The Transition Control Group...Dissolve, Wipe and Take buttons are located adjacent to the Fader. Conveniently located HOLD buttons allow directing a transition to any or all levels. You can see at a glance which levels will change in the next transition.

Dimensions

One rack frame only 7 inches (4 RU's) also contains all optional accessories and 2 Aux buses. An additional frame is required to accommodate 6 more Aux buses. The switcher panel width is 28 inches (12 inputs) or 34 inches (20 inputs) and 18 inches deep.

The RVS-514 is available with 12 or 20 inputs, and in NTSC, PAL and PAL-M Standards.

PRODUCTION SWITCHERS

RVS 517 Series Switchers

With 12 or 20 inputs, the 517 is designed for any post-production, van or studio installation. A wide range of optional equipment enables the 517 to meet most production requirements. The operational convenience of the PGM/PST style of switcher takes on a new dimension with the added power of two fully integrated Multi-Level Effects (MLE) systems. Logical controls allow any effect to be achieved easily with a minimum of confusion. For example: preset a title by the push of only a single button, then move the fader handle to put it on-air.

Now complicated transitions that include up to four sources can be seen on the preview monitor and adjusted without disturbing the on-air output of the effects system. For example, a bordered wipe with color and softness or a wipe limit can be previewed exactly as it will occur. After previewing a wipe or dissolve, switching off TRANS P/V automatically returns the monitor to the next scene preview mode, regardless of which limit the fader is at. Most simple transitions are made between the PGM bus and the PST bus. At the end of a transition, the PST source selection is transferred to the PGM bus and the PGM source is automatically transferred to the PST bus.

The MLE title keyer is a complete downstream keyer with a four-input source selector...the 4th bus of the Multi-Level Effects System. The Transition Control Group...dissolve, wipe and take buttons are located adjacent to the fader handle. Conveniently located HOLD buttons permit directing a transition to any or all levels. The Preview (or next scene) monitor always shows what change will take place in the next transition. Adjusting key levels, effects, borders or colors is simplified and there are no surprises because the next scene is always in sight on the preview monitor.

When fully equipped, a wide variety of patterns and effects can be created with the 30 basic patterns, pattern modulation, horizontal and vertical multipliers, joystick positioner and optional rotary/spin wipes and matrix wipes. The RVS 517 is equipped with two pattern generators which are independently controlled by an assignable pushbutton pattern selector. The selector has 30 pattern keys, an assign key and a shift key. The most commonly used patterns may be selected directly. When the SHIFT key is turned on, 30 different patterns may be selected, thereby providing a total of 60 patterns from the selector panel.

DIMENSIONS: Only 17-1/2 inches of rack space required for the 517 electronics package, including all options. Control panel 34 — 38 inches wide and 26 inches high, depending on number of inputs.

RVS 517 Series Switchers and Options

517A-12 Video Production Switcher (12 Inputs)	\$49,700.00

PRODUCTION SWITCHERS/ ACCESSORIES

ROSS 500 MLE® Switchers

The clean panel layout is only 46 inches long.

Most simple transitions are made between the Background bus (B) and the Background Preset bus (B PST). The B bus is always the On-Air Bus. When the B PST source is transferred to the On-Air B Bus at the end of a transition, the B source is automatically transferred to the B PST bus.

The Foreground source is selected on the F bus and the processing mode is selected in the Foreground group of MLE controls. Mode selections include RGB and Encoded Chroma Keys, Non-Additive Mix, Split Screen, Spotlight, PST Key and Matt Key.

Each MLE Title Keyer is a complete Downstream Keyer with 4 input sources. Three inputs can be wired from primary crosspoints...and tally is supplied.

The Transition Control Group...Dissolve, Wipe and Take buttons are located adjacent to the Fader. HOLD buttons, conveniently located in the control group for each MLE level, allow directing a transition to any or all levels. You can see at a glance which levels will change in the next transition.

504A-16 Video Production Switcher (16 Inputs)	\$35,406.00
504A-20 Video Production Switcher (20 Inputs)	\$37,061.00

505A-20 Video Production Switcher (20 Inputs)	\$41,346.00

Model 508B is shown

Models are available with 16, 20 and 24 inputs, and in NTSC, PAL and PAL-M Standards.

505A-24 Video Production Switcher (24 Inputs)	\$43,610.00
Extra Control Cable for Basic Switcher (per ft.)	8.40
508B-20 Video Production Switcher (20 Inputs)	\$67,513.00
508B-24 Video Production Switcher (24 Inputs)	\$71,121.00
Extra Control Cable for Basic Switcher (per ft.)	14.00

Scene Store:
An optional accessory

Scene Store Memory System

The Ross Scene Store memory system provides a simple-to-operate means of recalling video production switcher set-up information. It is designed to improve accuracy, while reducing the pressure on the switcher operator during fast-moving programs.

Features:

- Operates to/from the next scene as shown on the MLE (Multi Level Effects) preview monitor. The MLE program output is never disturbed
- Each of ten pages of memory stores 20 MLE set-ups (scenes) and one sequence of scenes up to 32 long. Total storage is 200 scenes and 10 sequences of 32 scenes each
- Extensive error checking of the recalled scene for compatibility with the on-air scene it will follow
- Stored scenes and sequences are protected against power loss for a period exceeding 1000 hours
- Built in diagnostics for simplified troubleshooting and verification of system operation
- Rack-mounted electronics only 1-3/4" high

Option:

- Cassette Tape Storage

Quad Split: An optional accessory

Quad Split

Another Ross innovative optional accessory that adds tremendous production power and flexibility to a small switcher.

Features:

- Unique Quad Split does not tie up any switcher bus, and virtually gives you 4 extra buses for free
- Each quadrant has access to any 9 predetermined primary inputs
- Includes diagonal, offset and conventional quad patterns
- Has its own border color generator
- Lets you preset the next source for each quadrant...then do a vertical interval Take of the entire scene

PRODUCTION SWITCHERS

390 COMPONENT VIDEO SWITCHER AND EDITOR

The Model 390 "Component Video" Switcher is a triplicated production/post production switcher with a built-in tandem (2 x Z80) microprocessor-controlled command system.

It has 6 inputs, each consisting of three component channels and internally generated black and YIQ background which can be used as input. The bus system is A & B, Preview and Program. Wipes (16 patterns), key and mix can be accomplished between A Bus and B Bus, while Preview and Program Buses have independent access to each input, black, color background and the A & B result.

The color background is generated by the microprocessor which produces three suitable pseudo-component signals to simulate the desired color background. The input accepts "currently available" standard component signals as specified by the manufacturers; however, acceptable signal format can be easily altered to comply with whatever future standards may be developed. For example, M-format defines the existence of a sync pulse on both Y and I signals, while Q has none. BetaCam specifies only Y and I signals, while Q has none. BetaCam specifies only Y to have the sync pulse and none on both R-Y and B-Y. The Model 390 Component Switcher is capable of switching the input circuit to accept either format.

The built-in intelligence consisting of two Z-80 microprocessors communicates with the editor of the user's choice, decodes instructions, and selects operational switches. The on-board intelligence, in addition to the standard operational functions, is expandable to accommodate the function to handle both SMPTE and in-house time codes. This feature is an industry first by Shintron.

Professional editors used in the post-production environment use time codes extensively to communicate and mark edit points. An RS-232 or RS-422 port becomes a necessity in these circumstances. Also, the Model 390 is equipped with a special port to communicate with Convergence Editors. All decision points can be independently input to the switcher's intelligence on a time code basis. The switcher reads time codes and acts upon instructions based on time codes. This makes the Model 390 a unique combination of a triplicate switcher and a universal editing machine interface. The system is equipped with plenty of on-board processing capability and its upgrading to being an editor is just a software step away.

390 \$18,000.00

Optional Time Code Reader/Generator Board,

Part #390CR \$ 2,460.00

Optional Downstream Keyer with dropshadow and border .. 6,000.00

StratosI† A 12 input, A, B, Preview/Program Bus Switcher with downstream keyer, chromakeyer, Empress features. The StratosI is a combination of an Empress 2000 control panel, 390 electronics, DK-3 downstream keyer, 390CR time code board all joined together with Orange bus..... \$36,000.00

StratosII† A Model 390 with downstream keyer in component. 22,000.00

StratosIII† A Model 390 with downstream keyer plus Model Empress 2000 with its own downstream keyer. Controlled from one keyboard of Model 390. 40,000.00

†Available in PAL: specify NTSC or EBU when ordering.

375 SUPERSWITCHER FOR NTSC, PAL & PAL-M FEATURES

Vertical Interval Switch: Momentary contact, high-grade incandescent lighted pushbutton switch with VIS on all controls.

Automatic Take System: Automatic transfer of preview set-up to program, located before chromakey. Dissolve into Effects by (A/B)-C bus structure.

Re-entry:

Independent Pre-set Output:

Preset Bus has its own output.

Independent Preview Output:

Preview Bus has its own output to prevent chromakey effects.

10 Basic Wipe Patterns:

10 basic wipes and 12 more modified wipes.

Soft Wipe & Edge Wipe: Wipe Modulator & Positioner:

Built-in audio generator modulates wipe patterns and positioner is joy-stick.

Wipe Direction Control:

Normal/Normal-Reverse/Reverse.

Wipe Limit Controls:

Wipe limiters are built-in.

Encoded Chromakeyer:

Takes input from preview bus. No delay compensation necessary. Easy color match by its own color generator.

Three Built-in Color Background Generators:

One for general use, one for chromakeyer, the third for downstream matte keyer.

Downstream Matte Keyer:

Has its own background generator, and dissolve to Program bus. Preview capability.

Fade-to-Black:

Downstream Fade-to-Black.

Total Tally Logic:

All tallies are a true expression of signal states.

Non-Sync Detector:

Non-sync is handled as "take".

Self-Test of Buses:

Unique feature of bus self-test.

Rugged Construction:

For ENG, EFP users.

Remote Control:

Separate Electronics.

Shintron Model 375-375P Chromatic Special Effects Generator is a part of the Chromatic series Color Video Equipment. The Model 375-375P SEG is a complete color studio programming switcher having the features of the most modern professional studio equipment together with a compact size and a highly human-engineered operational panel for teleproduction directors.

Model 375-375P Chromatic is designed to produce sophisticated special effects. The unit is intended for use as a main switcher in any advanced teleproduction situation, studio or mobile.

SWITCHERS

EMPRESS 2000

EMPRESS 2000 SWITCHER

Shintron offers the perfect solution for your production and post production needs, the Empress 2000 Switcher. Empress, which means Event Memory Programmable Effects Switching System is the most powerful of its type on the market.

At the heart of the Empress 2000 is the Shintron Empress System itself, the most flexible editor interface and switching control system. The Empress System consists of two Z-80 microprocessors which accept digital data from the switcher and edit control systems to fully integrate edit suite operations. Auto transitional switching can be triggered by either internally or externally generated SMPTE Time Code, through general purpose relay contact closure, through RS-422 and direct plug compatibility with edit control systems.

The Empress System interfaces with operators through a CRT display. All switching functions are digitized so that precise settings can be achieved in editing and the Empress System can be taught to do tricks.

The Empress 2000 comes standard with 12 inputs, 10 for external video sources, colorizer and color black. The bus structure is A/B, Preview and Program, with 16 basic wipe patterns, soft and hard borders, RGB chromakeyer, master fade to black, and a downstream keyer equipped with drop shadow.

The Empress 2000 is equipped with Orange Bus (Organized Ancillary Grouped Equipment) digital control. Orange Bus allows the Empress 2000 to communicate with other Shintron products, the Model 270 Audio Follow Video Mixer/Router and the 12x series of routing switchers which allows for remote studio operations.

EMPRESS 2000 \$8,670.00

DK-3 DOWNSTREAM KEYER FOR COMPONENT VIDEO

The Model DK-3 is a stand-alone downstream keyer derived from the design incorporated in the Empress 2000 Encoded Switcher. The model DK-3 is triplicated to accommodate component signal.

Features

- Matte fill or video fill
- Four corner edges, drop shadow and border-around letters
- Dissolve to Key + Program from Program
- It is compatible with Shintron's Orange Bus

DK-3 \$3,450.00

12X SERIES

12X ROUTING SWITCHER SERIES

Shintron introduces a new family of digitally-controlled routing switchers created specifically for the video professional — the new "12X" Series. The 12X Series has been designed for flexibility and expandability, and is suitable for situations where superb signal quality and cost-effectiveness are chief considerations.

The "12X" Series is based on twelve inputs of either composite video (V), three-channel component video (C), or three-channel audio (A, for left channel, right channel, and time code). Current models in the 12X Series are available with either one or four independently controlled outputs. Thus, the 12X-V4 is a twelve by 4 video switcher, the 12X-C4 has twelve inputs and four separate outputs for component video, and the 12X-A1 is a three channel, twelve by one audio switcher.

At the heart of the 12X Series is Shintron's remarkable new "Orange" (Organized Ancillary Grouped Equipment) digital control. Orange consists of a stream of RS-422 digital data which is understood by all of Shintron's new products. With the flexibility of Orange, any switching device in the 12X Series can receive commands from any 12X Remote Control Unit.

The "12X" Routing Switcher Series has been superbly engineered for the highest possible electrical performance and system transparency. The wide bandwidth of the 12X Series is even suitable for High Definition TV (HDTV).

Video switching in the 12X Series is done during the vertical interval, and with the 12X-C4 Component Video Routing Switcher, the same timing system developed for our successful Model 390 Component Video Switcher/Editor Interface assures that timing errors between channels are eliminated. The 12X-C4 is in fact the world's first routing switcher originally designed to simultaneously control three separate video channels for either RGB, YIQ, or Y, R-Y, B-Y format signals, and represents one more way in which Shintron is maintaining its role as the primary supplier of "Components for Component."

12X-C4 \$6,990.00
 12X-V4 4,910.00

INTERMATRIX CONVERTER/ READER/GENERATOR

MC-1

690 ET

MC-1 COMPONENT INTERMATRIX CONVERTER

Shintron introduces another first in the growing field of component video, the MC-1 Intermatrix Converter. The MC-1 is an important link in our burgeoning line of "Components for Component," and is sure to become a standard element of every component system.

The MC-1 is a stand-alone unit, one rack-unit high, that accepts as input signals in either RGB, YIQ, or Y, R-Y, B-Y format, and produces outputs in any of the other formats.

The absence of a highly reliable and superbly engineered unit to perform component matrix conversions has, until now, been a major stumbling block to designers of component video systems. With the MC-1 used as an integral part of editing and post-production set-ups, a degree of flexibility and variety of effects approaching that of standard NTSC systems is now possible, while taking advantage of the inherently higher quality offered by component video.

RGB graphic generators, processing equipment, and cameras can now be incorporated into M-Format and Beta-cam suites, various types of component products can be simply interfaced, and relatively inexpensive RGB monitors can be used to monitor YIQ or Y, R-Y, B-Y signals with true component quality. The MC-1 is a completely transparent addition to any state-of-the-art component system, and enables discerning producers to enjoy a fuller range of available effects without sacrificing one bit of resolution or colorimetry.

Inputs are three BNC connectors for either YIQ, RGB, Y, R-Y, B-Y External Genlock Input. Outputs are six BNC connectors for two sets of the selected format. Bandwidth is better than 20MHz and Intermatrix Conversion Accuracy is better than 0.2%.

MC-1 \$2,000.00

690 ET (Everything Time Code) READER/GENERATOR

Shintron introduces the single time code product that does it all...the remarkable Model 690 ET Reader/Generator. Reading and generating SMPTE or EBU Time Code is just the start. The ET comes equipped with every function ever put in a Time Code product and several unique innovations. Independent readers and generators can handle time code and user bits in either Vertical Interval Time Code (VITC) or Longitudinal Time Code tracks. The 690 can actually be used to translate between VITC and longitudinal Time Code. A sophisticated character generator will burn a high-quality numeric display onto any video source, and even generates a set-up menu onto a video screen which makes access to all of its digitally-controlled functions available at the push of a button. The Model 690 can jam-sync to other Time Code Generators in either longitudinal or VITC mode, has ten internal memories which can be used to mark edit points, and automatically adjusts itself to read in any frame-rate standard.

The performance of the Model 690 is no less amazing than its range of features. In the longitudinal mode, the ET can read at speeds from 1/60 to 80 times normal play speed in either forward or reverse. One frame is automatically added when reading in the forward direction or is subtracted when reading in the reverse direction to keep the resulting display in direct correspondence with the frame that is currently under the tape machine's playback head. The ET has adjustable hysteresis levels from -15 to -25dBm to allow the user to select the amount of noise rejection desired.

The ET comes equipped with Shintron's unique Orange (Organized Ancillary Grouped Equipment) digital control. That means that it can be directly interfaced with any of our new switchers or routing systems to become part of a completely interconnected studio control system.

The most amazing feature of all is the ET's price. Compare the ET with any Time Code Product on the market for features, performance, and price, and you will discover how truly remarkable the ET is.

- 008 VITC Output

PTC-100 PORTABLE TIME CODE GENERATOR/READER

- Generates and Reads Time Code
- Jam Sync Capability
- Video Standards: NTSC, PAL, PAL-M
- Film Standards: 24, 25, 30 fps
- User Bit Generation and Display
- Remote Control for Time Counter
- Standard Connectors (type XLR, BNC...)
- Large, Bright LED display
- Antiglare Contrast Enhancing Display Filter
- Identification of Color Field Sequence in Code
- Simple, Straight Forward Operation
- Time of Day Clock

The Skotel Portable Time Code Generator/Reader Model PTC-100 provides a reliable source of time code for field production. A reader with Jam Sync capability is included to enable several units to be synchronized together in the field.

PTC-100

Portable Time Code Generator/Reader with LED display and longitudinal code output. Includes — service manual, Ni-Cad battery pack, battery charger & spare battery pack to accept 4 size AA cells.

PTC-100 \$2,800.00

PTC-100

DM-1000

DM-100 DIGITAL METRONOME

- Can be used for film and videotape productions
- Resolution to 1/100th of a frame makes metronome rate calculations easy
- Headphone and line outputs
- Fits into an attache case (8" x 6" x 1.75")

Modern editing methods, and production techniques such as computer animation, animation using computer assisted editing, and shooting directly on videotape, have created a demand for music scores more accurately timed than in the past. This demand is easily satisfied by the Skotel Digital Metronome.

DM-100 Digital Metronome \$750.00

DM-1000 DIGITAL METRONOME

Same as DM-100 and with 1/1000th of a frame resolution.
DM-1000 Digital Metronome \$870.00

SEG-2000A Special Effects Generator

The SEG-2000A is a fully equipped, rack-mountable studio unit and it's also a totally self contained, lightweight EFP portable that can be operated on AC, DC or rechargeable battery packs. At less than 21 pounds, with its own optional custom fitted carrying case plus a matched companion case for a CCU and a monitor, SEG-2000A offers an unprecedented level of flexibility and versatility.

The SEG-2000A incorporates the most sophisticated Sony industrial video features and delivers a high level of operating and control flexibility. Six video inputs and four output buss lines from the core of a system which accommodates a wide selection of cameras and offers wide latitude in transition switching. These are coupled with controls designed to achieve special effects in professional style. Cut, mix, ext. key, downstream key and wipe with 6 wipe patterns and soft, hard and border modes plus a built-in background color generator. Additional features, such as a built-in NTSC sync generator with Gen-lock capability, help assure high operating flexibility.

The outstanding performance of the SEG-2000 is based on the same engineering that's brought outstanding picture quality, color integrity and long-term reliability to all Sony video equipment.

FEATURES

- Built-in Sync Generator • Three-way Operation • SC and H Phase Adjustment • Four Output Buss Lines • Cut and Dissolve Between Inputs • Comprehensive Inputs/Outputs • Mixing, External Keying and Wipe Effects • Six Separate Wipe Patterns • Downstream Keyer and background color generator • Super-convenient Operation • Tally Intercom Circuit.

SPECIFICATIONS

- Power requirements AC 120V, 50/60 Hz, DC 10-24V (Ext DC), DC 12-24V with BP-60 Battery pack (1 or 2) • Power consumption 37W(AC), 30W(DC) • Operating temperature 0°C to 40°C (32°F to 140°F) • Weight Approx. 9.5kg (20 lbs, 15 ozs) • Dimensions Approx 482(W) x 168(H) x 266(D)mm (19x6³/₈x10¹/₂"") • Color system NTSC color • Switching system Vertical blanking switcher

Effects

- MIX, Dissolve by special effects control lever and PGM/PST MIX lever • WIPE, 6 wipe patterns (selectable) • Wipe edge: The softness is continuously variable • Border line: Hue, chroma, luminance, width and amplitude are continuously variable • EXT KEY, Input signal: 0.7Vp-p (VB) or 1.0Vp-p (VBS), 75 Ohms, unbalanced, EXT KEY connector (BNC), Slicer circuit is included • DOWNSTREAM KEYS, Gen-lock with PGM buss line signal, B&W CAMERA connector (6-pin) • Output signal: HD, VD 4Vp-p, 75 Ohms, unbalanced • Input signal: Video 0.7Vp-p, 75 Ohms, unbalanced • Shadow: Wide and narrow (selectable) • BACKGROUND COLOR, Chroma 0-650mVp-p (variable according to the hue level) • Hue 0°-360° • Luminance (Y) 0-450mV continuously variable.

Video Inputs

- VIDEO IN, 1-6 connectors (BNCx6) 0.7 Vp-p (VB) or 1.0Vp-p (VBS), 75 Ohms, unbalanced, with 75 Ohm termination switch (The PHASE INDICATION switch does not function with the VB input signal.) • VIDEO IN AUX, connector (BNCx1) 1Vp-p (VBS), 75 Ohms, unbalanced, with 75 OHM termination switch • GEN LOCK IN, connector (BNCx1) 1Vp-p (VBS) or 0.3V 0.3V (black burst), 75 Ohms

Video Outputs

- PGM OUT, 1-3 connectors (BNCx3) • PST OUT, 1, 2 connectors (BNCx2) 1Vp-p (VBS), 75 Ohms, unbalanced • VIDEO OUT, connectors (BNCx7) 1Vp-p (VBS), 75 Ohms, unbalanced (loop-through output of the corresponding VIDEO IN connector) • BLACK BURST OUT, 1-4 connectors (BNCx4) Sync burst 0.3Vp-p, 75 Ohms, unbalanced • V DRIVE OUT, connector (BNCx1) 4Vp-p, 75 Ohms, unbalanced • TALLY INTERCOM, 1-4 connectors (DIN, 4-pin x 4) • DG, DP 1.5%, less than 1.5° (APL 10-90%) • Crosstalk (SC) Over -40 dB • Supplied accessory AC power cord.

Optional Accessories

- Sony CVM and PVM series Color Video Monitors • Sony DXC series Color Video Cameras • Sony B&W Video Cameras • Sony CCDD, CCF & UGC Connecting Cables • BP-60 Rechargeable Battery Pack • LC-2003 Carrying Case for camera controller and monitor • LC-2006 Carrying Case for SEG unit • BC-20 Battery Charger

\$4990.00

SMC-70 Microcomputer

SPECIFICATIONS:

Main Unit

CPU

Processor: Z-80A*. Clock: 4.028 MHz

Memories

Read/Write Memory: 64K Bytes fully accessible. Read Only Memory: 32K Bytes includes System Monitor, Sony BASIC and Automatic start up diagnostic. Video Memory: 32K Bytes Graphic RAM, 6K Bytes for character, attribute and programmable character generator.

Display

Format: (software selectable) 25 lines of 80 characters or 25 lines of 40 characters x 2 pages. Character Set: ASCII character set (includes upper and lower case). Software programmable fonts (up to 256 total character types) 8x8 character cell size, 8 colors. Graphic Resolution: 640x400 dots, 2 colors (green or black and white); 640x200 dots, 4 colors; 320x200 dots, 16 colors; 160x100 dots, 16 colors, 4 pages. Border Area: 16 color display. Output Video Signals: Color—Analog RGB signals (0.714 Vp-p 75 Ohms, positive); Sync Signals (4 Vp-p 75 Ohms, negative); System Control Signal (TTL, 525/625 lines select); B/W—Composite Video Signal (1 Vp-p 75 Ohms, sync negative). Horizontal Frequency: 15.73 kHz. Vertical Frequency: 50 or 60 Hz Selectable.

Keyboard

Type: Standard QWERTY, full alphanumeric keyboard. Keys: Total 72 (individually sculpted and contoured by row) including 5 Programmable function keys (up to 15 defined functions), Editing function keys (insert, delete and clear), 5 Cursor position keys, Programmable HELP key.

Standard Interfaces

RS-232C Interface. Printer Port (Centronics type 8 bit Parallel). RGB Video Out (Color). Composite Video Out (Monochrome). Cassette Tape Recorder Interface. Light Pen Interface. Numeric Key Pad Interface. 5 Expansion I/O slots: (2 inside, 3 outside), Micro floppydisk drive (internal); Expansion memory port (internal); 3 expansion I/O slots (on tray). Expansion Unit Connector (for expansion unit).

Additional Standard Features

Timer/Calendar (battery backed up). Earphone Jack. Audio Speaker. Sound Level Switch. System Turnkey Switch. Tone Generator. Dimensions: 3.5" x 14.5" x 17.5" (HWD). Weight: 10.6 lbs. Power Requirements: 115 VAC +/- 10 % 60 Hz, 30 W. Operating Temperature: 5° to 35° Centigrade. **\$995.00**

Optional Accessories

RS-232C Interface Unit. IEE-488 Interface Unit. Video Signal Converter. Battery Backup Unit. Cache Disk Unit. Floppy Disk Control Unit: for 8" single sided, single density disk drive. VCR Control Unit. VideoDisc Superimpose Unit. Expansion Unit: Includes 5 additional I/O slots and power supply. 192K Bank RAM Unit. 16-Bit Adaptor.

SMI-7011 (A) Micro Floppydisk Unit

Console mounted, single drive, Single sided, double density, 280K Bytes capacity (formatted), 135 Tracks per inch, 70 Tracks, 500k bps transfer rate. Media: Sony micro floppydisk (3.5"). Size: 2.3" x 14.5" x 6.3" (HWD). Weight: 3.5 lbs. **\$565.00**

Other Disk Storage Options

Sony Dual Micro Floppydisk Unit. (SMI-7012): Console mounted, dual drives. Sony External Micro Floppydisk Unit. (SMI-7013): Single drive with power supply and cabinet (requires SMI-7011 and SMI-7012). Sony Micro Floppydisk Drive. (SMI-7014): Single drive (only for use with SMI-7011 and SMI-7013). 8" High Density Floppy Disk Drive: 1.0 megabytes (unformatted). Hard Disk System: 5.7 megabytes (formatted).

SMI-7012 \$1,100.00
SMI-7013 775.00
SMI-7014 500.00

KX 1211HG (Z) Trinitron® Component TV

12" picture tube measured diagonally, Composite and RGB Color Monitor, High Resolution Display (25 lines of 80 characters), 525 and 625 line mode (software selectable). Inputs: RGB Multi-input (Analog and TTL), Composite Video Input, Audio Input (2 channels). Dimensions: 13.1" x 13.3" x 15.0" (HWD). Weight: 28.9 lbs.

\$895.00

CPD-120 Character Display

12" picture tube measured diagonally, Non-glare tube with long persistence green phosphor, High resolution display (25 lines of 80 characters), 525 and 625 line mode (software selectable), Built-in audio amplifier and speaker. Inputs: Composite Video Input, Audio Input. Dimensions: 11.1" x 12.8" x 12.7" (HWD). Weight: 17.9 lbs.

\$280.00

Other Display Option

Standard color TV receiver: (with Sony Video Signal Converter).

SMI-7020 Dot Matrix Printer

Printing Method: Impact, dot matrix, logic seeking printing, bidirectional, incremental printing. Printing Quality: 7(H) x 9(V) dots Alphanumeric, 8(H) x 8(V) dots character generator based graphic, N(H) x 8(V) dots, bit image graphics. Print Speed: 120 cps, 63 LPM (10 CPI). Line Spacing: 1/6", 1/8", N/144 (N=0-99). Print Density: 5, 6, 8.5, 10, 12, 17 char/inch. Interface: 8-bit Parallel. Dimensions: 4.9" x 15.0" x 11.2" (HWD). Weight: 18.7 lbs. **\$725.00**

Other Printer Options

Dot Matrix 136 Character Printer, Letter Quality Printer (40 CPS).

MICROCOMPUTER TO VIDEO SUPERIMPOSER

SMI-7073 RGB
SMI-7074 NTSC
Superimposers

The Sony Superimposers are modules that plug into the SMC-70G enabling character or graphic data generated on the Genlocker™ Microcomputer to be superimposed on video signals.

SMI-7073

Lock pulse input (for LDP-1000): TTL level, 4.7k Ohms, pull-up

Superimpose and mix mode: Superimposed portion of video signal: Same as above; Other portion of video signal: Dependent on external video signal

Sync out (for LDP-1000): 2V p-p ±0.5V p-p, 75 Ohm, BNC connector

SC out (for LDP-1000): 2V p-p ±0.5V p-p, 75 Ohm, BNC connector

Audio input level: -5dBm (Z in), 50k Ohms

Audio output level: -6dBm (Z out), 600 Ohm

Audio control:

Audio Out	0	1	2	3	4
R	Off	Audio 1 R	Audio 1 R	Audio 1 L	Audio 2 R
L	Off	Audio 1 L	Audio 1 R	Audio 1 L	Audio 2 L

Display capability: 8 colors* under following modes:

Mode	Superimposed Video	Mix Video
640×400	No	No
640×200	No	No
320×200	Yes	Yes
160×100	Yes	Yes

*One fixed color is used as a transparent color in superimposed mode

Remote control jack (for audio recorder): Minijack

RGB video input (from SMC-70): 25 pin connector

RGB video output: 0.7V p-p, 75 Ohm, 37 pin connector

SMC-70 interface: 50 pin connector

Dimensions: 4.4"×14.6"×1" (HWD)

110mm×365mm×25mm (HWD)

Weight: 1.7 lbs. (0.65kg)

SMI-7073 (RGB) \$500.00

VP-124

SMI-7073

SMI-7074

Video input: 1V p-p, 75 Ohm, BNC connector

Video output: Encoded video: 1V p-p (140 IRE units), 75 Ohm, BNC connector; Signal level: 100 IRE units including set up; Sync Level: 40 IRE units; Burst level: 40 IRE units; Set up level: 7.5 IRE units

Connector	Power On	Power Off
Video In (1V p-p)	75 Ohm terminated	75 Ohm open
Video Out 1	1V p-p, 75 Ohm	Connected to Video In
Video Out 2	1V p-p, 75 Ohm	No signal

Superimpose and mix mode: Superimposed portion of video signal: Same as above; Other portion of video signal: Dependent on external video signal

Lock pulse input (for LDP-1000): TTL level, 4.7k Ohms, pull-up

Volume adjustment: Inside of case: Video gain, sync gain, set-up level, chroma level, encoder gain
Outside of case: Chroma level with chroma on/off switch, subcarrier phase (360 degrees)

Sync out (for LDP-1000): 2V p-p ±0.5V p-p, 75 Ohm, BNC connector

SC out (for LDP-1000): 2V p-p ±0.5V p-p, 75 Ohm, BNC connector

Audio input level: -5dBm (Z in), 50k Ohms

Audio output level: -6dBm (Z out), 600 Ohm

Audio control:

Audio Out	0	1	2	3	4
R	Off	Audio 1 R	Audio 1 R	Audio 1 L	Audio 2 R
L	Off	Audio 1 L	Audio 1 R	Audio 1 L	Audio 2 L

Display capability: 16 colors* under following modes:

Mode	Encoded RGB	Superimposed Video	Mix Video
640×400	Yes	No	No
640×200	Yes	No	No
320×200	Yes	Yes	Yes
160×100	Yes	Yes	Yes

*One fixed color is used as a transparent color in superimposed mode

Remote control jack (for audio recorder): Minijack

**SMC-70G****SMC-70G GENLOCKER™****Microcomputer with Genlock Capability**

The SMC-70G is an incredibly versatile, highly flexible, readily expandable microcomputer with genlock that enables it to synchronize internally generated text and graphics with an external video signal. It can superimpose text and graphics directly onto any video signal using either the RGB or NTSC Superimposer module (optional).

The SMC-70G is a cost effective system for video production houses and industrial studios that currently rely on outside services to add text and graphics to their video productions.

Features**Video**

- Built-in genlock capability
- Sync mode selectable by hardware or software
- Looping input for composite sync or video
- BNC connectors for composite input, reference output, RGB and sync or B & W outputs simplify computer/video equipment connections
- RGB superimpose capability with optional plug-in module—SMI-7073
- NTSC computer output and superimpose capability with optional plug-in module—SMI-7074
- Outstanding graphics capability in four modes: 640 x 400 dot, 1 color; 640 x 200 dot, 4 colors; 320 x 200 dot, 16 colors; 160 x 100, 16 colors
- Programmable character display
- Independent control of graphics and character displays from software
- Dual composite sync/video loop outputs
- Simultaneous RGB and B & W computer outputs
- Wide range of available peripherals and software due to complete compatibility with SMC-70 Micro Computer

Microcomputer

- Compact, integrated CPU/keyboard unit designed to accept either single or dual, built-in, 3.5" Auto Shutter micro floppy disk drives
- Optional 16 bit adaptor plug-in via expansion unit connector
- Custom LSI circuitry for graphics display and timing generation
- 16 resident I/O ports for RGB video x2, composite monochrome video x2, RS-232C, Centronics-type parallel printer port, numeric keypad interface, light pen interface, tape cassette interface, expansion unit connector and 2 internal and 4 external I/O slots on a slide-out tray
- Resident clock/calendar with battery backup
- Resident audio tone generator, speaker and volume control switch
- Three-mode turnkey switch: Off: System monitor signs on when powered on; Disk: OS or application program automatically loaded from diskette when powered on; ROM: Software loaded from ROM pack (contained in plug-in expansion module) when powered on
- Sculpted and contoured 72 key QWERTY type keyboard with 5 function keys (software definable up to 15), 4 edit keys and 5 cursor position keys
- Optional 17 key numeric keypad unit
- Optional light pen for non-keyboard data entry
- Direct memory access

\$2400.00

**SMI-7075 VIDEOTIZER
 FOR SONY MICROCOMPUTER SMC-70/70G**

The Sony's VIDEOTIZER takes you to a new world of graphics and images with much easier and faster input capability than a keyboard and a tablet.

It allows you to make a picture file for computer with the images from any NTSC composite video source, such as Video Camera, VTR, Video Disk and so on.

And more, enhances the usages of SMC-70/70G as an eminent presentation tool, and a special effect equipment for video post-production, with the mosaic effect capability.

The picture file made by VIDEOTIZER has compatibility with "Graphics Editor" and "Video Titler" in the PIC. file format.

FEATURES

- Field Still — Can freeze the video picture with resolution of 448 x 262 pixels*.
- Color Mode — 2 planes of 256 colors, 448 x 262 pixels*.
- B&W Mode — 2 planes of 256 gray scales or 16 planes of user sliceable binary mode, 448 x 262 pixels*.
- * SMC-70/70G: 320 x 200 pixels.
- Write-in Speed — 1/60 sec. (1 field real timing)
- Built-in Genlock capability for any NTSC video input
- Mosaic Effect
- 1 pixel can be enlarged up to 32 times for a special mosaic effect

SMI-7075 **\$2900.00**

SPECIFICATIONS (Inputs/Outputs)

- Video Input:** BNC Type, 1.0Vp-p 75 ohms, sync negative
- B&W Video Output:** BNC Type, 1.0Vp-p 75 ohms, sync negative
- RGB Video Output:** BNC Type, 0.7Vp-p 75 ohms
- Composite Sync Output:** BNC Type, 4.0Vp-p 75 ohms
- Keying Signal Output:** BNC Type, 0.7Vp-p 75 ohms, without sync signal
- RGB Multi-Input:** 25-pin Connector
- RGB Multi-Output:** 25-pin Connector

PROGRAMMABLE VIDEO CONTROLLER (PVC)

The PVC is compatible with most remote controllable VTR's, and when combined with existing VTR's it provides a cost effective playback system without the large initial expenditure necessary with other similar systems. The PVC will automatically control up to 8 different VTR's following your pre-programmed schedule. The PVC will control and can intermix different industrial tape formats such as 3/4", Beta and VHS. The PVC provides maximum flexibility.

Best of all, the PVC gives you ease of programming. An entire day of programming can be entered in a few minutes. Up to 64 separate commands can be programmed into memory for daily operation of power, play, stop or rewind functions — automatically switching video and audio sources at the prescribed time.

A special input is provided so that a Character Generator or Title Camera can be automatically switched on whenever the VTR's are not playing. In addition, an audio input is provided so that background music can be played over this special input.

For those occasions when it is necessary to insert a non-scheduled program or live camera input onto the system, a special auxiliary input is provided. Switching to the auxiliary input does not disturb the scheduled programming commands stored in memory. To activate the special auxiliary input only requires pressing two buttons on the PVC keyboard.

All VTR inputs can be switched up manually by pressing buttons on the keyboard. This does not disturb the scheduled programming commands stored in memory, and is particularly useful for previewing tape programs already loaded on the VTR's.

Battery backup prevents loss of memory during momentary power failures.

Because a PVC-based playback system includes several VTR's, the failure of any particular VTR eliminates only one input channel, and in no way affects the programming or playback of other VTR's.

OPTIONS

The PVC can be wired for two separate independent channel outputs utilizing four input positions per output channel. Programming and control of the two channels can be simultaneous.

An additional memory section can be added to the PVC, increasing its memory an additional 64 positions, to a total of 128.

Both options are available either as factory installed or as a field update.

TCR 660

6010

TCG 550

T5010

T-7000

TCG 550 Time Code Generator

FEATURES

- Low, low cost opens up many new applications • Rugged construction. It's built to live in the real world • Operates on four standards. Drop frame, 24, 25, and 30 frames per second • Color framing. Operates with both NTSC and PAL color field sequences... necessary for work requiring great precision such as animation
- Auto preset to 23:58:30:00. Accommodates 1-1/2 minute pre-roll
- 'Lock' & 'Line' indicator lights. Lets you know if you're properly sync'd to video signal or powerline • Large, bright display. LED's .6in/1.5cm high are readable at a glance • Microprocessor-design. Fewer parts; lower operating temperature; greater reliability • Low power consumption. The TCG 550 draws only 4 watts from an AC source and 3 watts from 7-1/2-16 volt DC source. **\$995.00**

TCR 660 Time Code Reader

FEATURES

- Low cost opens up many new applications • Rugged construction for long, trouble free life • Operates on four standards. Drop frame, 24, 25 and 30 frames per second • Indicates color framed time code. Operates with both NTSC and PAL color field sequences . . . necessary for work requiring great precision such as animation • Time or user data display is selected from front panel • Front panel and remote Run/Hold lets you freeze a reading while the code count continues • Convenient operating range of .1 to 10 times play speed • Error light indicates absence of code • Large, bright display. LED's .6 in/1.5 cm high are readable at a glance • Microprocessor-design. Fewer parts; lower operating temperatures; greater reliability • Low power consumption. Draws only 4 watts from AC source and 3 watts from 7 1/2 - 16 volt DC source. **\$995.00**

T5010 SMPTE/EBU Time Code Generator

FEATURES

- Generates SMPTE (drop and non-drop frame), EBU and 24 frames per second time code • 4 field NTSC and 8 field PAL color framing sequences • Jam Sync and Continuous Jam operation featuring indicators for received time code error and received time code synchronous. All jam operations are held pending until received time code errors clear • Keyboard entry of time and user bits • High resolution 16 x 16 dot character generator. Offers boxed or uniquely bordered characters, reverse character video, continuously variable character position, frames suppression switch and two isolated video outputs • Time and user data displayed together or separately in video • Parallel input/output of time/user data • Two isolated 600 Ohm time code outputs • Large, bright .8" high display with intensity adjustable to match your control room lighting • Microprocessor design and extensive use of NMOS large scale integrated circuits. Fewer parts and low operating temperature for greater reliability. 19" rack mount only 3.5" high • Versatility. Combination of function and size makes the T5010 ideal for VTR room and mobile applications. **\$2695.00**

6010 High Speed Time Code Reader

FEATURES

- Full compatibility with any source of SMPTE/EBU time code • Drop frame indicates 25 or 30 frames per second modes
- Reads 1/10 to 80 times play speed. Accommodates precise edit choices • Wide input level range accepts signal from any professional equipment source • Time or user data display is selectable from front panel. Provides time code for edit selection and user data for further identification or control purposes • High resolution 16 x 16 dot character generator. Offers boxed or uniquely bordered characters, reverse character video, two isolated video outputs, continuously variable character position, and frames suppression switch • Regenerated 600 ohm +11 dBm time code output
- Time and user data displayed together or separately in video • Remote and front panel Display Run/Hold control • Parallel output of time or user data • Indicates color framing in NTSC and PAL for precision editing jobs, such as animation where the odd/even color framing sequence is significant • Forward/Reverse indicator. Tells you the direction in which the tape is being read • Error indicator shows that you're not reading good code, and in the event of an error, the display will freeze on the last valid reading • Decoding delay compensation • Large .8" (2cm) high, bright LED display with intensity adjustable to match your control room lighting • Microprocessor design. Fewer parts for greater reliability. 19"/48.3cm rack mounting only 1-3/4"/4.5cm high. The low operating temperature means T6010 can be racked immediately above or below other equipment • Versatility. Combination of size and function makes the T6010 ideal for VTR room and mobile applications. **\$2295.00**

T-7000 Time Code Generator/Reader

FEATURES

- Self-powered, it weighs only ounces • This pocket calculator size time code generator/reader operates up to 8 hours on its internal rechargeable power supply; another 18 to 30 hours from the reserve supply in the book-size carrying case • It offers direct keyboard entry of time and user bits; standard 600 ohm +11 dBm output; jam-sync with built-in reader; color framing; all 3 standards (drop frame 30 and 25 frames per second) as well as remote start/stop capability • High intensity display readable in direct sunlight without using the sun shield **\$1695.00**

CAN SOLVE YOUR VIDEO MATTING PROBLEMS FOR LIVE BROADCAST

The **Newsmatte** has been designed to satisfy the needs of broadcasters desiring Emmy Award winning **Ultimatte** composites for their newscasts. Chromakey in newscasting has always been both desirable and undesirable. Desirable because image compositing allows for dynamic presentations and undesirable because of the distracting edge effects on the newscaster.

Newsmatte now permits image compositing without any edge effects, with every strand of hair reproduced. There is no blue edge or blue tinting, shadows are totally linear and quiet.

Newsmatte operates on the encoded signal and therefore does not require an encoder. It is connected in line between the camera and the switcher and delays the composite video 18 nanoseconds.

The output of the **Newsmatte** is either the direct unaltered camera video or processed video, whereby the blue backing and blue flair have been removed. Processed video is automatically selected when the chromakey button is depressed on the switcher.

The RGB inputs are used to generate the matte (key) signal which is made available along with the processed

foreground for subsequent mixing with the background scene within the switcher.

Newsmatte also contains its own mixing amplifiers, and when the background video is connected directly, it can be used as a stand-alone compositing device, without need of a switcher.

Many switcher manufacturers have **Newsmatte** interfacing options available for their new switchers. There are several ways of connecting **Newsmatte** into existing switchers, depending upon customer requirements.

Live news broadcasting demands immediacy whereby human engineering is developed to an ultimate. **Newsmatte** comes as close to this ideal as possible with its one-knob "matte density" control. One more button for selecting "shadows" or "no shadows" and the operational controls are defined.

Newsmatte departs from **Ultimatte** in both intended end user and principle of operation, while maintaining **Ultimatte's** flawless, undetectable compositing performance.

Operational Controls

Flare — normally set full-on for full suppression.

White Balance — Adjust color temp of FG grey scale. One time adjustment upon installation.

Matte Density — Sets foreground matte density. Adjustment may be needed when cool wardrobe colors are present.

Black Gloss — Used to stop background print-thru from blue reflections on shiny black objects. Typically set for black glossy hair.

Clean-Up — Allows elimination or reduction of shadows on background. One time adjustment used when shaded logos are present on blue backing.

Bal — Allows for fine adjustment of edge transitions when Clean-up is used.

Print Thru — Sets null for background multipliers. One time adjustment needed only when **Newsmatte** is being used as a stand alone device.

Matte (Switch 1) — Composite image is selected when switch is lighted; direct FG camera is selected when switch light is off.

Clean-Up (Switch 2) — Clean-up enabled when switch is lighted.

Hue (Switch 3) — Selects blue or green backing color.

\$4870.00

NEWSMATTE-2 – a Professional Compositing Tool that is both easy to operate and easy to integrate into a video system

PERFECT, UNDETECTABLE COMPOSITES

Since Ultimatte Corporation introduced Newsmatte in early 1982, it has literally revolutionized the set design and format of news and weather programs throughout the world.

Unlike Chromakey, Newsmatte allows the foreground subject to be close to or even touching the blue backing. Sets can therefore be much smaller, less expensive.

Broadcasters have enjoyed the flexibility of a compositing device which gives them freedom to use transparent objects, smoke, fast moving objects, and other difficult-to-composite items. Newsmatte picks up even the finest hair detail and there is never a "cut-out" look, again not available with chromakey—even the new "soft edge" designs. Newsmatte contains its own mixing amplifiers, and when the background video is connected directly, it can be used as a stand-alone compositing device, without need of a switcher. Newsmatte has been designed to handle the immediacy of live broadcast, with its automated controls. Unlike chromakey, adjustment of iris and paint pots do not require a readjustment on the Newsmatte.

Newsmatte-2 has all these same advantages, plus Digital Memory, along with some other interesting developments to make it even more useful for the broadcast industry—not only as a more versatile tool for news and weather, but allows the News Department and Production Department to share the benefits and costs.

Newsmatte-2 is introduced not as a replacement for the original, but as a medium priced compositing device

suitable for either live broadcast or simple production work. Newsmatte-2 has all the desired features of the Newsmatte, plus digital memory. For small or fairly simple productions, where, perhaps, the more expensive and versatile Ultimatte-4 could be an "overkill" Newsmatte-2 has the necessary features for a professional job.

Newsmatte's ability to handle simple production situations makes it an extremely useful product for corporate or industrial video departments or smaller production houses. At a comparatively small cost, it is possible to obtain professional results, not available from even the very best and most expensive chromakey.

In the event a set is unevenly lit, say with hot spots at the top, the camera can zoom in on the area immediately surrounding the subject. Pressing the memory button locks in the backing characteristics; the camera can then be pulled back and the background will be perfectly composited without the ill effects normally caused by hot spots.

Dissolves and Wipes: An output to a switcher is available with continuous flare suppression of the foreground image. It is then possible to dissolve or wipe from the Newsmatte effect to the direct picture, while still maintaining the color balance of the foreground subject. This feature gives the foreground picture an appearance of better definition and depth and no noticeable difference between a composited or non-composited image.

ULTIMATTE®-4 FRONT PANEL

FOREGROUND DIRECT

BACKGROUND-ULTIMATTE-4

FINAL COMPOSITE

ULTIMATTE® -4

FEATURES

- Flawless Composites
- New Creative Opportunities
- Finer Quality Control
- Unusual Production Features

Black logic—compositing against black backing with variable level and density, for streak photography, titles, etc. Shadow control—reproduce, darken, lighten or eliminate. Overshoot the backing—using the built-in window/mask generator. Contrast control of foreground subject independent of background. Foreground fade-in/out—to extinction—to black silhouette. Fill a silhouette with a second scene (using two Ultimattes). Create halos in any color (using two Ultimattes). Subject can walk completely around himself during a continuous take (using two VTRs). Many other special effects are possible by creative use of the unique switching/mixing/mating functions of the Ultimatte.

Production

With live video camera in foreground and background. With live video camera in foreground—with background scenes on tape.

Post Production—Film

Composites onto tape images previously photographed on film (foreground and background, 16 or 35mm). This is done during the film-to-tape transfer process. The quality of the matte is superior to any film matting system. Replaces film opticals for both blue screen composite photography and streak photography on black backings.

Post Production—Tape

By recording the matte output signal at the same time as the Ultimatte processed foreground, post production video composites of the highest quality become possible.

Now you can achieve superior blue screen video matting that can defy detection and will composite two images with no restrictions of any kind as to the nature of the subject matter.

Ultimatte is designed on a linear principle. It is not a keyer, and can thus solve problems Chroma-Key type systems cannot. It will reproduce (unless purposely inhibited) all foreground information seen by the camera.

Normally used with a blue screen, the Ultimatte can also composite against green or red backings.

Ultimatte is available with either local controls (UM-4) or a remote control panel (UM-4R).

Ultimatte®-4 \$13,500.00

ULTIMATTE® -5 FRONT PANEL

ULTIMATTE® -5

FEATURES

- Post Production—Makes high quality composites from taped (analog component) originals
- Soft or hard-edge windows
- Reverse window. Allows shut-off of background scene within window area
- Digitally based remote control over a single coax cable
- Can be controlled from 4 remote locations
- 32K random access memory
- Accepts all inputs, RGB/YRGB/YR-Y B-Y/YIQ (YUV)/NTSC
- Automatic BG matte setting
- Dynamic BG matte tracking through color changes from back wall, through coving, to floor. (A Breakthrough)
- Matting logic for Blue, Green, White, and Black backings
- May be computer controlled through switchable interface
- RBG Black balance/RGB White balance. Permits matching of color tones in FG/BG blacks and whites
- Inserts Glow or title—solid or transparent
- Accepts external Matte (key) signal

Ultimatte®-5 \$25,000.00

Prices and Specifications Subject to Change Without Notice.

mini-comm

VIDEO TAPE EDITOR
 Expandable and Up-Gradable to a
 Commander II, Eight Machine Editor.

List Management — Includes Insert, Delete, Change, Replace with and without Ripple, also Display 2, manual control of any parameters.

Edit List Memory — For up to 250 events with manual entry of dissolves, wipe or keys when using a single source.

Interfaces — 2 or 3 Interfaces for either 1", 3/4" or 1/2" VCR.

Switcher Control — To include crosspoint selection, dissolves and wipes up to 999 frames with partial effects in 10% increments. Keys, Pop, Fade, In, Out or Both.

User Definable Key — Allows storage of up to 125 keystrokes. Simply depress the key again to repeat each and every keystroke stored in memory.

Assignable Record/Play — Any machine in the system can be a recorder or player.

Multiple Recorders — Record/Slave Operation, one or all machines on the system can be recorders.

Automatic Assembly — Either sequential or checker-board.

Audio Switcher Control - Using the Model 425 for cuts or dissolve up to 999 frames.

Mark One/Mark All — VTR assigned to the system in one stroke, can also be used to trim the Edit in, Edit out, or duration.

Fully Time Code and Control Track Capable — Intermixing DF, NDF, SMPTE T/C or Control Track is perfectly acceptable.

Motion Control — Rotary Control of Search Speeds with detents and variable rotation

without detent when in Jog Mode. Jog is available on all types of video and audio machines.

Slow Motion Control — Manual Slo-Motion during the Edit Interval to achieve variable speed effects.

Special Function Control — Control of any external devices such as DVE, Audio Cart Character Generator or any device which can be activated by a contact closure.

Color Frame — All color frame parameters are checked for proper C-F relationship in NTSC-RS-170A or PAL 8-Field Sequence.

Cueing of VTR's — Cue one or all machines to the cue point or to the Edit point automatically as desired.

Edit Back Timing — Operator selectable Edit durations, for Back Timing of Edits and quick Edit adjustments.

Animation — Allows repeated Edit or previews to occur in durations of one frame to many hours operator selectable.

Frame Bump A/V Sync — Frame Bump, Audio/Video, on one or all machines in the system, with computer assistance in modifying the in times to ensure complete synchronization when recycled.

Back Timing — Automatic Back Timing of Edits — enter the outpoint and the desired duration. The Mini-Comm does the rest.

RS-232 Input/Output Port — Output of Memory Data or Edit list is via an RS-232C Port. Device Optional.

Sync Roll — All machines on the system can be used.

Single Machine Preview — For BVB, VBV, or VVV either source or Recorder.

Auto Tag or Manual Tag — Allows freedom of mixing the operation as desired.

Edit List Format — The industry standard Edit list can be displayed, printed, paper tape punched or output to disc.

Time code standards: SMPTE/EBU 24, 25 and 30 FPS; Drop/Non-drop Frame.

Electrical

Source Voltage: 115-220 VAC
 Source Frequency: 50-60 Hz. Single Phase
 Brownout Voltage: 30% of Source Voltage
 Power Consumption: 300 watts nominal

Dimensions:

Electronic Chassis: 16.5"W x 20"D x 10.5"H
 Keyboard:
 Rear — 28.0"W x 9"D x 3.6"H
 Front — 19.5"W x 9"D x 1.5"H

Weight:

Electronic Chassis — 80 lbs.
 Keyboard: Rear — 8 lbs.
 Prices start at \$9200.00

EDITING SYSTEMS

EAGLE I, II And III

EAGLE I

FEATURES

- Full Transport Mode Feedback
- The Most Accurate System Available
- Distributed Intelligence
- 250 Event Memory
- Built-in Sync Generator
- Built-in Black Burst Generator
- Animation
- Multiple Split Edits
- Auto-Tag
- Auto-Edit from Memory or the Eagle Disk Operating System
- ADR
- Printer Output
- Two Source Capable
- Fully Digital Speed Control
- Cruise Control
- Full Function "All" Button
- Search to any Register
- Trim + or - any Register
- Calculate Mode
- Full Capstan Override Routines
- Tape Number Handling
- Sync Roll Capable
- Program Length Counter
- Micro-Loc II and Control Track or SMPTE
- Single Defined Pushbuttons
- Multi-Display
- Transition and Pattern Entry
- Software Selectable Pre-Roll and Post-Roll
- Fully Upgradable to the Eagle II or Eagle III
- Software Lockout of Assembly Edits
- Full Complement of Error Messages
- Can be used with the Eagle DOS Dual Disk Drive System
- Slide Feature

\$7500.00

EAGLE II

All the features of the Eagle I but includes full list management functions including: Insert Event, Delete Event, Move Event, Index, Ripple, Auto-Clean and Slide.

\$9,500.00

EAGLE III

A full A/B roll system including the switcher. Includes all the features of the Eagle I and II plus third TCP module, Z6006, Z6007, complete switcher control, and Echo SE-3 computerized production switcher with Videomedia editing interface.

\$30,000.00

EAGLE EDITING OPTIONS AND ACCESSORIES

MICRO-LOC "2"	Intelligent Micro-Loc reader generator. (specify type VTR)	\$ 750.00
SM-3	Triple SMPTE/EBU readers (for three VTRs)	2,800.00
EA100	Single 5-1/4" mini-floppy disk file storage and retrieval system. Includes one 5-1/4" drive, mounting chassis and disk controller card.	1,995.00
EA-DOS	Dual 5-1/4" mini-floppy disk operating system. Includes two 5-1/4" drives, mounting chassis, disk controller card, and disk operating system software.	5,000.00
Z6004	Dual 8" floppy disk operating system. Includes two 8" drives, rackmount power supply and chassis, disk controller board and operating software.	7,500.00
VER 2.00	Enhanced operating software includes expanded list management and software assignable VTRs. Must have the Z6004 DOS for this option. Not available on the Eagle I.	1,500.00
C1-TRAN	Translator software to convert a Videomedia edit list to CMX format. Includes error tagging of all functions incapable of being performed by a "CMX" type editor. This option is available with the Z6004 only.	1,000.00
EA101	CMX edit list translator to printer port only. EPROM version	1,500.00
EA102	Non-volatile memory. Retains memory for extended periods of time even when the editor is not plugged in. No external batteries or power supply backup is required. ...	1,000.00
Z6007	Contact closure and general purpose interface. Includes audio and video monitor switcher and software control; 5 separate contact closures for use with external devices. (This unit is standard with the Eagle III).	900.00
Z6008	Monitor switcher for use with any Eagle I or II to provide single monitor use for rehearsal and shuttling.	450.00
TCP-2	Complete set of hardware and software with Z-80 microprocessor for parallel interface of additional transport to the Eagle. (specify type transport).	2,500.00
TCP-3	Complete set of hardware and software for serial interface of two additional transports to the Eagle. (specify type transports).	5,000.00

Note: Maximum number of transports controlled — 6 serial or 4 serial and 1 parallel or 2 serial and 2 parallel or 3 parallel.

EA-RM	Rack mount version option for any Eagle model editor.	\$ 450.00
SP-EAG	Spare parts for Eagle editing system	650.00

Upgrade or changeout charges

TCP-2 to TCP-2 (VTR Change)	Includes software and cable swap.	\$ 800.00
TCP-2 to TCP-3 (VTR Change)	Includes software and cable swap.	1,400.00
Eagle to Magnum upgrade charge	POR

EDITING SYSTEM

Z-6000			
FEATURES			
<ul style="list-style-type: none"> • Distributed intelligence using standard S-100 bus • Standard rackmount chassis • Z80A - 8-bit microprocessor • Frame accurate, color framed w/SMPTE or Micro-Loc; Machine dependent w/control track • Dedicated; Full alpha-numeric capability w/KR-6000 • Serial printer/Videomedia disk operating system 			
<p>The Z-6000 Editing System is the latest in the family of post-production products from Videomedia. It incorporates full distributed intelligence for control of teleproduction devices, assuring maximum system flexibility and precise system timing. Machines may be intermixed or changed easily as the user's requirements vary. SMPTE Time Code, Micro Loc and control track can be used together with complete accuracy. The Z-6000 may be economically installed in its simplest configuration as a single source, control track, on-line editing system, and then expanded, as the needs dictate, to an 8-source editing system with full switcher control, Text Editing (List Management) and a sophisticated Disc Operating System, which allows the editor to custom design the Z-6000 to his particular style of editing.</p>			
Z6000-A	2 machine, 8 event, cuts only, printer output, 2 TCP modules (specify type transports).....	\$ 9,800.00	
Z6000-B	2 machine, 250 event, cuts only, printer output, 2 TCP modules (specify type transports).....	13,400.00	
Z6000-C	2 machine, 250 event, cuts only, list management, printer output, 2 TCP modules (specify transports).....	16,250.00	
Z6000-D	3 machine, A/B roll, 8 event, printer output, 3 TCP modules (specify type transports) and switcher to be used (order switcher and/or software driver separate).....	22,750.00	
Z6000-E	3 machine, A/B roll, 250 event, list management, printer output, 3 TCP modules (specify type transports) and switcher to be used (order switcher and/or software driver separate).....	30,500.00

PRO-PATCH

New Concepts In Audio and Video Patching

Pro-Patch — ADC's newest family of jackfields offers the user additional features, greater savings and new concepts in both audio and video patching.

Pro-Patch units are re-usable and especially suited for remotes, special broadcasts and advance builds as well as studio environments. Pro-Patch jackfields allow matching audio and video configurations while providing a uniform and professional look to any system.

The Pro-Patch video jackfield features a 2 x 22 or 2 x 24 array of ADC switching (self-normalling) coax jacks wired back to quick and simple BNC connectors on a clutter-free rear panel. Self-normalling loops internal to the jackfield are color-phase compensated for cross patching. No phase shift occurs between self-normal and patch cord providing a phase coherent patching system.

ADC Part Number:

4-26053-0010 2 x 22 (44 Jacks) \$14.10
 4-26053-0020 2 x 24 (48 Jacks) 15.40

Note: Minimum order on patch cords, two each length.
 Additional discount for 10 or more of each length.

PRO-PATCH (Video/Coax Patch Cord)

3' Coax Patch Cord ADC No. CC-1076-N \$13.66

Note: Use only 3 foot patch cord to preserve phase coherent capability of ADC Pro-Patch Video Jackfield.

PRO-PATCH VIDEO JACKFIELDS

The Pro-Patch video jackfield features a 2 x 22 or 2 x 24 array of ADC switching (self-normalling) coax jacks wired back to quick and simple BNC connectors on a clutter-free rear panel. Self-normalling loops internal to the jackfield are color-phase compensated for cross patching. No phase shift occurs between self-normal and patch cord providing a phase coherent patching system. ADC Part Number PPV-22 or PPV-24

PPV-22 \$1410.00
 PPV-24 1540.00

SPECIFICATIONS

Physical

Chassis: Aluminum with gold anodized finish
 Front Panel: Black thermoset plastic or black thermoplastic.
 Rear Connectors: Isolated BNC bulk-head receptacle, non-tarnish finish

Cable

RG-59 series coax cable (75 ohms impedance)

Jacks

Nickel plated zinc alloy housing. Gold-plated beryllium copper and phosphor-bronze springs.

Electrical

Better than 90dB isolation between circuits in range of 0.6 MHz. Not greater than 0.2dB of insertion loss. VSWR of less than 1.1 in range of 0-100 MHz.

Environmental

Operating Temperature: 2°C to +50°C
 Non-operating Temperature: -50°C to +70°C
 Humidity: 5% to 95%

VW SERIES Time Base Corrector/ Frame Synchronization

VW SERIES FEATURES

- Full frame "infinite window" time base correction
- Electronic Frame or Field Freeze for production applications
- Remote control panel for full studio control of operational and setup functions
- Exceptional degree of transparency in either TBC or Synchronizer mode
- Hot switching without video roll or breakup
- Selectable freeze on loss of video—last good field or system black
- Horizontal blanking fixed at 10.8 usec.
- Bandwidth exceeds 2.4 MHz in heterodyne TBC mode
- RS-170A
- Direct or Heterodyne color processing
- Vertical Blanking is switch selectable in any order between lines 15-20
- Velocity compensation in both Direct and Heterodyne TBC mode
- Bandwidth exceeds 2.4 MHz in Heterodyne TBC mode
- Adjustable chrominance-to-luminance delay of ± 200 nsec.
- Advanced vertical output to minimize video delay for multiple generation editing
- Capable of delaying non-synchronous video feeds by as much as a full frame to make them synchronous with system reference

VW-2/VW-3 TBC, Frame Synchronizer, Electronic Freeze Frame

The VW-2 is designed to provide first-quality time base correction and dropout compensation for systems which utilize direct color Type C format VTR's.

The VW-3 is designed to provide first-

quality time base correction and synchronization for systems applications.

The VW-2/VW-3 also supply superior heterodyne processing for systems employing 3/4 and 1/2-inch format video tape machines.

The VW-3 has a signal-to-noise of 56 dB and is smaller with less power consumption.

The VW-3 provides simultaneous time base correction and synchronization, making it possible to take random feeds from land lines, microwave links or satellite and switch them synchronously with program materials.

- Hot switching without video roll or breakup
- Electronic Frame or Field Freeze for production applications
- Selectable Freeze on loss of video, last good field or system black
- Remote control unit can be operated from any location. Two remotes may be used
- Internal sync generator or Gen-lock mode
- Dropout compensation: TTL or RF inputs

SPECIFICATIONS

Television Standard

NTSC 525-line 60 Hz

Video

Bandwidth: ± 0.5 dB to 5 MHz; Heterodyne 2.4 MHz (luminance)

K Factor: 1% (2T pulse); Heterodyne 4% (2T pulse)

Differential Phase: Less than 2°

Differential Gain: Less than 2%

Signal-to-Noise: (VW2 + 56 dB)
(VW-3 + 58 dB)

Sampling Rate: 4th Harmonic of color sub-carrier

Time Base Error:

Monochrome: ± 20 ns

Heterodyne: $\pm 3^\circ$

Direct Color: ± 2 nsec

Range of Correction: 1 TV frame (two fields)

Line Rate Tilt: 1%

Field Rate: 1%

Output Sync Jitter: ± 1 nsec

Operating Controls

Bypass: Bypasses input video to Video Out 1

HET: Selects Heterodyne TBC mode

Freeze Frame: Full frame freeze

Freeze Field: Field freeze eliminates interfield flicker

Chroma Level: ± 3 dB

Hue: $\pm 45^\circ$ (with $\pm 180^\circ$ switch)

Setup: ± 10 IRE

Video Level: ± 3 dB

Outputs: Video — 2 outputs composite video
1 volt p-p

3.58 MHz — jittering 3.58 MHz 1 volt signal + adv. sync

Inputs: Video input — 1 volt ± 3 dB composite (NTSC) 75 Ohm terminating

Reference input — composite video or black burst looping input; 1 volt ± 3 dB return loss is 40 dB with power on or off.
(VW-3 — RF or TTL DOC)

VW-2 Physical

Size: 5-1/4"H, 19"D, rack mount

AC 20A DUAL CHANNEL VIDEO SIGNAL PROCESSING SYSTEM

The Modular Concept

Truly modular signal processing is more than a collection of plug-in parts; it is an integrated system of interchangeable components that can be selected to perform a number of specific tasks at the user's discretion.

It may be configured as a single or dual channel system of time base correction or field/frame synchronization or a combination of both...by simply inserting the appropriate modules.

The AC 20A concept was the first digital video processor designed to grow with you as your needs expand. Start with a single channel processor at a very modest cost and add the second when you're ready.

Select the TBC module for tape machine use or the synchronizer module for integrating non-synchronous video...or a combination of both.

The simple architecture of the AC 20A includes four major elements...mainframe, genlock board and two signal processing channels.

AC 20 A Mainframe

The mainframe chassis occupies only 7" of rack space. All connections are made on the rear panel, power, video, external reference for video and advanced vertical and 3.58 MHz feedback for VTR use. Multi-pin connectors are used for interconnection with remote units and accessories.

Proc amp controls, genlock indicator and bypass switches may be included on the front panel of the mainframe, or on a separate Engineering Remote unit.

Inside, a single printed-circuit interconnect board routes power, video and sync signals to and from the genlock board, the module boards and the outboard remote and accessory units.

The AC 20A may be equipped with either a single or dual changeover power supply.

Genlock Board

The AC 20A may operate as a stand alone system with its own internal sync generator, or it will genlock to house reference black burst or composite video. The GL 1 board supplies each channel with accurately timed blanking, sync and burst for reinstantiated into the corrected output video.

The optional GL 2 genlock board performs all GL 1 functions plus production remote control as well as control from many commercial tape editors. It provides switching effects and channel C output circuitry which may be controlled by the PRC 20.

Modular Video Processing

Interchangeable modules provide for one or two channels of digital video processing — time base correction and/or field/frame synchronization.

You may add either one or two TBC or field/frame synchronizer boards in any combination...two TBC's, two synchronizers, or one channel of each. Processor modules in the AC 20A are totally interchangeable.

TB 1 Digital TBC Processor Module

The time base corrector module in the AC 20A accepts color NTSC composite video from common V-locked, nonsegmented video tape machines which will accept 3.58 MHz subcarrier feedback (supplied from the AC 20A).

MODULAR VIDEO PROCESSING

PRC 20
DIGITAL EFFECTS REMOTE

AC 20 MAINFRAME

ACR 20 ENGINEERING
REMOTE

Output is time base corrected NTSC composite signal meeting RS-170A specifications.

TB2 Digital TBC Processor Module

The TB2 TBC module has all the TB1 capabilities, plus: Heterodyne processing — 3.58 MHz feedback available but not required (for 3/4 and 1/2" VTR's); Sony BVU 820 Slo Motion capabilities; viewable picture up to 40 times shuttle speed; and, drop out compensation.

VS 1/VS 2

Digital Synchronizer Module

The synchronizer module delays non-synchronous video by as much as a full frame to make it synchronous with system reference. Field synchronization is provided with the VS 2 board; frame synchronization is provided with the VS 1 board.

With 8 bit resolution and a sample rate of 4 times subcarrier, the synchronizer module makes the AC 20A ideal for all broadcast and production applications.

PRC 20 2:1

Production Remote Control

The PRC 20 puts digital switching effects within the reach of almost any budget, delivering professional control of speed, type and direction of transitions between the two channels without tying up a costly production switcher. Microcomputer controlled effects include Push On, Push Off and Pull On...transitions not available on any analog switcher.

Transitions are selected by pushbutton control and may be made at any of four fixed rates — 16, 24, 32 or 48 frames.

When added to the AC 20A with two TBC channels, the PRC 20 transforms the system to an ingenious post-production tool to smooth out the complexities of three-machine, A/B roll editing.

GL 2 Editor Interface

Many editing system controllers are able to interface directly to the AC 20A in order to fully control the digital switching effects as part of the edit list.

Take Box Editor Interface

Lower cost editing systems which do not include software interface provisions may still control the switching transitions between channels with the "Take Box"...a 3 x 4 x 1" accessory which initiates the last function selected on the PRC 20 remote control panel when it receives a ground closure signal from the editor controller.

Dual Power Supply

In order to meet the needs of many broadcast applications, a full standby power supply may be included as an option. This alternate power supply may be selected at the flip of a switch.

Manual Transition FADER BAR

This accessory unit, with familiar T-type "handle bar," permits the operator to control the duration of transition effects manually.

Available in desk top or panel-mount configurations, the Fader Bar extends the range of creative control for production and post-production applications.

System Pricing

Product	Price
Time Base Correctors (TBI)	
AC 20A 1-Channel	\$6,950.00
AC 20A 2-Channel	13,450.00

RACK MOUNTABLE VIDEO/ PULSE DELAY LINES

Allen Avionics, Inc.

(516) 248-8080

A complete rack mountable series of video and pulse delay lines, with the capability of replacing up to 1450 feet of cable, is now being marketed by Allen Avionics.

Showing 8 individual slide switches for rapid delay changes.

Photo shows 1 of 4 Strappable versions (VRS Series). Note that there are 7 input and output terminals available for strapping desired delay.

All units are manufactured to fit standard 19 inch racks and are provided with additional inserts to satisfy almost any mounting requirement. Delay units and racks can be purchased separately. The rack is manufactured with a hinged panel so that fast delay adjustments can be made. However, once adjustments are made, the front panel prevents further tampering with the slide switches or terminals.

All models are stocked in our plant in Mineola, New York.

RACK MOUNT showing delay units with switches and terminals available for delay changes. Up to 11 delay units can be housed. Cards for mounting units in rack are purchased separately. Note hinged front panel.

Rack Size: 19" w., 10" d., 5 1/4" h.

Four variable slide switch units are being offered with total delays of 255, 637.5, 1275 and 2270 nanoseconds. Each unit contains 8 individual delay units. Four strappable units are also manufactured with total delays of 317.5, 635, 1270 and 2260 nanoseconds. The strappable units consist of 7 separate delay lines each having their own input and output terminals. The slide switches or terminal strapping provide methods for adding the individual lines together so that the output is always the summation of the individual lines. This eliminates most video distortions and assures good chrominance to luminance delay. Precision delay changes of as small as one nanosecond are easily accomplished. Low insertion loss, amplitude and delay flatness, along with excellent pulse fidelity, are characteristic of this series.

Units are rack mounted by attaching a durable plastic card to the large surface. Note inserts provided for the attachment.

To satisfy requirements other than rack mounting, additional inserts are provided.

Part No.	Delay Range (Nano-Sec.)	Delay Steps (Nano-Sec.)	Method of Variation	Maximum Insertion Loss @ 100 KHz (db)	Amplitude Flatness At Any Delay Setting 100KHz to 5.5MHz (db)	Max. Rise Time (Nano-Sec.)	Package Size (Inches)
VRM0255	0-255	1.0	Slide Switch	.40	.4 Max.	20	1.250 x 4.15 x 4.00

*±.2db variation at any delay setting.

Impedance: 75 ohms.

Pulse Distortion: Less than 4% with an input pulse rise time of 20 nanoseconds.

Working Voltage: 50 volts maximum.

Return Loss: 15db minimum.

Delay Tolerance: 5% or 1 nanosecond, whichever is greater.

Prices and Specifications Subject to Change Without Notice.

VT-7

Allen Avionics, an established leader in the design and manufacture of Electromagnetic Delay Lines and L-C Filters has now developed a specialized group of products for the video market.

In color television broadcasting, accurate timing of signals is essential. This was initially achieved by the use of 75 ohm coaxial cable. The cost in time and materials to accomplish precise trimming and the lack of a rapid and convenient method of changing delays is currently responsible for the decline in cable usage. Television studios, studio equipment manufacturers and others engaged in the video industry are changing from 75 ohm cable to a more suitable method of achieving precise short delays. Allen Avionics now offers a line of Video Units for this purpose. Their use will result in a reduction of size, weight, installation cost and an overwhelming saving in time and effort to make delay changes.

Models VPO635, VP1270 and VP2075 are padded to provide a flat loss at any setting. As a result of this padding, these units will exhibit a maximum variation of $\pm .2$ db at any delay setting.

Model VP0010 was designed specifically to be used as a delay trimmer in conjunction with our other delay units or any 75 ohm system. It offers .5 nanosecond switching resolution with excellent amplitude flatness up to 5.5 MHz.

These new delay units feature extremely flat amplitude response to 5.5 MHz, small increments of delay variation, low signal distortion and tight delay tolerance. The delay networks are ideal for pulse applications because of their fast rise times and low distortion. Amplitude equalization is employed to achieve excellent flatness over the video frequency range. The delayed output of any model in this group is the summation of individual lines. It is not the result of a tapped line. This feature insures that output pulse distortions are minimized. Units will match to any 75 ohm system and can be directly connected into the video signal path by means of BNC connectors.

Part No.	Delay Range (Nano-Sec.)	Delay Steps (Nano-Sec.)	Method of Variation	Maximum Insertion Loss @ 100 KHz (db)	Amplitude Flatness At Any Delay Setting 100KHz to 5.5MHz (db)	Max. Rise Time (Nano-Sec.)	Package Size (Inches)

 Working Voltage: 100 volts.
 Pulse Distortion: Less than 3% with an input rise time of 20 nanoseconds.
 Return Loss: 20db or greater.

TYPE AV-397 & 75-2A

75-2A
 7-3/8"x4-11/16"x2-3/16"

Maximum Delay: 2.075 microseconds ±3% variable in .025 μs. steps from .025 to 2.075 microseconds.

Time Delay of Individual Lines: 1, .5, .2, .1, .05, .025 microseconds.

Rise Time for Entire Line: .06 microseconds maximum.

Frequency Response: 3db down at 5 megahertz for 2.075 microseconds delay.

Distortion: 2% maximum with .2 microsecond input pulse.

Impedance: 75 ohms ±5%.

Working Voltage: 100.

Temperature Coefficient: 50 parts/million/°C from -55°C to 105°C.

Attenuation: 7% maximum for 2.075 microsecond delay.

AV-397
 2"x2-1/2"x5-1/2"

TV LINE EQUALIZERS—VE300 & AV-535

IMPEOANCE: 75 ohms + 2 ohms to 8 Megahertz.
 ATTENUATION OF CABLE PLUS EQUALIZER: 3db.

