

# ANTIQUE RADIO CLASSIFIED

VOLUME 8

DECEMBER 1991

NUMBER 12

This is a Radio  
Season

THE NATIONAL PUBLICATION FOR BUYERS AND SELLERS  
OF OLD RADIOS AND RELATED ITEMS - PUBLISHED MONTHLY

## ANTIQUE RADIO CLASSIFIED

Antique Radio Classified (ISSN:8750-7471) is published monthly, 12 times per year, by John V. Terrey, 498 Cross Street, P.O. Box 2, Carlisle, MA 01741. Second-class postage paid at Carlisle, MA, and additional mailing offices. Telephone: (508) 371-0512, 9:00 AM to 5:00 PM ET weekdays; machine answers phone at other times.

Annual subscription rates within the U.S. are \$27.00 by Second Class mail and \$40.00 by First Class mail.

Annual foreign rates. By air: Canada - \$43.00; Mexico - \$43.00; Other foreign countries - \$75.00. Surface mail: Canada - \$35.00; Other foreign countries - \$38.00 (Surface delivery to countries other than Canada may take two or more months and cannot be guaranteed.)

Two-year subscriptions are twice these rates and receive an extra month. Sample issues are available free on request.

**PURPOSE.** Antique Radio Classified is published for people involved in the radio collecting hobby. Its purpose is to stimulate growth of the hobby through the buying, selling and trading of radios and related items, and to provide a monthly forum for the interchange of ideas and information.

**CONTACTING ANTIQUE RADIO CLASSIFIED.** All correspondence should be sent to:

A.R.C., P.O. Box 2, Carlisle, MA 01741.

Send only UPS, Federal, etc. items to 498 Cross St.

Telephone: (508) 371-0512; Fax: (508) 371-7129

Please no classified ads by telephone, thanks.

Your ads, renewals, letters, etc. can be handled faster and more efficiently if (1) each is on a separate piece of paper, and (2) your name, address and SUB# is written on each.

Unfortunately, A.R.C. is not staffed to answer letters

with questions about antique radios or requests for advice. However, A.R.C. does solicit letters of interest to its readers and publishes them as space permits. A.R.C. assumes that permission is given to edit and to publish all correspondence and articles received unless otherwise indicated.

**GUARANTEE.** You may cancel your subscription at any time and receive a pro rata refund for issues not yet mailed. If errors to ads are made by A.R.C., upon request a free correction will be run in the next available issue.

**PAYMENT.** Payment send in full payment with your order or ad. A.R.C. does not carry accounts; all subscriptions, ads, etc. must be prepaid. Pay in U.S. funds. Checks drawn on a U.S. bank, money orders, VISA or MasterCard (\$10.00 min.) are preferred. Make check out to "A.R.C." U.S. stamps or cash are OK for small amounts. Canadian payers may send a Canadian check in U.S. funds, but please add \$1.00 (U.S.) for bank charges. Subscriptions will be prorated to amount sent if amount is incorrect.

**CHANGE OF ADDRESS.** Please notify us 4 weeks in advance of a change of address. Send both your new and old address, and include your SUB# and effective date of your new address. Temporary address changes can be made also.

**SUBMISSION OF MATERIAL.** Antique Radio Classified welcomes and solicits information that pertains or relates to radio history or collecting. This may include articles, book reviews, photos, information on upcoming radio events, meetings, antique radio organizations, radio auctions and price reports, sources of old radio and restoration supplies, and other related and interesting material. All material submitted should be neat and verified for accuracy. Unless prior arrangements are made, all submitted materials may be edited, become the property of Antique Radio Classified and will not be returned.

**MAILING OF ISSUES.** U.S. subscribers can receive A.R.C. by First or Second Class mail (Second Class is the way most magazines are mailed). The mailing of First Class copies is staggered over one to four days with faraway copies mailed before local copies. Non-U.S. copies are mailed on the first day. Second Class copies are mailed on the last day. Mailing dates change each month, but mailing is usually completed by the 26th of the month. First Class copies usually are received by the fifth of the month; copies by Second Class mail, by the tenth.

**ETHICS.** No person involved in the production of A.R.C. is to act on any information in the magazine until the day after local copies are mailed.

**DISCLAIMER.** The publisher is not responsible for any buying and selling transactions incurred, or for any other use of the contents of this publication.

Antique Radio Classified subscription rates, frequency of publication, content, policies, size and ad details, and rates are subject to change at any time by A.R.C.

## DISPLAY AND BUSINESS CARD ADS - DETAILS AND RATES

*The deadline is the first of the month for display and business card ad artwork, payment and repeat requests.*

Advertising is accepted only for early items related to radio, communication, etc. All items must be described fairly; reproductions, reprints and not-original items must be so identified. Advertisers agree to respond promptly to inquiries and orders, and to resolve problems promptly if the buyer is not satisfied.

All advertising must be prepaid; see "Payment" paragraph above. Late ads will be run only if space and time permit. Since artwork is reduced to 63% in the printing process, originals must be the artwork size listed below. Do not send in artwork on art board or send negatives. Ads should be typeset or typed neatly with a carbon ribbon, black printing on white. No reverse type if A.R.C. is to make up the ad. If you want us to prepare your ad, include the one-time cost below for A.R.C. to make up the ad.

Photos should be at an 85 line screen; otherwise, add \$8.00 per photo for screening. (Do not cut or trim photos or glue photos to artwork; submit separately.)

If you are confused by these requirements and terms,

Page	ARTWORK SIZE (SEND IN THIS SIZE)		As Printed (size in magazine)		Cost for 1-month	Cost for 3-months	Cost for 6-months	One-time Cost for A.R.C. to make up Ad (if requested)
	H x W (inches)		H x W (inches)					
Full	12 3/16 (or 10 1/2)	x 7 1/2	7 3/4 (or 6 5/8)	x 4 3/4	\$145.00	\$390.00	\$695.00	\$50.00
1/2 H		5 1/4 x 7 1/2		3 5/16 x 4 3/4	73.00	197.00	350.00	25.00
1/2 V	12 3/16 (or 11 13/16)	x 3 9/16		7 7/16 x 2 1/4	73.00	197.00	350.00	25.00
1/4		5 1/4 x 3 9/16		3 5/16 x 2 1/4	37.00	99.00	177.00	13.00
1/8		2 5/8 x 3 9/16		1 5/8 x 2 1/4	19.00	51.00	91.00	7.00
Business Card		2 x 3 3/4		1 1/4 x 2 3/8	not avail.	27.00	48.00	5.00

please contact A.R.C. before beginning to prepare your ad. We will be happy to advise you on your ad ideas, estimate how much the ad will cost, recommend an ad size, etc.

We assume that advertisers want all ads which are submitted to run without delay; therefore, we will run the ad and bill for any additional work required for the ad to meet these specifications. A late ad will be run beginning with the next month. "Tear sheets" will be sent only for 1/2 and full page ads, and if requested when the ad is submitted.

Business card ads are limited to one per advertiser. The 3-month rates represent about a 10% discount, the 6-month rates, 20%. Placement requests for display ads: add 15% but call first. Clubs: write for discount policy.

## EDITOR'S COMMENTS

1991 has been another growth year for the antique radio community. A.R.C. now covers 48 U.S. antique radio clubs and has announced 213 club events in 1991. Attendance at meets continues to increase, and this growth is reflected in auction activity. Two recent auctions (the Antique Wireless Association and the Vintage Radio and Phonograph Society) grossed over \$50,000 each!

A.R.C. continues to grow also. Circulation for September 1991 (shown below in the *Statement of Ownership, Management and Circulation* required for magazines by the U.S. Postal Service) was 7,008 — 654 more than a year ago. Issues have grown too: the number of article pages is up about 14%; classified, boxed classified and photo ads — with over 750 in this issue — are up about 12%. We greatly appreciate the support of our subscribers who spread the word about A.R.C. and made this growth possible.

**In This Issue.** The Gonset Company six-page feature is by Tom Marcellino, who interviewed the grandson of Gonset's founder to obtain information and photos for his article, the first of two.

Coverage of transistor radios continues with Fred Geer's article on the Regency TR-1, the first transistor radio. In *Collecting Foreign Sets* Ian Sanders presents a description of the British Western Electric 2-step amplifier.

Something new is in store for you in *The Vintage Quiz*. See if you can identify the radio terms suggested by the cartoons.

*Restoration Topics* this month features cleaning with ammonia. Jack Clark and Charles Conte herald ammonia as "Stronger Than Dirt and Just About Anything Else, Too!"

The second part of "Will The Real Radio Boys Please Stand Up" is included this month. Mike Adams presents synopses of the remaining books in the Chapman Radio Boys series.

We also have Alan Douglas' book review of Tom Lewis' *The Empire of the Air*, a triple-biography of de Forest, Armstrong and Sarnoff. Alan's conclusion: "...it is the best book on radio history ever written." Public television will present a two-hour documentary based on this book on January 29, 1992, at 9 P.M. (local date and time may vary).

**New Display Ad Rates.** Display and business card ad rates will be going up about 25% on January 1, 1992. However, until January 1, the current rates (see the opposite page) will be honored for prepaid ads running for up to six months.

**Thanks!** One of the most enjoyable facets of publishing *Antique Radio Classified* is reading the kudos about A.R.C. that many of you include with your ads and letters. We are pleased that A.R.C. is an exciting part of your radio collecting activities. Thank you again for your support, and please keep sending us your comments about A.R.C.

I join the A.R.C. staff — Bobby, Chris, Dave, Dick, Dorothy, Lisa, Scott and Shirley — in wishing all of you a happy holiday season and a prosperous new year,

John V. Terrey

## ON THE COVER

The cover illustration is from an early 1920s magazine in the editor's collection. In fact, it is from the very same issue which provided the cartoons for the *Vintage Quiz* in this issue. We will credit this magazine in a future issue.

## STATEMENT OF OWNERSHIP, MANAGEMENT AND CIRCULATION

(1) Title of publication: Antique Radio Classified. (1B) Publication No.: 37507471. (2) Date of filing: Oct. 31, 1991. (3) Frequency of issue: Monthly. (4) Complete mailing address of known office of publication: 498 Cross Street, P.O. Box 2, Carlisle, MA 01741. (5) Complete mailing address of general business offices of the publisher: Same as #4. (6) Full names and complete mailing address of publisher, editor and managing editor: John V. Terrey, 498 Cross Street, Carlisle, MA 01741; Same; Same. (7) Owner: Same. Known bondholders, etc.: None. (9) not applicable.

