Midwest can put any show on the road

Whether you need a 47-foot teleproduction unit, an ENG Van, or something in-between, Midwest has the expertise to put your show on the road.

With over 20 years experience, we have the knowledge required to do the job right. Using a systems approach, we design a unit to meet your specifications. Then we equip it with the best available products from the industry's leading manufacturers.

From our standard models to our custom-designed units, everything we build is engineered to produce high quality results under even the most adverse conditions. And we deliver them on time and on-budget.

Finally, as the largest supplier of video components in the nation, Midwest has a complete inventory of the equipment you need.

If you would like more information on how to get your show on the road with the right mobile unit for you, contact Midwest, toll-free at (800) 543-1584.

BROADCAST ENGINEERING (USPS 338-130) is published monthly by Intertec Publishing Corporation, 9221 Quivira Road, P.O. Box 12901, Overland Park, KS 66212-9981. Postmaster, return form 3579 to P.O. Box 12938 at the above address.

THE COVER this month is adapted from NAB brochures promoting this year's greatest broadcast equipment show: NAB-'84/Las Vegas. The 62nd Annual Convention and International Exposition's theme is "You've Got What It Takes," recognizing that, in an election year, voters have the power to elect candidates who represent their views.

As BE goes to press, the NAB has not completed its brochure cover plans. So, we adapted the initial drawings to produce this cover. The rotating world denotes the convention's worldwide scope that makes it exciting and successful.

NAB-'84/Las Vegas

- April 29-May 2
- Las Vegas Convention Center

NAB CONVENTION GUIDE—Most of this issue is devoted to pre-show coverage of NAB-'84/Las Vegas. Extensive research went into compiling data from manufacturers exhibiting at this year's convention to make our exclusive coverage as detailed and complete as possible. The results, in terms of articles and special sections, can be seen in the contents listing to the left. This special coverage will help attendees plan for the show or make it easy to obtain data on new products for those who cannot make it to Las Vegas this year. In any event, look for BE's extensive wrap-up in our June and July issues.

NEXT MONTH marks BE's 25th anniversary of serving broadcasters around the world. Besides our usual offering of departments and articles, we will review some highlights of this dynamic, changing era of broadcasting.

Comark's "S" Series UHF Television Transmitters

Simply Superior

10kW/30kW/55kW model shown

Integrating high efficiency, reliability and low cost, each model incorporates state-of-the-art technologies to achieve a unique combination of unparalleled features:

- External cavity, full-band, field proven, klystron power amplifiers, combining highest efficiency and compact size.
- Broadband (no tuning), high power, Exciter System, featuring dual channel (redundant) operation as well as Comark's CM-100S Broadcast Modulator with IF S.A.W. filter.
- Space efficient, mechanical and electrical layouts, fully engineered for maximum EMI/RFI isolation and overall operator convenience.
- Fiber optic telemetry for all floating high voltage metering functions, incorporated into a complete, remote control-compatible, latched fault and status display system.
- Clean, fully isolated, high voltage compartments, with double-filtered air cooling and front access. (No exposed high voltage in klystron areas.)

Comark's "S" Series transmitters are available from 10kW through 220kW with advanced system options, including beam current pulsers, motorized RF switching systems, E.D. and ICPM correction systems, and the services of Comark's 24-hour field operations group.

Study predicts 8 million LPTV households by 1990

By 1990, some 8 million TV households will be receiving broadcast service via low power television. Of these households, 75% will receive advertiser-supported service, while the remaining households will subscribe to some form of pay LPTV.

These are the main conclusions of a recent study, "Low Power Television: Will it Take Off by 1990?" The study was prepared by Michael Couzens for the New TV Reporter, a broadcast technology newsletter. Couzens, a former FCC staffer who headed the commission's LPTV inquiry, currently practices law in San Francisco.

The heyday of LPTV construction will be during 1986 and 1987, according to the study. By the end of 1987, some 1370 stations are forecast to begin operations. By 1990, the station count is predicted to reach 2000.

Adequate broadcast spectrum is available to accommodate an average of two stations through the Top 50 markets, and an average of four in the second 50 markets numbered 51-100. The markets from 101-200 can accommodate an average of six new LPTV stations. Station growth is predicted to approach these limits by 1990 in the Top 200 markets, resulting in 750 new stations.

The remainder, or 1250 stations, are expected to start up in smaller communities, outside the Top 200. The new station estimate includes upgrading of approximately 500 conventional TV translator station repeaters.

In its analysis of competitors, the study said that the largest single obstacle to LPTV development by 1990 will be the difficulty of configuring multichannel LPTV sta-

tions under common management. Cable Television (CATV), direct broadcast satellites (DBS) and multipoint distribution service (MDS) all will be offering multichannel services. The study concludes that LPTV will enjoy higher circulation, but lower revenues, than either DBS or MDS by 1990.

Copies of the study are available for \$10 from the New TV Reporter, P.O. Box 421956, San Francisco, CA 94142.

Whitaker to speak at NAB-'84

Jerry Whitaker, BE radio editor, will deliver a technical paper titled "Transient Overvoltages...Their Causes and Cures," during the upcoming NAB Convention to be held April 29-May 2.

His presentation will include a detailed analysis of the problems faced by broadcasters due to power company voltage surges and the damage that can be caused by such electrical disturbances at radio and TV facilities. Special emphasis will be placed on the methods available to broadcasters to protect sensitive transmission and computer-based equipment. To further the industry's understanding of the overvoltage problem, Whitaker will write a chapter on ac voltage power supplies and power conditioning for the soon-to-be-released Seventh NAB Engineering Handbook.

Whitaker also is scheduled to speak at the upcoming Ohio State University Engineering Conference (July 17-19) and will present a special engineering paper titled "Writing for Technical Publications."

LEADER

ACTUAL SIZE

Two Leaders with an important following.

Check the racks of the industry's leaders, and you'll find Leader instruments. At ABC, Sony Broadcast, Reeves, Zenith, HBO, RCA, A.F. Associates, Group W, ATC, Midwest Corporation, and NBC, to name a few... where quality is paramount, Leader has been their choice.

You could pay more for others. But you'll get more from Leader.

For instance, our half-rack LBO-5860A Waveform Monitor is the only one that lets you select

lines 14-21 (fields 1 and 2) from the front panel. And there's an L model that shows you lines 7-21 for coding information, too. Our half-rack LVS-5850B Vectorscope is the perfect mate, with selectable, electronically-generated targets* that can be read from across the room. Electronically-generated targets also provide the highest level of measurement accuracy, even if you misalign the CRT center dot. It also has an internal etched graticule, and gives a VITS display with strobe input.

More than just competitively priced.

The convenience of viewing both vector and waveform displays simultaneously gives you uninterrupted monitoring capability.

Top broadcasters rely on Leader quality. It's backed by a two-year warranty (including CRTs) and factory service depots on both coasts.

Ask for a catalog of our waveform monitors, vectorscopes, signal generators and other instruments; an evaluation unit, and the name of your nearest "Select" Leader distributor.

SUPER PERFORMANCE from

Midwest delivers for TBS

When TBS wanted a second fully-equipped mobile production unit, they chose Midwest Corporation, the company with the reputation for meeting every challenge in the field. From 47 foot teleproduction units to ENG vehicles, Midwest can custom-design a mobile system that insures network quality production in the most difficult locations. For TBS's wide-ranging sports and news coverage, Midwest used its M40 Series to develop the SuperTruck, 44

feet of unparalleled technical and production potential.

Large enough to cover any sports or major news event, it's stocked with state of the art video and audio equipment, from companies like Ikegami, Grass Valley and Ampex. Because only the finest equipment is utilized, everything Midwest builds has an amazing track record for enduring the demanding conditions of on-location shoots. TBS noticed, and moved to Midwest. For more information on how to keep your show on the road, call toll-free, today. (800) 543-1584.

SuperStation WTBS
Cable News Network
TBS Sports

Designed and
Constructed by

SUPER COMPANIES

TBS delivers for you

To catch the action of a play-off game or a major news event, even a SuperStation needs the ability to keep its show on the road. So TBS asked Midwest to design a second mobile production unit that meets three criteria: First, it's large enough to handle any on-location assignment from a major sporting event to a live concert to a presidential visit. Second, with its equipment specifications it produces the finest results in the industry, and finally, it's ready for lease on an as available basis. Midwest's solution is the 44 foot SuperTruck II. When SuperTruck II goes on

the road, it will cover the assignment with:

- Five (5) Ikegami HK-357 Cameras with Fujinon 44:1 Lenses
 - Two (2) Ikegami HL-79 Cameras with Fujinon 17:1 Lenses
 - 24 Input Grass Valley 300/3A Production Switcher
 - Three (3) Ampex VPR-2B One Inch Slo-Mo Tape Machines
 - Abekas Still Store System
 - Solid State Logic Triple Stereo Audio Console
 - Ampex ADO Digital Effects Unit
 - Chyron 4100 Graphics Generator
- With two "SuperTrucks" TBS has increased its ability to generate a wide range of programming from sporting events to documentaries. In addition, TBS can lease one of its units for your

assignment that requires network quality. So for that major assignment in the field, put a SuperTruck on the road for you.

Turner Broadcasting System
Dick Dodson
Manager
1050 Techwood Drive

We've got what it takes

As we head into what appears to be another record-setting convention at NAB-'84/Las Vegas, we sense an unusual air of excitement. In part this may be attributed to the show's first politically oriented theme: "You've Got What It Takes." But that is only part of the picture.

Some careful thought unveils multiple implications behind this year's theme:

- As voters, we have the power to elect candidates who best represent our views on critical issues.
- As broadcasters, we have the most effective communications tool to reach out to the public and encourage them to turn out in record numbers to exercise their voting privilege.
- As broadcasters, we have the communications power to help shape and form public opinion on candidates and issues.
- As broadcasters, we have the most effective communications channels to provide early, rapid reports on election returns and trends.

This final point already is surfacing to cloud the 1984 political arena. Congressional hearings have been held to consider muzzling broadcasters to keep them from projecting election results before the polls are closed nationwide. Rep. Timothy Wirth (D-CO), chairman of the House Subcommittee on Telecommunications, Consumer Protection and Finance, has spearheaded efforts to constrict broadcasters, but so far has not been successful. This problem of projecting election results emerged dramatically in 1980 when the networks predicted that Ronald Reagan would win some three hours ahead of the closing of polls on the West Coast. Compounding the situation, President Jimmy Carter conceded defeat while much of the nation was still voting.

The NAB-'84/Las Vegas convention will help broadcasters begin to perfect their communications and sales tools for riding the tide of politics in this election year. The program is loaded with sessions and panels focusing on what broadcasters can and cannot do in a deregulated environment.

But the convention is just a starting point. NAB plans to provide member stations with how-to kits that detail voter activities across the country, offer suggestions that have worked for other stations, show how to use the campaign as a promotional tool and identify source/location of election-year material.

It is easy to get wrapped up in new equipment at the annual NAB show. But, at NAB-'84, let us not lose sight of our show theme. Indeed, we do have what it takes. So, let us take what we have and put it to maximum use, but with the attitude of service and responsibility that makes broadcasting the greatest communications media on earth.

UHF reassignment proposal for private land mobile use opposed

In comments filed with the FCC, the NAB has opposed a supplemental petition for rulemaking of the Los Angeles County Sheriff's Department to reassign UHF TV Channel 19 for public safety land mobile use and to re-allocate Channels 14-20 in the largest urban markets. NAB has requested that the commission not institute a rulemaking on the sheriff's petition and, instead, consider proposals to meet public safety land mobile needs through new technologies and advanced spectrum management techniques.

NAB said that the lifesaving and emergency communications needs of the LA County Sheriffs would not be well-served because of the high potential for interference caused by lawful UHF TV transmissions. Furthermore, Channel 19 reassignment could create undue interference to UHF TV reception in the Los Angeles area.

The association said that the future expansion of both full-power and low power UHF television would suffer, as would programming diversity, if reallocation of Channels 14-20 in the largest urban markets became a reality. The proposal that UHF television use reallocated channels on a secondary basis is impractical and inconsistent with the Communications Act, NAB said.

The filing also said that changing the existing UHF TV taboos would serve neither the interests of the LA Sheriff's Office nor the public, and that their proposed elimination in favor of encouraging improved receiver technology should be evaluated realistically in the context of the present UHF marketplace.

FCC asked to correct FM translator abuses

Edward O. Fritts, NAB president, has asked the chairman of the FCC, Mark Fowler, to take action to correct FM translator violations. In a letter to Fowler, Fritts cited a resolution passed by NAB's Radio Board of Directors calling for the FCC to rectify a nationwide pattern of translator abuses.

He said several FM translators are violating commission rules that limit program origination to 30 seconds/hour and the agency's policy that restricts the airing of advertising matter only to those translator licensees that are legitimate community groups. He also said there is concern that several translators are receiving programs via microwave and/or satellite feeds—program sources not allowed under existing regulation.

The NAB president asked that the public, translator licensees and current and potential translator applicants be alerted to the commission's requirements and the penalties for violations.

Reliance on support facilities to be determined by NAB survey

The NAB is conducting a mail survey to determine how broadcasters rely on various telecommunications facilities, such as telephone, microwave and satellite systems, to reach the public. All TV stations and more than 2000

A partial 1983 list of broadcast industry leaders who've "captured sound" with Neve:

NBC

CBS

WNEW-TV New York

WCVB Boston

ESPN

Reeves Teletape

KTTV

Radio Quebec

University of Montreal

WKYS-FM

What they've said about Neve:

"Great sound, ease-of-operation, reliability and little or no downtime are just some reasons why we chose Neve."

—*Joe Commare, Director of Remote Engineering, ESPN, Connecticut*

"When our clients walk in and see that we have a Neve, they are very happy."

—*Bob Alexander, VP Engineering, Reeves Teletape, New York City*

Neve

Circle (9) on Reply Card

Capture sound at its purest.

Hold a seashell to your ear and hear nature's pure and natural sound. Compare it to the final sound produced by a Neve. You'll begin to understand why Neve is far and away the most respected name in audio mixing.

The Neve sound is so pure and natural, one might suspect that nature herself had a hand in the design. Perhaps. Not every engineering achievement can be explained away. There are mysteries in nature, just as there are mysteries man-made.

Some suggest that Neve's unique Formant Spectrum Equalizers account for its unparalleled sound by taking into account the psycho-acoustic properties of voice and music while satisfying the critical demands of balance engineers. Others claim it's superior technical performance, novel circuitry, or high quality components.

All agree on one thing: To capture sound at its purest, aspire to Neve.

For further information, call us, or write.

NAB looks at AM stereo
 The status of AM stereo probably will be a hot topic once again at this year's NAB convention. An engineering session devoted to AM stereo has been scheduled for 4:30-6:30 p.m. on Tuesday, May 1. The session will be chaired by Mike Rau of the NAB, and will consist of a panel discussion on the status of AM stereo development and implementation. Panelists will include representatives from the FCC, various receiver and transmitter manufacturers, and attorneys. Proponents of each system will be invited to be present in the audience.

Another engineering topic scheduled for NAB-'84 of interest to AM stations now operating in stereo, or planning to convert to stereo, is scheduled for Saturday, April 28. The paper, titled "Broadbanding Directional Antenna Systems for AM Stereo," will be delivered as part of a radio

engineering session set for Saturday afternoon.

Convention to feature equipment/demonstrations

AM stereo equipment manufacturers will be out in force at the convention again this year. Most companies plan to exhibit working systems on the convention floor, and outside demonstrations are planned by some proponents. Motorola, for one, will show its C-QUAM system in operation using 1984 Buick automobiles equipped with Delco AM stereo receivers.

The convention will see some new entries into the AM stereo equipment manufacturing group, including Time and Frequency Technology, Broadcast Electronics and Delta Electronics. Delta recently received type acceptance from the FCC for its C-QUAM (Motorola) exciter and

modulation monitor.

New developments are expected at the convention in the AM stereo receiver field, which also should be of interest to stations involved in, or planning to convert to, stereo operation. Several receiver manufacturers have said that they plan to begin offering new AM stereo/FM stereo receivers to consumers in the near future. It is expected that these new entries into the AM stereo receiver market will give a substantial push to the move to get stereo AM radios into the hands of the listening public.

Kahn introduces stereo converter

Kahn Consumer Products has announced agreement with several AM stereo broadcasters to purchase and promote its new AM stereo adapter product that will convert any Motorola-only AM stereo car radio to a multimode receiver. The new All Four converter is designed to receive stereo broadcasts from any of the four FCC type-accepted AM stereo systems. Kahn said that the adapter, which will connect to a C-QUAM (Motorola single-mode) automobile receiver in a manner similar to the FM converters of 10-20 years ago, will cost less than \$10 each in large quantities

Now Your Station Can Try An Eventide H949 Harmonizer®

FREE For 30 Days . . . With No Obligation.

• LIMITED TIME OFFER

For some time, we've been telling you why your station should own an Eventide H949 Harmonizer. Hundreds of stations have gotten the message. But if you're still "on the fence" . . . here's the offer you've been waiting for. Order an H949 Harmonizer from an authorized Eventide dealer by May 31, 1984. Try it for thirty days at your station. If you don't agree that the H949 is the most versatile audio production tool you've ever used . . . just send it back to your dealer and tear up the bill.*

• WHY YOU SHOULD TAKE US UP ON THIS OFFER

We're sure that once you get your hands on an Eventide Harmonizer, you'll find it irresistible. The H949 is a complete audio special effects department in a single box. Pitch change capabilities create new voices instantly. You can get variable delays, echo and reverb effects. Double tracking and chorus effects are available. For really way out sounds, there's time reversal and infinite repeat. The H949 is a super flanger, too. And the H949 can do more than one effect at a time. Combinations of the various effects, as well as variable mixes and recirculation of output/input let you create an infinite number of new vocal, musical and sound effects.

• IT'S A TIME COMPRESSION SYSTEM, TOO

Best of all, the H949 is a complete audio time compression system. You get the audio time compression and expansion capabilities of competitive single-purpose units costing well over twice as much. You can even control a VTR, by adding our

economical PTC960 control module.

• BRINGS OUT YOUR STAFF'S CREATIVITY

When your station's H949 trial begins, you'll find that the Eventide Harmonizer brings out the creativity in people from every department at your station. The sales manager will discover an enticing tool for local commercial production. A clever air personality can create a whole roster of new characters. Your station's promotion director will have a field day, creating really distinctive promos, intros and custom jingles. News directors even use the H949 to protect the identities of confidential sources, by altering their voices. And the music director can use the H949 to create custom music mixes, even altering tempos.

• DONT MISS OUT

This thirty day no obligation free trial offer must end on May 31, 1984. So, if you've been reading our ads, and thinking about getting an Eventide H949 for your station, now's the time to act. Contact your Eventide dealer, or call Eventide for more information.

*Offer limited to licensed U.S. radio and television stations, valid upon receipt of purchase order. Unit if returned must be in as-new condition, in original packing. Customer pays shipping. Trial offer limited to one unit per station.

THE TREND CONTINUES . . . CRL IS COVERING AMERICA WITH AM STEREO.

It all started in 1982 with the Delco test at WIRE in Indianapolis. CRL was asked to provide an AM Stereo processor. After months of research and testing and working with our customers on prototype models, CRL AUDIO is now shipping the SMP 900 AM Stereo Matrix Processor. The first production unit was installed at KFI in Los Angeles in September. The results were outstanding. Not only is the stereo sound exceptional, but the MONO signal

has never been better. Other customers, like WSM in Nashville (Home of the Grand Ole Opry), KSD in St. Louis, WSB in Atlanta, CFRB in Canada selected the CRL system . . . along with many others.

Regardless of the type of exciter you use, CRL will improve your signal . . . in mono and stereo. Call **Bob Richards** at **(800) 535-7648** for our two week trial plan.

Satellite update

By John Kinik, satellite correspondent

TV transmission techniques

TV transmission techniques for domestic satellite systems have remained similar over the past few years, because there has been no need to change. The basic FM transmission mode adopted for the Canadian Broadcasting Corporation (CBC) network via the Anik 1 satellite in 1973 was not optimal in terms of delivering the maximum possible performance, but it was adequate. The major growth that has occurred in cable television over the past eight years also has been based on the same transmission parameters, which were derived from practices used for terrestrial microwave links. The basic parameters that have been the satellite industry standard are as follows:

- video baseband: 4.2MHz;
- audio channels: subcarriers centered on 6.8MHz;
- maximum RF deviation: one-half of the available bandwidth less 4.2MHz (for example, 13.8MHz for 36MHz transponder);
- RF deviation by audio subcarrier: 2MHz;
- RF deviation by energy dispersal*: 0.8MHz; and
- RF deviation by video baseband: 13.8MHz - 2.8MHz = 11MHz

These transmission parameters are extremely conservative regarding RF bandwidth occupancy because the model assumes a direct addition of all contributors to RF carrier deviation. Thus, the RF carrier deviation due to the video baseband has been limited by this assumption, which in turn limits the video signal-to-noise (S/N) ratio performance. A more realistic model would consider the video and audio contributors to RF deviation to be non-coherent, allowing a greater

video deviation (higher video level) and an overall link improvement of approximately 2dB in S/N. In fact, this has been demonstrated, in effect, over the years as signal originators have found that a larger number of audio subcarriers could be added to the composite video baseband without the degree of excess RF deviation that would be expected from the conservative transmission model. Even though this is true, the standard FM transmission method ultimately is limited by three factors:

- Audio subcarriers use up bandwidth, decrease video carrier-to-noise (C/N) and S/N, and are subject to color subcarrier interference problems.
- Video synchronizing signal is a waste of transmission capacity.
- The signals are susceptible to unauthorized reception.

Two major economic requirements in today's satellite broadcasting marketplace are changing the situation. One requirement is to protect pay TV signals from unauthorized reception by digital scrambling, and the other is to optimize transmission parameters to provide DBS-type services. Home Box Office (HBO) has announced plans to scramble its signals, and hardware to achieve this scrambling recently has been demonstrated. The technique used encodes the video and audio information digitally and also eliminates the need for transmitting the video synchronizing signal. Besides providing signal security, the technique promises to help C-Band and medium power Ku-Band satellite systems squeeze the maximum performance from their downlinks for the new DBS market.

A combination of optimized transmission parameters and digital signal processing at the receiver (to filter out C/N threshold effects) could provide an opportunity for C-Band DBS systems with antennas in the 4- to 6-foot diameter range, and could provide additional rain fade margin for medium power Ku-Band DBS systems. One such Ku-Band system already is in operation in the eastern United States (United Satellite Communications)

and HBO also is considering DBS delivery via C-Band satellites similar to Galaxy or medium power Ku-Band satellites.

FM transmission will remain an attractive technique for delivery systems in which signal protection and/or downlink optimization are not critical. This will be true for the majority of satellite TV signals in which the inherent cost-effectiveness of FM and the need to adhere to standard receiver technology are more important. In those cases, optimized video deviation may be used to maximize video S/N performance and to minimize interference from adjacent satellites, which will become a more significant problem as C-Band satellites are spaced 2° apart. One type of application in which optimized FM transmission will be used is broadcast-type video conferencing.

Recently, a number of companies have used 1-way TV transmissions (with voice return hookups) to conduct meetings with geographically scattered branch offices, instead of bringing representatives to the head office or a central location. A significant cost saving can be realized, and the 1-way mode is effective for such applications, particularly if no need exists to protect the programming from competitors. In fact, the technique is so popular that one major hotel chain is planning to provide such meeting services as part of its regular package to attract more business customers. Because large projection screens are used, optimization of video S/N is mandatory; the low definition 525-line NTSC video signal needs all the help it can get.

Various enhanced video transmission techniques are being developed to improve image definition on large screens and, in some cases, this will involve greater bandwidth requirements. New medium power Ku-Band satellites will offer transponder bandwidths ranging from 43-72MHz, and new hybrid satellites (C-Band and Ku-Band) will provide some 72MHz C-Band transponders. This also will create opportunities to configure net-

POWER SYSTEM STATUS

118-AS Audio Synchronizer (Above) No more lip sync problems! Tek's new 118-AS provides a practical solution to the audio-to-video delay caused by four-field memory video synchronizers. The 118-AS features wide dynamic range, low distortion and automatic and manual delay correction.

1980 Automatic Video Measurement Set (Top center) Tek's Answer System permits continuous, unattended monitoring of all your incoming and outgoing video feeds. It generates complete reports automatically, alerts you when measurements exceed specified limits, and can be programmed to meet your changing needs.

Tek's newest product for television: — new measurement capabilities detailed on the following page. Take a look!

PICTURE OF YOUR SIGNAL WITH TEKTRONIX!

Behind the sets, the programming, the glamor of television, success still depends on signal quality.

2445 Portable Oscilloscope TV System (Left)
Tek's state-of-the-art 150 MHz, 4-channel portable scope now offers a TV option with backporch clamp, display and readout of any line or field. Also available: a fully-programmable GPIB option.

No one gives you better tools for measuring and maintaining video signal quality—quickly, consistently, confidently—than Tektronix.

For more than 30 years, Tektronix technology has stayed a step ahead to help you solve problems in color television: Whether you're broadcasting live feeds from a bike race in northern California... or sending signals via satellite to thousands of television stations around the world—our products are helping you get a clearer picture of the video signal.

Tek instruments give you broad test and measurement capabilities. They are accurate, easy to operate, and compatible with other broadcast equipment. Above all, Tektronix television products continue to meet the broadcast industry's needs. Take it from us: no one watches television closer than Tektronix.

494/494P Spectrum Analyzer (Above) An unprecedented value! Counter frequency accuracy baseband through microwave coverage and unique HELP mode to guide

less experienced users. Store up to nine displays and ten set-ups in non-volatile memory. Portable and rugged, the 494 is backed by a three-year warranty!

THE NEW TEKTRONIX 1750: HEADS OFF PROBLEMS YOU DIDN'T KNOW YOU HAD...UNTIL IT WAS TOO LATE!

Our new 1750 signal monitor gives you a unique, dynamic display of SCH phase relationships.

You can see at a glance if a video signal is properly SCH phased... or just as easily, compare two signals for color frame matching.

Hit-or-miss SCH phasing may have been tolerated in the past—but now it's costing you time and money every day.

The Tektronix 1750 can help you regain control. By maintaining consistent SCH phase... or by seeing potential problems *before* a glitch occurs, you'll avoid the frustration of multiple passes and enjoy getting it right the first time. Saving time saves you money and makes the best use of your valuable resources.

SCH phase, of course, isn't the only parameter you need to keep on track, and SCH display is only part of the 1750's comprehensive signal monitoring capabilities. At the push of a button it also displays vector mode... or waveform mode, enhanced by digital line selection through the vertical interval... or R-Y/sweep mode for easy interpretation of differential phase distortions.

Whether used for monitoring video in production and editing

Correct SCH phase relationship is clearly displayed on the 1750 when dot on the calibration circle is aligned with the vector on the $-x$ axis.

Dot placement on the $+x$ axis indicates an error in the color frame matching of two signals.

This 17-degree offset, indicating a 17-degree SCH timing error, would be impossible to perceive on an ordinary waveform monitor display.

environments, or for making fast and accurate measurements during equipment maintenance, the 1750 Series is a new benchmark for comprehensive performance in both NTSC (1750) and PAL (1751) standards.

A compact 5.25 inch package, mechanically interchangeable with many other "half-rack" packages, allows

easy installation in new or existing facilities.

If you see the advantages of comprehensive signal monitoring, you'll like what you see in the 1750.

NAB-'84/Las Vegas

By the BE staff

Broadcasters are getting ready to flood Las Vegas for the industry's most prestigious convention: NAB-'84/Las Vegas, the 62nd Annual Convention and International Exposition. Exhibitors from around the world are feverishly working on booth displays and special surprises to make this year's show better than ever, with many companies taking additional booth space because the convention center has more space available.

This year's theme for the convention is "You've Got What It Takes," a theme to encourage broadcasters to use their persuasive power to get voters to turn

out this election year.

In our opening article, "Engineering Conference of NAB-'84/Las Vegas: Bigger Than Ever," the NAB staff lays out the welcome mat and provides a glimpse of some of the planned activities. This is followed up with BE's comprehensive exhibit coverage for NAB-'84.

Our coverage includes:

- a profile of one of last year's exceptional exhibitors;
- a complete listing of exhibitors, alphabetically, with established and new products listed by model number and name and description;

- a comprehensive product directory that lists product categories and exhibitors showing those products; and
- late exhibitor data received just before press time.

Details of the NAB-'84/Las Vegas show are still being released as BE goes to press. An updated map and exhibitor data will be distributed at the show to help you further. The final program will be available upon registration, but our pre-NAB coverage provides a broad outline of what is being planned for you at this year's exciting convention.

Our NAB pre-show coverage...

Engineering Conference of NAB-'84/Las Vegas: Bigger than ever By Ed Williams, staff engineer, NAB, Washington, DC	26
NAB exhibit profile: Sony Broadcast	42
Exhibit roundup	46
Convention exhibitor guide	200
Product directory	218

- April 29-May 2
- The Convention Center Las Vegas, NV
- Most comprehensive exhibit for broadcast equipment
- More than 300,000 square feet of exhibit space
- Distinguished Service Award to Elton H. Rule, ABC
- Engineering Award to Otis Freeman, Tribune Broadcasting
- Major addresses by James McKinney and Mark Fowler, FCC
- Entertainment by Paul Anka

Exhibit hours:

- 9 a.m.-6 p.m. Sunday, Monday and Tuesday
- 9 a.m.-2 p.m. Wednesday
A special feature again this year: "free" time for managers and engineers to visit exhibits without missing technical sessions
- Radio: Monday afternoon
- TV: Tuesday afternoon

Registration hours:

- 8 a.m.-5 p.m. Sunday, Monday
- 9 a.m.-5 p.m. Tuesday
- 9 a.m.-noon Wednesday

"Panasonic Recam™ made our

On Saturday mornings, children all over America are being entertained by a unique new CBS-TV series, "Benji, Zax and the Alien Prince." What makes this show unique is more than a lovable dog. It's the fact that this Mulberry Square Productions project is the first network series

entirely shot and edited on ½-inch tape. And the system they selected was Panasonic Recam.

One of the reasons Joe Camp selected Recam is its incredible YIQ M-Format picture quality. Another reason is its portability. It makes changing scenes and locations fast

and easy. And that's important on a tight production schedule.

What's more, this "Benji" production utilizes Recam's remarkable ½-inch off-line editing system, after which, each show is transferred to 1-inch for television broadcast.

Recam was also selected by ABC

new Benji TV series possible."

Joe Camp, *Creator of Benji.*

Sports to record their momentous ascent of Mt. Everest for "The American Sportsman." And by the producers of the epic science-fiction film "Dune" to record "The Making of Dune" for TV broadcast in 1984.

You can see "Benji, Zax and the Alien Prince" on Saturday mornings.

But you can see Recam right now. Just call your nearest Panasonic regional office:

Engineering Conference of NAB-'84/Las Vegas: Bigger than ever

By Ed Williams, staff engineer, National Association of Broadcasters, Washington, DC

This year's NAB Engineering Conference begins on Saturday, April 28, with a full day of radio and TV production and engineering sessions. That's right—Saturday (the day before the main event begins). This is the perfect time for a distraction-free day of technical presentations and demonstrations. Plan to arrive Friday night, April 27 (a time, by the way, preferred by the hotels and airlines). Convention registration begins at 9 a.m. Saturday. Engineering sessions start at 11 a.m. and continue until 5 p.m., with a break for lunch.

Many station technicians and broadcast engineers have commented that the 1½ days allocated for technical sessions during past NAB conferences have not been adequate to cover the expanding range of technical expertise demanded of station engineers. The new Saturday sessions add one more full day to the conference at a time convenient to most registrants. This addition to the convention should be relatively easy to arrange with hotels and airlines, and should be economical compared to the cost of the entire convention. Added without cost to your schedule are engineering workshops beginning at 7:30 p.m. on Tuesday.

The Saturday program features two concurrent sessions. For radio, there will be a production engineering session followed by radio engineering presentations. For television, the morning session will be devoted to implementing multichannel sound for television, followed by production engineering topics in the afternoon.

TV multichannel sound will be a hot topic at the convention this year, as evidenced by the displays of stereo sound TV receivers at the spring Con-

Planned Engineering Conference sessions/events

sumer Electronics Show, the expression of interest by program producers and the FCC's publicly announced interest in avoiding an AM stereo situation. Also the Broadcast TV Systems Committee (BTSC) of the EIA has voted unanimously to recommend the adoption of a single transmission and noise reduction system as a broadcast standard. The Saturday session will present a series of papers and demonstrations on techniques for producing stereo and the conversion of TV plants and transmitters to the BTSC multichannel system. The Monday session, "Multichannel TV Sound—The System," will present papers on the new equipment and how it was developed and tested.

The Saturday session on radio production engineering will feature presentations on the difficult problems faced by radio stations in producing digital, stereo, talk and sports programming on a local level. Following this session will be a series of papers on important radio engineering topics, including multistation FM antenna sites, AM grounding systems and transient overvoltage protection.

After the Saturday engineering sessions, a good dinner (and maybe a show), Sunday morning can be devoted to the exhibits, followed by the formal opening of NAB's 62nd Annual Convention and International Exposition at 2:30 p.m.

Monday's sessions

Monday morning features the AM/FM allocations session with reports on a new omnibus FM docket affecting nearly all FM stations, and a wrap-up of changes in the AM band as a result of recent agreements between the United States, Canada and Mex-

In the world of audio production, tension is a killer. Draining creative energy and making tight deadlines impossible. If you're still trying to do today's job with yesterday's technology we've just solved one of your headaches. Our prescription is a dose of our deuce, the TASCAM 42.

Everything you've considered to be a must is there, and a whole lot more. Balanced and unbalanced, with individual connector to interface with broadcast automation equipment and SMPTE control, the 42 fits in anywhere.

To more precisely control tape tension, and yours, our rugged transport is built with a full computer control on all three motors. Our autolocator function with Return-to-zero and Search-to-cue doesn't just start putting on the brakes when it hits the mark, it stops on the dime.

You also get a positive/negative real time counter and a precision splicing block mounted just below the plug-in fixed mount head assembly, where it belongs. That translates to faster, more accurate editing, and the peace of mind that comes with it.

To learn more about the hottest half-track in the under \$2,500 class see your TASCAM dealer or write TASCAM Production Products, 7733 Telegraph Road, Montebello, CA 90640, (213) 726-0303.

HOW TO RELIEVE TENSION IN THE CONTROL ROOM.

TASCAM
TEAC Production Products

ico. This will be followed by a session titled, "Radio Subcarriers," with presentations on the possible paging, data and load management uses of subcarriers. FM transmitter performance requirements also will be discussed.

The Monday morning TV sessions are devoted to new technology, satellite systems and UHF transmitter efficiency.

The session, "Television—New Technology," features reports on the development of a new video cart machine, the state-of-the-art in video recording, solid-state imaging devices and other topics of general interest to TV personnel.

Substantial new developments in satellite technology will be reported in the TV satellite systems session, along with new information on 2° spacing, interference suppression, the torus antenna and Ku-Band network distribution.

A full special session on UHF efficiency will feature reports on the multiple-depressed-collector and other improved-efficiency klystrons and transmitters. Advanced UHF receiver design also will be examined.

Monday afternoon is free for radio engineers to tour the exhibits with their managers to inspect the latest in broadcast technology, consult equipment manufacturers, purchase hardware (and software) and renew acquaintances with old friends. Be sure to plan your tours to the exhibit area carefully, using maps and lists to avoid wasting time in finding the booths you plan to visit. Because virtually everything a station needs is shown in the exhibit halls, the convention provides the perfect opportunity to implement technical plans by purchasing or examining facilities slated for later purchase.

The Monday afternoon TV session is devoted to a detailed description of the EIA/BTSC-approved (and possibly approved by the FCC as well by the convention) multichannel TV sound system. This session, with the one Saturday on implementing the BTSC system, will give TV broadcast engineers the complete story on the new stereo transmission method.

Monday afternoon's two special sessions focus on non-ionization radiation and broadcast auxiliary systems. Although the EPA will not be releasing its proposed guidelines for radiation limits until sometime during the summer, the session on radiation limits is important to stations that want to be up-to-date on sources of reliable and accurate information on the topic.

Broadcast auxiliary systems are the life line for stations using STL links, RPU, ENG and other important auxiliary services. The session on these systems will feature reports on the state of the broadcast auxiliary bands, new frequency assignments and methods for improving auxiliary band spectrum efficiency.

Engineering Award to Freeman

Otis S. Freeman, director of engineering, Tribune Broadcasting Company, and senior vice president, engineering, WPIX, New York, will receive the 1984 Engineering Achievement Award. The award will be presented at the Engineering Conference Luncheon on May 1.

Freeman is credited with leading the move to erect the transmitting tower on top of the World Trade Center to improve reception in New York. Also, he developed the gen-lock, which allows TV stations to incorporate signals from a remote location.

After World War II, Freeman worked at the Dumont Laboratories on experimental TV station W2XWV (now WNEW-TV) and, as assistant chief engineer, helped design and build WPIX. He became chief engineer in 1953 and has served on the station's board of directors since 1965. Before being named to his present position, he was WPIX's engineering vice president.

Freeman is president of the TV Broadcasters All-Industry Committee, which is composed of the 10 New York City TV stations; a member of the Society of Broadcast Engineers' board of directors; a member of the Institute of Electrical and Electronics Engineers; and a member of the Society of Motion Picture and Television Engineers.

He received his electrical engineering degree from New York University.

But that's not all for Monday, because at 6:30 p.m., the NAB-sponsored Sixth Annual Ham Radio Operators Reception gets under way with refreshments, door prizes and special guests. More than 600 persons attended this event last year.

Tuesday's sessions

On Tuesday morning, sessions are scheduled titled, "Radio New Technology" and "Advanced TV Systems." Radio engineers will find particularly interesting the presentations on AM improvement methods, optimization of directional patterns, enhanced FM stereo coverage, amplitude-companed sideband transmission (ACSB), and use of microprocessors in transmitters to improve performance.

TV engineers will be treated to a full session on domestic and foreign advanced TV system developments. These are important presentations that foretell the ways in which television will evolve over the next decade.

After the Tuesday morning radio and TV technical sessions comes the engineering luncheon, during which the NAB Engineering Achievement Award will be presented to Otis S. Freeman, director of engineering, Tribune Broadcasting Company, and senior vice president, engineering, WPIX, New York. The featured speaker for this gathering will be James McKinney, chief of the FCC's Mass Media Bureau.

On Tuesday afternoon, TV engineers will be given time off to attend the exhibits with their managers and examine the latest equipment developments.

In the meantime, radio engineers can attend the session on satellite and digital technology, which is followed by a roundtable discussion on AM stereo. Although most radio stations have a satellite receiver, station engineers will appreciate presentations on network distribution via digital satellite systems, and basic satellite technology.

The state of AM stereo remains uncertain, with stations and receiver manufacturers cautiously approaching the engineering aspects until more is known about multisystem receivers or trends toward a single system. This problem is further complicated by the concern of AM stations that subcarriers for data or load management may be incompatible with AM stereo, and skywave interference from other stereo AM stations using different systems may cause receiver malfunctions. The session will address these and other issues in a lively roundtable discussion with, among others, the FCC, equipment manufacturers, lawyers and NAB staff members.

Interference to broadcast reception is the topic of a special Tuesday afternoon session that will feature reports on major interference problems faced by broadcasters. This is a growing

Five alarm hotel fire, 400 guests,
three competitors and one news editor
who eats cigars for breakfast.

Don't trust it to ordinary video tape.

Get it fast.
Get it right.
Get it done.

The pressure in this business
is extraordinary.

Which is why Fuji gives you
professional video tape that can
take anything you can throw at it.

Consider the latest advance in Fuji technology: the $\frac{3}{4}$ inch H521BR U-matic video cassette. It gives you the absolute minimum number of dropouts possible—less than 4 per minute. Its video and color S/N ratio are boosted up to +2dB over the outstanding specs of our H521.

Superior back-coating technology and precision-engineering ensure that Fuji stands up to all the punishment dished out in the editing room. In fact, stop-motion capabilities increase to over 180 minutes. And Fuji's smoother, denser BERIDOX coating makes sure your tape heads suffer less abrasion than ever before.

To find out more about the new $\frac{3}{4}$ inch H521BR and the other extraordinary video tapes we make, all you have to do is a very ordinary thing.

Just call Fuji.

FUJI.

Nobody gives you better
performance.

The difference is what you don't hear

- Each inner conductor has 40 strands of small diameter (.00315") copper wire that provide maximum flexibility and avoid breakage.
- "Star-Quad" configuration with 4 inner conductors provides a substantial improvement in rejection of EMI.
- Polyethylene insulation is a better dielectric than rubber insulation, thereby reducing capacitive coupling for improved high frequency response.
- Cotton filler acts as strain relief and also reduces handling noise by preventing changes in stray capacitance.
- Very high density, braided shield blocks most static and other noise.
- Tough yet very flexible jacket can be unpacked from extreme cold and used immediately. The brittle point is -56°F (-49°C).

Available with a satin finish in 10 attractive colors to aid channel identification and / or to complement visual appearance. Fits standard XLR connectors.

You don't hear the fluorescent lights, motors, SCR dimmers, static, buzz, hum and handling noise with Canare L-4E6S. This shielded professional microphone cable is immune to electro magnetic noise due to its unique Star-Quad configuration. Compared to the leading 2-conductor microphone cable, Canare L-4E6S offers 10 times more rejection of the worst source of EMI...impulse noise from SCR dimmers. This cable blocks the noise, but not the program. Its low series resistance and low capacitance give L-4E6S extended frequency response, in mic runs of over 300 feet the 3 dB downpoint is at 50 kHz.

problem, and radio and TV engineers should keep abreast of the subject.

Activities on Tuesday will conclude with an evening series of workshops with experts on various subjects. The idea is to permit station engineers and technicians to work directly with the experts and personnel from other stations to solve problems and discuss certain issues. The workshops begin at 7:30 p.m. Be sure to check them out before making other evening plans.

Wednesday's activities

Wednesday morning brings the session on spectrum management for

engineers, just before the FCC commissioners' forum. This year the main topic of the forum will be technical deregulation, current FCC technical rule enforcement policy and a description of the capabilities of the FCC monitoring van. There also will be a panel of FCC engineers on hand to answer questions from the audience. Sometime during the conference, the FCC monitoring van will be open for inspection and staff members will be available to explain its operation.

So that is it for the 1984 NAB Engineering Conference. No engineer should miss this convention. [:-?-)]]]]

Our painstaking vacuum and coil-winding technology increases efficiency and eliminates acoustical "buzz."

OUR SCIENTISTS HAD TO OPERATE IN A VACUUM TO GIVE YOU A NEW QUALITY OF SOUND.

The quality of any sound system begins at its source. Precision in the power supply is vital to capturing and maintaining the fullness and subtlety of amplified sound. The need for that exactness is why we insist on operating in a vacuum rather than depending on outside sources.

A vacuum tank, to be precise. An environment in which our transformer is created with an air expulsion process. Where air pockets are purged from multi-layers of the transformer's high grade core laminations, and the core made airtight with a special impregnating sealant.

This process gives us impeccable control of transformer function and quality. Which gives you the assurance of the most efficient transfer of power possible, and an end to the acoustical "buzz" that so often fights sound purity.

To a lot of manufacturers the lowly transformer is far down on the list of priorities. For us, every element in the sound system relies on the exacting performance of every other element, and must be painstakingly attended to.

Whether you're driving your studio monitors in a demanding final production mix with our 6000 Series amplifiers, or making critical adjustments to signal quality with our peak or RMS limiter/compressors, you'll find our audio science giving outstanding clarity to your work. To find out which system is designed to meet your needs, contact your authorized JBL/UREI professional products dealer today.

Automatic, continuous, reliable broadcasting. Introducing the Panasonic® MVP-100.

Now broadcast automation takes a giant leap forward with the introduction of the MVP-100. To start with, it incorporates the YIQ 1/2-inch M-Format. And that means picture quality that not only surpasses 3/4-inch and 2-inch, but actually rivals 1-inch tape. All with the reliability and economy of 1/2-inch, M-Format recording.

But the Panasonic MVP-100 will do more than make your programming look better; it will also make broadcasting easy. The reasons: its

automatically threaded, computer-controlled tape transport systems. The MVP-100 lets you schedule in advance and automatically air program length material, news spots, editorials, commercials, station IDs and promos. All with time-code accuracy. It all adds up to totally reliable automation of your station's broadcast day. The MVP-100's spot player and recorder will even make those unfortunate moments of "dead air" disappear since protection copies are easily dubbed

and are programmed to take over the moment broadcast continuity has been interrupted.

Still, with all the MVP-100 has to offer, you can put it to work at a surprisingly affordable price. Audition the Panasonic MVP-100. Once you do, don't be surprised if you end up carting your present video cart machine away.

For more information on what the MVP-100 can do for your station, call the Panasonic New Technology Products Group at (201) 348-7471.

BROADCAST[®] ENGINEERING

M-Vision[™]

The Complete Recording
and Playback System

M-VISION[™]

Panasonic
Broadcast Systems

Toshihiko Yamashita
President
Matsushita Electrical
Industrial
Company Ltd.

"From a modest beginning in 1918, with an investment of

\$50 in an electrical socket, the Matsushita Electrical Industrial Company Ltd., has grown into a giant, worldwide organization. We now have more than 125,000 employees in 35 countries worldwide and manufacture more than 14,000 different kinds of products. In all, we have 46 manufacturing companies spread throughout the world, backed up by 34 sales companies. The result was a gross business last year that exceeded \$16 billion. This ranks us among the major companies of the world.

"Currently, nearly 67% of our sales are derived from consumer products. But, within the next decade, I expect that percentage to drop to about 50%, as we place greater emphasis on the professional and business markets – areas that include semiconductors, robotics, personal computers, word processors, copiers and office automation equipment. We'll continue our dominance in the consumer products that have made us famous, of course, but we'll use our unique manufacturing and R&D capabilities to penetrate key new growth markets."

With a bold new change in organization and a dedicated focus on broadcast video, Panasonic Industrial Company suddenly has emerged as a major contender in the broadcast marketplace.

Recently, under a new management structure, complete with strengthened marketing and field engineering/service forces, Panasonic's image in the broadcast video market has undergone a rapid metamorphosis. This new Panasonic marketing approach is matched with products that meet today's professional market needs, with a substantial investment in R&D to create new products as the market evolves. Thus, Panasonic Industrial Company became a major force to be reckoned with, a supplier of M Format component video equipment that meets today's market needs as well as the future's.

In the eyes of many teleproduction and broadcast professionals, this moment at Panasonic has been a long time coming. Now that it has arrived, the market is quickly responding to the realignment of priorities at Panasonic Industrial Company.

Background and growth

The parent company behind the Panasonic operations is the prestigious Matsushita Electric Industrial Company Ltd. (MEI) of Osaka, Japan.

MEI now produces more than 14,000 different kinds of products; employs more than 125,000 people worldwide; and has 46 manufacturing plants and 34 sales companies.

The sales from this giant, complex operation amount to more than \$16

billion annually, of which about 66% of the products are for consumer markets with products bearing the names of Panasonic, Quasar, Technics and National. With worldwide sales steadily growing, MEI's net income for 1983 exceeded \$774 million, up more than 16% from 1982.

Because it operates on a global basis, MEI has had to develop strengths to compete in the worldwide economic environment. This has meant local and international attention to R&D.

R&D: The lifeblood

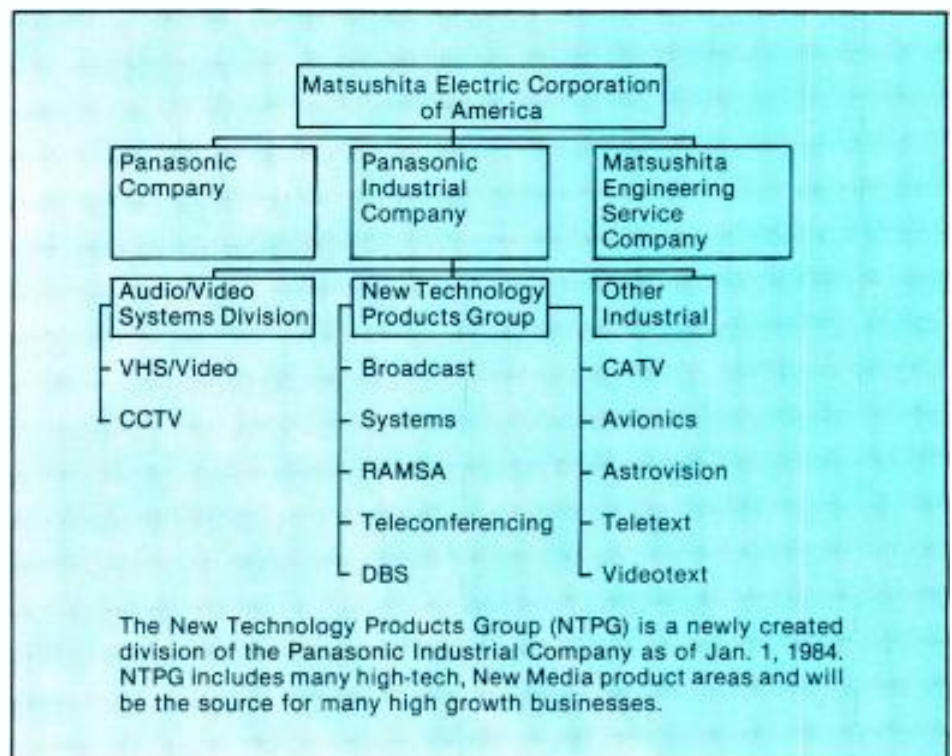

The only certainty in the electronics industry is constant and rapid progress – in technology, products and product facilities.

For a company to survive in this fast-moving industry, it must move equally fast in adapting its products to new electronics technology that is constantly emerging. But Matsushita Electric has done much more than simply keep pace. It has set the pace with the RECAM system, and new products derived thereof, such as the MVP-100 videotape cart machine.

MECA – A growing force in America

MEI activities were launched on the North American continent in 1953 with the opening of a New York office. The success of this venture led to the founding of Matsushita Electric Corporation of America (MECA) in 1959 – the same year that Alaska and Hawaii were admitted to statehood.

Even in its early years, MECA's growth was steady and impressive. In 1961 the name Panasonic was selected

as a brand name, followed in 1974 by the acquisition of Quasar and adoption of the Technics brand name. In 1975 MECA moved into its present headquarters in Secaucus, NJ, and the stage was set for an accelerated growth and expansion in sales and staff.

In the United States alone, in the past 25 years, MECA has grown from a 3-man sales force to an organization of impressive statistics: more than 7000 employees and a network of six sales companies, seven manufacturing operations and one service and engineering company. Sales from this complex operation in 1983 exceeded \$2.8 billion, with 20% of the North American sales coming from Western Hemisphere manufacturing plants.

The results include products with high performance and a strong image: a corporation that is eminently successful in its operations; and a productivity that is enviable.

In anticipating future growth, MEI is now shifting more effort to other markets—robotics, communications, office equipment and broadcast video.

By putting emphasis on these markets, without decreasing its attention to the consumer markets, MEI expects to increase sales in these growth markets up to 50% of its sales within the next decade. This is an ambitious undertaking, but none of the visions at MEI have been small.

Broadcast video

Broadcast video equipment is particularly attractive to Panasonic in its North American market, and it is the Panasonic name that will blaze the trail. The products that are spearheading this market penetration are the RECAM 1/2-inch camera/recorder system and the MVP-100 Multifunction Video Player.

The roots for these products go deep, but they burst into public view with dramatic impact at the 1981 NAB Convention in Las Vegas. Panasonic not only introduced its combined camera/recorder system, the RECAM, but it also introduced studio recorder/players and an edit controller—the complete package

Keiichi Takeoka
President
Matsushita Electric
Corporation of
America (MECA)

"In just 25 years, MECA has grown from a 3-man operation

importing and selling portable radios out of a small office in New York City to one of America's leading electronics companies. Today, MECA has more than 7000 employees and annual sales of \$2.8 billion.

"We are known in the United States largely by our Panasonic, Quasar and Technics products. But MECA produces and markets a wide variety of goods, ranging from electronic components to industrial robots. In all, we comprise 14 organizations in North America, including six sales firms, seven manufacturing operations and one service and engineering company.

"Through these companies, MECA is striving to become an organization contributing to American society by being deeply rooted in this country."

RECAM: The complete 1/2-inch M Format camera/VTR system

RECAM was developed as a professional studio system as well as for ENG/EFP production. As such, it heralds a new era of quality, lightness, portability and compatibility into professional video.

At right are shown the major components of the system: the camera, attachable VTR, edit controller and studio VTRs. However, besides introducing a new standard of excellence in equipment design with RECAM, Panasonic also introduced a new level of compatibility. Thus, the RECAM camera and VTR can be used as separate building blocks, with interfaces that allow the camera to function with any recorder and the recorder with any camera.

The AK-1020 Gen-Lock Adapter, when connected to the camera in place of the VTR, allows the AK-100 camera to be used with any conventional VTR. Alternately, the AU-S100 NTSC Adapter interfaces the AU-100 recorder to any conventional NTSC camera.

The new AK-30 camera and AU-220 portable field recorder add significant features to 2-piece field production and newsgathering. Especially valuable is color playback in the field.

Keeping all its customers in mind, Panasonic designed RECAM to be selected as a complete package or to be phased in as needed. Thus, although RECAM is revolutionary in terms of technology and performance, it can be considered evolutionary in terms of adaptability into a customer's facility.

The RECAM B-100 system comprises the in-camera VTR with AK-100 camera/AU-100 recorder; the AU-300 studio VTR; and the AU-A30 edit controller.

