23641 Ridge Route Dr. • Laguna Hills, CA 92653 • (714) 859-6016

SERIES 100 VERTICAL RACK SYSTEM

SERIES 100 Vertical Rack System

The Series 100 Vertical Rack System is designed to house 19" rack mounted equipment up to 24" in depth. Rack openings are 19-3/16" with 17-25/32" clearance between rails to handle slightly oversized equipment which does not adhere to the EIA RS-310-C rack standard. All rack rails are manufactured from heavy duty 10 gauge steel and are fully drilled and tapped for 10-32 screws eliminating the need for captive nuts and clips. Decorative black rack screws and protective washers are also available.

The Series 100 is based on our rugged 16 gauge tubular steel framework covered in a tough polyester resin-based substrate and finished in durable plastic laminate. All front and rear edges are trimmed in solid hand-selected oiled oak or walnut giving the look and feel of fine hand-crafted furniture with a contemporary styling.

Removable rear doors with top and bottom black anodized ventila-

tion screens are optionally available. Rear rack rails are also available for cabinets that will house large pieces of equipment which require rear support or rack slides. These rack rails are the same high-quality black anodized tapped steel rails that are used in the standard rack cabinets. The addition of rear rack rails also includes our adjustable mounting system so the depth of the rear rails can be easily changed.

Optional flat or sloped counter assembly may be added to these rack systems at the time of order. Counter is covered in matching plastic laminate with solid oak or walnut trim and has 14" of rack space per bay. The flat counter consumes 2 rack spaces in vertical height while the sloped counter requires 4 rack spaces. The standard knee clearance for either countertop is 25-9/16". 24-1/2" of rack space is available below the counter of each bay. Counters must be installed at the factory and can be retrofitted to existing vertical racks at an additional charge.

Consult factory for details regarding special configurations, pricing and delivery.

SERIES 500 PRODUCTION CONSOLE SYSTEM

SERIES 500 Production Console System

The Series 500 Production Console Systems are ergonomically designed for user comfort and are suitable for most editing and production requirements. Flat console countertop is 19-1/2" deep and 28-3/16" above the floor for comfortable desk height seating. The Series 500 features 14" of rack space (8 rack units) per bay above countertop and can house equipment up to 24" deep. Rack openings are 19-3/16" with 17-25/32" clearance between rails to handle slightly oversized equipment which does not adhere to the EIA RS-310-C rack standard. All rack rails are manufactured from heavy duty 10 gauge steel and are fully drilled and tapped for 10-32 screws eliminating the need for captive nuts and clips. Decorative black rack screws and protective washers are also available.

The Series 500 is based on our rugged 16 gauge tubular steel framework covered in a tough polyester resin-based substrate and finished

in durable hand-selected oiled oak or walnut giving the look and feel of fine hand-crafted furniture with a contemporary styling.

Removable rear doors with top and bottom black anodized ventilation screens are optionally available. Rear rack rails are standard for consoles that will house large pieces of equipment which require rear support or rack slides. These rack rails are the same high-quality black anodized tapped steel rails that are used for front mounted equipment. The rear rack rails also feature our adjustable mounting system so the depth of the rear rails can be easily changed.

Up to 24-1/2" of rack space (14 rack units) is optionally available below countertop to house switcher power supplies, etc. Adjustable rear rack rails are optional for rack space below countertop.

Custom consoles can be manufactured to almost any desired size and configuration. Consult factory for details regarding special configurations, pricing and delivery.

SERIES 1000 PORTABLE VCR HOUSING SYSTEM

SERIES 1000 Portable VCR Housing System

The Series 1000 Portable VCR Housing System meets the need for 1/2" and 3/4" VCR editing systems by providing space efficient, aesthetically pleasing mobile cabinetry. The Series 1000 is available in two configurations. The Type A housing system was designed for front loading rack mounted 3/4" VCRs up to 24" deep while the Type B system is oriented to house top loading 1/2" and 3/4" VCRs in a configuration that facilitates easy access during editing sessions. Front surface is sloped back to allow viewing VCR controls and to change cassettes. Each Type B VCR tray is 28" wide by 18" deep and is mounted on velvet-glide slides rated at 100 pounds per tray. The Series 1000 comes complete with four heavy duty casters for mobility and rear cabling access.

Rack openings for the Type A System are 19-3/16" with 17-25/32" clearance between rails to handle slightly oversized equipment which does not adhere to the EIA RS-310-C rack standard. All rack rails are

manufactured from heavy duty 10 gauge steel and are fully drilled and tapped for 10-32 screws eliminating the need for captive nuts and clips. Decorative black rack screws and protective washers are also available.

The Series 1000 is based on our rugged 16 gauge tubular steel framework covered in a tough polyester resin-based substrate and finished in durable plastic laminate. All front and rear edges are trimmed in solid hand selected oiled oak or walnut, giving the look and feel of fine hand-crafted furniture with a contemporary styling.

Removable rear door with black anodized ventilation screen is optionally available. The Type A system also features rear rack rails to secure rack slides common to most rack mounted VCRs. Rear rails also include our adjustable mounting system so the depth of the rails can be easily changed.

Consult factory for details regarding special configurations, pricing and delivery.

SERIES 1100 VERTICAL DUPLICATION SYSTEM

SERIES 1100 Vertical Duplication System

The Series 1100 Vertical Duplication System fulfills the need for space efficient aesthetically pleasing duplication racks. The Series 1100 features sliding trays 19" wide and 16" deep, mounted on 14" velvet-glide slides rated to carry 100 pounds per tray. The standard vertical spacing between trays is 10-1/2 inches.

Standard 19" rack space is optionally available to house time base correctors, monitors, etc. in the same duplication rack. Rear rack rails are also available for rack-furnished systems that will house large pieces of equipment which require rear support or rack slides. The addition of rear rack rails also includes our adjustable mounting system so the depth of the rear rails can be easily changed. Rack openings are 19-3/16" with 17-25/32" clearance between rails to

handle slightly oversized equipment which does not adhere to the EIA RS-310-C rack standard. All rack rails are manufactured from heavy duty 10 gauge steel and are fully drilled and tapped for 10-32 screws eliminating the need for captive nuts and clips. Decorative black rack screws and protective washers are also available.

The Series 1100 is based on our rugged 16 gauge tubular steel framework covered in a tough polyester resin-based substrate and finished in durable plastic laminate. All front and rear edges are trimmed in solid hand-selected oiled oak or walnut giving the look and feel of fine hand-crafted furniture with a contemporary styling.

Optional removable rear doors with top and bottom black anodized ventilation screens are also available.

SERIES 1200 PORTABLE EDITING SYSTEM

SERIES 1200 Portable Editing System

The Series 1200 Portable Editing System is designed to meet the needs of off-line editing system users who have a limited amount of floorspace available. The Series 1200 is a complete, self-contained cabinet system available in three types. Type A has two 19" wide sliding trays to house 1/2" top loading and front loading VCRs. Type B has two 28" wide sliding trays for larger top loading 3/4" VCRs while Type C has 24-1/2" of vertical rack space for rack mounted front loading machines. All three versions feature heavy duty rubber casters and dual-level work surfaces.

The Series 1200 is based on our rugged 16 gauge tubular steel frame-

work covered in a tough polyester resin-based substrate and finished in durable plastic laminate. All front and rear edges are trimmed in solid hand-selected oiled oak or walnut giving the look and feel of fine hand-crafted furniture with a contemporary styling.

Available options include either an 18" deep flat monitor shelf or 20" deep three-bay monitor rack. Both options are fully adjustable in height and are easily attached with four bolts. The monitor rack option features adjustable rear rack rails to support monitor slides and is available in several rack sizes.

Consult factory for details regarding special configurations, pricing and delivery.

Camera cable access

Change cassette and record

Adjustable back straps

VCR BAG

It's in the bag! A tough bag designed especially to protect your video recorder and give you easy access.

The bag is custom designed in three styles to give a custom fit to most major brands of VCRs and accessories. Engineered so you can change cassettes and record without the VCR ever leaving the bag. There are separate compartments for an extra cassette, stick battery and cable storage. Use as a "backpack" or with the shoulder strap for hands-off portability.

Ballistic Nylon (the same fabric used in bullet-proof vests) is stitched and double stitched to create a handsome, almost indestructible bag that is water resistant and cleans easily. Durable closed cell foam padding (its extra density providing extra protection) surrounds the VCR on all sides. Each pocket has a specially designed cap cover that sheds moisture and dirt. Generous Velcro® closures and heavy-duty hardware combine with the functional styling to make storing and handling your VCR a breeze.

A first class bag with first class features offered at a reasonable price, Smith-Victor Fotima VCR bags come in three models. Get the best value—no other VCR bag on the market does the job better.

- Separate compartments for recorder, cassette, stick battery and cables
- Camera cable access
- Change cassette without removing VCR from bag
- Adjustable back straps
- Adjustable removable padded shoulder strap
- Weather resistant cap covers with Velcro® closure strips
- Ballistic Nylon fabric
- Durable, extra dense, closed cell foam padding

- Quick release buckle and heavy-duty zippers with functional oversized pull-tabs on recorder compartment
- Hi-impact plastic feet
- Smith-Victor warranty against defective materials and workmanship
- Available in Brick Red, Silver Grey, Safari Green, Smoke Grey, or Blue with black trim

Add-On Module: 1 center panel (light grey), 1 back panel with vents and handgrips (black), 1 top panel (light grey), 1 foot (black), 1 blank panel 3 1/2" x 19" (dark grey), 1 blank panel 10 1/2" x 19" (dark grey) **\$330.00**

SU-514 Single Bay Add-On Table

Add-on-table: 1 center support (dark grey), 1 padded front piece, 19" wide, with simulated leather covering (dark brown) **\$120.00**

SU-515 Twin Bay Table

2 side supports (dark grey), 1 padded front piece 38" wide, with simulated leather covering (dark brown), 38" wide table panel with cut out for RM-440 (light grey), mounting hardware included **\$210.00**

RMM-501 Type 5 Mounting Kit

Hardware kit for mounting Type 5 U-matic units. Kit includes: Pair of 3-section ball bearing steel chassis slides; chassis slide mounting hardware; chassis slide mounting adaptors for non-Sony Consoles; pair of rack handle brackets; filler strip; necessary screws **\$200.00**

RM-502 Panel for RM-500/RM-V5

2 unit mounting panel with cut-out for either RM-500 or RM-V5; screws included **\$40.00**

RMM-503 Mounting Brackets for RM-580

Pair of brackets to rack mount RM-580; screws included **\$35.00**

RMM-504 Panel for RM-440

4 unit mounting panel with cut-out for RM-440; screws included **\$45.00**

RMM-505 Mounting Brackets for RM-550 and RM-V5

Brackets for side-by-side rack mounting of RM-550 and RM-V5 **\$30.00**

RMM-506 Mounting Bracket for SLO-383

5 unit bracket to rack mount SLO-383 **\$140.00**

BLP-501 Unit Blank Panel

1 3/4" x 19" Light grey filler panel with predrilled mounting holes **\$20.00**

BLP-502 2 Unit Blank Panel

3 1/2" x 19" Light grey filler panel with predrilled mounting holes **\$23.00**

BLP-503 3 Unit Blank Panel

5 1/4" x 19" Light grey filler panel with predrilled mounting holes **\$25.00**

BLP-504 1 Unit Padded Panel

1 3/4" x 19" foam padded panel with simulated leather PVC covering and predrilled mounting holes **\$35.00**

BLP-505 2 Unit Padded Panel

3 1/2" x 19" foam padded panel with simulated leather PVC covering and predrilled mounting holes **\$40.00**

BLP-506 Mounting Conversation Kit

Special hardware to modify standard 5 unit height upper console section to accept 6 unit height equipment **\$40.00**

SU-501

SU-502

SU-511/512/ 513/514

SU-501 VIDEO CONSOLE

A special console ideally suited for use in offices, showrooms or reception areas. The upper section of the unit contains a slide-out equipment shelf with a locking door that disappears into the console when open. The lower section is a roomy, locking drawer that can be used to store tapes or accessories. **\$400.00**

SU-502 VIDEO CONSOLE

A companion unit to the SU-501 console that has exactly the same features plus an elevated pedestal large enough to accommodate up to 19" monitors. **\$500.00**

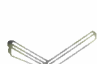

SU-511/512/513/514

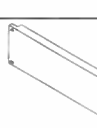

An incredibly versatile system of custom designed video consoles for users of Sony Type 5 U-matic and other video equipment. The completely modular EIA standard system can be assembled in countless different configurations to suit individual requirements. It's a K-D (knockdown) design that assembles easily in minutes and can easily be expanded via convenient add-on options.

CABINETS

Series 400

Series 300

Series 100

Series 200

Cabinet Relay Racks

SERIES 100 cabinet relay racks are designed for standard 19" (483mm) panels. Constructed of 16 ga. CRS throughout. Rear door lock and low profile handle included. Panel mounting angles are tapped to accept 10-32 pan head screws included. Louvers are internal type for improved ventilation. Iron phosphate coated for rust prevention and paint adhesion. Knockouts located at rear top and bottom. If no color is specified, Soundolier light satin beige will be furnished. Complete list of colors available. Shipped knocked down. Hardware and instructions included.

Options:

Series 110 Front Door — mounted on a ridged continuous hinge. May be ordered with or without cabinet. See specification chart for model numbers.

Series PT Panel Trim — stainless steel trim for covering panel mounting hardware. Complete with fasteners. Specify model PT-36, PT-42, PT-61, PT-70 or PT-77.

Transmitter Racks

SERIES 200 Transmitter Racks are designed to mount standard 19" (483mm) panels. Constructed of 16 ga. CRS throughout. Front and rear door handles and locks provided (locks keyed differently for security). Modern internal louvers for improved ventilation. The 11 ga. panel mounting angles are tapped for 10-32 screws (included) and are adjustable to any distance from front to rear. Panel angles are mounted to three sturdy channel slides on each side. Knockouts are located at rear top and bottom. If no color is specified, Soundolier light satin beige will be furnished. Complete list of colors available. Shipped knocked down. Hardware and instructions included.

Optional Accessories for Series 100 and 200

TMC-10 Television monitor adaptor—Provides 10-5/8" vertical mounting space.

TMC-15 Television monitor adaptor—Provides 15-7/8" vertical mounting space.

Sectional Wall Mounting Cabinets

SERIES 300 Sectional Wall Cabinets are designed for standard 19" (483mm) rack panels. Entire cabinet is constructed of 16 ga. CRS. Back and front sections are one piece construction with angle braces at each corner. All seams and miters are electric welded and ground smooth. Center cabinet is strengthened with 16 ga. braces at each corner. Three larger models have 11 ga. mounting supports on back section. Removable pin hinges for easy assembly and hinges are bolted to cabinet section for greater strength. Knockouts and internal louvers are two Soundolier exclusives. Center section and rear section are secured with locking rods and alignment pins. Front section is complete with cylinder lock. All models have tapped panel mounting rails and 10-32 pan head screws for panel mounting. If no color is specified, Soundolier light satin beige will be furnished. Complete list of colors available. Shipped completely assembled.

Desk Top Cabinet

SERIES 400 desk top cabinets are completely assembled and constructed from 16 ga. CRS throughout. Each unit is equipped with a locking rear door which is mounted on sturdy slip joint hinges. Internal louvers and recessed panel angles give this compact cabinet a "clean look." The panel mounting angles are tapped for 10-32 screws. Designed to mount most Soundolier cabinet accessories. If no color is specified, Soundolier light satin beige will be furnished. Complete list of colors available.

CABINETS

Series 500 Multi Racks

SERIES 500 Multi Racks are designed for standard 19" (483mm) rack panels and for maximum flexibility. Multi Racks can be readily joined together and because of its open side construction, wiring is simple and convenient. Each basic rack is supplied with a rear door complete with cylinder lock and low profile handle and slip-jointed hinges. Panel mounting rails are adjustable, manufactured of 11 ga. CRS and tapped for 10-32 screws. Construction of all other parts is 16 ga. CRS. Combination knockouts are located on the top, bottom and rear flanges. To facilitate cable entry, three 2-13/16" (71mm) diameter holes are located toward the rear of the base of the rack.

Multi Racks are shipped welded and assembled. All metal surfaces receive an iron phosphate coating prior to finishing for rust prevention and maximum paint adhesion. If no color is specified, Soundolier light satin beige will be furnished.

(Complete list of colors available)

OPTIONAL ACCESSORIES:

SERIES 510 Front doors are easily field installed with either right or left hand hinging. The basic rack is furnished with a series of small knockouts on each side of the front return. These knockouts are easily removed and will accept the 10-32 self tapping screws furnished with the door. Complete with continuous piano hinge, lock and low profile handle.

SERIES 230 Mounting rails—While each basic rack is supplied with one set of mounting rails, extra sets are available at customer's option.

SERIES 540 Side panels—One pair of side panels is required to close either a single basic rack or multiple racks attached. The side panels install easily by hooking them over internal side channels in the basic rack.

SERIES 502 Multi racks are basically the same as Series 500 multi racks but are 25-1/2" (648mm) deep for extra equipment area.

TMC-10 Television monitor adaptor—Provides 10-5/8" vertical mounting space.

TMC-15 Television monitor adaptor—Provides 15-7/8" vertical mounting space.

Series WA 100

Cabinet Relay Racks—Welded Construction

SERIES WA 100 Cabinet relay racks are constructed of 16 ga. CRS and are completely welded for additional strength and neater appearance. The panel mounting angles are tapped for 10-32 screws. The rear door is attached by slip-jointed hinges and includes lock and low profile handle. The entire cabinet receives an iron phosphate coating for rust prevention and excellent paint adhesion. If no color is specified, Soundolier Satin Beige will be furnished. Complete list of colors available.

Series 200 Transmitter Racks

SERIES 200 Transmitter racks are designed to mount standard 19" (483mm) panels. Constructed of 16 ga. CRS throughout. Front and rear door handles and locks provided (locks keyed different for security). Modern internal louvers for improved ventilation. The 11 ga. panel mounting angles are tapped for 10-32 screws (included) and are adjustable to any distance from front to rear. Panel angles are mounted to three sturdy channel slides on each side. Knockouts are located at rear top and bottom. If no color is specified, Soundolier Satin Beige will be furnished. Shipped knocked down. Hardware and instructions included. Complete list of colors available.

CABINET ACCESSORIES

Phono Drawers

PD Series phono drawers are constructed of 16 gauge CRS and designed to mount in standard 19" (483mm) rack panel space. The chassis is mounted on slides with nylon bearing rollers. The chassis is complete with 1/4" (6mm) thick walnut grain hardboard base. Partial and full drawer extension models are available. Mounting hardware is supplied. Finish is Satin Beige. Other colors are available.

FP Series phono drawers are the same as the PD series but are designed with a flush appearance to complement our select series cabinets. Slide has a tilt-up action for removal of chassis. Two standard colors are offered: Royal Blue (No. 35) or Satin Beige (No. 31). Suffix model number with color number. Other colors are available.

Blank Panels and Vent Panels

S19 Series panels are constructed of 1/16" (2mm) CRS. Two sides of the panel are formed for rigidity. The panel mount holes are oblong for adjustment and neater appearance. Finish is Satin Beige. Other colors are available.

S219 Series panels are same as S19 and will fit any Soundolier cabinet but they are designed to maintain the flush appearance of select series cabinets. Two standard colors are offered: Royal Blue (No. 35) or Satin Beige (No. 31). Suffix model number with color number. Other colors are available.

A19 Series panels are constructed of 1/8" (3mm) aluminum. Panel mount holes are oblong for adjustment and neater appearance. Panels are painted on one side. Finish is Satin Beige. Other colors are available.

SVP19 Series vent panels are constructed of 22 gauge perforated CRS. Two sides are formed for rigidity. Panel mount holes are oblong for adjustment and neater appearance. Finish is Satin Beige. Other colors are available.

SVP219 Series are same as SVP19 and will fit any Soundolier cabinet but they are designed to maintain the flush appearance of select series cabinets. Two standard colors are offered: Royal Blue (No. 35) or Satin Beige (No. 31). Suffix model number with color number. Other colors are available.

AC Power Panels

Model ACR-193 is an AC master power panel for standard 19" (483mm) rack mounting requiring only 3-1/2" (89mm) of vertical panel space. Panel is constructed of 16 gauge CRS and standard color is Soundolier Satin Beige (No. 31). Complete list of colors available. The main switch is a DPST rocker type and switches both sides of the power line. A red jewel, neon pilot lite indicates whether AC power is on or off. Eight outlets are provided, six controlled by main switch and two non-switched outlets. Each outlet is grounded. A 15 amp fuse is provided. Back of panel has a 7/8" (22mm) hole which accepts 1/2" (13mm) conduit fittings.

Model ACK-193 is identical to ACR-193 except a key switch is used for security. Two keys are provided.

Model ACR-293 and **ACK-293** are the same as those above except they have a return on all four sides to maintain flush appearance of Soundolier select series cabinets.

5 Channel Monitor Panels

Model MVX-193 monitor panel for standard 19" (483mm) rack mounting requiring only 3-1/2" (89mm) of vertical panel space. Panel is constructed of 16 gauge CRS and standard color is Soundolier Satin Beige (No. 31). Complete list of colors available. Unit can be used with any multi-channel sound system. It provides aural and visual monitoring with the turn of a switch. A double pole, six position switch is wired to supply five program channels with a sixth "off" position. Each channel connects to two screw terminals on the rear of the panel. A 70 volt or 25 volt line may be monitored. A 3" (76mm) speaker is used for aural monitoring connected through a potentiometer for level selection. Potentiometer and channel selector are on a black plate with white nomenclature. Speaker grille is slightly raised. The VU meter has a long life thermoplastic case. The meter movement is a moving coil design and has a type A meter scale.

Model MVX-293 is identical to MVX-193 except it has a return on all four sides to maintain flush appearance of Select Series cabinets and Soundolier Royal Blue (No. 35) is offered as a second standard color.

Model MX-193 is identical to MVX-193 except the VU meter is not provided.

Model MX-293 is identical to MVX-293 except the VU meter is not provided.

Model MVX-195 is identical to the MVX-193 except a high compliance Soundolier 4" (102mm) FC104 speaker is used for better aural monitoring. A high quality Soundolier HT-82 line transformer is also used. Panel height is 5-1/4" (133mm).

CABINET ACCESSORIES

ACS-1

CT1020

ACR-193

ACK-193

Model ACS-1 is an AC Power Strip assembly designed for Soundolier equipment cabinets. This versatile unit provides six UL listed duplex outlets with grounded UL listed power cord. When used in conjunction with power panels (listed above), a complete AC Power System can be assembled for each cabinet.

Roller Truck

Model CT1020 roller truck is constructed of 16 gauge CRS and is designed for Soundolier's 100, 200, WA100 and WA200 series cabinets only. Finish is Satin Beige. Complete list of colors available. The roller truck is complete with four 3" (76mm) ball bearing casters. Two casters are the rigid type and two are the swivel type. The swivel casters are also the locking type. The total load capacity is 400 lbs (181kg). Dimensions—24-13/16" (630mm) x 21" (533mm).

Model MVX-295 is identical with the MVX-293 except a high compliance Soundolier 4" (102mm) FC104 speaker is used for better aural monitoring. A high quality Soundolier HT-82 line transformer is also used. Panel height is 5-1/4" (133mm).

Model MVX-1910 is identical to MVX-193 except the panel is 10-1/2" (267mm) high and the monitor speaker is an 8" (203mm) unit.

Model MVX-2910 is identical to MVX-293 except the panel is 10-1/2" (267mm) high and the monitor speaker is an 8" (203mm) unit.

Model MX-1910 is identical to MVX-1910 except a VU meter is not provided.

CABINETS & ACCESSORIES

AWR-3/AWR-5S Series Amplifier Wall Cabinets

AWR-3/AWR-5 Series is designed as an amplifier wall cabinet for standard 19" (483mm) panel mounting space of 3-1/2" (89mm) (5-1/4" or 133mm for AWR-5S) on a tilt-out door/chassis assembly. Mounting holes are EIA standard. On the right side of the chassis is blank panel area 1-1/2" (38mm) x 5" (127mm) 6-3/4" or 171mm for AWR-5S) where additional switches may be mounted.* The front door and the door frame are constructed of 14 gauge CRS. Keylock is flush and comes with two keys. Door is attached to frame with a piano hinge. Door stops are welded on the door frame preventing the door from closing improperly. Backbox is constructed of 16 gauge CRS with 7 knockouts on bottom panel. Tampering is prevented by attaching door frame to backbox internally. Shipped complete, finished inside and out with Soundolier Satin Beige. Other colors are available.

NOTE: AWR-3-4 Does not contain switch panel area

Select Series Louvered Panels

These louvered panels are designed to replace solid panels in select series cabinets. Top panels are available for racks, consoles and turrets. Back panels are available for turrets only, and side panels are available for racks only. Nine internal louvers constitute a set of louvers. There are 2 or 4 sets of louvers per panel, depending on panel size.

S219-15L

S219-8L

Shelf Assembly

Model SH19-7 shelf assembly is constructed of 16 gauge CRS and is easily mounted to the panel mount rails of all standard 19" (483mm) racks. Requires 7" (178mm) of panel space. Ideal for mounting equipment that does not have an attached rack mount panel. Shelf area dimensions — 17-1/2" (445mm) x 14" (356mm) x 7" (178mm) high. Finish is Satin Beige. Other colors are available.

Select Series Casters

CS-8PR Swivel casters must be used with select series racks and consoles which have caster plates ready to mount CS-8PR casters. Each CS-8PR includes 2 swivel casters. An individual rack or console requires 4 casters or two CS-8PRs. Adjoining cabinets require only 2 casters (one CS-8PR) at juncture.

DK19-3 Rack Mounted Writing Surface

A hard board laminated writing or component surface to fit our standard 19" (483mm) 100, 200, WA100 and WA200 series racks. This assembly requires only 3-7/16" (87mm) of vertical panel space. Surface is 17-1/2" (445mm) wide and 12" (305mm) deep. Surface is supported by a heavy gauge CRS bracket. Hardware furnished.

AS100/AS120 Amplifier Shelves

These shelves are designed to support electronic equipment. They are wall mounted by use of keyhole type screw holes. Wiring holes are provided on bottom of shelf for convenient wiring access. Front of shelf has a 3/8" (10mm) retaining lip. Construction is of heavy gauge CRS. Model AS100 is 14-1/4" (362mm) wide x 10-3/32" (256mm) deep. Model AS120 is 20" (508mm) wide x 12-1/2" (318mm) deep.

CONSOLES

Heavy Duty Slope Front Consoles

Select series 1044 Slope Front Console is an example of Soundolier's top quality engineering and modern futuristic design. This unit has a wide variety of applications. The modular design allows for easy installation of assemblies, and the modern color schemes complement any building interior. Basic unit consists of a 16 gauge CRS frame with 11 gauge CRS mounting angles, a louvered full length locking rear door which is easily removed, a removable top and lower front panel and pontoon base. Mounting angles are tapped 10-32 on universal E.I.A. hole spacing and are movable from front to rear. Caster plates are provided. The writing surface may be easily removed for access to standard 19" (483mm) E.I.A. mounting rails.

Plastic laminate writing surface is off-white or teakwood color. Three 7/8" (22mm) knockouts are provided on the rear portion of the writing shelf. The frame, mounting angles, pontoon base and shelf assembly are finished in Soundolier textured flat black baking enamel. Standard colors for tops, sides and doors of this series will be Soundolier Royal Blue (No. 35) or Satin Beige (No. 31). Suffix model number with color number. Complete list of colors available.

1044

MODEL NO.	DESCRIPTION	VERTICAL PANEL SPACE
1044	Slope Front Console	19-3/8" (492mm) Top Front
1044LS	1044 w/o Writing Surface	24-5/8" (625mm) Bottom Front

Model 1047 Slope Front Console

Model 1047 Slope Front Console is the same basic design as Model 1044, except that it will not mount a writing surface. Modular in design, it can be joined with other 1047 or 1044 consoles, or 1044-45 wedge sections. The basic unit consists of a 16 gauge CRS frame painted textured flat black baking enamel with 11 gauge CRS mounting angles and a louvered full length locking rear door which is easily removed. Additionally, the top and lower front panels and pontoon base are removable. Mounting angles are tapped 10-32 on universal E.I.A. hole spacing and are movable from front to rear. Caster mounting plates are tapped for easy installation of Soundolier CS-8PR casters. Side panels and casters are optional. Color selections include Soundolier Royal Blue (No. 35) or Satin Beige (No. 31). Complete list of colors available. Extruded aluminum side trim and decorative insert panel must be ordered separately.

1047

MODEL NO.	DESCRIPTION	VERTICAL PANEL SPACE
1047		19-3/8" (492mm) Top Front
		28-1/8" (714mm) Bottom Front

Console and Turret 45° Wedge Sections

Model 1044-45 wedge section is for use with 1044 and 1047 Slope Front Consoles. Models 714-45 and 719-45 wedge sections are for use with 700-14 and 700-19 desk turrets respectively. Each wedge section is a complete self supporting unit. They have no front openings or mounting angles. One wedge section used with appropriate consoles or turrets will produce a 45° corner installation. Two adjoining wedge sections will produce a 90° corner installation. The 1044-45 wedge section used with 1044-LS consoles and 144-45 or 144-90 writing surface will produce a 45° or 90° corner writing surface. The basic frame is 16 gauge CRS painted textured flat black baking enamel. The 1044-45 has a pontoon base painted flat black. It has a removable louvered full length locking rear door and top panel. The 714-45 or 719-45 have removable top and back panel. Door, top and back panels are available in Soundolier Royal Blue (No. 35) or Satin Beige (No. 31). Complete list of colors available. The decorative insert panel must be ordered separately.

1044-45

144 Series 45° and 90° Writing Surfaces

144 Series writing surfaces are designed to be used with Soundolier's 1044LS slope front consoles and 1044-45 corner wedge sections. The writing surface frame is constructed of 16 gauge CRS steel with choice of teakwood (TKS) or white (WHS) laminate writing surface. Versions for 45 degree or 90 degree console configurations are available. Six 1/2" (13mm) knockouts are provided on the rear portion of each writing surface. The 16 gauge CRS frame is painted in Soundolier textured flat black baking enamel to match the 1044LS consoles.

TKS144-45

TKS144-90

MODEL NO.	DESCRIPTION

BASIC MODULES

INTRODUCTION TO THE STANTRON VIDEO CENTER

BASIC MODULES

On this page — and the following page — we have displayed the **Basic Modules** of our **VIDEO CENTER** modular consoles, modular cabinets, modular racks and monitor bridge desks. These products have been designed — primarily — for **VIDEO CENTER** production and post-production facilities. There is a choice of "in-place," portable or mobile options. Our modular, "add-on," design features allow for maximum flexibility in designing console arrangements for editing, dubbing or production within professional, educational, industrial and communication **VIDEO CENTERS**. With our 30 years

of extensive manufacturing experience, (totally spent within the electronics industry), we have "designed-in" the structural strength and aesthetic features required by our valued customers. All products displayed within this catalog (with the exception of some hardware items) are manufactured within our 60,000 square foot plant, where — during the aforementioned period of thirty years — we have produced thousands of cabinets for television and radio broadcasting facilities, as well as audio-video production facilities.

VTR MONITOR BRIDGE CONSOLES

STANTRON VIDEO CENTER

VTR MONITOR BRIDGE CONSOLES

- **NOTE: TOTAL WIDTH IS 23 1/4" (590.6 mm)**
- The Monitor Bridge is adjustable in height from 19" to 32" (483 mm to 813 mm).
- Base Cabinet panel space: 19 1/8" wide x 21" height (front/rear) (485.8 mm x 534 mm).
- Monitor Bridge Cabinet will accept:
 - A 10 1/2" x 19" (266.7 mm x 482.6 mm) wide panel with a TV monitor.
 - A 5 1/4" x 19" (133.4 mm x 482.6 mm) wide panel with a wave form monitor and a vector scope (side by side).
 - An additional 3 1/2" x 19" (88.9 mm x 482.6 mm) panel for operational equipment.
- A Vertical Accessory Panel 3 1/8" wide x 19 1/4" high (79.4 mm x 488.6 mm) is included. The upper half of this panel has a grille opening for your speaker. The lower half is available for mounting of optional equipment such as microphone jacks, switches, etc.
- Vertical Supports may be used as electrical raceways.

- Base Cabinet and Monitor Bridge Cabinet both have removable rear perforated panels for ventilation and access to equipment. Part #VCP14P. Laminate top for base cabinet is included.
- 3" swivel casters (2 with brake) are included.
- Finish:
 - Vertical supports: Bright chrome
 - Cabinets: Black textured #VC8T
 - Laminate Top: Black

- **NOTE: Finish must be submitted when placing order.**
- * Shipped Assembled: Important! Submit VTR clearance dimensions. Add dimension number to suffix of catalog #. i.e.: VCMB9000-24. This number would allow for a 24" (610 mm) clearance between the Base Cabinet top and bottom of Monitor Bridge Cabinet. If, after receipt of cabinet a different clearance is desired, our adjustability feature may be utilized. If no clearance dimension is submitted with the order, we will ship with a 19" (483 mm) VTR clearance.

EXHAUST or INTAKE FAN ASSEMBLIES

MODEL NO. VCTA530

- STANTRON TUBE AXIAL FAN has been designed for flushing and cooling VIDEO CENTER cabinets. The FAN can be used for both exhaust or intake since air flow direction is established by mounting position.
- Two finger guards, one on each side, are provided with each FAN and unit cost includes installation.
- When ordering, specify VCTA530-EX for exhausting air or VCTA530-IN for intake of air.
- IMPORTANT: When ordering, specify where fan is to be installed. If installed in door, indicate top or bottom.

STAR CASE MFG. CO., INC.

648 Superior Ave.
Munster, IN 46321
(219) 922-4440

CASES

If it's Audio, Video, Computer or anything, Star Case has probably built a case for it. Star Case has always had the reputation of making "State of the Art" cases. Our quality exceeds far beyond that of our competitors. Star Case is the only company to offer 3 ATA rated cases, and 3 lightweight carrying case lines.

STANDARD ATA

- Custom fiberglass laminate
- Appropriate foam density
- Custom design and options available
- 8 different colors available
- Custom step-down hardware
- Standard tongue and groove
- Exclusive 8mm construction

TRANSPORT II

- Custom fiberglass laminate
- Appropriate foam density
- Custom design and options available
- Black only
- Exterior mounted hardware
- Standard tongue and groove
- Exclusive 4mm construction

ULTRASTAR

- Custom fiberglass laminate
- Appropriate foam density
- Custom design and options available
- 8 different colors available
- Custom Ultrastar hardware
- Custom large tongue and groove
- Exclusive 14mm construction

Superstar Cases—Same features as above but use 1/4" plywood instead of 1/2".

MOVER II

- Custom fiberglass laminate
- Appropriate foam density
- Custom design and options available
- Black only
- Exterior military straps
- "Shoe-Box" style D case
- Exclusive 4mm construction

CASES

TELEPAK

Designed and constructed with the user in mind, Telepak offers the field productionist the best in soft, over-the-shoulder protective carrying case.

Many User-Friendly Features

- Non-slip shoulder strap pad
- Adjustable shoulder strap
- Velcro secured microphone straps
- Adjustable, quick release hand strap
- Washable white balance flap
- Cable restraint loops for protecting connectors and fittings
- Velcro straps for cable routing and control
- Quick out cinch straps for easy removal of VCR
- Velcro enclosure pockets for carrying production accessories
- Bad weather hood surrounding the VCR panel

Rugged Construction Features

- Shock absorbing, cross-linked polyethylene foam
- Rust-proof slides
- Water repellent, 100% nylon
- Vinyl white card
- Indestructible Tuff Buks
- Web nylon for straps and loops (tensile strength 6,000 lbs.)
- Magic grip, non-slip shoulder pad
- Woven, nylon hook and napped looped Velcro
- Accessory compartments integrally manufactured as part of the case

Telepak™ carrying cases are custom-designed for portable recorders of every major manufacturer. Telepak™ carrying cases are available from video product dealers throughout the U.S.

Feature Products

- T-Scope — Tektronix 1740/50 waveform/vector pak

The ribbed plastic shell of Thermodyne cases is tough-as-steel, yet pliant and super shock-absorbent.

Ribbing permits the case to "concertina" slightly in impact, absorbing kinetic energy.

These cases outlast metal, fiberglass and wood cases and protect contents better. * Even the prices are better.

Thermodyne cases meet numerous specs and maintain a watertight seal. Many options available. Over 100,000 Thermodyne cases supplied to USAF, McDonnell Douglas, Texas Instruments, Hitachi, Sony, Hughes, JVC, Canon, ABC-TV, CBS, NBC, etc.

SHOK-STOP CASES
available in 106 sizes
Suitable for
computers/peripherals,
instrumentation, optics, etc.
Sizes up to 82 x 17 x 10

RACK-PACK CASES
for shipping and operating
rack-mount instruments
in the field.

LOW-COST CUSTOM TRANSIT CASES
to meet your particular requirements.

STANDS/TABLES

US-22 UTILITY STAND

The US-22, smallest of the Ultimate Support Systems' utility stands, weighs 4-1/2 pounds (2.04 kg), securely holds up to 75 pounds (34 kg) of equipment; 1" (2.54 cm) diameter aluminum alloy tubing construction. Features allow the entire stand to fit into a slender 33-1/2" (.85 m) long bag when disassembled. The US-22, when set up, has a height of 30-1/4" (.77 m). The perfect stand for: keyboards, mixing boards, lighting consoles, rack equipment, etc. The two support bars can be placed in any of four positions to accommodate various equipment widths. The aluminum is deep etched and clear anodized to provide a look that complements any product it upholds. The feet are double-capped and skid resistant; all nuts are locking type; rubber pads are included to keep equipment from sliding.

The US-22 is covered by a limited one year warranty. A waterproof nylon tote bag is included for traveling ease.

SPECIFICATIONS

- Height: 30-1/4" (.77 m)
- Tabletop Dimensions: 28-1/4" x 14-1/8" (.72 x .36 m)
- Load Capacity: 75 pounds (34 kg)
- Breakdown Dimensions: 33-3/8" x 4" dia. (.85 x .1 m dia.)
- Weight: 4-1/2 pounds (2.04 kg)
- Set up time: 2 minutes

US-22\$80.00

US-44 UTILITY STAND

The US-44 Utility Stand is constructed of 1-1/2" dia. (3.81 cm) aluminum alloy tubing. The products' 6-1/2 pound (2.95 kg) structure securely holds up to 75 pounds (34 kg) of equipment. The tubing goes through a special etching and anodizing process to create a rich matte look to complement any piece of equipment it upholds. The top dimensions are 15-3/4" x 34-1/8" (.40 x .87 m). The two support bars can be placed in any of four positions for various equipment widths. When set up, the US-44's 36" (.91 m) height is perfect for mounting keyboards, lighting consoles, mixing boards, etc. The entire stand disassembles to slip into a slender 40" (1 m) long waterproof nylon tote bag, which is included. Additional features include: double capped skid resistant feet, locking type nuts, and rubber pads to keep equipment from sliding.

SPECIFICATIONS

- Height: 36" (.91 m)
- Tabletop Dimensions: 15-3/4" x 34-1/8" (.40 x .87 m)
- Load Capacity: 75 pounds (34 kg)
- Breakdown Dimensions: 39-1/4" x 5-1/4" dia. (1.00 x .13 m dia.)
- Weight: 6-1/2 pounds (2.95 kg)
- Set up time: 2 minutes

US-44\$105.00

VT-44 VERSA TABLE

The VT-44 is ideal for elevating large synthesizers and keyboards; mixing consoles, lighting controls, and other paraphernalia. The VT-44 is constructed of lightweight aluminum alloy tubing. The deep etch and clear anodize gives the quality appearance that complements any type of equipment that is placed on it. The VT-44 features individually adjusting legs (seven height settings). Coupled with the absence of long braces, this enables the VT-44 to straddle rows of theater seats, sit securely on uneven ground and tilt to adjust to individual preferences. The table top is constructed of 1/8" (3.2 mm) oil tempered hardboard and is covered with heavy black vinyl. The edging is constructed of vinyl clad metal, providing tough protection all around. The table top dimensions are 22" by 44" (.56 x 1.12 m). Height can be adjusted in 2-1/4" (5.8 cm) increments between 20" and 33" (.51 m and .84 m). A brace under the center of the table top gives a solid working surface capable of supporting 250 pounds (113.4 kg) of equipment. Spring buttons and ball-lock pins make setup and breakdown a snap. Double capped skid resistant feet are glued on to stay in place. The VT-44 comes with a tough waterproof nylon tote bag for easy transportation and storage.

SPECIFICATIONS

- Height: 20" - 33" (.51 - .84 m)
- Tabletop Dimensions: 22" x 44" (.56 x 1.12 m)
- Load Capacity: 250 pounds (113.4 kg)
- Breakdown Dimensions: 22" x 44" x 2-1/2" (.56 x 1.12 x .064 m)
- Weight: 15-1/4 pounds (6.9 kg)
- Set up time: 1 minute

RACK CASES

VIDEO PROJECTOR WITH CONTROLLER

STACKER

- Reel-to-reel system cases
- Triple stack 35mm projector cases
- Video tape recorder cases
- Video camera cases
- BB rack style cases
- Monitor (TV) cases
- Shock-mounted BB rack style cases
- Projector and screen cases
- Shock mounted broadcast racks

Wherever you look on a Viking case, you'll see superior strength and workmanship. Wood panels laminated with tough, scratch resistant ABS or stucco aluminum are supported by a double edged aluminum extrusion crimped at intervals for a permanent, non-yielding bond; a construction technique far stronger than conventional gluing, stapling or riveting.

Viking's heavy duty valances contribute to long life and a tight fit. And all but the smallest Viking cases are equipped with heavy duty steel recessed hardware including spring loaded handles, twist locks and corners. All Viking hardware is attached with steel rivets and backed with steel washers; your assurance of greater strength and impact resistance.

CARRYLITE CASES

The Carrylite is 25% less expensive and 30% lighter than our ATA case. Carrylite is rugged...built of dependable heavy gauge ABS for exceptional strength yet still a beautiful and versatile way to carry your valuable equipment. Carrylite is adaptable in size for audio/visual, video, computers, and musical instruments.

VIDEO EQUIPMENT CARTS

Model EFP-17 Folding All-Terrain Field Production Cart

The Wheelit EFP-17 folding camera cart is the big brother to ENG-1. EFP-17 is a larger, smoother folding vehicle designed to assemble all of the necessary portable video equipment required for quality field production. It features a separate shelf to support your monitor for playback or viewing as the action happens. The monitor platform is positioned forward to place the recorder controls at the fingertips of the operator. With optional elevator column and head, taping may be accomplished directly from the cart. Large 12 inch inflatable pneumatic wheels dampen vibration and allow basic dolly moves over general terrain. Wheelit EFP-17 folds to 15-1/2 inches and only the camera and monitor need be removed for storage. The equipment board is predrilled in 1 inch increments for quick adjustment.

EFP-17 Specifications

Equipment platform 17" x 29"
Monitor platform 15" x 21" x 41"H
Camera platform* 6" x 17" x 37"H
Folded size 42" x 28" x 15"
Load capacity 175 lbs.
Wheel base 16"
Wheels (inflatable) 12" pneumatic
Casters 5" swivel w/lock
Straps 1 ea. 8', 2 ea. 5'
Shipping Assm. 57 lbs. truck

*NOTE: Camera platform is predrilled for elevator column.

Accessories:

Receptacle and Cord Reel, Elevator Column, Friction Head, or Fluid Head

VIDEO EQUIPMENT CARTS

Model ENG-1 Mobile Camera Cart

The ENG-1 mobile camera cart was developed for the video industry as the ideal vehicle for transporting and employing portable video recording equipment. The unit accommodates most VTR and camera CCU's as well as their AC adaptors and battery packs. Addition of the optional elevator column and friction or cam link head converts the ENG-1 into one of the most versatile production tools available. ENG-1 folds to a slim 12 inches for transportation and storage. The equipment board is pre-drilled in 1-inch increments for rapid adjustment. **\$285.00**

ENG-1 Specifications

Equipment platform 14" x 29"
Camera platform 6" x 14" x 35"H
Wheel base 16"
Wheels 12"
Casters 4" swivel
Load capacity 150 lbs.
Straps 2 ea., 4"
Folded size 23" x 42" x 12"
Shipping Assm. 45 lbs. UPS
*NOTE: Camera platform is pre-drilled for optional column.

Accessories:

Receptacle and Cord Reel, Elevator Column, Friction Head, or Cam Head.

Model GR-3 Video Cart

The Model GR-3 is the smaller offspring of the ENG-1. This folding video cart is designed to store, transport, and operate your portable 1/2" VCR equipment. This lightweight, affordable cart is ruggedly built with 8" semi-pneumatic wheels and 4" front swivel casters. The GR-3 is standard with spring head and telescoping column which will accommodate cameras up to 7 pounds. With model GR-3 Wheelit, there is no need to carry or set-up equipment on location; it's all there on your cart when you are ready to shoot. The cart can be folded with your equipment in place. **\$325.00**

GR-3 Specifications

Equipment platform 13" x 33"
Wheel base 16"
Wheels 8"
Casters 4" swivel
Load capacity 100 lbs.
Straps 3 each, 5"
Folded size 21" x 41" x 10"
Column height 43" min., 82" max.
Shipping Assm. 39 lbs. UPS

Accessories:

Receptacle and Cord Reel.

PORTAGE SERIES

Models S-4218/4218/TV-503

Indoor/Outdoor Carts

Wheelit Model 4218 is designed for indoor/outdoor transportation of video player and monitor unit. The 5" casters and 12" rear wheels assure a smooth ride and stability over questionable terrain. The model 4218 folds to a thin 12" to store in a closet or automobile trunk. As with all folding Wheelits, the platforms lock into the upright position with positive assurance. The Model S-4218 increases the utility and load capacity by adding a 15" x 18" bottom platform to the model 4218. This bottom platform locks into a slanted position when the cart is folded.

Wheelit Model TV-503 is a non-folding cart that features a top platform for placement of a television monitor for the viewers' standing line of vision. The top platform incorporates two leveling screws for tilting the monitor ten degrees. For presentation to a seated audience, the top platform is folded down and viewing equipment is placed upon the second shelf for proper eye level.

WORK STATION CARTS

FOLDING SLIM-LINE SERIES

Models 3628/S-3628/2916/S-2916 Work Station Carts

Wheelit Folding Slim-Line Model 3628 is designed for indoor/outdoor transportation of office machines, lab equipment, and electronic monitoring hardware. The large upper platform is positioned at a convenient working height for technicians on the move. Wheelit Model S-3628 has an additional lower platform to handle extra pieces of equipment. Both carts fold in seconds for fast and efficient storage.

Model 2916 was designed with the salesperson in mind. This rugged cart weighs only 33 lbs., folds to 10 inches, and yet has a load capacity of 150 lbs. Its platform height of 29" makes it the ideal working desktop. The thick sound-absorbing particle board with vinyl edge molding makes it the preferred demonstration cart. Model S-2916 has an additional lower platform for equipment accessories.

ALL PURPOSE CARTS

FOLDING ACTION SERIES

Models C-402/68-402P/69-22VTR

All Purpose Carts

Wheelit Model C-402 is an all purpose utility vehicle designed for transportation of video tape equipment, audio/visual equipment, photography equipment, and business machines. Model C-402 has become a particular favorite of photographers because it offers an abundant carrying capacity.

Construction of Wheelits 68-402P and 69-22 VTR is similar; however, basic differences will be found in the length of the wheel bases and the dimensions of the platforms. The upper and lower platforms are spaced so that a VT monitor and recorder can be interchanged to accommodate different viewing heights. Folded, these Wheelits fit into most automobile trunks. Heavy duty equipment straps are standard.

VE-105

NEW Modular RACK & STACK Video Furniture System in Metal or Wood ... in any combination you desire!

It's the modular system you can design to your needs with options you select; sturdy metal mobile racks with shelves and cabinets in metal or wood. Comfortably secures your video equipment including your largest 25" video monitor.

Three-sided racks and extended base designed for stability and protection.

Video System Mobile Rack Modules

All racks constructed of heavy-gauge steel with 37-1/2" wide x 27-1/2" deep bases. VS40, VS54 equipped with 4" casters; VS69, VS78 with 5" casters. Two lock. Reinforced back panel has 2-1/2" dia. openings for electrical cords. Provisions for electrical assembly make it a self-contained mobile unit. Brown enamel finish. Accepts both wood and metal VSC29, VSC42 cabinets and VSS18, VSS24 shelves.

Model No.	Description	Floor to Top of Base (in.)	Ship Wt. (lbs.)	Price

SUPER-RUGGED table for video systems

A basic, super-rugged, three-shelf table especially designed to support your heaviest video equipment. Has been tested to securely hold more than 450 lbs. Features 1" chrome-plated tubular steel legs and 18-gauge steel shelves - 33% heavier than used for conventional tables. Shelves have rolled retaining lip that adds strength, enhances safety. Top shelf has a non-slip rubber mat.

Shelf heights may be infinitely adjusted and the patented corner clips clamp the shelves to the legs with a grip that's stronger than a weld. Table rolls surely and easily on 4" swivel, ball-bearing casters. Two may be locked for in-place stability. Web strap available for securing monitor.

Model WKD-Basic Table

MOVABLE STORAGE SYSTEMS

MOVABLE STORAGE SYSTEMS In a variety of designs and 5" to 36" depths to serve your special storage needs

Winsted Shelf Storage System. Offer organization and storage for most any tape or film storage system. Choose from stock or custom shelving at affordable prices. All designs are completely flexible—can be adapted to a variety of configurations and setups to serve your special storage needs. What's more, Winsted shelving grows as your needs grow. Both stock and custom installations can be expanded, or relocated as your needs change.

A

A "Super Density" Movable Cabinets. Offered in a range of cabinet depths for maximum storage in a limited space. Front row cabinets move side to side on floor tracks for easy access to rear storage. Ideal for "VHS," "BETA," "U-matic and broadcast tape storage.

B Space-Saving Pull-Out Cabinets. Ideal for "high access" tape storage. May be installed in room alcoves or set-backs. Save floor space, too, by eliminating unnecessary aisles. Gives you 100% storage space efficiency. Units bolt together for any length system. Cabinets pull-out effortlessly on a low-profile track.

C High Capacity Tape Storage System. Affords compact storage in a limited space. Offered in a full range of cabinet depths to meet every storage need. Cabinets move laterally on low-profile rails for easy access to all records instantly, effortlessly.

Includes two complete sets of C9300 "L" frames with "5" swivel casters (4 locking) three 93580 monitor shelves, one 93582 editor shelf, one mini-monitor shelf 93084, and two all-steel C9310 VTR drawers. Frames can be joined to make an "in-line" console. Overall dimensions: 56"H x 28"D x 60"W. Wt. 300 lbs. **\$1415.00**

B Model E9306. Three complete C9300 "L" frames with 5" swivel casters (6 locking), three 93580 monitor shelves, one 93582 editor shelf, four all-steel C9310 drawers, and one 93084 mini-monitor shelf. Each of three consoles shown set-up. Individual consoles are 56"H x 28"D x 30"W overall. Wt. 428 lbs. **\$2073.00**

C Model P9207. Includes two C9200 "L" frames, two C9210 pull-out VTR shelves, one 92586 editor shelf and two 92581 monitor shelves. Overall dimensions: 56"H x 44"W x 28"D. Wt. 266 lbs. **\$1211.00**

D Model P9302. One C9300 "L" frame with 5" casters (2 locking), one 93581 extended monitor shelf, two C9310 VTR drawers and one C9311 editor shelf. Overall dimensions: 56"H x 26"D x 42"W. Wt. 208 lbs. **\$1071.00**

POWER SUPPLIES

AP SERIES CATV STANDBY POWER SUPPLIES

Alpha Standby Power Supplies protect your CATV system against powerline disturbances and complete loss of utility power. In addition, they are designed to operate in harsh outdoor environments with wide temperature fluctuations. Continuity and quality of supply is maintained independently of commercial power or weather.

Reliability is the key to the value of a standby power supply—reliability through design, workmanship and many years of product experience.

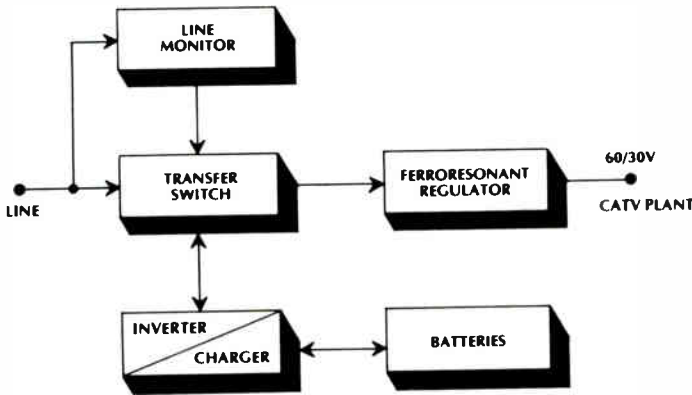

Cable operators, large and small, have recognized Alpha's commitment to this unsurpassed reliability—over 20,000 Alpha Standby Power Supplies are now installed across North America and Europe.

Operation of the Alpha Standby Power Supply:
 The unit consists of a Ferroresonant Regulator, Battery Charger, Bank of Batteries, Inverter, Transfer Switch and Line Monitor as shown in the Block Diagram.

During normal operation, power passes through the Transfer Switch to the Ferroresonant Regulator, which feeds the CATV system. This regulator provides line and load regulation and prevents high speed line transients from entering the cable system. Simultaneously the automatic temperature-compensated charger maintains the batteries at full capacity. Standby time and battery life are maximized. When the line voltage falls below a preset level, the Line Monitor activates the Transfer Switch. This switch connects the battery driven inverter to the regulator, at the same time providing positive isolation from the power line. To ensure uninterrupted service, transfer takes place in less than one cycle. Frequency and phase relation to the line are preserved through crystal control and phase-lock circuitry.

In case of prolonged power outages, an adjustable Low Battery Voltage Shutdown prevents irreversible damage to the batteries. Transfer back to utility power is delayed by 20-30 seconds to allow for line settling.

All Circuit functions are designed with one goal in mind...to provide your system with the cleanest, most reliable power, continuously.

POWER MODULES FOR AP SERIES STANDBY POWER SUPPLIES

The AM Series power Modules are the operational heart of all ALPHA Standby Power Supplies. They contain the Battery Charger, the Inverter, the Transfer Switch and all necessary Control Electronics to provide the back-up power function in a compact, smoothly functioning and reliable package.

All AM Series modules fit any available AP Series enclosures and all options. Mounting is by means of a simple, one screw tie down. Should service be required the entire module can be removed after a few screw terminal connections are undone. To ensure uninterrupted service while performing this procedure, Alpha highly recommends the use of the Model AP-60S Service Power Supply, shown below.

The modules have the following features and specifications:

FEATURES:

- Three prong grounded line cord input
- Barrier terminal strip for battery, output and options connections
- Output current meter, 0-15 AMPS iron vane type (except AM-8801)
- Battery fuse (30 AMP) or breaker (40 AMP)
- Output fuse or breaker (15 AMP)
- 'Line On' and 'Standby' indicator lights (except AM-8801)
- Optional elapsed time meter
- Front panel pushbutton for test/reset functions with APM, RSM or RPM
- Heavy duty high temp insulation transformer for high reliability
- Upward compatibility through easy to exchange plug-in boards
- Positive line-disconnect through mechanical relay—no back-feed
- High output float/equalize type charger—temperature compensated
- Phase-synchronized transfer and re-transfer from line to standby
- Crystal controlled clock for accurate frequency during outage
- Output waveform virtually unchanged during inverter operation
- Completely overload and short-circuit protected—automatic recovery
- Easy service—all components mounted on chassis and two P.C. boards

MODEL AP60S—SERVICE POWER SUPPLY

The Model AP60S is the ideal service companion to the AP Series Power Supplies. It is simply plugged into one of the enclosure's utility outlets and connected to the Service Power Inserter, located in the output filter. The switch is thrown and cable power is derived from the Service Power Supply. The Standby Module can now be serviced, removed or replaced, ensuring a complete fix of the problem.

The Model AP60S also makes an excellent emergency or bench power supply.

TV DEMODULATOR

TVDM 34

REMOTE CONTROL

TVDM 34 TV DEMODULATOR OFF-AIR TELEVISION DEMODULATOR

- Digital search tuning system using the latest voltage synthesis techniques
- 32 channel memory capacity
- Sequential channel selection
- 7 segment LED display of the selected channel
- Tuning indication with LED bar indicating the position of the channel in the band
- Mono- and multi-standard version
- 2 video and 1 audio output
- Built-in monitoring loudspeaker
- Headphone and loudspeaker connection
- 19" rackmountable (2 units height)
- Fully modular construction for fast and easy servicing
- Standard equipped with two front handles

Applications

The TVDM 34 demodulator accepts TV off-air signals to deliver video and audio output signals. This demodulator can be used as a separate unit or in combination with a BARCO monitor (CS, CM), thus transforming it into a receiver monitor and with the BARCOVISION video projector.

Versions

Mono-standard: BG, 1; others on special request
Multi-standard: BG-DK-I-L-MN; others on special request

Option

Wired remote control: 2 x 16 preselections, volume control, off

Accurate program searching

The digital search tuning system uses the latest voltage synthesis techniques.

By pressing the "f →" button (search), the system moves through each band, stopping whenever a transmitter is located.

This transmitter is automatically stored in the memory on the displayed program selection channel, retaining it for future use, even after mains supply interruptions. Over-programming to another preselection channel is possible with the "X → Y" button, when using the optional wired remote control. LED indicators show the tuning range and the band being searched.

A presettable fine tuning facilitates precise tuning on the chosen transmitter.

A sequential channel selector is provided with a two digit 7 segment LED display of the selected channel.

Memory information is protected during mains supply interruptions. Volume control for the built-in audio monitoring facility.

For multi-version

6 switches allow standard selection for the first 6 programs of the sequential channel selector. The others being preset for the BG standard.

Inputs and Outputs

Aerial input 75 ohm (unbalanced)
Video out: 2 x BNC-sockets
1 Vpp CVBS
Audio out: 1 x DIN socket
1.2 Vpp/10 k ohm
External loudspeaker: DIN socket
8 ohm, 6 W sinus
Input for wired remote control

SPECIFICATIONS

EARTH STATION ANTENNA

MODEL 6053 3.7 METER ANTENNA W/PRIME FOCUS FEED

Features

- Lightweight reflector reduces size of cartons and shipping costs. Easily transported to installation site.
- Individual reflector panels are interchangeable and field replaceable.
- Antenna meets proposed FCC 2° spacing requirement.
- Feed can be rotated thru 360° of polarization adjustment from the rear of the antenna.
- Textured front panel diffuses sunlight and reduces solar heating at the focal point.

The Blonder-Tongue Model 6053 is a 3.7 meter Earth Station Antenna featuring a segmented, fiberglass reflector, dual polarized prime focus feed, and a T-Bar Azimuth/Elevation Mount. The Model 6053 is designed for receive-only applications in the 3.7-4.2 GHz range and is especially well suited as a low cost, easily installed SMATV antenna. The antenna is capable of video programming anywhere in the continental United States from domestic satellites.

The parabolic reflector consists of 10 identical self-aligning sections of lightweight compression-molded fiberglass (FRP) material resulting in an excellent strength-to-weight ratio, easy assembly and trouble-free ground installation.

The Model 6053 antenna comes complete with reflector, T-Bar mount and prime focus feed. The T-Bar mount's pointing accuracy is within .2° at a wind velocity of 65 MPH and is designed to withstand winds of 125 MPH with optional braces. The antenna can be easily erected at a site with no special tools or equipment.

EARTH STATION ANTENNAS

4.6 METER EARTH STATION ANTENNAS

Model 6048 with Prime Focus Feed

FEATURES

- Elevation-Over-Azimuth Mount for ease of operation
- Prime Focus Feed for minimum system cost
- Protected environment for LNCs
- Designed for minimum shipping and installation costs
- No panel alignment or testing required
- Minimum site preparation required
- Easy installation, minimum maintenance

4.6 Meter Antenna

Blonder-Tongue's field-proven 4.6-meter earth station antenna now includes a standard elevation-over-azimuth mount for ease of operation and pointing accuracy. The antenna is designed for receive-only applications in the 3.7 to 4.2 GHz range and is especially well suited for CATV operations receiving video programming from domestic satellites.

The parabolic reflector is made of twelve precision die-stamped aluminum panels for consistent surface accuracy. The twelve panels are uniform and completely interchangeable, allowing convenient handling, lower shipping costs and easy installation. After a foundation has been prepared, two men can install the antenna in less than one day. No special tools are required and no part weighs more than 100 pounds (45 kg).

Elevation-Over-Azimuth Mount

The 4.6-meter earth station has a standard elevation-over-azimuth mount, engineered to provide continuous satellite arc coverage from any location in the contiguous United States. Pointing the antenna is rapid and accurate. Complete 360° azimuth coverage does not require alignment of the foundation to a specific heading, eliminating the possibility of installation errors associated with foundation centerlines.

Economical Pier Foundation Kit

A cast pier foundation kit is available as an economical alternative to a concrete slab foundation. The pier foundation is designed for steady 100 mph windloads. It consists of three cast pier inserts. A steel framework bolts the inserts into a triangle which is lowered into three augered holes containing prepared re-bar cages. The holes are then filled with concrete. Installing the pier foundation is less time consuming and less expensive than pouring a concrete slab foundation.

NOTE: When ordering antennas with pier foundation kits please specify: Model 6049 for Prime Focus Feed Antenna/Pier Foundation Kit.

High-Performance Prime Focus Feed

Blonder-Tongue's standard prime focus feed offers consistent high quality and unusual economy in a mid-sized earth station antenna. Sidelobe performance is excellent meeting 29-25 log θ sidelobe specifications. The feed system provides dual-polarization capability in the 3.7 to 4.2 GHz range, and can be manually rotated to any position.

SINGLE CHANNEL PROFESSIONAL ANTENNAS

BTY* SERIES

VHF Single Channel Professional Antennas

STOCK NOS. 4866S and 4867S(-)

- Patented* off-center driven element provides excellent 75 ohm match without use of fragile capacitors as required in gamma match antennas
- UPS shippable for reduced freight and handling cost
- Hard drawn, heavy wall aluminum boom for added strength. Square boom design assures positive lock with mast mounting bracket
- End-sealed aluminum elements for maximum vibration dampening. Lo-Band elements are fiber filled
- Antennas constructed to withstand 125 mph winds
- Elements are permanently affixed to an aluminum mounting block. Block has square interior aperture to completely encircle boom for optimum element alignment while preventing rotation
- Heavy duty bracket has serrated teeth for added grip to mast. Bracket accepts mast sizes up to 2" in outside diameter
- B-T Cantilever Mount available for rear mounting on a tower or mast. Unique design permits vertical or horizontal orientation of mast

BTY series single channel 5 and 10 element antennas are high quality, professional VHF/FM antennas designed for CATV and MATV installations. These antennas are designed with a two piece boom permitting the antennas to be shipped via UPS to reduce freight and handling costs. They are available for channels 2 thru 6, FM and 7 thru 13. NOTE: BTY-FM antenna has two driven dipoles for a total of six elements. BTY VHF antennas feature high gain and a narrow beamwidth at the individual channel. Two piece, square boom construction and end-sealed aluminum elements provide added strength, excellent wind resistance and exceptional weathering properties. The heavy duty mounting bracket is positioned at the antenna's center of gravity for balanced mounting to the mast. BTY antennas can also be rear mounted vertically or horizontally on a tower leg or mast (1-1/4" to 2-1/2" OD) using a B-T Model 5760 Cantilever Mount. BTY Series antennas feed 75 ohm coaxial cable downwards.

*Pat. No. 4,218,686. Other Pat. Pend.

Material and Finish

Boom—6063-T6 aluminum tubing, 1-1/4" Sq.; .062 wall thickness.
Elements—6063-T52, 1/2" Dia. aluminum tubing; .049 wall thickness.

Element Mounting Block—solid extruded aluminum; 1-3/4" x 2-3/4" x 1".

Mast Mounting Bracket—14 gauge steel with electroless nickel plating.

6063-T6 is a hi-strength aluminum/magnesium/titanium alloy.

Output Connector: 1-"F" Type

CANTILEVER ANTENNA MOUNT

STOCK NO. 5760

The Blonder-Tongue Model 5760 Cantilever Mount consists of a heavy duty square aluminum boom and all clamping hardware required for rear-end mounting of Blonder-Tongue antennas, Nos. 4866, 4867, 4871. The use of cantilever end-mounting is widespread in CATV systems since the antennas are usually attached to tower legs rather than to masts. The cantilever is designed to be mounted parallel to and below the antenna boom. Boom is 1-1/4" square aluminum tubing (6063-T6), 64-3/8" long. Mounting plates and brackets are #41 gauge stainless steel.

BLONDER-TONGUE LABS, INC.

YH-SERIES YAGI ANTENNAS

...Extra rugged for the highest quality systems.

- Extra heavy duty construction
- Superior high-gain performance
- VSWR 1.5 (14dB R.L.)
- Bandwidth 6MHz

The most rugged single-channel TV antennas available. Boom and all elements are made of heavy-duty, hard drawn aluminum tubing. Internal vibration dampers are sealed into all elements over four feet long. One piece dampers run the full length of the element to eliminate fatigue producing vibrations, greatly increasing the life of the antenna.

A gamma matching system with a completely encapsulated, moisture and weatherproof capacitor provides direct 75-ohm coaxial feed with no external matching baluns. Maximum transfer of received signals from the antenna to the feed cable is assured.

No holes are drilled in the boom. Elements are clamped on. Element ends are sealed with caps. Wind noise is minimized.

MECHANICAL DETAILS

- Boom — 0.058" wall thickness, 6061-T6 hard drawn aluminum, 1-1/2" outside diameter
- Elements — 0.058" wall thickness, 6061-T6 hard drawn aluminum, 3/4" outside diameter. Low band elements are fiber filled
- Element-to-Boom Connection — 3-1/2" x 3" x 1" solid aluminum block
- Boom-to-Mast Mounting — 6" x 7", 1/4" solid aluminum plate with four 3/8" cadmium plated U-bolts
- Accepts mast sizes from 2" to 2-1/2" outside diameter
- Wide element spacing provides typical gain 2dB higher than competitive models

* Supplied with load support struts. Boom shipped in two sections with all connecting hardware supplied.

** Thrust in lbs. transferred to supporting structure based on 30 lbs. per square foot wind pressure (100 miles per hour sustained wind on round boom antennas, 80 miles per hour sustained wind on square boom antennas).

Y-FM-2 OMNIDIRECTIONAL FM ANTENNA

Stock No. 4808

- Full 88-108MHz Frequency Range

The Y-FM-2 is a twin dipole FM antenna. Two 1/2 wave dipole elements mounted 90° to one another on the antenna mast give this antenna an omnidirectional reception pattern. Maximum transfer of received signals is assured by a weatherproof gamma match. An F-type connector accepts cable sizes from RG-59/U to .412 aluminum. Elements are attached to the boom (not supplied) with solid aluminum blocks. Element ends are sealed with end caps to minimize wind noise.

YSB MOUNTING ASSEMBLY

Stock No. 4760

- Stack antennas of the same channel for increased gain.

Bracket for stacking BTY and YH-Series antennas. Connects vertical and horizontal members of stacking frame. Six units required for horizontal quad array. Dimensions: 1/4" x 6" x 7" flat aluminum plate with four 3/8" diameter U-bolts. U-bolts adjustable to take any tubing from 1-1/2" O. D. to 2-1/2" O. D.

VHF AND UHF ANTENNAS

PROFESSIONAL VHF BROADBAND ANTENNA HI-BAND, 10 ELEMENT Stock No. 4871

DESIGN FEATURES

- Patented* off-center driven elements provide excellent 75 ohm match without use of fragile capacitors as required in gamma match antennas.
- Hard drawn, heavy wall aluminum boom for added strength. Square boom design assures positive lock with mast mounting bracket.
- End-sealed aluminum elements provide maximum vibration dampening.
- Elements are permanently affixed to an aluminum mounting block. Block has square interior aperture to completely encircle boom for optimum element alignment while preventing rotation.
- Heavy duty bracket has serrated teeth for added grip to mast. Bracket accepts mast sizes up to 2" outside diameter.

For CATV and MATV installations. It has a 10 element, broadband design for VHF channels 7 to 13 and features high gain and narrow beamwidth. The output feeds a 75 ohm downlead. The antenna has a two piece boom permitting less expensive UPS shipment, easier handling and reduced shelf space. Two piece, square boom construction and end-sealed aluminum elements provide added strength, excellent wind resistance and exceptional weathering properties. The heavy duty mounting bracket is positioned at the antenna's center of gravity for balanced mounting to the mast. The antenna can also be rear-end mounted vertically or horizontally on a tower leg or mast using a B-T Model 5760 Cantilever Mount.

ELECTRICAL

Gain Over Isotropic: 12.2dBI
Gain Over 1/2 Wave Dipole: 11dB (Ch. 7); 10dB (Ch. 13)
VSWR: 1.6:1
Return Loss: 14dB
Impedance: 75 ohms
Beamwidth (-3dB) Horizontal: 50.5° (Ch. 7); 42° (Ch. 13)
Attenuation of Undesired Side Lobes: 20dB
Bandwidth: 174-216MHz. 1/2dB flatness

MECHANICAL

Maximum Element (Reflector) Width: 35-1/2" (88.75 cm)

Turning Radius: 84" (210 cm)
Wind Resistance: 52 lbs. (23.6Kg)† (No Ice); 76 lbs. (34.5Kg)† (1/2" Ice)

Maximum Cross Sectional Area: 1.3 sq. ft. (0.117m²)
Operational/Survival Wind Velocity: 125 mph (200 kph) (No Ice)

† Thrust in lbs. transferred to supporting structure based on 100 miles per hour sustained wind on antenna.

Y-10 UHF ANTENNAS

Stock No. 4778-(*)

- Sold Aluminum Reflector and Director Elements
- High-Quality Gamma Match Gives Accurate 75-ohm Match
- Simple Installation

VRF-8

For CATV systems using UHF channels. Each antenna is designed to receive a single UHF channel, and provide higher gain and narrower beamwidth at the channel of interest than broadband UHF antennas. Heavy-gauge aluminum is used for durability and light weight. The mounting assembly is on rear of the antenna allowing it to be mounted directly to vertical tower members. This feature prevents the mast from interacting with the elements and interfering with the antennas' performance.

MECHANICAL

Boom: 0.058" wall thickness, 6063-T 832 aluminum, 3/4" O.D.
Elements: 1/4" solid, 2011-T3 aluminum
Center Sleeve: 1-9/16" x 1" x 3/4" solid aluminum block
Mounting Assembly: 3-1/2" x 1-1/2" x 1/2" bracket with single 3/8" x 2-1/2" cadmium plated U-bolt

Cable Connector: type F

Mast Size: accepts up to 2" O.D. mast

Wind Resistance: 100 MPH

ELECTRICAL

Gain: 13.6dB

Beamwidth: (-3dB points)
Vertical: 48°
Horizontal: 38°
(*) Specify Channel

ANTENNA STACKING DATA

Stacking single channel antennas (using more than one antenna for the same channel) increases gain and improves directivity. Some typical stacking arrays are shown below. To operate properly, single channel antennas in an array must be separated by a minimum of one wave length at the center frequency of the channel or a multiple of it. Dimensions A and B on the illustration are determined by this formula:

$$\text{One wavelength (in air)} = \frac{11811}{\text{Channel Frequency in MHz}} \text{ inches}$$

5 Element VHF Antenna Stacking Dimensions:

Channel	2	3	4	5	6	FM	7	8	9	10	11	12	13
Dimension A	8'8"	7'10"	7'2"	6'3"	5'10"	5'0"	2'9"	2'8"	2'7"	2'6"	2'5"	2'4"	2'4"
Dimension B	17'4"	15'8"	14'4"	12'6"	11'8"	10'0"	5'6"	5'4"	5'2"	5'0"	4'10"	4'9"	4'8"

GALAXY III PLUS SERIES PREAMPLIFIERS

- Designed for multi-set home or MATV system use
- Ultra low noise, mast-mounted preamp
- High gain post amplifier permits relatively long cable runs from the antenna without signal degradation
- Split band amplifier eliminates low band interference with high band in VHF
- Individually packaged in full-color display box with all mounting hardware and cable connectors

The Galaxy III Plus Series are two-unit amplification systems that can provide all the gain required for optimum television signal distribution in a multi-set home or a moderate size MATV installation. The system consists of a low noise, mast-mounted preamplifier and a high output indoor post amplifier/power supply. This arrangement allows each component to be optimized for its particular function and results in the best possible system performance.

All mast mounting hardware for the preamplifier and all cable connectors required are supplied with the unit. The Galaxy III Plus Series employs the most modern technology for protection from lightning and power line surges.

Skyliner III Plus

Two unit VHF amplification system for multi-set home or moderate size MATV installations.

Vaulter III Plus

Two unit UHF/VHF amplification system for multi-set home or moderate size MATV installations. Used with separate VHF and UHF antennas.

Suburban III Plus

Same as Vaulter III Plus except for use with combined UHF/VHF antenna.