10. Extent and Nature of Circulation	Average No. Copies Each Issue During Preceding 12 Months	Actual No. Copies of Single Issue Published Nearest to Filing Date
A. Total No. Copies (Net Press Run)	8688	8506
B. Paid and/or Requested Circulation		
1. Sales through dealers and carriers, street vendors and counter sales	0	0
2. Mail Subscription (Paid and/or requested)	6824	7008
C. Total Paid and/or Requested Circulation (Sum of 10B1 and 10B2)	6824	7008
D. Free Distribution by Mail, Carrier or Other Means (Samples, Complimentary, and Other Free Copies)	1375	949
E. Total Distribution (Sum of C and D)	8199	7957
F. Copies Not Distributed		
1. Office use, left over, unaccounted, spoiled after printing	489	549
2. Returned from News Agents	0	0
G. Total (Sum of E, F1 and 2 — should equal net press run shown in A)	8688	8506
11. I certify that the statements made by me above are correct and complete.	Signature and Title of Editor, Publisher, Business Manager, or Owner	
		

# COMMUNICATION RECEIVERS

## The Gonset Story — Part 1

BY F. T. MARCELLINO, W3BYM

*A.R.C. begins a two-part article on the history of the Gonset Company. F.T. Marcellino's careful research reveals the fascinating story of the Gonsetts, a father and son whose combined inventive genius contributed greatly to the electronics industry throughout the twentieth century. It is interesting to note that the final "t" in the family name is dropped in the company name. (Editor)*

Figure 1. The civil defense version of the famous Gonset 2-meter Communicator.

The adventure that lies ahead is the story of two men, Robert R. Gonsett and his son Faust R. Gonsett, and their numerous inventions and significant contributions to mankind.

Many of you probably remember the famous Gonset Communicator, alias the "Gooney Box" or "Gooney Bird," and how it expanded amateur radio's use of the VHF spectrum. The civil defense version is shown in Figure 1. You may also remember how the Gonset 10-meter converter found popularity in mobile use. These are but two examples of the many products produced by the Gonset Company for radio amateurs, the military, and the general public.

The research effort connected with this article was a pleasure because it put me in contact with many people who knew, and some who worked with, Faust Gonsett. Among them is Faust's son, Robert F. Gonsett, WA6QQQ, a major contributor to this effort. Bob's recollections about his dad and his companies were intensely clear. I am grateful for his assistance and cooperation.

The story of the Gonsetts is long overdue and fills a void in the history of early radio and electro-mechanical technology. To the best of my knowledge, most of the information contained in this story has never been published formally.

### ROBERT R. GONSETT — THE FATHER

Our story begins with Robert R. Gonsett, 1891–1951, who at the age of sixteen left his native land of Romania to seek a new beginning. He arrived in Canada in 1907, with only two dollars in his

pocket, and settled in the small village of Edmonton in the province of Alberta.

R. R. was an exceptional individual, inquisitive and very mechanically minded. At the age of eight, he built a musical instrument, and at age nine, he made a tricycle for himself.

In Edmonton, he used his carpentry skills, following the line of work his father had taught him in Europe. Recognizing his need for additional training, he completed a correspondence school course in architectural drawing

and studied electrical engineering at night school.

He made his first investment in 1908 by purchasing a plot of land for \$300. Two years later, during which Edmonton experienced a real estate boom, he sold the land for the sizable profit of \$9,000. He used the proceeds to buy another lot, construct a building and open a furniture store. However, the furniture business was a failure.

Undaunted, at the age of twenty, he started another business, a partnership in a motion-picture theater. This venture was short-lived because he lost the business to his partner in a game of chance. Then, due to his skill as a projectionist, he was hired by a theater in Edmonton.

Figure 2. The first Gonset laboratory, ca. 1910, in Edmonton, Canada.

Figure 3. R. R. Gonsett in 1920 with his combination phonograph, radio, and lamp.

In those early days, changing reels of film took a fair amount of time, and the audience became impatient with the delays. R. R. solved this problem by inventing a self-threading motion-picture projector which revolutionized the industry. His first model was made in the laboratory building shown in Figure 2. The building previously served as a chicken coop. Yes, a real chicken coop, complete with insect infestation. So, he moved the coop to a friend's lot, fumigated it and opened his laboratory.

In 1916, Gonsett and his family left Canada for the United States where he believed greater opportunities awaited. They lived in several places, including Chicago and Detroit, before settling in Los Angeles in 1923. While living in Detroit, R. R. developed and manufactured an electric phonograph, among other things. Figure 3 shows R. R. in 1920 with his combination phonograph, radio and lamp.

In Los Angeles, the family first purchased a small lot and built a two-car garage. One garage was used for living quarters, while the other unit served as a small laboratory for R. R.

After this modest beginning, Gonsett estab-

Figure 4. F. R. Gonsett at work in the plant in the early years.

lished his own place of business under the name of Gonsett Research Laboratory. In this new facility, he conducted research, developed his own inventions, and fabricated the inventions of others. Some of these inventions were not accepted readily because his concepts were ahead of their time. For example, he developed electrically operated shears for cutting fabrics, but it was difficult to market this product during the Great Depression. However, he later entered into a patent licensing agreement with the Singer Sewing Machine Company.

R. R. was a prolific inventor and had fifty patents to his credit, including such diverse products as a soap dispenser and a vibrator used in health and grooming products. Although these patents expired many years ago, consumers are still enjoying the fruits of his fertile mind. It is noteworthy that R. R. Gonsett was always self-employed. He created not only products, but jobs for others as well.

### FAUST ROBERT GONSETT — THE SON

Our story continues with the introduction of Faust Robert Gonsett, 1916–1963, the designer

Figure 5. A Beverly Hills patrolman and F. R. Gonsett with a two-way mobile radio in 1939.

of the famous Gonset 10/11-meter mobile converter and the Communicator line of amateur radio transceivers. Figure 4 shows Faust Gonsett at his desk in the Gonset plant.

Faust became interested in radio at an early age and learned much from his father, the engineer and inventor. In 1930, at the age of fourteen, he became a licensed amateur radio operator. His call sign was W6DIZ, later changed to W6VR. He enjoyed operating his amateur station on both code (CW) and voice modes.

After graduating from Los Angeles High School, Faust studied at the Frank Wiggins Trade School, also in Los Angeles. He earned two FCC commercial radio licenses — a First Class Radio Telephone and a First Class Radio Telegraph.

In the late 1930s, Faust became associated with the Beverly Hills Police Department as a radio

(Continued on following page)

*(The Gonset Story, continued)*

technician. He designed and installed two-way VHF radios in the department's motorcycles and patrol cars. A typical motorcycle installation is shown in Figure 5. Prior to the installation of Gonsett's equipment, the Police Department was limited to one-way communication with its motorcycles and patrol cars; radio messages could be transmitted to these field units, which could not reply because they carried only receivers.

The Gonset two-way radios all operated on the 8 1/2-meter band (35 MHz), contained five tubes, and weighed about seven pounds. The January 14, 1940, issue of the *Los Angeles Times* stated that "...the police radio equipment is the most up-to-date in the United States and Beverly Hills has the only Police Department in the world completely equipped with two-way radios on motorcycles as well as 'prowl' cars."

In addition to the mobile radios, Faust was responsible for the installation of radio equipment at police headquarters for which he designed and built a soundproof radio operating room. An unusual feature of the Gonsett-designed system was its ability to relay transmissions from the Los Angeles police radio to the Beverly Hills police radio. This feature resulted in improved coordination between the two police departments.

While serving as Chief Engineer for the Beverly Hills Police Department, Faust also worked for *Radio* magazine, a predecessor of *CQ* magazine. From 1936 to 1940, he contributed articles dealing with the construction of dozens of pieces of radio equipment. Probably his most popular articles dealt with the construction of a 10-meter mobile rig. He also wrote several articles for *Popular Science* and other hobby magazines. At the age of 26, he co-edited the 1942 edition of *The Radio Handbook*, published by Editors and Engineers of Santa Barbara, California.

From 1942 to 1951, the year R. R. died, the father and son team were active in the design and production of electronic equipment. They made significant contributions to military electronics and developed a reputation as manufacturers of quality amateur radio equipment.

### THE WAR YEARS

Founded by a group of investors early in 1942, Aircomp Ltd. (short for "air computer") had its headquarters and shop facilities in Burbank, California. See Figure 6. The company's primary

Figure 6. Aircomp Ltd., Burbank, California, 1942, where the Gonsetts developed the Aircomp computer.

Figure 7. Waterproof remote control switch box with special spring bands around the rubber to prevent water entrance.

product was a device used to compute load weight and load distribution for aircraft. Proper distribution of cargo and the calculation of gross weight were important considerations for flight safety. Aircomp's computers were used extensively in the Douglas DC-3 and saw service during World War II in support of the DC-3's military version.

Aircomp had received a government contract to refine the aircraft load computer, but its efforts were not successful. The company was experiencing financial difficulties and sought the managerial and technical expertise needed to complete this project. The Gonsetts offered their help and were given the responsibility for the computer project.

The agreement between the two parties was quite novel. The Gonsetts agreed to develop the computer and to work without compensation until the government accepted the computer model. Aircomp management granted the necessary authority to the Gonsetts and agreed to provide the resources necessary to complete the project.

The Gonsetts prevailed. After months of hard work, the first working model of their computer was submitted to Wright Field for testing and evaluation. The unit performed flawlessly. As a result, Aircomp received a production contract. This contract brought badly needed financial help and breathed new life into the company. Special tooling and equipment were developed, and production of the computers began.

The contract was completed on schedule and led to additional contracts. Some simple statistics show the results of the Gonsetts' labors. In 1942, Aircomp employed only eight people. During the production phase, employment soared to more than 100 workers.

The Gonsetts left Aircomp in early 1944 and formed a company of their own, the Waterproof Electric Company. This company, as the name implies, engaged in the production of military radios which required protection from the elements.

The company successfully designed, developed and produced military radio communication

Figure 8. R.R. Gonsett with his toroid coil winder, now on display in the museum of the University of Alberta, Canada.

sets capable of reliable performance under harsh environmental conditions. The sets were used on motor vehicles, barges, and other amphibious craft throughout the world. Reliable performance was paramount because the sets were used to pass vital command orders and emergency communications.

These radio sets were housed in waterproof aluminum boxes. The fabrication techniques used in the manufacture of these boxes, including the welding process, were developed by Waterproof Electric and were later applied to amateur radio equipment.

When installed in Jeeps, the radio sets employed a remote control box which featured waterproof covers for switches and microphone/headphone jacks, as seen in Figure 7. Although Faust held patents for these covers, the patents were not as important to the company's success as the product's timeliness in the marketplace.

Government contracts were responsible for the company's rapid growth. At one time, the compa-

ny was working on five U.S. Navy contracts, two prime contracts and three sub-contracts.