The MVP-100: A revolutionary multicassette player system

The Panasonic MVP-100 M-Vision Player is a Multifunction Video Player that takes full advantage of the high quality video and unique features offered by the M Format technology. It is designed to provide the features and flexibility needed by many broadcast, teleproduction, cable, industrial and educational facilities. With the MVP-100, TV programming now enters a new era of ease-of-operation, reliability and long playtimes. And quality need not be sacrificed, from the point of picture origination, through post-production editing, right to the final playback. Distribution and exchange of program material is enhanced by the use of lower-cost, smaller, and lighter standard VHS cassettes, using M-Vision Component Video Recording.

Much of today's news, sports, commercials, documentaries and entertainment shows are taped on-site using 3/4-inch tape format, with reluctant tolerance of video signal quality degradation. When better quality is demanded, higher cost, size and weight are the accompanying penalties in the use of 1-inch tape recorders. The response to the needs of the TV industry for lower-cost, better quality is the Panasonic M-Vision 1/2-inch tape format.

Most of the income revenue of the

TV station is derived from the playback of short segment commercials through a cart or reel player. End users well understand the expense, limitations and problems encountered in using 1-inch and 3/4-inch tape technology in these applications.

The MVP-100 plays *all* of the TV station's programming needs, short and long—automatically, economically, accurately, reliably and in high broadcast quality.

The MVP-100, with its innovative improvements, offers an attractive solution to these drawbacks of earlier equipment. In fact, for its intended video applications, users may come to refer to it as the *Most Valuable Player*. The basic model can be supplied with 4 to 24 transport decks. However, it can be arranged initially with fewer decks and provisions for future expansion.

The manual controller is capable of directing up to 24 transports into 24 random-access sequences. The computer controller adds memory in depth using 128K RAM for all-day programming. Information exchange from the traffic department is by floppy disc, IBM language compatible. An RS-422 port is supplied for communication from station automation devices. Log verification data is supplied besides the built-in printer. Users will be surprised at the forethought given to look-ahead error checking and correction, diagnostics and alarm systems. Extensive video and audio switching, redundant dual channel outputs, including dual signal

processing and TBCs, make the MVP-100 a most reliable player. Instead of merely previewing a sequence, a spot reel can be instantly recorded in either of the two record decks supplied. Then the operator can double roll the sequence and a spot reel, or he can double roll two spot reels.

Combined with the RECAM system, the MVP-100 makes it possible to have an all-1/2-inch videotape operation in broadcasting or production. Furthermore, the customer has a full choice in satisfying his equipment needs. He can select a totally new installation or phase in M Format components as he retires other equipment.

MVP-100 features

1. Up to 24 separate transport decks and threading mechanisms for reliable, redundant playback.
2. Simple, fast automatic threading for error-free operation.
3. Decks are removable from MVP-100 for easy maintenance.
4. Two decks may be used to record the entire sequence of a station break for built-in spot reel playback.
5. Each cassette will hold 20 minutes of spot segments. T180 cassettes record 30-minute programs to provide play of all programming needs.

needed for professionals in broadcasting and post-production, covering both ENG and EFP. The M Format recording technique was developed for more purposes than just ambulance chasing for the news. M Format provides high quality, economical, convenient information storage and retrieval for all TV operations.

With the introduction of the 1/2-inch, M Format camera/recorder systems, 1981 represented a landmark in broadcast video. No longer would professionals be encumbered with the heavier, cable-linked cameras and recorders that were the industry workhorses from the early 1970s. Thus, with a combined camera/recorder system, producers of news and commercial programs now have a new freedom in recording that they never before have seen.

Interface units are included in the line so that the RECAM components can stand alone—the camera can be used with any recorder and the recorder with any camera, regardless of the tape size and format or the manufacturer. Thus, the professional who wants to phase-in a RECAM camera or recorder with other product lines can do so easily.

This makes it possible for professionals to plan ahead for a total component RECAM system in the future without having to scrap NTSC 3/4-inch equipment that is still providing good service: a concept as evolutionary as you, the customer, want to make it.

More recently, a second chapter in the RECAM was written. At the 1983 NAB Convention, Panasonic introduced its revolutionary videotape cartridge machine, the MVP-100. This product also established a landmark, the first major contribution to video insert and program playback since quad decks were introduced in 1969 and 1971.

As with RECAM, the MVP-100 is the next logical equipment addition to the Panasonic line, providing a specialized tool with high quality and versatility for broadcasters and production facilities. Based on the 1/2-inch M Format, the MVP-100 provides the quality that is needed when integrating multiple video sources for broadcasting. At the same time, the MVP-100 achieves play times compatible with the broadcast environment.

Now, for the first time in TV history, the MVP-100 makes it possible for TV broadcasters to consider seriously total

automation for on-air broadcasts. But even if automation is not a major consideration, the MVP-100 adds a new dimension of freedom in inserting commercials, IDs, promos, news, editorials and public service messages into broadcast programs. Multiple spots of various lengths may be recorded on one cassette. A complete directory is indexed at the front, addresses are searched and spot-cued by time code. The directory consists of information stored in the time code track during the first few seconds of the tape. It contains the following listed contents that will be read into the computer memory, displayed on the menu monitor, and used to fast-forward the tape to park at the correct address for the spot designated by previously entered data:

1. Title and spot number
2. Spot duration
3. House ID
4. Agency ID
5. Directory ID
6. Time code address in
7. Time code address out
8. Number of times aired
9. Agency play priority
10. First air date/remove date
11. User-inserted information

6. Many short spots may be recorded on one cassette. A complete menu is indexed at the front. Addresses are searched and spot cued by time code for significant cost reductions.
7. Standard, low cost cassettes are readily available with a reliability record of billions in use throughout the world.
8. Control of machines is by serial data access RS-422 compatible for MC automation.
9. Total editing system control with the ability to actuate playback and record, audio and video cueing, and on-line start sequences on any transport, in any combination.
10. Off-line sequencer for all-day spot reel assembly random access, multisource library for reliable, cost-saving programming.
11. Highly flexible systems switching configurations, monitoring and playback. 24 video, stereo audio and time code sources to A and B outputs.
12. 76"x46"x30", approximately 8 transports
76"x71"x30", approximately 16 transports
76"x96"x30", approximately 24 transports

Program-length material also is handled by the MVP-100 with the introduction of the 30-minute cassette. Thus, the entire station's playback may be channeled through the MVP-100, reliably, automatically, inexpensively and in top quality.

The crowning achievement in the MVP-100 concept may well be that all these advances are provided at a modest price, well within the budgets of most facilities. Thus, the MVP-100 provides a quantum jump forward in technology and capabilities at a price considerably less than that of traditional, more restrictive equipment.

Panasonic's new structure

The development of the RECAM and MVP-100, specifically for broadcasters and video producers, has firmly launched Panasonic into a new market — broadcast video. To properly serve this market, Panasonic created its New Technology Products Group in January 1984. Under the direction of Koichi Sadashige, Vice President, this group is responsible for spearheading Panasonic's push into a wide range of new market areas that will use the company's high technology capabilities

to serve growth markets of the future. One of these markets is the broadcast video field, with Morris Washington as National Sales Manager and Nick Hudak as Systems Development and Marketing Manager.

But marketing is not the only concern of Panasonic. It must serve its customers, and that has meant the establishment of an appropriate engineering and service network to support sales. Today this network divides the United States into five regions. A regional sales engineer is available to service Panasonic Broadcast customers from their nearest field office, in addition to the national RECAM service center in Secaucus, NJ.

M Format: The turning point

As previously noted, the broadcast market has anxiously awaited Panasonic's attention to its field. The M Format has served as the turning point for Panasonic, allowing it to focus its full attention and expertise on a totally new market, competing with a new wave of high technology products for broadcast video.

We often read that 1/2-inch tape is nearly as good as 1-inch tape, but

Koichi Sadashige
Vice President
New Technologies
Group
Panasonic Industrial
Company

"The formation of our New Technology

Products Group in January 1984 brings a new dimension to Panasonic's marketing thrust: using new technologies to spearhead growth in new areas of professional, broadcast, industrial and government markets.

"Already the move has shown remarkable success. But we're not being awed by the growth, nor are we being careless in our strategies. The wisdom here is in maintaining a careful balance in new media market growth and still providing the backup customer service support that has been the mainstay of Panasonic's success."

Ken Kurahashi
President
Panasonic Industrial
Company (PIC)

"The Panasonic organization goes back to 1959, but the

Panasonic Industrial Company (PIC) was not formed until 1982. The formation of PIC was necessary to allow us to better focus attention on growing business in the areas of office automation, factory automation and new media communications products, as well as other professional and industrial markets."

M-Vision: The complete broadcast system, origination through editing to playback

The science of videotape recording has recently been augmented by a new technique—the technique of recording the luminance signal and the color signals on separate tracks. Known as *dual-track recording*, this technique eases considerably the problems of luminance-to-chrominance crosstalk, and removes many of the picture artifacts, such as moire and color misregistration, which have plagued the recording art since the earliest days of color recording.

It is the purpose here to offer a brief preliminary explanation of the system, to aid the reader in understanding the formal specifications of M Format recording.

A single chrominance channel is generated, but instead of summing this chrominance signal with luminance to produce a composite color signal, both the chrominance and the luminance are sent separately to the recorder, where each of the two signals is recorded on its own private track. No subcarrier is used. Instead, the I and Q components are converted directly to FM signals occupying differing frequency bands, and these two FM signals are recorded on the color track.

This system offers the two fundamental advantages of freedom from color-framing considerations when editing, and freedom from the hue errors which arise when a subcarrier signal on tape is time-modulated by head-to-tape speed variations. There is no contamination of video caused by subcarrier crosstalk, nor any video impairment caused by heterodyne or "color under" by-products.

Track format

The video-track format of this dual-track system is shown in Figure 1.

As the figure shows, two parallel video tracks are written diagonally across the 1/2-inch-wide tape, at an angle of about 4.7°. The uppermost track of the pair is 2 1/2 mils wide, and contains the color signal. The tracks are about 4.1 inches long, and are written by a pair of heads spaced about 5 1/2 mils apart, with the luminance head lagging its associated color head by about an eighth of an inch.

In addition, there are four longitudinal tracks: two audio, one time code and one control track. The 30 mil Audio 1 and Audio 2 tracks are spaced apart by a 30 mil guard band, while the Time Code (Audio 3) track, at 15 mils width, is only 15 mils from the 20 mil control track at the bottom edge of the tape. These longitudinal tracks are recorded at approximately 8ips.

Figure 1

Figure 2

Figure 3

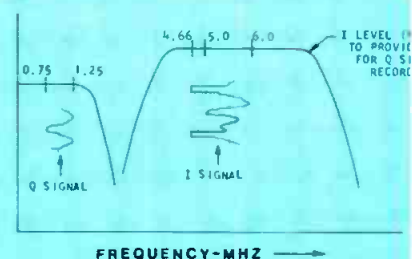

Figure 4

A top view of the drum (Figure 2) shows that there are two such pairs of luminance/color heads. Each head pair writes one field; each drum revolution writes a frame. Each pair is preceded by a flying erase head, mounted at 90° to the writing pair. These two flying erase heads enable the system to generate clean insert edits.

Highlights of MECA and the RECAM Development

1959—Matsushita Electric Corporation of America (MECA) established.

1961—*Panasonic* selected as a brand name.

1975—Headquarters moved from NYC Pan Am building to facilities in Secaucus, NJ.

1976—MECA established Panasonic Company. The Quasar Electronics Company was purchased.

1978—RECAM and other systems inventions listed. Applied for patents.

1979—Design goals established. Matsushita began hardware development.

1980—Matsushita working model of FM/FM chroma recording system, M Format, tested and accepted. Compression/expansion chroma system rejected.
—RECAM prototype shown to NHK.

1981—RECAM working system consisting of recording cameras, studio recorder/players and an edit controller shown at NAB and Montreux conventions.
—First systems delivered.

1982—NAB and SMPTE, *complete* M Format system products available.
—Format documents for interchangeability specifications submitted to SMPTE.
—Panasonic Industrial Company formed. Broadcast Group expanded.

1983—MVP-100 Multifunction Video Playback cart machine prototype shown at NAB. Pre-production model shown at SMPTE. Customers on back order.
—Transmission over microwave for ENG.
—Interfaces available to all manufacturers' edit controllers.
—30-minute tape for 30-minute programming demonstrated at SMPTE convention.

1984—New Technology Products Group formed Jan. 1, 1984, of which Panasonic Broadcast Products is included.
—Production model of MVP-100 multifunction video player shown at NAB. Immediate deliveries available.
—Matsushita Electric Corporation of America celebrates its 25th anniversary of progress and dedication.

Nick Hudak
Manager, Systems
Development and
Marketing
New Technologies
Group
Panasonic Industrial
Company

"When we introduced the MVP-100

multifunction video player to the industry at the 1983 NAB Convention, we took a bold, dramatic step forward. Not since 1969 and 1971, when quad cart decks were introduced, has the industry seen such a dramatic approach to handling commercial inserts. Based on the new M-Vision 1/2-inch tape technology, the MVP-100 represents a quantum leap forward in airing combinations of inserts and programs, putting broadcasters for the first time on the brink of complete TV station automation.

"And, all this is possible while retaining the high professional quality available in the emerging 1/2-inch tape and systems technology. Furthermore, the MVP-100 system can be custom tailored, with a variety of multiple decks available to meet the differing needs of many customers. Thus, the features and benefits of the MVP-100 provide distinct advantages to everyone in the TV operation: management, traffic, sales, engineering, news, financial and programming."

M systems

The luminance signal, which is either derived directly from the camera or encoded from an NTSC signal, is converted to an FM signal which deviates from 4.3MHz to 5.9MHz, as shown in Figure 3.

The I and Q signals, derived in the same way as the luminance signal, are converted to a 5.0MHz-to-6.0MHz-deviation FM signal (for I) and a .75-to-1.25MHz-deviation FM signal (for Q). These FM signals are summed, and the sum is recorded on the color track, as indicated in Figure 4.

The Q signal is linearly recorded, with the I signal itself providing the high-frequency bias needed for such near recording.

In effect, there are three independent M channels in the system, with I and Q separated from each other by frequency division multiplexing, and Y in turn separated from I and Q by the use of a completely separate track. This 3-channel arrangement yields an optimum match between the characteristics an NTSC recording system must have and the recording capabilities of 1/2-inch videotape. Sync is recorded in the Y and I signals to provide an automatic timing reference between the two tracks.

Dual-track characteristics

The format described briefly above offers the following advantages:

1. Editing without concern for color framing.
2. Freedom from color misregistration resulting from envelope delay.
3. Freedom from differential phase and gain distortions.
4. Greatly improved color signal-to-noise ratio for both fine-grain and streaky noise.
5. Freedom from subcarrier-caused moire.
6. Low tape cost, through use of VHS standard cassettes.
7. High quality multigeneration dubbing and editing.
8. High quality dual-channel audio, plus time code, due to 8ips speed.
9. Simple, uncomplicated signal processing. No TBC needed to dub or cut-edit.
10. Simple, uncomplicated mechanical handling of tape, for greater tape life.

Specifications

The full specifications of the M Format are described in a paper that details the track dimensions, transport geometry and signal processing for this recording method. We invite you to read these specifications for a detailed understanding of how the system achieves its performance. For a copy of these specifications, write Panasonic or call 201-348-7471.

"When we unveiled the RECAM

combination video camera/recorder system at the 1981 NAB Convention, we rocked the industry. Not only did we show a highly advanced camera/recorder unit, we showed a complete system with studio recorder/players and an edit controller.

"You need a total system to meet the needs of broadcasters and producers. With RECAM we go a step further and let end users make individual choices. Although they can use the RECAM camera and recorder as a unique pair, they may use them separately interfaced to any existing system – the camera to any recorder and vice versa. The beauty of this design is that the customer can buy a complete system or individual components as needed. He can start with a complete new system or phase in specific components. He's in command because he can adapt new equipment into his operating system without obsoleting existing equipment that he wants to keep in service."

without reference to a specific reason. The above noise comparison measurements of multigeneration recordings illustrate the differences. In the amplitude-modulated noise of luminance and chrominance measurements, 1/2-inch tape holds up well compared to 1-inch. However, the phase-modulated noise figures, or FM noise, of 1/2-inch is far superior to 1-inch performance.

Why is that? Because of that elusive, difficult-to-measure, variable picture impairment called *moire*. *Moire* is caused by the heterodyne or beat frequencies caused by contamination of video signals wherever subcarrier is present. The herringbone suit or striped shirt illustrate this video contamination. Picture elements are generated into the video where none existed before. Consider the video impairment of several generations of NTSC recording.

In M Format 1/2-inch tape, there is no subcarrier recorded on tape. Therefore, there is no *moire* or spurious signal problem to impair true video fidelity, generation after generation. One-inch tape, because it is a composite video recording with subcarrier present to cross-talk into video, suffers from *moire* and spurious signal impairment. Therefore, 1-inch tape is nearly as good as 1/2-inch M Format tape.

The response in the marketplace has been gratifying. Acceptance of both the RECAM and the MVP-100 is growing rapidly, especially with products readily available to meet the increasing demands. Not since the introduction of the portable cameras in the early 1970s has the industry demonstrated such enthusiasm for a new line of video products.

Industry acceptance is illustrated by

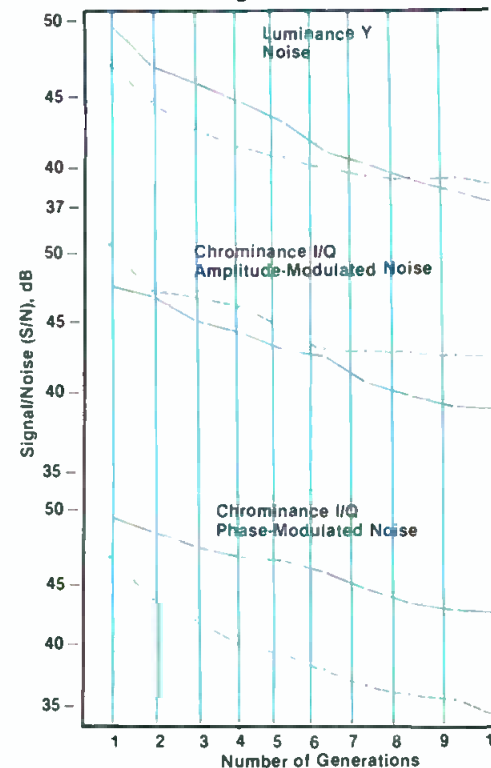

Tape." Ichiro Arimura and Koichi Sadashige. Matsushita Paper No. 22. 17th Annual SMPTE Television Conference, Feb. 4-5, 1983, San Francisco, CA.

Catch Defective Caps And Coils All Other Testers Miss—With The Triple Patented “Z Meter”.

**ORDER NOW
And Receive A
Universal Accessory
Pouch (\$24.95 Value)
FREE**

\$895

The Most Reliable Cap & Coil Tester On The Market: The “Z Meter” is a totally unique, Triple Patented Capacitor/Inductor Analyzer that will locate defective caps, coils and special devices that all other testers miss—we guarantee it!

The Only Complete Capacitor Analyzer On The Market: Extensive testing by our engineering staff has shown that value only testers and bridges will assist you in finding a mere 25% of all the defective capacitors you come across. Only the “Z Meter” checks all 3 critical capacitor parameters: value, leakage (at full rated voltage up to 600 V) and most importantly, dielectric absorption (patented), to catch the other 3 out of 4 bad caps that all the rest miss.

Patented, 100% Reliable Inductor Testing: The “Z Meter” measures true inductance (patented), not inductive reactance as bridges do.

This means the “Z Meter” measurements are not related to frequency, assuring you of dependable, accurate and consistent readings—every time!

Exclusive Ringing Test: But value testing alone is not enough to thoroughly analyze inductors; that’s why we have incorporated our patented ringing test into the “Z Meter”. With just the push of a button, the ringing test (which is related to the ‘Q’ of the coil) will give you proof positive if even just 1 winding is shorted. A value only tester won’t show a difference.

Test SCRs, TRIACs And More: The “Z Meter’s” unique design and exclusive features allow you even more testing versatility—including:

- Checking SCRs, TRIACs, and high voltage diodes—at rated voltage.
- Pinpointing distance to a short or open in a transmission line or coaxial cable.

- Testing for high potential dielectric leakage (Hi Pot Testing).

Money Back Guarantee
Try a “Z Meter” for 30 days. If you don’t agree that it’s the most reliable cap/coil tester on the market you may return it for a full refund including freight both ways.

Call Today: Get the entire LC53 “Z Meter” story. Write or call toll-free today and ask for our free eight page color brochure and see why thousands of Sencore customers say they catch ‘em all with their “Z Meter”.

NAB exhibit profile: Sony Broadcast

The NAB convention, the world's leading show for broadcasters, provides an opportunity for exhibitors to do the unusual and unexpected. Within the framework of NAB restrictions on what exhibitors can and cannot do, companies devote a tremendous amount of time, talent and money to create exceptionally attractive and meaningful displays for the convention.

Each year we include in our NAB pre-show coverage an inside look at an outstanding exhibit from the previous year's convention. Last year we were impressed with the Sony display, and we asked the company to detail its efforts to develop the exhibit.

Although many people were amazed by its size and futuristic design, nearly everyone agreed that Sony Broadcast Products Company's 1983 NAB exhibit was a success. Titled, "Bringing Vision to an Industry," the 14,000-square-foot space center became a hot attraction for NAB's 30,000 visitors. The combination of innovative design and high technology was the key to the company's capability for displaying a wide range of products to a large number of attendees.

An insight into the planning, preparation and logistics involved in putting together an exhibit of such magnitude has been provided by Irwin Ungerleider, manager, shows and exhibits, Sony Broadcast Products Company, in this interview.

Q: In many ways, Sony Broadcast's 1983 NAB exhibit broke tradition. How was the initial concept formed? What were your goals?

A: In previous shows, we had employed the traditional fortress design, in which walls are set up around the perimeter of a booth area and all the hardware and demonstrations are held inside. For 1983, because we were working with the largest area that had ever been sold at NAB, management's idea was to create an open-air environment strikingly dif-

The huge Sony exhibit facility included a demonstration of high definition television (HDTV). The company's HDTV studio camera can be seen at the right.

THE SONY 1" T

SIGNAL WEAR	JOGGING DURABILITY	STILL TEST	GUIDE WEAR-OFF	RF OUTPUT	VIS S/

TAPE MEASURE.

THE VIDEOTAPE THAT ACHIEVES THE OPTIMUM BALANCE BETWEEN THESE 16 VITAL ELEMENTS.

What good is a recording tape that gives you a terrific video signal-to-noise ratio but falls short in signal wear? Or one that excels in video sensitivity but is dismal in dropouts? Or, for that matter, one that reduces head wear but sticks and slips in the jogging mode?

The answers bear the simplicity of common sense: no good. Which is why Sony created the yardstick for all 1" videotape: the Sony V-16.

The V-16 is based on the assumption that the only good tape is a perfectly consistent tape. And to achieve this consistency Sony has developed exclusive tape production techniques, created special binding materials, lubricating oils and additives. And then each batch of V-16 is submitted to over 16 quality-control checks where meticulous attention is paid to every detail from dropouts to print-throughs.

Any Sony tape that isn't perfectly balanced in picture quality, runnability, durability and audio will never find its way into your editing suite.

So if you're looking for the best overall performance in a 1" tape, look for the one that's superior **SONY** in 16 points, not just some of them: V-16 from Sony. Industrial Tape Division

Exhibitor roundup

This special section alphabetically lists the NAB-'84 exhibitors and previews products to be displayed in Las Vegas. The parenthetical number following the exhibitor name is the booth site in the convention hall. If a company did not have a booth at press time, an asterisk (*) appears in place of the number. A dagger (†) indicates that a company's NAB form was not returned by press time. In such cases, data was generated from the NAB listing and/or BE files.

Below each exhibitor listing is a number by which the Reader Service Card may be used to provide additional

exhibitor data. Also, if the exhibitor is advertising in this issue, the location of the ad is indicated for additional details about the company's NAB-'84 exhibit products.

Although this section will be a valuable aid in planning convention activities, caution should be exercised. The listing here is comprehensive as of press time, but changes are still occurring in exhibitor sign-ups, products being shown and booth assignments. Check the final program at NAB-'84 to make your final plans. Look for the BE wrap-up of this convention in our June and July issues.

The ingredients of Varian's new S-Tube bring super-high efficiency.

Varian's new "S-Tube" klystron operates at super-high efficiency—translating to significant savings in electric utility costs for UHF-TV broadcasters. The new S-Series, 5-cavity klystron provides significant improvement in operating efficiency through a unique configuration of tuning and cavity loading.

Efficiency-tuned for 10% improvement.

The new S-Series klystrons are tuned to maximize efficiency while maintaining useful gain. The Q of the second cavity is reduced by external loading and the output cavity is optimized by use of a variable visual coupler. These tubes will provide efficiency improvement of up to 10 percentage points over current high efficiency types when used under equivalent conditions.

Interchangeable with Varian H-tubes.

The most practical aspect of the new S-Series tubes is the complete interchangeability with the Varian VA-953H-Series tubes, providing broadcasters maximum flexibility in planning new equipment acquisitions.

More information on Varian's new S-Tube is available from Varian Microwave Tube Division, or any Electron Device Group worldwide sales organization.

The unequalled equalizer.

Not all equalizers are created equal. You know that from experience. So do we. Our years of parametric design experience let us build so much performance and versatility into our 672A (mono) and 674A (stereo) graphic/parametric equalizers that *Modern Recording & Music* (October, 1981) described the 674A as "... the most powerful equalizing tool for pro audio work that I have yet to come across".

They clearly appreciated the versatility and functionality of eight bands of EQ with fully adjustable center frequency and bandwidth, plus the availability of 12dB/octave highpass and lowpass filters to limit signal bandwidth or to serve as a full electronic crossover.

No matter what your application—production, program shaping, room tuning, reinforcement work, or clean-up chores—you can count on Orban's heavy-duty professional construction and equally professional documentation and service. Find out why the Orban 672A/674A's are truly the "un-equalled equalizers".

ADC's NEW SELF-NORMALLING COAX JACK:

Delivered faster for less without leaving performance behind

In the past, many engineers felt that a 12-plus week wait was the price one paid for a reliable coax jack.

But the self-normalizing, multi-purpose ADC SJ2000 has changed all that. SJ2000 gives superior performance without the delays. Or the expense.

The SJ2000 has the features you want: nickel or gold plating, terminating or non-terminating versions, and you can purchase it individually or loaded in panels.

What the SJ2000 doesn't have is a high price tag. That's because ADC

manufactures most of its own parts, employing the latest CAD/CAM technology.

Our high volume manufacturing capabilities also let us deliver from stock, either from our distributors or Minneapolis order center.

Check our claims yourself. **To order, just call**

(612) 893-3010.

Custom orders are welcome.

ADC's New Humbucker only \$95.00 list

It will reduce up to 60dB of ground induced hum. Plus the price is less and the delivery fast. Call (612) 893-3010 for details.

ADC/Magnetic Controls Co.
4900 W. 78th St.
Minneapolis, MN 55435

**Be sure to visit us in Booth 1320 at the NAB Show,
April 29 – May 2 in Las Vegas.**

Stop using bad tape. Reduce tape dropouts. Improve video quality.

The RTI Videotape Evaluator/Cleaner finds control track and other physical damage that makes a tape useless. It can even print out exact damage locations. You'll know instantly which tapes shouldn't be used.

It eliminates up to 70% of temporary tape dropouts. Good tapes will look even better.

It also eliminates frequent head clogging by reducing tape-borne dirt and loose oxide.

Protect your tapes, your recorders and your reputation.

This machine will pay for itself in tape costs alone. For detailed information, write or call us toll free at 800/323-7520.*

Models available for U-Matic, VHS or Beta.

"WHY?"

WHY DO SEVEN MAJOR PRODUCTION HOUSES IN NEW YORK CITY CHOOSE FUJINON LENSES?

According to John Martin of Modern Telecommunications, Inc., MTI chose **FUJINON** P17 x 16.5ESM lenses because...*"the lens delivers the highest performance we've seen in any lens today...smooth zoom and focus...sharp, clear pictures...FUJINON service before and after sales is unmatched by the competition. We deal with most of the major advertising agencies as well as all the networks and they are quite critical of the end product. We need great pictures to satisfy our customers. So, to get the best pictures, we chose the best lenses...FUJINON."*

To know how good your camera tube is, look it straight in the eye.

Saticon II

Plumbicon™

For better color pictures, compare the color of the photoconductors.

This simple comparison demonstrates why you'll get better broadcast quality with Saticon* II. The dark red faceplate of Saticon II shows its selenium-arsenic-tellurium photoconductor. The lighter reddish-yellow faceplate of the Plumbicon™ tube reveals its lead-oxide photoconductor.

This color difference indicates significant Saticon II advantages. Because the darker photoconductor absorbs more light, picture quality is enhanced. On the other hand, Plumbicon's lighter color photoconductor reflects more light at all visible wavelengths, as shown in the chart below.

Because Saticon II reflects less light, you benefit with reduced flare and less blooming. Low-light colors maintain their integrity and accuracy.

As a consequence, Saticon II does a remarkably good job of handling high contrast scenes in uncontrolled lighting conditions because of its low flare. What's more, Saticon II's photoconductor is a glassy, amorphous, high resistivity film. Its structure serves to ensure high resolution, high sensitivity and unmatched depth of modulation.

For more information on Saticon II, contact your RCA distributor or write to RCA Camera Tube Marketing, New Holland Avenue, Lancaster, PA 17603. Or call (800) 233-0155. In Penna., phone (717) 397-7661. Overseas, contact RCA Brussels, Belgium. Sao Paulo, Brazil. Sunbury-on-Thames, Middlesex, England. Paris, France. Munich, W. Germany. Hong Kong. Mexico 16 DF, Mexico.

THE LEGEND LIVES

LJ-12 AUDIO TAPE RECORDER/REPRODUCER

1. Complete microprocessor control of all transport and audio functions resulting in unprecedented operational stability and flexibility.
2. SMPTE compatible with versatile accessory connector containing all vital signals, including RS-232 serial input and output.
3. Digital adjustment and storage of audio parameters eliminates trimpots and allows front-panel adjustment and multiple alignment settings in non-volatile memory (no batteries).
4. Most accurate vari-speed ever offered, with precise digital control of capstan speed from 3 to 36, IPS, and real-time vari-speed correction of the tape timer display.
5. Simplicity by design — in operation and construction.

Now there's even more to look into

TM14-9RH

Ikegami's new Broadcast Color Monitors

Ikegami has just made it impossible for any quality-minded high resolution color monitor user not to consider looking into an Ikegami monitor.

They call it the 9-Series, two new monitors (13V and 19V) with standard features that include a High Resolution Shadow Mask CRT with a Self-Converging In-Line Gun; American Standard Matched Phosphors; a Comb Filter to preserve luminance resolution; pulse cross and R-Y/B-Y outputs. We think you'll call it just what you've been looking for. Along with its streamlined design and easily serviced modules, Ikegami's new monitors follow in a tradition of excellence. Each offers high stability, exceptional performance and proven reliability. Together with Ikegami's Delta-Gun Series, the 9-Series provides yet another reason to look into the monitors that more and more video users are spending their time looking into. Isn't it time you looked into Ikegami monitors?

TM20-9RH

Ikegami

9-Series monitors

Ikegami is the supplier of Color Monitors to ABC for its coverage of the 1984 Winter and Summer Games.

PICK A VIDEO SYSTEM. ANY ONE!

Chances are we've already done one just like it! The fact is, we've designed, fabricated and installed video systems of every size and configuration—from ENG vans to large mobile production systems, from insert stages to multi-camera production studios, from 3/4" editing rooms to state-of-the art post-production suites, film-to-tape facilities, videotape duplication centers, satellite network playback facilities, etc.

That's why more and more production

and post-production companies, broadcasters, cable operators, corporate users and advertising agencies have come to rely on us—for our experience and engineering knowhow, and our ability to get the job done on schedule.

And they know it makes good economic sense, too. Because while we're doing what we do best, they can concentrate on doing what *they* do best!

So pick a video system. And then call us, today!

HE'S ALL YOU NEED TO START YOUR MARCONI FULLY DIGITAL TELECINE!

He's 5½ going on 6 and he isn't a genius. But the Marconi Line Array Telecine B3410 doesn't need a genius.

Unlike other telecines, the Marconi B3410 is fully digital. That means, among other things, it can deliver full performance within two minutes from the time you switch on. It does not require tweaking or day-to-day adjustments, and there is no registration drift or tubes to replace. The stability of its electronics is simply superb!

Once it's started, you'll appreciate the Marconi B3410 for its fully digital processing and CCD image sensors that provide an extraordinarily true video picture. Moreover, the Marconi B3410 has a light bias facility that resolves dark areas of the film. It converts into all international standards and interfaces with all available color correctors.

For more information on specifications and the cost of the Marconi B3410, call us in New Jersey (201) 767-1000 or in California (213) 466-5066.

Shure's new FP31 Mixer takes a big weight off your shoulders.

Introducing the most innovative field production mixer of its kind. Shure's FP31. You won't find another mixer this small with these features, dependability and ease of operation.

The FP31 measures only 6⁵/₁₆" x 5⁵/₁₆" x 1⁷/₈", and weighs just 2.2 pounds! Incredibly, it offers the same important features as much larger mixers. Plus, a few of its own.

Every channel has a mic/line level and a low-cut filter switch. And to prevent overload distortion, there's a built-in limiter with adjustable threshold.

The FP31 can be powered by two internal 9-volt batteries, or from an external 12-volt source. A green LED flashes to remind you that the mixer is on. Phantom and A-B power are also provided to operate lavalier and shotgun microphones.

A slate tone can be laid

down on the tape for locating specific takes, and there's also a built-in mic for voice slating.

The mixer also has two separate mic/line outputs for 2-camera shoots and a tape output to feed a cassette. For monitoring, there are two stereo headphone jacks—one 1/4-inch and one for miniplugs. The FP31's rugged nylon carrying case allows you easy access to every mixer function and lets you piggyback the mixer on your VCR or other equipment.

For ENG, EFP and film use, Shure's FP31 has everything you need to make your mix a perfect success. Coming from a mixer this small, that's quite an accomplishment.

For more information on Shure's FP31 Mixer, call or write Shure Brothers Inc., 222 Hartrey Ave., Evanston, IL 60204, (312) 866-2553.

Now is the Time to Cut Your Land Lines!

It's really very simple.

Just switch from expensive phone lines to Comtech's new DART 384 (Digital Audio Receiver Terminal) and receive your network audio directly from the satellite with full fidelity, less cost, and greater control than ever before.

Six Major Benefits

Ordering the DART 384 Terminal gives you six immediate benefits:

1. 10-20% lower cost than the other guys (Lease or Purchase).
2. Better performance under marginal conditions.
3. Immediate off-the-shelf delivery.
4. Avoid phone troubles—forever.
5. User-friendly.
6. Quick response to customer's problems.

DART 384 is priced 10-20% below the other guy's model and yet our bigger 3.8 meter antenna gives it more performance margin per dol-

lar. It gives you everything you need to match or exceed all network audio quality requirements. Comtech's 3.8 meter antenna also operates better under the proposed 2° satellite spacing compared to the competition's 2.8 meter.

The DART 384 is user-friendly. It is designed for easy installation and maintenance. The indicators are **really** useful for accurate antenna pointing and isolating problems. If you need help, Comtech and Allied are ready to respond quickly.

The DART 384 Terminal consists of Comtech's high-performance 3.8 meter antenna, low-noise amplifier, antenna-mounted down converter and demodulator shelf with 8-chan-

nel program capacity. Channels can consist of a mixture of audio channels and one voice cue channel.

And there you have it. Better service. Lower costs. The proven path to profits since the beginning of business.

For a closer look at this audio receiver terminal alternative, call Allied Broadcast Equipment toll free at 1-800-428-6954.

AM BROADCASTING - HIGH FIDELITY Are these terms mutually exclusive?

YES NO DON'T KNOW

Surprisingly, many broadcasters may not know that the correct answer to this question is no. Large sums of money are spent each year to purchase new transmitters, new studio equipment, new audio processing equipment and to modify antenna systems for improved AM sound. Unfortunately, until now, there has been no such thing as a professional quality AM monitor receiver. As a result, the perceived fidelity of an AM signal has been severely restricted by receiver performance.

Potomac has developed the SMR-11 Synthesized Monitor Receiver which will let you hear and measure the quality of your transmitted AM signal ... perhaps for the first time. Features include: Crystal Stability; 60 dB Signal to Noise Ratio; Audio Frequency Response ± 0.5 dB, 20 Hz to 8 kHz; Total Harmonic Distortion less than 0.2% (95% Modulation) at audio frequencies above 40 Hz ... please write for complete descriptive brochure.

THIS DIAL WILL TUNE YOU IN TO THE
NEW SOUND OF AM BROADCASTING

Add Color to Your Audio

In growing numbers, broadcasters and postproduction houses are using the 200 to add ambience to their audio. The 200's Hall and Chamber programs add reflected energy to dry voices, delivering fullness while maintaining clarity and articulation. Simple adjustments of the 200's size control can produce ambiances that identify an unlimited variety of spaces, such as a wooden cabin, an empty factory, a long corridor, or a stone temple. Scenes and dialog acquire more meaning – and the audience's ears appreciate ambience as much as their eyes appreciate color.

A reliable, cool-running, affordable package.

Human-engineered panel controls for easy, intuitive operation.

On-board mixing.

Programmable nonvolatile memory for storing up to 10 user setups with instant recall.

Now with the Lexicon Model 200 Digital Reverberator, broadcast audio takes on new color.

Size control – from the smallest closet to grandest canyon.

Balanced input and output connections with a maximum signal level of +24 dBm – in full stereo.

Hall, Chamber, and Plate programs – each with 10 preset variations.

What could you do with a
VHF-TV Transmitter
with 30% fewer parts?

In a word,
Relax.

NEC PCN-1200 Series VHF-TV Transmitters with exciter output options have 30% fewer circuit parts than conventional-type transmitters. That's 30% fewer parts to worry about. You get more reliability, less maintenance.

And because conventional tuning capacitors and sliding-type inductances have been eliminated, you get broad-band frequency coverage with no tuning adjustment.

Find out what more you could do with a VHF transmitter with fewer parts. Call NEC at 1-800-323-6656.

A NEW DIMENSION IN MASTER CONTROL SWITCHING

Utah Scientific, the industry's number 1 supplier of routing switchers, has now applied its talents to an allied area—Master Control Switching. Designed for immediate conversion to stereo and/or station automation, Utah Scientific Master Control Switchers are designed to deliver superior performance today while accommodating your future needs as well.

- Two models: two bus and three bus
- The industry's best performance specs
- Full preset capability with "goof-proof" single-button execution
- Integral edge, shadow, outline and color matte
- 28 direct inputs plus two assignable from panel
- Alphanumeric readouts on assignable inputs
- All-digital interconnect via RS-422 lines
- Top quality switches
- Stereo-ready—just add the matrix and one card
- All panel functions software controlled
- Machine control for two telecines and ten VTR's included
- Available with or without station automation system
- Preroll times individually assignable and user alterable
- Full audio over/under capability
- Separate 8 x 3 audio only matrix included
- Four large LED VU meters

Let's face it. Listeners will never know that the Delta Series, ITC's new generation of cartridge machines, has improved cart guides, a crystal-referenced servo capstan motor with a vapor-honed non-magnetic shaft, and high-speed recue. They won't care that the Delta's modular design makes alignment and service convenient.

Listeners won't know about Delta's microprocessor-controlled digital cue tone detector and exclusive ITC playback head. Delta's compact size and choice of four configurations won't matter to them.

Give people great sound and they'll come back for more!

And the average listener won't know that ITC sells more professional cartridge machines than all other manufacturers combined. Or that the Delta Series replaces the Premium Line, previously the standard of value in the industry.

A lot of the things that make the Delta Series special. . . features that matter to you . . . don't matter to your listeners.

But that's okay. Because the thing your listeners care the most about is exactly what the Delta Series gives them . . . great sound.

The Delta Series sounds great... for you and for your listeners!

April-June

A 4-day course on digital image processing offered by Integrated Computer Systems will present topics including image acquisition; enhancement; tracking and coding; and image processing software and database structures. The course will be offered as follows: April 10-13, Boston; April 24-27, Phoenix, AZ; May 1-4, Palo Alto, CA; May 8-11, Washington; and June 19-22, Los Angeles. For more information, contact Ruth Dordick, Integrated Computer Systems, 6305 Arizona Place, P.O. Box 45405, Los Angeles, CA 90045; 213-417-8888.

April 8-12

National Public Radio (NPR) will hold its annual affiliates' convention at the Hyatt Regency Crystal City in Arlington, VA. Technical sessions are planned for two days of the convention, although at press time a listing was not available. Additional sessions are scheduled for programming and financial matters. A number of broadcast equipment manufacturers plan to attend the convention, although there will not be a formal equipment show.

April 25-27

EDS-'84 will be held in the Las Vegas Hilton Hotel, Las Vegas, NV. For the first time in the convention's 47-year history, distributors are invited as exhibitors. For more information, contact Electronic Industry Show Corporation, 222 S. Riverside Plaza, Suite 1606, Chicago, IL 60606; 312-648-1140.

April 29-May 2

NAB-'84 will be held in Las Vegas, NV. For more information, see our pre-convention coverage that begins on page 23, or contact NAB, 1771 N St., NW, Washington, DC 20036.

May 5-9

The *European Cable and Satellite Television Exhibition and Conference (EUROCAST-'84)* will be held in Basel, Switzerland. Awards will be presented for achievements in cable and satellite hardware and software. For more information, contact Cable & Satellite Television Exhibitions Ltd., Five Barratt Way, Tudor Road, Harrow, Middx United Kingdom HA3 5QG.

May 13-17

The Anaheim Convention Center in Anaheim, CA, will be the site of *Computer Graphics-'84*, the *Fifth Annual Conference and Exposition of the National Computer Graphics Association*. Included in the six technical sessions will be "Election-'84: Network Videographics for Political Coverage" and "Videodisc and Computer Graphics." For more information, contact Department YY, National Computer Graphics Association, 8401 Arlington Blvd., Suite 601, Fairfax, VA 22031; 703-698-9600.

May 14-17

The *International Conference on Communications (ICC-'84)* will be held in Amsterdam, the Netherlands. Topics include communication switching, communication networks, radio communications, and satellite and space communications. For more information, contact Dr. T.A.C.M. Claasen, Secretary ICC-'84, Philips Research Laboratories, WY-2, 5600 MD Eindhoven, the Netherlands.

May 15-18

Communications 84, an international exhibition, will be held in Birmingham, England. The biennial trade fair attracted more than 430 exhibitors from 17 nations in 1982. A 3-day conference program, organized by the IEE, will complement the exhibition activity. For more information, contact Kallman Associates, US Representative, 5 Maple Court, Ridgewood, NJ 07450; 201-652-7070.

May 20-23

The Grand Hyatt Hotel in New York City will be the site of the *24th Annual Broadcast Financial Management Association Conference*. Topics at the approximately 33 general sessions and workshops will include accounting standards, fraudulent billing, cable television, automation, public broadcasting and special concerns of BFMA's Canadian members. Gene F. Jankowski, president, Broadcast Group, CBS, will be the luncheon speaker on Tuesday May 22.

May 23-25

The *Eighth Annual Conference on Teleconferencing and Interactive Media* will be held in Madison, WI. The program will report on the current status of and trends in teleconferencing, computer conferencing, videotex and other interactive systems. For more information, call 608-262-2569.

June-July

A series of film and video workshops will be held in Rockport, ME. For more information, call 207-236-8581.

June 13-15

A course titled "Video Teleconferencing" will be held at George Washington University in Washington. The course covers progress in video teleconferencing technology and describes the latest systems. For more information, contact Chip Blouin at 202-676-8527, George Harrison at 202-676-6106, or either Blouin or Harrison at 800-424-9773 (Tuesday-Friday).

September 21-24

Learn about audio techniques from professionals at the *13th Tonmeistertagung Muenchen*. Subjects discussed will include radio, television, recording, film, video theater and public address audio applications. In addition to many technical sessions, an exhibition of sound equipment and practice-oriented field trips will round out the experience. For more details, contact das Bildungswerk des Verbandes Deutscher Tonmeister, Organisationsbuero, Postfach 101950, D-5000 Koeln 1 West Germany.

Sept. 21-25

The *10th International Broadcasting Convention, IBC-'84*, will be held at the Metropole Conference and Exhibition Center in Brighton, United Kingdom. The growing interest in higher definition and enhanced TV pictures and the distribution of programs and information by cable and satellite will be covered in depth. For more information, contact the IBC Secretariat, the Institution of Electrical Engineers, Savoy Place, London WC2R 0BL, United Kingdom.

**BVE-5000
COMPUTERIZED
EDITOR**

RS-422

You're looking at the utopian editing suite.

A system that takes you straight to productivity without passing through chaos.

One that truly breaks Murphy's Law. Because Sony mastered the seemingly impossible feat of asking a series of machines to work in perfect harmony with one another.

No longer must you take the hodgepodge approach to editing systems, which is purchasing one component from one company and another from a second. Through the Sony total system approach you're assured that all the interfaces will work perfectly. Because they're worked out in our labs, not your editing suite. So downtime is virtually eliminated.

Only Sony offers it. But then, only Sony developed each and every product on these pages. (Even the Grass Valley software interfaces for the 300 Series Switcher were co-developed by Sony.)

So if you want to spend more time counting profits and less time counting losses, contact Sony. And discover the joys of building an editing system that does what nobody else's can consistently do: Work.

1" EDITING

BVH-2000 IN CONSOLE

- Multiple machine configurations, changeable and upgradable.
- Wide DT range: from -1 to +3 X standard speed
- Video/Audio confidence replay
- Self-diagnostics with visual and audible malfunction alarms

- Plug-in Time Code Generator/Reader (optional)
- Plug-in Timebase Corrector (optional)
- 2 hours record/play time

BKH-2015 OPTIONAL PLUG-IN TIMECODE FOR BVH-2000

- Generator/Reader with VITC/LTC capability
- Character Generator
- User Bit Display

BVH-2500 RECORDER

- All features of BVH-2000 plus:
- Full C Format compatibility
- Real time, variable and frame-by-frame recording, using DT head
- Full-color framing
- Instantaneous and repeatable re-writing by erasable DT head

BVT-2000 TBC

- 9-bit, 4 Fsc sampling
- Drop-out compensation with Y/C separation
- Built-in Velocity Compensation, Sync Pulse Generator, Video Processor and automatic Advanced Sync Generator
- Full remote-control function
- DT playback with BVH-1100/1100A/1180/2000 and BVU-820 VTRs

BKH-2100 OPTIONAL PLUG-IN TBC FOR BVH-2000

- Plug-in, 4-circuit board Digital TBC
- 8-bit 4x Fsc samplings
- Remote-control capability

3/4" EDITING

BVU-820 RECORDER

- Built-in, full-scale editing functions
- Dynamic Tracking
- Playback from -1 to +3 X standard speed
- Simultaneous video playback in record mode (Video Confidence)

BVT-800 DIGITAL TBC

- 15 H correction range
- DT operation with BVU-820 from -1 to +3 X standard speed
- Built-in digital DOC
- Single cable interconnect with BVU-800/820
- Remote-control facilities
- Recognizable monochrome pictures up to ± 40 X standard speed

1/2" EDITING

BVW-40 BETACAM™ RECORDER

- Compressed Time Division Multiplex video recording system
- Built-in Timebase Corrector with Digital DOC
- Full Video/Audio insert and assemble editing, with preview/review, forward/reverse trim, selectable pre-roll and auto edit in/out functions
- 9-pin RS-422 serial and 36-pin parallel remote ports
- 7-pin Dub-in/Dub-out connection for BVU series U-matics™
- 12-pin Y/R/Y/B-Y component input/output
- Component and composite outputs

BVW-10 BETACAM™ PLAYER

- Full Shuttle and Jog functions
- Built-in TBC with Digital DOC
- Built-in Time Code Reader and LED display
- Selectable Dolby™ noise reduction
- Plug compatible with wide range of external systems
- Only front access required
- Component and composite outputs

At Sony, we do more than guarantee the best total system. We guarantee the best individual components.

The machines you see on these pages, which comprise the three established formats of the broadcast industry, represent only a small sampling of the Sony universe of post-production products.

Each component, while different in price and scope of features, shares five things in common. Unsurpassed quality, reliability, durability, ease of maintenance, and excellence of value that Sony is famous for.

So whether you buy the Sony system piece by piece, or an entire system at a time, you can be assured peace of mind.

For all the details contact Sony in New York/New Jersey at (201) 833-5350; in the Northeast/Mid-Atlantic (201) 833-5375; in the Midwest (312) 773-6045; in the Southeast (404) 451-7671; in the Southwest (214) 659-3600; in the West (213) 841-8711.

CUSTOMIZED EXCELLENCE

WPMT Mohawk Broadcasting of York, Pa. had a clear vision of what they needed. They wanted a state of the art facility, turnkey operation, brought in on time and in budget. The Lerro Corporation came through on all counts.

The Lerro Corporation has the people, experience and creativity to design, engineer, install and provide the follow up support for your facility. Let us show you, face to face, what we can do for you.

For information, contact The Lerro Corporation, 3125 N. Broad Street, Philadelphia, Pa. 19132 • (215) 223-8200.

 **LERRO**
ELECTRICAL
CORPORATION

**Enough. From now on we
make our own tape.**

...and here it is: **Dynamax**™

Here's Dynamax.™ A new brand of brilliant audio tape, formulated to satisfy the special requirements of the broadcast professional. And not the mass production standards of consumer tape.

To create Dynamax, we built a brand new manufacturing facility, and had each piece of production equipment designed to our own specs. Now we can monitor and control the manufacture of every inch of tape we put in our cartridges.

As a result, the mechanical and electrical properties of Dynamax are superior to those of any lube tape available in the world today.

The 1 mil Mylar* base film used for Dynamax broadcast tape is almost twice as thick, and twice the weight, as that used in the ScotchCart.™ And our cross-linked urethane resin binder system guarantees the best possible bonding of the oxide, totally unlike the cheap vinyl adhesives used by 8-track manufacturers in consumer tape.

The bonding is so positive, so permanent, that oxide shedding, and the problems shedding creates are virtually eliminated.

This combination of features means that tape life of 10,000 plays or more can be expected from

Dynamax broadcast tape, in Fidelipac cartridges, will deliver 10,000 plays — or more!

Fidelipac is making a new brand of broadcast tape, Dynamax, formulated to satisfy the special requirements of the broadcast professional.

Fidelipac cartridges loaded with Dynamax.

Phase stability is enhanced by maintaining constant tape width, and smooth, clean edges. On our own tape slitting equipment, we can control tape width to 1/1000 of an inch. So, the stereo phase performance of our Master Cart,™ loaded with Dynamax, is truer than ever.

I'd like to send you a sample Fidelipac Master Cart loaded with Dynamax broadcast tape. Just circle our number on the reader response card in this magazine, or write me, Arthur

Constantine, at the address below.

Test Dynamax broadcast tape yourself. Measure the long life. Delight in the transparent sound.

See us at NAB Booth 411.

CMX taste and a Convergence budget? ...Get Lightfinger™!

Now, the editor that made new technology, like touch-screen editing, affordable brings you Advanced List Management (ALM™). The result is a system that's ideal for both experienced pros and occasional editors. ALM features include:

Cut and Paste: Cut on an image instead of an edit boundary, to insert or delete material.

Scene Note Sorting: Evaluate and review alternative takes by using scene notes to sort, find or list.

Reel Directory: A touch-selectable "table of contents" for all of the information on your tape.

Film Edge Reading: Edge numbers from any format or brand of film can be

transferred to, or read from, user bits. Actual edge numbers will also appear on your list printout.

Source/Record VTR Slaving: Source-Trak™ allows you to match your source machine to your record machine at any point within an edit.

List/VTR Sync: ListTrak™ lets you sync-lock your list and your record VTR, and move them together for visual list management.

Lightfinger can be easily expanded from a basic two machine system up to one with more than 16 machines, and such added features as multiple roll, interface to mixed effects switchers and VITC. Prices for a complete, two machine system start at \$15,950. F.O.B. factory.

For full details, call or write.

200 VIDEO GRAPHICS SYSTEMS INSTALLED & WORKING

And We're Celebrating!

Our LiveLine System is the *industry standard* for news, weather and sports electronic graphic production!

Who's Got #200?

Congratulations to KSAF-TV, San Antonio, Texas!

With over 200 systems now in use at stations coast to coast, ColorGraphics far outsells all other graphics systems! Here's a partial list of major LiveLine system purchasers: Gannett, Metromedia, the CBS Network and O&O's, Corinthian, Outlet, United Television, Post-Newsweek, Times-Mirror, The KING group, Taft...and most of the nation's major station groups. Many of our LiveLine systems are also in use at market sizes 100 and lower!

Why Is LiveLine the Leader?

It's extremely fast; has an ultra-high resolution display; is simple to use; interfaces to major data bases like WSI, Accu-Weather, and Weather Central; has special graphics packages for live sports score display from National SportsTicker, election coverage results news graphics and weather animations; and is backed by our reputation for quality and service which is unequalled in the industry! In 1984, watch for new dial-up color radar and more!

Join the electronic graphics revolution with

Your best value in wireless.

Cetec Vega's R-31 PRO is your best value in a wireless-microphone receiver. When you compare the price, compare the performance too. And the size. And the features:

- **"Infinite gain" receiver technology.** Improved performance in the critical threshold region, superior accommodation of multipath conditions, better signal-to-noise ratio, and constant receiver audio level output.
- **High signal-to-noise ratio and wide dynamic range.** 97 dB (103 dB A-weighted) with DYNEX® II; 77 dB (83 dB A-weighted) non-DYNEX.

