Make sure the video deck you buy for business is designed for business.

Presenting the
Panasonic® AG-2200 VHS™ deck.

Whether you're selling, demonstrating, or training, it pays to come to Panasonic for industrial video communications.

For a great-looking picture, the AG-2200 incorporates an advanced 4-head design. Its quartz-locked direct-drive video heads are wider than heads in conventional home decks, so they provide the kind of picture quality you'd expect from Panasonic: ultracrisp and vividly colorful. This 4-head design also makes special effects like fast search, slow and still frame extra special. Because what you see will remain virtually free from video

noise in the 2-, 4-, or even the economical 6-hour mode.

And to make life even easier, the AG-2200 comes with one-touch recording, a 9-function remote control, and a full-function display to show the operational mode. You can also use the AG-2200's display in conjunction with its 107-channel cable-ready VHF/UHF tuner for unattended automatic recording.

Of course, the AG-2200 has all the inputs and outputs you'd expect from an industrial VCR. Like an 8-pin video connector for direct single connection to a monitor. What's more, the 8-pin connector makes tape duplication easy because you can connect the standard video and audio outputs

to another VCR. And for easy interface with other industrial video components, the AG-2200 also includes BNC connectors.

So before you buy a VCR for your business, make sure you buy a VCR designed for business. The Panasonic AG-2200.

Stand-alone Downstream Keyers To Upgrade Your Total System

DSK-6-DL
&
DSK-4-DLB

Especially
Designed
for
Character
Generators

Various Other
Models
Offered

- Video/key selector permits individual or simultaneous multiple keys
- Keys may be "cut" or automatically faded in or out
- Provides for edge border, outline & drop shadow
- Internal Matte generator
- DSK-4-DLB provides for automatic fade to/from color black

For Remote, ENG, and Small Production Facilities Model 712

12-input, 4-output mix-effects amp with downstream mixer, includes downstream preset and program busses with cut bar, RGB chroma key

OPTION

Downstream Keyer

CHECK BEAVERONICS FOR: • Specialized custom switchers
• Selected terminal equipment

For Moderate Size Facilities Model B1-154

15-input, 4-bus mix/eff/key amp with downstream mix/key amp. Many optional features including DSK and quad-split, etc.

(Also Available in PAL and PAL-M Versions)

For Sophisticated Facilities Model B1-156

15-input, 6-bus with two full mix/eff/key systems and dir. pgm and pre busses: many options available, DSK, quad, etc.

ALL BEAVERONICS SWITCHING EQUIPMENT CARRIES A TWO YEAR WARRANTY

320.

The ProCam™ Video Camera
with Plumbicon* tubes at Saticon** price.

JVC's experience — and success — in designing the highest quality and reliability into compact video production cameras is unmatched. Now, continuing this tradition of high performance at an affordable price, JVC has brought a "high-end" teleproduction camera within the financial reach of production people often victimized by modest budgets. This time, it's ProCam 320.

What a package!

SENSITIVITY. ProCam 320 features three, 2 3" Plumbicon pick-up tubes for incomparable picture quality. A refined f/1.4 prism optics system provides horizontal resolution of better than 600 lines at center. A 2H vertical contour correction circuit further assures image clarity. And minimum illumination measures only 38 lux (3.6 fc) at f/1.7, permitting shooting even in limited or artificial light.

A video S/N ratio of 57 dB. Color framing output signal (RS-170A). A split field color bar generator for consistent color reference. A genlock circuit for maintaining a stable picture while switching or mixing with other signals locked on the same source.

EASY OPERATION.

Several 8-bit data memory chips offer operator conveniences for quick set-up and consistent performance. These include: Auto centering, auto-black balance and auto-white balance, auto black level stabilization and auto beam control circuits. Matrix masking for true color reproduction and automatic protection for the pick-up tubes are a few of the many features standard on this new camera.

VERSATILITY. Easy portability. Outstanding performance in low-level

lighting. High degree of automation. An extensive selection of options and accessories combine to make the ProCam 320 suitable for both studio production, EFP, or ENG; or, indeed, to any application, anywhere, that calls for top quality video production while staying within a tight budget.

PROCAM TECHNICAL SUPPORT. Your ProCam sales representative will be happy to explain the availability and calibre of the ProCam technical support program.

For a demonstration of the ProCam 320 Video Camera, a 320 Spec Sheet, or JVC's complete catalog, call, toll-free:

VIDEO SLIDE PROJECTOR

A42 VIDEO SLIDE PROJECTOR

Dedicated to optimum picture quality and ease of operation, the A42 is the most compact and reliable digital still store system. Advanced digital video processing yields high quality images, and a micro-processor-based control system ensures powerful and easy-to-use features. A built-in 5-1/4" Winchester disk drive provides the safest on-line picture storage available.

FEATURES

Virtual Picture Numbering

The picture numbering scheme employed in the A42 is completely independent of disk storage locations. Pictures are identified by serial numbers ranging from 0 to 9999 regardless of the on-line storage capacity. The user is no longer unnecessarily burdened with keeping track of the actual picture location on disk.

Backup and Off-Line Storage

The A42 offers the most up-to-date, reliable and cost effective means of off-line storage. Utilizing a high speed digital streaming tape drive, it stores pictures on a compact quarter-inch tape cartridge. For the first time, unlimited off-line picture storage is practical due to low media cost and compact size. This facilitates easy transport of pictures from one system to another, or from the studio to the mobile truck. With selective backup, any number of pictures up to 50 frames/100 fields can be transferred to the tape cartridge. In a similar manner, selective restore allows either the entire contents or only selected pictures to be transferred from the cartridge to the disk.

Sequence

Three sequences of 100 pictures each can be created using any of the recorded pictures. A sequence can be edited at any time by inserting, deleting or substituting pictures. The forward and back arrows on the control panel allow a sequence to be played in either direction, and any item in a sequence to be played at random. A sequence can be temporarily exited to perform other functions.

Simple Basic Operation

Regardless of the function selected, operation is always easy. A complete status display is superimposed on the preview video output to provide information to the operator. When a picture is grabbed, it can be recorded as a field or frame, as determined by the field/frame button. When the picture is played back, the system automatically selects field or frame depending on how the picture was recorded.

Independent Output Channels

In the dual channel system, pictures can be recalled to both channels independently. While one channel is displaying a picture, the other channel can be fully used to record, playback or create sequences. Dissolves or vertical interval cuts can be programmed for on-air transitions between the channels. The dissolve rate can be varied from the control panel.

Graphics Compose

The A42 provides excellent multi-generation capability which is essential in the composition of multi-layer graphics. The special graphics compose mode optimizes the use of the two channels for easy graphics creation. Each layer, or the entire graphic, can be

THE A42 LIBRARY TERMINAL

stored on the disk. Unlike most other systems, the A42 makes it possible to recover from mistakes when composing multi-layer graphics, because it automatically saves the previous layer in the other frame buffer.

Built-In Test Signals

The A42 has the ability to generate digitally multiburst, color bars and other useful test signals to aid in the maintenance and troubleshooting of the system.

Digital Interface

An optional digital interface provides composite digital input and output ports. These ports make it possible to interface the A42 to the A52 Digital Special Effects system.

Library System (optional)

The A42 offers the most advanced, yet easy-to-use library system available. Each still on the A42 can be labeled with a title of more than 60 alpha-numeric characters, including an automatic time and date stamp. Flexibility in searching for a picture eliminates the need to set up categories that other systems require. To group certain pictures together, all that is necessary is to include a common word anywhere in their titles. For example, if searching with the word '49ers', any picture that includes '49ers' anywhere in its title would be listed on the screen.

The A42 library system employs an extremely sophisticated searching algorithm to perform complex searches with unequalled speed. When all or part of a title is typed for a search, the system initiates a word-by-word comparison to find the right picture. Even if the operator misspells or changes the order of the words in the title, the system will find the picture that most closely matches what was typed.

Compatibility

The library system is compatible with all A42 systems. Pictures already on the A42 instantly become a part of the library system. Although pictures without titles are recognized by serial number, a title can easily be added.

HOLLYWOOD TRIPODS

What a Fluid Torq Tripod Head Will Do for You:

Most tripod heads have no control in the panning or tilting action. Their movement is rough and when unlocked the head will just flop loosely. A spring head adds the advantage of spring tension preventing the camera flopping too far. But the new series of Fluid-Torq Heads provide all these added advantages: (1) camera will remain in fixed position even when unlocked; (2) a smoother, controlled movement of the head; (3) brakes the fall of the camera without springy bounce; and (4) tension controlling the head can be adjusted to the weight and size of the camera.

TWO ECONOMY TRIPODS WITH FLUIDTORQ ACTION

It's not necessary to pay high prices to obtain the advantages of FluidTorq action described above. Two models, one tubular leg and one channel both feature the FluidTorq head described at right at virtually the same prices as tripods with ordinary spring heads.

CADET FT: A strong 25mm tubular leg tripod, 3 sections with positive collet locks, leg braces to rigidize legs, and crank and gear elevator column. Also features adjustable tension on elevator column to prevent camera from descending too rapidly. Fluid-Torq head has smoother action and adjustable tension for both panning and tilting.

MASTER FT: A handsome 25mm channel leg tripod, 3 section with fast lever locks, leg braces to rigidize legs, and crank and gear elevator column. Also features adjustable tension on elevator column to prevent camera from descending too rapidly. Fluid-Torq head has smoother action and adjustable tension for both panning and tilting.

THREE DIFFERENT STYLE HEADS PROVIDING FLUIDTORQ FEATURES

FLUIDTORQ: Handsomely styled head with adjusting knob for changing head tension from loose for small cameras to tight for heavier cameras. Adjusts both panning and tilting simultaneously. Extra long handle locks pan and tilt. Balances different size cameras to prevent falling or slipping. Smooth fluid movement. Featured on Vidipod CF and TF models.

Separate locking controls for panning and tilting. Smooth fluid movement. Featured on Vidipod CF and TF models.

FLUIDTORQ SR: Massive, more deluxe head for larger cameras. Adjusting knob changes head tension to balance camera with spring assist to brake camera under loose tension. Telescoping panhandle to adjust to different lengths with adjustable angle and ratchet lock. Quick Disconnect to mount camera quickly. Separate locking controls. Smooth fluid movement. Featured on Vidipod CS and TS and Dollypod III models.

FLUIDTORQ II: Large, heavier duty head with added features. Adjusting knob changes head tension to balance camera weight and size. Long handle can be adjusted to different angles. Quick Disconnect facilitates mounting camera quickly and easily.

VIDIPOD TRIPODS

- Tubular or Channel Legs
- 3 Different Head Styles

VIDIPOD C: Heavy-duty 28mm Channel leg tripod with large 2-way spring head. Includes leg braces, crank and gear elevator, lever locks, retractable leg spikes **\$119.95**

VIDIPOD CP: Same, with 3-way head without spring **\$119.95**

VIDIPOD T: Heavy-duty 30mm Tubular leg tripod with large 2-way spring head. Includes leg braces, crank and gear elevator, collet locks, swivel feet. **\$139.95**

VIDIPOD TP: Same, with 3-way head without spring **\$139.95**

Select from the Vidipod series either channel or tubular leg and which of the two FluidTorq heads to provide the perfect combination for your camera. Then add the optional wheels available on any Vidipod tripod as described lower right.

C-SERIES FLUIDTORQ MODELS

VIDIPOD CF: Same as Vidipod C described above but mounted with FluidTorq II Head **\$159.95**

VIDIPOD CS: Same as Vidipod C described above but mounted with FluidTorq Sr. deluxe fluid head. **\$174.95**

With Wheels: Equipped with heavier race and lock; bubble level.
VIDIPOD CF/R **\$209.95**
VIDIPOD CS/R **\$224.95**

ALL VIDIPOD TRIPOD MODELS AVAILABLE WITH WHEELS

All of the Vidipod models shown on this page can be provided with 3" wheels with individual toe locks, double acting locks, and leg angle adjustment for smoother rolling. Models equipped with wheels have heavier braces with lock, bubble level, and tubular models have grooved leg sections to prevent twist. See left for fluid head models and prices.

C/R: Vidipod C with wheels **\$169.95**

T/R: Vidipod T with wheels **\$189.95**

T-SERIES FLUIDTORQ MODELS

VIDIPOD TF: Same as Vidipod T described above but mounted with FluidTorq II head **\$179.95**

VIDIPOD TS: Same as Vidipod T described above but mounted with FluidTorq Sr. deluxe fluid head. **\$194.95**

With Wheels: Including grooved legs, wider braces with lock, bubble level.
VIDIPOD TF/R **\$229.95**
VIDIPOD TS/R **\$244.95**

TRIPODS/ACCESSORIES

HOLLYWOOD TRIPODS

VIDEO ENSIGN TRIPOD

A most unusual tripod and outstanding value. Same construction as all Ensign models but features square channel legs for extra rigidity to hold most video cameras plus a built-in 3-sec. Unipod. Elevator disassembles from tripod to become independent Unipod for using outdoors when you don't want to carry tripod. Use tripod indoors; use Unipod outdoors. Includes spring head which counterbalances camera weight forward and backwards making an ideal tripod for video cameras. **\$99.95**

Square Channel Legs on Video Ensign and TSB are closed in back for extra strength compared to standard channel legs which are open in back making them ideal for heavier cameras.

VIDEO CADET

23mm Tubular leg, 3-sec., 3-way head, crank and gear elevator, positive collet locks. Features spring head to counterbalance camera weight plus leg braces for stability. Can be used for small to medium video cameras **\$69.95**

JET CADET

Same tripod but without spring head **\$49.95**

ENSIGNS: A duo of popular tripods featuring heavy 25mm open channel legs, 3-sec. with lever locks, leg braces, crank and gear elevator column with friction control, leg spikes.

VIDEO MASTER: As above with double action spring head. **\$74.95**

ENSIGN MASTER: As above with standard head without spring. **\$69.95**

TVB: 3-sec., 23mm Square Channel legs, leg braces, crank and gear elevator with friction control, leg spikes and with double action spring head. **\$69.95**

TSB: Same as above with standard head without spring. **\$59.95**

TGB: Same as TVB but open channel legs with standard head without spring. **\$54.95**

DOLLYPOD LINE

DOLLYPOD: Heavy duty tripod with its own built-in dolly. Uniquely designed with low center of gravity with legfulcrum closer to floor to balance weight and facilitate rolling on 3" wheels with locks. Clutch Elevator adjusts height by squeezing grip and locks automatically when released. Head same as Video King with quick-disconnect, leaf spring fluid effect panning, heavy spring tilting tension, long adjustable handle. **\$189.95**

DOLLYPOD II

Same as above but with simpler spring head without precision movement and no disconnect. **\$149.95**

DOLLYPOD III

Same as above but with large FluidTorq Sr. head (described above) for adjustable pan and tilt tension and smoother movement **\$189.95**

TRIPOD ACCESSORIES

VIDEO KADDYKART

Convenient, low priced way to support video camera and VCR. Camera mounts to 3-way panhead on telescoping tubing for adjustable height. VCR mounts on strong base with 3" wheels secured by adjustable strap. Now you can roll your equipment and follow action. Upright tubing disassembles for use as Unipod. **\$69.95**

L. O. DOLLY

Heavy duty dolly with 3" wheels will hold any type or size tripod and provide easy movement of camera and accessories. Adjustable clamps to hold tripod legs; carry handle for portability; each leg spring locks automatically. **\$109.95**

ACCESSORY SHELF: Strong wire shelf mounts to dolly for carrying VTR, accessories. **\$29.95**

SHELVA-DOLLY

Unique medium weight dolly with its own built-in shelf to hold VTR and accessories. Three 3" wheels each has plunger lock with toe release. Fits any tripod with adjustable clamps. Canvas shelf folds up when dolly collapsed for easy portability. **\$84.95**

PODRACK

Wire basket which hooks onto legs of any tripod to hold VTR conveniently. Measures 13" wide and 4.5" deep expandable to 8". **\$39.95**

KWIKSTIK

Heavy duty telescoping Monopod with camera platform to hold still or video camera. Provides steady support with lightweight mobility which can be carried easily and change camera position quickly. 3-sec with fast lever lock; complete with wrist strap and rubber tip. **\$29.95**

ACME-LITE MFG. CO.

Skokie, IL 60076
(312) 588-2776

BATTERY BELTS/LIGHTS

SELECT FROM 3 BATTERY BELT MODELS

Individual battery belts for strapping around the body to connect to and power VCR, cameras, lights, etc. Each cell in separate pockets to distribute weight evenly. All batteries rechargeable sealed lead acid to provide maximum energy for low cost. Cells are sealed to prevent leakage and can be used in any position; can be recharged in 16 hours up to 200 times from zero. Ideally suited for lighting applications because low impedance insures longest effective illumination output as well as extended discharge time for other applications. All belts include shoulder suspenders to lighten battery weight.

MODEL 12BB

Basic Battery belt 12V, 5 amp hour. Will power 100 watt light 20 minutes effectively; VCR or camera 4-5 hours. Has standard receptacle for cigarette lighter plug. Battery circuit fused. Includes 500MA charger and belt suspenders. Weight 5.5 lbs. \$149.95

MODEL 12BL

Long life Battery belt 12V, 10 amp hour. Same as above but powers light 45 minutes; VCR or camera 9-10 hours. Weight 11 lbs. With 1.0 amp charger, suspenders. \$290.00

MODEL 24BB

Heavy duty Battery belt 24V, 5 amp hour. Same construction as above. Includes 500MA charger and suspenders. Weight 11 lbs. \$345.00

BATTERY BELT WITH CHARGER

LOW VOLTAGE VIDEOLITES FOR BATTERY OPERATION

MODEL 7PB

12V 100W Light including quartz lamp for plugging into 12BB or 12BL Battery belt or any 12V battery system with 6 ft. coil cord with cigarette lighter plug. Fitted with 3/8 stand adaptor (see shoe fitting below) \$69.95

MODEL 7DL

24V 250W Light including quartz lamp for plugging into 24BB Battery belt or any 24V battery system with 6 ft. coil cord with cigarette lighter plug. Swivel yoke with 3/8 stand adaptor (see shoe fitting below). Lamp 75 hours, 3200K \$99.95

COMBINATION LIGHT AND BATTERY BELT KITS

PBB KIT

12V 5AH 100W. Includes 12BB Battery belt and 7PB low-voltage light plus 100 watt lamp, 500MA charger, shoe adaptor to mount light to camera, pouch to hold light, charger, suspenders. \$225.00

PLL KIT

12V 10AH 100W. Intended for longer running time. Includes No. 12BL Battery belt and 7PB low-voltage light plus 100 watt lamp, 1.0 amp charger, shoe adaptor, accessory pouch, suspenders. \$360.00

PHD KIT

24V 5AH 250W. Heavy duty kit for greater light output. Includes No. 24BB Battery belt and 7DL low-voltage light plus 250 watt lamp, 500MA charger, shoe adaptor, suspenders. Barndoors and diffusing scrim available for light. \$440.00

MODEL 7PB

MODEL 7DL

HOLSTER STYLE BATTERY KIT

MODEL PML

Combination 7PB light and lamp with holster-style battery for carrying over shoulder. 12V 5AH Battery in leatherette case and shoulder strap includes lamp, 500MA charger, shoe adapter, accessory pouch. Same specs as 12BB Battery belt. \$225.00

MODEL PBL BOOSTER

Separate holster-style battery and case for plugging into PML to double running time. Includes 500MA charger and battery connector. \$160.00

HOLSTER STYLE BATTERY KIT

VIDEOLITE ACCESSORIES

NO. 4VS

Barndoors, 4-leaf Rotating for Model 7DL light \$29.95

NO. VSS

Diffusing Scrim for Model 7DL light \$10.95

NO. 25

Shoe Adapter for 7PB or 7DL to mount light to video camera \$7.95

ALEXANDER BATTERY CO.

4410 W. Elm St.
P.O. Box 365
McHenry, IL 60050
(800) 323-3813 (800) 892-2265

If you've ever been on location with portable cameras or VTRs, you probably know the frustration of a dead or defective battery pack. You know what it can cost in wasted dollars and man hours and missed stories and deadlines. Now Alexander Manufacturing can end all that with this line of quality nickel-cadmium rechargeable battery packs.

Alexander BP20A-11. (Top photo) 13.25 volt, 2.3 AH. Improved, with a 5-amp internal fuse and heavy-duty molded plug.

Replaces these packs: Sony BP20A, Christie 10B25A3, Cine BP512FC, Pep V20, Frezzolini FNC-12-2.

Alexander BP60A. (Right photo) 13.75 volt, 2.2 AH.

Replaces these packs: Sony BP60, Cine BP612FC, Pep V60, Paggpac PP-60.

Alexander JVC-1. (Above) 12 volt, 2.3 AH.
Alexander JVC-11 13.25 volt, 2.3 AH. Must be charged by Alexander 20-11 Charger.

Replaces these packs: JVC PBP-1, Panasonic LCR-3012, Christie 10B25C3, ER5, Cine CBP2J5FC, Pep V44, Frezzolini FBP 12-25, Paggpac PP-1.

Alexander BP90. (Right) 12 volt, 4 AH. Newly redesigned, including improved molded plug.

Replaces these packs: Sony BP90, Christie ER6, Cine BP912FC, Pep V90, V90N, Frezzolini FBP-90, FBP-90FC, Penolt PE90.

Alexander 7700. Like 7600, except is equipped to mount on QR5V-type bracket.

Replaces: Anton Bauer Pro Pack 14.

Alexander 7700-11. Like 7600-11, except is equipped to mount on QR5V-type bracket.

Replaces: Anton Bauer Pro Pac 13.

Alexander B77 Mounting Bracket. Accommodates 7600 type batteries.

Fits these cameras: RCA TK-76, TK-76B, TK-

CHARGERS FOR EACH BATTERY PACK

ON-BOARD UNITS

Alexander 7600 Ride Behind is a fully rechargeable nickel-cadmium 14.4 volt, 4 AH unit. Equipped with studs for snap-on mounting on any camera equipped with a standard or short power cable to camera.

Replaces these packs: Christie KR2, Cine OB4-14, OB5-14, OB5-145, Frezzolini BP14, PEP H14.

Alexander 7600-11 Ride Behind. Like TR7600, 13.2 volt, 4 AH unit.

Replaces these packs: Christie KR1.

Alexander 7600-10 Ride Behind. Like TR7600, 12 volt, 4 AH unit.

Replaces these packs: Cine OB5-12, Frezzolini BP12, PEP H12.

Alexander CR90-1 Smart Charger. We call it "smart" because it detects when the battery is fully charged and automatically drops to trickle charge. Will charge any 12-15 volt battery with a capacity of at least 4 AH.

Alexander 20-11. Completely recharges three BP20A-11, JVC-1 or JVC-11 packs in ten hours or less. Cannot harm battery by overcharging.

Alexander 20-40. Completely recharges two BP90 packs in ten hours or less.

Alexander CR76-2. Completely recharges two 7600 "Ride Behind" packs in ten hours or less. Cannot harm battery by overcharging.

TRIPODS/HEADS/DOLLIES

VIDEO TRIPODS

V-0523

V-0522

Model V-0522 Fluid Head Video Tripod

Internationally recognized by video professionals as the best type of head for steady, jitter-free videocamera movement, the specially-designed head housing encases fluid and uses its viscosity to provide the smoothest possible movement throughout a 360° pan or a 180° tilt. Tripod has three-section, channeled tubular legs for maximum stability and portability. Folds to a compact 29 1/2 inches; extends to a full 72 inches.

\$219.95

Model V-0523 Wheeled Fluid Head Video Tripod

All the features of the remarkable Model V-0522 above, including fluid motion control and fluid head. In addition, has large, smooth rolling wheels for following the action virtually anywhere. Includes Sure-Stop brakes on each wheel for steady still shots.

\$259.95

Model V-0599 Video Dolly

For tracking shots and easy movement of the video tripod. Screw adjustable clamps securely hold each tripod leg on dolly. Large size wheels roll smoothly, even on carpeting or tile floor. Built-in, Sure-Stop brakes on each wheel hold steady for still shots. Fits most tripods. Folds compactly for easy carrying. Carrying handle makes transporting easy.

\$69.95

Model V-0502 Video Tripod

Our most economical tripod, yet specifically designed for the video-camera. Continuously adjustable tilt control helps keep camera steady for smooth pans and tilts. Like our more expensive models, includes center leg braces for added stability. Tubular, three-

V-0514

V-0512

V-0502

V-0511

section legs with channels for extra steadiness. Trigger-release, lever-style leg locks are designed to open with one hand, for quick extension of legs with no pinched fingers. No-mar rubber feet will not slide, even on smooth surfaces. Panhead handle also becomes carrying handle. **\$89.95**

Model V-0511 TLC Square-Leg Video Tripod

TLC (Tilt Level Control) means the video-camera cannot tilt forward suddenly. Simple screw adjustment sets large panhead to weight and balance of individual video-camera for steady, smooth shooting. Square leg construction is closed cross-section (not open "U") for strength combined with light weight. **\$129.95**

Model V-0514 Professional Video Tripod w/Wheels

Heavy-duty, tubular legs are channeled for maximum stability. Channels along side of each three-section leg keep each section aligned with next. Large-size wheels for following action. Rolls smoothly, even over shag rugs. Built-in Sure-Stop brakes for still shots. TLC (Tilt Level Control), and extra large panhead for videocameras. **\$189.95**

Model V-0512 (without wheels)

All features are exactly the same as Model V-0514. **\$149.95**

Model V-0325 Quick Release Camera Mount

For quick mounting and removal of video-camera on tripods. Securely attaches to all AMBICO tripods; however, not required with Model V-0522 or V-0523. **\$9.95**

Model V-0524 Videocamera Shoulder Pod

Complete mobility, yet new steadiness for hand-held shots. Weighs just 3 pounds. Any camera can be mounted on the large size mounting bracket; tubes and belt adjust to fit any body size.

- Hands free operation
- Works on left or right side
- Easy on — easy off

\$59.95

Model V-0515

A VCR caddy and camera support, all in one. Video recorder mounts below, held safely in place with heavy web straps (included). Videocamera attaches to built-in three-section monopod with full-function head for pans and tilts. Over-size wheels roll smoothly and have built-in brakes for still shots. Includes wrist strap for easy portability. **\$99.95**

CAMERA BAGS/TELE-CINE CONVERTERS/ POWER SUPPLY/CABLES/ANALYZER

V-0430

V-0431

Videocamera Bags

Designed for a total video system. Dividers allow ample room for videocamera, plus accessories. Practical, good-looking "caterpillar" tread design cushions equipment and won't slide on smooth surfaces. Nylon fabric outer covering resists moisture, mildew, and abrasion; luxurious, cushioned vinyl nap inner lining is gentle to equipment inside. Accessory pockets for batteries, tapes, and cables. Tripod can be carried under belting. Web straps adjust for convenient hand or shoulder carrying.

V-0430
Videocamera Bag **\$49.95**

V-0431
Videocamera and Equipment Bag **64.95**

Model V-0327 Tele-Slide Converter

Places photo slides on tape without a slide projector. Tele-Slide attaches to videocamera lens mount. Camera is aimed into artificial light source or daylight. Videocamera's zoom lens can crop slides, camera controls can color-correct slides, and sound or music can be added. Converter can also transfer color negative film to positive image if camera is equipped with polarity reversal switch. Includes adapter rings to fit most videocameras. **\$99.95**

Model V-0610 Tele-Cine Converter

Pays for itself after a few tapes, compared with the cost of commercial video transfer services. Image from any 8mm or 16mm movie projector, or slide projector, passes through precision optics to a high-contrast, rear projection screen. Videocamera shoots image on this screen, which can be color-corrected, can have narration, music, or other sound added. If videocamera does not have macro capability, an AMBICO Macro Lens Attachment, V-0314 will adapt camera for use with Tele-Cine. **\$49.95**

Model V-0611 Titling Tele-Cine Converter

Adds another feature to the basic Tele-Cine Model V-0610; titles are superimposed as recording takes place. With Titling model, transfer letters and clear, flexible plastic strips are included. Plastic strips fit into slots in front of screen on Titling converter. Titles are spelled out on plastic strips, and they can be moved horizontally or vertically across screen to place titles on movies or slides as they are recorded by videocamera.

Kit Includes:

- 3 — color marker pens
- Set of Peel-'N'-Stick letters and numbers (all black)
- Set of acetate sheets **\$59.95**

Model V-0605 AC Camera Power Supply Adapter

For use with any VHS recorder not equipped with camera input. Power supply adapter breaks out signal into video, audio and pause. On-off switch has LED indicator light. **\$64.95**

V-0602 V-0603

Videocamera Extension Cables

Thirty-three-foot cables with 10-pin male to 10-pin female connectors. All 10-pin connectors wired for stereo capability.

Model V-0602 Panasonic Extension Cable

Fits all Panasonic and Panasonic-type cameras. **\$69.95**

Model V-0603 JVC Extension Cable **\$69.95**

Model V-0329 Cable Analyzer

Solves the problem of finding defective cables in complex cable networks. Checks cables with F, RCA, Mini, and Phone plugs. Each end of cable attaches to tester and any combination of plugs is possible. Test light indicates cable status. Four switch settings test center conductor, outer conductor (ground), and indicate short circuits. **\$24.95**

AMBICO, INC.

50 Maple Street
Norwood, NJ 07648-0427
(201) 767-4100

VIDEO LENS ATTACHMENTS

Model V-0319 Video Special Effects Kit

Three high-quality, screw-in lens attachments. **\$59.95**

Multi-Imager creates identical multiple images which can be rotated with control arm.

Rainbow-Effect lens turns light sources into dramatic, prismatic effects in all colors of the spectrum.

Starburst lens attachment makes any point of light become a brilliant star. Kit also includes carrying case with protective pouch for each lens attachment, and adapter rings to fit most video cameras. All handsomely gift boxed.

Model V-0990 Lens Guard Kit

Neutral density lens attachment protects camera tube when shooting toward strong light. Prevents "hot spot" burn on camera tube. Also adds contrast for extra-vivid coloring. Kit also includes Clear Optical Lens Shield to protect camera lens from fingerprints, dust, spray, etc., while pictures are shot distortion free. Kit comes in carrying case with protective pouch for each lens attachment, and with adapter rings. **\$15.95**

Model V-0310 Fisheye Lens Attachment

Dramatically widens angle of view. Helpful when shooting in tight quarters. Used close up, it creates those well-known fisheye caricature effects. **\$74.95**

Model V-0341 Hemispheric Lens Attachment

Gives a picture area three times larger than the videocamera's normal wide-angle capability. Tremendous depth-of-field means virtually limitless focal length, from directly in front of lens to infinity. Large precision lens provides distortion free image with no fish-eye effect, no barrel distortion, etc. Works with any videocamera having macro capability. **\$99.95**

Model V-0311 Close-up/Wide View Lens Attachment

A two section attachment. As a close-up allows tight, detail shots; for example, a wedding invitation card. As a wide-view, takes in the entire shot when camera cannot be moved back further. Gives 166 2/3 % greater field of view than standard camera lens. **\$69.95**

Model V-0342 Telephoto Lens Attachment

A lighter-weight, more compact and economical telephoto lens attachment. Adds length to the camera's zoom lens, and allows tight close-ups with a soft focus background that fills entire frame. 1.4X magnification. **\$99.95**

Model V-0312 Telephoto Lens Attachment

Acts as a telescope to make the longest zoom even longer. Great for sports action, wildlife, and travel. Used for close-ups, gives sharp focus on subject with soft focus on background. 1.5X magnification. **\$175.00**

Model V-0314 Macro Lens Attachment

For extreme close-ups, less than six inches from subject. A +4-diopter, high-optical-quality attachment; especially useful for videocameras with no macro capability. Necessary when using AMBICO Tele-Cine Converter with video cameras not designed for close-up work. **\$14.95**

All lens attachments are supplied complete with carrying case and adapter rings to fit most video cameras.

LENS ATTACHMENTS & MAINTENANCE ITEMS

VIDEO SYSTEM MAINTENANCE ACCESSORIES

Head-Cleaning Cassettes

Improve picture quality and reduce wear on video heads. Clean entire tape track (audio and video) in a few seconds. Specially formulated cleaning fluid included, along with simple instruction.

V-0732
VHS Head-Cleaning Cassette **\$14.95**
V-0731
Beta Head-Cleaning Cassette **14.95**

Model V-0733 Head-Cleaning Replacement Fluid

For use with Head-Cleaning Cassettes, V-0732 and V-0731. **\$7.95**

Videotape-Cleaning Systems

Cleans a T-120 minute tape in less than fifteen minutes, with automatic shut-off at end of cycle. Includes 3.5-ounce bottle of cleaning fluid. Replacement fluid available in 3.5-ounce and 17.5-ounce bottles.

V-0330
VHS Videotape-Cleaning System **\$149.95**
V-0331
Beta Videotape-Cleaning System **149.95**

Videotape-Cleaning Replacement Fluid

For use with Videotape-Cleaning Systems, V-0330 and V-0331.

V-0333
Tape-Cleaning Fluid (3.5 ounces) **\$ 7.95**
V-0334
Tape-Cleaning Fluid (17.5 ounces) **17.95**

VC-11

30mm TUBES

XQ1410 Series Plumbicon® Camera Tube

The AmpereX XQ1410 Series is a 1.2" (30mm) diameter Plumbicon television camera tube with high resolution leadoxide photoconductive target, separate mesh construction, magnetic deflection and magnetic focusing and internal light bias. It's intended for highest quality usage in XQ1410L, XQ1410R, XQ1410G and XQ1410B types of color cameras, in broadcast, educational and high quality industrial applications.

The XQ1410 series has increased resolution and internal light bias for reduction of lag under low-key conditions.

XQ1413, XQ1415 Series Plumbicon® Camera Tube

The AmpereX XQ1413 Series is a 1.2" (30mm) diameter Plumbicon camera tube with high resolution lead oxide photoconductive target, with extended red response.

The XQ1413 Series is interchangeable with the XQ1023 Series, however the XQ1413 Series has internal light bias for reduction of lag under low-key conditions.

Tubes of the XQ1415 Series are identical to tubes of the XQ1413 Series but incorporate an infrared reflecting filter on the anti-halation glass faceplate.

1" TUBES

XQ1070 Series Plumbicon® Camera Tube

The AmpereX XQ1070 Series is a 1" (25mm) high resolution Plumbicon television camera tube with low heater power, separate mesh construction, magnetic focusing and deflection.

The XQ1070 Series is intended for use in highest quality broadcast camera equipment.

The XQ1070 Series is also mechanically interchangeable with 1" diameter vidicons with separate mesh construction and has the same base pin connections.

XQ1075 Series Plumbicon® Camera Tube

The AmpereX XQ1075 Series is a 1" (25mm) high resolution Plumbicon television camera tube with extended red response, and is intended for use in high quality broadcast camera equipment where infrared filtering is required but not present in the camera optical system.

The XQ1073 Series is identical to the XQ1075 Series with the exception that it does not have an infrared cutoff filter.

XQ2170 Series Plumbicon® Camera Tube

1" (25mm) Diode Gun™ (Patent Pending)
High Resolution Plumbicon® Camera Tube

The XQ2170 Series Plumbicon® Camera Tube is a high sensitivity, high resolution, low lag television pick-up tube with lead-oxide photoconductive layer, separate mesh and all magnetic deflection and focus.

It has a new electron gun assembly designed to significantly improve resolution and lag. The electron gun operates in a diode mode. The beam has a uniform energy distribution, improved beam acceptance and speed of response, and enhanced resolution. The gun also provides very high beam reserve, minimizing comet tailing and blooming in cameras with dynamic beam control.

© T.M. N.V. Philips of Holland

Note that while the XQ2170 Series is mechanically interchangeable with the XQ1070 Series, the "diode gun" requires a positive grid 1 voltage (up to + 20V) and draws a positive grid current of up to 5mA. Cameras designed around XQ1070 then, must be modified to accommodate this.

XQ1500 Series Plumbicon® Camera Tubes

The AmpereX XQ1500 is a 1" (25mm) high resolution Plumbicon television camera tube which features the Anti-Comet Tail (ACT) gun designed to handle high-lights up to four F stops over peak white. The internal light bias reduces lag to a minimum. The XQ1505 extended red Plumbicon tube for best red response incorporates an infrared reflecting filter on the anti-halation glass faceplate.

2/3" TUBES

XQ4187 (85XQ) Plumbicon® Camera Tube

2/3" (17.8mm) diameter Plumbicon television camera tube with Diode Gun™ for dynamic beam control DBC and low output capacitance for best signal-to-noise ratio. The XQ4187 R, G, & B has a high resolution lead oxide photoconductive layer, Electrostatic Focus magnetic deflection with high stability (HS) electrode structure. It requires very low power and has low deflection field damping.

XQ3467 Series Plumbicon® Camera Tube

2/3" (17.8mm) diameter Plumbicon television camera tube with a lead oxide, high resolution layer. The XQ3467 R, G, & B employs a triode gun with Electrostatic Focus and Magnetic Deflection.

XQ3457 (87XQ) Series Plumbicon® Camera Tube

2/3" (17.8mm) diameter Plumbicon television camera tube with high resolution lead oxide layer, Magnetic Focus and Electrostatic Deflection (MS). The XQ3457 R, G, & B incorporates the Diode Gun™ for dynamic beam control DBC, Low Capacitance for high signal-to-noise ratio and is only 87.5mm long for smaller cameras.

XQ2427 Series Plumbicon® Camera Tube

2/3" (17.8mm) diameter Plumbicon television camera tubes with special high resolution lead-oxide photoconductive target, low heater power, magnetic focusing and deflection.

Special features are:

- New photoconductive target for increased resolution
- "Diode" electron gun for DBC (dynamic beam control) to minimize comet tailing and blooming

XQ3427 Series Plumbicon® Camera Tube

2/3" (17.8mm) diameter Plumbicon television camera tubes with special high resolution lead-oxide photoconductive target, low heater power, magnetic focusing and deflection.

Special features are:

- New photoconductive target for increased resolution
- "Diode" electron gun for DBC (dynamic beam control) to minimize comet tailing and highlight blooming
- Low output capacitance for high signal to noise ratio

XQ1427 Series Plumbicon® Camera Tube

The XQ1427 is a 2/3" (17.7mm) Plumbicon television camera tube with high resolution leadoxide photoconductive target, separate mesh construction, low heater power, magnetic deflection and magnetic focusing.

The XQ1427R, XQ1427G, and XQ1427B types are intended for use in color cameras in Field Production, Broadcast Studio, Electronic News Gathering, educational and high quality industrial applications.

1/2" TUBE

XQ4087 (80XQ) Plumbicon® Camera Tube

The XQ4087 is a 1/2" (8mm scan diagonal) Plumbicon television camera tube with low heater power, magnetic deflection and electrostatic focusing, assembled with a DT1120 small lightweight deflection unit.

Special features are:

- Diode electron gun for DBC (dynamic beam control), which minimizes comet tailing and blooming
- Low output capacitance achieved by a special signal plate with contact through the window
- Low deflection field damping by wall electrodes
- Excellent geometry and registration capability
- Reduced line pick-up due to side connection of the mesh
- Low power consumption due to electrostatic focus

The XQ4087 tubes are intended for color and monochrome cameras in broadcast (Electronic News Gathering), educational and high quality industrial applications.

ARC

1/2" M-Format VTR/Camera System

The Ampex ARC system utilizes the 1/2" M-format to produce broadcast video and audio quality in a portable package that is superior to 3/4" VTRs. The video recording system is the latest technology in separate luminance and chrominance signal recording, producing superb picture quality generation after generation of post-production processing. The two channels of broadcast-quality audio also feature the Dolby C* noise reduction system for low noise, multi-generation performance.

This lightweight, versatile system is ideally suited for EFP applications. You can shoot and record quickly and easily, then edit and go on the air via necessary time base correction but without dubbing to another format. The self-contained camera/VTR unit can be operated by one person and uses readily available, inexpensive VHS cassettes.

The complete ARC system consists of a camera/recorder unit, a portable VTR, a studio editing VTR and an editing controller. All components interface with each other and are compatible with existing studio equipment.

AMPEX ARC-10

Camera/VTR

The Ampex ARC-10 integrated camera/VTR allows one person to cover all the action with comfort, with precision, and with efficiency. It produces 20 minutes of recording time on one VHS cassette. The rechargeable battery gives a full 60 minutes of power.

Weighing less than 22 lbs., the ARC-10 camera and VTR lock together to form a self-contained system with freedom from connecting cables, shoulder straps, and pack frames. The integrated camera/VTR utilizes microprocessor-based circuitry to provide automatic functions. It features a weather-proof, high power, motorized zoom lens with automatic lens cap when the camera is in stand-by or off. Other features include a high sensitivity cardioid microphone that is removable for interviews and a slide-in/out rechargeable battery pack for rapid change in the field.

The camera employed in the ARC-10 is a 3-tube prism optics camera with automatic beam control, 2-line vertical aperture corrector, black stretch, and corner registration circuitry.

Choose from either a 2/3" Plumbicon* or Saticon** tube. The economical Saticon offers high resolution with 550 lines; the Plumbicon offers higher resolution with 600 lines. Signal-to-noise ratio is 59dB for Plumbicon, 58dB for Saticon.

AMPEX FPR-10

Portable VTR

You'll appreciate the flexibility of the FPR-10: it can work as part of the ARC-10 System while directly coupled with the camera; it can be separated for operation as a two-unit system equipped with a multipurpose video adaptor and used with any camera or video source with a composite output.

The FPR-10 comes complete with two audio tracks, a dedicated SMPTE/EBU Time Code Track, a built-in Backspace Record function, and a built-in SMPTE/EBU Time Code Generator. The controls located at the rear of the unit are easily accessed.

ARC-20

Portable VTR

The ARC-20, full-featured portable VTR, weighing under 20 lbs. offers the user built-in confidence, quality replay capabilities, and much more. ARC-20 complements the Ampex ARC-10 Recorder/Camera, and it gives a field director instant color playback in even the remotest locations.

ARC-20 can also function as the primary field recorder, serving as an acquisition VTR as well as offering field replay. ARC-20's light weight and small size make it the ideal match for portable ENG/EFP cameras that operate in a two-piece configuration.

ARC-20 offers uniquely powerful production capabilities in a fully portable VTR.

ARC-40

Studio VTR

After the ARC-10 and ARC-20 have been used for field recording, the ARC-40 provides a full range of post-production capability. With its optional plug-in digital time base corrector, the ARC-40 is ready to play direct to air, or work in a variety of editing situations. Convenient controls, picture-in-shuttle, search and jog provide full stand-up editing capability.

The ARC-40 also fits into all types of editing systems arrangements, from the simplest two-machine system controlled with the optional ARC-30 Editing Controller, to the most powerful multi-machine, multi-format systems. Existing interfaces allow the ARC-40 to work with most popular computerized editing systems.

ARC-30

Editing Controller

The ARC-30 is a low-cost, sit-down editor for a two ARC-40 editing configuration. Control track based, one-event edits keep its operation simple but flexible. It controls edits between the ARC-40s in the dub mode, maximizing the M-format multi-generation video quality.

15X9 f/1.5-T1.65

This entirely new lens provides unexcelled illumination because of the extremely high aperture of f/1.5 combined with the outstanding photometric factor of 1.1. This feature is also particularly valuable as it allows the use of the built-in turret operated 2x extended in low light conditions.

Despite the larger lens elements needed to achieve this, the overall weight is only 2.1 kg (4.7 lbs.) including range extender turret and servo zoom control.

The image quality is particularly high at infinity as well as at close working distances, to match the improved performance of 2/3" tube cameras.

The lens is weather resistant with shower-proof optical and servo units. Performance and features of the lens (such as built-in 2x range extender turret—choice of pistol grip or rocker-switch zoom control—all weather construction etc...) responds completely to end user needs.

PRO PAC 90

PRO PAC 60

30/13 BATTERY BELT

SNAP-ON® NICAD BATTERIES

Anton/Bauer Snap-On batteries are the original equipment power source for virtually every professional video camera manufacturer. Features quick change design for instant camera mounting without cables or connectors. Premium fast charge cells and exclusive all-cell sensing provide 100% reliable charging. Every battery is individually computer tested and shipped with a print-out. Accessories are available for mounting Snap-On batteries on belts, VTRs, monitors, and other portable equipment.

Pro Pac® 14 4 AH, 14.4 Volt Snap-On NiCad Battery.

Fast or slow charge. 4-3/4 lbs. Typical Run Time: 2 hours at 25 watts, 3 hours at 18 watts, 4 hours at 13 watts. **\$495.00**

Pro Pac® 13 4 AH, 13.2 Volt Snap-On NiCad Battery.

Fast or slow charge. 4-1/4 lbs. Typical Run Time: 2 hours at 24 watts, 3 hours at 16 watts, 4 hours at 12 watts. **\$475.00**

Com Pac® 14 2AH, 14.4 Volt Snap-On NiCad Battery.

8 hour charge with Lifesaver 8 Hour Quad Universal only. 3-1/8 lbs. Typical run time: 1 hour at 25 watts, 1-1/2 hours at 18 watts, 2 hours at 13 watts. **\$375.00**

Trim Pac® 2 AH, 12 Volt. Compact Snap-On NiCad Battery.

Fast or slow charge. 2-1/2 lbs. Recommended for applications drawing under 15 watts. Typical Run Time: 1-1/2 hours at 12 watts. **\$225.00**

CA-TP. Trim Pac Charge Adaptor.

Snaps onto 12V Trim Pac and allows 1 hour fast charging with JVC KY-1900 charger. **\$45.00**

Recommended Applications for Pro Pac and Trim Pac Batteries.

The Pro Pac 13 is a universal battery that will power virtually all ENG/EFP cameras, VTRs, and monitors. However, the Pro Pac 14 will yield superior performance and capacity on those cameras that can accept the higher voltage. See table below.

Pro Pac 14/Com Pac 14		Pro Pac 13	Trim Pac	
Ikegami	Thomson	Panasonic	Bosch	JVC KY-1900
RCA	Philips	Hitachi FP 15, 20, 21, 22, 40, Z31		KY-2000
Sharp		JVC		Hitachi FP10, FP7
Hitachi SK81, 91, 97		Sony Betacam, DXC-M3/A, DXC 6000		Sony BVP-110
Sony 300 Series, 110, 250, 8VP3		Harris TC90		

PRO PAC 90 PROFESSIONAL VTR BATTERY

The Anton/Bauer Pro Pac 90 is a premium professional direct substitute for the Sony BP-90 type VTR battery. Unique features include: unique circuit board design, special fast charge premium cells, individual cell sensing system for foolproof charging, special Triconn™ 3-conductor connector (eliminates need for separate fast charge cable), accessible fuse with spare fuse, and heavy duty molded housing. Can be charged directly with all Lifesaver Chargers.

Pro Pac 90 4 AH, 12 Volt NiCad VTR Battery.

Fast or slow charge; 3-1/2 lbs. Typical Run Time: More than 3 hours at 14 watts. **\$330.00**

SO-90. Pro Pac 90 To Snap-On Adaptor.

Allows Pro Pac to fit any Anton/Bauer Snap-On Bracket; i.e., for on camera mounting or for wearing on a belt with UniPac holder. **\$195.00**

Pro Pac 60. 2.5 AH, 13 Volt NiCad VTR/Camera Battery.

Premium professional NiCad replacement for Sony BP-60 VTR/Camera Battery. High voltage design assures full run times under all conditions. Charge with all Lifesaver Chargers in 8 hours **\$195.00**

UNIVERSAL NICAD BATTERY BELT MODEL 30/13.

The ultimate battery belt. Powers virtually all portable equipment, including 30 volt lights and all 13V cameras and VTRs. Unique construction features include leather belt, Lexan® battery modules, quick release military buckle, and anatomical design. Can be worn around the waist, over the shoulder or bandolero style. Exclusive operating features: 30 volts, 4 AH or 13 volts, 8 AH switchable; built-in 115/230 volt overnight charger; voltage display, charge indicator; input and output circuit breakers; multiple charge sensors for 100% safe fast charging.

30/13 Battery Belt

30 volt, 4 AH or 13 volt, 8 AH switchable. Built-in 115/230 volt overnight charger. Can be one hour fast charged. 10 Amp circuit breaker. Waist size: 32" to 48" adjustable. Wgt. 11-1/2 lbs. . . **\$795.00**

CA-30 Fast Charge Cable

Connects 30/13 belt to Lifesaver 1 Hour Fast Charger (LSFC) . **\$48.00**

SILVER BATTERY SYSTEM

Silver Zinc batteries will operate equipment approximately three times longer than NiCad batteries of equivalent size and weight. In many cases an Anton/Bauer SV-13 Silver Battery will operate a camera for an entire day, eliminating battery change interruptions and the need for spare batteries.

The SV-13 Silver Battery is fully compatible with all Anton/Bauer Snap-On accessories and Snap-On mounts, and will power virtually all video cameras and VTRs. It is not recommended for lighting applications. Silver batteries cannot be charged with NiCad battery chargers. They can only be charged with the Anton/Bauer SVDC-13 Silver Battery Charger shown and described below.

SV-13. 12 AH, 13.5V Snap-On Silver Battery
Must be charged with SVDC-13 charger only. Expected life: 80-100 charge/discharge cycles (one year maximum). Typical Run Time: 6 hours at 25 watts. Wgt. 4-1/2 lbs. Individually computer tested and packaged with computer printout. **Call For Price**

SVDC-13 Digital Control Silver Charger
Charges two SV-13 Silver Batteries simultaneously and independently. Overnight or 5 hour charge rate, selectable. Features dual protection circuits, charge rate indicators and green ready lights. Size: 8-1/2" x 5-1/2" x 10-1/2"; Wgt. 14-1/2 lbs; 115/230 volts, 50/60 Hz. **SVDC-13** **\$1595.00**

SVSC Silver System Shipping/Carrying Case
Heavy duty case features custom foam interior that holds one SVDC-13 Charger and two SV-13 Silver Batteries. Rugged hardware and an outer shell of high density polyethylene fully protects battery charger during shipment. Size: 18" x 11" x 16-1/2" **\$250.00**

LIFESAVER® NICAD CHARGERS

The first 100% safe charging systems. Lifesaver circuit safely maintains fully charged battery indefinitely. All Lifesaver chargers feature: 3 automatic charge rates; logic controlled charge monitor circuit; battery coupled cell sensing system. Integral Anton/Bauer Snap-On bracket directly accepts Snap-On type batteries, and special Triconn 3 conductor connector accepts Pro Pac 90 and other BP-90 type VTR batteries.

LSFC Lifesaver Fast Charger
Single position, one hour charger. Accepts all Anton/Bauer 4 AH Snap-On, Pro Pac 90 and Pro Pac 60 NiCad batteries, and all Anton/Bauer battery belts. Size: 7-1/2" x 6-1/4" x 4"; Wgt. 3 lbs.; 115/230V, 50/60Hz **\$495.00**

LSQC Lifesaver 8 Hour Single
Single position, 8 hour quick charger. Accepts all Anton/Bauer 4 AH Snap-On, Pro Pac 90 and Pro Pac 60 NiCad batteries. Charges other brand BP-90 type batteries at the overnight rate. Size: 6-1/2" x 4-1/8" x 3-5/8"; Wgt. 4-3/4 lbs.; 115/230V, 50/60Hz. **\$295.00**

LSQ4 Lifesaver 8 Hour Quad
Four position 8 hour quick charger. Independent charge circuits and LED indicators for each position. Accepts any combination of Anton/Bauer 4 AH Snap-On and Pro Pac 90 NiCad batteries. Charges other brand BP-90 type batteries at overnight rate. Size: 10-1/4" x 3-5/8" x 7"; Wgt. 3-1/4 lbs; 115/230V, 50/60Hz **\$895.00**

LSQ4U. Universal Lifesaver 8 Hour Quad.
Similar to LSQ4 as above but in addition accepts the 2AH Com Pac batteries in any combination with the Anton/Bauer 12-14 volt NiCad batteries listed with the LSQ4. **\$1095.00**

SPECIAL PURPOSE CHARGERS

MFC Mobile Fast Charger
Single position one hour fast or 16 hour overnight charger. Operates from most vehicles with or without engine running. Accepts all 4 AH 12 to 14.4 volt Anton/Bauer Snap-On and Pro Pac 90 NiCad batteries. Features protection circuit that disconnects charger if vehicle voltage becomes too low. Operates on 10-15 volts DC input. Size: 6" x 7-1/2" x 3-1/2"; Wgt. 2-3/4 lbs. **\$495.00**

WRMC Wide Range Microcharger
Single position overnight charger. Designed specifically for world travel. Can be plugged into any power source world-wide (95-250 volts AC or DC) and will automatically adjust for proper charging current. Accepts any Anton/Bauer 4 AH Snap-On NiCad battery, as well as a Pro Pac 90 (with SO-90 adaptor). Operates on 95-250 volts AC or DC input. Size: 5-1/4" x 4" x 2-5/8"; Wgt. 1-1/2 lbs. **\$195.00**

WICKIT. Replacement Wicking Kit for SV-13 Silver Battery. ... \$7.00

SNAP-ON II™ QUICK RELEASE BRACKETS

QRX. Universal Snap-On II Quick Release Bracket. This is the basic Anton/Bauer Snap-On bracket that is the standard of the video industry and included as standard equipment with virtually all ENG cameras. Includes electrical contacts, internal wire connections and 4 mounting screws (6x32). Designed to be installed on any portable device allowing use of any Anton/Bauer Snap-On battery. Bracket measures 4-11/16" x 3-3/8".

QRX \$75.00

QRX-C. Universal Snap-On II Compact Bracket. Designed for the new smaller cameras, the QRX-C is fully compatible with all Snap-On products. Includes electrical contacts, internal wire connections and 4 mounting screws (6 x 32). Bracket measures 4-11/16" x 3".

QRX-C \$75.00

QR-BVP-3. Snap-On II Quick Release Bracket with integral power connector and plate for custom mounting on Thomson 601/701, Sony BVP-300 Series cameras and BVP-3 camera with SONY CA-3 Adaptor. No camera modifications required.

QR-BVP-3 \$95.00

QR-BVP-1. Snap-On II Quick Release Bracket with integral power connector and plate for custom mounting on Sony BVP-110. No camera modifications required.

QR-BVP-1 \$95.00

QR-DXC. Snap-On II Quick Release Bracket with integral connector and plate for custom mounting on Sony DXC 1800/1820/1821/6000. No camera modifications required.

QR-DXC (w/trade-in of existing Sony battery bracket) \$95.00

QR-DXC-M3. Snap-On II Quick Release Bracket. As above, but for Sony DXC-M3 camera. Built-in circuit operates low battery level indicator in viewfinder.

QR-DXC-M3 \$130.00

QR-DXC-M3A. Snap-On II Quick Release Bracket with integral power connector and plate for custom mounting on Sony DXC-M3A. No camera modifications required.

QR-DXC-M3A \$95.00

QR-777. Snap-On II Quick Release Bracket with integral power connector for custom mounting on the rear of Panasonic 777, 888, or 555 camera. No camera modifications required. (Same as Panasonic WV-PS355 bracket.)

QR-777 \$95.00

QR-76A. Snap-On II Quick Release Bracket with integral power connector and special plate for custom mounting on the rear of RCA TK-76A cameras. No camera modifications required.

QR-76A \$130.00

QR-76BC. Similar to QR-76A, but for TK-76B and C cameras.

QR-76BC \$130.00

QR-BETA-3. Snap-On II Quick Release Bracket with integral power connector and plate for custom mounting on Sony/Thomson Betacam camera/recorders. No camera modifications required.

QR-BETA-3 \$150.00

QR-BETA-1. (As above but for BVW-1 camera) \$150.00

POWER SUPPLIES

The Anton/Bauer SPS-3 and SPS-5 are advanced switching-type power supplies. Superior filtering techniques and design make these supplies the coolest, most efficient and noise free units available to the video industry. The integral Snap-On mount allows these supplies to be conveniently snapped onto the rear of any camera just like a battery pack.

SPS-3. Advanced Switching type 3 Amp Power Supply with Snap-On mount. Output: 13 volts at 3 amp (max). Input: 115 volts AC only.

SPS-3 \$495.00

SPS-5. Advanced Switching type 5 Amp Power Supply with Snap-On mount. Output: 13 volts at 5 amp (max). Has auxiliary 5 pin XLR power out connector. Input: 115/230 volts AC.

SPS-5 \$595.00

MICRO CHARGERS/ACCESSORIES

PPSA-D PERPETUAL POWER BELT

CLPA (Mounted on Camera)

QR-BVP-3

UP, UNIPAC

MICRO CONTROL

MICRO CONTROL COMPACT CONTROL UNIT (CCU)

Revolutionary new portable camera control system operates over a standard 3 wire microphone cable, up to 1000 feet long, and is powered by the camera battery.

Micro Control's hand held Compact Control Unit (CCU) weighs only 1-1/3 lbs. and its companion Camera Decoder snaps onto an Anton/Bauer Snap-On battery bracket on the rear of the camera. A standard battery then snaps onto Micro Control's Camera Decoder. The system controls Iris, Master Ped, Red Gain, Blue Gain, Red Ped, Blue Ped, On/Off control for Bars, Auto White Balance, and Auto Iris. In addition, tally/call and a RTS intercom circuit are included. Micro Control draws only 75 milliamps from the camera battery. All control functions, power and intercom operate over a single microphone audio cable with standard 3 pin XLR connectors.

Micro Control

Available for Ikegami HL-79A-DAL, HL79E, Sony/Thomson BVP 300 Series, Hitachi SK81/91, Harris TC 90, Panasonic ReCam, and other cameras. No camera modifications required. Compact Control Unit: Panel size is 6" x 4-3/8", and unit is 2-1/2" deep; weighs 1-1/3 lbs. Camera Decoder: 5-1/3H x 4-1/3"W x 2-1/2"D; weighs 1-1/2 lbs. Call or write for specific application information.
(depending on camera model) \$2995.00 to \$3275.00

Special Twin Cable

Miniature, highly flexible cable consisting of one audio conductor and one coax for video output. Audio terminated with 3-pin XLR male and female; video terminated with standard BNC connectors both ends. These cables may be linked in series for additional length with BNC adaptor.

50 Feet \$ 65.00
100 Feet 95.00
150 Feet 125.00

MICRO CHARGERS

MC-14 Micro Charger 14 Volts

Miniature wall mount overnight (14-16 hours) charger for Pro Pac® 14. Must not be used with 13 volt or 12 volt batteries. For 115 volts AC only \$65.00

MC-13 Micro Charger 13 Volts

Miniature wall mount overnight (14-16 hours) charger for Pro Pac 13. Must not be used with 14 volt or 12 volt batteries. For 115 volts AC only \$65.00

TPMC-12 Trim Pac® Micro Charger

Compact overnight charger for 12 volt Trim Pac battery only. Full charge in 14-16 hours. For 115 volts AC only \$65.00

SNAP-ON ACCESSORIES

UP UniPac Single Snap-On® Battery Holder

Accepts any Anton/Bauer Snap-On battery. Includes loops (for any size pants belt) and integral power cable with XLR-4 DC input connector. Cameras and VTRs not equipped with an XLR-4 DC input require SO/XLR adaptor. \$130.00

SO/XLR Snap-On Bracket to XLR-4 Adaptor

Fits any Anton/Bauer Snap-On Bracket. Provides universal 4 pin XLR DC input connection to any camera or other device with an Anton/Bauer Snap-On Bracket. \$65.00

CLPA Camera Light Power Adaptor

Powers Anton/Bauer LG-U Light from camera battery. Snaps on between battery and bracket at the rear of any camera. Integral cable plugs directly into LG-U Light Head. Requires 14.4 volt 70 watt bulb. \$95.00

SODAP Snap-On Battery to XLR-5 Adaptor

Compact adaptor snaps onto any Anton/Bauer Snap-On battery or power supply converting it to a 5 pin SLR female power output connector. \$40.00

SO-90 Pro Pac 90 to Snap-On Adaptor

Allows Pro Pac 90 to fit any Anton/Bauer Snap-On Bracket; i.e., for on camera mounting or for wearing on a belt with UniPac holder. \$195.00

PPSA-D Perpetual Power Belt-Automatic

Accepts two Snap-On batteries of any type. When the first battery is depleted, the belt automatically draws from the second. The first battery may be replaced and the process be repeated providing uninterrupted power indefinitely. Features leather belt, military quick release buckle and Lexan® control module with voltage display, circuit breaker, and 2 output connectors for powering a camera and a VTR simultaneously. \$265.00

All Snap-On accessories will accept both Anton/Bauer Snap-On NiCad and Silver batteries.

COAXIAL & BROADCAST CABLES

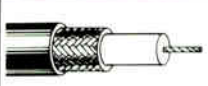

TV Camera Cables AND CCTV CABLES

Belden TV Broadcast and Closed Circuit TV Camera Cables assure reliable circuit isolation thereby reducing AC hum and minimizing cross-talk between circuits. They are made to withstand rugged service and to maintain high conductor insulation resistance regardless of ambient temperature changes.

Major uses for these cables are for controlling, powering and transmitting sound and picture information for monochrome and

color TV cameras as well as for remote control, monitor and cue line systems.

Belden TV Camera Cables are engineered to be lightweight, flexible and easy to terminate. They are manufactured and tested in accordance with Belden's own rigid and time-proven quality control standards in order to assure outstanding reliability, performance and service life.

COAXIAL & BROADCAST CABLES

75 OHM PRECISION VIDEO CABLES

The 9231 is a precision 75 ohm video cable manufactured with rigid control of concentricity and all dimensional tolerances offering superior return loss characteristics; a quality Video transmission cable which provides exceptional picture definition and eliminates problems resulting from periodicity. It has a non-contaminating PVC jacket for more flexibility. The double braid 8281 75 ohm Video cable is made to tight tolerances for excellent

return loss performance. Our 8279 miniature 75 ohm Video cable is for applications where space is critical. The gray PVC and black polyethylene jackets are made of non-contaminating, non-migratory compounds.

Typical Application: Video signal transmission in Color and Monochrome TV studios.

100% SWEEP TESTED.

TRIPODS

Mini Fluid Head

Measuring just 5" x 5" x 5" (excluding handle), this lightweight, fluid-type damped tripod head pans smoothly a full 360° and features a camera platform that measures 2 3/4" x 3". For convenience and comfort and to accommodate the widest possible range of cameras, the Mini Fluid Head comes with a versatile handle which is positionable on either side and can be separated into two individual segments, each 9" in length. The Mini Fluid Head can be tilted 45° up and 90° down continuously, with detent at -45°, and has separate pan and tilt locks. Vertical drag is continuously adjustable.

3063 \$109.95

Micro Fluid Head

You'll be amazed at the smooth, fluid effect movement of the Bogen Micro Fluid Head. Only 2 lbs. including an adjustable handle. It's perfect for just about any of the new light-weight (up to 6 lbs.) VCR cameras. It measures 4-1/4" x 5-3/4" x 2-3/4" (excluding handle); pans smoothly a full 360 degrees; can be tilted up or down 90 degrees, has pan and tilt locks, and continuously adjustable drag. Platform has adjustable positioning slot for best camera balance and is designed so that the handle can be on either left or right side.

3126 \$69.95

Fluid Head

This lightweight, professional quality, fluid-damped tripod head is designed for cine and video cameras weighing up to 22 lbs. (10 kg). The large, removable, camera platform has a mounting stud that travels in a 3 1/2" slot and facilitates balancing at the camera's center of gravity. In addition, there are three locking detents for the platform, any of which can be used. The Bogen 3066 Fluid Head pans smoothly 360° and the panning drag can be adjusted by means of a simple adjustment screw. Vertical drag is adjusted by a large pawl-controlled lever. The tilting range is 60° up to 90° down with the camera under perfect control at all times. And there's a detent which can be set to limit the downward movement to 45°. Separate locks, independent of the drag system provide a positive hold in any position.

3066 \$200.00

Ball Camera Leveller

This is an ideal adjunct to the 3063 Mini Fluid Head. It VC-26

works like a claw ball in that you mount it to your tripod, you can remove the camera and head quickly to mount on another tripod similarly equipped, and you can level your camera even if you haven't levelled the tripod. Ideal for use in the field on uneven terrain.

3115 \$39.95

3124 Tripod w/Micro Fluid Head

A lightweight all-aluminum tripod (our 3011) that's sturdy, stable, versatile, easy to use and easy to carry. It weighs only 7 lbs. with our Micro Fluid Head (Order Code 3126) that features real, fluid-effect action.

3124 \$144.95

3122 Also available in black anodized finish \$159.50

3129 3011 Tripod with 3126 Micro Fluid Head and 3127 Dolly \$199.95

3145 Video Tripod Caddy \$24.95

3149 3126 Micro Fluid Head with 3211 Tripod with black anodized finish and 3127 Dolly \$219.50

3046 Sturdy Tripod

An all aluminum double-braced, two-section design with remarkable rigidity and weighing only 7 lbs. 4 oz. It extends to a full 73" with the Mini Fluid Head. 19" geared center post. Folds to a compact 32 1/2" for travelling. Legs are furnished with convertible cushion/spike tips.

3046 Cine/Video Tripod w/o Head \$144.95

3140/3040 Cine/Video Tripod w/Mini Fluid Head \$234.95

Universal Tripod

The Bogen Universal Cine/Video Tripod weighs less than 12 lbs. yet extends to 66". Legs are furnished with convertible cushion/spike tips. For precise positioning, there is a centerpost which permits 9" of extension. The unique variable-angle center brace system on the tripod allows minimum elevation of the tripod platform as low as 16".

3068 \$189.95

3065 Universal Cine/Video Tripod w/3066 Fluid Head \$379.50

3069 Universal Cine/Video Tripod w/3066 Fluid head and Cine/Video dolly \$529.50

3118 Universal Cine/Video Tripod w/3063 Mini Fluid Head \$299.90

Heavy-Duty Tripod

The Bogen Heavy-Duty Cine/Video Tripod is the ideal field tripod. Closed length, is only 37 1/2" yet it extends to a full 63". It can be set as low as 12". With its built-in claw ball, the camera head can be levelled quickly under all use conditions. The Heavy-Duty Tripod weighs just 17 lbs. 2 oz.

3061 \$229.50

3062 Heavy Duty Cine/Video Tripod w/3066 Fluid Head \$419.50

3064 Heavy Duty Cine/Video Tripod, w/3066 Fluid Head and Cine/Video Dolly \$569.50

Cine/Video Dolly

The Bogen Cine/Video Dolly is designed specifically for use with the Universal and Heavy-Duty tripods. Individually braked wheels measuring 5" in diameter, and a unique leg locking system make it easy to assemble and disassemble for transporting. The tripod legs are captured in a 38" diameter circle and the doorway clearance needed for the fully assembled dolly is only 39 1/2".

3067 \$160.00

Auto Dolly

Some dollies require you to brake and release each leg separately. But the Bogen Auto Dolly has a better way: when you depress the centrally located foot pedal you release all three casters. When you lift the pedal, cam action raises the casters free of the ground and the weight of the dolly and tripod rests on separate feet. The ideal companion for the 3140 combination, the Auto Dolly weighs only 6 lbs. and is easily assemble. Spread from the center to tripod leg socket is 18". Mounting and dismounting the tripod is accomplished by cam operated kick-locks. If you need to support a camera for very low angle shooting, we've thoughtfully provided a European thread stud on the central casting on which you can mount your Mini Fluid Head.

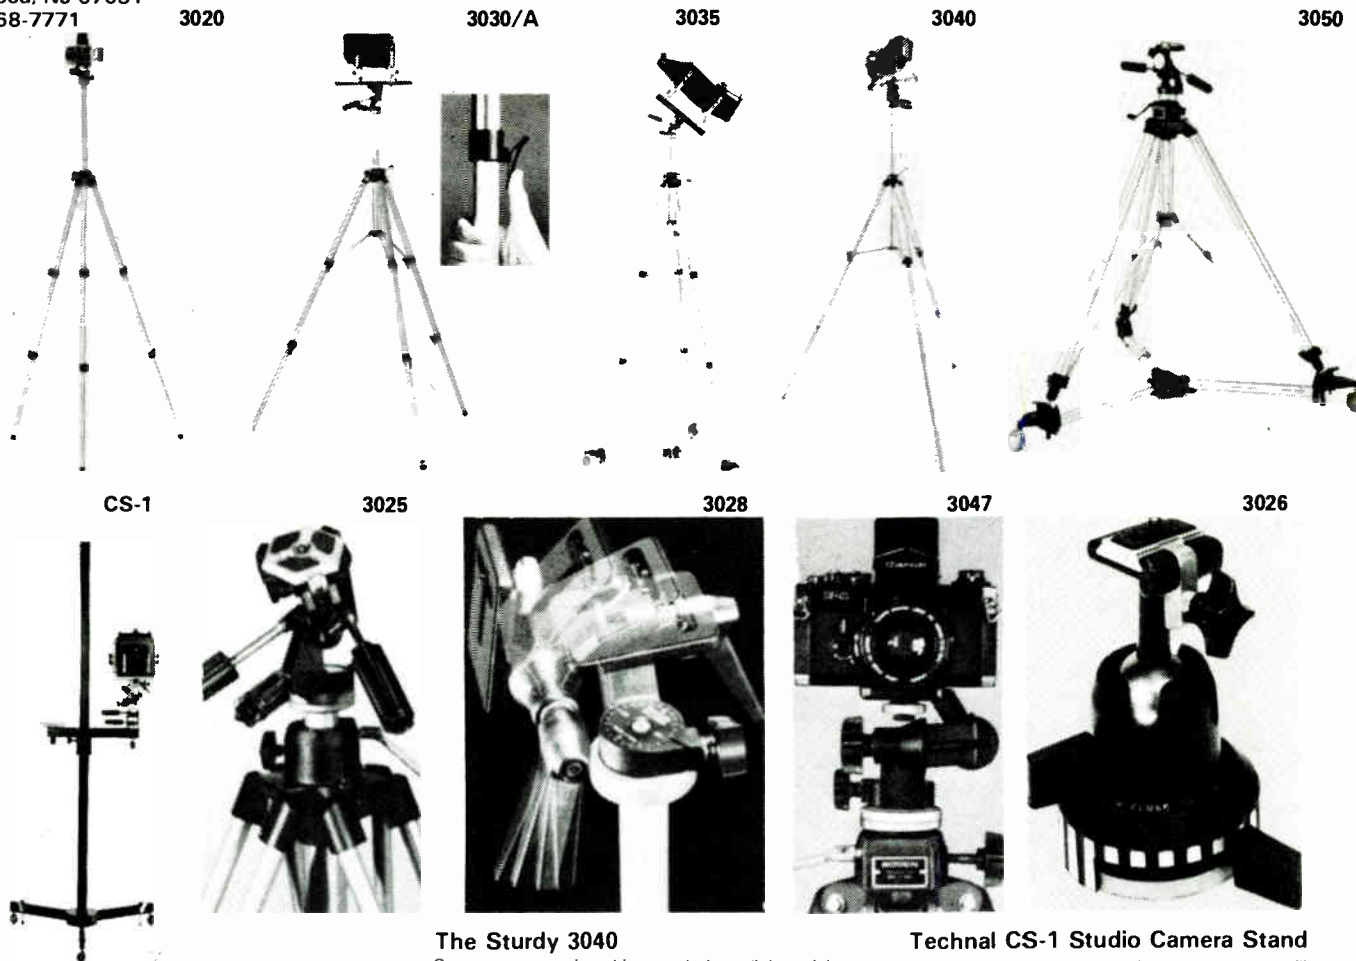

3056 \$99.95

TRIPODS/HEADS

The 3020 Convertible

Maximum shooting height is 74 1/2". The adjustable spread of the legs combined with the reversible center post, which has a removable section, lets you get as low as 14". (Even minus the center post extension, you can go up to 63", with 6 1/4" of center post travel). Of course, for real worm's-eye views, just reverse the center post.

Specifications (with 3025 head): Maximum Elevation: 74 1/2". Minimum Elevation: 14". Closed Length: 30 1/2". Center Post Travel: 17 1/2". Weight: 6 3/4 lbs. **\$114.95**

The Dependable 3030/a

Ideal for location shooting where you need a compact, sturdy tripod (the 3030/a has three-section legs and a geared center post, which means it provides good maximum, working height — over six feet — then telescopes into a really manageable package for carrying). Leg adjustment is fast and easy, even when you're wearing gloves, thanks to our exclusive rocker arm leg lock and a spirit level on the shoulder shows you when you're on the level. Convertible cushioned spike tip legs and rigid center bracing hold everything firm.

Specifications (with 3047 head): Maximum Elevation: 72 1/4". Minimum Elevation: 30 1/4". Closed Length: 33 1/2". Center Post Travel: 11". Weight: 7 lbs. **\$174.95**

The 3035 Work Horse

You can use Tripod at its maximum height of 7 1/2 feet, then lower it to 22 inches or go to virtually ground zero by opening the legs and reversing the geared center column. Most important, the 3035 maintains its stability at all heights. This stability is enhanced by independent, variable-spread leg braces that also allow you to obtain different angles on each leg.

Specifications (with 3047 head): Closed Length with head: 38". (Without head: 32"). Height: (With legs spaced 36" apart) 87 1/2". on Auto Dolly, 7 1/2". Weight: 11 lbs. 12 oz. Minimum Height: (Legs at full spread, retracted) 22". **\$194.95**

The Sturdy 3040

Strong two section bi-post design, light-weight aluminum alloy construction, with exceptional sturdiness built-in. A single, easy to reach locking knob controls extension of each leg. Geared, reversible center post offers 19" of travel, and reverses for low shots or copying. Maximum height is 73", yet it folds to a compact 37". Minimum height without reversing the geared center post is 34 1/2". Legs are equipped with convertible cushion/spike tips.

Specifications (with 3047 head): Maximum Elevation: 73". Minimum Elevation: 34 1/2". Closed Length: 37". Center Post Travel: 19". Weight: 9 lbs., 14 oz. **\$184.95**

The 3050 Automatic

Extension of each leg can be adjusted individually, or all three can be released simultaneously. Triggers let you move from as low as 22" (16" from base of pan head to ground), to 67 1/2" or higher, built-in spirit level on the shoulder, plus two more levels on the 3047 pan/tilt head. Auto Tripod has independent, continuously variable leg braces that set each leg at a different angle. A sturdy geared center post with 9 1/2" of precisely controlled elevation. The legs have convertible, cushioned spike tips. The removable 3047 pan/tilt head doesn't come off until you want it to.

Specifications 3050: (Note: weights and dimensions given are for the 3050, including the model 3047 pan/tilt head, which weighs 2 lbs., 9 oz., and is approximately 6" high). Closed Length with head: 40 1/2". Without head: 36". Height with legs spaced: 40 1/2". With legs apart: 67 1/2". Weight: 14 lbs., 2 oz. Minimum Height (Legs at full spread, retracted): 22". **\$244.95**

ACCESSORIES

- 3041 Adapter Plate for 3047 Pan Head (1/4-20) **\$11.95**
- 3042 Adapter Plate for 3047 Pan Head (Euro Thread) **11.95**
- 3045 Carrying Strap for all Bogen Tripods **9.50**
- 3049 Replacement Mounting Plate (as supplied with 3047 Pan Head) **11.95**
- 3054 Converter Plate to allow any Bogen Tripod to accept heads with 1/4-20 socket **11.00**
- 3059 Side Arm for Bogen Tripods **24.95**

Technal CS-1 Studio Camera Stand

Free-wheeling camera stand gives you great movability for camera placement, then locks into a rock-solid stance for super stability while shooting. Rubber-tipped feet take over from the casters. Fast and easy to adjust, letting you raise the camera to over six feet, or lower it to about a foot above the floor (with the cross arm reversed). Counterbalancing makes the cross arm easy to move, and the stand can handle an 11 1/2 lb. camera with no difficulty. Once the stand is in position, you lock in the rubber-tipped feet for extra stability.

Specifications: Base is on a 36" diameter. Clearance height (for getting through doors fully assembled): 77". Shipping Weight: 45 lbs. Net Weight: 34 lbs. Designed for cameras up to 11 1/2 lbs. See sketch for other dimensions. **\$249.95**

3025 - Lightweight and Sturdy

Separately locked movements on three axes. Perfect for 35mms, and the conical self-adjusting bearing surfaces on the tilt pivots provide more than enough strength to support Hassels and RB's. Thumb-screw movement locks **\$21.95**

3028 - Unique Locking System

Three axes movement system, including a pan lock. Camera platform wider for better support of larger camera bodies and a pair of ratchet-type positive locking handles that give substantial grip, yet can be rotated to any desired position. **\$34.95**

3047 - No Slip, Precise Leveling

New idea in tripod head design: removable camera mounting plates that don't slip. Works like a chuck. Two fixed bosses seat the mounting plate, while the third opens and closes with a quick acting, positive locking knob. In addition to an in-laid friction surface, it also has a positive locking knob. Accessory plates are offered in a choice of U.S. (1/4-20) or European thread, add negligible weight to your camera. Each accessory mounting plate is also socket-tapped for 1/4-20 and Euro thread tripod bushings. Separate spirit levels for each of the two principal tilt axes assure that your camera can be leveled on any terrain. **\$59.95**

3026 - Double Action Ball Joint Head

Separate, quick-acting locks for panning and tilting functions. You can position camera anywhere in a 180° hemisphere. Exclusive feature of this versatile head is quick release mounting which lets you take camera on and off quickly, yet offers positive, slip-proof fastening. **\$29.95**

Prices and Specifications Subject to Change Without Notice.

SERIES II - MOBILE MULTIPLEXER

SERIES II - MOBILE MULTIPLEXER The Film Chain Without A Dedicated Camera

Active image optical system.

The Series II Mobile Multiplexer is a free standing, compact film chain system designed to optically transfer visual dissolve programs to video systems, using two 35mm slide projectors and a 16mm projector.

Non-dedicated camera.

The television camera does not have to be dedicated to film chain use. The camera can be tripod-mounted and used on the Multiplexer with its normal zoom lens. A camera mount and quick release device are available if desired.

Normal zoom lens.

The camera's zoom lens allows precise image sizing. This includes the option of image size adjustments for mixtures of normal 35mm slides and TV format slides. No special lenses or close-up attachments are needed to enable the camera to match-up with the optical components of the Multiplexer.

A high quality, three element collimating lens system optically places the aerial image so that the video camera may be used at normal distance settings.

Built in projector lenses.

All highly corrected objective lenses for the slide projectors and the 16mm projector are built into the Multiplexer. One lens is used for the pair of slide projectors, which eliminates any magnification problems that might arise from using individual objective lenses.

Ektagraphic III slide projectors.

The Multiplexer is designed for use with Ektagraphic Series III E slide projectors. This projector features easy lamp change, is compatible with most electronic dissolve controls and only a minor modification is needed to adapt these projectors for video use.

Standard loading slide trays.

The carefully designed folded optical path allows for the 35mm slides to be loaded into the trays as for normal front projection. This eliminates the need to "flip" the slides for correct image orientation.

Because the camera has constant access to all inputs at all times, the slide projectors can be used to provide extra titles for the 16mm film.

620-100	Mobile Multiplexer	\$3000.00
	Basic unit includes mounting plate to hold 16mm projector and the optical system for 16mm films. Does not include projectors. Includes light diffusion device and neutral density filter holder for slide projectors.	
620-150	Camera mount for 620-100 Multiplexer	240.00
620-180	Floor mounting stand for MM II with leveling feet	247.50
620-182	Floor mounting stand for MM II with locking casters	261.00
620-390	Rolling cabinet for MM II, Shipped from Kansas	282.00
620-400	Ektagraphic E III for use on MM II and installed on original equipment	275.00

(412) 321-0076 (800) 245-4574

SERIES III - MULTIPLEXER

SERIES III - MULTIPLEXER

The Mobile Multiplexer III Film Chain

Designed to provide top quality transfers from three 35mm slide projectors onto video.

Space requirements.

The Mobile Multiplexer III is compact in design. Three Ektagraphic III slide projectors are placed in a stacked arrangement. Due to the projector arrangement, the actual footprint of the Multiplexer is only 2 x 3 feet.

Image alignment.

Images from the three projectors are accurately superimposed through the folded optical path. The camera has constant access to all inputs. Beamsplitting prisms are used rather than fragile pellicles or double-image producing beamsplitting plates. There are no double-image problems when using beamsplitting prisms. There are no moving mirrors to worry about.

Slide projectors.

The Mobile Multiplexer III is designed around the Kodak Ektagraphic III slide projectors. These projectors feature easy lamp access and are compatible with most electronic dissolve controls. Brightness modifiers for the three slide projectors are factory installed. Neutral density filter holders are provided should balancing filters be needed.

Alignment controls.

Easy to reach controls for alignment and fine tuning drastically cut down on initial set-up time as well as pre-transfer checking. Alignment and adjustment of each projector is precise and independent of the others.

Objective lens.

A highly corrected objective lens is used for all three slide projectors. The use of only one lens eliminates frustrating magnification problems that arise when more than one lens is used.

Collimating lens system.

A high quality three element collimating lens system optically places the image so that the video camera may be used at normal distance settings. No macro or other special lensing is needed for the video camera. The camera's normal zoom lens allows for precise image sizing. This includes the option of image size adjustments for normal vs TV format slides. The integrity of the optical video relations in the camera design is retained.

630-310 Multiplexer **\$2925.00**
Accepts 3 Ektagraphic III Slide Projectors. No input for 16mm. Does not include projectors.

630-312 Multiplexer **\$3225.00**
Accepts 3 Ektagraphic III Slide Projectors and has a 4th input port for a 16mm projector. Does not include projectors.

630-316 Multiplexer **\$2600.00**
Accepts 2 Ektagraphic III Slide Projectors.

630-150 Camera Mount **\$240.00**
Fits 630-310, 630-312, and 630-316 Multiplexers. Used for mounting the video camera instead of a free standing tripod.

CASP 1 - Six-Port

CASP 1 - Six-Port
Universal charger-analyzer-sequencer-power supply for any rechargeable battery.
12 lbs.
8 1/2" x 14 1/2" x 3 1/2"
Contact factory for non-Christie battery charge cables.

"SMT" Charger

Single Channel
Will charge one ER6, KR2, HR1***, or KS12*** battery pack in less than 20 minutes.
15 lbs.
9 1/2" x 8 1/2" x 11 1/8"
***Requires CSB8 for HR1; CSB12 for KS12 batteries.

"DM" Series Charger

Dual Channel, Multi-Purpose
Will charge any two similar ReFLEX-20 batteries above 21-25 lbs.
9 1/2" x 8 1/2" x 11 1/8"

RS1A Sequencer

RS1A Sequencer
Will charge up to 8 intermixed ReFLEX-20 batteries automatically in sequence in less than 4 hours. The Sequencer must be used together with DMB, DMBZ1, or DMBZ2 only.
11 lbs. 8 oz.
10 1/4" x 5 1/4" x 9 1/2"

TC1/TC23 Timed Slow Charger

TC1/TC23 Timed Slow Charger
TC1 will charge ER6, HR1, HR2, KR1, KR2, KS11, KS12.
TC23 will charge ER8.
20 oz.
4 1/2" x 2 1/2" x 1 1/4"
excluding wall-mount transformer.

Newspak Nickel-Cadmium Battery Systems

Newspaks combine the best features of Cine 60 Battery Belts in an On-Board Battery to provide a high quality battery for video applications. Built-in Lifeguard Cell Sensors, 50% more accurate than the commonly employed sensors, monitor temperature of the custom-matched premium quality cells more efficiently, prevent overcharge and undercharge. This exclusive design assures a longer, more powerful battery life and makes the Cine 60 Newspak the most practical high reliability battery on the market.

The Newspak mates with the standard battery bracket on the rear of most ENG cameras. It connects via an integral banana jack 'shorty' connector. As a direct replacement for OEM supplied On-Board Batteries, it is fully compatible with the OEM's Fast, Quick, or Slow Chargers. No cables, adaptors, or modifications are required. It also has an auxiliary 5-pin XLR for powering a battery light when required and which may also be used for charging with Cine 60 Chargers.

Newspak U-14

14.4V / 4 Amp.-Hr. / 4 1/2 lbs. For all Ikegami, Sony BVP Series, RCA, Thomson, Philips, CP, Harris, Ampex, and Hitachi SK81/91/97, FP-21, FP-22 Cameras. Direct Replacement for Ikegami QPY9N, Sharp XC-70/80/90 BAT On-Board Batteries.

U-14 \$435.00

Newspak U-13

13.2V / 4 Amp.-Hr. / 4 1/2 lbs. For Panasonic (except Recam), JVC, Sony DXC-M3, Sony Betacam, and all other Hitachi Cameras. Direct Replacement for Hitachi DP-40, JVC B-20, Sony BP-65AN, Panasonic SQ13F On-Board Batteries.

U-13 \$425.00

NICKEL CADMIUM BATTERIES/CHARGERS

Cine 60 VTR Batteries

The Professional Direct Replacements for Sony BP-90 and BP-60 VTR Batteries. Feature custom-matched premium quality NiCad cells and the exclusive 'Lifeguard Cell Sensors' as used in Cine 60 Newspaks and Battery Belts.

BP-912FC & BP-912S Sony BP-90 Replacements

12V / 4 Amp.-Hr. VTR Battery in heavy-duty molded case with non-shorting type connector and replaceable fuse to guard against external shorts. Both Fast and Slow Charge models compatible with Sony BC-210 and all overnite chargers for BP-90 type Batteries.

BP-912FC \$255.00

(For fast or quik charging with all Cine 60 Fast Chargers use BPA Charger Adaptor)

BP-912S Standard Charge Model \$230.00

BP-612FC & BP-612S Sony BP-60 Replacements

13.2V / 2 Amp.-Hr. rating for maximum power. Delivers up to ten times more power over its life than Sony's BP-60. Can be stored in discharged condition indefinitely. Both Fast and Slow Charge models can be charged overnite with Cine 60's BP-25C 2-position Overnite Charger.

BP-612FC \$195.00

(With Cine 60 Lifeguard Fast or Quik Chargers, use BPA Adaptor)

BP-612S Standard Charge Model \$180.00

Cine 60 Betacam Battery NP-4

12V/4 Amp.-Hr./4 lbs. The Professional Replacement for Sony's NP-1 Battery. Provides more than three times the power. Features premium quality NiCad Cells and Cine 60's exclusive Lifeguard Cell Sensors. Has automatic reset circuit breaker to guard against external shorts, 4-pin XLR for direct connection to the Betacam's D.C. input. Mates with the Cine 60 MB-4 Battery Bracket which can be mounted on the rear of the Betacam with existing screws. Run Time: 2.5 Hrs. for BVW-1, 1.6 Hrs. for BVW-3 Betacam. Can be charged fast, quik or slow with Cine 60 Chargers.

NP-4 \$275.00

(Supplied with Overnite Charger, Shoulder Strap and Belt Clip for use off the Betacam)

MB-4 Battery Bracket \$ 75.00

(For the Betacam)

LC4-914 Lifeguard 4-Hour, 4-Position Fast Charger

Has 4 independent 1 Amp Charging Channels. Each can be changed to provide single position charge rates of 2, 3, or 4 Amps. Use as a single position 1 Hour Fast Charger for 4 Amp. Newspak, OEM On-Board Battery, BP-912FC, BP-612FC VTR Batteries, Betacam Battery...or...as a 4-position, 4-hour Fast Charger for any combination of these Batteries. Requires BP3XF Charge Adaptors for OEM Batteries, BPA Adaptor for VTR Batteries, 4P-5P Charge Adaptor for Betacam Battery. Excellent line and load regulation assures a full charge. 115/220V switchable. Compact 4 1/2" x 6 5/8" x 7 1/2". Lightweight 4 lbs.

LC4-914 \$695.00

LC-914 Lifeguard 4-Hour, Single-Position Quick Charger

Compact 1 Amp. single-channel version of LC4-914 Fast Charger. Weighs 10 ozs. Charges Newspak, OEM On-Board Batteries, etc. in 4 hours. Requires same Charge Adaptors for OEM & VTR Batteries as LC4-914 above. 115/220V switchable. Size: 4 1/4" x 2 7/8" x 1 1/2".

LC-914 \$210.00

BP-2C 2-Position Overnight Charger For BP-90 Batteries

Accepts all types. Charges two overnight. Size: 4 1/4" x 2 7/8" x 1 1/2". Weighs 10 ozs. BP-2C 115V, BP-2C-220 220V.

BP-2C ea. \$105.00

BP-25C 2-Position Overnight Charger for BP-612 Batteries

Same size and weight as BP-2C. BP-25C 115V, BP-25C-220 220V.

BP-25C ea. \$105.00

630 Ninth Avenue
New York, NY 10036

NICKEL-CADMIUM BATTERY CHARGERS

"Pro" Universal Fast Chargers

Provide safe fast charging without overcharging of 6 to 30 volts (5 to 25 cell) Fast Charge type batteries. Will recharge a 4AH Battery in one hour, 7AH in 2 hours. Sensing circuits are utilized and visual indicators on the Chargers provide continual monitoring of Battery status. Manual "Start", automatic cut off at end of charging cycle. Two charge rates, Fast/Slow.

Model No.	Input Voltage	Cell Types	Charge Rates	Charge Conn.	Size	Weight

9400-UB	"	"	"	4-pin XLR	"	"

Mobile 12VDC Fast Chargers

Using the vehicle's electrical system, these models provide safe fast charging without overcharging 12 to 30 volt Fast Charge type batteries. Equipped with Charge Current Ammeter, LED Indicators for DC input & Charge Mode, "Start" Charge Pushbutton, On-Off Switch and sensing circuits to provide continual monitoring of battery status. Automatic cut off at end of charging cycle. DC Input Cord 3 ft. long terminated in AMP lugs for connection to Car Battery or Fuse block. Will recharge a 4AH battery in 1 hr., a 7AH battery in 2 hrs.

Model No.	DC Input Volts/Amps	Cell Types	No. of Cells	Charge Rate	Charge Conn	Size	Weight

CBP-2J/220	220V 50/60Hz	"	"	"	"

Single Overnight Chargers

These line-isolated desk type chargers are available for replacing inefficient Nickel-Cadmium Battery Chargers. Each provides a full charge in 14 to 16 hours at the C10 charge rate. Each is equipped with a LED Charge Indicator, 5-pin XLR Charge Cable. C10 Chargers for different Battery Voltages, Charging Rates, and/or Charge Connectors can be made up on special order. To denote a 4-pin XLR Charge Cable for any charger listed below, add the letter "B" to the end of the model number. Charger input is 115V/V 50/60Hz. For 220 V Chargers add suffix -220V to Model No.

Custom Packaging and Assembly

Cine 60 packages and assembles Nickel-Cadmium Cells and Battery Chargers into special Packs or Belts to meet your specific requirements. Complete services are available.

Battery Dememorizer

Nickel—Cadmium battery 'memory' is created by the build-up of excess crystals in the cell. Repetitive long periods of overcharging and shallow discharging can bring about this condition of apparent loss of capacity. The Dememorizer, properly used, will break down the excess crystals in the cell thereby restoring the apparent capacity loss. In the process it will also rebalance the cells to improve the battery's performance. Model No. DM-1214: equipped with solid-state constant current drain device, voltage sensor, automatic voltage cut off circuit, voltmeter, voltage selector, pushbutton 'start' switch. It will dememorize 12V and 14.4V 1.5 Amp to 20 Amp Batteries.

Battery Cables

Elasticity and rugged hard use is assured by the quality of these cables. Coiled types retracted are 11 inches long, extended 6 ft. They are supplied with OEM connectors. When the equipment's DC input connector is of the non-locking type, straight 6 ft. long cables are specified.

LIFEGUARD SOFBELTS/PACKS/ STANDARD SOFBELTS

Features

- 115/230 Volt built-in Lifeguard switchable charger. Fully charges 4A or 8A Lifeguard Sofbelts or Packs in 4 hours, 7A or 14A units in 7 hours. Automatically switches to Lifeguard mode to keep battery fully charged.
- Thick-walled, cell-fitted, injection-molded, Sofbelt battery modules protect cells and intercell connections against harsh field abuse.
- Agelessly flexible, soft body-molded, foam-cushioned belt assures lifetime comfort. Soft rounded edges extend beyond mounted battery modules to conform to body contours.
- Individually calibrated precision ceramic cell sensors prevent overcharge, insure full charge.
- Switchable models, 14 volt for Camera, 30 volt for Light

Lifeguard Sofbelt/Battery Pack Data

All Lifeguard Battery Packs utilize the same components used in the 'Lifeguard' Sofbelt.

Battery Protection:

Precision cell sensing system assures full charge without overcharge. Automatically discontinues charge mode when full charge is reached.

'Lifeguard' rate prevents self-discharge, heat build-up.

Automatic reset circuit breaker disconnects battery from load in case of an external short.

Non-resettable thermal fuse.

All 'Lifeguard' Sofbelts, Packs, and Standard Sofbelts may be fast charged with Cine 60's 'Lifeguard' Fast Chargers Models LC4-914, LC4-930, or 'Pro' Chargers Models 9400, 9400-U, Car Chargers Models 94DC12A, 94DC30. Standard Sofbelts have same features and construction of 'Lifeguard' Sofbelts except that the built-in charger is a 14 hour overnite charge type and operates from 115VAC. 220 Volt operation is optional.

Built-in 'Lifeguard' Charger

Charge Time: 4 hours for 4 Amp & 8 Amp Batteries, 7 hours for 7 Amp & 14 Amp Batteries.

Charge Rate: 1 Amp, 'Lifeguard' Rate: 150mA

Regulation: Line and load regulation

Construction: Line-isolated, High Frequency System

Charger Cord: Integral

Operating Voltage: 95-135V/190-250V Switchable

BATTERY BELTS & CHARGERS FOR PANASONIC & JVC CAMERAS

Why . . . Cine 60's Battery Belt?

- You wear it. It's not carried. More comfort. Better balance.
- More power than attached equipment batteries
- Longer life. It will outlive any Pack style nickel-cadmium battery because of extremely low cell-to-cell heat transfer.
- Always full battery power in cold weather by wearing it under clothing.
- Equipment becomes easier to carry by eliminating attached battery's weight.
- Unimpeded freedom of movement assured by uniform weight distribution.
- Versatility. A Battery Belt can be used to run any equipment that is battery-powered. It never becomes obsolete.
- It can live forever. As battery parts wear out, they can be replaced from the most complete Battery Parts Inventory ever maintained by a battery manufacturer.

Battery Belt Specifications

There are two types of Battery Belts, the Standard Battery Belt (cannot be fast charged), and the Fast Charge Battery Belt. Both have 115 volt built-in overnite chargers and are equipped with circuit breakers. Fast Charge Battery Belts, Series 'FC', are equipped with precision ceramic 'Lifeguard' cell sensors for fast charging 'FC' Battery Belts.

JVC Battery & Battery Charger Selector

These Cine 60 batteries are designed specifically for running JVC Cameras and VTRs. On-Camera Batteries for JVC's KY310, KY900, KY950 and KY1900 Cameras are equipped with an integral T-fitting that permits mounting directly on the Camera. No bracket is needed. On-Camera Batteries for the KY2000 and KY2700 Cameras come with 3 studs for snap mounting on the keyhole accessory bracket furnished by JVC. Connection to the camera's DC input is made with a short XLR pigtail cable included with the battery. In addition they are equipped with an auxiliary 5-pin XLR connector which can be used to power a 12 Volt Sun-Gun or battery light at the same time the camera is being powered. Alternately, when the camera is operating off the VTRs battery, this feature permits the use of the On-Camera Battery to run the Sun-Gun exclusively. All camera batteries are 12 Volts 4 Amp-Hours and

with the appropriate Cine 60 battery cable may be used off the camera to run other 12 Volt equipment. Because of the precision ceramic 'LifeGuard' cell sensors used in these batteries, they may be safely and fully charged with various types of Nickel-Cadmium Battery Chargers including JVC's AC Adaptor Chargers #AA-C50-U and #AA-C19-U. Cine 60's Battery Chargers with Charging Adaptor may also be used to safely and fully charge JVC's Nickel-Cadmium Batteries. When in areas where AC power is not available for battery charging, Cine 60's 12 VDC Mobile Car Fast Chargers can be used for charging JVC's and Cine 60's Nickel-Cadmium Batteries. JVC's #AA-C50-U and #AA-C19-U AC Adaptor Chargers can be used for charging Cine 60's Batteries. #BAC-19 Charge Adaptor is required. Charge Time: For Cine 60 OB Batteries — 1½ Hrs. with #AA-C50-U; 2 Hrs. with #AA-C19-U.

AMPEX/PANASONIC BATTERIES/CABLES

Ampex/Panasonic Battery Data

These batteries, with the specified battery cables, will operate the Ampex and Panasonic equipment listed below. The run time figures given are based upon the manufacturer's power ratings. Temperature, state of charge, and other factors vary these figures. The Battery and Cable Data for the Ampex ARC-10 and Panasonic AU/AK100 Recams is the same. Later versions of Panasonic's WV-777, WV-888, WV-555 cameras may have a 4-pin XLR DC input connector. If so, use Cine 60's #6408 Battery Cable for these cameras, not those listed below.

Cine 60 Ampex/Panasonic On-Camera Batteries

Cine 60 On-Camera batteries feature battery belt style construction. This results in substantially less cell heat generation as compared to conventional battery packs or blocks, thus providing considerably longer battery life. All On-Camera, CC types are equipped with a 5-pin auxiliary power output plug that can directly power Cine 60's 14.4 Volt Sun-Gun at the same time the camera is being powered from an integral pigtail which mates with the Panasonic or Ampex DC input connector. Batteries will mount on Panasonic's or Ampex's OEM keyhole brackets and may be recharged with the OEM banana plug equipped battery chargers using Cine 60's #BF3XM Charge Adaptors. On-Camera battery #OC-14, 14.4V is used on the Ampex FPC-10 and Panasonic AK100 Cameras. #OC-13P, 13.2V is used on all other Panasonic cameras equipped with the #WV-PS35S Battery Bracket. Refer to 4 Amp column above for run time.

SONY BATTERY BELTS/ PACKS/CABLES

Sony Battery Belt/Pack Data

The various batteries listed below provide a long-lived reliable source of power for Sony equipment. The battery cables specified provide connection of all Cine 60 batteries to the DC inputs of the Sony equipment. Run time (per charge) is based upon Sony's operating voltages and power ratings. Temperature, state of charge, and other factors may vary these figures.

In place of the 12 Volt and 13.2 Volt batteries listed below, a new device, Cine 60's Model No. VR-X in-line Voltage Adaptor permits using 14.4 Volt batteries instead. Connected in-line, it converts 14.4 Volts to 13.5 Volts. With it, a 14.4 Volt battery can be running a Betacam at 13.5 Volts while simultaneously powering the new low-drain camera-mounted 14.4 Volt Sun-Gun with 14.4 Volts

Use of the VR-X minimizes the need for 12 Volt or 13.2 Volt battery power in the facility to run Sony equipment rated at 36 Watts or less; enhances the use of 14 Volt Sun-Guns (drain 4.86 Amps vs. 8.33 Amps for 12 or 30 Volt Sun-Guns, a power savings of over 3.4 Amps...enough power to run a Betacam an extra 2 hours); broadens the application of Cine 60's switchable 30V/14V Batteries for most battery power requirements.

This Cine 60 concept of using 14.4 Volts for all Sony Cameras, VTR, and lighting power needs provides a practical approach to reducing the cost of battery power while maintaining the high standard of reliability and long life.

RCA BATTERIES/CABLES/ POWER SUPPLY/ACCESSORIES

RCA Battery Belts/Packs/On-Camera/VTR Battery Data

These Battery Belts, Packs and On-Camera Battery are for operating RCA's cameras, camera/recorders, and HR-1020 recorder on 14.4 Volts. Original RCA battery cables will mate these batteries' power output connector. RCA's Charger MI-557117B1 (Cine 60's #9400B) can be used to charge the 4A and 7A Belts and Packs as well as the OB4-14 Camera Battery. It can also be used to recharge the 8A and 14A batteries (which utilize an XLR 5-pin charge connector) by converting the Charger's 4-pin XLR to a 5-pin XLR with Cine 60's connector adaptor #4P-5P. Similarly Cine 60's Cat. No. 9400 Charger's 5-pin XLR connector can be adapted to 4-pin with the Cat. No. 55P-44P connector adaptor to permit its use with RCA's batteries. The Run Time (per charge) figures given below are based upon RCA's power ratings. Temperature, state of charge, and other factors may vary these figures. Cine 60's Cat. No. 94AC14 AC Power Supply is designed to operate the RCA equipment listed below using the specified power supply cable.

On-Camera Battery, #OB4-14

For all RCA Cameras. Mounts on any key-hole type battery bracket. Equipped with 4-pin XLR connector for power output. Requires shorty cable from battery to camera's DC input. Battery Belt style modular construction for maximum cell cooling provides longest life. Reliable XLR connection for trouble-free operation. Refer to 4A column above for Run Time and Battery Chargers. Use #LC4-914B for recharging 4 batteries in 4 hours; #9401-4 for 14 hour overnite charging. Shorty Cable #SHB-6476 for TK-76 Cameras. #SHB-6486 for TK-86. HC-1, HC-2 Cameras, #SHB-6478TK for TK710 Camera.

#NMB-76

On-Camera Battery Bracket for TK-76 Cameras. All metal type. Supplied complete with hardware. No camera modification required.

#94AC14 Power Supply

Switching type, line/load regulated, remote sensing, well-filtered. Input: 110/220V 50/60Hz. DC Output: 13.5V 4 Amps continuous; 5 Amps intermittent; 8 Amps momentary. Output Cable: Plug-in 8 ft. long. Dimensions: 4 3/4" x 3 1/2" x 8 1/2". Weight: 5 lbs. with 12 ft. input cable.

Prices and Specifications Subject to Change Without Notice.

VC-45

Battery Belt/Pack Data

These batteries provide a long-lived, reliable, trouble-free, and economical source of power for the Hitachi, Sharp, and Thomson equipment. Run Time (per charge) is based upon the manufacturer's power ratings. Temperature, state of charge, and other factors may vary these figures. The battery cables specified provide connection of all Cine 60's batteries to the external DC inputs of the listed equipment. Cine 60's Switchable Battery Belts or Packs in lieu of those listed below. The Switchables provide 8/14 Amps of power for camera/VTR, and 14.4V Sun-Guns as well as 30V 4/7 Amps of power when needed for 30V Sun-Gun operation.

Why... Cine 60's Battery Belt?

- You wear it. It's not carried. More comfort. Better balance
- More power than attached equipment batteries
- Longer life. It will outlive any Pack style nickel-cadmium battery because of the extremely low cell-to-cell heat transfer
- Always full battery power in cold weather by wearing it under clothing
- Equipment becomes easier to carry by eliminating attached battery's weight
- Unimpeded freedom of movement assured by uniform weight distribution
- Versatility. A Battery Belt can be used to run any equipment that is battery-powered. It never becomes obsolete.
- It can live forever. As battery parts wear out, they can be replaced from the most complete Battery Parts Inventory ever maintained by a battery manufacturer.

Equipment Run Time (In Hours)

Run Time (per charge) is based upon the manufacturer's power ratings. Temperature, state of charge, and other factors may vary these figures. The battery cables specified provide connection of all Cine 60 batteries to the external DC inputs of the listed equipment. Those having the letters 'OE' in the catalog number signify that the cable is open ended and requires the manufacturer's mating DC cable connector.

#6312

12 Volt Double-Duty Battery Packs

Equipped with two (2) 5-pin XLR power output connectors to provide the convenience of two batteries in one. Supplied with the charger built-in the 8, 10, 14, and 20A models, external with the 4A and 7A models which also feature battery belt style construction for longer life. A built-in 15 Amp Automatic Reset Circuit Breaker protects the equipment and the battery in case of an 'external' short. Available in standard charge only. The 20A model has a handgrip. All other models come with a shoulder strap and handgrip.

Battery Rating	Catalog #	Dimensions	Weight

Swintek Communicator Battery Pack

Swintek Communicator Battery Pack. Will run Swintek 12 hours on one charge. Has built-in Overnite Charger, Charger Cord, Automatic Reset Circuit Breaker. Comes with integral 2 ft. long battery cable terminated in 5-pin XLR which mates with Swintek connector. 12 Volt 1200 mAH rating. Weighs 2 lbs. Measures 1 3/8" x 4 1/2" x 5 3/4". With built-in Belt Loop, it can be worn on pantsbelt. Catalog No. S-1200.

Canon Lens Battery Pack

Permits remote servo focus lens operation using battery power. Will operate Lens for approximately 5 hours on one charge. Has built-in Overnite Charger, Charger Cord, Automatic Reset Circuit Breaker. Battery-to-Lens power cables available. One for remote servo focus operation from a distance of 4 ft.; the other, from a maximum distance of 12 ft. Comes with shoulder strap and waistbelt loops. Weighs 2 lbs., measures 2" x 5 1/2" x 6". Battery Power Cable Cat. No. 4LCA ft. length; No. 12LCA 12 ft. length. For J13X9B & J15X9S Lens. Cat. No. PP13/15.

Snaplok Mount

Mount your camera or device in a second. Consists of a precision machined dovetail plate for the camera or device and an interlocking base assembly for the tripod, shoulder pod or support. Allows quick mounting and removal. Once the dovetail plate has been attached to the camera or device and the interlocking base to the support, tripod or shoulder pod, no screws, cranks or levers are required to instantly mount or demount the camera or device. Two models are available, Cat. No. 6700 for medium to heavy weight equipment and Cat. No. 6701 for lightweight equipment.

Shoulder Pods

Lightweight. Adjustable to most body sizes, with soft cushioned shoulder and body supports. Fully adjustable to keep camera in perfect shooting position. Easily removable between takes. Cat. No. 6758-BL for Arri 16BL, 16SR & most flat base video cameras. Requires Arri Offset Eye Piece. Cat. No. 6758TK Same as 6758-BL except that body pad comes down to abdomen. For TK76 and similar Video Cameras. Cat. No. 6750 for Arri 16 and similar flat base cameras. Cat. No. 6751 for Arri 35.

Focusing Device

Cat. No. 6504. For uninterrupted easy follow focusing by camera man or assistant. Includes 3 interchangeable lens scales and 3 lens gears.

Offset Motor Base

A gear box providing a flat camera base and low center of gravity for Arri 35. Essential for professional tripod mounting. Cat. No. 6900 - Mounts constant or variable speed motors next to camera eliminating need for hi-hat. Cat. No. 6900A - Same as #6900. But with built-in contacts for automatic clapstick on Arri 35IIC-GS.

Zoom Drives

Remarkably compact zoom motors. Provide smooth, economical, variable speed zooming at the touch of a button. Complete with transistorized, rechargeable power supply/hand control unit.

Cat. No. 6601 for Angenieux 12-120
Cat. No. 6602 for Angenieux 12-240
Cat. No. 6603 for Angenieux 25-250
Cat. No. 6604 for Angenieux 9.5-95
Cat. No. 6605 for Angenieux 9.5-57
Cat. No. 6606 for Canon 12-120
Cat. No. 6607 for Zeiss 10-100
Cat. No. 6608 for Angenieux 10-150
Cat. No. 6354 Replacement Charging Cord for power supply
Cat. No. 6355 Replacement Zoom Cable

Cat. No. 6910 'C' Lens Mount Adaptor
Cat. No. 6910B 'Bayonet' Lens Mount Adaptor

Lens Mount Adaptors

Precision machined lens mounts permitting the use of Arri mounted lens on cameras with 'C' mounts and 'Bayonet' mounts.

Bealieu Battery Pack

Direct replacement for Bealieu battery. 1200mAh capacity provides approximately 2000 ft. pr charge. Compact 4 1/2" x 1 1/2" x 3". Weight 1 lb. Equipped with built-in charger, charging cable, camera power cable and carrying pouch permitting wearing it on the waistbelt. Cat. No. 9000-B

2AH 16SR On-Board Battery

Custom-designed with special 2AH Cells providing a 30% increase in run time per charge. Totally compatible with Arri SR system. No adaptor, special mounting, or special connections required. Double Charger will recharge two batteries in 7 to 8 hours. At end of full charge, the charging channel cuts off automatically. Battery Cat. No. 12V/2A Weight: 2 lbs. Dimensions: 2 1/2" x 3 5/8" x 4 1/2" Dual Charger Cat. No. D-NC2000 Input: 110/220V Automatic Controls: (per channel) LED/Start Button, Automatic Cut Off Weight: 1 1/2 lbs. Dimensions: 2" x 3 1/2" x 4 1/2"

6 Ft. Coil-Cord Battery Cables

6401S For Arri 16S with 2-pronged molded plug
6401S-5 For Arri 16S with 5-pin battery connector
6401M For Arri 16M with 2-pronged molded plug
6401M-5 For Arri 16M with 5-pin battery connector
6401BL For Arri 16BL with 4-pin battery connector
6401BL-5 For Arri 16BL with 5-pin battery connector
6401SR For Arri 16SR, 35BL 35-III Cameras
6402V For Arri 35 for variable speed motor
6402V-5 For Arri 35 with 5-pin battery connector
6402C For Arri 35 for constant speed motor
6402C-5 For Arri 35S with 5-pin battery connector
6403 With 5-pin Canon on 1 end, with other end open for equipment mating connector

Cables not listed can be made to special order.

Clear-Com has everything you need to put together a reliable, versatile intercom system...there's no other that can match the results of our 15 years experience providing multi-channel communications to theatre, television, musical, commercial and industrial facilities.

HARD-WIRED INTERCOMS

- 1-8 channels
- portable, console and rack-mount stations
- circuit breaker-protected, no-fail power supplies
- volume and sidetone controls at every station
- interconnect with standard mic cable
- 4-channel intercom with 12 x 4 assignment matrix
- pre-settable talk and listen monitor functions
- visual "call" signalling
- stage announce and remote paging

BATTERY-POWERED INTERCOMS

- ideal for ENG, EFP, and other remote applications, indoors or out
- portable system runs on 12-32 volts DC
- rugged, lightweight belt-packs; 1- or 2-channels

SYSTEM INTERFACES

- rack-mount and portable
- interfaces Clear-Com with any 2-, 3-, or 4-wire cameras and lines
- individual "transmit" and "receive" controls
- headset test tones for system balancing
- AC-10H holding coil lets you answer telephone without lifting receiver
- RTS-type system interface

INTERCOM HEADSETS

- complete range of styles for all low- or high-noise environments
- lightweight and rugged
- built-in mic switches in flexible booms
- binaural or monaural headphones

WIRELESS INTERCOM INTERFACE

- partial full-duplex base station
- 1/4 mile range
- "call" signalling
- interfaces with hard-wired intercoms

IFB SYSTEM (PROGRAM INTERRUPT)

- designed for studio or remote applications
- perfect for sportscasters, news commentators, musicians
- accesses up to 8 talent
- one or two channels of program, select between continuous or interrupted feed
- compact Talent Receiver with miniature earphone
- "split-feed" Talent Receiver with binaural headset output
- rack-mount IFB Controller
- works with all Clear-Com Intercoms

2850C

MODEL 2850C LOW LIGHT, SELF CONTAINED ENVIRONMENTAL TV CAMERAS

- Fully Automatic Operation —
Automatic 640,000 to 1 Light Range, Beam Control, Black Level, Gain Control with 20 dB Range and Bandwidth Reduction, plus Remote Control Capability
- Gamma Correction —
Selectable 0.35, 0.5, 0.7 or 1.0
- 700 TV Lines Horizontal Center Resolution
Resolves 10-Shade Gray Scale with 0.05 Lumens/ft² Highlight Illumination on Image Tube Faceplate
- Underscan and Overscan Capability . . . White Peak Clipping . . . Internal EIA RS-170 or CCIR Sync, Jumper Selectable
- Peak to Average Detector for Automatic Light Control
- Dual 75-Ohm Selectable 1 or 1.4 Volt Video Outputs
- Environment-Resistant, Sealed Housing with Purge Fitting, Operates under Adverse Conditions and Down to -40°C
- Genlock
- Bright Light Limiter to Prevent Camera Being "Blinded"
- Options —
Screen splitter for Multiple Camera Display
Cable Pre-Equalizer for Output No. 1 Gives 4.5 dB of Signal Increase

The Cohu Model 2850C Low-Light Television Camera is designed for reliable, unattended, continuous-duty operation in a wide variety of day and night monitoring or surveillance applications such as encountered in airports, factories, parking lots, gates, tunnels, bridges, and traffic areas. The cameras will operate automatically in light levels ranging from bright sunlight to moonlight. A camera can be aimed at direct sunlight, without damage to the tube target, and then aimed at a low-light level area and produce a clear, crisp picture.

A Bright Light Limiter circuit allows full camera performance under conditions where blooming from intense scene highlights would otherwise make the picture unsatisfactory. The level and amount of scene highlights affected are adjustable. Highlight level can be set from black to maximum white for best contrast and resolution. This feature makes the 2850C well suited for nighttime applications where automobile headlights, a bright light being turned on, or a flashlight or spotlight can cause accidental or deliberate "blinding" of the camera.

Adverse environments (wet or dry, and hot or cold) do not affect the operation of the cameras; they are self-contained and enclosed in environment-resistant housings. In addition to being environment-resistant, 2850C camera housings are tamper-proof; they have no exposed controls.

The camera has a fully automatic black level compensation system to provide high contrast video over the light level range. Maximum accuracy of picture black level and white level is maintained with a keyed clamp that compensates for image tube dark current variations as a function of the ambient temperature. An adjustable white peak clipper limits video amplitude.

Automatic operation and remote control capability are standard features on 2850C cameras. An automatic sensitivity control adjusts a motorized iris on the lens and adjusts the video gain for an optimum picture over a wide range of scene illuminations. The iris can also be remotely controlled for manual operation in specific applications. A peak-to-average detector allows the automatic sensitivity circuitry to be set at full peak detection or full scene average detection, or any point in between. Optional remote controls are available for variable focal length (zoom) lenses and accessories such as pan and tilt units.

SYNC OPERATION (factory installed)

- 2800C-200 EIA RS-170
- 300 CCIR
- 500 Crystal Controlled EIA RS-170
- 600 Crystal Controlled CCIR

ACCESSORY OPTIONS (factory installed)

- 2800C-700 Screensplitter
- 900 Cable Pre-Equalizer
- 071 Front Removal Kit

COHU, INC.

HIGH-RESOLUTION TV/ CAMERA SYSTEMS

8000 Series

Designed for reliable, unattended, continuous-duty operation, the Cohu 8000 series High Resolution Television Camera System provides maximum stability, detailed video information, superior corner resolution, and optimum flatness of field. This versatile system has a separate lightweight camera head and modularized camera control unit.

Typical applications which are ideal for use of the 8000 High Resolution System include virtually any instrumentation or monitoring need in medical, scientific, and industrial fields. The convenient small size and weight of the camera head allows interface with delicate instruments, such as laboratory microscopes. This "go-anywhere" convenience of the camera head, plus the ability to remotely locate the control unit through a single cable connection, suits numerous industrial closed-circuit television applications including inspection, measurement, and test chamber monitoring purposes.

FEATURES:

- **1" IMAGE TUBE** for superior resolution quality.
- **AUTOMATIC SENSITIVITY** over 10,000:1 light range.
- **FULLY SOLID-STATE**, with exception of image tube.
- **FET INPUT** for clear, crisp, low-noise video.
- **CHOOSE:** Up to 1749 lines/frame.
- **8, 16, or 32 MHz BANDWIDTHS**, selectable.
- **FRONT PANEL CONTROL** of target, beam, focus, black level, and power.
- **RENDERS ALL 10 EIA GRAY SHADES** with only 0.05 footcandle illumination on image tube faceplate.
- **LESS THAN 1.5% PICTURE DISTORTION.**
- **ADJUSTABLE** Overscan and Underscan, White Peak Clipper, Gamma/Black Compressor, and Output Video.
- **CCU CAN BE UP TO 2000 FEET** from camera head.
- **FULLY PROTECTED** with regulated power supplies and automatic beam cut-off in the event of sweep failure.
- **TWO BNC VIDEO OUTPUT CONNECTORS.**
- **OPERATES ON 115/230 VAC, 50/60 Hz.**

OPTIONS:

- **VARIABLE SCAN RATE GENERATOR MODULE** with jumper selectable line-locked or crystal controlled synchronization.
- **BLANKING GENERATOR MODULE** operates from external sync pulse or EIA RS-170, 330, or 343 video signal.
- **SHADING CIRCUIT** corrects for non-uniform response of lens and image tube.

ORDERING INFORMATION

NOTE: When ordering, specify EIA RS-170 or CCIR sync.

VIDEO CARRYING CASES

Aluminum-covered wood carrying cases provide maximum protection at the lightest weight and lowest cost.

CVC-300-B1 For all portable Beta and VHS recorders with AC adaptor. Comes with partition that allows using the case with many different video units. **\$139.95**

CVC-400-VHS For all VHS and Beta Series II. **\$135.95**

CVC-500E THE EVERYTHING CASE. Comes with layers of foam that allow you to cut out and custom fit cameras, decks, lenses, etc. to suit your needs. **\$139.95**

Outside dimensions of above cases (not including hardware): 21" L x 16-1/2" W x 7-1/4" H. Weight 16 lbs. Inside dimensions: 19-3/4" L x 15" W x 4-1/2" H.

UNIVERSAL-POLE SYSTEM

Unique lightweight pole system that offers unlimited possibilities for supporting lights, backgrounds or cameras. Poles and special clamps set up quickly and can be used floor to ceiling or horizontally between two walls.

Model No.		Closed	Fully Extended	Price
CUP-1	Set of two Universal-Poles	47"	70"	\$ 99.00
CUP-3	Set of two Universal-Poles	8'8"	11'	119.00

Extensions interconnect for longer lengths.

COMPU=PROMPT™

Color Computerized Prompting Systems

OPERATOR'S CONSOLE

Microcomputer—8 bit, 6502 based, 2MHz, 64K RAM, (CP-1000 series) 128K RAM (1130XM series), certified to comply with FCC class B limits, Part 15, silent operation.

Operator's Monitor—7" full color with tuner and video inputs and outputs.

Controller—Hand-held, cable may be extended, continuous speed control, speed ranges from 1/2 line to 30 lines per second, forward or reverse, start, stop, reset stopwatch.

Software—COMPU=PROMPT: disk, ROM cartridge, instruction manual, training guide. Word Processor: ROM cartridge, instruction manual.

Text Buffer—CP-1000 series: holds over 1000 lines of text, approximately 20 minutes reading time before needing to reload additional text from disk. CP-1130 XM series: 5500 lines of text, 1 hr. 40 minutes reading time.

Floppy Disk Storage—Disk drive (for text storage) 5-1/4" single sided, double density, 96 or 180 kilobytes.

Automatic Text Formatting—Formats 20 character lines, will not break up words, choice of left-justified or centered text.

Character Set Editor—Operator can create original fonts to be saved to disk and loaded as needed. Several prepared fonts are included, such as Spanish, French, Japanese and several English-style fonts.

On-Screen Indicators—Stopwatch/timer to 1/10 second, line counter, relative position indicator.

Editing—COMPU=PROMPT: On-screen line editor, insert/delete/replace. Word Processor: insert/delete/replace characters, move, duplicate, delete blocks of text, and search and replace.

Random Access—Instant reset to beginning of text, instant access for up to 35 pre-set text locations.

Find—Enter up to 20 characters and instantly find the first occurrence in the script.

Printer (optional)—Several models available, print speed up to 160 characters per second.

Printer Interface—Centronics standard parallel with 4K buffer.

Modem Communications (optional)—Standard ASCII code. 300 or 1200 baud optional.

RS232C Serial Interface (optional)—for use with modem.

Video Distribution Amplifier (optional)—Provides clean video signal to additional monitors (one input, four outputs). If more than four outputs are necessary, additional amplifiers can be cascaded.

Power Requirements—110V AC 60 Hz.

Power Consumption—139W

Video Output—1V p/p, noninterlaced NTSC compatible color composite video.

Case—ATA-rated with wheels, converts to operator console.

Dimensions: 26"H x 14.5"D x 19.5"W

(66cmH x 36cmD x 49.5cmW)

Weight: 37 lbs., (16.8 kg)

System Weight (in cases)

CP-1000: 75.5 lbs., (34.2 kg)

CP-2000: 151 lbs., (68.4kg)

OPERATOR'S CONSOLE

COMPU = PROMPT
DELUXE COLOR CAMERA
MOUNT SYSTEM

DELUXE COLOR CAMERA MOUNT SYSTEM

Quick Setup—The COMPU=PROMPT Camera Mount System was designed with a small 7" x 6" baseplate which can conveniently be left on the camera when the prompter is not in use. Once the plate is attached, mounting or removing the system is done in 2-3 minutes.

Compatible With Virtually All Camera Systems—COMPU=PROMPT's mount is completely adjustable on all axes, allowing a wide variety of cameras and lenses to be accommodated.

Balanced Mounting System—Every size camera will remain perfectly balanced thanks to the ingeniously adaptable counter-weight system created by COMPU=PROMPT.

Easy Access To Lens—COMPU=PROMPT's swing-away mirror allows access to the lens for lens changes or cleaning.

Compact Design For Easy and Safe Storage—COMPU=PROMPT's specially designed beamsplitter assembly and anti-glare hood fold flat for storage.

MONITOR

- 14" full color, 24.4 lb., (11.1 kg.)
- Modified to increase contrast and enhance readability.
- Normal or mirror-image display controlled by rear-mounted switch.
- Overscan switch vertically enlarges text on the display screen by 30%.
- Power and video supplied to monitor via duplex cable consisting of 18 gauge grounded power cable and Beldon RG59 video cable attached every 18".
- Power requirement: 110V 60 Hz.
- Power Consumption: 58W
- Video Input: 1V p/p NTSC compatible color composite video.

BEAM-SPLITTER ASSEMBLY

- Anti-glare Hood: Made of black Velcro cloth and aluminum, adjustable on three axes.
- Reflective Glass: Negligible optical distortion, 1/2 stop light loss, 70% transmission, 30% reflectance.
- Weight: 5.75 lbs., (2.6 kg.)

COUNTERWEIGHTS

- Lead weights with lockdown knob.
- Weight: 22 lbs. each (10 kg.)

CASES (optional)

COMPU=PROMPT Deluxe Camera Mount System is contained in two ATA-rated cases.

Large case has wheels and contains monitor, steel rods, cables, hood and mirror assembly.

Dimensions: 22.5"W x 20.5"D x 23.5"H

(57cmW x 52cmD x 60cmH)

Small case contains brass rods, camera mount baseplate and counterweights.

Dimensions: 13.5"W x 11"D x 10.5"H

(34.5cmW x 28cmD x 26.5cmH)

SHIPPING WEIGHT

Large Case: 84 lbs., (38.1 kg.)

Small Case: 79 lbs., (35.8 kg.)

OLYMPIC

BATTERY BELTS (With Built-In Chargers)

**OLYMPIC L-13 12V, 13 AMPERE-HOURS
(C4457) \$279.95**

**OLYMPIC L-20 12V, 20 AMPERE-HOURS
(C4459) \$329.95**

These are the Finest Portable Power Sources available, with extra capacity for extended on-location use. They are made of top quality materials throughout, are very comfortable to wear and are extremely easy to operate and to recharge. Batteries are New Advanced-Technology Cells, made by Panasonic, which provide more running time per ampere-hour than batteries previously available. All components are Zipper-Accessible, and zipper has double closure devices so you can operate it from either end. Inner surfaces of belt are lined with a "Silky" material, for wearing comfort and to prevent friction damage to clothing. Two alternately-flashing

LED Indicator Lights tell you when batteries need recharging. Older belts rely on mechanical-movement meters, which are easily damaged by dropping. Our Solid-State Electronic System is virtually shock-proof. Output receptacle is cigarette-lighter type. Battery charger is built into the belt, you can't misplace it or forget it! Use these belts to power your light (or lights) alone, or to power your video camera and VCR, along with your light. You can power a 75-watt lamp for almost three hours with the Olympic L-20, and for almost two hours with the L-13 Model.

VIDEO AND PHOTO LIGHTING GUIDE

*There are many more accessories available for the Mini-Cool than those shown on these three pages. Our complete line is illustrated in the **Cool-Lux Professional Lighting Guide**, a unique introduction to Video Lighting and the Mini-Cool System. This informative document (16 pages, full color) can save you many times its modest cost. To get your copy, send \$3.50 to the address below. We will include a **FREE Certificate** worth \$5.00 on any purchase of Mini-Cool Lights or Accessories.*

205 BVH UNIVERSAL FLUID HEAD

- Positive Tilt lock - Tilt Tension Control in addition to a full fluid system.
- Autoslip[®] provides self-adjusting breakaway free pan (no knobs to adjust). Allows smooth starts and stops on all pans, even fast "swish" pans.
- Extremely smooth pan and tilt movements.
- Camera platform 5 1/4" x 3 3/4"
- Leakproof and dustproof sealing.
- 3/8" - 16 camera screw
- Head weight 8 pounds.
- Hydralok[®] concentric, hydraulic tilt lock/tension device insures safe locking in any position.
- Designed to accept dual handles, second handle optional

\$1164.00

F-10 FLUID HEAD

Load Capacity 10 lbs.
 Tilt Angle 90° Up-90° Down
 Pan Rotation 360°
 Height 4 1/2"
 Width Overall 3 1/2"
 Length 2"
 Weight 1-1/3 lbs.
 Platform Size 2" x 2 1/2"
\$59.00

MODEL FM-25 FLUID HEAD

Load Capacity 25 lbs.
 Side Tilt 90° either side
 Pan Rotation 360°
 Height 5"
 Weight 5 lbs.
 Platform Size 4" x 4 1/4"
 Features • 2 yr. warranty
 • Dual handle capability
 • Easily visible bubble level gauge
 • Extremely smooth pan & tilt movements w/2 handles
\$215.00

MODEL FM-15

Same as FM-25 but with lighter viscosity fluid for cameras under 15 lbs. **\$215.00**

MODEL H-4 SPRING HEAD

Load Capacity 25 lbs.
 Tilt Angle ± 60°
 Pan Rotation 360°
 Height 4 1/2"
 Width 2 1/2"
 Length 4 1/2"
 Weight 3 1/2 lbs.
 Material & Finish Black Anodized Alum.
 Features • 1/4"-20 Camera Screw
 • Dual Counterbalancing Springs
 • Pan Handle locks both tilt and pan

\$99.00

MODEL CC CRADLE HEAD

Load Capacity 25 lbs.
 Tilt Angle ± 45°
 Pan Rotation 360°
 Height 6 1/4"
 Width 8"
 Length 9"
 Weight 5 lbs.
 Material & Finish Black Anodized Alum. and Plated Steel Cradle

- Features • Removable and adjustable camera platform for easy installation and perfect balance. Holds tilt without camera dumping

\$84.00

MODEL DSLA LEVELING ADAPTOR

Load Capacity 50 lbs.
 Leveling adjustment +5°
 Height 3 1/2"
 Diameter 6 1/2"
 Weight 2 lbs.
 Material & Finish Black anodized aluminum

Quick and easy action. Locks securely. **\$140.00**

MODEL MH-1-S SPRING HEAD

Load Capacity 30 lbs.
 Tilt Angle 60° Up-90° Down
 Pan Rotation 360°
 Height 6"
 Width 3 1/2"
 Length 6"
 Weight 4 1/2 lbs.
 Material & Finish Black Anodized Alum.

- Spring loaded tilt to prevent camera dumping
- Pan and tilt lock independently of each other
- Pan handle with adjustable angle fits either side
- Leveling base allows 5° tilt in all directions
- Bubble level
- Friction drag adjustment of pan and tilt by spring loaded control knobs

\$148.00

MODEL MH-2S SPRING HEAD

Load Capacity 20 lbs.
 Tilt Angle 60° Up-90° Down
 Pan Rotation 360°
 Height 5 1/2"
 Width 3 1/4"
 Length 6"
 Weight 2 1/2 lbs.
 Material & Finish Clear Anodized Alum.

MODEL MH-2

Same as above except without spring

\$86.00

MODEL CM CRADLE HEAD

Load Capacity 50 lbs.
 Tilt Angle 20° Up-30° Down
 Pan Rotation 360°
 Height 6"
 Width 5"
 Length 14"
 Weight 7 lbs.
 Material & Finish Black Anodized Alum.

\$218.00

MODEL CS CRADLE HEAD

Same as above except
 Load Capacity 40 lbs.
 Length 10"
 Weight 6 lbs.

\$218.00

MODEL HD-46 SPRING HEAD

Load Capacity 50 lbs.
 Tilt Angle 70° Up-90° Down
 Pan Rotation 360°
 Height 7 1/2"
 Platform Size 4" x 6"
 Weight 6 lbs.
 Material & Finish Black Anodized Alum.
 Internal Torsion Spring to prevent camera dumping

\$162.00

MODEL Q SPRING HEAD

Load Capacity 10 lbs.
 Tilt Angle ± 60°
 Pan Rotation 360°
 Height 3"
 Width 4"
 Length 4"
 Weight 1 lb.
 Material & Finish Black Anodized Alum.

- Features • Counterbalancing spring to prevent camera dumping
 • Two camera screw locations

\$42.00

MODEL RTH TWO-WAY TILT HEAD

Load Capacity 10 lbs.
 Tilt Angle 30° Up-90° Down
 Pan Rotation 360°
 Height 5"
 Width 2"
 Length 2 1/2"
 Weight 1 lb.
 Material & Finish Clear Anodized Alum.

- Features • Quick Change Camera Screw
 • Friction drag screw to prevent camera dumping

\$65.00

**THE CHALLENGER
MODEL DG/H4
TRIPOD/HEAD**
Load Capacity 25 lbs
Minimum Height 34"
Maximum Height 70"
Elevation Adjustment 16"
Geared Center Post 1 1/4" Dia
Leg Diameters 1 1/4" x 1 1/4"
Head Tilt Angles 60° Up-
90° Down
Spring Loaded Head 2 Springs
Head Pan Rotation 360°
Weight 8 lbs
Material & Finish Clear and Black
Anodized Alum
Self-Locking Gear Mechanism

MODEL DG
Same as above except without
head **\$130.00**

**DOLLYPOD
GEARED ELEVATION
TROLLEY**
Load Capacity 25 lbs
Minimum Height 48"
Maximum Height 66"
Elevation Adjustment 18"
Geared Center Post 1 1/4" Dia

TRIPODS/DOLLIES/CAMERA AND MONITOR MOUNTS

**REDITILT PRO MODEL RTP
LIFT COLUMN TRIPOD/HEAD**
 Load Capacity 10 lbs.
 Minimum Height 28"
 Maximum Height 65"
 Elevation Adjustment 18"
 Center Post 3/4" Dia.
 Leg Diameters 3/4" x 3/4"
 Two-Way Tilt Head ± 90°
 Head Pan Rotation 360°
 Weight 3 1/2 lbs.
 Material & Finish Clear and Black Anodized Alum.
 • "Quick Change" Camera Screw
 • Friction Drag Screw
 • One handle set pan and tilt simultaneously
 • Reversible Center Post

\$73.00

**REDITILT JUNIOR
MODEL RTJ
LIFE COLUMN TRIPOD/HEAD**
 Load Capacity 10 lbs.
 Minimum Height 23"
 Maximum Height 50"
 Elevation Adjustment 16"
 Center Post 3/4" Dia.
 Leg Diameters 3/4" x 3/4"
 One-Way Tilt Head ± 90°
 Head Pan Rotation 360°
 Weight 2 1/2 lbs.
 Material & Finish Clear and Black Anodized Alum.
 • "Quick Change" Camera Screw
 • Friction Drag Screw
 • One handle locks pan and tilt simultaneously
 • Reversible Center Post

\$52.00

**REDITILT MINI-20
MODEL RTM-20
LIFT COLUMN TRIPOD/HEAD**
 Load Capacity 10 lbs.
 Minimum Height 20"
 Maximum Height 52"
 Elevation Adjustment 12"
 Center Post 3/4" Dia.
 Three Section Leg Diameters 3/4" x 3/4" x 3/4"
 One-Way Tilt Head ± 90°
 Head Pan Rotation 360°
 Weight 2 1/2 lbs.
 Material & Finish Clear and Black Anodized Alum.
 • "Quick Change" Camera Screw
 • Friction Drag Screw
 • One handle sets pan and tilt simultaneously
 • Reversible Center Post

\$59.00

**UNIVERSAL DOLLY
MODEL W-4**
 Load Capacity 50 lbs.
 Folds to 10" x 21"
 Circle Diameter 42"
 Wheel Diameter 5" & 3" x 13/16" tread
 Weight 7 lbs.
 Material & Finish Clear and Black Anodized Alum.
 For all D & S Tripod except C and CG

\$94.00

**SLIP ON DOLLY FOR
COMPACT TRIPOD
MODEL CW-1**
 Load Capacity 20 lbs.
 Wheel Diameter 5"
 Weight 6 1/2 lbs.
 Material & Finish Nickel Plated Steel
 Easy on—Easy off
 Screw On Wheels
 No tools required
 Available with 3" Wheels & Deluxe Wheels

\$46.00

**DOLLY FOR A & B TRIPODS
MODEL W-3**
 Load Capacity 60 lbs.
 Diameter Open Same as tripod spread
 Rubber Wheels 5" x 13/16" tread
 Weight 6 lbs.
 Material & Finish Anodized Alum.
 Dolly folds with tripod
 • Easily attached to tripod legs and center post

\$119.00

**MONOPOD
MODEL MONOPOD/
FRICTION HEAD**
 Load Capacity 10 lbs.
 Minimum Height 31"
 Maximum Height 72"
 Leg Diameters 3/4" x 1"
 RTH Head ± 90° One Way Tilt
 Pan Rotation 360°
 Weight 1 1/2 lbs.
 Material & Finish Clear Anodized Alum.
 • "Quick Change" Camera Screw
 • Extension made secure with toggle lock instead of collet for strong support

\$39.50

**DOLLY SHELF
MODEL SD-3**
 Load Capacity 30 lbs.
 Shape Equilateral Triangle
 Length of Sides 29"
 Rubber Wheel 3" Dia.
 Weight 9 1/2 lbs.
 Material Steel
 Finish Baked Metallic Alum.
 Plugs on and off the legs of tripod.
 Fits all D & S tripods except A, B & C series

\$79.00

MODEL SD-5
 Same as above but with 5" Wheels **\$79.00**

**WHEEL DOLLY
MODEL WD-3**
 Load Capacity 20 lbs.
 Folds to 5" x 6" x 22"
 Circle Dia 36"
 Wheel Dia 3"
 Weight 4 1/2 lbs.
 Material Steel
 Finish Baked Metallic Alum.
 For all D model tripods

\$45.00

**MODEL WB-8
CAMERA MOUNT**
 Camera Load Capacity 10 lbs.
 Height 5"
 Tilt Angle ± 90°
 Pan Rotation 360°
 Tubing Length 12"
 Tubing Diameter 1"
 Mounting Screw 3/4"-20
 Material & Finish Black Anodized Alum.
 Special Features • "Quick Change" Camera Screw can quickly convert to tamper-proof unit
 MAY BE MOUNTED ON CEILING, WALL OR TABLE

\$38.00

**MODEL UM-1
CAMERA MOUNT**
 Camera Load Capacity 25 lbs.
 Tilt Angle ± 90°
 Pan Rotation 360°
 Height 15"
 Width 00"
 Material & Finish Clear Anodized Alum.
 Options: Additional tube length and brace supports may be ordered
 MAY BE MOUNTED ON CEILING, WALL OR TABLE

\$73.00

**MONITOR CEILING MOUNT
MODEL RCM-1**
 Test Load Capacity 500 lbs.
 Tilt Angle ± 30°
 Rotation 360°
 Size 3 in. larger than monitor
 Weight 30 lbs.
 Material Steel
 Finish Brown Baked Enamel
 Ceiling plate may be custom made to attach to existing ceiling

\$125.00

**MONITOR WALL MOUNT
MODEL RWM-3**
 Test Load Capacity 500 lbs.
 Tilt Angle ± 30° Down
 Rotation 360°
 Size 3 in. larger than monitor
 Weight 30 lbs.
 Material Steel
 Finish Brown Baked Enamel

\$125.00

B0-001 BOOSTER ONE

B0-002 BOOSTER TWO

B0-001 BOOSTER ONE

Features

- Amplify a standard carbon intercom headset up to 800%
- No battery
- No modifications
- Independent volume
- Talk switch
- New 1/4" male plug

B0-001 amplifies standard carbon head-sets using existing voltage. It senses the proper wiring in most 2 and 3 wire Carbon Intercom Systems. Communications are always maintained without constant ambient noise in the System. A newly engineered 1/4" male, 3-circuit plug seats snugly and does not intermit in most jacks. A removable belt clip adds to its convenience.

A Booster at each headset will improve total system performance with a minimum of effort.

The little black box that makes a big difference. Lightweight, rugged aluminum 3-1/4" x 2-1/8" x 1-1/8" with a 12 ft. retractable cord. Shp. Wt. 7 oz.

B0-001 \$79.00

B0-002 BOOSTER TWO

Features

- Amplified Dynamic Headsets on a Carbon Intercom System
- No battery
- No modifications
- Talk switch
- Dynamic or Carbon Headsets

B0-002 achieves putting a Dynamic or Carbon headset on a 2-or 3-wire Carbon Intercom System without shielded wiring or additional power supplies. Like B0-001, no modifications in wiring are required. The mic output is also increased in Booster Two, along with hearing level increases as in Booster One.

Achieving the quality of Dynamic with the reliability of Carbon, expands the life and viability of the Carbon System. At 7.5 oz., this rugged, black aluminum case w/12 ft. cord and plug is a winner.

B0-002 \$99.00

M-100 BOOSTER COMMAND

Features

- Operates on inexpensive wiring up to 1000 ft.
- On/Off switch with LED power indicator
- Isolated program audio input source
- Portable, lightweight - under 12 ozs.
- 1/4" ring, tip, sleeve intercom jacks
- Operates 6 common Carbon Intercom Headsets or more advanced Booster products using professional Dynamic Headsets
- Interconnects with most other intercom systems for expansion

Requirements

Power In: 9-35 VDC/500 m a. 2 conductor 1/8" mini phone plug

Carbon Headset: Mic 50 ohms/Ear 250 ohms

Dynamic Headset: Mic 150 ohms/Ear 275-600 ohms

Headsets In: 1/4" phone plug. Ring-positive (+). Tip-negative (-). Sleeve - N.C.

Program Feed: RCA - type phono plug

Weight: 11.5 ozs.

Case: Molded Styrene, Black

Dimensions: 6 x 3.15 x 1.84"

M-100 \$145.00

Electret Headset for use with the BOOSTER TWO .. \$39.00

P8160

EEV TELEVISION CAMERA TUBES — 2/3" LEDDICONS®

Photoconductive camera tubes with high sensitivity lead oxide target, for high definition pick-up in monochrome and color broadcast cameras. Features of these tubes include very short lag, low dark current and unity gamma. All types have separate mesh connections.

Type Series	Suffix Letters *	Description	Direct Replacement For
P8160	B, G, R, M	Broadcast quality, designed for ENG, EFP and studio cameras.	XQ 1427
P8161	B, G, R, M	Standard quality, designed for ENG, EFP and studio cameras.	XQ 1428
P8460	B, G, R, M	Broadcast quality, diode gun, high resolution photolayer.	XQ 2427
P8461	B, G, R, M	Standard quality, diode gun, high resolution photolayer.	XQ 2428
P8462	B, G, R, M	Broadcast quality, diode gun. Low output capacitance (L.O.C.) contact permitting improved signal-to-noise ratio.	XQ 3427
P8463	B, G, R, M	Standard quality, diode gun. Low output capacitance (L.O.C.) contact permitting improved signal-to-noise ratio.	XQ 3438

EEV TELEVISION CAMERA TUBES — 1/2" LEDDICONS®

Type Series	Suffix Letters *	Description
P8470	B, G, R, M	Broadcast quality, diode gun magnetic focus, magnetic deflection, high resolution photolayer for new generation of ENG cameras with integral video recorder.

EEV TELEVISION CAMERA TUBES — 1" LEDDICONS®

All Types Have Separate Mesh Connections.

Type Series	Suffix Letters *	Description	Direct Replacement For
P8022	B, G, L, R, M, X	Variable light bias from light source in socket, front loading.	XQ 1070
P8024	RF	Similar to P8022 but with extended red response and infrared filter.	XQ 1075
	AR	Similar to P8022 but with extended red response and no infrared filter.	XQ 1074
P8142	B, G, L, R, M	Rear loading version of P8022 Series, with variable light bias from light source in socket.	XQ 1070/02
P8144	RF	Rear loading version of P8024RF, with variable light bias from light source in socket; extended red response and infrared filter.	XQ 1075/02
	AR	Similar to P8190 but with extended red response and no infrared filter.	XQ 2073/03
P8145	B, G, L, R, M	Rear loading version of P8025 Series, with variable light bias from light source in socket; high-light overload protection (H.O.P.) facilities.	XQ 1080
P8146	RF	Rear loading version of P8026RF. Variable light bias from light source in socket, highlight overload protection (H.O.P.) facilities; extended red response and infrared filter.	XQ 1085
	AR	Rear loading version of P8026AR. Variable light bias from light source in socket, highlight overload protection (H.O.P.) facilities; extended red response and no infrared filter.	XQ 1083
P8147	B, G, L, R, M	Similar to P8145 but with improved resolution and 190(mA) heater.	XQ 1500
P8148	RF	Similar to P8147 but with extended red response and infrared filter.	XQ 1505
	AR	Similar to P8147 but with extended red response and no infrared filter.	XQ 1503

* The complete type number comprises the Series number with appropriate suffix letter/letters as follows:

B Blue Channel L Luminance Channel R Red Channel The letters IG added to the above indicate Industrial Grade
G Green Channel M Monochrome X Medical In the case of monochrome tubes, the letter M is usually omitted from the type number.

VC-65

All are available in 18" x 24"

Color Registration Chart

(Formerly RETMA Registration Chart). This 18" x 24" Color Registration Chart is used to aid in the alignment and test of the accuracy of registration of triple-pickup color television cameras. The fine horizontal and vertical lines on a white background permit accurate alignment of the optical and electrical systems of three pickup cameras. The Chart is mounted on 100 mil heavy paper board to provide stand-alone stiffness for studio and field use.

Color Registration Chart \$45.00

Linearity (Ball) Chart

This Linearity Chart is used to help test geometric distortion of a television camera chain. This is done by comparing on a suitable picture monitor two super-imposed patterns; one generated by an electrical pattern generator, the other by a television chart with the equipment to be checked. The electrical pattern grating frequencies required to match the chart pattern are 315 kHz for horizontal, 900 cycles for vertical linearity tests. The Chart is mounted on 100 mil heavy paper board to provide stand-alone stiffness for studio and field use.

Linearity (Ball) Chart \$45.00

Linear Reflectance Chart

This Linear Reflectance Chart is similar to the Logarithmic Reflectance Chart described above except that the nine gray scale steps have a linear relationship to each other, rather than a logarithmic relationship. (not shown)

Linear Reflectance Chart \$60.00

Logarithmic Reflectance Chart

This Logarithmic Reflectance Chart consists of two gray scales of nine steps each on 4" x 18" mounted on 100 mil heavy paper board to provide stand-alone stiffness for studio and field use. This Chart, with its two gray scales of logarithmic relationships, is used in the alignment and measurement of transfer characteristic of television camera systems. This is of particular importance in color television systems where departure from the correct characteristics may result in color error.

Logarithmic Reflectance Chart \$60.00

Resolution Chart

(Formerly RETMA Resolution Chart). This 18" x 24" Resolution Chart is used to help measure the resolving power of a television system, or part of it, such as a television camera chain. The Chart is televised by the studio facility under test, and reproduced on a suitable picture monitor. Horizontal and vertical resolution wedges cover the range from 200 to 800 lines. This Chart was revised slightly in 1956 and the present printing is on high quality heavy paper board which is extremely "white". Gray Scale Overlay Strips (10" x 1" - 4 each) are provided over the indicated section of this Resolution Chart. These highly accurate gray scales are designed to provide a logarithmic reflectance relationship. The Chart is mounted on 100 mil heavy paper board to provide stand-alone stiffness for studio and field use.

Resolution Chart \$70.00

CAMERA ENCLOSURES

The Model EVH-22

The Model EVH-22 is a compact, aluminum, environmental enclosure designed to protect a CCTV camera from adverse weather conditions. The EVH-22 will accommodate most 2/3" and 1" format cameras with fixed, auto iris, and zoom lenses. The unique collapsible-hinged top allows for easy access to the inside without completely removing the cover. A convection air flow system provides air circulation for cooling and anti-fogging.

A thermostatically controlled heater and a positive pressure, filtered, blower system are available as accessories. The blower exhaust flows down across the window to provide both cleaning and weather protection for the window.

SPECIFICATIONS

Mechanical

- Construction: aluminum
- Weight: 7 lbs. (approximate)
- Window opening size: 4" W x 4.5"H
- Camera mounting: adjustable sliding track
- Power requirements: 120VAC-60Hz
- Optional: 24 VAC or 240 VAC package available
- Cable entry: 3 water-tight gland fittings
- Maximum inside clearance: 5.5"W x 5.25"H x 18.5"L
- Standard finish: white textured enamel

ACCESSORIES

Heater

Model EVH-22H

- Blanket type, thermostatically controlled (closes at 40°F)
- Provides 30-80 Watts of heat
- Available in the following voltages (specify when ordering): 24 VAC, 120 VAC and 240 VAC

Blower

Model EVH-22B

- Provides 38 CFM positive airflow
- Thermostatically controlled (closes at 90°F)
- Available in the following voltages: (specify when ordering): 24 VAC, 120 VAC and 240 VAC

Sun Shield

Model SS-22

- Lightweight
 - White texture enamel finish
 - Protects enclosure from radiant heat
 - Provides cooling by allowing air to flow over the exterior of the enclosure
- NOTE: Will lower internal temperature of housing 10°F-15°F

Additional Options Available

- Tamper proof latches
- Extreme low temperature insulation kit

The Model SCH-4 Security Camera Housing

The Model SCH-4 Security Camera Housing is a "tamper-proof" environmental enclosure, designed to protect a TV camera from vandalism as well as the environment. The enclosure, constructed from heavy gauge sheet metal, can only be opened with the proper key. Once opened, complete access to the camera is obtained for easy maintenance. A track is provided to permit a camera to be positioned and secured in the housing. There are three louvers at the back of the housing for ventilation, and two water tight gland fittings are provided at the bottom rear of the housing for cable entry.

Maximum inside dimensions: (15"L x 5-1/8"W x 4-1/4"H)

Approximate weight: 7 lbs.

Finish: White enamel outside, satin black inside

The enclosure is also available with a Sun Shield model SS-4 which should be specified when ordering.

Additional weight: 3-1/2 lbs.

Finish: White enamel

MOUNTS

SCB-1

The Model SCB-1 Swivel Corner Building Mount

The Model SCB-1 is designed specifically for mounting a heavy duty scanner or pan and tilt unit to the corner of a "building cap." This unique design includes two adjustable gussets to allow for variations in the thickness of the building cap, and is constructed in such a way so that it can be installed from the roof of the building rather than outside. To facilitate "ease of service", simply remove one Bolt and "Swing" the entire P/T unit over the roof for safe and secure servicing. When the adjustments are made, simply swing the unit out into its original position and re-install the locking Bolt. It's just that easy.

SPECIFICATIONS

- Extension: 24" from face of building to the center-line of Pan/Tilt
- Construction: All Steel, Heli-Arc welded and Zinc plated prior to painting
- Finish: Black Texture Enamel
- Weight: 57 lbs.
- Maximum load: 150 lbs.

The Model H/D VSM-P Heavy Duty Vicon Scanner Pole Mount

The Model H/D VSM-P Heavy Duty Vicon Scanner Pole Mount is designed specifically for mounting a heavy duty scanner or pan and tilt on a 2-1/4" minimum diameter pole. This unique one-piece design includes an integral strut for added stability and greater load capacity. This mount is designed for use with the Vicon scanner or pan and tilt models: V300PT, V310AP, V350PTV, V353APT, V355APT, V380PTX, V390APT, and V3000PT.

The scanner mounting plate extends 20" out from the pole and is 6" square, with four holes for scanner or pan and tilt mounting. Four 5/16" bolts are supplied with each mount making an easy attachment of the scanner or pan and tilt to the mount. This all steel heli-arc welded mount is constructed from 2" diameter tubing with a 2-1/4" wide by 14" high pole mounting plate, that has eight 3/4" long slots for the mounting straps (not supplied).

- Maximum recommended load: 125 lbs.
- Approximate weight: 7-1/2 lbs.
- Standard finish: Black Texture

The Model WM-2 Camera Wall/ Ceiling Mount

The Model WM-2 CAMERA WALL/CEILING MOUNT is a dual purpose mount.

WALL MOUNTING: When mounted on a wall the universal swivel head extends 9 1/2" from the mounting surface and can be adjusted from a level position to a tilt angle of 90 degrees; will rotate 360 degrees and lock in any position with an Allen Set Screw.

CEILING MOUNTING: When mounted to a ceiling the mounting surface of the swivel head extends down 8" from the ceiling.

POLE MOUNTING: See pole mount section.

This all steel heli-arc welded mount is constructed from 1 1/2" diameter tubing with a 3/16" flange that has three 5/16" holes for mounting purposes.

Maximum recommended load 20 lbs.

Approximate weight 2 lbs

Standard finish is black or beige texture. Please specify when ordering.

CCD1200R
CCD1000 SERIES

CCD Industrial Line Scan Cameras

- Charge Coupled Device Image Detectors • All solid state • Small, compact sealed enclosure • Ideal for use in hostile industrial environments • Remote operation (up to 200 cable feet) • Data rates to 20M pixels per second • Line scan rates to 40K lines per second

The Fairchild CCD1000 series are small, rugged, solid-state line scan cameras designed for incorporation into non-contact electro-optical measurement and process control systems. System design and implementation using the CCD1000 series cameras are simplified due to the requirement of only two clock input signals to completely control operation of the cameras. The sealed enclosure and remote operation capability make these cameras ideally suited for operation in hostile environments.

The camera can be installed in a water jacket when necessary for environmental protection and located more than 200' away from a control unit/power supply.

The cameras are available in resolutions of 512, 1024, or 2048 elements.

CCD1200R	\$1200.00
CCD1300R	1300.00
CCD1500R	1500.00

CCD COMMERCIAL LINE SCAN CAMERA

CCD Commercial Line Scan Camera Systems

Small, rugged solid-state camera. Line scan contains a CCD line scan of 256, 512, 1024, 2048 elements of resolution. A timing control module, sequential processing module and a rugged housing that can be tripod, front faceplate or dovetail mounting.

Complete with Camera Control Unit; CCU provides video output control, video data rate control, exposure control and camera power supply.

CCD1100C	\$2500.00

CCD1300C	3000.00
CCD1500C	4500.00

CCD3000
CCD4001
AUTOMATION CAMERA SERIES

CCD3000 Automation Camera Series

Self-contained camera which makes it easy for industrial users to take advantage of the inherent geometric accuracy, wide dynamic range, and reliability of a buried-channel charge coupled device image sensor. It can be used as a relatively small single-component camera, or be separated into a camera control unit plus a cable-connected sense head which is robust enough to be mounted onto a robot arm.

The CCD3000 camera is available in 488X380 NTSC resolution. The CCD3000F includes a fiber optic faceplate over the sensor. These cameras are also available with an especially high quality 488X380 sensor and are referred to as the CCD3100 and CCD3100F respectively.

CCD3000	\$3500.00
---------------	-----------

CCD4001 Robotics Camera

The Robotics camera incorporates a 256X256 element non-interlaced sensor with a square pixel pitch format. It can be efficiently utilized by a CPU for automatic inspection, recognition and robot guidance. The camera image output may also be displayed on standard monitors.

CCD4001	\$1750.00

AS-100A

ACS-100A

MV-24

SVS-660 Digital Video Sensor

- Accurate super video sensor for in and outdoor surveillance application
- Free channel selection from 1 to 6 channels by plug-in module
- 6 camera inputs and 6 outputs
- 64 x 64 (4096) sensor markers for CCIR; 64 x 52 (3328) markers for EIA
- Each sensor marker can be set for write-in/erase by using the lightpen for each channel
- Track function (triggered sensor markers are automatically displayed on the monitor so that movement of the intruding object can be traced)
- Sensor markers are not affected by environmental light change (from day time to night time), flash light, intrusion of fly, use of auto iris camera, etc.—only activated by intruders, intrusion of cars, etc., which invade in the camera scene with target speed and sizes
- Sensitivity controls for picture level and size
- The ACS-100A with the AS-100A and SC-100 is compatible
- Dimensions: 16.92"W x 5.20"H x 13.78"D (430 x 132 x 350 mm) (19" rack type)

SVS-660 Digital Video Sensor Main Frame \$3600.00
DM-660 Channel PC Board (1 per channel required) 900.00

DT-204 1-Channel Video Sensor

- Compact low price 1-channel Video Sensor for one camera input
- Four sensor markers detect the object intruded into the picture scene
- Size and position of each sensor marker can be varied independently
- Sensor markers display on/off
- Sensitivity control
- Automatic/manual reset function
- Dimensions: 8.46"W x 1.75"H x 9.84" (215 x 44.5 x 250 mm) (half 19" rack type)

DT-204 Video Sensor \$575.00

MC-310 Multi-Channel Video Sensor

- Simultaneous sensing capability for up to 10 cameras
- Selected channel number shown on TV screen
- Built-in sequential switcher with manual over-ride
- Separate alarm relays for each channel plus general alarm relay
- Wide sensitivity setting with built-in test signal
- Connect with ordinary coaxial cable; compatible with nearly all TV equipment

MC-310 Multi-Channel Video Sensor \$1600.00
DM-310 Channel PC Board (1 per channel required) 250.00

ACS-100A Autocode Switcher

- 10 video inputs (from camera, VTR, etc.) and one output
- Automatic/manual sequential channel switch
- Automatic sequential time control (1-60 seconds)
- Spot channel function
- Up to 16 characters can be freely selected and superimposed onto the picture scene by way of the built-in character generator, so that each picture scene is distinguishable and recognizable at a glance
- Two units interconnection providing 20 input channels
- The AC-100A and SC-100 are compatible
- Dimensions: 16.92"W x 1.75"H x 10.63"D (430 x 44 x 270 mm) (19" rack type)

ACS-100A Autocode Switcher \$1100.00

AS-100A Audio Switcher

- Direct-relay type Audio Switcher used with the ACS-100A
- Up to 10 audio sounds (up to 20 if 2 units are interconnected) can be controlled and switched with the camera scene by the switching function of the ACS-100A
- Adjustable audio sound of each channel
- Audio sound with its appropriate picture scene provides extensive surveillance more effectively
- Dimensions: 16.92"W x 1.75"H x 8.46"D (430 x 44 x 215 mm) (19" rack type)

AS-100A Audio Switcher \$1100.00

MV-24 Multi-Viewer

- Pictures from up to 4 cameras can be displayed on one monitor
- Adjustable position of the split borders and of each divided camera scene horizontally and vertically

MV-24 Multi-Viewer \$1300.00

FREZZI ON BOARD™ BATTERY PACKS

"Superior To Camera-Manufacturer-Supplied"

FEATURES:

- Battery mounts direct to camera-manufacturer-supplied Anton/Bauer bracket or optional Frezzolini® camera battery mounting bracket.
- No cables or modification required.
- Full 4AH capacity—only premium selected nickel-cadmium cells used.
- Custom-designed mounting brackets available.
- Rugged welded aluminum case.
- Lightweight 2AH models available.
- Internal fuse & thermal protection—internal spare fuse included for field replacement.
- Complete charge compatibility with camera-factory-supplied charge systems, or Frezzolini® fast, overnight or multiple battery chargers available.

Frezzi On-Board™ BP-12 4AH, 12 volt	\$455.00
Frezzi On-Board™ BP-13 4AH, 13.2 volt	475.00
Frezzi On-Board™ BP-14 4AH, 14.4 volt	495.00
Frezzi On-Board™ BP-122 2AH, 12 volt	275.00
Frezzi On-Board™ BP-132 2AH, 13.2 volt	285.00
Frezzi On-Board™ BP-142 2AH, 14.4 volt	295.00

All battery packs have fast charge (1 Hr.) capability.

Frezzi™ Premium-Grade Direct Replacement for Sony BP-90 Battery Packs

Models: FBP-90 and Fast Charger Model FBP-90 FC

- Full 4AH capacity using premium-grade selected nickel-cadmium cells.
- Rugged & serviceable plastic case.
- Fuse & thermal protection
- Internal spare fuse for field replacement.
- High discharge capability to power 100W lightheads.
- Weight 3.5 lbs.
- Complete charge compatibility with:
 - Sony BC-210 charger.
 - Frezzi BC-124S overnight charger.
 - Frezzi MBC-5 8-battery overnight charger
 - Frezzi BC-77UB 1 hr. fast charger w/HV fast-charge adaptor cable.
 - Plus other Frezzi fast/slow multi-battery charging stations.

Model FBP-90	\$275.00
Model FBP-90 FC	330.00

CHARGERS

Frezzi™ Dual Channel AC Adaptor and Fast Charger

General:

The new Frezzolini® Model RPS-2 Dual-Channel combination power supply/fast charger consists of two (2) totally independent power sources. Each power source has the capability of either functioning as a precise regulated power supply for ENG Camera/VTR Power or switching over to a ni-cad battery fast charger. Either one or two battery packs are simultaneously fast charged with automatic high-charge termination when the battery packs reach full charge.