Galaxy III Plus

As has been the practice in previous B-T preamplifiers, the Galaxy III series preamps employ a sharp cut-off filter at the input to reduce interference from strong local FM transmitters. As a result, the FM band gain drops to about 10 dB below the low-band gain at 95 MHz and above. Since this filter is at the input, noise figure at FM is also degraded somewhat. Thus the Galaxies can be considered to pass FM for most stronger signal applications, but will not be suitable for critical weak signal FM preamplification.

GALAXY III SERIES PREAMPLIFIERS

The Only Home Preamplifier with All These Features:

- All new transformer and power adder simplify hook-up and mounting
- Lowest UHF noise figure of any preamp available plus lower VHF noise figure
- Three way split-band amplifier sections (VHF 2-6, 7-13, and UHF) to eliminate low band signal interference with high band and to optimize dynamic range
- All UHF models fully operational thru ch. 83
- Each Galaxy III is protected from lightning and power line surges
- Dual models have a built-in splitter for two TV set feed from one preamp
- Units available for use with single or dual antennas
- Includes heavy duty mast mounting hardware to insure secure installation
- Individually packaged in colorful display box

A complete new look line of superior performance rated, mast mounted preamplifiers for any home installation requirement. Galaxy III units feature modern design; a high-impact polypropylene case; simplified mounting and all-channel range (thru ch. 83 on UHF). A compact indoor transformer and power adder are included with all models.

Horizon III

VHF amplifier for weak signal areas, 300 OHM downlead, 300 OHM output.

Horizon III Dual

Same as Horizon III with two outputs for two TV sets.

Horizon III Jr.

Economy VHF amplifier for medium signal areas. 300 OHM downlead, 300 OHM outputs for two TV sets.

Skyliner III

VHF amplifier for weak signal areas. 75 OHM downlead, 75 OHM output.

Skyliner III Jr.

Economy VHF amplifier for medium signal areas. 75 OHM downlead, 75 OHM output.

Skyliner III Dual

Same as Skyliner III with two 75-ohm outputs for two TV sets.

Able U2 III

UHF amplifier for weak signal areas. Amplifies channels 14-83, 300 OHM downlead, 300 OHM output.

Able U2 III Dual

Same as Able U2 III with two outputs for two TV sets.

Able U2 III 75

UHF amplifier for weak signal areas. Amplifies channels 14-83, 75 OHM downlead, 75 OHM output.

Cross Country III

All channel amplifier. Single 300 OHM UHF/VHF antenna input, 300 OHM downlead, 300 OHM output.

Suburban III

All channel amplifier. Single 300 OHM UHF/VHF antenna input. 75 OHM downlead, 75 OHM output.

Voyager III

All channel amplifier. Separate 300 OHM UHF and VHF antenna inputs. 300 OHM downlead, 300 OHM output.

Voyager III Dual

Same as Voyager III, but with outputs for two TV sets.

Vaulter III

All channel amplifier. Separate 300 OHM UHF and VHF antenna inputs. 75 OHM downlead, 75 OHM output.

Vaulter III Dual

Same as Vaulter III, but with outputs for two TV sets.

SCMA SINGLE CHANNEL VHF PREAMPLIFIER

Stock No. 4761 - (*)

- Low Noise Figure GUARANTEED
- Best Adjacent Channel Overload Rejection
- High Gain with Flat 6 MHz Bandpass

The SCMA is a very low noise, single-channel VHF and FM pre-amplifier. All solid state design featuring two "field effect" transistors provides a guaranteed ultra high signal-to-noise ratio. The actual noise figure of each individual unit is indicated on the case. Excellent gain and the ability of the unit to accept a wide range of input signal levels makes the SCMA ideal for difficult signal areas. The unit has exceptional immunity to overloads caused by strong adjacent channel signals. A full six MHz bandpass insures excellent color operation. Standard units have a 75-ohm F connector input and either F type output connector or .412" aluminum cable output connector.** A 20 dB output monitor jack (backmatched) permits the unit's performance to be checked without interrupting service. The unit mounts on the antenna mast and power duplexed on the downlead, eliminating the need for a separate power lead. Current required is -21 VDC at 65 ma. Mounting hardware and cable connectors supplied.

*Specify Channel

**Specify Output Connector (including type of .412 cable).

SPECIFICATIONS

Noise Figure: Channels 2-6, FM; less than 3.0 dB, Channels 7-13; less than 2.5 dB. **Gain:** Channels 2-6; 29 dB, Channels 7-13, 26 dB; FM, 24 dB. **Minimum Recommended Input for TASO Grade 1 (Excellent Picture):** -10 dBmV. **Operating Temperature Range:** -40° to +140°F.

SCMA-U-75 SINGLE CHANNEL UHF PREAMPLIFIER

Stock No. 4526-(*)

- Low Noise Figure GUARANTEED
- Unit Optimized for Single UHF Channel

This ultra-low noise UHF preamplifier is optimized for a single UHF channel. A unit's channel number and noise figure at that channel are indicated on its case. Beside its very low noise figure and excellent gain, each SCMA-U provides exceptional immunity to overloads caused by strong adjacent channels. Current required is 24ma at -21 VDC. All required mounting hardware and cable connectors are supplied. *Specify Channel

SPECIFICATIONS

Noise Figure: 3.5 dB +/- 1 dB typical (actual guaranteed noise figure indicated on case). **Gain:** Channels 14-69, 22 dB; 40-69, 21.5 dB; 70-83, 21 dB. **Minimum Recommended Input for TASO Grade 1 (excellent) picture:** Channels 14-39, 300pV (-10.5 dBmV); 40-60, 330pV (-9.6 dBmV); 70-83, 335pV (-9.5 dBmV). Use Model 1526 Power Supply.

BROADBAND PREAMPLIFIERS

CMA-(BB, HB, AND LB)

Broadband TV Preamplifiers

Stock No. 4948 (*)

- High Gain and Input Capability
- Provides Superior Performance with Wideband Antennas
- Available in Broad Band, High Band or Low Band to Meet Any Requirement

These companions to Blonder-Tongue's famous line of channelized low-noise preamplifiers combine exceptionally high signal-handling capability and gain with good input match to make them ideal for use with wideband antennas. A 300-ohm input connector and a 75-ohm type F, output connector permits the use of coaxial downlead without the necessity of a separate balun. A rugged metal case, wide operating temperature range, and mast-mounting design combine to make it ideal for tower installations. A backmatched output-monitoring jack is included for monitoring the units performance without interrupting service. Mounting hardware and a BTF-591 cable connector are supplied.

*Specify Band

DYNAMIC™ CATV PROCESSOR Stock No. 4455(*)

- Lower Adjacent Channel Intermod Trap Reduces Adjacent Channel Distortion and Intermodulation Products.
- Front Panel Auto/Manual Switch Facilitates Proof of Performance Testing without Altering Previous Level Settings.

The DYNAMIC is a CATV Channel Processor with automatic gain control and fully solid state circuitry. It is intended to amplify and stabilize the level of a single VHF channel in CATV headend systems. It is available for TV channels 2 thru 13, FM, A-1, A-2, A thru I, IF, and CH D inverted.

The combination of a low noise, high gain amplifier with high output capability and wide AGC window assures a large dynamic range providing a stable quality signal, free of distortion and intermodulation products.

Gain: VHF 52dB (min.)
57dB (typ.) FM 47dB (min.)
52dB (Typ.)

Bandpass Flatness: (Pix - 0.5 MHz Pix + 3.75 MHz) 0-35dB Gain Control Range: +/- 0.25dB Typ., +/- 0.9dB max. (6 MHz BW)
0-35dB Gain Control Range +/- 0.4dB Typ.

0-40dB Gain Control Range +/- 0.6dB Typ.
FM: (91 MHz to 108 MHz) +/- 1.5dB Typ., +/- 2.0dB max.

Maximum Output: 66.0dBmV Typ. for 1/2dB sync compression

Alternate Channel Rejection: -27dB Typ. (+/- 9 MHz from channel center) (use with BPFb Bandpass Filter and Audiomatic input for adjacent channel operation)

Power Requirements: 117 VAC, 60Hz, 0.11 amp (DC Auxiliary, -24 VDC, 0.15a)

Test and Monitor Points: EXTERNAL: OUTPUT. -30dB

Recommended Maximum Output Operating Level: 60dBmV for all distortion products -60dB (aural carrier -15dB, color subcarrier -25dB)

Output Level Range: 40-60 BmV min.

Output Return Loss: 18dB Typ. 54-216 MHz

Semiconductor Complement: 3 IC's, 1 FET, 12 Transistors, 19 Diodes

Mechanical: Line Cord: 3 wire grounded; 3 wire convenience outlet. Connectors: BTF-100, F-type, Female "G/F" at output test. Fuse: 1/8 amp, Slo-Blo. Dimensions: 19" L x 1 1/4" H x 5 1/8" D. Shipping Weight: 5 pounds.

(*) Specify Channel

AUDIOMATIC™ AURAL LEVEL CONTROL*

Stock No. 4461 *U.S. Pat. 4,081,839

- Compatible With Any Channel Processor
- IC ALC Unaffected by Chroma Subcarrier
- Hi-Q Asymmetrical Helical Resonator Notch Filter Controls Aural Carrier Level

The AUDIOMATIC Model 4461 is a self-contained automatic sound control system that continually monitors the Aural-Visual Carrier ratio of an incoming channel signal, and by processing this information, automatically varies the depth of a Hi-Q Helical Resonator notch filter to maintain an constant, pre-set ratio. The AUDIOMATIC is designed to automatically maintain a constant Aural-Visual Carrier ratio at the output of any Channel Processor.

Frequency Range: ch. 2-13, Midband (specify channel)

Thru-loss at visual carrier: 3.0 typical

Amplitude response flatness between 0.75 MHz to 5.0 MHz above lower boundary frequency (Pix -0.5 MHz to Pix +3.75 MHz): +/- 0.5dB typical (FCC spec is +/- 2dB)

Notch filter attenuation, manual front panel control: 0dB to 12dB (additional 4dB with rear panel control, with increased thru-loss)

Aural carrier ALC range indicator: LED indicates aural carrier ratio is being maintained

Aural carrier ALC range: 12dB or 16dB

Channel sample level requirements: +10 to +30dBmV(AGC'd in Audiomatic)

Temperature range: 0 to 50 C (32 F to 122 F) for 1dB change in A/V ratio when using max notch depth. No change when using less than max notch depth.

Power requirement: 117 VAC, 60Hz, 0.11 amp; (DC Auxiliary -24VDC, 0.15 amp)

Power Supply: No change in aural carrier level with AC power input between 100 VAC and 130 VAC

Battery backup operation: Automatically transfers to external -24 VDC battery power in event of AC powerline failure or AC voltage drop below 100 VAC

Size: 19" rack x 1 1/4" panel space x 5 1/2" deep

Aural Notch Filter shapes

CONVENTIONAL

Amplitude response of standard (symmetrically shaped) aural carrier notch filter (rolls off on color subcarrier. Does not meet CATV FCC specs)

AUDIOMATIC

The tandem system of BPF-c, AUDIOMATIC, and DYNAMIC meets the required FCC amplitude response specifications.

MCA-b VHF PROCESSOR, HIGH OUTPUT, SINGLE CHANNEL, AGC CONTROLLED

Stock No. 4454

- Interchangeable broadband amplifier board to facilitate maintenance
- Adjustable sound trap for lower distortion
- Lightning and line voltage surge protected
- True peak detector AGC
- Wide Dynamic Range

The MCA-b channel processor is a high-output VHF TV amplifier with automatic gain control and all solid-state circuitry. It is intended to amplify and stabilize the level of a single VHF-channel in MATV headend systems.

The MCA-b features high output even on adjacent channels through use of built-in intermodulation notch filter and built-in aural carrier level control notch filter.

Electrical:

Maximum output for 1/2 dB sync compression: 68.5 dBmV (2.7 volts) min.: 70.5 dBmV (3.3 volts) typ. with sound at -15dB

Recommended output operating level for color operation in alternate or adjacent channel systems (920 KHz beat at -55 dB, adjacent channel beat at -50 dB), with sound carrier adjusted to -15 dB, color subcarrier -25 dB: 68.0 dBmV (2.5 volts) min.; 69.5 dBmV (3.0 volts) typ.

Gain: 55.0 dB min.; 60.0 dB typ.

Noise Figure at Full Gain: 5.5 dB typ.

Output Level Control Range: 20 dB min.

AGC Range: 40 dB min.

AGC Stiffness (output change for +/- 20 dB input change): Less than +/- 0.25 dB at 69 dBmV output; less than +/- 0.5 dB at 59 dBmV output

Maximum input with level set at 69 dBmV output: 43 dBmV

Bandpass Flatness, 6 MHz BW (over 35 dB gain control range): +/- 1.0 dB max.; +/- 0.5 dB typ.

Alternate channel rejection (Use with BPFa Bandpass Filter at input for adjacent channel operation): -26 dB (+/- 9 MHz from channel center)

Input Match: 16 dB return loss typ.

Output Match: 18 dB return loss typ. greater than 9 MHz from channel center; 18 dB return loss typ. on channel

Power Requirement: 117 VAC, 60 Hz, 0.11 amp.

Test and Monitor Points: External: Output, -30 dB; Internal: AGC, 9.5V

Semi-conductor Complement: 1-IC, 1-FET, 7-transistors, 13 diodes

Mechanical: Line Cord: 3-wire grounded; 3-wire convenience outlet. Connectors: BTF-100, F-type, Female. Fuse: 1/8 amp. Slo-Blo. Dimensions: 19" L x 1 1/4" H x 4" D. Shipping Weight: 4 pounds.

CHANNEL CONVERTER/ FILTERS/MODULATORS

MUC-3 UHF TO VHF SINGLE CHANNEL CONVERTER

STOCK NO. 1468

- Uniform gain independent of the channel conversion for stable operation.
- High input capability with low noise figure for wide dynamic range over entire UHF band.
- Local oscillator is easily adjustable thru front panel for fine tuning.
- Rigid extruded aluminum base and sturdy aluminum cover for added protection of components.
- Sealed RF can minimizes radiation and isolates RF module from undesired signals.

The Masterline MUC-3 is a single channel UHF to VHF converter with a temperature compensated, highly stable L-C oscillator. Each converter is factory tuned for a specific customer-selected conversion.

FORBIDDEN CONVERSIONS

UHF Channel to VHF Channel

22,23,24,25	7
25,26,27,28	8
28,29,30,31	9
31,32,33,34	10
34,35,36,37	11
37,38,39,40	12
40,41,42,43	13

NOTE: The Forbidden Conversions listed would lead to picture impairment in single stage converters. Special conversions such as UHF to subchannels, midband, superband, hyperband, and European versions are also not available in the MUC-3 Converter. Other models provide these options.

UX-3 SINGLE CHANNEL UHF TO VHF CONVERTER

STOCK NO. 1424

- High frequency crystals minimize total number of potentially interfering spurious harmonics
- Custom built/conversion compatibility verified

Crystal-controlled, solid-state, UHF to VHF amplified converter. **Gain:** 4-13 dB (depending on conversion). **Noise figure:** 9-15 dB (depending on conversion). 75-ohm input and 75-ohm loop-thru outputs. BTF connectors (male connectors supplied). **Crystal:** +/-0.005%. **Power Requirements:** 117V, 60Hz, 0.065A. **Size:** 9"L x 4-5/8"W x 3-1/4"H. Specify UHF input and VHF output channels, when ordering. Custom built. If UHF channel frequency minus VHF frequency is greater than 500 MHz use **Model 8214 Ux-3 .002%** converter for compliance with FCC CATV specs.

ESHM

ESHM MODULATOR FOR CATV AND PRIVATE CABLE SYSTEMS

Stock No. 5928

- Heterodyne conversion process provides proper vestigial sideband selectivity for use in adjacent channel color systems
- Removable converter module for easy, in-field channel change, without opening modulator housing
- SAW filter provides flat group delay and maintenance-free bandpass characteristics
- Three light indicator system shows proper video modulation and over or under modulation
- Aural/Visual IF loop-thru allows IF scrambling or alternate source of composite IF. Separate aural and video loop-thru is available
- Wide range of available frequencies—TV channels 2-13, midband (A-I), superband (J-W).

The ESHM is an all solid-state heterodyne audio/video modulator. It generates modulated visual and aural RF carrier output on any single VHF (2-13), Midband (A-I), or Superband (J-W) channel of a closed circuit CATV or SMATV system. It requires only standard baseband video and audio inputs. The ESHM also features excellent modulation qualities for use with character generators. The heterodyne conversion system provides proper vestigial sideband selectivity for use in adjacent channel color systems. The modulator uses a SAW (Surface Acoustic Wave) filter which provides flat group delay and maintenance-free bandpass characteristics.

A combined IF loop-thru accommodates the use of an alternate source of combined IF, as well as IF scrambling equipment. Optionally, separate aural and visual IF loop-thrus can be provided for the ESHM in order to use alternate scrambling systems. The modulator accepts standard NTSC signals (Sync negative, 0.5-2.5 p-p) from video sources such as a satellite receiver, video tape recorder, TV demodulator, or TV camera. All level controls and modulation indicators are located on the front panel for ease of operation.

The ESHM has a removable heterodyne module, (slide-out drawer), which permits qualified service personnel to easily change channels in the field, without removing the entire modulator from the headend rack.

A three-light indicator system pinpoints correct video modulation as well as under or overmodulation. An audio overmodulation indicator is also provided.

ESHM CHANNEL CONVERSION REPLACEMENT MODULE

Stock No. 5938

Slide-out drawer allows changing of channels in the field quickly and easily without removing the entire modulator from a headend rack or opening the modulator housing. Specify channel when ordering.

CATV DISTRIBUTION AMPLIFIERS

DA 400-33

DA-21

LP-45P

DA-51

DA-33

LP-30

LP-51

DA 400-33 CATV DISTRIBUTION AMPLIFIER Stock No. 4475

- Full 53 Channel Bandwidth; 40 MHz to 400 MHz
- Uses Two Ultra Reliable, Push-pull Hybrid Integrated Circuits
- Wide Range, Continuous Gain and Slope Controls
- Regulated Power Supply
- Surge Protected Amplifier and Power Supply Sections

The DA 400-33 is a high-output, 53 channel CATV Distribution Amplifier. The unit uses push-pull hybrid IC amplifiers and has cable slope compensation from 40 MHz to 400 MHz. The DA 400-33 features a gain control adjustable from 15 to 33 dB (continuously variable).

The DA 400-33 is designed for a wide variety of applications. It is primarily used for the CATV distribution of TV/FM signals in the 40 to 400 MHz frequency range. Other applications include use as an instrumentation amplifier to increase the output level of a sweep or signal generator; as a preamplifier for CATV signal level meters for making FCC required signal leakage measurement.

CATV INDOOR DISTRIBUTION AMPLIFIERS

DA-51 2/3 WIDEBAND DISTRIBUTION AMPLIFIERS

- Specifically Designed for CATV "DROP" Distribution Systems
- Wide Frequency Range for Incorporating MID-SUPER Bands with VHF/FM

Designed for TV signal distribution systems that use a CATV "drop" as a signal source. 50 to 300 MHz bandpass. An excellent amplifier for apartment buildings fed from a CATV system wide frequency range allows the DA-51 to be used in systems incorporating MID and SUPER band channels with the standard VHF and FM channels. Push-Pull Hybrid IC output. Has high output capability of 56 dBmV on each of 12 channels. Two models of the DA-51 are available: DA-51-3 with a slope control covering 50-300 MHz, and DA-51-2 with a slope control operating between 50-220 MHz.

DA-21 CATV DISTRIBUTION AMPLIFIER

- Ideal CATV Distribution Amplifier in Small Apartment Buildings

The latest in CATV distribution amplifiers. 50-300 MHz response. Includes many features found only in higher priced units.

DA-30 WIDEBAND DISTRIBUTION AMPLIFIER

- Flat Response — 50-300 MHz.
- 40 dBmV Output per Channel for 21 Channels.
- Front Panel Gain and Slope Controls.
- Slim Line Design — Easy to Install.

Designed specifically for apartment building and other multi-set installations served by CATV. Features flat response from 50 to 300 MHz for distribution of VHF, MID, and SUPER band channels. Good output capability and wide gain and slope control ranges make it easy to adapt to any system. Front panel gain and slope controls.

DA-33 WIDEBAND AMPLIFIER

- Ultra-Wide Bandwidth 0.5 MHz-300 MHz
- Push-Pull Hybrid IC Amplifier
- Exceptionally High Output

The DA-33 features extremely wide bandwidths; 0.5 MHz to 300 MHz, wide range continuous gain control and surge protected amplifier and power supply sections. It is ideal for increasing the output level of sweep generator or signal generator to test very lossy devices under test, such as long lengths of coaxial cables, coaxial relay isolation, etc. The DA-33 is also used as a preamplifier for CATV signal level meter (SLM) used to make FCC required signal leakage measurements. It may also be employed as a sub-channel return amplifier. In this case external multiplexers such as Blonder-Tongue MSVM are required to bypass VHF in the forward direction.

The DA-33 is also used aboard ship where its coverage of the short wave and communications bands is desired.

LP-30 CATV LINE EXTENDER AMPLIFIER

Stock No. 4618

- Push-Pull Hybrid IC for High Output Capability
- 50 to 300 MHz Bandpass—30 Channel Capability
- Input and Output Adaptors Permit Use of Aluminum Cable Connectors
- Backmatched Input and Output Test Points for Uninterrupted Service

The LP-30 CATV Line Extender Amplifier is designed for direct insertion in CATV trunklines. Designed primarily for buried systems, this amplifier's input and output connectors are both located on the same end of the unit. This feature facilitates vertical installation in CATV equipment pedestals. Adaptors are supplied to permit use of aluminum cable connectors.

The LP-30 may be powered from either the input or output side of the thru-line and has a 6 amp, thru-power capability. Gain and cable slope adjustments located on the front panel. Gain is continuously adjustable between 10 and 30 dB. Cable slope may be varied between a fixed minimum of 6 dB and a maximum of 20 dB. Input and output test jacks are provided for signal and amplifier performance monitoring.

LP-45P IN-LINE AC POWERED AMPLIFIER

- High Output and Gain Provide Exceptional Stability
- Added Flexibility — Wide Range Gain and Tilt Controls

The LP-45P amplifier is designed for VHF/FM CATV distribution systems in which AC power is duplexed on the TV signal distribution cable. The unit accepts power from either its input or output sides. It will pass power straight through or can be used to block power from either side. Connectors are standard 75-ohm, F-type. Test points (isolated from AC power) are provided on both the input and output. This amplifier features all solid state, printed circuit board construction. Split-band amplifier design permits separate gain and band slope adjustment (low band with FM and high band). Wide trunkline spacing and elimination of temperature equalizers is possible, owing to the wide dynamic range of the LP-45P.

LP-51 CATV LINE EXTENDER AMPLIFIER

Stock No. 4421-(2) (3)*

- Push-Pull Hybrid IC for High Output Capability
- Wide Range, Continuous Slope and Gain
- Input and Output Adaptors Permit Use of Aluminum Cable Connectors
- Selector Allows Powering from Input or Output and Provides Thru-line for Powering Subsequent Units in Cascade

The LP-51 is a broadband CATV Line Extender Amplifier designed for direct insertion in CATV branchlines. The amplifier's input and output connectors are both located at the same end of the unit. This feature facilitates vertical installation in CATV pedestals. Adaptors are supplied to permit the use of a variety of aluminum cable connectors. Slope controls are available that hinge at 220 MHz or 300 MHz.

The LP-51 may be powered from either the input or output side of the thru-line. A power selector jumper board allows installers to block power from either the input connector or to pass power through the amplifier. The voltage necessary to power the amplifier ranges from 20 to 60 VAC, and is selectable externally with a jumper board.

The line extender has high output capability through the use of a push-pull integrated circuit in the output stage. Push-pull design results in cancellation of second order distortion products (typically to 65dB below rated output); triple beat suppression, 64dB.

VIDEO/AUDIO MODULATOR PRODUCTS

TVM 4930 Television Modulator

Stock No. 4930 \$1979.53

The TVM is an all solid-state, high quality, audio video modulator that generates TV channel RF carriers using video and audio sources. The unit accepts standard polarity video (sync negative) of .5-2VP-P level. The TVM features a loop-thru video input and a balanced line level bridging input provided for the audio. Level controls and modulation indicators are provided on the front panel. Aural intercarrier phased locked to 4.5 MHz.

- Switch Selectable VID/4.5 MHz Optional Input
- Wide Frequency Range; Ch 2 thru 13, Sub and Midband
- Balanced Low Impedance MIC Input with XLR Connector
- Vestigial Sideband Filtering Suitable for Adjacent Channel Color Systems

Various options are available in the TVM. These include:

Option 2 \$468.58

CHANNEL LOCK MODULE: Visual carrier channel lock to an amplified and filtered off-the-air channel to eliminate co-channel beat.

Option 3 \$292.88

FCC GROUP DELAY PRE-CORRECTION NETWORK: Envelope delay and chroma delay meet FCC Group Delay specifications.

Option 4 \$190.39

VIDEO LPF: Video low pass filter removes spurious signals above 4.2 MHz from video sources to protect adjacent channels from interference.

Option 5 \$292.88

A/V AGC: Audio/Video AGC controls the audio and video level to prevent overmodulation or undermodulation of aural and visual carrier respectively.

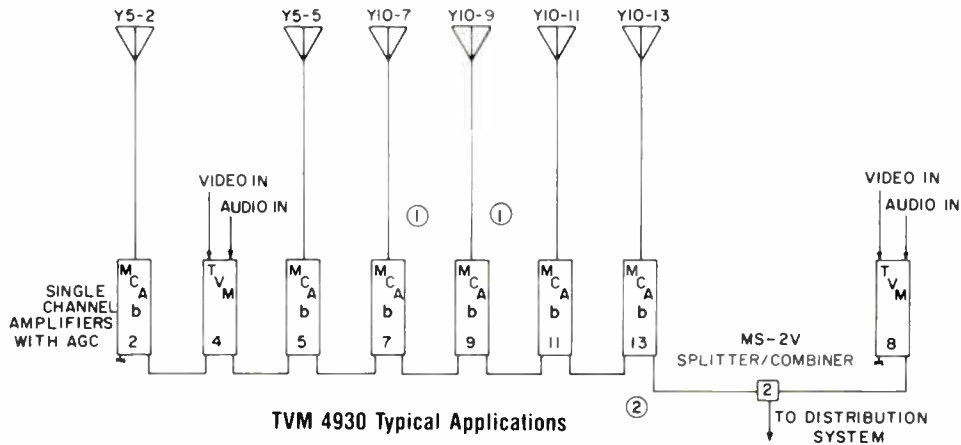

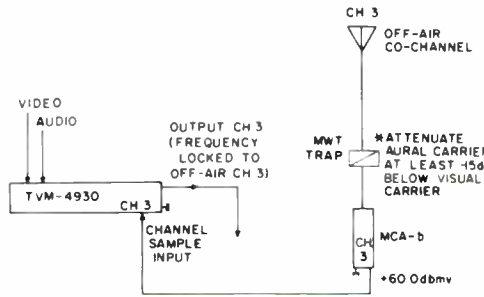

Option 7 No charge when ordered with 4930

AURAL/VIDEO SEPARATOR: Takes composite video/4.5 MHz from a microwave receiver output and provides 4.5 MHz aural input to aural mixer and video to video modulator. Microphone input circuitry and 4.5 MHz phase lock circuits are deleted. High-level audio input is included for bench testing when 4.5 MHz aural is not available.

NOTE: A maximum of two options may be selected from Options 3, 4, 5, and 7. Audio AGC portion of Option 5 is not functional with Option 7. Use Option 6 with Option 7.

Frequency Range, Standard: TV Channel 2 to Channel 13; **Special:** Sub-band, IF, and Midband channels.

Visual Carrier Output: +57 dBmV.

TVM 4930 Typical Applications

AVMTa Modulator

Stock No. 4923 \$1068.81

The AVMTa is an all solid-state, audio video modulator that provides a modulated visual and modulated aural carrier RF output on any single VHF TV channel 2-13. It can be used to put sound and color video on any unused channel of a closed circuit, MATV or CATV system. The AVMTa works with standard video sources such as a TV camera, video tape recorder, or TV demodulator. The wide range audio input can be directly driven from an AM or FM tuner tape recorder, or Hi Impedance dynamic or crystal microphone. The AVMTa may also be used for carrier substitution.

The model number of the AVMTa indicates its channel of operation, e.g., AVMTa-4 is a channel 4 unit. All AVMTa's are designed for rack or cabinet mounting.

Frequency Range, Standard: SUB Channels B-1 to B-6; VHF Channels 2 to 13; **Special Order:** Midband.

Spurious Beats in adj. channel at +50 dBmV output: -50 dB min., -65 dB typ.; **All other spurious outputs up to 300 MHz.:** -60 dB, -65 dB typ.

VCM: Video Channel Modulator

Stock No. 4926 \$442.71

The VCM-4926 solid-state video channel modulator is designed to provide low cost modulated visual carrier RF output on any single TV channel 2-13. It may be used as a carrier substitution generator.

The VCM contains a vestigial sideband filter, suitable for adjacent channels operation and also assures quality performance for both monochrome and color TV channels. The operating RF output level is at least +20 dBmV with a control provided on the front panel for adjustment over a 14 dB range. The VCM accepts video inputs from a line, film chain, camera or TV demodulator. The video signal before modulation is DC restored at tips of sync, thus preventing variations in the RF output due to changes in the picture content.

AUDIO/VIDEO MODULATOR

MAVM Audio/Video Modulator

Stock No. 5923

FEATURES

- Heterodyne Conversion Process Insures Optimum Vestigial Sideband Selectivity for Adjacent Channel Color Systems
- I.F. Loop Thru Allows Replacement of Standard I.F. Output with Alternate Source of Composite I.F. or Allows Use in All-Call Alert Systems
- Field Replaceable Heterodyne Converter Board for Easy In-Field Channel Conversion
- Calibrated Video and Audio LED Indicators
- Video and Audio Level Controls

MAVM Audio/Video Modulator \$811.46
MAVM Converter Module 268.94

The MAVM is an all solid state heterodyne audio/visual modulator that provides a modulated visual and aural RF carrier output on any single VHF (2-13), Midband (A-1), or Superband (J-W) channel. The Modulator can be used to put sound and color video on any unused channel of a closed circuit MATV or SMATV system. The heterodyne conversion system which is employed insures optimum vestigial sideband selectivity for adjacent channel color systems.

I.F. loop-thru capability in the MAVM supplies a padded I.F. output before channel conversion. This feature provides the capability to replace standard internally generated I.F. and "all call" capability.

The MAVM has a field replaceable heterodyne converter board which permits qualified service personnel to change channels in the field.

The Modulator accepts standard polarity (sync negative) of 0.7-2.5Vp-p level from video sources such as a satellite receiver, TV camera, video tape recorder or TV demodulator. All level controls and modulation indicators are located on the front panel for ease of operation.

SPECIFICATIONS

RF

Frequency Range:	TV Channels 2-13, Midband Channels A-1, Superband Channels J-W
Output Level:	+40 dBmV, Typical 35dBmV Min.
Output Level range:	10 dB, continuously adjustable by the front panel output level control
Aural/Visual Carrier Ratio Control:	-9 dB to -30 dB, continuously adjustable by the front panel output level control
Visual Carrier Frequency Tolerance:	10 KHz Typical
Aural Carrier Frequency:	4.5 MHz above visual carrier \pm 500 Hz
Spurious Output (except for video sidebands) at 35 dBmV output:	64 dB down, Typical (A/V carrier ratio 17 dB)
IF Output Level:	Set at 30 dBmV
IF Input Level:	35 dBmV Max., A/V carrier ratio 15dB, color subcarrier @ -25dB, for 920 beat (External IF in) > 55 dB down
Output Return Loss:	12 dB
IF Output Return Loss:	10 dB
IF Input Return Loss:	12 dB
Intermod Distortion: (3 tone 920 beat)	60 dB, 35dBmV output, A/V carrier ratio-15 dB, color subcarrier -25 dB

VISUAL

Video Input for 87.5% depth of modulation:	0.7V p-p Min
Video Modulation Depth:	Set @ 87.5% adjustable to 96% Typical
Vestigial Sideband Response:	Optimized for adjacent channel operation
Video Input Return Loss:	18 dB
Visual Carrier to Noise Ratio in 4 MHz Bandwidth:	60 dB
P-P Video to RMS Hum Ratio:	60 dB
Differential Gain: @ 87.5% Modulation	\pm 0.25 dB
Differential Phase: @ 87.5% Modulation	\pm 1°

AURAL

Input Audio for 25 KHz Peak Deviation:	50mV RMS
Aural Overmodulation LED Deviation:	25 KHz \pm 2 KHz
4.5 MHz Inter-carrier Stability:	\pm 2.5 KHz, 0°C to 50°C
Power Requirements:	100-130 VAC, 60 Hz, 0.8 A
Fuse:	3 AG, 125V, 1/8A Slo-Blo
Temperature Range:	0°C to 50°C

MECHANICAL

Dimensions:	19"W x 1 1/4"H x 4 1/4"D
Weight:	5 1/2 lbs. (Approximate)
Connectors	
Audio In:	RCA phono
Video In:	"F" type
RF Out:	"F" type
I.F. In and Out:	"F" type

MATV DISTRIBUTION AMPLIFIERS

MVB-15 VHF/FM Distribution Amplifier

Stock No. 1445

Low noise, high gain, broadband VHF and FM amplifier featuring the exclusive patented* ICEF circuit for increased input capability while combining low distortion with a low noise figure. Full band FM amplification when tunable FM trap is not used. 75-ohm input and output. **\$63.89**

MVB-25 VHF Distribution Amplifier

Stock No. 1498

- Designed Specifically for VHF MATV Installations
- Patented* ICEF Circuit Increases Input Capability
- Provides Snow-Free Reception in Weak Signal Areas
- Switchable FM Stop Filter Eliminates Interference from Strong FM Signals when Necessary

The MVB-25 is a medium gain, low noise, VHF broadband amplifier. It features the exclusive, patented inductively coupled emitter feedback (ICEF) circuit that increases input capability while combining low distortion with a low noise figure. **\$91.10**

MVB-35 VHF/FM Distribution Amplifier

Stock No. 1450

- Designed for Medium Size VHF MATV Installations
- Separate Gain Control for High and Low Bands
- Split Band Input Amplifiers
- Switchable FM Bandstop Filter Prevents FM Overload

The MVB-35 is a medium gain, low noise VHF broadband amplifier. It includes patented* inductively coupled emitter feedback circuit for wide dynamic range. **\$147.77**

MUVB-15 UHF/VHF/FM Distribution Amplifier

Stock No. 1444

Amplifies all VHF and UHF channels thru ch 83 plus FM. Low noise, high gain distribution amplifier for large home or small MATV systems. Features ICEF circuit separate VHF and UHF sections and tunable FM trap. Single UHF VHF 75-ohm input and output. **\$87.28**

MUVB-25 UHF/VHF Distribution Amplifier

Stock No. 1499

- Superior UHF Gain to 890 MHz — Ideal for Translator Reception
- Extra Low-Noise Figure for Snow-Free Pictures
- Accepts Inputs from Separate UHF and VHF Antenna Cables or from a Single UHF/VHF Antenna Cable
- Switchable FM/MID Band Stop Filter — Removes Interference from FM and Communications Band.

The MUVB-25 is a medium gain, low noise, broadband amplifier with both UHF and VHF amplifiers. The VHF section of the amplifier features the exclusive patented* inductively coupled emitter feedback (ICEF) circuit that increases input capability while combining low distortion with a low-noise figure. **\$128.42**

MUVB-35 UHF/VHF/FM Distribution Amplifier

Stock No. 1451

- Full UHF Gain to 890 MHz — Ideal for Translator Reception
- VHF Split Band Amplifiers Reduce Distortion
- Separate Gain Controls for High and Low Band VHF and UHF
- Switchable FM Bandstop Filter Prevents FM Overload

The MUVB-35 is a medium gain, broadband UHF VHF FM amplifier designed for use in medium size "on-channel" MATV systems. It features wide dynamic range, excellent stability and low noise. A switchable input mode permits the use of either a combined UHF VHF antenna or separate UHF and VHF antennas in a system. **\$281.65**

MVB-45 VHF/FM Distribution Amplifier

Stock No. 1446

- Dynamic Range Increasing Type Gain Control
- Maintains Signal-to-Noise Ratio at Reduced Gain Settings
- Separate Gain Control for High and Low Band
- High Input Capability with Low Noise Figure
- Switchable FM Bandstop Filter Prevents FM Overload

The MVB-45 is a broadband VHF FM MATV distribution amplifier featuring high gain and high output with low noise assuring a wide dynamic range. It consists of independent high and low band input amplifiers, main amplifier with three stages of RF amplification and power supply. Switchable combined or split inputs are provided for use with either a single antenna (low band FM high band) or for separate low band and high band antennas. **\$332.59**

MASTERLINE PLUS® MVB-56 VHF/FM Distribution Amplifier

Stock No. 1447

- Automatic Overload Protection. Stabilizes Output Levels Over a Wide Range of Input Signal Levels to Prevent Overload
- High Output Capability and Low Noise Figure for Wide Dynamic Range
- Dynamic Range Increasing Type Gain Control
- Selectable Manual Gain Control or Automatic Level Control for each band
- FM Bandstop Filter can be "Switched In" to Prevent FM Signal Overload or "Switched Out" when High FM Sensitivity is Desired

The MVB-56 is a solid state, broadband VHF FM MATV Amplifier with automatic overload protection to stabilize the output signal level. This very high gain unit consists of a main amplifier with three RF amplification stages, independent high and low band input amplifiers, automatic overload protection circuitry, independent variable high and low band gain controls. Signals can be provided by either a single antenna (low band FM, high band) or by separate low band and high band antennas since the MBV-56 has switchable, combined or split inputs. *US Pat No 3,413,563 **\$423.71**

MASTERLINE PLUS® MVB-62 VHF/FM Distribution Amplifier

Stock No. 1455

- Dynamic Range-Increasing Type Gain Control
- Automatic Overload Protection
- Integrated Circuit Design for Added Reliability
- -30 dB Test Point for Ease of Monitoring

The MVB-62 is a 75 ohm solid state, low noise, high output VHF distribution amplifier with automatic overload protection to stabilize the output signal. It is designed for large MATV systems using an off-the-air signal source. The unit features independent (LB HB) automatic level controls, high output capability and a low noise figure. Switchable combined or split inputs permit signals from a single antenna (LB HB FM) or separate antennas. The MVB-62 has switch selectable Manual Gain Control or Automatic Level Control in each band. **\$673.92**

VARIFLEX SYSTEM II

The VARIFLEX System II is a new generation modular headend designed for medium and large MATV applications. The plug-in modular approach simplifies installation by eliminating interconnecting cables. The system consists of a broadband VHF FM Amplifier mounted on a

base plate. The Amplifier has both automatic and manual level controls. The base plate accepts a maximum of eight cartridges on non-adjacent VHF channel assignments. Amplified channel filters, passive channel filters, and UHF to VHF single channel down converters are avail-

able. An input separator module can be added when a single broadband antenna is used to feed several filters. A locking security cover is available to enclose the complete system.

VARIFLEX System II Specifications

Amplifier Stock No. 1477

- **Gain** : LB FM 45.5 dB
: HB 47.5 dB
- **Bandpass Flatness** : LB FM 1.0 dB
54-88, 88-108, 174-216 MHz : HB 1.2 dB
(0-18 dB gain control range)
- **Noise Figure (Full Gain)** : LB = 6.4 dB
: HB = 5.4 dB
- **Input Return Loss** : LB = 17 dB
: HB = 11.5 dB
- **Output Return Loss** : LB = 13 dB
: HB = 15 dB
- **Output Capability**
Flat (7 Ch. crossmodulation @ -46 dB) : 55.5 dBmV
Block Tilt -6 dB (LB 6 dB below HB) : 57.5 dBmV

- **Gain Control Range (minimum)** : 18 dB
- **AGC Stiffness** : -0.8 dB
(18 dB input change of 7 Ch. @ 56 dBmV output)
- **Hum Modulation** : -58 dB
(117 VAC, 25 C)
- **Power Capability (INPUT)** : 265 mA @ -21 VDC
Any combination of VARIFLEX II Amplified Filters, Filters or Converters
- **Power Requirement** : 117 VAC, 60 Hz, 0.25A

Amplified Filter Stock No. 1476 - (*)

- **Gain** : LB 12.5 dB
: HB 12 dB
: FM 11 dB
- **Bandpass Flatness** : LB 1.0 dB (0-20 dB gain control range)
(6 MHz Bandwidth) : HB 1.0 dB
: FM 1.5 dB
- **Noise Figure** : LB 9.2 dB
(Full Gain) : HB 8.3 dB
- **Input Return Loss** : LB 11 dB
: HB = 13.5 dB
: FM 7.5 dB

- **Recommended Input Range** : 8.0 dBmV to 26 dBmV (Use Filter #4576 for higher level inputs)
(For rated output and 9 dB into ALC range of VARIFLEX II Amplifier)
- **Gain Control Range** : 20 dB minimum
- **Selectivity** : LB 30 dB 9 MHz from
: HB 35 dB center of channel
: FM 13 dB (6 MHz from band edge)
- **Power Requirement** : -21 VDC, 17 mA, diplexed to RF output

*Specify Channel

Filter Stock No. 4576 - (*)

- **Selectivity** : 40 dB down 9 MHz from channel center
TV Channels 2-13
: FM 20 dB down 6 MHz from band edge
- **Return Loss** : 13 dB RL (input)
- **Attenuation Range** : 6 dB (min. loss) to 24 dB

- **Bandpass** : TV Channels 2-13 6 MHz (-0.75 dB Flatness)
: FMA 88-108 MHz
: FMB 92-108 MHz

Converter Stock No. 1490 (*)

- **All UHF to VHF**
Conversions except Channels : 22-25 to 7 34-37 to 11
: 25-28 to 8 37-40 to 12
: 28-31 to 9 40-43 to 13
: 31-34 to 10
- **Gain/Attenuation** : Adjustable from +13 dB to -12 dB
- **Return Loss** : Input = 16 dB
: Output = 18 dB
- **Selectivity** : 18 dB down to 6 MHz from band edge
- **Power Requirement** : -21 VDC (supplied from amplifier)

*Specify Channel

VHF Separator Stock No. 4578

- **Impedance** : 75 ohms
- **Return Loss** : 18 dB RL (Input)
- **Insertion Loss** : 0.3 dB
- **Isolation between outputs** : 20 dB min

Cover Stock No. 4579

- **Dimensions** : 17 7/8" L x 10" W x 6 1/4" H
- **Material** : 20 Gauge Turnplate (coated steel)
- **Finish** : Black Textured
- **Weight** : 5 1/4 lbs
- **Accessories** : Double bit tumbler lock and two keys

VRF-17

FEATURES

- Full broadcast quality and versatility
- Every unit fully tested
- Wide variety of standard patterns and gains

Bogner broadcast quality broadband slot antennas are designed for translator and low/medium power TV broadcasters. Bogner antennas are fully comparable in quality and versatility to the finest high-power antennas available to broadcasters today, but are substantially lower in cost. This is achieved through use of the inherently simple Bogner single slot per bay design, standardization of radiation patterns, and the utilization of modular construction and modern manufacturing techniques.

Antennas with any of twelve horizontal patterns, and a choice of vertical patterns, gains, and power input ratings up to 10kW, can be delivered in a very short period of time after order. These antennas are available for any High VHF (Band III) channel up to 8 MHz wide (between 170 and 230 MHz); for any one, or for any group of contiguous, UHF (Bands IV and V) channels up to 30 MHz wide (between 470 and 890 MHz); or for any SHF group up to 42 MHz wide (1990 to 2700 MHz).

TV Transmitting Antennas (Low and Medium Power)

MDS 2160 TO 2163 MHz BAND, O AND A PATTERNS	
(other directional patterns 25% additional)	
Model	Price
B4SO, B4SA	\$ 3,950.00
B8SO, B8SA	6,675.00
B16SO, B16SA	12,800.00
B24SO, B24SA	17,900.00

ITFS/MMDS 2500 TO 2690 MHz BAND, ANY 42 MHz GROUP	
(1.25 max. VSWR over full 2500 to 2690 MHz band 5% additional)	
Model	Price
B4S ()	\$ 7,500.00
B8S ()	10,000.00
B16S ()	15,000.00
B25S ()	22,000.00

First null fill and electrical beam tilt available on all MDS and ITFS antennas, except (B4S ()) at no additional charge.

Combined MDS and MMDS and dual polarized antennas available. Consult factory.

UHF SLOT ANTENNAS*

NON-METALLIC CONDUIT PIPE

CARLON PLUS 40® RIGID NON-METALLIC CONDUIT (Heavy Wall EPC)

The most widely used rigid conduit in the United States, UL listed for use underground, encased in concrete or direct buried, and for use exposed or concealed in most conduit applications above ground. It is rated for use with 90°C conductors and is sunlight resistant. (See NEC Article 347 and other sections for approved locations.) Special compounds are used which reduce emission of smoke and HCL in fire situations, and impart better weathering characteristics.

PLUS 40 HEAVY WALL

6"	49017	6.625	6.065	.280	387	10

Rigid Non-Metallic Conduit is normally supplied in standard lengths of 10 feet including one coupling. For specific requirements it may be produced in lengths shorter or longer than 10 feet, with or without couplings. Couplings may be integrally formed (as shown) or attached.

CARLON PLUS 80® RIGID NON-METALLIC EXTRA HEAVY WALL CONDUIT (EPC-80)

Carlton Plus 80® conduit is designed for above ground and underground applications where an extra heavy wall PVC conduit is needed. Frequently used where subject to severe physical abuse such as for pole risers, bridge crossings, and in heavy traffic areas. UL listed for use with 90°C conductors and is sunlight resistant.

Rigid Non-Metallic Conduit is normally supplied in standard lengths of 10 feet. Couplings may be integrally formed (as shown) or attached. For specific requirements it may be produced in lengths shorter or longer than 10 feet, with or without couplings.

CARLON PLUS A® THIN WALL RIGID NON-METALLIC CONDUIT (EPT)

Carlton Plus A® , UL listed (concrete encasement only) for use with 90°C conductors, complies with UL Standard 651A. It is used primarily in underground installations encased in concrete.

PLUS A THIN WALL

EXPANSION COUPLINGS

(EXPANDS TO A MAXIMUM OF 6")

E945 Series Expansion couplings are designed to compensate for temperature variations of 120°F in exposed applications per 200 feet of conduit. E955 Series Expansion couplings are for use in extremely short runs. If installed at lowest anticipated temperature, coupling should be in full open position. If installed at intermediate temperature, adjust coupling proportionately. See instructions on label. Be sure to secure barrel portion of expansion coupling only.

NOTE: When encased in concrete, conduit is immobilized by the concrete and will conform to the expansion rate of the concrete.

PROCESSOR SYSTEMS

FMU 2150C SATELLITE STEREO PROCESSOR SYSTEMS

FEATURES

- Warner Music TV Compatible
- Composite Video & Subcarrier Input
- Frequency Agile (Synthesized) FM Stereo Output
- Dual Tone Decoders
- VTR Control/Audio and Video Switching
- Independent 600 ohm Mono Output
- Status Indicators and Front Panel Metering

Description

The Catel FMU 2150C is a single unit processor in a 1-3/4" rack mount, which is designed for the Warner MTV Service or any other satellite subcarrier service using separate L + R and L - R subcarriers.

The processor features a state of the art Frequency Agile FM stereo modulator which can be programmed on any frequency in the 88-108 MHz range. Frequencies in the 50-200 MHz range can also be accommodated on special order.

A comprehensive tone decoding/switching section provides all necessary tone decoding for the dual 19 kHz tones transmitted for commercial insertions. All video and audio switching functions are contained within the unit. An internal Matrix/Stereo generator converts L and R audio from commercial inserts to true stereo.

Front panel diagnostics include a subcarrier presence indicator, tone decoder and switching status, and an L + R VU meter which can be used to monitor deviation of the main program audio, or the commercial substitution audio.

*Dolby registered Trade Mark of
Dolby Laboratories

FMU 2150C

SPECIFICATIONS:

SUBCARRIER INTERFACE

Input Frequencies

- 5.8 MHz (L - R)
- 6.62 MHz (L + R), supplied by satellite receivers as part of the composite baseband signal.

Input Configuration

- 75 ohm, BNC connector

Input Sensitivity

- 30 to -16 dBV (0 dBV = 1 Volt P.P. Video) or subcarrier amplitudes of 30 to 150 mV P.P. in baseband video

Input Deviation Acceptance

- ±75 kHz APL
- ±237 kHz PPL

TV MODULATOR INTERFACE

Output Configuration

- 600 ohm, unbalanced, screw terminal strip

Output Level

- 0 dBm at APL

FM STEREO INTERFACE

Output Frequency

- Synthesized, 87 to 108 MHz std., or 50 to 200 MHz on special order

Frequency Stability

- ±.001% phaselocked

Output Configuration

- Built in directional coupler, BNC

Output Level

- +25 to +45 dBmV (adjustable) including built in directional coupler loss

Spurious Products

- >65 dB

AUDIO CHARACTERISTICS

Within ± 0.5 dB of transmitted signal from 30 Hz to 15 kHz

Pre-Emphasis

75 μ Sec, modified to 25 μ Sec by Dolby*B encoder, at uplink location

Distortion

≤0.3% THD at 1kHz

Stereo Separation

≥30 dB at 1 kHz

TONE SWITCHING

Tone Frequencies

19 kHz ± 10 Hz

Trigger Sensitivity

≤15 kHz peak deviation of carrier by tone

VTR Relay

One set form C contacts, 2A rating at 30V DC, momentary closure

Commercial Insert Relay

One set form C contacts, 2A rating, closed for duration of tone. (Audio switching performed electronically inside unit.)

PHYSICAL CHARACTERISTICS

Dimensions

19"W x 1-3/4"H x 9"D

Shipping Weight

15 lbs.

Operating Temperature

+10 to +40°C

Power Requirements

115 or 230VAC (specify) 16 watts

**CT-558 "CABLE CUSTOMIZED"
AM/FM HEADEND MONITOR TUNER****FEATURES**

- AM/FM Reception
- Total Digital Tuning—Down/Up Frequency Seeker
- Quartz PLL Frequency Synthesis
- 7 Memory Presets
- Signal Strength Indicator with 10dB steps
- 50dB Stereo Separation
- Multi-function Display Lights up to Indicate Correctly Tuned Station, Frequency Selected, Memory Function, Stereo Mode, and Signal Strength

The CATEL CT-558 AM/FM Stereo—quartz PLL synthesized tuner is customized for headend rack mounting and was selected from the H.H. Scott superior line of high fidelity stereo tuners for its exceptional performance and reliability. This tuner is the epitome of tuners available on the market today.

CATEL has customized the CT-558 in only 3-1/2" of rack space for close monitoring of your premium FM audio service. Modifications include an output level of 0dBm at 600 ohms which can be connected to the audio portion of a TV modulator for background music.

This state of the art tuner featuring quartz PLL frequency synthesis includes a microprocessor-controlled memory permitting insertion of from one to seven stations for instant recall by the touch of a numbered button. Additional enhancements include auto-scan tuning, fluorescent display for display readout, signal strength and center tuning, stereo indicator, active hi-blend filter, mode selector, 9.8dB f/1.7uV sensitivity, a varactor diode tuning.

The CATEL CT-558 tuner is truly a professional component with sensitivity and reliability as inherent characteristics.

SPECIFICATIONS:**FM Tuner Section**

Tuning Range: 87.9 to 107.9MHz
Usable Sensitivity: -55dBmV (1.7uV)
50dB Quieting Sensitivity: (Mono) -48dBmV (4uV)
(Stereo) -28dBmV (40uV)

Audio Output Level: 0dBm at 600 ohms
Signal to Noise Ratio: (Mono) 78dB
(Stereo) 72dB

Total Harmonic Distortion: 0.04% at 1kHz (stereo)
0.03% at 1kHz (mono)
Frequency Response: 25Hz to 15kHz +0.5dB, -1.5dB
Stereo Separation: 50dB at 1kHz
Spurious Rejection: 65dB at 98MHz
Image Rejection: 60dB at 98MHz
AM Suppression Ratio: 70dB
Capture Ratio: 1.2dB
Alternate Channel Selectivity: 60dB at 400kHz

AM Tuner Section

Tuning Range: 530 to 1620kHz
Usable Sensitivity: 250uV/m (Bar Ant)
Audio Output Level: 0.25V, 2K ohm
Signal to Noise Ratio: 52dB
Image Rejection: 45dB

General:

Power Requirement: 120V 60Hz
Power Consumption: 35 watts
Dimensions: 19"W x 3-1/2"H x 11-1/4"D
Shipping Weight: 3.5kg (8.25 lbs)

TELEVISION MODULATOR

TM-2400

TM-2400 TV MODULATOR

FEATURES

- I.F. modulation at moderate price
- In-the-field channel change
- Output level of +54 dBmV standard, to 60 dBmV optional
- Meter for both video and sound modulation levels
- Low differential gain: + /-0.5 dB
- Low differential phase: + /-1.0 degree
- Automatic white limiter
- High impedance or 600 ohm audio input
- 6 to 440 MHz frequency range
- Ten pole band pass filter
- Available on most international standards

DESCRIPTION:

The TM-2400 TV modulator brings the advantages of IF modulation within reach of almost any CATV and CCTV system. Technical performance meets the most stringent broadcast, CATV and CCTV requirements. It can be used with film chains, cameras, VTRs or TV demodulators. For microwave, a second version (TM-2400B) is available with composite video and 4.5 MHz intercarrier input. The TM-2400 is available in CCIR standard B, G, I, K, M and N, and is compatible with NTSC, PAL or SECAM VIDEO.

In addition, the TM-2400 is the only unit in its price range with easy, in-the-field channel change, a feature usually found only on more expensive modulators.

As a result, users can change the operating channel by simply changing a P.C. board assembly. Aural and visual circuits are also modular, to make field maintenance easier. Since the IF design allows modulation at a fixed frequency, filters are optimized for a true vestigial side band signal.

SPECIFICATIONS

SPECIFICATION	VISUAL	AURAL
Frequency Range	All Channels With Modular Converter	All Channels With Modular Converter
Input Level	Min. 0.5 Volt Peak to Peak for 87.5% Modulation	Min. -10 dBm for 100% Modulation (± 25 kHz Deviation)
Input Impedance	75 Ohms, Unbalanced, Terminating	5,000 Ohms, Unbalanced, and 600 Ohms, Balanced
Output Impedance	75 Ohms	75 Ohms
Output Level Capability	+ 60 dBmV	Adjustable from 12 to 27 dB Below Visual Carrier
Recommended Output	+ 54 dBmV (Factory Set)	+ 39 dBmV (Factory Set)
Output Control Range	20 dB, Continuously Variable	15 dB, Continuously Variable
Frequency Response	30 Hz to 4.2 MHz at ± 1 dB	Within ± 1 dB of Pre-emphasis Curve, 50 to 15 kHz
Frequency Stability	0.005%	± 1 kHz
Hum and Noise	60 dB Down at 87% Modulation	60 dB Down with ± 25 kHz Deviation
Distortion		≤ 1% at Full Deviation
Modulation Range	0 to 92% APL, Variable	± 25 kHz
Spurious Beats	Minimum 60 dB Below Video Carrier @ + 54 dBmV (Aural Carrier) @ + 39 dBmV	
Color Response	± 0.5 dB Max. Diff. Gain ± 1.0 Degree Max. Diff. Phase	
Power Input	105 to 125 VAC, 60 Hz, 25 Watts (230 V, 50 Hz optional)	
Dimensions	3½" x 12" x 19" Rack Mounted	
Shipping Weight	17 Pounds	
Connectors	Video, BNC, Audio, Cannon XL, R F F	
Optional Extras	Non-standard Connectors, Group Delay Network (Meets FCC Specifications 73.687 with GDF2300 Group Delay Pre-distortion Network)	

SPECIFICATIONS CCIR M/NTSC

COLOR TELEVISION MODULATOR

CTM20

CTM20 Color Television Modulator

FEATURES

- Microcomputer Control
- Extensive Control and Monitoring Capability
- Central Control Serial Data Interface
- Totally Modular Expansion
- Multiple Audio/Visual Switching
- Internal Message Generator
- Complete Scrambler Interface
- Surface Acoustic Wave (SAW) IF Filtering
- Bar Graph Modulation Indicators
- Calibrated Detent Modulation Controls
- Self Test Mode
- Audio/Video/IF AGC Signal Level Normalizing

The CTM20 is a high performance digitally controlled modulator designed for all applications in CATV system headends, local origination, terrestrial microwave service, and satellite TVRO signal remodulation for cable distribution. The modulator incorporates an on-board microcomputer control system, complete audio, video, and IF signal switching, and provisions for controlling operating levels, signal switching, and the monitoring of system performance from a central terminal or under local control.

System Design Flexibility

The modulator is designed to give total configuration control to the system operator. All options for the modulator can be readily field installed by the equipment user. System revisions, updates, or reconfiguration can be made from the central control computer and through the option hardware within the modulator.

SAW Vestigial Sideband Filter

A surface acoustic wave IF filter is utilized in the CTM20. Inherently linear phase and a flat amplitude response across the channel passband are achieved with the SAW filter, insuring excellent video signal transparency and waveform fidelity. The exceptional shape factor obtained with the SAW filter affords excellent adjacent channel protection. Auxiliary video and IF filters with attendant all-pass delay correction circuits are not required with the SAW filter.

Phase Equalization

The SAW IF filter exhibits an inherently flat group delay characteristic across the channel passband. The shaped group delay characteristic specified for color television transmission is provided by an all-pass phase equalizer in the video module.

Control and Monitoring System

A microcomputer based control system contained within the CTM20 provides extensive controlling and monitoring capability. All switching functions as well as modulation levels and the channel output level are controllable from a headend terminal. Up to four audio and three video signal sources may be accepted by each modulator. A video message generator option located within the modulator offers preprogrammed, custom messages as the fourth video signal source.

Local control of the modulator's audio, video, and IF switching is accomplished by means of parallel, hardwired switch input lines to the modulator's control module.

Audio and video modulation levels are internally precalibrated to normalized values. Adjustment of detent type front panel controls permits local override of the preset levels or central controller command if desired.

Control Features

AGC — Automatic level control of selected audio, video, and IF signal inputs is optionally available within the CTM20. These options serve to normalize the modulator's modulation characteristics and carrier level under all conditions of signal switching, and provide the means for remote programming and monitoring of these functions.

Signal Switching

The internal signal switching provisions within the CTM20 will accommodate multiple signal sources (both baseband and IF) and various modes of switch program control. All commands for signal switching are processed by the microcomputer located within the modulator and permit the control of switching functions by local commands generated at the headend site, by automatic prioritized signal selection, or by override of both these through central controller commands.

Baseband Switching

The audio/video switches respond to the microcomputer generated commands, with switching decisions based on 4 data input types:

- hardwired, parallel data switch commands into the modulator
- presence of video at each of 4 audio/video switch locations in the modulator
- the priority level of each switch relative to all other switches
- central controller serial data input commands to the modulator

Audio switching normally will follow the associated video switch unless otherwise specified by central controller command. The hardwired, parallel data inputs permit audio override to energize the emergency audio alert switch or to switch off all audio sources.

IF Switching

The substitute IF signal switching control may be enabled by either local, hardwired input line commands, or by the central controller data input. Automatic switching to an external IF signal source may be initiated by the loss of a selected video input signal source if so desired.

Signal Scrambling

A scrambler interface for both IF and baseband encoders is included in the CTM20 chassis. Separate picture and sound carrier loop through connectors provide the interface to IF scramblers. Video loop through connectors at the video output bus allow baseband scrambling of the CTM20 switch selected video source. An aural subcarrier input provides for sound security in baseband encoding systems.

Monitoring Features Self Test Mode

The self contained local monitoring system provides a self test mode that is automatically initiated with power up of the modulator, or at the request of the local keyboard. Ten parameters are sequentially checked against internal preset limits contained in ROM. The measured parameters are:

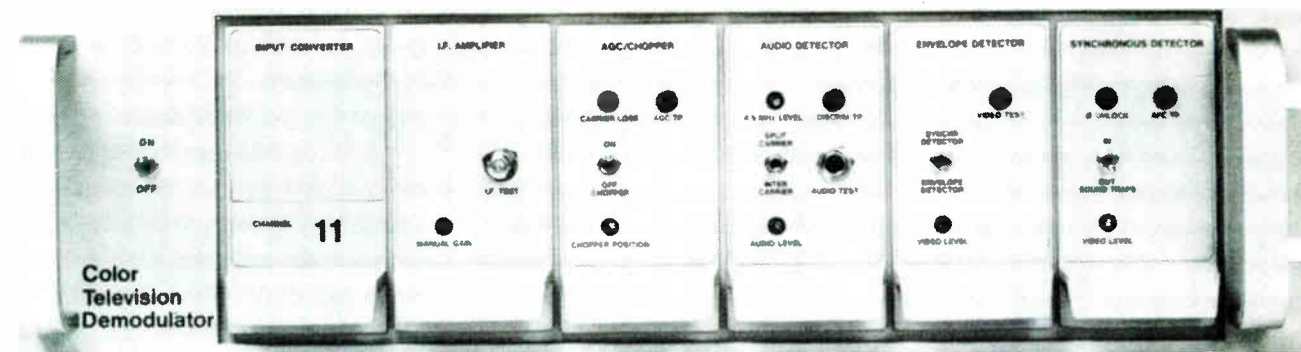

- Audio, video, VSB filter, and converter module currents
- Audio and video modules local 5 and 15 volt regulator outputs
- Audio module and output converter AFC levels

COLOR TELEVISION DEMODULATOR

CTD10

CTD10

Color Television Demodulator

FEATURES

- Synchronous/Envelope Detection
- Zero Carrier Chopper
- Video Squelch
- Switchable Sound Traps
- Split Carrier/Intercarrier Sound
- Audio Squelch
- Balanced Audio Output
- DC and AC Input Powering

The CTD10 Series Demodulators are solid state and have been designed for use in cable system applications. The demodulated signal is available for monitoring, video processing, or remodulation for transmission over cable system or microwave systems.

Synchronous/Envelope Detection

Both synchronous and envelope video demodulation are available in the CTD10. Selection of the desired detection mode may be chosen by front panel control, or remotely from rear panel contacts. Logic circuitry automatically enables the envelope detection mode with removal of the optional synchronous detector module. Rear panel terminal jumpering also permits automatic transfer to envelope detection with synchronous detection phase unlock.

SPECIFICATIONS

Input Level Range:

- 20 dBmV to +30 dBmV VHF Channels
- 10 dBmV to +30 dBmV UHF Channels

Operating Channels:

- Any standard VHF 2 thru 13
- Any standard UHF 14 μ thru 83 μ
- Sub-Low Cable Channels T 7-T11
- Cable Channels 14 thru 36 (A-W)

Noise Figure:

- 6 dB Channels T7 thru T11 & 2 thru 6
- 7 dB Channels 7 thru 13
- 12 dB Channels 14 μ thru 83 μ

Input Impedance:

- 75 ohms nominal

Input VSWR:

- 16 dB (1.37:1) 6 MHz Channel width, over specified input level range

AGC Type:

- Keyed AGC, sync tip referenced

AGC Control:

- ± 0.5 dB maximum video variation over specified input level range

Image Rejection:

- 60 dB VHF, 50 dB UHF

IF Rejection:

- 60 dB

Adjacent Channel Rejection:

- 60 dB

IF Frequency:

- 45.75 MHz Visual Carrier,
- 41.25 MHz Aural Carrier

Video Output Impedance:

- 75 ohms, 30 dB min return loss

Video Output Level:

- Adjustable to 1.5 VP-P, sync tip to peak white

Video Frequency Response:

- a) Envelope detector ± 0.5 dB, 30 Hz-3.58 MHz
- b) Synchronous detector, sound traps in: ± 0.5 dB, 30 Hz-4.18 MHz
- c) Synchronous detector sound traps out: ± 0.5 dB, 30 Hz, -4.5 MHz

Envelope Delay:

- a) Sound traps in circuit, Chroma/Luminance delay within ± 25 nsec of complement of FCC transmitter nominal delay
- b) Sound traps out of circuit, Chroma/Luminance delay within ± 25 nsec (synchronous detector only)

Linearity:

- 2% Synchronous, 5% Envelope Detection

Differential Gain:

- $\pm 1\%$ Synchronous
- $\pm 2.5\%$ Envelope Detection

Differential Phase:

- $\pm 0.5^\circ$ Synchronous
- $\pm 1.0^\circ$ Envelope Detection

Chopper:

- Position adjustable within vertical blanking interval, width adjustable between 30 μ sec and 60 μ sec

Chopper Carrier Cutoff:

- 55 dB

Video Squelch:

- Activation selectable from one or more of 3 modes
- a) Carrier loss
- b) Adjustable threshold carrier level
- c) Synchronous Detection Phase Unlock

Audio Output Level:

- Adjustable to 2.0 VRMS across 600 ohms (Before deemphasis starts). The main output is balanced or unbalanced to ground depending on the selected option. The monitor output is always unbalanced to ground

Audio Frequency Response:

- ± 0.5 dB from 30 Hz to 15 kHz

Audio Deemphasis:

- 75 μ sec

Audio Harmonic Distortion:

- 0.5%, 30 Hz to 15 kHz, 25 kHz deviation at specified maximum audio output level

4.5 MHz Output:

- Adjustable to 0.2 VP-P, 75 ohms source impedance, 1:25:1 VSWR

AC Powering Input:

- 100 to 130 VAC, 50-60 Hz, 30 watts

DC Powering Input:

- 21.5 to 30.0 VDC, 800 mA, negative ground

Option Code C

DC Powering Input:

- 21.5 to 28.0 VDC, 1.5A, floating ground

Ambient Temperature:

- 0 to +55°C operating

Dimensions:

- Standard 19" rack mount, 5-1/4"H, 16" chassis depth

Weight:

- 24 lbs.

FMX-2100

FMX-2100 FM Modulator

FEATURES

- Direct modulation of RF carrier
- Oven regulated VCO for high stability
- Fully solid state
- Crystal controlled output on any VHF or HF frequency
- Pre-emphasis or optional flat response
- Output plus 45 dBmV...continuously variable over 15 dB range
- Meter indicates percentage of modulation

The FMX-2100 FM Modulator is a modular packaged frequency modulation cable transmitter designed specifically for CATV and CCTV applications. When used with the SM-2200 Stereo Generator it makes possible the origination of stereo programming. With direct audio sources such as AM/FM tuners, tape decks, microphone preamplifiers and short wave receivers, it can add varied FM signals to the cable system. In addition to the re-transmission of audio signals the wide band (plus or minus 75 kHz) deviation makes

the unit ideal for multiplexed voice or data transmission.

The crystal controlled output of the FMX is normally on a customer selected frequency in the 88 to 108 MHz frequency range. It is also available, at added cost, on any other HF or VHF frequency on special order. The unit is fully solid state and employs an oven regulated VCO for greater stability. Up to ten FMX-2100 Modulators can be powered from a single PS-2000 Regulated Power Supply.

SPECIFICATIONS

Frequency Output:

50 to 55, 87 to 108, 170 to 174 MHz. Other frequencies to 200 MHz are available on special order

Output Impedance:

75 Ohms

Output Level:

+45 dBmV

Output Control:

Continuously Variable

Frequency Stability:

0.005%, Crystal Controlled

Response:

Response:

Within ± 1 dB of Pre-emphasis Curve, 50 to 15 kHz or 50 to 60

kHz, ± 1 dB without Pre-emphasis

(Hi Z input)

Modulation Frequency Range:

30 Hz to 100 kHz

Modulation Capability:

75 kHz Deviation

Hum and Noise:

60 dB Below Maximum Output

Power Requirements:

+12.6 VDC @150 ma

Multiplexing:

Catel SM-2200 Available, See Data Sheet

Input Impedance/Level:

5000 Ohms Unbalanced and 600

Ohms Balanced Standard, - 10

dBm for 100% Modulation

Modulation:

Oven Regulated VCO

MODULATORS/DEMODULATORS

WFMM 3000 MODULATOR

WFMD 3000 DEMODULATOR

SERIES 3000

Signal Transmission Systems for Broadband Coax and Fiber

Series 3000 is a new family of professional quality signal transmission systems, using plug-in modules, for broadband communications.

Combining CATEL's over 15 years of experience with innovative ideas in electronic design, Series 3000 gives broadband coax users superior performance, high reliability, and unequalled convenience. These advantages are described below, using, as an example, the new WFMS-3000 broadband video/FM transmission system.

The WFMS-3000 is a complete, 70 MHz IF based, broadband system featuring sophisticated circuitry and compliance with international standards. The system provides virtually transparent transmission of wideband signals such as video (PAL/NTSC/SECAM), high speed PCM Multiplex Data, and Analog FDM Multiplex signals.

Modular Flexibility

The basic Series 3000 housing is a 5-1/4" EIA, rack mount frame and power supply that accepts up to eight separate Series 3000 modules. Three modules typically make up any basic sub system. So, two sub systems can be combined in one cabinet, with two individual module slots left free for auxiliary functions. For instance, an FM modulator and demodulator can form a full modem. Any 3000 Series module can be used in any slot because all slots have identical universal connecting, and all systems are user programmable by means of rear panel BNC jumpers. True modular performance is guaranteed because modules can be replaced without need for systems adjustments to meet full specs.

Wide Frequency Range

In step with the latest bandwidth expansions of broadband coax systems, operating frequencies in the Series 3000 cover 5 octaves, from sub-low to hyperband frequencies. In the WFMS-3000 system, for example, double conversion input and output converters are used to cover the 14 to 130 MHz range, and single conversion converters cover the 130 to 450 MHz range.

To enhance the frequency agility of the Series 3000 Systems, a frequency translator

can be created by pairing back to back input and output converters with an IF AGC and filter module (3720 Wideband IF Processor).

Fiber Optics and Data I/O Compatible

Cabinet space in all Series 3000 systems is provided for modules that can interface the system to fiber optics links, high speed data buses, T1 Multiplexers and FDM Multiplexers. Or, the extra slots can be used for auxiliary functions. In a typical television link application, they are taken up by an Audio Modulator and an Audio Demodulator.

User Programmable Options

The circuit boards on all Series 3000 PC boards have a variety of options, such as different clamping, emphasis, supplementary phase equalization, and signal filtering modes which are implemented via jumpers. Therefore, system modules can be customized for specific installations.

AC or DC Operation

Series 3000 systems can be AC or DC powered. The standard AC mode provides both 110 and 220 volts, selectable by a switch on the rear panel of the Power Supply Module, which comes as part of the basic Series 3000 cabinet.

Front Panel Diagnostics

A major feature of the Series 3000 is the use, on module front panels, of LED performance indicators and alarms, BNC connectors or test jacks and screwdriver adjustments. You are able to see, at a glance, the status of your system, easily make any signal tests needed and quickly make any necessary adjustments. The front panel features of the WRMS system are described below.

Sub-Carrier Audio Modulator

The 3303 Sub-Carrier Modulator is used to carry audio as a 4.5 MHz (NTSC), or a 5.5 MHz (PAL/SECAM) sub-carrier above video. This module accepts audio and a video loop, and presents composite video to the Video Input Processor Module. Front panel controls are provided for deviation adjustments (monitored by a 4 segment LED indicator), and sub-carrier superimposition level.

Input Video Processor

The 3101 Video Input Processor provides clamping, CCIR pre-emphasis, video gain and DC disposition to the IF Modulator. A video presence indicator is provided as a diagnostic aid.

Wideband FM Modulator

The Wideband IF Modulator is available in two versions: Model 3102 (NTSC), and Model 3104. The 3104 is particularly well suited to high speed data applications, as well as PAL/SECAM television signals. These modules are phase-locked on 70 MHz, to ensure precise channel centering. Test points for incoming processed video and modulated IF, an AFC alarm and an LED deviation indicator are provided for diagnostics.

Output Converter

The 3105 (14 to 130 MHz) and 3106 (130 to 450 MHz) Output Converters accept the 70 MHz IF signal and translate it to the desired frequency. A -20dB test connector is provided for convenient monitoring of the output signal.

Input Converter

The 3205 (14 to 130 MHz) and 3206 (130 to 450 MHz) Input Converters translate the received channel frequency to the 70 MHz IF. A 70 MHz test point is provided for observing the 70 MHz IF signal.

Wideband FM Demodulator

The 3202 Wideband IF Demodulator provides the selectivity to the system through phase corrected IF filters. A spare phase equalizer is built into the module, which can be user programmed into the IF path to fine tune any desired specification for special applications. AGC is combined with limiting, to reduce AM to PM conversions and ensure consistent performance over the specified input level range. Front panel diagnostics include a low input level indicator, as well as a test point for the demodulated baseband signal.

Sub-Carrier Audio Demodulator

The 3401 Sub-Carrier Demodulator is a particularly versatile module. Designed to accept a composite (video + sub-carrier) signal, this unit delivers a demodulated audio signal, a filtered video signal with sub-carrier removed, and the original composite video signal. An elaborate, phase-equalized low pass filter, with buffering amplifiers, is used to ensure minimal degradation of the filtered video signal.

More detailed instructions about all these front panel features are available in the instruction manuals furnished with each Series 3000 system.