Faust's son, Robert (Bob) F. Gonsett, recalls rows of Jeeps parked at the plant awaiting the installation of radio sets, as well as a pool through which outfitted Jeeps were driven for immersion testing. This testing approach was characteristic of the Gonsett philosophy: Keep all tasks simple and practical.

In addition to his activities at Waterproof Electric, Faust was employed as the Technical Supervisor of Radio Equipment for the city of Beverly Hills and as a consulting engineer for the T.W.T. Company of Los Angeles, a prime contractor of military equipment.

During World War II, R.R. Gonsett made a major contribution to the production of radar equipment by developing a toroid coil winding machine. Toroid

coils consist of multiple turns of wire wrapped around a ring-shaped form called the torus. In this case, the government requirements called for an automatic coil winder capable of wrapping wire the size of a human hair around the form.

Working with such fine gauge wire called for great precision. For example, if the exact wire tension was exceeded, the wire would break and the coil would be rejected. And there were other difficulties. Because some of the parts were extremely small and delicate, the builders had to wear powerful magnifying glasses. In addition, locating some needed materials was very hard because of shortages created by the war.

R. R. persisted, and after several redesigns, he developed a coil winder capable of producing the much needed toroid coils. His coil winder could automatically wind a toroid in ten minutes — less time than it took an operator to set up the machine for the next coil. R. R. and his coil winder appear in Figure 8. The coil winder is now on display in the Provincial Museum and Archive of the University of Alberta, Canada.

In recognition of their contributions to the war effort, the Gonsetts were awarded the U.S. Navy Certificate of Commendation shown in Figure 9.

#### AMATEUR RADIO — THE POSTWAR YEARS

After World War II had ended, the Gonsetts stepped up the design and production of amateur radio equipment under the Gonsett name. They purchased the physical assets of Aircomp, and their Waterproof Electric Company became the manufacturing facility, while the Gonsett Company served as the sales organization. A picture of Gonsett's main plant appears in Figure 10. The front of a smaller secondary plant displayed both the "Gonsett" and "Waterproof Electric" signs.

Prior to the war, Faust had designed and manufactured a popular converter using the name

(Continued on following page)

Figure 9. U. S. Navy Certificate of Commendation awarded to F.R. and R.R. Gonsett in 1947.

Figure 10. The Gonset Company main plant in Burbank, California.

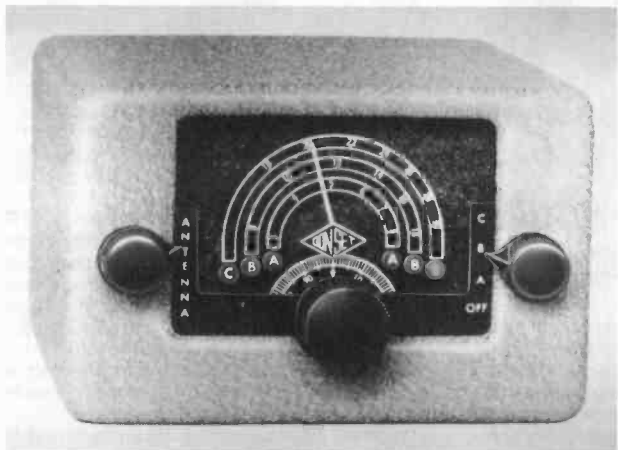

Figure 11. The Gonset 3-band converter, tuning from 3 to 30 MHz.

(The Gonset Story, continued)

"GON-SET." With the end of the war and renewed interest in amateur radio, he introduced the 10/11-meter converter. Designed to extend the range of surplus military receivers, whose upper frequency limit was typically 18 MHz, this version of his converter was extremely popular. Sales numbered in the thousands. This unit first appeared for sale in the September 1946 issue of *QST*. It was priced at \$39.95. The ad copy read "GON-SET converters have been manufactured since 1938 and are used worldwide. Long experience together with precision design and construction assures a superior product. Ideal for surplus receivers." An optional noise silencer was available for \$8.25.

A new converter, the GONSET 3-30 Mobile Converter, was introduced in 1948. It carried the same price tag as its predecessor but provided coverage on the 80- to 10-meter amateur bands.

Illustrated in Figure 11 is another of the company's converters. This 3-band converter tuned from 3 to 30 MHz. In the April 1965 issue of *73* magazine, William Kennedy, W3ZFJ, an avid ham, wrote how he had built a complete receiver around his Gonset 3-band converter. His article "The Converted Converter" demonstrates the versatility of a ham operator, as well as of this converter.

The November 1952 issue of *CQ* magazine carried an advertisement for "The new GONSET 2-meter XMTR-Receiver" priced at \$189.50. My research indicates this is about the time frame of the introduction of the famous Gonset Communi-

cator. Could Faust have known how popular this transceiver would become?

## THE GONSET COMMUNICATOR

The Gonset Communicator featured a single frequency crystal-controlled transmitter and receiver. The Communicator was comparatively small, measuring 8.5" x 10.25" x 6", and contained a dual power supply which permitted operation on either 120 vac or 6 vdc. Power output was rated at 12 watts on Amplitude Modulation (AM).

It appears that two models of the Communicator may have been available at that time. The same issue of *CQ* carried a second ad for a communicator which differed from the unit described above, although it carried the same price tag. The power output was rated at 15 watts, and it was larger in size, measuring 10.25" x 9.25" x 7".

Bob Gonsett is fortunate to possess the prototype of one of these units. The prototype had been the property of his father, Faust, who kept the unit under lock and key.

From 1952 until 1960, Gonset produced a series of 2-meter communicators beginning with Model I and progressing to Model IV. The Model II is shown in Figure 12. The Communicator IV was produced after Gonset became part of the Altec Lansing Company in 1961. This model, the last of the Communicator line, was a completely repackaged set. It boasted a 6360 tube in the final amplifier and produced a higher output of 12 to 14 watts. Variations of the Communicator series were produced.

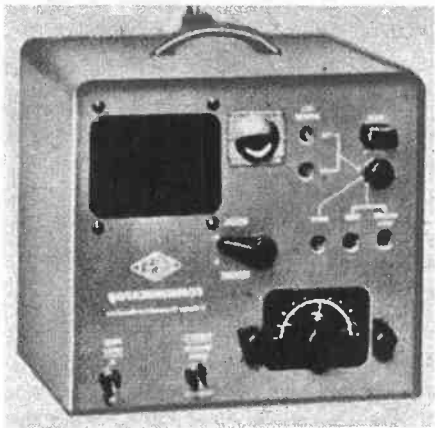

Figure 12. The Gonset Communicator II, from a 1954 Allied Radio Catalog.

for civil defense, the Civil Aeronautic Patrol (CAP) and for industrial use.

Six-meter and 10-meter versions were also manufactured. Designated the G-50 and the G-28 respectively, these transceivers offered the flexibility of VFO control and higher power (48 watts input). These units used a 6146 tube in the final amplifier while the smaller 2E26 was used in the 2-meter communicators.

### GONSET AMPLIFIERS

Following the end of World War II, the surplus market was flooded with military radio equipment and vacuum tubes. One tube, the 826 power triode, was available in substantial quantities and priced accordingly. While its specifications were not particularly impressive, Faust Gonsett, in his typical fashion, could not ignore this large source of supply. So, he utilized the 826 tubes in a popular line of 2-meter and 6-meter linear amplifiers. When hooked up to one of the company's communicators, these amplifiers increased the RF power output to 50 or 60 watts on AM and 80 to 100 watts on CW.

These extremely rugged units were built on a  $\frac{3}{16}$ "-thick welded aluminum chassis and mounted in a steel case similar to those developed by the Waterproof Company. Taking the simple approach that we discussed earlier, Faust omitted meters from the amplifier, but provided a window through which the plates of the two 826 tubes could be viewed for tuning purposes. He also provided a rear-panel jack into which a meter could be plugged to monitor plate current.

Without the plug-in meter, amplifier tuning was accomplished simply by watching the color of the tube plates. When adjusted properly, the plates glowed orange. If the color changed to yellow, the operator knew that retuning was required. Again, instead of a meter, a #47 pilot lamp served as a modulation monitor with the lamp glowing more brightly as the modulation level increased.

The appearance of the amplifiers changed along with that of the companion communicators. The early amplifiers were painted grey and used red knobs to match the Communicator Models I and II. The second series was painted white and used blue knobs just like the Communicator III. Amplifiers and communicators were also produced for civil defense use. A companion amplifier to the CD version of the Communicator is shown in Figure 13. These ubiquitous models were painted a bright yellow.

Another Gonset-produced amplifier failed to gain the popularity of the VHF units, possibly because of a \$399 price tag and because Faust tried to stuff too much into one box. This amplifier, produced in the mid-1950s, covered nine amateur radio bands from 160-meters to 2-meters.

Figure 13. The Gonset CD Amplifier.

The inclusion of both VHF and HF coverage in a single amplifier was a departure from the customary amateur radio practice. The amplifier used four 807 tubes rated at 250-300 watts peak envelope power (PEP) on single-sideband (SSB), 220-240 watts on CW and 80-100 watts on AM. This rack-mounted amplifier was extremely bulky and heavy.

(To be continued)

He has contributed many amateur radio construction articles to magazines.

# WITH THE COLLECTORS

## Evolution of the Transistor Radio Smaller Is Better

BY FRED GEER

*Fred Geer traces the beginnings of solid-state devices which led to the development of the first transistor radio. As Fred puts it, transistors revolutionized radio, but transistor radios personalized the way we listen to radio. (Editor)*

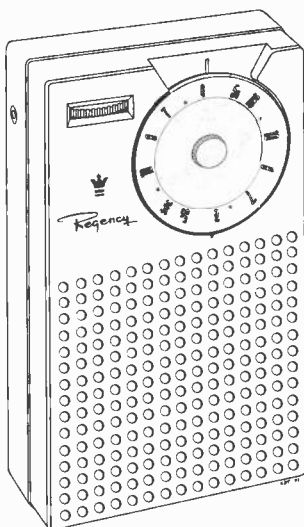

Nearly all radios today, of course, use solid-state devices. But, it may not be commonly known that radios used solid-state devices as early as 1907 when Pickard invented the mineral or crystal detector. Vacuum tubes sidetracked solid-state development until Bardeen and Brattain of Bell Laboratories developed a point contact transistor in 1948. Their transistor would revolutionize radio, but it was first used in hearing aids as the audio output.

A first is hard to document. But, the first all-transistor radio project began in June 1954 and was cloaked in secrecy. Many companies were involved under the umbrella of I.D.E.A. Inc., of Indianapolis. Painter, Teague & Petertil, industrial designers, who worked in secret with their suppliers, achieved miniaturization of components for the first all-transistor radio, the TR-1.