SPECIFICATIONS

AC Input	115/230 VAC +/- 10% 50/60Hz
Regulated DC Output	13.25 VDC (3.0 Amps Max. each channel)
Line Regulation	+/- .05% for 10% line change
Load Regulation	+/- .05% for 50% load change
Output Ripple	5.0mV Pk-Pk maximum
Overload Protection	Automatic current limit/foldback
Fast Charge Time	12.0V battery-75 minutes 14.4V battery-180 minutes
Size	8 1/2" x 5" x 5 1/2"
Weight	8.5 lbs.

Model RPS-2 \$ 895.00

RPS-2

BC-77UB

Frezzi™ Single-Battery Universal Fast Chargers

MODEL BC-77U/MODEL BC-77UB SINGLE-BATTERY UNIVERSAL FAST CHARGERS

General:

The new line of Frezzolini® Universal fast chargers were specifically designed to fast-charge (1 Hr.) all models of Frezzolini® 12V and 14.4V 2-6AH battery packs. The Frezzi™ chargers also have the capability to safely fast-charge Anton/Bauer 12V and 14.4V nickel-cadmium on-board battery packs. All chargers are transformer-type line-isolated and designed per European IEC-65 safety code specifications. The chargers are constructed of heavy-gauge aluminum in a compact size to withstand abuse in the field. The universal feature of this charger enables operation anywhere in the world.

Model BC-77U/BC-77UB..... \$395.00

RPS-3

Frezzi On Board™ AC Adaptor

MODEL RPS-3 AC ADAPTOR

General:

The Frezzolini® Model RPS-3 AC Adaptor is specifically designed to power ENG/EPF cameras consuming up to 50 watts of power. Model RPS-3 is a "State-Of-The-Art" switcher power supply with additional RFI/EMI line suppression filters. AC adaptors mount directly to the Frezzolini® or Anton/Bauer Battery Brackets with no modifications or adaptor cables required.

SPECIFICATIONS

AC Input	117/234 VAC 50/60Hz +/-10%
DC Output	RPS-3 13.25VDC at 4A
Line Regulation (10% line change)	RPS-3 +/- .10%
Load Regulation (50% load change)	RPS-3 +/- .2%
Output Ripple (Pk-Pk Max.)	RPS-3 10mV
Overload Protection	Automatic current limit/foldback
Weight	RPS-3 2lbs.
Size	5.0" x 4.0" x 3.4"

Model RPS-3 \$595.00

Intermixed or same packs

FREZZI™ MULTIPLE BATTERY CHARGING STATIONS "We custom-design per your specific charging requirements"

MODEL MBC-2 (All Feature Model)

Fast-charges five (5) Frezzolini® or Anton/Bauer 12-14.4V nickel-cadmium battery packs in less than one (1) hour while simultaneously charging eight (8) additional Frezzolini®, Sony, JVC or Panasonic VTR battery packs overnight. Universal AC inputs. Deluxe shipping case available. Weight: 45 lbs.

MBC-2 \$2400.00

MODEL MBC-4A

Fast charges (5) Frezzolini® or Anton/Bauer 12-14.4V battery packs.

MBC-4A \$1595.00

MODEL MBC-5, Charges Eight (8) BP-90 Type Batteries Simultaneously

- Universal AC inputs
- Compact size
- Line-isolated
- Current-sensing LED's
- Other models available for all VTR or camera battery packs

Charge eight (8) BP-90 type battery packs simultaneously in 14 hours with Frezzolini® Model MBC-5 Charging Station. Universal AC Inputs. Weight: 8 lbs.

MBC-5 \$495.00

MODEL MBC-4

Fast charges (1 Hr.) five (5) Frezzolini® or Anton/Bauer 12-14.4V nickel-cadmium battery packs while simultaneously charging eight additional Sony BP-90 type battery packs in 14 hours. Universal AC Inputs. Deluxe shipping case available. Weight: 45 lbs.

SOLID STATE CID CAMERA

TN2200/TN2201 Solid-State Automation Camera

- 100% Solid State Reliability
- Small Size
- Low Power Consumption
- Precise Spatial Geometry
- Variable Pixel Data Rate to 350 kHz
 Standard and to 500 kHz if Specified
 at Time of Order Placement
- Flexible Interfacing
- No Image Burn and/or Lag
- Drift Free Scanning
- Integrating Detectors

BLEMISH SPECIFICATION

Maximum 8 black or white pixels at 30 frames/second 25°C (77°F) ambient.

LENS SELECTION

Lens selection for the TN2200 is a function of matching the scene observed to the active area of the micro-sensor. Pixels are located on 0.0018 inch centers and generally may be considered contiguous. Thus, the image size is $128 \times 0.0018 = 0.2304$ inch per side. Applying the normal lens formula,

$$\frac{\text{Object Size (OS)}}{\text{Object Distance (OD)}} = \frac{\text{Image Size (IS)}}{\text{Focal Length (FL)}}$$

will yield the proper lens selection.

The TN2200 is designed to accept C-mount lenses which have a fixed back mounting flange length of 0.69 inch. The viewing angle can be selected by choosing standard lenses. The following chart lists the ratio of distance from an object to the size of an object for available lenses.

TN2200 (128 x 128 ARRAY)

Focal Length		Object Size/Object Distance
mm	inches	
4.5	0.18	1.3
6.5	0.26	0.89
9	0.35	0.65
12.5	0.50	0.46
16	0.63	0.37
17	0.67	0.34
25	1.0	0.23
35	1.4	0.17
50	2.0	0.12
75	3.0	0.08
100	4.0	0.06

For example, to view a 6-inch object at a 4-foot distance, the object size/distance ratio is $0.5/4 = 0.125$. Therefore, a 50 mm lens is appropriate for this application.

TN2200 Series Automation Cameras, featuring a patented CID Microsensor, compact, rugged design, variable scan rate, and square pixel spacing. Coupled to microprocessor or minicomputer controlled signal processing and controlled lighting, these cameras can provide visual inputs to control quality of small parts, monitor machine operations, sort produce, guide robot arms, gather scientific data, and a host of other applications.

SOLID STATE CID CAMERAS

TN2500 CID Solid-state Video Camera

FEATURES:

- Analog and Digital Outputs
- Interlaced or Sequential Scan
- Antiblooming
- No Image Burn or Lag
- Non Microphonic
- No Operating Adjustments
- Operable in High Magnetic Environment
- Low Voltage Operation
- Two Unit Versatile Construction

General Electric's TN2500 represents a 3rd generation CID solid-state television camera with 30% higher resolution than provided by CID imagers used in previous GE solid-state cameras. This camera provides both ANALOG and DIGITAL outputs, with several user selectable features; making it an extremely versatile unit appropriate to many applications.

ELECTRICAL CHARACTERISTICS

Line Voltage:	117 VAC \pm 10% 12 VDC (Optional)
Imager Elements:	244 Vertical x 248 Horizontal
Pixel Size:	1.4 x 1.8 Mil (36 x 46 Micrometers)
Blemish Content:	Less than 10 Blemishes Total (White and/or Black)
Composite Video Output:	1 Volt p-p into 75 ohms
Synchronization Outputs:	Horizontal, Vertical and Element Rate Clock
Element Rate Clock Frequency:	4.5 MHz
Digital Output:	TTL Compatible 8 Bit Parallel Output
SNR:	43 dB Nominal (Peak Signal to RMS Noise)
ALC Range:	60,000 to 1 with Optional Auto Iris Lens
AGC:	10:1 with Automatic Bandwidth Compression

MECHANICAL CHARACTERISTICS

Weight:	Remote Head Approx 12 Oz. (341 gms) Camera Control Unit Approx 57 Oz. (1619 gms)
Lens Mount:	Standard "C" Mount (1"—32 Thread)
Lens:	25 mm, f 1.4 (Standard)
Remote Head Mount:	1/4—20 Tapped Hole
Connectors:	Lens Power—Winchester—SM 2 SN Video Out—BNC Video In (Gen-Lock)—BNC Remote Head—Amphenol HDP20 Series Digital & Control Interface —Amphenol HDP20 Series
Remote Head Cable:	Standard 5 foot Length Optional—Extender Cable 10 ft, 20 ft, 45 ft long

SOLID STATE CID CAMERAS

TN2505

SOLID-STATE CID CAMERAS

PERFORMANCE FEATURES

- Display Format: 11
- Sensor Format: 244 x 388
- CID Saturation S/N: 50
- Sensitivity S/N: a) 50 lux (4.5 FC) scene illumination 46; b) 11 lux (1 FC) scene illumination 34
- Modulation Transfer Function is Better than 90%
- Integral Power Supply: Power Consumption 2 Watts (nominal)
- Operating Voltage: 12-35 VDC or 120 Volt with Separate AC Adaptor
- Ambient Temperature is 0° - 50°C

The General Electric TN2505 Security and Surveillance camera provides its user with exceptional performance, solid-state reliability and flexibility for security, surveillance and industrial CCTV applications.

The TN2505 is VLSI/LSI based, utilizing an LSI Scan Generator, LSI Pre-amplifier, and CID (Charge Injection Device) imager with a horizontal resolution of 388 elements. The performance of this unique camera is quantified by a signal to noise ratio of 50dB. The camera also provides its user with a wide range ALC and selectable 0, +6, +12dB gain boost.

The GE TN2505 has a built-in power supply which consumes less than 2 watts of power. Its operating voltage is 12-35 VDC or 110/220 volts with its separate AC adaptor.

All of this, and more, has been neatly packaged in a rugged case, only 3" x 3" x 2 1/2" and weighs less than one pound.

- TN2505 CID Imager 244 x 388 pixels (RS-170 Compatible)

What The TN2505 With VLSI/LSI Means:

• CID IMAGER	No geometric distortion or microphonics	Virtually no blooming or lag	No performance degradation over time
• CIRCUITRY	High reliability performance	Virtually maintenance free operation	Resistant to shock and vibration
• COMPACT SIZE	Easier installation and concealment	Can be used with smaller housings	Retrofits to existing optics
• LIGHTWEIGHT	Installation on lighter support structures and poles	Reduced wind load with smaller enclosures	Permits faster pan and tilt motion
• VERY LOW POWER	Permits battery operation for portability	Little temperature rise in confined space	Low energy costs

New Dimensions In CCTV

Mechanical

- Weight: 13.5 oz.
- Lens Mount: Standard C-Mount 1.00-32 Thread
- Lens: 25mm Standard
- Camera Mount: 1/4-20 Thread (top and bottom)
- Video Connectors: BNC
- Power, I/O and Irisc Connectors
- Thorkum Circular Connectors

SOLID STATE CID CAMERAS

TN2507 SOLID STATE CID CAMERA

The TN2507 monochrome video camera contains an imager of 488 x 388 pixels and is RS170 compatible for domestic applications.

The new camera employs custom LSI circuitry with limited discrete parts, enabling it to be smaller (3" x 3" x 2-1/2"), lighter (less than one pound) and more rugged than previously marketed monochrome cameras.

An advanced "safeguard" process and differential readout gives CID imagers several performance attributes, including higher signal output and significant noise reduction. An anti-reflective coating allows absorption of incident light rays to a greater degree, therefore gaining more signal current. This contributes to a significantly higher signal-to-noise ratio for optimum imaging performance.

The TN2507 accepts standard C mount, auto iris lenses for flexibility. There is virtually no camera adjustment required for operation.

The internal power supply is a highly efficient design with excellent regulation that allows operation from a 12 to 35V DC source. Separate miniature adaptors allow operation from either 120V AC or 220V AC, 60 Hz.

4TN2507A1 Solid State Camera, 488 x 388 Sensor, Line Lock	\$2700.00
4TN2507A2 Solid State Camera, 488 x 388 Sensor, Crystal Control	2700.00

TN2509 SOLID STATE AUTOMATION CID CAMERA

For machine vision applications that require square pixel, 256 x 256 x 8 bit image data, the TN2509 Monochrome Camera utilizes an imager having 28 micron square pixels which are structured to provide contiguous relationship. A unique electrode structure provides a wide dynamic range with each pixel having a storage capacity of 1,800,000 carriers.

This camera makes extensive use of custom LSI circuitry with limited discrete parts thereby allowing it to be physically small (3" x 3" x 2-1/2") and light in weight (less than 1 pound).

The camera is fully enclosed and accepts standard C mount lenses. There is virtually no camera adjustment required for operation.

The internal power supply is a highly efficient design with excellent regulation that allows operation from a 12 to 35V DC source. Separate miniature adaptors allow operation from either 120V AC, 60/50 Hz. or 220V AC, 50 Hz.

Synchronization of the camera is with 5 Volt TTL level, 75 ohm impedance signals consisting of horizontal reset, vertical reset, and input clock. The model 4TN2509A7A requires a 10 MHz clock which produces a 5.0 MHz element rate. The 4TN2509A7B requires a 14.318 MHz clock which results in a 7.159 MHz element rate.

Inject/Inhibit control is also included for implementation of stop action or image integration. The source of these signals or control points may be remoted by several hundred feet.

SYSTEM INTEGRATION

The TN2509 camera as it is received from General Electric is complete with a 120 Volt 60 Hz AC adaptor which supplies 24 Volts DC to the camera through its 10 foot interconnecting cable. A standard coaxial cable (RG59/U) with BNC connectors is used to provide video signals to modified 525 line rate monitors. Some monitors may need horizontal frequency adjustment in order to synchronize to camera video.

The TN2509 is intended to be locked to an external clock, horizontal reset, and vertical reset signals which can be generated in the timing and control module.

OPTICAL VERSATILITY

The TN2509 has a unique optics centering feature. A machined lens adaptor is mounted to the front camera casting and provides precision optical centering or bore sighting of the CID sensor. A threaded "C" mount lens adaptor and locking ring provides close-up lens adaptation.

TN2507

4TN2507A3 Solid State Camera, 488 x 388 Sensor, RS170 Sync Lock	2800.00
4TN2507A4 Solid State Camera, 488 x 388 Sensor, RS170 H&V Drive	2800.00

TN2509

TIMING AND CONTROL MODULE

An accessory module which generates appropriate timing for external clock, H-reset, V-reset, and Inject/Inhibit is available for the TN2509. The Input/Output signals for the timing and control module are:

INPUTS

AC to 5V DC Supply
 Inject/Inhibit (BNC)

OUTPUTS

Element Rate Clock (TTL)
 H-Video Flag (TTL)
 V-Video Flag (TTL)
 Sync to Monitor
 H-Reset (BNC)
 V-Reset (BNC)
 10 MHz or
 14.318 MHz Clock (BNC)

Variations to the standard timing are available for a nominal setup charge. When ordering, refer to TN2509 Timing and Control Module.

CCTV CAMERAS

4TE-44 Series CCTV Cameras

General Electric's 4TE-44 CCTV cameras are designed to provide optimum performance, reliability and flexibility in a variety of surveillance and industrial imaging applications, at a moderate price. Quartz crystal controlled, random interlace or line locked RS-170 sync, high quality components used in design proven circuits, together with a wide selection of one-inch vidicons insure the adaptability of these cameras to most video installations. The 4TE-44 model is intended for indoor applications.

- Patented automatic beam current regulator circuit automatically compensates for normal vidicon aging eliminating the need for manual adjustment.
- Automatic black level clamp precisely maintains setup level over varying temperature and lighting conditions.
- Wide ALC range for automatic operation at varying light levels.
- Superior GE designed and manufactured deflection yoke eliminates need for image tube alignment.
- VTR compatible.
- Completely solid state (except vidicon).
- Single, high quality glass epoxy circuit board with plated through holes for greater reliability.
- Component locations are printed on circuit board to facilitate servicing.
- Cable compensator circuit provides improved performance on long cable runs.
- Full sweep failure protection.
- Light averaging circuit to enhance background information.

OPTIONS

- External H & V drives (B models only)
- Input voltages
 - 24 VAC
 - 117 VAC
 - 230 VAC 50 Hz
- Wide range auto iris lens options
 - 12.5mm f/1.4
 - 25mm f/1.4

 - 2:1 interlace RS-170

STANDARD SPECIFICATIONS

INPUT VOLTAGE	117 VAC, 60Hz (+10%, -15%) (Optional): 24 VAC, 60Hz (Optional): 230 VAC, 50Hz
INPUT POWER	12 watts @ 117V
HORIZONTAL SWEEP	15,750Hz
VERTICAL SWEEP	60Hz
COMPOSITE VIDEO OUTPUT	1.4 p-p into 75 ohms
SYNC	Quartz crystal controlled random interlace
VIDEO BANDWIDTH	9 MHz
SIGNAL TO NOISE RATIO	Better than 40db (weighted)
GEOMETRIC DISTORTION	± 2% of picture height
GRAY SCALE REPRODUCTION	10 shades
SCAN RATE	525 line, 60Hz (standard) 625 line, 50Hz (optional)

CONTROLS

EXTERNAL	None
INTERNAL	Electric Focus, Beam, Setup, V Size, H Size, V Center, Scene Averaging, Target (Limit or Set), Low Peaker (Streaking), Internal Frequency (Horizontal Hold)

ENVIRONMENTAL

AMBIENT TEMPERATURE	-30°C to +60°C
HUMIDITY LIMITS	100%

MECHANICAL

LENGTH	25.38 in. (64.5cm)
WIDTH	8.50 in. (21.5cm)
HEIGHT	5.38 in. (13.7cm)
WEIGHT	12.5 lbs. (5.7kg)
LENS MOUNT	1"
CAMERA MOUNT	¼" + 20 (2)
CONNECTORS	BNC
SHIPPING WEIGHT	15.0 lbs. (6.8kg)
SHIPPING VOLUME	1.7 cu. ft.

CCTV CAMERAS

4TE-50 Site Gard I CCTV Camera

The General Electric 4TE-50 series of CCTV cameras present the latest state-of-the-art developments in camera technology. Designed for professional use, they offer high sensitivity over a broad range of lighting conditions and the flexibility that permits use in most systems where outstanding performance and dependability are of primary importance.

- Beam regulation circuit that automatically compensates for normal vidicon aging, minimizing manual beam adjustment.
- Instant-set that returns set-up and video level to factory preset level for ease in installation and servicing.
- Selectable frequency response booster for extra crisp pictures.
- High resolution, broad bandwidth design for sharper pictures.
- Capability to drive or be driven by other cameras.

OPTIONS

- Automatic bandwidth compression with LED indicator. Optimizes sensitivity and performance at low light levels.
- Full sweep failure protection.
- External drive capability with H&V, composite sync or Gen-Lock.
- Programmable EIA or CCIR sync.
- Jumper selectable 117/230V, 60/50Hz power.
- Modular plug-in boards with plated through holes.
- 10:1 automatic gain control.
- Filament regulation for extended tube life.
- Reversible H&V sweeps.

CCTV CAMERAS

4TE63 Site Gard II Series

The General Electric Site Gard II series of CCTV cameras offer traditional GE quality and reliability in a $\frac{2}{3}$ -inch vidicon camera. Incorporating state-of-the-art circuitry plus features not found in other low cost cameras.

- A choice of models for either 120-volt AC, 60 Hz or 24 volt AC, 60 Hz
- Line locked random or Internal 2:1 RS-170 EIA standard sync.
- Internal beam, focus and target controls.
- Horizontal resolution of 550 lines and S/N ratio of 43dB.
- Automatic Beam Control (ABC) and Automatic Electric Focus Control (AFC) maintain clean sharp picture automatically.
- New metal case and design, along with rugged die-cast chassis. Rugged construction provides more stability and better protection from RFI.

CCTV CAMERAS

4TE-57 Site Gard III Series

The 4TE-57 Site Gard III camera is the ultimate in very low light level cameras available today. Site Gard III has been carefully engineered to provide outstanding performance and GE dependability. General Electric's superiority in low light level cameras is known throughout the world. For hands off, 24-hour-a-day dependable service, Site Gard III "On Guard"!

- Electron beam coated lens assures highest contrast and resolution obtainable under the most adverse conditions.
- 15 Billion to 1 automatic light compensation.
- Utilizes reduced blooming, silicon intensified target vidicon.
- Cameras are subjected to a 48-hour "burn-in" before final testing.
- Rugged, dust resistant, all-aluminum case radiates heat away from vidicon to enhance tube life.
- Beam regulator circuit that automatically compensates for vidicon aging.

- Selectable frequency response booster for extra sharp display.
- Automatic bandwidth compression.
- Sweep failure protection.
- External drive capability with H&V, composite sync or Gen-Lock.
- Programmable EIA or CCIR sync.
- Jumper selectable 117/230V, 60/50 Hz power.
- Modular plug-in boards for easy service.
- 10:1 automatic gain control (AGC).
- Separately reversible H&V sweeps.

 Woodside, NY 11377
 (718) 565-0004

Gitzo Product Features

Top Precision. Hand assembled, literally custom built to your order, to the most demanding European precision requirements, with stressproof light metals as used in airplanes.

Optimal Stability. Ingenious design with extra solid tubular legs firmly positioned against rigid center part, gives optimal stability without torque, prevents vibration of camera, telescope.

Easy Handling. Deeply anodized (1/10mm), corrosion and rust proof leg extensions and center column, glide smoothly and lock firmly on fiber sleeves (no metal on metal), with soft cushioned locking rings, for easy, foolproof handling without any binding — ever.

Multiple Choice. More than 100 tripods, short or long for portability or height, with rapid reversible sliding column or Cremaillere gearlift column for fine adjustment, thinner or fatter legs for any light weight (35mm, Super 8mm), medium weight (2 1/4", 6 x 7cm), heavy (4 x 5", 5 x 7", 8 x 10", 16mm), or extra heavy photo, video, cine cameras, equipment.

Interchangeable Heads. More than 30 photo, ball and video/cine pan-tilt heads, with 90° tilts, 360° panning, plus twin heads, counterbalanced heads, fluid heads, levelling balls for video/cine, with strong, but soft touch handles for smooth moving, tight locking in any position.

Complete System. More than 15 monopods, multipod, copystand, ladderpods, monocolumns, microphone booms, dollies, attachments, cases, protection stands and platforms, plus side arms, shutters, diaphragms, professional cable and remote releases, light stands, etc.

Economical All-Metal Construction. Uncompromisingly solid, virtually indestructible precision mechanism — the result of over 65 years of expert development — withstands the most rugged use, for lifelong durability.

Easy, Minimal Service. Construction unit system of rolled threads, solid steel bolts, nuts and screws, permits easy detaching, cleaning and replacing of any part by user, without any breakable casts or plastic substitutes, without any unrepairable riveting, without any falling apart — ever. And the service quota for GITZO tripods is less than 1%.

Scrupulous Quality Controls, Full Warranty Buyer Protection. Each tripod passes the most severe quality controls, to meet the most rigid European precision standards. And, you are protected by the Full GITZO Warranty For Life plus permanent service and availability of parts.

LEVELLING BALLS With LOCKING GRIP, HEADLOCK, For RAPID ADJUSTMENT OF FLUID HEADS, Without Or With CENTER COLUMN For HEIGHT ADJUSTMENT	
221 BR	Levelling Ball 2 w/Rapid column for Reporter \$139.95

ENG/EFP CAMERA

TC-90 ENG/EFP CAMERA

The Harris TC-90 brings out the best in your cameraperson...and your pictures. The just-right camera balance makes sure-footed shooting from even the most difficult angles a snap. And the super lightweight adds to the ease of handling and eliminates fatigue as a factor on long days in the field.

Better yet, the TC-90 provides excellent pictures, like a studio camera. It uses three LOC, mixed field 1/2" (13mm) diode gun Plumbicon® tubes, an extremely stable f/1.4 prism and exclusive FET preamps for outstanding picture performance. The TC-90 reproduces colors the way you actually see colors, and the pictures have a sharpness and clarity you rarely get from a portable camera. Even the reds are clearly defined. With most cameras, anything red tends to become a little fuzzy; with the TC-90, an exclusive contours-from-red* circuit maintains sharp detail on all red objects.

A terrific balancing act

The TC-90 could be smaller, but we deliberately designed it just a little longer than it had to be, making it slightly tail-heavy to counterbalance the weight of the lens. It also has a low center of gravity that makes the TC-90 practically cling to a cameraperson's shoulder. Then there's the weight, only 8.2 pounds without viewfinder, lens and battery.

It may be the most rugged camera there is.

Lightweight as it is, the TC-90 may be the toughest camera you can buy. Every part was selected or designed to take a beating. The case is built of a graphite composite that needs no maintenance and should never need repair.

FCC radiation certification.

The TC-90 has passed the FCC radiation test with flying colors, and is suitably labelled to conform to Part 15 Subpart J FCC Rules and Regulations for Type A equipment.

Tubes — smaller is better.

The LOC (low output capacitance), mixed field 1/2" diode gun Plumbicon tubes used in the TC-90 provide registration performance so much better than 2/3" magnetic tubes that the additional complication of computer-controlled geometry correction is not required.

Pictures with "snap".

From its exclusive f/1.4 prism to its sophisticated use of Large Scale Integrated (LSI) circuits, the TC-90 is designed to deliver outstanding picture clarity as well as perfect colorimetry under all lighting conditions.

Auto white balance in 0.3 second.

When the auto white balance switch is activated, with the TC-90's test signal inserted, you will get a perfect white balance for 3200°K scene color temperature. Or, when the auto white switch is activated with scene content, a perfect white balance is achieved for that scene content in 0.3 second. This is stored in memory until reset.

Auto black balance assures perfect colorimetry.

When the TC-90's black balance switch is momentarily activated, the lens iris closes automatically, the blacks are balanced in 0.3 second, and the lens opens to its previous iris setting. This ensures perfectly balanced individual black levels for red, green and blue channels, which are stored in memory until reset.

Comet tail suppression.

The TC-90 employs comet tail suppression circuits to minimize the effects of bright scene highlights.

The TC-90 delivers a S/N of at least — 60dB.

An outstanding S/N ratio of -60dB is achieved at light levels as low as 56 foot-candles at f/1.4.

TC-90

Simultaneous contours from red and green.

Other cameras offer contouring on only one color at a time. The TC-90 provides contours out of green and red simultaneously to enhance image sharpness over a wide color spectrum.

Genlock with precise SC/H phasing.

With three LSIs in the RS-170A sync generator system, timing is quick, accurate and at the proper relationship between horizontal sync and color subcarrier. The TC-90 genlocks to either a composite color or black-burst signal.

Built-in color bar and stairstep test signals.

The TC-90 has built-in full field or split field color bars that meet or exceed all NTSC specifications.

High-fidelity microphone amplifier.

The TC-90 includes a built-in microphone preamplifier to supply line level audio to all VTRs.

Built-in RTS-compatible intercom amplifier.

The TC-90 camera head has a built-in RTS-compatible intercom amplifier.

Runs on very little power from a big array of sources.

You can power the TC-90 on DC voltage from +10.5 to +15 volts, from any of six sources: 1) two-ampere/hour on-board battery pack; 2) four-ampere/hour on-board battery pack; 3) VTR/VCR battery; 4) an AC-to-DC converter power pack which attaches like a battery pack; 5) a battery belt; 6) any automotive 12-volt DC power supply with negative ground.

You get more than a good view on the 1-1/2" diagonal CRT in the TC-90 viewfinder.

An oscilloscope-type display provides an actual video waveform, which, with a 100% exposure cursor line, lets you make precise manual iris adjustments. You can turn it off when you don't want it. Four LEDs in the viewfinder give you four different warnings: 1) the VTR/VCR is in record mode; 2) end-of-tape of VTR/VCR not connected to camera; 3) VTR/VCR battery low; 4) on-board camera battery low.

A filter for any type of shot.

The TC-90 has a built-in 5-position filter wheel to allow the camera operator great flexibility for color temperature compensation and scene illumination correction.

With the "Smart Package"™ option, the TC-90 may just be the smartest ENG/EFP camera available anywhere.

Add the exclusive Smart Package™ option to the TC-90, and you get microprocessor time code generation that lets you record SMPTE and VITC time codes as you shoot. The Smart Package also adds diagnostics, auto centering and encoder balance. No diascope lenses or special test charts are needed for the automatic adjustment of these parameters, only normal scene content is required.

COLOR STUDIO TELEVISION CAMERAS

C SERIES COLOR STUDIO TELEVISION CAMERAS

The Harris C Series offers a wide range of choices to give you the exact camera configuration that best fits your production needs. Now you can have a camera that is essentially custom designed for your operation. You make the choices...and you get exactly what you want.

The basic C Series model is a manual setup camera with automatics. The C Series also offers a full computer-controlled automatic setup version that features a separate computer in each camera for simultaneous setup and greater flexibility. The basic model may be upgraded in the field to full computer setup capability as your requirements change.

The C Series operates with TV-81 multicore cable, Triax cable or TV-81 mini multicore cable. This gives you the flexibility of utilizing camera cable that may already be in place in your facility or at remote sites. All types of pickup tubes designed for the 25mm format can be accommodated. These include standard Plumbicons®, Diode Gun Plumbicons, ACT Plumbicons and Saticons. Choose the tube that best fits your operating environment. From your local newscast to a remote sports event, the C Series offers a lens to "bring it home". 10:1 to more than 42:1 zoom ranges are available from all major lens manufacturers.

- Color fidelity and picture integrity of the Harris C Series cameras are unsurpassed. High resolution with low lag, high sensitivity, low noise, unique contouring from red and green simultaneously, highlight handling that virtually eliminates comet-tailing, and variable contrast give you color as you really see it, and clean sharp video even under the most severe lighting conditions.
- Harris C Series cameras are designed for easy operation from the control panel on through to the camera head.
- The Harris C Series cameras are reliable, rugged and ready to operate over long periods of time with minimal engineering attention.
- In the C Series computer setup model, 48 operator functions are controlled by the computer and adjusted according to preset parameters. Each camera has a built-in independent computer to eliminate camera interdependence in multi-camera installations.

TC-80C Manual Studio Camera

C SERIES

Camera-head modules are readily accessible for servicing, and controls are front-edge mounted.

Utility panel provides connections for test equipment and external intercoms, tallies, monitors.

Joystick remote control panels.

Operator's view of Harris C Series tilttable, rotatable viewfinder showing electronic-generated safe-title area and variable grease pencil window.

FP-5 PORTABLE COLOR VIDEO CAMERA

The FP-5 portable color camera is a single frequency separation type high-sensitivity color camera using 1/2" Saticon tube which ensures clear and sharp pictures even in dim light. It also has auto focus, auto/manual iris, auto white balance, character generator, genlock and color bar.

Features

Beautiful and Clear Picture

Since this camera uses a Saticon tube and a bias light just like television cameras used for the broadcasting industry, it is possible to obtain clear pictures with a minimum of after-image or noise even in dimly lighted scenes. Horizontal resolution is 250 lines at center and S/N ratio is 45dB.

Built-in Genlock Unit

For EFP and ENG applications, the camera can be used in genlock with other cameras by feeding the genlock input signal to the Genlock connector on the optional Remote Operation Panel.

Auto Focus Functions

The auto focus system enables the focus adjustment automatically. Thanks to this function, the focus operation is extremely easy.

CAM/BAR Select Switch

Since the color bar generator necessary for studio use camera is built-in, camera output signals or color bar signals are easily selected by the CAM/BAR select switch.

8x Zoom Lens with Macro Function

The lens is a 8x zoom lens with auto/manual iris. Since it has a macro function, extreme close-up shooting is possible.

Character Display by Microcomputer System

Titles, date, time and stopwatch can be displayed in the viewfinder screen and also recorded along with pictures.

Alarm Display on the Electronic Viewfinder

Phenomena	Battery run-down	White balance is unbalanced	Insufficient illumination
Display			

VTR Remote Function

The VTR functions: Record, Play, Forward and Reverse Search, Slow, Still, Record check can be controlled from the camera.

Auto White Balance

White balance adjustment is achieved by simply pressing down the white balance switch.

Fade-In/Out Switch

The picture and sound automatically fade in or out by one touch control.

FP-5

Boom-Type Condenser Microphone

A boom-type unidirectional electret condenser microphone is provided as an accessory. This microphone is removable.

Electronic Viewfinder can be Attached to Right or Left Side

The electronic viewfinder can be mounted on either the right or left side of the camera, depending on which side is most convenient for you. The viewfinder can be tilted to any position.

Low Power Consumption

The consumption is approx. 6.8W. As it is low, VTR's battery lasts longer. To reduce power consumption, this camera also has a Standby switch.

Power Consumption: Approx. 6.8W (when the power zoom, Auto focus and color bar generator are not operated)

Dimensions: 81W x 172H x 286.5D mm (excluding the electronic viewfinder and accessory microphone.)

Weight: Approx. 3.2kg (including electronic viewfinder and microphone)

\$1800.00

Optional Accessories

- GM-5N/P 4.5" viewfinder
- SA-5 Studio adaptor (for GM-5N/P mounting attachment)
- C-502CC Camera cable (50m)
- C-152CC Camera cable 15m
- C-501VF VTR cable 5m
- C-201VF VTR cable 2m
- AP-4 AC adaptor
- C-102CT Extension cable (10m)
- ZL-5WM Lens cable kit
- OP-5 Remote control functions; Master black, Iris, Camera cable select switch, Camera/Bar select switch, Intercom, Intercom level, Tally, (max. cable length; 50m) \$1280.00

HITACHI

Hitachi Denshi, Ltd.

175 Crossways Park W.
Woodbury, NY 11797
(516) 921-7200

COLOR CAMERA

FP-7

FP-7 COLOR VIDEO CAMERA

High performance and multi-purpose single-tube color camera equipped with a 5MHz high band Saticon tube and a 10x power zoom lens.

Features

- CAM/BAR select switch
- Masking circuit
- Auto white balance and preset function
- Turret type color temperature compensation filter and filter position display
- Built-in genlock unit
- Servo zoom and servo iris type 10x f/1.6 lens
- VTR interface
- High gain select switch
- Independent monitor output
- Low power consumption

The FP-7 is developed mainly for broadcasting and sophisticated commercial applications and is provided with high performance and function which are equal to those of a 3-tube color camera. Not only a single set operation with a VTR but also system operation using several cameras can be performed by combining the camera with the remote operation panel (OP-77).

High Resolution Pick-Up Tube

The high band Saticon (2/3", 5MHz) offers the wide frequency band width of the luminance signal and high horizontal resolution of 360 lines.

2H Contour Corrector

The same 2H contour corrector used in a 3-tube color camera offers high vertical resolution.

High Sensitivity and Signal-to-Noise Ratio

A single carrier frequency separation system and a low noise preamplifier are incorporated to yield a very high signal-to-noise ratio of 50dB. Even when the quantity of light is insufficient at open aperture, setting the high gain switch to +12dB and using a 10x f/1.6 lens enable an object to be shot under subject illumination of down to 23 lux.

Color Shading Correction

The FP-7 is provided with the color shading correction circuit to produce a flat picture regardless of the frequency separation system. With this circuit, corner color shadings are reduced to a minimum.

Vertical and Horizontal False Signal Reduction

The vertical and horizontal false signals are reduced to obtain a high picture quality almost the same as that of a 3-tube color camera.

Color Reproduction

Since each of four channels (Y, R, G and B) is provided with a processing amplifier which controls color signal waveform, the color signals are balanced and the color reproduction distortion resulting from changing a pick-up tube is reduced.

Power Requirements: 12V DC

Power Consumption: Approx. 10W (incl. viewfinder)

Weight: 10.1 lbs. (4.6 kg)

including lens and viewfinder

Dimensions: 3.94"W x 8.66"H x 9.05"D

(100 x 220 x 230mm)

\$2195.00

Optional Accessories

GM-5N/P	4.5" viewfinder
AP-60U	AC adaptor
N10x10BRM-7 (f/1.6)	10x servo zoom lens
ZL-20W	Remote control unit for lens
DP-10	Battery pack
BA-7	Battery adaptor
AP-61	AC adaptor/charger
TA-1	Tripod adaptor

PORTABLE COLOR CAMERA

Z-31

Z-31 3-TUBE PORTABLE COLOR CAMERA

The Hitachi ENG/EFP Color Camera Z-31 is a three-tube auto set-up portable camera for production houses, schools, business, etc.

The Z-31, a sister camera of the FP-22, is improved in picture quality, temperature stability, and automatic set-up adjustments by a microcomputer. Character display function is newly designed to the Z-31 for ease of camera operation. Also features prism temperature sensor. Studio accessories and triax digital command systems are all available as options.

SPECIFICATIONS

HIGH PICTURE QUALITY

- Resolution:** Newly developed three 2/3" LOC MS Saticon tubes are employed. MS: Electromagnetic focus/electrostatic deflection type.
- Registration:** New MS Saticon tubes reduce registration errors. Registration compensation circuit is provided.
- S/N:** LOC MS type Saticon tubes are employed.
- Enhancer:** 2H (standard).
- Gamma Correction:** Variable gamma correction.

- Viewfinder Display:** LED: Tally (T), Battery (B), High gain (A), and Write mode (W).
CRT: Signal level (tiger stripe).
Mode: WHT, Gain, and CAM/BAR.
Alarm: DLT OFF, BAR.
Diagnosis: Auto set-up data.
Malfunction of automatic set-up: Next required operation is indicated.

ESSENTIAL FUNCTIONS

- Mon Out:** Yes
- Level Ind:** Yes (tiger stripe)
- ENC:** I.Q.
- Title Memory:** Yes
- Memory Backup:** Lithium Battery
- Beam Splitter:** Prism f/1.4
- Pickup Tube:** 2/3" LOC MS Saticon
- Opt. Filter:** 3200, 5600, 5600 + 1/8, ND, CAP
- Sensitivity:** f/4 2000 lux
- Resolution (G):** 750 TV Lines
- Registration:** 0.1, 0.2, 0.4%
- S/N (NTSC):** 58dB (typical)
- Hi Gain:** +9dB, +18dB
- Enhancer:** 2H
- Bars:** EIA Split Bar
- ENC (NTSC):** I.Q.

COLOR CAMERAS

Hitachi FP-50S is especially suitable for:

- All Studio Applications
- Multiplexer Transfers
- Graphics Intense Colors

FP-50S Color Camera

The Hitachi FP-50S is a fully developed new generation color studio camera adopting highly efficient prism optics and three 3/8-inch SATICON* pickup tubes. Features include superb resolution, signal-to-noise ratio and color fidelity even under low lighting conditions.

FEATURES

Lightweight

11.3 kg (24.9 lb) compact camera head (less lens) is very easy to operate both in studio and field.

Excellent resolution

3/8-inch magnetic focus magnetic-deflection separate-mesh SATICON tubes (H9311A) and improved electronics can provide 550 lines of resolution at center and 450 lines at corners.

High Sensitivity and low noise

Highly efficient (F1.4) RGB prism splitter and 3/8-inch SATICON tubes offer 53 dB signal-to-noise ratio at 2,000 lux (200fc), F4, 90% reflection, 3,200°K. Further a +6/+12 dB high gain switch offers acceptable pictures up to a minimum of 100 lux (10 fc), F1.6.

Low lag

Built-in bias light ensures low lag for SATICON* or Plumbicon** operation.

Shading correction

To assure flat pictures, adjustable saw-tooth and parabolic shading corrections are superimposed both in the H and V directions.

3 position filter wheel

3,200°K, 6,000°K plus 25% ND filters are included in the filter wheel for color temperature and scene illumination corrections.

Auto white balance

In combination with the above trim filters, white balance is achieved automatically from color temperature of 2,000 to 8,000°K, by merely pressing the "AUTO WHITE" button and using a white scene as reference. White balance is retained by an analog IC memory for over two days even after the camera power has been turned off.

Manual white balance (option)

By exchanging an H. detail/Auto white unit for an H. detail/Manual white unit (option), white balance can manually be corrected to 3,200, 4,000, 5,000, 6,000 and 7,000°K at the trim filter position of 3,200°K.

Color tone control

Fine color tone matching is achieved by controlling chroma phase. This does not affect the white balance.

Detail correction

Horizontal out-of-green detail correction ensures sharp pictures. 1-line vertical out-of-green detail unit (option) further adds picture contour crispness.

Internal/External synchronization

The camera can be synchronized to the internal sync pulse generator or external drive pulses. The camera can be genlocked to external color composite or black burst signal by using an optional genlock unit. Horizontal pulse timing (+/-3 us) and subcarrier phase (0 to 360°) adjustments are available.

FP-50S

Blanking width adjustment

To compensate for induced errors in recording and post-production processes, horizontal blanking width is adjustable from 10.2 to 11.2 us, and vertical blanking width is adjustable from 18 to 21 lines.

High brightness viewfinder

The 5-inch tiltable viewfinder features 100 ft-lambert brightness and minimum 500 lines of center resolution, which make camera focusing and framing very easy even under high ambient light. Viewfinder peaking and DC restoration circuits are also provided.

Auto iris

With any recommended zoom lenses the camera continuously and rapidly corrects the lens iris to compensate for changes in scene illumination by using mean video level detection. The iris may also be controlled manually from the CCU.

Auto iris closure

The lens iris is closed automatically when the camera is turned off or switched to standby, protecting the pickup tubes from highlight damage. The iris is not opened again when the "SHUTTER" button is in the "OFF" position, even if the camera is switched to "OPERATE." Meanwhile the black level of the camera output can be adjusted with no incident light.

Line-up signals

Built-in full field color bar generator facilitates the line-up of the camera encoder and color monitor. Synchronized focus wobbling circuitry for tube alignment is also provided.

R, G, B outputs

Individual R, G, B outputs at standard level and impedance are provided for chroma keying.

Remote control flexibility

The CCU can be separated from the camera head by up to 300m (1,000 ft). The CCU also has a remote connector to control "R and B GAIN," "MASTER BLACK," "IRIS" and "AUTO WHITE" from an additional unit.

PROFESSIONAL COLOR TV CAMERA

FP-60S Studio Color TV Camera

The Hitachi FP-60S Color TV Camera adopts a newly developed prism optics and three 1-inch SATICON™ pickup tubes, and features superb resolution, signal-to-noise ratio and color rendition. The camera head is of sturdy die-cast aluminum construction and can be used in field applications under severe operating conditions as well as studio use.

Features

Prism optics and 1-inch SATICON™ tubes

The newly developed prism optics and 1-inch SATICON™ tubes provide a high signal-to-noise ratio of 52 dB and a high resolution of 600 TV lines.

Built-in automatic beam optimizer

Built-in automatic beam optimizer developed by Hitachi extends dynamic range and reduces comet tail.

Built-in bias light

The built-in bias light reduces lag.

Built-in test signals

Input and output levels for each module can be easily adjusted by the built-in test signals, also color encoder can be easily set without vectorscopes by special test signals.

Tiltable viewfinder

The viewfinder is tiltable and its 7 inch diagonal CRT offers easy viewing. Also a higher grade viewfinder is available for extra high illumination and resolution applications (option).

Dual method for color temperature compensation

Color temperature is compensated both by optical conversion filter for high color reproductivity and electrical method for high sensitivity. ND filter is built-in.

Built-in shading compensators

The built-in compensation circuit for modulation shading and black shading.

Built-in iris servo amplifier

Light volume coming into the camera is kept optimum by combined built-in iris servo amplifier and zoom lens. Manual control is also available.

Extra video gain

Extra video gain (+ 6 dB and + 12 dB) is available for applications in low light areas.

Built-in contour corrector

Sharp and clear pictures can be obtained through the built-in vertical contour correctors of H-detail and 1H delay types. A 2H-Vertical contour corrector is available (option).

Auto white balance

High quality picture can be maintained for many hours through the use of digital memory automatic white balance.

Painting

To get color balance between cameras, "Painting" function is provided. The painting can also be switched off.

Masking amplifier (optional)

Optional masking amplifier is provided for subtle color reproduction adjustment.

Automatic wobbling circuits

Automatic wobbling circuits are built-in for easy beam alignment.

Negative G. signal for registration adjustment

Negative G. signal is provided for easy registration adjustment.

R, G and B signal outputs

Outputs of R, G and B non-composite signals are available as the signals for chroma key.

A level meter

Black level and black balance can be easily set by a level meter.

Built-in color bar generator

Color bar generator is built-in for color adjustment between cameras and adjustment of color monitors. Switching of active video and color bar can be made from the remote control panel.

	Saticon Prism Studio Camera

COLOR CAMERAS

SK-91 EFP Color TV Camera

- **ULTRA-LIGHT AND RUGGED** — Advanced design of the camera housing with magnesium alloy casting, new construction of the optical and mechanical sub-assemblies and careful selection of the electronic parts have realized the compact, ultra-light and rugged, self-contained, hand-held camera. It weighs only 4.4 kg (9.7 lbs.) including 1.5-inch viewfinder and withstands rough handling and environmental extremes.
- **SHOCK- AND VIBRATION-FREE** — A new shock-mounted optical system, with prism, yokes and tubes packaged as a single assembly, assures registration stability and makes the camera virtually impervious even to severe shock, vibrations and jolts encountered in transportation.
- **RF INTERFERENCE-FREE** — Improved shields for tubes, yokes and preamplifiers guarantee practically interference-free operation even in the 120dB electro-magnetic field from MF to UHF.
- **IMPROVED PRISM BEAM-SPLITTER** — A newly developed, high-speed (f1.4) prismatic, beam-splitter, together with low-noise pre-amplifiers, provides high sensitivity and excellent signal-to-noise ratio. A deviation of optical registration due to temperature changes and a bias light shading of the prism are also improved substantially.
- **ABO (AUTOMATIC BEAM OPTIMIZER)** — The Hitachi developed ABO circuit greatly extends dynamic range, reduces comet-tailing and thereby guarantees easy highlight handling.
- **SHADING CORRECTION** — Adjustable H/V sawtooth, parabolic and portholing axis shading correction for each color channel, and also V sawtooth modulation shading correction are adopted to assure perfectly flat pictures.
- **2H CONTOUR CORRECTION** — 2-line horizontal and vertical out-of-green signals, level dependent with coring and comb-filtering, are added to R, G and B channels to ensure optimum picture sharpness with minimum noise contribution.
- **GAMMA CORRECTION** — Gamma correction is continuously adjustable in each color channel from 0.35 to 1, which permits easy matching to other cameras.
- **LINEAR MATRIX MASKING** — A linear matrix masking amplifier is built-in to get high-fidelity color rendition and fine tone-matching among the cameras.
- **AUTO IRIS** — Automatic iris control by video level detection maintains constant video level under wide variations of lighting conditions.
- **AUTO WHITE BALANCE** — White balance is achieved automatically in half a second by the "AUTO WHT" switch, if a white object is focused in the center of the picture. Digital memory retains the white balance semi-externally even after the camera is turned off or to standby, or the power supply is disconnected.
- **AUTO BLACK BALANCE** — Black balance is also automatic by turning on the "AUTO BLK" switch, which closes the lens iris and sets up the video black level in each color channel. Digital memory is used also for this control.
- **VIDEO LEVEL INDICATOR** — For manual iris operation of lenses, an oversignal indication of tiger stripes is superimposed on the viewfinder display.
- **AUTO IRIS CLOSURE** — A lens iris is automatically closed for protecting the camera tubes from possible damage due to highlight when the camera is turned off or to standby, and for setting up the video black level when the "AUTO BLK" switch is turned off.
- **4-POSITION FILTER DISC** — A filter disc includes 3200° K, 4700° K, 6000° K +50% ND, and 0% ND filters. These filters, together with the auto white balance and auto iris, provide sufficient color temperature compensation and scene illumination correction.

SK-91

- **POWER SUPPLY OPTIONS** — The SK-91 may be powered from any of a conventional battery belt, an attachable battery pack, a car battery and an AC power adaptor. Low power consumption of mere 20W at single +12 V DC assures continuous operation in excess of two hours with the battery belt or one hour with the attachable battery pack.
- **LOW BATTERY VOLTAGE WARNING** — A flashing LED in the viewfinder alerts the cameraman to low battery voltage.
- **STANDBY/OPERATE SWITCH** — The camera draws only 5% of the normal power in the "STANDBY" mode. Return to the "OPERATE" mode is accomplished in a few seconds.
- **+9/ +18dB HIGH-GAIN SWITCH** — Master gain of +9/ +18dB operates on the gain of all three color channels simultaneously and is quite useful for the camera operation under extremely low light levels. Usable pictures with acceptable signal-to-noise ratio is provided down to 20 lux (2 fc) scene illumination at +18dB and f 1.4.
- **MASTER BLACK CONTROL** — Master black level control is provided for brightness matching to other cameras.
- **REGISTRATION CONTROLS** — H/V centering trim pots in R and B channels and R, G, B, R-G and B-G monitor outputs are provided to check and control fine registration.
- **SPLIT-FIELD COLOR BARS** — A built-in color bar generator produces split white with 75% and 100% white as well as six hues and black. This makes it easy to set 100% modulation level in VTR recording.
- **SEPARATE VIDEO OUTPUTS** — In addition to the two isolated encoded video outputs for line and VTR, a separate monitor output is provided. This delivers R, G, B, R-G, B-G or encoded video signal by switch selection.
- **RETURN VIDEO INPUT** — An external synchronous or non-synchronous composite video signal may be switched in the viewfinder.
- **GENLOCK INPUT** — A built-in sync generator can be genlocked to an external color composite or black burst signal. Horizontal pulse timing and sub-carrier phase are adjustable. In a PAL model the genlock unit is externally attached to the camera.
- **BLANKING WIDTH ADJUSTMENT** — Both H and V blanking widths are adjustable over a wide range to compensate for the errors introduced into the recorded video signal in the recording/time base correction/editing process.
- **HIGH RESOLUTION VIEWFINDER** — A 1.5-inch, tiltable, high brightness, high-resolution viewfinder with a magnifying eyepiece assures precise focusing and picture composition. A built-in peaking circuit further assists in attaining sharp optical focusing of the lens. An optional 5-inch viewfinder is also available for studio use.

- **VIEWFINDER INDICATORS** — The 1.5-inch viewfinder includes the following indicators: Tally, White Balance, Video Level (tiger stripe), Battery Voltage and VTR Record.
- **HI-FI MICROPHONE AMPLIFIER** — A built-in microphone amplifier accepts a mike having output level from -45 to -60dBm. Two-time-constant limiting amplifier assures natural sounds even when a sound level varies abruptly.
- **VTR TRIGGER BUTTON** — A trigger button is provided on the lens for remote control of a portable VTR. VTR record is indicated in the viewfinder with an LED.

- SK-91** ENG/EFP Camera
With 2/3" Saticons or Plumbicons, f1.4 prism optics, 2H enhancer and AVO, 9.7 lbs., +9, +18dB gain, auto white and black balance and low 22 watts power consumption. **\$26,700.00**
- Self-contained color camera package includes:**
HP-91: Camera Head
(3) H8398: Saticons
VF-153: Viewfinder (1.5")
DC-91: Camera Cover
DP-40: Battery
CB-91: Battery Bracket
BC-40: Battery Charger
SDM-91: Shoulder Mount
TA-91: Tripod Adaptor
CL-91: Carrying Case
MK-91: Maintenance Kit
SVM-91: Service Manual
- SK-91P** Same as SK-91 package except with XQ-1427 RGB Plumbicons. **\$26,700.00**

COLOR CAMERA

SK-97 Full Auto Setup EFP Camera

The Hitachi SK-97 is an epoch-making, 2/3-inch, 3-tube, portable color camera with full auto setup functions. The camera satisfies all the requirements necessary for a portable camera in EFP and studio applications; i.e. excellent picture quality, great ease of operation and extremely high reliability.

The SK-97 employs the same auto setup system as that of the sister camera SK-970 for studio portable use, and can be used in combination with the SK-970. In addition, the SK-97 can be controlled by the SK-110 full auto setup studio camera system too.

The SK-97 weighs approximately 13.2 lbs. (6 kg) excluding a lens in spite of improvement in performance and addition of the auto setup functions.

Excellent Picture Quality

- High Performance Pickup Tubes
- High Resolution over Entire Screen — 600 TV Lines at Center
- High Signal-to-Noise Ratio — 58dB (NTSC); 55dB (PAL)
- Improved Prism Optics
- ABO (Automatic Beam Optimizer)
- Encoder with Dynamic Contrast (Variable Gamma)
- High-Precision Static and Dynamic Registration
- Linear Matrix Masking

Great Ease of Operation

- Auto Iris
- Two Filter Disks
- High-Brightness, High-Resolution Viewfinder
- Viewfinder Character Display
- Power Supply Options
- Preheat/Operate Switch
- +9/+18 dB High-Gain Switch
- Centralized Control Panel
- Chroma Keying Outputs
- Selectable YIQ/RGB Outputs
- SMPTE/EBU Color Bar Output
- Hi-Fi Microphone Amplifier
- Two-Wire/Four-Wire Intercom System

Versatile Auto Setup System

- Zero Method Control
- Auto Setup Mode Selection
- Data Files
- Fault Diagnosis
- RCU (Remote Control Unit)
- Auto/Manual Setup by Camera Itself

Digital Command System Available

When an optional digital command system consisting of the MU-97 multi adaptor and the DU-97 DCU is used, all the camera operations can be remotely controlled from the RCU or the SK-110's SCU through a single coaxial cable. The MU-97 is attached to the camera side cover and the DU-97 of half-rack size is located near the BSU

VC-98

In addition, when a TX-97 triaxial adaptor is used together with the above units, power transmission as well as camera control is possible through a single triaxial cable of up to 1.4 miles (2.3 km) in case of using a Felten 2.5 LS/11.5 cable.

Superior Serviceability

The pickup tubes are rear-loaded for ease of replacement. In particular, the R and the B channel tube can be simply replaced by removing the top and the bottom cover of the camera respectively.

All of the electronic circuitries are divided by functions into printed circuit boards with silk printing on both sides, and major circuit boards are inserted into a PCB harness with mother board connection.

SK-97-3A Full Auto Set-Up EFP/Studio Camera For Broadcast Use with LOC D.G. Plumbicon (XQ3427RGB), Less Lens.

Package Includes:

- SK-97 Camera Head, Built-in Auto Set-up
- XQ-3427RGB LOC D.G. Plumbicons
- VF-154 1.5" High Resolution V.F. w/ Diagnosis Display
- AP-40U A/C Adaptor
- TA-97 Tripod Adaptor
- CL-97 Carrying Case
- SVM-SK-97 Service Manual
- Standard Accessories

\$39,500.00

Accessories

- CB-97 Battery Bracket \$ 95.00
- DP-40 Battery (2 Hour) 475.00
- BC-40 Battery Charger for SP-40 70.00

COLOR CAMERAS

SK-970

Full Auto-Setup Compact Studio Camera

The Hitachi SK-970 is an epochmaking, 2/3-inch, 3-tube studio camera with full auto setup functions built into a compact size and a light weight of 55 lbs. (25 kg). The camera satisfies all the requirements necessary for studio and field applications; i.e. excellent picture quality, great ease of operation and extremely high reliability.

The auto setup system controls every parameter related to color balance and registration to provide the highest picture quality at all times. In addition, the system controls on-line, real-time compensation for registration errors caused by a change in lens zooming and focusing or in prism temperature, ensuring high picture quality.

Since a microcomputer is built into the camera, the camera can be set up both automatically and manually either at the camera itself or from an RCU (Remote Control Unit) through a BSU (Base Station Unit). A DCU (Digital Command Unit) is also provided to constitute a system configuration best suited to each application anywhere at any time.

The SK-970 employs the same auto setup system as that of the sister camera SK-97 EFP camera, and can be used in combination with the SK-97. In addition, the SK-970 can be controlled by the SK-110 full auto setup studio camera system too.

The SK-970 features not only high performances but also much flexibility for system configuration.

FEATURES

Excellent Picture Quality

- High performance pickup tubes
- High resolution over entire Screen — 600 TV lines at center
- High signal-to-noise ratio — 58dB (NTSC); 55dB (PAL)
- Improved prism optics
- ABO (Automatic Beam Optimizer)
- Encoder with dynamic contrast (Variable Gamma)
- High-precision static and dynamic registration
- Linear matrix masking

Great Ease of Operation

- Compact and lightweight system
- Auto iris
- Two filter disks
- 7-inch VF with various functions
- Viewfinder character display
- +9/+18 dB high-gain switch
- Centralized control panel
- Outputs of four pictures at camera
- Chroma keying outputs
- SMPTE/EBU color bar output
- Hi-Fi microphone amplifier
- Two-wire/Four-wire intercom system

Versatile Auto Setup System

- Zero method control
- Auto setup mode selection
- Data files
- Fault diagnosis
- RCU (Remote Control Unit)
- Auto/Manual setup by camera itself

Triaxial Digital Command System Available

When an optional digital command system consisting of the MU-970 multi adaptor and the DU-970 DCU is used, all the camera operations can be remotely controlled from the RCU or the SK-110's SCU through a single triaxial cable and also the camera power can be transmitted through the cable.

The MU-970 is built into the camera and the DU-970 of half-rack size is located near the BSU. When a Felten 2.5 LS/11.5 cable is used, both are separated by up to 1.1 miles (1.8 km).

Since an FM frequency multiplexed transmission is used for video, audio and command signals, the system ensures excellent transmission quality, especially high signal-to-noise ratio for video and audio signals and high reliability for command signals. Transmission of the selected monitoring video signal (PIX/WFM/CK) is possible as a standard.

Superior Serviceability

The pickup tubes are rear-loaded for ease of replacement. In particular, the R and the B channel tube can be simply replaced by removing the top and the bottom cover of the camera respectively.

All of the electronic circuitries are divided by functions into printed circuit boards with silk printing on both sides, and major circuit boards are inserted into a PCB harness with mother board connections.

General-purpose electrical parts are selected for ease of maintenance and particularly, ICs having a second source are used.

SK-970-3 Full Auto Set-Up

Self-Contained Studio Camera for broadcast field/studio use with LOC D.G. Plumbicons, Less Lens.

VC-99

SK-110 Broadcast Quality Camera

CAMERA HEAD

- **Highly efficient prism optics:** A newly developed f1.8 prism optics are used in conjunction with 1-1/4" Plumbicon* tubes to provide a high signal-to-noise ratio of 54 dB at 2000 lux and f5.6. The optical filters have been dust-proofed to virtually eliminate dust problems.
 - **Six-position ND and color filter discs:** Two filter discs, one for ND filters and the other for color filters have been provided, with independent filter selection possible from both the RCU and the SCU. The discs are servomotor driven and may be rotated in either direction.
 - **Improved registration and optical axis accuracy:** By using an independent four-corner adjustable dynamic registration compensation unit, compensation to within 0.05% over the entire picture area is possible. This can be achieved by means of either the auto-setup or the remote control from the SCU. The compensation data is stored in RAM memory with a back-up battery. The optics, coil assemblies and zoom lens are mounted as a unit to ensure that mechanical distortion does not affect the optical system or coil assemblies and to eliminate the effects of external mechanical stresses on registration and optical axis accuracy.
 - **Comet tails eliminated by ABO (Automatic Beam Optimizer):** The Hitachi developed ABO circuit allows the beam current to be increased up to 16 times versus only 4 times the normal setting for conventional systems, a limitation imposed by considerations of picture quality. This means that comet tails can be eliminated without the usual accompanying misregistration, loss of resolution, and increase in dark current.
 - **High-performance viewfinder:** A bright, high-resolution CRT has been used in the viewfinder to provide an easy-to-view image even for outdoor shooting. The viewfinder can be tilted from +25° to -45° and rotated +/90° to set it at any arbitrary angle.
 - **Easy-to-use video select button:** R, G, B, minus G, and two return video signals (AUX-1 and AUX-2) can be switch-selected as the viewfinder video signal.
 - **Convenient monitor output on the camera head:** A separate video output has been provided on the camera head to be used for floor monitors, etc.
 - **Red and green tallies:** The viewfinder is provided with both red and green tallies, the red one for live shooting and the green one used for VTR recording.
 - **Built-in microphone amplifier:** The camera head is provided with a built-in microphone amplifier with limiter. The audio output is balanced to prevent the pickup of noise from the camera cable.
 - **Test signals provided to simplify setup:** Test signals are used for easy calibration of the output of each amplifier stage. The signals are applied in sequence, starting from the process amplifier and walking back until the preamplifier is calibrated. The test signals may be applied to the input of the preamplifier first stage, process amplifier-1 and process amplifier-2, and consist of a 100% and 200% level sawtooth waveform which can be used for level calibration as well as verification of gamma, knee point, slope and clipping point.
 - **Designed for easy servicing:** The camera head and CCU PC boards are simple to remove and marked on both sides, making parts easy-to-find for quick servicing or inspection. Another serviceability feature is a coil assembly that can be removed while the camera is mounted to the dolly.
- CCU**
- **Compact design:** The CCU is designed as a dedicated camera control unit for computer controlled cameras. Both the video processing section and the computer section have been housed in one compact package.
 - **Linear matrix masking:** A built-in linear matrix masking circuit is provided and ensures faithful color reproduction and easy tone matching among cameras.
 - **High-performance contour corrector:** Compensation signals derived from the R and G channels provide clear, crisp images of even red subjects. The contour correction signals are automatically processed to match the type of subject, maintain optimum compensation and ensure natural images.

- **Standby mode operation:** Three operating modes have been provided to reduce power consumption and extend the life of the pickup tubes and CRT.
 - (1) **CCU POWER:** Main power supply is switched on; the CCU is operating.
 - (2) **POWER:** The camera head is on and the heaters of the pickup tubes and CRT are supplied with 50% of the normal voltage.
 - (3) **BEAM:** The pickup tube beams are switched on and the camera operates.
- **Genlock:** The SK-110 is genlocked to an external sync signal when composite sync and subcarrier signals are applied. Horizontal and subcarrier phases can be adjusted manually. If required, genlocking by means of a black burst signal can also be provided.
- **Built-in SMPTE/VIT color bar generator:** A color bar generator conforming to the latest SMPTE standards has been built-in for convenient adjustment of monitors. Also built-in is a VIT color bar generator, allowing monitoring of the characteristics of the encoder and the transmission line while on the air.
- **High-reliability LSI process amplifier:** Camera picture quality is greatly effected by the stability of the process amplifiers used. LSI process amplifiers have been used in the SK-110 camera to provide stable operation with respect to temperature variations and eliminate variations between channels. They provide both picture quality and high reliability and represent the most advanced step in a camera of this class.
- **Special effects:**
 - (1) The horizontal and vertical deflection currents can be independently reversed, a feature useful in picking up mirror images.
 - (2) The video polarity of the R, G, and B signals can be independently inverted.
 - (3) A circuit has been provided which can be used to provide swinging of horizontal deflection by means of an externally applied low frequency signal.
- **Encoder with variable gamma (contrast):** Gamma control of luminance and chrominance signals is linked and can be adjusted by remote control, making adjustment of the picture contrast very easy, even under such difficult conditions as those encountered outdoors.
- **Iris:** In the Auto Iris mode the lens iris is automatically adjusted according to subject illumination. In manual mode, the center value and adjustment range of the iris are set by the sense and range controls of the SCU or RCU. This feature makes operation in the studio where light variations are small extremely simple. The iris values are visible on the SCU and RCU LED display.

AUTOMATIC SETUP

- **Zero method control:** The zero method of control is capable of controlling the R, G, and B channels, thus eliminating the troublesome manual adjustment of the G channels required in the G channel reference method. The system has been completely automated, and a parallel control system can set up multiple cameras simultaneously in just 2 minutes.
- **Control of multiple cameras:** By using a DSU for every group of six cameras, up to 24 cameras can be controlled with just one SCU. By adding a TSU control capabilities can be expanded up to 42 cameras using two SCUs, providing all the flexibility you will ever need.
- **Automatic setup modes:** Five automatic setup modes have been provided; full, registration, color balance, G-reference, and white balance. These can be selected from to suit the picture conditions at the time. In addition, manual control from either the SCU or RCU is possible, with all normal operational controls accessible manually.
- **Data files:** Five data files are provided except for the AUTO data file. Automatic setup data is automatically stored in the AUTO data file. It is possible to store or erase the manual setup data from the SCU in the five data files by operating the entry or reject switch.
- **Fault diagnosis:** Fault diagnosis of the camera video system, power supply and pulse system is performed automatically to detect failures. Diagnosed results are printed out on the typewriter. This system has greatly simplified camera maintenance by providing quick and accurate information on failures.
- **Quick check:** When the SCU Check switch is depressed, registration (G-reference) and color balance (G-reference) are automatically checked and, if the required accuracy is not being obtained, the readjustment is automatically made.
- **Scroll display and automatic setup status display:** The results of the fault diagnosis and the quick check are displayed on a scrolled picture monitor character display. The scrolling display may be stopped at any desired point for viewing. The status of the automatic setup function (controlled parameters and their status) may also be viewed on the picture monitor character display.
- **Remote control:** The SCU, TSU, DSU, and CCU may be connected with just three twisted-pair cables and be separated from one other by up to 1000m (3000 ft.). The CCU and RCU may be connected using three twisted-pair cables and separated up to 100m (300 ft.). If the power supply is provided externally to the RCU the distance to the CCU can be extended up to 1000m (3000 ft.).

COLOR CAMERA

SK-110D FULL AUTO-SETUP COLOR TV CAMERA

SCU (Setup Control Unit)

This unit provides centralized camera control functions for multiple cameras.

A power supply on/off, auto-setup, quick check, fault diagnosis, manual control, typeout, picture monitor character display, digital display of lens f-number, monitor picture selection, floppy-disk memory for manual adjustment data, and RCU function are provided for each camera. The picture monitor character display includes controlled parameters and percentage of controlled quantities. The DSU function for six cameras is built into the SCU to simplify the system. However, when controlling more than six cameras, use external DSUs.

DSU (Delegation Switch Unit)

This unit serves as a switching unit for data lines and video signals when several cameras are controlled by an SCU. It is possible to assign up to 6 CCUs to one DSU which can be located anywhere between the SCU and the CCU.

TSU (Transfer Switch Unit)

This unit provides switching for data lines and video signals when several camera groups are controlled by two SCUs. The group is selected in a block of a DSU and each camera is controlled through the DSU.

CAMERA HEAD

Pickup Tubes

1-1/4" LOC-DG Plumbicon*1 pickup tube; 750 TV lines; signal-to-noise ratio of 56dB or more.

Highly Efficient Prism Optics

f/1.8 prism optics.

High-Accuracy Static Registration

Auto setup control for camera registration including that for bow and skew distortions in both the horizontal and vertical directions guarantees high accuracy static registration of 0.05% over the entire screen, in combination with Digital Registration Compensation (DRC) and corner registration compensation which controls four corners independently.

High Precision Dynamic Registration

By using RLC (Real-time Lens Correction), the auto setup system controls on-line, real-time compensation for registration errors caused by variations of lens zooming and focusing.

Scrambling Use of Multiple Cameras

Computerized Tube Hour Meter

Controlled by the built-in microcomputer instead of a conventional electromechanical hour meter, providing a character display of operating hours on the viewfinder screen.

Dynamic Focusing Circuit

ABO (Automatic Beam Optimizer)

High Performance 7" VF with Numerous Functions

Built-in Microphone Amplifier/Limiter

Test Signals for Amplifier Calibration

A 100% and a 200% level sawtooth test signal are provided to facilitate calibration and setup of each video amplifier. By applying these signals in sequence to the input of the process amplifier-2, process amplifier-1 and preamplifier first stage, it is possible to calibrate the level of each amplifier as well as to verify the gamma, knee point, slope, clipping point, etc.

Easy Servicing

The PC boards in the camera head and CCU are simple to remove and are marked on both sides, making parts easy-to-find for quick servicing or inspection. Another serviceability feature is a coil assembly that can be removed while the camera is mounted on the dolly.

CCU

Compact Design

The CCU is designed as a dedicated camera control unit for a computer controlled camera. Both the video processing section and the computer section have been housed in one compact package. The width of the power supply unit is reduced to just a half of 19" rack for compact system configuration.

Linear Matrix Masking

High-Performance Contour Corrector

Compensation signals derived from the R and G channels provide clear, crisp images even for red subjects. The contour correction signals are automatically processed to match the type of subject, maintain optimum compensation and ensure natural images.

Standby Mode Operation

Three operating modes are provided to save power consumption and extend the life of the pickup tubes and CRT.

1. CCU Power: Main power supply is switched on; the CCU is operating.
2. Power: The camera head is on and the heaters of the pickup tubes and CRT are supplied with 50% of the normal voltage.
3. Beam: Beam current of the pickup tube is turned on and the camera operates.

Genlock

The SK-110D is genlocked to a black burst signal or a composite video signal. Horizontal and subcarrier phases can be adjusted manually.

High Reliability LSI Process Amplifier

Output picture quality is greatly affected by the stability of process amplifiers. LSI process amplifiers used in this camera provide stable operation against temperature variations and provide no deviation between channels.

Special Effects

1. The horizontal and vertical deflection currents can be independently reversed, a feature useful in picking up mirror images.
2. The video polarity of the R, G, and B signals can be independently inverted.
3. Swinging of horizontal deflection is provided by means of an externally applied audio frequency signal.

Encoder with Variable Gamma (Contrast)

Gamma control of luminance and chrominance signals is linked and can be adjusted by remote control, making adjustment of the picture contrast very easy, even under such difficult conditions as those encountered outdoors.

Built-In SMPTE/VIT Color Bar Generator

A color bar generator conforming to the latest SMPTE standards has been built in for convenient adjustment of monitors. Also built in is a VIT color bar generator, allowing monitoring of the characteristics of the encoder and the transmission line while on the air.

Computer-Controlled Auto Iris

Lens iris is automatically controlled by detecting the average and peak value of the object illumination and calculating the control output data for optimizing lens servo response by a built-in microprocessor.

AUTOMATIC SETUP

Zero Method Control

The zero method of control is capable of controlling the R, G, and B channels, thus eliminating the troublesome manual adjustment of the G channel required in the G channel reference method.

Expandable System Hierarchy

A microprocessor is built in each unit from the SCU to the camera head, so that the system can flexibly be configured from 1-camera chain to a large scale system. By using a DSU for every group of six cameras, up to 24 cameras can be controlled with just one SCU. By adding a TSU control capabilities can be expanded to up to 42 cameras using two SCUs, providing all the flexibility you will ever need.

Automatic Setup Modes

Eleven automatic setup modes are provided: AUTO SETUP (full), COLOR BALance, REGISTRATION, DRC AUTO, G REFERENCE, EXTERNAL chart full AUTO, EXTERNAL chart regi AUTO, EXTERNAL chart color balance AUTO, CHECK, AUTO WHITE, and AUTO BLACK.

Fault Diagnosis

Fault diagnosis of the video system, pulse system and power supply in the camera head and the CCU of the selected camera is performed by depressing the DIAG switch. Diagnosed results are displayed on the picture monitor and the viewfinder, and can be printed out on an optional teletypewriter, too.

Auto Setup of 38 Parameters

Total of 38 parameters of auto setup for color balance and registration including digital registration compensation are available for system setup.

Remote Control

The SCU, TSU, DSU, and CCU may be connected with just three twisted-pair cables and be separated from one another by up to 1,000m (3,000 ft.). The CCU and RCU may be connected using three twisted-pair cables and separated up to 100m (300 ft.).

HV-17L

HV-17L 1" Vidicon Camera

The HV-17L, designed for industrial use, and faithful surveillance is a recent addition to the superb line of Hitachi CCTV cameras. Two features particularly appealing about the HV-17L are its top-level performance and low price. Its sensitivity has been greatly enhanced by a Hitachi 1-inch Vidicon, producing faithful scene reproduction despite the absence of adequate lighting. Its superb performance is further ensured by more advanced circuit design such as white suppress and auto-beam circuits. These features render it possible to use the HV-17L in the broad industrial field.

FEATURES

- **Enhanced ASC operation range**
The HV-17L boasts of greatly enhanced ASC (Automatic Sensitivity Control) operation . . . 20,000:1.
- **1-inch high-sensitive Vidicon**
Equipped with a 1-inch high-sensitive Vidicon, the HV-17L provides expert surveillance where there is inadequate lighting. It requires only 3 luxes (minimum illumination) for thorough surveillance.
- **Clearst possible image**
The built-in white suppress circuit assures the clearest, brightest possible images of darkened scene objects even when there is a bright object among them.
- **Auto-beam circuit**
The auto-beam circuit automatically compensates Vidicon emission deterioration, and eliminates the necessity to periodically adjust the camera reducing maintenance cost.
- **Easy back-focus adjustment**
Vidicon back focus can be easily adjusted from the camera exterior.

HV-17T 1" Vidicon Camera

Not Shown

The Hitachi CCTV Camera HV-17T, a high-performance TV camera intended for broad industrial use, is designed with particular emphasis placed on system application.

Equipped with a Hitachi 1-inch Vidicon, its sensitivity has been sharply improved, assuring faithful scene reproduction in the low light condition. The HV-17T incorporates a 2:1 complete interlace synchronizing signal generator, a white suppress circuit, an auto-beam circuit, and other advanced circuit designs to ensure wide-range surveillance capability. Operable by external synchronizing signals, it can be used in combination with other cameras or in conjunction with a VTR, promising expanded system application.

HV-700 Series CCTV Camera

The Hitachi HV-700 Series CCTV Camera is a monitor television camera which is suitable for a wide range of applications.

It is available either as an internal sync type (Line-lock type), an external sync type (Non-line-lock type).

FEATURES

- Owing to the use of an automatic sensitivity control circuit, the only necessary camera operation is focusing (only vidicon tube type).
- **Automatic Beam Control (ABC)**
Automatic circuitry eliminates need for periodic readjustment of beam throughout life of camera tube.
- A white suppressor circuit ensures faithful reproduction on the video monitor, even for subjects with strong contrast.
- Camera mounting screws are provided at the top and bottom of the camera, facilitating mounting of the camera.

■ Specifications for Each Machine

(with ES Lens)

- Switchover to external synchronization takes place automatically when an external drive signal is input, hence no switch operation is necessary.
- The camera is available as a high resolution type for a Vidicon tube or as a high sensitivity type for a Newvicon* tube, to suit the particular applications and place where it is to be used. In total, 8 models are available. All of these employ a 2:1 interlaced scanning system, providing a more stable and clearer image.
- Video monitor available in three versions, 9-inch, 12-inch and 17-inch.
The optimum distance for viewing a video monitor is considered to be about 4 to 10 times the height of the screen. This monitor is available in three sizes, 9-inch, 12-inch and 17-inch, for applications ranging from close up monitoring to cases where the monitor is viewed from a distance. All three monitors provide a clear, sharp and stable image.
- **Wealth of accessories**
A wide range of accessories, including various lenses, camera case, motorized pan/tilt heads, automatic video switcher, VTR, and video cable, is available to enable you to upgrade your system in accordance with the particular applications.

CCTV CAMERA

"REMOTE EYE" SINGLE CABLE CCTV SYSTEM

The Remote Eye is a compact, high-performance CCTV camera system designed for use in a wide variety of monitoring applications. As a result of its single coaxial cable system, the need for involved AC power installation of the camera has been eliminated. This system allows greatly increased customer service, crime and fire prevention in such diverse applications as financial institutions, stores, hospitals, and hotels, while also helping improve managerial capabilities.

CAMERA HV-240/240N

This is a black and white TV camera of an internal sync type designed to be used with a multi unit (MU-240). A 2:1 interlace system employing a crystal oscillator makes for excellent picture. The HV-240 is a high resolution type (horizontal 550 lines or more at center) of vidicon camera containing an ASC (Automatic Sensitivity Control) circuit, enabling a stable picture to be obtained over a range of illumination between 10 and 100,000 lux. The HV-240N is a high sensitivity type of Newvicon camera (minimum illumination: 0.5 lux f1.6).

It is provided with an auto iris lens output terminal, permitting fitment of an auto iris lens which automatically regulates the aperture in accordance with fluctuations in illumination.

CAMERA HV-245/245N

This is an external sync type of camera which is used in combination with a dedicated sequential switcher (CS-263/266). The HV-245 is a vidicon camera. The HV-245N is a newvicon camera.

SEQUENTIAL SWITCHER CS-263/266

This is a sequential switcher which selects the video signals from several HV-245/245N cameras and then sends them to a video monitor. It is provided with all the functions necessary for monitoring and recording. Two models, the CS-263 with 3 inputs and the CS-266 with 6 inputs, are available.

- Clean, undistorted switched picture. Each camera is driven by the same sync signal, and switching takes place during the vertical blanking period of the video signal, hence there is no distortion of the picture during switching. During automatic switching, it is possible to skip terminals to which cameras are not connected, by operating a switch. It is also possible to perform video switching manually.
- Interrupt switching function provided. Interrupt terminals corresponding to the camera numbers are provided, hence by connecting an alarm device such as a sensor, the video of the camera corresponding to the place where an alarm was emitted will automatically be selected. Thus there is no risk of failing to recognize an abnormal condition.
- Alarm output function provided. This unit is provided with an alarm output terminal from which an alarm signal is emitted for a period of about 5 to 30 seconds in the event of an interrupt input. By connecting an alarm device such as a buzzer or a lamp, the occurrence of an abnormality will be brought to your attention.
- Auto mode return function. The video of a camera switched by an interrupt input can be returned to the auto mode after about 5 to 60 seconds (this time can be continuously varied). It is also possible to return to the auto mode immediately after the interrupt input disappears.
- Can be connected to a Time Lapse VTR. Switching timing can be controlled by an external switching pulse input. As a result, even when connected to a Time Lapse VTR, the entire camera picture can be recorded without error.

HV-240	\$350.00
HV-240N	800.00
HV-245	225.00
HV245N	595.00
CS-263	470.00
CS-266	625.00

K-type: 240V AC 50 Hz
Power consumption Approx. 10W (When using a HV-240 or HV-240N)
Dimensions (WxHxD) 3.0 x 2.4 x 5.7"
(76 x 62 x 145mm)
Weight Approx. 2.2 lbs. (1kg)

CS-263

Video inputs Max. 3 (HV-245/245N)
Power consumption Approx. 40W (When using three HV-245/245N cameras)
Dimensions (WxHxD) 9.4 x 3.0 x 10.2"
(240 x 75 x 260mm)
Weight Approx. 8.8 lbs. (4kg)

CS-266

Video inputs Max. 6 (HV-245/245N)
Power consumption Approx. 70W (When using six HV-245/245N cameras)
Dimensions (WxHxD) 9.4 x 3.0 x 11.4"
(240 x 75 x 290mm)
Weight Approx. 13.2 lbs. (6kg)

MONITORS

VM-900A 9-inch monitor

Dimensions (WxHxD) 9.6 x 9.2 x 9.3"
(244 x 233 x 235mm)
Weight Approx. 13.4 lbs. (6.1kg)
Optimum monitoring distance 2 to 5' (0.5 to 1.5m)
VM-900A \$180.00

VM-906 9-inch monitor

Dimensions (WxHxD) 8.6 x 8.6 x 9.2"
(219 x 219 x 234mm)
Weight Approx. 13.2 lbs. (6kg)
Optimum monitoring distance 2 to 5' (0.5 to 1.5m)
VM-906 \$285.00
Used in combination with Time Lapse VTR

VM-129 12-inch monitor

Dimensions (WxHxD) 12.5 x 11.2 x 12.4"
(318 x 284 x 315mm)
Weight Approx. 22 lbs. (10kg)
Optimum monitoring distance 3 to 7' (0.8 to 2m)
VM-129 \$380.00

VM-173 17-inch monitor

Dimensions (WxHxD) 15.9 x 15.2 x 11.5"
(405 x 386 x 293mm)
Weight Approx. 37.4 lbs. (17kg)
Optimum monitoring distance 4 to 10' (1 to 3m)
VM-173 \$395.00

KP-230/231 ALL SOLID-STATE CCTV CAMERA

The Hitachi KP-230/231 is a solid-state black-and-white TV camera which employs a solid-state imaging device instead of a conventional pickup tube.

The KP-230/231 is designed to be a separate type of an ultra-compact camera and a camera control unit. KP-230 is DC powered, KP-231 is AC powered.

FEATURES

- This camera features an MOS two-dimensional photo sensor array with 384 horizontal and 485 vertical picture elements, developed especially by Hitachi, as the solid-state imaging device, and this device provides the high resolution of 450 TV lines and high picture quality.
- The "blooming" can be greatly reduced as compared with a conventional camera.
- 2:1 interlaced scanning is employed according to the EIA standard.
- The MOS solid-state imaging device ensures no deflection distortion or burning, and also a low level of lag. Moreover, the service life is prolonged and the reliability of the camera has been upgraded.
- Max cable length is 10 m. Camera head with incl. cable is 2 m; camera extension cable is 8 m (option).
- Easy system configuration: the KP-230/231 is used with external units and peripheral units, since the clock pulse, horizontal and vertical sync signals and composite sync signal are supplied from the camera control unit (CCU).
- Besides the internal non-line-lock system, external sync may also be employed. The switch-over to external sync is automatic with the supply of the external drive signal and so there is no need to operate any switches. **\$2450.00**

SPECIFICATIONS

Imaging device	MOS-type 2-dimensional photo sensor array with 384(H)x485(V) picture elements, HE-98222
Scanning area	6.6x8.8 mm (equivalent to 2/3-inch vidicon)
Synchronization	Internal/External sync
Scanning system	2:1 interlaced scanning
Scanning frequency	Horizontal: 15,734 Hz Vertical: 59.94 Hz
Resolution	Horizontal: 450 lines at center Vertical: 350 lines at center
Signal output	Composite video signal, 1.0Vp-p(VS), 75 ohms sync negative (BNC connector)
Signal-to-noise ratio	42 dB
Minimum illumination	20 lux, f1.4 (When the HIGH GAIN switch is ON)
Lens mount	C-mount
Camera cable to CCU	2m (Standard)
Camera mount	1/4"-20 UNC

Ambient temperature	-10 to +50°C (14 to 122°F)
Power requirements	
KP-230:	DC12 ⁺ 3V
KP-231:	U type 117V±10%, 60Hz E type 220V±10%, 50Hz K type 240V±10%, 50Hz
Power consumption	
KP-230:	Approx. 4.8W
KP-231:	U type Approx. 9W E&K types Approx. 10W
Dimensions (WxHxD)	
Camera head:	45x45x61 mm (1.8x1.8x2.4 in)
Camera control unit:	200x71x235 mm (7.9x2.8x9.3 in)
Weight	
Camera head:	Approx. 110g (0.24 lb) excluding lens and cables
Camera control unit:	
KP-230:	Approx. 1.5 kg (3.3 lb)
KP-231:	Approx. 2.0 kg (4.4 lb)

STANDARD COMPOSITION

• Camera head (with 2m-camera cable)		1 pc
• Camera control unit		1 pc
• EE lens connector	HR10-7P-4P	1 pc
• External sync input connector	DIN 6-pin	1 pc
• Sync output connector	DIN 7-pin	1 pc
• 12V DC input connector (KP-230 only)	RM12-BPG-3S	1 pc
• Operation manual		1 copy

OPTIONAL ACCESSORIES

- Lenses
- Extension camera cable (8m)

CCTV CAMERA

MOS SOLID STATE CAMERA

KP-120/220 CCTV CAMERA

The KP-120/220 is a black-and-white TV camera employing a solid-state pickup device in the form of a MOS-type 320 (H) x 244 (V) picture element two-dimensional photo-sensor array, developed by Hitachi, Ltd., to achieve improved sensitivity and blooming characteristics.

The operating principle of a TV camera which employs solid-state pickup devices prevents the actual picture from deflection, distortion or sticking and minimizes lag problems. Furthermore, this type of camera is characterized by long life and high reliability.

And there are even more merits! The KP-120/220 is compact and lightweight, and it can be operated easily. All these features render this camera ideal for geometric image processing where its lack of distortion is put to good use, and also for special monitoring applications in high or dangerous locations where the camera's long life and high reliability can be used to the utmost advantage.

EE lens output signals can be fed out.

FEATURES

Compact size and light weight

By replacing the pickup tube and coil with a solid-state pickup device, the camera's weight and volume have been reduced to about one-third the corresponding values of conventional black-and-white pickup tube cameras (produced by Hitachi).

Long service life and high reliability

Similar to conventional semiconductor devices, the KP-120/220's solid-state pickup device is characterized by minimal aging, ensuring long service life. What a pleasing contrast with an outmoded pickup tube whose degree of vacuum was subject to impairment and whose cathode material was subject to deterioration, requiring replacement.

Using a solid-state pickup device also reduces by about 50% the total number of parts used and increases reliability (compared with other Hitachi cameras).

Applications

- Pipe cameras, underwater cameras, cameras mounted in high locations, monitoring of locations where no maintenance is normally possible
- Instrumentation applications, pattern recognition (geometric readout devices, robots), planimeters, dimensional and flow inspections
- Monitoring of moving objects, monitoring of locations subject to possible strong light, monitoring inside tunnels, pollution monitoring, traffic survey
- Monitoring behind buses and trucks, monitoring work with cranes and other machines, monitoring at locations subject to vibration and shock
- Shooting in strong magnetic or electrical fields

SPECIFICATIONS

- Pickup device: 320 H x 244V MOS-Type Solid-State device, HE-97211
- Scanning Area: 6.6 x 8.8 mm (equivalent to 2/3-inch Vidicon)
- Synchronization: Internal/External automatic selection
- Scanning System: Progressive scanning
- Scanning Frequency: Horizontal: 15.72 kHz, Vertical: 59.9 Hz
- Resolution: Horizontal: More than 240 lines at center, Vertical: More than 190 lines at center
- Signal output: 1.0 Vp-p (VS), 75 ohms, sync negative
- Minimum Illumination: 10 lux (1 fc) standard or 5 lux (0.5 fc) selector incorporated, F1.4
- Signal-to-noise ratio: Random noise; 49 dB (4.5 MHz band), Fixed pattern noise; 52 dB (4.5 MHz band)
- Lens Mount: C-mount
- Camera Mount: 1/4" -20
- Ambient Temperature: -10 to +50°C (15 to 122°F)
- Power Requirements: 100 V +1 -10% AC, 50/60 Hz; 120V +/-10% AC, 60 Hz, Approx. 5 W (using AC adaptor), 9 V DC, 0.3A, approx., 2.7 W (camera only)
- Dimensions (W x H x D): Camera; 2.4 x 1.9 x 5.2 in., AC adaptor; 2.6 x 2.1 x 3.5 in.
- Weight: Camera; approx 0.95 lbs. excluding lens, AC adaptor: Approx. 1.76 lb.

No geometric distortion

The solid-state pickup device is composed of tiny picture elements—320 horizontal to the light sensor and 244 vertically. These elements are arranged with precision in the order of microns, and since the video signal is taken out from these unit devices, no geometric distortion occurs regarding the light sensor.

It has been impossible to avoid this type of distortion with conventional pickup tubes because the electron beam emitted from the electron gun was deflected by the coil and the light sensor was scanned. This demerit persisted even when some form of electrical compensation was provided.

Reduced lag

One undesirable characteristic of pickup tubes leads to lag for a very short interval after the subject image had faded away. This produces a so-called "comet tail effect" when a rapidly moving subject is shot. However, with the solid-state pickup device, this lag has been reduced to a very low level.

No sticking; long service life

When the same object is shot over a long period or when an extremely bright light is shot, the signals produced may not fade away—or they may never fade away. This phenomenon is termed "sticking".

However, with a solid-state pickup device, absolutely no sticking occurs—a feature which prolongs camera service life.

Excellent immunity to vibration and shock

The construction and mounting method of conventional pickup tubes and the coil made them susceptible to vibration and shock. By using a solid-state pickup device, it is now possible to upgrade the camera's immunity to vibration and shock to a level commensurate with other electronic devices and equipment.

KP-120

Includes camera without lens, AC adaptor, connectors for external sync and EE lens, operators manual.

KP-220

Includes camera head without lens, cable, remote control unit, operators manual.

DK-3000/3300 SINGLE TUBE COLOR CAMERAS

Compact, easy-to-operate cylinder type camera head suitable for combination with surgical microscopes, endoscopes, and biological microscopes. They are approximately 1.5" (38mm) in diameter and weigh approximately 0.8 lb. (370g).

Resolution of 350 lines, minimum illumination of 25 lux (2.5 fc), f/1.6, and SN ratio of 50 dB. A special circuit enables independent adjustment of red and green color phases and color saturation for the finest color reproduction. A compensation circuit is also built in for sharper pictures.

Special color bar for easy color adjustment of color monitor. LEDs are used for indication of the video level. ALC (automatic light control) and AGC (automatic gain control) detect the amount of light at the center of the screen, enabling a continuously stable picture. Auto to white, ALC, AGC and ABO (automatic beam optimizer) are provided.

STANDARD COMPOSITION

Camera head with 10' (3m) camera cable (for DK-3000); with 10' (3m) + 23' (7m) camera cable (for DK-3300); camera control unit.

The DK-3300 has a very unique feature, the title generator, which superimposes title, date, patient name, etc. onto the picture screen.

ADAPTORS FOR SURGICAL OPERATION MICROSCOPE

These adaptors are used for combining a surgical operation microscope with a television camera.

ADAPTORS USED FOR COMBINING SCOPE WITH TELEVISION CAMERA

Applicable camera Manufacture	DK-3300/3000	Conversion adaptor
For OLYMPUS	MC-06 MC-08	CP-301(MA-ST)/(MA-WO)
For FUJINON	TVA-10B TVA-01/02	CP-302(ST-OL)/(WO-OL)
For MACHIOA	CA-16-AC	CP-302(ST-FU)/(WO-FU)
Others	For STORZ WOLF SHINKO MA-9300	FOA-08

Applicable camera	DK-5050	DK-3300 3000
Model	ME-901(CZ)*	ME-902(CZ)*
Exterior		
General	This adaptor is designed for use on CARL ZEISS surgical operation microscopes. It is provided with automatic aperture control and also the aperture can be controlled remotely. The television field is about 70%.	This adaptor is the same as that of the ME-901(CZ)* with the addition of a photography function. By simply pressing the foot switch, it is possible to take unblurred pictures without interrupting the operation in progress. For a still camera, we recommend the separately available (at cost) Contax 137MD. Television field is about 70%.
		ZEISS = 301519
		
		This adaptor is designed for use on CARL ZEISS surgical operation microscopes. It has a television field of approx. 80%.

* Can be used with DK-3000 series using mounting adaptor LM-B48C.

MEDICAL CAMERAS

DK-5050/5053 3-TUBE COLOR CAMERA

The DK-5050/5053 is a 3-tube color camera with an ultra-compact size, light weight and high performance. It is composed of a camera head and camera control unit, and is ideal for combination with surgical microscopes, endoscopes, biological and metal microscopes. It has horizontal resolution of 550 TV lines (NTSC).

When an f/1.6 lens is used, a signal-to-noise ratio of 53 dB (NTSC) can be attained minimum 16 lux (1.6 fc) illumination by a high-sensitivity pick-up tube and a low-noise pre-amplifier.

The camera sensitivity can be increased to 3 times or 8 times; usable picture is obtained under the illumination of 16 lux (1.6 fc) without changing the lens. A built-in contour correction circuit ensures clear and crisp pictures.

The DK-5050/5053 is used with an optional viewfinder and a zoom lens. A compact and high-performance prism and ICs make it possible to reduce the size and weight of the camera.

ABO (Automatic Beam Optimizer) (only DK-5050)

The built-in ABO circuit ensures the dynamic range from dark portion to highlight portion.

Built-in auto black and white balance controls with digital memory/color correction

Automatic light control is incorporated to activate the automatic light control device for a microscope and the auto-focusing device of the zoom lens.

An optical automatic setup unit using a microprocessor facilitates a correction of the deviation of the setting during operation.

This function has never been used in cameras of this class.

Video level is indicated by the level meter on the operation panel, and the video waveform is displayed on the viewfinder screen (option). Therefore, the adjustment of illumination and lens iris is facilitated even when the ALC is not used.

The color bar signal is used as a color reference signal and facilitates the inspection of color monitor.

Remote control (only DK-5050)

Though the standard distance between a camera head and a CCU is 20m, the distance can be extended up to 300m by using a remote operation unit (option). Inter-communication between a remote operation unit and a CCU are available by headsets (option).

STANDARD CONFIGURATIONS:

DK-5050 Camera head (2m cable) x 1, camera control unit x 1, camera cable (18m) x 1

DK-5053 Camera head (2.5m cable) x 1, camera control unit x 1

VIDEO CASSETTE RECORDERS/ COLOR VIDEO CAMERAS

VT-3P 3 HEAD PORTABLE VCR PORTADECK — VT-3A

- Compact VCR under 8 lbs • 3 Heads • Special effects • 11 mode wired remote • Power shut-off feature with compatible Hitachi video cameras • Video dubbing facility for later insertion of titles, etc. • LCD multi display, including memory rewind/stop • Large, functionally spaced LSI (large-scale integrated circuit) logic controls • DD motors • Noise free editing • Sound on sound • 8 hour recording
- Dimensions: 10"W x 3-3/8"H x 10-3/8"D • Weight: 7.92 lbs. approx. (including Battery Pack)

TUNER VT-TU3A

- 6 program/14 day timer • Instant recording timer • Auto channel lock — protects against accidental disruption of timer settings • Simple 1-cable connection between tuner and video deck • Large, easily visible fluorescent time display • Cable ready - 82 channels
- Dimensions: 10"W x 3-3/8"H x 10-3/8"D • Weight: 7 lbs. **\$1095.00**

VT-5P 3 HEAD PORTABLE VCR PORTADECK — VT-5A

- Lightweight • 3 heads • 8 hour recording • DD motors with power shut-off feature • Noise-free editing • Sound on sound • Video dubbing facility for later insertion of titles, etc. • LCD multi-display, including memory rewind/stop • 18-function wireless remote control included • Large, functionally spaced LSI (large scale integrated circuit) logic controls • Special effects
- Dimensions: 10"H x 3-3/8"H x 10-3/8"D • Weight 7.92 lbs. approx. (including optional Battery Pack)

TUNER — VT-TU5A

- 6 Program/14 day timer • Instant recording timer • 105 channel tuner • Auto channel lock, protects against accidental disruption of timer settings • Simple 1-cable connection between tuner and video deck • Large, easily visible fluorescent time display
- Dimensions: 10"W x 3-3/8"H x 10-3/8"D • Weight: 7 lbs. **\$1195.00**

VT-8P 5 HEAD STEREO PORTABLE VCR PORTADECK — VT-8A

- Compact VTR under 8 lbs. • 5 heads stereo sound • Noise free special effects • Normal speed reverse play • Sound with sound • Wide range of special viewing effects • Noise-free fine editing • Date coding • LCD multi-display • "Power Shutoff" • DD motors
- Dimensions: 10"W x 3-3/8"H x 10-3/8"D • Weight 7.92 lbs. (approx.)

VT-TU8A TUNER/TIMER

- (Customized Tuning)
- 7 prog/14 day timer • Instant recording timer • 19 mode wireless remote • "Cable Ready" 133-channel tuner • Instant Recording Timer—activates automatic on/off recording of 30, 60, and 90 minutes; 2, 3 or 4 hours duration • Dimmer switch for digital timer readout • Quick, single cable connection between tuner and recorder • Timer backup circuit
- Dimensions: 10"W x 3-3/8"H x 10-3/8"D • Weight 7 lbs. **\$1295.00**

VK-C840 SATICON

Auto Focus Color Video Camera

The VK-C840 eliminates problems through a new type of CCD (charge coupled device) sensor which employs photoelectric signals relayed to a servo circuit employing a high-accuracy analog/digital converter. This then instructs a built-in DC drive system to focus precisely on the subject. The auto focus operates in a range of 1 meter to infinity, and under virtually any natural or artificial lighting conditions between 10 to 100,000 lux. Manual override can also be used to defeat auto focus operation when desired.

- 1/2" Saticon™ including striped filter • NTSC 525 lines, 2:1 interlace • Nondirectional microphone • Electronic viewfinder (1" b/w CRT) • Better than 270 TV lines • f/1.2 special mount, 6x zoom, macro function, auto-iris lens • Instant review • Power consumption: 4.0W • Dimensions: 4-5/8"W x 5-1/2"H x 10-1/2"D • Weight: 3.08 lbs. **\$995.00**

VK-C870 SATICON

Auto Focus Color Video Camera

- High-performance 1/2" Saticon™ pickup tube • Sharp f/1.4 motorized zoom lens (6x) with macro setting • Auto iris, auto white balance adjustment • 1" electronic viewfinder reversible for left or right mounting • Unidirectional boom-type condenser microphone • 1.5x teleconversion and 0.7x wide angle conversion lenses available • Fade in/out instant review • Shoulder mount • Character generator • VCR remote operation for special effects
- Dimensions: 7-5/8"W x 9"H x 17-7/8"D includes handgrip
- Weight: 5.7 lbs. **\$1125.00**

VK-C1500 ONE-HAND MOS COLOR VIDEO CAMERA

- High resolution of up to 300 TV lines • Inner microphone with excellent sensitivity • Instant review of just-shot scenes through the viewfinder in use with selected Hitachi video tape recorders • 2/3" MOS image sensor • f/1.2, 6x zoom lens with macro function and fixed mount • Horizontal grip • Automatic white balance control
- Dimensions: 4-7/8"W x 5-1/4"H x 7-11/16"D • Weight: (without cable) approx., 2.16 lbs. **\$1225.00**

VK-C3400 MOS W/COMPUTERIZED AUTO FOCUS

- 2/3" MOS image sensor • Full feature special effects • Color viewfinder • Computerized auto focus • Fade in/out, focus in/out functions • Nega-Posi reversal function • Detachable unidirectional gun-type condenser microphone • Time lapse function (3 seconds to maximum 999 seconds) • Titler provides insertion of title characters (max. 60 letters) at beginning of already recorded scene • Check button confirms operation modes in viewfinder • Warning display informs low battery and underexposure information • Timer readout start/stop inserts digital time display in 1/10 second increments • "Scene timer", digital time readout in viewfinder informs cameraman of exact length of scene being filmed • Instant review facility • f/1.2, 6x, 10.5 to 62mm Zoom, Auto Iris, macro focusing lens
- Dimensions: 7-7/8"W x 8"H x 13-1/2"D • Weight: 5.5 lbs. **\$2095.00**

COLOR CAMERA

IKEGAMI HL-95 UNICAM®

If you're confused by the many tape formats and conflicting manufacturers claims, relax. Ikegami's new HL-95 Unicam® is the only universal camera system that accepts all professional on-board VCR formats, 1/4-inch and 1/2-inch, and solves your buying puzzle by putting the picture you want into place.

Engineered to offer performance beyond the most rigid expectations, the HL-95 utilizes new 2/3-inch SM diode gun Plumbicons®, resulting in a camera with higher sensitivity and S/N ratio, greater resolution, lower operating power requirements and less registration error than previously possible in a camera of its size and weight.

The HL-95 is also available as a stand-alone ENG camera, and in systems configurations using Triax or multi-core cable base stations, or with the ML-95 ENG Microwave Link. Once you examine the HL-95 Unicam®, you'll agree that the system flexibility and picture quality puts it in a class all by itself. The standard of excellence continues at Ikegami.

FEATURES

- High sensitivity: Max. 24dB
- Small size: 165D x 95W x 250H mm
- Weight: 3.0kg (Camera + 1.5" VF)
- Full shading correction: Black and white
- Dynamic focus correction
- Flare correction
- Geometry correction
- Color matrix
- Knee aperture correction
- Viewfinder:
 - White balance indication
 - Battery warning indication
 - Tally (REC) indication
 - Gain up indication
 - Stand-by indication
 - Lens extender indication
 - Audio level indication (CH1, CH2)
 - Tape remaining time indication
 - Filter position indication
- Color bars: Split field, in accordance with RS-189
- Sync generator: RS-170A, adjustable H. V Blanking

- Automatics:
 - Auto iris
 - Auto iris close
 - Auto white balance
 - Auto beam control
 - Auto highlight compression

1/2" M-FORMAT PORTABLE VCR FOR THE HL-95

IKEGAMI HM-100

1/2" Portable VCR for HL-95 ENG Camera

Ikegami has succeeded in combining the HL-95 compact ENG camera and a newly developed 1/2" video cassette recorder. The HL-95 with 1/2" VCR is our answer for demanding ENG applications. It incorporates a creative new recording process which may record up to 20 minutes of broadcast quality signal on one NV-T120HG VHS tape. This camera system will afford a camera person greater maneuverability in material gathering activities such as news reporting and documentary and sports reporting.

New 1/2 inch Format Features

The HL-95 with 1/2 inch VCR's professional quality results are made partly possible by a special recording process which records Y and I/Q information on separate video tracks. This means that Y and I/Q signals are delivered directly from the camera to the recorder. In addition, the I/Q signals are multiplexed for even greater freedom from intermodulation.

Also contributing to the outstanding picture quality are the 4 video recording heads and the high tape speed of about 8 ips with a recording wavelength of 27,000 cycles per second. Although compact VHS tape is only 1/2" wide, the M-format recording system delivers broadcast quality video, 2 high quality audio tracks, a control track, and a time code track all on this space saving, easily available tape.

And the new 1/2 inch VCR gives you a full 20 minutes of recording on one NV-T120HG VHS cassette.

HM-100

Specifications for 1/2" Portable VCR

General

- Power: DC +12V
- Power consumption: 12W (nominal DC +12V)
- Video recording system: 4 rotary heads, 2-track helical scanning system
- Tape speed: 8 inch/sec. (204.5mm/sec.)
- Recording time: 20 min. (NV-T120HG VHS cassette)
- FF/REW time: less than 5 min.
- Tape: NV-T120HG VHS cassette
- Dimensions (WxD): 120mm x 237mm x 240mm
- Weight: 9.0 lbs. (4.1 kg)

Video

- Television system: NTSC system, 525 lines, 60 fields
- Modulation system: 2 channel Y/I/Q frequency modulation, I/Q frequency multiplexing
- Bandwidth: Luminance: 3.0 MHz, -1dB, Chrominance: 1.0 MHz, -1dB
- Signal-to-Noise ratio: Luminance: better than 47dB, Chrominance: better than 48dB
- Differential gain: less than 5%
- Differential phase: less than 5°
- K factor (2T pulse): less than 2%
- Chrominance: Luminance delay: 90 nsec.
- Inputs: Y/I/Q from camera
- Outputs: composite video: 1.0Vp-p, 75Ω

Audio

- Frequency response: 50 ~ 15,000 Hz ± 3dB
- Signal-to-noise ratio: better than 50dB
- Crosstalk: better than -40dB
- Inputs: Mic 1 (XLR): -60dBm, 600Ω, Mic 2 (XLR): -60dBm, 600Ω
- Output: Headphone: -20 to -32dB, 8Ω

Environmental

- Ambient temperature: 32° ~ 104°F (0° ~ 40°C)
- Relative humidity: 20 ~ 85% (noncondensing)
- Operating altitude: 0 ~ 10,000 ft. (3,040m) unpressurized

HM-300

IKEGAMI HM-300

Playback and Editing Equipment

Features

- M-Format recording can produce broadcast quality results
- Y and I/Q or NTSC video input and output
- Advanced microprocessor control for smooth tape transport and direct mode operation
- Insert or assembly editing
- Audio limiter built-in
- Y and I/Q direct dubbing input and output connectors for minimal loss of signal quality
- 4 servo controlled direct-drive motors
- 2 audio tracks plus a time code track
- Dial search control with jogging capability

COLOR CAMERA

SC-500 STUDIO CAMERA

A new economical professional studio color-TV.

The new viewfinder camera, employs three 2/3" pickup tubes and a prism-optics system to produce pictures of superb clarity and color fidelity. The sturdily built, easy-to-service camera can be relied on to keep performing under the most demanding studio conditions.

Features

- Dynamic focus to ensure superior corner resolution
- Deflection distortion corrector for extremely low registration error
- Detail corrector for crisp, sharp images
- Black and white full shading correction
- Video matrix to provide accurate color matching between cameras
- Servo-controlled filter disc
- +6/ +12dB video gain switch
- Dynamic beam stretch
- Return video
- Level suppression to accommodate high-contrast scenes
- Horizontal resolution (at G channel)—700TVL at center, 600TVL at corners
- S/N ratio—57dB/NTSC, with Gamma, DTL off

Automatic Features

- Automatic centering control
- Automatic iris with weighting system
- Auto cap for tube protection
- Auto white and black balance
- Auto black level
- A newly developed non-volatile memory retains all the automatic correction data for several years, even when power is removed.

A zebra-pattern video signal indicator in the 7" viewfinder ensures optimum matching of video signals, and a built-in split-field color-bar generator is provided. A character display in the viewfinder permits easy monitoring of camera status while the camera is being used.

Fully modular construction is employed to simplify service and maintenance. Plug-in printed-circuit boards, divided according to circuit function, are utilized. All major controls are located in front of each unit to facilitate adjustments.

ENG/EFP COLOR CAMERA

ITC-730A

IKEGAMI ITC-730A

Ikegami introduces the ITC-730A, a compact, professional, and economical camera capable of consistently producing quality pictures of fast-breaking events. The ITC-730A is the perfect answer for the cost-conscious TV station or cable operation that wants a multi-purpose, high-quality ENG/EFP camera that's easy to maintain.

PERFORMANCE FEATURES

- Saticon II pick-up tubes
- A built-in high-speed (f/1.4) prism beamsplitter produces pictures with excellent sensitivity, resolution, colorimetry, and high sensitivity (f/4.0 at 2000 lux)
- A high-performance FET is built into the coil assembly to offer pictures with an excellent signal-to-noise ratio of -57dB
- A bias light is incorporated to reduce lag, designed especially for critical low-light scenes
- A 2H detail corrector assures an excellent, crisp, sharp image
- The camera employs a deflection distortion corrector to make images with extremely low registration error
- To ensure superior corner resolution, a dynamic focus is employed

OPERATIONAL FEATURES

- The lightweight camera head is well balanced on the shoulder, so there is no feeling of fatigue during extended operation
- Rugged camera head: The camera head is made from a tough, magnesium diecast alloy
- The lens mount is the same size as that on the ITC-350, ITC-730 and HL-79D/E cameras. Perfect interchange among lenses is possible—meaning you can use a wide variety of ENG-type high magnification lenses with any of these cameras
- A servo type auto iris control system is used to enable iris control from peak to average levels, or variable combination of peak and APL
- The auto iris closes automatically to protect the camera pickup tubes from damage whenever the power is cut off
- To maintain optimum video quality under all indoor and outdoor conditions, the ITC-730A incorporates a color temperature filter wheel. Indoors: 3200°K, Outdoors (cloudy weather): 5600°K, Outdoors (sunny weather): 5600°K + 25% ND, CAP: Blind

SYSTEM CONNECTION FEATURES

- A built-in genlock feature (standard) makes external sync (VBS/BBS signals) operation possible by a coaxial cable
- When the supply of genlock signals stop, the camera is automatically switched over to the internal sync operation
- There is easy control of subcarrier phase and horizontal sync phase at the camera head
- Horizontal and vertical blanking widths can be controlled separately
- SC-H phase relationship meets EIA RS-170A
- Gamma correction is continuously adjustable in each video channel to permit easy matching to other cameras
- By connecting the CCU-730A, a variety of remote control operations, such as those shown below, are possible

- | | |
|------------------------------------|-----------------------------------------------|
| 1) Iris | 8) Color bar switching phase |
| 2) Manual/Auto switch-over of iris | 9) Subcarrier phase control |
| 3) Master pedestal | 10) Horizontal sync phase control |
| 4) R/B pedestal | 11) Nor/Mid/High (0/+9/+18dB) Gain switchover |
| 5) Peaking with R or B-knob | 12) Camera call |
| 6) Peaking with R/B-knob | 13) R/B H-centering |
| 7) Auto white setting | 14) R/B V-centering |

- The 5-inch viewfinder is equipped with a tilting mechanism mount for studio use. (A 1.5-inch viewfinder for portable use is also available.)

CAMERA CONTROL UNIT

- The ITC-730A CCU mounts into a 19" rack, height is 3.5"
- The CCU-730A compensates for cable lengths up to 300 meters. Cable diameter is 13mm. Cable compensation positions are 15/100/200/300 meters
- The standard unit can be operated from Camera Head power, a battery, or other DC power source
- Horizontal phase is automatically controlled by APC (Auto Phase Control) system regardless of cable length
- Utilizes a power source with a remote sensing function which automatically supplies a fixed voltage to camera head, regardless of cable length
- RGB signals (with one channel provided for each), simultaneously fed out from the CCU, may be utilized for chroma key signals

ITC-730AP Plumbicon® ENG/EFP Color Camera
Plumbicons are utilized for better highlight handling characteristics and lowest image lag.

COLOR CAMERA

IKEGAMI HL-79E ENG/EPF Color Television Cameras

The Ikegami HL-79E establishes a new standard of comparison for high quality ENG/EPF color television cameras. Although it is smaller and lighter than its HL-79 series predecessors, it uses the same proven and available 2/3-inch pick-up tubes while achieving important performance improvements in the areas of sensitivity, signal-to-noise ratio, registration accuracy, resolution and R.F.I. immunity. Picture quality is further enhanced by new circuit features such as chroma aperture correction, dynamic detail correction, automatic highlight compression and knee aperture correction. The improved performance and picture quality enhancement result in a camera with overall performance rivaling that of the competitor's studio cameras; hand-held or tripod supported versions are available.

The HL-79E is designed for ease of maintenance with a micro computer to carry out self diagnostic functions. The micro computer assesses the camera's operating condition and makes any necessary corrections in a short time.

The ADC-79E incorporated in the system prints out a statement of the camera's condition via an RS232C port, thus control of the camera can easily be made for the long term.

FEATURES

RFI Immunity

Up to 10 volts per meter (140dB) from 100kHz to 600MHz for the entire camera surface (not including lens port).

Chroma Aperture Correction

Generates aperture correction signal when Green information is absent from the signal, results in improved sharpness of picture in Red and Blue content areas.

Dynamic Focus

Parabolic modulation of electrostatic focus voltage improves corner resolution.

Dynamic Detail Correction

Parabolic modulation of detail correction signal improves corner picture sharpness.

Knee Aperture Correction

Expands horizontal video frequency response in highlight areas of picture to compensate for aperture correction fall-off due to gamma compression of correction signal.

Performance Parameters

Various fundamental performance parameters have been emphasized to achieve the superior performance desired by today's program originators.

Sensitivity

Standard sensitivity is 2000 lux at f/5.0 Maximum sensitivity at + 18dB video gain is 20 lux at f/1.4 (using 89.9% reflectance chart).

Signal-to-Noise Ratio

-59dB is achieved with low input capacitance tubes using conventional measuring techniques (0dB video gain).

Registration

Deviation of Red and Blue with respect to Green is within 0.05% in Zone 1, 0.1% in Zone 2, and 0.3% outside of Zone 2 as a result of the Quadrant Geometry Correction Circuit used.

Resolution

By operating the pick-up tube in a high voltage mode, center resolution of 650TVL limiting and corner resolution of 500TVL limiting is achieved (using Diode Gun pick-up tubes, measured at 2000 lux illumination on a standard RETMA resolution chart).

Viewfinder Resolution

Crisp, high contrast pictures are assured by the use of an improved cathode-ray tube.

Output Signal Characteristics

In accordance with EIA Standard RS-170A, blanking pulse widths and SC-H phase relationship adjustable.

HL-79ESL Saticon 3 tube, low capacitance

ACCESSORIES

AUTOMATIC FEATURES

The HL-79E is a fully automatic camera configured to permit the camera operator to concentrate on artistic aspects with minimum attention required by the camera operators. The automatic features provided are:

- Auto Iris Control
- Auto White Balance (2 Modes)
- Auto Black Balance
- Auto Iris Closure
- Auto Iris Waiting
- Auto Highlight Compression
- Auto Beam Control

MAINTENANCE CONSIDERATIONS

To simplify maintenance of the HL-79E, numerous features have been incorporated in the design:

- Electromagnetic Beam Alignment Controls
- Synchronized Focus Wobble Circuitry for Precision Tube Alignment
- Deflection Overscan Facility for Accurate Raster Positioning
- Calibrated Video Test Sawtooth Voltages for Video Amplifier Adjustment
- Sealed and Dust Free Color Splitting Optics
- Monitor Video Output Separate from Line Video Output
- Monitor Video Output with Negative Green Facility for Precision Registration
- Externally Accessible Monitoring Controls

ADC-79E AUTO SETUP DIGITAL CONTROL

Following functions may be controlled from the ADC-79E Auto Setup Digital Control.

1. Just pushing a button automatically diagnoses and sets up the camera simultaneously. This function is useful to check if the camera is ready or not.

- a. Registration
R/BH cent, R/BV cent,
R/B rotation, R/B skew,
R/BH lin, R/BV lin,
R/B width, R/B Height
 - b. Level
R/G/B gamma, R/G/B flare,
Master ped, R/B ped,
R/B gain.
2. Other controls (manual)
Total knee, Total slope, DTL
cont, Iris, CAL on, Bar on,
Auto iris off, Auto black off,
Auto knee off, White clip off,
DTL off, Gamma off, Knee
off, Tally,
Mon sel (R, G, B, R-G, B-G, R + G + B, ENC),
WFM sel (R, G, B, RG, BG, super, seq, ENC),
Chroma aperture off, Auto white cont, Auto white sel,
Auto black cont, Diascope on.
Iris close, Extender ans.

RDC-79E REMOTE DIGITAL CONTROL

The various functions may be digitally controlled from the RDC-79E Remote Digital Control to match the users' preferences.

Detail cont, Iris, M. ped, R/B paint, R/B ped, R/BH cent, R/BV cent, BAR on, Auto iris on, Auto white cont, Mon sel (R, G, B, R-G, B-G, R + G + B, ENC), Call. R/G/B flare, Auto knee on/off, Knee cont, DTL off, Chroma aperture on/off. Cable length: up to 100m

BROADCAST COLOR CAMERA

Ikegami HK-302

The Ikegami HK-302 is the workhorse camera for studios that want network-grade color at an affordable price.

With the HK-302, you'll be getting a standard, rugged, reliable studio camera. You'll find the HK-302 easy to use because it's compact and light in comparison with other studio cameras. Yet, just the right amount of automatic controls have been left to make superb color with a minimum attention from a video operator.

Performance

PICK-UP TUBES

The HK-302 uses three 2/3" Low-capacitance Diode-Gun Plumbi-cons® (XQ-3427).

OPTICAL SYSTEM

The color-separation prism is tops in efficiency and performance. We've mounted the yoke assemblies directly on the optical block to prevent any mechanical registration errors. Bias light is introduced through the prism. An IR filter assures correct colorimetry with extended red PbO's.

QUALITY COLOR

The HK-302 has an adjustable matrix to improve overall colorimetry of the pick-up tubes and prism, and to provide high fidelity chromatic performance. Both black shading and amplitude modulated shading circuits are employed to produce a uniform field.

DETAIL CORRECTOR

A 2H-delay detail corrector enhances the picture vertically and horizontally. Noise suppressor and threshold circuits maintain a high S/N ratio of 57 dB.

DYNAMIC BEAM STRETCH

Ikegami's DBS (Dynamic Beam Stretch) circuit minimizes comet-tailing.

SYNC SYSTEM

The HK-302 satisfies EIA RS-170A standards which prescribe relationships for horizontal and subcarrier phases for correct color framing. Horizontal blanking width and vertical blanking width can be adjusted over a wide range. The HK-302 has an internal sync generator. Genlock is possible using VBS or BBS as an external sync signal, or from sync and subcarrier input signals.

Price Upon Request

CONTRAST EXPANSION CIRCUIT

Produces a sharper image in fog or haze—400 TV lines, 50% performance response.

Improves pick-up tube beam landing errors, resulting in excellent corner focus.

VIEWFINDER

A tiltable, high resolution 6" viewfinder is standard. A high-brightness, 7" viewfinder is optional.

Easy operations

SET-UP

To simplify camera setup, there are four types of test pulses: preamp set, gain set, gamma set, and reference pulse. Speedy and exact setup is possible. The video circuits can be checked with the pick-up tubes turned off or removed.

COLOR BAR GENERATOR

A split-field color bar generator facilitates simplified encoder adjustments.

AUTO IRIS

To assist the video operator in fast changing scenes, auto iris circuitry may be activated by a switch on the control panel.

FILTERS

Two independent filter wheels contain five sets each of ND filters and color temperature conversion filters. The filters can be selected either manually at the camera head or controlled electrically from the CCU.

CABLE COMPENSATION

Video frequency equalization is adjustable in 50 meter steps. Timing is automatically corrected.

CCU MULTIPLEXER

Digital multiplexing of camera control signals vastly reduces the amount of conductors used in a camera cable, thus reducing its size requirement.

LENSES

Normally, the HK-302 uses a 2/3" studio zoom lens; it can, however, take a 1" studio, 2/3" EFP or 2/3" ENG zoom lens. Lenses are easy to mount on the HK-302's quick disconnect wedge mount.

BROADCAST COLOR CAMERA

Ikegami HK-322

The fully automatic television camera. IKEGAMI introduces its newest and most advanced studio color camera: The IKEGAMI HK-322, a fully automatic television camera system. The HK-322's Master Control Panel contains a computer to perform all of the setup functions automatically.

Several other TV cameras have computerized automatic setup controls—but it takes a lot more than just a computer to produce top quality color.

Ikegami has that extra something: color technology. So, when you get an HK-322, you're not just getting a fully automatic camera — you're getting excellent picture quality, superior craftsmanship, and many non-computerized, automatic correction functions.

Television cameras aren't just a sideline at Ikegami — they're the mainstay of our business. And when it comes time to choose the camera that's going to show off your productions best, remember IKEGAMI: the TV-Camera Specialists.

Camera head

Camera setup functions performed by the digital control system contained within the MCP. This information is stored in a camera memory system. The camera becomes a "black box", requiring essentially no internal adjustments.

Among the design highlights included are:

- Precise geometry of less than 0.1% distortion
- Superior registration accomplished digitally resulting in minimal errors, maintained with 0.05% throughout the entire picture area
- Independently adjustable bias lights for R, G and B channels
- 8 pre-programmable zoom lens and diascope error correction modes
- ND and Color Correction filter wheels quickly removable "CASSETTE fashion" for easy maintenance or special effects filter insertion
- Zoom lens heater power is available when the head power is turned off
- Video and power is provided for a video prompter system
- Dual tally system
- Two channel return video
- Dual Mic amplifiers
- S/N ratio of 56dB
- Horizontal resolution — 60% performance response at 400 TV lines, center

Camera Control Unit

Similarly to the camera head, the CCU's memory system retains the setup control data from the MCP. The "black box" concept permits the mounting of the CCUs out of the control area. Several features are to be noted:

- Totally automatic cable compensation for up to 600m of small diameter multicore cable
- Plug in FM Triax system with an operational range of 1500m
- Digitally controlled automatic shading correction
- R/G/B Detail corrector employs a novel design. Picture detail is no longer lost in red or blue picture content as is common with the "contour out of green" principle
- Chromakey (option)
- Negative video (option)
- Color Corrector (option)

Automatics

Basic automatics, other than CPU setup, include:

- Auto White Balance/Black Balance
- Auto Iris Control
- Auto Cable Compensation
- Auto Pedestal Control
- Auto Detail Level Control/Selection Control
- Auto Optical Cap
- Auto Highlight Compression

Special Effects

- H and V deflection reversal, with stored linearity correction
- Negative video permits RGB video polarity reversal
- Horizontal deflection modulation for "dream scenes"
- Scene compression and expansion for improving high contrast and/or hazy scenes
- Various effects may be stored in a data file. Up to 8 presets may be retrieved on command

The Operation Control Panel controls the camera during normal "on air" operation

After initial setup, each camera may be operated by its individual OCP, independently of the MCP.

One Master Control Panel can control up to 24 cameras directly by using a Camera Switching Unit (CSU). By the addition of a Studio Selector Unit and other CSUs, up to 10 camera groups or a total of 100 cameras may be controlled by a single MCP. For backup purposes, a second MCP may be connected in parallel.

In addition, to provide up to 10 studio parallel Automatic Setup capability, additional CPUs may be added for each of the studios.

37 Brook Avenue
Maywood, NJ 07607
(201) 368-9171

IKEGAMI ML 83/79 Portable Micro-Link System for HL-83, HL-79A/D Series and HL-79E Color TV Camera

The Ikegami ML-83/79 Micro-Link System is a complete high quality wireless television program origination and reception system. At the Camera Station, program audio captured by a microphone, scene video picked-up by an HL-83, HL-79A/D Series or HL-79E television camera, and audio intercom are modulated onto a 2GHz band carrier for R.F. transmission up to 1,500 meters to a companion Base Station. The transmitted aural/video signal is received at the Base Station, and de-modulated to base-band frequencies. Command signals and intercom audio are sent to the Camera Station from the Base Station on a 950MHz band carrier. Seven (7) channels are available in the 2GHz band and 950MHz band to accommodate multi-camera systems.

Command signals transmitted over the 950MHz wireless link from Base Station to Camera Station include Genlock; horizontal delay and S.C. phase controls are available at the Base Station to correctly time each individual camera's output signal to the video system.

The system permits two-man operation as well as one-man operation at the camera station using a directional electromagnetic horn antenna. In two-man operation, the 2GHz transmitter and 950MHz receiver are removed from the camera's microwave camera adaptor and are attached to a Hip Pack that is carried by a follower. The cable between camera and Hip Pack is extendable up to 30m. Thus, the camera operator is permitted to concentrate on the scene, the follower is responsible for the transmission.

Microwave Camera Adaptor (MCA)

- Easily attaches directly to Ikegami HL-83 system adaptor, HL-79 interface, or HL-79E interface.
- The MCA is compact, lightweight, easy to carry, and supports both transmission and reception of signals to the base station.
- The video operator at the base station has remote control over camera functions and can correct for scene changes.
- System permits use of a program audio microphone. The audio signal is multiplexed with the video signal and transmitted to the base station.
- The MCA has an intercom circuit permitting direct communication between the camera operator and the base station.
- The 2GHz transmitter and the 950MHz receiver on the MCA both have 7 selectable channels.
- The 2GHz antenna used on the camera has an automatic steering mechanism that can turn throughout a full 360°. Once the direction to the base station's antenna has been established, the antenna will continue to transmit to that point regardless of where the camera operator points the camera. This reduces the effect of multipath. The 2GHz transmitter and 950MHz receiver may be separated from the microwave camera adaptor and attached to the Hip Pack for two-man operation.

PORTABLE MICRO-LINK SYSTEM

Base Station

- The base station can be separated from its receiving antenna by up to 400 meters of triax cable (Belden 9232).
- The video operator at the base station can control the camera function genlock via the camera's wireless microwave link.
- Control over the following camera functions is possible.
Analog: Iris, M-ped, R/B gain, R/B H cent, R/B V cent, R/B ped
Digital: Bar on/off, Iris manual on/off, White Bal on/off, Call, Tally

Effective Transmission Area

Once the direction of the automatic steering antenna to the base station's antenna has been established, the camera is movable within the area between points B and C as long as the base station antenna is directed to the camera.

Horizontal beam width of auto-steering antenna: $\pm 60^\circ$
Horizontal beam width of parabolic antenna: $\pm 11^\circ$

System & Components

Camera Station

1. Microwave Camera Adaptor (MCA)

- Head command unit
- WL201T 2GHz transmitter
- WL901R 950MHz receiver
- 2GHz auto-steering antenna
- 950MHz whip antenna

2. Components for Two-man Operation

- Multi adaptor
- Hip Pack
- Hip Pack pedestal
- Hip Pack belt
- 2GHz directional electromagnetic horn antenna
- Pole antenna

Base Station

- 2GHz parabolic antenna
- 950MHz 3-element antenna
- WL201R 2GHz receiver
- WL901T 950MHz transmitter
- Camera control unit
- Receiver control unit
- 19" rack mount

ELECTRONIC CINEMATOGRAPHY CAMERA

EC-35

The World's First Electronic Cinematography Camera

Performance

The EC-35 uses 2/3" Low-capacity diode-gun Plumbicon® pickup tubes.

The EC-35 has a complete micro-processor that will automatically perform all of the set-up functions for you. All you do is aim the camera at the test chart, push Auto Set, and wait for the Set Up light to go off.

The EC-35 has an unusually wide dynamic range that makes the picture look like it was taken with a 35mm film camera:

- The camera uses special technology to produce gamma curves that match that of film
- The Knee compression circuit compresses signals from 600% of the rated signal level down to 100%
- A dynamic beam stretch circuit (DBS) stabilizes highlight signals as much as four stops in excess of normal peak video level
- The EC-35 has extremely high resolution and low noise (S/N over 57 dB rms).
- A dynamic beam focus circuit improves corner focus resulting in sharper pictures from corner to corner
- Image enhancement and out of band aperture correction signals are proportionately mixed, producing exceptionally pleasing picture detail

Lenses

Ordinary video lenses weren't good enough for the EC-35. A whole new set of lenses have been designed and even calibrated in T-stops — so that you would feel at home with this camera. The EC-35 has its own set of five, fixed, focal-length lenses interchangeable without effecting registration or color balance. You can also use the special effects filters you already have for your film camera.

Using these superior quality lenses you'll be able to do something you could never do with ordinary video lenses: Use depth of focus to create scenes as a film camera does. You'll also be able to regulate the light source to create lighting effects that you'd normally use for a film camera.

Convenience

The EC-35, like a 35mm camera, is normally used with a tripod — but it can be hand held. It weighs in at about 9.9 kg (under 22 lbs, with 1.5" VF). It has a focus knob, like that of a 35mm camera, which you can use for the "follow focus" method of filming.

Off the tripod, you'll like its balanced feel in your hands. You'll find VTR Start and Return Video controls on the pistol-grip for handy use. You can use the EC-35 with any production VTR.

The viewfinder is rotatable, positionable in the front or rear of the camera. You have a range of viewfinders to choose from: 1.5", or 6". You can even attach a second viewfinder for the assistant cameraman.

A new type of geometry corrector, based on quadrant control, makes it easier to set up the registration with exceptional accuracy.

And the EC-35 comes with an arms-length of typical Ikegami high-tech features: Auto black/white balance will reset color balance for you in response to changes in color temperature. A video level (zebra), shows you 100% white or 70% flesh tone level. A level meter will help you in selecting an ND filter and in deciding the right amount of light, and it comes with a handy dotline indicator. On the upper portion of the viewfinder is a timer that shows you the remaining VTR tape time.

Lens	EC Camera Lens			35mm Cine Lens Equivalent		
	Focal Length	T No.	Horizontal Angle	Focal Length	T No.	Horizontal Angle

COLOR TELECINE CAMERAS

TTC-150 System

High grade 3-tube prismatic color camera

The ITC-240 high performance color camera forms the central part of this unique system. Colorimetry, picture resolution and shading are uniformly excellent. A highly compact prism optical multiplexer and automatic light control unit is utilized on a rigid rack frame.

Superior quality images are obtained from the slide projector, super/single 8 mm film projector and 16 mm film projector. An opaque card projector can be optionally employed.

Field lens system construction makes possible easy, cost saving camera assimilation in existing systems. Moreover, adjustment is simpler than most competitive systems. S/N ratio better than 47dB, horizontal resolution of 550 lines or better at center.

Pedestal construction on rigid channel base

Individual pedestals are provided for each main component. Mechanical vibration originating in one pedestal cannot spread to other units of the island. A standard 19-inch rack is employed for the camera pedestal, the lower half of which is available for accommodating other equipment.

Standard axis height

A standard optical axis height of 1220mm facilitates interchangeable use with broadcast-quality projectors.

SPECIFICATIONS

Overall Construction

Floor stand type on channel base with standard 1220mm optical axis height

Camera Rack

Standard 19" width rack type

Optical Multiplexer

Fixed half-mirror prism type

Auto Light Controller

ALC-710 Variable density ND

ALC ND Filter

Transmissivity 0.92 to 92%

Telecine Control

(1) Remote/local control selection

Panel Function

(2) Slide projector lamp on/off; (3) Slide change normal/reverse selection; (4) Slide change; (5) 16mm film projector start/stop (6) 16mm film projector lamp on/off; (7) 8mm film projector start/stop; (8) 8mm film projector lamp on/off

Power Supply Unit

(1) Control relay system; (2) 24 VDC power supply; (3) 2 channels Audio input; (4) 2 channels Audio output; (5) Color corrector by RGB

Overall Dimension

1512 x 1875 x 1636mm

Overall Weight

160 kg approx.

Power Requirement

120 VAC, 60 Hz

OPTIONAL AUDIO AND VIDEO MONITOR PANEL

Audio Inputs

2 channels, 600 ohms 0 dB unbalanced

Audio Outputs

2 channels, 600 ohms 0 dB balanced

Audio Monitor

Monitor speaker built-in VU meter built-in

TTC-150

Video Inputs

G, B, R, ENC, Aux. and EXT. G

Video Monitor Select

G, B, R, -G, Enc., Aux.

Waveform Monitor Mode

IKEGAMI ELECTRONICS, INC.

37 Brook Avenue
Maywood, NJ 07607
(201) 368-9171

COLOR TELECINE CAMERA

- Color separation is accomplished by a prism beam-splitter, with high transmission efficiency, minimum color shading, minimum ghosting and color errors
- Bias lighting to reduce pickup tube lag at low light levels is introduced via the prism. RGB bias lights, individually adjusted, automatically or manually, are utilized
- Yoke is mounted directly on the optical block to minimize registration errors
- An IR filter is provided to assure correct colorimetry

Pickup Tubes

- Vidicon or Saticon® tubes, operated in the high voltage mode are usable to provide high resolution (700 TVL at center)
- A new and improved coil assembly together with dynamic beam focus (DBF) to reduce beam landing errors, results in improved corner focus and resolution (typically 600 TVL in corners)
- Digital deflection and shading circuitry optimizes overall registration geometric distortion and shading performance and also assures ease of tube replacement. The registration is within 0.05% and is stored in digital memory
- Low noise FET pre-amplifier to establish a video signal with a minimum of -58dB S/N ratio

Operational Automatic Features

The TKC-990 is capable of automatically correcting the video signal generated to reduce or correct problems due to various film errors. Without prior programming, electronic analysis and adjustment of the R/G/B video signals developed by the camera accomplish auto color balance by correcting white, gamma, and black. The automatic White Balance (AWB), Automatic Gamma Balance (AGB), and Automatic Black Balance (ABB) functions are coordinated with auto level compensation functions which are Auto Light Control (ALC), Auto White Level (AWL), and Auto Black Level (ABL).

Maintenance Conveniences

To simplify manual camera check-out, the TKC-990 is provided with the following:

- For monitoring purposes, the camera provides 2 sets of picture monitor (PXM) signals, 2 sets of waveform monitor (WFM) signals and the necessary keying signals for type 528 (or equivalent) waveform monitor
- For precision pickup tube adjustment, a synchronized focus wobble circuit is employed for the beam alignment procedure
- For accurate raster positioning, deflection overscan is available
- A new SMPTE color bar is built in

Specifications:

Camera tube:	1" Vidicon tube or 1" Saticon® tube
Optical system:	Dichroic prism system (Bias light for RGB built in) (Pattern projector built in) Image size: 86 x 115 (mm)
Input signal:	
BBS	0.45 Vp-p, 75 ohm or high impedance
Sync	4 Vp-p (negative), 75 ohm or high impedance
SC	2 Vp-p (sinewave), 75 ohm or high impedance
Output signal:	
Line output	4 channels (VB or VBS), 75 ohm
Video monitor	2 channels, 75 ohm
Waveform monitor	2 channels, 75 ohm
Power requirements:	AC 100V, 117, 200, 220, 240V; 50/60Hz
Power consumption:	600VA approx. (incl. picture monitor and waveform monitor)
Tally input:	DC 24V or contact closure
Ambient temperature:	0°C - +40°C
Weight:	220kg (approx.) (incl. picture monitor and waveform monitor)
Dimensions:	W: 550; H: 1,500; D: 430 (mm)

TKC-990

The High-Performance Telecine Camera With Computer Control

The Ikegami TKC-990 is a new multipurpose broadcast telecine camera suitable for "on-line" applications, such as local viewing or direct on-air broadcast and "off-line" applications, such as tele-production and video tape recording. For on-line applications, film characteristics can be uncorrected, manually corrected or automatically corrected.

For off-line applications, detailed operator scene-by-scene corrections can be established and stored for retrieval during subsequent playback of the film and transfer to video tape.

Outstanding performance and stability characteristics have been incorporated into the TKC-990. Setup, operation and maintenance controls for the camera, as well as color corrections for film types and corrections to normalize projector characteristics are microcomputer controlled and stored.

A 6-vector adjustable color matrix permits colorimetry setting to user preferences and match between cameras. The camera's built-in test pattern projector assures standardized setting of geometry and level parameters; simple centralized control of multiple cameras is made feasible by digitally addressing the memories built into each camera's body.

A sequential manual setup mode, fully automatic setup mode, as well as a rapid pre-operational auto check of user selected set-up parameters is available.

Performance Features

Optical System

- A built-in pattern projector permits computer control
- Large image field lens built into camera body assures long-term stability of optical alignment
- Built-in neutral density wheel with fast attack rate for automatic light control (ALC)

Ikegami TKC-970

The TKC-970 is one of Ikegami's best color telecine camera systems. Featuring top-quality picture, faithful color reproduction and high reliability, it answers today's demands from professionals for a top-grade telecine camera, adopting 1" tubes with electromagnetic focus and electromagnetic deflection systems. The TKC-970 employs a prism splitting system with 86 x 115mm image size. Thanks to the adoption of space focusing on an object, any dust adhering to the lens seldom appears as such on the picture. When a telecine camera with the same image size is replaced by the TKC-970, related equipment previously used can be employed without modification. By selecting a field lens, the TKC-970 can be freely combined with various projectors. Further, equipment layout planning can be effected with due regard to operability.

TOP-QUALITY PICTURE, FAITHFUL COLOR REPRODUCTION

- By adopting a pre-preamplifier system employing high S/N FETs, the S/N ratio has been greatly upgraded to 56dB.
- Registration has also been further enhanced by employing newly designed yoke assemblies and a registration corrector.
- Thanks to adopting dynamic focus, resolution at the corners has been improved. (700 lines at center; 600 lines at corners).
- The TKC-970 is provided with a black shading correction circuit.
- White shading correction is available in three modes.
- A bias light incorporated in the TKC-970 reduces lag in dark picture areas.
- A crisp, high-quality picture is attained by employing an optical black and a flare compensation circuit.
- A horizontal/vertical detail corrector with an auto-edge circuit constantly provides appropriate corrected pictures.

VARIOUS AUTOMATIC SYSTEMS

Added to the conventional automatic systems (ALC, AWL, ABL, optical black, etc.) are incorporated new automatic systems.

- The edge circuit in the detail corrector circuit is provided with auto level control for assuring constant, most rational correction.
- Auto Light Control (ALC) is incorporated in the TKC-970's optical system.
- Auto Color Balance functions—Auto White Balance (AWB), Auto Gamma Balance (AGB), and Auto Black Balance (ABB)—are provided. These balance controls maintain the best color-balance pictures during On-Air.

COLOR TELECINE CAMERAS

COLOR CORRECTION CONTROLS

- An optional color corrector unit permits correction of hue and saturation of R, G, B, Y, C, and M respectively. Also, this unit is available in three presetting modes.
- The masking unit is provided for correct color matching among cameras.
- A gamma selector is included on the TKC-970 control panel. Overall gamma of 0.55, 0.6, 0.65 and 0.7 may be applied according to the status of the film material.

HIGH RELIABLE CONTROL SYSTEM

- Since all controls from the exterior are stored in the camera, an abrupt power failure does not require readjustment.
- A digital semiconductor in the control system, including a monitor circuit, greatly enhances reliability.
- Multiplexer control is possible from the camera thanks to the multiplexer select switch on the control panel.

EASY-TO-OPERATE MONITOR SYSTEM

Selection is made from the following items through piano-key-touch operation.

- PM Select; R, G, B, R-G, B-G, -G and ENC.
- WFM Select; PRE SUP, PRE SEQ, PROCE SUP, PROCE SEQ, PROCE RG, PROCE BG, ENC.
- When the camera power supply is turned OFF and then turned ON again, PM Select is automatically set to 'ENC', while 'PROCE SEQ' is automatically selected on the WFM Select.
- The SEQ indication employs a horizontal system.
- Preamp as well as proc amp waveforms can be monitored.

COMBINABLE WITH OTHER EQUIPMENT

Two types of field lenses are available, and the projection direction (right and left) for the TKC-970 can be selected, enabling a combination with various projectors. For 16 mm film projectors, an aplanatic TV film lens (67 mm, f/2.5) is available.

EASY OPERATION AND MAINTENANCE

- A test chart, test pulse, and color bar are incorporated respectively in the optical system, amplifier system, and encoder.
- Preamp and process-amp are composed of separate R, G, B amplifiers of the same structure, greatly facilitating replacement and maintenance.
- Since all dual-in-line IC's are socket types, replacement and maintenance of semiconductors are facilitated.
- The target voltmeter employs digital display.
- The ND filter position is indicated by LED.
- Various check meters for power supply voltage are provided.
- Two timers (camera operation time display and tube operation time display) are provided.
- The registration corrector circuit is incorporated for easy registration control.
- Beam discharge at 150% can be easily set with the Beam Set switch.

VARIOUS PROTECTIVE CIRCUITS

- Camera Tube Protection: Automatic camera tube protection is provided in case of sweep failure either horizontal and vertical scanning.
- Camera tube heater voltage is lowered during Beam-Off.
- Should short-circuiting occur, the power supply is restricted by internal protection, preventing hazards.

COLOR TELECINE CAMERAS

TKC-970 Specifications

Rating

Camera tube: 1" Vidicon tube or 1" Saticon® tube.

Optical System: Dichroic prism system (light incidence selectable in left or right direction). Image size: 86 x 115 (mm).

Input signal — Sync: 4Vp-p (negative), 75 ohm or high impedance. **SC:** 2V p-p (sinewave), 75 ohm or high impedance.

Output signal — Line output: 4 channels (VB or VBS), 75 ohm. **Video monitor:** 1 channel (exclude for proper), 75 ohm. **Waveform monitor:** 1 channel (exclude for proper), 75 ohm.

Power requirements: AC 100V, 110V, 120V, 240V, 50/60 Hz.

Power consumption: 400VA approx. (incl. picture monitor and waveform monitor).

Tally input: DC 24V or contact closure.

Ambient temperature: 0°C to +40°C.

Weight: 193 kg (approx.) (incl. picture monitor, waveform monitor, color corrector).

Dimensions: W: 550, H: 1,500, D: 430 (mm).

Projector lens

Field Lens Model	1 m Field Lens (*800 ~ 920 mm)	1.2 m Field Lens (*1,000 ~ 1,120mm)
16 mm Film Projector	f = 60 ~ 69 mm	f = 75 ~ 84 mm
35 mm Slide Projector	f = 158 ~ 180 mm	f = 196 ~ 220 mm

*Distance between the pupil-point of the projector lens and the primary image plane.

Example:

Distance Model	1 m	1.2 m
16 mm Cine	EL NIKKOR 63/3.5 CANON P65/1.4, P67/2.5	EL NIKKOR 80/5.6
35 mm Cine	EL NIKKOR 135/5.6	EL NIKKOR 150/5.6
35 mm Slide	MASTER 180/4.7	EL NIKKOR 210/5.6
Super 8		EL NIKKOR 50/4 50/2.8

Performance

Frequency response: 1 kHz to 5.5 MHz: ± 0.5 dB (at 100 kHz), below 1 kHz, over 5.5 MHz: falling down characteristic (aperture off, masking off, detail off, and gamma correction off).

Waveform distortion

Frequency	60Hz	15kHz-250kHz
Rise Time		Less than 0.1 μ s
Overshoot		Less than 10%
Sag	Less than 2%	Less than 1%

Luminance signal noise: (with respect to encoder output of 0.7V p-p). **Hum:** Less than -60 dB. **Synchronous noise:** Less than -45 dB. **Other noises:** Less than -56 dB. (Refer to 4.2 MHz band and aperture off, masking off, detail off, and gamma correction off).

Linearity: Less than DG 5% at encoder output (APL 10, 50 and 90%).

Gamma — (1) Step gamma: 0.7, 0.65, 0.6, 0.55 (Vidicon). **(2) Variable gamma:** More than ± 0.2 . (For step gamma, variable gamma, remote control is possible). **Horizontal resolution:** Better than 700 lines at center. Better than 600 lines at corners. Modulation ratio at 400 TV lines is more than 50% (aperture off, masking off, detail off, and gamma correction off) (with vidicon tube).

Registration —

- Area A: Within 0.05%
- Area B: Within 0.1%
- Area C: Within 0.2%

Geometric distortion: Zone A (circle in center = 0.8 picture height) 1%. Zone B (area outside Zone A) 2%.

Stability —

(1) **Power Stability:** Stable operation within $\pm 5\%$ of the rated value. (2) **Input drive signal stability:** Stable operation within ± 6 dB variation. (3) **Environmental temperature: No adjustment range:** After 30 minutes preheating, when the ambient temperature varies by $\pm 10^\circ\text{C}$ in the range of 5° to 35°C , the permissible variation values of the amplitude and pedestal level are within $\pm 2\%$ with respect to the performance referred to above without adjustment.

TKC-970 Package

Consisting of — Camera head with: • 3VFK-7 optical system • Vidicon tubes 8507 • Yoke and assembly • Pre amp unit • Shading unit • Proc. unit • Masking unit • V. detail unit • H. detail unit • Auto black level on auto B unit • Auto white on auto B unit • Pulse unit • Sync. generator with SC/Sync gen-lock • Monitor unit • Deflection unit (hand V) • Geometric distortion corrector • Multi board • Encoder 1 • Encoder 2 • ALC assembly • Power supply • Interface • Control Panel • Monitor select panel • Set up panel.

Accessories: • module extender • test slide • lamps • tool • service manual

Remote Control Panel w/30' Cable
Automatic Color Balance Module
Color Corrector w/Remote Control
Negative Video Module
Optical Axis Tester

MICROSCOPE COLOR CAMERA

ITC-350M COMPACT 3 TUBE COLOR MICROSCOPE VIDEO CAMERA

Features

- The three-tube prism optical system offers excellent resolution, sensitivity, and color reproduction.
- A light, compact camera head facilitates compatibility with microscopes and other optical systems.
- Handy operation is enabled by the finecore cable connecting the camera head to the CCU, allowing use at distances of 30 meters (100 feet).
- Optimum camera condition is ensured by the unique automatic color balance circuit.
- An extremely high sensitivity is provided by the pickup tube, a 2/3-inch MAG-MAG Chalnicon.
- Bias lighting in the optical assembly minimizes image lag.
- Fine-correction circuits are provided for both horizontal and vertical contour, improving the clarity of the picture contour.
- Sensitivity can be increased by a factor of two to four times, simply by touching the +6 dB/ +12 dB switch, permitting low light level operation.
- RGB connectors are provided at the CCU to output the RGB signals. These are invaluable for the requirements of high picture quality in image processing, such as analog-to-digital conversion.
- A built-in color bar generator facilitates color monitor adjustment and color tone matching for multiple cameras.
- External sync driving requires only a VBS (color video sync composite signal) or BBS (black burst signal), option.
- Internal-to-external sync switching is automatic.

SPECIFICATIONS

Camera Tube:	Chalnicon E5092D (2/3" magnetic focus and deflection type)
Optical System:	RGB prism system, f/1.4
Scanning System:	2:1 interlaced 50 PAL or 525/60 NTSC
Sync System:	Internal sync operation with built-in sync generator or external sync driving
Video Outputs:	NTSC or PAL Video Out 1.0V(p-p) Composite, 2 Channels Monitor Out 1.0V(p-p) Composite, 1 Channel RGB Out 0.7V(p-p), 1 Channel each
Sensitivity:	a) Minimum 60 lux approx., f/5.6/6000°K b) Standard f/4.0/2000 lux/6000°K
Signal-to-Noise Ratio:	52 dB (p-p)/rms or better at f/4.0/2000 lux. G-channel at 4.2 MHz bandwidth, gamma and detail off
Horizontal Resolution:	f/5.6/2000 lux, G-channel a) 550 lines or better at center b) 450 lines or better in corners
Power Requirement:	100/110/120 60 Hz AC or 220/240 50 Hz AC
Power Consumption:	80 VA approx.
Dimensions (WHD):	Camera head: 3.9 x 10.6 x 7.2" (99 x 270 x 184mm) Control unit: 15.7 x 5.2 x 14.6" (400 x 132.5 x 370mm)
Weight:	Camera head: 4.6 lbs. (2.1kg) approx. (less lens and cable) Control unit: 18.7 lbs. (8.5kg) approx.

Standard Composition

- ITC-350M: Camera head w/3M camera cable 1 pce
- Control unit 1 pce
- Service manual 1 vol

MK-309C

COLOR CAMERA FOR MEDICAL APPLICATIONS

The MK-309C is an extremely compact television camera developed solely for the special requirements of the medical fields. In order to provide high-fidelity color reproduction, the MK-309C employs three pick-up tubes and prism optics with high-sensitivity.

The color splitting prism and circuitry, such as the quality video amplifier and detail correction, provide for faithful color reproduction, unlike less expensive single tube cameras. Furthermore, an adoption of high sensitive CdSe tubes assures quality color pictures even in low light conditions.

The lightweight compact camera head can be used for various medical requirements such as microscopic, endoscopic, or other special applications.

The MK-309C provides superior results with simple operation by using various automatic functions.

FEATURES

SUPER COMPACT CAMERA HEAD

The camera head of the MK-309C with three pick-up tubes is small and lightweight in order to permit easier system connection with other apparatus and reduces the space required. The camera head weighs only 1.2kg.

FAITHFUL COLOR REPRODUCTION

The specially designed circuitry of the MK-309C always reproduce faithful color. The highly sensitive CdSe tubes enable beautiful color pictures, even in low light level conditions, especially in red, which is important since the interior of the human body is primarily red in color. The red reproduction of the MK-309C is finely tuned to a precise red shade, and built-in detail correction circuit gives a sharp and clean picture.

HIGH SENSITIVITY WITH LOW LIGHT

The beam splitting system and sensitive pick-up tubes give a clear picture in low light levels. The +18dB/9dB gain switch can increase the sensitivity 8X/3X, electronically, which is important for both microscopic applications and endoscopic applications.

EASY DIRECT INPUT TO VIDEO RECORDER

Since the MK-309C incorporates a color encoder and sync signal generator, the output signal of the MK-309C can be directly recorded on video tape. In this way, important and valuable information can be stored and replayed later with a clean and clear color picture.

SIMPLE AND EASY OPERATION

The operation of the MK-309C is simple. Various automatic functions offer very smooth handling with no special training for operation necessary. Anyone can use this camera system with microscope, endoscope or fibroscope. The only control is the power on-off switch.

SPECIFICATIONS

Rating

Optical system:	R/G/B prism beamsplitter
Pick up tube:	2/3" Chalnicon
Scanning system:	2.1 interlace; 525 lines, 60 fields 30 frames/sec or 2.1 interlace; 625 lines, 50 fields 25 frames/sec
Sync system:	Internal Sync Operation with built-in Sync Generator or External Sync Drive (Genlock)
Lens mount:	P-mount
Dimensions:	Camera Head 74×261×169mm (W×H×D) Camera Control Unit 180×250×430mm (W×H×D)
Weight:	Camera Head 1.2kg (2.6 lb.) Camera Control Unit 9kg (19.8 lb.)
Ambient temperature:	0°C ~ 40°C (32°F ~ 104°F)
Power Supply:	AC 110V, 220V, 240V ± 10%, 50, 60Hz

VC-124

MEDICAL COLOR CAMERA

SIMPLE WHITE BALANCE CONTROL

With the built-in white balance control, the camera operator can obtain well-balanced, faithful color reproduction by pushing the white balance button on the camera control unit.

AUTOMATIC LIGHT CONTROL

For microscope application, the MK-309C provides the automatic light density control system. A uniform brightness can be obtained automatically without any manipulation by the camera operator.

BUILT-IN TEST PULSE GENERATOR

When the power switch is turned on, the pulse for setup testing automatically comes on to check the camera operation and monitors.

H & V Detail Corrector

Detail correction circuits are incorporated for both Horizontal and Vertical contours, giving improved clarity to picture information.

Color painting

To facilitate color adjustment, an R & B color painting control is provided at the CCU.

Power consumption: 70 VA

Output signal:

- (1) Color composite VBS 1.0Vp-p, 75 ohms, 2 outputs
- (2) RGB video V 0.7Vp-p, 1 output
- (3) Monitor out VS 1.0Vp-p, 1 output

Genlock input signal: VBS 1.0Vp-p 75 ohms or BBS 0.45Vp-p 75 ohms

Shading compensation: Standard provision

Gamma correction: Standard provision

Performance

- Resolution:** 500-lines or better at center (horizontal)
- Signal to noise ratio:** 54dB or better (NTSC), 52dB or better (PAL)
- Sensitivity:** 250 lux at F2.0/6000°K
- Registration:** Maxim 0.1% inside a circle having a diameter of 80% of picture height

ITE-30/ITE-40 CAMERA SUPPORT SYSTEMS

Both systems include: a fluid head, tripod and dolly.

SYSTEM ITE-30

The ITE-30 Camera Support System is specifically designed for broadcast, educational and industrial applications. Handles cameras up to 10 lbs.

ITE-H30 Fluid Head

Provides smooth pan and tilt control. Its counter-balanced design eliminates camera "nose dives." It features a quick-release camera mounting plate, a spirit level and is equipped with a single, adjustable control handle. Dual handles are optional. The ITE-H30 is compatible with other ITE Tripods.

Capacity: 10 lbs. Counter balanced for 2" Vertical C.G.
 Height: 4"
 Width: 5"
 Length: 4"
 Weight: 2 lbs. \$120.00
 ITE-RH30 Right Hand Zoom Handle . . \$35.00

ITE-T30 Tripod

Features three-section legs with radial locks for extension and contraction. Its elevator column adjusts to 14". An adjustable, lockable spyder provides structural stability. The ITE-T30 is equipped with a spirit level and combination rubber leg tips and metal spikes.

Camera/Head Load Capacity: 15 lbs.
 Minimum Height: 24"
 • Maximum Height at 40°
 Included Angle: 69"
 Weight: 6.5 lbs. \$130.00

ITE-D30

Completing the system is the ITE-D30 Dolly which provides a stable platform with sufficient radius for proper structural support.

A tripod attachment affords quick set-up and tear-down. Quiet movement is assured by bearing-mounted casters with step-on brakes. A center-locking device offers excellent stability and allows the dolly to easily fold and lock in place.

Load Capacity: 20 lbs.
 Folded Length: 19-3/4"
 Folded Width: 6-1/2"
 Height: 6" \$95.00

SYSTEM ITE-40

The ITE-40 Camera Support System is designed for both studio and remote applications.

This system is specifically oriented toward cameras weighing up to 30 lbs. and which are equipped with studio viewfinders, larger lenses and rear controls which create high centers of gravity.

ITE-H40 Fluid Head

Counterbalanced for smooth, effortless control. It features separate controls for pan and tilt lock and is lightweight. The ITE-H40 utilizes a quick-release camera-mounting platform. It comes equipped with a spirit level and one control handle. Dual handles are optional. The ITE-H40 is compatible with other ITE Tripods.

Capacity: 30 lbs.
 Height: 6-1/2"
 Width: 7-1/2"
 Length: 6-1/2"
 Weight: 7 lbs. (without handle) . . . \$295.00
 ITE-RH40 Right Hand Zoom Handle . . \$35.00

ITE-T40 Tripod

Lightweight, heavy duty system that features two-section, positive cam-locked legs that are indexed for easy length adjustment.

An adjustable, lockable spyder for structural stability, the elevator column adjusts to 16". Spirit level and rubber-tipped legs are provided. The ITE-T40 will accommodate other ITE Fluid Heads.

Camera/Head Load Capacity: 40 lbs.
 Minimum Height: 20-1/2"
 Maximum Height at 40°
 Included Angle: 66"
 Weight: 10 lbs. \$240.00

ITE-D40

Completing the system is the ITE-D40 Dolly. It shares the same features as the ITE-D30 except:

Load Capacity: 50 lbs.
 Folded Length: 22"
 Folded Width: 8"
 Height: 6"
 Diameter: 40"
 Wheel Diameter: 4"
 Weight: 9 lbs. \$140.00

Elevation Adjustment 16 in (40 cm)
Minimum Folded Length 32 in (80 cm)
Minimum Folded Width 9 1/2 in (23.75 cm)
Maximum Leg Angle 15°
Tilt Angle ± 60°
Pan Rotation 360°
Weight 8 lbs (3.6 kg)
Finish Anodized Aluminum and Black Wrinkle

\$205.00

ITE-H2 CAM HEAD

Camera Load Capacity 120 lbs (54 kg)
Tilt Angle up to ± 50°
Pan Rotation 360°
Height 7 1/2 in (18.75 cm)
Width 9 in (22.5 cm)
Length 10 in (25 cm)
Weight 25 lbs (11.25 kg)
Dose Mitchell Type

\$1295.00

Optional Accessories

Dual handles
wedge adapter
telescopic handles

ITE-MT1 TRIPOD

For Camera and Microwave Applications

Camera/Head Load Capacity 250 lbs (112.5 kg)
Minimum Height 25 in (62.5 cm)
Maximum Height 43 in (107.5 cm)
Minimum Folded Length 34 in (85 cm)
Minimum Folded Width 9 1/2 in (23.75 cm)

Maximum Leg Angle 38°
Weight 33 lbs (14.85 kg)
Finish Aluminum and Black Wrinkle

Includes spreader foot pad/spike/spherical ball set. Mitchell base

\$1095.00

ITE-T44 ELEVATION TRIPOD

Camera/Head Load Capacity 33 lbs (15 kg)
Minimum Height 32 in (80 cm)
Maximum Height @ 40° Included Angle 66 in (165 cm)
Leg Angle (adjustable) 80° included (max.)
Elevator Column Adjustment 10 in (25 cm)
Minimum Folded Length 35 in (85 cm)
Minimum Folded Width 7 in (17.5 cm)
Weight 12 lbs (5.3 kg)
Finish Anodized Aluminum and Black Wrinkle

\$270.00

ITE-H4 TORSION HEAD

Camera Load Capacity 40 lbs (18 kg)
Tilt Angle ± 45°
Pan Rotation 360°
Height 6 in (15 cm)
Width 6 in (15 cm)
Length 8 in (20 cm)
Weight 8 lbs (3.6 kg)
Dose 1 3/4 in (4.4 cm) Clamp

\$295.00

ITE-H4D TORSION HEAD

Camera Load Capacity 40 lbs (18 kg)
Tilt Angle ± 45°
Pan Rotation 360°
Height 6 in (15 cm)
Width 6 in (15 cm)
Length 8 in (20 cm)
Weight 8 lbs (3.6 kg)
Dose 1 3/4 in (4.4 cm) Clamp

Includes dual handles

\$375.00

ITE-H6 HYDROCAM HEAD

Camera Load Capacity 130 lbs (58.5 kg)
Tilt Angle up to ± 50°
Pan Rotation 360°
Height 8 in (20 cm)
Width 9 in (22.5 cm)
Length 9 1/2 in (23.75 cm)
Weight 23 lbs (10.35 kg)
Dose Mitchell Type

Includes dual handles and wedge adapter (requires wedge plate)

\$2650.00

ITE-H7 TORSION HEAD

Camera Load Capacity 50 lbs (22.5 kg)
Tilt Angle ± 45°
Pan Rotation 360°
Height 8 1/2 in (21.25 cm)
Width 7 1/2 in (18.75 cm)
Length 8 1/2 in (21.25 cm)
Weight 13 lbs (5.85 kg)
Dose 1 3/4 in (4.4 cm) Clamp

Includes dual handles

\$895.00

ITE-H8 MICROWAVE PAN/TILT HEAD

Camera Load Capacity 250 lbs (112.5 kg)
Tilt Angle ± 45°
Pan Rotation 360°
Height 7 in (17.5 cm)
Width 8 in (20 cm)
Length 9 in (22.5 cm)
Weight 19 lbs (8.55 kg)
Dose Mitchell Type

Mounting plate designed for standard L bracket attachment

\$995.00

Optional Accessories

Control handle

ITE-H9AC HYDRO HEAD

Camera Load Capacity 30 lbs (13.5 kg)
Tilt Angle ± 50°
Pan Rotation 360°
Height 6 in (15 cm)
Width 6 1/2 in (16.25 cm)
Length 6 in (15 cm)
Weight 8 lbs (3.6 kg)
Dose 1 3/4 in (4.4 cm) Clamp or Claw Ball

Mounting plate includes standard ITE-QR Quick Release Adaptor

\$1395.00

Optional Accessories

Dual handles

ITE-H10 HYDRO HEAD

Camera Load Capacity 40 lbs (18 kg)
Tilt Angle ± 60°
Pan Rotation 360°
Height 6 1/2 in (16.25 cm)
Width 6 3/4 in (16.9 cm)
Length 6 3/4 in (16.9 cm)
Weight 9 lbs (4.05 kg)
Dose 1 3/4 in (4.4 cm) Clamp or Claw Ball

Camera Mounting Plate/Quick Release

4 in (10 cm) x 2 in (5 cm) with 3/8 in (9.4 mm) slot for mounting cameras with 1/4 in (6.25 mm) or 3/8 in (9.4 mm) screws

Optional Accessories

\$1750.00

Dual handles

ITE-H11 FLUID HEAD (Miller Super "8" Model)

Camera Load Capacity 10 lbs (4.5 kg)
Tilt Angle ± 80°
Pan Rotation 360°
Height 5 in (12.5 cm)
Width 3 1/2 in (8.75 cm)
Length 4 in (10 cm)
Weight 2 lbs (0.9 kg)
Dose Flat

Optional Accessories

Claw Ball leveling

\$365.00

ITE-H17 FLUID HEAD

Camera Capacity	: (18lbs) 8 kg
Pan Movement	: 360° plus positive lock system
Tilt Movement	: ±60° plus positive lock system
Drag	: Full fluid system
Temperature Range	: -40° to +65°C
Counterbalancing	: Static system; 8 kg @ 50mm C of G height

Camera Platform : ±30mm sliding camera plate for balancing C of G plus quick release action

Pan handles : Ø16mm x 450mm vertically and horizontally adjustable

Base Weight : Ø75mm ball levelling : 2kg **\$625.00**

ITE-H100FD FLUID DRAG HEAD

Camera Load Capacity	250 lbs (112.5 kg)
Tilt Angle	± 53°
Pan Rotation	360°
Height	8 1/2 in (21.25 cm)
Width (less handles)	12 in (30 cm)
Length (less handles)	14 in (35 cm)
Weight	31 lbs (13.95 kg)
Base	Mitchell Type

Includes telescopic control handle zoom stub handle quick-release lever-action wedge adaptor (requires ITE-WP100 wedge plate)

\$2995.00

Optional Accessories

Right hand telescopic handle

ITE-P1 PNEUMATIC STUDIO PEDESTAL

Camera/Head Load Capacity	290 lbs (130.5 kg)
Minimum Height	29 in (73.75 cm)
Maximum Height	51 in (127.5 cm)
Minimum Doorway Clearance	30 in (75 cm)
Wheelbase	28 1/2 in (71.25 cm)
Dual Wheel Diameter	8 in (20 cm) (cast aluminum polyurethane tires)

Steering Wheel Diameter : 26 in (65 cm) (vinyl coated)

Steering Mode : Crab and Tricycle

Cable Guard : Adjustable from 1/8 in (3.1 cm) to 1 in (2.5 cm) above floor
Air Pressure : Pressure relief valve opens at 200 PSI representing equivalent overload condition of 300 lbs (135 kg)

Construction : Cast aluminum structure with steel tank and outer column to ASME Pressure Vessel Safety Code aluminum center column

Weight : 180 lbs (81 kg)
Mount : Modified Mitchell Type
Finish : Black Wrinkle

\$8850.00

Optional Accessories : Air Supply Charging System

ITE-P3 ELEVATION PEDESTAL

Camera/Head Load Capacity	60 lbs (27 kg)
Minimum Height	31 in (77.5 cm)
Maximum Height	49 in (122.5 cm)
Elevation Adjustment	18 in (45 cm)
Caster Radius	19 in (47.5 cm)
Wheel Diameter	4 1/2 in (11.25 cm)
Weight	36 lbs (16.2 kg)
Finish	Black Wrinkle

Optional Accessories

\$1475.00

QUICK RELEASE ASSEMBLIES

The ITE Quick Release Assembly provides for rapid attachment and removal of cameras from pan/tilt heads. Positive attachment of plate to adapter is accomplished by rotating a spring-loaded lever. Inadvertent disengagement is impossible.