These Equalizers are designed to compensate for losses in RG-11/U (75 ohm) cable and its equivalents. The units are capable of equalizing 50 to 300 feet in 50 foot increments.

The VE300 is provided with a rotary switch to select the required amount of cable footage to be equalized. It is supplied with BNC connectors for quick input and output connections and is foamed in a metal can.

The AV-535 has terminals on its mounting surface arranged to provide for simplified strapping of different cable lengths. The unit is foamed and hermetically sealed in a metal can.

Attenuation of equalizer alone is as shown. TOLERANCE ±.07 db.

VE300
 4-11/16"x3-11/16"x2-1/16"

Feet	0.1 MHz	2 MHz	4 MHz	8 MHz
50	2.97 db	2.86 db	2.79 db	2.67 db
100	2.93	2.68	2.53	2.27
150	2.90	2.51	2.28	1.88
200	2.86	2.35	2.03	1.52

NEW "MVFL" SERIES

DELAY EQUALIZED NTSC LOWPASS FILTERS — VFL, MVFL & VCL SERIES

For the video field, we have built many lowpass filters having sharp roll-offs and good passband delay linearity with cut-off frequencies from .1 MHz to 10 MHz. The most popular of these are used to attenuate the harmonics of the NTSC color sub-carrier frequency 3.58 MHz. The most commonly used filters in this group are tabulated below:

VFL & MVFL SERIES — IMPEDANCE = 75 OHMS

Standard Size Max. Insertion Loss 1db Part No.	Miniature Size Max. Insertion Loss 2db Part No.	Max. .25db Attenuation @ Frequency (MHz)	Max. 3db Attenuation @ Frequency (MHz)	Min. 45db Attenuation @ Frequency (MHz)	Approximate Passband Delay (Nanoseconds)
VFL1P7	MVFL1P7	1.75	1.92	2.41	1691
VFL2P2	MVFL2P2	2.25	2.45	3.10	1325
VFL2P7	MVFL2P7	2.75	3.00	3.77	1082
VFL3P2	MVFL3P2	3.20	3.50	4.40	928
VFL3P5	MVFL3P5	3.50	3.84	4.82	846
VFL3P8	MVFL3P8	3.80	4.16	5.22	781
VFL4P0	MVFL4P0	4.00	4.38	5.51	741
VFL4P5	MVFL4P5	4.50	4.93	6.19	659
VFL5P2	MVFL5P2	5.20	5.70	7.16	570
VFL6P0	MVFL6P0	6.00	6.58	8.27	494
VFL6P5	MVFL6P5	6.50	7.12	8.95	457

Max. Delay Variation = ±3% to —.25 db Freq. Max. Passband Ripple = ±.25db.

VFL Size: 4" x 2" x 1 1/4" in metal can with BNC Connectors.

MVFL Size: 3" x 1 1/2" x 1/2" in metal can with terminals for PC mounting.

VCL SERIES — IMPEDANCE = 75 OHMS

Part No.	Maximum ±3% Delay Distortion to Frequency (MHz)	Maximum .25db Attenuation @ Frequency (MHz)	Minimum 45db Attenuation @ Frequency (MHz)	Approximate Passband Delay (Nanoseconds)
VCL3P2	2.7	3.2	3.63	1100
VCL3P5	2.9	3.5	3.97	1010
VCL3P8	3.2	3.8	4.31	930
VCL4P2	3.5	4.2	4.76	840
VCL4P5	3.8	4.5	5.10	780
VCL4P9	4.1	4.9	5.56	720
VCL5P2	4.4	5.2	5.90	680
VCL5P7	4.8	5.7	6.46	620

Max. Insertion Loss @ 100 KHz = 2.5db.

Max. Passband Ripple = ±.25db.

Size: 6" x 2" x 1 1/4" in metal can with BNC Connectors.

DELIVERY FROM STOCK

TYPICAL AMPLITUDE & DELAY RESPONSE OF VFL & MVFL SERIES

NTSC REJECT FILTERS

Some of the most frequent specifications that we encounter in the video industry are based upon rejection of the color information in the video signal to provide isolation from the luminance signal. These specifications require very low phase distortion to the luminance signal. To satisfy this requirement, Allen Avionics has designed a group of band reject filters with phase equalization where necessary. One of the most often used applications for this band reject filter is in color systems for monochrome transmission to prevent color flashes from appearing on the screen. Since various segments of the television industry have different passband requirements, we are listing three filters with different reject bandwidths.

Impedance = 75 ohms.
Maximum Insertion Loss @ 100 KHz = 3db.
Maximum Passband Ripple to 5.5 MHz = ±.25db.

Part No.	Maximum 3db Attenuation @ Frequency (MHz)	Minimum Attenuation @ 3.58 MHz
VFR4P6	1.95 — 6.55	40db
VFR1P3	3.00 — 4.30	40db
VFR0P5	3.37 — 3.88	30db

Size: 4" x 2" x 1 1/4" in metal can with BNC Connectors.

NTSC BANDPASS FILTER

Allen Avionics sub-carrier bandpass filter is a low distortion unit designed to attenuate the luminance information in color TV signals. This filter is useful in most applications where it is required to isolate the chrominance information.

Impedance = 75 ohms.
Maximum Insertion Loss @ 3.58 MHz = 1.5db.
Maximum Ripple = ±.25db.

Part No.	Maximum 3db Attenuation @ Frequency (MHz)	Minimum 30db Attenuation @ Frequency (MHz)
VFB3P6	3.40 — 3.70	2.40 — 5.80

Size: 4" x 2" x 1 1/4" in metal can with BNC Connectors.

Prices and Specifications Subject to Change Without Notice.

VSL4P5 DELAY EQUALIZED LOWPASS FILTER

This filter is similar to the VFL series and is intended for use at the output of a digital to analog converter. Its special feature is that amplitude equalizers have been incorporated to shape the passband response for $\frac{\sin x}{x}$ correction.

- Impedance = 75 ohms.
- Attenuation = 38db or greater at 7.03 MHz.
- Maximum Group Delay Distortion = 30 nanoseconds or less to 4.7 MHz.

Nominal Delay = 500 nanoseconds.
Size - 4 x 2 x 1 1/4 inches.

Units supplied in Metal Cans with BNC Connectors

VIDEO GAUSSIAN FILTERS

These filters are used for pulse shaping and bandwidth limiting. They are very useful in the removal of unwanted distortions caused by noise, ringing, preshoot and overshoot. Due to their fine impulse response, they are often used in conjunction with delay lines that must have minimum pulse distortion in the delayed output.

Input Pulse

Output Pulse

An approximate Gaussian Waveshape obtained by passing a pulse through a Gaussian Filter.

Part No.	3db ± .5db Frequency (MHz)	Impedance (Ohms)	17db Min. Attenuation Frequency (MHz)	Delay Time (Nano-seconds) Nominal	Rise Time (Nano-seconds) Nominal

4100 SERIES

4100 SERIES VIDEO SWITCHING SYSTEM

The Ampex 4100 Series Switcher has something to appeal to everyone at the teleproduction or broadcast studio.

As the heart of the television operation, the 4100 Series provides a wide range of effects. It does its job swiftly and effectively.

The 4100 Series easily accommodates virtually any combination of video sources and keys.

FEATURES

- Extended A/B format for logical signal flow and straightforward operation
- Keypad control allows the operator to control several visual functions from a small space with speed and accuracy
- The Series 4100 keypad gives you fingertip control of:
 - 100 different patterns
 - 99 transition rates (in seconds to make your job a lot easier) From 0.1 to 9.9 seconds
 - Key sources (10 key sources from phantom buses that allow you to make any type of key appear at any video level)
- Dual bus keyers to provide the ability to put any of 10 key sources (including RGB chroma keys, encoded chroma keys, character generator, luminance keys, etc.) upstream of the M/E amplifier
- Function Module, together with the keypad's operation lets you fully control the M/E bank without having to reach away from the M/E itself
- Status indicators show you exactly what's happening on the switcher at all times so you're in total command of every situation
- Exceptionally high quality keyers deliver clean, noise-free operation, even under adverse conditions
- Auto-transition is standard on each M/E
- Rugged construction using only the highest quality, multi-sourced components assures you a superior level of reliability and maintainability
- The 4100 Switchers are controllable by electronic editing systems for cost-effective production and post-production applications

OPTIONS AND ACCESSORIES

Downstream Mixer/Keyer: Offers a program to preset mix or take and automatic transition for keys and master fade to black. It provides keyboard control of 10 sources (including an additional external

source not available on the M/Es) and automatic transition control. The Downstream Mixer/Keyer genlocks independently to the program bus so that even non-synchronous sources can be smoothly faded to black.

Quad Slit: The individual size and aspect ratio of each quadrant is fully variable. Quadrants may also be diagonal and even then the quadrant sizes are fully adjustable. Three border choices are available with variable width, softness and color control.

Quadrant Selector for Quad Split: This option doubles the number of video sources available to the Quad Split. And it allows any bus video from Buses 1A, 1B, 2A, 2B and the preview bus to be placed in any of the quadrants. M/E1 and M/E2 outputs, as well as an external video source, may also appear in any of the quadrants. This option also permits quadrant video sources to be pre-set and entered whenever and wherever you desire.

Linear Key Border Generator/Composite Chroma Keyer: In addition to providing an exceptionally high quality encoded chroma key, this option allows keys to be bordered with adjustable border luminance. It also allows drop shadows and colored outlines. Encoded chroma key is hard to distinguish from high-quality RGB keys.

Bi-Level Linear RGB Chroma Keyer: Up to four are available on the 4100-E and up to six on the 4100-H, A and L models.

Pattern Extender for 100 Patterns: With the 4100 Series, 65 patterns are standard. Thirty-five additional patterns (rotary and rotating patterns) are also available for use in the system. This option may be installed in any or all M/E pattern systems at any time.

In-Line Dual Bus Keyer Upstream of Mix/Mix Effects: Provides all the keying power and flexibility needed to meet today's teleproduction operations.

External Key Signal Processor: Allows full capability character generators to be fed to the phantom buses.

Aux Buses: Available with Audio Follow Video and Audio Break-away. Includes M/E re-entries. Up to 8 aux buses may be installed, depending on the switcher model involved. Two video only aux buses are prewired standard for easy field installation.

Editing Interface: Provides extensive control of the 4100 Series by electronic editing systems.

Digital Effects Interface: Allows the 4100 Series to be used with and control any digital effects unit currently available on the market.

TEST EQUIPMENT

TV TEST SIGNAL GENERATORS

CB11A Color Bar Generator

The CB11A is designed for the precise adjustment of television receivers and monitors. There are 10 basic patterns available and combining these with the specially designed "mode switch," an additional 50 patterns and combinations are available. Available in NTSC, PAL, SECAM.

TG/7 Video Test Signal Generator

A complete modular test signal system with all drives. Seven interchangeable modules provide up to 48 different test signals. RS170-170A Sync, Gen Lock, and Black Burst.

The TG/7 may be completely automated with the QB102A (531) GP-1B Interface unit. Available in NTSC, PAL, SECAM.

TG53A1 Digital Test Signal Generator

This generator uses an 8 bit high speed digital-analog converter. It generates 6 signals and also utilizes two RAMs with a two-line writing capacity. Utilizing the GP-1B Interface Bus, special test signals may be designed, placed on a floppy disc and displayed via the RAM.

CB53A1 Digital Color Bar Generator

The CB53A1 provides 7 signals as well as an RF modulator, Audio Oscillator, Gen Lock, and a character Generator which displays 31 characters on 2 lines. AC/DC Operation. Available in NTSC, PAL.

SPECIALIZED TEST EQUIPMENT

CC-5 Color Encoder

The CC-5 is a high quality encoder which converts the RGB signals to composite video. In addition, the unit also outputs Y, I, Q, and R-Y, B-Y and has aperture corrector. Available in NTSC, PAL, SECAM.

205A Video Sweep Generator

The 205A is used to measure the frequency response on color TV sets, Video Tape Recorders and other video equipment. The frequency range is 100kHz-10MHz. Available in NTSC, PAL.

VH01BZ VTR Dropout Counter

With dropout detection levels selectable from -10dB-24dB and dropout time widths selectable from 0.5-50 Micro seconds, the VH01BZ gives high precision readings and is also an automatic testing system using the QB101A GP-1B Interface Unit. Available in NTSC, PAL, SECAM.

CD101A Color Decoder

The CD101A demodulates the VBS signal to generate RGB, Y, I, Q, and R-Y, B-Y. Drive signals of BL, BF Sync, and SC are also available for interfacing with other equipment. Also available is the CD902A to generate RGB and sync only. Available in NTSC, PAL, SECAM.

SL3000

SL3000

LASER-BASED FIBER OPTIC SYSTEM

For simultaneous transmission of video, audio and data.

FEATURES

- Over 20 mile (32km) range without repeaters
- Exceeds RS-250B short haul standards
- Over 20 MHz video bandwidth
- Automatic protection switching option
- On-line self-diagnostics and metering
- Automatic alarming (local and remote)
- 75 ohm or 124 ohm (balanced) input/output
- Easy access connectors (WECO or SMA-type)
- Long wavelength, singlemode option
- Coaxial input/output equalization
- Compact, modular construction
- Front panel monitor output
- Multiple audio subcarrier option

This FM laser-based system combines state-of-the-art modulation techniques with the latest in reliability/maintainability features. These features include automatic protection switching and on-line self-diagnostics. The SL3000 is a compact, modular system designed to replace microwave radio and balanced coaxial cable in video transmission links ranging over 20 miles (32 kilometers).

Longest Distance Transmission

The SL3000 is available as a short wavelength (840nm) multimode system for distances up to 10 kilometers, and as a long wavelength (1300nm) singlemode system (SL3000L) for distances over 32 kilometers without repeaters. Artel's low-noise receiver circuitry means that the SL3000 can transmit over 10dB greater cable loss than other systems.

Most Transparent Video and Audio

The SL3000 exceeds the most stringent video transmission standards: RS-250B (short haul). The system's bandwidth is a full 20 MHz wide, allowing you to send wideband video and multiple subcarriers. Audio is flat from 20 Hz to 20 kHz, with better than 70 dB RMS signal-to-noise ratio and less than 0.1% total harmonic distortion.

Flexible Modular Construction

Video and subcarrier cards are separately packaged on compact plug-in modules. Up to nine card modules can be housed in a single 19-inch card frame. The T/R3000 video module set can be configured for transmission of high resolution (up to 20 MHz) video or for standard video plus up to six subcarriers. Subcarrier modules are switch selectable for either audio or data transmission, and can be incrementally added or changed as needed. All modules are quick and easy to change and to troubleshoot, with self-diagnostic indicators on the front of each module.

Video Plus Data and Audio Subcarriers

The Artel SL3000 system consists of three transmitter/receiver pairs designated the T/R3000 for broadcast quality video and T/R3111 and T/R3114 FM subcarriers for broadcast audio or TTL data. The SL3000 system lets you independently add up to two channels of audio or TTL data or one of each on a single optical fiber. Both video and audio modules exceed RS-250B short haul standards over installed cable with losses exceeding 40dB. An additional four channels of microwave-compatible (standard) audio subcarriers can be provided upon special request.

POR

FIBER OPTIC SYSTEMS

SL2000

The T3000 cards accept unbalanced 75 ohm coax and 124 ohm balanced pair, 1 Vp-p video. These cards also have built-in coax equalizers. The subcarrier transmitter cards (T3111, T3114) accept 600 ohm balanced audio or TTL asynchronous data, with the selection of audio or data made by on board DIP switches.

All transmitter cards convert the video, audio and data signals to a composite optical signal which is transmitted through the fiber optic cable. The receiver cards reconvert the optical signal to full level video, audio and data. BNC connectors are used for loop through video inputs.

SL-2000 FIBER OPTIC TRANSMISSION LINK

FEATURES

- Broadcast quality video/audio
- Long distance transmission
- Extended frequency response
- Eliminates group loops, hum
- Immune to RFI and EMI
- Self-monitoring, self-testing
- EIA/CCIR compatibility
- Space saving cable
- Versatility
- Convenient modular construction
- Dual video outputs
- Loop through input
- Switchable AGC/MGC
- Switchable squelching
- Adjustable I/O levels
- Tunable differential gain
- Signal level alarm outputs
- High reliability
- Quick, easy set-up
- Switchable DC clamping

A high performance fiber optic video/audio system for fixed point-to-point transmission. This versatile system delivers broadcast quality signals over long distances with complete freedom from interference and ground faults.

The Artel SL2000 is a revolutionary advance in video communications. For the first time fiber optics can be used to transmit broadcast quality video and audio signals over several kilometers without the need for repeaters. This modular system offers the convenience of small, lightweight cable, with performance that rivals microwave. And there is no need to obtain an FCC license with fiber optics.

The SL2000 is specifically designed to meet the performance requirements of the broadcast industry. Only with fiber optics can this performance be achieved, without regard to atmospheric or electromagnetic considerations. Only the SL2000 can deliver this level of quality over such long distances.

The SL2000 delivers all the intrinsic advantages of fiber optics, plus unique features that enhance performance, reliability and ease of use.

TEST EQUIPMENT

HEAVY-DUTY SERIES DIGITAL MULTIMETERS

- Diode test function.
- Drop Proof.
- Shock Proof.
- Contamination Proof.
- High Overload Protection.
- Easy-to-use.

The Heavy-Duty Series is designed for dependability under rugged industrial conditions. The meters are built of tough fire-retardant thermoplastic and sensitive components are shockmounted. The housing is of waterproof construction so dirt, grime, and moisture can never get inside to cause inaccurate readings or damaging shorts. All voltage ranges can withstand transients up to 6KV. Resistance ranges are protected to 600 volts and current ranges are protected by a 2 amp/600 volt fuse.

Model HD-100

- 0.25% DC Volts Accuracy.
- 2000 Hour Battery Life.
- Insta-Ohms® Quick Continuity.

The HD-100 is built for accuracy under rugged conditions.

The HD-100 includes a test lead set, battery, spare fuse, and operator's manual. **\$169.00**

Model HD-110

- 10 Amp Current Range.
- 0.25% DC Volts Accuracy.
- 2000 Hour Battery Life.
- Insta-Ohms.

The HD-110 is used with confidence by transportation companies, electrical contractors, and maritime operators. Each HD-110 includes test lead set, battery, spare fuse, operator's manual. **\$189.00**

Model HD-110T

- Temperature Function.
- 10 Amp Current Range.
- 2000 Hour Battery Life.
- 0.25% DC Volts Accuracy.
- Insta-Ohms Quick Continuity.

HD-110T is designed for service in the heating, ventilation and air conditioning industry because of its ability to measure temperature. A simple field adjustment is all that is required to switch from Fahrenheit to Centigrade.

The HD-110T comes with test lead set, battery, spare fuse, operator's manual, and a K-type thermocouple wire. **\$209.00**

Model HD-130

- True RMS (AC + DC coupled).
- 10 Amp Current Range.
- 0.1% DC Volts Accuracy.
- 2000 Hour Battery Life.
- Insta-Ohms Quick Continuity.

The HD-130 is built to withstand industrial, factory, and automotive applications. The HD-130 includes the Adaptor Capacitor Accessory (Model BC-047), which allows decoupling of the AC and DC signals. The HD-130 includes test lead set, battery, spare fuse, BC-047 Accessory, and operator's manual. **\$239.00**

Model HD-140

- 4-1/2 Digits.
- True RMS (AC + DC coupled).
- 0.05% DC Volts Accuracy.
- 10 Amp Current Range.
- Insta-Ohms.

The HD-140 is designed for production testing, field servicing, industrial maintenance, and design engineering applications. The 4-1/2 digit display provides high resolution and accuracy.

Model HD-140 comes complete with test lead set, battery, spare fuse, and operator's manual. **\$259.00**

Model 320

PROFESSIONAL SERIES DIGITAL MULTIMETERS

- Dependable.
- Easy-to-use.
- High Overload Protection.
- Diode Test Function.
- Long Battery Life.

The Professional Series Digital Multimeters provide reliability and ease of use. Each meter is designed for day in and day out use.

The single rotary function/range selector switch is a special patented design which eliminates the friction wear that reduces the life of typical wafer-type rotary switches.

These multimeters contain extra overload protection. All voltage ranges can withstand 6KV transients for 10 microseconds. Resistance ranges on the Series 300 multimeters are protected to 600 volts.

Model 300

- 3-1/2 Digits.
- 0.5% DC Volts Accuracy.
- 2000 Hour Battery Life.
- Diode Test Function.

The Model 300 is ideal for repairing televisions, appliances, stereos, and common electrical problems.

High performance is achieved through a combination of special features, including RF shielding to prevent stray signals from affecting the reading. The Model 300 comes complete with test lead set, battery, spare fuse, and operator's manual. **\$120.00**

Model 310

- 10 Amp Current Range.
- 0.25% DC Volts Accuracy.
- Insta-Ohms.
- Diode Test Function.
- 2000 Hour Battery Life.

The 310 group comes complete with test lead set, battery, spare fuse, and operator's manual. **\$145.00**

Model 310B

The Model 310B features an audible continuity beeper for busy technicians who need to perform repeated continuity checks. Within 100 milliseconds, the meter beeper signals continuity. **\$155.00**

Model 310T

- Temperature Function.
- 10 Amp Current Range.
- Diode Test Function.

Model 310T features a built-in temperature function which uses any K-type thermocouple having a standard miniature or subminiature connector to measure up to 1999°F with one degree resolution. A single adjustment allows the meter to read in Fahrenheit or Celsius. **\$165.00**

Model 320

- 0.1% DC Volts Accuracy.
- 10 Amps Current Range.
- Diode Test.
- 2000 Hour Battery Life.
- Insta-Ohms Quick Continuity.

The 320 group is designed for the professional who desires high accuracy in a reliable hand-held meter. The 320 group comes complete with test lead set, battery, spare fuse and operator's manual. **\$179.00**

Model 350

Model 320B

The Model 320B is designed for situations that require an audible continuity beeper and high accuracy. The "beep" allows a technician to check circuit continuity without having to look at the LCD display. This feature is an excellent aid in trouble-shooting. The momentary beep requires very little power which helps retain the 2000 hour battery life. **\$189.00**

Model 330

- True RMS (AC + DC coupled).
- 0.1% DC Volts Accuracy.
- 10 Amp Current Range.
- 2000 Hour Battery Life.
- Insta-Ohms Quick Continuity.

The Model 330 comes complete with test lead set, battery, spare fuse, BC-047 accessory, and operator's manual. **\$219.00**

Model 4410

- 4-1/2 Digits.
- True RMS (AC + DC coupled).
- 0.05% DC Volts Accuracy.
- 10 Amps Current Range.
- Insta-Ohms Quick Continuity.
- Diode Test Function.

The True RMS feature is ideal for testing switching power supplies, heating elements, flyback transformers, motors, electronic flashes, and SCR or TRIAC controlled power supplies. The meter comes complete with test lead set, battery, spare fuse, operator's manual. **\$239.00**

Model 350

Bench/Portable

- 20 Ohm Resistance Range.
- 0.1% DC Volts Accuracy.
- Diode Test Function.
- 10 Amp Current Range.
- Audible Continuity Beeper.
- 12,000 Hour Battery Life.

Model 350 includes test lead set, batteries, spare fuse, and operator's manual. **\$229.00**

Model 360

Bench/Portable

- True RMS (AC + DC coupled).
- Temperature Function.
- 20 Ohm Range.
- 0.1% DC Volts Accuracy.
- Diode Test Function.
- Audible Continuity Beeper.
- 12,000 Hour Battery Life.

The True RMS feature makes the Model 360 an ideal meter for testing power supplies. A decoupling switch allows the AC ripple of a DC power supply to be easily measured. The storage compartment on the top of the meter will hold the test lead set, spare fuse, and an operator's manual. **\$289.00**

VIDEO SIGNAL GENERATOR

DELUXE VIDEO SIGNAL GENERATOR MODEL 1260

FEATURES

- NTSC Color Bars—with or without —IWQ signal
- TCXO Master Oscillator Stability Exceeds Broadcast Requirements
- Five step linear staircase; selectable high/low chroma
- Selectable chroma and burst
- Circle pattern
- Multiburst pattern—full field, stepped or variable
- Convergence patterns—dot, cross-hatch, dot-hatch, center cross
- Raster patterns—eight EIA colors
- RGB outputs
- Interlaced or progressive scan

- Gen lock
- Crystal Oscillator—I-F, CH 3, CH 4 and sync generator
- Composite video output
- RF output
- External Video input
- Sound output—1 kHz or 3 kHz
- External audio input and output
- Black Burst output
- Sync Pulse output
- Subcarrier output
- Multiburst output
- Composite blanking output
- Rugged rack-mount cabinet design

APPLICATIONS

Television studio and transmitting station set-up and maintenance... CATV, MATV, CCTV system installation, adjustment, service and maintenance... Color or black and white video monitor or RGB color monitor installation, adjustment, and service... television, VTR, VCR and Video disc testing, service and adjustment... Production line testing of nearly any type of video product... video product design lab.

SPECIFICATIONS

PATTERNS

NTSC Color Bars: White (75%), yellow, cyan, green, magenta, red, blue, black (7.5% set-up).

—IWQ: —I, white (100%), Q, black. Switch selectable on or off with NTSC color bars. Pattern appears on bottom 1/4 of vertical scan

Top Burst Off: Switch selectable (top 1/4 of vertical scan)

Full Burst Off: Switch selectable

Chroma Off: Switch selectable

Circle: May be superimposed on any pattern.

Dots: 19 x 15

Crosshatch: 19 x 15.

Dot Hatch: Dots and crosshatch.

Center Cross: 1 vertical and 1 horizontal line.

Linear Staircase: 5 equal steps.

High or Low Chroma Staircase: Burst phase chroma, 40 or 20 IEEE units.

Raster: Black (7.5%), red, blue, green, yellow, cyan, magenta, white (7.5%).

MULTIBURST

Gated Multiburst: Six fixed frequencies (0.5, 1.5, 2.0, 3.0, 3.58 and 4.2 MHz $\pm 5\%$) with a leading white level.

Full Field: Any one of the six frequencies selectable for full field display.

Variable Frequency: One selectable variable frequency may be substituted for 4.2 MHz as the sixth frequency or full field (variable from 2 MHz to 7 MHz).

Amplitude Flatness: ± 1 dB to 4.2 MHz.

MULTIBURST OUTPUT

Multiburst output available at rear panel for frequency measurement.

Voltage: 2.4 V p-p into open circuit.

Impedance: 1 k Ω .

VIDEO OUTPUT

Composite Video Voltage: Preset=1 V p-p. Variable=0 to 1.5 V p-p.

Impedance: 75 ohms.

Polarity: Positive (negative sync).

RF OUTPUT

Modulation: Negative

Carrier Frequency: Crystal controlled.
CH 3=61.25 MHz.
CH 4=67.25 MHz.
I-F=45.75 MHz.

Voltage: 5 mV rms minimum into 75 Ω .

Impedance: 75 ohms

External Video Input: Switch selectable; requires 1 V p-p, 75 Ω input

SOUND OUTPUT

RF Modulation: 4.5 MHz FM-modulated intercarrier (± 25 kHz deviation with internal 3 kHz audio signal).

Internal Signal: 3 kHz or 1 kHz.

Audio Output: 3 V p-p into 1 k Ω .

External Audio Input: 1 to 3 V p-p, 100 Hz to 10 kHz, pre-emphasis of 75 μ s.

Input Impedance: 10 k Ω .

SYNCHRONIZATION

Type: 59.94 Hz field of 525 lines, interlaced scan; 262 lines non-interlaced scan.

Horizontal Frequency: 15.734 kHz.

Vertical Frequency: 59.94 Hz.

Horizontal Blanking: 10.76 μ s.

Vertical Blanking: 1.33 ms.

Horizontal Sync: 4.89 μ s.

Front Porch: 1.47 μ s.

Burst: 8 cycles minimum 3.58 MHz.

Equalizing Pulse: 2.44 μ s.

TRIGGER OUTPUT

Type: Horizontal or vertical sync pulse available at front panel, switch selectable.

Horizontal sync pulse available on rear panel.

Voltage: TTL level.

Impedance: 75 ohms.

Polarity: Negative going sync.

SUBCARRIER OUTPUT

Frequency: 3.579545 MHz, (± 5 Hz, 0 $^\circ$ to +40 $^\circ$ C).
Stability ± 1 Hz; TCXO

Voltage: Approx. 1 V p-p, no load.

Impedance: 75 ohms.

GEN LOCK

Generator synchronizes horizontal and vertical sync and color burst with external NTSC video input. Adjustments on front panel for horizontal delay and chroma phase. BNC connector on rear panel for loop through.

COMPOSITE SYNC OUTPUT

—4 V into 75 Ω .

COMPOSITE BLANKING OUTPUT

—4 V into 75 Ω .

BLACK BURST OUTPUT

Continuous output consisting of negative sync (286mV p-p), color burst (206mV p-p), and black level; 75 Ω .

RGB OUTPUT

Outputs: Red, green, and blue outputs to drive 525 line color monitors.

Video Patterns: Convergence, full field raster, multiburst, circle, and staircase.

Voltage: High/low selectable. Use low level for staircase.

Low level approx. 1 Volt p-p into 75 ohms.

High level 2.4 V into open circuit (TTL).

Sync: Horizontal and vertical sync; 2.4 V into open circuit (TTL).

Polarity: Positive sync.

Positive RGB.

MISCELLANEOUS

Input Power Requirements: 105-130 VAC, 60 Hz, 25 Watts.

Operating Temperature: 0 $^\circ$ to +50 $^\circ$ C. Specifications apply for operating temperature of +18 $^\circ$ to +28 $^\circ$ C unless otherwise noted. Temperature coefficient less than 0.1 times the stated accuracy per $^\circ$ C.

Dimensions (HWD): 5-5/16 x 19 x 14" (135 x 483 x 356 mm).

Weight: 14 lb (6.36 kg)

VACUUM TUBE VOLTMETER

Model 177 / \$228.00

FEATURES

• Internal DC power supply for ohms ranges - no battery needed • 37 ranges, including dB and zero center scales.

The 177 includes the PR-43 DC/AC Ohms probe with switch and ground

lead. Low AC ranges have special calibrations. Features easy-to-read 7" mirrored scale, DC polarity switch and 1% precision resistors in all critical circuits.

SPECIFICATIONS

DC Volts: ±0.5, 1.5, 5, 15, 50, 150, 500, 1500.
AC Volts: RMS, 0-1.5, 5, 15, 50, 150, 500, 1500; peak-to-peak, 4, 14, 40, 140, 400, 1400, 4000; frequency response, ±1 dB, 4 Hz-4 MHz, 600

ohm source, 5V range.
 Resistance: 0-1 K, 10 K, 100 K; 0-1, 10, 100, 1000 meg; 10, 100, 1000, 10K, 100K center scale.
 Input Resistance: 11 MΩ (1 MΩ in probe).
 Accuracy: DC, ±3% f.s.; AC, ±5% f.s.
 Power Required: 117/234 VAC, 50/60 Hz.
 Size (HxWxD): 18 x 18 x 9 cm (7.5" x 7.5" x 3.6")
 Net Weight: 2.2 kg. (6 lbs.)

LAB QUALITY SEMI-CONDUCTOR TESTER

Model 530 / \$497.00

FEATURES

• Measures transistor beta or FET gm • Measures transistors cut-off frequency up to 1500 MHz • Non-destructive testing of transistor and diode breakdown voltages • Measures Ices and loss • Fast testing of transistors, FET's and SCR's - in or out-of-circuit • Base diagrams are not required • No biasing information required • Identifies all leads of transistors and SCR's • Automatic identification of PNP/NPN types and N or P channel FET's.

• Measures transistor beta or FET gm • Measures transistors cut-off frequency up to 1500 MHz • Non-destructive testing of transistor and diode breakdown voltages • Measures Ices and loss • Fast testing of transistors, FET's and SCR's - in or out-of-circuit • Base diagrams are not required • No biasing information required • Identifies all leads of transistors and SCR's • Automatic identification of PNP/NPN types and N or P channel FET's.

f.: Three ranges (0-100 MHz; 0-750 MHz; 0-1500 MHz). Ices and loss: From .5 μA to 5 mA. BVces of transistors and PIV of diodes at 10 V (5 mA max.) or variable 10-100 V (100 μA max.).
 Accuracy: Within ±10% for β, gm test; ±20% f: tests.

High-power beta and gm Tests: Special 300 μs, 1% duty cycle current pulses enable testing at 2 amps without over-dissipation of device under test. Maximum beta (200) and maximum gm/425 milliohms correspond to test current of 2 amps.

SPECIFICATIONS

IN-CIRCUIT TESTS
 Good/Bad Test: For bipolar transistors, FET's and SCR's.
 Identifies: All leads of bipolar transistors and SCR's, and gate lead of FET's. Also identifies device polarity by automatically indicating PNP, NPN, and P or N channel FET's.
OUT-OF-CIRCUIT TESTS
 Measures: Transistor beta, gm, f_c, Ices, loss, BVces, and PIV.
 Transistor Beta: Two Ic ranges (low power, 10-600; high power, 15-200). gm: DF FET's

INDICATORS
 Audible tone for GOOD indication. Front panel switch provides tone defeat. LEDs identify device polarity. Panel Indicator and Test Switch identifies all leads of transistors and SCR's and base lead of FET's. Jacks and test leads are color coded. Meters indicate other device parameters.
APPLIED TEST CURRENTS
 Collector: 100 mA at 4% duty cycle. Base: 200 mA at 4% duty cycle (HI drive); 0.75 mA at 4% duty cycle (LO drive).
 Test Repetition Rate: 6 per second. Voltage for Leakage Test: Variable from 0-100 VDC.

LIMITING IN-CIRCUIT SHUNT VALUES FOR IN-CIRCUIT GOOD/BAD TEST
 Resistance: Down to 10Ω (HI drive). Down to 1.5 kΩ (LO drive).
 Capacitance: Up to 15 μF (HI drive). Up to 0.3 μF (LO drive).
GENERAL
 Color-coded Mini-lock clips for hands-free operation. Detailed instruction manual. Optional FP-5 Dynaflex three-lead, one-hand probe for easy in-circuit testing.
 Power Required: 117/234 VAC, 50/60 Hz, 10 watts.
 Size (HxWxD): 10 x 33.6 x 25.6 cm (4 x 13.5 x 10.25")
 Net Weight: 2.3 kg. (5 lbs.).
 CSA Listed.

PORTABLE INDUSTRIAL TRANSISTOR TESTER

Model 510 / \$155.00

FEATURES

• Fast GO/NO-GO in-circuit transistor testing • Fast and thorough GOOD/BAD out-of-circuit testing • Tests FET's and SCR's in-circuit or out-of-circuit • Connect any test clip to any component lead • Gives positive emitter-base-collector identification in LO drive - positive base identification in HI drive • Light-Emitting Diodes indicate NPN-OK or PNP-OK • Pocket-size - over 100 hours of testing from single set of "AA" cells • Digital stability - no adjustments; nothing to go out of calibration.

SPECIFICATIONS

IN/OUT-CIRCUIT TESTS
 GOOD/BAD test for transistors, FET's, SCR's and Darlingtons.
 Identifies transistors as NPN or PNP. FET as N-channel or P-channel. Identifies FET gate lead.
 Identifies all leads of transistors in LO drive; base lead in HI drive. Identifies all leads of SCR.
APPLIED TEST CURRENTS
 Base Drive: 250 mA (HI) or 1 mA (LO) at 2% duty cycle.
 Collector Drive: 125 mA at 2% duty cycle.

Test Repetition Rate: 5 Hz.
IN-CIRCUIT SHUNT LIMITS FOR VALID GOOD/BAD TEST:
 R/C: >10 ohms with HI drive; >1.5 K ohms with LO drive/Up to 25 μF with HI drive; up to .3 μF with LO drive.
 Power Requirements: 6 VDC from four "AA" cells, not supplied.
 Accessories: Carrying Case and test leads supplied. Model FP-5 Dynaflex Probe (optional).
 Size (HxWxD): 4 x 9.5 x 17 cm (1.75 x 3.75 x 6.6")
 Weight: .45 kg. (1 lb.).

INDUSTRIAL TRANSISTOR TESTER

Model 520B / \$275.00

FEATURES

• Now with HI/LO drive • Works in-circuit when others won't • Identifies all three transistor leads • Random lead connection • Audibly and visually indicates GOOD transistor • Automatic NPN/PNP determination • Positive Si/Gc identification • Tests diodes, SCR's, FET's, and Darlingtons.

SPECIFICATIONS

IN-CIRCUIT TESTS
 Good/Bad Test: For PNP and NPN transistors, FET's and SCR's.
 Identifies: NPN or PNP; N or P channel FET's.

OUT-OF-CIRCUIT TESTS

Good/Bad Test: For PNP and NPN transistors, FET's, SCR's, leakage and loss.
 Identifies: NPN or PNP; silicon or germanium transistors.
 Measures: Reverse leakage from 0.1 μA to 5 mA.
AUTOMATIC INDICATORS
 Audible Tone for GOOD indication. LEDs identify NPN or PNP devices and Ge or Si types. Test Switch automatically identifies base or gate lead for good transistors or FET's.
 Meter Scales: 0.1 μA to 5 mA for Ice leakage; silicon and germanium power and signal transistor leakage limits.

APPLIED TEST CURRENTS
 Collector: 250 mA at 3% duty cycle. Base: 125 mA at 3% duty cycle. Test Repetition Rate: 10 per second.
LIMITING IN-CIRCUIT BASE-EMITTER SHUNT VALUES FOR VALID TESTS
 R/C: Greater than 10 ohms/Less than 15 μF.
GENERAL
 Accessories: Color-coded test leads with Mini-Lock clips; detailed instruction manual.
 Power Required: 105/125 VAC, 50/60 Hz; also available for 120/240 VAC, 50/60 Hz.
 Size (HxWxD): 20 x 17 x 8.9 cm (8 x 7 x 3.5")
 Net Weight: 2.27 kg. (5 lbs.).

BPFa

BPFa SINGLE-CHANNEL BANDPASS FILTER **Stock No. 4414**

Features

- Suitable for use in adjacent channel headends
- Lower adjacent channel sound down 60dB
- Upper adjacent channel picture down 60dB
- Fits standard 19" rack

The BPFa is a VHF single-channel bandpass filter. It provides extremely high rejection of signals outside of its bandpass, including adjacent channels. A BPFa is available for each standard VHF channel, midband channels A thru I, superband channels J thru P, and FM. Circuitry consists of a high-Q, six-stage bandpass filter and two-phase cancellation traps,

The traps are normally factory aligned to the lower adjacent sound and upper adjacent picture carrier frequencies.

BPFa's are recommended in adjacent channel headends, ahead of individual strip amplifiers. The model BPFa may also be used to eliminate the undesired lower sideband of a CCTV camera with RF output to permit the use of the camera with a lower adjacent VHF channel.

Typical Specifications

- Impedance: 75 ohms
Return Loss - Input/Output (between video and sound carrier): 13dB
Return Loss - FM band (90-107MHz)
Input/Output: 16dB (with traps)
Insertion Loss (Low Band)
At picture carrier: 3.5dB
Sound carrier ref. to pix: -2.0dB
Insertion Loss (High Band)
At picture carrier: 8.0dB
Sound carrier ref. to pix: -2.0dB

Insertion Loss (FM Band)

90-108MHz: 3.0dB

At 88MHz: 5.0dB (no traps)

Bandpass Flatness ref. to picture carrier

Low Band (from pix minus 0.5MHz

to pix plus 4.0MHz): + /-1.5dB

High Band (from pix minus 0.25MHz

to pix plus 4.0MHz): + /-1.5dB

FM Band (90-108MHz): 1.5dB (with traps)

Selectivity - Low Band

Trap - lower adj. sound: 60dB down

Trap - upper adj. video: 60dB down

Lower adj. video: 40dB down

Upper adj. sound: 50dB down

Lower adj. band edge: 55dB down

Upper adj. band edge: 55dB down

Selectivity - High Band

Trap - lower adj. sound: 60dB down

Trap - upper adj. video: 60dB down

Lower adj. video: 40dB down

Upper adj. sound: 45dB down

Lower adj. band edge: 50dB down

Upper adj. band edge: 50dB down

Selectivity - FM Band

At 82MHz: 30dB

At 114MHz: 22dB

At Sound Trap: 60dB down

At Pix Trap: 60dB down

(201) 679-4000

MCA-b SINGLE CHANNEL PROCESSOR Stock No. 4454

The MCA-b channel processor is a 3 volt VHF TV strip amplifier with automatic gain control and all solid-state circuitry. It is intended to amplify and stabilize the level of a single VHF channel in MATV and CATV headend systems. The model number of the MCA-b amplifier indicates the channel number it will amplify (e.g. MCA-b 2 is for amplifying Channel 2).

The MCA-b features high output even on adjacent channels through the use of a built-in intermodulation notch filter and a built-in aural carrier level control notch filter.

Each MCA-b consists of three modular sections: A 6MHz wide channelized input amplifier with variable gain for AGC, a main amplifier with five broadband RF stages as well as the power supply and AGC control circuitry, and a channelized output module consisting of a directional filter diplexer to enable backmatched mixing of alternate channels in a system. All three modules can be easily removed for servicing and/or channel changing.

FEATURES

- Interchangeable broadband amplifier board to facilitate maintenance
- Adjustable aural carrier control for lower distortion
- Lightning and line voltage surge protected
- True peak detector AGC
- Wide dynamic range

SPECIFICATIONS

Electrical

Maximum output for 1/2dB sync compression: 69.5dBmV (3.0 volts) min.; 71.0dBmV (3.5 volts) typical

Recommended output level for color operation: 68dBmV (2.5V) for 920kHz beat down 55dB min., 60dB typical (measured with P = -8dB, S = -15dB, C = -17dB)

Recommended output level for adjacent channel operation: 66dBmV (2.0V) for adjacent channel beat down 48dB min., 58dB typical (measured with S = 15dB)

Gain: 55.0dB min., 61.0dB typical

Noise Figure at Full Gain: 7.0dB typical

AGC Range: 40dB min

AGC Stiffness (output change for +/-20dB input change): Less than +/-0.25dB at 69dBmV output; Less than +/-0.5dB at 59dBmV output

Maximum input with level set at 69dBmV output: 43dBmV

Bandpass Flatness, 6MHz BW (over 40dB gain control range): +/-1.5dB max.; +/-0.75dB typical

Alternate channel rejection (use with BPFa Bandpass Filter at input for adjacent channel operation): -30dB (+/-9MHz from channel center) typical

Input Match: 14dB return loss typical

Output Match: 18dB return loss typical greater than 9MHz from channel center; 18dB return loss typical on channel

Power Requirement: 117VAC, 60Hz, 0.11 amp

Semi-conductor Complement: 2-ICs, 1-FET, 6-transistors, 9-diodes

Mechanical

Line Cord: 3-wire grounded; 3-wire convenience outlet

Connectors: BTF-100, F-type, Female; G/F monitor point

Fuse: 1/8 amp., Slo-Blo

Dimensions: 19"L x 1-3/4"H x 4"D

Shipping Weight: 4lbs.

\$385.77

HMCA-b SINGLE CHANNEL PROCESSOR Stock No. 4462

The HMCA-b channel processor is a 6-volt VHF TV strip amplifier with automatic gain control and all solid-state circuitry. It is intended to amplify and stabilize the level of a single VHF channel in MATV and CATV headend systems. The model number of the HMCA-b amplifier indicates the channel number it will amplify (e.g. HMCA-b 2 is for amplifying Channel 2).

Each HMCA-b consists of three modulator sections: A 6MHz wide channelized input amplifier with variable gain for AGC, a main amplifier with five broadband RF stages as well as the power supply and AGC control circuitry, and a channelized output module consisting of a directional filter diplexer to enable backmatched mixing of alternate channels in a system. All three modules can be easily removed for servicing and/or channel changing. To simplify maintenance, there are two main amplifier configurations, one for the low band (Channel 2-6) and one for the high band (Channel 7-13).

FEATURES

- Provides a stable, quality signal free of distortion and intermodulation products
- A built-in aural carrier control reduces the sound level for maximum output and adjacent channel operation
- Modular construction for quick, easy servicing
- Contains a diplexing output filter for loop-thru lashups of alternate channels
- Convenience AC outlet mounted on front of panel for easy connections between mounted units

SPECIFICATIONS

Electrical

Maximum output for 1/2dB sync compression: 75.5dBmV (6.0 volts) min., 77.5dBmV (7.5 volts) typical

Recommended Output Level for Color Operation: 74dBmV (5.0V) for 920kHz beat 55dB down min., 58dB typical (measured with Pix = -8dB, Sound = -15dB, Color = -17dB)

Recommended Output Level for Adjacent Channel Operation: 73dBmV (4.5V) for adjacent channel beat down 48dB min., 55dB typical (measured with Sound = -15dB)

Gain: 63dB min., 69dB typical

Noise Figure at Full Gain: 7.0dB

AGC Range: 40dB min.

AGC Stiffness (output change for +/-20 input change): +/-0.25dB at 76dBmV out; +/-0.5dB at 63dBmV output level setting

Maximum Input with level set at 72dBmV out: 48dBmV

Bandpass Flatness, 6MHz BW over full 40dB AGC range: +/-1.5dB max., +/-0.75dB typical

Alternate Channel Rejection (skirt selectivity): -30dB (+/-9MHz from center) typical

Input Match on Channel at 75 ohms at 10dB AGC gain reduction: 14dB return loss typical

Output Match on Channel at 75 ohms: 13dB return loss typical

Output Match, alternate channels and rest of 54-216MHz band at 75 ohms: 18dB return loss typical

Power Requirement: 117V, 60Hz, 0.20 amp

Supply Voltage Range for 0.5dB change in level or output capability: 100-130VAC

Semi-conductor complement: 10-transistors; 1-FET; 2-ICs; 16-Diodes

Mechanical

Line Cord: 3-wire grounded; 3-wire convenience outlet

Connectors: BTF-100, F-type Female; G/F monitor point

Fuse: 1/4 amp, slow-blow

Dimensions: 19"L x 1-3/4"H x 4"D

Shipping Weight: 5lbs.

BOSCH

2300 S. 2300 W.
Salt Lake City, UT 84119
(801) 972-8000 Telex 38-8352

TCS-1 Machine Control System

FEATURES

- Controls up to 100 VTR's/film chains
- Dual twisted pair wiring simplifies installation
- Control of each VTR/film chain can be delegated to any one of eight studio control panels or machine control multiplexers:
 - Each studio control panel can operate up to four VTR's and three film chains simultaneously; each includes a "Gang-Start" switch. (custom configurations available)
 - Each machine control multiplexer can accommodate up to 30 MC-24 control panels
- Central microprocessor can be programmed to provide special functions, such as permanent assignment of specific machines to specific control panels
- System can be integrated with Bosch TVS/TAS-1000 Distribution Switcher to provide dynamic machine selection

The TCS-1 is a microprocessor/software based machine control system designed to operate up to 100 videotape recorders and/or teletext film chains. It eliminates patch panels or complex relay switching systems where it is desirable to delegate control of machines to various points. Connection between the control panels and the VTR's/film chains is accomplished with dual twisted pair audio-type wiring, rather than the multiple-conductor cabling normally used with remote controls. The system includes provisions for assigning specific machines to specific control panels, eliminating the possibility of conflicting or unauthorized control commands reaching the same machine from different control stations.

MI-8	8-Function Machine Interface, 1 3/4" Rack mount
MI-24	24-Function Machine Interface, 3 1/2" Rack mount
MD-8	Machine Delegate Panel, 1 3/4" Rack mount
MC-200	Studio Control Panel
MC-24	Single-machine Control Panel, requires MCM-1000. Includes space for one CP-1200A or BP-1200
MCM-1000	Machine Control Multiplexer, connects with up to 30 MC-24's
DC-1	Dynamic Machine Selector, connects with up to 6 MD-8's and 30 MI-8/24's (must be used in connection with Bosch TVS/TAS-1000 Distribution Switcher)
CP-1200A	Single-bus Control Panel, with audio breakaway, mounts in MC-24
BP-1200	Blank panel, mounts in MC-24 not having CP-1200A

VT-20

MACHINE CONTROL SYSTEM/ MASTER CONTROL SWITCHER

Because It Communicates.

MCS-2000 Master Control Switcher

FEATURES

- Dynamically labeled input buttons, assignable to any input
- Instant switching between on-air and production work with the bypass mode, allowing one switcher to do the work of two, automatically
- Two fully independent keyers allow mix-keys and key-mixes
- Microprocessor control of up to four channels of audio allows smooth transitions and precise control of audio levels
- Multiple memories allow Saves and Recalls of switcher configurations
- Single-stage mixing of both audio and video provides excellent operational specifications, and eliminates system timing problems

The MCS-2000 allows unlimited input selections. Select any of these inputs as key sources, with as many external key inputs as you need, automatically. It allows you to use any input as an audio under or audio over source. It also enables the MCS-2000 to offer the easiest system timing, and the simplest installation in the master control industry.

The MCS-2000 can offer the most sophisticated, and yet still the simplest preroll system you can get. It offers the capacity to multi-roll A/V splits and backup machines, to automatically handle film chain multiplexers, and to provide automatic full-function machine control at the operator's finger-tips.

The MCS-2000 can provide complete on-air automation, with every function of the switcher available to an automation system. The automation system can even adjust the clip levels of a keyer.

The MCS-2000 can provide automatic logging of all switcher events, even without an automation system.

The Switcher can be interfaced to a complex machine control system such as the TCS-1 and will provide complete full-function control of any machine selected on the preset or program bus.

Prices and Specifications Subject to Change Without Notice.

DISTRIBUTION SWITCHING SYSTEMS

TVS/TAS-2000 Video/Audio Distribution Switcher

FEATURES

- Multi-level breakaway capability (7 level standard)
- Power supply alarm indicators on all boards
- Power supply alarm indicators with contact closure for remote alarm
- No PROM changing on crosspoint boards
- Clamped video inputs
- Output delay trim
- Redundant control card capability
- Coax party line or RS-422 control standard
- Internal refresh memory with 120-hour memory save
- Fused power supply outputs
- Redundant power supply capability
- Vertical internal switching of video
- Field expansion of outputs without rewire
- Compact — 10 x 10 matrix arrangement. 60 x 10 audio and video or 130 x 10 audio or video in 8-3/4" card cage
- Internal cooling fans. Fans removable during normal operation
- Matrix "in use" indicator
- Computer automated system testing of audio and video circuit parameters through all possible signal paths. Hard copy results supplied.

The TVS/TAS 2000 Distribution Switcher is the newest in the family of Bosch distribution switchers. Bosch developed the 2000 switcher system using the knowledge gained from earlier switcher experience, and adding features suggested by our customers. Improved packaging, audio signal performance, video DC restoration, output delay adjustments to simplify timing, circuitry to monitor the power supplies on each circuit board. The power supplies are also monitored for failures. Redundant power supplies allow the system to continue operation if one power supply fails. The user is alerted to the failure of the first power supply, while the system continues to operate on the second.

CP-1400 Control Panel

The CP-1400 a Single Bus 10-key Control Panel for the TVS/TAS 1000 and TVS/TAS 2000 Video/Audio Distribution Switcher features alphanumeric LED displays for rapid identification of selected source.

CP-1404 Lever Wheel Control with Status

The CP-1404 Control Panels, for use with TVS/TAS 1000 and TVS/TAS 2000 Distribution Switchers, have lever wheel switches for input selection. LED readouts are provided for true switcher status.

CP-1405 Desk Top Lever Wheel Control Panel

The CP-1405 Control Panel, for use with TVS/TAS 1000 and TVS/TAS 2000 Distribution Switchers, is designed to sit on a desk or table top. It is intended to provide economical switcher control in offices and conference rooms.

CP-1420 Control Panel

The basic CP-1420 Control Panel for use with TVS/TAS 1000 and TVS/TAS 2000 Distribution Switchers, provides for 20 pushbuttons to select inputs for one switcher output. The buttons can select inputs in numerical order, or they can be encoded to select inputs in any order. Additional buttons may be added to expand input selection. X-Y control and category/number selection are also available.

TVS/TAS-2000

CP-1440 Control Panel

The CP-1440 Control Panels for use with the TVS/TAS 1000 and TVS/TAS 2000 Distribution Switchers have three level alphanumeric lever wheel switches for input selection. Four character alphanumeric LED displays are provided for status.

CP-1450 Control Panel

The CP-1450 is a single-bus, microprocessor based control panel for use with TVS/TAS 1000 and TVS/TAS 2000 Video/Audio Distribution Switchers. Alphanumeric lever wheels are used to reduce space requirements and cost while still providing category/number operation.

CP-1500 Control Panel

The CP-1500, a full-matrix control panel for use with TVS/TAS 1000 and TVS/TAS 2000 Video/Audio Distribution Switchers, features alphanumeric LED displays for rapid identification of sources and destinations. The alphanumeric displays, which can consist of any combination of one to four letters or numbers, are complemented by descriptive labels on a 10-key pad to provide simple error-free operation.

CP-1550 Control Panel

The CP-1550 is a single-bus, microprocessor based control panel for use with TVS/TAS 1000 and TVS/TAS 2000 Video/Audio Distribution Switchers. Alphanumeric lever wheels are used to reduce space requirements and cost while still providing category/number operation.

TI-2000 Telephone Interface

The TI-2000 Telephone Interface allows remote control of TVS/TAS 1000 and TVS/TAS 2000 Distribution Switchers from any Touch-Tone® telephone. All commands to the switcher are entered, using the Touch-Tone® pad. Prompting of the operator and status from the switcher are reported by a synthesized voice.

SM-2000 Full Matrix Status Monitor

SM-2000 Full Matrix Status Monitor provides full matrix status information in alphanumeric format of entire matrix for display on any video monitor. Selection of display pages may be remote controlled via the party line control system. The video output is compatible with the TVS/TAS 1000 and TVS/TAS 2000 video switchers.

TERMINAL EQUIPMENT

"525" SERIES EQUIPMENT

TVA-528

Video Distribution Amplifier

• Differential input • One input/Six outputs • Precision-grade components assure long-term stability • 1% bounce (overshoot) • 0.25% distortion and tilt, 50Hz square wave (Servo on) • Accepts delay and equalizer plug-in operations • DL 525 Delay plug-in option — up to 300 nsec delay with frequency response/ripple of less than 0.25dB to 5MHz • EQ 525 Equalizer plug-in option — corrects for up to 1000 feet of 8281 cable • Delay/Equalizer combinations possible

TVA-528 Precision Video Distribution Amplifier\$410.00

TVA-524

Video Distribution Amplifier

• Differential input • One input/Four outputs • Direct-coupled outputs • 0.25dB to 5.5MHz frequency response • 0.5% tilt 60Hz square wave • 0.25% 0.25° differential gain and phase (10-90% APL)

TVA 524\$326.00

TPA-527

Precision Pulse Distribution Amplifier

• One input/Four outputs • Precision design assures long-term stability • Separate output stages • Individual output 350-4000 nsec delay adjustments

TPA-527\$399.00

TPA-528

Precision Broadcast Pulse Amplifier

• One input/Six outputs • High input noise immunity • 0.5% tilt; 1% overshoot and ringing • Symmetrical output rise and fall times • Strappable for 2 or 4 volt operation

TPA-528\$289.00

TSA-525

Distribution Amplifier

• TSA-525 for NTSC and PAS-M systems (3.58MHz), TSA-535 for PAL-I systems (4.43MHz) • 40dB input return loss at subcarrier frequency (Power on or off) • Greater than 360° individual phase adjustments • 1.8 to 2.0V p-p adjustable output level • Four outputs with 36dB isolation at 3.58MHz

TSA-525\$625.00

TAA-525

Audio Distribution Amplifier

• Extremely low distortion at all power levels • Accepts balanced or unbalanced inputs • Wide dynamic range • High common mode rejection • Transformer-coupled inputs and outputs with individual gain adjustments

TAA-525\$515.00

TVS/TAS-525

Video/Audio Distribution Switcher

• 5 x 1 modules can be stacked for additional inputs with common latching or for multiple bus operation • Video-loop/audio-bridge inputs • Video switching is vertical interval, with a sixth crosspoint for improved isolation specifications in multimodule systems, (0.2° differential phase, 0.2% differential gain), (-60dB crosstalk) • Switchers self-latch, require only momentary closures • TAS-525 Audio Distortion: 0.1dB overall; Crosstalk: -75dB • 5 x 1 illuminated pushbutton control panel available • The RC5 pushbutton remote control panel can be mounted in RP-203 rack frame. The RC5 will operate either a TVS-525, or a TAS-525, or both simultaneously (audio follow video). Looping control connections allow two control panels to operate in parallel. Each RC5 requires a CC5 interconnecting cable.

TVS-525\$488.00

TAS-525\$515.00

TBB-525

Black Burst Generator/Sync Blanking and Burst Adder

• Burst adder • Permits smooth fades to black without loss of color-lock • Two separate outputs permit simultaneous sync/blanking/

SIGNAL PROCESSING EQUIPMENT

TVP-1000

TVP-1000 Video Processing Amplifier

Features

- Full sync, blanking, burst regeneration
- Includes programmable pulse width digital sync generator with genlock
- Differential input rejects up to 30 V P-P Common Mode Hum
- Strappable for operation with helical scan and U-Matic format recorders
- Separate sync, luminance, chrominance and burst processing
- Failsafe compensated metallic-contact bypass
- Full 360° subcarrier phasing
- Full remote control
- Reverts to monochrome black on incoming signal loss
- Luminance and chrominance AGC (optional)
- VIRS AGC Mode — Luminance/chrominance ratio maintained. Loss of VIRS causes reversion to burst AGC mode
- Available for NTSC, PAL, or PAL-M standards
- Selectable AGC responds to VIRS or burst for chroma gain — sync, VIRS or video for luminance gain

The TVP-1000 Video Processing Amplifier meets modern broadcast performance requirements with superior operating features and stability. Handling both color and monochrome signals, the TVP-1000 is designed to operate with quadruplex, helical scan or U-Matic format videotape recorders. Models are available for NTSC, PAL or PAL-M.

A differential amplifier at the processor input, together with an input clamp circuit, provides over 60 dB common mode hum rejection and over 35 dB reduction of single-ended hum. A wide dynamic range permits the circuit to effectively remove over 30 V P-P common mode hum from the incoming video.

RC-1000 Remote Control

A remote control is available and separate controls are provided for Video, Chrominance, Pedestal, Sync, Burst and White Clip levels plus Sync Bypass, Processor Bypass, Video AGC and Chroma AGC. Any or all of these adjustments can be remotely controlled.

Sync Generator with Genlock

The sync generator built into the TVP-1000, a programmable digital unit, is an application of the TeleMation-originated digital approach to sync generator design. Transitions of the output pulses are all clock-derived and can be programmed in 100-nanosecond increments (83 nanoseconds for PAL operation). Once timed to meet local requirements, no further timing adjustments are required.

The special genlock circuit developed for the TVP-1000 provides stable performance even with badly degraded input signals. Output signal variations are minimal—regardless of wide variations in video level, burst level, time base stability and input signal-to-noise ratio. Internal strapping is provided for operation with helical scan or U-Matic format videotape recorders.

The PO-1000 Pulse Output accessory permits the TVP-1000 to be

used as a local sync generator. Sync generator outputs in 625/50 PAL units may be so used when genlocked, but do not provide the 25 Hz offset sync derivation when free-running.

In normal operation, sync, burst and blanking are replaced with internally generated waveforms. A remotable Sync Inhibit switch optionally allows the sync portion of the waveform to pass through the amplifier unchanged. Luminance, chrominance, sync and burst information are separated, processed separately then recombined.

AG-1000 AGC Option

The TVP-1000 provides automatic luminance and chrominance gain control with the plug-in AG-1000 AGC option. The luminance detector in the AG-1000 is switchable to operate on peak video, sync, a standard VIRS signal or any combination where the greatest of the selected signals compared to its reference level is used for control of output video level. Similarly, the chroma detector can be strapped for detection of burst amplitude or VIRS reference, but not both. If VIRS are not present, burst will automatically be used instead.

Unique to the TVP-1000 is the ability to select Full Video or Partial Video AGC operation. The Partial Video selects an area of the raster approximating the safe title area for the sampling. When VIRS referenced AGC is used, chrominance/luminance ratios are precisely maintained. With the absence of VIRS, the TVP-1000 reverts to burst and video/sync AGC references.

Range of the luminance and chrominance AGC circuit is sufficient to restrict output variations to less than 5%, with 6 dB increases or decreases in luminance or chrominance level.

The TVP-1000 allows a variety of sync and subcarrier reference options. All references can be derived from the incoming video. Sync and/or subcarrier may be referenced against external pulse sources or from an external black burst signal, if desired.

Video Processors

TVP-1000N	NTSC Video Processor, use with RC-1000 Remote Control recommended	\$5,229.00

SIGNAL PROCESSING EQUIPMENT

TCE-2000 Digital Color Encoders For NTSC/PAL/PAL-M Systems

TCE-2000N

Features

- Available for NTSC, PAL-I, PAL B, G, and H or PAL-M operation
- Drift-free digital modulators (U.S. Patent No. 3721755)
- All-digital color bar generator — full/split bars — optional
- Level-dependent proportional aperture correction
- 100% circuit access during operation — no extenders required — no phase shift or gain change during adjustment
- Umbilical connection for instant service replacement
- Subcarrier rejection typically 55 dB
- No DC shift with APL change
- Drift-free current summing matrices (U.S. Patent No. 3715470)
- Meets all specifications over 100-130 VAC, 0°-60°C range without readjustment

TCE-2000 Digital Color Encoders are available to produce NTSC, PAL or PAL-M encoded color signals according to NTSC, CCIR and EBU specifications. With the use of digital circuitry and precision components, set-up and maintenance requirements are minimized on the TCE-2000 Series.

The TCE-2000 Encoders are designed for use with both live and film cameras, either three or four-tube types. All inputs are bridging with looping jacks provided. Compensation networks assure excellent input return loss characteristics.

TCE-2000N

- NTSC Digital Color Encoder
- Digital Color Bar Generator
- Pulse Delay Module

TCE-2000N \$4,473.00

TCE-2000P

- PAL Color Encoder
- PAL-1 Digital Color Encoder
- Digital Color Bar Generator
- Pulse Delay Module

TCE-2000P \$5,208.00

THE-100 Hum Eliminator

Features

- For use in color and monochrome systems
- Greatly reduces common mode power line hum in video circuits
- Passive, failure-free
- Compact
- Flat frequency response
- No differential phase or gain distortion

The THE-100 greatly reduces common mode hum caused by differences in ground potential as frequently encountered in installations with long video cables, incoming and outgoing lines, or separate power distribution systems.

Specifications

- Impedance** 75 ohms, unbalanced
- Connectors** Type BNC
- Bandwidth** DC to 10 MHz
(-0.1dB at 5 MHz, -0.6dB at 10 MHz)
- Hum Reduction** To 50dB depending on system
- Dimensions** 4-11/16" H x 3-11/16" W x 2-1/4" D
(119 x 93 x 57mm)
- Weight** 3 lbs. (1.36 kg)
- Insertion Loss** Greater than 0.5dB

THE-100 Hum Eliminator \$142.00

Incoming Video with
16V P-P hum superimposed

SIGNAL DISTRIBUTION SYSTEM

SDS-2 Signal Distribution System

SDS-2 Signal Distribution System is a totally new concept for meeting today's and tomorrow's signal distribution and control requirements.

System Architecture...the basic system's architecture is a modular straightforward simplistic design to assure extremely high performance and reliability regardless of system size.

This design approach also provides:

- Flexibility...microprocessor controlled and 4 levels of switching
- Extremely Hi-Density 2048 crosspoint array
- Expandable...from 32 x 32 up to 512 x 512

RS-2000 Switching Array

RS-2000 Hi-Density switching array features the latest state-of-the-art circuitry and packaging techniques in the audio and video domains.

The basic RS-2000 Switching Array contains 2048 crosspoints, the control board, a power supply...all in a rack frame that is only 14" high and 15" deep...8 RUs.

The control board includes the master intelligence system that uses the Intel 8085 microprocessor which has the capacity and speed to control a system using more than one RS-2000 array. The power supply has the capacity to power any two RS-2000 frames; therefore, providing redundant power supply capacity.

RS-2000 Array

The basic array configuration is 32 inputs by 32 outputs and a variety of switching array types are available.

	64 x 32	32 x 32
Audio Only	X	
Data Only	X	
AFV		X
Dual Audio		X
Video Only		X
Video + Data		X
Audio + Data		X
Dual Data		X

The basic system is configured for up to 4 signal levels and any combination of the above arrays may be combined. As an example...a system could include 1 video, dual audio and 1 data level. The latter could be used for SMPTE Time Code, digital control signals or data lines connecting peripheral computer hardware to various host computer systems. All 4 levels can be controlled in a Follow mode or separately at the discretion of the user.

The SDS-2 has been designed to accommodate arrays as large as 512 x 512 with up to 4 levels.

Examples: Space requirements for SDS-2 systems using RS-2000 Hi-Density arrays.

32 x 32 AFV	8 RU	14"
64 x 32 Audio Only	8 RU	14"
3 Level		
64 x 32 AFV		
64 x 32 Audio Only	24 RU	42" (3 RS-2000 arrays)
1 Level		
96 x 96 Video Only	72 RU	126" (9 RS-2000 arrays) (Less than 2 std. racks)

MicroPatch™ Control System

MicroPatch is the computer software operating program that puts the intelligence into SDS-2's control scheme. MicroPatch is highly sophisticated, flexible and includes a variety of software application programs.

Among the programs included with MicroPatch are:

- Salvo Take
- Security Loc
- System Alert
- MacroPath
- Quick Switch
- SysConfig

An exclusive feature of the SDS-2 MicroPatch control software is the ability to initiate up to eight Salvo Takes automatically using the systems on-board clock. This feature permits users to define various matrix configurations that are used on a daily basis and have the system select them at a predetermined time. Each of these Salvos can be of any size from one crosspoint to 512 crosspoints with all switches occurring in the vertical interval.

MicroPatch also includes Help and extensive Diagnostic software routines.

CENTRAL DYNAMICS CORP.

147 Hymus Blvd.
Pointe Claire, Quebec CN H9R 1G1
(514) 697-0810
TWX 610-422-3906 Telex 05-821506

SIGNAL DISTRIBUTION SYSTEM

SDS-2 Signal Distribution System (Cont'd)

Diag. 1 is used for Microprocessor/Memory/Control maintenance. Diag. 2 tests the switching array(s) to verify that the routing switcher is operating properly. Individual crosspoints, tally, latches, all inputs to a specific output, a specific input to all outputs are all separate diagnostic routines...as is a check which cycles through all the crosspoints.

Self-Test routines are also included and are transparent to the operating system as are the other tests.

The above represent a sampling of the available programs. Software development will continue through Central Dynamics Computer Labs and a formal Central Dynamics Users Group. Testing, documenting and debugging will be conducted by Central Dynamics to assure that all programs developed by Users are compatible and available to other interested users.

MicroPatch also includes programs that permit communicating with the outside world. The ports are compatible with RS-422/423 and RS-232.

Control Hardware

The control system is based on the Intel 8085 microprocessor which communicates to all control panels and switching arrays. The array's frame control board communicates to the matrices within the array. Example: If the array is configured into a 32 x 32 Video Only matrix and a 32 x 32 Audio Only matrix, the control board would talk to each path separately making it possible to independently control each half of the frame. This board also has sufficient RAM to store operating data so all the application programs can be executed efficiently; programs such as Salvo Take, Security Loc, etc.

Memory is also backed up with battery power that can protect the memory for a minimum of 15 days.

MICROPATCH CRT STATUS DISPLAY

A CRT control console is standard equipment and is used for defining the basic system operating parameters and as a master control center for the system. Besides providing control, it is used to monitor the status of all input and output signals. Other status displays include input and output Lock configurations and Salvo Take tables.

When installing the SDS-2 system, reconfiguring the switching arrays or expanding the system, the terminal is used to define the control panel types used, their priorities, and the basic system operating parameters, i.e., audio follow video, stereo audio, digital control, etc.

In addition to the CRT control console, the user may select any number of a wide variety of discrete and multi-function numeric or alphanumeric control panels...up to a maximum of 512. The panels communicate with the 8085 microprocessor via eight coax serial control loops.

DEDICATED CONTROL PANEL

ALPHANUMERIC CONTROL PANEL

Video System

The SDS-2 switcher RS-2000 uses the latest state-of-the-art video switching technology. The basic design of the crosspoint is a high speed analog multiplexer developed by Central Dynamics expressly for the SDS-2. Each video crosspoint board contains 16 multiplexers; each one under microprocessor control. This permits selecting a crosspoint and receiving a confirming tally, via a return signal from the matrix, that verifies that the selected crosspoint is latched.

Each video input amplifier PCB contains 16 unity gain wideband video amplifiers that distribute each video signal to a maximum of 32 multiplexers. The video output card contains 16 video output amplifiers which receive outputs from a maximum of 8 multiplexers. The unique Central Dynamics designed output switching amplifier eliminates the requirement for "combiners" when expanding a SDS-2 system. This output switching amplifier concept permits expanding the inputs by simply connecting the output of each frame to the output of another frame...via a standard 75 Ohm coax cable.

This unique design not only reduces rack space when expanding, but assures maintaining and optimizing the system's signal distribution transparency and timing.

Audio System

The SDS-2 utilizes a Central Dynamics design that closely simulates the characteristics of a manual patch panel.

This is achieved by processing all audio signals in a balanced configuration. Each input signal is routed through two separate, isolated input buffers; therefore, two parallel crosspoint paths.

All audio switching uses highly reliable, standard CMOS analog switches. Packaging design for the input crosspoints and output amplifier cards achieves the same density as the video matrix.

MASTER CONTROL SWITCHER

MC-4000 Master Control Switcher

The MC-4000 is a perfect blend of hardware and software. The sophisticated microprocessor control system processes all analog and digital commands. Control extends to all audio and video interfaces, plus all matte, color background and all audio level control. Digital VU meters that measure peak and average audio levels. Video crosspoint circuitry is high speed analog multiplexer design. Advanced packaging concepts . . . rack electronics require only 8 RUs; control console mounts on top of the console and only 2 small cable accesses are required.

Ergonomics. More than cosmetics. The industrial designed back-lighted control panel has been designed by experienced master control operators for efficient, safe On-Air operations. On-Air switching and control can now reach a high confidence level with the MC-4000. All controls have been strategically located based upon operator usage.

Exclusive On-Air Program confidence switching system protects against accidental changes to On-Air signal. This system continually verifies that the computer hardware and software are functioning properly.

Pushbutton LED verifies that a command has been communicated to its crosspoint and that the crosspoint has latched.

Automatic control features reduce the number of manual functions required when executing complex program breaks.

Many control functions are automatically cleared after a transition to air. This concept reduces operator error and permits a higher level of operating confidence.

On-Air mirror protection system inhibits preset film island mirror flips. Audio Over preset selection can be monitored while On-Air.

Output Path selector may be used to bypass Mixer and Downstream Keyer outputs.

Preset bus can be used as an On-Air emergency bus.

Optional emergency switcher (VAS-1010) controls can be located in console panel.

Software status tables for control console and electronics computer systems are stored in battery protected CMOS RAM. Switcher will return to "before main power failure" status, after power is restored.

Machine control and Preroll system for 10 VTRs, 2 film islands and 4 Audio Only starts.

Preroll delay times are user definable for individual machines in 10ms increments up to a maximum of 10 seconds. Separate preroll delays can be used for 2 projectors on the same island.

Preroll system automatically adjusts delays to accurately follow Mix and Fade transitions.

Transition multifunction ramp generator provides for Mix, Fade, Fade Cut and Cut Fade and 4 transition rates of 0.5, 1, or 2 seconds, or Cut.

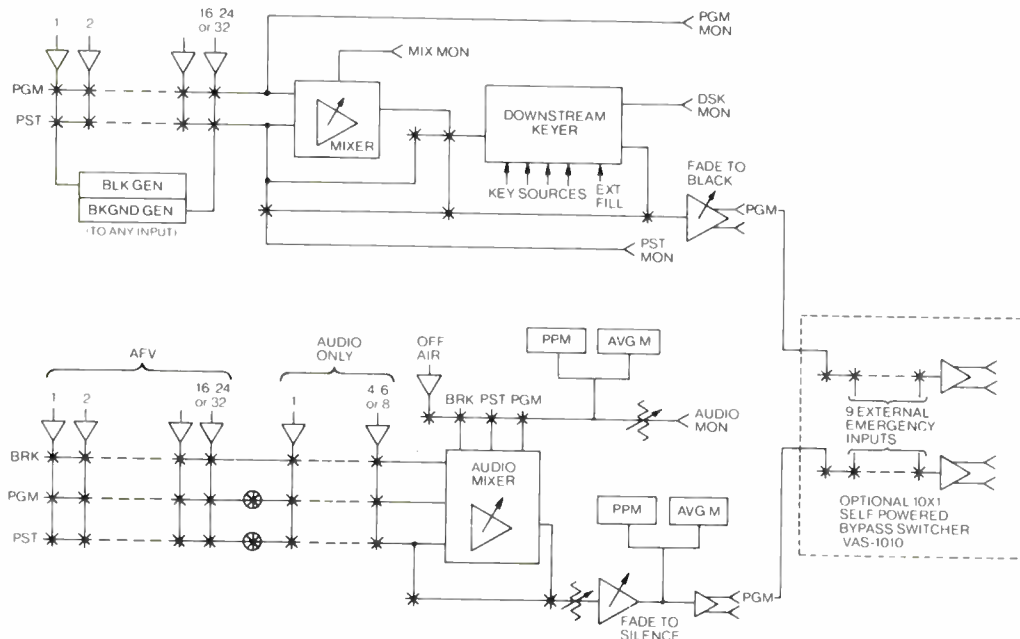

Stereo audio. Second Program output control locations and cutouts are provided to add stereo to existing system. Rack electronics only requires 4 RUs.

Serial port available for external digital communications.

A MC-4000 System is available for any size location.

MC-4164 16 AFV inputs; 4 Audio Only inputs
MC-4246 24 AFV inputs; 6 Audio Only inputs
MC-4328 32 AFV inputs; 8 Audio Only inputs

All models are available in NTSC, PAL and PAL-M.