- **DYNEX® II, a new standard in audio processing.** Can be switched in and out, to accommodate transmitters with or without DYNEX® II.
- **Power-source flexibility.** Dual 115/230 Vac, 50-60 Hz operation, and external +12 to +24 Vdc for vehicular and portable use.
- **Attractive, compact case.** Only 7.15 inches wide, 1.72 inches high, and 8.25 inches deep.
- **True helical-resonator front-end filter.** Plus all of the other standard features expected in Cetec Vega's professional

wireless equipment, famous for quality and reliability.

Write or call for further information on the R-31 PRO wireless-microphone receiver, and for the location of your nearest dealer: Cetec Vega, P.O. Box 5348, El Monte, CA 91734. (213) 442-0782. TWX: 910-587-3539.

SMART

Asaca/Shibasoku's new high resolution monitors have the capability to deliver color performance other monitors simply cannot produce. Using R-Y, B-Y decoding no longer meets the demands of today's professional standards.

The Asaca/Shibasoku monitor like the human eye resolves certain colors best; reds, oranges, yellows, and flesh tones. The I-Q decoding system enables the monitor to display these colors at a higher resolution using wide band demodulation of 1.3 MHz rather than 0.5 MHz as in R-Y, B-Y systems.

We cared enough to give you a monitor with the I-Q to reproduce the best possible pictures. We know you're smart enough to buy it.

SHARP

COLOR

FEATURES

- 20" and 14" models available—high resolution delta CRTs.
- I-Q wide band demodulation system.
- Complete board interchangeability between models.
- Switchable high performance comb filter and aperture correction.
- Multi-standard capabilities (NTSC, PAL, SECAM) on all models. Switchable from the front panel (20" model). No adjustments necessary because of digital sync circuitry.
- Dynamic focus insures perfect focus on all areas of CRT. Adjustable from the front panel.
- Special feedback circuits guard against color changes due to variations in temperature.
- Active convergence—40 controls allow precise adjustment on all areas of CRT.
- Pulse cross with expanded vertical blanking interval.
- OPTIONS... Built-in color bar or cross hatch patterns. Built-in safe title marker generator. Multi-standards. RGB inputs.
- TWO YEAR WARRANTY ON ALL PARTS AND LABOR INCLUDING THE CRT.

ASACA/SHIBASOKU CORP. OF AMERICA

Circle (49) on Reply Card

**29 broadcasters bought
the new Harris Medalist™ in
its very first week! Here's why.**

Wide input switching flexibility. Transparent audio performance. Choice of attenuators. Adaptability to any application. Excellent cost/benefit ratio. Broadcasters across the country cite these as major reasons for choosing the new Medalist dual stereo audio console over all others.

Switching Flexibility

Input selectors switch *after* the mic preamp, allowing intermix of mic and other types of sources on any channel. The Medalist also gives you six selector positions each for headphone and speaker monitoring.

Superb Audio Quality

Harris engineering makes the Medalist remarkably trans-

parent. The Signal-to-Noise ratio of 95 dB beats the competition by 10 to 20 dB, and is typical of the Medalist's outstanding performance.

Linear Or Rotary: Take Your Pick

Harris gives you a choice—two styles of linear and two styles of rotary attenuators. Intermix rotary with linear if you like, to suit *your* station's particular needs.

Easy To Install... Easy To Maintain

The barrel terminals on the input and output circuits connect quickly and surely. Additional preamps and program amp interconnect with plug-in ribbon cables. Also, you can change

attenuator modules—even while you're on the air—in about the time it takes to cue up a record.

Now In 8, 10 and 12 Channels

The Medalist is equally well suited for AM/FM/TV on-air and production applications. Take your choice of three models—8, 10 or 12 channels.

Learn more about the Harris Medalist family of audio consoles. Write Harris Corporation, Studio Division, P.O. Box 4290, Quincy, Illinois 62305-4290. 217-222-8200.

More Tests More Accuracy Less Time ...

The QEI Model 691 Tuneable Stereo & SCA Modulation Monitor *

That's right, QEI's 691 performs more than 40 proof-of-performance, sound quality and troubleshooting tests (up to 4 tests simultaneously) with greater accuracy and in less time than possible before.

Most functions and test connections are on the front panel in easy to read, easy to use groupings. QEI's auto-ranging meters guarantee correct readings every time and SCA capability is a simple matter of an optional plug-in module.

* FCC Type Approval No. 3-244

For the full story and complete specs on the QEI 691, call us or write to:

When Choosing Quality The Choice Is LEMO Electronic Connectors

LEMO Audio-Video Connectors

Designed to maximize communication capabilities within a minimum of space. Available in coax, triax, multipin and mixed coax-multipin configurations.

RELIABILITY: Positive locking mechanism and gold plated contacts assure consistent signal transmission to 1.5 GHz.

SPACE SAVINGS: Only finger clearance needed to engage and disengage connectors. No need to twist or turn locking ring.

RUGGEDNESS: Connector components are precision machined. Locking mechanism is totally protected by outer shell, virtually eliminating accidental disconnections and damage to locking mechanism, cables and contacts.

SPEED: Connectors engage and disengage simply and quickly by pushing and pulling axially on the outer shell of the plug.

Over \$1 million inventory stocked in Santa Rosa, California, sold by a network of representatives in North America.

For technical data and catalog, as well as the name of your local representative, please call or write LEMO U.S.A., INC. (707) 578-8811, TELEX 340-933, P.O. Box 11006, Santa Rosa, California, 95406.

Why our new radio is heavier than you'd expect.

When we introduce a brand new portable microwave transmitter with innovative features like continuously variable power from 3 to 12 watts and a linear GaAs FET power amp, our customers also expect it to be "bulletproof".

So, we build in modular plug-in circuit boards for quick service; multilevel RFI shielding for superior integrity, and an integral heat sink to eliminate dependence on the antenna bracket. Plus, a linear power amp eliminates spurious response to provide excellent spectral purity, while its *one* stage (versus the usual 4) reduces still further the probability of failure.

You see, when you buy either our *Challenger* at three watts, or the *Challenger 12* with 3 to 12 watts variable, you get unexpected state-of-the-art features. But you also get what you expect from Harris—reliability, ease-of-service, and the best product support in the business.

For information about our complete line of ENG equipment call or write, **Harris Broadcast Microwave, 967 Stierlin Road, Mountain View, CA 94043. Phone: 415-969-9100. Telex: 17-2584 HARFARVID**

Class A Linear
GaAs FET Power Amp

Challenger 12

variable power

The definition of the best color camera

No matter how you define your color camera needs, you will want to be certain you have chosen the best tube for the job. And no technical appraisal can be complete without EEV Leddicons.

Highest picture quality

Lag or smearing under low-light conditions is a common effect with most tubes - but less with EEV Leddicons! Instead of the twin-light pipe used by some competitors, Leddicons incorporate a unique light bias arrangement with a 10-hole and sintered quartz diffusing disc system for minimal shading. Differential lag is minimised by balancing the response speeds of the green, red and blue channels; so a football in flight will always look like a football - not a flying saucer! Light biasing is variable on 30mm and 25mm Leddicons. On 30mm types, biasing is integral so there is no need for a clumsy adaptor.

High resolution

EEV is the only manufacturer to make three different target layers to optimise resolution for each color channel. The advantage of this unique feature can be clearly seen in the Leddicon's much better performance.

Faithful color imagery

Faithful color imagery is all about reproducing what the eye sees. And that is exactly what Leddicons do. Extended reds have a precisely-engineered response and a matched infra-red filter is incorporated to provide cut-off where you want it.

Reduced highlight image retention

Highlight image retention can be a production team's nightmare - the wrong choice of tube and highly polished orchestra instruments can end up looking like the aftermath of an aerobatics display. With EEV Leddicons, the problem is minimised by a unique target manufacturing process. The result is you can rely on Leddicons, even in the very difficult extended red channel where other tubes are simply unable to cope.

Better tube quality - plus longer life

At long last a manufacturer who is prepared to talk about blemishes - but then we know Leddicons average less spotting than other tubes! The secret lies in the fact that all Leddicons must satisfy the most exacting manufacturing, testing and quality control standards. These not only preclude loose particles from the inside of the tube but also ensure longer tube life.

Optimised geometry and registration

The optimised electron optical design of Leddicons ensures the best possible geometry without distortion. Registration too is equally distortion free - we can, in fact, supply computer-matched sets for all three channels.

LEDDIC

Unique anti-microphonic features

Nothing tests a tube more rigorously than the range of frequencies generated by an orchestra. With EEV's unique anti-microphonic mesh assembly, Leddicons provide the cleanest pictures - even from cameras operating in areas of high ambient acoustic noise.

tubes in the world.

First for customer service

EEV is not only concerned with manufacturing the best tubes but also ensures the best delivery and after-sales service. Our reputation in this respect, like that of our Leddicons, is second to none.

To serve the needs of our broadcast customers in the USA and Canada best, we sell direct from our centers in New York and Toronto where we maintain a large inventory as well as full test facilities.

When you add up all the facts about EEV Leddicons, there is only one conclusion - namely, the definition of the best tubes for your camera. But don't leave it at that. Next time specify Leddicons for your new equipment and as replacements. Then find out what that definition really means in practice.

LEDDICONS[®]

Comprehensive range

EEV Leddicons are specified throughout the world for virtually every type of studio, EFP and ENG camera. The range covers 30mm (1 1/4 in), 25mm (1 in), 18mm (3/4 in) and 12mm (1/2 in) sizes. And the comprehensive choice of front- and rear-loading types includes diode gun, low output capacitance (LOC) diode gun, triode gun and tetrode gun highlight overload protection (HOP).

EEV Leddicons are fully interchangeable in most types of camera including:

BCC10/20/21	HL79/81/83	MNC80	TC80/85
BVP300/330	HK312/322	MKVIII/IX	TK47

NAGRA KUDELSKI
a passion for perfection

Sheer enthusiasm inevitably leads the Stefan Kudelski-Nagra design team to build the best, as with our IV-S. This portable, stereo mastering recorder incorporates all the functional specifics professionals need... Like instant read-out of channel level differences, weighted signals for disc groove depths, current consumption and battery voltages. And, there's a 6-position filter circuit to correct undesirable acoustical effects, plus two switchable, ganged potentiometers. Share the enthusiasm. Ask for details.

ANNOUNCES THE NEW ERA IN LOW COST EDITING

Eagle

**Breaking the
price / performance
barrier**

**Designed in the
tradition of the
famous Z6000
series of editors**

**Compare these standard features with
any competitive system**

STANDARD FEATURES:

- Distributed intelligence
- 250 event memory
- Animation
- Printer output
- Status display generator
- Frame accurate
- Built in sync generator
- Much more...

OPTIONS:

- List management
- Dual disk operating system
- Off line communications package (an industry first)
- A/B roll & sync roll
- General purpose interface (for external devices)

THE FIRST NAME IN FILM

Introducing video tape with the quality, dependability, consistency, and backup service you expect from Kodak.

The virtues that have made Eastman Kodak Company the first name in film are now yours in new Eastman professional video tape.

A world leader in imaging technology for more than a century brings you a brand of video tape so good that we stake our reputation on it.

So can you. Because Eastman professional video tape offers you a unique combination of benefits.

Quality. Try our video tape and experience its quality. You'll see that Eastman professional video tape meets the same stringent performance standards that characterize all Eastman products.

Dependability. Establishing a reputation for reliability takes time and commitment. Our record speaks for itself. To satisfy your need for dependability, our products are made to our own demanding specifications.

Consistency. As the world's leading manufacturer of photographic film, Kodak appreciates the critical impor-

tance of video tape product consistency. Therefore, Eastman video tape is manufactured according to our strict uniformity requirements.

Technical service. You can count on our field force of skilled sales and engineering representatives to help you get the most from Eastman video tape products.

Availability. You don't have to wait for Kodak to set up shop. We already operate a worldwide marketing network. And a dealer organization also will soon be ready to supply you with Eastman pro-

IS THE NEW NAME IN VIDEO TAPE

professional video tape...when and where you need it.

You have the option of professional-quality and broadcast-quality Eastman professional video cassettes in both 1/2-inch (VHS and Beta) and 3/4-inch (U-Matic, standard and mini) cassette sizes. Broadcast-quality 1-inch tape (helical "B" and "C" format) is scheduled to be available in mid-1984. We offer an excellent selection of video cassettes and video tapes for use with NTSC as well as PAL/SECAM TV systems.

Now is the time for you to discover what the new name in professional video tape can do for you. To learn more, contact your Kodak sales and engineering representative.

EVERTZ closes the Time Code price / performance gap!

Model 4000
Edit Code Master

EVERTZ presents a new generation of LTC and VITCode products at prices comparable to traditional longitudinal only systems, but with all the advantages that vertical interval time-code offers.

We have taken a quantum leap forward in time-code technology. These products combine the best of LTC and VITC to provide the ultimate in performance, flexibility and reliability.

Model 4900
LTC & VITC Reader

Because longitudinal time-code remains popular as a powerful production tool we are also introducing several new LTC generators and readers combining our time tested designs with the latest advances in micro-chip technology to offer you superb edit code equipment at affordable prices.

Model 3600D
LTC Generator / Reader

See our comprehensive line of time-code equipment at the AMTEL booth, #1745 at N.A.B.

TELESCOPING MAST SYSTEMS FOR ENG

Ski-Hi telescoping masts are precision engineered and the top of the line for ENG use. Because of their design, they can support a top load of 100 lbs. and be operational in moderately strong winds.

Ski-Hi telescoping masts are compatible with any ENG top load, including pan and tilts, cameras and other instrumentation. The standard ENG mast is 42', but sizes are available from 26' to 60' to fit your specific needs.

Call or write today for a free brochure.

Q: WHAT'S THE BEST KEPT SECRET IN EDITING?

A: EECO's Pioneering Past.

- 1967—EECO develops first television time code editing system, called ON-TIME™.
- 1970—EECO works with the SMPTE to help establish an industry standard for longitudinal time code.
- 1971—EECO is presented an Emmy Award citation for outstanding engineering achievement for the development of time code and equipment for videotape editing.
- 1972—EECO pioneers first synchronizing system utilizing time code and a microprocessor to control both sprocketed and non-sprocketed transports.
- 1974—EECO introduces first low power time code generator CMOS chip.
- 1976—EECO, jointly with RCA, develops first microprocessor controlled videotape editing system—the RCA AE600 for the RCA TR600 VTR.
- 1978—EECO receives an Academy Award citation for the application of code and control systems in motion picture production.
- 1980—EECO works with the SMPTE to help establish industry standard for vertical interval time code.
- 1980—EECO, jointly with RCA, develops videotape editing system incorporating longitudinal and vertical interval time code editing capabilities—the RCA AE800 for the RCA TR800 VTR.
- 1982—EECO introduces IVES™ Intelligent Video Editing System, a complete post-production system for two VCR's.

A: EECO's Innovative Future.

EECO is unveiling new solutions in multi-machine editing control. Our latest innovative milestone: A computer-assisted videotape editing system, capable of multi-machine control of any mix of up to 9 professional 1/2", 3/4" and 1" VTR's or multitrack ATR's and a production switcher.

Providing ease and speed of operation, our new editing system utilizes distributed processing and multiple keyboard configurations for use by either videotape or film editors.

We've also expanded our IVES Editing System with the addition of complete A/B control of three 1/2" and/or 3/4" VCR's...the IVES A/B™ enhancement option.

EECO's forward direction in editing is backed by a history as an industry pioneer and product innovator, including a full line of longitudinal and vertical interval time code generator and reader peripherals to fit every price and capability range and a multi-cue synchronizer for enhancing audio for video.

For additional information or the name of your nearest EECO Authorized Distributor call (714) 835-6000 Ext. 419. EECO Incorporated, 1601 E. Chestnut Ave., P.O. Box 659, Santa Ana, CA 92702-0659.

The more you see, the more we hear

Look who's talking about Dubner now.

While we claim no responsibility for the famous line, "Build a better mousetrap and they'll beat a path to your door," we'd like to think it might have been said about the Dubner CBG-2 video graphics/animation system. In any case, we thought you might like to hear what your colleagues are saying about us:

"The CBG-2 is undeniably the most novel and flexible state-of-the-art real-time animation graphics device currently available."

— Mark Bernardo, Chief Graphics Design Engineer, Olympics
ABC Television

"We needed a machine that would allow us to compete effectively in an already competitive market. The CBG-2 gave us the capability to create weather maps and news graphics quickly, it could be operated by department personnel, and it was the best buy on the market."

— Bob Plummer, Director of Engineering, Fisher Broadcasting
KOMO (Radio & Television, Seattle)

"It's a digital computer and animation tool that allows artists to create quality animations independently. The CBG-2 is relatively inexpensive, it works fast and enhances the creative process with real-time imagery."

— Elaine Schwartz, Computer Animator
Atlantic Image (New York animation house)

"The CBG-2 is much faster and less expensive than standard film animation. The real-time animation, clean key capability, expandability and great software support make it one of the best computers around."

— Corinne Sousoulas, Art Director
Motion Picture Laboratories (Memphis post production house)

"The CBG-2 is a valuable tool due to its ability to create effective graphics quickly. It offers three dimensional animation, graphic enhancement, and character generation all in one unit. And these features are difficult to find in any one machine."

— Victoria Henigman, Electronic Graphic Designer
WPBT-TV (Miami PBS Affiliate)

"The Dubner was purchased for its advanced animation capabilities, its ability to be upgraded via software, and its cost effectiveness. We love it!"

— Dan Sokol, Vice President, Engineering
Video Post & Transfer (Dallas post production house)

With all the nice things being said about Dubner, all we can say is thank you. We plan to keep up the good work. You'll keep seeing it and we'll keep hearing about it.

For a free demonstration of the Dubner CBG-2, call (201) 592-6500, or write.

**Where Does An
Editor Go to Discover
More Creative
Control with Fewer
Technical Constraints?**

Welcome to the Ampex

Care-free Creative Control

Anyone who has ever integrated a complete post-production editing system knows that it's a complex, difficult and often confusing job. Products from different manufacturers don't always interface easily.

Ampex stands above the confusion by offering all the key elements of a sophisticated post-production system from one manufacturer, complete with fully integrated hardware and software. We call this the *Ampex Creative Command Center*.

This system consists of an Ampex ACE edit controller, Ampex switcher and VTRs and our Emmy-award-winning ADO digital special effects system. Since all these use SMPTE RS-422 serial communications, they are easily interfaced with each other and the peripheral equipment you need to fill out your system. No hidden costs for interface devices. Ampex products are designed from the ground up to work with each other in a fully compatible system.

This isn't exactly a new idea. Post-production facilities all over the world are discovering the business advantages of Ampex Creative Command Centers. A few of them are pictured above, and more are being installed every day.

More creative power and control is the name of the game with an Ampex Creative Command Center. With a system based on a sound technical groundwork, editors are free to put their full creative energy into every job, confident that they are free of technical constraints.

At the heart of the Center is the remarkable ACE editing system, fast enough and smart enough to satisfy the most creative editors in the business. Depending on individual preferences, you may choose the Touchscreen option, or either the dedicated or ASCII-style keyboards. Using the ACE joystick control, you're in command of all the other products in the system. With the optional General Purpose Interface (GPI) you can command any product activated by an electronic "trigger."

And there's more flexibility. ACE disks are interchangeable with any other ACE system of any configuration. ACE can even read and write CMX-format disks. You can schedule system time much more effectively and conveniently.

That's only part of the story. There's more creative power, control and flexibility inherent in all the Ampex products.

System Flexibility

Product quality and reliability have long been associated with the Ampex name. In our Creative Command Center, you have a wide choice of Ampex products, each unsurpassed in its price/performance category. Complementing ACE, with its various options, you have a choice of Ampex production switchers, either 4100 Series, or the microprocessor-based AVC Series. AVC switchers offer awesome creative power, yet are simple and logical to operate.

You also can choose any of the Ampex VTRs: the VPR-2B, the VPR-80, or the VPR-3 (the mainstay of Olympic Games broadcasts) with unequalled speed and tape handling ability, or our ARC-40 M-format VTRs.

The very popular ADO has become the standard in the world of creative image manipulation, with over 250 in use around the world. Its abilities are constantly being expanded by the imaginations of its many users.

Your needs and budget determine the configuration of your own Ampex Creative Command Center. No matter what shape it takes, Ampex products will perform to support your business goals.

Creative Command Center

Can Management Love a Creative Command Center?

Every Ampex Creative Command Center is, we agree, a tool to help you attain your business goals. Editors who use these systems every day find that their solid technical foundation allows more efficient use of time for creative experimentation, or to meet tight client budgets and deadlines.

All this helps keep clients happy. Not only is the Creative Command Center an impressive system to see, but its performance can help you build the kind of goodwill that pays off on the bottom line.

Captive facilities find that Creative Command Centers can be equally effective for their needs, turning out sales and training programs, internal communications and a variety of other software. One interesting application can be found at the coin-operated games division of Atari, where a complete Center has been installed to produce the very latest in laser video arcade games.

So don't be intimidated by the sophistication of these systems. They're practical first and foremost, and designed to make management smile, even the controller.

Support That Keeps You Going

Xceptional dedication to the smooth working of your Ampex Creative Command Center is a characteristic of our service and support force. This tradition is well-known and appreciated by the many users of Ampex products.

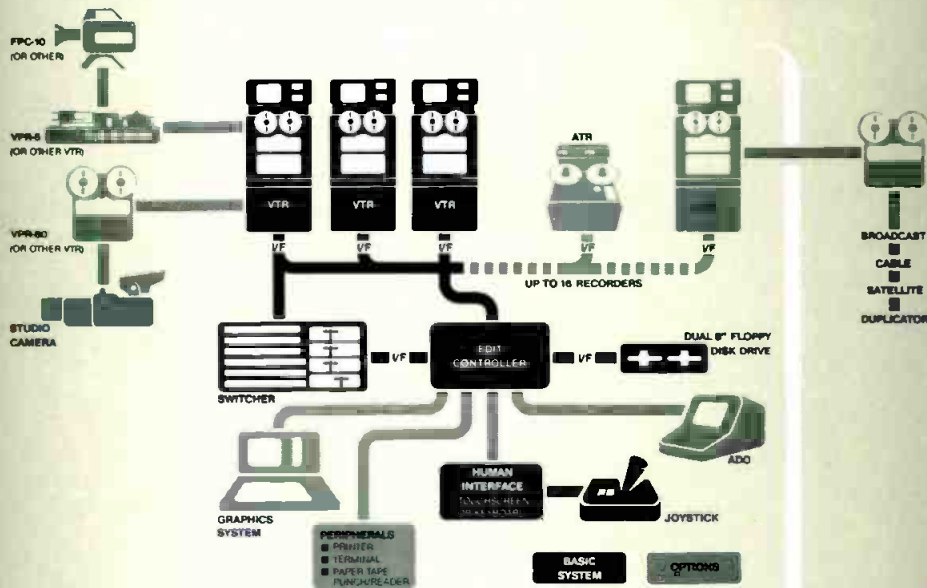

It starts with the Ampex Sales Engineer you may call to explain how a Creative Command Center can fill your individual needs. He and your Ampex Service Engineer will work with you as your system is installed and checked out. They and all the other support people at Ampex in Spares, Technical Support, Training and Technical Documentation will be there when you need them, wherever you are.

Obviously, there's much more that you need to know about an Ampex Creative Command Center than we can tell you here. Your Ampex Sales Engineer is just the person to give you that information. Ask him to tell you everything you want to know.

What Our Customers Are Saying About Us and the Creative Command Center.

- "With ACE, I can put more creative energy in my work with peace of mind. I don't have to worry about technical problems."
- "ACE is really an awesome editor. And the *system* is even more awesome than ACE alone."
- "The thing I'm most impressed with is the Ampex software and how user-friendly it is."
- "We purchased the Ampex equipment as a system, rather than stand-alone products, because we believed Ampex's innovative power can be most effectively demonstrated in the total system."
- "Interface on all equipment was a key factor in our decision to purchase a full ACE system. We wanted a single source."
- "In 20 working hours, we went from an empty room to an ACE system in full operation. That's due to the basic quality of the Ampex equipment and the use of the RS-422 buss."
- "We've gotten good support from both Ampex sales and service. They seem to be interested in what we're doing and what we think."
- "We've been with Ampex for 11 years. We're a small company; we need the support of a large manufacturer."

Ampex ACE Post-Production System

The Ampex "Creative Command Center" featuring ACE joystick control is a sophisticated post-production editing system offering many outstanding advantages including: hardware and software components tailored to user applications, extremely fast system speed, field-proven reliability, compatible software, easy interfacing, expandability, and single-source spares and service worldwide.

At \$14,750, the totally new Chromafex 766 brings special effects within reach of every budget.

Posterize. Compress. Invert. Position. Slide. These microcomputer controlled special effects, and many more performed by the expensive image processors, can be yours in the Chromafex 766. That's right. Outstanding special effects. And for only \$14,750.

There's more. The 766 also includes time base correction and frame store capabilities with infinite window performance along with freeze frame and two full fields of memory. Drop out compensation will clean up the noisiest

of tapes. Perfect for remotes, it consumes only 85 watts of power.

Chroma Digital Systems has the engineering, manufacturing,

**CDS****Chroma Digital Systems**

marketing and service expertise, drawn from years of experience in the television equipment industry, to provide you with the support you need now and in the future.

And the Chromafex starts you with the most attractive SFX price/performance package anywhere.

If you have a problem with the high cost of SFX, we've got the solution. Chromafex 766. High priced effects. Affordably priced.

April 1984 *Broadcast Engineering* 115

With low key lighting, differential lag can be a problem. AmpereX Plumbicon tubes with built in bias light increase the speed of response of the layer, and lag is virtually eliminated.

Comet tailing and loss of detail in highlights are minimized by using the AmpereX patented Diode Gun or anti-comet tail (ACT) tube. Both solve this problem by providing high beam current to stabilize highlights.

High audio levels can produce the annoying problem of microphonics. AmpereX attacked this at its source, and all AmpereX Plumbicon tubes have a unique mesh designed to prevent the build-up of mesh vibrations—not just to dampen them.

Six of TV's toughest shots and how

the problem of image retention. By examining layer physics and semiconductor properties Amperex developed a new extended red layer. Now you can include brilliant reds in your scene without concern for image retention.

Low output capacitance Amperex Plumbicon tubes help maintain high signal to noise performance. This helps prevent loss of detail and increased video noise in low light areas of high contrast scenes.

Because of special photoconductive layers for each color and an optimized electron optics design, the Amperex Plumbicon provides the highest resolution for each image format. This resolution is measurably higher than earlier tubes.

Amperex Plumbicon® camera tubes handle them.

Ordinary pick up tubes can handle ordinary TV shots. But when you have to contend with low light levels and bright highlights... the glare of reds and the blare of trumpets... you need the extended performance of Amperex Plumbicon camera tubes.

Amperex invented and refined the pick up tube technology that makes it possible to handle the 6 toughest shots in TV. Since the original Plumbicon cameras were introduced, your business has become more competitive, more demanding. Camera designs have become more complex. That's why we continued to invest in improving the performance of the Plumbicon. That's why we offer today's range of extended performance Plumbicon tubes.

Today, virtually every TV camera system— domestic or imported—is designed to use the Plumbicon tube. And that makes the handling of the toughest shots in TV very easy. Simply specify Amperex Plumbicon pick up tubes.

For more information call or write Amperex Electronic Corporation, Slatersville Division, Slatersville, Rhode Island 02876. (401) 762-3800. Made in Rhode Island, U.S.A. Delivered to you in twenty-four hours or less.

WIRELESS COMMUNICATION SYSTEMS

- Continuous hands-free communications.
- Full duplex operation (talk and listen simultaneously).
- Unlimited system configurations with easy operation.
- VHF/UHF high band operation for less interference and noise, more reliable operation.
- Safe for hazardous environments.
- Interfaces to wired intercom systems and TELCO lines.
- Meets applicable government standards—NASA proven on the space shuttle.

The Swintek Mark 200 is the world's finest and most reliable wireless intercom system. It's simple to operate and exceptionally dependable utilizing the same technology as our systems used on the Space Shuttle. Each system is designed to meet your specific requirements using standard, fully tested, precision Swintek electronic components that are protected by rugged, industrial grade, all metal cases.

Presenting the Major Maintenance Tool for Dynair's Series 10 Switch

Right. A feather duster.

We first placed the Series 10 audio/video switching systems in the field four years ago. Today, most are still maintenance-free. Unless, of course, you count dusting the buttons.

Nobody's perfect. But we're close.

In fact, this solidly reliable, solid-state Series 10 switching system is virtually transparent to broadband signals. And the specifications we publish are not "typical" or best case. They are guaranteed, off-the-shelf minimums.

Study them. Then consider your installation. The Series 10 uses a single coax cable for control. That's only one economy.

Compare the cost effectiveness:

- The Series 10 switches both standard and high definition signals.
- A 72-hour battery protects the memory.
- The "in use" status of each channel is constantly displayed.
- Up to four levels of switching are available, including video and multiple video, audio and multiple audio, audio-follow-video and time code.

The Series 10 is also flexible.

Select local or remote control. Panel or desktop operation. Or both. You can start with a single level, then add levels and controls with ease.

All this, and it's almost maintenance free. Ask us for a specification booklet.

Feather duster optional.

DYNAIR

The New Garner 1400

The high-energy tape eraser that outperforms
every other eraser on the market.

The revolutionary coil design of the Garner 1400 makes it the superior high-energy 1-inch tape eraser on the market. Independent tests prove it:

Depth of Erasure:

No eraser can match the Garner 1400's minus 90 db. erasure of a heavily saturated 14-inch reel of 1-inch high coercivity tape.

Speed:

It is no contest. The 1400 erases high-energy tapes completely in less than 16 seconds. Other erasers take four times as long.

Ease of Operation:

No one beats Garner 1400's ease of operation. Just touch the "on" switch and place the tape on the conveyor. There are no drawers, no spindles, and no height adjustments.

Dependability, Guaranteed

For over 12 years, Garner has set the standard for tape erasers. Just one look at the rugged construction of the Garner 1400 shows you why. Garner is so confident of the 1400's quality that it's backed with a 2-year warranty.

The Garner 1400...designed to meet the
highest standards of the industry...yours.

"Microdyne's satellite radio network gives us better signal quality and saves us over \$120,000 a year."

Paul Stone, General Manager, Georgia Radio News Service

Reduced costs – fast payback

State and regional networks need all the money they can save. That's why the Georgia Radio News Service installed a Microdyne SCPC satellite radio network system.

They found that it reduced monthly distribution costs 80% while improving signal quality.

At Microdyne we manufacture nearly everything in the system, from the precision-molded 5-meter uplink antenna . . .

Where the network once paid 12,000 a month for land lines to feed their 105 affiliates, they now lease a 0-dBW carrier on Westar IV for about \$2,000 a month. That results in savings of \$120,000 a year.

"We expect a fast payback on

the equipment," General Manager Paul Stone adds.

Greater programming flexibility

But lower costs and superior performance aren't the only advantages of a Microdyne radio network. Our system is frequency agile and has an optional bandwidth selection feature that lets you change formats when you change channels.

That means you can receive any of the many radio programs now being carried on a single satellite. And that gives you more programming options and greater flexibility.

Turnkey systems

At Microdyne we manufacture nearly all of the components that make up a satellite radio network, from the uplink antenna to the downlink demodulator. And we not only design and build custom systems, we can also manage the complete instal-

lation. So all you have to do is tell us what you need and when you need it.

. . . to the rack-mounted downconverter and unique bandwidth selectable, frequency-agile demodulator that lets you change formats when changing channels.

And of course all of our products are backed by our 48-hour repair or replacement policy and our 24-hour toll-free number for emergency engineering support.

Let us custom-tailor one for you

If saving thousands of dollars a month while improving performance appeals to you, call our Marketing Department at the number below. Ask for our free brochure on satellite radio systems. It could brighten your budget for years.

Introducing a high-performance mixer with a personality all your own.

The Ramsa WR-8616.

RAMSA
Audio Mixer WR-8616

Inside every engineer is the desire for more creative control at the board.

Now there's a post-production/recording mixer designed to make your sessions sound more like you. And less like everybody else's. The Ramsa WR-8616. And its modular design is as ambitious as your needs.

You can have 16 channels of either full stereo or mono modules. Or a combination of the two.

The WR-8616 will also save you valuable time. By letting you simultaneously monitor up to 16 channels on a multi-track machine while recording.

What's more, two discrete mixes give you full monitoring capability, which can be independent from the control room's mix.

And in the mixdown, you'll have access to all 16 inputs without having to repatch or reset the board.

You'll also find the 3-band continuously variable input EQ will give you more precise control over the highs, midrange and lows. And the six-channel remote start/stop capability lets you program materials using turntables, or tape and cart machines.

To make the WR-8616 even more compatible, we've given it a dual set of meters. Eight LED bar graphs will monitor the 16 input signals. While the six VU meters handle the Master, Group, Send, Echo outputs and Solo level.

And the balanced Mic and Line inputs and Main outputs won't let any unwanted noise come between you and your sound.

The Ramsa WR-8616. A post-production/recording mixer designed to treat you like an individual.

SPECIFICATIONS:

- Frequency Response: 20-20,000Hz, ± 0.5 dB / ± 2.0 dB
- ± 4 dBm, 600 Ohm Line Input and Output Signal Levels
- Noise: -128 dB (IHF "A" WTD, 150 Ohm)
- THD: 0.05% typical at 1kHz, ± 20 dBm
- CMRR: Greater than 80dB typical

Please send me more information about the Ramsa WR-8616.

LEADERS ARE ALWAYS FOUND AT THE TOP

AND YOU'LL FIND MARK ANTENNAS AT THE TOP OF THE WORLD.

Mark antennas are at work right now—not only throughout the world—but at the very top of it. You'll find them on the peaks of the world's highest mountain, Mount Everest. And also atop the world's tallest twin buildings, the World Trade Center.

Scaling such heights is the mark of a champion. And that's true of Mark Antennas.

It took over 30 years of innovative design and engineering, careful quality control, and superior long-lasting performance—backed by reliable on-time delivery—to get them where they are. And to keep them there. On top.

MARK STEERABLE ANTENNAS

The Mark 5 meter hydraulically steerable antenna system is the only one of its kind. Covers the entire geostationary arc with no change to mount members. Meets 2 degree requirements with Scalar feed. Repositioning rate of 1 degree per second. Standard control has 20 programmable positions plus one position for manual override.

ANIXTER-MARK

MANUFACTURERS OF A FULL LINE OF POINT-TO-POINT ANTENNAS.

Test & Measuring
Instruments

PHILIPS

FROM THE INVENTORS
OF THE PLUMBICON TUBE

Objective Color Monitor Balance

At last, a practical solution to the age-old problem of color balancing your picture monitors—the PM5539 color analyzer.

Working directly off the screen with three color-sensitive photodiodes, the PM5539 gives you quick and easy readings of the three primary colors—separately or simultaneously—referred to a previously-set white standard.

This means that in a matter of minutes every color monitor you need to watch can be set up to have the

same color temperature and intensity.

Once the PM5539 matches all your monitors, you'll see all the difference in the world. The PM5539 is the quantitative way to eliminate the qualitative "calibrated eye-ball."

For nationwide sales and service information call 800-631-7172, except in Hawaii, Alaska and New Jersey. In New Jersey call collect (201) 529-3800, or write Philips Test & Measuring Instruments, Inc., 85 McKee Drive, Mahwah, NJ 07430.

Color temperature should normally be adjusted at both high and low light levels. Balance of the three primary colors should track at the "grey" levels in between. To facilitate "grey scale tracking," the PM5539 has a wide sensitivity range (1 to 300 NIT's full scale).

- 64dB (68dB S/N) STEREO Master Fader at maximum and one CH STEREO level control at nominal level.
- 80dB (70dB S/N) ECHO SEND volume at maximum and all CH ECHO volumes at minimum level.
- 75dB (65dB S/N) ECHO SEND volume at maximum and one CH ECHO volume at nominal level.

CROSSTALK

- 70dB at 1kHz: adjacent Input.
- 70dB at 1kHz: Input to Output.

MAXIMUM VOLTAGE GAIN (INPUT GAIN "-60")

PGM	74dB: MIC IN to PGM OUT.	ECHO	70dB: MIC IN to ECHO SEND.	
	24dB: TAPE IN to PGM OUT.		C/R	74dB: MIC IN to C/R OUT.
	34dB: ECHO RETURN to PGM OUT.			24dB: 2 TRK IN to C/R OUT.
	14dB: PGM SUB IN to PGM OUT.	STUDIO	74dB: MIC IN to STUDIO OUT.	
STEREO	74dB: MIC IN to STEREO OUT.		24dB: 2 TRK IN to STUDIO OUT.	
	24dB: TAPE IN to STEREO OUT.			
	34dB: ECHO RETURN to STEREO OUT.			

CHANNEL EQUALIZATION

± 15 dB maximum

HIGH: from 2k to 20kHz PEAKING. MID: from 0.35k to 5kHz PEAKING. LOW: from 50 to 700 Hz PEAKING.

HIGH PASS FILTER - 12dB/octave cut off below 80Hz.

OSCILLATOR Switchable sine wave 100Hz, 1kHz, 10Hz

PHANTOM POWER 48V DC is applied to XLR type connector's 2 pin and 3 pin for powering condenser microphone.

DIMENSION (W x H x D) 37-1/2" x 11" x 30-1/4" (953 mm x 279.6 mm x 769 mm)

Hum and Noise are measured with a -6dB/octave filter at 12.47kHz; equivalent to a 20 kHz filter with infinite dB/octave attenuation.

*0dB is referenced to 0.775V RMS.

• Sensitivity is the lowest level that will produce an output of -10dB (245mV), or the nominal output level when the unit is set to maximum gain.

• All specifications subject to change without notice.

The specs speak for themselves. But they can't tell you how natural, logical and easy the RM1608 is to work. All the controls and switches are logically arranged to help you get the job done quickly and accurately.

And in the tradition of Yamaha's sound reinforcement mixers, the RM1608 sets new standards of reliability as well as ease of operation. For complete information, write: Yamaha International Corporation, P.O. Box 6600, Buena Park, CA 90622. In Canada, Yamaha Canada Music Ltd., 135 Milner Ave., Scarborough, Ont. M1S 3R1.

WCCO puts its state-of-the-art equipment in Emcor's state-of-the-art enclosures.

WCCO-TV in Minneapolis/St. Paul has been a leader in broadcasting for many years and its new broadcast center is one of the finest in the industry. When it came to housing their equipment, the WCCO engineers chose Emcor enclosures.

Emcor is also a leader in its field, meeting the needs of broadcasters with high quality enclosures. Choose from six distinct product lines and more than 9,000 standard items. For those who need it fast, Instant Emcor is ready to ship in five working days. In addition to standard products, we manufacture modified designs for special needs.

Call us today with your requirements.

**Adda, Ampex,
Harris, and Quantel
all make excellent
Still Stores.
But more and more
the choice is Harris.**

1 Harris' new IRIS Composition Station (ICS) solves your video production problems with these exclusive features:

- Compression and Positioning
- 2X expansion
- Variable size
- Infinite border and background color
- Soft border capability
- H & V inversion
- Cut-and-paste
- Removable memory modules
- Single joystick control

Adda doesn't. Ampex doesn't. Quantel doesn't.

The ICS is sophisticated enough to complement an artist's imagination, yet simple enough for use in the hectic pace of on-air production. And it's based on Harris' new *four frame* synchronizer, the 650.

Here's why.

2 Harris' IRIS II offers you simultaneous access by up to six users, without costly networking of separate systems.

Adda doesn't. Ampex doesn't. Quantel doesn't. Now when you want to expand, you can—cost effectively. Your system can grow just by adding inexpensive user stations.

3 IRIS II lets you title stills from each user station.

IRIS II gives you character generation with multiple fonts. It lets you title stills directly from *each* user station without tying up expensive character generation equipment.

4 IRIS II solves your still sorting and locating problems with an integral library.

In fact, IRIS II offers the most powerful search routines of *any* still store. Its library is also accessible by each user station, and has a capacity of over 80,000 stills.

5 Problems with identifying stills are eliminated.

You can get complete information on *all* the stills in your list, with full description, date, sequence, and I.D. information.

You also have the power you need to manipulate list order through addition, deletion and change of position. And, you can also link and loop your lists.

6 IRIS II gives you the storage flexibility you need for future planning.

IRIS II interfaces with the largest variety of storage drives of any still store. Several types of fixed and removable drives give you the capability of over 17,000 on-line stills. No other still store offers this flexibility. Period.

We think you get the idea. *We build the most powerful, and the most flexible, still store there is.* Whatever your business, if your problem is storing and manipulating video images, the best choice is the Harris IRIS II.

For more information about this superior solution to your video problems, call Dave Fabian, Product Manager at (408) 737-2100, or contact **Harris Studio Division, Video Systems Operation, 1255 E. Arques Avenue, Sunnyvale, CA 94086 Telex 4992172**

THE RADICAL SOLUTION

Efficient press feeds. When your facility hosts the electronic press you need the Radical solution, the M-18 press mult box.

One mic feeds entire press. The M-18 features two inputs and 18 outputs each with the option of mic or line level on either industry standard XLR or 1/4" phone jacks for maximum versatility.

Clean press feeds. Each of the 18 outputs are fully transformer isolated and driven by individual buffer amps. A built-in, calibrated tone oscillator allows all outputs to be set at standard levels.

Tough, portable. A rugged, aluminum industrial case houses the M-18 assuring portability and efficient set up.

The M-18

The Radical solution to a pressing problem.

Call or write today for detailed information.

New Standards

The Widest Angle, The Highest Performance

Canon engineers have done it again, advancing the optical state-of-the-art so far forward that new standards must be considered.

The Canon P18 x 15 BIE offers the widest angle of any broadcast television zoom lens: 59° plus incredible edge-to-edge sharpness, fidelity and sensitivity throughout its 18X range.

Every one of these superb lenses will be supplied with both 1.5X and 2X built-in extenders and a pattern projector. Options include manual, semi-servo or full servo operation.

The Canon P18 x 15 is the most versatile studio lens ever made, setting new standards for years to come.

P18 x 15 BIE F2.1 for 30mm Cameras*

KEY SPECIFICATIONS

- Focal length: 15-270mm
- Max. Relative Aperture: 1:2.1 (15-218mm)
- Aperture: 1:2.7 at 270mm
- Angular Field of View: 59° x 45.8° at 15mm
- View: 3.6° x 2.7° at 270mm
- Minimum Object Distance: 0.6 meter (2 feet)

*Also available: PV18 x 11 BIE F1.6 for 25mm Cameras

Finally! A radio automation system for under \$5,000

- State-of-the-Art Ingenuity at Off-the-Shelf Prices.
- \$4,900 buys everything you need to operate your present live equipment. You get a Commodore™ 64 computer with the Automate-64 operating system on a plug-in ROM cartridge, a Commodore™ Datasette recorder, a Zenith™ Data Systems monitor, a 3"-high rack-mount interface unit, interconnecting cables, plus easy to understand installation and operating manuals. Low-cost printers and disk drives are optional.
- The Automate-64 system is easy for EVERYONE in your station to learn to use because you converse with it in English.
- No compromising of your format. You can air satellite networks, syndicated programming, or locally-produced music tapes, using almost any playback equipment.

The true measurement of success

If your business relies on precise audio reproduction, the Advantage 310 insures your success. Our Audio and Noise Level Meter is a low cost, high quality, measurement device capable of delivering greater accuracy than that achievable with more expensive general purpose equipment.

The features of the Model 310 are tailored for audio test and troubleshooting. It offers:

- Isolated, balanced, Trans-Amp™ differential inputs
- 10 Hz to 100 kHz "wide band" filter
- 20 Hz to 20 kHz multiple pole filter
- 400 Hz to 20 kHz multiple pole filter
- "A" weighting filter
- CCIR weighting filter
- Three detector response modes: Average, Peak, RMS
- Large, easy-to-read, dual scale analog meter
- Full scale range select
- Detector output
- Preamplifier output return

Want to hear more? Put the Advantage in your corner!

Optimod / op'-tə-mod /

Op-ti-mod *n* [►Early Orbanian; deriv. of *optimum modulation*]

1. A broadcast audio processor built by Orban Associates to the highest standards of quality and reliability, incorporating patented circuitry to achieve a cleaner, brighter, louder airsound.

2. OPTIMOD-AM, Model 9100A; a high fidelity stereo or mono processor which achieves extraordinarily natural audio quality along with high loudness, remarkable source-to-source consistency, and FM-like brightness.

3. OPTIMOD-FM, Model 8100A/1 compressor/limiter/stereo generator; the industry's dominant choice for optimum FM processing, with or without the optional Studio Chassis and Six-Band Limiter Accessory Chassis.

4. OPTIMOD-TV, Model 8182A; a stereo processor that brings TV audio processing into the '80's by combining Orban's artifact-free multiband gated compressor with our clean "Hilbert Clipper" peak limiter and the commercial-taming CBS Loudness Controller.

5. OPTIMOD; a registered trademark.

PRE-WIRED JACKFIELD

In front...

Your engineering staff has more important things to do than soldering patch panels. That's why you'll find a big advantage in ADC's 100% pre-wired Pro-Patch™ jackfields and Ultra-Patch™ panels. Featuring ADC's new split cylinder contacts, these units allow for fast, reliable, hassle-free installation.

Fully assembled, computer tested and ready to hook up, Pro-Patch and Ultra-Patch completely eliminate labor intensive soldering or crimping operations.

In fact, hooking up to the back of a Pro-Patch unit is

Pro-Patch jackfields and Ultra-Patch panels cut installation time from hours to minutes and allow circuit or normaling configuration changes in seconds.

almost as easy as plugging into the front. Just a push on a special hand tool bares a wire, locks it into a split-cylinder contact inside an insulated

housing and trims off excess length.

Since their introduction last April at NAB, Pro-Patch jackfields and Ultra-Patch panels have appeared in virtually every segment of the Broadcast industry.

READY TO PLUG IN.

and back.

ADC's unique split-cylinder system features contacts that will accept 22, 24 or 26 AWG solid or stranded wires. The cylinders are housed in plastic insulating modules and are recessed to virtually eliminate shorting at the contacts. Both sides of the contact have two-wire capability providing for four gas-tight terminations per contact. The cylinders are also rated for a minimum 100 cycles and are easily replaceable. Triple strain relieving is provided on all units.

Pro-Patch and Ultra-Patch — as well as many custom configurations incorporating the split-cylinder contacts — are fast setting the stage for a new industry standard of wire termination.

For more information on these truly state-of-the-art audio patching systems — or our over 300 other standard audio and video patching systems — write or call ADC Magnetic Controls Co., 4900 West 78th Street, Minneapolis, Minnesota 55435, (612) 893-3000.

Custom orders welcome.

ADC Magnetic Controls Co.
4900 W. 78th St., Minneapolis, MN 55435

Be sure to visit us in Booth 1320 at the NAB show, April 29-May 2, in Las Vegas.

LIGHTNING BARRIER™

See LEA at NAB
in Booth #302

Ⓟ Patented

100% LIGHTNING STRIKE PROTECTION. GUARANTEED.

You name it, LEA protects it.

Broadcast towers, buildings, power lines, plant sites, tank farms, substations, water towers, radar installations, missile launch pads...any application.

LIGHTNING BARRIER Dissipation Array Systems from LEA bleed off and control high energy electrostatic buildup between the clouds and the ground.

LIGHTNING BARRIER Dissipation Array Systems take full account of differences in structure size and height, storm patterns, altitude, and Keraunic Number.

And LIGHTNING BARRIER Dissipation Arrays are storm activated, so there is no power consumption.

No conventional lightning rod approach can possibly give you the protection that LEA'S LIGHTNING BARRIER Dissipation Array Systems provide.

So strike back at lightning. Get complete details today from LEA, Inc., a Dynatech Company, 12516 Lakeland Road, Santa Fe Springs, California, 90670 (213) 944-0916, TWX 910-586-1381.

LEA LIGHTNING BARRIER. Typical Hemispherical Dissipation Array in use at a broadcast site.

BUICK IS ROLLING WITH MOTOROLA C-QUAM AM STEREO!

GM's Buick division is the first domestic automaker to offer AM Stereo radios.

Delco single-system radios, using the Motorola C-Quam[®] decoder integrated circuit, will be introduced in selected 1984 models.

But one of the most enthusiastic responses to this news came from a man who isn't even a Buick dealer. He's Tom Cassetty, General Manager of WSM, Nashville. "I heard the Delco playing C-Quam AM Stereo at the National Radio Broadcasters meeting in New Orleans, and I was really impressed. The sound was terrific! If they'd been playing WSM, I never would've gotten out of the car!"

If your station had the choice, wouldn't you really rather be heard in the new Buicks? You can be. Just call Dick Harasek at (312) 576-2879, or Chris Payne (202) 862-1549.

MOTOROLA AM STEREO. THE WINNING SYSTEM.

Now the **CHYRON®** RGU-2

for
under
\$20,000.

Now's the time to buy a brand new, latest model CHYRON RGU-2 graphics and tilting system at a price that's hard to resist.

The high-quality RGU-2 provides many of the most-wanted features of the industry-standard CHYRON IV: unsurpassed character resolution of 27 nanoseconds...programmed graphics animation...color for background and text on a character-by-character message basis (with the optional CHYRON Color Encoder)... a versatile multi-font library... automatic color/font change...64 color choices...and much more.

With the optional Channel Control Module, mixes, wipes and fades are available at the touch of a key.

Operation is flexible and uncomplicated. Just load a software program and automatic instruction displays appear on the monitor to provide an interactive communications channel between operator and RGU-2.

So, don't delay. There may never be a better time to buy the character

generator that offers most of the features found in units costing twice as much—the CHYRON RGU-2.

WITH OUR VERSATILE 'DUAL-TRUCK' VIDEO REMOTE PRODUCTION SYSTEM, YOU CALL THE SHOTS!

Take one. Or take both. Go just about anywhere a car can go, and park with ease. Join them together in various configurations. Or split them apart. Either way, our unique dual-truck system—featuring a self-contained electronic production truck and a control room truck—is more versatile and cost-efficient than any comparable system on wheels.

Designed to suit the difficult terrain and environmental conditions of the Mountain States, our system provides the same production capabilities as much larger, conventional tractor/trailer rigs. With enough flexibility to cover anything from small, low-budget shoots to full-blown sports events and concerts.

We can supply experienced crews and customized, cost-efficient equipment packages on a step-scale basis. Choose from broadcast-quality Sony ENG/EFP cameras, recorders and monitors, to sophisticated time code and character generators, switchers, intercoms, audio mixers, etc. And for back-up, we offer our extensive inventory of video and film rental equipment: power supplies, lighting and grip equipment, camera prompters, camera support equipment (including Steadicam), etc. All serviced by our own experienced technicians.

So go ahead and rent just what you need. That's all you will be paying for.

AM Stereo Without Compromise

C-QUAM[®] AM Stereo System by Delta Electronics, Inc. FCC Type Accepted

Delta Electronics, Inc. introduces the ASE-1 AM Stereo Exciter and ASM-1 AM Stereo Modulation Monitor: FCC type-accepted C-Quam System transmission equipment for the AM Stereo broadcast market. C-Quam is the *Compatible* Quadrature Amplitude Modulation system developed by Motorola, Inc. C-Quam is the system of choice for more than 70 U.S. stations plus additional Canadian stations. Users range from kilowatt day-timers to full-time network flagships. These stations report enthusiastic response from listeners using multimode and full C-Quam stereo receivers as well as typical monophonic receivers. The key is compatibility without compromise. All listeners, stereo and mono, receive a clear signal with low distortion. Delta's twenty-year leader-

ship in the field of broadcast instrumentation solidly backs this technological advance.

The proliferation of receivers from GM's Delco Electronics, Inc., MacIntosh Labs, Sherwood Electronics, Chrysler Corporation, Concord Electronics, Samsung Electronics and others not yet announced, is creating a sizeable C-Quam audience. With the outstanding performance of this equipment, you can be sure that the audience will *stay* tuned to your Delta C-Quam AM Stereo transmission system.

For additional information, contact Bob Bousman at (703) 354-3350.

C-QUAM is a registered trademark of Motorola, Inc. Manufactured under license from Motorola, Inc.

the Sound Solution

HIGH PERFORMANCE

Video Equalizing Amplifier VEA-662

\$265.00

This wideband, six-output amplifier is the latest addition to our comprehensive line of distribution equipment. It features differential input, soft backporch clamping and easily set, continuously variable equalization from zero up to 300 meters (1000 feet) of Belden 8281 or equivalent coaxial cable. Delay trim and common mode hum null controls are also provided. A unique feature of this ultrastable, low power amplifier is a removable sub-module which contains the operational controls for gain and equalization. This allows instant, adjustment-free amplifier substitution.

soft backporch clamping and easily set, continuously variable equalization from zero up to 300 meters (1000 feet) of Belden 8281 or equivalent coaxial cable. Delay trim and common mode hum null controls are also provided. A unique feature of this ultrastable, low power amplifier is a removable sub-module which contains the operational controls for gain and equalization. This allows instant, adjustment-free amplifier substitution.