Assemblies are used in conjunction with all models of Torsion, Fluid and Hydra Heads.

ITE-QR

WEDGE ADAPTER ASSEMBLIES

The ITE Wedge Plate and Adapter combination provide for rapid attachment and removal of cameras from pan/tilt heads. Positive attachment of wedge plate to adapter is accomplished by rotation of a locking screw which make inadvertent disengagement impossible.

Assemblies are used in conjunction with Model ITE-H2 Cam Head and ITE-H5 Hydra Head.

REMOTE VIDEO SYSTEM

Two-Way Telecommunication In A Portable Package

Now, with a minimum of expense and training, full motion color video conferencing is within reach.

IRIS RM-1. A totally self-contained, live origination/videoconferencing module, designed for use on cable and broadband local area network systems. Wherever there is a need for frequent face-to-face contact between people from different sites, IRIS provides the solution. Without the downtime and expense of employee travel. **\$9725.00**

And, there is no need for exotic operator training. The applications are almost limitless:

- School Districts
Telecourses
- Medical Facilities
Consultation
Video-Visiting
- Businesses with Multiple Locations
Administration
Training
- Campus Based Institutions
- Government Facilities
- Municipal and County Governments

Specifications

RM-1 Module

Single tube, color camera
 Tripod
 Microphones (4)
 Weight 52 lbs.
 Height 13.5"
 Width 20.0"
 Depth 12.7"
 (16.7" when closed
 for transportation)

Inputs

Video-1.0v pp NTSC composite/75 ohms
 Audio-4 microphones, 25-600 ohms
 or
 3 microphones, 25-600 ohms
 1 line, switchable 600 ohms/less than 10k ohms
 RF-broadband RF cable input

Outputs

Video-baseband, 1.0v pp NTSC composite/75 ohms
 Audio-600 ohm, line output
 or
 RF-modulated 6 Mhz audio/video frequency in
 sub, low, high, mid bands (channel specified by users)
 Level - +40 dBm V to +54 dBm V

CAMERAS

SPECTAR® SERIES

General Purpose Cameras — All models have 2/3" separate mesh vidicon. 10,000:1 weighted ALC utilizes three state of the art chips, and plug-in type PC boards can be disassembled without soldering. Provides 600 TV lines of resolution, vertical phase built in to all units. Can be top or bottom mounted. Lens not included.

Models:

SP1810A	117VAC	60 Hz	Random Interlace	\$269.00
SP1820A	220VAC	50 Hz	Random Interlace	269.00
SP1840A	24VAC	60 Hz	Random Interlace	283.00
SP1861A	12VDC		2:1 Interlace (RS-330)	283.00
SP1812A	117VAC	60 Hz	External/internal sync	283.00
SP1822A	220VAC	50 Hz	External/internal sync	315.00
SP1842A	24VAC	60 Hz	External/internal sync	315.00

Low Light Level Cameras — All models have a Newvicon® camera tube. 100,000:1 ALC — with auto iris spot filter lens. Resolution beyond 600 lines. Scene illumination 0.05 fc for usable picture, 0.5 fc for full video.

Models:

SP1910A	117VAC	60 Hz	Random Interlace	\$710.00
SP1920A	220VAC	50 Hz	Random Interlace	710.00
SP1940A	24VAC	60 Hz	Random Interlace	710.00

Optional Plug-in Accessories (for all Spectar® cameras):

SP10 Camera ID—Adjustable 00 to 99 identification of camera view on the monitor.

SP20 RF Modulator—Switchable channel 3 or 4 output for display on standard television receiver.

SP30 Inserter/Splitter—Combines views from two ext. sync cameras into a single monitor.

SP40 Video Line Amplifier—Amplifies the video signal for extended operating distances.

SP50A Mother Board—Interfaces all options within the camera. 1 per camera required.

SP60 2:1 Sync—Converts random interlace Spectars to RS-330 2:1 sync operation.

SP65 2:1 Sync—Converts random interlace Spectars to CCIR 2:1 sync operation.

LL77 AND LL79

Very Low Light Level Cameras (SIT/ISIT)—Extremely high sensitivity and low lag. Scene illumination 3.3×10^{-4} fc (SIT), 2.7×10^{-5} fc (ISIT) for usable picture, 1.0×10^{-3} fc (SIT), 5.4×10^{-5} fc (ISIT) for full video (f/1.4 lens, 75% highlight reflectance). Full horizontal and vertical sweep-loss protection circuits. Provides stable operation with high resolution. **\$7775.00**

Control for Zoom/Auto-Iris Lenses: CB1430—Rack or Desk Top Controller. CB1430R—Camera Mounted Control Unit.

MINI-SECURITY SYSTEMS

As easy to install as plugging in a TV set.

1. JMS-30 Mini System includes SP1810 camera, D1800 dummy camera, VM-9C monitor, 50 ft. of RG59/U video cable and two JWM-9 camera wall mounts.
2. JMS-41 Mini System includes two SP1810 cameras with two 16mm lenses, one VM-9C monitor, two 50 ft. RG59/U video cables, 10 ft. of RG59/U video cable, two JWM-9 wall mounts and MS-4D manual four position video switcher with room for expansion.

CAMERAS/MONITOR

JE-3040A CCTV SYSTEM CAMERA AND CVM-13 MONITOR

The only solid state (No Tube) color camera designed specifically for CCTV.

Features

- Many Security and Industrial Applications
- Extremely Compact — 2.5"W x 4.4"H x 8.6"D
- Uses Standard CCTV Lenses
- Requires a Single Adjustment
- 300 Lines Horizontal Resolution
- S/N Ratio of 46dB
- Weighs just 3.3 lbs.

True-to-life color monitoring is important in many different industries: gaming, medical, processing, chemical, robotics, etc. Not only is it valuable in identifying colors, but it is needed when shadows, lack of contrast or darkness of tone eliminate black and white details. For example, facial features, even in normal indoor light, may be unidentifiable without the full fidelity of color.

Because the camera has 100% solid state electronics, there is no flare or bloom, no light streaks and no trailing in the picture. Additionally, there is no image retention.

Only solid state electronics and rugged, industrial-type construction can provide the level of reliability required of a system that must be used constantly.

Both the camera and the monitor are designed to be compatible with most other quality CCTV components. The monitor is also compatible with many computers and can be used for color graphics as well.

JE-3040A \$1565.00

CVM-13 MONITOR

Features

- Sharp Focus by In-Line Ultra High-Resolution - 260 Horiz, 300 Vertical Lines — Color Display Tube (13") Incorporating 0.31mm Pitch Matrix
- Excellent Terminals for Personal Computers, Micro-Computers and Office Computers
- More than 2,000 Characters in Alphabet. Numerals and Graphics Can Be Displayed with Seven Bright Colors: Red, Green, Blue, Yellow, Cyan, Magenta and White
- Compact Chassis Employing Self-Convergence System. The Chassis Has Enough Space for Incorporating Extra Logic Circuit Boards
- Bright Picture with Low Distortion is Ensured Thanks to Employment of High Performance Deflection Yoke and Transformer-less Power Supply
- Lightweight, 25.6 lbs. High Reliability and High-Performance

CVM-13 \$550.00

JE-2062 (U.S. EIA)/JE-2152 (CCIR) SOLID STATE B/W TV CAMERA

Features

- All Solid State Chip Sensor
- No Sensor Burn
- No Residual Image or Smearing
- No Distortion
- Not Influenced by Electromagnetic Fields
- Long Life
- Vibration and Shock Resistant
- External or Internal RS-170 2:1 Sync
- High Resolution
- Vertical Camera Positioning Does Not Damage Sensor
- Back Focus Adjustment of Chip

SPECIFICATIONS

NIGHT VIEWING DEVICES

NIGHT VIEWING DEVICES

General Surveillance Models (Non-Military)

Easy to handle. Interchangeable lens fields. Connects and disconnects to different cameras quickly.

Models 221 and 226—For single lens reflex (SLR) photographic, 16mm TV, 16mm and 35mm SLR cameras. Focal plane iris, automatic brightness control, batteries, carrying case and manual.

221—Most versatile of all NVDs. Mounts on tripod. Can be used with biocular viewer. 3X magnification. 2.9 lbs. (1.3 kg).

221

226

325

Night Vision Goggles

Complete hands-free vision. Need no supplemental illumination for normal observation. Small infrared light source for map reading, etc. Separate adjustable viewer for each eye. Can be adapted to helmets. Automatic brightness control. 2.0 to 2.7DC battery. Temperature range of 0° to 125°F (to -65°F with optional arctic adaptor.)

304

Accessories

Accessories for various models are similar. Included are biocular viewers; adaptors for photographic and TV cameras (relay lenses), "C" mount lenses, and for lenses that will not mate with "C" mount lens; batteries and rifle mounts.

Military Models

Fully militarized. Passive operation, no artificial lighting required. Completely self contained and portable. Undetectable. Waterproof, shock and vibration resistant. Nitrogen-filled lenses, automatic brightness control and bright flash protection. Carrying case included.

Model 229—For long range direct observation and target location. 5000 meter (3 miles) range. 7X magnification. Standard lens 255mm f/1.23. Built-in azimuth and elevation scales. Self-contained tripod 12" above ground level. 37 lbs. (16.81 kg).

Model 230—Small arms sight. Can be rifle mounted. Meets MIL-STD 512, Procedure 1. 600 meter (2000 ft.) range. 3.8X magnification. Standard lens 95mm, T/1.6, f/1.2. 4.5 lbs. (2.05 kg).

229

230

240

340

226—For long distance viewing. Biocular viewer on swinging door type mount with optional adjacent swinging door to attach camera. Tripod mounting. Standard 135mm f/1.8 telephoto lens. Can also be used with 1000mm (or greater) lenses. 13.5 lbs. (6.14 kg).

Model 325—"Pocketscope". Less than 1 lb. (.5 kg). Very low distortion and reduced blooming when bright light is in field of view. Standard lens 50mm f/1.4.

Model 230RI—Same as model 230 with Reticle Illuminator, providing dark to light reticle adjustment to provide contrast against variations in reticle background illumination.

Models 240 and 240RI—Same as models 230 and 230RI except for longer range—1200 meters (4000 ft.) for use with crew served weapons. 6.2X magnification. Standard lens 155mm, T/1.6, f/1.2. 8.8 lbs. (4 kg).

Model 330—Javelin's second generation small arms, short range weapon sight with light weight 25mm micro-channel Intensifier Unit. Meets MIL-STD 512, Procedure 1. 600 meter (2000 ft.) range. 3.8 magnification. Standard lens 95mm, T/1.6, f/1.2. 2.8 lbs. (1.27 kg).

Model 330RI—Same as model 330 with Reticle Illuminator.

Models 340 and 340RI—Same as models 330 and 330RI except for longer range—1200 meter (4000 ft.) for use with crew served weapons. 6.2X magnification. Standard lens 155mm, T/1.6, f/1.2. 6.1 lbs. (2.77 kg).

PAN & TILTS/ SCANNERS

PAN/TILTS & SCANNERS

Proven through years of dependable service. High torque motors for smooth, constant pan motion. Lifetime lubrication.

All pan/tilt units have a pan of 350° and a tilt of ±90°. Accessories such as cable guards, spot heaters, weather proofing, optional gear head speeds and long distance relay boxes are available.

CONTROLS

Zoom Lens Controls—Provide operating voltages to Zoom Lenses for zoom, focus and iris functions.

Scanner Controls—Provide operating voltages to control left, right and auto-scan functions for motorized Scanners.

Pan and Tilt Controls—Provide operating voltages to pan/tilt to add variable speed, auto-scan and Vector solving.

Dual Station Controls—Combination lens and pan/tilt controls in two separate control locations to supply operating voltages to a single Zoom Lens, Pan/Tilt installation.

V111PT

CB100ZF

Multi-Drive Controls—Combined Zoom Lens and Pan/Tilt control in one unit. Provide operating voltages to any one of six different Pan/Tilt, Zoom Lens locations.

OMNI-ACS—Operates in conjunction with the OMNI-100™ controller (SuperSwitcher) to provide full Pan/Tilt, Zoom, Focus and Iris control plus up to 6 on/off functions at up to 100 separate locations.

HOUSINGS & ENCLOSURES

DISCREET SURVEILLANCE SYSTEMS

Where overt camera systems would be undesirable, Javelin JB16 Series has camera assemblies enclosed in completely mirrored spherical capsules. Clear picture in lighting conditions to a minimum of 1 fc scene illumination. Band transmission 5X greater than conventional one-way mirror.

Available for fixed camera position, Auto-Scan, Pan and Tilt and Pan/Tilt with Motorized Zoom Lens.

JBA16

OUTDOOR SYSTEM ENCLOSURES

Both camera and Pan/Tilt or Scanner are enclosed in a clear dome. Provides an operational environment for inexpensive indoor Pan/Tilts or Scanners in outdoor locations. Wind, snow and ice loads are eliminated along with deterioration by weathering.

CD29

INDOOR/OUTDOOR ENCLOSURES

From a simple tamper-proof box to an explosion-proof enclosure, there is no requirement that can't be met. Temperatures from -110° to $+750^{\circ}$ F. Dust-proof. Pressurized/Non-Pressurized Explosion Proof.

JEH24

A complete line of Housing Accessories—Heater and thermostat assemblies; blower and thermostat assemblies, insulation. Whatever requirements you demand, Javelin can supply.

MOUNTS/VIDEO SIGNAL EQUIPMENT

MOUNTS

Housing Mounts—Wall, ceiling or pedestal models with load limits up to 100 lbs. and with tilt range of 90° and rotation range of 360°. Extensions from 8.5" to 24".

Monitor Mounts—Wall and ceiling models with load limits up to 150 lbs., tilt ranges to 90° and rotation ranges to 360°. Extensions to 22".

Scanners/Pan and Tilt Mounts—Wall, ceiling or pedestal models with load limits up to 250 lbs.

Camera Mounts—Wall, ceiling or pedestal models with load limits up to 100 lbs. Tilt range of 90° and rotation range of 360°. Extensions to 17". Javelin camera mounts are recommended for all cameras except SIT/ISIT.

VIDEO SIGNAL EQUIPMENT

Video Motion Detector

Models: **J314MD** 117VAC 60 Hz
J314MDX 220-240VAC 50 Hz (CCIR)

From 2% to almost 100% of screen may be sensitized to discern movement within or into and out of adjustable window positionable on screen. When intrusion detected, provides audio/visual notice and outgoing closures to trigger other devices. Reads video streaking, repetitive light changes, noise and power fluctuations to eliminate false alarms while maintaining sensitivity. Automatic or manual reset. Works with black and white or color systems.

J314MD Video Motion Detector

RF Modulator

JRF-10 (video only)—Converts any video signal to RF signals tunable over TV channels 2 through 6.

JRF-15 (NEW)-Audio/Video—Accepts line-level or low-level audio with black and white or color video. Set for standard TV signals for channels 3 and 4. Built-in gain control. Adjustable audio and video and RF levels.

JRF15 RF Modulator

3-TUBE CAMERA BY-110U

JVC®

FEATURES

- Extremely Compact & Lightweight — 8.2 lbs. with Lens and 1" Viewfinder
- Low Power Consumption—15.0 watts with 1" Viewfinder
- F/1.4 Prism Optical System
- 3 Newly Designed 1/2" Hi-Voltage Satlcon Tubes
- Hi-Resolution of 600 Lines
- Excellent Signal-to-Noise Ratio of 54dB
- Genlock Input (through AC power connector)
- Auto-Shift Registration
- Auto White/Black Balance
- Auto Beam Control (ABC)
- Auto Black Level Circuit (ABL)
- Servo Iris Control Circuit with Auto Iris Close
- Color Bar Circuit
- +6dB/+12dB Gain Boost For Low Light
- Built-in Color Temperature Filter Wheel
- "Hot Shoe" Viewfinder, Lens and Optional Microphone
- Extended Life Memory Backup Battery

BY-110U

BY-110U COLOR VIDEO CAMERA

Extremely Compact, Extremely Light.

Computer aided design and manufacturing techniques have made possible drastic reductions in size and weight without reducing performance and features. Strength and protection are provided by an aluminum diecast body. Total weight of the camera including lens and 1" viewfinder is only 8.2 lbs. (3.7 kg).

Low Power Consumption. Power consumption is a low 15.0 watts when the 1" viewfinder is used. When a fully-charged DC-C11U battery pack is used, the camera will operate for approximately 60 minutes at normal temperatures (about 77°F). The camera may be powered from a range of 10.5 to 15 DC volts. The BY-110U has a quick warm-up time and is stabilized sufficiently for normal use about 40 seconds after switching the power on. (Perfect stabilization will require 10 minutes or more.)

Excellent Picture Quality. Three newly designed 1/2" Satlcon (SM) tubes assure accurate color reproduction and 600 lines of horizontal resolution. The BY-110U

has a superb signal-to-noise ratio of 54dB. The new 1/2" tubes (H9392) were chosen because of their excellent reproduction quality and compact size. A fast f/1.4 glass prism assures superb resolution and accurate color separation.

Wide Range Of Automatic Functions

Auto Shift Registration (auto centering). Provides automatic adjustment of vertical and horizontal alignment (shift) of blue and red channels. Adjustment is accomplished by simply flipping a switch on the front panel. The circuit is digital, and registration data is stored in the camera's memory (battery back-up provided).

Auto White Balance Circuit...white color balance can be adjusted automatically by flipping a switch, or the camera can be operated in the "pre-set" position (3200K). White balance data is stored in the camera's memory circuit.

Auto Black Balance Circuit. Flipping a switch automatically closes the iris and adjusts pedestal balance of the individual channels.

Auto Beam Control Circuit. Reduces comet tails in most cases.

Auto Black Level Circuit. The ABL circuit offers sharp black images even when shooting outdoors under bright conditions.

Auto (Servo) Iris Circuit. The iris responds quickly to objects with varied contrast and slowly for those with little contrast for natural automatic iris operation. A weighting detection circuit controls the video signal level of the upper part of the screen to optimize the over-all brightness when the sky is very bright, etc. To protect the pickup tubes, the iris closes automatically when the Operate switch is off, or when the color bar switch is on.

Extended Life Back-Up Battery. To retain the memory of the digital auto circuits, a back-up battery is employed. This allows the camera to retain its white balance, black balance, and auto-shift settings even when the power is turned off. A new long-life battery is utilized for this function and has a rated life of approximately 4 years.

Excellent Operability. Good human engineering went into the placement of switches and other camera controls. Switches are "touch coded" and some are protected from accidental mis-operation. The auto centering and auto white/black controls are located on the front panel behind a small door. A diopter is provided in the 1" electronic viewfinder for people who wear eyeglasses. An optional adjustable chest rest is available which improves stability and comfort. The chest rest, model KA-111, is similar to the one provided with the KY-210U cameras.

"Hot Shoe" Connection System. To eliminate problems with cables and connectors, the camera head and its portable accessories are designed to connect together without the use of cables. Direct connection is provided for: 10:1 zoom lens; 1" electronic viewfinder; M-K50U microphone; DC-C11U NiCad battery pack. When in operation, the only exposed cable is the VCR cable. This feature not only solves the usual problems associated with cables, it greatly enhances the appearance of the camera, giving it a very "solid" look.

Genlock Circuit. The BY-110U has built-in genlock facilities for locking up to other cameras in multi-camera operations. Instead of the usual genlock connector on the camera, to save space the genlock input and external power inputs are provided through the AA-C11U AC adaptor. Connection between the camera and AC adaptor is provided by the VCR cable (VC-511BU-2). The BY-110U will lock to any stable composite video signal or black burst (B.B.).

Built-in Color Bars. The BY-110U has a built-in full field color bar generator. Color bars are useful for checking and making adjustments to color monitors and they provide a consistent reference for checking the performance of the videocassette recorder.

Gain Boost For Low Light. The BY-110U has a +6dB and +12dB gain booster for operation in low light conditions. Also provided is a level-depend circuit which adjusts the starting point of

enhancement, according to the light level. Together, these circuits enable maximum low light performance with a minimum of noise in the picture. The minimum illumination required is 65 lux (70% video level) with +12dB of gain. Even at this light level, the picture is quiet, with well defined images and natural colors.

Wide Choice Of Lens Options. The BY-110 is available in a variety of configurations and offers a wide choice of lens options. For ENG/EFP applications, the 10:1 HZ-110U (f/1.4, 7-70mm) and 16:1 HZ-116U (f/1.4, 7-112mm) are recommended.

PRICING/ACCESSORIES		Suggested List Price
BY-110UCH	3-Tube Camera Head	\$3590.00

-5 to +45°C (23 to 113°F)

Weight:

5.3 lbs. (2.4kg)

Dimensions:

4-1/8"W x 10-1/16"H x 10-7/8"D
(104.5 x 254.5 x 276 mm)

RS-110U Remote Control Unit For BY-110U. Despite its surprisingly low price, the RS-110U offers a full range of features and capabilities. Using only one standard rack space (1-3/4"), the RS-110U may be used to power and control many of the functions of the BY-110UP. In addition, the RS-110U provides individual red, green, and blue channel outputs from the camera.

HZ-FM11U, HZ-FM12U Manual Focus Control. Rear focus and zoom controls are essential for most studio operations. The HZ-FM11U (for HZ-110 lens) and HZ-FM12U (for HZ-116 lens) are manual focus units which attach to the lens and to the tripod.

HZ-WCL11U Wide Angle Converter For BY-110U. This adaptor screws onto the front of the BY-110U lens to decrease the focal length by 0.7 times.

HZ-NK11U Nikon Lens Adaptor For BY-110U. This adaptor was designed to enable a wide variety of photographic lenses to be used with the BY-110U. Using a standard Nikon mount, literally hundreds of special effects lenses become available. Extreme wide angle and extreme close-up lenses are the most popular of this type.

HZ-ZS11U, HZ-ZS12U Servo Focus Control. The HZ-ZS11U (for HZ-110U lens) and HZ-ZS12U (for HZ-116 lens) are electronic zoom units which plug into the lens and attach to the tripod. Use with HZ-FM11U/HZ-FM12U, VF-400 and RS-110U to make a complete studio package.

HZ-M110 Microscope Attachment. The HZ-M110 Microscope Attachment is designed exclusively to use the BY-110 in combination with a microscope made by Olympus, Nikon, etc. for applications such as analysis, research, education, process control and inspection.

HZ-CA11U C-Mount Adaptor For BY-110U. Because the BY-110U uses 1/2" pick-up tubes and a prism optical system, conventional lenses would not normally be able to be used on it. For this reason, the HZ-CA11U was designed. Actually a lens itself, this adaptor enables most any standard C-Mount lens to be used on the BY-110U.

TE-1000 Telecine Attachment. The TE-1000 Telecine Attachment can easily be attached on the front of the lens of the KY-210 or BY-110 for the transfer of film images onto videotape. The amount of light is adjusted by the automatic iris of the lens and, as it is mounted on the front of the lens, it takes up only a small space and makes it easy to use the camera for both normal shooting and telecine operations. It can be used with a wide range of projectors using 8mm, 16mm and 35mm film.

HZ-110MDPU 10X Motorized Zoom Lens & Remote Control Unit. The HZ-110MDPU 10X Motorized Zoom Lens was developed specially for the BY-110. Included with it is a Remote Control Unit; zooming, focusing and iris operation can be controlled from a distance of up to 600m (1970 ft). The HZ-110MD is ideal for surveillance, teleconferences, graphics displays, etc.

HZ-TCL11U Teleconversion Lens For BY-110U. This adaptor screws onto the front of the BY-110U lens to increase the focal length by 1.5 times.

VF-400U 4" Viewfinder. A large-screen viewfinder is desirable for studio and EFP applications. The VF-400U incorporates a high resolution CRT (more than 500 TV lines), pan-tilt mechanism, and tally lamps.

3-TUBE CAMERA KY-210U

JVC®

FEATURES

- Outstanding Picture Quality: 650 Lines Resolution, 57dB S/N
- Excellent Low Light Performance: 40 Lux (3.8 fc) at +18dB
- Compact and Lightweight Diecast Construction
- High Quality Prism Optical System
- Full RS-170A SSG with Color Framing Output
- 2H Vertical Enhancement with Level Depend Circuit
- Split-Field Color Bars (RS-189A Standard)
- Built-in Genlock Circuit
- "Hot Shoe" Adjustable Viewfinder with Diopter
- Numerous Auto Circuits and Functions
- Full Complement of Studio Options

KY-210U COLOR VIDEO CAMERA

Excellent Picture Quality. Utilizing three H4101 Saticon tubes (the same tubes used in the popular KY-1900U cameras), JVC engineers have incorporated a high quality f/1.4 prism beam splitter to achieve a high resolution of 650 TV lines (G channel, center).

Picture sharpness is further improved through the use of a 2H vertical enhancement circuit. As with any enhancement circuit, a certain amount of noise is also enhanced. To eliminate this under low light conditions, a level depend circuit is incorporated which controls the enhancement, so that the pictures produced are sharp and well defined, yet quiet even under gain boost situations. At +18dB boost, the minimum illumination required is only 40 lux (3.8 fc) using the standard lens, which makes the KY-210U one of the most sensitive three tube cameras available today.

To provide the most natural color reproduction possible, a linear matrix masking circuit is employed. Briefly, what it does is adjust the pickup characteristics of the camera to be identical to the human eye, compensating for the negative energy portion of the ideal color characteristics.

(Without this circuit the camera cannot "perceive" the color picture the way the human eye does). Camera performance in bright light is just as important as in low light, and the KY-210U contains several circuits which achieve performance not equalled by other cameras in its class.

With the newly designed processing circuitry, the slope circuit compresses 300% video level to 110% so that the gradation in highlight sections is greatly improved.

An automatic black level (ABL) circuit always offers a sharp, black image even when shooting outside under bright lighting conditions.

A NAM-type servo iris circuit including a weighted detection circuit improves pictures taken outdoors in bright sunlight by placing greater emphasis on the illumination of the subject in the lower part of the frame.

Compact, Light & Rugged Construction.

The KY-210U incorporates a diecast aluminum body. Extensive use is made of miniaturized components, and the entire camera head weighs only 7.8 lbs. (3.5kg). Controls are logically placed, and protected from damage and mis-operation.

RS-170A Color Framing. The sync signal generator (SSG) in the KY-210U conforms to RS-170A specification. A color framing pulse, required in some editing systems, is output through the VCR connector. This assures the widest range of compatibility today, and with post-production systems in the future.

Genlock Circuit. To genlock the KY-210U, simply plug-in a stable composite video signal to the genlock input on the camera. The camera will then be locked to the external source. To control the phase (color shift) of the camera, an adjustment is provided inside the camera to match it with the external source.

Split Field Color Bars. The KY-210U has a built-in split field color bar generator, meeting the RS-189A standard. Color bars are useful for checking and making adjustments to color monitors and provide a consistent reference for checking the performance of the video-cassette recorder. The advantages of split field bars (as opposed to full field) are as follows: Both 75% white and 100% white are displayed, making it easier to check these levels; The I & Q signals of the encoder are provided and easily displayed on the vectorscope; Virtually all broadcast and high-end production systems use the split field bars.

Newly Designed 1.5" Electronic Viewfinder. The new VF-215U is unique in that it combines the adjustability of the cable-connect type of viewfinder, with the advantages of the direct connect (Hot Shoe) system. The VF-215U connects directly to the KY-210U camera head without cables, thus eliminating cable related problems (such as RF interference, bad connections, etc.) It is also unique in that it is adjustable both horizontally and vertically and has both a flip-up eyepiece and a diopter. The diopter allows the eyepiece to be adjusted for people who wear eyeglasses.

Indications provided by the viewfinder are: Front tally lamp; Video recorder/camera battery warning; High sensitivity indication; Tape run/tape end warning; Peaking (with on/off switch).

Wide Range Of Automatic Functions Auto-Shift Registration (Auto Centering).

Provides automatic adjustment of vertical and horizontal alignment (shift) of blue and red channels. Adjustment is accomplished by simply flipping a switch on the front panel. The circuit is digital, and registration data is stored in the camera's memory (battery back-up provided).

Dimensions (with VF-215U and HZ-510U)

Unit: mm (inch)

Suggested List Price	\$6150.00

Auto White Balance Circuit. White color balance can be adjusted automatically by flipping a switch, or the camera can be operated in the "preset" position (3200K). White balance data is stored in the camera's memory circuit.

Auto black balance circuit. Flipping a switch automatically closes the iris and adjusts pedestal balance of the individual channels.

Auto Beam Control Circuit... reduces or eliminates comet tails in most cases.

Auto black level circuit. The ABL circuit offers sharp black images even when shooting outdoors under bright conditions.

Auto (Servo) Iris Circuit. The iris responds quickly to objects with varied contrast and slowly for those with little contrast for natural automatic iris operation. The weighting detection circuit compresses the video signal level of the upper screen for smooth iris operation, with the NAM system (which controls the iris by separate R, G, and B signals) guaranteeing the correct response. The iris level can be switched to over (0.5/f-stop open) the normal setting.

To protect the pickup tubes, the iris closes automatically when the Operate switch is off, or when the color bar switch is on.

SPECIFICATIONS:

COLOR VIDEO CAMERA KY-210U

Optical System:

f/1.4 three-tube RGB prism system

Focusing/Deflection System:

Electrostatic focus/electromagnetic deflection

Pickup Tubes:

2/3" Saticon® (x3) (H4101)

Encoder:

NTSC (IQ encoder)

Synchronizing System:

Internal: Built-in SSG conforming to RS-170A with color framing pulse output

External: Composite video or black burst

Lens Mount:

Bayonet

Sensitivity:

f/4.0 at 2000 lux (186 fc)

Minimum Illumination:

f/1.6, 40 lux (3.8 fc)

(+18dB switch On)

S/N:

57dB (Contour correction Off, Gamma 1, Bandwidth 4.2MHz, matrix off, I/Q off)

Horizontal Resolution:

650 lines (G ch center)

Registration:

Zone 1: Within 0.1% (circle 80% of picture ht.)

Zone 2: Within 0.2% (circle of picture width)

Zone 3: Within 0.4% (area outside Zone 2)

Input Signals:

Return video signal: VBS, 1.0V p-p, 75 ohms

Genlock Signal: Composite video (VBS, 1.0V p-p, 75 ohms) or black burst (B.B., 0.43V p-p, 75 ohms)

Microphone: -52dBm, 600 ohms unbal.

Output Signals:

Composite Video Signal: 1.0V p-p, 75 ohms (x2 from BNC and 14p connector)

Test Signal: R, G, B, —G, ENC

Audio Signal: -52dBm, 600 ohms unbalanced -20dBs, unbalanced (switchable)

Audio Monitor Signal: 8 ohms, -20dB

VCR control signal: Contact or 4V supply (switchable)

Contour Correction:

Horizontal: Dual-edged

Vertical: 2H (with comb filter)

Color Bar Generator:

Spirit bar

Optical Filters:

Closed, 3200K, 5600K, 5600K + 25% ND

Gain Boost:

0dB, +9dB, +18dB

Power Requirement:

+12V DC (10.5 to 17V), 1.45 A

Ambient Temperature:

-20 to +45°C (-4 to 113°F)

Weight:

7.8 lbs. (3.5kg)

ACCESSORIES

KY-210U

JVC®

FEATURES

- Compact & Lightweight
- Remote Control Up To 320m (1,050 ft.)
- Built-In Genlock Facility
- Serial Data Command System
- Various Output Systems
- Comprehensive Functions for Versatility
- Camera Adaptor
- Balanced Audio Line (to & from camera)
- Intercom Function

RS-500U
FRONT PANEL

REAR PANEL

RS-500U

REMOTE CONTROL UNIT

RS-500U Remote Control Unit. So the KY-210U color video camera can be used for a wider range of applications both in the studio and on location, we are pleased to offer a remote control unit and a 5.5" viewfinder together with camera cables and lens control units.

Compact & Lightweight. The RS-500U is easy to carry outdoors and takes up so little space that two can be mounted in one EIA rack (using an optional rack mount adaptor UC-1003U), making it ideal for use in small video vans.

Remote Control Up To 320m (1,050 ft.). The cable connecting the camera and the remote control unit can be extended up to 320m (1,050 ft.). Even at such a long distance, the RS-500U is still able to supply power to the camera with no other power supply being necessary.

Built-In Genlock Facility. External genlocking is possible with either composite video or black burst signal. SC phase and H phase are adjustable from the front panel of the unit.

Serial Data Command System. With the aid of a microprocessor and 14-conductor cable, a variety of remote control operations can be performed.

Various Output Systems. The output terminals accept the connection of composite video signals, RGB signals, test signals, waveform monitoring signals and audio signals.

Comprehensive Functions For Versatility. Power On/Off; Manual iris control; Iris mode selection (Auto/Manual); Master black level control; R/B black level controls; Auto black balance; Auto white balance; Preset white balance; R/B gain controls; Auto-shift registration; Manual-shift registration controls; Sensitivity selection; Color bar On/Off; Contour correction On/Off; SC phase control; H phase control; Cable length compensation; Remote control function lock switch; Intercom volume control; Call switch

Camera Adaptor. Included with the RS-500U is a camera adaptor which mounts on the rear of the camera, and provides connections for camera cable and intercom headset.

SPECIFICATIONS

Remote Control Unit RS-500U

Output Signals:

Composite Video Signals: 1.0 Vp-p, 75 ohms, x 2

RGB Signals: 0.7 Vp-p, 75 ohms, x 1 each

Test Video Signals: ENC, R, G, B, B-G, R-G, SEQ, AUX

Audio Signal: -20dBm, 600 ohm balanced

Intercom Signal: 2-wire system or 4-wire system, line -10dBm, 600 ohm balanced

Input Signals:

Genlock Signal: VBS 1.0 Vp-p, 75 ohm (loop-thru output) or BB 0.43 Vp-p, 75 ohms (loop-through output)

AUX Signal: VBS or VS, 1.0 Vp-p, 75 ohms, (loop-thru output)

AUX Audio Signal: -10dB, 10k ohms unbalanced

Intercom Signal: 2-wire system or 4-wire system, line -20dBm, 600 ohm balanced

Tally Signal: Make-contact or power supply (5 to 24 V DC, or 6 V AC)

Power Requirement:

120 V AC, 50/60 Hz

Power Consumption:

76W (incl. camera w/5.5" VF) 24W RS-500U only

Weight (Main Unit)

4.8 kg (10.6 lbs.)

Weight (Camera Adaptor):

1.1 kg (2.5 lbs.)

Ambient Temperature:

-10 to +45C (+14 to 113F)

VF-550U 5.5" Viewfinder. A large-screen viewfinder for studio and EFP applications, incorporating a high-resolution CRT. Pan and tilt mechanisms are provided so that the position can be set according to the scene being shot and for the ease of the camera operator.

HZ-E512U 12:1 Servo Zoom Lens W/Extender. 9-108mm Fujinon lens. Motorized zoom and iris. Bayonet mount (B type). With 2x extender built-in.

RS-L501 Local Remote Control. The RS-L501 Local Remote Control is used for the operation of the RS-500 Remote Control Unit so that the required images can be created while watching the picture. Up to four RS-L501 units can be mounted in the optional UC-P1004 Unit Case which fits in a standard EIA rack.

- Single-Knob Control of Iris, Master Black Level and Preview Switching (make-contact supply)
- Control Select Switch
- New "Iris Preset Mode" which Enables Fine Adjustment of Preset Iris Value By Up To ± 2 f-stops
- On-Air/Tally Indicator

HZ-516 16X Power Zoom Lens. The HZ-516 is a newly developed power zoom lens for use with the KY series cameras. A high zoom range of 16:1 (9.5 to 152mm) and max. aperture of f/1.8 will capture any object, precisely and sharply.

HZ-CA23U C-Mount Adaptor For KY Series Cameras. This adaptor fits the bayonet mount of the 3-tube prism cameras (KY series) and permits use of standard C-Mount lenses.

HZ-NK23U Nikon Lens Adaptor For KY Series Cameras. This adaptor fits the bayonet mount of the 3-tube prism cameras (KY series) and permits use of 35mm Nikon camera lenses.

MK-50U "Hot Shoe" Microphone Mounts to side of camera without cable. Power is provided by the camera. Uni-directional. Windscreen. For hand-held use, use KA-M50. Can also be used with BY-110U.

KA-3 Component Adaptor. The KA-3 Component Adaptor is to be used when component signals (Y/R-Y/B-Y or Y/I/Q signals) are required to be output from a KY series color video camera.

- Easy Attachment Onto the Rear of Camera Head
- DC-C50 Mount Shoe and 4-Pin (Canon) Power Supply Connector Provided
- Output Selector Switch for Y/R-Y/B-Y Signals or Y/I/Q Signals

PRICING/ACCESSORIES		Suggested List Price

COLOR CAMERA GX-S700U

JVC®

FEATURES

- **Excellent Picture Quality:** 360 Line Resolution, 48dB S/N
- **Ultra-Low-Light Performance:** 30 Lux (2.8 fc) (+12dB)
- **C-Mount 10X Variable-Speed Servo Zoom Lens**
- **2 Line Enhancement Circuit**
- **Built-In Genlock Circuit**
- **Built-In Color Bar Generator**
- **Built-In Character Generator with Time/Date Function**
- **Auto Fade In/Out Circuit**
- **Computerized On-Screen Read-Out Warning System in VF**
- **Stereo Microphone Provided**
- **Snap-On Battery Power System**
- **Simple Operation with Variety of Automatic Functions**

GX-S700U COLOR VIDEO CAMERA

Excellent Picture Quality. A newly-developed 2/3" high-band Saticon tube is employed. Also, a new multiplex crystal filter is installed between the lens and the pickup tube, which minimizes color beat interference, giving clear color pictures. Horizontal resolution of 360 lines is achieved (excellent for a one-tube camera) with a signal to noise ratio of 48dB. Picture sharpness is further improved by the use of a 2H vertical enhancer circuit, normally found on more expensive three-tube cameras. A switch for the enhancement circuit (contour on-off) is conveniently located for the camera operator. For operation in low lighting conditions, a +6dB/+12dB gain booster is provided. Even under extreme low light, the GX-S700U produces a clear picture with good color reproduction. Lag and comet-tailing are kept to a minimum through the use of an ABC (Automatic beam control) circuit and LED bias lighting.

10:1 Zoom Lens. A 10:1 Zoom Lens is included on the camera. The motorized zoom speed is variable, dependent on the amount of pressure applied to the zoom rocker arm. The f/1.8 lens has a zoom range of 10.5mm to 105mm, making it ideal for telephoto operation. In addition, a macro feature is included,

which permits extreme close-ups. Also built into the lens is an automatic iris function which can be switched for manual operation. An iris lock (AL) is included, which locks the iris at the current setting. This is useful when momentary lighting fluctuations or strong back lighting conditions occur. The lens has a built-in color temperature conversion filter to change from indoor (3200K) to outdoor (5100K) temperature settings. The GX-S700U is designed to accept a wide variety of C-mount lenses without modification.

Genlock. Genlock is very simply a method of synchronizing or locking-up the camera's internal circuitry to an external video signal. Once a camera is "genlocked", its output can be switched or mixed with the other signal (or any other signal that is locked to the same source) without any distortion or break-up in the picture. This is of course provided that the synchronizing signal is from a stable source — like another camera, not a VCR. Without genlock, switching the signal to another signal would create terrible distortion at the transition, and mixing the signals (dissolves, special effects) would be impossible. To genlock the GX-S700U,

simply plug-in a stable composite video signal to the genlock input on the camera. The camera will then be locked to the external source. To control the phase (color shift) of the camera, an adjustment is provided on the camera to match it with the external source.

Built-In Color Bars. The GX-S700U has a built-in full field color bar generator. Color bars are useful for checking and making adjustments to color monitors and they provide a consistent reference for checking the performance of the videocassette recorder. When the color bars are activated, the lens iris is automatically closed, if it is in the Auto mode.

1.5" Electronic Viewfinder w/Computerized Warning System. A black and white 1.5" (diagonal) electronic viewfinder is provided with the GX-S700U. It utilizes an advanced warning/status system which displays, in alphanumeric characters, various indications on the screen. These include iris, pause, tape run, battery alarm, white balance, filter setting, gain switch, etc. This system makes the camera "user friendly" and nearly impossible to make

an error. This feature is especially important for beginners, and those unknowledgeable about video camera operations.

Built-In Character Generator w/Lap Time/Date. A 12-key character generator with 8-hour memory backup time enables titles, dates, and lap time to be recorded over the scene being shot. This feature is especially beneficial when the camera is used for documentation.

Fade-In, Fade-Out. This feature, normally found on consumer type cameras, was included because it gives the user better scene transitions, when no post-production equipment is used. Fades can be to and from black, white, or color (R, G, or B). When used in conjunction with the built-in character generator, effective titles can be produced.

Modular Power System. One very distinctive — and very important — feature of the GX-S700U is its modular power system. As it is packaged, the camera can be powered from the VCR's battery using the standard VCR cable (provided). Power consumption is 9.2 watts (peak at 12V DC). (Under normal operation, power consumption will be around 8.0 watts.) However, it is the practice of most professionals to power the camera from its own, separate battery. This provides longer operation time, and extends the life of the VCR battery. The GX-S700U can be used with either the NB-P3U (0.7 Ah) or the NB-P4U (1.4 Ah) NiCad battery packs which snap directly onto the rear of the camera. This is the same modular power system used with the HR-C3U compact

VHS recorder. The optional charger for the system, the BB-P3U, can be powered from any AC power source in the world, and is designed to quick-charge either battery. The NB-P3U and NB-P4U batteries are optional and are not included in the basic camera package. For AC operation, the optional AC-P3U snap-on AC adaptor can be used, or if a separate adaptor is desired, the AC-C412U can be connected via the VCR cable.

Stereo Microphone Included. Included with the GX-S700U is a plug-in stereo microphone. The single microphone has two pickup elements with slightly different directional characteristics (the same as you have two ears). The two audio signals are fed through the VCR cable to the individual left and right channels of a stereo portable VCR (like the JVC BR-6200U). If the VCR only has one audio channel, then the two channels may be mixed by flipping the "stereo-mono" switch to the Mono position.

PRICING/ACCESSORIES		Suggested List Price
GX-S700U	Color Camera	\$1900.00
AC-C412U	Camera AC Adaptor	65.00

Unit: mm (in.)

SPECIFICATIONS

Pickup Tube:

2/3" Static-magnetic Saticon, high resolution type

Color System:

Frequency separation color system 5MHz chrominance carrier frequency

Scanning System:

30 frames, 525 lines, 2:1 interlaced

Video Output:

1Vp-p, 75 ohms, NTSC

Horizontal Resolution:

Better than 360 TV lines

Video Signal to Noise Ratio:

Better than 48dB (contour off)

Minimum Illumination:

30 lux with +12dB gain

Audio Output:

CH-1 and CH-2, -20dB, 1K ohm

External Microphone Input:

CH-1 and CH-2, -72dB/low impedance, 3.5mm stereo jack

Headphone Output:

-6dB/low impedance, 3.5mm stereo jack

Mike Mixing:

CH-1 and CH-2 mixed by stereo mono sw

Lens:

Variable-speed power zoom lens, 10:1 (10.5 — 105mm), f/1.8, with macro and auto-shutter

Iris: Auto iris/auto lock/manual control
Color Temperature Filter: Indoor (3200K)/outdoor (5100K) switched on lens

White Balance:

Preset and automatic

Viewfinder:

1.5" Electronic, detachable

Indicator & Alarm:

On-screen read-out indications controlled by character generator and microcomputer (Iris, pause, tape run, battery alarm, white balance, filter, gain, etc.)

Auto Fader:

Video/audio or video only to/from white, black, red, green or blue or audio only

Genlock Input:

BNC; 1.0V p-p composite (NTSC)

Color Bar Generator:

Built-in; full field

Character Generator:

12-key operation character generator for superimposition of titles, dates and lap time; memory back-up time: 8 hours

Power Requirement:

+12V DC from VCR or battery pack

Power Consumption:

9.2 watts

Weight:

2.95kg with lens, VF, mic, shoulder pad

Dimensions:

415(D) x 190(W) x 238mm(H)
w/lens hood, VF & shoulder pad

FEATURES

- Extremely Lightweight, Only 4.3 Lbs.
- Automatic Iris Control
- Compact Electronic Viewfinder
- High-Sensitivity Low-Lag Pickup System
- 6:1 Power Zoom Lens with Macro Setting
- Direct TV Connection
- VHS Compatibility
- Shuttle Search
- Independent Camera and Recorder Functions
- 3-Way Power Supply Flexibility
- Compact Videocassettes

BR-C100U

BR-C100U* VIDEOMOVIE

VideoMovie is a single lightweight and compact unit that combines a full-feature camera with a VHS video recorder, for playback as well as recording.

Comprehensive Color Temperature Adjustment. VideoMovie employs a combination of a filter and electronic circuitry to accommodate lighting of different color temperatures.

Automatic Iris Control. When set to the STD position, VideoMovie's iris control system automatically adjusts the lens opening for optimum exposure. The iris setting can be manually adjusted.

Compact Electronic Viewfinder. VideoMovie's supremely compact EVF incorporates a comprehensive warning system which includes an exposure meter, low battery warning, tape-end alarm and five other indicators. The eyepiece can be rotated 180° to accommodate different shooting angles. The viewfinder permits instant playback of newly-recorded tapes for on-the-spot checks.

Audio. A high-sensitivity unidirectional condenser microphone is provided for exclusive use with VideoMovie along with an earphone jack for audio monitoring.

High-Sensitivity Low-Lag Pickup System.

VideoMovie can be used effectively under a wide variety of shooting conditions. In lighting as low as 15 lux (1.4 fc) — about what you'd find in a quiet continental restaurant — the sensitive Saticon pickup tube and supporting technology, including a bias light, Automatic Beam Control, and low-noise FETs, record normal images with clear, natural color.

6:1 Power Zoom Lens with Macro Setting.

A 6-to-1 wide-angle/telephoto range is provided, along with a macro setting for screen-filling close-ups of objects as small as a postage stamp. The zoom buttons are strategically placed for light, natural fingertip control.

Direct TV Connection. VideoMovie includes circuitry for playback of the cassettes it records; no additional recorder, player or adaptor is required.

VHS Compatibility. Because VideoMovie uses the standard VHS tape pattern and signal processing system, its recordings are compatible with all VHS equipment. Compact videocassettes can be played on full-size recorders using a special cartridge which holds the compact cassette in a standard-size cassette shell.

Shuttle Search. For quick accurate access to any part of a tape, the picture can be viewed at three times normal speed in forward or reverse.

Independent Camera and Recorder Functions.

For direct live recording onto full-size cassettes, VideoMovie can be used just like an ordinary video camera with any full-size video recorder. In addition, its playback facility allows VideoMovie to be used as a master player for editing or tape-to-tape transfer.

3-Way Power Supply Flexibility. Compact rechargeable Ni-Cad battery packs are VideoMovie's standard power source. To take advantage of other power sources, an optional AC power adaptor (AA-P1V) and a car battery cord (AP-P1V) are available.

Compact Videocassettes. VideoMovie uses VHS-C compact cassettes which are one-third the size of standard VHS cassettes. Each cassette holds enough half-inch video tape for 20 minutes of recording.

TM-9060/TM-9010 CCTV System Monitors

TK-10/TK-N10 CCTV Camera Heads

TM-920/TM-122 CCTV Video Monitors

JVC has developed a new series of CCTV systems using more compact camera heads for easier installation and operation.

FEATURES

- Connection between the system monitors and each camera can be done with a single coaxial cable
- The 9-inch system monitor incorporates CCUs so that the construction of a monitoring system is easy: The TM-9010 has one CCU while the TM-9060 has six CCUs and can perform sequential switching
- Both of these system monitors, the TM-9010 and TM-9060, have built-in CCUs and are provided with a power-save standby mode, with which video output is interlocked with the built-in video sensor
- The TM-9060 is provided with a video recording connector, a video playback connector, an external alarm input connector and a camera No. 1 output connector
- The camera heads are both compact, with the TK-10 using a vidicon tube and the TK-N10 a Newvicon tube. A monitor output connector is provided on the camera heads so the angle of view can be easily set when installing the cameras
- The TM-920 9-inch high-resolution video monitor has been newly designed and can be mounted in a standard EIA 19-inch rack. The TM-122 12-inch monitor is also available

Preliminary Specifications

SPEC.	MODEL	TK-10	TK-N10
Scanning system		2:1 interlaced	
Scanning frequency		Horizontal: 15.625 kHz Vertical: 50 Hz	
Synchronization system		External (Special Composite Sync. Signal from CCU)	
Video output		for CCU x 1 Video 0.7 Vp-p 75 Ω (BNC) for Monitor x 1 VS 1.0 Vp-p High Imp. (PIN)	
Horizontal resolution		more than 550 lines (at center)	
Scene illumination		min. 3 lux (f/1.4) normal 30 lux (f/1.4)	min. 0.3 lux (f/1.4) normal 3 lux (f/1.4)
Pickup tube		2/3" Separate mesh type vidicon (20PE14)	2/3" Separate mesh type newvicon (S4092)
Lens mount		C-mount (for TV camera)	
Power supply		from video monitor only (BNC) DC 12 V to DC 30 V, coaxial cable	
Power consumption		max. 9 VA (DC 30 V, 270 mA)	
Dimensions (W x H x D)		70 x 70 x 150 mm (2-3/4" x 2-3/4" x 6") without lens	
Weight		approx. 0.6 kg (1.33 lbs) without lens	

SPEC.	MODEL	TM-9010
Picture tube		9"
Horizontal resolution		more than 900 lines (at center)
Scanning frequency		Horizontal: 15.625 kHz Vertical: 50 Hz
Camera control unit		Yes x1
Input		Camera x1, TK-10/N10 only (BNC)
Output		Video x1, VS 1.0 Vp-p 75 Ω (BNC) Alarm x1, contact Low Level (PIN)
Power supply		AC 220/240 V
Power consumption		25 W (including camera head x1)
Dimensions (W x H x D)		220 x 250 x 290 mm (8-3/4" x 9-7/8" x 11-1/2")
Weight		approx. 7 kg (15.5 lbs)

SPEC.	MODEL	TM-9060
Picture tube		9"
Horizontal resolution		more than 900 lines (at center)
Scanning frequency		Horizontal: 15.625 kHz Vertical: 50 Hz

KW5 FLEXIPAK™ WITH VIS-I-VOLT™ VOLTAGE INDICATOR
The Most Advanced Belt Packs Available Today . . .

KW5 Flexipak with Vis-i-Volt™

This was (and still is) the first flexible, yet lightweight pack that is worn around your waist. The case is made of Cordura®, which is virtually indestructible, and features cylindrically wound metal cells, the exclusive Vis-i-Volt feature, and the KAPCO in-line fused receptacle.

- The battery cells are individually wound in their own heavy-duty Metal cylinders
- The battery cell construction is so superior, they can't leak in any position
- Solid cross-linked polyfoam wraps around cells for maximum protection
- The rugged Metal cell cases maximize resistance to shock and vibration
- Up to 2½ years shelf life without needing a charge
- Can be recharged up to 1400 times
- Provides excellent performance under severe usage and conditions
- Cylindrically wound cells are the best you can buy
- Exclusive Vis-i-Volt and in-line fused receptacle
- Long service life means only pennies per use

KAPCO Power Packs Will Operate:

- Portable TV
- Video Recorders
- Video Cameras
- Radios and Tape Decks
- Indoor and Outdoor Power Tools
- Test Equipment
- Depth and Fish Finders
- High Intensity Lighting
- Photographic Lighting
- CB and other Communications Equipment

KW5 FLEXIPAK™ WITH VIS-I-VOLT™ VOLTAGE INDICATOR \$149.95
KW675 FLEXIPAK™ WITH LEAD ACID BATTERY AND REGUCHARGER™ \$129.95

Unit	Type Of Construction	Average Camera Recorder Operating Time*	Typical Usage
FLEXIPAK (KW5)	Flexible fabric belt pack	4 to 5 hours	Medium to heavy

R10 Vis-i-Volt™

Provides visual indication of the charge condition of your battery pack. Can be used while charging and using your pack. For 12 volt "lead-aid" packs only.

R10 Vis-i-Volt™ **\$19.95**

KF1 Fast Charger

Will fully charge any KAPCO 5 to 8 amp hour battery pack in approximately 4 hours. Provides an approximate 50% charge after only 1 hour of charging. UL and CSA listed.

KF1 Fast Charger **\$19.95**

KR201 Regucharger™ **\$24.95**

Connectors

C50 Double Receptacle Cord \$ 5.95
C10 "Y" adaptor 9.95

BATTERY PACS

KH1 Hande-Pak™ 1 Amp

The Hande-Pak is ideal for powering those smaller electronic devices; radios, CB sets, test equipment, small portable TVs etc. Durable, vinyl case has a stitched loop for attaching to your own belt, and has a built-in receptacle. Complete with charger (and recharges in only 2 hours). Combine this with the R37 Voltage Converter, and you'll be able to power most of those smaller devices. At a little over 1 pound and 4"H x 4-1/2"L x 2"W, this is one small, but versatile, battery pack.

KH1 \$49.95
KW1P Walk-Pak™, 3 Amp, 6 Volt 39.95

K08 Powerpouch™ 8 Amps

Durable, lightweight, attractive vinyl case with attached shoulder strap. Comes complete with charger and in-line fused receptacle. Charges in 12-16 hours. (Approx. 7 lbs.-8-1/2"H x 5"L x 2"W)

K08 \$119.95

KL08 Powerpouch™ with Vis-i-Volt™

Durable, lightweight, attractive vinyl case with attached shoulder strap. Comes complete with Vis-i-Volt feature, charger and in-line fused receptacle. Charges in 12-16 hours. (Approx. 7 lbs. - 8-1/2"H x 5"L x 2"W)

KL08 \$139.95

K12 Shoulder Pack 12 Amps

This pack has a padded cordura case with shoulder strap. The charger stores inside. Comes complete with charger and in-line fused receptacle. Charges in 14-18 hours. (Approx. 12 lbs. - 9-1/2"H x 8-1/2"L x 3-1/2"W)

K12 \$169.95

KL12 Shoulder Pack with Vis-i-Volt™

This pack has a padded cordura case with shoulder strap. The charger stores inside. Comes complete with Vis-i-Volt feature, charger and in-line fused receptacle. Charges in 14-18 hours. (Approx. 12 lbs. - 9-1/2"H x 8-1/2"L x 3-1/2"W)

KL12 \$189.95

K15 Powerhouse™ 15 Amps

Plenty of extended running time for your camera, recorder, lights and accessories. The leatherette case has carrying handle and strap.

Comes complete with charger and in-line fused receptacle. This is truly economical, heavy-duty power. Charges in 16-20 hours. (Approx. 14 lbs. - 8"H x 11"L x 6-1/2"W)

K15 \$159.95

KN2001 Handle-Pak™ Ni-Cad With Regucharger™

This KN2001 battery packs 4.8 amps at 12 volts. It's the smallest and lightest weight ni-cad (only 3-1/4 lbs., 2-3/4"W x 6-3/4"L x 2-1/2"D). It's cased in metallic, padded Cordura®. A detachable shoulder strap and stitched belt loop make it easy to transport. Comes with in-line fused receptacle and regucharger.

KN2001 \$119.95

Battery Comparison

1. Add up the total number of watts used by your equipment. (Camera, monitor, recorder, radio, etc.)
2. Read across to find the "average" continuous operating time for each Kapco battery pack.

WATTS	KH1	KW5	K08 KLO8	K12 KL12	K15
6 - 9	2:00	8:30	12:45	16:00	25:45
10 - 13	1:15	5:30	8:30	11:00	17:00
14 - 17	1:00	4:00	6:15	8:30	12:30
18 - 21	0:45	3:15	4:45	6:45	9:45

VC-151

FP-30 TV

FP-30 TV PROJECTOR

The FP-30 TV Projector utilizes the basic film transport and system as found in the professional 35mm systems widely used for exhibition, and studio applications. The high speed intermittent movement with 5 blade shutter renders the system compatible with 25 or 30 Frame operation. The system meets all SMPTE specifications.

Precision Projection

The FP-30 TV Projector utilizes a single piece, curved gate of self-lubricating delrin material. The gate, with delrin runner strips and ceramic guides, provides a film path exactly controlled with minimal pressure, providing high picture stability with minimal stress on the film.

Optimal Sound Quality

The optical reproducer follows all of the state-of-the-art designs, resulting in low wow and flutter. The rotating sound drum and the flywheel accelerator provides fast sound stabilization. The high quality slit lens and scanning system provides for high quality sound reproduction.

Audio

The FP-30 TV System is normally provided without Pre Amplification. The solar cell output being easily coupled to Station audio systems. Where a 0 level signal is required, an audio system can be provided as an accessory.

FEATURES

- Equipped with Column and adjustable Pedestal
- 35mm Film Transport
- Fast Pull Down Intermittent 5 Blade Shutter
- Step Frame
- Proximity Sensor (Auto Stop)
- Sound Reproducer, Optical with Solar Cell Pick-up and Exciter Lamp
- DC Exciter Lamp Power Supply
- Sound Drum Accelerator
- Picture Change-Over Relay, Dowser Control
- Electrical Control System 24V DC
- SMPTE Spec on Jump and Weave
- Spool Shafts and Frictions: 6000' capacity
- Drive Motor: Synchronous 115V, 60Hz, 24 p/s
- Lens Support: Vernier Focus, Lensholder, Set of Aperture Plates
- Light Source: Halogen Lamphouse 250W, 36V, 2 Lamp System, Automatic Lamp Change

Cable per ft. for above	3.50
Lens Requirements	Special Quote

FP-18 TV PROJECTOR

For use in TV, film to tape transfers, and special studio systems.

Precision Projection

The projector's extremely high picture stability, less than .19% jump and weave, is achieved by the unique Philips grooved disk mechanism, curved gate, and ceramic film edge guides. The intermittent mechanism was developed especially for 16mm film systems using a 12 tooth sprocket for film control and protection. This combined with the rotating 5 blade disk shaped shutter, dual halogen lamp with automatic lamp change, provides a highly efficient projection system compatible with 25 or 30 frame TV systems.

Optimal Sound Quality

The sound reproducing system follows the pattern of professional standards used in 35 or 70mm reproducers. A rotating sound drum machined to high standards, fitted with a split damping drum and flywheel accelerator provides for a fast stabilization time and provides for less than .2% wow and flutter. The scanning optics can be adjusted (by lever) to compensate for standard or non-standard recordings. A manual switch will shift the system from optical to magnetic if so equipped.

Audio

The preamplifier module is located within the cabinet. It provides for pre-amplification of selected signals with plug-in equalization boards for optical or magnetic signals. The output provides for a +8dBm signal into a 600 ohm load. Each input is individually controlled for balance, with an overall master and a bass/treble boost circuit.

FEATURES

- Rack Mounting with adjustable Pedestal, 24V Control System, Control Panel, built-on Proximity Sensor (Auto Stop)
- Film Run Mechanism Forward/Reverse
- Crown Groove Intermittent 5 Blade Shutter
- Picture Dowser/Change Over, Still/Step Frame
- Curved Gate
- SMPTE Specs for Jump and Weave
- 5000 foot Film Capability, Remote Control for all Functions
- 24 Frames per second
- Audio: Preamplifier/Line Amplifier Module built-in with +8dBm Output Level into 600 ohm Load B+ Power Supply
- Light Source: Halogen Light Source, 2 Lamp Turret System with Automated Change 250W, 24V
- Drive Motor: 110-250V, 60Hz Synchronous
- Reel Drives: Friction Drive, 5000' capacity
- Optical Playback: Sound Drum Damping Assembly, Sound Drum Accelerator, Solar Cell, Exciter Lamp, Exciter Lamp Power Supply

KODAVISION CAMCORDERS

KODAVISION SERIES 2000 CAMCORDERS

The Kodavision Series 2000 Camcorder is an exciting new concept in home video movie making. The camera and recorder are combined in one light-weight, easy-to-use unit that can record images and sound on a compact 8mm video cassette. And it's battery powered. Because of this new configuration, the entire well-balanced unit rests on the shoulder of the user for ease of operation. With a Kodavision Series 2000 Cradle, Model 2020, your movies can be viewed on your television screen. Or the camcorder can be used with the Kodavision Series 2000 Cradle equipped with an optional Kodavision Series 2000 Tuner/Timer, which will allow the additional capability of recording broadcast programs directly from your television for viewing at a later time. The cradle includes a remote control.

MODEL 2400 AUTO FOCUS CAMCORDER

Features

- Still Frame and Single Frame Advance, 3 heads
- Infrared Auto Focus
- Date Set—day, month, year
- Fade In/Fade Out
- Negative/Positive Switch
- Backlight Switch with f/1.5 override
- Black-and-White Electronic Viewfinder
- Viewfinder Indicators
 - Light levels
 - Counter, to indicate tape usage
 - DEW Warning Light, to indicate condensation
 - Recording Mode
 - Indoor/Outdoor Lights
 - Battery-Power Low Light
- 1/8" Newvicon tube
- 6x Power Zoom
- Fully Automatic White Balance
- Auto Iris, variable aperture
Low-light capability to 20 lux
- Standby Switch
- Fast Forward and Fast Reverse
- Visual Search
- Counter with "Memory" Feature
- Record Review
- Indoor/Outdoor Lighting Selection
- Tally Light
- Auto White Balance Override Switch
- 60-Minute Battery Use/Charge
- Metal-Particle (MP) and Metal-Evaporated (ME) Kodak Video Cassettes
- Microphone

MODEL 2200

MODEL 2200 CAMCORDER

Features

- Still Frame, 2 heads
- Black-and-White Electronic Viewfinder
- Viewfinder Indicators
 - Light levels
 - Counter, to indicate tape usage
 - DEW Warning Light, to indicate condensation
 - Recording Mode
 - Indoor/Outdoor Lights
 - Battery-Power Low Light
- 1/8" Newvicon tube
- 6x Power Zoom
- Fully Automatic White Balance
- Auto Iris, variable aperture

KODAVISION ACCESSORIES

MODEL 2000 CRADLE

The Kodavision Series 2000 Cradle, with the use of a Kodavision Series 2000 Camcorder, Model 2200 or 2400, allows video recorded tapes to be viewed on your television screen. In addition to providing the proper signal to your television, the cradle serves as an AC adaptor and a battery charger. This also allows you to dub your recorded images onto standard 1/2" tape on existing VCRs and vice versa. With the addition of a Kodavision Series 2000 Tuner/Timer, the cradle may be used as a VCR to record your favorite broadcast television programs.

Features

- Full set of VCR record and playback controls: Play, Record, Fast Forward with Visual Search, Fast Reverse with Visual Search, Fast Forward/Fast Reverse, Pause/Still, Frame Advance, Stop, Eject, Tape Counter with "Memory" Feature
- Dust-Cover Protection for Camcorder
- Wired Remote Control
- Battery Charger in Camcorder Plus Spare Battery with Automatic Shutoff
- Convenient Tape Storage Drawer
- Accepts Optional Tuner/Timer

2000 Cradle \$199.00

MODEL 2000 CRADLE

MODEL 2000 TUNER/TIMER

The cradle (with Camcorder), when equipped with the Tuner/Timer plug-in module, provides the user with a complete video cassette recorder. The Tuner/Timer module allows the user to record broadcast television programs on 8mm Kodak Video Cassettes.

Features

- 105-Channel Cable Ready Capability
- 12 Preset Channel Positions
- LED Channel Position Display
- Program Capability: 2 programs/2 weeks
- One-Touch Recording: 0, 30, 60, 90 Minutes
- Fluorescent Indicator Panel Display
- Tuner/Cradle Multiconnector

2000 Tuner/Timer \$300.00

MODEL 2000 TUNER/TIMER

8mm KODAK VIDEO CASSETTES

8mm Kodak Video Cassettes for use with the Kodavision Series 2000 Video System and other 8mm systems. MP video tape offers an advanced metal-particle coating for excellent density and sensitivity, and ME video tape offers highest-quality metal-evaporated coating for excellent performance and dubbing.

COLOR VIDEO CAMERA

- **High sensitivity.** The New Cosvicon pickup tube in the CV-301 is so sensitive, it requires only 35 lux for recording, allowing for recording indoors without special illumination
- **Very easy to use.** There are no complex or difficult adjustments to worry about. The user just turns the 4-position color temperature selector to the appropriate setting (indicate by graphic symbols), focuses and shoots
- **Low power consumption.** Since the CV-301 consumes only 3.5 watts, recorder batteries last longer between recharging
- **Compatible with a wide variety of decks.** The camera cord can be connected directly to VHS 10-pin connectors and to other VHS and Beta decks easily via an adaptor

Specifications

Television system:	NTSC, Single carrier frequency separation system
Pickup tube:	1/2 inch New Cosvicon™
Video output signal:	1 volt p-p, 75 ohms
Scanning system:	525/60 fields/sec, 2:1 interlace
Horizontal resolution:	270 lines plus
Image S/N ratio:	45 dB plus
Min. required luminance:	35 lux
Built-in microphone:	Unidirectional electret condenser
Audio output level:	-20 dB (1K ohm)
Zoom lens:	f/1.5 (f = 10~30mm), 3X manual zoom lens, automatic iris, 43mm filter diameter

Minimum focusing distance:	0.8 meter
Viewfinder:	TTL optical type, recording indicator, insufficient lighting indicator, battery strength indicator, optional electronic viewfinder may be added

Color temp. compensation control:	4-step:	
	Cloudy:	7000°K
	Sunny:	5500°K
	Fluorescent:	4500°K
	Incandescent:	3200°K

Power requirement:	DC12V (from a portable video recorder or camera AC adaptor)
---------------------------	-------------------------------------------------------------

Power consumption:	Approx. 3.5 watts
Temp. range for operation:	0°C to +40°C (32°F to 104°F)
Dimensions:	2.76" (W) x 9.65" (H) x 5.63" (D)
Weight:	About 1.8 lbs. (including 5 feet cable. Not including lens hood and lens cap.)

CV-301 Compact Color Video Camera\$699.00

CV-301 COMPACT COLOR VIDEO CAMERA

Weighing just 1.8 lbs., the Konica CV-301 is the smallest and lightest color video camera in the world. That's why it was given the name CV, "C" for compact and "V" for video.

Extremely compact size was achieved by the use of a 1/2" New Cosvicon pickup tube, a unique, original optical system, and high density circuit boards. Further benefits of the Konica CV-301's sophisticated optical-electronic system are that the camera is very simple to operate and requires no more than 35 lux for low-light recording. The result is a color video camera with which anyone can make beautiful recording. From beginners to the experienced camera user, the Konica CV-301 is the ideal camera for today's on-the-go consumers since it satisfies the demand for compact size, light weight and simplicity.

Features

- **Ultra-compact, ultra-lightweight design.** The use of a 1/2" pickup tube, a unique optical system and densely packed circuit boards made it possible to build a color video camera this small and this light

**MODEL 5300
 OPTICAL MULTIPLEXER**

The **MODEL 5300 OPTICAL MULTIPLEXER** provides as many as three separate film images projected for televising by a single camera. First-surface mirrors and precision optics ensure excellent results in color TV applications. An integral field lens provides an intermediate image plane upon which both camera and projector lenses are focused. The field lens mounting is designed to permit insertion of a special screen for alignment purposes. The mirrors are shifted by individual electric gear motors through a unique torsion-bar/pitman coupling and produce an "instant" vertical wipe image transfer. The optical transfer assembly is supported for a 48" optical center by a bench pedestal.

The **MODEL 5400 OPTICAL MULTIPLEXER** is similar to the Model 5300, with the capability of multiplexing up to four separate film images. It has two field lenses to provide intermediate image planes upon which the camera and the projector lenses are focused. The movable mirrors are shifted by a cam/aperture coupling but in both the 5300 and the 5400, automatic self-dousing is inherent in the vertical-wipe image transfer so that all unused input images are eliminated.

MULTIPLEXERS

- * **5300** For three input sources (Small Image). Includes optical transfer assembly with field lens and cover, bench pedestal and local control. **\$2095.00**
- * **5330** For three input sources (Large Image). Includes optical transfer assembly and cover, bench pedestal and local control. **\$3680.00**
- * **5340** For three or four input sources (Large Image. Less field lens). Includes optical transfer assembly with cover, bench pedestal and local control. Three input units may be field converted for fourth input source.
 For three input sources **\$3490.00**
 For four input sources **4220.00**
- 5040** Large Image Field Lens and mounting assembly for 5330, 5340 Multiplexer. (Required for camera without integral field lens.) **\$1105.00**
- * **5400** For four input sources (Small Image). Includes optical transfer assembly with field lens and cover, bench pedestal and local control. Requires 5041 ND mounting bracket for 410 light control. **\$2735.00**
- * **5500** For five input source (Small Image). Includes optical transfer assembly with field lens and cover, and bench pedestal.
 For four input sources **\$3545.00**
 For five input sources **3910.00**

SHELVES AND STANDS (For Multiplexers)

- (For 5300, 5340 and 5400 Multiplexers)
- 5104** Stand for cameras or projectors with optical center height between 8-1/4" and 12-1/4". Includes mounting adaptor. (Specify camera or projector model when ordering) **\$425.00**
- 5107** Shelf for small camera or projector. Includes mounting adaptor. (Specify camera or projector model when ordering) **\$310.00**
- 5108** Stand for camera or projector with height of less than 8-1/4" from mounting base to center of optics. Includes mounting adaptor. (Specify camera or projector model when ordering) **\$425.00**
- * **Does not include camera or projector mounting shelves or stands.**

DIPLEXERS/UNIPLEXERS

- 5116** Assembly with first surface mirror and field lens. Includes shelves and adaptors for camera and 16mm film projector. (Specify camera and projector when ordering). Requires 50mm camera lens with 3/8" extender and 3" projection lens. (Lenses not included) **\$1200.00**
- 5116 + 35** Diplexer Assembly — for two input sources. Includes first surface mirror, field lens, bench assembly and shelves (desk top mount) for 35mm slide projector and 16mm film projector. (Specify camera or projector, dedicated or dolly-up) **\$1790.00**
- 5135** Uniplexer Assembly same as above for one 35mm slide projector. (Less mirror) **\$1075.00**
- 5135m** Uniplexer Assembly for monochrome camera and 35mm slide projector. (Less field lens and mirror) **\$540.00**
- 5136** 105mm Camera taking lens and 1.57" lens barrel for use with 5135 Uniplexer. ("C" Mount) **\$245.00**

LENS/EXTENDERS

- 5015** 3/8" Lens Extender for 50mm lens to "C" mount camera adaptor. **\$21.00**
- 5016** Lens Extender Kit (Cosmicar) **\$52.00**
- 5017** 50mm f/1.4 Lens — for "C" mount camera, includes lens extender: 3/16" for 2/3" format camera. 3/8" for 1" format camera. **\$240.00**
- 5019** 55mm lens with Bayonet mount for prism optic cameras. **\$1515.00**

MULTIPLEXER ACCESSORIES

- 5021** Test Film Kit Loop. Includes RES, REG, FLESH TONE slides. RES 16mm film loop **\$225.00**
- 5022** Eastman Kodak Gray Scale Slide **\$700.00**
- 5036** Neutral Density Filter Kit — 6 filters supplied for mounting. For small image. (One Kit for each projector recommended). **\$110.00**
- 5037** Neutral Density Filter Kit — 6 filters supplied for mounting. For large image. (One Kit for each projector recommended). **\$235.00**
- 5041** Mounting Bracket for 5050 light control for use with 5400 4-input optical multiplexer. **\$45.00**
- 5050** Automatic Light Control — maintains camera video at p/p. **\$2185.00**

4410 TELOP PROJECTOR

FRONT VIEW 4220 — LOCAL CONTROL

FRONT VIEW 4210

4220 DISSOLVE DUAL DRUM SLIDE PROJECTOR provides a large slide capacity projector with time-controlled dissolve transitions. The 4220 Dual Projector offers the alternate sequencing of up to 160 glass, metal, plastic or paper-mounted 2" x 2" slides from a dual configuration of Eastman Ektagaphic E2 projectors.

The fade from one slide to the other can be varied, by means of a panel control, from less than half a second up to a full 15 seconds.

4210 DUAL DRUM SLIDE PROJECTOR provides a large slide capacity projector with broadcast-quality quick-cut transitions. The 4210 projector offers the alternate sequencing of up to 160 glass, metal, plastic or paper-mounted 2" x 2" slides from the dual configuration of Eastman Ektagaphic E2 projectors.

4410 TELOP PROJECTOR for use on an optical multiplayer for converting opaque pictures, such as magazine or newspaper clippings, Polaroid or quick notes. The picture size is 3-1/4" x 2-7/16".

PROJECTORS

- 4110 Eastman Single Drum Slide Projector.** Holds 80, 35mm slides. Includes modified 7" lens and adjustable mount. (Requires 5107 Shelf or 5108 Stand). (Use 2508 Remote and 3504 Adaptor for remote control) **\$540.00**
- 4210 Dual Drum Slide Projector.** Holds 160, 35mm Slides. Includes lens and adjustable mount.
 - With 7" lens for Small Image System **\$2365.00**
 - With 7 1/2" lens for Large Image System **2870.00**
 - With 9" lens **2870.00**
 (Requires 5107 Shelf or 5108 Stand). (Uses 2515 for remote control). (Uses 2513 for remote reconcile).
- 4220 Dual Drum Dissolve Slide Projector.** Hold 160, 35mm Slides. Includes lens and adjustable mount.
 - With 7" lens for Small Image System **\$4125.00**
 - With 7 1/2" lens for Large Image System **4625.00**
 - With 9" lens **4625.00**
 (Requires 5107 Shelf or 5108 Stand). (Uses 2525 for remote control). (Uses 2526 for program tone generator).
- 4410 Telop Projector**— Includes 3" lens and two image holders. (Uses 2510 Remote Control) **\$1900.00**
- ST 1200LTI Elmo Super 8 TV Film Projector**— Includes 25-50mm zoom lens, optical and magnetic playback, and magnetic record. (Requires 5108 Stand). (Uses 2510 Remote Control and 3518 Adaptor for remote control) **\$1775.00**
- 16-CLLTI Elmo Slotload 16mm TV Film Projector**— Includes 75mm lens, optical and magnetic playback. (Requires 5108 Stand). (Uses 2510 Remote Control and 3518 Adaptor for remote control) **\$2640.00**
- 16-FLTI Elmo Heavy Duty 16mm TV Film Projector**— Includes 75mm lens, optical and magnetic playback. (Requires 5104 Stand). (Uses 2523 Remote Control) **\$2825.00**
- 2230LTI Singer 16mm TV Instaload Film Projector.** Includes 3" lens, fast forward and reverse mode and Optical Playback. (Requires 5108 Stand). (Uses 2510 remote and 3503 adaptor for remote control) **\$2595.00**
- NT-2LTI Eiki Autoload 16mm TV Film Projector.** Includes 3" lens, Optical and Magnetic Playback, and Remote Adaptor. (Requires 5108 Stand). Uses 2523 remote control **\$2585.00**
- NT-3LTI Eiki Autoload 16mm TV Film Projector.** Includes 3" lens, Optical and Magnetic Playback, and Remote Adaptor. (Requires 5108 Stand). Uses 2523 remote control **\$3110.00**

REMOTE CONTROL

(All modules use 1/3" of rack width unless otherwise indicated)

- 1506 Rack Frame**— accepts up to three remote control modules. Blank filler panels provided, if necessary. Frame is 19" x 3 1/2" x 3" (W x H x D) **\$60.00**
 - 2508 Control, Remote** — "Off", "Ready", "Show", "Forward", and "Reverse" slide change **\$150.00**
 - 2509 Control, Remote** — for two 16mm TV Film Projectors. (Dual configuration of 2510 below) **\$180.00**
 - 2510 Control, Remote** — Controls "Off", "Ready", and "Show" modes **\$120.00**
 - 2513 Control, Remote Reconcile** — (optional) for Model 4210 Dual Drum Slide Projector. Adds individual "Forward" and "Reverse" control of Drum A and Drum B **\$120.00**
 - 2515 Control, Remote** — "Off", "Ready", "Show", "Forward", "Reverse", and "Alternate" **\$180.00**
 - 2516 Control, Remote** — for 5400 Multiplexer. Controls input sources 1, 2, 3 and 4. Uses 2/3 of rack frame. (Not required with LTI projector remote control system) **\$120.00**
 - 2517 Control, Remote** — for 5300 Multiplexer. Controls input sources 1, 2 and 3. (Not required with LTI projector remote control system) **\$120.00**
 - 2523 Control, Remote** — "Off", "Ready", and "Show", "Forward", and "Reverse" **\$150.00**
 - 2525 Control, Remote** — Uses 2/3 of rack frame **515.00**
 - 2526 Tone Generator** **350.00**
 - 2528 Control, Remote** **80.00**
 - 2533 24 Volt Power Supply** — for Uniplexer remote control ... **190.00**
- NOTE:** Consult factory for remote control cables.

ADAPTORS FOR REMOTE CONTROL

- 3503 Remote Adaptor** for 2230 LTI film projector **\$ 75.00**
- 3504 Remote Adaptor** for 4110 slide projector **110.00**
- 3510 Universal Remote Adaptor** with AC power cord for all projectors without remote provisions. Includes local controls, "Off" and "Ready". (Used with 2510 Remote Control) **150.00**
- 3518 Remote Adaptor** for ST 1200LTI and 16-CLLTI Elmo Projectors. **150.00**
- 3520 Remote Adaptor** for 16-FLTI Elmo Projector. **150.00**

MODEL 4320 DISSOLVE DUAL DRUM SLIDE PROJECTOR

Provides a large capacity projector, with a time controlled dissolve transition. The dissolve time and the dwell time can be programmed to run automatically. The 4320 Dual offers the alternate sequencing of up to 160 glass, metal, plastic, or paper-mounted 2" x 2" slides, from a dual configuration of the new Eastman Ektagraphic III E projectors.

Image transfer between successive slides is accomplished by a means of a stationary optical beam splitter, thus slides selected from either of the two storage drums share a single, high-quality projection lens. This, together with the use of a quartz halogen light source, makes the projector ideal for color television applications.

The single-chip, programmable microcomputer based electronics allows for user computer interface, an unlimited number of remote inputs, and a real-time sequencer.

MODEL 4300 SINGLE DRUM SLIDE PROJECTOR

Utilizes the new Eastman Ektagraphic III E projector modified by Laird for Film Chain use. It holds 80 35mm Slides; and includes modified 7" Lens and adjustable mount.

Projectors

4300 EASTMAN III E Single Drum Slide Projector. Includes modified 7" lens and adjustable mount. (Requires 5107 Shelf or 5108 Stand.) Uses 2543 Remote Control. \$ 590.00

4320 Eastman III E Dual Drum Dissolve Slide Projector. Includes lens and adjustable mounting hardware. (Requires 5107 Shelf or 5108 Stand.) (Uses 2545 Remote Control.) (Uses 2546 Tone Generator/Decoder.)

With 7" lens for small image system \$4200.00
 With 7-1/2" lens for large image system 4700.00

Remote Controls

(To be used for all projectors when the 4320 Dual Drum Projector is used.) (All modules use 1/3 Remote Control Frame Width unless otherwise specified.)

2540 Remote Control Frame-Accepts up to three remote control modules. Blank filler panels provided, if necessary. Frame is 19"W x 1-3/4"H x 1-1/4"D. \$ 60.00

2541 Remote Control-For 5300 or 5330 Multiplexer. Controls input sources 1, 2, and 3. (Not required when LTI Projector remote controls are furnished.) \$ 120.00

50 Ft. Cable 46.00
 100 Ft. Cable 75.00

2542 Remote Control-For 5400 or 5340 Multiplexer. Controls input sources 1, 2, 3, and 4. (Not required when LTI projector remote controls are furnished.) \$ 120.00

50 Ft. Cable 68.00
 100 Ft. Cable 120.00

REAR VIEW 4320

2543 Remote Control-For Model 4300 Single Drum Slide Projector. Controls "Off", "Ready", "Forward", and "Reverse" slide change. \$150.00

50 Ft. Cable 62.00
 100 Ft. Cable 105.00

2544 Remote Control-For Model 4210 Dual Drum Slide Projector. Controls "Off", "Ready", "Show", "Forward", "Reverse", and "Alternate". \$180.00

50 Ft. Cable 70.00
 100 Ft. Cable 110.00

2545 Remote Control-For Model 4320 Dual Drum Dissolve Slide Projector. Includes all local control functions. Full Width Rack Frame furnished. \$515.00

50 Ft. Cable 150.00
 100 Ft. Cable 250.00

2546 Tone Generator/Decoder-For Model 4320/2545 Dissolve Slide Projector System. \$350.00

2549 Power Supply-24 Volt-For Uniplexer remote control. (Required only on Uniplexer with stationary mirror.) \$190.00

2550 Remote Control-For Model 5050 ND Light Wheel. \$ 80.00
 50 Ft. Cable 47.00
 100 Ft. Cable 75.00

2551 Remote Control-For Film Projectors. Controls "Off", "Ready", and "Show" Modes. \$120.00

50 Ft. Cable 49.00
 100 Ft. Cable 80.00

2553 Remote Control-For Eiki NT-2LTI and NT-3LTI or Elmo 16-FLT1 Projectors with LTI Modification. Controls "Off", "Ready", "Show", "Forward", and "Reverse". \$150.00

50 Ft. Cable 73.00
 100 Ft. Cable 115.00

**"ULTRA"
FLUID HEADS****JRA-83M TRIPOD
AND FLUID HEAD****JRA83M TRIPOD SYSTEM**

The Peter Lisand Company has announced a new, "true-fluid" design camera/tripod head designed exclusively for application in the professional cinematography and video industries. Peter Lisand's true-fluid head is available separately or as part of the total Lisand Camera Support System. Two versions are currently being offered: Ultra I the light-duty head 15-30 lbs., or the Ultra II heavy-duty version, 30-50 lbs. (Matching support systems from Lisand are similarly rated.) The head is designed to be compatible with most support systems on the market today.

FEATURES

The key elements in the Lisand Camera Head are its simplicity and positive leak-proof design. The head uses two separate chambers, each filled with a specially-formulated "heavy" fluid, and then permanently, hermetically sealed. The Lisand True-Fluid system allows extraordinarily smooth tilt and pan action every time. The head is capable of tilting to a full 90° vertical position. Separate fluted knobs control the fluid-head's movement offering positive lock and positive drag adjustments across the full spectrum. All parts of the Lisand tripod are of the finest quality. Bearings, for example, are bronze operating in Delrin. This combination was chosen to minimize wear and eliminate metal-to-metal contact. The finish on the Lisand head is a combination of baked-on vinyl and anodized aluminum. Users may choose where they want their handles. Left, right, or, both sides. There is also the opportunity to choose an optional quick-release or standard tie-down screw for the camera attachment.

- True fluid action maintains a smooth regulated motion by a sensitive system without brake shoes, bands, or other mechanical parts to interfere with its operation. Separate positive locks and drag are featured on the pan and tilt. Tilt achieves a full 90° vertical position.
- Sealed leak-proof chamber assures long-lasting, problem free operation
- Adjustable quick release will counterbalance camera and lens requirements. (optional)
- Versatile control—use right, left or dual handles.
- New reversible foot, rubber-tipped for interiors and standard metal points for outside use, can be ordered with either of the JRA tripods. (optional)
- Tripods come with various top castings to accommodate existing systems.
- Complete the light-duty system with the JRA-83M, a new light-weight tripod that weighs in at 7 lbs., with a total combined weight of 16 lbs.

These Peter Lisand products reflect our highest standards and are backed with our one-year no-hassle guarantee.

JR-A-74

ULTRA 1™

MITCHELL TRIPOD

VIDEO TRIPOD DOLLY

HEAVY DUTY
TRIPOD DOLLY

HI-HAT

JR-A-74

- The new light-weight Junior motion picture tripod weighs in at a mere 9½ lbs
- Finely machined tubular aluminum legs and stainless steel parts and nylon bushings. Rustproof and noiseless too!
- Adjustable from 39" closed to 60" open. Flexible leg adjustment
- Rigid construction—no movement when panning

LST-80

- This heavy duty tripod is built for cinema and video weighing
- Only 22 pounds complete with built-in spider assembly
- Finely machined tubular aluminum legs and stainless steel parts and nylon
- Rigid construction—no movement when panning. Will support 200 lbs. or more of equipment
- Ideal for studio and location work
- Available in standard, regular, intermediate and baby versions

The Mitchell Type Tripod

- Precision Built—we use only air-dried selected American hardwoods, finely machined aluminum and steel parts
- Heavy construction—assures solid base for camera, free of vibration
- Fully adjustable—can be adjusted with hairline precision, all locks hold legs exactly as you set them
- Beautifully finished—all steel parts plated, all aluminum parts
- Spider assembly is available on request
- Available in three models—Regular, Sawed-Off and The Baby

Video Tripod Dolly

- Tripod dolly for smooth silent maneuverability designed for all professional tripod-mounted movie and video cameras
- Rugged construction—heavy 1/8" wall aluminum tubing assures solid base for even the biggest and heaviest movie camera
- Smooth running—heavy 4" Darnell rubber-tired swivel wheels glide smoothly and noiselessly over any studio or location surface
- Compact—folds up in seconds from an open-spread diameter of 46" to compact, easy to store unit just 10" in depth

Heavy Duty Tripod Dolly

- Rugged construction — heavy aluminum tubing assures solid base for even the biggest and heaviest movie camera.
- Smooth running — heavy 5" deluxe rubber-tired swivel wheels glide smoothly and noiselessly over any studio or location surface.
- Individual wheel locks — locking device on each wheel permits fixed position use.
- Compact — folds up in seconds from an open-spread diameter of 46" to compact, easy to store unit just 10" in depth.
- Made in two models — screwdown, and spring-lock systems.

ULTRA 1™

- A simple, sturdy true-fluid motion picture and video camera/tripod system
- The light-duty tripod weighs only 7.5 lbs.; the total system weighs about 16 lbs., with 15-25 lb. capacity
- Finest quality parts and options to make the ideal system for each user
- Aluminum and Delrin bearings, Delrin and fiber lock and drag shoes offer long-lasting performance and durability
- Tripod/camera head is capable of tilting to a full 90° vertical position
- Positive, independent pan capability of a full 360°

Adjustable and Fixed Hi-Hat

- A lightweight, precision machined aluminum accessory, the Hi-Hat is fast mounting with three screws
- Adjustable from 7¾" closed to 9½" raised. Legs can be spread to achieve a minimum height of 3 inches
- Hi-Hat can be supplied with all Standard Junior Tops
- A Fixed Hi-Hat is available with an overall height of 7½"
- The Hi-Hat is economically priced.

Triangles

- Rugged—aluminum construction assures solid base for even the biggest and heaviest movie camera tripods
- Compact—folds up in seconds from an open-spread diameter of 48" to compact, easy to store unit just 14"
- Made in three models—screw-down, spring clamps, and spike-lock systems

Screw Down	\$132.00
Spring	136.00
Spike	121.00

Junior Tripod Tops

- Peter-Lisand can supply the Junior Tripods, wood or metal, to fit any domestic or foreign head
 - The tops are first quality aluminum castings and precision-machined for reliable service
 - Models include: 35mm Arri Ball Top; 16mm Arri Ball Top; Miller "F" Top; Miller Regular Top; "F" Ball Type NCE; Junior Flat Top; "F" O'Connor C-B Top
- Prices on Request.

Superior Shoulder Pod SSP-73

- Lightweight—aluminum and steel construction
 - Fully Adjustable—6 adjustments fit the pod to operator's body. 2 separate adjustments locate camera to operator's eye.
 - Easy handling—Operator's hands are free to zoom and focus.
 - Beautifully finished—All parts are machined and finished to eliminate glare.
 - Waist straps provided
- \$297.00**

VC-162

Quick-Release System

Fast, Fast mounting camera, regardless of size or weight, mounts securely and rigidly to tripod in several seconds. Simply set camera in place and close latch. You're ready to shoot. To remove camera from tripod, just open the latch.

Only Two parts to system. The lower section mounts on any tripod with a 1/4" or 3/8" threaded thumbscrew. The upper section mounts to the camera tripod socket.

Lightweight. Both the upper and lower blocks (with the exception of the latch) are precision-machined from aluminum, so that little extra weight is added to the camera/tripod combination.

For Most Cameras. Movie, television, press and view cameras (or even smaller cameras such as 2 1/4 and 35mm) can easily be equipped with the Quick-Release system.

Rugged and Long-Lasting. Quick-Release camera mounts are precisely machined and ruggedly constructed so that they will not break or wear out—even under the most demanding of operating conditions.

LQR-75 \$175.00

MQR-76 Medium Duty Quick-Release System

Rapid Mounting—Safety lock system secures camera in place rigidly on tripod or shoulder pod. Detaches instantly.

Lightweight—The anodized aluminum and stainless steel construction weighs only nine ounces.

Durable—The precision machined medium quick release provides the accuracy that makes it stand up to all kinds of operating conditions.

MQR76 \$165.00

TELEPROMPTER SYSTEM

A-2000 SERIES ON-CAMERA DISPLAY SYSTEM

FEATURES

- Separate remote control module
- Rack mountable disk drive
- Separate keyboard
- 50 foot cable
- Optional large character printer
- Provides simultaneous viewing of on-air story and story editing
- EFP configuration available
- Monitor/Prompter has wide angle hood and mirror assembly
- Separate linear power supply
- Mounting hardware for all cameras

A-2100 SCRIPTWRITER KEYBOARD

SPECIFICATIONS

A-2015W	15" monitor prompter wide angle hood and mirror assembly Accommodates minimum focal lengths of 15mm on 1-1/4" format, 11mm on 1" format and 8mm on 2/3" format separate linear power supply and mounting hardware for all cameras (Not available as EFP configuration)
Video	Composite video: Standard EIA RS-170, .35 to 2V peak-to-peak
Power	Power from separate power supply, 120V AC, 50 watts nominal, 65 watts maximum
Monitor	24V DC 1.25A nominal, 1.5A maximum
Video Bandwidth	32 MHz (-3 dB)
Resolution	1,200 lines center, 950 lines corner at 40 ft. lamberts
External Controls	Vertical scan reversal, horizontal scan reversal, brightness, contrast
Video Input	One non-looping BNC connector
Dimensions	A-2015W Weight: 28 lbs., Monitor Size: 13" x 12" x 10-1/2", Vertical Adjustment: 6" A-2015 Weight: 26 lbs., Monitor Size: 13" x 12" x 10-1/2", Vertical Adjustment: 6"
A-2019W	As above, but with 19" monitor
A-2015	15" monitor prompter with standard hood for zoom lenses with minimum focal lengths not less than 18mm on 1-1/4" format, 13.5mm on 1" format. Otherwise as for A-2015W, above. Recommended for EFP configuration
A-2019	As A-2019W above, but with standard hood
A-2015SA	As A-2015 above, but mounted on roll-around dolly. Recommended for use with lightweight ENG cameras and small pan and tilt heads. (No EFP configuration available)
A-2019SA	As A-2015SA above, but with 19" monitor
A-2015CS	15" floor mounted prompter and separate stand with semi-reflective mirror for conference prompting
A-2019CS	As A-2015CS above, but with 19" monitor

A-2015W MONITOR PROMPTER WITH EXTRA WIDE-ANGLE HOOD

A-2200	Script Tables Long table, for end to end layout of individual 8-1/2" x 11" sheets. Includes 2/3" Vidicon Camera. Adjustable lighting, and remote variable speed (forward and reverse) conveyer belt control
A-2210	Short table, for continuous roll type scripts. Otherwise as A-2200 above
A-2220	Optional VDA with five outputs, non-looping. Can be mounted onto script table

A-2100	ScriptWriter System ScriptWriter comprising rack mountable disk drive and associated programmed electronics, separate keyboard. Total disk storage equivalent to 6,120 lines of text, 22 characters per line. Upper and lower case characters with reverse polarity and input from typical typewriter keyboard internal and external Sync standard, video output formatted to produce five lines of text on prompter monitors. Ability to view on-air story and story editing simultaneously. Disk access time less than 1.0 second. Separate remote control module with pause/start, next story, previous story, story reset and variable speed control with forward/reverse and 50' cable standard
A-2150	Optional large character printer, prints prompter copy to the right with production commands to the left, full 14" carriage with 1/4" high characters
A-2175	Optional 9" monitors for edit and preview, separate displays For optional VDA, see A-2220 above

A-3300	Special Systems Universal prompter support system including trapezoidal mirror, hood assembly and cradle for customer provided monitor. (Accepts 17" x 15" x 16" monitor).

 color camera.
 Price: \$39,500.00
 ATHENA® 6000 UNIPLEX

ATHENA® MULTI MEDIA TELECINE SYSTEMS DIPLEXING & MULTIPLEXERS

Up to six in/one out configurations. Novel 3 port, Athena optical multiplexer with 8:1 neutral density wheel and automatically controlled by camera electronics, is the heart of this flexible system. The Athena multiplexer is sealed, pre-aligned optical and electronic assembly accepting C mount lenses and bayonet mount TV cameras. No projector or camera lenses are used, for the Athena multiplexer prism and lenses focus on the projector gates; all exposed optical surfaces are therefore out of the image plane, greatly reducing dust and dirt problems. All three multiplexer ports are prism block assemblies and are always open, with any change in projector selection controlled by lamp control; no flip/flop mirror to delay source change or to produce mis-registration; also permits any rate of dissolve transition with any projector and the super-imposition of three projectors simultaneously.

Added versatility occurs with use of our 2" x 2" periscopic diplexer, doubling image inputs to any, or all, of the three multiplexer ports. Our 2" x 2" periscopic diplexer, though designed for Kodak Carousel or Ektagraphic use, can be used to input a variety of slide or filmstrip projectors. When used with Kodak projectors, all projector functions are exposed and trays can be easily changed, zeroed or manually advanced.

Additional quality and convenience results from our self-aligning pedestal and 2" x 2" diplexer modules permitting the interchangeability of projectors into any of the multiplexer ports. As an example, the configuration can be quickly changed from six 2" x 2" slides to two 16mm and two 2" x 2" slides, etc.

While best results generally occur with a dedicated camera, easy removal for other uses is encouraged through the use of a standard bayonet mount. Due to the wide ownership of TV cameras, Kodak slide projectors, etc., Athena multiplex systems can be ordered less these components. However, best results usually occur with a turn key system configured to your specific needs, producing a balanced system under our supervision.

VC-164

ATHENA 4500 UNIPLEX®

The Athena 4500 uniplexer is identical to the 4500 multiplexer except that it's an in-line right angle uniplexer for 16mm film use only. It also features the 8:1 neutral density wheel and controlled iris, but with a single prism input to the camera field. The optical and electronic assembly is also pre-aligned, sealed and back-focused upon the projector's gate. The 4500 can be used with any bayonet mount camera.

ATHENA® 6000 UNIPLEX

The Athena 6000 16mm uniplexer is designed for the ultimate in ease and quality in transferring film to different video formats. The Athena 6000 Uniplex System employs a clean, vertical rack format to minimize space requirements, to group all controls, function lights and monitor into a convenient and accessible cluster; it features built-in frame counter and picture and wave-form monitor. All components are modular and stocked as complete sub-assemblies.

BASIC MULTIPLEX COMPONENTS

Athena 4500 Telecine 16mm Projector	\$9,995.00
Athena Multiplex Pedestal System	1,800.00
Athena Prismatic Multiplexer, Filters & Mount	3,200.00
Athena Slide Diplexer and Mount	650.00
<small>(accepts one or two Kodak Slide Projectors)</small>	
Athena 16mm Plexer Lens	250.00
Athena Slide Projector Plexer Lens	250.00
Total	\$16,145.00

BASIC UNIPLEX SYSTEM

Athena 4500 Uniplex System complete (less camera)	\$14,045.00
------------------------------------------------------------	--------------------

TYPICAL ACCESSORIES

Color Camera	\$6,000.00 - \$30,000.00
Kodak Slide Projector*	345.00
Kodak Dissolve Control*	550.00
Athena 4500 Remote Control Panel	495.00
9" B&W Alignment Monitor and Mount	500.00
Video Tape Recorder	1,000.00 & up
Camera Control Unit (exp. & color correction)	2,945.00

* Multiplex only.

TELECINE PROJECTORS

4500® 16mm Telecine Film Transport

The **Athena 4500®** is designed for use in cable, industrial, medical, training, production and all but the most demanding broadcast television applications.

Electronic control, drive motors and reel drive sub-assemblies are mounted in a rigid horizontal and vertical base plate. Proven performance, ease of maintenance and low price are just a few benefits derived from owning the Athena 4500.

SPECIFICATIONS & FEATURES

- Flickerless projection of 16mm film at all frame rates
- Frame rates: 24 frames per second, forward or reverse (25 fps)
- Film Capacity 50-2000 feet (15.2-588 meters)
- Unlimited hold time on single frame without damage to film and without focus drift
- Instantaneous change of direction, forward or reverse
- Easy Film threading
- Projector control panel: Motor Stop, Forward, Reverse, Lamp, Still, Single Frame, Lighted Switches 1-2-4-6-8-12 frames per second (1, 2.1, 4.2, 6.3, 8.3, 12.5)
- Optional Remote Control Functions: Same as projector control panel, plus (optional) single button control of multiple functions or remote location delegation
- Shutter: Five-blade, constant speed at all frame rates and still (2 blades)
- Light application time: 30.6% per TV field-5ms (50% per TV field-10ms)
- Pulldown time: 5.5ms (5.3ms)
- Cooling system: Separate motor-driven fan and heat filter system prevent damage to film or focus drift, even during prolonged viewing
- Drive motors: two DC permanent magnet, servo controlled
- Optical and magnetic playback
- Sound output: Flat 600 ohm balanced +8 DBM
- Optical frequency response: 100 to 7 kHz ± 2 dB; signal to noise 60 dB; flutter .2% DIN; distortion less than .15%
- Magnetic frequency response: 50 to 10 kHz ± 2 dB; signal to noise 60 dB; flutter .2% DIN; distortion less than .15%
- Solid state preamp
- Light output: Variable, depending upon light source and optical configuration. 750W tungsten halogen standard, other wattages available
- Lamp intensity control (when used with accessory pedestal)
- Vertical and horizontal weave: Less than 0.2% of picture width
- Focusing: Rack and pinion
- Easy projector alignment: Four leveling screws (when used with accessory pedestal)
- Power requirements: 105-120 VAC, 60 Hz (210-240 VAC, 50 Hz) 10 amps. (7½ amps)
- Optical pickup: silicon solar cell
- Dimensions: (will full reels) 27¾" high x 30¾" wide x 13¼", deep
- Weight: Approx. 85- (38.5 kilograms)
- New solid-state plug-in timing circuit, easily replaced as a unit if necessary
- Critical operating parts self-lubricating
- Heavy duty optional pedestal. Optical center of lens to base 48" \pm .50"
- High-Low lamp switch
- Direct factory service
- Safety feature: Indicator light on master switch glows when power to projector has proper polarity

TELECINE PROJECTORS

ATHENA® 6000 16mm TELECINE FILM TRANSPORT

The Athena 6000 is designed to meet most professional telecine requirements in NTSC, PAL and SECAM countries. Many of the features and benefits listed below are exclusive to the Athena 6000:

- Slow motion/still frame
- Automatically phase-locks to NTSC, PAL or SECAM field rates
- Unlimited hold time in still frame mode
- Precision adjustable film gate assembly with 8.73mm x 10.16mm aperture
- Cost-effective modular design
- Multi-voltage/multi-frequency
- Cueing sensor (stops film)
- 50 to 5,000-foot film capacity (15.2 meters - 1520 meters)
- Remote control option
- Automatic lamp change-over
- Moderate price
- Two year parts and workmanship warranty

The Athena 6000 is totally modular, enclosed in a RTMA rack 19 inches (480mm) wide by 69¼ inches (1.7 meters) high. Each module contains all related electronics. These modules are sold separately for emergency back-up inventory. All connections are plug-in to further facilitate easy servicing.

Solid-state technology reel tension sensors permit a wide range of reel sizes and film footage, from 50 feet (15.2 meters) to 5,000 feet (1520 meters). The result is gentle film handling. Upper and lower loop formers combined with an automatic stop feature (film break) further protects the film.

Dual projection lamps have automatic change-over feature. Illuminated pushbutton on control panel will enter flashing mode if change-over occurs. Dual exciter lamps are also equipped with automatic change-over.

Price includes follow-up visit by Athena Field Service Engineer at no charge, within the 48 contiguous States and District of Columbia, USA. Other locations require only per diem fee plus-transportation.

FILM-TO-TAPE TRANSFER SYSTEM

VIDEOLA® V-400 COMPACT FILM-TO-TAPE TRANSFER

The V-400 COMPACT is designed specifically for broadcast applications which require premium-quality video at an affordable price.

A single unit offers superb video transfers of 16mm films up to 3,000 feet in length. An interconnected pair can provide continuous video from multiple-reel films; the independent video outputs allow clean switching between reels. A dual installation occupies only 14 square feet of floor space.

Except for being limited to 16mm composite-sound films, the V-400 COMPACT offers all of the quality and value of the V-1000. Virtually silent in operation, it delivers superb Flickerless Prism® image quality, with no sign of flicker or jitter. The Videola transport is easy to load, and exceptionally gentle with film. Installation and maintenance are simple and straightforward.

SPECIFICATIONS

Transport: Modular dual sprocket servo drive systems. Crystal-controlled or variable sound speed. Hollow "FLICKERLESS PRISM®" type optical projection. All surfaces in critical areas recessed to prevent film damage. Composite optical and magnetic sound pickup. Film breakage interlock automatically shuts off transport and reel motors. Can be interlocked to compatible external pulse source. Manual inching provided.

Film Capacity: 2,000 ft. (610m) on lab core or 3,000 ft. (915m) standard projection reel.

Film Speed: Crystal-controlled sound speed forward 24 or 25 frames per second $\pm .01\%$ ($\pm .0024$ fps). Pushbutton switch-activated variable speed from less than two fps to six times sound speed in both forward and reverse directions. Controlled acceleration and deceleration for gentle film handling. Interlock mode to external source. Digital displayed film speed.

Torque System: Switch-selectable automatic or manual turn on/off for supply or takeup torque motor.

Audio System: Output-15 Watts RMS, 8 Ohms. 600 Ohm balanced transformer-isolated output for each track and 2,000 Ohm quasi line output also provided. Headphone output automatically disconnects external speakers. SMPTE or DIN equalization. Dampening arm system results in low wow and flutter. Sound head in line with picture.

Controls: All controls conveniently placed for minimum lost motion. INCHING button located on transport.

Control Panel: Power ON-OFF, PROJECTION LAMP switch. Selectable 24/25 fps SOUND SPEED switch. MASTER SOUND SPEED switch for sound speed and stop from sound speed. Pushbutton controls for variable speed forward/reverse direction. MASTER pushbutton control for variable speed forward/reverse. Electronic advance/retard control. Composite optical/magnetic audio level control. Exciter lamp switch. Video level control.

Input Panel: Line fuses, two each 10 amp, 3AG type for 120 VAC. Interlock remote input plug for slave operation. Interlock remote output jack for master operation. Speaker output. A/B wind selector switch for each torque motor.

Electronics: Power supply and electronics in removable chassis/card cage, mounted on pedestal base.

Optical Response: 50-7000 Hz \pm 3dB, SMPTE or DIN standards.

Wow and Flutter: Less than .08% RMS or DIN weighted.

Resolution: Video system limited.

Projection Aperture: Variable on monitor screen; selectable by adjustment.

Transfer Capability: 2 fps to 150 forward and reverse without flicker or jitter.

Picture Steadiness: Typical 0.2%, vertical and horizontal.

Input Power: 115/230 VAC, 50 or 60 Hz, 1200 Watts, typical maximum.

Dimensions:

Height 41"(1041mm)
Width 40"(1016mm)
Depth 29"(737mm)
Weight, net, uncrated 135 lbs. (62kg)

FILM-TO-TAPE TRANSFER SYSTEMS

VIDEOLA® V-1000 FILM-TO-TAPE TRANSFER SYSTEM

- Resolution: Video System Limited
- Wow and Flutter: Less Than .06% RMS or DIN Weighted
- Magnetic Response: 50-10,000 Hz ± 3dB, SMPTE or DIN Standards
- Film Color Correction: Variable Color Temperature Light Source

The unique Flickerless Prism® optical system allows a smooth continuous film motion, and produces a video image consisting of frames dissolving one into the next. The transfer is completely independent of television synchronization and scanning rate, so the film can be transported at any speed while the video image remains sharp and clear, with no sign of flicker, jitter or frame lines.

Picture resolution is extremely high. Imaging is by a high-grade video camera, using the Videola optics. The machine can be supplied with or without a camera, so the user may employ an existing ENG/EPF camera. In either case, the camera may be readily removed for other purposes.

SPECIFICATIONS

Picture Transport: Modular dual sprocket servo drive system. Crystal controlled or variable sound speed. All surfaces in critical areas recessed to prevent film damage. Composite optical and magnetic sound pickup — 16mm; optical sound pickup — 35mm. Manual inching provided.

Sound Transport: Modular dual sprocket servo tach drive system. Crystal-controlled or variable sound speed. Can be interlocked to picture transport or compatible external pulse source. One 16mm edge track or center track SMPTE or DIN equalization. Sound head in line with picture. Manual inching provided. Edge-track heads standard. Interchangeable with optional 3-track (35mm) or 2-track EBU (16mm) heads.

Film Capacity: 2,000-ft. (610m) on lab core or 3,000-ft. (915m) standard projection reel.

Film Speed: Crystal-controlled sound speed forward 24 or 25 frames per second, ±.01% (± .0024 fps). Pushbutton switch-activated variable speed from less than two fps to six times (35mm) or ten times sound speed (16mm) in both forward and reverse directions.

Torque System: Switch-selectable automatic or manual turn on/off for each supply or takeup torque motor.

Audio System: Built-in control and mixing facilities for four audio tracks including composite optical or magnetic. Output: 15 Watts RMS, 8 Ohms. 600 Ohm balanced transformer-isolated output for each track and 2,000 Ohm quasi line output also provided.

Control Panel: Power ON-OFF, PROJECTION LAMP switch. LOCK switch for sound transport. Selectable 24/25 fps. SOUND SPEED switch for both transports. PICTURE MASTER SOUND SPEED switch for sound speed and stop from sound speed. PICTURE MASTER pushbutton control for variable speed forward/reverse. Electronic advance/retard control for each transport.

Audio Panel: Composite optical/mag level control. Magnetic level controls #1, #2, #3. Master audio level control. Exciter lamp switch. Servo iris control.

Input Panel: Line fuses, two each 10 amp, 3AG type for 120 VAC. Interlock remote input plug for slave operation. Interlock remote output jack for master operation. Speaker output. A/B wind selector switch for each torque motor.

Electronics: Power supply and electronics in removable chassis/card cage, mounted on pedestal base.

Optical Response: 16mm: 50-70,000 Hz ± 3dB, SMPTE standard. 35mm: 50-12,000 Hz ± 3dB, SMPTE standard.

Projection Aperture: Variable on monitor screen; selectable by adjustment. Anamorphic capability standard, manual pan-scan.

Picture Steadiness: Typical 0.2%, vertical and horizontal.

V-1000

Input Voltage: 115/230 VAC, 50 or 60 Hz.

TEST CHARTS/SLIDES

ACCU-CHART

ACCU-SLIDES

ACCU-CHART™ SET

Video Test Chart System for Field and Studio use includes: Color Chart, Logarithmic Reflectance Chart, Resolution Chart, Registration Chart, Linearity Chart.

ACC-2 Set of 5 charts with cover and pouch \$99.50

INDIVIDUAL 9" x 12" CHARTS

Grey Scale Chart

Basic standard for setting light response characteristics of cameras. Essential for balancing R, G and B channels in 3-tube color cameras. Chart consists of 2 sets of 9 neutral grey patches on uniform grey background. Reflectances vary from 3% to 60% according to EIA Logarithmic (2) Law. Dead black (R 0.5%) patch establishes black level.

AC-GS Grey Scale \$34.95

Color Reference Chart

A subjective reference chart for checking color rendition. Consists of three primary (Red, Green, Blue) and three secondary (Yellow, Cyan, Magenta) plus 4 grey levels. In color bar format, but not intended for quantitative use. Use to evaluate overall system color reproduction by comparing transmitter image with original chart. Also for use as a field standard; record image of chart at beginning of each tape and adjust monitor on playback for proper color rendition.

AC-CR Color Reference \$34.95

Linearity Chart

Standard EIA "Ball Chart" for adjustment of camera and monitor linearity. Use with electronically generated grating test pattern for quantitative measurements as specified in EIA RS-170.

AC-LN Linearity \$19.95

Resolution Chart

For evaluation of frequency response of video systems. Adapted from EIA standard chart, includes resolution targets for 200 to 800 TV lines in center and at four corners. Also, test objects to detect ringing and streaking. Continuous neutral grey background for shading adjustments.

AC-RS Resolution \$19.95

Registration Chart

Similar to EIA standard chart, used primarily for registration of 3-tube color cameras. Black square grid on white background includes 200-600 line resolution wedges and circular targets for evaluation of linearity.

AC-RG Registration \$19.95

ACCU-SLIDES™

Provides the same accuracy for use with Telecine set-up and alignment as the standard Accu-Chart system. Accu-Slides are available in either a positive or negative image. They are mounted in a 2" x 2" glass protected format which is supplied with approved pin registered television mounts and anti-Newton ring optical glass. The Accu-Slide set consists of the same five test patterns as the Accu-Chart set and comes in a custom designed wooden box. Accu-Slides are also available individually.

ACCU-SLIDES

Test Slides, available as positive or negative

AS-ST Set of 5 slides complete with wooden box \$80.00

INDIVIDUAL SLIDES

AS-RG Registration \$11.00
AS-RS Resolution 11.00
AS-LN Linearity 11.00
AS-CR Color Reference 11.00
AS-GS Grey Scale 11.00
WB-1 Wooden Box, holds total of 7 slides 39.00

STOP ACTION VIDEO

N-79E

NISUS N-79E STOP ACTION VIDEO

Nisus stop-action video, is now available for the Ikegami HL-79E broadcast-quality ENG/EFM camera.

Widely-acclaimed Nisus shuttered video is now available on the world's most respected broadcast camera, the Ikegami HL-79E. Dramatic Nisus clarity in real-time and no-motion playback, superior color saturation and an absence of blur during zooms and pans combine with renowned Ikegami quality to give you the most reliable NTSC-standard video.

FEATURES

- Low-capacitance diode gun Plumbicons®.
- Significant performance advantages in sensitivity, signal-to-noise ratio, registration accuracy, resolution and RFI immunity.
- The Nisus shutter is continuously adjustable from 1/250th to 1/5000th of a second.
- Shutter speed may be changed at any time, either on the camera or remotely (with optional CCU), without stopping the camera.
- No background smear or loss of color saturation during pans or zooms.
- Superior image clarity during action sequences. Outstanding dynamic resolution.
- The shutter may also be turned off, thus allowing the camera to be used as a standard video camera.

SPECIFICATIONS

- Shutter:** Shutter system: rotary focal plane shutter with single opening.
Shutter speed: continuously adjustable from 1/250th to 1/5000th of a second (system may be turned off, thereby providing normal video).
- Scanning:** 525 lines/frame; 60 fields/second with or without shutter.
30 frames/second (2:1 interface) with or without shutter.
- HL79E Shutter for HL79E Series **\$29,600.00**

PORTABLE VIDEO SYSTEMS

COLOR VIDEO CAMERAS

Ease of operation puts video cameras from Olympus in a class of their own. Focus, white balance and exposure are all automated to make video photography with an Olympus video camera easy.

Automatic focusing

The video cameras from Olympus employ an active autofocus system using an infrared beam.

Continuous, fully automatic white balancing

The full-auto white balance control assures properly adjusted color indoors or out.

Automatic exposure

The exposure automatically and continuously adjusts to changing lighting conditions.

High resolution, extremely sensitive Newcosvicon pickup tube

Exceptional image definition and high resolution are the hallmarks of the Newcosvicon image pickup tube. This tube also offers excellent low-light performance.

VX-305

VX-305

Don't be fooled by this camera's light weight and easy operation. Inside this slim, 2.43 lb. camera reside the latest advances in electronic automation and pickup tube miniaturization to make it the lightest full-automatic video camera in the world.

- Detachable microphone
- Backlight compensation switch
- Fade button
- Auto/manual focus selector
- 6X Power zoom lens
- 1/2" B/W electronic viewfinder
- Date/time display selector
- Power standby/operate switch
- White balance switch
- Tripod mount

VX-305 Compact Color Video Camera with Auto Focus 6x f/1.2 Power Zoom Lens (Macro), VF-KG 1 Pistol Grip \$975.00

VX-304

VX-304

The VX-304 is a top-performance, fully automatic camera that lets you enjoy either the simplicity of point-and-shoot operation or the wide-open creative potential of full-manual override, ultra-low available-light shooting and a host of automated special effects. Its truly first-rate performance makes it ideal for professionals and advanced video photographers, as well as beginners.

Full-function viewfinder monitor

You can monitor nine functions essential for camera operation right on the viewfinder screen with the help of the OK Monitor.

Titling facilities

Under a cover on the camera's left side there's a flexible, easy-to-use character generator for titling. With simple keyboard operation, eight different titles can be composed and stored in memory.

FEATURES

- Stereo microphone
- Focus out button
- 8X Zoom lens
- Zoom lever/Macro setting knob
- Date/Stopwatch display mode selector
- Fade button
- Recording review button
- Recording start/stop button
- Auto/Manual focus selector
- VCR playback control buttons
- White balance selector
- Auto/Manual aperture control
- Stopwatch start-stop/lap-reset buttons

WOODBURY VIDEOLITE

Finally, video lights designed for video. A must for all serious devotees of video photography, for that extra luminosity when it's needed. Without bulky, heavy, hot equipment to make supplementary lighting difficult.

FEATURES

- Cool operation for convenience, comfort, longer lamp life
- Lightweight and compact, a mere 8 ozs.
- 3400° K color temperature, correct for video
- Quartz Halogen lamp for full output throughout lamp life
- 40° light beam covers 99% of video tube requirements
- Adjustable barn doors for professional light pattern control

Model 120 for AC operation, provides 80 foot/candles (at 10 ft.)

Model 12L for DC operation, provides 75 foot/candles (at 10 ft.) (requires Battery Pack and Charger 12B)

OMNIMOUNT SYSTEMS

10850 Vanowen Street
North Hollywood, CA 91605
(818) 766-9000 Telex 181149/West/LSA

MOUNTS

THE 100 SERIES OF OMNIMOUNT ASSEMBLIES

100WA
Wall Mount Assembly, with a maximum recommended load of 70 lbs.* The single-bend tube and clamp/flange unit attaches to the back of the device that is to be mounted.

100WA \$69.95

100WB
Wall Mount Assembly, with a maximum recommended load of 70 lbs.* There is a double-bend tube, with a clamp/flange unit that attaches to the bottom of the device that is to be mounted.

100WB \$73.95

100WBZ-802
Wall Mount Assembly, with a maximum recommended load of 70 lbs.* There is a double-bend tube. The unit is designed specifically for use with the BOSE® Model 802 speaker, and includes all necessary hardware for attaching it to the speaker.

100WBZ-802 \$76.50

101RWA/101CA
Both of these models are Ceiling Mount Assemblies with a maximum rated load of 60 lbs.* The 101CA has a ceiling plate for direct mounting into the ceiling. Where height extension is required, use the 101RWA. It is ideal for suspended ceiling installations, and mounts securely above the false ceiling line. The coupler has a standard 3/4" tapered female plumbing pipe thread at the open end. A finishing flange "dresses down" the ceiling tile.

101RWA \$71.50

101CA 69.95

101SWA
Short Tube Assembly, with flange has a maximum recommended load of 70 lbs.* This unit is for close mounting on walls, floors, or ceilings.

101SWA \$60.50

101STO
Short Tube Assembly, without flange; maximum recommended load of 70 lbs.* This unit comes with nuts and washers, for direct installation on the mounting surface.

101STO \$52.50

101VDM
Short Tube Assembly; maximum recommended load of 60 lbs.* Available for horn and driver combinations made by some leading manufacturers.

101VDM \$68.95

THE 50L SERIES OF OMNIMOUNT ASSEMBLIES

All Omnimount models bearing the "L" designation are made with a strong but thinner wall tubing, along with a more economical bonding process for the ball and tube.

These models are a cost-efficient and effective alternative for light-duty applications. Maximum recommended load on all of the 50L Series: 20 lbs.*

THE 50 SERIES OF OMNIMOUNT ASSEMBLIES

50LWA
Wall Mount Assembly, with a maximum recommended load of 20 lbs.* The single-bend tube attaches to the back of the device that is to be mounted.

50LWA \$38.95

50LWB
Wall Mount Assembly, with a maximum recommended load of 20 lbs.* There is a double-bend tube, with a clamp/flange unit that attaches to the bottom of the device that is to be mounted.

50LWB \$44.95

50LRWA/50LCA
These models are Ceiling Mount Assemblies with a maximum rated load of 20 lbs.* Ideal for suspended ceiling installations, and mount securely above the false ceiling line. The coupler has a standard 3/4" tapered female plumbing pipe thread at the open end. A finishing flange "dresses down" the ceiling tile.

50LRWA \$39.95

50LCA 37.95

50LSWA/50HSWA
Short Tube Assembly, with flange, has a maximum recommended load of 20 lbs.* This unit is for close mounting on walls, floors, or ceilings.

50LSWA \$28.95

50HSWA 32.95

50LSTO
Short Tube Assembly, without flange, maximum recommended load of 20 lbs.* This unit comes with nuts and washers, for direct installation on the mounting surface.

50LSTO \$24.95

OMNIMOUNT SPECIAL HANDLES

50H
For Series 50 Omnimount assemblies. It is for use where frequent adjusting is required, and makes unnecessary the use of a socket drive tool. The assemblies that use this handle have a maximum recommended load of about 20 lbs.*

50H \$6.40

ACCESSORIES

50PA
1/2" Plumbing pipe for 50 Series—7/16" x 20 locknut.

50PA \$9.50

75PA
Adapts standard Omnimount 5/8" x 18 N.F. threaded tube to standard 3/4" tapered plumbing pipe.

75PA \$9.50

500C
1" x 13 Internal thread for C clamp bolt. 5/8" x 18 Internal thread for 100 Series tubing (C clamp not included).

500C \$9.50

625T1
For Series 50 Omnimount assemblies. It adapts Series 50 tubing to 1375C, 1500C and 75 PA accessories. (5/8" x 18 external thread, 7/16 x 20 internal thread).

625T1 \$8.50

1375MC
Adaptor for use with tubular tripod stands using 1-3/8" diameter tubing. Omnimount tube and ball assembly coupled to top of stand affords angle adjustment unavailable with fixed-flange units.

1375MC \$11.50

1500C
Same as 1375C, except that it is for use with 1-1/2" diameter tubing.

1500C \$11.50

4375MC
For Series 50 Omnimount assemblies. It adapts 7/16" Series 50 tubing to a standard 5/8" x 27 microphone stand thread.

4375MC \$8.50

*All recommended loads are based on optimum conditions, sensible weight distribution, and proper installation.

BATTERY CHARGERS/ ACCESSORIES

SPEEDCHARGE 6000

Model #9407

- FAST & SLOW CHARGE BATTERIES AND BELTS
- REVITALIZE POOR BATTERIES
- CAMERA/VTR POWER SUPPLY

Built-in microprocessor selects correct charge for any NiCad battery or belt (some Lead Acid) of 10-15 Volts and 2-12Ah capacity. Automatic 110/220V switching. (Fast charges 4Ah battery in 1 hour). Charge via cable mounted XLR-4 pin. PP90 adaptor supplied. Other adaptors below.
Models in other ranges available. \$1095

SEQUENCER 6000

Model #9418

Connects to Speedcharge 6000 to sequentially charge any assortment of 8 NiCad batteries or belts (and some Lead Acid) in 10-15 volts; and 2-12Ah capacity. Status indicators for all eight channels. Eight PP90 sockets. See adaptors below. **\$825**

SOLO CHARGER

Model #9426

Lightweight low cost overnight battery charger. 400mA charge current for 4Ah (12-14V) batteries or belts. PP90 socket. See adaptors below.
(7Ah & 10Ah versions available. Also 24-30 volt models) \$175

10/90 MULTICHARGER

Model #9419

Charges up to ten PP90 type (12V/4Ah) batteries overnight simultaneously and independently. Reduces to trickle charge after 14 hours. Ten PP90 sockets. See adaptors below. **\$995**

PAGPAC BATTERIES/ PAGBELTS/PAGLIGHTS

PAGPAC BATTERIES

PAG batteries are high quality **NiCads** recommended by and used in most video equipment including Ampex, Fernseh, Hitachi, JVC, Philips, RCA and Sony. (All Pagpac batteries may be fast charged with Speedcharge 6000/Sequencer 6000 or appropriate Solo Charger.)

Batteries with Anton Bauer Mount

- | | | | |
|-------|--------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| #9379 | PP79 | 12 volt 4Ah battery for Ikegami HL-79 series and HL-95, cameras with Anton Bauer mount. Same as PP86A but has multi-pin connector for charging with Ikegami fast charger. | \$459 |
| #9387 | PP86A | 13 volt 4Ah battery with Anton Bauer mount. Use with Sony M3, Ikegami HL-79 series, Sharp, RCA, all Hitachi, Panasonic and others that accept Anton Bauer mount. (Similar to Pro Pac™ 13.) | \$423 |
| #9386 | PP86 | 14 volt 4Ah battery with Anton Bauer mount. (Similar to Anton Bauer Pro Pac™ 14.) Use with Panasonic Recam and Ampex ARC-10, and cameras listed for PP86A | \$449 |

(Other batteries available or made to order)

On Board Batteries

- | | | | |
|-------|--------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| #9390 | PP90 | 12 volt 4Ah approved replacement for Sony BP90 battery. Use to power Sony BVU series VTR's, Vidtek RM-5A monitor and with PAGCLIP to power most ENG cameras. | \$235 |
| #9360 | PP60 | 12 volt 2.5Ah NiCad replacement for Sony BP-60 Lead Acid. Use for Sony VO-4800 VTR. Can be recharged on Sony recharger. | \$199 |
| #9318 | PP125 | 12 volt 2.5Ah battery for RCA Hawkeye cameras. | \$259 |
| #9303 | PP3B | 13.2 volt 4Ah battery for Sony Betacam. Run time approximately 1 hr. 15 min. in full record mode. External mounting bracket (Model #9482) required. See Camera Battery Clips listing | \$379 |
| #9394 | PP94 | 12 volt 4Ah battery for Hitachi SK-97 camera. Mounts on Hitachi factory supplied camera back. | \$459 |
| #9400 | PP100 | 12 volt 4Ah battery for Hitachi HR-100 1" VTR. | \$279 |
| #9302 | PP2 | 12 volt 4Ah battery for JVC KY-2000/2700. | \$449 |

PAGBELTS

PAGBELTS are deep molded top quality leather encasing 4Ah, 7Ah, or 10Ah sealed NiCad cells with spot welded nickel inter-cell connecting strip. Available with or without lightweight internal 14 hour overnight charger (IC). (PAGBELTS may be fast charged with Speedcharge 6000/Sequencer 6000 or appropriate PAG Solo Charger.)

PAGBELTS WITH INTERNAL CHARGERS

- | | | |
|-------|----------------------------------------------------|---------------|
| #9203 | 12V/4Ah Belt (runs PAGLIGHT 100 for 26 min.) | \$621 |
| #9253 | 12V/7Ah Belt (runs PAGLIGHT 100 for 45 min.) | \$837 |
| #9283 | 12V/10Ah Belt (runs PAGLIGHT 100 for 65 min.) | \$1061 |

PAGBELTS WITHOUT INTERNAL CHARGERS

(Use Speedcharge 6000/Sequencer 6000)

- | | | |
|-------|----------------------------------------------------|--------------|
| #9103 | 12V/4Ah Belt (runs PAGLIGHT 100 for 26 min.) | \$501 |

S1 SUPER HI-RESOLUTION SINGLE

WV-6000 ENG/EFP

The S1 series: Three tube level performance with the economy and ease of operation of a single tube camera. Designed for the video professional: it is a camera system flexible enough for a myriad of applications — with advanced engineering never before incorporated in a single tube camera.

- 2/3" Pick-up Tube
- Weight: 9.9 lbs.
- 6 MHz Saticon Tube for 420 lines horizontal resolution

- 50 dB Signal-to-Noise Ratio
- Full System Operation with internal Gen Lock or optional WV-RC60 Studio Remote Control
- 2 lines Vertical Enhancement (standard)
- Minimum Illumination 20 Lux with f/1.6 12X Servo Zoom
- Color Bars; +6, +12 dB and switchable AGC
- Titler, VTR remote, Stereo Mic, F.B.C.
- Up-to-future design with magnesium alloy construction

HIGH QUALITY

**WV-3170/6X, WV-3240/8AF, WV-3240/12X,
WV-3245/8AF**

These Panasonic cameras offer an array of useful features destined to expand your creative ability.

WV-3170/6X

Sensitive Newvicon® tubes resist permanent burning and comet-tailing under bright lights, and give you clear images even under low light conditions. In fact, you can even take sharp videos in candlelight.

Title your videos with the built-in 7-color character generator, or shoot an external title and change the background color. A 2-frame memory function lets you set your messages in advance and display them when you want. Neg/Pos picture reversal adds a dramatic effect to any scene.

Other built-in functions such as "Date," "Time" and a lapping "Stop-watch" give vital information when recording important events such as birthdays or sports meets. And all these functions can be pre-set on a fold-away control panel. All the controls you'll need to engage them are located conveniently near the viewfinder, so it's a snap to add studio effects to your video creations.

Video and Audio Fade-In/Fade-Out gives your recordings a professional touch, allowing not only video fading to and from black, but also fading of audio input.

The viewfinder is movable to the forward/backward direction by 1.2" and to the left/right direction by 1.6" for your easy carrying. A look inside shows the "OK Monitor" in action. It lets you know of the shooting conditions, and the "Alarm Function" warns you of any problems during operation.

LOW COST WITH PANASONIC PROLINE

Portable VTR operations, including rewind, forward, play, slow and still can be performed at the camera with the WV-3240 models, so you don't have to shoulder extra weight that can cramp your shooting style.

What's more, the WV-3240/8AF comes with an 8X Auto Focus lens, so you can shoot your moving subjects and pan without ever losing focus, and do it automatically. The WV-3245/8AF even comes with a color electronic viewfinder that allows you to see what you are videotaping in full color.

The WV-3240/12X offers a 12X lens, the WV-3170/6X a 6X lens, and all three models are capable of close-up "macro" shooting.

KEY FEATURES

- 1.5-inch Electronic Color Viewfinder (WV-3245/8AF)
- 7-Color Multiple Title Displays
- 5-MHz 2/3" NEWVICON®
- Ultrasonic Auto-Focus (WV-3245/8AF, WV-3240/8AF)
- Auto white balance
- Auto-manual IRIS control
- Two position stand-by switch
- Negative/Positive picture reversal
- Time/Date and stopwatch generator
- Video and Audio fade-in/fade-out
- Adjustable diopter on viewfinder (except WV-3245/8AF)
- Multi-status display viewfinder

FEATURES PLUS

- Adjustable hand grip
- Newly designed shoulder pad
- Remote control connector
- Stereo microphone (except WV-3170)
- VTR remote control
- Red and Blue gain control

WV-EX1 CPD Color Camera

The WV-EX1 is the first commercially available Charged Priming Device (solid state) color camera designed for fast and easy operation. Its compact size lets you carry it anywhere. And you'll want to carry it everywhere when you see all the features that make it a snap to use. And your portable VCR won't get in your way because you can control it right from the camera. You can even name your features and record time and date with a built-in title generator.

WV-EX1

THE WV-EX1 PROVIDES YOU WITH

- Newly developed CPD technology. Burnless, no electronic image distortion, no warm-up time, and built to withstand shock.
- Advanced color sensor system. A line sequential color differential system and highly precise mosaic color filter.
- A variety of microprocessor controlled functions. Automatic tracing white balance (A.T.W.), VCR remote control, 41 character titler, and alphanumeric status display.

WV-EX1 \$1400.00

3500 System: WV-3500 Industrial Color Camera w/ Gen Lock

The 3500 Production

WJ-3500 System Switcher

The 3500 System is composed of the WV-3500, a low cost gen lockable color camera; and the WJ-3500, an economical System Switcher which has titling, SEG and Audio Mixing functions.

The WV-3500 and WJ-3500 are designed to enhance each others usefulness; but both possess complete compatibility with other Panasonic gen lock cameras and SEG's.

WV-3500 \$1750.00

WJ-3500 Video Titler \$1150.00

SPECIFICATIONS:

Special Effects Generator WJ-3500

Color Camera Input: x 2, (10-pin Connector)
Video Input Level: 1.0Vp-p NTSC composite/75 ohms
Audio Input Level: -20dB, High impedance
Output Power: 12V DC, Max. 0.6A for CAMERA 1 and 0.5A for CAMERA 2

Line Input

Video Input Level: 1.0Vp-p NTSC composite/75 ohms, BNC Connector x 1
Audio Input Level: -6dB, High impedance, Pin Jack x 1
Key Camera Input: x 1, (10-pin Connector)
Video Input Level: 1.0Vp-p USA TV system composite/75 ohms
Output Power: 12V DC, 0.3A

External Sound Input

Mic Input Level: -72dB, High impedance, Phone jack x 1

Line Input Level: -20dB, High impedance, Pin jack x 1

Video Output Level: 1.0Vp-p NTSC composite/75 ohms, BNC Connector x 1

Monitor Output Level: 1.0Vp-p NTSC composite/75 ohms BNC Connector x 1

Audio Output Level: -20dB, High impedance, Pin jack x 1

Black Burst Output: 0.45Vp-p composite/75 ohms, BNC Connector x 1

Effects: Mixing, Wipe: , Key

Superimpose: Yes

Color Selection for Superimpose and Back Color: White, Red, Yellow, Green, Cyan, Blue, Magenta

Maximum Cable Length of CAMERA 1 and CAMERA 2:

20m

Frequency Response: ± 1dB at 3.58MHz

Gen-lock Range: Sync: 15.734KHz ± 120Hz

Burst: 3.579545MHz ± 50Hz

Power Source: 120V AC, 60Hz or 12V DC 1.8A

Power Consumption: 33W (with color cameras)

Ambient Temperature: +32° F to +104° F (0°C to +40°C)

Ambient Humidity: Less than 90%

Dimensions: 400(W) x 88(H) x 188(D)mm

15-3/4" (W) x 3-7/16" (H) x 7-3/8" (D)

Approx. 3.14kg (6.95 lbs)

Weight:

Key Camera

Pick-up Tube: 2/3" static focus, magnetic deflection vidicon tube

Scanning: 525 lines/60 fields/30 frames

Synchronizing: External 2:1 supplied from the system switcher

Horizontal Resolution: more than 450 lines

Automatic Light Compensation: 10,000:1

Video Output Level: 1.0Vp-p, 75 ohms

Signal-to-Noise Ratio: 42dB

Lens: 2 times variable focal lens

Power Source: 12V DC supplied from the system switcher

Ambient Operating Temperature: +32° F to +104° F (0°C to +40°C)

Dimensions: 89(W) x 164(H) x 261(D)mm (incl. lens)

3-1/2" (W) x 6-7/16" (H) x 10-1/4" (D)

Approx. 0.7kg (1.5 lbs)

WV-144/24VAC
Black and White 1/2" Vidicon

Key Features

- A choice of models for 120VAC operation (WV-140) and 24VAC operation (WV-144)
- Compact and lightweight design for versatile mounting
- Highly sensitive separate mesh 1/2-inch Vidicon pick-up tubes in both cameras
- Internal or line locked sync system
- Minimum illumination of one footcandle (10 lux) with optional f/1.4 lens
- Automatic light compensation circuit allows use under a wide variety of lighting conditions
- Mechanical focus externally adjustable
- Top or bottom mounting flexibility
- Standard C-mount allows for use of interchangeable lenses
- White clip circuit

The Panasonic WV-140 and WV-144 black and white CCTV cameras have been specifically designed to provide reliable, cost-effective operation without compromising on performance quality. The highly sensitive 1/2-inch separate mesh Vidicon tubes that are incorporated in these cameras offer a minimum illumination of only one foot-candle so they perform extremely well under most lighting conditions. In addition, both cameras offer more than 500 lines of horizontal resolution for highly detailed image reproduction. And, the WV-140 and WV-144 can be easily installed.

Reliability is a key factor when purchasing CCTV cameras. The WV-140 and WV-144 black and white CCTV cameras are the result of extensive research and development on behalf of Panasonic to provide high quality CCTV systems components.

**The Panasonic Mini-CCTV System...
the economical "do-it-yourself" surveillance system.**

Panasonic introduces our Mini-CCTV System. Designed to be a practical, reliable, and economical TV surveillance set-up, the system's most important feature is its simple "do it yourself" installation. Whatever your application is — home safety, retail sales, manufacturing, business and office use — the Mini-CCTV System offers a host of surveillance oriented features that rival costlier, more complex systems. The system's design incorporates some important features. These include, single coaxial cable camera to monitor connection for power and video. This simplifies wiring. The monitor has a built-in adjustable sequential camera switcher. You can connect your Mini-CCTV System to intercoms or alarm sensors in addition to a time-lapse VTR for maximum effectiveness. Automatic outputs are provided to wire warning lights and buzzers. All CCTV electronics are housed in a handsome, high performance, desk-top monitor which fits easily into any environment. And the cameras are very compact, easy-to-mount and attractive. So, if you need a CCTV surveillance system but cannot get involved in costly equipment and installation, the Panasonic Mini-CCTV System is ideally suited for you.

Video Monitor

Additional Camera Adaptor WV-83

Vidicon Camera WV-80

Newvicon Camera WV-85

Virtually Endless Applications

The Panasonic Mini-CCTV System can be used for virtually unlimited applications. In the home, you can monitor from your kitchen, your child's bedroom, the front door, or just about any area which could use surveillance. The basic system features three CCTV cameras but for more demanding applications you can expand the system to six cameras. Other important applications include convenience stores, gift shops, or any retail outlet that could use CCTV monitoring, without the high cost of conventional CCTV systems. The Mini-CCTV System is also perfect for light industry, warehousing and educational applications. Thanks to its design, this system requires a minimum of wiring, and its main monitor unit is easy to use and offers high quality performance.

Design Your Own System

The Mini-CCTV System is simple to install and easy to operate. Just attach the camera mounting bracket to the wall or ceiling, aim the camera and focus. A single coaxial cable between the camera and the monitor carries the video signal from the camera and supplies it with power. The system is completely versatile for it will connect with alarms, intercoms, up to six cameras (with optional adaptor) and a time lapse recorder.

WV-LA8A	(8mm f/1.5) auto-iris lens	270.00
VZ-ML10	Wide angle lens	40.00

Newvicon cameras in this series (Models WV-85/KT2, WV-85) Require Optional Lenses. Models WV-LA16A, WV-LA25A, WV-LA50A, WV-LA8A described in optional accessories section.

Key Features

CCTV Camera WV-80

- Single cable connection
- Cable distance from camera to monitor can be extended up to 2640 ft. (with proper cable)
- Camera uses BNC connector
- Automatic light compensator allows use under broad variety of lighting conditions
- Excellent picture quality with horizontal resolution of 500 lines
- Compact, lightweight and handsomely styled
- 2/3" high sensitivity pick-up tube with minimum illumination of only 1 footcandle

CCTV Monitor

- As many as three cameras can be connected to one monitor/switcher unit
- Video output displays each camera in sequence or any camera manually selected
- Monitor has a 9" (mea. dia.) monochrome screen
- Sequential switching interval manually adjustable from 1 to 60 seconds
- Inputs for three monitor controls: intercom, alarm sensor and switch
- Built-in camera/monitor protection circuit
- Alarm control output for warning buzzer or chime
- Alarm period manually adjustable from 1 to 30 seconds

HIGH PERFORMANCE CCTV CAMERAS
WV-1500, WV-1504, WV-1550, WV-1554

Vidicon CCTV Cameras — Black & White

WV-1410
2/3" general purpose Vidicon Camera with switchable line lock random interface or internal 2:1 EIA RS-170 sync, adjustable vertical phase, automatic focus control, automatic beam control, and accepts an optional camera identification generator board (WV-Q90), 120VAC, 60Hz.
WV-1410 \$270.00

WV-1414
2/3" general purpose, low voltage Vidicon Camera with switchable line lock random interface or internal 2:1 EIA RS-170 sync, adjustable vertical phase, automatic focus control, automatic beam control, and accepts an optional camera identification generator board (WV-Q90), 24VAC, 60Hz.
WV-1414 \$270.00

WV-1500
2/3" high performance Vidicon Camera with 16mm, f/1.6 C-mount lens, line lock random or internal 2:1 interface (RS-170) or external sync (Genlock RS-170), black clamp, L.L. Phase, video level control, accepts an optional splitter board, AGC on/off switch, 120VAC 60Hz.
WV-1500 \$370.00

WV-1504
2/3" high performance, low voltage Vidicon Camera with 16mm, f/1.6 C-mount lens, line lock random or internal 2:1 interface (RS-170) or external sync (Genlock RS-170), black clamp, L.L. Phase, video level control, accepts an optional splitter board, AGC on/off switch, 24VAC, 60Hz.
WV-1504 \$370.00

WV-1500X
2/3" high performance Vidicon Camera without lens, line lock random or internal 2:1 interface (RS-170) or external sync (Genlock RS-170), black clamp, L.L. Phase, video level control, accepts an optional splitter board, AGC on/off switch, 120VAC, 60Hz.
WV-1500X \$350.00

WV-1504X
2/3" high performance, low-voltage Vidicon Camera without lens, line lock random or internal 2:1 interface (RS-170) or external sync (Genlock RS-170), black clamp, L.L. Phase, video level control, accepts an optional splitter board, AGC on/off switch, 24VAC, 60Hz.
WV-1504X \$350.00

Newvicon CCTV Cameras — Black & White (Body Only)

WV-1460
2/3" general purpose Newvicon Camera (body only; without lens), switchable line lock random interface or internal 2:1 EIA RS-170

**GENERAL PURPOSE
CCTV CAMERAS**
WV-1410, WV-1414

WV-CD10/80
High Technology Solid State
Black and White CPD Cameras

Key Features

- Compact and lightweight design incorporates solid state single-chip Charged Priming Device Image Sensors
- Solid-state components with metal casings provide long life and high reliability
- No image distortion or burn-in
- Very short lag
- Not effected by magnetic fields
- Constructed for protection against shock and vibration
- Expanded CCTV applications include medical, scientific, military, robotics and general surveillance operations

Built with a new generation of advanced engineering, the Panasonic WV-CD10 and WV-CD80 black and white CPD cameras redefine performance parameters in industrial CCTV applications. Incorporating innovative Charged Priming Device (CPD) single-chip image sensors, these cameras perform superbly and offer improved maintenance-free operation.

Applications for the WV-CD10 and WV-CD80 CPD cameras are virtually endless. Their design characteristics make them ideal for use in medical and industrial applications—especially in the new field of robotics—because they do not produce image distortion like conventional cameras. In addition, their compact design allows them to be mounted in tight places.

Color Surveillance Camera**

- * Pick-up Tube : Newvicon
- * Minimum Required Illumination : Only 1 footcandle
- * Horizontal Resolution : More than 270 lines
- * Signal to Noise Ratio : Better than 46 dB
- * Automatic White Balance : on both Camera and RCU
- * R/B Gain Control : on both Camera and RCU
- * 200 meters : Maximum distance between Camera and RCU
- * 6 Times Zoom Lens **OPTIONAL**
Controlled from RCU of pan/tilt mechanism
- * Applicable with Panasonic CCTV Accessories (WV-7000 series)
- * Industrial Design for surveillance (Metal Case, Top or bottom mounting)

Specifications

CAMERA

- Pick-up Tube : 1/2" 3.9MHz Newvicon
- Sync : 2:1 internal interlace
- Horizontal Resolution : 270 lines at center
- Video Output : 1.0Vp-p / 75 ohm BNC connector
- Minimum Illumination : 1 footcandle (10 Lux)
- Signal-to-Noise Ratio : Better than 46 dB
- Lens :
 - Zoom Ratio : 6 Times (f=9-54mm)
 - Aperture : F1.2
 - Mount : N-Bayonet
 - Filter Size : 52mm
 - Iris : Auto/Manual
 - Remote Control : Zoom, Focus, Iris

- Controls :**
- Indoor/Outdoor Select Switch (On camera)
 - R/B Gain Control (On camera and RCU)
 - Auto White Balance Control (Momentary push button, on camera and RCU)

- Maximum cable Length : 200 meters
- Power Source : DC 12V 0.3A
- Dimensions : 85 (W) x 81 (H) x 252 (D) mm
- Weight : 1.1kg

RCU

- Power Source : AC 120V 60Hz
- Power Supply : DC 12V to the camera head
- Power Consumption : 9.3W
- Dimensions : 138 (W) x 44 (H) x 153 (D) mm
- Weight : 1.8kg

WV-CD120
High Technology Solid State
Color CPD Camera

Key Features

- Solid-state CPD offers extremely long-life and high reliability as compared to conventional tubes
- No image distortion, burn-in, lag, or blooming
- Compact, lightweight construction with protection against shock and vibration
- Minimum fixed pattern noise as compared to MOS image sensors
- Broader dynamic range than conventional CCD image sensors
- A Line Sequential Color Differential System is employed with a highly precise mosaic color filter on the CPD imaging area to pick-up the 4 primary colors (Green, Cyan, Magenta and Yellow)

Panasonic complements its already outstanding line of CPD CCTV cameras with the introduction of the WV-CD120.

The WV-CD120 is a quality, compact color camera that offers some of the most advanced features available today.

Incorporating innovative Charged Priming Device (CPD) single-chip sensors, this camera performs superbly and offers improved maintenance-free operation.

In addition, the compact design of the WV-CD120 allows it to be mounted in areas of limited space.

Applications for the WV-CD120 CPD CCTV camera are virtually endless.

The WV-CD120 is perfect for use in the new field of Robotics because it does not produce image distortion like conventional cameras.

This makes the WV-CD120 a highly accurate camera for scanning, measurement and observation purposes.

Expanded CCTV applications also include medical, scientific, military, and general surveillance operations.

WV-CD120 **\$1595.00**

16" - 25" WALL BRACKETS CEILING MOUNTS

16" TO 25" MONITOR/ RECEIVER MOUNTING HARDWARE

WALL SWIVEL BRACKETS

Peerless offers three distinct styles of wall brackets. Each particular design has features which could make one most desirable for your installation. Select the proper bracket for your application after comparing their features.

SINGLE ARM DESIGN

SINGLE ARM DESIGN

FEATURES: Simple design - few parts. • Easiest to assemble - quick installation. • Provides security - cannot be disassembled once receiver is secured. • Provides good swivel. • Limited to 19" screen size maximum. • Less headroom - arm protrudes below receiver. • Does not look as well from bottom

STOCK #	Description	Price
2142-210	Universal Locking Wall Swivel Bracket for 16" - 19" receivers. Tray measures 21 1/2" W x 12" D. Key-type lock	59.50ea.
2142-211	Universal Locking Wall Swivel Bracket with fixed 10 degree tilt for 16" - 19" receivers. Tray measures 21 1/2" W x 12" D	62.00ea.
2126-212	Universal Locking Wall Swivel Bracket with adjustable tilt features. Designed for 16" - 19" receivers. Tray measures 21 1/2" W x 12" D. Key-type locking bracket	81.75ea.

STOCK

2171-000	Non-locking Wall Swivel Bracket with universal tray for all 19" color TV receivers. Tray measures 24" W x 13 1/2" D	33.00ea.
2171-111	Non-locking wall swivel bracket with walnut woodgrain vinyl tray for all 19" color TV receivers. Tray measures 29" W x 13 1/2" D	39.75ea.
2172-000	Same as model 2171 except tray has fixed 10° tilt	35.00ea.
2173-000	Same as model 2171 except tray has adjustable tilt from 0° to 15°	45.00ea.
2176-000	Non-locking Wall Swivel Bracket for all 16" color receivers. Universal tray measures 19 1/4" W x 15" D	30.50ea.

DOUBLE ARM DESIGN

FEATURES: Good appearing - most of the bracket is behind the TV receiver. • Tray covers unsightly bottom of receiver. • Provides good head clearance. • Somewhat limited swivel. • Not as secure - can be disassembled. • More complex design. • More time to assemble and install. • Limited to 21" screen size maximum.

DOUBLE ARM DESIGN

2121-000	Non-locking Universal Wall Swivel Bracket for all 19" color receivers. Tray measures 24" W x 13 1/2" D	35.00ea.
2121-010	Same as model 2121, with fixed 10 degree tilt	37.00ea.
2116-000	Non-locking Universal Wall Swivel Bracket for all 16" color receivers. Tray measures 19 1/4" W x 15" D	32.50ea.
2123-000	Non-locking Universal Wall Swivel Bracket for 21" color receivers and 19" units with very large cabinets. Tray measures 25-7/8" W x 15-3/4" D	43.75ea.
1100-000	Non-locking Universal Wall Swivel Bracket for all 19" B/W receivers. Tray measures 21" W x 10" D	30.50ea.

YOKE BRACKET DESIGN

FEATURES: Handles all large receivers with ease. • Unlimited swivel - unlimited tilt. • Provides maximum head clearance. • Good appearing - bracket is behind and over receiver. • Fairly secure - difficult to disassemble. • More complex design • More time to assemble and install.

1469-170	Small Yoke Wall Bracket for 16" receivers. Complete with 13" deep random perforated telescoping tray for easy mounting. Width of yoke adjusts from 13 3/4" to 22". Height from 12" to 18"	145.00ea.
1469-000	Same as stock #1469-170 except without adjustable tray. Yoke attaches with brackets, each side of cabinet on bottom	111.00ea.
1470-171	Yoke Bracket for 19" receivers. Complete with 13" deep adjustable perforated tray for easy mounting. Width adjusts from 22" to 36". Height from 12" to 18"	150.00ea.
1470-172	Same as stock #1470-171 above except without adjustable tray. Yoke attaches with brackets, each side of cabinet on bottom	105.00ea.

YOKE BRACKET DESIGN

YOKE BRACKET DESIGN

1470-173	Yoke Style Mounting for 21" - 25" color receivers or other large products. Complete with 13" deep adjustable perforated tray for easy mounting. Width of yoke adjusts from 22" to 36". Height from 18" to 24"	150.00ea.
1470-000	Same as stock #1470-173 above except does not have adjustable mounting tray. Yoke attaches with brackets, each side of cabinet on bottom	105.00ea.

CEILING BRACKETS

FALSE CEILING MOUNTS

This is the easy, safe way to mount receivers, monitors, etc., in areas where you have a 2' x 2' or 2' x 4' exposed grid false ceiling system. What's our secret? We just simply spread the load out over a large area. Extra safety factors are added to the installation with more tie wires plus a safety cable. Each kit is supplied complete with instructions and all hardware for a safe, simple installation. Yoke style mounting bracket can be extended down to a lower position by using #1445 extension column.

1449-150	Mount 16" and other small size units utilizing a 13" deep random perforated telescoping tray for easy mounting. Width of yoke adjusts from 13 1/2" to 22". Height adjusts from 12" to 18"	220.00ea.
1449-000	Same as #1449-150 except without telescoping tray. Unit is mounted by using cabinet mounting plates which attach to the bottom of the cabinet on each side	186.00ea.
1450-151	Yoke Bracket designed to hold most 19" color receivers. Includes random perforated 13" deep telescoping tray for easy mounting. Width adjusts from 22" to 36". Height from 12" to 18"	225.00ea.
1450-152	Same as #1450-151 except does not have telescoping tray. Cabinet is attached with mounting bracket on each side, on bottom	180.00ea.

1450-153	Yoke Bracket for 25" receiver and other large units. Supplied complete with 13" deep adjustable width tray for easy mounting. Width adjusts from 22" to 36". Height from 18" to 24"	225.00ea.
1450-000	Same as stock #1450-153 except does not have adjustable telescoping tray for mounting. Unit mounts with side cabinet mounting brackets that attach to the bottom edge of the cabinet	180.00ea.

STRUCTURAL CEILING MOUNTS

Mount directly to a beam, slab or true ceiling with this structural ceiling mount. Yoke bracket can be extended down to a lower position by using #1445 extension column.

1459-140	Mount small units using this yoke bracket which is supplied complete with a random perforated adjustable width tray measuring 13" deep. Yoke bracket adjusts in width from 13 3/4" to 22". Height from 12" to 18"	145.00ea.
1459-000	Same bracket as #1459-140 except does not have telescoping mounting tray. Units are mounted with side cabinet mounting plates that attach under the bottom edges of the cabinet	111.00ea.
1460-141	Mount 19" color receivers and other products similar in size utilizing this adjustable width bracket, complete with random perforated 13" deep telescoping universal tray. Yoke bracket adjusts in width from 22" to 36". Height from 12" to 18"	150.00ea.
1460-142	Same as #1460-141 above except does not have telescoping mounting tray. Units are mounted with side cabinet mounting plates which attach under the bottom edges of the cabinet	105.00ea.

1460-143	Mount 25" receiver and other items of similar size using this unit. Supplied complete with random perforated 13" deep adjustable width tray. Width adjusts from 22" to 36". Height from 18" to 24"	150.00ea.
1460-000	Same as #1460-143 above except supplied without mounting tray. Units are mounted with cabinet mounting plates that attach to the bottom edge of the cabinet	105.00ea.