MODULATORS/DEMODULATORS

VFMM VIDEO FM MODULATOR
WITH AUDIO MODULE

VFMD VIDEO FM DEMODULATOR
WITH AUDIO MODULE

VFMS-2000 System

FEATURES

- Greater than 60 dB Signal to Noise
- Improved Impulse Noise Immunity
- Longer Transmission Runs with Less Distortion
- No Gain and Tilt Compensation Required
- Low Maintenance, Solid State Design
- Minimum Cross-Modulation Effect
- High Output Levels
- Improved Group Delay Performance
- Ideal for PCM Multiplex
- Lower Cost than Comparable AM Systems
- Minimum Effect from Intruded Signals

The Catel VFMS Video FM Transmission System consists of a VFMM-2000 Video FM Modulator and a VFMD-2000 FM Video Demodulator. Frequency range available is from 16 to 340 MHz with standard bandwidth of 14 MHz. (NTSC) or 16 MHz PAL/SECAM.

Due to the noise immunity advantages inherent in FM, this system is capable of long distance transmission of high speed data, television pictures of facsimile with minimum distortion.

SPECIFICATIONS

VFMS-2000 Video FM System

- Frequency Range:
16 MHz, to 340 MHz—System (Specify)
- Channel Bandwidth:
14 MHz (NTSC), 16 MHz (PAL)
- Video Frequency Response:
 ± 0.5 dB 30 Hz to 4.2 MHz NTSC, 25 Hz to 5.5 MHz (PAL/SECAM)
- Chrominance-Luminance Delay:
 ± 50 nsec (62-340 MHz Systems)
- Differential Gain:
 ± 0.5 dB
- Differential Phase:
 $\pm 2^\circ$, 3.58/4.43 MHz
- Signal to Noise Ratio:
60 dB Min. Back to Back (Unweighted)
+ 15 dBmV Receive Level
- Field Squarewave Tilt:
2% Max.
- Operating Temperature:
+ 10 to + 40°C, Ambient

VFMM-2000 Video FM Modulator

- Input Level:
1.0V Peak-Peak, (Adjustable)
- Input Impedance:
75 Ohm Unbalanced
20 dB Return Loss
- Deviation:
800 kHz, Sync tip to peak white
- Output Impedance:
75 Ohm Unbalanced
16 dB Return Loss
- Output Level:
 ± 54 dBmV, (Adjustable)

- Frequency Stability:
 $\pm 0.1\%$
- Spurious Output:
Min. of 60 dB Below Peak
Carrier Level Outside 14 MHz Bandwidth

VFMD-2000/BPF-2100 Video FM Demodulator

- Input Level:
+ 10 dBmV Min. to + 30 dBmV Max.
- Input Impedance:
75 Ohm Unbalanced
16 dB Return Loss
- Output Level:
1V Peak to Peak (Adjustable)
- Output Impedance:
75 Ohm Unbalanced
20 dB Return Loss

PS-2500 BP Power Supply

- Input:
110/220 VAC, 50/60 Hz, 60W Max.
- Outputs:
+ 12.6 VDC
-15.0 VDC
- Regulation:
Electronic
- Protection:
Input—Fused
Output—Electronic Short Circuit Protected

- Options:
Video bandwidths to 20 MHz
Enhanced deviation
High level launch to + 80 dBmV
Low level receive to -10 dBmV,
Preamp & Equalizer
12, 24 or 48 VDC power supplies

FMX-2100 Audio Modules

- Output Level:
+ 45 DbmV (Adjustable)
- Frequency Range:
14-200 MHz
- Audio Frequency Response:
 ± 1 dB of 75 Microsecond Pre-emphasis
curve 50 Hz to 15 kHz
- Deviation:
 ± 75 kHz Max.
- Harmonic Distortion:
Less than 1% (50 Hz to 15 kHz)

- Hum and Noise:
60 dB below 100% Modulation
- Input Level:
-10 dBm
- Input Impedance:
5000 Ohms unbalanced or 600 Ohms
balanced
- Spurious Signals:
60 dB below max. output
- Frequency Stability:
 $\pm 0.005\%$
- Power Requirements:
+ 12.6 VDC 220 mA max. (Powered by
PS2500 Power Supply)

FMRX-2200

- Frequency Range:
4 MHz to 200 MHz (Specify)
- Sensitivity:
3 Microvolts for 30 dB Quieting (IHF)
- Selectivity:
Less than 150 kHz at 30 dB down
Less than 250 kHz at 50 dB down
- Passband:
200 kHz
- AM Rejection:
50 dB
- Capture Ratio:
2.5 dB
- Spurious Response:
-80 dB Minimum
- Audio Output:
+ 10 dBm at 600 Ohms
- Audio Frequency Response:
 ± 1 dB of 75 Microsecond De-emphasis
Curve, 50 Hz to 15 kHz
- Harmonic Distortion:
Less than 1% (50 Hz to 15 kHz)
- Hum and Noise:
-60 dB Minimum
- Power Requirements:
12.6 VDC, 115 mA (Powered by PS2500
Power Supply)
- Options:
50 Microsecond Pre and De-emphasis
Flat Response
Stereo Capability

with other CAFM equipment

FMX-2100 with
tamper-guard cover

FMX-2100 module

Three FM channels
plus power supply

CAFM

Today, with the increasing emphasis on additional sources of CATV revenue, a growing number of operators are finding that expansion of FM services is an effective, yet relatively simple and inexpensive way to increase subscribers and profits. The combination of greater variety in both TV and FM, plus the improvement in FM reception, results in an extremely attractive and saleable home entertainment package.

First of all, the availability of a wide variety of high quality FM signals can attract people who are not too interested in more television channels but who are critical music listeners. Many FM fans will be happy to pay a premium for improved reception and added variety.

Secondly, CAFM can increase the revenue from existing subscribers. This can be a significant source of profit, since the cable is already in place. If FM was not in your original package, you may be able to qualify for new rates because CAFM brings real benefits to the community. The Catel CAFM package can also strengthen applications for new franchises.

To implement such a program, a majority of systems use the Catel CAFM program. The Catel CAFM program involves the use of modular, rack mount equipment (see Figure 1) to add as many as 50 channels of off-air and locally originated FM programming, and such special services as time and weather broadcasts. And, since Catel CAFM equipment is modular, you can start small and add other services as the market grows.

Catel FM equipment is specifically designed to satisfy the requirements of any size CATV system. With few exceptions, the product modules described below are 12" D x 3 1/2" H; module widths vary from 2" to 8". Catel has standard, 19" wide cabinets with 16" of module space. These hold various module combinations to give you maximum budget and design flexibility in both initial system setup and later system expansion.

FM REPEATER

FMR-2000: Uses crystal-controlled RF modules for superior, individual channel processing of off-air FM signals. The FMRM-A adds monaural TV sound to your system.

Prices and Specifications Subject to Change Without Notice.

FEATURES

- Ceramic filters and integrated circuits in the intermediate frequency stages
- No drift, crystal controlled input and output
- Each module delivers full output...no post amplifier or filtering required
- On channel or off set operation
- Light emitting diodes...provide constant performance monitoring
- 20 channels in only 10 1/2" of rack space
- Optional squelch and special selectivity available
- Redundant powering concept...provisions for emergency power
- Uses both limiting and automatic gain control
- Separate level control for each channel

FM MODULATORS

FMX-2100: Generates signals from direct audio sources. Standard frequencies: 88-108 MHz; special frequencies 14-300 MHz.

FEATURES:

- Direct modulation of RF carrier
- Oven regulated FCO for high stability
- Fully solid state
- Crystal controlled output on any VHF or HF frequency
- Pre-emphasis available (optional)
- Output plus 45dBmV...continuously variable over 15 dB range
- Meter indicates percentage of modulation

AM-2000: Converts audio frequency signals to 4.5 MHz aural sub-carrier frequency or to any other frequency in the 4.5-14 MHz range.

FEATURES

- Fully solid state
- Oven regulated FCO for high stability
- Frequency range 2-14 MHz
- Meter indicates percentage of modulation
- Output plus 40 dBmV with 15 dB range
- Modular construction
- Direct modulation of RF carrier

FM DEMODULATORS

Crystal-controlled units for any frequency from 4.5-300 MHz. **Stereo:** FMRX-2100; **Monaural:** FMRX-2200, or FMRX-2400.

STEREO GENERATOR

SM-2200: Produces L-R double sideband suppressed carrier, L plus R and 19 MHz pilot signals from left and right audio sources.

TIME/WEATHER

WVW (FMW-2100) or NOAA (FMT-2100): Units include receiver with FM Modulator and power supply to provide NBS or NOAA broadcasts in the FM band.

AM/FM RECEIVER

KT-5500: Cable customized AM/FM Tuner for use as "off air" audio source for FM or TV Modulators, or for use as a monitor of your CAFM services.

PARAMETER III® COAXIAL CABLE SOLID COPPER

PLAIN

Solid copper center conductor; expanded polyethylene dielectric; solid aluminum sheath.

J

Similar in construction to plain version except with outer jacket of black linear low density polyethylene.

JSS

Similar to J except with Migra-Heal compound between jacket and aluminum sheath.

JASS

Similar to JSS except with corrugated chrome plated steel armor applied longitudinally and with flooding compound between the armor and inner jacket. The armor is coated on outside with heat sealable film which bonds to outer jacket and seals edges to form an effective moisture barrier and provide mechanical protection.

J-M109

Similar to J except "Figure 8" construction with galvanized steel messenger.

QUANTUM REACH® SUPER LOW LOSS COAXIAL CABLE

GENERAL DESCRIPTION

Copper covered aluminum center conductor; Double-Clad™ center conductor corrosion protection; microcellular gas expanded polyethylene dielectric with surface coated adhesive bonding agent; RF welded aluminum outer conductor; jacket of black medium density polyethylene with optional co-extruded tracer stripe.

JCA

JCASP

Similar in construction to JCA (above) except with asphaltic flooding compound which inhibits cable corrosion in the event of severe jacket damage.

JACASP

Similar in construction to JCASP (above) except with corrugated chrome plated steel armor applied longitudinally and with flooding compound between the armor and the inner jacket. The armor is bonded to the outer jacket and enhances cable longevity in burial applications.

59 SERIES SOLID POLYETHYLENE DIELECTRIC — NON-BONDED FOIL

Basic Construction

Center Conductor: Nom. 0.025" copper covered steel;
 Dielectric: Solid natural polyethylene; Inner Shield:
 Aluminum-polypropylene-aluminum laminated non-
 bonded tape with overlap; Outer Shield: 34 AWG bare
 aluminum braid wire; Jacket: Black polyethylene flooded
 design only; Nom. O.D.: 0.242"

Model No. 67% Braid Coverage

S5967EF See basic construction, polyethylene jacket.

S2-5967EF See basic construction, except dual, polyethylene jacket.

Model No. 95% Braid Coverage

S5995EF See basic construction, polyethylene jacket.

6 SERIES SOLID POLYETHYLENE DIELECTRIC — NON-BONDED FOIL

Basic Construction

Center Conductor: Nom. 0.029" in copper covered steel;
 Dielectric: Solid natural polyethylene; Inner Shield:
 Aluminum-polypropylene-aluminum laminated non-
 bonded tape with overlap; Outer Shield: 34 AWG bare
 aluminum braid wire; Jacket: Black polyethylene flooded
 design only; Nom. O.D.: 0.272"

Model No. 60% Braid Coverage

Submarine Armored MC² Coaxial Cable

Designed to offer submarine protection at a fraction of the cost of conventional steel wire armor, our new submarine armored cable uses copper wire armor to give MC² cable the weight and tensile strength needed for successful underwater applications.

The construction, available in (.500"), (.750") and (1.00") sizes, is manufactured as follows:

Bare coaxial cable is jacketed with polyisobutylene flooding compound beneath the black polyethylene jacket (General Cable Specifications 7004, 7007 and 7008). A layer of copper wires is helically stranded around the cable. The cable is covered with an asphalt flooding compound which includes rubber, and jacketed with black polyethylene.

MC² Coaxial Cable Flooding Compounds For Jacketed Cable

In general, aluminum resists the corrosive effects of the atmosphere extremely well. Tests performed by the American Society for Testing Materials (ASTM) and by our research laboratory have shown that aluminum samples are not severely affected even by long-term exposure to a salt fog atmosphere. However, the environment of an operating cable television system differs significantly from these test conditions. The aluminum is coupled to galvanized steel strand, usually by stainless steel lashing wire. Movement of the cable against these materials occurs due to thermal changes. In the presence of an industrial or marine environment, severe corrosion can occur to bare cables and jacketed cables are recommended. In other environments, bare cables are often sufficient.

Once the aluminum is jacketed, its corrosion susceptibility is increased if the jacket is damaged. In situations where differences in the oxygen concentration can arise, i.e., low oxygen under the jacket and high oxygen at the location of the jacket failure, this moisture becomes the electrolyte of a differential aeration cell. Corrosion resulting from a differential aeration cell or limited supply of oxygen where moisture has migrated under the jacket is progressive. The addition of chlorides to this situation (salt air environment) accelerates the attack in terms of severity and extent.

Buried installations, although soils vary significantly in their corrosiveness, in general represent more severe environments than unprotected aluminum can withstand and jackets must be employed. If jacket damage exists, extensive corrosion damage occurs as a result of stray currents or galvanic cells. To prevent this damage, we recommend our burial flooding compound, which entirely covers the aluminum sheath, and prevents migration of moisture between the sheath and the jacket. In the event of minor jacket damage, it will tend to flow into the damaged area and often continues to isolate the aluminum sheath from the environment, thereby minimizing corrosion.

Aerial installation exposes cable to a less severe environment than direct burial. However, the cable is exposed to temperature cycling not encountered underground. This temperature cycling can make the burial flooding compound difficult to use. Shrinkback of the jacket, and flow of the flooding compound from cable ends on hot days have been reported by system operators. We recommend our aerial flooding compound, an asphalt compound which includes rubber. Though it completely covers the aluminum sheath, its flow is minimized.

Coaxial Cable .440", .500", .650", .750", 1.00", MC²

1. CABLE DESIGN MC² coaxial cables will be manufactured in the following constructions:

1.1 Bare. The cable shall consist of a solid inner conductor of either copper or copperclad aluminum, disc spacers, sleeve insulation and an outer conductor of aluminum. The inner conductor shall be annealed copper or copperclad aluminum. A thin adhesive coating will be applied overall. The dielectric shall consist of compartments of air and thermoplastic discs with a dielectric sleeve overall. The discs are uniformly spaced and hold the inner conductor centered within the sleeve and the aluminum outer conductor. The discs are bonded to both the coated inner conductor and the dielectric sleeve. The outer conductor shall consist of an electrical grade welded aluminum tube drawn down in a compression fit over and bonded to the sleeve in order to prevent moisture migration.

1.2 Jacketed Aerial. A black medium density polyethylene jacket shall be extruded over the cable (described in 1.1). When flooding is specified for aerial application, a rubber-modified asphalt flooding compound will be applied between the outer conductor and the jacket.

1.3 Jacketed for Direct Burial. A black medium density polyethylene jacket shall be extruded over the cable (described in 1.1). A clear, viscous flooding compound shall be applied which will flow to fill any minor construction damage in the overlying jacket.

1.4 Figure 8 (Messengered). The support wire and the coaxial cable (described in 1.1) shall be parallel and covered by a black high molecular weight polyethylene jacket to form a figure 8 cross section. The support wire shall be either solid galvanized steel on the .440", .500" sizes or a flooded stranded 7 wire EHS galvanized steel.

1.5 GP Armored. The construction described in 1.3 shall be covered by a steel tape, corrugated and longitudinally folded around the jacket with positive overlap. Flooding compound shall be applied to cover both sides of the corrugated steel tape. A black medium density polyethylene jacket shall be applied over the flooded steel tape.

SUPER VU-FINDER ANTENNAS

All Channel Model VU-937S For deepest fringe reception areas

Features

- Unsurpassed Color Reception
- Heavy-Gauge Aluminum Construction
- Quick, Easy Installation
- Excellent Match Provides Highest Output
- Center-of-Gravity Balance
- Positive Locking Fold-Out Elements
- Coloraxial Convertible

SUPER VU-FINDER Antennas are an improved series of all-channel, 300-Ohm Coloraxial convertible units. Engineered for highest gain, reliability and ease of installation, each model provides premium reception of color and black and white TV signals on VHF and UHF channels as well as FM stereo.

Each SUPER VU-FINDER cascades a UHF Corner-Reflector Yagi section and VHF Paralog section for outstanding gain, high front-to-back ratios and excellent match.

The VHF and UHF sections are directly connected with a permanent die-stamped insulator to deliver maximum strength VHF and UHF to the downlead terminals. Excellent match VSWR: VHF 1.8:1, UHF 1.5:1 eliminates phase shift which adversely affects color reception.

The antennas are installer engineered for quick and reliable installation. The mechanical features include unitized construction, space-age insulators, snap-out corner reflector, rugged square boom, dual boom construction on larger models, new steel U-bolt assemble and heavy gauge aluminum snap-out elements. They only require 6 inches of vertical mast space for mounting.

Model VU-931S through 934S are shipped completely assembled and ready to install. Large models VU-935S, 936S and 937S are assembled

*Without VU-8PZ. When using VU-8PZ add 8 parasitics to UHF element count.

O = Driven Elements

P = Parasitic Elements

on the ground and then put up in one piece. Installation requires only positioning on the mast and tightening the nuts on the U-bolt assembly.

All elements and corner reflectors fold out and positively snap into place. Once in place, they stay there (special attention given in Paralog design to critical point-of-element support—full 360° crimped support sleeve and lock-tight Paralog insulators used on all models). New U-bolt assembly positioned at the center of gravity grips and holds reliably. No twisting on the mast. Positive electrical contact prevents flashing and golden armour coating maintains good electrical contact through years of exposure to the elements.

UHF Breakaway Butterfly

UHF elements are designed for maximum gain on standard UHF channels. Breaking away the elements at the score line will extend the range for higher gain through 890 MHz.

FM Breakaway

Super VU-Finder Models except VU-931S, VU-932S now come with FM blocking elements which reduce FM up to 12 dB. To receive FM at full gain, break off element at score mark. Antenna gain curves are shown for full FM gain (block elements removed).

Power Zoom, Model VU-8PZ

Extends UHF section of Super VU-Finder antennas by 33.5 inches to provide additional UHF gain. Can be shipped UPS.

MODEL J-283X J-SERIES ALL-CHANNEL ANTENNA

For applications requiring a VHF broadband or an All-Channel VHF/UHF rugged antenna, these All-Channel units are built to the same high standards as the cut-channel antennas. Log periodic bi-conical design gives performance exceeding the physical size of the antenna. The unique design gives flat response which is essential to the reception of quality color. Extra-heavy-duty construction; seamless chrome-aluminum tubing; ends sealed against entry of moisture; protected with a special anti-corrosion finish for all weather-resistant installations.

SATELLITE TV SYSTEM

DISH ANTENNAS

General Instrument's family of top quality dish antennas is available in 8', 10', 12' and 15' sizes. Assembly is easy and quick due to interchangeable dish sections and a feed assembly that requires no focal length adjustment. The deep dish design gives low noise temperature performance and the unique reflector manufacturing process assures maximum surface accuracy and efficiency.

MRS-2 SATELLITE RECEIVER

The General Instrument Model MRS-2 satellite receiver is a cost effective realization of state-of-the-art block downconversion technology with today's most requested features.

FEATURES

- Detent tuning with illuminated channel indication
- Built-in matrix/discrete stereo processor with mode select switch and narrow/wide bandwidth
- Push button control for all popular polarization devices: "pulsed" rotating probes (including skew control), ferromagnetic, pin-diode with interface
- Switchable (3/4) RF modulator included
- FCC approved
- Built-in motor drive (east-west) control switch with illuminated meter for indication of relative dish position
- Signal strength meter with ultra-sensitive dual mode to aid the dish alignment

SPECIFICATIONS

IF Bandwidth: 24MHz	Frequency Response: 50Hz to 15kHz
Image Rejection: 23dB nominal	De-Emphasis: 75 u.s.
Threshold Level: Better than 8dB C/N	Output Level: 150mV/10K min.
VIDEO	Harmonic Distortion: 1% maximum
De-Emphasis: CCIR 405-1, 525 lines	MODULATOR: Switchable for chan. 3/4
Frequency Response: to 4.2MHz	POWER SUPPLY: External power module: 115VAC, input; 18.5VAC, 750mA output
Dispersion Removal: 2 IRE maximum	MECHANICAL: 2.5" x 13.5" x 10"
Output Level: 1V p-p	
Output Impedance: 75 ohms	
Output Polarity: negative/positive sync	

ANTENNA POLAR MOUNT

The polar mounts for General Instrument dish antennas are designed for ease of installation and operation as well as long life. The mount is used to aim the dish antenna at the individual satellites by rotation on a single axis.

They are available with a manually operated handcrank or in a motorized version which allows for remote control in aiming at satellites. The General Instrument polar mounts are precision instruments which, when properly installed, will travel through the complete polar arc with pinpoint accuracy.

SATELLITE SYSTEMS

8-Foot Systems — 1 Piece Aluminum Antenna	Price
SATV081M2 System with 8-foot antenna, manually operated polar mount with pedestal base, feed with electronic polarizer, 120° LNB, MRS-2 receiver	\$2180.00
SATV081M2M System with 8-foot antenna, motorized polar mount with pedestal base, feed with electronic polarizer, 120° LNB, MRS-2 receiver	2620.00
10-Foot Systems — 8 Piece Steel Antenna	
SATV108M2 System with 10-foot antenna, manually operated polar mount with pedestal base, feed with electronic polarizer, 120° LNB, MRS-2 receiver	\$2570.00
SATV108M2M System with 10-foot antenna, motorized polar mount with pedestal base, feed with electronic polarizer, 120° LNB, MRS-2 receiver	2995.00

SATELLITE RECEIVER

MODEL STCM-4

SATELLITE COMMANDER RECEIVER STCM-4

Features

- Block down conversion compatible (950-1450 MHz input)
- 24 Channel frequency agile tuning with digital display
- Video clamping
- Front panel bar graph signal strength meter
- 6.8 MHz and 6.2 MHz audio subcarriers
- 8 dB threshold
- 15V DC output through coaxial cable to power a low noise amplifier/block converter (LNB)
- 70 MHz receiver IF permits the use of readily available terrestrial interference filters

The Model STCM-4 Satellite Commander receiver is specifically designed for SMATV and CATV applications. It features frequency agile 24-Channel electronically synthesized tuning and a digital Channel display.

Very low distortion and an 8.0 dB threshold are insured by eliminating amplitude noise from the signal through a limiter-discriminator. For a relative indication of the strength of the input signal, a bar type meter is located on the front panel.

The receiver provides DC power for the LNB through the coaxial signal cable. Both 6.8 and 6.2 MHz audio subcarriers are standard.

A single RF input is available for either horizontal or vertical polarization and tunes either the 12 odd or 12 even channels, depending on the polarization of the input.

Specifications for Satellite Receiver, Model STCM-4

TUNING	24 Channel frequency agile for satellites transmitting at 3.7 to 4.2 GHz

TV SIGNAL DISTRIBUTION EQUIPMENT

MODEL 1000 BROADBAND DATA MODEM

Features

- Frequency-Agile Point-to-Point Modem
- 16 Data Rates: From 110 BPS to 19.2 KBPS
- 50 kHz per Data Channel
- Sensitivity of $-16 \text{ dBmV} \pm 10 \text{ dB}$
- Synchronous or Asynchronous

The Metronet 1000 Broadband Data Modem is designed to interconnect computers and computer terminal devices over a coaxial cable network. Units are available for either full-duplex or half-duplex operation. The modem interfaces with user devices at any of 16 data rates, from 110 BPS to 19.2 KBPS, in either the synchronous or asynchronous mode. Metronet 1000 is also available for single or dual cable operation. With the dual cable operation, a second R.F. connector is provided for the dual cable and the diplex filter is not used. A choice of 156.25 MHz or 192.25 MHz

offset between send and receive channels is available with either the single or dual cable option.

The modem is frequency-agile through dip-switch setting. Up to 102* modems can operate in full-duplex mode, and 204* modems in half-duplex mode, on a 6 MHz TV channel pair. A high receive-level sensitivity permits operation at relatively low signal levels. This, coupled with a narrow bandwidth of 50 kHz per data channel, allows serving a large number user without system overload. No other point-to-point modem has this narrow bandwidth capability.

The Metronet 1000 Modem is part of General Instrument's family of communication products. It is designed by broadband communications experts to provide you with the best in technology and performance for your network needs.

MODEL 1600 BROADBAND T-1 MODEM

Features

- T-1 Point-to-Point Modem
- Voice Trunking Applications
- High Speed Data Communication
- Sensitivity of $0 \text{ dBmV} \pm 10 \text{ dB}$
- Synchronous

The Metronet 1600 Broadband T-1 Modem is designed to provide high speed (1.544 MBPS) for voice trunking and high speed data transfer. All units are capable of full-duplex operation and are used for synchronous transmission. This modem is used in point-to-point applications and has DS-1 digital interface.

The modem has a bandwidth of 3 MHz per carrier and is capable of full-duplex communication within a 6 MHz channel pair. The unit features a wide variety of

input/output channel pairs which allow it to be used with subsplit, midsplit or highsplit systems. It can also be used on single or dual cable systems. With the dual cable option, a second R.F. connector is provided for the dual cable and the diplex filter is not used. The offset of 156.25 MHz or 192.25 MHz between send and receive channels is available with either single or dual cable option.

The Metronet 1600 Modem is part of General Instrument's family of communication products. It is designed by broadband communications experts to provide you with the best in technology and performance for your network needs.

*When used with the Metronet 8000 Transverter, which provides a guard band at each edge of the TV channel, to ensure compatibility with video signals on the same cable.

MODEL 8000 RF FREQUENCY TRANSVERTER

Features

- Six MHz Block Translation
- Compatible with Sub-Split, Mid-Split, High-Split and Dual Cable Systems
- Works with all Metronet Modems
- Compact Unit Designed for Rack Mounting

The Metronet 8000 R.F. Frequency Transverter is a frequency translator designed to convert, with proper gain, the low-frequency upstream TV channels to the high-frequency downstream TV channels. The primary application for the transverter is with Metronet Broadband Data Modems, to allow for both upstream and downstream transmission of data.

The standard input ranges of the transverter are channels T-7 to 2A (5.75 to 59.75 MHz) and channels 60-16 (108 to

136 MHz). The output range is offset by either 156.25 MHz or 192.25 MHz to accommodate sub-split, mid-split or high-split systems. The standard output ranges for a 156.25 MHz offset are channels 21 to 13 (162 to 215 MHz). The standard output ranges for a 192.25 MHz offset are channels 11 to 28 (198 to 252 MHz) and channels 37 to 41 (300 to 330 MHz).

Metronet 8000 is suitable for single or dual cable operation. Two R.F. connectors are provided. For single cable operation, the headend diplex filter can be used to separate the forward and reverse signals.

The Metronet 8000 is part of General Instrument's family of communication products. It is designed by broadband communications experts to provide you with the best technology and performance for your network needs.

MODEL 9000 TRANSVERTER REDUNDANCY SWITCH

Features

- Automatic or Manual Transverter Switching
- Compatible with Sub-Split, Mid-Split, High-Split and Dual Cable Systems
- Built-In Visual Alarm Indicators
- Contacts for External Alarm Indicator
- Compact Unit Designed for Rack Mounting

The Metronet 9000 redundancy switch provides automatic switching from the primary to a backup M8000 frequency transverter. If the transverter output level falls below an established threshold due to a degradation in gain or frequency drift, the unit will switch to the backup transverter and provide visual indication of failure. In addition, contacts are provided for activation of external devices or alarms.

TV REMOTE CONTROLLER

LCC-91 TV Remote Controller For Homes Without Cable TV

FEATURES

- Remote control lets you change television channels from the comfort of your chair.
- Turn your TV set on and off — even fine tune the picture — without touching the dial.
- Up to 91 channel capacity, approved by the F.C.C., and U.L.
- Eliminates wear and tear on your TV's tuner due to its advanced microprocessor technology.
- Wireless hand controller switches stations.
- Lighted digital display on converter indicates the channel you're tuned to.
- Simple do-it-yourself installation in minutes.
- Works with virtually all TV models. Receives VHF and UHF signals from a TV antenna.

TV Remote Controller Receiver Unit

Power Source	AC 120V 60 Hz
Power Consumption	14W
Channel Coverage	VHF 2-13, UHF 14-83, Cable midband A-1
Controls	Search up/down, power on/off switch, fine tuning
Antenna input	VHF, UHF, Midband
Impedance	300-ohms balanced
Output Impedance (to TV Set)	75 ohms
Output Channels	Channel 3 or 4, adjustable by end user
Components	9 IC's, 25 Transistors, 32 Diodes, 2 LED's, 1 Photo Diode
LED Display Height	.560"
Weight	4 lbs., 4 oz.
Dimensions	9½" w x 2¼" h x 8¾" d
Gain (AGC attack point 3dBm)	VHF 7dB min/21dB max UHF 10dB min/25dB max Midband 0dB min/14dB max

Handheld Transmitter

Power Source	One 9V Transistor Battery
Controls	Power on/off switch, direct channel number selection, search up/down, fine tuning
Range of Operation	20 feet or more
Weight	5 oz. including battery
Dimensions	3" w x 1" h x 5" d

LCC-58 TV Remote Controller For Homes With Cable TV

(Formerly Model DRX-105)

FEATURES

- Remote control lets you change television channels from the comfort of your chair.
- Turn your TV set on and off — even fine tune the picture — without touching the dial.
- Up to 58 channel capacity, approved by the F.C.C., U.L. and C.S.A.
- Saves wear and tear on your TV's tuner due to its advanced microprocessor technology.
- Wireless hand controller switches channels.
- Lighted digital display on the converter indicates the channel you're tuned to.
- Rich wood-grain finish looks attractive in any room's decor.
- Simple do-it-yourself installation in minutes.
- Works with all TV models and compatible with virtually all cable systems.

DE-SNOWER PREAMPLIFIERS

VHF-TV/FM BROADBAND MODEL DSB-587 75-OHM

Jerrold's DSB-587 is a high output VHF preamplifier with the added feature of a built-in turnable FM trap. Gain: 28 dB. Output capability at +40 dBmV per channel for 7 channels at -46 dB cross-modulation, is sufficient to drive a small distribution system. The FM trap may be tuned to insert 10 dB of attenuation on a band 1.25 MHz wide within the FM band. If there is no strong FM band. Uses remote power supply, Model 587. Lightning protected. 75-ohm input. Four F-659 connectors supplied.

UHF-TV BROADBAND MODEL DSU-II 75-OHM

Jerrold Model DSU-II is a high-gain, low-noise, 75-ohm UHF-TV preamplifier. The use of unique stripline constructed transistors with low radial lead inductance optimizes noise figure over the UHF band. Housed in a rugged mast mounting aluminum casting, the preamplifier is ready for immediate installation. An indoor mounting power supply DSU-PS is also supplied. The 75-ohm input impedance makes this unit a perfect match to the J-275 antenna for system applications. Four F-659 connectors supplied.

VHF-TV/FM SINGLE CHANNEL DSS-SERIES 75-OHM

The "De-Snower" DSS-Series is Jerrold's highest gain line of single-channel preamplifier systems, Models DSS-2 through DSS-13 for VHF television channels, and Model DSS-FM for the full FM radio band. These systems are used with cut-to-channel antennas such as Jerrold J-55 and J-105-Series Ruggedized Antennas for large MATV systems in fringe to extreme fringe locations. The preamplifier is enclosed in a weatherproof aluminum housing which has a universal bracket for either mast or indoor mounting. When ordering, specify channel number or FM.

SINGLE CHANNEL CONVERTERS VHF-TV TO VHF-TV CONVERTERS

SCON-Series

Now Including Sub-VHF to Midband

- Zener-regulated full-wave power supply
- Crystal-controlled oscillator with input buffer circuit
- Double conversion compatibility

Jerrold SCON-Series are VHF-to-VHF converters and are solid-state, crystal-controlled modular units. The accompanying chart indicates possible conversions. Standard SCON's comprise an oscillator-mixer assembly with one input and output filter. Filters (FLC or FHC) are factory tuned for specified channels. SCON Sub-to-Mid comprises input filter, oscillator-mixer-assembly and outboard filter Model PBF-Mid. All filters are factory tuned to channels specified. Ordering information: Specify model, then channel conversions. For example: T8 to C should read SCON Sub-to-Mid T8-C.

TV SIGNAL MODULATOR

UNI-MOD II MODEL UM-2* AUDIO-VIDEO MODULATOR

- Monochrome or Color Operation
- Front Panel Control and Metering of Aural and Visual Modulation
- Adjacent Channel Operation Made Possible by Unique Helical Resonator Bandpass Filter
- Crystal Controlled Visual Carrier
- 4.5 MHz Aural Offset Automatic Frequency Controlled with Integrated Circuitry
- Loop Thru

Jerrold's Uni-Mod Modulator Model UM-2* is an audio-video unit designed for adjacent channel operation in MATV and CCTV systems. The unit modulates separate RF carriers with video and audio program information, then combines and filters the signals to conform with a standard TV channel format. Uni-Mods are available with outputs on sub-channels T-8 thru T-13, standard VHF-TV channels 2 thru 13 and Mid-Band Channels A thru I. Output level is sufficient to drive a medium size distribution system directly and sharp skirt filtering allows mixing with off-the-air channels. (See the mixing diagram.) Flat video response and low differential phase and gain specifications give the Uni-Mod excellent video performance. Meter face simplicity allows even the non-technical operator to set up and produce quality pictures.

*Specify TV channel.

Video

Input Impedance 75 ohms, VSWR: 1.5:1 (14 dB return loss)
 Input Type Composite video, sync negative
 Input Level 0.5 V p-p (for 87.5% modulation)
 Frequency Response +/- 0.5 dB to 4.2 MHz
 Differential Gain 2 dB at 3.58 MHz, full modulation
 Differential Phase 5° at 3.58 MHz, full modulation
 Metering Peak depth of Modulation
 Control Depth of Modulation

Audio

Input Impedance 600 ohms, unbalanced
 Input Type Baseband audio
 Input Level 50 mV RMS (-35 dBm) for full deviation
 Frequency Response 100 Hz to 15 kHz, +/- 1 dB to std. 75 usec. pre-emphasis
 Harmonic Distortion 3%
 Metering Deviation
 Control Amount of Deviation

RF

Output Impedance 75 ohms, VSWR: 1.5:1 (14 dB return loss)
 Output Level
 Visual Carrier + 62 dBmV, adjustable—standard VHF
 + 40 dBmV, sub and mid VHF
 Aural Carrier 10 to 15* dB below visual, adjustable
 Output Frequency
 Visual Carrier VHF channel (2-13, T8-T13 and A-I crystal controlled, .005%)
 Aural Carrier 4.5 MHz above visual carrier, AFC-controlled within +/- 3 kHz
 Output Control Range 10 dB
 Spurious Output -60 dB, except lower adjacent channel, which is -52 dB
 Radiation -80 dB, meets FCC radiation requirements
 76.605 (a) 12

*Aural carrier factory-set for 15 dB below visual.

General

Temperature Range 0°C (32°F) to 50°C (122°F)
 Power Requirements 117 V, 60 Hz, 17 W
 Dimensions 19" W x 3 1/2" H x 7 1/4" D

TELEVISION DEMODULATOR, MODEL DM-283A FOR MATV, CCTV AND CATV APPLICATIONS

- All Channel
- Push Button Channel Selection
- Quality Color & Black & White Signals
- Front Panel LED Indicators
- Automatic Noise Cancellation (ANC)
- AFT
- AGC

The Television Demodulator, Model DM-283A, provides quality baseband video and audio signals from any selected TV channel (2 to 83).

The DM-283A offers high video output level capability. AFT, AGC, and ANC features assure excellent output signals under a wide range of operating conditions and input levels.

Front panel controls include push button express tuning and illuminated on-off power and AFT switches. LED indicators display status of AFT and power functions.

DM-283A SPECIFICATIONS

Circuitry Design	100% Solid State
Channel Selection	Push button express tuning, varactor type system, preset fine tuning with band select, VHF channels 2-13, UHF channels 14-83
AFT	Automatic Fine Tuning with defeat switch and precise tracking across all 83 channels
AGC	Automatic Gain Control, Amplified Type
ANC	Automatic Noise Cancellation
Noise Figure	VHF: Better than 6 dB UHF: Better than 12.5 dB
Minimum Input Level	-36 dBmV
Antenna Inputs	75 Ohm, F-59 Connectors
Color Video Quality	Low Chrominance to Luminance Differential Gain and Phase
Video IF Characteristics	Bandwidth 3.8 MHz at -6 dB; Adjacent Channel Rejection: Picture, 50 dB; Sound, 60 dB
IF Stages	SAW filter "IF" with IC amplifier
Audio Outputs (Dual)	600 Ohms at 0 dBm, unbalanced; 0.25V P-P Max.
Video Outputs (Dual)	1.0V P-P Adjustable, into 75-Ohm Load, Negative Sync.
Power	120 VAC, 60 Hz; approx. 20W Dissipation
Circuit Protection	Dual buffered and short circuit protected video, audio and 4.5 MHz aural outputs
Power Supplies	Regulated power supplies
Cabinet Construction	Baked light gray finish with silk screened black anodized recessed control panel
Dimensions	3-1/2"H x 19"W x 13"D (rack mountable)
Weight	14 lbs.

Model 1592C

VHF Splitter, 2-Way

A convenient-size, two-way splitter for use in systems requiring a frequency range of 5-300 MHz. Shipped bulk, less connectors.

Models 1596C and 1596CDP

UHF/VHF Splitter, 2-Way

Model 1596C is a hybrid, two-way splitter with extended bandpass from 5-890 MHz. This 75-ohm splitter uses precision printed circuits, packaged in a zinc cast housing. The housing provides better than 80 dB shielding. Model 1596C is bulk packed, less connectors. Model 1596CDP is display packaged with three F-659 connectors.

Model SWS-2

VHF Splitter, 2-Way

Two-way indoor/outdoor hybrid splitter/combiner, 5-400 MHz equipped with axial (face-mounted) F-type fittings for wall mounting. Shipped bulk, less connectors.

Model SWS-2UV

UHF/VHF Splitter, 2-Way

Same as above, except 5-890 bandwidth.

Model 1593C

VHF Splitter, 3-Way

Three-way indoor/outdoor hybrid splitter/combiner with grounding screw, 5-400 MHz. Equipped with radial (side-mounted) F-type fittings for surface mounting. Shipped bulk, less connectors.

Model 1594C

VHF Splitter, 4-Way

Same as above, except 4-way.

Model SWS-4

VHF Splitter, 4-Way

Four-way indoor/outdoor hybrid splitter/combiner, 5-400 MHz. Equipped with axial F-typed fittings for wall mounting. Shipped bulk, less connectors.

Model SWS-4UV

UHF/VHF Splitter, 4-Way

Same as above, except 5-890 bandwidth.

Models 1597B, 1597BDP

UHF/VHF Hybrid Splitter, 4-Way

Model 1597B is a 75-ohm, four-way UHF/VHF hybrid splitter with sub-channel capability. The hybrid network is constructed on a printed circuit board which is mounted in a zinc cast housing. Shielding is better than 80 dB.

The unit is designed for mixing four separate inputs to obtain a common output or splitting a common input into four separate outputs. It is for indoor surface mounting. Model 1597BDP is display packed with five F-659 connectors.

Model LGB-4

Grounding Block

Jerrold Model LGB-4 is a grounding block assembly for positive grounding of lead-in cable shield. The LGB-4 can be mounted in any position on a flat surface, indoors, or outdoors; two wood screws are supplied for this purpose. F-61A connectors.

The ground connection is made with a heavy gauge copper wire connected to a grounding rod or to a nearby cold water pipe. **\$1.63**

Model T-6000

Jerrold All-Channel Matching Transformers

Model T-6000 matching transformer provides excellent balance (40 dB, VHF) and is ideal for TV set mounting in all signal areas. The T-6000 matches 75-ohm coaxial cable to a 300-ohm TV set and is a must for reducing local pickup (ghosts) in MATV systems. It also incorporates an exclusive Jerrold fitting to accept our Snap-fit SF-59 cable connector, designed to prevent damage where sets are moved frequently. Model T-6000 is bulk-packed 25 per carton with instructions, less connectors. **\$1.66**

Model T-6000DP

Same as T-6000 except individually display card packaged, with 12 display cards per shipping carton. Each display card contains a T-6000 transformer, F-659 connector, 1082 ferrule, and ET-659 expansion tool. **\$2.16**

Model T-6789

All-Channel Matching Transformer

Model T-6789 75/300-ohm matching transformer incorporates superior T-6000 performance into an indoor/outdoor design, readily adaptable to either an outdoor antenna or a TV set. Design improvements include a tighter coaxial fitting seal, soldered spade-tip lugs for better connection, and twinlead conductor which resists bending or twisting to protect UHF signals. Model T-6789 is bulk-packed 25 per carton with instructions, less connectors. **\$4.18**

Model T-6789DP

Same as T-6789, except individually display card packaged (12 cards per carton) with F-659 connector, 1082 ferrule, ET-659 expansion tool, plastic strap, and weatherboot. **\$5.69**

TV SIGNAL DISTRIBUTION EQUIP.

INTERNAL DISTRIBUTION AMPLIFIER

MODEL IDA-45 35-CHANNEL, PUSH-PULL INTERNAL DISTRIBUTION AMPLIFIER, 2-WAY CAPABLE

FEATURES

- Die-cast aluminum housing
- Radiation-shielded design
- Input/output connectors compatible with CATV cables
- Surge-protected input terminal
- Meets or exceeds FCC technical requirements (Part 76)
- Fully adaptable to two-way communications
- Operates with any CATV service — flat, block tilt or sloped
- Compatible CATV/MATV interface
- Push-pull amplifier design for up to 35-channel service
- Integrated circuit design

Jerrold Model IDA-45 Internal Distribution Amplifier is a professional quality product meeting the most exacting specifications for RF distribution. Fully solid-state including integrated circuits, two-way capable with high gain, ultralinear broadband characteristics and excellent shielding, the IDA-45 is designed to interface CATV systems and internal distribution systems. However, input to the amplifier may also be from antennas or local origination. The amplifier is housed in a maximum heat dissipative, rugged, die-cast aluminum housing which provides shielding of 90 dB. Circuit design is based on the push-pull principle providing for amplification of up to 35 channels.

Gain and slope controls are accessible with the removal of the top cover. The amplifier provides the necessary plugs and adapters to accept a wide range of accessories including:

- SEE equalizers to compensate for cable tilt preceding the amplifier.
- JXP attenuators to compensate for excessive input signal level.
- IOC plug-in automatic overload control to compensate for input signal level fluctuations.
- IDF plug-in sub-channel splitting filters for two-way system applications.
- IRA plug-in sub-channel return amplifier for 5 to 30 MHz return signal amplification.

GIBRALTAR BROADBAND AMPLIFIERS

MODEL 3770 P-P WIDE BAND VHF PUSH-PULL AMPLIFIER

FEATURES

- Wide Band (40-300 MHz)
- Includes Entire Mid-Band (120-174 MHz) and Super Band (216 to 300 MHz)
- Push-Pull Design for 30-Channel Operation

- Ideal as MATV Distribution Amplifier with CATV Feed
- Heat-Dissipating Housing Design
- Input/Output Test Points

The 3770 P-P Push-pull design provides suppression of second order harmonics (-65 dB). Triple beat suppression is -70 dB. Slope is variable, 0 to 8 dB.

MODEL 3455 VHF/FM AMPLIFIER

FEATURES

- Solid State, Low Noise
- High Output Capability
- Diode Lightning Protection
- Tunable FM Trap

Jerrold's 3455 Gibraltar is a high gain (30 dB) broadband amplifier for medium-sized distribution systems. Accepts combined Hi Band and Lo Band VHF inputs and includes separate 10 dB gain controls for the Hi and Lo Bands.

MODEL 3880 VHF/FM AMPLIFIER

FEATURES

- Solid-State, Low Noise
- High Output Capability
- Diode Lightning Protection
- Tunable FM Trap

The Jerrold Model 3880 is a super-high gain (55 dB) and output +60 dBmV VHF-TV/FM, split-band, solid-state amplifier for use in large Master Antenna TV distribution systems.

MODEL 3662 VHF/FM BROADBAND AMPLIFIER WITH AUTOMATIC OVERLOAD CONTROL

FEATURES

- Automatic Control for Input Variations of Up to 20 dB
- Separate Lo and Hi Band Control
- Operates at Full Output Rating
- Switch Selectable AOC or MAN Operation
- Lightning Protected
- Universal Rack or Surface Mounting Bracket

Jerrold Model 3662 is the only broadband MATV amplifier with output signal levels automatically controlled. This exclusive AOC feature permits use of the full output capability of a broadband amplifier without fear of overload due to input signal fluctuations. Prevents overloading the amplifier when input levels increase. Increases amplifier gain to compensate for signal fades. Prevents system cross-modulation even if only one channel level increases or fades.

Model DC-()B Directional Couplers

Models DC-8B, DC-12B and DC-16B are a series of extended bandwidth directional couplers encased in radiation-proof cast housings. DC-12B and DC-16B are very efficient, back-matched and compact directional couplers covering the entire spectrum from 5 to 806 MHz. Model DC-8B fully covers the frequency range 5 to 300 MHz with reduced performance in the UHF range above 300 MHz. Three F-659's are supplied.

Specifications — DC-()B Series **\$22.40 ea.**

Model	DC-8B	DC-12B	DC-16B
Passband (MHz)	5-300	5-806	5-806
Insertion Loss (dB)	1.1	VHF 0.7 UHF 0.9	VHF 0.6 UHF 0.8

Radiation (dB)	-80	-80	-80

Model DCT4-() Directional Coupler Taps UHF/VHF, 4-Way

Features

- Directional Coupler Design
- Two-Way Compatible
- 5 Values of Isolation
- Low Insertion Loss
- CATV Compatibility
- UHF Capability to 806 MHz
- Completely Shielded — more than 80 dB
- Back Matched
- AC Isolation

DCT4 Series of Directional Coupler Taps are broadband (5-806 MHz) low-loss, high isolation units designed for indoor use. Five models are available providing average attenuation values of 10, 14, 19, 24 and 30 dB. DCT-4's do not pass AC or DC power. The housing is a die cast alloy housing which provides a minimum of 80 dB RF shielding. The housing has a chromate conversion finish which deters Galvanic corrosion. "F" fittings are not supplied. DCTs are designed for surface mounting.

Specifications — DCT4 Series **\$29.40 ea.**

Model DFT-Series Directional Coupler Flush Tap

DFT taps surpass the most stringent requirements of internal distribution systems in buildings, whether equipped with a CATV feed of MATV headend. For CATV internal distribution systems, DFTs are compatible with 30-channel, 2-way service and surpass cable TV technical requirements. For MATV, the DFT-Series is recommended for both VHF and VHF-UHF distribution.

The printed board directional coupler circuitry used in the DFT provides uniform tap isolation (7 dB, 13 dB, 19 dB, 25 dB, 31 dB) with directivity of 16 dB from 5 to 300 MHz. Therefore minimum isolation between outlets is 30 dB (2x tap isolation + 16 dB directivity). The 13, 19, and 31 dB taps are also recommended for all-channel MATV systems with typical directivity of 10 dB to 806 MHz.

The DFT installs easily in any standard single gang outlet box (2" minimum depth recommended), with CAC-59 or -6 coaxial cable. Where conduit and box size permit, CAC-11 may be used. May be used with standard electrical wall outlet plate or order matching ivory cover plate (213-353) separately. The output "F" connector accepts regular "F" or snap-fit "SF" cable connectors (not supplied).

Specifications — DFT Series **\$12.46 ea.**

Specifications	DFT-7	DFT-13	DFT-19	DFT-25	DFT-31

PREPACKAGED COMMANDER HEADENDS FEATURES

- Includes all Commander units needed to provide the channel carriage you specify
- Commander units, combining devices, and accessories at your headend site installed in racks and fully wired
- Headend completely engineered, assembled, and tested to function as a reliable system
- Simplifies installing top quality headends, from the most basic to the most complex

All you need do to your custom demod system is provide Jerrold with a listing of channel carriage. Jerrold will design your system, considering any special functions such as channel switching, and carry the design through to installation of equipment in open frame relay racks, complete wiring of the equipment, and thorough system testing. If you prefer, units can be installed in closed cabinets instead of relay racks.

Each item of Jerrold equipment first passes through its quality control cycle to assure that it meets its published specifications. After system assembly, measurements of the following parameters are made on each channel at the combined output: spurious output level, frequency accuracy of video carriers, video carrier-to-noise ratio, video passband flatness, and system output return loss. The combined system output level is also set at this time.

Your custom headend will be fully documented with "as-built" wiring and racking diagrams, and with the results of the system tests.

Talk to your Jerrold representative about price and delivery.

SINGLE CHANNEL AGC Amplifiers for VHF-TV, UHF-TV and FM!

- Stable High Output
- Automatic Gain Control
- Matched Input and Output
- High Gain
- UL Listing
- Reversible Mounting Brackets

Jerrold's complete line of single-channel AGC amplifiers for VHF-TV, UHF-TV and the FM band comprises the JHPM, THPM and UHPM-Series: The JHPM-Series provides a rated 2-volt output (+66 dBmV) on any specified VHF channel (2 through 13) or +60 dBmV for each of three FM channels. A full 4-volt output (+72 dBmV) is supplied on any specified VHF channel (2 through 13) (also mid-band channel D) by the THPM-Series, or +60 dBmV for each of three FM channels. The UHPM-Series, or +60 dBmV for each of three FM channels. The UHPM-Series provides a full 4-volt output (+72 dBmV) on a specified standard UHF channel (14-70)

J-SERIES YAGI ANTENNAS. VHF-TV AND FM 75-OHM

MODEL J-55-LO

- Extra heavy-duty construction
- High gain performance
- Choice of models
- High reliability
- Low maintenance—Long life

J-Series Models are heavy-duty 75-ohm commercial quality master antennas for TV distribution systems. Available in both cut-to-channel yagi and broadband models. Single channel antennas feature sharp directivity for high gain, and excellent front-to-back ratios. All cut-to-channel models have a built-on silver-plated 75-ohm coaxial cable connector with a sealed capacitor-tuned gamma match network for optimum signal transfer. Broadband models are of true log-periodic design assuring extremely flat response and matched output over the entire band. Both types provide the finest reception of color, black-and-white, and FM.

J-Series antennas are of extra-heavy-duty construction from seamless chrome-aluminum tubing, end-sealed against entry of moisture, and have a special anti-corrosion finish, to assure a maintenance-free, weather-resistant installation. J-Series yagis are the answer to any system requirement where high reliability or long life is a must. Operational/survival wind velocity specification (ice-free) for J-Series Antennas is 125 mph.

AVERAGE SHIPPING WEIGHT: Cut-to-Channel Models—10½ lbs. Broadband Models —14 lbs.						
*Relative to a tuned half-wave dipole.						

ELECTRICAL SPECIFICATIONS

J-Series Antennas may be stacked both vertically and horizontally for greater gain and directivity. For best results, strictly adhere to the array spacing given. (See the following figure and table.)

The gamma feeds of all antennas within the array must face in the same direction for proper polarity. Broadband models must be assembled exactly as described in the installation instructions, and all down leads must exit from the bottom of the crossarms to maintain proper phasing and polarity.

Splitting harnesses may be made from 75-ohm cable such as Jerrold CAC with Jerrold F-659 fittings. Harness legs should be as short as possible with direct routing and no sharp bends. Each cable length attached to the splitter must be of equal length for satisfactory results. Use Jerrold Model 1596B-Two-Way Splitter or 1597A Four-Way Splitter mounted in an indoor housing. Model HB-3.

ANTENNAS

10-ELEMENT YAGI ANTENNAS, MODEL Y-101, -103, -104

TEN-ELEMENT YAGI ANTENNAS

Y 101 SERIES

Triple-driven narrow-bandwidth models covering 60 to 108 MHz including TV channels 4, 5 and 6 and having 1-1/4 in. crossarms, 5/8 in. dia. elements and 3/4 in. dia. reinforcing sleeves.

Y 102 SERIES

Twin and triple-driven moderate-bandwidth models covering 108 to 163 MHz and having 1-1/4 in. crossarms, 5/8 in. dia. elements and 3/4 in. dia. reinforcing sleeves.

Y 103 SERIES

Twin-driven broad-bandwidth models covering 152 to 440 MHz including individual and combined TV channels 7 thru 13, and having 1-1/4 in. crossarms, 1/2 in. dia. elements and 5/8 in. dia. reinforcing sleeves.

Y 104 SERIES

Extra-rugged, twin-driven, narrow-bandwidth models covering 43 to 88 MHz including TV channels 2 thru 6, and having 2 in. crossarms, 3/4 in. dia. elements and 7/8 in. dia. reinforcing sleeves, for use in extreme ice and windloading environment.

Y-SERIES YAGI MOUNTING KITS

(For up to 4-1/2 in. O.D. masts or tower-legs, see Note below. Order masts separately from Accessory listing below).

MODEL DESCRIPTION

- Y-MB-4 Two, 4 ft. Y-B-4 booms, four Y-TC-1 tower-clamps, and two Y-MC-1 mast-clamps
- Y-MB-8 Two 8 ft. Y-B-8 booms, four Y-TC-1 tower-clamps, and two Y-MC-1 mast-clamps
- Y-MB-10 Two 10 ft. Y-B-10 booms, four Y-TC-1 tower-clamps, and two Y-MC-1 mast-clamps
- Y-MB-14 Two 14 ft. Y-B-14 booms, four Y-TC-1 tower-clamps, and two Y-MC-1 mast-clamps

NOTE: For tower-legs up to 7-1/2 in. O.D. specify Y-TC-2 tower-clamps when ordering.

Y-SERIES MOUNTING ACCESSORIES

MODEL DESCRIPTION

- Y-B-4 4 ft. boom of 1-1/2 in. "U" channel
- Y-B-8 8 ft. boom of 1-1/2 in. "U" channel
- Y-B-10 10 ft. boom of 1-1/2 in. "U" channel
- Y-B-14 14 ft. boom of 1-1/2 in. "U" channel
- Y-MC-1 Mast-clamp for up to 2-3/4 in. O.D. masts
- Y-MM-6 6 ft. mast of 2-1/4 in. O.D. tubing
- Y-MM-8 8 ft. mast of 2-1/4 in. O.D. tubing
- Y-MM-12 12 ft. mast of 2-1/4 in. O.D. tubing
- Y-MM-18 18 ft. mast of 2-1/4 in. O.D. tubing
- Y-MM-20 20 ft. mast of 2-1/4 in. O.D. tubing
- Y-TC-1 Tower-clamp for up to 4-1/2 in. O.D. legs
- Y-TC-2 Tower-clamp for up to 7-1/2 in. O.D. legs
- 7943-13 Mast-coupling, undrilled and without hardware

J-SERIES YAGI ANTENNAS UHF, 75-OHM

- EXTRA HEAVY-DUTY CONSTRUCTION
- QUICK, RELIABLE INSTALLATION
- HIGH GAIN PERFORMANCE
- EXCELLENT MATCH

The Jerrold J-275D-* series of antennas are rugged UHF antennas designed to provide the finest reception of color as well as black and white signals for MATV systems.

Each Model J-275D-* consists of a wide-band, diamond-loop driver, two vertically spaced reflectors and 13 tuned directors. The diamond driver is an original Jerrold design providing a matched 75-ohm impedance throughout the UHF range. Dual reflectors increase both horizontal and vertical directivity of the driver and provides front-to-back ratios of 20 dB or better. Directors are tuned for specified channels to provide gain of 12 dB over a referenced dipole. See gain curves.

The J-275D-* can be used as a single-channel yagi (specify channel) or as a broadband (specify highest channel to be received). For example, where channels 17, 29 and 48 are to be received, specify J-275D-48.

Table 1 — Array Spacing of "J Series" UHF

ANTENNAS

Model D-1338

PARABOLIC ANTENNAS

D-1338BB SERIES UHF ANTENNAS

Jerrold Model D-1338BB is a high-gain, ruggedized UHF antenna featuring a new broadband diamond-loop driver (patent applied for) which provides 14 dB of gain at 470 MHz rising to 17 dB at 890 MHz relative to an isotropic source. Front-to-back ratio is 15 dB or better. The 4-foot diameter reflector is made of 1/8 inch steel wires spaced only 1 inch apart and welded to 1/4 inch thick cross-members and outer ring. The entire antenna is protected with anti-oxide primer and vinyl alkyd paint. Each unit will withstand up to 125-mile-per-hour winds and adverse environment conditions. All models mount with a pair of clamp brackets designed for 1 1/2 to 4 1/2-inch mast or tower leg. Shipping weight is 25 pounds.

Model CYD-1470

CORNER REFLECTOR YAGI CYD-SERIES, 300-OHM

Jerrold's new series of Sharpshooter Antennas are Corner Reflector Yagis designed to provide high gain and excellent color reception on UHF channels. The CYD-Series is comprised of four models with the model number indicating frequency range by channel designation. Any CYD* can be added on to an existing VHF antenna without a separate combiner required for a single download. DYD's are also Coloraxial Convertible with a separate STO-82 for single coaxial download.

OFM-2A

RUGGEDIZED OMNI-DIRECTIONAL FM ANTENNAS, OFM-SERIES

Jerrold Model OFM-1 is an extremely rugged, single, 75-ohm coaxial output antenna for receiving the entire FM band. Model OFM-2 is a dual-bay array of OFM-1s. The antenna is constructed of heavy-wall, tubular aluminum elements secured to a sealed aluminum casting which contains a matching network. The VSF-type output terminal accepts aluminum jacketed coaxial cable or may be adapted to an F-type fitting. Supplied with dual-bay array, Model OFM-2 is a low-loss, weatherproof combiner and an appropriate 75-ohm stacking harness. The integral mounting bracket fits two to three-inch-diameter tubular masts.

RECEIVERS/ HEADEND AMPLIFIERS

C4R

MODEL C4R

SATELLITE COMMANDER RECEIVER

Features

- 24 Channel Frequency Agile
- Used with a low noise block downconverter
- Multiple audio subcarriers
- Bar type Signal Strength Meter
- 1.75 inch rack height

The Jerrold Satellite Receiver is designed for use with a low noise block downconverter at the dish to eliminate the need for high cost cable from the dish to the headend. This system design also eliminates the costly duplication of downconverters in each receiver.

The Model C4R employs an input frequency of 950 to 1450 MHz, an industry standard designed to be compatible with the future 12 GHz satellite products. In addition, the 950-1450 MHz input range eliminates inband interference and interference from UHF band transmissions.

The Model C4R features electronically synthesized tuning and a digital channel display. The electronic tuning will not drift and does not require manual adjustments.

A bar meter is located on the front panel for a relative indication of the strength of the signal input.

The C4R provides a signal RF input and will tune either the 12 odd or the 12 even channels depending on whether the input is horizontally or vertically polarized. It also provides 300mA power for the C4LNB-120 or an LNA and separate block downconverter model BDC.

This receiver has two standard audio sub-carriers, 6.8 and 6.2 MHz. Alternate subcarriers may be ordered separately as ASUB-* (Special Order).

ASUB-* Plug-in audio subcarrier. Specify frequency 4.5 to 7.5 MHz.

MODEL HPAS HEADEND AMPLIFIER MODEL HPAS-8 HEADEND AMPLIFIER WITH 8-WAY COMBINER/SPLITTER

FEATURES

- Adjustable Level Control Level Trunks Independently
- Two -20dB Test Point Outputs use for "Test" and "Monitor"
- Simultaneous-Sweep Input Port Isolated for True "Flatness"
- Two Front Panel AC Outlets Power Test Equipment
- Available with Built-In 8-Way Combiner/Splitter—Excellent to Amplify and Distribute Phaselock Reference
- Full Bandwidth 50 to 450MHz

The HPAS Headend Amplifier is a rack mounted low gain amplifier designed to overcome the high combining losses in large headends. The amplifier provides from up to 14 dB of gain. A level control allows the amplifier output to be attenuated up to 6dB. Therefore, the adjustment range of the amplifier is 8 to 14dB.

SPECIFICATIONS: MODELS HPAS, HPAS-8

Bandwidth	50-450 MHz All Ports
Return Loss

RETURN CHANNEL DIPLEX FILTERS

TF-30DHE Subsplit (5-32/52-450MHz) Diplex Filter

TF-108DHE Midsplit (5-116/168-450MHz) Diplex Filter

TF-176-DHE High Midsplit (5-174/250-450MHz) Diplex Filter

FEATURES

- Low Insertion Loss nearly Transparent to System
- High 40dB Isolation Excellent Band Separation
- 450MHz Full Bandwidth Rating
- 1-3/4" Rack Mounted Space Saving

The TF series diplex filters are placed after the composite output of the headend. In two-way systems they are used to extract the return signals. In one-way systems they are installed to reduce noise ingress from the unused return band. Jerrold recommends the use of a diplex filter on each trunk output regardless of whether two-way operation is planned.

COMMANDER PROCESSORS MODELS C4P SERIES

FEATURES

SAW Filter

- Attenuates adjacent channels for improved performance
- Eliminates more than 20 adjustable coils and trimmers to provide high mechanical and thermal stability
- Any number of equal level adjacent channels permitted

Built-in Features

- IF switching with loss-of-signal sensing and AGC for substitute signals
- Override alert switching
- Easy access front panel test points
- Standby for 30 Vdc backup power

The Commander processor takes signals from off-air channels, super trunks or return signals in a two-way system, amplifies them, filters out interfering signals, and converts the signals to any cable output channel.

Commander processors provide output in the non-phaselock, incremental phaselock, or harmonic phaselock modes.

The front end system employs a three-pole helical resonator input filter followed by a low-noise, high linearity pre-amplifier. This is followed by a double balanced mixer and a precision delayed AGC. This front end design ensures a combination of a low noise figure and excellent input overload performance. It eliminates the need for external filters even when adjacent signal levels are high.

The IF amplifier provides independent amplification and AGC for picture and sound. This enables the sound level to be adjusted and regulated independently of the picture level.

SPECIFICATIONS:

RF	
Input Channels	T7-T13, 2-13, 14I-61I* 2H-69H*, 14-83 *Special Order
Output Channels	T7-T13, 2-13, 14I-61I, 2H-69H

COMMANDER DEMODULATOR

MODEL C4D DEMODULATOR

- True Nyquist response SAW FILTER

- Enhanced envelope detection circuit

- Automatic Video/Sound squelch

- Front panel adjustable chroma gain control

The C4D is the first CATV demodulator to have its waveform characteristics tested and guaranteed prior to shipment. The C4D will have a K-factor less than 2%, chroma delay less than ± 50 nsec, and multiburst flatness less than ± 1 dB.

Balanced and unbalanced (600 ohms) audio outputs are available from barrier-strip terminals or from a standard XLR broadcast audio connection.

The SAW filter also acts to reject signals from incoming adjacent channels. Any number of equal level adjacent channels are permitted. The C4D offers -80 dB intermodulation and cross modulation at 10 dBmV input levels. This enables a greater than 60 dB carrier-to-noise ratio at the demodulator output.

FEATURES

First true Nyquist response SAW filter in a CATV product.

- The Nyquist characteristic is required for accurate demodulation of the vestigial sideband signal to assure that timing is preserved and that distortions are not introduced.

- The precise Nyquist response is inherent to the SAW filter and will not change with time or temperature. This assures both long and short term stability.

- The single SAW filter improves maintenance because it reduces 30 adjustable components in our former demodulator to just five adjustments.

Enhanced envelope detection

- The C4D contains a specially enhanced envelope detection circuit. This circuit employs a complementary diode detector network in which a second diode corrects non-linear effects in the envelope detector. A standard envelope detector cannot adequately handle high depth of modulation—resulting in degraded differential phase and gain and degraded hue and color saturation in the picture. The C4D's enhanced envelope detector and synchronous detectors can handle an index of modulation up to video clamping without phase and gain losses.

- The enhanced envelope detector is inherently more reliable than synchronous detectors. Synchronous detectors cannot handle all signal conditions. Therefore, whenever a synchronous detector is used, sensing and switching circuits must be added to switch to a back-up envelope detector. The C4D avoids the reliability penalties of the sensing and switching circuits.

Automatic video/sound squelch

- The C4D provides automatic video/sound and subcarrier squelch so that noise will not enter the system if the input signal is lost.

MODULATOR

COMMANDER IV MODULATOR C4M

TV Signal Modulator for broadcast quality adjacent channel operation, monochrome or color

- Spurious outputs down -70 dB at +60 dBmV output
- Extremely low differential phase and gain
- Front-panel metering for video depth of modulation and audio deviation
- White-level limiter prevents over-modulation
- Front-panel test points
- No outboard filters required
- Automatic gain control
- Ease of maintenance—slide-out drawer allows maintenance without interrupting service
- Plug-in modular construction
- Crystal-controlled oscillator with new pulse-integrating AFC
- Complete override control for emergency alert
- Provides for maximum system reliability with external standby power
- Only 3 1/2" of rack space
- Optional phase lock: single channel or incremental

To complement the Commander IV heterodyne processor, Jerrold engineers designed the new modulator to provide comparable signal fidelity and compatible IF switching and output configurations.

The Commander IV modulator comprises five active modules, two of which are unique to the modulator. The other three, CAX, CPR, and ICC, are identical to those used in the Commander III heterodyne processor. (See processor information.)

The two unique modules are: Audio Modulator, Model CAM; and Video Modulator and Delay Predistorter, Model CVM.

The audio-modulator section provides a 4.5 MHz sub-carrier which is frequency-modulated by the audio wave-form, after standard pre-emphasis. The center frequency of the sub-carrier is stabilized to meet (or better) the +/- kHz FCC requirement. To accomplish this, a new pulse-integrating discriminator is employed in which a crystal oscillator is used to maintain constant pulse width. The result of the improved pulse-width control is greater precision and reliability in stabilizing the frequency.

Ordering Information

Commander IV modulator is designated CMM-. A Commander IV modulator equipped with phase lock is designated by Model No. CMMP-. When ordering, the model number and output channel must be specified. For example, a Commander IV modulator for channel 4 output must be specified as Model No. CMM-4. If phase lock is required the designation is CMMP-4. Refer to the price sheet for complete ordering information. Test kit, model COM IV-TK is available for test and maintenance.

MODEL HC-8F EIGHT-WAY COMBINER/SPLITTERS

The HC-8F is a full bandwidth 5 to 450MHz 8-way combiner/splitter. It may be used as a combiner to merge the signals from up to eight channels or as a splitter to distribute phaselock reference or emergency alert signals to multiple channels.

Jerrold employs a directional coupler circuitry in the HC-8F because this technique provides greater channel-to-channel isolation. High isolation provides protection for adjacent channel interference. Very high isolation such as the 35dB level offered in the HC-8F is critical for any application where signals are fed to an AML system.

The HC-8F input ports are balanced so that if the input signals have equal levels, they will remain equal when combined. Regardless of which input port is used a 16dB difference in level is maintained.

SPECIFICATIONS

Frequency Range: 5-450MHz. **Insertion Loss (min.):** 15.8dB. **Isolation (min.):** 30dB. **Impedance:** 75 ohms. **Match:** 20dB. **Dimensions:** 19"L x 1-3/4"W x 1-1/2"H. **Weight:** 1 lb. 13 oz.

VHF SINGLE-CHANNEL FILTERS, PBF-SERIES

Jerrold Model PBF-* filters are single-channel VHF, high-Q, pass-band devices which overcome many headend overload problems. They also may be used effectively on the output of headend equipment to eliminate spurious signals generated by the particular equipment.

These devices feature low insertion loss and have a high degree of selectivity. The next higher "SND" and next lower "PIX" frequencies of adjacent channels are attenuated by more than 30 dB. These filters are ultra stable; i.e., there is no perceptible frequency shift throughout a temperature range from -40°F to +140°F.

This filter, which features a helical resonator design, can be rack-mounted and requires only one and three-quarter inches of vertical rack space (one panel increment). PBF filters are available in any of the following channels: Sub-Band, T7 thru T13; Lo-VHF, 2 thru 6; Mid-Band, A thru I; Hi-VHF, 7 thru 13; Super Band, J thru W. Order Model PBF- and specify channel. Example: for channel 3, order Model PBF-3.

*Specify channel.

SPECIFICATIONS—PBF-SERIES

Center Frequency: Sub-, Mid-, Super, and Standard TV Channel Assignments. **Bandwidth:** At 0.5 dB pts. 5.5 MHz +/- 150 KHz. **Insertion Loss:** 1.0 dB Max. (Low Band), 1.6 dB Max. (High Band). **Impedance:** 75 ohms, 18 dB return loss Input/Output. **Skirt Selectivity:** Upper adjacent sound carrier—32 dB, Lower adjacent picture carrier—43 dB. **Environment:** -40°F to 140°F, 95% relative humidity. **Physical:** 19" rack mounting; 1 (one) EIA rack increment (1 1/4"). **Connectors:** F-61A (Female), **Chroma Delay:** 35 nsec. max (Ch. 2-R).

SCRAMBLING COMPATIBLE, SAW FILTER MODULATOR

**C4MS MODULATOR
C4MPS PHASELOCK MODULATOR**

Scrambling compatible

- Compatible with both Jerrold RF and baseband encoders at no extra cost
- SAW filter eliminates adjacent channel interference
- IF loop-throughs provides separate video IF and sound IF to scrambler
- Scrambled video input for use with Jerrold baseband encoders

Built-in IF switching

- Loss-of-signal sensing provides program substitution when signal loss is detected
- Remote switching operates on external command as required for emergency override
- Alert ready. Built-in IF switch provides full video and audio override for emergency announcements
- Second switch option. First IF switch is standard. Second switch (CIS) is available to allow both timer-controlled programming changes and emergency override
- Optional video switching. Switch from one video input to another upon loss of signal or external command

Industry Best Performance

The C4MS and C4MPS offer these excellent performance standards:

- Depth of modulation To 95% without distortion
- Output level 60 dBmV
- Spurious output -60 dB at 60 dBmV
- K factor Less than 2%. The first CATV modulator to have its waveform guaranteed

Easy operation

- Built-in meter offers five functions. Unique circuit accurately measures depth of video modulation regardless of picture content. (Most other meters are content-sensitive.)
- White level limiter prevents over-modulation
- Front panel test points. More test points than competitive equipment
- Front panel controls provide ready access for signal adjustments
- Front panel status indicators show input signal, input power, B + power, and phaselock
- Center drawer slides out and tilts up to allow access to IF, AGC, and video modulator circuits without interrupting service
- Plug-in output module. Change to any channel using plug-in output converters
- Automatic gain control. Full AGC for IF input
- Standby power. Upon loss of AC power, the modulator will switch to a back-up 24-30 VDC power source
- Circuit isolators. Conveniently located push-in jumpers can be removed to isolate circuits for testing

AUDIO

Audio Input Type	600 ohms balanced, Cannon XLR type connector
Audio Input Level	continuously adjustable, 250 mV rms min. for 25 kHz deviation, at 1 kHz or lower
Audio Frequency Response	within ±1 dB, 50 Hz to 15 kHz, including standard pre-emphasis
Harmonic Distortion	1% max. at ±25 kHz deviation, 50 Hz to 15 kHz
FM Hum and Noise	60 dB min. below ±25 kHz deviation, 50 Hz to 15 kHz
Inter-carrier Frequency	4.5 MHz, ±1 kHz

4.5 MHz AURAL

4.5 MHz Input Type	75 ohms, unbalanced
Input Terminal Match	15 dB min. return loss
4.5 MHz Input Level	3.16 mV rms (10 dBmV) min

METERING

Video Modulation	indicates peak percent depth of modulation, within ±3%, for any composite video waveform
Sound Modulation	indicates kHz deviation, within ±5% up to ±35 kHz deviation
AGC Voltage	indicates operating point of AUX IF AGC system, ±3%
B+	indicates power supply DC voltage
Phase Lock	indicates error voltage
PHASE LOCK	
Phase Lock Capability	Off-the-air single-channel or comb generator
Reference Signal Level	+10 to +30 dBmV (CW); +20 to +30 dBmV (modulated carrier)
Capture Range	-40 kHz minimum

GENERAL

Standby Carrier Modes (Optional)	a CW b external video -1 V p-p for 87.5% mod. c. external 4.5 MHz sound
Standby Carrier Output Level	0 to -10 dB relative to normal video level
Standby Carrier Delay (Turn-on)	0, or 5, or 25 seconds (switchable)
AC Power Requirements	100 to 130 V, 50 to 60 Hz, 25 W
DC Power Requirements	23-30 V DC, 900 mA max
Dimensions	19" wide, 3.5" high, 17" deep (48.26 cm, 8.89 cm, 43.18 cm)
Shipping Weight	21 lbs. (9.52 kg)
Mounting	19" standard relay rack or cabinet
Operating Temperature Range	32° to 120°F (0° to 48.9°C)

VIDEO

Video Input Level	0.5 V p-p for 87.5% mod.
Video Input Type	composite NTSC video, negative sync
Video Input Impedance	75 ohms
Video Input Match	30 dB min. return loss, 25 Hz to 6 MHz
Overall Amplitude Response	within ±1 dB, 25 Hz to 4.18 MHz
Differential Gain	±0.25 dB max. for 87.5% depth of modulation, 10% to 90% APL
Differential Phase	±0.5° max. for 87.5% depth of modulation, 10% to 90% APL
AM Hum and Noise	60 dB min. below 87.5% depth of modulation
Sync Compression	0.4 dB max. for 87.5% depth of modulation
Tilt or Sag of 60 Hz Square Wave	1% max.
Modulation Range	to 95%
White Level Limit, Adjustable	80% to 95% modulation depth
K factor	2% max

CPG

MODEL CPG PHASELOCK REFERENCE GENERATOR

FEATURES

- HRC or IRC Coherent Operation
- High Output Level

When multiple channels are carried on a cable system, distortion products result at harmonic multiples of the picture carrier frequencies and at mathematical sums and differences between carriers. Coherent operation controls carrier spacing so that the beats from one channel fall directly on the picture carrier of the other channels where they are overwhelmed by the strength of the carrier signal.