This set shown in Figure 1 was sold under the Regency label. Sanford Electronics in New York and Gough Industries, Inc., in Los Angeles were the first distributors. The selling price in December 1954 was \$49.95. The available colors were green, red, blue, ivory, gray and a red-dish walnut.

Texas Instruments was the first to develop a mass produced, low cost, high gain, high frequency germanium transistor. These NPN transistors provided the 30-40 decibel gain needed in the IF and audio stages. Defects plagued the first mass-produced transistors and diminished the public's confidence. As with any new technology that develops defects, the company replaced the first few thousand defective transistors. Public assurance that transistors were dependable was restored.

The Regency Model TR-1 used four transistors and a germanium diode. It was 3" x 5" x 1.25" and used a 22.5-volt battery that lasted

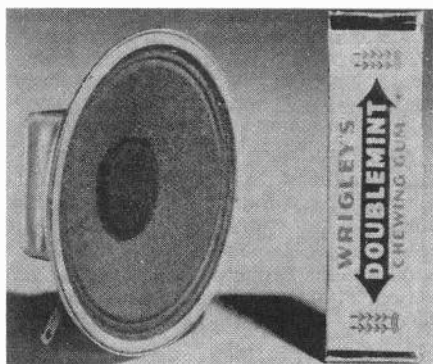

*Figure 1. Regency Model TR-1. This first all-transistor radio, announced in the fall of 1955, changed the way we listen to radio.*

about forty-five hours. Each transistor had a specific job. The first transistor is a TI223 which is the oscillator and converter. Radio Condenser Co. of Camden, New Jersey, made the miniature two-ganged tuning condenser. The IF stages used two TI222 transistors and three tiny IF transformers made by the Vokar Corp. of Dexter, Michigan.

The audio signal is developed across a 1000-ohm volume control made by Chicago Telephone Supply Corp. of Elkhart, Indiana. Centralab of Milwaukee provided the tiny ceramic capacitors. A TI210 developed enough audio power to drive the diminutive Jensen permanent magnet speaker seen in Figure 2. Components were assembled by a semiautomatic process using printed wiring and dip soldering techniques.

Claims made for the first all-transistor set were the following: long battery life, reduction in weight, lower operating cost, and long-lasting transistors.

Time has tested those early radios and only a

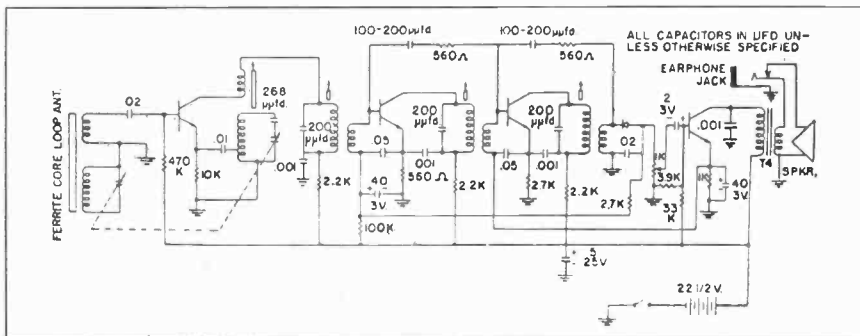

*Figure 2. This P275-Y Jensen speaker, 2.75 inches in diameter, was developed for the Regency TR-1. It has a 16-ohm voice coil and weighs less than 2.75 ounces. (Photo from "Radio and Television News," March 1955.)*

## A New Pocket Radio

"Slightly smaller than a teacup...this all-transistor broadcast receiver weighs less than twelve ounces and is the first available for consumer use."

"Another advantage claimed by the manufacturer is the elimination of tubes and the problem of tube replacement. While the hot filament or cathode in a vacuum tube is continually consumed during operation, no similar phenomenon occurs in transistors. Except for physical damage, transistors will last indefinitely."

Complete schematic for the Regency Model TR-1.

A.R.C. is grateful to Gene Claus for a reprint of the January 1955 issue of "Radio & Television News" from which we culled the schematic and this boxed information.

few defects, such as the following, have shown up: open interstage transformers, broken power switches, rusty battery contacts, and missing cabinet parts. Keep in mind that transistor radios did not sit in a protected living room, but went everywhere that people went. Transistors changed the way we listen. Radio became personal. Smaller is better!

I want to thank Harold Herp for furnishing me information on the Regency TR-1.

(Fred Geer, 6042 Brookridge Rd., Jacksonville, FL 32210)

Fred Geer's radio collecting began in 1953 with a Shure microphone and an RCA R-32. Through his articles in A.R.C., he likes to help others explore various aspects of collecting and radio history. In addition to his radio collection, Fred owns around two thousand old-time radio programs, which he can broadcast to any radio in the house.

## LETTERS - RESTORING WOODEN RADIOS

Dear Editor:

Here is another "Restoring Wooden Radios" tip. Reading the letter on restoring wooden radios in the January 1990 issue prompted me to write.

About 20 years ago, I acquired a Majestic lowboy, Model 90B. The top of the cabinet was quite dirty and had several scratches. The sides were in good condition.

I had never undertaken the challenge of restoring the finish on an old radio, and as far as that goes, this was my first real "antique radio." I spotted a can of automotive rubbing compound on the shelf in the basement. I pondered for some time. I reasoned, "If it is safe enough for auto finishes,

what will it do for varnish?"

First, I made a small pad with some cloth, and then I got started, working a small area at a time. (You will feel a gritty sensation as the compound works; then, all of a sudden, the surface will feel slick.) This process requires a lot of elbow grease, and you will want to stop and do something else for a time. I even go over the cabinet a second time.

The resulting finish is clean and shiny, so much so that you do not even need to follow up with a wax or polish. I might add though that I do hide the small scratches with "Old English Scratch Cover and Polish."

Glen M. Nichols, Lynnwood, WA

## The Western Electric Loudspeaking Power Amplifier

BY IAN L. SANDERS

*In his continuing series on radios produced in Great Britain, Ian Sanders introduces equipment manufactured by the Western Electric Company, Ltd., to suit the British market. (Editor)*

The radio products manufactured and distributed by Western Electric in the U. S. between 1920 and 1927 were covered in an excellent, two-part article by Charles Fisher in the April and May 1989 issues of A. R. C. In the United Kingdom, however, the Western Electric Company, Ltd., manufactured a different range of radio equipment tailored to the British market.

This product line included the Model 44001 crystal receiver (1922), the 44002 battery super-het (1924), and a family of "Weconomy" receivers and amplifiers using the miniature, dry cell-operated Weco valve, the British-made adaptation of the 215A peanut tube. A 2-valve and 3-valve Weconomy receiver, as well as 1-, 2-, and 3-valve versions of the Weconomy amplifier (Models 44011, 44012, and 44013, respectively), were introduced in 1923. The 2-valve Model 44014 amplifier is the subject of this article.

---

**"The volume of sound could be adjusted 'from a quiet conversational tone to an intensity sufficient for dance purposes or garden parties...'"**

---

The 2-valve loudspeaking power amplifier, Model 44014, which used U. S. manufactured WE 216A tubes, was also introduced in 1923. It provided greater amplification than the Weconomy models, but at the expense of significantly higher filament power consumption.

Designed for both domestic and commercial operation, the loudspeaking amplifier, as described

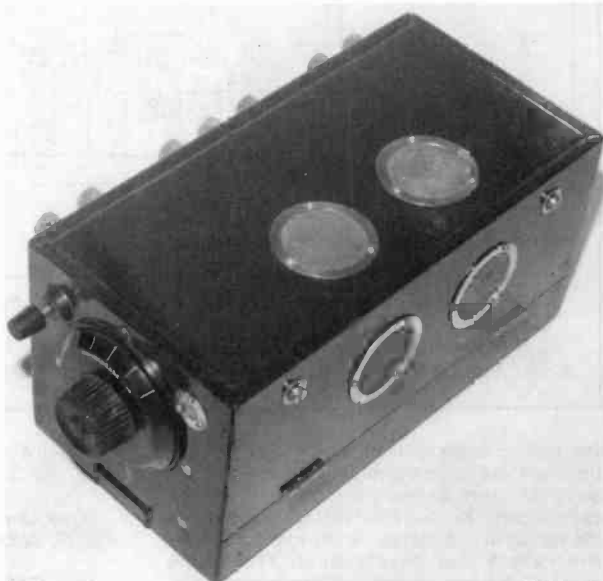

Figure 1. The Western Electric power amplifier.

Figure 2. View showing the controls of the Western Electric power amplifier.

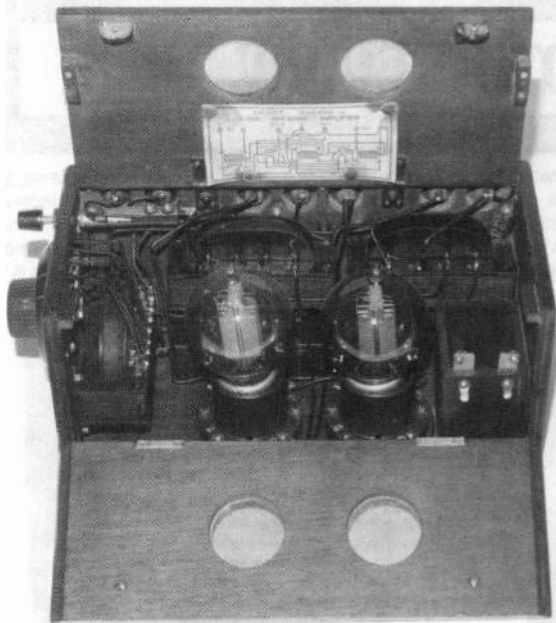

Figure 3. Internal view of the Western Electric amplifier with the top and frontpiece opened showing the two Western Electric Type 216A tubes.

in an early advertisement, was "primarily for private use, but its power is such that it has been used with success in hotels and public buildings..." The volume of sound could be adjusted "from a quiet conversational tone to an intensity sufficient for dance purposes or garden parties..."

The power amplifier is shown in Figures 1 and 2. The set is built in a highly polished mahogany cabinet measuring 5" x 5" x 10", with a lift-up lid and hinged drop-down frontpiece. Brass-trimmed portholes for observing the valve filaments are provided in the lid and front. The amplifier carries the ubiquitous BBC stamp of approval, and the set in this author's collection bears the Post Office Registration Number 3006 on the front panel beneath the volume control. (Interestingly, the unit described by Jonathan Hill in his reference

speaker appears to be the British equivalent of the well-known 518W horn loudspeaker distributed in the U. S.