WB	Wall Mounting Bracket for EHTP2	20.00
CB	Ceiling Mounting Bracket for EHTP2	18.00
EH44	Tamper Resistant for 2/3" and small 1" cameras with auto iris or fixed focal length lens. Max. camera/lens size: 6.50"W x 4.50"H x 17"L. Use with EM22 wall mount, MM22 ceiling or pedestal mount.	80.00

2/3" CAMERA ENVIRONMENTAL ENCLOSURES

EH55	Environmental enclosure with sun shroud for 2/3" and small 1" camera. Max. camera/lens size: 5.50"W x 5"H x 15"L. All aluminum construction. Use with EM22 wall mount, MM22 or MM103C ceiling or pedestal mount.	165.00
EH55B	EH55 with thermostatically controlled Blower.	210.00
EH55H	EH55 with thermostatically controlled Heater.	220.00
EH55HB	EH55 with thermostatically controlled Blower & Heater.	286.00

1" CAMERA ENVIRONMENTAL ENCLOSURES

EH66	Environmental enclosure with removable lid. Max. camera/lens size: 7"W x 7"H x 22"L. All aluminum construction. Use with EM22 or EM102W wall mount, MM22 or MM103C ceiling or pedestal mount.	210.00
EH66B	EH66 with thermostatically controlled Blower.	275.00
EH66H	EH66 with thermostatically controlled Heater.	264.00
EH66HB	EH66 with thermostatically controlled Blower & Heater.	330.00
EH66L	EH66 with Tamper Resistant Key Locks.	253.00
EH66BL	EH66 with thermostatically controlled Blower & Tamper Resistant Key Locks.	320.00
EH66HL	EH66 with thermostatically controlled Heater & Tamper Resistant Key Locks.	308.00
EH66HBL	EH66 with thermostatically controlled Blower & Heater and Tamper Resistant Key Locks.	375.00

ACCESSORIES FOR EH66 SERIES ENCLOSURES

S66	Sun Shroud	60.00
WW66	Window Wiper and Washer Assembly	260.00
WD66	Window Defroster and Defogger. (Must be used in conjunction with heater assembly.)	130.00
Ti66	Thermal Insulation	28.00

EXTRA LONG 1" CAMERA ENVIRONMENTAL ENCLOSURES

EH66X	Extra-long environmental enclosure with removable lid. All aluminum construction. Max. camera/lens size: 7"W x 7"H x 33"L. Use with EM22 or EM102W wall mount, MM22 or MM103C ceiling or pedestal mount.	USER
		253.00
EH66XB	EH66X with thermostatically controlled Blower.	320.00
EH66XH	EH66X with thermostatically controlled Heater.	310.00
EH66XHB	EH66X with thermostatically controlled Blower & Heater.	375.00
EH66XL	EH66X with Tamper Resistant Key Locks.	297.00
EH66XBL	EH66X with thermostatically controlled Blower & Tamper Resistant Key Locks.	363.00
EH66XHL	EH66X with thermostatically controlled Heater & Tamper Resistant Key Locks.	352.00
EH66XHBL	EH66XHBL with thermostatically controlled Blower & Heater and Tamper Resistant Key Locks.	420.00

ACCESSORIES FOR EH66X ENCLOSURES

S66X	Sun Shroud	66.00
WW66	Window Wiper and Washer Assembly	260.00
WD66	Window Defroster and Defogger. (Must be used in conjunction with heater assembly.)	130.00
Ti66X	Thermal Insulation	30.00

EXPLOSION PROOF ENCLOSURES—CERTIFIED

(N.E.C. Class I, Div. I, Groups C,D—Class II, Div. I, Groups E,F,G)

EHX6	Explosion proof, 6" dia. x 24" long, non-pressurized. Use with EM102W wall mount, MM103C ceiling or pedestal mount	\$760.00
EHX8	Explosion proof, 8" dia. x 24" long, non-pressurized. Use with EM102W wall mount, MM103C ceiling or pedestal mount	825.00
EHX10	Explosion proof, 10" dia. x 24" long, non-pressurized. Use with EM102W wall mount, MM103C ceiling or pedestal mount	Quote

ACCESSORIES FOR EXPLOSION PROOF ENCLOSURES

E700H	Thermostatically controlled heater kit for EHX6 & EHX8 enclosures. (Installation required)	\$80.00
EHSX6	Sun shroud for EHX6 enclosure	77.00
EHSX8	Sun shroud for EHX8 enclosure	80.00

EHX8

DUST TIGHT ENVIRONMENTAL ENCLOSURES

E706-16	Dust tight environmental enclosure, 6" dia. x 16" long, all aluminum construction. Use with EM22 wall mount, MM22 ceiling or pedestal mount	\$280.00
E706-24	Dust tight environmental enclosure, 6" dia. x 24" long, all aluminum construction. Use with EM22 wall mount, MM22 ceiling or pedestal mount	300.00
E706-24P	E706-24 with purge fittings, requires a filtered compressed air supply. Provides positive pressure internal air circulation	360.00
E706-24S	Same as E706-24, except Type 304 stainless steel construction	400.00
E706-24PS	E706-24S with purge fittings	460.00
E708-24	Dust tight environmental housing, 8" dia. 24" long, all aluminum construction. Use with EM22 wall mount, MM 22 ceiling or pedestal mount	400.00
E708-24P	E708-24 with purge fittings, requires a filtered compressed air supply. Provides positive pressure internal air circulation	440.00
E708-24S	Same as E708-24, except Type 304 stainless steel construction	500.00
E708-24PS	E708-24S with purge fittings	560.00

MT10

ACCESSORIES FOR E700 SERIES ENCLOSURES

E700H	Thermostatically controlled heater kit. (Installation required)	\$ 80.00
E700B	Thermostatically controlled fan kit for internal air circulation (Installation required)	80.00
E700A	Air funnel kit, provides positive pressure air flow across face of front window. (Installation and filtered compressed air supply required)	160.00
E706S	Sun shroud for E706-16 & E706-24 series enclosures	60.00
E706SS	Type 304 stainless steel sun shroud for E706-24S & E706-24PS enclosures	90.00
E708S	Sun shroud for E708-24 series enclosures	70.00
E708SS	Type 304 stainless steel sun shroud for E708-24S & E708-24PS enclosures	100.00
E706V	Sun visor for E706-16 & E706-24 series enclosures	24.00
E706VS	Type 304 stainless steel sun visor for E706-24S & E706-24PS enclosures	42.00
E708V	Sun visor for E708-24 series enclosures	26.00
E708VS	Type 304 stainless steel sun visor for E708-24S & E706-24PS enclosures	48.00

HT10

WATER COOLED ENCLOSURES

MT10P	Medium temperature water-cooled enclosure w/Pyrex glass for furnace or kilns. See data sheet for exact temperature ratings. 10" dia. x 24" long	\$ 860.00
HT10V	High temperature water-cooled enclosure w/Vycor glass for furnace or kilns. See data sheet for exact temperature ratings. 10" dia. x 24" long	1400.00

ACCESSORIES FOR WATER COOLED ENCLOSURES

WCRC	*Infrared reflective coating for HT10V Vycor glass	\$100.00
E700A	*Air funnel kit, provides positive pressure air flow across face of front window. (Requires installation and filtered compressed air supply.)	160.00
WCAL	*Alarm thermostat kit, provides a contact closure upon internal temperature rise. (Installation required.)	60.00

MISCELLANEOUS ACCESSORIES

EHCM	*Cradle mount for EH66 for inverted mounting	\$ 60.00
EHRC	*Relay module for low voltage control of wiper/washer & camera on/off. Requires MEH24DT control module	60.00
EB1	Elevation block 1"	10.00
EB2	Elevation block 2"	10.00

ANTENNA POSITIONING SYSTEM

AP2500 * All Weather/Complete Positioning System. For antennas up to 6 feet in diameter. Designed to operate in wind force of 65-70 MPH and withstand winds of 110-115 MPH. Includes MPT2500R control, with joystick, variable speed & Azimuth/Elevation indicators **4950.00**

SPECIAL ORDER OPTIONS AND ACCESSORIES

/PP * Position feedback modification. Requires special order control for Preset Position. Four additional conductors required. Available for PT550P, PT570P, PT570-24P, PT1250P, PT1250DC **300.00**

/SEC * Sector scan modification for PT1250P and PT1250DC permits scanning only within preset limits but allows manual override for scanning outside limits. **220.00**

/RAD * Radiation resistant wiring & white epoxy paint for PT550P, PT570P, PT570-24P, PT1250P, PT1250DC. Low level radiation resistant up to 10⁶ Rads. **320.00**

/HB * Spot & blanket heaters. Allows operations to -50F. For PT550P, PT570P, PT570-24P, PT1250P, PT1250DC. **220.00**

/FGP * Special hi-speed gears: 9 /sec pan speed. For PT570P, PT570-24P, PT1250P, PT1250DC only. **110.00**

/FGT * Special hi-speed gears: 4.59 /sec tilt speed. For PT570P, PT570-24P, PT1250P, PT1250DC only. **110.00**

/FG * Special hi-speed pan & tilt gears: 9 /4 59 per sec pan/tilt speed. For PT570P, PT570-24P, PT1250P, PT1250DC only. **200.00**

/SS * Type 304 Stainless Steel Construction for PT1250P, PT1250DC **QUOTE**

SCANNERS

INDOOR SCANNERS

PS7 Light Duty — "Mini" Scanner. 115 vac operation for loads up to 15 lbs. Auto-scan operation ONLY — 6 ft. line cord furnished. Use with PM14 or PM105 wall mount, PM200C ceiling or pedestal mount **132.00**

PS7A Light Duty — same as PS7. Requires MPS5DT control. Use with PM14 or PM105 wall mount, PM200C ceiling or pedestal mount. **132.00**

PS7-24 Light Duty — same as PS7, except operates on 24 vac. Requires MPS524DT control. Use with PM14 or PM105 wall mount, PM200C ceiling or pedestal mount. **132.00**

INDOOR/OUTDOOR SCANNERS

PS30 Medium Duty/Weatherproof. 115 vac operation for loads up to 50 lbs. Auto-scan operation only — 6 ft. line cord furnished. Use with PM102W wall mount, PM102C ceiling or pedestal mount. **430.00**

PS30A Medium Duty. Same as PS30. Requires MPS5DT control. Use with PM102W wall mount, PM102C ceiling or pedestal mount. **430.00**

PS30-24 Medium Duty. Same as PS30, except operates on 24 vac. Requires MPS524DT control. Use with PM102W wall mount, PM102C ceiling or pedestal mount. **430.00**

PM102W	Medium duty wall mount for PS30, PS30A, PS30-24, PT550P, PT570P, PT570-24P. Supports up to 75 lbs.	60.00
PM102C	Medium duty ceiling or pedestal mount PS30, PS30A, PS30-24, PT550P, PT570P, PT570-24P. Supports up to 75 lbs.	50.00
PM1000W	Heavy duty wall mount for PT1250P, PT1250DC, PT1250EX, PT2000L. Supports up to 125 lbs. (ST1 strut recommended for loads over 125 lbs.)	60.00
PM1000C	Ceiling or pedestal mount for heavy duty pan & tilts—PT1250P, PT1250DC, PT1250EX, PT2000L. Supports up to 175 lbs.	50.00

OPTIONAL SUPPORT STRUT

ST1	Optional support strut. Enables EM102W, PM102W, and PM1000W to support up to 175 lbs. Also increases horizontal stability when two or more are used with PM102C or PM1000C.	\$34.00
-----	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	---------

ADAPTORS FOR CORNER MOUNTING

CM100	Corner mount adaptor for EM102W, PM102W, and PM1000W. (Note: Must order SCM100 below for use with PM1000W)	\$40.00
SCM100	Strut corner mount adaptor for ST1 strut	30.00

ADAPTORS FOR POLE MOUNTING

PA100	Pole mount adaptor for CM14 and EM22 wall mounts. Minimum pole diameter: 1.50"	\$24.00
PA102	Pole mount adaptor for PM102W, PM1000W, and EM102W. Minimum pole diameter: 3"	30.00
SPA102	Pole adaptor for ST1 strut. Minimum pole diameter 3"	24.00

PARAPET ADAPTOR MOUNT

PP100	Adaptor mount secures to inside of parapet at least 18" high. Positions equipment anywhere on parapet, including corners. Universal adaptor for medium to heavy duty Pelco wall mounts. Supports up to 175 lbs.	\$125.00
-------	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	----------

MONITOR MOUNTS

MM100W	Universal wall mount for 9" & 12" monitors. Adjustable horizontally and vertically. Supports up to 40 lbs.	\$ 50.00
MM200P	Universal pedestal mount for 9" and 12" monitors. Adjustable horizontally and vertically. Supports up to 40 lbs.	50.00
MM300	Ceiling mount for 9" & 12" monitors. Adjustable horizontally & vertically. Supports up to 40 lbs.	QUOTE
MRU1	Monitor/receiver mount with 32"W x 16.125"D monitor support pan. Designed for use in educational institutions, churches, hospitals, and homes. Supports up to 150 lbs.	120.00
MRU3	Monitor/receiver mount. Same as MRU1 but with a 26"W x 12.25"D monitor support pan.	120.00
MRU4	Monitor/receiver mount. Same as MRU1 but with a 20"W x 16"D monitor support pan.	120.00
MRWA	Wall adaptor for MRU series	36.00
MRCA	Ceiling adaptor for MRU series	22.00
MRU	Monitor/receiver mount without monitor support pan. For use with monitor/receivers with side mounting holes.	90.00

SHORT DISTANCE CONTROLS, HARDWARE

RELAY BOXES

- RB24** Relay box for 24VAC pan & tilts and scanners. Extends control's operating distance up to a maximum of 15,000 ft. **\$250.00**
- RB115** Relay box for 115VAC pan & tilts and scanners. Extends control's operating distance up to a maximum of 15,000 ft. **250.00**

DUAL STATION CONTROL SYSTEM

Dual Station Control System is compatible with all Pelco short distance control modules. When ordering, specify control series (priced separately) and components listed below:

- MDS100DT** *Desk top dual station control module (2 required, 1 per control panel.) . . \$100.00
Select appropriate J-Box (1 per dual station system)
- DS100-24** *Dual Station J-Box for 24VAC systems. Wired for pan & tilt, zoom lens, auto iris, and auto/random scan functions. **200.00**

CONTROLS CAXITRON™

COAXITRON TRANSMITTER & CONTROL MODULES

- MPT9000PZ** Transmitter/control with pan & tilt joystick, zoom lens and 4 accessory function controls. Rack mounted. **\$460.00**
- MPT9000CZ** Transmitter/control. Same as MPT9000PZ, except desk top model. . . . **460.00**
- MPT9111PZ** Computron transmitter/control integrates Compuswitch switching system & Coaxitron control system. Same operational features as MPT9000PZ **Quote**
- MPT9111CZ** Transmitter/control. Same as MPT9111PZ, except desk top model. **Quote**

COAXITRON RECEIVER & SUPPLY OPTIONS

- CX9024RX** Coaxitron receiver in weatherproof box for 24VAC pan & tilts with power supply for pan & tilt, zoom lens and 4 accessory functions. (3 latching and 1 momentary.) **\$490.00**
- CX9115RX** Coaxitron receiver/power supply. Same as CX9024RX, except for 115VAC pan & tilts. **490.00**

AUTO/RANDOM SCAN MODULE

- A9024** Auto/Random Scan plug-in module for CX9024RX Coaxitron receivers. . \$100.00
- A9115** Auto/Random Scan plug-in module for CX9115RX Coaxitron receivers. . **100.00**

TEST/MANUAL BOARD

- CX900TLC** System test and receiver manual control board plug-in module for all CX9000RX series receivers **\$100.00**

CONTROLS LONG DISTANCE

DIGITAL MULTIPLEXOR PANELS AND DESK TOP CABINETS

- M5CP** Rack panel (1.75"H x 19"L) for up to 5 modules **\$66.00**
- M5CDT** Desk top cabinet for up to 5 modules **66.00**

CONTROL MODULES

- MAD3200** Address module for up to 32 locations **\$60.00**
- MPT3200** Pan & Tilt joystick control module **60.00**
- MA3200** Auto/Random Scan control module **60.00**
- MV3200** Variable speed control module **60.00**
- MLZ3200** Pelco lens control module **60.00**
- MAI3200** Pelco lens control module with Auto-iris **Quote**
- MEH3200** *Enclosure control module (camera on/off, wiper/washer) **60.00**
- MG3200** *Gate control module (open, close, stop) **60.00**

DIGITAL TRANSMITTER

- DM3200TX** Digital Multiplexor transmitter **\$850.00**

DIGITAL RECEIVER

- DM3224RX** Digital multiplexor — up to 24 function receiver **\$1280.00**

MINI-LINE SERIES CONTROL MODULES

All Mini-Line Series controls are desk top mounted. Rack mounting is available at additional cost. Specify Rack Kit No. when ordering. R100 (Single)/R200 (Dual)/R300 (Triple) **\$20.00 ea.**

PAN & TILT CONTROLS

For short distance control of 24VAC pan & tilts — PT270-24P, PT280-24P, PT570-24P

- MPT24DT Desk top joystick control module **\$165.00**
- MPTA24DT Desk top joystick control module with Auto/Random scan operation . **230.00**

For short to medium distance control of 115VAC pan & tilts — PT270P, PT570P, PT1250P, PT1250EX

- MPT115DT Desk top joystick control module **\$165.00**
- MPTA115DT Desk top joystick control with Auto/Random scan operation **210.00**

For short to medium distance control of 115VDC pan & tilts — PT550P, PT1250DC

- MPT1510DT Desk top joystick control module **\$165.00**
- MPTV1510CZ Desk top joystick control with variable speed and zoom lens control. . **280.00**
- MPTV1510PZ Rack mount joystick control with variable speed and zoom lens control. **280.00**

- MPTV1510CA *Desk top joystick control with variable speed, auto scan, and zoom lens control. (For PT1250DC only) **380.00**

- MPTV1510PAZ *Rack mount joystick control with variable speed, auto scan, and zoom lens control. (For PT1250DC only) **380.00**

- VR1500DT *Desk top variable rate joystick control module (3.50" panel height). Specify rack mounting or desk top. **280.00**

For short distance control of PT2000L pan & tilt

- MPT2000DT Desk top joystick control module **\$165.00**
- MPTV2000DT *Desk to joystick control with variable speed **280.00**
- VR1500DT *Desk top variable rate joystick control module (3.50" panel height). Specify rack mounting or desk top **280.00**

SCANNER CONTROLS

- MPS5DT Desk top control modules for 115VAC scanners PS7A, PS30A **\$110.00**
- MPS524DT Desk top control for 24VAC scanners PS7-24, PS30-24 **110.00**

MULTIPLE LOCATION SCANNER CONTROLS

- PS506-24DT *Multiple position control for up to 6 scanners. 24VAC operation for PS7-24 & PS30-24 **\$480.00**

MULTIPLE LOCATION PAN/TILT/LENS CONTROLS

- PT506-24DT *Multiple position control for up to 6 pan/tilts and zoom lenses for 24VAC pan & tilt units **\$1100.00**

LENS CONTROLS FOR PELCO MOTORIZED ZOOM LENSES

- MLZA6DT Desk top zoom lens control with auto-iris operation **\$420.00**
- MLZ6DT Desk top zoom lens control module with auto/manual iris control for use with AI700/AI701 auto-iris servo assembly **180.00**

ENCLOSURE CONTROLS

- MEHDT Desk top enclosure control module for 115VAC camera on/off windshield wiper/washer **\$70.00**
- MEH24DT Desk top enclosure control module for 24VAC camera on/off windshield wiper/washer. (Requires EHRC in enclosure.) **80.00**

The EE series of lenses incorporates a CdS sensor, which measures light volume in variable situations. Aperture size is controlled quickly from the information determined by the sensor. Developed by Asahi

Precision, Co., Ltd., EE lenses are compact in size and light in weight. Offering a range from wide-angle to telephoto, the lenses are available for both 1" and 2/3" standard vidicon cameras.

COSMICAR ZOOM LENS SERIES FOR 1/2, 2/3 AND 1 INCH VIDICON CAMERAS

Cosmicar high performance zoom lenses are available to satisfy a wide range of applications. Constructed to the highest standards of design, Cosmicar zoom lenses are compact and lightweight, enabling a perfect balance with any camera.

Method of operation ranges from manual focus, zoom and aperture control to the exclusive new lenses having remote facilities and incorporating the new auto iris system with peak to average response adjustment.

To establish your exact requirements, please refer to the specification tables for zoom ratio and operation type.

Cosmicar offers a wide selection of monofocal, manual iris, lenses to satisfy any applications from an extremely wide angle view using a 4.8mm lens to very distant surveillance

and close-up situations requiring a 75mm lens. Select any Cosmicar lens to suit your particular application.

COSMICAR ES AND EX TYPE AUTO-IRIS LENS SERIES FOR 2/3 AND 1 INCH VIDICON CAMERAS

The conventional automatic iris lenses limit the metering method to either an Average or a Peak response against camera's video signal level. Now Cosmicar's ES-3 and EX Series allows you choices at any optional response weighting between Average and Peak signal level. As a result, even in a

picture area where brightness of an individual object is extremely adverse, any objects, bright or dark, you want to observe can be delivered sharply in image by adjusting the ALC screw of our ES-3 and EX lens series.

PEP, INC.

25 West 54th Street
New York, NY 10019
(212) 246-2490

ENG/EFP POWER UNITS AND ACCESSORIES

30 Volt DC Portable Battery Packs

- F-30-EC** "Frezzi Belt" battery pack. 30 volt. 4 AH output capacity. Includes internal battery charger (14 hours) **\$545.00**
- F-30-EXFA** "Frezzi-Belt" battery pack. 30 volt. 4 AH output capacity. Re-charges in 1 hour or less with "Frezzi-Fast" Charger (see below). Also includes internal battery charger (14 hours). **\$595.00**
- BC-30C** Fully charges 30 volt "Frezzi-Belt" Model F30-EXF Battery Pack (above) in 1 hour or less. Requires 120 / 240 volt, 60hz AC input **\$450.00**

Battery Mounting Brackets

- HM300** Battery Mounting Brackets for BVP 300/330 and Thompson MC601. Mounts ON-BOARD batteries H12, H14, L12, and L14 **\$105.00**
- HM76B/C** Battery Mounting Bracket for RCA TK76B and TK76C. Mounts ON-BOARD battery H14 **\$155.00**
- HM77** Battery Mounting Bracket for HL77. Mounts ON-BOARD battery H77 **\$145.00**

Six (6) AMP-HR Power Belts

- F-12-EXF** (12V) 6 AH Recharges in 1 hour or less with PEP model UF1 Universal Safety Charger also includes internal battery charger (14 hours) **\$475.00**
- F-14-EXF** (14.4V) 6 AH Recharges in 1 hour or less with PEP model UF1 Universal Safety Charger also includes internal battery charger (14 hours) **\$495.00**

12 Volt OB Lights

- FL12V** Lighthead with cable terminated in 2-pin amp connector for use with PEP model V90 FAST charge VTR battery. Includes FAV 100 watt bulb, 1/4 - 20 TV camera mount stud and removable handle **\$195.00**
- FL12C** Lighthead with cable terminated in Sony VTR plug in-line connector for use with V90N standard charge battery. Includes FAV 100 watt bulb, 1/4 - 20 TV camera mount stud and removable handle **\$195.00**

- FL12G** Lighthead with cable terminated in 3-pin amphenol connector for use with B12G battery. Includes FAV 100 watt bulb, 1/4 - 20 TV camera mount stud and removable handle **\$195.00**

- FL12S** Lighthead with 24" cable terminated in XLR4 rt. angle connector for use with PEP model B12S BRICK battery. Includes FAV 100 watt bulb, 1/4 - 20 TV camera mount stud and removable handle **\$195.00**

Belt Holsters

- BHV** Belt Holster for V90 battery, use with FL12 light **\$35.00**
- BHC** Belt Holster for ER6 / V90N battery with retainer for in-line DC plug and mate, use with FL12C light **\$45.00**
- BHG** Belt Holster for ER6 V90N battery to 3-pin amphenol output, use with FL12 G light **\$55.00**
- BU** Belt, 2" Leather, cut to length **\$25.00**

Lamps

ENG/EFP POWER UNITS AND ACCESSORIES

ON-BOARD Camera Power

H12	ON-BOARD battery, 4 AH 12 volt	\$400.00
H14	ON-BOARD battery, 4 AH 14.4 volt	\$440.00
H77	ON-BOARD battery, 4 AH + 7.2 volt for HL77 Camera	\$450.00
HAC3	ON-BOARD AC Adaptor, 40 watts 13.5 volts	\$495.00

BRICK Pack Batteries

B12G	BRICK Pack battery for 12V Sun Gun, 4 AH 12 volt with 3-pin amphenol connector	\$395.00
B12	BRICK Pack battery, 4 AH 12 volt with 5-pin XLR	\$395.00
B14	BRICK Pack battery, 4 AH 14.4 volt with 4-pin XLR	\$425.00

FAST Charge Nicad VTR Batteries

V90	FAST Charge VTR battery for BVU 50/110, a direct replacement for Sony BP90—will also charge from the BC 210 Nicad charger or overnight charge	\$295.00
V90N	Standard Charge VTR battery for BVU 50/110, a direct replacement for Sony BP90—will charge from the BC 210 Nicad charger or overnight charge	\$275.00
V60	VTR battery for V04800 etc., FAST charge Nicad	\$210.00

Universal FAST Charger

UF1	Universal Safety Charger, 100/120/220/240 volt 50/60 Hz, FAST charges all PEP batteries*	\$450.00
*ON-BOARD models H14 and H12 as well as Anton/Bauer 4 AH Nicad "Snap-on" batteries mount directly on charger battery bracket for charging. All other batteries require charge adapter cable for connection		
HL	Charge adapter cable for 2 AH ON-BOARD batteries L12 and L14 to UF1 charger	\$30.00
HS	Charge adapter cable for 4 AH BRICK Pack batteries B12G, B12 and B12S and for FAST charge VTR batteries V20, V44 and V60	\$30.00

HC	Charge adapter cable for V90 FAST charge BVU 50/110 battery	\$30.00
HX	Charge adapter cable for B14 BRICK Pack	\$30.00

Battery Charging Stations

BCS 5	Simultaneously FAST charges up to five (5) PEP ON-BOARD or Anton/Bauer "Snap-on" 4 AH Nicad batteries in less than one (1) hour	\$1595.00
BCS 90	Simultaneously Overnight Charges up to eight (8) PEP V90 N or Sony BP90 batteries	\$395.00
BCS 5/90	Simultaneously FAST charges up to five (5) PEP ON-BOARD or Anton/Bauer "Snap-on" 4AH Nicad batteries in less than one (1) hour, and at the same time, overnight charges eight (8) PEP V90 or Sony BP90 batteries in twelve (12) hours	\$2090.00

Overnite Trickle Chargers

N12H	Overnite (14 hr.) trickle charger with H connector for 4 AH 12 volt ON-BOARD battery H12	\$75.00
N14H	Overnite (14 hr.) trickle charger with H connector for 4 AH 14.4 volt battery H14	\$75.00
N122L	Overnite (14 hr.) trickle charger with L connector for 2 AH ON-BOARD 12 volt battery L12	\$75.00
N142L	Overnite (14 hr.) trickle charger with L connector for 2 AH ON-BOARD 14.4 volt battery L14	\$75.00
N12S	Overnite (14 hr.) trickle charger with SEN connector for 4 AH BRICK 12 volt batteries B12G, B12 and B12S	\$75.00
N122S	Overnite (14 hr.) trickle charger with SEN connector for 2 AH VTR batteries V20, V44 and V60	\$75.00
N12C	Overnite (14 hr.) trickle charger for V90 and V90N VTR battery	\$75.00
N14X	Overnite (14 hr.) trickle charger for B14 BRICK battery	\$75.00

NP-1

NiCad® Battery

- Authentic original equipment.
- Can be charged in about one hour.
- Circuit breaker and thermostat protected.
- Reasonably priced.
- Off-the-shelf delivery.
- Top quality fast charge NiCad® cells.

SPECIFICATIONS

Volts (nominal): 12.0

Capacity & typical running time:

Available Watts	Amp Hours	Hours
(BVP-1/BVU-1) 18	1.5	.8
(BVP-3/BVU-1) 18	1.5	.5
(Thomson) MC-611 18	1.5	.8
(Thomson) MC-613 18	1.5	.5

Weight: 1.5 lbs.

Size: 7-1/4" x 1" x 2-7/8".

Connectors: Spring contacts.

Charger: Use with Sony/Thomson charger.

\$60.00

PE-62

NiCad® Ampex VTR Battery

- For your VPR-20
- Direct replacement for the Ampex battery.
- Less than half the Ampex battery price.
- Top quality fast-charge NiCad cells.
- Sturdy lightweight aluminum frame.
- High impact molded case.
- 100% quality control inspected, electronically and manually.

SPECIFICATIONS

Volts (nominal): 13.2

Capacity & Typical Running Time:

Available Watts	Amp Hours	Hours
105.6	8.0	1.2

Weight: 8.0 lbs.

Size: 8-1/4" x 5-1/4" x 2-3/4"

Connectors: 6-pin Ampex-type connector (TRW)

Minicharger®: Use PE-8200 or PE-8204.

\$495.00

Replacement Batteries

- Top quality lead acid cells.
- Authentic OEM "pigtail" connectors.
- Moderate price.
- 100% quality control inspected, electronically and manually.

SPECIFICATIONS

For Your Camera	Minipack	Nominal Voltage	Capacity AH	Running Time (hrs.)	Weight (lbs.)	Charger
Sony DXC-1600	PE 39 Pack	12	2.5	.6	3	Use Sony Charger

TWX 910-321-4049 TV CHARTS LSA CABLES: TVCHARTS

TELEVISION OPTICAL TEST MEDIA

- 014-10 EFP Three Chart System with three Black & White Geometric Test Patterns, including case \$220.00
- 014-11 EFP Three Chart System with two Black & White Geometric & one Nine-Step Log Chip Chart, including case 250.00
- 014-12 EFP Three Chart System with one Black & White Geometric, one Log Chip & one of either Color Bar, BBC #61P Flesh Tone or Pulse Bar Chart, including case 280.00

PORTA-PATTERN® DUOCHART™ SYSTEMS

The PORTA-PATTERN DUOCHART System is a lightweight, durable portable video test chart package in the convenient PORTA-PATTERN 9" x 12" image size. Each chart is recess-mounted on lightweight, heavy-duty expanded PVC Foamex™ and hinged to fold face-to-face when not in use. Black Velcro™ provides a light and dirt seal when the system is closed. Each system includes a black vinyl case for carrying and storage. There are three DUOCHART systems to provide the right information for the required set-up and evaluation.

(A) RESOLUTION/LINEARITY. This system contains the standard Resolution and Linearity Charts. The Resolution Image is designed as a standard reference for measuring and evaluating overall camera resolution as well as testing for camera streaking, ringing, interlace and aspect ratio. The Linearity Image is designed for measuring and adjusting scan linearity. The image is a matrix of circles that provide reference when combined with the proper electronically generated grating signal.

(B) REGISTRATION/LOG GREY SCALE. This system contains the standard Registration and Log Grey Scale Charts. The Registration Image is designed for adjustment of scan timing (registration) in multiple tube color cameras. The Log Grey Scale contains two rows of nine paint chips each, providing the range of reflectance from TV white (60%) to TV black (3%), scaled in increments to approximate the transfer characteristics of the color picture tube.

(C) MULTI-BURST/FLESH TONE REFERENCE. This system contains the Multi-Burst Chart and the BBC #61P Color Flesh Tone Chart. The Multi-Burst Image is a dual range grouping of bursts. The full scan range is from 1 MHz to 8 MHz in 1 MHz steps. The half scan range is from 0.5 MHz to 4 MHz in 0.5 MHz steps. The bursts are spaced by a solid black bar for separation of burst information on a waveform monitor. The BBC #61P Color Flesh Tone Image has been developed to provide a standard color reference for matching and evaluating cameras after normal color balance is achieved. The image is manufactured in close cooperation with the Research Department of the BBC with advanced electronic color separation to assure spectral characteristics and long lasting chromaticity.

- 020-10 Resolution Linearity \$130.00
- 020-11 Registration Nine-Step Log Grey Scale 160.00
- 020-12 Multi-Burst BBC #61P Flesh Tone Reference 195.00

PORTA-PATTERN® TEST CHART SYSTEM

The PORTA-PATTERN Test Chart System is a convenient, portable 9" x 12" chart package for studio or field use. The system has been designed to offer maximum versatility and protection for the Test Charts, thus providing faster, easier camera set-up and alignment.

The light weight self-standing aluminum Chart Holder provides three point positional alignment. A spirit level is an integral part of the unit's design for horizontal alignment accuracy. Optional Microphone and Light Stand Mounting Adapters allow the system to be stand mounted with the same alignment capabilities.

The system contains one each Resolution, Linearity, Registration and Logarithmic Reflectance Charts. The charts are mounted in recessed, high-impact plastic frames for chart surface protection. Each chart frame is color coded for ease of location in the holder. Charts are placed in order of usage. After use the front chart can be reversed so all chart surfaces are protected.

- 001-10* Four Chart System with NO adaptors \$310.00
- 001-11* Four Chart System with microphone stand adaptor 325.00
- 001-12* Four Chart System with light stand adaptor 335.00
- 001-13* Four Chart System with mic and light stand adaptors 350.00
- (*Includes Charts indicated)
- 001-15 Microphone stand adaptor 33.00
- 001-16 Light stand adaptor 36.00
- 001-17 Aluminum frame assembly, complete w/o adaptors 190.00
- 001-50 Dual system carrying case 85.00
- 001-51 Single Chart carrying case 60.00
- 001-24* Resolution Chart 75.00
- 001-25* Linearity (Ball) Chart 75.00
- 001-26* Registration Chart 75.00

- 001-42 Line Resolution Chart 75.00
- 001-43 Full-Field Color Bar Chart 145.00
- 001-44 Eleven-Step Log Chip Chart 110.00
- 001-45 Depth of Modulation Chart (Rev. 1984) 75.00

PORTA-PATTERN® ELECTRONIC FIELD PRODUCTION THREE CHART SYSTEM

In order to provide a greater range of available test patterns in a package better adapted to the portability of EFP camera systems, PORTA-PATTERN has developed a Three Chart System which will accept any combination of three charts presently available in the PORTA-PATTERN catalogue.

The system consists of three protective plastic frames, similar to those used for all individual PORTA-PATTERN Test Charts, uniquely hinged end-to-end which allows the frames to be folded upon themselves, thus providing complete surface protection for all three charts, and, when closed, takes up no more space than a single PORTA-PATTERN Test Chart.

The entire system is held closed by a Velcro™ closure system and a vinyl coated nylon case is included to provide a complete Three Chart System in a package 15" high x 18" wide x 1 1/2" thick.

Prices and Specifications Subject to Change Without Notice.

PORTA-PATTERN®

ENG TWO CHART SYSTEM

The PORTA-PATTERN ENG Chart System has been designed to provide basic alignment, registration, color balance and Auto-White balance information for fast electronic news gathering or field camera set-up.

The system consists of a Registration Chart and a specially designed Color Balance Chart, mounted on durable white acrylic. The two acrylic frames are hinged together, and the charts are folded face-to-face when not in use. Black Velcro™ provides a light and dirt seal when the system is closed, and the white acrylic has a non-reflective surface for Auto-White balance use.

008-10 ENG Portable Two-Chart System, Registration and Color Balance, including Carrying Case. **\$185.00**

PORTA-PATTERN®

TEST SLIDES AND TEST SLIDE SYSTEMS

The PORTA-PATTERN Test Slides and Slide System provide the same accuracy and convenience for Color and Black & White Telecine set-up and alignment as the industry standard PORTA-PATTERN Test Charts. These Slides are available in either a 2" x 2" glass protected format, for use with slide projectors, or a 3 1/4" x 4" Field Lens format for use with large image Telecine systems.

002-10P*	Test Slide System, Positive, 8 Slides with Hardwood Case	\$175.00

PORTA-PATTERN®

SPHERICAL TRANSPARENCY ILLUMINATOR

The PORTA-PATTERN Spherical Transparency Illuminator provides a laboratory-type test standard in a practical, video-oriented test package. It is a unique approach to 8" x 10" format transparency illumination for testing, set-up and evaluation of color television camera systems.

A wide range of ultra-stable color temperatures and illumination levels are easily achieved by the use of two front panel controls. The modified 20" integrating sphere produces a flat illumination field throughout a cone angle of greater than 20 degrees without any additional adjustments.

The light source is a low-voltage, regulated DC controlled quartz iodine lamp that assures a constant color temperature independent of AC line variations. This light source illuminates the interior of the sphere, which is coated with high efficiency Eastman BaSO₄ sphere coating.

The illumination level is varied by adjusting the light source position inside the sphere, employing the principle of the inverse square law. A precision lamp position assembly, controlled by a numerically calibrated, vernier knob, enables the selection of established illumination levels without the use of a light meter.

Constant color temperature is achieved by the regulated DC power source, which

TELEVISION OPTICAL TEST MEDIA

is controlled by a front panel adjustment and is calibrated by an easily read meter. The PORTA-PATTERN Spherical Transparency Illuminator mounts on any light stand that will accept an 1 1/8" stud. The unit includes a yoke, hood and transparency holder and 10-foot power cord.

010-10	Spherical Transparency Illuminator, including Hood, Yoke and spare lamp, 117 Volt, 60 Hz	\$2750.00
010-11	Same as above, 230 Volt, 50 Hz <i>Note: Above Illuminators shipped via COLLECT AIRFREIGHT ONLY</i>	2750.00
010-60	Vinyl coated nylon fitted dust cover	140.00
010-75	Test Bench Mount	60.00
010-99	12 Volt, 50 Watt Replacement Lamp for above	17.50

PORTA-PATTERN®

8" x 10" ILLUMINATOR TRANSPARENCIES

The PORTA-PATTERN 8" x 10" Transparencies represent advanced state-of-the-art technology using emulsioned high-impact acrylic. The Geometric Images are direct reading to the camera. There is no glass between the Camera Lens and the Image to cause distortion or light loss. The elimination of the normal "sandwich" type of construction prevents buckling of the image surface and moisture collection.

This all acrylic construction eliminates the danger and high cost of breakage under normal operating conditions. Neither image emulsion nor acrylic base is subject to heat distortion or damage under usual operating conditions.

Highest quality photographic reproduction insures accurate resolution and maximum and minimum density stability. Dimensional stability and resolving power are in excess of 0.010 percent. All Geometric Image transparencies include tube scan information to aid in camera set-up. Geometric Images are available in standard positive image transparencies or negative image transparencies for lower Average Picture level.

LARGE Model TTL \$199.95

SWING 'N TILT UNIVERSAL JOINT

For use with 12", 18" and Double Pivotellis
To angle the TV, Speaker or Monitor up or down.

MODEL UL \$27.95

CHOICE OF BASEPLATE?

SCREWTYPE—an effective way to support wood-based equipment. Support is provided by the "H" shaped baseplate to which equipment is fastened by four wood screws. Also if wood platform is desired.

LIMPET—The Pivotelli Limpet actually grips the cabinet of the equipment with rubber-lined clamps and is adjusted by you to support equipment in its exact center of balance.

Pivotelli wall brackets mount onto wood or metal studs and masonry walls.

VIDEO PROMPTER SYSTEMS

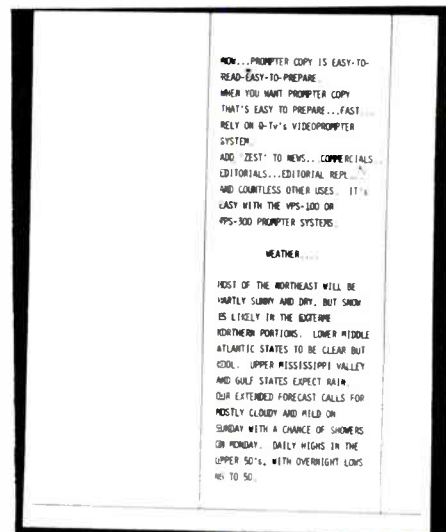

Q-TV's/SC Monochrome Video Monitors are 100% solid-state with professional quality features which make them ideally suited for use in high quality display applications. The equipment is designed for operation from either composite video sync signals, or from systems in which external sync is provided. Monitor cabinet construction is steel with a baked, vinyl finish.

A compact, economically priced prompting system that is unmatched in performance, versatility and reliability.

Successful speech presentation starts here with Q-TV's "Speech-Cue" System. Step behind it and you're in total command of your speech material...in total command of your audience. The "Speech Cue" System provides you with the most favorable conditions for "Face-to-Face" communications.

No special prompter paper required...No special prompter ribbons necessary...No special typewriter needed...It all means savings! Use any standard wide bond paper or handy "snap-packs" for typing prompter scripts.

VPS-100 CONSOLE TRANSPORT

We have simplified prompting! By eliminating elements such as the large-size typewriter, special paper, special ribbons, replacing broken keys, typewriter adjustments, and transposing copy, we figured what can't go wrong, won't go wrong.

These unique prompting systems offer the broadcast industry and its allied fields, a versatile, efficient and rapid method for providing prompter copy through a video signal.

Prompter copy is prepared on standard 8-1/2" x 11" single sheets of paper using any manual or electric typewriter. The prompter script is conveniently fed through the aperture of the VPS-100 by means of 'taping' the individual sheets into a continuous roll; or by placing the individual sheets of copy on the conveyor belt of the VPS-300, thus eliminating the need for 'taping'.

ONE VPS-100 PROMPTER SYSTEM

- 1 VPS-100 Console Transport
- 1 Vidicon Camera w/lens
- 1 14" Prompter/Monitor
- 1 Remote Hand Control
- 1 25' Coaxial Cable
- 1 Prompter Camera Mount
- 1 Camera Balancing Assembly
- 1 VPS Eye-Line
- 1 Instruction Manual **\$4750.00**

TWO VPS-100 PROMPTER SYSTEM

- 1 VPS-100 Console Transport
- 1 Vidicon Camera w/lens
- 2 14" Prompter/monitor
- 1 Remote Hand Control
- 2 25' Coaxial Cable
- 2 Prompter Camera Mount
- 2 Camera Balancing Assembly
- 2 VPS Eye-Line
- 1 Instruction Manual **\$6500.00**

VPS-300 CONVEYOR TRANSPORT

Prompter copy is scanned by the vidicon camera and transmitted to one or more prompter/monitor read-outs mounted on or off camera. The prompter script appears as clearly defined copy. Both units are equipped with a remote hand control for easy operator control.

When used with the VPS Eye-Line, prompter copy is superimposed directly over the taking lens of the television camera for direct "Eye-to-Eye" contact with the viewing audience. The high brilliance image is clearly visible to the speaker but in no way detectable by the camera lens.

The adaptability of the VPS systems over conventional prompting equipment enables you to derive maximum returns both technically and financially because of the reduction in preparation of prompter copy and general running costs.

ONE VPS-300 PROMPTER SYSTEM

- 1 VPS-300 Conveyor Transport
- 1 Vidicon Camera w/lens
- 1 14" Prompter/Monitor
- 1 Remote Hand Control
- 1 25' Coaxial Cable
- 1 Prompter Camera Mount
- 1 Camera Balancing Assembly
- 1 VPS Eye-Line
- 1 Instruction Manual **\$5350.00**

TWO VPS-300 PROMPTER SYSTEM

- 1 VPS-300 Conveyor Transport

COMPUTERPROMPTER SYSTEM

VPS-500

VPS-500 ComputerPrompter System Features

- Word processing capability
- Easy-to-read font
- Rapid access to all lines of copy
- The VPS-500 ComputerPrompter is implemented on the Atari 800XL and 1050 Disk Drive
- Optional printer for hard copy
- Positive or negative display
- Variable speed control
- Multi-language
- Various fonts
- User friendly design

The VPS-500 ComputerPrompter is a new generation prompting system suitable for both production and news applications. The VPS-500 ComputerPrompter is designed to perform the three major functions of production prompting.

1. Text Entry and Editing
2. Variable Speed Scrolling
3. Variable Fonts

The VPS-500 ComputerPrompter accomplished this and maintains basic simple operation. A prompter operator controls the operation of the VPS-500 with a variable speed control; can call up previous pages, future pages or re-start present page. No cryptic codes are needed. This illustrates simple keystroke controls.

VPS-500 ComputerPrompter System

- 1 Computerprompter Mainframe
- 1 Disc Drive
- 1 VPS-500 Software Package
- 1 Variable Speed Script Control
- 1 Interconnecting Cable
- 1 Manual

VPS-500\$3600.00

MINI-Q-PROMPTER II

FEATURES

- Hi-Efficiency Optical Reading Surface for Easy-To-Read Copy
- Copy Reading Surface: 9-3/4" x 9-5/8"
- 7 Lines of Text in Reading Area for "Complete Thought" Preview
- Shadow-Free Lighting Illuminated by Two 50W Hi-Intensity Lamps
- Script Capacity: 30 Feet
- No Special Paper Required. Uses Standard 8-1/2" Wide Bond Paper
- The Compact Miniaturized Motor is "Sound-Take" Silent
- Miniature Variable Speed Hand Control Measures 4-1/2" x 1" with 25' Cable
- Universal Camera Mount
- Solid State Circuitry
- Power: 12V Battery-Pack Belt, 5 Amps; or AC to DC Power Converter
- Weight: 9 lbs. Less Mount

MINI Q PROMPTER

QUANTITY	ITEM	PRICE
1	Mini Q Prompter	\$2595.00

 SMALL PROFESSIONAL STUDIO

MVP 706 MINI VIDEO PROMPTER

FEATURES

- Simple to Operate
- Compact and Realistically Priced
- Variable Speed Forward/Reverse Script Drive
- Vidicon Pick-Up Camera
- Can Be Located in the Control Room or Studio Floor
- Houses a Lightweight 9" Prompter Monitor and Over-the-Lens Beam-Splitter
- Readable from Distances up to 8-10'
- Mounts with Adjustable Bracket onto the Camera Pan and Tilt Head

MVP 706 \$3700.00

MVP 706

SYSTEM 2000 MODULAR TRIPOD

System 2000 was planned and built with the Broadcaster in mind. It will provide efficient, versatile service when used with any Electronic News Gathering (ENG), Electronic Field Production (EFP), or film camera.

System 2000 is not only limited to broadcast applications. It will provide reliable, stable support for virtually any type of instrumentation requiring a tripod: microwave transmissions, laser equipment and electro-optical equipment.

The Basic System 2000

System 2000 starts with a set of basic components: a multi-purpose mounting plate and extendable crutch legs. Revolutionary is the best word to describe the System 2000 mounting plate. Computer-assisted design techniques have been used to create a plate which will accept either a ball-base or pro junior base. This means that virtually any fluid head can be used without cumbersome or expensive adaptors. In addition, the plate will accept a geared elevation column module.

Crutch Legs — Strong. Lightweight. Durable. Easy to extend and retract. The basic tripod height is 55" when fully extended, 33" when retracted. A precise calibration scale on each leg assures uniform extension on all three legs when required. Legs are equipped with non-slip rubber tip pads and are designed to accept System 2000's unique retractable spike tip module and/or strut assembly.

"Quick-Lock" Leg Locking System — The most extraordinary design feature of System 2000's crutch leg is its extension locking device. There are no knobs, twist mechanism or protruding handles to strip, freeze or break off on impact. An exclusive cam-action pressure plate assures a positive lock, even with heavy loads on the tripod. The pressure plate is activated and released with a simple, semi-recessed flip lever which has been human-engineered for easy use, even while wearing bulky gloves. The "Quick-Lock" system is a standard feature on all crutch legs.

QLT LIGHTWEIGHT TRIPODS

QLT-1 95534 - 2 section legs
QLT-3 95542 - 3 section legs
QLT-5 95549 - 4 section legs
Load Capacity Up to 17 lbs.
(7.7 kg)
Height Extended 57" - 72"
(144.8 - 182.9 cm)
Height Telescoped 23" - 31"
(58.4 - 78.7 cm)
(Dependent on model)
Column Rise 16" (40.6 cm)
Tilt Angle 60° up, 90° down
Pan Rotation 360°
Weight 7 lbs. (3.2 kg)

All have anti-drop columns and counterbalanced heads included.

For remote or studio applications. Use with QLD-1 dolly for mobility.

QLT-7 TRIPOD WITH STRUTS

QLT-7 95565
Load Capacity 20 lbs. (9.1 kg)
Maximum Height 57" (144.8 cm)
Minimum Height 29 1/2" (74.9 cm)
Column Height 16" (40.6 cm)
Weight 7 lbs. (3.1 kg)

For location and studio work with video cameras. Furnished with Safety Pan/Tilt Head.

QLT-9 TROLLEY

QLT-9 95810
Load Capacity 20 lbs. (9.1 kg)
Maximum Height 58 1/2" (148.6 cm)
Minimum Height 43-3/8" (110.2 cm)
Column Height 16" (40.6 cm)
Weight 9 1/4 lbs. (4.2 kg)
Wheel Circle 38" (96.5 cm)

For location and studio work with video cameras. Furnished with Safety Pan/Tilt Head.

(10.2 x 2.5 cm)
Wheel Circle Diameter 45" (114.3 cm)
Folds to 7" x 13" x 28"
(17.8 x 33.0 x 71.1 cm)
Weight 17 lbs. (7.7 kg)

The same dolly w/4" wheels is available
in a 3/4 size version under QHD-3 56100

QHH-23 FLUID HEADS - SUPER HYDRO QHH-23 52815

Load Capacity 50 lbs.
Tilt Angle + / -80°
Pan Rotation 360°
Dimensions 6 3/4" x 6" x 7"
(171 x 152 x 178 cm)
Weight (Incl. Handle) 10 3/4 lbs.
(4.9 kg)

QHH HYDRO FLUID HEADS

Load Capacity 40 lbs. (18.8 kg)
Tilt Angle + / -80°
Pan Rotation 360°
Dimensions 6" x 5" x 6"
(15.2 x 12.7 x 15.2 cm)
Weight 8.5 lbs. (3.9 kg)

QHH-13 52810 Hydro Fluid Head
with Pro Jr. Base
QHH-15 52811 Hydro Fluid Head
with Ball Base
QHH-17 52812 Hydro Fluid Head
with QM Column Base
QHH-19 52813 Hydro Fluid Head
with Pro Jr. Base
No 3/8" Stud
(For use with QMT-1 ENG/EFP Tripod)

*For ENG/EFP and Cine applications.
Use with any QM tripod, pedestal or
column.*

QHH-5 CAM HEAD QHH-5 52304

Load Capacity 80 lbs. (36.3 kg)
Tilt Angle 35° up, 45° down
Pan Rotation 360°
Dimensions 5" x 9" x 10"
(12.7 x 22.9 x 25.4 cm)
Weight 21 lbs. (9.5 kg)

*For studio and remote applications. Use
with QH tripod and dolly for remote, QH
and QX pedestals for studio work.*

MOUNTING ACCESSORIES

WALL MOUNTS

INDOOR DECORATIVE AND INDUSTRIAL

QIB-CS-10	17700	LIGHTWEIGHT, INDOOR - 10 lb. capacity (Adjustable Ball)	16.00
QIB-40	17800	MEDIUM WEIGHT, INDOOR - 40 lb. capacity (Pan and Tilt Head included)	30.00
QIB-D	17900	DECORATIVE, INDOOR for QPT15-24, QLS-115 and QLS-24 Hidden wall mount.	18.00

MONITOR MOUNT

QMM	19033	MONITOR MOUNT - 100 lb. capacity For most monitors up to 21"	180.00
QMM-A	19034	ADAPTER - for Wall Mounting	60.00

OUTDOOR INDUSTRIAL

QWBM-18	17500	ENVIRONMENTAL WALL MOUNT - For pan/tilt drivers 57920, 57930, 57900, and 57910	75.00
QWCB-12	17412	ENVIRONMENTAL WALL AND CEILING MOUNT (12" long)	65.00
QWCB-18	17418	ENVIRONMENTAL WALL AND CEILING MOUNT (18" long)	85.00
QWCB-24	17424	ENVIRONMENTAL WALL AND CEILING MOUNT (24" long)	90.00

COLUMN MOUNTS - HEAVY DUTY

QCM-12	17403	HEAVY DUTY FLOOR AND CEILING FIXED MOUNTS - 12" long For medium and heavy duty Pan/Tilts or Scanners	65.00
QCM-24	17404	HEAVY DUTY FLOOR OR CEILING FIXED MOUNT - 24" long For medium and heavy duty Pan/Tilts or Scanners	90.00
QCM-48	17405	HEAVY DUTY FLOOR OR CEILING FIXED MOUNT - 48" long For medium and heavy duty Pan/Tilts or Scanners	160.00

PAN/TILT HEAD FOR MOUNTS AND COLUMNS

QPH	15502	HEAVY DUTY PAN/TILT HEAD for QWCB-12, -18, -24 mounts and QCM-12, -24, -48 Allows 360° rotation and ±180° tilt	60.00
-----	-------	----------------------------------------------------------------------------------------------------------------	-------

MOUNTING ACCESSORIES

QCM	19022	CORNER MOUNT - Allows all mounts to be fixed to 90° outside corner.	35.00
QSM	17401	SIDE MOUNT - Enables medium and heavy duty Pan/Tilts and Scanners to be used with all mounts and columns in standard position when inverted positioning is not acceptable	40.00

CONTROLS (Single-Hardwire)

All controls are desk top in half or full rack size (except QPAS-15 indoor pan/tilt control and QLSAP-24 indoor scanner control). As a general rule, all AC controls (115VAC or 24 VAC) are in the 1 3/4" "slim-line" height. DC controls are 3 1/2" in height. For rack mounting "slim-line" controls two one-half rack size controls can be combined together with provided hardware. Rack mounting "ears" are available under model #QRM-H to convert a half rack size desk unit to a rack mounted configuration and QRM-F converts a full width desk top unit or the combination of two half rack size units to a rack mounted configuration.

Code Key... 3 1/2" = 3 1/2" high unit H = 1/2" rack size
1 3/4" = 1 3/4" high unit F = Full rack size

MOUNTING BRACKETS

FOR PAN AND TILT DRIVES

QPAS-15	36800	Paddle Switch (Autoscan) for QPT15 (24VAC) [Desk top only]	165.00
QJAS-15	37810	Joystick (Autoscan) for QPT15 (24VAC) [1 3/4", H]	245.00
QJ-24	37510	Joystick (Non-Autoscan) for QPT30, QPT90, QPT200 (24VAC) [1 3/4", H]	325.00
QJ-115	37500	Joystick (Non-Autoscan) for QPT30, QPT90, QPT200 (115VAC) [1 3/4", H]	250.00
QJAS-24	37800	Joystick (Autoscan) for QPT30, QPT90, QPT200 (24VAC) [1 3/4", H]	350.00
QJAS-115	37700	Joystick (Autoscan) for QPT30, QPT90, QPT200 (115VAC) [1 3/4", H]	270.00
QJDC-115	38200	Joystick (Non-Autoscan) for QPT90 (115VDC) [3 1/2", H]	270.00
QJDCVS-115	38300	Joystick (Non-Autoscan) Variable Speed For QPT90 (115VDC) [3 1/2", H]	350.00
QJDC-24	38320	Joystick (Non-Autoscan) for QPT90 (24VDC) [3 1/2", H]	410.00
QJDCVS-24	38330	Joystick (Non-Autoscan) Variable speed For QPT90 (24VDC) [3 1/2", H]	490.00
QJ500-115	37501	Joystick (Non-Autoscan) for QPT500 (115VAC) [3 1/2", H]	330.00
QJDC500-115	38201	Joystick (Non-Autoscan) for QPT500 (115VAC) [3 1/2", H]	500.00
QJAS500-115	37701	Joystick (Autoscan) for QPT500 (115VAC) [3 1/2", H]	395.00
QJDC500VS-115	38301	Joystick (Non-Autoscan) Variable Speed, for QPT500 (115VDC) [3 1/2", H]	760.00
QRM-C-H	52508	■ Rack Mount - Option for Controls	35.00
QRM-C-F	52507	■ Rack Mount - Option for Controls	30.00

FOR SCANNER DRIVES

QLSAP-24	45400	Paddle Switch (Autoscan) for QLS Indoor Scanner (24VAC) [Desk top only]	90.00
QESAP-24	45500	Paddle Switch (Autoscan) for QES Environmental Scanners (24VAC) [1 3/4", H]	165.00

FOR MOTORIZED LENSES

QZLC	42500	PADDLE SWITCH - Control for all QuickSet Motorized Zoom Lenses. Provides separate zoom, focus and iris functions [3 1/2" H or 1 3/4", H]	185.00
QZLC-AI	42600	PADDLE SWITCH - Incorporates Automatic Iris control for QuickSet "Spot" Lenses along with separate zoom and focus functions [3 1/2", H]	470.00

■ Instruct factory to combine with Joystick into single half width control if desired. If not specified, lens control will come as a "stand-alone" in a half width desk top enclosure.

MISCELLANEOUS SINGLE CONTROLS

QWWC	46510	WASHER/WIPER CONTROL at console panel [1 3/4" H]	90.00
QAEM	47000	AZIMUTH/ELEVATION METERS at console panel (Potentiometers P30, P90 or P2500 must be installed in the Pan/Tilt drivers) [3 1/2", H]	450.00

Model	Product Code	Description	User Price

CONTROLS (Multiple)

MULTIPLE DRIVE CONTROLS

FOR OPERATION OF MORE THAN ONE UNIT WITH A SINGLE CONTROL

QMP6-24	45010	CONTROL, UP TO 6 PAN AND TILTS COMBINED WITH ZOOM LENS FUNCTIONS. Features joystick with autoscans, lens functions with speed control and 6 pushbutton site select. 24VAC. [In rack mount.]	1,150 00
QMP6V-24	45015	CONTROL, UP TO 6 PAN AND TILTS COMBINED WITH ZOOM LENS FUNCTIONS. Same as above with video switching	1,400 00
QMP6-115	45011	CONTROL, UP TO 6 PAN AND TILTS COMBINED WITH ZOOM LENS FUNCTIONS. Features joystick with autoscans, lens functions with speed control and 6 pushbutton site select. 115VAC. [In rack mount.]	990 00
QMP6V-115	45016	CONTROL, UP TO 6 PAN AND TILTS COMBINED WITH ZOOM LENS FUNCTIONS. Same as above with video switching.	1,240 00
QMP4S-24	45001	CONTROL, UP TO 4 PAN AND TILT COMBINED WITH ZOOM LENS FUNCTIONS. Features joystick, zoom lens control and independent (select) control for each site. Use with any 24VAC pan/tilt. [In rack mount.]	890 00
OPM4S-115	45002	CONTROL, UP TO 4 PAN AND TILT COMBINED WITH ZOOM LENS FUNCTIONS. Features joystick, zoom lens control and independent (select) control for each site. Use with any 115VAC pan/tilt. [In rack mount.]	870 00
QMS6-24	45501	CONTROL, UP TO 6 SCANNERS (INDOOR AND/OR WEATHERPROOF). Drives QLS-24, QESM-24, QESH-24. [In rack mount.]	680 00
QMS6-115	45510	CONTROL, UP TO 6 SCANNERS (WEATHER-PROOF). Drives QESM-115, and QESH-115. [In rack mount.]	590 00

DUAL STATION CONTROLS

FOR OPERATION OF A SINGLE PAN/TILT DRIVE FROM TWO REMOTE LOCATIONS

QDS-NA	46550	SYSTEM FOR CONTROLLING A PAN/TILT COMBINED WITH ZOOM LENS. Consists of two separate units. Combines joystick and zoom lens controls. Identical controls at each of two locations. Use with either 24VAC or 115VAC pan/tilt. [In rack mount.]	1,250 00
QDS-AS	46560	SYSTEM FOR CONTROLLING A PAN/TILT WITH AUTOSCAN COMBINED WITH ZOOM LENS. Consists of two separate units. Combines joystick with autoscans and zoom lens controls. Identical controls at each of two locations. Use with either 24VAC autoscans or 115VAC autoscans pan/tilt.	1,325 00

COAXSET SYSTEM

TRANSMITTERS - CONTROL OF MULTIPLE REMOTE SITES

QCST-8	49080	CONTROL OF 8 PAN/TILTS WITH AUTOSCAN AND ZOOM LENS FUNCTIONS. Features joystick with autoscans, zoom, focus, iris and four auxiliary functions. [In rack mount.]	745 00
---------------	--------------	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------	--------

TRANSMITTER - CONTROL OF ONE REMOTE SITE

QCST-1	49010	CONTROL OF A SINGLE PAN/TILT WITH AUTOSCAN AND ZOOM LENS FUNCTIONS. Features joystick with autoscans, zoom, focus, iris and four auxiliary functions. [1 3/4" H]	630 00
---------------	--------------	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------	--------

RECEIVER

QCS-R	49500	RECEIVER - One required at each remote site. Specify 24VAC or 115VAC pan/tilt when ordering. 115VAC required for receiver.	675 00
--------------	--------------	-----------------------------------------------------------------------------------------------------------------------------------	--------

LOW VOLTAGE SYSTEM (12VDC)

CONTROL OF UP TO 10 REMOTE SITES - FOR EXTRA LONG RUNS

QLVS-10	46810	CONTROL OF 10 PAN/TILTS WITH AUTOSCAN AND ZOOM LENS FUNCTIONS UP TO 10,000 FEET. Features joystick with autoscans, zoom, focus, iris, camera power and 10-site rotary select. System is addressable. Latching memory for autoscans and camera power functions. Allows cost effective long distance runs with small gauge wire. Use with all 115VAC Pan/Tilt Drivers. Remote Box required at each site. [In rack mount.]	685 00
----------------	--------------	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	--------

Model	Product Code	Description	User Price
-------	--------------	-------------	------------

RECEIVER

QLVS-R	46730	RECEIVER - One required at each remote site. 115VAC required for receiver operation.	465 00
---------------	--------------	---------------------------------------------------------------------------------------------	--------

CONTROL OF UP TO 5 REMOTE SITES FROM TWO SEPARATE CONTROL SITES - FOR EXTRA LONG RUNS

QLVS-MS	48150	SYSTEM CONTAINS THE SAME ELEMENTS AS THE QLVS-10 for 5 Pan/Tilt Sites from two separate control panels. Receiver QLVS-R required at each remote site.	QUOTE

1" CAMERAS FOR HIGH PERFORMANCE

TC1005 CAMERA FAMILY

Standard Vidicon Cameras 600,000:1 Light Range (Supplied less lens).

Model	Optional User Price \$	Dealer Cost \$			Description
		1 - 4	5 - 24	25 -	
TC1005/01 ²	995	670	650	625	High performance camera, 800 lines resolution, 1" separate mesh, magnetic focus vidicon, internal, RS-170 sync. Accepts external M&V drive, sync or composite video for Genlock.
TC1005/01F ²	995	670	650	625	24 V, 60 Hz version of TC1005/01

LOW LIGHT CAMERAS

1" Ultricon II¹ — 3.67 x 10⁷ :1 Light Range with f/1.4 to f/1200 Lens.

Less Lens or With Fixed Lens ²					Description
Model	Optional User Price \$	1 - 4	5 - 24	25 -	
TC1005/U01 ²	1725	1155	1110	1065	1" Ultricon II (Silicon Target) version of TC1005/01 less lens.
TC1005/U9	2030	1360	1315	1270	With 9.0 mm f/1.4 auto iris lens
TC1005/U12	1945	1310	1265	1220	With 12.5 mm f/1.4 auto iris lens
TC1005/U24	1930	1292	1247	1202	With 25 mm f/1.4 auto iris lens
TC1005/U49	1935	1297	1252	1207	With 50 mm f/1.8 auto iris lens
TC1005/U74	1990	1333	1288	1243	With 75 mm f/1.8 auto iris lens
With Zoom Lens and Auto-Iris Controller, Factory Installed and Adjusted					
TC1005/U06	3250	2175	2130	2085	TC1005/U01 Ultricon II (Silicon Target) camera with 17.5-105 mm (6x) f/1.8 zoom lens with spot filter and separate TC1430 Controller
TC1005/UR6	3250	2175	2130	2085	Same as TC1005/U06 but with TC1430R Control Unit mounted on camera
TC1005/U10 ³	3800	2545	2495	2450	Same as TC1005/U06 but with 16-160 mm (10x) f/1.8 lens Includes TC1430 Controller
TC1005/UR0 ³	3800	2545	2495	2450	Same as TC1005/U10 but with TC1430R Control Unit
TC1005/URE	6400	4270	4115	3960	Same as TC1005/U06 but with 15-150 mm (10x) f/1.8 lens, integral remotely controlled extender (23.5-235 mm f/2.9) and TC1430R Control Unit on camera
The TC1430 Controller is for desk top or rack mount. Use in hard wired systems of up to 1000 ft. with one controller per camera. The TC1430R Control Unit is mounted on the camera. Use in long hard-wired systems or with twisted-pair control systems. A separate controller such as V100C is required (V108C for URE cameras) or use twisted-pair control system.					
With Auto-Iris Zoom Lens, Factory Installed & Adjusted (No remote iris control) ⁴					
TC1005/UT6	2795	1875	1830	1785	TC1005/U01 Ultricon II (Silicon Target) camera with 17.5-105 mm (6x) f/1.8 Auto-Iris Zoom lens
TC1005/UT0 ³	3350	2245	2195	2150	Same as TC1005/UT6 but with 16-160 mm (10x) f/1.8 lens
TC1005/UT2 ³	3725	2495	2445	2400	Same as TC1005/UT6 but with 15-180 mm (12x) f/1.9 lens

NOTES:

Cameras are 120V, 60Hz. For 24V, 60Hz version add suffix "F" to model number (same price).

- For Newvicon cameras tube type 4906 (S4076), change "U" to "N" in model number and add \$10.00 to cost.
- Crystal control available on Special Order for basic cameras without lens (shown in bold type). Add suffix "C" to model number and add \$10.00 to cost. Crystal control models do not have Line Lock feature. Contact RCA for minimum quantity requirements for factory installed lenses on crystal controlled models.
- Pre-position addition (VPPL) available on models indicated. Add suffix "P" to model number and add \$240.00 to cost. Other types may be available with pre-position. Contact RCA for requirements.
- "UT-" cameras require a separate controller such as the V1002F. If length of run exceeds 1000 ft. use a relay box or a suitable control system.

1" CAMERA FAMILY

TC1006 CAMERA FAMILY — LOW LIGHT LEVEL SYSTEMS

- Prepackaged in Integral Environmental Housing
- Designed Tested to Military and Space Environmental Standards
- Round-the-Clock Service
- Three Camera Tube Options
- Factory Assembled, Adjusted and Pressurized

Signal-to-Noise FET low noise amplifier. Better than 43dB.

Automatic Beam Control (ABC) Eliminates need for periodic readjustment of beam throughout life of camera tube.

Gamma Correction Internally adjustable from 1.0 to 0.7 for enhanced grey-scale rendition.

Video Output 1.1 V p-p composite. Internally adjustable. Fixed lens models have two isolated outputs at 75 ohms. Zoom lens models have one output at 75 ohms.

Auto Black plus Keyed Clamp maintains constant pedestal setup over entire operating range.

Sync EIA RS-170 in 60Hz models or CCIR in 50Hz models. Phase-locked loop synchronizes camera to power line zero-crossing. Crystal control option available.

Genlock Accepts negative 4 V p-p composite sync (1 to 6 V p-p) and negative 4 V p-p H & V drives (3 to 6 V p-p). Will also lock onto composite video. Internal sync in/out and HiZ/75 ohm termination selection.

WITH FIXED LENS

Ultricon II Camera Tube (Newvicon — see note below)

Model	Optional User Price \$	Dealer Cost \$			Description
		1 - 4	5 - 24	25 -	
TC1006/U12	2490	1670	1620	1570	TC1005/U01 camera with 12.5 mm auto iris lens with filter
TC1006/U24	2460	1650	1600	1550	Same as TC1006/U12 but with 25 mm lens
TC1006/U49	2460	1650	1600	1550	Same as TC1006/U12 but with 50 mm lens

CLOSED CIRCUIT VIDEO EQUIPMENT

TC1030/H

TC1030/H SIT CAMERAS FOR VERY LOW LIGHT LEVEL

Silicon Intensified Target (SIT) Cameras
for Very Low Light Level Applications.

Using RCA 16mm low bloom silicon intensified target tubes. Supplied with factory installed/adjusted zoom or fixed focal length auto iris lenses with spot filters.

TC1030 SERIES — HIGH PERFORMANCE SIT CAMERAS

Cameras include a remote lens control where applicable.

Type	Price \$	Description
TC1030/H06	7160	With 18-108 mm (6X) f/1.8 zoom lens. Includes separate TC1430 remote lens controller.
TC1030/H08	7650	Same as above with 18-144 mm (8X) f/2.0 zoom lens.
TC1030/H10	8625	Same as above with 16-160 mm (10X) f/1.8 zoom lens.
TC1030/HR6	7160	With 18-108 mm (6X) f/1.8 zoom lens. Includes camera mounted TC1430R remote control unit.
TC1030/HR8	7650	Same as above with 18-144 mm (8X) f/2.0 zoom lens.
TC1030/HR0	8625	Same as above with 16-160 mm (10X) f/1.8 zoom lens.
TC1030/HRE	10000	Includes 15-150 mm (10X) f/1.8 lens with integral remotely controlled extender (23.5-235 mm f/2.9) and camera mounted TC1430R remote control unit. Use V108C controller.
TC1030/H12	6900	With 12.5 mm f1.4 fixed focal length lens.
TC1030/H24	6825	Same as above with 25 mm f1.4 fixed lens.
TC1030/H49	6825	Same as above with 50 mm f/1.8 fixed lens.
TC1030/H74	6900	Same as above with 75 mm f/1.8 fixed lens.
TC1030/H	6650	Less lens. Available on special order for use in constant low light level applications.

TC1036 SERIES — ENVIRONMENTALIZED HIGH PERFORMANCE SIT CAMERAS

Auto Iris function controlled by lens/camera electronics. Cameras do not include a remote lens control.*

TC1036/HZ6	7720	With 18-108 mm (6X) f1.8 zoom lens.
TC1036/HZ8	8170	Same as above with 18-144 mm (8X) f2.0 zoom lens.
TC1036/HZ0	9180	Same as above with 16-160 mm (10X) f1.8 zoom lens.
TC1036/HZ2	9480	Same as above with 15-180 mm (12X) f1.9 zoom lens.
TC1036/H12	7500	With 12.5 mm f1.4 fixed focal length lens.
TC1036/H24	7415	Same as above with 25 mm f1.4 fixed lens.
TC1036/H49	7415	Same as above with 50 mm f/1.8 fixed lens.
TC1036/H74	7500	Same as above with 75 mm f1.8 fixed lens.

TC1034 SERIES — LOW COST SIT CAMERAS

Auto Iris function controlled by lens/camera electronics. Cameras do not include a remote lens control.*

TC1034/HZ6	6015	With 18-108 mm (6X) f1.8 zoom lens.
TC1034/HZ8	6425	Same as above with 18-144 mm (8X) f2.0 zoom lens.
TC1034/HZ0	7250	Same as above with 16-160 mm (10X) f1.8 zoom lens.
TC1034/HZ2	7550	Same as above with 15-180 mm (12X) f1.9 zoom lens.
TC1034/H12	5200	With 12.5 mm f1.4 fixed focal length lens.
TC1034/H24	5200	Same as above with 25 mm f1.4 fixed lens.
TC1034/H49	5200	Same as above with 50 mm f/1.8 fixed lens.
TC1034/H74	5200	Same as above with 75 mm f1.8 fixed lens.

NOTE:
*For zoom focus where applicable, use V100ZF controller or twisted pair remote control systems such as RCA TC1600 or TC1700 Series.

TC1040/H ISIT CAMERAS FOR ULTRA LOW LIGHT LEVEL

Intensified Silicon Intensifier Target (ISIT) Cameras
for Ultra Low Light Level Applications

Using RCA 16mm low bloom silicon intensified target camera tubes with additional intensifier section. Supplied with factory installed/adjusted zoom or fixed focal length auto iris lenses with spot filters.

TC1040 SERIES — HIGH PERFORMANCE ISIT CAMERAS

Cameras include a remote lens control where applicable.

Type	Price \$	Description
TC1040/H06	9270	With 18-108 mm (6X) f/1.8 zoom lens. Includes separate TC1430 remote lens controller.
TC1040/H08	9800	Same as above with 18-144 mm (8X) f/2.0 zoom lens.
TC1040/H10	10750	Same as above with 16-160 mm (10X) f/1.8 zoom lens.
TC1040/HR6	9270	With 18-108 mm (6X) f/1.8 zoom lens. Includes camera mounted TC1430R remote control unit.
TC1040/HR8	9800	Same as above with 18-144 mm (8X) f/2.0 zoom lens.
TC1040/HR0	10750	Same as above with 16-160 mm (10X) f/1.8 zoom lens.
TC1040/HRE	12200	Includes 15-150 mm (10X) f/1.8 lens with integral remotely controlled extender (23.5-235 mm f/2.9) and camera mounted TC1430R remote control unit. Use V108C controller.
TC1040/H12	9050	With 12.5 mm f/1.4 fixed focal length lens.
TC1040/H24	8975	Same as above with 25 mm f/1.4 fixed lens.
TC1040/H49	8975	Same as above with 50 mm f/1.8 fixed lens.
TC1040/H74	9050	Same as above with 75 mm f/1.8 fixed lens.
TC1040/H	8800	Less lens. Available on special order for use in constant low light level applications.

Supply Voltage Options

24V, 60Hz
24V, 50Hz
220V, 50Hz
12VDC, 60 fps (RS-170)
12VDC, 50 fps (CCIR)

Type Designation Suffix

Add Suffix F
Add Suffix FX
Add Suffix X
(TC1034 Series only) Add Suffix DC
("C" indicates crystal control)
(TC1034 Series only) Add Suffix DCX
("C" indicates crystal control)

Remote Control Description — For Zoom/Auto-Iris Lenses

TC1430 Rack or Desk Top Controller

Can be used with up to 1000 feet of AWG-18 4-wire cable between controller and camera.

TC1430R Camera Mounted Control Unit

- Permits long cable runs of up to approximately one mile when used with 4-wire controller such as RCA or Vicon V100C.
- Accepts output from 6-wire Modupulse or 4-wire bipolar receivers used with twisted-pair control systems.
- Can also be used with any external switch closures or relays when such a control system is used, i.e. TC1600 and TC1700 micro-processor controls.

DUMMY CAMERAS

TC1501/D	60	Dummy TC1501 with pilot light, no lens, 120 VAC, 60 Hz.
TC1502/D	60	Dummy TC1502 with pilot light, no lens, 24 VAC, 60 Hz.
TC2011/D	75	Dummy TC2011. Integral power supply format (120 V) and pilot light. (Also use as TC2511 Dummies.) No lens.
TC2012/D	75	Dummy TC2012. Integral power supply format (24V) and pilot light. (Also use as TC2512 Dummies.) No lens.
TC2055/D	70	Also use as TC2021, TC2022, TC2521, and TC2522 Dummies.

NOTE: Order lens separately.

SURVEILLANCE KITS

Everything required for a CCTV Surveillance setup in one, low cost, convenient package. Includes a 2/3" Vidicon Camera, a 16mm Lens, a 9" RCA Monitor, a Camera Wall Mount, 100 feet of connecting cable and necessary connectors.

Model	Price \$	Description
KIT1551	455	120 V TC1501/16 camera and 9" monitor. Use where 120 VAC power is available at both the camera and monitor locations.
KIT1552	465	24 V TC1502/16 camera, 24 V transformer and 9" monitor. Use where 120 VAC power is available only at the monitor.

Prices and Specifications Subject to Change Without Notice.

OPTIONS FOR TC2500 SERIES

Camera Identifier — TC2600 Series

Use TC2500 series model number except change second numeral to "6", i.e., TC2612/U16. Add \$60.00 Optional User Price.

TC900 MINISYSTEMS

AN ECONOMICAL AND ATTRACTIVE ENTRY TO CCTV SURVEILLANCE

Available as a single package including one Video Monitor/Sequential Switcher capable of handling up to three cameras and one Mini CCTV 2/3" Vidicon Camera with a 16mm, f/1.6 lens (no iris) and a universal camera mounting bracket. Easy to install and operate. A single, user supplied, coaxial cable between the camera and monitor supplies power from the monitor to the camera and video from the camera to the monitor. Expandable.

Model	Price \$	Description
TC951	740	Basic MiniSystem. Includes Monitor/Switcher and one TC901 Camera with lens and mounting bracket. (Can handle 3 cameras.)
TC901	260	2/3" Vidicon Camera with 16 mm, f/1.6 lens (no iris) and universal camera mounting bracket. (TC1888 8 mm, f/1.6 wide angle lens (no iris) available.)
TC901N	645	2/3" Newvicon Camera with universal camera mounting bracket. Auto Iris lens required. Order separately. (8.5-16-25-50 mm lenses recommended)
TC931	285	Expansion Unit. Extends capabilities of Monitor/Switcher to handle a total of six cameras.
TC901PS	118	Power Supply, 120 V, 50/60 Hz.
TC901PSDC	118	Power Supply, 12 VDC.

TC800 VIDEO PRINTER

Instant printed copies of video pictures on your monitor or from your Video Recorder. This compact thermal printer produces positive or negative prints. It has adjustable video level and contrast and gives approximately the same resolution as a TV receiver.

TC800	595	Video Printer.
TC801	27	Paper for video printer. (Pack of 4 rolls)

TC1400

TC2800 CCD CAMERA FAMILY

- 206, 366 Picture Elements (403 H x 512 V) for Sharp, High Resolution CCD Pictures
- High Sensitivity for Nighttime Surveillance. Usable Pictures at 0.060fc
- No Geometric Distortion for Precise Measurements and Positioning
- No Lag or Image Retention for Sharp Pictures of Moving Objects
- Reduced Blooming

Model	Price \$	Description
TC2811	1775	Integral power supply, 120 V, 60 Hz. ¹
TC2811/8	2005	With 8.0 mm f/1.4 auto iris lens
TC2811/16	1970	With 16 mm f/1.4 auto iris lens
TC2812	1775	Integral power supply, 24 V, 60 Hz. ¹
TC2812/8	2005	With 8.0 mm f/1.4 auto iris lens
TC2812/16	1970	With 16 mm f/1.4 auto iris lens
TC2821	1775	Separate power supply, 120 V, 60 Hz. ¹
TC2821/8	2005	With 8.0 mm f/1.4 auto iris lens
TC2821/16	1970	With 16 mm f/1.4 auto iris lens
TC2822	1775	Separate power supply, 24 V, 60 Hz. ¹
TC2822/8	2005	With 8.0 mm f/1.4 auto iris lens
TC2822/16	1970	With 16 mm f/1.4 auto iris lens
TC2855C	1775	12 VDC camera (10.5-16 VDC) crystal control, no lens.
TC2855/8C	2005	With 8.0 mm f/1.4 auto iris lens
TC2855/16C	1970	With 16 mm f/1.4 auto iris lens

NOTES:

1. Crystal control available on Special Order for basic cameras without lens (shown in bold type). Allow for extended lead time when ordering. Add suffix "C" to model number and add \$10.00 to cost (TC2855 is crystal control only). Crystal control models do not have Line Lock feature.

FIXED AND ZOOM LENSES FOR TC2800 CCD CAMERAS

Auto-iris lenses providing performance and economy for a wide range of CCTV applications with connectors installed for ease of installation. Includes built-in spot filter that extends upper range to a minimum of f/360.

FIXED

TC1805/D2	305	2/3" format EX 5.7 mm f/1.4.

TC1874/D2	270	" " ES 75 mm f/1.8 " "

ZOOM³

TC1841A/D2	690	2/3" format 12.5-75 mm (6x) f/1.8
TC1846/D2	1095	" " 11-110 mm (10x) f/1.6
TC1843/D2	1700	1" format 15-180 mm (12x) f/1.9 (also usable on 2/3" cameras).

NOTE:

For zoom lens use V100ZF controller or a suitable control system.

SWITCHERS, DATE TIME GENERATOR, MOTION DETECTORS, SPLITTER/INSERTER, TRANSFORMERS

Model	Price \$	Description
TC1400	650	6 position Sequential Switcher, individually adjustable dwell time, 2 outputs. Interface for TC1460A/2 Motion Detectors.
TC1404	210	"Alarm" auto homing sequential switcher. 4 position. One output. Interface for TC1460A/2 Motion Detectors.
TC1408	620	"Alarm" auto homing sequential switcher. 8 position. One output. Cascadable to 32 positions. Interface for TC1460A/2 Motion Detector
TC1418	650	8 position, Alarm Auto homing switcher. Two bridging video outputs. Interface with TC1460A/2 Motion Detector. On screen camera identification (formerly model TC1408B).
TC1420	165	Black out unit. Blacks out peak white portions of the video signal. Recommended for use only with Ultricon. Requires customized field hook-up.
TC1440B	405	Date and Time Generator. Year, month, day, hour, minute, and second. Black outline numerals. Position, brightness and size controls front panel accessible. Crystal control and DC options available.
TC1460A/2	740	2 channel VidAlert Motion Detector for 1 or 2 cameras. Interface with TC1400 Series sequential switchers for automatic camera call up. Controls on front panel.
TC1461	315	VidAlert motion detector for one camera. Alarm beeper and LED. Switcher and alarm interfaces.
TC1461/01	425	12 VDC Single Channel VidAlert Motion Detector. Beeper and LED Alarm Indicators. Switcher and Alarm interfaces.
TC1470A	330	Splitter/Inserter. Permits simultaneous display of two cameras on one monitor and/or tape recorder.
TC1313	11	DC power cord with connectors for TC1910 monitors.
TC1320	50	20' extension cable for TC5002 Color Camera to power supply
TC1324	11	24 V, 60 Hz transformer. Provides low voltage power for one TC1500 family 24 VAC camera. Plugs into standard wall receptacle
TC1334	13	Same purpose as TC1324 except will operate one TC2000 family, one TC1005 family or two TC1500 family 24 VAC cameras.

19" RACK MOUNT HARDWARE FOR TC14XX SERIES EQUIPMENT

TC1404, TC1461 AND TC1470 ARE QUARTER-RACK SIZE (All Others Are Half-Rack Size)

TC2117/01	65	For one half-rack equipment with one half blank.
TC2117/02	65	For two half-rack equipments.
TC2117/03	65	For one quarter-rack equipment with three quarters blank.
TC2117/04	65	For one half-rack and one quarter-rack equipment with one quarter blank.
TC2117/05	65	For two quarter-rack equipments with one half blank
TC2117/06	65	For three quarter-rack equipments with one quarter blank
TC2117/07	65	For four quarter-rack equipments.
TC2117/08	65	For one half-rack and two one quarter-rack equipments

10x

6x

Lenses may be oriented in any position with respect to camera.

SPECIFICATIONS

Imager: 1/2" CCD
Sensitivity(2856 K):

Scene Illumination*	fc	Usable Picture	Full Video
Scene Brightness*	lx	0.024	0.097
	fL	0.261	1.044
	nt	0.018	0.071
Faceplate Illum.	fc	0.060	0.242
	lx	0.0018	0.0071
		0.0190	0.0759

*f/1.2 lens, 75% highlight reflectance.
1.0 lux (lx) = 0.0929 footcandle (fc).
1.0 nit (nt) = 0.2919 foot Lambert (fL).

Resolution:

Horizontal — 403 elements (50% amplitude response at 200 TV lines/picture height). Vertical — 512 elements (Standard EIA Resolution).

Geometric Linearity: No camera distortion. Picture linearity limited by lens and monitor.

Light Range: 3.5 x 10⁶:1 with f/1.2 to T/360 auto iris lens. Includes selectable 10:1 AGC, internally adjustable for peak/average response weighting.

Automatic Lens Override (ALO): Provides camera-controlled auto-lens response independent of auto-lens setup. Eliminates AGC/Auto-Lens interaction and gives smooth, step-free response throughout light range. Compatible with all ES and EX Series Auto Iris lenses.

Signal to Noise: Better than 65dB.

Bandwidth: 3.7MHz.

Gray Scale: At least 10 steps.

Gamma Correction: Factory set for preferred response. Internally changeable from 0.5 through 1.0.

Composite Video Output: 1.0 to 1.4Vp-p. Adjustable attenuator-type control on back panel. 75 ohm.

White Clipper: Automatic. Keeps highlights within preset level to avoid monitor or VCR overdrive.

Auto Black: plus keyed clamp maintains constant pedestal setup throughout entire light range.

Sync: EIA RS-170. Phase-Locked-Loop synchronizes camera to power line zero crossing. Crystal control option available (DC and 220VAC models - Crystal Control only).

Genlock: Accepts composite sync or H&V drives at negative 4Vp-p (3 to 6Vp-p, RS-170).

External Controls: Composite Video Level, Imager Position and Lock.

Supply Voltage/Power: 12VDC models 10.5 to 16VDC. 7.2 watts nom. at 12V. 24VAC models 20 to 28V or 26 to 34V, 60 Hz. (Range Switch). 15 watts nominal at 20 or 30 volts.

120VAC models 100 to 140V, 60 Hz. 15 watts nominal at 120V.

220VAC models 198 to 264V, 50 Hz. 15 watts nominal at 220V.

Camera/Power Supply Separation: (Remote Power Supply Models) up to 100 ft. using AWG-18, Type SV, 3-conductor cable (12 ft. cable supplied).

Lens Mount: Standard "C".

Camera Mounts: Two 1/4" - 20 tapped holes in base. One 1/4" - 20 tapped hole in top.

Connectors: Genlock/Auto-Iris — 8-pin DIN.

Video — BNC.

Printed Circuit Board: Fiberglass epoxy with double-sided ground plane structure. Plated through holes.

Finish: Light beige Lexan case.

Weight: Camera (12V and Remote PS models) — 2.0 lbs. (0.9kg).

Camera/Integral Power Supply — 3.3 lbs. (1.5kg).

Remote Power Supply only 1.3 lbs. (0.6kg).

Size: Camera (12V and Remote PS models) — 3.05"H x 4.50"W x 7.10"L (75 x 114 x 180mm).

Camera/Integral Power Supply — 3.05"H x 4.50"W x 9.23"L (75 x 114 x 235mm).

Remote 24V Power Supply — 3.36"H x 2.61"W x 2.65"L (85 x 66 x 68mm).

Remote 120 or 220V Power Supply — 3.10"H x 2.53"W x 2.65"L (79 x 65 x 68mm).

12x Zoom Lens, Sup't Rail & Camera (w/o Power Supply) — 6.35"H x 5.70"W x 19.7"L (162 x 145 x 500mm).

12x Zoom Lens, Sup't Rail & Camera/Integral Power Supply — 6.35"H x 5.70"W x 21.85"L (162 x 145 x 555mm).

Environment: Temperature — 0 to 122°F (-18 to 50°C).

Humidity — 0 to 95% relative.

Vibration — 3g swept sine wave, 15 to 2000 Hz.

Shock — 50g.

CLOSED CIRCUIT VIDEO EQUIPMENT

TRANSCOAX CONTROL SYSTEM TC4500 SERIES

The TC4500 Series, TransCoax, Control System provides control of camera functions at distant sites via the coaxial video cable. It thus eliminates the necessity and expense of separate control wiring to camera sites. The system consists of control Transmitters at one or more locations and Receivers at the site of each camera to be controlled. The control transmitters insert encoded control signals on the video cable during the retrace time and send these signals to the on-site receiver where they are decoded and used to implement the various control functions. The eight-camera transmitter, TC4508, with a built-in vertical interval switcher, can be used to control up to eight cameras. A one-camera transmitter, TC4501, is available for controlling a single camera or it can be used in conjunction with V1400S Series manual switchers to control multiple cameras. The transmitters may be used in series to control cameras from multiple locations. A lock-out switch with a "busy" light eliminates conflicting control signals in such multi-control systems.

Complete Site Control

- Pan, tilt, and auto-pan for 24 VAC, 115 VAC and 115 VDC pan/tilts.
- Zoom, focus, and iris control with variable speed.
- Two momentary switches for control of intermittent auxiliaries.
- Two On/Off switches for control of latching auxiliaries. (One required for auto-pan implementation)

Easy to Use

- Just connect to existing or new video cabling and to a power source
- 2:1 or random interlace operation, monochrome or color.
- Vertical interval switcher in 8-camera transmitter for roll-free pictures and clean VCR recordings.
- "Back-porch" video clamping for hum and noise rejection.
- Weatherproof NEMA on-site receiver enclosure.
- Sealed "MS" style receiver connectors.

WITH TC4508 FOR 2 TO 8 CAMERAS - OR TC4501 FOR 1 CAMERA

WITH TC4501 and V1400S SERIES SWITCHER FOR MULTIPLE CAMERAS

Specifications

TC4508, TC4508X Eight-Camera Control Transmitters

Use to control one to eight cameras

Switching Vertical interval

Controls:

- Camera Selection - 8 "illuminated on" pushbuttons.
- Pan/Tilt - Joystick.
- Zoom In/Out - two position lever switch.
- Focus Near/Far - two position lever switch.
- Iris Open/Close - two position lever switch.
- Lens Control Speed - Slow to Fast rotary knob.
- Latching Auxiliary #1 On/Off - two position lever switch.
- Latching Auxiliary #2 On/Off - two position lever switch.
- Momentary Auxiliaries #3 & #4 - two position lever switch (Aux #3 - Up, Aux #4 - Down).
- On/Off - rocker switch. LED "On" indicator.
- Channel Lock/Unlock - rocker switch. LED "Busy" indicator.
- *Selectable at each receiver to control Auto-Pan.

Latching Auxiliary "On" Indicator - LED (selectable at each receiver for status of either Aux #1 or Aux #2).

Video Input (Hi Z, loop-through):

- 115 V Models - 525 line, 30 field, NTSC.
- 230 V Models - 625 line, 25 field, CCIR.

Video Output 1.0 V p-p composite video.

Operating Distance:

- With low loss RG-59/U type cable (Belden #9259 or equiv.) - 2000 ft. (600 m).
- With low loss RG-11/U type cable (Belden #9292 or equiv.) - 4000 ft. (1200 m).

Connectors:

- Video Input - 16 BNC (2 per camera for loop-through).
- Video Output - 1 BNC.
- Power - 3-wire cord supplied.

Supply Voltage:

- 115 V Models - 115 V, 60 Hz. (100 to 130 V).
- 230 V Models - 230 V, 50 Hz. (200 to 260 V).

Power 4 watts approx.

Size:

- Table Top 1.81" H x 17" W x 9.5" D (46 x 432 x 241 mm).
- Racked* 1.75" H x 19" W x 9.5" D (44 x 483 x 241 mm).

*Order Rack Kit TC4501MK

Weight 9 lbs. (4 kg) approx

Ambient Operating Temperature -20 to +120° F (-29 to +49°C).

TC4501, TC4501X

Single Camera Control Transmitters

Use to control one camera - or, with a V1400S Series Manual Switcher, to control multiple cameras.

Same as TC4508 Eight-Camera Control Transmitters except do not include the vertical interval switcher or the camera selection pushbuttons and have only two BNC video-in connectors for loop-through of a single input.

TC4550, TC4550X Receivers

One required at each camera site to be controlled.

Controls "On/Off" toggle switch.

Signal Input 1.0 V p-p composite video, Hi Z loop-through (100 K ohm approx.)

Pan/Tilt Output:

- Internal Selections - 24 VAC, 115 VAC, 115 VDC.
- Max. Current - 2 amps continuous, 4 amps intermittent.
- Auto Pan - Internally selectable constant pan voltage.

Lens Outputs:

- Zoom, Focus, Iris - 7 VDC (adjustable with "speed" control) (1 V p-p, composite video & 12 VDC available for auto-iris).

Connectors:

- Video - 2 UHF for loop-through.
- Pan/Tilt - one 7-pin sealed "MS" style. Mating connector supplied.
- Lens - one 6-pin sealed "MS" style. Mating connector supplied.
- Auxiliaries - Internal barrier strips. (Customer to supply and install connectors).

Relay Contact Rating:

- Auxiliaries #1 & #2 (Latching) - 5.0 amps at 115 V.
- Auxiliaries #3 & #4 (Momentary) - 0.5 amps at 115 V.

Supply Voltage:

- TC4550 - 115 V, 60 Hz. (100 to 130 V).
- TC4550X - 230 V, 50 Hz. (200 to 260 V).

Power 8 watts approx. - plus pan/tilt power.

Construction Weatherproof NEMA enclosure.

Size 10" H x 8" W x 3.3" D (254 x 203 x 84 mm).

Weight 10 lbs. (4.5 kg) approx.

Ambient Operating Temperature -20 to +120° F (-29 to +49°C)

TC1678BE	1950	Keyboard - Desktop Executive - No Pan/Tilt or Lens Control.
TC1680	1225	Receiver/Driver - Outdoor. 120 V Pan/Tilt. Optional heater - \$40 Dealer Cost (Add suffix "H" to Model No.). Up to 3 momentary or latching auxiliaries - \$40 each Dealer Cost (Add suffix "M" or "L" and 1, 2, or 3). Also specify auxiliary output as 24 V, 120 V, or contact closure, i.e., TC1680HM1L2 (M is CC, L's are 24 & 120 V).
TC1680N	1135	Same as TC1680, mounted on metal plate with no housing.
TC1681	985	Same as TC1680 but for 24 V Pan/Tilt.
TC1681N	875	Same as TC1681, mounted on metal plate with no housing.
TC1682	925	Receiver/Driver. Indoor. 24 V Pan/Tilt. Up to 3 momentary or latching auxiliaries, 24 VAC only. - \$40 each Dealer Cost (Add suffix "M" or "L" and 1, 2, or 3), i.e., TC1682M2L1.
TC1685P	440	Preposition Card for TC1680, TC1681 and TC1682 Receivers.
TC1689/8	3615	Multi Receiver/Driver for up to 8 cameras. Indoor 24 V Pan/Tilt. No auxiliaries. Surface mount.**
TC1689/6	3615	Receiver/Driver for up to 6 cameras. Indoor 24 V Pan/Tilt. Eight auxiliaries with 24 V output. Surface mount.**
TC1689/4	3615	Multi Receiver/Driver for up to 4 cameras. Indoor 24 V Pan/Tilt. Sixteen auxiliaries with 24 VAC output. Surface mount.**
TC1689/0	3615	Multi Receiver - 32 auxiliaries only. 24 VAC output. Surface mount.**
TC1689P	645	Preposition Card for TC1689 Receiver/Driver (10 positions).
TC1691	415	Distribution Unit. Required where control cable exceeds 5000 ft. or 3 Receiver/Drivers in "Star or Daisy Chain" for TC1600 systems or 8 for TC1990 systems. Surface mount.
TC1695	675	Alarm Interface Unit for TC1600 and TC1700 Systems. 64 switch closure inputs (for switch "open" inputs add suffix "C" to model number).
TC1696	675	Same as TC1695 but for use with TC1990 series systems.

*For Rack Mount add \$50.00 Dealer Cost.

**For Rack Mounting add suffix "R" to Model No. — same price.

SPECIAL CORNER MOUNT HOUSING AND LENS FOR RESTRICTED SPACE SUCH AS ELEVATORS

TC2070HL	575	Corner Mount Housing for TC2021, TC2022, TC2521 or TC2522 Camera. Includes 4.8 mm wide angle lens. Purchase camera separately.

TRIPODS AND ACCESSORIES

TRIPODS

Sachtler Triangle

A triangle for slippery or delicate floors. Made of various rubber and polyamid parts, it is light, robust and unbreakable. Rubber pull loops attach it to the tripod. For transport the triangle is folded inwards and is stored together with the tripod in the container.

Sachtler Triangle From \$250.00

Sachtler Semi-Dolly

A lightweight, rolling triangle with independent brakes for the rolling and spinning action of the wheels; for clean straight and defined circular drives.

The wheels have cable guards which are adjustable in height. The Semi-Dolly folds to a minimum in volume and has a handy grip to ease transport.

Sachtler Semi-Dolly \$795.00

Sachtler Tripods

Sachtler tripods are extremely lightweight, robust and twistfree with 100mm resp. 150mm bowl leveling.

Height clamping of legs requires little effort with the fast and secure ball-ring clamp. The pre-set end pressure point of this clamp prevents damage by over-tightening. Double claws are provided for using the tripod with the triangle or rolling triangle.

Stainless steel spikes provide rigid standing on soft ground. For the weight minded traveling cameraman the 100mm bowl tripod is available with carbon-fibre legs, saving 2.8 kgs in weight, when using it with the lightweight triangle the saving is 4.2 kgs.

	SPECIFICATIONS 100mm Bowl For Panorama and Video 20	SPECIFICATIONS 150mm Bowl For Video 25-30
Tripod long		
Height at 50cm spread	26.8" - 54" (68 - 137cm)	32.7" - 60.6" (83 - 154cm)

Weight Duraluminium	3.3 lbs (1500 g)	6.6 lbs (3000 g)

Sachtler Containers

For Panorama, Video 20 and Video 25 the container offers effective protection for the complete unit — head, tripod, triangle — during transport and storage. For Video 30 a separate case for the head and a container for the tripod with triangle are available

Sachtler Containers **POR**

Sachtler Shoulder Brace

The shoulder brace is easily adjustable for body shape and type of camera. The touch & go quick-release-system permits speedy change of camera between tripod and shoulder brace. For transport it is collapsible, its weight is 1.1 kg.

Sachtler Shoulder Brace **\$712.00**

THE ACTION TRIPOD FOR NEWS CREWS ON THE GO!

The Hot Pod

- Locked when folded, handy grip
- Central lock for easy set-up
- Self-locking lever for camera leveling
- Self-locking center column for increased rise and height

For ENG-Cameras

The Sachtler Hot Pod with the Sachtler Panorama head. Minimal height (up to wedge plate) — 940mm; Legs fully extended — 1432mm; Max. height — 1892mm.

For Recording-Cameras

The Sachtler Hot Pod with the Sachtler Video 20. Minimal height (up to wedge plate) — 957mm; Legs fully extended — 1449mm; Max height — 1909mm.

Volume, for Transport and Storage

Hot Pod with Panorama: Full length — 1003mm, ø 195mm; Hot Pod with Video 20: Full length — 1020mm, ø 240mm

HEADS

VIDEO 30

EFP

The utmost in comfort for EFP:

Sachtler Video 30

For studio and field production using the new generation of easy-to-carry cameras.

Sliding camera platform to compensate for center of gravity displacements.

Dynamic Counterbalancing System (pat. pend.)

Balancing momentum adjustable in 7 steps by means of 3 toggle levers for camera weight and center of gravity height and to easily re-balance the camera when changing lenses and/or viewfinder-monitors.

Tilt range +/-60°.

Drag individually adjustable in 7 steps for pan and tilt. As an option, a lens-support fitting the sliding camera platform can be made available. The supporting device is adjustable to meet different camera/lens combinations. Support is effected by a spring loaded bracket, compensating for the extra load of narrow-angle zoom lenses, not affecting lens-prism-tube alignment.

Camera Interface

Heavy-duty touch & go system or Debrie wedge plate

Tripod Interface

150 mm bowl, Mitchell intermediate

Specifications

- Capacity: 40 kgs • Counterbalancing momentum • Pan: 360°
- Tilt: +/-60° • Damping: 7 steps for pan and tilt each • Pan arm O: 18 mm, extension 22 mm • Temperature range: -40° to +60° C
- Camera interface: heavy duty touch and go or Debrie wedge-plate
- Tripod interface: 150 mm bowl • Sliding platform: +/-50 mm
- Weight: 9 kgs • Finish: black enamel

Video 30HP

Same as Video 30S but with Vinten interface

\$5650.00

Video 30S

Same as Video 30, but with heavy-duty, 7 position dynamic counterbalancing system, tilt range ± 60°

\$5376.00

VIDEO 25

ENG/EFP

The doing everything:

Sachtler Video 25

A medium sized ENG/EFP fluid head optimized for on location shooting combining the stability and pan and tilt comfort previously offered only by significantly larger and heavier camera supporting systems.

Sliding camera platform to compensate for center of gravity displacements.

Dynamic Counterbalancing System (pat. pend.)

Balancing momentum adjustable in 4 steps by means of 2 toggle levers for camera weight and center of gravity height and to easily re-balance the camera when changing lenses and/or viewfinder monitors.

Tilt range +/-60°.

Drag individually adjustable in 7 steps for pan and tilt. Positive operational pan and tilt lock plus safety lock for keeping the camera in horizontal position.

As an option, a lens-support fitting the sliding camera platform can be made available. The supporting device is adjustable to meet different camera/lens combinations. Support is effected by a spring loaded bracket, compensating for the extra load of narrow-angle zoom lenses, not affecting lens-prism-tube alignment.

Camera Interface

Touch & go system to ease alternative use of camera on tripod or shoulder brace.

Tripod Interface

150 mm bowl, Mitchell intermediate

Specifications

- Capacity: 25 kgs • Counterbalancing momentum • Pan: 360°
- Tilt: +/-60° • Damping: 7 steps for pan and tilt each • Pan arm O: 18 mm, extension 22 mm • Temperature range: -40° to +60° C
- Camera interface: small touch and go wedge-plate • Tripod interface: 150 mm bowl • Sliding platform: +/-50 mm • Weight: 6.5 kgs • Finish: black enamel

HEADS

7 + 7

ENG

For the travelling news gatherer:

Sachtler Panorama 7 + 7

A small, lightweight fluid head for real news gathering, with an integrated counterbalance spring adequate for today's ENG cameras. To compensate for the center of gravity being displaced, this spring can be locked in 7 different positions.

Tilt range +/-90°.

Drag individually adjustable in 7 steps for pan and tilt. Together with the Sachtler Carbonfiber tripod and the lightweight triangle the weight of the complete system, including its carrying case, is 8.2 kgs.

Camera Interface

Touch & go system to ease alternative use of camera on tripod or shoulder brace.

Tripod Interface

100 mm bowl, Pro-Junior intermediate

Specifications

- Capacity: 10 kgs • Counterbalancing momentum • Pan: 360°
- Tilt: +/-90° • Damping: 7 steps for pan and tilt each • Pan arm O: 14mm • Temperature range: -40° to +60° C • Camera interface: small touch and go wedge-plate • Tripod interface: 100 mm bowl
- Sliding platform: no • Weight: 2.8 kgs • Finish: black enamel

\$2445.00

Panorama 3 + 3

3 step on-off drag control for pan + tilt **1965.00**

Panorama 1 + 1

1 step on-off drag control for pan + tilt **1410.00**

Panorama 7 + 7

Panorama to come with flat base in exchange for 100mm ball
add **100.00**

VIDEO 20

ENG/EFP

For the mobile unit:

Sachtler Video 20

A medium sized ENG/EFP fluid head for the ultimate in mobility. Lightweight but stable enough to accept ENG cameras with FP accessories.

Sliding camera platform to compensate for center of gravity displacements, more powerful counterbalancing spring for cameras with integrated shoulder brace or for cameras in EFP configuration.

Tilt range +/-60°.

Drag individually adjustable in 7 steps for pan and tilt. Positive operational pan and tilt lock plus safety lock for keeping the camera in horizontal position.

Camera interface

Touch & go system to ease alternative use of camera on tripod or shoulder brace.

Tripod Interface

100 mm bowl, Pro-Junior intermediate

Specifications:

- Capacity: 15 kgs • Counterbalancing momentum • Pan: 360°
- Tilt +/-60° • Damping: 7 steps for pan and tilt each • Pan arm O: 18mm, extension 22 mm • Temperature range: -40° to +60° C
- Camera interface: small touch and go wedge-plate • Tripod interface: 100 mm bowl • Sliding platform: +/-50mm • Weight: 5.5 kgs
- Finish: black enamel **\$3595.00**

XC-A1 ENG/EFP COLOR VIDEO CAMERA

New Field-Proven 2/3" Diode Gun Saticon* Tubes with Prism Optics
Broadcast-caliber picture quality starts with the three 2/3" Diode Gun LOC/MS Saticon* tubes coupled with a high-transparency glass f/1.4 prism beam splitter. The result is high sensitivity, enhanced resolution (750 lines), excellent S/N ratio (57 dB), truer colorimetry, plus reduced image retention and comet tailing. Bias lighting further reduces lag, especially for those critical low-light scenes.

Automatic Functions Offer Increased Ease-of-Use

- **Auto-White** — The high performance Auto-White circuit is supplemented by a preset 3200°K setting. This allows shooting to begin immediately if the action requires a quick change of scene
- **Auto-Black** — Black balance is continuously maintained by high-gain DC clamp circuitry and precisely calibrated by the micro-computer Digital Auto-Black Balance. This combination totally eliminates black balance adjustment when switching from 0 to 18 dB gain, and reduces routine maintenance requirements.

SPECIFICATIONS

Optical System: Prism beam splitter (f/1.4) with bias light injection
Lens Mount: Bayonet
Pick-Up Tubes: Three 2/3" Diode Gun LOC MS Saticons*
Scanning System: 525 lines; 2:1 interlace 30 frames/second
Synchronization:
 a. Internal Synchronization: Built-in sync generator (meets SC-H Phase requirements of RS-170A)
 b. External Synchronization: Locks to composite video or black burst
 Timing for External Synchronization: H-sync adjustable from 2 μ sec. delay to 4 μ sec. advance with respect to gen-lock input signal. Subcarrier phase adjustable 360° with respect to gen-lock input signal
 c. Blanking Width: H-Blanking adjustable from 10.0 μ sec. V-Blanking selectable — 18, 19 or 20 lines NTSC (I, Q System)
Color Encoder System:
Sensitivity: 2000 lux 89.9% Refl. 3200°K f4
Standard Illumination: Horizontal — 750 lines — center G-ch. (typ.)
Resolution: 600 lines encoded (typ.)
S/N Ratio: 57 dB measured without Gamma and without image enhancement
Registration Error:
 a. Zone 1 (within a circle of diameter equal to 80% of picture height): Less than 0.1% of picture height
 b. Zone 2 (within a circle of diameter equal to picture width): Less than 0.2% of picture height
 c. Zone 3 (outside of Zone 2): Less than 0.5% of picture height
Geometric Distortion: Less than 1.5% of picture height
Color Temperature Compensation: Built-in optical filter turret, 3200°K, 5600°K, 5800°K, + 12% ND, cap and built-in auto-white balance circuit with memory produce total range from 2000°K to 10,000°K + 9 dB (+ 6 dB) or + 18 dB (+ 12 dB)
Gain Boost: + 9 dB (+ 6 dB) or + 18 dB (+ 12 dB)
Detail Correction: 2 line type including level dependence, noise coring and comb filtering
Automatics: Auto-White, Auto-Black, Auto-Centering with memory and presets
Character Display: VF character display of camera status. Optional status display on main video

COLOR VIDEO CAMERA

- **Auto-Centering** — The Automatic Centering circuit allows centering to be automatically adjusted using computer control. A preset switch position is also available

+ 9/+ 18 dB High Gain Switch

Sensitivity can be increased 3X or 8X for low light-level scenes using the + 9 dB and + 18 dB settings. Minimum required illumination is an amazingly low 30 lux (2.8fc) at f/1.4, making the XC-A1 the ideal choice for difficult ENG work.

Compact, Lightweight, Solidly-Built Die-Cast Body Provides Balanced Weight and EMI Shielding

Sharp has precision-machined the die-cast camera body to create a durable, solid unit that assures optical alignment under the roughest ENG applications.

Automatic Beam Optimization Adjustment (A.B.O.)

Built-in automatic beam optimization circuitry can handle incident light intensity up to 8 times higher than normal. This feature eliminates "comet tailing" and "blooming" phenomena caused by bright pin-point light sources.

Color Temperature Filter System

A 4-position rotating filter system allows selecting the optimum color temperature filter for indoors, normal outdoor light, bright sunlit outdoors, and cloudy/dim outdoor light levels. This equipment insures the best possible picture image under every lighting condition.

Power Conserving Standby Switch

Switching to standby mode further extends running time with battery operation by reducing power consumption to a minimum while the operator is waiting for the action to begin.

Information-Packed 1.5" Viewfinder

The 1.5" underscanned electronic viewfinder can swivel a complete 180° and can slide right and left. Additional features include a built-in peaking circuit and a zebra pattern video level indicator with adjustable threshold.

Multi-Standard Intercom System

The intercom provides communication with virtually all major 2-wire intercoms presently in use.

XC-A1 (ENG configuration, less lens) **\$6500.00**

ABO: Automatic Beam Optimization stabilizes highlights up to 8 times normal
Auto Iris: Uses NAM (non-additive mix) of RGB plus center screen weighting
Zebra Indication: Adjustable zebra with On/Off switch
Color Bar: Split field 100% saturated, 75% amplitude in accordance with EIA RS-189A (with camera identification)
 Compensated for individual channels
Flare Compensation:
Input Signals:
 a. Gen-Lock Signal: 1V, composite video or 0.43V, black burst (75 ohm) 2 inputs — BNC connector, Remote/VTR connector
 b. Return Video: 1V (75 ohm) composite video synchronous or non-synchronous. 1 input — Remote/VTR connector
 c. Mic: 0 dB or + 50 dB Gain (internally selectable) 1 input — XLR connector
 1 input — Remote/VTR connector
 d. Tally:
Output Signals:
 a. Encoded Video: 1V (75 ohm) composite video
 2 outputs — Remote/VTR connector, BNC connector
 b. RGB Video: 0.714V (75 ohm) non-composite
 1 output for each signal at Remote/VTR connector (GRN with sync available)
 1V (75 ohm). RGB individual video, encoded video,
 c. Monitor Video: R-G, B-G. Registration video
 (on encoded output) -20 dBm or -70 dBm 600 ohm unbalanced 1
 d. Mic Audio: output — Remote/VTR connector
Power Requirements: + 10V to + 17.4V DC, approx. 22W regardless of input voltage
Ambient Operating Conditions: -10°C to + 40°C (14°F to 104°F) less than 90% humidity
Weight: Camera head approx. 8.58 lbs. (3.9kg)
 Viewfinder approx. 1.32 lbs. (0.6kg)
Dimensions: Height: Approx. 10-15/16" including legs
 Width: Approx. 15-7/8" including 1.5" viewfinder
 Depth: Approx. 7-13/16" including 1.5" viewfinder (without mic. holder)

XC-800 II

**XC-800 II
PROFESSIONAL ENG/EFP COLOR CAMERA**

- Saticon II® Tubes for reduced high light sticking
- 750 lines resolution
- 57dB SN
- Rugged die-cast chassis and RFI protected side covers with weatherproofing
- On-board microcomputer
- Flare compensation
- Dynamic beam optimization
- Geometry correction
- Test calibration signal with dual ramp for gamma correction
- 2 line image enhancement with comb filtering, noise coring and level dependence
- +9dB, +18dB gain switch
- Continuous gamma correction
- Digital auto white and auto black balance maintains balance when changing gain
- Split-field color bars (EIA RS-189A)
- Built-in Gen-Lock with H and SC phase shifters
- Broadcast I & Q encoder
- Phantom power for condenser microphones
- Video and audio monitoring for recording and playback
- Extremely accurate shading compensation
- Serial data transmission to reduce size, weight and cost of camera cable
- Glass f/1.4 prism beam splitter

XC-800PP ENG-PORTABLE PACKAGE

Includes:

- XC-800H** Camera head with quick disconnect tripod mount, battery bracket, service manual, extender board, spare fuses, registration chart.
- XC-815VF** 1.5" high resolution viewfinder with Zebra pattern, adjustable peaking, underscan and high gain indicator.
- XC-812AA** AC power adaptor.
- XC-80CC** Heavy duty carrying case.
- XC-800PP** ENG-Portable Package **\$7500.00**
(Less Lens/Less VTR Cable)

CAMERA HEAD AND COMPONENTS

- XC-800H** Camera head with quick disconnect tripod mount, battery bracket, service manual, extender board, spare fuses, registration chart ... **\$6240.00**
- XC-815VF** 1.5" High resolution viewfinder with Zebra pattern, adjustable peaking, underscan and high gain indicator **\$695.00**
- XC-803TX** Triax System. Includes base station and camera head **\$9995.00**
- XC-870VF** 7" High resolution underscanned studio viewfinder with Zebra pattern and adjustable peaking **\$770.00**
- XC-80RPA** Remote operation panel (includes R.O.P. adaptor) digital microprocessor controlled with serial data transmission and black stretch **2200.00**
- XC-802RA** R.O.P. adaptor (included with XC-80RPA) **455.00**

AC ADAPTOR, BATTERY AND CHARGERS (XC-800II/XC-900D)

- XC-812AA** AC power adaptor, mounts directly to camera head or can be used remotely **\$225.00**

VC-258

ENG/EFP COLOR CAMERAS

- XC-80BAT** Anton/Bauer 14.4V 4AH heavy duty NiCad rechargeable battery **495.00**
- XC-70SC** Anton/Bauer slow battery charger **64.00**
- XC-80FC** Anton/Bauer fast battery charger **495.00**
- XC-80Q4** Anton/Bauer 8-hour quad battery charger **895.00**
- XC-99BT** Frezzolini 14.4V 4AH heavy duty NiCad rechargeable battery **495.00**
- XC-99SC** Frezzolini slow battery charger **63.00**
- XC-99FC** Frezzolini fast battery charger **395.00**
- XC-99S8** Frezzolini slow charger for 8 batteries **495.00**

VTR CABLES (XC-800II/XC-900D)

- XC-8B3VT** VTR cable with 14-pin connector **\$195.00**
- XC-8B3VC** VTR cable with 10-pin connector **145.00**

OTHER ACCESSORIES (XC-800II/XC-900D)

- XC-80CC** Heavy duty carrying case **\$340.00**
- XC-80QRR** Tripod quick release plate — heavy duty .. **123.00**
- XC-80LB** Light bracket with universal stud **45.00**
- XC-800KIT-0001** Spare parts kit for XC-800 **2995.00**
- XC-800SM** Spare service manual for XC-800, XC-815VF, XC-870VF and XC-80RPA **75.00**

3000AF 660506

A working range from 63" to practically ground level makes this the ideal choice for special applications.

Construction: 3-section anodized aluminum channel

Channel Size: 28 x 21mm

Height: 63", Weight: 6 lbs.

Folded Length: 23¾"

Center Column: 2-piece reversible manual lift

Other: Indexed, locking telescopic braces

\$89.95

2000AF 660501

Smaller, lighter weight version of the 3000AF, the 2000AF offers the same capabilities in a smaller package.

Construction: 3-section anodized aluminum channel

Channel Size: 24 x 18mm

Height: 57", Weight: 5½ lbs.

Folded Length: 22½"

Center Column: 2-piece reversible manual lift

Other: Indexed, locking telescopic braces

\$84.95

3000GLB 660507

Our best conventional tripod, the 3000GLB has all the sought-after features.

Construction: 3-section anodized aluminum channel

Channel Size: 28 x 21mm

Height: 63", Weight: 6½ lbs.

Folded Length: 23¾"

Center Column: Gear operated

Other: Reversible pan-head, Center braced legs

\$79.95

2000GLB 660502

A smaller, lighter weight version of the 3000GLB.

Construction: 3-section anodized aluminum channel

Channel Size: 24 x 18mm

Height: 57", Weight: 5 lbs.

Folded Length: 22½"

Center Column: Gear operated

Other: Reversible pan-head, Center braced legs

\$69.95

2000SQ 660503

The 2000SQ is a basic no-nonsense tripod with a price to match.

Construction: 3-section anodized aluminum channel

Channel Size: 24 x 18mm

Height: 57", Weight: 4½ lbs.

Folded Length: 22½"

Center Column: manual lift

\$59.95

2000SQ Mini 660513

A heavy-duty, full-featured table top tripod designed for the serious enthusiast.

Construction: 3-section anodized aluminum channel

Channel Size: 24 x 18mm

Height: 20¾", Weight: 3¾ lbs.

Folded Length: 11½"

Center Column: manual lift

\$49.95

KC5000 660510

An ultra-compact tubular leg tripod complete with vinyl carrying case.

Construction: 3-section tubular aluminum

Height: 43", Weight: 1½ lbs.

Folded Length: 16"

Center Column: manual lift

\$37.95

255 Monopod 660512

Deluxe compact monopod.

Construction: 5-section tubular aluminum

Height: 61", Weight: 12 oz.

Folded Length: 15½"

Head: Locking ball and socket

Other: Knurled cam-type leg locks, wrist strap included

\$27.95

Cable Release 660601

All metal 24" cable release with shutter release lock.

\$4.95

Model 601 660542

Construction: 2-section anodized and lacquered aluminum channel

Channel Size: 1.1" x .81"

Height: 60" with column fully extended, Weight: 6 lbs.

Folded Length: 32"

Center Column: Geared, with locking screw, 12¾" rise

Panhead: Model AA 2-way, indexed head with locking controls. Oversize panhandle. Geared camera mounting screw for easy camera mounting and removal

Other: Center braces, rubber-tipped feet with metal spikes for outdoor applications

\$94.95

Model 65 660520

Construction: 2-section contoured anodized & lacquered aluminum tubing.

Channel Size: 1.1" x .81"

Height: 62", Weight: 8.5 lbs.

Folded Length: 33"

Center Column: Safety double-geared with 11¾" rise

Panhead: Model AA 2-way, indexed head with locking controls. Oversize panhandle. Geared camera mounting screw for easy camera mounting and removal

Other: 2" locking casters, locking center braces

\$169.95

Model 501 660541

Construction: 2-section anodized and lacquered aluminum channel

Channel Size: .95" x .71"

Height: 59", Weight: 5 lbs., 2 ozs.

Folded Length: 32"

Center Column: Geared, with locking screw

Panhead: Model CC 2-way, indexed head with locking controls. Oversize panhandle. Geared camera mounting screw.

Other: Center braces, rubber-tipped feet with steel ground spikes

\$84.95

Model 641 660544

Construction: 2-section contoured anodized & lacquered aluminum tubing.

Channel Size: 1.1" x .81"

Height: 60", Weight: 6 lbs., 8 ozs.

Folded Length: 32"

Center Column: Geared

Panhead: Model AA 2-way, indexed head with locking controls. Oversize panhandle. Geared camera mounting screw for easy camera mounting and removal.

Other: Locking center braces, rubber-tipped feet with steel ground spikes

\$139.95

Don't be locked into the OEM lens supplied with the C-mount video cameras on the market. Smith-Victor C-mount adaptors allow maximum versatility and flexibility by enabling all popular 35mm photographic lenses to be mounted on all video cameras with a removable C-mount lens.

Now, any photographer can make use of their existing 35mm lenses to realize the true potential of their video cameras. Fisheyes, wide-angles, macros, telephotos, and zooms can all be adapted with one simple converter, and at a fraction of the cost of high-

priced, hard-to-get video lenses. The creative possibilities are almost endless.

Smith-Victor Kenlock C-mount adaptors are of a precision-machined alloy featuring plated mounting flanges which conform to each lens manufacturer's specifications. To use, simply unscrew the existing C-mount video lens, affix the appropriate converter in its place, and attach the desired lens following the standard procedure common to that lens mount.

Adaptors are available to fit the following 35mm lens mounts:

Canon mount	640300
Nikon mount	640301
Pentax K mount	640302
Pentax S mount	640303
Minolta mount	640304
Contax/Yashica mount	640305
Olympus mount	640306

\$29.95 each

Note: C-mount adaptors are not meter-coupled. Lens apertures must be set manually.

DXC-1850 HBST Color Video Camera

The DXC-1850 with Sony's HBST, High Band Saticon™ Tricon, pickup tube delivers the best possible picture in a single-tube camera. The camera head, by virtue of its compact design and extremely light weight, is ideally suited for use with specialized fiber optics and a wide range of other optical instruments in fields ranging from medicine to metallurgy.

Features

- $\frac{2}{3}$ " HBST (High Band Saticon™ Tricon) pickup tube for the best possible picture from a single-tube color video camera
- HBST pickup tube assures high resolution, good color fidelity and uniformity, low image lag and retention
- Lightweight camera head (less than 1 lb. 9 oz.) for precision interface with optical equipment: microscopes used in medicine, biology, metallurgy
- Full range of automatic controls for very simple, very safe operation
- Ideal for surveillance and teleconferencing, especially when lighting and installation-space are limited
- 3-mode white balance: automatic, manual and halogen-lamp
- Red Hue Expander, Red Detail Control for enhancing and delineating red color nuances
- Provision for handle on control unit, which is 19" EIA Standard for rack mounting
- Safety conscious features include an exterior finish highly resistant to alcohol and disinfectants, electrical leakage of less than 10 micro Amps and solid housings not prone to damage from accidental spills
- On-screen illumination indicating lines simplify illumination adjustments
- Uniformity control ensures optimum color quality with wide variety of optical instruments by compensating for color hue distortions
- Built-in two line type Vertical Image Enhancer
- Automatic Beam Optimizer — ABO
- VBS GenLock capability
- Automatic and manual gain/iris control
- Chroma level control

Specifications

- Pickup tube: $\frac{2}{3}$ " HBST tube
- Scanning system: 525 lines 30 frames NTSC 2:1 interlace
- Sync system: Internal or external
- Horizontal resolution: 400 lines
- Sensitivity: 2000 lux f.4
- Automatic gain control range: 120-2000 lux (with f/2.5 lens)
- Output: 1.0 Vp-p, sync negative 75 Ohms unbalanced x 3
- Video signal-to-noise ratio: 53 dB
- Lens mount: C-mount
- Power requirement: AC 120V, 60 Hz + 11 to +16 V DC
- Power consumption: AC 26W DC 18W
- Operating temperatures: 0°C to +40°C
- Weight: CHU: 1 lb 9 oz (0.71 kg) CCU: 17 lb 10 oz (8.2 kg)
- Dimensions: CHU: 2-3/8" x 2-1/4" x 7-3/4" HWD 55mm x 59mm x 196mm HWD; CCU: 3-1/2" x 16-3/4" x 13-3/8" HWD 88mm x 424mm x 340mm HWD

Supplied Accessories

- Camera cable (10m)
- 75 Ohm coaxial cable with BNC connector (10m)
- AC power cord
- Camera head bracket
- Bracket set for 19" rack mounting
- Filter set (ND4, W14 and replacement tool)
- Battery (Eveready M 542)

Optional Accessories

- VCL-1106YB 6.1 auto iris power zoom lens
- VCL-08S Wide angle lens
- CCJ-10 10m camera cable
- CCJ-25 25m camera cable

DXC-6000

DXC-M3

A 3-Tube MF Saticon™ Color Video Camera

- **MF Saticon™ Pickup Tube:** Sony developed the 3/8" MF Saticon tube to achieve both a significant improvement in resolution and a reduction in geometric distortion. The 3 tube system in the DXC-M3, using the new technology, offers superior picture quality with a high level of operational simplicity.

- **Superior Resolution:** The MF Saticon tube with its reduced beam spot achieves 650 lines of resolution at the center. Corner resolution was also improved due to the flat focus effect realized in the new tube design.

- **Outstanding Picture Quality:** Measurable improvements in picture quality attained with Sony's new MF Saticon tube technology include less geometric distortion, less registration error, anti-high-light sticking, a S/N of 57 dB thanks to a low output capacitance type target electrode, exclusive Sony FET and a sensitivity of 2000 lux at F4. A standard 2H vertical image enhancer also helps to create a sharper and crisper picture.

- **Improved Operating Convenience:** New sophistications in chip design enabled Sony to enhance the operation of the DXC-M3 with computer-assisted automatic centering without any special chart consultation, automatic black setting/automatic black balance and automatic white balance. A visual warning system has also been integrated into the viewfinder display so that the cameraman is alerted in the case of low light, incorrect balance or centering and when battery power is too low.

- **Character Generator and Display:** Highly advanced microcomputer type circuitry allows Sony to provide the added convenience of a built-in character generator that will hold 60 characters. Either letters or numbers can be stored, displayed in the viewfinder and recorded as titles, dating or identification coding.

- **Portability Plus:** Compact tube design and highly condensed circuitry result in improved portability. Streamlined design makes the camera easier to handle and lighter in weight with both camera and viewfinder totalling just over nine pounds.

- **A Highly Versatile System:** Designed for optimum flexibility and versatility, the DXC-M3 also has a serial data command system that allows full remote control via new, lightweight, low cost 14 pin connecting cables. There's also direct interface with most consumer VTRs with no additional adaptors, lens interchangeability with other Sony 3 tube cameras and the ability to use a variety of different viewfinders.

3-Tube MF Saticon Color Video Camera

- **MF Saticon™ Pickup Tube:** Sony developed the 2/3" MF Saticon tube to achieve both a significant improvement in resolution and a reduction in geometric distortion. The 3 tube system in the DXC-M3A, using the new technology, offers superior picture quality with a high level of operational simplicity.
- **Superior Resolution:** The MF Saticon tube with its reduced beam spot achieves 750 lines of resolution at the center. Corner resolution was also improved due to the flat focus effect realized in the new tube design.
- **Outstanding Picture Quality:** Measurable improvements in picture quality attained with Sony's new MF Saticon tube technology include less geometric distortion, less registration error, anti-high-light sticking, an S/N of 57 dB thanks to a low output capacitance type target electrode, exclusive Sony FET and a sensitivity of 2000 lux at F4. A standard 2H vertical image enhancer also helps to create a sharper and crisper picture.
- **Improved Operating Convenience:** New sophistications in chip design enabled Sony to enhance the operation of the DXC-M3A with computer-assisted automatic centering without any special chart consultation, automatic black setting/automatic black balance and automatic white balance. A visual warning system has also been integrated into the viewfinder display so that the cameraman is alerted in the case of low light, incorrect balance or centering and when battery power is too low.
- **Color Character Generator and Display:** Highly advanced micro-computer type circuitry allows Sony to provide the added convenience of a built-in character generator that will hold 48 characters. Either letters or numbers can be stored, displayed in the viewfinder and recorded as titles, dating or identification coding. Memory-stores character message.
- **Portability Plus:** Compact tube design and highly condensed circuitry result in improved portability. Streamlined design makes the camera easier to handle and lighter in weight with both camera and viewfinder totalling just over nine pounds.
- **A Highly Versatile System:** Designed for optimum flexibility and versatility, the DXC-M3A also has a serial data command system that allows full remote control via new, lightweight, low cost 14 pin connecting cables. There's also direct interface with most consumer VTRs with no additional adaptors, lens interchangeability with other Sony 3 tube cameras and the ability to use a variety of different viewfinders. NP-1 NiCad adaptor.

DXC-1820KA SMF TRINICON® COLOR VIDEO CAMERA

FEATURES

- Lightweight, Rugged Aluminum Diecast Camera Body
- Optical Filter for Shooting in Fluorescent Light
- Vertical Image Enhancer Standard
- Built-In Electret Condenser Microphone
- Built-In Color Bar Generator
- Adjustable Horizontal and Vertical Blanking Width
- Intercommunication Headset Jack On Camera Head
- Built-In Bias Light
- Optical Black System
- Diode Gun
- Saticon™ Layer
- MF System
- Trinicon System

12:1 Servo Zoom Lens Standard (DXC-1820KA)

The 12:1 f/1.6 servo zoom lens provides zoom with variable speed, wide range macro and auto iris and there is a 14:1 f/1.6 servo zoom lens also available as an optional accessory. The lenses automatically close to protect the pickup tube when the power to the camera is turned off.

Full System Capability

The camera can be used as a studio camera when connected to a CCU-1800 camera control unit. The CCU can remotely control most of the functions of the camera. The CCU, a 4" viewfinder/monitor and AC adaptor can all be mounted in a single standard 19" rack and the system can be easily configured for either EFP or studio use.

Information Pack 1.5" High Resolution Viewfinder

A 1.5" high resolution (400 lines) viewfinder monitors the recording picture. Warning indicators in the viewfinder illuminate if (1) there is a problem with the VTR or the tape, (2) the battery is weak, (3) the lighting is insufficient, or (4) the video output level is too low. The playback picture and the return video picture can be viewed when the camera and a VTR are connected with a CCQ camera cable.

Automatic White Balance Adjustment w/Preset Position

The white balance is automatically adjusted by a microcomputer and the adjusted value is stored in the digital memory even when the power is off. When the WHITE BAL switch is set to PRESET, a white balance of 3200°K is obtained. This allows you to start recording without the need to adjust the white balance.

Sensitivity

The gain up function makes low light shooting possible down to 4 fc (40 lux) and automatic, 0, +6, +12 and +18dB positions are also provided.

Automatic Beam Optimizer (ABO)

An automatic beam optimizer allows the camera to accept a light input that exceeds normal levels without causing comet tails or blooming and makes highlight handling very easy.

Versatile Interfacing Capability

A four position VTR selection switch is provided to make interfacing with various types of portable VTRs possible without any additional adaptors.

Fader

The fader makes it possible to record with fade-in and fade-out for more professional results. The fade time can be adjusted from 0 seconds to about 5 seconds.

Negative-Positive Picture Converter

The camera picture can be reversed to provide a negative picture for special effect.

DXC-1820KA

SPECIFICATIONS

Pickup Tube: 2/3" diode gun SMF Trinicon with built-in bias light, CT-2232

Lens Mount: DXC-1820: S mount, DXC-1821: C mount

Optical Filter: 3200°K, 4800°K, 5800°K, white fluorescent lamp

Signal System: EIA standard, NTSC color

Sync System: Internal sync or Genlock

Horizontal Resolution: 300 lines

Sensitivity: 200 fc (2000 lux) F4 at 3200°K, 89.9% reflectance

Minimum Illumination: 4.0 fc (40 lux) at f/1.6, +18dB gain up

Signal-to-Noise Ratio: 53dB in luminance channel

Video Output: BNC (1.0V p-p, 75 ohms)

VTR/CCU: Sony Q type 14P (automatic detection)

Mic Input: Mini (-60dB, 600 ohms)

Genlock: BNC (composite or black burst, 75 ohms)

Gain Switch: Auto (0 to +12dB) 0/6/12/18dB

Vertical Enhancer: 1H

Power Consumption: 12W (camera head only), 14.1W (w/1.5" VF)

Operating Temperature: 32°F to 104°F (0°C to 40°C)

Weight: Camera: 6 lbs. 6 oz. (2.9kg) Camera + 12X zoom lens + viewfinder + shoulder pad: 11 lbs. 11 oz. (5.3kg)

Dimensions: 3-5/8"H x 7-1/8"W x 12-7/8"D (90 x 180 x 325mm)

DXC-1820KA	DXC 1820 Camera head, DXF 1820 1.5" viewfinder, VIC 1020SY 12x zoom, DC-6 Battery Adaptor, LC1820 carrying case, CCQ 2AR cable	\$3,345.00

AVC-D1

Miniature CCD Video Camera

Compact enough to fit in the palm of your hand, the AVC-D1 delivers versatile performance with no sacrifice in video quality. Lightweight and easy to handle, it can be quickly attached to either a wall mount or tripod for use in a multitude of applications.

FEATURES

CCD Image Sensor

CCD (Charge Coupled Device) solid-state image sensor for extended life and improved stability.

CCD Image Sensor Provides:

- High resistance to image burning
- Low lag
- Excellent geometric accuracy
- No magnetic interference

Lightweight and Compact

Revolutionary size, 1.14"H x 1.73"W x 4.72"D, and ultralight weight, 7.7 oz., for incredible versatility.

High Sensitivity

High sensitivity makes low light shooting possible with minimum illumination of 0.3fc (3 lux).

Lens Interchangeability

Special mini bayonet mount for ultra compactness. Supplied C mount adaptor allows use of C mount lenses.

Full Solid-State Design

All electronic components are solid-state for video performance unaffected by shock and vibration.

Quick Start-Up

Shooting start-up requires 0.5 seconds and no preheating is necessary.

AVC-D1

Tripod Mountable

Tripod attachment screw holes of 1/4" and 3/8" make mounting possible on both tripods and pan/tilt units. The attachment is removable from the bottom of the unit and mountable on the top cover.

Supplied Accessories

Standard Lens with IR Filter: f/1.4, 16mm, manual iris, manual focus lens with detachable IR cut filter.

C Mount Adaptor: Any C mount lens can be attached by using this C mount adaptor.

ND Filter: The 1/64 ND filter attaches to the standard lens.

CCDC-10: 33' connecting cable (for use with CMA-D1).

AVC-D1 CCD Video Camera \$1350.00

Optional Accessories

CMA-D1 AC Adaptor: The CMA-D1 supplies power to two AVC-D1s simultaneously. Power Requirements: 120V AC, 50/60Hz, DC Out: 12V, 1A, 2 outputs, Weight: 3 lbs., 15 ozs. (1.8kg), Dimensions: 2.75"H x 6.50"W x 5.25"D \$220.00

VCL-08D1 Auto Iris Lens

CCDC-25 82' DC Power Cable: (For Use with CMA-D1) POR

CCDC-50 165' DC Power Cable: (For Use with CMA-D1) POR

CCD-G5

Color Video Camera

- Ultra-compact portable color video camera using solid-state CCD (Charge-Coupled Device) imaging sensor
- Lightweight: 2 lbs., 7 oz.
- Exceptional color fidelity and uniformity
- High sensitivity (down to 30 lux)
- No image lag and burn
- Low power consumption with no warm-up time necessary
- High quality 6:1 power zoom lens with macro position
- Built-in electronic viewfinder with 1-1/2" B/W CRT
- Auto white balance
- Record/review (with SL-2000/SL-2500/SL-2700)
- Electronic fader
- 2-channel audio recording capability
- Weight: 2 lbs., 5 oz.
- Dimensions: 4"W x 3-7/8"H x 7"D

Supplied Accessories

Shoulder strap, ME-20H earphone, lens cap. \$1300.00

Optional Accessories

Camera Extension Cable: CCK-5 . . . \$ 48.00

Camera Extension Cable: CCK-10 . . . 63.00

Camera Plug Adaptor: CMA-1010A . . . 55.00

Camera Adaptor Cord: CMA-1030 . . . 55.00

Unidirectional External Microphone: ECM-K100B 60.00

External Zoom Microphone: ECM-Z300C 150.00

Hand Grip: GP-10 30.00

Camera AC Power Adaptor: HVA-200 55.00

Camera AC Power Adaptor: HVA-220 65.00

Special Effects Generator: HVS-120K 550.00

External Microphone Shoe: SAD-100 25.00

Filter Kit: VF-105A 65.00

CCD-G5

**AVC-1400
COMPACT MONOCHROME VIDEO CAMERA**

Consists of a camera head and a separate power unit to make the camera head truly compact and lightweight. Ideal for surveillance or observation system. Power supply and video signal transmission with a single coaxial cable. Easy handling and adjustment: only focus adjustment. Automatic Sensitivity control for the most suitable lighting condition adjustment. Light Emitting Diodes for pilot lamp. Camera Weight: 2 lbs., 2 ozs. Dimensions: 8" x 4" x 2½". Power Unit Weight: 2 lbs., 13 ozs. Dimensions: 6½" x 2¾" x 4¾"

AVC-1400. Black and White Surveillance Camera with 16mm f/1.7 lens **\$495.00**

AVC-1400

**AVC-3260DX
VERSATILE MONOCHROME VIDEO CAMERA**

Easy-to-operate video camera for versatile applications such as program production at small-size video studio, surveillance system, etc. Sharp and crisp picture due to minimal interference and excellent resolution. Stable quality performance assured by precise engineering and reliable solid-state circuitry. Reinforced mechanical construction assures lasting stable performance and stability against temperature change, vibration, impact, etc. Automatic sensitivity control for regulating camera sensitivity to suit a wide range of lighting conditions. Light Level Switch provides clear pictures under lighting intensity of as low as 15 lux. There are two types of camera output. VIDEO OUT: connects to a video tape recorder or monitor for direct picture display, and VIDEO/SYNC: connects to a video tape recorder, or to other components such as special effects generator, wiper and switcher. Selectable between internal and external sync system. Adjustable pedestal level for contrast matching between cameras with multiple camera connections. Sony Viewfinder AVF-3250 (supplied w/AVC-3250DX & AVC-3260DX) can be installed onto the camera for direct monitoring without any cable or additional hardware. Truly compact and lightweight.

AVC-3260DX. Black and White Studio Camera ensemble including AVC-3260 camera, zoom lens, viewfinder, tripods, microphone **\$1165.00**

AVC-3260DX

GCS-50

GCS-1

RM-E50

**PROFESSIONAL SUPERBETA™ SERIES:
GCS-50 BETAMAX® EDITOR/RECORDER
GCS-1 BETAMOVIE® CAMERA
RM-E50 EDITING CONSOLE**

SUPERBETA™ SYSTEM

The SuperBeta system is designed around a new recording technique that shifts the video carrier signal frequency higher by 800kHz, creating a wider luminance bandwidth. The resulting picture is sharper and has finer detail and texture than conventional Betamax® VCR. The new system with higher horizontal resolution and superior dubbing picture quality is ideal for program origination as well as multi-generation editing.

The Sony SuperBeta system includes the one-piece GCS-1 Betamovie® color camera/recorder unit, the GCS-50 Betamax editing videocassette recorder and the RM-E50 automatic editing control unit.

GCS-1 BETAMOVIE® ONE-PIECE CCD CAMERA

The GCS-1 is a well-balanced, extremely compact package, weighing just 5 lbs., 11 oz. It combines the high performance of a Charge Coupled Device (CCD) image sensor with 250,000 picture elements and the convenience of a built-in recorder. The one-piece, cord-free design allows for quick start recording with just a single button control in both camera and recording operations.

The replacement of the conventional pick-up tubes with the CCD sensor has resulted in much reduced size, weight and power requirement. The CCD sensor produces accurate pictures with low lag, high resistance to image burning and offers long life and high stability of performance. Adoption of the high band recording system and the high density CCD image sensor create a sharper and more detailed picture.

A digital LCD display on the GCS-1 incorporates a tape counter and battery indicator. Also displayed are date or time and camera/recorder operating status. The date/time information on the LCD window can also be recorded on videotape.

The GCS-1's auto index mark-in function allows the user to record an index signal on the tape during shooting.

The GCS-1 camera/recorder unit also incorporates a 6X power zoom lens with macro capability, one-inch black and white electronic viewfinder, built-in electric microphone and three-position (0dB, AGC, 12dB) light sensitivity switch.

GCS-50 BETAMAX® VCR RECORDER/EDITOR

A prominent feature of the GCS-50 Betamax VCR recorder/editor is greatly improved picture quality. It incorporates a newly developed D.A. Pro 4 head for a sharp and noise-free picture even in search mode. The GCS-50's high band recording system provides 270 TV lines of resolution (horizontal) in color. Along with this new recording system, the newly adopted dubbing mode produces superior quality dubbing — with fourth generation tapes produced on GCS-50

rivaling the picture quality of video tapes produced as second generation on conventional Betamax VCRs.

The GCS-50's framing servo and external sync systems allow precise editing. Its rotary erase heads produce clean cuts at edit points in either insert or assemble mode.

The editor has programmed assembly edit function, and capability for automatic insert editing of picture and sound from a camera or other sources (simultaneously or independently) for title and graphics insertion.

For quick edit point location, the jog/shuttle dial allows picture and sound search at X/5, 1X, 2X and Betascan® 9X speeds, in both forward and reverse direction. During recording or playback, the GCS-50 can record/erase an index signal that provides quick and easy program search and programmed repeat.

The outstanding picture quality of the GCS-50 is complemented by its superior two channel audio permitting stereo or dual language recording and by the optional Beta Hi-Fi sound. The unit is capable of recording in Beta II and playback in Beta I, II and III modes.

RM-E50 AUTOMATIC EDITING CONTROL UNIT

The fully automated editing control unit RM-E50 offers automatic programmed assembly of up to 64 events. The unit's timesaving preview function allows the user to rehearse an edit decision before it is actually executed.

In the auto edit mode, the RM-E50 memorizes all the edit in/out points on a particular cassette or series of cassettes — up to 64 segments. While executing the edit list for a master tape, all unnecessary scenes in the original footage are ignored. By feeding the appropriate cassettes indicated in the edit decision list, an entire program is assembled with great speed, ease and flexibility. Automatic editing also saves a generation, since multiple copies can be auto-assembled directly from the original tapes in second generation with minimum loss of picture quality.

The jog/shuttle dial on the RM-E50 provides fast and accurate picture/sound search. In shuttle mode the tape speed can be varied at X/5, 1X, 2X and Betascan 9X speeds, in forward and reverse. The jog dial permits frame-by-frame picture movement in both directions for quick and precise edit point location. During operation, possibility for editing errors is minimized by the alphanumeric information in the three LCD windows which display source and editing VTR status and editing commands. Among the other features of RM-E50 are (TTL level) CUE signal output, automatic tape protection system and capabilities for butt edit and go-to function.

Professional Wireless Communication Systems

for: Broadcasters
Entertainers

Schools & Churches
Athletics

Industry
Race Car Crews

Police, Fire & Security
TV & Film Production

WIRELESS MICROPHONE SYSTEMS

- Systems for hand-held mics, lavalier mics, electric instruments and ENG/EFP/LPTV.
- A variety of hand-held mics and finishes.
- VHF/UHF high band operation.
- All metal construction assures durability and RF shielding.
- Reduced RF bandwidth for multi unit operation.
- Antenna switching diversity for glitch free reception.

Swintek systems are used whenever reliable, high quality sound transmission is required without the physical limitations and visual clutter of "hard-wired" microphones. All systems contain our patented dB-S® companders which permit wide dynamic range without unnatural compression.

Mark 1L & Mark 2L RF Switching Diversity for Sound Reinforcement

Top-of-the line receivers that can be powered by either 110 or 230 V AC power mains, optional built-in batteries, or an external source of 12 to 24 V DC.

Mark 3 Cinematographer Receiver

Top-of-the line compact, portable receiver that is powered from any external 10 to 16 V DC power source or internal battery cells.

Mark QAC Institutional Receiver

Compact, economical receiver for church, school, business and similar groups.

Mark QDC Video Production Receiver

DC powered, compact receiver designed to be integrated with any video or film camera. Interfaces to most microphones and wired intercoms.

Mark 50A/ENG & Mark 50A

Compact pocket transmitters that may be used with any dynamic, ribbon or electret condenser lavalier microphone.

Hand-held Microphones

Swintek offers a choice of mic capsules, finishes and antenna systems.

Mark 8, Mark 8C & Mark 9-2

Antenna combination diversity—the simplest, most effective multiple diversity antenna system for fade-free reception.

WIRELESS INTERCOM SYSTEMS

- Continuous hands-free communications.
- Full duplex operation (talk and listen simultaneously).
- Unlimited system configurations with easy operation.
- VHF/UHF high band operation for less interference and noise, more reliable operation.
- Interfaces to wired intercom system and TELCO lines.

The Swintek Mark 200 is the world's finest and most reliable wireless intercom system. It's simple to operate and exceptionally dependable utilizing the same technology as our systems used on the Space Shuttle. Each system is designed to meet your specific requirements using standard, fully tested, precision Swintek electronic components that are protected by rugged, industrial grade, all metal cases.

Mark 200 RPL/D

Full duplex base station expander, mounts up to five Mark 200D/R remote receivers per rack.

Mark 200 RPL/D

HS200D/T or HS200D/B

Single-muff headset with noise canceling dynamic microphone and rubber duckie antenna. Dual-muff headsets also available or use your own headset. The Mark 200 system works with carbon or electret condenser mics.

Mark 200/D, 200/CPS

Remote intercom units powered by battery or external DC source.

Mark Q/DC

Remote intercom receiver powered by battery or external DC source.

**909V CAMERA
VIEWING UNIT**

909 PROMPTER SYSTEM

The Tekskil 909 is the first prompter designed specifically to work with your portable video camera. Other prompting systems, designed for heavy studio cameras, have front-mounted imaging monitors that must be counterweighted. The result is a clumsy system that doesn't lend itself to smooth camera work and is time-consuming to set up. The 909 eliminates these problems with a totally different design.

The 909 also fills an important need for many teleproduction studios: The ability to use a variety of material for on-camera prompts. State-of-the-art controls, time-saving innovations, and a compact, rugged design make the 909 system an extremely useful permanent accessory for your portable video camera.

Full-function display control

The 909T provides for two NTSC inputs: One for the text camera and one for your portable camera, with instant switching between cameras. Script feed stops when the talent or operator switches to the auxiliary video feed. When the script is recalled, it continues where it left off, at the exact speed it was moving before the switch. The 909T also provides individually-buffered NTSC video outputs to drive monitors and other equipment.

You can switch between normal and reverse video text displays. An adjustable video enhancer brightens poor-contrast originals to give your talent the sharpest possible display to make reading easier.

Light, rugged, and easy-to-work-with

The mount is a single basic unit — a light, rugged, precision aluminum casting that is easy to transport (it also contains and protects the imaging monitor), and can be set up in the field in a few minutes without tools. It is the first prompter really suited to EFP and ENG.

Optional: A gen-lockable text camera

This option gives you the ability to use the 909T to create text or graphic overlays. Place the material under the camera; the 909T gives you a monochrome output to work with.

Now you can use script paper in any format

The 909T Script Transport lets you feed almost anything to the monitor. You can use paper up to ten inches wide, including continuous computer printouts, and even whole magazines — the document guide is self-adjusting. When you have to work from a variety of written, typed, or printed material, this feature will simplify your life.

PROMPTER SYSTEM

**909T SCRIPT
TRANSPORT**

State-of-the-art microcircuitry controls

The 909T uses a pulse frequency modulation circuit to give you precise one-touch control of script speed forward and backward. A bar-graph display indicates scroll-ready status, direction of movement, and speed. Once your script assistant has established the best speed for the talent, that precise speed can be used every time. Scrolling speed and video-input switching can also be controlled by means of a plug-in remote controller.

The 909 lets you pan and tilt your portable as smoothly as a studio camera

The 909V Camera Viewing Unit mounts on any standard-mount field or studio tripod and accepts any portable camera. It holds the prompting monitor below the camera, so that both are balanced over the tripod head. Tekskil uses folded optics — a surface-reflectance mirror and a 70/30 beamsplitter — to bring the prompts up in front of the lens. The result: Smooth, easy pans and tilts, free from the clumsiness associated with traditional front-heavy prompters.

Let your talent see what the camera sees

The 909 takes a video output from the camera and lets you switch it onto the prompting monitor. While looking straight at the camera, the talent can see what the camera sees — ideal for blocking scenes, pointing at weather maps, and generally reducing production time.

SPECIFICATIONS

Power: 120VAC, .2 amp, 60Hz; or (optional) 240VAC, .1 amp, 50Hz

Tekskil 909V Viewing Unit

Weight: (without monitor) 11.0 lbs. (5.0kg)

Imaging Monitor: 9" industrial monitor, Ikegami PM-910A or equivalent.

Dimensions: 18"H x 12-1/2"W x 19-7/8"D (45.8 x 31.7 x 50.5cm)

Tekskil 909T Script Transport

Weight: (without camera) 17.0 lbs. (7.7kg)

Inputs: Two, 1V p-p, negative sync video, BNC connector standard.

Outputs: Two individually buffered NTSC outputs.

Text Camera: Panasonic WV 1400 or equivalent.

Dimensions: 15-3/8"H x 17-1/8"W x 17-11/16"D (39.0 x 43.5 x 44.9cm)

909 Prompter System — Includes 909T, (script transport), 909V (9" monitor) and Vidicon Camera \$4250.00

909V Camera viewing unit 9" monitor \$1525.00

909T Script transport includes Vidicon Camera and remote control \$2850.00

MONITOR PROMPTING SYSTEMS

TELESCRIPTOR

MPS

Telescript's Monitor Prompting Systems consist of the "Monitor Prompter" (M/P) featuring the Lever Principle® and the Telecue® and Telescriptor® Transports.

The Telecue®

The compact, portable TELECUE transports Prompting scripts and graphics with equal facility. To facilitate script Prompting continuity and for remote location operation, 8 1/2 x 11 sheets of paper should be taped together.

The Telescriptor®

The TELESCRIPTOR transports Prompting scripts and graphics via a white Fiberglass Belt with equal facility. TELESCRIPTOR Prompting only requires that 8 1/2 x 11 sheets of paper be placed singly on the Transport's belt. Over and under lapping and immediate editing by exchanging sheets is the norm.

1 Monitor Prompting System (MPS)®

Telecue Transport or Telescriptor Transport incl. Table w/Casters; Vidicon Camera w/Mounting Plate. Int. 2-1, Sweep Sw, 12.5mm f/1.8, 1" Format Lens. Remote Hand Control and 25' cable. Includes:

- 1 Monitor/Prompter (15", 1000 Line)
- 1 Monitor Lensview Assembly
- 1 Monitor Mount Assembly
- Manuals

TRIPODS

TS-30 TRIPOD STAND

Each Tripod combines deep etched and clear anodized aluminum tubing with black polycarbonate parts to create a look that complements any product it upholds. The stand's weight is 6 pounds (2.72 kg) and carries loads of up to 75 pounds (34 kg). Two sizes of Ultimate Support Systems Tripods are available. The TS-30 is 30% smaller than the TS-33, but is identical in design. Height is infinitely adjustable from 3'6" (1.07 m) to 6'7" (2 m) making it ideal for speakers, PA systems, signs, photo studio lights, etc. Large, easy-to-use handknobs make height and base spread adjustments simple and quick. For traveling and storage ease, the Tripod Stand breaks down to slip into a slender 42" (1.07 m) waterproof nylon tote bag which is included. A variety of mounting adaptors are available and are described on the accessory information page. Special interest is the TMB-400 Tripod Mounting Bracket; this innovative two piece mounting system solves the problems normally associated with mounting speakers on tripods. All USS lighting products can also be used with the TS-30. For uneven surfaces, USS has introduced the TAK-300 Tripod Articulation Kit which converts an existing TS-30 into an articulating leg tripod.

SPECIFICATIONS

- Height: 3'6" to 6'7" (1.07 to 2 m)
- Max Base Diameter: 47" (1.19 m)
- Load Capacity: 75 pounds (34 kg)
- Breakdown Dimensions: 41-1/4" x 6-1/2" dia. (1.05 x .165 m dia.)
- Weight: 6 pounds (2.72 kg)
- Set up time: 2 minutes

TS-30 \$100.00

TS-33 TRIPOD STAND

Each Tripod combines deep etched and clear anodized aluminum tubing with black polycarbonate parts to create a look that complements any product it upholds. The stand's weight is just 8 pounds (3.63 kg) yet it carries loads of up to 100 pounds (45.36 kg). The TS-33 is height adjustable from 5' (1.52 m) to 9'2" (2.79 m). With its wide base spread of 62" (1.57 m) it is well suited for larger, heavy speakers that need stability. The TS-33 serves as the base for all USS stage lighting products.

Applications include: projection stands for backlit screens, photography studio backdrops, studio lights, signs, etc. Large, easy-to-use handknobs make height and base spread adjustments simple and quick. For traveling and storage ease, the Tripod Stand breaks down to slip into a slender 58" (1.47 m) waterproof nylon tote bag which is included. A variety of mounting adaptors are available and are described in full on the accessory page. The TMB-400 Tripod Mounting Bracket; innovative two piece mounting bracket solves the problems normally associated with mounting speakers on tripods. For uneven surfaces, USS has introduced the TAK-330 Tripod Articulation Kit which converts an existing TS-33 into an articulating leg tripod.

SPECIFICATIONS

- Height: 5'0" to 9'2" (1.52 to 2.79 m)
- Max. Base Diameter: 62" (1.57 m)
- Load Capacity: 100 pounds (45.36 kg)
- Breakdown Dimensions: 57-1/2" x 6-1/2" dia. (1.46 x 1.64 m dia.)
- Weight: 8 pounds (3.63 kg)
- Set up time: 2 minutes

TS-33 \$120.00

ARTICULATING LEG TRIPODS

These new Ultimate Support Systems enable their users to direct the sound on almost any surface. By simply adjusting a handknob located conveniently at the top of the leg, the tripod can be infinitely adjusted to the exact contours of the ground surface. From outdoor concerts to stairs, this innovative stand will securely hold speakers, lights, etc., in the most precarious positions. The design also allows the tripod to be used normally on flat surfaces when the articulating leg is fully retracted. Tripods are constructed of lightweight aluminum alloy tubing and glass-reinforced polycarbonate parts to produce an end product that is not only extremely light but able to hold loads up to twelve times their own weight. Two sizes of Ultimate Support Systems Tripods are available. The TS-30A has a maximum height of 6'7" (2 m), and can hold up to 75 pounds (34 kg) of equipment. The TS-33A has a maximum height of 9'7" (2.79 m), and can hold up to 100 pounds (45.36 kg). For traveling and storage ease, the tripod stands breakdown to slip into a

EXP-800

TAD-138

1-3/8" dia. Tripod Adaptor for TS-30, TS-33. Allows Tripod to be used with any 1-3/8" (3.53 cm) inside diameter socket such as Peavey or EV-Tapco. Plastic construction.

TAD-100

1" dia. Tripod Adaptor for TS-30, TS-33. Allows Tripod to be used with any 1" (2.56 cm) inside diameter socket such as Atlas.

Can be used in conjunction with a microphone stand clamp for high miking applications. Plastic construction.

TMB-400

Tripod Mounting Bracket for TS-30, TS-33. USS's unique two part mounting system consisting of a thin plate, which is screwed to the bottom of the speaker, and a slide-in bracket which secures speaker to the Tripod. Constructed of glass-reinforced polycarbonate. Mounting screws included.

BMB-200

Mounting Bracket for TS-30, TS-33. Designed for attachment to speakers with built in threaded inserts spaced 4-3/8" to 6" (11.11 to 15.24 cm) apart. Constructed of glass reinforced polycarbonate. 1-1/2" (3.85 cm) inside diameter socket fits directly on USS Tripods. Mounting screws not included.

BMB-200K

Mounting Bracket (not shown). Identical to the BMB-200 except that it includes two 5/16-18 T-thumbscrews and two T-nuts. The bracket mounts directly to any speaker cabinet made of wood (or particle board) at least 5/8" thick.

KT-36, KT-42, KT-48, KT-54

Keyboard Tiers. Used with KS-12, KS-22 and KS-88. Comes in four widths: 36", 42", 48", 54" (.91, 1.07, 1.22, 1.37 m). Includes: Support Bars, Tee Fittings, and Rubber Pads.

KSB-222, KSB-220, KSB-160

Keyboard Support Bars. USS offers three various length support bars that will work on any size tier. The KSB-222 is 20" (.51 m) long enabling its user to mount extremely deep keyboards either directly to one tier or to reach from a front tier to a rear mounted tier. The KSB-220, 14-1/8" (.36 m) long, is the most popular support bar and comes standard with all USS tiers. Extra KSB-220s may be used when mounting two keyboards side by side, or to increase stability for heavier instruments. The KS-160, 8-3/4" (.22 m) long, is designed to hold small instruments on a keyboard tier. Its short length is perfect for drum machines, sequencers, etc.

EXT-220

Support Bar Pin Extensions (Pair). For Keyboard Tiers. Increases height of pins from 3/4" to 2-1/2" (1.91 to 6.35 cm). Used with slanted front instruments.

TAK-300, TAK-330

The Tripod Articulation Kits were designed specifically so that USS tripods might provide a stable support for mounting speakers, lights, etc., on uneven surfaces such as outdoors or on stairs. The TAK-300 provides a maximum single leg extension of 11" (.29 m) for the TS-30, while the TAK-330 provides a 16" (.41 m) single leg extension for the TS-33. Installation is quick and easy, as it uses existing parts from the tripod and common tools.

PKT-100

Parts Kit (MI). For KS-12, KS-22, KS-88, KT-36, KT-42, KT-48, KT-54, KS-11, SS-44, SS-40, TS-33, TS-30, VT-44, US-22, and US-44. A generous stock of parts for repairs and replacements. Part numbers and descriptions are inside the lid of the unbreakable plastic box.

PKT-200

Parts Kit (Lighting). For TS-30, TS-33, VE-24, CB-48, CB-24, HB-48, and HB-24. A generous stock of parts for repairs and replacements. Part numbers and descriptions are inside the lid of the unbreakable plastic box.

ABG-100

Accessory Bag. Holds all sections of a complete lighting tree (less Tripod). Also useful for microphone stands etc. Heavy waterproof nylon with full length zipper and carrying handle.

EXP-550

Expander Bracket. Provides a means of attaching power expanders, dimmer packs, etc., to the lighting tree. Bar has 1/4" (.64 cm) holes drilled 8" (20.32 cm) apart. Hardware included.

VCS-712

Velcro Cord Straps (pair) (not shown). Use to secure power and audio cords to any USS stand. 7" (17.78 cm) long.

HAWKEYE CORDLESS VIDEO/AUDIO TRANSMITTER

MODEL VTR-80 CORDLESS VIDEO/AUDIO TRANSMITTER

Features

- Transmits live video/audio from video camera to any TV set
- Transmits recorded video/audio from VCR to any TV set
- Range approx. 200 feet • sharp — clear picture
- No cable — portable • operates on 12 volts DC
- Color or B/W • light weight — miniaturized size
- Applications: — home entertainment — crime watch — baby minder — education — home security — and much more

The Video/Audio Transmitter, Hawkeye Model VTR-80 is a portable, real time, fast scan, high resolution, cordless Video/Audio transmission device, with an operational range of more than 200 feet.

To transmit Live Video pictures, you simply plug in any standard Video Camera to the Video/Audio input connections on the VTR-80 Video Transmitter.

Alternatively, you can transmit Recorded Video Tapes, directly from your VCR, by connecting the Video/Audio output connections on your VCR to the Video/Audio input connections on the VTR-80 Video Transmitter.

With the Hawkeye Video Transmitter, your pictures, live or recorded, can be viewed on any standard Television, just turn the dial to UHF Channel 14.

VTR-80 **\$399.95**

Specifications

- **Frequency Range:** X-tal controlled UHF Channel 14
- **Number of Channels:** Single Channel
- **RF Output:** Below 500 μ V/m at 30 meters
- **Antenna Impedance:** 50 Ohms
- **Power Input:** 12 Volts DC
- **Power Consumption:** Approx. 350 mA.
- **Type of Modulation:** Video — AM
Audio — FM
- **Video Input:** 1.0 Volt peak-to-peak/75 Ohms
- **Video Sync:** Negative Sync
- **Video Carrier Stab:** .002%
- **Audio Input:** 0.1 - 1.0 Volts RMS/600 Ohms
4.5 MHz Subcarrier
- **RF Bandwidth:** Max. 6 MHz
- **Deviation:** Max. 7 kHz
- **Resolution:** NTSC Standard
- **Spurious Output:** 50 dB down
- **Harmonics Output:** 50 dB down
- **Dimensions:** 5.75(W) x 1.50(H) x 8.50(D)
inches
- **Weight:** 1.8 lbs.

POWER BELTS

Professional Power Belts
 Various Models: 7 to 20 AMP Hours

VDO-PAK offers the most complete range of battery power belts for the home videophile. All belts feature auto-reset circuit breaker for safety and ease of use. Group I belts utilize a modular design that allows user conversion of B600 or B800 to high-capacity B1000 model. Group II belts feature a quick conversion option that gives the user the choice of cutting weight and capacity by 50%, when lighter weight is important, and full power is not needed. All Group II belts are equipped with dual outlets, so that VCR and other equipment may be used simultaneously. Group I and Group II contain gell cell batteries.

VDO-PAK supplies all Power Belts with electronically regulated high-output float chargers. From full discharge, a VDO-PAK belt will regain full capacity within 14 hours. The regulated float charger ensures that the Power Belt will never overcharge, regardless of how long the charger is connected.

All Power Belts are completely adjustable for waist sizes 27-50", and provide comfortable, balanced 12 volt DC power for all applications. Belts are available in Black or Rust color heavy-duty Nylon, with quick-release buckle. VDO-PAK provides a limited 1-year warranty on all power belts.

	Model	VCR & Camera	Operating Time 100W Quartz Light	Price
GROUP I				
B600	6 Amp Power Belt	3-4 Hours	20-25 Minutes	\$169.95
B850	8.5 Amp Power Belt	5-6 Hours	40-45 Minutes	199.95
B1000	10 Amp Power Belt	7-8 Hours	50-55 Minutes	224.95
GROUP II				
B1200	12 Amp Power Belt	8-9 Hours	55-60 Minutes	249.95
B1700	17 Amp Power Belt	11-12 Hours	100-110 Minutes	299.95
B2000	20 Amp Power Belt	14-16 Hours	120-130 Minutes	349.95

Listed capacities based on continuous recording without power zoom or auto focus options. Intermittent operation will increase rated capacity. VCR playback only operation will result in approximately double the listed operating time. Units weigh approximately 1 pound per Amp Hour.

CAMERA HOUSINGS

SECURITYSCAN I & II

- Flexibly designed for 2' x 2' drop ceilings, surface, pendant or wall mounting
- Accepts standard drive motors and zoom lens
- Upper trap door used for fine focusing camera
- Quick-release fasteners on mounting plate for ease of servicing
- Non-toxic, non-flammable metal upper support - Fire Marshall's choice
- Silent operation

Model I

Top: Top is fabricated from 18 gauge steel and measures 23" square. A swinging door appearing on bottom of unit is fastened to steel top on one side using two hinges. Swinging door measures 22-5/8" square and has a 20-3/4" diameter hole in its center. Four (4) butterfly fasteners are located around perimeter of 20-3/4" diameter hole and are used to secure capsule to top in absence of drive motor. Swinging door is secured in place using two butterfly fasteners located on opposite side of hinges. Smaller trap door, measuring 7-3/4" W x 13" L, is located on side of steel top and is fastened to top with a continuous hinge. Trap door is commonly used to secure swinging door and for fine focusing camera as it looks through outer capsule. Additionally, trap door has a keyed cam lock which is used to render entire unit tamper proof. Located within interior of top is a drive motor mounting plate measuring 7-3/4" square and containing four (4) quick release type fasteners. Height of mounting plate is adjustable to enable housing to be fitted with a variety of drive motors. Entire top is designed for a 2' x 2' ceiling grid, pendant, wall or hard surface mounting. Optional acrylic finishing plates can be fastened to all four (4) exterior flat sides of steel top. In addition, an optional trim frame is available for concealing rough cut which might exist when installing unit in a sheet rock ceiling.