Two reference formats are available:

The HRC system (harmonically related carriers) offers the mathematically purest signal because it makes both second and third order beats invisible. On Jerrold's set-top converters 5H is the same as channel 55H; 6H, the same as 56H.

The IRC system (incrementally related carriers) eliminates third-order distortion. Because second order beats are not usually a limitation with push-pull amplifiers, the improvement is as good as with the HRC system. The advantage of IRC phaselock is that the traditional broadcast, mid and super channel assignments remain unchanged.

Therefore, IRC is compatible with existing set-top converters and may be employed in systems which have a no-converter tier of service. Broadcast channels 5 and 6 do not align with the IRC scheme and must be moved for phaselock operation to channels 551 and 561.

The phaselock circuitry available for Commander IV heterodyne processors and modulators has been designed for maximum reliability and flexibility of operation. To insure fault-free operation of the phaselock circuitry, a lock-in range of ± 40 KHz has been provided. Reliable operation is guaranteed regardless of: broadcast reference-signal offset and drift, comb-generator-frequency accuracy, or internal-oscillator drift. If the reference signal ever becomes unavailable, each Commander modulator and processor contains a back-up crystal oscillator.

CPG SPECIFICATIONS

Model	Output Frequency	Output Level Level
CPG-I-400	55.25-397.25 MHz 6.00 MHz spacing	34 dBmV, each of four outputs
CPG-H-450	54-450 MHz 6.00 MHz spacing	same as above

REFERENCE GENERATOR/ ALERT CONTROLLER

C4E

MODEL C4E COMMANDER ALERT OVERRIDE CONTROLLER

FEATURES

- Provides Override Switching Control Signal and Emergency Audio Signal Received over a Standard Telephone Line
- Includes User Programmed Security Code
- Provides Three Time Out Functions

Every Commander III and IV modulator and processor has an override capability built-in. This standard feature allows normal programming to be overridden at IF for emergency announcements.

The C4E emergency override controller consists of a telephone auto answer and tone detector in one unit. The C4E System consists of both the override controller and a modulator with high level output at IF.

A touch tone telephone supplies the necessary audio tone source to activate/-deactivate the override function. The C4E activates the override function upon correct input of a user-programmed multi-digit code which is entered on the telephone touch tone keypad. The high level output IF modulator supplies the telephone audio to all channels. An optional character generator or studio camera may be employed to provide a video message as well.

The override message may be terminated after a pre-determined time delay or after the star character on the telephone keypad is depressed for at least 3 seconds.

The IF signal is distributed to each channel by means of a splitting network which may consist of SWS-2, SWS-4 and HC-8F splitters.

C4E SPECIFICATIONS

"SJ" SERIES MAINSTATION

STARLINE "SJ" SERIES 20/450 PUSH-PULL MAINSTATIONS

The Starline "SJ" Series is the CATV industry's most widely used mainstation amplifier. The Starline "SJ" Series utilizes Jerrold's exclusive quad technology and is capable of 450 MHz performance. The Starline "SJ" Series is capable of amplifying 60 standard forward channels and by use of plug-in filters is capable of two-way subsplit (5-32 MHz return and 52-450 MHz forward passbands) or midsplit (5-108 MHz return and 172-450 MHz forward passbands) configuration.

FEATURES

- **60 Channel Capability**
Designed for all CATV markets
- All modules and accessories have been upgraded to 450 MHz performance
- **The Versatility of the Quad**
Jerrold's convenient amplifier circuit. The quad gives you a choice: greater cable spacing for new transportation or distribution systems...with fewer active electronics per mile; or traditional cable spacing for extensions or rebuilds...with fewer AGC amplifiers required
- **The Exclusivity of Total Level Compensation**
With variable equalizer, 8 dB gain control, independent slope control, and/or plug-in thermal compensation for the manual stations...allows cost-effective designs, easier installations, reduced maintenance and operating expenses
- Return feeder connect/disconnect option
- **Two-Way Upgradable:** Plug-in filters and return amplifiers make for easy upgrade to subsplit or midsplit systems
- Variable equalizers for 220, 270, 300, 330, 350, 400 or 450 MHz systems
- Rotatable feeder maker for 1 to 4 feeder outputs
- Circuit breaker protection on all feeder ports, model CB-5
- **Very Low Power Consumption**
Maximum of 31 watts per mainstation with SJSW power supplies
- Jerrold's new SJSW "Super Switcher" power pack: For ultra-dependable delivery of basic and premium-program services—at the lowest power cost possible!

STARLINE "SJ" SERIES HOUSING AND POWER SUPPLY COMBINATIONS

HOUSING FEATURES

- 7 port aluminum housing
- RFI and weather gaskets
- Input and output test point apertures
- 120 dB radiation well at input and output connector ports
- Electronic packages can be removed without removing cables

POWER SUPPLY FEATURES

- SJSW "super switcher" provides high efficiency and lowest power cost possible
- Heavy duty surge arrester standard, model SJSA-145

"SJ" SERIES HOUSING

STARLINE "SJ" SERIES HOUSING

The Starline 20 housing, model SJAH is a 7 port aluminum housing designed for both trunk and trunk feeder/feeder applications. The housing includes separate RFI and weather gaskets. Input and output test point apertures eliminate the need to open the housing to measure forward and return levels. The input and output platforms are designed for high isolation, 120 dB radiation wells at input and output connector ports, and seizure of coaxial cable center conductors. This allows electronic packages to be installed or removed without removing coaxial cables.

POWER PACK
MODEL "SJSW"

STARLINE "SJ" SERIES POWER SUPPLIES

The primary design criteria for Jerrold power supplies is reliability. The SJSW-* incorporates heavy-duty components selected for long life and surge protection is standard (model SJSA-145). Choose either 30 volt or 60 volt.

Jerrold power supplies have an extended-voltage operating-range feature which allows the amplifier station to continue to operate during over voltage conditions, thus providing continuous service to subscribers. Current limiting circuitry and fuse assembly protect the power supply and amplifier modules. Easily accessible test points allow simple set-up and performance checks. Current limiting is insured by a current sensing and limiting circuit. When a load current exceeds a predetermined threshold, this unique circuit effectively "blocks" any excessive current from flowing through the power supply—without interrupting the "normal" current flow. When the excessive load condition causing the current is removed or abates, the circuit automatically returns to its quiescent state.

STARLINE "SJ" SERIES ELECTRONIC PACKAGES

There are "5" basic electronic package configurations of the Starline "SJ" Series to meet your system design requirements; trunk amplification, trunk and bridging, and trunk terminating or intermediate bridging with one to four bridging outputs; with automatic gain and slope control available for trunk amplification and trunk and bridging styles.

Feeder Disconnect

SJ-*S/E electronics packages are designed to accommodate an optional feeder connect/disconnect switch, model SEP-30S. This module has three positions: connect, disconnect, and remote. The SEP30-S may be remotely operated from an external controller (model STSM) when in the remote position.

Thermal Compensation

All trunk amplifier modules are equipped with thermal compensation to maintain optimal system performance over temperature swings from -40°F to +140°F.

AGC/ASC Trunk Amplifier With Bridging Amplifier

This electronic package provides amplification for trunk and bridging. The push-pull trunk amplifier module SJAS is a dual pilot gain and slope control amplifier. AGC and ASC can be turned on or off independently for ease of operational set-up and maintenance using a simple 5 step procedure which eliminates seasonal rebalancing. The push-pull bridger amplifier module SJBM utilizes manual gain and slope controls and has a plug-in pad (model JXP-*) facility.

The amplifier modules are mounted in a two-way connector chassis which provides up to 4 bridger outputs.

Mainstation Electronic Packages Model	Upper Freq. Design Spectrum	Return Feeder Disconnect Capability	Connector Chassis (Note 2)	Trunk Amplifier Module	Standard Pilot Carrier Channels	Bridger Amplifier Module
SJ 1SS*/450	300-450	Yes	SCD-F SS2	SJAS 450	4 and 36 (W)	SJBM 450
SJ 1SS/450	300-450	Yes	SCD-F SS2	SJAS-450*	NOTE 1	SJBM 450
SJS-1AS/E	220-300	Yes	SCD-2WDS	SJAS 400A	4 and 1	SJBM 400
SJS 1AS*/E	220-300	Yes	SCD-2WDS	SJAS 400A*	NOTE 1	SJBM 400
SJ 1SS/330	220-330	Yes	SCD-F SS2	SJAS 330	4 and 36 (W)	SJBM 330
SJ 1SS*/330	220-330	Yes	SCD-F SS2	SJAS 330*	NOTE 1	SJBM 330*

1. ASC/AGC module tuned to customer order.
2. Contains input, output and distribution filters, except 300 MHz models.

Manual Trunk Amplifier With Bridging Amplifier

This electronic package provides amplification for trunk and bridging. The push-pull trunk amplifier module SJMM utilizes manual gain control. This module is thermally controlled to compensate for changes in gain and for changes in attenuation and slope in 18 dB of cable preceding the amplifier due to environmental variations.

The SJBM bridger amplifier and the SCD connector chassis are used in these models.

Mainstation Electronic Packages Model	Upper Freq. Design Spectrum	Return Feeder Disconnect Capability	Connector Chassis (Note 1)	Trunk Amplifier Module	Standard Pilot Carrier Channels	Bridger Amplifier Module
SJ-2SS/450	300-450	Yes	SCD-F-SS1	SJMM-450	N/A	SJBM-450
SJ-2AS/E	220-300	Yes	SCD-2WDS	SJMM 400A	N/A	SJBM 400
SJ 2SS/330	220-330	Yes	SCD-F-SS1	SJMM-330	N/A	SJBM-330

1. Contains input, output and distribution filters, except 300 MHz models.

ASC/AGC Trunk Amplifier

This electronic package provides amplification for trunk only. It utilizes the AGC/ASC trunk module SJAS.

The amplifier module is mounted in a two-way connector chassis, model SCL. This connector chassis is for trunk only applications. The SCL-F-SS contains subsplit input and output filters, while the SCL-F-MS contains midsplit filters.

Mainstation Electronic Packages Model	Upper Frequency Design Spectrum	Return Feeder Disconnect	Connector Chassis (Note 2)	Trunk Amplifier Module Channels	Standard Pilot Carriers	Bridger Amplifier Module
SJ 3SS 450	300-450 MHz	N/A	SCL-F-SS	SJAS 450	4 and 36 (W)	N/A
SJ 3MS 450	300-450 MHz	N/A	SCL-F-MS2	SJAS 450*	NOTE 1	N/A
SJ 3SS* 450	300-450 MHz	N/A	SCL-F-SS/	SJAS 450*	NOTE 1	N/A
SJS 3A 1	220-300 MHz	N/A	SCL-F-MS2	SJAS 400A	4 and 1	N/A
SJS 3A* 1	220-300 MHz	N/A	SCL-2WD	SJAS 400A*	NOTE 1	N/A
SJ 3SS 330	220-330 MHz	N/A	SCL-F-SS	SJAS 330	4 and 36 (W)	N/A
SJ 3SS* 330	220-330 MHz	N/A	SCL-F-SS	SJAS 330*	NOTE 1	N/A

1. ASC/AGC module tuned to customer order. (Recommend 7 and 36 l for SJ-3MS*/450).
2. Contains input and output filters, except 300 MHz models.

Manual Gain Control Trunk Amplifiers

This electronic package provides amplification for trunk only. It utilizes the manual gain control trunk modules SJMM.

The amplifier module is mounted in a two-way connector chassis, model SCL. This connector chassis is for trunk only applications.

Mainstation Electronic Packages Model	Upper Frequency Design Spectrum	Return Feeder Disconnect	Connector Chassis (Note 1)	Trunk Amplifier Module Channels	Standard Pilot Carriers	Bridger Amplifier Module
SJ 4SS 450	300-450 MHz	N/A	SCL-F-SS	SJMM 450	N/A	N/A
SJ 4MS 450	300-450 MHz	N/A	SCL-F-MS1	SJMM 450	N/A	N/A
SJ 4SS 330	220-330 MHz	N/A	SCL-F-SS	SJMM 330	N/A	N/A

1. Contains input and output filters, except 300 MHz models.

Trunk Termination/Intermediate Trunk Bridging Amplifier

This electronic package provides amplification for bridging only. It utilizes a push-pull distribution amplifier module SJDL with manual gain and slope control. This module is thermally controlled to compensate for changes in gain and for changes in attenuation and slope in 20 dB of cable due to environmental variations.

For intermediate trunk bridging applications, an external directional coupler, model STC-8F or STC-12F is required.

Mainstation Electronic Packages Model	Upper Frequency Design Spectrum	Return Feeder Disconnect	Connector Chassis (Note 1)	Trunk Amplifier Module Channels	Standard Pilot Carriers	Bridger Amplifier Module
SJ 4SS/450	220-450 MHz	Yes	SCD-F-SS	N/A	N/A	SJDL 450
SJS 5S 1	220-300 MHz	Yes	SCD-2WDS	N/A	N/A	SJDL 400
SJ 4SS 330	220-330 MHz	Yes	SCD-F-SS	N/A	N/A	SJDL 330

1. Contains input and distribution filter; output filter included but not required.

CABLE EQUALIZERS FOR MAINSTATIONS

Forward Equalizers

The forward cable equalizers used in all Starline "SJ" mainstations include fourteen sub-series: SEP-224*, SEP-225*, SEP-274*, SEP-275*, SEP-304*, SEP-305*, SEP-334*, SEP-335*, SEP-354*, SEP-355*, SEP-404*, SEP-405*, SEP-454* and SEP-455*. These equalizers plug into connector chassis model SCD-2WD, SCD-2WDS, SCL-2WD, and SCD-2WFS. Specific functions are described below.

Model SEP-224 Series—For 220MHz One-Way Applications

This series of variable cable equalizers operates within a passband of 40-220MHz and is utilized in one-way mainstations that do not use model TF-30/TF-30F trunk filters.

MODEL	SEP-224TL	SEP-224L	SEP-224H	SEP-224ST
Passband	40-220 MHz	40-220 MHz	40-220 MHz	40-220 MHz
Response Flatness	±0.15 dB	±0.1 dB	±0.1 dB	±0.15 dB
Max. Insertion Loss	2.3 dB	1 dB	1.2 dB	1.5 dB
Variable Equalization Range at 260 MHz	2-11 dB	10-16 dB	15-22 dB	19-26 dB
Terminal Match, return loss, 75 Ω impedance (minimum)	16 dB	16 dB	16 dB	16 dB

All equalizers are designed for 0.5 inch outer diameter, aluminum sheathed, foam dielectric, coaxial cable.

Model SEP-225 Series—For 220MHz Two-Way Mainstations (With Filters)

This series of variable cable equalizers operates within a passband of 52-220MHz and is utilized in two-way mainstations that use model TF-30/TF-30F trunk filters.

MODEL	SEP-225L	SEP-225H	SEP-225ST
Passband	52-220 MHz	52-220 MHz	52-220 MHz
Response Flatness	+0.1 dB	±0.1 dB	±0.15 dB
Max. Insertion Loss	1 dB	1.2 dB	2 dB
Variable Equalization Range at 260 MHz	10-16 dB	15-22 dB	19-26 dB
Terminal Match, return loss 75 Ω impedance (minimum)	16 dB	16 dB	16 dB

All equalizers are designed for 0.5 inch outer diameter, aluminum sheathed, foam dielectric, coaxial cable.

Model SEP-274 Series—For 270MHz One-Way Applications

This series of variable cable equalizers operates within a passband of 40-270MHz and is utilized in one-way mainstations that do not use model TF-30/TF-30F trunk filters. (For midsplit mainstations use this equalizer series.)

MODEL	SEP-274TL	SEP-274L	SEP-274H	SEP-274ST
Passband	40-270 MHz	40-270 MHz	40-270 MHz	40-270 MHz
Response Flatness	±0.15 dB	±0.1 dB	±0.1 dB	±0.15 dB
Max. Insertion Loss	2.6 dB	1.3 dB	1.3 dB	1.6 dB
Variable Equalization Range at 270 MHz	2-11 dB	10-16 dB	15-22 dB	19-26 dB
Terminal Match, return loss, 75 Ω impedance (minimum)	15 dB	18 dB	18 dB	16 dB

All equalizers are designed for 0.5 inch outer diameter, aluminum sheathed, foam dielectric, coaxial cable.

Model SEP-275 Series—For 270MHz

Two-Way Mainstations (With Filters)

This series of variable cable equalizers operates within a passband of 52-270MHz and is utilized in two-way mainstations that use model TF-30/TF-30F trunk filters.

MODEL	SEP-275L	SEP-275H	SEP-275ST
Passband	52-270 MHz	52-270 MHz	52-270 MHz
Response Flatness	±0.1 dB	±0.1 dB	±0.15 dB
Max. Insertion Loss	1.3 dB	1.3 dB	1.6 dB
Variable Equalization Range at 270 MHz	10-16 dB	15-22 dB	19-26 dB
Terminal Match, return loss, 75 Ω impedance (minimum)	18 dB	18 dB	16 dB

All equalizers are designed for 0.5 inch outer diameter, aluminum sheathed, foam dielectric, coaxial cable.

Model SEP-304 Series—For 300MHz One-Way Applications

This series of variable cable equalizers operates within a passband of 40-300MHz and is utilized in one-way mainstations that do not use model TF-30/TF-30F trunk filters. (For midsplit mainstations use this equalizer series.)

MODEL	SEP-304TL	SEP-304L	SEP-304H	SEP-304ST
Passband	40-300 MHz	40-300 MHz	40-300 MHz	40-300 MHz
Response Flatness	±0.15 dB	±0.1 dB	±0.1 dB	±0.15 dB
Maximum Insertion Loss	2.5 dB	1.3 dB	1.3 dB	1.6 dB
Variable Equalization Range at 300 MHz	2-11 dB	10-16 dB	15-22 dB	19-26 dB
Terminal Match, return loss, 75 ohm impedance (minimum)	15 dB	16 dB	16 dB	16 dB

All equalizers are designed for 0.5 inch outer diameter, aluminum sheathed, foam dielectric, coaxial cable.

Model SEP-305 Series—For 300MHz Two-Way Mainstations (With Filters)

This series of variable cable equalizers operates within a passband of 52-300MHz and is utilized in two-way mainstations that use model TF-30/TF-30F trunk filters.

MODEL	SEP-305L	SEP-305H	SEP-305ST
Passband	52-300 MHz	52-300 MHz	52-300 MHz
Response Flatness	±0.10 dB	±0.10 dB	±0.15 dB
Maximum Insertion Loss	1.3 dB	1.3 dB	1.5 dB
Variable Equalization Range at 300 MHz	10-16 dB	15-22 dB	19-26 dB
Terminal Match, return loss, 75 ohm impedance (minimum)	16 dB	16 dB	16 dB

All equalizers are designed for 0.5 inch outer diameter, aluminum sheathed, foam dielectric, coaxial cable.

Model SEP-334 Series—For 330MHz Two-Way Mainstations (With Filters)

This series of variable cable equalizers operates within a passband of 330MHz and is utilized in two-way mainstations that use model TF-30/TF-30F trunk filters.

MODEL	SEP-334L	SEP-334H	SEP-334ST
Passband	40-330 MHz	40-330 MHz	40-330 MHz
Response Flatness	±0.15 dB	±0.15 dB	±0.15 dB
Maximum Insertion Loss	1.3 dB	1.3 dB	1.7 dB
Variable Equalization Range at 350 MHz	10-16 dB	15-22 dB	19-26 dB
Terminal Match, return loss, 75 ohm impedance (minimum)	18 dB	18 dB	16 dB

All equalizers are designed for 0.5 inch outer diameter, aluminum sheathed, foam dielectric, coaxial cable.

FORWARD EQUALIZERS (Cont'd.)

Model SEP-335 Series — For 330MHz

Two-Way Mainstations (With Filters)

This series of variable cable equalizers operates within a passband of 52-330MHz and is utilized in two-way mainstations that use model TF-30/TF-30F trunk filters.

MODEL	SEP-335L	SEP-335H	SEP-335ST
Passband	54-330 MHz	54-330 MHz	54-330 MHz
Response Flatness	± 0.15 dB	± 0.15 dB	± 0.2 dB
Maximum Insertion Loss	1.3 dB	1.3 dB	1.7 dB
Variable Equalization Range at 400 MHz	10-16 dB	15-20 dB	20-28 dB
Terminal Match, return loss, 75 ohm impedance (minimum)	18 dB	18 dB	16 dB

All equalizers are designed for 0.5 inch outer diameter, aluminum sheathed, foam dielectric, coaxial cable.

Model SEP-354 Series — For 350MHz One-Way Applications

This series of variable cable equalizers operates within a passband of 40-350MHz and is utilized in one-way mainstations that do not use model TF-30/TF-30F trunk filters. (For midsplit mainstations use this equalizer series.)

MODEL	SEP-354TL	SEP-354L	SEP-354H	SEP-354ST
Passband	40-350 MHz	40-350 MHz	40-350 MHz	40-350 MHz
Response Flatness	± 2 dB	± 1.5 dB	± 1.5 dB	± 2 dB
Maximum Insertion Loss	2.0 dB	1.3 dB	1.3 dB	1.6 dB
Variable Equalization Range at 300 MHz	5-11 dB	10-16 dB	15-20 dB	20-26 dB
Terminal Match, return loss, 75 ohm impedance (minimum)	16 dB	18 dB	18 dB	16 dB

All equalizers are designed for 0.5 inch outer diameter, aluminum sheathed, foam dielectric, coaxial cable.

Model SEP-355 Series — For 350MHz

Two-Way Mainstations (With Filters)

This series of variable cable equalizers operates within a passband of 52-350MHz and is utilized in two-way mainstations that use model TF-30/TF-30F trunk filters.

MODEL	SEP-355L	SEP-355H	SEP-355ST
Passband	52-350 MHz	52-350 MHz	52-350 MHz
Response Flatness	± .15 dB	± .15 dB	± .2 dB
Maximum Insertion Loss	1.3 dB	1.3 dB	1.6 dB
Variable Equalization Range at 300 MHz	10-16 dB	15-20 dB	20-26 dB
Terminal Match, return loss, 75 ohm impedance (minimum)	18 dB	18 dB	16 dB

All equalizers are designed for 0.5 inch outer diameter, aluminum sheathed, foam dielectric, coaxial cable.

Model SEP-404 Series — For 400MHz One-Way Applications

This series of variable cable equalizers operates within a passband of 40-400MHz and is utilized in one-way mainstations that do not use model TF-30/TF-30F trunk filters. (For midsplit mainstations use this equalizer series.)

MODEL	SEP-404TL	SEP-404L	SEP-404H	SEP-404ST
Passband	40-400 MHz	40-400 MHz	40-400 MHz	40-400 MHz
Response Flatness	± 0.2 dB	± 0.15 dB	± 0.15 dB	± 0.2 dB
Maximum Insertion Loss	2.0 dB	1.3 dB	1.3 dB	1.6 dB
Variable Equalization Range at 400 MHz	5-11 dB	10-16 dB	15-20 dB	20-26 dB
Terminal Match, return loss, 75 ohm impedance (minimum)	16 dB	16 dB	16 dB	16 dB

All equalizers are designed for 0.5 inch outer diameter, aluminum sheathed, foam dielectric, coaxial cable.

Model SEP-405 Series — For 400MHz

Two-Way Mainstations (With Filters)

This series of variable cable equalizers operates within a passband of 52-400MHz and is utilized in two-way mainstations that use model TF-30/TF-30F trunk filters.

MODEL	SEP-405L	SEP-405H	SEP-405ST
Passband	52-400 MHz	52-400 MHz	52-400 MHz
Response Flatness	± 0.15 dB	± 0.15 dB	± 0.15 dB
Maximum Insertion Loss	1.3 dB	1.3 dB	1.6 dB
Variable Equalization Range at 400 MHz	10-16 dB	15-20 dB	20-26 dB
Terminal Match, return loss, 75 ohm impedance (minimum)	16 dB	16 dB	16 dB

All equalizers are designed for 0.5 inch outer diameter, aluminum sheathed, foam dielectric, coaxial cable.

Model SEP-454 Series — For 450MHz One-Way Applications

This series of variable cable equalizers operates within a passband of 40-450MHz and is utilized in one-way mainstations that do not use model TF-30/TF-30F trunk filters. (For midsplit stations use the following equalizer series.)

MODEL	SEP-454TL
Passband	40-450 MHz
Response Flatness	± 0.2 dB
Maximum Insertion Loss	2.0 dB
Variable Equalization Range at 450 MHz	5-11 dB
Terminal Match, return loss, 75 ohm impedance (minimum)	16 dB

All equalizers are designed for 0.5 inch outer diameter, aluminum sheathed, foam dielectric, coaxial cable.

Model SEP-455 Series — For 450MHz

Two-Way Mainstations (With Filters)

This series of variable cable equalizers operates within a passband of 52-450MHz and is utilized in two-way mainstations that use model TF-30/TF-30F trunk filters.

MODEL	SEP-455-L	SEP-455-H	SEP-455-ST
Passband	52-450 MHz	52-450 MHz	52-450 MHz
Response Flatness	± 5 dB	± 15 dB	± 15 dB
Maximum Insertion Loss	1.3 dB	1.3 dB	1.6 dB
Variable Equalization Range at 450 MHz	10-16 dB	15-20 dB	20-26 dB
Terminal Match, return loss, 75 ohm impedance (minimum)	16 dB	16 dB	16 dB

RETURN EQUALIZERS

RETURN FEEDER DISCONNECT SWITCH AND EQUALIZER

RETURN EQUALIZERS

Trunk return cable equalizers used in all standard Starline "SJ" mainstations include two sub-series: SEP-30C3 and SEP-108*.

These equalizers couple and attenuate the return trunk and feeder signals before amplification by the trunk return amplifier. Two facilities for plug-in pads, model SXP-*, provide for the additional attenuation to the trunk return amplifier. These equalizers plug into connector chassis model SCD-2WDS, SCD-2WFS or SCL-2WD. Specific functions are described below.

MODEL SEP-30C3—FOR TWO-WAY SUBSPLIT MAINSTATIONS

This variable cable equalizer operates within a passband of 5-32MHz and is utilized in two-way subsplit mainstations that use model TRA-30M or TRA-30A trunk return amplifiers.

MODEL	SEP-30C3
Passband	5-32 MHz
Response Flatness	±0.2 dB
Max. Insertion Loss at 30 MHz	Trunk: 4.5 dB Feeder: 3.5 dB, ±0.2 dB max.
Variable Equalizer Range at 30 MHz (equivalent forward spacing at 300 MHz)	3-7 dB (10-24 dB)
Isolation Between Trunk and Feeder Inputs	30 dB min.
Terminal Match, return loss, 75 Ω impedance (minimum)	18 dB
Return Signal Attenuation Facilities	SXP-* plug-in facilities for both trunk and feeder return path; SXP-0 units factory-inserted. Note: Where feeder coupler section is not used, insert SXP-15

All equalizers are designed for 0.5 inch outer diameter, aluminum sheathed, foam dielectric, coaxial cable.

MODEL SEP-108*C SERIES—FOR TWO-WAY MIDSPLIT MAINSTATIONS

This series of variable cable equalizers operates within a passband of 5-116MHz and is utilized in two-way midsplit mainstations that use model TRM-110 or TRA-108A trunk return amplifiers.

MODEL	SEP-108LC	SEP-108HC
Passband	5-116 MHz	5-116 MHz
Response Flatness	±0.2 dB	±0.2 dB
Max. Insertion Loss, at 108 MHz	Trunk: 3.1 dB Feeder: 8.8±0.5 dB	Trunk: 3.8 dB Feeder: 8.8±0.5 dB
Variable Equalizer Range at 108 MHz (equivalent forward spacing at 300 MHz)	5-11 dB (9-19 dB)	10-14 dB (18-25 dB)
Isolation Between Trunk and Feeder Inputs	35 dB min.	
Terminal Match, return loss, 75 Ω impedance (minimum)	18 dB	
Return Signal Attenuation Facilities	SXP-* plug-in facility for both trunk and feeder return path; SXP-0 units factory inserted. Note: Where feeder coupler section is not used, insert SXP-15	

All equalizers are designed for 0.5 inch outer diameter, aluminum sheathed, foam dielectric, coaxial cable.

VRF-74

Prices and Specifications Subject to Change Without Notice.

RETURN FEEDER DISCONNECT SWITCH AND EQUALIZER

Model SEP-30S incorporates a diode switch in the reverse feeder path, a reverse trunk and feeder combiner, and a sub-split reverse trunk equalizer. Trunk and feeder paths are provided with SXP, plug-in pad, facilities.

Local control of the feeder switch is provided by a 3 position slide switch; with "on", "remote", or "off" positions. In the "on" position, the return feeders are connected to the return trunk path. In the "off" position, the return feeder path is disconnected and terminated in 75 ohms. In the "remote" position, the switch is controlled by a TTL compatible logic signal supplied thru the seventh port of the starting twenty housing. The SEP-30S must be used in conjunction with the SCD-2WDS/SCD-2WFS connector chassis, which is wired to provide the proper inputs.

To order Starline "SJ" Series electronics with SCD-2WDS/SCD-2WFS connector chassis for feeder disconnect, order SJ-450-*S/E for 300-450MHz systems, SJS-*S/E for 300 or 400MHz systems for SJS-*AS/E for 220, 270, or 300MHz systems.

MODEL	SEP-30S
Passband	5-32 MHz
Response Flatness	0.2 dB
Max. Insertion Loss	Trunk: 4.5 dB Feeder Connected: 5 dB
Variable Equalizer Range at 30 MHz (equivalent forward spacing at 300 MHz)	3-7 dB (10-24 dB)
Isolation Between Trunk and Disconnected Feeder	50 dB
Terminal Match, Return Loss, 75 Ω impedance (minimum)	18 dB
Return Signal Attenuation Facilities	SXP-* plug-in facility for both trunk and feeder return path; SXP-0 units factory-inserted. Note: Where feeder coupler section is not used, insert SXP-15
Remote Switch Control Input	TTL Compatible
DC Operating Voltage	-27V at 0.01 A

Equalizer is designed for 0.5 inch outer diameter, aluminum sheathed, foam dielectric, coaxial cable.

TRA-30M

TRA-30A

TRUNK RETURN AMPLIFIERS

The trunk return amplifiers used in all Starline "SJ" Series mainstations include four models: TRA-30M-TRA-30A, TRA-108M and TRA-108A. Specific functions are described below:

MODEL TRA-30M—FOR SUBSPLIT MAINSTATIONS

The model TRA-30M trunk return amplifier with manual gain control, for all "SJ" Series mainstations, will amplify 4 channels in the 5-32 MHz band. This push-pull amplifier is thermally controlled to compensate for changes in amplifier gain and for changes in attenuation and slope in 18 dB of cable due to environmental variations. The TRA-30 M trunk return amplifier plugs into the manual return trunk compartment of connector chassis model SCL-2WD, SCD-2WD and SCD-F-SS and SCL-F-SS. Each unit is shipped with jumper cable ST-RJC.

MODEL TRA-30A—FOR SUBSPLIT MAINSTATIONS

The model TRA-30A trunk return amplifier with AGC for models "SJ"-2 and "SJ"-4 mainstations, will amplify 4 channels in the 5-30 MHz band. This push-pull amplifier utilizes a pilot-control carrier at 31.5 MHz to operate the AGC. The AGC can be turned on or off for ease of operational set-up and maintenance.

The model TRA-30A trunk return amplifier plugs into connector chassis model SCL-2WD, SCD-2WDS and SCD-F-SS and SCL-F-SS. Each unit is shipped with jumper board ST-RJB.

MODEL TRM-110—MANUAL GAIN CONTROL TRUNK RETURN AMPLIFIER FOR MIDSPLIT MAINSTATIONS

The model TRM-110 trunk return amplifier with manual gain control for all "SJ" Series mainstations, will amplify 12 channels in the 5-116 MHz band. This push-pull amplifier is thermally controlled to compensate for changes in gain and for changes in attenuation and slope in 18 dB of cable due to environmental variations. The TRM-110 trunk return plugs into the manual return trunk compartment of connector chassis model SCL-2WD, SCD-F-SS and SCL-F-SS and SCD-2WDS. Each unit is shipped with jumper cable ST-RJC.

MODEL TRA-108A AGC TRUNK RETURN AMPLIFIER FOR MIDSPLIT MAINSTATIONS

The model TRA-108A trunk return amplifier with AGC, for models "SJ"-2 and "SJ"-4 mainstations, will amplify 12 channels within a 5-116 MHz passband. This push-pull amplifier utilizes a pilot-control carrier at 115 MHz to operate the AGC. The AGC can be turned on or off for ease of operational set-up and maintenance. The TRA-108A trunk return amplifier plugs into connector chassis model SCL-2WD, SCD-2WDS and SCD-F-SS and SCL-F-SS. Each unit is shipped with a jumper board ST-RJB.

RETURN CARRIER GENERATORS

The return carrier generators used with Starline Series mainstations with installed AGC trunk return amplifiers include three models; RCPG-1-31.5, RCPG-1-115 and RCPG-2-48/180.

The return carrier generator produces a noise band centered about a specified frequency to serve as a reference for the AGC circuitry in the trunk return amplifiers. The noise band can be attenuated by a 3 dB output level control and by plug-in pads SXP-*. Each trunk cable branch that has one or more mainstations containing an automatic return amplifier requires a generator at the extremity of the cable. Model RCF-*N, return carrier filters are required in selected mainstations with automatic trunk return amplifiers.

MODEL RCPG-1-31.5 FOR SUBSPLIT SYSTEMS

The model RCPG-1-31.5 return carrier generator for subsplit Starline Series mainstations with automatic trunk return amplifiers, will produce a pilot signal centered at 31.5 MHz. This pilot signal serves as a reference for the AGC circuitry in the trunk return amplifier.

MODEL RCPG-1-115—FOR MIDSPLIT SYSTEMS

The RCPG-1-115 return carrier generator for midsplit Starline Series mainstations with automatic trunk return amplifiers, will produce a pilot signal centered at 115 MHz. This pilot signal serves as a reference for the AGC circuitry in the trunk return amplifier.

MODEL RCPG-2-48/180—FOR HIGH SPLIT MIDSPLIT SYSTEMS

The RCPG-2-48/180 return carrier generator used with Starline Series mainstations with automatic trunk return amplifiers, will produce two pilot signals; one at 48 MHz and another at 180 MHz.

RCF-31.5N

RETURN CARRIER FILTERS

The return carrier filters used in Starline "SJ" mainstations include two models: RCF-31.5N and RCF-115N.

These filters attenuate the return AGC pilot signal in selected mainstations to prevent a buildup of pilot levels on the return path to the headend.

Model RCF-*N filters are utilized at points in the return trunk signal path where two or more branches of the trunk combine. These filters are installed in the mainstation(s), with the AGC trunk return amplifier, model TRA-*A, closest to the combination point in each branch leaving one branch without the filter for passing the return carrier to operate the succeeding AGC return amplifiers.

TV SIGNAL DISTRIBUTION

RETURN CARRIER FILTERS (cont'd)

The Model RCF-* return carrier filter installs in the manual trunk return compartment of connector chassis model SCD-2WDS, SCL-F-SS, SCL-F-MS, SCD-F-SS.

Specific functions are described below:

MODEL RCF-31.5N—FOR SUBSPLIT MAINSTATIONS

The Model RCF-31.5N return carrier filter for subsplit mainstation electronics, "SJ" Styles 2 and 4 will pass return trunk signals within a band of 5-30MHz while attenuating the return pilot carrier 3dB. The number of filters required for a system depends upon the trunk branching design of the specific system.

MODEL RCF-115N—FOR MIDSPLIT MAINSTATIONS

The Model RCF-115N return carrier filter for midsplit mainstation electronics, "SJ" Styles 2 and 4 will pass return trunk signals within a band of 5-108MHz, while attenuating the return pilot carrier 3dB. The number of filters required for a system depends on the trunk branching design for the specific system.

FRP-6

MODEL FRP-6—JUMPER BOARD FOR SUBSPLIT MAINSTATIONS

The model FRP-6 jumper board with 6dB attenuation for subsplit mainstations, "SJ" Style 5 with installed trunk return amplifier model TRA-30M, is required to attenuate signals to the trunk return amplifier. This jumper board plugs into model TRA-30M.

ST-RJB

MODEL ST-RJB—JUMPER BOARD FOR TWO-WAY MAINSTATIONS

The ST-RJB jumper board for two-way Starline "SJ" mainstations is required when trunk return amplifiers, TRA-30A and TRA-108A, are installed. This jumper board, shipped with those trunk return amplifiers, is installed in connector chassis models SCD-F-SS, SCL-F-SS, SCL-F-MS, SCD-2WDS, SCL-2WD, SCD-2W, and SCL-2W.

FRB-108

MODEL FRB-108—JUMPER BOARD FOR SUBSPLIT AND MIDSPLIT MAINSTATION ELECTRONICS

The Model FRB-108 jumper board with SXP-* facility for subsplit and midsplit mainstation electronics, model "SJ" 5 Station with installed trunk return amplifier, model TRA-30M or TRM-110, is required to provide return path continuity and additional attenuation to the return trunk amplifier. This jumper board plugs into the return equalizer compartment of connector chassis SCD-2WFS, SCD-2WDS or SCD-2W. (Shipped with SXP-0 installed.)

FEEDERMAKERS FOR MAINSTATIONS

MODEL FM-*F

FM-*F feeder makers are rotatable. They provide a choice of which feederline ports will be active.

The two-way feeder makers used in all Starline "SJ" Series mainstations include four models. These plug-in feeder makers create 1 to 4 feederline outputs at any distribution amplifier location equipped with connector chassis model SCD-2WD, SCD-F-SS and SCD-F-MS.

Model	FM 1F	FM 2F		FM 3F		FM 4F	
Pass Band	5-450 MHz						
Insertion Loss	5-450 MHz 0.3 dB max	5-300 3.5 dB + 0.5 dB	300-450 3.7 dB + 0.5 dB	5-300 6.7 dB + 0.5 dB	300-450 7.4 + 0.5 dB 3.7 + 0.5 dB	5-300 6.7 dB + 0.5 dB	300-450 7.0 + 0.5 dB
Isolation		20 dB	20 dB	20 dB	20 dB	20 dB	20 dB
Terminal Match	20 dB	18 dB	18 dB	18 dB	18 dB	18 dB	18 dB

MODEL ST-RJC—JUMPER CABLE FOR TWO-WAY MAINSTATIONS

The ST-RJC coaxial jumper cable for two-way Starline "SJ" mainstations is required when trunk return amplifiers, TRA-30M and TRM-110, are installed. This coaxial jumper, shipped with those trunk return amplifiers, is installed in connector chassis models SCD-F-SS, SCL-F-SS, SCL-F-MS, SCD-2WDS, SCL-2WD, SCD-2W, and SCL-2W.

MODEL SXP-T — FOR SXP- PADS

This tool makes it a simple task to install or remove SXP-pads.

PLUG-IN PADS FOR MAINSTATIONS AND LINE EXTENDERS

MODEL SXP — FOR STARLINE "SJ" AND "SLR" SERIES

This series of fixed value plug-in pads provides additional flat attenuation within a passband of 5-450MHz. These pads plug into model SCD-2WD, SCL-F-SS and SCL-F-MS, SCD-F-SS, SEP-30S, SEP-30C3, SEP-108 - series, LPF-30, DF-30F-UH, FRB-108 and SLR-series. Installation facilitated by using an SXP-T tool.

MODEL JXP — FOR STARLINE "JN", "SJ" AND "JLE" MODULES

This series of fixed value plug-in pads provides additional flat attenuation within a passband of 5-450MHz. These pads plug into models SJBM and SJDL.

CB-5

CIRCUIT BREAKERS FOR MAINSTATIONS

MODEL CB-5 — AMP CIRCUIT BREAKER

The model CB-5 circuit breaker used in the SCD-2WD, SCD-2WDS and SCD-F-SS connector chassis is required for each operating feederline that is powered. This circuit breaker plugs into the socket provided on the SCD-2WD, SCD-2WDS and SCD-F-SS connector chassis.

TF-108F

DF-30F

DF-30F-UH

FILTERS FOR MAINSTATIONS

MODEL TF-30F — FOR SUBSPLIT MAINSTATIONS

The model TF-30F trunk filter, for sub-split mainstations, will pass forward trunk signals within a band of 52-450MHz and pass return trunk signals within a band of 5-32MHz. Model TF-30F trunk filters plug into the input and output filter sections of connector chassis model SCD-2WD, SCL-2WD, SCD-2WDS. Two are required for each station; except for "SJ" Style 5. The SCD-F-SS and SCL-F-SS connector chassis are shipped with two of these installed.

TV SIGNAL DISTRIBUTION

MODEL TF-108F — FOR MIDSPLIT MAINSTATIONS

The model TF-108F trunk filter, for mid-split mainstations, will pass forward trunk signals within a band of 168-450MHz and pass return trunk signals within a band of 5-116MHz. Model TF-108F trunk filters plug into the input and output filter sections of connector chassis model SCD-2WD, SCD-2WDS and SCL-2WD. Two are required for each station. The SCL-F-MS is shipped with two of these filters installed.

MODEL DF-30F — FOR TWO-WAY DISTRIBUTION MAINSTATIONS

The model DF-30F distribution filter for two-way mainstations will pass forward signals within a band of 52-450MHz and return feeder signals within a band of 5-32MHz. The DF-30F two-way distribution filter plugs into the bottom of connector chassis model SCD-2WD and SCD-2WDS. The SCD-F-SS is shipped with one of these filters installed.

MODEL DF-30F-UH — FOR DUAL CABLE CROSSOVER APPLICATIONS

The model DF-30F-UH distribution filter in a Starline utility housing is used in a dual trunk single feeder mid-split system at crossover between mainstation.

MODEL SJSA-145

MODEL SSA-145

SURGE ARRESTORS

FOR SJSW-30 OR SJSW-60 POWER PACKS, MODEL SJSA-145

Replacement surge arrester for SJSW-() increases protection to 20,000 amp surge discharge currents (80 amps for 1/2 wave 60Hz) without interruption of service.

FOR STARLINE "SJ" MAINSTATIONS WITHOUT SJSW-() POWER SUPPLY

Provides same excellent surge protection as the SJSA-145. The SSA-145 is mounted in the SCD-2W, SCD-2WDS, SCD-2W-FS and SCL-2W connector chassis.

FOR 30 AND 60V JLE LINE EXTENDERS, MODEL A0-36

JLE housings provide receptacles at main input and output for optional insertion of A0-36—useable for protection against line voltage surges in both 30V and 60V systems. Supplied 2 per package.

FOR 60V STARLINE TWENTY MAINSTATIONS, MODEL A0-6

Model A0-6 surge arrester for 60V stations protects the electronics against surge voltages and AC transients on trunk and feeder-lines. This surge arrester fits into the seized center conductor locations in the Starline "SJ" housing and is recommended to be used on all feeder ports.

FOR 30V MAINSTATIONS, MODEL A0-3

Model A0-3 surge arrester is similar in function and location to model A0-6, except it is designed for 30V stations.

STARLINE X SERIES AMPLIFIERS

The Starline X Series is the only mainstation amplifier that cost effectively meets today's modern system needs and provides future growth capabilities. The Starline X Series has been designed to utilize all amplifier technologies and provide more basic features related to reliability, installation ease, and maintenance. In addition, the X-Series offers more advanced features than any other mainstation amplifier ever available. The Starline X allows you to optimize the tradeoffs between system performance, desired system features, and cost, so that you can customize your system to meet your objectives of cost and performance optimization.

FEATURES

Reliability

- Redundancy options
 - Power supply
 - Forward trunk amplifier
 - Return trunk amplifier
 - Bridger amplifier
- Complete station bypass
- Return feeder ingress control
- Return trunk ingress control
- Advanced status monitoring (System Commander)
- Superior heat sinking
- Heavy duty surge protector (80 ampere follow-on current)

Large system size

- Power doubled X-1500 increases cascadeability

High channel capacity

- 80 channel, 550 MHz
- 60 channel, 450 MHz
- Dual cable, single housing X-2000

Institutional systems

- High split forward 234-450 MHz and return 5-174 MHz
- Trunk and feeder capability
- Dual pilot return amplifier
- Capable of uninterruptible data communications path
- Unequaled system reliability (see above)

Ease of installation and reduced maintenance

- Right angle housing entry ports
- 30 dB directional coupler test points
- Modular design
- Double hinged housing
- Redundancy minimizes emergency maintenance
- Replaceable surge protectors
- Advanced status monitoring (System Commander)

Future growth capabilities

- Start with the basics, expand to advanced capabilities, as required, by simply plugging in the appropriate modules
- Power doubling modules
- Feedforward modules
- Return data traffic controller

STARLINE X SERIES HOUSING AND POWER SUPPLY COMBINATIONS

HOUSING

Installation Features

- Right angle entry ports
- Double-hinged cover
- Bolt-on rotatable brackets
- Large, well spaced ports
- Direct AC powering port
- Test point accessible through housing
- Visual inspection of center conductor seizure

Reliability Features

- Made from corrosion resistant 360 aluminum to insure long life
- 120 dB of port-to-port isolation
- Separate R.F.I. and weather gasket
- RF port surge arrester facilities
- Large heat sink areas
- Large ground contact areas for chassis, insures extended system stability
- Large fins for maximum heat dissipation

The all new Starline X-Series housing was designed with the cable system operator in mind. Extreme care was taken to produce a housing that would save time and money when being installed and, at the same time, insure an extended lifetime of high reliability.

In addition to the right angle entry ports, which simplify pedestal mounting, the double-hinged housing, bolt-on surface mounting brackets, well spaced ports and visual inspection of center conductor seizure are features that were specifically designed to ease equipment installation.

Long-term reliability is insured by built-in features like the large heat dissipating fins, expanded heat sink surface areas, separate R.F.I. and weather gaskets, corrosion resistant 360 aluminum alloy and improved ground contact areas for chassis-housing interface.

POWER SUPPLY COMBINATIONS

FEATURES

- Redundant DC power packs provide the utmost in reliability
- High efficiency switching circuit cuts power bills
- Status indicator lights on XNPD-60R
- Status monitoring available to report power pack status to headend

The Starline X Series power supply was designed with reliability in mind. This was achieved in two ways: by designing a rugged power supply and then adding a back-up power supply in case the primary supply should fail.

The standard Starline X Series power supply, Model XNPA-60, consists of a heavy duty transformer, a DC regulator and fused AC inputs.

The redundant Starline X Series power supply, Model XNPA-60R consists of the same heavy duty transformer and DC regulator plus an additional DC regulator module. The redundant DC regulator module contains a relay that switches to the back-up supply when failure of the primary supply is sensed. The primary module has a pilot light to indicate when the back-up supply is operating. When used in conjunction with the Starline Status Monitor, the operating status of the D.C. supply is reported back to the headend. The XNPA-60R, therefore, provides uninterrupted service, while indicating a failure which can be scheduled for maintenance at a later time.

DISTRIBUTION EQUIPMENT

SINGLE CABLE CONNECTOR CHASSIS

STARLINE X-SERIES SINGLE CABLE CONNECTOR CHASSIS

FEATURES

- Tested to 600 MHz
- 30 dB directional coupler test points insure accurate measurements
- MG connectors insure high reliability and response consistency
- Dedicated trunk input and output filters available in subsplit and highsplit
- Complete station bypass (optional)
- Heavy duty 80 amp. follow on surge protection
- Separate trunk and feeder power disposition switches
- Built-in Feedermaker for 1 to 3 outputs
- Standard chassis shipped with thermal breakers on all feeder lines

Jerrold's new Starline X single cable chassis offers the latest in state-of-the-art amplifier design. The dedicated input and output filters are tested for 600 MHz operation (subsplit: 5-33/50-600 and highsplit: 5-174/234-600 MHz available). 30 dB directional coupler test points provide accurate readings regardless of system passive location, and the new feedermaker system is shipped with all the components required for 1, 2 or 3 outputs (XFM-3 can be ordered to configure a 4 output station).

The new Starline X-Series single cable chassis can be ordered with Jerrold's exclusive complete station bypass feature. This valuable, optional feature provides the ultimate in system reliability by insuring an uninterrupted path for video and data signals.

DUAL CABLE CONNECTOR CHASSIS

STARLINE X-SERIES DUAL CABLE CONNECTOR CHASSIS AND INPUT/OUTPUT FILTERS

CHASSIS FEATURES

- All modules plug-in
- Totally passive for reliability
- Standard heavy duty surge protector

- Return amplifiers may be installed in the forward direction for ease of system alignment
- Separate trunk and feeder power disposition switches
- Fuse holders for feeder lines
- MG connectors insure high reliability

The dual cable connector chassis of the Starline "X" Series Mainstation provides plug-in facilities for all modules. The connector chassis is highly reliable since it contains only passive electrical components; wiring interconnections, holders for feeder fuses, and power direction plugs. All chassis types provide wiring interconnections for the optional status monitor module.

The Starline X-Series dual cable chassis provides the ultimate in flexibility for system design.

TRUNK INPUT FILTER

DUAL CABLE CONNECTOR CHASSIS AND INPUT/OUTPUT FILTERS

INPUT/OUTPUT FILTER FEATURES

- AC filter circuit
- Diplex filters for subsplit, midsplit and highsplit return
- Plug-in variable equalizers for slope adjustment
- Plug-in pads to attenuate level
- Plug-in notch filters for return carrier channels

The input and output modules extract the AC voltage from the trunk input, control the passband of each trunk, and accept plug-in attenuators. The output module includes a directional coupler which provides the input to the bridger amplifier.

The "A" cable usually carries both RF signals and AC to power the mainstation. When AC is entering the mainstation, an AC filter circuit in the input or output module separates the AC voltage from the RF signals. When the AC is leaving the mainstream, the outgoing AC is recombined with the trunk RF signals. Both the input and output modules contain an identical AC filter circuit.

Passband control is provided by diplex filters. Jumper modules without filters allow the full passband through. Modules with filters split the signals for two-way transmission. Subsplit, midsplit and highsplit modules are available.

The XIF input filter provides facilities for plug-in equalizers and pads.

The XOF output filter module has facilities for plug-in return carrier filters which are used to attenuate the return carrier when two return branches combine into one.

XRTA-450

STARLINE X-SERIES POWER DOUBLING AMPLIFIER MODULES (450 and 550 MHz)

Jerrold power doubling amplifier modules are designed with parallel output integrated circuit gain blocks which provide a 5 dB improvement in distortion performance in addition to increased reliability.

The 550 MHz amplifier modules provide the industry's widest bandwidth with performance characteristics comparable to 450 MHz products.

All power doubling amplifier modules offer superior heat sinking in the newly designed double-width modules.

XTRM-30

STARLINE X-SERIES RETURN AMPLIFIERS

Jerrold offers the widest selection of return amplifiers in the CATV industry. Amplifiers for subsplit, midsplit and highsplit upstream systems are available in both automatic and manual models.

The XTRA-30 has automatic gain control and thermistor adjusted slope control for subsplit systems (5-33 MHz). The XTRM-33 is the manual amplifier (manual gain control and thermistor adjusted slope control) for subsplit systems.

Midsplit systems (5-110 MHz) use the XTRA-110 and XTRM-110 return amplifiers. The XTRA-110 has automatic slope control and manual gain control and the XTRM-110, manual gain and thermistor-adjusted slope control.

Jerrold offers two different automatic slope and gain control return amplifiers for highsplit (5-174 MHz) systems. The XTRA-174A is used with X-1000 and X-1500 highsplit mainstations, and has control pilots at 51 and 176 MHz. The XTRA-174 has control pilots at 48 and 180 MHz for use with X-2000 mainstations. The XTRM-174 is the manual return amplifier for all highsplit applications.

All return amplifiers can also be ordered with fail-safe (FS) or fail-safe and bypass (TFS) options. The fail-safe option provides a bypass around the return amplifier, in case of failure or loss of voltage. The "TFS" option offers bypass in addition to return trunk shut-off.

VRF-82

XBF-450-30X

STARLINE X-SERIES BRIDGER FILTER MODULES

The bridger filter controls the directional flow of signals and contains diode switches which control the insertion into the return trunk of signals from the feeder lines. The diode switches are controlled by the status monitor module.

The bridger filter receives forward signals from the bridger amplifier and directs them to the feederline. It receives return signals from the feederline and directs them through a return feeder disconnect switch and combines them with the return trunk.

The XBF-450-30X, XBF-30X and XBF-174X Bridger Filters have a three position switch which can open, close or route the feeder return signals through a 6 dB attenuator. Use of the 6 dB attenuated path offers filtering of ingress without data interruption.

The XBF-450-30W has a single switch which controls the entire 5 to 32 MHz bandwidth. The XBF-450-30W can be used in both subsplit and X-2000 midsplit applications. The XBF-450-30S provides two return signal paths, 5-15 MHz for data, and 18-30 MHz for two video channels, and each return path has an independent control switch. The XBF-450-30S can be used in subsplit system applications only.

Both the XBF-450-30X and XBF-450-30W couple signals generated by the status monitor into the return path. They also couple return signals from the trunk with the return signals from the feeder. For trunk only, X-2000 status monitoring applications, the signals generated by the status monitor are coupled into the return trunk by using the bridger coupler, Model XBC-12, instead of a bridge filter.

RETURN CARRIER FILTER

STARLINE X-SERIES RETURN CARRIER FILTERS

The Return Carrier Filters used in the Starline X and JN Series mainstations are available for three system architectures: Subsplit, Midsplit and Highsplit. XCF-* (used in X-2000 applications) and XRPF-* (used in X-1000 or X-1500 applications) are used to maintain the return pilot carrier at the desired signal level in the first mainstation after combining points in the return system, where the two branches utilize automatically controlled return amplifiers. If only one branch utilizes automatically controlled return amplifiers, an XCF-* or XRPF-* are not required. The return carrier filter plugs into the output filter module of the Starline X Series mainstation.

To closely estimate the quantity required, determine the number of return pilot generators used in a particular trunk design and subtract one from that quantity.

STARLINE X-SERIES FORWARD AND RETURN EQUALIZERS

The Starline X-Series of fixed and variable equalizers are designed to compensate for slope variations due to cable attenuation at the input of a trunk amplifier. Both forward and return equalizers plug into the input filter of the amplifier station.

STARLINE X-SERIES ACCESSORIES

Redundancy Splitter

Redundancy Splitter, Model XRS-SPL, is used on the input and output of amplifier modules when operating in the redundant mode (not required when using XRTA-* or XRBA-* modules). The XRS-SPL is bolted into the Starline X Connector chassis.

Test Probe Adaptor

MODEL XTP-30F: Female F to female MG test probe adaptor with 30 dB attenuation built-in. Test probe to connect field strength meter to test points on Starline X-2000 & JN Series Mainstations.

MODEL XTP-0F: Female F to female MG test probe adaptor with 0 dB of attenuation. Test probe to connect field strength meter to test points of Starline X Single Cable Chassis mainstations.

STARLINE X-SERIES FEEDERMAKERS SINGLE CABLE CHASSIS (X-1000 or X-1500 Mainstations)

Jerrold's new single cable connector chassis is designed with a revolutionary new feeder maker system. Simplicity of use and low cost are the key factors of the product's design. All mainstation electronic packages are configured with a three (3) output feeder maker (two forward and one back). From this configuration, through the various placements of the jumper (XFM-0) and splitter (XFM-3), a total of six (6) different feeder maker arrangements can be constructed without having to order any additional feeder maker components. Only when a four (4) output feeder maker is required (typically less than 20% of the overall requirements) is it necessary to order additional components. In the case of a four (4) output feeder maker, a splitter (XFM-3) must be ordered in addition to the mainstation electronic package.

The terminal match, at 75 ohms impedance, at the input to the feeder maker circuitry or any utilized output port is 18 dB or better. The minimum isolation between any two output ports is 21 dB or better.

DUAL CABLE CHASSIS (X-2000 Mainstation)

XFM feeder makers receive the output of the bridger or distribution amplifier and create from one to four feeder lines. The feeder maker also inserts AC power on the lines.

The feeder maker is symmetrical and plugs into its socket in any of four positions. The position of the feeder maker governs which feeder ports will receive the output signals.

Each feeder line has a thermal circuit breaker which limits the AC current to 5 amperes. The breaker resets automatically.

XFM Feeder makers can be used as JFM-* replacements for JN Series mainstations.

STARLINE "JLE" SERIES LINE EXTENDERS

TWO WAY MODELS

Line Extender Model JLE-7-†-2W
Mini-Bridger Model JLE-6-†-2W
Mini-Bridger Model JLE-5-6P-2W

FEATURES

- Low noise figure
- High output capability
- Very low power consumption
- Reliable operation during over voltage conditions
- Current limiting circuitry protects the power supply
- DC over voltage sensing protects the amplifier module
- Interchangeable accessories and modules

The JLE-7 and JLE-6 utilize quad technology. The JLE-7 is intended for use as a typical feeder line extender, and the JLE-6 is ideally suited for short haul minibridger applications or for 'stretched feeder' situations. Both the JLE-7 and JLE-6 have increased gain for more economical system design.

The JLE-5 station has very high gain (48dB) making it exceptionally suitable for use as a very economical trunk-terminating bridging amplifier in 300MHz or lower bandwidth systems. It can be the source of a very long feeder line before a conventional line extender is needed or, through an external splitter of the SSP-* type, several feeder lines can be established.

All three models are characterized by high output capability, well-filtered 2-way circuitry, and 60 or 30 volt AC operation capability via a slide switch factory-set for 60 V. This switch together with the LOCAL/REMOTE switch allows application of any one of four AC input ranges as specified. Bypass circuitry for up to 5 amperes rms together with a circuit breaker Model CBJ-5, factory-inserted in the "5" model, optional for the "6" and "7" models, allows powering of additional line extenders. The power supply is protected by current-limiting circuitry and the RF module by an over-voltage sensing circuit. A 0.75 fuse gives protection against high current drain. Additional protection against line voltage surges is provided by insertion of surge arrestor Models AO-36 in the input of the line extender.

Optional, high or low gain sub-channel amplifiers Models JRA-30H and JRA-30L are available and can be plugged into the main module in either direction.

The amplifier housing is designed for maximum heat dissipation, has a woven wire gasket between body and lid for efficient ground continuity and RF shielding, and a silicone rubber gasket for weather protection. Two clamp and bolt assemblies are provided on the housing for strand-mounting and additional tapped holes permit the installation of auxiliary brackets for surface mounting. The input and output ports have extrusions for the secure interfacing of cable connectors with heat-shrunk tubing or sealing tape. The ports are protected by factory-inserted plastic cap plugs, to be discarded when installing the cable connectors. The input and output terminal platforms have special receptacles for surge arrestors. R.F. input and output test fittings, accessible through plug-sealed ports in the housing cover, and accept Jerrold standard test adaptor Model SPD-30F for signal measurements without having to open the housing. O-rings on the test port plugs prevent ingress of moisture and dirt. A station data card is provided in the housing cover for the recording of signal parameters measured and optional accessories installed.

The amplifier module can be plugged into the housing in either direction as required by signal flow and hence provides easy access and maintenance from the street side, away from private property. Module covers have access holes for the gain and slope controls, the Local/Remote slide switch, B+ and Rectifier Test points, and the two RF test terminals. Thru-holes in the module allow closing of terminal screws on the center conductors of the input and output cables, without having to remove the module.

CABLE EQUALIZERS FOR LINE EXTENDER, MODELS JLE AND SLR

The fixed cable equalizers, used in all JLE amplifiers and SLR-series line extenders, include seven sub-series. These equalizers plug into line extender amplifier modules. Specific functions are described below:

Model SEE-0—FOR ALL LINE EXTENDERS

The model SEE-0 is a shorting bus factory-inserted in all SLR-series line extenders.

Model SEE-174—FOR 174 MHz RETURN AMPLIFIER

This series of fixed cable equalizers operates within a passband of 5-174 MHz.

MODEL	SEE-174-4	SEE-174-8	SEE-174-12	SEE-174-16
Passband	5-174 MHz			
Maximum Insertion Loss	1 dB	1 dB	1 dB	1 dB
Fixed Equalization at 174 MHz	4 ± 0.5 dB	8 ± 0.5 dB	12 ± 0.5 dB	16 ± 0.5 dB
Terminal Match return loss, 75 ohm impedance (Minimum)	18 dB	18 dB	18 dB	18 dB

Model SEE-220 SERIES—FOR 220 MHz LINE EXTENDERS

This series of fixed cable equalizers operates within a passband of 40-220 MHz.

MODEL	SEE-220-6	SEE-220-12	SEE-220-18	SEE-220-24
Passband	40-220 MHz			
Maximum Insertion Loss	1.5 dB	1 dB	1 dB	1 dB
Fixed Equalization at 174 MHz	6 ± 0.5 dB	12 ± 0.5 dB	18 ± 0.5 dB	24 ± 0.5 dB
Terminal Match return loss, 75 ohm impedance (Minimum)	16 dB	16 dB	16 dB	16 dB

*Measured at 220 MHz through 0.412 inch coaxial cable.

Model SEE-270 SERIES—FOR 270 MHz LINE EXTENDERS

This series of fixed cable equalizers operates within a passband of 40-270 MHz.

MODEL	SEE-270-6	SEE-270-12	SEE-270-18	SEE-270-24
Passband	40-270 MHz			
Maximum Insertion Loss	1 dB	1 dB	1 dB	1 dB
Fixed Equalization at 174 MHz	6 ± 0.5 dB	12 ± 0.5 dB	18 ± 0.5 dB	24 ± 0.5 dB
Terminal Match return loss, 75 ohm impedance (Minimum)	16 dB	16 dB	16 dB	16 dB

*Measured at 270 MHz through 0.412 inch coaxial cable.

Model SEE-300 SERIES—FOR 300 MHz LINE EXTENDERS

This series of fixed cable equalizers operates within a passband of 40-300 MHz.

MODEL	SEE-300-6	SEE-300-12	SEE-300-18	SEE-300-24
Passband	40-300 MHz			
Maximum Insertion Loss	1 dB	1 dB	1 dB	1 dB
Fixed Equalization at 174 MHz	6 ± 0.5 dB	12 ± 0.5 dB	18 ± 0.5 dB	24 ± 0.5 dB
Terminal Match return loss, 75 ohm impedance (Minimum)	16 dB	16 dB	16 dB	16 dB

*Measured at 300 MHz through 0.500 inch coaxial cable.

Prices and Specifications Subject to Change Without Notice.

Model SEE-350 SERIES—FOR 350 MHz LINE EXTENDERS

This series of fixed cable equalizers operates within a passband of 40-350 MHz.

MODEL	SEE-350-6	SEE-350-12	SEE-350-18	SEE-350-24
Passband	40-350 MHz			
Maximum Insertion Loss	1 dB	1 dB	1 dB	1 dB
Fixed Equalization at 174 MHz	6 ± 0.5 dB	12 ± 0.5 dB	18 ± 0.5 dB	24 ± 0.5 dB
Terminal Match return loss, 75 ohm impedance (Minimum)	16 dB	16 dB	16 dB	16 dB

*Measured at 350 MHz through 0.500 inch coaxial cable.

Model SEE-400 SERIES—FOR 350 and 400 MHz LINE EXTENDERS

This series of fixed cable equalizers operates within a passband of 40-400 MHz.

MODEL	SEE-400-6	SEE-400-12	SEE-400-18	SEE-400-24
Passband	40-400 MHz			
Maximum Insertion Loss	1 dB	1 dB	1 dB	1 dB
Fixed Equalization at 174 MHz	6 ± 0.5 dB	12 ± 0.5 dB	18 ± 0.5 dB	24 ± 0.5 dB
Terminal Match return loss, 75 ohm impedance (Minimum)	16 dB	16 dB	16 dB	16 dB

*Measured at 400 MHz through 0.500 inch coaxial cable.

Model SEE-450 SERIES—FOR 450 MHz LINE EXTENDERS

This series of fixed equalizers operates within a passband of 40-450 MHz.

MODEL	SEE-450-6	SEE-450-12	SEE-450-18	SEE-450-24
Passband	40-450 MHz			
Maximum Insertion Loss	1 dB	1 dB	1 dB	1 dB
Fixed Equalization at 174 MHz	6 ± 0.5 dB	12 ± 0.5 dB	18 ± 0.5 dB	24 ± 0.5 dB
Terminal Match return loss, 75 ohm impedance (Minimum)	16 dB	16 dB	16 dB	16 dB

*Measured at 450 MHz through 0.500 inch coaxial cable.

Model XEE-450 SERIES—FOR 450 MHz LINE EXTENDERS

This series of fixed cable equalizers operates within a passband of 40-450 MHz.

MODEL	XEE-450-6	XEE-450-12	XEE-450-18	XEE-450-24
Passband	40-450 MHz			
Maximum Insertion Loss	1.5 dB	1 dB	1 dB	1 dB
Fixed Equalization at 174 MHz	6 ± 0.5 dB	12 ± 0.5 dB	18 ± 0.5 dB	24 ± 0.5 dB
Terminal Match return loss, 75 ohm impedance (Minimum)	16 dB	16 dB	16 dB	16 dB

*Measured at 450 MHz through 0.500 inch coaxial cable.

Model XEE-550 SERIES—FOR 550 MHz LINE EXTENDERS

This series of fixed cable equalizers operates within a passband of 40-550 MHz. The chart for this series is identical to that for the XEE-450 series except for the passband range, and maximum insertion loss on the XEE-550-6 is 1 dB. Note: Substitute 550 for 450 on the model numbers in above chart.

STARLINE MODELS JLE AND SLR ACCESSORIES THERMAL EQUALIZER FOR LINE EXTENDERS

Model CTF-*

Thermal Equalizers for Manual Gain Control JLE Amplifiers and SLR Line Extenders.

There are now four thermal equalizers available: The CTF-11A, CTF-20, CTF-20B and CTF-30. These thermal equalizers are designed to compensate for attenuation changes in cable due to environmental variations.

MODEL	CTF-11A	CTF-20	CTF-30	CTF-20B**
Passband	40-450 MHz			
Nominal Attenuation, at MHz				
at +25°C ambient	3.0 dB	3.0 dB	5.0 dB	3.5 dB
at -40°C ambient	5.0 dB	7.0 dB	9.8 dB	6.8 dB
at +60°C ambient	2.0 dB	2.0 dB	3.1 dB	2.3 dB
Slope from 40 to MHz at +25°C	0.7 dB	0.7 dB	1.0 dB	0.7 dB
Flatness	± .25 dB	± .25 dB	± .25 dB	± .25 dB
Thermal Compensation	11 dB of tap-loaded cable*	20 dB of trunk cable 0.5**	30 dB of tap-loaded cable*	20 dB of trunk cable 0.5**
Thermal Match, at 75 ohms	20 dB minimum	18 dB minimum	18 dB minimum	18 dB minimum

* 0.412 inch outer diameter aluminum sheathed cable

** For use with JLE-7-452.

DRA-30

JRA-30H

DISTRIBUTION RETURN AMPLIFIERS FOR LINE EXTENDERS

DRA and JRA amplifier models plug into their respective line extender main amplifier modules and amplify the 5 to 32 MHz subchannel band.

Model Number	JLE-2W SERIES		SLR-2W SERIES	
	JRA-30L	JRA-30H	DRA-30	DRA-30L
Passband	5-32 MHz		5-32 MHz	
Minimum Full Gain	15 dB	24 dB	22 dB	10 dB
Rated Output Cross-Mod (-57 dB or better) for 2 channels for 4 channels	55 dBmV per channel 50 dBmV per channel		55 dBmV per channel 50 dBmV per channel	
2nd Order Beats (-70 dB or better)	46 dBmV			
Triple Beat (-70 dB or better)			48 dBmV	46.5 dBmV
Hum Modulation (by 60 Hz line)	-68 dB		-80 dB	-70 dB
Maximum Noise Figure, without equalizers at 30 MHz	7 dB	6 dB	6 dB	7 dB
Input Level Padding or gain control	9 dB gain control		by SXP-() (SXP-0 factory-inserted)	
Slope, rising from 5 to 30 MHz	+3 dB fixed		+2 dB fixed	flat
Terminal Match, return loss, 75Ω impedance (minimum)	18 dB		20 dB	
DC Operating Voltage	24.0 to 24.5 V		24.3V, 60 mA	
Power Requirements	Switch selection 30V local or remote. 2.6 Watts		Tapped primary, 3.0 Watts	
Ambient Temperature Range	-40°F to +140°F		-40°F to +140°F	

"SSP" SERIES SPLITTERS AND DIRECTIONAL COUPLERS

SSP-Series splitters and directional couplers for Starline Distribution Systems include six models: SSP-3, SSP-7, SSP-9, SSP-12, SSP-16, and SSP-3-636. These AC power passing, two-way devices operate within an r.f. passband of 5-600 MHz and are enclosed in die cast 360 aluminum alloy housings that are equipped for strand, pole, and pedestal mounting. The SSP-Series employs a swivel center conductor seizure mechanism and a rotatable faceplate to insure the units can be configured in a wide variety of input/output and RF/AC combinations including: strand mount, reverse strand mount, pole mount, and pedestal mount. These features allow for flexible installation and reduce the necessity for "cable loops." Each leg is fused for 15 amps with the user afforded the option of fusing the system passives for individual layout requirements.

Model SSP-3—Hybrid Splitter

Model SSP-3 is a hybrid splitter used to create two outputs, each 5.0 dB lower than the input.

Model SSP-7—Directional Coupler

Model SSP-7 is a directional coupler used to create two outputs, 3.1 dB and 8.0 dB lower than the input.

Model SSP-9—Directional Coupler

Model SSP-9 is a directional coupler used to create two outputs, 2.5 dB and 10.2 dB lower than the input.

Model SSP-12—Directional Coupler

Model SSP-12 is a directional coupler used to create two outputs, 2.0 dB and 13.2 dB lower than the input.

Model SSP-16—Directional Coupler

Model SSP-16 is a directional coupler used to create two outputs, 1.6 dB and 16.5 dB lower than the input.

Model SSP-3-636—Dual Hybrid Splitter

Model SSP-3-636 is a dual hybrid splitter used to create three outputs, two 9.0 dB and the other 4.8 dB lower than the input.

MODEL	SSP-3	SSP-7	SSP-9	SSP-12	SSP-16	SSP-3-636
DESCRIPTION	2 way Splitter	Directional Coupler	Directional Coupler	Directional Coupler	Directional Coupler	3 way Splitter

MODEL SSP-PI

"SSP" SERIES POWER INSERTER

Model SSP-PI is a fuse-equipped network for combining RF with AC power from power supplies JSPS-* or STPS-60 to coaxial cable. The unit can be used for 30V and 60V powered systems. Model SSP-PI installs on the coaxial cable and passes up to 10 amps in each direction; a total of 14 amps common - with each direction fused for 15 amps. The user can choose optional fuse values as determined by the individual system configuration. Model SSP-PI is housed in a die cast aluminum alloy housing designed to provide maximum installation flexibility. Swivel center conductor seizure mechanisms and a rotatable faceplate insure the SSP-PI can be configured in a wide variety of input/output and RF/AC combinations including strand mount, reverse strand mount, and pedestal mount. This increased versatility allows for easier installation and reduces the necessity for "cable loops".

MODEL	SSP-PI	
PASSBAND	5-600 MHz	
MAX. INSERTION LOSS	5-450 MHz 0.5 dB	450-600 MHz 0.7 dB
TERMINAL MATCH (min.)	20 dB	
RF/AC ISOLATION	> 70 dB	> 60 dB
AC POWERING CAPABILITY	10 amps each leg 14 amps total	
FUSING	15 amps each leg

FEEDERLINE EQUALIZERS FOR STARLINE DISTRIBUTION SYSTEMS

Model FFE-8-* is a coaxial cable equalizer designed to compensate for feeder cable tilt, and thus provide improved "window" specifications. The equalizer circuit is contained in the same type of housing assembly as an FFT type tap, less the house drop fittings. Five models are available for 260, 300, 400, 450, and 550 MHz systems.

MODEL	FFE-8-260	FFE-8-300	FFE-8-401	FFE-8-450	FFE-8-550
PASSBAND	5-260 MHz				
Maximum Insertion Loss	5-30 MHz 0.5 dB	5-300 MHz 0.5 dB	5-400 MHz 0.5 dB	5-450 MHz 0.5 dB	5-550 MHz 0.5 dB
Equalization Slope (measured at 75 ohm at input)	260 MHz 300 MHz 400 MHz 450 MHz 550 MHz	5 dB	5 dB	5 dB	5 dB
Terminal match (75 ohm at input)	20 dB				
Current Carrying Capacity (Max)	5 amps. continuous				

STPS-60 60 VOLT STAND-BY POWER SUPPLY

STANDARD FEATURES:

- "Cycle Charge" low maintenance battery charging system
- Plug-in modular construction
- Auxiliary AC input facility
- Status Monitor capability
- Input/Output surge arrestors
- Circuit breaker protection
- RFI Filter - Provides minimum of 40 dB RF isolation
- Built-in load current meter
- Synchronized, time variable "delay back to line"
- AC convenience outlet
- External status indicator lamp
- Adjustable battery voltage

Operating from a 120 volt commercial AC power source, or for up to three hours from self-contained batteries, the Jerrold Model STPS-60 stand-by power supply provides constant square wave voltage to power CATV Distribution Systems. The STPS-60 has been designed for optimum reliability utilizing a field proven inverter to drive a ferro-resonant transformer during commercial power outages. In the normal mode power is derived directly from the ferroresonant transformer.