The selling price of the unit in 1923, including two 216A tubes, less batteries, was £24 — about \$45 at today's exchange rates. If we bear in mind that an average working person's wage in Britain at that time was around £2 per week, the Western Electric loudspeaking amplifier was definitely a luxury item!

Reference:  
Hill, Jonathan. *Radio, Radio*. Sunrise Press, 1986.

(Ian L. Sanders, 16725 Wild Oak Way, Morgan Hill, CA 95037)

Ian Sanders started collecting in 1974 when he was still living in the United Kingdom. His first homebuilt, 2-valve (tube) set he bought for £2 — about \$4. From then on, he was hooked on crystal sets and battery receivers of the early 1920s, and he has continued to collect them since moving to the U. S. in 1977. His collection contains both European and North American sets, although he favors British sets for the quality of the cabinet workmanship.

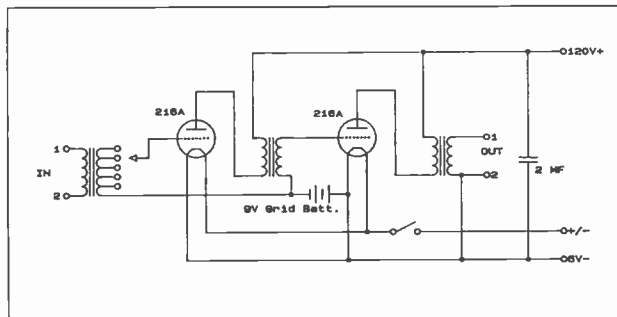

Figure 4. Circuit diagram of the Western Electric amplifier.

# PHOTO REVIEW

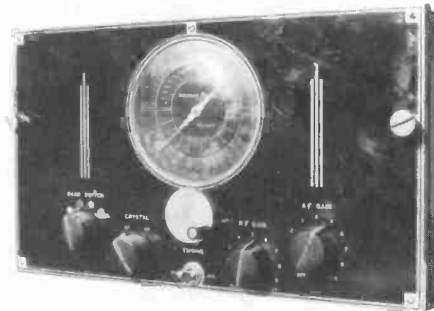

This column presents in pictorial form many of the more unusual radios, speakers, tubes, advertising, and other old radio-related items from our readers' collections. The photos are meant to help increase awareness of what's available in the radio collecting hobby. Send in any size photos from your collection. Photos must be sharp in detail, contain a single item, and preferably have a light-colored background. A short, descriptive paragraph **MUST** be included with each photo. Please note that receipt of photos is not acknowledged, publishing is not guaranteed, and photos are not returned.

**RCA VICTOR MODEL 121** - Built in 1932, this is one of the most impressive RCA cathedrals. The band selector is a pull switch. Unlike so many RCA models of the early 1930s, the chassis on this model is more accessible. (Fred Geer - Jacksonville, FL)

**EARLY CROSLY** - This is a 1922 two-step amplifier. The construction is rather crude with non-Crosley (but correct) knobs. Even the binding posts are different from the familiar Crosley type. The cover lid overhangs the panel, which did not have the Crosley name. (Dave Crocker - Duxbury, MA)

**WESTERN ELECTRIC TYPE 20A** - The serial number on this communications receiver is 175, and the newest patent listed is 1933. I date the radio in 1935. The set uses five standard radio receiver tubes (not Western Electric) and runs from a separate power supply through a connector like the one used in Scott radios of that era. It covers long wave, the AM band, and shortwave up to 18 MHz. (Ron Boucher - Goffstown, NH)

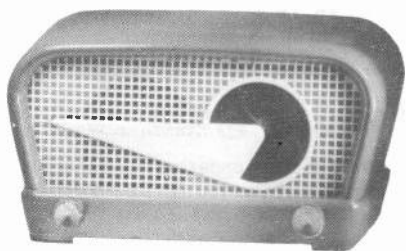

**SILVERTONE MODEL 132-018** - A metal cabinet painted ivory with a maroon dial and red lettering made this 4-tube superhet AC/DC set a real buy in 1946. (Fred Geer - Jacksonville, FL)

---

## PHOTO REVIEW

---

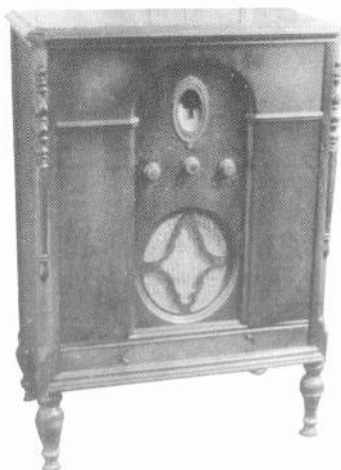

**PHILCO TRANSITIONE MODEL 48-703** - This radio came in a maroon, glass-like, plastic cabinet that was easily broken. Its cabinet was also used in Model 49-503 and came in black and green. *(Fred Geer - Jacksonville, FL)*

---

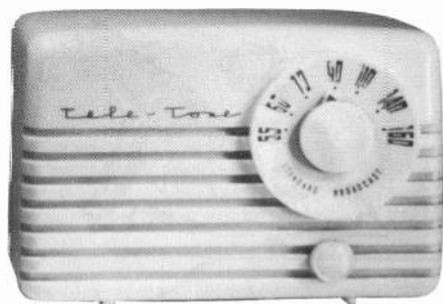

**PHILCO MODEL 20** - Also known as the "Baby Grand," this AC-operated TRF set, made in 1930, was Philco's first cathedral radio. It uses seven tubes and covers the broadcast band. *(Ron Ramirez - Providence, KY)*

---

**MAJESTIC MODEL 71** - The Grigsby-Grunow Co. of Chicago, Ill., made this TRF receiver in 1928. It uses eight tubes, including a Type 80 receiver in the separate power supply, mounted at the bottom of the cabinet. *(Ron Ramirez - Providence, KY)*

---

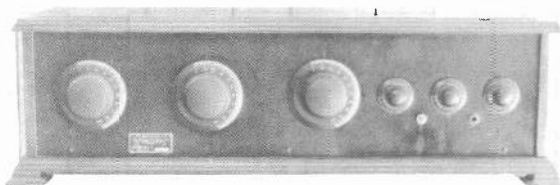

**TELE-TONE** - Produced in 1947, the Tele-Tone has an ivory plastic cabinet with black lettering. This 4-tube superhet radio shows what can be done with very few materials and parts. *(Fred Geer - Jacksonville, FL)*

---

**HERALDYNE** - Manufactured in the mid-1920s by Brenard Manufacturing Company of Iowa City, Iowa, this is a typical five-tube, three-dial Neutrodyne set of the period. Battery operated, the set was in working condition when I acquired it. Brenard was just one of several radio companies that came and went in the 1920s. *(Ron Ramirez - Providence, KY)*

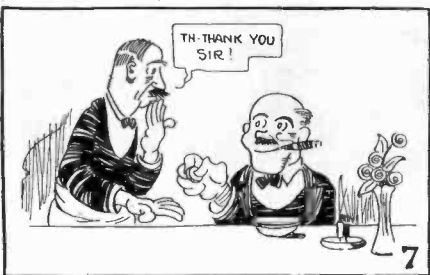

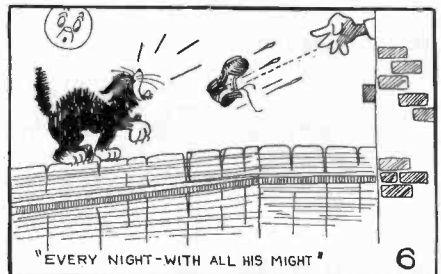

---

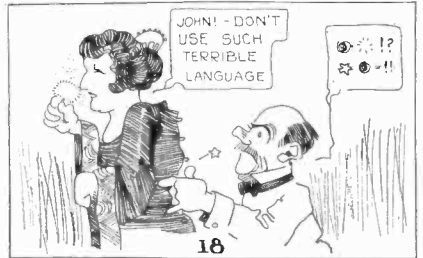

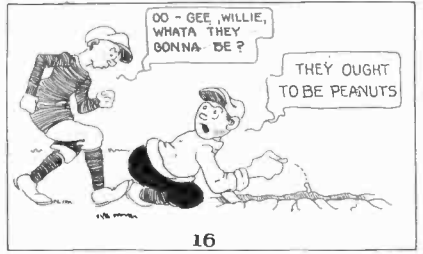

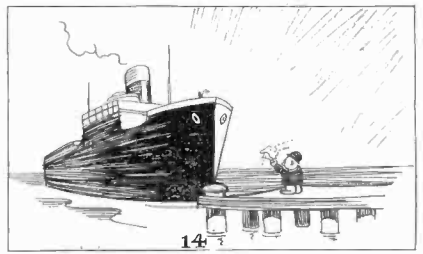

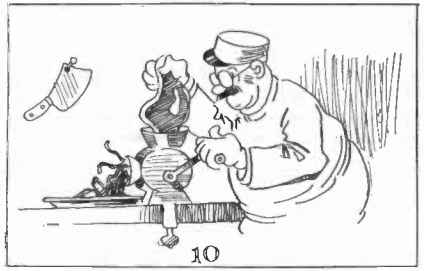

# VINTAGE QUIZ

## Enter A Rare Holiday Quiz

For a bit of holiday fun, A.R.C. is rerunning this radio term quiz which appeared in a magazine of the 1920s. Can you identify the radio terms suggested by these cartoons? Can you name the publication and issue in which the contest ran? Mail your answers, along with your name and address, to A.R.C., P. O. Box 2, Carlisle, MA 01741. In a later issue, we will print the answers, as well as the names of those who sent in the largest number of correct answers. Try for a perfect score! This must have been a very popular contest in its time because the first prize was \$190 worth of radio — a lot of radio in those days!

# RESTORATION TOPICS

## Cleaning With Ammonia

Stronger Than Dirt, and Just About Anything Else, Too

BY JACK CLARK & CHARLES CONTE

Remove the tarnish from brass without hours of bone-wearying polishing! Strip away paint from thermoplastics! Watch the milky lacquer coatings fall away from brass and plastic before your eyes.

How? — you ask. With that miracle solvent,  $\text{NH}_3$ . That's right — common household ammonia.

Most radio restorers are familiar with the benefits of ammonia as a cleaner and brightener of brass es-cutchions. A leisurely soak in an ammonia bath will remove dirt and tarnish from brass parts and will prepare the surface for polishing with Brasso, or your favorite metal polish. Any clear coating on brass will also lift off easily after a good soak. (Brass plating will be removed as well, so be sure to soak only pure brass.)

Two facts are clear about ammonia: (1) A leisurely soak in an ammonia bath will remove just about anything from anything, and (2) ammonia is one great solvent. In many cases, it's the only solvent that does the job without harming the surface you're restoring or refinishing.