Here are some prominent SPECIFICATIONS

Input

Return loss > 54 dB to 5 MHz
 > 46 dB to 10 MHz
 Common mode rejection . > 60 dB to 1 kHz

Outputs

Return loss > 40 dB to 5 MHz
 > 36 dB to 10 MHz
 Output isolation
 Signal (3.58 MHz) > 48 dB
 Load < 0.05 dB/load at 10 MHz
 < 0.15°/load at 3.58 MHz
 Output DC < ± 25 mV at back porch

Timing

Delay 25.4 ns (32.7° at 3.58 MHz)
 Adjustment range typically 6° at 3.58 MHz

Power Requirements

Total power
 dissipation < 2 W

Performance

Frequency response < ±0.02 dB to 5 MHz
 < ±0.1 dB to 10 MHz
 +0 -0.2 dB at 15 MHz
 typically -0.6 dB at 20 MHz
 Differential phase < 0.1° 10% to 90% APL
 Differential gain < 0.2% 10% to 90% APL
 H tilt < 0.25%
 V tilt < 0.25%
 S/N ratio > 70 dB to 20 MHz
 (rms noise/0.714 V)
 unweighted

Equalization

Range 0 - 300 m (0 - 1000 ft)
 Belden 8281, Northern
 Electric 728, or equivalent
 Response < ±0.05 dB to 5 MHz
 < ±0.15 dB to 10 MHz
 typically -0.2 dB at 15 MHz
 typically -1.0 dB at 20 MHz

If you're a Decision Maker, here's an easy one:

REQUIREMENTS	YOU COULD PAY	HARRIS 632
Digital noise reduction	\$ 9,000	Included
Digital keying	7,500	"
Picture compression/position	18,000	"
Frame synchronization	12,000	"
Time base correction	10,000	"
Remote control	5,000	"
	<u>\$61,500</u>	<u>\$27,990</u>

OK, what will it take to get the job done?

The Harris 632 Series image processing system. It gives you a combination of signal processing capabilities and features that will add versatility to your studio, and imagination to your productions.

And at less than half what you could spend on separate pieces of equipment.

So, if you're trying to get a job done and stay within a budget, the *component-coded* 632 (for NTSC) or 631 (for PAL) may just be the right answer.

Try a 632. Then try to be without it.

For information contact: **Harris Studio Division, Video Systems Operation, 1255 E. Arques Avenue, Sunnyvale, CA 94086 (408) 737-2100**

OUR ENHANCER DOES MORE THAN YOU THINK

suppression to reduce noise in dark areas

- Split-screen mode allows side-by-side comparison of enhanced and unenhanced video.

- Special video output consisting of enhancement signal with 50% setup and sync
- Price: \$1295

Also note that the Vidicraft H & V

image enhancer is constructed

Before you judge our horizontal and vertical image enhancer solely by its moderate price, consider its features... some of them unusual:

- 4.5 MHz bandwidth, 2H-type vertical enhancement, plus horizontal aperture correction and detail enhancement, optimized for 1/2" & 3/4" formats
- Adjustable coring to suppress overall enhancement noise
- Adjustable enhancement-

- Loop-through video input with switchable 75 ohm termination
- Four video outputs
- Unique one line vertical chroma registration switch
- Enhancement signal gating and white/black level clippers to prevent picture tearing or recording level shifts caused by over-enhancement

for stand-alone or 1 3/4" rack-mount use. It is available in 120V or 220V, NTSC or PAL (4.43 MHz)/SECAM versions. For complete information or to order call 800-547-1491.

EVEN THE HAIRIEST SITUATION CAN'T SHAKE UP THE FIRST 3-CHIP CAMERA.

Some gripping news from NEC: the ENG camera has come of age. Our new SP3 packs so many features into 7.3 lbs., it's a small wonder.

With three CCD chips instead of tubes, the SP3 can take all the abuse your crew dishes out, and never needs registering. It produces broadcast quality pictures with over 500 lines of resolution. And better still, you can use it with any format — VHS, Beta,[™] or 3/4 inch.

To find out more about the SP3, the most newsworthy camera around, call NEC at 1-800-323-6656. In Illinois, call 312-640-3792.

ONE NEW MONITOR FOR BOTH

Your choice of input displays (A, B, Test or RGB) is only one of many advanced features in the new Conrac 6200 master video monitor. A simple front panel switch lets you use the same monitor to display computer graphic images or live action shots.

The Conrac 6200 is the first in-line monitor with full broadcast features that meets the demanding requirements of Class 1 performance levels. That includes Conrac's best-yet white field and brightness uniformities, consistent Colormatch™ phosphors, switchable comb filter and notch filter chroma separators and status indicator lights that reduce trouble-shooting time to almost nothing.

KINDS OF ACTION.

And all this at prices under \$5000 list for a full 19-inch cabinet model, \$4675 list for 13-inch CRT models.

With the introduction of the 6200, Conrac continues its 37 year commitment to providing the highest quality professional monitors for technical and artistic evaluation of broadcast picture quality.

For Conrac 6200 Technical Specifications, use the Reader Service number or call Conrac Marketing Communications at (213) 966-3511.

Contact Conrac Division for a full color reproduction of this illustration which is suitable for framing.

Clear-Com Gives You...

...a Choice!

For more information, call or write:

1111 17th St. / San Francisco, CA 94107
415-861-6666 / TWX: 910-372-1087
EXPORT DIV.: Box 302
Walnut Creek, CA 94596 / 415-932-8134
Telex: 176340 CLEAR-COM WNCK

In this demanding industry so abundant with incompatible formats, Clear-Com presents TWO barrier-breakers: a 2-channel belt-pack that works on standard mic cable and a Clear-Com-to-RTS System Interface!

Our CP-300 Two-Channel Belt-Pack is not only a high-intelligibility Clear-Com Remote Station, but it also provides the same pin-to-pin connections as RTS-type intercoms with *better performance*.

Ergonomically, the tough, lightweight CP-300 has been designed for camera operators and production people. Dynamic or carbon headset-compatible, it features rocker switches that place Clear-Com's popular features at your fingertips. Three-pin XLR input and output connectors allow simple, quick set-up.

The CP-300 works with any Clear-Com or RTS System. You decide: do you want one channel or two? Finally, you can enjoy two channels of communication in an RTS-type OR Clear-Com-type* intercom system.

The choice is yours!

*two channels when used with Clear-Com TW-12 two-wire interface

IN SATELLITE RADIO EQUIPMENT ... **MODULATION ASSOCIATES IS THE LEADER**

- The **SU 10** is the first completely portable SCPC solid state satellite uplink. It allows any earth terminal in a network to become a transmitting station for news collection, for regional program uplinking to the network, or for data transmission.
- The **R SAT** is the first optimized SCPC satellite receiver specifically designed for state and regional networks. There are more R-SAT's in operation in regional networks than any other system.
- The **DATA-SAT** is the first receiver designed for reliable, low cost point-to-multipoint reception of 56 kbs data over satellite links. It allows affordable high speed data reception of weather, financial, commodity, and other broadcast data information to multiple users from a common originating uplink.
- The **MC-SAT** (Multichannel) can accommodate any combination of wideband or optimized SCPC audio and/or data demodulators along with an extensive line of multiplex and downconverter options. Its expansion capabilities make the MC-SAT the affordable choice of many networks.

MODULATION ASSOCIATES is the pioneer and leader in state-of-the-art satellite technology. Let the satellite network experts help you with your complete satellite package, including:

- Hardware
- Space Segment
- FCC Licensing
- Installation

**50
YEARS**

EXCELLENCE

EIMAC

1934-1984

Supporting Broadcasting for 50 years

50 years of quality and dependability from Varian EIMAC.

EIMAC's tradition of high quality and dependability was firmly established in 1934 and continues on in 1984. Stringent manufacturing standards and controls, plus EIMAC's exclusive, long-term warranty reduces transmitter downtime and eliminates excessive operating overhead.

EIMAC backs its quality products with the industry's most comprehensive warranty program:

Warranty time for each EIMAC tube type is specified in writing and runs from the industry standard of 1,000 hours or 12 months to as high as 10,000 hours and 24 months.

Specific warranties for some popular tube types are:

4CX5000A 10,000 hours/24 months
4CX10,000D 10,000 hours/24 months

4CX15,000A 10,000 hours/24 months
4CX35,000C 10,000 hours/24 months
3CX2500A3 5,000 hours/12 months
4CX1500A 5,000 hours/12 months
5CX3000A 5,000 hours/12 months

Fourteen other EIMAC types have these extended use-time warranties. Specific warranties for each tube type are available from the Varian EIMAC worldwide sales organizations.

In all cases, EIMAC tubes are 100% warranted to be free of manufacturing defects. And, don't forget, EIMAC has a "carcass credit" return program for real savings on replacement tubes.

Compare EIMAC's 50-year record of outstanding performance. We guarantee EIMAC products will be here tomorrow for today's applications.

More information is available on EIMAC tubes and warranty program from Varian EIMAC, or any Electron Device Group worldwide sales organization. See your distributor or contact Varian EIMAC today.

If You Are Involved in Post Production You Should Visit Us at NAB

Our 1231 Downstream Keyer can give your video switcher all the keying capability you need for today's complex video editing.

4 units are now being used by ABC-TV for their 1984 Olympic coverage

- Up to 6 Simultaneous Keys
- Post Production Editor Interface
- Analog Type Key Bordering
- Key Masking
- Key Mix In and Out
- Program Fade to Black

Our 612 Post Production Audio Mixer will give you all the capability and flexibility you need to edit audio the same way you now edit video. And in stereo too!

10 units are now being used by ABC-TV for their 1984 Olympic coverage

- Post Production Editor Interface
- AFV Capability
- 12 Inputs
- Auto Transitions
- Dual Channel

NAB SPECIAL

**IT'S THE ONLY
GAME IN VEGAS
YOU CAN'T LOSE.**

WIN \$25.

Negotiate your best deal for RCA or EIMAC tubes with any of their authorized dealers in the U.S.A. and if we can't beat their price we'll pay you \$25.00!

HOUSE RULES

- 1. Quotes must be current and valid throughout the IAB Convention dates.
- 2. The tubes offered must be factory new 1983 or 1984, late coded, made by RCA or Eimac.
- 3. The quote must be verifiable and at our option may require a copy of dealer's invoice showing Part Number, date of shipment, date codes, serial number and brand.

If you beat our price you win \$25.00. If you can't beat our price your tubes cost you less. Either way you win!

 CUSTOMERS. NOT ALL MANUF. DO THIS! (John)

The DC-38 series of Audio consoles — the fourth for WHUT/WLHN-FM.

Although Mr. Hood's comments indicate what you can expect with a RAMKO console, there is a lot more to the story. Features, for example, that in many cases can only be found in these truly superb consoles. Here's a short sampling; Mono or stereo — 5, 8 and 10 mixer, dual channel — four inputs per mixer — each input gain selectable — mono mix/phase meter on stereo units — DC control via dbx® voltage controlled amplifiers — all solid state switching — multiswitch programmable CUE, MUTE and on air relay — op-

tional digital clock/production timer — optional plug in remote equipment start/stop — and much, much more. All this and our exclusive 4 year parts and labor warranty.

For the whole story, contact your nearest rep or dealer today, or call RAMKO RESEARCH toll free, (800) 821-2545, for your full color, descriptive brochure. Let us help you do it right the first time.

**A DECADE OF
PROGRESS...
A DESIGN FOR
THE FUTURE**

VIDEOTEK

Videotek, in only 10 years, has emerged as an industry leader on the strength of quality products, competitive pricing, and an unprecedented record of delivery and customer service.

The Studio 13 is the latest example of this Progress by Design, incorporating more features and a higher level of quality than any color monitor in its class.

Line Select and 1H/2H Mode highlight the 1984 refinements to the ever-popular TSM-5A Waveform Monitor and VSM-5A Vectorscope.

As we enter our second decade, our commitment to offer the best products, prices, delivery, and service remains an uncompromised goal.

www.americanradiohistory.com

The new S-230D easily interfaces with new or existing Microtime T²E-120 A/B Roll Effects Systems to provide the ultimate in input signal flexibility and freeze effects capability.

The S-230D allows inputs such as in-house camera signals, external ENG, microwave, satellite, network and remote studio feeds, as well as 1/2" and 3/4" heterodyne VTR formats with or *without* capstan servos. You also have the choice of operating in either standalone heterodyne or 3.58 MHz sub-carrier feedback modes. And by using the S-230D on one or both channels of the E-120 A/B Roll Effects System, you get the additional "effect" of manual or automatic freeze.

Now there are three E-120 A/B Roll Effects configurations:

T²E-120. This established configuration consists of two T-120D TBCs capable of

DYNAMIC TRACKING* operation with a SONY* BVU-820 U-MATIC* VTR.

TSE-120. This new configuration consists of:

- one T-120D TBC capable of DYNAMIC TRACKING* operation with a SONY* BVU-820 U-MATIC* VTR and
- one S-230D TBC/Synchronizer with freeze and auto mode switching.

S²E-120. This new configuration consists of two S-230D TBC/Synchronizers with freeze and auto mode switching for maximum flexibility in both channels.

*DYNAMIC TRACKING, SONY and U-MATIC are registered trademarks of Sony Corp.®

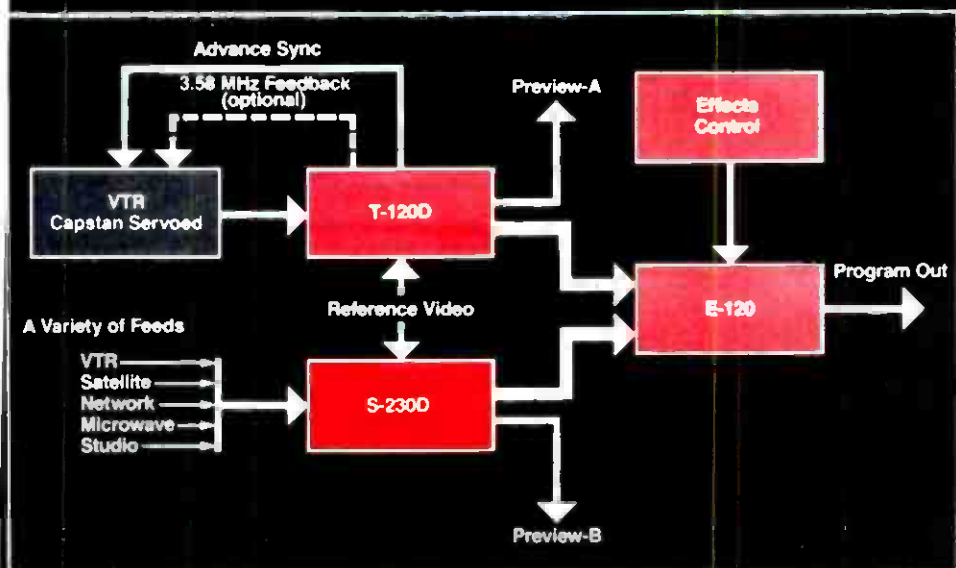

Flexibility is on a roll.

E-120 A/B Roll Effects System.

from the systems for standalone operation. Each E-120 System includes the E-120 A/B Roll Effects Processor and Effects Control with a 75' cable. Each features an 8 bit 4x subcarrier design for high reliability and transparent performance and is controllable by VTR editor for preview and record. Each contains a RS-170A gen-lock sync generator to assure precise output timing. Each is made in the U.S.A., rigorously tested throughout the manufacturing process, and comes with a full one-year warranty on all parts and labor.

ANVIL® produces literally thousands of case designs for the audio/visual, television, and broadcast industries. Whether your professional needs call for a totally operational video system that is permanently installed in an ANVIL® CASE, or a simple transit case to insure against shipping damage, ANVIL® can meet the test. ANVIL® has been assuring safe transit for video producers, sound teams, and engineers for over 30 years.

It takes a lot to build a top quality case worthy of the ANVIL® brand name. ANVIL® utilizes only the finest raw materials which must conform to exacting standards. ANVIL® stocks these materials in huge quantities for its entire line of ATA, Forge II™, Anvilite™, and Fibre cases so even the largest orders can be produced without interruption to ANVIL®'s renowned service.

The machinery used to manufacture ANVIL® CASES is the finest in the travel case industry. Only the most advanced pneumatically operated tools are used. Precision foam slicing and sculpting is facilitated by high speed, accurate electronic cutting devices. The result is a case that stands up to the bumps and grinds of life on the road—so your delicate instruments don't have to.

But cases don't build themselves. People do. And ANVIL® has the most highly-skilled and dedicated design staff, assemblers, field sales design personnel and customer service people you'll find anywhere.

So, if your delicate, sensitive equipment has to get there and back in one piece, every time, just take our word for it—ANVIL®—The #1 name in travel cases for over three decades.

ANVIL CASES, INC., 4128 TEMPLE CITY BLVD., ROSEMEAD, CA 91770 818-575-8614

What is this man doing?

*...he is readjusting his audio processing!*

You no longer need to compromise your station's audio quality. Format changes, audience profile variations and cut-to-cut music inconsistencies present problems that no ordinary processor can hope to deal with. That's why Inovonics developed the *Programmable Processor*.

Our Model 250 behaves just like five independent audio processing chains. The AGC action, compression, equalization and overall limiting of each of these chains can be custom-tailored to any specific audio feed or to any station format. This gives precisely the proper processing to make any program source or format sound its very best. No compromise!

Controlled by station automation, a time clock, or simple manual selection, the 250 provides processing which can change with your station throughout the broadcast day. What's more, our RS-232 Interface Option puts the 250 under continuous computer control with almost endless processing possibilities.

The 250 is a fully L/R correlated stereo unit with slow, gain-riding AGC, a five band compressor, five band equalizer and either a split-spectrum peak limiter for FM or a true matrix, phase-following AM peak limiter. Each of the five preset groups is remotely selected by simple contact closures to ground.

Is the Inovonics 250 ahead of its time, or aren't you keeping up?

The best equalizer is no equalizer.

It's Belden fiber optic cable.

Now a video signal can go two miles on a Belden optical cable with 60dB SNR and no hint of high frequency roll-off. That means a cleaner picture without equalizers, and less maintenance than alternative transmission systems—coax or microwave.

For tower installations, Belden's high-strength, all-dielectric optical cable design doesn't have the problems generally associated with coax, such as ground loops, lightning and other E.M.I. problems. Plus, it's rated for full performance from -40°C to $+60^{\circ}\text{C}$.

Belden optical fiber cable is also thinner and up to 30% lighter than conventional cable. That makes it easier to install on transmission towers, or through underground ducts. A recent installation of Belden cable on a 1500 ft. vertical tower was accomplished in less than one day.

For remote applications, Belden optical cable is much easier to carry around the golf course, or the metropolitan sports arena. Its toughness has been proven in rapid deployment cables designed by Belden for military applications in desert terrain.

Put Belden optical fiber cables and experience to work for you. They'll put you ahead with cleaner signals, better reliability and total system economy. For information on our fiber optic line and application reports or system design guide, contact your local Belden distributor or write: Belden, Fiber Optics, 2000 S. Batavia Ave., Geneva, IL 60134. Phone: 312-232-8900.

To Totally Appreciate A Video, Audio/Visual or Teleconferencing Communications System Created

By Avtec, You Have To Take It Apart.

Whether it's a conference room, a training center, a video studio or an audio/visual center, to fully appreciate the thought and care that went into a total communications system created by Avtec, you have to take it apart. And when you do, you'll begin to appreciate why Avtec has been acknowledged as a worldwide leader in total communications systems.

Design

Avtec designers begin a system at the very beginning. They will work with you, your architect and/or your communications consultant during initial planning. They'll study your requirements and provide all of those little details that ultimately lead to a system's successful operation.

Engineering

Avtec's engineering department is comprised

of dedicated, talented professionals. Together, they control every facet of every system designed by Avtec. They'll consider the designer's concepts and translate those concepts into the technology a system specifically calls for.

Procurement

Avtec considers every communications system individually. We realize each has a specific purpose. We keep in mind the client's specific requirements, so we select and procure all system components on the basis of the best available technology and technical compatibility.

Fabrication

Avtec procured equipment is tested individually as well as a total system and retested to make certain it meets our client's requirements and Avtec's demanding standards. Enclosures, consoles and alike are fabricated and finished and the system's

components are assembled and shipped to the installation site.

Once the system is on site, Avtec personnel test every function. When we're absolutely certain the system is performing as it should, only then will we approve it for operation.

Documentation And Training

We don't consider our job to be over until our clients fully understand how to operate their systems. So we document every piece of hardware and software. Avtec engineers will remain at the installation as long as necessary to train all client personnel and we'll return to the site

to repeat training sessions on an as needed basis.

Maintenance

If you appreciate the fact that during the life of any communications system problems sometimes arise, you'll appreciate Avtec service. Avtec's service group is available virtually anytime, anywhere in the world to solve problems quickly, efficiently and professionally.

AVTEC In Total

Each individual part of any Avtec communications system can be considered a specialty. The fact that Avtec can and does have proven expertise in each of these specialties, has established Avtec as a premier company in video, audio/visual and teleconferencing communications systems.

So if you are considering creating parts of a communications system or a total system, consider Avtec—the total company for total communications systems.

The Only Digital Still Store for Less than \$40,000

MODEL **DSS-11**

The DSS-11 is the world's only digital still store with the quality and resolution required for broadcasting applications priced under \$40,000. Although the DSS-11's compact modular design is ideal for OB vans, an on-board Winchester disk drive provides 160 megabytes of storage for up to 1,000 fields. It can also be simultaneously interfaced with up to seven additional disk drives. Superb stills reproduction is guaranteed by the CC-SPF system. And the fast access time of 0.35 sec even for frames makes the DSS-11 perfect for either studio or OB applications. Call NTI America for a free demonstration. The DSS-11: the most cost-effective digital still storage on the market.

The Squeezer

Precision Echo Presents The Video Compression System With One Feature All Others Lack: Affordability.

Everyone today is facing the budget squeeze one way or another. Networks, affiliates and independents. Cable companies. Production and post production houses. One curious thing about budget squeezes is that they have a way of making equipment purchase decisions both easier and harder. Easier when it's clear that a particular item costs too much for the times. But harder when you are looking at equipment you know you need, but can't find the bucks for.

The Squeezer: Meeting Your Needs With A Unique Set of Special Effects Features.

The Squeezer, from Precision Echo, is a programmable video compression and positioning system that compresses an image down to four selectable sizes, places that image anywhere within the

screen on command, crops any part of it to any size, and puts a variable-sized border of any color around it on request. It can even flip the image horizontally or freeze the action. Exclusive dual joy stick controls make image manipulation simple. And the utility of its design makes The Squeezer a versatile tool whether rack mounted in a production facility or used in mobile applications.

The Squeezer: An Affordable Alternative.

There's very little that you'll find on The Squeezer that you couldn't find on an ADDA, Vital, or a Quantel system. Except the price tag. Those other systems cost anywhere from \$40,000 to \$200,000. The Squeezer costs under \$20,000. For broadcast programming, news and

sports production, cable TV, educational and industrial applications, nothing comes close to the cost efficiency of The Squeezer.

The Squeezer from Precision Echo. High on quality and cost efficiency.

HERE'S WHY THE KAMAN BROADCAST MANAGEMENT SYSTEM IS THE CHOICE OF THE INDUSTRY.

The KAMAN Broadcast Systems are designed to be the most comprehensive and advanced in the industry. They are truly state of the art.

The Kaman Broadcast Systems are a "Station Operations" solution designed for today and the future. The interactive data base ties together all the various departments within your station. Information can be put in the systems anywhere . . . is immediately part of the systems everywhere. Speed is one of its greatest attributes!

The Kaman Broadcast Systems are totally "in-house," and are available at all times, unlike other systems which have operating hours and days. Timely, deci-

sion-producing information is now available at your fingertips anytime. Your sales staff can log spots immediately when a buy is made and avails will be updated. Information ripples through the entire system: to traffic, billing, and even production. The Kaman Systems are designed for your station's future needs: to produce information, data, and reports in an ever-changing industry.

1500 Garden of the Gods Rd • Tel: 303/599-1500 • Telex 452412
Mailing Address: P.O. Box 7463 • Colorado Springs CO 80933-7463

The Kaman Broadcast Systems are designed exclusively for the IBM System/38 which can provide uninterrupted, multiterminal access for your entire station. The System/38 has outstanding capacity for data and is backed by IBM's reputation for superior service.

The Broadcast Management System reflects Kaman's in-depth broadcasting background . . . a background unique among broadcast computing companies. Kaman has a strong commitment to the broadcasting industry and it shows through a solid reputation for service and reliability of its products.

At Kaman, today's quality is tomorrow's reputation.

KAMAN BROADCAST SYSTEMS

A TOTAL SOLUTION FROM A SINGLE SOURCE

REPORTS TO INCREASE PRODUCTIVITY

AVAILS:

- Multiple formats
- 365 days
- Budgets
- Average pricing
- Constant updating

PROJECTIONS:

- 9 different calendars
- By salesperson, agency or advertiser
- Budgets
- History
- Pace

LOGS:

- Complete pre-logs, engineers logs, final logs

CONTRACT/CONFIRMATIONS

PSA/PROMO LISTS AND AFFIDAVITS

DAILY LOG VALVE

FCC LOG ANALYSIS

COMPLETE PREEMPT/MAKEGOOD HANDLING

TAPE CARTRIDGES:

- Automatic allocation
- Inventory control
- Dub lists
- Cartridge labels

BILLING:

- Invoices – airtime/production
- Statements
- Accounts receivable
- Cash receipts
- Co-op reports
- Salesperson journal
- Rep report
- Revenue analysis by:
Time, Show, Salesperson,
Agency, Advertiser, Product,
All with history

Standard reports are formatted but may be changed, and other reports can be tailored by the user through the use of the IBM System/38 "Query" function.

FLEXIBILITY

The Broadcast Management System is completely interactive and geared to maximize sales. As a contract is being input, it immediately checks the avails

and places every spot according to the station's priorities; i.e., highest rate, client preference, length of unit, national or local, rate section, personal preference, length of contract. The priorities are set by the station to their sales philosophy. Each time a spot is ordered, the spot is placed according to these steps and

according to space availabilities on the log or avails. If space is not available but can be acquired by moving or juggling spots, the system will maximize the area by the station's logging priorities. The system logs and avails spots automatically in horizontal and vertical rotations following sports programs, specials, etc.

THE IBM SYSTEM/38

The IBM System/38 is engineered to grow as your station work load and business requirements change and grow. It is a system that can adapt easily to the addition of a work station in one of your satellite offices or the addition of a new disk file ... all without major programming changes. The System/38 has integrated many large system features into a single system design ... at an affordable price.

For various station departments, it can provide accurate, timely information where it is needed, when it is needed, and in the desired form, without support from data processing personnel.

The IBM System/38 lends itself to networking with other IBM Systems and multistation operation from a single site. Our programs incorporate the ability for corporate reporting and electronic mail.

1500 Garden of the Gods Rd • Tel 303 599 1500 • Telex 452412
Mailing Address, P O Box 7463 • Colorado Springs, CO 80933 7463

Let us show you more about how the Kaman Broadcast Systems can provide you with present and long-term solutions to your problems now. Developing software for broadcasters is our business. Call us at 303-599-1470.

Security is also built into its operation ... users enter their assigned password, and the system determines the information they can use. Your employee files, for example, can be restricted to a select few.

OTHER KAMAN BROADCASTING PRODUCTS

Autoswitching Interface System: passes the log directly to engineering and retrieves following airing for automatic billing.

Accounting: includes capabilities for General Ledger, Payroll, Fixed Assets and Accounts Payables.

Film System: inventories feature and syndicated films. Amortizes as you prefer. Includes payables to vendors. The system is unique in that it is designed to forecast for your station ... what you have

contracted for the future, costs versus cash flow so you know what you can afford to bid. This system is scheduled for release in late 1984.

Interface your Broadcast Management System with your National Reps. Your Reps will be able to have access to whatever you want them to have (and no more) to help them close sales on your hot avails. Currently under research and design.

All new Kaman Systems software modules can be interfaced with all other Kaman Broadcast Systems software, even if added at a later date.

THE KAMAN DIFFERENCE

We pride ourselves on the fact that our training, installation and customer services people are broadcasters. Our systems are designed from the user point of view and in broadcast language. All Systems are easy to learn, operate, and bring up. Our program consists of station personnel being in Colorado Springs for advanced training, and our installation team being at the station for instruction and live conversion. We have Customer Service personnel available thereafter.

At Kaman, today's quality is tomorrow's reputation.

**REACH THE WORLD WITH SSTV**

High quality programming can be provided to a national audience using Slow-Scan television (SSTV). Both the digital Model 285C and analog Model 290C transmit still video color images over the subcarrier of a satellite transponder—at a fraction of the cost of full-motion satellite delivery.

With the addition of inexpensive earth stations, SSTV can be used to reach specialized audiences, like academic institutions, religious groups, or professional associations.

Slow-Scan television offers rapid "slide-show" programming. Use it for topics such as news, travel, weather, finance, art, real estate or geography.

To learn how specialized programming becomes affordable with SSTV, contact Colorado Video, Inc. Box 928, Boulder, CO 80306 303/444-3972.

Circle (288) on Reply Card**For simplified phasing**

Certifying the SC/H-phasing in a TV facility is not that difficult, but even for an engineer or knowledgeable technician, the process does take time. More than a glance at the waveform monitor or CRT display is needed to set the phase adjustments correctly. For less well-trained personnel, the process could be a major undertaking. As an answer to the task of SC/H phasing the facility, Tektronix will introduce its 1750 series at NAB '84/Las Vegas.

Closely paralleling the design of the TEK 1740, the 1750 waveform monitor/vectorscope includes the capability for measuring and monitoring subcarrier-to-horizontal (SC/H) sync phase. The instrument allows quick determination of proper composition of individual signals and their compliance with NTSC RS-170A, as well as relative color framing of two signals. The phasing display is available at the touch of a front-panel mode select button.

Easily understood front-panel controls allow normal waveform and vector displays, as well as R-Y differential phase and new SC/H mode. Sweeps allow 1H, 2H, 1-field and 2-field displays, along with a magnification mode. Dc restore is switched and vertical filtering provides for flat, IRE and chroma selections, just as on the 1480 waveform monitor. Also, line selections from Fields 1 or 3 and Fields 2 or 4 may be made, allowing VIRS, VITS and other vertical interval signals, such as teletext, to be monitored.

In the SC/H-phase monitor mode, the 1750 uses the vectorscope graticule, with the subcarrier reference burst indicated as on a vector display. When controls are properly set, the phase error is determined by the position of a spot lying on the outer circle of the vector display. The number

FM BROADCASTERS, IS YOUR SIGNAL REALLY ON TARGET?

You know your market numbers, and the demographics that tell you where you should have your best signal coverage.

That's good, because your competition knows them too.

But, are you certain that you're delivering every watt into those numbers? Do your field-strength numbers raise a few doubts? And, what about the quality of your station's sound? You've spent all that money on the studio equipment. You've fine-tuned your transmitter. Great. But those improvements really don't count for much if your programming is hitting the open pastures while your competition is zeroing-in on the key demo sectors. This is where a CETEC FM Antenna comes in.

INTRODUCING OUR "HAVE IT YOUR WAY" PROGRAM FOR FM BROADCASTERS

Because your market has changed since your antenna was first put into service, or it's come time to directionalize, it makes good sense to look into the benefits of upgrading with CETEC ANTENNAS. Here's three different ways:

1. Our Pattern Optimization Service;
2. Directionalization on any of our standard antennas;
3. Upgrading to our patented Series JSCP antennas.

With pattern optimization, we can give you more uniform coverage and better signal quality. Typical nulls and peaks can be virtually eliminated. All of our work is done fullscale to eliminate errors too. Parasitic elements are precisely determined on a custom basis for your particular site. When you optimize your signal our way, you optimize your market reach and penetration—your way.

Cetec Antennas meet FCC requirements for directionalizing. With us, FM antennas aren't a sideline. All of our FM's are CP and can be directionalized. From 4KW to 360KW, one bay to large, multiple bay systems, we're one of the largest suppliers to the industry. With a CETEC directional, we can place your signal right where you want it.

When you upgrade with CETEC, you get more than 20 years proven experience in engineering ability that has delivered more than 1,000 JSCP model FM antennas. Other important features you gain when you plan with CETEC are factory tuning on a customer-type structure, and the comfortable feeling of a two-year material and workmanship warranty.

Now that the FCC 80-90 Docket is part of your planning, it makes all the more sense to talk with CETEC ANTENNAS. There's no obligation for complete technical information.

We'll see you in Las Vegas at Booth 509 as well as our suite at the MGM Grand. At the NAB Convention, or all year long at the Sacramento factory, we're ready to serve with speed and a high quality product. Let us show you how we can give you—**THE EDGE IN COVERAGE.**

of degrees of error are read from graticule marks.

Intended for rack-mount or bench use, the new instrument is sized similar to the 1740 and 528A waveform monitors or 1420 vector-scope. The half-rack-width monitor is 18.13 inches deep, weighs 16 pounds and is operable only on ac power. It will sell for approximately \$5600 in NTSC. A 1751 PAL version and a PAL-M model, 1752, will follow the NAB introduction. In each case, the cost is slightly more than the combined cost of a 528A/1420 set, or PAL equivalent, in half the space.

©Sound Technology, 1984

WHY?

Sound Technology's 1510A tells you EVERYTHING YOU NEED TO KNOW ABOUT YOUR AUDIO. It insures delivery of a sound product each & every time!

DESIGNED TO GIVE YOU THE COMPLETE PICTURE

The 1510A quickly and precisely evaluates and analyzes audio quality for VTRs. Microprocessor control, differential inputs, electronically-balanced outputs with a clean, low-distortion signal source (typically .005%) from +30 to -70 dBm. . . all contribute to the 1510A's ability to fulfill ALL your audio requirements.

MORE FOR LESS

Why invest \$17K in a collection of test gear when the 1510A can do it all? Call Sound Technology to find out more about THE ONLY ALL-INCLUSIVE, TWO-CHANNEL TEST INSTRUMENT in today's market!

DID YOU KNOW CHESTER CABLE MAKES AUDIO AND VIDEO CABLE?

Many people don't.

But that's changing. We've committed ourselves to the broadcast industry by offering a full line of custom-designed and standard audio and video cables. We didn't just get started either. We've been manufacturing wire and cable for over 40 years. Today, Chester products are carrying critical signals in network broadcast studios and for field broadcast coverage. They've been used to cover the Olympic Games, the U.S. Open in golf and in numerous everyday news and sports coverages.

We gained our knowledge and experience by designing quality wire for use in atomic submarines, jet aircraft and life support systems and diagnostic equipment in the medical field to name just a few. Of more importance to you, we build coaxial and triaxial video cables, shielded multi-pair audio cables and multi-conductor control cables. But, we don't stop there. We will design a cable for you as well, for that special application that needs something more than the standard designs. So, you can design a cable to fit your project rather than design your project to fit a cable. We also don't go into slow motion when the word "special" comes up. We understand the needs of the broadcast industry and are ready to react to your timetable demands. So when your next cable requirement comes up, think of Chester. We've got what you're looking for.

CHESTER CABLE

ONE OF THE INDUSTRY'S BEST KEPT SECRETS . . .

ISC EDITING SYSTEMS ARE CONTROLLING MORE VPR-3'S
THAN ALL OF OUR COMPETITORS COMBINED.

SURPRISED?

THEN YOU SHOULD GET TO KNOW US BETTER.

ISC is the only company that can control both the newest Ampex and Sony's VTR's through RS422 Direct Control protocol, and simultaneously control a host of other equipment through Calaway and CMX RS232 interfaces.

Visit us at NAB. We will demonstrate the industry's most flexible interfacing and most sophisticated VTR and switcher control. ISC provides precise, easy to use control permitting you to expand your creativity.

ANOTHER BEST KEPT SECRET . . .

In fact, our new model 51 is still a secret . . . until NAB.

See it at NAB booth No. 1167

ISC—the strong, quiet company setting the pace.

ADD AUTOMATIC DIALOGUE REPLACEMENT SYSTEM

EMPLOY A FULL TIME SOFTWARE ENGINEER.

OR
BUY AN SL 6000 E SERIES STEREO VIDEO SYSTEM.

In the competitive world of video production, providing the facilities is one of the first requirements for success.

Getting it right can prove difficult, however. Especially in the area of audio post-production.

For people expect the same sophisticated standards of sound that they hear from the recording industry. But they usually expect it in a fraction of the time.

Which means a post-production studio, if it is to meet these demands, must not only give first-rate stereo sound, it must be streamlined to give it as quickly and efficiently as possible.

Unfortunately, because the video business is still young, much of the equipment on offer is new and unproven. With different suppliers working to differing standards.

And even if you choose the individual components of your system wisely, they won't work together with maximum efficiency. Because they weren't designed to do so.

So, at best, assembling your audio facilities will be complicated, time-consuming and not entirely satisfactory. At the worst, it will be very costly and potentially catastrophic.

Unless of course you choose the Solid State Logic SL 6000 E Stereo Video System. The world's first fully integrated audio post-production system.

Designed in consultation with several leading post-production houses and broadcasters, the SL 6000 E Series provides outstanding audio quality. Combined with systematic design and practical innovation, aimed specifically at the needs of the video and broadcasting industries.

The Stereo Mix Matrix, for example, contains three stereo mix buses. Allowing the simultaneous creation of separate music, effects and dialogue mixes, and giving the greatest possible flexibility for both stereo and mono post-production.

on each input/output module gives easy patchfree routing and sub-grouping.

The SSL Primary Studio Computer handles automated mixing, autolocation, and list management. It interfaces with the remarkable Total Recall system and links with the Synchroniser Controller to provide direct control of the entire system via its keyboard and in-built TV monitor.

As a result, an enormous amount of time (and money) is saved. Giving the engineer a new freedom to concentrate on the more creative aspects of his work.

These features, incorporated into the SL 6000 E's cohesive and comprehensive design, are of great benefit to post-production and broadcast studios alike.

And because of the system's modular nature, it can be built up from the basic mainframe as your needs and budget dictate. Making it an affordable proposition for any size of studio.

So if you're in the market for an audio post-production system, you can fall into the trap of trying to assemble one piece by piece.

Or you can drop a line or call Antony David in the UK or Piers Plaskitt in the USA, and find out more about SSL's Stereo Video System.

Master Logic Control enables the console to be reconfigured instantly for track laying, overdubbing or remixing. Ingenious switching

Solid State Logic

Portable Multiburst Generator

And, we mean PORTABLE!

This rugged, solid state Multiburst Generator is designed to go where you go.

It's a self contained test package which allows you to check your frequency response—anywhere!

It has 75Ω unbalanced output and 124Ω balanced.

The frequency bursts are from 0.5 to 4.2 MHz.

Internal sync, blanking and white bar are sine-square filtered to avoid overshoots.

It even has its own rough, tough carrying case for added protection.

This is just one of over 175 products that we make.

Free catalogs are available upon request. Please call or write...

When you'd give
an arm and a leg
for an extra foot...

A-T
gives you
a hand!

The new AT835.

Now there's a new way to reach out and hear. The Audio-Technica AT835 Condenser Line + Gradient Microphone. It's barely longer than a legal pad, but it zeroes in on the sound you want to hear, while blocking out noise from the sides and rear.

Baby Brother

The new AT835 is 4 inches shorter than our famed AT815a and its remote-powered brother, the AT815R. Yet its performance in the field is remarkably close. The major difference is a slightly wider (60°) acceptance angle at higher frequencies. Credit a sophisticated "Fixed-Charge" element for the truly impressive sound and excellent directional control. The AT835 short "shotgun" fits in whether you are recording "actualities" for the evening news, picking up dialogue for film or A/V, or eavesdropping from the sidelines.

With Guts

Our FET impedance converter is super quiet, and runs for months on a single "AA" flashlight cell. The balanced, phased output matches any remote or studio input from 150 to 1000 Ohms without problems. And the AT835, like all A-T condensers, is built to take real punishment. Even so, it weighs just 7½ ounces for easy fishpoling or extended hand-held use.

If your goal is better control of your sound at moderate cost, your Audio-Technica sound specialist has a brand new answer. The AT835.

“Our Litepak® is the best equipment investment we’ve made. It’s never let us down.”

*Marc Raymond,
Westsun Media Ltd.*

For years, the Litepak® 1224 high density dimming system has been the choice of discriminating users of permanent and touring equipment. Now it's available in a competitive twelve-pack for the portable rental market. All models have plug in control and dimmer modules, a separately breakered hot pocket and pin, TLG or PBG receptacles. Main power is fed from the rear by cable or optional G4100 connector. Packs can be stacked in any combination and still allow access to all parts and controls.

The DMD 324 three phase dimmer module has output voltage regulation, a full sized pregrounding pin, digital continuous self trimming and short circuit protection.

The new 1200 series expandable manual control console has direct or cross fade submaster selection, split dipless crossfader and bump/solo buttons.

Convention exhibitor guide

This removable Exhibitor Guide form has been designed to help you organize your plans for NAB-'84/Las Vegas. The exhibitors have been located on the Convention Center floor plan by an abbreviated name and booth number. Handy alphabetical listings give quick references to exhibitors' booths.

This special section will prove valuable in planning your convention coverage—a convention that promises to be exceptional in terms of exhibits, attendance and sessions showing trends in broadcasting, especially in digital technology.

An attempt has been made at the Las Vegas Convention Center to maintain a consistency in organization of the exhibits by rows and aisles, using a crosshatch pattern. Aisles are easily identified.

Show aids

To locate a specific exhibitor, look it up on the alphabetical listings on the map to get the booth number. Then just "walk" through the map to find it. It's that simple. (Advertisers in this issue are identified in red ink; you can find their ads in the Advertisers' Index near the back of this issue to obtain further details of what they are showing.)

To ascertain what all exhibitors are showing, study the Exhibitor Roundup

section elsewhere in this issue. (In that section, Reader Service Numbers are provided and advertisers' positions are designated.)

To make sure that you have thoroughly covered a product line of interest at the convention, use the Product Directory section that collects exhibitors and their booth numbers under selected product categories. If you wish, circle these booths on your map to be sure you don't miss an exhibitor important to your purpose of attending NAB-'84.

Final notes

The exhibitor lists given here are up-to-date as of press time, but daily changes are still being made at NAB headquarters. Consequently, BE will print a map update to be distributed at the show that will contain all the latest changes. After you've registered, pick up your copy and also check NAB's notices for any late bulletins and/or revisions.

Map out your plan of attack for NAB-'84 now and fine tune it after registration to optimize your time.

Whether you attend NAB-'84/Las Vegas or not, look for our June issue for a Convention Wrap-up with its emphasis on new equipment and technology. Our July issue will carry highlights of the technical radio and TV sessions.

!:-?-)!!!

Protect your investment with a cannon.

An audio connector by any other name is simply not an ITT Cannon audio connector. Which is precisely why so many audio engineers continue to specify Cannon[®] connectors for use with their audio equipment.

The XLR, the new XLB and XLA series are small, rugged, quick-disconnect connectors designed for use in audio/video and other low-level circuit applications where reliability, quiet operation, elimination of mechanical interference and ease of use are necessary. Four different plug styles are available.

The EP connector is ideally suited to applications where extreme ruggedness and versatility are required. The new AP connector is a popular choice for heavy-duty audio applications and is interchangeable and intermateable with the EP series. Both the EP and AP series may be used where as few as 3, or as many as 18 contacts are required.

Audio Connectors from Cannon

The AP LNE and AX LNE are specifically designed to handle the special needs of mains and other power supply applications.

For more information, please contact Commercial/Industrial Products Marketing Manager, ITT Cannon, a Division of ITT Corporation, 10550 Talbert Avenue, Fountain Valley, CA 92708, (714) 964-7400. For the sales office nearest you, call toll-free (800) 845-7000.

Now available at the following stocking locations:

XLR/XLB at:
Time Electronics
Ramtronix

EP/AP at:
Ritchey Electronics
Yale Electronics
Connector Corp.
Ramtronix

1. Max input level - 1% THD; dBu = dBv ref. 0.775 V

2. With recommended secondary termination

3. Specifications shown are for max. number of secondaries terminated in 1000 ohm (typical mic preamp)

4. Separate lead supplied for case and for each faraday shield

5. Except as noted, above transformers are cased in 80% nickel mu-metal cans with wire leads.

PACKAGE DIMENSIONS:

W	L	H
1 = 1 1/16" Diam.		× 1 1/16"
2 = 1 3/16" × 1 3/16"		× 1 1/16"

6. Multifilar construction has no faraday shield.

All specifications are for 0Ω source, 600Ω load.

7. Max output level - 1% THD; dBu = dBv ref. 0.775 V

8. Source amplifier - 3dB @ 100kHz

9. Output transformers are horizontal channel frame type with wire leads, vertical channel frames available.

PACKAGE DIMENSIONS:

W	L	H	Mounting Centers
7 = 1 1/2" × 2 5/16"		× 1 15/16"	2 13/16"
8 = 1 5/16" × 1 15/16"		× 1 5/8"	2 3/8"
9 = 1 1/8" × 1 11/16"		× 1 3/8"	2"
10 = 1 1/8" × 1 7/16"		× 1 3/8"	1 3/4"

These charts include the most popular types which are usually available from stock. Many other types are available from stock or custom designs for OEM orders of 100 pieces or more can be made to order. Certified computer testing is available for OEM orders. Call or write for applications assistance and/or detailed data sheets on individual models.

Prices shown are effective 2/1/84 and are subject to change without notice.

BROADCAST
ENGINEERING

P.O. Box 12901, Overland Park, KS 66212
U.S.A.

One of the world's smallest digital still stores is also one of the largest.

Introducing "Snapshot" from MCI/Quantel. Only 12¼ inches high by 19 inches—including removable cartridge Winchester disk drive!

Snapshot is not only the smallest of MCI/Quantel's DLS 6000 series units—it's one of the smallest digital still stores in the world.

Snapshot lets you capture pictures from live asynchronous feeds, store up to 400 of them with titles, and replay them on demand. You can prepare and edit sequences or stacks of sequences. And you can search by title.

Need more? You can increase Snapshot's storage to 1,600 pictures. Or you can upgrade it to

a DLS 6020 with on-air cuts and dissolves. Or upgrade it further to a DLS 6030, the most powerful still store available with production effects that bring an exciting look to your stills.

If that's not enough, you can integrate up to seven Snapshots—or other DLS 6000 series units—as workstations into our Central Lending Library (CLL). Now you can store over 10,000 stills at each

workstation and have simultaneous access to 100,000 more from the CLL. Plus unlimited off-line storage on disc cartridges or videotape.

You can even include MCI/Quantel's Paint Box as one of the workstations. So you can create the finest electronic graphics ever seen in television and have them instantly available for on-air use as well as library storage.

So whether you want a small system or a big system, Snapshot is the place to start.

Call your local MCI/Quantel office for more details. Or get in touch with us directly at 415/856-6226. Micro Consultants, Inc., P.O. Box 50810, Palo Alto, California 94303.

Product directory

This special section provides a directory to the NAB-'84/Las Vegas exhibitor products. Each exhibitor was asked to complete a comprehensive checklist of products to be shown. The following section is a compilation of that data. It shows major equipment headings followed by the exhibitor name and booth number (when provided before deadline).

This special section will be an aid in finding equipment of special interest at the show. But a word of caution: As BE goes to press, there are still changes being made daily

in the exhibitor sign-ups, equipment being displayed and booth assignments. So, although every attempt has been made for accuracy in this section, double-check the final program at NAB-'84 to organize your show coverage and visits.

For those not attending NAB-'84/Las Vegas, the June issue of BE will provide a wrap-up of equipment trends at the show and the July issue will carry highlights of the technical radio and TV sessions.

NOW!

The Penny & Giles Feel in a Rotary Fader.

from Penny & Giles continue a tradition of incomparable performance, matchless quality, total reliability. They'll give you the same level of excellence you've come to expect with Penny & Giles' linear faders.

Discover a new standard of rotary action.

Nothing approaches the technology of Penny & Giles' new rotary faders:

- Ultra-smooth rotary action
- Mono or stereo (optional)
 - Maintenance-free
 - Fully sealed construction
- Up to eight outputs per fader
- Audio, linear or pan pot taper
- Detents and switches (optional)

As seen at NAB, Las Vegas.

For the complete story on Penny & Giles' new rotary fader, call or write:

Penny & Giles

Compare and there's no comparison.

Nothing compares with Penny & Giles' world-famous smooth-as-glass feel. These totally new rotary faders

Talk Isn't Cheap

On the other hand, a really good telephone interface doesn't have to be expensive. Our Model TI-101 Telephone Interface isolates your send and receive signals and performs level and impedance matching to help you get the best possible audio quality from your phone lines. The TI-101 features send limiting, adjustable caller EQ, caller compression and expansion, and true hybrid (two way)

operation. If telephones are an important part of your operation then you know talk isn't cheap. So don't let yourself down. Call Symetrix or your favorite broadcast equipment supplier to get complete details and specifications on the Model TI-101 Telephone Interface.

How Boston took advantage of us.

Boston is the home of a wealth of history: Paul Revere, the Boston Tea Party, and Harvard University. But respect for all that tradition didn't stop WNEV-TV from seeking equipment from other than the traditional suppliers.

After a thorough examination of the transmitters available today by the station's Engineering group led by Karl Renwanz, Vice President of Engineering and Operations, WNEV-TV decided to take advantage of the sophisticated simplicity of Larcans Model "F" transmitter. They chose a pair of 30 kW

TTC30000FH transmitters in parallel, backed up by a single TTC30000FH.

In today's competitive environment, a station such as WNEV-TV needs the performance and reliability that is designed into every Larcans transmitter. It also needs the back up and commitment to the business which Larcans, a company that specializes in RF, can provide.

Increasingly broadcasters in large and small markets are joining the new tradition by taking advantage of Larcans Model "F" transmitters.

Find out what it can do for you by contacting:

LARCANS COMMUNICATIONS EQUIPMENT INC.

Let a leader in sound technology lead you through the commercial sound barrier. Introducing Panasonic Commercial Sound Systems.

For more than 40 years, the parent company of Panasonic, Matsushita Electric, has supplied the international commercial sound market with products. Dependable, quality products that are the result of the engineering expertise, sophisticated testing and rigorous quality-control standards of Matsushita—one of the largest and most innovative electronics companies in the world.

And now, Panasonic is introducing a line of quality compact sound amplification/paging units that offer some of the most advanced features available today.

Our 30, 60 and 120 watt 5-input Mixer Power Amps (Models WA-735P, WA-745P, WA-755P respectively) feature a built-in AM/FM tuner, three low impedance microphone inputs, a transformer balanced auxiliary input for telephone paging, a voice-activated priority circuit and a tone generator for sound level setting. Plus a two-tone calling chime for paging.

Many of these features are offered without an AM/FM tuner in our other 60 and 120 watt 5-input Mixer Power Amps (Models WA-740P, WA-750P).

Our 15 and 30 watt 4-input Mixer Power Amps (Models WA-300P, WA-320P) feature two low impedance microphone inputs and a transformer balanced auxiliary input for telephone paging. And both can be powered by a DC 13.2 volt source for portable operation.

Remember: Panasonic is a leading name in advanced sound technology. So, if you're looking for Commercial Sound System equipment, follow a leader: Panasonic.

For more information on Panasonic Commercial Sound Systems, please contact: Commercial Sound Systems Department, Audio-Video Systems Division, Panasonic Industrial Company, One Panasonic Way, Secaucus, NJ 07094.

HOW DO YOU IMPROVE ON A GOOD THING?

Peter Lisand follows a tough act ...

Peter Lisand has learned from its successes. Proof of this can be seen in our two new camera support systems. Our heavy-duty camera head has a 30-50 pound capacity, while the light-duty style holds 15-30 pounds. Here are a few reasons both heads deserve your attention:

- True fluid action maintains a smooth regulated motion by a sensitive system without brake shoes, bands, or other mechanical parts to interfere with its operation. Separate positive locks and drag are featured on the pan and tilt. Tilt achieves a full 90° vertical position.
- Sealed leak-proof chamber assures long-lasting, problem-free operation.
- Adjustable quick-release will counterbalance camera and lens requirements. (optional)
- Versatile control—use right, left or dual handles.
- New reversible foot, rubber-tipped for interiors and standard metal points for outside use, can be ordered with either of the JRA tripods. (optional)
- Tripods come with various top castings to accommodate existing systems.
- Complete the light-duty system with the JRA-83M, a new light-weight tripod that weighs in at 7 lbs., with a total combined weight of 16 lbs.

These Peter Lisand products reflect our highest standards and are backed with our one-year no-hassle guarantee.

When
it comes
to who
said what,
Dictaphone's
VeritracTM
loggers
give you
the last
word.

Dictaphone's VeritracTM voice communications recorder systems are as important to stock brokers as they are to public safety agencies. In fact, wherever people rely on phones they rely on Dictaphone's Veritrac loggers. They record up to 60 channels of telephone and radio messages simultaneously so verification of who said what is both simple and sure.

And Dictaphone microprocessor technology means you get a host of useful features along with Dictaphone reliability and service. Call your Dictaphone representative today.

We couldn't improve the
conditions you work under.
So we improved
the tape you work with.

maxell[®]
PROFESSIONAL
INDUSTRIAL P/I

**HGX
PRO**
For ENG
Recording

Epitaxial[™]
Videocassette **VHS**

T120

HGX Pro 1/2" Videocassettes.

Differences you can see, hear. And retain.

At last, tape performance impervious to the whims of weather and the rigors of editing. Maxell has harnessed new tape technology and with it, given ENG dramatic improvements you can see, hear and retain. In the field or under freeze frame.

Smaller, more densely packed Epitaxial™ oxide

Molecular Fusion Binder for a stronger, cleaner bond

New base film with improved dimensional stability

Molecular Fusion Binder

Friction-balanced backcoating

High-impact polystyrene endures temperature variables without warpage

Five machine screws guarantee precisely aligned mechanism

A shell made to the industry's toughest standards.

Ours. The transport is smooth, quiet and jam-proof. The housing immune to temperature extremes. The construction leaves nothing to chance.

From open reel tapes to a complete line of KCS/KCA U-Matics, audio and VHS/Beta cassettes, we're getting quality down to a science. And in your hands, our science turns to art.

HGX Pro 1/2" Videocassettes are available in Beta and VHS formats.

The Epitaxial™ contribution: higher video, brighter chroma.

Unique, uniform cobalt ferrite oxide particles, now even smaller (a mere 3 microns long), yield unprecedented packing density. Expect enhanced signal-to-noise ratios in audio and video. Better definition. Brighter chroma. And no significant signal loss despite endless editing replays.

Molecular Fusion Binder: longer life bonding for truer-to-life performance.