Options: Jerrold JTSM Status Monitoring system • Pedestal mount for surface mount applications • Spare modules • Battery heater

STARLINE A.C. POWER SUPPLY

Power supplies for Starline distribution systems include two models, JSPS-30 and JSPS-60. These constant-voltage, square-wave power sources are especially designed for CATV systems where coaxial cables have to carry both RF energy and AC power.

This series of power supplies has a constant-voltage power transformer, a secondary voltage external indicator light, a U/L listed circuit-breaker assembly, a self-healing, gas-filled surge protector at the input, an AC test point, and a 115 V AC auxiliary socket. Housed in weatherproof, sheet-aluminum, louvered cabinet which has a padlock facility and is equipped with appropriate mounting brackets, the power supply can be mounted on a utility pole or cross-arm, or on any surface where a 115 V, 60 Hz, 3-wire source is available.

An optional 200 msec. time-delay relay, Model PDT 30/60, is available for installation to protect the cable system from turn-on transients, after power company outages.

An optional lightning arrester can be installed in the JSPS-*, it will protect the unit against line surges.

MODEL	JSPS-30	JSPS-60
Primary	95-130 V, 60 Hz 450 W	95-130 V, 60 Hz 1050 W
Secondary (For 115 V ac Primary)	30 v rms, ± 2%, at 12A	60 V rms, ± 2%, at 14A
Line Regulation	30 V rms, 95-130 V input	60 V rms, ± 2% 95-130 V input
Line Regulation	+ 2-0%, 12 to 4A Load	+ 2-0%, 14 to 4A Load
Surge Protection, Breakdown Voltage	145 V dc, ± 12%, non-polarized	
RF/AC Isolation	> 40 dB	

STARLINE POWER SUPPLY ACCESSORIES

Model PDT-30/60-Time Delay Relay

The Model PDT-30/60 is a 200 msec. time delay relay for use in Starline power supply models JSPS-30 and JSPS-60.

It will protect the cable system from turn-on transients of the regulating transformer, after power company outages.

It must not be used in a power supply that is mounted on a pedestal.

CONNECTORS FOR 0.412-INCH AND 0.500-INCH DIAMETER CABLES

Cable-to-Equipment-Housing Connectors with Intra-Shield®

FEED-THROUGH TYPE

Model VSF-412S—For .412" \pm .008" OD Cable with .022/.025" Wall Thickness

Model VSF-500S—For .500" \pm .010" OD Cable with .025/.030" Wall Thickness

Cable center conductor is fed through connector and seized inside the equipment housing. Integral radiation sleeve. Use model CPT-412 or CPT-500, as appropriate, to prepare cable end.

STINGER TYPE

Model VSF-412SS—For .412" \pm .008" OD Cable with .075-.095" CC and .022/.025" Wall Thickness

Model VSF-500SS—For .500" \pm .010" OD Cable with .098-.119" CC and .025/.030" Wall Thickness

Cable center conductors are seized by the fitting. Integral radiation sleeves. Use model CPT-412 or CPT-500, as appropriate, to prepare cable end.

Cable-to-Cable Splice Connectors with Intra-Shield®

Model SC-412SS—For .412" \pm .008" OD Cable with .075-.095" CC and .022/.025" Wall Thickness

Model SC-500SS—For .500" \pm .010" OD Cable with .098-.119" CC and .025/.030" Wall Thickness

Cable center conductor is seized by the fitting. Pin is 0.075" dia., length 1-1/4". Integral radiation sleeve. Use model CPT-412 or CPT-500, as appropriate, to prepare cable ends.

Cable-to-"F" Adaptors with Intra-Shield®

Model F-412SS—For .412" \pm .008" OD Cable with .075-.095" CC and .022/.025" Wall Thickness

Model F-500SS—For .500" \pm .010" OD Cable with .098-.119" CC and .025/.030" Wall Thickness

Cable center conductor is seized by the fitting. Integral radiation sleeve. Use model CPT-412 or CPT-500 to prepare cable end.

CONNECTORS

CONNECTORS FOR 0.750-INCH DIAMETER ALUMINUM CABLE

Cable-to-Equipment-Housing Connectors with Intra-Shield®

FEED-THROUGH TYPE

Reducer pin is crimped to center conductor. Pin is fed through the connector and seized inside the equipment housing. Integral radiation sleeve. Use model CPT-750 to prepare cable end.

Model VSF-1750S (Silver Colored)—For .750" \pm .010" OD Cable with Shield I.D. of 0.67" or greater.

Model VSF-1750S is shipped with two reducer pins, a silver one for high density polyethylene and a gold one for polystyrene/fused disc cables.

Model VSF-2750S (Gold Colored)—For .750" \pm .010" OD Cable with Shield I.D. less than 0.67". Model VSF-2750S is shipped with one gold pin.

STINGER TYPE

Cable center conductor is seized by the fitting. Pin is 0.075" dia., length 1-1/4". Integral radiation sleeve. Use model CPT-750 to prepare cable end.

Model VSF-1750SS (Silver Colored) — For .750" \pm .010" OD Cable with 0.150-0.179" CC and with Shield I.D. less than 0.67" or greater.

Model VSF-2750SS (Gold Colored)—For .750" \pm .010" OD Cable with 0.150-0.179" CC and Shield I.D. less than 0.67".

Cable-to-Cable Splice Connectors with Intra-Shield®

Cable conductors are seized by the fitting. Integral radiation sleeve. Use model CPT-750 to prepare cable ends.

Model SC-1750SS (Silver Colored)—For .750" \pm .010" OD Cable with 0.150-0.179" CC and with Shield I.D. of 0.67" or greater.

Model SC-2750SS (Gold Colored)—For .750" \pm .010" OD Cable with 0.150-0.179" CC and with Shield I.D. less than 0.67".

Cable-to-"F" Adaptors with Intra-Shield®

Cable center conductor is seized by the fitting. Integral radiation sleeve. Use model CPT-750 to prepare cable end.

Model F-1750SS (Silver Colored)—For .750" \pm .010" OD Cable with 0.150-0.179" CC and with Shield I.D. of 0.67" or greater.

Model F-2750SS (Gold Colored)—For .750" \pm .010" OD Cable with 0.150-0.179" CC and with Shield I.D. less than 0.67".

(602) 294-1600

TERMINATORS

STR-75D AC BLOCKING TERMINATOR

A VSF-style 70-ohm terminator that can be inserted directly into an unused mainstation or line extender port with both RF and AC present. Completely weatherproof. Pin length is 1-1/8" with breakpoint at 3/4".

TR-75-FCW AC BLOCKING TERMINATOR

A 75-ohm terminator designed to mate with a female-F fitting that is carrying RF and AC. Completely weatherproof.

ADAPTORS

VHH-1

Male coupling connector for joining two equipment housings. Eliminates need for jumper cable. Provides a completely weather-and radiation-proof connection. Pin length is 1-5/8", each end.

VSF-59A

Male-VSF to female-F adaptor. Allows connection of RG-59/U or RG-6/U cable with F-fitting to distribution equipment housing. Pin length is 1-1/16".

PBA—SERIES 4

Universal splice connector utilizing FFT tap housing. Accepts any two cables equipped with VSF-type connectors. Allows 90° or 180° splicing. Facilitates splicing of different size cables. Can be used as a dummy tap.

VSL

Male-VSF to female-VSF 90° adaptor. Used where space restrictions make right angle connections between cable and equipment desirable, such as in pedestal installations. Female end accepts any male-VSF fitting. Center conductor is seized by tightening hex-plug on the end of the VSL. VSL pin length is 3/4".

MODEL VSL-M

Male-G to female-VSF 90° adaptor. Used in 7th-port Starline 20 series mainstation applications, such as above AK-7 situations.

AK-7A

"A" cable 7th port adaptor kit. Used in dual trunk midsplit systems to adapt "A" cable Starline 20-Series mainstation for crossover to "B" cable.

AK-7B

"B" cables 7th port adaptor kit. Used in dual trunk midsplit systems to adapt "B" cable Starline 20-Series mainstation to receive crossover signals from "A" cable.

CONNECTORS/ ADAPTORS/TOOLS

F, G, MG ADAPTORS AND WEATHER BOOTS

PMG-61 CHASSIS ADAPTOR

Male-MG chassis-mount fitting. Accepts female-MG connectors. Mounts in 3/8" diameter hole.

PGL ADAPTOR

Right-angle adaptor, female-F to male-G.

GFA ADAPTOR

Female-G to female-F adaptor. This is an elongated version of the GF-81 and is used as a test probe of Starline 20 distribution amplifiers and Channel Commander II headend equipment.

PMG-61F ADAPTOR

Male-MG to female-F adaptor adapts a female-MG to accept a male-F connector. Used as a test probe for Starline 300 mainstations and Commander IV headend processors.

MG-61F ADAPTOR

Female-MG to female-F adaptor. Couples a male-MG to a male-F fitting. Used as a test probe for Starline 300 mainstations and Commander IV headend processors.

SMG-61 CHASSIS ADAPTOR

Female-MG chassis-mount fitting. Accepts male-MG connectors. Mounts in 3/8" diameter hole.

PGF ADAPTOR

Female-F to male-G adaptor, elongated for use as a test probe for Starline 20 distribution amplifiers and Channel Commander II headend processors.

DS-56

Used to provide weather seal over "F" connectors installed on RG-59/U, RG-6/U and CAC-6 cables.

TOOLS

CPT-412, CPT-500, CPT-750 CORING TOOLS

These cable coring tools are designed to remove polyethylene and polystyrene foam dielectrics from 0.412", 0.500" and 0.750" diameter aluminum cables, respectively, without harming center conductor or sheath. This allows proper assembly of Jerrold's Intra-Shield® connectors to the cable for maximum RFI integrity. The tools may be hand-operated or the handle may be removed, exposing a triangular shaft which may be inserted in any drill with a 3/8" chuck.

CT-412, CT-500, CT-750 CUTTING TIPS

Replacement cutting tips for the CPT-412, CPT-500 and CPT-750.

PL-602H CRIMPING TOOL

A high quality tool for crimping ferrules 1026, 1051 and 1082. Also used for integral ferrule connectors. Models F-59A and F-56A.

Prices and Specifications Subject to Change Without Notice.

HOUSE DROP EQUIPMENT

MODEL DRZ-A 66-CHANNEL ADDRESSABLE CONVERTER W/MODEL DRC REMOTE CONTROL

FEATURES

- Optimum system security
- Product line flexibility and upgradability
- Increased revenue opportunities
- Growth capabilities
- Enhanced parental control

MODELS JSX-DIC/JRX-DIC/JSM-DIC 9-CHANNEL and 36-CHANNEL MIDBAND CONVERTER DESCRAMBLERS

FEATURES

- Reliability
- Economy
- Signal security
- Quality performance
- Attractive styling
- Parental keylock operation

MODELS JSX-A/JRX-A/JSM-A 36-CHANNEL ADDRESSABLE CONVERTERS

FEATURES

- Proven reliable
- Economical
- Lower costs for service and operation
- Growth capability
- Additional revenue possibilities
- Security for signal and converter
- Attractive styling
- Parental control option

MODEL SV IMPULSE PAY-PER-VIEW TRANSMITTER W/MODEL DRC REMOTE CONTROL

FEATURES

- Impulse pay-per-view
- Unique subscriber authorization
- Field upgradable
- Event charge indicator
- Ultimate security
- Increased revenue opportunities

MODEL DS/E DIGITAL SCRAMBLER/ENCODER

FEATURES

- Multiple scrambling levels
- Random scrambling modes
- Digital circuitry throughout
- Fold down front panel
- Thumbwheel switch settings
- Local or remote control

MODEL PR-A ADDRESSABLE PROM PROGRAMMER

FEATURES

- User friendly
- Flexibility
- Auto increment
- PROM (Programmable Read Only Memory) chip coded
- Unique identification code
- Converter operation/Parental control modes
- Time-out interval
- Dedicated modular personality cards
- 5" CRT display and simple interactive keyboard components (hardware)

STARBASE®

MODEL SBD-A ADDRESSABLE DESCRAMBLER

FEATURES

- Add-on addressability
- Encapsulation of sensitive circuitry
- Dynamic scrambling
- Self-powered
- Parental control option

MODEL SB-200 ADD-ON DESCRAMBLER

FEATURES

- Add-on multi-level pay programming
- Upgrades non-scrambled CATV systems
- Preserves existing converter base
- Self-powered
- Encapsulated circuitry
- Parental control option

REMOTE VIDEO SYSTEM

Two-Way Telecommunication In A Portable Package

Now, with a minimum of expense and training, full motion color video conferencing is within reach.

IRIS RM-1. A totally self-contained, live origination/videoconferencing module, designed for use on cable and broadband local area network systems. Wherever there is a need for frequent face-to-face contact between people from different sites, IRIS provides the solution. Without the downtime and expense of employee travel **\$9725.00**

And, there is no need for exotic operator training. The applications are almost limitless:

- School Districts
Telecourses
- Medical Facilities
Consultation
Video-Visiting
- Businesses with Multiple Locations
Administration
Training
- Campus Based Institutions
- Government Facilities
- Municipal and County Governments

AVS-1500ST

AVS-1500ST AUDIO & VIDEO RECEIVER

Features

- High accuracy frequency synthesis tuners for AM, FM and TV broadcast and cable TV
- Micro-touch controls for all audio and video functions
- Full complement of audio and video functions allows control of all media: broadcast, disc, and tape
- "Last function" memory returns to previous channel, function and volume when power switch is engaged; memory continues for 1 day when unit is unplugged
- Direct access wireless remote control for all primary functions
- Adjustable DNR™, stereo synthesis, and acoustic enhance signal processing allows optimum audio performance with all media

Surprisingly simple in appearance, the AVS-1500ST is essentially four components in one: a digitally synthesized AM/FM tuner; a 50 watt per channel high performance integrated amplifier; an advanced technology, cable ready digitally synthesized, 133 channel video tuner; and a micro-processor controlled input/output switcher. Added to this is the convenience of a direct-access wireless remote control for all primary audio and video functions.

Far from simply combining audio and video, the AVS-1500ST adds signal processing capabilities which afford the user the opportunity to optimize every aspect of the home entertainment experience. Features such as the adjustable DNR™ Dynamic Noise Reduction System to provide high performance, low noise audio from standard videocassettes. Simulcast, a unique feature which allows simultaneous operation of both the audio and video tuners for easy reception of simulcast broadcasts. A special stereo synthesis circuit permits standard television broadcasts and monaural videocassettes to be experienced with much of the enjoyment of true stereo. The acoustic enhance function enables the user to simulate the acoustic experience of a concert hall environment.

The headphone control system of the AVS-1500ST further expands its usefulness in a unique fashion. Separate amplifiers and switching circuitry combine to permit the enjoyment of audio functions through headphones at the

same time that the main outputs are being used for broadcast TV or video.

The AVS-1500ST is the beginning of the ultimate home entertainment system.

KEYSTONE

ELECTRONICS CORPORATION

246 East 2nd Street
Plainfield, NJ 07060
(201) 753-4400

ENGINEERS & MANUFACTURERS OF CO-AXIAL COMMUNICATION PRODUCTS

KEYSTONE ELECTRONICS CORPORATION is an engineering and manufacturing firm serving cable television, SMATV, mini-cable, private cable, closed circuit television and telecommunications industries.

In our 9th year of servicing, we continue to provide:

PRODUCTS:

- Pay TV security traps
- Key lock traps (video & sound)
- Audio carrier only traps
- Band pass & band reject filters
- High pass & low pass & band pass filters
- Diplex filters
- Indoor tap with gain in FM band
- Cable isolator
- Ground blocks with/without cable isolator or high pass filter

ENGINEERING FOR:

- Feasibility studies
- System design
- Auditing & technical evaluation
- System engineering
- Reliability engineering

All our products are designed for outdoor and indoor applications. For outdoor, our products are housed in zinc housing for maximum protection against corrosion. Airtight sealing of housing eliminates all probability of water leakage or moisture condensation. Our competition cannot make this claim.

We are the leading manufacturer for keylock traps, tier traps, band-pass and band reject filters, and in-line audio carrier traps for outdoor installation. These traps prevent objectionable programming language going into subscriber home.

We can custom design a product to meet your specific requirements. Please give us a call. At Keystone, we worry about you.

MODEL 106 OUTDOOR SUBSCRIBER CHANNEL TRAP

The Series 106 trap circuits remove video signal. (Sound traps available on special order.) Weatherproof housing, pre-assembled, one end has 'F' fitting attached, other end has short double shielded (foil and braid) 59U cable 'F' fitting eliminating need for a jumper cable. Simply insert channel trap into existing 59U drop line. (Fits standard indoor moldings.) No splices.

SPECIFICATIONS

- Trap Attenuation Bandwidth at 50dB (min.): 10 kHz
- Return Loss: ± 10 MHz from Trap: 18dB
- Insertion Loss: 450 MHz: 0.25 dB; ± 6 MHz from trap Freq.: 1.5dB
- Temperature Stable: -40 F to + 140 F
- AC-DC: Burnout Protected
- Connectors: Female 'F' connector case; Male 'F' connector on 59U cable

SERIES 106

Mechanical:

- Zinc Diecast Housing
- Zinc Plate — Yellow irridite finish
- Stable: -40 to + 140 F, Jumper cable with 'F' Fitting attached

Model 106/Channel No., Single/Multi-Channel Trap

- Applicable for any 2, 3 or 4, 5 or 6 channels in any band (50-450 MHz)

Model 106/LP, Low-Pass Filter

- Passes 2 thru 6, Rejects all other channels

Model 106/HP, High-Pass Filter

- Passes 7 thru 13, 175.25-216 MHz, Rejects all other channels

SERIES 106

Model 106/S, Super-Band Trap

Channels	Rejection
217.25-300 MHz	
J	-30 dB
K thru W	-50 dB

Model 106/M, Mid-Band Trap

Channels	Rejection
120-156 MHz	
A thru G	-50 dB
H	-45 dB
I	-35 dB
7	-3 dB

Pass all other channels.

246 East 2nd Street
Plainfield, NJ 07060
(201) 753-4400

**PARENTAL CONTROL MULTI-CHANNEL
KEY-LOCK PROGRAM SWITCHES**

KE/501VS

VIDEO AND AUDIO

The Model KE/501VS is designed with a Key-Lock to permit parental programming control. When the Key is removed, pay channel is trapped. The KE/501VS Multi-Channel Trap series removes Video and Audio, and is available for Chs. 2-6, Midband and Chs. 7-EE. The KE/501VS is equipped with female "F" fittings on each side and 2 mounting ears for screw attachment. Size 2-1/2" L x 2" W x 1-1/2" D.

MODEL KE/500V

VIDEO ONLY

The Model KE/500V, similar to the KE/501VS, is also designed with a Key-Lock to permit parental programming control. The basic difference between the KE/501VS and KE/500V is that this Multi-Channel Trap series removes Video only.

The KE/501VS and KE/500V are also available in any combination of four channels, combining Lowband, Midband, Highband or Superband chs. with no adjacent channel problems.

Going Into Pay-Cable? Keystone designs and mass produces traps and filters for control of per-channel pay-cable TV. Traps are designed to remove Chs. 2 through 6, Mid-Band and 7 through EE. Filters pass signals in the same range. Keystone supplies pay-cable traps and filters in subscriber configurations, and also in trunk/distribution housings. Subscriber models include outdoor video traps for drop cable attachment; and indoor traps that feature key-locks, two-way splitting, or removal of audio and video for parental control.

Trunk/Distribution Channel Traps. 12 Amp AC power passing for system marketing prior to pay TV turn-on and individual subscriber trapping. Model 502 Trunk/Distribution Traps are capable of trapping out any Channel between 2-5, Mid-Band and 7 through EE. This series permits master control of pay-cable programs in your trunk or distribution networks. The Model 502 circuits are contained in an RFI shielded cast aluminum housing suitable for standard fitting installations. Size: 7-3/4" L x 6" W x 3" D.

SUBSCRIBER DROP PROTECTION DEVICES

Keystone has designed additional protection features in conventional grounding blocks. These features are: cable isolator and elimination of CB ingress into the system. The cable isolating feature breaks the physical continuity of inner and outer sheaths of the drop cable at the ground-block. This prevents travel of low frequency surges and power line disturbances to subscriber terminals. Catastrophic failure of expensive subscriber terminals is minimized.

Another version of ground-block has a high-pass filter, 50-450MHz and rejecting 0.5 to 35 MHz signals. This eliminates ingress of CB interference into the subscriber drop. Unnecessary service calls are eliminated.

A third version of ground-blocks has incorporated a surge protector to prevent surge reaching the TV set — or backward to the line extender.

The construction is of zinc die-cast with yellow irridite finish and machined "F" type connectors with weatherproofing.

When ordering specify

- KE-700 CI Cable isolator only
- KE-701 GBLA Ground block with lightning arrestor
- KE-702 HPF Ground block with high pass filter
- KE-703 CGH Ground block with cable isolator, high pass filter

KE/500V

KE/501VS

525ST

KE-700CI

MODEL 525ST

TWO-WAY SPLITTER TRAP

Keystone's Model 525ST is available for Chs. 2 through 6, Mid-Band and Chs. 7 through EE. Output 'S' provides all programs on the cable, including the pay-cable channel. Output 'T' passes all programming less the pay channel. Insertion Loss: 3.5dB. The Model 525ST is equipped with female 'F' type fittings and two mounting ears. Size: 2" square x 1-1/2" D.

MODEL 526, FM SPLITTER

Our Model 526 is a special splitter with a trap for FM band in one output (To TV Set) and a bandpass filter for FM band in other output (To FM Receiver). TV and FM bands are isolated by 55dB. TV signal pickup by FM receiver and FM signals pickup by TV receiver are thus prevented from interfering with each other. This splitter is of great value where video carriers are HRC frequencies and FM stations are off frequencies on cable spectrum. This also prevents overloading of FM tuner by video carriers. This splitter also provides 2.5dB higher signals in all bands. Ch. 6, A & B excepted. Conventional 2-way splitter has 3.5dB loss.

**MODEL KE FM MXX 75/300 OHM MATCHING TRANSFORMER
WITH FM BAND PASS ONLY**

This matching transformer is designed for FM receivers. The bandpass filter prevents TV signal pickup to travel back to the television set. It only permits FM signals to FM receiver, preventing tuner overloading.

CATV/MATV TEST INSTRUMENTS

LSG-202

LFC-945B

LSG-202 SYNTHESIZED AM/FM SIGNAL GENERATOR

An all-purpose wide-band Signal Generator, the LSG-202 combines easy entry of operating parameters with storage of up to 100 test setups. Frequency and attenuation are set by keypad entry or increment-decrement control of individual digits, making it easy to enter parameters and make changes. Setting resolution is 100 Hz for frequency and 0.1 dB for attenuation.

All parameters can be preset and recalled from the front panel keypad. AM (0-90%) and FM (0-100 kHz) modulation is available by external signals or internal signals at 300 Hz, 400 Hz, 1 kHz or 3 kHz. Battery backup of memory prevents accidental loss of programmed data. And for communication operations, the reverse power protection feature prevents damage by an accidentally keyed transmitter.

All front panel programming operations can be remotely controlled. This type of control speeds lab routines by reducing setup time. It also adapts the unit to production-line and inspection routines

LSG-202 \$4995.00

LFC-944B VHF/UHF FIELD STRENGTH METER

The LFC-944B is a portable battery operated field strength meter designed for testing and measuring the performance of CATV and MATV systems. It provides for measuring levels of -40 to +60 dBmV on VHF channels and -30 to +40 dBmV on UHF channels. The meter scale is also calibrated to make measurements in microvolts. An accurate attenuator provides up to 70 dB attenuation in 10 dB steps. Accurate detent tuning is provided for VHF channels and UHF tuning for channels 14 to 83 is with a continuous control. The LFC-944B is supplied with a sturdy carrying case.

LFC-944B \$525.00

LFC-945B CATV LEVEL METER

The LFC-945B CATV Level Meter is a rugged, accurate instrument for measuring signal levels in CATV and MATV Systems. It covers the two frequency ranges 40 to 300 MHz and 470 to 890 MHz with accuracies of +/- 1.5 dB and +/- 2 dB respectively. Tuning of individual channels is facilitated by large dials marked with both frequency and channel, an electronic fine tuning control and a built-in sound amplifier and a loudspeaker which enables separate field strength measurements of the audio and video signals.

VRF-100

LFC-944B

LSW-359

Three 20 dB switchable attenuators and a 25 dB meter scale provide an input signal range of -35 to +60 dBm (0 dBm = 1mV).

The LFC-945B will also measure AC voltages on the cable system from 0 to 50 VAC with an accuracy of +/- 5% f.s.

Power is supplied by rechargeable NiCad cells and the power switch is automatically set to off when the protective cover is closed.

The LFC-945B weighs just 8.8 lbs. and is supplied with a battery charger, rechargeable batteries, 300:75 ohm balun and nylon web carrying/operation strap.

LFC-945B \$775.00

LSW-359 1.5 GHz SWEEP GENERATOR

A wide band Sweep Generator, the LSW-359 covers the frequency range of 1 MHz to 1.5 GHz in three bands. It features four modes to select the range of swept frequencies:

Full Band: In which the entire band is swept. For example, 450 MHz to 1 GHz for band 2.

Start/Stop: Two controls determine the starting and ending frequencies for the range swept. Frequencies are indicated on a slide-rule dial.

Delta F Sweep: One control sets the center frequency, another sets the sweep width centered on that frequency. Sweep width is variable from 200 kHz to 500 MHz.

CW: The generator operates as a CW signal source with calibrated output frequency and optional 1-kHz sine wave amplitude modulation.

A unique marker system offers a pulse-type marker in full-band operation. The frequency of the marker is read off the slide-rule dial. In addition, harmonic comb-type birdy markers are available in all modes of frequency selection. The birdies are spaced at 1, 10, 50 and/or 100 MHz and are staggered in amplitude for ease in identification. All markers are bypassed (post-detector injected) so that marker amplitude is independent of the characteristics of the device under test.

Attenuation is 60 dB in 10 dB increments augmented by a 17 dB DC voltage controlled attenuator.

Sweep rates are continuously variable from 10 mS to 100 S and can be automatically triggered, synchronized from the power line, or triggered manually for single-sweep operation. In the single-sweep mode, a pen lift contact closure permits operation with X-Y plotters. All major functions can be remote-controlled to make the LSW-359 an extremely versatile sweeper for lab and production uses.

CABLE CADDIES/ REEL ACCESSORIES

T-255

T-254

T-253

1220 REEL BUCK

Will easily handle 18" and 22" diameter reels of strand and cable reel diameters from 36" to 54". Foot and handle design hold main frame up and away from irregular surfaces.

Fabricated of steel tubing. Wt. 70 lbs. Primed and painted.

Rugged — Truly designed for construction site usage.

Safe — Arbor sleeves slip over arbor, keeping the handles in control

- Use on Ground, Truck or Warehouse
- Collapsible for easy Storage
- Labor Saving Lifetime Tool

The Reel Buck is 35" high and 64" in length.

REEL HANDLING DEVICES

The Cable Caddies shown here are for use in paying-out Drop Cable during customer installations. They can be carried (rolled) to walk-off cable or placed and cable can be pulled out.

Drop Cable Manufacturers recommend that when paying-out cable the spool should rotate. Cable damage will result if the cable is pulled off from a dead spool or over an end of a spool. The resulting damage may be hidden. Do not twist or jerk the cable. Fabricated of sturdy steel tubing and painted utility orange these devices will yield years of service. Three sizes are made available to meet your requirements.

T-256 DROP REEL JACK

The Drop Reel Jack supports up to four reels of drop cable and is used in multiple wiring installations, i.e. — apartment buildings. The unit is supplied with springs which serve as a braking device to avoid inadvertent pay-out. Maximum reel size is 18-inch diameter and 16-inch width. The unit is fabricated of steel tubing and painted. Assembly instructions are supplied. Wt. 33 lbs.

SPLICE BLOCK AND UNIVERSAL CONNECTORS

HSB

HOUSING SPLICE BLOCK

Female splice adapter: splices any two chassis mounting connectors with standard $\frac{5}{16}$ "-24 threads; enables the joining of one size cable to another size or type cable. Facilitates a thru splice of 90° or 180° splice. Accepts center conductor up to .185 diameter.

TSB

THROUGH SPLICE BLOCK

Female splice adapter: splices any two chassis mounting connectors with standard $\frac{5}{16}$ "-24 threads; enables the joining of one size cable to another size or type cable. Facilitates a thru splice only. Accepts center conductor up to .185 diameter.

EU-90

ENTRY UNIVERSAL - 90°

Right angle entry designed for use in a pedestal or in tight spaces where cable cannot be bent. Can be used with any chassis mount fitting with standard $\frac{5}{16}$ "-24 threads. Use two together for 180° entry or EU-90-3.0 or EU-90 4.5 to extend away from the housing. Accepts center conductor up to .185 diameter.

EU-90 3

ENTRY UNIVERSAL, - 90° - 3"

Same as EU-90 except with a longer body to extend away from the housing. Use with one EU-90 for 180° entry with a center conductor 3 inches: center to center. Accepts center conductor up to .185 diameter.

EU-90 4-5

ENTRY UNIVERSAL, - 90° - 4.5"

Same as EU-90 except with a longer body to extend away from the housing. Use with one EU-90 for 180° entry with a center conductor 4.5 inches: center to center. Accepts center conductor up to .185 diameter.

B SERIES INTEGRAL MANDREL CONNECTORS FEATURES

The design of the LRC EI series connector incorporates an internal mechanism which seizes both the center conductor and the aluminum sheath in one operation by the tightening of a single nut, thus making installation easier and faster.

The electrical parameters of this connector series make them more than adequate for today's and tomorrow's cable system.

W SERIES INTEGRAL MANDREL

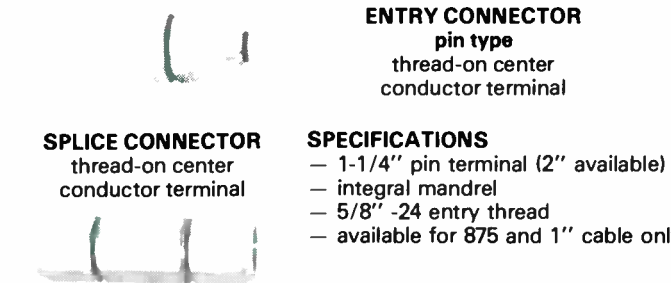

FEATURES

The same mechanical features that made the LRC EFI series one of the most used connectors in CATV are retained in the present design, which now incorporates electrical parameters that make these connectors usable to 500 MHz and beyond.

This series uses a separate seizing mechanism for the center conductor and the shield.

These pin type entry connectors are unique in the industry in that they have a threaded center conductor pin which affords maximum pull strength for the center conductor. The stresses of the center conductor are absorbed in the connector itself and none is transferred to the equipment that the connector is used on.

- SPECIFICATIONS**
- 1-1/4" pin terminal (2" available)
 - integral mandrel
 - 5/8" -24 entry thread
 - available for 875 and 1" cable only

K SERIES INTEGRAL MANDREL

FEATURES

The feed thru connector in the "K" Series offers a 30 dB minimum return loss from 0-850 MHz (LRC will supply test data.)

Identifying part numbers are stamped permanently on the main body of each connector for easy identification.

- ENTRY CONNECTOR feed thru**

TEST EQUIPMENT

MODEL 810 LINE TRACER

FEATURES

- Significantly improved line identification
- Push button depth indication
- Left/right guiding system
- Digital signal strength indicator
- Automatic sensitivity control
- Human engineered for convenient operation

Pipe and cable locating and tracing is not an exact science, therefore, most instrument operators must learn certain skills to properly locate and trace underground utilities. Metrotech's Model 810 Line Tracer narrows the gap between required skill and technology to provide you with an automatic instrument that will yield easier, more accurate traces than obtainable from any other device, even on the first time out, with training time reduced by 50-80%. The LCD Signal Strength Indicator greatly improves the operator's ability to trace targeted conductors in congested underground areas.

The 810 has no drift electronics to provide long term frequency stability for perfect tracking with low susceptibility to external noise interference. The system also has high rejection to all power line frequencies and harmonics. Also, at the touch of a button, the 810's computing circuits will give you depth readings from a full standing position, without the need for 45 degree angular measurements. The instrument is human engineered to offer you convenience, safety, and accuracy.

Metrotech Model 810 is the most complete underground line tracer for. . .

Electrical

- Traces in service lines using the Metroclamp or inductively
- Traces both base and jacketed concentric neutral
- Cable identification in congested areas

Telephone

- Cable ID in congested areas
- Digital depth indication
- Excellent tracing distance

Gas

- Easily traces large and small diameter lines
- Digital depth indication
- No 60Hz interference
- Structure identification in congested areas

Water

- Structure identification in congested areas
- Human engineered—no bend, no squat, no stoop
- Automatic guidance for easier tracing

VRF-108

TECHNICAL SPECIFICATIONS

Note to Communication Users The Model 810, as with all Metrotech instruments, will not introduce noises or false tones into active circuits being traced. A combination of frequency, waveform, and low power of the unique signal assures that no noises will be induced into communication lines.

Transmitter

Nominal Output Power: 250 mw. Inductive; 250 mw. Direct (2.7k ohms-A, or 50 ohms-B)
Mode Switching: Automatic
Output Frequency: 83.075 kHz, unmodulated
Frequency Tolerance: .002%
Self Testing: Battery & Output power, Inductive & Direct modes
Battery Type: 6 NEDA 13F "D" cells, alkaline
Size, H-W-L: 7.5x3x8.5 in. (19.1x7.6x21.6 cm.)
Weight:** 3.875 lbs (1.76 kg.)

Receiver

Nominal Sensitivity: 0.15 microvolts, AUX Input, to assure lock-in.
Noise Sensitivity: Zero when locked
Sensitivity Controls: Fully Automatic
Function Switching: 4-position selector: OFF, BATT TEST, OPERATE (incl. DEPTH mode), AUX (provides continuous digital reading either with internal signal field sensor or Model 4820 Metroclamp when attached to AUX jack on rear panel).

Visual Readout Provisions: Left-Right indicator shows centerline and highly compressed left-right responses. Digital Depth/Aux display is 3-digit, high contrast LCD. .5" (1.27 cm) height, with internal in./cm. selector strapping.

Audio Output: Internal speaker provides proportional audio 650 Hz, 76 dB average level (at 3 ft. (.9m). Steady signal corresponds to Right indications and pulsed signal for Left. Jack provided for alternate audio to earphones (nom. 500-2K ohms).

Accuracy, Location:* 1-3% of depth. Note: Left-Right sensitivity is approx. .04 in. (1mm) at 18" depth.

Accuracy, Depth:* ± 10% good conditions, ± 20% poor conditions.

Depth Range: 13 ft. (4 m) min., with automatic overrange indication.

Battery Type: 4 NEDA 1604A alkaline (typical 9V alkaline transistor batteries).

Battery Test: Range included on Left-Right indicator
Size H-W-L: Probe 32.25x6x12.38 in. (81.92x15.2x31.4 cm.)
Extended Weight:** 4.125 lbs (1.87 kg.)

Overall Unit

Temperature Range, Operating: -13° to 117°F (-25° to 65° C)

Battery Life: 100-125 operating hours, nominal

Shipping Weight (Gross Wt.): 19.5 lbs (8.85 kg.); deduct 1.5 (.68 kg.) without clamp

Case Dimensions, H-W-L: 8x16x23 in. (20.3x40.6x58.4 cm.)

Shipping Carton, H-W-L: 17.25x10.5x24.25 in. (43.8x26.7x61.6 cm.)

*Actual performance may be affected by improper signal drive method, concentration of utilities, and poor ground conditions such as moist or highly conductive soil.

**All weights include batteries.

Ordering Information

The Model 810 comes complete with transmitter (including internal inductive coil), receiver, direct connect cable with ground plate, padded carrying case and batteries. Optional Metroclamp and headphones are available.

Prices and Specifications Subject to Change Without Notice.

PYRAMID INDUSTRIES, INC.

P.O. Box 23169
Phoenix, AZ 85063

UNDERGROUND MATERIALS

CATV 1500

Dimensions: 23-1/2"W x 10-1/2"D x 43"H

Components: Closure will house a maximum number of electronic components: Amplifiers, thermal equalizers, splitters, directional couplers, line extenders or power supply.

Features: Each closure is made of heavy-gauge steel, with extra-heavy mill-galvanized coating. Split front and back covers permit 360 degrees accessibility. Hinges are stainless steel "piano" type and run the full length of the covers. Each set of doors has a locking hasp and louvers for ventilation.

Closure Mounting Hardware: Furnished with 42-inch anchor posts and hardware.

Finish: Phosphatized; green, baked-on enamel.

CATV 2100

Dimensions: 5-3/4"W x 5-3/4"D x 20"H

Components: Designed to house a variety of smaller modern equipment.

Features: Low silhouette design ideal for front-lot installations. Furnished with padlock hasp. Closure is made of heavy-gauge steel, with extra-heavy mill-galvanized coating. Closure provided with knockout for installation of optional cylinder lock with dust cover.

Closure Mounting Hardware: Can be used with 24-inch or 42-inch-long anchor post (optional), depending on local soil conditions. Also available with pole mounting kit.

Finish: Phosphatized; green, baked-on enamel.

Mounting Bracket No. 9235-1000

Dimensions: 22"W x 3.0"H x 2.0"D
Standard package - 2 pair per carton
(Includes screws and nuts.)

Mounting Bracket No. 9431-1000

Dimensions: 1.0"W x 2-1/2"H x 2-1/2"D Angle
Standard package - 10 per carton
(Includes screws and nuts.)

Pole Mounting Kit No. 9832-0000

(w/mounting hardware)
Dimensions: 5.0"W x 5-3/4"H x 2.0"D
Standard package - 2 per carton
(Includes screws and nuts.)

Mounting Bracket No. 9431-2000

Dimensions: 4-1/8"W x 3-1/2"H x 3/8"D
Standard package - 10 per carton
(Includes screws and nuts.)

UNDERGROUND MATERIALS

CATV 1001

Dimensions: 6-1/2"W x 6-1/2"D x 42"H

Components: Multi-tap, splitter, line extender.

Features: Easily accessible from either side. Designed for self-supporting field installation. Made of heavy gauge steel, with extra-heavy mill-galvanized coating. Front cover provided with knockout for installation of optional cylinder lock with dust cover.

Closure Mounting Hardware: Furnished with one 42-inch anchor post and mounting hardware.

Finish: Phosphatized; green baked-on enamel.

CATV 1100

Dimensions: 8-1/4"W x 8-1/4"D x 26"H

Components: Designed to accept line extenders, splitters or couplers.

Features: Low silhouette design ideal for front-lot installations. Furnished with padlock hasp. Closure is made of heavy-gauge steel, with extra-heavy mill-galvanized coating. Closure provided with knockout for installation of optional cylinder lock with dust cover.

Closure Mounting Hardware: Can be used with 24", 32" and 42" anchor post (optional), depending on local soil conditions. Also available with pole mounting kit.

Finish: Phosphatized, green baked-on enamel.

Mounting Plate No. 9361-2000

Dimensions: 9-3/4"W x 5-1/2"H
Standard package - 3 per carton
(Includes screws and nuts.)

Mounting Bracket No. 9362-0000 (Optional)

Dimensions: 3"W x 13-7/8"H x 1-3/4"D
Standard package - 6 per carton
(Includes screws and nuts.)

Mounting Bracket No. 9351-2000

Dimensions: 5-1/2"W x 1.0"H x 1.0"D Angle
Standard package - 5 per carton
(Includes screws and nuts.)

Mounting Bracket No. 9351-3000

Dimensions: 5-1/2"W x 2.0"H x 1.0"D
Standard package - 5 per carton
(Includes screws and nuts.)

CATV 2400

Dimensions: 4-1/2"W x 4-1/2"D x 20"H

Components: Designed to house miniaturized equipment. (Complete listing on adjacent page.)

Features: Low silhouette design ideal for front-lot installations. Furnished with padlock hasp. Closure is made of heavy-gauge steel, with extra-heavy mill-galvanized coating. Closure provided with knockout for installation of optional cylinder lock with dust cover.

Closure Mounting Hardware: Can be used with 24-inch or 42-inch-long anchor post (optional), depending on soil conditions. Also available with pole mounting kit.

Finish: Phosphatized; green, baked-on enamel.

Mounting Bracket No. 9431-1000

Dimensions: 1.0"W x 2-1/2"H x 2-1/2"D Angle
Standard package - 10 per carton
(Includes screws and nuts.)

UNDERGROUND MATERIALS

CATV 1205

Dimensions: 10-1/2"W x 10-1/2"D x 39"H.

Components: Trunk and bridging amplifier, power supply unit, or combination of line extender, directional coupler and multi-tap unit.

Features: CATV 1205—Designed for self-supporting field installation. Cover is removable to permit 360 degrees access. The closure is made of heavy-gauge steel, with extra-heavy mill-galvanized coating.

Closure Mounting Hardware: Furnished with two anchor posts, hardware and padlock hasp.

Finish: Phosphatized; green, baked-on enamel.

CATV 1200—less covers

CATV 1305

Dimensions: 16-3/4"W x 10-1/2"D x 39"H

Components: Closure will house the maximum number of electronic components that might be required at one mounting station: Trunk and bridging amplifier, line extender, thermal equalizer, splitter and directional coupler.

Features: CATV 1305—Designed for self-supporting field installation. Cover is removable to permit 360 degrees accessibility, for ease of installation and service. The closure is made of heavy-gauge steel, with extra-heavy mill-galvanized coating.

Closure Mounting Hardware: Furnished with two anchor posts, hardware, and padlock hasp.

Finish: Phosphatized; green, baked-on enamel.

CATV-1300—less covers

Mounting Bracket No. 9381-1000

Dimensions: 9-3/8"W x 16"H
Standard package - 5 per carton
(Includes screws and nuts.)

Mounting Bracket No. 9371-0000

Dimensions: 9-3/8"W x 16.0"H x 2-1/2"D
Standard package - 1 per carton
(Includes screws and nuts.)

Mounting Bracket No. 9361-4000

Dimensions: 9-3/8"W x 16.0"H x 1-1/4"D
Standard package - 2 per carton
(Includes screws and nuts.)

Mounting Plate No. 9381-2000

Dimensions: 9-3/8"W x 2.0"H
Standard package - 3 Pair per carton
(Includes screws and nuts.)

Mounting Bracket No. 9412-0000

Dimensions: 15-3/8"W x 16.0"H x 1-1/4"D
Standard package - 2 per carton
(Includes screws and nuts.)

Mounting Bracket No. 9411-1000

Dimensions: 15-3/8"W x 3.0"H x 2-1/2"D
2 pair per carton (Includes screws and nuts.)

Mounting Bracket No. 9421-1000

Dimensions: 15-3/8"W x 3.0"H x 3-1/2"D
2 pair per carton supplied (Includes screws and nuts.)

CATV 3011/3111/3200

Dimensions: CATV 3100 21-1/4"L x 10-3/4"W x 10"D (ID). CATV 3111 44-3/4"L x 12"W x 10"D (ID). CATV 3200 12"L x 9"W x 10"D (ID).

Components: CATV 3011 — Directional-coupler, multi-tap, or line extender, and trunkline coupler. CATV 3111 — Trunkline or bridging trunkline coupler. CATV 3200 — Directional-coupler or multi-tap.

Features: Below ground installation with easy top access. Excellent for front-lot locations where traffic is moderate.

All units equipped with rugged steel cover plates. Durable bell-jar-type interior housing protects equipment from flooding and water damage. Multi-purpose inner-security bracket for fastening cover plate to closure, securing inner housing and for attaching Tamper-Lock.

Heavy-gauge steel, with mill-galvanized coating. Internal housing thermal-formed ABS.

Mounting Plate/Bracket: Furnished with bracket and necessary screws and nuts, stainless steel 300 series grade. (CATV 3200 supplied less bracket.)

Closure Mounting Hardware: Available with anchor posts (optional) and additional mounting brackets.

Finish: Phosphatized; cover plate, green baked-on enamel; housing, black, with CT-1 coating.

CATV 3011 Mounting Bracket No. 9881-1100

Dimensions: 2-1/2"W x 7-3/8"H
Standard package - 5 per carton
(Includes screws and nuts.)

CATV 3111 Mounting Bracket No. 9884-1000

Dimensions:
11-3/4"W x 4.0"H x 1-1/4"D
Standard package - 1 Pair per carton
(Includes screws and nuts.)

CATV 3200 Mounting Bracket No. 9311-1000

Dimensions:
2-1/2"W x 4-3/8"H
Standard Package - 5 per carton

ANCHOR POSTS

For use with CATV Closures

Order No. 9831-0000 for 42" Anchor Posts

Order No. 9836-1000 for 32" Anchor Posts

Order No. 9833-1000 for 24" Anchor Posts

Two galvanized and painted anchor posts, plus mounting hardware for use when extra stability is desired.

CATV 3011 Mounting Bracket No. 9881-2000

Dimensions: 10-1/2"W x 3.0"H x 1-3/4"D
Standard package - 1 Pair/ctn.
(Includes screws and nuts.)

CYLINDER LOCK ASSEMBLY WITH STAINLESS STEEL DUST COVER

Lock: Order No. 9881-4100

Key: Order No. 9881-4110

Spring clip furnished for quick, easy mounting. Cam lock is interchangeable with all makes of CATV Closures.

(One key is supplied per 10 locks ordered.)

Box 105600

 TWX 810-766-4912 Telex 0542898

SINGLE ANTENNAS, SERIES QCA

For installations that require a moderately narrow beamwidth antenna, one of the Series QCA Single Antennas will provide superior reception through its excellent front-to-back ratio and sidelobe suppression. The wide bandwidth of this antenna permits all VHF channels to be covered by only three antennas.

Mounting hardware is available to permit no-drilling, single point mounting on round or angle tower sections or on wooden poles. No bracing or other supports are required.

SPECIFICATIONS

- Minimum Front-to-Back Ratio: 25 dB (all models)
- Minimum Sidelobe Suppression: QCA-UHF; 30 dB, All Others; 25 dB
- Output Connector: Type-N Male
- Output Impedance: 50 ohms unbalanced
- Wind Survival at 0°C (+ 32°F) Air Temperature, No Ice: 160 km/h (100 mi/h) 25mm (1 in.) Radial Ice: 113 km (70 mi/h)

Antenna Separation

- QCD-2/-2-6: 3556mm (140 in.)
- QCD-4: 2667mm (105 in.)
- QCD-7: 1143mm (45 in.)

TWO-ANTENNA ARRAY, SERIES QCD

The Series QCD combines two Series QCA antennas in a precision horizontal array. For an installation where co-channel interference can be a problem using the single Series QCA antenna, the narrower bandwidth and better co-channel performance of the Series QCD makes it the ideal antenna for this condition.

Included with the Series QCD Array is a two-way power combiner, all necessary assembly and mounting hardware and instruction.

SPECIFICATIONS

- Max VSWR: 1.5:1
- Min Front-to-Back Ratio: 25 dB
- Min Sidelobe Suppression: 18 dB
- Output Connector (Power Combiner): Type-F female
- Output Impedance: 75 ohms unbalanced
- Wind Survival at 0°C (+ 32°F) Air Temperature, No Ice: 160 km/h (100 mi/h), 25mm (1 in.) Radial Ice: 113 km/h (70 mi/h)

ANTENNA MODEL

	QCA-2-6	QCA-2	QCA-4

ANTENNAS/RECEIVER

FOUR-ANTENNA ARRAY, SERIES QCS

Production of co-channel interference through very narrow beamwidth and high sidelobe suppression makes the Series QCS Four-Antenna Array the superior "problem-area" antenna. Four models receive channels in the VHF television band, while one model is available to receive all UHF television channels.

The QCS Array consists of four Series QCA antennas arranged in a diamond-shaped array that exhibits very narrow beamwidth, high sidelobe suppression, and high gain. A precision high-strength backing structure positions and supports each of four antennas for optimum performance. A four-way power combiner is supplied with the array, as are all hardware and mounting clamps.

SPECIFICATIONS

- Max VSWR: 1.5:1
- Min Front-to-Back Ratio: 25 dB
- Min Sidelobe Suppression: QCS-UHF: 13 dB, All Others: 25 dB
- Output Connector (Power Combiner): Type-F Female
- Output Impedance: 75 ohms unbalanced
- Wind Survival at 0°C (+ 32°F) Air Temperature, No Ice: 160 km/h (100 mi/h), 25mm (1 in.) Radial Ice: 113 km/h (70 mi/h)

Beamwidth — V	22°	28° (Ch 14) 20° (Ch 70)	

DUAL-BEAM FEED ANTENNAS

Scientific-Atlanta's dual-beam feed for 4.6-, 5-, and 7-meter earth station antennas eliminates the need to purchase a complete receiving system to expand program offerings. An easy-to-install retrofit kit is also available for antennas now in the field. The feed enables simultaneous reception of two adjacent domestic C-band satellites separated by 3° to 4° of geosynchronous arc, without compromising current 32-25 log θ sidelobe specifications.* Because of this special design consideration, existing licensed sites are assured contained protection from terrestrial interference.

Each feed is equipped with dual-polarization adjustments. Molded plastic enclosures for standard LNAs or Scientific-Atlanta's LNCs provide important protection against environmental corrosion and insect damage.

*3° spacing only for 7-meter antenna.

MODEL 6602 VIDEO RECEIVER

Features

- Frequency Agility provides selection of any one of 24 channels with one receiver
- Automatic Polarization Switching for any selected frequency with Optional Coaxial Replay
- Internally programmable for single line selection of one of any six frequencies. Remote Code access to any one of 24 transponder frequencies when interfaced with Scientific-Atlanta 1:N video protection switch or compatible equipment
- Threshold Extension Demodulation provides enhanced picture quality at lower signal levels for reduced system cost
- Easy-access plug-in downconverter
- Adaptable for microwave applications
- Optional Audio Demodulators for future audio services
- Solid-state reliability

Box 105600

TWX 810-766-4912 Telex 0542898

SERIES 9000 2, 8 and 3.2 METER ANTENNAS

FEATURES

- Ku-band Compatible
- Side-lobe Performance Meets FCC Proposed Regulations for 2° Satellite Spacing
- Interchangeable Reflector Panels
- Reflector Edge Feed Rotation Panels
- Full Arc Coverage
- Simplified Alignment and Pointing
- Independent of Foundation Alignment
- Meets AISC Building Code Standards

The Series 9000, 2.8- and 3.2-meter earth station antennas represent an advancement in the design and manufacture of high-performance, low-cost antennas for audio, video, and digital receive-only applications at 4 and 12 GHz. These antennas, used in conjunction with the appropriate LNA or LNC, will provide high-quality signals for many applications throughout the United States.

The 2.8-meter antenna consists of eight interchangeable reflector panels and can be expanded to 3.2 meters by adding sixteen extender panels. The 3.2-meter antenna offers 1.6 dB additional gain. Panels are manufactured using an improved die-stamping technique that produces an extremely precise surface tolerance, yielding high efficiency even at Ku-band. Excellent side-lobe performance meets FCC regulations for 2° satellite spacing.

No special tools, panel alignment, or testing are required for installation, maintenance, or repair. The feed rotation design allows polarization to be accurately aligned from the edge of the dish, preventing RF blockage from a technician working on the assembly.

Simplified and reduced-cost installation is another advantage of the Series 9000 design. No crane or handling equipment is necessary, and an innovative foundation assembly reduces both excavation and concrete requirements.

Two mounts have been developed for the 2.8- and 3.2-meter reflectors. Both the elevation-over-azimuth (el/az) and the polar mount configurations provide structural integrity, full arc coverage, and simplified alignment and pointing, in addition to being totally independent of foundation alignment. For versatility, the Series 9000 reflector and hub are common to both the el/az and motorized polar mount bases.

4.6-METER ANTENNA, MODEL 8346PF/8346CS/8346DF

FEATURES

- Prime Focus for Minimum System Cost
- El/Az Mount Permits Low Cost Installation
- Optional Cassegrain Feed for high efficiency RF Performance
- Protected Environment for LNAs
- Designed for Minimum Maintenance
- Stamped Aluminum Reflector Panels for Consistent Surface Accuracy
- Designed for Minimum Shipping and Installation Costs
- No Panel Alignment or Testing Required
- Minimum Site Preparation required
- Optional Cast Pier Foundation
- Optional Dual Beam Feed

For receive-only applications in the 3.7 to 4.2 GHz range, Scientific-Atlanta's Model 8346, 4.6-Meter earth station antenna can be easily installed in a wide variety of locations with a minimum of site preparation. This antenna system is especially suited to the needs of the CATV operator receiving video programming from domestic satellites. Sidelobe performance meets FCC specifications for 2° satellite spacing. For higher gain requirements, an optional Cassegrain feed is available. Both of these feed systems, furnished for receive-only operation, provide for dual polarization capability in the 3.7 to 4.2 GHz range, and may be manually rotated to any position. Receive/transmit operation can also be provided with a special feed.

The reflector, parabolic in shape, is made up of 12 interchangeable aluminum panels, precisely die-stamped for consistent surface accuracy. This factory-produced accuracy guarantees complete interchangeability, and the concept of modularity provides benefits in handling ease, lower shipping cost, and ease of installation. Two men can install this antenna easily in less than one day.

For reception of two adjacent satellites that are 3°-4° apart on the geosynchronous arc, Scientific-Atlanta provides a dual beam feed option for the Model 8346 antenna.

A cast pier foundation kit is available as an optional mounting arrangement. Each foundation kit consists of three cast pier inserts. A steel framework bolts these three inserts into a triangular shape which is then lowered into three augered holes to be filled with concrete.

HEADEND EQUIPMENT

VIDEO RECEIVER, MODEL 6650

The Model 6650 Video Receiver is a low cost, high performance satellite television receiver, designed for use with the Scientific-Atlanta Series 360 Low Noise Converter (LNC). The LNC converts the entire 500 MHz satellite band to UHF frequencies between 270 - 770 MHz at the antenna feed. This eliminates the need for microwave components in the receiver design, resulting in significant cost reduction for multiple receiver applications.

The Model 6650 uses Phase-Locked Demodulation (PLD) to enhance video and audio quality at low signal levels. Techniques employed in designing PLD for the Model 6650 have substantially improved receiver performance, even in the presence of multiple subcarriers. Impulse noise in the video signal is reduced near the threshold level, and high picture quality is extended to considerably lower operating signal levels than with conventional demodulation.

The Model 6650 allows for selection of any one of 24 satellite channels simply by turning a single dial on the front panel. For remote operation, the Model 6650 is 6 or 24 channel programmable with optional Logic Interface Board. Compatible interface equipment is available for use with cue tones or timing devices. Because of its modular design, the Model 6650 Video Receiver includes provisions to accept optional plug-in subcarrier printed wiring boards for a variety of system applications, including terrestrial microwave interface.

The power supply has adequate capacity to provide power to a Series 360 Low Noise Converter via the center conductor of the coaxial cable or with a twisted pair.

The carefully selected down conversion frequency permits the use of long lengths of coaxial cables for applications where the antenna and receiver need to be separated.

RACK ADAPTOR FOR MODEL 6650

3.7 to 4.2 GHz LOW NOISE AMPLIFIER, SERIES 300

Scientific-Atlanta has developed a series of Low Noise Amplifiers for Satellite earth stations. These amplifiers are designed using GaAs FET technology for optimum noise performance. These amplifiers have noise temperatures of 80 to 120K with 50 dB gain and operate over the 3.7 - 4.2 GHz frequency band. Low Noise Amplifiers with 60 dB gain are also available on request.

All units come with integral isolator to protect against antenna mismatch, as well as having internal output isolation. Standard units come with regulated power supply permitting dc voltage to vary from +15 V to +25V dc without performance degradation, and are powered through the center conductor of the RF cable. All units are fully weatherproofed to assure long operation outdoors and have waveguide pressurization capability.

3.7 to 4.2 GHz LOW NOISE CONVERTER, SERIES 360

The Series 360 Low Noise Converter (LNC) is designed for use with the Series 6650 Video Receiver to provide low cost, high performance satellite television reception. The LNC is a combination of a low noise GaAs FET amplifier and a microwave down-converter for optimum noise performance.

The Series 360 LNC converts the entire 500 MHz satellite band to UHF from 270 to 770 MHz at the antenna feed, eliminating the need for expensive microwave components in the receiver and allowing the use of low-cost UHF coaxial cable from the antenna to the headend. The result is a low-cost earth station electronics sub-system.

The LNC combines a low-noise GaAs FET amplifier with the block downconversion process for optimum noise performance. Internal output isolation and an integral isolator protect against antenna mismatch.

The amplifier, a microwave oscillator, microwave filters and a power supply regulator are arranged within a precision-cast housing that provides extra protection against the elements.

The LNC is powered from the headend through its external connectors or through the center conductor of the coaxial cable. The Series 360 is available in 80K, 90K, 100K and 120K noise temperature ranges. The Series 361 LNC is available for use with Ku-Band satellite systems.

RECEIVER/ COMBINING NETWORK

MODEL 9530/9530A SATELLITE RECEIVER

FEATURES

- Microprocessor Controlled
- Block Downconverter System
- Front Panel/Pushbutton Frequency and Level Controls
- LED Readout For: Relative RF Signal Level, Transponder Number, Fine Tuning, and Audio Frequency and Relative Audio Level Display
- Volatile and Non-Volatile Memory for Set-Up Instructions
- Tunable Audio
- Single or Dual LNC Select Switch
- Front Panel Reverse Polarization Switch
- AFC LED Indicator
- U.L. Listed
- Composite and Baseband Outputs
- Built-In Infra-Red Detector for Remote Control (9530A only)
- Soft Touch Front Panel Pushbuttons
- Fine Tuning to minimize Terrestrial Interference
- Video Inversion Switch
- Compact size

- 70 MHz IF Monitor Port
- 70 MHz IF Loop-Thru for Terrestrial Interference Traps
- Built-In Power Inserter on each RF Input

The Model 9530 is a rack mounted receiver requiring only 3/4 of standard (3.5 x 12.5 inches) rack space. This compactness is achieved through the use of microchips which control all receiver functions, thereby alleviating the need for independent circuits and larger circuit boards. The 9530A is a table top model affording the same compact 3.5 x 12.5 inch size. The 9530A table-top receiver is packaged with a decorative cover and surface-protecting rubber feet.

OPTIONS

9530/9530A

- Second Tunable Audio
- 18, 25, or 30 MHz IF Filters (30 MHz Std.)
- Threshold Extension

9530A

- Auxiliary AC On/Off Relay and Convenience Outlet
- Infra-Red Remote Control Transmitter
- TV Modulator (Switch-Selectable CH 3 or 4)

MODEL 68-12/68-12TS COMBINING NETWORK

Both Model 68-12 and Model 68-12TS combining networks provide the means to combine twelve separate signal sources, such as signal processors, modulators, etc., into one signal source. The Model 68-12TS combining network provides four front panel and four rear panel test connectors. These front panel connectors can be used for test connections, monitoring points, sweep inputs, or as needed to satisfy a station or system configuration.

SPECIFICATIONS

Frequency Range: 50-440MHz. Input Return Loss: 17dB. Output Return Loss: 16dB. Isolation between ports: 30dB. Impedance: 75 ohms unbalanced. Test Point (68-12TS only): -20dB \pm 1dB. Dimensions: Standard 19"W x 3.5"H x 0.5"D. Weight: Net 1.8 lb. Shipping: 2.5 lb.

HEADEND EQUIPMENT

COAXIAL CABLE, 50-OHM

Coaxial cable provides the 4 GHz output signals from the low noise amplifier to the receiver input with minimum attenuation and distortion.

The 50-ohm cable provides rugged strength and flexibility in addition to superior electrical performance. The design includes a copper-clad aluminum center conductor, corrugated copper outer conductor, and a protective black polyethylene jacket. Both extruded spiral polyethylene and high density polyethylene tube design are offered as dielectric insulators.

In addition for short cable runs where additional flexibility may be required, cellular polyethylene dielectric foam filled cable is available.

CABLE CONNECTORS

Both Type-N male and Type-N female connectors are available with spiral polyethylene and high-density tube polyethylene 50-ohm dielectric coaxial cable. All connectors are furnished with a 3.2mm (1/8 in.) pipe-threaded pressurizing port sealed with a pipe plug and gasket. The pipe plug may be removed to allow installation of valves, pressure gauges, etc.

SPECIFICATIONS

• 7/8", 50-ohm Dielectric: Nominal size: 22.2mm (9.875 in.) • Impedance: 50 ohms • Propagation Velocity: 85-91.5% • Attenuation: 2.96dB/30m (100 ft.) • Bend Radius: 3m (10 ft.) • Weight (Net): 0.74 kg/m (0.5 lb/ft.)

• 1/2" Foam Dielectric • Nominal Size: 12.7mm (0.5 in.) • Impedance: 50 ohms • Propagation Velocity: 80% • Attenuation: 8.0 dB/30m (100ft.) • Bend Radius(127mm (5 in.) • Weight (Net): 0.25 kg/m (0.17 lb/ft.)

A range of VHF/UHF power splitters is available for use with the LNC and 6650, 6651 receiver systems.

SPECIFICATIONS

• Frequency Range: 270 - 770 MHz • RF Input: Type-F female • RF Output: Type-F female • Input/Output Impedance: 75 ohms unbalanced • Insertion Loss: 1.5 + 10 log N dB (N = number of ports) • Number of Ports: 2 or 4

POWER DIVIDERS

Power dividers are used to provide input signals to several receivers from one antenna/LNA combination and are specifically designed for the 3.7 to 4.2 GHz frequency range. The input is divided across a pair of quarter-wavelength lines etched on copper-coated board. Internal termination provides port-to-port isolation.

SPECIFICATIONS

• Frequency Range: 3.7 to 4.2 GHz • RF Input: Type-N female • RF Output: Type-N female • Input/Output Impedance: 50 ohms unbalanced • Insertion Loss: 1.5 + 10 log N dB (N = number of ports) • Number of Ports: 4, 8, or 16

POWER INSERTER, 75-OHM

A power inserter, Scientific-Atlanta Part No. 233967, is available for powering the LNC over the coaxial cable.

SPECIFICATIONS

• Frequency Range: 270 - 770 MHz • Insertion Loss: 0.5 dB maximum • VSWR: 1.3 maximum • RF Impedance: 75 ohms • DC Current: 1A maximum • Connectors: Type-F for RF screw terminals for dc

HEADEND EQUIPMENT

MODEL 6150

MODEL 6150 SIGNAL PROCESSOR

FEATURES

- Fully modular
- All solid-state
- Low power consumption
- Converter modules for all standard channels
- Battery operation optional
- Extensive list of optional switching and processing modules

Completely modular in construction, the Model 6150 signal processor represents the ultimate in headend signal-processor technology, convenience, and reliability.

Spurious outputs from the processor are virtually eliminated from 5 to 450 MHz through the use of double balanced mixers and hybrid amplifiers. Double notches at each of the nearest adjacent channel carriers (upper adjacent picture carrier) lower adjacent sound carrier, and lower adjacent color subcarrier, increase adjacent channel rejection to at least 60 dB.

An all-pass phase equalizer in the video IF amplifier holds group delay to a minimum.

The standby carrier oscillator has several modes of operation including CW, internally modulated with a 15 kHz keying pulse, and an external mode. The external mode greatly facilitates emergency audio override for community alert requirements. It also allows the operator to utilize his headend as a source of modulated signals with which to measure the cross modulation in the distribution system.

Output frequencies from sublow through hyperband are standard. A plug-in UHF to IF input converter is also standard, eliminating the need for separate UHF-VHF converters in most instances.

Several options to the basic Model 6150 signal processor are available that will permit automatic switching, spectrum inversion, signal phase-locking, DC power operation, etc.

Four Model 6130 signal processors rack mounted in a standard 19" rack

MODEL 6130 SIGNAL PROCESSOR

FEATURES

- Cable quality
- Compact package may stand alone or be rack mounted
- SAW filter
- For use in CATV, MATV, and ETV systems
- VHF, UHF, midband, and superband input channels available

- VHF, midband, and superband output channels available
- Crystal controlled frequency accuracy
- Output Power: +50 to +60 dBmV
- Spurious Output: -60dB (relative to video carrier at +60dBmV)
- Front panel monitor/test point
- Front panel output level control
- Input signal and power status monitoring
- Built-in high-level IF switch

Developed primarily for mini-cable applications,* the Model 6130 signal processor offers the advantages of heterodyne signal processing in a low-cost and compact unit. Due to its unique design, up to four processors may be mounted in a standard 19" rack width.

Through the use of double-balanced mixers and hybrid circuits, spurious outputs are virtually eliminated from 5 MHz to 450 MHz.

*The Model 6130 signal processor is not modular and does not offer many of the options available in the Model 6150 processor.

MODEL 6250

MODEL 6250 TELEVISION DEMODULATOR

FEATURES

- Fully modular
- All solid-state
- Low power consumption
- Operates with all standard channels
- Battery operation optional
- Synchronous detector optional
- Performance options available

Precision demodulation of any standard VHF, UHF, sublow, midband or superband television channel is provided by the Model 6250 television demodulator. Outputs are baseband, video, audio, and an aural subcarrier.

Video delay characteristics match those of the average home television receiver as defined by the FCC, thereby permitting demodulation of signals transmitted with standard group delay predistortion. Audio output is a very high quality balanced line for use by subsequent amplifiers. In addition, a front-panel audio monitor jack with level control is furnished.

In applications such as microwave retransmission of the received television signal, an aural subcarrier can be added to the video output. The sound signal will then be at a frequency above the spectrum occupied by the video signal.

Envelope detection is used in the standard version of the demodulator. An optional synchronous detector is available to essentially eliminate the quadrature distortion found in all vestigial sideband envelope detectors. Thus unsymmetrical ringing and smear as well as crosstalk between video sideband components are removed from the resultant demodulated signal.

Most of the demodulator circuits, including power supply, are contained in easily accessible solid-state plug-in modules. Some are interchangeable with those of the Model 6150 signal processor and Model 6350 television modulator, thereby reducing spares inventory requirements.

MODEL 6350 TELEVISION MODULATOR

FEATURES

- All Solid State
- SAW Filter Technology
- Low Power Consumption
- Covers All Standard and Non-Standard Television Channels
- Many Options Available
- Monitor/Test Connector
- Fully Modular

The Model 6350 television modulator generates a high quality vestigial sideband TV signal. Advanced circuit design results in unexcelled picture and sound fidelity from color or black and white video inputs and from either audio or 4.5 MHz subcarrier inputs. Scientific Atlanta's pioneering application of the SAW* filter results in unequalled vestigial sideband response characteristics. The SAW filter provides superior adjacent channel performance while retaining excellent group delay characteristics. Vestigial sideband filter adjustments are virtually eliminated and temperature stability is excellent.

A delay predistortion network is provided to conform with the standard FCC predistortion requirements.

Most of the modulator circuits (including power supply) are contained in solid-state plug-in modules, easily accessible from the front panel. Some of the modules are interchangeable with those of the Model 6150 signal processor and Model 6250 television demodulator, thereby reducing inventory requirements for spare parts.

*Surface Acoustic Wave

OPTIONS

Phase Lock — permits phase-locking the modulator output to an interfering local off-air station.

Video Switching — allows automatic switchover to a secondary video source when primary video is lost.

Audio Switching — permits switchover to an alternate audio source. An additional switch input is provided to permit switching emergency override audio.

Audio Modulation Limiter — limits sound deviation to 25 kHz on all audio inputs.

High-Level IF Switching — An alternate high-level IF signal can be switched into the modulator output converter with option HIFS.

Video AGC — provides a constant output level of 1V p-p with input level variations of 0.5 to 2V p-p.

Video Switch/AGC — provides a constant output level of 1V p-p from either the primary or alternate video input signal.

IF Automatic Gain Control — With IFAGC installed, amplification and automatic gain control of an external High Level IF input is provided. This option is used with the HIFS option.

IF Loopthrough — furnishes a composite IF output signal for processing by a scrambler.

DIFLA — furnishes separate audio and video IF signals prior to the vestigial sideband filter for use with pulse-sync suppression scrambler systems.

DIFLB — provides separate audio and video IF signals after the vestigial sideband filter for use with sinewave suppressed scrambler systems.

Standby Battery — permits a standby negative ground 24V DC battery to be automatically connected as the power source upon loss of AC power.

DC Operation — permits modulator operation from a DC source of positive ground 19V to 32V. Operation from the AC line is not possible with this option, and there is no standby protection.

Spectrum Inversion — inverts the video and audio carriers, with the video carrier 4.5 MHz above the audio at RF.

Signal, Voltage Metering — installs a metering module in the front panel of the modulator.

MODEL 6330 TELEVISION MODULATOR

FEATURES

- Cable-Quality Modulator
- Low Cost
- For Use in Mini-Cable and CATV
- Ideal for Private Television Earth Stations
- Standard VHF, Midband, Superband Channels Available
- Minimum Rack Space Requirements
- Monitor/Test Port Standard
- Composite IF Loop-Through (SIFL) Standard

The Model 6330 television modulator offers exceptional performance on all VHF, midband, and superband channels at a very low price. Its compact size allows for a cost effective approach to configuring headend racks since up to four 6330s can be mounted in a standard 19" rack width. The modulator is ideally suited for mini-cable and CATV applications.*

The 6330 modulator employs extensive use of integrated circuit technology to ensure state-of-the-art performance and reliability. A surface acoustic wave (SAW) vestigial sideband filter as well as a composite IF loop-through are provided as standard features. Optional features include dual IF loopthrough (DIFL) and Spectrum Inversion (SI).

The 6330 provides excellent differential gain and phase response. It meets FCC predistortion requirements and offers excellent group delay characteristics. Front panel features include audio over-deviation and white clip indicators, video carrier output level control and a -20dB test point.

*The Model 6330 modulator is not modular and does not offer many of the options available on the Model 6350 modulator.

TV SIGNAL DISTRIBUTION

TRUNK STATIONS

ELECTRICAL FEATURES

- Switching Regulated Power Supply with Automatic Transient Protection, Overvoltage Protection, and Current Limiting. Operates at 30V or 60V ac
- -20 dB Directional Coupler Test Points Throughout
- CW or Modulated Carrier Pilot Channels are Totally Immune to Adjacent Channel Variations
- Absolute Automatic Level and Slope Compensation
- Plug-In Hybrids
- Stepped Pad and Equalizer to Prevent Unauthorized Adjustments

MECHANICAL FEATURES

- Compatible with Push-Pull/Feedforward Electronics
- No Motherboard—All Controls and Functional Components are Located Within the Plug-In Modules
- A360 Aluminum Die-Cast Housing
- Positive Cable Seizures Optimize Return Loss and Do Not Damage Cable Center Conductor or Connector Pin
- Optional Housing Protective Coating
- Housing Reversible for Tandem Mounting and Street Side Access

TRUNK AMPLIFIERS

Scientific-Atlanta offers a complete line of 300, 400, 450, and 550 MHz trunk stations in either a conventional push-pull configuration or the distortion improving feedforward configuration. Designed to plug into a standard trunk housing, amplifier modules can be simply exchanged to obtain increased channel capacity or upgrade to feedforward. This upward compatible design combined with reverse options, results in our ability to accommodate the most demanding of system requirements while not limiting the stations to any particular configuration. Status Monitoring and/or Reverse Switching features can be added quite simply whenever the need arises. The same is true of reverse electronics.

MODULE FLEXIBILITY

Standard trunk amplifier modules are equipped with a built-in thermal slope and gain compensator that can be augmented with an automatic control module. Status monitoring/reverse switching and reverse options are compatible with forward modules allowing future upgrades without obsoleting existing equipment. Diplex filters plug in, as do the stepped pads/equalizers, and accessories.

PERFORMANCE

As a leader in the cable industry, Scientific-Atlanta's charter is to set system performance standards that provide each system with the utmost in signal quality while constantly improving overall system reliability.

SIMPLIFIED INSTALLATION AND SET-UP

An accurate switch selectable built-in thermal slope and gain compensating network provides a continuous reference for pad and equalizer selection. Plug-in trim networks facilitate selective adjustment of the system frequency response without altering the basic amplifier module alignment.

TRUNK STATION CONFIGURATIONS

One advantage of modular station design is the flexibility it provides the system planner. With the modular concept employed in Scientific-Atlanta's 6500 series trunk station, the system planner may select from a broad range of standard modules in configuring a particular trunk station to a specific need. The system frequency range; need for automatic slope and gain control; reverse and bridging requirements are representative functions which dictate trunk station configuration.

Once the trunk station has been configured, it assumes a model number which aids in the identification of its function in the completed system. It will be helpful to the system operator to become familiar with these model numbers; familiarity will be an asset as model numbers become the language of system employees.

All amplifier station model numbers carry a suffix preceded by a slash (/) i.e., 6540A/400. This suffix designates the upper frequency limit of the forward system.