PATCHMASTER™

The PATCHMASTER is a broadcast-quality bridging audio-follow-video routing switcher which will satisfy a variety of switching requirements. Configured as a 10 input by 1 output switcher, the moving of internal jumper plugs converts the unit to two independent 5-input by 1-output switchers. Switching is vertical interval as referenced to the output signal.

The extremely high impedance, low capacitance bridging inputs cause negligible line loading, therefore, many switchers may be looped together for expansion to any desired number of outputs. Expansion in increments of ten inputs is provided with automatic secondary switching to eliminate crosstalk degradation. Stereo audio is available optionally.

Connections are also provided for remote switcher control. The switches are momentary and provided with electronic interlocking.

AVS-10A SPECIFICATIONS VIDEO

- Inputs: 10 or 5 x 2, plus expansion in increments of 10
- Input Impedance: High impedance looping
- Return Loss: Greater than 50 DB at 5 MHz
- Input Level: 0.5 to 2.0 VPP
- Outputs: 2(10 x 1) or 1 (each 5 x 1) at 75 ohms
- Output Level: 4 VPP maximum
- Frequency Response: ± 0.05 DB to 5 MHz ± 0.1 DB to 10 MHz
- Crosstalk: 60 DB or more at 3.58 MHz
- Differential Gain: Less than 0.1 percent
- Differential Phase: Less than 0.1°

AUDIO

- Inputs: 10 or 5 x 2, plus expansion in increments of 10
- Input Impedance: High impedance balanced or unbalanced bridging
- Input Level: + 8 DBM Nominal, + 12 DBM Maximum
- Outputs: 2(10 x 1) or 1(each 5 x 1); 600 ohms Balanced
- Output Level: + 19 DBM Maximum
- Frequency Response: ± 0.05 DB, 20 Hz to 20 kHz
- Crosstalk: Greater than 70 DB at 20 kHz

AVS-10A PATCHMASTER \$1000.00
RCP-15A Remote Control Panel 350.00

UAA-6A Universal Audio Amplifier

The UAA-6A is a broadcast-quality universal audio amplifier providing six separate transformerless amplifiers in a self-contained 1.75 by 19 inch rack mounting frame. Each amplifier has a high impedance input which may be either balanced or unbalanced and a low impedance output of 600 ohms balanced or 150 ohms unbalanced. A front panel gain control and test points are also provided for level adjustments.

**ROUTING SWITCHERS,
AUDIO AMPLIFIERS, AUDIO AND VIDEO
DISTRIBUTION AMPLIFIERS**

It is particularly useful in installations utilizing video cassette machines to convert their high impedance preamp audio output to 600 ohms balanced and to provide gain control.

UAA-6A SPECIFICATIONS

- Response: 20 Hz to 20 kHz ± 0.1 DB
- THD: Less than 0.05% at +24 DBM output
- Connectors: XLR on input and output or terminal Board (UAA-6A-TB)

UAA-6A with XLR connectors \$750.00
UAA-6A-TB with screw terminals 700.00

ADA-1A, ADA-2A, ADA-3A Audio Distribution Amplifier

The ADA-1A is a broadcast quality audio distribution amplifier providing six balanced 600 ohm source-terminated outputs from one high impedance bridging input. Both inputs and outputs may be connected to provide balanced or unbalanced circuits. Outputs are independent precision integrated amplifiers, providing accurate output balance. Gain is adjusted with a 25-turn potentiometer for ease and accuracy of control.

The 1.75 by 19 inch rack-mounting package is available with one, two or three independent amplifiers with a common power supply.

SPECIFICATIONS

- Frequency Response: ± 0.5 DB, 10 Hz to 30 kHz
- Hum and Noise: 80 DB down with + 20 DBM Output
- Distortion: 0.1% or Less
- Connectors: Terminal Strips

ADA-1A One Amplifier \$375.00
ADA-2A Two Amplifiers 600.00
ADA-3A Three Amplifiers 800.00

VDA-1A, VDA-2A, VDA-3A Video Distribution Amplifier

The VDA-1A is a self-contained broadcast-quality video distribution amplifier with six source-terminated 75 ohm outputs and one high-impedance looping input.

The 1.75 by 19 inch rack-mounting package is available with either one, two or three independent amplifiers with a common power supply.

SPECIFICATIONS

- Frequency Response: ± 0.10 DB to 5 MHz ± 0.20 DB to 10 MHz
- Differential Gain: Less than 0.1%, 10 to 90 APL
- Differential Phase: Less than 0.1°, 10 to 90 APL
- Automatic DC Offset Compensation

VDA-1A \$375.00
VDA-2A 600.00
VDA-3A 800.00

SPOTMATIC

**Random Access
Commercial Insert System**

The SPOTMATIC Random Access Commercial Insert System is designed to schedule and automatically insert local commercials into any length of available time slot on multiple channels of satellite service programming. SPOTMATIC locates, cues and inserts the proper commercials in the proper order from standard 3/4 inch video cassettes. Up to 100 randomly mixed commercial spots can be added to each cassette, greatly reducing tape and editing costs. In addition, it prints out a log of all switching functions as they occur and also prints out a daily advertiser-grouped listing identifying all spots inserted on each channel. Insertion is accomplished in a clean, broadcast-quality fashion.

FEATURES

- Controls up to Four VCR's Per Channel
- Display-Prompted Keypad Programming
- Controls Multiple Channels/VCR's Simultaneously
- Each Channel Independently Programmed for Versatility
- Uses Non-Modified Sony Type-5 VCR's
- Expandable to Control Up to 32 VCR's

The SPOTMATIC Random Access Commercial Insert System uses sophisticated multiple microcomputers to automatically locate an individual commercial spot on a video cassette, cue it in accordance with a satellite service's chosen preroll time and insert it upon receipt of the proper satellite cue tones. SPOTMATIC may be configured to control from one to four VCR's per channel and to insert commercials on as many channels as desired, as long as the total number of VCR's to be controlled does not exceed 32. SPOTMATIC also has a built-in automatic logging feature which gives the operator a hard copy printout of the times and contents of each commercial insertion.

\$18,000.00 & up

SPOTMATIC JR.

Single VCR

Commercial Insert System

The SPOTMATIC JR. provides a highly versatile, yet extremely cost-effective means of inserting local commercials into satellite programming. The microcomputer controlled unit performs all of the functions necessary to insert commercials in a broadcast fashion and is also equipped with a full-feature logging and verification printer.

The SPOTMATIC JR. is completely self-contained and provides all the necessary control for one satellite service. It decodes satellite tones which occur at the beginning of a local availability and inserts a VCR commercial into the satellite program. All variable microcomputer functions are programmed with an external handheld touchpad which is easily connected to a front panel mounted jack.

\$2,750.00

COMMERCIAL INSERT SYSTEMS, TONE SWITCHER, AND SONY VP/VO5000 SERIES VIDEO/AUDIO INTERFACE MODULE

The same touchpad is used to encode commercial tapes with spot cueing and advertiser information. **\$225.00**

ATS-4A

Automatic Tone Switcher

The ATS-4A Automatic Tone Switcher provides a simple and inexpensive means of inserting local programming from an audio source and a character generator or other video source into satellite programming. It decodes the satellite tones which occur at the beginning and end of the satellite programming or a local commercial insert period and uses the locally generated information to automatically fill the time period surrounded by the cue tones.

All switching is performed by integrated circuits and occurs during the vertical blanking interval for clean, broadcast-quality performance. The microcomputerized tone decoding circuitry is programmable for various satellite service tone codes and is equipped with a lithium backup power supply for memory retention in the event of power failure.

SPECIFICATIONS

INPUTS

- Tone: 600 ohms balanced, 0 DBM nominal
- Audio: 600 ohms balanced, 0 DBM nominal
- Video: 1 volt PP, 75 ohm unbalanced
- Video A and B: 1 volt PP, 75 ohm unbalanced

OUTPUTS:

- Audio: 600 ohms balanced, 0 DBM nominal
- Video: 1 volt PP, 75 ohm unbalanced

\$1,200.00

HANDIMOD I.

- **Auto Sync-Lock** — Automatic vertical sync-lock of Sony Type 5 VCR to an external video source so vertical interval switching is possible
- **Balanced Audio** — Converts 47,000 ohm high-impedance audio line output of VCR to 600 ohm balanced or dual 150 ohm unbalanced for compatibility with most audio equipment
- **Audio Level Control** — Installed in seconds by plugging into modulator cavity on rear of VCR; absolutely no VCR modifications necessary

Broadcast-Type Audio Output. The HANDIMOD I converts the high-impedance preamp audio output of the VCR into either one 600 ohm balanced audio output or two independent 150 ohm unbalanced audio outputs. An audio level control is also provided, which allows adjustment of the output level from zero to better than +14 DBM

Auto Sync-Lock. The HANDIMOD I also adds circuitry to enable the VCR to be sync-locked to an external video source.

The HANDIMOD I is particularly useful in VCR systems which require vertical interval switching between the VCR and an external source. **\$300.00**

SWITCHING SYSTEM

MODEL: V8800 SERIES

The Matrix 88 is a microprocessor-based video switching system that automatically routes video signals from a requested camera position to a specified monitor. The basic system configuration permits video switching of up to 64 cameras on 8 monitors, and when fully expanded, a total of 255 cameras and 32 monitors can be utilized without additional hardware. Removeable printed circuit boards, featuring plug-in connectors, provide on-line serviceability and eliminate down-time of the entire system.

Standard System components consist of a Control Processing Unit (CPU), an 8 x 8 Matrix Switcher, and a Power Supply Unit. The control unit contains the system software, and when automatic sequencing is desired, the EAROM memory programming card. The control front panel houses the numerical keypad for video selection and the LED displays for camera/monitor number indication.

The CPU decodes signals accepted from external sources and transmits the information directly to the Matrix Switcher. A total of 48 Remote Keypads can be added to the basic System when multiple video control is desired.

Internal Switcher components consist of three mother boards which accommodate ten vertical boards; eight of which are switcher boards that route video from eight cameras to eight monitors for a total basic Matrix Capacity of 64 cameras by eight monitors. The remaining two boards are the Address Board and the Output Amplifier Board respectively.

The Power Supply Unit consists of six output circuits that are individually double-fused, and provide power for up to six Matrix 88 Switcher Modules. Positioned internally are two transformers that deliver +12V at 7½ amp. and -12V at 1 amp. to each of the switcher units respectively.

This diagram illustrates some of the ways that the modular components can be configured to meet video system requirements. Using the fewest possible components, this simple Matrix 88 system can meet video switching requirements for up to 64 camera inputs and eight monitor channels out

PULSE AND VIDEO DISTRIBUTION AMPLIFIERS

PULSE DA

VIDEO DA

9800 Series Distribution Amplifiers

- Modular Construction with Total Solid-State Active Circuitry
- Etched Glass Epoxy Circuit Boards
- Mix or Match both PDA's and VDA's in Same Enclosure
- Choice of Vertical or Horizontal Configuration
- Fits Standard 19-inch Rack or Cabinet
- Integral Power Supply on Each Module

The Cohu 9800 Series Pulse Distribution Amplifier is a solid-state, regenerative pulse-amplifier that processes and distributes television synchronizing signals from one input to four output channels. The input may be horizontal drive, vertical drive, blanking, or sync pulses. Each amplifier has an integral power supply; ac on-off switch and indicator; front panel test points for input, output, and power supply;

and an output level adjustment on the front panel. Individual connector panels, one for each amplifier, fasten to the rear of the enclosure and have six BNC or UHF connectors, one connector for each output and two for the bridging (loop-thru) input.

The Cohu 9800 Series Video Distribution Amplifier is a solid-state, wide-band video amplifier that amplifies (optional sync adding) and distributes video signals from one input to four output channels. The input may be composite or noncomposite, monochrome or color video. Each amplifier has an integral power supply; ac on-off switch and indicator; front panel test points for input, output, and power supply; and a video gain adjustment on the front panel. Individual connector panels, one for each amplifier, fasten to the rear of the enclosure and have six BNC or UHF connectors, one connector for each output and two for the bridging (loop-thru) input. The outputs to which sync is to be added (optional) are selected by means of slide switches mounted on a special version of the rear connector panel of the pulse distribution amplifier.

VIDEO CABLE EQUALIZER

EQUALIZER MODULE

PORTABLE CABINET

HORIZONTAL FRAME

VERTICAL FRAME

9800 Series

- Up to 30 dB Equalization at 10 MHz
- Dependable Operation Over a Wide Environmental Range
- Front Panel Variable Equalization Adjustments
- Total Solid State Active Circuitry
- Exceptional Low Hum and Noise Level
- Integral, Regulated Power Supply on Each Module

The Cohu 9800 Series Video Cable Equalizer compensates for high frequency losses due to long runs. Equalization is sufficient for up to 6000 feet of RG-11/U foam dielectric cable. Longer distances can be equalized by using polyfoam dielectric cable having even lower losses.

The equalizer is a self-contained, plug-in module, having its own integral regulated power supply. All circuitry is contained on an etched, glass epoxy circuit board. All components, test points and adjustments are prominently marked.

Equalization to 30 dB at 10 MHz is provided by three convenient front panel controls, variable RESPONSE control, a variable GAIN control, and a fixed + 15 dB toggle switch. Equalization of 0 to 15 dB is made using the RESPONSE control. Equalization above 15 dB requires activating the + 15 dB toggle switch and using the variable RESPONSE control. Activating the + 15 dB toggle switch introduces a fixed 15 dB of equalization to which the variable RESPONSE control will add the necessary signal for up to a total of 30 dB equalization at 10 MHz. Should low frequency gain compensation be necessary, the variable GAIN control will provide -4 dB to + 6 dB adjustment,

which shifts the entire equalization curve, low frequency to high frequency.

The Cohu 9800 Series Equalizer when used at the receiving end of a cable provides excellent results with both color and monochrome video signals. The equalizer will accept either a 75-ohm unbalanced or 124-ohm balanced output. Differential input provides rejection of hum caused by ground loops. The equalizer may also be used at the transmitting end with similar excellent performance.

ENCLOSURES

The Cohu Video Cable Equalizer Module may be mounted in any of three enclosures. A 10 module vertical frame, a 3 module horizontal frame or a 3 module self-contained portable cabinet. The 10 module vertical or 3 module horizontal frame will mount into a standard 19 inch rack.

Contents:

- 200 "F" Plug for RG59/U Cable with Crimp Ring
- 1 Heavy Duty Crimp tool for FP
- 1 Cable stripper

Break-Out Boxes

PS-7B

Features 10 pin cable (E10P) to plug into camera input of portable VCR or other equipment using 10 pin jack (E10JCM). Provides video in/out via BNCs and audio in/out via Minis (3.5mm). **PS-7B \$59.95**

PS-6B

Features 8 pin cable (E8P) to plug into equipment using 8 pin jack (E8JCM). Provides video in/out via BNCs and audio in/out via Minis (3.5mm). **PS-6B \$54.95**

CBB-10

Provides access to individual signals of color cameras using the common 10 pin (E10P) connection. Features: 10 pin camera input (E10J), Video out via BNC connector, Audio out via 3.5mm Mini connector, 12 volts DC power input fused via 4 pin DIN (allows external powering of camera), Remote record/pause via extended Mini jack.

CBB-10 \$69.95

Video Distribution Amplifier

Overcome line loss, provide additional equipment outputs and line equalization, or any combination of these. Comprehensive's 4 output Video Distribution Amplifier contains two input connectors to permit signal looping, thereby allowing the units to be "ganged" if more than four outputs are needed. Mounts easily on any flat surface.

CVA2B-4 \$175.00

Passive Video Switchers

Versatile Switchers You Can Depend On

Comprehensive's passive video switchers with audio pass-along offer a fast simple way to interconnect video and audio equipment. Pushbuttons select the input and automatically terminate the other video inputs, for constant impedance.

AUTOMATIC SWITCHING IS A REALITY

WITH OUR MODULAR COAXIAL SWITCHING RELAYS

STANDARD COAXIAL RELAY: Now selective interconnecting allows maximum channel allocation, and reliable single channel timesharing with multiple programming sources becomes a reality! Our totally passive design eliminates third order distortion. Our highly reliable RF coaxial Reed assemblies are triggered by command switching voltage with PC board design that guarantees performance every time!

VIDEO SENSING RELAY: Solve many of your switching problems with confidence. Now you can insert back-up video signals, or channel preempting from a variety of sources. Match this one with our Standard relay (above) and you've got a totally automatic system! It's really a system you can build on.

RF/IF SENSING RELAY: Switch between primary and secondary inputs upon carrier or modulation signal completion or failure. Senses video modulated signals from 5 to 450 MHz from local, microwave, or satellite sources. Built to your specs, and match with our Standard Relay for totally automatic RF/IF and video switching that you can depend on.

CARRIER MODULATION SENSOR: This one will indicate the presence or failure of TV modulated carrier or TV modulation signal (on the carrier) with no third order distortion. As with all our relay units, you get high isolation and solid state dependability.

VIDEO SYNC SENSOR: This simple yet sophisticated sensor actually "sees" the presence or failure of the appointed video signal. Its speed will defy even the most sensitive detection with drop-out time of 225mS and lightning fast 20mS pick-up time; that you can build into your system and forget about!

POWER SUPPLY: To make your system complete, our 12 or 24Vdc rack mount power supply allows for mounting and powering several relays.

MAKE THE RIGHT SWITCH:

D-2000 SERIES ROUTING SWITCHERS

- Compatible matrix frames of 50 x 25, 25 x 25 and 25 x 20 used as building blocks for systems of up to 256 inputs, with up to 8 levels of control
- Easily field expandable—no need to specify initially the future matrix size
- Switcher is output oriented with each output bus having its own microprocessor control system, independent of every other output bus
- Serial data control system using RG-59/U coax—with opto-isolators in the control lines to avoid compromising reliability due to ground loop hum
- D-4300 series switching units can be furnished with compatible microprocessor controls, for use where small auxiliary switchers are needed for special purpose additional levels
- Non-proprietary components, available through electronics distributors, used throughout
- All plug-in modules interchangeable with other modules of same type. Switcher remains within specifications, without readjustment, when modules interchanged.

The Datatek D-2000 series of Video and Audio Routing Switchers use a variety of compatible matrix frames to make up systems of various sizes for video, audio, SMPTE time code and intercom.

The D-2000 series switchers are easily field expandable without down time, by adding matrix frames and interconnecting them with plug-in cables. There is no need to specify initially the future size of the switcher, provided the ultimate size is not greater than 256 inputs.

The switchers are output oriented both from a signal and a control standpoint. Output modules are either 25 x 1 or 50 x 1 and each output module has its own microprocessor control system which is completely independent of the control system on any other output bus. This provides maximum bus security since failure of a microprocessor or shorting a control line will affect only one bus and not the entire matrix.

Further, since each output bus has its own control system, the crosspoint tally fed back to the control panel is generated on the same module as that on which the crosspoint is located. A positive crosspoint tally status for the bus is generated, rather than a tally generated from a central control module serving many output busses.

Serial data is used over standard RG-59/U coaxial cable to connect the matrix frames to the control panels. This simplifies installation and reduces cost. To insure that ground loop hum does not compromise the reliability of the serial data control system, control panels are equipped with opto-isolators.

By combining a video matrix frame with one or more audio, time code, etc. matrix frames, multi level systems can be assembled for video, audio, stereo audio (left and right), SMPTE time code, intercom, tally, and machine assignment. The control system provides for up to 8 levels of control, any of which may be "follow video" or "breakaway". Where an auxiliary matrix of small size is needed, D-4300 series switching units can be equipped with compatible microprocessor control modules, and controlled as part of the D-2000 switcher. This is useful where a small video or audio auxiliary matrix is needed for special purpose additional levels for switching audio, tally, intercom, SMPTE time code, synclock, cursors, time base correctors, etc.

D-2000 Series Video and Audio Routing Switchers

The D-2000 Series Routing Switchers use a serial data control system and have expansion capability to 250 inputs x 250 outputs.

D-2000-25x20V Video Routing Switcher. Basic "Building Block" matrix frame capacity is 25 inputs x 20 output busses. Frame size is 7 inches.

D-2000-25x25V Video Routing Switcher. Basic "Building Block" matrix frame capacity is 25 inputs x 25 output busses. Frame size is 8-3/4 inches.

D-2000-50x25V Video Routing Switcher. Basic "Building Block" matrix frame capacity is 50 inputs x 25 output busses. Frame size is 10-1/2 inches.

D-2000-25x20A Audio Routing Switcher. Basic "Building Block" matrix frame capacity is 25 inputs x 20 output busses. Frame size is 7 inches.

D-2000-25x25A Audio Routing Switcher. Basic "Building Block" matrix frame capacity is 25 inputs x 25 output busses. Frame size is 8-3/4 inches.

VIDEO-AUDIO ROUTING SWITCHERS

D-2000-50x25A

Audio Routing Switcher. Basic "Building Block" matrix frame capacity is 50 inputs x 25 output busses. Frame size is 10-1/2 inches.

100x25 AUDIO SWITCHER

There are no proprietary components used in the Datatek switching systems. All components are available through electronics distributors as standard items.

All plug-in modules are interchangeable with other modules of the same type, and the switcher will remain within specification, without adjustment, when modules are interchanged. If cable equalization is used, the cable equalizer would of course normally need to be reset. Removal or insertion of modules with power on will not disturb other signals, and will not blow fuses.

MATRIX FRAMES

D-2021 Power Supply System, 5-1/4" rack mounting. Includes fault monitoring and alarm.

D-2044 Latch Retention (Battery) Supply.

D-2045 Control Buffer Frame, 3-1/2", for use with X-Y Control Panels.

D-2014 Source Tally Relay Frame, 1-3/4"

D-2019 Parallel Interface Frame, 5-1/4"

CONTROL PANELS

D-2047 Three Bus Lever Switch Control Panel

D-2029 Single Bus Touch Pad Control Panel

D-2000 Series Control Panels

Each Datatek control panel is equipped with its own microprocessor to communicate with an associated output bus microprocessor in the matrix frame. The serial data control system uses RG-59/U coaxial cable, with an optoisolator in each bus to prevent errors due to ground loop hum.

Control panels are available to operate either a single bus, or multiple busses. They are also available for audio-follow-video, audio or video breakaway, and for controlling multiple levels, either on a follow or breakaway basis. In addition, the control panels can be lever switch, touch pad keyboard, or pushbutton per input.

Modems and RS-232-C interfaces are available to operate single or multiple busses over standard telephone lines, or connected to automation systems.

Control Panels — Some of the D-2000 series control panels are listed below.

- D-2029** Single Bus Touch Pad Control Panel, 1-3/4" Rack Mounting, for video-only, audio-only, or audio-follow-video switching. With two LED displays, one for preset (selection) and one for line. With reset and take button.
- D-2030** Single Bus Touch Pad Control Panel, 1-3/4" Rack Mounting, for one video and two audio channels, with provisions for switching audio-follow-video or breakaway of one or both of the audio channels. Includes three LED displays, one each for video and audio channels 1 and 2. Includes switch level select switch, reset and take button.
- D-2031** Single Bus Touch Pad Control Panel, 1-3/4" Rack Mounting, for audio-follow-video or audio breakaway switching. With two LED displays, one for video source and one for audio source. Includes split-audio switch, reset and take button.
- D-2032** Portable Diagnostic Control Unit, for checking matrix status from front of rack. Includes LED displays and touch pad keyboard. May also be used as a single bus control panel.
- D-2033-25** Single Bus Pushbutton Control Panel, 1-3/4" Rack Mounting, with 25 illuminated pushbutton switches.
- D-2033-25S** Single Bus Control Panel, 1-3/4" Rack Mounting, with 25 illuminated pushbutton switches. Provision for split audio switching.
- D-2033-25P** Single Bus Control Panel, 1-3/4" Rack Mounting. Programmed to control any 25 specified inputs out of the matrix.
- D-2033-50** Single Bus Pushbutton Control Panel, 3-1/2" Rack Mounting, with 50 illuminated pushbutton switches.
- D-2033-50S** Same as above, but with additional switch for split audio switching.
- D-2034 S** Multi-Bus Touch Pad Control Panel, 3-1/2" Rack Mounting, for operation of the full matrix or a portion of the matrix, including provision for split audio operation. Includes two LED displays, one for output bus and one for input selected. With touchpad, reset and take button. Equipped with key-lock inhibit of the take switch to prevent accidental interference with individual bus control panels. Requires also D-2045 Control Buffer Frame.

- D-2037** Single Bus Control Unit, 2-digit lever switch input selection, no take button. Signal switches as lever switch changed. In miniature housing.
- D-2040** Single Bus Desk Top Control Panel, touch pad input selection with reset and take button, and LED status display.
- D-2041** Single Bus Desk Top Control Panel, lever switch input selection with take button.
- D-2042** Single Bus 2-Digit Lever Switch Control Panel, 1-3/4" Rack Mounting, with LED status display and take button.
- D-2042A** Single Bus 3-Digit Lever Switch Control Panel, 1-3/4" Rack Mounting, with LED status display and take button.
- D-2047** Three Bus 2-Digit Lever Switch Control Panel, 1-3/4" Rack Mounting.
- D-2049** Two Bus 2-Digit Lever Switch Control Panel, 1-3/4" Rack Mounting.
- D-2049A** Two Bus 3-Digit Lever Switch Control Panel, 1-3/4" Rack Mounting.
- D-2050** Supervisory CRT Terminal and X-Y Control Panel. Requires also D-2045 Control Buffer Frame.
- D-2036** Alpha-Numeric Single Bus Control Panel, 1-3/4" Mounting, 10 Alphas and 10 numerics/Alpha.
- D-2069A** Alpha-Numeric Single Bus Keypad Control Panel, 1-3/4" Rack Mounting, 12 Alphas and 99 numerics/Alpha.
- D-2098** Two Bus Keypad Control Panel, 3-1/2" rack mounting.
- D-2100** Single Bus Keypad Control Panel, 3-1/2" rack mounting.
- D-2103** Eight Bus Keypad Control Panel, 3-1/2" rack mounting, permits split audio, with nine LED displays.

Machine Assignment and Control System

The Datatek Machine Assignment and Control System is designed for operation in conjunction with the D-200 Video-Audio Routing Switcher.

- D-2000-25x25D** Bi-Directional Data Matrix, 8-3/4", for 25 Source Buffer Modules and 25 Destination Switch Modules.
- D-2000-50x25D** Bi-Directional Data Matrix, 10-1/2", for 50 Source Buffer Modules and 25 Destination Switch Modules.
- D-2204** Source Buffer Module (one needed for each machine interfaced into system).
- D-2205** 25x1 Destination Switch Module (one needed for each machine control panel).
- D-2206** 50x1 Destination Switch Module (one needed for each machine control panel).
- D-2207** Machine Interface Unit, 8 function.
- D-2208** Machine Interface Unit, 16 function.
- D-2213** Machine Control Panel Module. Provides: (A) RS 422 connection to 25x1 or 50x1 Destination Switch Module and (b) Connection to readouts and momentary normally open switches on console for up to 8 functions.

Control Panels—Price dependent on customer requirements. Customer can use existing switches if desired or can build own panels.

Because of options and system configuration affecting price, all prices are on a "Price on Application" basis.

Prices and Specifications Subject to Change Without Notice.

VIDEO-AUDIO SWITCHING UNITS

VIDEO-AUDIO SWITCHING UNITS

D-4300 Series Video and Audio Switching Units

- Video and Audio switcher "building blocks" of 6 x 1, 16 x 1 and 20 x 1
- Each building block equipped with self contained power supply
- Choice of video-only switching, audio-only switching, audio-follow-video and split audio operation
- Video and Audio inputs are high impedance bridging, permitting stacking units for multiple output bus applications
- Vertical Interval video switching
- Video switching units equipped with 4-section cable equalizer on output
- Differential Phase/Differential Gain performance of 0.15°/0.15%
- Video crosstalk 60 dB or better to 6.0 MHz
- Audio maximum output level +30 dBm, balanced
- Audio distortion 0.15% maximum, 20 Hz to 20 kHz
- Audio dynamic range in excess of 100 dB
- Audio inputs and outputs on connectors
- Balanced audio crosspoint, audio common mode gain -60 dB, 10 Hz -20 kHz
- Remote control panels using momentary switches with choice of LED or incandescent lamps for feedback tally
- Remote control cable is RG-59/U coax with BNC connectors
- Local control panels available
- Switching units are plug-in modules
- Optional tally relays available for source tallies, intercom, etc.

SWITCHING UNITS

D-4301A	6 x 1 Video Switching Module, bridging inputs, occupies 2 module widths in 10-module DF-603 Rack Frame. Less rack frame and remote control panel.	\$445.00
D-4310A	6 x 1 Video Switching Module, terminating inputs occupies 1 module width in DF-603 Rack Frame or DF-603H Rack Frame. Less rack frame and remote control panel.	\$430.00
D-4302A	6 x 1 Audio Switching Module, bridging inputs, occupies 1 module width in 10-module DF-603 Rack Frame or in 3-module width DF-603H Rack Frame. Less rack frame and remote control panel.	\$430.00
D-4304A	20 x 1 Video Switching Unit, bridging inputs, including 1-3/4" rack frame, less remote control panel.	\$935.00
D-4305A	20 x 1 Audio Switching Unit, bridging inputs, including 1-3/4" rack frame, less remote control panel.	\$935.00
D-4307A	16 x 1 Video-Audio Switching Unit, audio-follow-video switching, bridging inputs. Includes 1-3/4" rack frame, less remote control panel.	\$1305.00
DF-603	Rack Frame, 5-1/4"	\$175.00
DF-603H	Rack Frame, 1-3/4"	\$155.00

REMOTE CONTROL PANELS

D-4320A-6	Pushbutton Remote Control Panel, 6 inputs, for video only, audio-only or audio-follow-video switching. 1-3/4" rack mounting, less control cable (coax). Uses switches with LED tallies.	\$375.00
D-4322A-6	Pushbutton Remote Control Panel, 6 inputs, for video-only, audio-only or audio-follow-video switching. 1-3/4" rack mounting, less control cable (coax). Uses switches with lamps for tally, and clear plastic lenses for inserting legends.	\$385.00
D-4320A-6S	Pushbutton Remote Control Panel, 6 inputs, audio-follow-video or split-audio switching. 1-3/4" rack mounting. Uses switches with LED tallies.	\$395.00
D-4322A-6x2	Pushbutton Remote Control Panel, 6 inputs, 2 output buses, for controlling two of 6 x 1 type switching units. 1-3/4" rack mounting, less control cable (coax). Uses lamps for tally and clear plastic lenses for inserting legends.	\$475.00
D-4320A-16	Pushbutton Remote Control Panel, 16 inputs, for audio-follow-video switching. For use with D-4307A Switching Units. 1-3/4" rack mounting, less control cable (coax). Uses switches with LED tallies.	\$435.00
D-4322A-16	Pushbutton Remote Control Panel, 16 inputs, for video-only, audio-only or audio-follow-video switching. For use with D-4307A Switching Units. 1-3/4" rack mounting, less control cable (coax). Uses switches with lamp for tally, and clear plastic lenses for inserting legends.	\$460.00
D-4320A-20	Pushbutton Remote Control Panel, 20 inputs, for video-only, audio-only or audio-follow-video switching. For use with 20 x 1 Switching Units. 1-3/4" rack mounting, less control cable (coax). Uses switches with LED tallies.	\$455.00
D-4322A-20	Pushbutton Remote Control Panel, 20 inputs, for video-only, audio-only or audio-follow-video switching. For use with 20 x 1 Switching Units. 1-3/4" rack mounting, less control cable (coax). Uses switches with lamps for tally, and clear plastic lenses for inserting legends.	\$490.00
D-4320A-20S	Pushbutton Remote Control Panel, 20 inputs, for audio-follow-video or split-audio switching. For use with 20 x 1 Switching Units. 1-3/4" rack mounting. Requires 2 control cables (coax). Uses switches with LED tallies.	\$475.00

VIDEO DISTRIBUTION AMPLIFIER

D-603G VIDEO DISTRIBUTION AMPLIFIER

FEATURES

- High Impedance Differential Input provides High Return Loss and 50dB or better Longitudinal AC Hum and Noise Reduction
- Six Outputs, Direct Coupled Resistive Split, with High Isolation over Wide Bandwidth
- Front Access for in-position Adjustment of Gain, Output DC, Frequency Response and Transit Time
- Includes Cable Equalizer with Front Access in-position Adjustment for Cable Length
- Individual Power Supply

The Datatek D-603G Video Distribution Amplifier is a standard plug-in card module which, with its accompanying frame mounted rear assembly, D-603RA, provides six 75 ohm highly isolated, level matched, source terminated outputs.

Up to ten D-603G Video Distribution Amplifiers and their rear assemblies mount in a DF-603 5-1/4" Rack Frame for accommodation in a standard 19" equipment rack.

A very high impedance differential input provides a non-polarized long time constant AC coupling to the input signal and the low common mode gain reduces longitudinal hum and noise by 50dB or more up to 100KHz. This not only reduces the effects of ground loops but also those caused by transients from lighting circuits, motors, welders, etc. A compensated bridging loop through, in conjunction with the high input impedance, results in a high input return loss, power on or off, over a wide bandwidth, so reducing mis-match effects.

Front access is provided for screw driver adjustment of gain, output DC offset, frequency response, transit time and cable equalizing, all with the module in its normal operating position (not on a module extender).

The D-603G also provides cable equalizing up to 10dB at 10MHz. The four section slope equalizer is preset to match a particular cable type (specified when ordering) down to low frequencies and a single, front access, screw driver adjustment on the D-603G is set to equalize the particular length of cable involved.

Input and output test points, together with ground terminals to which scope probe ground clips may be attached, are provided at the front of the module. The output test point is low impedance and level corrected to correspond with a terminated output for correct response and level assessment. An LED is used to indicate when power is applied to the module.

The D-603RA Rear Assembly, into which the D-604 plugs, by way of a 22 contact edge connector, provides the input and output BNC connections, together with the module power connections. The rear assembly contains the power transformer, with fused primary, for operation on AC power line, avoiding the hazard of taking high voltage (117V or 234V) line supplies onto the module itself.

A small power cable from the D-603RA Rear Assembly plugs into one of ten power distribution outlets provided on the DF-603 Rack Frame, whether the supply be line or low voltage AC. This means that all connections to a D-603/D-603RA combination are by way of connectors. Additions or deletions to the complement of amplifiers in the frame may be made at any time, without wiring, and without interrupting primary supply to the frame or other modules.

The DF-603 5-1/4" Rack Frame accommodates up to ten D-603 Video or D-604 Pulse Distribution Amplifiers. An optional second power distribution system may be added to the DF-603 Frame should it be desired to operate up to six of the amplifiers on a second supply circuit, such as a priority or emergency supply system.

D-603G Video Distribution Amplifier with D-603 Rear Assembly **\$335.00**

D-603RA Power Supply and Connector Assembly **100.00**

FRAMES

DF-603	5-1/4" Rack Frame, accepts 10 D-507G, D-518, D-603G, D-604, D-605, D-606, or D-607A modules, intermixed if desired	\$185.00
DF-603H	1-3/4" Rack Frame, accepts 3 D-507G, D-518, D-603G, D-604, D-605, D-606, or D-607A modules, intermixed if desired	\$155.00
DE-400A	Module Extender for D-507G, D-518, D-603G, D-604, D-605, and D-607A	\$30.00

SERIES 10

The Series 10 Solid-State Video and Audio Switching Equipment provides 10-input/10-output high quality vertical interval monochrome or color video switching and on-air quality audio switching. Each 10 x 10 matrix is housed in a 5-1/4"H x 14-1/2"D x 19" rack mount chassis (13.34 x 36.83 x 48.26 cm) which includes power supply.

The control system is microprocessor-based and allows local and remote operation. Remote master and individual output bus control

panels are available to operate over a single coaxial cable control line. Up to four levels of switching, 1 video and 3 audios as an example, can be controlled locally and/or remotely. A total of 15 remote control panels may be used to control a system.

Models SVA-100B, SVA-101B, SAA-110A and SAA-111A include 10 Form A tally relays and facilities to control the slave matrices, Models SVA-102B and SAA-112A.

Notice: Series 10 equipment has been tested to show compliance with FCC Rules, Part 15, Subpart J, for Class A computing devices.

Video Switcher

SVA-100B. Self-contained, for local control. 10 inputs, 10 dual outputs with tally and regulated power supply. **\$4350.00**

Video Switcher

SVA-101B. Same as SVA-100B but for remote control operation only. Control by single coaxial comm. line. Requires remote control panel(s) option. **\$4060.00**

Video Switcher

SVA-102B. Same as SVA-101B but for slave control only. Controlled from switcher control bus only. (Model CC-1130A Control Bus Jumper Cable Assembly not included). Tally not provided. **\$3425.00**

Audio Switcher

SAA-110A. Self-contained, for local control. 10 input by 10 output with tally and regulated power supply. **\$4050.00**

Audio Switcher

SAA-111A. Same as SAA-110A but for remote control operation only. Control by single coaxial comm line. Requires remote control panel(s) option. **\$3760.00**

Audio Switcher

SAA-112A. Same as SAA-111A but for slave control only. Controlled from switcher control bus only. (Model CC-1130A Control Bus Jumper Cable Assembly not included). Tally not provided. **\$3125.00**

Master Remote Control Panel

SCA-120A. Rack mounting. For remotely controlling all 10 outputs of video and/or audio switchers. **\$900.00**

Master Remote Control Panel

SCA-122A. Desk top use. Same as SCA-120A except for housing. **\$900.00**

Single Bus Remote Control Panel

SCA-130A. Rack mounting. For remotely controlling 1 output of video and/or audio switchers. **\$675.00**

Single Bus Remote Control Panel

SCA-131A. Desk top use. Same as SCA-130A except for housing. **\$625.00**

Switcher Control Bus Jumper Cable Assembly

CC-1130A. Switcher Control Bus Jumper Cable Assembly for control of slave matrices, Models SVA-102B and/or SAA-112A. 24 inches (61 cm) in length. **\$120.00**

Termination

TC-260A. 75 ohm BNC Termination Plug for terminating looping video inputs. **\$10.00**

FR-1500A

VS-12D

SERIES 1500 VIDEO DISTRIBUTION AMPLIFIERS

Series 1500 distribution and switching products may be used as self-contained, stand alone units for desk top or custom mounting. For rack mounting applications, units can be installed in the Model FR-1500A Rack Mounting Frame which occupies only 1 1/4 inches (4.45 cm) of standard 19-inch rack space. All units are equipped with BNC type signal connectors unless otherwise noted. Mating connectors are not included.

DA-1510A

Video Distribution Amplifier. Provides four isolated 75 ohm source terminated outputs from one high impedance looping input.

- Input: 75 ohm unbalanced, high impedance looping, 1 V p-p, BNC connectors
- Outputs: 4, 75 ohm source terminated, 1 V p-p, BNC connectors
- Gain: Adjustable + / -3 dB
- Frequency Response (ref. 1 MHz): 100 kHz-10 MHz: + / -0.5 dB; 30 MHz: +1, -2 dB
- Tilt: Less than 1% line or field
- Differential Gain: 0.25% at 5 MHz, 10-90% APL, 1 V p-p output
- Differential Phase: 0.25° at 5 MHz, 10-90% APL, 1 V p-p output
- Hum and Noise: 65 dB RMS below 1 V p-p, 10 MHz bandwidth
- Size: Module only, 1-11/16" H x 5-3/4" W x 9" D (4.32 x 14.61 x 22.86 cm); mounted in MB-1504A desk mount, 2" H x 6" W x 9-1/4" D (5.08 x 15.24 x 23.50 cm)
- Power: 115/230 VAC + / -10%, 50/60 Hz
- Net Weight: 2-1/2 pounds (1.13 kg)

DA-1510A **\$300.00**

FR-1500A

Rack Mounting Frame. Provides mounting for three (3) Series 1500 units in standard equipment racks. A captive screw fastener at the rear of the frame, and a guide pin at the front, secures each unit, allowing equipment to be used in mobile applications.

- Size: 1-3/4" H x 9-1/4" D x 19" rack mounting (4.45 x 29.21 x 48.26 cm)
- Net Weight: 2-1/2 pounds (1.13 kg)

\$100.00

BP-1502A

Blank Module. Fills one unused space in FR-1500A Frame • Net Weight: 1-1/4 pounds (0.57 kg) **\$60.00**

MB-1504A

Desk Mount Kit. For one Series 1500 unit. Includes rugged aluminum cover, rubber feet, and hardware.

- Net Weight: 13 ounces (0.37 kg) **\$30.00**

PULSE DISTRIBUTION AMPLIFIERS

PD-1515A Pulse Distribution Amplifier

Provides 4 isolated, source terminated outputs from 1 high impedance looping input. Regenerative input, linear output. Normal output with up to 1000 ft. (305 m) Belden 8281 input cable.

- Input: 2-4 V p-p negative pulses, 75 ohm unbalanced differential, high impedance bridging, BNC connectors
- Common Mode Rejection: Greater than 60 dB, 50-400 Hz, + / -30 V reference chassis ground
- Outputs: 2-4 V p-p negative pulses, 4 each 75 ohm source terminated, BNC connectors
- Output Return Loss: Greater than 35 dB at 5 MHz
- Output Isolation: Greater than 40 dB at 5 MHz
- Output

- Rise Time: 130 ns
- Gain: Adjustable to 2-4 V p-p
- Hum and Noise: 75 dB RMS below 4 V p-p
- Overshoot and Ringing: Less than 1.0%
- Tilt: Less than 1.0%
- Size: 1-11/16" H x 9" D x 5-3/4" W (4.32 x 22.86 x 16.61 cm); mounted in MB-1504A desk mount, 2" H x 9-1/4" D x 6" W (5.08 x 23.50 x 15.24 cm)
- Power: 115/230 V ac + / -10%, 50/60 Hz
- Net Weight: 3 lbs. (1.36 kg) **\$325.00**

EQUALIZERS

EQ-1530A Equalizer (Post Equalizing) **\$575.00**
EQ-1531A Equalizer (Post Equalizing) **700.00**
EQ-1532A Equalizer (Pre-Equalizer) **650.00**

PASSIVE VIDEO SWITCHERS

Multiple input to single output locally controlled terminating video switchers. Units have extra contacts for user wiring of audio-follow or external cue lights.

VS-6D Video Switcher

Video Switcher. Provides passive switching of from one to six inputs to a single output. Incorporates switch-controlled terminations. Equipped with separate auxiliary switch section for user wiring of unbalanced audio, balanced audio, external cue lights, or other secondary functions. For lighted pushbutton operation, order LK-1541A Lighting Kit shown below.

- Inputs: Six (all except operating channel terminated in 75 ohms)
- Output: One
- Connectors: BNC
- Size: 1-3/4" H x 6-1/2" D x 19" W (4.45 x 16.51 x 48.26 cm)
- Net Weight: 2-1/2" pounds (1.13 kg) **\$225.00**

VS-12D Video Switcher

Video Switcher. Same as VS-6D but with 12 inputs.

- Inputs: Twelve (all except operating channel terminated in 75 ohms)
- Output: One
- Connectors: BNC
- Size: 1-3/4" H x 6-1/2" D x 19" W (4.45 x 16.51 x 48.26 cm)
- Net Weight: 2-1/2 pounds (1.13 kg) **\$300.00**

LK-1541A Optional Lighting Kit

Lighting Kit. For use with passive switchers. Provides 6 volts DC at 100 mA to power lamps provided with switcher. Calculator style plug-in transformer with 6 foot (1.82 meters) cable.

- Connector: Miniature male, 3.5 mm (mates with Switchcraft No. 41 jack provided on rear of switcher)
- Primary Power: 115 VAC, 60 Hz
- Net Weight: 6 ounces (0.17 kg) **\$20.00**

SW-1540A 6-Input, 1-Output Passive Video Switcher

6-Input, 1-Output Passive Video Switcher. Switch controlled 75 ohm inputs. Separate auxiliary contacts included for user wiring of secondary switching functions. Lighted pushbuttons with use of LK-1541A Lighting Kit. Shown with optional MB-1504A.

- Inputs: 6 (all except input selected, 75 ohm terminated), BNC connectors
- Output: 1, BNC connector
- Switching: Break-before-make
- Size: Module only, 1-11/16" H x 9" D x 5-3/4" W (4.32 x 22.86 x 14.61 cm); mounted in MB-1504A desk mount, 2" H x 9-1/4" D x 6" W (5.08 x 23.50 x 15.24 cm)
- Net Weight: 2-1/2 lbs. (1.13 kg) **\$200.00**

DYNAIR ELECTRONICS, INC. BROADCAST DISTRIBUTION EQUIPMENT

5275 Market Street
San Diego, CA 92114
(619) 263-7711 TWX 910-335-2040

SERIES 5300 DISTRIBUTION EQUIPMENT

Series 5300 Distribution Equipment mounts in a 5-1/4" x 19" rack-mounting frame (13.34 x 48.26 cm). The frame has a total of twenty mounting spaces. Two power supply modules can be used to provide redundant power supply operation. All amplifier modules include "on-board" power regulators, fuses and blown fuse indicators. AC input power is 115/230 VAC ± 10%, 50/60 Hz.

FR-5300B FRAME

Module Mounting Frame. Provides twenty spaces for Series 5300 modules. All modules can be installed without soldering. (Frame shown with modules installed.)

Size: 5-1/4"H x 14-1/4"D x 19"W Net Weight: 9 pounds . . . \$400.00

PS-5305B Power Supply Module

Power Supply Module. Mounts in FR-5300B Frame and provides unregulated dc for amplifier modules. Requires four spaces in frame. Two power supplies can be installed for redundant operation. \$500.00

AD-5370B 5-OUTPUT AUDIO DISTRIBUTION AMPLIFIER MODULE

High performance audio distribution amplifier module. Indefinite short circuit protection. Can be used in same frame with other Series 5300 modules. \$325.00

DA-5310B DUAL 1 INPUT-2 OUTPUT VIDEO DISTRIBUTION AMPLIFIER MODULE

Video Distribution Amplifier Module for high performance video systems. Two identical amplifier sections on one module, each providing 1 terminating input to 2, 75 ohm outputs. Equalization available for up to 1000 ft. (305 m) of cable.

- DA-5310B/10A Video DA, Non Equalized \$450.00
- DA-5310B/11A Video DA, Equal., Belden 8281, Unbal. In. \$75.00
- DA-5310B/21A Video DA, Equal., WECO 16 PEVL, Bal. In. \$75.00
- DA-5310B/22A Video DA, Equal., WECO 760, Bal. In. \$75.00

DA-5320B 5-OUTPUT VIDEO AND SUBCARRIER DISTRIBUTION AMPLIFIER MODULE

Video Distribution Amplifier Module for high performance video systems. Sync-Tip reference maintains dc level with changing APL. Equalization available for up to 1000 ft. (305 m) of cable.

- DA-5320B/10A Video DA, Non-Equalized \$395.00
- DA-5320B/11A Video DA, Equal., Belden 8281, Unbal. In. \$460.00
- DA-5320B/21A Video DA, Equal., WECO 16, PEVL, Bal. In. \$460.00
- DA-5320B/22A Video DA, Equal., WECO 760, Bal. In. \$460.00

DA-5330B 10-OUTPUT VIDEO AND SUBCARRIER DISTRIBUTION AMPLIFIER MODULE

Video Distribution Amplifier Module for high performance video systems. Sync-Tip reference maintains dc level with changing APL. Equalization available for up to 1000 ft. (305 m) of cable.

- DA-5330B/10A Video DA, Non-Equalized \$400.00
- DA-5330B/11A Video DA, Equal., Belden 8281, Unbal. In. \$470.00
- DA-5330B/21A Video DA, Equal., WECO 16 PEVL, Bal. In. \$470.00
- DA-5330B/22A Video DA, Equal., WECO 760, Bal. In. \$470.00

DA-5340B 4-OUTPUT VIDEO DISTRIBUTION AMPLIFIER MODULE

4-Output Video Distribution Amplifier Module and Frame Adapter for high performance video systems. 1 high impedance looping input and 4,75 ohm outputs provided \$225.00

EQ-5350B POST-EQUALIZING AMPLIFIER MODULE

Post-Equalizing Amplifier Module. Provides up to 24dB of equalization at 8 MHz. Will equalize up to 3000 ft. (914.4m) of Belden type 8281 cable or 5000 ft. (1524 m) of WECO 16 PEVL. Provides 2,75 ohm outputs.

- EQ-5350B/51A Post-Equalizing Amp., Belden 8281, Unbal. In. \$550.00
- EQ-5350B/61A Post-Equalizing Amp., WECO 16 PEVL, Bal. In. 550.00

LA-5353B UNBALANCED TO BALANCED LINE AMPLIFIER MODULE

75 ohm unbalanced input, 124 ohm balanced line driving amplifier module. Available with pre-equalization for up to 2500 ft. (762 m) of WECO 16 PEVL cable to provide 7500 ft. (2286 m) equalized circuit when used with EQ-5350B/61A.

- LA-5353B/10A Line Amplifier, Non Equalized \$450.00
- LA-5353B/41A Line Amplifier, Equalized, WECO 16 PEVL 520.00

COAXIAL PATCHFIELDS AND ACCESSORIES

The system consists of a high density patchfield that incorporates 22 channels in a standard 19 inch wide rack panel—either 1 3/4 or 3 1/2 inches high. Each circuit is connected to a patented COTERM® 22T jack which provides normal-thru connection without the use of patch cords or looping plugs. Patch cords may be inserted to break the normal-thru signal path and program cross connections. Sources that are patched out are automatically terminated within the jacks. Test probes may be used to enter the jack to sample the signal without interruption of the live circuit.

The Dynatech Coaxial Patching System provides normal-thru connections and self-termination within the jacks, as well as cross patching and non-interrupting on-line monitoring of live circuits.

COTERM® 22T

(Normal-Thru, Self-Terminating) **\$38.00**

The COTERM 22T is a reliable, normal-thru patching and line terminating jack designed for rugged use and trouble-free service. It is available in 75 ohm impedance or optionally in 50 ohm impedance. It accepts standard BNC connectors on its rear terminals.

COJAX® 22B

(Normal-Thru) **\$34.00**

The COJAX 22B is identical to the COTERM 22T in dimensions, quality and serviceability. It is a normal-thru patching jack without the internal self-termination feature.

COPATCH® 2-2A

(Normally Terminating) **\$38.00**

The COPATCH 2-2A is a self-terminating jack without the normal-thru feature. It provides patchfield appearance of two standby source circuits. 75 or 50 ohm impedance.

COPATCH® 2-2

(Non-Terminating, Non-Normalling) **\$34.00**

The COPATCH 2-2 has neither the normal-thru or self-termination features. It provides two inputs to test equipment, trunk lines or other equipment.

All Coaxial Jacks may be interchanged for use in mixed patchfields.

COAXIAL PANELS

Panels are available in metal or phenolic either 1 3/4 or 3 1/2 inches high for standard rack mounting. Coterm, Cojax or Copatch jacks may be mounted interchangeably on all panels—each panel holds 22 jacks across the 19 inch width. 4 standard panels are available, consult factory for other sizes.

- Model 105-113-22 Aluminum 1 3/4" high x 19" wide **\$46.00**
- Model 105-114-22 Phenolic 1 3/4" high x 19" wide **65.00**
- Model 105-115-22 Aluminum 3 1/2" high x 19" wide **52.50**
- Model 105-112-22 Phenolic 3 1/2" high x 19" wide **73.50**

COAXIAL PATCH CORDS

Model 105-057—Standard Patch Cord constructed with soldered center pin and crimped sleeve shield connections to meet the highest standards of reliability. Standard lengths of 2, 3 and 4'; others available on special order.

PATCH CORDS, (Specify length—2, 3 and 4' standard)

- Model 105-057-Y (Patch plugs on both ends) **\$23.00***
- Model 105-057-BNC-Y (Patch plug on one end, male BNC on opposite end) **\$23.00***

VIDEO COAXIAL CABLE, (Specify Length)

- Model 105-112-MM-Y (MM = BNC male connectors on both ends) **\$23.00***

COAXIAL TEST PROBES

TEST PROBES, (Specify Length—6' standard)

- Model 105-5-Y (Test probe tip on one end, standard patch plug on opposite end) **\$23.00***
- Model 105-5A-Y (Test probe tip on one end, BNC male connector on opposite end) **\$23.00***
- Model 105-5B-Y (Test probe tip on one end, UHF male connector on opposite end) **\$23.00**

COAXIAL PLUGS

- Model 105-13—Dummy plug for opening normal-thru connections. **\$11.50**
- Model 105-14—Terminating plug for use with Cojax or Copatch 2-2 to terminate source in proper impedance. **\$17.00**

Y = length in feet; customer to specify.

*Plus \$.50 per foot over 6 feet.

RecordEx

RecordEx™ improves the picture quality of your portable recorder in the field. By processing small details prior to recording, it prevents their loss in successive generations.

The new FL RecordEx™ is an add-on device which compensates in advance for the usual picture degradation that 3/4" and 1/2" cassettes suffer in normal playback operation.

RecordEx™ goes in your signal path ahead of the VTR, after the camera. RecordEx™ crisps the small details in the picture without enhancing large outlines. As a result the playback image does not have the usual flat, pasty appearance with over-emphasized edges that conventional enhancers produce.

To get even further advantage from this unique signal process, RecordEx™ generates a pedestal around small image details, allowing your playback enhancer to reduce luminance and chroma noise without loss of detail. A sharper, crisper, more detailed image that does not look enhanced is the result.

In addition to its Record boost features, the new RecordEx™ is also capable of enhancing the Play-back signal from a cassette recorder. RecordEx™ is a fully compatible device that requires no modification of your camera, VTR, or playback setup. RecordEx™ is small (5" x 5" x 1.5"), weighs only 12 ounces, and fits conveniently on the side of your battery-operated VTR. It requires less than 1.2 watts from the VTR battery. RecordEx™ is available in Rack-Mount and Portable configurations, and is available for NTSC as well as for PAL/SECAM standards.

Model No.		Price
PRX-N	Portable RecordEx™ in a 5x5x1.5", 12 oz. Package for NTSC/PAL-M applications	\$995.00
PRX-P	Portable RecordEx™ in a 5x5x1.5", 12 oz. package for PAL/SECAM applications	1100.00
RM-RX-N	Rack Mount RecordEx™ 1-3/4" height. NTSC Video In, Video Out. 115V/160Hz AC	1300.00
RM-RX-P	Rack Mount RecordEx™ 1-3/4" height. PAL/SECAM Video In, Video Out. 220V/50Hz AC	1400.00

Accessories

3/4" or 1/2" RecordEx™ and Record One Demonstration Cassette (NTSC)	50.00
10-pin Interconnection Cable for PR-1 and PRX	110.00
14-pin Interconnection Cable for PR-1 and PRX	110.00
110V/60Hz or 220V/50Hz AC Adapter for PR-1 and PRX	75.00

ColorEx

The ColorEx is a chroma noise reducer and enhancer designed specifically to work with one inch professional VTRs and 3/4 inch format recorders used in ENG, EFP, or general purpose applications. With a standard NTSC input signal the ColorEx yields an enhanced NTSC output with up to 12 dB of chroma signal to noise ratio improvement.

The ColorEx features include: 1) A noise reducer switchable between 6 dB or 12 dB of noise reduction. 2) a chroma enhancer which eliminates chroma ringing, chrominance/luminance delay errors, and apparent loss of chroma bandwidth associated with 3/4" VTRs. 3) An active comb filter separator which preserves the integrity of the luminance and chrominance bandwidth.

The front panel controls include: (a) A three position N/R selector switch with 0, 6 dB and 12 dB selections. (b) A Chroma Enhancing 2 position switch marked "operate/bypass".

Connections are made through standard BNC plugs on the rear panel. The NTSC source driver can accommodate up to three outputs. Selection of the level of noise reduction is dependant on the quality of the NTSC input signal. The ColorEx is housed in a rugged rack mount case only one module high.

Model No.		Price
CRX-N	Color Noise Reducer and Enhancer (NTSC) Video In, Video Out, 1-3/4" Rack Mount. 115V/60Hz AC	\$5995.00

MODEL CFD-2 NTSC DECODER w/CHROMA ENHANCER

The CFD-2 is a high quality NTSC to RGB comb filter decoder for use in critical applications where high resolution and absence of artifacts are required. Among these applications are large screen projection, precision color monitoring, tape-to-film transfer, computer generated information display, color keying and standard conversion.

The model CFD-2 uses a novel active comb filtering method which leads to a much more effective suppression of color subcarrier dot crawl problem present with standard comb filter designs. In addition, the resultant image has no visible loss of resolution. The luminance bandwidth extends to 10 MHz, making the CFD-2 the closest thing to true RGB possible. This comb filter approach results also into an inherent improvement in signal-to-noise ratio.

Features of the Faroudja Laboratories CFD-2 include also, a unique luminance enhancer to improve narrow band input signals, and chroma enhancement circuitry which eliminates ringing, chroma/luminance delay errors, and apparent loss of chroma bandwidth often associated with NTSC signals.

With a standard NTSC input signal, the CFD-2 Decoder provides on the back panel: Separate RGB signals, combed chroma and luminance, R-Y, B-Y, G-Y, and sync outputs. All sources drivers are capable of handling three outputs.

The CFD-2 is a moderately priced professional unit, housed in a rugged mount case only one module high.

SPECIFICATIONS

Faroudja Laboratories Decoder CFD-2

Inputs:

(75 ohms)
Video: 1V p-p NTSC
Subcarrier: 4V p-p 3.57945 MHz

Outputs:

(75 ohms)
R, G, B: 1V p-p
R-Y, B-Y, G-Y: 1V p-p
Luminance: 1V p-p
Chroma: 3.58 MHz, 1V p-p
Sync: 4V p-p

Performances,

luminance channel:

Bandwidth: ± 1 dB to 5 MHz, -3 dB at 8 MHz
2T sine-square pulse K factor: under 1.5%
Vertical tilt: under 2%
Signal to noise ratio: 60 dB
Subcarrier rejection: 32 dB

Performances,

chrominance channel:

Demodulated chroma bandwidth: 1.5 MHz
Demodulation quadrature: $90^\circ \pm 1^\circ$
DP: under 1.5%
DG: under 1.5%
Chroma-luminance delay error: less than 25 ns

Front panel controls

Chrominance channel

amplitude: ± 3 dB
phase: $\pm 20^\circ$
enhancement*: ON/OFF

Luminance enhancement

amplitude: 0 to +50% (rise time reduction)
threshold: 0 to 15 IRE units

Dimensions

Width: 19" (48.3 cm)
Height: 1.75" (4.5 cm)
Depth: 16" (40.6 cm)
Weight: 8.5 lbs (38.6 kg)
Power: 117 V AC, 60 Hz, 40 VA

*Chroma enhancement reduces chroma rise time by 50%, reduces by 6 dB chroma ringing and reduces chroma/luminance delay from ± 100 ns to 25ns

TIME BASE CORRECTORS

FA-400

FA-400 TBC With Freeze Frame

Features

- Full color frame memory function
- Compact, lightweight unit specially designed for professional video systems
- Outstanding timebase correction together with automatic/manual field 1 and field 2 freeze, and remote control capabilities
- Corrects errors in 1/2" and 3/4" VTRs, or any V-lock or non-V-lock source
- A full processing amp
- Optional remote control
- Includes a built-in RS-170A standard sync signal generator with gen-lock function

FA-400 TBC w/Freeze Frame \$5950.00
FA-420RU Remote Unit for FA-400/420 675.00

FA-420

FA-420 TBC With Freeze Frame

Features

- Compact, lightweight unit
- Full feature digital time base correction
- Full color frame memory
- Capable of correcting errors in 1/2" and 3/4" VTRs, or any V-lock or non-V-lock source
- TBC processes color in either the HETERO or VTR SC modes
- Optional remote control unit allows full operation away from the FA-420
- Full processing amp allows control of video level, chroma level, chroma phase, set-up and freeze operation
- Comes with built-in digital DOC and a RS-170A standard sync signal generator with gen-lock function

FA-420 Digital Time Base Corrector

w/Freeze Frame \$7950.00
FA-420RU Remote Unit for FA-400/420 675.00

FA-410

FA-410 Digital Time Base Corrector

Features

- PAL/SECAM, NTSC standards
- 16H wide range time base correction for a large variety of popular VTRs (such as the 3/4" U-format, VHS and Betamax) in studio and production use today
- Designed especially for ENG and field production applications
- Component encoding of luminance and color difference signals
- Either external sync referenced or non-capstan servoed VTRs are corrected
- Portable small size and low weight
- Unbeatable low cost compared with other available equipment with less capability in many instances
- Digital luminance/chroma delay correction
- Composite and non-composite outputs
- Chroma noise reduction with comb filtering
- Built-in sync pulse generator
- LED input level display
- White clip function
- Optional digital DOC is available (standard for NTSC)
- Dimensions: 16.92"W x 3.46"H x 19.88"D (430 x 88 x 505mm) (19" rack type)

FA-410 Digital Time Base Corrector (NTSC)
w/Dropout Compensator \$7450.00
DT Option for Sony BVU-820 400.00

FA-430

FA-430 Digital Time Base Corrector/Image Processor

Features

- Full feature processing for 3/4" and 1/2" VTR formats
- Includes Time Base Correction, Image Enhancement, Digital Color Correction and Noise Reduction
- System consists of the basic 19" rack-mount main control unit and a compact remote controller containing controls for all correction functions
- Incorporates the major design and performance features of the Model FA-410
- Combines both H detail enhancement and selective noise reduction to provide pleasing pictures with appearance of greater bandwidth
- Color correction allows RGB correction to compensate for poorly aligned camera white & black levels as well as for camera-to-camera differences in shooting the same scene
- Special Black Stretch circuit that provides improved contrast in low light level scenes
- Allows directors to "paint" scenes to create special moods by changing overall picture hue
- Time Base Correction capabilities provide professional broadcast level performance
- Composite or non-composite video outputs, built-in sync pulse generator, and composite sync and VTR subcarrier outputs
- Dub-In, Dub-Out mode for editing and duplicating

FA-430 Time Base Corrector & Image Processor \$12,500.00

TSG-5000

DEC-100

ENC-100

CCS-4200

CCS-4300

CCS-4300 Color Corrector with Full Broadcast Processing Amp

Features

- Full broadcast specifications
- 19" Rackmounting processor & remote control unit
- Independent RGB controls for both white & black levels
- Vertical blanking set in 1H steps range 10H to 21H
- Designed for color balancing and leveling in production, post production and telecine operations

CCS-4300 Color Corrector \$5500.00

TSG-5000 Sync Pulse and Signal Generator

Features

- Highly advanced sync pulse and signal generator with excellent performance
- PAL, NTSC standards
- H drive, V drive, composite blanking, composite sync, burst flag and vertical sync/2 outputs (plus PAL pulse for PAL).
- Superior gen-lock capability for an external composite video signal
- Gen-lock to either composite video (black burst) or composite sync and subcarrier (plus PAL pulse for PAL)—mode of the gen-lock operation is indicated by LED lamp on the front panel
- When gen-lock operation is off, built-in sync generator will be operative
- Optional CB-5000 Color Bar Generator and BC-5000 Background Color Generator are available (both generators are plug-in module type)—remote control capability of hue, saturation and luminance for the background color
- Dimensions: 16.92"W x 3.46"H x 13.19"D (430 x 88 x 335 mm) (19" rack type)

TSG-5000 Sync Pulse and Signal Generator \$3400.00
Color Bar Generator 1100.00
Back Color Generator 700.00

ALC-4100 Automatic Level Controller

Features

- PAL, NTSC standards
- Correction of video output level differences
- Automatic gain control
- Separate control for video, sync and burst signals

ALC-4100 Automatic Level Controller \$3450.00

DEC-100 RGB Decoder

Features

- Converts standard NTSC video signals to RGB components, primarily used to provide Chroma key inputs on switchers or to mix with RGB Graphic Systems
- Converts composite video inputs from cameras and VTRs, etc. and provides RGB component signals as well as Sync outputs

DEC-100 RGB Decoder \$1900.00

ENC-100 Color Encoder

Features

- Especially designed to incorporate with the FVW-910, in conjunction with the CC-910, CS-710 and VTW-600 in conjunction with the CU-600, resulting in effective performance
- Encodes analogue or digital RGB signals input
- Special mixing is performed providing certain and distinct superimposition
- Both NTSC and PAL standards are available
- Dimensions: 16.92"W x 1.75"H x 12.6"D (430 x 44 x 320 mm)

ENC-100 Color Encoder \$2000.00

CCS-4200 Color Corrector

Features

- Highly advanced color corrector for professional use
- PAL, NTSC standards
- Composed of the main process unit and remote control unit
- Variations in the color balance and video level caused by the surrounding conditions in ENG, EFP, etc. are finely corrected
- For correction of color tone differences, gamma, gain and black balance adjusters are provided
- For correction of video signal level, video level, chroma level, set-up and burst phase adjusters are provided
- Three operation modes: by-pass, operation, and off
- DIF/BAL mode switch: DIF is for adjusting live camera and VTR output; BAL is for adjusting film camera output
- Gamma on/off switch
- Inferior sync and burst signals improvement
- Each adjuster includes neutral center clip
- Dimensions: Main Process Unit 16.92"W x 1.75"H x 18.11"D (430 x 44.5 x 460 mm) (19" rack type)
- Remote Control Unit 9.84"W x 2.17"H x 3.86"D (250 x 55 x 98 mm)

CCS-4200 Color Corrector \$4500.00

IV-550

VS-1000

IV-570

VPA-1000

IV-550 Video Micro Scaler

Features

- Especially developed for use with the microscope
- Horizontal length of an object in a picture can be precisely measured by using one horizontal and two vertical lines whose positions are independently varied
- High resolution: maximum 1999 horizontally
- Measured data is displayed on both the picture scene and front panel of the unit
- Calibration adjuster sets the most suitable measurement length based upon size of the object in a picture
- Edge enhancer function provides clear picture quality, assisting in precise measurement
- Five different measurement units are selective (nm, um, mm, cm and m)
- Dimensions: 16.92"W x 3.46"H x 13.78"D (430 x 88 x 350 mm) (19" rack type)

IV-550 Video Micro Scaler\$3000.00

IV-570 Crossline Generator

Features

- Compact and easy operation design
- Essentially designed for observing, seizing, comparing or recognizing size, length or position of an object displayed in a picture
- One each of horizontal line and vertical line is displayed in either the straight line or dotted line display modes
- In either the straight/dot modes, each display line can be variably positioned on the monitor
- Also each display line can be set to the fixed position
- Graduations are included with horizontal and vertical straight lines
- Dimensions: 8.46"W x 1.73"H x 9.84"D (215 x 44 x 250 mm)

IV-570 Crossline Generator\$775.00

VS-1000 Video Scaler

Features

- Low cost measurement unit for human action and object motion analysis
- Two measurement modes: in the scale mode, single or double crosslines which are variably positioned independently are superimposed onto the picture; in the grating mode, number of line selected by 5-step rotary switches in both horizontal and vertical position are superimposed
- Size of the mask can be freely adjusted
- Comparison of sizes, distances and space of different picture element can be readily determined
- Dimensions: 16.92"W x 3.94"H x 13.78"D (430 x 100 x 350 mm) (19" rack type)

VS-1000 Video Scaler\$1200.00

VPA-1000 Video Position Analyzer

Features

- An excellent and accurate unit for researching and analyzing human actions and motions such as in sports, medical rehabilitation, etc.
- One each of horizontal line, vertical line and dot whose positions are independently varied are superimposed onto the picture, and position of the dot is expressed in XY coordinate value based upon position of the H and V lines, and displayed on both the picture and front panel of the unit
- The obtained data (XY coordinate values) can be fed to external equipment such as printer either automatically (every .5 second) or manually
- Slight differences in the regular movement of the object can be digitally analyzed
- Dimensions: 16.92"W x 3.46"H x 13.90"D (430 x 88 x 353 mm) (19" rack type)

VPA-1000 Video Position Analyzer\$2500.00

VC-81 Video Counter

Features

- Slim-line video terminal unit
- Up to 8 digits, which counts from 0 to 9, are superimposed onto picture
- Display character format is 7 x 9 dot matrix
- Each character includes edge for maximum legibility
- Operation is performed either manually through the front panel facilities, or remotely through BCD or TTL 5 V external input signals
- Start, stop, reset, matt control, V and H display position control facilities
- Wide applications such as program editing in broadcasting stations, time and score indications for sport events, traffic monitoring and control, data insertion in video research, security systems, etc.
- Dimensions: 16.92"W x 1.75"H x 11.81"D (430 x 44 x 300 mm) (19" rack type)

VC-81 Video Counter\$1025.00

VP-380 Video Pointer

Features

- Compactly designed instructional instrument allows to superimpose 4 different directions of arrow pointers and 4 different symbol pointers (O, °, + and □) onto a picture
- Each pointer can be positioned anywhere within 80% of the effective picture area by using the joystick controller
- Black/white pointer selection
- Flash function
- Excellent for educational, medical and research purposes. (Effective use if incorporated with the video measurement unit)
- Dimensions: 8.46"W x 1.75"H x 9.84"D (215 x 44.5 x 250 mm) (half 19" rack type)

VP-380 Video Pointer\$700.00

VG-40 Videogram

Waveform generator for up to 4 analogue inputs which are supplied from an electrocardiograph, seismograph, etc.

VG-40 Videogram\$4400.00

FM-60 Frame Memory

Features

- Excellent device for video research and video surveillance
- B/W video signal is memorized in real time and frozen instantly frame by frame, or field by field
- Compact and lightweight yet reliable performance with low cost
- Automatic freeze function with freely set time interval
- Any of Video Timers, Video Measurement Units, Video Surveillance Units are effectively incorporated
- Dimensions: 16.92"W x 1.75"H x 11.81"D (430 x 44 x 300 mm) (19" rack type)

FM-60 Frame Memory\$2000.00

IV-530 Contour Synthesizer

Features

- Unique device for analyzing X-ray and all types of difficult-to-interpret photographic data
- Differences in density within the image are converted into differences in contour (image enhancement), so that slight details of the picture will be easily discernible
- 21-step gradient switcher plus independent differential level control
- Negative/positive modes selection
- Dimensions: 16.92"W x 1.97"H x 14.17"D (430 x 50 x 360 mm) (19" rack type)

IMAGE CORRECTION PRODUCTS

RECORD 2 Image Correction

RECORD 2 is a stand alone detail booster with noise threshold control, and a passive filter separator. However, it may also be used to insert the Faroudja Pilot on the video tape for automatic playback control of The Y-688³² Total Error Corrector, PLAYBACK 1 or PLAYBACK 2. RECORD 2 is available in a portable or rack mount model.

RECORD 1 Image Correction

RECORD 1 is the top of the line detail booster designed as the first part of two part comprehensive automatic image correction system. It provides pre-record detail boost and inserts the Faroudja Pilot on the video tape for automatic playback control of the Y-688³² Total Error Corrector, PLAYBACK 1 or PLAYBACK 2. RECORD 1 features a full bandwidth comb filter separator for the ultimate in picture quality, and is available in a portable or rack mount model.

CONTROLS AND INDICATORS

- Power (On/Off): 2 position switch
- Faroudja Pilot (On/Auto/Off): 3 position switch. On: inserts Faroudja Pilot proportional to boost at all times; Auto: inserts Faroudja Pilot and boost when no previously recorded Pilot signal is detected. Auto position is on RECORD 2 only. Off: does not insert Faroudja Pilot or boost.
- Boost Level (Adjustable): From: 0-100 IRE 0% Boost; To: 0-10 IRE +200% Boost; 11-20 IRE +100% Boost; 21-100 IRE +5% Boost
- Noise Threshold (Adjustable): Inhibits boost 0-10 IRE
- Power On (Rack Mount only): Green LED

SPECIFICATIONS

- Signal to Noise Ratio: 65dB (*RECORD EX 60dB)
- Differential Phase: 1.5° (*RECORD EX 2.5°)
- Differential Gain: 1.5% (*RECORD EX 2.5%)
- Bandwidth: 5MHz +/-1dB (*RECORD EX 4.2 MHz +/-1dB)
- K Factor (2T): 1.5%-2% (*RECORD EX 2%-2.5%)
- Video In/Video Out: 1V peak to peak, 75 ohms
- Power (Rack Mount): 115VAC, 60Hz, 10W (Portable): 12VDC +/-2V, 160mA
- Ambient Temperature: 5°C to 45°C (41°F to 113°F)
- Ambient Humidity: 10% to 90%
- Weight (Rack Mount): 2.5kg (5.5 lbs.) (Portable): 0.7kg (1.5 lbs.)
- Dimensions (Rack Mount): 19"W x 1.75"H x 14"D (48.3 x 4.5 x 35.6 cm)

Specifications apply to RECORD EX, RECORD 2 and RECORD 1 except where asterisk (*) indicates RECORD EX specifications different than RECORD 2 and RECORD 1.

TIME BASE CORRECTORS

CCD1H TIMING CORRECTOR

- Signal-to-noise: 60 dB NTSC, 58 dB PAL
- Differential Phase—1%
- Differential Gain—2%
- Window of Correction—1H
- Affordable Price
- NTSC or PAL

The CCD1H Timing Corrector removes skew and jitter from VTR playback. The Timing Corrector operates with any non-segmented helical scan VTR. Color or monochrome operation is selected automatically.

Patented circuit techniques in the CCD1H utilize digitally controlled charge coupled devices to provide superb signal transparency.

High quality, simplicity of operation and the lowest price in the industry make the CCD1H Timing Corrector ideal for use by educational institutions, cable TV, industry, hotel and motel channels and broadcasters in editing facilities.

\$3950.00

CCDHP TIME BASE CORRECTOR

- Full broadcast standard performance
- Horizontal enhancement and noise reduction standard
- Full proc amp controls
- Super transparency for all heterodyne, non-segmented VTR's
- Available in NTSC and PAL standards
- Input comb filter separator (NTSC)

The CCDHP time base corrector offers high performance and proven reliability at a low price.

High Performance patented circuit techniques utilize digitally controlled CCD's (Charge Couple Devices) to provide signal transparency exceeding the most advanced digital designs. Signal to noise ratio is 60 dB, K factor is 2% and differential phase is less than 0.5°. The CCDHP's bandwidth and transient response are designed to match the latest professional broadcast heterodyne VTR's.

Proven Reliability: The CCDHP time base corrector is the result of more than seven years research and development. Fortel has pioneered the use of CCD's for time correction and has delivered more units worldwide than all other manufacturers combined.

\$5495.00

CCDHPS TIME BASE CORRECTOR

The CCDHPS provides the same high performance and unequalled picture quality as the extremely popular and highly reliable CCDHP.