An example involves stripping paints from delicate thermoplastics. Never use a paint stripper for this job. If you've ever tried it, you won't try it again. Paint strippers will melt these plastics in an instant. However, ammonia, while not really a paint solvent, will attack the bond between paint and plastic so that you can scrape away the paint with little effort. You can remove most paints this way after a bath of one to four hours.

Using ammonia as a paint "stripper," we have restored a number of radios and jukeboxes ruined by some "Pete Pliers" who thought he could spruce up the old box with a quick brush-paint job.

Another restoration problem not easily solved, unless you know about the powers of  $\text{NH}_3$ , involves clear lacquer coatings on brass inserts in plastic knobs that have turned milky and fogged. Some manufacturers used clear lacquers to cover the brass inserts. However, they usually coated the inserts as well as the plastic knobs. Years later, the finish has chipped and fogged, leaving tarnished areas on the brass and milky-looking splotches on the plastic. Zenith Trans-Oceanics often demonstrate this problem. A one-hour soak will remove the clear-coating and expose the surfaces for cleaning and polishing.

A variation on both of these uses for ammonia-paint stripping and brass finish renewal is remov-

ing brass paint from real brass. When, you may ask, would such a situation arise? We have stripped brass paint from the real brass center section of at least four Westinghouse Little Jewel radios this way. Our forefathers, in their very peculiar wisdom, would go to any lengths to avoid unsightly tarnish or oxidation — the patina of age, as we call it from our more so-

phisticated perspective. Hence, brass paint over real brass.

You *could* use paint stripper to remove brass paint from brass; however, we can't tell you how paint stripper might affect brass. We *can* tell you that after an hour's dip in ammonia, the dull brass paint literally slides off the Little Jewel's brass center section, leaving a clean, bright brass surface exposed for polishing. And besides, ammonia is roughly ten to fifteen times less expensive than paint stripper.

A note: it's best to submerge a brass piece for stripping entirely in ammonia. Turning the piece in a shallow pan of ammonia will leave hard-to-remove stain lines on the piece. If you don't wish to buy enough ammonia to completely submerge your brass object for stripping, don't cap or cover

**Caution: When following restoration procedures using ammonia or other cleansers, be sure to work in a well-ventilated area.**

the basin in which you're soaking the brass part. The fumes from the ammonia will stain the brass exposed to the "ammonia air," making it necessary for you to turn the part again to remove the stain from the newly exposed brass surface. Obviously, if you don't catch on really quickly, this process could be repeated almost endlessly, or at least until you pass out from the fumes. This tip comes from someone once too cheap to invest in a second half-gallon of ammonia.

Another unrelated application of ammonia in radio restoration — but perhaps the most frequently used — is for the initial cleaning of Bakelite cabinets. Once you remove the chassis and dial face, drop the box in the sink and spray it with any ammoniated household cleaner, like 409 or Top Job. Then stand back and watch the old Bakelite exude streams of its brown, oxidized self. (This

discharge is often referred to by knowledgeable restorers as Bakelite "doogee," though the layperson may refer to it simply as "disgusting.")

Lastly, and most spectacularly, we have used ammonia to remove chrome plating from some thermoplastic knobs found in an electronic surplus store. These knobs were shaped just like knobs used on some miniature plastic and metal radios from the 1940s and 1950s. Unfortunately, they were chrome-plated plastic and therefore unsuitable as proper looking replacement knobs.

The chrome plating was over a copper-plated base, and both looked as if they were there to stay. We took a few of these knobs, submerged them in a jar of ammonia, capped it and set it aside. Sure enough, after about two weeks, we could pull off small bits of plating. A month of soaking and chipping, and the knobs were completely stripped and in perfect condition. Although they were grey plastic and still not authentic looking, a coat of black vinyl paint resulted in a finish good enough to pass the closest inspection.

If all this isn't enough to convince you of the glories of ammonia, then maybe its value will. At

eighty-nine cents a gallon, you can't beat it.

Bring along a gallon next time you're invited to a local radio club social function. That, along with copies of this article for distribution, is guaranteed to earn you the respect and admiration of your fellow radio restorers

*(Jack Clark, 642 Netherlands Dr., Hermitage, TN 37076. Charles Conte, 7 Parklawn Dr., Bethel, CT 06801.)*

*Jack Clark worked for 10 years as a technician in a well known Swiss company, makers of professional audio electronics, and for 17 years in the electronics field. He now works as an audio consultant in the Nashville music industry.*

*Charles Conte is Public Relations Administrator and an advertising writer for Siemens Audio, Inc. (Bethel, CT) — American headquarters for the Neve series of audio consoles and the AMS digital audio editing and recording systems.*

*Together they are completing a book entitled "Vintage Decorative Radios: Collecting and Restoring Classic and Art Deco Sets from the 30s, 40s and 50s."*

## Duplicating Stenciled or Painted Brand Names and Logos

BY SPENCER J. DOGGETT

We all realize tubes, caps, and basic electrical components are easily obtained. It's the parts that are unique to a particular set that challenge our ingenuity. Although we can purchase a limited offering of decals through suppliers, such as Antique Electronics Supply, located at 6221 S. Maple Ave., Tempe, AZ 85283, there is money to be made by expanding this selection. What about sets with stenciled or painted logos or brand names? A decal certainly would not be suitable for them. I'd like to share a solution I have used.

For example, I was restoring a wooden Aldens radio. Actually, it was a Detrola Model 579 manufactured for Aldens (I assume that Aldens was a department store chain). The word "Aldens" was painted on the front in a stylish type font. The set needed a complete refinish, but for certain, the stripper would remove the brand name.

I had heard of masking off the area and trying to match the new finish to the remaining section of old. I had never tried it, but I doubted my ability to succeed. I'm no artist; therefore, I could never achieve the right effect freehand. I felt the following process might yield a better appearance while taking less time and effort. Indeed it does!

The first step is to make a tracing of the original. Cut a piece of thin paper large enough to cover the name you are attempting to duplicate. Tape it in place, if necessary, over the logo. Hold a pencil at an angle allowing you to rub the side of the lead over the letters. Since the letters are slightly raised from the surface of the radio, you now have a tracing of the original. This will be your guide to reproduce exactly the style of type.

Continue your refinishing to the point where you've applied the first coat of lacquer. Now you're ready to replace that brand name.

Obtain some typewriter correction paper wide enough to cover the rubbing area. I have white, one-inch wide paper which is just what is needed!

Lay the correction paper, white side down, on a clean work surface. You may have to trim your tracing, and then tape it to the correction paper.

Now position this "sandwich" on your radio and once again tape it in position. By carefully following the tracing with a somewhat dull pencil, you will transfer the white correction paper to the radio. Then remove the tracing/correction paper sandwich, and you've duplicated the original.

The final step is to spray a coat of lacquer. This is very important; otherwise the correction paper would be easily scraped off.

I have looked into the availability of other colors, but correction paper is available only in white. Therefore, I am experimenting with Liquid Paper. For those not familiar with it, Liquid Paper is basically the modern replacement for correction paper. You merely brush it over your typing mistakes.

What I have done is brush it on a piece of paper, and then use it as I would correction paper. I have not attempted to spray clear lacquer over it yet, but feel it will work.

Liquid Paper is available in several colors such as pink, goldenrod, off-white and blue. At the moment I am in need of black. My next step is experimenting with tinting the Liquid Paper. The materials discussed are readily available at office supply stores.

The name on the radio used in this example was written in script; therefore, the tracing didn't have to be exact, since there were no perfectly straight lines in any of the characters. Printed characters would require more skill. I also suggest experimenting on a scrap piece of wood to acquire the feel and the confidence.

I hope this may help someone else or even lead to other ideas!

*(Spencer J. Doggett, 61333 North Ridge Trail, Romeo, MI 48065)*

# RADIO ADVENTURES

## “Will The Real Radio Boys Please Stand Up?”

### The Chapman and Breckenridge Radio Boys Stories — Part 2

BY MIKE ADAMS

*Of all the early adventure stories about radio for boys and girls, the most sought after by collectors today are the thirteen Chapman and the ten Breckenridge books. A.R.C.'s September 1991 issue contains Mike Adams' background information on these books and synopses of the Chapman Series, Books 1-4. We continue here with books 5-13 (Editor)*

#### The Alan Chapman Radio Boys Stories (continued)

**5. The Radio Boys Trailing a Voice or Solving a Wireless Mystery, 1922.** This episode begins as the Buck Looker bullies get the

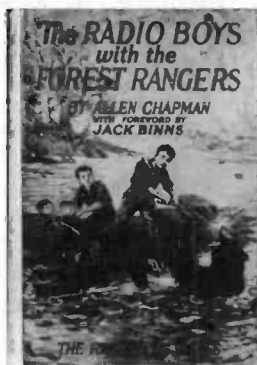

Radio Boys in trouble over a broken window. This minor brouhaha is soon resolved, but just as the boys are enjoying a radio concert, the stuttering voice of Crook Dan Cassey interrupts the broadcast and utters a seemingly meaningless collection of coded words. The cover illustration depicts the boys

listening to those strange emissions from the forest. Then the story begins in earnest. Can bars not hold this fiend?

Enter Forest Ranger Bentley, and a discussion ensues of how radio is used by the Forest Service to transmit news of fires from one station to another. Soon, Radio Inspector Frank Brandon appears, and Cassey's mysterious coded transmissions are connected to a series of automobile robberies. Finally, the boys go into the woods to help the Forest Service look for Criminal Cassey's cars. Of course, in the end, they find the secret transmitter, capture Cassey (for the third time) and get the autos back.

**6. The Radio Boys with the Forest Rangers or The Great Fire on Spruce Mountain, 1923.** Jack Binns talks about sound-on-film and the promise of television in his foreword. The story begins as the boys save Bob's father from the aftermath of an ammonia explosion at

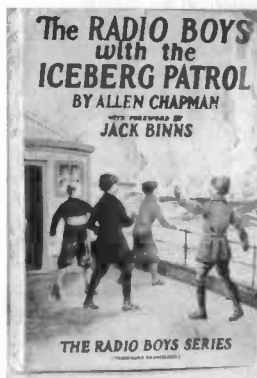

the drugstore. Then, the boys listen to a radio talk by their friend Bentley of the Forest Service, learn more about radio from Dr. Dale, and beat up the same three bullies for the sixth time in the series.

Radio Inspector Brandon and Forester Bentley drop by for several chapters of

discussion on radio. As a result, the boys are invited to spend their summer vacation on Spruce Mountain with the rangers and their radio operators. While there, the boys encounter fires, wild animals, underground caves, and yes, Buck's bullies. In a climactic final fire, the boys actually end up saving Buck from flames and bears, and although surrounded by the hot fire, they manage to raise an antenna and use radio to save everyone. Again.