TRUNK STATION MODEL NO. DESIGNATOR

DESIGNATOR	DESCRIPTION
6540	This model number pertains to all standard trunk stations having a lower forward frequency limit of 54 MHz. (Sub-Split)
6560	This model number pertains to all standard trunk stations having a lower forward frequency limit of 174 MHz. (Mid-Split)
6570	This model number pertains to all standard trunk stations having a lower forward frequency limit of 234 MHz. (High-Split)
6840	This model number pertains to feedforward trunk stations having a lower forward frequency limit of 54 MHz.
A	Designates that the forward amplifier employs automatic pilot operated slope and gain control.
M	Designates that the forward amplifier is thermal in operation. (Thermal is built into all trunk amplifier modules.)
B	Designates that the station utilizes a bridger module.
R	Designates that the station is equipped with a reverse trunk module.*
G	Designates that the station automatically controls gain in the reverse trunk module. Used only in 6560 station models.*
S	Designates that the station automatically controls slope in the reverse trunk module. Used only in 6560 station models.*
T	Designates that station is a terminating trunk.

TRUNK STATIONS (Cont'd)

- P** Designates that a reverse pilot generator module is used.
- X** Designates that a status monitor/reverse switching transponder module is utilized.

TRUNK STATION MODEL 6540M (Specify Forward Upper Frequency)

6540M/***) is the most basic of trunk station models. It is composed of the trunk station housing which comes fitted with internal wiring harness, power transformer, a trunk amplifier module, and a switching regulated power supply.

Operational gain is 22 dB with all losses included. Plug-in pad and equalizer are used for output level and tilt adjustment. Thermal gain and tilt compensation is standard.

TRUNK STATION MODEL 6540A (Specify Forward Upper Frequency)

6540A/***) is comprised of the same station components of the 6540M, plus the addition of the Automatic Control Module. Trunk gain and tilt are automatically controlled by continuous monitoring of two pilot channels. Thermal gain and tilt compensation is standard.

TRUNK STATION MODEL 6540B (Specify Forward Upper Frequency)

6540B/***) provides additional bridging along trunk routes in locations which are between standard trunk amplifier locations. The 6540B/***) may be used as a terminating trunk (6540TB) at standard 22 dB spacing. In the latter configuration, the trunk is terminated within the station and signal is fed directly to the bridger module. The station is comprised of the trunk station housing which comes fitted with internal wiring harness and power transformer, an intermediate/terminating trunk module, a bridger module, and a regulated power supply. Tilt and output level adjustments in both I/T trunk and bridger modules are accomplished with separate plug-in pads and equalizers for each module.

TRUNK STATION MODEL 6540MB (Specify Forward Upper Frequency)

6540MB/***) is the most basic of trunk/bridger station models. It is comprised of the trunk station housing which comes fitted with internal wiring harness and power transformer, a trunk amplifier module, a bridger module, and a regulated power supply. The high level bridger provides up to four feeder output ports by means of plug-in feeder makers. Operational gain in the trunk is 22 dB with plug-in pad and equalizer used for output level and tilt adjustment. Bridger output level and tilt adjustments are likewise accomplished with separate plug-in pad and equalizer. Thermal gain and tilt compensation is standard.

TRUNK STATION MODEL 6540AB (Specify Forward Upper Frequency)

6540AB/***) is comprised of the same station components as the 6540MB, plus the addition of the Automatic Control Module. Trunk gain and tilt are automatically controlled by continuous monitoring of dual pilot channels. Thermal gain and tilt compensation is standard; pilot channel operation is switch selected.

Series 6500 Distribution Sub-Split Trunk Stations		Forward Trunk Amplifier Intermediate/Terminating Trunk Amplifier	Bridging Amplifier	Automatic Control	Reverse Trunk Amplifier 30 MHz	Reverse Intermediate Trunk Amplifier	Diplex Filters, Sub-Split
Model	Description						
6540M	Thermal Trunk Amplifier	1					
6540A	Automatic Trunk Amplifier	1		1			
6540B	Intermediate/Terminating Amplifier with High Level Bridger		1	1			
6540MB	Thermal Trunk Amplifier with High Level Bridger	1	1				
6540AB	Automatic Trunk Amplifier with High Level Bridger	1	1	1			
6540MR	Thermal Trunk Amplifier with Thermal Reverse Amplifier and Diplex Filters	1			1		2

6540TBR	Terminating Trunk Amplifier with High Level Bridger Thermal Reverse Amplifier and Diplex Filters		1	1		1	2

SUB-SPLIT GUIDE

The addition and activation of sub-split reverse (5-30 MHz) is easily accomplished with the modular convenience of reverse amplifiers and accessories. Even in cases where the forward system is in place and operating, activation of the reverse path may be accomplished with minimal disturbance to the active, forward signal path. To add sub-split reverse to any 6500 series trunk station, add the equipment listed after each station model which is to be upgraded (refer to Figures 1 and 2 for module and accessory locations). An "R" suffix added to the trunk station model number specifies that reverse trunk amplifier module and diplex filters are to be included. Plug-in pads and equalizers must be called out separately. To add sub-split reverse to any 6500 line extender, refer to Line Extender Reverse Kit.

- 6540M** Becomes 6540MR with addition of reverse equipment. Install as follows:
 1—233180 Reverse Trunk Module
 2—DFS30 Diplex Filters
 1—EQ30T(*) Reverse Equalizer
 1—PP(*) Plug-In Pad
- 6540A** Becomes 6540AR with addition of reverse equipment. Install as follows:
 1—233180 Reverse Trunk Module
 2—DFS30 Diplex Filters
 1—EQ30T(*) Reverse Equalizer
 1—PP(*) Plug-In Pad
- 6540MB** Becomes 6540MBR with addition of reverse equipment. Install as follows:
 1—233180 Reverse Trunk Module
 3—DFS30 Diplex Filters
 1—EQ30T(*) Reverse Equalizer
 1—PP(*) Plug-In Pad
- 6540AB** Becomes 6540ABR with addition of reverse equipment. Install as follows:
 1—233180 Reverse Trunk Module
 3—DFS30 Diplex Filters
 1—EQ30T(*) Reverse Equalizer
 2—PP(*) Plug-In Pads
- 6540B** Becomes 6540BR with addition of reverse equipment. When used as a terminating trunk (6540TBR), install as follows:
 1—233180 Reverse Trunk Module
 2—DFS30 Diplex Filters
 1—EQ30T(*) Reverse Equalizer
 2—PP(*) Plug-In Pads

Box 105600

 TWX 810-766-4912 Telex 0542898

TRUNK STATIONS (cont'd)

—OR—

When used as an intermediate trunk:
 1—232470 Reverse Intermediate Trunk Module
 3—DFS30 Diplex Filters
 1—EQ30T (*) Reverse Equalizer
 2—PP (*) Plug-In Pads

*The reverse equalizer and plug-in pads are required to complete the trunk station; however, they are not shipped with the reverse modules. The appropriate value must be specified when ordering.

The 6540BR may be used as an intermediate trunk without reverse path amplification in those locations where reverse feeder is not required. To accomplish this, install reverse through cable RC-100 in place of the sub-split intermediate trunk module 232470.

300/330 MHz Notes

- Includes all losses with amplifiers in normal operating configuration.
- At 20°C (68°F).
- Cable equivalent at upper frequency.
- Gain specifications with forward trunk in normal operating configuration.
- Single feeder output.
- In 1 dB steps.
- 1.5 upper frequency cable equivalent steps dB of cable change at upper frequency.
- Gain for reverse trunk or feeder only is 3 dB greater.
- Carrier to distortion ratio.
- With 0 dB equalizer installed in forward trunk or forward interterm trunk module.
- Includes forward trunk and bridger.
- Cable shape: - for cable (down tilt), + for equalization (up tilt).
- Thermal AGC/ASC.
- 12 dB spacing.
- 22 dB spacing.
- Does not include 3 dB loss for optional plug-in thermal network.
- Includes bridger equalizer for 7 dB tilt.
- Includes bridger pad for typical operating gain.
- Includes diplex filter loss.

SERIES 6560 MID-SPLIT SYSTEM

The Mid-Split System provides increased channel capacity in the reverse direction (5-108 MHz) and fewer channels in the forward direction (174 MHz-upper frequency).

As in sub-split, each mid-split station model is suggestive of its function in the system. In ordering, the "(***)" in station model number is replaced by the appropriate upper frequency limit in the forward direction: 300 MHz, 330 MHz, 400 MHz, 450 MHz, or 550 MHz.

Series 6560 Distribution Mid-Split Trunk Stations		Forward Trunk Amplifier	Reverse Trunk Amplifier	Bridge	Automatic Control	Reverse Trunk Amplifier 5-108 MHz	Reverse Trunk Amplifier 5-108 MHz	Reverse Trunk Amplifier 5-108 MHz	Reverse Trunk Amplifier 5-108 MHz	High Power Filter 108-174 MHz only
Model	Description

BRIDGERS

Any standard mid-split trunk station may be equipped with bridging capability with the addition of a bridger module. The station model number is added with "B"; that is a 6560AS becomes 6560ASB when bridging is added.

SERIES 6570 HIGH-SPLIT SYSTEM

Available in 450 and 550 MHz, high-split offers a reverse bandwidth of 5-174 MHz and a forward bandwidth of 234 MHz up to 550 MHz.

Series 6500/450 Distribution High-Split 450 MHz Trunk Stations*		Forward Trunk Amplifier	Reverse Trunk Amplifier	Bridge	Automatic Control	Reverse Trunk Amplifier	Reverse In Term Trunk Amplifier	Diplex Filters, High-Split
Model	Description							
6570MR450	Thermal Forward Trunk with Temperature Compensating Reverse Trunk and High-Split Diplex Filters	1						2
6570AR450	Automatic Forward Trunk with Temperature Compensating Reverse Trunk and High-Split Diplex Filters	1			1			2
6570MBR450	Thermal Forward Trunk with High Level Bridger, Temperature Compensating Reverse Trunk and High-Split Diplex Filters	1	1					3
6570ABR450	Automatic Forward Trunk with High Level Bridger, Temperature Compensating Reverse Trunk and High-Split Diplex Filters	1	1	1				3

Frequency Response	± 0.5 dB	± 0.5 dB	± 0.5 dB	± 0.5 dB

NOTES:

- Includes all losses with amplifiers in normal operating configuration.
- At 20°C (68°F).
- Cable equivalent at upper frequency.
- Gain specifications with forward trunk in normal operating configuration.
- Single feeder output.
- In 1 dB steps.
- 1.5 dB upper frequency cable equivalent steps.
- dB of cable change at upper frequency.
- Gain for reverse trunk- or feeder-only is 3 dB greater.
- Carrier to distortion ratio.
- With 0 dB equalizer installed in forward trunk or forward intermediate/terminating trunk module.
- Includes forward trunk and bridger.
- Cable shape. - for cable (down tilt). * for equalization (up tilt).
- Thermal AGC/ASC for forward amplifier.
- 12 dB spacing.
- 22 dB spacing.
- Does not include 3 dB loss for optional plug-in thermal network.
- Includes bridger equalizer for 7 dB tilt.
- Includes bridger pad for typical operating gain.
- Includes diplex filter loss.
- Includes forward intermediate/terminating trunk module.
- Noise figure is 3 dB lower for reverse trunk- or feeder-only.
- Reverse thermal compensation is selectable by plug-in drivers. Drivers are available for 6 dB, 12 dB, 18 dB, 24 dB, and 30 dB of cable at 174 MHz.
- Requires reverse injection test probe (Part No 276982).

AGC OR ASC MID-SPLIT REVERSE TRUNK AMPLIFIER MODULES 232660/232670

The Model 232660 and 232670 Reverse Trunk Amplifiers are complementing reverse transmission amplifiers for the 5-108 MHz mid-split system. Each model is designed to compensate for losses introduced by coaxial cable spans while introducing minimum levels of noise and non-linear distortion. The amplifiers install in a standard trunk housing and interface with forward trunk and bridger modules. Inputs are provided to accept 5-108 MHz reverse signals from both trunk and feeder. Circuitry for automatic gain control (AGC) is included in the Model 232660 and circuitry for automatic slope control (ASC) is included in Model 232670. In the AGC module the slope is thermally controlled and in the ASC module gain is thermally controlled. The two amplifier models are designed to be alternated in cascaded stations throughout the system. Both AGC and ASC versions operate from pilots generated in the first reverse station of a cascade.

MID-SPLIT REVERSE PILOT CARRIER GENERATOR MODULE 232690

The Model 232690 Reverse Pilot Carrier Generator Module is used in the 5-108 MHz mid-split system to generate low and high pilots for automatic slope and gain correction. The reverse pilot carrier generator module also serves as the first reverse amplifier in the upstream cascade. The module generates, filters, and sums two stable pilot carriers which are combined with 5-108 MHz inputs from the feeder. After the pilots are combined with the 5-108 MHz feeder inputs, the combined signals are amplified and routed through a pad and equalizer to the output of the module. The plug-in equalizer and plug-in pad are installed at the output of the module to allow optimum set-up where trunk splits occur. A range of plug-in equalizers permit precise cable equalization and a range of plug-in pads permit proper output adjustment. A separate plug-in pad in the feeder path permits feeder-trunk match-up. Potentiometers are provided to permit individual pilot level adjustment.

HIGH-SPLIT REVERSE TRUNK AMPLIFIER WITH THERMAL COMPENSATION MODULE 234600

The Model 234600 High-Split Reverse Amplifier with Thermal Compensation Module serves as a primary reverse amplifier for single cable 5-174 MHz trunk operation. The reverse amplifier installs in a standard trunk housing and provides gain for reverse trunk transportation and origination of feeder signals. Plug-in drivers allow thermal slope and gain compensation for various lengths of cable. The design accuracy of the thermal networks and use of reverse trunk amplifiers in every forward amplifier station provide accurate level control over long cascades.

SUB-SPLIT REVERSE INTERMEDIATE BRIDGING AMPLIFIER MODULE 232470

The Model 232470 Sub-Split Reverse Intermediate Bridging Amplifier module is designed to be used with the Forward Intermediate Trunk Module. The reverse intermediate module provides no reverse transmission gain, but completes the reverse trunk path with a minimum of insertion loss. In addition, the module accepts an input from the feeder and couples the feeder signal into the trunk path through a directional coupler; a plug-in hybrid amplifier in the feeder input provides gain to overcome loss of the directional coupler. A plug-in pad in the feeder allows feeder levels to be matched to those of the trunk. Provision for a plug-in feeder disconnect switch makes the module compatible with computer-operated systems.

TV SIGNAL DISTRIBUTION

MID-SPLIT REVERSE INTERMEDIATE/TERMINATING TRUNK AMPLIFIER MODULE 232680

The Model 232680 Mid-Split Reverse Intermediate/Terminating Trunk Amplifier Module is used with the Forward Intermediate/Terminating Trunk Module. When used in an intermediate station, the module provides no reverse trunk transmission gain, but completes the reverse trunk path with a minimum of insertion loss. In addition, the module accepts an input from the feeder and couples the feeder signal into the trunk path through a directional coupler; a plug-in hybrid amplifier in the feeder input provides gain to overcome loss of the directional coupler. A mid-split terminating station typically requires a pilot carrier generator be used as the first reverse module of the upstream cascade. However, in the case where a short sub-trunk (not more than two cascaded stations) exists, the mid-split reverse intermediate/terminating module may be used instead.

POWER SUPPLY MODULE 276910

The Model 276910 Switching Regulated Power Supply Module is used in all Scientific-Atlanta trunk stations to convert station ac input voltage to a well-regulated dc voltage for station module powering. The switching regulated supply provides improved efficiency over a linear power supply which results in cost savings in both equipment and operating expense. The switching regulated supply is a constant power device, meaning that it automatically adjusts its internal operating parameters for most efficient use of different levels of voltage and current within a system. The switching regulated supply automatically determines load power requirements and adjusts its operation so that only that amount of power is provided.

HIGH-SPLIT REVERSE INTERMEDIATE/TERMINATING AMPLIFIER MODULE 234620

The Model 234620 High-Split Reverse Intermediate/Terminating Amplifier Module is used with the Forward Intermediate/Terminating Trunk Module. When used in an intermediate station, the module provides no reverse trunk gain, but completes the reverse trunk path with a minimum of insertion loss. In addition, the module accepts an input from the feeder and couples the feeder signal into the trunk path through a plug-in combiner; a plug-in hybrid amplifier in the feeder input provides gain to overcome loss of the combiner. When the high-split reverse intermediate/terminating amplifier module is used in a terminating station where trunk input is not required, the plug-in combiner can be replaced with a jumper and signal from the feeder is routed through the hybrid amplifier directly into the trunk path.

6501/6502 POWER SUPPLY MODULES 276705 and 276715

Power supply modules 276705 and 276715 are used in the 6501/6502 distribution amplifier station to convert station ac input voltage to a well-regulated dc voltage for station powering. The switching regulated supply (276715) provides improved efficiency over the standard linear power supply (276705) which results in cost savings in operating expense. The switching regulated supply is a constant power device, meaning that it automatically adjusts its internal operating parameters for most efficient use of different levels of voltage and current within a system. The switching regulated supply automatically determines load power requirements and adjusts its operation so that only that amount of power is provided.

DISTRIBUTION AMPLIFIER, MODELS 6501 and 6502 FEATURES

- Upgradable to Bi-directional With the Installation of a Sub-Split Reverse Amplifier Printed-Circuit Board, Diplex Filters, Pad, and Equalizer
- Simplified Setup Procedure
- Plug-In Forward Hybrids
- Selectable Transformer Taps and Built-in Voltage Indicator
- 30- or 60-Volt Operation
- Plug-In Transient Protectors
- Symmetrical Module and Housing Permits Mounting for Easy Maintenance
- Field Replaceable Power Supply Module
- Flat-20 dB Directional Coupler Test Points
- Reverse Injection Test Point
- Optional Switching Regulated Power Supply Module
- Plug-In DC Powered Thermal Network
- Plug-In Frequency Response Trim Networks
- Innovative Cable Seizures Provide Positive Connection and Ensure Good Return Loss

HIGH-GAIN UPGRADE TRUNK AMPLIFIER MODULES 232840 (330 MHz) AND 280200 (450 MHz)

Designed to drop into existing trunk station locations, the high gain amplifier features 28 dB of forward gain, permitting fast and inexpensive system upgrades from 216 MHz to 330 or 300 MHz to 450 MHz. Circuitry for automatic gain and slope operations is included and is driven from switch-selectable built-in thermal networks or a separate carrier level operated Automatic Control Module. The trunk module is designed to compensate for losses introduced by coaxial cable spans while introducing minimum levels of noise and non-linear distortion. Plug-in diplex filters for the input and output provide signal routing for split frequency two-way operation.

BRIDGING AMPLIFIER MODULE 276990 (300, 330 MHz) 234290 (400 MHz) 233170 (450 MHz) 344000 (550 MHz)

The Model 276990, 234290, 233170, and 344000 are the bridging amplifiers for the Series 6500 trunk station in the frequency ranges of 300-550 MHz.

The bridger module is designed to provide gain and isolation between trunk and feeder systems in a common station. Four symmetrical plug-in feeder makers permit feeder activation from all or a combination of four ports—two on either end of the station housing. Feeder ports can be independently powered through plug-in fuses. A single plug-in diplex filter before the feeder maker provides signal routing for sub-split, two-way operation. A single output test point before the feeder maker permits consistent set-up regardless of the number of feeders activated.

SERIES 6800 FEEDFORWARD STATIONS

FEATURES

Push/Pull Feedforward Trunk

- Forward Capability of 54 to 550 MHz
- Feedforward Amplification for Higher Gain and Less Distortion
- Forward Operation Gain of 22, 26, or 30 dB
- Built-in Hybrid Redundancy
- Optional Status Monitoring
- Optional Plug-in Interstage Filter
- Directional Coupler Test Points on Input and Output
- Plug-in Equalizers and Pads
- Provisions for Interstage Trimming
- Versatile Housing for Aerial or Underground
- Precision Automatic Control System Operates off CW Carriers or Modulated Channels
- 50-60 Hz Powering
- Feedforward Trunk Module Compatible with Existing Distribution Trunk Housing

Push/Pull Feedforward Distribution Amplifier

- Forward Capability of 54 to 550 MHz
- Forward Operational Gain of 32 dB
- Built-in Hybrid Redundancy
- Reverse Capability
- Field-Replaceable Feedforward Blocks
- Directional Coupler Test Points on Input and Output
- Plug-in Equalizers and Pads
- Plug-in Surge Protectors
- 50-60 Hz Powering
- Switching-Regulated Power Supply
- Optional Plug-in Thermal Network
- Optional Plug-in Trim Network

450, 550 MHz TRUNK AMPLIFIER MODULES 234420/344070

TRUNK AMPLIFIER MODULES

149680, 231120, 234420, AND 344070

Trunk modules 149680, 231120, 234420, and 344070 are the forward amplifiers for the Series 6500 Trunk Station in frequency ranges from 300 MHz to 450/550 MHz. Circuitry for automatic gain and slope operation is included and is driven from switch-selectable built-in thermal networks or a separate carrier level operated Automatic Control Module. The trunk module is designed to compensate for losses introduced by coaxial cable spans while introducing minimum levels of noise and non-linear distortion. Plug-in diplex filters for the input and output provide signal routing for split frequency two-way operation. Provision for plug-in interstage trim networks permit simple system frequency response error correction without affecting basic module alignment.

FEEDFORWARD TRUNK AMPLIFIER MODULES
 22 dB 450 MHz—280360 550 MHz—343900
 26 dB 450 MHz—343880 550 MHz—343910
 30 dB 450 MHz—343890 550 MHz—343920

SERIES 6800 450/550 MHz

Feedforward trunk amplifiers offer significantly improved signal distortion characteristics over conventional push-pull amplifiers. Advantages include increased amplifier spacing and improved cascadeability, while in many instances reducing the total cable system cost. Additionally, the feedforward design utilizes redundant amplifier hybrids, improving overall system reliability.

The trunk module features plug-in hybrid and feedforward amplifiers, built-in directional coupler test points on both input and output, superior hybrid amplifier heat sinking, plug-in pads, equalizer, and a series of interstage trim networks, switch-selectable thermal or carrier-controlled slope and gain, ac power directors for power pass or block from input or output, and total access for ease or maintenance in the field.

TV SIGNAL DISTRIBUTION

FEEDFORWARD BRIDGING AMPLIFIER MODULE,
High-Gain 450 MHz, 280210
Low-Gain 450 MHz, 280220
High-Gain 550 MHz, 280230
Low-Gain 550 MHz, 280240

The Series 6800 feedforward bridging modules are the forward bridger amplifiers for use where superior distortion performance is required. Model 280210 high-gain feedforward bridger is used with the 22 dB feedforward trunk amplifier and Model 280220 low-gain feedforward bridger is used with the 26 and 30 dB trunk amplifiers.

INTERMEDIATE/TERMINATING TRUNK MODULE
232900 (300, 330, 400 MHz)
234430 (450 MHz)
344030 (550 MHz)

The Forward Intermediate/Terminating Trunk Module is used in the forward system to provide additional feeder between normally spaced trunk amplifier stations or to terminate the trunk system where existing trunk requirements end. In the intermediate configuration the trunk signal is passed through the module (without amplification) where a sample is tapped off, equalized, amplified, and routed to a standard bridger module. In the terminating configuration the input signal is equalized, amplified, and routed to a standard bridger module. The module is configured for intermediate or terminating operation by means of a plug-in rotatable signal director. Plug-in diplex filters for the input and output provide signal routing for split frequency two-way operation in the intermediate configuration, with a single plug-in diplex filter at the input being required for two-way operation in the terminating configuration. Because the intermediate/terminating module plugs into the station housing in the position of a standard trunk amplifier module, a terminating trunk station can directly be converted to a standard trunk station in the event future additions to a terminated trunk cascade arise.

AUTOMATIC CONTROL MODULES 276440 and 277360

The Model 276440 and 277360 Automatic Control Modules are used in the forward system to provide carrier level control of the slope and gain circuits in the trunk amplifier module. The automatic control module samples the band of signals at the trunk amplifier output, monitors the level of a selected high band carrier (high pilot) and a selected low band carrier (low pilot), and provides error correction input to the trunk amplifier slope and gain circuits in the event level changes occur. The closed loop system ensures a constant trunk amplifier output level despite changes in signal level prior to the station. The automatic control module operates from either modulated carriers by detecting the peak carrier level during the sync interval or from unmodulated CW carriers. Channels selected for automatic control operation cannot be scrambled by sync suppression.

SUB-SPLIT REVERSE AMPLIFIER MODULE 233180

The Model 233180 Sub-Split Reverse Amplifier Module serves as the primary reverse amplifier for single cable 5-30 MHz reverse trunk operation. The Sub-Split Reverse Amplifier Module installs in a standard trunk housing and provides gain for reverse trunk transportation and origination of feeder signals. Built-in thermally controlled slope and gain circuits are designed to compensate for level changes that occur in a single span of cable. The design accuracy of the thermal networks, the low frequency of operation, and use of reverse trunk amplifiers in every forward amplifier station provide accurate level control over long cascades without the need for pilot systems.

TV SIGNAL DISTRIBUTION

6502 AUTOMATIC CONTROL MODULE 276695

The 6502 automatic control module is used in the forward system to provide carrier level control of the slope and gain circuits in the distribution amplifier module. Automatic control module 276695 is used in the distribution amplifier and provides AGC systems up to 450 MHz. The automatic control module samples the band of signals of the distribution amplifier output, monitors a high band carrier (high pilot), and provides error correction input to the slope and gain circuits in the event level changes occur. The closed loop system ensures a constant distribution amplifier output level despite change in signal level prior to the station. The automatic control module operates from either modulated carriers by detecting the peak carrier level during the sync interval or from unmodulated CW carriers.

LAN INDOOR DISTRIBUTION AMPLIFIER, MODEL 6822

Scientific-Atlanta's Model 6822 is an indoor local area network (LAN) distribution amplifier that meets the performance and reliability requirements for high quality data and video intrafacility systems. Available to 450 MHz, the Model 6822 offers 115V ac powering, selection of the three reverse splits, and optional AGC or thermal compensation. Our standard modular approach accommodates ease of maintenance while supporting the addition of thermal or automatic compensation at a future date.

DISTRIBUTION AMPLIFIER 450/550 MHz, MODEL 6810 FEEDFORWARD

FEATURES

- Forward Capability of 54 to 550 MHz
- Forward Operational Gain of 32 dB
- Built-in Hybrid Redundancy
- Reverse Capability
- Field-Replaceable Feedforward Blocks
- Directional Coupler Test Points on Input and Output
- Plug-in Equalizers and Pads
- Plug-in Surge Protectors
- 50 - 60 Hz Powering
- Switching-Regulated Power Supply
- Optional Plug-in Thermal Networks
- Optional Plug-in Trim Networks

Scientific-Atlanta's Model 6810 450/550 MHz feedforward distribution amplifiers offer significantly improved signal distortion characteristics over conventional push-pull line extenders. Advantages include increased amplifier spacing and improved cascadeability, while in many instances reducing the total cable system cost. Additionally, the feedforward design utilizes redundant amplifier hybrids, improving overall system reliability.

Available in a 450/550 MHz forward configuration, the following table lists options for the Model 6810

Model 6810 Feedforward Amplifier Stations

All stations shipped with housing and switching regulated power supply

STATUS MONITORING/REVERSE SWITCHING SYSTEM, MODEL 6581

FEATURES

- Compatible with Existing Scientific-Atlanta Trunk Amplifier Stations
- Audio and visual Alarms Identify Failure Type and Location
- Reduces Fault Finding Time and Cost
- Identifies Potential Problem Areas
- Sequentially Polls up to 2048 Trunk Stations for Change in Status
- Permits High-Quality Live Remote Broadcasts to Cable Customers
- Selectively Activates/Deactivates Reverse Feeder or Reverse Trunk Paths, thus Reducing Overall System Noise and Ingress During Periods when Reverse Paths are not used
- Identifies the Source of RF Ingress by Deactivating Suspect Trunk Station Feeder
- Maintains System Integrity
- Provides a Hard Printout of Failure Type and Address
- Permits Operator Interrupt via Keyboard at any Time
- Permits Operator to Modify Status Monitoring Program Stored on Floppy Disk
- Compatible with Former Model 6580 Status Monitoring System
- IBM Personal Computer retains all the Features of a Personal Computer and can run all Software and Interface with all Hardware Designed for the IBM Personal Computer

Model 6581 Status Monitoring/Reverse Switching System automatically monitors signal levels and power throughout the trunk system. The system continually polls up to 2048 trunk stations, and can activate or deactivate reverse feeder paths or reverse trunk paths in specific trunk stations containing a reverse switch and amplifier status transponder. Reverse feeder switching reduces return path noise and facilitates high-quality, live remote video transmission.

An IBM Personal Computer and RF Subsystem, located at the headend, controls the system. Data concerning trunk station status changes or specific trunk station addresses is displayed on the computer terminal and can be printed for reference.

AMPLIFIER STATUS TRANSPONDER MODULE, PART NUMBERS 277080 and 277090

The Trunk Station Status Transponder module is a transceiver that responds to status polling and switching commands issued from the system communications control unit. Module 277080 is the HRC model, while Module 277090 is the IRC or standard model. Each transponder module is assigned a field-selectable digital address to permit selective station polling for out-of-tolerance conditions such as high or low pilot level, ac or dc power, and reverse switch status.

ACCESSORIES

FORWARD-REVERSE TRIM NETWORKS

In amplifier cascades, frequency response variations are controlled with use of interstage trim networks. A broad selection should be on hand at the outset of balance and alignment procedures.

Part Number	Operating Frequency (MHz)	Name	Where used	Description
276754	450	LPP-1	6554/6555	Line Extender Forward Trim
277161	450	LPP-1ES	6554/6555	Line Extender Forward Trim with pad socket
035959	300	HFD-5		High Frequency Dip with pad socket
143185	300	PAD-2		Interstage Pad where no other trim is used
231381	300-450	LPP-1S	Forward Trunk	Low Peak - Peak with pad socket
231382	300-450	MPP-1S	Forward Trunk	Mid Peak - Peak with pad socket
231383	300-450	LFP-1S	Forward Trunk	Low Frequency Peak with pad socket
231385	300-450	PAD-1S	Forward Trunk	Interstage Pad where no other trim is used
232206	450	PAD-1	Forward Trunk	Interstage Pad where no other trim is used
232531	300	HFP-2S	Forward Trunk	High Frequency Peak with pad socket
232532	300	LFP-2S	Forward Trunk	Low Frequency Peak with pad socket
232533	300	DIP-2S	Forward Trunk	Low to Mid Frequency Dip with pad socket
232535	300	PAD-2S	Forward Trunk	Interstage Pad with pad socket, where no other trim is used
232537	300-450	VHP-2S	Forward Trunk	High Frequency Peaking with pad socket
234341	300-450	MFP-1S	Forward Trunk	Mid Frequency Peaking with pad socket
279450	300-450	HTTP-2S	Forward Trunk	High Triple Peak with pad socket
233190	30	TPR-1	Reverse Trunk	Triple Peaking
234499	30	TPR-3	Reverse Trunk	Peaking
233108	108	RLTT-2S	Reverse Trunk	Mid-Split Cold Trim with pad socket
233109	108	RHTT-2S	Reverse Trunk	Mid-Split Hot Trim with pad socket
233110	108	RMD-2S	Reverse Trunk	Mid-Split Diplexer Trim with pad socket
279440	174	HSR-2	Reverse Trunk	High-Split Reverse
279445	174	HSRT-2	Reverse Trunk	High-Split Reverse with Thermal
279400	300-450	BVEO	Bridge	Forward Trimable Equalizer

NOTES:

All networks with "S" suffix have plug-in pad sockets.

Networks with a "2" in their name are for use in 300 MHz trunk modules. All have 2 dB insertion loss.

Networks with a "1" in their name are for use in 330 to 450 MHz system. All have 1 dB insertion loss. These may be used in 300 MHz trunk module with 1 dB pad installed in trim.

SCIENTIFIC-ATLANTA, INC.

Box 105600

TWX 810-766-4912 Telex 0542898

LINE EXTENDER/DISTRIBUTION AMPLIFIER REVERSE KITS

Forward line extenders and distribution amplifiers can be converted to sub-split two-way operation with the reverse kit.

AC POWER SUPPLY

Capable of furnishing either 30V or 60V, the Model 6509 Power Supply is used to supply power through the cable to trunk and line extender stations in the system. The unit can be mounted outside on a pole and is completely weatherproof. Total surge protection is built into the solid-state design.

MODULE PLUG-IN CABLE EQUALIZERS

Plug-in equalizers are required at the input of all forward trunk, bridger, line extender, and distribution amplifiers. They are also required at the output of all reverse trunk, line extender, and distribution amplifiers. Equalizer values are expressed in terms of cable attenuation in dB at the upper frequency. All forward equalizers are selected according to the upper frequency attenuation of the cable on the input side of the forward amplifier. Reverse equalizers are selected according to the upper frequency attenuation of the cable on the output side of the reverse amplifier.

PLUG-IN PADS

Plug-in pads are required in all bridger amplifiers, at the input of all forward modules, and at the output of all reverse modules. Where reverse is activated through a bridger, an additional pad is required in the bridger path of the reverse trunk module.

VRF-132

Prices and Specifications Subject to Change Without Notice.

TV SIGNAL DISTRIBUTION

MID-SPLIT REVERSE INTERSTAGE TRIM NETWORK

As amplifiers are cascaded, small frequency response variations can accumulate. Plug-in trim networks are available to compensate for these cascaded effects.

Selection and assignment of reverse interstage trim networks are as follows:

Hot Trim	Cold Trim	Diplexer Trim	2 dB Pad
233109	233108	233110	143185

Each series of four reverse trunk modules requires one of each type trim network. The sequence in which they are installed is of little significance.

The 2 dB pad (Part No. 143185) is shipped in place in each mid-split reverse trunk module and is removed to allow installation of the other trims required.

FORWARD INTERSTAGE TRIM NETWORK, FOR 6554/6555 LINE EXTENDERS

As line extenders are cascaded, small frequency response variations can accumulate. A plug-in trim network is available to compensate for this effect.

HIGH-SPLIT DRIVERS

High-split reverse amplifier, Part No. 234600, contains circuitry for slope/gain temperature compensation. Plug-in high-split drivers are required for proper operation of this circuitry. Drivers are available to permit temperature compensation for 6, 12, 18, 24, and 30 dB of cable. Both a slope and a gain driver is required for each Part No. 234600 temperature compensating high-split reverse amplifier. Slope and gain drivers are selected based on post amplifier cable loss at 174 MHz.

LINE EXTENDER THERMAL COMPENSATORS

For use in 6554/6555 line extender amplifiers.

TV SIGNAL DISTRIBUTION

PLUG-IN JUMPER

Used in place of the plug-in combiner in the Intermediate/Terminating Trunk, Sub-Split Reverse Trunk, and High-Split Reverse Trunk modules.

DIPLEX FILTERS

Diplex filters are used in the trunk amplifier, bridger amplifier, and line extender amplifier modules for routing of forward and return signals. Forward trunk and line extender modules accept two plug-in diplex filters and the bridger amplifier accepts one. Diplex filters plug into the respective modules in place of diplex jumpers which are shipped standard in all modules.

Diplex Filter Specifications

	5-30 MHz	54-550 MHz	5-108 MHz	174-550 MHz	5-174 MHz	234-550 MHz
Flatness	±0.1 dB	±0.1 dB	±0.1 dB	±0.1 dB	±0.1 dB	±0.1 dB
Insertion Loss	0.2 dB	0.2 dB	0.2 dB	0.2 dB	0.2 dB	0.2 dB
Chrominance-to-Luminance Delay	6 ns (T10)	2 ns (CH2)	1 ns (CH6)	1 ns (CH7)	1 ns (CH1)	1 ns (CH11)

ACM BYPASS ASSEMBLY

The ACM bypass assembly plugs into the trunk station housing in place of the ACM to allow status monitoring to be used in forward thermal trunk stations.

EXTERNAL DIPLEX FILTER ASSEMBLY

The external diplex filter assembly is used at the head-end to separate forward and reverse signals in a two-way system. The assembly consists of a standard plug-in diplex filter installed in a passive housing. Specifications are identical to the standard diplex filters.

MID-SPLIT
 DUAL DEEP
 NOTCH DDNF 1
 280108

DUAL DEEP NOTCH PILOT FILTER DDNF

Used in mid-split reverse paths where one reverse pilot source intersects alternate pilot sources. The DDNF is plugged into the input of the last reverse trunk module before any intersection where pilot addition would occur.

MODEL 6501 and 6502 FORWARD THERMAL COMPENSATORS

These compensators provide thermal slope and gain compensation over a temperature range of -40°C to $+60^{\circ}\text{C}$ (-40°F to $+140^{\circ}\text{F}$).

BRIDGER FEEDER MAKERS

Bridger feeder makers are available in one, two, three, or four output configurations. One of the four types is required with each bridger module to activate trunk station feeder ports.

REVERSE THROUGH RETURN CABLE RC-100

This cable allows reverse signals to pass through a trunk station when no reverse trunk amplification or feeder input is required. Order Part No. 35860.

TV SIGNAL DISTRIBUTION

LONG REACH TEST-POINT ADAPTOR

This 75 ohm push-in adapter permits a test cable to be connected to test points in a trunk station or line extender module. Available in two configurations, these adapters are long enough to reach through the module housing to the test point inside. The push-in test point adapter exhibits negligible insertion loss.

DROP ADAPTOR

This 75 ohm adapter permits a semi-permanent RG-59 test cable to be connected to the trunk station test point and run to the bottom of the pole for easy access. The drop adapter screws into the standard trunk station external test points. The drop adapters exhibit negligible insertion loss. For "Slim Line" trunk housing, order Part No. 231390. For other trunk housing application, order

CABLE SEIZURE WRENCH

Machined from high grade stainless steel, the wrench is used to loosen or secure the cable seizure fittings in the trunk and 6554/6555 line extender station housings. The steel pins are field replaceable.

TEST PROBE, 3 dB

This probe is used for reverse signal injection in the 6501/6502 Distribution Amplifier. It is also useful for testing reverse feeder input levels to bridging amplifier Module Number 233170.

TRUNK STATION TEST CABLE

This cable allows simple connection of test equipment to module coaxial connectors located in the trunk station amplifier housing.

TANDEM MOUNTING BRACKETS

These brackets are used in applications where dual cable construction requires tandem mounting of trunks, line extenders, and taps/passives.

LOAD PAD ASSEMBLY LPA-75

This 75 ohm termination mates with the coaxial female connectors located in the trunk station amplifier housing module sockets. This assembly is employed to terminate critical module output cables when operational modules are not used. The load pad assembly is primarily used to terminate trunk feeds to the bridger and automatic control modules when these modules are not included as part of the station.

TRUE TILT CORRECTION NETWORK

During initial set-up of the system, the true tilt correction network allows conversion of true tilt signals to a flat response. The network is connected in cascade with a short length of 75 ohm test cable attached to an FSM or spectrum analyzer. This results in a flat overall signal amplitude (frequency response observed when the signals are properly tilted). Measurements can thus be made without lengthy, error-producing calculations to ascertain flatness of response.

LINE TERMINATOR LT-75

The line terminator terminates a branch of a reverse trunk cable split when only one branch of the split is used for reverse transmission. The line terminator plugs into the output reverse amplifier module socket and terminates the unused branch of the cable split.

FUSE EXTRACTOR

The fuse extractor is used to insert/remove bridger module output fuses. Order Part No. 172510.

CIRCUIT BREAKER

Circuit breakers can be used in place of bridger module output fuses. The circuit breaker plugs in directly in place of the standard fuse.

SPECIFICATIONS

Hold Current 4A
 Trip Current 8A
 Trip Time 10-60 seconds

PLUG-IN FILTERS

Low pass/high pass filters are required in all 6501/6502 hybrid amplifiers. A plug-in filter is not required in the sub-split (5-30 MHz) discrete module as it is hard wired to the chassis. Forward filters reject reverse carriers; reverse filters reject forward carriers.

SPECIFICATIONS	REVERSE SUB-SPLIT	REVERSE MID-SPLIT	REVERSE HIGH-SPLIT
	FORWARD S-S	FORWARD M-S	FORWARD H-S
Frequency Range	5-30 MHz	5-108 MHz	5-174 MHz

DISTRIBUTION EQUIPMENT TAPS AND PASSIVES

FEATURES

- Modular design allows changing of board and cover without removal of housing from cable
- Versatile housing design permits aerial or pedestal mounting
- Subscriber ports cast into housing provide added strength, prevent leakage
- 1.00" spacing between ports gives more room for drop installation and use of traps
- Center seizure mechanism rotates to either the aerial or pedestal input/output port to eliminate need to remove center conductor seizure screw
- Tough die-cast housing
- Housing halves sealed with neoprene rubber O-rine type gasket
- Collars on input/output ports facilitate use of heat-shrink tubing
- Housing halves joined by captive bolts
- Subscriber ports sealed with a puncture-seal
- Umbrella-effect housing design prevents accumulation of water at joints
- Center conductor seizure screw can be tightened with 1/4" Hex Nut Driver or straight-blade screwdriver
- Center conductor seizure screw designed to minimize scoring and damage to the cable center conductor
- Subscriber ports designed to accept heat-shrink
- Optional weather resistant protective coating
- Optional RFI gasket

SET TOP TERMINALS

SET-TOP TERMINAL, SERIES 8500

Features

- Handsome, High-Tech Exterior
- Bright LED Display
- Extra Surge Protection
- Lighting Path Protection
- Coded Serial Communications Protects Against Internal Tampering
- Advanced Automatic Manufacturing Technique
- Well Ventilated
- UL Listed
- Protective Pads

SERIES 8500 REMOTE CONTROL UNIT

Features

- Remote Control Receiver Standard On All Series 8500 Set-Tops
- Duplicates All Keypad Functions
- Dual Message Pulse Infrared System Eliminates False Activation
- Ultra Lightweight

Control Key Functions — Both the Set-Top Terminal and Remote Control Unit have the following keys:

Increment/Decrement Keys — Steps up or down consecutively through all authorized channels.

OFF Key — Switched ac feature permits on/off control of the television from the set-top unit.

AU (Authorize) Key — To request channels subject to parental discretion, press this key and enter a 5-digit secret code.

PRG (Program) Key — To program favorite channel memory, press this key and enter desired channel number.

RCL Key — Steps through up to 20 favorite channels in memory.

The Series 8500 Scientific-Atlanta set-top terminals are available in three unique set-top models, all offering fully electronic, microprocessor-based control. Series 8500 set-top terminals operate at frequencies up to 440 MHz and can deliver 128 channels in a dual cable system.

The Series 8500 Programmable set-top terminal includes a long list of standard product line features, including programmable frequency allocation and a built-in infrared remote control receiver.

The Series 8500 Programmable set-top terminal with Descrambling uses dynamic switched sync suppression for signal security. Dynamic switched sync suppression is an important Scientific-Atlanta innovation providing economical security that is extremely difficult to defeat.

The Series 8500 Addressable set-top terminal is an advanced electronic set-top terminal providing headend control for service level authorizations and pay-per-view events. The addressable CATV system includes computer capability, software programs, several headend pieces, and personnel orientation. Scientific-Atlanta offers several versions of addressable control systems, with complete hardware and software, site preparation, and personnel training.

- The System Manager II/LAMS is a linkable computer system designed to interface in a real-time fashion with a host billing system.
- The System Manager I is a stand-alone system for cable operators with less than 20,000 subscribers. Its data base includes subscriber information and inventory records.
- The Addressable Control Unit (ACU) is a microcomputer-based, addressable headend system. The ACU data base is keyed to converters only, and is designed to interface with a host computer containing both business and billing software. It can also be used in a partially automated addressable control system where subscriber data base information is managed from a manual filing system.

SERIES 8500 PROGRAMMABLE WITH DESCRAMBLING

Features

- Dynamic Switched Sync Suppression
- Full Line Headend Scrambling Accessories
- Custom-Manufactured Timing Chips That Cannot Be Purchased Commercially
- All Series 8500 Standard Product Features

TERMINAL CONTROL SYSTEMS

SET-TOP TERMINAL, SERIES 8500

Feature Summary

Feature	Programmable	Programmable With Descrambling	Addressable
Programmable Frequency Allocation	X	X	X
Unauthorized Channel Default to Barker	X	X	X
Parental Control Function	X	X	X
Automatic Dual Cable Switching	X	X	X
Increment/Decrement	X	X	X
Favorite Channel Memory	X	X	X
Remote Control Receiver	X	X	X
Switched AC for TV	X	X	X
Dynamic Switched Sync Suppression Scrambling		X	X
Central Control of Authorizations			X
Central Execution of Pay-Per-View Functions			X
Global Authorization and Deauthorization			X
Pay-Per-View Preview			X
Advance Pay-Per-View Program Load			X
Non-Volatile Memory			X
System Security-Legal Terminal Test			X
System Security-Refresh Timer Signal			X

SYSTEM MANAGER I FEATURES

- Uses IBM Personal Computer
- Integrated Subscriber and Converter Control Software
- Pre-Formatted CRT Display Screens for Easy, Accurate Computer Entries
- Pay-Per-View Management
- Inventory Programs
- Flexible Management Report Capability
- Added System Security
- Applications Engineering and Consulting.

SYSTEM MANAGER II/LAMS FEATURES

- Uses Hewlett-Packard Micro 1000 Computer
- Can be Interfaced with a Host Billing Computer
- Software Uses Pre-Formatted CRT Display Screen Format
- Efficient Structure for Pay-Per-View Management
- Added System Security
- Extensive Customer Support

ADDRESSABLE CONTROL UNIT, SERIES 8552 FEATURES

- Individual Converter Enable/Disable
- Individual Converter Channel Authorization/Deauthorization (change of service level)
- Advance Pay-Per-View Event Loading
- Global Authorization of a Pay-Per-View Event (only pre-loaded converters)
- Refresh Timer Signal
- Legal Terminal Test
- Display Service Levels for Each Device

SCIENTIFIC-ATLANTA, INC.

Box 105600

MODEL 8550 ADDRESSABLE SET-TOP TERMINAL

The Model 8550 addressable set-top terminal is designed to maximize the benefits of addressability by providing the CATV operator exceptional security and downloading flexibility. The high-performance Model 8550 and its related control equipment offer user-friendly and efficient software, large capacity for premium programming and pay-per-view events, remote diagnostic capabilities, subscriber conveniences, business management interface and extensive security features.

Enhanced Security

Dynamic switched sync suppression, a Scientific Atlanta innovation, provides signal security that is virtually impossible to defeat. This scrambling/descrambling method uses a custom-manufactured timing chip to dynamically control the restoration of the video sync tip. The timing delay for every video frame changes randomly among four values, making internal tampering or reproducible scrambling defeats extremely difficult.

The Operator's Addressable

The advanced design of the Model 8550 set-top terminal has eliminated the need for a PROM. All authorizations and frequency allocations are down-loaded into the terminal's non-volatile memory from the addressable computer at the headend. (The non-volatile memory is sealed inside the 8550 and is not affected by power outages or by unplugging the set-top in the subscriber's home.) Additions and deletions of program tiers, single channels, pay-per-view events and program promotions can be accomplished without the expense of service calls. In addition, the cable operator may enable or disable the remote control receiver remotely from the headend.

Subscriber Convenience

The Model 8550 set-top terminal provides user-definable parental control. When a set-top is tuned to a channel which has been placed under parental control, an appropriate barker channel will tune in until the correct five-digit authorization code is entered. Objectionable programming never enters the home since even audio is denied.

ADDRESSABLE TERMINAL

With the Model 8550, parental guidance channels can be defined and redefined by the subscriber utilizing an edit function, or by the cable operator downloading from the headend. The five-digit code can be changed by downloading a new code from the control computer.

Hardware and Software Support

Scientific-Atlanta provides extensive customer support for addressable systems. Services available include system design, applications engineering, site preparation, installation, training and factory repair. Also available are several versions of computer hardware and software systems, geared for different sized CATV operations with varying requirements. The System Manager series features addressable management systems which can be integrated with host billing computers, as well as stand-alone control systems.

SPECIFICATIONS

Environmental

Temperature: 0-45°C
Relative Humidity: 5-95%

Electrical

Input Bandwidth: 54 to 450 MHz
Number of Channels: 66 with single cable; 128 with dual cable
Output Channels: 3 or 4

Channel Frequency Response: ± 2 dB
Gain: 0 to +9 dB
Noise Figure: 13 dB typical

Return Loss Input: 7 dB minimum on tuned channel
Output: 11 dB minimum
Isolation Input/Output: 60 dB

Spurious Response Input: -37 dBmV (up to 470 MHz)
Output: -57 dBmV in channel

Frequency Accuracy: ± 100 kHz
Frequency Stability: ± 100 kHz
AC Input Range: 115V AC $\pm 10\%$
Power Consumption: 20 watts maximum

Power Supply Surge Protection: Yes
RF Input Surge Protection: Yes; MOV

Distortion at 15 dBmV; 60 channel load
Flat Input: Second Order: -57 dB
Cross Modulator: -57 dB
Composite Triple Beat: -57 dB

Input Level: -7 to +20 dBmV

Mechanical

Dimensions: 10.4" x 8" x 2.1"
Weight: 5.5 pounds
Keyboard Type: 16 position, X-Y matrix
Display Type: LED, 0.5" x 0.26"

ADDRESSABLE TRANSMITTER (ATX), SERIES 8500

The ATX, located at the headend, accepts converter control data from the ACU and transmits the data over the cable system. It operates at a standard frequency of 108.2 MHz. The unit also generates converter control signals needed to keep all legal Series 8500 Addressable set-top terminals active. Output data is transmitted as an FSK-modulated digital signal at the data rate of 19,200 baud. One ATX is required in each headend. Two ATXs can be installed in tandem for system redundancy at each site.

36-CHANNEL CONVERTER, MODEL 6780

FEATURES

- The 36-Channel Converter delivers High-Quality Picture over Range of Input Frequencies from 54 MHz to 300 MHz
- Sturdy Rotary Dial Selects Channels 2 through 37
- Fine Tuning Dial Adjusts Converter to Zero Frequency Error
- Handsome Dark Brown and Simulated Woodgrain Exterior Blend Well in the Modern Home
- Rugged Construction Ensures Mechanical Integrity and Long Life Under Normal Home Use
- AC Cord is Safety-Tested for up to 35 Pounds Pull
- Corrosion-Resistant Construction
- Operates in Temperatures Ranging from 54°F to 110°F, and Stores Without Damage in Temperatures from -40°F to 140°F
- FCC Certified. UL Approved

ADDRESSABLE TRANSMITTER/ CHANNEL CONVERTER

ACCESSORIES, SERIES 8500

Dual Cable Switch
Model No. 8554-002

External switching device for dual cable systems.
Corrosion-resistant.

Torx Handle
Model No. 8550-093

For use with special Torx bits for Series 8500 security screws.

Torx Bit
Model No. 8550-094

PROM Removal Tool
Model No. 8550-096

Permits easy and quick removal of PROMs from set-top terminal.

PROM Insertion Kit
Model No. 8550-097

Allows easy installation of PROM without pin damage.

ATX Cable for Redundancy
Model No. 8553-001

Facilitates operation of dual ATXs.

TELEVISION DEMODULATORS

The 1450-1 is compatible with System M Television Transmission, the 1450-2 is compatible with System B/G, and the 1450-3 is compatible with System I.

1450-2

1450-1/1450-2/1450-3

Measurement-Quality Performance for Negligible Distortion

Synchronous Detection Eliminates Quadrature Distortion

Envelope Detection for Accurately Determined Differential Phase

Surface Acoustic Wave Filter Provides Precise Nyquist Slope; Excellent Long and Short-Term Stability

Digital Readout of Input Power Level for Easy, Accurate Field Strength Readings

Constant-Bandpass Characteristics Over Wide Dynamic Range

Any Single VHF or UHF Channel Operation

UHF and VHF Tunable Down Converters

Conforms to EIA Standard RS-462 (System M Only)

The 1450-1 (System M), 1450-2 (System B/G) and 1450-3 (System I) Demodulator Mainframes are combined with a Tektronix Television Down Converter (TDC) to provide an accurate link between your transmitter's RF signals and video baseband measuring equipment. Unique components work together to identify and eliminate any possible demodulation distortion in reproduced signal characteristics. You see a transparent picture of your transmitter's performance and signal output.

High Performance Spectrum Analyzers for your RF measurements are described on pages 202-216.

Tunable or Fixed-Channel Down Converters

For demodulating an RF signal at a TV channel frequency, the 1450 Series demodulator mainframes must be used with a Tektronix TDC. Three compatible TDCs are available for each system and provide a selection between tunable and fixed-channel performance. The TDC Fixed-Channel Down Converter supports your specified system channel number. Tunable Down Converters available for VHF and UHF channels are the TDC1 and TDC2 respectively.

Demodulation of the transmitter IF signal may be accomplished by using only the mainframe.

Synchronous and Envelope Detection

The 1450 Series demodulators allow you to select either synchronous or envelope detection. Each method has advantages, yet both are required for full measurement capability. For instance, synchronous detection is necessary for measurements that can be seriously affected by quadrature distortion.

The 1450 Series demodulators have two synchronous video detectors operating in phase quadrature. One detects the in-phase signal; the other detects the quadrature component of the video signal. (The quadrature component is a measure of change in visual carrier phase resulting from a change of video level.)

However, if incidental phase modulation is present on the picture carrier, the amount of differential phase measured on a synchronously detected signal will be erroneous. Because of this, an envelope detector is necessary to determine the actual differential phase present. The envelope detector has linear transfer characteristics down to 3% carrier and so provides optimum modulation depth indication.

Tektronix-Developed Surface Acoustic Wave Filter

The 1450 Series demodulators feature a SAW (surface acoustic wave) filter developed by Tektronix. It provides more precise Nyquist slope characteristics without group delay distortion, improves long-term and short-term stability, and lowers maintenance costs compared to conventional filter network circuitry.

In conventional demodulators, the more precisely the bandpass characteristics approach an ideal Nyquist curve, the more complex the filter network required. In the 1450 Series demodulator mainframes however, the bandpass characteristics are determined by just a single component, the SAW filter. Precision is the result.

Conventional tuned IF circuitry must be meticulously adjusted and is subject to change with mechanical and thermal shock. But the SAW filter is in a sealed unit and accurately provides the critical selectivity characteristics of the demodulator—and requires no adjustments.

ORDERING INFORMATION, SYSTEM M

1450-1 Television Demodulator (Order one vision IF option)	\$14,400
Option 01 — 37 MHz Vision IF	NC
Option 02 — 38.9 MHz Vision IF	NC
Option 03 — 45.75 MHz Vision IF	NC
Option 10 — Wide Bandwidth Audio 20 Hz to 55 kHz · 0.4 dB	+\$170

For demodulation of RF signals, one of the following three down converters must be plugged into the 1450-1 mainframe.

Order one vision IF option and either Option 1* or 14	
TDC Fixed Channel Down Converter — (Stipulate channel number when ordering)	\$3,550
TDC-1 — Tunable Down Converter VHF Band	\$7,660
TDC-2 — Tunable Down Converter UHF Band	\$7,660
Option 01 — 37 MHz Vision IF	NC
Option 02 — 38.9 MHz Vision IF	NC
Option 03 — 45.75 MHz Vision IF	NC
Option 11 — System M Countries	NC
Option 14 — System M Countries	NC

ORDERING INFORMATION, SYSTEM B/G

1450-2 Television Demodulator (Order both Option 02 and Option 09)	\$11,900
Option 02 — 38.9 MHz Vision IF	NC
Option 09 — 90 ns/ 170 ns Group Delay	NC
Option 10 — Wide Bandwidth Audio 20 Hz to 55 kHz · 0.4 dB	+\$165

For demodulation of RF signals, one of the following three down converters must be plugged into the 1450-2 mainframe. Order both Option 02 and Option 12.

TDC Fixed Channel Down Converter — (Stipulate channel number when ordering)	\$3,550
TDC-1 — Tunable Down Converter VHF Band	\$7,660
TDC-2 — Tunable Down Converter UHF Band	\$7,660
Option 02 — 38.9 MHz Vision IF	NC
Option 12 — System B/G/I countries	NC

ORDERING INFORMATION, SYSTEM I

1450-3 Television Demodulator (Order Option 02)	\$13,145
Option 02 — 38.9 MHz Vision IF	NC
Option 10 — Wide Bandwidth Audio 20 Hz to 55 kHz · 0.4 dB	+\$165

For demodulation of RF signals, one of the following three down converters must be plugged into the 1450-3 mainframe. Order both Option 02 and Option 12.

TDC Fixed Channel Down Converter — (Stipulate channel number when ordering)	\$3,550
TDC-1 — Tunable Down Converter VHF Band	\$7,660
TDC-2 — Tunable Down Converter UHF Band	\$7,660
Option 02 — 38.9 MHz Vision IF	NC
Option 12 — System B/G/I countries	NC

TELEMET

DIVISION OF GEOTEL, INC.

Amityville, L.I., New York 11701
(516) 842-2300 TWX 510-227-9850

VIDEO BROADCAST TEST EQUIPMENT

MODEL 3710 Broadcast Demodulator

Broadcast Demodulator Model 3710 is the most comprehensive, precision testing instrument available today for checking video quality of the television broadcast signal; and it has its own built-in tester for self checking calibration.

3710-A1	Broadcast Demodulator — VHF — 5mv sensitivity	\$9,300.00
3710-A2	Broadcast Demodulator — UHF — 5mv sensitivity	9,700.00
3710-A3	Broadcast Demodulator — VHF — 1mv sensitivity	9,700.00
3710-A4	Broadcast Demodulator — UHF — 1mv sensitivity	10,000.00

MODEL 4500 Demodulator

Demodulator 4500 accepts the broadcast signal and converts it to base band without distorting the original picture quality. It houses a plug-in VHF front end module that is selected and ordered separately for the particular VHF channel required. This VHF module is Telemet type D-xx-A1, where xx denotes the VHF channel number (e.g. D-02-A1 for Channel 2). It contains a crystal-controlled oscillator and FET mixer. Also a 2-stage a.g.c. controlled VHF amplifier, using silicon insulated-gate field effect transistors.

4500-B1	VHF Demodulator (Off-air)	\$2,110.00
D-xx-A1	VHF Plug-in (Channels 2-13)	675.00
D-xx-A1	Sub-Band Plug-in (Channels T7-T11)	865.00
D-xx-A1	Mid-Band Plug-in (Channels A-1)	865.00
D-xx-A1	Super-Band Plug-in (Channels J-V)	865.00

Option:	Demodulator supplied at — 48 VDC	\$225.00
4500-B2	UHF Demodulator (Off-air, fixed, tuned, single channel)	2,960.00

MODEL 4501 Broadcast Demodulator

Broadcast Demodulator 4501 is for use in the measurement of the characteristics of broadcast television signals, including chrominance-luminance relative gain and delay, K rating, burst amplitude and modulation depth, differential phase and gain, intercarrier frequency stability (using an external counter) and other distortions.

4501-A1	VHF Precision Demodulator — 5mv sensitivity	\$6,000.00
4501-A2	UHF Precision Demodulator — 5mv sensitivity	6,275.00
4501-A3	VHF Precision Demodulator (Channel 2-13) with low input sensitivity of 1mv	6,275.00
4501-A4	UHF Precision Demodulator, input sensitivity of 1mv	6,525.00

MODEL 4503 Demodulator Tester

Demodulator Tester 4503 provides a fast sure method of determining the on-going frequency response of a broadcast TV demodulator.

4503-A1	VHF Precision Demodulator Tester	\$800.00
4503-A2	UHF Precision Demodulator Tester	925.00

MODEL 4504 Synchronous Detector

Synchronous Detector Model 4504 is designed to measure transmitter parameters, especially the incidental phase modulation of the visual carrier. The Model 4504 can be used with the Telemet broadcast test demodulator Model 4501 and other suitable test demodulators.

4504-A1	Synchronous Detector	\$1,885.00

TEXSCAN CORPORATION

2446 N. Shadeland
Indianapolis, IN 46219
(317) 357-8781

CHARACTER GENERATOR

SPECTRAGEN III (SG III)

SpectraGen III is a low-cost character generator with a full spectrum of features and programming flexibility. Texscan MSI invites you to compare the SpectraGen III with any other single channel, low-cost unit available.

Only the SpectraGen III can provide you with 150 pages of basic RAM expandable to 812 pages. Only the SpectraGen III gives you 32 keyboard-selectable colors for colored upper and lower case characters, backgrounds and edging. Only the SpectraGen III has 32 graphic symbols for display enhancements. Only the SpectraGen III can provide full, remote, off-line editing capability when used in conjunction with a Flexicaster. Only the SpectraGen III has six independently programmable display regions, a 16 x 32 character matrix and a real time clock with events switching. The SpectraGen III accepts up to four serial inputs, such as: weather, AP, UPI, Reuters, NOAA and keyboard. Stockwriters and Dow Jones optional.

The SpectraGen III is entirely self-contained in a convenient keyboard housing that fits easily on a desk or shelf top. All keyboard functions are clearly labeled. A single keystroke addresses most functions, making the SpectraGen III one of the most convenient character generators to operate.

In the past, low-cost character generators have been stripped-down versions of other models; not the SpectraGen III. This unit offers all the software features of a Texscan MSI Flexicaster. The only important thing we've dropped is the price.

FEATURES

- Single channel output • 150 to 650 page RAM memory capacity
- 16 x 32 character matrix • 32 keyboard selectable character color/background color combinations • Line or page control of character colors and background colors • Four character heights: single, double, triple, and quad • Two character widths: single and double
- 32 keyboard graphic symbols • Graphic line separators • Character edging • Upper and lower case standard Helvetica font • Six independent display regions per 21-line screen display • Auto centering • 24 hour battery memory protection • Four page display modes: Bang, Splash, Crawl and Page-print • Three page display speeds: Slow, Medium and Fast • Three crawl speeds, plus pause • Real Time Clock control or display • Programmable page display attributes • Four serial I/O ports for Weather, AP, UPI, Reuters, NOAA and Keyboard • Editing features • Line and page shift up, down, left and right • Cursor home, right, left, up and down • Character repeat • Erase to end of line/end of page • Character insert/character delete • Line insert/line delete • Word wrap line justification • Word or line flash • Capable of animation • Each page offers weekly calendar event • 68 nanoseconds dot clock with character cellular matrix of 16 x 32 • Two line levels in and four out for externals.

OPTIONAL

Interactive public access

SPECIFICATIONS

Data Inputs

Four serial data inputs configured as baudot or ASCII current loop, RS-232, or TTL at data rates from 55 to 6900 baud.

Video Outputs

Two video outputs per one channel system. Level is 1.0 v. P-P nominal at 75 ohms impedance. Standard is RS-170 A 525-line NTSC color video signal.

Memory Capacity

Up to 242K bytes dynamic RAM usable memory storage, organized in 8-bit bytes, and configured by user into pages of 1 to 21 lines in depth.

Interfaces Accomodated

Keyboard, local weather sensors, NOAA, AP and UPI.

Dimensions

15"D x 5-1/4"H x 20"W

Power Requirements

70 Watts

Housing

Aluminum, self-contained housing with built-in keyboard.

Characters

Resident font with 92 ASCII, upper and lower case characters plus 32 special graphic characters in a high-resolution 16 x 32 pixel matrix. Heights are 20, 40, 60 and 80 scan lines. Widths show 16 or 32 characters per line. Maximum screen display is 21 lines of 32 characters. Helvetica font is standard. Character Colors are pre-programmed into 32 keyboard selectable character color/background color combinations on a line or page basis.

Display Attributes

All page display attributes are programmable by the page. Page display times are from 1/2 to 99 seconds, display speeds are slow, medium or fast plus pausing crawl with up to six independent display regions per 21 line screen display. Real Time Clock control or display function.

Editing/Cursor Functions

Line and page shift, up and down, right and left. Skip page, Erase page or line. Erase to end of line or page. Character insert or delete. Word or line flash. Line insert or delete. Character repeat. Cursor home, and Word wrap.

Memory Protection

A Battery pack preserves system memory up to 24 hours in case of system failure.

COLOR CHARACTERS

Texscan MSI now offers in their full product line, 32 combinations of character, background and edging colors.

All colors are keyboard selectable, by the press of one key, on a line by line or full page basis. These colors apply to alphanumeric as well as graphic characters.

Texscan MSI selected color combinations on the basis of aesthetics, making text easy and pleasing to read. Colors range from a subdued black on grey, for newspaper applications, to bright color combinations for eye-catching display advertisements.

Other sets of color combinations are available. Consult the factory for details.

SG III — Character Generator

SG III — GLT — Genlock Titler

SG IV — High Resolution SG III GLT with 32 nanoseconds — 32 x 64 matrix

MODEL VSM-1D SPECTRUM ANALYZER

- 4-450 MHz Frequency Range • Dynamic Range of 40 dB on Screen
- Portable Operation • Typical ± 1 MHz Dial Accuracy • 8 MHz Fixed Calibrated Dispersion

More than 13 years of proven reliability and performance back the Texscan VSM-1D (75 ohm) portable spectrum analyzer. This low cost instrument provides accurate coverage of the frequency range from 4 to 450 MHz, with up to 40 dB on-screen amplitude displayed to an accuracy of ± 1.5 dB. Truly portable, and weighing only 26 lbs. (including battery), this rugged, field-ready package allows up to 2-1/2 hours of continuous operation with an internal rechargeable battery. The VSM-1D, in addition to battery or external DC power, also provides for direct conversion of 117 VAC power by utilizing an external charger/converter. Both the CRT and the front panel of this unit is securely protected (when not in use) by an integral latching cover.

Three pre-set frequency bands eliminate time-consuming operator adjustments in the VSM-1D by automatically setting center frequency and dispersion controls. A 40 dB on-screen display range and a sensitivity which exceeds -40 dBmV enables easy detection of interfering signals, and a dial accuracy of ± 1 MHz (typical) further enhances accurate signal measurements.

MODEL 9900D SWEEP SYSTEM

- Checks for illegal connections to a system • ± 0.25 dB flatness — measurement by comparison • Measure return loss, gain or insertion loss — switch selectable • Variable tilt to simplify testing

- Sweep cable to 450 MHz and 32 dB • Sweep test in the yard or on the pole — only 23 lbs. and battery operated • Scope, attenuators, sweep generator, and bridge — all in one instrument • Variable bridge available.

Sweep test cable, amplifiers, passives all with a single instrument — now to 450 MHz — and it's portable.

The 9900 Series of sweep test systems has been used for testing CATV cable for more than 12 years. This is the newest member of the club. Now the 9900 Series is portable. The same basic measurement capability that you are used to from the 9900, 9900A, and 9900B is provided by the new 9900D but at one-third the weight and size — yet battery operated to use in the yard, at the pole, or in the system.

The instrument incorporates a 4 to 450 MHz sweep generator, oscilloscope, return loss bridge, attenuators, frequency markers, and dual trace comparator to provide comparison sweep testing with a single instrument. Test your amplifiers and passives on the bench; test your cable on the reel in the yard, or take the 9900D up in a bucket to test the cable system on the pole. You can even use it to sweep the drop cable of a subscriber to determine if there are illegal connections. The sweep output can even be tilted to compensate for linear slope loss in the test piece and achieve a flat response on the oscilloscope.

MODEL VSM-5D SPECTRUM ANALYZER

- 4-450 MHz Frequency Range • Built-In Markers (1-10-50 MHz)
- Portable Operation • Selectable Resolution • Optional Digital Storage

The VSM-5D spectrum analyzer covers the frequency range from 4 to 450 MHz and provides up to 70 dB of accurate, on-screen amplitude measurement. Truly portable, the VSM-5D allows a choice of AC, external DC, or internal rechargeable battery operation.

The VSM-5D's logical control panel layout with three presettable frequency bands facilitates quick learning of all the specialized functions and speeds testing procedures. An integral latching cover is designed to securely protect both the CRT and the controls of the VSM-5D while the unit is not in use.

Signal dispersions can be varied from below 3 kHz per division to as much as 45 MHz per division, allowing the operator to closely examine narrow band signals and to see the complete 4 to 450 MHz spectrum visually on the CRT. 60 dB dynamic display ranges make these units ideally suited for specification testing and alignment in a wide range of applications in both the laboratory and the field. A built-in, 1, 10, and 50 MHz harmonic marker combination enables the operator to identify displayed signal frequencies, and to set center frequency and scan width. An advanced oscillator design and a 500 Hz crystal IF filter enhance the VSM-5D's resolution, allowing the measurement of signals separated by only 20 kHz in frequency and 60 dB in amplitude.

2446 N. Shadeland
Indianapolis, IN 46219
(317) 357-8781

MODEL VSM-2D SPECTRUM ANALYZER

- 4-1000 MHz Frequency Range • Dynamic Range of 70 dB on Screen • Built-In Markers (1-10-50 MHz) • Portable Operation • AM /FM Audio Recovery • Optional Digital Storage

The VSM-2D spectrum analyzer covers the frequency range of 4 MHz to 1 GHz and provides 120 dB of accurate amplitude measurement. A portable spectrum analyzer, the VSM-2D allows a choice of AC, external DC, or internal rechargeable battery operation. A color-keyed front panel and a logical control layout simplify the selection of settings, and often monitored frequency bands can be preset by screwdriver controls which are easily accessible on the front panel. An integral latching cover is designed to protect both the CRT and the controls of the VSM-2D while the unit is not in use.

Signal dispersions of this instrument can be varied from less than 2 kHz per division to as much as 100 MHz per division, allowing the operator to closely examine narrow band signals and to scan the complete 1,000 MHz spectrum visually on the CRT. Also provided is the ability to make system hum measurements with a resolution of 2% per division. DC blocking of the input protects the input attenuator and mixer against inadvertent application of system powering voltages.

Phase locking in the VSM-2D is provided by a stable internal reference (below 200 kHz per division dispersion) which stabilizes the first local oscillator, yielding low residual FM performance during the investigation of narrow band dispersions. A 70 dB dynamic display range makes the VSM-2D ideally suited for specification testing and alignment in a wide range of applications. A built-in 1, 10, 50 MHz harmonic marker combination enables the operator to identify displayed signal frequencies and provides center frequency and scan width settings of unparalleled accuracy. An audio recovery system, including AM/NBFM detectors and audio amplifiers with speaker, allows the user to audibly monitor the displayed carrier signal modulation. An advanced oscillator design and a 500 Hz crystal IF filter enhance the resolution, allowing the measurement of signals separated by only 20 kHz in frequency and 60 dB in amplitude.

MODEL MDC-3 MICROWAVE CONVERTER

- 2.1 GHz, 3.7 GHz and 12.7 GHz conversion in one converter
- Spectrum analysis at microwave for less than \$10,000.00 • Microwave sweep generator for less than \$6,000.00 • Optional filter kit to simplify measurements.

The MDC-3 provides microwave spectrum analysis at CARS band, MDS, and TVRO frequencies without a microwave spectrum analyzer. Not only is spectrum analysis possible, in conjunction with the VSM-5B, but the MDC-3 also converts low-frequency sweepers to microwave.

Faulty pointing of CARS antennas are easily corrected while monitoring the output with the MDC-3 and a VSM-5B. Deviation adjustment of CARS transmitters is easily and precisely accomplished by observing the sideband distribution on a spectrum analyzer. CARS or TVRO systems can be easily checked for spurious or interfering signals.

The MDC-3 is a small and lightweight unit which can be operated in the field with Texscan's VSM-1A, VSM-2A, or VSM-5B portable spectrum analyzers. The MDC-3 can be powered directly from these instruments, operating from their internal batteries with the retractable front panel power cord of the MDC-3.

The optional filter kit adds increased accuracy and usefulness to the MDC-3. This filter kit is necessary to use the converter for microwave sweep generator operation. The unit has a calibrated insertion loss so that absolute signal strength measurements can be made and the local oscillator for each of the three bands can be individually adjusted.

Other frequency bands are available on an optional basis.

MODEL 7272 SIGNAL LEVEL METER

- 400 MHz coverage in 6 bands • Patented peak detector eliminating errors due to modulation • Rugged construction designed for field use • Advanced design rotary attenuator • Optional UHF plug-in converter • Voltmeter and ohmmeter capability built in.

Model 7272 Signal Level Meter—featuring 5 to 405 MHz coverage without plug-ins, ± 1.0 dB accuracy, new easy reading dial, manual gain control, video output, built-in speaker and volt/ohmmeter, and patented peak detector. With the optional UHF plug-in converter, the 7272 provides the technician with the most complete and versatile Signal Level Meter in the industry. Besides versatility, accuracy and convenience, the ruggedness of the 7272 is still there. And the 7272 offers the widest level measurement range available.

The incorporation of preselection filters for each band reduces the number of carriers present at the first mixer, thereby eliminating the effect of internally generated disorders on measurement accuracy. This feature plus the superior rejection characteristics of the IF are unavailable with other manufacturer's meters.

The 7272's built-in volt/ohmmeter eliminates the need to carry a second VOM up the pole or in the bucket truck. The VOM is an integral part of the 7272 with the leads stored in the non-detachable lid, ready when you need them.

TEST EQUIPMENT

MODEL 9552 T/R SWEEP SYSTEM

- Low Cost • Easy Operation • Rack Mount Headend Transmitter
- Selectable Sweep Widths and Rep Rates • Digital Storage • Flat or Tilted Sweep Output • Portable, Battery Powered Receiver • Calibrated Display, 1 or 2 dB/Div.