Features include a new Y/C Separator, developed by Faroudja Laboratories resulting in higher performance specifications.

- 60dB signal to noise ratio
- 0.5° differential phase

CCD1H

CCDHPS

CCDY/C

- 1.5% differential gain
- 1% K Factor
- 2.8 MHz bandwidth

The CCDHPS is designed to obtain the highest performance from the new professional grade U-Matic VTR's. Standard features include noise reduction, enhancement, preset and manual proc amp control and full sync drive capability.

\$6495.00

CCDY/C TIME BASE CORRECTOR™

The CCDY/C Time Base Corrector™ ... The perfect TBC for producing high quality video playback from 1/2" VHS and 3/4" VTRs. The CCDY/C processes Y/C component video using Dub signals, as well as standard NTSC composite video.

Features

- Y/C (Luma—Chroma) component video input and output uses the Dub video input and output of Sony 3/4" and Panasonic 1/2" VHS and 3/4" VTRs for a dramatic improvement in picture quality
- Full function performance meets all FCC requirements and corrects time base error to RS170A specifications
- Y/C input and output combined with Y, R-Y, and B-Y internal component baseband processing provides edited copies, tape duplications, and video playback that is sharper, crisper, and more lifelike than encoded video playback
- Corrects wrong color-frame edits automatically
- 3dB of chroma noise reduction
- Full proc amp control
- Luminance noise reduction from 0 to 4dB
- Horizontal enhancement from 0 to 100% boost (limited to 20IRE)
- Use NTSC composite Video In for operation with all 1/2" VHS and 3/4" VTRs; add Dub input and/or output (composite Video In must remain connected) for automatic Y/C component processing

TIME BASE CORRECTOR

FORTEL C-YIQ³² TBC

SPECIFICATIONS:

- Digital Sampling: Y Channel - 14.32 MHz, I Channel - 3.58 MHz, Q Channel - 3.58 MHz
- Window of Correction: 32 H
- Signal to Noise Ratio (p-p signal to rms noise, per channel at defined p-p input Y and chrominance levels) better than 57 dB
- Differential Phase: Encoded In/Encoded Out 1.5°, Dub In/Dub Out 0.5°
- Differential Gain: Encoded In/Encoded Out 1.5%, Dub In/Dub Out 0.5%
- Residual Jitter: ±7.5 Nanoseconds (Stable Input)
- Bandwidth: (-3dB), Luminance 4.5MHz, I Channel 1.5MHz, Q Channel 1.5MHz, Encoded 4.5MHz (Subcarrier Direct)
- K Factor (2T): Luminance (2%) 1%, I, Q Channel (1QT) 1%, Subcarrier Direct 1.5%, HET 3%
- Power: 87 - 130VAC, 50 or 60 Hz
- Ambient Temperature: 10°C to 40°C (50°F to 104°F)
- Ambient Humidity: 10% to 90%
- Weight: 18.2kg (40 lbs)
- Dimensions: 19"W x 3.5"H x 23.75"D (48.3 x 8.9 x 60.3cm), 21.5" Depth into Rack (54.6cm).

Inputs:

- YIQ In - Loop - Switchable rear panel termination
- Video In (Encoded) Subcarrier Feedback Only
- Genlock/Sync (Loop), Subcarrier (Loop), Search - Switch to Encoded mode if Recorder playing YIQ during search or jog mode

Outputs:

- YIQ Out - Loop - from YIQ In, Video 1 (Encoded) Relay bypass, Video 2 (Encoded) Active output only, VTR Advanced Sync, VTR Subcarrier

Controls and Indicators:

- Power: 2 Position switch (on or off)
- Program Out: 2 Position switch bypasses unit circuitry in program video path, monitor video path is always activated
- Input Mode: YIQ video input signal or encoded video input signal
- Video Gain: ±3dB
- Chroma Gain: ±3dB
- Setup +20 IRE
- Hue: ±30°
- Video Position: ±250 nsec (with respect to sync)
- Horizontal Phase: ±4 usec
- Chroma Phase: Greater than 360°
- Power On: Green LED
- Video: Green LED (indicates input video present)
- GenLock: Green LED (indicates GenLock present)

The Challenge: POWER to time base correct new 1/2" Type "M" VTR's pure YIQ signals without conversion to composite NTSC or PAL video

THE INNOVATION: C-YIQ³² Time Base Corrector™, another result of Fortel's ongoing research in component signal processing. The C-YIQ³² is the only TBC that uses pure YIQ signals to work with the new Type "M" format high speed 1/2" VTR's offered by RCA, Ampex and other world leaders in video — powerful evidence of Fortel's leadership. Because of its superior picture quality, the C-YIQ³² TBC was selected over all other TBC's for the first major Type "M" installation at WNEV-TV in Boston.

The C-YIQ³² Power Provides:

YIQ Component Processing — The C-YIQ³² is the only stand alone TBC that time base corrects full bandwidth, pure baseband YIQ component video signals. YIQ processing eliminates picture quality loss due to heterodyne processing or composite NTSC encoding and decoding.

Y-688 Output — The C-YIQ³² provides a 2 wire Y-688 "dub" output for dubbing to 3/4" U-Matic VTR's. Using Y-688 signals for dubbing produces pictures of better quality than a live encoded feed.

32 Line TBC — Field trials have shown that a 32 line window of correction is necessary to correct the large gyroscopic errors produced by the high speed, shoulder mounted Type "M" VTR's. The C-YIQ³² has two 32 line digital memories for separate time base correction of the luma (Y) and chroma (I, Q) components of the color video signal. Time base correcting the luma and chroma separately reduces luma/chroma crosstalk.

Search Mode Viewing — The TBC control input from a 1/2" Type "M" VTR to the C-YIQ³² TBC permits viewing in the search (jog) mode.

3.58 Feedback Operation — The C-YIQ³² can be used to time base correct 1/2" VHS and 3/4" U-Matic video with 3.58 Feedback for full bandwidth operation.

Color Correction — Fortel's CC-1 Color Corrector can use high quality Y-688 "dub" video from the C-YIQ³² to produce the optimum in color corrected pictures. The CC-1 had RGB output, full remote control and joystick control of individual vectors. Use the CC-1 to balance color out of blacks and whites and correct the color saturation, hue and luma level of the six color bar colors. The CC-1 also compresses and stretches blacks and whites. Unleash the **PURE POWER** of the YIQ format with the C-YIQ³² Time Base Corrector **\$14,995.00**

TOTAL ERROR CORRECTOR

Y-688³² Total Error Corrector The New Standard

The Y-688³²™ Total Error Corrector™ represents a major advance in the art of video signal correction.

First, the unique circuitry of the Y-688³² TEC accepts component or composite signals and performs all functions of time base correction and picture improvement in the component, Y-688, form. This method bypasses the root cause of most errors before they occur.

Second, new and improved image processing techniques are possible when the signal is in the Y-688 component form so that errors in the original color-under recording or introduced in later processing can be more completely eliminated.

The result of the above innovations is a first generation U-Matic playback that looks like 1" or 2" formats and 3rd generation tapes that look like conventional first time playback.

The Y-688³² Total Error Corrector. The New Standard in time base and video image correction!

Features

- 32 line super-wide instantaneous window Phase Comp™ one and two line digital look ahead velocity compensator and phase error corrector
- Complete image processing including horizontal and vertical enhancement, horizontal detail improvement
- Luminance noise reduction through advanced compression and combing techniques to 10db
- Chroma noise reduction to 10 db
- Chroma crispening
- Gyro-Trac™ automatic window re-centering for extraordinary errors without hue shift or horizontal movement
- Record 1™ Pilot tone compatible for automatic setting of image processing controls
- Chroma Amplitude Correction through two line look ahead providing 4.2db short term and 6db long term correction
- Accepts shuttle speeds up to ten times normal
- Unitec™ Construction features easy access to all components without board or unit removal from operating system

- Front panel image process bypass control with internal programmable jumpers allow anything from super transparent time base correction through extensive image reprocessing
- High efficiency, low power, low heat
- Accepts composite or component (Y-688) signals and outputs both types
- Adjustable H and V Blanking
- Automatic Chroma/Luminance delay compensation
- Adjustable video position
- Drop-out compensation based upon previous line information
- Single cable Gen-Lock Sync Generator
- Programmable jumpers and mode switches allows tailoring to specific system objectives
- Automatic color or monochrome operation
- Full Proc Amp
- Chroma combing

Applications

- Use Y-688³²™ for time base and image correction of U-Matic masters when dubbing to other U-Matics, VHS or Beta formats
- Edit, special effects, or A/B rolls through Y-688³² for third generation tapes that look like master tapes
- Use accessory adaptors or RGB switcher to do complete production in component format for final product approaching full bandwidth format
- Reprocess any color under signal to reduce luminance noise by 10db and chroma noise by up to 10db
- Use in conjunction with Record 1™ for completely automatic processing of the cleanest, sharpest pictures ever from U-Matic
- Use Y-688³² as alternative to digital picture processors costing thousands of dollars more
- Remove transmission noise and distortions from satellite feeds
- Use with latest scan track U-Matics for broadcast stable pictures in slow motion
- Do field production in U-Matic format and all post production through broadcast or distribution copies for lower program costs
- Use with microprocessor controllers and U-Matics for high quality, economical, automatic program delay or remote broadcast

UNITEC™ and Gyro-Trac™ are trademarks of Edutron, Incorporated

CHROMA NOISE REDUCER

COLOR EX CHROMA NOISE REDUCER™

FEATURES

Chroma noise reduction up to 12dB in the Heterodyne (Het) mode and up to 6dB in the Direct (Dir) mode.

Up to 50% reduction in chroma ringing.

Chroma risetime improvement for sharper, crisper color transitions.

Automatic Y/C delay correction of ± 100 nsec.

Manual Y/C delay correction of up to 280 nsec.

Exclusive one-year warranty on parts and labor

Use COLOR EX with any NTSC composite video signal, time base corrected or uncorrected:

To virtually eliminate quad banding from 2-inch VTR's.

To reduce moiré and noise from 1-inch VTR's.

With 3/4-inch and 1/2-inch color-under VTR's to reduce chroma noise, improve chroma risetimes, and reduce ringing and Y/C delay.

To remove moiré noise and other interference patterns from satellite and microwave transmission paths.

COLOR EX Chroma Noise Reducer™ ... The better alternative to higher priced digital noise reducers (DNR's). COLOR EX uses a unique processing technique, developed by **FAROUDJA** Laboratories, to reduce chroma noise and improve the color content without affecting the luminance (luma) portion of the video signal. This exclusive processing technique reduces chroma noise without frame-to-frame or field-to-field averaging. The result is a crisp, clean video picture without the motion artifacts associated with DNR's.

COLOR EX works with any NTSC composite video signal, time base corrected or not, to reduce chroma noise and restore rich, vibrant color to your video picture. In addition, COLOR EX corrects problems inherent in different video sources. COLOR EX virtually eliminates quad banding from 2-inch VTR's, and removes annoying moiré and other interference patterns from satellite and microwave transmission paths. COLOR EX gives more complete and comprehensive improvement of chroma deficiencies from color-under VTR's (1/2-inch and 3/4-inch) than DNR's costing thousands of dollars more. In addition to chroma noise reduction, COLOR EX reduces chroma ringing by up to 50%, improves chroma risetimes for sharper, crisper color transitions, and corrects Y/C delay for improved luma/chroma registration.

While COLOR EX gives you powerful performance, operation is simple requiring only a video loop-through (video in/video out). Front panel controls are power (on/off), program (bypass/operate), input source selection, and Y/C delay control. Simply connect COLOR EX to the video source, turn it on, select the appropriate input source, and COLOR EX does the rest. Up to ± 100 nanoseconds of Y/C delay is automatically corrected, additional manual control can be used to correct more severe delay.

Analog Fiber Optic Modules

video

MODELS FI-7300T And FI-7300R ANALOG FIBER OPTIC MODULES (Video)

The FI-7300 analog link consists of two modules; the transmitter (FI-7300T) and the receiver (FI-7300R). Each unit can be plugged into the FI-7000MF mainframe from which operating power is derived.

The FI-7300 link is intended for the transmission of high quality analog signals over large distances, with exceptionally low signal degradation.

The link can be used for the distribution of studio quality video signals through areas of high electromagnetic interference or where the advantages of the small size of optical fiber cable are significant.

Front panel indicators and test points provide easy monitoring of link performance.

Analog Fiber Optic Modules audio

MODELS FI-7310M And FI-7310D ANALOG FIBER OPTIC MODULES (Audio)

The FI-7310 voice analog link consists of two modules; the modulator (FI-7310M) and the demodulator (FI-7310D). Each unit can be plugged into the FI-7000MF mainframe from which operating power is derived.

The FI-7310 link is primarily intended for the transmission of a baseband video signal along with its associated audio over a single fiber.

The modulator FM modulates an RF subcarrier with the audio signal. The FM modulated subcarrier is then summed with the video in the transmitter module. The receiver module separates the audio FM signal from the video; the audio FM is then demodulated by the demodulator.

Specifications

INPUT

Type	Terminated. Line impedance of 600 ohms
Connector	Input 3 pin audio XLR male; Output 3 pin audio XLR female
Common mode rejection, 60 Hz	> 40 dB
Maximum common mode voltage	> ± 5 volts
Maximum 600 ohm level	+ 18 dBm

OUTPUT

Line impedance	600 ohms
Maximum line output Driving 600 ohms	+ 18 dBm

PERFORMANCE

Distortion (at maximum output level) THD, 15 Hz to 15 KHz	< 1%
Frequency response	30 Hz to 15 KHz
Crosstalk, video in audio	-57 dB
Signal-to-noise; (referenced to maximum audio output level, with no video input)	70 dB

Digital Fiber Optic Modules

data 0-10 Mb/s

- TTL Input Levels
- Data Rates from 0 to 10 Mb/s - NRZ
- Low Cost
- Low Bit Error Rate
- Single Supply
- Link Quality Monitor
- Long Distance (up to 5Km)
- Arbitrary Data Format
- Optical Port Connector

MODELS FI-7400T And FI-7400R DIGITAL FIBER OPTIC MODULES (data 0-10 Mb/s)

The FI-7400 digital fiber optic data link was designed for digital data transmission over single fiber channels. The modules can be plugged into the FI-7000MF mainframe from which operating power is derived.

Bipolar integrated circuits and a high radiance LED convert TTL level inputs to optical pulses at data rates from DC to 10

Mb/s NRZ. An internally coded mode of operation produces a 3-level coded optical signal for reception and decoding by the receiver. This 3-level optical signal places no restriction on data format over the data range of DC to 10 Mb/s NRZ while allowing for wide dynamic range and high sensitivity at the receiver.

Features

- TTL input levels
- Data rates from 0 to 10 Mb/s - NRZ
- Low Cost
- Low bit error rate
- Single supply
- Link quality monitor
- Long distance (up to 5Km)
- Arbitrary data format
- Optical port connector

Specifications

Data rate	0 to 10.0 Mb/sec
Input data	TTL NRZ or RZ
Output Data	TTL NRZ or RZ
Optical Rise/ Fall time	20 nsec max
Optical Output Power	30 uW min
Optical Input Power	.2 uW min for 10 ⁻⁶ BER
Electrical Risetime	20 n sec
Electrical Faltime	7 n sec
Jitter	25 n sec typ
Permitted Link Loss	22 dB (No margin)
Optical Wavelength	830 nm (nominal)
Operating temperature	0 to 40 C

RS-232C Fiber Optic Module

data 0-56 Kbs

FI-7000MF

MODEL FI-7500TR RS-232C FIBER OPTIC MODULE (data 0-56 Kbs)

The FI-7500TR fiber optic modem is designed for full duplex asynchronous data transmission at rates of 0 to 56 Kb/s. Each modem module can be plugged into the FI-7000MF mainframe from which operating power is derived. The electrical connections for the data signals are made on the rear panel of the mainframe using a standard 25-pin RS-232C connector.

The FI-7500TR communicates in full duplex over a single fiber, thus offering a substantial saving in fiber costs.

FI-7000MF MAINFRAME

The FI-7000MF Mainframe is designed to be installed in a standard 19" (48.26 cm) rack. Mounting is included with each tray. Modules are installed in the mainframe as shown in the front view.

Specifications

Connector	25 pin RS-232C
Electrical Signal Input Output	EIA RS-232C
Data Rate	0 to 56 Kb sec
Transmission Medium	Single Fiber Optical Cable
Distance	3,000 meters (longer distances optional)
Error Rate	< 10 ⁻⁶
Optical wavelength	830 nm (Nominal)
Operating temperature	0 to 40° C

400 SERIES ROUTING SWITCHERS

FEATURES

- High performance • DC restored inputs • Vertical interval switching • Destination oriented matrices • Expandable • Built-in short term memory protection

OPTIONS

- Additional audio matrices • Tally relay systems • Special control systems • Dual power supplies • Expansion systems

The basic video switching matrix is arranged in a 32-input by 16-output format. A complete frame contains 21 printed circuit modules consisting of four input buffer amplifiers, sixteen crosspoint modules, and an interface module. Each buffer contains eight DC restorers together with other circuitry to drive eight 32 by 1 crosspoint modules. The latter also contain the line driving amplifiers. The interface module is used to "marry" the video matrix with other matrices, e.g., audio and tally.

The mounting frame employs exclusive Grass Valley Group zero insertion force connectors for mating the input buffer amplifiers to the crosspoint modules via the frame-mounted mother board. Modules are removed by a quarter turn screw on the front of each connector.

Since all video crosspoints for an output bus are contained on a single module, the system is thus destination oriented. A failure in a crosspoint module only affects one output bus; all other busses continue to operate normally. It is not necessary to switch the system off when removing modules.

The audio switching matrices are similar to video switching matrices; consisting of input buffer modules, crosspoint modules, and a single interface module. The buffer modules utilize differential input circuitry to provide up to 80 dB of common mode rejection at 60 Hz. Grass Valley group can supply systems with audio input and/or output transformers at extra cost — on special order.

It should be noted from the specifications that the audio system will operate at levels up to +24 dBm at 600 ohms or +30 dBm at 150 ohms — with full performance.

A tally relay matrix is available to provide contact closures corresponding to input sources. The system can be enabled on a bus by bus basis.

On special order, Grass Valley Group can provide matrices with relays corresponding to each crosspoint. The latter are particularly useful in distributing special control signals through a routing switcher.

The power supply system is unique. AC line current is first rectified to provide 48 volts direct current. This voltage is then converted to 15 volts DC by means of high efficiency DC to DC converters for distribution to the matrices. The latter also provide regulation.

The 48 volt rectifiers, as well as the DC to DC converters, are plug-in modules for ease of maintenance. Systems can be supplied with dual rectifiers fed from separate AC inputs for maximum system protection. A 400 Series routing switcher can also be fed directly from (nominal) 48 volt direct current sources.

System crosspoint status can be maintained by an optional battery system. Short term protection (nominally 1 minute) is inherent in the standard system as a result of the CMOS memory elements employed.

The flexible control concept employed in the 400 Series allows systems to be addressed in two basic ways; (1) on an individual bus-by-bus basis, and (2) by means of a single X-Y panel for control of all buses.

Several types of panels are offered for controlling individual output buses. These consist of panels with momentary illuminated push-buttons corresponding to input sources, panels employing thumb-wheel preset, LED status indicators and a take button, and 10-digit keyboards with LED status indication.

The X-Y control panel provides the means for both input selection and output assignment. This method of control operates via the input/output data port available on each matrix, as opposed to addressing the individual control bus connectors used with the panels described above. The data port also can be used for controlling systems via a computer.

A unique feature of the control system allows several panels to be paralleled on a single output bus, even panels of different types, e.g., keyboard and pushbutton. The only limitation to paralleling panels is the current available for lighting lamps.

Special control panels can be provided on a custom-built basis. Consult Grass Valley Group with your requirements.

Output expansion of a basic 32x16 system requires that input sources be distributed to each frame.

Grass Valley Group's modular approach to routing switcher requirements allows users to start with a small system and expand as needs change. It is not necessary to initially purchase additional frames, power supplies, or other equipment to accommodate future expansion.

TEN-XL

TEN-XT MONITORING STATION

**TEN-XL
 10 x 1 ROUTING SWITCHER**

Now when you buy a routing switcher, you can feel like a big spender without having to spend like one. And without short-changing your systems.

The TEN-XL provides the best price/performance value available in 10 x 1 program quality routing switchers. The best video and audio specs in the business are here, backed by high quality design and manufacturing standards, right down to the plug-in-from-the-front modular construction and optional dual power supplies with fault alarms.

FEATURES

Breakaway stereo audio comes with every unit and both local and remote control panels are available. The binary control system even makes it easy to fabricate your own control panels. Add the optional RS422/232 interface module and you can externally control the TEN-XL from production switchers, modems, machine control systems, or any other computer system.

Input source isolation problems are virtually eliminated by the use of differential inputs for both video and audio. No more ground loops caused by sources from different locations. No need to put humbuckers on remote feeds. Video inputs are DC restored and switching is done in the vertical interval (line 10).

The built-in expansion capability lets the TEN-XL be a 19 x 1, 28 x 1 or more. Add two more frames plus looping control cable, and you have an RGB switcher for your component video system.

Plug in a relay module, and get tally follow for your DVE input switching, or source start capability. It even has a one-hour minimum crosspoint memory in case of power failure. After this interval, if power has not been restored, it reverts to input 1. The TEN-XL encompasses video, stereo audio, optional RS422/232 serial interface module, relay module, and dual power supply, all in a one rack unit frame. No other routing switcher incorporates so many features in so compact a space.

TEN-XT MONITORING STATION

The unique packaging of the new TEN-XT allows you to combine the capabilities of the TEN-XL with the Tektronix 1740 or 1750, as well as the 528 and 1420 waveform/vector monitors. Nested together, they give you the ultimate central quality control monitoring station. When used in transmission facilities, VTR and film chain bridges, the monitoring station puts all control at your fingertips. This makes the TEN-XT ideal as an input selector to VTRs or video monitors.

The marriage of these two important pieces of equipment into one functional unit is a logical extension of Grass Valley Group technology into a specialized, reliable monitoring station. Now the comprehensive routing switcher technology your work demands has been engineered into two remarkably small packages, at one remarkably small price.

TEN-X

TEN-X II

TEN-X™ Series Program Quality 10x1 Routing Switchers

Versatility: The TEN-X™ is a 10x1 routing switcher housed in a one-rack unit frame. It is available in video only, audio only, video-plus-audio or video-plus-relay module.

More versatility: The TEN-X™ II is a 10x1 routing switcher housed in a two-rack unit frame. The TEN-X II will permit the use of video, plus the addition of either three audio modules, three relay modules or any combination thereof.

As an option, the TEN-X II can house dual power supplies.

FEATURES

The TEN-X Series may be controlled locally or remotely. Two different types of local control panels are available; one for video-only (or audio-follow-video operation) and another for audio breakaway operation.

When configured for remote control operation, the local control panel is replaced by a blank front cover. Both AFV and audio breakaway remote control panels are available, or you may choose to build your own. Control is wire-per-crosspoint with switching accomplished using a momentary closure to ground. Tally information is returned on the same wires as switching control. The control/tally lines may be operated and read by external TTL logic, if required. The TEN-X operates by local and remote control panels simultaneously.

Video input signals are independently DC-restored, blanking to ground level. Switching is timed to line 10 of the vertical interval of the last selected source.

FET audio crosspoints ensure virtually silent audio switching. +24dBu maximum input/output level facilitates integration of the TEN-X into practically any broadcast audio environment.

Modular Construction: All modules plug into a common motherboard and the frame has no wiring harness. This results in ease of maintenance and reliability.

10x1 Video Crosspoint Module

Selects 1 of 10 video inputs and switches this signal to an output buss. All inputs are D.C. restored. Crosspoint switching occurs during line 10 of last video.

10x1 Audio Crosspoint Module

Selects 1 of 10 balanced audio inputs and routes this signal to a balanced output buss. The system gain is unity and accepts signal levels up to +24dBu (12.3 volts RMS amplitude).

10x1 Relay Module

Two isolated contacts per input are switched to two isolated common busses. This module is interchangeable with the 10x1 audio crosspoint module. It allows you to have a tally relay for activating external tally module devices, a bidirectional data switch or an audio relay crosspoint module capable of switching balanced audio sources.

Power Supply Module

Provides power for the 10x1 video, audio and relay modules. The power supply furnishes unregulated filtered +/-16V* direct current to the TEN-X frame power distribution busses. Power regulation is accomplished on the individual plug-in modules.

*Nominal for 115V or 220 VAC input.

Model Ten-X™ Routing Switchers Basic System

The Ten-X is a high performance 10x1 switcher housed in a one-RU rack mounting package. It is available in audio-only, video-only and video/audio configurations. The Ten-X may be controlled locally or remotely. Two different types of local control panels are available: one for video-only (or audio-follow-video operation) and another for audio breakaway operation. When configured for remote control operation, the local control panel is replaced by a blank front cover. Both AFV and audio breakaway remote control panels are available. Both local and remote control panels can be operated simultaneously.

TNX-10 10x1 Video-Only basic switcher for remote control use, 110-120V. Does not include remote control panel. Includes Blank Front Cover.	\$1080.00
TNX-11 10x1 Video/Audio basic switcher for remote control use, 110-120V. Does not include remote control panel. Includes Blank Front Cover.	1380.00
TNX-12 10x1 Audio-Only basic switcher for remote control use, 110-120V. Does not include remote control panel. Includes Blank Front Cover.	1025.00
TNX-20 10x1 Video-Only switcher with local standard control panel, 110-120V.	1230.00
TNX-21 10x1 Video/Audio switcher with local standard control panel, 110-120V.	1480.00
TNX-22 10x1 Video/Audio switcher with local breakaway control panel, 110-120V.	1500.00
TNX-23 10x1 Audio-Only switcher with local standard control panel, 110-120V.	1185.00
TNX-201 Standard Local Control Panel.	250.00
TNX-305 3"x4" Slot Mount standard remote control panel .	525.00
TNX-905 3"x4" Slot Mount standard remote control panel for Ten-X II .	550.00
TNX-211 Breakaway Local Control Panel.	275.00
TNX-301 Standard Remote Control Panel.	170.00
TNX-311 Breakaway Remote Control Panel.	215.00
TNX-401 25 Conductor Control Cable for remote control panel (specify length).	32.25 plus 2.50/meter
TNX-402 25 Conductor Remote Control Connector Kit.	22.00
TNX-501 Module Extender.	75.00
TNX-502 Video Crosspoint Module.	395.00
TNX-503 Audio Crosspoint Module.	325.00
TNX-504 Relay Module.	310.00
TNX-505 Power Supply Module, 110-120V.	185.00
TNX-600 One Rack Unit Frame with 110-120V power supply	680.00
TNX-601 One Rack Unit Blank Front Cover.	110.00

Ten-X with RS232/422 Control

TNX-50 Video-Only, no Control Panel .	\$2755.00
TNX-60 Video-Only, with STD Local CP .	2945.00
TNX-61 Video-Only with BKwy Local CP .	2970.00
TNX-301 STD Remote CP .	170.00
TNX-311 BKwy Remote CP .	215.00

TNX-401 Control Cable with Connectors .	32.25
	plus 2.50/meter
TNX-402 Connector Kit .	22.00
TNX-701 RS422/232 Module (spare) .	755.00

All 2 RU Frames above supplied with video crosspoint module single power supply, and RS-232/422 control module. Add up to 2 audio crosspoint and/or relay modules and dual power supply, as required.

Ten-X II

The Ten-X II is a 10x1 routing switcher housed in a 2 rack unit frame. The Ten-X II will permit the use of video, plus the addition of either three audio modules, three relay modules or any combination thereof. As an option, the Ten-X II can house dual power supplies by ordering an additional TNX-505 or TNX-505-2.

TNX-70 Two rack unit Video-Only routing switcher for remote control use, 110-120V. Does not include remote control panel.	\$1325.00
TNX-80 Two rack unit Video-Only routing switcher with single 110-120V power supply and local standard control panel.	1515.00
TNX-81 Two rack unit Video-Only routing switcher with single 110-120V power supply and local breakaway control panel.	1535.00
TNX-801 50 Conductor Control Cable for Ten-X II remote control panel (specify length).	52.00 plus 5.95/meter
TNX-802 50 Conductor Remote Control Connector Kit for Ten-X II.	40.00
TNX-901 Standard Remote Control Panel for Ten-X II switcher.	215.00
TNX-905 3"x4" Slot mount Remote CP for 2 R/U Switcher.	550.00
TNX-911 Breakaway Remote Control Panel for Ten-X II switcher.	260.00
TNX-602 Two rack unit Blank Front Cover.	150.00

TNX-100A

The TNX-100A Interfaces with the Grass Valley Group Model 100 Production Switcher via the Serial Interface Port to provide an Audio Follow/Breakaway Switching System.

The Model 3400 Utility Video Distribution Amplifier has differential input circuitry which can reject common mode voltages up to +/-10V, six outputs and gain adjustment between -2 and +3dB. It is operated in an AC coupled mode.

The amplifier is designed for use in small systems that do not require cable equalization. It is intended to be used as a utility amplifier to cost-effectively distribute video in small facilities.

The Model 3401V Video Distribution Amplifier is a general purpose differential input, six-output, cable equalizing module. It is capable of equalizing up to 500 feet of Belden 8281/9231 or WE724 with appropriate equalizer cards. The amplifier has current mode input circuitry, which provides +/-30V common mode range, and may be operated in either an AC or DC coupled mode. In the DC mode a +/-150mV offset adjustment is provided for system balancing.

The Model 3402V-A Precision Video Distribution Amplifier has differential input circuitry, six outputs, and cable equalizing capability. It is capable of equalizing up to 1,000 feet of Belden 8281/9231 or WE724 with the appropriate equalizing cards. The amplifier has voltage mode input circuitry with a +/-4V common mode range. The amplifier is designed for use in large systems where extremely low distortion and precise timing are essential.

The Model 3403V Clamping Distribution Amplifier is a general purpose unit providing differential input, six outputs, clamping and cable equalizing capability. It is capable of equalizing up to 1,000 feet of Belden 8281/9231 or WE724 with appropriate equalizer cards. The amplifier has current mode input circuitry, which provides an extremely high common mode range of +/-30V.

The Model 3407 Subcarrier Distribution Amplifier is designed for installations where phase control and/or level stabilization of color subcarrier are required. The 3407 regenerates color SC on zero crossings and provides 360° of highly stable phase adjustment. Output level is adjustable for nominal 1V or 2V operation. Input circuitry is identical to Model 3401V.

The Model 3410 Pulse Distribution Amplifier regenerates and shapes tv pulses, and selectively provides stable delay adjustments from 400ns to 3.5ns. It is designed to operate with nominal pulse levels of 1V to 4V. The amplifier provides normal outputs when fed with as much as 1000 feet of Belden 8281/9231 or WE724 cable. The amplifier's current mode input amplifier is identical to the Model 3411V.

The Model 3411V Linear Pulse Distribution Amplifier provides differential input, cable equalizing capability, and optional pulse shaping. The unit is specifically designed for use in television systems where pulse timing is critical; that is, installations where the SC/H phase relationship must be accurate. The amplifier has a looping current mode differential input stage with +/-30V common mode range, as does the 3410, above.

The Model 3421V Long Cable Equalizing Video Amplifier is a differential input three-stage device which can equalize up to 2,100 feet of Rg59b/u, 3,000 feet of Belden 8281, 3,900 feet of Rg 11/u or Rg 11A/u, or 5,400 feet of Belden 8213 cable with the appropriate plug-in equalizers.

The Model 3430V Video Delay Distribution Amplifier is a high performance video delay module with a differential input, six outputs, and optional cable equalization. It is capable of equalizing up to 500 feet of Belden 8281/9231 or WE724 with appropriate equalizer cards. The 3430V has a looping current mode differential input stage with +/-30V common mode range, and may be operated in either an AC or DC coupled mode. In the DC mode a +/-150mV offset adjustment is provided for system balancing.

Variable Equalizer Models in the 3400 Series allow rapid adjustment with a single front card edge control. This makes the 3400 variable equalizer models good for mobile operations and situations where setup with unknown cable lengths is required.

Note: Two instruction manuals are supplied for each type of amplifier.

**8500 SERIES
 AUDIO/VIDEO DISTRIBUTION AMPLIFIERS**

The 8500 Series is a new range of video and audio distribution amplifiers. These new DA's feature both high performance and low cost as a result of innovative engineering coupled with advanced manufacturing techniques.

All 8500 Series models feature differential inputs with six outputs. Circuit building blocks such as input amplifiers, output amplifiers, and voltage regulators have been reduced to individual hybrid integrated circuits which provide improved performance, better unit-to-unit consistency, and ease of maintenance over conventional discrete designs.

Video DA's include the 8501, a basic non-equalizing DA; the 8502, an equalizing DA with dual range (0-500' and 500'-1000') variable equalizer; the 8503, an equalizing DA with precision stepped equalization (0, 100', 200', ... 1000') plus vernier trim (0-125'); the 8504, a delay DA capable of up to 300ns delay (up to 1.1µs with optional plug-ins); and the 8505, a field DA which combines long cable eq (up to 3000' of 8281) and a two speed clamp. The line also includes the 8520, a pulse DA.

The 8551 is a high performance voltage-mode audio DA. It has an active, balanced hi-z input (input Z > 40K ohms) and six active, balanced lo-z outputs (output Z < 50 ohms). The 8551 will accommodate signal levels to +24dBu; SNR is greater than 110dB.

- 3240-206** Relay bypass module; Option-205 may not be used . . **295.00**
- 3240-207** External Reference module; Option-205 may not be used **995.00**
- 3240-208** NTSC Pulse DA-3 **725.00**
- 3240-209** NTSC Color Bar Gen. Submodule **470.00**
- 3240-101** Fade-to-black control with 8 meters (26') connecting cable **465.00**
- 3240-102** Console type Remote Control panel with 8 meters (26') of connecting cable. Option-103 may not be used **525.00**
- 3240-103** Rack mounting Remote Control panel with 8 meters (26') of connecting cable. Option-102 may not be used **525.00**
- 3240-104** Delegate Remote Control panel with one meter (3.3') of connecting cable. Options-101 or -102 may also be used **695.00**
- 3240-105** Console type Remote Control parts kit with 8 meters (26') of connecting cable **275.00**

The Model 3240 Video Processing Amplifier is a high performance sync and blanking regenerative amplifier designed for signal processing in studio, master control, remote, and transmitter locations.

Features

- SC/H phasing • Full regeneration of sync and burst • Adjustable blanking width • Soft and hard clippers • Cable equalization option • Selectable line deletions: 10-21 • Sin² pulse edges • Color black output option • Optional accessories

The basic 3240-10 system is a fully functional processing amplifier, available in one rack unit (RU = 1.75") height. Controls are available on the card edge or at a remote control point.

The compact and rugged construction, coupled with low power consumption and wide supply voltage range, make it ideal for remote van applications. All active components are accessible from the front of the rack.

Conservative ratings, and a sealed air design that keeps contamination out, will assure years of trouble free service.

The expandable 3240-20 system in the two-RU frame contains four additional cells for accessories. The accessories are plug-in modules that complement the basic processor. The frame has been prewired to accept the accessories, and power is supplied from the 3200A Power Supply.

Model 3274A Borderline Generator

- 3274A-10** Borderline Generator in 1-RU tray, power supply, AC line cord, module extender, two instruction manuals, and a 1.75"H x 19"W (4.45 x 48.3cm) control panel with 8m (26') of control cable. **3274A-10** **\$3995.00**
- 3274A-11** Borderline Generator in 1 RU tray, power supply, AC line cord, module extender, two instruction manuals, and a 2.25"H x 6.95"W (5.72 x 17.6cm) control panel with 8m (26') of control cable. **3274A-11** **\$3995.00**
- 3274A-101** Nonsynchronous Detector submodule **255.00**
- 3274A-102** Matte Insert Colorizer module **925.00**

The Model 3274A Borderline Generator is a caption inserting device normally installed at the output of studio production switching systems.

Features

- External matte • Complete downstream keyer • Matted inserts • Three modes of caption enhancement • Insert fade-in and fade-out operation • Optional matte colorizer • Optional non-sync detector

3230-200 SLAVE FRAME

3230-100 REFERENCE ASSEMBLY

Model 3230 Isophasing System

3230-100 Reference Assembly in 1-RU tray, AC power cord, module extender, two instruction manuals. The system can drive up to four slave assemblies (3230-200) and up to 32 isophasing amplifiers (3230-201). **\$1495.00**

3230-200 Slave Tray with cells for eight 3230 modules, 3200 power supply, three 24" coax cables, and AC line cords. A maximum of four 3230-200's may be ordered with one 3230-100. **875.00**

3230-201 3230 Isophasing Distribution Amplifier (one); maximum is eight per slave assembly, 32 per system. **855.00**

3230-205 Remote indicator panel for up to 16 isophasing DA's in two trays. Two maximum per system. Eight meters (26') of cable included. **385.00**

The Model 3230 Isophasing System provides automatic video delay as part of a precision distribution amplifier.

The 3230 distribution system automatically adjusts the timing of input signals for precision color phase timing at the input of a switching or mixing center.

The system will remove daily drifts and reduce the usual source timing requirements to coarse timing. The automatic timing does not effect the critical subcarrier horizontal relationship specified by RS170A.

3252A TRAY REAR

Model 3252A Genlocking Sync Pulse Generator

3252A-SG1 Dual sync system consisting of two 3252A Sync Generators with power supplies and Pulse DA-1A, 3257A Automatic Changeover Switch with power supply, module extender, remote connectors, and two instruction manuals. **\$12,740.00**

3252A-SG2 Dual sync system consisting of two 3252A Sync Generators with power supplies and Pulse DA-2, 3257A Automatic Changeover Switch with power supply, module extender, remote connectors, and two instruction manuals. **11,740.00**

3252A Single Sync Generator, power supply, module extender, remote connector, and two instruction manuals. **4250.00**

3252A-201 Pulse DA-1A module **995.00**

3252A-202 Pulse DA-2 module **495.00**

Note: One Pulse DA (DA-1A or DA-2) is required for operation.

3256A TRAY REAR

3257A TRAY REAR

3258 FRONT PANEL

3258 TRAY REAR

Model 3256A Non-Genlocking Sync Pulse Generator

3256A Tray with modules, power supply, AC line cord, remote connector, module extender, two instruction manuals. **\$1995.00**

3256-201 Pulse DA-1A with sin² pulses, two color black outputs and test output. **995.00**

3256-202 Pulse DA-2 with ramp shaped pulses, and two color black outputs. **495.00**

3256-213 Encoded Subcarrier module; converts the slave sync generator to a master sync generator. **365.00**

Note: One Pulse DA (DA-1A or DA-2) is required for operation.

Model 3257A Automatic Changeover Switch

3257A Rack mounted switching matrix, power supply, AC power cord, remote connector, module extender, and two instruction manuals. **\$2250.00**

The Model 3257A Automatic Changeover Switch can automatically transfer between the outputs of two sync generators when a "fault" output condition is detected.

Features

- Manual and automatic switching
- Sensing on output lines
- Mechanical and electrical transfer
- Visual and remote alarms
- Eight programmable detectors
- Unique switching application in a one-RU package.

Eight detectors in the module sense eight of the nine outputs. All detectors adjust between 2 or 4V pulses, and 1 or 2V subcarrier signals. One detector can sense a low level, steady state signal such as color black or encoded subcarrier. Any or all detectors may be switched off.

Model 3258 SC/H Phase Meter

3258 SC/H Phase Meter with power supply, module extender and two instruction manuals. **\$2995.00**

The Model 3258 SC/H Phase Meter is a measurement instrument specifically designed to aid in establishing and maintaining an SC/H phased video system. It has two video inputs plus a color frame pulse (VI) input, which are used to measure absolute SC/H phase of either video input, the difference between the two video inputs, and absolute SC/H phase of either video input with respect to an externally applied house reference color frame pulse (VI).

**3291 COMPLETE UNIT WITH
 DUAL CHANNEL AUDIO OPTION**

**Models 3290/3291 Wavelink®
 Fiber Optic Communications System**

The Model 3290 is the broadband transmission component of the Wavelink system. It provides a full wideband 10MHz channel to accommodate any signal requiring such a bandwidth, for instance high-quality video. Incoming coaxial cable can be equalized by the 3290 with the addition of an optional submodule. The 3290 consists of an LED or laser-based transmitter, a receiver employing an APD detector, and compact mounting trays built to accommodate transmit and receive modules with their power supplies. The mounting trays are available in one rack-unit (RU, 1.75 inches) or two rack-unit heights. One RU tray package houses up to three transmitter or receiver modules or one laser transmitting system. Two RU tray packages will house up to six transmitter or receiver modules, or two laser transmitting systems, plus two power supplies for back-up redundancy.

3291

The Model 3291 is the multichannel transmission component of the Wavelink system. Like the 3290, the 3291 consists of an LED or laser-based transmitter and an APD-based receiver. In addition to a 5.8MHz video channel, the 3291 includes the multiplexing capability for two optional subchannels of audio and/or data. The Model 3291 also provides adjustable equalization of incoming and outgoing coaxial signal cables as an option. All 3291 receiving systems and LED-based transmitting systems are housed in two rack-unit mounting trays. Each of the two rack-unit trays will accommodate three transmit or receive systems. Laser-based transmitting systems are housed in either one or two rack-unit trays, one laser transmitting system being accommodated by each rack-unit of height.

3291 Audio, Data, and Alarm Options

Each option consists of plug-in modulator and demodulator modules which are fully interchangeable with the other option modules. The modulator module plugs into the frame of the transmitting system, while the demodulator module is housed in the standard two rack-unit frame used in the receiving system. Audio options use a unique

FM-on-FM modulation scheme to enhance the signal-to-noise performance. The baseband audio signals are individually preemphasized and modulated at 100kHz; one channel is then frequency modulated on a 9.8MHz carrier, and the other (dual audio systems) on an 8MHz carrier.

For the data option, serial asynchronous data (up to 20kbits/second) is accepted at the data modulator via an RS232 interface. The data is bandlimited to 500kHz to limit the spectral width of the modulator output, and then FM modulated on a 9.8MHz carrier. The audio/data option combines the features of the single audio and data options. Audio specifications are the same as for the dual audio option, and the data specifications remain unchanged. The GV43 audio option supports transmission of two channels of audio on carriers of 5.8MHz and 6.4MHz for common carrier applications; and 6.2MHz and 6.8MHz for satellite link applications.

Before transmission, each option channel is summed with the video channel on the exciter or LED transmitter module, and the resulting waveform is frequency modulated on a carrier of 24MHz. At the receiver the FM signal is demodulated and separated into its video, audio, and/or data components. The demodulator modules perform further FM demodulation and baseband filtering to restore the original audio or data signals. For the dual audio and the audio/data options, the audio output amplifier may be configured for a 600 ohm (20 dBm) or low impedance (50 ohm) balanced output. For the single audio option a choice of 600 ohm, 150 ohm, or a low impedance (50 ohm) balanced output is provided. The data output is available via an RS232-compatible interface. An optional alarm provides relay closures if a video input at the transmitter becomes disconnected, an optical carrier is absent at the receiver, or a redundant power supply fails.

Repeaters

Laser-based 3290/91 repeaters allow transmission distances to be greatly extended.

REELS

Manual Rewind Reels For Cable Storage

Series C-3200

SERIES C-3200

Series C-3200 reels are designed for storage of long lengths of electric cable. A 4-1/2" x 5-1/2" opening in the reel drum is provided for insertion of the cable to initiate winding. Equipped with a spring-actuated pin lock.

Rewind: Direct crank rewind. Crank attaches to reel axle and is removable.

Options: Upon request, reels can be supplied with "B" dimension other than shown and with disc sizes ("E" dimension) in other diameters.

Divider discs, as shown on Page 11, can be placed at almost any point on the drum you specify. Specify spacing of discs on your order.

See chart below for specifications.

Series C-1500

SERIES C-1500

Series C-1500 reels are designed for storage of shorter lengths of electric cable. A 7/8" x 1-3/4" opening in the reel drum is provided for insertion of the cable to initiate winding.

Rewind: Direct crank rewind. Crank is permanently attached to axle.

Options: Reels with "B" dimension other than those shown in the chart are available upon request.

Divider discs, as shown on Page 11, can be placed at any point on the drum you specify. Specify spacing of discs on your order.

See chart below for specifications.

To Order: Specify complete Model Number. Give size, length, type and weight of cable. Indicate how reel will be installed and used.

SERIES C Manual and Power Rewind Reels for Cable Storage

These heavy-duty reels are designed for storage of all types of electric cable. A 4½" x 5½" opening in the drum permits end of cable to be inserted to initiate winding.

Rewind: Choose gear-drive crank rewind, or chain and sprocket drive powered by A.C. or D.C. electric motor, compressed air motor or hydraulic motor. (See Page 1.)

Options: Upon request, reels can be supplied with "B" dimension other than shown and with disc sizes ("E" dimension) in other diameters.

Divider discs, as shown on Page 11, can be placed at almost any point on the drum you specify. Specify spacing of discs on your order.

A 15½" diameter drum, in place of the standard to accommodate a bending radius of 7¾" or less, is available on all models. With this option the reel cable capacity is reduced.

To Order: Specify complete Model Number and include proper prefix for rewind wanted. Specify size, length, type and weight of cable. Specify A.C. or D.C., voltage and phase for electric rewind models. Specify standard or 15½" diameter drum. Give spacing for divider discs, if required. Indicate how reel will be installed and used.

Note: Be sure to specify all options you require when ordering.

*** WHEN ORDERING POWER REWIND MODELS, PREFIX MODEL NO. WITH:**
A = AIR REWIND
E = ELECTRIC REWIND
HD = HYDRAULIC REWIND

ADD 10" to E dimension when crank is in rewind position.

NOTE: Weights shown in chart are for crank rewind models. **ADD** these amounts for power rewind models:

	NET	SHIP
ELECTRIC	40	45
AIR	25	30
HYDRAULIC	25	30

To Order: Specify Model Number and indicate if reel is to be equipped with handle. Specify Gauge/No. of Conductors, length and type of cable for factory installation.

Model C-10-17-19 Cable Storage Reel.

A compact, lightweight crank rewind reel, without collector rings, for cable storage. Rewind handle is permanently attached to disc.

FRAME SYNCHRONIZERS/ TIME BASE CORRECTORS

HVS 632

HVS 690

HVS 690 Frame Synchronizer and Time Base Corrector STANDARD FEATURES:

- Freeze frame or freeze field for production versatility
- Dropout compensation to clean up bad tapes
- Line-by-line velocity compensation with look-ahead for high accuracy correction with direct signals
- Preset proc amp level controls for complete control over input video
- Hysteresis circuitry for smooth signal handling
- Transparent signal performance for perfect originals and clean, crisp dubs
- Industry standard components to speed maintenance
- 3.5 inch height to conserve rack space, or to make tabletop use more convenient
- Auto-freeze when incoming signal is lost to reduce output video disturbance
- Automatic mode switching between stable and unstable inputs to reduce operator set-up time
- Built-in TBC for heterodyne and direct signals for complete versatility with all formats

Part #	Product	Price
7-16154-01	HVS 690	\$14,500.00
1-10440-01	Quad Head Switch Amplifier	295.00

HVS 550VT Digital Time Base Corrector

The Harris 550VT operates with all capstan servo heterodyne video recorders, from the older, non-subcarrier feedback machines to the new highband VCRs. 3.58 feedback and process modes are both available to offer superb performance over a wide range of VTRs.

For easy editing, the 550VT will handle 10X shuttle speeds. And its full remote panel is small enough so that two can fit side-by-side in a 1-3/4" rack space.

The 550VT's 8-bit, 4xfsc architecture provides virtually-transparent signal performance, while its 16-line memory and Automatic Vertical Advance handles large gyro errors with ease. A built-in proc amp, plus RS-170A sync output circuitry, allow complete operator control of video signals and gen-lock of external equipment.

VARIABLE TRACKING OPTION FOR 540/550 TBCs

The new Variable Tracking (VT) option allows either TBC to be used with slow-motion heterodyne VTRs such as the Sony BVU 820 with its Dynamic Tracking mode. The 540VT and 550VT will dynamically track from 1x reverse play speed to 3x forward play speed and will hold color lock to $\pm 5x$ shuttle speed. In addition, the 540VT and 550VT will enable the VTR to present a stable picture in "Pause" as well as present a viewable picture in fast forward and rewind modes ($\pm 40x$ normal speed).

Part #	Product	Price
7-18000-02	HVS 540 (16L-feedback mode only)	\$6450.00

	Interconnect harness compatible with the Sony BVU 820	250.00

HVS 632/DNR NTSC

Frame Synchronizer and Time Base Corrector

Frame Synchronizer and Time Base Corrector which offers superb performance with outstanding flexibility. It operates with time base stable direct color, and monochrome signals and also time base unstable heterodyne or monochrome signals. The unit is shipped as a stand-alone unit with manuals and rack slides.

- Stable or unstable inputs
- "Dual Mode" hot switching
- Smooth handling of odd field edits
- Compensation for lost video
- Picture freeze
- High noise immunity
- Exceptional write clock range
- RGB mode
- Digital interface
- Convenient front panel operation
- Easy maintenance

AUDIO/VIDEO DISTRIBUTION

ADA-200/ADA-201 Audio Distribution Amplifier

- Differential Input
- Balanced Outputs
- Six Outputs
- Ultra Low THD
- Wide Range
- Modular

The ADA-200 Audio Distribution Amplifier is a modular, high-performance amplifier designed to meet the rigorous requirements of the broadcast industry.

Each module has tandem output stages containing LF256H operational amps and MPS-U05 /U55 output transistors in tracking loops, providing very low THD and high output drive capacity. The amplifier response profile allows distribution of SMPTE time code without modifications. The ADA-200 can be used with ADF-200 or AVF-150 frames, and APS-155 power supplies.

ADA-200 \$245.00
ADA-201 245.00

ARA-202/ARA-203 Audio Distribution Amplifier

- Remote Gain
- Differential Input
- Balanced Outputs
- Six Outputs
- Wide Range
- Modular

The ARA-202 Remote Gain Audio Distribution Amplifier provides remote gain adjustment using a single 10 K potentiometer to ground. Internal jumpers provide ± 3 dB, ± 6 dB, or ± 9 dB remote ranges in addition to the local ± 3 dB adjustment. Differential input, and six balanced outputs with advanced, tandem tracking loops in the output stages, provide very low THD and transparent signal distribution. The ARA-202 may be used in any HEDCO Audio Distribution Frame and/or mixed with standard Audio Line Amplifiers.

ARA-202 \$325.00
ARA-203 325.00

VDA-100 Video

- Differential Looping Input
- Six Identical Outputs
- High Performance
- Multi-Purpose DA

EDA-102 Equalizer

- Up to 1000 feet of 8281 Cable
- Four Pole Equalization
- Six Identical Outputs
- Operator-proof

The EDA-102 has a plug-in, four-pole cable submodule (CEQ-100) which allows four individual peaking circuits to compensate for various types of cable. The equalizing submodule has a security clip which prevents misadjustment of response on an installed EDA. Gain and DC adjustments are accessible for local operations.

The EDA-102 plugs into the standard VDF-100 or AFV-150 frame, and can be mixed with other video or pulse amplifiers in the same frame.

\$285.00

CDA-104 Clamper

- Back Porch Clamp
- Differential Looping Input
- Six Identical Outputs
- Optional Cable
- Equalizer

The CDA-104 clamping DA provides up to 45 dB of hum rejection with a fast forward clamp pulse derived from input composite video. For set-up, clamping may be bypassed with a front panel switch. The CEQ-100 cable equalization submodule may be added to the CDA-104 clamping DA to provide additional compensation for up to 1000 feet of 8281 cable. The front panel gain control provides level adjustments without affecting response or clamping. The CDA-104 can be mixed with other video or pulse DA's in the same frame.

\$325.00

Option: CEQ-100 1000 Foot Cable Equalizer

SCA-105 Subcarrier

- Differential Looping Input
- Phase Adjustable
- Six Identical Outputs
- Regenerated S/C

The SCA-105 provides regenerated, low distortion subcarrier, and 360° of subcarrier phase control.

The SCA-105 has a differential input with over 80 dB hum rejection at 60 Hz. Subcarrier is switched through one of four 90° phase shifters, and a three-pole filter that recovers only the fundamental frequency. Fine phase is adjusted prior to phase shifting and filtering.

The SCA-105 uses the standard VDF-100 or the AFV-150 frame.

\$270.00

LDA-108

- Linear Low Delay
- Six Identical Outputs
- AC Coupled Input
- Looping Input

A linear pulse DA with less than 20ns transition time from loop-thru input to six outputs. Designed to complement RS-170A pulse distribution, the LDA-108 has very low group delay. A pulse presence detector with LED indicators and remote line is optional.

Useable for 1V p-p video, 2V p-p subcarrier or 4V p-p pulses. The LDA-108 uses the standard VDF-100 or AFV-150 frame.

\$165.00

Options: PPD-100 Horiz. Sync Detector, PPD-101 Vert. Sync Detector

SDA-107 Sync Strip

- Sync from Video
- Sin² Transitions
- Six Identical Outputs
- Looping Input

The SDA-107 provides output sync at 4V p-p levels with 120ns sin² transitions from any video input.

Input signals are passed through a sync strip filter submodule (SSF-100) mounted on a PDA-108 module. Sync level detector (PPD-100) indicates low level signals with local LED's and remote closure to ground.

The SDA-107 series can be mixed with other video or pulse amplifiers in the same frame.

\$215.00

Versions: SDA-107 NTSC/Horiz., SDA-117 NTSC/Vert., SDA-127 PAL/Horiz.

Frames

Each 2RU frame is prewired for easy expansion. One power supply is required for each tray. An optional, "plug-in" redundant supply is available. Separate AC inputs and CB/ switches are standard.

ADF-200 Audio frame is prewired for eight audio DA's and two APS-155 audio power supplies. **\$550.00**

AVF-150 Audio/video frame is prewired for four audio DA's, four video DA's plus two APS-155 audio power supplies. **\$575.00**

VDF-100 Video frame is prewired for eight video DA's and two VPS-154 video power supplies. **\$575.00**

Module Extender

An optional module extender, Model DEX-160, is available to provide maintenance adjustments and ease of trouble shooting. The DEX-160 may be used with all audio, pulse, and video distribution amplifiers. **\$40.00**

Power Supplies

Two types of power modules are used in the distribution equipment: APS-155 with audio equipment, and VPS-154 with video units. Each supply provides regulated outputs from selectable 115V/60 Hz or 230V/50 Hz lines.

APS-155 \$245.00
VPS-154 245.00

**MRC-16/4V
MRD-16/4A**

- 16 or 8 Inputs
- Up to 4 Output Buses
- Up to 4 Channels
- Audio, Video, AFV
- Dual Power Supplies
- Vert. Interval Switch
- Diff Audio In/Out
- Meets AVR-1 Specs

RCP-105 CONTROL PANEL provides four buses of 16 LED/switches. Uses single wire per crosspoint lines and closure to ground contacts. The 2RU panel requires on cable per bus.

RCP-101 CONTROL PANEL provides 16 LED/switches for control of one bus. Single wire per crosspoint lines connect through the remote connectors and activate with closure to ground.

24 Inputs/1 Out	MRI 24/1	MRJ 24/1
16 Inputs/2 Out	MRI 16/2	MRJ 16/2
24 Inputs/2 Out	MRI 24/2	MRJ 24/2

MRC/MRD 16/4 Audio/Video Routing Switchers are modular and bus oriented. The MRC/MRD switchers provide premium switching quality in either Audio, Video or AFV configurations. The MRC Video switcher features vertical interval switching based on last video plus video transparency. The MRD Audio switcher features differential inputs and outputs and operation at levels up to +240dBm.

MRC REAR PANEL is equipped with loop thru inputs and two outputs per bus. The frame is prewired for all 4 buses and has parallel control connectors for use with either the RCP-101 or RCP-105 panels. The 2 RU frame is fully equipped for dual power supplies.

MRD REAR PANEL is equipped with RDI block terminals for ease of rack wiring. Parallel control connectors allow additional levels of audio or multiple control panels. The MRD frame is wired for two ABM-8's, eight ACM-8's, 2 control logic, and two APS-155 modules.

RCP-109 CONTROL PANEL is equipped with 40 LED/switches to control one bus. Two RU panel mounts in standard 19 inch rack. May be used for video, audio or AFV control.

ORDERING INFORMATION

MRI/MRJ 24/2 AUDIO AND VIDEO Routing Switchers provide one or two buses which are individually controlled by remote panels. The combined buffer, crosspoint, output amplifier modules completely isolate the buses and are front panel accessible. Each switcher is compact and provides auxiliary bus switching using single wire per crosspoint control.

MRI REAR PANEL is prewired for 24 BNC looping inputs and dual outputs on both buses. Frame space for one VPS-154 power supply and six VSM900 video switcher modules. Dual control connectors for each bus allows looping of control to additional frames.

ROUTING SWITCHERS

**MRE-40/2V
MRF-40/2A**

- 24 to 40 Inputs
- 1 or 2 Buses Out
- Audio/Video/AFV
- Multiple Levels
- 4 RU Frames
- Dual Power Supplies
- Meets AVR-1 Specs

MRE/MRF 40/2 AUDIO AND VIDEO Routing Switchers provide one or two buses which can select from either 24, 32, or 40 buffered inputs. Each bus uses standard crosspoint and buffer modules in 8 input increments. AFV systems may be configured with up to three levels of audio. Excellent audio and video transparency using standard components.

MRE REAR PANEL is prewired for 40 BNC looping inputs and dual outputs on both buses. Frame space for up to four VPS-154 power supplies, two logic, five VBM8 buffers, and ten VCM8 crosspoint modules. Dual control connectors on each bus for looping to additional frames.

MRF REAR PANEL is prewired for 40 audio differential inputs and two differential audio outputs per bus. Frame space for up to four APS-155 power supplies, two logic, five ABM8 buffers, and ten ACM8 crosspoint modules. Dual control connectors and separate AC inputs.

RCP-111 CONTROL PANEL is equipped with 24 LED/switches to control one bus. Single RU panel mounts in standard 19 inch rack and provides single wire per crosspoint control.

CONTROL PANELS

- RCP-109 Panel, 40 Inputs, 1 Bus
- RCP-110 Panel, 32 Inputs, 1 Bus
- RCP-111 Panel, 24 Inputs, 1 Bus
- CAB-4 Cable for RCP-109, RCP-110
- CAB-3/4 Cable for RCP-111

OPTIONS

- REX-161 Extender Module
- VPS-154 Redundant Video P.S.
- APS-155 Redundant Audio P.S.

RCP-111 CONTROL PANEL is equipped with 24 LED/switches to control one bus. Single RU panel mounts in standard 19 inch rack and provides video, audio or AFV control with LED status display. HEDCO remote panels contain a minimum of electronics for operations.

OPTIONS

- REX-162 Extender Module

CONTROL PANEL

- RCP-111 Panel, 24 Inputs, 1 Bus
- CAB-3 Cable for RCP-111

MRJ REAR PANEL is prewired for 24 audio differential inputs and two differential outputs per bus. Frame space for one APS-155 power supply and six ASM900 audio switcher modules. Also has dual control connectors for each bus for AFV operation or for use with multiple panels.

ROUTING SWITCHERS

SRB 8/1 V

- 8 Video Inputs
- Broadcast Quality
- LED Indicators
- Single RU Frame
- Remote Option
- Meets AVR-1 Specs

SRB-8/1 VIDEO ONLY Routing Switcher is our plain vanilla unit. Frame houses one VSM-9 and one VPS-153 module with front panel access for maintenance. Local front panel displays video status on LED's. Compact rack mounting with excellent performance.

REAR PANEL shows loop thru BNC video inputs which exhibit greater than 50dB return loss. Dual video outputs have better than 0.1° diff θ . 0.1% diff G and 0.1dB response. Equipped with captive AC cord and remote plug for parallel control.

ORDERING INFORMATION

SRB-8/1 8 input, Video Only

OPTIONS

- RCP-100** Remote 8/1 Panel
- CAB-1** Cable for RCP-100
- SRX-162** Extender Module
- LCP-100** Local Control Panel

RCP-100 REMOTE PANEL has 8 LED/switches mounted in 19 inch single RU panel. Single wire per crosspoint control.

SRB-182 AFV

- 8 Video Inputs
- 8 Audio Inputs
- AFV Operation Only
- One RU Frame
- Remote Option
- Meets AVR-1 Specs

The **SRB-182 AFV** Switcher frame construction is identical to the SRB 8/1 above except for the rear panel. Audio Follow Video operation is standard and controlled locally by LED/switches mounted on the front panel. Audio response of 0.1dB from two outputs with < 0.1% THD at levels up to +24dBm over the range of 20 Hz to 20 kHz.

REAR PANEL of the SRB-182 AFV Switcher shows loop thru BNC video inputs and dual video outputs. Audio inputs and outputs are thru an RDI terminal block for ease of wiring. Equipped with captive AC cord and remote plug for parallel AFV control.

ORDERING INFORMATION

SRB-182AFV Complete 8 Input AFV

OPTIONS

- RCP-100** Remote 8/1 Panel
- CAB-1** Cable for RCP-100
- SRX-162** Extender Module
- LCP-100** Local Control Panel

SRB-281

- Dual Audio
- 8 Input Groups
- Separate Control
- Diff Audio In/Out
- Two Remote Panels
- Meets AVR-1 Specs

SRB-281 DUAL AUDIO Switcher provides two independent 8 input, dual output audio switchers in a single RU frame. Frame houses one VPS-150 power supply and two ASM-9 audio modules with fold down front panel access. LED/switches provide local control and status. Excellent audio transparency in both channels.

REAR PANEL Of the SRB-281 shows an independent set of RDI terminal blocks for each audio group. Remote operation for each group is controlled by single wire per crosspoint contact to ground, through the rear mounted connectors. Equipped with a captive AC cord and fuse protection. All audio input and output connections are balanced.

ORDERING INFORMATION

SRB-281 Dual Audio, 8 + 8 Inputs

SRB-181 Equipped as one channel

ROUTING SWITCHERS

COMMON MODULES

ASM-900 Audio Switch Module contains 8 high impedance input buffers, 8 transistor switches, and dual balanced outputs. Levels of +24dBm and 0.1% THD with 0.1dB response over 20 to 20 kHz.

VSM-900 Video Switch Module contains 8 high impedance input buffers, 8 transistor switches, and dual 75 ohm 0.1% outputs. Switcher exhibits 0.1° diff, 0.1% diff G and 0.1B response.

VPS-152 Power Supply provides ± 24 VDC and ± 12 VDC with fold back current limiting for single rack unit frames. Line inputs can be strapped for 115V/60Hz or 230V/50Hz.

SRA 16/1 AFV

- 16 or 8 Inputs
- Video, Audio, AFV
- Built-in Breakaway
- Dual LED Indicators
- Single RU Frame
- Meets AVR-1 Specs

ORDERING INFORMATION
SRA 16/1AFV Complete 16 Input AFV

- SRA 16/1A Only 16 Audio Inputs
- SRA 16/1V Only 16 Video Inputs
- SRA 8/1AFV Only 8 Inputs AFV
- SRA 8/1A Only 8 Audio Inputs
- SRA 8/1V Only 8 Video Inputs

- OPTIONS**
- RCP-121 Remote 16/1AFV Panel
 - CAB-2 Cable for RCP-121
 - SRX-162 Extender Module
 - LCP-101 Local Control Panel
 - LCP-121 Local Control Panel with audio breakaway

ABM-8 Audio Buffer Module contains 8 individual differential balanced inputs with 80dB CMR at up to +24dBm input levels. Individual buffers with DC offset adjustments drive isolated motherboard paths to crosspoint modules.

ACM-8 Audio Crosspoint Module contains 8 T-style transistor crosspoints, audio output driver and bus control logic. Dual output driver has true 600 ohm impedance at up to +24dBm with THD 0.1% and 0.1dB responsive to 20 kHz.

VBM-8 Video Buffer Module contains 8 individually powered high impedance buffers. Each buffer drives a motherboard path and provides constant level video for up to eight crosspoint modules. Fully compensated for loop thru inputs.

VCM-8 Video Crosspoint Module contains 8 T-style transistor crosspoints, video output driver, and bus control logic. Dual outputs are gain adjustable 3dB and have < 0.1% diff G, < 0.1% diff θ , and 0.1dB response. Wire per crosspoint unit control logic.

SRA-16/1 AFV Routing Switcher offers breakaway audio or video with local or optional remote control. Frame houses 2 each VSM-900, 2 each ASM-900 and single VPS-152 modules, with fold down front panel access. Local front panel displays individual audio and video status with red/green LED's. Hold down breakaway feature prevents accidental operations.

REAR PANEL shows loop thru BNC video inputs and dual video output. Audio connector is a quick disconnect style yet provides access for differential inputs and outputs. Captive AC cord. Remote control connector provides full access to all features.

RCP-121 provides identical remote control of audio and video as the local panel plus parallel LED status indicators. Rack mounting, single RU construction.

SRE 16/1 AFV

- 16 or 8 Inputs
- Video/Dual Audio
- Built-in Breakaway

SRU-16/1 DELAY

- 16 or 8 Video Inputs
- 25 to 125ns Input Delay
- 25 to 125ns Input Delay
- 65 to 165ns BG Out Delay
- BG Switching/Timing
- Compliments UltiMatte®

SRU-16/1 DELAY switcher provides either 16 or 8 input transfer delays and a delayed switched output. Delays are adjustable over a 100ns range to compensate for cabling and BG transit time through the UltiMatte. The two RU frame contains 2 each VSM-900 Video Switch module, 2 each VDM-9 Video Delay Module, and one VPS-154 Power Supply.

BACK PANEL shows the 16 looping BNC inputs plus delayed and non-delayed switched output. Delayed outputs are positioned below the looping inputs. The control connector provides the interface to the RCP-101 Control Panel.

RCP-101 CONTROL PANEL provides 16 LED/switches for control of the switched output. Panel is single RU high and mounts in standard 19 inch racks.

SPECIFICATIONS

- Refer to HEDCO AVR-1 Specs except for:
- Frequency Response: 100K to 5MHz, ± 0.2 dB
- Differential Phase: $< 0.2^\circ$ (10 to 90 APL)
- Differential Gain: $< 0.2\%$ (10 to 90 APL)

ORDER INFORMATION

- SRU-16/1 DELAY Complete 16 Input with 16 Input Delays plus BG Delay
- SRU-8/1 DELAY Equipped as 8 Input with 8 Input Delays plus BG Delay

- CAB-2 Cable for RCP-101

OPTION

- SRX-162 Extender Module

MRA-8/8V

- 8 Inputs
- Up to 8 Output Buses
- Up to 4 Channels
- Audio, Video, AFV
- Dual Power Supplies
- Vert. Interval Switch
- Diff Audio In/Out
- Meets AVR-1 Specs

MRB-8/8A

MRA/MRB 8/8 AUDIO And VIDEO Routing Switchers provide 8 buses which can select from 8 buffered inputs. Each bus including control logic, transparent switches and output amplifier is contained on one module. A separate buffer module feeds signals through a motherboard to each crosspoint module. Frame has space for redundant power supply and all modules are removable from the front.

MRA REAR PANEL shows the eight looping inputs and dual outputs on each bus. Frame space for two redundant VPS-154 power supplies, one VBM8 buffer module and eight VCM8 crosspoint modules. Individual connectors for looping and bus control. Separate AC inputs.

SRU-YRGB

- YRGB or RGB Switching
- Single Control Panel
- Dual Outputs per Bus
- Two RU Frame
- Compliments UltiMatte®
- Meets AVR-1 Specs

SRU-YRGB Video Switcher consists of four individual 8 input, one bus VSM-900 switchers in a two RU frame. Outputs are simultaneously controlled by one RCP-100 panel to provide Y, R, G, B switching. Dual outputs on each bus allow monitoring and direct feeds. Unit may be used for 3 channel RGB switching by removal of one VSM-900 module.

BACK PANEL shows four groups of 8 loop thru BNC inputs for Luminance (Y), Red (R), Green (G), and Blue (B). Each channel has dual outputs. Equipped with a standard AC connector and a 1 Amp Circuit Breaker/Switch.

RCP-100 CONTROL PANEL provides 8 LED/switches for singular control of all channels. Panel is single RU high and mounts in a standard 19 inch rack.

ORDERING INFORMATION

- SRU-YRGB 4 Channel YRGB Video Switcher
- SRU-RGB 3 Channel RGB Video Switcher
- RCP-100 Control Panel for 8 Inputs
- CAB-1 Cable for RCP-100
- OPTION
- SRX-162 Extender Module

MRB REAR PANEL shows the RD1 terminal blocks for audio differential inputs and outputs. Frame contains space for two APS-155 power supplies, one ABM8 buffer and eight ACM8 crosspoint modules. Individual connectors for bus control plus looping connectors. Separate AC inputs.

RCP-104 CONTROL PANEL controls up to eight buses using individual rotary pushbuttons plus take pushbuttons for selections. Panel is standard 19 inch width and required only one RU of space. LED indicators.

ROUTING SWITCHERS

IRS 48 x 48 AUDIO/VIDEO INTERMEDIATE SIZE ROUTING SWITCHER IRS 24 x 24 VIDEO AND 3 CHANNEL AUDIO INTERMEDIATE ROUTING SWITCHER

IRS 48 x 48/IRS 24 x 24 FEATURES

- No Fans or Blowers are required. Thermal design provides for efficient heat removal. All integrated circuits are state-of-the-art, require very little power and are mounted in high quality I.C. sockets. All components are Off-Shelf and most Dual Sourced, available from an electronic parts house near your location.
- All modules are identified by matrix card slot for the Computer Software, not by individual module. Permits total type interchange.
- Back-Plane Inputs and Outputs (Signal I/O) modules are direct plug-in, with no intervening cables or wires to cause signal degradation or timing changes which complicate future maintenance problems.
- Each module has close tolerance on-board voltage regulators for maximum isolation characteristics. The input to each regulator is fused and its output is protected by automatic thermal shutdown and current limit.
- The Video Buffer has Differential Inputs to assure a high degree of common mode or Hum Rejection.
- The Video channels use Vertical Interval Switching featuring Back Porch Clamping to assure bounce-free switching between signals with widely different APLs. No SC traps are used. The circuit is designed to clamp only when there is a difference in DC levels, thus helping to maintain excellent system transparency.
- Audio Input is Balanced Differential for either balanced or unbalanced sources, has input impedance greater than 50K ohms and operates at levels up to +24dBm.
- Dunker circuit gives "pop free" on-line Audio switching.

IRS 48 x 48

System can start as small as 12 x 12, single channel, and expand to 48 Inputs by 96 Outputs with up to four channels of Audio, Video and Time Code in any combination.

The IRS is available as individual Video, Audio 1, Audio 2, and/or Time Code Matrices with a maximum capacity of 48 inputs by 48 outputs in just 17 rack units, (29.75").

IRS 24 x 24

Can start as small as 12 x 12, single channel, and expand to 24 Inputs by 24 Outputs with up to three channels of Audio.

IRS CONTROL PANELS

This series of control panels can be used on all HEDCO microprocessor based routing switchers. Control is via shielded twisted pair (balanced) using RS 422 protocol, MPU 6803 based.

RCP-301: Basic single bus control panel. Keypad entry, Audio follow Video.

RCP-302: Single bus control panel. Keypad entry, separate Audio and Video selection.

RCP-303: X-Y control panel. Keypad entry for control of all buses. Audio follow Video.

RCP-304: Single bus control panel. Keypad entry, separate Video and two channel Audio selection.

RCP-311: 1 R.U., 16 pushbutton "shot box" panel. Buttons can be easily programmed to access any 16 inputs of 24, all levels.

RCP-306: X-Y control panel. Keypad entry for control of all buses. Separate Video and two channel Audio selection.

RCP-307: Single bus control panel. Keypad entry, separate Video and three channels of Audio.

RCP-310: 2 R.U. 48 pushbuttons. (IRS 48 x 48 only)

RCP-305: 1 R.U. 24 pushbuttons. (IRS 24 x 24 only)

IRS 24 x 24

IRS FRAMES

Both Models' Switchers are contained in 17 rack units 29.75".

IRS MODULES

IVI-611 Video Input Buffer

- Back porch clamp
- Differential inputs
- Equalization for 200' of 8281 or equivalent cable
- On board power supply regulation
- 6 buffers per module

IXP-144 Audio or Video Crosspoint

- 12 x 12 array
- Crosspoints are transistor arrays in IC sockets
- Vertical interval switching (refer to house sync)
- On board power supply regulation

IYO-612 Video Output Amplifier

- On board power regulation
- 6 output amplifiers per module
- Two separate full level outputs per amplifier
- Output gain unity, ± 3 dB adjustable

IAI-601 Audio Input Buffer

- Accepts balanced or unbalanced audio lines
- Differential inputs
- S/N ratio > 90dB
- On board power regulation
- 6 buffers per module

IAO-602 Audio Output Amplifier

- 600 ohms or 150 ohms outputs
- 6 output amplifiers per module
- Two separate full level outputs per amplifier
- +24dBm max. at 600 ohms; +27dBm max. at 150 ohms

ICL-412 Computer

- One required for each 12 buses
- On board diagnostics
- Non-volatile E² RAM for unlimited memory retention
- MPU 6803 based at 76.8 Kbaud

ICI-401 Bus Interface

- One required for each 12 buses
- Uses RS-422 bi-directional controls
- Change module for RS-232-C

**SRG-128/4 VIDEO / SRH-128/4 AUDIO
SRG-256/2 VIDEO / SRH-256/2 AUDIO
LARGE INPUT MONITORING SWITCHERS**

SRG-256/2: 256 input, 2 bus video switcher.
SRH-256/2: 256 input, 2 bus audio switcher.
SRG-128/4: 128 input, 4 bus video switcher.
SRH-128/4: 128 input, 4 bus audio switcher.
Includes **SMC-256** Logic Interface — One for 256 inputs,
Two for 128 inputs.

SRG/H 256/2 AUDIO/VIDEO SWITCHER

Features

- Automatic Scan Alarm
- Remote Computer Control
- Modular Input Configurations
- Input Skip Program

SMC-256 Logic Interface

The SMC-256 Logic Interface uses two MC6803 Microprocessors which are programmed to execute all commands from the RCP-207 panels plus operations via the RS232-C computer link. Communication using the remote computer link is via standard ASCII parallel code. Two completely separate computers are housed in a one RU frame, each with NOVRAM™ memory for "SKIP" retention during power failures plus external alarm contacts.