Capsule: Capsule is formed from 1/8" bronze acrylic with a maximum of one "F" stop light transmission loss. Interior of capsule is painted flat black with exception of viewing slot. Diameter of capsule measures 20" and is attached to drive motor using two (2) plastic arms and four (4) quick release fasteners for ease in servicing. Installed capsule appears entirely black and will not disclose position of camera when bright background lighting is present.

In general the unit described above is designed to conceal a CCTV surveillance camera without the use of mirrors or other reflective image devices. In addition it is designed for standard off-the-shelf type drive motors which are standard to the CCTV industry.

Model I \$399.00

Model II (Simulated Unit)

A fabricated piece of 18 gauge steel measuring 23-6/8" square and containing a 20-3/4" diameter hole is used for the simulated model. Four (4) butterfly fasteners are located around the perimeter of the hole and are used to secure capsule to steel part. Interior of entire capsule is painted flat black since live camera will not be present. When placed into a 2' x 2' ceiling grid and viewed from the ground, simulated model appears identical to Securityscan I. There are no provisions for mounting camera.

Model II \$267.00

Max. Camera Length - 16"

Note: Length includes fully extended lens and rear cable connector(s). Optional VC-1, VC-2, or VC-3 coiled cable is recommended for this housing.

SECURITYSCAN III & IV

- Accepts standard drive motors and zoom lens
- Silent operation
- Easy to install and service
- Vertical movement in upper hemisphere for easy access

Model III

Top is formed from 1/8" thick, high-impact, black, hair-cell A.B.S. (acrylonitrile butadiene styrene) and measures 20" in diameter and has a 10" radius. The housing support bracket, threaded coupling, and pan/tilt mounting plate are located within interior of housing. Ceiling mounting plate is also included, but 1-3/4" tubing is not supplied. Once installed, the housing never has to be removed for maintenance. The upper hemisphere can be lifted upward to expose pan/tilt assembly for any maintenance because all equipment is supported from pole.

Capsule: Capsule is formed from 1/8" bronze acrylic with a maximum of one "F" stop light transmission loss. Interior of capsule is painted flat black with the exception of a viewing slot. Diameter of capsule measures 20" and is attached to drive motor using two (2) plastic arms. Installed capsule appears entirely black and will not reveal position of camera when bright background lighting is present.

In general the unit described above is designed to conceal a CCTV surveillance camera without the use of mirrors or other reflective image devices. In addition it is designed for standard off-the-shelf type drive motors which are found in the CCTV industry.

Model III \$434.00

Model IV (Simulated Unit)

Top is same make as above, with no provisions for mounting camera. Interior of entire capsule is painted flat black, since live camera will not be present. When viewed from the ground, simulated model appears identical to Securityscan III.

Model IV \$392.00

Max. Camera Length - 15"

Note: Length includes fully extended lens and rear cable connectors). Recommended Drive Motors: Vicon V3000, V3200; Pelco PT-270/280; Quickset QPT-15.

VIDEOLARM, INC.

P.O. Box 802

CAMERA HOUSINGS

MODEL: VLS-16

Fixed camera housing, wall or overhead application

- Aesthetically designed for indoor/outdoor covert applications
- Easy to install and service
- Comes complete with all necessary mounting hardware and security fasteners
- Low profile for wall or ceiling mounting
- Ideal for parking decks, train stations, interior halls or entrances, drive-through bank windows

Housing consists of base plate and upper cover which is formed from 1/8" thick, high-impact, black, hair-cell A.B.S. (acrylonitrile butadiene styrene) and measures 20-1/2" square. Upper and lower parts of housing are connected using one 18" stainless steel hinge. Upper cover has a 16" diameter hole in its center. Weatherproof gasketing is located around perimeter of 16" diameter hole and around perimeter of upper cover. Upper cover is secured to base plate using two (2) security fasteners. A fixed camera mounting plate that is fully adjustable to 360° is located within interior of housing. Unit is designed for both interior and exterior applications, but, since no heaters or blowers are available for this unit, it should not be installed in direct sunlight.

CAPSULE: capsule measures 16" in diameter and is formed from 3/16" thick, high-impact, cell-cast acrylic sheets with no visible light transmission loss on clear and a maximum of one "f" stop loss on tinted capsules. Unit contains an opaque inner liner in which a viewing slot can be cut to conceal direction of camera. If outer capsule is painted or scratched by vandals, open unit and twist outer and inner liner to clear location.

Model VLS-16\$343.00

Max. Camera Length — 12"

Note: Length includes camera, lens, and rear cable connectors.

MODEL: OBSERVADOME I & II

Fixed camera housing, indoor discreet, recessed ceiling applications.

- Flexibly designed for a 2' x 2' drop ceiling
- Easy to install
- Comes complete with all necessary mounting hardware

PRODUCT SPECIFICATION AND USER GUIDE

Model 0-1

Unit is formed from 24" x 24" high-impact, bronze acrylic sheets. Capsule measures 20" in diameter with a 10" radius. Interior of capsule is painted flat black with the exception of a viewing slot. Installed capsule appears entirely black and will not reveal position of camera when bright background lighting is present. Unit comes complete with camera mounting hardware that allows 0° to 90° viewing angle. Dome cover is available as an option and is formed from high-impact styrene.

Model 0-1\$122.00

Model 0-2

Interior of capsule is painted entirely black, since no live camera will be present. No camera mounting hardware is included.

Model 0-2\$100.00

Max. Camera Length — 11"

VIDEOLARM, INC.

CAMERA HOUSINGS

MODEL VLW-22

Recessed Housing For Outdoor Wall/Ceiling Applications

- Comes complete with mounts for drive motor & metal rough-in box
- Accepts standard pan/tilt motors
- Standard 22-inch diameter smoked acrylic capsule (1/4" thick)
- Optional fan and heater available
- Hinged front door with cam lock
- Smoked capsule only eliminates one f-stop of light

Model VLW-22 is designed for either a recessed wall or ceiling application. Metal rough-in box is painted black along with adjustable pan/tilt mount. Optional fan or heaters can be ordered in 240, 115 or 24 volts (AC). 22-inch diameter smoked acrylic capsule is standard with this housing. Vicon V3000PT or Pelco PT270 or 280 pan/tilt motor recommended.

Dimensions: Rough-in box 25" x 8", Front door 24 1/2" x 24 1/2", Capsule diameter 22"

Max. camera length 16"
(length includes fully extended lens & rear cable connectors)

MODEL VLP-20

Indoor/Outdoor CCTV Housing

- Aesthetically designed for indoor/outdoor use
- Allows use of pan/tilt & zoom lens
- Easy to install & service
- 1/4-inch smoked capsule with high optical quality (only one f-stop reduction of light transmission)

Model VLP-20 is attractively designed using black hair-cell textured plastic for the upper portion and our 1/4-inch smoked Plexiglas for the lower capsule (only one f-stop of light is lost). The cast aluminum globe holder and ceiling mounting plate are painted a coordinating black. Styled to complement your next interior or exterior application such as hotel lobbies, banks, department stores and casinos. Since no blowers or heaters are available at this time, it is not recommended that housing be installed in direct sunlight.

Max. camera length 15"
(length includes fully extended lens & rear cable connectors)

NOTE: Optional VC-1 or VC-2 coiled video cable is recommended for above housing. Heaters and blowers are not available at this time.

Drive Motor Recommended: Vicon PT3000, or Pelco PT270 PTA 15

Housing supplied with threaded couplings but 1 3/4" diameter tubing not supplied by Videolarm.

VLP-20WM WALL MOUNT

PENDANT MOUNT

VLW-22	Recessed housing for outdoor wall or ceiling applications. Accepts standard pan/tilt or scanning motors. Complete with motor mount, rough-in box, 1/4" high impact tinted capsule (22" diameter), 16" maximum length for both camera and lens.	\$525.00
NOTE: OPTIONAL HEATERS AND BLOWERS AVAILABLE		
VLP-20	Pendant housing with sunshield, safety chain and tamper-proof fasteners. Complete with 1/4" high impact tinted capsule. (P-10410 toolhead driver to open/close unit not included). Unit designed for installations utilizing pan/tilt and zoom lenses. Shipped complete with threaded mounting plate for ceiling or optional designer wall mount. CAMERA HOUSINGS

OUTDOOR HOUSINGS MODELS VL-294/VL-29/VL-22/VL-18

Now there is no need to use the more costly weatherized Pan and Tilt or Scanner Motors for outdoor installations. Since everything is enclosed in VIDEOLARM and the weight of a heavy metal conventional housing is no longer a factor, light duty indoor drive motors can be used resulting in a lower installation cost. The real savings, however, is due to the lack of service calls your company will experience, because it is a recognized fact that the VIDEOLARM all-weather camera housing eliminates . . .

- Wind problems experienced with conventional equipment. Since everything is enclosed, the housing protects the gear mechanism of drive motors from harmful effects of high winds.
- Reduces weight load on drive motors. Pan/tilt or scanning motor must only contend with the weight of the camera and lens and not a heavy metal housing.
- Icing and salt air damage to drive motor.
- Fogging experienced with conventional outdoor surveillance housing.
- The threat of "wire pulling" vandals since everything is sealed within the housing and mounting bracket.
- "Sky Watching" on behalf of security personnel resulting in burnt or damaged vidicon tubes.

In short the "Better Alternative" has arrived for both indoor and outdoor use. Four different sizes are now available - for the very low light level cameras, motorized zoom lenses and large pan tilts, to fixed lens cameras with scanning motors. Heaters and blowers are also available in all voltages.

Note 1. Length includes fully extended lens and rear cable connector(s).

Model #	Description	User Cost
VL-18	All-weather housing with sunshield, safety chain and locking mechanism. 1/4" high impact clear capsule. For fixed and scanning installations. 14" maximum length	\$329.00
VL-22	Same as VL-29 in design, including key lock. Designed for camera and motorized zoom lens, 16" maximum	385.00
VL-29	All-weather housing with sunshield, safety chain and key lock. 1/4" high impact clear capsule. Designed for camera and motorized zoom lens, 20" maximum	406.00
VL-294	Same as VL-29 with exception of 4" height extension on white upper part. For large pan/tilt motors. Designed for cameras and motorized lenses, 22" maximum	539.00

NOTE: Above units are available with tinted capsule. Add \$50.00 per unit and "T" to model number. Optional heaters and blowers available.

FM VIDEO TRANSMISSION SYSTEM

FM modulator and demodulator system for long-line, interference-free video transmission. Long-line video transmission without signal loss.
RG-20u coax 10,000 feet
24 Ga wire 4,000 feet
Video transmission through any type wire
Interference-free video transmission
Complete ground loop isolation
Two-year warranty
For further information contact factory \$1120.00

MICROWAVE TRANSMISSION SYSTEM

Completely self contained 23GHz microwave transmitter and receiver offering video, and up to two audio subcarriers. Antennas can be interchanged, which allows longer distance transmission to take place. The system operates in the 21.8 to 22.0 GHz and 23.0 to 23.2 GHz bands. Transmitter designed to fit inside model VL-29 and VL-294 environmental housing. \$3360.00

INFRARED ILLUMINATORS

A new approach to nighttime surveillance is offered by low-light level illuminators placed alongside camera in model VL-29 and VL-294 environmental housing. Projects the greatest possible light energy over a maximum distance, both narrow-beam and wide-beam versions are available. In continuous operation, the surface of the illuminator housing only exceeds ambient temperatures by 3° fahrenheit. \$1120.00

VC-1/2/3

All coiled cables are 5' extended having braided copper video conductor and two (2) low-voltage power leads for camera. Each conductor is stranded copper. Both ends of cable are sealed with heat shrink tubing to eliminate breakage at connectors.

- VC-1 \$19.00
- VC-2 20.00
- VC-3 22.00

VC-4

5' coiled video cable (7' extended). Complete with BNC (M/F). Connectors on each end. 5 conductors for zoom lens and 2 conductors for powering low voltage camera. Each conductor supplied with quick disconnect ends. \$68.00

VLB-24v/115v/240v

VLB-24v
24 vac, 60Hz, 12 watt U.L. listed fan. Metal parts have been treated with corrosion inhibitors for outdoor use. 3125 RPM (min) free air 1.4A (max). Thermostat provided-closes at 95° f and opens at 80° f \$83.00

VLB-115v
115vac, 60Hz, .18 amps U.L. listed fan. Same description as above. Air delivery is 95 (cfm) \$83.00

VLB-240v
240 vac, 60Hz, .12 amps. U.L. listed fan. Same description as above. \$95.90

VLH-24v/115v/240v

VLH-24v
24vac, 176 ohms, 150 watts, 6.25 amps heating pads (set connected in series) constructed from 4 ply fiberglass supported silicone rubber. Each pad backed with .20 (mil) aluminum. Thermostat provided closes at 35° F and opens at 50° F \$66.00

VLH-115v
115vac, 7.6 ohms, 575 watts, 5 amps, same description as above. \$66.00

VLH-240v
240vac, 384 ohms, 150 watts, 6.25 amps, same description as above. \$75.00

PM-3

Pole mount is used in conjunction with WM-18/22/29 brackets. Constructed of 7 gauge hot rolled steel which is electrically galvanized. Straps are stainless steel. \$70.00

VC-282

WM-18/22/29

7 gauge hot rolled channel iron 1 1/2 x 3 with 2 1/4" diameter holes for entering and exiting of cable. Steel is dipped in oil and electrically galvanized for rust prevention. WM-18/22 measures 13"H x 16 1/2"L square plate (10 gauge) measures 8 1/4 x 8 1/4, WM-29 measures 13"H x 18"L, square plate measures 11 1/4 x 11 1/4. Both plates have four spot welded 1/4" x 20" x 1 1/2" bolts.

- WM-18 & 22 \$76.00
- WM-29 83.00

CM-2/WA-2/CA-2

7 gauge hot rolled steel, dipped in oil and electrically galvanized for rust prevention. Each bracket has eight 7/16" mounting holes.

Note: all 3 brackets can be used with VL-18,22,29,294.

- CM-2 \$44.00
- WA-2 44.00
- CA-2 41.00

PTM-13

Quick release mounting plate for VL-18/22/29/294 housing. Adjustable in height and predrilled for an assortment of drive motors. Contains four quick release fasteners for removing drive motor and camera. Also accommodates strip heaters, VLH-24/115/240. \$34.00

PI500

15" pole manufactured from 4"x4"x1/4" steel. Unit comes complete with two access panels and adapter plate for mounting WM-18/22/29 brackets. \$679.00

SECURITY POLE P1500

ACCESSORIES

PA-2/3

Parapet mount adapter. Used in conjunction with WM-18/22/29 for flat wall or corner mounting. Hinged to allow rooftop servicing. PA-3: backup adapter plate for PA-2.

- PA-2 \$70.00
- PA-3 31.00

PARAPET MOUNT PA-2

Elbow swings backwards to allow rooftop servicing

FP-1

Tinted acrylic finishing plates designed for use with Securityscan I on surface mount applications. \$60.00

TR-1

Trim frame used for recessing Securityscan I or II into sheet rock ceiling. \$56.00

PK-2

Pendant kit for Securityscan I. Includes mounting board and two threaded couplings for 1 1/4" diameter tubing. Tubing not included. \$69.00

CL-800

16 fl. oz. silicone cleaner for capsules of all housings. \$6.65

WK-3

Wall mount kit for Securityscan. Includes mounting board and "L" shaped mounting arm. \$99.00

VLP-20WM

Wall mount bracket for VLP-20, black aluminum. \$65.00

P-10410

Toolhead driver for captive security fasteners on models VLP-20, VLW-22, and VLS-16. \$3.50

953

Right angle, BNC male to BNC female connector. \$5.60

954

Right angle, PL259 UHF at one end and female UHF at other. \$3.54

SECURITY SYSTEMS

WATCHMANN

An Environmental Simulated Security System That Provides Real Security.

MODEL W-1 — System comes complete with:

- Simulated camera with built-in motion detector, high frequency sonalert and red alarm light
- Adjustable camera mounting bracket
- Weather resistant upper housing
- Rock resistant globe
- L-shaped housing mounting bracket
- Pole mounting straps
- Strapping clamps (Requires standard screwdriver for securing)

Note: Can handle 800 watts

Model W-I\$685.00

MODEL W-II — Scanning unit includes:

- All equipment above
- Plus scanning motor

Model W-II\$875.00

Accessories:

- Flood light (mounted on top of L-shaped bracket)\$16.80
- Warning sign (with your company's name upon request)\$19.00

How System Works:

Once unit is installed, high frequency sonalert is activated and remains on until intruder crosses path of motion detector. Once motion detector senses movement, son-alert turns off and red alarm light turns on inside weatherproof housing. The optional flood light will turn on at the same time the red alarm light turns on and can be pointed in any direction.

Applications:

- Construction sites
- Lumber yards
- Automobile dealerships
- Truck dealers
- Parking lots

Patent pending

VIDEO TRANSMISSION SYSTEM

MODELS FM 3100/FM 3200 FM VIDEO TRANSMISSION SYSTEM

- FM Modulator and Demodulator System for long line interference free video transmission.
- Long Line Video Transmission without signal loss:
 - RG-59u coax 10,000 feet
 - 24GA wire 4,000 feet
- Video Transmission through any type wire
- Interference Free video transmission
- Complete ground loop isolation
- Two year warranty

SPECIFICATIONS

FM 3100T Modulator

- Power Requirements 120 Volts 60Hz, 18 watts (Optional Power Sources Available - See Price Schedules)
- Operating Temperature -20° C to +70° C
- Input Impedance 75 ohms
- Output Impedance 75 ohms
- Input Level (Video) 1.4 volts pp max
- Output Level +66 dbmv (adjustable internally)
- Carrier Frequency 8 Mhz Normal
- Deviation ± 1 Mhz for 1.4 volts video

FM 3100R Demodulator

- Power Requirements 120 Volts 60 Hz, 18 watts
- Operating Temperature -20° C to +50° C
- Input Impedance 75 ohms, 5 MHz-13 Mhz
- Return loss at 75 ohms Less than 18 db, 5Mhz-13Mhz
- Video output Impedance 75 ohms
- Minimum signal for full limiting ... + 10 dbmv

FM 3100 System

- Video Response 60 Hz to 3.8 MHz (not for color)
- Tilt Less than 2%
- S/N Better than 40 db (+10 dbmv input to limiter at demodulator)
- Package size (both units) 7x4x2 inches
- Coaxial Connections Type BNC
- Primary fuse ¼ Amp
- External Adjustments None
- Transmission 10,000 Feet with RG 59
- Isolation Foam Co-Ax
 5000 Volt Isolation from ground loop.

FM VIDEO TRANSMISSION SYSTEM

FM 3100	Complete with FM 3100R (120 VAC) and FM 3100T (120 VAC).	\$1,120.00

CAMERA BOOM

THE BARBER "BABY" BOOM

Features

- Weight: 70 lbs.
- Vertical Boom: 6' to 11'
- Horizontal Swing: 14'
- Boom Radius: 360°
- Camera Tilt: 160°
- Camera Pan: 360°
- Crew Requirement: 1 camera operator
- Set Up: 5 to 10 minutes
- Maintenance: Minimal - No Motors or Pumps
- Space Requirements: 3 sq. feet on Standard Tripod - operates excellently in small tight spaces
- Mounting: Any standard camera mount from a High Hat to a Titan Crane
- Safety: Camera operator remains on the ground at all times
- Portable Case: 10'L x 10"H x 30"W

A boom. A breakthrough. A revolutionary camera positioning system. The Barber "Baby" Boom was designed and developed to create unique camera angles, fluid movement, versatile rapid positioning, and multi-dimensional combination moves that were never possible before.

You're familiar with traditional booms — where the camera and the operator ride up into the air on the end of the boom arm. But the camera operator has no immediate control over height, swing or speed of movement. He has to rely on 2 or 3 grips to interpret his shot and position him in the right place, at the right time, at the right speed. Inefficient, costly, and creatively limiting.

The Barber "Baby" Boom requires only you, the cameraman, to operate and control it. The camera is mounted on the end of the boom arm. You are at the other end with your hands on the two controls. You look into the video monitor and begin to track the action...fast, slow, whatever speed you need for the shot. With a feather light touch, you boom from 6" off the ground to 11 feet in the air. You swing the boom arm 14' horizontally (a dolly move without the dolly). You tilt the camera 160° up and down, pan it 360° and servo zoom and focus without ever taking your hands off the controls, your eyes off the action, or your feet off the ground. It's all made possible by the Barber "Baby" Boom's center of gravity gimble head and counter balance parallelogram design which allows a single camera operator to vary camera height, angle, pan, tilt, boom, zoom, and focus simultaneously in one smooth continuous motion. Great in the studio or on location, easy to set up (about 10 minutes), and simple to operate.

Barber "Baby" Boom\$9950.00

TRIPOD HEAD

CENTER OF GRAVITY

Camera floats in perfect balance—the camera's center of gravity is coincident with the tilt axis, eliminating springs and providing a precise balance of pan and tilt dampening. Dampening remains constant regardless of the camera's operating position.

UNIQUE FLUID DAMPENING MECHANISM

Each tripod head contains 12 individually sealed dampening chambers, 8 of which can be selectively engaged with precision spring plungers, allowing a fine degree of tension adjustment and a smooth, effortless feel.

VARIABLE GEOMETRY MEANS VERSATILITY

The tripod head can be adjusted to obtain magazine clearance for the largest cameras—you can get a 360° tilt range with Panaflex, BL3 and all ENG-EFP video cameras.

Tripod head can be mounted upside down as well as right side up—perfect for snorkel lenses.

The capacity for a low-profile configuration—ideal for passing the camera through an aperture or operating in limited space.

Camera can be positioned with lens axis directly over pan axis.

SPECIAL DESIGN FEATURES

Ultra-thin camera shoe allows camera placement within 1.064" of the deck for low-angle perspective.

Dual brakes on both tilt and pan cylinders allow access from either side—important when suspending the camera.

Maximum stiffness-to-weight ratio is achieved with thin wall, tempered magnesium castings and large-diameter bearings.

Lightweight—only 18 pounds, the tripod head will carry a 75-pound camera in perfect balance.

FEATURES:

	Weaver/Steadman	Ronford 7
Center of gravity design	YES	YES
Weight	18 lbs	24 lbs.
Camera sag with 57 pound Arriflex	0°21'	1°26'

Video Systems and Tripods from Welt/Safe-Lock **LAST FOREVER!**

Consider the sturdy yet lightweight versatility and portability of all Welt units, and you'll understand our worldwide reputation for quality and design excellence backed up by the famous Welt lifetime guarantee.

Consider our Video Rol-O-Pod (VRP) with optional adjustable Recorder Attachment (RA)

Lightweight, sturdy, speedy shooting through advanced small camera technology, with our unique adjustable recorder attachment unit.

Complete VRP/RA: \$175.95
Video Rol-O-Pod (VRP): \$139.95
with fluid movement head: \$159.95
Recorder Attachment (RA): \$38.00

Unit folds compactly for storage and transporting.

Consider our Complete Video System (VID/CS)

Complete VID/CS System:
with spring loaded head: \$228.50
with fluid loaded head: \$248.50

Video Tripod (VID)
with spring loaded head: \$129.95
with fluid movement head: \$149.95

Adjustable Recorder Attachment (RA): \$38.00

Optional Center Support Wheel for AD-IL (CSW): \$8.50

Adjustable RA unit is easily attached and sold separately as an accessory

For Smaller Cameras, Consider our Lightweight Tripods with Unique Welt Features:

The "Zoom Leg" Tripod (TW-V) - Our lightest tripod was designed for any climate and terrain. It can be set in water, mud, dirt, or snow and closed without wiping lower leg sections, due to unique construction. Patented Twist-Lock system allows legs to extend and lock in one instant motion to any height.

Zoom-Leg Tripod (TW-V): \$62.95

The "Flip-Lock" Tripod (FL-V) Famous "flip-lock" leg controls have made the FL-V a favorite of photographers world-wide because of its instant one-hand positioning to any height. Allows photographer to adjust legs without taking eye from camera viewfinder. No fiddling with leg adjustments.

Flip-Lock Tripod (FL-V): \$74.00

Consider our New Video CaddyPod (VCP)

Unique 4-wheel construction incorporates the finest features of our Video Rol-O-Pod with the convenience and maneuverability of a video caddy.

Video CaddyPod (VCP): \$99.50

DIGITAL DISK RECORDER

A62 DIGITAL DISK RECORDER

FEATURES

- Real-time record and playback
- Internal digital matting
- Random access
- Simultaneous record/play
- Variable record/play speed
- Transparent signal system
- Digitally-decoded RGB outputs
- Built-in sequence editor
- SMPTE serial interface
- Precise control
- High quality color framing
- Compact size

The Abekas A62 Digital Disk Recorder is the most advanced tool available to satisfy the demanding needs of complex post-production. It is ideal for applications such as animation, video disk mastering and sophisticated multi-layered matting.

The A62 combines the well-known advantages of digital video recording with high-speed Winchester disk drives, producing a precisely controllable real-time record and playback device with storage capacities of 50 seconds and 100 seconds. Both versions offer the same basic features: namely, a full range of record/playback speeds, from still frame to faster than one times in forward and reverse; precise high-speed single frame editing; built-in sequence editor; and internal digital matting. Dramatically enhancing the value of the A62, the 100 second version also offers simultaneous real-time record/playback and color-framed random access over the entire 100 second range.

Transparent Signal System

The transparent picture quality of the A62 is the direct result of full bandwidth digital recording and advanced digital signal processing techniques. The digital decoding and freeze frame performance are identical to that of the highly acclaimed A52 Digital Special Effects system. Unlike that of video tape recorders, the A62's performance is not limited by analog recording techniques and the tape medium, but rather by the A/D and D/A performance.

Powerful Control System

The A62 offers a powerful and traditional video tape recorder type of control system using a time code based addressing scheme.

The A62 can be controlled by the A62CP control panel, which is provided with the system, or by an external computer through RS232 or

RS422 serial ports. In addition, two RS422 SMPTE serial ports are provided, enabling the A62 to emulate a VTR, thus simplifying editor interface.

Simple Control Panel

The A62CP control panel consists of an integral graphics display with associated softkeys, trackball, DataKey, numeric keypad and various dedicated function keys. Comprehensive menus are presented on the graphics display, enhancing the power and simplicity of the system. The trackball is used to browse manually through the material on the disk. The browse speed corresponds to the speed of the trackball movement. A DataKey, like the one used on the A52 Digital Special Effects system, is used for off-line storage of control parameters.

Sequence/Segment Editor

A number of variable length segments can be defined by specifying In and Out points, and can be linked in any order to form a sequence. Individual segments, or the entire sequence, can be run manually or automatically. A sequence can be modified by rearranging the order of the segments or redefining the segments by changing their In and Out points. The sequence length automatically reflects these changes.

Internal Digital Matting

The A62 greatly simplifies the sophisticated post-production task of complex multi-layer matting. The internal matting capability allows a foreground to be digitally matted over an existing background in real-time. The background always remains in the digital domain during this process; therefore, the usual problems of generation loss associated with matting are completely eliminated. This process can be repeated a countless number of times, maintaining first generation quality from start to end. The matting is accomplished in non-real-time on the 50 second version, and in real-time on the 100 second version using the simultaneous record/playback capability.

The flexible system architecture enables internal re-entry of either the background video or the foreground video and key signal. This permits the real-time matting of incoming foreground on an existing background, or the matting of an existing foreground on an incoming background. All the necessary adjustments for the matte/key processor are provided: foreground black, foreground black cleanup, fade value, key polarity, key level and key gain. The analog input/output video level and timing, and the digital matte/key adjustments are made right from the control panel.

RGB Outputs

Digitally-decoded high quality RGB outputs are provided as an option for the A62.

VIDEO CASSETTES

AGFA BROADCAST PLUS U-MATIC VIDEO CASSETTES

Video producers and engineers demand perfection from their master video cassette. They fully appreciate that their image depends upon the quality of the video tape original just as much as it does on the camera, lens and lighting. AGFA BROADCAST PLUS U-Matic video cassettes fulfill all of these expectations...and then some.

AGFA BROADCAST PLUS U-Matic Cassettes will add a new dimension of color brilliance and definition to your masters with: 3 dB more color signal-to-noise, 3 dB more video signal-to-noise, 2 dB more RF output and an exceptionally low drop out rate, as compared to the industry standard.

In addition to excellent video characteristics, AGFA BROADCAST PLUS U-Matic Cassettes utilize a black anti-static backcoating resulting in better tape transport and winding properties.

Precision molded and assembled under stringent and uncompromising quality control standards, AGFA BROADCAST PLUS U-Matic Cassettes are designed for use on all U-Matic video cassette players and recorders.

AUDIO/VIDEO CLEANING SYSTEM

60200

71300

71200

60100-A

58030

60100-A VCR Cleaner For VHS

Utilizes an exclusive ribbon that feeds into your machine like a conventional tape. A few drops of Allsop 3 solution are placed on the soft ribbon which then circles critical parts to remove oxide residues from the video and audio heads. Additional soft pads swab contaminants from the capstan and pinch rollers. This great cleaning system is effective for up to 30 cleaning cycles. Non-refillable.

\$19.95

66000-A VCR Cleaner For Beta

Incorporates Allsop's unique ribbon for thorough, non-abrasive cleaning power. Simply place a few drops of Allsop 3 solution on the soft ribbon and insert the tape into your machine like an ordinary cassette. The ribbon gently swabs contaminants from critical parts, removing oxides and airborne debris from audio and video heads. Good for 20-30 separate cleanings. Non-refillable.

\$19.95

60200 Ultraline VHS Video Recorder Cleaner

Uses a technologically innovative design to provide a cleaning breakthrough offered by no other system. Small "windows" on the surface allow you to directly apply Allsop 3 solution to the internal cleaning ribbon for maximum cleaning coverage. The non-abrasive ribbon cleans entire tape path, removing contaminants from critical VCR parts. Additional felt pads clean capstan and pinch rollers. Replaceable ribbon and pads available.

\$29.95

68000 Ultraline Beta Video Cassette Cleaner

The ultimate Beta cleaning system. Strategic "windows" on the cleaning cassette surface allow you easy access to place Allsop 3 solution directly inside the cassette. The moistened cleaning ribbon then gently removes harmful contaminants and oxides from critical parts along the entire tape path. Replacements available.

\$29.95

71300 Ultraline Audio Cleaner

Our gear driven wiper arm and felt cartridge replacement system enables the user perfect cleaning action for all three areas needed. When cleaning felts become soiled, cartridges can be easily replaced to make the Ultraline like new again. System includes ½ oz. bottle of Allsop 3 cleaning solution. Use part #71010 for replacement cartridges and solution.

\$8.95

71200 Ultraline Audio Cleaner With Case

Fits nicely into any automotive glove or map compartment. This wet system cleaner performs three important tasks in one cleaning cycle. First our gear driven wiper arm insures positive wiping action for head cleaning; second our felt cartridges on both sides (for auto reverse) of the head wiper cleans the pinch roller as it revolves; and third the Allsop 3 wipes the capstan automatically. Includes a 1 oz. bottle of special Allsop 3 solution, spare felt cartridges and tweezers which all fit into an attractive leather-like case. Uses #71010 for replacement.

\$14.95

58000 Orbitrac™ Record Cleaning System

58010 Orbitrac™ Record Cleaning Solution

58030 Orbitrac™ Refill Kit

Takes a totally new approach to record care. By anchoring the cleaner in the record center, the Orbitrac™, when rotated around the record surface, delicately wipes and removes dirt from each groove. After one or two revolutions the record should be free of impurities and have no static charge because of the Orbitrac™ specially formulated cleaning solution. This system comes complete with Orbitrac™ cleaner, solution and sprayer, wipe off brush, special record cleaner anti-static mat, attractive designer case and complete instructions. Orbitrac™ record cleaner solution is also available in an 8 oz. refill bottle, and in a refill kit that includes two new cleaning pads with an 8 oz. bottle of cleaning solution.

VPR-3 Type C Video Tape Recorder

The VPR-3 has been created for the uncompromising new video production world. It has more instant functions. It is more versatile and flexible. It's more precise and sophisticated. And it's crafted for longer life and simpler maintainability.

Day-in, day-out, this machine will give you air-guided tape handling, superior video and audio features, simplified control and easy adjustment accessibility.

VPR-3. It's ideal for teleproduction where time is money. For broadcasters use where versatility is expected. And for satellite or cable distribution organizations where dependability is demanded.

CONSOLE

The optional console has provisions for mounting the VPR-3, TBC-3, a picture monitor, waveform and vector monitors, and the high power audio system.

RACK MOUNT 19 inch rack compatible

TABLE TOP

PHYSICAL DIMENSIONS

	Rack Mount	Table Top	Studio Console w/Monitor Bridge & TBC
Height	29.75 in. 75.56 cm	30.5 in. 77.47 cm	75.5 in. 191.77 cm
Width	19.0 in. (Note #4) 48.26 cm	22.0 in. 55.88 cm	29.875 in. 75.86 cm
Depth	25.75 in. 65.4 cm	26.5 in. 67.31 cm	32.00 in. (Note 5) 81.28 cm
Weight	270 lb 122.47 kg	275 lb 124.74 kg	650 lb 294.84 kg

FEATURES

- Pinch-rollerless design. Vacuum capstan with gas film and roller guides provide fast, gentle and precise tape control and handling in all operating modes for smooth, predictable acceleration/deceleration
- 500 inches/second acceleration/deceleration profile allows a 30 second segment to be re-cued and synchronously played in 2.0 seconds using one hour tape reels
- Large dot addressable fluorescent display with direct access and six menu-identified "soft keys" can easily organize, display and simplify important operational control and diagnostic functions
- Unique SCH phase meter built-in to assure better control for fast edits without picture shift
- Master Unity control
- Automatic computer optimization of video and audio record parameters, with storage for three tape types

- Single field lock-up (20 milliseconds) and synchronous start for full color frame playback in a maximum of four fields in NTSC, and a maximum of eight fields in PAL/SECAM
- Audio input and output processing ports for easy interfacing with popular noise reduction and time compression/expansion systems
- Five machine editing control
- 3-hour reel capability in either a tabletop or rackmount configuration
- Optional line-by-line autochroma
- Input cable equalizer

Additional Features

- AST Automatic Scan Tracking permits continuously variable play, from still frame to 3X play speed forward, and zero to 1X in reverse
- SMPTE/EBU Type "C", one-inch format
- Individually replaceable video and sync head assemblies
- Two SMPTE series communications ports (RS-422)

Optional Accessories

- TBC-3 Time Base Corrector
- Time Code Reader-Generator/Character Generator
- High-Powered Audio System/Speakers
- Digital line-by-line Autochroma
- SMC-100 Slow-motion Controller

PROFESSIONAL VIDEO TAPE RECORDER

VPR-6

Type C Video Tape Recorder

The VPR-6 is an appealing blend of machine intelligence and ease of operation, combined to allow operators to be more productive. Powerful microprocessors help the operator to make recording and playback operations as smooth as a ballet, perform simple or complex editing steps with equal ease, or to locate a troublesome IC if necessary. The mechanical design and packaging, based on proven Ampex designs, offer more reliability and greater accessibility.

"User friendly," a term often applied to computers, applies equally well to the VPR-6. A well laid out control panel allows the operator to easily access the logical and powerful software. Virtually all board edge controls have been eliminated, allowing the operator to perform machine setup procedures from the control panel.

With RS-422 serial communications capability, the VPR-6 operates efficiently as an element of state-of-the-art systems, responding to computer editing systems such as the Ampex ACE edit controller.

Helping the VPR-6 attain its full potential is the TBC-6 digital time base corrector, performance matched to the VPR-6. Expanded memory and a very compact package make the TBC-6 the ideal companion for the VPR-6.

FEATURES

- AST™ Automatic Scan Tracking is standard, allowing variable play speeds, 1 to 3X normal
- Shuttle speeds approaching 500 ips with viewable picture
- Forward and reverse single-frame jog
- Video and audio confidence playback
- Optional sync channel
- Optional fourth audio channel (EBU systems)
- Microprocessor-controlled optimization of servos for gentle tape handling of all reel sizes from spot to 2 hours
- Automatic unthread mode prevents head breakage from ragged tape ends
- Virtually all machine functions can be run from control panel
- Extensive built-in diagnostics monitor VTR status continuously
- Expanded diagnostic routine utilizing test probe can be run from control panel

ACCESSORIES AND OPTIONS

Sync Channel

An option to permit all vertical sync information to be recorded according to the SMPTE/EBU Type "C" formats.

Four Channel Audio

This EBU option provides a fourth high quality audio channel in the track space normally allotted to the sync channel.

Audio Processing Kit

This kit provides a harness and connectors to allow simple interfacing of the VPR-6 to external processing devices.

Rack Size Monitoring

A compact, rack mountable monitoring assembly is available for use with the VPR-6.

Time Code Generator/Reader & Character Display

A printed wiring assembly plugs into the VPR-6 electronics bay to add longitudinal time code generation and reading capability.

Parallel Remote Interface PWA

Installation of this accessory adds a 75-pin remote connector which is pin-compatible with Ampex VPR-2B's and VPR-80's.

Serial Remote Interface PWA

Installation of this PWA provides RS-422A-compatible connection to the serial control bus of a microprocessor-based editing system.

Diagnostic Probe

Standard diagnostics capability in the VPR-6, consisting of wakeup and background tests, can identify system malfunctions to assembly or subassembly level.

SMC-100

The traditional sports slow motion controller provides full variable speed playback control of the VPR-6 from up to 100 feet away.

STC-100

This multi-point search-to-cue accessory provides up to 99 cue point assignment and search capability. All cues can be recorded on tape for later recall.

VPR-80 — LOW COST HIGH PERFORMANCE TYPE C VIDEO TAPE RECORDER

Reliability, simplicity, efficiency: The fundamentals behind the design of the VPR-80. It offers the video producer the latest advances in helical recording technology from Ampex.

FEATURES

- SMPTE/EBU Type C 1" format
- Advanced transport design for superior tape handling of all reel sizes, from 6-1/2" "spots" to 2-hour, 11-3/4" reels
- Dual microprocessor control of all VTR functions and servo systems
- AST™ Automatic Scan Tracking system, permits continuously variable play from still frame playback to 1-1/2 times play speed with no picture breakup
- Compact design offers table-top and rack-mount versatility
- Highly functional control panel, all operational controls are up front, logically placed for efficient operation
- Sophisticated, frame-accurate editing including search-to-cue
- Control panel includes Key Pad entry system
- Edit trim
- Exit to entrance edit cue transfer
- Extensive built-in fault detection
- Power-down memory holds control panel setup and tape timer information for up to four days
- Easy access to PWAs, transport components and internal electronics
- State-of-the-art materials, designed to meet the most stringent international safety requirements
- Optional diagnostic probe systems for user-interactive fault tracing
- Compatible with the Ampex VPR-series options and accessories
- High-band FM video recording system for the highest quality video signal performance

VPR-80

- Three full, high quality audio channels, third channel is time-code-compatible
- Built-in speaker monitors any combination of channels
- Tape speed override for VTR synchronization
- Unthread mode protects heads and master tapes

ACCESSORIES

Remote Interface

The VPR-80 offers optional parallel and serial remote control data interfaces for external control panels or editing systems such as the Ampex Computerized Editing (ACE) system.

Diagnostic Test Probe

Using the VPR-80's control system microprocessor, an optional handheld test probe is available for troubleshooting component-level faults in the VPR-80 electronics circuitry.

Rack Size Monitoring

A compact, standard rack width monitoring assembly is offered with space provided for picture waveform and vectorscope monitoring, and an integral two-source video monitor switch panel.

Time Code Generator/ Reader Character Display

A microprocessor-based, plug-in printed wiring assembly (PWA) provides time code generation and reading on Audio Track 3. An eight digit character display provides time code information on the picture monitor.

TBC-80 Time Base Corrector

A digital TBC that provides full performance time base correction of the VPR-80's off tape signal during playback, from still-frame up to 1.5X play speed. The TBC-80 includes full color dropout and velocity error compensation, and color slow motion processing as standard features.

PROFESSIONAL VIDEO TAPE RECORDER

AMPEX NAGRA VPR-5

Type C Video quality from Ampex, Nagra Audio quality, all in the world's finest field recorder.

Combined in this machine are the quality and features of an Ampex one-inch type C VTR with Nagra audio quality from Kudelski SA, in the most practical field acquisition recorder, no bigger than a briefcase and weighing only 15 lb. (6.8 kg.)

The VPR-5 adapts to all kinds of situations, thanks to its own versatility and a full complement of options and accessories. It adapts to the user's working style. One person can handle both a camera and the VPR-5, or the VPR-5 can be manned by a dedicated operator, with the recorder connected to either a shoulder-held or fixed camera. The machine also conveniently fits into any kind of field production vehicle or aircraft.

Despite its compact size, the VPR-5 offers a full range of features needed for sophisticated production. To begin, you're in C-format, which pays off in the quality of your material. Added to that are some other VPR-5 amenities, such as its exclusive dual-cue editing that allows studio-type control. Four edit-related functions characterize this VTR's professional ability: from "let's see it" reviews and precise returns to the next edit point, to total control when replacing undesired material, and even mid-segment edits to new material.

Advanced audio technology is built into the VPR-5. You'll find features like a variety of interfaces available for microphone types and/or line inputs. And seven built-in switch-selectable filters to match scene acoustics, particularly low frequency reverberation cancellation.

You'll find a unique display using LCD for VU or PPM level. Even full individual record channel lockouts for two audio channels and standard time code channel.

You'll also discover that the VPR-5 features an audio confidence playback selector independent of the video.

Physical Dimensions:

Height: 5.5" (13.7 cm)
Width: 17.5" (44.2 cm)
Depth: 8.5" (21.5 cm)

ACCESSORIES

Extended Record/Play

When a production calls for recording times longer than the standard 20-minute reels, the VPR-5 can be converted in a matter of seconds to hold NAB 9-inch, one hour tapes.

Power Systems

The VPR-5 is powered from a variety of sources. Two on-board, pluggable battery packs of different capacities are available: the lightweight standard capacity version for use with 20-minute tapes, and an extended capacity pack to accommodate one-hour tape operation.

The Battery Charger Unit can charge six battery packs at one time.

An ac power mains adapter that works with all world power standards is available. The VPR-5 can also be powered from low impedance dc sources of 12 to 18 Vdc, such as vehicle batteries.

Field Playback

When the normal monochrome confidence-quality video replay is not satisfactory, the optional Color Stabilizer Unit produces a color-locked signal with excellent color rendition on any monitor or conventional TV receiver.

Audio Inputs

A modular approach has been taken for audio inputs of the VPR-5, so that field reconfigurations dictated by audio sources can be quickly accommodated.

Carrying Aids

The VPR-5, with its light weight and compact size, is easy to take where C-format has never gone before. To enhance this portability, a protective soft case and a pack frame with carrying harness are available.

Video Interface

The VPR-5 has optional, pluggable modules for most EFP applications.

BEST OF BOTH WORLDS

When you've produced the best show in town, transferring to Ampex 196 Professional Video Tape lets you keep all the emotion, color and snap of the original. And it stays that way, run after run. Nothing is lost, especially the subtleties and the 'little things' that can make your show memorable.

Ampex 196 High Energy Video Tape offers superb color and crispness. Plus the kind of audio performance that has made Ampex tape number one in the music industry.

Video tape quality won't be the only reason

your show's a hit, but if you specify film-to-tape transfer on Ampex 196, you'll see on the screen what you first saw in the script.

To find out more about how Ampex 196 Video Tape can give you the best of both your worlds, call our Regional Sales Office in Glendale (213) 240-5000 or write Ampex Corporation Magnetic Tape Division, 401 Broadway, Redwood City, CA 94063.

ANNIS

Protect valuable recorded tapes with an...

Audiophile HAN-D-KIT

Provides everything needed to measure and eliminate magnetism in recorder components before recorded tapes are damaged permanently

1 Check Magnetism in Recorder Components

The Annis Pocket Magnetometer quickly and accurately measures residual magnetism levels in recorder heads, drive capstans or tape guides. Indicates when it's time to demagnetize and lets you know when it's again safe to use the recorder.

2 Demagnetize Components When Necessary

Whenever the Magnetometer indicates any appreciable level of magnetism in a tape transport component, you can demagnetize it effectively with the powerful Annis Han-D-Mag before it causes permanent damage to recorded tapes.

Valuable audio and video tapes can be damaged when played on equipment that is not thoroughly and regularly demagnetized. Magnetism can easily build up in capstans, tape guides or recorder heads to a point where it will degrade the magnetically recorded signal on tapes passing over them. Tape damage is first apparent as a loss of recorded high frequencies and a progressive increase in background noise each time they are played on magnetized equipment.

Until recently, there has been no easy way to tell when demagnetizing was needed, and most Demagnetizers on the market were far too weak to be effective, particularly on offending hardened steel guides or capstans, etc. Now, with the introduction of the Audiophile Han-D-Kit, both measurement and correction problems can be solved easily at modest cost.

Here in one convenient package is everything needed to measure magnetic levels quickly, along with a handy, powerful unit to demagnetize components completely before they can spoil valuable tapes.

THE AUDIOPHILE HAN-D-KIT CONTAINS

ANNIS POCKET MAGNETOMETER

Measures level of magnetism in components. Calibrated to read directly in gauss. Model 20/B5 shown.

TEST STRIPS

One of these sensor strips is magnetically soft and the other magnetically hard. For experiments and testing your demagnetizing technique.

CLIP-ON EXTENSION PROBE

Extension probe is 1 3/4" long. Can be formed with fingers. Improves checking of magnetism in hard to reach components.

"NOTES ON DEMAGNETIZING" ETC.

Explains causes of magnetism, with particular reference to tape recorders. How to measure it accurately and how to eliminate it. Interesting experiments also included.

ANNIS AUDIOPHILE HAN-D-MAG

A rugged, dual-use Demagnetizer having a powerful, sine wave demagnetizing field strength of over 350 oersteds 1/4" beyond the tip of the 2 1/4" long probe.

Standard Han-D-Kit Model K20/B5

Includes all items shown above. Model 20 Magnetometer has polarity indicating center zero scale, calibrated to read 5-0-5 gauss.

Deluxe Han-D-Kit Model K25/S5

Same as above except for the Magnetometer. This kit includes the larger, more rugged Model 25 jewelled Magnetometer with ten times the calibration stability of standard Model 20.

	Shipping Wt.	Price
Standard Han-D-Kit Model K20 / B5 For operation on 115 V. 50 / 60 Hz.	2 Lbs.	\$49.00
Deluxe Han-D-Kit Model K25 / S5 For operation on 115 V. 50 / 60 Hz.	2 1/4 Lbs.	83.00

SPECIAL SAVINGS ON PREPAID ORDERS: When money order or check accompanies your order, add \$1.00 for handling. Surface delivery to your door is included Via UPS or Parcel Post in USA. Air shipment, or export, is extra.

TAPE LOADING SYSTEMS/ACCESSORIES

SYSTEM III WITH 619-P PAY-OFF UNIT

SYSTEM III

619-R REWINDER

"HOCKEY PUCK" SPLICER

VIDEO TAPE LOADING SYSTEMS UMATIC, VHS AND BETA — (Also Load Audio)

Systems can be equipped to load Umatic, VHS, and Betamax video cassette and cookies as well as audio cassettes, cartridges and reels. Tape loading speed is 135 inches per second. Counter allows selection of exact tape length desired. Built-in cleaner is included which can be used to wipe both sides of video tape during loading or rewinding. Space is provided to mount a burnisher/scraper.

All systems consist of a 751-V Delivery Unit and an 829 Receiving Unit with one interchangeable Take-up Module. Systems II and III also include the 29R Unloading Unit. The 829 Receiving Unit, which contains a processor that continuously monitors in-path tape loading tension, may be upgraded: System I or II to System II or System III.

Systems I and II require only one Take-up Module for both VHS and Beta; System III requires separate modules for each format. Umatic modules handle both KCA and KCS housings. When ordering, specify desired module — Umatic or 1/2" on System I or II; Umatic, VHS or Beta on System III.

System I Video Loader Loads new tape into new cassette housing. **\$6075.00**

System II Video Loader/Reloader Has additional feature that automatically removes old tape from cassette housings without taking them apart, and thus allows for their convenient reuse **7075.00**

System III Video Loader/Reloader/Rewinder Adds ability to rewind and fast-forward cassettes, and to wipe tape while rewinding. When reloading, tape can be removed from either reel. **7275.00**

Take-up Modules Extra interchangeable modules (in addition to one selected with Receiving Unit).

Load (All Systems) **450.00**

Load/Reload (Systems II and III) **600.00**

Load/Reload/Rewind (System III) **750.00**

Audio Tape Loading Options (1) Audio Cassettes, (2) Type-A Broadcast and 8-track Carts, and (3) Nagra Reels.

First Option **325.00**

Second and Third Option (each) **50.00**

619-P Pay-off Unit Used with video loader to transfer tape directly from a cassette housing or cookie into another housing. Mounts to left of Delivery Unit which counts desired length. Built-in leader detector stops loading, and length loaded is indicated. VHS unit transfers tape from VHS housings to both VHS and Beta housings.

Umatic or VHS **975.00**

Umatic and VHS **1175.00**

Economy Video Loader Loads new tape into new cassette housings. Includes 751-V Delivery Unit and 619-T Take-up Unit with tape wiper and one Take-up Module, either 1/2" (VHS and Beta) or Umatic, Audio tape loading options also available **4475.00**

Second Take-Up Module **450.00**

VIDEO CASSETTE REWINDER

619-R Video Cassette Rewinder Rewinds and fast-forwards Umatic, VHS and Beta cassettes. Unit can also be used as either 619-P Pay-off Unit or 619-T Take-up Unit on Economy Video Loader (Take-up tape wiper is \$150 extra).

Rewinder One format — Umatic, VHS or Beta **\$1125.00**

Each additional format **700.00**

Rewinder/Unloader 29-R Unloader added to above 619-R. Allows old tape to be removed from housings and stops automatically when leader is detected. One format **1975.00**

Each additional format **700.00**

VIDEO TAPE SPLICERS

"Hockey Puck" Splicer Tape and leader are butted together and held in place by vacuum holes in tape slot. Splicing tape is placed on top of block across ends to be spliced. The "puck", a precision fitting, hardened metal roller, is rolled down the slot and cuts and applies splicing tape in one motion.

1/2" Tape **\$550.00**

3/4" Tape **550.00**

Vacuum Source The "Hockey Puck" Splicer requires a vacuum source for tape hold-down, either a small vacuum pump or a compressed air source connected thru a venturi.

Venturi Kit Consists of venturi, flow control and fittings to generate vacuum from compressed air source. **75.00**

Vacuum Pump **125.00**

SUMMARY

Costs for various formats and features, including optional "Hockey Puck" Splicer(s) and vacuum pump.

ECONOMY LOADER	SYSTEM I	SYSTEM II	SYSTEM III
Umatic (or one 1/2" format on System III)			
\$5150.00	\$6750.00	\$7750.00	\$7950.00
VHS and Beta			
\$5150.00	\$6750.00	\$7750.00	\$8700.00
Umatic, VHS and Beta (two "Hockey Puck" Splicers)			
\$6150.00	\$7750.00	\$8900.00	\$10,000.00

Above System III for Umatic, Plus:

Umatic Pay-off Unit **\$8925.00**

VHS/Beta System II Load/Reload Module, and 1/2" "Hockey Puck" Splicer **9100.00**

Add **\$325.00** to above prices for audio cassette or broadcast cart loading option; add **\$375.00** for both.

Subtract **\$50.00** from above prices for Venturi Kit instead of Vacuum Pump.

All prices F.O.B. Elk Grove, IL, and subject to change without notice.

TD-1B Tape Degausser

(With Automatic Overheat Thermal Protection)

- Erases audio, video, computer, data tape, magnetic films, cartridges and cassettes.
- For tapes up to 3/4 inch.
- Accommodates up to 10 1/2 inch NAB reels.
- Provides a wide focused magnetic field to assure complete erasure.
- Positive results every time with a simple two pass operation for broadcast NAB audio cartridges.
- Transient protection to prevent permanent tape damage.
- Operate light flashes, indicating auto-shutoff by thermo protector, resets automatically.
- 115 and 220 volt, 50-60 Hz models available.

Power Requirements: TD-1B 115 volts AC ± 10% 50-60 Hz.

TD-1BF 230 volts AC ± 10% 50-60 Hz.

Duty Cycle: One minute ON — Three minutes OFF.

Dimensions: 5 1/4 x 7 1/4 x 3 inches high. 133 x 184 x 76.2 MM.

Weight: Net — 9 1/2 lbs. Shipping — 10 lbs.

Reel Size: Up to 10 1/2 inches in diameter. Removable center post for large carts.

TD-1B - \$105.00
(115V 50-60 Hz)

TD-1BF - \$118.00
(230V 50-60 Hz)

TD-4 Tape Degausser

- Erases audio, video, data tapes, U-Matic cassettes up to 750 oersteds, reels to 14 inches in diameter. See performance chart.
- Provides 2550 effective gauss field.
- Built in timer has adjustable "on" cycle and automatic shut-off.
- Automatic cooling fan operation.
- Overheat light with automatic thermal protection prevents exceeding duty cycle on "HI" position. Thermal protection resets to normal operation automatically.
- Hi-Lo operation allows continuous duty erasing on Lo position for most tapes. See performance chart.
- Standard 5/16 inch center post with 3 inch NAB hub supplied.
- Conservative design assures long reliable performance.

MODEL NUMBER	LINE VOLTAGE	LINE FREQUENCY	LINE CURRENT		MAXIMUM GAUSS

Duty Cycle: Hi position 50%, 20 minutes. Lo position - continuous.

Dimensions: 10 x 13 x 4 inches. (25.4 x 33 x 10.1 mm)

Shipping Weight: 45 lbs. (14.97 kg)

Erases audio, video, computer, and cartridge tape.

TD-5 Tape Degausser

- Erases audio, video, data U-Matic cassettes up to 1100 oersteds and 16 inches diameter.
- Provides 3500 effective gauss field.
- Built in timer has adjustable "on" cycle and automatic shut-off.
- Automatic cooling fan operation.
- Overheat light and automatic thermal protection prevents exceeding duty cycle on "Hi" position, resets to allow normal operation.
- Hi-lo selectable operation allows continuous duty erasing on Lo position for many tapes. See performance chart.
- Standard 5/16 inch center post with 3 inch NAB hub supplied.
- Conservative design assures long reliable performance.

AUDIO-VIDEO ACCESSORIES

Gibson Girl® Tape Splicer

Precision made—produces slight trim cuts on the edge of the splicing tape to prevent adhesive from contacting parts. Knob has cut and trim position blade adjustment provided to maintain lifetime accuracy.

26-038 1/4" tape (reel to reel) splicer . . \$9.95
26-043 Cassette splicer 9.95

Cordless Cassette Tape Eraser

Erases recorded material from standard and micro or mini cassettes in seconds—no outside power or batteries needed.

24-004 \$14.95

Robolite

Battery operated dustcover lamp. Light turns on when cover is raised, off when lowered. Uses two D-cells (not supplied).

40-002 \$12.95

Cassette Tape Head and Capstan Cleaner

This unique wet cleaning system will clean the tape heads, capstan and pinch rollers in one operation. It will bring back the original clarity and performance of your cassette unit without scratching or damaging the tape head.

35-005 \$4.95

Cassette Head Demagnetizer and Cleaner

Operates with home & auto cassette player/recorders. Features rotary magnet and non-abrasive head cleaning tape.

25-007 \$3.95

Stylus Cleaning Kit

Removes dust and dirt from stylus tip. Increases life of stylus and records.

40-052 \$1.95

Audio Cassette Care Kit

A complete care kit for auto, home & office cassette recorder/players featuring the Audible Tone cassette head demagnetizer. Non-abrasive cassette tape head and capstan cleaner (cat. no. 35-005) packaged in a plastic storage box.

25-010 \$19.95

Universal Tape Splicer

Low cost splicer for both 1/4" and cassette tapes—blades included. Uses standard splicing tape.

26-030 \$2.50

Micro/Mini Cassette Tape Eraser

Erases recorded material from micro and mini cassettes.

24-005 \$9.95

Micro-Cassette Head Cleaner

Non-abrasive cleaning cassette thoroughly cleans recorder heads.

35-008 \$4.95

Audible Tone Electronic Cassette Head Demagnetizer

Restores original full range recordings by demagnetizing heads which have lost high frequency response or show distortion. Audible tone confirms electronic demagnetizing action.

25-005 \$19.95

Tape Head Cleaning Kit

Contains bottles of head cleaner and head guide lubricant, audio clean swabbies (10 pcs.) for safe easy cleaning and lubricating of hard to reach recorder heads.

30-005 \$1.95

24-022 Audio-Video Bulk Tape Eraser, Industrial grade, erases up to 1" wide tape (3/4" helical scan video) on reels up to 10-1/2" diam. UL listed \$200.00

24-026 Heavy Duty Bulk Tape Eraser, Industrial grade, erases up to 1" wide tape (3/4" helical scan video) on reels up to 17" diam. UL listed 500.00

24-032 3" Hub Adaptor for 24-022, 24-026 10.00

24-033 3-11/16" Hub Adaptor for 24-022, 24-026 10.00

VHS ALBUM

- Single cavity VHS cassette album
 - 4" clear label holder on bottom of front cover and spine
 - Available in Chocolate Montana, Black, Red, Azure Blue, Ginger Montana, White, and Royal Blue
 - All albums have black trays except Ginger and White, which have white trays
 - Packed 50 per carton. Carton weight is 21 lbs.
 - Excellent for attractive dust proof cassette storage
- Suggested Retail Price** \$2.75 ea.

BETAMAX ALBUM

- Single cavity VHS cassette album
 - 3" clear label holder on bottom of front cover and spine
 - Available in Chocolate Montana, Black, Red, Azure Blue, Ginger Montana, White, and Royal Blue
 - All albums have black trays except Ginger and White, which have white trays
 - Packed 50 per carton. Carton weight is 19 lbs.
 - Excellent for attractive dust proof cassette storage
- Suggested Retail Price** \$2.50 ea.

3/4" U-MATIC ALBUM

- Single cavity 3/4" U-Matic cassette album
 - Molded hub locks prevent tape creasing
 - 4" clear wrap-around label holder centered on front cover and spine
 - Dust proof closure
 - Available in Chocolate Montana or Black vinyl with black trays
 - Packed 48 per carton. Carton weight is 32 lbs.
- Suggested Retail Price** \$3.75 ea.

PROFESSIONAL VIDEO PACKAGING

INJECTION MOLDED COMBO ALBUM

- Easily accommodates either VHS or Beta videocassettes
 - Unique internal loading tray locks cassette in place
 - Impact resistant, hard plastic construction
 - 3" clear label holder centered on front cover and spine
 - Professional looking black, brown, or clear leather grain textured exterior
 - Ideal protection for transporting or storing videocassettes
- Suggested Retail Price** \$2.50 ea.

CP-T CLEAR COMBO ALBUM with CLEAR POCKETS

- Manufactured in clear transparent vinyl
 - Designed to hold either a VHS or Beta cassette
 - Full-length clear pockets on front cover, spine and back cover allow insertion of literature or title material
 - Dust proof closure
 - Packed 50 per carton. Carton weight is 12 lbs.
- Suggested Retail Price** \$2.50 ea.

POST COMBO ALBUM

- Holds in place either VHS or Beta videocassettes
 - White or Black exterior vinyl with full open trap unsealed at spine
 - Dust proof closure
 - Packed 50 per carton. Carton weight is 22 lbs.
 - Versatile album for retail or professional use
- Suggested Retail Price** \$3.00 ea.

CP-S CLEAR COMBO ALBUM

- Manufactured in clear transparent vinyl to attractively display either a VHS or Betamax movie sleeve with or without its cassette
 - Prevents handling wear in displaying movie sleeves
 - Packed 50 per carton. Carton weight is 10 lbs.

BCN 21 Portable VTR for Recording, Play-back and Editing

Features

- Weight: 16.6 lbs. (7.5kg) without battery and tape — 20.1 lbs. (9.1kg) with battery and tape
- 6.5 inch standard reels for 20 minutes playing time — 6.5 inch Bosch reels for 30 minutes playing time — 9 inch standard reels for 60 minutes playing time
- Color monitoring output
- Video and audio monitoring on any home receiver (with optional HF modulator)
- Internal 12 V/2.5 Ah battery or external 12 V DC-supply
- Field editing with the scene
- Correction of edit decisions
- Status monitor (LCD display) for time code, operating modes or failure
- Built-in μ C time code generator
- Presetting of time code and user bits
- Output for time code for simultaneous recording on two BCN 21
- Integrated audio mixer
- Three audio inputs
- Audio cross dubbing (on-site postproduction)
- Overload protection for audio tracks (limiter)
- Integrated supply line for condenser mike
- Integrated automatic editing facilities with edit simulation
- IN, OUT cue marks for Master and Slave
- Search function with two frame editing accuracy (tape timer)
- Fully remote control facilities
- Instant edits with 1 second backspace
- Interface for external editing systems

BCN 41/51 - One Inch Video Tape Recording System

The BCN 41 is the basic unit of the system. It consists of:

- Standard tape deck
- Control panel
- Electronics

Operating modes

- Recording with broadcast quality
- Insert and assemble editing (manual)
- B/W reproduction
- Color reproduction on request

Applications

- Compact unit for OB vans especially suitable due to low weight
- Optional operation with one processor switchable to two BCN 41s for broadcast playback
- All applications where time-base-corrected signals are not necessary but a top-quality recorder is required. An economical solution

The BCN 41 can be upgraded with the processor BCPC 49C and an additional monitoring bridge BCBM to the BCN 51

version which then includes the following features:

- Time base correction
- Play-back in broadcast quality
- Drop-out and velocity error compensation
- Delay time and subcarrier phase correction
- Monitoring of picture level and vector signals
- Audio monitoring
- Test point selection

Digital Vario Motion

The BCN 51 basic version can be further upgraded with a digital BCN store BCQE 620.

The following features can be added for a more time saving and therefore more economical production.

Functions

- As per BCN 51 basic version
- Still frame reproduction
- Step motion
- Slow motion
- Visible search
- BCN 51 with BCN store is the basic version for further optional peripheral units

Applications

- Demanding electronic productions
- Fast and economical decision making for editing; fast take search possible
- Analysis of moving sequences, e.g. sports events
- Artistic use of quad split mode

BCN 41/51 A Production Peripherals

A BCN 51 with the store unit and additional control interface ZPQ is capable of being used with four further control panels:

- Single frame display BFS 9B
- Slow motion programmer BPS 9A
- Production editing systems
- Remote control

A further specialty of the BCN system is the digital split system. The digital quad split control RCSH can be connected to every BCN 51 with the DVM unit.

- For picture archiving with fast access to individual pictures, (135,000 pictures on a 90 minute one-inch tape), picture sequences (programmer takes) or logos
- Replacement of slide archives where the slides have so far been reproduced conventionally

Functions

- Single frame recording and reproduction
- Remote control of main tape deck functions
- Automatic frame selection
- Automatic reproduction of picture sequences
- Fast search mode

BPS9A Slow Motion Programmer

Applications

- Programmable slow motion replay of various takes or high-lights (e.g. goal scene etc.) Analysis of motion sequences or for replay of still picture from any kind of program
- Substitute for complex disk store systems

Functions

- Programmable slow motion, forward and reverse
- Programmable single frame selection
- Automatic selection between normal and slow motion mode
- Variable slow motion speed
- Remote control of the main tape deck functions

RC SH Digital Quad Split Effects

Applications

- Analysis of motion sequences
- Artistic picture designing
- Production revising
- Industrial, scientific and medical applications

Functions

- Display of all effects with moving pictures in color
- Display of still pictures
- Adjustable frequencies of picture sequences when still pictures are reproduced (Skip field mode)
- Reduction of picture area down to 1/4
- 4 fold simultaneous display (Quadsplit)
- Repetition of Quadsplit produces 8 fold reduction (Restore)
- Selectable freeze frame of individual quadrants (Quad Freeze)
- Display of various mirror effects

CHANNELMATIC

BROADCASTER I

Automatic Video Cassette Changer

(Patents Pending)

BROADCASTER I is the basic unit of a revolutionary new series of ultra-reliable and highly flexible video cassette changer systems. It can random access amongst up to fifteen video cassettes or, optionally can also random access up to 100 individual spots on each video cassette. It is designed to be used in broadcast stations, CATV systems, LPTV systems, hospitals, schools, hotels and other facilities where quality programming must be originated automatically on a pre-programmed weekly time schedule.

The microcomputer in BROADCASTER I is operator programmed to select any one of the standard 3/4 inch video cassettes from the integral tape storage magazine, insert it into an unmodified Sony Type-5 VCR, playback the tape and then replace it in its designated slot. Provisions are included for precisely prerolling the VCR and audio/video switching is accomplished in a broadcast fashion, with vertical interval transition as referenced to the primary program source.

BROADCASTER I may be operator programmed to rewind a video cassette immediately after it has played, or to delay tape rewinding until a specific time, such as midnight, when each tape which has been played will be inserted into the VCR, rewound and replaced in the magazine. All tape rewinding is totally automatic and requires no operator attention.

FEATURES

- Random Access of up to 15 Video Cassettes
- Total Microcomputer Control
- Easy Programming-Display Prompted in English
- Full 7-Day Programming (100 Events per Day)
- No VCR Modification Required
- Computerized Stepper Motor Drive — Indexing Accuracy Within .005 Inch
- Reliable...No Oil, No Gears, No Belts, No Chains
- Minimal Moving Parts for Ultra Long Service Life
- Units May Be Cascaded for Additional Capacity
- Will Play Multiple Sequential Segments on Each Tape
- Built-In Vertical Interval Switching
- Automatic Switching to Auxiliary Source During Cassette Change
- Automatic Record and Delayed Playback Optional
- Built-In Video Monitoring Optional
- Optional Electronic Modules can add Numerous Features

AUTOMATIC VIDEO CASSETTE CHANGER

OPTIONAL EQUIPMENT

In its basic form BROADCASTER I can solve many of the problems associated with loading and operating a video cassette machine, but when options are added, BROADCASTER I becomes a custom workhorse capable of almost any operation involving video tape.

PHYSICAL DIMENSIONS

BROADCASTER I is housed in a free-standing, castered cabinet measuring 52" H x 22" W x 37" D and weighing approximately 200 lbs.

BROADCASTER I **\$13,500.00**

Single channel Random Cassette Changer including Microcomputer Controller, Audio/Video Switcher with two additional inputs and DTG-102A Tone Generator for encoding tapes.

OPTIONS:

5-Inch Monochrome Video Monitor	\$ 300.00
Additional 3-Input Audio/Video Switch	450.00
Tone Decoder (Satellite)	400.00
8-Page Character Generator Including Programming	900.00
Video Presence Detector	325.00
Balanced Audio, 3-Input and 1-Output	300.00
HANDIMOD I Accessory for Sony Type 5 VCR	300.00
SONY VP-5000 Video Cassette Player, Installed	1895.00
Video Distribution Amplifier, 6 Isolated Outputs	325.00
Audio Distribution Amplifier, 6 Isolated Balanced Outputs	325.00
Logging System Including 80-Column Printer	1500.00
Random Access Within Tape (Incl. Logging and Tape Encoder)	5500.00
Automatic Record and Playback	3000.00

MAXERASE®-16B

**BULK VIDEO/AUDIO
TAPE DEGAUSSER** A 30-second
one pass total erasure of all high coercivity
video tape formats and sizes.

For the first time high coercivity tape (up to 1500 oersted) can be completely and automatically degaussed at the touch of a button. The Christie MAXERASE-16B, provides hands-off, fast degaussing, and eliminates the uncertainty of previous degaussing systems.

MOST POWERFUL DEGAUSSER

The MAXERASE-16B (Model ME-16B) with its advanced design is the most powerful professional degaussing machine on the market today. It makes use of a patented high-power [equivalent flux of over 16 kilowatts] assembly composed of upper and lower magnetic cores, assuring total erasure of any video tape.

There is no other degaussing machine currently available which: [1] comes even close to the magnetic flux levels generated; [2] directs almost all of the degaussing flux through the tape; [3] simultaneously rotates the tape reel or cassette while passing it non-linearly through the magnetic field preventing "spoking"; [4] does all this in one pass, automatically, in about 30 seconds.

ERASES HIGH COERCIVITY TAPE

Difficult to erase high coercivity tape rated at 700 to 1000 oersteds is degaussed by the MAXERASE-16B to levels typically exceeding -85 dB in one pass. Degaussing to typically more than -95 dB is achieved on 300 to 500 oersted tapes. Multi-track audio tapes are usually also degaussed to levels exceeding -80 dB.

HANDLES ALL FORMATS/SIZES

The MAXERASE-16B is the only automatic degausser capable of being quickly adjusted to accommodate maximum degaussing fields for all widths of audio, computer, video, and instrumentation tape from 0.25 inch up to 2.6 inches and any

tape reel size up to 16 inches in diameter. It handles all magnetic tape formats—reels, cassettes, cartridges and disc. For even faster degaussing, on smaller formats and sizes, several tapes can be erased at once by the MAXERASE-16B.

HEAVY DUTY APPLICATION

Many degaussers quickly overheat and stop functioning until they cool down. They also can cause the tape to overheat and perhaps even be damaged if multiple passes are required. The MAXERASE-16B is built with an enhanced duty cycle for long-term continuous operation with most tapes, without overheating the tapes or the degausser.

SIMPLE AUTOMATIC OPERATION

The MAXERASE-16B operation is simple, safe and automatic. A tape is placed into the holding tray. The tape width is reset if different from the prior tape as indicated on the control panel. The operator then presses the start button, which causes the degaussing operation to begin. A motor drives the tape into the high-energy flux field and back out, while uniformly rotating the tape tray first in one direction and then in the opposite direction.

HIGH QUALITY CONSTRUCTION

The unit employs a high quality drive motor, all solid-state control logic, high-current resonant technology, visual display control panel, heavy cast base construction, and a sturdy molded fiberglass enclosure.

ONE-YEAR WARRANTY

The Christie MAXERASE-16B carries a one-year warranty on all parts. The warranty also includes labor if the unit is returned to Christie for repair. A complete copy of the Christie warranty containing all provisions is available from Christie Electric Corp.

MAXERASE-16B (Cont'd)

TECHNICAL FEATURES

UNIQUE CORE DESIGN

The task of degaussing today's high coercivity tape requires a magnetic flux field of maximum intensity. Since the magnetic flux density decreases exponentially with the distance, the MAXERASE-16B locates one magnet core just under the reel tray, in close proximity to the bottom of the tape. The top core assembly can be raised or lowered to bring it close to the top of the tape. Operating with flux equivalent to more than 16 kilowatts, these electro-magnets produce an extremely concentrated flux field to penetrate the tape.

CONTROL/INDICATOR PANEL

Push-button controls and an indicator display panel make the MAXERASE-16B easy to operate. A linear scale indicates the top magnet position which can be adjusted for standard or non-standard tape widths. If an operator loads a tape which is too tall for the magnet position selected, the unit reverses and a light on the display panel flashes.

SELECTABLE FLUX FIELD

- For high and low coercivity tapes, the unit has selectable high and low power settings for each of the electro magnets.
- To assure the best erasure for every type of tape, the unit also provides switch selection between two orientations of the flux field.

SPECIFICATIONS OF MODEL ME-16B*

Operation Cycle:	One-pass, approximately 30 seconds.
Formats/Sizes:	All diameters up to 16 inches [41 cm]. All widths up to 2.6 inches [6.6 cm].
Degaussing Level:	- 80 to - 95 dB typical, one-pass. (Degaussing level will vary with temperature, tape coercivity, tape width, depth inside tape stack, reel type, reel construction, wave-length recorded, power setting, and number of passes.)
Controls:	Front display panel.
Mechanical Drive:	Single gearmotor.
Electro-Magnets:	Heavy duty, patented core assemblies.

Flux Power	High and low power settings.
Flux Field Orientation:	Two settings.
Power Input:	230 Volts, 60 Hz, 30 amps max., twist lock plug.
Protection:	Main Power: Magnetic circuit breaker; Control circuitry: fuse.
Dimensions:	H 16" [41 cm] x W 35" [89 cm] x D 24" [61 cm].
Base Construction:	Heavy cast aluminum.
Cabinet:	Molded fiberglass.
Mounting:	Bench mount.
Net Weight:	150 lbs. [68 kg.].

*Subject to change without notice.

MAXERASE-16B \$5,550.00

Optional Features

Suffix: Z: 230V, single phase
50Hz (only),
30 amps maximum input \$400.00

STC-100

A highly flexible microprocessor-based search-to-cue controller designed for use with Ampex VPR-1 and VPR-2/2B VTRs, the STC-100 can designate, store and recall up to 99 separate cue points, and remotely control the VTR's record, normal speed play and full speed bi-directional shuttle functions. Cue points may be keyed-in via a number pad in SMPTE/EBU format, or they may be marked on-the-fly from SMPTE/EBU time code being read off a moving tape. Each designated cue point is automatically assigned a two-digit file number which may be keyed-in to recall the associated SMPTE/EBU time code address of the cue point, allowing the STC-100 to "rapid search" VTRs under its control to specific cue points.

INTERNAL MEMORY:

An internal memory with battery backup stores all cue point information. The memory can be dumped to or loaded from audio track 3 of the VTR under the STC-100's control, allowing cue point lists to be stored on the same tape as the program material to which they apply, for convenient recall. The entire 99 cue point capacity of the STC-100 memory occupies only 40 seconds of tape, so the list can easily be recorded onto the leader ahead of the program material, if desired.

APPLICATIONS:

The STC-100 has a wide range of uses in both live production and post-production. For sports, it can be used to rapidly designate cue points for "instant replay" at any time during recording or playback. It can increase the efficiency of spot commercial playback by allowing a series of commercials to be recorded on a single reel, with cue points designated at the beginning of each spot to allow rapid searching to those selected for playback. For postproduction, an entire library of still-frame recordings can be selected and the cue point information stored right on the video tape for recall during subsequent editing sessions. The list of STC-100 applications is limited only by the user's imagination.

MANUAL, STILL AND SLOW-MO OPERATION:

Cue points may be marked, assigned cue numbers and searched in manual, still and slow motion mode.

Manual: Provides normal remote control of the VTR via the STC-100's record, play, stop and shuttle buttons. Cue points may be marked or searched-to during any motion sequence.

Still: Allows up to 99 stills to be selected in an auto-assemble sequence, providing a rapid-access still store. Each still segment is 10 frames long. 99 recordings occupy approximately 33 seconds of real time (NTSC). Maximum access time is 5 seconds, with a ± 2 frame target accuracy.

Slow Motion: Similar to manual mode, except that the transport controls on the STC-100 are disabled. Transport control is provided by an Ampex SMC-60/100 slow motion controller, while cue points are marked and searched by the STC-100. Operating in conjunction with the STC-100, the SMC-60/100's memory is expanded from one auto cue point to 99. The SMC-60/100 plugs directly into the back of the STC-100.

SIMPLE INSTALLATION:

The STC-100 plugs directly into the VTR's remote connector, and may be remotod up to 100 feet. No VTR modifications are required.

VIDEO TAPE CLEANER/EVALUATOR

3/4 INCH CASSETTES MODEL EA750

ONE INCH TAPE MODEL EA 254

The Elcon Tape Evaluators are fully automatic, high-speed tape cleaners and profilers, specifically designed and precision-engineered for professional tape maintenance and evaluation. The Elcon offers a unique LED linear display system that makes thorough tape evaluation quick and easy. Push-button accessing of three pre-established acceptance levels simplifies classification into common categories, i.e., "Master Stock", "Commercial", and "Dub" quality, making this system particularly suited to operation by non-technical personnel. In one pass, tapes are cleaned, evaluated and rewound in 1/10 the normal running time.

Operation is fully automatic. The machines shuttle tape from head to tail end, cleaning only. The tape reverses automatically. On the rewind pass, the tape is cleaned a second time, and, if profile has been selected, the tape is degaussed and profiled electronically.

Electronic profiling will locate and identify damaged tape areas by illuminating the appropriate section on the LED linear display panel. The panel is divided into three illuminated channels representing the "Top Edge", "Video", and "Bottom Edge" of the tape. These channels are calibrated in 1/4 minute segments. No light indicates that the number of defects is below the predetermined acceptability level.

After a tape has been profiled, the operator evaluates the tape by pressing the buttons labeled A, B and C. These alter the display illumination to reflect three separate user-programmed acceptance levels.

VIDEO TAPE

Fuji features 1-inch "C" format video tape in hard plastic shippers. The rigid, flame-retardant cases are available in 10½-inch and 14-inch sizes with built-in handles. Fuji H621 video tape is acclaimed for its reliability, particularly under adverse conditions.

H621 Professional 1-Inch Video Tape

Fuji H621 1-inch video tape gives you better color, better S/N ratio, fewer dropouts, longer life, lower abrasion, and lower jitter from the capstan and drum. You get better results on the master, and with each subsequent generation you make.

High-density particles of Fuji's exclusive BERIDOX (Berthollide iron oxide) are specially sensitized, then held together and fastened to the tape's backing material with Fuji's special U-binder. The backing material has uniform thickness and an extremely fine finish to prevent edge damage during winding, and is treated to reduce static. Fuji H621 provides superb performance in virtually any recording or playback situation.

For extra protection, a flame retardant shipping case is also available.

Length	Recording Time	Reel	Carton Quantity	Case
1640'	34 Min.	8"	5	FRS or carrying case
3170'	66 Min.	9"	5	FRS or carrying case
4620'	96 Min.	10.5"	5	FRS or carrying case
5070'	105 Min.	10.5"	5	FRS only
6070'	126 Min.	14"	2	FRS only
7540'	157 Min.	14"	2	FRS only
9100'	189 Min.	14"	2	FRS only

All the above lengths are available in the Type C Format. The 34 min., 66 min., 96 min., and 120 min. lengths are available in the Type B Format.

VIDEOCASSETTES

Super XG H451 VHS/H351 Beta

Proudly dubbed "The Master Tape". A magnetic layer 2.7 times higher in density than Super HG ensures the highest possible image and sound quality.

"Additionally, a new binder developed specifically for the Super XG features the lowest friction co-efficient of any binder yet available, enhancing reliability and durability to the maximum."

VHS: T-120, T-60 BETA: L-500, L-250

H521 BR Professional U-Matic Videocassettes

Fuji's new H521 BR is a high grade version of our H521 which is already considered to be the top of the line as far as 3/4" inch videocassettes go. Fuji has now taken U-Matic tape technology a step further by suppressing dropouts to the absolute minimum technically possible—less than 4 per minute. We've also boosted video and color S/N performance a maximum of +2 dB over the H521. Fuji's H521 BR is the ultimate 3/4 inch video cassette.

BR KCA-30, BR KCA-60, BR KCS-10, BR KCS-20

H521 Professional U-Matic Videocassettes

Employing its new backcoating technology, Fuji has recently developed the "H521", the highest quality U-matic videocassette available to professional producers and broadcasters. With the dramatic reduction in dropouts and increased durability, the H521 becomes the most ideal U-matic cassette around, delivering the sharpest, cleanest picture—just what professional broadcasters expect and demand. The H521—the reliable 3/4-inch videocassette that can stand up to the toughest of operating conditions. Its outstanding features include:

KCA-10, KCA-15, KCA-20, KCA-30, KCA-60, KCS-10, KCS-20

Super HG VHS/Beta

The pioneer of super high-grade videocassettes. Exclusive DURO-BACK backcoating realizes both super picture quality and excellent running stability.

The Standard In Video and Computer Degaussers

Garner serves the video and computer industries with a full line of automated video tape erasers engineered for both the speed and effectiveness professionals demand.

Depth of Erasure: Garner's erasure of a heavily saturated, high coercivity tape is the standard of the industry.

Speed: Erases high-energy tape completely in 5 to 15 seconds. Other erasers take many times that long.

Ease of Operation: No one beats Garner's ease of operation. Just touch the "on" switch and place the tape on the conveyor. There are no drawers, no spindles and no height adjustments.

Dependability, Guaranteed. For over 13 years, Garner has set the standard for tape erasers. Just one look at the rugged construction shows you why.

VIDEO TAPE RECORDER/PLAYER

HR-230

High Performance 1-Inch Production VTR

- High quality recording/reproduction
- Interchangeability with all Type C tapes
- 2-hour/3-hour reel operation selectable
- -1 to +3 times variable play speed (option)
- Built-in 4Hp-p TBC (option)
- Auto setup of optimum record current
- Video confidence (simultaneous playback)
- DG/DP compensation circuit
- Deviation marker for modulation setting
- Auto chroma function
- Built-in cable compensator
- Auto setup of optimum bias current
- Audio confidence (simultaneous playback)
- Linked left-right volume control possible
- Peak level display by LED
- Audio spot erase function
- Built-in monitor speaker
- Digital servo system
- Quick start of tape travel
- Hand advance of tape under servo control
- Automatic color framing
- Any size of reel usable without servo switching
- PRO (Protective Reverse Oxide) tape path
- Non-contact head drum in standby and FWD/REW modes
- Retracting entrance and exit guides
- Escape tension mechanism
- Retracting master erase head
- Automatic audio head cover opening and closing
- Built-in monitor select buttons
- Controls with unity setting and center click
- Various displays for ease of operation
- Assemble/insert editing with 1-frame accuracy
- Split edit and forced edit possible
- Cue shift and variable preroll
- Preview and review operation
- Change and display of edit data
- Edit point setting by ten-key entry

The Hitachi HR-230 is a newly designed 1-inch helical-scan VTR in accordance with the SMPTE Type C standard and provides the same highly acclaimed performances that made the former HR-200 series so popular with many new added features that make it even more useful for various applications.

The HR-230 inherits the same features as the former models such as the tape transport designed by CAD to assure stable tape travel, the PRO (Protective Reverse Oxide) tape path to protect oxide surface of a tape, the air support system to reduce resistance to tape travel, and the retracting entrance guide for ease of tape loading. In addition to these features, air tension arm posts are newly adopted to further reduce resistance to tape travel and an escape tension mechanism and retracting exit guide, to make tape loading more simple and accurate in combination with the retracting entrance guide.

Only by changing the mounting position of reel motors, both of the 3-hour and 2-hour reel operations are possible; the former for desk-top and console configurations, and the latter for rackmount configuration.

Other performances improved, and functions added, are two micro-processors which independently control the operation system and servo system, -1 to +3 times variable play speed and its memory function (option), auto setup function of the optimum video record and audio bias currents, variable play time function which can increase or decrease program time, master/slave control function, reduction of tape accelerating time and lock-in time, incorporation of 4Hp-p TBC (option), various alarms and error messages for ease of fault diagnosis and maintenance, etc.

The HR-230 can be used in any configuration of desk-top, console and rackmounting and is most suitable for broadcast station, production house and other high end industrial and educational applications.

Multipoint Freeze-Frame Transceiver and Image Processor

FEATURES

- A true communicating image processor
- Can accept future transmission/compression programs
- Easy to use
- Compact
- Microprocessor-based
- Remote control
- Full color
- High resolution - 640 by 480 pixels
- Fast transmission - initial image in 4 seconds (V2.3)
- Automatic error detection/correction
- Compatible with other members of the DISCON family
- Upgradeable

FastScan 200 is the entry level member of the DISCON™ family. Both affordable and upgradeable, it allows users to transmit to multiple locations any image that can be captured by a video camera or created by a video compatible professional computer. FastScan 200 systems can be used in a stand-alone network or as part of a DISCON 700 or 1000 network.

FastScan (with Image Processor Program 2.3) transmits the initial image over ordinary telephone lines to multiple sites in 4 seconds. As users discuss the image, the system adds color and detail. High resolution allows decision-makers to review such complex images as blueprints, mechanical parts, circuit boards, molded pieces, financial documents, seismic charts, typewritten copy, and photographs. Advanced Image Processor Programs can be installed as they are made available.

FASTSCAN 200 \$14,000.00

4 Sec. Initial Image 21 Sec. First Color

47 Sec. Completed Image

FastScan Transmission Time*
(Using Image Processor Program 2.3)

IMAGE FILE™ II

Video Image Storage System

FEATURES

- Easy to use
- "Help" menu
- Remote control
- Instant image storage and retrieval
- Automatically generated menu of images, including record of date and time of storage
- Automatic display mode
- Automatic send mode
- Tape drive for image backup and restore
- Capacity expandable from 200 to 1400 full-color high resolution images

A significant addition to DISCON™ 1000, 700, or FastScan™ 200, Image File allows storage and retrieval of any image that can be captured by a video camera or created by a video compatible professional computer. With expansion modules, up to 1400 full-color high resolution images can be stored, any of which can be called up on DISCON display terminals in less than three seconds.

Using FastScan, images can be transmitted over ordinary telephone lines and remotely stored in Image Files at all locations. Users can then call up any of these images simultaneously at all sites for fast, effective problem-solving and telepresentations. Images can also be sequenced for automatic display at all sites to create a remote electronic slide show.

3/4" EDITING RECORDER CR-850U

JVC®

FEATURES (Preliminary)

- 4-Heads
- Front Loading
- Direct Drive Reel Servo
- SMPTE Time Code Track (3rd Audio)
- Diagnostic Warning System
- Front Panel Test Points
- S/N 47dB Video
- Vertical Interval Head Switching
- Improved Drop-Out Compensation
- Die-Cast Chassis
- LED Indication for Fuse Condition Status
- Record, Playback and Editing Capabilities

CR-850U

CR-850U 3/4" EDITOR

The CR-850U is a very high quality 3/4" editing VCR with characteristics that make it suitable for a wide variety of applications. It was designed with the following objectives in mind:

It should have a picture reproduction quality second to none.

It should be easy to use.

It must adapt to a wide variety of systems and applications. Above all, it must be reliable.

The CR-850U achieves all of these goals and more. It incorporates a variety of innovations in VCR technology and will certainly set new standards of performance.

Signal Quality, Performance. The most important attribute of a 3/4" editor is its picture quality. Design engineers made every effort to see to it that the CR-850U would have absolutely the best picture reproduction quality of any 3/4" VCR on the market.

Through the use of a variety of circuits, the CR-850U has exceptionally low noise — 47dB signal to noise ratio in the color mode. And the less noise produced by a VCR, the cleaner the picture. This is especially important in the editing process, since noise is usually compounded as multi-generation dubs are being made.

Y-688 Dubbing System. Normal tape-to-tape transfers result in deterioration of the video signal. To minimize this, the CR-850U employs a Y-688 dubbing system, utilizing a standard 7-pin cable (provided).

Convenience. Line Input Switcher. On the CR-850U there are two video inputs labeled "Line A" and "Line B". These inputs are selectable by pressing a pushbutton on the front panel. An LED lights to indicate which input is active.

When switching from Line A to Line B, the CR-850U performs the switching in the vertical interval. If the signals are genlocked together, then the transition is glitch-free, even when it is recorded. To further this benefit, a connector is provided on the rear panel for remote operation of this function. Contact closure of this connector causes the VCR to switch from Line A to Line B. The VCR can actually be used as a "mini-switcher".

Built-In Editing Control Functions. In many instances, a separate editing controller is not necessary to perform editing functions. The CR-850U has a built-in Z-80 microprocessor which controls these functions. A close look at

the control panel on the CR-850U shows many of the same functions found on popular editing controllers: Preroll, Preview, Entry In, Entry Out, Assemble, Insert, Edit Start, Edit Stop.

Digital Tape Counter. The LED digital tape counter on the CR-850U displays Hours, Minutes, Seconds, and Frames. Its count is based on the FG pulse from the capstan circuit, and will continue to read even if control track is lost. If the control track reference is desired, a DIP switch can be flipped internally to make this selection. In addition to displaying tape travel, the counter in the CR-850U has another function unique to a VCR: it has a built-in Lap Timer. This is like having a separate tape timer working independently of the normal counter. It can be used to measure tape travel distance from a given point. It is especially useful when doing fixed length edits.

Visible Picture Search. The front panel search dial on the CR-850U provides a convenient way to shuttle the tape with a viewable picture at speeds from 1/30th to 15 times normal in forward and reverse.

Jog Mode. In addition to visible picture search, another function is provided, which can be accessed when using a

serial editing controller. "Jog" is a feature which allows the picture to accurately follow the movement of the search dial on the controller, as it is turned to the right or left.

Full Capstan Control In All Modes. When the cassette is inserted into the CR-850U, mechanism fully loads the tape around the head drum. The tape remains threaded in this fashion until the eject button is pressed. This permits much faster cueing times, as well as more positive control over the tape. A special "standby" mode is provided which stops the head drum and disengages the pinch roller after 10 minutes in still. This permits rapid drum-up to full picture while protecting the tape and vital components.

Independent Audio Limiters. Besides adjusting the audio levels manually, the CR-850U can adjust levels automatically with its built-in limiter circuit. Separate on/off switches are provided for each channel, a JVC exclusive feature.

Flexibility. It is fitting that an editing VCR as advanced as the CR-850U be able to adapt to a wide variety of systems and applications. For this reason, JVC incorporated a number of features which are explained below.

Front Loading Design. Besides saving space the front loading design permits mounting in a standard 19" rack, with an optional rack slide kit. All operational controls are mounted on the front panel.

Serial (RS-422) Control. A 9-pin "D" type connector is located on the rear panel for connection to editing controllers and other components. Using the serial port permits connection to a wide variety of sophisticated controllers. The serial connector is also used for the JVC RM-G850U controller.

Parallel Control. A 45-pin connector is located on the rear panel for connection to existing JVC editing controllers. Direct connection can be made to the RM-86U or VE-90AT/VE-93 controllers.

SMPTÉ Time Code Capability. SMPTÉ time code is a digital code which can be recorded on one of the VCR's audio

channels, to provide accurate indexing of the tape and to provide an accurate reference for editing. The CR-850U is equipped with a 3rd audio track (address track) for SMPTÉ code. A front panel LED illuminates when a signal is present on this track.

Balanced XLR Audio. The audio inputs and outputs on the CR-850U are balanced, and utilize standard 3-pin XLR connectors. The inputs can be switched for three levels, depending on the audio source.

Reliability. Diagnostic Warning System. Advanced microprocessor technology was applied to a sophisticated array of sensors and detectors throughout the CR-850U. If a problem occurs the VCR will immediately detect it and go into the "warning" mode. All functions will immediately be terminated so as to protect the tape and the machine. A digital readout on the front panel will display a code number from 01 to 99. This code number corresponds to the type of problem detected.

Front Panel Test Points. To aid in troubleshooting and preventive maintenance, test points were placed onto the front panel. A technician would normally connect test gear to these points and analyze the machine's performance. Adjustments can be made by opening the top or side panels.

Direct Drive Motors. The CR-850U uses a fully direct drive reel servo system (separate motors for the supply and take-up reels), which keeps tape tension constant during all modes. In addition, the head drum and capstan are also directly driven. There are no belts, pulleys, or idlers to require maintenance.

Die-Cast Chassis. All critical components are mounted onto a heavy-duty die-cast chassis. This assures stability, even when the machine is moved around a lot. Circuit boards are easy to access, and can be unplugged from the machine if necessary.

SPECIFICATIONS (Preliminary)

GENERAL

Format:

U-VCR

Video Signal System:

NTSC

Power Requirements:

85 - 135V/170 - 270V (switchable)

Dimensions:

17-9/16"W x 11-3/16"H x 21-1/8"D
(446 x 284 x 535mm)

Weight:

73 lbs. (33kg)

Operating Temperature:

5-40°C (-4 to 140°F)

Storage Temperature:

-20 to 60°C (-4 to 140°F)

Operation Position:

Horizontal

VIDEO

Input:

0.5 to 2.0V p-p, 75 ohms BNC x2

Output:

1.0V p-p, 75 ohms BNC x2

CR-8250U

3/4" RECORDER/PLAYERS

JVC®

FEATURES

- SMPTE Address Channel
- Balanced Line Audio Inputs/Outputs
- Vertical Interval Head Switching
- Full Metering
- H-Phase Control
- Full Capstan Control with Standby Mode
- Real-Time Electronic Tape Counter
- Professional-Quality Editing Functions
- FM-FM Dubbing System for High Quality Copies
- Color Dubbing Switch
- Automatic Pre-Roll
- Capstan Servo System with External Lock Function
- Automatic Search Mechanism
- Automatic Repeat Mechanism

CR-8250U

CR-8250U 3/4" Recorder/Players

With 3/4" videocassettes used in production houses throughout the world, there is a pressing need for recorders that are able to make the precise edits required for professional results. Various sophisticated features have been added to the recognized reliability and dependability of our previous Tape Handler models. The improvements include:

Addition of a third audio (address) channel for time code; Balanced line audio inputs/outputs with XLR connectors; Vertical interval head switching; Video input level meter with manual adjustment; Tracking meter for precise playback adjustment; H-phase control to prevent edit flagging; Full capstan control in all modes except load and eject; Standby mode to protect tape and machine components while allowing quick drum-up; External hour meter; Increased dubbing flexibility through the use of FM-FM dubbing or Color Dub; Faster tape search (15X); Real-time tape counter that reads at search speed, even through blank tape; Improved horizontal resolution

H-Phase Control. This allows the CR-8250 to be accurately synchronized with the horizontal phase of the player for more accurate editing.

Full Capstan Control With Standby Mode.

The tape remains threaded in all modes except load and eject, permitting faster cuing times as well as better control. Tape search speed is variable from 0 to 15 times in forward and reverse when an edit controller is used. A special "standby" mode is provided which stops the head drum and disengages the pinch roller after 2½ minutes in still. This permits rapid drum-up to full picture while protecting the tape and vital components.

Real-Time Electronic Tape Counter. The electronic tape counter has an easy-to-read fluorescent display that shows elapsed time up to 59 min. 59 sec., facilitating indexing. It operates at search speeds, even while winding through blank tape.

Professional-Quality Editing Functions. The CR-8250U has a rotary erase head and a blanking switcher which make possible assemble and insert editing with virtually no distortion at the edit points. Editing flagging is minimized by use of framing servo and extremely stable horizontal phase lock.

FM-FM Dubbing System For High Quality Copies. In the FM-FM dubbing system, the signals are transferred in the form of FM signals without modulation and demodulation; this greatly reduces the

degradation of picture quality, making the CR-8250U ideal for use as a master VCR in software production and in copying and editing systems.

Color Dubbing Switch. When FM-FM dubbing is not suitable for your editing situation, the Color Dub switch, located on the rear, improves the color dubbing quality.

Automatic Pre-Roll. When the pause button is pressed during recording or when the edit stop button is pressed during assemble-editing, the tape is automatically pre-rolled and stops after being rewound by about 2 seconds of program time.

Capstan Servo System With External Lock Function. This permits playback to be locked to external sync signals so that the CR-8250U can be used in any existing video system. The external subcarrier input terminal also enables connection of a time base corrector (TBC).

Automatic Search Mechanism. This function operates together with the tape counter so that any section of the program can be located automatically.

Automatic Repeat Mechanism. In the auto repeat mode, playback is continuous; when the tape reaches the end, it is automatically rewound and repeated.

SMPT E Address Channel. By connecting a time code generator, SMPT E time codes can be recorded on the tape allowing access to exactly the required frame for precise edits.

Balanced Line Audio Inputs/Outputs. XLR audio connectors, the type most commonly used on professional audio equipment, are provided for line inputs/outputs.

Vertical Interval Head Switching. The head switching line, sometimes visible in the picture area, has been moved into the vertical interval — out of the picture completely.

Full Metering. For demanding professionals, a video level meter and adjustments are provided to allow the video recording current to be optimized. A tracking meter is provided for precise playback adjustment. Independent audio level meters are provided for channels 1 & 2. The audio levels of the two channels can be adjusted referring to the meters, or automatically using the audio limiter. The limiter can be switched out on either or both audio channels as needs require. An external hour meter is also provided.

Based On A Heavy-Duty Mechanism For Assured Reliability

Direct-Drive Head Drum And Capstan Servos For Stable Rec And Play. The rotary head drum and heads which trace 85 micron tracks for the accurate recording and playback of the video signal are the most crucial parts of the video system. In the CR-8250U, the head drum is directly driven by a servo-controlled brushless DC motor. Together with the servo-controlled capstan which is also driven by an independent brushless DC motor, it assures highly stable pictures as well as greatly improved reliability.

Reel Servo System With Independent Motors. The stability of the tape transport mechanism is maintained by the independent motors driving the supply and take-up reels, and the servo system which keeps tape tension constant during fast forward and rewind, as well as recording and playback, so there is no overload on the tape at any speed.

Aluminum Diecast Chassis Supporting The Heavy-Duty Mechanism. The advanced mechanisms used in the CR-8250U are supported by a rugged, durable aluminum diecast chassis. A two-motor gear-driven tape loading mechanism and powered cassette eject mechanism are used to further assure reliability.

Microprocessor-Based Logic Control. The logic control system using a microprocessor allows direct changeover between modes without having to enter the stop mode. It is this facility that makes possible remote control over all the recorder's functions. Modes are clearly shown by the lighting of LED indicators corresponding to various controls which perform an intelligent tally function.

Skeletal Construction For Ease Of Maintenance. To make the CR-8250U easier to service and maintain in optimum condition, its front and rear, top and bottom and side panels can be detached independently, giving easy access to all circuit boards. For easy maintenance, the circuit boards use plug-in connectors.

PRICING		Suggested List Price
CR-8250U	Tape Handler 3/4"	
	Videocassette Editing Recorder	\$5220.00
CR-6650U	Recorder/Player Version with Assemble Edit	\$3415.00
	(No Insert Editing)

3/4" RECORDERS/PLAYERS

CR-6060U/CP-5200U

JVC®

FEATURES

- Remote Control Option
- Timer Start Capability
- Dubbing Switch (CR-6060U)
- Audio Level Control w/Limiter (CR-6060U)
- Two Audio Channels
- Auto Replay Feature
- Solenoid Operation
- Still Frame
- Optional RF Converter

CP-5200U

CR-6060U

CR-6060U/CP-5200U 3/4" RECORDERS/PLAYERS

The CR-6060U and CP-5200U...proven 3/4" U-Format performers.

The CR-6060U is a basic 3/4" recorder/player offering excellent economy, simplicity, and reliability. The CP-5200U is a player only model based on the same design philosophy. Both models offer the right combination of features and performance and are priced within the reach of most industrial users.

Sharp, Clear Pictures. Highly stable, sharp images and well defined colors are provided by the AGC and double function Automatic Color Control circuits.

Dubbing Facility (CR-6060U). A feature normally found on more expensive 3/4" VCRs, the CR-6060U provides a dubbing switch which allows some of the color processing circuitry to be bypassed, thus improving the quality of machine-to-machine transfers.

Still Frame Playback. During playback, you can stop the action to analyze

individual pictures. Both the CR-6060U and CP-5200U are equipped with this capability.

Timer Start Capability. By plugging the deck into an external timer (not included), unattended recording (playback on the CP-5200U) can take place. In the timer start mode, the machine automatically enters the record mode (CR-6060U) when the AC power is supplied.

Audio. Dual audio channels are provided. On the CR-6060U, recording levels can be adjusted using the meters, or automatically with the built-in limiter circuit. In addition, the CR-6060U is equipped with an audio-dub feature which allows the audio on channel-1 to be re-recorded, if desired.

Auto-Repeat. Tape playback can be repeated from beginning to end as many times as desired using the auto-repeat feature. An auto-search feature also lets you fast forward or rewind to counter "0000".

Solenoid-Control. Solenoid operation not only provides easier operation, but enables an optional remote control to be used. The RM-60U (CR-6060U) and RM-51 (CP-5200U) provide remote control of most tape transport functions and have tally indication.

Optional RF Converter. Both machines can be connected to an ordinary TV receiver through the use of an optional RF converter, KR-234 (Ch 3-4) or KR-256 (Ch 5-6).

PRICING/ACCESSORIES	Suggested List Price
CR-6060U 3/4" Recorder/Player	\$1685.00
CP-5200U 3/4" Player	1230.00
RM-51U Remote Control for CP-5200U ...	110.00
RM-60U Remote Control for CR-6060U ...	165.00
SW-200UF Switchbox and Antenna Cable for CR-6060U	7.25
MCB-20 Carrying Case	115.00
KR-234U RF Converter (Ch 3-4)	100.00
KR-256 RF Converter (Ch 5-6)	100.00

FEATURES

- Video Confidence Heads
- SMPTE Time Code Capability makes Possible Edits with Single-Frame Accuracy
- Automatic Backspace Editing for Assemble Edits in the Field
- Real-Time Tape Counter; for Convenience, Shows Tape Running Time in Minutes and Seconds
- Microprocessor-Based Logic Controls All Tape Operations for Precise Control
- Full-Function Remote Control (optional); Useful when the Recorder is Operated by the Cameraperson
- Shuttle Search at about 10 Times Normal Speed in either Direction

CR-4900U

CR-4900U VIDEOCASSETTE RECORDER

Lightweight. Complete with its rechargeable NB-P2U battery pack and a KCS-20 videocassette, the CR-4900U weighs only 19.6 lbs. (8.9kg). This is less than similar machines; lighter weight makes it more portable so that it can be used on more demanding assignments.

Low Power Consumption. The CR-4900U has a low power consumption, only 12 watts, an important advantage when it is used on location. The optional multi-charger/AC adaptor can charge the NB-P2U battery pack; four battery packs can be connected to this multi-charger and charged either in sequence (taking 90 minutes per battery pack) or simultaneously in a total of 10 hours.

Video Confidence Heads. The CR-4900U is the first 3.4" U-format recorder to be equipped for real-time monitoring of the signal immediately after it has been recorded while recording is taking place. This allows instantaneous detection of unsatisfactory sections so that they can be rerecorded immediately. This gives the CR-4900U an impressive advantage over competing machines.

Recording Current Adjustment. While recording is taking place, the level of the video signal recorded on the tape is measured; this is displayed so that the video recording current can be optimized. By turning a control on the

bottom, the recording current can be adjusted. When the meter makes its biggest deflection, the recording current is optimum.

Microprocessor-Controlled. All tape operations are controlled by a microprocessor. This makes it possible to use feather-touch operation buttons; when these buttons are touched lightly, they generate electrical signals which are fed into the microprocessor, which analyzes the feasibility of mode changes and the necessity of entering other modes during the changeover process before issuing the appropriate signals.

Remote Control. Microprocessor control also facilitates remote control using the optional remote control unit. All functions of the recorder can be controlled using this except audio dubbing and videocassette eject; this flexible remote control is particularly useful when the CR-4900U is operated by the cameraperson.

SMPTE Time Code Capability. With the optional TG-P47U Time Code Generator connected, the SMPTE time code — an eight-digit address — can be recorded on the tape so that the exact frame can be accessed for precise editing.

Frame Servo Mechanism. The frame servo mechanism allows accurate frame-to-frame editing.

Automatic Editing. Whenever the recorder enters the pause mode by use of the front panel pause button, the remote control unit's pause control or the camera's start switch, the tape is backspaced. Then, when recording starts again, the control track previously recorded on the tape is read so that the subsequent recording is correctly synchronized.

Real-Time Tape Counter. The 4-digit LCD tape counter shows the amount of tape that has run in minutes and seconds. This is a convenient way to indicate the amount of tape that has run and allows the required section of the tape to be accessed with a fair degree of precision. An identical 4-digit LCD tape counter is provided on the optional remote control.

Shuttle Search. In playback, the picture can be seen on the screen with the tape running in either direction at about 10 times normal speed. This is convenient when you want to locate any section of the program quickly.

PRICING/ACCESSORIES	Suggested List Price
CR-4900U Portable 3/4" Recorder	\$3285.00
AA-P47U AC Adaptor/Charger	370.00
TG-P47U Time Code Generator	1470.00
CB-P47U Custom Shoulder Case	115.00
RM-P47U Remote Control	245.00
BA-P47U Battery Case for NB-P2U	170.00

EDITING CONTROLLER VE-93

JVC®

FEATURES

- Joystick Control
- Keypad Entry
- Automatic Edit-In/Edit-Out
- Entry On-The-Fly, Auto Tag
- Variable Pre/Post Roll Times
- Dual Channel Time Code Readers
- SMPTE Time Code Generator
- Jam Sync, Time Code Copy Mode
- Edit Decision List Output for Printer Connection
- Fade to Black Module
- Machine Synchronization (Bump)
- Time Code Offset Compensation
- Multiple Edit Replay Feature
- Full Audio Preview
- Built-In Cooling Fan

VE-93
SHOWN WITH OPTIONAL
CI-90 CHARACTER INSERTER

VE-93 EDITING CONTROLLER

The VE-93 brings state-of-the-art computer technology to video tape editing. Utilizing a single, rugged joystick for controlling both record and source machines, the VE-93 is one of the easiest to operate controllers on the market.

Time Code Capability. One of the most useful features of the VE-93 is that it generates, reads, and references SMPTE time code. Tapes with time code can be searched, catalogued, and edited with frame accuracy. This greatly simplifies and speeds up the post-production process.

CI-90 Character Inserter (optional). The CI-90 is actually a separate time code reader which displays the time code in the picture area. This enables you to make a copy of the master tape (the copy can be in any format) with numbers on the screen which correspond with the code on the original tape. The lengthy process of reviewing footage and making edit lists can be done away from the editing system.

Other Features of VE-93. With the JVC TapeHandler 3/4" series, tape speeds are variable from 0-15 times in forward and reverse. Edit points and search locations can be directly accessed by entering the exact location into the controller via a numerical keypad. In addition, edit points can be entered in a variety of other ways, depending upon application. With the tape running, edit points can be entered "on-the-fly". In the parked position, edit points can be entered either manually or automatically using the Trim or Auto Tag functions. The VE-93 will also compute in-points automatically for back-timed edits.

When connected to an external monitor, a Status Display Generator generates a screen full of pertinent information including edit times, program length, etc. Other advanced features:

Variable pre/post roll times (0-9 sec.); Last edit recall; Machine synchronization; Cruise (full speed search without joystick); Abort capability; Time code offset compensation; Multiple edit replay; Fade in/out to and from black; Edit decision lister with printer interface.

VE-93	Editing Controller	\$6,900.00
CI-90	Character Inserter	1,250.00

FEATURES (Preliminary)

- Controls 2 Source Decks
- RS-422 Serial Control
- LED Indicators
- Lap Time Function
- Automatic Back-Timed Edits
- Monitor Audio Volume Controls
- Audible Alarm Warning
- Dial Search with Jog Mode
- Automatic Edit Control
- Switchable Total Time/Lap Time Counter
- "Go To" Edit-Point Location
- Preview Perform/Review Functions
- Auto-Tag Operation
- Frame-by-Frame Correction

RM-G850U

RM-G850U AUTOMATIC EDIT CONTROLLER

The RM-G850U controller uses a built-in microprocessor to automatically produce edits from any three In/Out points entered — especially convenient for fixed-length and back-timed edits. Smooth editing accuracy is provided by twin Search dials for the master and slave recorders, jog capability and frame-by-frame edit correction.

"Conversational" Operation. Self-illuminating control buttons light in proper sequence to guide operators naturally through editing procedures.

Audible Warning. An electronic alarm confirms activation of key functions including tape-transport, Preview, Perform, Review, etc. The alarm will also sound to indicate tape-transport abnormalities.

Dial Search with Jog Mode. Twin dials control recorder and player search at several different speeds between 1/30 and 15 times normal playback. The jog mode, which can be entered directly from any other, provides the fine adjustment for exact edit-point location.

Automatic Edit Control. This system allows entry of edit points in the still mode or on the fly (while the tape is running), and will automatically determine the fourth point in a set of edit locations.

Switchable Total Time/Lap Time Counter. Independent counter displays are provided for the player and the recorder. Memorized edit points or the duration of an edit can be displayed in hours, minutes, seconds and frames. Elapsed time indication is also available.

"GOTO" Edit-Point Location. Edit points can be called up directly from the player or recorder for on-screen checks.

Preview and Review. Programmed edits can be previewed (rehearsed) without actual recording, and then reviewed after completion at the push of a button.

Auto-Tag Convenience. After completion of an edit, the recorder returns to the edit-out point and enters the Still mode. Pressing the Perform or Preview button automatically makes it the starting point for the next edit.

Frame-by-Frame Correction. Correction of edit locations to single-frame accuracy is provided using the Shift button.

Variable Pre-Roll Time. 3, 5, 7, 10 or 15 seconds.

9-Pin Remote Control Terminal (RS-422)

Suggested List Price TBA

Audio Monitor Level Adjustment. Permits audio level reduction in high-speed search modes.

VHS RECORDER/PLAYER BR-6400U/BP-5300U

JVC®

FEATURES

- Direct-Drive Motors
- Rugged Diecast Aluminum Chassis
- Motorized Front Cassette Loading
- 4-Head System
- Microprocessor Full-Logic Control
- Shuttle Search at up to 10 Times Normal Speed in either Direction
- Playback at any Speed from Still to 5 Times Normal Speed in either Direction
- Capstan Servo and External Sync Capability
- Two-Channel Audio
- Hi-Fi Sound
- Remote Control and Random Access Options
- Electronic Tape Counter/Lap Timer with Fluorescent Display
- Audio Level Control with Meters
- Two-Channel Selectable Audio Dubbing (BR-6400U only)
- Editing Control Interfacing
- Easy Serviceability

BR-6400U

BP-5300U

BR-6400U VIDEOCASSETTE RECORDER BP-5300U VIDEOCASSETTE PLAYER

These machines embody the latest and best of JVC's VHS technology. They are designed to offer every possible user-oriented convenience. The BR-6400U and BP-5300U can be used as source decks with JVC's VHS and 3/4" editing systems.

Direct-Drive Motors. The motor used to drive the head drum is a direct-drive, servo-controlled, brushless DC motor, while the capstan and reels have independent direct-drive DC motors. This system keeps jitter down to an absolute minimum, assuring stable pictures and more reliable operation.

Rugged Diecast Aluminum Chassis. Robust and durable, the diecast aluminum chassis gives the firm support that the mechanism requires for years of trouble-free operation in a demanding professional environment.

Motorized Front Cassette Loading. Simply insert the edge of the videocassette into the front panel slot and the loading motor moves the

cassette gently so that it is positioned for correct operation. With all controls on the front panel, this loading mechanism allows the machine to be mounted in a stacked configuration to save space.

4-Head System. Both these machines have two pairs of video heads; one pair for recording (BR-6400U only) and normal speed playback, the other pair for search and variable-speed playback. This is in keeping with JVC policy; as well as assuring that recording is of the highest possible quality, this system gives stable pictures in any playback mode.

Microprocessor Full-Logic Control. Feather-light touch operation and highly reliable tape transport control are made possible by advanced full-logic electronics.

Shuttle Search at up to 10 Times Normal Speed in Either Direction. No more guesswork in locating the particular section you want to view; you can scan through a whole 2-hour program in about 12 minutes. Run the tape at about 10 times normal speed either forward or in reverse while watching the speeded-up picture on the screen. This takes you to the scene you want quickly and accurately.

Playback at any Speed from Still to 5 Times Normal Speed in either Direction. When controlled from either of the optional remote control units, the playback speed can be varied continuously from still to 5 times normal in both forward and reverse directions. This is a great help in editing; you can accurately and quickly locate any required frame. It also allows more detailed analysis of action.

Capstan Servo and External Sync Capability. Because of its capstan servo mechanism and the fact that it can accept external sync signals to which playback is synchronized, these machines can easily be incorporated in an existing video system.

Two-Channel Audio. Two audio channels make the system more versatile and increase the range of applications. Either of the two channels can be played independently; stereo playback is also possible.

Hi-Fi Sound. Advanced audio circuitry ensures excellent sound reproduction that's further improved by the built-in Dolby® noise reduction system.

Remote Control and Random Access Options. A choice of cable and infrared full-function remote control units using microprocessors are optionally available; choose the one which meets your needs best. As well as giving control over tape operations, they also control high-speed picture search and variable-speed playback. An optional random access unit equipped with a digital fluorescent display allows you to input any tape address for quick retrieval of any scene.

Electronic Tape Counter/Lap Timer with Fluorescent Display. 4-digit tape counter provides a convenient means of addressing tape segments. The display doubles as a 5-digit lap timer showing tape running time in hours, minutes and seconds.

Audio Level Control with Meters (BR-6400U only). To prevent over-level recordings, an audio limiter circuit is provided in each of the audio channels. These limiter circuits can be switched on and off. In either condition, manual level control referring to the meters is possible.

Two-Channel Selectable Audio Dubbing (BR-6400U only). For greater flexibility and better control over sound, either of the two audio channels can be selected for dubbing.

Editing Control Interfacing. For more elaborate editing, direct interfacing with JVC's Automatic Editing Control Units is possible, enabling 1/2" to 3/4" or 3/4" to 1/2" edits to be made quickly and accurately.

Easy Serviceability. Main circuit boards can be checked conveniently by connecting an extension board. This makes a major contribution to dependable operation throughout the unit's long service-life.

HI-FI VHS DUPLICATOR BR-7000UR

JVC®

FEATURES

- Quality Hi-Fi Sound
- Direct-Drive Motors Plus Heavy-Duty Chassis
- Professional HI-FI Dubbing System
- Oversize Cassette Mounting Guide
- Big, One-Glance Audio/Video Level Meters
- Manual/Auto Video Recording Level
- Accidental Erasure Override
- High Quality Sound in Normal Audio Mode
- Two Audio Inputs for Recording Flexibility
- Easy Frontal Access to Essential Test Points
- Front Panel Hour Meter
- Easy Tape Path Maintenance
- Serial Parallel Remote Control Flexibility

BR-7000UR HI-FI VHS DUPLICATOR

JVC, the originator of the world's most popular video format — VHS, has designed and built a VHS Hi-Fi recorder specifically for tape duplication. The new BR-7000UR was conceived with the anticipation of a large consumer demand for pre-recorded VHS Hi-Fi tapes during the next few years. And it was conceived with the idea that people duplicating the video cassettes would be expecting the very highest quality video and audio reproduction from a machine designed for such a purpose.

Why A Video Recorder Just For

Duplicators? JVC engineers visited a number of major duplication facilities throughout the world, and it became apparent that the needs of duplicators were unlike those of any other user of video tape products. There was the temptation to design an "all purpose" recorder/player that would incorporate some of the features the duplicators needed — and many features that were not needed. But there were already such machines on the market, and that's not what the duplicators were asking for.

Instead, JVC engineers took the ideas and suggestions of the engineers and

technicians specializing in duplication, and came up with a VCR that was designed Inside and Out especially for them. Complete with punch-outs on the rear panel for user modifications, and front panel test points, the BR-7000UR was designed for one application: continuous duty tape duplication in the VHS Hi-Fi format at the Standard Play tape speed.

Durability. The BR-7000UR is based on the most advanced electronic tape transport system available today. The transport, mounted on a solid die-cast aluminum chassis, has been designed to give continuous, trouble-free use for years. Servo-controlled direct-drive motors not only ensure greater viewing stability, but they are also more reliable.

Ease Of Maintenance. Despite its low maintenance design, JVC engineers wanted a recorder that technicians could keep in peak operating condition with utmost ease. It is for this reason that several innovations were incorporated: Front panel test points. Provided are the following: Ground; Drum Pulse; Video RF (FM Carrier); Hi-Fi Audio RF (FM Carrier); Normal Audio RF-Out

Plug-in circuit board construction. Most circuit boards are designed for quick replacement and can be swung out or unplugged. In addition, a replaceable fuse is located on the rear panel.

Front panel hour meter and serial number. Most people wouldn't want these items on the front of the machine, but the BR-7000UR wasn't designed for most people. Duplication houses want the ability to quickly identify a machine and its operating hours. The plug-in hour meter indicates up to 5000 hours of head drum operation, and can be reset by simply un-plugging and turning around.

Window for tape path cleaning. On the top cover of this front load machine is a trap door. Inside, there is access to the head drum and tape path components.

Duplicator-Friendly Operation. The following features were asked for by the professional duplication houses:

1. Wide opening for accepting the cassette with a guide for easy loading and unloading of the cassette.
2. At-a-glance large recording indicator (possibly the largest LED recording indicator in the industry.)

3. Recording capability of a cassette with the safety-tab off. (Bulk duplication tape is shipped and recorded with the safety tab already broken off. This eliminates the need for the duplicator to remove the tab.) The BR-7000UR goes one step further. A front panel LED tells the duplicator whether the tab is in the cassette or not.

4. Large video/tracking and audio meters.

5. A cover for operational buttons is provided which prevents accidental misoperation. Since all transport functions are normally remote controlled, there is no need for the person loading and unloading tapes to have access to these controls.

6. Video AGC on/off switch. Provided as a convenience, the video recording level can be adjusted manually or automatically, using the AGC. The BR-7000UR is equipped with a video level meter.

Outstanding Performance. The performance of the BR-7000UR is second to none. With no compromise either electronically or mechanically, JVC engineers built the very best VHS machine possible.

Improved video processing circuitry including: A pulse response improvement circuit; S/N improvement circuit; Improved filter response; Improved head resonance characteristics.

Dolby B noise reduction circuits on the normal audio channels.

Utilization of the "VHS Hi-Fi" audio format, incorporating two rotary audio heads. Audio dynamic range is more than 85dB, with a frequency response of 20 to 20,000Hz.

Serial Or Parallel Control System. Thanks to the BR-7000UR's built-in serial coding system, you can create a whole professional system carrying out hi-fi dubbing operations with matchless efficiency. Dubbing operations are further simplified by the BR-7000UR's remote control capability covering, Record, Play, FF, REW, Stop, Pause, Rec. Pause, Eject, plus Hi-Fi Record on/off functions. Simply interconnect any number of BR-7000UR units using an RCA pin cable. Each unit is supplied with a cover over the control buttons and switches on the front panel, which prevents the BR-7000UR from operating accidentally when under serial coded remote control.

For installation into duplication facilities using parallel control, the BR-7000UR is equipped with a 34-pin connector, which gives access to most machine functions.

VHS EDITOR BR-8600U

JVC®

FEATURES

- Professional-Quality Editing Functions
- Flying Erase Heads
- Preroll Function for Automatic Editing
- Direct-Drive Transport
- Variable-Speed Dial Search
- New Video Processing Circuit
- Two-Channel Audio
- Dolby® B Noise Reduction
- Improved Color Dubbing Quality
- Three Video Inputs Selectable
- External Sync Capability
- Total Front Operation
- Electronic Tape Counter/Lap Timer
- Tape End Warning
- External Hour Meter
- Automatic Rewind
- Electronic Tape Tension Control
- 45-Pin Connector for Edit Controller

BR-8600U Videocassette Editing Recorder

Engineered for professionals, a full-function VHS editor with the features, styling, and feel of advanced ¾" systems.

The VHS format, now the most popular videocassette format in the world, has grown immensely popular within the professional video community. As the originator of the VHS format, JVC is totally committed to its success and has responded to the demand for a full function editing recorder.

The BR-8600U is a VHS editor based on JVC's advanced heavy-duty technology. It incorporates 6 video heads! One pair is used for standard 2-hour recording and playback. Another pair is for still and search functions. And two rotary erase heads provide perfect insert edit capability. System configurations are flexible: a choice of professional VHS and ¾" recorders and players are available as a playback source. For a complete automatic editing system, a choice of editing controllers is also available.

Professional-Quality Editing Functions.

The BR-8600U has a pair of rotary erase heads and a blanking switcher which make possible assemble and insert

editing with virtually no distortion at the edit points. Edit flagging is minimized by use of a framing servo and extremely stable horizontal phase lock.

Preroll Function for Automatic Editing.

An independent Preroll button is provided on the control panel to automatically backspace the tape by about 3 seconds of program time. When no edit controller is being used, reasonably accurate editing can be accomplished with two BR-8600U's utilizing the Preroll buttons on the recorder and source. After locating the edit-in points using the convenient dial search controls, the machines are each prerolled. When Edit Start buttons are pressed simultaneously, the edit takes place at the predetermined edit points.

Heavy-Duty Mechanism with Direct-Drive Motors.

The head drum is directly driven by a servo-controlled brushless DC motor, while the capstan and reels are also directly driven by independent DC motors. This assures highly stable pictures as well as greatly improved reliability. To add further to reliability and durability, the mechanism is supported by an aluminum diecast chassis.

Variable-Speed Dial Search. A convenient, easy-to-operate control dial is provided for fast and accurate location of edit points. Turning this rotary dial varies the tape speed from still to 10 times normal, in both forward and reverse directions. The sensitivity of the control is dependent on the selected speed, so that fast, positive control of the tape is always maintained.

New Video Processing Circuit. VHS picture quality is improved due to a new video signal processing circuit. The BR-8600U conforms to the standard VHS format and a single cassette (T-120) provides 2 hours of quality recording and playback.

Video Recording Adjustment—Video Level/Tracking Meter. Normally the Automatic Gain Control (AGC) circuit optimizes the video recording current depending on the input video signal. For demanding professionals, however, this circuit can be defeated and the video level can be manually adjusted referring to the video level meter. During playback, the meter functions as a tracking meter and helps in precise playback adjustment together with an independent tracking control.

Two-Channel Audio for Stereo Recording and Playback. Independent audio level meters are provided for channels 1 and 2. The audio levels of the two channels can therefore be separately adjusted. Independent audio limiters are provided and can be switched in and out as needs require.

Dolby® B Noise Reduction Incorporated. To further improve sound quality by reducing tape hiss, Dolby B noise reduction circuitry is incorporated in the audio recording and playback circuits.

Improved Color Dubbing Quality. The playback video signal is normally subjected to compensation so that the picture quality on the monitor is improved. However, non-compensated color signals are more suitable for dubbing and result in higher-quality color copies. In order to make this kind of signal available at the Video Out terminals, the BR-8600U is equipped with a switch labeled Color Process. When the BR-8600U is used in a copying system, set this switch to Off; the resulting tape will have a significantly improved color quality.

Three Video Inputs Selectable. Three video inputs (Line-1, Line-2, 8-Pin TV) are provided and the input select switch on the front panel makes it possible to incorporate signals from a tape, a camera or a TV monitor onto an edited tape by simply operating the switch.

Field-Still and Slow-Motion Playback. The BR-8600U has two pairs of video heads: one pair for recording and normal-speed playback, the other pair (extra video heads) for still and slow-motion playback. This is in keeping with JVC policy; recording of the highest possible quality is assured and stable pictures can be obtained even in still and slow-motion modes. Ease of locating edit points is considerably enhanced.

External Sync Capability. The BR-8600U is equipped with all the terminals and connectors required by video professionals for editing; the Sync In connector enables external synchronization so that the BR-8600U can easily be incorporated

in an existing video system. By use of the Sync In connector, a time base corrector (TBC) can also be connected.

Total Front Operation. As well as the front cassette loading system, all switches and controls are accessible from the front. Conforming to the 19" rack mount standard, the BR-8600U presents no problem at all when it is to be installed in your existing production house.

Electronic Tape Counter/Lap Timer with Fluorescent Display. A 4-digit counter provides a convenient means of addressing tape segments. The display doubles as a 5-digit lap timer showing tape running time in hours, minutes and seconds. The fluorescent display used assures easy readability.

Tape End Warning. About 5 minutes before the end of the tape, the electronic tape counter starts flashing, indicating that the tape is coming to an end.

Shuttle Search at About 10 Times Normal Speed. Run the tape at about 10 times normal speed either forward or in reverse while watching the speeded-up picture. You can scan through a whole 2-hour program in about 12 minutes.

Automatic Search and Repeat. In conjunction with the tape counter, the automatic search mode enables any section of the program to be located automatically. In the automatic repeat mode, the entire tape is automatically played back any number of times.

BR-3000U

BR-3000U VHS RECORDER/PLAYER

JVC, the originator of the VHS format, continues to expand its growing VHS product line-up with the BR-3000U. This state-of-the-art recorder/player has the features professionals need most, in an attractive, economical package. Moreover, the BR-3000U is extremely simple to operate, and can be easily connected into any existing video system.

4-Head System for Excellent Picture Quality in all Speeds. The BR-3000U utilizes four video heads for recording and playback: one pair provides an optimum track width for the SP (2 hour) speed; the other pair is for the EP (6 hour) speed. Playback is also possible in the LP (4 hour) speed. With the BR-3000U, recording and playback is possible for up to 8 hours, using a T-160 cassette (EP).

Built-In Clock Timer, Fluorescent Display. An electronic clock with a 14-day timer is built into the BR-3000U. This permits the user to preset the VCR to automatically record or playback a segment of material up to 14 days in advance. Setting the VCR to operate in the unattended mode is a very simple process.

Shuttle Search. A very useful and convenient way of locating material on the recorded tape is through the use of shuttle search. The tape can be reviewed quickly (about 7 times normal speed) in either the SP or EP modes, forward and reverse.

Wireless Remote Control Included. A full function infrared remote control unit is provided with each BR-3000U. All tape transport control functions (except eject) may be controlled with this unit.

Electronic Tape Counter. Also integrated with the fluorescent clock, is a digital tape counter. This four-digit counter provides an accurate reference for tape location, and can be reset to "0000" by pressing the reset button.

Flexible Auto Repeat, Auto Rewind Functions. One very important feature for institutional applications is auto-repeat. The BR-3000U can be set to automatically rewind the tape and repeat a desired segment over again. The auto-repeat feature has three modes:

1. Full repeat — from the beginning of the tape to the end.
2. From counter "0000" to the end of the tape.
3. From the beginning of the tape to counter "0000".

The auto-repeat function can be a very important feature for applications where the VCR is to be used for unattended playback operations, such as point-of-purchase displays, etc. It can be used in conjunction with the automatic timer, so that the VCR can be turned on at a specified time, for repeat playback.

Suggested List Price \$715.00

SPECIFICATIONS

Format:

VHS Standard, Less NTSC System

Recording/Playback System:

Rotary, slant azimuth two-head helical scan system with two pairs of video heads, one pair exclusively for the SP mode and one pair for the EP mode.

Tape Speed:

SP: 33.35mm/s (1-5/15 ips) (1.31 ips)
EP: 11.12mm/s (7/16 ips) (0.43 ips)

Max. Recording Speed:

SP: 160 min. with JVC T-160 cassette
EP: 480 min. with JVC T-160 cassette

Temperature:

Operating: 5°C to 40°C (41°F to 104°F)
Storage: -20°C to 60°C (-4°F to 140°F)

VHF Output Signal:

Channel 3 or 4 (switchable; preset to channel 3), 75 ohms, unbalanced

Power:

Consumption: 30 Watts
Requirement: AC 120V, 50/60Hz

Video:

S/N Ratio: More than 45dB (Rhode & Schwarz Noise Meter)

Horizontal Resolution:

240 lines (SP mode)

Audio:

S/N Ratio: More than 40dB
Freq. Response: 70Hz to 10kHz
(SP mode)

Dimensions:

17-3/16"W x 5-1/8"H x 14-1/2"D
(435 x 130 x 368mm)

Weight:

20.1 lbs. (9.1kg)

Provided Accessories:

Remote Control Unit, Antenna Cable (F-type), Power Cord, Matching Transformer

Specifications shown are for SP mode unless otherwise specified.

FEATURES

- 9-Function Remote Controllable
- Pictograph Indicators For Operation At A Distance
- Memory Function For Automatic Stop
- Dependable 4-Motor System Design
- 4-Head Recording And Shuttle Search In Both SP And EP Modes
- Automatic Rewind At Tape End
- Automatic Edit Function Makes Scenic Transitions Smooth And Noiseless
- Pause Button For Still Frame Advancement

BR-1500U

BR-1500U VHS RECORDER/PLAYER

Eight Hours Recording Time in EP Mode, 4-Heads. The BR-1500U has four video heads — two used exclusively for the SP mode, two for the EP mode — to ensure a sharp, clear picture always. The EP mode offers an extra-long eight hours of recording time from a single cassette (T-160).

Detachable Remote Control. You can attach the wireless remote control to the front panel of the videocassette recorder, an arrangement that comes in handy when loading or unloading a tape. Control buttons jut out slightly from the surface of the control panel for easy operation.

Push the right side of the remote control unit and it pops out into your hand so you can operate the videocassette recorder from anywhere in the room. Controls include Recording, Play, Stop, Pause, Shuttle Search (forward and back), Power On/Off, Channel Up/Down, Video/TV Switching, and Cassette Eject.

To prevent accidental operation, the buttons for recording, channel up/down and video/TV switching are hidden behind a sliding cover. The remote control even operates when its batteries have run down; merely mount it on the videocassette recorder to regain full control.

Built-In Timer — Four TV Programs/Two-Week Period. You can program the BR-1500U to record unattended up to four TV programs over the coming two-week period. This means you can automatically record programs at any time of the day or week — late at night, weekends — for later viewing at more convenient times. The built-in timer also permits automatic recording of the same program at the same time every day. Setting the timer is easy. A "flowchart" like guide shows you the way, step by step.

Counter Memory. When the counter memory button is touched at the start of recording or play, the tape stops at "0000" on the counter automatically during rewind or fast forward.

Special Effects Playback. Whether in the EP or SP mode, you can move the tape back and forth at high speed, freeze a frame or advance one frame at a time. Thus you can search for a specific scene more efficiently, and take a closer look at a critical moment. (Note: Noise bars may appear on screen during special effects playback.)

VIDEOCASSETTE PLAYER

BP-5100U

JVC®

FEATURES

- 7-Function Remote Control
- Flexible Repeat Playback
- Memory Function for Automatic Stop
- Automatic Timer Playback
- Flexible Connection
- Dependable Four-Motor System
- Four-Head System for Consistently Excellent Picture in All Playback Modes
- Two-Way Shuttle Search
- Automatic Rewind at Tape End
- Pause Button

BP-5100U VIDEOCASSETTE PLAYER

7-Function Remote Control. Control all tape operation, including Shuttle Search, from the most convenient and desirable position.

Flexible Repeat Playback. This welcome feature is ideal for training sessions or sales demonstration where repeated viewing is essential. You can set the BP-5100U to automatically playback all of the tape or a certain part of it repeatedly as many times as required.

Memory Function for Automatic Stop. Another useful function that can eliminate a lot of unnecessary guesswork is this memory function which automatically stops the tape during rewind or fast forward when a "zero" counter reading is reached.

Automatic Timer Playback. Besides connecting a separate timer between the BP-5100U power cord and an AC outlet in the usual manner, a Timer connection is provided on the back panel of the BP-5100U to accommodate a "shorting timer". In this way, in addition to playback beginning automatically at a preset time, the built-in preheater circuit will remain continuously operative to prevent moisture condensation.

Flexible Connection. A standard 8-pin TV connector is provided for direction connection to a TV monitor; an RF Out terminal is also provided to accommodate any ordinary television through the built-in RF converter. Video (BNC) and Audio (RCA) outputs are also provided.

Dependable Four-Motor System. To guarantee long-term reliability, this model is driven by a four-motor system that comprises separate motors for tape loading, the capstan, and the take-up reel, as well as a brushless, quartz-locked direct-drive motor to ensure accurate rotation of the head drum.

Four-Head System for Consistently Excellent Picture in All Playback Modes. Clear, stable pictures are assured in all three playback speeds (SP, LP and EP), and a detection circuit automatically determines the mode in which a tape has been recorded and plays it back at the appropriate speed.

Two-Way Shuttle Search. For quick, accurate access to a desired program segment, follow a clearly visible picture in either direction at about 7 times normal speed in the SP mode, or 21 times normal speed in the EP mode.

Automatic Rewind at Tape End. To further relieve users of burdensome, time-consuming operations, the BP-5100U automatically rewinds tapes when they reach the end in the Play or Fast Forward mode.

Pause Button. When this button is pressed during playback, a still picture with noise bars will appear. The still picture can be advanced frame by frame each time this button is pressed.

And More. A tape protection circuit that cancels the Pause mode after about five minutes and engages the Stop mode.

Suggested List Price \$650.00

PORTABLE VIDEOCASSETTE RECORDER BR-6200U

FEATURES

- Two-Channel Audio Track
- BNC Video Connectors
- Shuttle Search
- Full-Function Wireless Remote Control
- Automatic Backspace Editing
- Extended-Time Recording Capability

BR-6200U PORTABLE VHS RECORDER

In sales, education, medicine and all types of business communication, the half-inch VHS video format has earned extensive acceptance for its cost-effective, high-impact communications capability. JVC's portable BR-6200U possesses the technological features and the rugged, reliable construction to provide years of trouble-free service in the widest variety of professional and institutional applications.

Easy Connection to Professional Equipment. Professional-type BNC video input and output jacks are provided on the BR-6200U for direct connection to other professional video gear.

Power Economy. The low power-consuming design of the BR-6200U is enhanced by a unique REC LOCK power economy switch. This feature allows the operator to shut down power for indefinite periods and return to the record mode, with smooth edits.

Full-Logic Operation. Microprocessor control over all functions allows direct changeover between modes and feather-touch pushbutton operation.

Two-Channel Audio Track and Dolby Noise Reduction. This two-channel system enhances production flexibility, allowing the recording of "voice-over" narration, bilingual sound-tracks or full stereo sound. Dubbing can be

performed independently onto the left channel only, or simultaneously onto both.

Extended-Time Recording and Playback. In addition to normal-speed operation (two hours of recording or playback with a T-120 cassette), the BR-6200U functions in an extended play mode to give you extra recording time in those situations where your supply of tape is limited but the subject matter is not.

Advanced Editing Functions. During recording, backspace editing prerolls the tape between takes so that the end of the previous segment is neatly synchronized to the beginning of the next one, thereby eliminating distortion at the edit points in assembled recordings. The BR-6200U's improved editing capabilities permit program segments from different video and audio sources to be edited into a previously recorded tape with minimum distortion at the start and end of the new material.

Shuttle Search. This JVC-developed high-speed visual scanning system lets you view the tape at 7 or 21 times normal speed (depending on the playback mode) in either direction, for quick easy access to any desired portion of a video program.

Flexible Power Supply System. Rechargeable NiCad battery packs

(NB-P1) are the basic power source for the BR-6200U; their compact yet high-capacity design makes it easy to carry extras for on-location applications. Power can also be supplied from regular household AC outlets or a car battery, via appropriate adaptors.

Also Included:

Built-in RF converter for connection to the antenna terminal of any TV receiver; LCD (Liquid Crystal Display) 4-digit tape counter with memory function; LED tape running, insert editing and audio dubbing indicators; Battery depletion and moisture condensation warning indicators; Automatic quick review function

- Counter Panel
- Simplified Insert Editing Function
- Direct Video Connection

BR-1600U

BR-1600U PORTABLE VHS RECORDER

Four Heads For A Crisp, Sharp Picture. Pictures are crisp and sharp at any speed because the JVC BR-1600U uses one pair of heads exclusively for the Standard Play mode, and another for the Extended Play mode. A choice of two tape speeds also means economy: use the tape-saving EP mode to file away less important documents and visual presentations, while saving the high-resolution SP mode for documents and presentations of top importance.

It's Portable Light Weight So It Can Be Used Almost Anywhere. Whenever sales and deals are made, indoors or out, the BR-1600U is extremely compact (8-1/16" x 3-3/16" x 8-7/8") and weighs only 5.3 lbs. Its remarkable small size and weight give it flexibility to be used almost anywhere. For full versatility, it connects to most video cameras without an adaptor.

Operable On Three Power Sources. Enhancing the mobility of the BR-1600U is its ability to operate on any of three power sources.

Outdoors, it can receive its power from an optional battery pack. Indoors, it operates from standard household AC through an optional AC pack. And in and around the car, it taps into the car's 12V DC power supply by means of an optional car battery adaptor. So wherever you go, just select the most accessible power source.

Clean Scene Changes. All recordings you make on the BR-1600U are clean and free of annoying "streaking." The backspace editing function assures clean transitions from scene to scene. The automatic recording lock provides an uninterrupted transition between two recording sessions even if the power has been turned off after the first.

Easy Operation. Using the BR-1600U is very simple. A memory counter lets you quickly review a specific segment of the tape. The counter panel serves as a tape counter and also as a dew indicator and a battery condition indicator. There's a built-in jack that accepts an optional earphone so you can monitor the audio on playback. Playback speed automatically matches the speed at which a tape was recorded, either SP or EP.

- Independent Dial Search Controls
- Preview/Perform/Review Functions
- Automatic Back-Timed Edits
- Frame by Frame Edit Trim Feature
- Auto Tag (to last Edit-Out Point)
- Lap Time Function
- LED Indicators
- Record Monitor Control (REC-EE)
- Monitor Audio Volume Controls
- VCR Interface Cables Provided

RM-86U

RM-86U VIDEO EDITING CONTROLLER

With the introduction of JVC's new BR-8600U VHS editing recorder, JVC engineers saw fit to design a new, economical editing controller — one that would offer the convenience and ease of operation necessary for a VHS system, yet one that would also provide a degree of sophistication applicable to JVC's 3/4" TapeHandler Series. The RM-86U, a highly sophisticated micro-processor based automatic editing controller, offers features previously not found on units in its price range.

Dial Search Controls. Two Dial Search knobs provide tape shuttle control (visible picture search) for each VCR. Detent positions give indication as to machine speed, depending upon which VCR is being used. Tape search speeds are variable, forward & reverse.

Independent LED Indicators. Two large, easy to read LED displays show the tape location in Hours, Minutes, Seconds, and Frames for both recorder and player. In addition, these indicators provide "lap time" indication, edit in point locations, edit out point locations, and computed edit duration.

Preview/Perform/Review Buttons. Edits may be rehearsed (previewed) prior to

actually erasing any tape. This "preview" function allows the operator to make any corrections or adjustments to the edit points prior to doing the edit. The Perform button actually initiates the editing process which continues until the edit is completed, or until the Edit Stop button is pressed. The Edit Stop button can be used to manually end the edit, or to abort an unwanted edit in progress. The Review button replays the just completed edit.

Automatic Edit Computation. When any three edit points are entered, the fourth point is automatically computed. This controller allows you to enter two out-points and one in-point. The controller will compute the other in-point. This is a very important feature because it permits automatic back timed edits.

A back timed edit is one in which two events must end simultaneously at the edit out point. Other edit controllers in this class don't have this feature.

Frame By Frame Trim Feature. Edit in and out points can be trimmed one frame at a time by holding down "shift +" or "shift -" and touching In or Out once for each frame to be trimmed. (A computed edit point cannot be trimmed.)

"Go To" Button. With edit points set, pressing "Go To" and In or Out will

command the respective VCR to search to that edit point and stand-by. This is convenient when the operator wants to make corrections without using the trim feature.

Edit Lap Time Indication. When an edit point is entered, the lap timer is reset to zero, automatically. This timer indication can be viewed by pressing the Lap button next to the digital readout. The purpose of the lap timer is to allow the operator to use the tape counter with a zero reference during each edit, without disturbing the normal counter reading, which is used as a program timer and for locating segments on the tape.

Record Monitor Control (REC-EE). This alternating pushbutton switches the recorder's video and audio circuits to the player's signals. This permits an editing set-up using only one monitor.

VIDEO TAPE

KODAK VIDEO CASSETTES 1/2" VHS/BETA

Kodak Video Cassettes for use with 1/2" VHS and Beta format video recorders. And for the new generation of 8mm video systems.

Each Kodak Video Cassette is designed and manufactured to meet exceptionally high standards of quality, performance, reliability, and consistency.

- For beautifully accurate images
- Excellent picture sharpness, color brilliance, sound clarity
- Quality that lasts even after repeated use

KODAK VIDEO CASSETTES (REGULAR GRADE)

For use with 1/2" VHS and Beta format video recorders. Designed for excellent picture sharpness, color brilliance, sound clarity, and reliability.

KODAK VIDEO CASSETTES, HGX (EXTRA-HIGH GRADE)

Extra High Grade video cassettes in both VHS and Beta recorder formats. For use at extended playing speeds and for repeated recording and playback. High-density particle packing has excellent capability for re-recording, erasure, and signal stability.

- Stop motion Better than 1 hour
- Tape life Better than 2,000 passes

PREMIUM VIDEO CASSETTES

Formulated to exceed the demanding standards of today's state-of-the-art equipment. Memorex video cassettes deliver consistently accurate reproduction, play after play.

- Colors that are richer, more lifelike—because the high density Memorex oxide provides a higher chroma output even at super long play.
- Pictures that are crisper, clearer—because the mirror-like tape surface affords a higher signal-to-noise ratio.
- Long term performance reliability—thanks to the tough binder material, low friction Acetel rollers, and rigorous quality control.
- Comes with extra labels for your convenience and a dust-proof album for extra protection.
- Superior results with all VHS and Beta recorders.
- Full 180 day warranty

VIDEO PRINTER

P-50U Video Printer

Within the last decade, the role of the television set has taken on dynamic new dimensions. It now encompasses home videotaping, cable, satellite, and videodiscs. Personal computers have provided us with powerful resources and conveniently linked the home with vast database/information services. Teletext and videotext services are now in operation and expanding.

What was once a simple source of entertainment, has been suddenly transformed into an extremely useful tool. And this transformation has created a need for new and innovative video-related products.

Until now, there has been no cost-effective way of obtaining "hard copies" of video images from the TV set. You could certainly photograph them, but the quality, cost and convenience of that process leaves a lot to be desired. And unless you have a costly printer for your home computer, you have no way of recording permanent records and important data on paper.

The Mitsubishi P-50U Video Printer solves these problems. It provides low-cost printouts of any video image at the simple touch of a button.

Instant Hard Copies

Simply connect the Video Printer to any direct composite video output, or in-line between TV and VCR, videodisc, etc. Then at the touch of a button on the front panel or remote control, it stores the current image on the screen and prints a clear, legible 3-15/16" x 3-5/16" copy in less than 15 seconds. Printouts are reproduced in 16 discrete tones ranging from black to white with image resolution of 280 x 234 dots. Print contrast can be adjusted in three steps (dark, normal and light). Darker images can be lightened, brighter images can be darkened.

Prints are made on special thermo-sensitive paper that's available at your Mitsubishi dealer. The 82-1/2' rolls will accommodate approximately 220 prints.

Remote Control

The P-50U is also equipped with a wired remote control (16 ft.) It's a handy feature that enables printing without getting up from your easychair.

Positive/Negative

Normally, the printout is a positive image (the same as the picture display). It can, however, be reversed to a negative image for special applications. White letters on a dark background (as in a computer display) can be reversed to print as black letters on a white background for improved legibility.

Mitsubishi P-50U Video Printer provides quick, legible "hard copies" of any TV or video image.

Remote control for initiating prints from across the room.

Reverse Scanning

Under ordinary circumstances, printing advances from the bottom of the image to the top. But when printing several images that need to be in sequence, we've included a special reversing function. The image orientation is printed upside-down to create a continuous "real-time" sequence of prints.

VC-N70EU

Stereo Beta Hi-Fi Video Cassette Recorder

- 4 Head design
- 3 week/8 event
- 17 function wireless remote control
- 134 channel cable-ready

Beta Hi-Fi is a breakthrough in audio technology. While conventional audio is recorded by a stationary head along the edge of a tape, Beta Hi-Fi frequency-modulates audio and records it along with the video signal on the tape's video tracks by means of a rotary drum. Called AFM (Audio Frequency Modulation), this is the same system used in FM radio broadcasting, and it's one of the two reasons why Beta Hi-Fi sounds so good. The second reason is that the Hi-Fi signal is recorded at a much higher relative head-to-tape speed than with a conventional stationary audio head — 7m (23 feet, 4 inches) per second vs. 1.33cm (1/2 inch) or 2cm (13/16 inch) per second.

VC-N70EU \$999.00

SA-84A

BM-22EU

VC-N60EU

Super Beta Hi-Fi Video Cassette Recorder

- Stereo ready — all audio inputs and outputs are stereo
- Multichannel decoder terminals to connect a multi-channel decoder for stereo TV and SAP (Secondary Audio Programs)
- Super Beta — a new video technology for higher resolution
- Programmable 1-week/3-event timer with daily repeat
- 14-function wireless remote control
- 105-channel cable-ready tuner for VHF, UHF and Midband cable channels

Beta Hi-Fi yields audio that is devoid of wow and flutter and noise, producing clear, accurate sound and a dynamic-range approaching digital quality.

In addition to Beta Hi-Fi, the VC-N60EU also features MPX connectors designed to interface with NEC's TV Stereo Adaptor, the SA-84A. When interfaced, TV stereo can be recorded in Beta Hi-Fi.

TAPE HEADS/ACCESSORIES

DURACORE™ REPLACEMENT TAPE HEADS FOR PROFESSIONAL RECORDERS

Professional recording equipment users need magnetic heads with greatly-extended wear life to directly reduce operational costs by eliminating electronic adjustments, requiring fewer service calls and cutting recorder downtime. Nortronics now offers a new series of direct replacement magnetic heads constructed with a new wear-resistant material called Duracore. It provides ten times the operational lifespan of conventional Mumetal replacements to yield meaningful cost advantages. More than three years of extensive testing have proved Duracore to be the ideal material for long-life replacement heads. You'll find that Duracore heads provide excellent wear resistance and they're also affordable. Duracore replacements are currently available for popular professional reel-to-reel and cartridge recorders/players manufactured by many well-known companies.

AT-200B CASSETTE ALIGNMENT TAPE AT-120 REEL-TO-REEL ALIGNMENT TAPE

Nortronics AT-200B is a versatile full-track professional cassette alignment tape recorded at 1.875 ips.

VIDEO RECORDER CARE PRODUCTS

VCR-800

VCR-350

VCR-300

VCR-50 Deluxe Video Maintenance Kit

Professional kit includes five essential products necessary for video recorders to function at peak performance level: 25 highly absorbent, lint-free cellular foam swabs. 16 oz. can of 100% pure TF spray head cleaner. Static-free cleaning cloth. Super Blast compressed air duster. 280 lint-free cellular tissues. **\$40.00**

VCR-90 Video Foam Swabs And Cleaner

"Maxi" performance from a "mini" kit.
 Compact "mini" care kit for thorough manual cleaning. 18 highly absorbent, lint-free cellular foam swabs. 3 oz. bottle of 100% pure TF liquid head cleaner. Detailed, easy to follow instructions. **\$15.20**

VCR-95 Video Maintenance Kit

Industry's top selling complete video maintenance kit includes: 15 highly absorbent, lint-free cellular foam swabs. 3 oz. can of 100% pure TF spray head cleaner. Anti-static dust cloth. Specially designed screwdriver for original equipment VCR screws. Complete, illustrated instructions for thorough manual cleaning. **\$21.40**

VCR-109 Video Super Blast Duster

High velocity jet of air blasts away loose dirt and dust from hard to reach areas within the recorder. Completely safe for use on all metals, plastics, rubber, painted surfaces and elastomer parts. Available in 10 oz. spray cans. **\$7.20**

VCR-111 Video Head Spray Cleaner

Scientifically formulated, 100% pure TF solution cleans magnetic heads, pinch rollers, and capstans without leaving harmful residue. Non-flammable, non-toxic formula will not harm metal, plastic, rubber, painted surfaces or elastomer parts. 2 oz. can. **\$4.40**

VCR-130 Video Head Cleaning Cassette — VHS

Unique, non-abrasive, wet system drop-in video cleaner thoroughly cleans the entire VCR tape path. All magnetic heads and critical parts are exposed to a fresh-moving cleaning surface with each application. Spun-bonded pure polyester cleaning tape consists of tiny cross-weave pockets which give a deep-down cleaning action and carry away debris. 100% pure TF spray cleans all critical areas without leaving residue or harming any sensitive recorder parts. **\$29.95**

VCR-135 Video Head Cleaning Cassette — Beta

Unique, non-abrasive, wet system drop-in video cleaner thoroughly cleans the entire VCR tape path. All magnetic heads and critical parts are exposed to a fresh-moving cleaning surface with each application. Spun-bonded pure polyester cleaning tape consists of tiny cross-weave pockets which give a deep-down cleaning action and carry away debris. 100% pure TF spray cleans all critical areas without leaving residue or harming any sensitive recorder parts. Available with effective counter rack or counter merchandiser. **\$29.95**

VCR-205 Video Head Demagnetizer

290 gauss field intensity removes residual magnetism from all video heads, capstans and guides for a sharper picture and sound. Angled, Plastisol-coated probe tip designed for hard to reach locations will not

harm sensitive head surfaces. Rugged Lexan housing withstands years of heavy use. Thermal-fused to prevent overheating and burn-out. Also available as VCR-207 for 220-250VAC. **\$36.40**

VCR-211 Video Tape Bulk Eraser

Recognized as industry's finest and most reliable video tape bulk eraser. Powerful 2300 gauss flux intensity erases all video cassettes back to original level of virgin tape. Burn-out proof design automatically shuts off power to the coil when core temperature reaches 70°C. Thermal protective device resets once core returns to normal operating temperature. Convenient microswitch activates with fingertip pressure. Hand-contoured housing is constructed of rugged Lexan. Also available as VCR-212 for 220-250VAC. **\$54.95**

VCR-300 VCR Dustcover

The neutral tan, 100% cotton cover has brown fabric trim and a high-quality, clear plastic insert which allows for easy viewing of the VCR controls. The fabric breathes well so the cover can be put back on the VCR immediately after use without concern about it holding in heat. In addition, the washable fabric has no objectionable odor, as do some vinyl models.

The Dustcover comes in a standard size which fits 80-90% of the recent model tabletop units and many portables as well. It measures 18" wide by 15" deep by 4" high **\$14.95**

VCR-350 VCR Speed Rewinder

The Rewinder allows a VCR user to enjoy uninterrupted playback of videotapes by putting them directly into the rewriter after use. The Rewinder is capable of rewinding a T-120 VHS Videotape in about two minutes, compared to four or more minutes for a VCR to do the same job. The unit has forwarding as well as rewind capability and features auto stop and auto power off for added safety and ease of operation **\$59.95**

VCR-510 Video Foam Cleaning Swabs

10,000 pores per square inch polyester urethane foam absorbs more solution, is completely non-abrasive, and provides optimum cleaning action. Completely lint-free, foam swab will not harm even the most delicate recorder parts. For use in conjunction with Nortronics 100% pure TF liquid or spray head cleaner. Package contains 12 foam cleaning swabs. **\$5.80**

VCR-800 Video Dubbing Kit

Permits convenient dubbing with any combination of VHS, Beta and video disc systems. Highly shielded, very low 25 pico farads per foot cable capacitance ensures quality duplication. Convenient 3-foot cable length makes dubbing easy. Kit includes Beta "mini-jack" adaptors for dubbing to or from Beta format machines. **\$17.20**

VCR-820 VCR Dubbing Kit

The RCA style plugs are gold electro-plated because gold is the best conductor of electricity available. Attached to them are low capacitance, ultra flexible cables that minimize attenuation of the signal, resulting in excellent transmission quality of both the audio and video signals. **\$11.95**

AG-6300 VHS Video Cassette Recorder

A high performance VCR perfect for use in editing systems with all the precision and connectors required for professional use.

- Two DD Reel motors for smooth tape transport
- Forward (noiseless) and reverse slow motion playback and frame shift
- 17 step dial
- Audio dubbing selector
- Audio level/tracking meter
- EXT SYNC IN
- Time code IN and OUT Connectors
- DUB/NORMAL switch select
- Random auto repeat functions
- Real time counter
- Two channel audio with Dolby NR System
- Audio limiter and audio level meter
- Headphone level control
- Loophrough recording for dubbing
- Intermediate loading system
- Mode lock function
- Optional remote control
- External clock timer
- 19" rack mountable
- Multiple AC Power sources

AG-6300 \$1895.00

AG-6300

AG-6200 VHS Video Cassette Recorder

Ideal for dubbing and a wide range of other applications including education, research, medical analysis and demonstration.

- Noiseless slow (forward)
- 14-step dial search
- Intermediate loading
- Audio dubbing possible on channel 2
- Headphone level control
- Audio limiter and audio level meters
- 2-Channel audio w/Dolby NR System
- Realtime counter with "tape remaining" time counter
- Random auto repeat
- Optional remote control
- Mode lock function
- Time code connectors
- Loophrough recording for dubbing
- 19" rack mountable
- Multiple AC power sources

AG-6200 \$1750.00

AG-6200

AG-6100 VHS Video Cassette Player

A playback only video cassette deck that offers the advanced functions of the AG-6200.

- Noiseless slow (forward)
- 14-step dial search
- Frame advance
- Intermediate loading
- 2-Channel audio w/Dolby NR System
- Random repeat
- Optional remote control
- External clock timer can be connected for timer—playback control
- Mode lock function
- Loophrough operation
- 19" rack mountable
- Multiple AC power sources

One Panasonic Way Secaucus, NJ 07094 (201) 348-7000

AG-6200E

Multi-System VHS Video Cassette Recorder

A multi-system VTR for international video PAL, CCIR & 4.43 MHz NTSC

- PAL CCIR (recording and playback), 4.43MHz NTSC (playback only)
- Noiseless slow (forward) and noiseless frame advance make it possible to locate exact edit points
- 14-step dial search for quick and accurate program searching. (forward: 1/25, 1/10, 1/5, 1/2, 1, 2, 6, 10, Still, reverse: 1/2, 1, 2, 6, 10)
- Real time counter with "tape-remaining" time counter and lap time can display up to 9 hours, 59 minutes, 59 seconds
- Random auto repeat function, other versatile counter. The unit automatically stops at 000 on the counter (Rew./FF). Set the beginning and end points. At the end point, the unit will automatically rewind to the beginning point and stop. The unit will consecutively repeat playback between these points.
- Intermediate loading system aids in random access by reading the control signal in the FF and REW modes
- Loop through recording remote control makes multiple dubbing easy up to 500* units at the same time
- Two channel audio with Dolby** NR system enables stereo playback and recording with very low noise
- Audio limiter and 2 audio level meters make independent adjustment of channels 1 and 2 possible
- Audio dubbing possible on channel 2
- Mode lock function locks the unit into the current mode and overrides front panel controls
- Time code In and Out connectors permit recording and playback of time code signals on audio track 2

AG-6200E

- See-through front loading mechanism and EIA 19" rack mounting size makes it possible to install a large number of units in a limited space
- A 34-pin remote-control connector is provided and the optional remote control AG-A600 controls of the Play, REC, FF, REW, Stop, Pause/Still, Frame ADV., Search and Audio DUB modes
- Multiple AC power sources

AG-6200E **\$1850.00**

*Use of the AWG-24 cords with units spaced 1m apart.

**"Dolby" and the double-D symbol are trademarks of Dolby Laboratories.

AG-6300MD

VHS Video Cassette Recorder for Medical Applications

Meets UL-544 Standards

- Microcomputer-controlled full logic operation, and two direct drive reel motors provide the precise tape handling
- See-through front loading mechanism and EIA 19" rack mounting size
- A 34-pin remote-control connector is provided, and the optional 9-mode remote controller (AG-A600) controls of the play, record, fast forward, rewind, stop, pause/still, frame advance, search, and audio dub modes
- 17-step dial search for quick and accurate program searching. (forward: 1/25, 1/10, 1/5, 1/2, 1, 2, 6, 10, Still, reverse: 1/25, 1/10, 1/5, 1/2, 1, 2, 6, 10)
- Forward (noiseless) and reverse slow motion playback and noiseless frame shift
- Real time counter with "tape-remaining" time counter and lap time can display up to 9 hours, 59 minutes, 59 seconds
- Random auto repeat function, other versatile counter. The unit automatically stops at 000 on the counter (Rew/FF). Set the beginning and end points. At the end point, the unit will automatically rewind to the beginning point and stop. The unit will consecutively repeat playback between these points.
- Time code In and Out connectors permit recording and playback of time code signals on audio track 2
- Two channel audio with Dolby* NR system enables stereo playback and recording with very low noise
- Audio dubbing selector enables dubbing on either channels 1 or 2, or both
- Audio limiter and 2 audio level meters make independent adjustment of channels 1 and 2 possible
- Audio level meter for Ch. 2/tracking meter switch-select
- Headphone level control

AG-6300MD

- Ext Sync In makes it possible to connect an external sync source
- Intermediate loading system aids in random access by reading the control signal in the FF and REW modes
- Loop through recording remote control makes multiple dubbing easy up to 500** units at the same time
- Mode lock function locks the unit into the current mode and overrides front panel controls
- An external clock timer can be connected for unattended timer-recording and playback
- Multiple AC power sources

- Loop-through Recording for Dubbing
- See-through Front Loading Mechanism
- Rack Mountable (optional frame available)
- Real Time Counter and Random Repeat
- Remote Control Connector
- SMPTE Time Code Recording Possible

Presenting the AG-6800, the professional VHS Hi-Fi video cassette recorder designed for recording studio and dubbing applications. The AG-6800 uses the newly developed VHS Hi-Fi system to provide stereo sound with full conventional VHS video compatibility. Technically speaking, VHS Hi-Fi is an FM multiplex depth recording system. Two additional audio heads are mounted on the same cylinder as the usual video heads. These record the audio signal on a deep layer of the video tape, then the video heads record the video signal on the shallow surface layer. Azimuth angles of the audio and video heads are different ($\pm 6^\circ$ for video and $\pm 30^\circ$ for audio) so there is no problem of interference or intermodulation distortion. Furthermore, the left and right audio channel information is completely independent, unlike FM stereo broadcasts, so stereo separation is complete.

On a VHS Hi-Fi VTR you have four channels to work with — two hi-fi audio channels and two conventional audio channels. The AG-6800 is equipped with complete input and output connectors, level controls, and metering facilities to handle each channel independently, all at once, or any combination in between. Therefore, you enjoy the ideal balance of flexibility and convenience.