**7. The Radio Boys with the Iceberg Patrol or Making Safe the Ocean Lanes, 1924.** In his foreword, Binns elaborates on famous sea rescues. The story begins as the boys rescue

Navy Captain Amos Springer from an out-of-control auto. Next, Dr. Dale arranges for the boys to go by ship to Halifax, Nova Scotia, whereupon they collide with a lumber schooner and begin to sink. After fruitless hours of SOS by the ship's wireless operator, everyone gets into lifeboats and waits to be rescued as the big

ship sinks. A Navy ship arrives, and the boys discover that its captain is none other than

Amos Springer.

On board the ship, they hear a radio news broadcast telling of a major fire burning in their hometown of Clintonia. Some icebergs that are in the way are blown up. When a serious illness befalls the ship's radio operator, guess who takes over? Then, the ship hits an iceberg, bears chase the boys, and finally, they hear the news over the ship's radio that their families are safe in Clintonia. All are rescued in the end, thanks to radio.

**8. *The Radio Boys with the Flood Fighters or Saving the City in the Valley, 1925.***

Binns is back with another inspirational message about boys and radio. A new adventure begins with Dr. Dale's auto stalled on the rail-

road tracks just seconds away from being crushed by an oncoming train. The boys save him just in time and are hailed as heroes. Back home, they listen to their friend Larry's bird call show on WEAF; they beat up Buck Looker and his gang again, and save Jimmy from inside their burning high school.

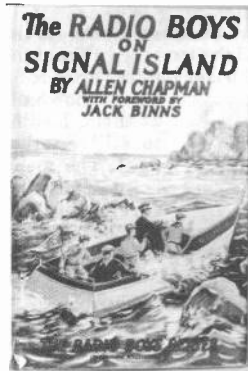

Uncle Lon appears, and since there won't be any school for a while, he invites them to visit him in Bottville in the Horseshoe Valley. Many exciting chapters are devoted to life in the valley where even the Looker gang shows up for its usual fight. But heavy rains come, the dam breaks, and a flood results. You can guess the rest. The Radio Boys use their equipment to transmit to the outside world, thus saving Bottville and even the hapless Looker gang from the flood.

**9. *The Radio Boys on Signal Island or Watching for the Ships of Mystery, 1926.***

Binns expounds on ships, and the story starts as the boys plan a radio booth for a local benefit fair. They talk about UX-120s and UV-199s while watching a circus procession passing through town. Suddenly, the circus wagons tip over, tigers escape, people scatter, and our boys shoot one of the threatening animals seconds before it devours Bully Buck.

At the fair, a Mr. Fordyce arrives from Bottville to congratulate the boys for saving his family in the previous story. As a reward, he asks the boys to accompany him to a property he owns called Signal Island. When they are preparing to leave, ominous messages urge Fordyce to stay away from the island and sell it to a man named Joe Brown.

Once on Signal Island, they explore hidden buildings and caves, and discover strange people coming and going by boat. As it turns out,

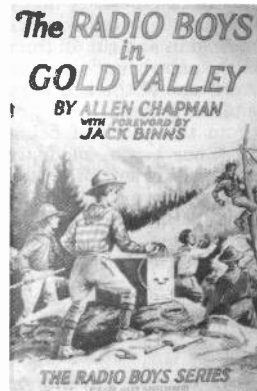

the island is being used by a den of thieves for the storage of contraband. The boys discover the secret, and after two of them get caught, the remaining two use their radios to summon help from the mainland.

Help arrives, the criminals are caught, and the boys discover the hideout. The boys get the money, and they'll probably spend it all on radios.

rate treasure hidden near the boys get the money, and they'll probably spend it all on radios.

**10. *The Radio Boys in Gold Valley or The Mystery of the Deserted Mining Camp, 1927.***

Binns' foreword is about the use of radio in the mining of ore. The four boys plan a trip West with Radio Inspector Brandon to visit an abandoned mine left him by a relative. As luck would have it, the bus on which Brandon is to arrive is struck by a cliff, as the boys watch in horror. But within minutes, they run to the rescue and save the passengers.

Time out to beat up the Looker gang again, and then, the boys are off to Gold Valley and the allegedly dormant mine.

Upon arriving, they realize that obviously they are not wanted. Snakes attack, and gunshots threaten the peace of the valley. They explore the maze of tunnels in the mine, get lost, and even discover a gang of Indians hired by bad guys to keep Harvey from a newly discovered rich vein of gold. They get captured, but they quickly turn the tables and tie up their Indian guards.

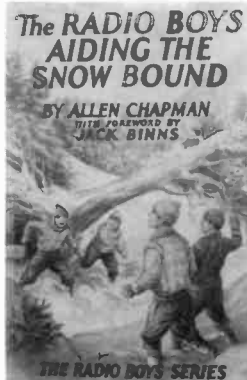

In the end, as the boys are surrounded by many Indians, they discover an electric wire nearby to which they hook up the radios they happen to have with them. They signal for help, and the United States Cavalry arrives in the nick of time. Brandon Harvey is now rich, the bad guys are rounded up, and once again, radio has saved the day.

**11. *The Radio Boys Aiding the Snowbound or Starvation Days at Lumber Run,***

*(Continued on following page)*

(Radio Boys, continued)

1928. Binns' foreword discusses hams. As the Radio Boys ride a sleigh along the banks of the Shagary River, the Looker bullies throw rock-

filled snowballs at them, leading to still another fight. The melee is interrupted by screaming ice skaters falling through thin ice.

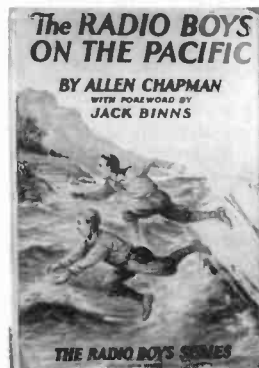

After the usual rescue, there is the typical technical discussion of radio with Dr. Dale. Jimmy announces that his father plans to go to Lumber Run to search for Jason

Pelton, a criminal who owes him two thousand dollars. The rest of the boys decide to go along. Buck and his gang are beaten up again for good measure, and the Radio Boys skate off for Lumber Run.

At the lumber camp, they set up their radios, meet swarthy lumberjack-types, see many fights, run from wolves, tangle with bad guys and are eventually snowed in and cut off from the outside world. As the snowbound workers listen to a radio concert, one of the bad guys burns the storehouse to the ground.

After recovering from the shock of being snowed in without food, our heroes suddenly remember they have a sending set. But, they discover that the bad guys have stolen it. Of course, they soon find it again. Along the way, they kill a bear for a few good meals. A distress call brings airplanes that drop food on the camp, Criminal Pelton is captured, and Jimmy's father's money is returned. From Bob, the last line — "Score once more for radio, the greatest thing in the world!"

12. *The Radio Boys on the Pacific or Shipwrecked on an Unknown Island, 1929.* Binns' introduction is on radio guidance for planes and ships. Another adventure begins with telegrams announcing that the boys have each won first prizes in the International Radio Gazette essay

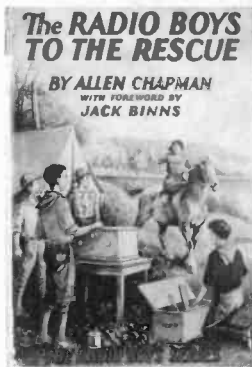

contest. The prize is a trip to Hawaii, so the boys board a train for San Francisco. So does Bully Buck Looker, who also won the contest by stealing the entry of another hapless youth from Clintonia. In San Francisco's Chinatown, the boys encounter Buck, and for the ump-

teenth time, beat him up.

On board the ship Golden West, our boys meet the other contest winners and save one from drowning during a fall overboard. They land in Hawaii, where they visit a friend of Dr. Dale's, the wealthy Commodore Rowland. While they are on the Rowlands' yacht, a storm wrecks the boat. The boys, including Buck, become castaways on a volcanic island. Of all the luck!

For several days, they attempt to signal ships, using clothing as flags. Then, the once sleeping volcano begins to rumble ominously. Just when all seems bleak, a lost yacht with no one aboard drifts into the island's bay. The boys discover it has a broken wireless set, repair it, and send out an SOS — all this just seconds before molten lava from the erupting volcano reaches them. Whew! Saved again!

13. *The Radio Boys to the Rescue or The Search for the Barmore Twins, 1930.* Binns discusses police radio. In this final adventure, the boys are camped at Cedar Lake, talking as usual about radio, when they see what appears to be dinner perched on a nearby fence. They

shoot and three black chickens' owner, Farmer Barmore, runs up shaking his fist. The boys apologize to the old man and meet the farmer's wife and twin boys. Later they save two local electric company executives from a bridge accident, and are rewarded by being given

access to the lines near their camp for power for their transmitters.

Meanwhile, the Barmore twins are kidnapped, the farmer accuses the boys, the boys offer to help find the children, and a ransom note arrives. Luckily, the power lines have been tapped, and daily pleas for help in what now is a statewide dragnet are sent out to New York City stations to relay. Now the whole world knows about the case of the kidnapping of the Barmore twins.

Dr. Dale shows up with a car and joins the search through back country and woods. The boys, along with the population of the entire county, follow clues, finally surround the bad guy, and the twins are saved. These Radio Boys live happily ever after. Really.

(To be continued)

## The Empire of the Air The Men Who Made Radio By Tom Lewis

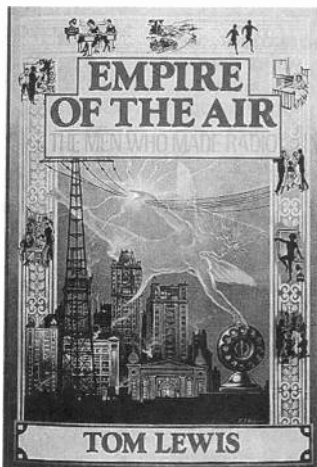

REVIEWED BY ALAN DOUGLAS

Quite simply, it is the best book on radio history ever written. While others have covered the technical background or the development of broadcasting more thoroughly, no one has told the tale as well as Tom Lewis in his *The Empire of the Air: The Men Who Made Radio*. Lewis focuses on three men who played key roles in the development of radio — Lee de Forest, who devised the vacuum tube, Edwin Armstrong, who invented the circuits, and David Sarnoff, who put it all into practice.

Lewis has chosen to relate the story of radio's development through biographical accounts of these three men.

Each has been the subject of biography before, but usually tainted by hero worship, or even self-worship. Lewis' book is the first account where all three men are treated equally.