VDS-182 Buffer Crosspoint

The VDS-182 Buffer Crosspoint module contains selection logic, eight buffers, two sets of eight crosspoints and a card select crosspoint. Standard transistor arrays are used for switching and buffer functions.

VOA-182 Output Amplifier

The VOA-182 Output Amplifier contains two independent output amplifiers and signal detectors. Each section uses standard components and logic elements for ease of maintenance.

RCP-207 Control Panel Local Functions (optional)

Take: Activate bus to keyboard entry.

Audio Only: Causes audio SRH switcher to follow independently.

Skip: Allows any input to be bypassed in SCAN or SCAN ALARM.

LARGE INPUT MONITORING SWITCHER

Reset: Stop operations and switch to input one.

Scan: Sequentially switch each input to an output bus at scan rate.

Scan Alarm: Scan while monitoring for video or audio present. Reverts to HOLD when signal loss is detected.

Hold: Manual or Automatic selection causes steady display of last input.

Continue: Continue in SCAN or SCAN ALARM.

Options

RCP-207: Remote panel — Two for 256 inputs, Four for 128 inputs.

VPS-156: Redundant Power Supply, Video + 15V.

APS-256: Redundant Power Supply, Audio + 28V. Cabling: One of each type listed is required for each bus. Specify length.

CAB-2: RS-232 Computer cable. Up to 50m. Matrix to Logic Interface cable. Up to 10m.

CAB-4: Remote panel to Logic Interface cable. Up to 20m.

NOVRAM is a trademark of XICOR, INC.

THE MATCHBOX

The MATCHBOX is the ideal way to correctly interconnect "HiFi" or Semi-Pro (IHF standard) equipment with professional studio gear. The Matchbox is a bi-directional unit, with four independent amplifiers providing full stereo input and output interface. Two amplifiers convert a stereo IHF HI-Z unbalanced source to LO-Z balanced outputs at studio level. A second pair of amplifiers converts a stereo balanced studio line source to unbalanced IHF outputs to feed the inputs of an IHF device. All circuitry is active and direct-coupled for absolute sonic transparency. The Matchbox is compact and lightweight, allowing it to be permanently mounted to most cassette recorders, tuners, portable mixers, etc.

- Gain is adjustable to +20dB
- +26 dBm maximum output level
- .008% distortion, 90dB S/N
- All active direct coupled circuitry
- Does not load or ground studio lines

- Self contained regulated power supply
- Provides extra AC outlet for convenience
- Made with high quality U.S.A. components

MATCHBOX Specifications:

General

- Power input: 115 VAC, 4 watts
- Fuse: .1 amp, internal
- Dimensions: 6.25" x 3.75" x 2.25"
- Weight: 2 lbs.
- Adjustments: Studio Output level adjustable via front panel access holes

Electrical

	IHF Input to STUDIO Output	STUDIO Input to IHF Output
• Input Level:	-10dBv to 0dBv, nominal	0dBm to +8dBm, nominal
• Input Imped:	25K ohms, unbalanced	10K ohms, balanced
• Gain/Loss	+6dB to +20dB, adjustable	-14dB, fixed
• Output Level:	0 to +8dBm nom, +26dBm max	-10dBv nom, +20dBv max
• Output Load:	600 ohms or greater, bal	2K ohms or greater, unbal
• Freq Response:	DC-20 kHz, +/-0.25dB	DC-20 kHz, +/-0.25dB
• Distortion:	.008% at any level	.008% at any level
• Noise Level:	85dB below +4dBm output	75dB below -10dBv output
• Number of Channels:	2, "Left" and "Right"	2, "Left and "Right"

The Matchbox \$195.00

UNIVERSAL TURNTABLE CONTROLLER

The Universal Turntable Controller is a control interface unit for use in conjunction with Technics (SP10, SP15, SP25, SL1200 MKII) and Russco direct drive professional turntables.

The "UTC" adds remote control facilities to these turntables. It converts the turntable's "single button" control logic so that separate Start and Stop switches can be used to operate the turntable. The UTC also provides outputs to drive 24VDC tally lamps for Run and Stop mode indication. The turntable's start-stop switch can still be used for cueing records, and the Universal Turntable Controller will always remain "in sync". It easily connects to the turntable with just three wires, and may be controlled by either momentary switches or CMOS circuitry. One UTC will control two turntables.

- Works with most console remote control facilities, or use "outboard" switches
- Tally lamp outputs accommodate illuminated pushbuttons
- No contact bounce or false operation
- CMOS circuitry is RF immune...no relays
- Self contained regulated power supply
- One UTC controls two turntables

Universal Turntable Controller \$180.00

MASTER CONTROL SYSTEM

AUTOMATION/MASTER CONTROL SYSTEM

FEATURES

- Timecode based system
- Dual computers with failsafe capacity
- Interfaces to traffic department computer
- Interfaces to single and multiple deck machines
- Accountability for log changes
- Generates as run log and discrepancy report
- Decodes satellite channel cue tones
- Uses WWV as clock reference
- Automatic and manual operation
- Runs back-up tapes simultaneously
- Security code access to the system
- Discrepancy generated for every log change
- System will operate with or without a master control switcher
- Printouts including list of tapes needed for the day's log

The Master Automation System offers a new and unique solution pertaining to automating master control. The MAS-100 acts as a central manager of information and a coordinator of activities for the equipment used in the master control operation.

As the hub of a data network that includes the traffic computer, single and multiple deck machines, and other equipment used in master control the MAS-100 oversees and monitors the on air operation. This includes receiving a station log from the traffic computer, performing the breaks as specified, and generating an as run log with a discrepancy report.

The MAS-100 operates in an automatic mode in which all the operator has to do is load tapes. At this point the MAS-100 takes over and follows the below procedure:

- Detect tape has been loaded
- Read the userbit identification label
- Verify that the tape is needed for the day's log. If the tape is not needed then go to step 12
- Look up segment start time in MAS-100 tape database
- Cue the tape to the timecode preroll point from the database
- Turn the video head or scanner off (minimizes wear on tape)
- Turn the video head or scanner on and recue the tape one minute before it is to be rolled
- Roll the tape at the specified log time minus amount of preroll
- Switch the tape on air
- Switch to next source upon completion
- Verify if tape is needed again. If so then go to step 4
- Eject cassette or rewind reel

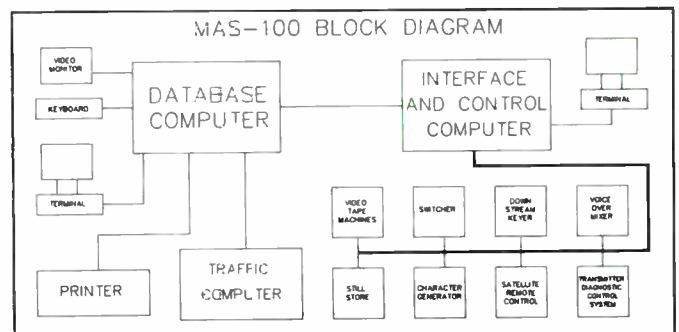

Normally the MAS-100 will use the specified log time to start a break. During live events when the break times are unknown the MAS-100 has the ability to use satellite channel cue tones to initiate the station break or be operated manually in which the operator must instruct the system when to start the break. Even though the break is started manually the MAS-100 automatically performs and logs the times of the entire break as it was performed.

The MAS-100 interfaces to equipment via a serial network. This enables the system to control single deck machines as well as the new multiple deck machines being manufactured today. A customer now has a choice to run the master control operation with a set of lower cost single deck machines for both program and commercial material or the multiple deck machine for commercials and several of

single deck machines for programs. Besides interfacing with tape machines the MAS-100 is capable of communicating with and controlling character generator/electronic still store equipment, satellite control equipment, switchers, down stream keyers, and audio voice over mixers. A down stream keyer and audio voice over mixer can be used in conjunction with a small routing switcher in place of a costly master control switcher.

Accountability is a key aspect of the MAS-100. Whenever a change is made to the log by an authorized person, the system records the person's name, the log change as well as the time the change was made. This information is printed in the day's discrepancy report. Also if there are any changes to the log due to equipment failure or other reasons the MAS-100 will insist the operator include a discrepancy for every occurrence.

DISTRIBUTION AMPLIFIER

DA-5000P DISTRIBUTION AMPLIFIER

Features:

- Combination video and audio distribution in single cabinet
- Ten video and ten audio outputs
- Rackmountable, 1.75" high
- Gain and high frequency front panel screwdriver adjustments
- Front panel monitoring test points
- 110/220 VAC, NTSC or PAL operation

The DA-5000P is a versatile distribution amplifier combining audio and video into one cabinet. Ten matched, isolated video outputs are provided from a single video input, and ten matched, isolated audio outputs are provided from a single audio input. The inputs are looping or bridged so that additional DA's can be stacked to provide more outputs.

The front panel has screwdriver adjustments on both video and audio channels for overall level and high frequency compensation. Test points on the front allow oscilloscope monitoring of one of the video outputs and one of the audio outputs.

The video section handles NTSC and PAL signals equally well. The DA-5000P is supplied to operate on 110VAC, but a simple internal wiring change will allow it to operate on 220 VAC, 50Hz for PAL countries.

The DA-5000P, with rack mount hardware included, provides more outputs per rack inch than any other DA. Its cost per output is extremely moderate. Its clean, stable operation and long term reliability make the DA-5000P an unbeatable choice.

Specifications:

Video:

Bandwidth	10MHz
Linearity	Better than 1%
Tilt	Less than 1%
S/N Ratio	56dB
Differential Phase	Less than 1/2°
Differential Gain	Less than 1%
Gain	Up to 6dB (front adjustment)
Hi Freq. Comp.	Up to 1500 ft. RG-59/U
Isolation Between Outputs	40dB
Connectors Used	BNC

Audio:

Bandwidth	50kHz
THD05%
S/N Ratio	70dB
Gain	Up to 6dB (front adjustment)
Isolation Between Outputs	60dB
Input	High impedance, unbalanced
Outputs	600 ohm, unbalanced
Connectors Used	RCA phono

General:

Power Requirement	110VAC, 60Hz (220VAC, 50Hz capable)
Power Consumption	6 watts
Operating Temperature	10°C to 50°C
Dimensions	17"W x 12"D x 1.75"H
Shipping Weight	10 lbs.
Accessories Included	Rack mount hardware

VIDEO CORRECTOR

VC-2000P PROFESSIONAL VIDEO CORRECTOR

Features:

- Ideally suited to 1/2" and 3/4" videotape correction
- Useful as a remote camera control unit
- Automatic regeneration of all sync signals
- Image enhancement and noise reduction
- Fade to black control
- Four output video/stereo audio DA
- Optional plug in RF Modulator
- Copyguard Stabilizer
- Rack mountable

The VC-2000P is an advanced video corrector at an extremely moderate price. The unit automatically generates new sync and blanking signals, both horizontal and vertical, plus new color burst signals. The insertion of new synchronizing signals plus back porch clamping permit the VC-2000P to solve a variety of stability problems. Jitter, flicker, bending, and rolling are automatically corrected in most cases.

The "Bypass-Operate" switch allows instant comparison of processed and unprocessed signals. The "Stabilize" switch automatically removes copyguard encoding when activated. The "Indicate" switch activates a zebra stripe 100 IRE peak video indicator.

The zebra stripe indications in the picture permit unskilled operators to set the video level correctly without special test equipment.

The "Video Level," color "Level," and "Phase" (color hue) allow the correct setting of these parameters, even on video shot in low light. These controls are a great aid in matching scenes with different brightness, contrast, color, and hue when editing video tapes.

When used as a remote camera control unit, the level and phase controls make camera matching and correct setup very practical.

The "Noise Level" control aids in removing grainy background noise. The enhancement "Level" control provides pleasing and often dramatic improvement to picture sharpness and clarity. The two controls together eliminate much of the degradation that occurs when duplicating video tapes.

The enhancement "Position" and "Normal/Split" switch give a split screen presentation of the picture with the top half enhanced and the bottom half not enhanced. The "Position" control moves the split up

and down to permit a close, instant analysis of the improvements gained by enhancement. The signal may even be recorded this way so that the same analysis can be performed on the playback of the test recording.

The "Fade" control permits fade to black; an especially useful effect in editing and remote camera control. When fully faded to black proper sync, burst, and setup level are maintained at the video outputs.

The "Setup" control is a screwdriver adjustment to allow correction of signals with non-standard black levels. Internally the VC-2000P has horizontal and vertical blanking width adjustments.

The VC-2000P also has a built-in 4 output video distribution amplifier with a 4 output stereo audio distribution amp.

Specifications:

Bandwidth:	5MHz, ± 3 dB
S/N Ratio:	60dB
S/N Improvement-Luminance:	Up to 6dB with "Noise Level"
Tilt:	Less than 1%
Differential Gain:	1-1/2%
Differential Phase:	1-1/2°
Video Gain:	0% to 300% of input level
Chroma Gain:	50% to 150% of input level
Burst Phase (Hue) Range:	130° ($\pm 65^\circ$)
Enhance Gain:	14dB at 2MHz
Setup Control Range:	-15, +20 IRE from 7.5 IRE
Number of Outputs:	4 video, 4 stereo audio
Isolation Between Outputs:	40dB video, 60dB audio
Operating Temperature:	+10°C to +50°C
RF Channels (with optional RF):	Channels 3 and 4, switchable
Connectors Used:	Video-BNC, Audio-RCA, RF-F
Power Requirement:	117VAC, 60Hz, 9 watts
Dimensions:	17"W x 1-3/4"H x 12-3/4"D
Shipping Weight:	11 lbs.
Accessories Included:	Rack mount hardware

Ordering Information:

For optional RF modulator, order model RFC-34.

VIDEO PROCESSORS

VC-2500P AUTOMATIC VIDEO PROCESSOR

- Ideal for use where unattended, automatic video correction is needed
- Automatic level adjustment of video signal
- Automatically regenerates synchronizing signals
- Clamp circuit removes hum and flicker
- Four video and audio outputs
- Available in NTSC (American) or PAL (European) models
- Ideal for driving RF modulators
- Video tape duplicating

Ideal for applications where it is necessary to provide technically correct levels and stable video at all times, automatically and unattended. Corrects most of the stability problems encountered with video. Problems (e.g. jitter, satellite receiver flicker, bending and rolling) are corrected automatically. When the AGC circuit is switched on, the processor samples incoming video sync level and uses that reference to set video level to the correct standard of 1 volt peak to peak into 75 ohms automatically. The "Stabilize" switch automatically solves all videotape copyguard problems when switched on. Additionally built-in is one input, four outputs audio distribution amplifier and a one input, four corrected outputs video distribution amplifier.

VC-2500P Dimensions:
17"W x 1 3/4"H x 12 3/4"D

VC-2500P \$495.00

VC-2500P

VE-200C

VE-200C VIDEO ENHANCER

Features

- Connects to standard TV sets (with optional RF modulator)
- Automatic regeneration of all sync signals
- Copyguard stabilizer
- Four audio and video outputs
- Image enhancement and noise reduction
- Fade to black capability
- Available in NTSC (American)

The VE-200C is an advanced video processor that uses the same technical processes for the video signal that expensive commercial

processors use. This process of regenerating to proper standards all the video synchronizing signals will automatically correct most of the technical problems encountered when dealing with video. Stability problems such as jitter, flicker, bending, rolling and loss of color are automatically corrected. The "Stabilize" switch automatically solves copyguard problems when activated. Additionally, the front panel controls permit correct adjustment and consistency in contrast, brightness, color and hue on all signals.

UNIVERSAL SERIAL DATA READER

7100 UNIVERSAL SERIAL DATA READER

The lack of a reliable method of monitoring serial interface data is a major problem in troubleshooting complex multi-processor control systems.

A solution to this problem is the Image Video UNIVERSAL SERIAL DATA READER (U.S.D.R.). The U.S.D.R. is capable of reading and displaying serial data in real time by simply looping into the suspected problem line. The unit is set to the predefined parameters of that line and that data may be viewed in either hexadecimal or binary format as preferred. Triggering is valid on detection of a unique word (HEX byte) and may be checksum qualified if necessary.

Operation

Three operational modes are alternately selected by the MODE key.

Mode 1 Setup

MODE 1

MODE 1 causes the displayed setup data to be latched into the U.S.D.R.'s control routine.

The required hexadecimal (unique word) trigger byte is entered by pressing the TRIG key followed by two digits.

A requirement when reading checksum qualified data is the frame length byte. Press the LEN key and enter the number of bytes per frame (including the unique word and checksum bytes). For operator convenience this number is expressed in decimal format, three to ninety-nine being valid.

The offset byte is used to set the KEY byte (starting point for the data display). Press the OFFSET key and enter the number of bytes offset from the trigger byte. Again this number is expressed in decimal format, zero to the frame length being valid.

MODE 2 Hex Status

This mode displays the hexadecimal status of four bytes of data from the line with the KEY byte appearing in readouts seven and six and KEY + 1, KEY + 2, KEY + 3 bytes appearing in readouts five through zero respectively. The most significant nibble appears in the lefthand display of each of the four pairs. For proper interpretation of the display none of the error tallies should be on.

MODE 3 Binary Status

Mode 3 shows the binary status of one byte of data from the line at the KEY byte. The eight displays show the status of the eight bits of the KEY byte with the most significant bit appearing in readout seven and the least significant bit in readout zero. For proper interpretation of the display none of the error tallies should be on.

Error Indication

Four error tallies are provided to alert the operator to possible false data detection; FRAME error, OVERRUN error, PARITY error, and CHECKSUM error.

DIP switches select O/E parity, inhibit parity, and select one of eight baud rates.

Control Panel Features

- Coax Cable Control Line
- Audio Cable Control Line Optional
- Multipanels per Line
- Large selection of control panel configurations
- Audio and Video may be selected married or unmarried on some panels
- Multilevel unmarried control panels available
- Standard 8 bit word serial communications
- Alpha numeric entry and display available on some panels
- Single or multi destination control panels available on some models
- Will operate the switcher up to 2000 feet using coax
- Multi source electronic components used, no hybrids, custom I.C.'s or mask programmable ROMs
- Custom panel requirements easily accommodated
- Milled plate aluminum used on front panels
- All front panels are brushed, deep etched and clear anodized
- Legends custom engraved and filled black

IV CP-1/X

The CP-1/X is either a full matrix or restricted Keypad control panel. The "X" designation indicates full matrix control panel. If a digit is substituted for "X" then this digit identifies the total number of destinations which the panel controls. These destinations must be specified when ordering, but may be changed later by recoding a PROM. The panel is complete with 7 segment LED readouts for BUSS, VIDEO PRESET, AUDIO PRESET, VIDEO STATUS and AUDIO STATUS. Selection of new source may be 1 of 4 modes; Audio follow Video, Audio only, Video only or Audio/Video unmarried. The unit is built in a desk top configuration.

IV CP-1/CX

This panel is similar to the CP-1/X, except the Keypad is coded for alpha input selection instead of numeric.

IV CP-1/XK

This panel is similar to the CP-1/X, except the TAKE function is disabled by the use of a lock and key.

IV CP-1/CXK

This panel is similar to the CP-1/X and also includes the features of the CP-1/CX and the CP-1/XK.

The CP2/X, XK, CX, CXK, are similar to the CP-1 but rack mounted. In addition, the CP-2 Panel can be restricted to any nine destinations, selected by DIP switches (provided) or may control the full matrix.

ROUTING SWITCHER CONTROL PANELS

IV CP-3/1

Single thumbwheel control panel with access to all inputs on one destination. Complete with TAKE pushbutton and 7-segment LED status readout. Simultaneous audio and video selection. Desk top mounted box.

IV CP-4/X

Rack mounted control panel. Thumbwheel input selection with TAKE pushbutton and numeric status display. Simultaneous audio and video selection.

A number (1 through 9) substituted for X indicates the total number of destinations the panel controls. Separate thumbwheel selection and status readout for each destination.

IV CP-5/X

Shadow pushbuttons with gold contacts and relegendable caps. Mounted in a brushed anodized aluminum panel. Pushbuttons available in multiples of 10 to a maximum of 50.

IV CP-6/X

Same as CP-5/X but with Clare Pendar S180 series illuminated pushbuttons.

IV CP-7

Salvo panel capable of 10 presets. MASTER TAKE pushbutton for simultaneous take of preset inputs. Status, and preset numeric displays. Simultaneous or separate audio and video.

IV CP-7/C

Same as IV CP-7 but with coded (alphanumeric) keypad.

IV CP-8/4

Controls one destination only. Has four overrides and four breakaway levels. Alphanumeric thumbwheel selection and alphanumeric display.

IV CP-9/1, IV CP-9/2

Similar to IV CP-4/1, IV CP-4/2 but with alphanumeric thumbwheel and numeric status display

IV CP-10

Alpha thumbwheel with unmarried audio-video operation. Six overrides and numeric status. Single destination control.

IV CP-11

Six destination control panel. Married audio/video operation only. Alphanumeric display. Preset function and alpha coded keypad.

IV CP-12

Alphanumeric coded keypad and status display. Six overrides. Simultaneous audio/video, or separate audio and video functions.

BROADCAST ROUTING SWITCHERS

6000 Broadcast Routing Switcher

Custom Control Panel

Features

- Solid state vertical interval switching.
- Compact expandable modular construction used throughout.
- Excellent video and audio specifications for full color broadcast use.
- Video only, audio only, audio follow married or unmarried control available.
- Crosspoint retention during power interruption optional.
- Tally LED on each video crosspoint indicates exact switcher status at all times.
- Conservatively rated, overload protected power supplies for trouble free operation.
- One pushbutton per crosspoint or thumb-wheel control panels available.

Description

The 6000 Series Switchers are specifically designed for small and medium audio/video routing systems. These versatile switchers are ideally suited as high quality electronic patch panels, delegate switchers or in any application where remote controlled switching is needed.

Compact 5 x 1 or 10 x 1 crosspoint modules plug directly into the motherboard assembly which also accommodates the input and output amplifier modules. This flexible configuration allows up to 24 outputs per 19-inch rack.

Switcher Matrices

BROADCAST ROUTING SWITCHER

6010 10 X 1 Self-Contained Broadcast Routing Switcher

Description:

The 6010 self contained switcher is a high quality 10 x 1 suitable for use throughout the television or radio plant, from production to monitoring applications. The flexible configuration and control system frees the Engineer from handbuilt or customized equipment procurement.

Configuration:

- Basic switcher is 10 x 1, video only, mono or stereo audio only or AFV with mono or stereo audio in one rack unit.
- One or both audio channels may be replaced with time code or control bus.
- Basic switcher may be expanded to 20 x 1 or more with additional 6010's and one control interconnection.
- Remote control via shielded audio pair may be factory installed or field installed later (no soldering or adjustments required).
- Tally is optionally available (one open collector per input).
- Parallel BCD control optionally available for automation interface.

Features:

- Relegendable pushbuttons with gold contacts and LED indicators.
- Two outputs per bus, video and audio.
- Loop through video inputs.
- Bridging audio inputs.
- Vertical interval switching.
- Hinged front panel for easy access to plug-in modules.
- Low power consumption.
- Second audio channel may be retrofitted.
- All electronic switching.

ROUTING SWITCHER

9100 SERIES ROUTING SWITCHER

FEATURES

Video

- Outputs of individual 16 x 4 cards are disabled when not required so that crosstalk for 256 x 256 is same as for 16 x 1
- All module interconnections are made via 75 ohms coax for controlled transmission characteristics
- System is easily timed because of short internal bus systems
- Vertical interval switching controlled by a single feed of sync or composite video to the controller
- All plug-in boards have overcurrent protection so that a short circuit failure only affects the board concerned
- All addressed boards (i.e. crosspoints and controller) identify their position in the matrix by backplane wiring — no adjustments or prom changing required
- Output cable equalization
- Input cable equalization
- True confidence tally

Audio

- Balanced throughout — drivers, crosspoints, intermodule transmission lines and outputs
- + 24dBm input and output levels with 600 ohms output impedance
- 50 ohms output impedance optional
- Audio-follow-video or full breakaway of audio/time code
- Multiple level audio available
- Extended bandwidth audio (100kHz)
- Click/transient free switching
- Over current protection
- True confidence tally

Control

- Accommodate all 6100/6200 series control panel types and options
- Battery retention of status during power fail (in controller module)

Power

- Modular plug-in power supplies
- Power supply backup system with built-in failure alarm system, continuous operation with one failed supply
- Simple, rugged, fan-cooled supplies offer reliable operation
- Over-temperature protection/alarm system prevents failure of system due to cooling failure

A new generation of routing switchers designed for medium to large routing systems. Its modular construction facilitates easy expansion up to 256 inputs with an unlimited number of outputs. Any combination of video, audio, and time code matrices are available.

All controls are microprocessor based with processors located in both the control panels and the matrix controller. Battery retention of status during power failure is provided and control panels are available in button per crosspoint, X-Y, thumbwheel, keypad, or combinations of these. RS232 and IEEE-488 control ports can be supplied when computer interface is desired.

Video Configuration

Input Distribution Amplifiers restore DC and provide input cable equalization up to 1000 feet. The input feed is then split into four 75 ohm outputs. 75 ohm coaxial cable is used for all inter-module connections. This provides controlled transmission characteristics.

MODEL 9100

VIDEO CROSSPOINT FRAME

AUDIO CROSSPOINT FRAME

CONTROL PANEL

Each video crosspoint frame is arranged in a 16-input by 64-output format. A crosspoint frame consists of sixteen 16 x 4 cards each with output buffers for 75 ohm cable. There is also a control buffer card. All addressed crosspoint cards identify their position in the matrix by backplane wiring thus eliminating DIP switch adjustments or PROM changing. Crosspoint cards may be removed and reinserted without switching off the system.

The combiner frame consists of sixteen 16 x 1 combiner cards. This, in conjunction with the crosspoint frames, makes up a 256 x 16 format. Output equalization adjustment is provided for up to 1000 feet of cable.

Audio Configuration

Each audio crosspoint frame consists of two 16-input buffer cards which drive sixteen 32 x 8 crosspoint cards. This results in a 32 x 128 frame format. There is also a control card in each frame for interfacing to the microprocessor controller. Differential input circuitry provides 82dB of common mode rejection at 60Hz.

The audio combiner cards each contain two 8 x 1 combiners. The frame consists of sixteen combiner cards to accommodate expansion up to 256 inputs by an unlimited number of outputs. Extended audio bandwidth (100kHz) allows use of time code channels.

Control Configuration

Control panels communicate with a system controller. The switcher modules are then controlled by a parallel control bus via the control card in each frame. Redundant control is possible by paralleling two control modules on the control bus in a master/slave configuration.

A wide variety of microprocessor based control systems are available including button per crosspoint, X-Y, thumbwheel, keypad, or combinations of these. All systems may be equipped with interrogation, numeric only or alphanumeric display on the control panels, CRT status displays, and rack mount alphanumeric displays.

Image Video designs control panels to meet the requirements of the particular customer. We can custom design one for your special application.

MACHINE CONTROL SYSTEMS

4100 Machine Assignment System

- Handles up to 160 Machines • Up to 24 Control Panels • Up to 25 Machines per Panel • Up to 35 levels of switching • Master start of preset functions • Tally of Remote/Local control • Communication via coaxial cable • Plug-in modules for flexibility and easy maintenance • Status generator and printer facility

System Controller

The organization is built around the System Controller which is made up of two sections; the Assignment Controller, and the Machine Controller. Each section contains a microprocessor and they communicate with each other via a multi-conductor cable in parallel format.

The Assignment panels all contain a microprocessor and communicate with the Assignment Controller via coaxial cable. The Assignment Controller handles the assignment of control panels and machine interfaces.

The control panels also all have a microprocessor and communicate with the Machine Controller via coaxial cable. The Machine Controller handles communications between the control panels and the machine interfaces.

Machine Assignment Panel

The machine assignment panel permits the assignment of any control panel to control any machine (VTR, Telecine) through the machine interface unit. It effectively interconnects the various control panels and the machine interfaces.

Assignment is made by simply entering the machine number and then the control panel number. Pressing ASSIGN completes the assignment. A machine cannot be assigned to more than one control panel. The communications link between a machine and a control panel is broken by entering the machine number and pressing CANCEL.

The machine and control panel numbers are three characters and do not have to be in any specific order.

Machine Interface

The machine interface is a two rack unit assembly capable of remotely controlling the functions of a machine. It consists of five Relay Tally Boards, a DIP Switch Board, a Line Driver Tally Board, and a Microprocessor Board.

Each Relay Tally Board is capable of seven levels of relays and seven return tallies. Pushbutton functions, e.g. Fastforward, are associated with each relay.

The Microprocessor Board communicates with the outside world and operates the relays etc.

The DIP Switch Board has DIP Switches for machine number assignment, relay close time, and baud rate etc.

The Line Driver Tally Board controls the remote tallies and confirms the presence of the power supplies.

Five 38-pin connectors at the rear of the frame interfaces between the relay boards and the actual machines being controlled.

VTR interfaces normally consist of 7 levels of control and Telecines normally have 21 levels. However, up to 35 levels may be controlled. The control is buffered via floating (form C type) relay contacts and the tally from the machine with an optical isolator.

Machine Assignment Panel

Machine Assignment System

Control Panel

This desk mount panel provides control of the machines assigned to it. The number of machines to be controlled varies depending on specific customer requirements. The standard configuration is 3 VTRs with 7 levels of control and 2 Telecines with 21 levels of control each. Special control panels with up to 25 machines and 35 functions per machine may be specially ordered.

A three character alphanumeric display shows which machine is assigned to the bus. The machine numbers do not have to follow any specific order and there can be a total of 160 machines in a system. The numbers assigned to the machines should be specified at the time of ordering. A blank machine number indicates that no machine is assigned.

Operations may be preset on all of the busses of the control panel and with one button, the MASTER START, all the selected functions will be taken. Functions are preset by holding down the PRESET button and depressing the desired functions. Preset functions can be cleared by holding down the PRESET button and depressing the function button again. Presets can also be cleared when they are initiated by the MASTER START button.

A coaxial cable is used to interconnect the control panel and the System Controller. Clare Pendar or Shadow type pushbuttons are available.

MASTER CONTROL

AUTOMATED MASTER CONTROL—MODEL 8100

Off The Shelf Broadcast Automation

Image Video now offers the world's first really practical automated master control system for broadcast applications.

The System is built around two components—a full capability master control (on-air) switcher with the most advanced features in the industry, and a state-of-the-art, plug-in automation system. The Automation Package has been kept to a minimal size with full function through the use of a Z-80® microprocessor. The Automation System simply plugs into the switcher matrix—no further hardware is required. So the master control switcher can be bought and used manually until volume makes the Automation System desirable.

The Design is based on six years experience in producing custom systems for major television and radio stations world-wide. All of the most advanced functions to date have been incorporated—you no longer have to sacrifice one function to get another. And because the Image Video Automation System is based on proven engineering, standard components and off the shelf hardware, your total package price is extremely competitive with units offering far less capability.

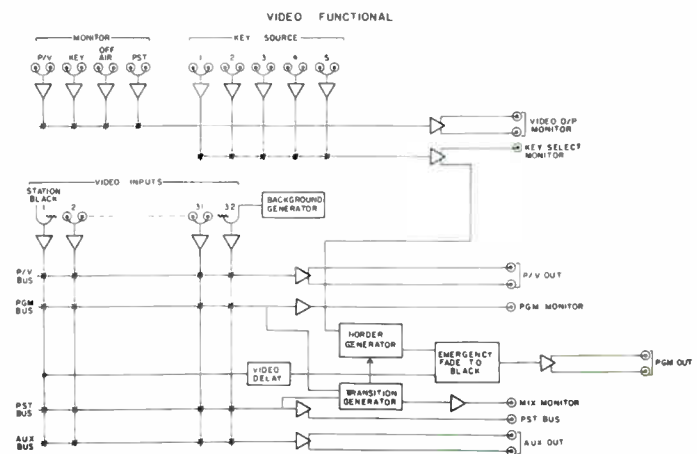

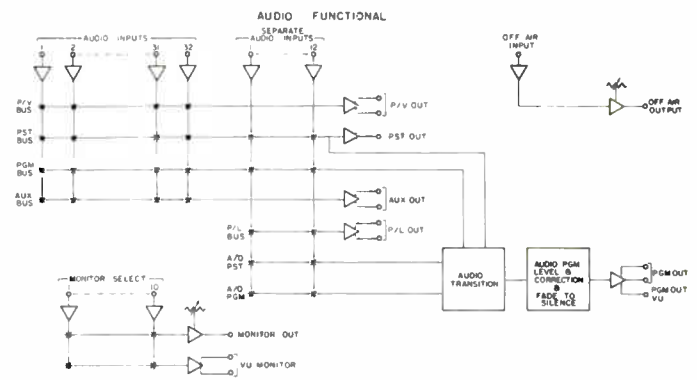

The System can interface with business systems for direct entry of accounting, traffic and other functions. Floppy discs are used for storage of daily programming and can be programmed with standard equipment off-line. A full 24 hours' events can be handled.

A printer is easily connected and back up processor is available.

Highlight Features:

- Electronic Digital Clock Timer indicates real time, elapsed time and countdown in 12 or 24 hour time modes. Provides for automatic time freeze as program events occur
- Automatic Pre Roll allows for stabilization of related equipment with adjustment increments of .01 seconds to 10 seconds maximum for each of the 30 inputs. Individual pre roll settings are achieved via a touch pad and protected against power loss.
- 4 Audio/Video Transition Modes
- Adjustable Transition Rates
- Start Facility on all Audio Inputs Available
- 40 Audio and 30 Video Inputs
- Audio/Video Married or Separate Operation
- Manual Fader Control
- Emergency Fade to Black for Video and Audio
- Audio and Video Preview Bus
- Separate Key Input Bus
- Colour Defeat Function
- Border Generator
- Matte Generator and Background Generator
- 5 Input Key Source Select and Monochrome Keyer
- 10 Separate Audio Inputs
- Continuously Variable Audio Over/Under Ratio
- Audio Level Correction Facility
- Comprehensive Audio Monitoring Facilities
- 48K of Ram for Data Storage
- 16K of ROM for Program Storage
- Dual 8" Floppy Discs for Off-Line Storage
- CRT Terminal For Data Entry and Status Display
- Line Printer for "As Aired Log" Available
- Optional 2nd CRT Entry and Display System and a Stand Alone Entry Disc Package

Z-80 is a registered trademark of Zilog Corporation

MONITORING PANELS

7105 Silence Monitor

Features

- Expandable two to ten channels in single rack unit enclosure
- Immediate alarm warning indicator
- Audible and visual alarm (after preset time lapse)
- Remote alarm outputs
- Cancelling/non-cancelling resettable audible alarm
- Simple setup procedure
- Low cost
- 110/220V operation

Specifications

- Number of Detectors Multiples of 2, up to 10 max
- Audio Input Impedance 600 ohms balanced, bridging
- Acceptable Input Level +24dBm to -68dBm
- Trip Threshold Range Adjustable from -20dBm through -68dBm
- Detection to Alarm Time Delay 0 sec through 2 mins, 35 sec in 5 sec increments
- Remote Alarm Outputs 1 per detector, Open-collector active low 150mA, 30V max
- Size 1-3/4" high, 19" wide, 15" deep

VMP-1 Voltage Monitor Panel

- Monitors up to 128 DC voltages
- Digital circuitry throughout
- Adjustable display rate
- Software adjusted alarm tolerances
- Continuous and automatic monitoring

Options

- 01 Basic unit c/w AC power supply, local alarm and remote alarm connectors, seven segment LED display
- 02 Eight character alphanumeric display c/w supporting circuitry.
- 03 Battery backup for above
- 04 Printer dump circuitry to allow hard copy of information displayed
- 05 CRT interface to continuously display data on BW monitor

The Image Video Audio Silence Monitor automatically monitors up to ten audio inputs and issues audible and visual alarms if any input falls below a preset level. It is a compact, low cost, single rack unit product incorporating many unique features and is particularly suited for use in isolated, non-supervised areas.

Operation

Each silence detector channel can be set to trip at any level from -20dBm through -68dBm. Individual alarm delays are switch settable from 0 seconds through 2 minutes, 35 seconds. As the audio level falls below the detector threshold, the amber warning LED of the channel lights. If this condition persists for a period determined by that channel's delay setting, the red alarm LED lights, the remote output goes low and an audible warning is issued.

Remote alarm outputs are provided for each channel. These outputs will sink up to 150mA at up to 30V and are open-collector, active-low enable. They may be used for a variety of purposes as the customer desires. The remote alarms may be individually disabled.

The audible alarm can be manually reset. However, a simple strap feature permits automatic reset when the alarm disappears. Conversely, the automatic reset can be inhibited so that the operator will know that silence occurred when no one was in attendance.

The Image Video Voltage Monitor is a microprocessor based unit capable of monitoring up to 128 individual D.C. voltage sources both continuously and automatically. Circuitry is digital throughout, eliminating the need for adjustment and improving reliability.

Alarm tolerances are set via a software (PROM) adjustment and may contain both upper and lower limits. A channel failure is announced through a local sonic alarm and silenced with a pushbutton. Both alarm and reset functions are remotored through a rear panel connector.

The standard unit is equipped with LED type seven segment displays, indicating channel number and voltage. Display rate is adjusted by a front panel control.

Several enhancements are available as factory installed options.

Operation

Normal (Standby) Mode. In this mode, the DISPLAY RATE control is rotated fully CCW and CHANNEL and VOLTAGE displays are blanked. The green STBY lamp indicates that the microprocessor is scanning all of the channels.

Alarm Mode. If for any reason an input voltage falls outside its tolerance range, the red displays illuminate indicating the channel that failed and its present voltage. Simultaneously the remote and local alarms are switched on. If more than one channel failure exists each faulty channel is displayed in turn at a fixed rate which may be overridden by the DISPLAY RATE control.

The audible alarm can be cancelled at any time by the ALARM RESET pushbutton, however, the displays will remain active until a no-fault condition is restored.

Examine Mode. The Voltage Monitor may also be used as a maintenance tool, even if no alarms are present. A slight CW rotation of the DISPLAY RATE control allows the displayed channel's voltage to be shown permanently. A further CW rotation allows the channels to be sequentially stepped at a variable rate. It should be noted that at all times, no matter what operational mode is selected, ALL channel voltages are ALWAYS MEASURED.

IMAGE VIDEO LTD.

MODEL 7001C

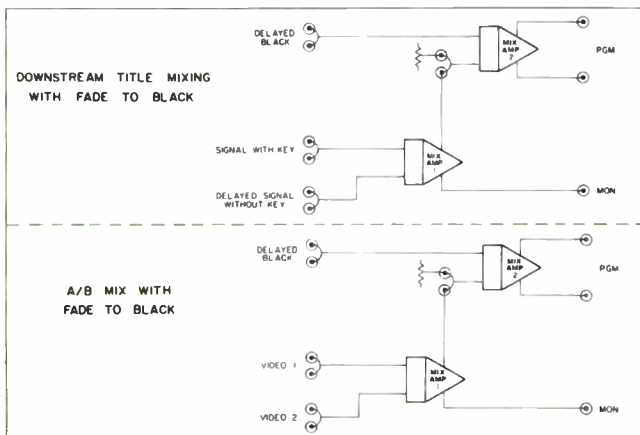

MODEL 7001C — DUAL VIDEO MIX AMP

Features

- Two separate video mixing amplifiers housed in a single rack unit
- Remote control panel
- Mix amps may be independently operated or cascaded
- Operates on synchronous video source — no external sync requirements
- Control and tally output on same connector on rear panel
- Standard AUTO-MIX permits variable rate and automatic mix on amp 1
- Easily conformed to existing system
- Audio-follow-video option available
- Manual fader on amp 2

The Dual Video Mix Amp — Model 7001C incorporates two independent video mixing amplifiers housed in a single rack unit and controlled from a remote panel.

The Model 7001C meets all broadcast specifications and is ideal for use in downstream title mixing and A/B mixing applications.

TYPICAL APPLICATIONS

SPECIFICATIONS

Video Inputs	Four, 1V p-p, 75 ohms terminating
Video Outputs	Four, 1V p-p, (2 outputs per amp)
Frequency Response	±0.2dB to 5MHz, ±0.5dB to 8MHz
Diff. Phase	< 1.5° (10-90% APL)
Diff. Gain	< 1.5° (10-90% APL)
Crosstalk	> 55dB at 3.58MHz
Tilt (Vert & Horiz)	< 1%
Signal to Noise	> 60dB
Path Length	.25ns (through one amplifier)
Path Length Differential	< 1°
Tally Output	Open Collector pull down
Electrical	117/230V, 50/60Hz
Electronics Frame	.1 rack unit (1-3/4" x 19" x 10")
Control Panel	7" x 3" x 3-1/2"
Video Connector	BNC
Control and Tally Connector	D-Sub miniature

MODEL 7707 — UNIVERSAL UNDER MONITOR DISPLAY

The basic system consists of 2 components: the monitor display driver and the monitor status display.

AUDIO/VIDEO COMPONENTS

MODEL 7707K DRIVER AND DISPLAY UNITS

FEATURES

Driver Frame

- Two rack units high
- Will drive up to 9 displays
- Connects to displays by 37 pin flat ribbon cable
- Connects directly to the Routing Switcher or to an RS232 interface unit (7707 only)
- On Air Tally inputs connected by 25 pin D type connector—the user supplies the contact closures only
- Internal Power Supply
- Alphanumeric Keypad for message update (7707K only)

Display Unit

- Single rack unit high
- Available in both rack and wall-mounted design
- Rack mounted units are available in a number of formats to accommodate the picture monitor layout: displays can be located in the center, to the left or right side, or two displays per panel

There are two types of systems available — the model 7707 and the model 7707K. Both systems use the same kinds of monitor status displays; only the display drivers are different.

The model 7707 system can be driven directly from Image Video routing or master control switchers or with an optional RS232 interface, can be driven directly from any routing or master control switcher that has a tally output. Each driver frame can handle up to nine display units and multiple drivers may be connected via the control inputs to accommodate requirements for more than nine displays.

The model 7707K system has a built-in alphanumeric keypad used to update message data on the display units. Up to nine display units may be driven from one 7707K driver, however, multiple drivers may be connected together to facilitate additional display units. Only one of these drivers requires a keypad. Each display output is internally assigned a display number (1 to 225) via a dip switch.

MODELS 601, 602 10X1 PASSIVE ROUTING SWITCHERS

Video Model 601 AFV Switcher

Transparent signal path ensures the integrity of the audio/video signal.

Video signal is fed through the switcher with excellent crosstalk specs and high stability with no noise interference. And, there is unity transmission gain. Input video is via isolated BNC connectors and is terminated with built-in 75 ohms 1% resistors. Selected input is indicated by an orange strip on input pushbuttons.

Crosstalk	Better than 40dB at 4.2MHz (All other inputs hostile)
Physical Dimensions	19" x 1-3/4" x 4"

Model 602 Dual Audio Switcher

Each audio input is terminated with built-in 600 ohms resistors. The inputs and outputs are brought to the panel via two 25-pin D-type connectors for wiring convenience. There is no degradation of the input signal.

Crosstalk	Better than 70dB at 20kHz (All other inputs hostile)
Physical Dimensions	19" x 1-3/4" x 4"

Ordering Information

For 10 x 1 audio follow video	Model 601
For 10 x 1 dual audio	Model 602

992

952

982

982 ROUTING SWITCHER

DESCRIPTION

The Model 982 AFV Routing Switcher is based upon refinement of the CMOS logic family and is characterized by extremely low power requirements, high noise immunity, and controlled rise and fall times.

FEATURES

- Vertical interval switching
- Ten inputs with two video and four audio outputs per bus
- Modular construction/bus expandable
- Employs latest COS/MOS logic
- Self-contained using only 1 3/4" rack space

MATRIX

The matrix requires only 1-3/4" of standard 19" rack space, is self-contained, and has a dual voltage power supply and vertical trigger generator dedicated only to this matrix. The vertical interval switching pulses are derived from video.

Available with 952 dual audio and/or 992 remote control with 25' cable.

982 ROUTING SWITCHER (SC) \$ 950.00
Audio Follow Video; 10 X 1 Vertical Interval Switcher; Loop Thru Video Inputs; Remote Controllable; Additional Audio Channels for Stereo; Auto Sequencer; Stackable to form up to 10 X 10 Matrix.

982 OPTIONS:

972 Two Additional Audio Channels (SC) **590.00**
952 Automatic Sequencer with Manual Remote (SC) **400.00**
992 Remote Controller with 25 ft. Cable (SC) **225.00**
Additional Cable up to 250 ft. **2.00/ft.**

SPECIFICATIONS

Audio

Inputs:
Impedance: balanced bridging
Level: 0dBm, +/- 15dBm

Outputs:
Program: 2
Impedance: 600 ohms balanced
Level: 15dBm max.

Performance:
Harmonic Distortion: less than .25%, 20Hz to 20KHz at 0dBm output
Frequency Response: +/- 0.1dB, 10Hz to 30KHz
Crosstalk: less than or equal to -60dB
Signal to Noise Ratio: less than or equal to -65dBm below +0dBm
Gain: Unity +/- 2dB

Mechanical/Power
Video Connectors: BNC
Audio Connectors: Micro Blue Ribbons
Dimensions: 1.75 x 19 x 13
Power Required: 115 volts AC +/- 10% 50-60 Hz
Temperature Range: 0-50° C

Video

Inputs:
Impedance: 75 ohms, bridging
Return Loss: 35dB minimum

Outputs:
Impedance: 75 ohms, source terminated
Number: 2
Return Loss: 35dB minimum

Performance:
Frequency Response: DC to 8MHz +/- .25dB
Differential Phase: less than 1°
Differential Gain: less than 1%
Tilt (line or field rate): less than 1%
Crosstalk: less than -52dB at 3.58 mHz (4.43 PAL)
Signal/Noise Ratio: less than 60dB to 5mHz

1100 SERIES AFV ROUTING SWITCHER

FEATURES:

- Vertical interval switching
- Two video outputs, two audio outputs on each bus
- Color timed system
- Field expandable
- BCD control
- Modular construction
- COS/MOS logic
- Front-panel plug-accessibility
- Microprocessor control option
- Computer adaptable

Description:

The 1100 Series Routing Switcher is a third generation design providing inherently simple and extremely reliable operation based on a decade of experience.

One 7" matrix module contains the input buffers, crosspoints, latch and output DA for a 20 by 1 balanced audio or wide band video switcher.

This system has been field tested in many installations around the country and has proven not only completely reliable, but also mechanically rugged and free from major service problems.

Since inputs and outputs are in different planes, crosstalk is greatly reduced.

All cards are interchangeable and matrices are direct coupled, eliminating the introduction of tilt.

Audio is switched balanced negating the effects of transients and spurious crosstalk in the system, and uses high impedance bridging units.

The 1100 system offers maximum flexibility by its availability with many different control options including pushbuttons, touchtone pad, keyboard, thumbwheel preset and take, microprocessor control, and special controls. Audio, AFV, audio and video, or almost any combination audio and video can be switched in any manner required by the user.

Pushbutton Controllers

The standard pushbutton controller (Model 1190) has up to 20 illuminated pushbuttons in a 1-3/4" rack mount panel. For audio breakaway in AFV routing switchers the Model 1192 with 10, 15 or 20 inputs, is available with a 3-1/2" panel with two rows of buttons and breakaway audio switch is available.

Thumbwheel Controllers

Thumbwheel controllers are particularly useful in larger systems or when large scale expansion is planned as they can accommodate up to 100 inputs, with modification when the system is expanded. For certain applications thumbwheels alone are available (Model 1193). For operational ease, the standard thumbwheel configuration includes an LED status window and Take button (Model 1195). This allows presetting an input and switching directly to it on the vertical interval. Panels are available in rack mount and multiple output configurations and with audio breakaway. (Models 1194 and 1196).

Keyboard Control

Touchpad keyboards with LED status windows are available in a desk top configuration or in rack mount panels. Touchpads allow pre-setting inputs and switching on the vertical interval. Audio breakaway is not available.

Microprocessor Controller

The Model 681 microprocessor controller is a very cost-effective means of controlling large systems. A central computer and terminal allow selection of any input to any output with audio breakaway. An 80 event memory, sequenced by an internal clock, allows presetting changes in router status for up to 7 days. The memory has backup battery protection to restore crosspoint status in the event of power interruption. Additional control terminals are available as options.

1100 Series Routing Switchers (from 10 x 5 to 20 x 20)

Audio Follow Video	from \$3,250.00 to \$15,200.00
Video or Audio only	from \$2,500.00 to \$9,200.00

Controllers

1190-10	Pushbutton Controller with 10 Inputs	\$ 340.00
1190-15	Pushbutton Controller with 15 Inputs	420.00
1190-20	Pushbutton Controller with 20 Inputs	505.00
1192-10	Pushbutton Controller with Audio Breakaway; 10 Inputs	675.00
1192-15	Pushbutton Controller with Audio Breakaway; 15 Inputs	840.00
1192	Pushbutton Controller with Audio Breakaway; 20 Inputs	1,010.00
1193	Thumbwheel Controller	105.00
1194	Dual Thumbwheel Controller with Audio Breakaway	170.00
1195	Thumbwheel Controller with LED Status; Preset and Take	280.00
1196	Dual Thumbwheel Controller with LED Status; Preset and Take	560.00
1181	Keypad Controller Desk Mount	435.00
1181R	Keypad Controller Rack Mount	485.00
681	Microprocessor Controller	5,600.00
683	Additional CRT for Microprocessor Controller	1,120.00
B-6000	Controller Interface card for 681	850.00
	Additional Cable (per Output Bus)	2.50/ft.
	Spare Parts Kit	500.00
	Cable Length 50'	Standard

MODEL 831

831 Master Control Switcher

FEATURES

- Ten AFV Inputs including Blackburst/Colorizer
- Five Breakaway Audio Inputs with Auto Cart Start
- Audio Over/Under
- Auto Transition Audio/Video Mixer, Cut or 3 Mix Rates
- Downstream Keyer with 4 Input Selector, Colorizer and Key Edging
- Non-Sync Detectors with Mix Transition Inhibit
- Program VU Meter and Level Adjust
- Audition and Program Monitor Amplifiers with Gain Controls
- Time Display (Count-up Event Timer)

The Model 831 Master Control Switcher with audio follow video utilizes state-of-the-art circuitry and construction techniques to maximize operation convenience, flexibility and accuracy.

The Model 831 utilizes a 10 in and 2 output AFV matrix which allows for direct cuts on the Program bus at any time. The Preset/Audition bus allows auditioning of any of the inputs and presetting of the next event. The auto transition system allows for cuts and for audio and

video mix transitions between the Preset and Program busses. Mix transitions at one-half, one and two second rates may be preselected but will be inhibited if a non-synchronous source is selected. A downstream key edger with 4 input selector, colorizer and outline, shadow and border edging is standard.

Both switching busses provide 5 breakaway audio inputs with auto cart start which may be used with any 600 ohm source. A variable ratio audio mix between Program and Preset is provided when audio over/under is activated. A Program VU meter, Program level control and Program and Audition 5 watt monitor amplifiers are standard.

831 Master Control Switcher \$11,700.00

MASTER CONTROL SWITCHER

MODEL 899-20 WITH STEREO OPTION

899 Master Control Switcher

- 10 to 30 inputs including Color Black
- Equalizing Input Amplifiers with +/- 15° Phase Adjust
- 5 Breakaway Audio Inputs with Auto Cart Start
- Audio Over/Under
- Auto Transition Audio/Video Mixer, cut or 3 mix rates
- Downstream Keyer with 4 Input Selector, Colorizer and Key Edging
- Non-Sync Detector with Mix Transition Inhibit
- Program VU Meter and Level Adjust
- Audition and Program Monitor Amplifiers with Gain Controls
- Live/Air Input Selector to Program Monitor Amplifier
- Audition VU Meter
- Time Display
- Tally System
- Master Fade to Black/Pulse Processing

The Model 899 Master Control Switcher combines the Model 1100 series routing switcher matrix with state-of-the-art electronics to provide both a master control switcher and a routing switcher matrix. Based on the 1100 series router matrix, the 899 uses two output buses for its audio follow video matrix. The additional output buses (3 minimum) may be used for preview or routing using standard 1100 series controllers. Equalizing amplifiers simplify color timing of the system. The 899 is also available in various input sizes from 15 to 30 inputs.

The Program bus allows for direct cuts at any time. The Preset/Audition bus allows auditioning of any of the inputs and presetting of the next event. The auto transition system allows for cuts and for audio and video mix transitions between the Preset and Program buses. Mix transitions of one-half, one and two second rates may be preselected, but will be inhibited if a non-synchronous source is selected. A downstream key edger with four input selector, colorizer and outline, shadow and border edging is standard.

Both switching busses provide 5 breakaway audio inputs with auto cart start which may be used with any 600 ohm source. A variable ratio audio mix between Program and Preset is provided when audio over/under is activated. A program VU meter and program level control and program and audition 5 watt monitor amplifiers with gain controls on the panel are standard.

OPTIONS

- Model 810 Booth Mic Pre-Amplifier: Provides booth mic level setting prior to air
- Model 868 Machine Control Logic

**5010 RACK FRAME/
 5030 EXTENDER/5050 (VIDEO)/
 7050 (AUDIO) POWER SUPPLY**

FEATURES

- Rugged, modular construction holds up to eight (8) plug-in modules (including power supply)
- Universal power supply
- Dual voltage

Description

The Model 5010 3-1/2" rack frame accommodates eight (8) plug-in modules including the power supply. The Model 5050 Video Power Supply provides a source for the distribution of pre-regulated +10V and -10VDC to an entire rack frame of seven (7) modules. The Model 7050 Audio Power Supply provides a source for the distribution of pre-regulated +15VDC and -15VDC to an entire rack frame of seven (7) modules. Both the 5050 and 7050 power supplies are plug-in modules which utilize rugged, heavy-duty components in a straightforward and reliable design. They supply voltage limited low ripple power from compact convection cooled modules.

5010	\$200.00
5030	40.00
5050	200.00
7050	200.00

**5130
 VIDEO DISTRIBUTION AMPLIFIER**

FEATURES

- Specifically designed for NTSC and PAL standard color video systems
- Six (6) isolated outputs
- Flat frequency response
- Minimum chroma-luminance delay (less than 10 ns) minimal phase and gain distortion
- Self-regulation of incoming DC voltage
- Uses one (1) module space in 501 rack frame

5130	\$175.00
------------	----------

**5160
 VIDEO EQUALIZATION AMPLIFIER**

FEATURES

- Six (6) isolated outputs
- Continuously variable equalization and ± 15 phase adjustment at 3.58MHz
- Feedback, sample and hold clamp circuit for stable DC reference
- Common mode rejection greater than 60dB at 60Hz
- Self-regulation of incoming DC voltages
- Uses one (1) module space in 5010 rack frame

5160	\$250.00
------------	----------

**TERMINAL PROCESSING/
 SIGNAL GENERATING EQUIPMENT**

**5190
 PULSE DISTRIBUTION AMPLIFIER
 5220 QUAD PULSE DELAY
 DISTRIBUTION AMPLIFIER**

FEATURES

- Four (4) outputs, each individually driven
- Total regeneration of pulses allow any of the outputs to be operated unterminated
- Circuits or regenerative devices sensitive to hum or other low frequency disturbances are not utilized
- Shaped rise times (less than 100 ns)
- Self-regulation of incoming DC voltages
- Uses one (1) module space in 5010 rack frame

5190	\$185.00
5220	225.00

5290 COLOR BLACK GENERATOR

FEATURES

- Produces Black Burst signal for use as a color black or to drive devices which genlock to a black burst signal
- Adjustments for burst phase and level, sync level and setup
- Uses one (1) module space in 5010 rack frame

5290	\$505.00
------------	----------

**5225 SUBCARRIER
 DISTRIBUTION AMPLIFIER**

FEATURES

- Subcarrier output level independent of input level
- Two step continuously variable 0-170° and 170-340° phase control
- Self-regulation of incoming DC voltage
- Uses one (1) module space in 5010 rack frame

5225	\$285.00
------------	----------

**5600 SMPTE
 COLOR BAR GENERATOR**

FEATURES

- Meets RS 189A specifications including new SMPTE Monitor Alignment signal
- Front panel controls switchable to full field or split field color bars or monitor alignment
- Digitally synthesized I and Q signals
- Filtered I and Q bands
- Composite output delay for ease of system timing
- Self regulation of incoming DC voltage
- Uses two (2) module spaces in 5010 rack frame

5600	\$750.00
------------	----------

5690 SYNC GENERATOR

FEATURES

- TCSO 14.3MHz Crystal Oscillator
- Digitally derived pulses
- Self-regulation of incoming DC voltages
- Uses one (1) module space in rack frame
- Meets RS170A standard

5690	\$590.00
------------	----------

**7070
 AUDIO DISTRIBUTION AMPLIFIER**

FEATURES

- 20dBm maximum output level
- Six (6) outputs, 600 ohms balanced
- Flat frequency response
- Self-regulation of incoming DC voltage
- Uses one (1) module space in 5010 rack frame

7070 Audio D/A 6 Output	\$225.00
7200 Monitor Amp	265.00

*Requires 7050 (Audio) Power Supply

INTERPHASE

2060 Menold Dr.
Allison Park, PA 15101
(412) 367-3775

CB-1

CB-1 ELECTRONIC SLATE BORDER GENERATOR

BORDER GENERATOR FEATURES

- Safe Action/Title Display with Center Crosshairs
- Internal Keyer — Selectable Hard or Soft Key
- Crosshatch Display
- Custom Patterns Available
- Remote Controllable — SPDT Switch Required
- Digitally Generated Patterns for Stability and Accuracy
- 1 Line Vertical, .15 μ s. Horizontal Resolution
- 2, 75 ohm 1%, Outputs

COUNTDOWN GENERATOR FEATURES

- Selectable Size Numbers 7 to 112 Lines
- Audio Output — Beeps Over Tone
- Internal Keyer
- Remote Controllable — SPST Switch Required
- Relay Closure on "Zero"
- No Pulses Required — Locks to Input Video
- Countdown Position Adjustable over Entire H & V Picture
- 1, 75 ohm 1%, Output

The CB-1 provides two useful post-production accessories in one compact package.

The Electronic Countdown Slate provides a digitally generated, 7 segment style countdown from 10 to 3. Both size and positioning are adjustable. The CB-1 derives its timing from input Video. It contains an internal Video Keyer that can be used to key the countdown over the program or to add its key signal to a character generator's.

The CB-1 audio output is a 400Hz tone that rises in level 12dB, for 200ms after each number transition. The Tone automatically starts when the slate is activated and turns off .2 sec. after the "3". With the slate function switch in the Tone position, a low distortion, steady 400Hz tone is available for reference or utility use.

The Countdown Video and tone disappear 200 ms. after the "3". A relay is activated at "0". Its contacts are available on a rear mounted terminal strip and can be used to activate a switcher or other device.

The Border Generator utilizes a phased-locked-loop, locked to the input video, to clock a read only memory that generates the video pattern. This translates into long-term stability and accuracy.

Two patterns are selectable by the front panel switch or remote control: 1. Safe Border/Safe Title/Center Crosshairs 2. Safe Border/Safe Title/With Crosshatch. The crosshatch display is useful for monitor alignment or graphic positioning. User defined custom patterns are available, or they can be developed in-house with access to an EPROM programmer.

The Key Level is adjustable from 0 to 110 IEEU units. An internal jumper can select a Hard or Soft Key mode. In the Hard Key mode, the pattern is keyed regardless of the program video level. In the Soft Key mode, the pattern is keyed only where the program luminance is lower than the pattern's luminance. This mode provides a non-obtrusive display ideal for line monitor use.

DIGITAL GENERATOR/SWITCHERS

S-20

S-202 10x1

DUAL AUDIO/REMOTE CONTROL SWITCHER

FEATURES

- One Video — Two Audio Channels
- Tally Contacts Standard
- Gold Contact Switches with LED Indicators
- Can be Configured as a 19 x 1 Switcher
- Modules Removable from the Front of the Unit
- Occupies only 1 RU of Panel Space
- Power Switch, Test Points, and Adjustments Accessible From the Front of the Unit
- Interface to SMPTE (RP-113) Digital Machine Control Optional
- 10 BNC Video, 2 x 10 Audio Inputs
- 2 Video Outputs, 2 x 2 Audio
- RF Equals +0/-3dB, 20Hz to 20kHz
- 10 Hours Data Retention in Cases of Power Loss

The Interphase S-202 is the 10 x 1 switcher with everything. Dual audio, multiple panel remote control, audio breakaway, tally contacts and the specifications to back it all up.

Remote control is accomplished via serial digital data. Up to four remote control panels can be connected to one S-202 utilizing normal shielded audio cable. Cmos circuitry is utilized throughout the unit for low power consumption and high reliability. Memory backup is provided for the event of a power failure.

S-20 AUDIO FOLLOW VIDEO PASSIVE SWITCHER

FEATURES

- 10 Audio/Video Inputs
- BNC Video Connectors
- No Power Requirements
- Balanced Audio Switching
- Title Strip to Identify Sources
- Gold Contact, Premium Switches Utilized for Trouble Free Operation
- All Unselected Video Sources Terminated with 75 ohms \pm 1%
- All Unselected Audio Sources Terminated with 600 ohms
- Colored Switch Lens to Identify Selected Source
- Compact Size — 1.73" x 19" x 6" Mounts in Standard EIA Rack

INTERPHASE

2060 Menold Dr.
Allison Park, PA 15101
(412) 367-3775

M-400 MACHINE CONTROL SYSTEM FEATURES

- Up to 250 Machines
- Up to 24 Functions per Machine
- Up to 24 Tallies per Machine
- No Switching Matrix Required
- Custom Control Panels
- Up to 8 Control Panels
- Up to 10 Machines per Panel
- SMPTE (RP-113) Compatible
- No Central Assignment Controller Required

The Interphase M-400 Machine Control System was developed to merge the existing older equipment in a typical Broadcast facility with the new, RS-422, digitally controlled equipment of today and tomorrow. It accomplishes this with a minimum of hardware.

The M-400 is designed to conform to the Multi-Point operational configuration of SMPTE RP-113. It can consist of from 1 to 8 control panels and from 1 to 250 machines, communicating via a common RS-422 digital communications bus.

The Machine assignment problem is addressed by a shared responsibility between the machine operator and the control panel operator. A machine is delegated to a particular Control Panel location by selecting one of the eight assignment buttons on the Machine Interface. The assignment is completed when that machine number is selected on one of the leverwheel switches of the delegated Control Panel. There is no central assignment controller to contend with. In fact, a large system can be re-configured into several smaller systems by simply moving some cables. The fact that no "overhead" equipment is required, makes the M-400 cost-effective for small systems.

The M-400 system uses one looped RS-422 bus for all machines and control panels. Only one Control Panel will be in control of the bus at any time. Control of the bus is transferred between control panels utilizing the "ESCAPE" provision of RP-113. While in control of the bus, a Control Panel will Poll each machine assigned to it and update its status. If a command is initiated the panel will initiate a command sequence message. When polling is completed, control of the bus is transferred to the next Control Panel and the sequence is repeated.

MACHINE CONTROL SYSTEM

MACHINE CONTROL PANEL

VTR INTERFACE

Control Panels

The Control Panels are normally built to the customers specifications. The standard control panel shown consists of four VTR controls of five functions and two film controls of 19 functions. Control panels can be supplied ranging from a single rack unit for one VTR with 2-8 functions to a desk mount unit with 10 VTRs with eight functions.

Machine Interface

The Machine Interface is available in two basic versions: an eight function unit, suitable for VTRs and a 24 function unit suitable for film chains. Both units mount in a 19" EIA rack and contain eight front panel Control Delegate switches. The 24 function unit has relay (form A) outputs and opto-isolator tally inputs. The eight function also has relay outputs, opto-isolator inputs and an additional RS-422 Port to communicate with those devices that use RS-422 but are not RP-113 compatible. It will, of course, interface with devices that are RP-113 compatible, depending on the software supplied.

VM19X 220-240VAC 50 Hz (CCIR) **399.00**

Viewing area 172 sq. in. UL listed.

VIDEO SWITCHERS

Provide a means of routing a number of cameras to a single video display (monitor) or recorder.

LMS6D \$116.00

Manual Switchers

Passive Manual-MS and LMS Series—Economical, reliable low signal loss mechanical switchers. Available in 4 and 6 position with terminating or looping inputs.

Active Manual-MS-L and LMS-L Series—Feather touch electronic switching. Illuminated. Low power micro-CMOS circuitry. Javelin V-Phase available. Looping and terminating versions. Modular circuit board construction for quick field service or system expansion at minimal cost.

Positions available: 2, 4, 6, 8, 10, 12, 16, 20, 24, 28, 32. Available in 117VAC 60 Hz or 220-240VAC 50 Hz (CCIR).

HSS6D \$249.00

Sequential Switchers™

All Javelin Sequential Switchers feature low power CMOS circuitry on two position modular board for quick field service or system expansion at minimal cost. Individual dwell pot per camera position, plus overall dwell pot on front panel for varied camera viewing times. Javelin V-Phase available. Looping and terminating versions.

Homing Sequential HSS-Terminating LIHSS-Looping—Provide for single monitor output. Front mounted switches provide camera by-pass, auto sequence and camera hold.

Bridging Sequential BSS-Terminating LIBSS-Looping—Two monitor outputs. Displays sequencing cameras on monitor #1 while selected camera is viewed on monitor #2. Looping series permits independent dual station control. Same switch features as Homing Sequential.

Auto Alarming Sequential—All Javelin Homing and Bridging switchers available in auto alarm versions.

- AHSS — Auto Alarm Homing (Terminating)
- LAHSS — Auto Alarm Homing (Looping)
- ABSS — Auto Alarm Bridging (Terminating)
- LABSS — Auto Alarm Bridging (Looping)

Will automatically switch to camera covering an intruded area when area alarms are tripped. N. O. and N. C. relay contacts to operate other remote devices—recorders, phone dialers, etc.

All Sequential Switchers available in desk top or rack mount cabinets.

Positions available: 2, 4, 6, 8, 10, 12, 16, 20, 24, 28, 32. All Sequential Switchers available in 117VAC 60 Hz or 220-240VAC 50 Hz (CCIR).

Telex 19-4860 JAVELIN TRNC

OMNI-100™ /SUPER SWITCHER™

Omni-100 is Javelin's new total system controller. Plug-in modular components can be combined as required to fit any requirements from a simple 2 camera video-only system to complete control of a 100 camera/100 alarm integrated system with pan/tilt and motorized lenses. All video switching is performed on a single microprocessor-based Master Control. The same Master Control can be used to completely integrate a full alarm network simply by adding Alarm Gathering Panels as required.

An auxiliary Accessory Control Keyboard can be added at any time to provide complete pan/tilt, zoom, focus and iris control of up to 100 cameras. The Accessory Control System (ACS) also includes built-in remote control of any six on/off functions (room lights, camera power, etc.) per camera position.

A Remote Transmitter and Receiver relays control signals over long line twisted pair wire.

The video switching system is available separately as SuperSwitcher, and can be expanded into a full control system simply by adding components.

SWITCHING FUNCTIONS:

- Manual
- Looping
- Sequential
- Auto Alarming
- Bridging
- Remote

FEATURES:

- Expandable to 100 cameras and 100 alarms
- Variable speed automatic sequencing
- Adjustable dwell on individual cameras
- Bypass and restore functions (video and alarm)
- Forward and back search function
- Automatic find bypass search function
- Full control of pan, tilt, zoom, focus and iris AutoPan control
- Memory-stored preset positions
- Manual or alarm activated home return
- 6 keyboard controlled on/off functions per camera position
- Remote control of room lights, locks, housings, etc.
- Interface with automatic alarm response - autodialer, etc.

SWITCHER

System Components

JO-101 MASTER CONTROL—Pressure sensitive touch pads allow the operator to select which type of switching the system will do, and program those functions. Two LED digital displays indicate which camera is being monitored and read sequence time in seconds during sequencing selection. The Master Control unit interfaces with the Video Gathering Panel via a plug in ribbon cable. SuperSwitcher and OMNI-100 provide the user with switcher versatility unheard of in the security marketplace. **\$349.00**

JO-102AC AUXILIARY KEYBOARD — Attaches directly to the JO-101MC Master Control to provide accessory control for the entire system. Pan/tilt or scanner control; zoom, focus and iris control; and remote control of six functions per camera position are operated from pressure sensitive touchpads on the JO-102AC ACS keyboard. **\$185.00**

JO-103RT REMOTE TRANSMITTER—Converts signals from the video alarm gathering panels to long line twisted pair transmission, enabling remote operation of the system. This configuration eliminates costly coaxial cable previously associated with non-remote switchers. **\$422.00**

JO-104RR REMOTE RECEIVER —Reverts signals from Remote Transmitter. **\$422.00**

JO-105VP VIDEO GATHERING PANEL—The Video Gathering Panel is a 10 position switching module providing input for as few as one camera and as many as 10. Up to 10 Video Gathering Panels may be utilized in the system for a maximum capacity of 100 video inputs. No matter how many panels are used, all are controlled by one Master Control. Looping or terminating switching functions are accomplished individually via a switch at each position on the Video Gathering Panel. **\$286.00**

JO-106AP ALARM GATHERING PANEL—The Alarm Gathering Panel is similar to the Video Gathering Panel in that individual panels handle up to 10 alarm inputs and 10 panels may be utilized providing up to 100 alarm inputs. Fire, smoke, seismic, door and window, infrared or any other sensor with a normally open or closed contact may be connected to the system. Alarms are set and re-set by Master Control and may be sequenced or bypassed. **\$270.00**

JO-107MP MULTIPLEXER PANELS — Each Multiplexer Panel will relay pan, tilt, zoom, focus and iris control signals as well as 6 remotely controlled on/off signals from the ACS keyboard to up to 10 individual camera locations. Up to 10 Multiplexer panels can be controlled from a single Master Control, for a total system capacity of 100 cameras. **\$500.00**

JO-4PS, JO-16PS POWER SUPPLY — Several power supplies are available for the SuperSwitcher system. Because of the variety of configurations the system may take, the power requirements will differ. By offering a range of supplies, the appropriate supply may be chosen optimizing energy efficiency and representing a cost saving. **\$235.00 - \$565.00**

VIDEO SIGNAL EQUIPMENT

VIDEO SIGNAL EQUIPMENT

J312T Series Time and Date Generator

Provides flicker-free display of year, month, day, hour, minutes and seconds. May be added to any video system. All functions, including 300 year clock, preprogrammed. Includes own stand-by power supply. 220-240VAC 50 Hz available.

J312T

J411-Real Time Video Transmission System—Transmits video over #22 or #24 gauge wire or telephone wire. Basic system will transmit up to 4000 feet. Repeaters available for each additional 4000 foot interval.

J411 System

JVAS100-Video Authentication System

Transmits information from a central file to any work station. For signature verification the teller signals the name and account number to the operator via intercom. When the file card is placed on the base tray of the console, it is displayed instantly on the teller's remote monitor. In a typical system two tellers share a centrally located 9" monitor. For other applications monitors are available in 15" and 19" formats. The addition of a time lapse video recorder with a time/date generator allows transmissions to be recorded and stored for easy review.

JVAS-100 Video Authentication System

JVA-D-1-Video Line Amplifier—Amplifies signal and compensates for high frequency roll-off for coaxial runs up to 3400 feet over RG-59/U cable.

JDA-D-2-Video Distribution Amplifier—Provides a four-line output from a single video source for driving up to 40 monitors. Each line may drive a group of up to 10 monitors in any direction desired.

220-240VAC 50 Hz (CCIR) available.

JDA-D-2

FEATURES

- 8-Bit Digital Sampling At A Sampling Rate 4 Times the Subcarrier Frequency
- High Performance Comb Filter for Improved Resolution and S/N
- Full Frame Memory for Ultra-Wideband Time Base Correction
- Compact and Lightweight
- Automatic Freeze
- Built-In Drop-Out Compensator
- Built-In Color Picture Frame and Field Freeze Functions
- VTR Subcarrier Feedback for Wide-Bandwidth Performance
- Heterodyne Color Processing
- Built-In Sync Signal Generator with Genlock

SA-T100U

SA-T100U DIGITAL TIME BASE CORRECTOR

The video signal produced by any VCR contains a certain amount of instability commonly called "jitter". This is due to the fact that the VCR uses mechanical components, and a relatively fragile recording medium: magnetic tape. Ordinary video monitors have no trouble reproducing the signal. It can even be recorded and edited by other VCRs. But no matter how precise the VCR, none can produce a signal free from this instability. And if the signal is to be mixed with another video signal — as is the case if dissolves and other special effects are to be performed — it must be perfectly stable.

A time base corrector is a digital device which temporarily stores the video signal (or part of it) and then releases it at a steady, precise rate, free from the error caused by the moving and rotating parts of the VCR. In addition to simply eliminating the jitter, some TBCs also provide other features like drop-out compensation, and special effects (freeze frame, etc.).

Full Frame Memory, Freeze Frame/Field. Wide variations in the Input signal can be corrected with the SA-T100U because of its full frame memory. If the input signal is interrupted, the SA-T100U will automatically freeze the picture until the

incoming signal is restored. In addition to this, the SA-T100U offers the user the ability to manually freeze a frame or field with pushbutton controls on the front panel. The frozen picture is displayed in full color.

Compact, Lightweight. The SA-T100U is only 1-3/4" tall and can be mounted in a standard EIA rack. Mounting hardware is included. And because of its size, it is ideal for both studio and mobile operations.

Built-In Drop-Out Compensator. For VCR's which provide an RF-DOC output (like JVC's CR-850U) the SA-T100U can provide digital dropout compensation. The fully digital drop-out compensator is far superior to the circuits found in most VCRs.

Subcarrier Feedback. For wide bandwidth performance, the SA-T100U can be connected to VCRs which accept external subcarrier (SC) and sync signals. Since most 3/4" professional VCRs have this capability, maximum performance can be obtained.

Heterodyne Processing. For use with JVC's professional VHS models (BP-5300U, BR-6400U, BR-8600U) the SA-T100U can be connected using the "heterodyne" mode. This mode does not require the "SC" input on the VCR, thus expanding the flexibility of the TBC.

Built-In SSG. An RS-170A sync signal generator required by some A-B roll editing controllers is included in the SA-T100U. Included also is a genlock function which locks the SSG with another stable sync signal.