The 9552T Transmitter employs a very fast sweep rate so that the interfering signal is only present in any video channel's bandwidth for less time than the length of one horizontal line. The sweep signal is 20 to 25dB higher in amplitude than the picture carriers resulting in a swept output display uncluttered by video carriers riding on the trace. The system will interface with most two-way radios for a "sweep-when-triggered" operation. The DBG-1 option is used to eliminate the possibility of the sweep transmitter affecting wideband fast acting AGC circuits on long cascades.

The 9552R Receiver is synchronized to the transmitter with a time base triggered by the leading edge of the sweep signal. A sample of the sweep signal is used to generate a variable marker which appears as two pips 6MHz apart riding on the swept display. This marker presentation provides a convenient reference for standard TV channel width. The receiver is rugged, portable, and battery operated. Digital storage provides continuous updated display.

MODEL VS-60CZ SWEEP SIGNAL GENERATOR

- 1-10-50MHz Harmonic Markers Standard • Optional Single Frequency Markers • 1 to 1,000MHz Frequency Coverage • +/-0.25dB Flatness • 1 and 10dB Step Precision Attenuator Output Control

In the 1 to 1000MHz range, there is simply no better instrument on the market for such a wide variety of sweep applications than the VS-60CZ. This dependable worry-free "workhorse" has proven itself as an indispensable tool. A field-proven performer, the Texscan VS-60CZ packs the capabilities of a high stability, narrow band sweeper, and the flexibility of a wide band sweeper into one versatile instrument. The VS-60CZ's 0.05 to 60Hz sweep rate range is compatible for testing almost any bandwidth. An internal automatic level control maintains the RF output amplitude at 0.25dB over the entire frequency range. Internal pushbutton activated harmonic and single frequency (optional) markers are available, and provisions for combining external RF signals for use as markers are also included.

9557
HEADEND
UNIT

9558
PORTABLE
UNIT

MODELS 9557/9558 TWO-WAY TEST SET

- Battery operation of remote receiver • Simplified two-way system alignment • Field proven reliability.

SIMPLICITY IN TWO-WAY SYSTEM ALIGNMENT

The Texscan 9557/9558 two-way test set permits alignment of the return path amplifier system with a single stop at the amplifier location. It is no longer necessary to shuttle a sweep or signal generator to various points at the extremities of the distribution system. The reverse alignment system greatly simplifies this complex task.

The reverse path alignment system consists of a headend unit and a battery-operated remote unit which functions in conjunction with a field strength meter or spectrum analyzer.

The system functions by sending a pilot signal in the forward direction (VHF). This signal is nulled by the headend when it receives the Sub band signals at the proper levels. The Sub band signals are inserted in the return patch by the remote unit. The null is detected by the FSM or spectrum analyzer.

MODELS FDM 3, 4, 5 RF LEAKAGE MONITORING SYSTEM (Not Shown)

- The FDM 3, 4 monitors discrete frequencies—minimizes erroneous results • Crystal controlled stability • Narrow (20 kHz) bandwidth provides low level reception • Speaker and meter outputs • Built-in squelch — prevents triggering on noise • Go/No Go indicator at FCC leakage level — using optional antenna • Optional customer specified test frequencies • Vehicle mount makes routine patrolling easy.

The leakage monitoring system can detect radiation leakage when it's still at a level too low to interfere with other communication systems.

Basically, the System is a crystal controlled, FM, transmit-receive system designed for rapid and convenient location of signal leakage in a cable system. The portable, battery operated receiver will activate visible and audible alarms if it receives leakage signals greater than the adjustable sensitivity threshold. The optional vehicle mounting bracket and whip antenna permit leakage monitoring during routine truck runs.

The FDM 3, 4, 5 leakage monitoring system provides complete radiation protection. Monitoring discrete frequency bands for leakage results in testing with a low probability error. Narrow receiver bandwidth and speaker output produces a leakage monitor system with high probability of detection and low false alarm rate. The FDM-5 headend unit injects a signal at 107.9 MHz at the headend. The FDM-2 receiver, vehicle mounted or hand held, is transported throughout the plant cable runs searching for leakage. If leakage is found, the FDM 3, 4, 5 can be used to make calibrated measurements to determine the severity of the leak.

TEXSCAN CORPORATION

2446 N. Shadeland
Indianapolis, IN 46219

TEST EQUIPMENT

TFC-7A

MODEL TFC-7A TUNED FREQUENCY COUNTER

- Designed specifically for proof of performance testing
- 0 dBmV sensitivity—5 to 405 MHz coverage
- Measures selected channel with adjacent channel 10 dB larger
- Preselection/stripper—removes video modulation prior to counting
- Simple operation—lightweight. Measures video carrier frequency and audio-video carrier spacing accurately in the presence of modulation.

Texscan's highly accurate Model TFC-7A Tuned Frequency Counter uses a broadband preselector/stripper to remove modulation and an accurate counter for Proof-of-Performance measurements. The TFC-7A provides precise count accuracies in fully loaded 52 channel systems—even with adjacent channels 10 dB greater than the desired. The TFC-7A gives precision frequency measurements at any test point in the system—with measurements down to 0 dBmV.

For operator convenience, intercarrier spacing is measured at the push of a button, eliminating the requirements for two separate carrier readings and subtraction of the results. A digital LED read-out provides simplified frequency tuning. Input attenuators control signal input to the counter, maintaining optimum operation from high-level head-end to low-level output test points.

Additional features of the TFC-7A include a special RF output capability of +40 dBmV which may be used as a counted variable marker for accurate adjustment of processor bandpass limits, adjacent channel sound and video traps, and other alignments where precise frequency measurement is required. Also, a detected video output of 4 MHz bandwidth, allows close examination of sync pulses and other transmitted information. Providing added versatility, the TFC-7A will also function as a broadband, high-level frequency counter for signals above +20 dBmV. This feature lends itself to applications with tracking sweep generators and other single frequency unmodulated frequency counter applications.

DU-127

MODEL DU-127 X-Y OSCILLOSCOPE

- Large 12 inch diagonal CRT—for reduced eye fatigue
- 25 kHz horizontal and vertical bandwidth—for excellent marker presentation whether they're vertical or tilted
- Excellent sensitivity—1mV/division both horizontally and vertically.

The DU-127 combines high performance, low cost and wide bandwidth in a wide screen display ideal for laboratory sweep testing.

The Texscan DU-127 X-Y, wide screen oscilloscope combines low cost and high performance and is an excellent choice for laboratory and repair test systems. The DU-127 features a large 12 inch diagonal CRT with a bright, stable, focused trace for ease of viewing. It has high sensitivity, high resolution, good writing speed, and high output light level.

The DU-127 is compatible with any sweep generator since it accommodates pulse, birdy or intensity markers. The combination of 1 mV/DIV sensitivity and extremely low drift make this instrument a workhorse.

MODEL RCB-3/75 REFLECTION COEFFICIENT BRIDGES

- Tests return loss of cable, amplifiers, passives and taps
- Accurate to 1 GHz

The Texscan reflection coefficient bridge is a broadband RF comparator which, when used in conjunction with a sweep generator and oscilloscope, provides an accurate display of reflection or VSWR versus frequency. Component and/or device mismatch is easily and accurately determined.

The RCB-3/75 is an ideal device for laboratory testing of amplifiers, filters, taps, passives, attenuators and other coaxial components. The bridge provides a DC output which is proportional to the unknown element's reflection coefficient.

MODEL 9644A VARIABLE BRIDGES

- Measures Structural Return Loss Independent of Average Cable Impedance
- Accurate to 450 MHz.

The 9644A Variable Bridge is recommended for Structural Return Loss testing of 75 ohm coaxial cable. It is specifically designed for use with Texscan's Model 9900D Sweep System, but may also be used in conjunction with a separate sweep generator, attenuator set, and display scope.

The built-in reference termination has adjustable resistance and reactance, which allows Structural Return Loss to be measured independently of average cable impedance.

Bridge Kits

KRCB-3	(50 ohms) (VS-60C)
KRCB-3/75	(75 ohms) (VS-60CZ)

Each bridge can be purchased separately or as a kit with calibrated mismatches included. A kit consists of a bridge and five calibrated MF-75 mismatches, representing VSWR values of 1.0:1 (2 each), 1.2:1, 1.5:1, and 2.0:1.

KRCB-3

TEXSCAN CORPORATION

TEST EQUIPMENT

BROADBAND AMPLIFIER

VSX-92S

- 7dB Noise Figure • 26dB Gain • ± 1.0 dB (40-890MHz)

VSX-92S AMPLIFIER

The VSX-92S wideband RF amplifier is designed to amplify low-level signals. This portable, lightweight, solid-state amplifier extends the range of signal level meters, spectrum analyzers and similar test equipment. The battery-operated VSX-92S incorporates two hybrid broadband amplifiers, a flatness-compensation network, and a voltage regulator.

TBC-12 BATTERY CHARGER

The TBC-12 Battery Charger is designed to charge the battery system used in the VSX-92S. This instrument charges the battery in approximately 12 hours. For optimum battery cycle life, the charger should be disconnected within 14 hours.

REFERENCE DIPOLE ANTENNA

AFS-1

- Replaceable Dipole Elements • Fiberglass Mast • Calibrated Down-lead

AFS-1 ANTENNA

The AFS-1 is a calibrated, adjustable half-wave dipole specifically designed for making required FCC radiation tests from 50 to 400MHz. This unit is passive, requiring no batteries, and it is provided with a mast to make measurements 20 feet above the ground.

A calibration chart for setting antenna length for the resonance at any carrier frequency in the VHF band is supplied with the antenna. The antenna can be used with a signal level meter and preamplifier to make the FCC required radiation test on CATV systems. The AFS-1 is provided with calibration data and test information, allowing accurate data to be recorded when used with a VSX-92S amplifier and a spectrum analyzer, or signal level meter.

PRECISION ROTARY ATTENUATORS

- Housed in Lightweight Irridated Aluminum • Attenuation from 9 to 70dB • Low VSWR • Wideband Accuracy

ROTARY ATTENUATORS

The Rotary Attenuator Models RA-70F, RA-71F, RA-73F, RA-734F, RA-74F are laboratory-type precision instruments for bench use or inclusion in test equipment. Model RA-70F provides 0 to 10dB of attenuation in 1dB steps from DC to 1000MHz. Model RA-71F provides 0 to 70dB of attenuation in 10dB steps from DC to 1000MHz. Model RA-73F provides 0 to 1dB of attenuation in 0.1dB steps from DC to 500MHz. Model RA-734F provides 0 to 11dB of attenuation in 0.1dB steps from 0 to 500MHz. Model RA-74F provides 0 to 50dB in 1dB steps with accuracies from DC to 1000MHz.

SA SERIES

BMA SERIES

SWITCHABLE AND BENCH MOUNT ATTENUATORS

SA SERIES/BMA SERIES

- Finger Tip Controlled Rocker Switches • Selectable Attenuation • Can Be Bench or Panel Mounted • 500MHz Coverage • Single Unit Operation • Accurate Reduction of High Level Signals • Accuracy up to 1000MHz.

MODEL SA-70F and SA-78F

The SA Series Switchable Attenuators provide selectable attenuation by finger tip control of nine rocker type switches. This 75 ohm attenuator is equipped with Type F connectors and may be placed on the bench or panel mounted. Provides coverage up to 500MHz.

MODEL BMA-577 and BMA 567

A "packaged attenuator", the BMA series, may be used in measurement-by-comparison test applications and for reduction of high-level signals from sweep generators to oscilloscopes and spectrum analyzers.

The advantages of the "packaged attenuator" concept are convenience of operation (single unit versus a pair of non-attached attenuators) and a neater test bench—plus accurate reduction of high-level signals for measurement-by-comparison tests.

TEXSCAN CORPORATION

2446 N. Shadeland

(317) 357-8781

TUNABLE BANDPASS FILTERS

VF SERIES

- Octave tuning bandwidth
- 3% or 5% bandwidth available
- 3 or 5 section available
- Low insertion loss

For measurement of low level signals in the presence of high level signals—like triple beat measurements.

No cross mod or triple beat measurement should be made without filtering the input to your spectrum analyzer or field strength meter. This is necessary to reduce the number of carriers present at the analyzer input. If the overloading effect of these signals is not removed, it is not possible to make the measurement with reliability or accuracy. Texscan's line of VF tunable filters are specifically designed for this application. In fact, any time you are looking for a low level signal in the presence of high level signals, a filter is necessary; for example, radiation surveys, signal surveys, carrier to noise measurements, co-channel, etc. Various models in the series cover a frequency range from 48MHz to 400MHz with each model covering more than an octave. These units are available with either a three or five section response and have a 3dB bandwidth of 5% or 3% with low insertion loss values from 0.2dB through 1.5dB. VSWR is less than 1.5:1.

LOGARITHMIC AMPLIFIER LN-70

- 70dB Dynamic range with ± 0.5 dB accuracy
- A calibrated digital readout with ± 0.1 dB resolution is provided
- Selectable noise filtering for accurate measurement at low signal levels
- Selectable sensitivity of 10, 5, 2, 1, and 0.5dB per volt are provided
- Tracking adjustments to calibrate to various detectors

The LN-70 logarithmic amplifier will display a full 70dB range for inputs of +20dBm. The frequency range of the device is that of the RF detector. The DC offset control allows the generation of a reference line on the scope display which indicates the amount of gain or loss. The digital readout has an ± 80 dB range and resolution of ± 0.1 dB.

VRF-148

TEST EQUIPMENT

FIXED ATTENUATOR PADS

- Accurate to 1200MHz
- Calibration data supplied standard
- Lab attenuators
- Color coded

FP-75

The FP-75 Fixed Attenuator Pad is available in a wide range of attenuation values and provides accurate attenuation to 1200MHz. Each of the pads is color coded for easy identification of the value of attenuation and calibration points are clearly marked on the body of the pads. The FP-75 is provided with calibration points at 30MHz and at 1000MHz.

MINIMUM LOSS PADS

- Converts system impedance level simply and accurately
- Performance through 1000MHz

ZM SERIES

Most signal and sweep generators have a nominal source impedance of 50 or 75 ohms. However, these impedance levels can be conveniently changed to some other impedance for specific applications using ZM series pads. Providing good performance through 1000MHz, these pads provide a simple and accurate means of converting system impedance levels. Texscan's minimum loss, coaxial pads are resistive "L" pads, which provide the minimum loss possible for resistive matching between impedance levels.

When ordering, be sure to specify input impedance, connector type and sex, and output impedance, connector type, and sex. Model ZM-57F (Male F, 75 ohms; Female BNC, 50 Ohms) or ZM-57M (Female F, 75 ohms; Male BNC, 50 Ohms).

DETECTORS

- Accurate to 1000MHz
- Efficient operation

The CD-75F in-line detector is designed for efficient operation in the 200kHz to 1GHz range, which provides a halfwave output with positive or negative polarity as specified by the customer. The standard unit Model DC-75F is equipped with an F-type input connector and an F-type output connector.

CD-75F DC BLOCKS

- Accurate to 1000MHz
- Less than 0.1dB insertion loss at 300MHz

BLOCKING NETWORK

The DB-75 Blocking Network passes RF signals in the 5 MHz to 1000MHz range, and blocks DC and 60 Hz voltages. The blocking network can be used in any application where high-frequency signal components must be separated from 60 Hz voltage. Insertion loss is less than 0.1dB at 300 MHz. Available with type F, BNC, or N connectors.

Prices and Specifications Subject to Change Without Notice.

DISTRIBUTION EQUIPMENT

XRPR CABLE POWER UNITS

Features

Turn On Time Delay — Delays power turn on to the cable to minimize transients.

AC Input Circuit Breaker — Metal oxide varistor and gas filled surge protectors plus low pass filters are standard.

Optional Transient Clipper and Thyrite Arrestor — For severe transient conditions and lightning protection.

30 and 60 V Units Available — Dual mounted units also available.

Painted Housing and Louvered Cabinet — With locking capability.

Power Couplers and Splitters — Available as internally mounted options.

The Theta-Com XRPR AC power sources continue to be the workhorses of the CATV industry. Ruggedness, reliability and ease of maintenance characterize these supplies. They are available in two basic versions; a 60 volt 14 ampere unit and a switchable 30 volt/60 volt unit. Each can be purchased as a single unit or in a dual mounted configuration.

Providing 2% regulation, standard units are supplied with a self-healing, non-polarized gas filled surge protector, metal oxide varistor, low pass output filter, and turn on time delay. In addition to the standard surge protectors, optional protection is available. A transient clipper can be incorporated in the AC output to prevent power supply transients from entering the cable system. This option is recommended in locations which suffer from severe power transients. And for lightning protection, a thyrite arrestor is also available. Burn-In is not required due to a lack of 'infantile failures'.

These AC supplies are designed to be compatible with the Theta-Com T series and Phoenician II distribution system but are equally at home providing power for any distribution equipment.

Specifications XRPR

NOTES

1. An adjustable (1 to 10 seconds) time delay relay kit is available to retrofit supplies in the field.
2. Dual units are available (24 x 12 x 8-1/2") (61 x 31 x 22cm) in all types but cannot be supplied with optional couplers or splitters.
3. The transient clipper cannot be supplied with the optional couplers.
4. Input currents vary with line voltage and load current. Numbers above are maximums, consult factory for typical numbers for various operating conditions.

OPTIONS

1. Power Coupler—A power coupler to couple AC power to the CATV system is available for any single mounted supply (3).
2. Splitter—A splitter to feed power into two inputs is available for any single mounted supply.
3. Transient Clipper—A 91 volt transient clipper is available (3).
4. Thyrite Arrestor—A thyrite lightning arrestor is available.
5. Transient Clipper Tester—This feature can be purchased with the transient clipper to allow testing of the clipper while mounted in the supply. Only available for the 60/14 supply.

UNJACKETED TRUNK AND FEEDER CABLE T4™

Unjacketed T4 cable is recommended for aerial installations in non-corrosive environments.

- A center conductor coating that is moisture blocking yet strips clean.
- A hard foam dielectric which provides firm support for the fullwall seamless aluminum outer conductor, achieves excellent core-to-outer conductor adhesion, and has superior handling characteristics.

Unjacketed T4 cable is available with a copper-clad or solid copper center conductor. A hard foamed polyethylene dielectric, bonded to the center conductor with a moisture blocking adhesive, supports the fullwall seamless aluminum outer conductor.

DETAILS OF CONSTRUCTION AND MATERIALS

- **Center conductor** — Electrical grade 10% nominal (by volume) copper-clad aluminum (ASTM B-556 Class 10A).
- **Conductor coating** — Proprietary moisture blocking polymer adhesive.
- **Dielectric** — Foamed polyethylene (Federal Specification LP-390 and ASTM D-1248 prior to foaming).
- **Outer conductor** — Seamless fullwall high purity electrical grade aluminum tube, alloy 1060 (ASTM B-221).

JACKETED TRUNK AND FEEDER CABLE T4™

Jacketed T4 cable incorporates the same features, construction and materials as unjacketed shown opposite.

Jacketed T4 cable is recommended for aerial installations in urban and coastal environments where corrosion is more likely to occur. This cable will withstand more abrasion and mechanical abuse than an unjacketed cable.

A protective jacket of low density high molecular weight black polyethylene is extruded over the outer conductor.

- **Jacket** — Abrasion resistant low density high molecular weight black polyethylene (Federal Specification LP-390 and ASTM D-1248 jacketing material).

ARMORED TRUNK AND FEEDER CABLE T4

Recommended Applications

Armored T4 cable is recommended for direct burial installations where the cable is exposed to increased mechanical abuse and rodent attack.

FEATURES

- A center conductor coating that is moisture blocking yet strips clean.
- A hard foam dielectric which provides firm support for the fullwall seamless aluminum outer conductor, achieves excellent core-to-outer conductor adhesion, and has superior handling characteristics.
- A flooded jacketed cable with an additional jacket over a flooded steel tape.

Construction

Armored T4 cable is available with a copper-clad or solid copper center conductor. A hard foamed polyethylene dielectric, bonded to the center conductor with a moisture blocking adhesive, supports the fullwall seamless aluminum outer conductor. A combination layer of a flooding compound, a polyethylene jacket, a helically wound steel tape, another layer of flooding compound, and a polyethylene jacket form a complete mechanical and corrosion-resistant shield.

Details of Construction and Materials

- **Center conductor** — Electrical grade 10% nominal (by volume) copper-clad aluminum (ASTM B-556 Class 10A).
- **Conductor coating** — Proprietary moisture blocking polymer adhesive.
- **Dielectric** — Foamed polyethylene (Federal Specification LP-390 and ASTM D-1248 prior to foaming).
- **Outer conductor** — Seamless fullwall high purity electrical grade aluminum tube, alloy 1060 (ASTM B-221).
- **Self-healing flooding compound** — Low molecular weight polyisobutylene which cold flows for self healing.
- **Jacket** — Abrasion resistant low density high molecular weight black polyethylene (Federal Specification LP-390 and ASTM D-1248 jacketing material).
- **Armor** — 0.010 in. thick steel tape SAE/AISI 1010 steel.

ARMORED TRUNK AND FEEDER CABLE T4 PLUS™

Armored T4 Plus cable is recommended for direct burial installations where the cable is exposed to increased mechanical abuse and rodent attack.

FEATURES

- A flooded steel tape and jacket are layered over the standard flooded jacketed cable for increased mechanical strength.
- A cold flowing, self-healing (underground) or non-dripping (aerial) flooding compound provides an additional layer of corrosion protection.
- Cable jackets have sequential footage markers for easy determination of the amount of cable remaining on the reel.
- A tough jacket of linear low density polyethylene provides increased abrasion resistance and can be cut and removed easily for connector installation.
- A fully bonded composite construction increases pull strength and resists sidewall pressure damage during installation.
- Bonding of the jacket to sheath provides improved handling characteristics and prevents concealment of aluminum sheath damage.
- Controlled bonding of the core provides high core-to-sheath adhesion (to -40°C) dramatically improving protection against connector pull-outs due to extreme temperature variations and allows the use of standard connectors.
- Bonding of the dielectric to center conductor prevents moisture ingress and can be easily stripped without leaving a harmful residue.
- A reduced bend radius of approximately 8x the outside diameter of the cable allows easy accommodation to vault and pedestal placements.
- Available with increased bandwidth of 5 to 550 MHz.

Armored T4 Plus cable is available with a copper-clad or solid copper center conductor. A hard foamed polyethylene dielectric supports the fullwall seamless aluminum outer conductor. A composite construction is obtained by bonding the individual components together, center conductor to dielectric and dielectric to outer conductor, with proprietary polymer adhesives. A combination of a layer of a flooding compound, a polyethylene jacket, a helically wound steel tape, another layer of flooding compound, and a polyethylene jacket form a complete mechanical and corrosion-resistant corrosive shield.

DETAILS OF CONSTRUCTION AND MATERIALS

- **Center conductor** — Electrical grade 10% nominal (by volume) copper-clad aluminum (ASTM B-556 Class 10A); solid copper (ASTM B-3).
- **Conductor coating** — Proprietary moisture blocking polymer adhesive.
- **Dielectric** — Foamed polyethylene (Federal Specification LP-390 and ASTM D-1248 prior to foaming).
- **Dielectric coating** — Clean stripping proprietary polymer adhesive.
- **Outer conductor** — Seamless fullwall high purity electrical grade aluminum tube, alloy 1060 (ASTM B-221).
- **Self-healing flooding compound** — Cold flowing, low molecular weight polyisobutylene for self healing.
- **Jacket** — Abrasion resistant linear low density black polyethylene (Federal Specification LP-390 and ASTM D-1248 jacketing material).
- **Armor** — A 0.010" thick steel tape per SAE/AISI 1010 steel.

JACKETED MESSENGERED TRUNK AND FEEDER CABLE T4 PLUS™

RECOMMENDED APPLICATIONS

Jacketed messengered T4 Plus cable is recommended for aerial feeder installations where strand installation is not practical.

FEATURES

- A strong integral galvanized steel wire supports the cable in aerial installations.
- A tough jacket of linear low density polyethylene provides increased abrasion resistance and can be cut and removed easily for connector installation.
- A fully bonded composite construction increases pull strength and resists sidewall pressure damage during installation.
- Bonding of the jacket to sheath provides improved handling characteristics and prevents concealment of aluminum sheath damage.
- Controlled bonding of the core provides high core-to-sheath adhesion (to -40°C) dramatically improving protection against connector pull-outs due to extreme temperature variations and allows the use of standard connectors.
- Bonding of the dielectric to center conductor prevents moisture ingress and can be easily stripped without leaving a harmful residue.
- A reduced bend radius of approximately 8x the outside diameter of the cable allows easy accommodation to vault and pedestal placements.
- Available with increased bandwidth of 5 to 550 MHz.

Jacketed messengered T4 Plus cable is available with a copper-clad or solid copper center conductor. A hard foamed polyethylene dielectric supports the fullwall seamless aluminum outer conductor. A composite construction is obtained by bonding the individual components together, center conductor to dielectric and dielectric to outer conductor, with proprietary polymer adhesives. A galvanized steel wire is integrally attached to the cable by a web of polyethylene that is part of the protective polyethylene jacket over the outer conductor and messenger wire.

DETAILS OF CONSTRUCTION AND MATERIALS

- **Center conductor** — Electrical grade 10% nominal (by volume) copper-clad aluminum (ASTM B-556 Class 10A); solid copper (ASTM B-3).
- **Conductor coating** — Proprietary moisture blocking polymer adhesive.
- **Dielectric** — Foamed polyethylene (Federal Specification LP-390 and ASTM D-1248 prior to foaming).
- **Dielectric coating** — Clean stripping proprietary polymer adhesive.
- **Outer conductor** — Seamless fullwall high purity electrical grade aluminum tube, alloy 1060 (ASTM B-221).
- **Messenger** — Galvanized 0.109 in. solid steel wire (ASTM A-326) or a galvanized 0.188 in. stranded wire (ASTM A-475).
- **Jacket** — Abrasion resistant linear low density black polyethylene (Federal Specification LP-390 and ASTM D-1248 jacketing material).

NOTE: Conventional strand installation of cable offers more mechanical protection than messengered cable. However, where strand installation is not possible, messengered cable offers the next best approach if care is taken to follow the hardware manufacturers' installation instructions and proper cable sags and tensions are used.

JACKETED TRUNK AND FEEDER CABLE T4 Plus™

RECOMMENDED APPLICATIONS

Jacketed T4 Plus cable is recommended for aerial installations in urban and coastal environments where corrosion is more likely. This cable will withstand more abrasion and mechanical abuse than an un-jacketed cable.

FEATURES

- A tough jacket of linear low density polyethylene provides increased abrasion resistance and can be cut and removed easily for connector installation.
- A fully bonded composite construction increases pull strength and resists sidewall pressure damage during installation.
- Bonding of the jacket to sheath provides improved handling characteristics and prevents concealment of aluminum sheath damage.
- Controlled bonding of the core provides high core-to-sheath adhesion (to -40°C) dramatically improving protection against connector pull-outs due to extreme temperature variations and allows the use of standard connectors.
- Bonding of the dielectric to center conductor prevents moisture ingress and can be easily stripped without leaving a harmful residue.
- A reduced bend radius of approximately 8x the outside diameter of the cable allows easy accommodation to vault and pedestal placements.
- Available with increased bandwidth of 5 to 550 MHz.

Jacketed T4 Plus cable is available with a copper-clad or solid copper center conductor. A hard foamed polyethylene dielectric supports the fullwall seamless aluminum outer conductor. A protective jacket of tough linear low density polyethylene is extruded over the sheath. A composite construction is obtained by bonding the individual components together, center conductor to dielectric, dielectric to outer conductor, and sheath to jacket, with proprietary polymer adhesives.

DETAILS OF CONSTRUCTION AND MATERIALS

- **Center conductor** — Electrical grade 10% nominal (by volume) copper clad aluminum (ASTM B-556 Class 10A); solid copper (ASTM B-3).
- **Conductor coating** — Proprietary moisture blocking polymer adhesive.
- **Dielectric** — Foamed polyethylene (Federal Specification LP-390 and ASTM D-1248 prior to foaming).
- **Dielectric coating** — Clean stripping proprietary polymer adhesive.
- **Outer conductor** — Seamless fullwall high purity electrical grade aluminum tube, alloy 1060 (ASTM B-221).
- **Jacket adhesive** — Proprietary non-residue polymer adhesive.
- **Jacket*** — Abrasion resistant linear low density black polyethylene (Federal Specification LP-390 and ASTM D-1248 jacketing material).

*Sequential footage marking on outer jacket available upon request.

UNJACKETED TRUNK AND FEEDER CABLE T4 Plus™

RECOMMENDED APPLICATIONS

Unjacketed T4 Plus cable is recommended for aerial installations in a non-corrosive environment.

FEATURES

- A full wall seamless aluminum tube provides maximum strength, shielding integrity, and low sheath resistance.
- A fully bonded composite construction increases pull strength and resists sidewall pressure damage during installation.
- Controlled bonding of the core provides high core-to-sheath adhesion (to -40°C) dramatically improving protection against connector pull-outs due to extreme temperature variations and allows the use of standard connectors.
- Bonding of the dielectric to center conductor prevents moisture ingress and can be easily stripped without leaving a harmful residue.
- A reduced bend radius of approximately 8x the outside diameter of the cable allows easy accommodation to vault and pedestal placements.
- Available with increased bandwidth of 5 to 550 MHz.

Construction

Unjacketed T4 Plus cable is available with a copper-clad or solid copper center conductor. A hard foamed polyethylene dielectric supports the fullwall seamless aluminum outer conductor. A composite construction is obtained by bonding the individual components together, center conductor to dielectric and dielectric to outer conductor, with proprietary polymer adhesives.

DETAILS OF CONSTRUCTION AND MATERIALS

- **Center conductor** — Electrical grade 10% nominal (by volume) copper-clad aluminum (ASTM B-556 Class 10A); solid copper (ASTM B-3).

JACKETED FLOODED TRUNK AND FEEDER CABLE T4 PLUS™

RECOMMENDED APPLICATIONS

Jacketed flooded T4 Plus cable is recommended for underground, both conduit and direct burial installations. Asphaltic flooding compound may also be used for aerial applications.

FEATURES

- A cold flowing, self-healing (underground) or non-dripping (aerial) flooding compound provides an additional layer of corrosion protection.
- Cable jackets have sequential footage markers for easy determination of the amount of cable remaining on the reel.
- A tough jacket of linear low density polyethylene provides increased abrasion resistance and can be cut and removed easily for connector installation.
- A fully bonded composite construction increases pull strength and resists sidewall pressure damage during installation.
- Bonding of the jacket to sheath provides improved handling characteristics and prevents concealment of aluminum sheath damage.
- Controlled bonding of the core provides high core-to-sheath adhesion (to -40°C) dramatically improving protection against connector pull-outs due to extreme temperature variations and allows the use of standard connectors.
- Bonding of the dielectric to center conductor prevents moisture ingress and can be easily stripped without leaving a harmful residue.
- A reduced bend radius of approximately 8x the outside diameter of the cable allows easy accommodation to vault and pedestal placements.
- Available with increased bandwidth of 5 to 550 MHz.

Construction

Jacketed flooded T4 Plus cable is available with a copper-clad or solid copper center conductor. A hard foamed polyethylene dielectric supports the fullwall seamless aluminum outer conductor. A composite construction is obtained by bonding the individual components together, center conductor to dielectric and dielectric to outer

conductor, with proprietary polymer adhesives. A layer of flooding compound is applied over the outer conductor, and a protective jacket of linear low density polyethylene is extruded over the flooding compound.

JACKETED FLOODED TRUNK AND FEEDER CABLE T4™

FEATURES

- A center conductor coating that is moisture blocking yet strips clean.
- A hard foam dielectric which provides firm support for the full-wall seamless aluminum outer conductor, achieves excellent core-to-outer conductor adhesion, and has superior handling characteristics.
- A protective layer of flooding compound for additional corrosion protection.

T4 DROP LOW COVERAGE BRAID CABLE

The Low Coverage Braid T4 drop cable is recommended for use in areas where low RF signal noise is present and ease of connector installation is not critical.

FEATURES

- A bonded dielectric that blocks moisture yet pulls off easily leaving no residue on the conductor.
- An environmentally resistant black PVC jacket that provides long drop life.
- Uniform web dimensions that allow easy messenger wire separation.

Single—Low coverage braid T4 drop cable has a copper-clad steel center conductor with a hard foamed polyethylene dielectric. An aluminum-polypropylene-aluminum (APA) laminated tape is longitudinally wrapped with an overlap around the dielectric. An aluminum wire braid is then applied over the APA tape, and a protective PVC jacket is extruded over the braid to environmentally seal the construction.

Flooded—The same as the single, except with a layer of flooding compound between the braid and PVC jacket.

Messengered—The same as the single, except with a galvanized steel wire integrally attached by a PVC web that is part of the jacket that covers the braid and messenger wire.

Siamese—The same as the single, except two singles are attached by a PVC web.

Siamese Messengered—The same as the siamese, except a galvanized steel wire is integrally attached by a PVC web.

T4 DROP MEDIUM COVERAGE BRAID CABLE

The Medium Coverage Braid T4 drop cable is recommended for use in areas where moderate RF signal noise is present and easy connector installation is required.

FEATURES

- A bonded dielectric that blocks moisture yet pulls off easily leaving no residue on the conductor.
- An environmentally resistant black PVC jacket that provides long drop life.
- Uniform web dimensions that allow easy messenger wire separation.

Single—Medium coverage braid T4 drop cable has a copper-clad steel center conductor with a hard foamed polyethylene dielectric. A sealed aluminum-polypropylene-aluminum (APA) laminated tape is longitudinally wrapped with an overlap around the dielectric. An aluminum wire braid is then applied over the sealed APA tape, and a protective PVC jacket is extruded over the braid to environmentally seal the construction.

Flooded—The same as the single, except with a layer of flooding compound between the braid and PVC jacket.

Messengered—The same as the single, except with a galvanized steel wire integrally attached by a PVC web that is part of the jacket that covers the braid and messenger wire.

Siamese—The same as the single, except two singles are attached by a PVC web.

Siamese Messengered—The same as the siamese, except a galvanized steel wire is integrally attached by a PVC web.

T4 DROP HIGH COVERAGE BRAID CABLE

The High Coverage Braid T4 drop cable is recommended for use in areas where moderate to high RF noise level is present.

FEATURES

- A bonded dielectric that blocks moisture yet pulls off easily leaving no residue on the conductor.
- An environmentally resistant black PVC jacket that provides long drop life.
- Uniform web dimensions that allow easy messenger wire separation.

Single—High coverage braid T4 drop cable has a copper-clad steel center conductor with a hard foamed polyethylene dielectric. A sealed aluminum-polypropylene-aluminum (APA) laminated tape is longitudinally wrapped with an overlap around the dielectric. An aluminum wire braid is then applied over the sealed APA tape, and a protective PVC jacket is extruded over the braid to environmentally seal the construction.

Flooded—The same as the single, except with a layer of flooding compound between the braid and PVC jacket.

Messengered—The same as the single, except with a galvanized steel wire integrally attached by a PVC web that is part of the jacket that covers the braid and messenger wire.

Siamese—The same as the single, except two singles are attached by a PVC web.

Siamese Messengered—The same as the siamese, except a galvanized steel wire is integrally attached by a PVC web.

T4 DROP QUADSHIELD CABLE

Quadshield T4 drop cable is recommended for use in areas where a high to very high RF noise level is present.

FEATURES

- A bonded dielectric that blocks moisture yet pulls off easily leaving no residue on the conductor.
- An environmentally resistant black PVC jacket that provides long drop life
- Uniform web dimensions that allow easy messenger wire separation

Single — Quadshield T4 drop cable has a copper-clad steel center conductor with a hard foamed polyethylene dielectric. A sealed aluminum-polypropylene-aluminum (APA) laminated tape is longitudinally wrapped with an overlap around the dielectric. A medium coverage aluminum wire braid is applied over the sealed APA tape, an unsealed APA tape is applied over the braid, a low coverage aluminum wire braid is applied over the unsealed tape, and a protective PVC jacket is extruded over the braid to environmentally seal the construction.

Flooded — The same as the single, except with a layer of flooding compound between the braid and PVC jacket.

Messengered — The same as the single, except with a galvanized steel wire integrally attached by a PVC web that is part of the jacket that covers the braid and messenger wire.

Siamese — The same as the single, except two singles are attached by a PVC web.

Siamese Messengered — The same as the siamese, except a galvanized steel wire is integrally attached by a PVC web.

DISTRIBUTION AMPLIFIERS

Distribution amplifiers are designed to amplify signal voltage to overcome the inherent distribution system losses and provide adequate signal level to receiver.

EAGLE SERIES

Eagle series distribution amplifiers are designed mainly for CATV systems. It can handle 30 channels present simultaneously with no perceptible distortion. Ideal for multi outlet home or garden apartments which hook up to a CATV system or to a master antenna system.

EAGLE SERIES DISTRIBUTION AMPLIFIERS SPECIFICATIONS

MATCHING TRANSFORMER

MODEL MT-101

75 to 300 ohm matching transformer — designed to handle the most difficult of direct pick-up problems.

SPECIFICATIONS

- Frequency Range: 5-450 MHz
- Insertion Loss: .5 dB max.
- Balance: 40 dB min.
- Return Loss: 18 dB min.
- Response: ±.25 dB max.
- Isolation: 1000V min.

FEATURES

- Heavy Duty Twin Lead
- Soldered and Crimped Lugs
- Brass Connector
- PC Board
- 3 Capacitors
- Metal Case with Plastic Cover

DISTRIBUTION AMP/ TRANSFORMERS/SPLITTER

MATCHING TRANSFORMER WITH FILTER

MODEL MT-102

Matching transformer with high pass filter — designed to block interference caused by C.B., Ham Radio, Two-way Communication, Industrial Equipment, Auto Ignition, X-ray, etc.

SPECIFICATIONS

- Frequency Range: 50-450 MHz
- Insertion Loss: .9 dB max.
- Balance Ratio: 30 dB min.
- Return Loss: 18 dB min.
- Cut-off Frequency: 50 MHz
- Filter Attenuation: 35 dB min. (5-35 MHz)

FEATURES

- Heavy Duty Twin Lead
- Soldered and Crimped Lugs
- Brass Connector
- P.C. Board
- Totally Shielded Housing

TF-7

TV FM SPLITTER

MODEL TF-7

TV/FM Splitter — designed to separate TV and FM signals. Eliminates the interference between FM and TV set.

SPECIFICATIONS

- Frequency Range: TV — 5-88 & 120-300 MHz;
FM — 88-110 MHz
- Insertion Loss: TV — .7 dB max.; FM — 3 dB max.
- FM Rejection on TV Output: 35 dB min.
- TV Rejection on FM Output: 25 dB at Ch. 2 and 7
- Return Loss: 18 dB min.

FEATURES

- Brass Connector
- Epoxy Sealing
- Chrome Plated

SPLITTERS

MODEL TF-7A

MODEL TF-7A TV FM SPLITTER

SPECIFICATIONS:

Frequency Range: 5-450 MHz
Insertion Loss: TV 0.5 dB max.
FM 4 dB max.
Isolation: TV-FM 120-150 MHz 22 dB min.
150-300 MHz 35 dB min.
300-450 MHz 30 dB min.
Impedance: 75 ohm

Same features as TF-7

MODEL OS-201

MODEL OS-201 OUTDOOR 2-WAY HYBRID SPLITTER

SPECIFICATIONS:

Bandwidth: 5-450 MHz
Insertion Loss: 3.2 dB max.
Frequency Response: $\pm .25$ dB
Isolation Between Output: 30 dB min.
Return Loss: 20 dB min.

FEATURES:

- Weatherproof and corrosion resistant die cast A-360 aluminum alloy housing
- Built-in grounding block
- Stand mounted or wall mounted
- Epoxy sealing

MODEL FCB-1

MODEL FCB-1 HIGH PASS FILTER

SPECIFICATIONS:

Frequency Range: 54-450 MHz
Cut Off Frequency: 50 MHz
Insertion Loss: 1 dB
Filter Feature: 35 dB
Impedance: 75 ohm

MODEL OS-401

MODEL OS-401 OUTDOOR 4-WAY HYBRID SPLITTER

SPECIFICATIONS:

Bandwidth: 5-450 MHz
Frequency Response: $\pm .25$ dB
Insertion Loss: 7 dB max.
Return Loss: 20 dB min.
Isolation: 30 dB min.

FEATURES:

- Weatherproof and corrosion resistant die cast A-360 aluminum alloy housing
- Built-in grounding block
- Stand mounted or wall mounted
- Epoxy sealing

SPLITTERS

SP-203

SP-204

2-WAY HYBRID SPLITTERS

MODELS SP-203, SP-204

Indoor 2-way hybrid splitters. Designed to divide signal into two, provide high isolation between outputs.

SPECIFICATIONS

Bandwidth: 5-450 MHz
Insertion Loss: 3.2 dB max.
Frequency Response: ± 25 dB
Isolation Between Output: 30 dB min.
Return Loss: 20 dB min.

FEATURES

- Totally Shielded Housing
- Brass Connector
- Epoxy Sealing

SP-301

3, 4-WAY HYBRID SPLITTERS

MODELS SP-301, SP-401

3, 4-Way indoor hybrid splitters — to divide signal into 3, 4 outputs.

SPECIFICATIONS (SP-301)

Bandwidth: 5-450 MHz
Frequency Response: ± 25 dB
Insertion Loss: 3.5 dB max., 1 port; 7.0 dB max., 2 ports
Return Loss: 20 dB min.
Isolation: 30 dB min.

SP-401

SPECIFICATIONS (SP-401)

SP-202

2-WAY HYBRID SPLITTERS

MODEL: SP-201, SP-202—

Indoor/Outdoor

SPECIFICATIONS

- Bandwidth: 5-450MHz
- Insertion loss: 3.2dB max.
- Frequency response: $\pm .25$ dB
- Isolation between output: 30dB min.
- Return loss: 20dB min.

FEATURES:

- Nickel plated die cast housing
- Built-in grounding block (SP-201)
- Totally weather shielded
- Stainless steel bottom plate
- Epoxy sealing

SP-802

8-WAY HYBRID SPLITTER

MODEL SP-802—Indoor/Outdoor

SPECIFICATIONS

- Bandwidth: 5-450MHz
- Frequency response: $\pm .25$ dB
- Insertion loss: 10dB
- Return loss: 20dB min.
- Isolation: 30dB min.

FEATURES

- Nickel plated die cast housing
- Totally weather shielded
- Stainless steel bottom plate
- Epoxy sealing

TOWERS

ROHN NO. 25G TOWER

General Purpose Communication or Heavy-Duty TV Tower. The 25G will satisfy a tremendously wide range of tower needs.

Built on a 12-1/2" equilateral triangular design with continuous steel "zig-zag" cross-bracing entirely electric welded and fabricated in precision equipment. The 8 "zig-zag" braces per 10' section mean more than usual strength.

CONSTRUCTION

Unequalled Sturdiness...Extra heavy-duty 1-1/4" steel tubing is used for side rails, resulting in far greater strength and sturdiness than ordinarily found in this size tower. SUPERIOR STRENGTH.

FINISH

Famous ROHN Hot-Dip Galvanized long-life finish.

SPECIAL FEATURES

The No. 25G uses double-bolted joints...proven the best method of joining tower sections for sturdiness and dependability. The extra strength of the No. 25G allows it to be self-supporting provided a house bracket is used and can go 35 feet above this bracket under normal conditions. Under most guyed conditions the No. 25G is suitable to heights of 200 feet. Where special conditions or unusual antenna loading requirements must be met, we suggest you contact the Engineering Department for complete information. Assembly bolts and nuts are located within 1 leg of each tower section.

SELF-SUPPORTING HEIGHTS FOR 25G TOWER*

WIND LOAD	Factor of Safety—1.5		Factor of Safety—2.3	
	No. Ant.	2 Ft. ²	No. Ant.	2 Ft. ²

*DR25G	2' drive rods (set of 3) 6
DT25	Drive tool 1
RP25G	Rotor post 3
RP25GCM	Rotor post 2
AS25G	Accessory shelf. Triangular plate for mounting Ham "M" rotor or mast bearing. Mounts inside of tower. When using Model 400 Rotor, plate must be redrilled 4
GA25G	Guy assembly (bracket with torque bars) 10
GB25G	Guy bracket only 6
HB25AG	Adjustable house bracket (0 to 15") 6
HB25BG	Adjustable house bracket (0 to 24") 11
HB25CG	Adjustable house bracket (0 to 36") 17
HBU	Universal house bracket (6" to 30") 15
EB2525G	Eave bracket (universal) 7
TB50	Tower bushing for 25AG and ST25AG tops (1-1/4" I.D. x 2" O.D.) 1/2
TB75	Tower bushing for 25AG and ST25AG tops (1-1/2" I.D. x 2" O.D.) 1/2
AB	Amateur bearing for use with 25AG4 top (2" x 4" x 10" hardware) 1
TB3	Heavy duty thrust bearing, recommended for 2" O.D. tubing 2-1/2
TB4	Heavy duty thrust bearing, recommended for 3" O.D. tubing 3
BPL25G (Disc.)	Top plate with guy lugs for mounting AB or TB3 bearing 7
BAS25G	Bearing/accessory shelf section for mounting AB or TB3 bearing and rotor 18
UHF25G	Side arm mount for UHF and FM antennas 4
SA253UA	Side arm bracket for top antenna mounting alongside beacon (2-1/2" O.D. tubing, 36" total length) 15
SA25G67	67" side arm with 1-1/4" I.D. support tube for mounting TV receiving antenna (not recommended and must be guyed to resist twist) 25
TA25	Torque arm stabilizer assembly 35
25TDM2	Top dish mount w/2" O.D. mast (extends 2' above top plate) 34
25TDM2SP	Top dish mount w/2" standard pipe (extends 3' above top plate) 44
25TDM2EH	Top dish mount w/2" EH pipe (extends 3' above top plate) 53
25TDM25SP	Top dish mount w/2-1/2" standard pipe (extends 3' above top plate) 58
DM25G2	Face dish mount w/2" (2-3/8" O.D.) 5' long standard pipe 42
WP25G	Work platform (for #25 and #20 towers) 10
SR245	Safety ring 6
EF2545	Aluminum erection fixture, 12' long (fits all models with 1-1/4" side rails) 18
P2545	Pole only for EF2545 10
H2545	Head only for EF2545 6

*Towers mounted on these bases must be bracketed or guyed.

ROHN® NO. 45 COMMUNICATION TOWER

This tower is an 18 inch triangular pattern suitable for heights to 300 feet with proper guying. A true multi-user tower.

DESIGN

ROHN No. 45 tower is designed in an 18 inch equilateral triangular pattern. The three legs of the tower are of heavy, 14 gauge, special quality steel. The cross bracing is the ROHN "zig-zag" design using a continuous, solid steel rod, electric welded to side rails every 15 inches. All sections are 10 feet in length.

USAGE

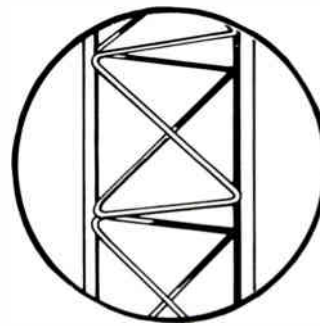

This tower is suitable for mounting communication antennas or other equipment under normal conditions for heights up to a maximum of 300 feet. See specification sheets for complete guying and wind load information.

#45 TOWER		Wt.
45G	10' tower section	70

55

ROHN® NO. 55 COMMUNICATION TOWER

GENERAL USE

This tower lends itself to a wide variety of uses commonly encountered in the communications field. Adaptability to varying heights and loading requirements are two of the strong points for this model.

DESIGN

This tower was engineered to provide excellent strength in heights up to 400 ft. in a 30 lb. per sq. ft. wind load. When properly installed and guyed, this tower will support approximately 10 sq. ft. of antenna. Because of this rugged design the No. 55 tower satisfies a broad range of communication uses, particularly where unusual wind loading and height requirements exist.

CONSTRUCTION

Constructed on an 18-1/2" equilateral triangle pattern, utilizing 1-1/2" high-strength tubing for the side rails. The "zig-zag" cross bracing is formed from a continuous 7/16" solid steel rod electrically welded every 15-3/4" on the side rails. Each 10' section is sleeve joined to the other and double bolted to provide superior strength.

#55 TOWER		Wt.
55G	10' tower section	100
55TG	10' tapered base section	158
*55ACL	10' welded anti-climb section	185
*55ACL3	3 anti-climb metal sheets for attaching to tower section	100

TOWERS

ROHN NO. 80 COMMUNICATION TOWER

This tower is designed specifically for microwave installations, heavy duty communications, TV and FM broadcast and meteorological equipment installations.

CONSTRUCTION

The No. 80 tower is constructed in an equilateral triangular pattern with steel legs and crossbracing in a pattern as indicated by the insert. The triangular size is 41" on leg centers and the diameter of the tower legs vary to meet the requirements of the installation. This feature permits considerable flexibility in supplying a tower tailored to specifically meet and adequately handle the equipment to be installed. Cross-bracing is of tubular steel with bolted construction.

FINISH

All components of this tower are completely hot dip galvanized after fabrication to protect all areas of the tower. A minimum of 2 ounces of zinc of square feet of surface is applied throughout including bolts.

RATING

This tower is rated for installation up to 800 feet using variable size and weight of tubular steel components. Each tower is individually engineered to handle a particular job.

TOWERS

SSV SELF-SUPPORTING COMMUNICATION TOWERS

- Designed for a minimum wind load of 30 psf. Towers requiring higher wind or ice loads are no problem due to the tower's amazing versatility.
- Standard designs available in heights to 500 feet depending on loading. Special towers available depending on specific requirements.
- The SSV series make use of primarily knock-down construction for on-site assembly, which reduces shipping costs.
- Towers for minimal loadings are available in welded construction in heights up to 60 feet, shipped in 20 foot sections.
- All components and hardware are Hot Dip Galvanized after fabrication with a zinc coating per E.I.A. Standards.
- All ROHN SSV series towers are engineered, designed and fabricated to meet or exceed latest E.I.A. specifications.

SSV SELF SUPPORTING TOWER

Anchor Bolts for Standard and Heavy Duty Sections

Part Number	Wt.
Individual Anchor Bolts (12 required per tower)	
3/8X18AB For sections 1 and 2	3/4
1/2X24AB For section 3	1-1/2
5/8X30AB For sections 4, 5, 6, 7, 8 and 9	3
3/4X36AB For section 10	5-1/2
7/8X42AB For sections 11, 12 and 13	9
1X48AB For sections 14, 15N and 16N	13
1X72AB For sections 15NH and 16NH	18

Anchor Bolt Assemblies

6NAB For sections 6N, 7N, 8N, 9N and 9NH (consists of 12-5/8X30AB w/templates)	45
10NAB For sections 10N and 10NH (consists of 12 - 3/4X36AB w/templates)	70
11NAB For sections 11N, 12N, 12NH, 13N and 13NH (consists of 12 - 7/8X42 w/templates)	120
14NAB For sections 14N, 14NH, 15N and 16N (consists of 12 - 1X48AB w/templates)	165
15NHAB For sections 15NH and 16NH (consists of 12 - 1X72AB w/templates)	225

Accessories for Standard and Heavy Duty Sections

	WT.
Tapered Tops	
1TT For sections 1W, 1WB or 2W	18
3TT For sections 2WB, 2WST or 3WN	20
4TTN For sections 3WNB, 3WNST or 4N	21
5TTN For sections 4NB, 4NST or 5N	23
6TT For sections 5NB, 5NST or 6N	25
4' Short Base Sections	
SB2 For section 2W	45
SB3 For section 3WN	65
SB4 For section 4N	80
SB5 For section 5N	105

Beacon Plates and Cap Plates

APL1W2WA Beacon plate for section 1W or 2W	26
APL3WNA Beacon plate for section 3WN	23
APL4A Beacon plate for section 4N	13
APL4HA Beacon plate and two cap plates for sections 5N or 6N	15
APL5A Beacon plate and two cap plates for sections 7N, 8N, 9N or 10N	15
APL6A Beacon plate and two cap plates for section 11N	16
APL7A Beacon plate and two cap plates for sections 12N, 13N or 14N	17
CP4A Cap plates (set of 3 w/nuts and bolts) for section 6N	15
CP5A Cap plates (set of 3 w/nuts and bolts) for sections 7N, 8N, 9N or 10N	15
CP6A Cap plates (set of 3 w/nuts and bolts) for section 11N	15
CP7A Cap plates (set of 3 w/nuts and bolts) for sections 12N, 13N or 14N	15
BCA5A Beacon plate, cap plate and antenna support tube for sections 6NST, 7N, 8N, 9N or 10N	36
BCA6A Beacon plate, cap plate and antenna support tube for section 11N	37
BCA7A Beacon plate, cap plate and antenna support tube for sections 12N, 13N or 14N	39

Side Arm Brackets for Top Antenna Mounting Alongside Beacon

SAB1W For section 1W	15
SAB2W For section 2W	15
SAB3WN For section 3WN	15
SAB45N For sections 4N or 5N	15
SA32PL For sections 6 and 7	100
SA325PL For sections 8, 9 and 10	100
SA33PL For section 11	100

Type 1W Side Arm Booms for SSVN Sections**

SSV256B 6' boom for sections 2 through 5	61
SSV259B 9' boom for sections 2 through 5	81
SSV66B 6' boom for section 6	69
SSV679B 9' boom for sections 6 and 7	89
SSV6712B 12' boom for sections 6 and 7	110
SSV715B 15' boom for section 7	133
SSV89B 9' boom for section 8	92
SSV8912B 12' boom for sections 8 and 9	113
SSV891015B 15' boom for sections 8, 9 and 10	136
SSV91018B 18' boom for sections 9 and 10	147

**Boom lengths mentioned above are the total length of the boom. Each boom includes an antenna mast kit w/2" (2-3/8" O.D.) 3' long standard pipe and hardware, plus kit w/hardware for mounting boom to required section. NOTE: Total required boom length is determined by section number, section width at mounting elevation and amount of the boom needed as side arm to extend beyond face of tower on one side. (See appropriate drawings for face widths of tower sections and Dwg. C-710348 for boom installation information).

Miscellaneous

LSSVN Ladder, leg mounted	4/ft.
LSSVNIX Ladder, inside corner mounted, for X-braced sections 7NST through 16	8/ft.
DMSSL Leg dish mount w/4" (4-1/2" O.D.) 5' long standard pipe	135
DMSSLTB Leg dish mount (same as above) with tie back clips	150
RMBSS Reflector mount (for leg mounting)	130
EFSSV Erection fixture, 16' long (for use w/sections 2 through 10 only)	90
EFSSVRH Erection fixture (same as above) with rotating head	100

NOTE: Erection fixtures should be used to raise 10' or 20' sections only (one section at a time).

TEST EQUIPMENT

TVRO/BENCH SWEEP SYSTEM MODEL 1084

Model 1084 is an economical sweep generator that features simple operation, 1% display linearity, and digital readout.

Versatile Testing With Adjustable Bandwidths From 200kHz to 1GHz
Model 1084 has three operating modes (CW, ΔF , and Full Sweep) to facilitate both broadband and narrowband measurements. In the CW mode, frequency is selected by the frequency control and is displayed by the frequency indicator with 1MHz resolution. In the ΔF mode, center frequency is selected by the frequency control and sweep width is controlled by a 100MHz step selector and 100MHz vernier. In the Full Sweep mode, the instrument sweeps from 3.5 to 4.5GHz. The marker frequency is identified by the four-digit vacuum fluorescent display.

Test Made Simple At Any Sweep Rate

Simple pushbutton control of the sweep characteristics of Model 1084 is achieved through the use of digital front-panel circuitry.

The instrument is equipped with two sweep modes and three sweep rates. The single sweep mode, which is manually initiated by the trigger button, enables the unit to sweep through a single cycle. The recur mode allows the unit to automatically sweep through continuously repeating cycles. Sweep time is continuously variable from 0.01 to 100 sec. sweep. Additionally, a line-locked sweep rate may be selected (sweep time equals one-half line period).

Accurate Frequency Location

Wavetek's Model 1084 includes a built-in marker system to aid in simple location of frequency and sweep width. Birdy bypass markers with frequencies of 1, 10, and 100MHz located harmonically through the spectrum are tools for the operator to accurately locate any given frequency with 1MHz resolution. This crystal-controlled system eliminates guessing or the need for calibrated external marker inputs except for those measurements requiring identification of specific frequencies with resolutions better than 1MHz. An external marker input is provided and is controlled via an external frequency source for those applications.

Power Level Accurately Displayed

For compatibility with both small signal and medium-power testing, the unit has an output level of +13dBm and is continuously adjustable to -60dBm. Output level is read from a three-digit vacuum fluorescent display with .1dBm resolution. Additionally, the instrument's level system has a 10dB/step attenuator for coarse level settings, and an 11dB vernier which utilizes an electronic P.I.N. diode attenuator. This enables the user to finely adjust signal level for extremely accurate measurements.

System Level Correction

Inaccuracies found in test setups caused by high-frequency rolloff of system components, such as adaptors, cables or "lossy" connectors, can be compensated for via the slope control on the rear panel of the instrument. Simply connect all system components except for the device under test. Look at the detected response of the network and adjust the slope control ($\pm 1\text{dB/GHz}$) to compensate for inherent system errors which typically result in undesirable high-frequency rolloff. Then insert the device under test in the setup. Absolute gain or loss measurements can now be made.

Signal Generator Measurements Possible

In many communications systems, the sweep test at some point loses its effectiveness and signal generators take over where the sweep generator leaves off. Model 1084 Sweep Generator not only is a cost-effective sweep source, but, through a very simple interface to a phase-locking counter, can take up the slack in system testing and replace a signal generator for some measurements. This makes it unnecessary to purchase two RF sources and reduces the chance of error caused by testing the same device with signals of differing purity. Thus, the system not only has phase-locking capabilities, but can also adapt the instrument to the IEEE-488 bus.

SPECIFICATIONS MODEL 1084

FREQUENCY	
Range	3.5 to 4.5 GHz
Sweep Width	ΔF 500 kHz to 1000 MHz Full Sweep 3.5 to 4.5 GHz
Readout	3 1/2 digit LED
Resolution	1 MHz
Operating Modes	CW, ΔF , and Full Sweep
Accuracy	CW, Center Frequency of ΔF , and Variable marker, ± 10 MHz Frequency accuracy can be improved to ± 1 MHz at a specific frequency Sweep width at 100 MHz intervals ± 10 MHz
Display Linearity	1% at maximum sweep width
Drift	< 800 kHz for 10 minutes <i>NOTE: At a constant temperature after 1 hour warm up</i>
RF OUTPUT	
Impedance	50 Ω
Output Connector	Type N
Power Level Range	+13 to -60 dBm (50 Ω)
Attenuation	Continuously adjustable in 10 dB steps with a 11 dB vernier. Output level is displayed on a 3 digit readout with 0.1 dB resolution
Accuracy	Step attenuator $\pm (0.3 \text{ dB} + 1\% \text{ of attenuation})$ Vernier attenuation $\pm 0.5 \text{ dB}$
Output Flatness	$\pm 0.5 \text{ dB}$
SPECTRAL PURITY	
Harmonic Output	> 30 dBc
Nonharmonics	Non-detectable
Residual FM (CW Mode)	< 10 kHz peak
SWEEP CHARACTERISTICS	
Sweep Modes Recurring and single sweep	
Sweep Time	
Fast	0.010 to 1 sec (typical)
Slow	1 to 100 sec (typical)
Line	$\sim 1/2$ of AC line period
Horizontal Output	0 to 10 volts Impedance 1000 Ω
Blanking	RF output is blanked during sweep retrace

MARKER SYSTEM

RF Markers	Birdy bypass marker system is controlled by front-panel switch which provides selection of harmonic markers in these combinations 100 MHz only, 100 MHz and 10 MHz, or 100 MHz, 10 MHz, & 1 MHz
Accuracy	0.005%
Width	Adjustable from approximately 100 to 500 kHz
Amplitude	Adjustable from approximately 1 mV to 1.5V p-p
Variable Marker (Full Sweep Mode Only)	
	The 10-turn potentiometer and 3 1/2 digit frequency display function as variable marker. The marker produces a bright spot on the display by momentarily delaying the sweep ramp for approximately 2 msec. Accuracy is ± 10 MHz

REMOTE PROGRAMMING

Frequency	Rear-panel jack permits remote control of center frequency, sweep width and external frequency modulation
Level	Rear-panel jack permits external control of RF output level over greater than 10 dB range
Trigger	TTL input, during high to low transition Also, by contact closure to ground

OUTPUTS

Pen Lift	Contact closure during sweep
Blanking	-15V during sweep +15V during retrace
Sweep	0 to 10V
Reference	Output of 1W/100 MHz
Power Supply	+18V, -18V, and common. External current limited to 10 mA

GENERAL

Dimensions	28.6 cm (11 1/4 in.) wide, 13.3 cm (5 1/4 in.) high, 26.7 cm (10 1/2 in.) deep
Weight	4.9 kg (10 3/4 lb.) net, 6.8 kg (15 lb.) shipping
Power	90 to 110V, 105 to 125V, 190 to 220V, or 210 to 250V, 50 to 400 Hz, approximately 35 watts.

TEST EQUIPMENT

MODELS 1067/1075/1801-B 1 to 500 MHz BENCH SWEEP SYSTEM

A complete system is available for sweep testing amplifiers, filters, and passives. With a good sweep system you can maintain your system components and avoid lengthy factory repair cycles. A Bench Sweep System also permits you to check components before they are installed in your system.

A Bench Sweep system is comprised of a sweep and marker generator, a comparator, and an oscilloscope. The WAVETEK 400 MHz system offers you a choice of the Basic Model 1067 Sweep Generator or the more flexible Model 1801B Laboratory Style Sweeper. The sweeper is used in conjunction with the Model 1075 Comparator and the 1901C Large Screen Oscilloscope. The sweep generators both contain built-in marker generator systems, and can be purchased separately for use with existing scopes or comparators.

The Sweep Generator Comparator system can also be purchased for use with your own oscilloscope.

MODEL 1076 SWEEP COMPARATOR

The Model 1076 Sweep Comparator allows easy, accurate measurement of frequency response characteristics of 75-ohm amplifiers and passive devices, by simultaneously displaying the input and output of the device on an oscilloscope screen. Calibrated attenuators allow the traces to be superimposed, permitting measurement of gain or loss at any frequency. A logarithmic detector allows measurement of return loss to 40 dB, using a bridge.

The 1076 is used in conjunction with a sweep generator, which provides RF, markers, and DC power. Frequency response of the 1076 is 1 to 1000 MHz. Gain may be measured to 79.9 dB on 0.1 dB steps; loss is measurable to at least 65 dB.

The sweep is switched alternately between the reference channel and the channel containing the unit under test. The reference channel is closely matched to the test channel, including the length of the cables connecting to the unit under test, so that the only difference between the channels is the presence of the unit under test. Gain is measured by attenuating the test channel until the traces match; loss is measured by attenuating the reference channel. An RF post amplifier drives the internal detector. The detector output may be shaped to provide logarithmic or quasi-linear response.

The 1076 plugs directly into the Wavetek Models 1067, 1067-522, 1801B, and 1081.

SPECIFICATIONS MODEL 1067

RF SPECIFICATIONS		Sweep Time	Continuously variable from less than 0.5 Hz to more than 60 Hz
Frequency Range	1 to 400 MHz (1 to 500 MHz optional)	Horizontal Output	10V p-p triangular waveform symmetrical about ground
Dial Calibration	50 MHz intervals (frequency vernier included)	MARKER SYSTEM	
Accuracy in CW Mode (at 25 °C)	5% of full sweep	RF Markers	Fuse and Birdy-type markers are provided by plug-in "A" Option. Six sockets are provided for these options. Birdy marker modules use one socket, pulse markers use two
Sweep Width	200 kHz to 400 MHz w/log taper continuously adjustable	Accuracy	Pulse 0.02% (at leading edge) Birdy 0.005% (at center)
Display Linearity	2%	Width	Pulse 80 us Birdy adjustable, 100 to 400 kHz
Spurious Signals		Amplitude	Adjustable approximately from 2mVpp to 2Vpp
Fundamental	(10 to 400 MHz)	REMOTE PROGRAMMING	
Harmonic	-30 dB below output	A rear-panel connector is provided for remote control of frequency, sweep width and the 20 dB vernier level control. The connections can also be used to provide external AM or FM. Also provided is access to ±18 V (30 mA), blanking and scope horizontal signals to drive the Model 1075 Comparator	
Nonharmonic	30 dB below output	MECHANICAL	
Residual FM (CW mode)	less than 20 kHz	Dimensions	28.6 cm (11 1/4 in.) wide, 10.2 cm (4 in.) high, 26.7 cm (10 1/2 in.) deep
Stability	100 kHz/5 minutes - 2 MHz/8 hours (after 1/2 hour warm-up at constant temperature and allowing a 5 minute stabilizing period after a frequency change)	Weight	3.7 kg (8.25 lbs.) net, approximately 5.5 kg (12 lbs.) shipping
Blanking	Retrace blanking of the RF output provided for sweep operation. Removed for CW operation.	Power	115 or 230 VAC ±10%, 50 to 60 Hz, 25 VA max
Impedance	75 ohms (50 ohms available at no extra cost)	ENVIRONMENTAL	
Output Amplitude (Max)	+10 dBmV	Specifications apply at 25 °C ± 5 °C. Instrument will operate from 0 °C to 50 °C	
Level Calibration	50 dB in 10 dB steps, vernier with +7 to -7 dBmV calibrated in 1 dB intervals		
Accuracy			
Vernier	±1.0 dB		
Step Attenuator	±0.2 dB/10 dB step		
Output Flatness	±0.25 dB (Measured with Wavetek D171 detector and includes an AC-DC block (100 V max.) in RF output line)		
Output Connector	Type F		

SWEEP SPECIFICATIONS

Sweep Modes: Repetitive sweep, single sweep, externally triggered sweep, line-locked sweep

SPECIFICATIONS MODEL 1076

Frequency	1 to 1000 MHz
Gain Measurement Range	79.9 dB in 0.1 dB steps.
Loss Measurement Range	65 dB minimum with 1 millivolt/div. oscilloscope.
Impedance	75-ohm.
Connectors	75-ohm BNC.
Error Display (LEDS)	Excess sweep input will overload internal RF Post Amplifier.
DEMODO Out	Low impedance, 5000 Ohms nominal 0.5 to 0.7 volt, positive.
Scope Display	Linear, normal and log (30 dB).
Power	Supplied by associated sweep generator.
Balance Adjustment Range	±1 dB level; ±1 dB slope
GAIN/LOSS ACCURACY	
	Error - dB
Balance Ref. to Test	2-500 MHz ±0.05 1-1000 MHz ±0.15
0.1 dB attenuator	±0.1 ±0.2
1 dB attenuator	±0.2 ±0.25
10 dB attenuator	±0.5 ±1
Maximum error	±0.85 dB ±1.60 dB

TEST EQUIPMENT

1901C

MODEL 1901C, 12-INCH MODEL 1905, 9-INCH DISPLAY SCOPES

MODEL 1901C

The 1901C Display Scope is designed to display sweep system responses. It is an excellent display for Bench Sweep Systems as well as set Top Converter Sweep Displays. The large 12" display lets you easily see amplifier responses over wide 300 to 400 MHz sweep ranges. This dedicated display (no internal sweep) is available with P-7 phosphor as well as the standard P-1. This unit also has an automatic blanking circuit preventing phosphor damage by blanking the CRT when the horizontal input is removed.

SPECIAL MARKER DISPLAY

The 1901C has a Z axis modulation circuit that is designed to accept standard Birdy Markers and produce pinball (bright spot) markers on the sweep display. This is extremely useful when using a variety of markers such as those available with the 1402A converter sweeper. It also is easier to identify markers on the steep response of traps or other pass band type responses.

STABLE DISPLAY

The 1901C provides a very stable display. After a half hour warm-up, the trace will drift less than a half division in an eight hour period. This eliminates annoying trace repositioning while working on amplifiers or converters for an extended period of time.

OPTIONS

- A:** P-4 medium short persistence phosphor (white).
- B:** P-7 Long persistence phosphor.
- C:** Clear faceplate (instead of grid).
- D:** Amber faceplate (normally used with P-7 Phosphor) without grid.
- E:** Amber faceplate with grid.

SPECIFICATIONS MODEL 1901C

DISPLAY	CRT 12 inch diagonal (30 CM)	HORIZONTAL	Sensitivity Continuously adjustable from 0.1 V/div. to over 10 V/div
Phosphor	P-1 (medium persistence - green)	MARKER ADDER	Input Signal Pulse or birdy
VERTICAL		Sensitivity (Max)	Typically 0.5 V/div (continuously adjustable with rear-panel control)
Sensitivity	4 position step attenuator for 1, 10 and 100 mV and 1 V/div. continuously variable vernier between steps	Polarity	Rear-panel switch provides polarity reversal
Bandwidth	DC to 15 kHz	Input Impedance	Approximately 15 K ohms
Drift	Typically less than 1/2 div for 8 hours (at a constant temperature after 1/2 hour warm-up)		
Polarity	Front-panel switch for inversion of vertical signal		

1905

MODEL 1905

The Model 1905 is a low cost, electromagnetic, X-Y display scope, ideal for use in displaying the sweep response of passive or active circuits. High performance and low cost make this scope an excellent choice for engineering laboratories, bench application, production facilities, educational institutions, and original equipment manufacturers.

VERSATILITY

The Model 1905 weighs only 15 lbs. It is a versatile unit which occupies a small area of bench space. In addition to its compact size, it has a rugged exterior and carrying handle for easy portability to a site location. The simple straightforward design of the magnetic deflection tube is ideal for point-by-point image construction. There is no degradation of spot size as is normally found in electrostatic deflection tubes.

ULTRASTABLE DISPLAY

The Model 1905 features a large 9-inch diagonal CRT with a bright, stable, focused trace for ease of viewing. An automatic blanking circuit prevents phosphor damage by blanking the CRT when the horizontal input or the vertical input is removed.

PHOSPHORS

The standard phosphor for Model 1905 is P-1, a green phosphor. Other phosphors are available on special order.

SPECIFICATIONS MODEL 1905

CRT DISPLAY	23 cm diagonal (9 in.)	Drift	Typically less than 1/2 div for 8 hours (at a constant temperature after 1/2 hour warmup)
Phosphor	P-1 is standard Other phosphors are available on special order.	Protection Circuit	Autobanking protects the phosphors in the event of loss of deflection signal. Either horizontal or vertical signals of about 4 div. (<60 Hz) will cause "unblanking"
Graticule	1.2 cm/div., 10 vertical, 14 horizontal.	Z AXIS	
Deflection	Magnetic.	Sensitivity	Adjustable from 1 to 10V p-p for full intensity modulation via rear panel contrast control
Acceleration Voltage	8KV nominal.	Input Impedance	20 k Ω
VERTICAL		Bandwidth	Flat from dc to 1 MHz, 3 dB down at 3.5 MHz, 10 dB down at 10 MHz
Sensitivity	4-position step attenuator for 1, 10 and 100 mV and 1 V/div., continuously variable vernier between steps.	Polarity	Positive going voltage intensifies the trace Internally changeable for positive blanking
Impedance	374 k Ω	Input Connector	BNC, rear panel
Bandwidth	DC to 15 kHz	GENERAL	
Coupling	Switchable ac-dc (when ac coupled, maximum dc voltage plus ac peak not to exceed 200V).	Dimensions	29.8 cm (11 3/4 in.) wide, 24.8 cm (9 3/4 in.) high, 25.7 cm (10 1/8 in.) deep.
Linearity	3%	Weight	6.8 kg (15 lb) net; 10 kg (22 lb) shipping
Input Connector	BNC, rear panel	Power	115/230V ± 10%. 50/60 Hz approximately 75 watts
Drift	Typically less than 1/2 div. for 8 hours (at a constant temperature after 1/2 hour warmup).	OPTIONS	Non-standard phosphors are available on special order. Consult factory for pricing
Polarity	Switchable for inversion of vertical signal		
HORIZONTAL			
Sensitivity	Continuously adjustable from 0.1 V/div. to over 10 V/div		
Impedance	>320 k Ω		
Bandwidth	DC to 1.5 kHz		
Coupling	Switchable ac-dc (when ac coupled, max dc voltage plus ac peak not to exceed 200V)		
Linearity	3%		
Input Connector	BNC, rear panel

MODELS 1081/1076
1 to 1000 MHz

BENCH SWEEP SYSTEM

EXTENDED RANGE BENCH SWEEPING

For bench sweep requirements exceeding the 1 to 400 MHz range, the Model 1081 1 to 1000 MHz Sweeper, and the Model 1076 Sweep Comparator offer precision and ease of use previously unavailable.

This system accurately displays measurements such as loss, gain, and return loss, while eliminating errors typically created in other systems by amplifier and display drift.

Using a Model 1081 Sweeper, a calibrated dual-channel switching RF comparator, and a large-screen oscilloscope this system simultaneously compares a test and reference channel, allowing continuous monitoring of both the input signal (reference channel) and the resulting output signal (test channel) during testing.

This 1 to 1000 MHz bench sweep system allows alignment and adjustment of system components, including amplifiers, filters, passives and cable. The addition of a suitable return loss bridge, such as the Wavetek Model FB40-75 extends further the usefulness of this system by allowing the direct reading of return loss. The Model FB40-75 connects directly to the Model 1076 Comparator.