Note: AG-6800S is for duplication only.

SPECIFICATIONS

Power Source: 110, 120, 220, 240V AC, 50/60Hz
Power Consumption: Approx. 60 watts
Television System: EIA Standard (525 lines, 60 fields)
 NTSC color signal

Video Recording System: 2 rotary heads, helical scanning system
 Luminance: FM azimuth recording
 Color signal: converted subcarrier phase shift recording

Audio Channel: 4 channels
 NORMAL (CH1/CH2): 2 fixed heads
 HD (CH1/CH2): 2 rotary heads

Tape Format: Tape width 1/2 inch (12.7 mm),
 high density tape

Tape Speed: 1-5/16 ips (33.35 mm/s)
Record/Playback Time: 120 min. with NV-T120
FF/REW Time: Less than 4.0 min. with NV-T120
Input Level: Video: Video In (BNC), 1.0Vp-p,
 75 ohms unbalanced

Output Level:

Audio: Line In (RCA): unbalanced
 Normal (CH1/CH2) -20dB
 (reference input -8dB),

NV-8500 1/2" VHS Editing System

This system combines the professional features of 3/4" editing systems with the convenience and economy of 1/2" VHS. The system is comprised of Panasonic's advance design NV-8500 editing recorder/player combined with the NV-A500 automatic editing controller and may be expanded through the NV-A505 remote controller. The new editing system provides excellent versatility and performance that was previously limited to larger tape formats.

NV-8500 Recorder/Player

- Accurate 8-step search dials for fast editing point location
- Microprocessor based operation
- Dolby* noise reduction
- 2-track audio with audio limiter, playback level adjustment and meters for each channel
- Second audio track can be selected to accept time code information
- S/N ratio 45dB color, 46dB monochrome
- Horizontal Resolution 240 lines color, 300 lines B/W
- Hot pressed ferrite video heads
- Dub in/Dub out connectors
- 100-240VAC, 50/60Hz
- LED indicators
- Adjustable headphone out level

NV-8500 \$3250.00

NV-A500 Editing Controller

Designed to work effortlessly with the NV-8500 deck. It offers outstanding features for easy and accurate assembly edits with non-locking feather touch controls, designed around an advanced microprocessor that allows for a variety of professional editing functions.

- Preview mode allowing for a trial run
- Review mode for rapid review of a completed edit
- Edit time + /1 function for locating a specific edit point
- Bi-directional search dials
- Searching speeds: 1/25, 1/10, 1/5, 1/2, 1, 2, 5 and 10 times normal playing speeds
- Pause function with a visible still picture and frame by frame advance in either forward or reverse
- Two LED counters for source and editing deck

A full-function remote control, model NV-A505, is also available for this system.

NV-A500 Full Function Editing Controller \$1500.00

NV-A505 Full Function Remote Search Controller 750.00

NV-J500 Multi-Source Switcher 450.00

AG-6300 VHS Video Cassette Recorder

A high performance VCR perfect for use in editing systems with all the precision and connectors required for professional use.

- Two DD Reel motors for smooth tape transport
- Forward (noiseless) and reverse slow motion playback and frame shift
- 17 step dial
- Audio dubbing selector
- Audio level/tracking meter
- EXT SYNC IN
- Time code IN and OUT Connectors
- DUB/NORMAL switch select
- Random auto repeat functions
- Real time counter
- Two channel audio with Dolby NR System
- Audio limiter and audio level meter
- Headphone level control
- Loophrough recording for dubbing
- Intermediate loading system
- Mode lock function
- Optional remote control
- External clock timer
- 19" rack mountable
- Multiple AC Power sources

VHS Video Cassette Recorder/Player

- 2/4/6 Hour record and playback capability
- Advanced 4-head system greatly enhances picture quality. Clear still and frame advance pictures with minimal noise and jitter
- Frame advance button permits slow motion playback. Speed search forward and reverse
- 107-channel cable ready with 12 button tuning
- Supplied wired remote control with 9 modes
- Multi-function display confirms all tape modes and shows time and day
- Front loading
- 8-pin connector permits single cable connection to monitor
- 2 week/single event unattended recording

AG-2200 \$895.00

AG-2200

AG-2400 4-Head System
W/Quartz-Servo Direct Drive Cylinder

AG-2400 is ideal for use with a portable video camera and is also perfect for stationary VCR applications when connected to the matching AG-V340 Video Tuner/Timer (optional). There are four precision video heads mounted on the cylinder. Two heads are used for conventional recording and playback, while the other two enable clear STILL, FRAME ADVANCE, and SLOW playback modes. In addition, a SPEED SEARCH mode is included, making it easy to locate any desired point on the tape. Recording is possible in the 2-hour and 6-hour VHS modes and playback is possible in all 2/4/6 Hour modes.

With liquid crystal display (LCD), this single panel can transport speed modes (LP, SLP), cassette status, tape counter, remaining tape time, battery charge level, audio dubbing, and video adding. By simply connecting a single 20-pin cable, the AG-V340 can be added to provide you with the capabilities of a full-size conventional VCR. In addition, a standard 10-pin connector on the AG-2400 allows the unit to be used with most conventional video cameras. Weight: 4.84 lbs. (w/o internal battery pack). Dimensions: 8-7/16" x 2-3/4" x 10-3/8".

FEATURES

- 2/4/6 Hr. Playback; 2/6 Hr. Record
- 4-Head System W/Quartz-Servo Direct Drive Cylinder
- 5-Speed Search/Variable Slo-Mo Playback
- Multi-Function LCD Display
- Diecast Aluminum Chassis
- Wired Remote Control Enables Variable Slo-Mo Playback
- Video Adding For Basic Insert Editing
- Audio Dubbing Capabilities
- Memory Function
- Auto-Rewind

3/4" Component Editing System

Deluxe 3/4" Editing Systems: NV-9600 (2 units), NV-A970. Panasonic introduces a system package providing the ultimate in advanced-feature editing. The system includes two NV-9600 3/4" high performance editing recorders and one NV-A970 editing controller combined in a total system package. 221 lbs. (3 ctn. total) \$17,950.00

High Performance 3/4" Editing System: NV-9600, NV-9240 and NV-A970. A practical approach to the many demands of modern-day video production and editing. A single package of exceptional Panasonic 3/4" equipment designed for precision results throughout the use of one NV-9240 production recorder as source, one NV-9600 3/4" high performance editing recorder and one NV-A970 editing controller. 221 lbs. (3 ctn. total) \$15,700.00

**NV-A500
Editing Controller**

Designed to work effortlessly with the NV-8500 deck. It offers outstanding features for easy and accurate assembly edits with non-locking feather touch controls, designed around an advanced microprocessor that allows for a variety of professional editing functions.

- Preview mode allowing for a trial run
- Review mode for rapid review of a completed edit
- Edit time + /1 function for locating a specific edit point
- Bi-directional search dials
- Searching speeds: 1/25, 1/10, 1/5, 1/2, 1, 2, 5 and 10 times normal playing speeds
- Pause function with a visible still picture and frame by frame advance in either forward or reverse
- Two LED counters for source and editing deck
- 15-3/8" x 2-7/8" x 9-5/8" (WHD)
- Weighs 5.28 lbs.
- 2 pcs. 34-pin remote control cable supplied

A full-function remote control, model NV-A505, is also available for this system.

NV-A500 Full Function Editing Controller \$1500.00

NV-A500

AG-6010 1/2" TIME LAPSE VIDEO CASSETTE RECORDER A New Era In Time Lapse Recording

AG-6010 is Panasonic's all new time lapse video cassette recorder. Equipped with multiple search functions and a built-in time/date generator, the AG-6010 provides reliability and economy of operation. In addition to the 24-hour and 72-hour time lapse recording features for observation and surveillance applications, this new model also includes 2-hour standard play and 6-hour super-long play VHS modes. Engineered and built for time lapse operation by the world's largest manufacturer of video recorders, the AG-6010 boasts these additional quality engineering features...

- 4 Video Heads
- Resolution: 300 lines B/W; 240 lines color
- Front-loading tape system
- Built-in RF converter for viewing tapes on a conventional television receiver
- Automatic Repeat Recording
- Recording lock protects against external tampering once recording has started
- Multiple Search Functions
- Hour Meter (up to 10,000 hours)
- Sturdy die-cast chassis stability

VHS Mode/Time Lapse Mode Recording

In addition to time-lapse recording in the 24-hour and 72-hour modes, the AG-6010 is also equipped for 2-hour (SP) and 6-hour (SLP) VHS recording. Since the AG-6010 has a built-in RF converter, it can be conveniently used with a conventional television to meet a wider variety of requirements and effectively serve as two units in one.

Recording System Versatility

For surveillance and monitoring applications, such features as timer recording, automatic-repeat recording, external timer recording, and alarm recording greatly enhance the versatility and convenience of the overall system.

Timer Recording

The built-in time/date generator also functions as a single-event 24-hour recording timer.

Built-in Time/Date Generator

The built-in time/date generator automatically superimposes complete date and time information, including the hour, minute and second, upon recorded images for later reference or evidence. This data can be moved to any of the image's four corner areas. In addition, the power-failure compensation function assures the retention of time/date and recording time mode data in the unit's memory for approximately 72 hours, providing the unit was in operation for a minimum of 48 hours prior to the power failure.

Automatic Repeat Recording

By simply setting the automatic-repeat recording switch in advance, recordings are automatically made repeatedly end-to-end on the tape, thereby eliminating the need for manual reloading of the cassette or resetting the controls.

Automatic Recording After Power Failure

If the external timer recording switch is set to the "ON" position, recording will automatically resume if a power failure occurs during operation. This switch can also be used for timer recordings.

Recording-Lock

The recording-lock switch protects the unit against external tampering once a recording has started.

Alarm Recording

If the unit detects any abnormal activity in the area under surveillance while in the time-lapse recording mode, it immediately switches to the 2-hour (standard play) recording mode and records all activity in full detail. After 3.5 minute interval has elapsed the unit will return to the former time lapse mode.

Multiple Search Functions

The advanced four-head system makes a wide range of search functions possible for utmost versatility. Search functions include clear still, clear slow, frame shift (forward and reverse) search, and speed search (forward and reverse). Thus, you can quickly and precisely locate any desired scene for study or analysis.

High Reliability and Durability

Image stability assured by direct-drive capstan. Tape-transport mechanism mounted on sturdy die-cast chassis to assure complete stability.

Built-in RF Converter

Because the RF converter (CH 3/4) is built-in, video playback is possible on any TV.

Hour Meter

The hour meter indicates the approximately total time (power supply time), up to a maximum of 10,000 hours.

SPECIFICATIONS

Power Source:	120V AC, 60/50 Hz
Power Consumption:	Approx. 45W
Television System:	EIA Standard (525 lines, 60 fields) NTSC color signal

AG-6050
1/2" Time Lapse Video Cassette Recorder

The Panasonic AG-6050, a 1/2-inch time lapse VCR with advanced features for security, industrial, scientific and other professional applications.

Maximum recording time on a single VHS video cassette is 480 hours (20 days) in color or black & white. Simultaneous audio recording is possible in the 2-hour (real time) and 12-hour modes. 24, 48, 72, 120, 240-hour and 1-shot modes are also included to meet a variety of needs.

For surveillance and security applications, the deck is equipped with a sophisticated alarm function. Timer, auto-repeat, auto-rewind and series recording modes provide additional performance. To permit detailed analysis of recorded contents, advanced technology boosts resolution to an impressive 350 lines (B&W).

Convenient playback functions include 6 times normal speed forward and reverse search, reverse playback, forward/reverse field advance and automatic playback of alarm triggered segments.

The AG-6050 boasts rugged, durable construction. There are special protection features such as recording mode lock (to protect against tampering and accidental mode switching), recording monitor display of video head record status, power failure reset switch and auto-off display in case of improper internal conditions. Standard connectors are provided for video/audio input/output, simple video monitor hookup (8-pin terminal), camera switching and camera number and remote control.

RECORDER/PLAYER-TIME LAPSE SYSTEM 1/2"-VHS

Panasonic
AUDIO-VIDEO SYSTEMS GROUP

One Panasonic Way Secaucus, NJ 07094 (201) 348-7000

High-Resolution Playback

Black & white recording provides 350-line high resolution picture reproduction which is particularly valuable for close analysis in the still playback mode. The picture sharpness control can be adjusted for maximum viewing comfort.

9-Mode Recording

Nine recording modes are available. The real time 2-hour mode and 12-hour mode allow simultaneous audio recording. The time mode selector also offers 24, 48, 72, 120, 240 and 480-hour recording modes. Thus, unattended time lapse recording is possible for a maximum of twenty days on a single VHS video cassette. The 1-shot mode is convenient for special situations such as animation or data files.

	2-Hour	12-Hour	24-Hour	48-Hour	72-Hour	120-Hour	240-Hour	480-Hour	1-Shot
Sound Recording	○	○	—	—	—	—	—	—	—
Video Record Intervals (sec.)	1/60	0.1	0.2	0.4	0.6	1.0	2.0	4.0	1min. 30sec. (Manual) 2min. 30sec. (Auto)
Camera Selector Intervals (sec.)	1	12	1.6	2.0	2.4	4	8	16	4 (field)

Built-in Time/Date Generator with Alarm Function

This can be used to automatically add month, day, year, hour, minute and second displays to the recorded picture. Camera number can also be added. Data memory of date and time of alarm triggered recording can be recalled and displayed. If desired, the activation of an alarm can switch

the deck to the 2/12 hour mode for extra detail while also sounding an audible alarm and lighting an indicator lamp. The lamp stays on after the end of the tape is reached.

Multi-Function Recording Versatility

To better meet your particular needs, the AG-6050 is equipped with a variety of convenient recording functions. Timer (built-in) recording can be used to record at the same time every day or the same day every week. The auto-repeat function can be selected to rewind at the end of the tape and begin recording again. Simple auto-rewind is also possible. Series recording lets you cascade a number of AG-6050 decks so that when one finishes recording, the next begins.

Multi-Mode Playback

To quickly find desired segments of a recording, the AG-6050 is equipped with convenient 6 times normal speed search (normal mode), reverse playback and forward/reverse field advance. An alarm triggered recorded segment can be found and played back automatically at any time.

Other Features

- Rear panel facilities include video/audio input/output, 8-pin connector for video monitor, camera switching terminal, camera number terminal and 34-pin remote control connector
- 10,000-hour operation time meter for reminder of maintenance schedule
- Semi-fine slow motion interval playback
- Audio level meter with audio limiter
- 1/2H lock switch
- Counter memory
- Alarm buzzer switch

Specifications (Tentative)

Power Source: AC 120V 50/60Hz
Power Consumption: Approx. 70 watts
Recording System: 2 rotary heads, helical scanning
Tape Speed: 1-5/16ips (33.35mm/s) (2-hour mode)
Tape Format: Tape width 1/2 inch (12.7mm), high density tape
Recording/Playback Times: 2~480 hours with NV-T120
FF/REW Time: Approx. 4.5 min. (with NV-T120)
Recording Time Modes: 2/12/24/48/72/120/240/480 hours and 1-shot mode

This unit is designed exclusively for time lapse use. The special recording system will not allow interchanging recorded programs with a standard VHS unit.

VR-75

AG-A100 The Dubbing Controller can be used for control of as many as 10 slave VTRs and 1 or 2 master VTRs.

A complete dubbing system designed for precise and efficient simultaneous dubbing. The ideal system to solve your dubbing problems, this new Panasonic Dubbing System offers complete control over virtually every step of the dubbing process, with remote control facilities for added convenience, permitting dubbing to as many as 40 VTRs at the same time.

- Either one or two master VTRs can be connected
- From one to ten slave VTRs can be connected
- Remote control of the start and stop of the playback mode of the master VTRs (one or two units)

- Remote control of slave VTRs (one to ten units): recording, playback, fast forward, rewind, forward and reverse search, stop, pause/still and cassette ejection
- As many as 40 slave VTRs can be connected by using the multi-connection system (with four Dubbing Controllers, AV Distributors and Switchers)
- Remote control possible with any master VTR which has an RCA-type record remote jack
- Mountable in 19-inch rack

SPECIFICATIONS

Remote Control Connector: 20-pin x 10

Master VTR

- Start/Stop:** RCA jack, open collector (A & B)
- Rec Start/Stop:** RCA jack, open collector
- Multi-Connection:** 20-pin (Input/Output)
- Weight:** 10.65 lbs. (4.8 kg)
- Dimensions:** 17"(W) x 3-1/2"(H) x 13"(D)
430 x 88 x 328mm
- Operating Temperature:** 41°F ~ 104°F (5°C ~ 40°C)
- Operating Humidity:** 30% ~ 80%
- Accessories Supplied:** Rack Angle x 2

AG-A100 \$750.00

REAR VIEW

AG-DA100 The AV Distributor can be used for distribution of as many as 10 video or audio (2-channel) signals.

- Two inputs, A and B, selectable for two outputs, A (1 - 5) and B (2 - 10)
- Because loop-through type input terminals are used, video/audio distribution can be further expanded by using an additional AV Distributor
- Video and audio output levels can be adjusted while monitoring the level meter
- Distribution to as many as 40 slave VTRs is possible by using the multi-connection system (with four Dubbing Controllers, AV Distributors and Switchers)

SPECIFICATIONS

Power Supply: AC 110/120/220/240V, 50/60 Hz
Consumption: 14 W
Video Input: BNC x 4 loop-through
Video Output: BNC x 10
Audio Input: RCA jack x 8 (CH1, CH2), loop-through type
Audio Output: RCA jack x 20 (CH1, CH2), loop-through type -6 dB 600 ohms (-8, -20 dB selectable)

- Weight:** 12.76 lbs. (5.8 kg)
- Dimensions:** 17"(W) x 3-1/2"(H) x 13"(D)
430 x 88 x 328mm
- Operating Temperature:** 41°F ~ 104°F (5°C ~ 40°C)
- Operating Humidity:** 35% ~ 80%

AG-SW100 The Switcher can be used to select any one of as many as 10 audio/video inputs for monitoring.

- Video/audio selection of one from as many as 10 input signals for monitoring
- Manual and automatic modes can be selected for the output signal
- Selection timing for the automatic mode ranges from about 1 second to 30 seconds
- Selection timing can be set according to the external pulse
- Audio monitoring selectable as either audio channel 1, mixed or audio channel 2
- Mode lock function for inhibition of remote control input (normal side) and front panel control (remote side)
- Automatic skip function makes selection quicker by skipping terminals with no input signal
- Interval switching function makes it possible to switch within the synchronized signal of the video signal if a video input signal is present at input terminal 1
- Mountable in 19-inch rack

SYSTEM APPLICATIONS

BASIC SYSTEM

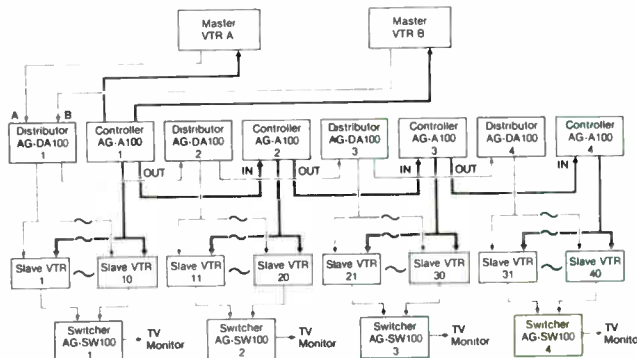

A Controller (AG-A100), AV Distributor (AG-DA100) and Switcher (AG-SW100) combine with one master VTR for dubbing to as many as 10 slave VTRs.

SYSTEM USING 2 MASTER VTRs

The Controller, AV Distributor and Switcher are combined with two master VTRs for dubbing to as many as 10 slave VTRs.

MULTI-CONNECTION SYSTEM

Up to 4 Controllers, 4 AV Distributors and 4 Switchers are combined to facilitate dubbing from

2 master VTRs to as many as 40 slave VTRs at one time, with full control over system operations.

PROGRAMMABLE VIDEO CASSETTE PLAYER/CHANGER

THE DIRECTOR

System 19, Model 12

The Automatic Programmable Video Cassette Player/Changer

The Director represents a revolutionary approach to video cassette utilization. Rather than time-link a series of VTRS, the technologically sophisticated DIRECTOR manipulates and plays a stack of video cassettes through a single VTR. Essentially, it is an electro-mechanical robot teamed with microcomputer technology to provide you with great versatility of system design and programming capability.

The Model 12 with its added abilities resulting from an integral Z-80 microprocessor, proudly succeeds the hundreds of Model 10's and 11's presently serving the industry. It is the only such comprehensive device on the market today, and its uniqueness is acknowledged by U.S. Patent #4133013.

Full Week Programming Capability

The DIRECTOR has random access to nineteen (19) video cassettes and the capability of programming an entire week or seven distinct schedule days...for automatic and continuous video distribution throughout a closed circuit or cable television system. Each cassette may contain an assembly of programs, with options for automatic "Intermission" displays between each program or cassette. Once programmed, no personnel assist is ever required. The DIRECTOR goes on working...seven days a week, week after week.

THE DIRECTOR: Loads, Plays, Unloads. Gives "Intermissions." Retrieves and Rewinds Video Cassettes. Automatically and in Any Sequence According To Your Keypad Entered Schedule.

AND You Can Specify the start of any cassette at any real time minute of the day.

THE DIRECTOR IS DESIGNED TO OPERATE WITH THE SONY U-MATIC 5000 VTR. The 3/4" tape format provides you with the best combination of economy and excellence of performance.

For Education • For Entertainment • For Training

Hospitals: FOR PATIENT EDUCATION, ENTERTAINMENT AND STAFF TRAINING.

Industrial Plants: FOR IN-PLANT TRAINING, SAFETY AND MOTIVATIONAL PROGRAMMING.

Hotels: FOR PREMIUM CHANNEL ENTERTAINMENT.

Schools, Fire and Police Depts.: FOR EDUCATIVE SUPPORT AND IN-SERVICE TRAINING.

Whether Your Program Schedule Needs Are Simple or Complex... The Director Can Solve Them.

For example, in multichannel systems you have options for time switching the video output to different channels. This has proved particularly important to hospitals for distributing programs to different floors or patient populations.

Important Facts About The Director

Each of its nineteen (19) video cassettes can start at any time of the day, any day of the week, in any sequence. Each cassette can have more than one program.

Its computer is capable of storing and executing in sequence seven (7) distinct schedule days. Each schedule day has a 49 event capacity.

Video cassettes automatically rewind at end of the day, or are automatically rewound immediately prior to their next play.

COMPUTER CONTROLLED PROGRAMMER

Sophisticated microprocessor control executes 7 distinct schedule days, with up to 49 events per day. It loads, plays, unloads. Gives "intermission" displays. Retrieves and rewinds videocassettes. All automatically.

CASSETTE RACK

Large 19 videocassette capacity with random access to each cassette in stack. You can specify the start of any cassette at any minute of the day.

Cue tones are placed before and after each program to signal computer.

CONTROL PANEL

Simple keypad schedule entry. Allows easy review and editing of stored schedules. Has LED displays of the Real Time Clock and of elapsed time from start of each program.

PLAYER

The Sony Model 5000 Player. The 3/4" tape format provides the best combination of performance and economy.

POWER SUPPLY

Power supply and motor controls use 110V AC to furnish regulated DC.

\$8995.00

02 Graphic Generator
Intermission lines

021 Custom Programming
2 pages of 2 lines each. Each line has 12 characters.

Programmable Time Switch
The DIRECTOR has a Programmable Time Switch (PTS) Option. The PTS may be utilized by Multichannel Systems to change the output channel automatically at specific times, or coincident with specific programs.

ADDITIONAL OPTIONS AND ACCESSORIES

Ceramic Filter
Provides maximum protection against false cueing due to the presence of full audio or noise on audio track 1

Complex Cue Tone Generator
Crystal controlled, battery powered complex cue tone generator. Used to record cue tones compatible with Complex Tone Detectors.

LD-V1000 HIGH PERFORMANCE LASERDISC™ PLAYER

FEATURES:

- Full random access of up to 30 minutes (54,000 frames) of video, with two sound channels
- Plays heavy duty, aluminum-backed CAV discs as well as standard CAV discs
- Maximum access time of three seconds
- Bidirectional parallel computer interface with continuous player Status output
- Variable play speeds
- Multiple track skips in selected increments up to 100
- Maximum skip time less than 5ms
- Audio channels can be enabled during Variable Speed Play for special audio effects
- 512 user registers in player RAM
- Ability to load player RAM from disc resident "data dumps"

Designed for special purpose applications, the Pioneer-V1000 offers features tailored for external computer control in industrial, OEM, and other high usage environments.

Typical Applications:

- Simulators
- Arcade Games
- High level CAI systems

SELECTED SPECIFICATIONS

Operational Features:

Play
Fast Play: 1, 2, 3, 4, and 5 times normal play speed
Slow Play at 1/4 and 1/2 normal speed
Step Frame, Still Frame, and Scan functions
Frame accurate Search
Frame accurate Autostop
Selectable display of frame number, register number, and register contents

Design Features:

Helium neon laser
Top loading
Height 5.6 inches, 14.3cm
Width 20.7 inches, 52.5cm
Depth 15.6 inches, 39.5cm
Net weight 33 lbs, 15 kg
MTBF 4500 hours

Video Format:

NTSC, 525 lines, 350 lines horizontal resolution, 30 frames per second

SNR greater than 42 dB
Video signal available during track skip

Audio Characteristics

Two switchable audio channels
Frequency response 40-20,000 Hz
Signal-to-noise ratio better than 50 dB
Total harmonic distortion less than 0.5%

Power Requirements:

120 VAC, 60 Hz
60 watts
LD-V1000 POR

Accessories:

Wheeled carrying case for LD-V1000 \$300.00
Service Manual 50.00

LASERDISC PLAYERS

LD-V6000

LD-V6000 INDUSTRIAL LASERDISC™ PLAYER

PLAYER FEATURES:

- Multiple control modes:
 - Level II—Standalone programmable
 - Level III Computer peripheral (RS232C)
 - Normal linear play with RCU keypad
 - User programmable with RCU keypad
- Front panel disc loading
- Solid state laser signal pick-up
- Fast access—maximum of three seconds
- Compact—less than 17 inches wide, sized for rack mounting
- Built-in RS232C serial interface
- External sync and subcarrier 75 ohms looped through (adjustable)
- Playback sync out
- Video and RF out
- AutoRepeat
- Switchable AutoPlay
- Chassis access door to removable EPROM
- Displays to show frame number, register, register contents, command(s) entered, and multi-speed function entered
- CX™ noise reduction
- Plays CLV, CAV, and CAV aluminum backed discs
- Optional remote control

The LD-V6000 is a flexible, versatile industrial videodisc player. In one front loading, compact chassis is a videodisc player capable of meeting a wide variety of needs.

SPECIFICATIONS

Visual Access

- Three seconds or less access time from frame 1 to frame 54,000
- Under one second for nearby frame searches ($\pm 10,000$)

Environmental Requirements:

- Power: 120V $\pm 10\%$, 50/60 Hz, 40 watts typical, 120 watts max.
- Size: Height 5.9" (150mm), Width 16.6" (420mm), Depth 16.4" (415mm)
- Weight: 30.8 lbs. (14 kg)

Signal Parameters

- Video: NTSC, 525 scan lines, 30 frames per second
- 330 lines horizontal resolution
- SNR greater than 40 dB
- Timebase error less than $\pm 22ns$.
- Differential gain less than 10%
- Differential phase less than 12°
- Output impedance 75 ohms
- Audio: two discrete, switchable channels
- Frequency response 20-20,000 Hz $\pm 3dB$
- CX™ noise reduction decoding
- Signal-to-noise ratio 67 dB with CX™ 55 dB without
- Distortion - 1 KHz 75% mod, less than 0.5%
- Crosstalk - 1 KHz 75% mod, -50 dB
- Output impedance 3.3K ohms
- RF: Channel 3 or 4 out, switchable
- Output impedance: 75 ohms
- Synchronization: sync and subcarrier potentiometer adjustable
- Composite sync
 - 75 ohms loop-through, switchable terminator
- Subcarrier
 - 75 ohms loop-through, switchable terminator
- Sync out
 - TTL, 2K ohm pull-up

LD-V4000 LASERDISC™ PLAYER

FEATURES:

- Front disc loading
- Solid state laser signal pick-up
- Compact size - ideal for rack mounting
- Autostop function when attached to external computer
- Expanded control features
- Maximum access time, six seconds
- Switchable AutoRepeat
- Serial computer ports
- Optional remote control keypad (wired or infrared wireless)
- Stereo headphone jack with volume control built into the keypad

The LD-V4000 can operate in a Level I standalone mode using chapters and picture stops and in a Level III mode when attached to an external computer.

Typical Applications:

- Learning centers
- Sales demonstrations
- Group lectures
- Point-of-sale information booths
- CAI with color visuals and sound
- Audi-visual libraries

SPECIFICATIONS*

Operational Controls:

- Normal play with two discrete audio channels
- Bidirectional Fast Play: 1, 2, 3 times normal
- Bidirectional Slow Motion: 1 frame per 1/2, 1/4, 1/8 or 1/16 second.
- Bidirectional Timed Step Frame: 1 frame each three seconds or each second
- Pause, with screen blanking
- Random Chapter Search
- Chapter Scan
- Frame Search (CAV)
- Picture Stop (CAV)
- Bidirectional Step Frame (CAV)
- Fast Scan
- Time Search (CLV)
- Bookmark Review (CAV)
- Selectable automatic disc Repeat or Reject
- Selectable audio channels, left, right, or stereo

Computer Ports:

- Serial TTL with pulse timing logic
- "Acknowledge" output
- Amphenol-type 24-pin rear panel, and DIN 8-pin front panel connectors

Remote Control Unit (Optional):

- Wireless infrared
- Wired, via 16" cable provided
- Stereo headphone jack with dual channel volume control, 1/4", 8 to 200 Ohms (wired mode only)
- Two AAA dry batteries included

Design Features:

- Front disc loading
- Solid state laser signal pick-up
- Height4.7 inches (12cm)
- Width16.5 inches (42cm)
- Depth16.3 inches (41.5cm)
- Weight27.3 lbs. (12.4kg)

Screen Displays:

- Frame number (CAV)
- Chapter number
- Elapsed time (CLV)
- Fast Play/Slow Play speeds

Front Panel Indicators:

- Power on/off
- Antenna/disc player out
- CX™ Noise Reduction status
- Audio channel(s)
- CAV/CLV mode
- Memory status
- Pause
- Play/standby
- Disc loading status
- Remote sensor

Video Format:

- NTSC, 525 scan lines, 30 frames per second
- 330 lines horizontal resolution
- Channel 3 or 4 RF output
- Video output

Audio:

- Dual discrete channel or stereo
- CX™ noise reduction decoding
- Frequency response: 20-20,000 Hz (± 3 dB)
- Signal-to-noise ratio
 - 70 dB with CX™
 - 58 dB without CX™

Power Requirements:

- 120 VAC 50/60 Hz
- 33 watts

Environmental Requirements:

- Operating temperature/humidity:
 - 41-95°F, 5-35°C, 0-90% non-condensing

We protect the image you project.

Video Tape Reels. Video Cases.

Plio-Magic® improves the state of the art in tape reels! Plio-Magic's quality of endurance gives you precision reels that last and last for long-term dollar savings. There's a reel for all types of tape systems: 1" and 2" video tape reels with NAB centers. For shipping, transporting or storage, Plio-Magic custom designed cases are available for video tape reels and cassettes. All offer the unparalleled protection of PRC's super tough material assuring dust resistant, safe protection for your valuable programs. We maintain large inventories in four centralized locations, assuring you of product when your requirements dictate. To find out more about how we can protect your image call or write today.

VHS VIDEOCASSETTE PLAYER

VIP-1100

Portable VHS Format Videocassette Player

FEATURES

- Playback up to 2 hours 40 minutes (T-160)
- Soft-touch controls with microprocessor
- Noise canceller (fine picture reproducer in STILL mode)
- Soft damped eject mechanism
- Auto rewind feature
- Still picture can be viewed
- Puts Hollywood movies at home within everyone's reach
- Brings learning to a higher level

It's portable Housed in a rugged, tamper-proof protective case and weighs approximately 16 pounds

It's quality-built Made with heavy-duty industrial components for years of reliable operation

It's convenient Connects in seconds to most any TV or monitor

The VIP-1100 is a lightweight, portable VHS Format Videocassette player. It adds sight and sound impact to sales presentations. It can be used for employee orientation and training, recruitment, internal communications, hotels, motels and resorts, convention booths and hospitality rooms, school systems, libraries and self improvement programs.

SPECIFICATIONS:

Playback System	Twin heads, Helical Scanning system
Video Signal	525 lines, 60Hz standard TV signal
Tape Width	1/2 inch
Tape Speed	23.39mm/sec.
Playback Time	Up to 2 hours 40 minutes/T-160 tape
Usable Tape	VHS pre-recorded video cassette
RF Output	VHS ch-3 or 4
Video Output	1 Vp-p, 75 ohm unbalanced
Horizontal Resolution	240 TV lines for VHS standard recorded tapes
Video S/N	43 dB
Audio Output	Line output; - (minus) 2dB
Audio Frequency Response	100Hz to 10kHz
Audio S/N	40dB
Operation Temperature	40°F to 106°F (5°C to 40°C)
Main Input	117VAC 60Hz
Player Dimensions	10.62(W) x 4.33(H) x 12.4(D) inches
Player Weight	
With Case	Approximately 16 pounds
Without Case	Approximately 12 pounds
Accessory	RF Cord, switch box, instruction book

VIDEO TAPE

Helical Video Products

Color Plus U-Matic (3/4") Video Cassettes

"Scotch" Color Plus UCA Videocassettes use a special Color Plus oxide video tape which provides a superior signal-to-noise ratio, color-noise ratio and lower dropouts. Color Plus U-Matic videocassettes are fully compatible with all 3/4" U-Matic Videocassette Systems; the permanent oxide lubrication and time proven backside treatment assure low head wear, extended stop motion and maximum tape life.

Color Plus Mini-U-Matic Format

"Scotch" Brand Mini-U-Matic Videocassettes are designed for use with such recorders as the Sony VO-3800 and the JVC-CR-4400 portables. Features new Color Plus oxide. An "S" after the playing time (UCA-10S) indicates mini size.

Color Plus Master Broadcast U-Matic Format Video Cassettes

"Scotch" Master Broadcast U-Matic Series (MBU) provides a more rugged, longlife product suitable for repetitive playback and increment recording situations such as field (ENG) recording and editing applications. Other features are the same as the Standard Series UCA Videocassettes except MBU cassettes also feature the new Color Plus oxide. All MBU's are packaged in a distinctive two-tone shell that affords immediate identification, plus visual access to tape pack during crucial editing operations.

Color Plus Extended Play U-Matic Format

Designed for use where playing time is key factor. Features new Color Plus oxide. These Extended Play U-Matics use an extra thin polyester backing. Tape machines that are poorly aligned or with incorrect tensioning can cause damage to this product. Performance of this U-Matic on such equipment cannot be guaranteed by 3M.

Color Plus Professional Use Beta & VHS (1/2") Video Cassettes

"Scotch" Brand Color Plus Beta and VHS Format (1/2") Videocassettes, with proprietary back treatment, feature improved color, broadband signal-to-noise, improved RF output, low RF output, low dropouts, stop motion capability, and very low head wear. "Scotch" Beta and VHS Formats are compatible with all 1/2" videocassette recorders and playback units.

U-Do-It (U-Matic) Reload Kits

These items permit in the field reloading of damaged cassettes. The extra rugged Color Plus MBU Series U-Matic tape is supplied in the 18S (for Minis) and 30-minute (std. size) reload kits. The 60-minute reload kits use UCA U-Matic tape.

No. 361

No. 361 is longitudinally oriented video tape with many outstanding advantages, including a heavy duty binder system, long wearing oxide, improved signal-to-noise ratio, excellent audio and video output characteristics, low dropout count, a highly conductive backside coating which offers extended head life. Backside treatment of the film precludes interlayer slippage, scratching, and the attraction of foreign debris. No. 361 uses a thin coat of black oxide applied to a 1 mil polyester base.

No. 479

No. 479-1" helical video tape is a special application tape that can only be used with "high-density" video recorders such as the Bosch-Fernseh, Ampex VPR-1 and 2, Sony BVH-1000 and other machines having similar record/erase capabilities.

No. 480

No. 480-1" helical video tape is an improved broadcast video tape providing better signal-to-noise, color-noise qualities and virtually eliminates head friction. For use on all recorders capable of using 479 mastering/broadcast video tape (type C recorders).

VIDEO TAPE REELS/ ACCESSORIES

Hanger System

You're looking at the videocassette case design that's triggered a revolution in 3/4" videocassette storage and handling — it's at the focal point of the all new "Scotch" Hanger System from 3M Company. The shipper/storage case (patents applied for) represents a whole new design concept based upon the idea that hanging your videocassettes not only is the best way to protect them from damage, but it will organize your storage area and simplify the way you transport videocassettes. So "hang on" with the "Scotch" Hanger System.

SHIPPER/STORAGE CASE (C-125)

This sturdy C-125 box can be labeled and mailed with no other packaging needed. Its unique hanging hook and slide-snap latch are only two of the features of this case that opens to reveal a recess for storing the record-lockout button when you are not using the record mode. The stabilizer bars on the box bottom and the expandable, spine-handle simplify storage and retrieval in any situation.

CASE HANGER (CHB-4)

This extruded aluminum bar comes in four-foot lengths and can be cut to fit doors, desk backs, cabinets, shelves, walls, etc. Standard screws or bolts anchor them securely to concrete, wood, plaster or metal surfaces, and when properly mounted, the bars can maintain weights of up to 240 pounds. We call it the Case Hanger.

CASSETTE HANGER (CHH-10)

In order to handle unboxed, bulk videocassettes, 3M has designed the Cassette Hanger to snap in and out of the case hanger bar providing a hook on which to place the videocassette. The Cassette Hanger is made of heavy duty plastic and will fit any case hanger bar, whether it is attached to a shelf, door, wall or mobile cart. Another flexible adaptation of "Scotch" Hanger System.

SIX-PACK HANGER (6 PH)

What else could you call a sturdy, aluminum frame that easily totes up to 6 videocassettes, with the case or without, than the "Six-Pack Hanger"? Simple to carry, lightweight and yet durable, the "Six-Pack Hanger" can be adapted to hold bulk cassettes by adding two Cassette Hangers and two Cassette Hanger Clips on the center bar.

PULSING VIDEORASER®

Erases Industrial and Broadcast quality video tapes

Industrial and Broadcast video tapes are the hardest to erase. The VP-2001's powerful pulsing action removes all traces of video and audio signals, and even time codes from *all grades of 3/4" U-Matic and 1" and 2" video tape*. Hand-held, weighs just 4 pounds. With thermal cutoff switch.

VIDEORASER®

Erases high grade videocassettes

The Videoraser Model VX-1601 erases VHS and Beta videocassettes in seconds for better, cleaner recordings! Reduces wear on expensive video recording heads. Erases regular, High Grade, and Extra High Grade tape. UL Listed with thermal cutoff switch. 4 pounds. No home video system is complete without it!

Sonar Radio Corporation has been manufacturing magnetic tape erasers for over 20 years.

With the new Pulsing Videoraser, Model VP-2001, we now offer 3 power levels, addressing the data processing, consumer video, and professional video markets.

Full One-Year Warranty. Your complete satisfaction is guaranteed. All Models are covered by Sonar's Full One-Year Warranty against defects in materials and workmanship.

VP-5030 U-MATIC® PLAYER

- PAL/SECAM/NTSC playback
- High-efficiency power supply permits operation on 110-to-220 Volts, 50/60 Hz
- Front-loading tape transport
- Tilt-out control panel
- Aluminum diecast chassis
- Direct drive drum and capstan, and digital servo IC
- High-speed search at 5 times normal speed in forward/reverse
- Still frame capability
- Long pause with automatic tape protection
- Built-in "programmed operation" function allows automatic tape-segment repeat
- End-of-tape automatic rewind
- Optional RF modulator allows playback on ordinary TV receiver
- Optional timer allows unattended, automatic playback start and stop
- Random access/interactive capability
- Exclusive data in/out connector for RX-303CE/RX-353CE Automatic Search Controls
- External sync input capability
- Weight: 48 lbs. 8 oz.
- Dimensions: 9-3/8"H x 17-5/8"W x 20-3/8"D **\$2500.00**

Sony Video Communications (201) 930-1000

VIDEOCASSETTE RECORDER/PLAYERS

VP-5000 U-matic Player

The most convenient and versatile U-matic player ever made. Up front controls and indicators, an all new front loading tape transport and standard EIA rack mounting head the list of exterior improvements. Inside, there's new technology with advances in the drive components, power supply and control circuits.

Features

- New front loading tape transport • Aluminum diecast chassis
- Direct drive for both drum and capstan • Digital servo LSI with "Phi Square Servo" • DC motor reel servo • x5 forward and reverse search • Noiseless still — Fine still picture • 19" rack mountable
- High picture quality • Tilt-out control panel • New switching regulator power supply provides wide range of voltage and frequency, with low power consumption — 45W • Exclusive connector for RX-303 and RX-353 • Random access/interactive capability • Micro-computer based logic control

\$1895.00

VP-5000

VO-5600

VO-5600 U-matic Recorder

A new generation of U-matic recorder with new all time high levels of performance and flexibility. Totally redesigned around a new front loading tape transport, the unit has a super-functional, tilt-out control panel and is 19" rackmountable. New circuitry and components further enhance the reliability and accuracy of video's most relied-on format.

Features

- New front loading tape transport • Aluminum diecast chassis
- Direct drive for both drum and capstan • Digital servo LSI with "Phi Square Servo" • DC motor reel servo • x5 forward and reverse search • Noiseless still — Fine still picture • 19" rack mountable
- High picture quality • Tilt-out control panel • New switching regulator power supply provides wide range of voltage and frequency, with low power consumption — 55 W • Exclusive connector for RX-353 and RX-303 • Random access/interactive capability • Micro-computer based logic control

\$2395.00

VO-5800 Videocassette Recorder

Sony expands the upgraded Type 5 U-matic system with another convenient new recorder. Compact and even more lightweight than the VO-5850 Editing Recorder, the VO-5800 offers the same professional quality and design, with front-loading tape transport, and allows smooth manual editing. It can be used alone; or as a player in a sophisticated, rack-mountable automatic editing system.

- Front loading tape transport • Aluminum diecast chassis • Direct drive of both drum and capstan • Digital servo LSI with "Phi Square Servo" • DC motor reel servo • Backspace edit capability • Vertical interval switch between two video inputs • Feeder capability with full RM-440 interface • Bidirex dial search, x1/30 to x5 • U-scan, high speed picture search (with RM-440 and KCS tape) • LED tape counter with mark-in function • Switching regulator power supply provides wide range of voltage and frequency and low power consumption — 75W • Noiseless still • 19" rackmountable • Tilt-out control panel • High picture quality • Exclusive connector for RX-353 • Random access/interactive capability • Video Recording: Rotary two-head helical scan system • External sync lock capability • Color Signal: Converted subcarrier direct recording • Video Signal System: EIA standards, NTSC color

\$4590.00

VO-5800

VO-5800H

VO-5800H High Resolution B/W Videocassette Recorder

The VO-5800H is a High Resolution Monochrome Videocassette Recorder with over 400 lines of resolution per field (525/60 field) compatible with both EIA and non-EIA Standard Signals from 525 to 1125 lines. The unit is equipped for widespread applications in institutions, research and medicine, able to record images from medical diagnostic systems such as X-ray, Ultrasound, Computer Axial Tomography (CAT) Scans and even Positive Emission Tomography (PET) Scans. The VO-5800H may be used to record special signals from infrared and radar systems and can also be employed as a "ground" player for an airborne VTR.

- Front loading tape transport • Aluminum diecast chassis • Direct drive of both drum and capstan • Digital servo LSI with "Phi Square Servo" • DC motor reel servo • Backspace edit capability • Vertical interval switch between two video inputs • Feeder capability with full RM-440 interface • Bidirex dial search, x1/30 to x5 • U-scan, high speed picture search (with RM-580 and KCS tape) • LED tape counter with mark-in function • Switching regulator power supply provides wide range of voltage and frequency and low power consumption — 75W • Noiseless still • 19" rackmountable • Tilt-out control panel • Exclusive connector for RX-353 or RX-303 • Random access/interactive capability • Video Recording: Rotary two-head helical scan system • External sync lock capability • 2 audio tracks • Dimensions: 9-3/8"H x 17-5/8"W x 20-1/2"D (237 x 446 x 518mm) including projecting parts and controls • Weight: 53 lbs. (24kg)

\$6000.00

U-MATIC RECORDER

VO-5850 Professional Editing U-Matic Recorder

Features

- New front loading tape transport
- Aluminum diecast chassis
- Drum and capstan direct drive
- Digital servo LSI with "Phi Square Servo"
- DC motor reel servo
- Sophisticated editing with full RM-440 interface
- Bidirex dial search +/-1/30 ~ x5, 15 different speeds
- High speed picture search (with RM-440 and KCS tape)
- LED tape timer with mark-in function
- Built-in preroll editing capability
- Noiseless still
- Accurate editing +/-2 frames with one preview
- New power supply with switching regulator, wide range of voltage, frequency and low power consumption — 75W
- 19" rackmountable
- Loop through video input with 75 Ohm termination switch
- 2 video output connectors — BNC
- Tilt-out control panel
- High picture quality

Specifications

System

Video recording: Rotary two-head helical scan system

Luminance: FM recording

Color signal: Converted subcarrier direct recording

Video signal system: EIA standards, NTSC color

Video

Video Input: VIDEO IN, BNC type, x2 with 75 Ohm termination switch and loop-through output. 1.0 V (p-p) + 1.0-0.5 V (p-p), 75 Ohms, unbalanced, sync negative. DUB IN, 8 pin, x1 TV, 8 pin, x1

Video Output: VIDEO OUT, BNC type, x2. 1.0 V (p-p) +0.2 V, 75 Ohms, unbalanced, sync negative DUB OUT, 7 pin, x1 TV, 8 pin, x1

Horizontal resolution: Monochrome: 340 lines

Color mode: 260 lines

Signal-to-noise ratio: Monochrome mode: more than 49 dB

Color mode: More than 46 dB

Subcarrier: SCIN, BNC type, x1.2 V (0.5-3V) (p-p), 75 Ohms, unbalanced, sync, negative
Sync: EXT SYNC IN, BNC type, x1.4 V (25V) (p-p), 75 Ohms, unbalanced, sync negative
Recording level: Automatic and manual

Audio

Audio Input: LINE CH-1, CH-2 IN, Phono jack, x1 in each -10 dB, 47 K Ohms. MIC CH-1, CH-2, Phone jack, x1 in each. -60 dB, for 600 Ohm microphones TV, 8 pin, x1

Audio Output: LINE CH-1, CH-2 OUT, Phono jack, x1 in each -5 dB (with 47 K Ohms load). HEADPHONES, Stereo phone jack, x1 for 8 Ohm headphones
Level: Adjustable (-24 dB to -46 dB). TV, 8 pin, x1

Signal-to-noise ratio: Better than 48 dB (at 3% distortion) Both channels 1 and 2

Frequency Response: 50 15,000 Hz (channels 1 and 2)

Recording level adjustment: Manual, with audio limiter

Edit

Assemble: Video and audio channel 1 and audio channel 2 (simultaneously)

Insert: Video, audio channel 1 and/or audio channel 2 independently (selectable)

Preroll: Possible

Automatic editing: Possible with the RM-440 Automatic Editing Control (optional)

Accuracy: +/-2 frames

Special Instructions

Pause: A still picture is obtained, with long pause function

Search: Possible (still, and 1/10 to 5 times of normal speed in forward and reverse directions). Picture search is possible with the RM-440 when KCS tape is used

Tracking control: Possible

Skew control: Possible

Sync System: Internal and external

Vertical-interval switcher: Internal

Dropout compensator: Internal

Tape Transport

Tape speed: 3-3/4 ips (9.53 cm/sec)

Recording or playback time: 60 min (with KCA-60)

Fast forward and rewind time: Within 4 min (with KCA-60)

Wow and flutter: 0.2% RMS

Tape compatibility: U-Matic videocassette tape

Usable tape: KCA, KCS type tape

General

Power requirements: 100-120 V AC +/-10%, 50/60 Hz +/-10%

Power consumption: 75 W with RM-440

AC OUT: 400 W maximum, unswitched

Operating position: Horizontal

Storage temperature: -4°F to + 140°F (-20°C to +60°C)

Operating temperature: 41°F to 104°F (5°C to 40°C)

Dimensions: 9-3/8"H x 17-5/8"W x 20-1/2"D (237 x 446 x 518mm) including projecting parts and controls

Weight: 55 lb. (25 kg)

Supplied accessory: AC power cord

Price

\$7395.00

VO-6800
PORTABLE VIDEOCASSETTE RECORDER/PLAYER
 For All ENG and EFP Applications

FEATURES

- Real Time Tape Counter
- Logic Control System
- Backspace Editing Capability
- Picture Search
- Soft Eject
- Rain and Dust Proof
- RF Modulator
- Remote Control Capability

A Video Confidence Head makes it possible to monitor just-recorded images simultaneously when the VO-6800 is in the REC mode. These images can be seen in the camera viewfinder when the return video button on the camera is pressed. This function allows the operator to make sure that what he is shooting is actually being recorded on the tape.

Two NiCad Batteries (NP-1) can be installed for longtime battery operation (approximately two hours for VTR recording or one hour with the Sony DXC-M3/M3A). Since the unit can also be powered by a single battery, continuous recording or playback is possible if two batteries are used in tandem. Pop-up battery compartments are adopted for easy battery replacement.

The Tape Remaining Time can be seen in the camera viewfinder when the return video button is pressed. Eight different indications can be displayed, 15 min, 10 min, 5 min, 4 min, 3 min, 2 min, 1 min and Tape Before End. (Accuracy is ± 7 seconds when using Sony's KCS-10K/20K Series). This function conveniently lets the operator know just how much shooting time he has left.

A Complete Warning System notifies the operator of recording conditions in three different ways.

- 1.) LED indicators on the control panel of VTR.
- 2.) Warning sound (1kHz) output to the earphone of the VTR.
- 3.) Blinking warning lamp in the camera viewfinder.

This threefold warning system makes sure the operator knows in advance of any malfunctions so that the recording will come out perfect from the first time.

Picture and Sound Quality A sendust head and XLR connector (balanced) bring the signal-to-noise ratio to 50dB and widen the frequency response range from 50 to 15,000Hz. Wow and flutter is reduced to a mere 0.2%, thanks to a highly accurate capstan motor.

RF Modulator Using the RFK-634 RF modulator (option), you can play back tapes on a conventional TV receiver.

Remote Control Capability Using the RM-680 remote control unit (option), you can control REC, PLAY, F. FWD, REW, PAUSE, and STOP operations. (The cable can be extended up to 50 meters).

VO-6800
Portable U-Matic Recorder/Player **\$3800.00**

SPECIFICATIONS

VIDEO

Video Recording System: Helical scanning FM recording

Video Heads: Rotary 4-head (R/P x 2, Confi. x 2)

Video Signal System: EIA standard, NTSC color

Input: Composite, sync, negative 1.0 + 1.0/-0.5 Vp-p, 75 ohms, unbalanced

Output: Composite, sync, negative 1.0 \pm 0.2 Vp-p, unbalanced

Horizontal Resolution: 260 TV lines

Signal-to-Noise Ratio: Better than 45dB (color)

AUDIO

Input: MIC: -60dB, more than 3 K ohms, balanced, CAMERA MIC: -20dB/-60dB switchable, more than 3 K ohms balanced, LINE: (CH-1/L/DUB, CH-2/R): +4dB, more than 10 K ohms balanced

Output: LINE: (CH-1/L/MONI, CH-2/R): +4dBm (at 600 ohm load) balanced, EARPHONE: -20 to -33dB (at 8 ohm load) adjustable.

- Beta I, II and III playback capability with automatic mode selection and LED mode indication
- 2 head system
- Variable speed playback in all Beta modes, Beta I: Still, continuous slow, variable speed play up to X2 and auto frame advance, Beta II: Still, continuous slow, variable speed play up to X4, Beta III: Still, continuous slow, variable speed play up to X6
- BetaScan high speed search in all modes
- Repeat/Auto Stop function
- Exclusive connector for RX data
- 33-pin remote control connector enhances random access and interactive applications
- Logic controlled tape transport design allows direct switching between tape travel modes
- End-of-tape automatic rewind
- Dual audio tracks for playback of stereo or bilingual recording
- Direct head drum and capstan drives
- Switchable RF modulator
- Soft eject cassette mechanism
- Weight: 23 lbs. 13 oz.
- Dimensions: 5-7/8"H x 15-1/2"W x 13-7/8"D

- SLP-305 Betamax® Player \$1160.00

- SLP-305/RX-353 Betamax® Player w/programmable automatic search controller 1560.00

SLP-305

SLO-325 Betamax® Recorder/Player

- Beta I recording and Beta I, II and III playback capability with automatic mode selection and LED mode indication
- Advanced four head system
- Variable speed playback in all Beta modes, Beta I: Still, continuous slow, variable speed play up to X2 and auto frame advance, Beta II: Still, continuous slow, variable speed play up to X4, Beta III: Still, continuous slow, variable speed play up to X6
- BetaScan high speed search in Beta I mode
- Repeat/Auto Stop function
- Exclusive connector for RX data
- 33 pin remote control connector enhances random access and interactive applications
- Logic controlled tape transport design allows direct switching between tape travel modes
- End-of-tape automatic rewind
- Dual audio tracks permit stereo or bilingual recording
- Direct head drum and capstan drives
- Switchable RF modulator
- Soft eject cassette mechanism
- Weight: 27 lbs. 2 oz.
- Dimensions: 5-7/8"H x 15-1/2"W x 13-7/8"D

- SLO-325 Betamax® Recorder/Player \$1650.00
- SLO-325/RX-303 Betamax® Recorder/Player w/automatic search controller 2000.00
- SLO-325/RX-353 Betamax® Recorder/Player w/programmable automatic search controller 2050.00

SLO-325

SLO-340 Betamax® Portable Videocassette Recorder

The SLO-340 is a portable unit for recording and playing back Betamax videocassettes. It weighs less than 20 lbs., and will record in either color or black and white for up to 90 minutes on its internal lightweight battery pack. The SLO-340 offers all the basic Betamax advantages. Quality recording on smaller, less expensive videocassettes. Lower equipment costs, and the security of equipment proven in the field. Lower shipping and distribution costs. Simple one-button operation and interchangeability of cassettes.

- SLO-340 Betamax® Portable Videocassette Recorder ... \$1295.00

SLO-340

SLO-420 Betamax® Videocassette Recorder/Player

- Super-compact size 3-1/8"H x 17"W
- Front-loading and front-panel control
- Beta II and III recording capability plus Beta I, II and III playback
- SwingSearch™ continuous search in forward/reverse at normal speed, 2 times normal speed, 1/5th and 1/10th normal speed, plus slow-motion, frame-by-frame advance and still frame
- Beta-Scan II™ search in forward/reverse at 9 times (Beta II) and 15 times (Beta III) normal speed
- Linear time counter shows exact tape position in hours, minutes, seconds
- Optional Wireless Remote Commander® RMT-312 with recording and speed control functions
- Double azimuth head eliminates frame jitter and delivers noise-free slow motion
- New Micro Timing Phase Circuitry maintains precise transitions at record/pause and on/off
- Tab Marker™ electronic indexing system
- Two channel audio
- External sync lock capability
- Weight: 20 lbs. 12 ozs.
- Dimensions: 3-1/8"H x 17"W x 13-3/8"D

- SLO-420 Betamax® Videocassette Recorder/Player \$1340.00

BETAMAX RECORDER/PLAYER

SLO-383

SLO-383 EDITING BETAMAX® VIDEOCASSETTE RECORDER/PLAYER

- Direct drive drum and capstan
- Rotary erase heads, vertical interval switching and framing servo system
- Interfaces with RM-440 Automatic Editing Control Unit
- BetaScan® high-speed search
- Playback at 1/20th to 2 times normal speed in forward/reverse
- Insert and assemble editing capabilities
- External sync-lock connector plus built-in sync-signal generator
- Manual audio recording level control plus audio limiter function
- Dub-In/Dub-Out connectors allow Beta to Beta, U-matic to Beta or Beta to U-matic tape duplication
- Soft cassette eject mechanism
- Random access/interactive capability
- Exclusive data connector for RX-353/303 Automatic Search Controls
- Weight: 34 lbs. 3 oz.
- Dimensions: 7-1/2"H x 15-1/2"W x 16-3/8"D

The SLO-383 is an editing Betamax recorder/player with new features that make the Betamax system even more effective for education and training, sales demonstration, corporate communications and a variety of other uses.

New Beta-Scan high-speed picture search ability helps you find what you want while viewing coherent picture at up to 15 times normal in the forward mode and up to 10 times normal in reverse (average speed in forward and reverse is 8 times normal).

The SLO-383 offers full editing capability, including edit preview, when used with the RM-440 Automatic Editing Controller. Video, Audio 1 or Audio 2 may be selected independently for insert editing, or handled simultaneously in assembly editing. Dubbing connectors let you work easily in both Beta and U-Matic formats.

The design of the SLO-383 assures top-rate performance. Direct-drive power for both head drum and capstan maintain precise tape alignment and smooth play, with video signal-to-noise ratio at 45 dB in color mode.

CONTROLLERS/INTERFACE

RM-440 Automatic Editing Control Unit

- Interfaces with both U-matic Editing Recorder/Players and Betamax Editing Recorder/Players, allowing U-matic to U-matic, Beta to Beta or Beta to U-matic editing
- Edit point memory system memorizes the edit-in points for a player and a recorder and 1 edit-out point for either machine
- Insert and assemble editing capabilities
- Preview function allows rehearsal before actual edit is made
- Review function allows instant edit review
- Return/jump function: in preview mode, tapes return to edit-in point; in review, tape fast forward to a point 5 seconds before the cutout point, then returns to normal speed to review edit-out section
- Butt edit and trim edit functions
- Cue-Out connector provides cue signal for camera recording and computer generated graphic insertion
- Automatic safety pause release
- Weight: 4 lbs. 14 oz.
- Dimensions: 3-1/8"H x 15-3/8"W x 8-3/4"D

\$1770.00

RM-440

RX-353 Programmable Auto Search Control

- Hand-held remote keyboard
- Memorizes locations of up to 63 programs and commands automatic playback of any 8 segments in any sequence
- Compatible with most Betamax and U-matic units
- Functions include automatic repeat plus skip and return
- Segment data recording capability for automatic playback retrieval
- Timer-activated programmable operating capability with Betamax and U-matic units
- Weight: 1 lb. 5 oz.
- Dimensions: 1-1/2"H x 3-5/8"W x 7-1/8"D

IF-500 Multiple Interface Box

- Institutional and broadcast equipment combination capability allows institutional VCRs to be controlled from broadcast equipment and institutional editing or remote controllers to be used with broadcast VCRs
- Preroll Time Selection from 0 to 15 seconds in convenient 1 second increments
- REF Video In signal for greater editing accuracy
- Rack mountable in EIA standard 19" racks
- A separate IF-500 is required for each combination of broadcast and institutional units
- Weight: approx. 15.5 lbs.
- Dimensions: 3-3/4"H x 19"W x 11-7/8"D

IF-500

Accessories Supplied

- AC power cord
- Rack mount kit (2 brackets, 4 screws, 4 washers)
- Operation/service maintenance manual

Audio Cables

- RK-5XLRf (16', XLR female-phono)
- RK-5XLRm (16', XLR male-phono)

Note: Separate connections are required for each combination of broadcast and institutional units.

Note: Equipment functions are restricted by the connecting equipment. **\$1150.00**

Type 5 Accessories

A whole family, six in number, of system accessories especially designed to enhance the flexibility and versatility of the new Type 5 U-matic equipment. These highly compatible units can also be teamed in a variety of different combinations to further expand their capabilities.

RM-580 Remote Control Unit

• Full function remote control with Bidirex search dial • Functions: STOP, F.F., PLAY, REW, PAUSE, SEARCH (Bidirex Dial), REC, EDIT, PRE-ROLL • LED tape timer, includes frame counts • DC operation (power supplied from VTR) • Pre-roll start jack for remote start • Cable length 3m (10 ft) can be extended to 18m (60 ft)

\$650.00

RM-555 Multi-Unit Remote Controller

• Simultaneous control with RM-500 or RM-580: Up to 5 VTR's controlled simultaneously; Up to 4 RM-555's can be connected in series for control of up to 20 VTR's • Sequential record/playback with DA-500 or VCS-500: Up to 5 VTR's can be controlled to record or playback in one sequence or in continuous sequences; Timer operation capability enables unattended operation • Individual control with VCS-500 and RM-V5: Any 1 of up to 5 VTR's can be selected with the RM-V5 for control by an RM-500, RM-580 or RM-440. VCS-500 will select appropriate video and audio outputs. RM-300 or RX-303/RX-353 can be used for random access multi-VTR operation

\$1890.00

RM-500 Remote Control Unit

• Basic function remote control • Functions: STOP, F.F., PLAY, REW, PAUSE, REC, DUB, X5 SEARCH, FORWARD, X5 SEARCH REVERSE • DC operation (power supplied from VTR) • Cable length: 3m (10 ft) can be extended to 18m (60 ft)

\$197.00

DA-500 Video and Audio Distributor

• 1 video input (BNC), 2 channel audio input RCA and 1 dub input (7 pin) • 5 outputs of each input • Individual direct outputs of each input permit branching to additional distributors • Single input can be expanded to a maximum of 20 outputs with up to 4 DA-500's • Power requirements: 120 V AC +/-10%, 20W

\$700.00

VCS-500 Video and Audio Switcher

• 5 video inputs (BNC), 2 channel audio (RCA) and 2 dub-in inputs (7 pin) • 1 video output (BNC), 2 channel audio output (RCA) and dub-out (7 pin) • 1 sync input (BNC) and 5 sync outputs (BNC) for external sync-lock operation • Vertical interval switching • Interface with RM-V5 or RM-555 • Dual VCS-500's can be used for control of up to 9 inputs • Power consumption: 20 W

\$1250.00

RM-V5 VTR Selector

• Up to 5 VTR's can be selected with RM-555 • 1 out of 5 selection with VCS-500 • Selection can be expanded to 1 out of 1-4 or 1 out of 5-9 using VCS-500 group selector switch • Remote cable length 3m (10 ft) with 20 pin connector can be extended up to 50m (160 ft)

\$230.00

LDP-180 VIDEODISC PLAYER

FEATURES

Semiconductor Diode Laser Pick-Up
LDP-180 employs a semiconductor diode laser to ensure dependability, long life, and compact construction.

Non-Contact Read System

Laser scanning system permits unlimited use of still frame and repeat functions because signals are picked up without physical disc contact, thereby eliminating chance of disc deterioration.

Picture Clarity

LDP-180 VideoDisc System produces clear, sharp and super-stable picture with the use of direct frequency modulation.

Front-Loading Design

Front-loading design for space saving and easy disc loading.

Superb Sound

High fidelity sound reproduction adopting CX noise reduction system.

Highly Reliable Design

Special LSIs are incorporated to provide operation and quality you can rely on.

External Control

LDP-180 can be controlled externally through the I/O port on the back of the unit.

LDP-180 \$1100.00

Optional Accessories

**RMT-180 Remote Control Unit
..... \$70.00**

IF-180 Interface Box

IF-180 provides interactive capability between LDP-180 & a microcomputer having RS-232C interface.

LDP-180

RMT-180 Multi-Function Remote Control Unit (optional)

All the functions of LDP-180 can be controlled using remote control unit either in a wired or wireless mode.

- Chapter number search
- Frame number search (CAV discs only)
- Time number search (CLV discs only)
- Chapter stop
- Swing search (CAV discs only)
- Memory review play
- Headphone can be used in a wired mode

RMT-180

SPECIFICATIONS

General	
Disc format:	Laser vision
Pickup method:	Laser beam (reflective)
Laser:	Semiconductor diode laser
Maximum playing time	
12-inch standard play disc (CAV)*2	30 min/side
12-inch extended play disc (CLV)*3	60 min/side
8-inch standard play disc (CAV)	14 min/side
8-inch extended play disc (CLV)	20 min/side
Spindle revolution	
CAV:	1800 rpm
CLV:	1800 rpm (inner circumference) to 600 rpm (outer circumference)
Power requirements:	AC 120 V, 50/60 Hz
Power consumption:	33 W
Dimensions:	16 5/8" x 4 3/4" x 16 3/8" (W x H x D) 420 x 120 x 415 mm (W x H x D)
Weight:	12.4 kg (27 lb 5 oz)
Operating temperature:	41° to 95°F (5° to 35°C)
Operating humidity:	25% to 90%
Storage temperature:	-4° to 140°F (-20° to 60°C)

*1 IF-180 WILL BE RELEASED IN Jan. '85
*2 CAV Constant Angular Velocity
*3 CLV Constant Linear Velocity

Remote control system:	Wireless (infrared) or wired
Power requirements	
Battery Size	AAA x 2 (IEC battery designation R03) included
Dimensions:	3 3/8" x 1 3/16" x 7 3/8" (W x H x D) 84 x 29 x 187 mm (W x H x D)
Weight:	250 g (9 oz) including batteries
Operating temperature:	41° to 95°F (5° to 35°C)
Operating humidity:	5 to 90%
Storage temperature:	-4° to 140°F (-20° to 60°C)

VIDEO	
Signal:	EIA standards, NTSC color
Output:	1.0 Vp-p ±0.1 Vp-p, 75 ohms unbalanced, sync negative
Resolution:	350 lines (color)
Signal-to-noise ratio:	42 dB
VHF output:	Channel 3 or 4 (switchable), 75 ohms, unbalanced

AUDIO	
Output	
Line out:	Less than 3.3 k ohms 650 mV nominal (1 kHz 100% MOD 50 k ohms terminated)
Signal-to-noise ratio:	Better than 70 dB (with CX noise reduction system on)
Frequency response:	20 Hz to 20 kHz

CONNECTIONS	
Video Out:	(BNC type)
VHF In:	(F type)
VHF Out:	(F type)
Audio Line Out:	(CH1 and CH2 separately)
External control:	(24 pins, amphenol type)
Remote control jack:	(DIN 8 pins)

SUPPLIED ACCESSORIES	
75 ohm antenna cable with F-type connectors (2 m)	

LDP-2000 SERIES

LDP-2000 SERIES VIDEODISC PLAYERS

The new Sony LDP-2000 Series of fast, internally expandable videodisc players combines random access video, analog and digitally compressed audio and external computer control for unprecedented multimedia and communications capabilities.

The LDP-2000 Series is the result of Sony's new, integrated systems approach to videodisc player design. This is manifested, on the one hand, by significant improvements of individual functions. The players, for instance, are extremely fast: capable of accessing any frame in 1.5 seconds or less. On the other hand, with the LDP-2000 Series Sony is introducing the concept of planned internal expandability for videodisc players.

To enable users to select the level of player capability best suited to their needs, the LDP-2000 players are available in five different configurations. Upgrading from one configuration to another is achieved by the simple addition of boards making additional wiring or add-ons unnecessary.

LDP-2000/1

In its most basic form, the LDP-2000 is a linear (Level 1) player controlled by an external computer. It features built-in, industry standard RS-232C computer interface port and switchable baud rates of 9600, 4800, 2400 and 1200.

LDP-2000/1 \$1,690.00

LDP-2000/2

LDP-2000/1 + Control Expansion Board (DB-2010)

The addition of DB-2010 board permits the playback of (Level II) videodiscs with audio track control programs, including those designed for Sony LDP-1000 and LDP-1000A disc players. In this configuration, the player reads the command codes on the disc and stores them in the expansion board's random access memory (RAM).

LDP-2000/2 \$1,895.00

LDP-2000/3

LDP-2000/2 + Parallel Interface Board (DB-2020)

The LDP-2000/3 is designed for applications that require the basic features of the LDP-2000/2 with a parallel interface. The DB-2020 is the IEEE-488 standard interface board for fast data communication between the player and an external computer. The IEEE-488 bus also

permits computer control of up to 15 videodisc players via just one IEEE-488 port on an external computer.

LDP-2000/3 \$2,305.00

LDP-2000/4

LDP-2000/2 + Computer Data/SFA Board (DB-2040)

The LDP-2000/4 expands the capabilities of LDP-2000/2 with the added dimension of Still Frame Audio (SFA). SFA is an audio signal digitally compressed to take up considerably less space on the videodisc, enabling the extension of audio playback while still pictures are displayed on the monitor. The SFA data are recorded in blocks. One block consists of 2 to 32 frames or 2 to 40 seconds of audio. In conventional systems, 300 frames are required to record 10 seconds of audio, and only 30 minutes of playback is possible on one side of a disc. With the DB-2040 SFA board, however, only 15 frames are needed for 10 seconds of audio. This permits 15 hours of audio playback. In this configuration, SFA can be used either in a standalone mode or controlled by an external computer via the RS-232C port.

LDP-2000/4 \$3,235.00

LDP-2000/5

LDP-2000/1 + DB-2010 + DB-2020 + DB-2040

The fully-configured LDP-2000/5 allows an external computer to read computer data recorded on a videodisc with the same reliability as a micro floppydisc. Digital data access is achieved via the DB-2010 and DB-2040 boards. The DB-2020/IEEE-488 bus permits high speed transfer of digital data.

LDP-2000/5 \$3,535.00

All of the LDP-2000 configurations utilize a newly-developed Sony semi-conductor laser. In contrast to the conventional helium-neon gas laser, the new optical block with the diode laser is both smaller and designed for higher reliability. An automatic optical block locking mechanism, which is activated when the power is turned off, obviates the need for manual lockdown screws during transportation.

The LDP-2000 players are also mountable on 19" racks with the optional RMM-201 Rack Mount Kit. The motor-driven, front-load videodisc tray on the players is activated manually, by external computer. The players also incorporate CX™ noise reduction system for improved signal-to-noise ratio.

CX™ is a trademark of CBS, INC.

LDP-1000A

LDP-1000A Laser Videodisc Player

An extremely versatile high density video system utilizing the compact, convenient videodisc. An expanded RAM and the option of Still Frame Audio make this system perfectly suited for interactive video uses, including a vast number of training, storage, educational and informational applications for business and industry. A wide range of connectors for external video and computer systems further expand the system's potential and it is compatible with its predecessor, the LDP-1000.

FEATURES

- Internal microcomputer expands versatility into interactive video applications with programming options that include pre-encoding, user-entered coding, prompts and indicators
- Maximum side-to-side access time of five seconds allows even single frames to be viewed smoothly in any sequence desired
- Storage capacity of 54,000 frames per 12" disc provides densest storage medium in existence
- Laser scanning system permits unlimited use of still frame or segment repeat because signals are "read" without physical disc contact, thereby avoiding disc erosion and signal deterioration
- Durable discs retain "like new" playback quality that is unaffected by normal handling or minor surface scratches
- Sony Laser Videodisc system produces clear, sharp, super-stable pictures of excellent color quality
- Dual audio channels permit separate track audio recording/playback for bilingual or multiple specialized audiences
- Built-in, system-oriented connections provide future flexibility by anticipating links with external video equipment and computers
- Detachable remote control provides both wireless or wired control of all functions
- On-screen video index display confirms function selected, current disc location and address requested plus prompting the writer during control instruction input. The index location on the screen can be moved as the viewer desires, left or right and up or down
- Variable playback modes include SCAN, FAST, SLOW, STILL, REPEAT and STOP in both forward and reverse plus INTERRUPT, SKIP and REVIEW
- Semi-automatic functions include frame search, segment search, and memory search plus segment and frame repeats of 1 to 15 times each, or infinitely
- Playback of CAV and CLV discs with automatic sensing of proper operating mode
- Compact size requires less space and reduced weight cuts shipping costs
- Swing-out circuit boards simplify servicing and reduce downtime
- Addition of the SFA-1000 Still-Frame Audio Adaptor provides up to 40 seconds of audio to accompany a single still frame of video. Over 15 hours of audio can accompany nearly 1400 video still frames on a single disc side. Use any mix of voice, music and sound with any combination of still and full-motion video. Operable in either stand-alone mode or under computer control, the SFA-1000 is completely compatible with LDP-1000 and LDP-1000A videodisc players and SMC-70 microcomputer systems. Standard connections allow easy upgrading of existing systems.

Specifications

General

- Pick-up method: Laser beam (reflective)
- Laser: He-Ne ($\lambda = 6328\text{\AA}$)
- Maximum playing time: CAV: 30 min/side; CLV: 60 min/side
- Spindle revolution: CAV: 1800 rpm; CLV: 1800 rpm (inner circumference) to 700 rpm (outer circumference)
- Power requirements: 120 V AC $\pm 10\%$, 60 Hz
- AC out: Unswitched 120 V AC, max. 400W
- Power consumption: 110 W
- Dimensions: 21-3/8" x 6-1/4" x 16-3/8" (WHD) 542 x 160 x 415 mm (WHD)
- Weight: 43 lb 3 oz (19.6 kg)

Video

- Signal: EIA standards, NTSC color
- Output: 1.0 V (p-p) ± 0.1 V (p-p), 75 Ohms unbalanced, sync negative
- Resolution: Color: 360 lines
- Signal-to-noise ratio: 42 dB
- VHF output: Channel 3 or 4 (selectable) 75 Ohms, unbalanced
- Input signals: SYNC 4 V (p-p) ± 1 V (p-p), 75 Ohms; SC 2 V (p-p) ± 0.5 V (p-p), 75 Ohms

Audio

- Output: LINE OUT: Less than 2 K Ohms; 0 ± 2 dB[V] (100% MOD, 47 K Ohm load), unbalanced; PHONES: 8 Ohms, -19 ± 2 dB [V]
- Signal-to-noise ratio: More than 50 dB
- Frequency response: 40 Hz to 20 kHz (± 3 dB)

Connections

- RS-232C communication connector for EXT CPU (25 pin)
- TV connector (8 pin)
- Video Out
- Audio Line Out (CH 1, Ch 2 separately)
- VHF In
- VHF Out
- SYNC In
- SC In
- AC Out
- Headphone Jack
- Remote Control Jack

Data Capacity

- Frame numbers: From 1 to 54,000
- Segment numbers: From 1 to 63
- Program line numbers: From 000 to 511 (program 000 to 255 are stored on page 0 and 256 to 511 are stored on page 1). Multiple programs possible on single disc side
- Memory capacity: 5 K Bytes (Up to 5 program segments may be downloaded to memory at one time.)
- Inputs: From 1 to 9
- Registers: 4 (Registers 0, 2 and 3 accessible with pre-encoded discs)
- Register value: From 1 to 255 (if 0 is entered, the register does not function)
- Repeat times: Up to 15 (if 0 is entered, playback will continue until the command to stop is entered)
- Step speed: 1/1 to 1/255 of normal speed

Remote Control Unit RM-1002

- Remote control system: Infrared control
- Power requirements: 4.5 DC Battery size AA x 3 (IEC battery designation R6)
- Dimensions: 3-5/8" x 1-1/4" x 6-1/4" (WHD) 91 x 31 x 157 mm (WHD)
- Weight: 10 oz (280 g) including batteries
- Supplied accessories: 75 Ohm coaxial cable with F-type connectors (1.5m) Remote cable (2m)
- Optional accessory: SFA-1000 Still-Frame Audio Adaptor

LDP-1000A Laser Videodisc Player
RM-1002 Remote Control

VIDEOMASTER

FEATURES

- 5-1/4" color monitor
- Full size 1/2" VHS format
- Four head deck
- Only 22 lbs.
- Fits under an airplane seat
- Complete accessory line

Videomaster is geared for the sales, marketing or training professional. It can be operated with both AC and DC (using an accessory battery pack), has a built-in battery charger, retains a ten-pin connector for easy camera hook-up and boasts rotary 4-head helical scan, azimuth recording for superior playback, pause and slow motion (with the use of remote control).

The unit utilizes full size 1/2" VHS cassettes, has top-mounted loading and function controls, has a fold down arm which acts as both a carrying handle and an elevation device and comes equipped to accept a full range of accessories. Videomaster is constructed to withstand rugged use, and comes in a matte industrial black finish to complement its business-like design.

ACCESSORIES

- A nickel-cadmium battery pack
- R/F modulator
- VHF color tuner
- Wireless remote control
- Dust cover
- Soft carrying cover
- Attache-style carrying case
- A heavy duty shipping case

SPECIFICATIONS

Format:	1/2" VHS Portable Recorder/Player with monitor built-in. Rotary 4 head Helical Scan, Azimuth Recording.
Speed:	SP, LP & EP (Records and Plays up to 8 hours).
Monitor:	5" Diagonal. Tint, Color, Contrast and Brightness Control Knobs.
Speaker:	0.5W, 8 ohm.
Loading:	Top Loading (Cassette).
Features:	(Front Panel or Top) Play, Stop, Record, Cassette Ejection, Pause, Counter, Rewind/Fast Forward (high speed and viewable), Counter Reset, Audio Volume, Power Switch, After Recording, Insert, Tracking, Sensor for Wireless Remote Control and Auto-Rewind. (Slow motion available with use of Remote Control only).
Indicator Lamp:	Play, Stop, Pause, Record, After Recording, Battery Warning, Dew Light.
Earphone Jack:	Included (Disengages internal speaker when in use).
Video In/Out:	Included.
Video Input:	0.5-2.0Vp-p (75 ohm RCA Connector).
Video Output:	1.0Vp-p (75 ohm RCA Connector).
Video S/N:	45dB Over.
Ten Pin Connector:	Included.
Audio Input:	Microphone - -67dB (mini jack). Line - -20dB (RCA Connector).
Audio Output:	Line - -6dB (RCA Connector).
Audio Hertz:	70Hz - 8kHz Audio Output: Line (Standard)
Resolution:	Over 240 Lines (Standard)
Measurements:	15"W x 5.5"H x 16"D.
Weight:	22 lbs.
Power:	AC 117V, DC 12V (Battery Pack Extra Option).
VIDEOMASTER \$995.00

TAPE ERASER

TABERASER MODEL 409

Method Of Operation:

Tape is placed on the spindle and rotated manually several times at slow speed. Erasure is accomplished by exposing tape to a strong magnetic field. To avoid high-energy pops and thumps being recorded on the tape due to turn-off transients, the field is gradually reduced automatically. Tapes over one inch wide should be turned over and the above process repeated.

Types Of Tape:

Taberaser completely erases all audio, video, instrumentation tapes and magnetic films (widths over one inch must be turned over). Audio and video cartridges, as well as tapes on reels or in boxes, can be efficiently degaussed. Reel sizes up to 16 inches can be accommodated.

Erasure:

30Hz to 15kHz the depth of erasure is 76dB below saturation (from reference control tape).

Thermal Protection:

At 150° to 170°F coil surface temperature, the automatic heat overload circuit activates internal blower circuit indicated by front panel red light.

Cycle Time To Erase:	20 seconds
Power:	95-135 VAC, 60Hz, 1 phase 210-230 VAC, 50Hz, 1 phase (both 3 wire)
Maximum Current:	Up to 10 amps
Nominal Current:	2-1/2 amps
Size:	5"H x 10"W x 13-1/2"D
Weight:	409110-60: 46-1/2 lbs. (21kg) 409220-50: 49-1/2 lbs. (22-1/2kg)

Model Number:		
409-117V 60Hz		\$1295.00
409-117V 50Hz		1347.00
409-220V 60Hz		1360.00
409-220V 50Hz		1360.00

MODEL 409
TABERASER

MODEL 1500H
AUTOMATIC TAPE DEGAUSSER

AUTOMATIC TAPE DEGAUSSER MODEL 1500H

Precision Controlled Erasure:

Eraser automatically erases all tapes by moving the tape through a strong field while electronically diminishing the field over a precisely controlled decay of the erase field.

Easy Operation:

Operation is accomplished by inserting reels of tape or film stock in the top, or U-Matic; VHS; RCA video cassettes or audio cassettes in the side. The tape control mechanism either rotates the reels or conveys cassettes through the field while the electronics decay the field, thus providing the smoothest and deepest erasure yet accomplished in the state-of-the-art.

Degaussing Efficiency:

Tape with coercivity from 150 oersteds to 1500 oersteds (contact dealer or factory for details) will be erased to a depth of 80dB or greater (as measured from a reference control tape).

Reel Size:

Up to a 19 inch reel of 2 inch video tape, audio tape, 1 inch instrumentation tape, or film stock.

Cassette Video or Audio:

Erases any size video cassette, VHS, U-Matic, 2 inch quad cartridge, audio cartridge or cassette.

Erase Time:

20 to 45 seconds depending on tape format and power configuration.

Thermal Overload:

At 150° to 170°F coil surface temperature, the automatic heat overload circuit activates internal blower circuit indicated by front panel red light.

Power Requirements: AC Voltage 115 VAC, 60Hz, +/-10% at 20 Amps.
Optional 115 VAC, 50Hz, +/-10% at 20 Amps.

Size: 25-1/2"W x 30-1/2"L x 15"H
Weight: 320 lbs.

Model 1500H \$6495.00

34B

38

Tascam Recorders/Reproducers Series 30

If you need a cost-effective, high quality tape recorder/reproducer for production of jingles, demo tapes, or soundtracks for AV and industrial use, the Tascam Series 30 may be just what you need. They have been engineered specifically for multi-channel audio production. We build significantly better tape machines for less money by combining close contact with the field of audio production, manufacturing experience, and economies of large scale assembly. This is not to say the Series 30 is mass produced. For example, the Series 30 heads are hand lapped to precise tolerances. By making our heads and all critical parts "in house", we retain the strict quality controls needed to achieve uncompromising performance...not only when the machines are new, but after months and years of regular use.

Superior Heads for Superior Recording and Reproduction

- 25% narrow gaps for 40 Hz to 22 kHz (+/-3 dB) response...same for repro head and sync playback off record head • Hand lapping significantly reduces head bumps for more accurate response and more track-to-track transfers without degradation • Built to precision tolerances for minimum "gap scatter", which improves alignment and "mixability" between tracks • New high-density permalloy material is 30% harder and lasts 20% to 50% longer than previous permalloy compounds • Staggered gap erase heads on 8-track for less fringing effect avoids partial erasure of adjacent tracks • All erase heads made of high beta material with 25% higher flux density at saturation mean complete erasure (over 65 dB down at 1 kHz) and quieter tapes

Series 30 Chassis Are Exceptionally Strong, Yet Light

- Folded, braced box-type chassis with steel boxes around reel motors provides rigidity by means of the same principles that give steel "I-beams" their high strength • Lighter than solid castings, Series 30 is easy to take on the road (38 weighs 59.6 lbs., 34B and 32 each weigh 44 lbs.) • Tape path remains absolutely level for easier initial alignment, and long-term stability

Slotless DC Reel Motors for High Torque and Smooth Winding

- Get up to speed faster than AC motors, with no hum • Achieve very high torque for faster start-up and faster high speed winding—saves time and avoids missing cues • Large, trapped ball bearings for low friction and long life • Even less "cogging" than brushless DC motors for low wow and flutter—less than 0.05% RMS (NAB, Wtd., 15 ips) • Combination of dynamic and mechanical braking to stop tape quickly and reliably without any appreciable wear or tendency—uniform tension avoids stretching tape

Frequency Generator DC Servo Capstan Motors With Vari-Pitch

- Motor circuit includes +/-12% variable speed control for returning or "tightening chops" without accessory VSO • Belt driven capstan acts as further filter to keep even the smallest motor shaft vibrations

- from affecting the capstan • FG Servo Motor operates at precise speed of 15 ips on all 3 models, switchable to 7.5 ips on 32 and 34B
- Special polyurethane pinch roller firmly grips tape and resists wear, avoiding flat spots and the wow they cause

Fast, Gentle Tape Handling Under Microprocessor Control

- Micro-touch pushbuttons command transport modes via custom programmed microprocessor which also incorporates motion sensing
- Tape motion sensed by LED photosensor tachometer on Reel Motor (5 times more accurate than mechanical counter) • No appreciable step between fast winding and record/play

Exceptional Audio Electronics for Exceptional Performance

- +/-15 V DC supply for wide dynamic range without distortion (minimum 25 dB headroom, with +/-18 dBV maximum output) • Major circuits rated at +/-18 Volts, so they are not "straining" and thereby last longer • Only selected "DD" low-noise type ICs are used for record, playback, and EQ amps for 68 dB S/N (A wtd., 15 ips no NR)
- Bipolar power supply means less susceptibility to hum and RFI • All components are mounted on a single PC board per channel for easier service and less costly "spares" kit • The 32 has mic inputs and controls to permit simple 2-track location recording without a mixer

Built To Operate in Any Position and For Easy Alignment

- Dynamically balanced tension arms means transport operates equally well vertically (in rack or on table) or horizontally, for editing and alignment • Rubber stand-off feet on back panel, plus angled, recessed input/output connector panel, provides equally good cable accesses in horizontal or vertical position • All bias, record/repro level and EQ controls are readily accessible behind the bottom panel • By laying the machine on its back, it's easy to adjust the alignment trimmers while simultaneously observing the results on the front-panel meters • 32 and 34B come with NAB EQ, easily switched to IEC by moving a jumper wire and replacing a single part; the 38 has IEC EQ, the industry standard for 1/2" 8-tracks

The Features You Need For Professional Recording and Editing

- Three OUTPUT SELECT buttons set the source of the line output signal: INPUT is for setup, SYNC for recording initial tracks and overdubbing, and REPRO for mixdown or alignment • With SYNC button engaged, each track's output source depends on its individual FUNCTION SELECT switch (Record Ready/Safe) and on the machine's record/play status • Flip-up head cover and flip-down record head gate make it easier to mark edit point • Single-point search-to-cue, where tape fast winds, slows and then "parks" at previously indicated zero point • Output normally muted during fast wind, but tape lifters and mute can be defeated by CUE lever; EDIT modes for manual "reel rocking" or dump edits • Industry standard 250 nWb/m nominal tape flux level at 0 VU (machines include large VU meters with peak LEDs)

440B

440B 4-TRACK COMPACT RECORDER/REPRODUCER

The TASCAM 440B is a high quality 4-track 1/4" recorder/reproducer designed for audio and video production work where flexibility, reliability and synchronized operation are primary requirements. We have improved the audio electronics, added a total servo system under microprocessor control, packed in many new features, and provided single plug compatibility with popular SMPTE controller/synchronizer systems. The 440B operates at 15 ips and 7-1/2 ips with industry standard NAB equalization, and can be set for flux reference levels of 250 or 320 nanoWebers per meter. Nominal +4 standard, and -10dBV RCA jacks are also provided for the broadest possible compatibility. To avoid distortion and make your mixing less critical, we allowed plenty of headroom: 24dB of it at the XLRs (+28dBm maximum output level) and 28dB headroom at the RCAs (+18dBV maximum output level).

All 3 motors in the 440B's heavy duty transport are under servo control, not just the capstan, so tape comes up to speed fast — a clear benefit in any application, and a "must" to avoid excessive "chasing" for lock-up under SMPTE control. A rapid "spooling" mode permits forward or reverse winding at 8 times normal play/record speed for tight, uniform tape packs. Normal play/record speed can be fixed via an internal crystal, externally controlled, or adjusted over a full ±12% range with the Pitch control.

Tape motion is fast and accurate. The 440B's precision is obvious when Search-to-Zero actually parks tape at zero; a second search function, Search-to-Cue remembers the actual tape position so resetting counter zero doesn't blow the cue. The tape counter displays positive or negative "real time" (a major convenience for back-timing cues). These benefits are made possible by advanced microprocessor control of all transport functions. Each track has its own Function selector (Ready/Safe) and pre-load selector (Input/Sync) that help you rehearse overdubs or make inserts with exactly the right signal in the monitors. Because sync response is equal to repro response, your mixing and performance values remain consistent throughout all phases of production. And if you're working alone, you can punch in or out of record mode with an optional foot switch. Peak LEDs in the meter faces detect brief, high level transients, helping you to avoid overdriving the tape. A precision splicing block is mounted immediately in front of the head stack where tape naturally lays in place. Simple installation and single operator controllability. A consideration for musicians working alone or producers working through the night. LEDs signal the status of all selected transport and electronic functions. With such features as a braced, box type chassis and separate circuit cards for each channels electronics.

440B \$2995.00

480B

480B RECORDER/REPRODUCER

The Tascam 480B is a high quality 8-track 1/2" recorder/reproducer designed for audio and video production work where flexibility, reliability and synchronized operation are primary requirements. This compact, solidly built machine is the natural successor to our famous 80-8. We have improved the audio electronics, added a total servo system under microprocessor control, packed in many new features, and provided single plug compatibility with popular SMPTE controller/synchronizer systems. The 480B operates at 15 ips with industry standard IEC equalization, and can be set for flux reference levels of 250 or 320 nanoWebers per meter. Nominal +4dBm balanced inputs and outputs are standard, and -10dBV RCA jacks are also provided for the broadest possible compatibility. To avoid distortion and make your mixing less critical, we allowed plenty of headroom: 24dB of it at the XLRs (+28dBm maximum output level) and 28dB headroom at the RCSs (+18dBV maximum output level).

All 3 motors in the 480B's heavy duty transport are under servo control, not just the capstan, so tape comes up to speed fast — a clear benefit in any application, and a "must" to avoid excessive "chasing" for lock-up under SMPTE control. A rapid "spooling" mode permits forward or reverse winding at 8 times normal play/record speed for tight, uniform tape packs. Normal play/record speed can be fixed via an internal crystal, externally controlled, or adjusted over a full ±12% range with the Pitch control.

Weight:	89.6 lbs. (37kg)

TASCAM

TEAC Professional Division

7733 Telegraph Road
Montebello, CA 90604
(213) 726-0303

MODEL 58

TASCAM Model 58 compact recorder/reproducer is designed for demanding production applications, including SMPTE control. The 8-track 58 records 1/2" tape at 15 ips with IEC equalization.

It also incorporates a unique concept in tape path configuration. We call it OMEGA DRIVE™. This balanced drive system delivers tight consistent tape wrap. Tape tension arms never pop so you always maintain maximum tape to head contact. Precise interface between tape and heads provides optimum edge track contact.

All tape motion is under microprocessor control. There are five different, non-contacting, photo-interrupter sensors that continuously update the status of the tape. The microprocessor then feeds the servo motor drivers necessary commands to ensure accurate and gentle tape handling.

Play, Rewind, Record, Fast Forward, Stop, Rewind...after 10,000 takes our machines will pull tape as steadily as the day they were first installed. The 58 is built to exacting tolerances with industrial construction techniques. The transports employ high strength 5052-S aluminum alloy base plates, plus the three strongest motors ever put into a compact deck.

This advanced recorder/reproducer has the sound quality that matches its construction, with features like custom designed, hand lapped permalloy heads that eliminate head bumps, narrow gaps for extended high frequency response, and FET differential playback preamps for sync response equal to repro response. Because we engineer the record amps and the sync and repro preamps to match the Q and impedance of the record heads, the noise and distortion is near zero.

BUILT FOR FAST, EFFICIENT EDITING

- Built-in auto-locator functions for search-to-cue in either direction, plus return-to-zero; speeds overdubs, looping, and editing
- Choice of remote controls: RC-50 Transport Function Remote or RC-51 Full Function Remote
- Tach driven fluorescent display with precise positive and negative real time readout for logging cues in Rewind or Fast Forward
- Servos track when you finger-turn the tach roller for effortless manual cueing
- Flip-up head assembly, and push-down head gate for rapid mark/splice tape access; precision splicing block included

122/122B

RECORDER/REPRODUCERS

- For tight, uniform pack in minimum time, forward and reverse "spooling modes" wind off tape at eight times the play speed
- Output normally muted during fast wind, but tape lifters and mute can be deleted by CUE lever; dump edit mode, too

RUGGED TRANSPORT AND SERVO-CONTROLLED MOTORS

- Rigid aluminum alloy base plate always keeps transport in perfect alignment
- High-torque slotless DC reel motors emit no hum, and bring tape to play speed under a second. They easily keep up with video tape transports when fast winding under SMPTE control
- 9600 Hz referenced rec/play speed can be switched to variable mode; dual pitch controls for coarse ($\pm 15\%$) and fine ($\pm 0.7\%$) adjustments
- Ball bearings minimize friction and maintain close tolerances in the tension arms, tension arm guides, and pinch roller

BETTER HEAD + BETTER ELECTRONICS = BETTER RECORDINGS

- 25% narrower record and repro head gaps for increased high frequency response
- Direct-coupled amplifiers for lowest distortion and optimum low frequency response
- Record/sync head and repro head yield identical performance (typical 30 Hz to 26 kHz ± 2 dB)
- Separate low frequency compensation adjustments for record/sync and repro heads
- VU meter plus peak LEDs to detect brief, high-level transients

SIMPLE ALIGNMENT AND FAST ACCESS FOR ELECTRONIC MAINTENANCE

- Each channel has a plug-in, glass-epoxy circuit board with metal glazed trimmers for mechanical durability
- Meter panel swings out and down for front panel access to all EQ, bias and level trimmers
- All servo system trimmers are accessible on front by removing one cover plate

SOPHISTICATED "BRUTE FORCE" POWER SUPPLY

- Transformers available for 100V to 240V AC lines, 50 or 60 Hz, with low flux leakage to minimize hum
- Eight different supplies including noise-cancelling bipolar 15 volt for all audio amps, which optimizes performance while eliminating interaction between logic, audio and motor circuits

COMPATIBLE WITH LEADING SMPTE EDITOR/SYNCHRONIZERS

- Rear panel SMPTE connector has TTL logic needed for interface to equipment made by Adam Smith, Audio Kinetic, BTX, Convergence, EECO, Fernseh, Video Media, and others
- Two tach rates: 12 Hz provides slow tach, and 60 Hz allows certain SMPTE equipment to exercise control in tracking and parking
- With microprocessor servo control, SMPTE lockup is easily maintained in modes, including high speed winding

Model 58 OB Input/Output + 4-10 RCA \$5995.00

122/122B STUDIO CASSETTE RECORDER/REPRODUCER

- 3 Heads: Erase, Record, Play • 2-Speed 1-7/8—3-3/4 ips • Dolby* Hx-Headroom Extension Circuits and Dolby* B • Adjustable Bias and EQ Select • Front Panel Line Inputs • Optional dBx-II** Interface • 122B + 4 XLR/-10 RCA

RECOMMENDED ACCESSORIES

- AH-50 Rack Mount Handles • RC-90 Remote Control • RX-8P Optional dBx-II** • TO-122A Test Tone Oscillator

122/122B \$725.00/\$825.00

133/133B

133/133B Stereo-Plus Cue Cassette Recorder/Reproducer

Fully compatible with the TASCAM 144. Stereo program on Channels 1 and 2 with cue on channel 4 allowing for total separation from program. With extensive auto present features, the TASCAM 133 is the definitive tool for stereo production and presentation using cassette tapes.

Recorder Features:

- Two position cue select for compatibility with all analog or digital programming units
- 2-motor, soft-touch logic control transport
- 2-speeds: 1-7/8—3-3/4 ips
- Double-action pinch roller for reel time pause
- Switchable mic/line inputs
- Dolby* noise reduction system
- Input and output level controls for each channel
- "Simul-Sync" recording for multitrack recording
- Independent headphone gain
- 4-digit LED counter
- 2 output levels: normal and high to deliver the extra output needed to drive self-powered speakers

Auto Present Features:

- Cue pulse: generates a 25 Hz tone on the cue channel which does not affect projector operations, but which triggers the auto present functions
- Automatic shutoff or rewind at cue tone
- Following automatic rewind TASCAM 133 can be programmed to: a) Return to 0000 and restart program b) Return to 0000 and stop awaiting manual start c) Return to beginning of tape and restart program d) Return to beginning of tape and await manual start

Recommended Accessories:

- RC-133 Remote Control
- AH-50 Rack Mount Handles
- RX-8P Optional dbx-II**
- FC-133 Flight Case

MECHANICAL CHARACTERISTICS

Tape	Philips Type Cassette C-60 and C-90, 70 μ s, Hi-Bias Tape, Type II

225 Syncaset® Multi-track Recorder

For mixing inputs, overdubbing, ("ping-pong") tracks on standard compact cassettes. Produce demo cassettes, work out musical arrangements, create narration/music tracks for AV presentations, and play back standard audio cassettes in high fidelity as well.

Recorder Features:

- Produce professionally on standard 4-track, 2-channel format (stereo or dual mono, 4.8 cm/s tape speed)
- Insert new sound in perfect synchronization with a pre-recorded track
- Route your inputs to feed one or both tracks, from mono or stereo sources
- Ping-pong tracks as you add new sounds
- Punch-in/out with a single touch of the optional footswitch
- Dolby B noise reduction
- Headphone jack with level control
- Zero return switch

234

234 Syncaset® Multi-track Recorder

If you want the production power of a 4-track open reel machine plus the convenience and portability of a compact cassette, then our Model 234 Syncaset® is for you. It's the perfect tool for production of demo tapes, working out complex musical arrangements, in fact, any application needing high quality, 4-channel sync recording and playback.

The 234 is an extension of advanced cassette technology. It's perfect for AV, or non-sync film and video soundtracks that are compatible with the latest 133 and 244 machines. You can even use the 234 in conjunction with the 133 or 244 to make realtime copies.

MECHANICAL CHARACTERISTICS

Tape	Compact Cassette C-30 to C-90, 70 μ s, Hi-Bias Tape, Type II

D-C60L	60 Min (2x30)	Normal/120μs

110-S

110-S

True 10-Bit Accuracy and Resolution

Tracks Signals into the Noise

Optional Four-Field Memory for the Highest Picture Quality

Adaptive Decoding-Minimizes Picture Shifts while Preserving Horizontal and Vertical Detail, Provides Exceptionally High Quality Picture Freeze

Adaptive Clamping-Minimizes Streaking on Noisy Signals

Digitally Precise RS-170A Sync and Burst Insertion

Passes the Vertical Interval

Processing Amplifier

Precalibrated Boards in Modular Design

Audio Delay

An Audio Delay control port allows automatic audio-video delay correction when used with a Tektronix 118-AS Audio Synchronizer.

Quantizing Error Included in Specifications

The industry has neglected the effects of quantizing error on synchronizer product specifications. The following 110-S specifications, however, include quantizing error for a modulated ramp with 40 IRE subcarrier.

CHARACTERISTICS

Digital Sampling — 10 bits at 14.3 MHz (1024 levels at 4 times NTSC Subcarrier).

ELECTRICAL

PROGRAM CHANNEL

Gain — Program Output Unity $\pm 1\%$.
Frequency Response — $\pm 1\%$ to 4.2 MHz.
Signal to Noise Ratio — -60 dB unweighted.
Chrominance/Luminance Gain Error — $\pm 1\%$.
Chrominance/Luminance Delay Error — ± 10 ns.
Differential Gain — $\pm 1\%$.
Differential Phase — $\pm 1^\circ$.
2T Pulse K Factor — 0.5%.
2T Pulse to Bar Ratio Error — $\pm 1\%$.
Short Time Distortion — $\pm 1\%$.
Line Time Distortion — 0.5%.
Field Time Distortion — $\pm 0.5\%$.

PROCESSING AMPLIFIER

Input Gain Range — ± 3 dB.
Output Gain Range — ± 3 dB.
Setup Range — ± 10 IRE.
Hue Adjustment Range — $\pm 20^\circ$.
Chrominance Gain Range — ± 3 dB.
Signal Correction Timing — Horizontal Blanking: 10.2 μ s, 10.7 μ s or 10.9 μ s (selectable). Vertical Blanking: Start of field through line 21.
Sync and Burst Insertion Timing — Horizontal Insertion: 10.2, 10.7 or 10.9 μ s (selectable). Vertical Insertion: Start of field through line 9.
Sync and Burst Insertion Amplitude Accuracy — ± 1 IRE.
VITS Deletion Timing — Vertical Timing Line 10 through line 14 (selectable).

ADAPTIVE CLAMP

The adaptive clamp has 32 dB hum rejection in the absence of noise other than hum, and reduces hum rejection in the presence of other noise in order to minimize clamp streaking.

Clamp Speed — Slow: (± 20 dB S/N)^{**}. Settling Time: Within 5 IRE in 30 lines or more. Medium (± 35 dB S/N)^{**}. Settling Time: Within 5 IRE in 10 lines to 30 lines. Fast: (± 35 dB S/N)^{**}. Settling Time: Within 5 IRE in 2 lines to 3 lines.

^{**} Approximate signal to noise ratio.

CHROMINANCE DECODER

Video Signal Filtering Modes — Pass: Signal unaltered. Comb: Chrominance inverted using 3-line comb filter. Burst is comb decoded. Notch: Chrominance inverted using 9-point transversal notch filter. VITS are notch decoded. Adaptive: Chrominance inverted using combination of notch and comb filters.

SYNCHRONIZER TIMING

Output Timing Range — Horizontal: 13.41 μ s advance to 4.40 μ s delay. Vertical: Two lines advance to one line delay.

POWER SUPPLY

Line Voltage Range — 90 V ac to 132 V ac; 180 V ac to 250 V ac.
Peak Input Power — 300 W maximum.
Typical Power — 240 W.

ENVIRONMENTAL CHARACTERISTICS

Temperature — Operating: 0°C to +50°C. Nonoperating: -55°C to +75°C.

PHYSICAL CHARACTERISTICS

Dimensions	mm	in
Width	480	19.0
Height	89	3.5
Depth	510	20.1
Depth (Rackmount)	491	19.4
Weight	kg	lb
Net	32.7	14.8

Remote Control Interface Functions — Remote Bypass, Manual Freeze, Freeze Field or Frame, Freeze Four Field, Enable Auto Freeze, Inhibit Decode, Inhibit Sync and Burst Insertion, External Test Data Enable, (Digital Input Port), Status Indicator, Power LED, System Status LED, Proc Amp Active LED, Bypass LED, Hue Control, Setup Level, Chroma Level, Input Gain (ADC), Output Gain (DAC).

INCLUDED ACCESSORIES

Power Cord (161-0066-00); remote plug 36-pin unwired connector with shell (131-0293-00); one set of rack slides (351-0636-00); circuit board extender (670-7754-00); operators manual; service manual.

(314) 567-5366

DEGAUSSERS

MODEL 9205A

A Professional Heavy-Duty Unit

- Erase reels up to 17" diameter, 2" thick
- Rugged and reliable
- Two powerful electromagnets
- Portable

WRE Model 9205A Degausser is recommended for complete erasure of program and residual noise on audio, video, and data recording tape and magnetic film — in reels, cartridges and cassettes. For use with plastic, aluminum or other non-magnetic reels with any type hub and any diameter up to 17 inches. If used with care, 19 inch reels may be degaussed. May also be used to demagnetize tools or components having residual magnetism imparted into the material being worked.

The Degausser contains two powerful electromagnets which generate the erasing field, each having its individual fuse and pilot lamp located on the front panel. The top of the unit is a heavy duty black bakelite plate with a 5/16 inch spindle emerging from it. It is equipped with high temperature rated coils for extended life under heavy use.

Degaussing is accomplished by rotating the reel slowly around the spindle three (or more) times. Continue to rotate and at the same time lift the reel slowly off and away from the degausser. For 2 inch tape, turn the reel over and repeat the procedure.

The 9205 is manufactured with heavy-duty, double pole switches, double-fused with dual pilot lights for individual protection and monitoring of each coil, six-foot three conductor cord with two-prong plug and ground connector, heavy steel gray baked enamel case complete with rubber feet. This rugged Degausser is built for years of efficient and dependable service.

Model 9205A-110

Reel Size:	Will handle any size reel up to 17 inches in diameter and 2 inches thick
Erase Level:	60 to 90 dB minimum erasure below recorded level
Switch:	Heavy-duty, double pole
Fuses:	Two 15 amp, fuses; one for each coil
Pilot Lights:	Two; one for each coil
Power Requirements:	115 VAC, 50-60 Hz
Power Consumption:	2000 watts
Dimensions:	4-1/8" x 12" x 14"
Net Weight:	32 pounds
Shipping Weight:	35 pounds
Model 9205A-110\$342.20

Model 9205A-230

Identical to Model 9205A-110 except the Model 9205A-230 is designed to operate at 230 VAC, 50-60 Hz.

Net Weight:	33 pounds
Shipping Weight:	36 pounds
Model 9205A-230\$370.49

Optional Accessories

Model 11-267-1 Hub Adaptor:	Permits easy degaussing of NAB reels with 3 inch hub diameters. Fits on existing 5/16 inch spindle.	\$12.80
Model 22-323-1 Foot Switch:	A companion accessory to the bulk degaussers that allows convenient, "hands free" operation and provides a positive means of turning the degausser off immediately after use. This is a momentary acting switch and can help extend the life of the degausser.	\$43.84

WRE

2119 Schuetz Road
St. Louis, MO 63146
(314) 567-5366

DEGAUSSERS

Model 642-21 Degausser

- Professional bulk eraser
- Erase reels up to 10-1/2" diameter, 2" thick
- Portable
- Two locating spindles
- Simple and efficient operation

WRE Model 642-21 Degausser is designed for the same applications and usage as the Model 9205A except that it is equipped with a single powerful electromagnet (same type as in the 9205A) and is limited to erasure of 10 1/2 inch reels. This unit is recommended where size and cost are primary considerations.

Construction is of heavy duty steel, finished in gray baked enamel with a brown phenolic top panel and two locating reel spindles. A sturdy handle is located on the front panel of the unit.

Degaussing is accomplished by rotating the reel by hand on the top surface of the degausser. Cartridges and cassettes can be passed slowly across the field area for a clean erasure. The unit provides an audible indication when in operation. It is equipped with a high temperature rated coil for extended life under heavy use.

SPECIFICATIONS

Model 642-21/110

- Reel Size: Will handle any size reel up to 10 1/2 inches in diameter and 2 inches thick. Any size cartridges and cassettes that fit within the field area outlined on the top panel
- Erasure Level: 60 to 90 dB minimum erasure below recorded level
- Switch: Heavy-duty, single pole
- Fuse: One 15 amp, line fuse
- Power Requirements: 115 VAC, 50-60 Hz
- Power Consumption: 1000 watts
- Dimensions: 4-1/8" x 6" x 8"
- Net Weight: 15 pounds
- Shipping Weight: 18 pounds

Model 642-21/110 \$200.13

Model 642-21/230

Identical to Model 642-21/110 except the Model 642-21/230 is designed to operate at 230 VAC, 50-60 Hz.

- Net Weight: 16 pounds
- Shipping Weight: 19 pounds

Model 642-21/230 \$214.27

Model 8905 Magnetic Erasing Pencil

WRE Model 8905 Magnetic Erasing Pencil is an excellent tool for erasing limited, small areas of sound tracks and splices on tape and film. In program material, words, complete sentences, and even syllables may be erased. The 8905 is equally useful for demagnetizing record and play heads. A press to operate switch is located on the handle.

SPECIFICATIONS

- Active Tip Area: 0.250" diameter
- Switch: Single pole, press to operate
- Enclosure: Heavy phenolic case, complete with six foot rubber cord
- Finish: Matte black
- Power Requirements: 115 VAC, 50-60 Hz
- Power Consumption: 10 watts
- Dimensions: 5/8" diameter by 8" long
- Net Weight: 6 ounces
- Shipping Weight: 12 ounces

Model 8905 \$54.34

SPECIAL EFFECTS SYSTEM

A52 DIGITAL SPECIAL EFFECTS SYSTEM

FEATURES

- Picture positioning
- Compression to zero
- Expansion to 99 times
- Variable compression axis
- Border of any color and width
- Background of any color
- Cropping from any or all sides
- Full manipulation of cropped pictures
- Flips and tumbles
- Mosaics
- Multi-freeze
- Variable aspect ratio
- Solarization
- Variable duration for each keyframe
- Variable time for entire effect
- Programmable break or pause
- Soft edge key signal
- Contact closures for remote operation
- A/B video switching

Transparent Picture Quality

The A52's transparent picture quality is the direct result of advanced digital signal processing. The incoming composite signal is immediately digitized to eliminate the usual analog decoding problems such as drift and complex adjustments. Digitally decoded into 4:2:2 components, it is then processed to ensure signal transparency and long-term stability.

Smooth Picture Movement

The A52 completely eliminates the stepping usually associated with moving a picture slowly across the screen. For flawless motion while keying the A52 over another source, the key output moves as smoothly as the picture.

The A52 Control System

Never before has there been a control system so ideal for the speed required by on-air effects and the accuracy needed for post-production. By providing instantaneous access to a large number of effects, it makes on-air operation extremely simple. The power and sophistication are reflected in the ease with which complex effects can be created. Precise control over all parameters is provided to satisfy the most demanding requirements.

The A52 Control Panel

The control panel consists of a high-resolution graphics display, a professional 3-axis joystick, numeric keypad, optically encoded fader bar, dedicated keys and the DataKey. The heart of the control panel is the graphics display and associated "softkeys". Because information is clearly displayed above the softkeys, operation is easy. Instead of searching for buttons all over the control panel, simply press the softkey below the function desired. The joystick is used for specifying parameters during programming. For instance, the joystick is used to choose the hue, saturation, and luminance of a background color. The numeric keypad allows precise entry of parameters. Duplicating the exact size, position, or other parameters of a previous effect is easy. The fader bar manually runs effects forward or reverse. With one full throw of the fader bar,

COMPLEX MANIPULATIONS PERFORMED BY THE A-52 ON STILL IMAGES

an effect can be run in its entirety. The position of the fader bar directly corresponds to a given point on the time-line of the effect, thus enabling precise control when manually rehearsing any part of an effect.

Mini Control Panel

The A52MP mini control panel, one of the smallest ever designed, retains the majority of the A52CP functions. It also consists of a 3-axis joystick, display and the DataKey. Operation of the A52MP is similar to the A52CP, allowing them to be used interchangeably.

On-Air Operation

For fast on-air operation the A52 provides the user with 36 on-line effects. Twelve frequently used effects are pre-programmed and presented in picture form on the graphics display. These include flips, tumbles and a variety of compressions. As an added advantage, the user can modify the pre-programmed effects to meet specific needs. The remaining 24 locations can accommodate simple to very complex effects created by the user. The 12 pre-programmed and 18 user-programmable effects are stored in non-volatile memory and are therefore protected from power down.

External Control

RS232 and RS422 serial ports are standard on the A52. Through these ports, all of the functions of the control panel can be emulated by a computer. For a simple interface to switchers and editors, four contact closure inputs are provided. These can trigger the A52 to run an effect forward or reverse, pause an effect already in progress, or freeze the incoming video. Contact closure outputs can be used to trigger an external device such as a video switcher for A/B switching.

Digital Interface

The A52 provides composite digital input and output ports. These digital ports make it

possible to interface the A52 to the Abekas A42 digital still store system.

Key Softness

The A52 produces a variable soft edge key signal, to obtain hard or soft edges when keying the output of the A52 over another source.

Unmatched Dual Channel Operation

The A52 Digital Effects Combiner provides a truly flexible multi-channel system. It accommodates up to four control panels and two channels. A remote assignment panel allows the system to be configured either as a dual channel, or as two completely independent single channel systems. As a dual channel system, operation can be from any one of the four control panels. When operated as two single channel systems, one control panel is assigned to each channel. True dual channel operation is achieved by allowing each channel to be programmed independently to its fullest extent along a common time-line. In this way, different effects can be programmed on each channel and run simultaneously. For time critical applications such as live newscasts, there are also pre-programmed, complementary effects. As with the single channel A52, custom effects can be created and stored in non-volatile memory. Off-line storage is provided on the standard Data-Key.

Variable Priority

In dual channel operation, a channel can be defined as the foreground or background, depending on its priority. Unlike other systems, the effects combiner offers variable priority, allowing programmable dissolves between the two channels.

Internal Keyer

An extremely versatile luminance keyer is also part of the effects combiner, which makes keying titles over a picture and manipulating them separately very easy.

TIME CODE TAPE SYNC & TRANSPORT CONTROL PRODUCTS

SYSTEM 2600

SYSTEM 2600

A family of Modules for LTC and VITC Generation and Reading, Video Tape Editing, Audio/Video Tape Synchronizing, TV Sound Editing, Transport Control, and Computer Interfacing.

TECHNICAL FEATURES

- **Time Code:**
 - Formats: SMPTE/EBU standard
 - Reading Speeds: LTC: 1/20 to 100 x play speed
VITC: still-frame to 45 x play speed
Control Track/Tack Pulse: 0 to 100 x play speed
 - Translating Speed (VITC to LTC): 0 to 60 x play speed
 - Standards: 24-frame film
25-frame PAL and SECAM
25-frame PAL and SECAM
30-frame NTSC, full or drop-frame and PAL-M
- **Tape Synchronizing:**
 - Accuracy and Resolution: $\pm 1/1000$ TV frame
 - Offset Capability: ± 24 hours
 - Offset Adjustment: $\pm 1/100$ TV frame
- **Power:** 115/230 VAC $\pm 15\%$, 50/60 Hz.
- **Mechanical:**
 - Modules:
 - Size: 5-1/4" (133mm) (3 RU) high
1" (25mm) or 2" (50mm) wide
15" (381mm) deep
 - Weight: approx. 1 lb. (0.5kg), 1" width modules
approx. 2 lbs. (1.0kg), 2" width modules
approx. 4 lbs. (2.0kg), Power Supply module
 - LED Size: 1/8" (3mm) high characters
 - Mounting: table-top, panel, or relay rack (chassis slides optional)
 - Controllers:
 - Size: 5-1/4" (133mm) (3 RU) high
4-1/4" (108mm) wide
3" (76mm) deep
 - Weight: approx. 1 lb. (0.5kg)
 - Mounting: SYSTEM 2600 modular consoles, mix console or relay rack (in 19" wide frames)
 - Controller Displays:
 - Size: 1-3/4" (44mm) (1 RU) high
8-1/2" (216mm) wide
3" (76mm) deep
 - Weight: approx. 1 lb. (0.5kg)
 - LED Size: 9/16" (14mm) high characters
 - Mounting: SYSTEM 2600 modular consoles, mix console or relay rack (in 19" wide frames)
- **RF Emission:**
 - complies with FCC requirements for class A computing equipment

A New Generation of time code, machine control and studio automation products of proprietary design. They're modular — and each module is a complete, stand-alone product. They're system-oriented — tied together by a uniquely efficient data bus. And the systems you make with them are expandable — without obsoleting prior purchases.

SYSTEM 2600 modules are designed to save time, reduce costs, improve quality and unlock creativity in audio and video production, post-production, and program distribution. Operations such as identifying the location of picture and sound material on recording media, linking multi-track ATRs, making frame-accurate video edit decisions, editing video tapes, building television audio tracks, controlling studio equipment by computer, and many more — all can be enhanced by SYSTEM 2600's new techniques. All-in-all, SYSTEM 2600 modules are your best bet, whether you're modernizing existing facilities or building new ones. Each module is an independent product, yet when incorporated into a system, each can talk to the others over the data bus. And the data bus design is so efficient that modules don't have to wait in line to hand-shake and talk. Instead, they "broadcast" their data as they generate it, for use by all the others. This new computer technique, combined with distributed data processing (there's an advanced-design micro-processor in every module that processes data), gives each module the computing time to really do its job right.

SYSTEM 2600 gives you the modules you need for Longitudinal and Vertical Interval Time Code generating, reading and display, transport control, audio and video tape synchronizing, and LTC restoration. SYSTEM 2600 modules incorporate the very latest in state-of-the-art features, such as color framing, jam-syncing user bits, field-rate code generation, automatic drop-frame handling, bi-phase mark phase correction, and binary group (user bits code) decoding identification.

Our VITC Reader can read Vertical Interval Time Code at high wind speeds* — even when your one-inch VTRs are really rolling. And because reading VITC at high speed doesn't mean much if you can't feed it into your video tape editing system, we make a module which will do that, too, by translating VITC into Longitudinal Time Code. This not only lets you make edit decisions in still-frame and slo-mo, but also lets you edit with VITC alone — without modifying your existing editing system.

When you're ready to synchronize audio tapes to audio or video tapes in your video tape editing or television sound sweetening facility, SYSTEM 2600 can help you there, too. Our tape synchronizing modules will precisely fit your requirements, from basic recording and layback, through multi-slave chase operations for mixing, right up to television sound editing features such as "Smart-Lock®" fast re-synchronizing and "Splice-Trap®" handling of physically spliced tapes are Adams-Smith exclusives.

SYSTEM 2600 (Cont'd)

TAPE SYNCHRONIZER CONTROLLERS AND DISPLAYS

Tape Synchronizer Controllers and Displays

To put together a complete television sound editing room, you can use SYSTEM 2600's controllers and displays. These user-friendly, advanced-design units let you implement all of the Tape Synchronizer module's control capabilities with single keystroke operations. You can choose only the controllers you need to fit your particular requirements, because they also are fully modular, able to stand alone or in combinations, as suits you needs.

The controllers and controller displays in a system talk to other SYSTEM 2600 modules over a single coax cable through a special Remote Control Processor module. This technique lets you locate the controllers and displays in your mixing console and the modules near your recorders. A Serial Interface module lets any computer or terminal communicate with SYSTEM 2600 modules using an RS-232 format. Our Serial Interface module has all the hardware in it to implement SMPTE/RS-422 communication when it becomes an industry standard — just by plugging in a PROM.

The ChassiRod® System*

This design allows you to incorporate SYSTEM 2600 technology into your studios and remote vans easily, flexibly and cost-effectively. ChassisRod construction permits modules to be rearranged or added whenever required by system changes or expansion. The design also insures the system compatibility of new modules, and there's no expensive "mainframe" to buy with your first SYSTEM 2600 purchase.

The modules of SYSTEM 2600 are all physically separate units, including their front panel controls and rear panel input and output connectors. All modules are of the same height and depth, and either one or two inches wide, depending on whether they contain one or two printed circuit boards. Any number of modules of the same or different kinds can be grouped together, side-by-side, in any arrangement, to form a specific system. Very little rack space is required, even for an extensive system.

An important feature of the module design is that it permits video signals to be handled with "broadcast" quality.

The chassis is made up of two side panels tied together by four ChassiRods. The two bottom rods are permanently connected, while the two top rods are easily removable. The individual modules fit down over the bottom rods, and are captured by the top rods to form a rigid assembly. Individual modules can easily be removed when changing system configuration or for service. The ChassiRods are available in various lengths, allowing the chassis to be of standard rack width, or wider or narrower to accommodate the modules used.

TIME CODE TAPE SYNC & TRANSPORT CONTROL PRODUCTS

Snap-on top and bottom covers protect the modules and contain slots for ventilation and adjustment of set-up controls. When fully assembled, the chassis is completely shielded electrically, and all exposed parts are grounded. Rack mounting angles, chassis slides and rubber feet are all available, permitting the chassis to be mounted in a rack, in a panel, or on a table-top.

For Production

In studios and remote vans, you can use SYSTEM 2600 LTC and VITC generators to record synchronous time codes — either elapsed time or time-of-day, or even calendar data — simultaneously on all VTRs and ATRs. In addition, you can use time code readers and character inserters to locate and identify program material right away during playback and review. And when you use Vertical Interval Time Code, you can display time during slow motion replay — with right-to-the-frame accuracy.

You can use the user bits of the time codes to log production identification information, such as reel, scene and take numbers. And for those who may wish to use a small computer for logging, the possibilities for recording production information become almost limitless.

You can use SYSTEM 2600 Tape Synchronizer modules to cue VTRs to captured tape addresses for immediate replay, and eliminate the need for additional storage devices. In addition, you can use these same Tape Synchronizer modules to link multi-track ATRs to each other, to video sync, or to VTRs, greatly simplifying later post-production timing problems.

For Post-Production

You can group the modules of SYSTEM 2600 into many configurations to enhance both audio and video editing. You can combine high speed VITC Reader* and Translator Interface modules with other modules to add a VITC capability to your present video tape editing system. SYSTEM 2600 VITC modules permit both edit decision-making in still-frame and slow-motion, and actual editing (winding, cueing, parking, syncing and locking). The modules will handle tapes with either or both codes. Both manual and automatic change-over between codes allow the system to adapt to changing session-to-session requirements without lots of re-setup.

In audio recording operations, you can use SYSTEM 2600 Tape Synchronizer modules to link multi-track ATRs together — for instance, to make two eight-track recorders act like a 16-track recorder. You can also use the Tape Synchronizer modules to sync an ATR to video sync or to a VTR. These techniques can be particularly useful during recording and playback, and when laying back a mixed-down audio track onto a video tape in synchronism with the picture material.

Importantly, interfacing SYSTEM 2600 Tape Synchronizer modules to your audio and video recorders is easy and straightforward. No internal or external special interface circuitry is needed. All you need to do is make up the interconnecting cable. We supply the mates to any special connectors used on our modules.

An important use for a combination of SYSTEM 2600's Tape Synchronizer and time code reader modules is to implement chase synchronizing during audio mixing. One or more slave ATRs chase a master VTR at all times. They run in exact synchronism when in play, so lip-sync is maintained. The VTR is normally controlled by the video tape editing system or by its own remote controls. This technique is extensively used in both video editing suites and in audio studios which do television sound editing.

You can also assemble complete television sound editing systems by combining Tape Synchronizer modules with other SYSTEM 2600 modules and our modular controllers. The system permits creative sound professionals to enhance the quality of television audio, especially stereo, while at the same time reducing the cost of sound editing by removing it from the video tape editing suite. Phasing the audio to the video with a resolution of 1/100 of a TV frame, rehearsing and recording with a repeatability of better than 1 ms, measuring elapsed time from any selected tape location, starting and stopping other devices with frame accuracy, re-locking audio to video after cueing in one or two seconds, and, of course, cueing, looping and re-playing, are all possible, using SYSTEM 2600 modules.

SYSTEM 2600 TELEVISION SOUND EDITING SYSTEM

For Studio Automation

You can combine SYSTEM 2600 time code and Tape Synchronizer modules with either Serial or Parallel Interface modules to implement automatic operation of VTRs and ATRs. Operations such as cueing, playing and rewinding, verification of correct tape content, and monitoring of the play function, can all be implemented by studio computers, large or small.

The Serial Interface modules permit serial data interchange, using the RS-232 format, at data rates from 50 to 19,200 baud. Normally, you can connect up to eight devices to each Serial Interface module. And you don't need to be a professional computer programmer — the unique design of SYSTEM 2600's data bus lets our Serial Interface use very fast, efficient and simple protocols. Programming is thus straight-forward and uncomplicated.

You can implement parallel data interchange, using either BCD or ASCII codes, by means of the Parallel Interface. This module is particularly useful for interfacing to special control panels which you may want to design and build yourself, to fit your specific studio requirements.

130 Knowles Drive
Los Gatos, CA 95030
(408) 379-1500

The basic ADDA VIP-C system can be upgraded to interactive multifunction operation with PR-2 remote panel, featuring menu-driven effects and off-line sequence control.

VIP-C Video Compressor

The ADDA VIP-C is a modular, single-channel image compressor and positioner with exceptional signal processing transparency and straight-forward approach to image manipulation.

The difference between the basic unit with the PR-1 and the VIP-C with PR-2 remote unit is the degree of image control sophistication.

PR-1 has 6 preset effects positions that can be remembered, while the VIP-C with PR-2 intelligent remote panel can commit over 224 events and sequences to memory for either manual or automated recall. The optional off-line "sequence memory module" expands the storage capacity of routine effects setups and sequences.

The VIP-C is a versatile digital effects system. Frame synchronization and time base correction for heterodyne VTRs are included for extended versatility in utilizing freeze frame and multi-freeze effects. Engineering control is provided on a separate remote panel.

With these features, the VIP will serve the everyday needs of most stations and production houses, and even many in-house video operations in industry, business, medicine and education.

Basic Control Panel (PR-1)

Simplicity is the key for news and mobile installations. The basic PR-1 control panel can be rack or desk-top mounted. Push button clusters control image size and position. Unit includes six size & position presets, variable or locked image size, and border controls.

Engineering Remote and Proc Amp Control Panel (ER-1)

The engineering remote provides processor control of video, chroma and setup as well as hue, system subcarrier and horizontal phase. ER-1 assigns up to four production remotes and selects TBC or synchronizer modes.

Both production and engineering remote modules connect to the mainframe chassis with a single 75 ohm coax, eliminating the need for multi-conductor cables.

Interactive Control Panel (PR-2)

Optional multifunction programmer. 3-axis joystick provides infinite video compression size and position, locked or variable aspect ratio, border generator plus programmable sequence control and extended event memory. Prompter panel informs operator of position, move trajectory and image size in addition to sequence order.

VIP-C with PR-2 control can learn up to 16 effects events which can be executed in real time from the working memory. Over 224 events — including move time and move ballistics — can be stored in the protected memory, as separate effects or linked together to form sequences which may be run manually or automatically.

Sequence Memory Programmer (SM-1)

An optional off-line effects sequence memory system, featuring a removable plug-in archive module, can be added to the PR-2 to off-load selected sequences for individualized effects control by different operators.

VIP-C PR-2 3-axis joystick provides infinite compression size and position. Optional off-line effects sequence memory module may be included to off load sequences for individualized operation. Joystick unit may mount on either end of remote control panel.

Standard PR-1 remote unit is engineered for simplicity. Adaptable for rack or console mount, the panel's small size is ideal for mobile application. Push-button clusters control size and position; up to six different effects (size, position and border) may be preset.

System Description:

- 1 MF-1 Main Frame
- 1 ER-1 Engineering Remote
- 1 PR-2 Remote Control

Price

VIP-C \$42,000.00

FEATURES

- Single channel system
- 0-7 10 of full screen size compression when synchronizing and or time base correcting
- 0-full screen size when feeds are synchronous
- Picture may be positioned anywhere
- Improved horizontal and vertical interpolation
- Remotes utilize a single 75 ohm coax cable

Options:

PR-1 PRODUCTION REMOTE

FEATURES

- Pushbutton operation
- 4 x 3 aspect ratio lock/unlock during zoom
- Horizontal and vertical justification (one side of picture locks to edge of screen, then it compresses off screen)
- Color border or mat generator
- Unity size and center position switches (will return either to center or full size)

PR-1 \$3700.00

PR-2 REMOTE CONTROL

FEATURES

- Joystick control of positions, size, borders
- Hex key pad entry with menu
- Software defined and multimode
- Inversions and reversions
- Multiuser and RS 232 port
- Color border or mat generator
- Electronic freeze frame
- Programmable presets
- Dynamic moves
- Programmable sequences
- SM-1 cassette storage of pre-programmed effects

PR-2 \$7600.00

Cassette pricing

1/4 user cassette pack of 3 \$550.00
Full user cassette, pack of 3 645.00
Pre-programmed cassette 490.00

ELECTRONIC GRAPHICS SYSTEM

ESP II Electronic Graphics System

The easy entry to professional broadcast quality, still store and electronic graphics generation.

ADDA's ESP II offers a unique opportunity to move up to truly professional video graphics production and presentation. Transfer your current slides, still photos, art cards, titles and other graphics to digital frames in the ADDA ESP II for video production or special display.

You can even "grab" stills from live camera or tape productions with the ESP II freeze frame feature. Stills may be stored as random frames, each with a numerical address for instant recall, or assembled in sequences. ESP II high resolution stills are always perfect, always right side up, always available.

Create your own graphics without costly art work, paste up or photography. Multi-layer video graphics may be assembled in the frame buffer for storage as completed stills. Because the ESP II uses the same 8-bit, 4-times subcarrier sampling scheme, multi-generation graphics can be created without picture degradation. Up to 2 of the most popular drive units may be used with the ESP II, each with a capacity of up to 400 stills. Drives may be fixed or removable for additional off-line storage flexibility. The ESP II's modular architecture permits expansion to dual-channel operation at any time to add additional production capability plus digital transitional effects between channels.

Add new dimensions to video productions and display presentations with broadcast quality electronic graphics...always at hand in the ESP II. Save on slide production and graphics cost as well as maintenance.

VIDEO

Television Standard:	Accepts NTSC or NTSC type 525 line, 60Hz signal.
Input Signals:	Requires stable color signal. Also requires gen lock reference signal with composite sync, blanking, and burst.
Input Impedance:	75 ohms, A and B Channel Inputs. (Gen Lock is high impedance looping)
Output Signals: (A, B, C Outputs)	Composite video with burst, composite sync, and blanking meeting RS-170A requirements.
Range of Synchronization:	One frame (2 fields).
Bandwidth:	± 0.5dB to 5MHz.
K Factor:	1% (2T pulse).
Differential Phase:	Less than 2° at 40 IRE, using linearity ramp and subcarrier test signal.
Differential Gain:	Less than 2%.
Signal-to-Noise:	+ 56dB (p-p signal to rms noise).
Sampling Rate:	4 x Fsc (14.3MHz).
Line Rate Tilt:	Less than 1%.
Field Rate Tilt:	Less than 1%.
Output Sync Jitter:	± 1 nsec.

POWER REQUIREMENTS

Voltage:	120 ± 10%.
Frequency:	50 or 60Hz.
Power Consumption (single):	Less than 300 watts (mainframe); less than 50 watts. (remote control unit at 120V AC).
Power Consumption (dual):	Less than 350 watts (mainframe); less than 50 watts (remote control unit at 120V AC).

ESP II REMOTE (Single Channel)

ESP II REMOTE (Dual Channel)

DIMENSIONS AND WEIGHT

	MAIN FRAME	REMOTE
Height:	7 inches	3-3/4 inches
Width:	19 inches	19 inches
Depth:	21-3/8 inches	8 inches
Weight:	35 lbs. (46 lbs. for dual)	6 lbs.

ESP C SERIES

Digital Still Storage and Retrieval

On-line previewing and editing; automatic sequencing; the instant creation of multi-layer graphics.

The electronic storage and retrieval of video images for graphic production and preprogrammed on-air use, is becoming an industry standard for the technological leaders in television and video production.

Now there is a new generation of still store systems. And from the 200C to the large, multiple drive 750C, our microprocessor-controlled, expandable systems have a production versatility that can't be beat.

The Basic System

The ESP 750C Digital Graphics System consists of an Analog/Digital Processor, a Master Control Panel, and standard computer industry disk drives. But the built in flexibility of our system makes it easy to expand. Each Analog/Digital Processor can accommodate up to four drives. You can add up to a total of fifteen remote production panels. And more off-line storage with up to 99 separately identified disk packs.

Our dual channel output and front end synchronization allow you a choice of inputs and a wider range of capabilities.

And the 750's second generation digital electronics give you a production-oriented sequence and memory system that lets you perform last minute editing. Add or delete within a sequence. Create multiple generation graphics with virtually no degradation in the quality of your original image.

ESP's intelligent controls make the C Series a production tool that goes easy on everyone in your operation.

FEATURES

- A built-in operator prompter.
- Single function keys.
- A rapid-access sequence and memory system.
- Built-in safety features.

LIBRARY CONTROL SYSTEM

The ADDA Library Control System (LCS) is an option to the ESP-C series digital video still store. Utilizing the LCS, an operator may identify a still with an alpha descriptor and then may conduct searches for descriptors, build sequences of stills, transfer sequences to and from the ESP main frames, and print copies of sequence lists or disk packs.

FEATURES

- One to eight users.
- One-half second typical search time.
- Dedicated engraved key functions.
- Multiple search categories.
- Single or quantitative searches.
- Up to 15,000 still descriptors storable.

Basic System Description

- 1 - Computer Operating Software
- 1 - Terminal/CRT
- 1 - Library Control Software
- 1 - Library Interface Card \$14,750.00

Options

Printer	\$1,200.00
Terminal/CRT	1,350.00
Interface Card	600.00

CALL HARVEY

AVC SERIES

AVC SERIES VIDEO PRODUCTION SWITCHER

FEATURES

- Simplified Controls: pushbuttons, instead of knobs, assure controls never get out of sync with internal memories
- Expanded Memory System: Key Memory System allows storage and recall of up to four separate and distinct key setups for each key source
- Unparalleled Switcher Flexibility: three keyers per M/E so operator can introduce any type or combination of keys in any sequence with any background
- Extensive Preview Capability: preview monitoring system allows previewing of not only any M/E output, but also individual buses feeding the M/E as well as the Quad Split, Program, and Preset Buses (or program bus A and B)
- Independent M/E Pattern Systems: with the AVC Series, 90 patterns are keypad selectable, and each M/E has its own independent pattern system
- Bordering Flexibility: half-halo borders allow wipe transitions to be hard on one side, tapering to full soft on the other for unique images and effects
- Choice of Auto-Transitions: automatic transitions from 0.1 to 9.9 seconds can be sinusoidal, exponential or logarithmic, as well as linear
- Positive Tally Indication: actual tally with positive "On Air" indications are provided for extra operating ease and reliability
- Wider Matte Color Choice: totally independent matte generators let the operator choose any color wanted on every matte function
- Downstream Mixer/Keyer: downstream mixer/keyer allows user to choose either PGM/PST or A/B operation

The uncluttered beauty of the AVC Series panel is striking. In creating the AVC Series switcher, Ampex engineers achieved many industry firsts, including the elimination of all panel control knobs. Instead, there are two centrally located "adjust panels" containing Up/Down and On/Off pushbuttons as well as the Pattern Positioner. All major switcher adjustments are made from this convenient focal point.

Advanced design concepts are used to enhance reliability and to improve signal performance. For example, dual current sharing power supplies are standard. Independent microprocessors in both the control console and the electronics bay may have an optional backup CPU installed. A battery backup for the AVC system is standard.

One dual-twisted-pair audio cable is the only connection required between the console and the electronics bay.

The large, backlit M/E display panels contribute to the easy operation of the AVC Series. These panels display the key sources selected on all three keyers in each M/E. In addition, the wipe pattern numbers and auto-transition duration times are also displayed in large, easy-to-read numerals.

Also on this display are "active bus" and keyer tally indicators that always show which video bus or buses including keyers are contributing to the output of the M/E. To further simplify the operator's job, these tally indicators change colors from yellow to bright red to indicate when any of those sections of the switcher are "On Air."

One of the greatest advantages of the AVC Series switcher is its ease of operation. AVC Series switchers are among the most powerful and capable production switchers available on the market today. Yet, for all their creative power and capability, AVC switchers operate in the logical and familiar cascaded re-entry, A/B format. The operator's perceived "video flow" is always left-to-right and top-to-bottom and, except for Mix Key, Wipe Key and Auto-Transitions, the fader position always corresponds to the active video bus.

The AVC switchers use 12-button keypads on each M/E for the selection of key sources for all three keyers, wipe patterns and auto-transition rates. Use of the keypad makes control of the M/E fast and efficient, and its compactness allows the overall physical size of these extremely powerful switchers to be kept to human proportions.

AVC Series switchers are designed to significantly increase creative capabilities while actually reducing operational tasks. Simple controls, easy-to-read and understand visual displays and tallies and compact size add up to a more useful production system. With an AVC Series switcher's simple-to-operate console and logical, familiar A-B operation providing truly useable power, you'll be assured of better final production results every time.

AVC SERIES OPTIONS

There are numerous options available for use with AVC Series switchers that can extend their unique and powerful production capabilities. AVC switcher options include:

- Analog Key Border Generators
- Encoded Chroma Keyers (with shadows)
- RGB Shadow Chroma Keyers
- Pattern Modifiers
- Rotating and Matrix Patterns
- Status Displays, Timer/Counters
- SMPTE Serial Interface
- Auxiliary Buses

While some of these options, such as the highly advanced Pattern Modifier system, offer exciting new visual effects and abilities unavailable on any other switcher, others (such as the Panel Memory system) make the already easy-to-use AVC's operation even simpler and more powerful.

The wide range of options available for use with the Ampex AVC Series switcher means you can better configure your switcher to meet all of your specific needs at a cost within the limits of your budget. And with AVC's modularity and microprocessor control, future expansion is easy to accomplish.

STUDIO PRODUCTION VIDEO SWITCHING SYSTEMS

MODEL 712

For Remote and Small Production Facilities
\$8300.00

(Also available in PAL and PAL-M versions)

STANDARD FEATURES

- 12 inputs including Black-burst and Color Background
 - Built-in Black-burst Generator
 - Built-in Colorizer
 - Built-in RGB Chroma keyer
 - Four Switching Buses
 - Downstream Preset and Program Buses with cut bar
 - Rack-mounted electronics
 - Adjustable Soft Wipe
 - Adjustable Border edges
 - Color Matte
 - Vertical Interval switching thru-out
 - Illuminated Momentary Contact pushbuttons
 - Internal, external, Chroma-key, and matte inputs to keyer
 - Built-in pattern modulator with frequency and amplitude controls
 - Full Tally
 - Pattern symmetry control
 - Illuminated Momentary contact pushbuttons for effects selection
 - Normal/Reverse/Normal-Reverse wipe transitions
 - Pattern limit controls for presetting size of patterns or varying vertical and horizontal aspect ratio
 - Loop-through inputs
 - Input amplifiers with clamping
 - Synchronous/Non-synchronous inhibit
 - Modular construction with front access plug-in modules
- PAL/PAL-M Versions, per Switcher.....\$1250.00

12-input, 4-output mix-effects amp with downstream mixer, includes downstream preset and program buses with cut bar, RGB chroma key

OPTIONS

Downstream Keyer
\$2250.00

CHECK BEAVERONICS FOR:

- Master control switchers AFV with audio breakaway
- Specialized custom switchers
- Keyers

MODEL DSK-4-DLB

Stand-alone Downstream Keyers To Upgrade Your Total System
\$9500.00

This Keyer is specifically designed for Character Generators and accepts both Video and Key signal outputs from up to four Char. Gens. (or other video sources). The key signals may, if desired, be keyed simultaneously, assuming different portions of the picture area are involved, to produce multiple inserts.

The unit is packaged with its electronics on plug-in cards in a 5-1/4" rack mounted frame together with a compact 1-3/4" remote control panel.

FEATURES

- Independent stand-alone keyer
- Built-in Edge Border, Shadow, and Outline, variable from black to white
- Built-in Matte Generator
- Key can be inserted or removed by cut or automatic mix at any of four rates
- "Cut" or automatic Fade to Black at any of four rates
- Edge Border variable from black to white
- Key may be filled with either key video or matte
- Can select up to four key sources either individually or simultaneously

STUDIO PRODUCTION VIDEO SWITCHING SYSTEMS

**For Moderate Size Facilities
 Model B1-154**

\$14,440.00

15-input, 4-bus mix/eff/key amp with downstream mix/key amp. Many optional features including DSK and quad-split, etc.

**For Sophisticated Facilities
 Model B1-156**

\$23,975.00

15-input, 6-bus with two full mix/eff/key systems and dir. pgm and pre busses: many options available, DSK, quad, etc.

**Models 154 and 156
 (Also Available in PAL and PAL-M Versions)**

STANDARD FEATURES

- Switcher Models 154 and 156** are of the same basic design and utilize the same electronic sub assemblies. These switchers have the same standard basic features, differing only in the number of busses and in the number of mix/effects units. The basic standard features include 32-pattern mix/effects, color black and color matte background generator, and a mix/key unit in the case of the model 154.
- Input Amplifiers** • loop through high impedance input • gain equalization for 1000' cable • 22° sub carrier phase control • clamped inputs (10% to 90% APL) sync addition on non composite signals if desired.
- Tallies** • isolated dry contact relay closure on all inputs (2 amps at 50v.)
- Mix-Effects Units [Includes Keying Function]** • One (1) used in model B1-154 • Two (2) used in model B1-156 • Fades (or Supers), Wipes, Keys may be produced • Positioner Joystick for each M/E positions patterns. • Pattern Modulation may be accomplished by an internal waveform generator. Modulating sources may be either (1) sine wave, (2) square wave, (3) saw tooth, or (4) an external customer generated source. • Mix Key and Wipe Key available. • Soft Wipe and Soft Key available with adjustable variations. • Push to Preview obtained by depressing knob on clip potentiometers (provides for M/E monitor output). • Wipe Mode — 3 interlocked buttons select "NOR", "REV" or "N/R". • Hard Wipe, Soft Wipe or Border can be selected with degree of softness made by "Edge" control adjustment. Border may be Colorized by adjustment of "Hue" and "Luminance" control. • Symmetry of Pattern may be adjusted by "SYM" knob. • Preset Wipe Limits are set by potentiometers. "H" and "V" vertical preset limits activated by Pattern Limit button. • Spotlight alternate action push button produces a 6 db. level difference between "A" and "B" input channels in the "Wipe" mode. (Operates on all patterns.) • Pattern Assignment is made by depressing "ASSIGN" button. Pattern select feature may be "locked" to pattern matrix by depressing the "ASSIGN" button a second time on the same pattern. Patterns assigned appear on LED display on

M/E control panel. • Non-Synchronous Inputs. An "NS" indicator is provided. Tearing is prevented by not allowing a non-synchronous signal to be switched except at extreme position of fader handle where a "cut" transition occurs. • Key Input Sources may be either (1) "A" bus video for self keying, (2) preview Key bus, (3) chroma key, or (4) an external key source. • Key Invert selector provided to accommodate either positive or negative video as a keying source. • Key Fill may be either "A" video for self keying or a colorized matte. • Mix/Key provided a lieu of second Mix/effects system for Model B1-154 switching system. Provides for all mix and keying functions of mix/effects system (as previously described) except for the pattern effects.

OPTIONAL FEATURES

May be added at any time (required control panel wiring already installed) except those indicated with an asterisk.

- Chroma Keyer [C.K.]** **\$1100.00**
 • Hue — selects hue of keying color • Gain — adjusts the amplitude • Clip — adjusts the clip level for keying • Camera (4 x 1) input switcher — selects RGB output of any one of 4 cameras to feed C.K.
- Down Stream Keyer [DSK]** **\$2250.00**
 • Keys in titles, inserts, or fades to black with or without insert • Color matte background • Key sources: (1) Mix/Effect, (2) Chroma Key, (3) External • Push to Preview (Monitor)
- DSK Border** **\$2200.00**
 • Border — black edge around insert • Shadow — black edge on right side and bottom of insert.
- Quad Split** **\$2500.00**
 Provides four (4) variable size quadrants from eight possible sources with variable width border.
- Aux Busses** — (Model 156 only) **\$2300.00**
 Two remote outputs are available — remote control panel and amps required.
- 2nd Mix/Effect Unit** in lieu of Mix/Key amp in 154 **\$2990.00***
 Mix/Key amp fed by preview and program busses in 156 .. **3850.00***
PAL/PAL-M Versions, per Switcher **1250.00***

VIDEO GRAPHIC SYSTEM

FGS-4000

Video Graphic System

FEATURES

- Polygon based system • NTSC, PAL, SECAM and film compatible
- Scene Synthesis of 2D and 3D shaded objects in 3-space • Real time animation • Area selectable display mode: raster fill or vector outlined
- Unlimited area overlap • Variable perspective • Multiple light sourcing: variable direction, color, intensity and ambience • Infinite curve resolution • Hidden surface processing • Keyboard, knob, tablet, stylus and joystick controls • Interactive editing from work station • Simultaneously displayable colors: 16,384 real time, 16,777,216 nonreal time • Real time, full-color frame capture • User diagnostics • High quality images • 2D and 3D image entry • Single frame VTR control • Software expandability • 16 levels of transparency • Texture mapping • Film Effects: glows, streaks, and script-on • Paint capabilities • Viewports of variable size and position

High Quality Animation System (HQAS)

The High Quality Animation System (HQAS) software gives the operator a tool for enhancing previously created animations by adding glows, script-on effects and streaking capabilities along with texture mappings. Each of these "high-quality" effects can be applied to produce exceptional animation sequences and still pictures. By generating single-frame animation sequences the FGS-4000 can produce effects previously available only with film.

Texture Mapping enables the artist to create special effects with video images "captured" by a camera. These effects can include images of metallic surfaces, textures, landscapes and personalities applied to a previously created object or shape. 3D box can now have different video inputs on each of the six sides. Logos assigned with a picture of chrome can be transformed into metal.

Real Time Text Editor

Using the Real Time Text Editor, displays can be created and pages composed of both 2D and 3D objects. Fonts can be selected, sized, colored, italicized or condensed either by turning a knob or by menu selection. All objects can then be positioned, rotated or rearranged prior to the animation being created. The operator is not limited to the virtual image area of the monitor, but can also type or position characters off-screen.

Typing is not limited to a horizontal line. By rotating the cursor, keyboard characters can be entered at an angle, into the distance (Z-axis) or even upside down and backwards, all in real time. There are no limits to composition with the Real Time Text Editor.

2D Editor

The 2D Editor allows the operator to input arbitrary flat objects by rapid digitization from artwork placed on the tablet. Overlapping of different colorable areas is possible, along with duplicating objects for repositioning, coloring, etc.

The 2D Editor puts real time entry and editing at the operator's fingertips. All operations are viewed in real time and display can be zoomed up and back or moved left-to-right for close-up scrutinizing. Character entry does not require preprocessing time prior to page composition and animation. This feature allows rapid creation time while maintaining interactive editing capabilities for the operator.

FGS-4000

3D Editor

The 3D Editor provides four different techniques for generation of three dimensional objects. With the Extruder, the operator can create a two dimensional character and make a three dimensional object. The object can also be extruded to a "ribbon" edge effect, without front or back faces. Options include variable curve tolerance to allow the operator to gauge the overall character smoothness and the capability of making a three dimensional font suitable for page composition from any 2D alphanumeric font.

Speed-Framing

This option is available for use with the Paint Editor, Animation Editor, and High Quality Animation System. It interfaces with a variety of 1" VTRs to provide automatic single frame control to allow mastering of nonreal time effects.

Animation Editor

The objects composed on a page in the Real Time Text Editor are animated by the Animation Editor. Each object, or group of objects, can be moved independently in 3D space. Controls including menus, knobs and a joystick are provided. Animations are Keyframe-based with automatic interpolation between Keyframes. Sizing, position and rotation can be animated, along with eye position, viewport size, and perspective. The FGS-4000 provides a single light source which can animate on the X, Y or Z axis. The intensity of the light source and ambient light levels also can be controlled.

By animating color, the operator has access to 16,000 real time and 16,000,000 nonreal time colors. There are 16 levels of transparency and two vector (or wire frame) character widths. When using vectors, the character maintains the assigned color, level of shading and high quality edges, a trademark of the FGS-4000.

Paint Editor

The Paint Editor extends the use of the FGS-4000 by transforming the operator's painting skills into artistic expressions of video imagery. "Paintings" are created by moving the stylus on the tablet in the same manner as moving a paint brush on a canvas. Instead of working directly on the painting, the artist watches the color monitor while moving his hand on the tablet.

Other features of the Paint Editor include: airbrushing effects, painting with 16,000 colors and 16 levels of transparency. All features are accomplished by a pressure-sensitive stylus that fits firmly in the artist's hand.

CENTRAL DYNAMICS CORP.

VIDEO PRODUCTION SWITCHERS

Series 80 Video Production Switchers

The Central Dynamics Series 80 range represents a great advance in the field of video production switchers. Based on the new SFX (Sequential Effects) group, the range offers unprecedented flexibility and ease of operation.

The Series 80 and its SFX group were made possible by the development of radically new systems of processing and control, resulting from a complete reappraisal of the uses of video switchers and the needs of operators in the light of present day production techniques.

Conventional video switchers suffer from severe limitations when used in complex production sequences, and frequently the whole sequence must be planned in advance to ascertain the correct point of entry into the sequence. Even with the pre-planning, some simple sequences are impossible on conventional switchers, because a 'lock-out' situation is reached. A single SFX group can perform sequences impossible on even a triple Mix/Effects conventional switcher. Pre-planning is generally unnecessary, and 'lock-outs' are impossible.

Three models of the Series 80 are offered, but modular construction of both electronics and control panels permits a high degree of flexibility in the choice of each system. This arrangement also enables plug-in installation by customers of additional facilities as required.

The Series 80 employs the latest techniques of circuitry and construction to ensure the highest standards of performance, stability and reliability. Each unit of the electronics is internally timed, so there are no heavy and bulky delay cables - a particular asset for mobile van installations.

Features

- Unique sequential effects (SFX) processing
- Greater flexibility plus simpler operation
- Modular construction
- Full range of options
- High performance, high stability
- Available for PAL, PAL-M, NTSC.

SFX Mode Module

(Part of each SFX group)

This module, shown above, provides selection of the operating mode of the SFX group.

The following controls are provided:

Key 1 Mode controls: a set of five momentary action pushbuttons to select the mode of operation on Key 1. Key, Matt Key, Non-Additive Insert, Spotlight, Split Screen.

Transition Mode controls: three pushbuttons to select Background, Key 1 and Key 2 Transitions. These controls may be either momentary or alternative action. (Selection is made in the electronics unit). Above the Key 1 and Key 2 buttons are LED indicators to show when these key levels are on air.

Matte controls: three potentiometers to provide control of Hue, Saturation and Luminance of the internally generated matte signal. (An optional dual matte generator allows two separate matte signals, matte 1, matte 2, to be used simultaneously in key 1 and key 2. When this option is fitted, the matte controls on the SFX module are not installed).

Split Screen controls: these controls adjust the size of the split screen and the width of a border around the split screen. The Size control also adjusts the size of the pattern when spot is selected.

Fader handle: used to effect dissolve or wipe transitions. Indicators are provided to show the current direction of travel.

Mix/Wipe controls: two momentary controls to select the type of transition controlled by the fader.

Cut: provides an immediate cut to the effect(s) selected on preview.

TR/PV: operation of the TR/PV button allows previewing of a transition without affecting on air signal.

Series 80 Standard Modules

Key Mode Module

(Part of each SFX group)

This module provides selection of key sources, masking, level and softness controls for the two key processors of the SFX group. Controls are also provided for the Dual Key Border Generator, which is a plug-in option to the SFX group.

The following control groups are provided:

Key 1 Source Controls

Note: In all of the modes of Key 1, except Matt Key and Spotlight, the key is filled with the video from the Foreground bus.

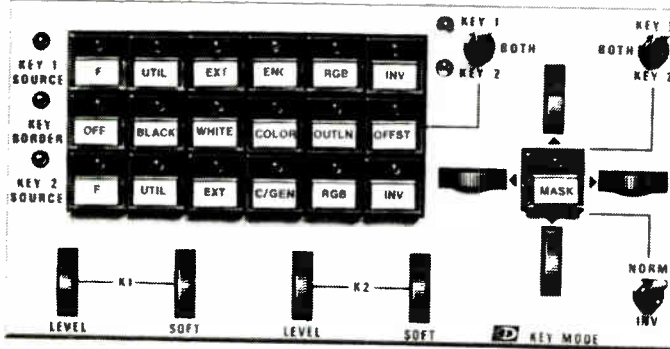

- | | |
|------|-------------------------------------------------------------------------------------------------------------------------------------------|
| F | Momentary action switches select the signal to be used for keying from either the Foreground or Utility buses, or from an external input. |
| UTIL | |
| EXT | |
| RGB | Momentary action switch select the key signal from the optional RGB Chroma Keyer. |

CENTRAL DYNAMICS CORP.

147 Hymus Blvd.

 TWX 610-422-3906 Telex 05-821506

VIDEO PRODUCTION SWITCHERS

Series 80 Key Mode Module (Cont'd)

ENC An alternate action switch. When enabled, the keying signal is derived from the encoded chroma keyer incorporated in the SFX group. The signal video input to the keyer is selected by the F, UTIL, EXT buttons. ENC is cancelled by depressing the button a second time, or by selection of RGB.

INV An alternate action switch which causes the selected key signal to be inverted.

Key 2 Source Controls

F Momentary action switches select the signal to be used for keying from the foreground or Utility busses, or from the external input. In all of these modes, the key is filled with the output of the color matte generator. With the optional Dual Matte Generator Key 2 may be filled with video from the Utility bus.

RGB Momentary action switch select the key signal from the optional RGB chroma keyer. In this mode the key is filled with the video from the Utility bus.

C/GEN Momentary action switch. Separate key and video fill signals are accepted from an external character generator

INV An alternate action switch which causes the selected key signal to be inverted.

Level and Softness Controls

Two pairs of potentiometers provide control of the key Level (clipping level) and Softness for Key 1 and Key 2.

Key 1/Key 2 Mask

An alternate action pushbutton enables a rectangular mask for Key 1 and Key 2 processing. A toggle switch assigns the rectangular mask to Key 1, Both, or Key 2. Four potentiometers provide full independent control of position for the four sides of the rectangle. When the mask is enabled, a brightness change on the preview output displays the masking area to permit accurate adjustment. Keying is inhibited outside the preset rectangle. A toggle switch inverts the mask i.e. —keying is inhibited outside the rectangle.

Masking of Key 1 may also be independently performed by patterns derived from the Wipe Mode Module. This function is enabled by the simultaneous operation of the KEY and S/SCN switches or MATT and S/SCN switches on the SFX mode module (page 3). When this function is enabled, a brightness change also displays the masking area in the preview output. Key 1 may be simultaneously masked by the S/SCN-KEY or S/SCN-MATT selection and by the Key Mode module rectangular MASK selection.

Key Border Controls (Optional)

Note: These controls are operational only when the Optional Dual Key Border Generator is fitted to the SFX group. This option also includes 1 or 2 line key borders.

A toggle switch assigns border selection to Key 1, or 2, or both, and all borders may be single or double width.

Note 1: Different color and key border modes can be assigned to Key 1 and Key 2.

Note 2: 1 or 2 line borders are selected by successive depressing of the BLACK, WHITE or COLOR pushbuttons.

BLACK Black all around borders.
WHITE White all around borders.
COLOUR All around borders, filled with the output of the matte generator, phase shifted by 180 degrees. This facility permits colored borders around a color matte title with minimum chroma crawl effect.

OFFSET An alternate action switch which displaces the border to the right and down, giving a 'drop shadow' effect.
OUTLINE The border only is displayed (black, white or colored, as selected).
OFF No border.

Wipe Mode Module

(Part of each SFX group)

This module provides basic pattern selection and multiplication, wipe direction and edge controls, pattern modulation and positioning. The controls are also used for the SPLIT SCREEN mode of Key 1.

Wipe Direction

Three pushbuttons provide selection of N (normal) N/R (normal/reverse) and R (reverse) direction.

Wipe Edge Controls

Two pushbuttons provide selection of hard or soft edge wipe. A potentiometer controls the degree of softness. This button also enables the border for the SPLIT SCREEN mode of Key 1.

An alternate action pushbutton selects a wipe border, which may be used in conjunction with hard or soft wipes. The border is filled by the matte generator and a potentiometer controls the width of the border.

Pattern Selection

A group of nine pushbuttons select the basic patterns. A symmetry control is provided for the box, diamond and circle patterns.

Pattern Multipliers

Two pushbuttons 'X H' and 'X V' allow multiplication of the selected pattern by four horizontally, or vertically, or both. When the positioner is turned On (NORM), the multiplication ratios (horizontal and vertical) may be varied by moving the positioner.

EE

This pushbutton selects the output of the optional Extended Effects Generator in place of the standard patterns.

CENTRAL DYNAMICS CORP.

 TWX 610-422-3906 Telex 05-821506

VIDEO PRODUCTION SWITCHERS

Series 80 Wipe Mode Module (Cont'd)

(Part of each SFX group)

Pattern Modulator

Amplitude and frequency controls operate in the conventional manner, except that modulation is normally of both horizontal and vertical edges. (Vertical or horizontal modulation may be inhibited in the rack electronics if required.) A three-position toggle switch selects sine wave, square wave or triangular modulating waveforms and another three-position switch selects OFF (no modulation), ON (modulation pattern "runs through" according to the setting of the frequency control) and LOCK (modulating frequency is locked to the vertical and horizontal picture frequencies. Various multiples can be obtained by appropriate setting of the frequency control). External modulation signals can also be accepted.

Pattern Positioner

A three-position toggle switch selects OFF (positioner not operating), NORM (normal "On" positioner operation with non-repeating patterns), and WIDE (the available wipe range is doubled permitting a full wipe across the picture from or to any pattern in any position).

Black and Background Generator

(Standard on every Series 80 switcher)

This unit provides black and color background signals for the primary inputs to the switcher, and separate black signals for use in the secondary stages of the switcher. Hue, Saturation and Luminance controls are provided for the color background. An additional output of color black is provided at the same timing as the switcher inputs for feeding to cameras, pulse assignment systems, etc.

A 2nd Background Generator can optionally be fitted to the switcher.

Program Processor Module

The Program Processor Module used in Models 680 and 1080 permits a wide range of Mix, Wipe, Title and Fade effects to be performed.

The module is fed by the Mix A and Mix B busses, each with re-entry facilities of the SFX Amplifier, and these two busses may be used as either A/B Mix, or a Preset to Program Take.

The Module operates similarly to the SFX Module; i.e., a transition may be performed by changing only the background or title or changing both the background and title simultaneously. A separate control permits fading a synchronous or non-synchronous source, or composite source to black.

The following control groups are provided:

Transition Mode controls: Two pushbuttons to select Background transition and/or Title Transition. A LED indicator, above the Title button, indicates when the Title is on-air.

Title Mode controls: Four buttons to select individual title sources. Any of these may be strapped for self keying or for accepting separate video and key (gate) signals as from a character generator. With pushbuttons, the key may be normal or inverted. Matte filled or video filled, and may be Blinked at a variable rate. Key Level and Softness controls are provided.