Suggested List Price TBA

SPECIFICATIONS

Input Signal:

Video: NTSC composite video, 1V p-p, 75 ohms

Reference Signal: Black burst 0.45V p-p or NTSC composite video 1V p-p, 75 ohms or loop through

DOC (input R.F.): 0.2 to 2.0Vp-p, 75 ohms

Output Signal:

Video: NTSC composite video, 1V p-p, 75 ohms

VIDEO TEST INSTRUMENTS

LCG-400M

LCG-400S

LCG-396

LBO-51MV

LSW-333

LCG-400 NTSC VIDEO SYNC/TEST GENERATORS

The LCG-400 provides both gen-lock and internal synchronization with the full range of video signals needed for testing and adjusting monitors, cameras, VTR's and overall performances of color and B & W TV systems. It is available with either multiburst (LCG-400M) or sweepmarker (LCG-400S) generators. The LCG-400 will sync with all standard composite video and black burst signals including those from quad head and helical scan VTR's. Patterns include EIA and full field color bars, 5-step modulated stair case, 8 color rasters, cross hatch and dot convergence, circle and corner marker with on/off control of chroma and luminance. Both interlace and progressive scanning are provided. Outputs include composite video, subcarrier, black burst, selectable vertical or horizontal drive, and CH 3/4 RF. Units are supplied for either bench-top or rack mounting (rails included).

LCG-400M \$1990.00
LCG-400S 1990.00

LCG-396 NTSC COLOR BAR PATTERN GENERATOR

The LCG-396 is a versatile NTSC video generator suitable for testing, servicing and evaluating a broad range of video systems including video tape recorders, CATV and MATV systems, video monitors and television receivers. It provides 11 test patterns including the standard NTSC color bars for measuring and adjusting color purity, white balance, luminance, chrominance, and convergence. Outputs include composite video, H or V scope trigger, subcarrier and RF (CH5 or 4). Other features include variable chroma, luminance and set-up levels, and selectable interlaced or progressive scanning. Also available as an option are RGB outputs on the rear panel for testing color computer display systems and video game color circuitry. The LCG-396 is supplied with a comprehensive user's manual including detailed VTR, TV and monitor application data.

LCG-396 \$995.00

LBO-51MV DISPLAY MONITOR

For special low-cost applications—and as a direct replacement for the Tektronix 602A or 1424 X-Y Display Monitors—the Leader LBO-51MV delivers outstanding performance. It is driven by R-Y and B-Y video signals, from a precision chroma decoder or a Tektronix 650 HR series picture monitor equipped with R-Y and B-Y outputs. The LBO-51MV has the added capability of displaying individual VITS and VIRS lines* when used with Leader's LBO-5860 waveform monitor.

The unit's CRT display area is 8 x 10 cm. Combines 3 MHz bandwidth on X and Y axes, with 4 MHz on Z axis. Phase shift between X and Y axes is less than 3° at 1 MHz (R-Y and B-Y signals are approximately 600 kHz).

In its standard configuration, the LBO-51MV is supplied with front panel controls for power, intensity, focus, and horizontal and vertical positions. Screwdriver adjustments are provided for vertical and horizontal (X and Y) gain, astigmatization, and trace rotation.

The absolute accuracy of the LBO-51MV display is dependent upon the accuracy of the precision chroma decoder being used to drive it.

*VITS and VIRS lines may be observed only when the signal delay inherent to the chroma decoder being used is not excessive (10 to 15 µ Sec).

LBO-51MV \$995.00

LSW-333 ALL-CHANNEL SWEEP/MARKER GENERATOR

The LSW-333 is a complete test and alignment instrument for the RF and IF tuned circuits of VHF and UHF television receivers and FM radios. It is used in production testing and aligning, and in servicing. Front-panel displays of ideal IF and chroma response curves with marker positions permit fast and precise alignment in accordance with manufacturers' recommendations. The LSW-333 has three bias supplies, selectable marker tilt (vertical or horizontal), and vertical and horizontal polarity reversal.

LSW-333 \$775.00

POWER SUPPLIES

LPS-151

LPS-152

The LPS-151 and LPS-152 are Triple Output DC Power Supplies with individual voltage and current meters, automatic overload recovery and auto tracking. The output voltages are adjustable, 0 to 6 Volts, 0 to +25 Volts and 0 to -25 Volts on both models making them ideal for computer subassembly, circuit board, semiconductor and system burn-in test applications. All three outputs have independent adjustable current limiting with an auto recovery feature which allows the output voltage to return to normal when the short or overload condition is removed. Both units also feature a tracking output mode which allows an adjustable ratio of positive vs. negative voltage between the 25 Volt outputs. The adjustment range is from 100% - 100% to 50% - 100%. Ripple is less than 3 mV p-p and output stability is rated at less than 3 mV for $\pm 10\%$ input line voltage variation and 0 to 100%. Both power supplies carry Leader's full Two Year Warranty.

SPECIFICATIONS

OUTPUT

Voltage

0 to +6V adjustable.
0 to +25V adjustable.
0 to -25V adjustable.

Current

LPS-151 0 to 6V output — 3.0A max.
 $\pm 25V$ outputs — 0.5A max.
LPS-152 0 to 6V output — 5.0A max.
 $\pm 25V$ outputs — 1.0A max.

Current Limiter

All outputs separately adjustable from 0A to fully loaded at rated max. current with automatic recovery.

REGULATION

Load

< 0.01% +3mV to 0 to 100% load variation.

Line

< 0.01% +3mV for $\pm 10\%$ input line voltage.

Ripple

< 3mV p-p.

METER

Voltage Ranges

0 to 7V, 0 to +30V, 0 to -30V.

Current Ranges

LPS-151 — 0 to 3.5A, 0 to 0.6A.
LPS-152 — 0 to 6A, 0 to 1.2A.

Accuracy

5% f.s.

GENERAL

Tracking Voltage Mode

Positive vs. negative voltage will track at 50% to 100% for ± 25 Volt outputs.

Overload Protection

FREQUENCY COUNTERS/ TRANSISTOR TESTERS

LDC-823S

LTC-905

LDC-824S

Laboratory Frequency Counters

Leader Frequency Counters provide accurate, reliable frequency and period measurements for a wide variety of laboratory, communications and bench applications. LSI and MSI technology results in cost-effective instrumentation for today's stringent requirements.

Large, florescent displays make these instruments particularly well-suited to production testing and other applications where a large, bright readout is essential.

All four units are housed in well-shielded metal cases which virtually eliminates errors caused by nearby R.F. fields.

In addition to frequency readout, period measurements can also be made. Normally, a sampling rate of ten seconds can be expected for direct frequency readouts when the test signal frequency is very low and resolution to 0.01 Hz or greater is required. The period function can be used to reduce sampling time and to increase the accuracy of the measurement while increasing the resolution significantly. In the period mode, the time duration of one period is measured, averaged over the gate time. A reading of 16.09 milliseconds, for instance, can be converted to 62.15 Hz using the relationship $f = 1/t$. The period mode is particularly useful when performing high resolution frequency adjustments because the counter readout permits constant observation of any change in frequency.

LDC-823S 250 MHz Counter

The LDC-823S has a standard time base accuracy of 1 ppm from 10 Hz to 250 MHz. It is also available with an ovenized time base which gives 0.03 ppm stability.

LDC-822 80 MHz Counter

The seven digit, 80 MHz LDC-822 is the simplest and least expensive bench-type counter from Leader. It has a time base accuracy of 5 ppm, offering high performance at a cost effective price.

LDC-831 150 MHz Counter

The LDC-831 is a 4 1/2 digit 150 MHz battery-powered counter. Its small size and portability make it ideal for field service applications, an optional AC adaptor converts it to bench use. Simple controls and a large, bright LED display make it easy to operate.

LDC-824S 520 MHz counter

The LDC-824S has a standard time base accuracy of 1 ppm (0.03 ppm optional) over its 10 Hz to 520 MHz frequency range.

LDC-825 1 GHz Counter

The LDC-825 has the widest frequency range of any Leader counter; 10 Hz to 1 GHz. It also has the highest time base accuracy (+/-0.03 ppm), making it the ideal counter for critical, high-frequency requirements. Two input impedances, 1 M ohms (10 Hz to 80 MHz) and 50 ohms (50 MHz to 1 GHz) are available for precise matching to the device under test.

TRANSISTOR TESTERS

LTC-905 Semiconductor Curve Tracer

The LTC-905 permits displaying the characteristic curves of all types of semiconductors (NPN, PNP, triacs, SCR's, FET's, MOSFET's, zener, signal, and rectifier diodes, etc.) on virtually any oscilloscope. Used in labs, classrooms, and for production-line testing, the LTC-905 will measure (both in-and out-of-circuit) gain (beta), cutoff, leakage, and output admittance. The LTC-905 provides 8 selectable collector sweep voltages from 10 to 100 Volts along with a full set of step-generator currents and voltages.

LTC-905 \$255.00

LTC-906 Transistor Checker

The LTC-906 is a portable, multi-purpose transistor checker widely used in laboratories, schools, servicing, and for production troubleshooting. In the automatic mode, activating a single switch initiates a programed test that automatically identifies emitter, base, collector, and type of device (NPN, PNP, FET, diode, or other) with an audible and visual good-or-bad indication...both in-and out-of-circuit. In the DC parameter mode, out-of-circuit measurements can be made of leakage current, h_{fe} , V_{be} and V_d . Powered by a single 9 V battery, it easily fits in a technician's tool kit.

LTC-906 \$220.00

LTC-906A Transistor Checker

The LTC-906A is identical to the LTC-906 in features, functions and specifications but is housed in a larger bench-top package. The larger physical dimensions allows for a more convenient front panel layout and is less susceptible to theft making it ideal when the instrument is used in unsecure areas.

LTC-906A \$249.00

METERS AND BRIDGES

LCR-740

LHM-80A

LPM-8000

LCR-745

LDM-853A

LCR-740 LCR BRIDGE

The LCR-740 is a versatile instrument for accurately measuring inductance, capacitance, resistance, and loss factor of electronic components. This compact unit provides a basic accuracy of 0.5% and resolutions of 0.1 μ H, 1pF or 0.001 ohm. Its broad measurement ranges make it ideal for use in component design, inspection and selection. It has also found wide use in educational institutions as an aid to teaching the characteristics of inductive, capacitive and resistive components.

LCR-740 \$365.00

LDM-853A-3-1/2" DIGITAL MULTIMETER

The LDM-853A is a rugged, compact AC or battery-powered DMM that is at home both in the field and in the lab. Its automatic zeroing and bright green LED display (which reduces eye fatigue) make it ideal for applications where constant monitoring of varying inputs is required. The LDM-853A can measure up to 2A, both AC and DC, as well as ohms, DC volts and AC volts. An AC adaptor is supplied, as are four each "C" cells for field operation.

LDM-853A \$185.00

LHM-80A HIGH VOLTAGE METER/PROBE

The LHM-80A permits easy and safe measurement of voltages up to 40,000 VDC. It is widely used for checking CRT accelerating voltages, testing and servicing X-ray machines, and other high voltage equipment. Completely self-contained (no batteries or external power required), it is made of high-impact polystyrene with a special corona safety shield. Full-scale accuracy is \pm 3%. It is supplied with ground wire and heavy-duty cap.

LHM-80A \$50.00

LCR-745G - DIGITAL LCR METER W/GPIB

Digital LCR Meter with GPIB interface can be used in remotely controlled test systems conforming to the IEEE-488 Standard.

Wide measurement ranges, from 0.001 Ω to 19.99M Ω for resistance, 0.1 μ H to 199.9H for inductance, and 0.1 pF to 1999 μ F for capacitance. Quality (Q) and Dissipation (D) factor measurements are also possible, along with a zero offset function to compensate for stray capacitance and residual resistance and inductance. Two test frequencies, 1 kHz and 120 Hz are available. Combining all of these features with GPIB capability will make the LCR-745G ideal for high volume quality control.

LCR-745G \$2495.00

LEM-73A FET BENCH MULTIMETER

The LEM-73A is a sensitive, versatile electronic multimeter for general purpose laboratory applications. Its high input resistance permits measuring high impedance circuits with minimum loading. DC and AC voltages can be measured from 30mV to 1,000 V; DC and AC currents from 30 μ A to 300mA. Resistance, using either high (1.5V) or low (100 mV) test voltages may be measured from 0.2 ohms to 500 M ohms. dB scales are also provided for sound level measurements in 600 ohms audio systems. AC operated.

LEM-73A \$208.00

LCR-745 DIGITAL LCR METER

The LCR-745 is a CPU controlled digital LCR Meter with automatic and manual ranging. Direct resistance, capacitance, and inductance measurements of components and equivalent series and parallel circuits can be made, with Quality (Q) and Dissipation factor (D) displayed simultaneously with inductance and capacitance. The unit's wide automatic measurement range greatly reduces the time associated with performing these component measurements compared with a manual LCR bridge. This makes the LCR-745 an ideal instrument for incoming inspection or final production test of components where ease of operation and high throughput are necessary.

An offset function is available which can be used to cancel any residual resistance, capacitance or inductance of the test leads or fixtures being used. In addition, the offset function can be used to normalize the value of a component under test to zero. The deviation (including polarity) from this normalized value of succeeding components will be displayed, simplifying testing.

Two test frequencies, 120 Hz and 1 kHz are available, facilitating the testing of electrolytic capacitors. In addition, an external DC bias in the range of 0 + 30 V can be applied; an internal bias of + 1.5 V is available. Basic measurement accuracy is \pm 0.35%.

LCR-745 \$1395.00

LCR-745-04 - DIGITAL LCR COMPARATOR SYSTEM

The LCR-745-04 is a complete LCR comparator system. It allows fast incoming inspection or production test of precision components, even by non-technical personnel. Upper and lower limits for inductance, capacitance or resistance and dissipation or quality are set on the comparator's front panel mounted switches. If the value of the component under test falls within these limits, a visible and audible "go" signal is given. Otherwise, a "no-go" indication is accompanied by the display of the actual deviation from the referenced value, including polarity, for precise quality control.

LCR-745-04 \$2300.00

LCR-745-01 - DIGITAL LCR METER w/BCD OUTPUT

The LCR-745-01 adds BCD output capability to the standard LCR-745. The BCD option is ideal for recording the values of the components under test, remote readout or input to a computer for further analysis.

LCR-745-01 \$1750.00

LPM-8000 LASER POWER METER

Two wavelength and three power measuring ranges are available on the LPM-8000, giving this instrument the versatility to be used in servicing the equipment of many laser disk manufacturers. This Laser Power Meter, which consists of a main body and a separate sensor connected by cable, boasts small size, light weight, and battery operation for portability. The LPM-8000 is a time and cost saving device since the service technician will be able to instantly verify power output from the laser device of disk players.

LPM-8000 \$225.00

PHASE MONITOR/ VERTICAL INTERVAL PROCESSOR

SYNC/SUBCARRIER PHASE MONITOR SCH-730N

The SCH-730N Sync/Subcarrier Phase Monitor is a self-contained metering device which develops a LED display corresponding to the relationship between the phase of subcarrier, as represented by burst in a composite video signal, and the sync of that signal.

The unit permits fast, accurate measurement, adjustment and continuous monitoring of SCH. Since it does not require an external reference signal, it can be used at any point in a video system.

Correct SCH, according to current practice, is achieved when the positive or negative slope zero crossings of subcarrier, of which burst is a representative sample, are coincident with the 50% point of the leading edge of horizontal sync. The acceptable tolerance is $\pm 40^\circ$ of subcarrier or ± 31 ns of H phase.

- SCH-730N** NTSC Sync/Subcarrier Phase Monitor, includes Instruction Manual **\$1145.00**
SCH-731N Same as above, with H Timing Indication **1450.00**
Extra Instruction Manual **20.00**

VIP-1101N VERTICAL INTERVAL PROCESSOR

Model VIP-1101N NTSC Vertical Interval Processor (two VI source inputs standard)
Complete with detachable power cord and instruction manual **\$3900.00**

Options

- Model 1101IP Input Preselect (module) **\$800.00**
Model 1101ME Module Extender **85.00**
Extra Instruction Manual **60.00**

Features

- Digitally generated sync, burst and black
- RS170A SCH always maintained
- RS170A or narrow H blanking selectable
- Microprocessor control
- Comprehensive self-diagnostics, including set-up and timing modes
- Digital front panel status display

- Automatic failure by-pass
- Transient-free switching
- RS232C remote control interface
- Digital power-down memory
- Digitally temperature compensated, high stability crystal oscillator
- Programmable signal-loss handling
- Differential video inputs
- High efficiency switching power supply

The VIP-1101N NTSC Vertical Interval Processor is a stand-alone device which, unlike traditional VITS insertion equipment, does not generate any insertion test signals. It offers, instead, an unprecedented degree of capability and flexibility in the handling of multiple, external insertion signal sources. The application of microprocessor control and digital technology in general, together with the latest analog circuit components, results in a unit with previously unavailable features and high quality video specifications.

NTSC MASTER SYNC PULSE GENERATOR

SPG-102N

The SPG-102N Master Sync Pulse Generator is the successor to the reliable and time-proven SPG-100N. Many refinements and additional options make this the ideal master generator for virtually any pulse system concept. Modular construction and the fully wired mounting frame guarantee maximum flexibility in the selection of a standard and optional module complement. Optional modules can easily be added later to satisfy system requirements or user preference.

Digital Timing Circuits

Ensure extreme accuracy and reliability. Gating for all pulses and the color subcarrier is derived from the 14.31818 MHz reference oscillator. Pulse widths and timing relationships are adjustable in 70 nsec increments.

Synchronous Counters

Eliminate phase drift of the subcarrier relative to the leading edge of sync. The sync generator features improved temperature stability and exceeds the performance specifications of EIA Standard RS-170. Time base errors are less than 1 nsec. Pre-aged and tested master oscillator crystals assure accurate calibration and very low long term frequency drift.

Master Color Standard 100CS

The optional Master Color Standard 100CS is a very high stability reference source oscillator. Its inclusion is recommended when the SPG-102N is used as the main system generator.

Automatic Digital Sync Lock

Circuits permit genlock and chroma lock with an external composite video signal input. Color lock is maintained by using the incoming burst only to phase lock the 14.31818 MHz reference oscillator from which all timing information is derived. The relative phase of the incoming sync signal is monitored to ensure phase coincidence. Electronic switching is used to automatically revert to the local, independent mode of operation should there be a degradation or complete loss of the input video signal.

Optional Frequency Converter/Resolver

A Frequency Converter/Resolver module is available and can be used in place of the 100CS Master Color Standard to lock the generator to the 5 MHz signal of an external Cesium or Rubidium standard.

Additional Features

A new vertical timer incorporates switchable 1 or 2 line advance and selectable vertical blanking width of 19, 20 or 21 lines.

A Color Frame Ident pulse at a 15 Hz rate and with a definite frame to subcarrier relationship is provided. The choice of ident pulse position has been expanded and is selectable by means of small U-link jumpers.

Test Signals

The mounting frame is pre-wired to accept optional dual output Bar/Dot/Grating and NTSC Encoded Color Bar test signal modules. A dual output Color Black signal module must be included with the test signal modules.

IC Regulators

On each module provide DC regulation with current limiting short circuit protection.

NTSC SYNCHRONIZING PULSE GENERATORS

VIDEO PROCESSING AMPLIFIER

VPA-331N

NTSC Video Processing Amplifier

FEATURES

- RS170A front panel SC/H indication
- H & V blanking width adjustable
- Selectable VIT retention
- Video gain control
- Chroma gain control
- Fade to black • Soft white clip • Hard white clip • Soft black clip
- Hard or soft clamping
- Input video lock
- External reference lock
- Video and/or chroma AGC
- Total bypass
- Auxiliary video input
- Differential input (optional)
- Equalizing (optional)
- Cue dot (optional)

The VPA-331N is a complete, broadcast quality Video Processing Amplifier requiring only one unit of rack space. It is an alternate version of the successful VPA-330N, featuring front panel controls for video and chroma levels, burst phase, set up and fade-to-black. An auxiliary video input has been added for a stand-by signal. The VPA automatically switches to this signal if this function is enabled and the main program input fails.

The VPA incorporates a high-stability color sync pulse generator capable of maintaining the EIA RS170A pulse and SC/H phase specifications. In order to allow a wide range of operational flexibility, the VPA has independent adjustments for the various signal parameters. Horizontal and vertical blanking, for instance, can be adjusted to suit specific in-plant applications. Once established, the settings are accurately maintained.

The H sync to subcarrier phase relationship (SC/H) is established relative to the selected lock signal. The VPA front panel and the optional 330RP-2 Auxiliary Remote Control Panel have "Correct SC/H" indicators as a convenience for setting and monitoring.

SPECIFICATIONS

Electrical

Power

Voltage 115/230 VAC \pm 10%
Frequency 50/60 Hz
Power consumption ... 25 VA max.

Video Input

Level 1 Vpp \pm 6dB composite video
Impedance 75 ohm, terminating
Return loss > 40dB to 4.2MHz

Auxiliary Video Input

Level 1 Vpp \pm 6dB composite video

External Reference

Level composite video with 40 IRE units sync & burst \pm 6dB
Impedance 75 ohm, bridging
Return loss > 40dB to 4.2MHz

Black Output

Number of outputs ... 1
Level 40 IRE units sync & burst, 7.5 IRE units set-up
Timing synchronous with program output
Impedance 75 ohm
Return loss > 37dB to 4.2MHz

Video Outputs

Number of outputs ... 2 (program & preview)
Total bypass input to program output
Impedance 75 ohm
Return loss > 34dB to 4.2MHz
Output isolation > 40dB to 4.2MHz

Video Path

Video gain range \pm 2.5dB
Chroma gain range ... \pm 2.5dB
Frequency response .. \pm 0.1dB to 5MHz
Line tilt < 0.5%
Field tilt < 0.5%
Differential phase < 0.2°
Differential gain < 0.5%
S/N ratio > 60dB to 4.2MHz (pp signal to rms noise)
Hum > 54dB below 1 Vpp

Blanking Interval Regeneration

Sync level 40 IRE Units, adjustable
Burst level 40 IRE Units, adjustable
Set-up 7.5 IRE units, adjustable
H timing range \pm 1 μ s
H timing resolution ... < 10 ns
H lock jitter < 5 ns
Pulse widths per RS170A, adjustable
H blanking start nominal \pm 5 μ s
H blanking finish nominal -1.0 + 0.5 μ s
V blanking lines 10-21 on either field may be blanked or retained.

Burst phase

Range 360°
Resolution < 0.1°
Jitter < 0.2°
Burst lock frequency .. 3.579545MHz \pm 30Hz

Temperature Range

Performance 5° -40°C ambient
Operating 0° -50°C ambient

Mechanical

Mounting Frame

Height 1.75" (44mm)
Width 19" (483mm)
Depth from mounting surface ... 17.5" (445mm)
Net weight 19 lbs. (8.6kg)

VPA-331N

NTSC Video Processing Amplifier complete with detachable power cord and instruction manual. \$4800.00

VPA-330N

NTSC Video Processing Amplifier \$4400.00

OPTIONS

330RP-1

Main Remote Control Panel \$660.00

330RP-2

Aux. Remote Control Panel
Input video and reference video status indications (present, color, locked). Lock mode selection (input video, reference video, automatic). Output SC/H status indication. AGC on/off. Burst kill \$640.00

330RP-3

Cue Dot Control Panel
Selection and tally of steady and flashing cue dot modes.
Initiation and tally of auto-timed cue dot sequence. Cancel button \$500.00

The VPA-331N can be equipped with either one of the following optional modules:

330PE

Processor Equalizer
Differential input with 40 dB of common mode hum rejection.
Equalization for up to 1500 ft. (450m) of Belden 8281 or equivalent coaxial cable \$305.00

330CD

Cue Dot Generator
Remotely controllable steady and flashing mode cue dot. Requires 330RP-3 Cue Dot Remote Control Panel.
Horizontal and vertical positioning of cue dot. Non-additive mixing of cue dot with processed video.
Auto-timed cue dot sequence selection. \$240.00

100ME

Module Extender \$65.00

TEST GENERATOR

DTG-1010N NTSC Digital Test Generator

This generator is the successor to the DTG-1000N. It retains all of the latter's capabilities and offers a number of new features and improvements.

The DTG-1010N has a high efficiency switching power supply which operates on line voltage inputs from 90 to 135 VAC, 50/60 Hz. The new power supply also results in a 25% weight reduction of the unit.

The generator's subcarrier frequency stability with crystal aging is less than 1 Hz/month, and with temperature variations it is less than 2 Hz/10°C. A facility has been added so that burst can be switched on or off.

Two new test signals are now available:

- a) Modulated Pedestal for chroma noise measurements, and
- b) Sync without Set-up for transmitter power calibration

H blanking has been narrowed to 10.6µs and vertical blanking width is selectable as 20 or 21 lines.

PSG-310 DIGITAL COLOR SYNC GENERATOR W/RS-170 GENLOCK

The PSG-310 Digital Color Sync Generator exemplifies the latest in design techniques of digital engineering. The unique circuit allows us to offer an ultra-stable and trouble free generator, with exclusive features not normally found in broadcast quality equipment. **\$1125.00**

OPTION 1: Variable Blanking Width Assembly

155.00

PSG-311 DIGITAL COLOR SYNC GENERATOR

The PSG-311 Digital Color Sync Generator incorporates the same unique design techniques that are found in the PSG-310 Sync Generator. The only exception is in the Genlock circuitry. The PSG-311 was engineered to operate with helical VTR's or other equipment that supplies unstable time base signals. **\$1125.00**

PMG-312 MASTER SYNC GENERATOR

The PMG-312 is a professional Master Color Sync Generator designed to meet the most demanding specifications for performance and stability. The design criterion was to provide a high quality master color sync generator that includes all the features desired by the discerning engineer. Utilization of the latest state of the art techniques are incorporated in the PMG-312. **\$2500.00**

PFT-314 FRAME TIMING MODULE

The PFT-314 basically has the same system responsibility as its sister unit, the PGS-315 Generator Substitute unit. That is, its primary function is to receive an external signal and supply the PFM-300 Frame mother board with all the six drive signals. The PFT-314 has major differences: The input signal is a Composite Reference Signal (CRS) instead of individual drive signals; provides a complete set of output signals for use external to the frame; has advance timing capabilities instead of just delay, and subcarrier is phase locked to H Sync. **\$995.00**

PGS-315 SYNC GENERATOR SUBSTITUTE

The PGS-315 Sync Generator Substitute module is a valuable member of the overall 300 System concept. It has the primary function of replacing the PSG-310 or PSG-311 Sync Generators when external drive sources are available to the PFM-300 Frame. The PGS-315 accepts Sync, Blanking, H-Drive, V-Drive and Subcarrier from an external source, processes these signals and distributes them to the proper busses in the frame. The identical digital delay circuits, as described in the PSD-340 System Delay Module, are also in the PGS-315 module, providing the system timing capabilities for the frame. Because the PGS-315 is not a generator, although in this application it is performing the same function, the pulses supplied to the frame are absolutely jitter free and can be perfectly timed. **\$550.00**

PFI-316 FRAME INTERFACE

The PFI-316 Frame Interface module is a unique and inexpensive way of allowing an external generator to supply signals to the PFM-300 Frame. It has the primary function of replacing the PSG-310 or PSG-311 when external drive pulses are available to the PFM-300 Frame. The PFI-316 accepts SYNC, BLANKING, H-DRIVE, V-DRIVE, SUBCARRIER, and BURST FLAG from an external source for proper distribution to the mother board busses in the frame. There are no delay circuits in the PFI-316. Its function is simply to apply the proper level and impedance of each signal to the Frame. **\$375.00**

The 300 System (continued)

PCO-317 AUTOMATIC SYNC CHANGEOVER SWITCH

The PCO-317 Automatic Sync Changeover Switch is a remarkable state of the art device designed to instantly recognize the failure of any synchronizing signals and immediately switch to an alternate source. Signal sensing circuits monitor each input for the level and timing of the sync, blanking, horizontal drive, vertical drive, burst flag, and subcarrier signals. Upon loss of the primary generator, the PCO-317 will supply the frame busses with the alternate source only if their signals are acceptable to the changeover module's parameters. It will not switch to a faulty generator. **\$585.00**

PCO-318—Automatic Sync Generator Changeover w/Black Burst (for PFM-301 frame only) (not shown) **\$880.00**

Option 1 Black Burst Generator, (for PCO-318 only). **\$250.00**
Option 2 Remote Control for PCO-318 **200.00**

PCB-320 ENCODED COLOR BAR GENERATOR

The PCB-320 Encoded Color Bar Generator is a precision test signal generator engineered to conform to the EIA-RS-189-A and NTSC specifications. Reflecting the progressive concept of the 300 System, the PCB-320 includes the new SMPTE Alignment Color Bar Test Signal with chroma and black set signals. The encoder is a true NTSC standard as evidenced by the precise filtering of the I and Q channels shown by the waveform.

One of the exclusive features of the PCB-320 is the single control composite video delay circuit which, for the first time, allows system timing of test signals. **\$1050.00**

PBB-321 BLACK BURST GENERATOR

The Lenco PBB-321 Black Burst Generator is a precision professional broadcast quality Black Burst Generator that provides a "Color Black" video signal composed of composite sync, set-up and color burst. This signal is used as the black reference input to switching systems, cameras or may be used as a signal source to genlock remote sync generators to "House" sync. **\$595.00**

PBD-322 BAR DOT/VISUAL REFERENCE GENERATOR

The PBD-322 Bar Dot/Visual Reference Generator is one of the 300 System's most technically advanced signal generators. It is two separate and independent generators providing the standard dot grading signals, and a new linearity test signal, including a "safe title" signal.

The Bar Dot Generator digitally produces EIA standard horizontal and vertical bars, cross hatch, and dot signals used in the testing for convergence of color monitors and camera sweep circuits. Horizontal and vertical position controls, plus pattern selection, are located on the front panel. **\$875.00**

PMB-323 MULTIBURST/SWEEP GENERATOR

The PMB-323 Multiburst and Sweep Generator is a combination of two precision test signal generators which are required for overall system frequency response measurements. A front panel switch provides for selection of either the Multiburst Signal, the Sweep Signal, or both (on alternate lines). Other switches allow for the selection of full or reduced amplitude and burst on-off. The Multiburst frequencies are preset to EIA standards but burst frequencies can be adjusted to 10 MHz if required. Stability of both amplitude and frequency is assured by a precision function generator operating within a feedback loop. The burst levels are fixed and cannot change as are the sync and setup levels. The Sweep Generator provides a linear sweep at a horizontal rate from 0.5 MHz to approximately 12 MHz with overall flatness of 0.2 dB. Fixed markers are provided at 2.0 MHz intervals. **\$995.00**

PSS-324 STAIRSTEP/RAMP GENERATOR

The PSS-324 Stairstep/Ramp Generator provides a precision test signal for measuring differential phase and gain, luminance linearity, and burst phase error of a video system. An exclusive feature of the generator is a negative signal for all combinations of test signals. This is a very important function for the testing of differential phase and gain in the burst region. Strict conformity to the standards of IEEE 206 is adhered to, as well as a true video bounce test that conforms to standard APL definitions. **\$1100.00**

PPB-325 SIN² PULSE WINDOW GENERATOR

The Lenco Model PPB-325 Sin² Pulse Window Generator is another in the series of fine, precision, state of the art signal generators. Unique engineering and packaging techniques have provided the following nine precision test signals in a one module width plug-in unit: Modulated 12.5T and 20T, T, 2T, or T/2 pulses, window or bar signals and the exclusive "pluge" pulse. The PPB-325, with a combination of front panel switches and internal strapping options, can provide almost any combination of the nine signals. This feature was designed to allow the user to determine the proper test signals which are best suited for his particular system application. **\$1295.00**

PFB-329 BLACK BURST/BACKGROUND GENERATOR

The Black Burst section of the PFB-329 provides a "Color Black" video signal composed of composite sync, set-up, and color burst. This signal is used as the black input to switching systems, or may be used as a signal source to genlock remote sync generators to "House" sync.

The Color Background section produces a solid field of color and, when connected to the input of a special effects generator or video insert keyer, provides color backgrounds for titles and other inserts. A standard feature of all 300 System generators is a composite delay which provides for delaying the output signal up to 1.5 μs to assist in system timing. **\$680.00**

PPA-343

PFO-344

PSA-346

The 300 System (continued)

PSD-340 SYSTEM DELAY MODULE

The PSD-340 System Delay Module has completely changed the traditional system timing techniques as they are now used. This unique system concept obsoletes the use of pulse and subcarrier distribution amplifiers, as well as excessive cable or other external delay devices used in system timing. The PSD-340 will supply all drive signals to any video source, including subcarrier, with the unique capability of timing these signals to your system requirements. This jitter free device can be compared with having an individual genlock sync generator driving each camera, switcher, VTR, etc. **\$550.00**

**PST-341 SYSTEM TIMING MODULE
W/OPTIONAL BLACK BURST OUTPUT**

The PST-341 System Timing Module is a new generation of system timing equipment added to the "300 SYSTEM". It not only has delay, but advance as well. The PST-341 requires the Composite Reference Signal (CRS), from the PMG-312 Master Sync Generator via the PFM-300 Frame mother board. This Composite Reference Signal supplies Master Sync Generator timing information to the PST-341 for the purpose of system distribution and timing. **\$995.00**

PBT-342 BLACK BURST TIMING

The PBT-342 Blackburst Timing Module not only has delay, but advance as well. The PBT-342 requires the Composite Reference Signal (CRS) from the PMG-312 Master Sync Generator via the PFM-300 Frame mother board. This Composite Reference Signal supplies Master Sync Generator timing information to the PBT-342 for the purpose of system distribution and timing of blackburst required devices. **\$995.00**

PPA-343 PULSE DISTRIBUTION AMPLIFIER

The PPA-343 Pulse Distribution Amplifier is an important module in the overall concept of the 300 System. Although the PSD-340 System Delay Module is the modern method of pulse distribution and system timing, there are still many applications where the standard methods of individual pulse distribution are required. **\$285.00**

OPTION 1: Pulse Delay Assembly for PPA-343 **160.00**

PFO-344 FAN-OUT PULSE DISTRIBUTION AMPLIFIER

The PFO-344 is a universal fan-out amplifier consisting of six separate and independent DA cells. Each cell has one input and one output with unity gain. Each cell can be programmed by changing connector positions to select any combination of drive pulses. The pulses are made available on the frame mother board by any of the 300 Series sync generators or an interface module. **\$375.00**

PSA-346 SUBCARRIER DISTRIBUTION AMPLIFIER

The PSA-346 Subcarrier Distribution Amplifier was designed to supplement the versatile 300 System's unique concept and incorporates the same state of the art design techniques found in all of the 300 System modules. The PSA-346 is a precision, ultra-stable, regenerative subcarrier amplifier whose advanced circuitry provides a pure, distortion free 3.58 MHz sine wave. **\$395.00**

PVA-350 VIDEO DISTRIBUTION AMPLIFIER

The PVA-350 Video Distribution Amplifier reflects a new concept in engineering techniques, bringing to the 300 System a versatile state of the art video amplifier with outstanding performance characteristics. The PVA-350 is flat to 15 MHz, has a unique automatic DC offset control, and offers low noise, excellent stability, and virtually no distortion. A differential amplifier on the input is standard in the PVA-350, and provides 70 dB of common mode rejection. **\$290.00**

OPTION 1: Feedback Clamp Assembly **110.00**

PSW-367

THE 300 SYSTEM (continued)

PVA-351 WHITE CLIP VIDEO AMPLIFIER

The PVA-351 Video White Clip Distribution Amplifier has a differential high impedance looping input that is standard and provides more than 60 dB of common mode rejection for reduced ground loop hum pickup. Gain is front panel adjustable over a +/-6 dB range. Frequency response is flat to 10 MHz. The PVA-351 offers low noise and excellent stability with virtually no signal degradation. Four 75 ohms source terminated DC coupled outputs are provided with excellent low frequency transient response and 40 dB of isolation.

\$365.00

PVD-354 VARIABLE DELAY VIDEO AMPLIFIER

The PVD-354 Variable Delay Amplifier is a precision device that has widespread system applications when quality and accuracy of video timing is desired. Most passive video display devices have a very sharp frequency roll-off above 5 MHz and show an insertion loss of about 6 dB. This requires the use of a video distribution amplifier with enough gain to bring the signal up to normal. The PVD-354, however, is a wideband device that has no insertion loss, and will provide up to 537 μ S of equalized video delay, with infinite resolution of delay setting. An option to the PVD-354 is a plug-in board that will provide a maximum of 1.051 μ S of video delay.

\$950.00

PRC-365 PROCESSING AMPLIFIER w/SYNC GENERATOR

The PRC-365 is a high performance video processing device. It is designed for use in studios, master control facilities or transmitter locations. It features standard or helical lock, differential video input, luminance only black clip, a soft white clip, internal digital sync generator, vertical interval line select, front panel controlled pedestal, genlock capability and a front panel LED that indicates the presence or absence of video. The PRC-365 requires only the PFM-300 Frame and Power Supply for operation.

\$1890.00

PSW-367 6 x 1 TEST SET SWITCHER

The PSW-367 6 x 1 Test Switcher was designed to provide a unique and economical method of selecting the various output signals from the test signal generators that may be installed in the PFM-300 Frame. In addition to the six test module signals, provisions have been included to allow the PSW-367 to switch to either the "Gen-lock Video" or one other external video source. The PSW-367 will switch during the vertical interval and the LED display will constantly monitor the switch status.

PCD-463

PVS-430

PCE-466P

THE 400 SYSTEM

PSG-412 Master Sync Generator

The PSG-412 is a Master Sync Generator with genlock. This unit meets the proposed RS-170A specifications. It maintains an accurate SC/H phase condition. There are 2 outputs of each drive pulse plus blackburst, video, CRS, burst flag & color field identification. CFI is programmed for field 1 line 10. An ovenized crystal is used to maintain an accurate internal timebase. All pulse widths are adjustable except VD and field ID. Vertical blanking is selectable between line 17 thru 21. Also converts the genlock video to RS-170A by inserting a regenerated blackburst signal. **\$3450.00**

PSG-412P Master Sync Generator

The PSG-412P is a Master Sync Generator that meets the PAL B, G & I standards. It uses an ovenized crystal to maintain a very accurate time base. The PSG-412P outputs two each of the following pulses: HD, VD, sync, blanking, burst flag, subcarrier, black burst, PAL pulse, a 13.5 MHz sine wave and color field identification. All pulse widths except HD, VD, and CFI are adjustable. Vertical blanking is selectable between lines 20 to 25. The PSG-412P maintains an accurate SC/H condition. **\$3575.00**

PCO-418 Automatic Generator Changeover

The PCO-418 Automatic Generator Changeover Switch instantly recognizes the failure of any of nine pulses and immediately switches to an alternate generator. There are nine LEDs metering each generator. A nine position DIP switch allows the lock-out of any of the nine generator pulses. A front panel switch selects GEN-1 or GEN-2 or Auto. The unit switches on failure of HD, VD, SY, SC, BL, CRS, BF, BB and CFI. **\$1975.00**

PCO-418P Automatic Generator Changeover

The PCO-418P Automatic Generator Changeover Switch instantly recognizes the failure of any of nine pulses and immediately switches to an alternate generator. The unit meets the PAL B, G & I standards. There are nine LEDs metering each generator. A nine position DIP switch allows the lock-out of any of the nine pulses. A front panel switch selects GEN-1, GEN-2 or Auto. The unit switches on failure of HD, VD, SY, SC, BL, BF, PAL pulse, black burst or CFI (Field Reference Pulse). **\$2175.00**

VNM-428 Video Noise Meter

The VNM-428 is a Video Noise Meter that offers the in-service capability of making accurate real time signal-to-noise measurements. It has a built-in calibrator that insures an accuracy of 1% through its range of 28.5 dB to 76 dB. The signal-to-noise ratio is shown directly on a large LED display. The VNM-428 can be calibrated to read directly in either the EIA or PAL-M system standards. **\$1925.00**

PVS-430 Videoscope

The PVS-430 provides a true method for certifying the correct SC/H Phase relationship. The PVS-430 will measure very accurately the SC/H phase relationship and compare the video input of a switcher or

mixer for precise and accurate system timing. In an editing system, the Videoscope provides a useful method of determining off-tape SC/H Phase. **\$3150.00**

PCD-463 Chroma Decoder

The PCD-463 is a Chroma Decoder with two line comb filtering. The input is any stable NTSC video and has two outputs each of 1V p-p RGB. One output of 4V p-p sync is available on the rear panel. The unit genlocks to the input video signal. The front panel controls are video level, saturation, hue and blanking position. It is self-contained with internal power supply. **\$2475.00**

PCE-466 Color Encoder

The PCE-466 Encoder produces an NTSC/EIA color signal from either a three or four channel video source. The fourth, or luminance channel, is optional. The encoder requires red, green, blue, sync, SC & blanking input. Split field color bars meeting RS-189A are standard. Full field or split bars are selectable internally. Front panel switches allow the selection of operate, color bars, black burst or mono. All inputs are 75 ohm loop-through. Two video outputs. **\$2980.00**

PCE-466P Color Encoder

The PCE-466P produces a PAL color signal from either a three or four channel video source. The fourth or luminance channel is optional. The encoder meets the PAL B, G & I standards. It requires the following input signals: red, green, blue, sync, subcarrier, blanking and burst gate. Color bars and reversed bars for setting decoder chroma gain are standard. The front panel switches select operate, color bars, black burst and mono. All inputs are 75 ohm loop-through. There are two video outputs. **\$3280.00**

PSW-467 Vertical Interval Bridging Switcher

The PSW-467 is a 12 x 1 vertical interval bridging switcher. It is designed to efficiently and economically route or delegate video signals. **\$1000.00**

PAF-467 Audio Follow Bridging Switcher

The PAF-467 is a 12 x 1 Audio Follow Video Switcher designed as a companion to the PSW-467 Video Switcher. **\$840.00**

PSR-467 Remote Control

The PSR-467 Remote Control is a self-contained rackmounted unit that can be located up to 1000 feet from the switcher location. It requires no external power source because it receives its power from the PSW-467 or PSW-468 Video Switcher. **\$550.00**

PSR-4673 Remote Control P.C. Board Assembly Only — Electronics Only **\$275.00**

PSW-468 Remote Vertical Interval Video Switcher

The PSW-468 is a 12 x 1 remotely controlled, vertical interval video switcher. This switcher has no push buttons. All input switching is controlled by the companion PSR-467 remote control unit or PSW-467 vertical interval switcher. **\$875.00**

MODEL CSL-710

MODEL CCE-850

700 SERIES EQUIPMENT

Model CSL-710

The CSL-710 Digital Color Sync Generator is a professional broadcast piece of equipment that meets several applications. The generator has a complete complement of NTSC pulses meeting EIA RS-170 specifications.

Two genlock modes of operation are provided by the CSL-710. The Standard genlock mode for RS-170, and Helical genlock mode for unstable time base signals. The genlock circuit has a unique noise immunity circuit which makes the generator highly insensitive to noise or extreme changes in input levels. The incoming video is sensed by an extremely fast video presence detector, processed and locks the generator automatically to the 50% point of the sync pulse. The Helical genlock mode will lock to most helical scan video tape recorders. It will lock to the unstable time base signal and ignore the fact that information is missing during the head drop out period of the VTR. In the Helical mode, it does not require a coherent burst input to achieve lock. Input level for genlock is automatically compensated to maintain genlock on various input signal levels.

A temperature compensated crystal oscillator operating at 14.318180 MHz provides the stable master frequency source from which all pulses and subcarrier are derived. All pulse widths and levels are fixed per EIA standards.

Two sets of output are provided on the rear panel including Horizontal Drive, Vertical Drive, Blanking, Sync, Subcarrier and Burst Flag. The modern design front panel provides test points for pulse measurements. Adjustments for Horizontal Frequency, Horizontal and Vertical Phase and Subcarrier Phase as well as the selection of Standard or Helical genlock is located on the front panel. The unit is self contained, operating on 100 to 130 VAC and drawing only 24 watts.

CSL-710	Digital Color Sync Generator w/ Genlock	\$1525.00
MOD-1	Special Scan Rates	1875.00

800 SERIES EQUIPMENT

Model CCE-850

The CCE-850 is a complete NTSC compatible color encoder with a built-in color reference bar signal. The system is a self contained unit measuring only 1-3/4 inches high and 17 inches wide. It can be used as a table top unit or mounted in a standard 19" equipment rack.

It is a wide band high resolution encoder primarily for the use with RGB color graphic generated information from a computer processor unit. The unit will encode most of the scan and resolution rasters presently offered by computer terminals. The output of the CCE-850 can be fed to any standard NTSC color monitor or video tape recorder.

The required signal input is RGB with or without the presence of sync. An external sync input is available if the computer RGB signal is non-composite (without sync.). The unit does not require an external GEN locking sync generator to interface with the RGB graphics computer. An automatic sync input detector selects between video sync or external sync to generate blanking and burst. A video gating circuit automatically matches black levels and inserts new blanking. Blanking regeneration automatically adjusts to line lengths and field lengths to closely simulate NTSC specification.

In addition to the two composite NTSC type outputs, in order to reduce system timing problems, the CCE-850 features a very short signal delay (250ns).

An image detail control on the front panel allows the operator to continuously compensate for high frequency losses in the system. A color reference pattern is switch selectable to aid in the adjustment of the NTSC color monitor.

Front panel controls are AC On/Off, Brightness, Color, Contrast, Detail, and Color Reference. Rear panel connections are high impedance looping RGB and sync input, two NTSC type composite video outputs source terminated 75 ohms.

The unit operates on 115/230 volts AC, 50/60 Hz. Power approximately 10 watts.

CCE-850	RGB to NTSC Computer Encoder	\$1900.00
CCE-8501	Adapts to 10µS Sync Pulse	190.00

DISTRIBUTION AMPLIFIERS

Video Distribution Amplifiers Type 280

The Video distribution amplifier type 280 is contained on a single 3-1/2" high module. This module contains mains transformer, power supply and active circuits. A plug-in daughter board type 281 contains equalizing and gain setting components. This board can readily be changed from one VDA type 280 to another. The gain and equalization characteristics will then be transferred to the new module. One 280 module can thus serve as a spare for a variety of 280/281 combinations.

FEATURES

- Single unit—handles video or up to four volt pulses without adjustment
- Multipurpose—fixed or variable gain, fixed or variable equalization, pre or post cable equalization
- Gain and equalization set by plug-in board
- Balanced input for rejection of unwanted common mode signals
- Low power consumption for long and trouble-free life.

286	Rack frame to accommodate up to eight distribution amplifiers w/one main	\$258.00
287	w/two mains	323.00
280	Distribution amplifier module (Less 281)	232.00
281	Daughter board for 280—All options	32.00
283	Rear video connector assembly for 280	65.00
204	Extender board for 280 Series	108.00
282	Six "Knobs" equalizing distribution amplifier module for complex equalization of individual adjustment of different parts of the response curve	387.00
285	Two knob distribution amplifier for frequent adjustment of gain and equalization	323.00
216/2	Portable case to accommodate two distribution amplifier 280 Series with mains	237.00
	Blank Panel for 1-4 module width	22.00

Audio Distribution Amplifiers 760 Series

The Audio Distribution Amplifier, type 760 is contained on a single 3-1/2" high (2U) module. This module contains mains transformer, power supply and active circuits. A.C. mains connects to the module through a separate isolated connector and not through the printed circuit edge connector. This feature considerably enhances safety aspects as well as reducing the likelihood of breakdown in high humidity conditions. To extend the versatility of the unit a variety of connector units and transformer modules are available. All the units fit into the same rack frame as the Link VDA, type 280.

FEATURES

- Low noise and low distortion
- Balanced and floating bridging input.
- Balanced, centre grounded outputs—fully floating using optional transformer module
- 20 dB variable gain range
- Compact, self powered modules with low power consumption
- Mechanically compatible with 280 Video DA series—uses same rack frame

760	Audio Distribution Amplifier	\$215.00
762	Rear Connector-screw	97.00
763	Rear connector for 760	183.00
766	Rear Connector-varien	95.00
767	5 Balanced and Floating	237.00
768	2 Balanced	129.00
769	Extender board for 760	108.00
286	Rack frame for 8 units w/one main	258.00
287	w/two mains	323.00

MACHINE CONTROL SYSTEM/ ROUTING SWITCHER

MODEL 6500

MODEL AX

MODEL 6500 Machine Control System

FEATURES

- Controls VTR's, audio tape machines or film chains
- Coax control line(s), simplifies installation
- Machine Interface Decoder — controls eight functions per decoder; maximum of 16 functions per machine
- Control of each machine's mechanical functions can be delegated to any number of machine control panels — Each control panel can operate up to ten (10) different categories of machines
- The central 6500 Microprocessor Controller can be programmed to provide special functions, such as temporary or permanent assignment of specific machines to a specific control panel
- Verification of machine function(s)
- The 6500 Machine Control System can be operated as a stand alone system or it can be integrated with the 3M 40X, AX and Series H Routing Switcher Systems
- Machine Control can also be assigned from a video terminal and display controller
- Automation of machine control and switching commands available
- Machine Lockout capability is a standard feature
- Tape Duplicator environment in Master—Slave Machine Control situation. Allows a bank of machines, i.e. 4, 6, 8, etc., to be controlled from one machine Interface Decoder in a "ganged condition."

The 6500 Machine Control System is a microprocessor/software base control system which allows an operator the capability for remote control of the mechanical functions of machines.

It eliminates patch panels or complex relay switching systems where the delegation of machine control is required.

Connection between the microprocessor, the machine interface decoders, and the machine control panel(s) is via coax cable. The machine interface decoder module interfaces directly to the specific machine(s).

In addition to handling the mechanical functions of machines, the decoder will provide verification that a specific machine has actually performed the requested function, if such a tally is available from the machine electronics.

MODEL AX Series Routing Switcher

FEATURES

- Mono or stereo
- 8-3/4" High rack frame
- All plug-in construction
- Balanced input & output amps
- Transformer input (optional)
- Plug-in control boards for every channel
- All solid state
- 400 Crosspoints/frame
- FET Crosspoints
- Card frame construction 20 x 20 or 40 x 10 mono configuration or 20 x 10 stereo
- Low cost
- Available with 6500 Microprocessor control

An audio routing switcher not only serves to eliminate the patch panel but provides a good portion of the audio distribution. Output distribution amplifiers are available with six (6) outputs.

Card frame construction is used to house two independent 20 (input) x 10 (output) matrices in the same frame. These two matrices may be combined to obtain either a 20 x 10 stereo matrix or 40 x 10-20 x 20 mono configuration. Input isolation is maintained with an isolation amplifier which bridges the line and provides a low driving impedance to the crosspoints. Each amplifier has provisions for balanced input feeds with common mode hum rejection.

For those who want transformer inputs, space on back panel is allotted for mounting the transformers (optional). The crosspoints are high impedance FET-MOS integrated circuit modules and offer line isolation and no measurable loading effect.

Each AX Series frame occupies 8-3/4" of rack space. A full width removable front panel allows access to the plug-in boards. Input connectors are gold plated multipin type. If terminal block type interconnect wiring is desired, ready made pigtail cables are available. Outputs wired to a plug-in terminal strip provided for each output furnishes all power required by that unit. Every card frame board has a power regulator for isolation. The power supply can be removed by simply removing two screws and three connectors.

The AX Series can be purchased in increments of four inputs and any number of outputs. To add more outputs than the capacity of a single frame requires looping the inputs of additional frames. If more than 40 inputs is required, additional frames can be cascaded together. Includes output amplifiers with +21 dBm maximum output on each of six (6) outputs.

SERIES H

Compact size, excellent mechanical and electronic integrity, and circuit redundancy give the 3M Series H switching equipment the best product performance per dollar of any Routing Switcher on the market.

The Series H Routing Switcher offers a number of other benefits as well. They include:

- No internal maintenance or service adjustments
- DC coupled inputs to outputs allow analog switching circuits to handle certain data signals without DC-restore circuitry
- Bi-directional, parallel control bus with positive feedback from crosspoint latches gives immediate and positive confirmation of crosspoint latching
- Pre-tested and pre-adjusted hybrid circuits
- Microprocessor control system simplifies design, maximizes dependability
- Single line coax control capability simplifies wiring and connections
- Separate plug-in video and audio output amplifier cards to assure that failures are isolated to one point and disable only one output if removed
- Each video path can have multiple associated audio paths (i.e., stereo, SMPTE time code, multi-lingual applications)
- The microcontrol system can provide one video with up to 5 audio levels with separate control for each level
- Audio-follow-video, video only, audio only, and audio breakaway for easy adaptation to any switching application
- I/O ports for RS232 computer terminal control, and standardized I/O protocol to allow for external CPU control by a variety of devices
- Improved temperature uniformity, hybrid ceramic substrates have stable and predictable dissipation characteristics
- Easy and cost-effective switcher expansion through modular building block design with full expansion compatibility
- Control circuits are distributed by card, another valuable circuit redundancy feature

Hybrid Circuits

A hybrid circuit consists of a high purity alumina ceramic substrate on which various alloys and resistive materials are printed to form conductor paths and resistive circuit elements.

Miniature leadless discrete components are attached directly to the substrate. Adjustments are made to screened resistors and capacitors by laser trimming. Each microelectronic hybrid substrate contains an entire circuit function. These centralized, modular functions include video and audio crosspoints, video and audio input amplifiers, and video and audio output amplifiers. Seven building block hybrid circuits make up the Series H system. They are:

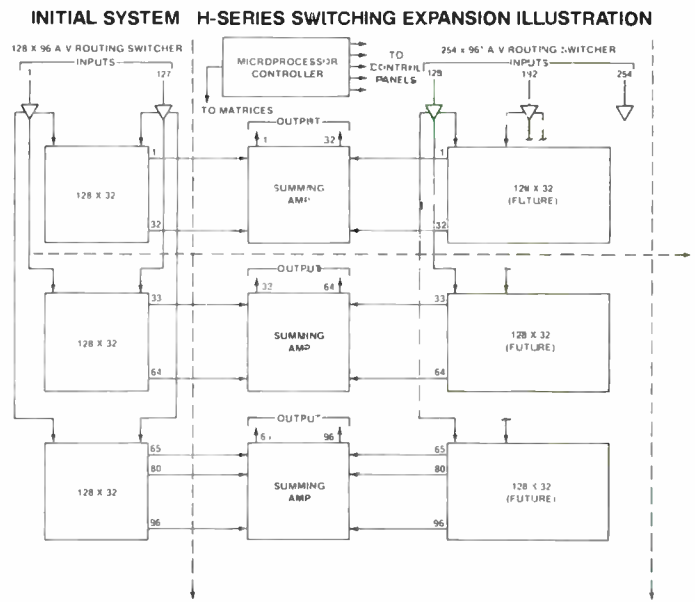

- 16 x 2 Video Crosspoint
- 16 x 2 Audio Crosspoint
- Quad Audio Input Amplifier
- Quad Video Input Amplifier
- Block Control Logic
- Video Output Amplifier
- Audio Output Amplifier

16 x 16 Audio/Video Matrix Card

The 16 x 16 Audio/Video Matrix Card is the basis of the Series H, Model 128 x 32 Audio/Video Switching System. It provides up to 16 inputs and 16 outputs of audio and video switching on a 11-1/2" x 15-1/4" circuit board. The audio/video matrix card is simply a carrier card for the hybrid circuits. All switching matrix functions are contained on this single card, demonstrating the packaging density that can be achieved using hybrid circuit design. This new technology allows crosspoint densities never before attained.

SERIES H MODEL 128 x 32

The 16 x 16 Audio/Video Matrix Card consists of the following hybrid circuit devices:

- 16 x 2 Video Crosspoint
- 16 x 2 Audio Crosspoint
- Quad Video Input Amplifier
- Quad Audio Input Amplifier
- Logic Control for the 16 x 16 A/V Matrix Card

Video and Audio Output Amplifiers

The Series H Routing Switcher employs individual hybrid video and audio output amplifiers. These amplifiers are placed on separate output amplifier carrier cards. An example, the Model 128 x 32 uses five output amplifier motherboards. Two of the boards have 7 plug-in audio and video output circuits, and the remaining 3 boards have 6 audio and video output circuits, for a total of 32 outputs. Individual video and audio outputs are used for ease of maintenance and card changing. This technique also restricts malfunctions to no more than one video or audio output circuit.

ROUTING SWITCHERS

15X SERIES

The Series 15X Routing Switcher offers an inexpensive method of eliminating patch panels and providing selectable distribution of audio and video signals. Any output channel can be independently programmed to select any input signal. The 15X Series offers very flexible control options which are divided into two categories — local and remote which can be intermixed within the same frame. Units are available in sizes: 2 outputs, 6 outputs, and 12 outputs. Also available with Audio Breakaway.

Plug-in input and output amplifiers are used for video and audio. The audio input amplifiers incorporate balanced inputs with common mode rejection for cancelling hum on input lines. The video inputs have looping BNC connectors and terminating switches.

15X

15X Series Video/Audio Routing Switchers • Bridging Crosspoints • Choice of Local or Remote Controls • Modular—Field Expandable • Three Frame Sizes • Low Crosstalk • Second Audio Level (optional) • LED Status Indicators • Input and Output Amps • Terminating Switches on Inputs • Audio Breakaway

6 out frame, add	1240.00
12 out frame, add	1475.00
Expansion Modules for:	
15X Local Control Chassis, per output	510.00
15X Remote Control Chassis, per output	820.00
For 12 out frame with less than 6 outputs	1500.00

Local Control

Mechanically interlocked pushbutton switches are used to select and switch the audio, video and tally signals.

Each video crosspoint is isolated from feeding back through the switch to the newly selected signal eliminating the glitch on other monitors. Each output has a separate plug-in tray containing the mechanical switch as well as the audio and video output amplifiers which are also separate plug-in units. LED status indicators above each pushbutton illuminate when the corresponding switch is depressed.

Remote Control

Standard remote controls are available for momentary pushbuttons. Remote control pushbutton trays are interchangeable with the local modules. Only D.C. voltages are used for control. Switch module assemblies are available in 12 x 1 and 15 x 1 sizes.

VIDEO PRODUCTS

P-50

P-50 Video Processing Amplifier

The Model P-50 Processing Amplifier accommodates a wide range of sync formats and provides adjustment for all signal parameters including sync, video, pedestal, burst level, burst phase and chroma level. In addition to the processed output, a pulse cross output is provided enabling the operator to adjust skew and tracking controls on a video tape recorder for optimum performance. The P-50 also has built in AGC circuitry for maintaining signal level automatically.

FEATURES

- Front panel control of six video signal parameters, including video level, sync level, chroma level burst, burst phase and pedestal level.
- Accepts most sync formats.
- Input AGC for maintaining proper signal level automatically.
- Generates a pulse-cross format with automatic picture brightening to allow the use of a standard monitor for VTR skew and tension adjustments.
- Comes complete with rack mounting kit and instruction manual. **\$1700.00**

SPECIFICATIONS

ELECTRICAL

Video Input

Level: 1.0V peak-to-peak, ± 6 dB, composite video
Impedance: 75 ohms, $\pm 5\%$

Video Outputs (2 each)

Level: 1.0V peak-to-peak, ± 6 dB, composite video
Impedance: 75 ohms, $\pm 5\%$ source terminated
Output No. 1 works in conjunction with the front panel Operate/Bypass switch
Output No. 2 can be strapped to provide a non-composite video signal

Monitor Output

Level: 1.0V peak-to-peak, ± 6 dB, composite video
Impedance: 75 ohms, $\pm 5\%$, source terminated
Output mode selectable by the front panel Monitor/Pulse Cross switch

Sync Output

Level: 4.0V peak-to-peak
Impedance: 75 ohms, $\pm 5\%$, source terminated
Sync signal is separated from the incoming video signal

Frequency Response: ± 0.5 dB to 5 MHz, down less than 3.0 dB at 8.0 MHz

Differential Gain: 1.0% maximum (10-90% APL)

Differential Phase: 1.0 degree maximum (10-90% APL)

Low Frequency

Noise and Hum Reduction: Greater than 30 dB

AGC (Sync Tip Detector)

Input: 1.0V peak-to-peak, ± 6 dB
Output: Less than 0.5 dB change with \pm dB change on the input

Controls (referenced to Nominal Video Levels)

Video Level: ± 6 dB
Sync Level: ± 6 dB
Chroma Level: ± 6 dB
Burst Level: ± 6 dB
Burst Phase: $\pm 45^\circ$
Pedestal Level: ± 40 IRE Units

720

Power

Requirements: 100-135 VAC, 50-400 Hz, 16 watts nominal

Connectors

Video Signal: BNC type
AC: 3-prong, heavy duty grounding type

MECHANICAL

Size: 1.75"H x 17.0"W x 9.30"D. Mounting hardware provided for standard 19" rack. Feet provided for desk top mounting 6 lbs. (net) 8 lbs. (shipping)

Weight:

ENVIRONMENTAL

Temperature: 0 to 50°C operating, -55 to +85°C (non-operating)
Relative Humidity: 0-90% (no condensation)

720 Video Distribution Amplifier

3M's Model 720 Video Distribution Amplifier has been designed for flexibility in almost any situation. It's ideal for studio, mobile, or duplication applications, where quality signal performance and reliability are mandatory.

Used independently, our Video Distribution Amplifier accepts up to three different sources with four outputs for each source. Multiple sections may be looped together to provide 4, 8, or 12 outputs from a single video source.

The Model 720 can either be conveniently rack-mounted or utilized as a free-standing unit.

FEATURES

- Three sections; 1 input, 4 outputs per section, with common power supply
- Front panel gain adjustments
- Cable equalization adjustments up to 1000' of cable
- Front panel test points
- High impedance, loop-through inputs
- 1 3/4" rack-mounting **\$835.00**

SPECIFICATIONS

ELECTRICAL

Input Impedance: Bridging, greater than 40 dB, 75 ohm return loss, 0-10 MHz

Maximum Input DC: ± 25 volts

Gain: ± 6 dB (front panel adjust)

Outputs: 4 each, 75 ohm source terminated

Maximum Output: 2.2 volts peak-to-peak into 75 ohms

Output Isolation: 35 dB at 3.5 MHz between outputs

Frequency Response: ± 0.25 dB, 100 Hz-5 MHz; ± 0.5 dB, 5 MHz - 10 MHz; Less than 3 dB down at 15 MHz, 50 Hz tilt less than 1%

Differential Phase: 0.5 degrees

Differential Gain: 0.5%

Chrominance/Luminance Delay

Error: 10ns

Cable Equalization: Capable of 1000 RG59U to 10 MHz. Unity gain through system

Isolation between Amps:

50 dB at 3.58 MHz

Power Requirements:

103-135 volts, 50-400 Hz, 10 watts nominal

Connectors:

BNC type

MECHANICAL

Size: 1.75"H x 17.0"W x 9.30"D. Feet provided for table top use. Mounting kit provided for standard 19" rack

MICROPROCESSOR SWITCHERS

ACTUAL PHOTOGRAPH
OF A 120 x 120 SYSTEM

CONTROL TERMINAL

40X MAINFRAME

40X Series

The 40X Series Routing Switcher is designed as an expanded 20X system. Up to 40 inputs can be accommodated in the same main frame and frames can be added to handle systems in excess of 40 inputs. One 40X Mainframe will house a complete 40 input—20 output routing switcher providing input/output amplifiers and switching for video, audio and auxiliary signals.

Inputs are expandable in groups of ten (10).

Outputs can be added one at a time. Each 40 x 1 channel is mounted on a single Switch Module that plugs into the Mainframe. Output Amplifiers and Crosspoint Modules, including latches, plug into the Switch Module. All redundant modules are interchangeable without compensating adjustments.

A unique microprocessor logic system is standard in the 40X system allowing any type of control to be used without changes to the logic. A dual microprocessor system with automatic changeover (option) may be employed eliminating the possibility of total system failure. With this type of logic every channel can be programmed for any type of control or can be changed in the field by simply replacing the existing control with another type. Single line coax cables are used as panel control cables. Tally verification is returned from the matrix crosspoints to the control panel. Control panel cables can be looped through without making home runs to the mainframe.

The Microprocessor System makes the following capabilities standard features:

1. RS232 port for a terminal or computer interface.
2. Port for cartridge tape recorder which can be used for test routines or special instructions.
3. Plug-in expansion to 4K of RAM (1K standard).
4. Plug-in expansion to 6K of ROM (10K total).
5. Plug-in I/O and timer expansion.
6. 5 1/4" card frame chassis.

7. Separate power supply in frame.
 8. Audible and visual alarm in case of failure-external closure for remote alarm also available.
 9. Audible and visual failure alarm can be used with one or two microcomputers.
 10. Display and keyboard included on board for field programming.
 11. MPU will handle a 1000 x 1000 matrix.
- Total Reliability is greatly enhanced in this type of system because of several factors.
1. Failure of any input will cause a loss of only one input in the matrix.
 2. A failure of any component or module associated with any given output will cause a loss of only that output or a small portion thereof.
 3. Modules can be removed and replaced while system is operating.
 4. All logic is provided with connector for applying emergency battery power in case of power failure. Only small dry cells are necessary with CMOS logic.
 5. Redundant power supplies are available as an option.
 6. Every channel has separate power regulators for all voltages offering excellent power isolation.

Options include a second audio switching path (built-in), redundant power supplies.

Breakaway Audio is standard with pushbutton control. It consists of selecting any audio from another input signal source and switching that source without changing the video. From that point the audio can be changed to another source or returned to the audio-follow mode.

With all other types of control, Breakaway Audio is available at a slight additional cost. Provisions are also available for adding a second audio switching channel. However, if this option is taken, the auxiliary switching channel is not available. Vertical Interval Switching is standard with all 40X systems.

M/A-COM VIDEO SYSTEMS, INC.

63 Third Ave. Bldg. 5
Burlington, MA 01803
(617) 272-3100

FIBER OPTIC TRANSMISSION SYSTEM

- Higher Resolution Video – to 30 MHz
- Greater Signal-to-Noise Ratio – Beyond 70 dB
- Lower Distortion – For Video and Audio
- Greater Distances – to 3 km and Beyond Without Repeaters
- Immune to RFI, EMI, Crosstalk and Hum

The SL-2000 Fiber Optic Transmission System represents a major advance in communications technology from M/A-COM Video Systems, Inc., a leading supplier of communications systems. The revolutionary SL-2000 System provides transparent transmission of broadcast quality signals over several kilometers of fiber optic cable without using repeaters and with none of the potential interference problems encountered when using conventional coaxial or microwave links. The MVS SL-2000 System is a cost-effective way of satisfying your video, audio or data communications requirements with provision for future expansion.

The MVS SL-2000 Fiber Optic Transmission System is capable of simultaneous transmission of video and multiple audio/data signals over a single optical fiber. Fiber optic cable provides the benefits of dielectric waveguide transmission with the convenience of lightweight dedicated cable and significantly lower installation costs. Add to this other inherent advantages of fiber optic cable, such as immunity from interference, electrical isolation, and security. The field proven MVS SL-2000 System is engineered for years of reliable, unattended operation with a built-in expansion capability to meet future requirements. Up to nine channels of video, audio, or data are housed in a single 19" rack frame. Modular design permits expansion or reconfiguration by simply adding or changing plug-in modules.

GENERAL

Rack Shelf Capacity	power supply/test module, plus up to nine function modules
Dimensions	17" (l) x 19" (w) x 5.2" (h) (43.2 x 48.3 x 13.4 cm)
Optical Connector	standard Amphenol 906 SMA Type

VIDEO PERFORMANCE

Input/Output	1.0V P-P; 75 ohms (loop-through/dual)
Signal-to-Noise Ratio	70 dB at 1 km; 60 dB at 3.2 km (2 miles)
Frequency Response	10 Hz to 6 MHz ± 0.15 dB
Distortion	
Line Time	1%
Field Time	1%
Chrominance-Luminance Delay	15 ns
Differential	
Gain	1%
Phase	0.5°

AUDIO PERFORMANCE

Input/Output Signal Level	+ 9 dBm (TT), + 21 dBm (peak)
Impedance	600 ohms balanced
Modulation	FM
Signal-to-Noise Ratio	83 dB at full modulation
Frequency Response	± 0.2 dB, 20 Hz to 20 kHz
Total Harmonic Distortion	0.1% (TT level)
Pre-Emphasis/De-Emphasis	75 µs

POWER

Voltage	115 Vac/60 Hz or 220 Vac/50 Hz
Consumption	5W/module

ENVIRONMENTAL

Temperature Range	0 to + 50°C

VIDEO DELAYS AND FILTERS

**DISTRIBUTED EXCLUSIVELY BY
TELEVISION EQUIPMENT ASSOCIATES, INC.**

Box 393
S. Salem, NY 10590
(914) 763-8893 TWX 710-575-2600

VIDEO DELAY BOXES (VARIABLE), DV SERIES

Small metal boxes with BNC connectors provide infinitely variable video delay either with switches (type 180 or 360) or taps (type 097) over a range of 10-665ns. A ± 1 ns trim achieves precise timing at installation and will compensate for temperature and aging variations during subsequent maintenance. For longer delay requirements, these variable boxes may be cascaded with lump delay boxes (type DV 0100-1000) for a maximum delay of 2500ns. The prefix DV identifies boxes which can be used as "stand alone" units or can be mounted on a 19" rack panel (Type 5) which accommodates 15 separate boxes. The prefix DN refers to similar boxes which are not rack mountable.

Adjustment of time delay in TV signal routes is important in all countries of the world. Matthey 75 ohm delay units are suitable for use in all TV systems including NTSC, PAL, SECAM, and all variations.

The Matthey SMALLER VIDEO DELAY UNITS are designed to make the fullest use of Matthey miniature DIP video delay line modules (separate data available on request) and retain features important to TV engineers.

Technical Data

Impedance 75 ohms
Frequency Response ± 0.05 dB Ripple up to 5.5 MHz (0.1 dB peak to peak)
Return Loss 27dB*
Temperature range 0-70°C
Max. input voltage 2v.d.c.
Performance of box and 19" rack units is a function of the delay line combinations used.

*Delay times > 400ps = > 25dB

RACK MOUNTED PC CARD DELAY (INFINITELY VARIABLE)

Video Delay Range 10-1830ns. with optional "O" loss.

Rack Frame Type 175: Height 1-3/4"; accommodates 10 PC cards (2 delay lines on each card); total 20 delays; BNCs on back of PC card; lucite front cover; cards mount horizontally.

Rack Frame Type 350: Height 3-1/2"; accommodates 16 PC cards (2 delay lines on each card); total 32 delays; BNCs on back of PC card; lucite front cover; cards mount vertically.

Delay Range	Part Number	1 - 10	11 - 50
10-165ns	VU 180 (switches)*	\$205	\$185
10-325ns	VU 360	482	433

*Original Matthey Video delay (not DIP performance)

Use rack panel 3

10-170ns	DV 180 (switches)	\$234	\$211
10-320ns	DV 360 (switches)	455	410

LUMP DELAY BOXES

These can be cascaded with variable boxes to achieve any delay out to 2500ns.

Delay Range	Part Number	1 - 10
100ns	DV 0100	\$196
200ns	DV 0200	218
300ns	DV 0300	267

ME-888 DIGITAL VIDEO PROCESSOR & STANDARDS CONVERTER

- Five input standards (auto switching)
PAL/SECAM/NTSC/4.4NTSC/PAL-M
- Four output standards (plus Y-U-V)
PAL/NTSC/4.4NTSC/PAL-M
- Eight-bit resolution — luminance & chrominance
- Five standard SPG & genlock full PAL sequence
- Noise reduction
- Detail enhancement
- Color correction
- Versatile control panel
- A-B channel switching
- Remote control
- Freeze and fade
- Fully modular construction

The ME-888 is much more than just a standards converter; it also performs a wide range of signal processing functions:

Timebase Correction:

A separate TBC is unnecessary when ME-888 is available.

Noise Reduction and Detail Enhancement

The powerful noise reduction capability and horizontal and vertical detail enhancement are valuable aids to improving picture quality. Improvements equivalent to at least one tape generation are easily possible.

Freeze

Field and frame controls are accessible externally (as are all controls) for effects generation, multigrab, etc.

Color Correction

A separate color corrector is unnecessary. Color errors in source material may be eliminated by the comprehensive color balance controls which are standard on the ME-888. Red and blue gain controls operating at white and black levels of the picture ensure complete color control.

Synchronizing

Multi-standard frame synchronizing to external references further increases the cost effectiveness of the ME-888.

TV Standards

The ME-888 offers TV standards conversion or synchronization between: (Inputs) PAL/SECAM/NTSC/4.4NTSC/PAL-M and (Outputs) PAL/NTSC/4.4NTSC/PAL-M. Y-U-V (optionally RGB) outputs are always available. Input standard selection is automatic and failsafe; it will not change until it positively identifies a new standard. Provision is made for manual selection in instances when interior quality render it necessary.

ME-888

Genlocking

Outputs of all four standards may be genlocked to a suitable reference. Coded signals (e.g. SECAM), derived from the Y-U-V outputs via an external coder, may also be genlocked if the coder provides for it. A genlock status light is provided. The full EIGHT-FIELD sequence is maintained in PAL and PAL-M.

SPG

The ME-888 contains its own stable multi-standard sync pulse generator and outputs all the necessary signals for driving external equipment. In PAL and PAL-M the full eight-field sequence enables recording on one inch VTRs from a freestanding ME-888. Sync/subcarrier phasing is adjustable on all output standards. (This enables, for example, EBU recommended phasing in PAL). Provision is made for temperature compensated reference oscillators to be used.

Remote

The front panel may be removed from the unit and adapted by means of a simple and inexpensive optional kit for remote use. Alternatively, an additional remote panel may be used. Total control passes to the remote unit when the REMOTE switch on the master panel is operated. Status lights on both panels are illuminated. The remote control panel has standard 19" fixings and is 3U (132mm) high.

Dimensions: (6U) 280H x 406D x 445W mm,
Weight: 19kg (approx.)

Cabinet is suitable for rack mounting when fitted with side lugs (supplied).

T-220 FIT/Time Base Corrector

The T-220 FIT™ component digital TBC allows multiformat input selection with simultaneous multiformat outputs from:

- 1/2" or 3/4" heterodyne VTRs
- 1/2" Professional Type M (Component) Format
- 3/4" U-Matic® (Dub) Y688, or Composite Mode

The T-220's input processing control architecture permits standard outputs to be integrated with future developments, such as digital effects. This architecture gives you the cleanest, most versatile TBC available today, ready to interface with your component studio.