1081

MODEL 1081 1000 MHz SWEEP GENERATOR

Model 1081 is an economical, 1 to 1000 MHz sweep generator that features simple operation, 1% display linearity, digital readout, and a unique "auto-zero" circuit that improves frequency accuracy and virtually eliminates frequency drift.

CW, ΔF , FULL SWEEP

The compact 1081 has three operating modes: CW, ΔF and Full Sweep.

Frequency in the CW mode is set by a ten-turn potentiometer and displayed with a resolution of 1 MHz on a 3-1/2 digit display. In the ΔF mode, center frequency is selected by the ten-turn potentiometer; the sweep width range of 200 kHz to 1000 MHz is controlled

TEST EQUIPMENT

by a 100 MHz/Step selector and a 100 MHz vernier. In the Full Sweep mode, the start frequency is fixed at 1 MHz and the stop frequency is fixed at 1 GHz. The ten-turn potentiometer and the 3-1/2 digit frequency display operate as a 1 to 1000 MHz variable marker.

+60 to -10 dBmV OUTPUT POWER

Model 1081 has an output power range of +60 to -10 dBmV. The output is continuously adjustable with a 10 dB/Step attenuator and an 11 dB vernier. Output level is displayed on a 3 digit readout with 0.1 dB resolution.

MARKER SYSTEM

The birdy bypass marker system is controlled by a front-panel switch which provides selection of harmonic markers at 1, 10 and 100 MHz. Differences in marker amplitudes make identification of markers easy. Marker width is adjustable for optimum wide and narrow band operation. A calibrated variable marker is provided in the Full Sweep mode. External marker input is standard.

SPECIFICATIONS MODEL 1081

FREQUENCY

Range	1 to 1000 MHz
Sweep Width	F 200 kHz to 1000 MHz Full Sweep 1 to 1000 MHz
Readout	3 digit LED
Resolution	1 MHz
Operating Modes	CW, ΔF , and Full Sweep
Accuracy	CW, Center Frequency of ΔF , and Variable marker, ± 10 MHz Frequency accuracy can be improved to ± 1 MHz at a specific frequency Sweep width at 100 MHz intervals ± 10 MHz

Display Linearity 1% at maximum sweep width
Drift < 200 kHz for 10 minutes

NOTE: At a constant temperature after "hour warm up"

RF OUTPUT

Impedance	75 Ω
Output Connector	Female BNC
Power Level Range	+60 to -10 dBmV
Attenuation	Continuously adjustable in 10 dB steps with a 11 dB vernier. Output level is displayed on a 3 digit readout with 0.1 dB resolution
Accuracy	Step attenuator $\pm (0.3 \text{ dB} + 1\% \text{ of attenuation})$ Vernier attenuation $\pm 0.5 \text{ dB}$
Output Flatness	$\pm 0.25 \text{ dB}$

SPECTRAL PURITY

Harmonic Output	1 to 20 MHz < 20 dBc 20 to 100 MHz < 30 dBc in 1 to 2000 MHz band
Nonharmonics	1 to 500 MHz < 50 dBc below 400 MHz 400 to 1000 MHz < 35 dBc
Residual FM (CW Mode)	< 10 kHz peak

SWEEP CHARACTERISTICS

Sweep Modes	Recurring and single sweep
Sweep Time	Fast 0.010 to 1 sec (typical) Slow 1 to 100 sec (typical) Line $\sim 1/2$ of AC line period
Horizontal Output	0 to 10 volts Impedance 1000 Ω
Blanking	RF output is blanked during sweep retrace

MARKER SYSTEM

RF Markers	Birdy bypass marker system is controlled by front-panel switch which provides selection of harmonic markers in these combinations 100 MHz only 100 MHz and 10 MHz or 100 MHz, 10 MHz, and 1 MHz
Accuracy	0.005%
Width	Adjustable from approximately 100 to 500 kHz
Amplitude	Adjustable from approximately 1 mV to 1.5V p-p
External Marker	BNC input accepts CW signal for conversion to birdy marker. Input level must be at least 100 mV into 50 Ω
Variable Marker (Full Sweep Mode Only)	The 10-turn potentiometer and 3 1/2 digit frequency display function as a 1 to 1000 MHz variable marker. The marker produces a bright spot on the display by momentarily delaying the sweep ramp for approximately 2 msec. Accuracy is ± 10 MHz

REMOTE PROGRAMMING

Frequency	Rear-panel jack permits remote control of center frequency, sweep width and external frequency modulation
Level	Rear-panel jack permits external control of RF output level over greater than 10 dB range
Trigger	TTL input, during high to low transition. Also, by contact closure to ground

OUTPUTS

Pen Lift	Contact closure during sweep
Blanking	-15V during sweep +15V during retrace
Sweep	0 to 10V
Reference	Output of 1V/100 MHz
Power Supply	+18V, -18V, and common. External current limited to 10 mA

GENERAL

Dimensions	28.6 cm (11 1/4 in.) wide, 13.3 cm (5 1/4 in.) high, 26.7 cm (10 1/2 in.) deep
Weight	4.9 kg (10 3/4 lb) net 6.8 kg (15 lb) shipping
Power	90 to 110V, 105 to 125V, 190 to 220V, or 210 to 250V 50 to 400 Hz, approximately 35 watts

Prices and Specifications Subject to Change Without Notice.

VRF-173

MODEL SAM I 450 MHz FULL PERFORMANCE METER

The SAM I is a very popular meter. This is due primarily to its excellent accuracy and reliability. This accuracy and reliability is designed in. The basic approach is the up-convert/down-convert system used in all SAM's. The internal controls are designed to eliminate critical tuning. IF is designed with ceramic filters to eliminate coils that can shake loose and change tuning.

Another reason for the SAM's popularity is its flexibility. It will perform almost every test that the SAM III will. The spectrum analyzer feature of the SAM III is available as an option on the SAM I. This option, when coupled with an external oscilloscope, expands the testing capability of the SAM I.

There are many additional features that combine to make this a great meter!

SPECIFICATIONS MODEL SAM I

MEASUREMENT RANGES

Frequency	4 MHz to 300 MHz, or 4 MHz to 450 MHz, 470 MHz to 890 MHz optional.
Amplitude	-40 dBmV to +60 dBmV.
Temperature	0 Fahrenheit to +20 Fahrenheit.
Hum	0.5% to 5%.
Voltage	5-100 volts AC-DC.

ACCURACY

Frequency	± 1 MHz.
Amplitude	± 0.5 dB at room temperature; ± 1.0 dB over temperature when calibrated at that temperature.
Hum	± 0.3%.
Volts	10%.

GENERAL

IF Bandwidth	280 kHz at 3 dB point, 600 kHz at 40 dB point.
Video Output	Approx 1 volt.
Power	Internal Nicad batteries, external 110 VAC/60 Hz or 200VAC/50 Hz.
Battery Life	Typically 8 hours, continuous operation.
Size	7" high x 11" wide x 10" deep.
Weight	11 lbs.

FURNISHED ACCESSORIES

Instruction Manual
Shoulder Strap
Voltmeter Leads
Sam Bag Carry-case

CALIBRATOR

Frequency	150 MHz ± 2 MHz.
Amplitude	+ 20 dBmV ± 0.25 dB over temperature range.

ANALYZER

Amplitude Range	40 dB on screen, -40 dBmV to +60 dBmV.
Frequency Range	4 MHz to 300 MHz or 4 MHz to 450 MHz.
Rate	Variable 2 Hz to 40 Hz, plus manual.
Dispersion	Variable from 0.15 MHz
Horizontal Output	+ 0.5 to + 9 volts.
Vertical Output	0-3 volts.

ORDERING INFORMATION

When ordering the Sam I Signal Level Meter, please specify the following models

Model	Description
Sam I	300 MHz SAM with Spectrum Analyzer
Sam I - UHF	300 MHz Sam with Spectrum Analyzer and UHF option (470 MHz to 890 MHz)
Sam I - 450	450 MHz Sam with Spectrum Analyzer
Sam I - 450/UHF	450 MHz Sam with Spectrum Analyzer and UHF option (470 MHz to 890 MHz).

OPTIONAL ACCESSORIES

Sky-1 Strandhook

MODEL SAM III 450 MHz MICROPROCESSOR CONTROLLED METER

The Model SAM III is the first in a new generation of completely microprocessor-controlled signal level meters. Utilizing state-of-the-art electronic tuning, coupled with on-board computer memory, the SAM III allows rapid keyboard access to any frequency or channel across the entire CATV spectrum.

This new electronic design has been combined with time-proven mechanical packaging and features, to create the ultimate in a signal level meter.

SPECIFICATIONS MODEL SAM III

MEASUREMENT RANGES

Frequency	4 MHz to 450 MHz, 470 MHz to 890 MHz optional.
Amplitude	-40 to +60 dBmV.
Temperature	0 to 120 degrees F.
Hum	0.5% to 5%.
Voltage	5-100 volts AC-DC.

ACCURACY

Frequency	± 100 KHz.
Amplitude	± 0.5 dB at room temperature, ± 1.0 dB over temperature, when calibrated at the temperature.
Hum	± 0.3%.
Volts	10%.

GENERAL

IF Bandwidth	280 kHz at 3 dB point, 600 kHz at 40 dB point.
Video output	Approx 1 volt.
Power	Internal Ni-Cad batteries External 110 VAC/60 cycle 220 VAC/50 cycle.

Battery life	Typically 5 hours.
Size	7" x 11" x 10".
Weight	11 lbs.

CALIBRATOR

Frequency	150 MHz ± 2 MHz.
Amplitude	+ 20 dBmV ± 0.25 dB.

ANALYZER

Amplitude range	40 dB on screen -40 to +60 dBmV.
Frequency range	4 MHz to 450 MHz, 470 MHz to 890 MHz optional.
Rate	Variable 2 Hz to 40 Hz Plus manual.
Dispersion	Variable from 0.15 MHz to 450 MHz.
Horizontal output	+ 0.5 to + 9 volts.
Vertical output	0-3 volts.

KEYBOARD PROGRAMMING

Standard Channels, VHF	Video 2 to 60, Audio 2 to 60, UHF 14 to 83.
HRC Channels	Video 2 to 60, Audio 2 to 60.
Frequency	Preset for 0.1 MHz steps, 4 MHz to 450 MHz, 470 MHz to 890 MHz.

TEST EQUIPMENT

MODEL SAM IIID 450MHz COMPUTER CONTROLLED METER

The SAM IIID is a computer controlled version of the Sam III. Utilizing the advanced microprocessor techniques employed in the SAM III, the remote control is accomplished through a standard RS-232 interface. This allows remote activation and control of the instrument. The controller might be as simple as a terminal, or as complex as an extensive computer system.

Provisions are made for remote measurements of signal level, hum, battery status, and temperature, in addition to automatic power on/off of the unit.

Access to the SAM IIID may be through telephone lines equipped with the correct modems, or through two-way cable systems, equipped with the proper interface.

MODEL SAM IV 450 MHz HEAD-END COMPUTER CONTROLLED METER

The SAM IV Signal Level Meter is a computer-controlled, rack-mounted measurement system, with a built-in display for spectrum analysis.

The SAM IV features direct entry keyboard tuning to any of 60 factory set standard channels, and 60 HRC format channels, either video or audio, across the standard 4 to 450 MHz band.

In addition, any frequency from 4 to 450 MHz may be accessed through the keyboard, in 0.1 MHz increments.

A unique feature of the SAM IV enables the operator to tune up to the next channel with the touch of a button. The NEXT button automatically selects the next higher channel in the channel configuration being used (either Standard or HRC).

Channel configurations are available for some countries. Please consult the factory for specific standards.

SPECIFICATIONS MODEL SAM IV

MEASUREMENT RANGES		Video Output	1 volt for full scale reading
Frequency	4 MHz to 450 MHz 470 MHz to 890 MHz optional	Power	110/220 VAC
Amplitude	-40 dBmV to +60 dBmV	Size	7 in. high x 19 in. wide x 12 in. deep
Temperature	0 degrees Fahrenheit to +120 degrees Fahrenheit	CALIBRATOR	
Hum	0.5% to 5%	Frequency	150 MHz ± 2 MHz
Voltage	5 to 100 volts AC-DC	Amplitude	+20 dBmV ± 0.25 dB over temperature range
ACCURACY		ANALYZER	
Frequency	± 100 kHz	Amplitude Range	50 dB on screen
Amplitude	± 0.5 dB at room temperature		-40 dBmV to +60 dBmV
Hum	± 0.3%	Frequency Range	4 MHz to 450 MHz 470 to 890 MHz optional
Volts	10%	Rate	Variable 2 Hz to 40 Hz plus manual
GENERAL		Dispersion	Variable from 0.15 MHz to 450 MHz
IF Bandwidth	280 kHz at 3dB point 600 kHz at 40 dB point		
Resolution	Sufficient to measure two FM signals of equal amplitude 400 kHz apart. Sufficient to measure a sound carrier in the presence of an upper video 40 dB greater than the sound carrier		

MODEL SAM JR. FULL RANGE METER

The SAM Jr. is a meter that fills in the line of signal level meters. The Jr.'s capabilities fall in between the LM-13 installer's meter and the SAM I full performance meter. The basic electronic design is quite similar to the SAM I and SAM III, which are very high quality and popular meters. The SAM Jr. has the same RF front end as these other two meters with only a slightly relaxed amplitude accuracy specification. This is very important as the RF front end is a prime factor in meter accuracy and reliability.

SPECIFICATIONS MODEL SAM JR.

Frequency Range	10 MHz to 300 MHz or 50 MHz to 450 MHz; 470 MHz to 890 MHz optional.	ORDERING INFORMATION	When ordering the Sam Jr. Signal Level Meter, please specify the following models:
Amplitude	-35 dBmV to +60 dBmV	Model	Description
Amplitude Accuracy	± 0.75 dB	Sam Jr.	10 MHz to 300 MHz Sam Jr.
Temperature Accuracy	± 2 dB	Sam Jr. - 450	50 MHz to 450 MHz Sam Jr.
Batteries	Rechargeable Nickel Cadmium.	Sam Jr. - UHF	10 MHz to 300 MHz, 470 MHz to 890 MHz Sam Jr.
Size	6 1/2" high x 8 3/4" wide x 6 1/2" deep.	Sam Jr. - 450/UHF	50 MHz to 450 MHz, 470 MHz to 890 MHz Sam Jr.
Weight	5 lbs 12 ounces.

TEST EQUIPMENT

7500 SERIES ATTENUATORS

FEATURES

- Broadband operation
- Low VSWR
- Highly accurate
- OEM, lab, and field use

The 7500 Series Attenuators are miniature turret type units that operate over wide frequency ranges.

They are ideal for bench setups, field use or incorporation into test instruments.

The 7500 Series (75 ohm) units cover the dc to 1000 MHz range. They are designed primarily for the CATV industry and have VSWRs of less than 1.1 up to 500 MHz (26dB return loss.)

Units having 1dB, 10dB, 35dB, and 70dB of attenuation, variable in 0.1, 1, 5, and 10dB steps, are available in either 50-ohm or 75-ohm versions.

Model 7580 is a dual concentric type attenuator that provides a total of 80dB attenuation, variable in 1dB steps.

All units are direct reading, ruggedly constructed, and have provisions for panel mounting.

7500 SERIES (75 OHM) ATTENUATORS

MODEL	7510	7535	7570	7580
Attenuation	0 to 10 dB in 1 dB steps	0 to 35 dB in 5 dB steps	0 to 70 dB in 10 dB steps	1 to 80 dB in 1 dB steps

*A - Accuracy with reference to the minimum loss position

MODEL 7580.1

MODEL 7580.1 ATTENUATOR SET

The Model 7580.1 (75 ohm) attenuator set consists of 10dB, 1dB, and 0.1dB turret type attenuators, mounted in a cabinet ideally suited for bench-top use.

The total attenuation range is 0 to 81dB with a fixed 1dB insertion loss. Attenuation accuracy is ± 1.0dB from dc to 400 MHz, and ± 2.0dB from dc to 1,000 MHz. Maximum input power is 0.5W.

BNC connectors are standard; however, F fittings are available at no additional cost.

SPECIFICATIONS

Attenuation	0 to 81 dB in 0.1 dB steps	Accuracy	± 1 dB to 500 MHz ± 2 dB to 1000 MHz
Frequency Range	DC to 1000 MHz	VSWR	1.2:1 dc to 500 MHz 1.3:1 dc to 1000 MHz

MODEL 1801B ADVANCED SWEEP GENERATOR

OPTIONS

- A-1: Single Frequency Markers
- A-2: Harmonic Markers
- A-4: 1 kHz Square Wave
- A-5: Pen Lift
- A-6: IF Markers
Crystals for above
- A-7: Pilot Carrier Notches
- A-8: UHF Option (450-950)

MODEL 1801B

SPECIFICATIONS

RF FREQUENCY		SWEEP MODES	
Frequency Range	1 to 500 MHz 450 to 950 MHz (optional)		Recurring, single sweep, external trigger, manual, and line lock
Dial Calibration	10 MHz/div with +5 MHz vernier	SWEEP TIME	Continuously variable from 10 to 100 ms and from 1 to 100s, plus a special variable 1 to 10 ms sweep time range with an associated variable 1 to 10s repetition rate for testing of operating CATV systems
Accuracy	10 MHz or 2% of selected frequency (whichever is greater)	MARKERS	Provisions for up to 6 crystal-controlled, plug-in birdy by-pass markers, plus rear panel external marker input. Markers may be either single frequency (Option A-1) or harmonic type (Option A-2). Pulse type markers are also available (Option A-6)
Sweep Width	200 kHz to 500 MHz		
Display Linearity	2%	RF OUTPUT	
Spurious Signals	-30 dB above 10 MHz (-35 dB minimum available on special order)	Impedance	75 ohms
		Output Amplitude	+57 dBmV, 0.7V rms, maximum
		Output Flatness	± 0.25 dB for 1 MHz to 500 MHz ± 0.35 dB for 1 MHz to 950 MHz
		Attenuation	Continuously adjustable from +57 dBmV to -33 dBmV, 70 dB in 10 dB steps plus a 20 dB PIN diode attenuator calibrated in 1 dB increments
		Accuracy	± 0.5 dB to 500 MHz ± 1.0 dB to 950 MHz
		Reference Attenuator	Internally adjustable from 0.05 dB to 0.5 dB above and below output level
		WIDTH	Adjustable from approximately 15 kHz to 400 kHz in 4 steps
		AMPLITUDE	Adjustable from approximately 1 mV p-p to 1V p-p
		POWER	115 or 230V ± 10% (available for 100 to 200V at no extra cost) 50 to 60 Hz approximately 20 watts

TEST EQUIPMENT

MODEL 1880 SYSTEM ANALYZER

The Model 1880 CATV System Analyzer is a 4 to 450 MHz field-portable test system designed to perform both FCC compliance tests and routine day-to-day system measurements.

A unique microprocessor control system replaces the complexity of a traditional spectrum analyzer, allowing rapid, precision measurements ranging from headend amplitude checks to subscriber drop composite triple beat. Measurements, such as Carrier-to-Noise, Hum, FM Deviation, Cross-Modulation and Composite-Triple-Beat are performed anywhere on the system with pushbutton ease.

Any portion of the spectrum may be viewed instantly, while split-screen capability allows two separate sections of the band to be viewed simultaneously. This allows rapid amplifier setup, and immediate verification of correct parameters. For example, Channel 2 and Channel 60 may be viewed in 10 MHz frequency spans at the same time, in a real-time display; and the channels may be called up with direct keyboard entry by converter number.

SPECIFICATIONS MODEL 1880

Frequency Range	4 to 450 MHz
Frequency Accuracy	± 1.00 kHz
Center Frequency	± 10%
Span	± 10 dB
Amplitude Accuracy	± 1.0 dB
Measurement Range	110 dB
	> 60 dB or screen
Resolution	0.1 dB
Pre-Programmed Channels	2 to 60
Temperature	- 10 to + 120 °F - 20 to + 50 °C.
Power	Battery, rechargeable sealed lead-acid, operating life approximately 2 1/2 hours
Display	5-in. diagonal, electromagnetic Alphanumeric with analog assist, developed by the microprocessor
Weight	30 lb (13.5 kg)

OPTIONAL ACCESSORIES

BU-1	Bucket-bucket for use with a standard bucket truck
C-1	Polaroid Camera for making permanent records for the 1880
PP-75	55 to 440 MHz Precision Preselector for use with extended amplitude range measurements.
BC-3	Heavy duty battery charger/AC adaptor for continuous 110/220 VAC, 50/60 cycle operation

ACCESSORIES FURNISHED

Test Cable
Instruction Manual
View ng Hood
Vehicle Cable BC-1

AUTOMATED FUNCTIONS

Carrier-to-Noise	53 dB max ± 1 dB
Hum Modulation	5%
FM Deviation	< 5% residual 200 kHz max < 5 kHz residual
Cross Modulation	43 to 62 dB ± 2 dB
2nd/3rd Order (Composite Triple Beat)	> 70 dB max ± 3 dB

MODELS 1855/1865 CABLE SYSTEM SWEEP

The Model 1855/65 Sweep Recovery System consists of a micro-processor controlled transmitter and receiver. The transmitter is installed at the headend and provides a sweep every 5 seconds at a speed unnoticed by your subscribers. The portable, battery operated receiver is taken into the field and used to evaluate the swept response at any point in the system.

This Recovery System provides an easy to use technique to maintain or audit your cable system. It can cut service calls by indicating changes in the trunk which affect the swept response even though the pilots may be at the proper level. The "signature" of the swept response will indicate:

- 1) Moisture in the cable.
- 2) Bad grounds on amplifier modules.
- 3) Corroded or loose RF cable fittings.
- 4) Mismatches from kinked or squeezed cable.
- 5) Low gain amplifiers.
- 6) Suck outs within the frequency response.

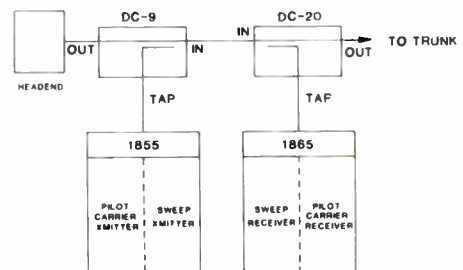

It will aid in locating these problems as they develop, so they may be corrected before the entire system is down.

This results in improved signal quality through easy-to-do, daily, preventative maintenance.

The recovery system can also be used for the annual FCC proof. It provides a fast easy method for headend, in-channel flatness measurements with no auxiliary signal generators or counters, and does so, while the CATV System is still "On the Air". It is also used for the 24 hour tests.

The receiver is as easy to use as a simple radio receiver. The internal microprocessor does all the work. Once the receiver is set up and calibrated at the headend, the technician simply takes it into the field, connects it to the output test point of the first trunk amplifier, turns it on and observes the swept responses from the headend to, and including, the first amplifier. Two level cursors automatically provide a 2 dB window of where the swept response should be. The technician merely adjusts the slope and gain controls of the amplifier to get the flattest pattern between the cursors (see figure #1).

If the response is correct, he turns the receiver off and continues to the next amplifier. If he has a problem it can be analyzed by using the keyboard. A push button will automatically provide a readout (in dBmV) of the peak-to-valley response. Other buttons on the keyboard allow the measurement of frequency to help in locating faults. See description of the 1865 for complete information on the cursor measurement system.

TEST EQUIPMENT

ACCESSORIES

PA-20 AMPLIFIER

The PA-20 is a general purpose amplifier. This battery powered unit is ideal for field work. Current consumption is less than 20 milliamps. The low power consumption provides more than ten hours of battery life. The PA-20 is a low noise amplifier. The low noise figure makes it an ideal preamp for spectrum analyzers or field strength meter applications.

SPECIFICATIONS MODEL PA-20

Frequency	50-250 MHz Useful 5-300 MHz
Gain	19.5 dB
Flatness	± 0.25 dB
Noise	7 dB typical
Impedance	75 ohms
Power	4-9 Volt batteries
Battery Life	10 hours continuous operation.
Size	4" high x 5" wide x 1 1/4" deep
Weight	1 lb

CABLE EQUALIZERS AND CABLE SIMULATORS

These devices are useful to compensate for true tilt devices or long cable drops for "easements", when using WAVETEK SLM or Sweep Recovery Systems.

Models are available to 300 or 400 MHz, and in 3 or 6 dB versions. They all follow the tilt characteristics of cable to within ±0.5 dB. The chart will aid in your selection.

EQUALIZERS	LOSS AT 50 MHz	LOSS AT 300 MHz	LOSS AT 400 MHz
E - 3 - 300	3 dB	0	—
E - 3 - 400	3 dB	—	0
E - 6 - 300	6 dB	0	—
E - 6 - 400	6 dB	—	0

SIMULATORS	LOSS AT 50 MHz typical	TRUE TILT 50-300 MHz	TRUE TILT 50-400 MHz
S - 3 - 300	1.9 dB	3 dB	—
S - 3 - 400	1.4 dB	—	3 dB

S - 6 - 400	3 dB	—	6 dB

MATCHING PADS MODELS M175 & M157

- Low VSWR
- Broad Frequency Range
- Flat Response

TRANSFORMS IMPEDANCE

Most RF communication equipment is designed for 50-ohm transmission, although several 75 ohm applications do exist in CATV and other related areas. All of the standard Wavetek Sweep/Signal Generators are available with either 50 or 75 ohm calibrated output systems. Matching pads are available to convert equipment with 50 ohm output to 75 ohm output or vice versa.

SPECIFICATIONS

Frequency Range	DC to 1000 MHz.
Impedance	50 to 75 ohms.
VSWR	1.15 to 1.
Insertion Loss	5.7 ± 0.1 dB.
Maximum Input Power	1 watt.
BNC Connectors	
M157	50 ohm male; 75 ohm female.
M175	50 ohm female; 75 ohm male.

RF DETECTORS SERIES 150/170

LOW VSWR

The series 150 and 170 Detectors are designed for applications requiring low VSWR and flat frequency response across broad operating ranges.

50 AND 75 OHM UNITS

The Models D151 and D152 are 50-ohm units with typical VSWR's of 1.2 at 1000 MHz. The D151 has a 1000 MHz upper limit and the D152 can be operated up to 2 GHz.

The Model D171 is a 75 ohm detector that operates over the frequency range of 200 kHz to 1000 MHz with a response of ± 0.3 dB and a return loss of greater than 23 dB. This is accomplished through use of the Wavetek designed 75 ohm BNC connector and associated frequency compensating circuitry.

Model D153 has a frequency range of 1.0 to 12,400 MHz with a VSWR typically less than 1.20.

RF DETECTORS SERIES 150/170

MODEL	D151	D152	D153	D171
Frequency Range (MHz)	0.2 to 1000	0.2 to 2000	1.0 to 12,400	0.2 to 1000
Impedance (ohms)	50	50	50	75
VSWR	1.15	1.5	1.2 to 4.5 GHz 1.3 to 7.0 GHz 1.4 to 12.4 GHz	1.15 (23 dB return loss)
Max Input	3.0V	3.0V	100 mW	3.0V
Output Polarity	Negative	Negative	Negative	Negative
Frequency Response (dB)	± 0.3	± 0.5	± 0.2 per octave to 8 GHz ± 0.5 overall	± 0.3
Connectors				
RF Input	Male BNC	Male BNC	Male N	Male BNC (75 ohm)
DC Output	Female BNC	Female BNC	Female BNC	Female BNC
Dimensions - Diameter	1.4 cm (9/16 in.)	1.4 cm (9/16 in.)	2.1 cm (0.83 in.)	1.4 cm (9/16 in.)
Length	5.7 cm (2 1/4 in.)	5.7 cm (2 1/4 in.)	6.3 cm (2.47 in.)	5.7 cm (2 1/4 in.)

DC BLOCKS MODELS B171 & B172

- Prevents Equipment Damage
- Low VSWR
- Minimum Insertion Loss

PROTECTS AGAINST BURNOUT

DC Blocks are designed to stop dc and attenuate any 60 Hz signals that are present in a signal while passing the RF portion with minimum insertion loss or additional VSWR. CATV line amplifiers are commonly powered through the RF cable itself. This voltage can cause severe damage when connected to 75 ohm systems not having internal dc blocking networks.

MOUNT PERMANENTLY

Model B171 is ideally suited for series insertion into any existing line having a BNC connector, while the B172 cable/block assembly is suited for permanent mounting in test equipment as a precaution against burnout. The standard B172 is supplied with a 9-inch cable. (Other cable lengths are available on special order.)

SPECIFICATIONS

Frequency Range	1 MHz to 1000 MHz	B172	75 ohms male & panel mounting female
Impedance	75 ohms		
VSWR	1.1 to 1	Dimensions B171	1.4 cm (9/16 in.) diameter, 4.8 cm (1 7/8 in.) length
Insertion Loss	0.2 dB	B172	1.4 cm (9/16 in.) diameter, 22.8 cm (9 in.) length (with BNC and cable).
DC Breakdown Voltage	100V		
BNC Connectors			
B171	75 ohms male & female

TEST EQUIPMENT

MODEL ST-1 "CUCKOO" RADIATION DETECTOR

This is a system that provides a low-cost method of patrolling cable systems for signal leakage. The system utilizes an ordinary FM radio for patrolling, and a special signal transmitter in the headend.

The ST-1 produces a signal which is continuously tuneable from 86 to 110 MHz. The signal can be switched to either a 1 kHz tone or a double tone similar to a Cuckoo Clock. The amplitude can be automatically switched over 5 different output levels, 5 dB apart. The different output levels produce a beeping sound on the radio. This sound increases in volume the closer you get to a signal leakage point.

To see how this stepping helps you, refer to Figure #1. As you approach a leakage point, the first signal you hear is the high-level signal. The closer in you get, the more leak you pick up. When you are by the leak, you will even pick up the signal when it is attenuated to 20 dB. The signal remains at each level for 1/3 of a second, which works out nicely for patrolling at about 30 MPH or slower.

This system enables you to equip every service vehicle to patrol for leakage produced by illegals, minor breaks, loose housings and other problems that might soon become major. If you have an FM radio in your car, just drive around town and check your system.

The "Cuckoo" system is one of the most popular ideas introduced to CATV testing. The reason for its popularity is that it pays for itself in reduced troubleshooting time and increased system performance. You turn it on and leave it on. The system is always available when you're ready for it. Leaks are easy to find. Operators report finding underground faults, illegal hookups, bad connectors, all with portable radios.

The sensitivity of the system depends on the radio you purchase. It is very easy to find radios which are much better than 1 uV. We recommend operating the signal at about 5 dB above normal FM level. The advantage in running near the FM band is that the band of frequencies that most concerns the FCC is the VHF OMNIRANGE for aircraft, starting at 108 MHz. This system allows you to put a carrier just below this point, and lets you check for radiation.

SPECIFICATIONS MODEL ST-1

Output	+ 35 dBmV (min.)
Frequency Tuning Range	86-110 MHz
FM Deviation	± 75 KHz
Output Level Control Range	20 dB
FM Modulation Frequency	1000 Hz (approx)
AM Modulation	Four 5 dB Steps
AM Modulation Step	
Rep Rate	Approx 0.33 Sec/Step
Incidental FM Modulation	± 10 KHz (max.)
Supply Voltage	110 Vac

ST-1C

MODELS ST-1C, CR-1B RADIATION DETECTOR

A COMPLETE LOW-COST SYSTEM THAT DETECTS RADIATION

The ST-1C operates in the same manner as the ST-1. The difference between the two units is that the ST-1C is crystal controlled. The purpose of this transmitter is to operate the CR-1B receiver.

SPECIFICATIONS MODEL ST-1C

Output	+ 35 dBmV
Frequency	107.997 MHz
FM Deviation	± 2.5 kHz
Output Level Control Range	20 dB
FM Modulation Frequency	1050 Hz
AM Modulation	Four 5 dB Steps
AM Modulation Step	
Rep Rate	Approx 0.33 Sec/Step
Supply Voltage	110 Vac

CR-1B

CR-1B CRYSTAL CONTROLLED RECEIVER

The CR-1B has two major advantages over the FM radios. The first advantage is that you don't have to tune it. You are always sure you are on frequency. There is no possibility of someone listening to a rock station instead of doing radiation patrol. The second advantage is the tone squelch circuit. The tone squelch circuit disables the audio until a 1050 Hz tone is received. While the CR-1B is tone squelched the receiver gain stays at maximum. Although the gain is high no bothersome noise is heard. When the receiver picks up the 1050 Hz tone from the transmitter, it automatically activates the audio. The CR-1B can be vehicle mounted or used as a portable unit. It is powered from batteries or vehicle +12 or 110 VAC supplies. The receiver has a built-in antenna as well as provisions for using an external antenna.

SPECIFICATIONS MODEL CR-1B

Frequency	107.997 MHz
Sensitivity	1 uV will activate tone squelch
Tone Squelch	1050 Hz Activated
Antenna	Internal whip and external jack
Power	110 VAC, + 12 VDC, or internal batteries, Four C Cells

TEST EQUIPMENT

SP-2

CM-1000

MODELS SP-2, CM-1000 FREQUENCY COUNTERS

A frequency counter will not properly count TV signals. This problem is due to the complex modulation. The SP-2 is designed to process the signals so that a frequency counter will read them. The two main measurements that must be made are video carrier accuracy and inter-carrier accuracy. The video carrier must be within ± 25 kHz of assigned frequency. The intercarrier frequency must be 4.5 MHz ± 1 kHz. The SP-2 processes the video carrier and removes 90% of the modulation. This instrument also compares the video carrier to the aural and provides the resultant 4.5 MHz signal at the front panel. The SP-2 signal processor is completely solid state. Integrated circuits are used extensively to minimize components and increase reliability. The input circuits are AC blocked to minimize effects of 30 volt AC supplies. The instrument's input is your system's signals. The SP-2 processes these signals and provides 3 main outputs. Output 1 is the intercarrier signal which is the 4.5 MHz differential between the video and sound carriers. This is very useful for aligning modulators as well as doing FCC proofs. The second output is the video carrier with modulation suppressed. The third output is for hum modulation tests. The Hum Mod output is a high quality video detector. Detection is accomplished in an integrated circuit and provides more than 2 volts of video signal with only 20 μ V of noise. This large ratio makes Hum Modulation measurements much more convenient than with low level video outputs from FIELD STRENGTH meters.

The SP-2 has measurement capability for measuring the standard twelve channels plus all the MID band and SUPER band channels J, K, and L. SP-2's may be ordered to measure other SUPER band channels by deleting MID band channels.

CM-1000

The CM-1000 is part of a new generation of low cost frequency counters. This counter is ideal for CATV application. The front-panel F connectors interface easily with most CATV instrumentation. This counter is extremely tolerant of video modulation, and this tolerance makes it an ideal companion for the SP-2 signal processor. This unit is normally powered from 115 volt AC, and covers a frequency range of 5 Hz to 1000 MHz. This wide band coverage is very useful for working on SUPER band headend units, their local oscillators, and UHF applications.

SPECIFICATIONS MODEL CM-1000

Frequency Range	
Direct	5 Hz to 60 MHz
Prescaled	25 MHz to 1 GHz.
Sensitivity	
Direct	+ 25 dBmV
Prescaled	+ 40 dBmV.
Input Impedance	
Direct	1 MEG OHM
Prescaled	50 OHM.
Overload Protection	
Direct	100 Volt Max.
Prescaled	5 Volt Max
Aging	1 PPM Per Year.
Display	9 digit, 0.4" LED
Size	3 3/4" H x 7 3/4" W x 6 3/4" D
Weight	2 lbs

SPECIFICATIONS MODEL SP-2

Frequency Range	50 MHz to 270 MHz.
Input Sensitivity	Normal operation from + 16 dBmV to + 60 dBmV
Input Impedance	75 ohms
Video Carrier Output	At least 100 mV into 50 ohms.
Inter Carrier Output	At least 100 mV into 100 K ohms.
Power	Internal - 12 volt rechargeable battery; External - 110 VAC 2 watts.
Battery Life	10 hours.
Hum Mod Output	2 volts video minimum

RD-1 TUNED DIPOLE

The RD-1 is a tuned dipole with a 16 dB gain battery operated amplifier. It is designed to test compliance with FCC CATV radiation specifications. The RD-1 is the most convenient dipole to use, no matter what you pay. The adjustable dipole whip antennas can be set for frequencies from 50 MHz to 250 MHz which covers the standard TV band, MID band, and SUPER band through channel 0. The whips are easily field replaceable and are available from stock.

The signal level to be measured for radiation and signal leakage tests are in the range of -30 to -50 dBmV. Most signal level meters do a poor job below -30 dBmV and can't measure anything below -40 dBmV. The RD-1 contains a low noise, battery operated preamplifier to solve this problem. In many areas of the country, it is necessary to measure small leakage signals in the presence of strong local signals. Provisions have been made on the RD-1 to permit you to place a bandpass filter between the dipole and preamplifier to correct this problem. The amplifier may also be used separately as a portable field instrument.

The pamphlet that is provided with the RD-1 lists the length of the dipole in inches for all channels to be measured. The chart also indicates the signal level to be measured to pass the FCC 20 microvolts per meter specifications. This eliminates the need for cumbersome formulas and calculations. You simply refer to the chart to find your pass-fail point in dBmV for every channel.

SPECIFICATIONS MODEL RD-1

Dipole Tuning	50 MHz to 250 MHz
Amplifier Noise Figure	6 dB
Amplifier Bandwidth	± 0.5 dB 50-250 MHz. adjustable 5-300 MHz
Power	4-9 volt batteries
Amplifier Gain	16 dB
Weight	2 lbs

HYBRID POWER DIVIDER/ COMBINERS/RF SWITCHES

**PRECISION HYBRID
DIVIDER/COMBINERS**

HYBRID SPLITTER/COMBINERS

Models A66 and A67 are hybrid splitter/combiners with exceptional bandwidth and performance for instrumentation and communications. Applications include signal splitting, combining, mixing, and phasing. Effects of impedance changes, shunts, or disconnections at one or more ports have a minimum effect on the insertion loss or impedance match through the other ports due to the high port-to-port isolation. This high isolation also minimizes intermodulation problems caused by mixing between signal sources. Each Model A66 or A67 is individually tuned for optimum performance.

MODELS AVAILABLE

Models A66 and A67 are 2-way and 4-way hybrids covering 1-500MHz. Model A66GA is a higher performance version of the A66 with higher isolation for critical applications.

Model A66L is a low frequency version covering .3-100MHz.

Model	N-Way	Freq Range MHz	VSWR (max)	Loss (max) back-back (dB)	Isolation (with matched input termination) (dB)	Response Flatness dB	max power to input	max power to output	Size (See Back Cover)						
A66	2	1-500	1.5:1	.7	20	±.25	5 watts	.25 watts	A						
		2-300	1.2:1	.30	35	±.1									
A66GA	2	1-500	1.5:1	.7	20	±.25			5 watts	.25 watts	A				
		2-400	1.3:1	.5	40	±.15									
A66L	2	.3-100	1.5:1	.5	35	±.2					5 watts	.25 watts	A		
		1-50	1.15:1	.2	40	±.06									
A67	4	1-500	1.5:1	1.0	20	±.25							5 watts	.25 watts	B
		2.5-300	1.2:1	.5	30	±.1									

When ordering specify: A) Model Number, B) Impedance, C) Connectors

A64 SOLID STATE SWITCH

Model A64 is an ultra wide band PIN diode solid state switch for transferring both low and high level signals with negligible distortion, high isolation, and minimum loss.

SPECIFICATIONS

Switch Type: SPDT

Frequency: 1-500MHz, useable .3-1000MHz

Impedance: 50 or 75 ohm (specify when ordering)

Loss: .5dB max; .2dB typical

Isolation:

Freq MHz	1	5	50	100	300	500
dB min	-100	-90	-80	-75	-60	-55

VSWR: 1-500MHz 1.3:1 (18dB RL); 5-500MHz 1.1:1 (26dB RL)

Response Flatness: 1-500MHz +/- .15dB; 5-300MHz +/- .1dB

Power:

When ordering specify: A) Model Number, B) Impedance, C) Connectors

A64MP PIN DIODE TRANSFER SWITCH

Frequency Range: 1.5-500MHz (usable .3-700MHz)

VSWR: 1.2:1 max

Loss: 1.3dB typical

Isolation: 50dB min (65dB min at 300MHz)

Max Signal Level: 1V rms for minimum distortion

Enclosure: 1-1/8" x 1-3/8" x 2-1/4" cast aluminum

Schematic:

When ordering specify: A) Model Number, B) Impedance, C) Connectors

SOLID STATE SWITCH

max levels permitted with negligible distortion

	cw Power	Peak Volts	Max cw Volts	dBm
50 ohm 1 MHz	50 mW	2	1.5	+17
50 ohm 5-500 MHz	1.0 W	11	7	+30
75 ohm 1 MHz	75 mW	3.5	2.3	+19 (+63 dBmV)
75 ohm 5-500 MHz	.75 W	11	7.5	+29 (+77 dBmV)

Switching Time: 0-.5ms

DC Bias: (+) and (-) 12V at 50mA

Enclosure: 3-5/8" x 1-1/2" x 1-1/4" cast aluminum, blue finish

UHF SWITCHES

A64U have specifications of a single switch head of the A49U RF Comparator.

DIRECTIONAL COUPLERS/ FILTERS

A73 SERIES DIRECTIONAL COUPLERS

A73 Series Directional Couplers are of reciprocal hybrid ferrite circuitry, featuring broad bandwidth with outstanding directivity and flatness.

APPLICATIONS

Line Monitoring: Power split from the line is -20dB down for sampling without altering line characteristics, for level measuring, VSWR alarms, etc.

Power Measurements: Insertion in the line allows level measurements with simple lower level detectors or field strength meters and power measuring equipment. By reversing the coupler in the line or using the A73D types, an indication of impedance match and/or reflected power can be measured by comparing the forward to reflected power levels.

Load Source Isolator: Using a directional coupler in the line, a signal can be taken from the source to the tap with high attenuation (directivity) between the tap and the load.

MODELS AVAILABLE

A73-20 types are for 1-500MHz signals up to 5-10 watts. GA and GB versions have a higher minimum directivity for more critical measurement applications.

A73-20P and A73-20PA are 1-100 and 10-200MHz couplers for precision measurements up to 50 watts. X versions have a higher minimum directivity.

DIRECTIONAL COUPLERS

A73D-20P and A73D-20PA are dual versions of the above for simultaneous measurement of forward and reflected power. X versions have a higher minimum directivity.

A73M is a 1-500MHz, 50 watt non-directional coupler providing a transformer tap -30dB down from the line.

Model	Freq Range MHz	Coupler Type	In Line Power	Minimum Directivity (dB)		In Line Loss (dB)	Response Flatness of -20 dB port (dB)	VSWR	Size (See Back Cover)
				1-500 MHz	5-300 MHz

When ordering specify: A) Model Number, B) Impedance, C) Connectors

RF FILTERS

Models A60 Hi-Pass/Lo-Pass, A60D Hi-Lo Diplexer, and A71 Band-pass are high density, flat hi-pass, lo-pass, or band-pass filter series, from 1-700MHz, totally impedance matched throughout the band-pass. Although some filters must be custom designed, WBE has many standard proven designs that may meet your requirements promptly without extra development. Hi-pass, Lo-pass, and Band-pass filters are specified by the customer using the following terms:

- A) Matched Bandwidth: Minimum impedance matched bandpass frequency boundaries. Usually 1.2:1 max VSWR
- B) Loss: Maximum loss allowable in dB throughout matched band-pass
- C) Rejection: Specific minimum rejection outside bandpass with dB attenuation and frequency required. 20dB or 30dB points suggested with other critical areas to be considered.

Warranty: 1 year

When ordering or requesting quotations specify: A) Model Number, B) Impedance, C) Connectors, D) Size Requirements, E) Exact Requirements.

IMPEDANCE BRIDGES/ DC BLOCKS/RF TERMINATIONS

RF IMPEDANCE BRIDGES

Models A56 and A57 are both widely used broad band balun transformer type RF IN-RF OUT impedance bridges with the unknown port balanced against a reference termination. Return loss is read directly as insertion loss through the bridge. This method is superior to simpler resistor-diode (RF IN-DC OUT) bridges since models A56 and A57 function independent of input level and do not require diode square law corrections, special scope graticules and calibrated mismatches. Models A56 and A57 are frequently used with an automatic RF Comparator (A49), RF Analyzer (A51) or Wideband RF Amplifier (A52) and a fixed or variable attenuator for automatic direct reading comparison, and can be amplified to display return loss levels even below 50dB.

MODELS AVAILABLE

Models A57 and A57U are provided with a reference port for balancing the bridge against an external termination. (Total of 4 ports).

Models A57T and A57TU have a built-in fixed termination without a reference port. (Total of 3 ports).

Model A56 is primarily for coaxial cable impedance testing (SRL). Termination is variable with two dials for reading of ohms resistance and + or - pF correction capacitance. Type "N" female fitting standard on "unknown" port. (Total of 3 ports).

Models A57GA, A57TGA and A56GA are high precision versions with a minimum guaranteed directivity of 50dB from 5-500MHz. Measured lab data is included with each "GA" model.

GENERAL SPECIFICATIONS

Frequency Range: A57, A57T, A56 1-500MHz; A57U, A57TU 1-900MHz.

Impedance: 50 or 75 ohm (specify when ordering).

Bridge Type: Return Loss, direct reading, balun-null.

Directivity or "Balance" (Terminated Loss-Bridge Loss): A57/A57T, A56 40dB min. (1.02:1 residual VSWR) 1-500MHz, 50dB min. (1.006:1 residual VSWR) 10-300MHz; A57U/A57TU 40dB min. (1.02:1 residual VSWR) 1-900MHz.

Bridge Loss RF IN-RF OUT: 12dB nominal or 6dB per leg (RF IN-Test Port or RF OUT-Test Port).

Short-Open Error: 1dB max.

Service: Shock protected, suitable for factory test or for calibration of lab instruments.

Enclosure: Cast aluminum, blue finish.

Connectors: Model A56 has standard type "N" female on unknown port.

Weight: A56 8-1/2 oz.; A57/A57T 3 oz.; A57U/A57TU 3 oz.

Size: A56 C; A57/A57T B; A57U/A57TU A

When ordering specify: A) Model Number, B) Impedance
C) Connectors

NEW PRODUCTS

Low Frequency Bridges

The units listed are representative of the types of Bridges available. If the units here do not meet your specific requirements, we will be most happy to quote to your specific Frequency Range and Directivity desired.

A57/30 and A57T/30

Frequency: 30kHz - 30MHz; Directivity: 40dB min.

A57LS and A57TLS

Frequency: 300kHz - 100MHz;

Directivity: 40dB min. 300kHz - 100MHz, 50dB min. 1 - 50MHz

A57LL and A57TLL

Frequency: 190kHz - 30MHz; Directivity: 50dB min.

Converted Bridges

RF In and RF Out ports are 50 ohms with Reference and/or Test Ports 75 ohms; or RF In and RF Out ports are 75 ohms with Reference and/or Test Ports 50 ohms. Specify when ordering.

A57C and A57TC

Frequency: 1-500MHz; Directivity: 40dB min.

A57GAC and A57TGAC

Frequency: 1-500MHz

Directivity: 40dB min. 1-500MHz, 50dB min. 5-500MHz

PRECISION DC BLOCK

Model A74 Precision DC Block is a capacitive block which provides up to 200 volts protection for RF Bridges, Detectors or other RF Equipment susceptible to damage by AC or DC power entering the RF Port. The excellent impedance match allows it to be useful in measurement applications where general purpose DC Blocks are inadequate.

SPECIFICATIONS

Frequency Range: 2-350MHz

VSWR: 1.02:1 max

Impedance: 50 or 75 ohm (specify when ordering)

Enclosure: 1-1/2" x 1-1/8" x 7/8" cast aluminum, blue finish

When ordering specify: A) Model Number, B) Impedance,
C) Connectors

RF TERMINATIONS

Several precision terminations are available. VSWR: 1.01:1 max 0-500MHz (45dB return loss); 1.006:1 max 0-300MHz (50dB return loss)

Model	Type	Impedance	Connector	Weight
A56T50B	Fixed	50 ohm	Male BNC	1 oz.
A56T75B	Fixed	75 ohm	Male BNC	1 oz.
A56T75F	Fixed	75 ohm	Male F	1 oz.
A56T50S	Fixed	50 ohm	Male N	2 oz.
A56T75S	Fixed	75 ohm	Male N	2 oz.
A56T50	Variable R & C	50 ohm	Female N	8 1/2 oz.
A56T75	Variable R & C	75 ohm	Female N	8 1/2 oz.

Prices and Specifications Subject to Change Without Notice.

VRF-183

MODEL A61 HIGH OUTPUT RF DETECTOR

Model A61 provides a flat DC voltage gain better than 10dB over conventional detectors. The unit replaces most detectors where easily increased gain is desired. The unit basically consists of a specially designed voltage doubling wide band RF transformer, loaded at the secondary by a frequency compensating termination network. More gain in voltage is realized by applying a dual microwave diode voltage doubling network at this termination. Additional DC output is gained from raising the diodes operating point in the square law region with respect to the RF input level. The detector is shunted by only 100 pF for exceptionally high frequency response on the DC side. For additional flatness, a network isolates the DC or Video output from the reactive effects or "suckouts" normally associated with various cable lengths connected between the detector and the scope, recorder, or other device. Additional external capacitance at the DC output may be used to reduce the high frequency video response for noise and transient reduction without the usual resonance distortion effects reflected back to the RF Termination. Some applications include sweep display, RF measurements, and signal monitoring.

MODEL A33 DETECTORS

These detectors are half wave and full wave voltage doubling detectors. A special feature is DC isolation between the RF line and the detector circuit.

MODELS AVAILABLE

Model A61: Special high output detector, increases gain 10dB +

Model A33: Half wave detector

Model A33D: Dual diode voltage doubling version of A33, increases DC voltage gain 6dB

Model A33T: In line half wave detector

Model A33TD: Dual diode voltage doubling version of A33T, increases DC voltage gain 6dB

Model	Freq MHz	Detector Circuitry			Configuration		VSWR	Flatness (dB)		In Line Loss (dB)	Typical DC Gain -30 dBm	Size (See Back Cover)
		Special High Output	Half Wave, Single Diode	Dual Diode, Voltage Doubling	Internally Terminated RF In, DC Out	In Line RF In, RF Out, DC Out		3-300 MHz	1-500 MHz

Warranty: 1 year

When ordering specify: A) Model Number, B) Impedance, C) Connectors, D) Positive or Negative DC Polarity

50/75 OHM IMPEDANCE CONVERTER

Model A65 uses a specially designed, individually tuned broadband transformer for 50 ohms to 75 ohms or 75 ohms to 50 ohms with virtually no loss (.15dB typical). This device replaces the conventional MLP (minimum loss pad) where extra padding is unnecessary. Model A65 is frequently attached directly to a 50 ohm test instrument for use in a system requiring a 75 ohm impedance. The unit is also valuable when attached to both ports of a device under test of opposite impedance than the measuring system. When Model A65 is used on each end of a two port device or on both generator and detector, a gain of approximately 11dB is added to the circuit when substituted for two resistive MLPs.

SPECIFICATIONS

Frequency Range: 1-500MHz

VSWR: 1.2:1 max 1-500MHz; 1.1:1 max 2-500MHz;

1.05:1 max 10-500MHz

Loss: .25dB max .8-500MHz; .16dB max 20-500MHz

Power: 5W cw

Enclosure: 1-1/2" x 1-1/8" x 7/8" cast aluminum, blue finish

Weight: 2 oz.

Warranty: 1 year

A65GA: Same as A65 except VSWR: 1.03:1 max 20-500MHz

A65U: Frequency Range: 10-900MHz, VSWR: 1.1:1 max, 1.05:1 typical, Loss: .5dB max

When ordering specify: A) Model Number, B) 50 ohm connector, C) 75 ohm connector

RF ANALYZERS/ COMPARATOR

RF SWITCHER/COMPARATOR, 1-500MHz

1-500MHz RF ANALYZERS

MODEL A49 RF COMPARATOR

Model A49 is a totally solid state, dual channel RF Comparator for comparison of gain, loss, and impedance with an attenuator or master reference, the technique used in the more advanced network analyzers. The Model A49 has the stability and high isolation required for measuring insertion loss in steps of .01dB to SRL and shielding effectiveness testing beyond -80dB. With both ports balanced, measurement error can be reduced to that of the standard alone without compensating for errors resulting from dual trace scopes, detector tracking, scale accuracy, linearity, drift, etc.

SPECIFICATIONS

Frequency Range: 1-500MHz (usable .5-1000MHz)
Switch Configuration: DPDT (2 separate SPDT heads)
Impedance: 50 or 75 ohms (specify when ordering)
VSWR: 1.1:1 typical
Flatness: +/- .1dB
Isolation: 45dB min at 300MHz, 50dB per switch typical
Path Selection: Path A only, Path B only, or Path A and Path B simultaneous at 30Hz line locked switch rate
Channel Match: .1dB max
Phase Control: Rear chassis mounted phase adjust and phase reverse controls.
Size: 3-1/2" x 19" EIA Panel x 5" deep
Finish: Grain satin panel, blue enclosure
Power: 115VAC, 60Hz, 15W
Weight: 4-1/2 lbs
Warranty: 2 years
When ordering specify: A) Model Number, B) Impedance, C) Connectors

A49U: Frequency Range: 1-900MHz. Other specifications: See A49.
When ordering specify: A) Model Number, B) Impedance, C) Connectors

Model A51 Combines — A49 RF Comparator
— A52 RF Sweep Amplifier
— A61 High Output Detector

MODEL A51 RF ANALYZER

For professional measurements of gain, loss, impedance, and response comparison. The user selects the accessory equipment such as attenuators, sweep signal generators, RF bridges and oscilloscope. The A51 is ideal for low cost reliable test and alignment stations or for high precision laboratory measurements dependent on the precision or economy of the accessory equipment. This system allows substitution or future upgrading and makes use of existing equipment without being "locked-in" to a high priced package analyzer. Panel connectors for the comparator, amplifier, and detector are provided for normal interconnection as a system, or these components may be used individually.

OVERALL SYSTEM SPECIFICATIONS

Frequency Range: 1-500MHz (usable .5-600MHz)
Impedance: 50 or 75 ohm (specify when ordering)
Flatness: +/- .5dB (+/- .25dB 5-300MHz)
Range: .01dB to 100dB depending on setup (i.e. .5V RF Input equals 1mV per scope division at -80dB attenuation).
Size: 3-1/2" x 19" EIA Panel x 5" deep
Enclosure: Heavy gauge aluminum, blue finish
Power: 115VAC, 60Hz, 22W
Weight: 6 lbs
Warranty: 2 years

RF SWEEP AMPLIFIERS/ MINIATURE AMPLIFIERS

RF AMPLIFIERS, 1-500 MHz

WBE RF Sweep Amplifiers are extremely flat response, low noise, wide band amplifiers for post amplification in critical sweep frequency measurement set-ups. Available in 50 or 75 ohm impedances, these units are excellent general purpose lab amplifiers amplifying signals for receivers, frequency counters, spectrum analyzers, oscilloscopes, markers and detectors and are rugged enough for mobile applications. Line filtering and double shielding prevent ambient and power line interference.

GENERAL SPECIFICATIONS

Frequency Range: 1-500 MHz (usable .5-600 MHz)
Impedance: 50 or 75 ohms (specify when ordering)
Noise Figure: 7dB max, 5dB typical
Input VSWR: 1.5:1 max, 1.2:1 typical

Output Capability: .7V min output for 1dB gain compression (saturation 1V)
Hum Modulation: .5% max
Power: 115V AC, 60 Hz, 10W

MODELS AVAILABLE

Model	Gain dB	Flatness (dB)		EIA Panel	Depth Behind Panel
		1-500 MHz	5-300 MHz		
A62/20	20	+/- .15	+/- .1	1-3/4" x 19"	2-1/2"

When ordering specify: A) Model Number, B) Impedance, C) Connectors

MODEL A52U/30

Frequency Range: 1-900 MHz
Gain: 30dB nominal
Flatness: +/- .5dB
Impedance: 50 or 75 ohms (specify when ordering)
Noise Figure: 7dB max, 5dB typical
Input VSWR: 1.5:1 max, 1.2:1 typical

Output Capability: .7V min output for 1dB gain compression (saturation 1V)
Hum Modulation: .5% max
Power: 115V AC, 60 Hz, 10W
EIA Panel: 1-3/4" x 19"
Depth Behind Panel: 2-1/2"

When ordering specify: A) Model Number, B) Impedance, C) Connectors

A82 SERIES MINIATURE RF AMPLIFIERS

Series A82 satisfies applications that require the following specifications in a rugged miniature package. Series A82 is ideal for direct antenna mounting. Applications include airborne equipment, test instrumentation, sweep equipment, spectrum analyzers, frequency counters, telemetry, radio astronomy, wide band communications, or a convenient all around test bench amplifier. Each stage is transformer coupled for highest power output with minimum distortion. Selective feedback is used to maintain flatness and impedance match over the entire bandwidth.

MODELS AVAILABLE

Models A82 and A82A are amplifiers of ultra wide bandwidth, extreme flatness, and excellent impedance match. Models A82H, A82L, and A82LA offer a more limited or specific bandpass with less stringent flatness specifications. Models A82/RP, A82A/RP, A82H/RP, A82L/RP, and A82LA/RP are remote power option amplifiers which may be remotely powered through the output connector.

GENERAL SPECIFICATIONS

Impedance: 50 or 75 ohms (specify when ordering)
Input VSWR: 1.5:1 max, 1.2:1 or less typical except at band edge
Gain: 20dB stable +/- .5dB -40 to 170°F

Noise Figure: 7dB max, 4.5dB typical
Reverse Attenuation: -30dB typical
Enclosure: Cast aluminum, blue finish
Warranty: 1 year

Model	Freq Range (Full Specification) MHz	Approximate 3 dB points (MHz)	Gain Flatness	Output Capability in V output for 1 dB Compression	Power Requirements +12 VDC @ ___ mA	Size (See Back Cover)	Weight oz.

REMOTE POWER ACCESSORIES

Model A82PIN: Power Injection Network contains network for injecting the DC into the RF amplifier "downline" and remotely powering any of the A82/RP Series. .5-500 MHz, 50 ohm, 1.2:1 max VSWR, .25dB max loss, 60dB min RF-DC Isolation, BNC connectors

standard, 2-1/4" x 1-1/8" x 7/8". Model A82RPS: Remote Power Supply for remote powering of any A82/RP Series amplifier. A82RPS contains power injection network comparable to A82PIN and a DC power supply. 4-11/16" x 3-11/16" x 2-7/32", 6 ft. line cord, BNC Connectors on RF IN and RF OUT.

WIDE BAND ENGINEERING CO., INC.

PRICE LIST

P.O. Box 21652
 1838 East University Drive
 Phoenix, AZ 85036
 (602) 254-1570

Connectors: VHF equipment is stock fitted with either 50 ohm BNC or 75 ohm type "F" (F61A or F61AS) connectors. UHF equipment is stock fitted with type BNC connectors (type "F" connectors are not recommended for 1-900MHz instruments). Other connectors are available at additional cost per connector (see price list). Special customer furnished connectors are installed at no additional charge.

Measurements: WBE specifications and data for 50 or 75 ohm impedance measurements, directivity, etc., requiring a precision termination are referenced to General Radio GR874 type precision termination and adaptors. For certain high precision items such as A66GA, A56GA, A73GB, etc., attenuation/gain data are referenced to Weinschel attenuators. If customer has a preferred termination, WBE will reference to the customer supplied equipment and return same with order.

ANTENNAS

TV MAN™

VHF-UHF FM ANTENNAS

Invite comparisons with this complete line of nine VHF-UHF antennas.

- Dual action director/reflector screen serves as reflector for UHF signals and director for VHF signals
- Unique driven element combines signals from VHF and UHF sections with very low loss
- All 82 channel models include free VHF-UHF band separators for making TV set connections
- Die-cut impedance correlators allow close spacing of antenna elements for a strong, compact antenna that will better withstand wind and ice loading
- All aluminum parts are 100% protected against corrosion and industrial deposits
- Exclusive wrap-around mast clamps with four locking jaws cannot crush antenna boom or mast
- High tensile aluminum elements are not affected by ice loading or strong winds
- Completely automatic hardware, locks tightly into place, unfolds in seconds.

TV MAN VHF-FM antennas combine simple, straightforward mechanical design with Winegard tried and tested electronic features for the best low priced antennas ever produced. These five TV MAN VHF-FM models have been carefully selected for their performance ability in a price range long deprived of antennas with quality mechanical construction.

TV MAN antennas, combined with CP-Series preamplifiers, cover an even wider range of reception conditions.

TV ANTENNAS

CHROMSTAR II™

Winegard has combined its most popular antenna features with new and evolutionary design changes to provide advanced excellence in construction and performance.

Whether you need long distance reception or picture-perfect close-in reception, Winegard offers a Chromstar II model that will be ideal for your location.

POWERFUL VHF PERFORMANCE

When it comes to reception on Channels 2-13, Chromstar II antennas come through with the finest performance yet. This can make a big difference in picture quality when weak signals are a problem — so much, in fact, that in many areas a smaller model than usual may be used for excellent results.

Many features combine to give Chromstar II red-hot performance including our famous Electro-Lens® director system combined with cross-phased, end-fire driven elements; low-Q dual directors...all of which give increased capture area and provide for peaking the antenna on each VHF channel.

POWERFUL UHF PERFORMANCE

Outstanding UHF reception is accomplished by precise director spacing combined with a highly efficient corner reflector system. Weak UHF signals are captured and reflected with minimal loss to the driven element for increased uniform gain on all UHF frequencies on Channels 14-69.

FINEST OUTDOOR FM ANTENNA

For FM and FM stereo reception from stations near or far, the Chromstar II CS-6065 is a must. Same rugged construction features as outdoor TV antennas including built-in, weatherproof downlead/preamplifier housing. Designed to cut distortion; separate adjacent channels and reduce or eliminate fading and noise.

HIGH PERFORMANCE RUGGEDIZED YAGIS

Chromstar II single channel and broadband yagis are designed for high gain, pinpoint directivity and perfect 75 ohm or 300 ohm impedance match, for maximum transfer of signal and perfect color pictures. Superb front-to-back ratio...no back lobes.

WINEGARD CO.

3000 Kirkwood
Burlington, IA 52601
(319) 753-0121

SR-20TA TV ANTENNA

Solid-state VHF-UHF travel TV antenna for side mounting on travel trailers and RVs. Gives best possible color and black and white reception on all 82 TV channels. Mast mounts on side of vehicle and is raised to the receiving position manually. Antenna may be rotated and lowered over roof so no parts can be damaged by tree limbs or wires. Pre-amplifier circuit board is coated with sealant to provide corrosion and salt spray protection. All components enclosed to meet RVIA electrical standards. Package includes both 117VAC and 12VDC power supplies, 46" mast, TV set cord with band separator and 15' of coaxial cable.

RV-1000

RV TV ANTENNA REPAIR KIT

Repair kit for Winegard RV models RVH-2K, RVH-3, RVH-4. Small quantities of most used repair parts.

RVH-2K

AMPLIFIED RV ANTENNA

Winegard has designed the RVH-2K exclusively for recreational vehicles — modern space age design and compact rugged construction gives the RVH-2K a pleasing appearance and years of trouble free service. Sensar's solid state circuitry amplifies TV signals to pull in VHF and UHF stations up to 60 miles or more away, depending on terrain. Power supply mounts flush in wall, provides TV outlet on-off switch and pilot light. Power supply requires 12VDC.

Permanent corrosion resistant finish of the RVH-2K insures lifetime installation that will not rust, corrode or stain finish of vehicle. Easy to install — requires only simple hand tools. UL listed. Carton contain Sensar antenna, 20' coaxial cable, power supply, mounting hardware and antenna lift.

RVH-3

RV AND VAN TV ANTENNA

Same as RVH-2K shown above except 12VDC power supply has a 12 volt receptacle for TV outlet and includes a VHF-UHF, MSJ-6 band separator with TV set cord attached.

RVH-4

NON-AMPLIFIED RV ANTENNA

300 ohm version of the RVH-2K designed for use on recreational vehicles. The modern space-age design and compact construction give the RVH-4 an appealing look and years of trouble free service. Pulls VHF, UHF and FM signals in from 40 miles away. Includes antenna, lift assembly, rotating handle, elevating crank assembly, and 15' of antenna lead-in wire.

RA-3330

SIGNAL AMPLIFIER

300 ohm TV signal amplifier mounted on wall plate. Designed for use on any 300 ohm non-amplified RV antenna such as RVH-4, RV-7020, etc. Connects to 12V DC power supply of vehicle. Provides up to five times the input signal for improved picture quality and greater range.

TV-6000 FM ANTENNA

TV MAN, 4 element flat yagi for FM and FM/stereo reception. Recommended for suburban areas where a moderately directive antenna is required. Completely factory preassembled, unfolds in seconds for easy installation.

TV-6010 OMNI-DIRECTIONAL FM ANTENNA

For receiving signals in all directions. Compact design is recommended for city and suburban reception areas. Popular turnstile design features unique one piece construction for easy installation. (was FM-3T)

KU-420 UHF ANTENNA

Four bay bow-tie UHF antenna for channels 14 thru 83. Ships UPS.

KU-4202 UHF ANTENNA

Eight bay bow-tie similar to KU-420. Features 2.5dB more gain, excellent directivity and front-to-back ratio for channels 14 thru 83.

U-800 UHF ANTENNA

25 element yagi with corner reflector for regular UHF band, channels 14 thru 50.

T-876

UHF ANTENNA (TRANSLATOR)

16 element yagi with corner reflector for UHF band, channels 50 thru 83. Similar to U-800.

SINGLE CHANNEL AND BROADBAND YAGIS

"K" series 5 and 10 element VHF cut-to-channel and broadband yagi antennas. Full size, wide spread precision tuned elements. "K" series yagis are completely factory preassembled with lock-tight reflector hardware and wrap-around mast clamp. All elements and boom are constructed of gold finish aluminum — all hardware dichromate tridite or triple thick cadmium plated.

VRF-190

ANTENNAS

SM-2200 SCANNER ANTENNA

Designed for peak performance on LO, HI and UHF public service bands. Vertically polarized with omni-directional pattern. Antenna is gold anodized. Mounts below TV antenna or on separate mast. Includes 65' coaxial cable with Motorola plug attached.

FM TRAP

Amplified models are equipped with a special FM circuit to prevent overload from strong local stations. Circuit may be easily switched out when FM amplification is desired.

SR-20A HOME TV ANTENNA

Winegard's ultra-compact Sensar 82-channel TV antenna provides perfect color and black and white reception in most viewing areas.

The Sensar antenna has elegant modern styling which blends with the decor of any home setting. Compact, unobtrusive design does not require elaborate mounting hardware, yet Sensar installations are stronger than conventional antennas with comparable performance.

Unique bi-directional characteristics of a Sensar antenna provides excellent reception in areas where stations are in different directions. Eliminates the need for an antenna rotor in most locations.

Recommended for viewing areas up to 50 miles from transmitters...even farther depending on mounting height and signal strength. The SR-20A features built-in solid state modular amplifier, plus power-supply and band separator. Requires 117VAC power. Ships UPS.

WINEGARD CO.

3000 Kirkwood Street

CHROMSTAR II™ PREAMPLIFIERS

PA-1375

75 ohm input and output
channels 2 thru 13 amplified
UHF bypassed

PA-4975

75 ohm input and output
channels 14 thru 83 amplified
VHF bypassed

PA-8275

75 ohm input and output
channels 2 thru 83 amplified

Winegard's PA series preamplifiers provide the systems installer with the latest high technology, RF circuitry available. Noise figure, gain and VSWR specifications are carefully engineered to maintain the highest signal quality while providing sufficient levels to overcome downlead loss and drive the system amplifiers to their rated outputs. Models which amplify VHF feature a selectable FM trap that reduces FM signals (88 to 108MHz) — 15dB to prevent overload from strong local stations. PA series circuitry is designed for maximum stability and housed in a rugged extruded aluminum housing for years of maintenance free service. Mounting hardware provided. UL listed.

EXCLUSIVE HOUSING

DOWNLEAD CARTRIDGE

PREAMPLIFIER CARTRIDGE

DOWNLEAD/PREAMP HOUSING FEATURES

- Preattached to all Chromstar antennas
- Includes downlead circuit board with installer choice of 300 or 75 ohm connection. Protects connections from water, salt, etc.
- Molded of clear, G-E Lexan® to prevent breakage, insured protection against ultra-violet rays and chemical deposits
- New snap-lock feature eliminates use of inconvenient small screws
- Accepts addition of any Chromstar II preamplifier and/or "TP" channel trap
- If preamplifier is removed, downlead can be reconnected to terminal board so antenna owner is not without reception
- The universal housing, CPH-1, can be attached to any make antenna or mast
- Selectable FM trap reduces FM signal to prevent overload from strong stations

CHROMSTAR II PREAMPLIFIERS HELP TO SOLVE TOUGH RECEPTION PROBLEMS

Size and cost limit the gain available from TV antennas, therefore where more gain is required an antenna mounted preamplifier is the best solution. Antenna mounted preamplifiers increase signal levels at the point of signal interception and improve picture quality throughout the system. Because preamplifiers are located on or near the antenna downlead terminals, they have at their input the best quality signals available.

Winegard Chromstar II preamplifiers are available with specifications to meet every local reception requirement. The Chromstar II line features models for use in mixed strong local and fringe signal areas which need high input levels to prevent overload and models for deep fringe areas which require high gain and low noise to boost signals to a useable level and preserve picture quality. Combinations of these specifications are also available for VHF and UHF channels to give the user a perfect custom installation for his particular area.

Newly Released Guides for Your Reference Collection

Home Video Marketplace, 1984-85 1st Edition
200 pages (approx.) Soft \$45.00
ISBN 0-86729-142-7

Now, for the first time, you can buy a complete directory of the major buyers and sellers of video cassette and disc programs for the home market.

This new resource identifies program producers/distributors, wholesalers and retailers—including major department store and specialty chains that sell video programming. Additional sections list production houses, duplicators, equipment dealers and other providers of services to the video producer. Each listing includes address, phone number, contact names and descriptive information. Clear organization and indexing make the directory easy-to-use, and a professional resource section rounds out the comprehensive coverage.

Whether you're looking for a distributor of how-to programs in your area, trying to market your latest video production, or interested in the latest professional resource, you'll find the names you need in *Home Video Marketplace*.

Dictionary of Computer Graphics
by Dr. John Vince
200 pages, 1984.
ISBN 0-86729-134-6 \$34.95

An invaluable tool for all those involved in computer graphics, this dictionary provides clearly written technical information about such terms as animation, cartesian, frame store, intensity illumination, pixel, programming, quantel, raster, vertex, windowing and more. Many entries are illustrated, showing both the equipment and the output of computer graphics.

Dr. John Vince is senior computing lecturer, Middlesex Polytechnic, UK.

The Producer's Masterguide™ 1984
by Shmuel Bension
770 pages, 1984. Soft \$69.95

This directory provides useful information about the major production centers throughout the U.S., Canada and the UK—including topography, climate, economy, movie/TV commissions, permit and fee requirements, transportation facilities, etc.—as well as the names, addresses and telephone numbers of services from aerial photography and casting directors to sound effects and writing services (arranged geographically). In addition, the guide provides details of production wage scales and working conditions of more than 60 local, national and international unions and guilds.

Brief articles bring readers up to date on feature production ventures, completion bonds, production insurance, copyright registration and the MPAA rating system. A resource for anyone involved in film, TV, video, cable or satellite productions.

The Video Register 1984-85
436 pages, 1984.
ISBN 0-86729-118-4 Soft \$34.50
ISSN 0190-3705

Here is a sure-fire way to pinpoint your customers, suppliers or colleagues more easily. Now in its seventh edition, this video industry directory is updated and expanded every year to keep up with rapid changes in the field.

New this year, you'll find several hundred additional listings of organizations using video for internal training and communications, bringing the total to 2700. Also expanded is the Production/Post-Production section. Plus, there are more than 500 manufacturers, more than 400 dealers, more than 300 program/distributors, more than 700 consultant/producers, more than 175 resources and more than 700 cable access/local origination centers.

The Rockamerica Guide to Video/Music
497 pages, appendices, glossary, 1984. Soft \$60.00

This the only up to date reference source of video music --thousands of listings -- including:

- Record company video contacts
- Directors and producers
- New York production listings
- Los Angeles production listings
- Television distribution outlets
- Video music related publications
- Video music glossary
- Short essays about the music video business
- National and international listings

The Teleconferencing Resources Directory, 1983-84
Audio and Video Conferencing Equipment, Facilities and Services
148 pages, glossary, bibliography, 1983.
ISBN 0-86729-073-0 \$47.50
ISSN 0739-2966

Comprehensive and easy-to-use, this handy reference guide locates hundreds of teleconferencing suppliers, including: permanent rentable video conference facilities; consultants and system designers; transmission services; training and information sources; and manufacturers of such specialized equipment as speakerphones and freeze-frame TV as well as manufacturers of basic audio and video equipment. All the sources you need to conduct an audio, audio-enhanced or video conference are neatly organized by more than 60 indexes. Company listings include detailed information on whom to contact and specific services provided.