Key border controls: Border On/Off, Outline (only the border is displayed) and Offset. The border width may be 1 or 2 Lines.

Matte controls: Hue, Saturation and Luminance. Border matte is always the complimentary hue of the Matte filled key. Independent border Saturation and Luminance controls are provided.

Dual Matte Generator

The dual matte generator option allows different matte signals (Matte 1, Matte 2) to be used in the Key 1 and Key 2 levels of each SFX group. Two switches, Key 1 M1/M2, Key 2 VID/M2, allows Key 1 matte to match Key 2 matte, and Key 2 to be filled with Video from the Utility bus or Matte 2.

Wipe border matte is derived from Matte 2.

NOTE: When this option is fitted to an SFX group, the matte controls on the SFX module are not installed.

Series 80 Optional Modules Extended Effects Generator

This module provides a wide range of rotary, matrix, spin and other wipes, and a pointer. There are five control groups.

Exclusive patterns (Black buttons)

Rotary wipes and matrix wipes can only be controlled by one fader handle and must always wipe over the full picture field. If an exclusive pattern is selected, a switch assigns control to SFX1 or SFX2. In this mode, the basic SFX pattern generator is still available for split screen, so it is possible for example, to perform a rotary wipe to a corner insert split screen. (By appropriate selection of SFX transitions, the foreground or background or both may be wiped.)

CENTRAL DYNAMICS CORP.

147 Hymus Blvd.
 Pointe Claire, Quebec CN H9R 1G1
 (514) 697-0810
 TWX 610-422-3906 Telex 05-821506

VIDEO PRODUCTION SWITCHERS

Series 80 Extended Effects Generator (Cont'd)

Orientation controls:

Four pushbuttons select the orientation of start point of the selected rotary wipe. The same controls may be used to determine the resolution of the matrix wipe patterns (4x3, 8x6, 16x12, or 32x24), and to select Normal or Alternate pattern, and Spin facilities on the non-exclusive patterns.

Non-Exclusive (White buttons)

These patterns are used in exactly the same way as those of the SFX pattern generator. They can be controlled independently by both SFX faders and can be used as split screen patterns.

Normal and Alternate pattern selections are available from each button, and these patterns may be used as Spin wipes.

Pointer:

Four pushbuttons control the direction of the pointer. This effect is available as a key input to each SFX group and is totally independent of all wipe functions.

These same controls are also employed to select the operational mode of spin wipes. Wipes may spin at a constant rate (free), or may rotate according to the fader arm motion (lock), or may not spin, but have their orientation changed (angle).

(A similar generator is available as a free standing model for use with any production switcher)

Positioner:

The positioner always controls the position of the pointer. The positioner on/off switch enables positioner control of the star and rotary patterns.

Modulation:

Modulation from the selected SFX group is available for all wipes (except matrix) and is controlled by the modulation on/off switch. When using an exclusive pattern it is possible to perform an unmodulated wipe to a modulated split screen.

Note: A second Extended Effects Module may be installed on Model 1080, so that each SFX has exclusive use of Extended Effects.

Digital Video Effects Interface

Each SFX provides, as a standard feature, outputs for key and wipe signals used by digital effects units. A video input for the Digital Effects unit may be provided by either the Utility bus, an Auxiliary bus of the Series 80 Model 1080, or by an optional auxiliary bus.

The DVE Key output is usually made available to the switcher as one of the inputs of an RGB output switching system (in place of one of the chroma keys).

Consult CDL's Marketing Services office for application information and details for interfacing to particular Digital Effects units.

One Bus Quad

This module provides quadplexer effects for all series 80 switchers. There are 5 selectable patterns which produce a composite picture derived from either 3 or 4 sources selected from 10 available video input signals.

The 5 patterns include 2 rectangular quad splits, 1 diagonal quad split, and 2 "Y" splits.

Patterns can be positioned horizontally and vertically, and edges may be soft bordered and colorized.

Other Features

Quadrant preselections can be aired simultaneously or in any sequence.

Quad output can be fed to another switcher input not used for Quad inputs.

Quad color border matt can be fed directly to the 10th input and used as a quadrant fill. It is 180° out of phase with the border matt and can therefore be used when colorizing pattern borders.

(Also available as a free standing VQ2170 model for use with any production switcher.)

Quadplexer

This module provides 'Quad Split' facilities, with SFX re-entry, and can be fitted to Models 680 and 1080.

A 4 x 4 input switcher allows selection of sources to the four corners of the split. The four sources provided are normally the Utility bus, the SFX1 Foreground and Preset Background Busses and the Output SFX1 (Utility 2 replaces Preset Background on Model 1080).

Three potentiometers provide control of the horizontal split position, and independent control for the two vertical splits. These controls are disabled if the alternate action 'CENTer' control is operated. In this mode, the Quadplexer provides a conventional quartering of the picture area.

A border of variable width is enabled by a toggle switch, and the integral Border Colorizer provides a color matte output to fill the border.

Special configurations using auxiliary busses allow a greater range of effects to be entered into the QUAD. Contact CDL Marketing Service for details and recommendations.

CENTRAL DYNAMICS CORP.

147 Hymus Blvd.

 TWX 610-422-3906 Telex 05-821506

VIDEO PRODUCTION SWITCHERS

Series 80 Title Keyer

This unit is designed to key color matte titles in program video. A Key Border module is fitted to provide a variety of edging effects. One or 2 line key borders are standard.

The unit accepts the following inputs:

Input video

Color black

For Key signal inputs. (One input may be strapped to accept separate feeds of key and video from a character generator.)

The internal color matte generator is locked to the incoming video, and no pulse feeds are required. An output of separated syncs is provided, and if this feed is used to drive a caption camera or character generator, this unit may be used to title over non-synchronous sources. Keying is inhibited if the selected key signal is not synchronous with the video.

Controls:

Matte controls: Hue, Saturation, Luminance

Key Border controls:

Border On/Off.

Outline (the border only is displayed).

Offset (the border is displaced to the right and down to give a drop shadow effect).

1 or 2 line borders are selected by successive depressing of the ON, OUTLN or OFFST pushbuttons.

Key source controls: 1, 2, 3, 4. Key input 1 is normally fed from the Utility bus of the switcher for maximum flexibility. Input 4 may be strapped to accept separate key and video from a character generator.

Title fader: allows the title to be faded into or out of the program video.

Title In/Out: allows the title to be cut into or out of the program video.

Master fade: fades the output of the keyer to black, and can be used with synchronous or non-synchronous video. A cut to local color black will occur at the end of the fader travel.

Key level: adjusts the "clipping level" of the keying circuits. Softness is preset to minimize edge crawl effects.

Border fill controls: The border is filled with the output of the matte generator, phase shifted by 180°. This permits color edges to colored titles with minimum crawl and differential saturation effects. Separate Saturation and Luminance controls are provided for the border signal, and permit black, white, grey or colored edges to be selected.

Preview: Three outputs of the preview signal are provided. This always displays the title keyed into the video, irrespective of the settings of the faders and In/Out controls.

(Also available as a free standing DK 2160 model for use with any production switcher)

Auto Transitions

Smooth, accurate transitions can be made for each SFX and the Program Processor Amplifier. Rates from one frame up to 999 frames can be selected. A transition can be stopped and restarted at any time.

Audio Follow Switcher

Either Mono or Stereo systems may be installed in any Series 80 switcher.

The system includes an 8 x 2 audio switching matrix for dissolve, fade-to-silence and A/B/output switching. The two audio busses follow the Program Background and Preset Background busses of an SFX.

There are 3 control modes: Manual, Editor and Follow Switcher.

In the Follow Switcher mode, independent selection is provided for Follow Crosspoints and Follow Faders. When Follow Fader is selected, the dissolve will follow the SFX fader when a background transition is performed. The fade-to-silence follows the fade-to-black of the Title Keyer (when this option is installed). Note: Title Keyer facilities are standard on Model 680 and 1080.

The system includes a 4" x 8" control panel (standard Series 80 Switcher control panel module) and rack electronics (6 RU).

Utility and Auxiliary Busses, and Re-entry

A variety of options are available for installing busses to a Series 80 Switcher.

4800 Series Busses may be added to the basic switcher electronics; i.e., additional rack space is not required. Models are available with primary only inputs, primary and secondary inputs, and timed to the switcher output or untimed. The following number of busses may be added to Series 80 Switcher in increments of 1 bus: 4 to 480, 2 to 680, and versions of the 1080 may have up to 6.

CENTRAL DYNAMICS CORP.

147 Hymus Blvd.
 Pointe Claire, Quebec CN H9R 1G1

 TWX 610-422-3906 Telex 05-821506

VIDEO PRODUCTION SWITCHERS

Utility and Auxiliary Busses, and Re-Entry (Cont'd)

UM8 and AM2, 8 and 2 Series Bus Expansion Systems may be added to Series 80 switchers to provide timed (UM Series), or untimed (AM Series) busses. They may also be used for general purpose vertical interval switching. The UM Series includes primary and secondary inputs. The AM Series has only primary inputs. These systems require additional rack space.

Contact CDL Marketing Services for full details and recommendations.

RGB Chroma Key Systems

The new RGB chroma keyer developed for the Series 80 Switchers is designed for optimum performance under a wide range of keying conditions. Controls are provided for Hue selection and "Separation" of the keying signal, and Shadow level. The shadow output is used to modulate the background signal, to obtain realistic shadows in the key composite. (Note: the shadow facility is only available on Key 1 of the SFX group).

Selection facilities can be provided for input or output of the chroma keyers.

1) For a single chroma keyer, a 6 x RGB input selector is available. For two chroma keyers a dual 6 x RGB input selector is available (See Figure 1).

2) For greatest flexibility, one chroma keyer per RGB source (up to a maximum of six) may be fitted, together with 6 x 2 output selectors. A 6 x 1 or 6 x 2 shadow output selector may also be provided, as appropriate (See Figure 2).

Both of these systems are controlled by the RGB Key Select panel, fitted with the correct number of switches. Each selector may be switched to any of the RGB sources (1-6) or to follow the selection of the appropriate foreground video.

For models 480 and 680, a special 4 x RGB Follow Only INPUT Selector is available as an option. Either a Single or Dual version can be installed in the switcher rack electronics. (No additional rack space is required.)

Figure 1. Input Switching System

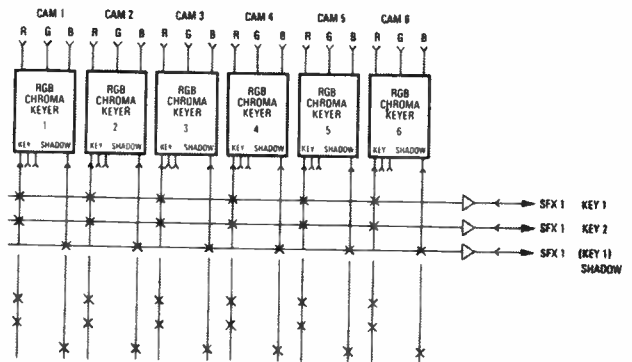

Figure 2. Output Switching System

Special Chroma Keying Systems

Two systems are available for cameras which produce preprocessed single line key signals, rather than RGB, and can also be used to select key signals from digital video effects units. The systems provide manual/follow switching of the key signals.

Consult CDL Marketing Services for details.

Encoded Chroma Keyers

Encoded chroma keyers may be fitted to each SFX amplifier.

The standard option is a one line delay type keyer and does not affect systems timing.

"Zero delay" encoded chroma keyers are also available for the most critical application. Details available from CDL Marketing Services upon request.

VIDEO PRODUCTION SWITCHERS

Computer Assisted Production—CAP

CAP is the advanced technology Computer Assisted Production option designed specifically for Central Dynamics' Series 80 video production switchers.

The Series 80 lends itself to Computer Assisted Production due to the unique design of its SFX amplifier which permits extremely complex production sequences to be performed with one fader handle.

CAP is an invaluable aid to fast moving production sequences.

Complex scenes involving multiple sources, keys, SFX amplifier mode, etc. can be preloaded into CAP's memory, and recalled randomly or sequentially, and accurately executed during real-time production.

This gives the operator full control of the dynamic transitions necessary for artistic expression and the desired effect.

Full manual control of all functions is maintained to allow last minute manual overrides of any CAP selection.

CAP FEATURES

- Can be added to any Series 80 production switcher.
- Memorizes all crosspoint selections, mode selections and potentiometer settings for a complete Series 80 SFX processor systems.
- Effects Dissolve dynamically transfers static analogue potentiometer settings from the setup of one event to a second event, over a period of time defined by the Auto Transition Module.
- Integral memory for 32 or 64 switcher set-ups.
- Ten-minute memory for all Learn events; 120-second Learn duration for any single event.
- Memorizes auto transition rates.
- Instantaneous random access to any event.
- Event editing permits changing contents of any event, such as a transition, without affecting the switcher set-up.
- Permanent storage of memory contents on optional floppy disk (not available on Model CAP-1).

	●	●	Background

*A/T module required on switcher

CAP MODELS

The CAP-1 Series (CAP-1 and 1XL) can be used with any Series 80 Model switcher. CAP-2XL can only be used with Model 1080.

Switchers with one SFX System require only the CAP MASTER Module.

Switchers equipped with two SFX Systems normally use both MASTER and SLAVE Modules. If only CAP MASTER is supplied, then selection of CAP control for either SFX-1 or SFX-2 must be specified on order.

When CAP-2XL Model is supplied, the MASTER Module controls SFX-2 and the SLAVE Module controls SFX-1.

Floppy Diskette Option

The Diskette and its Control Module permit the stored events in CAP to be transferred off-line to a diskette. The diskette can be filed for later use, or sent to another production center equipped with a Series 80 CAP.

Data from CAP MASTER and CAP SLAVE Modules can be quickly stored on the diskette, and retrieved, with the operation of two pushbuttons. This option is not available for CAP-1 Model.

The SLAVE panel is identical to the MASTER except for two keys. Because the SLAVE Module is used only for the SFX-1 Processor System, the MIX-LRN and A/T functions are replaced with SLAVE and FREE. The SLAVE key either 'ties the SLAVE Module to the MASTER or permits it to operate independently.

When the two modules are used independently, CAP has capacity of 64 events with information for different sections of the switcher. When 'tied', the capacity is 32 events, with each module containing information for the entire switcher.

Operation

The two basic operation modes are storing and recalling events manually or automatically.

To use CAP the following simple steps are performed.

1. Setup the switcher for an event's sources, keys, effects, etc.
2. Store the event information in the CAP memory.
3. Repeat steps 1 and 2 for each new event, or recall an event to reset the switcher to that previous event setup.

The following types of events are easily handled by CAP.

- Switcher status. (SWR)
- Auto transition rates. (A/T)
- Fader Learn. (LRN)
- Simultaneous auto transition from one set of analog values to another, excluding fader values. (EDIS)
- A combination of the above.

Each CAP control panel has two 4-character information displays and control keys with status indicators. The keys are used for:

1. Event selection for the current production sequence (Numeric keys with/without shift).
2. Select switcher sections that are to be memorized: SWR, E DIS (Effects Dissolves), SFX-LRN (Learn), MIX-LRN (Master Mix Learn), and Auto Transitions (A/T).
3. Mode Controls: Auto, Reset, Store Enable, On-Air Protect.

INSTALLATION

CAP Control Modules are mounted on panels which can be installed into spare 4" x 8" switcher panel slots, or in a matching switcher extension tub. Control panel extension is always required if the floppy diskette option is to be fitted. All CAP models can be added to any installed Series 80 switcher.

Prices and Specifications Subject to Change Without Notice.

VIDEO PRODUCTION SWITCHERS

Edit Controller Interfaces

All Series 80 Switchers are designed to be controlled by video tape edit controllers.

In some cases, the edit controller manufacturer supplies the interface; in others, CDL supplies the interface.

CDL's 480 EIF Interface for the Sony BVE 5000 is representative of the functions controlled by the editor.

A two way dialogue between the editor and a Series 80 Switcher permits:

- (1) Control of Preset, Program and Foreground buses.
- (2) Control of transitions of one SFX amplifier.
- (3) Automatically selects Cut, Mix, Key and Wipe modes.
- (4) Selects the wipe pattern.
- (5) Selects Normal or Reverse wipes.
- (6) Controls optional 8 x 2 audio switching systems; mono or stereo (480 AFM or 480 AFS).
- (7) Controls audio dissolves between the two audio buses of the 8 x 2 matrix.

Consult CLD's Marketing Services for application information and details for interfacing to a particular editing system.

Series 80 Rack space and Mechanical dimensions

Series 80	Rack Electronics (Note 1)	Control Panel		
		16 inputs W H	24 inputs W H	32 inputs W H
CD-480	15	25" x 16" (634 x 406 mm)	30" x 16" (762 x 406 mm)	N/A
CD-680	18	34 5/8" x 19 1/4" (879 x 489 mm)	39 1/8" x 19 1/4" (994 x 489 mm)	N/A
CD1080	36	47 5/8" x 22 3/4" (1209 x 578 mm)	53 1/8" x 22 3/4" (1349 x 578 mm)	59 1/8" x 22 3/4" (1501 x 578 mm)

	Extension tub	Cut Out 15° Mounting with wooded end	Cut Out Flush Mount
CD-480	11 5/8" x 16" (295 x 406 mm)	Add 1/8" (3 mm) to panel width and 7/8" (22 mm) to panel height	Add 1/8" (3 mm) to panel width and 1/8" (3 mm) to panel height
CD-680	11 5/8" x 19 1/4" (295 x 489 mm)		
CD-1080	11 5/8" x 22 3/4" (295 x 578 mm)		

Note 1)

The rack space shown includes a 2 RU Power Distribution Frame with an integral forced air convection fan, and a 1 RU Air Filter Frame. The Filter should be located on bottom of the switcher electronics, and the Power Distribution Frame mounted on the top.

Note 2)

When an ExtensionTub is supplied with a switcher it is normally mounted to one side; therefore, the console cutout width = control panel width + Ext. tub width of 11-5/8" + 1/4".

TYPICAL SPECIFICATIONS

Video Inputs:

16, 24 or 32 inputs, 1 V p-p synchronous or non-synchronous.
 75 ohm loop thru: return loss better than 40 dB to 5 MHz

Video Outputs:

2 Program outputs.
 2 Preview outputs (Utility/Preview)
 1 Auto preview output for each SFX group.
 All outputs are 1 V p-p composite; return loss better than 34 dB to 5MHz

Pulse Inputs:

All are 75 ohm loop thru, 2V or 4V p-p
 Sync
 Blanking
 Burst Gate (PAL only)

Subcarrier Input:

75 ohm loop thru: 1 V or 2 V p-p

Frequency Response:

1.5 MHz \pm 0.1 dB
 5-7 MHz \pm 0.2 dB - 0.5 dB
 Steady roll off above 7 MHz.

K Rating:

Kp 1/4% K Kp-b 1/4% K Kb 1/2% K

Linearity:

Better than 1% 10-90% APL.

Tilt:

Line and field (standard window)
 Less than 1%.

Chrominance/Luminance Inequalities:

Gain: Less than 1%.
 Delay: Less than 10 nS.

Non-Linear Distortion:

(10-90% APL)
 Dynamic Gain: Less than 1%.
 Diff. Gain: Less than 1%.
 Diff. Phase: Less than 1°

Crosstalk:

One adjacent input hostile.
 All paths energized except path under test better than -56 dB.

Path Delay, typical:

CD480: 200nS
 CD680: 350nS
 CD1080: 600nS

Path Length Inequality:

Less than 1° at subcarrier frequency.

Signal to Noise Ratio:

Better than 60 dB unweighted relative to 0.7 V.

Power Input:

(50-60Hz) 117V \pm 10% 234V \pm 10%

Power Requirements, typical:

CD680: 550VA CD480: 400VA
 CD1080: 900VA

Tally Outputs:

Two independent tally outputs are provided, each providing one 'make' contact to a common for each input. Contact rating 2 A, 40 VA resistive.

Permissible ambient temperature range:

0-50°C.

Within this range the performance specification will be maintained for changes of \pm 10°C, about the ambient temperature at which the equipment was set up.

Standards:

Switchers can be supplied for NTSC, PAL, PAL-M operation. Please specify at time of order.

CUSTOM SYSTEMS MESSAGE GENERATORS/ CLOCK SYSTEMS AND VIDEO CASSETTE SEQUENCERS

SERIES 3000 CUSTOM SYSTEMS

The Channelmatic 3000 Series "Building Blocks" provide the system designer with a diversified group of standard pre-packaged and pre-tested, plug-in modules which can be easily combined to satisfy a large variety of requirements. Over 50 modules, each with different functions, are available.

Developed by Channelmatic, Inc. through many years of providing custom designed switching and control systems for Cable and Industrial Television users, these modules represent the most reliable and economical solution to many specialized system requirements.

CMG-3008A 8-Page Color Message Generator Module

The messages are contained on a factory-programmed EPROM. Eight customer-composed messages are supplied with the module.

The CMG-3008A requires external video sync from a CSG-3000A Color Sync Generator module. One sync generator will drive up to thirty CMG-3008A modules.

The CMG-3008A is a very low cost 8-page color message generator module which displays an 8-line fixed message on a color background.

Up to eight different message pages can be stored in its non-volatile memory. The page to be displayed is selected with either a remote switch, a DIP switch mounted on the module, or by applying a 3-bit binary code to the page select inputs on the module.

Characters are displayed in a custom-designed uppercase font which includes numbers and all common symbols. The bold, white characters are 18 TV lines high for maximum legibility. Up to 32 characters may be placed on each message line; yielding a total message length of 256 characters per 8-line page. **\$1,605.00**

PCM-3000A SUPERCLOCK™ Programmable Controller Module

The PCM-3000A Programmable Controller is a microprocessor-based 7-day clock module for the Channelmatic Series 3000 frame. It has a 1-minute resolution and a large memory for storage of program events. The system is bus-oriented and provisions are included for input-output capability and addition of a multitude of special control interfaces. The basic system has eight programmable closure-type outputs which can be pre-programmed to open or close on any desired weekly time schedule.

The PCM-3000A is designed to be used in any application where local or remote control of equipment is required on a 7-day schedule. By adding appropriate modules, it can be used to control almost any electrical or electronic device, including satellite receivers, video cassette machines, audio-video switchers, relays, IF switching, message generators, solenoids, motors, etc.

A UAD-3000A Unattended Telephone Answering Device module and related CTD-3001A DTMF Decoder module can be added to a clock-controller subsystem enabling it to be operated over standard telephone lines.

Vertical-Interval Video Cassette Sequencers VCR-3005A-5

Automatic vertical-interval video cassette sequencer system for playback of locally generated programming. Frame is wired to handle up to five VCR's and provisions are included for cascading two or more main frames for the sequential control of any number of machines. Front panel Sequence Selector Switches allow each VCR to: 1) continue sequence normally, 2) bypass to the next VCR in sequence, or 3) terminate the sequence. For broadcast quality performance, all switching occurs in the vertical blanking interval of program video. This allows glitch-free transitions if the VCR's in the sequence are sync-locked using an accessory such as the HANDIMOD I. System includes ATG-202A Tone Generator/Verifier for videotape encoding. Sequence may be initialized using manual pushbutton, relay closure, or automatically on a real-time basis by the PCM-3000A Clock Controller. **\$5005.00**

Typical Superclock Programmable Clock Systems PCM-3000A-1

Programmable 7-day, 1683-event clock with eight outputs. Assembled in Series 3000 frame with blank filler panel. Outputs are open collector transistor type, which will sink 40 MA at 30 VDC. **\$2380.00**

PCM-3000A-2

Same as -1, except outputs are eight form A (SPST) relay closures. **\$2480.00**

PCM-3000A-3

Same as -1, except also has UAD-3000A Automatic Telephone Answering Device module and CTD-3001A Tone Decoder for telephone override capability. **\$2980.00**

PCM-3000A-4

Same as -3, except outputs are eight form A (SPST) relay closures. **\$3080.00**

CMG-3008A

PCM-3000A SUPERCLOCK

VCR-3005A-5

PCM-3000A-13

Remotely programmable 7-day, 1683-event clock having both transmit and receive subsystems. Transmit subsystem is provided with an answering device and telephone override. Receive subsystem has decoding for twenty independently programmable decimal outputs, each of which are provided with a form A (SPST) relay. Receive system can be expanded to control hundreds of devices, including satellite receivers, audio/video switches, etcetera. Transmit and receive subsystems can be connected by any voice-grade audio path. Multiple hubs can be controlled by a single transmit subsystem (PCM) by adding receive subsystems for each. Includes modems, card extenders and blank panels. **\$7860.00**
(Additional receive subsystems are \$3555 ea.)

CHAMELEON PAINT SYSTEM

Chameleon:

High resolution stand-alone paint system with digitizing tablet and pen, 10 megabyte removable hard disk, internal genlock with keyer.

FEATURES

- Easy to use icon-oriented Human interface
- Full set of drawing tools (plus free-hand drawing)
 - Line
 - Circle (outline or filled)
 - Rectangle (outline or filled)
 - Closed figure
- Area fill
- Multiple brushes
- User-definable brushes
- Cut and paste, with resizing
- Layout grid and drawing aid
- 16-Level zoom with pan
- Flexible color selection and modification
- 768 x 482 Resolution (582 lines for PAL)
- 256 Colors displayable out of 4,096 possible
- Digitizing tablet with pen
- 10 MegaByte removable hard disk
- Internal keyer configurable for downstream or upstream
- Simultaneous RGB and NTSC or PAL available with optional RGB board
- 256 Levels-of-Gray camera capture (option)

Chameleon\$11,900.00

**DIGIFEX™ — SPECIAL EFFECTS
 GENERATOR, MODEL RG-DFX-1
 FOR CHYRON® RGU-2, MODEL
 DFX-1 FOR CHYRON® IV**

FEATURES

- Multiple effects including spin, flip, rotate, zoom, compress, and image splitting can be created instantaneously
- Position and time duration of effect are operator selectable
- Key manipulation can be background or foreground relative to CHYRON characters
- 100 Matrix Wipe Patterns
- Standard broadcast rack mounted
- All trigonometric computations are implemented in hardware with pipeline processing under direction of a micro-processor controller
- NTSC and PAL compatible
- Special effect sequences can be stored within CHYRON messages and recalled at will
- A manual operation is available for effect formatting and testing
- Provides an external key signal for integration into your system

The DIGIFEX Special Effects Generator provides the CHYRON IV and the RGU-2 with a powerful new low-cost modular option. The DIGIFEX will provide exciting

special visual effects through digital video manipulation of CHYRON generated graphics.

Titles, logos, and shapes can be manipulated and positioned anywhere on the screen. The functions of spin, flip, rotate, zoom, compress, position, and image splitting can be requested from the CHYRON keyboard. Combinations of these effects may be individually customized. The speed of performance along with number repetitions can also be controlled from the CHYRON keyboard. All functions operate in real time and provide smooth transitions between steps. DIGIFEX will support up to 15 colors at one time from the palette provided by the CHYRON system. The DIGIFEX image may be keyed as a background effect behind CHYRON characters or as a foreground effect over the characters. It can also be manipulated as a background to foreground, or reverse transaction, to produce a three dimensional effect. A Channel Control Module is required on a CHYRON IV and a Digifex Control Module is required on an RGU-2 System.

Digifex\$19,500.00

THE EXPANDED CHYRON IV® CHARACTER/GRAPHICS GENERATOR

FEATURES

- 27 Nanosecond Resolution
- Automatic Character Kerning
- Software Controlled
- RS232 Computer Interface
- Software Diagnostics
- 512 Color Choices
- Versatile Multi-Font Library
- Proportionally-Spaced Characters
- Background Stripes and Solids
- True Character Overlay
- Choice of Character Edging (Style and Color)
- See-Through Characters
- Auto-Color/Font Change
- Diagonal Typing
- Multi-Color Character/Logo Display
- Six Font Loading Positions
- Programmed Animation (PSC)
- Multiple Roll & Crawl Speeds
- Adjustable Video Window During Roll
- Slow Reveal
- Automatic Centering
- Mini-Computer Programming
- Automatic Instruction Displays (AID)
- Flexible VIDIDISC Magnetic Storage System
- Disc Duplication
- Flash
- Automatic Lower Third Display
- Visibly-Bordered Safe Title Area
- Operator Controlled Margin Release of Safe Title Area
- Left & Right Justification
- Insert and Delete Controls
- 256 Tab Positions
- Auto Pause and Rolls and Crawls
- Modular Design
- Clock/Event Timer
- Automatic Kerning
- Word or Row Squeeze, or Stretch
- Row Swap

BACKGROUND GRAPHICS/ PAINT SYSTEM

OPTIONS

- International Fonts
- Right-to-Left Writing
- Subtitling Interface
- SMPTE Time Code Interface
- Real Time Digital Effects (Digifex)
- Advanced Camera Font Compose
- Multimode Graphics Module (MGM)
- Full-Function Second Channel
- Color Encoder
- Down Stream Keyer
- Multiple Keyboards
- Multiple VIDIDISC Transport
- Large Capacity Winchester Hard Disc
- Drawing Tablet (Electronic Painting System)
- Channel Control Module CCM (Mixes, Wipes, Fades)
- Sports Scoreboard
- Weather Service Interface
- Custom Font/Logo Compose Service

Chyron IV® Priced from \$54,000.00 to \$87,000.00 depending on configuration.

MULTIMODE GRAPHICS MODULE (MGM) (Option)

The Multimode Graphics Module (MGM) provides a multitude of graphic abilities never before associated with a character generator. In addition to Standard Camera Font Compose, traditionally a feature of Chyron systems, the MGM offers an Advanced Camera Font Compose that is unparalleled in the industry today. Combined with the MGM's Background Graphics/Paint System, it provides a graphics machine of awesome versatility.

FEATURES

- Standard RS170 Input
- 512 Color Palette
- Full Screen Display Capability
- Accepts Drawing Tablet Input
- Resizing of Graphics
- Cut & Paste
- Standard Geometric Library
- Infinite Montaging of Multiple Graphics
- Montaging of Text Channels
- Area Fill
- Custom Brush Compose
- Palette Animation
- Satellite Weather Service Interface

An important extra dimension is added to Chyron IV by the MGM's background graphics abilities. High resolution background graphics (1024 x 512 pixels) can be created either from standard black-and-white camera input or hand drawn with Chyron's optional drawing

tablet. Up to 16 colors may be selected from a 512 color palette, as well as a wide variety of brush sizes and styles, color fill, color pick-up, etc. Circles, rectangles and other graphic primitives are automatically drawn at the touch of a key. Completed portions of the background graphic can be cut and pasted and varied in size. Backgrounds can also be montaged over other backgrounds for an unlimited layered effect. Palette animation is an important function of the MGM. The colors of the background graphics can be animated for exciting effects such as Glow Glitter, Neon and Color Trails.

Weather Service Interface of the MGM can accept and display high resolution weather graphics from Weather Service International (WSI) or Environmental Satellite Data, Inc. (ESD). The weather graphics are transmitted over telephone line* to the Chyron IV and stored on Chyron's Winchester disc for subsequent display on command.

*Data terminal and modem are required.

In foreground mode, the MGM provides an extremely advanced form of camera font compose that will quickly and easily create standard and multicolor graphics. Fonts can be automatically modified and added to your font library.

When background graphics are created with the MGM, they can be displayed as a single graphic or combined with text and other graphics on Chyron IV's channel one or two and stored as a single message on Winchester Disc.

MGM.....\$8,000.00

RGU-2

High quality graphics & titling system for studio and mobile production. Incorporates many features of the Chyron IV.

Character Resolution of the Chyron RGU-2 is unsurpassed in television production. It is defined in 27 nanosecond increments to produce characters and graphics with sharp edges, smooth curves and distinctive detail similar to live camera video.

Font Library contains styles and sizes designed for high quality video presentations and a full range of programming applications. Character width and spacing is proportional for each character. Fonts contain upper and lower case alphas, numerics, punctuation, symbols, circumflexes, and diacritical marks. New fonts are constantly being added.

Font Storage can hold 4 complete fonts at once, allowing intermixing of styles and sizes in any word, row, or full page of text. The standard Chyron RGU-2 memory has a capacity of over 32,000 16 bit words.

Color For Characters/Background is available when using the optional CHYRON Color Encoder. Color can be produced on a character-by-character or complete message basis, with a choice of 8 colors at a time, selectable from a 64-color palette. Background colors can range in size from full screen height to as small as 8 TV lines. Because the height of background color is independent of character height, characters may be positioned over a background of two or more colors at any location on the screen. Character and background colors are recordable on VIDIDISC.

The Logo Compose Feature permits composition of custom graphics and fonts from artwork via keyboard entry.

The Character Display Area is defined by a visible safe title area on the Edit monitor. It will accommodate up to 62 characters per row, depending on their width and up to 20 rows per page, depending on their height. Maximum width of characters can encompass full screen width. Maximum height of characters can be 420 TV lines. Large graphics, such as station or sponsor logos can be displayed in conjunction with text.

Vertical Interval Change allows next messages to be displayed without black areas between messages.

Edging allows characters and graphics to be displayed with symmetrical "surround" edging, non-symmetrical "dropshadow" edging, or no edging. All edge types, including see-through characters, may be displayed with black or white edging.

Vertical Roll is selectable in five speeds, including pause. Roll may be used in two modes: roll from full screen, and roll from erased screen. Up to 2000 rows of standard text may be rolled continuously. An end-of-roll vertical tab—recorded at composition time—automatically pauses the roll at the desired screen location. Roll speeds may be changed at any time.

Horizontal Crawl is selectable in five speeds, including pause. Messages are crawled from right to left on any row within the display area. An automatic end-of-crawl pause may be recorded at composition time, and crawl speeds may be changed at any time.

Slow Reveal allows titling and graphics to be displayed character-by-character with a staccato typewriter-like effect in a choice of 5 rhythms.

Centering a single row of text or an entire page of text horizontally is easily achieved at a keystroke.

Flashing is provided on a character basis to dramatize titling and graphics, and is recordable on VIDIDISC.

Horizontal and Vertical Shift allows individual characters or rows to be moved under control of the cursor, in both the horizontal and vertical direction. Horizontal movement is in 112 nanosecond increments allowing adjacent character tuck. Vertical movement is in increments of one scan line pair. These features allow precise placement of text with a minimum of effort.

The Font Compose Unit (optional) enables RGU users to create high quality custom fonts, logos, and other graphics according to their

GRAPHICS & TITLING SYSTEM

RGU-2

own requirements. In addition, fonts may be italicized and re-sized. Any standard video input such as black-and-white camera or character generator may be used as the video source, or characters may be created manually.

Program Animation is achieved with the Program Sequence Controller (PSC), a standard feature that transforms the CHYRON RGU-2 into a graphics animation machine. A series of function keystrokes—recorded at composition time—establishes the appearance, sequence, and dwell time of displays. Subsequent high-speed playback produces smooth, professional image movement. All system functions can be captured by PSC, including color, flash, roll, and crawl to further enhance the effect animation. In addition to action graphics displays, PSC can provide automatic recall of non-sequential messages, instant interchange of fonts for the same message compositions, automated keyboard operations for recall sequences, and easy programming of repetitive operations.

Auto Color/Font Change allows fonts and/or colors of entire text or parts to be changed automatically without re-typing.

Tabs can be selected from 256 possible locations. Eight may be selected in a single page display.

Lower Third allows messages to be keyed into the lower third display area without pre-programming.

Insert and Delete are keystroke functions. Messages may be rapidly edited by use of character and row insert and delete keys, with automatic spreading or closing of remaining text.

RGU-2 . . . from \$19,950.00 to \$36,000.00 depending on configuration.

OPTIONS	
Full-function Second Channel	\$4,800.00

CHARACTER AND GRAPHICS GENERATOR/ VIDEO PRINTER

VP-2 Character and Graphics Generator

The VP-2 is a low-cost, high-resolution character and graphics generator with features and capabilities found only on costly, more elaborate studio character generators. With complete keyboard and micro floppy disk drive, this stand-alone system offers 512 colors, 35 nanosecond resolution, 6-font capacity, multiple graphic planes, and many more features. The VP-2 has cursors and prompting menus for very easy graphics composition and display. This combination of operational ease, superior composition capabilities, and high quality image, makes Chyron's VP-2 the ultimate low-cost character and graphics generator.

FEATURES

- Character Resolution: 35 nanosecond resolution, equivalent to 1510 pixel elements
- Colors: 512 color choices available 8 per page for characters, edges, and backgrounds
- Fonts: Six full fonts (upper and lower case) on line selectable from a library of 45 Chyron fonts with international fonts available. Custom font and logo compose service is also available. (two fonts standard)
- Character Planes: Full horizontal and vertical overlap of characters, symbols, and logos to any depth.
- Background Graphics: Color every two raster lines if desired.
- Auto Display (Read from Disk): Display selected graphics pages from disk memory in any sequence at variable rates.
- Palette Animation: Cycle color in graphic images at selected multiples of video frame rate.
- Edge Types: The three edge types for any font—full drop shadow, character offset, and bordered edge—can be varied in extent, direction, and color.
- Menus: Complete menus and prompting displays to guide you through graphics composition.
- Composition and Control Features: Cursor commands: up, down, right, left, backspace, return, home. Insert, delete, or move characters, words, lines. Select fonts, character colors, palette, edge types, edge colors, key color. Set tab, clear tab, right justify, center page, line or column. Italicize a font (left or right), and display menu. Change character, word, line, color, font, edge, or edge color.

SPECIFICATIONS

- Power Requirements: 115 VAC at +/- 10%, 60 Hz and less than 100 watts (230 VAC, 50 Hz available)
 - Packaging: PC board design with switching power supply, enclosed in a metal case with lighted power switch and all connections on rear of unit.
 - Physical Characteristics:
 - Keyboard: 7-5/8"D x 7/16"-1-3/8"H (front-back) x 17-3/4"W. 3 lbs.
 - Chassis: 20" x 3-15/32" x 17"
 - 30 lbs.
- \$8250.00**

VP-26

VP-1SG Video Printer

VP-1SG is a low cost Video Printer that provides character generation and graphics capabilities with a resolution previously available only with costly and elaborate studio character generators.

The VP-1SG accepts serial data from an RS232C communications interface. Imbedded format commands within the data will be detected and executed and will cause the generation of a high resolution video picture (35 NSEC increments). The video memory is organized as a dual frame buffer which allows one page to be displayed while the next page is being created.

FEATURES

This unit can be driven by any computer system with text processing capability and a serial communication port. This includes most personal as well as larger computer systems.

- Font Storage: ROM based minimum of two fonts, each with full upper and lower case. Optional expansion to six fonts. (Font library of 44 fonts.)
- Hardware: Microprocessor controlled — dual 32K Byte frame store memory — ROM Program — 4000 bytes of message memory — internal sync generator with genlock and NTSC video generation.
- Color Select: Any one of eight colors may be assigned to backgrounds, characters or edge.
- Color Table: Any eight of 512 colors.
- Sync: Genlock to external sync or composite video from a stable source. VCR may not be a stable source.
- Keying: Full down stream keying included.
- Output: NTSC composite video.
- Commands: Select background color, character color, edge type, edge color, font type. Skip scan lines (push down), center line, center page, roll display, page delay, repeat message, end of page, horizontal and vertical margin control. Adjust character spacing, italicize, set color table.
- Edit functions: New line. Character shift left, right, up, down. Repeat message. End of message.

SPECIFICATIONS

- System: Microprocessor based with ROM program
- Interface: Multibaud rate serial RS232 interface. Max 9600 BAUD
- Frame Store: 32K bytes of run length encoding. Two frame stores to provide sequential picture generation. (35 nsec resolution)
- Packaging: Single PC board designs for computer and video with switching power supply. Enclosed in a metal case with power switch and video connectors on rear of unit
- Power: 115 VAC, at +/- 10%, 60 Hz, and less than 100 Watts
- Compliance: FCC

VP-1SG Video Printer	From \$4395.00

CIPHER DIGITAL, INC.

10 Kearney Road
Needham, MA 02194
(617) 449-7546

MODULAR TIME CODE SYSTEM

MODEL 6100 MODULAR TIME CODE SYSTEM

Model 6100 is an intelligent, modular time code system which provides all SMPTE time code functions, including the ability to simultaneously generate, read, display, and character insert—SMPTE and EBU code, both longitudinal and vertical interval.

The modular design allows the user to select only those features required today. Future requirements may be easily and economically added, as needed, to a single, efficient, lightweight 3-1/2" by 19" stand-alone or rackmountable chassis.

The system's powerful microprocessor and firmware offer unparalleled performance and functionality, while additional features such as a built-in time-of-day clock and RS-232/422 computer interface insure total system flexibility and versatility.

MODEL 6100 SMPTE TIME CODE GENERATOR

Model 6100 generates the entire SMPTE code, including time data, user data, status bits, drop frame, or color frame and displays this data on a large 8-digit LED display.

It accepts the color field definition pulse required for high quality color video editing and generates code consistent with present as well as proposed SMPTE standards. The time base is selectable between external video sync or internal crystal reference. Application flexibility is provided by the choice of standard 30 frame, drop frame as well as 24/25 frame formats.

Model 6100 offers both automatic and manual jam sync capability with look-ahead circuitry. In jam sync mode, the generator is automatically locked to a pre-recorded or externally generated code source, such that the original code may be continuously generated, even when the originating source is removed.

MODEL 6100 SMPTE TIME CODE READER

Model 6100 decodes and displays the entire SMPTE time code, including time data, user data, status bits, drop frame, or color frame and displays this data on a large 8-digit LED display. Reliable code reading at levels as low as -25 dBm from 1/50 play speed up to 80 times play speed is facilitated. The extremely high sensitivity allows users to write code tracks at levels well below 0 dBm to minimize bleed through to adjacent program tracks.

Its ability to read deteriorated or poorly written code and reconstitute code with properly squared edges, restored rise times and amplitude without altering the time base is a powerful feature of the Model 6100.

CHARACTER INSERTER

In-video display feature provides up to three times code/user bits video displays. The character format of display is an alpha numeric 9 x 7 dot matrix. The size, position and window are completely user definable and variable.

VERTICAL INTERVAL TIME CODE READER/GENERATOR

May be originally ordered with VITC capability, or this capability may be easily added on site, as required. Vertical interval time code is reliably read from still frame to full wind-with-picture speeds. VITC to longitudinal conversion is also facilitated. The ability to add this capability to an existing unit saves the user both space and money.

PROGRAMMABLE TIME CODE RELAYS

A plug-in relay option to the Model 6100 provides 16 programmable, time-code-driven contact closures. The ability to turn ON and OFF various studio equipment or trigger a special effects cart machine or other studio equipment is facilitated.

MODEL 6100 AND RELATED PRODUCTS

6100 System-with Control Panel	\$4900.00
6110 Tach Pulse to Time Code Synthesizer	795.00
6240 Event Controller (option)	1295.00

ADDITIONAL FEATURES

- SMPTE/EBU Reader
- Video Character Inserter
- True re-clocked time code output available in jam mode allows code copying without degradation
- Unique forced-jam feature provides frame-accurate, glitch-free change over from reading to generating. Sync is maintained. Drop-outs or offsets are not introduced.
- Reverse jam-sync ability allows recovery of lost audio pre-rolls.
- VITC to longitudinal conversion upgrade of older video editors to VITC capability.
- Ten time code memories are available for later use in cueing and editing.
- Tachometer pulse driven time code generation allows use of film projectors, film dubbers and editing tables.
- Generates tach pulses from time code for use with tach pulse based auto locators.
- Reader to generator transfer of time code and/or user bits for specialized editing applications.
- Built-in time-of-day clock for master time or user bit insertion is a standard feature. Time code display, status, character size, and position are all accessed from both the optional front panel keypad and standard RS-232C/422 computer interface.

SYNCHRONIZER AND CONTROLLER

SHADOW II PLUS™ SMPTE/EBU EDIT CODE SYNCHRONIZER/CONTROLLER

The Shadow II Plus System, Model 4700, is a fully intelligent SMPTE/EBU Edit code synchronizer and controller for audio, video and film transports. The system utilizes sophisticated adaptive control loop techniques to insure superior synchronization and interlock of virtually any combination of audio, video or film transports.

Shadow II Plus is a complete, stand-alone system which provides control of the slave transport's capstan until phase error is adjusted to less than 1/100th of a TV frame; 1/3000 of a second to the audio engineer.

The System is further enhanced by an RS-232/422 computer interface, a standard feature of the Shadow II Plus. This interface allows studios to connect the Shadow II Plus to virtually any commercially available micro or mini computer as well as most video/audio editing systems. The Shadow II Plus, when interfaced to computer control, provides the ultimate in production flexibility. Users are free to control a virtually unlimited number of transports and perform complex edits in conjunction with ATR's, VTR's, mixing consoles, and other studio equipment.

The Shadow II Plus Synchronizer is completely compatible with, and may be interfaced to, the Softouch audio editing system for control of multiple ATR's, VTR's and sprocketed film transports for applications such as automatic dialogue replacement (ADR), sound effects assemble and sweetening.

Application Areas

The Shadow II Plus Synchronizer is currently satisfying customers in these and many other application areas: synchronization and control of multiple ATR's for audio post-production; synchronization and control of multiple ATR's and VTR's for audio for video post-production; synchronization of sprocketed film transports for audio for film post-production, and synchronization and control of film projectors and ATR's for corporate and institutional presentation requiring high fidelity sound.

ADDITIONAL FEATURES

- SHADOW locks to SMPTE/EBU Time Code, drop or non-drop frame, video sync, 24-frame film code, and 60Hz tone, interchangeable.
- SHADOW reverts to tachometer pulses when auto locating, eliminating the need for high-speed reading of time code.
- 24-hour offset in 1/100th frame increments facilitated.
- Typical interlock times between two to five seconds.
- Time code read accurately between 1/50 play speed to 80 times play speed.
- Unique selectable Slow Lock feature.
- Wow and flutter suppression circuitry assures stablest lock possible.
- Battery back up

SHADOW PAD

The Shadow Pad Console, Model 4735, facilitates the remote control of a master and slave transport. Multi-track audio, video or sprocketed film transports may be configured in any desired combination. The console's dedicated function keys and 10-digit LED display allow the user to select the speed and type of desired interlock as well as initiate GO TO and FOLLOW commands. Pre-programmed, subframe-accurate record-in and record-out of both master and slave transports are easily accessed. The console's LED display provides instant recognition of master and slave time code. The presence of drop frame code on any transport is displayed as are stored locations and offsets in hours, minutes, seconds, frames, and 1/100th frame.

SHADOW II PLUS

SHADOW PAD

4700 — SHADOW II System	\$5595.00
4725 — Master Transport Selector (Three Machine)	1850.00
4750 — Tally Test Board	150.00
4760 — Wide Band Reader	695.00
4770 — Universal Film Dubber Interface	2500.00
4735 — SHADOW PAD Controller (remote control for two transports)	2495.00
7000 — Packaged System, includes Model 4700 and Model 4735	6995.00

SMPTE TIME CODE READERS/GENERATORS/ VIDEO INSERTERS

SMPTE Time Code Reader Model 710A

710A Features: • Low Cost • Wide Dynamic Input and Bandwidth
• Integral Video Character Generator • Low Profile 1-3/4" x 19" Package **\$2650.00**

Reader/Generator/Character Generator with Video Model 722A

722A Features: • Designed to provide complete generate, read and video display capabilities in one cost-effective package • Drop Frame or Non Drop Frame mode, plus the insertion of User data • A wide dynamic input and bandwidth allows it to read and display code from 1/20 to 100x VTR play speed • Selectable parallel data outputs, for Time or User data **\$4950.00**

Time Code Generator Model 716A

716A Features: • Designed specifically for Television Studio and Production Environments • Display and output of SMPTE time codes
• Internal Reader • Reference Sync inputs for video or film tach pulse
• Drop Frame Mode • Jam Sync • Sync lock **\$2650.00**

SMPTE Code Generator Model 766

766 Features: • Generator Time and User Code • Internal or external Sync • Integral User Data Preset Switches • Fully Remote Controllable • Drop Frame Mode • Jam Sync Option • Real Time Clock Option **\$3650.00**

SMPTE Character Generator Model 700A

700A Features: • BCD Parallel Input • Keys Hexadecimal Characters on to Video Signal (O-F) • Low Cost **\$2450.00**

SMPTE Time Code Reader Model 760

760 Features: • Wide Input Bandwidth • Reads Simultaneous Time and User Data • Integral Video Character Generator • Dot-Matrix, Hexadecimal Display • Low Profile 1-3/4" x 19" Package **\$3650.00**

CMX CORPORATION

(408) 988-2000 Telex 910-338-0554

EDITING SYSTEM

Model 340XL Videotape Editing System

Today CMX systems are used in every possible television application from a three-hour network special, to a ten-second spot, to industrial training tapes. Most Emmy Award winning television programs have been edited using CMX. Agencies and producers have come to expect their programming to be edited on CMX.

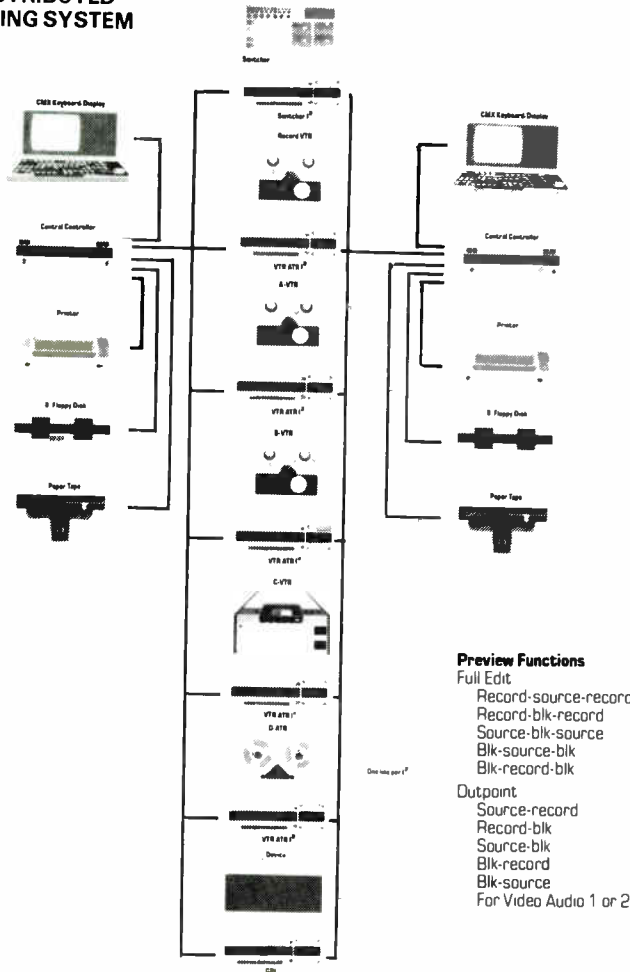

APPLICATIONS

- Delayed transition gives you the advantage of simple and efficient single event scene-transition-scene edits.
- Time code trim allows you to think in minutes, seconds and frames, not just frames.
- Nine preview modes allow you to see all important scene information for precise edits.
- Master/Slave operation gives you automatic synchronization of separate audio and video sources.

LIST MANAGEMENT

The CMX Decision List is the computer's copy of your Master Program Tape. True speed and flexibility in editing requires the capability to develop scene sequences in any order, i.e., matching incoming and outgoing takes, then processing the list for minimum auto assembly time. 340XL systems have the unique ability to move blocks of events, renumber events in groups or the entire list, and sort in several ways allowing you to get maximum efficiency from automatic assembly.

340X DISTRIBUTED PROCESSING SYSTEM

340XL SYSTEM SPECIFICATIONS

System Configuration Distributed Processing
Central Controller DEC Minicomputer
Device Interfaces 16 Bit Microprocessor Controllers
Device Interface Memory EPROM
Communication Format Serial/9600 BD/RS 232
Communication Protocol CMX 8 Bit Binary
Edit Decision List Format Industry Standard
Edit Decision List I/O Most DEC compatible Floppy Disk/ Papertape/High Speed Printer Devices
CRT Display Format 80 Characters per line/25 lines/50-60 Hz Refresh Rate/Noninterlaced
Display Monitor High Resolution CMX Terminal or any Broadcast Video Monitor
No. of Devices Assignable 24
No. of Devices Controllable 8
Edit Accuracy Frame Accurate, Color Framed, PAL-pair self-correcting
Time Code Standards SMPTE Drop/NonDrop Frame, EBU
Television Standards NTSC/PAL/SECAM
Operator's Keyboard Expandable/Alphanumeric/Color Coded
Motion Control Device Rotary Control for search/Slow Motion/ Frame Jogging (memorized recall in process)

Time Code Functions

Set in time/Set multiple in times	Mark out time/Mark multiple out times
Set out time/Set multiple out times	Auto trim of record and source devices
Set duration/Set multiple durations	Clear (all) marks
Trim in time/Trim multiple in times	Reset (all) marks
Trim out time/Trim multiple out times	Recall marks (of specific event)
Mark in time/Mark multiple in times	Restore last mark

Edit Transition Selections

Cut	Key out (background/foreground/duration)
Dissolve from/to	Delayed key
Dissolve duration	Key delay time
Wipe from/to	Fade up from black
Wipe code	Fade to black
Wipe duration	Key in (background/foreground/duration) (14 different types of key edits possible)

Machine Control Functions

EDITING SYSTEM

The Edge™ Computer-Assisted Editing System

FEATURES

- Compact Design/Fingertip Controls
- Smart Keys
- Internal Memory/Re-edit and List Rippling
- Auto Assembly
- VTR Mix
- Machine Control
- Time Code/Pulse Count Editing
- Built-in Dissolver
- Six Preview Functions
- 340XL Edit Decision List Input/Output
- Competitively Priced

The Edge from CMX is a two-source, one-record, computer-assisted editing system designed for broadcast, teleproduction, industrial, educational and government television applications.

Using The Edge, editors can perform dissolves, and produce a CMX-standard Edit Decision List with wipes and keys and delayed transition events. They can produce lists with new record start times as well as assemble automatically.

Two General Purpose Interfaces (GPI's) are included to control auto-transition switchers, digital video effects, character generators, and a variety of peripheral equipment. These GPI events, as well as splits (audio or video delays) and dissolve/wipe points, can be entered on the fly. Locating any point in a scene is smoothly and easily accomplished by a simple turn of the Reel Motion Controls.

The internal memory permits list manipulation which includes re-editing, list rippling, list scrolling, and event deletion.

Compact Design/Fingertip Controls

The Edge is lightweight and compact. All controls are conveniently grouped together around the CRT and can be quickly manipulated.

Smart Keys

The operating console combined with the CRT screen and the six Smart Keys on each side of the screen provide you with an ongoing dialog with The Edge as you move through the editing process. The dynamic labeling of the multi-layered screens will change to identify each of the keys by the function being requested. The screens virtually "talk" to you at each editing level, giving you an unusually high degree of control and flexibility. They will work with you, even instruct you if necessary, but always keep pace with your train and speed of thought.

Auto Assembly

The Auto Assembly function will assemble and deliver a polished, finished video tape in final form for screening from the scenes you have preselected. The assembly source can come from either a paper tape or an 8-inch floppy disk; output options available for The Edge.

VTR Mix

The Edge will interface with 1-inch, 3/4-inch and 1/2-inch formats including VTRs from Ampex, Bosch, Sony, and RCA.

Six Preview Functions

There is a full complement of Preview capabilities, including both In-Point and Out-Point, designed to provide flexibility, productivity, and give you, the editor, more time to concentrate on creativity without having to review unnecessary material. In-Point previews are: Video, Black, Video; Black, Video, Black; and Video, Video, Video only. Out-Points are Black, Video; Video, Black; Video Video.

Four Operating Mode Buttons

The Edge has four operating mode buttons: Setup, Motion, Edit, and Marks. The Setup mode allows you to set up your edit sessions parameters, and provides for maintenance.

Time Code/Pulse Count Editing

The Edge is Time Code-based and is switchable to Pulse Count when it is required. Using SMPTE Time Code, drop frame and non-drop frame may be mixed. The Edge is available in both PAL and NTSC standards.

Optional Audio/Visual

The Edge will perform actual dissolves in the machine. (External time base correctors are required.) Stereo audio can be added to this function.

Internal Memory/Re-edit, List Ripple

With the internal event memory, which features re-editing, list rippling, event deletion and list scrolling, you can essentially do your off-line editing with The Edge and build a CMX Edit Decision List. And this can all be done on a cuts-only system, if desired. Through the availability of a variety of optional techniques, such as using The Edge audio/video dissolver or auto-transition control of a production switcher, you can complete your final auto-assembly on The Edge. If it's a highly sophisticated production that requires numerous special effects, you may wish to complete it from The Edge EDL on a 340XL system.

THE EDGE. Priced from **\$9,200.00** to **\$18,400.00** depending on configuration.

EDITING SYSTEM

CMX 3400 Editing Control System APPLICATIONS

- Edit in the most efficient sequence, not necessarily chronologically
- Make changes to individual edits or groups of edits without the necessity of constant re-recording
- Facilitate efficient on-line conforming of a work print

These tools can be used to:

- Rearrange events (move a single event or a block of events)
- Change program content by adding or deleting edits (insert, delete)
- Change the master time positioning of an individual edit and/or subsequent edits
- Edit Decision List text editing without altering edit time relationships (re-number, change mode, change transition rates, change reel numbers, change transitions, repeat event blocks)
- Easier list management through Auto Clean, which reviews the EDL for anomalies, eliminating unwanted duplicate events and cleaning over-records
- Multiple EDLs on one disk eliminates changing floppies everytime you change lists
- Text editing allows you to change elements of events other than playback and record in and out times without having to re-edit each event one at a time
- The CMX3400 EDL has been expanded to increase flexibility and to store more information in the list. Switcher memory registers contents, as well as triggers and master slave offsets, are among the additional information stored in the EDL. In addition, the editor now has the flexibility to assign four characters in alphanumeric nomenclature to reels such as DUB1, EFX2, as well as 001A through 999Z
- The CMX 3400 also gives you Motion Memory (M²). M² lets you program a VTR over its range of stable tape speeds: you can stop motion, reverse, and allow variable tape motion for any event. Eight sequences can be rehearsed and recalled by the system at edit time. Total memory is eight minutes

SPECIAL FEATURES

Multi-Function Keys Each of these multi-function response keys is capable of executing an extensive series of editing functions with a single keystroke.

Precue Equipment controlled by I²'s are automatically recued in preparation for the next event.

Transition Preview Provides dissolve or effect preview preceded by five seconds of the segment.

VTR Channel Assignment Simplified assignment of individual VTRs.

Mark File Allows you to remember the frame, and the system to remember the time code, for later use.

Duplication Function Use the system to control playback and record VTRs for making duplicates.

VP-32

Centerpoint Dissolve With the midpoint selected, the system will back up half the assigned transition rate and perform the dissolve.

Go To Sends the VTR to the edit point rather than to the preroll point.

All Simultaneous command and control of all assigned sources.

Selective Switcher Control Several levels of effects switcher control are available permitting freedom to work directly with the switcher to make audio or video crosspoint selections and fades.

- **Look Ahead Auto Assembly** that uses the full advantages of the minicomputer and Distributed Processing to minimize assembly time

- **Delayed transition** gives the advantage of simple and efficient single event scene-transition-scene events

200 SERIES VIDEO EDITING SYSTEM

In a world where ideas are manipulated by the medium in which they are expressed; where soaring creativity can be grounded by technology; there comes a tool so sophisticated in design that once again the pure creative urge is set free...the 200 Series Video Editing Systems.

Each system in the 200 Series includes as standard the following features:

ActionMatch

ActionMatch calculates edit points to match action and sound anywhere within an edit segment. Audio-only or video-only inserts can be precisely matched to corresponding action or sound with joystick control and a single keystroke.

Amber Status Monitor

An amber status monitor is included with each 200 System. The amber display was chosen after extensive testing which showed that it produced minimum eye strain while causing the least distortion of an operator's color perception.

Auto Duration

Utilizes the trim register to set the edit duration relative to either an in or an out point. This simplifies back-timing, critical inserts and animation style sequences.

Auto/Manual Assembly

Auto Assembly provides for automatic editing of a sequence or an entire program following the instructions in the edit list. Any 200 Series editor will sequentially (in numeric order) auto assemble. Manual Assembly calls up the next edit automatically but actual performance of the edit relies on the operator. The 204 includes Checker-board as well as Sequential Auto/Manual Assembly.

AutoMatch

AutoMatch allows the operator to create matching source and record in edit points at any location within the previous edit. This automatically provides match frame edits for A/B rolls and effect transitions.

Auto Scene Store

In this mode a single keystroke snapshots scene location by time code and reel number. Up to ninety-nine locations can be stored or listed. When recalled the time code address is readily available for high speed search or loading as an edit point.

Automatic Dialogue Replacement

ADR provides cue tones and a continuous audio record cycle for "looping" or post-dubbing of sound. It also can be used to replace video material.

CleanIt

CleanIt automatically cleans overlapped edits in the EDL one edit at a time during the off-line edit process. This program constantly checks the preceding edit to see if an overlap has occurred.

Color Framing

A Color Framing routine allows the edit system to monitor the color frame relationship for one-inch VTRs based on time code.

Control Track or SMPTE/EBU Time Code

The editing system has the capability to operate in either control track or industry standard SMPTE/EBU drop frame or non-drop frame time code. The system also operates with any combination of control track or SMPTE/EBU time coded tapes.

High Speed Search

High speed search allows the operator to program any tape time location (control track or SMPTE/EBU time code), and have the selected VTR search to that tape location.

List Scroll

List Scroll gives you joystick control to shuttle forward and backward through the edit list, including "cruise" for no-hands scrolling of EDL.

Manual Bump

Manual Bump allows for small

adjustments to rolling VTRs from the keyboard to achieve precise synchronization of multiple machines for syncroll.

Programmable Personality

Each model of VTR has an individual "personality" with regard to speed and response characteristics. In the 200 Series, personality switches tell the system what specific VTRs are connected, providing greater control in cueing and searching.

Smart Start

Smart Start learns the characteristics of the VTRs in the system and makes adjustments in the synchronization routines to accommodate variations in performance.

Split Audio/Video Edits

Split audio/video edits can be programmed with independent selection of audio and video in edit points.

200 SERIES

LIST

All 200 Series edit systems include keyboard console, status display monitor and electronic control unit. All systems include edit storage, auto assembly and basic list management.

202 Sync Roll System stores 250 edit lines, includes three interfaces.	\$13,500.00
202T Time Code/Sync Roll System same as 202 but includes TCR Time Code Reader.	\$17,000.00
203 A/B Roll System interfaces with effects switchers; stores 250 edit lines; VTR sync roll capability, includes three interfaces.	\$19,000.00
203T Time Code / A/B Roll System same as 203 but includes TCR Time Code Reader.	\$22,000.00
204 Advanced List Management System stores 800 edit lines, VTR sync roll, 409, block move and comments; includes three interfaces.	\$25,000.00

CONVERSION KITS

CK-202/203 Conversion Kit upgrades 202 to 203; includes memory board.	\$ 6,500.00
CK-202/204 Conversion Kit upgrades 202 to 204; includes memory board and keycaps.	\$14,000.00
CK-203/204 Conversion Kit upgrades 203 to 204; includes memory board and keycaps.	\$ 7,000.00

ACCESSORIES AND OPTIONS

AVS-100 Audio Video Switcher cuts-only (required for multi-source cuts-only systems)	\$ 2,200.00
CG-100 Command Generator (Option for 104/204 only) Remotely commands peripheral devices.	\$ 1,500.00
CI-90 Character Inserter inserts time code digits into video being recorded, providing "Window Dubs".	\$ 1,500.00
DD-200 Dual Disk Drive	\$ 4,000.00

EDIT CONTROLLERS

ECS-90

ECS-90 SERIES

The ECS-90 is a low cost microprocessor-based editing system designed to bring sophisticated joystick editing within the budget of every videotape producer. It is a plug-in system that provides variable speed tape motion control with most 3/4" and 1/2" editing VTRs.

The multi-format ECS-90 is particularly suitable for high speed ENG (electronic news gathering), EJ (electronic journalism), remote production vans, educational and industrial productions, broadcast productions requiring a single source, and as an off-line system for commercial post production.

The ECS-90 can be used for single or dual monitor editing, remote VTR rolls, back-timed edits, animation and manual edit listing. The ECS-90 operates on control track or industry standard SMPTE/EBU time code, and is available in NTSC or PAL versions.

The ECS-90 is human-engineered for ease of operation and is the fastest editor available in the industry. The dedicated twelve-button keyboard permits quick initiation of edit functions and communication with the editor and its options, Liplock® audio pitch control, and BLADE™ black/fade module.

The ECS-90 standard package includes a status display generator for quick and convenient video monitor display of edit data, two CCA control cable assemblies (3/4" or 1/2" VTRs of customer's choice), one Operator's Manual and one Installation and Maintenance Manual.

FEATURES

- Plugs into most 3/4" and 1/2" VTRs
- Joystick control of tape speed
- Pulse Scan
- Interchangeable VTR formats
- High speed search
- Cruise
- Full VTR remote control
- Auto-tag
- Recall feature
- Built-in sync generator
- On-board computer
- Dynamic Edits
- Mark, set and trim in/out edit points
- Programmable pre- and post-rolls
- Insert or assemble edits
- Independent control of audio and video channels
- Control track or SMPTE/EBU time code
- Abort capability
- Status display generator
- Fastest edit controller available

ECS-90 Edit Control System

Price includes two CCA-90 Control Cable Assemblies, one Operator's Manual, and one Installation and Maintenance Manual. **\$4500.00**

ECS-90S "Super 90" Edit Control System

Includes two CCA-90 Control Cable Assemblies, Time Code Reader/Generator/Lister, one Operator's Manual, and one Installation and Maintenance Manual. **\$6500.00**

ACCESSORY

CI-90 Character Inserter

Inserts time code digits into video being recorded, providing "Window Dubs". **\$1500.00**

PLUG-IN OPTIONS

LL-90 Liplock™ Audio Pitch Corrector

Corrects audio pitch to provide intelligible audio dialog monitoring when tape is shuttled at fast or slow speeds. **\$1,200.00**

BL-90 Blade™ Black Generator And Fade Module

Fades up from and/or down to black at in or out edit points. Includes internal black burst generator for prerecording color black on video tapes. (Fades NTSC and PAL, Black Burst Generator NTSC only.) **\$925.00**

CCA-90 Control Cable Assembly

Interfaces ECS-90 to VTR. **\$650.00**

RGL-90 Time Code Reader/Generator/Lister

Can generate drop or non-drop frame SMPTE/EBU Time Code on Record VTR. Reads both Source and Record time code simultaneously. Lists edit decisions to RS-232C storage devices such as printers or disk drives. Includes everything necessary to upgrade an ECS-90 to a Super 90. **\$3250.00**

SPARE PARTS

ECS-90 or ECS-90S Operator's Manual **\$25.00**
ECS-90 or ECS-90S Installation and Maintenance Manual **50.00**
RMK-90C Rack Mount Kit **250.00**

CROSSPOINT LATCH CORP.

(201) 688-1510 • TELEX 9104901990

6109/7209

400 EVENT REGISTERS, 100 PROGRAMMABLE SEQUENCES is available with the 6109/7209 combination. The switcher can store and run sequences varying analog functions smoothly and simultaneously. Sequences can be stored on disc or in editors. Sequences can be recalled by editors and triggered to run. Each Event can be programmed for smooth transitions of up to 999 frames, and in addition to that a delay of up to an additional 999 frames before the start of each smooth transition. Event registers can be recalled as static displays (switcher control panel status); 400 such registers are available. Or, the Editor can recall the registers and "run" them on the switcher from the status of one Event register to the next. Individual functions on the Stored Events can be altered with the unique "Edit" mode. The 7209 can be controlled fully by most editors by means of RS232 or RS422 serial ports, or with parallel interface.

This is a three bus switcher with a 32 pattern generator with automatic or manual operation. It has a built in RGB chroma keyer, and a second optional chroma keyer. It has a downstream keyer with edge, master fade to black, can dissolve from a bordered split wipe (or from a chroma keyer over a split wipe) to a third signal. It has a blanking processor with a unique test mode for system timing.

Available in PAL
6109 \$6,995.00
7209 3,000.00
99 SEQUENCE OPTION 995.00
6112, 6112BH and 6112AK

The 6112AK is a microprocessor controlled switcher with two mix effects systems each with 12 individually positionable patterns. The two fader arms can be programmed to control not only the pattern size (as with conventional switchers) but also positioner, border width etc. between two limits. When so programmed, when the fader arm is moved from one of its mechanical limits to the other, the pattern moves from one of its programmed electrical limits to the other. The programmed transition can be produced automatically by the microprocessor with duration times up to 999 frames. In addition to that the start of the transitions can be delayed up to 999 frames each. The two mix effects systems can be programmed with different duration and delay times and can be triggered simultaneously or independently. The 6112AK has a downstream matte key with invert and blink. The optional chroma keyer is available either in RGB or Encoded. The switcher has nine inputs including colorizer, pattern modulator, Mix-Wipe which is a combination of mix and wipe independently controllable, dual back porch clamps, and blanking processor. The 6112 can produce a wipe over a wipe, a wipe inside a wipe, a wipe over or behind a chroma key. The blanking processor completely removes color shifts at the end of a transition. The 6112AK is equivalent to the 6112 combined with the 6403.

The 6112 has the same production features without the programmable features of the 6112AK.

The 6112BH is similar to the 6112 except for the incandescent lamp buttons.

All version of the 6112 can be used with the 6403 Editor interface. In addition the 6112 can also be used with the 7239 AUTO DRIVE TM and the 7203 Programmable Editor switcher interface. All versions operate with the 6800 Audio mixer.

Available in PAL
6112 \$7,950.00
6112BH 10,500.00
6112AK 10,900.00
Chroma Keyers (RGB or Encoded) 1,050.00

Prices and Specifications Subject to Change Without Notice.

SWITCHERS/CONTROLLERS

6124

A four bus 12 input switcher with illuminated push-buttons. A chroma keyer is standard (either RGB or encoded).

There are two independent mix effects systems, each with its own pattern generator and positioner, border generator (with individual luminance controls), keyer (with internal, external, and chroma key modes), hard or soft edge.

The downstream keyer mattes the incoming signal, and has blink and invert. The pattern modulator with adjustable amplitude and frequency, can be switched into either ME system. The colorizer has hue luminance and saturation controls, and drives both border generators with complimentary colors. The chroma keyer has a variable delay line which is adjustable from the front panel for optimum keying. It can be switched into either ME, allowing wipes and dissolves behind as well as over a chroma key.

The 6124 can be controlled by most editors by means of the 6403 Editor Switcher Interface. 6124A is available in 19" wide control panel with wide LED type buttons.

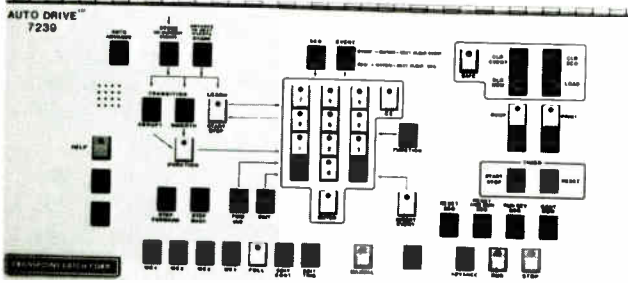

Available in PAL
6124 \$13,700.00

SWITCHERS/CONTROLLERS/ AUDIO & SYNC GENERATORS

7239 Auto Drive TM

Auto Drive is an extremely versatile programmable controller for the Crosspoint Latch "K" switchers. Its computer is capable of storing the configuration of the entire control panel and then making smooth or abrupt transitions from one configuration of the panel to the next. Each configuration is stored as an "event". Events can be grouped into sequences.

As a production tool, it enables artistic combinations of effects which could not possibly be achieved manually, to be generated with great precision and ease. Before editing, sequences can be programmed and then rehearsed live. Minor adjustments and trims (or major ones for that matter) can be made to the program. Events may be added, deleted or changed. Sequences of events may be called up and reviewed at random. Sequences may be stored one way and played back in reverse. Elaborate sequences may be set up slowly, at the convenience of the operator, then by programming a short duration for each event, the sequence can be run through rapidly and without mistakes. Programming 7239 Auto Drive is much faster than editing because no time is lost waiting for tapes to rewind and roll. By performing most of the effects before editing, a great deal of post production time is saved.

As an editing tool, the 7239 Auto Drive can be programmed to perform effects and switching for multiple roll edits. Since the programming is done with its own computer, interface with editors is very simple, via an RS232 serial port. The cost of a complex switcher to editor interface is eliminated.

AUTO DRIVE TM. is the most sophisticated controller in the industry. It has 256 Events each of which consists of the entire control panel of the switcher and any number of which can be grouped into sequences which can be run in either direction. Manual fader arm movements can be stored, then "run" with all analog functions being controlled smoothly from one switcher panel configuration to the next. Stored Events can be very easily modified, with the unique Crosspoint Latch "Edit" mode.

Interfaces with most Editors \$12,500.00

6800 Programmable VTR Audio Mixer

The 6800 has been designed primarily for use with VTR editing controllers. It can perform automatic cuts and mixes, with durations accurately programmable up to 999 frames. It has five stereo inputs with individual gain controls for each channel. The two channels (tracks) may be reversed at the output, or combined into either output channel. This allows the use of the SMPTE time code on the free audio channel of the recording VTR. The input selection may be manually overridden by switches on the front panel. Mixing may also be performed manually from the front panel, if required. Each output channel has a gain control with a center detent. A separate LED type VU meter is provided for each set of stereo inputs. Both mixers are simultaneously controlled by a single slider or by the automatic ramp generator \$3,500.00

6403 Editor/Switcher Interface

The 6403 is an active interface unit which allows most Crosspoint Latch switchers to communicate directly with VTR editing controllers. It greatly enhances the versatility of the more sophisticated editors by increasing the capability of their effects and mix functions. It adds the capability of effects and mix to simple editors. It has programmable start to finish points, for effects and mixes, along with an internal duration counter which may be set from one to 999 frames.

The 6403 is very flexible. It has several modes of operations. In one mode it accepts and stores commands such as duration time, pattern selection, input selection, etc., directly from an editor; and then executes the commands at the required instant. In another mode, where greater capability than that afforded by the editor is required, the start and finish points may be set manually from the 6403 control panel. The editor then merely issues the run command at the appropriate time. This function is especially useful, since most editors, even those capable of A-B rolls can only produce complete wipes. The 6403 enables an edit to be performed with a pattern or a mix starting from any point and ending at any level (for instance a horizontal wipe which stops in the middle). This enables even the simplest editors, which are only capable of performing cuts, to execute partial wipes during the edit.

One of the problems inherent in most editor-switcher combinations, is that when duration time is defined, the effect or mix almost always starts late and finishes early. This results in a shorter duration than that specified. This problem is especially apparent on wipe patterns, because of the overrun necessary for positioners. The 6403 completely eliminates the problem. The start and finish points can be precisely defined even with an offset positioner.

Interfaces with most Editors \$2,750.00
Editor Module 995.00

6006B Sync Generator

This is a complete sync distribution system, with a full set of distribution amplifiers included in the package.

There are four (independently) phase adjustable pulse amplifiers, switchable to either sync or horizontal drive. There are also five subcarrier distribution amplifiers, four of which are independently adjustable through a full 360 degrees.

Four black burst outputs are provided for genlock type cameras which are independently phase-adjustable for both horizontal and subcarrier from the front panel. 3-1/2" rack.

This unit is extremely compact, occupying only 1-3/4" of rack space. It is ideal for small studios, where in most cases, no additional drive distribution amplifiers are required \$1,990.00

6006C Sync Generator

This unit features two black burst outputs, with the addition of NTSC full field color bars. 3-1/2" rack \$1,990.00

6803 Audio Follow Mixer

This is an audio follow mixer for the 6112 and 6124 video switchers. It is similar to the 6800, but has no input selector button for break-away audio and no tone generator \$2,500.00

CROSSPOINT LATCH CORP.

SWITCHERS/CONTROLLERS/ AUDIO & SYNC GENERATORS

6119

The 6119 is a 3 bus, 6 input switcher. This unit features 12 wipe patterns with positioner, soft edge and bordered wipes. There is a full spectrum colorizer. Includes blanking processor and test mode for system timing. The 6119 has a unique EFFECTS DOWNSTREAM KEYER, which replaces the colored border with a matte key, (thus producing a matte key over an Effect, and this entire combination can be dissolved to black. The 6119 can dissolve from a bordered wipe to a third input.

The 6119 also offers both manual and automatic transitions which can be external GPI interface. The standard switcher has genlock, four black burst outputs (to lock four other devices), and provision for expansion pattern generator.

Not available in PAL

6119 \$ 2,400.00

OPTIONS

- *RS107A Sync Generator \$ 100.00
- *Microprocessor Board for full RS232 or 422 Control 1,850.00
- *Extended Pattern Generator TBA

6150BK Master Control Switcher

Programmable microprocessor controlled switcher. Two events memory directly selectable on the control panel. Real time clock. Serial communication between control panel and electronics. Automatic or manual fader operation. With the addition of the SMART INTERFACE BOARD the 6150BK can be accessed serially from external programmer or computer. Single or dual channel audio. Sixteen inputs, with four input downstream keyer. Voice over with automatic 4 db "duck". Options for machine control, printer driver. Includes blanking processor and test mode for system timing.

6150BK \$15,900.00
Dual Audio 3,300.00

6026

Encoded Chroma Keyer and Video mixer. 1-3/4" rack mountable, horizontal positioner, dual outputs for midstream and downstream chroma keying.

6026 \$ 3,500.00

6700 Matrix Switcher

This is an 8 input RGB Matrix switcher for selecting RGB inputs used for multiple camera chroma keying. Outputs of switcher goes into RGB chroma key inputs on switchers. Can be controlled from 6112, 6124 and 6139 switchers.

6700 \$ 1,990.00

Model 8000 TIBEC™

NEW

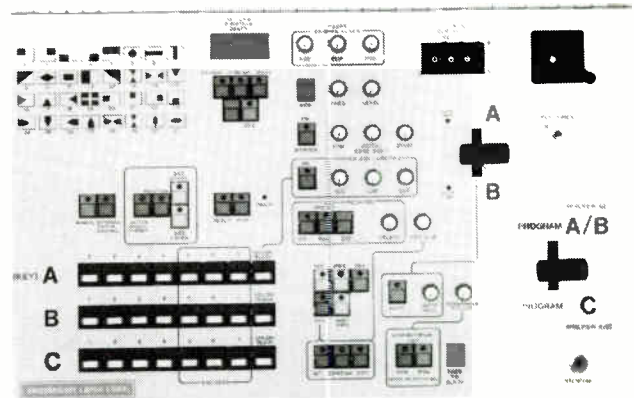

Time Base Corrector which can lock two VTR'S.

The 8000 makes it possible for the first time to have a full bandwidth, high quality A-B roll system with a single PBC.

The 8000 produces clearly recognizable pictures even when one VTR is in fast forward while the other is in rewind. It has a virtual "infinite window".

The 8000 can also be used in the conventional manner (one PBC for each VTR). Used in this way it is just a high quality PBC.

8000 \$6,995.00

6116/7209 Microprocessor controlled COMPONENT SWITCHER

Basic unit has four EVENTS which can be simply programmed and run automatically under internal computer control. Each EVENT consists of the entire configuration of the control panel. The 7209 can run smooth transitions controlling all functions on the panel simultaneously. The 7209 interfaces with most editors, with the SMART INTERFACE BOARD.

The 6116 handles four component inputs (any format) and three encoded signals. The switcher will not perform effects between encoded and component formats without an external transcoder. The Y channel can handle both 7 encoded inputs (when not used for component signals). The switcher has an optional chroma keyer, 32 pattern generator, bordered wipes, a matte downstream keyer, fade to black, and three video buses permitting a dissolve from a split wipe to a third input. Includes blanking processor and test mode for system timing.

6116 \$16,000.00
7209 3,000.00
SMART INTERFACE BOARD 1,000.00

6029 Genlock Unit

Generates sync and subcarrier from black burst or composite video. Locks to VTR. Automatic change over switch to external sync and subcarrier inputs on loss of video. Requires DC supplies derived from 6112, 6124, or 6139 switchers.

6029 \$ 407.00

CROSSPOINT LATCH CORP.

SWITCHERS/CONTROLLERS

6139 Series

8, 16, or 24 Inputs

LED or Illuminated Push Buttons

The illuminated push button versions have 32 patterns for each ME system, (instead of 12 each for the other version) and the pattern selection is by means of momentary illuminated push buttons.

This series of switchers has tremendous production power. Available in three sizes, 8, 16, and 24 inputs with either the illuminated, or the more cost effective LED type push buttons. A unique feature of the 8 input version (with LED buttons) is that it can be expanded in the field to a 16 input switcher.

All versions of the 6139 have six buses and three mix-effects systems; colorizer; pattern modulator with freeze; downstream keyer with edge and external border; quad split; master fade to black; spot-lite; mix pattern mode between ME1 and ME2; an effects unit which can either key or mix the program bus over the other three ME's or over quad split. A unique test mode (the simplest one ever conceived) for system timing and a blanking processor which completely eliminates color shifts on mixes and wipes are also standard on all units.

The 6139 "K" switchers can be controlled with AUTO DRIVE™, by far the most powerful controller in the industry, which stores the entire control panel status 256 times, learns manual fader movements, has unique "EDIT" Mode, and interfaces with most editors. **\$12,500.00**

Rotary and Matrix Wipe Option is available for the 16 and 24 input switchers. With this option it is possible to select a total of 96 patterns, which include matrix wipes (8x8) squares, rotary wipes and multiple patterns.

All switchers interface with most editing systems by means of the 6403 or 7200 interface unit.

Additional options include two chroma keyers, RGB or encoded and dual colorizers.

6139	\$14,500.00	6139B	\$21,799.00
6139AK	16,000.00	6139BH	37,299.00

5300 INTELLIGENT TIME PROCESSOR

With an optimum blend of state-of-the-art LSI and VLSI circuitry including a microcomputer, Datum has introduced the Model 5300 Intelligent Time Processor (ITP). This economical and flexible time processing package allows the user to make full use of his video resources in today's demanding broadcasting, post production, and industrial environments.

The Intelligent Time Processor can produce SMPTE/EBU time code simultaneously with user bits, vertical interval time code and video characters. The 5300 will operate in NTSC to the RS-170A specifications or in PAL to the EBU 3079-E specification.

A numeric key pad for data entry and high efficiency LED readouts combine to achieve an exceptionally attractive and highly functional front panel assembly. The slimline design occupies a minimum of standard rack cabinet space. All input and output signal connections are mounted on the rear panel.

The ITP reads standard serial code at speeds ranging from 1/3 to 90 times normal play speed in both directions without experiencing any frame decoding delay.

In addition, the system will automatically revert to reading vertical interval time code when reading down to still frame to insure complete code reading reliability.

STANDARD TIME CODE: MODEL 5300

The Intelligent Time Processor generates time code from data which is either preset through the front panel keyboard or dubbed from an external source. Special modes have been created which allow the 'user bits' portion of the code to update as an independent time generator or to be jam sync'd to serial time code from an external source. The ITP also produces color frame correct time code.

**VERTICAL INTERVAL TIME CODE:
MODEL 5301**

This is an optional feature that provides the ITP with the capability to both generate & read VITC in the proposed industry standard. Any two lines in the vertical interval from line 10 through & including line 20 can be selected. In the read mode, the ITP decodes VITC independently of its recorded position in the vertical blanking interval.

**TIME CODE CHARACTER GENERATOR:
MODEL 5302**

The optional time code character generator makes use of a black mask background for either recording or displaying characters in the video picture. The vertical and horizontal positioning of the characters is controllable from the front panel together with character height and width.

CONFIGURATION SUMMARY

5300 Standard T/C Reader/Generator	\$4150.00
5301 Vertical Interval Time Code	4550.00
5302 Character Generator	4550.00
5303 Includes all features	4950.00
Field Upgrade Kit VITC	500.00
Field Upgrade Kit CG	500.00

The ITP, a unique combination of demanding features for professional time processing, allows the user to make use of such features as time code dubbing, 'user bits' manipulation and synchronization, standard SMPTE/EBU and VITC generation and decoding, and clear, crisp video character display.

The TTL compatible input signals into the rear panel parallel connector permitting the ITP to be remotely controlled. A rear panel mounted toggle switch is used for selection of EIA RS170A/NTSC or PAL compatible video signals.

5350 SMPTE TIME CODE GENERATOR

The Datum Model 5350 generates industry standard time code in the SMPTE/EBU specified format. Front panel thumb wheel switches allow for user-definable setting of hours, minutes and seconds. Additional user accessible front panel switches allow for such useful functions as drop frame/non-drop frame format and generator start and stop.

The current time count is clearly displayed through the use of high efficiency red LED indicators located on the front panel.

Time code serial output is at the rear chassis through standard balanced XLR connectors. In addition, buffered parallel BCD code is also available for use with other Datum peripherals such as the Model 5370 time code character generator.

Code synchronization is achieved through a standard BNC connector requiring composite sync or video input reference to achieve properly locked time code. PAL ident connectors are also available.

A front panel indicator displays the presence of sync failure when it occurs. The Model 5350 and all of its features are combined in a standard 19" rack mount package requiring minimum panel space.

5350 SMPTE Time Code Generator\$1850.00

5360 SMPTE TIME CODE READER

The Model 5360 Time Code Reader processes SMPTE/EBU time code ranging in speed from 1/5 to 60 times normal play speed from any compatible source. The translated information is displayed in hours, minutes, seconds and frames by highly efficient LED readouts mounted on the front panel.

The hold feature of the 5360 allows the user to 'freeze' the display for data logging purposes.

A front panel lamp indicates the presence of drop frame/non-drop frame code.

To prevent the unit from translating invalid data (due to occasionally poor input signal quality), the Model 5360 allows for the bypassing of one, two, four, or eight frames of code before the internal displays are updated. The time code reader rear panel has input facilities for balanced or non-balanced XLR video input. Buffered paralleled BCD output at TTL compatible levels is available from a rear panel connector for use by Datum's Model 5370 Time Code Character Generator and other external devices.

5360 SMPTE Time Code Reader\$1550.00

5370 TIME CODE CHARACTER GENERATOR

Incorporating numerous user-defined functions in a compact 19" rack mountable package, the Datum Model 5370 is able to superimpose up to eight SMPTE/EBU time code characters and three alpha characters on a standard video signal.

The numeric characters reflect the SMPTE/EBU time code in hours, minutes, seconds and frames as translated through input sources such as the Datum Model 5360 Reader or the Model 5350 Time Code Generator. Additional rear connectors facilitate input for video background, composite sync and mixed output or characters only.

Front panel switches and controls facilitate character positioning vertically and horizontally in addition to character height and width selection.

As an added enhancement, the user may select either characters with mask, characters alone or remote control operation at the touch of a switch.

Three additional alpha characters can be superimposed by user selectable internal jumpers.

The Model 5370 Character Generator is fully compatible for use with Datum products and represents the state-of-the-art design in SMPTE/EBU time code equipment.

5370 Time Code Character Generator\$1680.00

ECHOLAB, INC.

175 Bedford Road
Burlington, MA 01803

PRODUCTION SWITCHER/ PULSE CROSS

SE-1G

SE-1G

4 Input S.E.G. for use with up to 5 video sources, one of which may be a VCR playback. 4 blackburst outputs simplify system connections with the new genlockable B-411 cameras. Rack mount or desk top.

SE-1G\$1695.00

SE-2 VIDEO PRODUCTION SWITCHER

- Direct plug compatibility with many cameras • Revolutionary Soft Take • Built-in phase shifter and sync DA's
- Single box, only 3-1/2" depth

The SE-2 is the ideal switcher/special effects generator for medium sized color studios. Designed for ease of installation, the SE-2 includes many features which are normally purchased in separate boxes. A sub-carrier phase shifter and a complete set of five standard sync pulses are built-in at no extra cost. Another important feature is a 400-hs window of acceptable sync timing; this means that a slight mis-phasing of camera inputs has no effect instead of causing a lateral shift during effects.

SE-2\$3195.00

SE-3 PRODUCTION SWITCHER

- Computer control of all switching and effects • Contact closure editing interface (standard) will initiate any pre-programmed event • 12 inputs, including black and background • 3 mix-effects circuits, 2 border generators
- 1 color background, 2 color matte generators • Front-panel programmable with up to 5000 steps • Remote control panel with coax or 5-wire cable, or clamps together for single-box 19" x 12" x 7-1/4" • Quad splits • Re-entrant effects • ECHOLab's patented soft take • 1-3/4" front panel depth

ECHOLab's revolutionary switcher/special effects generator, the SE-3, makes available exceptional performance for a low price. A powerful built-in Z-80 microcomputer replaces most of the digital logic found in other switchers and also allows user programming.

PCD

PCD PULSE CROSS DISPLAY

- Waveform Sampler • Pulse Cross Display • Distribution Amplifier

The PCD is the most effective and economical tool for monitoring video quality for small applications. The input to be monitored is a 1V p-p composite video signal. Six SO-239 connectors provide two different types of output signals: display and distribution.

The Display outputs carry unmodified input video until Display Select switch is pushed. Pulse cross or waveform sample displays may be selected separately or in combination. Four isolated distribution amplifier outputs are also available: these outputs are not affected by the display select switch. The Waveform Sample Display acts as an oscilloscope for monitoring video functions such as amplitude, pedestal level, excessive white peak clipping and 60 cycle noise. Instantaneous video level is sampled once per horizontal line and displayed as the horizontal displacement of a vertical white stripe which is added to the Display video outputs. Two additional vertical stripes act as a calibrated graticule, representing pedestal level and peak white level. These are factory-set for a 1V p-p signal but may be recalibrated with internal trim pots. Pulse Cross Display repositions the monitor picture to make sync and blanking pulses visible. Serration, equalizing, and blanking pulse timing can be quickly verified. Vertical interval test signals (VITS) and VTR head switching transients can be monitored. Editing VTRs can be tested for tape tension, servo lock and proper sync. Since the color burst is displaced in pulse cross operation, color sync will be lost on the display outputs only. In all other modes, broadcast color specifications are met.

COMPUTER CONTROLS FOR VIDEO PRODUCTION

MTG-550 LONGITUDINAL TIME CODE GENERATOR

A compact and versatile longitudinal time code generator packed with useful features. Outputs continuous serial SMPTE/EBU standard drop frame or non-drop frame time code with or without user bits for use in laying down longitudinally recorded time code tracks on video and audio tapes and magnetic film. Front panel thumbwheel switches for presetting starting time values and for manually entering user bit data. Front panel selectable slave mode allows starting count to be picked-up from a pre-existing time code track, an invaluable feature for generating continuous time code tracks in assembly editing applications and for reconstructing damaged sections of time code tracks. Accommodates a wide variety of sync references: AC line; NTSC, PAL or SECAM composite video. Additional features which make the MTG-550 an outstanding value include:

- Easily understood control panel with visual and audible status alarms/displays.
- Manual user bit entry with full hexadecimal capability.
- HOLD pushbutton that allows time code count to be frozen and resumed from front panel.
- Binary word and hexadecimal display modes.
- Selectable time code frame rate: 25 fps or 30 fps.
- Parallel BCD time and binary word output lines capable of driving TTL loads.
- Parallel binary word input lines.
- Compact, low power, high reliability design utilizing CMOS logic and EECO's exclusive custom LSI time code generator I.C.

MODEL NO.	DESCRIPTION	PART NO.	PRICE
MTG-551	NTSC	260182-01	\$2,995
MTG-552	PAL-B	260182-02	3,230
MTG-553	SECAM	260182-03	3,350

PTG-560 PORTABLE TIME CODE GENERATOR

A precision battery operated longitudinal time code generator expressly designed for portable use in ENG/EFP applications. Synchronized either to an internal crystal oscillator or to the video signal, the unit supplies continuous serial SMPTE/EBU standard time code with or without numerical user bits for use in laying down longitudinally recorded time code track simultaneous with recording of video/audio material under field production conditions. Dual function thumbwheel switches preset starting time values and also specify numerical user bit values. Two

TIME CODE READERS/ GENERATORS

switch selectable time code update modes are provided: time-of-day, in which time code updates continuously as long as power is on; and elapsed time, in which time code updates only when recording. Other design features and operating capabilities which uniquely qualify the PTG-560 for ENG/EFP include:

- Compact, lightweight and rugged packaging with mounting hardware designed for quick, secure piggyback installation on most popular portable VTRs.
- Operating temperature range of 32 to 104 degrees Fahrenheit for all-weather performance.
- Low power consumption design utilizing CMOS logic, EECO's exclusive custom LSI time code generator I.C., and an LCD time code display. 1000 hours typical operation from standard 9.0 volt battery.
- RESET pushbutton that clears time code value to zero.
- HOLD position on operating mode switch that allows time code count to be frozen and resumed manually.
- Bright electroluminescent backlight on LCD time code display that provides excellent readability at night and under low ambient light conditions.

MODEL NO.	PART NO.	PRICE
PTG-560	260236-01	\$1,495

TCR-650 TIME CODE READER

A full-feature time code reader capable of reading serial SMPTE/EBU standard drop frame or non-drop frame time code with or without user bits from video and audio tapes and magnetic film at forward or reverse speeds of 1/16th to 60 times normal play. The decoded time code is displayed on a front panel readout that is switchable between SMPTE/EBU time format and user bit format. Decoded time code is also output via serial and parallel interface ports for use by computer controlled editing systems and studio automation computer systems. At play speed, squared and buffered restored serial time code is output for use in time code dubbing. For added versatility, transport tachometer pulses can be used alone or in conjunction with SMPTE/EBU time code inputs to update the time code outputs and display. This capability allows time code synthesis from sprocketed equipment lacking provisions for a time code track, and also allows automatic switchover from time code input to tach pulse updating whenever invalid time code is detected. Additional features which make the TCR-650 a versatile performer include:

- Automatic frame rate detection circuit that automatically compensates for incoming time code rates of 24, 25 and 30 fps and for drop frame/non-drop frame format.
- Locally or remotely selectable frame blanking that suppresses frame display on front panel time code readout.
- Locally or remotely commandable HOLD that freezes time code/user bit display and outputs; terminating HOLD allows display and outputs to resume updating from current time code input value.
- Microprocessor technology and CMOS logic are employed to achieve compact size, low power consumption and operational flexibility.

MODEL NO.	DESCRIPTION	PART NO.	PRICE
TCR-651	Basic Unit	260202-03	\$2,995
TCR-652	With time code synthesis from tach pulses	260202-04	3,240

VCG-750 VIDEO CHARACTER GENERATOR

A versatile microprocessor based reader/character generator that reads SMPTE/EBU standard time code from any source at speeds from zero to 60 times normal play. From this input, the unit extracts tape time and user bit data and outputs this data as video characters which may be "burned" into or superimposed over source video on a monitor. Reads longitudinal and vertical interval time code, with automatic switchover to VITC if longitudinal code becomes invalid. Features include:

- Compatible with 24, 25 and 30 fps drop frame and non-drop frame SMPTE/EBU time code inputs; frame rate and drop frame status are automatically detected and compensated for.
- All current video standards accepted as source video inputs (NTSC, PAL, and SECAM).
- Tape time and user bits may be displayed on monitor alone or together, and are independently positionable vertically and horizontally; "smart" positioning controls prevent displays from overlapping.
- Tape time display includes video field readout at play speed and below. Frame blanking command allows frame and field characters to be suppressed.
- Selectable character heights of 28 or 42 raster lines; variable density black background mask may be added for increased legibility.
- Remote HOLD command freezes displayed tape time/user bits; display updating resumes from current time code input value when HOLD is released.
- Parallel interface outputs decoded time code/user bit data for use by computer controlled editing systems, synchronizers or studio automation computers. All front panel enable/disable functions remote controllable via TTL interface.

MODEL NO.	DESCRIPTION	PART NO.	PRICE
VCG-751	Basic Unit	260225-01	\$3,660
VCG-752	With VITC Reader	260225-02	4,560

VIG-850 INTELLIGENT TIME CODE GENERATOR/READER

The do-everything time code instrument! Reads and decodes vertical interval time code (VITC) with user bits from input video at speeds from freeze frame to ± 45 times play. Generates continuous longitudinal time code and/or VITC, with or without user bits, from manually preset values, from external sources, slaved to decoded VITC from the reader or slaved to longitudinal time code input. Virtually any VITC/longitudinal time code conversion can be accomplished. A broadcast quality video inserter provides the means to insert generated VITC into source video. Display of generated and read time code and user bits, and a variety of informational and error messages is via a multi-function 8-digit front panel readout.

The VIG-850's primary application is generating, reading, converting and slaving vertical interval and longitudinal time code for indexing and syn-

TIME CODE READERS/GENERATORS

chronizing videotaped programming. The unit's video inserter can suppress VITC present in incoming source video and re-insert slaved VITC into the outgoing source video, making the VIG-850 ideal for laying down continuous VITC on edited master tapes produced on VITC-only or mixed VITC/longitudinal time code video tape editing systems. A sampling of the VIG-850's many features includes the following:

- Flat membrane switch control panel with audible actuation feedback.
- Microprocessor control with sophisticated firmware that allows simultaneous reader/generator operation, guards against improper time code entries, prevents conflicting commands, inhibits operation in modes requiring signal inputs not available, and automatically switches certain signal inputs to backup sources if prime sources are not present.
- Front panel time code readout assignable between reader and generator, time-of-day or user bit display. Full hexadecimal capability and commandable frame blanking.
- HOLD command that freezes reader time-of-day/user bit display without affecting generator output updating.
- Time code output available via SMPTE bus for interface to computer-controlled editors, synchronizers and studio automation equipment.
- Compatible with NTSC and PAL/SECAM video standards.

MODEL NO.	PART NO.	PRICE
VIG-850	260234-01	\$5,490

VIR-950 VITC READER

An advanced time code reader capable of recovering and decoding SMPTE/EBU time code and user bits recorded in the video vertical blanking interval at tape speeds from freeze-frame to 45 times normal play, forward and reverse. Front panel time code readout is switchable from time code to user bits display. An additional readout element indicates the video field, providing indexing resolution to one half frame. Recovered time code is also output via a serial SMPTE bus for use by external equipment such as computer controlled editing systems and synchronizers. An automatic tach pulse update mode is provided, in which time code count is derived from transport tachometer pulses in the absence of readable VITC. Additional operating capabilities and design features which make the VIR-950 a versatile production tool include:

- Frame blanking function that suppresses display of frame and field digits in time code readout at high tape wind speeds or in response to local or remote blanking command.
- Local/remote HOLD command that freezes displayed tape time/user bits; display updating resumes from current time code input value when HOLD is released.
- Selectable VITC frame rate of 25 or 30 fps; selectable tach pulse rate ranging from 1 to 30 pulses/frame.
- Compatible with NTSC and PAL/SECAM video standards.
- SMPTE bus interface over which all front panel controls are remoted and decoded time code/user bit data and unit status are output.
- Microprocessor control with powerful firmware that prevents conflicting operator commands, checks and processes VITC in real time, automatically executes a complete self-test sequence at power-up and performs maintenance diagnostics on command.
- Compact, rack-mountable packaging. Flat membrane switch front panel.

EECO Incorporated

EDITING SYSTEM

COMPUTER CONTROLS FOR VIDEO PRODUCTION

IVES™ VIDEO TAPE EDITING SYSTEM

Definable System Parameters: Preroll time, postroll time, reel numbers, edit event numbers and control track editing starting time count are all user definable from the keyboard.

Printer Output: Print commands enable automatic hardcopy printer output of edit data as each edit is completed. Printout can be specified in CRT display format or CMX-compatible edit list format.

Recall Command: Lets you keep track of changes you make to existing edit data by allowing recall of the old value of the last data item changed.

Non-volatile Memory: When IVES is turned off during breaks or at the end of the day, all the information pertaining to the current edit is retained, and is immediately accessible when power is turned back on.

Auto Retry: If an edit is aborted due to VTR syncing problems, the IVES system automatically attempts the edit again, extending the preroll time to allow the VTRs a longer sync-up period.

PRE- AND POST-EDIT FUNCTIONS THAT MAKE IVES A COMPLETE POST-PRODUCTION SYSTEM:

Copy: Just one button starts an automatic sequence that makes a direct copy from the play VTR to the record VTR, or vice-versa. Both tapes are rewound to their beginnings before the copy starts, and all audio, video and SMPTE/EBU time code routing is accomplished automatically through the internal routing switcher.

Stripe Tape: Another powerful one-button command. Automatically stripes either the record or play tape with continuous SMPTE/EBU time code and/or video color-black and control track pulses. Before striping is begun, the tape(s) are rewound to the beginning and the starting count of the SMPTE/EBU code is preset to an operator designated value. All functions associated with the stripe tape sequence, including an NTSC sync generator, a video color-black generator and a SMPTE/EBU time code reader/generator for each VTR are included in the IVES system. An auxiliary video input jack is also provided for application of an externally generated color bar signal if color bars are desired instead of video color-black.

Record Time Code: Press this button and the designated play and/or record tapes are rewound to the beginning and then striped with continuous SMPTE/EBU time code. Starting count is automatically preset to an operator designated value before striping begins.

Audio Mixer and Monitor: Need to add audio background or voiceover to your edited master—The capability is right on the IVES control panel. The internal audio mixer with front panel level and mix controls allows you to blend audio from a front panel mic input or an auxiliary audio line input with play VTR audio output as it is routed to the record VTR input. A 2-watt audio amplifier with front panel volume control lets you monitor either VTR's audio.

"SMART" INTERFACES INSURE SMOOTH INSTALLATION:

Two self-contained interfaces for popular 3/4" and 1 1/2" VTRs are supplied as standard equipment on IVES. The interfaces are of plug-in design to facilitate fast conversion to different types of VTRs; no VTR modifications are required. The interfaces are capable of serving in both a record or play capacity, as selected at time of installation, and all VTR manual motion controls are remoted to the IVES front panel.

MGS-100A

A frame-accurate, microprocessor-based SMPTE/EBU time code instrument that can simultaneously search up to three video/audio tapes to designated program points, cue them at these points and then lock them in phase-locked synchronized play. The MGS-100A offers a broad range of operating modes that can enhance the efficiency, precision and flexibility of virtually any video or audio tape production facility. A sampling of its many applications includes:

Video/Audio Synchronization—

- Matching video to audio for perfect lip sync.
- Audio sweetening.
- Stereo simulcasting.
- Layback of sweetened audio onto final edited video master.

Video/Video Synchronization—

- Simultaneous program presentation.
- Program sequence selection (off-line editing).
- Network program backup.
- On-line program editing.

Audio/Audio Synchronization—

- Expanding total number of synchronous tracks by syncing two or more multi-track decks.
- Maintaining precise synchronization during mixdowns.

THE MGS-100A SYNCHRONIZATION CYCLE:

Time code from up to three transports is read by the MGS-100A. One transport is designated as a master; the others, slaves. At the start of the sync cycle, the MGS-100A commands each transport to cue to a pre-designated point. As the transports roll from their cue points, the MGS-100A issues speed-up/slow-down commands to the slave transports until they are the same distance from their cue points as the master is from its cue point. When this is achieved, the slave transports resume normal play speed. From then on, the time code of all transports is constantly monitored by the MGS-100A to maintain the synchronous relationship. Once lockup is achieved, the frame rates of the slave transports are held to within ± 100 usec of the master. Identical time code need not be recorded on the tapes to be synchronized; the MGS-100A automatically compensates for time code differences and for mixed drop frame/non-drop frame formats.

A HOST OF USEFUL OPERATING FEATURES:

The MGS-100A offers a full complement of operating modes and convenience features to satisfy even the most demanding user. Yet, for all its technical sophistication, the MGS-100A is simple to operate. Some of the features that make the MGS-100A so versatile are outlined below.

Cue Point Selection: Key-in cue point assignments as SMPTE/EBU time values or mark them on-the-fly, on an individual transport basis or for all transports simultaneously.

Cue Search With Preroll: A one-button command searches all transports forward or reverse to pre-designated cue points and parks them at these

points or at a specified preroll distance ahead of these points. Preroll capability is especially useful when the cue point is used as a main entry or event trigger point, as it gives all transports time to sync prior to the cue point.

Sync Play Command: Commands all enabled transports to play forward from their current tape locations, with the slave transports seeking time intervals from their assigned cue points to match the master's current distance from its cue point. When this match-up is achieved, the slave transports remain phase-locked to the master.

Tape-to-Tape Offset Adjustment: Offset commands allow the servo of any transport to be slewed at a high or low rate in any time increment from one frame on up, plus or minus of the current sync point, to allow shifting the program material on one tape with respect to another without breaking sync.

Roll Back: A one-button command that tells all transports to roll backward for a designated distance, then play forward and synchronize to one another.

Chase Mode: The chase mode allows parallel control of one or both slave transports from the master transport's remote control panel. The slaves duplicate every action of the master automatically.

Time Code Triggered "Event" Relay Closures: An internal time code comparator can be programmed to initiate up to two relay contact closures and/or roll the second slave transport when the master transport's time code matches "event" time code values preset by the operator.

Time Code Scratchpad Memories: Three scratchpad memory registers are provided for temporary storage of time code values and to facilitate transfer of time code values from one register to another.

On-the-Run Transport Mode Changes: The operating mode of any transport can be changed while system operations are in progress. With few exceptions, there is no necessity for placing the system in stop mode prior to performing mode changes.

Interface Flexibility: The MGS-100A employs modular hardware organization and custom interface boards to accommodate a wide selection of popular professional video and audio transports. All transport control and status signals are opto-isolated, preventing ground-loop induced system noise or damage resulting from mis-mated interface connectors. There are provisions for remoting the MGS-100A's control panel from its electronics chassis, and for connecting several remote control panels in parallel, providing the versatility to adapt to any studio layout.

UART Interface (RS-232): An optional serial UART interface allows all MGS-100A front panel control and indicator functions to be accessed by computer controlled editing systems and studio automation computers.

COMPUTER CONTROLS FOR VIDEO PRODUCTION

ECONOLINE™ TIME CODE GENERATOR AND READER PERIPHERALS

ECONOLINE peripherals are designed for entry level post-production and editing applications and complement the EECO line of full features time code products.

MTG-55 MASTER TIME CODE GENERATOR

The MTG-55 eight-digit SMPTE/EBU longitudinal time code generator outputs serial time code. Time code is formatted in hours, minutes, seconds, and frames. The MTG-55 is an extremely useful instrument for indexing video and audio tapes for subsequent material location and editing. It also offers the following affordable features:

- Drop frame or non-drop frame operation.
- Color frame synchronization through a rear-mounted BNC connector. This feature permits using an external 15Hz color framing pulse.
- Loop-through video input/output connectors (BNC) to assure that time code transmission starts at the beginning of a frame, per ANSI-V98. 12M.
- A video input designed to accept composite video or composite sync.
- An XLR connector that provides for time code output on the rear panel.

The unit is 1-3/4" high and 10" deep. It has a standard 19" wide rack mount front panel. Power required is 117 VAC, 60Hz, 3 watts maximum

MODEL NO.	PART NO.	PRICE
MTG-55	260246-01	\$1,250

TCR-65 TIME CODE READER

The TCR-65 eight-digit SMPTE/EBU time code reader uses 0.4" red LED's to display time code in hours, minutes, seconds, and frames. You can use the TCR-65 to read and decode longitudinally recorded time code from video tapes, audio tapes, and magnetic film. Other affordable features of the TCR-65 include:

- Reads time code from a SMPTE/EBU time code generator or directly from a tape. The time code is read at 1/20 to 20 times normal playback speed, in either forward or reverse mode.
- Extreme accuracy when the TCR-65 is reading code from a time code generator that is locked to a color sub-carrier frequency.
- A momentary Hold switch that holds the tape time on the display at the point the Hold button is pressed. The data is displayed as long as the button is depressed—even when the input is reading or decoding time code.
- A digital error-detection system. The TCR-65 automatically switches to a frame-counting mode when a bad time code frame is detected. A pulse train, pulsing at the frame rate, then increments an internal counter that is loaded with the last valid data.

TCR-65	260247-01	\$1,250

VCG-75 VIDEO CHARACTER GENERATOR

The VCG-75 eight-digit video character generator reads SMPTE/EBU time code from video tape or other sources and outputs this data as video characters. The output data can be burned into or superimposed over the source video on a monitor. Time code is read at 1/20 to 20 times normal playback speed, in either forward or reverse mode.

Using the VCG-75, you can correlate specific video frames with time code information without looking away from the video monitor. Other affordable features include:

- A front panel designed to put all of the necessary controls at your fingertips.
- Ability to adjust character size from 5% to 30% of screen size. Characters can also be positioned anywhere on the screen.
- Easy-to-read characters via black screen background with white characters. In addition, character brightness can be adjusted from very bright to barely visible.
- A display that includes a drop-frame indicator, in the form of a colon(:).
- Through a rear-mounted connector, remote inputs can be used to control the Hold function and two display blanking inputs. One blanking input blanks frames only and the other blanks the entire time display.

The VCG-75 is 1-3/4" high and 10" deep. It has a standard 19" wide rack mount front panel. The unit is powered by 117 VAC, 60Hz.

COMPUTER CONTROLS FOR VIDEO PRODUCTION

EMME™

Computer — Assisted Editing System

EMME System brings the most sophisticated editing tools available together with simple, straight forward operation. Combining the speed and creative freedom of an active list editing system with the list management capabilities of large data base systems, the EMME System controls up to nine VTR's and multi-track ATR's and a production switcher.

It features a choice of user interfaces. Called the EMME Creative Workstations, each is tailored to fit a distinctive editing style of today's professional video and film editors. The EMME Creative Workstation is offered in two versatile configurations — the Video Editing Workstation, and the Cinemagraphic Editing Workstation.

Human engineered to minimize button-pushing, the Independent Creative Workstation uses a keyboard with dedicated function keys and an active edit decision list to meet daily editing needs in an easy to learn and logical style.

The Cinemagraphic Editing Workstation is designed for the unique needs and creative style of film editors. It displays no time code numbers, and allows the editor to edit totally with pictures and sound using a minimum of keys.

Utilizing state-of-the-art computer hardware and totally new systems software optimized for the videotape editing application, the EMME system provides all the comprehensive editing features required in today's postproduction environment including:

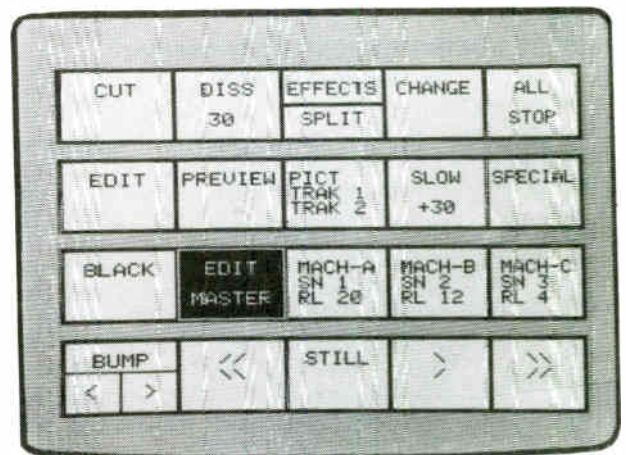

- Sync Roll: Allows the synchronization of multiple machines and creation of an edit decision list "on the fly".
- Cluster: Enables the creation of complex, multiple source events, and allows preview or record of these events in one pass.
- Motion Control: This standard feature provides Jog and Shuttle control of the assigned VTR's/ATR's.
- Auto Assemble: Provides sequential, checker board and dub assembly capabilities, and full "look ahead search" to eliminate waiting on machines.
- Auto Sync: Automatically tags a previously used source onto the edit list — in exact sync.
- Fill: Stretches or shrinks the source material to exactly fit the available space in the edit sequence.
- Slow: Allows manual entry of play speeds in frames per second or automatic entry via the shuttle knob.
- Constants and Macros: Ten Constant registers to store commonly used numbers and ten Macro registers which store up to 80 key strokes each.

Priced at 35,000.00 to 65,000.00

COMPUTERIZED EDITING SYSTEM

EMME™ VIDEO EDITING WORKSTATION with optional monitors and optional ASCII keyboard.

Close-up of EECO Cinemagraphic Editing Workstation's control display. All source material and edit function controls are displayed on-screen and are selected by the editor using the workstation's one-button "mouse" controller.

142 Sierra Street
El Segundo, CA 90245
(213) 322-2136

CLOCKS/TIMERS

70 SERIES CONSOLE MOUNT CLOCKS AND TIMERS

ES 172 Six Digit—12 Hour Clock. Three setting controls: Fast Advance, Slow Advance, and Hold \$174.00

ES 174 Six Digit—24 Hour Clock. Otherwise identical to the ES 172. \$174.00

ES 370 Four Digit, One Hundred Minute Up/Down Timer. Six controls: Count Up, Count Down, Stop, Minutes Advance, Seconds Advance, Reset \$222.00

ES 371 Up/Down Timer. Similar to the ES 370 except with Leverwheel Preset capability for faster setting of the desired time. \$352.00

ES 570 Four Digit, Sixty or 100 Minute Timer. Select 60 or 100 minute mode on rear connector. Start, Stop and Reset controls. Runs continuously unless stopped. Reset will return all displays to zero. Unit will run if reset while running or will stay at zero if reset when stopped. \$174.00

ES 572 Six Digit—12 Hour Clock or Timer. Five controls: Start, Stop, Reset, Fast Advance, Slow Advance. Will run continuously to 12:59:59. Advances to 1:00:00 and continues as clock unless stopped or advanced \$212.00

ES 574 A 24 hour version of ES 572 \$212.00

ES 575 Exactly like ES 570, with the addition of a "freeze" button. When the button is released, the display "catches up" with the correct elapsed time.

Dimensions: 2.16"H x 4.5"W x 4.13"D \$212.00

ES 562E/564E SIX DIGIT CLOCK/TIMER WITH MEMORY

ES 562E/564E is a combination six digit clock and 24 hour timer with memory, allowing the user to set the clock to the correct time of day, switch to timer mode, then switch back to time of day by pushing one button; time of day will be correctly displayed, in hours, minutes and seconds. Six pushbutton controls are mounted on the top of the unit, near the front of the desk-top case. When panel mounting is specified, they will be mounted on the front panel, below the display. The controls may also be removed, through two rear-mounted five pin connectors (Option R or Option D). These controls are Reset, Timer, Fast/Start, Slow/Stop, Hold and Clock.

Display: Six digits of .55" Planar Gas Discharge Display \$345.00

ES 112E/124E DIGITAL CLOCK

ES 112E (12 hr.) and **ES 124E** (24 hr.) are solid state, six digit clocks. Can drive 80 Series and 90 Series slaves. Displays are gas discharge, .55" high.

Dimensions: 2-1/2"H x 8"W x 6"D \$182.00

80 SERIES JUMBO CLOCKS AND TIMERS

Large, bright 1" gas discharge displays provide effortless long distance viewing from 40 feet.

ES 182L Six Digit—12 Hour Clock. Three rear-mounted setting controls: Fast Advance, Slow Advance, and Hold \$300.00

ES 184L Six Digit—24 Hour Clock. Otherwise identical to the ES 182. \$300.00

ES 380 Four Digit, 100 Minute Up/Down Timer Displays minutes and seconds, with rear-mounted connector to allow remote wiring of six momentary SPST Controls: Count up, Count Down, Stop, Minutes Advance, Seconds Advance and Reset. Other features similar to ES 301 \$349.00

ES 381 Up/Down Timer. Similar to ES 380, except that leverwheel preset is used. \$459.00

ES 580L Four Digit, 60 Minute Timer Displays minutes and seconds. Rear connector allows remote wiring of three momentary SPST controls: Start, Stop and Reset. Reset returns all displays to zero, and timer will continue to run from zero if reset while running.

80 Series slaves are also compatible with other ESE clocks and timers: ES 112/124, 301, 302 and 510.

Dimensions: 4.45"H x 10.38"W x 6.58"D \$251.00

ES 510E FOUR DIGIT 60 MINUTE TIMER

ES 510E is a four digit, sixty minute timer (59:59) with Start, Stop and Reset controls. If stopped, display will hold time reading and when restarted will continue with next count from last displayed figure. If reset while running, timer will continue to run. ES 510 can drive 80 Series and 90 Series Slaves.

Dimensions: 2-1/2"H x 6"W x 6"D \$174.00

ES 391

ES 992/994

ES 207 VIDEO DISTRIBUTION AMPLIFIER

ES 207 Video Distribution Amplifier answers the "one more unit" question with a versatile little package that can be tucked anywhere, either temporarily or permanently. Controls are available through the top plate with a miniature screwdriver for video gain, D.C. level and HF equalization. A very wide range of chroma level control can be obtained with the DA. Output video is expected to be set for 0 volts D.C. on the blanking or porch level, with video extending positive and sync negative. Nominal input and output signal level is 1 volt p-p. Typical gain-control range is from 1/2 volt to 1-1/2 volts p-p. . . \$175.00

ES 232 TIME CALCULATOR

ES 232 is an eight digit, 24 hour, Up/Down Timer/Time Calculator displaying Hours, Minutes, Seconds, and Frames (30 frames per second) on bright red .4" LED's. In the Calculator mode, data may be added or subtracted, or stored in memory, or recalled from memory. There are 10 memory locations available. Data may be added or subtracted from the timer value, while the timer is counting either up or down, but not while the timer is stopped. When stopped, data moved from calculator to time serves to preset the timer. In the timer mode, ES 232 counts up or down, and can be reset while running or stopped. It can be preset to any number in the 24 hour range. While timer is running or stopped, it is possible to enter the value into memory without disturbing the operation. It is also possible to recall a value from memory and add or subtract while timer is counting up or down. ES 232 uses 24 keys, mounted on a desktop case, measuring 2"H x 5"W x 6"D. \$250.00

90 SERIES 2-INCH DISPLAYS VIEWABLE AT 60 FEET

ES 391 Presettable Up/Down Timer. 100 Minute Range, Displays Minutes and Seconds, uses Leverwheel Preset. Controls are Count Up, Count Down, Stop, Reset and Preset.

Dimensions: 4.45"H x 10.38"W x 6.58"D \$537.00

ES 590L Sixty Minute Timer Displays Minutes and Seconds. Rear-mounted connector provides for wiring to user's single pole, momentary, push-button controls—Start, Stop and Reset. Reset returns all displays to zero, and timer will continue to run from zero if reset while counting.

Dimensions: 4.45"H x 10.38"W x 6.58"D \$376.00

ES 992E/994E— 6 Digit Clocks. ES 992E (12 hr.) and ES994E (24 hr.) Hours and Minutes on Two Inch Gas Discharge Displays, Seconds on One Inch Gas Discharge Displays. Three top-mounted setting controls—Fast Advance, Slow Advance, and Hold.

Dimensions: 5"H x 12"W x 3-1/2"D \$495.00

ES 301E/302E 100 MINUTE UP/DOWN TIMERS

ES 301E is a four digit, one hundred minute timer (99:59) with six controls: Count Up, Count Down, Stop, Minutes Advance, Seconds Advance, Reset. Counting can be activated up or down or set back to zero. When "Stop" control is pressed, the four digit display is held. Counting direction (up or down) can be changed or time can be reset to zero without stopping the count. The ES 301E can drive 80 Series and 90 Series Slaves. Displays are gas discharge .55" high.

With the ES 302E, the user can preset times much faster than with the ES 301E, because lever-wheel type switches are used for the preset feature. The ES 302E can drive 80 Series and 90 Series Slaves.

Dimensions: ES 301E: 2-1/2"H x 8"W x 6"D \$258.00

ES 302E: 2-1/2"H x 10"W x 6"D \$333.00

CLOCKS/TIMERS

ES 991

ES 192E/194E

ES 199

ES 160

MASTER CLOCKS

ESE Masters provide a means of keeping all time displays in the system in agreement, through the use of a Serial Time Code. Only one pair of wires is needed to distribute the time code to all remote serial input displays. An ESE Master Clock System can operate digital displays, clocks with sweep second hands, printers, and in addition, tell your computer what time it is. Twelve hours of standby battery operation is standard in ES 160 and 160/1.

ES 160. Mounted in a 5-1/4" relay rack panel & chassis, displays six digits of time information on .4" LED displays, in 12 hour format. The ES 160 has 3 sec. per month accuracy. Its standard output is serial BCD, CMOS compatible, and drives ES 161E, 166E, 171, 991 or 993 Remote Displays w/o buffering. All inputs & outputs are through rear-mounted connectors. Dimensions: 5-1/4" H x 19" W x 15" D. \$1158.00

ES 160/1. One second per month version of ES 160 \$1350.00

ES 199. Our most accurate Master, providing better than .5 seconds per month. It contains a 10 MHz receiver, with audio output, to synchronize with WWV at the push of a button. WWV transmits a 1000 Hz tone at the start of each minute, except for the first minute of each hour, when a 1500 Hz tone occurs. If the button is pushed and held during this time, the seconds' counters of the clock will be reset to zero. The ES 199 is supplied with an antenna, battery and charger. An external sync input connector is provided, to allow introduction of a periodic logic "0" or contact closure at a once per second or slower rate. In order to simplify maintenance, test points are provided on the 1000 Hz decoder board, to allow re-calibration of the oscillator using only an oscilloscope. The serial output will drive 100 ES 161E, 166E, 171, 991 or ES 993E Remote Displays. Dimensions: 5-1/4" H x 19" W x 15" D. Electrical: 117V AC, 50/60 Hz. Options: B (CMOS, 5V) J, One pps Output, Relay Closure on Hour and 1/2 Hour, Impulse Driver (ES 162) \$1575.00

ES 192E/ES 194E. The most economical Masters, ES 192E (12 Hr.) and ES 194E (24 Hr.) are constructed using ES 112 or ES 124 digital clocks and adding the ES 167B Serial Time Code Generator to provide the output needed to drive Remote Serial Displays ES 161E, 166E, 171, 991 and 993E. Displays are 6" incandescent type. Dimensions: 2-1/2" H x 8" W x 6" D. \$358.00

Accessories

ES 161E Remote Digital Display decodes serial time data and displays six digits of time on .55" Gas Discharge Displays, in either 12 or 24 hour format. Dimensions: 8" W x 2-1/2" H x 6" D. \$182.00

ES 162 Impulse Driver plugs into the ES 160 chassis, and can drive 20 Impulse Clocks. Designed so that if power fails, impulse always comes on with the same polarity when power is restored \$221.00

ES 164E Remote Digital Impulse Display is similar to the ES 161E except that the ES 164E derives its count command from the ES 162 Impulse Driver, or any impulse clock drive circuits already installed. Dimensions: 8" W x 2-1/2" H x 6" D \$269.00

ES 165 Impulse Driver was designed to provide synchronized power to the ES 168 Impulse Clocks. It is capable of driving 50 ES 168 clocks, and will keep them running accurately through twelve hours of power failure. The ES 165 derives its synchronizing pulse from any one pulse per second source, such as the ESE Master Clock, and can also accept the once per second, alternating 12 or 24 volt impulses from an existing impulse clock system \$210.00

ES 166E Jumbo 1" Clock Display features six digits of one inch Gas Discharge Displays in 12 or 24 hour format. Receives serial time code input from any ESE Master Clock or ES 167B. Dimensions: 10-1/2" W x 4-1/2" H x 6-1/2" D \$280.00

ES 167B Serial Time Code Generator is an integral part of ES 160, 190, 192E/194E and 196 Master Clocks, this unit can be added to many other ESE products, including ES 112, 124, 182, 184, 992, 994, 750, 751, 753, 754 and all 780 Series Time Programmers. Drives ES 161E, 166E, 171, 991 or 993 Remote Displays \$161.00

ES 168 Impulse Clock operates from the 8 pps output of the ES 165 Impulse Driver. As many as 50 ES 168s can be connected to a single driver, and they will continue to run during a power outage of at least 12 hours \$142.00

ES 171 Console Mount Remote Display receives the serial time code generated by any ESE Master Clock, or any ESE product containing the ES 167B serial time code generator, and displays it on bright red .3" LEDs. Dimensions: 2-1/4" H x 4-1/2" W x 4" D \$174.00

Impulse Clock. When a sweep second hand is desired specify the 3201 .003 "Extra Flat" Impulse Clock. It has a 12 inch dial protected by a glass cover and metal bezel and is approximately one inch thick. As many as twenty impulse clocks can be driven by a Master Clock which has ES 162 as an accessory \$211.00

ES 991 4-Digit Serial Input Slave decodes serial time data and displays four digits of time on large 2" Gas Discharge Displays. Dimensions: 10-1/2" W x 4-1/2" H x 6-1/2" D, Desk Top Case \$358.00

ES 993E 6-Digit Serial Input Slave features four digits of 2" high Gas Discharge Displays, and two digits (Seconds) of 1" Gas Discharge Displays. Receives serial time code input from any ESE Master Clock or ES 167B. Dimensions: 5" H x 12" W x 3" D (Wall Mount) . \$495.00

142 Sierra Street
El Segundo, CA 90245
(213) 322-2136

TIME CODE READERS PROGRAMMERS/LEVEL INDICATOR

TIME CODE READERS

ES 253 SMPTE Time Code Reader is an eight-digit SMPTE Time Code Reader displaying Hours, Minutes, Seconds and Frames \$500.00

ES 254 SMPTE Time Code Reader is a bi-directional, multi-speed eight-digit reader, displaying Hours, Minutes, Seconds and Frames on .4" red LED displays. \$744.00

ES 255 is a bi-directional, multi-speed, eight-digit SMPTE Code Reader, that can add the information to a video stream for recording time code on the video portion of a tape, or for displaying it on a monitor. Reading speed is 1/20 to 20 times playback speed. . . \$1095.00

ES 256 "Smart" SMPTE Time Code Reader. The ES 256 is a bi-directional multi-speed, eight digit SMPTE Time Code Reader which displays Hours, Minutes, Seconds and Frames on .4" red LED's. The ES 256 incorporates a digital error detection system: When a bad frame of time code is detected, the unit will switch to a frame-counting mode. \$1045.00

ES 257 SMPTE Time Code Reader/Comparator is capable of making two comparisons, as established by the two sets of thumbwheels located on the front panel. By specifying option "B" (four-line parallel BCD, 5V CMOS compatible), additional comparisons may be made by connecting one or more ES 258 "expander" units \$875.00

ES 258 SMPTE Time Code Comparator has been designed as an "expander" for the ES 257. Two sets of eight-digit thumbwheels are located on the front panel, to allow comparison of two SMPTE code locations. \$395.00

ES 280 Audio Time Code Generator/Reader is a 10 Digit Audio Time Code Generator/Reader, capable of laying down a serial BCD time code on audio tape in the Generator Mode, and recovering and displaying it in digital form in the Reader Mode. The code has been designed by ESE. It is not a standard code, such as SMPTE or IRIG. The frequencies used to produce the code have been selected to be compatible with cartridge machines as well as other tape recording and playback equipment. Amplitude adjustment assures the right amount of signal for the particular machine being used. \$550.00

VIDEO TIME AND DATE GENERATORS

ES 206 Video Time and Date Generator has been designed to allow the addition of Time and Date information to a video signal. Two rear-mounted video jacks permit "looping" the video information through the 206 to add the data. \$520.00

ES 261 SMPTE Time Code Generator is a pre-settable, eight-digit SMPTE/Time Code Generator, capable of Drop Frame or Non-Drop Frame operation. \$875.00

PROGRAMMERS

780 Series Ram Time Programmers are the most cost-effective way of programming more than eight events. They are flexible, easy to use, and provide 32 events (expandable to 96) in 5-1/4" of rack space.

780 Series units operate from the power line with a backup crystal time base and 72 hour battery/charger as an integral part of the equipment.

STANDARD UNITS

Eight Digits of Programming Capability

ES 780 10 Days, 10 Outputs, Hours, Minutes, Seconds \$1575.00

ES 781 100 Days, Hours, Minutes, Seconds 1433.00

ES 782 16 Outputs, Hours, Minutes, Seconds 1654.00

Six Digits of Programming Capability

ES 783 Hours, Minutes, Seconds 1365.00

ES 784 100 Days, Hours, Minutes 1365.00

ES 786 16 Outputs, Hours, Minutes 1600.00

ES 787 16 Outputs, Minutes, Seconds 1600.00

Four Digits of Programming Capability

ES 788 Hours, Minutes 1313.00

ES 789 Minutes, Seconds 1313.00

The size of the unit is 5-1/4"H x 19"W x 10"D — Relay Rack construction, totally enclosed, with a screen top.

ES 255

ES 280

ES 206

ES 790 Microprocessor-Based Programmable Timer is a 1,000 event, 32 channel, microprocessor-based programmable clock. Events occur as reed relay contact closures (single pole, normally open). These closures may be all momentary, all latching, or 16 of each, at the user's option. A simple modification allows the use of 16 double pole relays, instead of 32 single pole relays.

1,000 time events can be programmed into the memory and they can be entered randomly, as opposed to chronologically.

An internal crystal with battery and battery charger is provided for uninterrupted operation.

The size of the unit is 5-1/4"H x 19"W x 10"D.

ES 790 is totally enclosed in a rack mounting chassis with a screen top. \$2300.00

ES 790/1 790 w/1 sec/mo accuracy. Master Clock Option . . . 2888.00

750 Series Thumbwheel Programmer Comparators are recommended when programming up to eight time events. Thumbwheel switches are set to compare the time information from an ESE Clock or Timer.

An output (event) occurs each time the thumbwheel switch setting agrees with the time display.

One set of thumbwheels is required for each event. The standard 750 Series units are enclosed in a 3-1/2" high relay rack panel and chassis.

STANDARD UNITS

ES 750E ES 112 and one 6 Digit Program \$347.00

ES 751E ES 124 and one 6 Digit Program 347.00

ES 753E ES 112 and two 4 Digit Programs (Hrs. & Min.) . . . 414.00

ES 754E ES 124 and two 4 Digit Programs (Hrs. & Min.) . . . 414.00

ES 756E ES 510 and one 4 Digit Program (Min. & Sec.) 341.00

ES 758E ES 510 and two 4 Digit Programs (Min. & Sec.) . . . 430.00

AUDIO LEVEL INDICATOR

ES 214 Dynamic Audio Level Indicator is a highly accurate audio level indicator, which is designed to simulate the action of a conventional VU-Meter but with superior dynamic characteristics. The LED meter is five to one hundred times faster in responding to complex waveforms than the mechanical meter without sacrificing the familiar meter "movement."

SPECIFICATIONS

Number of Indicators: 14 LED Lamps in 3 colors. Scale: +4, +3, +2, +1dB-Red. 0dB-yellow. -1, -2, -3, -5, -7, -10, -15, -20, -25dB-Green.

Input Impedance: 2200 ohms at maximum sensitivity. 6800 ohms at +8dBm "House Level", 10,000 ohms at minimum sensitivity.

Input Circuit: Transformer isolated, balanced bridging.

Frequency Response: 20-20kHz ± 1dB (all modes).

Rise Times: Less than 250 MicroSec (Peak Mode), less than 25 MilliSec (Fast Averaging Mode). Approximately 300 MilliSec (Optional VU Standard).

Fall Time: (All Modes) About 300 MicroSec from full scale.

Modes of Operation: Peak Reading. Fast Averaging (Apparent Loudness). Slow Averaging (USA VU-Standard) \$125.00

Burlington, Ontario, Canada L7M 1A9
(416) 335-3700 Telex 061-8784

"TEACH YOUR EDITOR VITC"

Model 620 VITC/VITS Deleter

Model 621 VITC Generator/Translator

Model 622 VITC Reader/Translator

Powerful VITC/LTC translator modules. Source identification and remote control via video signals.

The 620 series modules are basically stand-alone units, i.e. no provisions are made for direct data transfer between modules, except via external code or video connections. For more complex systems 610 series modules should be used. Their "EV-COM" communications bus permits direct command/data interchange with other modules within a frame.

Model 620 VITC/VITS Deleter

This is a general purpose vertical interval signal deleter. A high quality programmable video keyer substitutes black level for any type of code or test signal present on lines 10 to 21 (6 to 22 for PAL) of the vertical blanking interval. A group of DIP switches is used to select any line or group of lines. Color burst is not affected.

EV-BLOC RACK FRAME COMPONENTS

Backplane Assembly #601

The Backplane circuit board has been developed specifically to meet our design goal of maximum flexibility on the system level with reliability and performance on the module level. Circuit conductors for data, video and audio signal transfers, from each circuit block to its associated I/O module, have been carefully laid out to eliminate any chance of cross-talk between program video and high frequency microprocessor signals.

The assembly comes complete with 21 64-pin euro-card connectors (DIN 41612), one for the power supply regulator module, and 10 pairs for the EV-BLOC modules and their companion I/O modules.

Model 621 VITC Generator

FEATURES AND APPLICATIONS

- VITC Generator: 4/8 field color framed, resettable to 00:00:00:00 or jam-synced to longitudinal time code (LTR option) with error bypass (a terrific LTC to VITC translator; teach your editor VITC)
- Multi-source VITC Keyer: Any number of 621's can be synchronized to a common time code generator to accommodate isolated video sources. User bits may be transferred from the common generator or preset locally, using easily accessible DIP switches. This provides an added benefit
- Source Identification: The user bits in each module can be encoded to uniquely identify its video source. The time code bits can be set to zero, for cameras etc., or jam-synced to time-coded sources such as VTR's
- Remote Machine Control: Six control inputs can be utilized to control VTR's etc. via the program video path

Model 622 VITC Reader

FEATURES & APPLICATIONS

- VITC Reader. Reads vertical interval time code from about 20 times play speed down to still frame, providing time and user data out as LTC and multiplexed parallel BCD. An optional video inserter (VCG) keys the data into the picture
- VITC to LTC translator for use with LTC only editing equipment or readers
- Source ID Decoder. User bits encoded with a special code from an EV-BLOC 621 module or Model 4000 are displayed as unique source identification e.g. CAM 3, TC 1, VTR 5 etc., using the optional VCG
- Remote Machine Control. Six grounding output switches respond to specific user bit codes from a 621 encoder to remotely control a variety of devices via the program video path or off tape. Just think of the application potential

TERMINAL EQUIPMENT

MODEL 620

Power Supply Regulator #602

Power Transformer #6025

The power supply consists of two separate assemblies.

The plug-in regulator module provides regulated +5V for micro-processor and logic circuits, and $\pm 8V$ for signal processing elements.

The power transformer module contains all line/mains voltage circuits enclosed in a heavy duty stainless steel shielding case. Appropriate RFI protection is provided by LC filters.

The power supply provides enough DC current to handle a full complement of 10 EV-BLOC modules. Except for special custom applications, the two units are generally supplied together.

Options currently available are:

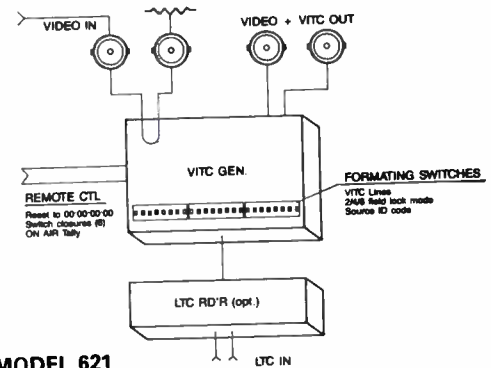

for Model 621: — LTR Longitudinal timecode reader

for Model 622: — VCG Video character generator

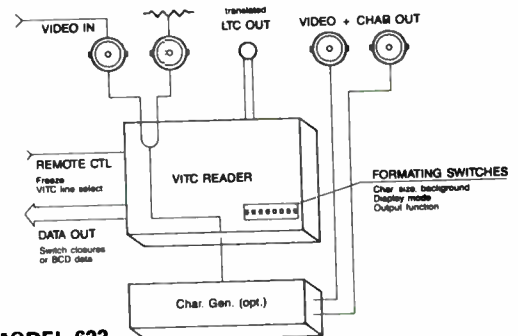

Each EV-BLOC module in this series requires I/O module #603

TERMINAL EQUIPMENT

"THEY WORK ALONE OR TOGETHER"

Model 610 System Controller

All communications within the EV-BLOC system are supervised by a system controller. The function of the system controller is to establish the location and type of each module installed in the system, and to schedule the use of the EV-COM bus by other modules. The model 610 System Controller module is specifically designed to perform this task and provide a gateway to the EV-BLOC system. The standard RS-232-C serial port allows an external computer or computer based editor to control and monitor the status of any of the 610 series modules installed in the system. Fitting the 422 option, changes the serial port to a SMPTE/EBU compatible RS-422 configuration.

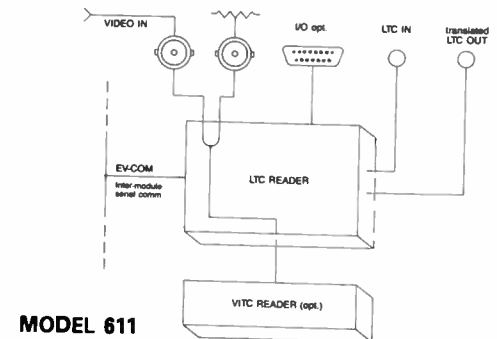

MODEL 610

Model 611 Timecode Reader/Translator

FEATURES & APPLICATIONS

- VITC/LTC Reader. Reads longitudinal time code from 1/30th play speed to 70 times providing time and user bits out as multiplexed parallel BCD (with BCD option fitted) or as serial ASCII (with 232 option fitted). Custom interfaces are available for other OEM applications.
- LTC Jam-sync Generator. Regenerates and re-synchronizes LTC code to eliminate edit aborts due to mis-phased or unreadable time code.
- VITC/LTC to LTC Translator. Permits LTC only editing equipment to read both codes providing frame accuracy at all tape speeds.

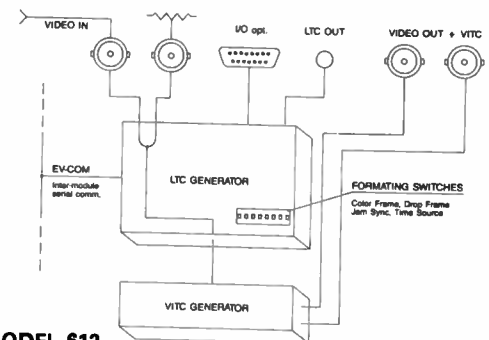

MODEL 611

Model 612 Timecode Generator

FEATURES & APPLICATIONS

- VITC/LTC Generator. 4/8 field color framed, free running or jam-synced to data from a 611 Reader module. When jam-synced to the record VTR reader in VITC only editing, continually ascending code is inserted on the edit master as edits are assembled. VITC coded workprints can be prepared for frame accurate edit decisions without a character burn-in
- Multi-source VITC Keyer. Any number of isolated video sources may be encoded with identical VITC using multiple 612 Generator modules.

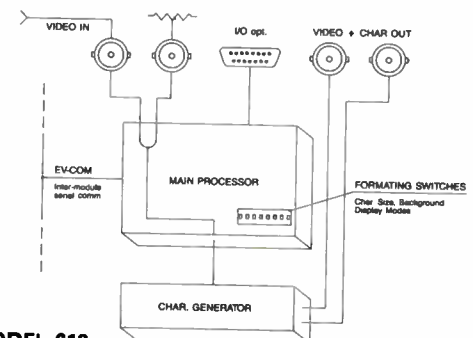

MODEL 612

Model 613 Video Character Generator

FEATURES & APPLICATIONS

- Off-Line Editing. Inserts time/user bit character data from another 610 series module into program video for burning timecode into workprints. Frame accurate edit decisions can also be made directly from VITC without the need of a window dub
- Video Typewriter. Used in conjunction with a computer or keyboard, the 613 module is a low cost alpha-numeric character generator for preparing tape indexes, slate boards, etc.

Each module requires a companion I/O module as outlined below:
 For 610 — #605 Serial I/O Module
 For 611 — #604 Parallel I/O Module
 — #605 Serial I/O Module when 232 option fitted
 For 612 — #603 Parallel I/O Module
 & 613 — #605 Serial I/O Module when 232 option fitted

TIME CODE EQUIPMENT

Model 3700D Edit Code Master

Our best longitudinal time code generator and full speed reader (over 2000:1 speed ratio). A video character generator with high resolution characters and alpha-numeric user bit decoding is standard. In addition to the features listed for the 3600D, these functional enhancements give this unit the power and flexibility to meet your most difficult operational requirements.

Features

- Separate generator and reader displays are particularly useful in Jam-Sync modes and when operating reader and generator independently.
- High flexible Jam-Sync modes allow transfer of reader time and user bits into the generator in a variety of configurations.
- Full alpha-numeric user bit functions can be used to record tape index, captions, source identification or other data along with the time code.
- RS-232-C serial port permits interfacing to remote control panels, computers, editors, etc.
- Multiplexed parallel BCD output of reader time and user bits.
- An aural alarm signals genlock problems. This can be disabled if, for example, the generator is locked to a VTR rather than house sync or PGM video.

3700D

3600D

4900

4000

Model ECM4000 Edit Code Master (with VITC)

The top of the line Model 4000 Edit Code Master combines a generator and reader for both VITCode and longitudinal time code with a high resolution character inserter, making it the most comprehensive answer to all time code needs. It reads from still frame to full wind speeds directly from the VTR output. Alpha-numeric user bit capabilities enable the storage of tape indexes, program comments and source identification.

Utilizing one of the most powerful microprocessors available, plus built-in diagnostics, the Model 4000 achieves new levels of functional flexibility and reliability. Particular attention has been paid in its overall design to maintaining operational simplicity. To this end we have introduced a new and unique concept which allows the Model 4000 to be configured to your particular operational environment. The daily operation of the unit is greatly simplified, often being reduced to just a few push button functions.

4000 Edit Code Master (with VITC) \$4995.00

Model 4300 Portable VITC Reader/Character Generator/Translator

Portable VITC reader/character generator. 15 character positions on raster; reads time code, standard and alphanumeric user bits, source ID data; reads VITC code at speeds of 10x play and above depending on VTR format; translates VITC to longitudinal time code.

4300 Portable VITC Reader/Character Generator \$1600.00

Model 3600D Edit Code Generator/Reader

This is an SMPTE/EBU edit code generator, a full speed reader and a video character inserter in a slim one rack unit package.

Features

- True dual standard, NTSC and PAL. Generates time code in accordance with SMPTE RS170 or RS170A, or EBU 4 or 8 field standards (4 switch selectable modes), locked to the PGM video source.
- Front panel format switches, no need to disassemble whenever certain system parameters need to be changed, e.g. field 1 or 2 update of VCG, color framing, drop frame, etc.
- Reads time code from 1/30x to 70x playspeed. New input circuit design permits reliable recovery of even severely distorted code such as can be expected off low end 3/4" machines.
- High resolution character generator in two character sizes, full screen positionable, keys time and user bits into the picture.
- Momentary and continuous Jam-Sync modes. In Cont-Jam, good code is automatically substituted when synchronizing to poorly recorded or disrupted code.

3600D Edit Code Generator/Reader \$3150.00

Model 4900 Edit Code Reader/VCG/Translator

A superb reader, capable of hesitation-free time code display from 70x down to 1/30x play speed, and with VITC option all the way down to still frame. We believe this to be the finest code reader available anywhere.

Features

- Full speed range LTC reader.
- Optional VITC decoder module (Model 49V).
- Easily accessible formatting Dip switches.
- High resolution character inserter; 2 sizes.
- VITC source ID decoder.
- Byte-wide parallel data output for easy Editor interface.
- Play speed LTC translator output incorporating a new soft-lock feature provides continuous time code at all reading speeds from still frame to maximum wind.
- LTC code phase corrector/regenerator for dubbing.

4900 Edit Code Reader/VCG/Translator \$1995.00
 49V VITC Reader Module for 4900 500.00

 (416) 335-3700 Telex 061-8784

CHARACTER GENERATOR/ TEST EQUIPMENT

VCG 1260 CHARACTER GENERATOR

The VCG 1260 Video Character Generator, designed primarily to display time information in video, has limited text and logo capabilities too. It decodes DQS-B6 or SMPTE/EBU time code from your master clock system and displays the time or user bit information. In addition, a built-in elapsed time counter with 0.01 sec resolution and a remote START/STOP control may be used for timing sporting events, etc.

The VCG 1260 may be used as a low cost alphanumeric generator using the optional serial. ASCII port. Limited custom logo capabilities are optionally available.

Eight front panel keys allow user selection of 4 character sizes; horizontal and vertical positioning, inverse video, input code, and display formats to suit individual applications. The configuration parameters are stored in non-volatile memory, eliminating the need to reprogram the setup after a power failure.

CHASER

Chase synchronizer for audio and video transports. As a stand alone unit, **CHASER** can perform a wide variety of tasks such as:

- Synchronizing an ATR to a VTR for audio laybacks
- Synchronizing ATR's to increase the number of available audio tracks
- Slaving an ATR to a VTR for integration of audio editing into the video edit suite
- Synchronizing multitrack ATR's to video during mixdowns of audio for video

CHASER incorporates a highly sophisticated intelligent transport interface which controls most transports with a simple cable change. Interfaces are selected by machine model using the **CHASER** remote control unit. Parallel, serial RS-232 and RS-422 SMPTE control protocols are supported.

Advanced software algorithms permit **CHASER** to learn machine ballistics, providing precise cueing and fast lock-ups. Integrated wideband LTC readers for both master and slave transports read code at slow hand crawl and full wind speeds. An optional VITC reader used with master VTR's, provides frame accurate timecode information even when the master is positioned at extremely slow speeds. Tach pulse backup allows normal tape lifter operation when spooling the ATR.

The only interface required from the master is timecode (LTC or VITC). Tach pulses may be required on some transports that do not provide LTC or VITC in wind modes.

CHASER is constructed using three of our popular EV-BLOC modules, providing distributed intelligence and possible system

PHASER—TIMECODE SYSTEM FOR AUDIO TRANSPORTS

PHASER—a new microprocessor based capstan speed resolver and timecode system for professional audio transports. Primarily intended for the live production environment, **PHASER** incorporates the functions of both a master timecode system and audio transport resolver into one slim rack mountable package.

PHASER controls the audio transport capstan to lock a pilot tone or SMPTE/EBU longitudinal timecode (LTC) to a master video reference. When time code is used, the absolute relationship between the timecode on the ATR and the video can be preserved in the video timecode by transferring the ATR timecode into either the time or user bits of the built-in LTC and VITC timecode generators.

The audio transport may be either frame locked to the video, or color framed such that the ATR timecode follows the SMPTE/EBU color frame sequence. This direct correlation between the video and audio time code facilitates video post production, as color framed edits may

VCG 1260

A broadcast quality keyer and high resolution characters combine to give a high quality presentation for on-air use. A separate preview output is provided for setup to preserve the integrity of the program output on air.

VCG 1260 Video character generator including video keyer to convert master clock, SMPTE, inputs to video output. Sports timer function with remote control stop/start facility—internal clock system, H-V positioning, inverse video-preview output. Optional serial ASCII input for alphanumeric display information and tape leader generator function.

VCG 1260A Video character generator as described above with optional serial I/O port for alphanumeric and tape leader generator displays.

VCG 1260 \$2480.00

CHASER

expansion. A remote control unit displays master and slave timecode, slave offset, machine status, etc., as well as controlling transport functions of the slave manually. The offset between master and slave timecode may be captured on the fly, trimmed up or down, or entered as absolute numbers from 1/100th of a frame up to 24 hours.

Two switch closures may be generated from either master or slave time code. The event outputs may be used to start and stop cart machines, unsynchronized recoders, or to punch in and out the master.

An RS-422 serial remote control port, compatible with the proposed SMPTE standard for digitally controlled equipment communicates with **CHASER's** remote control unit or may be used to permit computerized edit controllers or other studio computers to control **CHASER**.

Chaser w/no display \$3995.00
 Chaser w/built-in display 4495.00
 Chaser w/remote control 5395.00

PHASER

now be performed from the audio timecode numbers present in the video timecode's user bits.

PHASER's intelligent transport interface can be configured to a variety of ATR's. Front panel controls include remote control of transport functions, search, display and entry of timecode information for generator and reader.

PHASER is based on our popular EV-BLOC series, and is expandable to accommodate larger applications including multiple VITC channels, etc. Servicing is facilitated by a drop down front panel, which permits each module to be removed easily from the front.

Phaser \$3995.00

VTW-200 Video Typewriter

Features

- Self-contained, compact and low cost video typewriter
- 4-page memory
- Character format: 7 x 9 dot matrix
- Optional CMI-100A is compatible
- Dimensions:
16.92"W x 3.93"H x 11.42"D (430 x 100 x 290 mm)
(19" rack type)

VTW-200 Video Typewriter\$1500.00
VTW-200S With Internal Sync Generator1800.00

VTW-400 Video Typewriter

Features

- Character generator has clear, extremely high-resolution characters in a choice of 3 sizes and 2 resident font styles
- Includes a 4-step character slant
- Character flash
- Dropshadow and edge
- 8-page memory in standard version
- Displays 8 lines per page with 26 characters per line
- An optional built-in floppy disk adds 300 pages of memory
- 64 colors available for page by page character colorizing
- Displays modes for automatic and manual sequential page switching
- Time interval adjustable between 1-999 seconds
- Word processing characteristics such as line skip, line and page shifts, and line check
- Vertical position control
- Optional extras are also available. The MU-400 floppy disk memory which provides up to 300 pages on one diskette and fits onto the control unit of the VTW-400, and the PU-400 preview unit which allows information to be typed onto a page while another page is being displayed on the line monitor

VTW-210/210S Video Typewriters

Features

- Self-contained super video typewriter
- 4-page memory
- Optional PU-210 Preview Function is available
- Character format: 16 x 20 dot matrix for both line and preview monitors
- Three display mode: normal, roll and crawl
- Independent speed control for roll and crawl on the keyboard
- One line title display mode function
- Line monitor check function (transition preview)
- Automatic/manual sequential page switching
- Sequential time control
- Display line and quantity control
- Automatic character centering function
- Line/page word correction (horizontal character space shift)
- Line skip function
- Page-to-page line jump function
- Mis-operation detection function
- Optional MU-600, MU-300, MU-250 and PU-210 are compatible
- Dimensions: 18.5"W x 4.13"H x 11.8"D (470 x 105 x 300mm)

FVW-300 Video Writer

Features

- Self-contained, extremely low cost free hand writer
- Smooth writing: same picture elements as the FVW-910 (224 x 384 for NTSC, 256 x 384 for PAL) no line intermittence
- Line thickness selection
- Write, partial erase, total deletion functions
- Automatic straight line drawing function
- Cursor can be used as an instructional pointer. (cursor superimposition)
- Remote control capability
- Table top use or 19" rack installation use
- Optional MU-600 and RS-232C Serial Interface Unit are compatible
- Dimensions: 16.92"W x 3.46"H x 11.81"D (430 x 88 x 300mm)

FVW-300 Video Typewriter\$2950.00
FVW-300RS RS-232C InterfaceTBA
CI-10 Color Interface1650.00

FVW-910 VIDEO WRITER

FEATURES

- Idealized free hand writer meets broad applications
- Any information can be smoothly written directly onto the screen by using the lightpen
- Line thickness selection
- Eight different directions roll operation
- Straight line drawing
- Write/erase function
- Optional 3-page memory for the B and W mode (1 page memory for the color mode)
- Tremendous potential in broadcasting, educational, medical, instructional and informational video systems
- Optional CC-910 and AA-910 are compatible
- Dimensions: Control Unit 15.35"W x 6.93"H x 13.98"D (390 x 176 x 355 mm)
- Operation Unit 15.35"W x 4.72"H x 7.87"D (390 x 120 x 200 mm)
- All Units Combined 15.35"W x 18.50"H x 22.44"D (390 x 470 x 570 mm)

(Note: Monitor console not included, any Black & White monitor can be used with both the FVW-910 and the FVW-300.)

AA-910	Area Address Unit	2600.00

CI-10 COLOR INTERFACE

FEATURES

- Excellent to use with the Video Typewriters especially for information service at the hotel, medical center, etc.
- Character colorizer and color background generator
- 8 different colors can be added to the display characters
- One of single color, two color or three color backgrounds is selectable—selective color is out of 8 different colors
- Display portion of color background can be freely adjusted vertically when two or three color backgrounds are selected
- Width of border line(s) of each color background can be varied in a range of OH 4H lines
- Dimensions: Main Process Unit 16.93"W x 1.73"H x 15.75"D (430 x 44 x 400 mm)
- Control Unit: 18.5"W x 6.3"H x 3.94"D (470 x 160 x 100 mm)

RB-10	Remote Box for CI-10	700.00

TG-160

TG-160 Title Generator

Features

- Fixed character data is generated and superimposed through the built-in P-ROM
- External BCD input data (7 bits ASCII code) such as Time Code is superimposed independently or together with the fixed character data
- Up to 16 alphanumeric characters (7 x 9 dot matrix) are superimposed
- Black/white/off mask display at the back of the characters, for easy view
- Matt control, V and H display position control and display size control facilities
- Excellent device to use with the FOR-A Time Code Generator/Reader series
- Dimensions: 16.92"W x 1.75"H x 11.8"D (430 x 44 x 300mm) (19" rack type)

TG-160 Title Generator \$1550.00

TCG-3100

TCG-3100 Time Code Generator

Features

- Low cost SMPTE standards units for use in precision video tape editing systems
- The TCG-3100 generates SMPTE Time Code and 32 spare bits code. The unit contains 8 digits for hour, minute, second and frame number. Time can be preset at random and also reset to zero. Preset time is confirmed on the front panel. Sync 59.94/external/crystal for NTSC, and PAL/external crystal for PAL, are selectable. Also local/remote modes are selectable
- By combining the TCG-3100 with the TG-160 Title Generator, time and frame number can be superimposed onto a picture resulting in easy visual confirmation
- Dimensions: 16.92"W x 3.90"H x 16.54"D (430 x 99 x 420mm) (19" rack type)

TCG-3100 SMPTE Time Code Generator \$2700.00

TCR-3500

TCR-3500 Time Code Reader

Features

- Low cost SMPTE and EBU standards Time Code reader for use in precision video tape editing systems.
- PAL, NTSC standards
- It reads out SMPTE or EBU Time Code and 32 spare bits code
- Drop-out function
- Time Code display function so it is not necessary to utilize TG-160 Title Generator
- Video time display function with frame numbers of the TG-55B Video Timer is included
- Built-in real time generator: full automatic running-real time can be instantly displayed on the monitor
- Two Time Code memories: retrievable instantly
- Identification number for the VTR tape can be displayed on the monitor
- Dimensions: 16.92"W x 3.90"H x 16.54"D (430 x 88 x 420 mm)

TCR-3500 Time Code Reader w/Video Display \$3450.00

VTG-55

VTG-55B

VTG-12

VTG-33

VTG-12 Video Timer

Features

- Compact size, low cost and high performance
- Battery backup function
- Generates a month-day-year, hour: minute: second display
- Character format is a 7 x 9 dot matrix with a built-in black border for maximum legibility
- Includes a built-in rechargeable battery

VTG-12 12/24 hr. Time Date \$575.00

VTG-22 Video Timer

Features

- Designed for use with a video camera in field photography
- Easily attached to a VTR
- 12V power supply or external DC battery
- Built in rechargeable battery for continual internal counting
- Two time modes available: Calendar Mode is standard and a Stop-Watch adaptor can be added as an accessory.

VTG-22 Portable Timer w/Stopwatch \$740.00
10 Pin Camera Cable 120.00

VTG-33 Video Timer

Features

- Perfect accessory to any television system, compatible with almost any new and existing installation.
- Precision crystal controlled IC circuitry.
- Low cost, accessible to video and VTR equipment users.
- Compact, full-feature generator with wide operational flexibility.

VTG-33 Video Timer \$750.00
VTG-33F Video Timer w/Battery Backup Terminal 850.00
RB-33 Remote Box for VTG-33 and VTG-33F 175.00

VTG-55 Video Timer

Features

- High performance professional unit formats.
- Up-down counting versatility with freeze control.
- Full remote control capability.
- Crystal controlled IC reliability.

VTG-55 Video Timer \$1250.00
RB-55 Remote Box for VTG-55 330.00

VTG-55B Video Timer

Features

- Perfect timer for broadcasting use
- TV frame number display
- Time count-up in the range from -99 to +99 hours
- Independent display on/off for hour, minute, second and frame number
- 4-step display character size control
- Time freeze function
- Optional remote control box is available
- Time Display
Hour: Minute: Second Frame number

VTG-55B Video Timer \$1650.00
RB-55B Remote Box for VTG-55B 600.00

**MODEL 100
PRODUCTION SWITCHER**

FEATURES

With all the production features needed for basic programming, we expect the Model 100 will follow in family footsteps, becoming the industry standard in professional video production.

If you've been waiting for quality, performance and a comfortable drive before buying a compact switcher, call us today. And put the power of our new Model 100 Switcher on your production team.

STANDARD FEATURES

Unique Three Bus Multi-Level Mix/Effects System:

- Eight looping video inputs, plus black and color background.
- DSK Preview, overrides look-ahead preview system.
- Cut or mix key transitions with independent frame rate auto transition.