- Freeze: Vertical interpolator provides clean, crisp pictures
- Vari-Trak™: Color to 3x Forward and 1x Reverse when used with Sony BVU-820 in Dynamic Tracking® mode
- Search Performance: A full 40x Forward and Reverse
- Infinite Window TBC: Allows Operation with Nonservo'd VTRs or Remote VTR Feeds
- DOC Detector: TTL/RF Selectable with Automatic AGC
- Plug Compatible with Sony U-Matic Series

The T-220 can be purchased in NTSC and PAL-B television formats.

S-130 Full Frame Synchronizer

- Full Frame Storage Processes VITs, VIRs and Teletext
- Selectable Response to Fading Signals
- Excellent Hot Cut Performance
- Available in NTSC, PAL B and PAL M TV Standards
- Internal Microprocessor Controlled Troubleshooting
- Manual selection of Field 1, Field 2 or Full Frame Freeze

S-130 NTSC

\$10,990.00

S-130 PAL B, PAL M, TV Standards

11,500.00

2100 Video Image Processor

Provides dramatic picture improvement of any video signal and corrects many problems inherent in VTRs.

- 6 dB Noise Reduction in Chroma and Luminance
- Vertical and Horizontal Enhancement: Adjustable
- Automatic Chroma/Luminance Delay Compensation
- Proc Amp Controls

\$5950.00

C-150

C-150 Automatic VTR Machine Controller/ Commercial Ad Inserter

For use in Broadcast, Satellite, Cable and Low-Power Television applications.

- Total Automatic Operation, up to 4 VTRs
- Logging Interface
- Satellite Tone Decoder
- Automatic TBC Interface
- Vertical Interval Switching

\$4995.00

AUDIO/VIDEO EQUIPMENT

TS 2

VPDA-2

MULTIDYNE TS-2

The Multidyne TS-2 is a high quality test signal generator with many particular functions that are often achieved through the use of at least four different instruments. It produces bars with a field programmable 12 character message, black burst, tone end all standard oven-referenced pulses. It also produces a sophisticated ten second tape leader count-down with a swinging pendulum, frequency shift beeps, one second of black after second 2 and display of the edit point for the first 3 frames of second zero (picture start) For more versatility in editing systems it also has an audio and video bypass. The TS-2CG also has a character generator that allows typing over tape leaders. The instrument is housed in a 1 3/4" welded steel cabinet.

SPECIFICATIONS

Sync Generator

Frequency 14.318180 MHz
Subcarrier 3.579545 ± 1ppm, RS-170A

All pulses widths as generated by the National Electronics

MM5321 sync generator IC in the color mode.

Pulse and Subcarrier

Amplitude & Stability 1% 0 - 50 C.
Character Phase Stab Same as subcarrier
Tone Stability 10% 0 - 50 C.
AC Input 117/220 ± 10% at 10W
Bars Stability 2 degree, 2 IRE
Number of Characters 12 switch program
Count Down 0 through 2 w/ frequency shifted tone

TS-2 with all options \$2400.00
 With only bars logo and tone 1350.00
TS-2CG 3000.00

ACCESSORIES

TS-2A	Bars, black, logo, tone, aud.o/video bypass	\$1150.00
TS-2B	Bars, black, logo, tone, audio/video bypass All sync drives and black burst	1750.00
TS-2C	Bars, black, logo, tone, audio/video bypass All sync drives, black burst, & count-down	2250.00
TS-2D	Bars, black, logo, tone, audio/video bypass All sync drives, black burst, count-down, cross hatch, and character generator	3000.00

Multidyne VPDA-2

The Multidyne VPDA-2 is an AC/DC distribution amplifier designed mainly for field use. It runs on 115/230 Volt A/C 40-60 Hertz externally selectable or from external battery power dissipating about 4 Watts. It provides visual indication of low battery voltage and, most important, of signal presence at the output. Dimensions: 9"W x 7 1/2"D x 2 1/2"H \$650.00

Dual equalizer option	\$100.00
Rack mountable, two units per 1.3/4" rack height	\$1300.00
TCC-1	Time code center	\$4200.00
TCR-1	Time code reader/regenerator	2000.00
ADA-7	Audio distribution amplifier	650.00
ADA-7RM	Dual rackmounted	1300.00

DRC-120

DRC-202

SERICON SYSTEM — MACHINE CONTROL

The Sericon System is a set of SMPTE-compatible general-purpose remote control devices. A complete system consists of one or more Transmitters, one or more Receivers, and optional Interfaces, all connected to a common bidirectional digital serial data line. Each unit is housed in a rackmount enclosure, one rack unit 1.75" high and 6" deep.

DRC-108/DRC-120 Transmitter

The Sericon Transmitter is available in two versions: 8-button and 20-button. The 8-button version has 8 software-configurable illuminated pushbuttons mounted on its front panel, and 5 auxiliary input and 5 output lines available at a 15-pin D-connector on the rear panel. The 20-button version has 20 software-configurable illuminated pushbuttons and no auxiliary input/output lines. The Sericon Transmitter normally functions as a Controller.

DRC-202/DRC-20XA Receiver

Sericon Receivers have two rear-panel 15-pin D-connectors, each carrying 8 software-configurable outputs and 4 inputs. Each connector may be treated as a separately addressed port; in effect a Sericon Receiver may function as a single or a dual Receiver.

Interface

A Sericon Interface is required whenever a Sericon system must communicate with a device which employs a non-SMPTE-compatible serial data format.

Specifications

All Units:

Overall Dimensions	1 75 x 19 x 6 inches
Weight	3 lbs.
Power Requirement	110/220V, 50-60Hz, 15W
SMPTE Port	See SMPTE 207M & RP-113
Warranty	3 Years

Transmitters:

Buttons	8 or 20, illuminated, field-legendable
Rear Panel Connectors	AC power, 2- x 9-pin SMPTE, 2- x 15-pin D (1 Expansion Box Compatible, 1 user I/O)
Signal Levels	(Outputs) 200mA open-collector drivers, (Inputs) 0/5 Volt logic

Receivers:

Rear Panel Connectors	AC power, 2- x 9-pin SMPTE, 2- x 15-pin D (Both Expansion Box Compatible)
Signal Levels	(Outputs) 200mA open-collector drivers, (Inputs) 0/5 Volt logic

Interfaces:

Rear Panel Connectors	AC power, 2- x 9-pin SMPTE, 1 of: 25-pin D, RS-232C signal levels, 9-pin D, RS-422A signal levels BNC, 70mA current loop
Protocols Supported	Sony, Image Video, or per request

Sericon System: SMPTE Compatible Digital Serial Remote Control

DRC-001	Buss Controller	\$ 770.00
DRC-108	8-Button Transmitter	1700.00
DRC-120	20-Button Transmitter	1960.00

TEST EQUIPMENT

TR-1 and TR-1B Non-Linear Systems TRACER

Features:

- *In-circuit and out of circuit testing of circuit components & networks.
- *Graphically displayed signature patterns for rapid detection of faults by inexperienced personnel.
- *Tests all parameters simultaneously.
- *Test circuit boards to component level without powering up tested device.
- *Dual inputs for good-bad circuit comparisons.
- *Automatic, adjustable input switching rate.
- *LED input indicators.
- *Battery or line operation.
- *Self test capability.
- *Small and lightweight for user portability.
- *Dynamic testing of components and circuitry.
- *Tests all these components and more:
 - *Field Effect Transistors
 - *Bipolar Transistors

- *Diodes
- *Diodes back to back
- *Light Emitting Diodes
- *Zeners
- *Unijunctions
- *Ferrite Core Inductors
- *Seleniums
- *IC's and LSI Chips
- *Darlingtons
- *Bridge rectifiers
- *SCR's
- *Triacs
- *Capacitors
- *Inductors
- *Transformers
- *Combinations of all of these and more
- *Also indicates shorts and opens

DESCRIPTION

The NLS TRACER is a small, portable test instrument incorporating a cathode-ray tube display and test circuitry which enable it to present a graphically displayed "signature pattern" of a component or electronic network under test and thereby allows the user to determine if the component or circuit is good or faulty. The TRACER performs dynamic testing on circuits that are not powered up, in circuit or out. The TRACER has two inputs (A & B) each of which can be used alone or which can be used alternately at an adjustable rate. LED indicators show which input is being displayed on the CRT. Using this alternating mode, the user can compare a known good circuit to others in question and easily observe any difference in the displays.

The TRACER has two sensitivity ranges: LO — 1 Volt / Division and HI — 10 Volts / Division and includes a self-test capability that enables the user to determine that the TRACER is functioning correctly and is in proper calibration.

Model TR-1B comes complete with a battery charger and batteries as well as a set of three adjustable tip test leads. A leather carrying case with a neck strap and belt loop for versatile hands-free operation is offered as an optional accessory.

Package size is a small 2.9 inches high by 6.4 inches and 8.0 inches long. Weight is less than three pounds.

The TRACER uses mainly integrated circuits of the CMOS or low power Schottky types. Warm-up time is less than five seconds. Power consumption is less than 8 watts (actual running power consumption with batteries not charging is approximately 3 watts). Low battery indication is provided when the power ON LED doesn't light when the power switch is in the ON position.

The TRACER is an extremely stable instrument and therefore requires no controls for synchronization.

TR-1	\$645.00
TR-1B	795.00

Which diode is a good video detector?

Which is a good capacitor?

SPECIFICATIONS

INPUTS

- NUMBER: Dual inputs (A & B)
- MODES: A, B or A / B (Alternate)
- A / B SWITCHING RATE: 0.25 Sec to 0.5 Sec
- INDICATORS: LED indicators for each input
- TEST VOLTAGE FREQUENCY: 2 KiloHertz
- SENSITIVITY: 1 Volt / Division or 10 Volts / Division
- ACCURACY: 3%
- MAXIMUM VOLTAGE: 25 Volts peak (HI range)
2.5 Volts peak (LO range)
- MAXIMUM CURRENT: 1 mA peak (HI range)
125 mA peak (LO range)

DISPLAY

- CRT: Bluish-white phosphor, medium persistence, 1 1/2" diagonal screen. CRT uses low power filament for low battery drain.
- X AXIS: Represents peak voltage across the circuit under test.
- Y AXIS: Represents peak current through the circuit under test

POWER SOURCE

- INTERNAL: Three rechargeable, sealed lead-acid cells. Operating time using fully charged cells is approximately six hours. Charging circuitry is integral and functions when the TR-1 is connected to a power line through a plug-in transformer (supplied with each TR-1). Battery charge time with instrument off is 16 hours.
- EXTERNAL: Operates continuously from a 115 VAC source, 50 to 400 Hz when connected to the plug-in transformer.
- Alternate transformer for 230 VAC is available. Power consumption is less than 8 Watts.

ENVIRONMENT

- OPERATING TEMPERATURE: 0 to +40 degrees Celsius.
- SHOCK AND VIBRATION: Will withstand normal shock and vibration encountered in commercial shipping and handling.
- PHYSICAL MEASUREMENTS
SIZE 2.9" x 6.4" x 8.0" D.
WEIGHT Less than 3 lbs (1.36 kg) with batteries.

Prices and Specifications Subject to Change Without Notice.

TEST EQUIPMENT

LM-3A

LM-40A

Miniature Digital Multimeters

LM-3A, 3 Digits. • Full three digits — 1000 counts • Measures AC and DC volts, kilohms, megohms and AC and DC milliamperes • Bright, sharp .3" LED readout • Battery or AC line operated • Nicad batteries and charger included • Automatic polarity indication • Auto decimal placement • Automatic overload indication • No zero adjustment and no full scale ohms adjust • Small size — 1.9" H x 2.7" W x 4.0" D • Overload protection all functions • Weight — 9.2 ounces, including batteries

The Model LM-3A 3-digit Digital Multimeter is an original Digital Voltmeter designed and manufactured by NLS. NLS goal was to design an economical DMM with a wide range of accurate performance and thereby make digital instruments available to a much wider group of users. The LM-3A is packaged in a small 1.9 inches high by 2.7 inches wide by 4.0 inches deep attractive, tough case. It weighs only 9.2 ounces. Case design allows the meter to be placed on end for vertical viewing, as well as on its side for customary horizontal viewing. Optional tilt stand or panel-mounted cases are available. **\$148.00**

LM-3.5A • Moderate cost • 3 1/2 digits — 2000 counts — 100% over-range • Measures AC and DC volts, kilohms, megohms, and AC and DC milliamperes • Battery or AC line operated • Bright sharp 0.3" LED readout • Nicad batteries and charger included • Automatic polarity indication • Automatic decimal placement • Automatic overload indication • No zero adjust and no full scale ohms adjust • Small size — 1.9" H x 2.7" W x 4.0" D • Overload protection all functions • Weight — 0.2 ounces, including batteries • 10 megohms input impedance

The Model LM-3.5A e-1/1-digit Digital Multimeter called the "Voltmeter-Plus," was designed to be a rugged, hard working general purpose multimeter, priced very competitively with instruments of comparable performance. Since its introduction in 1975, it has been one of the fastest selling instruments in the world.

The Model LM-3.5A is a neat appearing instrument — in a modern, tough, scuff-resistant, basic black-colored case. Its size, 1.9 inches high, by 2.7 inches wide, by 4.0 inches deep, makes it the smallest 3 1/2-digit instrument available and allows it to fit snugly into any tool kit. Weight is only 9.2 ounces with batteries installed. Its form factor permits standing the meter on end for vertical viewing as well as placing it on its side for conventional horizontal viewing. Optional tilt-stand or panel-mounted cases are available.

Basic functions include AC and DC volts, kilohms, megohms, and AC and DC milliamperes. Full scale ranges are 2, 20, 200 and 1000 volts (750 VAC), 2, 20, 200 and 2000 kilohms as well as 20 megohms and 2, 20, 200 and 2000 milliamperes. Resolution for each function is 0.001 volts, one ohm and one microampere.

\$182.00

LM-4A, 4 Digits. • Moderate cost • 4 digits — 10,000 counts Measures AC and DC volts, kilohms, megohms and AC and DC milliamperes • 0.03% DC accuracy — 0.0001 VDC resolution • Battery or AC line operation • Bright, sharp 0.3" LED readout • Nicad batteries and charger included • Automatic polarity indication • Automatic decimal placement • Automatic overload indication • No zero adjust, no full scale ohms adjust • Small size — 1.9" H x 2.7" W x 4.0" D • Overload protection all functions • Weight — 9.2 ounces, including batteries • 10 megohms input impedance.

The NLS Model LM-4A "Lab Accuracy Voltmeter" was developed to provide a small hand-held DMM which would produce precise measurements in a laboratory, shop or field environment and yet would be small, tough and operate independently of the AC line. The LM-4A, 10,000-count DMM meets these requirements beautifully.

In addition it is a neat appearing instrument — in a modern, tough, scuff-resistant, basic black-colored case. Its size, 1.9 inches high by 2.7 inches wide by 4.0 inches deep, makes it the smallest 4-digit instrument available and allows it to fit snugly into any tool kit. Weight is only 9.2 ounces with batteries installed. Its form factor permits standing the meter on end for vertical viewing, as well as laying it on its side for conventional horizontal viewing. Optional tilt-stand or panel-mounted cases are available. **\$275.00**

LM-40A, 4 Digits. • 4 digits — 10,000 counts • Measures AC and DC volts, kilohms, megohms and AC and DC milliamperes • 0.01% DC accuracy — 0.0001 VDC resolution • Battery or AC line operation • Bright, sharp 0.3" LED readout • Nicad batteries and charger included • Automatic polarity indication • Automatic decimal placement • Automatic overload indication • No zero adjust, no full scale ohms adjust • Small size — 1.9" H x 2.7" W x 4.0" D • Overload protection all ranges • Weight 9.2 ounces including batteries • 10 megohms input impedance

The NLS Model LM-40A Digital Multimeter was designed to provide the extra performance offered by a 4-digit multimeter at a price comparable to that of a 3-1/2-digit hand-held DMM. This was achieved by replacing some of the most expensive parts in the NLS "Lab Accuracy Voltmeter." Only a slight degradation in accuracy was the result. However, the accuracy of the LM-40A meets or exceeds that of the best 3-1/2-digit DMM and in all other regards the 10,000-count LM-40A is vastly superior to its 2000-count counterpart.

In addition it is a neat appearing instrument — in a modern, tough, scuff-resistant, basic black-colored case. Its size, 1.9 inches high by 2.7 inches wide by 4.0 inches deep, makes it the smallest low cost digital instrument around and allows it to fit snugly into any tool kit. Weight is only 9.2 ounces, with batteries installed. Its form factor permits standing it on end for vertical viewing or placing it on its side for conventional horizontal viewing. Optional tilt-stand and panel-mounted cases are available. **\$252.00**

DIGITAL FREQUENCY METER

Miniature Digital Frequency Meters

FM-7, 7 Digits. • Seven digits — 10 million counts • Measures frequency 10 Hz to 60 megahertz (to 512 megahertz using SC-5 prescaler) • Small size — 1.9" H x 2.7" W x 4.0" D • 30-millivolts sensitivity at amateur and CB frequencies • One-hertz resolution on 10Hz range • Meets FCC standards for setting transmission frequencies • Battery or AC line operation • Nicad batteries and charger included • Automatic decimal placement • One-megohm input impedance • Weight — 9 ounces, including batteries • Bright, sharp LED display.

The NLS Model FM-7 Digital Frequency Meter is the smallest 7-digit, 60-megahertz, battery or AC line operated instrument available. Its dimensions are a neat appearing 1.9 inches high by 2.7 inches wide by 4 inches deep. Its case is modern tough, scuff-resistant and basic black-colored. The form factor of the case is amenable to standing the meter on end for vertical viewing or placing it on its side for viewing in the conventional manner. Optional tilt-stand and panel-mount cases are available. **\$237.00**

Avon, CT 06001
(203) 677-5252

TIME BASE CORRECTORS

The nova Series Digital Time Base Correctors

The nova Series Digital Time Base Correctors define new industry standards. For the first time, digital performance doesn't have to cost a lot. Designed for optimum correction of non-segmented 3/4" and 1/2" video tape recorders. Engineered like their predecessors, the nova Series provides superb performance in the smallest packages available.

Operating in the heterodyne (process) mode, the nova 490 will correct 3/4" and 1/2" non-segmented video tape recorders, including U-Matic®, VHS®, and Beta® formats. The nova 500 will time base correct all 3/4" and 1/2" non-segmented video tape recorders which accept sync and derived subcarrier inputs. The result is a full bandwidth time base corrected signal. The nova 510 contains more features in one rack height than any other time base corrector in its class. A general purpose TBC, operating in either subcarrier feedback (direct) or heterodyne (process) modes at the flick of a switch.

Compact — Only one rack unit high (1.75"), the nova 490 fits in even the tightest space. Strong aluminum extrusions form the front, rear and sides providing a solid chassis. A weight of only 10 pounds enhances portability in all applications.

Simple Operation — The nova Series is designed for use right out of the box. Simply connect 2 cables from the nova 490 to your VTR, one to your monitor, and turn on the power. Simply connect coax cables to the nova 500 and nova 510 and turn on the power. Control of video, chroma, hue and setup constitute the built-in video processing amplifier controls. Front panel LEDs indicate the presence of video and reference signals, as well as proper video level. (A front panel switch instantly changes from direct to process modes and back again on the nova 510 only).

Advanced Design — 8 bit 4X subcarrier sampling is employed for maximum picture fidelity. Advanced design memory provides 32 lines of video storage. Reference to output delay (or advance) is adjustable for perfect plant timing. Digital processing amplifier reinserts sync and burst perfectly every time. Never a need to trim filters or pots for proper rise time or position. RS-170A relationship is maintained regardless of Reference SCH. Proven technology allows operation with less than 60 Watts (50 Watts for nova 500) of power dissipation. Color lock is maintained in VTR shuttle and pause operation. A stable color still frame picture can be recorded in pause. (Front panel adjustment of luminance/chrominance timing for best multi-generation tape performance on nova 490).

Reliable — All active components are temperature cycled, burned-in and tested prior to assembly into the nova Series. Each system is thoroughly burned-in after test for enhanced reliability. Power supplies operate at no more than 60% (55% with nova 500) of their rated capacity.

Cost Effective — Compare the nova Series with any other time base correctors. Feature for feature, the nova Series are the lowest priced digital time base correctors around.

SPECIFICATIONS

Performance:

Correction Range	32 lines
S/N Ratio	56dB (p-p video to RMS noise)
Differential Gain	Less than 2% (plus quantizing effects)
Differential Phase	Less than 2° (plus quantizing effects)
K-Factor (2T)	
nova 490	Less than 3%
nova 500	Less than 2%
nova 510	Less than 2% (Direct) Less than 3% (Process)
Bandwidth	
nova 490	2.3MHz (Y), 1.0MHz (C)
nova 500	+/-0.5dB to 4.2MHz
nova 510	+/-0.5dB to 4.2MHz (Direct) 2.3MHz (Process)
Residual Error	+/-10ns (Y), 2° (C)
nova 500	+/-10ns
Sampling Rate	14.3MHz (4 times color subcarrier)
Number of Bits	8
L/C Delay Adjustment	
(nova 490 only)	Greater than 400ns

Video Inputs:	1.0 Volt p-p +6dB into 75 ohms
VTR Video Reference	Composite video or black burst, looping, or terminated. Necessary only if genlock is required.
Video Outputs:	
Program Video	Composite video, 1.0 Volt p-p nominal into 75 ohms. Input hard wired to Program Video output if power is off or the bypass switch is activated. Time base corrected video otherwise.
Monitor Video	Same as Program Video except no output with power off, and black burst output in bypass mode.
Control Outputs:	
Advanced Sync	4.0 or 0.4 Volts, nominal (jumper selectable) into 75ohms. 16lines advance of the Reference.
VTR Subcarrier	
nova 500, 510	2.0 Volts nominal into 75 ohms, 3.58mhz. Locked to Video Input horizontal rate.
Mechanical:	
Depth	20.5" (52.1cm)
Width	16.75" or 19.0" (with rackmount ears installed) (48.3cm)
Height	1.75" (4.5cm)
Weight	10 lbs. (4.6kg)

DIGITAL VIDEO PROCESSOR

GEMINI DIGITAL VIDEO PROCESSOR

GEMINI DIGITAL VIDEO PROCESSOR

- Dual bus digital processing
- Multiple inputs per bus
- Full synchronization from any source
- Universal Time Base Correction from any VTR or other input
- Digital switcher and effects panel
- Remote engineering control panel
- A/B roll editing capability
- Built in freeze and strobing
- Digital control of all functions
- Software control of signal processing, mixing and effects
- Built in broadcast sync pulse generator
- Variable digital enhancement
- Variable digital color balancing
- Built in color bar and black burst generators
- 8-bit integrated ADC's
- NTSC Coded and RGB outputs
- Selectable input proc modes
- Remote control by Paltex edit controller or other computer systems using RS422A
- Remote preselected effects initiated from relay closure or ground
- Single wire genlock or stand alone
- Operates in stop and slow motion
- Store error concealment
- Ease of maintenance
- Software controlled test routine
- Common size plug in circuit cards
- Cool and quiet main frame
- Optional "B" bus output for expanded applications

Designed to meet and exceed the requirements of the most demanding production and post-production applications, at a cost lower than that expected from similar systems consisting of multiple units from various suppliers.

GEMINI features advanced component coded sampling techniques to deliver fully framed, digitally processed, stable color video output, from the widest range of inputs, including unstable VTR outputs, and non-synchronous video feeds.

On board microprocessor software allows control of all signal processing, mixing and effects functions, offering flexibility as well as unlimited life expectancy. GEMINI is ideal for editing applications because of its infinite window which only requires a single wire feed from the source VTRs. An RS422A interface or a simple GPI contact closure may be used to command cut, mixes and effects for different levels of sophistication.

Four video inputs plus color black can be assigned to either A or B channel, and a joystick picture positioner can move any input selected on channel A off in any direction including diagonally.

GEMINI comes complete with central processing rack, fully operational production switcher, and engineering control panel. Hundreds of units are already in service around the world with a proven record of reliability, minimum down time, and maximum operational efficiency.

WJ-205B
Desktop passive switcher with 12 inputs that can be switched to a single video output, mechanical switching, front panel card holder permits labeling each input source, all inputs terminated with 75 ohms, BNC connectors.
WJ-205B **\$175.00**

WJ-205RB
Rack mountable passive switcher with 12 inputs that can be switched to a single video output, mechanical switching, front panel card holder permits labeling each input source, all inputs terminated with 75 ohms, BNC connectors.
WJ-205RB **\$175.00**

Sequential Switchers

WJ-512
Sequential Switcher, accepts up to 10 camera inputs with alarm mode, two spot monitor, sequential & spot monitor, front panel indicator lamps, manual selection of any camera for display on second monitor, switching interval manually adjustable from 1 to 30 seconds, 12-pin connector for optional remote selection of the spot monitor output, BNC connectors, front-panel buzzer shows alarm condition, inputs for 10 sensors: door switch, mat switch, window switch, etc., when sensor activated, sequential output automatically switches to camera involved.
WJ-512 **\$495.00**

COMPUSWITCH™

Pelco Compuswitch™ series of sequential switchers are the first of a new generation. They are designed using the latest high reliability micro-computer technology. Included are more useful features of higher priced switchers in an economical attractive package for general use.

MICRO-COMPUTER TECHNOLOGY — Compuswitch™ incorporates the majority of circuit functions in a single specially developed micro-computer to control video switching and other functions greatly reducing parts counts, which enhances reliability.

TWO SWITCHERS IN ONE — Compuswitch™ combines the features of Homing and Bridging switchers into a single compact configuration. The Monitor 1 output allows a number of CCTV cameras to be displayed in automatic sequence, or any cameras to be displayed in automatic sequence, or any camera may be selected for continuous viewing. The Monitor 2 output allows an independent camera to be selected for continuous viewing or may sequence with the Monitor 1 output.

Other outstanding features include Independent Programmable Dwell Time, Digital Channel Display, Rapid Sequence of All Cameras, a Self Test Mode, and human engineered ease of operation.

VARIETY OF MODELS — Compuswitch™ is available in a wide variety of models to fulfill the requirements of all systems. Separate interfaces which connect to the basic switchers using a flat ribbon cable allow for alarm operation, audio follow, and remote switching. Expansion of any Compuswitch system is easily achieved by cascading switchers together.

The Compuswitch Formatter interfaces with the basic Compuswitch and allows for a channel number, time, date and 16 character message to be superimposed onto a selected video picture. All programming is done from the front panel, for all inputs in the basic Compuswitch.

The channel number, time, date, and message are considered to be independent fields of information and can be positioned anywhere on the screen independent of the channel selected. Information can be displayed in black or white characters, and unwanted information may be blanked, independent of the channel selected. All displays are jitter free even with random interface cameras.

Each channel may have a different message on the screen, and have a different position on the screen. The character set has 128 characters, utilizing a 5 x 7 dot matrix, included are upper and lower case alphabet, numbers and 64 special characters.

The Compuswitch Formatter will interface with all basic Compuswitch options and accessories.

POWER SUPPLIES FOR DIGITAL RECEIVERS

PT3200PS	Pan/Tilt power supply	\$150.00
A3200PS	Autoscan power supply	150.00
V3200PS	Variable speed power supply	300.00
LZ3200PS	Pelco zoom lens power supply	130.00
AUX3200PS	*Auxiliary contact supply for MEH3200 and MG3200	140.00

COMPUSWITCH™ SYSTEM 700

NOTE: ALL COMPUSWITCH SYSTEM 700 PRODUCTS ARE DESK TOP MODELS. RACK MOUNTING IS AVAILABLE AT ADDITIONAL COST. SPECIFY WHEN ORDERING . . \$20.00

COMPUSWITCH — MASTER COMPONENT OF COMPUSWITCH SYSTEM 700

CS708DT	8 position user programmable sequential switcher combines both homing & bridging features. Separate dwell times programmable for each channel plus bypass of unwanted or unused inputs. Standard feature allows camera sequencing to be controlled from an external source such as VTR	\$490.00
CS708LDT	8 position. Same as CS708, except with looping inputs	540.00
CS716DT	16 position. Otherwise same as CS708	550.00
CS716LDT	16 position with looping inputs. Otherwise same as CS708	600.00
CS716EDT	16 position extender up to a maximum of 96 positions for interface with CS716DT or CSR716DT only. (Interface of more than one extender is available on special order only.)	380.00
CS716ELDT	16 position extender for looping inputs up to a maximum of 96 positions for interface with CS716LDT or CSR716DT. (Interface of more than one extender is available on special order only.)	420.00

SYSTEM EXPANSION MODULES

(NOTE: Interface with CompuSwitch Video Switcher Required.)

COMPUSWITCH FORMATTER™

CSF700DT	User programmable time/date, channel number, and 16 character message generator in one unit. Program each camera position independently. Position programmable information anywhere on screen individually for each camera. Internal battery backup system maintains power for up to 8 hours. Easily re-programmable in field.	790.00
----------	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	--------

COMPULARM™

CSA716DT	16 position. Integrates video and alarm systems. User programmable. "Arm" or "disarm" any alarmed camera. Attended or unattended modes. Multiple alarm monitoring in either "priority" or "sequential mode." Visual and audible alert indicators	\$500.00
CSA716EDT	16 position extender up to a maximum of 96 positions for interface with CSA716E only. (Interface with more than one extender is on special order only.)	Quote

COMPUSWITCH REMOTE™

(Two pair and coax required.)

CSR708DT	8 position remote	\$ 950.00
CSR708LDT	8 position remote. Same as CSR708, except with looping inputs	1000.00
CSR716DT	16 position remote. Otherwise same as CSR708	1120.00
CSR716LDT	16 position remote with looping inputs. Otherwise same as CSR708 ..	1170.00
CS716EDT	16 position extender for a maximum of 32 positions	Quote
CS716ELDT	16 position extender for a maximum of 32 positions. Interface with CSR716LDT only.	Quote

COMPUSWITCH AUDIO FOLLOW

CS708AFDT	8 position balanced audio follow. Integrates audio and video system for synchronized switching of audio with video	Quote
CS716AFDT	16 position balanced audio follow. Otherwise same as CS708AF	Quote
CS716EAFDT	16 position extender up to a maximum of 96 positions for interface with CS716AF only. (Interface with more than one extender is available on special order only.)	Quote

MULTIPLE OUTLET STRIPS

**A safe and convenient way to
distribute power where it's needed**

Acts as a branch circuit, instantly providing additional power outlets.

- Fuse or circuit breaker protection
- U-ground outlets with electrically-wired ground
- Switch capability to turn outlets on or off
- Attractive styling
- Compact size, to fit into tight places
- Heavy-duty construction
- Cross-slot rapid mounting feature

A wide choice of models.

Perma Power makes it easy to find exactly the kind of multiple outlet strip that's needed...

Choose a group, and then select individual models on the easy-to-follow pictorial chart.

Easy mounting. All units are provided with two screws and cross-slots on the bottom for rapid mounting.

Cases are different lengths, depending on the number of outlets—2" x 2" x 9", 2" x 2" x 12", or 2" x 2" x 15".

Convenient. "Sockets-Plus" multiple outlet strips are the quickest, most convenient way to control electric power when and where it's needed, with the assurance of complete safety. (Conventional cube taps and extension cords can result in over-loaded circuits and chaotic stacking of plugs into existing wall outlets.) Plug in "Sockets-Plus," and instantly you have the additional outlets you need.

Safe. All "Sockets-Plus" multiple outlet strips come with 3-wire U-ground outlets, and are housed in electrically-grounded steel cases. Because they are available with built-in fuse or circuit breaker, there's no danger of overloading one of the main circuits. If the power drain is too great, they shut off the power *here*, not in a fuse box somewhere down the line. They guard the line, so users can relax!

A smart idea in power control. With one or more on-off switch and current indicator lights available, "Sockets-Plus" multiple outlet strips put the user in complete control of his local power use! See at a glance what's on, what's off.

All units are rated at 15 amperes, 125 volts, 60 Hz continuous duty.

A one year limited warranty applies to all models.

SURGE SUPPRESSORS

Protect sensitive equipment
from power line voltage surges.

Sensitive digital circuits in today's home and business computers, and electronic office, industrial and medical equipment can be damaged or even destroyed by electrical power line voltage surges. These surges can be caused by lightning, equipment on the same power line being turned on and off, or by electrical utility company switching. Even though a direct strike by lightning is of low probability, lightning several miles away can cause significant power line surges that can harm electronic equipment (even without striking the earth).

All Perma Power Surge Suppressors provide protection against both *normal mode* surges (line to line) and *common mode* surges (line to ground). There are two model groups:

The first features single-stage filtering, provided by three metal oxide varistors. Unlike outlet strips in their price

category, the models in this group provide protection on all three conductors in a typical 120VAC circuit.

The second group features four-element, two-stage filtering, provided by a uniquely-engineered combination of metal oxide varistors and silicon avalanche diodes. These models assure you of both normal and common mode surge protection, and of an almost unlimited operating life.

All Perma Power Surge Suppressors feature a unique positive shutdown mechanism to prevent inadvertent operation of unprotected equipment in the event of a suppression element failure. A visual indication of shutdown is provided by the pilot lamp. Strip models have a 6-foot double-insulated #14/3 "SJT" line cord, master switch and indicator light and act as a *power control center*.

DIGITAL PROGRAMMING PRODUCTS

DiscAssemble™

FEATURES:

- Free-form source lines with multiple commands
- Optimized object code uses minimum dump space
- Checksum generated for file verification
- Provides library of macros, subroutines, and diagnostics
- Assembler variables available for use in expressions
- Variable symbols redefined during a single pass
- Warning and error messages readable and well documented
- Command mnemonics provided with abbreviations checked for compatibility with videodisc player.

DiscAssemble* is a symbolic macroassembler designed to automatically translate source statements from a source file into object code in an object file and a program listing in a listing file. All three files are normally saved on diskette. Source file contains statements typed by the programmer.

DiscSimulate™

FEATURES:

- Simulates up to 100 data dumps by automatically loading them into the player as they are called
- Allows testing of the transmit commands used to send data from a videodisc player to an external computer or printer
- Permits testing Partial Load commands for data dumps of less than 1022 bytes
- Provides warning and error messages that are readable and well documented.

DiscSimulate* is a program designed to be used by people unfamiliar with computer programming. It is used for demonstrating and debugging digital programs for Pioneer LaserDisc™ Players. It is intended to be used with a Check Disc to simulate the finished disc prior to approving a production run.

DiscMail™

FEATURES:

- Data transmission at 300 or 1200 baud
- Automatic retries if there are transmission errors

DiscMail* is a telecommunications program which allows transmission of videodisc source, listing, object, or message text files from one computer to another. Transmission is accomplished over phone lines using a Bell 212A (or compatible) modem or by direct connection of two computers using an RS232 serial interface.

Digital Programming Products System Requirements

- Apple II or IIe with Apple II Pascal 1.1 operating system. With Apple II, a language card is also required. For display purposes an 80-column text card is recommended.
- IBM Personal Computer (P.C.) with UCSD p-System, Version IV.0 operating system and at least 128K bytes of memory.
- Modification for other computers capable of using the p-System—RFQ.

DiscAssemble (includes library of macros, subroutines, and diagnostic programs on diskette, plus user's manual package) \$2,250.00
 DiscSimulate (includes a diskette and user's manual package) 1,250.00
 DiscMail (diskette and user's manual package included) 750.00

SS-D1 PROCESSOR

SWSD SYSTEM STILLS WITH SOUND AND DATA

Motion Video With Stereo Sound

- Traditional applications of optical LaserDisc brand videodiscs
- High quality full color video with two discrete high fidelity audio channels

Still Frames With Sound

- On one side of a disc, over 20 hours of music and narration explaining and describing 4500 different still frames can be stored
- Transfers sound filmstrip programs to the LaserDisc™ medium (100 typical 20-minute filmstrips per side)
- Expands multi-language/message capability

Digital Data Storage

- As much data as 1000 floppy diskettes stored on one disc side
- Massive ROM capacity for typical computer applications
- Graphics and text file data storage
- Keyed title and overlay storage
- Interactive program control
- Additional user area at 40 bytes per frame

Still with Sound and Data (SWSD) is a system that allows compressed audio and/or digital data to be stored in video frames. The SS-D1 Processor, when attached to any optical laser videodisc player, can process data encoded on the disc.

Flexibility is provided by three different encoding techniques. The blinking method blanks the video screen while reading the data into SS-D1 memory, then displays a video still frame while playing back the audio from memory. The masking method allows the user to store data in up to nine horizontal band segments. Typically, the top and bottom of an image would be cropped as data is read off the disc while the cropped areas are blanked on the video screen. Then, the player displays a still frame while the SS-D1 memory is played back. The user area, uses five lines at the top of the picture, outside visible range, to provide data transfer of 40 bytes per frame.

SWSD System **POR**

SPECIFICATIONS

Audio Encoding Method

- Adaptive Delta Modulation (ADM)

Error Correction Method

- Reed-Solomon

Power Supply Specifications

- Nominal Voltage 20V 50/60Hz
- Power consumption 30W

Connectors and Controls

- Video input 1-BNC
- Video output, masked nonmasked 2-BNC
- Audio input 1-RCA pair
- Audio output 1-RCA pair
- RS-232C port 2-D-Type (25 pin)
- Digital data out (conforms with Centronics specs) 1-Amphenol (36-Pin)
- SWS Audio Repeat switch 1-Push button
- Power ON/OFF switch 1-Push button
- RS-232 Baud rate (300-38 400) select 2-DIP (8 switch)
- AC Outlet: switched 1-200 Watts max

COLOR BAR GENERATORS/ VIDEO IDENTIFIER

QSI BG-200 SERIES

BG-200, BG-208, BG-216 COLOR BAR GENERATORS

The QSI BG-200 Series is an inexpensive line of high quality color bar generators which produce full field bars and a 1000Hz tone. This series is designed for testing both audio and video feed lines quickly and efficiently. The standard model, the BG-200, generates full field bars and 1000Hz tone only. Models BG-208 and BG-216 will provide the additional advantage of an on-screen ID of eight characters and sixteen characters, respectively. This ID proves very useful in locating specific feed lines.

FEATURES

- Full field color bars
- 1000Hz tone
- Field programmable eight character ID (BG-208 only)
- Field programmable sixteen character ID (BG-216 only)

SPECIFICATIONS

Power: 117VAC at 3/8 A
Size: 19"W x 1-3/4"H x 16"D rackmounted
Audio Output: +8dBm into 600 ohms, transformer isolated, balanced, Male XLR.
Video Output: 1.0V p-p source terminated in 75 ohms, BNC.

ID (where applicable):

Eight or sixteen alphanumeric characters, depending on model; character and background mattes adjustable. Horizontal and vertical size and position adjustable. Two character matrices 5 x 7 and 7 x 9 (7 x 9 shown). Background may be deleted.

BG-200 Full Field Bar Generator	\$1195.00
BG-208 Full Field Bar Generator with 8 character programmable identification	1395.00
BG-216 Full Field Bar Generator with 16 character programmable identification	1595.00

BG-308 COLOR BAR GENERATOR

- 1kHz audio test tone
- Internally switchable for either constant display or flashing mode
- Split-field NTSC bars patterns

BG-308 is a split-field color bar generator with a field programmable 8 character video source identifier positioned in the black block of the split-field pattern. The BG-308, one rack unit high, is perfect for the microwave equipped ENG truck.

SPECIFICATIONS

Video output
(color bar with 8 character ID): 1V p-p, 75 ohm source terminated, BNC connector

Blackburst output: 75 ohm source terminated, BNC connector

Pulses: Within RS-170 specifications

Subcarrier: 3.579545MHz ± 10Hz, 0-50 degrees C

Vector accuracy: Within 1.5 degrees

Audio output: Internally adjustable 0 to 8dBm, 600 ohms balanced, transformer isolated, male XLR

Tone: 1kHz sinewave, distortion less than 3%

Power: 117 VAC, 2 watts

Size: 19"W x 1-3/4"H x 12"D. Rack Mount

BG-308 **\$1495.00**

CB-9000V SERIES LIVE VIDEO IDENTIFIER AND SOURCE IDENTIFIED COLOR BAR GENERATORS

- Adds ID to vertical interval of external composite video when bars are dropped, placed on lines 10 through 16, both fields
- Switch selectable character matrix 5 x 7 or 7 x 9, in color bar mode
- Digital line by line vertical positioning in color bar mode

The CB-9000V Series, in the color bar mode, allows you to test your audio and video links, and the split field identification indicates who is out there. When the color bar is dropped for the live feed, the identification is automatically transferred to the vertical interval of the live video.

CB-9000

SMPTE Color Bar Generator with 8 character field programmable VSID (Video Source Identification) and 1000Hz Audio Tone. Video and audio by-pass. 19"W x 1-3/4"H x 16"D. Rack Mount. 117 VAC.
CB-9000 **\$2095.00**

CB-9000V

8 Character Vertical Interval Identifier. SMPTE Color Bar Generator with 8 character field programmable VSID (Video Source Identification) and 1000Hz Audio Tone. When bars are dropped for program feed, the 8 character I.D. is automatically transferred to the vertical interval. 19"W x 1-3/4"H x 16"D. Rack Mount. 117 VAC.
CB-9000V **\$2195.00**

SPECIFICATIONS

Video input: 1Vp-p nominal, 75 ohm terminated, BNC

Video output: Adjustable to 1Vp-p 75 ohm source terminated, BNC

Video transparency: Differential gain: Less than 0.5%
Differential phase: Less than 0.5°
Frequency response: ±0.5dB to 8MHz

COLOR BAR/ BLACKBURST GENERATORS

MODEL AF-1000 AUTOPHASING BLACKBURST GENERATOR

The AF-1000 is a time and labor saving device for multiple camera systems. Cable lengths are no longer a consideration since the AF-1000 adjusts each of its three blackburst outputs automatically to ensure properly phased chroma and sync at the switcher. Fully self-contained, the AF-1000 also features a fixed blackburst output to which all three cameras are referenced. The one rack high unit can be daisy-chained for systems of more than three cameras, due to its genlocking capabilities which include a single control covering more than 360° of subcarrier phasing.

FEATURES

- Stand alone or genlocking
- May be used at distances of 1000 feet
- Reference blackburst output
- All inputs are Hi-Z looping
- One rack high

TYPICAL APPLICATIONS

- Phases three cameras automatically
- Daisychain to phase additional cameras
- Enable quick camera phasing
- No camera tweaking for cable lengths
- Locks TBCed studio VTR's

AF-1000 SPECIFICATIONS

Auto Phase

H phase within ± 70 ns

Subcarrier phase within $\pm 1^\circ$

Lock time 5 seconds max

Internal phase trim H ± 1 us min., subcarrier ± 90 min.

Genlock Mode

H phase adjustable $\pm 2\mu$ s

Subcarrier phase adjustable more than 360°

Lock time 5 seconds max

19"W x 1-3/4"H x 16"D

115 VAC $\pm 10\%$, 22W

0-70 C operating

Net weight: 8 lbs.

Shipping Weight: 11 lbs.

AF-1000 Automatic Black Burst Phasing Generator

Automatically adjusts each of its three black burst outputs for varying camera cable lengths to ensure properly phased chroma and sync at the switcher. The unit can be used as a stand alone or genlocked. The one rack unit generator can be stacked for systems of more than three cameras

AF-1000 \$2595.00

MODEL CB-1680 COLOR BAR GENERATOR/VIDEO SOURCE IDENTIFIER

The CB-1680 gives you an ID in the vertical interval of an external video source. It is easy to program since pushbuttons are readily available on the front panel. The built-in memory stores up to 80 separate 16 character messages. The CB-1680 includes genlocking SMPTE bar generator and 2 blackburst sources.

FEATURES

- ID in vertical interval for satellite up-link feeds
- Up-link transmission
- Microwave feeds from both fixed and mobile transmitters
- EFP segment identification
- SMPTE bars
- 1kHz tone and blackburst signal

CB-1680 SPECIFICATIONS

Colorbar

Output: 1Vp-p, blanking at 0 VDC, 75 ohm source terminated.

Pattern: SMPTE with plunge.

Pulse Widths: Within RS170 specifications.

Subcarrier Frequency: 3.579545 MHz ± 10 Hz 0°C ~ 50°C.

Vector Accuracy: Within 1.5 degrees

Genlock

Input: 75 ohm terminated, requires blackburst.

H Phase: Front panel adjustable to within ± 70 ns.

Subcarrier Phase: Front panel adjustable more than 360 degrees.

Blackburst

Outputs: Two, 75 ohm source terminated, blanking at 0 VDC.

Pulse Widths: Within RS170 specifications

Subcarrier Phase: Adjustable more than ± 30 degrees.

ID

Inputs: Two, one internally connected to color bar, one external, 75 ohm terminated.

Clamping: Synctip.

Differential Phase: Less than 0.5 degrees.

Differential Gain: Less than 0.5%.

Frequency Response: 0.5dB to 8MHz.

Tilt and Overshoot: Less than 1%.

Hum and Noise: -60dB below 1Vp-p.

Dc In Output: Less than 0.75 VDC.

Output: 1Vp-p nominal, 75 ohm source terminated.

Audio

Input: +8dB, 600 ohm balanced.

Output: +8dB nominal at 0 VU transformer isolated, 600 ohm balanced.

Line Gain: adjustable from full off to a gain of 2.

Tone: 1kHz sinewave, distortion less than 1%.

Power

117 VAC 50/60Hz 25 Watts.

Mechanical

Video Connectors: BNC

Audio Connectors: XLR

Size: 19"W x 1-3/4"H x 16"D

Weight: Approx. 7 lbs.

Remote

7 BIT parallel plus negative strobe for remote ID selection.

COUNTDOWN GENERATOR/ VIDEO DISTRIBUTION AMPLIFIER

VT-7 7 SEGMENT VIDEO LEADER COUNTDOWN GENERATOR

The QSI VT-7 Video Leader Countdown Generator provides video and audio tape cueing information at the head end of each program segment. Video cueing is a 1 second interval numerical countdown for 10 seconds, consisting of 8 seconds of displayed numbers and 2 seconds of terminal or no numeral video. Audio cueing is 0.5 second of 400Hz tone burst during the first half display of each new video numeral. The first half second of "2" count contains a 200Hz tone burst, indicating that the terminal video has been reached.

All electronics are rack mounted with Size Flash, Set, Count, and Hold front panel controls. Remote contact closures may be input through the rear panel. Remote inputs are priority.

FEATURES

- Selectable expanding size
- Selectable fixed sizes; any one of eight
- Set: Places "10" in screen, no audio
- Count: Countdown starts with "9" and tone burst
- Count video deleted after "2" displayed
- Video bypass on power-down
- Switch selectable 1/2 second flashing characters
- Hold: Stops countdown on last number and silences audio
- Remote inputs for all control functions
- 400Hz Counting Audio, 200Hz Black Cue
- Accepts any composite video input
- Numerals generated in any display area
- Pulse out at "5", "3" and terminal count

SPECIFICATIONS

MECHANICAL

Size: 19"W x 1-3/4"H x 12"D, Rack Mount

CONNECTORS

Video: BNC

Audio: XLR

Remote Control: Terminal Strip

ELECTRICAL

Power: 115VAC, 60Hz, 10 watts

Controls: Toggle switches, pushbuttons and external dry closures

VIDEO

Input: 1.0Vp-p, 75 ohm terminated

Output: Adjustable to 1.0Vp-p, 75 ohm source terminated

Audio Output: 600 ohm balanced, transformer isolated

6 x 1 UTILITY VIDEO DISTRIBUTION AMPLIFIER

The QSI 6 x 1 DA Video Distribution Amplifier is designed to handle standard utility video distribution for your television system. The 6 x 1 DA is a desk top type distribution amplifier with looped-through video input and six isolated video outputs. The compactness and self-contained power supply makes the VDA highly portable for those tight quarters in your operations.

FEATURES

- 1 in x 6 out
- Looped-through input
- Excellent transparency
- Output source terminated in 75 ohms
- Front panel gain and equalization controls

SPECIFICATIONS

Size: 4-1/2"W x 2"H x 4-1/2"D

Power: 115VAC, 50/60Hz 5 watts

Optional: 230VAC, 50/60Hz 5 watts

VIDEO

Input: Hi-Z looped-through 1.0 VPP

Outputs: 75 ohm source terminated

Frequency Response: 0.5dB to 10MHz

Differential Gain: Less than 0.5%

Output Isolation: 40dB

Equalization: Utility — Single control, approximate compensation of 200-1000 ft. of RG59U coaxial cable.

Noise: Less than 60dB, below 1 VPP

Differential Phase: Less than 0.5°

Propagation Delay: Approximately 10 ns.

Gain: Adjustable from less than unity to greater than +10dB

6 x 1 DA Portable 1 in, 6 out distribution amplifier with front panel control for gain and equalization \$295.00

VIDEO SOURCE IDENTIFIERS

VSID-1611V VIDEO SOURCE IDENTIFIER

FEATURES

- 5 x 5 dot matrix
- 16 character positions
- No signal interference or degradation of video signals
- Adjustable matte level

The VSID-1611V inserts 16 numeric characters in the vertical blanking interval of a NTSC signal using lines 10 through 14 inclusive. There are 10 numeric characters (0 through 9) plus a blank for each of the 16 character positions.

Selection of the number or blank is done through sixteen (16) eleven position thumbwheel switches located on the front panel of the VSID-1611V. The thumbwheels are arranged in the same manner as the character format so that programming the identifier is simply a matter of dialing it in.

The VSID-1611V was designed to identify video signals transmitted by mobile satellite uplinks. The telephone number of the uplink is inserted into the VBI of the video program being transmitted.

SPECIFICATIONS

Input/Output:	Hardwire looping, 1 Vp-p nominal, 75 ohm source terminated, BNC connectors
Frequency Response:	± 0.5dB, DC to 8MHz
Differential Phase:	Less than 0.2 degrees
Differential Gain:	Less than 0.2 percent
Character Insertion:	Additive—no signal degradation with power loss
Matte Level:	Adjustable between 35 and 80 IRE
Power:	117 VAC ± 10%, 4 watts
Dimensions:	19"W x 1-3/4"H x 12"D
VSID-1611V 1295.00

VSID-82 VIDEO SOURCE IDENTIFIER

Developed for security, broadcast, medical and industrial applications, the VSID-82 provides an efficient and effective visual indicator of video signal's identity. The VSID-82 generates eight alphanumeric characters and inserts them into a composite video signal. The ID is movable anywhere on-screen or into the vertical interval, with separate controls for character and background matte levels. It can also be adjusted for several sizes.

Switches on the board allow the user to select either a 5 x 7 or a 7 x 9 character matrix and, if desired, to delete the full-surround background. Because the ID is programmed with DIP switches, it can be easily changed at any time, even in the field.

FEATURES

- Switch selected 5 x 7 or 7 x 9 matrix
- Eight easily programmed alphanumeric characters
- Adjustable mattes
- Switchable background delete
- Line by line vertical positioning
- Adjustable horizontal and vertical size

SPECIFICATIONS

Power:	5VDC at 500mA per card
Size:	4-1/2"W x 9"D x 5/8"H
Video Input:	1.0Vp-p nominal, on board termination
Video Output:	Adjustable to 1.0Vp-p, 75 ohm source terminated
Frequency Response:	± .5dB to 8MHz
Differential Gain:	Less than 0.5 percent
Differential Phase:	Less than 0.5 degrees
Display Size:	Horizontally adjustable from 1/4 to full screen. Vertically adjustable, three sizes per matrix. Character heights of 14, 28, and 42 raster lines in 5 x 7; 18, 36, and 54 raster lines in 7 x 9.

SWITCHER/PORTABLE COLOR BAR GENERATOR

SW-402 MINI-PRODUCTION SWITCHER

FEATURES

- One rack-unit high
- Four video inputs
- Two switchable buses
- Dissolve between buses
- Two program and two preview outputs
- Tally contacts (dry closure)

The SW-402 is a four input, two output mini-production switcher with a simple dissolve feature between the two selected signals. Designed originally to augment the QSI AF-1000 autophasing black-burst generator, the SW-402 can easily be integrated into other systems. The SW-402 is a compact, easy to operate, mini-production switcher—ideal where space and dollars are limited.

SPECIFICATIONS

Inputs: 1V p-p composite, internal termination, BNC
Outputs: 1V p-p, adjustable, two preview, two program, BNC
Dissolve: between buses
Power: 115 VAC \pm 10%, 230VAC optional
Size: 19"W x 1-3/4"H x 12"D
Tally: dry contacts on program bus, 9 pin connector, supplied

SW-402

Frequency Response: \pm 0.5dB to 8MHz
Differential Gain: < 0.5%
Differential Phase: < 0.5°
Switching: vertical interval
Sync Source: video or black on input #1
Weight: net weight: 6 lbs. shipping weight: 9 lbs.
SW-402\$1695.00

PSF-777 COLOR BAR GENERATOR

FEATURES

- 1kHz audio test tone output
- Can be powered by most common camera/VTR—11 to 15VDC batteries
- Internally selectable for either flashing ID or constant display

PSF-777 a battery operated split-field colorbar generator with 8 character user programmable video identification in the black block of the split-field bar pattern.

The PSF-777 is perfect for the remote engineer when testing temporary microwave links or long cable runs.

SPECIFICATIONS

Video Output (with 8 character ID): 1V p-p, 75 ohm source terminated
Pattern: Split-field NTSC bars
Pulses: Within RS170 specifications
Subcarrier: 3.579545MHz \pm 10Hz, 0-50°C
Vector Accuracy: Within 1.5 degrees
Video bypass with power switch off
Audio Output: Front panel switchable (transformer isolated)
-56dB, 150 ohm balanced; 0dB, +4dB +8dB at 600 ohm balanced
Tone: 1kHz Sinewave; distortion less than 3%
Power: 11 to 15 VDC, 120mA
External Controls: Power switch; LED indicates power on and low battery (flashing); and 4 position audio level switch

PSF-777

Mechanical:
Video Connector: 2 BNC for video in/out
Audio Connector: XLR
Power Connector: 2.1mm coaxial power jack
Size: 8.6"L x 4.6"W x 3"H
Weight: 3.5 lbs. (less battery)
Optional transistor battery pack (2) with 115V AC power adaptor.
PSF-777\$995.00

uniVUer

The uniVUer puts stereo metering over monitor video for quick unified reference of audio level and phase error.

The uniVUer is the first practical method of measuring audio levels in an environment which demands that the engineer's visual attention be on the video monitor. With the stereo audio levels keyed into the video monitor program material, the engineer has a single reference point for all program quality evaluations. Add the MonSter option (Mono-Stereo Coherency Evaluator) and the uniVUer will signal Phase/Polarity errors.

The uniVUer is available with either VU or PPM ballistics, both meters complying precisely with industry adopted standards.

The uniVUer has an adjustable peak flasher for system headroom protection and an adjustable silence sense which can be tied to an external alarm for master control "off the air" alarms.

The uniVUer is compatible with both NTSC and PAL systems and will not degrade the signal to even the most expensive video monitors. Simply insert the uniVUer into the monitor input loop and you're ready to go. Horizontal and vertical size and position are adjustable to suit any monitoring situation. The bar video level is adjustable, and a black box surround can be switched in or out to enhance visibility. The uniVUer display can be bypassed and both the bypass function and the black box can be remote controlled.

The uniVUer consists of two 4 1/2" x 6 1/2" PC boards stacked and hinged to open like a book for setup and maintenance. All setup adjustments are located on the front edge of the boards. The uniVUer is rackmounted (3 uniVUers in a 1 3/4" x 19" chassis with common power supply).

The uniVUer can be used any place where audio competes with video for operator attention. In master control rooms, network switching centers, satellite uplink facilities and other program distribution points where more than one program channel is in use and it isn't possible to monitor audio on all channels simultaneously.

Hundreds of uniVUers are in operation worldwide in major network facilities, production and post production facilities, satellite switching centers, duplicating houses and motion picture dialog and scoring stages.

The piggy-back optional MonSter (Mono-Stereo Coherency Evaluator) monitors stereo phase energy. As an optional extra capability within the uniVUer, the MonSter provides a go/no-go decision for both program material and setup tones. Intended for use in stereo TV, motion picture and recording studio applications, the MonSter is essential where left-right energy coherency provides the basis for correct mono-mix.

MonSter

The Mono-Stereo Coherency Evaluator is a stereo phase energy bargraph display.

Mono-Stereo energy coherency is defined as the point at which the electrically combined left and right channels will have substantially the same energy component as the perceived energy component when acoustically and aurally combined. In other words...the point at which the mono mix will sound like the stereo mix.

When bridged across the left and right channels the bargraph provides a continuous readout of average phase energy. The extremes, from center channel buildup to polarity reversals, and all the nuances in between are clearly apparent. The MonSter provides much the same information as the Lissajous Oscillograph in a display which requires less subjective interpretation.

The MonSter is intended for use in stereo TV, motion picture, and recording studio applications where left-right energy coherency is essential for correct mono-mix. The input filtering is designed to provide reliable phase energy measurement of program material. With the filters switched out the MonSter can be used to measure point source phase during microphone placement, transmission system frequency sweeps, and tape machine head alignment.

The Mono-Stereo Coherency Evaluator graphically indicates the phase energy relationship of the stereo channels in an unambiguous bargraph readout. In a stereo signal the instantaneous phase relationships appear random, but in reality they must be energy additive in order to provide "loudness" to the program material.

When program material is evaluated, the MonSter bargraph movement indicates the left-right instantaneous sum energy measured against the total left-right energy. The result is phase energy relationship. This relationship is extremely important if the resulting program is subject to being listened to on a monophonic system (as in television).

Maintaining the program in the GREEN with occasional dips as low as - 3dB into the AMBER range is the recording engineer's goal. When the display goes down into the RED zone a distinct cancellation is occurring, usually due to a microphone misphasing. When total energy reaches the - 15dB level a probable left-right polarity reversal is assumed and the RED portion of the display will blink as an operator warning. When audio level in either channel falls below the minimum sampling threshold, the entire display goes dark.

With the filters switched out of the circuit, the MonSter will display point source phase cancellation during microphone placement and system checkout.

Normal Program

Specifications.

Input Impedance	50K ohms balanced bridging 25K ohms unbalanced bridging
Frequency Response	20-20KHz ± 0.5dB
Reference Level	+ 4 dBm (± 4dB)
Minimum Sample Level	10dB below operating
Loading (600 ohm line)	0.1dB
Frequency Roll-off (Switchable)	2nd order at 750Hz lo-pass
Power Requirements	115/230V, 50-60Hz, 7VA ± 10%
Operating Temperature	0-50°C, 32°-122°F
Stability (Δ20° Δ5% Power)	± 0.5dB
Size	2 1/2" H x 8 1/2" W x 9 1/4" D, 63.5mm x 215.9mm x 234.94 mm
Weight	2 1/2 lbs., 1.125 kg.

RG341

Turn any video monitor into a precision alignment instrument with the Real World RG341 Safe Area/Safe Title Display Generator with Center Marker, Micro-Mark Cursor for extra convenience in post production and optional Remote Control.

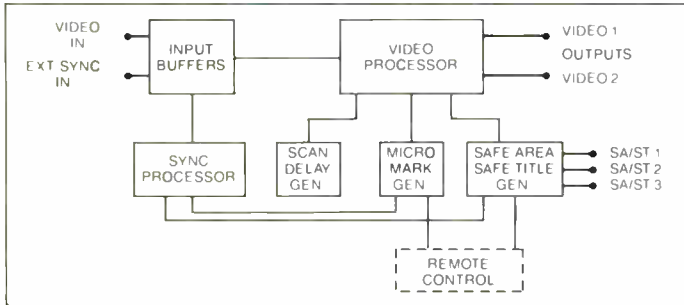

The Real World RG341 is a stand-alone display generator which provides three of the most useful alignment and signal verification tools for video engineering, production and post production.

Pulse Cross Precision electronics delay incoming video into horizontal and vertical elements in order to check video timing and adjust video tape machine tension and tracking.

Blanking Verifier Fixed patterns (10.9 microsecond horizontal and 20 TV lines vertical) are included in the pulse-cross display to verify that equipment under test conforms to RS-170A standard for H & V blanking width.

Micro-Mark Cursor Digitally-generated marker, calibrated in 1 microsecond intervals, may be positioned anywhere within picture to verify timing information and to aid in titling or scene setup.

Safe Area/Safe Title Dual reticules, digitally generated to meet SMPTE standard specifications confirm safe transmission of vital picture information. RG341 displays may be used separately or in any combination.

Specifications

Real World RG341 Micro-Mark/Safe Area Generator

INPUTS	Video	1V p-p, loop through differential input
Ext Sync	1-8 V p-p loop through	
OUTPUTS	Video	Two video outputs 1 V p-p 75 ohm with or without selected keyed-in pattern
SA/ST	Three dedicated non-switchable composite outputs, 1 V p-p 75 ohms 60dB isolation between outputs	
CONTROLS	1 Micro-Mark Cursor	On-Off (LED Indicator)
2 Line	On-Off (LED Indicator)	
3 Horizontal Position	Multi turn potentiometer	
4 Vertical Position	Multi turn potentiometer	
5 Horizontal Scan Delay	On-Off (LED Indicator)	
6 Vertical Scan Delay	On-Off (LED Indicator)	
7 Safe Area/Title	On-Off (LED Indicator)	
8 Center Crosshair	On-Off (LED Indicator)	
9 Minimum letter size	On-Off (LED Indicator)	
10 External Sync	On-Off (LED Indicator)	
11 Remote	On-Off (LED Indicator)	
12 Power	On-Off (Incandescent Indicator)	
NOTE Functions 7 and 8 are independent of each other Function 9 works in conjunction with function 7

INTERCOMMUNICATION MASTER STATIONS

302 308 316 324 332

SERIES 300 INTERCOMMUNICATION MASTER STATIONS

The full range of ROH Series 300 Intercom Stations provide a flexible and efficient intercommunication system capable of satisfying a broad range of news, production and technical operation requirements. Series 300 Master Stations are reliable and are suitable in both fixed and mobile environments.

Available in 1, 8, 16, 24 and 32 Channel versions, these Intercom stations can be configured to accommodate any combination of Intercom, Interphone, Party Line, IFB/PGM Interrupt, Page/Talk-back, 2-Way Radio, Telephone and All Call functions. When configuring these communication features into a single operator station, additional auxiliary control panels and associated accessories are unnecessary. ROH Intercom Stations can be supplied in either self-contained or remote panel versions.

Series 300 Intercom Systems include Models 308, 316, 324 and 332 and are designed for applications which require the coordination of Intercom, Party Line (PL), Program Interrupt (IFB), Page, Telephone, 2-Way Radio and All Call communication, utilizing a single Operator control panel in a Headset or Speaker/Mic mode. Each Operator panel is removable from its chassis and equipped with its respective number of dual purpose pushbutton switches, a corresponding number of toggle keys, speaker/headset selector and a master All Call toggle key.

Except for PL usage, all the functions are easily satisfied through the exclusive use of the toggle keys.

Operating controls have been kept to a minimum and communications with any number of Master Stations is a simple and straightforward procedure. Each Intercom station can originate and maintain two-way communications with any one or more stations. Both private and group communications can be conducted simultaneously without other stations interfering with one another. By depressing the momentary push-to-talk keys, individ-channels or functions (2-Way, IFB, etc.) may be addressed while alternate action switches select the listen status for the desired interphone channel(s). Concentric front panel controls adjust speaker volume and auxiliary program level. In addition, a rear panel control is provided for microphone gain.

- 332-02 32 Transmit and 20 Receive circuits, 5.25" x 19" rackmount. Requires RAN-001 or RAN-015 external speaker; and 75-pair interconnect cable. \$4700.00
- 332-01 Same as 332-02 except with 12 Receive circuits. 4460.00
- 324-02 24 Transmit and 20 Receive circuits with built-in speaker, 5.25" x 19" rackmount. Requires 50-pair interconnect cable. 4200.00

- 324-01 Same as 324-02 except with 12 Receive circuits. 3960.00
- 316-02 16 Transmit and 20 Receive circuits with built-in speaker, 3.50" x 19" rackmount. Requires 50-pair interconnect cable. 3700.00
- 316-01 Same as 316-02 except with 12 Receive circuits. 3460.00
- 308-01 8 Transmit and 12 Receive circuits with built-in speaker, 3.50" x 19" rackmount. Requires 25-pair interconnect cable. 2960.00
- 302-01 1 ICM and 2-channel PL (selectable) circuits with speaker and power supply, 115/230V, 50/60 cycle. 1.75" (H) x 19" rackmount. Includes 2 ea. PTT keys; ICM, PL and AUX volume controls; 4 ea. 3-pin XLR connectors for audio inputs/outputs; and 3-pin XLR gooseneck/mic connector. NOTE: 302-01 is self-contained only. 780.00

ACCESSORIES

- RAN-001 Unpowered full range speaker system in a walnut veneer enclosure. 30 Watts power capacity and 4 ohms input impedance. \$118.00
- RAN-015 Same as RAN-001 except housed in a protective transport case with handle and removable front/rear covers. 118.00
- RAN-002 Unpowered extended range speaker system. Constructed of 5/8" high density laminated wood, finished with walnut veneer. Includes two low frequency drivers, one HF Dome Tweeter and crossover. 60 Watts power capacity and 4 ohms input impedance. 178.00
- RAN-025 Same as RAN-002 except housed in a protective transport case with handle and removable front/rear covers. 188.00

GOOSENECKS/MICS

- 565-7 7" gooseneck, connectorized \$ 40.00
- 565-14 14" gooseneck, connectorized. 45.00
- 565-20 20" gooseneck, connectorized. 50.00
- 558 Noise-cancelling mic with 12" goose-neck for hardmounting on PL stations so designated. 140.00
- 563 Noise-cancelling mic, connectorized. 100.00
- 563H Handheld push-to-talk mic with 6' coil cord and 3-pin XLR connector installed. 90.00

CABLE, TELEPHONE (Specify to nearest 5' Length)

- 25-Pair 351B-() Solid, with connectors installed. \$30 + .70 ft.
- 351S-() Same as 351B except standard. Upon Request
- 50-Pair 352B-() Solid, double-booted with connectors installed. \$60 + 1.00 ft.
- 352S-() Same as 352B except standard. Upon Request
- 75-Pair 353B-() Solid, triple-booted with connectors installed. \$90 + 1.30 ft.

(404) 455-7940

303WS 303RS 303TM 303B 303R2 303RD 303C

SERIES 303 PARTY LINE (PL) USER STATIONS

The full range of ROH Series 303 Party Line (PL) User Stations are designed to provide reliability and audio clarity to party line communications for industrial, entertainment, and broadcast requirements. Series 303 stations are available in both Headset and Speaker/Mic versions to include Belt Pack, Console, Rack, Portable Speaker, Rack Mount Speaker and Wall Mount Speaker. All stations can be used with either Dynamic or Carbon headsets.

PL/User Stations are supplied standard as high impedance bridging (10,000 ohms, typical) across a 150 ohm unbalanced line; configured standard with one channel PL and one channel PGM. Two channel PL, optional. Other standard electro-mechanical features include a 3-position MIC Key for MIC ON/OFF and PTT (momentary) use, associated volume controls and Carbon and Dynamic headset jacks.

ROH User Stations can be used to construct a comprehensive stand-alone mobile or fixed PL System or to complement any ROH Series 300 Intercom Master Stations to provide additional communications to floor personnel, cameras, and remote field units. Although intended for PL use, various Series 303 User Stations can also be interfaced with ROH Intercom Systems as private intercommunication positions when the multiple channel features of Master Stations are not required.

Series 303 Party Line units are interconnected via standard 2-conductor mic cable or single shielded pair through the use of 3 pin XLR type audio connectors. DC power and two channels of the interphone stations are combined at a central location by a plug-in PC card regulator which creates phantom powered or "WET" audio buses. In addition to being able to receive power from the wet audio bus, Model 303RS and TM are also offered with the optional Model 200PS, 115/230 VAC Power Supply. Stations equipped with the PS will power themselves for the AC line normally, and will revert to the wet bus power if no AC is present.

A maximum of 30 non-speaker user stations or 8 speaker user stations may be powered from one wet line. Two wet lines may be audio coupled together to further expand the number of user stations intercommunicating with one another. Speaker user stations may be externally powered in order to reduce the DC load on a wet bus. All Series 303 User Stations present a high impedance bridging load to the wet bus audio and multiple units have little or no effect to the audio level on the bus. All units incorporate fast attack and slow decay automatic gain control circuits on their microphone inputs which helps maintain the audio bus level at a near constant level.

ROH Party Line units receive power from Model 274 Power Regulator module, installed in any Series 200 Mainframes. Typical installations use an XLR Breakout Panel to provide multiple interphone line connectors or lines may be connected direct to the plug-in regulator. Line connectors may all be wired to the same party-line channels or routed through a Source Delegation or Assignment Panel. Series 303 units are directly compatible with RTS TW Series and Clearcom System II interphone user stations, and can be interchangeably plugged into these systems.

GENERAL SYSTEM SPECIFICATIONS

(Ref 0dBV = 0.775V RMS)

Audio Line Impedance: 150 ohms, ± 50 ohms, 75Hz-20kHz
Speech Level: -20dBV to 0dBV (-10dBV avg.)
Line Capacitance: 0.3 microfarads max. (typ. 10,000 ft of cable)

303B	Portable headset station \$400.00/300.00
303C	Console mount headset station 400.00
303TM	Portable speaker station, 2-channel (selectable) plus AUX, removable rear panel for (optional) Model 200PS plug-in power supply. Includes 3-pin XLR connectors for INPUT, LOOP THRU, AUX and MIC 520.00
303R	Rack mount headset station, 1.75" x 19" 460.00
303R2	Same as 303R except with two (2) headset stations	
303RD	Same as 303R except with 10-position PL channel select switch. Requires 25-pair cable and 300SP Splitter Panel for system interconnect 700.00
303RS	Rack mount speaker station, 1.75" x 19", with 2-PL channels (selectable) plus AUX. Includes 14" gooseneck/noise-cancelling mic and removable rear panel for (optional) Model 200PS plug-in power supply 620.00
303WS	Wall mount speaker station, 2-PL channels (selectable) plus AUX. Includes built-in electret mic and rear-mounted terminal strip 540.00

MULTI-LEVEL EFFECTS SYSTEM/ CHROMA KEY

Encore Memory System

- Simple operation with one Multi-Level Effects system to store and recall the next scene as shown on the MLE preview monitor. The MLE program output is never disturbed.
- Set-ups are created on the switcher panel and stored or recalled from the Encore control module.
- Each of 5 memory pages stores 20 Multi-Level Effects set-ups (events) and one sequence of up to 32 events. Total storage is 100 set-ups and 5 sequences of 32 scenes each.
- RS422 serial port for editor interfacing.
- Built-in diagnostics for simplified trouble-shooting and verification of system operation.

The Ross Encore is a microprocessor based memory system that greatly enhances the capabilities of the switcher both in studio use and post-production.

Encore provides a simple-to-operate means of storing and recalling video production switcher set-ups. In the studio it improves accuracy and reduces the pressure on the switcher operator during fast-moving programs.

In the post-production suite, Encore can communicate with computerized videotape editing systems by means of a serial interface port. Now the most complex production effects can be created and instantly recalled, time after time, ensuring production consistency and effective use of costly editing time. When Encore is used with some brands of editors it is able to store switcher set-up information directly to the edit system's floppy disk.

Ultra Key

- Keying with ANY color
- Superior hue discrimination
- Production flexibility
- Ease of operation

The Ultra Key is a new approach to chroma keying that provides superb quality keys, free from the effects of background color "spill".

And now for the first time in the present generation of enhanced chroma keyers, there is continuous remote control of hue adjustment — you can key with ANY color. The Ultra Key is completely integrated into the Ross Multi-Level Effects system, meaning that you can use it like an ordinary chroma key unit WITHOUT the limitations and restrictions imposed by add-on units. You can change foreground or background sources separately or in combination with each other or with titles. And while other units limit you to one camera, the Ross Ultra Key permits the use of two or more chroma key cameras with selection right on the switcher control panel, including automatic key follow of the foreground bus video selection. An optional multi-camera selector is available. With Ultra Key there is no distortion of colors in the keyed scene. That means you can make transitions to and from chroma key situations without the distracting hue shifts on the keyed-in subject that occur on some chroma keyers.

A separate "travelling matte" output may be recorded for subsequent post-production to eliminate problems of encoded keying.

There are only two remote controlled adjustments — hue selection and null control. With the use of the null control, you can eliminate blue edging or blue tint, so common to conventional chroma keyers.

Continuous hue selection offers improved hue discrimination.

Null control is set to eliminate undesirable edge color effects from subject.

Two camera selector has follow position. An optional multi-camera selector is available.

AMPLIFIERS

HI-REL SYSTEM SERIES

High Reliability Audio/Video Distribution Amplifiers and Audio-Follow-Video Routing Switchers.

Shintron Hi-Rel System Component Series for video production professionals is an expanding line of signal distribution amplifiers and audio-follow-video routing switchers commonly required in video production systems.

The Hi-Rel Series pursues "reliability" single-mindedly. The products go through a series of long aging and quality control procedures before shipment. In addition to the thorough attention to reliability, the basic design philosophy is conservative in all aspects.

For example, all audio distribution amplifiers listed in this series are equipped with both input and output transformer isolation. Some manufacturers think this practice is superfluous. We think it adds an extra margin of safety making the products supremely reliable.

AUDIO DISTRIBUTION AMPLIFIERS (Transformer Coupled)

MODEL 201

Model 201 Audio Distribution Amplifier (Terminal Block)

The Model 201 is the terminal block type connector version of the extremely popular Model 316 as described below. The specifications are identical to Model 316 except 201 is equipped with terminal block connectors on the rear panel instead of XLR connectors.

\$450.00

MODEL 316

Model 316 Audio Distribution Amplifier

The Model 316 is an audio distribution amplifier with one input and six outputs. The Model features transformer isolation both at input and output. This conservative design approach makes this product popular among professionals.

\$480.00

VIDEO DISTRIBUTION AMPLIFIERS

MODEL 336

Model 336 Video Distribution Amplifier

Shintron Model 336 Video Distribution Amplifier is a professional grade, all-silicon solid-state video distribution amplifier for multiple fan-out, high grade distribution systems. Model 336 features professional electronics specifications, a compact 19" rack-mount package, and modern appearance.