Gone are conventional adhesives that time and temperature tempt to the surface. In their place, self-curing resins fuse oxides to the base film. It's a bond immune to time and mechanical stress. Anticipate far fewer dropouts, less clogging and extended tape and head life.

New base, binder, backcoating. Better support for the signal.

No static. No noise. No dust. The molecular-fused backcoating provides a perfect balance between inside and outside surfaces. For controlled friction. Less mechanical and magnetic noise. And optimum running smoothness, even in high heat.

CHARACTER GENERATOR & TITLERS

Amtel Systems (1745) →

FLEXIBILITY, PERFORMANCE,

In adaptability, state-of-the-art technology, and price the Hotronic AD 51 leaves other TBC/frame synchronizers in a blur.

The AD 51 series gives you a full range of options to fit your budget. Start with a TBC with a full 525 line correction window. Or the TBC + freeze field-freeze frame. Or the TBC + frame synchronizer. Or the complete TBC + frame synchronizer + freeze field-freeze frame. But, for real adaptability, you can pick any configuration which fits your current needs and budget, and upgrade later all the way to the top of the line. Incidentally, all upgrades are done by your technician at your facility.

The AD 51 series uses the newest digital signal processing with a full bandwidth comb filter. And yes, you get the digital noise reduction inherent in the comb filtering process. Check

the rest of the AD 51 specs . . . All are full professional video quality.

And now, to add to this impressive menu, Hotronic offers a pixel by pixel DOC which corrects both luminance and chrominance signals every 70 nanoseconds. Correction can be performed by sampling the RF envelope or detecting drop-outs in the digital words. In addition, a full function remote control unit is available to operate your AD 51 up to 100 feet from the TBC/frame synchronizer.

And this comes at a surprisingly low price. Compare Hotronics price/performance with any TBC/frame synchronizer on the market today and you'll find it offers the flexibility for your future, the performance you demand, and the affordability you need. Call Hotronics now!

and CHANGE.

ZAINES 84

Pre-eminence

Philips LDK 6

A giant leap forward in concept and design. So far ahead of its time that it will stay state-of-the-art for years to come due to its software-based system. The LDK6. The computer-controlled studio and field camera from Philips.

With the brilliant picture quality assured by optimized digital scan correction. With the distributed intelligence of four microprocessors. With production memories of your day-to-day set-ups giving unrivalled operational flexibility and creative freedom. With triax reliability and economy. With multi-level diagnostics. And with minimum cost of ownership.

Reader enquiry no. 100

..and the perfect portable partner

The LDK614 is the perfect portable partner. This rugged yet lightweight triax or multi-core RGB camera is equally at home in the studio or mobile unit. It operates independently or via the standard LDK6 control units for compatible colorimetry, performance and versatility.

Reader enquiry no. 101

A world of experience

Monitors of quality & economy

High stability, quality, reliability – at a very reasonable price. These are the reasons for the international success of the Philips LDH6200 14" color monitors.

These rugged yet stylish monitors have a high specification and many operational features only found on more expensive units. And monitor to monitor matching is excellent.

Reader enquiry no. 102

Transmitters a story of success

Pye TVT is famous for its UHF television transmitters. Thousands in many countries of the world perform to perfection every hour of every day of the week. State-of-the-art development – such as cost-saving beam control klystrons – ensures that the family covers the requirements for reliable and efficient medium and high power transmission.

Reader enquiry no. 103

Television systems

Philips Television Systems Inc. supply complete customized systems for the studio or mobile unit. Designed to the highest engineering standards. Complementary to the quality of all Philips broadcast products.

IN SEARCH OF EXCELLENCE.

Long before it was a popular management theory, broadcasters were searching for excellence.

Excellence of Sound.

The search is still on, but the goal is now within the reach of every FM broadcaster.

The 695 is an exciter without equal . . . in quality sound . . . in versatility . . . and in value. Any type of distortion you can name (THD, TIM, IMD) is less than .025 percent. This isn't an environmentally controlled lab figure, but rather one that is measurable over the operating temperature range of the equipment. Moreover, noise is so low that it's virtually impossible to measure.

QEI's 695 offers features that the competition has never even dreamed of. A peak counter with LED display, modulation measurements on the front panel, and a measurements grade linear demod built in. It is synthesized, has wideband circuitry, a 3-color LED bar graph for modulation display, a 10-position meter, and many other features that are best described in our new brochure.

For more information on QEI and the 695 Exciter just write or call us. You'll see why our search for excellence has produced the best value on the market today.

NO OVERLOAD. NO MATTER WHERE YOU USE IT.

In-studio or on-location from a whisper to the roar of a full-blown rock concert, nothing can overload our MD 421. *Nothing.*

Visit us at NAB Booth 1137

Varian GEN II KPA. Pushing earth terminal technology through the 80's.

Designed specifically for today's modern world of earth terminal communications, the new Varian GEN II KPA simplifies complex communications problems with its advanced computer interface options. Easily adaptable, GEN II can be programmed to IEEE 488, RS-232 and RS-422 data busses.

Smaller, more modern design. Modular construction includes a proprietary,* digitally-controlled, all solid-state, low noise regulated power supply.

Integrated in the RF section is a digitally-controlled PIN diode attenuator to provide precise setting of the RF output.

Controls/Monitors/Logic section circuits use C-MOS high

noise immunity digital techniques to energize, protect, control and monitor KPA performance. The modern front panel features all-LED indicators and digital meter displays.

Enhanced Varian klystron for high efficiency.

GEN II utilizes the original, field-proven Varian VA-936 series klystron, with enhanced specification including 24-channels for top performance.

GEN II provides high efficiency with only 12 kVA for a full 3.35 kW tube, less than 1 kVA in standby and automatic 10% reduction of heater voltage for extended klystron life.

* Patent applied

More information on the new GEN II KPA for the 80's is available from Varian Microwave Components and Subsystems Division. Or the nearest Electron Device Group sales office. Call or write today.

TOSHIBA Color TV Camera PK-41

Our PK-41 is a microprocessor-controlled fully automatic color camera with digital circuit reliability.

Controlled by a microprocessor with a non-volatile memory and over 100 controllable items, the fully automatic PK-41 can do practically everything for you. It also holds a data filing function for over 400 items.

The thinking PK-41 not only offers a fully automatic setup, it also displays the control and diagnostic data of the camera operating conditions on the picture monitor. Experience our incomparable 58dB high broadcast quality pictures.

ALLSOP'S AWARD-WINNING TECHNOLOGY COMES TO 3/4" U-MATIC.

Four years of extensive research produced Allsop's exclusive four-layer Lam-Tech cleaning ribbon. It has put Allsop at the forefront of 3/4" U-Matic cleaning. The top layer removes contaminants without abrasion—less than a conventional tape, while the second layer helps disperse solution. The nylon backing cleans guides, pins and rollers. Unique wetting windows allow an alternating wet/dry wiping action; first dissolving, then removing debris. Additional access windows enable easy replacement of the entire cleaning ribbon. Once again, Allsop ingenuity has produced a winning product professionals can trust. Look for it at your local video dealer's.

See Allsop at the N.A.B. Booth 1177

IMC IMPROVES YOUR IMAGE

Let us make your video images cleaner and sharper with the IMC 3565 motion control computer. Coupled with a high-speed animation stand, the 3565 provides you with total animatic capabilities: true

perspective movements, pans across large artwork, zooms that don't degrade image quality, real three-dimensional effects, and a variety of smooth-flowing moves...

all in real time. So let IMC show you how to improve what's coming out of your editing suite by improving the images that go into it. The difference you see will be perfectly clear.

Video images Courtesy Windsor Video

**"I NEEDED A REALLY SPECIAL CUSTOM CASE
AND CALZONE CAME THROUGH FOR ME."**

This may seem like utter nonsense, but we really can custom-build any kind of flight case for your next location shoot. And we work fast. Our super-tough Escort and Convoy cases feature Calzone's patented Double-Angle construction to give your most expensive and fragile equipment the best protection available today. More of today's production companies, radio/TV/film crews and sound contractors depend on Calzone to make sure their gear arrives at the job in perfect working order.

**WE'VE DEVELOPED
A WAY TO
ELIMINATE
HORIZONTAL SHIFT.
AUTOMATICALLY.**

the problem of horizontal shift caused by improper SCH timing. And solved it in a way that's not only economical, it's automatic. With our SYNC PROC™ unit you won't waste time, people and test equipment establishing SCH. And editors won't have to use trial and error to get the correct matched frame edit between two video signal sources.

SYNC PROC™ solves the problem in a simple way. It generates a color field identification signal that's positioned on the "front porch" of the TV signal. The ambiguity with RS-170A is thereby ended; you get positive identification for one field of the four-color field sequence. With color field identification, the SYNC PROC™ automatically maintains proper SCH timing, eliminating horizontal shift.

SYNC PROC™ provides the

most economical method of maintaining an SCH timed plant.

And it comes packaged with normally required features: a processing amplifier and sync generator and other optional features. Our expanding line of unique process and control products for the broadcast industry include color encoding, satellite transmission processing, machine control and many other state-of-the-art developments, and beyond.

For more information, write Business Development, Mail Stop A24-43, Grumman Aerospace Corporation, Great River, NY 11739, or call (516) 435-6001.

See us at the NAB Convention Booth #1631,
April 29-May 2, Las Vegas, Nevada.

CELWAVE... The oldest new

Get to know us!

We're **CELWAVE**, the newest name in communications, replacing another of impeccable reputation: **Phelps Dodge**.

That places at your disposal the entire array of premium quality equipment, the engineering know-how and the attentive service that you've always depended on. From a bright new corporate entity devoted exclusively to communications. And very eager to please.

CELWAVE brings you technologically advanced, durably constructed base station antennas: omnidirectional, directional, downtilt and special pattern. We also offer a wide range of FM and educational antennas, as well as rigid transmission lines.

CELWAVE is your international source of marine and vehicular antennas, of duplexers for land mobile and marine communications, of transmitter combiners and receiver multicouplers.

From broadcast to cellular, "ham" to RCC operator, you get Phelps Dodge performance from the industry's newest company. **CELWAVE**.

Corporate toddler.

Antenna systems giant.

**The Cadillac of Exciters
for under \$5,000⁰⁰**

The SMX-40 is a fully frequency synthesized, FM Stereo Multiplex Exciter with over 30 watts of absolute RF drive power and extensive status indication and protection, rivaling *all* competitive exciters presently available *at any price*.

FEATURES:

- Frequency Synthesized in 10 kHz Increments
- DC Switching Power Supply
- 5-30 Watt (Adjustable) Wideband Power Amplifier
- Harmonic Filter in Output for Stand Alone Transmitter

PARAMETER: SPECIFICATION:

FM Signal-To-Noise Ratio	- 70 db below 100% mod at 400 Hz (75 db typical)
Composite Intermodulation Distortion	.2% or less (.09% typical)
Composite Audio Response	± 0.2 db, 30 Hz-100 kHz
Composite Slew Rate	12 V/usec (symmetrical)
Frequency Stability	± 300 Hz 0° to 50°C. Direct FM

AM stereo

Continued from page 14

and, therefore, be suitable for station give-away promotions. The company said orders placed to date for the Kahn adapter have been contingent on sales of minimum quantities of Motorola-only car receivers in each station's market.

The decoding of all the systems except Motorola is automatic on the converter. When the listener wants to hear a C-QUAM signal, a button must be pushed. Kahn Communications president Leonard Kahn said the switching arrangement was not designed to embarrass Motorola, but instead had a good engineering basis.

Group W selects Motorola

Westinghouse Broadcasting has selected the Motorola AM stereo system for use at its AM music stations. According to Harrison Klein, Group W director of radio engineering, the selection follows more than a year of tests of various AM stereo systems at WBZ, the company's AM radio outlet in Boston. The Motorola C-QUAM equipment currently is installed at WBZ and will be installed in the near future at KDKA, Pittsburgh. All other AM stations in the Group W chain use news/talk formats, and will not be converted to stereo operation at this time.

Klein said he thinks the emergence of a single AM stereo system would best serve the long-term interests of the industry. However, he said he has no objections at this point to the multi-mode receiver concept. "The more AM stereo receivers (single- or multi-mode) we get out in the field, the better," he said.

Satellite update

Continued from page 16

works that will transmit two or three TV channels per transponder, reducing the network's annual transmission costs significantly. For example, a 6-channel hotel network would reduce its transponder lease costs by \$5 million to \$6 million a year if two TV channels were transmitted per transponder instead of the normal single channel. The savings over an 8-year period would be far greater than the total added cost of larger receiving antennas.

The next decade in satellite TV broadcasting promises to bring a wide variety of transmission techniques, a far different scenario than has been the case to this point.

3/4" Video Cassettes

RELOADABLE!

Only COARC rebuilds and reloads your 3/4" U-Matic video cassettes with new 3M Scotch Brand Videotapes in this special way:

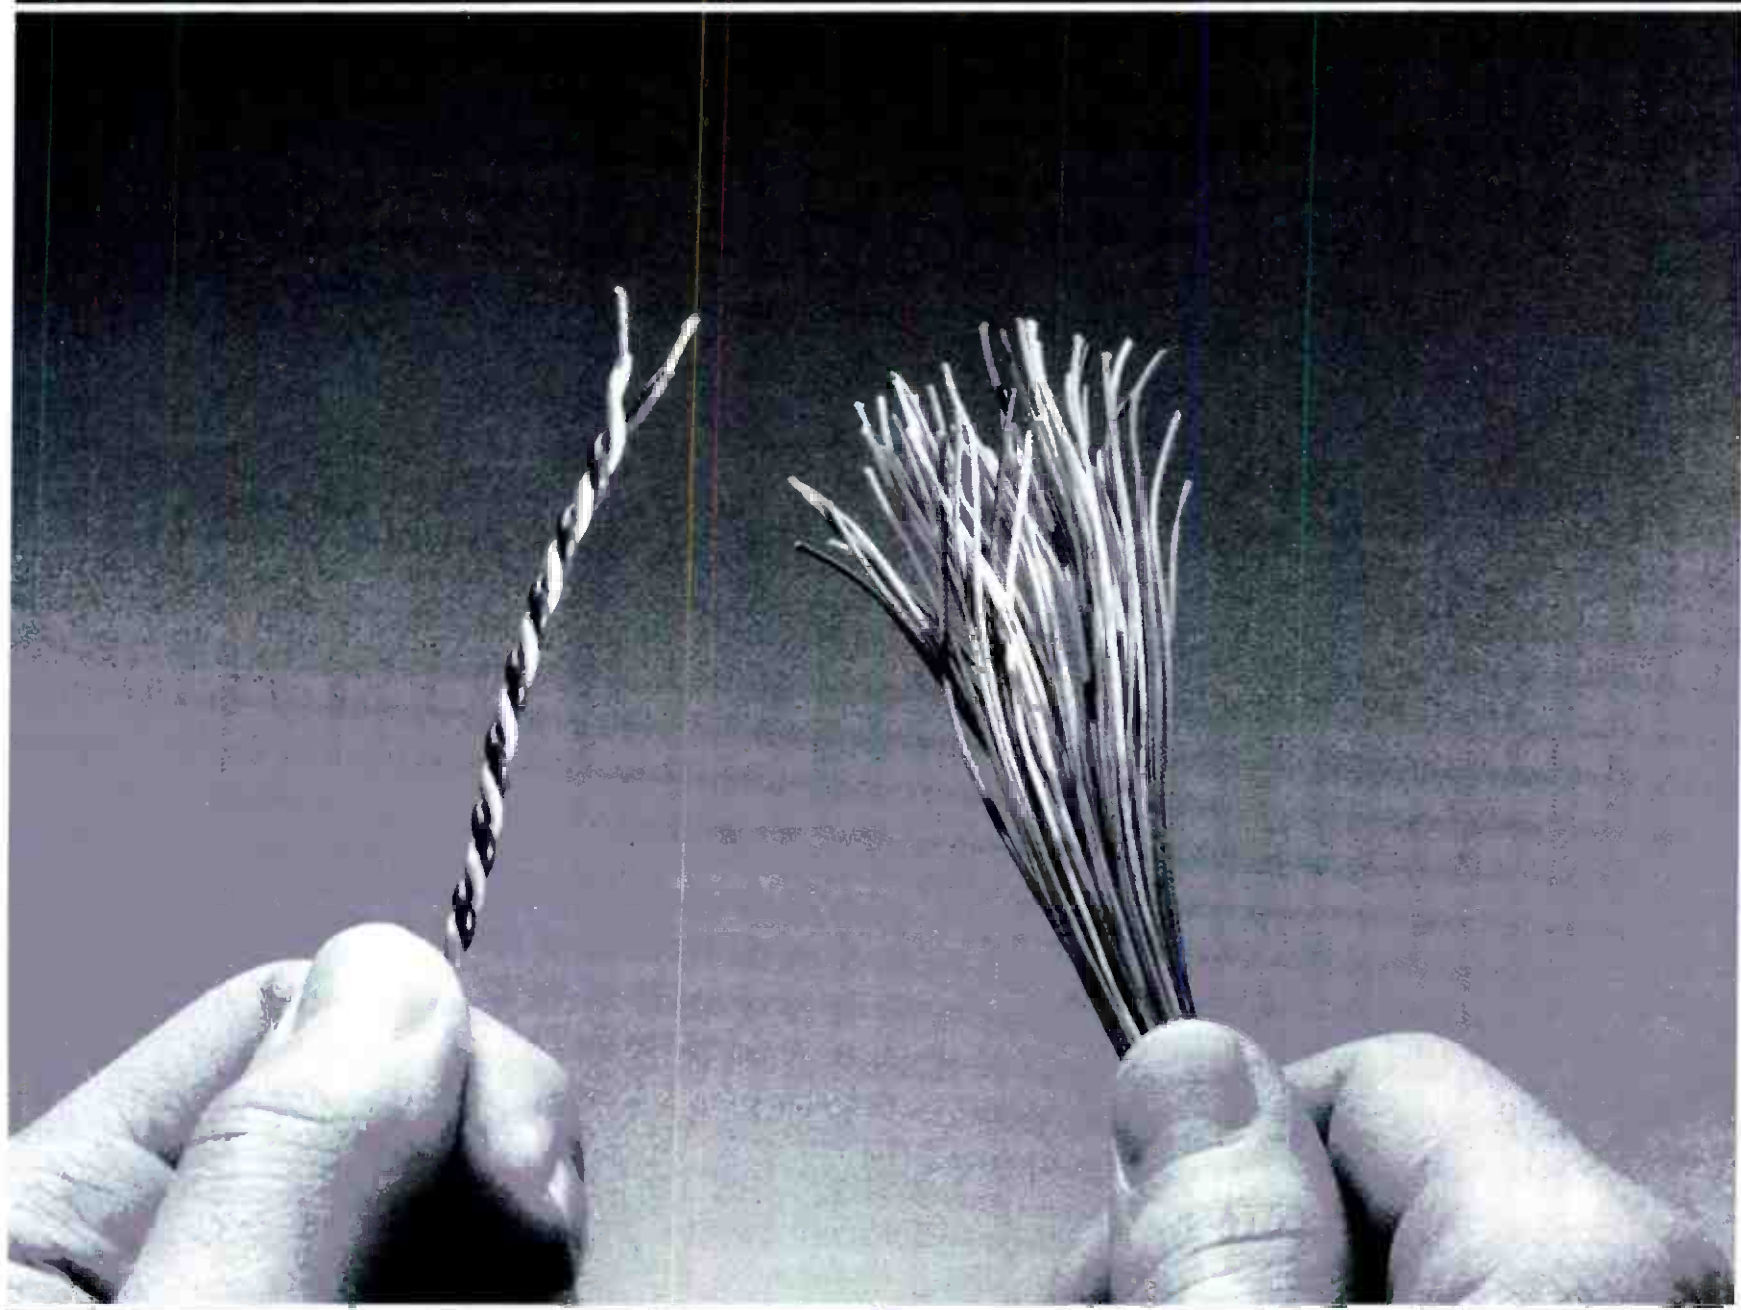

1. ALL labels are removed from used cassette by special COARC process which does not scratch or damage cassette.
2. Many reloaders spool directly into the cassette without inspecting or cleaning the inside. COARC opens, inspects and rebuilds every cassette. INSIDE and out.
3. Friction pads, tape wipers and door latches are replaced if necessary. Tape guides are inspected for excessive wear.
4. Under clean room conditions new videotape is placed in cassette already on the spool with tension rigidly controlled.
5. COARC will custom load any length from 3 minutes to 62 minutes.

COARC "like new reloads" cost considerably less than new cassettes, and custom loading lets you save even more by getting exactly the length of tape you need. Both 3M Color Plus or Agfa 297 MB Videotape available. Contact:

COARC™

INTRODUCING A SIMPLE SOLUTION TO A COMPLICATED PROBLEM

THE VECTOR 4000

Imagine monitoring up to 24 different audio programs or communication lines on one single pair of wires, telephone "dry pair" or a video coax. The incredible Vector 4000 Monitor System gives you 24 simultaneous, selectable channels of audio with a 50Hz to 5kHz bandwidth at distances of over a mile. The new Vector 4000 accommodates over 300 listening stations without any degradation.

Install the Vector 4000 in field or fixed locations in a fraction of the time and at considerable savings over current bulky systems. The possibilities are endless from multi-camera events to newsroom monitoring. All because of unique BTI technology.

Be the first on line at the N.A.B. with the new Vector 4000. See it in use at booth 1701.

BTI is proud to be a supplier of IFB equipment to ABC for the 1984 Summer Games.

One of a new wave of high technology manufacturing plants, the United Media facilities in Anaheim, CA, are designed conservatively to handle R&D and manufacturing needs.

Conversations

An interview with Bob Ricci of United Media

A: Our first product, the Commander I, went on the market in 1979, and the first unit was sold in June.

Q: Do you remember the first sale?

A: Very well. The contract, from a Canadian post-production house, included a clause requiring the system to pass certain engineering tests before it would be accepted. Needless to say, I was pleased when, within three days of the equipment's arrival, the editing controller had passed acceptance and payment was on its way.

Q: Was the Commander I a successful product?

A: Yes. Its shortcoming was that it was not an upgradable system, as is the Commander II. There are a number of them still in the field and in use in facilities that do 2-machine editing jobs.

Q: What about the Commander II?

A: We introduced the Commander II at NAB '80/Las Vegas. From the beginning, it was conceived as modular. The system could be configured in various ways, from a 2-machine system up to an 8-VTR operation, with integrated time code readers and generators. Any combination of VTR formats, quad, 1-inch or U-matic were possible, along with a switcher interface.

We stressed the upgradability factor at NAB-'82/Dallas. The buyer could

After the 1983 fall SMPTE meeting in Los Angeles, Carl Bentz, BE television editor, toured the United Media facilities in Anaheim, CA, and interviewed president Bob Ricci. The discussion focused on trends in videotape editing, Ricci's corporate philosophy and his plans for NAB-'84/Las Vegas. This report, which combines elements of the interview and plant tour, results from that meeting.

Q: How old is United Media?

A: I founded the company in 1976 to be a systems house. People could come in and state their needs, and we would develop a system to meet those requirements. I handled several lines of products from which the systems would be built.

Q: What was your background for such work?

A: Before forming United Media, I worked for Datatron. There I gained a good understanding of what was required in a reliable editing system. I also was involved in developing the Tempo system, which the company manufactured.

Q: When did United Media become a manufacturer, rather than a systems assembler?

The modular design of the Commander II edit controller adds flexibility to the total system.

The Studer for Tomorrow's Teleproduction

Introducing the A810 stereo recorder with center track SMPTE code...from Studer, the world leader in audio recording equipment.

Stereo + SMPTE Code on 1/4" Tape

This is the one recorder made to meet your demand for better quality stereo audio for video productions. With a Studer A810 you can produce state-of-the-art audio tracks, then use any SMPTE-based synchronizing/editing system to lock the A810 to your VTR's.

You don't need a 4-track recorder. You don't need 1/2" tape. And you don't have to program offsets into your synchronizer.

It's all possible because the A810's optional center-track SMPTE code system uses a separate set of code heads, working in conjunction with a microprocessor controlled digital delay. The separate heads assure code-to-audio crosstalk rejection of better than 90 dB. And the digital delay automatically compensates for the tape travel time between code and audio heads at all four tape speeds.

Total Microprocessor Control

The on-board CPU controls all A810 transport functions, all audio status switching, and all audio parameter settings. Design flexibility lets you program the A810 to do what you want it to do. A zero locate and one autolocate position are fixed, but three additional "soft keys" may be programmed for a variety of functions, including up to three more locate positions and two different edit modes. All audio parameters (bias, level, EQ) are set digitally and stored in memory, with memory storage for two different formulations at all four speeds. After initial set-up, you can switch to your alternate tape simply by pushing a button.

External Computer Control

With the optional serial interface, you can control all transport and audio functions with your personal computer (RS232) or with any device conforming to the forthcoming EBU/SMPTE standard (RS422 modified).

Studer Performance and Reliability

Using all-new electronics with advanced phase compensation circuits, the A810 delivers audio performance that is — compared to most other recorders — just short of phenomenal. And, as with all Studer products, the A810 is made from solid components and assembled with Swiss precision.

Get your production room ready for tomorrow's stereo audio. Call today for the location of your nearest Studer dealer.

www.americanradiohistory.com

start with the basic 2-machine system and build up to the full 8-machine configuration. From basic to expanded, the Commander II included almost every editing feature that the industry has requested. Obsolescence was avoided.

Q: How well was the second generation system accepted?

A: There are more than 100 Commander II systems installed in facilities around the world. They involve various grades of expansion, and have proved to be quite reliable.

Q: In talking with people experienced with United Media systems, each has stressed reliability. Why?

A: When an editor sits down to do a project, he has enough things to think about besides his equipment. The design should include every possible way to reduce failures. But electronic equipment will fail. So in major sections such as the power supply, for example, we use heavier duty components than normally needed. In case of a power outage, batteries protect the 500-event internal memory.

Q: I have also been told that your systems generally are lower priced than equivalent ones. How do you keep the price down?

A: Our products, which all are editing-related, use several basic common modules so that we can save on design costs, and, for product support, on the cost of storing an inventory of spares.

Q: What products are included in the line now?

A: All our products are involved in editing. Besides edit controllers, we have time code systems, an audio router/dissolver and automatic dialogue replacement equipment.

Q: When I talk to people in the industry, many are not acquainted with

United Media. Why?

A: Our marketing efforts have been at a rather low-profile level to date. In fact, our best promotion has been word-of-mouth. It's slower, perhaps, than splashy advertisements, but effective.

Q: Will you be showing new items at NAB-'84?

A: The major new product will be the new Mini-Comm edit controller. It is a compact A/B roll, full-featured system for up to three VTRs or ATRs. It is upgradable with SMPTE time code, list management and switcher interfacing.

We also will show a model 500 sequencer, or digital electronic programmer, and a user-definable key enhancement for the Commander II. Each of two keys may recall a sequence of 120 keyboard entries for often-used routines.

Q: What about the redefinable keys others are stressing? Why haven't you gone to that concept?

A: I do not think that redefining or reassigning keys gains anything. Once an operator is oriented to a particular system, why would he want or need to change it, to have to reorient himself? There are arguments that reassignment is of value for right- or left-handed and multiple operator situations, but I have not been convinced.

The same situation is true of other features that have been introduced in the last couple of years. For example, the touch-sensitive screen concept is interesting, but, in my opinion, somewhat of a restraint to the user. I find the touch screen approach to be slower, because it requires me to reorient myself all of the time.

Q: What about voice actuation and recognition systems?

A: They also are interesting. We looked at that approach several years

ago. At the present time, I don't think that it is practical.

Q: How practical are large editing systems, such as your Commander II, fully implemented with the maximum number of VTRs, switcher and mixer interfacing, etc.?

A: In the editing business, time is money. Let's suppose that you purchase eight 1-inch VTRs to go with your edit controller, each with a TBC, for an investment of approximately \$800,000. The majority of editing projects will only involve one or two source machines at a time with one recording VTR. In addition, the editing systems usually are limited to a single mix/effects amp control. With that in mind, most large systems simply are not cost-effective.

Q: Could you state your concept of the ideal editor control system?

A: I instruct my design group to think in terms of the complete system. The purchaser should be able to take the equipment out of the box, plug it in, connect the various record and source units to the assigned plugs and jacks, turn the equipment on and begin editing. As such, the controller should be a black box, designed and constructed in a manner that leaves the operator's concern to focus on the editing task. His technical staff should only need to worry about the sources, the recorders and other equipment attached to the black box.

Then, with the system operating, product support becomes important. We have developed a system, for example, in which users that call for help before 3 p.m. and need replacement parts to get their systems operating will have the parts on their way by 10 a.m. the next day.

It is my opinion that systems design, backed by a good customer service program, is what has made United Media successful.

Circuit boards are etched by an outside supplier, but United Media assembles the final systems and provides QC before shipment.

Forty-three station installations in the last 24 months!

Not bad for a company you may hardly know.

But more and more broadcasters are getting to know us every day! There's good reason why we've grown so fast. We call it "station orientation" . . . the basic philosophy of George Townsend, whose background is station engineering. Now it's practiced by all our design engineers, most of whom have had hands-on broadcasting experience.

We know staying on the air is everything.

We've been there when things go to black. We know the pressure to correct the problem fast. Who needs ulcers! You don't. We don't. So we design maximum redundancy into all our equipment.

But when servicing becomes necessary, we've made it so you can get to the trouble fast — and have room to work. It would be so easy to make smaller cabinets for our equipment. But we haven't forgotten that normal size hands do the service work.

Maybe you too should get to know us.

As so many broadcasters have lately, perhaps you should get to know us, too. Write for a catalog. But if you're in a hurry or have a technical question, call one of our executive group. At Townsend, you won't have trouble getting through to the top.

TOWNSEND T.V. TRANSMITTERS

Cetec Antennas

By Jerry Whitaker, radio editor

The Antenna Division of Cetec Corporation, with sales and manufacturing facilities located in Sacramento, CA, specializes in transmitting antennas for TV and FM broadcasting. The company is one of 11 divisions of Cetec, based in El Monte, CA.

Cetec Antennas has a long and distinguished record of accomplishments in FM and TV antenna technology. The company began more than 25 years ago as the Jampro Antenna Company, manufacturing a line of FM and TV transmitting antennas. The company introduced its patented JSCP Penetrator series of FM circularly polarized (CP) antennas in 1967. The design has served broadcasters around the world, with more than 1000 sold to date. The company began testing CPTV antennas in 1974 and, once authorized by the FCC, began selling its patented spiral antenna in 1977.

Cetec's spiral CPTV antenna is lowered into position on top of the Sears Tower in Chicago. The antenna was manufactured for WLS-TV.

Rodney Kobayakawa uses SONEX a little differently...

ALPHA AUDIO ACOUSTICS
Alpha Recording Corporation

KGMB
Honolulu, Hawaii

CUSTOMER SATISFACTION SURVEY

and so do thousands of others.

Just Listen — 1. You might even say that Rodney Kobayakawa's use is off-the-wall. He lines the ceiling of KGMB-TV's remote video truck with SONEX. "Controls the high ambient noise...Close speaker mounting caused problems with sound orientation...and they look so nice! White audiotiles match the chrome look of our equipment." He's the Audio Engineer at KGMB, Honolulu.

2. "Musicians are always impressed by your SONEX products." Dennis Scott of Chelsea Entertainment Organization, who won a Grammy in 1981 for *Sesame Country*, an album featuring Crystal Gayle, Loretta Lynn, Glen Campbell and the Muppets.

3. "Takes the 'ping' out of hard walls." Don Bachmeier, KFYP-TV, Bismarck, N.D. uses SONEX on wheeled, portable panels to kill voices on adjoining news sets.

4. "Delighted with SONEX's effectiveness...pleasing aesthetics... audio professionals notice reduced standing waves...increased sound-proofing." Sherrie Thomas, Producer, recording studio for the General Conference of Seventh-Day Adventists, Washington, D.C.

5. "Good!...in radio station's master control and production room." Craig Falkenstine, WJCF, Morgantown, W.V.

Pictures do speak louder than words.

When we asked our customers to show us how they used SONEX, we weren't surprised to hear that SONEX did the job. We knew that SONEX's special acoustical foam — with its sculptured anechoic design — absorbs sound successfully. What really amazed us was the number of different SONEX applications they showed us.* See (and hear) for yourself: **Wherever** sound is the problem, SONEX is the solution.

SONEX is manufactured by Illbruck/usa and distributed exclusively to the pro sound and A/V industries by Alpha Audio. Get all the facts by calling or writing:

See us at NAB, Booth #1606

The Cetec facility is impressive to the visitor in that virtually all machining and manufacturing work necessary to construct an antenna is done on-site. Raw stock goes in one side of the building and finished antennas come out the other side. Some specialized procedures, such as galvanizing and custom-order Teflon coating, are done by an outside company under contract to Cetec.

An important part of the company's 17-acre manufacturing facility is a sophisticated turntable measurement assembly used to conduct performance tests on antennas of various designs. The assembly allows engineers to check the radiation patterns and VSWR performance of full-scale production antennas with great accuracy.

The company currently is concentrating its efforts on multistation (or community) FM transmission systems and CPTV antennas. Cetec has installed spiral CPTV antennas at stations in several major cities in the United States. The spiral design gives viewers better reception, including reduced ghosting and less critical front-end tuning.

The FCC's 80-90 decision has forced many FM stations to consider improving their facilities to avoid reclassification at a lower level. The requirement for minimum height above average terrain often can be met by a community arrangement in which a single broadband transmitting antenna, located on a tall tower, is shared by several stations. Such cooperation results in better coverage for all stations participating in the project, and helps defer the costs of constructing the new facilities. Cetec offers several products aimed at meeting this need.

Building an antenna

Although each antenna manufactured at the Sacramento facility is unique, all follow a similar route through the construction process, as follows.

The company maintains a large supply of copper, brass and Teflon stock. As needed, the hardware is cut and machined into components that make up an antenna. The parts store also contains cast mechanical components, O-rings, brackets of various sizes, deicing elements and stainless steel hardware.

Machining is a critical stage in constructing an antenna. It is often necessary for parts to be cut to tight tolerances for low VSWR, as well as a proper fit. Some components machined at this stage carry the entire power load for portions of an antenna system.

"WHY USE WELLFLEX"

Optimum Design

Cablewave Systems offers Wellflex Transmission Lines designed to meet your most stringent electrical and mechanical requirements.

Highly reliable, the unique Wellflex construction provides a combination of strength and flexibility with optimum performance.

Outstanding electrical parameters include extremely low RF loss, smooth impedance coefficient, and conservatively rated power handling capability.

Wellflex is available with either air or foam dielectric with copper corrugated outer conductor, solid and corrugated inner conductor (depending on size), and with a tough, durable, corrosion resistance polyethylene jacket suitable for burial and prolonged life.

Air Dielectric Wellflex in smaller diameters, ($\frac{1}{2}$ " and $\frac{7}{8}$ ") offer a field proven, fixed helix design called Spirafil II—a single, continuous extrusion which locks the center conductor coaxially within the outer conductor, resulting in a near perfect impedance coefficient throughout the entire length of line.

RF transmission lines with welded and corrugated conductors are also manufactured by our associated companies in West Germany and Brazil.

Optimum Performance

Larger Diameter Air Dielectric Wellflex Cables, ($1\frac{5}{8}$ ", 3", $3\frac{1}{2}$ " and $4\frac{1}{2}$ ") feature a unique vertebra helix design to achieve optimum crush and tension strength. Its "pillar effect", using less volume of dielectric, provides lower loss and higher power handling capability due to the more rapid dissipation of heat from the center conductor.

Wellflex has it all: low loss, low VSWR, higher power handling, smoother impedance coefficient, and rugged, long dependable life.

Cablewave System's Wellflex is type accepted for sampling systems in accordance to FCC Part 73.68.

See us at NAB Show

A spiral CPTV antenna, similar to the antenna installed on the Sears Tower, is checked at the field measurement test site.

Shown is part of the supply of raw stock used in constructing an antenna.

The machine shop at the Sacramento plant is shown here.

The antenna begins to take shape in the plant's welding area. The radiating elements and line sections are cut to size and formed in this stage. The tungsten inert gas (TIG) process, also known as *heliarc*, is used to give a good electrical and mechanical bond to the members. All welders are state-certified, an important factor in assuring mechanical quality.

Radiating elements for FM antennas are assembled in individual bays, while the transmission line used for support and power distribution is constructed in another area of the plant. The inside surfaces of all power-carrying members are polished during production to assure maximum efficiency. Power loss can result from contaminants on the inside surfaces of antenna elements and power-carrying hardware.

TV antennas are built in sections of varying lengths, depending on the gain required and the frequency of operation.

Once assembled, the antenna elements are hot-dip galvanized to protect against corrosion.

If requested, Cetec will supply FM antennas with a baked-on Teflon coating, as an alternative to deicing elements or radomes. Field reports indicate that Teflon-coated elements shed ice more rapidly than those with the conventional finish.

Once the antenna has been built, one or more elements is fine-tuned on a support tower identical to the tower used by the station placing the order. Any antenna irregularities then can be tuned out, and adjustments made for minimum VSWR. Directional antennas, when desired by the station, are created by adding parasitic elements. Cetec produces a large number of directional FM antennas each year. Pattern measurements required for FCC approval are done on the company's test range.

Pattern optimization work also is done on the Cetec test range. Often, simply changing the antenna mounting slightly will benefit the pattern requirements. Parasitic elements sometimes are added to correct radiation pattern problems. This service does not directionalize an antenna, but seeks to optimize radiation in a desired direction by removing any nulls found in the pattern.

Shipping containers are constructed at the Sacramento facility and all FM antennas are shipped disassembled (unless specially ordered), because of the finished product's large size. A complete set of drawings and instruc-

Continued on page 266

We go to any heights to put you on the air!

In 1984 U.S. broadcasters have an inspired new company to call upon for their tower and antenna needs.

From roots that stretch sky high we have pulled together the resources of LeBlanc & Royle and Alan Dick to form LeBlanc & Dick Communications Inc., based near Washington, D.C.

By drawing upon the expertise of these two world class companies we are able to bring broadcasters the team that provided antennas for the world's tallest building, the Sears Tower in Chicago, and the world's tallest free-standing structure, the CN Tower in Toronto.

While our main activities include the design and construction of communications towers and antenna systems for broadcasters all over the world, our unique reputation has been built on mastering the really big challenges.

LDC is geared to provide complete turnkey systems. You'll find us at NAB Booth 1149. Be sure to come by and see how we can build a part of your future!

LeBlanc & Dick
Communications Inc.

Beyer provides typical condenser accuracy

At Beyer, we maintain the singular notion that a condenser mic *can* combine typical precision and sensitivity with a smooth, natural sound. Beyer Condenser Microphones give you the accuracy and higher output of a condenser without a "hyped," larger-than-life sound. Beyer condensers offer the high-performance specs required by digital recording without reinforcing the occasionally clinical aspect of this process.

More Options – More Versatility

The Beyer MCM Condenser System's comprehensive selection of interchangeable mic capsules means total applications versatility in the most logical and cost-effective format. A choice of mics with cardioid, lobe, omni or figure-8 patterns and

the option of integral shock-mounting is instantly available for use in the studio *and* out in the field.

New Super High Performance Mics

The ongoing technical evolution of Beyer condensers has produced several newly designed mics offering matchless performance and long-term reliability. The new MC 737 long shotgun (lobe pattern) and MC 736 short shotgun (cardioid/lobe) utilize a built-in switchable bass rolloff to effectively suppress low end noise and rumble below 200 Hz and provide increased intelligibility for optimum speech and music recording. A 12 dB attenuator prevents high sound pressure levels from overloading the mic's internal electronics without coloration. These mics also feature an extended frequency

The Dynamic Decision

without typical condenser sound.

response of 40 Hz to 20 kHz (± 2.5 dB) and an excellent signal-to-noise ratio of 74 dB.

The new MC 734 is the only "studio" condenser mic that delivers the highest standards of performance in any recording or live concert situation. An extremely flat frequency response from 20 Hz to 18 kHz (± 2.5 dB) insures total accuracy while a 3-step filter compensates for proximity effect in close-miking situations. To maximize the MC 734's performance onstage, a unique stage resonance filter which reduces rumble and extraneous noise is combined with the mic's ability to withstand sound pressure levels of 138 dB (1 kHz \leq 0.5% THD).

Condenser System Accessories

For added back-up flexibility, the Beyer Condenser

System includes a full complement of accessories including windscreens, power supplies, pistol grips, suspension mounts and our one-of-a-kind MZA 716 telescoping "fishpole" boom with an adjustable tilt variable from 0 to 360°.

Beyer Dynamic has firmly established itself as a leading force in moving-coil and ribbon microphone technology, but don't let our name mislead you. Instead, consider the uniquely natural sound, applications versatility and wide variety of accessories that make up the Beyer Condenser System.

Visit one of our select professional dealers for a complete demonstration. To obtain a Beyer Condenser Dealer List, please write to: Beyer Dynamic, Inc., 5-05 Burns Avenue, Hicksville, New York 11801 or call us at (516) 935-8000.

Circle (191) on Reply Card

April 1984 *Broadcast Engineering* 265

A welding turntable is used when working with line sections to ensure an even bond.

A production run of JSCP model FM antennas is readied for final assembly and testing.

tions is provided for the tower crew at the transmitting site.

TV antennas are shipped fully or partially assembled, so the units can be lifted directly onto the supporting tower. A flat-bed trailer transports these sectionalized antennas.

In addition to building new antennas, Cetec regularly receives FM transmitting antennas for refurbishment and repair. Sometimes the antenna has been damaged by lightning or vandalism, and requires repair that is not practical in the field. Other times, a station wants to change frequency and needs the main antenna retuned, while operating on a standby system.

A number of items are taken into consideration in the process of repairing an antenna. A visual inspection of the condition of the elements, feed line and mounting hardware reveals the more obvious problems. Elements, and sometimes entire bays, are replaced as needed and all internal power-carrying components are cleaned thoroughly. Deicer elements are checked for proper operation and the system's electrical cabling is inspected.

Antenna system maintenance

Cetec estimates that a well-built antenna will provide about 20 years of service, if properly maintained. The company recommends the following measures to guarantee long life:

- The transmission line and antenna should be pressurized with nitrogen gas. Not only will pressurization keep contaminants out of the system, but also will provide a means to monitor the integrity of the line and antenna. Pressure loss should be charted, and any increase in loss values should be investigated.

- The antenna system's VSWR should be measured regularly and charted to determine whether any long-term changes are occurring in the system. Likewise, the incidental AM (also known as synchronous AM) should be measured regularly and charted. An increase in either of these two parameters may indicate antenna or transmission line problems.

- A visual inspection should be made every year by an experienced tower worker of the transmission line and antenna system. Deicer cables should be checked and a determination made that each heater element is working properly. Particular attention should be given to the individual antenna bays. Any bent elements or other physical damage should be repaired as soon as possible. Assembly

Flexibility... *on the move*

with Gerstenslager

Mobile studios designed for quick setup and strike so you can get all the action, all the time. Proven capabilities. State-of-the-art communications technology. Meeting the changing demands of on-location, whether at the concert hall or the sports arena.

Tell us your needs. We'll custom design to your exact specifications. Install the equipment you want — where you want it. And we'll deliver when you want it. A mobile unit that's as dependable as your home base.

A JSCP FM antenna undergoes final testing and adjustment at the field measurement range.

Introducing the ultimate FM Exciter!

Continental's Type 802A solid-state FM Exciter offers broadcasters unmatched performance.

Modulation performance of this new exciter exceeds all currently known or marketed FM exciters.

No tuning adjustments are required other than selecting the operating frequency.

Power output is 50 watts into a 50 ohm load at all FM frequencies.

The exciter may be used as a low power transmitter.

Special circuits protect amplifier from mismatched loads. Automatic power control maintains output at preset levels from 5 watts up to the maximum level.

The Type 802A FM Exciter accepts composite baseband signal from a stereo generator, STL system or monaural and SCA programming.

A digitally-programmed, dual-speed, phase-locked frequency synthesis system generates exciter frequency.

Case design is very clean: front panel analog or digital meters and LED readouts give clear, accurate indications of system status and performance. A digital LED display shows true peak level of modulating signal in 5% increments with an accuracy of better than $\pm 2\%$.

Modular subassemblies may be removed from the exciter without removing the exciter from the transmitter. The exciter moves on slides for easy access from front of transmitter.

Call us for specs and prices.

TFT 8300 STL

Clearly Above The Crowd

In Price and Performance

The 8300 STL outperforms *any* other STL, even in the densest RF environment. Yet, it's priced way below the nearest competitor.

The 8300's superiority is clear in its overall performance. Like a 75 db SNR and stereo separation of 50 db, or better.

The transmitter features IF modulation for low distortion and high stereo performance, a technique pioneered by TFT, which has been further refined in the 8300.

In the receiver, too, the TET 8300 stands above the rest, with a sensitivity of 30 μ v or less for a 60 db SNR; front panel selection of wide or narrow I.F. bandwidth; and a Surface

Acoustics Wave (SAW) filter to ensure outstanding selectivity.

Additionally, the 8300 receiver features continuous, independent display of signal strength and a bargraph display of modulation.

The 8300 is also ready for AM stereo. An optional, plug-in demodulator provides both R and L channel without any external devices.

So, be selective about your STL and specify TET to put your station clearly above the crowd. Call or write today.

Exclusive Two Year Warranty

The TET 8300 carries a full two year warranty, which is backed by around-the-clock factory service.

* Free computer STL path analysis at NAB Booth 109.

Committed to keeping you, on the air!

A batwing-style TV antenna takes shape as the mounting brackets and radiating elements are secured to the mast.

New products

Cetec currently is working on several new antenna designs, including a spiral FM panel radiator. The antenna is a broadband CP design intended for multistation use. It will handle about 30kW per panel, and mounts on each face of the support tower. (See Figure 1.)

Dr. Ray DuHamel, a consultant to the company on antenna design, is directing research and development on the project. DuHamel also designed Cetec's spiral CPTV broadcast antenna.

REFLECTIVE PANEL SCREEN

FEEDPOINT

RADIATING ARMS
(held above the reflecting
screen by stand-offs)

The carpentry shop is where shipping containers are made for the antennas and other Cetec products.

Figure 1. The design of Cetec's new FM CP spiral panel antenna, which is being developed at the Sacramento plant. The spiral arms form the radiating elements, which sit in front of a reflector screen.

The main benefits of the new design are its true circular polarization and mechanical simplicity. The reduced number of machined parts and feed lines should make the new spiral FM CP antenna more reliable in the field and less expensive to manufacture. Tests to date on the antenna show that it has outstanding broadband characteristics, easily covering the FM broadcast band.

In addition to FM and TV antennas, Cetec also manufactures transmitter combiners and notch filters of various designs.

Buying an AM, FM or SW transmitter?

Let's talk company, product and price.

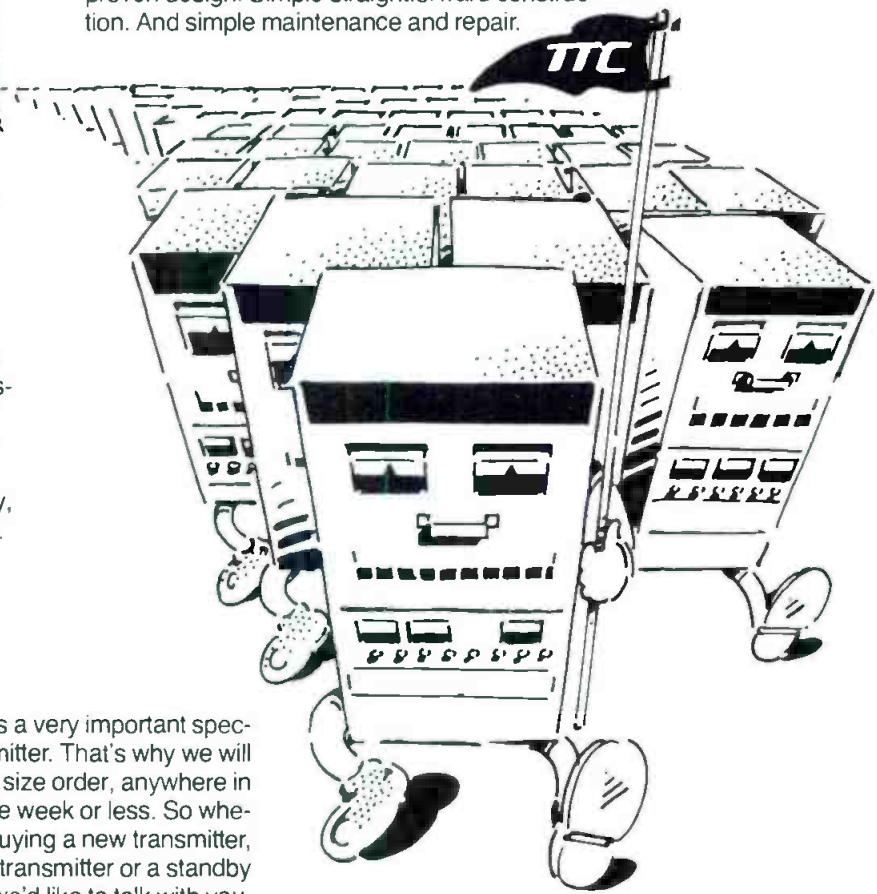

A good company gets better.

When TTC bought Wilkinson Electronics, back in 1981, we acquired a company with a good transmitter line, satisfied customers worldwide, and an expanding market. Since then, we've moved the company to a modern new facility in Colorado, increased production capacity, improved reliability, and basically, made a good company even better.

Long live our transmitters.

Today there are over 2,000 Wilkinson transmitters in operation around the world. Many of these have been in continuous operation since 1964.

The reason for this long life is simple. Simple, proven design. Simple straightforward construction. And simple maintenance and repair.

Call us for price.

We recognize that price is a very important specification of any transmitter. That's why we will quote you on any size order, anywhere in the world, in one week or less. So whether you're buying a new transmitter, a replacement transmitter or a standby transmitter, we'd like to talk with you.

Just call (303) 465-4141 or
TWX: 910-938-0396.

Corrections

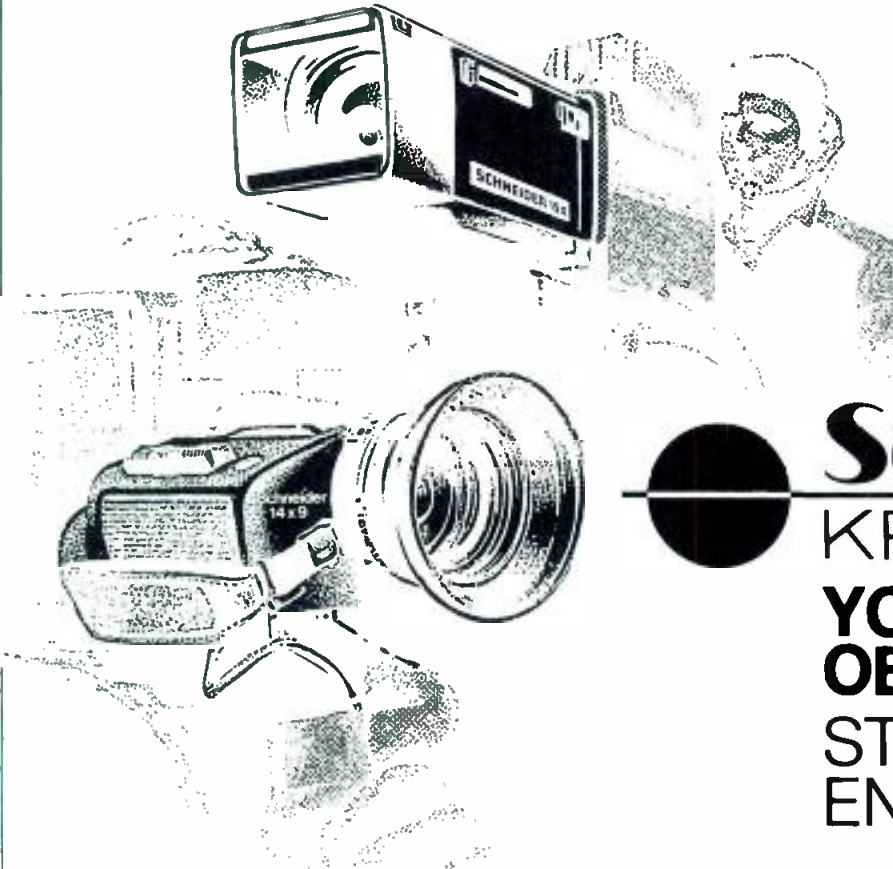

- In the February 1984 issue of *BE*, clarification should be made on a few points in the article, "Stages of SCA." Under the subheading "SCA for Data Transmission" (page 68), it is said that error rates for SCA delivery of data can be as much as five orders of magnitude **higher** than standard telephone data lines. This should be corrected to state that SCA delivery provides data error rates **less** (that is to say, **better**) than telco circuits. A similar discrepancy occurs at the bottom of page 70. The corrected paragraph should read as follows:

"Error rates (for SCA data transmission) are less than one in 10 million (1:10⁷), as opposed to the telephone company typical figure of one in 100,000 (1:10⁵), or **higher** in some cases."

- Environmental Satellite Data (ESD) was not included in "Electronic Videographics Systems: An Update" (February 1984 *BE*). ESD provides the PMT-100 Professional Model Terminal for access, storage, analysis and display of color weather information via the GOES East and West weather satellites. Sixteen-bit computer technology includes 128kbyte RAM, 10Mbyte hard disk and floppy disk storage with RS-232C interfacing, repeating image loop sequences and a graphics tablet for the artist's input. CP/M-86 allows data processing and business applications of the system as well. For more information, circle (1497) on the Reply Card.

- The manufacturer name for the Emph-a-sizer audio processor on page 27 of the 1983 *Spec Book* issue should have read ATI/Audio Technologies Inc. For those having used Reader Service Numbers, your requests have been properly directed to the Horsham, PA, company.