Master Fade-to-Black and Pulse Processor, Featuring:

- Independent frame rate auto transition for Fade-to-Black.
- Preview system that shows program output when Fade-to-Black is engaged.
- Pulse Processor re-inserts blanking from black burst on program output for stable output and recordings.
- Standard contact closure editor interface (GPI) to each of the three auto transitions or a fourth "select" line which allows selection of any one.
- Program and Preset buses for background transitions.
- Video key bus for luminance keying, chroma keying, and pattern inserts, over the background transition.
- Look-Ahead Preview System that shows the next effect; Wipe transition preview.
- Auto transition, adjustable 0-999 frame, lever arm transition or cut button.
- Ten wipe patterns, with modifiers:
Hard or soft edges
Hard or soft bordered edges
Pattern Reverse
Pattern Aspect
Rate controlled positioner
Preset Pattern size
- Independent Matte Generator for key fill and pattern borders.

Video Keyer, featuring:

- Video or Matte fill
External key input
Optional RGB chroma keyer
Key invert
Key mask using pattern generator
Preset Pattern insert filled from key bus

Standard Downstream Keyer, featuring:

- Key input from the video key bus or an external key input.

- Key fill from an external video source or the independent DSK matte generator.
- BORDERLINE[®] Generator option for black or white title borders, drop shadows, or matte filled outline.
- Key invert.
- Key mask using pattern generator.
- Optional serial interface (RS 232/422) for external computer control.
- Optional pulse regenerator for system timing

MECHANICAL SPECIFICATIONS

- Control panel can sit on desk top (17" wide, 14" deep), or with rack mount adaptor, can be placed in modular rack enclosures (requires eight rack units).
- Electronics frame requires three rack units and 20" depth.
- Single 15 conductor control cable.
- Full tally system.
- Selectable power ranges from 100 to 240 volts, 50 or 60 Hz.

OPTIONS

- 100N NTSC Production Switcher \$10,495.00
- 100-33 RGB Chroma Keyer 850.00
- 100-40 NTSC Digital BORDERLINE Generator 1,500.00
- 100-41 NTSC Pulse Regenerator . . . 1,000.00
- 100-50 Serial Interface Adaptor . . . 1,500.00

MODEL 100CV COMPONENT VIDEO PRODUCTION SWITCHER

The Model 100CV is a compact, flexible, economical component switching system with the traditional family characteristics of its older brother; quality, performance, economy and a comfortable drive. Designed for professional component video production, the Model 100CV has all the qualities expected by the most sophisticated user.

The Model 100CV features non-looping video inputs, 8 in all, and 3 sets of BNC connectors for every input. Utilizing the same control panel as the Model 100 Production Switchers, the Model 100CV Component Video Production Switcher has updated electronics that incorporate as standard equipment many of the features offered as options on the Model 100.

The electronics frame of the Model 100CV requires 6 rack units and 20" depth.

100CV-525 Basic System for 525 Line System \$18,950.00

OPTIONS

- 100CV-40 525 System—Digital BORDERLINE Generator \$1,500.00
- 100-51 Key MEM Effects Memory System \$3,195.00
- AMX-100 Audio Mixer System 5,495.00

**Model 1600-1LCV
 Component Video Switcher**

The 1600-1LCV is a compact, flexible and economical component switching system, functionally very similar to the popular 1600-1L switcher for composite systems. The switcher uses three parallel switching and processing paths, operating on equal (full) bandwidth R, G and B signals. Careful design allows for excellent tracking of the three processors. Most of the system employs standard 1600 Series modules.

FEATURES

- Component video quality
- Ten inputs, four output buses (optional transcoders required for each active input)
- Complete mix/effects system with modulated positioner, color matte generator, and rotary pattern generator
- Flip-flop mixer with cutbar
- Black generator
- Color background generator
- Camera tally system

The primary switching matrix is arranged in a 10-input, 4-output configuration. Buses 1 and 2 supply input signals to the mix/effects system, the output of which is available as an input to buses 3 and 4 — program (PGM) and preset (PST). Sources selected on the PST bus may be transferred to the PGM bus by operation of the cutbar. Alternatively, lap dissolve transitions may be made between the same two buses by means of the lever assembly using the flip-flop technique.

The mixing and special effects system provides mix or wipe transitions between sources, to a keyed insert, or to a preset pattern. Proportional (linear) control elements are used for all modes of operation; mix, wipe, and key. The proportional elements allow soft wipe and vignette effects to be generated; the degree of softness is ad-

justable from the panel. The mix/effects system is complete, in that it contains its own pattern generator, modulated positioner, and color matte generator.

Matte keys can be enhanced by use of an optional BORDERLINE generator, which provides a symmetrical or drop shadow black edge to inserts. The borderline unit also has an outline-only mode.

The shadow key operates in conjunction with the RGB chroma key option. Shadow chroma keying allows lifelike, noise-free shadows to be included in chroma keyed inserts; the shadows cast by the foreground subject can be electronically added to the background scene so as to provide a high degree of realism. Other options for the 1600-1LCV include an audio-follow-video system which operates in conjunction with the PGM and PST buses. Models are available for 525/60 and 625/50 systems.

SPECIFICATIONS

(Basic System)

INPUT CHARACTERISTICS:

Note: Each active input requires an input transcoder. See ordering information.

Video Input: R, G, B or Y, R-Y(V), B-Y(U) or Y.I.Q. (input formats individually selectable.) R, G, B and Y inputs 1Vp-p composite or 0.714Vp-p (0.7Vp-p for 625/50 versions) non-composite. Components input gain adjustable to accommodate "scaled to Y" components (e.g., "Betacam") or unscaled components. All inputs must be synchronous. All inputs 75 ohm terminating. Each transcoder provides a monochrome (Y) signal for input monitoring. 1Vp-p composite.

Pulse Input: Sync & Blanking
 1.8V — 6.0Vp-p, high impedance bridging.

OUTPUT CHARACTERISTICS:

Outputs Available:

PGM: 2xRGB Composite
 2x Y, C₁, C₂ Selectable Standard with optional program output transcoder (R, G, B or Y, R-Y(V), B-Y(U) or Y, I, Q) Composite or non-composite. (Both sets of outputs identical.)

2x Y, C₁, C₂ as above, with optional second output transcoder.

PVW: 2x RGB Composite
 2x Y, C₁, C₂, as above, with optional preview output transcoder.

Impedance: 75 Ω ± 1% source terminated

Level: R, G, B and Y outputs 1Vp-p composite or 0.714Vp-p (0.7Vp-p for 625/50 systems) non-composite, w/transcoder.

Components outputs gain adjustable to provide "scaled to Y" or "unscaled" outputs.

1600-1LCV-525	\$37,500.00
1600-1LCV-625	37,500.00

OPTIONS

RGB chroma keyer and switcher for component	\$2750.00
BORDERLINE® generators	2490.00
Flip-flop mixer AFV system	9260.00
Parallel edit interface with 8 x 2 audio mixer	8300.00
Input transcoders for all current standards	975.00
Program output transcoders	900.00
Preview output transcoder	900.00
Test bar generator and differential alignment system	1800.00

**Model 1600-1XCV
 Component Video Switcher**

The 1600-1XCV is a compact, high performance component video switching system intended for use in small studios, remote vehicles, or in post production applications. A fully integrated E-MEM effects memory system provides assistance to the operator through storage of effects, auto transitions, effects dissolves and effects sequence programming. The 1600-1XCV uses standard 1600 Series modules to provide three parallel switching and processing paths, operating on equal (full) bandwidth R, G, and B components. Careful design allows excellent tracking accuracy for accurate and stable performance.

FEATURES

- Component video quality
- Ten inputs (including black and color background)
- 4 output buses: M/E-1 A & B, PGM, and PST
- Complete Mix/Effects (M/E) system with modulated positioner, color matte generator, and pattern generator
- E-MEM™ II system with SE-QUENCER programming system
- Four Auto transitions
- Flip-flop mixer with cut bar
- Downstream keyer
- Black and color background generator
- Camera tally system

STANDARD E-MEM II SYSTEM

An E-MEM II system is standard on every 1600-1XCV. The E-MEM II system provides assistance to the operator through storage of effects (all controls and pushbuttons) in any of twenty registers. The stored effects can be recalled instantly at the touch of a button. This permits rapid effects sequences in live production or precise recalls for iterative post production work.

SPECIFICATIONS

(Basic System)

INPUT CHARACTERISTICS:

Note: Each active input requires an input transcoder. See order information.

Video Input: R, G, B or Y, R-Y(V), B-Y(U) or Y, I, Q.

(Input formats individually selectable.)
 R, G, B and Y inputs 1Vp-p composite or 0.714Vp-p (0.7Vp-p for 625/50 versions) non-composite. Components input gain adjustable to accommodate "scaled to Y" components (e.g., "Betacam") or unscaled components. All inputs must be synchronous. All inputs 75 ohm terminating. Each transcoder provides a monochrome (Y) signal for input monitoring. 1Vp-p composite.

Pulse Input: Sync & Blanking
 1.8V - 6.0Vp-p, high impedance bridging.

OUTPUT CHARACTERISTICS:

Outputs Available:

PGM: 2xRGB Composite
 2x Y, C₁, C₂, Selectable Standard, with optional program output transcoder (R, G, B or Y, R-Y(V), B-Y(U) or Y, I, Q)

Composite or non-composite.
 (Both sets of outputs identical.)

2x Y, C₁, C₂ as above, with optional second output transcoder.

PVV: 2x RGB Composite
 2x Y, C₁, C₂, as above, with optional preview output transcoder.

Impedance: 75 Ω ±1% source terminated

Level: R, G, B and Y outputs 1Vp-p composite or 0.714Vp-p (0.7Vp-p for 625/50 systems non-composite w/transcoder.

Components outputs gain adjustable to provide "scaled to Y" or "unscaled" outputs.

1600-1XCV-525	\$56,500.00
1600-1XCV-625	56,500.00

OPTIONS

RGB chroma keyer and switcher for component	\$2750.00
Borderline® generators	2490.00
Flip-flop mixer AFV system	9260.00
Parallel edit interface with 8 x 2 audio mixer	8300.00
E-MEM serial interface	1565.00
E-DISK floppy disk storage	5950.00
E-MEM audio system	15,500.00

Preview output transcoder	900.00
Test bar generator and differential alignment system	1800.00

MODEL 1600-1LN

The 1600-1LN is a compact, flexible, and economical video switching system, intended for use in remote vans, small studios, and post production applications. The switcher employs the same high quality components as other 1600 Series models. Many of the circuit modules, including the mix/effects system, are interchangeable with other 1600 Series modules.

Model 1600-1LN Basic System \$23,675.00

- Rotary and standard wipes
- 10 inputs (including color black and color background)
- 4 output busses: M/E-1 A & B, PGM, & PST
- Complete mix/effects system with modulated positioner, color matte generator, and pattern generator
- Flip-flop mixer with cutbar
- Color black generator
- Color background generator
- Non-sync inhibit system
- Camera tally system

Post Production Options

A Parallel Edit Interface option permits remote control of the switcher by a suitably equipped computer editing system. An 8 x 2 audio mixing system with separate control panel is included with the system. The Parallel Edit Interface is compatible with most current computer editing systems.

SPECIFICATIONS: (BASIC SYSTEM)

INPUT CHARACTERISTICS

- Video Input Level: 1V p-p composite or .714V p-p noncomposite
- Pulse Input Level: 4V p-p ± 6 dB
- Subcarrier: 2V p-p ± 3 dB
- Input Return Loss
 - Video: ≥ 40 dB (5MHz sweep)
 - Pulse: ≥ 30 dB (T Pulse)
- Input Hum Attenuation: ≥ 26 dB (reference; 1V p-p hum)

- Maximum Input Hum Level: 1.5V p-p
- Clamp APL Response: ≤ 2 mV shift for 10-90% change

OUTPUT CHARACTERISTICS

- DC on Output: ± 50 mV blanking to ground
- Output Return Loss: ≥ 40 dB (5MHz sweep)
- Output Isolation: ≥ 35 dB (5MHz sweep)
- Outputs Available: Four; $75\Omega \pm 1\%$, source terminated
- Output Level: 1V p-p composite (nominal)

MECHANICAL and POWER

- Control Panel: 12.25"H x 19"W x 3.5"D (31x48.3x 8.9cm)
- Rack Mounted Equipment: 8.75"H x 19"W x 18"D (22.3x48.3x45.7cm)
- Power Supply: Above dimension includes power supply. No additional air circulation space needed.
- Input Power: 120 or 240VAC $\pm 10\%$, 50/60Hz
- Power Consumption: 100VA approximate
- Connectors: BNC (video)
- Tally Relay Contacts: 2A, 28V (resistive load)
- Gross Shipping Weight: Approximately 100lb/45kg

OPTIONS

- RGB chroma keyer with shadow key **\$1850.00**
- Encoded chroma key system **2880.00**
- RGB switching matrix **900.00**
- Borderline® generator **2490.00**
- Downstream keyer with insert fade control **3995.00**
- Flip-flop mixer AFV system **9260.00**
- Parallel Edit Interface: compatible with most computer editing systems. Includes 8 x 2 audio mixer with control panel **8300.00**

MODEL 1600-1XN

A compact, high performance video switching system intended for use in small studios, remote vehicles, or in post production applications. A fully integrated E-MEM II effects memory system provides assistance to the operator through storage of effects, auto transitions, effects dissolves and effects sequence programming.

Model 1600-1XN Basic System \$36,500.00

- Ten inputs, four output busses
- Rotary and standard wipes
- Complete Mix/Effects (M/E) system with modulated positioner, color matte generator, and pattern generator
- E-MEM™ II system with sE-QUENCER programming system
- Four Auto transitions
- Flip-flop mixer with cut bar
- Downstream keyer
- Color black and background generator
- Non-sync inhibit system
- Camera tally system

OPTIONS

- RGB chroma keyer with shadow key **\$1,850.00**
- Encoded chroma key system **2,880.00**
- RGB switching matrix **900.00**
- Borderline® generators **2,490.00**
- Flip-flop mixer AFV system **9,260.00**
- Pulse regenerator
- Parallel edit interface with 8 x 2 audio mixer **8,300.00**
- E-MEM serial interface **1,565.00**
- E-DISK floppy disk storage **5,950.00**
- E-MEM audio system **15,500.00**

SPECIFICATIONS

Input Characteristics

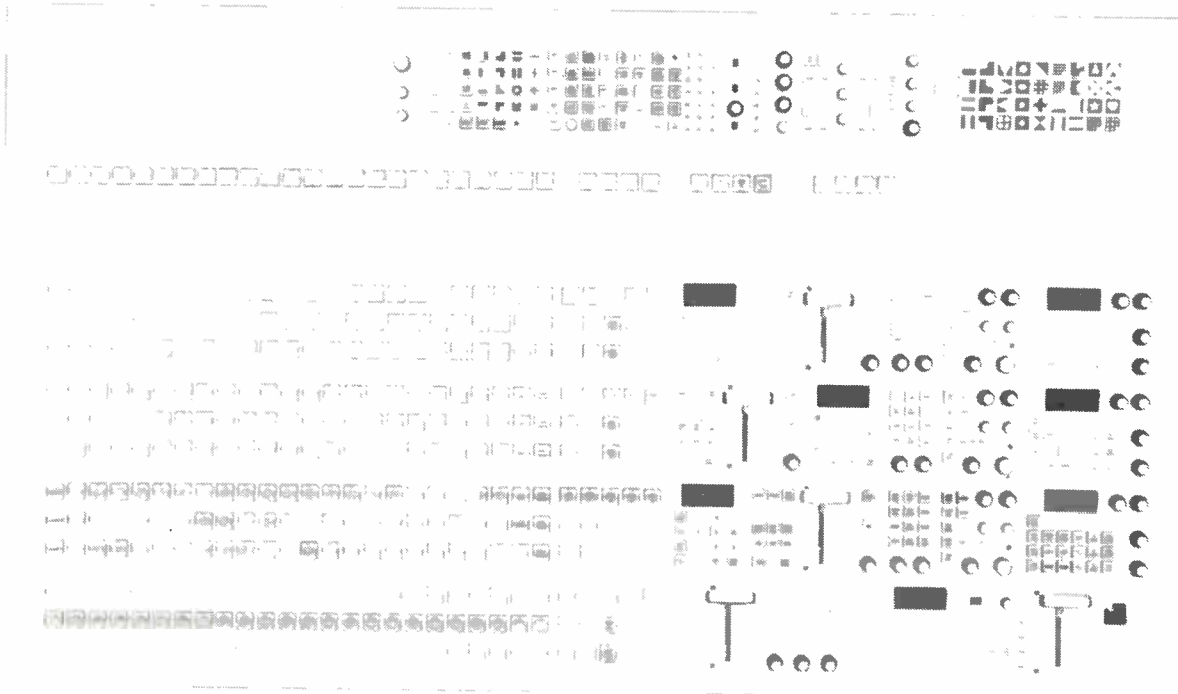

- Video Level: 1V p-p composite or .714V p-p noncomposite
- Pulse Level: 4V p-p ±6dB
- Subcarrier: 2V p-p ±3dB
- Return Loss
 - Video: ≥ 40dB (5MHz sweep)
 - Pulse: ≥ 30dB (T-Pulse)
- Hum Attenuation: ≥ 26dB referenced to 1V p-p hum
- Maximum Hum Level: 1.5V p-p
- Clamp APL Response: ≤ 2mV shift for 10-90% change

Output Characteristics

- Impedance: 75Ω ±1%, source terminated
- Level: 1V p-p composite, nominal
- DC on Output: ±50mV blanking to ground
- Return Loss: ≥ 40dB, 5MHz sweep
- Isolation: ≥ 35dB, 5MHz sweep

Mechanical and Power

- Control Panel: 15.3"H x 28"W x 5.25"D (38.9 x 71.2 x 13.4cm)
- Rack Mounted Equipment: 15.75"H x 19"W x 18"D (40 x 48.3 x 45.7cm)
- Power Supply: Above dimensions include power supply; no additional air circulation space needed
- Input Power: 120 or 240Vac ±10%, 50/60Hz
- Power Consumption: 225VA approximate
- Connectors, Video: BNC
- Tally Relay Contacts: 2A, 28V, resistive load
- Gross Shipping Weight: approximately 200lb/90kg

MODEL 300-3A

**300 SERIES PRODUCTION SWITCHING SYSTEM
FEATURES**

- Unlimited re-entry of effects
- E-MEM™ effects memory system on each Mix/ Effects (M/E) with Effects Dissolve and sequencing
- Four input buses per M/E
- Independent title mix/cut per M/E
- Lever and title auto transitions
- Multi-source title keys
- Automatic key follow
- Chroma key memory per input
- Quad split from each M/E
- Personality Programming
- Omni-Key™ system—Linear Key mode/Key Memory/Key Invert/ External Key*

The 300 Series Production Switching System has been developed to meet the demanding requirements of both live broadcast production, and complex program and commercial production in the studio or edit suite. It is the first production system designed specifically to integrate Digital Video Effects and E-MEM™ effects memory control. Careful attention to the human engineering of panel controls and computer assisted operation provide unmatched production power and ease of operation.

The fully integrated E-MEM system, standard in each mix/effects system, can learn up to 20 different M/E configurations (all switches and controls). Each effects E-MEM system is independent allowing for selective recalls during live programming. E-MEM's unique "Effects Dissolve" capability allows any combination of analog controls to be treated as a transitional device for unique new transitions and effects previously impossible under manual control. Sequencing allows a series of changes in control set-up and effects dissolves to be linked together for animated effects and complex productions. The effects E-MEM systems can be linked with control of the other switcher functions (Flip-Flop mix, DSK, Background, Quad

Split) and the MkII DVE by the Master E-MEM effects memory option. This distributed E-MEM system allows frame accurate control of individual elements of very complex effects frequently used in post-production.

Four input buses per M/E handle most common effects sequences without re-entry. Transitions from one background to another, the addition of a video key (chroma key, DVE key, self key or matte key), a title key or any combination of the above, can be accomplished with one lever movement on a single M/E. Title hierarchy is selectable over or under the video key for full flexibility. Four input buses also permit a quad split output from each M/E. Thus dissolves or wipes are now possible between quad split from different M/E s.

An automatic preview function displays the exact results of the next lever movement (including all re-entries) in the Preview monitor.

Lever and title auto transitions with independent rate programming, are provided on each M/E. Titles can be added or deleted in combination with background or video key transitions or independently from title mix (auto transition) or title cut buttons.

The preset black function permits a transition to black (mix or wipe) between the on air effect and the previewed effect. The first lever movement is a transition to black (the crosspoint is automatically selected), and the second lever movement is a transition to the previewed effect.

New high performance chroma keyers ignore luminance highlights in non-key areas, due to an exclusive Luminance Annihilator circuit. Encoded chroma key with shadow can be added to each M/E. For each primary input the appropriate chroma keyer (RGB or Encoded) and last key setup is memorized for automatic recall if selected.

A program/preset mixer with downstream keyer feeds the Program output of the switcher. It operates just like an M/E, with the exception of wipes, non-additive mixes, and video keys. Downstream keyer functions are accomplished in the same manner as title keys in an M/E with the same sources available.

*Available as standard on all 300 series switcher systems beginning May, 1985. Omni-Kit available to upgrade 300 series systems to include Omni-Key™ enhancements.

P.O. Box 1114
 Grass Valley, CA 95945

1680 SERIES PRODUCTION SWITCHERS

With the 1680 there is a new level of possibilities available to operators worldwide. With the same familiar drive of the 1600, there is more power, more control than ever before. Whether live broadcast or post production, the 1680 provides double the production power from each mix/effects system. Plus the 1680 has the ability to interface with peripheral devices integral to modern production. So your potential to create brilliant special effects explodes.

Best of all, the 1680 carries the Grass Valley Group reputation of respect, reliability, and worldwide recognition — a reputation meaning more to you than a well known name. It means when you outgrow your switcher, there will be a market to sell to. In fact, most of our 3,500 original 1600's are still in use somewhere in the world, commanding close to their original price. So, welcome to the world of the 1680. A world with power, control and Grass Valley Group reliability, all in the drive you have come to know.

The evolution from the 1600 has brought other standard features to the 1680 — expanding your ability to create visual messages. Non-Additive Mix greatly improves how supers look on the screen. New Soft Bordered Wipes allow control of border width and degree of softness. And the Downstream Keyer, formerly an option, is now standard in every 1680. Standard Title Keyers, Non-Additive Mix, Soft Bordered Wipes, and Downstream Keyer. They all add up to the production power needed to meet today's heavy demands.

E-MEM System

Although standard on the 1680-10X, the E-MEM System is an option on all other 1680 switcher models. The system provides effects memory for all switcher functions, plus the sequences created with the Post Production System. The system allows individual elements of complex effects to be adjusted and previewed separately, giving you precise control and effect repeatability.

Serial Interface Adaptor

The serial interface adaptor expands the switcher/editor interface beyond the edit decision list to total switcher control. It is the central hub that allows the switcher to connect all peripheral devices, such as the E-DISK™ Effects Storage System, post production audio, your computer editing system, and many other external production tools.

Post Production Audio

This integrates the control of audio sources with your system by placing your audio sources under computer editor control.

E-DISK Effects Storage System

With the E-Disk floppy disk system, favorite effects can be stored permanently for future use. This allows effects to be created off-line then used in live programs with perfect repetition. The E-Disk System is particularly useful in fast-paced formatted programs, where visually exciting effects are consistently repeated.

Peripheral Interface

The Peripheral Interface expands production capabilities by allowing your computer editor to control other intelligent devices, such as Digital Video Effects or character generators.

PRODUCTION SWITCHERS

Options

RGB Chroma Keyers with Shadow Key	
for 10V/10X	\$ 1,850.00
for 16F/24F — 16K/24K	1,950.00
Chroma Key Switcher*	900.00
E-MEM® III Effects Memory System**	
for 10V	19,545.00
for 16F/24F	32,180.00
for 16K/24K	37,380.00
E-MEM® III System Serial Interface	1,565.00
E-DISK™ Floppy Disk Storage	5,950.00
Digital BORDERLINE® Generators	2,490.00
Analog BORDERLINE® Generators	5,200.00
Encoded Chroma Key Systems	
for 10V/10X	2,880.00
for 16F/24F — 16K/24K	2,945.00

Preliminary Specifications

INPUT CHARACTERISTICS

Video Input Level:	1V p-p composite or .714V noncomposite.
Pulse Input Level:	4V p-p ±6dB.
Subcarrier:	2V p-p ±6dB.
Input Hum Attenuation:	≥26dB (reference; 1V p-p hum).
Maximum Input Hum Level:	1.5V p-p.

OUTPUT CHARACTERISTICS

Level:	1V p-p composite (nominal).
Available:	Three; 75Ω ±1% source terminated.
DC on Output:	±50 mV blanking to ground.

MIX/EFFECTS CHARACTERISTICS (each M/E)

Mix Tracking:	≤1% gain error. ≤10mV p-p DC error.
Chrominance Linearity	
During Mix:	≤1.5% amplitude error. ≤2° p-p phase error.

VIDEO SYSTEM CHARACTERISTICS

Short Time	
Waveform Distortion:	≤1% unweighted.
Line Time	
Waveform Distortion:	≤0.5%.
Field Time	
Waveform Distortion:	≤0.5%.
Frequency Response	
(reference; 1MHz):	300kHz to 5MHz: ±0.2dB.
	5MHz to 8MHz: +0.2dB to -0.7dB.
	8MHz to 20MHz: 0dB maximum.
Differential Phase:	≤1.5° (10-90% APL).
Differential Gain:	≤1.5% (10-90% APL).
K Factor:	0.5% (2 T Pulse).
Chrominance/Luminance Inequalities:	≤ 10ns delay. ≤0.2dB gain.
Crosstalk:	≥52dB at 3.58MHz; 50dB at 4.43MHz.
Signal-to-Noise Ratio:	≥65dB p-p signal/RMS noise to 5MHz.
Path Length Deviation:	≤1.5°.
Gain Stability:	≤1%.
Gain Uniformity:	≥0.1dB.
DC Stability:	≤30mV.

POWER

Input Power:	95-125 or 190-250 VAC, 48-62Hz.
Power Consumption:	450VA approx. (1680-24K/16K).
	275VA approx. (1680-10X).
	225VA approx. (1680-16F/24F).
	200VA approx. (1680-10V).

1680-10VN 1 Mix Effect Switcher	\$ 30,855.00
1680-10XN 1 Mix Effect Switcher	49,500.00
1680-16FN 2 Mix Effect Switcher	67,950.00
1680-16KN 3 Mix Effect Switcher	97,650.00
1680-24FN 2 Mix Effect Switcher	74,950.00
1680-24KN 3 Mix Effect Switcher	105,000.00

VP-65

SYSTEMS 31/41/51 VIDEOTAPE EDITING SYSTEMS

Modular

Each editing system, while uniquely designed for specific applications, permits "personal tailoring" to satisfy individual editing needs.

Expandable

As your demands increase for additional editing features and equipment, GVG editing systems expand to accommodate your growth by adding hardware or software modules.

Flexible

GVG Editing systems have the industry's most flexible interfacing capabilities. Examples include RS422 and RS232 VTR Control as well as the ability to control a wide variety of switchers and other equipment.

Help File

Sometimes an editor needs a quick solution to a complex editing request; Help File with sub-categories insures easy access to definitive help...help you will remember and repeatedly use.

SYSTEM 31

An editing system designed to serve both on-line and off-line applications, the System 31 is an editing system of unusual functional dimension. With eight I/O ports, and exceptional features such as Super-Slave and Cue Ahead, the System 31 provides exceptional performance at an outstanding performance/cost ratio.

FEATURES

- DEC 11/2 CPU
- 64K Bytes of Memory
- Dual 0.5M Byte Floppy Disk Drives
- Distributed Processing Control
- 8 Control Ports for VTRs and Switchers
- 4 Accessory Ports
- Sync Interface
- 132 Column Printer
- DEC RT/11 Operating System
- Exclusive Super Edit
- Assignable VTRs, Video, Audio
- Video, Dual Audio Editing
- Edit List Display, Input-Output
- Multiple Edit List Disk Files
- Auto-Track Dissolve Setup, Anywhere in Edit List
- Match Any Edit, Both Sides of Dissolves
- Unique-Timed Action Modes
 - XGPI, Expanded Switcher Control, Log in Edit List
- Auto-Clean Removes Overlaps
- Super-Slave
 - Slave 1 to 6 VTRs, Easy Slave Setup, Positive Offset Lock, Easy Offset Change, Slaves in Edit List
- Full Preview, Edit Functions
- Sequential, Checkerboard, and Cue-Ahead Auto-Assembly
- Real-Time Edit Mode
- Replay Any Edits, with Auto-Scroll
- Six-Character Alpha-Numeric Reel ID
- Multiple-Record, Synchronous Replay
- Help File
- Event Numbers to 999
- Notes in the Edit List, with Individual Add, Delete
- User-Bit Time Reference
- Powerful Edit List Management, with/without Ripple
 - Insert, Delete Groups, Recall, Replace, Move Groups, Shift Groups

**SYSTEMS 31/41/51
VIDEOTAPE EDITING SYSTEMS (Cont'd)
SYSTEM 41**

The System 41, a high performance on-line editing system, is designed for the most demanding applications. This system has a faster CPU than System 31. It also has features which make variable-speed VTR control and editing precise and easy. System 41 software and hardware features permit full exploration of the professional's creativity.

FEATURES

- Faster DEC 11/23 CPU
 - 64K Bytes of Memory
 - Dual 0.5M Byte Floppy Disk Drives
 - Distributed Processing Control
 - 8 Control Ports for VTRs and Switchers
 - 4 Accessory Ports
 - Color-Lock Sync Interface
 - 132 Column Printer
 - Jogger Motion Control
 - DEC RT/11 Operating System
 - Exclusive Super Edit
 - Assignable VTRs, Video, Audio
 - Video, Dual Audio Editing
 - Edit List Display, Input-Output
 - 10 Macro Functions, with Nesting
 - Multiple Edit List Disk Files
 - Powerful Edit List Management, with/without Ripple
 - Insert, Delete Groups, Recall, Replace, Move Groups, Shift Groups
 - Single-Keystroke Dissolve
 - Auto-Track Dissolve Setup, Anywhere in Edit List
 - Three Freeze Modes
 - Help File
 - Match Any Edit, Both Sides of Dissolves
 - Auto-Clean Removes Overlaps
 - Full Preview, Edit Functions
 - Match to Freeze, Variable-Speed
 - Replay Any Edits, with Auto-Scroll
 - Six-Character Alpha-Numeric Reel ID
 - VTR Speedometer
 - Event Numbers to 999
 - Notes in the Edit List, with Individual Add, Delete
 - Unique Timed-Action Modes
 - XGPI, Expanded Switcher Control, Log in Edit List
 - Fill Mode Computes VTR Speed
 - User-Bit Time Reference
 - Real-Time Edit Mode
 - Multiple-Record, Synchronous Replay
 - Super-Slave
 - Slave 1 to 6 VTRs, Easy Slave Setup, Positive Offset Lock, Easy Offset Change, Slaves in Edit List
 - Precise Programmed Motion Control
 - Sequential, Checkerboard, and Cue-Ahead Auto-Assembly
- System 41** \$35,500.00

SYSTEM 51

The top of the line System 51 is without reservations an editing system unmatched in features, performance and reliability. This system was specifically designed to perform flawlessly for the profession's best in their most demanding applications. The interfacing possibilities with the industry's most complex equipment is virtually limitless. The system features huge memory capacity, 16 ports for unrestricted control, and the most powerful software features in the industry.

FEATURES

- Fast DEC 11/23 CPU
 - Memory Management
 - 256K Bytes of Memory
 - 10M Byte Hard Disk Drive
 - 0.5M Byte Floppy Disk Drive
 - Distributed Processing Control
 - 16 Control Ports for VTRs and Switchers
 - 4 Accessory Ports
 - 132 Column Wide Form Printer
 - Jogger Motion Control
 - DEC RT/11 Operating System
 - Exclusive Super Edit
 - Assignable VTRs, Video, Audio
 - Video, Dual Audio Editing
 - Edit List Display, Input-Output
 - Multiple Edit List Disk Files
 - Color-Lock Sync Interface
 - Single-Keystroke Dissolve
 - Multiple-Record, Synchronous Replay
 - Super-Slave
 - Slave 1 to 6 VTRs, Easy Slave Setup, Positive Offset Lock, Easy Offset Change, Slaves in Edit List
 - Help File
 - Auto-Track Dissolve Setup, Anywhere in Edit List
 - Match Any Edit, Both Sides of Dissolves
 - Remote Terminal Emulator
 - Auto-Clean Removes Overlaps
 - Full Preview, Edit Functions
 - Print Spooling
 - Sequential, Checkerboard, and Cue-Ahead Auto-Assembly
 - Replay Any Edits, with Auto-Scroll
 - Six-Character Alpha-Numeric Reel ID
 - Notes in the Edit List, with Individual Add, Delete
 - Event Numbers to 9999
 - Powerful Edit List
 - Management, with/without Ripple
 - Insert, Delete Groups, Recall, Replace, Move Groups, Shift Groups
 - User-Bit Time Reference
 - Real-Time Edit Mode
 - 10 Macro Functions, with Nesting
 - Three Freeze Modes
 - Film Package
 - Direct Film Entry, Slate Calculation, 35/16mm, Centered Dissolve
 - Match to Freeze, Variable-Speed
 - VTR Speedometer
 - Fill Mode Computes VTR Speed
 - Unique Timed-Action Modes
 - XGPI, Expanded Switcher Control, Log in Edit List, Precise Programmed Motion
- System 51** \$43,500.00

TIME CODE EQUIPMENT

DT-113

DR-107B

DR-107 Font

NOTE: 5 Yr. Warranty on All Products Including Parts and Labor.

SMPTE Data Receiver & Character Generator

DR-107. The DR-107 offers an unusual number of capabilities in a minimum space at an economy price. All controls are on the front panel. In addition, there are internal selectors for DROP FRAME status on the monitor, choice of monitor up-date change, and free running of time in the absence of code.

Character heights may be varied from 8 to 64 lines in four increments, and the widths may be adjusted to the preferred aspect ratio. The characters may be plain or boxed. Characters may be inserted in the Vertical Interval, offering greater versatility to recording or transferring of tapes. Lines 12 through 19 are used in the Vertical Interval mode so no interference will occur. Size: 1-3/4" High Standard 19" relay panel x 9-1/2" deep excluding plugs.

SMPTE Time Code Transmitter

DT-113. SMPTE Edit Code is generated from a master clock which may be selected for DROP FRAME count by a front panel switch. User Bits may be inserted from a parallel 32 line input. TIME or USER BITS can be displayed on an 8-Digit hexadecimal readout. The master clock may be reset or loaded to a time on an 8-Digit thumb-wheel switch. The clock can be stopped by a HOLD button.

The clock and transmitted code can be synchronized to the 60 Hz line or to Video/Sync frames. Code start is within the HNSI spec. (1 H-Line in the Vertical Interval). The clock can be synchronized to the color burst phase for odd or even frame count when the sub-carrier is in phase. Size: 1-3/4" High Standard 19" relay panel x 9-1/2" deep excluding plugs.

Code Reader and Video Character Generator

DR-103. Data Receiver and Character Generator. Reads and displays edit-code and equivalent film-frames on video monitor and has three switchable units **\$4550.00**

DR-107B. Data Receiver and Character Generator. Reads and displays time or user bits on video monitor **2795.00**

DR-115. Data Receiver and 4 Channel Character Generator. Provides 4 separate video character displays from one edit-code input for iso-camera productions **4250.00**

DR-120. Data Receiver, Character Generator, Identifier and Demultiplexer. Reads and displays time, multiplexed user bits, and video source I.D. on video monitor **3150.00**

DR-122. Data Receiver and Dual Character Generator. Allows simultaneous video display of both time code and user-bits with video source identification capability **4450.00**

Code Reader and Local Display

DR-109. Data Receiver, Display and Demultiplexer. Reads and displays time or multiplexed user bits on 8 digit hex readout **\$2795.00**

TCR-119. Time Character Reader. Reads video characters in the stop or slow VTR speed and converts to serial time code for automatic computer editing **3950.00**

TBC-117. Edit Code Time Base Corrector. Converts wide-band erratic code input to a truly regenerated "ANSI" spec code output. . . **3900.00**

Code Generators

DT-104F. Data Transmitter. Similar version of the DT-104A that provides for NTSC and PAL compatibility, Color Frame Sync, advanced Slave (jam-sync) decoding and a choice of Field or Frame Rate Time Code. **\$5950.00**

DT-113. Data Transmitter. Transmit code at 30, 25, or 24 frame counts; color frame sync mode, local hex display, user-bit input; code start accuracy to +/-1 H line **2995.00**

CC-114. Code Comparator. Compares a pre-set time with an incoming Time Code to produce an editing signal on coincidence. Must be used with any Gray Time Code Reader. **2330.00**

User-Bit Equipment

MC-110. User Bit Modifier and Combiner. Combines time codes serially from two independent sources using user bits for the second time code. **\$2595.00**

MD-111. User Bit Modifier, Display and Demultiplexer. Modifies multiplexed user bits on incoming edit code from a 32-line parallel input. **3295.00**

UBE-118. User Bit Encoder. a 10-channel multiplexer that encodes user-bits from parallel inputs. Encoder for DT-104, DT-113, or MD-111. **2550.00**

Safe Area Generator

VR-116. Video Reticle Generator. Allows precise positioning of titles and graphics from dead center to the edge of verticle and horizontal blanking. **\$2595.00**

VR-121. Video Reticle Generator. Similar to VR-116 with the addition of monitor linearity check, variable reticle size and position with memory and recall and a keying switch to set reticle areas from white to black. **3950.00**

Code-Phase-Measurement

CPI-123. Code Phase Indicator. Measures the difference between an actual code frame start on a VTR versus ANSI spec of +/-1 H. Line to insure computer compatibility. **2100.00**

GRAY ENGINEERING LABORATORIES, INC.

504-P, West Chapman Avenue
Orange, CA 92668
(714) 997-4151

SMPTE EDIT CODE PRODUCTS

CPC-700

CPC-700 Code Phase Corrector

The location of SMPTE Time-Code on the cue track of a video tape and its relationship to other signals on the tape is specified by ANSI V98, 12M-1981. Although the Time-Code start of address as originally recorded may meet the specified tolerance of + one H line, an out of phase condition can develop due to video signal processing (TBC's) and the changing of the audio/video head relationship, among other things. When automatic editing is involved, a large enough displacement of the code with respect to the picture can cause the computer to reject the time code and prevent editing.

Measures, displays, and corrects the phase difference between the Cue-Track Frame Code and the Video to allow computer acceptance. One 703-1 and 703-2 modules are required for each playback VTR. Compatible with both NTSC and PAL.

\$1395.00 plus \$995.00 for both 703-1 & 703-2 modules

The equipment rack provides space for one to eight Code-Phase-Corrector Modules. One of these modules is required for each playback VTR machine in the edit bay.

Features:

SERIES 700 rack frame houses all modules. POWER SUPPLY plug-in module 701-1 provides the required power to all modules in the unit. FRAME PULSE GENERATOR plug-in module 702-1 supplies the sync timing to the Code Phase Corrector modules. CODE PHASE CORRECTOR plug-in module 703-1. TWO DIGIT DISPLAY shows the number of bits the Time Code is out of phase. Range is + 40 bits. A blinking point between the two digits indicates data is being sampled and corrected.

VIE-224 Vertical Interval Encoder

Converts longitudinal Edit Code Input to VITC for insertion into one or more video lines. Incorporates Code Time Base Correction techniques. **\$3450.00**

Features:

USER-BIT UPDATE switch offers choice of updating a time code used in the user bit section. ENCODE/OFF switch indicates when the V.I.T.C. is encoding. USER/TIME switch allows the selection of either Time or User-Bits for display. DISPLAY of time or User-Bits information of 8 Digit Hexadecimal characters. BLANK/FRAMES switch allows blanking of the two frames digits. SYNC/CUE indicates whether video sync and/or input code is present. DROP FRAME/NON DROP FRAME indicates the type of code being received.

VIE-224

VID-225

VID-225 Vertical Interval Decoder

Decodes both longitudinal and/or Vertical Interval Time Code and outputs information as longitudinal Time Code at a rate proportional to either input and acceptable to most edit computers. **\$3950.00**

A new SMPTE longitudinal code is outputted at a rate proportional to either input. Therefore VITC input can be used from freeze frame to full wind and be automatically interfaced to most existing edit controllers, SMPTE longitudinal generators, readers and character generators, etc.

Selection of the two codes can be automatic or manual, allowing the maximum advantage of both codes in various situations. At tape speeds below 1/4 play speed, the unit outputs longitudinal data at a 1/4 rate when VITC is present and will squelch if an absence of time code is required by the edit controller when the tape is stopped.

The VITC data is also available for use in encoding other video equipment.

Features:

DROP FRAME/NO DROP FRAME displays the type of Time Code being received. FRAME number thumbwheel is an eleven position switch to select the unit frame number for de-multiplexed User-Bit display or to display ALL frames of User-Bits. DISPLAY/FREEZE is an alternate switch to freeze the display. TIME/USER switch allow the selection of either Time or User-Bits for display. DISPLAY of Time or User Bit information of 8 Digit Hexadecimal characters. FRAMES/BLANK switch allows blanking of the two frames digits. FIELD 1 - FIELD 2 split indicator shows which field of the V.I.T.C. code is being received. V.I.T.C./CUE split indicator shows the source of data being transmitted on the Code Output. POWER button is an alternate toggle switch to turn the instrument ON and OFF.

EFFECTS SYSTEM

HDE 100/150/200 DIGITAL VIDEO EFFECTS SYSTEM

Harris introduces the HDE 200. This easy-to-use production tool features a 150 event bubble memory and easily upgradeable multi-channel capability. It is also available in two expandable versions, the HDE 100 and HDE 150. So now your effects capability can expand with your needs, and you can stay within your budget.

HDE 100 Features

- Variable Squeeze and Compression
- Slide/Push
- Split and Compression Split
- H & V Invert
- Freeze/Stop Action
- Programmable Multi-Pix Freeze
- Posterization
- Mirror/Reflect
- Montage
- Separate Border/Background
- Variable Aspect Ratio
- Fader Limiter
- Preset Effect Registers

HDE 150

All the effects of the HDE 100, plus:

- Variable Expansion/Zoom
- Programmable Trajectory
- Multi Move
- Mosaic (Tile)
- Flip/Tumble
- Wipe Follow
- Chroma Key Tracking
- Auto Operation of up to 150 Programmed Events
- On-Board Event Memory with Battery Back-up
- Removable Event Bubble Memory
- Editor Interface

HDE 200

All the effects of the HDE 150, plus:

- Automatic Input Switching
- Strobe Caption
- Decay
- Prewired for Dual Channel Option

Specifications

GENERAL

Signal processing system	PCM binary-coded signal processing
No. of bits per word	8 bits
Sampling frequency	14.3 MHz
Input signals	NTSC composite sync or monochrome signal: 1 V p-p, 75 ohms
Input key signal	0.7 V p-p or TTL
Output signals	NTSC composite sync, 1 V p-p, 75 ohms, 4 outputs
Output key signal	0.7 V p-p, 75 ohms, 3 outputs
External Reference	Black Burst: 0.3 V p-p Composite Video: 0.3 V p-p, high impedance SYNC: 4 V p-p SC: 2 V p-p

SIGNAL PERFORMANCE

Video input return loss	≥30 dB at 3.58 MHz
Reference input return loss	≥30 dB at 3.58 MHz
Video output return loss	>28 dB at 3.58 MHz
Frequency response	1 kHz to 5.0 MHz: ±0.2 dB >7.5 MHz: ≤-40 dB
(A/D, D/A only)	
K factor	≤1%
Diff gain	2%
Diff phase	2°
Signal-to-noise ratio	50 dB/rms (quantizing noise included)
Periodic noise	≤30 mV p-p
Hum	≤-50 dB
Adjustable ranges	
Video level	Adjustable to 0.7 V p-p with input of 0.56 to 0.84 V p-p
Chroma level	±10%
Set-up	0 to 17.5 IRE
Burst phase	360°
HUE	±20°
SYNC level	0.3 V ±0.1 V
Burst level	0.3 V ±0.1 V

MECHANICAL & ENVIRONMENTAL

Dimensions	Video Processor: 11.7" (30 cm) H x 19" (48 cm) W x 17.6" (45 cm) D System Controller: 5.9" (15 cm) H x 19" (48 cm) W x 17.6" (45 cm) D Control Panel: 17.2" (44 cm) H x 7.8" (20 cm) W x 5.9" (15 cm) D
EMI: Conducted & Radiated	Meets FCC Class A specifications
Operating temperature	0°C to 40°C
Spec temperature	10°C to 30°C
Power requirements	110 V ±10%, 220 V ±10%, 50/60 Hz

HDE 100	\$47,000.00
HDE 150	55,250.00
HDE 200 Single Channel	79,000.00
HDE 200 Dual Channel	135,000.00

COLOR SPECIAL EFFECTS GENERATOR

SEG-801-Studio Color Special Effects Generator

With full NTSC color specifications, the Image Video SEG-801 Studio Color Special Effects Generator is designed to meet the needs of VTR post production. It will function as a standard 6 input video switcher with basic mix and effects transition. With the downstream key function, basic matte keys and fade to blacks can be performed with non-synchronous sources (non time based VTR's). It's easy to follow front panel design is engineered to enable the operator to concentrate on the creative rather than the technical aspect of production.

FEATURES

- 7 video inputs (including Ext. Key), loop thru
- Total solid state vertical interval switching
- Momentary contact, illuminated pushbuttons used throughout
- Full NTSC color specifications
- Total of 5 busses (including PV & PGM out busses)
- Versatile configuration with M/E, A/B and C Aux. allow cut buss operation and total preview of all inputs plus EFF and KEY
- Mix Functions
 - Fade In/Out
 - Lap dissolve
 - Superimpose
- Effects Functions
 - 12 regular wipes with adjustable aspect ratio
 - external matte key
 - Normal and Inverted key
- Built in color/mono matte generator locked to input video. Requires no external drives or subcarrier
- Built in black generator with downstream fade to black capability. Locked to program input, requires no external drives
- Downstream keyer for normal or invert keys and provision for dissolving in or cutting in key
- External H&V drive outputs locked to program video for external monochrome key camera allow full color matte key inserts on program video even with non capstan servo VTR program source and no external sync gen. or gen. lock required.
- Full electronic tally with dry contact closures
- Fully solid state includes 180 transistors, 77 diodes, 40 integrated circuits and 2 bridge rectifiers
- Self contained unit with standard 19 inch rack mount capability

TECHNICAL SPECIFICATIONS

VIDEO INPUTS

Input signal level	1V p-p nominal, composite
Input impedance	75 ohm loop thru, BNC connectors
Number of inputs	6 plus ext. key video in

SYNC AND DRIVE INPUTS

None required

VIDEO OUTPUT

Signal level	1V p-p nominal, composite
Impedance	75 ohm, BNC connectors
Number of outputs	2 program, 1 preview

DRIVE OUTPUTS

Signals provided	H and V drive for key camera
Impedance	75 ohm source terminated
Signal level	4V p-p
Connectors	BNC

CHARACTERISTICS

Frequency response	10 MHz \pm 1 db
Gain	Unity
Differential gain	Less than 1%, 10-90% APL
Differential phase	Less than 1°, 10-90% APL
Crosstalk	Better than 52 db at 3.58 MHz
Line and field tilt	Less than 1%
Signal to noise ratio	Better than 60 db RMS below 1V p-p
Path length accuracy	\pm 1° at 3.58 MHz

GENERAL

Tally system	6 camera—dry contact closures
Intercom	Front Panel Jack
Power requirements	117V AC 60 Hz Nom. 35VA
Weight	13 pounds
Dimensions	19" x 5.2" x 13.8" behind panel
Mounting	Rack or desktop
Operating temperature	0° to 50°C
Operating humidity	0 to 95%

Prices and Specifications Subject to Change Without Notice.

BORDER GENERATOR

8105 Border Generator

The Image Video Ltd. Border Generator provides bordering facilities controlled from a remote control panel. One special feature is the elimination of bothersome dither associated with camera originated graphics.

Features

- Built-in color fill generator locks in the incoming video
- Borders graphics or character generators
- Eliminates dither when bordering camera originated graphics
- Built-in linear keyer provides cut or auto-mix of key into program video
- Remote control panel with facilities for border, outline, color fill key, drop shadow, invert key, and variable key threshold control
- Master fade to black
- Advanced technology incorporating CCD delay lines

SPECIFICATIONS

Input	
Inputs	Program, Key, and Reference video (usually tied externally to Program input).

"A Bold Beginning"

Creativity You Can Depend On!

Today, a new group with vision and dedication is working to expand the quality and creative limits of video. This new group, known as Intergroup Video Systems, recognizes that their ultimate success will depend upon satisfying the needs of video users. Therefore, they established three important goals for all Intergroup products: each must be innovative, quality-crafted and user-friendly.

Introducing Intergroup's New 5-Year Limited Warranty And 30-Day Return Policy

Intergroup Video Systems also recognizes that their products must be dependable. That's

why each Intergroup product is backed by a 5-year limited warranty. And to go one step further, Intergroup is offering a 30-day return policy. The video user can purchase an Intergroup product with complete confidence.

Innovation And Craftsmanship

Intergroup Video Systems manufactures a complete line of video production and switching equipment including: production switchers, master control switchers, routing switchers and audio and video terminal equipment.

Call toll free today 1-800-874-7590 to find out more about Intergroup products backed by a 5-year limited warranty and 30-day return policy.

VIDEO PRODUCTION SWITCHER

MODEL 901

FEATURES

- 3 Input Buses (A, B, and Direct)
- 6 Composite Video Inputs including, Colorizer/Black
- Mix, Wipe, Mix-Key, Wipe-Key
- Hard or Soft Wipes
- Normal/Reverse Wipes
- 12 Patterns
- Positioner
- Operates on AC or DC
- Master Fade-to-Black with Blanking Processor
- Mix or Cut from Direct to M/E
- Internal or External Key with Matt Fill or "A" Bus
- Prewired for Downstream Key Edger with Colorizer
- Prewired for RGB or Encoded Chroma Keyer
- Complete Tally
- No External Wiring between Circuit Boards

Description

The Model 901 Video Production Switcher is capable of a wide range of video effects. From soft or hard edged wipes to chroma keys with fade-to-black this unit will give you all the power you need. The

AC/DC operation makes this the ideal choice for the small production van or an EFP Unit that operates out of cases. Pulse lock, genlock, and internal sync generators are available to insure the correct mode for your system.

LEDs are provided as a convenience, indicating which bus is "on air". A low voltage indicator warning when the +12V supply is low when operating from battery power.

- 901 ENC Video Production Switcher
with Encoded Chroma Keyer \$4,300.00
- 901 RGB Video Production Switcher
with RGB Chroma Keyer 4,300.00

901 Options

- 666-C Downstream Keyer with
Color (Frame and PS req.) 2,275.00
- 934 Additional Extender Card 40.00
- Additional Manual 65.00
- Spare Parts Kit 400.00

VIDEO PRODUCTION SWITCHER

MODEL 903S

MODEL 903E

MODEL 903

FEATURES

- Computer Controlled Switcher
- 10 Inputs with Full Tally
- Momentary contact Pushbuttons
- Black Burst Generator/Colorizer
- Two Mix/Effects Systems with Shared Pattern Generator (Additional Pattern Generator available)
- Smart Panel enabling write or read capabilities
- Functions in each M/E: Mix, Wipe, Key, Mix-Key, Wipe-Key and Mix-Wipe-Key
- The Key System on each M/E features Matte Key, Key Invert and a three Input Key Selector that chooses between Self Key, External Key and Chroma Key Inputs
- Four Output Buses plus Separate Preview and Program Switching Buses allow easy set up, Preview and "Take" or dissolve between M/E1, M/E2, or the "B" Direct Bus
- Editor Interface Firmware (907-3)

The Model 903 Video Production Switcher is a fully computer controlled switcher. The microprocessor in the control panel makes it a "smart" terminal in relation to the microprocessor in the electronics.

A unique combination of Program and Preview Phantom Bus Switching allows for cuts or mixes from one M/E to the other. A blanking processor with Fade-to-Black is also standard.

The pattern generator has 14 standard wipe patterns. Variable softness or border width of the wipe edges is adjustable on each M/E with edge control while border color is also variable with the colorizer

control. Unique effects can be generated with the sine wave modulator. Modulation can be used on both M/E1 or M/E2 and varied with the frequency and gain controls. Both M/E's have electronic spot lite and M/E1 offers preset wipes which can be positioned for dramatic special effects. M/E1 can also be re-entered into M/E2, enabling mix or wipe behind keys colorized mattes wiping over chroma keys and many other advanced production features. An optional PROM allows External RS232 connection of an editor or computer.

903-S	Video Production Switcher with LED Buttons	\$ 9,900.00
903-E	Video Production Switcher with Illuminated Pushbuttons	11,900.00
903 OPTIONS:		
617	Downstream Key Edger with Color and 4 Input Selector	1,750.00
625	RGB Chroma Keyer	1,010.00
625-4	RGB Chroma Keyer with 4 Inputs	1,680.00
1233	Encoded Chroma Keyer	2,240.00
1233-4	Encoded Chroma Keyer	2,635.00
9026	Transition Control	2,700.00
908-4	Audio Follow Video	3,500.00
908-4S	Stereo Audio Follow Video	5,100.00
	Additional Manual	95.00
	Spare Parts Kit	650.00
	Additional Cable	5.00/ft.

VIDEO PRODUCTION SWITCHER

904-20E

MODEL 904 VIDEO PRODUCTION SWITCHER

Standard Features

- 10 inputs including Blackburst/Colorizer
- 6 busses
- 2 independent Mix/Effects units
- Program/Preset mixer
- DSK with key edging and 4 input selector
- Master fade to black
- Pulse processor
- Full camera tally system
- Microprocessor controlled
- Single 25' cable to remote control panel
- Technical manual
- Two year warranty
- Editor Interface firmware (907-4)

Each mix/effects system includes the following standard features:

- Mix, wipe, key, mix key and wipe key modes
- 16 pattern generator with 3 rotary patterns and star
- Pattern normal/reverse
- Variable soft or border and hard pattern transitions
- Pattern positioner
- Pattern preset with separate size and aspect controls
- Pattern modulation with frequency and amplitude controls
- Pattern spotlight
- Self, chroma key and external key inputs
- Matte key
- Key invert

The 904 provides a versatile switching package for complicated studio production, remotes and post production.

Computer editing...digital effects...automation...new technologies placing new demands on production switchers.

The 904 incorporates microprocessor control, effectively interfacing the 904 with the future. Serial editor interface, event storage and total switcher automation are field installable plug-in options.

The 904 mix/effects systems are unequalled in capabilities and ease of operation. The last technical advances have been incorporated into the new pattern generators, providing crisp hard wipes and variable soft or bordered wipe transitions. Included in the 16 patterns are a star and 3 rotary wipes. Pattern preset allows control of both the preset limit and pattern aspect ratio and can be used to either mix or wipe to a preset pattern or masked key.

904 10S	Video Production Switcher with LED buttons	.. \$15,900.00
904 10E	Video Production Switcher with Illuminated Pushbuttons 18,500.00
904 20E	Video Production Switcher with Illuminated Pushbuttons and 20 Inputs 24,500.00

904 OPTIONS:

625	RGB Chroma Keyer 1,010.00
625-4	RGB Chroma Keyer with 4 Input Selector 1,680.00
1233	Encoded Chroma Keyer 2,240.00
1233-4	Encoded Chroma Keyer with 4 Input Selector 2,635.00
9026	Transition Control 2,700.00
908-4	Audio Follow Video 3,500.00
908-4S	Stereo Audio Follow Video 5,100.00
	Additional Manual 95.00
	Spare Parts Kit 650.00
	Additional Cable 5.00/ft.

PRODUCTION SWITCHER ACCESSORIES

MODEL 640

MODEL 640 DOWNSTREAM KEY EDGER

FEATURES

- Built-in colorizer
- Outline, drop-shadow, border and normal keys (external cut with video fill)
- 4 input selector
- Remote control
- 3-1/2" self contained unit

MODELS 666, 666-C, 666-4C DOWNSTREAM KEY EDGER

FEATURES

- Outline shadow, border key
- Remote control

MODEL 2031

MODEL 2031 MATRIX WIPE GENERATOR

FEATURES

- Digitally derived patterns
- Switchable 32 x 32 or 64 x 64 matrix
- Variable speed auto or manual transition

- Sixteen (16) basic patterns plus pattern multiplier with 90° rotate
- Uses external key input on any switcher
- Remote control
- Self-contained rack electronics include power supply in 3-1/2" unit

MODELS 660, 660-4 RGB CHROMA KEYS

FEATURES

- Saturation selective
- Soft keying

- Full remote control
- Full 360° hue selection
- 660 uses one (1) module space in 5010 rack frame; 660-4 uses four (4) module spaces in 5010 rack frame

MODELS 1240, 1240-4 ENCODED CHROMA KEYS

FEATURES

- Wide range of encoded video sources
- Minimum chroma crawl
- Uses one (1) module space in 5010 rack frame (two (2) with input selector)

MODEL 924 BLANKING PROCESSOR

FEATURES

- Self-contained unit w/fade to black
- Inserts new blanking intervals into program output

MODEL 2065 POINTER GENERATOR

FEATURES

- Digitally synthesized
- Eight (8) direction arrow
- Uses one (1) module space in 5010 rack frame

Legend: SC-Self-Contained; # - Frame Slots
NOTE: Certain options require the use of a Model 5010 rack frame and 5050 power supply. This frame will accommodate up to seven (7) modules of options or audio/video terminal processing equipment.

MODEL	DESCRIPTION	FRAME SLOTS	PRICE
DOWNSTREAM KEY EDGERS:			
640	Downstream Key Edger with normal key mode; 4 Input Selector and Color	SC	\$2650.00
666	Downstream Key Edger with Outline, Shadow and Border	2	1680.00
666-C	Downstream Key Edger with Color; Outline Shadow and Border	3	2275.00
666-4C	Downstream Key Edger with Color; 4 Input Select; Outline Shadow and Border	4	2465.00
CHROMA KEYS:			
660	RGB Chroma Keyer	1	1010.00
660-4	RGB Chroma Keyer with 4 Input Selector	4	1680.00
1240	Encoded Chroma Keyer	1	2470.00
1240-4	Encoded Chroma Keyer with 4 Input Selector	2	2750.00
SPECIAL FUNCTION OPTIONS:			
5010	Rack Frame		
5050	Power Supply		200.00
924	Blanking Processor with Fade-To-Black		200.00
2031	Matrix Wipe Generator	SC	1370.00
2065	Digital Pointer Generator	SC	2550.00
		SC	1250.00

PRODUCTION SWITCHER ACCESSORIES

MODEL 9026

MODEL 9026 AUTOTRANSITION/ EVENT STORAGE UNIT

Features

- Autotransitions on M/E's Mix, FTB and DSK
- General Purpose Interface (GPI)
- 99 Event Storage/Recall
- Chaining of Events for Longer Sequences
- Editor Interface Built-in RS-232 or RS-422
- Stores Entire Switcher Set-up
- Operated with 903 or 904 Switchers

The 9026 offers both autotransitions for the 903 or 904 Production Switchers and Event Storage and Recall of 99 different panel "snap-shots". The autotransitions may be triggered through the GPI with either a momentary closure or TTL active low to ground. Multiple events may be sequenced to perform complex series of events. A Serial Editor interface allows either RS-232 or RS-422 editor control in concurrent operation.

Model 9026 \$2700.00

MODEL 908-4

MODEL 908 AUDIO FOLLOW VIDEO

Features

- 10 Audio Follow Inputs
- 5 Audio Breakaway Inputs
- Auto or Manual Control
- Follows M/E1, M/E2, or Mixer
- VU Meter for Program Out
- Level Adjust for Program Out
- Linear Fader for Manual Control
- Stereo Version Available

The Audio Follow Video package gives you the ability to mix audio sources concurrent with Fader movement on either the 904 or 903 Production Switchers. In addition to audio follow the 908 has 5 separate audio inputs for breakaway. Stereo operation is also available.

Model 908-4 \$3500.00

Model 908-4S Stereo Version 5100.00

SPECIAL EFFECTS GENERATOR KM-2000U

JVC®

FEATURES

- Eight Inputs (VBS), Three Buses
- Two Fader Levers
- Non-Synchronous Input
- Built-In RGB Chroma Keyer
- 13 Wipe Patterns with Soft Edge
- Built-In Color Background Generator
- Adjustable Background Color
- Color Downstream Keyer
- B/W Superimpose Circuit
- External Key Input
- Built-In S.S.G. with Genlock
- Intercom and Tally Circuits Provided
- Auto Fade-to-Black
- Auto Take

KM-2000U

The JVC KM-2000U Color Special Effects Generator is designed to meet the needs of users of professional and industrial video systems. Its popularity, and wide acceptance in both broadcast and non-broadcast environments is testimonial to its excellent design and performance.

Two-Piece Design. The KM-2000U actually consists of two components: a control unit and an electronics unit. The control unit is compact (only 3½" deep and 6 rack units high) and is connected to the main electronics unit by two ribbon cables. The electronic unit houses the primary electronics and all connections to peripheral equipment. The 16' ribbon cables provide a good deal of flexibility for placement of the components in a system.

Eight Inputs. There are eight synchronous video inputs, each with loop-thru BNC connectors. In addition, a non-synchronous input is provided, which can be routed to the program line via a pushbutton on the control panel.

Downstream Keyer. The KM-2000U's downstream keyer (DSK) has a built-in color background generator (adjustable). The polarity of this circuit can be switched so that a reversal of the key effect may be obtained. The circuit also allows the user to manually fade the effect in and out — independently of the fader controls.

RGB Chroma Keyer. Utilizing the RGB signals obtained from most 3-tube cameras, this feature allows the user to selectively replace any color in the picture with a signal from another camera. For example, a person standing in front of a blue background can be made to look as though he was standing in another location, with the KM-2000U replacing the blue color with another scene. The chroma keyer can also be switched to become an external keyer, allowing additional key effects.

Three Busses, Dual Faders. The KM-2000U's three bus system allows an effect to be created and previewed before actually putting it "on-line". The effect can then be inserted into the program output with a dissolve, using the second fader. The 13 built-in wipe patterns, together with joystick positioning and soft edge control provide most popular effects. This system can even be used to create "spotlight" and other effects, not possible with a single fader.

Other Features. An input is provided for a black & white graphics camera, allowing the signal to be independently faded in and out of the program material. An audio modulation input allows an audio source to be used to create some really unusual effects.

Suggested List Price \$4860.00

SPECIFICATIONS

Video Inputs:

X8, VBS, 1.0V p-p, 75 ohms or high (BNC)

Aux Input:

X1, VBS, 1.0V p-p, (non-synchronous) 75 ohms or high (BNC)

Chroma Key Inputs:

RGB, VB, 0.7V p-p 75 ohms or high (BNC)

External Key Input:

X1, VBS or VB 1.0/0.7V p-p, 75 ohms or high (BNC)

DSK Input:

X1, VBS 1.0V p-p, 75 ohms or high (BNC)

B/W Superimpose Input:

X1 VBS 1.0V p-p, 75 ohms or high (BNC)

EXT. Wipe MOD Input:

0dBm mini-jack (plug provided)

Program Output:

X3, VBS 25 ohms (BNC)

Preview Output:

X1, VBS 75 ohms (BNC)

Frequency Response:

60Hz to 5MHz ±0.2dB

DG/DP:

Less than 1.5%, 1.5° at 10 to 90% APL

Crosstalk:

More than 50dB at 3.58MHz

S/N:

More than 55dB (p-p/rms)

Sync Output:

HD, VD, sync, black burst X2

Power Consumption:

AC 110V 60Hz 50W

Tally:

5V DC or dry contact

Dimensions & Weight:

Electronics Unit:

175(H) x 482(W) x 250(D) mm

Standard EIA rack size (4 unit size)

Weight: 10.5kg

Control Units:

265(H) x 482(W) x 90(D) mm

Standard EIA rack size (6 unit size)

Weight: 5.0kg

SPECIAL EFFECTS GENERATOR KM-1200U

FEATURES

- RGB Chroma-Keyer
- Low-Cost, Economical
- 8-Color Generation
- 6 Wipe Patterns
- Smoother Fades and Dissolves

KM-1200U

KM-1200U SPECIAL EFFECTS GENERATOR

The KM-1200U is designed for mounting in a standard EIA rack and has 4 video inputs, a chroma key input, a background color generator and a DSK input. It incorporates an SSG and genlock operation is possible using composite video or blackburst signals. With its Autotake switch, the signal selected to be previewed can be supplied to the program line with a single operation. Both AC and DC power supplies can be used so that use on locations is possible.

RGB Chroma Keyer/External Keyer. By the use of 3 discrete signals the RGB Chroma Keyer allows for an extremely sharp key. These individual signals allow the decoder circuit to more easily distinguish subtle color differences, thus producing a more accurate and clean key.

An external keyer is also supplied for Black and White key sources, usually a CCTV type camera. This mode is selected by a back panel control, which switches between Background Color and external key. The external key circuit can also be used with a color character generator. The character generator supplies a B/W signal to cut the key hole and a color video signal to 1 of the 4 video inputs, which is in sync with the key hole.

D.S.K. — Down-Stream Keyer. The D.S.K. circuit is identical to the External Key circuit except for its electronic position in

the flow of the video signal path.

The D.S.K. circuit has the capability of colorizing itself. This internal generator has the ability to make the following 8 colors: Black, Blue, Red, Magenta, Green, Cyan, Yellow and White.

Sync Generator and Gen-Lock. The sync generator in the KM-1200U is multi-faceted because of its many modes and outputs. It is capable of generating RS-170 sync or Gen-Lock to any source, including a VCR.

The KM-1200U also supplies the following signals: Two Black Burst outputs. Composite Sync; Horizontal Sync; Vertical Sync; Blanking (Switchable as third Black Burst output).

Auto Take. The purpose of Auto-Take is to allow for preselection and confirmation of cuts, before they go to air.

Background Generator and External Input. The Background and External position is input 5 on the KM-1200U. These two sources are selectable from a back panel switch.

When in the Background position the following 8 colors are available: Black, Blue, Red, Magenta, Green, Cyan, Yellow and White.

Suggested List Price TBA

SPECIFICATIONS (Preliminary)

Video Inputs:

x4, VBS, 1.0V p-p, 75 ohms or High (BNC)

Chroma Key Inputs (EXT. KEY):

RGB, VB, 0.7V p-p, 75 ohms or High

DSK Input:

x1, VBS or BB, 1.0/0.45V p-p, 75 ohms or High

Program Output:

x2, VBS, 1.0V p-p, 75 ohms (BNC)

Preview Output:

x1, VBS, 1.0V p-p, 75 ohms (BNC)

DSK Preview Output:

x1, VBS, 1.0V p-p, 75 ohms (BNC)

Sync Genlock Output:

HD, VD, SYNC, x1 each,

*Blackburst x3 (*VD/BB-3 selectable)

Sync System:

(1) Internal mode

(2) External mode: Genlock by VBS or BB

Subcarrier Phase:

Adjustable from 0° to 360° in steps of 0°/120°/240°, continuously variable between steps

Horizontal Phase:

±0.1 μs (with reference to the input sync signal)

Chroma Keying (EXT.):

Blue only

Wipe Patterns:

x6

Tally Outputs:

x5, 5V (10 mA) DC (6-pin terminal)

Background Colors:

x8, black/blue/red/magenta/green/cyan/yellow/white (1 color selectable)

Power Supply:

AC 110/220/240V or DC 12V

Power Consumption:

AC 15W, DC 12VA

Dimensions:

482(W) x 176(H) x 90mm(D)
(19" x 7" x 3⁵/_{8"})

Weight:

Approx. 6kg (13.2 lbs.)

Language Symbols Included

K128B Character Generator

General Description: Keyboard entry device for purpose of generating high resolution white alphanumeric in video form. Unit self-contained requiring only AC power and sync pulse train. Allows entry of information at any location on page. Audio I/Os included. Character Specifications: Display format: 128 characters — 26 upper case, 26 lower case, 10 numerals, 26 typewriter symbols, 10 math symbols, 8 Greek letters, 11 foreign language letters, 9 special symbols, 1 flash, 1 space. Character resolution: 768 elements (32 horizontal x 24 vertical); Nominal character height: 32 scan lines, large, 16 scan lines, small; Page format: 24 characters/line; 8 lines/page; 4 pages of memory; 3 pos. title window, double size. Input full interlace composite video-sync per EIA RS170, RS330, EIAJ or similar standards. **\$3825.00**

OPTIONS: (To STD K128B)

KD-128 Expansion Memory Unit

Fast random access page storage on flexible magnetic Floppy diskettes. Expands the K128 memory capacity to 400 pages, external. Roll or crawl continuously from page to page. Or, with the inclusion of the KAM128 automated control option, PROGRAM the 400 pages to do any combination of Rolls/Crawls, full page displays, loop pages, pause the program, do character animation. A remote control unit is included with each system. **\$5715.00**

K50 Titling Unit

General Description: Keyboard entry device for purpose of generating white alphanumeric information in video form. Unit self-contained requiring only AC power and sync pulse train. Used as a video source or downstream keyer-inserter. Allows entry of information at any location or page. Independent program/preview channels. 4 full pages of memory. Character Specifications: Display format: 64 characters — 26 upper case, 10 numerals, 27 typewriter symbols, 1 space. Character resolution: 7 x 9 dot matrix. Nominal character height 36 scan lines. Page format: 16 characters/line; 8 lines/page. Input: Full interlace composite video-sync per EIA RS170, RS330, EIAJ, or similar standards.

SERIES K50/K60 TITLERS

K50 Character Generator with 4 pages of memory, independent edit channel, flash. 16 characters by 8 lines per page	\$1295.00
KS50 All features in K50 plus crystal controlled internal sync	\$1550.00
KX50 All features in KS50 plus title window, crawl, and automatically timed page sequencer	\$1775.00
Upgrade Kit to convert K50 or K60 to KX50 or KX60	\$710.00
K60 Character Generator with all K50 features but increases line length to 32 characters and number of lines to 16	\$1525.00

Upgrade from K50 or K60 to KS50 or KS60	\$255.00

K128B

K50/60

K700

K700 Video Corrector

The Model K700 Video Corrector is a unique proc amp, chroma corrector, noise reducer and image enhancer in a 1 3/4 inch high rackmount unit. The unit is designed to provide the user with correction of both luminance and chroma without the use of expensive waveform monitors or oscilloscopes. Up to 6dB of noise reduction and continuously variable image enhancement are also front panel controlled. The automatic wide-window genlock proc amp provides completely regenerated sync, burst and blanking on the output signal. The Knox Video Corrector can be used to correct most errors that are commonly thought to require more expensive time base correctors. The unit has an automatic signal bypass in the event of a power failure. Comb filter decoding is used to maintain accurate frequency response. **\$2495.00**

THE COLOR BOX

The Color Box

The Knox Color Box generates color backgrounds, color characters and full surround edging for the K50, K60, K128B or any other character generator. It features built-in sync for stand-alone applications and a video mixer for use in studio or production environments.

APPLICATIONS:

The Color Box is compatible with Knox Character Generators and key cameras. Two video outputs are provided on the Color Box. The built-in color sync generator may be used in stand-alone installations. Or a variety of external inputs may be used, including normal system video from a production switcher, color bars, time-base corrector, color black, or camera feed. The Color Box is ideal for use between video tape recorders. The stability of the inserted color characters will reflect the quality of the signal. Superior performance can be obtained from 3/4" U-Matic equipment and 1/2" VHS units. As in all tape to tape applications, the use of a TBC is desirable but not required if the recording and equipment are of good quality. **\$1950.00**

CHARACTER GENERATOR

K100 CHROMAFONT

The K100 Chromafont — full color character generation. The titler of choice when the budget is limited, the Knox Chromafont represents a totally new approach to character generator design. Advanced, high speed pipeline architecture puts sophisticated display capability in your hands at minimal expense.

Compact and versatile, the K100 is equally at home in the EJ van or in the studio. Its superior display adds elegance to routine titling such as schedule changes or weather alerts. The K100 also offers the small studio or production house a true alternative to costly and inconvenient outside titling services.

Chromafont Option B

- Full range color control (512 color palette) of background and character, organized as 16 selectable combinations. Color palette includes transparency
- Italics: two forward and two backward slants
- Variable line height
- Pinstriping. Selectable line thickness, spacing and color control. Can be inside character as well as over background
- Multi-speed forward and reverse roll and crawl
- Flexible, non-volatile 8000-character memory. Can be organized as:
 - up to 256 lines
 - up to 64 pages
- Portable, detachable keyboard
- NTSC and PAL-B compatibility
- Character-by-character color control
- Individual character background color control
- Character-by-character underlining and pinstriping
- Four Fonts: two upper and lower case, two upper case only, all in two sizes (eight 32-character font blocks)
- Horizontally and vertically adjustable shadow edging
- Fade Control: allows fade to and from black, dissolves from color to color
- Second 512 color palette for fade/cut/dissolve effects
- Serial interface for computer control or extra keyboards
- Superscript and subscript **\$3890.00**

Chromafont Option C (Under Development)

(This option features all of the capabilities of Option B, plus):

- Sixteen 32-character font blocks
- Completely interactive computer interface: allows for the design and loading of custom fonts, creation of logos and symbols
- Real time clock
- Programmable, automated sequences **TBA**

Screen Display Composed on a Chromafont Option B, Including One Extra Font

Model 3300 Time/Date & Fixed Message Generator

The Model 3300 Time/Date and Fixed Message Generator is a self contained, microprocessor controlled character generator designed to key highly legible alphanumeric characters into an external video source. The display consists of twelve text rows of thirty one characters per row. The characters may be displayed in either black or white with the opposite luminance value of horizontal edging. The front consists of 64 upper case and punctuation characters.

All messages and display modes are controlled by means of a 10 key numeric keypad on the front panel of the chassis. Messages are simply called up by entering the appropriate page number into the 10 key pad. Display control and time set modes are obtained by selecting a menu and entering the appropriate mode. The menu display may be set to a visible or invisible mode. This ensures downstream compatibility. The time is referenced to the incoming power and may be strapped for 50 or 60 Hz. Consult the factory if an external 50/60 Hz frequency standard or "time hold" is required.

The Model 3300 is supplied from the factory with the following standard messages:

- 24 HOUR TIME AND DATE WITH TENTHS OF SECONDS "PLEASE STAND BY AUDIO DIFFICULTIES"
- 12 HOUR TIME AND DATE WITH TENTHS OF SECONDS "NETWORK DIFFICULTIES"
- 12 HOUR TIME AND DATE WITH SECONDS "PLEASE STAND BY"
- "PLEASE STAND BY VIDEO DIFFICULTIES"

Optional messages may be installed by the factory.

Several other options are available for the Model 3300. Some of the options require custom factory software. Please consult the factory for pricing and availability.

3300 Time/Date and Fixed Message Generator	\$1575.00
Custom Message (Text format and message position for each page must be supplied by the customer — consult factory for details).	
First Text Row	\$50.00
Each Additional Row	1.00

Model 3302 Character Generator

The Model 3302 Character Generator is designed to be used in conjunction with a "user's" external computer. All display control and text entry is accomplished using a single RS-232-C serial I/O port with USASCII codes. This ensures compatibility with most of the computers in the world. All text and controls must be received via the RS-232-C serial I/O port as the Model 3302 does not have a keyboard for text entry. The Model 3302 may be used in any system that requires alphanumeric characters to be keyed into a video source. The character display consists of 12 text rows of 31 characters per row. The characters are formed using a 16 by 32 dot matrix to ensure a very high degree of legibility. All characters have horizontal edging to enhance readability at varying video luminance levels. Additionally, characters may be displayed in either black or white (with an opposite luminance value of edging). The character font consists of 64 ASCII characters — upper case and punctuation.

The Model 3302 contains a single page buffer memory which is used to store incoming text while an old message is being displayed. This makes possible a "hard cut" from one page to the next.

3302 Character Generator — General purpose designed for use with an external "user's" computer. RS-232-C interface (Note. This Character Generator does not have a keyboard)	\$1575.00

3600A CHASSIS

3610A KEYBOARD

Model 3600A Television Character Generator

Versatility, expandability and economy were of prime consideration in the design of the Model 3600A Television Character Generator. A plug in module approach permits field upgrades and additions to the basic 3600A system. The basic 3600A system includes 16 pages of resident text memory in a 10 row by 25 characters per row format. Page memory can be added in 16 page increments up to a total of 64 pages. Black or white, upper and lower case characters, can be keyed into the program video source under control of a program character on/off switch at the keyboard. A separate cursor output is included for editing text. Character edging modes include full edge, drop shadow, outline and drop shadow outline. Both the character stroke width and the edging stroke width are adjustable. Underline, overline, boxed characters and flash are provided on a word by-word basis. Dynamic display modes include roll, crawl, and page pop. In addition, a unique Format Window Position feature allows the mixture of page information with other pages and/or data sources on the same display.

Character Generators

3600A Character Generator— 10 lines of 25 characters with one preview and one program output. 9 x 14 font with large and small characters, 1000 character memory with 16 pages of roll, crawl, and pop-up. Internal External video selector switch, horizontal edging and auto centering all are provided as standard features. Must be driven by composite video. Requires 3610A or 3615A Keyboard **\$2995.00**

3610A Keyboard for 3600A Character Generator with character on/off, black/white, large/small, and fast roll/slow roll switch, and 16 key control. Includes 15' of interconnect cable **\$575.00**

3615A Keyboard/Memory for 3600A Character Generator with character on/off, black/white, large/small, and fast roll/slow roll switch, and 22-key control. Provides unlimited data storage on built-in heavy duty industrial audio cassette unit. Includes 15' of interconnect cable **\$1,295.00**

3600A Options

3620A Additional color output channel for 3600A. Provides one additional video input/output channel programmed from the first program channel. Requires a 3634B memory board **\$495.00**

3622A Dual floppy disk memory. Provides copying capability of memory up to 2000 pages. May access file for random page and operate in page or file mode. Contains separate keyboard control (Formerly 3618A) **\$2,595.00**

3630A Fixed Title — Provides 25 Character title line. (Total of 16 fixed title lines can be used per generator. Indicate line location and characters when ordering) **\$50.00**

3632A RS 232 Interface to a computer. Includes external switch to utilize 3610A or 3615A keyboard or computer. (Consult factory for control codes) **\$300.00**

3634B Solid State Memory — PC Board for 1000 characters of roll/crawl/10 LN, 2 LN pop-up. (Total of 4 memories can be used per generator) **\$995.00**

3639 Cassette Kit **\$25.00**

3640A Temperature Sensor — includes PC Board interface electronics, sensor and 100 ft. of interconnect cable. Provides fixed title and temperature display **\$455.00**

3641A Time Generator — provides fixed title and time display **\$295.00**

3642A Date Generator (Requires 3641A) provides fixed title and date display **\$350.00**

3643A Up/Down Counter — provides fixed title and up/down counting/time clock display **\$460.00**

3644A BCD input for 3600A. Consult factory for special engineering requirements **\$695.00**

3650A Color background, NTSC color sync generator, including single pulse drive outputs and adjustable pulse delay for color phasing with external video source. Controlled format display of any combination of red, green, or blue background. Provides H, V, SY, BL, BF, and SC. (Less genlock) **\$1265.00**

3652A Color background, pulse interface. Provides interface with drive pulse from external sync generator. Controlled format display of any combination of red, green, or blue backgrounds. Requires SY, BL, BF and SC **\$977.00**

*Only 2 data-source options can be used per chassis

Service Manual **\$38.00**

1500

MODEL 1500 CHARACTER GENERATOR

GENERAL DESCRIPTION:

The model 1500 is a high quality television broadcast character generator system with some graphics capability. It is capable of displaying multiple font styles and sizes in a single message. Custom logos and symbols can be included in the font styles. Each character style and size is created from an entirely different high-resolution font file. None of the fonts is stretched, squashed, or otherwise distorted to achieve multiple effects, which assures consistent quality and legibility in each display.

There are 65,536 colors resident in the 1500. The colors are controlled on a scan-line basis for both characters and background. This provides the means to have multi-colored characters on a multi-colored background of different colors.

The 1500 is essentially a two channel system. One channel is the Preview/Status Channel and the other is the Program Channel. All message information is entered into the Preview/Status Channel and then transferred to the Program Channel. Such a system allows for editing while on-air.

The 3-1/2" dual disk drive system and the logic system are both in one chassis. The single chassis unit can be used as rack mount or an attractive desk-top unit. As a rack mount system, the single chassis conserves rack space.

The keyboard is a low-profile, 72-key configuration. Many of the functions can be initiated by a single keystroke from the keyboard.

SYSTEM FEATURES:

Resident Memory

- Internal text memory and font memory are size interactive
- Variable page length

Fonts

- 35 ns resolution
- Multiple resident font capability
- 96 characters per font
- Multifont library (70 fonts included)
- Proportional spacing
- Character cell adjustment
- 12-56 scan-line character sizes

Display Editor

- Instant italics (forward or backward with choice of multiple angles)
- Auto centering (line and page)
- Underline
- Insert and delete character
- Insert and delete row
- Seven edge modes: no edge, outline, full border, and 4 quadrants of drop shadow
- 8 edge intensity levels

Color

- 65,536 colors resident
- RGB encoder required for color

Dual 3-1/2" Disk Memory

- Loadable operating system software
- System initialization user defined by auto-sequence
- Page, font, and auto-sequence loadable from disk

VIDEO SPECIFICATIONS

Outputs

- RGB:** 0.7V peak-to-peak, non-composite video
- PGM Out:** 1V peak-to-peak, composite video
- PRV Out:** 1V peak-to-peak, composite video
- Key:** 1V peak-to-peak, composite monochrome video

Inputs

- PGM In:** 1V peak-to-peak nominal, composite video, positive interlace, EIA; monochrome or color

Encoded In:

- 1V peak-to-peak nominal, composite video, EIA; monochrome or color

Dimensions

Size	H	W	D
1500 Logic Unit:	7"	15-5/8"	17"
1500 Keyboard:	1-1/2"	17-3/4"	7-3/4"

Model 1500 Character Generator \$6995.00

MODEL 7200 COMMUNICATOR SYSTEM FEATURES

Fonts

- 35 nsec horizontal resolution • 128 characters per font • 4 resident fonts • Multi font library • Proportional spacing • Inter-character spacing adjustment • Inter-row spacing adjustment • Custom logo capability • Character by character font selection

Display Editor

- Instant italics (12° slope) • Auto centering row and page • Row shift left and right • Row shift up and down • Character by character underline • Character by character flash (Variable duty cycle flash rate) • Insert and delete character • Insert and delete row

R-G-B Output

- 32,768 possible colors • 32 resident background colors • 32 resident character colors • Colors may be named individually • Character by character color selection • Full borderline edging • Outline edging • Drop shadow edging

Auto Sequence

- Real time machine control • Up to 20 frame per second animation • Adjustable run rate and time delays • Editor allows command insertion and deletion

Dynamic Messages

- Roll in 10 Speeds—up or down • Roll to stop, pause, or speed change • Roll to variable position split • Roll through variable size and position window • Crawl in 10 speeds—left or right • Variable crawl position • Resident titles—Random or sequential call-up • Variable size and position titles

Resident Memory

- 120 rows of resident text memory (Allows disk drives to be turned off during use.) • Utility programs such as font developer may be placed in resident memory • Four base pages may be expanded as required for message length • Fast call-up from base page to base page

Status Channel

- Machine control status • Creates user friendly environment • Menu operation • Doubles as low resolution, monochrome, text preview output • Allows system diagnosis

Dual 8" Floppy Disk Drives

- Operating system software loads from diskette • Diskette format and copy routines allow all diskettes to be copied • User defined system initialization from diskette

Keyboards

- Power on self-diagnosis • Single function control keys • Keys grouped by function for ease of operation • Up to four keyboards may be attached

Self-Diagnosis

- Power on self-diagnosis of all memory devices • Additional long-term memory testing and keyboard testing programs included

VIDEO SPECIFICATIONS

Outputs

- R-G-B Program: .7V peak-to-peak non composite video • R-G-B Cursor: Identical to program outputs with cursor added. (Cursor may be turned on/off from the keyboard.) • External Key: 1V peak-to-peak composite monochrome video. (Adjustable delay 0-1.5 micro secs.) • Status Channel: 1V peak-to-peak composite monochrome video

Inputs

- Sync: 4V peak-to-peak looping inputs • Blanking: 4V peak-to-peak looping inputs

KEYBOARD SPECIFICATIONS

- Inputs: Four inputs are supplied. (Input #1 has control priority.) • Cable length: 15 feet standard • Signals: RS-422 bi-directional. (May be used uni-directional.)

ELECTRICAL SPECIFICATIONS

117 VAC 60 Hz	
7200 Display Logic Unit	100 W Max
7210 Keyboard	10 W Max
7220 Dual Disk Drive	330 W Max
7234 Video Keyer	10 W Max

Character Generator

7200 System Character Generator-Includes 7260 Display Logic Unit, 7210 Keyboard, 7220 Dual 8" Disk Memory, (4 Each), 7240 RAM Font Memory, 7230 RGB Color Generator, 21 Standard Fonts, and all other standard Features. (Starter Program also available at reduced price.)

\$18,995.00

OPTIONS

7204 Dual Channel Upgrade for 7200 System-Includes 7238 Interface, 7260 Display logic Unit, (4 Each), 7240 RAM Font Memories, 7230-RGB Color Generator and all other standard 7200 features.

\$11,950.00

7210 Keyboard, Full Editing-Includes 15' Interconnect Cable. Up to four keyboards may be used per system.

\$2,000.00

7212 Control Keyboard-Provides machine control capability, but no text editing.

\$500.00

7222-XX Font Diskette (7 fonts per diskette).

\$210.00

7228-02 Font Development Kit-Includes software, manual and one each Mylar Master Grid Sheet.

\$495.00

7232 Interface RS-232 to RS-422 Interface (3-1/2" x 19" Rack Mount).

\$300.00

7234 Video Keyer-For Downstream Keying of 7200 Encoded Video (1-3/4" x 19" Rack Mount).

\$495.00

7236 Y-Channel Encoder-Show full luminance from RGB signals, status channel, or shows status over luminants. All controlled by external switch closure.

\$845.00

PCE-462 Color Encoder-Lenco (Rack Mount).

\$2,950.00

CSL-710 Sync Generator-Lenco (Rack Mount).

\$1,500.00

1060A Video Pointer Desk Top

The Laird Telemedia Model 1060 Video Pointer is a versatile, easy-to-use production aid designed to enable studio personnel to add the professional touch to both live and video tape production.

Using a selected mode, a joystick positioned arrow can be suited to the video background by a three-position switch. This is accomplished by an internal keying circuit to provide black or white image insert or, in the third position, an additive mix circuit, wherein the image is superimposed upon the video signal.

An 8-position rotary switch controls the orientation of the arrow in 45° incremental steps. Two sizes of arrows are by a "large-small" switch. As an enhancement feature, the arrow may be made to flash. A "Pointer On" Switch controls the presence or absence of the arrow image within the video presentation.

The 150 nanosecond dot-width can accommodate additional shapes including preselected logotypes of considerable sophistication. One of the operator controls allows switching between logos and other symbols and the pointer. The special shapes may be presented in the same manner as the arrow with the exception of rotation. The position of these shapes is controlled by the joystick so it may be positioned anywhere within the video presentation. Special logos or other shapes and symbols can be optionally ordered from the factory to be developed from a 32-by-32 dot matrix.

Three housing configurations are available: a desk-top chassis with all controls on top, a rack mount chassis with all controls on the front face, or a rack mount chassis with a cable connected remote control unit.

Remote controls are offered in rack mount or small desk top chassis.

ELECTRICAL

• Power Requirements: 117 VAC + /-10% 60 Hz or 234 VAC + /-10% 50 or 60Hz • Power Consumption: 70 MA at 117 VAC • Fuse: 3 AG ½ Ampere • Video Input: 1 V P-P nominal, composite positive or random interlace, EIA Monochrome or color • Video Output: 1 Volt P-P nominal when 75 ohm terminated, composite • Internal Power Supplies: +5V DC filtered and regulated; +12V DC filtered and regulated; -12V DC filtered and regulated

Video Pointer

Arrow may be oriented in eight positions and operated in the following modes: on/off, static/flash, large/small, arrow/symbol, keyed white/black/or highlighted (Additive Mix).

- 1060A** Self contained desk top unit **\$1045.00**
- 1060B** Self contained 1 ¾" rack mount **1045.00**
- 1060C** Remote Controlled Unit with rack mounted remote control **1100.00**
- 1060D** Remote Controlled Unit with desk top remote control **1148.00**
- Cable for remote control **47.00 + 2.10/ft.**
- 1064** Custom logos — customer specified by filling in squares of a 32 x 32 grid **First Logo 52.00**
Additional Logos up to 15 31.00

Model 1021 Electronic "Q" Board

The 1021 Q Board adds that professional touch to your video tape productions. By a method similar to that involving a "clap" board used in movie making, important production information may be televised and recorded on the leader of any commercial or program tape. Also, both an aural and visual countdown, recorded just prior to program information, will allow accurate cueing in playback. Emission of a countdown beep tone from the built-in speaker serves to alert the studio crew and talent during taping sessions.

- 1021** Electronic "Q" Board with built-in speaker may be remotely controlled **\$415.00**
- 1040** Video "Q" Board. Visual and audio countdown with audio cue tone. Composite sync and video compatible with local and remote control. Standard 10 second cue with last 2 seconds as "dead-time". Adjustable character size. **\$625.00**

CLOCKS

UDC-508/512 UNIVERSAL DIGITAL CLOCK

The Universal Digital Clock represents a departure from conventional clock design by combining the advantages of analog and digital time displays. It operates with any of the three most commonly available drive signals and can therefore be easily integrated into new or existing systems. The clock accepts:

- 12VDC impulse drive
- SMPTE serial time code
- 115VAC, 50/60Hz

To accommodate various viewing distances, the UDC is available in two sizes. The UDC-508 is an illuminated, wall mounting unit with an 8" diameter clock face, while the UDC-512 has a 12" diameter clock face.

The analog/digital time displays together with the cool white, glare-free illumination of the clock face make the UDC suitable for use in darkened areas, such as TV control rooms. Its noiseless operation makes it ideal for noise sensitive locations, such as announce booths.

- UDC-508** Universal Digital Clock, 8" wall mounting, includes Instruction Manual \$ **990.00**
- UDC-512** Universal Digital Clock, 12" wall mounting, includes Instruction Manual **1100.00**
Extra Instruction Manual for UDC-508/512 **40.00**

UDC-508/512

CLK SERIES

CLK SERIES ANALOG IMPULSE CLOCKS

The CLK Series Analog Impulse Clocks operate with 12VDC impulse drive or, optionally, with 115VAC, 60Hz. The clocks are available in five different models. The CLK-1600 is a wall mounting clock with an illuminated, 16" diameter clock face. It is generally used in studios, auditoriums etc.

The CLK-1200 and CLK-800 models have 12" and 8" diameter, illuminated clock faces respectively. They are also wall mounting units, but can be adapted to rack mounting. These clocks are primarily used in "monitor walls" in studio and master control rooms. The cool white, glare-free illumination of these clocks has very low infrared emission and does not adversely affect the viewing conditions of color picture monitors.

The model CLK-501 is a non-illuminated, rack mounting clock which is generally used in confined areas, such as small mobile units etc. The model CLK-500 is a non-illuminated, sloping front desk top unit. The virtually noiseless operation makes it suitable for use in announce booths.

IMPULSE CLOCKS

- CLK-1600** Illuminated 16" Impulse Clock, includes Instruction Manual **\$730.00**
- CLK-1200** Illuminated 12" Impulse Clock, includes Instruction Manual **625.00**
- CLK-800** Illuminated 8" Impulse Clock, includes Instruction Manual **520.00**
- CLK-500** Non-illuminated 5" Desk-top Impulse Clock, includes Instruction Manual **475.00**
- CLK-501** Non-illuminated 5" Panel-mount Impulse Clock, includes Instruction Manual **370.00**
- CLK-503** Impulse clock (oil-filled movement) 5" non-illuminated, desk top **695.00**

Options

- CLK-002** Internal Impulse Driver for CLK Series Clocks **\$180.00**
- RM-001** Rack Mount Kit for CLK 800 and CLK 1200 **50.00**
Extra Instructor Manual for CLK Series Clocks **30.00**

CLOCK SYSTEMS

CSD-510

CSD-510 MASTER CLOCK SYSTEM DRIVER

The CSD-510 Master Clock System Driver provides accurate and stable drive signals for:

- 100 impulse clocks (12 VDC)
- 50/60Hz synchronous clocks
- Digital clocks compatible with SMPTE Time Code (EIA/EBU)

The unit operates with its internal, temperature controlled master oscillator, or it can be referenced to an external Cesium or Rubidium standard. With WWV/CHU reception, the CSD-510 provides automatic synchronization to Coordinated Universal Time. Special features include an automatic 1 hour advance/retard function and an internal stand-by battery with a 1/2 hour capacity for 100 impulse clocks. An external battery input is also provided.

CSD-510 Master Clock System Driver, includes Instruction Manual \$4,325.00
Extra Instruction Manual 40.00

CAC-511

CAC-511 CLOCK AUTOCHANGE

The CAC-511 Clock Autochange is used with two CSD-510 Master Clock System Drivers to provide continuity of impulse drives, time code signals and 50/60Hz sine wave outputs when a malfunction of the assigned Master Driver occurs. The Autochange is activated upon the loss of one impulse or a 6dB level reduction of the time code signal. The unit's front panel provides assignment and failure LED indicators, an aural failure alarm and manual assignment switches. In order to switch the impulse clock load from one driver to the other it is necessary that both drivers are correctly phased. The CAC-511 contains the required phase comparator and indicates an "out of sync" condition with a front panel LED. During a primary power outage, the Autochange makes it possible to utilize the available standby battery power in each CSD-510 in a sequential manner.

CAC-511 Automatic Master Clock Driver Changeover, includes Instruction Manual \$1395.00
Extra Instruction Manual 45.00

CDP-514

CDP-514 CLOCK DISTRIBUTION PANEL

The CDP-514 Clock Distribution Panel is designed as a system accessory for the CSD-510 Master Clock System Driver and CLK Series impulse clocks. The distribution panel provides isolated feeds for 32 impulse clocks. Individual feed lines may be shorted, or either side of the lines may be grounded without affecting the other clocks in the system. Shorts cause visual and aural alarms. The visual alarm is a red LED, while the aural alarm is a high pitched tone which can be switched off. Up to three distribution panels can be used in parallel to feed 96 impulse clocks from one CSD-510 Clock Driver.

CDP-514 Clock Distribution Panel for 36 CLK Series Impulse Clocks \$790.00
Extra instruction manual 30.00

DCD-520/521

DCD-520/521 DIGITAL CLOCK DISPLAY

The DCD-520 Digital Clock Display accepts the standard SMPTE serial time code in the EIA or EBU format. The decoded signal drives a 6-digit 7-segment real time display in the 24 hour system, i.e. 00...23 hours, 00...59 minutes and 00...59 seconds. A front panel Store switch can be used to freeze the time display as an aid in event timing. When the switch is released, the unit returns to real time. The DCD-520 cannot be used for VTR editing functions. The brightness of the readout is adjustable. Also available: Model DCD-521. It provides a computer interface, i.e. a TTL (or CMOS) compatible, parallel BCD time code output. This output appears on a rear panel, 50-pin Amphenol connector.

DCD-520 Digital Clock Display, including Instruction Manual \$ 895.00
DCD-521 Digital Clock Display with Parallel BCD Code output, includes Instruction Manual 1095.00
Extra Instruction Manual for DCD-520/521 35.00

D-1510

D-1510 Television Character Generator

DESCRIPTION

The D-1510 is a multi-page video character generator that features a broadcast character display with color background and character capability. It is designed for operating in professional television systems that require quality, versatility and low cost in titling and captioning.

The D-1510 features a built-in keyer that will lock to virtually any composite video signal including 1/2 inch Beta, VHS, or 3/4 inch recorders. Eight colors: red, green, blue, cyan, magenta, yellow, black and white, can be used on the background and the characters in any combination needed on a row-by-row, word-by-word basis. Even the drop shadows and edges can be colored; three speeds, and pause can be applied to the roll and crawl modes. The D-1510 has fully independent edit channel and program channels, so editing of text can occur without affecting the program output.

There is a 32-character graphics font that allows for construction of basis charts, graphs and symbols.

The Model D-1510 is a complete titling facility. All necessary features are built into the unit eliminating the requirement for add-ons. Keyer, gen-lock sync and color, and 24-hour battery back-up are built in. This allows the unit to operate completely independently as a stand-alone unit without a support system. This "complete" system concept, plus the use of only high-quality materials, makes the D-1510 an inherently reliable device, a most important consideration for production use.

FEATURES

- 70 nanosecond resolution; 2 heights
- Built-in keyer with gen-lock
- Independent edit and program channels
- 8 background colors
- 8 character colors
- 8 edge colors
- 512 color palette
- 36-page random access memory
- 2 character sizes

- Upper and lower case
- Word Processor text editing
- 7 Graphic separators/International font set
- Automatic centering
- Left/right justify
- 9-speed roll and crawl
- 22 characters per row
- Flash
- Automatic word integrity
- User prompting
- Battery back-up
- Roll/Crawl speed — 8 speeds w/pause

Physical: 16.5"W x 18.5"D x 6.15" H
 Weight: 30 lbs.

D-1510 Character Generator \$4195.00

D-1512 Television Character Generator

D-1512 Television Character Generator shares the same features as the D-1510 except:

- 70 nanosecond resolution; 4 heights
- International font set
- Roll/crawl speed — 8 speeds w/pause
- 512 color selections
- RGB output: RS-170A compatible
- Independent channel for composition while program channel is in use
- Edge signal for external key on/off

Weight and dimensions same as the D-1510 as well

D1512 Character Generator \$4995.00

CHARACTER GENERATOR

D-5000 CHARACTER GENERATOR

The 3M Model D-5000 Character Generator is a titling and graphics system designed for broadcast production and cable television use.

This is an expandable system which brings high resolution and full features into the affordable price range, while allowing future system growth.

Features

- Multi-font library 4 resident fonts
- Proportional character spacing
- Full editing capability
- High resolution character definition
- 35 nanoseconds
- Multi-speed roll, crawl, reveal, and billboard dynamics
- Auto centering, line & page
- 512 color palette
- Built-in sync and gen-lock
- 9 speeds roll and crawl
- 100 page internal memory
- Programmable roll, crawl, and roll masking
- Built-in clock
- Built-in italics, all fonts
- Internal colorizer
- Background color in 4 line increments
- Non-volatile data storage
- Split screen displays
- Character kerning & overlap
- Multi-color logos
- Vertical roll, 9 rates plus pause (blanking to blanking), five different masks are selectable
- Horizontal crawl, 9 rates plus pause (blanking to blanking), position selectable
- Word flash and color change flash
- Mix rolls and/or crawl with static displays
- Slow reveal — 7 speeds
- Billboard — 9 speeds

Specifications

Configuration

Electronics 19" rack mount

10-1/2"H x 16-1/2"D — 38 lbs.

Keyboard 21"W x 4-5/8"H x 11-1/8"D — 10 lbs.

Output

Program channel NTSC compatible, color encoded, 1.0V peak-to-peak composite into 75 ohm load adjustable $\pm 10\%$. High Resolution. Two outputs provided.

Edit channel same as program channel with cursor, system status indication and interactive operator prompting information. High Resolution.

R-G-B outputs for program channel 0.7 volts peak-to-peak.

Edge External Key Signal-composite luminance 1.0 volts.
Strap for non-composite 0.7 volts.

Inputs

Sync accepts standard 4.0V peak-to-peak or composite video signal 75 ohm looping inputs.

RS-232 keyboard loop through for multiple channel operation.

RS-422 (optional) dual 3-1/2" micro floppy disc memory Subcarrier Reference Frequency. 3.58 MHz 2.0 volts peak-to-peak loop through (4.43 MHz 2.0 volts PAL).

Model D-5000 Character Generator **\$10,995.00**

Accessories/Options

4 Additional resident fonts	\$ 675.00

1 Font Chip set	125.00

Memory Expansion Options

50 pages additional resident memory	\$ 250.00
Single Disc Drive	2,900.00
(Store up to 600 pages of text per disc)	
Dual Disc Drives	3,199.00
(Greater on line storage and disc duplication capability)	
4 Font Ram Memory	1,150.00
(Down load 4 of 100 fonts from 3M font library disc)	
8 Font Ram Memory	2,300.00
(Down load 8 of 100 fonts from 3M font library disc)	

GRAPHICS GENERATOR FONT LIBRARY

This series of Video Fonts is designed for use with the D-5000 Generators. The styles and sizes shown are part of our growing Video Typography Library. Additional fonts will be added regularly. Also, custom alphabets and logo fonts can be prepared to your specifications. Fonts consist of complete high-resolution, alpha-numeric character sets. Characters are fully proportionally spaced for true letterforms. Unless shown otherwise, fonts contain complete upper case characters, lower case characters, numbers, and standard punctuation. A series of standard symbols is also provided.

ARTRONICS/3M STUDIO COMPUTER SYSTEMS

Designed For:

- Video Producers
- Audiovisual Producers
- Illustrators
- Art Directors
- News Graphics
- Business Graphics
- Industrial Artists
- Graphic Designers

Applications:

- Beautiful comps, with exciting alternatives, for logos, layouts, ads, story boards
- Thumbnails and roughs, in full color with instant variations
- Video and Business Graphics, grids and text
- Final reflective or transparency art, 35mm color slides, 4 x 5 and 8 x 10 instant color prints
- Video tape or broadcast

Paint System Consists Of:

- Central Processor with 128K bytes
- Two Dual Density Floppy Disks with 1 megabyte each
- 13" High Resolution RGB Color Display
- 12" Monochrome Monitor
- Detachable keyboard
- 15" x 15" Digitizer Pad with Stylus
- Optional Camera Input and Font Origination
- PC Software

FEATURES:

- Freehand Drawing
- Camera Input
- 128 Color Palette w/16,777,216 possible colors
- Color Mixing: Hue/Luminance/Saturation
- Color Matching
- Rainbow/Spectrum
- Continuous Tone
- Cycle "Real-Time" Color Movement
- 28 Brush Styles
- Create New Brush
- Air Brush

DLS 6010

Video Effects System DLS 6010 "Snapshot"

"Snapshot" is the most advanced small-scale still store available, employing the latest in electronic and disc drive technology. It therefore includes features that, singly or in combination, other systems cannot match. These include:

- Asynchronous picture capture
- Field or frame freeze
- Picture grab
- Half-second transfer rate
- Two framestores—instantaneous vertical switching

- On-air editing
 - External key
 - "Browse" and title search
 - Autofile numbering/default titling
 - Individual user picture protection
 - Printer output
 - Interchangeable disc cartridges
- "Snapshot" records and plays still pictures with the aid of remarkable Winchester disc technology. Each removable disc cartridge holds approximately 400 pictures on-line.

DLS 6010 \$44,375.00

DFS 1750

TBC Synchronizer DFS 1750

The remarkably small size of the DFS 1750 is achieved through advanced technology and elegant electronic design, with no sacrifices in performance. On the contrary, the DFS 1750 is a powerful performer, with such features as infinite window heterodyne TBC, automatic phased/non-phased switching, fast hot cuts, freeze, built-in reference signals and test equipment, full proc amp controls, remote control—even a digital I/O

interface conforming to SMPTE recommendations on composite sampling. And it consumes just 90 VA.

- Auto phased/non-phased operation
- Built-in reference signals
- Proc amp controls
- Remote operation
- Low power consumption
- Size: 19" rack mount; 1-3/4"H x 19"D
- Weight: 15 lbs.

DFS 1750 \$13,900.00

COLOR VIDEO TITLER/ CHARACTER GENERATOR

Model II Color Video Titler/Character Generator

2 MODELS

- TITLER-2 pages of memory\$259.00
- CHARACTER GENERATOR - 8 pages of memory with automatic sequencing.....\$299.00

FEATURES

- 2 character sizes
- 150 different letters, numbers and graphic symbols including punctuation marks
- 16 lines of 32 small characters, 4 lines of 10 large characters (with character by character colorization)
- 6 brilliant colors: red, blue, green, yellow, magenta, orange
- 4 way cursor control
- Status mode indicator shows:
 - direction selected
 - character or graphics mode
 - when in "shift-lock" mode
- Character size and color indicated by cursor
- Permits simple animation

- Power-on color bars
- Dependable tactile keyboard — 40 function keys
- Reliable solid-state construction — rugged metal case
- Easy to use — no computer language needed
- Completely portable...measures a mere 7" x 3-1/4" x 1-1/2" and weighs only 3/4 lbs.

APPLICATIONS

- Generates distinctive titles and graphics for home or commercial use
- TV Production
- Video Merchandising
- CATV/SMATV/MATV Channels
- HOTEL/MOTEL/HOSPITAL Announcements
- LPTV Production
- Instructional Programming

OPTIONS

- Standby Power
- Genlock Keyer/Matte Generator

- Spatial Antialiasing

GENESIS 1

Genesis 1 is an easy to operate, high performance digital effects system, containing features only available in the higher priced digital effects systems, and creating more special effects capabilities for users in the professional, industrial and academic areas.

Genesis 1 incorporates advanced digital technology producing effects such as zoom, flip, tumble, crop, vertical or horizontal compression, border, posterize, mosaic, smooth and freeze.

Genesis 1 with Standard Control Panel	\$21,990.00
Accessory Service Extender Card	350.00
Additional Cable (25' standard)	
— with Standard Control (100')	600.00
— with ACT 1 (2000' max.)	2.00/ft.
DATAKEY® (additional)	95.00

ACT 1

GENESIS 1/ACT 1™

FEATURES

- Variable Speed, Zoom and Position
- Menu Driven Design
- DataKey® Portable Storage
- Nonvolatile Memory
- Capacity to Operate up to 2000 feet from the Genesis 1 Mainframe
- Shadow, Disassemble, Inertia, and Variable Aspect Ratio for Mosaic added to Genesis 1 Capability

Genesis 1, Microtime's high quality, low-cost digital effects system was just the beginning. Now, ACT 1, Microtime's Artistic Control Terminal combined with the Genesis 1 mainframe, increases creative capabilities to your imagination's limit.

ACT 1 functions through the ease of the joy stick. The selection of Menu, Freeform and an Initialization File results in rapid availability of the joy stick for on-air use. Accessing the Directory and selecting a sequence number recalls a prior file, computes the requirements and obtains a playback within seconds. The sequence begins by pressing Take.

A routing switcher is used for changing sources at the system input. The switcher should have loop through inputs and flip/flop logic. Selection of the two sources is by manual entry.

The routing switcher is controlled by the Change Source command within ACT 1. Computer editors have access to the Genesis 1, ACT 1 combination via the Sequence Trigger connector on the rear panel of the Genesis 1 mainframe.

GENESIS 1/ACT 1™	\$27,990.00
ACT 1 Control Panel Only	7,000.00

GRAPHIC CHARACTER GENERATORS

SUPRA EDIT

SUPRA

SUPRA SYSTEM

- Supra
- Supra Two
- SupraEdit
- Supra Graphics

The high quality 40 nanosecond resolution supplies crisp, sharp, very readable character and graphics display. Text or graphics mix easily on the same line. For emphasis combine fonts on the same page. Add various character colors over a different background color.

With its real-time sequencing, your SupraSystem lets you set different events to appear hourly, daily, weekly, in whatever order or frequency you want. Organize, create and edit your programming by content...by time...by frequency. The Supra is a single-channel character generator with 10 fonts online, 250 pages (8 lines, 32 characters per line) of memory. This can be expanded to 1,000 pages of memory. The SupraEdit is the perfect answer for offline editing. It has micro disk drive for non-volatile storage.

Operating commands on the SupraSystem are written in plain, easy to understand English, not computereze. The keys are color coded and labeled in plain English. Most users can teach themselves to operate the SupraSystem in a matter of hours.

A SupraSystem will interface to news wire or a local weather station to give viewers an excellent variety of timely information. Sports, news and financial stories can be displayed on designated pages and sequenced to be shown at specific times and frequency. Also, classified ads can be stored and sequenced to run at your choice of times and frequencies to give maximum impact in the marketplace.

The Supra's modular design lets you start with one Supra. Keep adding units until you have your complete system set up. In-house systems can operate up to 99 character generators at the same location. A regional network can operate from a central location and feed into multiple remote headends. You can do off-line editing at the same site or from a remote location using phone lines. Each Supra-System operates independently.

Genlock

The Genlock option includes manual sequencing. "Pause" and "take" keys allow the operator to preview titles offline and add them to external video, providing great flexibility when mixing alphanumerics with tape or live video.

All Supras have a six month warranty. The optional service contract offers 24 hour, 7-days-a-week WATS service assistance. With the purchase of a Spares Kit, most problems can be handled over the phone.

CHARACTER GENERATOR

MYCRO-VISION™ MAX

Mycro-Tek Introduces Max

A low-cost character generator w/non-volatile RAM storage

Features

- Real-time clock for time and calendar display
- Main and auxiliary loop sequencing
- Up to four user-definable regions, with region separators user-definable by size and color
- Eight background colors and eight character colors: red, blue, green, yellow, cyan, magenta, black and white
- Display modes in three speeds of roll: print, crawl and splash. Additional display modes are bang and ripple
- Background and character color by line, page or character
- Full character edging in black or white
- Flashing characters or graphics (three speeds)
- Display time from one to 999 seconds
- Six-month full warranty on parts and labor

Max is a technological step ahead of other character generators in its price range because it utilizes non-volatile RAM storage. A built-in, product-life battery provides power for Max's memory, so Max retains stored pages even if power is accidentally interrupted.

This backup memory gives Max portability as well as safety. The user can store pages, power Max off, move it to another location, and power up again without losing pages. This makes Max an excellent display tool for meetings, conventions and classrooms.

Max has a standard 32K memory allowing 120 pages (eight lines, 32-characters per line) of storage. Two separate high-resolution fonts for text and graphics are standard. Both fonts can be displayed in four separate styles: single height/single width; single height/double width; double height/single width; double height/double width. Two optional wire service feeds can be captured by Max.

MODEL NUMBER	DESCRIPTION	PRICE

EDITING SYSTEM

ABR-1A EDITING SYSTEM

Features

- Advanced microcomputer technology
- Individual control of transports for faster editing
- Multi-event memory storage
- CRT Status Display
- Assemble and Insert Editing Modes
- Edit points trimming
- A/B Roll, Match Cut, and Sync Roll modes
- Printer Output (RS-232C)
- Serial Communication port for computer interface
- Animation Editing mode
- Split Edits
- Manual and Auto Take control for general purpose interface
- Frame accurate extend edit
- Mark Edit Points On-the-Fly, in still frame, or by numeric entry

The microprocessor based ABR-1A editing system offers simplicity, ease of operation, and ruggedness while providing outstanding performance and features in a variety of editing configurations at a competitive cost.

The basic system includes a Video Display Output consisting of four screens of information showing all editing related data, Executive Menu, 20 Event Memory List and System Diagnostics.

By selecting the Executive Menu, the operator may change edit parameters by second level software to suit particular modes of operation. The "Off-line" feature enables a full Edit Decision List to be compiled including Reel Number, Wipe/Dissolve Selection and Duration, Split Edits, etc. The EDL can be outputted to a hard copy printer or punched paper tape in Paltex (Datatron/Tempo) or CMX-340 formats.

Normal system counting uses control track or tach pulses and as an option SMPTE/EBU Time Code or Microloc can be fitted.

Specifications

EDIT MODES

- Assemble or Insert
- Split Video and Audio Edits
- Manual and Auto Animation
- A/B Roll
- Sync Roll

SEARCH MODES

- Fast Forward
- Forward Play
- Forward Variable Speed
- Still Frame
- Stop
- Reverse Variable Speed
- Rewind
- Cruise
- Go to any Programmed Point

EVENT SET UP

- On-the-Fly Marking
- Park and Perform

- Park and Enter
- Numerical Entry
- Trim Frame by Frame or a Programmed Value
- Auto Tag, Auto Next
- Extend Edit
- Recall any Edit in Memory

EDIT LIST

- Paltex (Datatron/Tempo) or CMX Compatible Edit Decision List
- Printer Output (RS-232C)

OPERATING CONFIGURATIONS

- Sony - 2860A, 5850, BVU, SLO-383, BVW-10/40
- JVC - 8200, 8250, 6400, 8600, 8800
- Pan - 8500, 9600, 9240, AU-700, AU-300 "M"
- Hitachi - HR-200

ABR-1A

ELECTRICAL

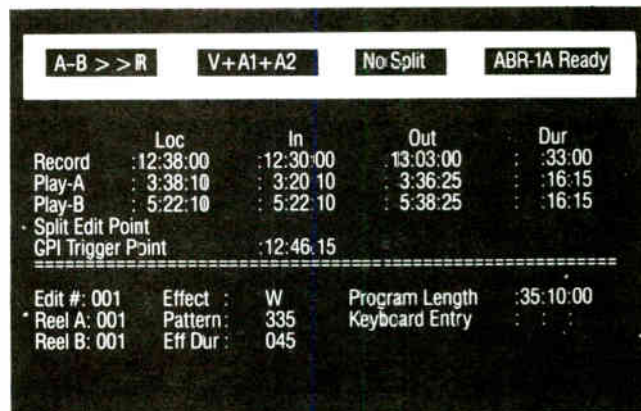

Power: 115/220 VAC ± 10%, 50/60 Hz
Power Consumption: 30 Watts
Television Standard: NTSC, PAL, SECAM
Time Code: SMPTE, Micro Loc, Pulse Count
Edit Accuracy: Frame Accurate w/Time Code

MECHANICAL

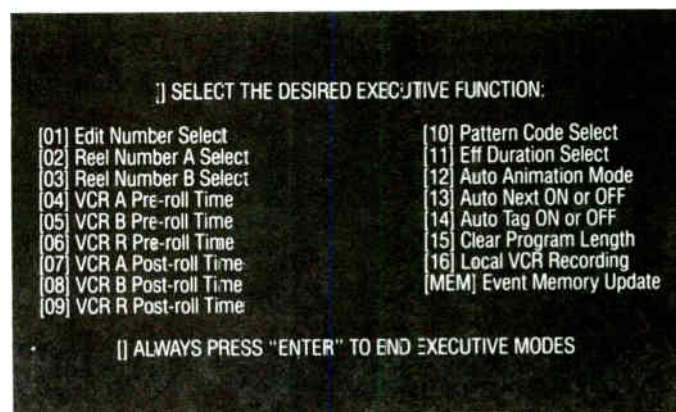

Length: 17.5"
Height: 6.0"
Width: 18.0"
Weight: 20 lbs.

EDIT-STAR COMPUTERIZED EDITING SYSTEM

FEATURES

HELP

HELP is PALTEX's exclusive feature that allows you to leave your user manual on the shelf.

USER DEFINABLE KEYS

Editors can store a sequence of up to 20 keystrokes in each of three user registers.

FRAME BUMP (A/V Sync)

FRAME BUMP allows the editor to sync up a source VTR to either the record VTR or another source VTR.

ASSIGNABLE RECORD

While the EDIT-STAR initializes with your preferred VTR assignment, any of the VTRs can be assigned to be the Record VTR; and any can be assigned to be the A, B or C VTR directly from the keyboard.

DISTRIBUTED PROCESSING

For special situations where you need to interface to more than four VTRs or where you need to have more than one EDIT-STAR share control of a pool of VTRs, Distributed Processing is available.

VTR MOTION CONTROL

EDIT-STAR is equipped with a rotary Varascan for manual jog and shuttle control of the VTRs, including frame jog (deck dependent).

SPECIAL FUNCTION CONTROL

EDIT-STAR is capable of controlling any external device such as a character generator, DVE or audio cart which can be actuated via a contact closure or TTL logic level.

SYNC ROLL

Will sync roll as many as three source and one record VTR.

SWITCHER CONTROL

When interfaced to a production switcher, the EDIT-STAR enables you to perform cuts, wipes, dissolves, fades and keys from the editing keyboard.

TIME CODE READERS

The EDIT-STAR includes a Time Code Reader in its electronic chassis for each of the interfaced VTRs. These longitudinal Time Code Readers also read and allow the operator to display on the status monitor User Bits data which is a part of the time code.

TIME CODE AND CONTROL TRACK

When operating in Time Code mode, it is frame accurate. The EDIT-STAR can also edit in Control Track mode and the operator can go into Control Track while the VTRs are at rest or in motion. It is capable of simultaneously intermixing VTRs which are under Time Code and Control Track control.

MARKING "IN" TIMES

Allows you to mark "In" (and "Out") points in three ways:

- Enter the time number via the 10-key pad and mark the VTR "In" key;
- Park the VTR at the desired point and mark the VTR "In" key with a single stroke;
- Play the tape and mark the VTR "In" key "on-the-fly"

AUTO USER REACTION TRIM

Allows the operator to enter a user-selectable "reaction time" of from 1 to 31 frames. It initializes with a reaction trim of zero frames.

EDITING SYSTEM

SPLIT AUDIO-VIDEO

Is capable of designating split audio and video edits.

CUEING OF VTRS

Allows the operator to send any or all of the VTRs automatically to the Cue point, which is the edit "In" time less the preroll time. In addition, the operator can send any of the VTRs to park directly on the "In" point or the "Out" point.

SINGLE DECK PREVIEWS

While the normal "automatic preview" function is in the video-video mode format you can also perform single deck manual previews.

AUTO TAG

Selectable for all of the VTRs or the record VTR only, and the system initializes with Auto Tag off.

EDIT LIST MEMORY

Has a dynamic memory of 318 events. A protect mode enables you to automatically dump to disk on an event-by-event basis to preserve the list.

EDIT LIST FORMATS

Outputs Edit List information in any of three EDL formats selectable from the keyboard.

LIST MANAGEMENT

TEXT EDITING allows the operator to add, delete, modify or reposition an individual event in the edit list, with or without ripple.

BLOCK MOVES allows the editor to add delete or reposition blocks of events in the edit list.

MATCH, when initiated by the operator, provides for continuous automatic tracking of the edit list as the record VTR is playing.

AUTO ASSEMBLE

The entire Edit Decision List, or a designated block of it, can be automatically previewed or edited.

SCRATCH PAD MEMORY

Can store two miscellaneous time code values.

SOFTWARE IN "PROM"

Operational software onboard in resident read-only memory.

AUTO SYNC POINT

In order to sync a point within a source shot to a point within material previously laid down on the record VTR, simply park the source and record VTRs on the desired sync point. It automatically calculates and enters the correct "In" point with the push of a button.

COLOR-FRAME ADJUSTMENT

The EDIT-STAR will automatically adjust all play VTR times to be in the proper color-frame relationship (NTSC, RS-170A or PAL 8-field) to the record "In" time at the press of a button.

ES1-3	Three-Machine EDIT-STAR System	\$27,500.00

THE ESPRIT

The Ultimate Editing Experience, includes:

Features

- Rolls up to 5 VTRs/ATRs in full synchronization
- Full Serial or Parallel Production Switcher interface
- Internal SMPTE/EBU Time Code Readers
- ESPRIT Broadcast Color Framers
- ESPRIT State-of-the-Art Software:
 - Smartscan (Learn Mode, Slow Motion Control in EDL)
 - Frame Bump (Audio/Video Sync)
 - 10 User Definable Keys with Disk Storage & Display
 - 20 Contact closure facilities with EDL storage
 - On-Screen Help Instructional System
 - Mix Effects & Crosspoint Assignment (with Serial Switcher)
 - Edit List Memory (1400 Edit Lines)
 - Advanced List Management:
 - Backtrac
 - Edit List Clean-Up
 - Match
 - Sort
 - Find-It
 - Block Moves
 - Text Editing
 - Comment Display

- Sync Roll with EDL listing
- Auto Assembly (Sequential, checkerboard & Animation, Continuous Roll)
- Auto-Trim & Auto-Tag
- Multiple Source Effects (All Sources in EDL)
- Assignable Record
- Split Audio1/Audio2/Video Edit
- Auto Sync Point
- Variable Pre- and Post-Roll Times
- SMPTE Time Code or Control Track
- Auto Reaction Trim
- Scratch Pad
- Programmable Switcher Delayed Effects
- Automatic Color Frame Adjustment
- Enrollment for one person in ESPRIT Maintenance Class
- Installation, Basic Training & Acceptance

WJ-5600

WJ-5600 Color Special Effects Generator

- Two built-in mixing amplifiers allow three-channel mixing
- 8-channel inputs
- Three black-burst outputs
- Mixing in Fade-in, Fade-out and dissolve modes
- Switch-over in Normal, Normal-Reverse, and Reverse
- Wipe waveforms in three stages: Soft, Sharp, & Color Border
- Switchover by self-collating non-locking button during the vertical interval
- A built-in positioner circuit
- Two color generators for the Matte Key & Border Wipe, and for Downstream Keying & Background
- Color generators adjusted independently for Hue, Saturation & Luminance
- The Matte Key, has a NEGA POSI selection switch
- Downstream Keyer has a built-in edge On/Off switch
- Color matte key and RGB chroma-key are independent
- Chroma-key creates key signals in full hue, & controls key delay levels
- Downstream key signals capable of color/monochrome switch-over
- Input signals in both the VBS composite & VB non-composite modes VBS genlock is also possible
- AC or 12V DC power operation available

WJ-5600\$5750.00

WJ-5500B

WJ-5500B Deluxe Color Special Effects Generator

- Vertical interval switching of 8 program inputs, 1 auxiliary input for VTR, 1 super input, and 1 external key input (monochrome)
- Downstream mixing of up to three cameras, including super
- Nine wipe patterns with soft/sharp edges; normal, normal-reverse, and reverse wipe modes; wipe positioner
- Wipe key, internal key, external key
- Built-in EIA RS-170A sync generator (HD, VD, Sync, BL, BFP, SC and Black Burst outputs) plus genlock capability
- Genlock circuitry for non-synchronous video signal mixing
- Subcarrier phase and horizontal phase adjustments for genlock
- Color bar generator with subcarrier phase control
- Black burst (Program Output only) 3 outputs
- Can mix composite and non-composite video inputs
- Effect, preview and two program outputs
- "CUT" pushbutton transfers program and preview buses
- 2-Step illuminated, non-locking pushbuttons: light dimly when pressed to indicate selected preview inputs; light brightly when pressed to indicate selected program inputs
- Illuminated lock release buttons light up when pressed to show function selected
- Supplies intercom power to eight cameras and level adjustable
- Supplies tally light on/off switching to all ten inputs
- BNC connectors
- Audio amplifier for intercom with level control

WJ-5500B\$3950.00

WJ-4600C

WJ-4600C Color Special Effects Generator

- DC operation for EFP use
- Vertical interval switching of 6 program inputs
- Fades, dissolves, and six wipe patterns
- Super, external key (monochrome); internal key

- Built-in EIA RS-170A sync generator (HD, VD, Sync, BL, BFP, SC, and Black Burst outputs) plus genlock capability
- Genlock circuitry for non-synchronous video signal mixing
- Subcarrier phase and horizontal phase adjustments for genlock
- Black burst (PROGRAM OUTPUT only) 3 outputs
- Can mix composite and non-composite video inputs
- Effect, preview, and two program outputs
- "CUT" pushbutton transfers program and preview buses
- 2-Step illuminated, non-locking pushbuttons: light dimly when pressed to indicate selected preview inputs; light brightly when pressed to indicate selected program inputs
- Illuminated lock-release buttons light up when pressed to show function selected
- Supplies intercom power to six cameras and level adjustable
- Supplies tally light on/off switching to all eight inputs
- BNC connectors
- Audio amplifier for intercom with level control

CHARACTER GENERATOR

KBD-2

STANDARD FEATURES

- 12 pages of memory.
 - Selectable roll, crawl, flow or static display. Programmable by page.
 - Programmable order of page display.
 - Insert/Delete editing mode.
 - Any character may be programmed to flash.
 - Full cursor control.
 - Direct page for urgent messages.
 - Internal battery to save memory.
 - BNC and F connectors.
 - Automatic line centering.
 - Lockout key to prevent unauthorized use.
- * Memory is essentially "non-volatile" during power failure. Memory retention during power failure is chiefly limited to the shelf life of the internal battery which is in excess of one year.

OPTIONS

- Six programmable background colors.
- Extra pages of memory up to 56 total.
- Time, day, and date display.
- "Heading" showing fixed message and time.
- Superimpose on external VTR or video signal.
- Dual outputs for editing.
- External audio cassette storage for increased memory or power failure back-up.

PRICING

KBD-2 Keyboard Character Generator. With 12 pages of memory; each page 8 lines of 32 characters. With Indefinite Internal Battery. **\$3175.00**

OPTIONS:

"-A"	Automatic Audio Changeover. Feeds "background" audio with internally generated video background for messages—switches over to VTR audio when VTR video is used. (Only available with "-X" option).	250.00
"-C"	Provides for pre-programming each page to one of six background colors (red, green, blue, orange, neutral). Message characters appear in white or black.	430.00
"-D"	Dual output for editing. Provides output signals on two connectors—one, for local "edit" use shows editing data during set-up. The main output shows a test bar pattern during editing.	230.00
"-F"	Spanish Font. Special keytops with accents.	450.00
"-H"	"Heading" option. Shows fixed message plus time, day and date above normal display.	550.00
"-H ₂ "	Two Line Heading without time, day and date.	260.00
"-P"	Permits Pre-programming Order of page display by time and day.	820.00
"-S"	External audio cassette recorder storage to provide extended memory capability.	845.00
"-T"	Provides for addition of one page to show time, day and date. This page may be inserted in the display sequence to show time between pages.	365.00
"-X"	Superimposes an external video (VTR) signal with auto changeover to internal sync generator if external signal fails or is turned off. (Specify -X1 to superimpose characters on external video; -X2 to blank characters when external video is used; -X3 will blank heading [-H option] only when video is used).	375.00
"-X ₁ / -X ₂ "	Switches between X ₁ and X ₂ options. (Requires -X option.)	25.00
"-24"	Added storage options. Increase display storage capability to 24	370.00
"-56"	or 56 pages.	1280.00

NOTE: Any number of options may be added to the basic KBD-2.

MESSAGE GENERATOR

KBD-2000

Keyboard Message Generator

- Up to 50 message pages
- Fixed two-line heading with time and date display
- Six color backgrounds
- Can be pre-programmed for the entire week with each day completely independent
- U.L. listed

A new approach to a total TV display system for hotels, hospitals, apartment complexes — any place where MATV or other distribution systems are required to display information, advertising or video programming.

The microprocessor controlled keyboard contains timing pages for each day of the week and the schedules for each day can be displayed on an edit monitor so that it is very simple to revise a schedule. Program outputs can be fed to dedicated monitors at strategic locations: lobby, restaurant, convention center, etc., and then routed to an MATV system for distribution to guest or patient rooms.

The KBD-2000 when combined with the new VCU-4 video control unit, can control four pre-loaded video tape players. Movies or educational videotapes may be scheduled to be shown at various times throughout the day or week and will pre-empt any messages. At the end of the program, the system will automatically resume message display and the tape player will rewind. The system gives the user complete control over what is to be displayed between videotape programs and the time at which those programs are to be turned on, 24 hours a day. VCU-4s can be stacked for increased program capability and/or multiple channel operation.

KBD-2000/VCU-4

TYPICAL INSTALLATIONS

Block diagram A outlines the most commonly used configuration—a PORTAC KBD 2000 50-page message generator provides text information and control commands to a VCU-4 video control unit which controls the start-stop-rewind functions of four (4) videotape players by day and by time on a 7-day pre-programmable basis for output to a video or RF distribution system. In this example, an FM tuner provides background music during text display. When a VTR is switched on the video program will pre-empt the message and the background music, both of which will resume at the end of video: i.e. at the end of the program or, alternatively, should tape or machine failure occur.

Block diagram B outlines a system where automated control of more than four (4) VTRs is desired for increased program capacity. Up to six VCU-4 video control units can be stacked in this manner to control up to twenty-four (24) video tape players. As in the case of the example in diagram A, messages are pre-empted by video and resume at loss of video.

Q8 QUANTAFONT®

Q8 Quantafont is a broadcast teleproduction graphics and titling system, microprocessor driven, incorporating high technology circuitry and the simplicity of real time operation. Employing the highest quality components and user-oriented design considerations, Q8 provides a complete complement of video typography, graphics display, character generator effects and animation, text handling and composition functions.

Font-Flex™ Instant Sizing. Perhaps the most significant composition feature offered, Quantafont exclusive instant sizing allows for increasing or decreasing character height instantly from the keyboard. The operator can literally "create" fonts by merely selecting "height", then depressing either "up" (arrow) or "down" (arrow) until the desired font size is achieved. Sizing by row or page operates as a repeat-key function in single scan-line increments while keeping the original proportions of all characters on the row intact as well as maintaining individual character aspect ratio.

Extend/Condense. In addition to instant sizing which applies to character height, Q8 also provides the ability to extend or condense character width by row or page in horizontal increments. This function is easily accomplished by selecting either "row" or "page", then "cursor right" (extend) or "cursor left" (condense). The extended or condensed type face may be instantly returned to "normal" width.

SPECIFICATIONS

Performance:

Base

Resolution: 26 nsec.

Resident Faces: All faces at 54 vertical sizes each (from 10 to 64 lines high), plus instant condense/extend and right/left italics for all faces.

Face Selection: By character, characters are proportional.

Size Selection: By row.

Maximum

Character/Logo Height: Single character/logo, 96 lines; multiple character/logo, 384 lines.

Character Colors: 16 million colors; interactive color mix; menu of 16 colors definable per page, selectable by character.

Background Selection: 16 million colors available, select by row from a menu of any 16 for each page; external video; or row-by-row split of internal color and external video.

Edging Styles: Fine border, bold border, selectable by character; 4-quadrant drop shadow selectable by row.

Edge Color: 16 million colors, selectable by row.

Page Size: 24 rows (max.) x 64 characters per row (max.)

Pages Per Disk: 400

Roll Message

Length: Full disk.

Crawl Message

Length: 4000 characters.

Roll/Crawl

Speeds: 9 plus stop. Roll to stop function provided.

Roll/Crawl Display Area: Blanking-to-blanking. Crawl displays can include static text area.

Page Access: Random or sequential.

Character Flash: By character. Flash speeds: frame rate selectable (1 to 256 system wide).

Special Display Elements: Graphic separators, Graphic blocks, geometrics, underline, accents.

Clock Displays: Real time clock (hours; minutes; seconds), or count up/down event timer (hours; minutes; seconds).

Tab Positions: 4 per page. Tab positions are stored with page on disk.

Editing Functions: Insert row or character; delete row or page; justify row or page left or right; move character left or right (including character tuck); erase row or page; move text to lower third position.

Optional Type-Face Library: 20 face diskette.

Electrical:

Color Standards: NTSC/RGB, or PAL/RGB

System Integration: Internal RS170A sync generator with genlock provides keyboard selection between upstream or downstream matte (with cut/dissolve)

Maximum Number Of Keyboards: 5, for single or dual channel system.

Inputs: Blackburst (to genlock circuit), 1.0 Vp-p @ 75 ohms, looping. External background video, 1.0 Vp-p @ 75 ohms.

Outputs: 2, Program (internal downstream keyer output), 1.0 Vp-p composite video @ 75 ohms. 1, Edit, 1.0 Vp-p composite video @ 75 ohms. 1, Upstream Key (character plus edge size, for use as switcher key input), 1.0 Vp-p monochrome composite video @ 75 ohms. 1, Downstream Key (similar to Upstream Key, except for use with dual channel systems). 2, CG (characters plus internal color background for use as switcher input), 1.0 Vp-p composite video @ 75 ohms. RGB (non-composite, 0.7 V) and sync (4.0 Vp-p) outputs included on all units.

Data I/O Port: RS-232

Disk Unit: Two, double-density, 8" flexible disk drives.

Power: 110 VAC, 60Hz, or 220 VAC, 50Hz (nominal); 130 watts.

Mechanical:

Dimensions: Keyboard: 3-3/4"H x 21-3/8"W x 10-1/2"D (95 x 540 x 265mm)
Chassis: 7"H (4 rack units) x 19"W x 17"D (180 x 480 x 430mm)
Disk unit: 7"H (4 rack units) x 19"W x 17"D (180 x 480 x 430mm)

Note: as supplied, chassis with disk units are suitable for rack mount or tabletop installation.

MG-200

MICROGEN™ MG-200

Microgen™ MG-200 is the new addition to the Microgen product line, incorporating Quanta's exclusive instant sizing plus built-in 3-1/2" disk drives providing 400 pages of memory per disk. The MG-200 assures the same reliability, high technology circuit design and easy, real-time composition and editing common to all Quanta products.

SPECIFICATIONS

Performance:

Horizontal

Resolution: 55 nsec. at 24 characters per row.

Character Sets: 1 face style standard, small and large caps, 8 sizes from 40 characters per row to 12 characters per row, sizes selectable by row. Vertical sizes from 48 to 16 scan lines high. Second face style optional.

Character Edge: Full surround border, black or white with on/off control.

Color: 256 colors for colorizing characters by row and colorizing backgrounds by row (available simultaneously); maximum 28 colors per page.

Editing Functions: Cursor up, down, right, left, home; line feed; return; key repeat; erase row, page; center row, page; justify row or page — right or left; move up, down; insert/delete character, word, row; variable size graphic separators; variable size graphic blocks; scan line pair adjustment of top leading, bottom leading or both (row tuck); caps lock; 8 columnar tab settings per page; color palette selection of RGB colors.

Memory: Single 3-1/2" disk, 400 pages; Dual 3-1/2" disk, 800 pages. Maximum 40 characters per row, 13 rows per page.

Battery: System has NiCad battery backup.

Display Functions: Flash by character, recall page by number, recall next page, prior page; matte characters in/out of Program output row by row or page; sequential or random page sequencing; real time clock displayable any size, color or location on the page.

Dynamic Functions: Automatic or real-time sequencing of any combination of pages; dwell time, 0.25-99 sec., selectable by page; roll, 260 rows max.; crawl, 260 rows max., position on any row, any size/color and mix with static text as required; roll/crawl at 9 speeds plus pause; all dynamic displays can be displayed one time or continuously.

Electrical:

Inputs: 1 external video in, looping.

Outputs: 2 Program; 1 Edit; 1 Key.

Power: Voltage, 105-135 or 210-270 AC (PC program card selectable); frequency, 48-70Hz; 45 watts.

Data I/O Port: RS-232 (optional).

Mechanical:

Dimensions: 17-1/2"W x 4-5/8"H x 17-1/2"D

Environmental:

Ambient

Temperature: 40 — 120°F (4 — 50°C)

QUANTAFONT® QCG-300 TELEPRODUCTION TITLING GENERATOR

FEATURES

- Instant sizing—8 to 64 scan line heights plus incremental extend/condense for both resident face styles—keyboard accessed
- 512 colors—easy RGB palette selection of background & character colors
- True proportional spacing—upper and lower case, two faces
- Edge selection—full surround border, 8 colors row selectable per page
- Easy edit—real time composition and editing capability—Quanta's exclusive text editing package
- Roll—260 rows, 9 speeds plus pause, edit in roll compose, roll to fixed title
- Crawl—260 rows, 9 speeds plus pause, edit in crawl compose
- Automatic page sequencing—random or sequential, date/time generator for real time sequences—dwell time selectable 1/4 to 99 seconds per page
- Manual page sequencing—random or sequential, forward or reverse, 0 second dwell time
- Built-in 3-1/2" Disk Drive—400 pages—second drive optional
- Built-in full terminal complement—sync/genlock RS170, NTSC or PAL-1 Encoder full studio timing
- Graphic blocks/graphic separators—variable size and color
- Real time clock and date generator
- Full battery back-up
- RS-232 Data I/O Port—optional

The Quantafont® QCG-300 is a real time professional teleproduction titling system for use in broadcast or non-broadcast applications.

Fully self-contained, the QCG-300 provides for either stand-alone operation or may be integrated into a full television production studio. The proportionally spaced type face styles provide over 40 resident fonts per face style instantly on-line with Quanta's exclusive instant sizing. Ease of operation, real time functions and Quantafont® dependability make the QCG-300 a versatile, multi-feature low-cost character generator.

SPECIFICATIONS

PERFORMANCE

Horizontal Resolution:	55 nanoseconds at 24 characters per row*
Resident Type Faces:	2 face styles standard—Quarnberg 300 (sans serif) and Journal Bold (serif), both faces proportionally spaced with upper and lower case. 40 sizes per face with 8 to 64 scan line heights plus widths of normal, condensed and extended
Color:	512 colors for coloring characters by row or page and backgrounds by row or page. Maximum 34 colors per page (13 each characters and backgrounds, 8 each edges—available simultaneously)
Character Edge:	Full surround border, 8 colors per page selected by row. See-through characters through edge selection / background selection
Editing Functions:	Cursor up, down, right, left, home; line feed; return; key repeat; erase row, page; center row, page; justify row or page—right or left; move up, down; insert / delete character, word, row; variable size graphic separators; variable size graphic blocks; scan line pair adjustment of top or bottom leading, or both (row tuck); caps lock; 4 columnar tab settings per page; color palette selection of RGB colors
Memory:	Single 3-1/2" disk; 400 pages (maximum 40 characters per row, 13 rows per page). Second disk available (optional)

Display Functions:

Flash by character; recall page by number; recall next page, prior page; matte characters in/out of Program output; sequential or random page sequencing; real time clock and date generator displayable any size, color or location on page

Dynamic Functions:

Automatic or real time sequencing of any combination of pages; dwell time, 1/4-99 sec., selectable by page. Roll 260 rows max; crawl 260 rows max; position on any row, any size/color and mix with static text as required. Roll/crawl at 9 speeds plus stop with programmed speed changes imbedded in message or manual keyboard adjustment. All dynamic displays may be one time or continuous

ELECTRICAL

Battery Back-Up: System has NiCad battery for RAM and real-time clock. Automatic program restoration including dynamic displays after power failure

Video Standards:

Built-in RS170 Sync Generator with Genlock. Built-in NTSC or PAL-1 encoder. Subcarrier phase and horizontal phase adjustment accessible from rear panel. Upstream or downstream operation. Chromalock plus regeneration of sync for proper genlock to non-time base corrected signals

Inputs:

Outputs:

1 composite video in, looping
2 Program, 1 V P-P composite at 75 ohms
1 Edit, 1 V P-P compcsite at 75 ohms
1 Key, 1 V P-P composite monochrome at 75 ohms
RS-232 (optional)

Data I/O Ports:

QUANTAFONT® QCG-400 TELEPRODUCTION GRAPHICS AND TITLING GENERATOR

FEATURES

- 7 resident type faces — 56 fonts on-line
- 30 topical graphics display symbols
- Instant sizing — true proportional spacing
- 128 colors — each page is palette assignable
- Built-in 3-1/2" high density disk drive (400 pages) — second drive optional
- Built-in full terminal complement—sync/genlock and NTSC or PAL-I encoder—full studio timing adjustments standard
- 224-row RAM with battery back-up — dynamic displays and automatic sequencing
- Patented NANOLOG™ character smooth & fill refinement—high resolution average rise times
- LED front-panel operator prompting
- RS-232 data I/O port option

The Quantafont® QCG-400 Teleproduction Graphics & Titling Generator is designed for real-time, easy operation in a wide variety of titling applications.

Incorporating the Easy Edit and quick, versatile composition features which have made Quanta the preferred standard of mid-range character generators world-wide, the QCG-400 is a modern, low-profile, ultra-portable self-contained unit.

SPECIFICATIONS:

Performance:

Effective Start Point Resolution	20 nsec with patented Nanolog™ character refinement
Resident Faces	7 faces at 6 vertical sizes each (from 8 to 64 lines high) <i>Face #1</i> Helvetica Medium, proportional upper and lower case <i>Face #2</i> Bolt Bold, caps non-proportional, lower case proportional <i>Face #3</i> Serifa, proportional upper and lower case <i>Face #4</i> Cooper Black, proportional upper and lower case <i>Face #5</i> Helvetica Medium Italic, proportional upper and lower case <i>Face #6</i> Grotisque 9, proportional upper and lower case <i>Face #7</i> Upper Case: 30 selected symbols Lower Case: Helvetica Bold, caps, proportional
Graphic Symbols	Weather, sports, transportation, medical, communications, miscellaneous
Face Selection	By character, maximum of two faces can be mixed on a row. All 7 faces may be used on a page
Character Color	Select any of 16 pre-defined palettes of 8 colors each. Palette is stored with page. Character color by word
Background Selection	Select either of 2 pre-defined palettes of 8 colors each or external video. Palette is stored with page. Background color by row
Edge Styles	Selectable by row: Fine border, bold border, 4-quadrant drop shadow positionable
Edge Luminance	Eight levels black to white, stored with page
Page Size	16 rows (max.) 32 characters on a row available with Grotisque 9
System Parameters	Stored within a block: tabs, memory protect, roll/crawl pointers and speeds, shadow quadrants, status line size, user-defined center of screen, last selected face description, flash speed
Roll Message Length	224 rows
Crawl Message Length	6,110 characters
Roll Speed	9 plus pause (start and re-start). Programmable roll to stop function provided
Crawl Speed	4 plus pause (start and re-start)
Roll/Crawl Display Areas	Blanking to blanking. Crawl displays can include static text area
Character Flash	By word. Flash speeds: 2
Special Display Elements	Graphic separators, graphic blocks, underline accents, special symbols (optional on international language versions)
Clock Displays	Real time clock (hours, minutes) or event timer (minutes, seconds)
Tab Positions	8 Columnar tabs with vertical tabbing

Editing Functions

Insert row or character; delete row or character; center row or page; justify row or page left or right; row move left or right; reduce top leading; reduce intercharacter spacing (selected characters); erase row or page; capture character attributes; Get, Save or Exchange row or page. Applicable editing functions operate right of the cursor on a row or from the cursor to end of page

Resident Memory

224 Rows (RAM) with battery back-up for non-volatile retention. Battery will last in excess of 24 hours

Automatic Sequencing

Full 14-page resident memory

Disk Memory

400 pages plus 2 blocks per disk

Page Access

Random or sequential

Disk Access Time

Page: average .4 sec: max. 1.2 sec.
Block: average .6 sec: max. 1.5 sec.

QUANTAFONT[®] QCG-500 PROFESSIONAL TELEPRODUCTION GRAPHICS AND TITLING SYSTEM

FEATURES

- High resolution — 29 nanoseconds
- Font Flex™ instant sizing, instant extend/condense, instant left/right italics
- 512 color palette
- Fine, bold or 4-Quadrant Positionable Drop Shadow
- Easy Edit
- Auto-Sequencing
- Built-In sync/genlock

The Quantafont[®] QCG-500 is a fully disk loadable, broadcast quality character generator and graphics system designed for cost effective teleproduction titling and text efficiency.

A powerful software intensive system, the QCG-500 offers real time speed and convenience. No slow, time consuming menu selections are required—all functions are immediately accessible from the keyboard and happen as the operator commands them.

A low profile remote keyboard accesses the rackmounted electronics with built-in 3-1/2" disk. The entire electronics chassis requires only 7" of vertical rack space. Big system features provide a degree of professional flexibility never before attainable in the QCG-500 price range. Disk compatibility with the Quantafont[®] Q8 Teleproduction Graphics System also makes the QCG-500 an ideal remote unit or addition to an existing Q8 graphics production facility.

Graphics enhancement accessories provide for a full paint system and digital effects, all conveniently controlled from the QCG-500 tri-level keyboard permitting interaction between text, paint or effects operations.

SPECIFICATIONS

Disk Loadable:	Program, faces, pages
Rack Mount:	Chassis includes electronics, single drive, power supply
Number of Keyboards:	One standard
Disk:	Single 3-1/2" double density, double sided; second drive optional
Pages per Disk:	600 max
Power Requirements:	150 watt power supply; 110/220 VAC switchable
Stand-Alone Operation:	Yes
Encoder:	Built-in, NTSC RS-170 or PAL
Genlock/Colorlock:	Built-in, horizontal and subcarrier phase adjustments
Phasing:	External, 360° subcarrier, horizontal drive - 1.5 usec.

System Integration:	Keyboard selectable upstream/downstream, or jumper selectable
Edit Output:	One, 1.0 V P-P composite at 75 ohms
Program Output:	Two, 1.0 V P-P composite at 75 ohms
Key Output:	One, character + edge or full page, 1.0 V P-P composite at 75 ohms
Sync Output:	4.0 V P-P composite
External Video Input:	One, looping
Options:	2nd 3-1/2" disk drive
Electronic Video Paint:	Yes, addressed by QCG-500 keyboard
Digital Video Effects:	Yes, addressed by QCG-500 keyboard
Camera Capture Digitizer:	Yes, addressed by QCG-500 keyboard

QUANTAPAIN™ ELECTRONIC VIDEO PAINT SYSTEMS

FEATURES

- 11 basic automatic drawing functions with individual enhancements
- 9 dynamic painting functions
- 12 illustration aids to make creating graphics fast and easy
- Anti-alias and improve overall or selected display quality
- Display/Illustration enhancements for creating superior graphics

Quanta's Electronic Video Paint systems provide the television graphics artist with multiple, full-function drawing, painting and illustration tools in an easy-to-use, high quality and compact configuration.

The system incorporates a powerful microcomputer with 3-1/2" floppy disk drive and may include a 53-megabyte fixed disk, a graphics tablet with push-button stylus, control keyboard and CRT (computer) monitor. An EVP system is a natural accessory to the Quantafont® Q8 Broadcast Teleproduction Graphics and Titling System, or the new Quantafont® QCG-500 Teleproduction Graphics and Titling System, or may be incorporated into studio facilities for providing backgrounds, enhanced digitized images, outstanding graphics with or without character generator text.

All painting, drawing and effects commands are accomplished from the graphics tablet so the artist rarely needs to refer to external equipment once a paint project is begun.

Execution of all commands is fast and simple by means of "touching" the appropriate area of the menu on the graphics tablet with the tip of the stylus. The menu may be displayed anywhere on the screen and may be turned on or off as desired by the operator. A total palette of 16.7 million colors may be called upon to create individual page palettes of 256 colors each. Color spreads, washes, chromes, neons and other dynamic color displays including color table animations, may be created for use in any portion of the illustration.

EVP-500	Paint System for Operation with QCG-500 Character Generator, Including: Microcomputer and Graphics Card Paint I Software (License Required) Single 3-1/2" Disk Drive Built-In EVP-500 System (requires operation with QCG-500)	\$14,950.00
EVP-505	Stand-Alone Paint System, Includes Microcomputer, Paint I Software (License Required), CRT Computer Monitor, Keyboard, Graphics Tablet & Stylus, Sync/Genlock/Encoder, Single 3-1/2" Disk Drive ...	\$16,805.00
EVP-550	Paint System as above but with 53-Megabyte Fixed Disk, Second 3-1/2" High-Density Disk Drive Built-In and Digitizer (Camera Capture) 256 Levels	24,995.00
EVP-800	Paint System for Operation with QCG-500 Character Generator, Including: Microcomputer and Graphics Card Paint II Software (License Required) Single 3-1/2" High-Density Disk Drive Built-In EVP-800 System (requires operation with QCG-500 Character Generator)	24,950.00

EVP-805	Stand-Alone Paint System, Includes Microcomputer, Paint II Software (License Required), CRT Computer Monitor, Keyboard, Graphics Tablet & Stylus, Sync/Genlock/Encoder, Single 3-1/2" High-Density Disk Drive and 53-Megabyte Fixed Disk Built-In	30,800.00
EVP-850	Paint System as above but with Second 3-1/2" High-Density Disk Drive Built-In and Digitizer (Camera Capture) 256 Levels	34,995.00

OPTIONS

Computer Monitor	300.00
Keyboard	395.00
3-1/2" Disk Drive	700.00
53-Megabyte Fixed Disk	3,995.00
Digitizer (Camera Capture) 256 Levels	3,495.00
Graphics Tablet & Stylus	850.00
Sync/Genlock/Encoder	310.00

RVS-210 Video Production Switcher

With a combination of production power, built-in memory, serial interface and Ross reliability, the 210 is the best small switcher value you'll find.

Three independent auto transition units, three color generators, complete memory facility and the Ross Multi-Level Effects system means that you can create complex production effects, and get into and out of them without batting an eye. And the RVS-210 is available with the Ross analog key border generator for high quality title keys.

Combine all this with serial interface, the Ross analog key border generator and a powerful pattern generator with mask and positioner and you have the kind of production power that usually costs several times the price.

The RVS-210 can be mounted on a desk, in a console or in a standard rack-frame. The electronics package needs just 8 inches of rack space.

STANDARD FEATURES

MULTI-LEVEL EFFECTS SYSTEM:

- Three bus Multi-Level Effects (MLE) system permits manipulation of foregrounds without ever locking up the switcher
- Transition preview system enables you to see every effect or wipe before you take it, even with the switcher on the air
- Program/Preset buses permit simple flip/flop operation using the Cut button. Transition controls include cut button, wipe or dissolve using fader handle or one of the three auto transition units, programmable from 0 to 999 frames
- Key bus permits source selection for chroma keys, video keys, and matte keys
- MLE keyer features video or matte fill, external or split screen key, optional RGB chroma key, key invert, key mask using pattern generator
- Twelve wipe patterns with modifiers: hard or soft edges, hard or soft bordered edges, pattern aspect ratio, pattern reverse, rate-controlled pattern positioner
- Three independent matte generators for wipe borders, title borders and backgrounds
- Non-sync inhibit detects non-synchronous sources and prohibits a wipe or dissolve and substitutes a cut at the end of the transition. Non sync LEDs indicate selection of a non-synchronous source

DOWNSTREAM KEYS:

Key input from key bus, an external source or a character generator; Key fill from external video, character generator or the independent DSK matte generator; Digital key border generator for black or white titles with all-round or drop shadow borders or matte filled outline; Key invert; Key mask using pattern positioner; Cut or dissolve titles in or out manually or with independent frame rate auto transition; Downstream keyer transition can be tied to the effects system.

BUILT-IN MEMORY:

Storage and recall of twelve complete switcher set-ups including key levels, patterns, matte levels, transition information, etc.; In normal operation the MLE keyer and Downstream keyer "remember" key and softness levels, fill source, borders, etc. for each key source; Auto transition unit, matte/background generator, pattern positioner can store and recall current settings.

MASTER FADE-TO-BLACK:

Independent frame rate auto transition for fade-to-black; Preview system shows next program output after fade-to-black is completed.

EDITOR INTERFACE:

Standard general purpose interface to each of the three auto transitions or a fourth line which permits selection of any one of the three.

OPTIONS:

Analog Key Border Generator — produces a smooth and quiet border without any tendency to jaggedness or break-up even on small characters or slightly inclined edges. Permits colorizing in the outline mode and reduces chroma crawl on colorized characters. Also offers drop shadow borders on self keys; RGB chroma key — single RGB keyer, available as a plug-in circuit board ensuring simple field installation; Serial Interface — serial port using RS 422 computer interface for external computer control; Rack mount adaptor permits installation in a standard 19 inch rack frame; Console mounting frame permits customized installation in desk top.

SPECIFICATIONS:

Control panel measures 14" (35.5 cm) x 17" (43 cm) x 7" (17.75 cm) deep. Can be mounted on desk or in rack space using optional adaptors. Rack mounting requires 3 rack units and 22.25" (57cm) depth; Available in NTSC, PAL or PAL-M standards.

RVS-210 10 input production switcher, equipped with choice of 2 meter or 10 meter control cable **\$9850.00**

OPTIONS:

Spare components kit	\$ 100.00
30 meter cable	150.00
Extender board set	325.00
Extra manual	100.00
Rack mount adaptor for control panel	100.00
In-desk adaptor for control panel	150.00
RGB chroma keyer	750.00
Analog key border generator	2500.00
Twelve event memory system	900.00
Serial interface adaptor	850.00

PRODUCTION SWITCHERS

RVS 524

Designed for any small studio, editing suite or mobile van, the 524 has a lot more production power than you would expect from a switcher this compact.

The Ross MLE system makes it possible to manipulate up to four video signals with just one fader handle. It permits changing the background picture either separately or in combination with the foreground and title sources...or dissolving or wiping behind a chroma key...all without locking up the switcher.

Most simple transitions are made between the PGM bus and the PST bus, using the familiar flip/flop mode or operation. The PGM bus is always the on-air bus. When the PST source is transferred to the on-air bus at the end of a transition, the former PGM source is automatically transferred to the PST bus.

The foreground source is selected on the F bus and the processing mode is selected in the foreground group of MLE controls. Mode selections include RGB and encoded chroma key, split screen, PST key and matte key.

The MLE title keyer is a complete Downstream Keyer with a 4 input source selector...the 5th bus of the switcher.

ROSS MLE Patented Transition Preview System

Ross Video was the first to introduce this unique operating feature. Now, complicated transitions that include up to four sources can be previewed and adjusted with the effects amplifier on-air...for example, the transition effect of a bordered wipe with color and softness, or a wipe limit can be previewed exactly as it will occur.

When Transition P/V is selected, the P/V monitor automatically shows the current on-air scene. After previewing the transition effect, switching off Transition P/V automatically returns the monitor to the next scene...regardless at which limit the fader is set.

Fade-To-Black

A master fade-to-black is provided from all synchronous sources by pre-setting the Fade button in the transition group and moving the fader handle.

Pattern Selector

A variety of patterns and effects can be created with the 18 basic patterns (Inner Pattern Group), Pattern Modulator, Horizontal and Vertical Multipliers, Joystick positioner and optional Rotary and Spin wipes.

The rotary selector has direct access to 18 patterns. Each can have colored and soft edge borders. A push-pull switch on the aspect ratio control knob is used to round the corners on the box wipe patterns.

- Rotary Wipes: Nine standard rotary wipe patterns are available with colored and soft borders
- Spin: A full excursion of the Fader spins some patterns 360 degrees and simultaneously reduces their size until they vanish.
- Spin Preset: the angular position of a pattern is set manually
- Horizontal and Vertical Multipliers: These multiply the pattern a number of times horizontally or vertically, or both
- Joystick: Can change the pattern multiplier factor or effectively zoom in on the pattern in the top left corner

Dimensions:

One rack frame only 7 inches high (4 RU's) houses all electronics and optional equipment, plus two aux buses. An additional frame is required to accommodate six more aux buses.

The switcher panel width is 22 inches (12 inputs) or 28 inches (20 inputs) and 16.65 inches deep.

RVS 524 Series Switchers

- Model 524B-12** Video Production Switcher, 12 Inputs .. \$23,483.00
Model 524B-20 Video Production Switcher, 20 Inputs ... \$25,417.00
 Extra control cable for basic switcher, per ft ... 8.40

Options:

- Rotary and Spin Wipe Patterns \$2,012.00
- Encoded Chroma Keyer 2,379.00
- Ultra Key RGB Chroma Keyer 3,780.00
- RGB Follow Switcher for 4 cameras and 1 Ultra Key 1,652.00
- Single RGB Chroma Keyer 770.00
- 2 RGB Chroma Keyers with Follow Switcher 1,652.00
- Video Output Sync and Burst Processor 1,273.00
- Digital Key Border Generator on Title Keyer 661.00
- Clamped Character Generator Video Input to Title Keyer 340.00
- Auto Transitions 1,230.00
- Digital Effects Interface for Quantel DPE5000/5001 1,458.00
- Digital Effects Interface for NEC 1,458.00
- Digital Effects Interface for Vital Squeezezoom 1,458.00

Videotape Editor Options:

- Editor Interface for CMX-340 \$1,458.00
- Editor Interface for Edge 1,458.00
- Editor Interface for Datatron ST5 1,458.00
- Editor Interface for Vanguard 1,458.00
- Editor Interface for Fernseh Mach-1 1,458.00
- Editor Interface for United Media Commander 1,458.00
- Editor Interface for Sony BVE-3000 1,900.00
- Editor Interface for Sony BVE-5000 1,900.00
- Editor Interface for Video Media Z6000 1,900.00
- Editor Interface for Video Media Z6000 1,900.00
- Editor Interface for CVC Lightfinger 1,900.00

PRODUCTION SWITCHERS

RVS 514-Series Video Production Switchers

The new RVS-514 is designed for any small studio, edit suite or van. And the RVS-514 has a lot more power than you would expect from a switcher this compact with a wide range of options to match almost any production requirement. The operational convenience of the PGM PST style of switcher takes on a new dimension with the added power of a fully integrated MLE system. And it is easy to operate. Complex multilevel effects are immediately accessible via wipe, dissolve or cut transitions.

Fast moving shows can be handled with confidence because: You always see the next event on the preview monitor as you compose it. Logical controls allow any effect to be achieved easily. For example: Preset a title by the push of a single button, and move the fader to wipe it On-Air. All this has been made possible with the Ross patented Transition Preview System.

How The MLE Works

Most simple transitions are made between the PGM bus and the PST bus. The PGM bus is always the On-Air bus. When the PST source is transferred to the On-Air bus at the end of a transition, the PGM source is automatically transferred to the PST bus.

The Foreground source is selected on the F bus and the processing mode is selected in the Foreground group of MLE controls. Mode selections include RGB and Encoded Chroma Keys, Non-Additive Mix, Split Screen, Spotlight, PST Key and Matt Key.

The MLE Title Keyer is a complete Downstream Keyer with a 4 input source selector...the 5th bus of the switcher.