I can't quarrel with any of the author's opinions. There are a few factual errors of the sort that keeps reviewers in business. For example, on page 50, Lewis speaks of Carborundum having "much the same property as the quartz later used in crystal sets" when he meant *silicon*. On page 52, he

mentions Marconi's interest in developing galena crystal as a detector when, in fact, galena was not popular that early. Also the reference on page 346 to Gene McDonald is inaccurate, since McDonald died in 1958 and was probably not still setting Zenith policy in 1961 (although if anyone could have pulled it off, McDonald was the man).

What more needs to be said? It's an engrossing story that will give you an accurate view of the industry whose products you collect. For the price of a Catalin knob, you can own a copy.

*The Empire of the Air: The Men Who Made Radio* by Tom Lewis is published by Harper-

Collins Publishers. It has 362 pages with an additional 32 pages of photographs. The book is currently printed in hardcover only and is presented in a 9 1/2" x 6 1/2" format. It is priced at \$25 in the U. S. and \$35 in Canada, and is available from HarperCollins Publishers, 10 East 53rd St., New York, NY 10022-5299, from bookstores, and from A.R.C.

(Alan Douglas, PO Box 225, Pocasset, MA 02559)

From a Review by Chris Goodrich in *Publishers Weekly*, June 14, 1991, on *The Empire of the Air: The Men Who Made Radio...*

Lewis calls *Empire of the Air* "a biographical history of radio" and much of it concerns, in Lewis' words, "how large corporations took over these inventions and forgot about the inventors."

...radio is not just a precursor of television...it's a phenomenon with a distinct culture and history of its own.

"Radio was the first national medium, and it created a national unity," Lewis says, citing the 30 million Americans who heard the broadcast of Lindbergh's post-flight reception in Washington, D. C., in 1927.

Lewis set himself the formidable task

of "trying to show how radio changed all our lives, and profoundly," while simultaneously capturing the individuals and the inventions as well.

Lewis' editor, Wendy Wolf, says, "Empire of the Air is an adventure of discovery and a deeply American book because it's full of larger-than-life figures, cutthroat competition, daredevil stunts, stock fraud and the like. Not to mention litigation — Armstrong filed unsuccessful lawsuits against both de Forest and Sarnoff's RCA that would go on for decades and would eventually lead to his suicide..."

**MESSAGE:** Thanks again to the transistor collectors who keep on calling and buying. To those who didn't call last month you missed: (3) TR1s, one red, (2) black, (1) TR63 yellow/red, an Emerson 808, an 849 in violet, a 500H, (3) 888s and many more of equally high collector value, and these were sales, not trades. And then there were the black Hoppy and the white U5A. **FOR SALE:** But, fortunately, I've a large collection of super sets almost all restored, and yes, I still want most of my house back so don't hesitate to call. And that also goes for you wood collectors. I'm still left with a few metals, and some novelty transistor sets as well. The goal is to reduce a collection that exceeded 450 sets to a more manageable 100 or so. For those who own TR1s or would like a copy, I'm selling Xeroxes of the official Regency Tech Data and Service Notes, from 1955, for — \$10 each postpaid. To those who sent for a list, I haven't been able to compile one because things are happening too fast. A phone call is a much better idea. Lastly, thanks to all who called and to those I'll hear from this month and, of course, happy holidays to all. Henry Cohen, 2459 Eighth St., Fort Lee, NJ 07024. (201) 585-0030

**FOR SALE:** General Radio & Television wooden grand piano radio — Best Offer. Scott Hagerman, 392 Ann St., Cary, IL 60013. (708) 639-7745

#### WANTED

##### FOR MY BROADCASTING MUSEUM

Microphones, stands, call letter plates. Tube amplifiers, mixers, compressors, Hi-Fi equipment. Speakers, air-line lights, equalizers. Disk, wire & tape recorders. Blank recording disks. Catalogs, magazines, manuals. 16" transcriptions, turntables, arms, pickups. Early TV cameras & receivers. Elaborate console, deco, plastic, mirror, novelty & wireless radios. Jukeboxes & parts. Acoustic phonographs.

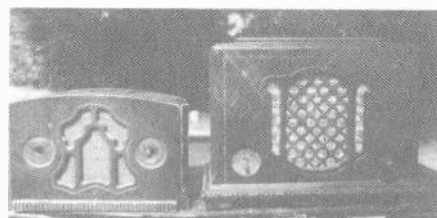

We are looking for all makes of equipment, and especially *Western Electric*, Telefunken, Neufmann and RCA. The museum contains various duplicates and items surplus to our needs, and many of these articles are available for sale or trade. The collection is located in my Victorian seaside inn, The Caffrey House, situated on a bay next to the ocean, in the Southampton resort area of Long Island. A trade of equipment for a stay at the hotel is always encouraged.

Robert Van Dyke, 2 Squires Ave., East Quogue NY 11942  
516-728-9835

## VACUUM TUBE DEALER PRICE LIST Nov. '91

		SOVTEK, USSR			
5U4G	\$4.30 each	12 at \$3.90 each	25 at \$3.50 each		
12AX7WA/7025	4.35	3.75	3.60		
6922 (military 6DJ8)	5.75	5.20	4.75		
EL84/6BQ5	2.60	2.25	1.75		
EL84M/6BQ5WA	5.20	4.50	3.50		
6V6GT	3.90	3.35	2.95		
6L6GC	3.50	2.95	2.60		
5881/6L6WGC	6.75	6.20	5.75		
The 5881 is Russia's selected military 6L6WGC and is regarded as the very best 6L6 type in the world. Eric Clapton recently replaced the Philips/Sylvania 6L6 STR's in the custom Soldano amp which he uses live, with SOVTEK 5881's because of their milky smooth sound. Discriminating musicians thruout the world are retubing with the SOVTEK 5881/6L6WGC.

- Buying "EMPTY" TV cabinets - 16" or smaller

Repairing...

- B&W TV's, 1946 to 1975 and Predicta's.

# CLASSIFIED ADVERTISING POLICY

**ONE FREE 20-WORD AD** for subscribers in each issue; additional words are 15¢ each. See details below. Classified ads must be received (not just postmarked!) by **NOON** on the ad deadline. Late ads are held for the following issue. Please enclose correct payment with all ads. Stamps or cash are OK for small amounts. (Canadian and other foreign advertisers, please see "Payment" on page two for methods.) "Free words" cannot be accumulated from month to month; free words must be requested when ad is submitted.

Please write each ad on a separate sheet of paper, especially when included with other A.R.C. correspondence. Include SUB# with ad. Ads may be sent in advance; but, write each ad on a separate piece of paper and indicate the month (or successive two months) you want the ad to run.

**Please write legibly and use both capital and small letters. Do not use dashes between words.** Some numbers and letters can look alike, for example 1, l and I (the number one, the capital i and the small L.) Write the following characters clearly (especially in model numbers): 1, l and I; 0, O, o, Q and D; r and n; 6, b and G; V, U, u, v and Y; A and R; 5, S and s; 2, Z and z. We try to correct spelling errors, so when using an uncommon word or manufacturer which looks similar to a common word or manufacturer, note it so that we do not "correct" it. Editor's comments are in [brackets].

**Advertising is accepted only for early items related to radio, communication, etc. All items must be described fairly; reproductions, reprints and not-original items must be identified as such. Advertisers agree to respond promptly to inquiries and orders, and to resolve problems promptly if the buyer is not satisfied.**

Publisher reserves the right to edit ads without notification to the advertiser and to reject ads for any reason. Publisher is not responsible for errors due to illegibly written ads or for any other reason. Since club activities receive free advertising on the *Coming Radio Events* page, the free 20 words may not be used for club activity ads. See inside front cover for additional information.

## CLASSIFIED AD DETAILS

### **Deadline: NOON - 10th of the month!**

Classified ads must have a standard heading such as **WANTED, FOR SALE, FOR TRADE, FOR SALE/TRADE, SERVICES, MESSAGE, HELP, AUCTION, MEET**, etc. This heading is the only bold or all-capitalized words allowed in the ad. Capitalize only manufacturer names, model names, etc. Wanted and For Sale ads are mixed together to encourage the reading of all ads, including the Wanted ads. This standard ad format makes scanning the ads easier.

Before writing your ad, please look over the ads in a recent issue of A.R.C., and try to write your ad in the same style. Full name and address is required in all classified ads; we will add it if you forget.

To encourage varied content of the ads, the same classified ad may be run only once per issue and for only two consecutive months. (To run an ad longer, use a boxed classified or display ad.)

### **Classified Ad Rates per Month**

Subscribers:

First 20 words: **FREE\***

15¢ per word for extra words over 20 **plus**

10¢ per word for a shaded ad (count all words including free words).

\* Subscribers may take 20 free words on only one ad each month.

Non-Subscribers:

30¢ per word **plus**

10¢ per word for shaded ad.

Please do not forget to send in the extra 15¢ per word when your classified ad runs over the free 20 words; your payment will be appreciated, and it will help to keep A.R.C. healthy.

## BOXED CLASSIFIED AD DETAILS

### **Deadline: 5th of the month!**

Boxed classified ads can run unchanged for three months or more. No words are free. Ads may be shaded and may include bold and all-capitalized words freely. The ad need not begin with For Sale, etc. Minimum run is 3 months, prepaid.

### **Boxed Classified Ad Rates per Month**

Nonshaded ads:

25¢ per word for all words,\* none free, **plus**

10¢ per word for each bold word **plus**

10¢ per word for each all-caps word.

Shaded Ads (All words are bold at no charge):

35¢ per word for all words\* **plus**

10¢ per word for each all-caps word.

Non-Subscribers:

Add 20¢ per word to above costs.

\*Three words can be bold-all-caps at no extra charge.

## PHOTO & DRAWING DETAILS

**Deadline: 5th of the month for classified and boxed classified ads with drawings or photos!**

Drawings and photos are encouraged as the response to your ad is much larger and the reader knows better what you want or are selling. Send in your drawing or photograph, and A.R.C. will reduce it or enlarge it as needed.

### **Photo and Drawing Rates per Month**

\$8.00 per month for each photo or drawing (if ad is canceled, this amount cannot always be refunded.)

## CHANGES & CANCELSATIONS

Please check your ads carefully before sending them in. Once ads are received, it is not always possible to refund the amount sent, pull the ad or make changes.

## IMPORTANT — COUNTING WORDS — IMPORTANT

The **standard headings: WANTED, FOR SALE**, etc., count as **one word** each time used in an ad. **Name, address** and (one) **telephone number**, count as **6 words**, regardless of length. **Ham call letters** and **business name** can be included in the 6 words and do not count extra. Full name and address is required in all classified ads — it does not cost extra! Each additional word, abbreviation, model number or number group, extra telephone numbers, etc. count as one word. Hyphenated words count as two words.