RADIO SYSTEMS

P.O. BOX 356 • EDGEMONT, PENNSYLVANIA 19028

ferent in appearance. We thought of a space-station that invited people to come off the wide aisles and experience the Sony family of broadcast products that were currently available and those high technology items coming in the near future.

After visiting with us, many people said it was like visiting the World's Fair. You could wander around and interact with the equipment, experience it and ultimately leave the area satisfied that you were able to see everything from a highly complex editing suite and a demonstration of the Betacam 1/2-inch camera/recorder system to a professional audio production studio designed for broadcast applications. It was a revolutionary concept, and much of the credit should go to Sony Broadcast president Neil Vander Dussen, who had the foresight to support the idea, and the company's management people who made the ideas into reality.*

Usually the gestation period for an NAB exhibit of this size is six months; our 1983 booth was created in four. Management gave us the go-ahead in late December 1982, and, in the next 12 weeks, the space center was designed, produced, shipped, erected and then stocked with 250,000 pounds of equipment. It was a remarkable feat accomplished thanks to the hard work of many dedicated people at Sony and Lynch Exhibits (Pensauken, NJ).

*In July 1983, Vander Dussen was appointed president of Sony Consumer Products company. William G. Connolly currently is president of Sony Broadcast Products Company.

Q: Can you discuss the design of the Sony exhibit in detail?

A: We received several competitive submissions by exhibit houses and selected the one by Lynch Exhibits to create a unique triad complex comprised of two circular space stations and the Sony Vision Theater, covering one-third of an acre.

We also designed a different treatment for housing equipment on the floor. We call it *space frames*. It makes the equipment seem to just be there without the customary walls and counters.

The larger space unit was 58 feet in diameter with an 18-foot engineering core at its center. Like slices of a large

The larger space center was 58 feet in diameter, and included a complete BVE-5000 editing suite (shown here). Note the tape machines behind the glass doors to the right.

pie, five interlocking areas around the central hub offered displays of the Betacam 1/2-inch camera/recorder system, including the BVW-40 recorder/editor, the BVW-20 portable field player and all accessories for the BVP-3 Betacam recording system; three editing suites (which combined 1-inch U-matic VTR and Beta); and a complete MCI/Sony multi-track studio. A combination of TV monitors, overhead projectors and a small sound system enabled people on the periphery of the editing suites to observe the activities without obstruction. Editing generally is a one-on-one type of demonstration.

Completing the configuration of the larger space center, two finger-like space frames extended from the sides of the structure: one displayed 1-inch equipment arranged in ascending levels of sophistication; and the second finger was devoted to U-matic hardware.

The sister space unit, the smaller of the two, was 42 feet in diameter, divided into four sections, with a 10-foot engineering core at its center. One section displayed additional Betacam accessories; two sections were camera stages for ENG and EFP operations and applications; and the fourth module introduced our new BHV-2500 animation machine. The

Shown is the floor plan of Sony's 1983 NAB booth. The complex included a reception area, theater center and two circular space stations built around their own engineering core.

Centro does it all...

your best "turnkey" source for video editing, production and broadcast facilities...fixed or mobile.

A 35,000-square-foot plant... a staff of electronic engineers that know all the complex aspects of systems technology... a fully integrated architectural, design, construction and installation team... a demonstrated history of providing clients with telecommunications systems... and advancing the state of the art... that's what we're all about.

Centro "softens" the impact of high technology by designing and providing the comfort and special needs that make the difference for your operational staff.

We can deliver you a system that integrates today's highly sophisticated equipment into a productive and profitable telecommunications tool.

entire exhibit had a staff of sales engineers on hand to interact with visitors and explain special features and operation of all equipment.

The third part of the exhibit was the Sony Vision Theater, a separate entity from the two space stations. Traditionally, we have an audio-visual presentation that gives a brief overview of our entire product line. In 1983, the show included an on-stage performer and video segment, and was capped by a dramatic demonstration of HDTV. People lined up for tickets and even returned for performances later

in the day. Showings were continuous from 9:30 a.m.-5:30 p.m.; 3800 NAB attendees saw the show.

Q: Mounting such an ambitious exhibit must have required a tremendous amount of coordination.

A: Pre-show activity always involves a great deal of pressure. Traditionally, NAB opens on a Sunday. However, Sony has a special preview of the exhibit a day before for the press and members of International Sony Broadcast Companies (Canada, England, Japan, Australia and South America),

cutting our time by one-half day to prepare. We also use this time to familiarize our own personnel who run the show with the intricacies of the exhibit.

The structure was so complex that, until the actual setup date, we never knew how long it would take to assemble. Working with teams of 10-16 people, it took approximately 1800 man-hours to erect it. We began construction a full 1½ weeks before NAB opened. Working 24 hours a day in two shifts, it took four days to prepare the exhibit for the arrival of more than \$6 million worth of equipment. We ran about 35 miles of cable. Last-minute problems were worked out and we counted down to the opening.

As a sidenote, our assembly procedure was so well-coordinated that we actually were ahead of schedule. More than once we completed a section and had to wait for the next truck to unload. We only had to redrill one hole in our entire steel structure.

Q: Were there any unexpected problems?

A: Of course. Our one shortcoming was that we did not adequately design the reception/check-out area to handle the large numbers of people. It was an unanticipated bottleneck. Another thing we learned, once the exhibit opened, was that the traffic patterns of booth visitors were far greater than anticipated, and created some minor traffic jams. At one point, we estimated that more than 2000 people were in the booth at the show's peak.

Q: Was Sony pleased with the results?

A: Everyone was extremely pleased. Our goal was to emphasize the company's position as a leader in the industry by showcasing our line of products and future technology in the most efficient and original way possible for our customers to learn the most about our products. Lynch Exhibits helped us dramatically demonstrate how an innovative display can serve those ends. We expect that our space center will influence the design of major exhibitors at NAB and other shows for many years to come.

Q: How do you top such an exhibit?

A: We hope you'll come to NAB '84 and see!

Extending from the larger space station were two fingerlike corridors (above), one of which displayed 1-inch tape equipment arranged in ascending levels of sophistication. Note the uncluttered open-space design of the exhibit layout.

The smaller space station included the company's new BVH-2500 model (below), a SMPTE Type C 1-inch machine that features still-frame recording and playback without pre-roll. The BVH-2500 is designed for animation applications.

Editor's note:

This is how Sony prepared for its NAB '83/Las Vegas convention spectacular. But remember, many exhibitors can relate similar stories. This year, when you see something you like at the convention in Las Vegas, let the exhibitor know. Much effort has gone into making *your* show the best in the world, and your words of acknowledgement will be appreciated.

Have a good show!

! : ? =)))

GET BEHIND THE CAMERA THAT'S OUT IN FRONT

THE IKEGAMI HL-79E

The HL-79E, Ikegami's crowning technological achievement continues to run ahead of all other cameras in its class.

That's why more and more top-of-the-line EFP camera buyers are getting behind the winner. Only by seeing this remarkable camera in action can it be fully appreciated.

Just how great is this camera? To begin with, it is the culmination of all that has gone into creating the legendary 79 Series cameras, the reference standard of the broadcast industry for both ENG and EFP applications.

HL-79E features—Dynamic Detail Correction, Chroma Aperture Correction, Highlight Aperture Correction and Auto Contrast Compression. Plus the HL-79E offers superior contrast range, S/N ratio, registration accuracy, resolution, viewfinder performance and more.

Available accessories include the ADC-79E Auto Set-Up Unit and the RDC-79E Remote Control—both digitally interfaced. The HL-79E is compatible for use with existing HL-79A and HL-79D Triaxial Multi-core cable base stations, lenses, power supplies, VTRs, and other accessories.

The HL-79E is part of the great and proud family of Ikegami products serving many satisfied users worldwide. For a complete demonstration of Ikegami Cameras and Monitors, contact us or visit your local dealer.

THE ONE PIECE THAT SOLVES THE PUZZLE

THE ALL-NEW IKEGAMI HL-95 UNICAM®

If you're confused by the many tape formats and conflicting manufacturers claims, relax.

Ikegami's new HL-95 Unicam® is the only universal camera system that accepts all professional on-board VCR formats, 1/4-inch and 1/2-inch, and solves your buying puzzle by putting the picture you want into place.

Engineered to offer performance beyond the most rigid expectations, the HL-95 utilizes new 2/3-inch SM diode gun Plumbicons®, resulting in a camera with higher sensitivity and S/N ratio, greater resolution, lower operating power requirements and less registra-

tion error than previously possible in a camera of its size and weight.

The HL-95 is also available as a stand-alone ENG camera, and in systems configurations using Triax or Multi-core cable base stations, or with the ML-95 ENG Microwave Link. Once you examine the HL-95 Unicam®, you'll agree that the system flexibility and picture quality puts it in a class all by itself. The standard of excellence continues at Ikegami.

For a complete demonstration of Ikegami Cameras and Monitors, contact us or your local Ikegami dealer.

The videodisc revolution

By Arthur Schneider, A.C.E., post-production consultant, Agoura, CA

This year at the NAB convention in Las Vegas, several editing systems manufacturers may show videodisc-based editing systems. However, based on my research, the big splash for disc-based systems will occur at next year's NAB show.

Without a doubt, the most time-consuming part of videotape editing is finding and locating material. Many ¾-inch VTRs used in editing take more than 12 minutes to go from one end of a 1-hour tape to the other. Even the most sophisticated of these machines will take more than two minutes to perform the same task.

Currently, 1-inch broadcast VTRs will search at speeds of 50X play speed or greater, but the majority of editing time still is devoted to threading VTRs or searching back and forth until the desired material is located. Even at 50X play speed, it takes more than a minute to go from one end of a 1-inch tape to the other.

If one were to analyze the various functions of the editing process, locating the material to edit takes most of the time and making decisions takes the rest of the time. Finding the right reel or cassette, winding down to the desired material and rewinding each reel consume much time during the so-called creative period of editing.

Most decision-making occurs or should occur during the work-print stage, using low cost editing controllers and VTRs. For obvious reasons, the cost of off-line or work-print editing generally is about one-quarter that of mastering or on-line editing.

What if you were to dramatically reduce the editing time by virtually eliminating search time? This presumes that adequate notes would be taken during production to allow production people to tell the editor to go to a specific take based on time code information or slate identification.

Let's assume that a point of reference has been selected. If a mass storage medium such as an optical laser videodisc were interfaced with the appropriate edit controller, access to this spot would take only a fraction of a second, instead of more than a minute with today's fastest VTR. Wouldn't it be great to be able to access material 60-600 times faster than

with present-day VTRs? Think of the time and money saved in editing.

You can quickly see the tremendous advantages of such a system. Decision-making will be improved immeasurably, and I predict an immediate improvement in the aesthetic quality of the product because the creative juices would not be lost waiting for tape machines to find the material.

Science fiction you say? That is not so. Believe it or not, in 1971 CMX announced such a system, the CMX-600. Although its specifications were not quite what I have described, it did work and was in a class by itself. In fact, it could locate any frame of information within its videodisc storage banks in one-seventieth of a second (twice as fast as the human eye blinks).

For all practical purposes, it allowed instantaneous retrieval of picture and sound information. You may ask why it is no longer around. There are a number of reasons. First, its initial price tag was close to \$500,000. Second, its high maintenance costs limited its sale to only a few facilities that had the resources to keep it running. Third, the 600 only produced pictures in black-and-white. And, finally, it had a capacity of only about 27 minutes, limiting the amount of raw material the editor had to work with. This meant that you had to carefully select only the takes with which you planned to work.

The CMX-600 was designed for one particular purpose: to edit commercials and other short segments. It was an amazing device, but producers, seeing the potential for editing programs, wanted to use it for more sophisticated editing.

I was pleased to be among the first users of this system. Once I had learned to operate the system, I was able to edit the first cut of a 1-hour program in one 8-hour day. It took me only another four hours to refine it. Today, that same process takes about five days to complete. Although no longer in production, there is one CMX-600 disc system still operating at One Pass Video in San Francisco.

CMX plans to show additional videodisc interfaces to its 3400 editing system at NAB-'84. Last year, CMX was the first to introduce a videodisc interface for its editing system.

Because of the tremendous technological advances in electronics and related fields, mass storage, quality and capacity have been improved greatly. To date, there are 17 announced manufacturers of videodiscs and related components. Not all of them, however, are building videodisc units for editing systems. Some of them are for industrial use in interactive applications and others are strictly consumer-oriented.

Some features that I as a film and tape editor would like to see included in a videodisc-based editor are light pen control with plain English editing commands, no visible time code so that the user may call up material by scene or take number, and the capability for editing at 24fps, allowing conversion back to film edge numbers.

Features needed for video editing applications include a videodisc player that has a minimum capacity of 30 minutes per side, preferably 2-sided. The capability for scanning the video and audio at any rate selected by the user; for freezing a clean usable field or frame indefinitely; and for making edits from disc to disc or within the same disc in real time are some other features required by such an editing system. Another required feature is instant random access of any material recorded on any disc within the system. It also must be easy to use and reliable. The industry does not need another piece of hardware that takes a staff of engineers to maintain it.

Thirteen years ago, when the CMX-600 was introduced, the picture quality was mediocre, black-and-white and of limited capacity. Today the laser disc has come into its own. For example, disc storage now is up to an hour per side. Color with resolution of 4.5MHz or more is available. Disc players are less complex than a VTR. Even the slowest disc access time now is only a few seconds.

There are some limitations to the current crop of videodisc units. The most obvious one is the inability to get a videodisc made within a short time, such as overnight. You cannot use a videodisc as a source in post-production if the turnaround time is not within the constraints of the show's time schedule. Access time is the second limitation. The 70ms access time of the CMX-600 is not yet available for the video laser disc, although I am sure that eventually will be achieved. A third problem is that of cost. Some disc mastering costs more than \$2000 per disc, out of the range of most TV editing budgets.

During my recent research on this subject, I contacted a number of com-

INTRODUCING THE CAMERA YOU'D BUY AT TWICE THE PRICE

THE NEW BROADCAST QUALITY IKEGAMI ITC-730A

When you examine the quality of the Ikegami ITC-730A and then hear the price, you'll probably ask to hear it again.

The new ITC-730A is a truly low-cost, lightweight ENG/EFP camera that's designed to give you exceptional performance and value. Video gain has been boosted to +9dB/ +18dB for a maximum sensitivity of 4-foot candles when using an f/1.4 lens, while signal-to-noise ratio has been improved to -57dB. Center horizontal resolution now exceeds 650 TV lines, with corners optimized by dynamic focus. Dynamic range has also been expanded—without sacrificing resolution or S/N ratio in low-light image areas—through highlight compression circuitry. In addition, the ITC-730A generates Split Field Color Bars in accordance with EIA RS-189A and sync waveform meets the SC-H criteria of RS-170A. And for multi-camera setups an adjustable color video matrix

permits accurate color matching between cameras.

Yet the ITC-730A still incorporates features that made the ITC-730 the ENG/EFP camera for budget-conscious, high-quality ENG and production. Features that give you the edge, such as Saticon II® pickup tubes, dynamic beam stretch, a 2-H vertical detail corrector, and a host of automatics. In addition, the ITC-730A CCU lets you operate up to 1000 feet away through a flexible 13 mm cable in AC mode and up to 300 ft. away using DC at the camera head or CCU. And its well-balanced, lightweight design lets you work comfortably in the field.

The ITC-730A: Great value never looked so good. The standard of excellence goes on at Ikegami. For a complete demonstration of Ikegami Cameras and Monitors, contact us or visit your local Ikegami dealer.

panies designing and building videodisc interfaces for their editing controllers. As of this writing, the following provides information on companies, many of whom will be at NAB'84/Las Vegas, that are building systems.

One of the companies working on a videodisc editing system is Spectra Image. Gary Matz, executive vice president, said that the company is building an interactive and catalog-type disc-based system. This will include equipment to provide motion control and capability for handling up to 30,000 individual slides. Another

service to be offered will be disc-based presentations. The company is building videodisc-based editing systems that will be leased to users. Input from industry film and tape editors helped this company develop a user-friendly system. According to Spectra Image, the TV industry is moving so fast that the company periodically will have to update its systems to be competitive.

Spectra Image plans to provide mastering to videodisc on a 1-shot basis with overnight turnaround for a cost per half-hour disc of \$150. By 1985, it expects to lower that price to

\$100. According to Matz, Spectra Image may show its system at NAB'84.

One of the most well-kept secrets in this industry to be unveiled at this year's NAB show is the Edroid videodisc-based editing system. This joint venture between LucasFilm and Convergence, if nothing else, should have people lined up at the booth to get a look. I have asked for information describing the system, but Convergence, as well as all other editing systems manufacturers, is not furnishing it.

According to Deborah Harter of Convergence, the Edroid editing system will be manufactured and distributed by Convergence. The system has been designed by George Lucas and his engineers and is aimed primarily at the film editor. There is no keyboard or light pen for input to the system. However, Harter said that the input device is mechanical. The number of disc players seems to be virtually unlimited. The system also will interface with existing VTRs. Although the Edroid seems to be designed for film editors, it also will be compatible with SMPTE time code and will allow the editing of TV programs on videotape.

The Control Video Corporation (CVC) has announced that it will introduce a new disc-based editing system, the Competitor. It is a high level editing system with the capability for interfacing up to 30 videodisc players, using an enhanced CVC editing controller.

At this time, CVC is interfacing to the Panasonic direct read after write (DRAW) videodisc recorder/player, which has a capacity of 13.8 minutes of material in real time. Some of the announced features include an interface to four videodisc players, real time playback, multiple record capability and variable speed playback in either direction. It also will allow film-to-video-to-film editing with the 24- to 30-frame conversion software included in the base price of the system, which is expected to be from \$50,000 to \$55,000. Another feature will be the transfer function, allowing auto duping of material to another disc for dissolves or for editing between disc players in real time.

The CVC Competitor also includes complete edit list management capabilities. This includes finding an edit by anything stored in the list from edit number to names stored as a note. Data is put into the system by the Lightfinger screen or an optional keyboard.

NAB'84 promises to unveil some of the most interesting and innovative post-production tools broadcasters have ever seen.

NEC's new 3-chip CCD color camera

By Masao Mitsui, director of engineering, NEC America, Elk Grove Village, IL

Shown is one of the new NEC interline CCD chips used in the SP-3 video color camera. The registration of the three CCD imaging chips is permanently set in the factory.

Since they were introduced in the late 1970s, video cameras using solid-state charge-coupled device (CCD) image sensors have generated a great deal of excitement in the broadcast industry. With their mechanically locked registration, CCD cameras seemed particularly suitable for electronic newsgathering, in which camera operators often are required to carry out tough ENG assignments in difficult circumstances with little or no time to set up.

Furthermore, CCD cameras promised to be considerably more rugged and reliable in operation, as well as lighter in weight and lower in power consumption, effectively easing the load of equipment ENG camera operators need carry with them.

Video cameras using solid-state CCD image sensors were expected to provide performance superior to that available from most conventional $\frac{3}{8}$ -inch pickup tubes. However, until recently, their use was confined mostly to industrial applications because their resolution was still inferior to that of Vidicon-type pickup tubes. One of the problems that needed an immediate solution was the blooming phenomenon. The application of an overflow drain and barrier positioned beside the photosensitive area has made it possible to suppress the blooming phenomenon in CCD image sensors. However, this method was found to sacrifice photosensitivity and dynamic range.

To produce its first broadcast-quality CCD color camera, the SP-3, NEC has developed a totally new interline CCD chip, in which the contents of the multiple solid-state data registers are read out during the video picture's vertical interval. The NEC interline CCD chip features a vertical

Compact and lightweight, the SP-3 is shown in the stand-alone configuration.

"The Only Truly Modular Wireless Remote Controlled Lighting System"

**NO DIMMER RACKS REQUIRED – NO CONTROL WIRING REQUIRED
NO PATCH PANEL REQUIRED – NO CONTRACTOR INSTALLATION COSTS
NO MAINTENANCE REQUIRED – NO OPERATIONAL TRAINING REQUIRED
NO ADJUSTMENTS OR TUNING – INSTALLS IN MINUTES BY STAGE CREW**

THIS IS SU-1 and DIGI-1

"The Dawn Of The Digital Lighting Revolution"

**A SMALLER, LIGHTER,
TRULY MODULAR, DIGITALLY REMOTE CONTROLLED
AND MORE ECONOMICAL LIGHTING SYSTEM**

(EITHER PORTABLE or HARD WIRED)

**THAT CAN HANDLE
ALL YOUR SWITCHING and DIMMING NEEDS
(CONTROLS UP TO 256 CIRCUITS)**

AND IT'S TOTALLY SILENT

(CAN ALSO BE AN INEXPENSIVE ADD-ON TO YOUR EXISTING SYSTEMS)

With Solid-State digital technology revolutionizing every facet of the theatre, broadcast and music worlds, it's about time lighting joined the revolution. And it's no wonder that it finally took Union Connector in conjunction with Stephen J. Skirpan to pick up the banner.

LIGHT SOURCE SU-1 SOCKET DIGI-1 SOCKET

It's this simple, Plug light source into SU-1 . . . Then plug SU-1 into any outlet . . . Now plug DIGI-1 into any outlet anywhere on the same wiring system . . . And you are ready to go.

SU-1: Weight 12 lbs. (Including C clamp)
Size 12" H x 6" W x 6" D

DIGI-1: Weight 2/3 lb.
Size 2 1/2" H x 4 5/8" W x 3 1/2" D

- FEATURES:**
- Expands Your Present System Without Excessive Costs
 - The Only Truly Modular and Expandable System Available
 - More Economical Than a Pack System
 - Controls up to 256 Circuits
 - Wireless R/F Line Carrier Control
 - Solid-State Dimmers
 - Handles up to 2400 Watts (2.4KW)
 - Can be used on a 3 Phase System

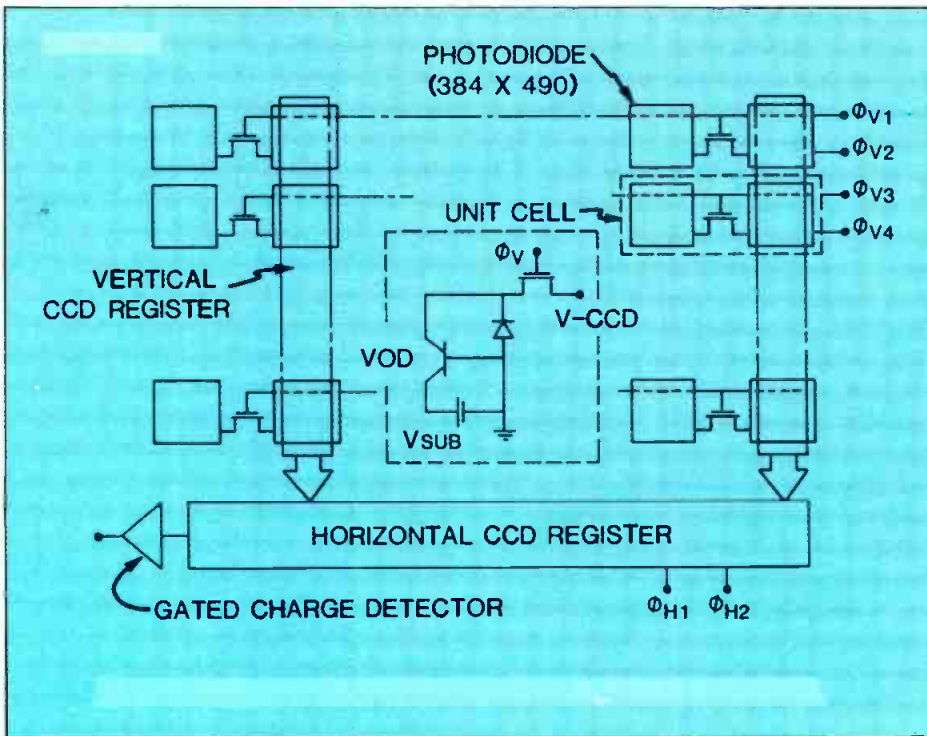

Figure 1. Diagram of the VOD sensor.

overflow drain (VOD) positioned under, rather than beside, the photo diode, thus effectively increasing the cell area that can be used for photo electron generation and storage. Three of these interline VOD CCD image sensors are used in the SP-3 ENG color camera: two for the green channel alone, and one for the combined red/blue (RB) channels. This dual green system, which can only be realized with a mechanically locked registration system, provides much higher resolution and sensitivity than can be obtained from a conventionally structured RGB system.

The CCD image sensor

Figure 1 shows the basic composition of the new interline CCD image sensor used in the SP-3 camera.

The sensor features a photoelectric conversion system that consists of an array of 490(V) x 384(H) photo diodes, a transfer gate region (TG) controlled with a vertical transfer pulse, a buried channel vertical register (V-CCD), a horizontal register (H-CCD) and a gated charge detector for the output signal.

The photogenerated signal charges are transferred to the corresponding V-CCD through the TG region during

the vertical blanking period. There are two ways to accomplish the transfer: One is the *field mode*, which transfers all photogenerated signal charges at the field rate; and the second is the *frame mode*, which transfers half of the photogenerated signal charges during the first field period and the remaining half of the signal charges during the second field period. The signal charges transferred to the V-CCD register subsequently are transferred to the horizontal register at the horizontal line rate and sent out to the output stage at the clock rate of the horizontal register.

A unit cell (indicated by the dotted line) consists of a photo diode, a half-stage V-CCD register and a VOD in which all of the photogenerated excess charges are drained into the substrate without flowing into the V-CCD. By means of the vertical overflow drain, the cell area can now be used effectively for photo electron generation and storage, and increased photosensitivity and dynamic range can be maintained. In effect, this technique eliminates the blooming phenomenon.

A dual green image pickup system

In a conventional 3-tube elements camera, each of the elements is assigned to the RGB channels respectively. However, this method of one channel/element assignment is not effective if applied to the 3-chip CCD camera, yielding resolution problems, as well as signal aliasing problems, which are created by the use of solid-state chips as the image pickup elements. Aliasing occurs in the CCD image sensor when the spatial fre-

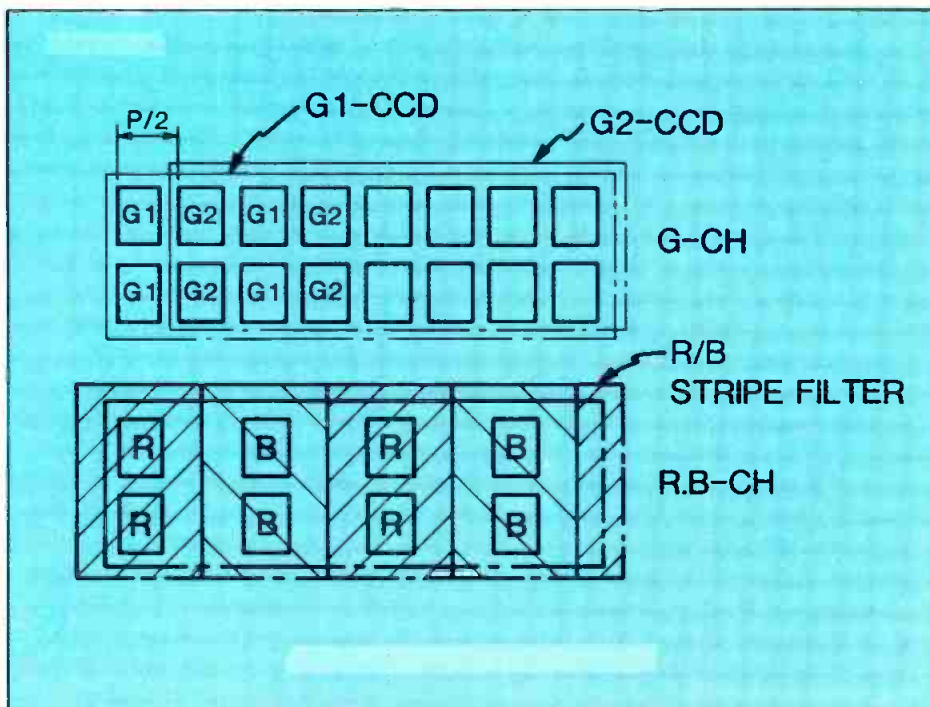

Figure 2. Pixel arrangement.

Designed as a broadcast-quality stand-alone ENG camera, the SP-3 (shown here with Sony Betacam 1/2-inch recorder) offers universal interface to all videotape formats: 1/2-inch Beta or VHS, 3/4-inch U-matic, as well as 1/4-inch VCRs. Solid-state operational characteristics feature accurate and permanent registration that is free from geometric distortion.

means of a time sharing multiple process with an RB vertical strip filter.

The dual green system attempts to approximate the performance of the human eye as it perceives color, taking into account the following: The light value ratio of green to red/blue is approximately 1.5:2; and in the NTSC color system, the bandwidth ratio of the luminance channel to the chrominance channels is about 4:1. Conse-

THE TOUGH GUYS... in tower building.

In the designing and building of superior communications towers, there is simply no room for compromise. At Stainless, the tough, uncompromising approach is a way of life. It always has been. It always will be.

This approach calls for "tough" people—people who never settle for less than the best: the best materials, the best designs, the best and most efficient state-of-the-art production methods. We have that kind of people, and that's one of the reasons we're a world leader in our industry today.

Whether your need is for AM, FM, TV, microwave, CATV or radar transmission, think of Stainless when deciding who should build your next tower.

Over 1,000,000 feet of construction has earned us the reputation of being "the Tough Guys in Tower Building."

quently, in spite of the limitations inherent in having only 384 pixels for the horizontal picture elements (per CCD chip), with the dual green system it was possible to obtain a horizontal resolution of more than 500 TV lines.

The optical system

Refer to Figure 3 for the composition of the optical system employed to split the incoming light beam by

prism. In front of the prism there is a series of filters: an ND filter (to help increase the camera's dynamic range), an IR cut filter and an optical low-pass filter (LPF).

The optical low-pass filter is used to minimize the aliasing problem, which is mainly caused by green light. In effect, the optical low-pass filter suppresses the spatial frequency of the image that causes aliasing on the CCD

image sensor.

Because the dual green system is employed, the SP-3 camera uses a unique prism-optics block to split the incoming light beam into three beams: two greens for the G1 and G2 CCD image sensors and one magenta for the RB CCD image sensor. One-half of all incoming green light is reflected at the first dichroic surface, and the remaining one-half of the green light is reflected at the second dichroic surface. Only magenta light passes straight through the prism without any reflection. In this system, two green lights are reflected to precisely opposite directions against the light axis, thus minimizing achromatic effects that may occur when the image is out of focus and the iris is wide open.

Past the prism, another low-pass filter is inserted in the red/blue optical path to prevent aliasing and ghosting from the RB CCD image sensor. This is done because the bandwidth of the red or blue channel is effectively only one-quarter of the green channel bandwidth.

The CCD imaging chips are mounted directly on the optical assembly. The registration of the imaging chips is permanently set in the factory. No adjustment is ever needed.

Signal processing circuits

• **Combining the G signals and splitting the RB signal**—Refer to Figure 3 for a block diagram of the SP-3 camera. Because the horizontal shift registers of the CCD image sensors for G1 and G2 are driven by the two clock pulses (7.16MHz) with 180° phase shift, a 1H delayed signal and a 2H delayed signal for G1 and G2 can be obtained just through two 1H CCD-type delay lines without requiring a special delay line for phase matching respectively.

The non-delayed original signal, the 1H delayed signal and the 2H delayed signal for G1 and G2 are all combined, respectively, by three sample-and-hold (S.H) blocks, each consisting of two sample circuits and one hold circuit. Therefore, the data rate of the output signal from each of the sample-and-hold blocks is twice the rate of the output signal from each of the green CCD image sensors.

On the other hand, because the output signal from the red/blue CCD image sensor consists of alternating red and blue pictures at a rate of 7.16MHz, the red and blue signals can be easily split by using two sampling

uniVUer™ puts an end to audio monitoring problems

Right before your eyes... Audio on Video

Not magic, but a creative use of contemporary technology. The uniVUer takes your audio signal, and puts it on the video monitor.

The stereo vertical bargraphs, with graticule markings keyed over the monitor video, can be positioned and sized to meet any requirement. Whether your application is for an editing suite, master control room, switching center, VTR bridge, production and audio control or the boss' office, uniVUer puts an end to audio monitoring problems.

For complete specifications and performance characteristics contact us today. Ask about our field portable uniVUer for ENG/EFM application.

Technical Highlights

- Choice of VU or PPM ballistics
- Peak Flasher
- Adjustable silence sense
- Transparent to monitor video
- Compatible with European standards

The new 30-kilowatt high band overachiever

The Harris TV-30H does it better at 30 kilowatts than any other high band TV transmitter. By design.

Better Performance

Specifications approach the measuring limits of the very best television test demodulators to easily handle the demands of new technology.

For example, highly linear amplifiers and the Harris Quadrature Corrector hold incidental phase modulation to $\pm 1.5^\circ$.

Our unique VIDEO* SAW filter provides visual sideband attenuation of -10 dB at 4.5 MHz.

*Visual IF Delay Equalized Output

These specs—vital for transmitting high-quality multi-channel (stereo) sound—are unmatched in the industry.

Greater Reliability

Because of the VIDEO SAW filter's built-in FCC receiver group delay pre-correction, the TV-30H is the only 30-kilowatt high band transmitter that needs no complicated receiver equalizer circuitry. Fewer circuits mean greater reliability.

And this is the only 30-kilowatt design linear enough to combine aural and visual signals at the exciter outputs for emergency multiplex operation (available as an option).

More Headroom

Other than the visual cavity and the cooling system—which were redesigned for maximum efficiency at 30 kilowatts—the TV-30H uses the same components and circuits as our field-proven 50-kilowatt high band transmitter. Result: a greater degree of headroom for added dependability, longer component life.

Find out more on why the new Harris Overachiever is your best buy at 30 kilowatts. Contact: Harris Corporation, Broadcast Transmission Division, P.O. Box 4290, Quincy, Illinois 62305. 217/222-8200.

For the first time, ultra high-resolution color graphics for less than \$10,000

APIS now brings you full-screen color graphics at *less* than 20 nsec resolution. And at a price any teleproducer can afford.

APIS calls it GRAPH-PAC. Using a unique approach in microcomputer technology, GRAPH-PAC gives you full screen, color graphic display at a resolution that has to become a new industry standard.

But GRAPH-PAC does not stop there. In addition to graphic display, GRAPH-PAC also gives you:

- Real-time graphic positioning.
- Full screen 10-sec countdown display.
- Graphic color bar display.
- SMPTE Time Code Read/Write Generator with full screen positioning.
- Self-standing RS-170A operation with color genlock.
- Graphics keyed over external video.
- Full-screen slate with high-resolution alpha/numerics.
- Graphic framing overlay displaying 90% safe picture, 80% safe title, and 5% gradicules to picture center.

Weight (Camera Only, with Viewfinder, less Lens)	Approx. 2.7kg (5.9 lbs.)

pulses (3.58MHz) with a 180° phase shift.

• **Image sharpener circuit**—The camera features a 2H-line type image sharpener by means of a high performance CCD delay line (DL) which has a 400% dynamic range and a 62dB signal-to-noise ratio.

The CCD delay line and the green image sensors are driven in parallel with the same clock signal to maintain proper timing between the signal coming from the green CCD image sensors and the delayed signal through the CCD delay lines. The output of the three sets of sample-and-hold blocks (non-delayed, 1H delayed and 2H delayed video) is then fed to a comb filter and image sharpener to peak the high frequency components of the green channel signal and to generate edge component signals. In this system, the high frequency component of the green channel is also used to feed the red and blue channel signals to enhance their frequency content.

• **Output signals**—The camera provides the following output signals:

- Y, R - Y and B - Y signal for component VTR;
- composite video signal with SP-1AD adapter; and
- direct RGB output signal with SP-2AD adapter.

An NTSC composite signal is also available as monitor for the built-in VTR system in camera/recorder combinations.

Camera functions

The SP-3 camera incorporates auto and preset white balance, auto black balance, black stretch and auto iris.

The camera system

The CCD color camera is designed to be used as a broadcast-quality ENG stand-alone camera, as well as in camera/recorder combined systems using on-board component VTRs for ENG applications.

Enhancing the versatility of the camera, available camera adapter attachments interface to external conventional portable VTRs, as well as to RGB image processing systems as a special application.

The SP-1AD camera adapter attachment is used to generate composite video signal output for conventional VTR recording. The SP-2AD camera adapter provides direct RGB output for use as a document camera or for image processing applications.

Because the SP-1AD camera adapter contains gen-lock and I/Q type encoder modules, it will generate a burst signal and a color frame pulse that will meet the RS-170A standard, as well as NTSC color signal requirements.

Remote-control functions are available for gain, pedestal, iris, SC and horizontal phase control, etc.

Features

Compared with conventional 3-tube video cameras, the CCD camera offers several distinct advantages:

• Solid-state operational characteristics feature accurate and permanent registration that is totally free from geometric distortion. In normal operation, no CCD chip ever requires replacement or adjustment.¹

• Disturbances such as electrical circuit deviations or the earth's

magnetism that can affect registration and cause geometric distortion in conventional magnetically deflected cameras are totally ignored by the SP-3 camera.

• Furthermore, the CCD camera is completely free from burn-in, sticking and comet-tail that may occur in conventional pickup tube cameras when high intensity objects are viewed. Even if you were to shoot directly at the sun, no damage would be incurred to the elements.²

The SP-3 offers a complete freedom of choice in videotape interface. Its compact size, light weight, and outstanding resistance to shock and vibration make it an extremely durable and versatile system that can be employed effectively in ENG applications as well as other applications where conventional 3-tube video cameras cannot perform adequately.

With its high resolution and quality color reproduction, NEC's new CCD camera represents a big step forward in available broadcast-quality cameras, and points the way for the next generation of broadcast camera technology.

¹As noted, under normal operation, the CCD chips of the SP-3 camera should never need replacement. If, for any reason, such replacement should ever become necessary, the camera should be returned to NEC for inspection and service. Although such service seems unlikely, BE explored the possibilities with NEC. The company said that individual chip replacement is possible. If the camera has been seriously mistreated, the entire optical block and all its CCDs can be replaced. In this worst-case situation, the cost would be approximately what you would expect for replacing the optics in a traditional tube-type camera. In any event, if your camera has been extensively damaged, you would probably want to replace it rather than service it.

²Aiming your expensive video camera at the sun, or at its reflection from a shiny surface, is not a recommended practice. However, according to NEC experts, such action, accidental or deliberate, does not have any apparent adverse effect on the immediate or long-term performance of the SP-3 camera. It is our understanding that NHK in Japan set up a CCD camera to tape an eclipse of the sun. A segment of the resulting tape was subsequently broadcast so that the public could view the event. BE is researching this work and will report details when they become available.

Editor's note:

This article on the SP-3 CCD camera was provided courtesy of NEC America and excerpted from the *NEC Synchronizer*, Volume 2, No. 1, Winter 1984. A production version of the SP-3 camera was introduced at the SMPTE '83/Los Angeles Convention, Oct. 30-Nov. 4, 1983. The camera is available now from NEC, essentially from stock, for approximately \$19,000 (without lens). For a quotation, contact the Broadcast Equipment Division, NEC America, 130 Martin Lane, Elk Grove Village, IL 60007.

ADDA does it again.

ESP II . . . dual-channel digital still store combines high signal transparency and modular convenience for cost-conscious graphics generation, still storage and retrieval . . . *plus digital effects transitions.*

ESP II is a significant contribution to still store technology, combining improvements in disk storage with innovative work in integrated circuits and electronic packaging to create a low-cost, modular system which extends this versatile production tool to users with smaller budgets.

The two-channel system with digital effects and a 400-still capacity is priced at \$25,990 plus drives.

ESP II can function as two independent freeze frame synchronizers, with a separate third channel for digital effects transitions . . . horizontal and vertical wipes, fades and dissolves and *pushes and pulls* (effects not found on normal production switchers).

Now, smaller TV stations, cable operations and production houses . . . even industrial and educational systems can move up to the benefits of quality still store graphics generation and control.

ADDA ESP II . . . Affordable Excellence!

ESP Graphics

ADDA's ESP-C . . . the industry's most popular on-air still store system . . . creates multi-generation, multi-layer digital television graphics using conventional art techniques.

Create exciting graphics for news, features and commercials in half the time with ESP-C from ADDA.

Working with ESP, an artist can use conventional "cut and paste" techniques while storing art as digital images . . . viewing the composition at each stage.

ESP Graphics take advantage of unusually high-quality, multi-generational transparency of ADDA still store technology. Art elements are added electronically, layer-by-layer with no apparent signal-to-noise or bandwidth degradation.

ESP is especially designed for use by non-technical people, with dedicated keys and prompter panel which guides artists through the system's store and recall logic.

The ESP-C and new ESP II . . . ADDA's low-cost, modular system . . . are the practical answer to quality electronic graphics generation, storage and retrieval.

Audio crosspoint switching: A design example

By Bob Zavrel, applications engineer, Siliconix, Santa Clara, CA

The audio crosspoint switching system described here can be used not only for recording studio and broadcast mixer applications, but also in a diverse range of circuits requiring low switch cost and small size. Such applications include audio-follow switches for video systems, audio synthesizers, high quality multiplexers and home entertainment systems.

Recent advances in analog switch integrated circuits have resulted in devices that can deliver superior audio performance for the most demanding applications. A high quality audio frequency switch should have a reasonable cost, unity or variable gain, low harmonic distortion (less than 0.01%) and flat response (from dc

THE BEST DIGITAL TBC IS NOW DYNAMICALLY BETTER!

FOR-A's Digital Time Base Corrector (FA-410) now offers Dynamic Tracking¹ compatibility for both the SONY Broadcast U-Matic¹ (BVU-820) and the PANASONIC VHS (NV-8950)² VTRs.

All of the FA-410 features from extraordinary transparency in operation to good human engineering (not to mention price!) are now enhanced with the ability to fully utilize Dynamic Tracking modes for fast and slow motion and still frame. For broadcast, cable and editing, the FA-410 is dynamically better than ever.

This, in addition to FOR-A's Performance-Plus features like 8-bit component encoding for highest signal-to-noise ratio and lowest

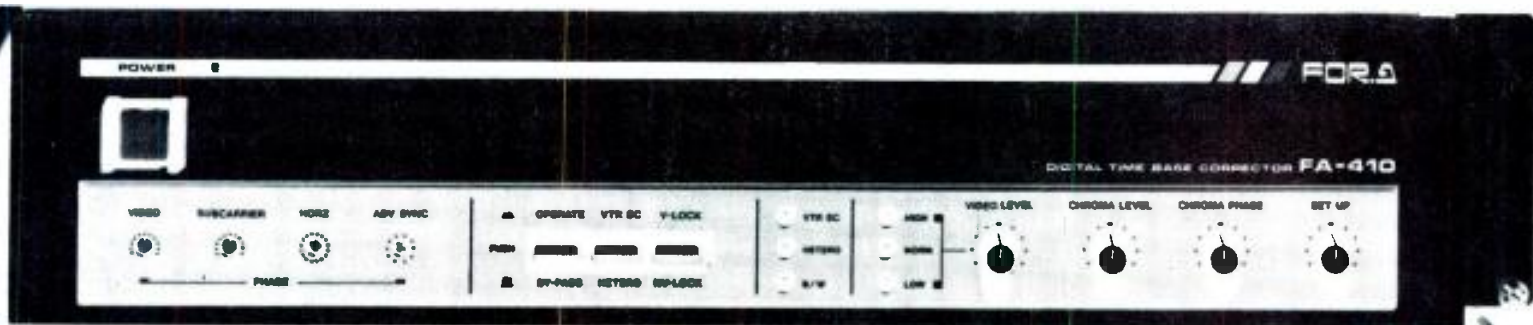

distortion, a digital dropout compensator and full compatibility with $\frac{3}{4}$ " and $\frac{1}{2}$ " VTRs, makes the FA-410 the first choice of professionals.

Call or write today for your copy of the new FOR-A Digital TBC brochure which covers all performance and engineering specifications including details on the new Dynamic Tracking options.

Seeing is believing. Comparing is convincing. Arrange for a demonstration by your FOR-A representative or dealer by

A magnified view of the circuit pattern for the SD5002 quad analog switch chip.

to greater than 1MHz). Low cross-talk, high off-state isolation, excellent phase linearity and high switching speed (less than 1ns) also are desirable characteristics. Finally, the switch should be free of popping, directly controllable by digital gates and use dc coupling only.

The size of a complex audio switching array can be reduced greatly by using integrated circuit (IC) technology. The analog array described here is an 8x2 stereo crosspoint switch mounted on a 4"x7" printed circuit board (PCB). Other switch configurations may be fabricated with little effect on the switch characteristics. This single board can replace a score of rotary switches and the bundles of audio cables often found in audio mixers. Furthermore, eliminating long cable runs often will reduce ground-loop problems.

The switching system

SD5002 switching elements are used in this application because of their low on-resistance, low switch capacitance and fast switching characteristics. The LF-347 quad op-amp is used as a buffer and output amplifier.

Figure 1 shows how a single SD5002 is configured as a 2x1 stereo switch. The LF-347 functions as a summing and output amplifier for each stage. The analog switches are held normally open by biasing the control gates to ground potential through 10kΩ resistors. For any configuration, the appropriate switches are closed by biasing their gates to the positive voltage supply.

In this circuit, pairs of switches are operated together to control the left and right channels of a stereo input simultaneously. This is accomplished by tying the applicable switch gates together and using a common bias resistor. The capability for directly interfacing the SD5002 gates to digital integrated circuits presents multiple design options for switch control.

Figure 2 shows how the basic circuit

Between You And Everyone Else
WE'RE THE ONE.

TW INTERCOM SYSTEM

A high performance conference-line communications system featuring over 25 different components and accessories that allow an almost infinite variety of system configurations. It's universally designed for demanding applications in teleproduction and broadcast as well as industrial and commercial installations.

Standard TW features include: up to 75 user stations on line with minimum loading, powerful headphone amplification, carbon/dynamic headset capability, mic-level limiting, and two-channel operation on standard microphone cable. Sophisticated circuitry permits 12-volt power operation, two-, three-, and four-wire line formats, and balanced line operation. A series of versatile options are also available to meet virtually all special requirements.

SERIES 800

The 802 Master Station is a unique micro-processor-assisted communications network providing 22 independent signal paths operating in up to six modes. It offers an impressive array of features including intercom, squawk, IFB/SA, station iso, and signalling. An intelligent combination of hardware and software programmability allows the user to conveniently structure an individualized operating format. Since the 802 is completely self-contained, it does not require space-consuming central electronics. Currently used in teleproduction, broadcast, theatre, security, aerospace and other industries, the 802 is both powerful and versatile enough to meet almost every communications requirement.

SERIES 4000 IFB SYSTEM

A one-way communications system created especially to meet the critical requirements of the television broadcast industry. This "program interrupt" system is used primarily to cue on-air talent. It provides program source material to the person on camera that can be interrupted with messages from the producer or director. Its modular building-block design allows the user to configure a system to meet specific requirements. A typical system combines User Stations, Central Electronics, and Control Stations. An essential broadcast tool.

SERIES 400 AMPLIFIERS

Application, performance, and reliability have all been carefully designed into the Series 400. The results: outstanding sound and unique versatility.

MODEL 405 PROFESSIONAL PHONO PREAMPLIFIER: High performance for broadcast stations and high-quality commercial installations.

MODEL 410 10-WATT MONITOR AMPLIFIER: A compact unit designed to power loudspeakers and headphones.

MODEL 424 DISTRIBUTION AMPLIFIER: High performance 1x4 audio D.A. with balanced input and four individually amplified transformer balanced outputs.

MODEL 416 DISTRIBUTION AMPLIFIER: Expanded version of the 424 with six outputs.

MODEL 444 DUAL TWO-CHANNEL BUFFER AMPLIFIER: Provides the necessary electronic interface between +8dBm balanced and -10dBv unbalanced circuits.

MODEL 465 MICROPHONE PREAMPLIFIER: A single-channel wideband preamp with transformer-balanced input and output.

50k	-55	-55	0.020
100k	-50	-49	0.045

Signal voltages: 3Vp-p
Supply voltages: +12V; -12V
Input impedance: 10kΩ

can be expanded into a switch matrix. Eight SD5002s are required to construct the 8x2 stereo matrix array.

How it works

Each channel input requires resistor R_L for termination and a second resistor (R_s) to feed the signal from the inputs to the various switches. The junction of these resistors forms an input bus.

The SD5002 drains are connected to the summing nodes located at the inverting inputs of the summing amplifiers. As array size increases, system performance normally would suffer from longer lead lengths and increased circuit capacitance. However, the SD5002 allows large matrices to be designed with little performance compromise because of the low switch capacitance.

The value of R_L , which should reflect the value of the source impedance, influences cross-talk and off-state isolation between channels. Both specifications improve with lower values of R_L . The feedback resistor for the output amplifier stage, R_c , can be adjusted to give a wide range of system gain values. Unity gain is achieved when R_c is equal to 150kΩ. Resistor R_D in the output circuit determines the value of the output impedance. If the switch feeds a high impedance load, R_D is necessary to maintain good system performance.

Electrolytic and mica capacitors are suggested for use on the circuit board to provide power supply bypassing functions. This reduces low frequency and supersonic noise, and helps to stabilize the system. The entire circuit should be well-shielded, particularly if it is exposed to strong RF or power-line fields. Conductors carrying high currents should be isolated from the card, and a double-sided PC board should be used to create a ground plane on the component side for added protection.

Table I shows the measured switch performance of the 8x2 crosspoint configuration. For test purposes, the value of R_L was 10kΩ, matching the high impedance to the test oscillator output. Regulated power supply voltages of ±9-15V may be used with this design. Peak-to-peak signal voltages at the input should be less than 3.5V for optimum switch performance.

A variety of other switching arrangements can be devised for the SD5002. This example can serve as a circuit guideline for other requirements a station might have.

Between the hits most stations waste energy and money.

The AEG-TELEFUNKEN PANTEL System can save you up to 40% of your transmitter power needs.

Radio stations of all power ratings are of basic importance for the distribution of information – fast and reliable. More and more, however, rising energy costs demand improving their efficiency.

The PANTEL System from AEG-TELEFUNKEN improves efficiency and cuts costs. By reducing the power needs of a 600 kW transmitter by up to 150 kW it can save enough energy to meet the monthly power requirements of about 200 households. Translated into dollars

and cents that's quite a tidy sum.

But that's not all. To save even more money, there's D.A.M., the dynamic-controlled amplitude modulation. Together with the PANTEL

System it controls a transmitter's power output. In only fractions of a second the exact energy needs of a particular transmission are met. Unnecessary wastes are avoided. Whether it be between the sober tones of a news announcer or within the fortissimo of a philharmonic orchestra.

Finding new ways to increase performance in the field of radio technology is only a small part of what AEG-TELEFUNKEN is all about.

We're also leading innovators when it comes to: FM, TV and communications transmitters. Equipment and systems for receivers and direction finders. Radio and data communications for official, commercial and private use. Radar systems and equipment. As well as guidance and control systems.

We will gladly inform you in more detail on the many potentialities and decisive advantages of cooperation with AEG-TELEFUNKEN. Please write to us.

Frequency coordination put to the test

By Richard Rudman, BE spectrum management consultant, and chief engineer, KFWB Radio, Los Angeles, CA

In 1984, frequency coordination will play a key role in three US events that will receive worldwide attention. Never before have this many events of global interest, so dependent on back-stage Part 74 2-way and microwave transmission, taken place. New ideas, along with methods used since the dawn of ENG interference, will be tested literally before the eyes of the world.

The 1984 Olympics

Olympic coverage and frequency coordination for the event are the responsibility of the American Broadcasting Companies (ABC), which bought exclusive broadcast rights. Along with the responsibility of getting the Olympics on the air from Los Angeles (the country's RF congestion capital), ABC will host broadcasters from the rest of the world who will provide electronic coverage for their respective countries. The word has gone out that anyone planning to bring wireless broadcast equipment into Los Angeles, even so much as a hand-held transceiver, must contact ABC's Olympics RF coordinator, Michael LoCollo.

LoCollo has been busy for more than a year planning ABC's Part 74 coverage. Because the Olympics will take place in the backyard of the Southern California Frequency Coordinating Committee (SCFCC), he has worked closely with that organization at key stages in the planning process. A prerequisite for the coordination planning was that Olympic coverage should have minimal impact on day-to-day operations in the Southern California area.

With more than 14 regular users of the 10 2GHz channels in the Los Angeles region, and more than 70 licensees in the two 1MHz slices of the 450MHz remote pickup unit (RPU) bands, you must resort to special measures to accommodate Olympian needs. With this in mind, the FCC has granted a special temporary authority (STA) to ABC for temporary use of frequencies not included in the Part 74 channels. The STA allows ABC to use a vacant UHF TV channel for voice communications related to its broadcast coverage. Protection for licensees

The upcoming Olympics in Los Angeles and the political conventions in San Francisco and Dallas/Fort Worth will be supreme tests of the capability of frequency coordination for squeezing 10 pounds of RF into a 5-pound bag. This complicated coordination of transmission equipment of all types involves not only the networks and local stations, but also out-of-town and foreign broadcasters.

in the 2GHz, 7GHz and 13GHz bands will be provided by close coordination with Los Angeles area TV licensees and other non-broadcast microwave users.

The FCC has formally recognized ABC as the principal coordinating body for Olympic activity by announcing that it will waive the 30-Day Rule (Part 74.24). This means that any broadcaster from outside the Los Angeles area will be required to perform prior coordination with ABC. The SCFCC will support this waiver fully. ABC has worked closely with the regional coordinating body to guarantee that coverage of the Olympics will mesh smoothly with local broadcast activity, and ABC will continue to do so. LoCollo, a member of the Society of Broadcast Engineers' National Frequency Coordinating Committee (NFCC), has worked closely with the SBE group on coordination planning.

The political conventions

The three networks traditionally have shared the frequency coordinating chairmanship for political conventions, since the need for prior planning was recognized some years

ago. This year, Richard Harvey of CBS has an immense task, Olympian in its own right. Harvey will be responsible for making sure that coverage in two different cities, each experiencing RF saturation, goes off without a hitch.

Both Dallas/Fort Worth, scene of the Republican convention, and San Francisco, where the Democrats will meet, have local frequency coordinating committees. Gerry Dalton of KKDA-FM has organized the Dallas/Fort Worth database, which makes coordination information available from any computer terminal equipped with the proper modem. Joe Berrini of KRON-TV in San Francisco is the Northern California Frequency Coordinating Committee chairman. These local organization efforts are important to the upcoming political convention activity. They have proved that local broadcasters in both regions can work together.

Harvey has held meetings of his National Political Frequency Coordinating Committee (NPFCC) in both convention cities. He has reassured local broadcasters that his group's coordination plan will affect daily operations as little as possible. STAs for unused UHF TV channels have

been approved by the FCC for both convention cities. The NPFCC will be responsible for coordination of these STAs. Unlike the STA that ABC obtained for the Olympics, the San Francisco and Dallas/Fort Worth STAs stipulate that all broadcasters needing extra channels for their coverage are eligible.

The 30-Day Rule also will be waived during the conventions in Dallas/Fort Worth and San Francisco, making the NPFCC the official coordinating body for these two events in the eyes of the FCC.

Sharing the spectrum

There is growing recognition that frequency coordination's time has come. The First Report and Order on Docket 82-334, which, at SBE urging, protected 2GHz and 7GHz microwave users from potentially disastrous requirements to share their channels with other users, is a milestone. Another milestone is FCC approval of a 450MHz channel split plan administered by the SCFCC that increased the number of users that could be accommodated in the UHF RPU band. An indication of the commission's interest in and support of industry-run frequency coordination efforts came at a January meeting of the NPFCC. Among the persons attending was Jim Durst, broadcast analyst for the FCC. He was there at the direction of James McKinney, chief of the commission's Mass Media Bureau.

Notice to the industry

Any organization that intends to cover the 1984 political conventions in Dallas/Fort Worth or San Francisco using RF transmitters or wireless microphones of any type, power or frequency, should contact Richard Harvey, chairman of the National Political Frequency Coordinating Committee, at CBS, 555 W. 57th St., New York, NY 10019.

Any group that plans to cover the Los Angeles Olympics using RF transmission gear should contact Michael LoCollo, chairman of the World Broadcasters RF Committee, at ABC-TV, 1313 N. Vine St., Hollywood, CA 90028.

Harvey has developed a set of guidelines for operation during the two conventions. Carrying the blessings of the SBE's NPFCC, these guidelines incorporate many ideas that all Part 74 licensees should take to heart. A complete list of these guidelines is available. Requirements of special interest include a power restriction that all parties must observe within the con-

vention centers, and a promise that everyone operating a microwave link outside the halls will use a visual identifier when the link is up but programming is not being transmitted.

Although prior coordination has been used on major events in the past, never have such events taken place where the level of radio and TV ENG activity, plus satellite transmission, will be as high as we will see later this year. It will be a test of the technical competence of all broadcasters involved, the patience of the frequency coordinators and the trust of local broadcasters who are working closely

with frequency coordinators for the events.

With hard work, good will and the proven elements of regional coordination, all participants in the sporting and political dramas of 1984 should see their efforts on the air with a minimum of problems—to themselves and others.

Editor's note:

The author is chairman of the National Frequency Coordinating Committee, under the auspices of the Society of Broadcast Engineers. He also has joined the BE masthead as spectrum management consultant.

SPECIFY MCL

NEW TWTA HIGH POWER AMPLIFIER

TWTA C-Band Satellite Transmitter System-Model 10717, delivers 2.8KW of usable power throughout the C-Band frequency range (5.85-6.45GHz). Innovative design and exclusive engineering techniques have produced this new MCL TWTA SYSTEM for extended reliable commercial service in the satellite communications earth terminals.

Quality features include the Thomson #3640 traveling wave tube, protective circuitry, solid state IPA, RF input and output impedance matching, necessary power supplies, and controls and monitor circuits as required.

MCL stands behind all of its equipment. Included is a one-year warranty against defects and workmanship from date of shipment; The TWT tube is warranted by the tube vendor. Operations and maintenance manual are provided.

This advanced system includes so many advantageous features (including a Linearizer to give system performance equal to a 6KW system) to users throughout the world that we suggest you write for the technical, illustrated literature on MCL HIGH POWER TWT AMPLIFIERS which also describes the full line of MCL SATCOM TWTA's in 'C' and 'Ku' Band.

Join the rapidly growing list of users of MCL equipment. SPECIFY "MCL"; you'll be glad you did.

WRITE for complete illustrated, technical reference brochure.

The Klystrode: An old idea with new applications

By Merald B. Shrader and Donald H. Priest, Varian Associates, EIMAC Division, Palo Alto, CA

Today's increasing cost of energy has forced power tube designers to incorporate energy-saving features into their newest designs and re-evaluate the merits of older models. In their search for a way to improve UHF TV transmitting tubes, the authors—without knowing it—resurrected an idea that had remained dormant for more than 40 years. Called the Klystrode,* the result of their efforts is seen as a promising source of energy-efficient power that already has generated more than 30kW (CW) at 775MHz, and conceivably could deliver hundreds of kilowatts in the UHF range.

The Klystrode, which combines the features of a tetrode and a klystron, consists of a magnetically focused electron beam bunched by an RF cavity-driven grid, an output cavity and a collector.

The device can be operated as a Class B linear amplifier, similar to a tetrode, but with the reliability and high power-handling capability of a klystron. Power gain is in the range of 18-25dB, depending on the input RF circuitry, and efficiency at full drive power is in the range of 50% to 63%.

For example, at an operating frequency of 775MHz and an RF drive power of 150W, the new tube delivers an RF output power of 30kW. This represents a power gain of 23dB. The conversion efficiency is 58% minimum. In pulsed operation, output power has been measured at 45kW, with a peak RF drive power of 225W, representing a power gain of 23dB. Conversion efficiency is 60%.

Best of both worlds

Recent testing of the Klystrode has indicated that it is well-suited to UHF

* The Klystrode is a trademark of Varian's EIMAC Division.

The Klystrode amplifier tube offers UHF TV users greater efficiency than the klystron or conventional tetrode. Long life also is expected from the Klystrode.

TV service as an aural or visual channel amplifier. In aural FM service, the high power gain and efficiency, as well as long life expectancy, make it especially attractive. The fact that the tube operates with a high voltage (HV) power supply having the positive end grounded makes it particularly suitable for use with a klystron visual amplifier, which uses a similar positive-ground configuration. The Klystrode can operate at the same beam voltage as the associated visual klystron, thus a common beam power supply may be used, further reducing cost.

In visual service, the Klystrode offers the possibility of greater overall efficiency than conventional tetrodes or even the most advanced klystrons. Compared with the tetrode, its efficiency and power gain at all signal levels and peak of sync is measurably higher. Because of its lower emission density (resulting from high voltage/low current operation), and the absence of a heavily stressed screen grid and anode (caused by high dissipation of energy due to current interception), the Klystrode also is expected to have a much longer life expectancy, and may prove to be as durable as the klystron.

Compared with a klystron, which has an input beam current that stays constant and high at all picture levels, the Klystrode—like the tetrode—has a dc power input that varies with the level of the video signal (lower at white, higher at black). Thus, even though the klystron has much higher power gain, long life expectancy, more-than-sufficient bandwidth and far more power output than necessary for today's TV needs, its operating cost is increased drastically by its relatively low average picture efficiency.

Initially, the Klystrode's cost seems to fall somewhere between the less-expensive tetrode and the more-expensive klystron. The Klystrode also is shorter than a klystron, an advantage in some applications.

10th International Broadcasting Convention

21-25 September 1984

IBC 84 will be held at the Metropole Conference and Exhibition Centre
BRIGHTON UK

The TECHNICAL PROGRAMME of papers by specialist authors and discussions will cover new technologies including satellite, cable systems and other developments for sound, television and related information services.

The IBC EXHIBITION complementing the technical sessions will have the latest professional broadcasting equipment on display and demonstration by leading world manufacturers.

The SOCIAL PROGRAMME during the Convention will include a Reception and a special Ladies Programme of talks and demonstrations and visits to places of interest.

Address

.....

EIMAC offers a low power, external-cavity series of Klystrodes rated for FM sound at levels up to 7.5kW (25kV beam voltage), and a medium power series, also external-cavity-type, for power levels up to 27kW (25kV maximum). A series of Klystrodes rated at up to 30kW power output at 32kV beam voltage is being developed for production. In all, two

tubes and cavities are required to cover the UHF TV band (470-600MHz and 600-806MHz).

With the growing interest in the potentially lucrative UHF TV market, there is a realization that any source of high power must be efficient, therefore cost-effective, to be a viable competitor with the firmly established VHF TV base. The broadcasting in-

dustry may have found such a contender in the Klystrode.

How it works

Developed by Varian Associates' EIMAC Division, the Klystrode actually is a pentode (five elements) that has a round-disc cathode, planar grid and apertured anode. (See Figure 1.) A re-entrant cavity has been placed between the anode and the next electrode, called the tail pipe. Insulated from this is the final electrode or collector. A solenoid or permanent magnet then is used to immerse the tube in a uniform magnetic field. At first glance, then, the tube is similar to a conventional tetrode, except the spent electrons are dissipated separately from the output resonant circuit.

In operation, an alternating RF voltage is applied between the cathode and grid, using one of several possible circuit arrangements. The resulting bunched, or density-modulated, electron beam then is accelerated toward the apertured anode at high potential, passing through it without being intercepted. Continuing through a field-free region at constant velocity, the beam next passes through an output gap in the resonant cavity as the electric field induced by its passing is decelerating.

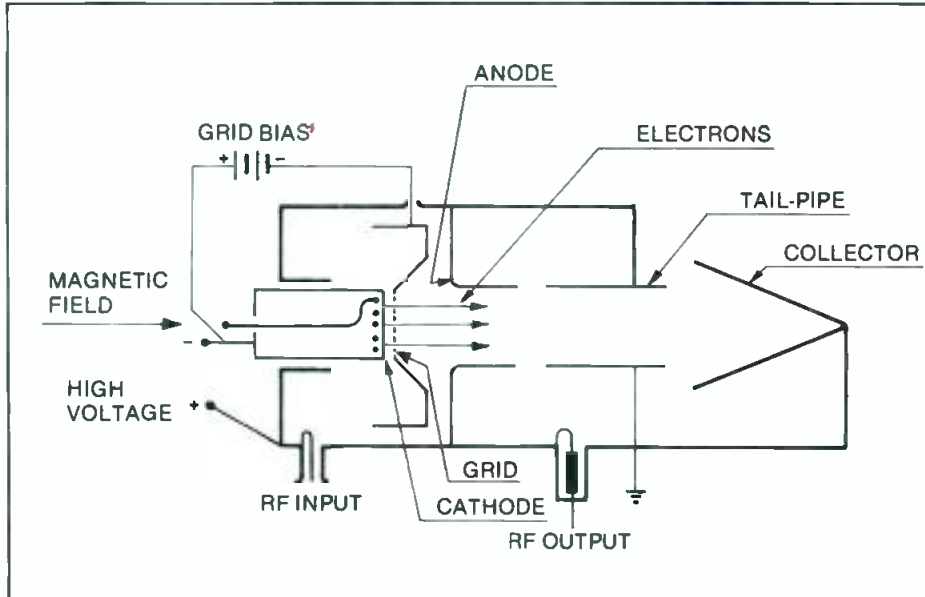

Figure 1. The structure of the Klystrode, which combines the features of a klystron and a tetrode.

FOR ALL YOU WANT A CART TO DO, THIS CART'S FOR YOU!

- ▶ For ... The best sound a cart can reproduce
- ▶ For ... The exclusive SGS-4 broadcast mastering tape.
- ▶ For ... Superb copies of CD's and digital masters
- ▶ For ... Outstanding high frequency sensitivity and headroom
- ▶ For ... Stable stereo phasing
- ▶ For ... Maximum reliability and longest life
- ▶ For ... Compatibility with all cart machines
- ▶ For ... Stations who care how they sound

BOSCH**FGS 4000**

UPDATE

V I D E O G R A P H I C S Y S T E M

The FGS-4000 Produces Video Image Quality Unsurpassed in the Industry.

Bosch, looking to the future, introduced at the 1983 NAB, the ultimate graphics system, the FGS-4000. A system so limitless, it provides a medium for the graphic artist to accomplish effects yet to be imagined, both today and tomorrow.

A video graphic system so limitless that wonders will become realities.

Bosch developed technology to introduce real time 3-dimensional animation. Highly defined 3-dimensional objects move in a real 3-dimensional world. Move the object, move the viewer, move the light source, travel within objects, see it with "reality."

The FGS-4000 is a powerful computer graphic system. Its versatility in combining the functions of a character generator, graphic art system, 2D and 3D animation into one unique system is, to date, unparalleled in the television industry.

The FGS-4000 will have a tremendous impact on the way you are doing business today. Imagine the time savings and increased productivity of your creative people that can be realized. This is due to the ease of image entry and the real-time interactive workstation, allowing you to actually see and manipulate the images, to establish your animation sequences, and to play them back in real time.

The image quality of this system is the highest in the industry. Our special anti-aliasing circuitry maintains edge quality at all times.

84' NAB Highlights

In addition to the now existing 2-Dimensional Editor, Real-Time Text Editor, Off-Line Text Editor, and Animation Editor, Bosch will highlight at the 1984 NAB:

3-Dimensional Editor: This editor gives complete freedom in the generation of true 3-D objects. With the extruder, the operator can take any 2-D object and make it thick. With ROB (Read Object), the operator can type in X, Y, and Z coordinates and produce any 3-D object, or 3-D objects can be produced via surfaces of revolution or by redefining objects by gluing existing 2-D and 3-D objects together.

HQAS: High Quality Animation System gives the operator tools for enhancing previously created animations by adding glows, sparkling effects and streaking capabilities. Also, texture mapping and multiple, moveable light sources will be included.

Paint: Also available at this year's NAB is a Basic paint system. By using the stylus and the system's tablet, the operator may paint with all the FGS-4000's 16 million colors, change brush size or shape, air brush or blend. This is an expandable package with more features to be introduced.

Single Framing Editor: Single frame machine control allows automatic control of VTR's via the FGS-4000. This gives the operator the ability to record frame-by-frame and then play them back in real time.

Things You Should Know

Ease of operation: Bosch enlisted the talents of professional graphic artists to help design the operational functions of the FGS-4000, thus making this graphic system as easy to operate as a pencil and paper.

Image quality: Images of the FGS-4000 are indistinguishable from actual video. No aliasing, stair stepping, breaking up or tearing of edges when scaling, positioning, or rotating objects.

Animation: The FGS-4000 allows the artist to create, animate and display 2- or 3-dimensional objects together or independently, as well as automatically assigning special effects such as transparency, light source and perspective.

The history of the Klystrode

During the 1930s, the state of the art in transmitting and receiving tubes had attained a maturity and cost-effectiveness that served most needs of contemporary radio communications. At that time, attention began to turn to higher frequencies, which offered advantages that later culminated in the development of such now-commonplace industries as television and radar.

As frequencies became higher, conventional transmitting tubes became necessarily smaller, with resulting lower power outputs. Some designers began to look for newer approaches, turning away from the classical gridded density-modulated tube. Two innovators who continued to do research on gridded tubes, however, were A.V. Haeff and L. Nergaard, who then were working for RCA in Harrison, NJ.

What they discovered was that a major output limitation involved wasted power dissipation by the grids and anodes of then present-day tubes. They perceived that if non-intercepting electrodes (apertures, for example) could replace wire grids, and the electron beam could be contained by a coaxial magnetic field, more-efficient, higher level power could be produced.

Similar to the developers of the klystron, they saw that power could be removed from a bunched electron beam by passing it through a resonant cavity in which the kinetic energy of the high velocity electron beam could be transformed to electromagnetic energy, without having to collect the electrons on the walls of the cavity.

Invented by Haeff, the inductive output tube (IOT)—precursor of the Klystrode—was first described by him in 1939 (*Electronics*) and again, with Nergaard, in 1940 (*Proceedings IRE*). When built, the tube delivered 100W (CW) at 450MHz, with a 10dB power gain and 35% efficiency, remarkable performance for its time.

Unfortunately for the IOT, during World War II, VHF triodes and microwave cavity magnetrons became popular, followed by increasing interest in velocity-modulation (V-M) tubes. The IOT remained forgotten until Shrader and Priest, searching for new ways to improve UHF TV transmission, independently resurrected the tube. It was only after reading Haeff's published papers that they realized their creation (the Klystrode) was none other than the basic IOT embellished by more-sophisticated tube and materials technology.

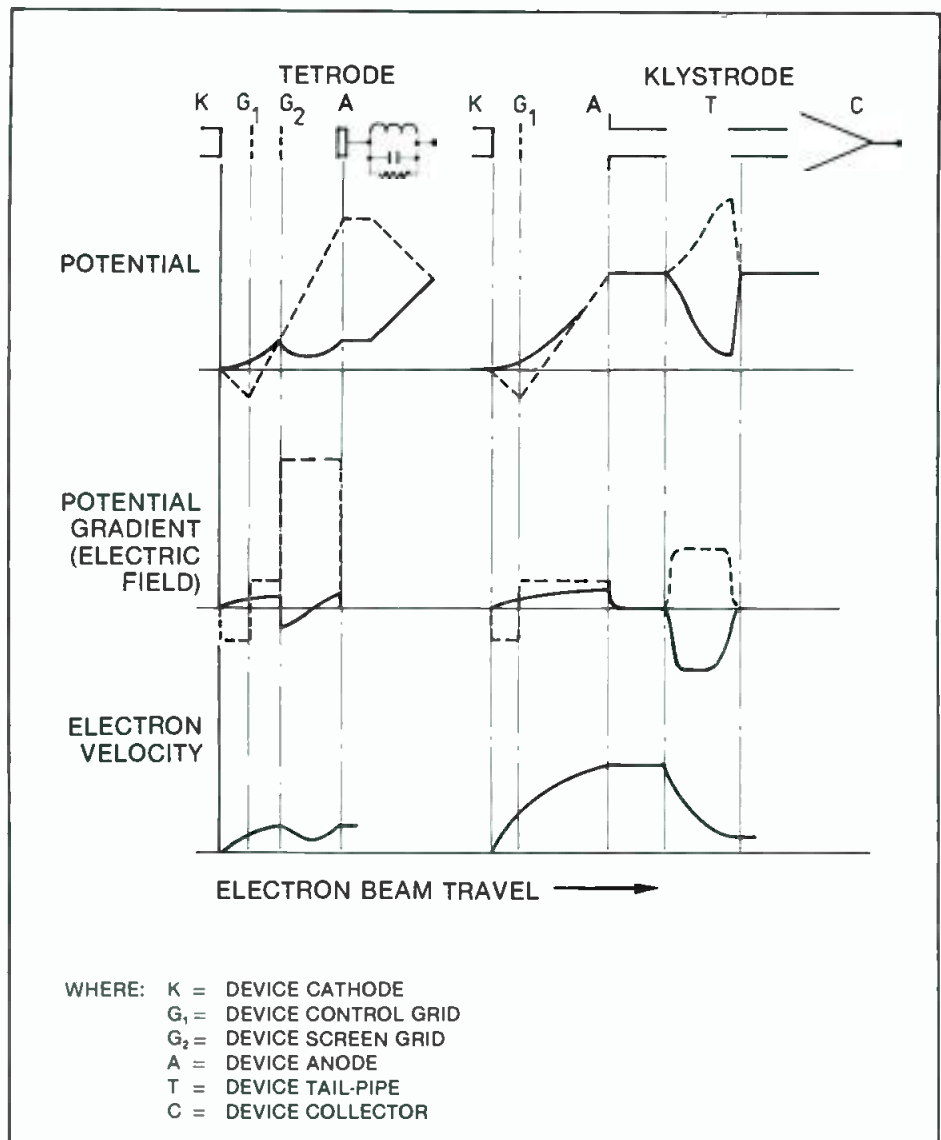

Figure 2. The potential, potential gradient and electron velocity vs. beam distance, for a tetrode and a Klystrode. In the top two drawings, the solid line indicates the tube characteristics at minimum conduction and the broken line shows the tube at maximum conduction.

Finally, the beam passes through a second field-free region (the tail pipe), again with minimal interception, and then crosses the gap between tail pipe and collector.

The differences between the Klystrode and a conventional tetrode can be demonstrated graphically in a comparison of their potential, electric field and electron velocity. (See Figure 2.) Observe that the Klystrode acts similar to a klystron between the anode and collector, but closely resembles a tetrode between the cathode and anode. Six important differences should be elaborated on:

- The Klystrode's anode potential is higher than the tetrode's screen grid potential.

- There is a strong decelerating field in the output gap of the Klystrode compared with an almost zero field associated with the tetrode at the time of maximum current flow.

These different profiles for the potential and field (potential gradient) reveal fundamental differences in

operation. Think of the tetrode as a switch that closes every half cycle, allowing current to flow from the power supply through the resonant load. By taking advantage of the energy storage properties of the resonant circuit, the dc energy is converted to RF energy in the circuit.

In contrast, the Klystrode (and the klystron) changes the kinetic energy of the high velocity electrons directly to electromagnetic energy in the output gap. Also, although the tetrode conversion efficiency is maximized at low frequencies, efficiency is decreased markedly at higher frequencies, when the screen-grid voltage must be made high enough to supply sufficient electron beam velocity.

An important result of the different potential profiles is the Klystrode's much larger average electron velocity, which makes the use of a relatively long beam possible.

- Another difference between the two devices is the presence of the field-free regions before and after the

Klystrode output gap. These ensure that the output interaction space is isolated from the input space (grid-anode), as well as the collector. In practice, this isolation is important because, without it, input circuit conditions could be affected adversely by variations in tuning or loading of the output circuit.

- The Klystrode tail pipe essentially is non-intercepting as compared with the tetrode's anode, which also functions as a collector. It becomes obvious, then, that the Klystrode's collector can be made large (unlike the anode of the tetrode) and, therefore, can operate at lower power density and greater power output.

- With the Klystrode, there is no need for a blocking or bypass capacitor, because there is no dc voltage across the output gap. The fact that the high voltage dc and RF fields are separated means that the gradient in each gap is about half the gradient in the output space of a conventional tetrode. This, coupled with the fact that no blocking capacitor is needed to carry the RF circulating current in the output cavity (which can be at ground potential), is an advantageous operational feature of the Klystrode.

- Unlike the tetrode, the Klystrode uses a magnetic field. Although the Klystrode would perform well without such a field (look at the electrostatically focused klystron, for example), the advantages of a magnetic field are considerable.

For one, the natural tendency of the beam to spread is curtailed, especially in the output gap, where the exit electron velocity is low and the space-charge forces are high. Without such focusing, the tail pipe would have to be much larger in diameter to avoid its interception with the beam, which could generate secondary electrons that would cross the gap in a direction opposite that of the main beam, thus tapping energy from the main load. The larger tail pipe also would increase the output gap capacitance and decrease bandwidth. Finally, the beam-to-gap-coupling coefficient between the beam and cavity fields would be reduced, decreasing conversion efficiency.

A bright future

Experimental results conducted at Varian EIMAC have proved the viability of the Klystrode tube as an excellent source of high power and efficiency for the broadcast industry, especially UHF TV. With the development of more powerful units, there is reason to expect that other applications requiring the performance and efficiency capabilities of this high frequency power source will emerge.

ANNOUNCING FORTY YEARS OF BROADCASTING EXCELLENCE... SWITCHCRAFT.

That statement should come as no surprise to anyone in broadcasting. For over forty years, we have been supplying broadcast engineers and technicians, studios and stations with efficient, durable audio components of every shape, size and design. As a broadcast professional you already know, and probably use, our products.

Just look around your studio for a moment. From the simplest audio connectors and patch cords to more sophisticated jack field and impedance matching transformers, Switchcraft products are an integral and basic part of the broadcasting and recording industries.

As you have grown, so have we. Our commitment to quality and excellence has led us to technological advances such as the "QG" Quick Ground connectors, a product innovation that has yet to be surpassed. All of our components are designed for convenience, durability and perfect sound transmission to insure broadcast and recording excellence.

Today, our product line encompasses thousands of standard and miniaturized components serving the full spectrum of audio requirements. Call us or your Switchcraft Representative today for complete details on all of our components and plug into forty years of experience.

Updating FM facilities

By Jerry Whitaker, radio editor

New technology and tougher-than-ever competition are causing station managers and engineers to look closely at their technical plants for ways to improve the performance and reliability of their systems. With the FCC's Docket 80-90 decision and the expected increase in subsidiary communication authorizations (SCAs), FM transmission systems that were acceptable in the past may no longer be adequate.

One of the potential bottlenecks to high quality, wideband transmission overlooked many times is the antenna. Unless presented with a serious an-

Photo: James Hoff

Constructing an FM transmitting facility is an expensive project that should be carefully planned for maximum service area coverage and long-term reliability. Shown is the construction of the transmitting tower and antenna for KPDJ-FM, Eureka, CA. The station's transmitting facility, located atop Kneeland Mountain, CA, operates with 100kW ERP from 2600 feet. A 10-bay circularly polarized antenna is used in the installation.

At TASCAM, we know how exasperating the hi-fi deck can be in any professional environment. The audio quality doesn't approach that of the machines with which it attempts to interface. The biggest hassle is balancing the entire juggling act with transformers and cables that allow the deck to be imposed into the system in the first place.

Well, the fighting's finally over. Whether your needs are for broadcast, recording studio, or multi-image applications, production, on-air, or sound reinforcement systems, TASCAM's professional 122-B and 133-B Cassette Recorder/Reproducers have got your balancing act wired. Out of the box, ready to go, no modifications. With the flick of a switch, each machine offers full compatibility with both high level +4 dBm, XLR balanced and line level unbalanced systems.

Both machines are built to take the most punishing production/dubbing demands. Each delivers professional audio quality far superior to either hi-fi or cart decks. And each offers the features you expect, helping to improve both the precision and ease of your work.

Why fight the system, when there's a truly professional answer to your stereo or stereo-plus-cue cassette machine needs. TASCAM's 122-B or 133-B. See your TASCAM dealer or write TASCAM Production Products, 7733 Montebello, CA 90640, (213) 726-0303.

FINALLY, CASSETTE MACHINES FOR PROFESSIONALS WHO'D RATHER SWITCH THAN FIGHT.

TASCAM
TEAC Production Products

tenna or transmission line problem. The performance of "outside" equipment often is ignored.

A wide variety of antennas is available for use in the FM broadcast band. Although these antennas differ from one manufacturer to another, some generalizations can be made that apply to any FM antenna.

Circular polarization (CP) of the transmitted signal almost universally is employed for FM broadcasting. CP results from equal electric fields in the vertical and horizontal planes of radiation that are out-of-phase by 90° and rotating a full 360° in one wavelength of the operating frequency. The rotation can be clockwise or counterclockwise, depending on the antenna system design. This continuously rotating field gives the CP signal good penetration capabilities, because it can be received by an antenna of any random orientation.

Propagation of RF energy in the FM band is governed by many different factors, such as free-space loss, vegetation, soil conductivity, the Brewster angle and Fresnel zone, multipath and type of terrain. These concerns must be considered when choosing a transmitting site or antenna type.

The need for careful planning of an

FM transmitting facility cannot be overstated. Mistakes in site selection or antenna gain design can be costly to correct after construction has been completed. This word of caution applies especially to stations trying to increase their antenna height or effective radiated power (ERP) to avoid classification at a B1, C1 or C2 level, because of the FCC's 80-90 ruling.

The solution to a low ERP is not necessarily additional bays on the transmitting antenna. Likewise, the solution to a low height above average

terrain (HAAT) is not necessarily additional sections on the present tower. Although these two actions may avoid classification of the station at a lower level, the end result may be disappointing (or even disastrous) when coverage patterns are considered. Safety factors also must be taken into account, such as the capability of the present tower for supporting additional antenna bays. Extending the height of an existing tower is a project that should not be entered into lightly. Unless the structure was designed for

Your studio is unique. That's why there's a family of Electro-Voice® Sentry® Studio Monitors.

Meet the new addition!

Electro-Voice is proud to announce the addition of a fourth member to the SENTRY family of studio monitors. The new MODEL 100EL combines the superb audio reproduction of the SENTRY 100A with an integral 50 watt power amplifier. The SENTRY family now includes a model to meet the requirements of every professional studio.

SENTRY 100EL—with an integral power amplifier

The SENTRY 100EL adds a 50 watt power amplifier to the SENTRY 100A. The internal amplifier has both balanced and unbalanced line-level inputs, an infrasonic filter to reduce distortion and a torroidal transformer—but nothing to get in the way of the trusted SENTRY performance. The SENTRY 100EL is a solution to problems like limited rack space, equipment transport on remotes, or cramped spaces in video editing booths.

SENTRY 100A—for tight spaces

The compact 8-inch, two-way SENTRY 100A is the ideal choice where space is limited but sonic accuracy cannot be compromised. Flat 45-18kHz frequency response, excellent imaging, true rack-mountability, high efficiency and incredible power handling are some of the features that have made the SENTRY 100A the standard of respected studios everywhere.

SENTRY 500—for wider coverage

The Constant Directivity SENTRY 500 broadens the "sweet spot," allowing more than one person to hear the same accurate sound without "beamy" high frequency problems. The 12-inch, two-way SENTRY 500 will produce 96dB at one meter with only a one

watt signal, yet can handle 100 watts of continuous power with 6dB of headroom—400 watts on peaks.

SENTRY 505—for "quarter-space" environments

The SENTRY 505 is the accoustical equivalent of the SENTRY 500 when mounted in a "quarter-space" environment such as the intersection of a wall and ceiling. The front baffle angles downward at either a 30° or 60° angle making this a large monitor that can be easily used in some of the tightest control room and production environments.

"Test equipment philosophy" of design.

Each of the four SENTRY monitors is a consistent, dependable audio reference combining high efficiency, high power handling

and low distortion. All deliver the linear response and uniform polar patterns that are mandatory for stringent quality control.

Greg Silsby talks about the SENTRY monitor family:

"Consistent quality audio requires the test equipment accuracy we've built in to every SENTRY Studio Monitor. If you need quality you need SENTRY."

"Accept the Sentry challenge. Write to me today for the complete SENTRY family story: Greg Silsby, Electro-Voice, Inc., 600 Cecil Street, Buchanan, MI 49107."

additional height, a careful engineering study should be conducted to determine how much higher the tower can go, and what reinforcing would be needed to preserve the present mechanical strength.

Antenna gain

The ideal combination of antenna gain and transmitter power for a particular installation is something few engineers or consultants ever agree on. A variety of different pairings can be made, and predicting which one would be best is a difficult proposition. Because the trial-and-error method is expensive in this case, broadcasters must make an educated guess on the right combination, based on the recommendation of a qualified consultant and the present coverage patterns of other broadcasters in the same market (preferably transmitting from the same general area).

If the presence of the ground could be disregarded, there would be virtually no difference between any combination of antenna gain and transmitter power that yielded the same effective radiated power. This, however, is not the case.

Often it is suggested that the best coverage patterns result from the highest reasonable transmitter power

Figure 1(a). The effects of antenna gain on flatland service area coverage. In this application, a low gain antenna with beam tilt should be used. The scale is exaggerated to illustrate the principle involved.

Figure 1(b). The effects of antenna gain when applied to a mountainous region. A high gain antenna with beam tilt should be used in this application. The scale is exaggerated to illustrate the principle involved.

THE DATUM COMMITMENT: Time Generation, Reading, Recording, and Display for Video Applications

SMPTE TIME CODE EQUIPMENT

- Longitudinal and Vertical Interval Time Code generation and reading including user bits
- Jam sync, dubbing and external control capabilities
- NTSC/EIA RS170A and PAL/EBU 3079-E color video signal compatible
- Internal character generation of decoded or generated frame number and time-of-day or user bits

NETWORK SOURCE IDENTIFICATION CODE ENCODERS AND READERS

- Encodes input SMPTE Serial Time Code and 8 bit source number into the 48 bit SIO code
- Reader automatically scans the vertical blanking interval and displays and outputs the decoded source number and time

DIGITAL TIME DISPLAYS

- Up to nine decimal digits on 7-segment LED display
- Up to 2 inch high LED display configurations
- Parallel BCD input at TTL compatible levels
- Can be shelf, rack cabinet, wall or ceiling mounted

AUTOMATIC VIDEO MAGNETIC TAPE SEARCH SYSTEMS

- Remotely controls operation of attached video magnetic tape recorder/reproducer
- Automatic searching for selected start and stop times by reading and comparing time code recorded on video magnetic tape
- Industry standard computer compatible interfaces available for programmable control of tape search operations

Quartercam™ from Bosch. If you're going half-inch, you're only going half-way.

Bosch Quartercam leapfrogs half-inch technology with a remarkable quarter-inch recorder-camera

Here's your current choice in recorder-camera combinations: either of two incompatible half-inch formats, or the breakthrough Bosch KBF-1 Quartercam.

Quartercam is smaller than the half-inch systems. Lighter—just 16 pounds including lens and battery. More maneuverable.

And the 20-minute quarter-inch cassette is about *one-fourth* the size of a Beta-cam cassette. *One-fifth* the size of a VHS. So small you can stuff it in your pocket. A couple in each pocket!

Quality? Outstanding. Bosch's unique Lineplex™ format produces quality so good you have to see it to believe it. Far better than current three-quarter inch tape. And the audio is beautiful, too.

There's a lot more including field editor, studio VTR, and other system components. Quartercam is a full system.

Is there any point in going half-way with half-inch? Go all the way with Quartercam—the new video recording standard.

Call your local Bosch-Fernseh office. Or get in touch with us directly: Fernseh Inc., P.O. Box 318186, Salt Lake City, UT 84131 (801) 972-8000.

FM classifications simplified

By Bob Weirather, Harris Corporation, Quincy, IL

FCC Docket 80-90 has caused much confusion among FM operators regarding new station class designations. The commission's order requires FM stations to meet certain minimum antenna height and effective radiated power (ERP) requirements or be permanently declassified at a lower level. Stations have, in the past, had the option of beginning operation with facilities below the full licensed power and height allowed by FCC rules and, when

economics permitted, improving their plant to the licensed level. Docket 80-90, however, places a time limit on updating facilities for stations currently operating at less than full capacity.

Docket 80-90 gave FM broadcasting three new classifications: B1, C1 and C2. Figure 1 and Figure 2 graphically show the new divisions. (For a more complete understanding of the implications and requirements of 80-90, see the docket itself.)

Figure 1. The Docket 80-90 classifications for Zone 1 and Zone 1A stations.

Figure 2. The Docket 80-90 classifications for Zone 2 stations.

Reading the charts

Stations located in Zone 1 and Zone 1A should use Figure 1, and Zone 2 stations should use Figure 2. The respective charts show the minimum and maximum facilities for each classification. Mark your antenna height above average terrain (HAAT) on the vertical axis and ERP on the horizontal axis of the proper zone chart. Plot the in-

tersect point and read your current classification. Further examination of the chart will show the minimum facilities that must be met to avoid being permanently placed in the lower position.

Note that to be a Class C station, you must have 100kW ERP from an elevation of at least 300 meters (984 feet).

and the lowest antenna gain needed to give the licensed ERP. This is not necessarily true, however, as demonstrated in Figure 1(a) and Figure 1(b).

The lower the antenna gain, the broader the radiation pattern. This is a requirement for the situation shown in Figure 1(a), but it is a waste of money and power for the example shown in Figure 1(b). A good share of the energy from the transmitter to city B would be radiated above the horizon if a low gain antenna were used. A high gain antenna, which will narrow the beam, should instead be paired with the transmitter serving city B. If the same high gain antenna were used at location A, however, the chances are fairly good that acceptable performance would not be available to the city of license because the majority of the transmitter energy would skim over the top of the city.

For greatest efficiency, electrical beam tilt can be designed into a high gain antenna. A standard antenna radiates more than half its energy above the horizon, thus losing it for practical purposes. Electrical beam tilt, caused by delaying the current to the lower elements of the antenna, can be used to provide more useful power to the service area.

Mechanical beam tilt sometimes is

used by a station in a particularly difficult mountainous location. In this arrangement, the antenna itself is mounted at an angle from the tower. Any attempt at substantial mechanical beam tilt should be closely examined by a structural engineer.

Another method used occasionally to increase the field strength over the primary service area is to employ a directional antenna with a radiation pattern specifically designed for the particular location. This is accomplished by special construction of the antenna using radiating and reflecting parasitic elements. Figure 2 shows a typical directional pattern available from one antenna supplier, Harris Corporation. The antenna consists of two driven horizontal elements, one horizontal parasitic reflector and one driven vertical element. In certain applications, vertical parasitic elements can be added to further shape the vertically polarized component.

Pattern correction

Another method to maximize radiation to the service area is pattern optimization. The characteristics of the transmitting antenna are affected, sometimes greatly, by the presence of the tower, if side-mounted, or by nearby tall obstructions (such as another

Figure 2. A typical radiation pattern (horizontal plane) for a Harris directional antenna.

transmitting tower) if top-mounted. Unless the antenna was tuned at the factory on a tower identical to the one it finally would be mounted on, the presence of the supporting structure can severely distort the radiation pattern. The tower causes reflections of

More DB's Per Dollar!

Highest Power Across All Broadcast Bands.

R.F. Technology, Inc. introduces the new Powerline series of solid state, weatherproof RF Power Amplifiers. When the broadcaster wants microwave RF power . . . R.F. Technology is the company to turn to. The new Powerline series really delivers: 10 watts at 7GHz is commonplace for us!

But, there's much more to R.F. Technology than amplifiers. We manufacture a complete range of fixed and portable broadcast microwave equipment. With our good delivery times and our excellent service, come to the company that gives more DB's per dollar!

TECHNOLOGY, INC.
A CONTINENTAL MICROWAVE PLC COMPANY

the transmitted wave and, in the case of circular polarization, opposite sense rotation, which further distorts the pattern.

Antenna manufacturers that offer a pattern optimization service use various methods to tune out pattern distortions. These methods generally involve changing the orientation of the radiators with respect to the test tower, and adding parasitic elements. Figure 3 shows a typical pattern before and after correction.

Such pattern correction techniques also may be used to develop directional antennas without the complexity of phased elements and multiple-feed systems.

Some antennas have provisions for fine tuning once the unit is mounted in its operating position. Generally, however, this is unnecessary if the transmitting tower was duplicated accurately by the manufacturer during factory pattern optimization. Spacing of the radiating elements from the tower face is important for proper operation, so tower riggers should be sure to mount the antenna according to the manufacturer's recommendations.

Community antennas

One of the effects of the commis-

Figure 3. An example of pattern optimization of an FM antenna. The dotted line is before correction ($\pm 6.58\text{dB}$) from the desired, near-circular pattern. The solid line is after correction ($\pm 2.08\text{dB}$) from the same coverage pattern.

sion's 80-90 decision has been to make the concept of community, or shared, transmitting antennas more appealing. In many areas of the country, high elevation transmitting sites are difficult (if not impossible) to find. The only alternative, then, is a tall tower, which is expensive to construct. Adding to the cost of such a project are difficulties that may arise when trying

to clear local zoning requirements and FAA flight path restrictions.

If, on the other hand, a number of stations in a particular market join to construct a tower and mount a broadband transmitting antenna used (through combiner equipment) by all participating FM stations, the project may become feasible. The cost of such an effort can be substantial, but in many markets there is no other way to achieve the desired performance.

Small-scale community transmitting towers (2-3 stations or less) probably are best served by individual antennas on the common structure. Larger facilities most likely will find the shared antenna system to be the more cost-effective approach. These estimates take into account costs for transmission system hardware, not the tower structure. Special considerations at a particular site may make the break-even point for a shared antenna slightly different than that presented here.

Engineers Love its Ability. Owners Love its price! (\$695.00)

The VC-2000P is perfect for videotape editing, duplicating and for use as a camera control unit. It automatically regenerates all sync, blanking, and color burst signals which corrects most instabilities such as jitter, bending, and rolling.

As a camera control unit the video, color, and hue

adjustments allow camera matching and correct levels. In tape editing these controls provide scene to scene matching and fade to black.

Enhancement and noise reduction controls provide dramatic picture improvement and reduce tape duplicate generation loss.

Additional features include four video and four audio

outputs, and optional plug in RF modulator.

The rack mountable VC-2000P is only \$695.00. Call or write for literature.

Dealer inquiries invited.

Studer A-810 tape recorder

By David Smith, chief project engineer, audio, Editel, New York, NY

The audio post-production room at Editel is an audio-for-video facility based on Studer tape machines, so it came as no surprise when Studer Revox America offered our company an in-house demonstration of Studer's new 2-track unit, the A-810. I had heard repeatedly that although this new machine's transport was microprocessor-controlled (as in previous Studer models), the audio setup also was under the supervision of the microprocessor. In other words, there were no screwdriver adjustments. I have been carrying a tweaker around for some 11 years, and I am a great believer in techniques such as non-standard equalizations, underbiasing and generally playing the tape deck as a musical instrument. The idea of a

self-aligning machine left me skeptical and somewhat apprehensive.

The day the A-810 arrived, I saw it aligned for record and playback with the push of several buttons. The alignment procedure demonstrated a heretofore unseen synthesis of tape recorder and computer that was fully programmed to converse with inhabitants of the real world, human and electronic. The level of software development immediately quashed my fears about automated alignment. The machine is managed entirely by microcomputer, including the establishment of audio parameters. Operational settings are dictated by the user. The computer's primary purpose is to execute instructions and store them in memory for later access.

SMPTÉ time code feature

The main reason for demonstrating the A-810 at Editel was to spotlight an optional feature of the unit that uniquely suits it to video post-production, where SMPTE time code is employed universally for synchronization. This is the first production machine that uses biphase recording to place time code signals between stereo audio tracks on 1/4-inch tape. The technique allows the code to be recorded without the cross-talk usually associated with time code. So successful was the A-810 in this respect that within two weeks of installing the demonstration model, the machine had become indispensable.

The Studer system records the SMPTE time code on a center track 0.33mm wide, using specially designed combination heads placed on either side of the audio record and reproduce heads. As shown in Figure 1, the combi-head to the left side of the headblock (when facing the recorder) performs the time code reproduce and audio erase functions. The combi-head on the right side functions as the time code erase and subsequent record device. It also performs code reading functions when the transport is in the shuttle mode, allowing rapid access to a particular section of tape. Because the time code and audio

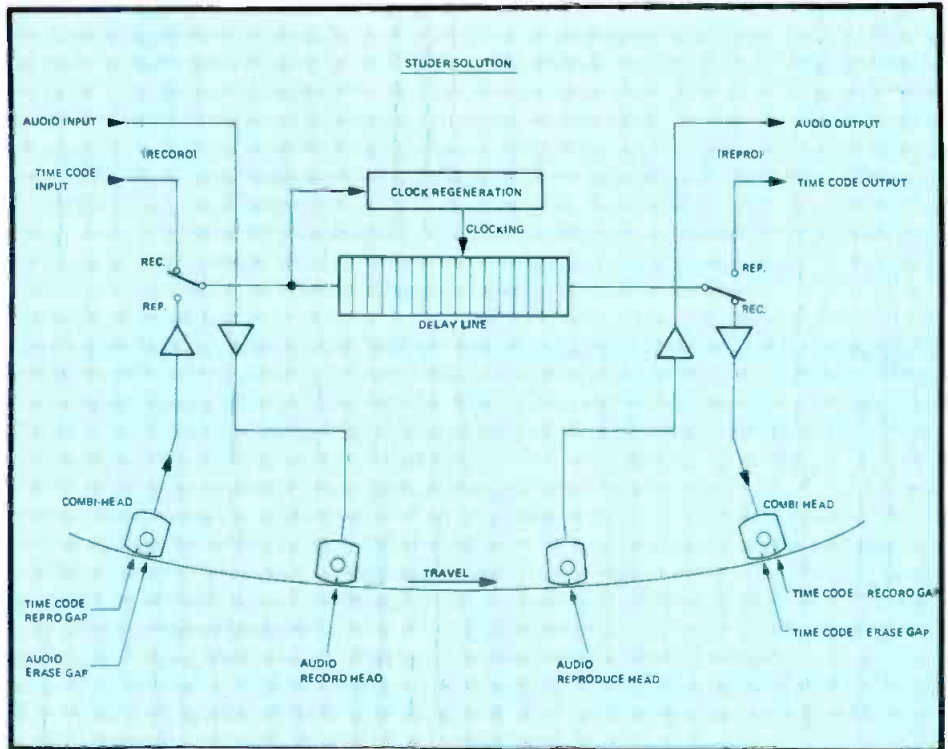

Figure 1. The Studer time coincident center channel SMPTE code system used in the A-810 tape recorder. According to the company, this arrangement keeps code-channel-to-audio-channel cross-talk at less than 90dB.

The world sees more through Angenieux than through any other lens

That 7 of every 10 video cameras used to shoot the '84 Winter Olympic Games in Sarajevo were equipped with Angenieux lenses shouldn't surprise you. Or that the COPAN Olympics were shot with 39 Angenieux lenses. After all, Angenieux was the first video lens to send pictures from the moon and is still NASA's prime choice in space.

Obviously, reliability is a major factor in choosing Angenieux. But, there's much more.

Innovation for one thing. Angenieux has never believed in leaving well enough alone. We invented the retro-focus design and the finest practical zoom lens.

We have a lifelong commitment to optical superiority in everything we design and make. That's why cameramen, broadcasters and major studios consistently look to Angenieux to enhance their images.

heads are separate, the Studer system is capable of maintaining cross-talk rejection (between audio channels and the time code channel) greater than 90dB, according to company specifications.

Figure 1 also shows the delay line system used to compensate for the tape travel time between the audio and time code heads. This compensation is automatic at all speeds, even in the variable speed mode. The time code system used in the A-810 also allows tape splicing in the normal manner without fear of cutting off the corresponding time code information.

Machine design

The A-810 is a compact, rack-mountable tape machine constructed around a light alloy transport casting that holds three motors, a precision-machined mount for interchangeable head blocks, a tape-tension servo system, stabilizer and tachometer rollers, and various power supplies. The capstan operates at all four professional tape speeds (3.75ips, 7.5ips, 15ips and 30ips) and is servo-controlled by a phase-locked loop (PLL) with a natural frequency of 9.6kHz. The spooling motors form servo loops with their associated tension arms. Supply and takeup reel motor torque are controlled by individual switching power

Courtesy of Studer Revox America

The electronics chassis for the A-810 is shown here. Plug-in circuit boards, accessible from the front of the unit, are used for easy field service.

supplies (a first for Studer), allowing more precise tension adjustment and reduced heat dissipation. An air-damped pinch roller gives the tape deck the silent start feature required in on-air control rooms.

Attached to the transport casting is a card cage of motherboard-backplane construction containing all analog and digital electronics. This assembly is protected by a hinged cover, which also contains the transport operating keys and various displays. Large backlit VU meters are standard on the A-810, and their ballistics can be switched electronically to European

Broadcasting Union (EBU) peak program characteristics, if desired.

The machine can be ordered as a free-standing portable, console or rack-mounted unit. The console configuration has lockable casters and an adjustable deck position feature, which allows the transport to be operated within a 90° arc from full horizontal to full vertical. The console model includes an overhead meter bridge that holds the audio controls at a fixed operating angle independent of the transport. All models of the A-810 include a switchable amplifier and loudspeaker, allowing local moni-

toring and cueing in the record or playback mode.

A variable speed control is available as an option on the tape deck. It can be mounted in the overbridge assembly on the console version of the A-810, or adjacent to the speed selector switch in other configurations.

The microcomputer system

The brain of the A-810 is a Motorola 6803 8-bit microcomputer operating on three levels simultaneously. It monitors the operational status of all controls and systems, runs all transport tape handling functions and keeps track of all audio parameters. (See Figure 2.) When the machine is switched on, the microcomputer begins a self-test of all circuits to determine any problems. This routine includes checks of all indicator lamps, push-buttons, random access memory (RAM), power supplies, audio channels and erasable-programmable read-only memory (EPROM) chips. Once these tests are passed, the microcomputer sets all machine controls to their last memorized positions.

In the event that a power supply rail or the spooling motor power controller has failed, the machine is rendered inoperative. Other problems can be handled by the computer under de-rated (limited mode) operating conditions. In such cases, the computer indicates the location of the problem to the operator via an electronic error (EE) visual message and disables that

section of the system. Functions not affected by the failure continue uninterrupted.

The microcomputer has full control of the transport, in that the functions of certain control keys are programmable (or soft) and can be changed. The machine contains a 4-memory autolocator, and the last three autolocate position keys can be reprogrammed to perform tape-dump, remote-control, fader-start, pause and code-channel-ready functions. Certain combinations of buttons read out the elapsed time of the capstan motor and power supplies in hours. When not being used for special functions, the liquid crystal display (LCD) indicates tape position.

A universal serial interface port is optional on the A-810. The port is compatible with RS-232, RS-422 and RS-422 modified. The interface permits external computer control of all transport functions, audio switching and electronic alignment parameters. The serial port also can be used for comprehensive monitoring and testing of all recorder functions.

In the A-810, the typical potentiometers used to set audio parameters have been replaced by 8-bit digital-to-analog converter (DAC) chips. These integrated circuits function as precision 256-step attenuators and give the system microcomputer control over what once was a manual adjustment. Eliminating the alignment pots removes one of the last vestiges of

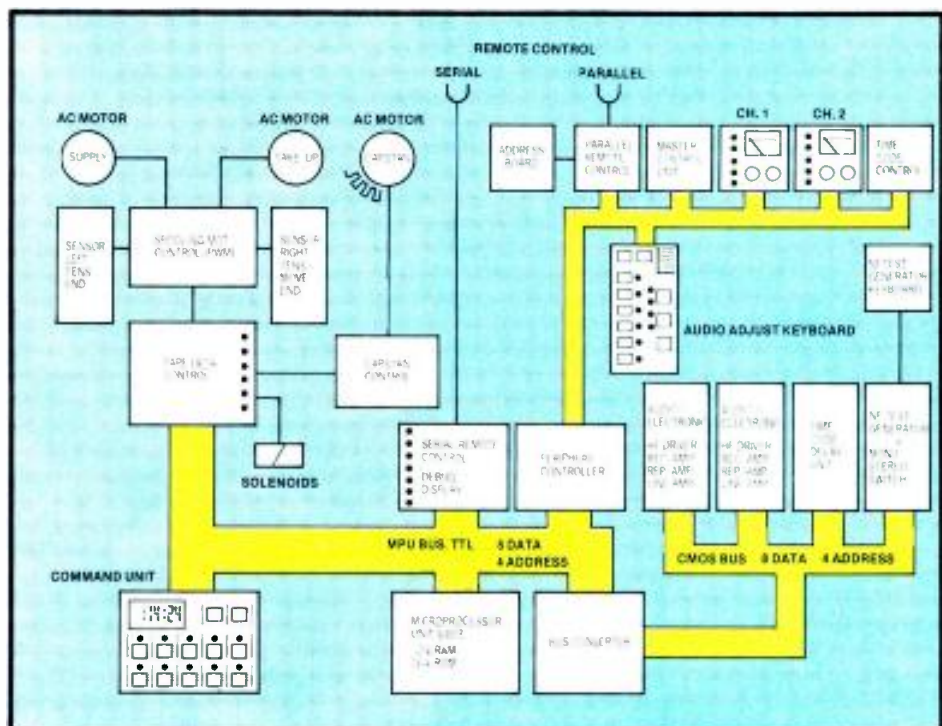

Figure 2. The block diagram of the microprocessor-controlled functions of the Studer tape transport and audio electronics. Note the use of data bus connections between the various circuit cards.

electronic drift, rendering this machine more stable and resettable than any other I have dealt with. Record and playback level, equalization and bias are set by pressing raise or lower buttons corresponding to the chosen parameter. These settings then are stored in non-volatile memory for later recall.

While electrical adjustments are being made, the LCD display reads out the setting values, allowing the user to compile a handwritten log that can be used to re-align manually the tape deck without having to put tape on it. The A-810 stores parameters for two types of tape at all four speeds with NAB equalization and also for two types of tape with CCIR equalization at 7.5ips and 15ips, giving a total of 12 alignment registers. In the event that the deck's registers contain no settings (due to failure of the operator or the machine), the factory has placed a full set of Agfa PER-525 parameters into the operating program. These values automatically will be downloaded into the alignment registers at powerup.

An optional 5-frequency (60Hz, 125Hz, 1kHz, 10kHz and 16kHz) tone generator is available for audio system alignment and routine performance tests. A special feature automatically adjusts the generator output and playback amplifier gain for operation with increased electronics and tape headroom, if desired.

The audio system

The audio circuits in the A-810 are analog, and have been perfected to give superb sonic performance. Specifications for major parameters are shown in a sidebar. Tests conducted at Editel indicate that the A-810 easily meets its published specifications. I found the head assembly to be stable and not subject to loss of alignment caused by vibration encountered in normal use. I also have found that there is ample headroom in the electronics portion of the playback system. Levels normally used with the machine leave 18dB or more headroom in the output section. Gain control of the amplifiers contained in the A-810 is accomplished through use of a variable element in the feedback loop of the particular stage, rather than a passive attenuator network. This arrangement preserves maximum headroom throughout the amplifier chains. All electronic circuits in the A-810 are phase-compensated. Gapless timed recording in and out can be programmed by the computer, further increasing the system's flexibility.

The audio input and output stages can be supplied in transformer or active-balanced configurations, depending on the user's preference.

THE TRUE MEASURE OF PERFORMANCE

ASACA/SHIBASOKU • CC-5 Color Encoder

The CC-5 is the new world standard color encoder for use with all character generators, chroma keyers and computer graphics systems.

- 2 RGB inputs plus 3 composite video outputs. Additional outputs include R-Y, B-Y, chroma, Y, I and Q.
- Split field color bars generated internally.
- Aperture correction.
- Phase of output signal may be varied from 0°-360°.
- Remote controllable.
- Available in NTSC; PAL B, M, N; and SECAM Systems.

Measure your performance with the best.

Manufacturer's specifications: Studer A-810

Tape speeds:	crystal controlled \pm 0.2%			
	3.75, 7.5, 15, 30 ips			
Reel type:	DIN. CINE. NAB. up to 11.1" (282 mm) diameter			
Tape slip:	0.1% max.			
Tape width:	1/4" (6.3 mm)			
Wow & flutter:	30ips	15ips	7.5ips	3.75ips
Peak weighted according to DIN 45507	.03%	.04%	.06%	.12%
Tape timer:	\pm 0.5% indicating hours, minutes and seconds real time for all speeds			
Rewind time:	approx. 100 seconds for 2500 ft reel			
Stopping time:	less than 2 seconds			
Line inputs:	balanced and floating; optional: transformer or transformerless			
Line outputs:	balanced and floating; optional: transformer or transformerless			
Output level:	max. undistorted output level + 28dBm into 600 ohms			
Equalization:	NAB or CCIR switchable; special (non standard) time constants can be programmed			
Equalization Time Constants:	30ips	15ips	7.5ips	3.75ips
CCIR:	17.5 μ s	35 μ s	70 μ s	90/3180 μ s
NAB:	17.5 μ s	50/3180 μ s	50/3180 μ s	90/3180 μ s
Frequency response:	30ips	15ips	7.5ips	3.75ips
(record-reproduce)	30Hz-33kHz	20Hz-30kHz	10Hz-23kHz	10Hz-16kHz
\pm 2dB	35Hz-31kHz	30Hz-28kHz	20Hz-21kHz	10Hz-12kHz
\pm 1dB				
Signal to Noise Ratio:	30ips	15ips	7.5ips	3.75ips
RMS record-reproduce (referred to 6dB above operating level of 510 nWb) unweighted according to NAB standard two track; 2mm track width	72dB	72dB	72dB	68dB
Distortion: at 1kHz (3rd Harmonic)	30ips	15ips	7.5ips	3.75ips
NAB equalization at operating level	1%	1%	1%	1.5%
Crosstalk rejection: (stereo)	70 dB or greater at 1kHz			
Erase efficiency: (15ips)	82dB at 1kHz			
Erase and Bias Frequency:	153.6kHz			

For broadcast applications in which RF is present, I recommend using transformers on the inputs and outputs to minimize interface problems and ground loop possibilities. For most other applications, I suggest using the active-balanced configuration, which gives slightly better sonic performance.

Maintenance considerations

This tape machine seems to be easy to service, with all electronic assemblies on plug-in cards using plug-in integrated circuits (ICs). As of this writing, I have not received a complete instruction and maintenance manual, but I am told one is forthcoming. A detailed set of operational instructions was supplied with the deck. However, schematic diagrams for the system and troubleshooting procedures had not been completed.

Most electronic parts used in the A-810 appear to be common types that can be obtained from local supply houses. Some of the ICs are somewhat specialized, though, and would have to be ordered from a major semiconductor distributor. Most mechanical parts and transformers used in the machine must be obtained from Studer. Troubleshooting the micro-computer system in the field is not practical because of the system's com-

BEAT THE OPEN DELTA BLAHS...

If you're running a 3-phase transmitter on open delta electrical service, chances are you're getting inferior results.

Open delta is often provided as a substitute for 3-phase, but unbalanced line impedance degrades performance and switching transients can damage solid-state rectifiers.

A simple, cost-effective solution is a Phasemaster[®] rotary phase converter. Phasemaster[®] closes the delta, eliminates undesirable fluctuations and regulates all three lines. It's been proven reliable in 15 years of broadcast applications, worldwide.

... AND WHIP THE 3-PHASE DOLLAR-GOBLER.

Have you found it's going to cost an arm and a leg to run 3-phase lines to your station? It doesn't have to. You can get true 3-phase power from a single-phase source with a Phasemaster[®] rotary phase converter.

Cost of a Phasemaster[®] can be as little as 5% of the expense of bringing in utility-supplied 3-phase lines. Phasemaster[®] regulates voltage, buffers spikes and transients and will operate indefinitely on a 24-hour-a-day basis.

UNIQUE DESIGN FEATURES PUT PHASEMASTER[®] FIRST

Phasemaster's[®] patented features give it unmatched performance, economy and reliability. For more information and a list of radio and TV stations using Phasemaster[®], call, toll-free, 800/348-5257, or write to Kay Industries, Inc.

Courtesy of Studer Revox America

The control panel of the A-810 is shown in the portable configuration. Some of the transport buttons are soft and can be programmed to perform various functions.

plexity. Repair of that section is a replace-the-card proposition.

The keyboard command switches are non-contacting Hall elements for long life and reliable performance. They appear to be relatively coffee-proof. However, I am somewhat concerned that the electronics bay (which sits below the command buttons) could be subject to damage from coffee spills when the machine is ordered in the console configuration. Operators of this deck should put their coffee cup somewhere else.

The A-810 contains a large amount of electronic hardware, and the heat generation from the system is substantial for a 2-track deck. The company has assured me that this is normal. It does seem somewhat unusual, however.

Editing

Editing is an important subject for broadcasters and production facility personnel, and the Studer A-810 offers an array of features to ease the burden of an editor working with time code or razor blades.

Spooling through a section of tape can be done in either direction at any of four speeds (10m/s, 7m/s, 4m/s and 1m/s). With practice, tape can be moved along one word at a time with the toggled spooling feature, a micro-processor routine that exerts precise control over the reel motors. Tape lifters prevent excessive wear of the heads while the machine is in the shuttle mode. The lifters can be defeated for cueing purposes, if desired. A 4-position autolocator system helps the operator find fixed points in the tape reel.

The tape deck comes with a splicing block. However, the position leaves something to be desired.

Limitations

Although the A-810 is an excellent machine, it is not without its limitations. The transport will not handle 14-inch-diameter reels, making it difficult to produce long music shows recorded at high tape speeds. Also, at this time no pilot tone 60Hz synchronizer is available for the machine, requiring the use of an alternate deck for this task. TV facilities increasingly are subject to film-type synchronization procedures, as film-to-tape transfers proliferate. Other problems with the tape machine include the LCD readout, which is not illuminated and therefore cannot be read in low light environments. An extra in-

Excellent results and simple operation have made telcom c4 the standard audio noise reduction for Type B VTR's. telcom c4 is now available for the c-format. Call for an evaluation unit today.

- interchange ability and
- last but not least the telcom quality of natural sound.

Take an existing analogue recorder (two track or multitrack), add telcom c4 and listen to the results! telcom c4 is the exceptional compander. Only this noise reduction system surpasses digital without the cost of completely new equipment and problems usually associated with implementing new technology. telcom c4 creates improved headroom, and high frequency resolution; lower distortion from tape, better crosstalk attenuation plus a 30dB gain in dynamic range.

\$650⁰⁰ per card*

TELEFUNKEN telcom c4 DM

telcom c4 is used in connection with ATR's, VTR's, line and satellite transmissions. telcom c4 in its new format will fit your standard noise reduction frame. Find out more about telcom and how you can make the telcom test.

indicator lamp also would be helpful to indicate the presence of a time code signal.

There has been much discussion at Editel regarding the soft key arrangement. Broadcasters might prefer a simpler arrangement with fewer keys.

whereas video and recording houses might want all functions soft. Studer could address this problem by offering different optional control panels (or additional control panels) that would be fitted into the blank areas of the electronics cover when the

machine is ordered in the console form.

Overall impression

In conclusion, the Studer A-810 is a machine that is unparalleled in performance and versatility. I think that the unit's innovative design points the way to the future for audio recording.

Editor's note:

The field report is an exclusive BE feature for broadcasters. Each will be prepared by the staff of a broadcast station, production facility or consulting firm. The intent is to have the equipment tested on-site. The author is at liberty to discuss his research with industry leaders and to visit other broadcasters and/or the manufacturer to track down pertinent facts.

In each field report, the author will discuss the full applicability of the equipment to broadcasting, including personal opinions on good features and serious limitations—if any.

In essence, these field reports are prepared by the industry and for the industry. Manufacturer's support will be limited to providing loan equipment and to aiding the author if support is requested in some area.

It is the responsibility of Broadcast Engineering to publish the results of any piece tested, whether positive or negative. No report should be considered an endorsement by Broadcast Engineering for or against a product.

The tape deck reviewed in this report was purchased by Editel for use in its New York City facilities. After this field report was completed, Studer Revox answered two questions brought out in the author's examination of the A-810. Thomas Mintner, director of Studer products in the United States, says an optional LED will be available in the near future to indicate the presence of time code signals. He also said that the digital readout display will be available soon in an LED format, instead of the present LCD, if desired.

For more information on the Studer A-810 tape recorder, contact: Studer Revox America, 1425 Elm Hill Pike, Nashville, TN 37210.

[:Z-)))))

The A-810 shown is installed in one of Editel's studios. The machine (here in the console configuration) also is available in portable and rack-mount models.

Adding blue-gun-only capability to the Sony PVM-1900

Carl Armon
Technician
WNEV-TV
Boston, MA

Being able to display only the blue channel has advantages in setting up videotape equipment. Blue, being most susceptible to noise, simplifies optimizing adjustments of the VTR, particularly in matching head settings of quadruplex machines. Unfortunately, the blue-gun-only mode is not available in many monitors that otherwise are well-suited to many areas of a TV facility.

A simple modification may be made to the Sony PVM-1900. The components are inexpensive (about \$35), and the procedure requires less than an hour to complete. The result allows a PVM-1900 or CVM-1900 with tuner to be used in the studio with a blue-gun-only display mode.

The added circuitry removes the red and green signals from the CRT by breaking the circuit paths and inserting equivalent circuit conditions in place of the signals. This leaves only the blue signal to reach the CRT screen.

Only one component, a diode found on the main printed circuit board (PCB) of the monitor, is replaced in the modification. Of the additional parts, the most expensive are two relays. Potter and Brumfield HP11D relays were chosen at \$16 each, because their small size allows easy attachment to the CRT PCB.

The modification has been made on seven PVM-1900 monitors at WNEV-TV. These monitors, used in the 1/2-inch YIQ format edit suites, have been in continuous 24-hour operation for more than six months. To date they have been trouble-free.

Modification procedures are performed as follows:

- Remove the back cover (five screws). Two screws at the rear of the chassis must also be removed to allow the chassis to slide out of the cabinet. Sufficient slack is provided in chassis cabling to allow the chassis to be

PVM-1900 monitor with blue-gun-only switch.

Figure 1. PCB location guide. Control switch mounts in front of the M board. Relays and components mount on the C board.

Editor's note:

The interior of a video monitor contains a high vacuum CRT and the ever-present possibility of stored, residual high voltages. Use care when working inside the unit. Also, this modification may void a warranty on the equipment.

Figure 2. Partial schematic of the main (A) PCB. TP92 and the location of D349 are shown.

pulled out far enough to perform the modification.

- Disconnect a black ground wire between the chassis and CRT housing at the CRT end.

- Release the following cables from their plastic guides: a red high voltage cable leaving the flyback transformer (two guides); all wires going from the main PCB to the CRT yoke and to the CRT socket PCB (three guides); and all cables running along the bottom of the CRT housing (five guides).

- Lift the plastic chassis locking tab at the right of the chassis and carefully slide the chassis out of the cabinet about 10 inches.

- Remove six control knobs from the front of the set (V Hold, Sharp, Hue, Color, Bright, Picture); then completely loosen the five screws that hold the control chassis to the front of the set. (See Figure 1.) The screws are captive to the circuit board. The board may be carefully pulled back, with the right end being moved out of the way to expose the portion of the case where the blue-gun-only switch will be mounted.

- Drill a 1/2-inch hole about three-quarters of an inch above the center of the panel. Viewed from the front, it will be to the left of the Auto color switch and at about an 11 o'clock position from the Subvolume control. Viewed from inside the set, the posi-

tion is at the center of a 3/8-inch circle that appears slightly indented into the plastic. Alternative to drilling, a round-tipped soldering iron may be used to melt a hole through the plastic, working from the inside. Remove any burrs from around the hole.

- Solder a 30-inch and an 18-inch length of wire to the toggle switch that

Figure 3. Schematic for the blue-gun-only modification addition to the CRT (C) PCB. Dotted lines indicate where components attach to relay coils for a ground connection.

The completed blue-gun-only circuit mounted on the CRT PCB.

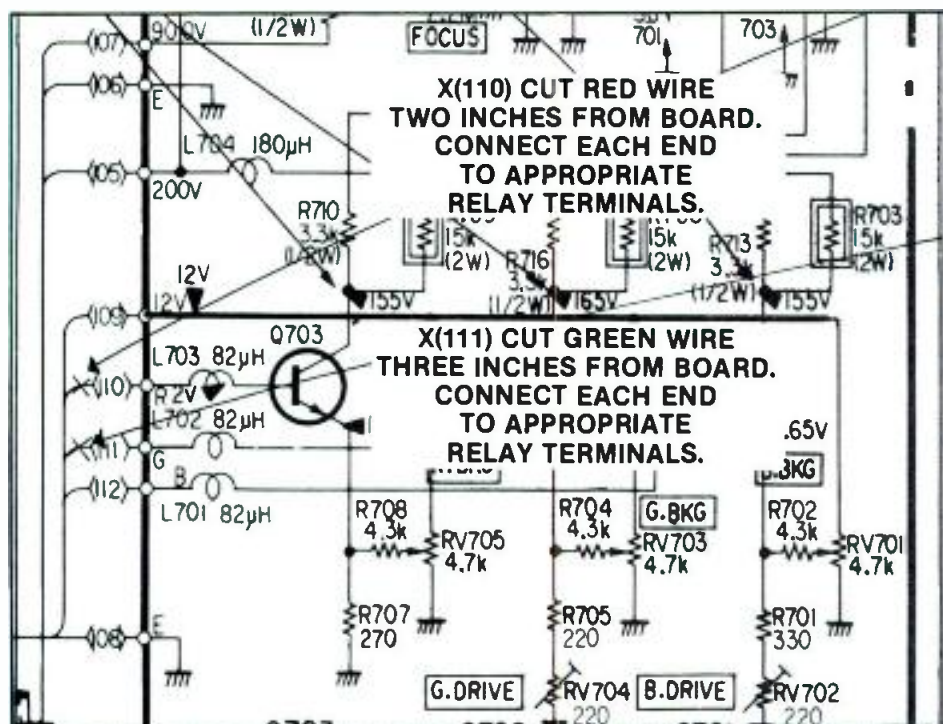

Figure 5. Partial schematic of the CRT (C) PCB indicates where the red and green signal wires are severed for attachment to added relays.

will be installed in the hole. Loosely twist the wires together before mounting the switch in the hole.

- Remount the front-control-panel PCB and tighten all five screws. Replace the control knobs.

- Replace diode D349 on the main PCB with a 1N4003, keeping the same polarity. (See Figure 2).

- Slide the main chassis toward the front of the set, leaving it out about three inches to give working room. Reinsert the cables from the bottom of the CRT housing into their respective cable guides and tighten the guides.

- Solder the free end of the 18-inch wire to TP92, and 15Vdc source on the main PCB. (See Figure 2).

- Cut the 30-inch wire near the TP92 location. Slide a short section of heat-shrink tubing over one end and attach the cut ends of the wire to the ends of a 39Ω, ½W resistor. Solder the connections and shrink the tubing over the resistor and wire junctions.

CRT PCB preparation and wiring

- Install a 1N4003 diode and 1.2kΩ resistor (in series) from one normally open (NO) terminal of each of the relays. (Note the polarity of the diode in Figure 3.) Install a 1.2kΩ resistor from the other NO terminal of each relay. Use one of the relay-coil terminals as the ground connections for the components.

- Use a short section of insulated wire to connect the normally closed (NC) terminals on each relay, as indicated in Figure 3.

- With 5-minute epoxy or a super

glue, attach the relays to appropriate areas of the CRT PCB, as shown in Figure 4. Allow the adhesive to set.

- Attach the remaining end of the 30-inch wire to the hot ends of the relay coils.

- Connect a wire between the ground ends of each relay coil (the common point to which the components were previously attached) and to the ground foil of the CRT PCB. A black wire from the main PCB attaches to that foil to aid in the point identification.

- Cut the green wire that connects to the CRT PCB at three inches from the board, then solder the ends of the

green wires to the common (CO) terminals of the relay closest to them. (See Figure 5).

- Cut the red wire that connects to the CRT PCB at two inches from the board and solder the ends of the red wires to the CO terminals of the second relay. (See Figure 5).

- Carefully plug the CRT PCB onto the CRT.

- Place all cables removed from cable guides at the beginning back into the guides and secure them.

- Slide the chassis back into the monitor cabinet and secure with the two screws. Then, replace the back cover. |:~:~:~|

Simple remote-control tally drivers

Robert Ramsaur
Engineer
KBYU-TV
Provo, UT

Most modern-day broadcasting equipment is designed to be remote controlled. You usually can find a connector on the rear panel labeled *Remote*. If your equipment has this feature, you should be able to connect switches to the appropriate pins and operate the device from some distant location. If you are fortunate, the remote connector also will provide tally information to indicate what operation the machine currently is performing.

Unfortunately, not all equipment you wish to control will have fully remotored control and tally lines. To add remote control to a particular device, you may only need to add a remote switch that parallels a local switch. If, however, that switch does not cause a tally lamp to light, you have no ready source for a remote tally.

We encountered this problem and designed a \$5 circuit to solve it. Figure 1 shows a basic circuit for latching command information and driving tally lamps. If we push the *Play* push-button (S1), the flip-flop is set, and Q goes high turning Q1 on, lighting the *Play* lamp. If the *Stop* button (S2) is pushed, the flip-flop is reset and Q goes low, which turns off Q1 and the *Play* lamp goes out. At the same time, Q goes high, turning on Q2 and lighting the *Stop* lamp. Resistors R1 and R2 limit the base-to-emitter current. This basic circuit can be adapted to many remote-control applications.

In the case of our Sony 2800/2850 VCRs, the remote connector had full remote-control lines and partial tallies. Tallies for *Play*, *Stop* and *Re-wind* were missing. The machines were easy to remote control because the VCR used momentary switches for all commands. We connected the remote switches directly to the remote

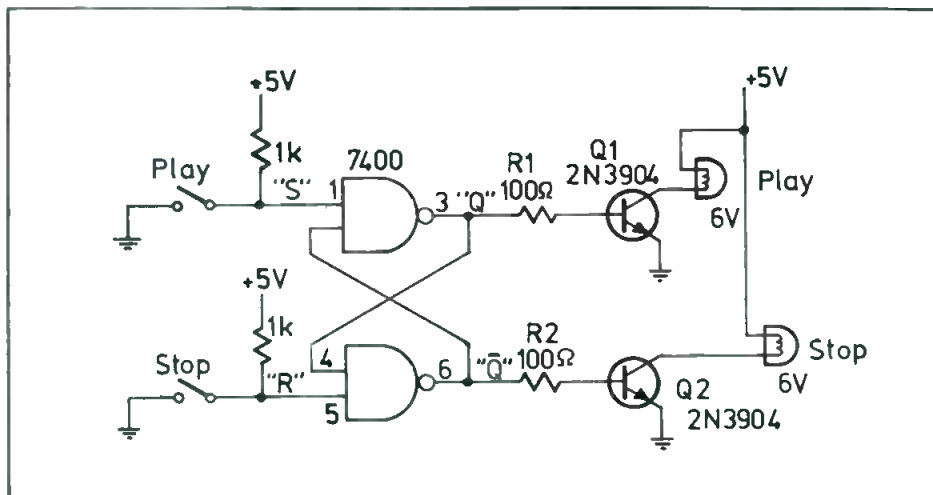

Figure 1. Basic RS flip-flop latch and lamp driver circuit.

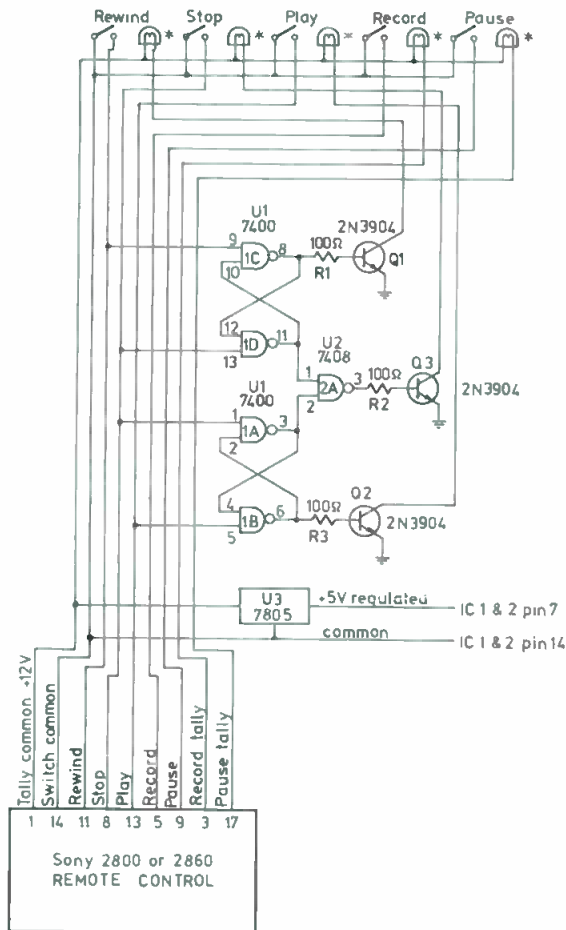

Figure 2. Remote control and tally for Sony 2800/2860.

connector, placing them in parallel with the command switches on the VCR itself. The remote connector on the VCR provided 6V power and Record and Pause tallies. We needed a way to remember which command had been issued and to tally Stop, Play and Rewind.

Figure 2 shows the basic flip-flop and driver circuit modified to serve the VCR's remote-control needs. IC-1 forms two flip-flops, one for Play/stop and one for Rewind/stop. Q1-Q3 are used to drive the Stop, Play and Rewind lamps. IC-2 sets the circuit logic so that it follows the VCR's logic. If you are in Play, you must push Stop before you can go to Rewind. The tally circuit indicates what mode the VCR is in, whether the command was issued at the machine or at the remote-control location. This happens because the remote switches parallel the local control switches and either can set or reset the flip-flops.

The basic circuit shown in Figure 1 can be used to generate tally logic and lamp drivers for many remote-control applications found in broadcasting. The circuits are simple to construct and easily can be modified for special applications. They draw little energy and usually can be powered from the equipment they are tallying. [!(->)]

CORPORATE DATA

Audio & Design Recording Ltd. and Calrec Audio Ltd. have concluded an agreement in which Calrec acquired a substantial stake in the US subsidiary **Audio + Design Recording**, based in Seattle. Nigel Branwell, formerly vice president of the US corporation, becomes president. To reflect the Calrec involvement, the name has changed to **Audio + Design Calrec**.

A new company, **Knudson & Benson Associates**, specializing in the design and specification of TV studios, performing arts facilities and places of public assembly, has been formed. Knudson, a registered architect, was formerly the associate director of plant facilities planning for CBS Television Network in New York, and is a graduate of the Yale University Theater Engineering Program. Benson is a professional lighting designer, author and teacher, with 20 years' experience in studio lighting control system design and specification. He was president of Skirpan Lighting Systems before establishing this practice with Knudson. The company is located at 3002 89th Place SE, Mercer Island, WA 98040; telephone 206-232-2273.

A special license from the US Department of Treasury enabled **Wold Communications** to proceed with live telecasts from Reno, NV, to Emtelcuba, Cuba's international telecommunications carrier. Boxing matches between amateur teams of the United States and Cuba were featured in the 4-hour telecast from Lawler Event Center in Reno. The transmission plan used a domestic satellite (Telstar 301) from the West Coast to Miami, then terrestrial microwave for the 90-mile Caribbean Sea link to Havana. Normally, TV from the United States to Cuba is routed through international satellite, but Intelsat was unable to provide the four hours required by Emtelcuba.

RCA's Broadcast Systems Division and Rank Cintel Ltd. have announced an agreement that gives RCA's Broadcast Systems Division non-exclusive rights to market NTSC, PAL and SECAM versions of Rank Cintel's solid-state broadcast telecine worldwide as the RCA TKS-100. RCA will sell the unit through its sales representatives and will then provide warranty coverage, installation, servicing, spare parts and training. Rank Cintel also will market the telecine as the ADS 1 through its own outlets worldwide, including Rank Precision Industries in the United States.

Innovative Concepts Int'l. has been appointed to represent **EECO** time code products in the 13 Western states. ICI also represents Anton/Bauer, Audiotronics, Video Aids of Colorado, Knox Video Products, Nova Systems and Zie-Mark.

ADDA Corporation has agreed in principle to acquire **Control Video Corporation**, Campbell, CA. Control Video will continue to operate under the direction of Wayne J. Lee, president, and founder Larry Seehorn, as vice president.

RCA and Ampex have announced an OEM agreement that will allow RCA to begin worldwide marketing of the Ampex VPR-80 1-inch helical-scan videotape recorder. **RCA's Broadcast Systems Division** also will provide servicing, warranty coverage, installation assistance, training and spare parts for the recorder, which RCA will

market as the TH-400. The TH-400 will be available in NTSC, PAL and SECAM standards.

EQUIPMENT SALES

Under an agreement announced by CBS, **Scientific-Atlanta** will provide satellite earth stations to CBS and some of its affiliated stations. The earth stations will be installed at various CBS locations and at CBS Television Network affiliated stations across the country as part of a plan to convert the network distribution system from the existing terrestrial network to a satellite-based system. The network conversion plan was initiated in the fall of 1983 and will continue with a roll-out plan that will be completed in 1986. A number of stations in strategic locations across the country also will be equipped with occasional transmission capability. The first 10 installations in the United States were scheduled to be completed and operational early this year, and other installations will proceed at the rate of about 20 per quarter.

Spar Aerospace Ltd. of Ste. Anne de Bellevue, Quebec and Toronto, has reached agreements worth more than \$20 million for the sale of 26 satellite earth stations and the transfer of related technology to the People's Republic of China. The earth stations will form a major part of China's planned satellite communications system.

Comtech Antenna Corporation of St. Cloud, FL, has delivered 3.8m and 5m transportable audio uplink antenna systems to the IDB Communications Group of Los Angeles, CA. Both transportable systems were used to uplink SCPC audio for a number of the major college bowl football games this past season.

Microdyne has announced a \$300,000 order from Anixter UK Ltd. for satellite TV receiving equipment to be used in Great Britain. Anixter UK was to take delivery of 70 1100BDC-12 block downconverters and 90 1100DCR-12 receivers in the first months of this year. The equipment ultimately will be used in Britain for distributing TV programming via Intelsat V and ECS satellites.

Comark Communications, of Southwick, MA, and Colmar, PA, has announced the receipt of a major contract award from JP Communications for the manufacture and installation of a 30kW UHF TV transmitting facility to serve KPOL-TV/Channel 40 in Tucson, AZ.

Arch Communications Corporation, Hartford, CT, has placed an order valued at more than \$3 million for UHF TV transmission and control equipment with the **Broadcast Transmission Division of Harris Corporation**. The equipment will be used at Arch's new TV station, WETG-TV/Channel 61, Hartford. The equipment package includes the first two omnidirectional pattern Wavestar antennas. Also included in the order are a Harris 220kW UHF TV transmitter, which is equipped with multi-channel (stereo) sound capabilities; a Harris 9100 facilities control system for intelligent remote control of the transmitter; and a Harris fully protected hot standby STL/TSL microwave system. Harris will install all the equipment except the antennas.

Recent orders of **Bogner** high power TV broadcast antennas include: Channel 23, Decatur, IL; Channel 51, Ocala,

THE AGONY AND THE ECSTASY

AGONY:

You work hard to keep your plant clean. A little tweak here, another adjustment there.

It's an endless maze of video paths, and you're the guy in the hot seat.

To make matters worse, everytime you

have things just the way you want them, somebody decides to plug in a new video source. It's tweaking time again and the longer it takes, the more it costs. Agony, pure agony.

ECSTASY:

The Grass Valley Group Proc Amp. Always SC/H phased. You get full regen-

eration of sync and burst, adjustable blanking width, soft and hard clippers, independent adjustability of

chroma and luminance, external reference and much more. Ecstasy.

THE TRUE MEASURE OF PERFORMANCE

ASACA/SHIBASOKU SV11A Video Sweep Generator

The SV11A measures frequency response on high resolution, wide-band color video equipment. It has a frequency band ranging from 100 kHz to 30 MHz. You also get a choice of two amplitude ranges: wide range covering the whole band in one sweep, and narrow range centered on a particular frequency. Sweep signals may be selected by the switching V sweep of the built-in sync signal and power line frequency. A variable marker and six fixed marker waves are built-in and may be set to desired frequencies.

- Generates sweep (0.1–30 MHz), Wide sweep width (3–30 MHz), Narrow sweep width (1–10 MHz).
- 6 pre-settable fixed frequency markers plus variable marker with digital readout.
- 22.5 db level marker can be inserted to 0.5 db steps, facilitating readout.
- Composite sync signal and VD signal available.
- On-off switch for sync signal, color burst signal and setup.
- CW output.
- Available in NTSC; PAL B, M, N; and SECAM systems.

Measure your performance with the best.
ASACA/SHIBASOKU SV11A. Wide band video sweeps up to 30 MHz.

FL; Channel 28, Columbus, OH; Channel 28, Corkville, TN; Channel 43, Bridgeport, CT; and Channel 52, Oklahoma City.

Microdyne has announced an agreement to supply a new \$1 million, 2-channel satellite radio distribution system for Florida Network. The initial agreement calls for a permanent single-channel-per-carrier (SCPC) uplink to be installed at WKIS in Orlando, FL, and for approximately 50 downlinks to be installed statewide at the network's various affiliates. Microdyne also will supply a transportable audio-only uplink for the network's second channel.

Toyo Recording Company Ltd. in Tokyo has installed a complete Ampex post-production system valued at more than \$1.1 million in its new editing suite. The suite features five Ampex VPR-3 1-inch helical-scan videotape recorders, a 2-channel Ampex Digital Optics (ADO) system, an ACE computerized editing system, an AVC-33 production switcher and ATR-102/ATR-104 and MM-1200 audio recorders.

NEW ADDRESSES, DIVISIONS

Atlanta-based VideoStar Connections has expanded its staff and opened a Midwest regional office just outside of Chicago. Johan Praats, VideoStar's Midwest region sales manager, will be in charge of the new office. The new address is Suite 400, 999 Plaza Drive, Schaumburg, IL 60195. Telephone number is 312-843-7323.

Comprehensive Video Supply Corporation has opened a West Coast distribution center. The new facility is located at 14731 Franklin Ave., Tustin, CA 92680; 714-669-1138.

Fortel has moved to a new, larger facility at 2985 Gateway Drive, Norcross, GA 30071. The phone number is 404-449-4343. The new facility has more than twice the floor space than the old location.

Digital Entertainment Corporation has announced the opening of its latest sales and service facility located at 2200 Hillsboro Road, Nashville, TN 37212. The phone number is 615-298-6613.

ITFS to see increased activity

Agreements between Microband Corporation of America and a number of educational institutions soon may result in additional TV programming for US viewers. Following regulatory changes in the Instructional Television Fixed Service (ITFS) allowing ITFS licensees to lease their excess channel capabilities to other organizations, Microband already has made arrangements with institutions in at least 24 US cities to transmit the new signals before the end of this year.

The ITFS spectrum, authorized by the FCC in 1963, set 2500-2690MHz aside as a supplemental band for educational TV broadcasting services. License holders have been limited to educational, institutional, governmental and non-profit organizations, and programming has been held to instructional and cultural materials. The new regulations and arrangements will allow Microband's Urbanet, a wireless CATV service, to transmit "the Pay TV programs consumers want, as well as the instructional programming America needs," according to Mark Foster,

Microband board chairman.

The program fare to be provided by Urbanet will be a combination of satellite-relayed premium programming and instructional material produced by the institutions to which the licenses are assigned. Because each licensee holds more than one 6MHz channel, simultaneous multi-channel operation is possible, with as many as 12-18 specialized program services being provided to a community.

Working with Microband in the venture are such educational institutions as the Network of Instructional Television (NITV), Harvard University, the University of California, the Pennsylvania Hospital Television Network, the Hispanic Information and Telecommunications Network, and a number of public schools and community colleges. Some of the cooperating organizations previously have operated limited power ITFS systems during the 20 years of the service's existence.

The 1983 re-regulation of the ITFS concept by the commission may bring to an end a running battle that has waged between Microband and other multipoint distribution service (MDS) operators and ITFS proponents. Not only has MDS been given eight of the originally available 31 channels in the 2GHz band, but now the commercial operation will use from 1-4 additional channels of what was strictly non-commercial spectra.

Waivers also have been given to ITFS operators to use non-standard transmission modes on the channels. These include a SECAM/60 color system in the Anaheim City School District of the Los Angeles area, and non-NTSC-compatible formats for specialized needs in transmission of medical programs. In the commission's re-regulation of ITFS, a relaxation of technical standards allows licensees the choice of standards and corresponding equipment appropriate to individual instructional goals involved.

Because the service operates between 2.5-2.69GHz, special receiving equipment is needed. Subscribers to the service must use a special microwave receiving antenna that generally will be roof-mounted to receive the strictly line-of-sight signals. A downconverter will change the signals to an unused VHF channel and feed a set-top converter. Through a 2-way telephone link, pay-per-view and other transactional programs may be delivered live or to a subscriber's VCR for delayed use.

Downtown teleport to be built

The world's first downtown satellite communications teleport—to be constructed on top of the National Press Building in Washington, DC—was announced recently in a news conference at the National Press Club.

The new satellite communications complex, called The National Teleport, will provide direct access to US and Canadian satellites from the heart of the nation's capital. For the first time, domestic and international broadcasters, news organizations, corporations, associations and government agencies will have a convenient and low cost means to transmit video, voice and data to and from Washington.

The National Teleport will be the first teleport located in a downtown area. Such facilities usually are situated in outlying, suburban locations to escape other telecommunications interference. But, because The National Teleport will use state-of-the-art Ku-Band technology, its satellite earth stations can operate in a congested metropolitan area interference-free.

Initial plans call for installing two 5m Ku-Band transmit/receive earth stations with multiple interconnections via fiber-optics, coaxial cables and microwave to locations throughout the greater Washington area. There will be expansion space for as many as six additional earth stations.

5050 MARK III-2 Two Channel Recorder

IN 1994, YOUR STATION IS SURE TO HAVE ONE FAMILIAR FACE.

The compact console version of the legendary OTARI 5050 "B" is built to be around for many years. It's the 1/4" two-channel professional machine that has been designed with the performance, features and flexibility a broadcaster needs—today and well into tomorrow.

The rugged MARK III-2 has three-speed capability (field-selectable in pairs of 7.5/15 or 3.75/7.5 ips) with $\pm 7\%$ vari-speed, dynamic braking for gentle tape handling, and it's the only machine in its price category that's available with a full-func-

tion autolocator. The MARK III-2 also features an external machine control interface connector for use with SMPTE time code-based synchronizers or the autolocator. Front panel record calibration adjustments, two-frequency oscillator and an extra 1/4-track playback head are just a few of the helpful production features we've built in.

After you compare features, performance and price, you can feel comfortable making an investment in the machine that's built for the real world.

We're confident of our new MARK III-2. And you can be too.

randomly selected radio stations will be contacted.

No previous studies have sought to measure comprehensively the amount and manner of use stations make of technologies that support routine program and signal transmission essential to providing service. The use of spectrum and non-spectrum-based applications will be measured. Spectrum applications refer to telecommunications that occur in an open system and make use of the electromagnetic spectrum, such as the broadcast auxiliary services and satellites. Non-spectrum applications include telephone, fiber-optics and coaxial cable.

Applications relating primarily to broadcast signals to the public, as well as those of secondary uses such as data communication, energy management and other new services, will be measured. In each area, present and planned usage levels, satisfaction with technical quality and cost variables will be considered.

Component analog tests conducted

Tests of a new time division multiplexed component analog video signal were conducted by the Working Group on Component Analog Video Standards of the SMPTE. The tests were held in a studio of the Canadian Broadcasting Corporation in Montreal during the week preceding the 18th SMPTE Television Conference.

The working group is developing a series of interface standards for parallel and serial interconnections at the studio level and for parallel interconnections of cameras and recorders in the field. The tests were designed to validate choices the group has recommended regarding the form of the signal to be used for single-cable, serial interconnections in the studio, and the waveform to be used to carry that signal.

A special, parallel-component system was assembled to support the tests of the serial component analog video (CAV) signal and waveform. Incorporated were several picture sources, including two cameras, a slide scanner, a character generator and two small format videotape machines for playback of pre-recorded tapes with live action. Also available were a number of test signal generators, including zone plate, a component production switcher and a color matting device.

A specially built multiplexer and demultiplexer were used to convert the parallel component signals to a serial Y, C_B, C_R signal having an 11MHz bandwidth. The resulting CAV signal then was passed through an environment that included reduced bandwidths (using filters with various corner frequencies and shapes), severe amplitude and phase non-linearities, and a variety of interferences such as hum, noise, line and field rate tilt.

Regarding the test results, Weiss said, "A majority of observers was startled by the robustness of the signal, even under severe distortions in the CAV environment. Distortions which would have destroyed NTSC signals had very little effect upon the CAV signal, aside from the expected reduction in resolution when the bandwidth was reduced."

The group will next proceed to tests of the stability of

NRBA

National Radio
Broadcasters' Association
2033 M St., NW, Suite 506
Washington, DC 20036
202-466-2030

Inclusion of NAB Programming Conference with NRBA Convention approved

"In recognition of the fact that NRBA has always supported any move that solidifies and unifies the radio industry, the NRBA board of directors invites the NAB's Radio Programming Conference to stage a joint all-radio convention at the NRBA's previously scheduled convention in Los Angeles, with instructions to our Executive Committee to negotiate any agreement which is sensitive to the financial needs of NRBA."

So read the NRBA board of director's resolution unanimously approving the joint effort, at the board's semiannual meeting in February. The board empowered president Bernie Mann and the NRBA staff to work out details with NAB on the matter. The music industry also will be invited to participate in the convention, according to another resolution.

Radio sales university to be created

NRBA will work to establish a radio sales university in a first-ever program of its kind to train those interested in radio sales. "This will be a sales university on a professional level taught by professionals in the industry," according to the NRBA board of directors.

Specific points remain to be developed for the program. It is expected that the university courses will be taught on a regional basis on college and university campuses within each region.

Translator action sought

NRBA has petitioned the FCC to begin a rulemaking proceeding to prohibit the assignment of FM translator facilities to communities that already receive primary service from two or more commercial FM stations and to clarify commission rules on the non-commercial nature of FM translators to make it clear that the use of such facilities for commercial profit is prohibited.

In light of the deluge of FM translator applications—650 in October and November—many for markets well-served by full-service stations, NRBA said it believes that without action by the FCC, a new low power FM broadcast service will develop and that the effects of the service could be harmful to the radio broadcasting industry.

NRBA also has asked the FCC to look at some 400 applications that have been filed by one entity using three applicant names.

people

Chuck Pope has been named product manager, 1/2-inch videotape, by Ampex Corporation. In his new position, Pope will be responsible for the VHS and Beta product lines.

Daniel Antonellis has joined Videotek as national sales manager. He will direct all sales efforts for Videotek's color monitor, test equipment and terminal equipment product lines. Also, Antonellis will work directly with Videotek's dealers in metropolitan New York, New Jersey, Eastern Pennsylvania, Maryland and Washington, DC.

Ronald L. Arendall has been named president of Dynavid Corporation, Indianapolis, IN. Arendall will be responsible for system design, application engineering, marketing and sales for the Broadcast and Industrial Divisions of DVC. Arendall, a registered professional engineer, had been director of engineering at WTHR-TV, Indianapolis, since 1976. He is immediate past president of the Society of Broadcast Engineers.

Joseph C. Volpe has been appointed division vice president and general manager of the RCA Broadcast Systems Division. Volpe succeeds **Joseph B. Howe**, who has been named staff vice president and chief engineer on RCA group vice president John D. Rittenhouse's staff. Volpe had been division vice president, operations, Broadcast Systems Division, since October 1983. Before heading the Broadcast Systems Division, Howe served as division vice president and general manager of the RCA Commercial Communications Systems Division since 1981.

Sony Broadcast Ltd. has announced the appointment of **Jeff Meadows** as managing director designate. Early in 1977, Meadows joined NBC News and, based in London, was in charge of its operations throughout Europe, Africa and the Middle East. Returning to New York in 1979 to manage all ENG operations for NBC News, he was appointed managing director of news operations in 1980, with additional responsibilities for studio operations, graphics and news archives. During 1982, he became vice president of engineering and technical services, responsible for development, design and installation of technical facilities for the NBC network generally and the electronic maintenance of its New York facilities. He vacated this post to join Sony Broadcast.

ADM Technology has promoted **Murray Shields** to the new position of vice president of corporate sales. Shields has been with ADM for 11 years and most recently was vice president of sales. **Larry Mandziuk**, who has been with ADM eight years, has been promoted to the new position of staff vice president of advanced programs. Mandziuk was formerly manager of systems engineering. **William Keely** has joined ADM in the new position of vice president of engineering. Most recently, he held several engineering management positions in the electronics group of the Advanced Development Center of National Water Lift in Kalamazoo, MI.

New Media Graphics Corporation has announced the appointment of **James A. Frantzreb** as Northeast sales manager. Before joining the company, Frantzreb held senior sales management positions with Pioneer Video, Unicom, MP Video and Crimson.

The appointment of **Stuart Rauch** as national sales

One **SPIKE** Can Cost **DOWNTIME!**

Overvoltage transients can bring the biggest installation down in a microsecond; or damage it cumulatively.

Surge-Master Heavy Duty Power Line Protectors give complete protection against all transients.

All audio and video transmission equipment is vulnerable to transients on AC power lines caused by heavy motors starting up (even elevators or testing your auxiliary power system), power company load adjustments—and of course, lightning. Even if your equipment operates from batteries charged by a UPS, you're not safe. If lightning knocked out your UPS, how long could you keep going?

The MCG Surge-Master offers two stage protection. The first reacts in nanoseconds to absorb lesser transients and the leading edges of major ones. The second stage absorbs the big ones, and has three modules on each line. So, in the unlikely event that one module should be knocked out, there are still two protecting you. And a system of indicator lights tells you not only when a fault has occurred, but exactly where it is. Modular construction (and the fact that Surge-Master is connected in parallel) makes replacement of damaged modules quick and easy. Initial installation requires minimal power interruption.

Available with capabilities from 100 to 3000 amps; for 120, 240 and 480 VAC; and for single, 3-phase, wye and delta power systems. MCG also manufactures smaller units for protecting individual pieces of equipment. To learn more, contact Department 31020 at 516/586-5133 or at the address below.

manager for broadcast and color CCTV dealers for Ikegami Electronics (USA) has been announced.

Beverly McGill and **Stephen Dunwoody** have joined Mycro-Tek as representatives for the company's Mycro-Vision video display information system. McGill will be based in Dallas. Her sales territory includes Texas, Arkansas, Oklahoma and New Mexico. Dunwoody will be based in Indianapolis and will cover Indiana, Michigan, Ohio, Kentucky, Tennessee and the metropolitan Chicago area.

Jon Bart, national marketing manager of Listec TV Equipment Corporation, Plainview, NY, will join the broadcast equipment staff at Listec (West) Corporation, Glendale, CA. Bart will be responsible for consulting and sales for Vinten camera mounting equipment and Listec visual prompting systems.

EECO has announced the appointment of **Eloy Chairez** to product specialist, video products marketing, Video Products Division. Chairez's primary responsibilities involve new product planning, market research/analysis, and sales and technical support. Before joining EECO, Chairez was associated with Fernseh.

Joseph M. Bradley has been appointed vice president of marketing for Varian Associates' Electron Device Group (EDG). Bradley will manage the EDG central marketing organization, which includes a network of field marketing and sales offices in the United States and Europe. He also will be responsible for coordinating divisional marketing activities among the nine operating divisions of the group.

Acrodyne Industries has appointed **Stephen Wozniak** as electrical design supervisor. Wozniak will be responsible for the design of Acrodyne's low power and medium power TV broadcast equipment.

Harris Corporation, Broadcast Group, has announced the appointment of **John F. Delissio** as vice president of systems and service operation. In his new position, Delissio will have general management responsibilities for the operation. Delissio comes to Harris after serving 18 months as vice president/general manager of the Broadcast Division of M/A-COM Video Systems.

Attila C. Bitto has been appointed editing products manager for Sony Broadcast Products Company. Bitto's responsibilities will include management of Sony's broadcast editing system, time code products and broadcast audio products. **Jerry Cohen** has been named product manager for cameras by the company. Cohen will be responsible for all marketing aspects of cameras, from interfacing with development and design engineers to supporting the activities of Sony sales engineers.

Ampex Corporation has announced the appointment of **Morgan Rees** as product manager of 3/4-inch videotape. His promotion follows three years of service with Ampex as sales representative for magnetic tape in Florida.

Leitch Video of America has announced the appointment of **Gary Becknell** to the position of marketing manager for the United States. Becknell brings with him 10 years of experience in all phases of TV broadcast engineering.

Glenn P. Wolk has been named national sales manager of the Visual Products Division, Hitachi Denshi America Ltd. Wolk joined the company more than a year ago as Eastern regional sales manager for the Visual Products Division.

IN OUR CONTINUING EFFORTS TO SERVE YOU...

From time to time, Intertec Publishing Corp. makes its subscriber lists available to carefully screened companies or organizations whose products, services, or information may be of interest to you. In every case, list users must submit their promotional material for approval. They may use the list only once.

No information other than name and address is ever divulged, although names may be selected by segments to which the particular offer might appeal.

We are confident that the majority of our readers appreciate this controlled use of our mailing lists. A few people may prefer their names not be used.

If you wish to have your name removed from any lists that we make available to others, please send your request, together with your mailing address.

classified

Advertising rates in Classified Section are \$1.00 per word, each insertion, and must be accompanied by cash to insure publication.

Each initial or abbreviation counts a full word. Minimum classified charge, \$25.00.

For ads on which replies are sent to us for forwarding (blind ads), there is an additional charge of \$25.00 per insertion, to cover department number, processing of replies, and mailing costs.

Classified columns are not open to advertising of any products regularly produced by manufacturers unless used and no longer owned by the manufacturer or distributor.

TRAINING

ELECTRONICS DEGREE by correspondence. Earn A.S.E.T., then B.S.E.T. Free catalog. Grantham College of Engineering, 2500 La Cienega, Los Angeles, California 90034. 7-82-tfn

FCC GENERAL RADIOTELEPHONE operators license through cassette recorded lessons at home plus one week seminar in Boston, Washington, Detroit or Philadelphia. Our twentieth year teaching FCC license courses. Bob Johnson Radio License Preparation, 1201 Ninth, Manhattan Beach, Calif. 90266, Telephone (213) 379-4461. 8-81-tfn

GET YOUR DEGREE IN VIDEO TECHNOLOGY after only 14 months of "hands-on" training. VTI, 1806 Royal Lane, Dallas, Texas 75229. Call Bill 214/263-1613. 2-84-3t

ASPEN AUDIO RECORDING INSTITUTE accepting applicants for summer 1984. Three 3-week sessions June-August. Intensive hand-on experience in live recording techniques. Noted faculty. There's more than one reason why top engineers want to work with us.

Let's meet at NAB.

Stop by our booth and introduce yourself to a world leader in television switching, signal processing and distribution systems. Broadcasters and production houses repeatedly sing our praises. Our systems enhance their programming capabilities and keep them competitive. Not to mention make their jobs a lot easier.

At Grass Valley Group, state-of-the-art is our starting point for the next generation of broadcast electronics including fiber optics, advanced special effects, and other systems. We're involved in an exciting technological challenge that will have a visible impact on the future of broadcasting.

Look at a career with us.

We offer security and growth, plus room for personal achievement — features that are actually built into our management policy. That says a lot about

how we care for our employees, and the following available positions are no exception.

Immediate opportunities are now open for digital hardware design engineers, analog design engineers, project managers for video and switching groups, and Division Engineering Manager.

Leave the city behind.

And take the technology with you. GVG is a high-tech company located in the beauty of the Sierra foothills, about 60 miles northeast of Sacramento. Clean air, affordable housing and the charm of the Gold Country create an ideal lifestyle for your family.

Imagine driving to work each day without the usual traffic jams. And, when the week is over, you can take advantage of varied recreational activities — skiing at Lake Tahoe, gambling in Reno, even opera in San Francisco!

GVG offers outstanding benefits, in addition to challenging career opportunities, growth, security and a scenic, rural setting. We are celebrating our 25th anniversary at NAB. Come see our booth and meet our people. We'll be at NAB in a big way. Interested and qualified applicants may ask for Sylvia Shelton who will take time to explore career opportunities with them. Or send your resume to her at The Grass Valley Group, Inc., P.O. Box 1114, Dept. AA56, Grass Valley, CA 95945. An equal opportunity employer M/F/H/V.

Grass Valley Group

A TEKTRONIX COMPANY

CHINA

An Exclusive Invitation

Broadcast Engineering invites you to join this high level delegation.

You and a limited number of other select international broadcast executives and equipment manufacturers will have a rare opportunity to meet with China's top broadcast station and equipment manufacturing officials and specialists. You will participate in one of the most complete technical tours of the Chinese broadcast industry ever organized. And the first such tour ever offered to the entire broadcast industry.

Sponsored by BROADCAST ENGINEERING in cooperation with The Ministry of Broadcasting and Television, this exclusive technical tour delegation is open to international broadcast station executives, consultants, equipment manufacturers and prominent educators.

Itinerary:

Organized with your needs and interests in mind, the itinerary includes visits to key technical facilities in each Chinese city visited. Delegates will have the opportunity to talk frankly with Chinese broadcast facility and plant operators at the plant and facility sites.

China Broadcast Tour Cities:

- Beijing
- Shanghai
- Guangzhou
- Hong Kong

Some China Broadcast Tour Highlights:

- Radio Peking
- Broadcast Technical Institute
- Central Broadcasting Station
- R&D Foreign Language Dept.
- Shanghai Radio and Television
- Guangzhou Radio and Television
- Broadcast equipment factories
- And more

NEW Date:

14 day tour departs
May 28, 1984

Tour Leader:

Cameron Bishop, Publisher, Broadcast Engineering, Intertec Publishing Corp.

Contact:

George H. Roman, Roman Specialty Tours, P.O. Box 1607, Lafayette, CA, 94549 USA (415) 284-9180

Special Note:

The number of tour delegates will be strictly limited. Persons interested in participating should inquire early.

Mail to:

THE 6139

VIDEO PRODUCTION SWITCHER
ELEGANCE AND DEPENDABILITY

8, 16 OR 24 INPUTS
LED OR INCANDESCENT LAMP BUTTONS
OPTION FOR FULL MICROPROCESSOR CONTROL IN ANY VERSION

ALL VERSIONS HAVE
3 MIX-EFFECTS SYSTEMS
FIVE KEYS
EDGE OR INSERT KEY ON DSK
QUAD SPLIT
TEST MODE FOR SYSTEM TIMING
MIX PATTERN MODE FOR ME3
FULL PREVIEW

The microprocessor versions of the 6139 operate with the 7203 and the 7239 AUTO DRIVE™, which enable the 6139 to be controlled serially by external computers and editors. Crosspoint Latch has the simplest and most effective switcher protocols in the industry, with the fastest access time. All Crosspoint Latch controllers operate in any of the three standard protocols which provide the user with an excellent compromise between high speed communication and massive data transfer.

THE 6139 IS AN EXCELLENT PRODUCTION SWITCHER

Each of its three mix-effects systems has the ability to dissolve in wipes and keys. The Program bus can be keyed over or dissolved to, from any of the ME systems or from Quad Split. The downstream key has an insert mode allowing externally generated multicolored graphics to be transmitted through the switcher. The Effects generator has soft edges and soft borders.

THE 6139 CAN BE CONTROLLED BY MOST EDITORS serially with the inexpensive 7203, or with the extremely powerful 7239 AUTO DRIVE™ stores and then reproduces fader arm and positioner movements, allows easy editing of stored events, provides bi-directional serial communication with external devices. AUTO DRIVE™ with its display monitor, is a very flexible and simple means of storing switcher data, allowing the user a full over-view of the stored data, and the ability to modify and edit stored events with precision and ease.

CROSSPOINT LATCH CORP.

8 INPUT LED \$14,500.
24 INPUT ALL OPTIONS \$70,000.

WE LISTEN

The first step in communicating is listening. We communicate sound. We do it well—we've been listening since 1948 and continue to supply state-of-the-art consoles, intercoms, switchers and systems to the broadcasting media world wide.

We listen not only to sound, but to the people who produce it. People like you. We provide unrivalled

performance, quality control, design, delivery and after sales service. Complete service. From an organization with everything at its fingertips.

Talk to us about your audio needs. Watch us listen . . . and listen to us perform. We deserve to be heard.

Witness Ward-Beck Wizardry!

Visitors to NAB '84 can witness a great leap forward in audio technology. It's the most significant advance since MicroCOM was introduced two years ago. Witness Ward-Beck wizardry as this totally new microprocessor controlled console system is unveiled. New modules. New circuitry. New flexibility. It leads broadcasters into the next generation of standards . . . Now!

First by Design.