\$300.00

MODEL 337

Model 337 Dual Video Distribution Amplifier

The Model 337 Dual VDA packs two Model 336's in one rack enclosure for compactness. The Model 337 can be used as either 1 in 12 out DA's or 2 in 6 out DA's in one enclosure.

\$480.00

The electrical performance is identical to Model 336 as above.

MODEL 338

MODEL 338-P

Model 338 Pulse Distribution Amplifier

The Model 338 is a regenerative PDA suitable for Broadcast Cable and other high reliability environment. The 338 contains two identical Pulse DAs of one input/six outputs.

\$480.00

BUILDING THEM BETTER IN TEXAS

Low cost. Fast delivery. Superb quality. Smart reasons to select Shook mobile television production systems. But the real advantage is not how little you'll spend for Shook's totally custom designed vehicles—it's the additional revenues you'll earn by delivering those profitable remote productions.

Cost effective? With Shook's low prices and solid reputation for quality and reliability, you couldn't ask for a better return on your investment!

Providing quality built mobiles throughout the industry at the right price. We give you what you want and how you want it.

Vehicles of all sizes custom designed and manufactured. Ready for equipment or turn-key jobs. Call or write today. We'll put you on the road to success.

BBG-144

VPA-380

ADA-110

ADA-210

FR-3-100

VS6-100 PASSIVE VIDEO SWITCHER

For switching six video inputs to one input. Desk or rack mount.

\$115.00

FR-3-100 RACK FRAME

For all of the above items; occupies 1.75 vertical inches of standard rack.

\$70.00

BP3-100 BLACK PANEL

For unused spaces in the rack frame.

\$16.00

CSG-160 COLOR SYNC GENERATOR

\$800.00

Provides all the standard synchronizing outputs including Blackburst. RS-170 standard. Desk or rack mount.

CSG-350A MASTER SYNC GENERATOR

\$1200.00

Provides all the standard drives, plus Blackburst and a color field ID pulse. Features include: RS-170A timing; SC/H locked; adj. blanking widths; freq. stability 1 P.P.M.

CSG-355A MASTER SYNC GENERATOR

\$1550.00

Same as CSG-350A, also includes: SMPTE Color Bar Signal plus an audio tone. The ideal generator for any studio large or small.

CSG-360A COLOR SYNC GENERATOR

\$1450.00

With Genlock. Source select allows lock to Helical VTR. RS-170A in crystal mode, SC/H locked.

CSG-365A COLOR SYNC GENERATOR

\$1850.00

With Genlock and color bars. RS-170A in crystal mode, SC/H locked.

BBG-144 SYSTEM TIMING MODULE

\$1650.00

Provides 4 independently adjustable Blackburst outputs with advance, as well as delay, $\pm 3 \mu$ sec. adjustment of Horizontal time, 360° subcarrier adjustment.

VPA-380 VIDEO PROCESSING AMPLIFIER

\$1750.00

Built-in genlocking sync generator, adjustable blanking width controls to allow saving the various vertical test and identification signals; and a dual-mode genlock circuit to allow acceptance of either stable or VTR signals.

AUDIO DISTRIBUTION AMPLIFIERS

ADA-110 AUDIO DISTRIBUTION AMPLIFIERS

\$405.00

High performance Audio D.A. One input and ten outputs; low noise, flat response, adjustable gain -8 to +23.5 dB. Can be used for SMPTE CODE.

ADA-210 AUDIO DISTRIBUTION AMPLIFIERS

\$610.00

Same high performance DA as the 110 except dual configuration. Can be either dual 1 X 10 or a single 1 X 20. Ideal for SMPTE CODE.

SELF-CONTAINED SYNC AND DISTRIBUTION EQUIPMENT

VDA-115 VIDEO EQUALIZING AMPLIFIER

\$360.00

The VDA-115 is an extremely versatile unit. In its most simple configuration, it is a 1 x 6 Video D.A. More importantly, it is a cable equalizing amplifier that can serve as a "line-driver" or "line-receiver" to compensate for up to 1100 feet of coaxial cable. It features a differential input that can eliminate as much as 10 volts of A.C. hum.

VDA-100A VIDEO DISTRIBUTION AMPLIFIER

\$310.00

6 output D.A. Freq. response 0.2 dB to 10 MHz, looping input, d.c. coupled, ± 6 dB gain adjust. 110/220 VAC Desk or rack mount.

ADA-106 AUDIO DISTRIBUTION AMPLIFIER

\$310.00

1 x 6, high performance amplifier, with a frequency response of ± 0.1 dB to 30 kHz, can be used for SMPTE Code. Screw capturing terminals. 110/220 VAC. Desk or rack mount.

PDA-100A PULSE DISTRIBUTION AMPLIFIER

\$310.00

1 X 6 Pulse regenerative D.A. with looping input. 110/220 VAC. Desk or rack mount.

SDA-110 SUBCARRIER DISTRIBUTION AMPLIFIER

\$390.00

Regenerative subcarrier amplifier, 2 independently adjustable outputs. 110/220 VAC. Desk or rack mount.

PDA-110 PULSE DELAY AMPLIFIER

\$415.00

Ideal aid in system timing. Four independently delayable outputs, range of 0.2 to 2μ sec. 110/220 VAC. Desk or rack mount.

DISTRIBUTION EQUIPMENT/ SWITCHERS

SYSTEM 500

SYSTEM 500 MODULAR DISTRIBUTION SYSTEM

- 10 Modules Per Frame with Plug-In Power Supply; 11 Modules Per Frame with External Supply
- Redundant Power Supply Configurations Available
- Different Types of Modules may be Mixed in Frame

Each FR-500 frame will hold up to ten plug-in modules plus a plug-in power supply, or eleven plug-in modules with external power supply. The exclusive Sigma Interface Adaptor System allows the mixing of Audio, Video, Pulse, and Subcarrier Distribution Amplifiers and other System 500 modules in the same frame.

FR-500	Holds 10 modules and PS-501 or 11 modules without power supply	\$400.00
PS-501A	Power Supply — Powers one FR-500 frame 90-130/180-260 VAC, 50/60Hz	150.00
EX-505	Extender Card	30.00
VDA-510	Video Distribution Amplifier, one-in, six-out — Differential Gain less than .1%; Differential Phase less than .2°; Return Loss less than 40dB to 5MHz	240.00
ADA-526	Audio Distribution Amplifier, one-in, six-out — THD less than .1%; Drives 600 ohm balanced lines to +22dBm	280.00
PDA-530	Regenerative Pulse Distribution Amplifier, one-in, six-out; less than 100 nsec delay; controlled rise and fall times	240.00
PDA-535	Dual Pulse Delay Amplifier, Two independent amplifiers each with two adjustable delayed outputs — 0.20 μ sec to 2.0 μ sec controlled rise and fall times	360.00
SDA-540	Subcarrier Distribution Amplifier, one-in, three-out; each output individually phase adjustable over 360° range	320.00
BBG-550	Adjustable SC & H Phase Blackburst Module	375.00
VDA-515	Video Equalizing D.A. for up to 1100 ft. of cable	280.00

VSS-120/VAS-120 SWITCHERS

- Can be used for Tally or Time Code
- Highly Visible Green Legend
- High Isolation
- Balanced or Unbalanced Audio Operation

The VSS-120 12 x 1 Passive Switcher offers simple and clean selection of any of 12 video and stereo or 2nd channel audio inputs to a single output, while terminating unselected inputs in their characteristic impedances. 2nd channel can also be used for tally indicators. The VAS-120 is basically the same unit, providing only one channel of audio. Easy input and output connections with BNC type video connections and screw-capturing terminal strip for audio.

VSS-120	Video/Stereo Audio Switcher	\$250.00
VAS-120	Video/Audio Switcher	225.00

VSD-200/VAD-200 VIDEO DISTRIBUTION AMPLIFIERS

- Balanced or Unbalanced Audio In and Out
- Separate Channel Gain Controls
- Easy Installation
- Dependable and Proven Circuits

The Video Stereo-Audio D.A. Model VSD-200, provides one 1 x 6 video channel and two 1 x 6 audio channels in one simple package. Both audio and video amplifiers provide flat frequency responses, making them suitable for any studio or duplication environment. The Model VAD-200 is the same device, with only one audio channel. With on-board regulators on each of 3 separate circuit boards, this unit provides the isolation of independent devices, in the space of the single unit. The "screw-capturing" audio terminal strips make for easy installation. The audio channels can be used for audio or time code signals.

VSD-200	(Stereo) Distribution Amplifier	\$900.00
VAD-200	(Audio) Distribution Amplifier	650.00

SOL-6800

- Controls up to eight VTRs with an integrated 12 input audio and video switcher
- Stereo audio optional
- Video component switcher optional (2 or 3 levels)
- Spare parts kit optional
- 250 real time or sequential events
- Programmable emergency and fill in inputs for automatic recovery
- VTR recording software option (for delayed telecast)
- Events logging software option
- RS422 or 232 communication link optional
- DTMF decoder optional

SOL-6800/MINI

- Controls up to four VTRs with an integrated 6 input audio video switcher
- All options available

SOL-6800/MICRO

- Controls one VTR with integrated 4 input stereo audio and video switcher
- Integrated DTMF decoder
- Can drive a printer
- Can be driven or programmed externally
- Can become a remote switcher
- Offers manual switching
- Memory battery back up
- Automatic bypass
- 6809 micro processor: offers two serial communication ports configurable as RS422, RS232, FSK Demodulator (modem)
- Networkable system; configurable up to 32KB EPROM, 24KB RAM

SOL-6800 COMPONENT SWITCHER

GSS-04 CUE TONE GENERATOR

- 2 frequencies available
- F1 start and end of message
- F2 pause (recue or skip)

AD.ID/Q GENERATOR FOR MESSAGE RECOGNITION

- Records on audio channel:
- 6 digit number
 - Duration (MM:SS) min, sec
 - 20 digit alpha information
 - Cue code

SEG-2000A

WEX-2000

CRK-2000

DIRECTOR 2000 SWITCHER SYSTEM

The Director 2000 Switcher System is made up of three beautifully matched, professional quality components that, as a trio, provide an incredibly diverse range of production possibilities coupled with outstanding control and broad flexibility. The impressive capabilities of the SEG-2000A, the central system component, are enhanced and extended through interaction with the WEX-2000 Wipe Pattern Extender and the CRK-2000 Chroma Keyer and create a system that is capable of very sophisticated and artistic special effects.

The SEG-2000A, by virtue of its ability to operate on either AC or DC power can be used for both studio and field production. The unit mounts in standard 19" racks for optimum studio convenience, yet is light enough at 21 lbs to be eminently portable at the same time. It is equipped with connections for up to six color cameras, one playback VTR, a camera for an external keyer and one camera for downstream keying using the built-in downstream keyer. A full complement of professional controls provide professional results with cut, mix, external key, downstream key and wipe functions. Output connections are extensive with three program outputs, two preset outputs, seven video outputs, four black burst outputs, a V drive output and four tally intercom connectors.

The WEX-2000 extends the wipe pattern selection of the SEG-2000A to 84 different patterns and provides easy-to-use keyboard actuation of the desired pattern with memorization of up to 3 patterns for enhanced convenience. There are auto wipe, servo wipe and trim wipe functions with variable wipe speeds.

The CRK-2000 has dual inputs for composite video signals as well as a separate RGB input. Another unique feature is the natural chroma key facility which creates natural shadow and softness on the compound key camera's picture. It also has a built-in effect amplifier, a background color generator and a sync generator which coupled with its external key input and SC/H phase indicator allow it to be used not only as a chroma keyer but also as a switcher. In operation with the SEG-2000A and WEX-2000, this unit enables the user to create a diverse range of artistic and creative special effects.

System Price \$9900.00

SPECIFICATIONS

SEG-2000A

• Color System: NTSC color • Switching System: Vertical blanking switcher • Effects: MIX: Dissolve by special effects control lever and PGM/PST mix lever. WIPE: 6 selectable wipe patterns, continuously variable wipe edge softness, border line with continuously variable hue, chroma, luminance, width and amplitude. EXT KEY: 0.7V p-p (VB) or 1.0 p-p (VBS) input signal, 75 ohms unbalanced, BNC connector. DOWNSTREAM KEYER: Gen-lock with PGM bus line signal, 6 pin B & W camera connector. Output Signal: Horizontal Drive, Vertical Drive, VD 4V p-p, 75 ohms, unbalanced. Input Signal: Video 0.7V p-p, 75 ohms, unbalanced. Shadow: Wide and Narrow,

Selectable. BACKGROUND COLOR: Chroma: 0-650mV p-p (variable according to the hue level). Hue: 0° to 360°. Luminance (Y): 0-450mV continuously variable **\$4990.00**

Optional Accessories

• Sony CVM and PVM Series Color Video Monitors • Sony DXC Series Color Video Cameras • Sony B & W Series Black and White Video Cameras • Sony CCDD, CCF Connecting Cables • BP-60 Rechargeable Battery Pack • LC-2003 Carrying Case for Camera Control Unit and Monitor • LC-2006 SEG 2000A Carrying Case • BC-20 Battery Charger

WEX-2000

• Color System: NTSC color • Genlock Input: Sync 0.3V p-p, Burst 0.3V p-p • Wipe patterns: 84 kinds • Wipe outputs: OUT 1: 6 pin for SEG-2000A (via CCF-5 cable). OUT 2: BNC connector for SEG-2000A or CRK-2000, 1.0V p-p, 75 ohms • Wipe speed: Approximately 0.5 to 9 seconds • Pairing wipe: Every other line • Pattern modulation: Wave length and frequency are continuously variable • Power requirements: 120V AC, 50/60 Hz; 11-15V DC, external DC • Power consumption: 19 W AC, 14 W DC • Operating temperature: 32°F to 140°F (0°C to 40°C) • Dimensions: 3-1/2"H x 19"W x 11-7/8"D (88 x 482 x 300 mm) • Weight: 15 lbs. 7 oz. (7 kg) **\$2500.00**

Supplied Accessory

• AC power cord

Optional Accessory

• CCF-5 interface cable with the SEG-2000A

CRK-2000

• Color system: NTSC color • Video inputs: VBS 1.0V p-p, 75 ohms • RGB inputs: 1.0V p-p, 75 ohms • External key: VIDEO INPUT: 1.0V p-p or 0.7V p-p, 75 ohms. HD/VD OUTPUT: 3.8V p-p • Gen lock input: Sync 0.3V p-p, Burst 0.3V p-p • Video outputs: VBS 1.0V p-p, 75 ohms • Video output channel crosstalk: Better than 40 dB • Video output DP: 1.5° • Video output DG: 1.5% • Video output frequency response: 5MHz +/-1 dB • Chroma key outputs: VBS 1.0V p-p • Chroma key output crosstalk: 32dB (fsc) • Chroma key output DP: 2.5° • Chroma key output DG: 2.5% • Chroma key output frequency response: 5MHz +/-1 dB • Black burst outputs: Sync 0.3V p-p, Burst 0.3V p-p • Keying bandwidth: RGB mode more than 2.0MHz, Line mode more than 0.8MHz • Power requirements: 120V AC, 50/60 Hz • Power consumption: 29 W • Operating temperature: 32°F to 140°F (0°C to 40°C) • Dimensions: 3-1/2"H x 19"W x 11-7/8"D (88 x 482 x 300 mm) • Weight: 15 lbs. 7 oz. (7 kg)

Supplied Accessories

• AC power cord • Chroma key cloth (Blue) • Instruction tape (U-matic® format) **\$2550.00**

244

244 Portastudio® Portable Recorder/Mixer

The Tascam 244 Portastudio improves upon the original 144, the world's first portable 4x2 mixer with a built-in 4-track sync cassette recorder. Portastudio combines top sound quality with flexibility and ease of operation, making it possible for the performing artist to sing and play multiple parts by recording in sync on successive "passes", and to transfer tracks ("ping-pong") for building more complex recordings. With its 4 input mic/line mixer, parametric EQ, and headphone cue capability, the 244 is also being used for AV production and occasional sound reinforcement.

- 4-track Simul-Sync cassette recorder operates at 3¾ ips (variable) with built in dbx noise reduction
- Simultaneous 4-channel recording capability for copying
- Accessory patch points on each input for use with compressor/limiters, graphic EQ, or special effects
- Punch in/out footswitch jack for "third hand" convenience
- "Mic/Line-Tape" selector switches have "Off" position to mute unused inputs without pulling down faders
- 18-1/2"W x 4-3/4"H x 14-5/8"D. Wt. 20 lbs. **\$1300.00**

RECORDER SECTION

- 4 channel Record/Reproduce
- 2 channel Simul-Sync record/4 track playback for multichannel recording
- Pitch control enables precise tuning of special effects
- Punch-in recording
- Built-in full time dbx* noise reduction system
- High speed, 3¾ ips (9.5 cm/sec) for wider dynamic range
- Digital Tape Counter and Zero Return function
- 4 track tape output

MIXER SECTION

- 4 Mic/Line or Tape Inputs
- 2 band, 4 knob sweep EQ
- Simul-Sync monitoring with separate stereo cue mix system for complete overdub flexibility
- Stereo AUX MIX SEND for echo recording using an external echo unit
- Acc. SEND/RECEIVE on each input
- Stereo AUX RECEIVE for effects or extra bus inputs

RECOMMENDED ACCESSORIES

- FC-144 Flight Case
- RC-30P Punch-in Foot Control

Shown with MB-20 and optional sideboards

M-2A Active 6-In/4-Out Mixer for Recording, P.A., Disco

- Model 2A—the right balance between multi-channel recording flexibility and low cost
- Six inputs drive four separate outputs
- Each input has switchable mic/line and mic attenuation to reduce overload distortion
- Bass and treble controls (+/- 12 dB at 100 Hz and 10 kHz)
- Color-coded channel assign buttons
- Pan for stereo balance
- Slide fader level control
- Master fader for overall level control
- Lots of mixdown flexibility with the Model 2A's patch points
- 13-7/16"W x 3-17/32"H x 14-9/16"D. WT. 13.2 lbs. **\$495.00**

MB-20 Meter Bridge

- A Natural Sale with Each Model 2A
- Excellent for P.A., Audiophile or Studio Applications
- 4 VU Meters each with fast acting Peak LED's
- Built-in 4 x 2 Monitor Mixer and 1 watt Headphone Amp
- Selectable Meter Sensitivity Control (4, -2, -10 and -20 dB)
- 13-3/8"W x 3-3/4"H x 6-11/16"D. Wt. 4.25 lbs. **\$250.00**

MB-20

M-2A

PORTA ONE

SB-2A Console Cradle for Models 2A and MB-20

- 38"W x 10-3/8"H x 17-3/8"D Wt. 2-15/16 lbs.

\$40.00

Ministudio Porta One Mixer/Recorder

The Ministudio is a portable, battery-operated 4 channel audio mixer/recorder designed for field work and convenient operation. Each input channel of the built-in mixer can accept a microphone, musical instrument, line level source or playback from the built-in recorder. Each channel contains controls for TRIM, EQ HIGH, EQ LOW, PAN, and a fader, as well as a Record Function matrix used to assign each input to any of the four tracks for recording, or all four inputs to any one track. Tape transport runs at 1-7/8 ips using standard track spacing, and switchable dbx noise reduction*. The recorder section is FG servo controlled with variable PITCH CONTROL, and a counter with ZERO RETURN for faster cueing. The monitor system includes cue capability. Four VU meters provide visual monitoring of any recorded or reproduced signals. Up to 10 different parts can be recorded without going beyond a second generation. A jack for an electronic remote punch-in/out (the optional RC-30P footswitch) permits you to start and stop recording with your hands free. **\$595.00**

RECOMMENDED ACCESSORIES

- AC Adaptor, PS-P1
- Soft Carrying Bag, CS-P1
- Flight Case, CS-P1H
- Auto Battery Adaptor

*dbx is a trademark of dbx, Inc.

300 Series Recording/Sound Reinforcement Mixers

Eight, twelve or twenty input channels with the following features on each channel:

- MIC or LINE selectable inputs
- Separate MIC and LINE TRIM controls
- 3 band sweep-type parametric EQ
- EQ bypass switch
- 2 assignable AUX send controls
- EFFECTS send control
- DIRECT OUT jack
- INSERTION jack
- MUTE and channel "On" indicator, overload LED
- PFL
- PGM and STEREO BUS assign matrix and PAN control

Other Features of the 300 Series:

- 4 PGM BUS MASTER SECTIONS with AFL
- STEREO and MONO MASTER SECTIONS
- 8 assignable TAPE RETURN MONITOR sections with LEVEL and PAN
- 2 EFFECTS RETURN master sections
- Multiple MONITOR selection with stereo outputs and headphone jack
- +4dBm balanced and unbalanced outputs on PGM, STEREO and MONO busses
- 6 selectable VU meters with LED peak indicators

Features of the M-312 and M-320 only:

- 2 additional AUX sends in TAPE MONITORS
- Built-in TALKBACK MIC and signal routing switch array

M-308	\$1649.00
M-312	2595.00
M-320	3495.00

M-320

M-312

M-308

M-106

M-106 6-In/4-Out Mixing Console

M-106 is equipped with a flexible combination of functions so it can be used in a wide range of applications, from small studio recording, to mixing in PA and disco systems and mixing audio productions.

- 6 input channels with selectable inputs, provide; 6 MIC IN; 6 LINE IN; 4 RIAA PHONO IN
- 4 PGM busses
- AUX bus with master level control
- EFFECT bus with master level control
- Each input channel provides: Input selector (CH 1 and 2; MIC-ATT-LINE, CH 3 to 6; MIC-ATT/PHONO-LINE), Trim control, Low (100Hz) and high (10kHz) EQ (12dB boost/cut), Direct out, insertion, Post/Line select switch for AUX bus, AUX send level control, EFFECT send level control, PGM assign/pan, input fader, Overload indicator
- PGM insertions
- PGM master faders
- EFFECT RETURN with level control and PGM bus assign/pan
- Monitor outputs (L, R) with monitor select matrix, mono switch and monitor level control
- Headphone jack (1.5W + 1.5W)
- 2 VU meters with peak indicators
- Meter select switch (PGM 1-2, PGM 3-4, Aux/Effect)
- PGM sub in/EFFECT sub in/AUX sub in
- 2 fader-link knobs supplied
- Optional portable case CS-106
- Optional EIA 19" rack mount angle RM-106
- Frequency Response: 20Hz — 30kHz, +1dB, -1.5dB
- Dimensions: 395W x 135H x 395D (mm)
- Weight: 7.0kg (net)

M-106	\$595.00

M-500 SERIES MIXING CONSOLES

The M-500 Series are sophisticated audio mixing consoles designed for professional production applications. The M-520 (20-in/8-bus) is intended primarily for 16-track studios, while the M-512 (12-in/8-bus) is ideal for 8-track installations.

- 20-input channels on the M-520, 12-input channels on the M-512, each with selectable inputs, provide:
 - 20 (M-520), 12 (M-512) balanced XLR microphone inputs with individually switchable phantom power.
 - 2 pair of instrument inputs (1/4" phone and RCA pin).
 - 2 RIAA phono inputs (RCA pin).
 - 16 (M-520), 8 (M-512) line inputs (RCA pin).
 - 16 (M-520), 8 (M-512) multi-track tape returns (RCA pin).
 - 2 pair of stereo tape returns (RCA pin).
- 8 main program busses with bus master controls
- 4 independent auxiliary busses
- 16 (M-520), 8 (M-512) groups of stereo monitor mix controls
- 8 balanced amplifiers (input; RCA pin/22K ohms, output; XLR/600 ohms)
- Access Send/Receive on each input channel and program bus
- 3-band parametric EQ on each input channel
- Mute switch on each input channel
- Direct Out on each input channel
- Built-in talkback mic plus slate tone/test oscillator
- Stereo SOLO
- PFL (Pre Fader Listen)
- 12 (M-520), 8 (M-512) VU meters with LED peak indicators
- 100mm input and bus master faders (compatible with PG-3000)
- Bipolar 15 volt power supply
- Optional pedestal (CS-520 for M-520, CS-512 for M-512)
- Optional top/side board (CS-521 for M-520, CS-513 for M-512)

RACKMOUNT SERIES

The TASCAM Rack Mount Series signal processing and auxiliary equipment augments a number of sound systems. By using top quality circuit components, TASCAM engineers have made the Rack Mount Series a cost-effective approach toward the expansion of your capabilities with signal processing/routing technology.

MX-80, 8 x 2 Mic/Line Mixer

The MX-80 offers top performance in a more versatile mixer. When other mixers are too large, too small, or lacking in necessary features, the MX-80 is ideal. It can be used for sound reinforcement as well as recording.

- Using the mic-level outputs, the MX-80 is perfect as a "spot mixer" for increasing the capacity of a snake.
- Transformerless, its electronically balanced differential inputs provide immunity from hum and noise without the high-level saturation.
- Pad and gain trim enable line-level inputs to be fed directly into microphone XLR input connectors.
- Accepts most 150 to 600 ohm low impedance mics; wired to supply external phantom power.
- Phase switch and mute/input attenuator switch.
- Pre-level control jacks allow effects or signal processing equipment to be patched into each input; double as unbalanced line inputs.
- Eight pan spots for assignment to the stereo mixing buss, and two independently adjustable stereo outputs: a balanced, 600-ohm, -40dBm nominal output for driving mic level inputs, and an unbalanced, 200-ohm source switchable to a medium line level of -10dBV or high line level of 0dBu for driving power amps directly.
- MX-80's can be cascaded together for increased input capability.

MX-80 \$650.00

LA-40 Line Amplifier/Impedance Converter

The TASCAM LA-40 is the perfect 1-track space solution to the problem of mismatched line levels or impedances. The LA-40 is a compact 4-channel unit that permits interconnection between +4dBm, -20dBm and -10dBV inputs and outputs. It also matches balanced and unbalanced circuits.

When you have an LA-40, you'll never have to concern yourself with compatibility. Your system will be able to drive or be driven by any line level equipment. It's an invaluable tool, a time saver, and a security blanket — a necessity for every studio, radio and TV production/broadcast facility and sound reinforcement system.

- Each of the LA-40's channels is really two circuits back-to-back. One channel can convert a +4dBm or -20dBm output to drive a -10dBV input, and it can simultaneously convert a -10dBV output to drive a +4dBm or -20dBm input.
- By plugging a jumper across the RCA in and out jacks, both halves of a channel can be used together permitting the LA-40 to match a -20dBm balanced or unbalanced input to a +4dBm balanced output, or vice-versa.
- Can be used where no level conversion is required, but instead for buffering (isolating) a line or for converting from unbalanced to balanced operation when both the output and input are at the same +4 or -20dBm nominal level.

- Instant compatibility between TASCAM or similar -10dBV unbalanced inputs and outputs and almost all other equipment: compatible levels, compatible impedances, and balanced/unbalanced operation.
- Utilizing three of the most popular types of connectors (XLR, phono, phone) the LA-40 also avoids the need for costly adaptor cables.
- All connections are on the rear panel for neat, orderly installation, except the phone jacks, which are intentionally placed on the front panel where they can be used in conjunction with a standard TRS jack patch bay.

LA-40 \$360.00

MH-40B Multi-Headphone Amplifier

The MH-40B accepts a low or high line level mono or stereo input and feeds it to four adjustable headphone outputs. By using one or more monitor outputs, or the stereo outputs from a TASCAM M1 or MX-80 mixer, the MH-40B provides increased monitoring capacity.

- Avoids overloading a headphone output when more than one person is using the same mono or stereo headphone system.
- No need for costly custom distribution systems with expensive high-power amplifiers and high-power attenuators.
- Allows use of different types of headphones, each with separate volume control.
- Increases headphone cue capacity.
- Unlimited freedom of expansion and system configuration.

MH-40B \$275.00

PE-40 4-Band 4-Channel Parametric Equalizer

The PE-40 permits adjustment of the three parameters: the center frequency at which boost or cut is applied, the amount of gain (boost or cut), and the "Q" (affected bandwidth). The PE-40 is really four separate equalizers in one rack mount package.

Graphic equalizers can be used to reduce feedback-causing peaks, and then also tune out desired program material. The PE-40 eliminates those peaks while permitting the overall level to be increased. The PE-40 can also alter the character of the sound in any PA or recording application.

- A top-quality recording or PA equalizer that can be patched into any input channel or output circuit.
- The four sections can be used for different programs, or combined for greater control over one signal.
- In addition to "Q", Frequency and Gain controls, each section has two High Pass and one Low Pass Filter for reducing vocal pops, wind noise, floor rumble, hiss.
- Bypass switches allow comparison of original and EQ'd signals, or instant preset changes in sound during a mix.

PE-40 \$650.00

VIDEO AMPLITUDE CALIBRATION FIXTURE

Video Amplitude Calibration Fixture, Digital Sweep Generator and P-P Detector shown in a Tektronix TM 504 Mainframe

Accurate calibration and verification of video equipment performance is essential for maintenance of optimum television system quality and thus signal quality.

New products as well as calibration standards and procedures, have been developed to help provide accurate and NBS-traceable calibration and performance verification of Tektronix television products.

VIDEO AMPLITUDE CALIBRATION FIXTURE

Provides a Standard Reference for Amplitude Calibration

Preset Values for Common Video Signals

NTSC, PAL, PAL-M, SECAM Compatible

The VAC (Video Amplitude Calibration Fixture) is a precision test fixture used in the measurement of common video signals and the calibration of video test signal generators and waveform monitors. It provides a simple means of measuring and calibrating luminance and chrominance amplitudes associated with most video signals.

The VAC provides a squarewave amplitude reference from 0.0 mV to 999.9 mV peak with a resolution of 0.1 mV and an accuracy of 0.05%. Signal amplitude may be selected using a four-digit front panel lever switch or from over 500 preset values stored in EPROM. The VAC preset amplitudes are compatible with NTSC, PAL, PAL-M and SECAM television systems.

In the design of the VAC, careful attention was paid to thermal tilt to ensure accurate conversion from dc calibration to squarewave output. Unique choice of output impedance compensates loading effects when calibrating equipment with loop-through inputs.

The calibration of the VAC requires only a digital voltmeter with an accuracy of 0.01%.

The VAC operates in any of two compartments of the Tektronix TM 500 or TM 5000 Series power modules (except TM 501).

CHARACTERISTICS

Output Signal
Front Output Connector — 37.5 Ω, BNC connector located on front panel
Rear Interconnect — 0.0 Ω, Rear edge connector pins 27A and 28A
Amplitude Range (Tolerance Disabled) — 0 mV to 999.9 mV (0.05% ± 0.1 mV), p-p squarewave amplitude
Amplitude Range (Tolerance Enabled) — 0 mV to 999.9 mV (0.5% ± 0.1 mV) · Tolerance reading, p-p squarewave amplitude
Resolution — 0.1 mV
Risetime — 1 μs
Frequency — NTSC, PAL-M 270 Hz nominal, PAL, SECAM 275 Hz nominal

ENVIRONMENTAL

Normal Operating Temperature — -15 C to +35 C
Operating Temperature Range — 0 C to +50 C

PEAK-TO-PEAK DETECTOR

NBS-Traceable Frequency Response Standard

Ultra Flat Response

Detector Amplifier Corrects Detector Diode Gain and Offset Errors

The 015-0408-00 Detector Amplifier, combined with a 015-0413-00 Detector Head, comprise an NBS-traceable peak-to-peak detector system for baseband video frequency response testing. This system allows precise comparison of sinewave amplitudes at frequencies throughout the video spectrum. Typical response is accurate to as low as ± 0.02% (± 0.002 dB).

The frequency response of an analog generator may be calibrated using the peak-to-peak detector system as a transfer standard. The generator may then be used as a frequency response transfer standard to calibrate frequency response and chrominance-luminance gain of test equipment such as waveform monitors and vectorscopes.

A second detector head may be ordered for differential measurements.

CHARACTERISTICS

Input Signal Range — 0.25 V to 1.0 V p-p
Envelope Gain Unit — ± 0.1% for 1% signal change
Input Impedance — 75 Ω

DIGITAL SWEEP GENERATOR

DIGITAL SWEEP GENERATOR

Digitally Derived Sweep Signal

10-Bit Digital Data for Use with 1900-Series Digital Test Signal Generators to Reconstruct Analog Sweep

Frequency Range 55.9 kHz to 7.16 MHz Field Sweep or (Manually Adjustable) CW

The Digital Sweep Generator provides 10-bit, 14.31818 MHz, digital data words derived from a cosine lookup table. The output signal sweeps from 55.9 kHz to 7.16 MHz in each field with high spectral purity and amplitude accuracy when used with the DAC in a 1900 Series generator. A front panel connector provides SMPTE*1 compatible balanced ecl data. Data is continuous through blanking so that it can be used with noncomposite video detectors. Sync and burst may be inserted by a 1900 Series generator using the blanking output on the DSG if desired. The Digital Sweep Generator may be locked to a 1900 Series generator using TRS and clock outputs from the 1900 Series generator. Alternatively, the 1900 Series generator may be genlocked to the black burst output from the sync generator in the Digital Sweep Generator. A separate marker output provides identification of 1 MHz intervals, as well as 3.58 MHz and 4.43 MHz, during the sweep.

The Digital Sweep Generator is enclosed in a single wide TM 500 package. The front panel includes an LED power indicator, two 25-pin digital data connectors, three BNC connectors for blanking, markers, and black burst outputs, and one variable control to manually set CW frequencies. Digital interfaces of the DSG conform to the signal levels, clock rate and pinout of the proposed SMPTE standard.

When the Digital Sweep Generator is used in conjunction with a 1900 and an 015-0408-00 peak-to-peak detector (included accessory), it will provide an NBS-traceable analog frequency response standard and completes an effort to provide NBS-traceable performance verification of Tektronix television generators, waveform monitors, and other television equipment.

*1 The proposed SMPTE standard "Digital Format for a Parallel Interface (System M/NTSC)," draft of July, 1979.

CHARACTERISTICS

Digital Sweep Output

Frequency Range — 55.93 kHz to 7.159 MHz in 55.93 kHz increments; Field Sweep, or CW digital data.

Format — SMPTE Standard parallel 10-bit signal.

Sample Clock Frequency — 14.31818 MHz (4 fsc) ± 100 Hz; also accepts external 14.3 MHz clock from 1900.

Blanking — Vertical: 22 lines to 23 lines. Horizontal: 10.8 μs.

Markers

1 V at 1.006747 MHz.

1 V at 2.013494 MHz.

1 V at 3.020241 MHz.

0.5 V at 3.579545 MHz.

1 V at 4.026988 MHz.

0.5 V at 4.418501 MHz.

1 V at 4.977805 MHz.

1 V at 5.984552 MHz.

Marker frequencies are multiples of 55.93 kHz.

The 1450 Series Test Modulator is used to test a television demodulator plus down converter (system) or the television demodulator alone. Test modulators are available for four CCIR Systems and three visual IF Carrier Systems. The Test Modulator converts baseband video frequencies to a specified IF or RF. The aural carrier is below the visual carrier frequency at the IF output and above the visual carrier at the RF output.

Group delay precorrection (except System 1) and sound pre-emphasis switches are front panel mounted. The RF and IF outputs provide double-sideband modulated signals of high quality. State-of-the-art circuitry is used to achieve high accuracy and stability. The test modulator needs very little maintenance or recalibration.

ORDERING INFORMATION

Test Modulator, 37 MHz for 1450-1. Order 067-0886-01	\$4,275

NTSC TV SIGNAL GENERATOR

R 147A NTSC TEST SIGNAL GENERATOR

R147A

VITS Generation, Insertion, and Deletion

Sync and Burst Regeneration

Program Signal Protected

Full Field Test Signals Independently Selectable from VITS Program

Reprogrammable for New Signals

Vertical Interval Reference Signal

Noise Test Signal and Measurements

The R147A NTSC Television Signal Generator provides the test signals commonly used for test and measurement of video transmission systems. The signals generated are available as full-field composite video test signals and Vertical Interval Test Signals (VITS) that may be inserted on an incoming composite video signal.

VERTICAL INTERVAL INSERTION/DELETION AND PROGRAM CONTROL

The R147A will insert VITS only when gen-locked to an incoming composite video signal. A VITS deleter inserter involves active circuit elements in the program line within the generator. Fail-safe provisions are provided in the event of a malfunction within the instrument including loss of sync or power. Local and remote-control manual override capability is also provided.

When an incoming program is lost, the R147A will go to one of two operating modes selectable by internal reprogramming jumpers. They are program line bypass, or full field test signal or flat-field signal. In the event the program signal is lost, the transmitter will continue on the air.

PROGRAM CONTROL FEATURES Processing Amplifier

In addition to performing deletion and insertion functions, the R147A generator is designed to function as a sync and burst regeneration amplifier.

TEST SIGNALS

The R147A provides the following NTSC Vertical Interval Test signals. These signals are also available full field (except VITS).

Composite
Linearity
Multiburst
Noise
Pulse and Bar
VITS

The R147A also provides these full field test signals:

Field Squarewave
Flat Field
Window

NOISE TEST SIGNAL

The R147A offers a signal-to-noise measuring technique for in-service testing during the vertical interval. The noise present in the middle portion of a line is deleted while the noise generated in a calibrated source is inserted for measurements by comparison. You then adjust the calibrated attenuator until inserted and incoming noise appears the same on a waveform monitor. The measured noise values are independent of operator interpretation errors to within 2 IRE.

CHARACTERISTICS

PROGRAM CONTROL SYSTEM

Input Level — Adjusted to unity gain.

Variable Input level — $\pm 30\%$.

Input Return Loss — 46 dB to 5 MHz. Power on, 40 dB to 5 MHz in bypass.

Inserted Signal Level — 714 mV (100 IRE) $\pm 1\%$.

Frequency Response, Program, and Preview Channel — $\pm 1\%$, 50 kHz to 5 MHz; $\pm 1\%$, 5% to 8 MHz.

2T Pulse to Bar Ratio — 100% $\pm 0.5\%$.

OTHER CHARACTERISTICS

Power Requirements — 90 V ac to 136 V ac or 180 V ac to 272 V ac, 48 Hz to 66 Hz, 40 W maximum at 115 V ac and 60 Hz.

R148/R148-M

Insertion Test Signals (Per EBU, CCIR Recommendation 473-2, Annex 1)

Full-Field Test Signals (Per CCIR Recommendation 567)

Easily Reprogrammable

Safe In-Service ITS Insertion (Per EBU Specifications)

Noise Measurement

APL Bounce Signal

Source Identification Code

Operates with Sound In Syncs

Locks with Mixed Sync (Per EBU Homologation Specifications for ITS Generators) Subcarrier, PAL Pulse, Burst Flag, Comp Sync

The Tektronix R148 (PAL) and R148-M (PAL-M) Insertion Test Signal (ITS) Generators provide all the test signals you need to test and measure PAL (or PAL-M) video transmission systems. Test signals are available as both full-field composite video and ITS inserted into the incoming program signal's vertical blanking interval. All timing information for ITS insertion is derived from the incoming composite video signal.

VERTICAL INTERVAL INSERTION/ DELETION AND PROGRAM CONTROL

The R148 and R148-M insert ITS only when genlocked to an incoming composite video signal. Since ITS insertion/deletion involves active circuit elements in the program line, program line fail safe operation is provided in the event of instrument malfunction, loss of sync, or power failure. You also have access to local and remote control manual override capability.

A preview monitor output permits observation of the ITS deletion/insertion program before anything is actually done to the program signal. Preview/program operation can be locally or remotely controlled.

Provisions are made for adding an externally generated ITS to the program line.

INSERTION SIGNAL CONTROL FEATURES Free Running Operation

A warning light indicates absence of incoming synchronizing information and ITS deletion and insertion is automatically discontinued.

Program Level

A front panel switch lets you select a preset gain, normally adjusted for unity gain between program input and program output. Or, you can use a front panel level adjustment to normalize the incoming program signal to provide 1 volt at the program output.

Local-Remote Control of Program and Preview

You can shift control of program or preview modes from the front panel (local) to a position remote from the generator. When operating under either local or remote control, front panel lights indicate program line status, since the front panel program status switch position may not correspond to the operating mode selected.

Program-Preview-Bypass

This three-position switch is used to select one of three modes: Program, Preview, or Bypass.

Program: In this switch position, ITS is inserted on program line output according to internal selection of test signals and their time addresses.

Preview: In this switch position, ITS is inserted only on program, as viewed on the preview monitor output. Preview is used for verification prior to inserting these signals on program output.

Bypass: In this switch position, incoming program material bypasses R148 functions and output is unchanged.

Auxiliary

A noncomposite video signal (such as a sweep generator) applied to the auxiliary input appears at the preview monitor output connector with composite blanking and sync added. A pedestal control provides a dc offset so the auxiliary signal excursion may be positioned between the black and white limits of the resulting composite video signal. Remote control is not available.

ITS Subcarrier Phase

A recessed front-panel control adjusts phase of color subcarrier on internally generated signals to be correct in relation to the phase of incoming burst.

Insertion Delay

A recessed front-panel control provides a fine horizontal timing adjustment for inserted signals.

FULL-FIELD OPERATION

The Tektronix R148 and R148-M provide full-field test signals separate from program. These signals are generated with or without external synchronizing information and will be locked to the external synchronizing signal when a program signal or external synchronizing signals are present.

FLAT-FIELD SIGNAL

The flat-field signal with VITS inserted is used primarily for system testing at discrete average picture levels.

The flat-field signal is a composite video signal that, during the active portion of each field, has a constant luminance level. The luminance level is selectable in eleven increments from 0% to 100% of white. An alternate selection provides automatic change between black and white with a period variable from 1 s to 10 s.

When operating the R148 in the flat field mode, you may select a white level preset between 85% and 100% and a black level preset between 0% and 15%. Automatic change between white and black is available and occurs at a period adjustable from 1.0 s to 10.0 s.

FIELD SQUAREWAVE SIGNAL

The field squarewave signal is used to measure field time distortions. In this mode, the Tektronix R148 provides a composite video signal with 205 active lines at 700 mV, approximating a 50 Hz squarewave. The R148-M provides a composite video signal with 132 active lines at 700 mV, approximating a 60 Hz squarewave.

Use this signal to detect low frequency phase and gain distortions, even those passing through clamper amplifiers.

PAL AND PAL-M INSERTION TEST SIGNAL GENERATORS

CHARACTERISTICS

PROGRAM CHANNEL

Input Level — Adjusted to unity gain.

Variable Input Level — $\pm 30\%$.

Inserted Signal Level — Within $\pm 1\%$ of nominal.

Output Dc Level — ≈ 50 mV (no signal).

Frequency Response, Program, and Preview Channels — $\pm 1\%$, 50 kHz to 5 MHz.

Field Time Tilt — $< 0.5\%$.

Line Time Tilt — $< 0.25\%$.

Differential Phase Standard Input — Program Output: $< 0.15^\circ$. Preview Output: $< 0.3^\circ$.

Differential Gain Standard Input — Program Output: $< 0.2\%$. Preview Output: $< 0.4\%$.

Random Noise Output Program Channel — < -75 dB RMS.

Hum, Transients on Noninserted Lines — ≥ 60 dB down.

Spurious Signals During Blanking Time — Inactive line time ≥ 40 dB down. Active ITS lines ≥ 60 dB.

Signal Attenuation in "Delete" Mode — 2T Pulse: > -70 dB. Subcarrier (Color Bars): > -60 dB.

Crosstalk into Program Channel from Internal Signals — 2T Pulse: < -70 dB. Subcarrier (Color Bars): < -60 dB.

Unwanted Pedestal at Time of ITS Insertion — Program and Preview Channel: < 5 mV.

Insert Delay Adjustment Range — ± 0.5 μ s front panel.

SOURCE IDENTIFICATION CODE (R148 ONLY)

The Tektronix R148 is a source identification code generator with up to 25 pulses available in any combination on line 16 or line 329.

Pulse Width — 1 μ s.

One Level — 630 to 700 mV above blanking.

Zero Level — Within 25 mV of blanking.

OTHER CHARACTERISTICS

Power Requirements — 90 V ac to 136 V ac or 180 V ac to 272 V ac; 48 Hz to 66 Hz, 55 W maximum at 115 V ac and 60 Hz. Factory set at 230 V ac (R148) or 115 V ac (R148-M).

Ambient Temperature — Performance characteristics are valid over an ambient temperature range of 0°C to $+50^\circ\text{C}$.

1410R NTSC/1411R PAL/ 1412R PAL-M

Five Test Signal Generators and One Switcher

Conforms to EIA Standard RS-170A (1410R)

Sync to Subcarrier Phasing Maintained or Corrected

Color Frame Reference Output

Genlock to Composite Video

Lock to External References

Adjustable Blanking Widths

Adjustable Sync Delays (H and V)

Broadcast Quality

The 1410R Series sync and test signal generators are precision generators for use in studios, remote vans, maintenance facilities and anywhere high quality sync or test signals are required.

Three different models are available. The 1410R is for NTSC applications, the 1411R for PAL and the 1412R is for PAL-M applications.

Each 1410R Series generator includes a genlock sync pulse generator. Five different test signal generators (four for PAL-M) and one signal switcher are available for each color standard (NTSC, PAL, PAL-M). Any combination of up to five test signal generators and signal switchers can be installed in one mainframe. The following components are available for each color standard:

1410R SERIES PRODUCTS

Description	Color Standard		
	NTSC	PAL	PAL-M
Mainframe	1410R	1411R	1412R
Sync Pulse Generator	SPG2	SPG12	SPG22
Color Bars Generator	TSG7	TSG11	TSG21
Convergence Generator	TSG2	TSG12	
Linearity Generator	TSG3	TSG13	TSG23
Pulse & Bar Generator	TSG5	TSG15	TSG25
Multiburst Generator	TSG6	TSG16	TSG26
Signal Switcher	TSP1	TSP11	TSP21

The 1410R Series generators may be ordered with standard combinations of signal generators or they can be configured to your specific requirement. A 1410R Series generator can be ordered with a minimal complement of signal generators now and others added later as your needs grow.

Unless otherwise indicated by a statement enclosed by parentheses (), all information characteristics and descriptions of the 1410R NTSC Series and its generators applies equally to equivalent mainframes or generators for the 1411R PAL and 1412R PAL-M Series. Information in parentheses applies only to the specified series.

SYNC PULSE GENERATORS

The SPG2, SPG12 and SPG22 are high quality sync generators designed for use in systems where accuracy, stable SCH (sync-to-subcarrier) phasing capability, and lockup mode versatility are of prime importance.

VT-174

SYNC AND TEST SIGNAL GENERATORS

1410R OPTION 04 TEST SIGNAL GENERATOR

Two external synchronization modes, external reference and genlock, are available. In the genlock mode, line, field, subcarrier, and PAL pulse (SPG12, SPG22) timing are derived from the incoming composite video signal.

In the external reference mode, line, field, subcarrier, and PAL pulse timing is derived from individual reference signals applied to the generator.

The SCH phasing can be set or maintained at any offset. This is made possible by locking the generator color subcarrier to the reference color subcarrier and referencing generator line and field-sync-signal timing to subcarrier rather than line and field sync on the incoming reference signals. This feature is of value in editing and program assembly applications. A color frame identification pulse output identifies Field 1 of the color field sequence. Should the user desire, the SCH phasing feature of the sync pulse generator can be disabled with a front panel control. In this mode of operation the SCH phasing of the incoming signal is maintained by locking subcarrier to incoming burst or subcarrier, sync to incoming sync.

A slow genlock mode is provided for those applications where fast-lock may upset the system. The slow-lock selector is located on the generator card sets.

Genlock or external reference lock mode selection may be remotely controlled. Remote manual phasing of the SPG12 or SPG22 signal to an external source is possible in the internal mode. Vertical and/or horizontal timing are altered as in slow-lock operation. Front panel LED's are used to indicate generator lock status.

Internal adjustments permit some variation of burst and blanking widths on the burst flag, comp blanking, and black burst outputs. These adjustments are preset to conform to recognized standards. You can reduce widths initially to allow for the widening that sometimes occurs when the video signal is processed.

The subcarrier frequency accuracy is ± 1 Hz when operated in the internal mode. An optional ± 10 Hz oscillator (Option 10) is available for the 1410R. A black burst output independent of all other outputs is provided. For NTSC systems, the VIRS (Vertical Interval Reference Signal) is factory programmed on line 19, Field 1 and Field 2 of the black burst when selected by a front panel switch on the SPG2. VIRS can be selected on line 18 if desired.

INCLUDED ACCESSORIES

Extender board (670-4441-02), 1.5 A fuse (159-0016-00), 0.75 A fuse (159-0042-00), rackmount hardware, instruction manual.

1410 R Series (cont'd)

TSG3/TSG13/TSG23 Linearity and Modulated Pedestal Test Generators

5 Step and 10 Step Staircase Signal
Ramp Signal
2 Modulation Amplitudes

One or Three Level Modulated Pedestal

Flat Field with 11 Fixed Levels

Ac and Dc Bounce

The TSG3, TSG13 and TSG23 provide high-quality linearity and modulated pedestal test signals for the 1410R Series signal generators

Combine variable APL with either of these signals to measure nonlinear distortions. The generators operate independently of all other test signal generators installed in the mainframe, while the rear panel output is available simultaneously with all other test signal generators' outputs

You can select the 5 step and 10 step staircase signals and the ramp signal with or without 180 subcarrier modulation for NTSC, or U subcarrier modulation for PAL and PAL-M. The subcarrier amplitude is front panel selectable at 20 IRE or 40 IRE on the TSG3, or at 140 mV and 280 mV on the TSG13 and TSG23. Applications include measuring differential phase and gain, dynamic gain, luminance linearity, and burst phase errors

With the TSG3, the flat field signal can be used on all active picture lines with levels set by the IRE Level control (% peak white on the TSG13, TSG23) or flat field on four lines can be alternated with one line of linearity or modulated pedestal. When using the alternate mode APL is controlled by the IRE level control (% peak white on the TSG13, TSG23)

The ac Bounce position of the IRE level switch (TSG3) or the % peak white switch (TSG13, TSG23) provides a signal in which the active portion of each line (excluding sync) changes APL levels at a rate determined by the rate control (1 second to 30 second intervals)

For the TSG3, amplitude of the bounce excursions is fixed at 0 IRE to 100 IRE in flat field mode and 10% to 90% APL in alternate modes. Blanking level remains fixed at 0 V. To check ac coupled circuitry use ac bounce

With the switch set to dc bounce, ac bounce occurs as described above. In addition, the entire signal changes dc level in the opposite direction at the same rate resulting in no change in average dc level. Clamp circuits may be checked using dc bounce

TSG5/TSG15/TSG25 Pulse and Bar Generators

Pulse and Bar Overlay

Full and Half Amplitude Pulse and Bar

Field Squarewave and Window

Modulated Pulse and Modulated Bar

Front Panel Selection of 2T, T, and T/2 Pulse
Width and Bar Risetime

The TSG5, TSG15, and TSG25 are \sin^2 pulse and bar television test signal generators designed for use with the 1410R Series signal generators. They're well suited for testing on equipment manufacturers' production lines and for testing of television transmitters, common carrier microwave and wire lines, and studio distribution systems. Front panel controls provide most test signal options, while internally selectable options provide additional versatility

The pulse and bar test signal consists of a \sin^2 modulated pulse, a \sin^2 pulse, and luminance bar. The pulse and bar overlay mode lets you conveniently compare pulse to bar ratio without manipulating waveform monitor controls

The inverted and noninverted 2T pulses may be overlaid to compare shape and HAD (half amplitude duration). This capability is particularly useful in detecting quadrature distortion which results from envelope detection of the RF modulated video signal. The pulse and bar test signal is also useful in measuring line time and short time distortions

For \sin^2 pulse signals, three self-cancelling switches permit independent selection of pulse half amplitude duration (2T, T, T/2) independent of bar risetime. In the bar mode, four self-cancelling switches permit selection of luminance bar risetime (2T, T, T/2) or modulated bar

Full or half amplitude pulse and bar test signals can be provided with or without pedestal or setup (the TSG15 and TSG25 do not offer setup capability). For the TSG5, full amplitude is 100 IRE units with no setup. Half amplitude is 50 IRE with no setup. For the TSG15 and TSG25, full amplitude is 100% (700 mV) with no setup. Half amplitude is 50% (350 mV) with no setup

The luminance pulse, luminance bar, and luminance components of the modulated pulse and modulated bar may be switched off to provide chrominance pulse and chrominance bar. The chrominance pulse and bar may be placed on a pedestal (50 IRE for the TSG5, 50% for the TSG15 and TSG25) to prevent chrominance from extending below blanking level

Use the standard field squarewave (with full amplitude and no setup) to measure field time distortion, and the window signal to measure line time distortion and picture monitor smearing. You can switch the color burst off without affecting the chrominance components of the test signals

Use the TSG5 for measuring overall gain, transient response, line and field time tilt, and chrominance to luminance delay and gain

SYNC AND TEST SIGNAL GENERATORS

TSP1/TSP11/TSP21 Switchers and Convergence Generators

Single Switchable Output for Two to Six
Generated Signals

Blanking, Sync and Burst Insertion for
External Signal

Matrixing—Eight Programmed Display
Formats to up to Six Sequential Signals

Convergence Border

Convergence Key

Crosshatch or Dots

Combined Crosshatch and Dots

The TSP1, TSP11 and TSP21 combine the capabilities of a test signal switcher and convergence signal generator in a single unit. They simplify and expand the uses of the 1410R Series signal generators

From a single, electronically switched output, you have access to all the test signals (from two to six) generated by the card sets in the mainframe. Meanwhile, you may continue to use the individual generator card sets' parallel outputs, so no restrictions are imposed on an established system. As an added feature, one of the input signals can be external (composite or noncomposite). All of the switcher inputs are provided with clamp circuitry

Eight different matrixes are stored in the PROM. This signal matrixing capability, combined with the full-field mode of the TSP1 presents several combinations of signals sharing the full field display

Most of TSP1 switching functions can be remotely controlled through the mainframe's Remote connector

TSG2/TSG12 Convergence Test Signal Generators

Dots and Crosshatch

Dots Only

Vertical Lines Only

Horizontal Lines Only

Vertical and Horizontal Lines

Position Controls

The TSG2 and TSG12 provide high-quality convergence test signals for the 1410R Series signal generators. You can use them to determine picture monitor or camera scanning linearity, aspect ratio, and geometric distortion. Signals for the TSG2 conform to IEEE Standard 202

Provision is made for on/off switching of the dots, vertical lines, and/or horizontal lines and for positioning vertical and horizontal lines. The signal output is located on the rear panel of the mainframe in which the test signal generator is installed. The convergence signal output is available simultaneously with all other test signal generator outputs

TSG7/TSG11/TSG21

Color Bars Generators

Color Bars Signals

SMPTE Color Bars (TSG7)

EIA (TSG7)

Fixed Full Field (TSG11/TSG21)

Full Field with Switchable Components

75% or 100% Amplitude

Split Field/Y Reference

Split Field/Red

Split Field Bars/Bars Reversed

The TSG7, TSG11 and TSG21 provide high-quality full field and split field color bars for the 1410R Series signal generators. The TSG7 operates independently from any other test signal installed in the mainframe. Its output is available simultaneously with all other test signal outputs. The composition of the signal can be altered by switching off Y, B-Y (U), R-Y (V), Burst, and Sync.

You may also select fixed or alternating R-Y (V) subcarrier phase, bar amplitude, white reference, and setup level (or pedestal).

The /Y REF switch selects a split field display of color bars in the same sequence as full field, followed by the luminance portion of the color bars for the remainder of the field. The split can be 1/2 or 3/4 field as selected by internal programming in the sync pulse generator. With this signal, you can check chrominance to luminance delay and picture monitor gray scale tracking while simultaneously evaluating color performance.

The /RED switch selects a split-field display of color bars, as in /Y REF, followed by red chrominance. (Same phase and amplitude, and at the same luminance level as the red bar.) Use this signal for adjusting VTR playback controls. Head equalization errors and noise are easily spotted on a red field. Other bar colors can be chosen by internal programming. The signal is also remotely switchable to color bars/white.

The /REVERSE switch selects a split field display of color bars as in /Y REF, followed by color bars in a reverse sequence. That is black, blue, red, magenta, green, cyan, yellow, white. This signal helps detect chrominance to luminance delay while viewing the kinescope of a color monitor receiver. Reverse bars are also useful in detecting VTR velocity errors.

The TSG7 will produce color bars VIT on any VIT line desired. (VIT signals cannot be inserted on the program line. Use a 147A, 148, 148M, or 1910 for insertion of VITS on a program line.)

The SMPTE switch (TSG7) is used to select the alignment color bar test signal for television picture monitors. This signal is generated in accordance with the format outlined in SMPTE Engineering Committee Recommendations, ECR 1-1978. SMPTE bars provide an easy way to objectively adjust picture monitor chroma, hue, and brightness.

VT-176

TSG6/TSG16/TSG26

Multiburst Signal Generators

Multiburst Signal

Controlled Risetime Burst Packets

Last Burst Frequency Variable

Manual and Field Swept Frequency Signals to 20 MHz

Markers for Both Frequency and Amplitude Reference

Full and Reduced Amplitude on all Signals

The TSG6, TSG16 and TSG26 are television multiburst and video sweep test signal generators designed for the 1410R Series signal generators.

They feature front panel controls for most test signal options, plus special Remote functions for additional versatility. They can be used in many testing applications, including equipment manufacture and microwave or long-line transmission systems.

Performance advances include reduction in harmonic content of sinewave signals and skirt energy associated with gating burst packets. Phase modulation of the burst packets aids ease of measurement by filling in shape of packets. Two ranges of multiburst frequencies are available: the 500 kHz to 4.1 MHz (TSG6) range aids in testing television transmitters and common carrier links, while the 1.25 MHz to 12 MHz range is used in testing television studio equipment and cabling.

Use these generators where nonlinearities make reduced amplitude test signals desirable. The reduced amplitude multiburst signal allows accurate testing of video tape record/playback systems, since it is not subject to the false distortion of the full amplitude multiburst that often occurs in such applications.

Using the front panel controls, you can select a high or low-frequency band for each operating mode. SWEEP, allows selection of field sweep signal with or without markers. MARKERS inserts amplitude/frequency markers in Sweep, and amplitude markers in Composite/Manual. BURST allows insertion/deletion of color burst on composite video for use with systems that operate differently when burst is present. COMPOSITE/CONTINUOUS determines whether sync, blanking, and a pedestal will be added to the sweep and manual signals.

MANUAL selects a fixed-frequency sinewave with frequency determined by the Frequency control and Frequency Range switch. AMP allows selection of either full or reduced amplitude in all operating modes. MULTIBURST selects line-rate discrete-frequency packets with reference insertion levels.

COLOR BAR GENERATORS (TSG7, TSG11, TSG21)

Luminance Signal Accuracy — Within 1% or 1.5 mV, whichever is greater.

Chrominance Accuracy — Absolute Amplitudes: Within 3% (all subcarrier components). Relative Amplitudes: Within 1% of the red chrominance bars or 1 mV plus p-p residual subcarrier amplitude, whichever is greater.

Full Field Displays — Bar Width: 6.45 μs (TSG7), 6.5 μs (TSG11); 6.6 μs (TSG21). White Bar Risetime: 130 ns, +20 ns, 10 ns (TSG7); 115 ns ± 15 ns (TSG11); 125 ns ± 20 μs (TSG21). Time Difference Between Chroma and Lum Channels: < 20 ns.

SYNC AND TEST SIGNAL GENERATORS

1474 NTSC COLOR SYNC GENERATOR

1470 NTSC COLOR SYNC AND TEST SIGNAL GENERATOR

1470/1474

Full Color Sync Generator with Gen-Lock

Locks to Most Helical Scan VTRs

Simple to Operate

Compact and Economical

Full Selection of Sync and Timing Signals

Simplified Timing Via Multiple Subcarrier Phasing Controls

The 1470 Sync and Test Signal Generator is a compact, full color, gen-lock sync generator providing a full selection of high quality test signals.

The 1474 is identical in performance to the 1470 with the exception of test signals which, in the interest of economy, are not included. Both products have color gen-lock compatible with composite video from all normal sources including most helical scan video tape recorders.

The 1470 and 1474 can operate as master-sync generators or as units fully or partially timed from external sources. Color gen-lock capable of locking to most helical scan VTRs is a standard feature.

Front-panel pushbutton selection of external synchronization is provided. In external mode, the 1470 and 1474 automatically lock on composite video (1 V), composite sync (-4 V), or reference subcarrier (2 V). Two front-panel lights show subcarrier and/or sync external lock. Lights out indicate a switch to internal standard.

1470 Test Signal Functions

To simplify your test signal selection and speed testing operations, the 1470 has push button selection of test signals. All test signal push buttons, except the color field selectors, are self-cancelling. Each test signal provides aberration-free transitions and accurate flat levels.

Color Bars

The 1470 provides full-field color bars signals useful for color monitor adjustments, VTR tape lead in, and system checks.

Color Fields

Red, green, and blue color-field signals are provided for checking purity on color monitors/receivers that do not have individual gun on/off controls. These signals may also be used to provide a color background source. The red, green, and blue selectors may be used simultaneously to provide yellow, cyan, magenta, and white full field signals.

Linearity (Staircase)

Staircase signal with selection of high, medium, or low APL. Staircase subcarrier may be switched on or off from the front panel.

Test Signals

Test Signals available include: Window, Convergence Multiburst.

Window signals are suitable for measuring both line time and field time distortion. Convergence test signals are used to check color monitor convergence and linearity, and camera scanning linearity. Multiburst signals are used to check system frequency response.

Both the 1470 and 1474 are configured for rackmounting and are shipped ready to install in a 19 inch rack.

CHARACTERISTICS

SYNC GENERATORS OUTPUTS (1470/1474)

Horizontal Blanking — Leading Edge: 2.2 μ s to 0.6 μ s before the leading edge of sync. Trailing Edge: 9.1 μ s to 10.7 μ s after the leading edge of sync.

Horizontal Drive — Leading Edge: 2.2 μ s to 0.6 μ s before the leading edge of sync.

Vertical Blanking — 20 lines or 21 lines.

Subcarrier Phase Controls — Composite Test Signals: Subcarrier 1 and 2. Blackburst: Independent adjustment range of $\pm 120^\circ$, and jumpers allow a full 360° shift in 90° steps. Gen-Lock Master: Independent 360° front panel adjustment and 100° remote control, via a rear-panel BNC connector.

GEN-LOCK

Composite Sync — Output Level Into 75 Ω : 4 V \pm 0.5 V. Rise-time and Falltime: 140 ns nominal.

Composite Blanking — Output Level Into 75 Ω : 4 V \pm 0.5 V. Field Blanking Rise-time and Falltime: 140 ns nominal.

Vertical Drive — Output Level Into 75 Ω : 4 V \pm 0.5 V. Rise-time and Falltime: 140 ns nominal. Duration: 9 lines.

Horizontal Drive — Output Level Into 75 Ω : 4 V \pm 0.5 V. Rise-time and Falltime: 140 ns nominal. Duration: 6.35 μ s.

Burst Gate — Output Level Into 75 Ω : 4 V \pm 0.5 V. Delay from Line Sync: 5.1 μ s \pm 0.1 μ s. Rise-time and Falltime: 140 ns nominal. Duration: 2.5 μ s \pm 100 ns.

Subcarrier — Output Level Into 75 Ω : 2 V. Frequency: 3.579545 MHz \pm 10 Hz.

Black Burst — Sync Amplitude Into 75 Ω : 40 IRE. Burst Amplitude: 40 IRE (286 mV p-p). Burst Frequency: 3.579545 MHz \pm 10 Hz.

Gen-Lock Signal Loop Input — Composite Video Input Range: 0.5 V to 1 V when loop-through connectors are externally terminated into 75 Ω . Comp Sync: 1 V to 4 V, ref subcarrier 1.5 V p-p to 2 V p-p.

TEST SIGNAL OUTPUTS (1470)

Test Signal Generator Outputs Composite Video — Return Loss: ≥ 30 dB to 5 MHz. Output Level Into 75 Ω : 1 V. Sync: 40 IRE, ± 1 IRE (286 mV nominal amplitude). Peak Video Level: 100 IRE, ± 2 IRE (714 mV nominal amplitude). Blanking Dc Level: 0 V, ± 50 mV.

NTSC Color Bars — Full Field: 75% amplitude, 100 IRE white reference, 7.5% setup. Luminance Signal Accuracy: Within 2%. Chrominance Signal Absolute Amplitudes: Within 3% (all subcarrier frequency components).

Window Amplitude — 100 IRE, ± 2 IRE. Duration: 25.8 μ s, $\pm 3\%$. Starts at line 66 in each field and ends at 218 in each field. Rise-time: 150 ns nominal.

Crosshatch Pattern or Dots — Setup: 7.5 IRE ± 1 IRE. Peak Level: 77 IRE ± 2 IRE. Rise-time and Falltime: 150 ns nominal.

Multiburst — White Reference Amplitude: 100 IRE ± 2 IRE. Multiburst Amplitude: 50 IRE ± 2 IRE. Average Level: 55 IRE ± 1 IRE. Multiburst Frequencies: 0.5 MHz, 1.5 MHz, 2.0 MHz, 3.0 MHz, 3.58 MHz, 4.2 MHz.

Staircase Luminance Component — Five Step Amplitude (each step): 20 IRE ± 1 IRE (143 mV). Staircase Amplitude: 100 IRE ± 2 IRE (714 mV). Aberrations: Within 2% of step amplitude. Step Rise-time: 150 ns nominal.

Staircase Subcarrier Chrominance Component — Amplitude: 40 IRE ± 1 IRE (286 mV p-p). Phase: 180° . Differential Phase: $\leq 0.3^\circ$. Differential Gain: $\leq 0.5\%$. Subcarrier Envelope Rise-time: 400 ns nominal.

OTHER CHARACTERISTICS

1470 Power Requirements — 115 V or 240 V line voltage, high-low ranges. Selection switches for line voltages and ranges are accessible internally. Factory set to 120 V. 120 V Range: High, 108 V to 132 V; Low, 95 V to 110 V. 240 V Range: High, 216 V to 250 V; Low, 198 V to 242 V. Line Frequency: 50 Hz to 60 Hz. Power Maximum: 50 W. 1474 Power Requirements: 115 V: 90 V to 130 V. 240 V: 198 V to 250 V. Power: Maximum 40 W.

TELEVISION DEMODULATORS

The 1450-1 is compatible with
System M Television Transmission, the
1450-2 is compatible with System B/G,
and the 1450-3 is compatible with System I.

1450-2

1450-1/1450-2/1450-3

Measurement-Quality Performance for Negligible Distortion

Synchronous Detection Eliminates Quadrature Distortion

Envelope Detection for Accurately Determined Differential Phase

Surface Acoustic Wave Filter Provides Precise Nyquist Slope; Excellent Long and Short-Term Stability

Digital Readout of Input Power Level for Easy, Accurate Field Strength Readings

Constant-Bandpass Characteristics Over Wide Dynamic Range

Any Single VHF or UHF Channel Operation

UHF and VHF Tunable Down Converters

Conforms to EIA Standard RS-462 (System M Only)

The 1450-1 (System M), 1450-2 (System B/G) and 1450-3 (System I) Demodulator Mainframes are combined with a Tektronix Television Down Converter (TDC) to provide an accurate link between your transmitter's RF signals and video baseband measuring equipment. Unique components work together to identify and eliminate any possible demodulation distortion in reproduced signal characteristics. You see a transparent picture of your transmitter's performance and signal output.

High Performance Spectrum Analyzers for your RF measurements are described on pages 202-216.

Tunable or Fixed-Channel Down Converters

For demodulating an RF signal at a TV channel frequency, the 1450 Series demodulator mainframes must be used with a Tektronix TDC. Three compatible TDCs are available for each system and provide a selection between tunable and fixed-channel performance. The TDC Fixed-Channel Down Converter supports your specified system channel number. Tunable Down Converters available for VHF and UHF channels are the TDC1 and TDC2 respectively.

Demodulation of the transmitter IF signal may be accomplished by using only the mainframe.

Synchronous and Envelope Detection

The 1450 Series demodulators allow you to select either synchronous or envelope detection. Each method has advantages, yet both are required for full measurement capability. For instance, synchronous detection is necessary for measurements that can be seriously affected by quadrature distortion.

The 1450 Series demodulators have two synchronous video detectors operating in phase quadrature. One detects the in-phase signal; the other detects the quadrature component of the video signal. (The quadrature component is a measure of change in visual carrier phase resulting from a change of video level.)

However, if incidental phase modulation is present on the picture carrier, the amount of differential phase measured on a synchronously detected signal will be erroneous. Because of this, an envelope detector is necessary to determine the actual differential phase present. The envelope detector has linear transfer characteristics down to 3% carrier and so provides optimum modulation depth indication.

Tektronix-Developed Surface Acoustic Wave Filter

The 1450 Series demodulators feature a SAW (surface acoustic wave) filter developed by Tektronix. It provides more precise Nyquist slope characteristics without group delay distortion, improves long-term and short-term stability, and lowers maintenance costs compared to conventional filter network circuitry.

In conventional demodulators, the more precisely the bandpass characteristics approach an ideal Nyquist curve, the more complex the filter network required. In the 1450 Series demodulator mainframes however, the bandpass characteristics are determined by just a single component, the SAW filter. Precision is the result.

Conventional tuned IF circuitry must be meticulously adjusted and is subject to change with mechanical and thermal shock. But the SAW filter is in a sealed unit and accurately provides the critical selectivity characteristics of the demodulator—and requires no adjustments.

ORDERING INFORMATION, SYSTEM M

1450-1 Television Demodulator (Order one vision IF option)	\$14,400
Option 01 — 37 MHz Vision IF	NC
Option 02 — 38.9 MHz Vision IF	NC
Option 03 — 45.75 MHz Vision IF	NC

For demodulation of RF signals, one of the following three down converters must be plugged into the 1450-1 mainframe.

Order one vision IF option and either Option 11 or 14.

TDC Fixed Channel Down Converter — (Stipulate channel number when ordering.)	\$3,550

1910 DIGITAL GENERATOR

1910 Digital Generator

Four External VITS Inputs for Insertion of Teletext, Closed Captioning, Source ID, etc.

Nonvolatile Memory to Maintain Selected VITS and Full Field Signal Configuration after Power Interruption

Signal Stored in Replaceable PROMs so Your 1910 won't Become Obsolete

The Accuracy and Stability of an all-Digital 10-Bit Sync and Signal Generation (RS-170A)

User Friendly RS-232C Control Port for Added Versatility

New Signals (Eye Test Pattern, Special Multipulse, Color Multipulse), New Functions (VITS Sequence, Field Sequence and More)

The 1910 Digital Generator is a state-of-the-art test signal generator designed for performance testing of NTSC video systems and equipment. The 1910 is especially suited where high accuracy and stability are required. It is also a VITS inserter (internal and external) with a full complement of signals that allow testing in studio, transmitter, production or research environments. Four external VITS inputs permit insertion of signals such as teletext, closed captioning, source ID, and other similar sources. These four inputs may be converted to four pulse outputs for use in a production environment.

External interfacing of the 1910 is controlled by an internal microprocessor and its nonvolatile memory. Test signals are stored as 10-bit digital words and converted to analog form by a 10-bit precision DAC (with deglitching to reduce differential gain and differential phase) to ensure signal accuracy as well as long term stability and repeatability.

Since all signals are stored in replaceable EPROMs, changing needs and industry standards will not cause obsolescence.

Control and versatility of the 1910 are greatly enhanced by the use of its RS-232 control port. Most functions of the 1910 can be controlled, reconfigured and saved. This includes VITS and full field signal selection, matrix signal creation, sequences and other features.

Remote Control

Remote control via a ground closure interface allows the user to control the full field signals, VITS insertion on lines 14 through 21 (VITS changes are saved in nonvolatile memory), VIR mode, bypass/operate, genlock source, control mode and reset to preprogrammed condition.

Programmability and RS-232 Control Port Features

The 1910 has a friendly command language that allows the user to program its features to meet specific applications. The user does not need to be a programming expert as the 1910 has a language that allows him to concentrate on the applications and not on programming.

The 1910 can be programmed and controlled using an RS-232 terminal. It can also be controlled or run under program control using an RS-232 host computer, including some handheld models or personal computers. The host computer could also be the Tektronix 1980 Automatic Measurement Set which would use the 1910 as a programmable signal source to stimulate and measure television equipment or a transmission link.

The 1910 can also be controlled over telephone lines. An auto-answer modem connected to the 1910 will allow the user to take control of the 1910, observe or modify its status and subsequently release control. The control and reconfiguration can also be accomplished automatically by a host computer.

Some of the capabilities offered by the RS-232 port include the ability to redefine the signal selection on the front panels (1910 and remote control unit) to better meet particular user needs, such as placing frequently used signals in a preferred position or in a convenient sequence for calibration; production testing or other special uses.

Pulse Out Feature

This included feature of the 1910 allows the user to change the four external VITS inputs to four pulse outputs for limited camera drive. The outputs available are H Drive, V Drive, Composite Blanking, and Burst Flag. Applications for pulse outputs are remote vans or standby sync generators. Composite sync and subcarrier outputs are always available.

The 1910 can also be used as a stand-alone signal source that will remain SCH phased and locked to an internal oven-controlled reference.

SIGNAL MATRIXING

The matrix feature of the 1910 divides the field into 16 blocks of lines consisting of approximately 16 lines each. Through the RS-232 control port the user can program any full field signal to appear in any of the 16-line blocks. Any signal can be repeated in as many blocks as necessary. There are three matrix signals in the 1910 that are factory set, but can be user-redefined and saved in a nonvolatile memory.

Some of the applications of this feature include user-defined tape headers or monitor test patterns. The matrixed signal can serve several users simultaneously, reducing the need for multiple signal outputs. By using the 15-line feature of the Tektronix 1480-Series Waveform Monitors, particular signals in the matrix can be viewed by the users.

DIGITAL GENERATOR

SYNC AND SUBCARRIER OUTPUT

All pulse outputs have negative going output levels of 4 V ± 10% into 75 Ω and have a risetime and falltime of 140 ns ± 20 ns.

Composite Sync Timing — EIA RS-170A Specifications.

Subcarrier Output — Frequency: See Genlock. Amplitude: 2 V p-p ± 10%.

The following optional outputs replace the external VITS input function of the 1910.

Composite Blanking — Horizontal Blanking Width: 10.7 μs ± 100 ns. Field Blanking: Field 1=21 lines, Field 2=21 lines.

Horizontal Drive Timing — Start of line blanking to end of line sync. ± 100 ns.

Vertical Drive Timing — Coincident with start of field. Duration: 9 lines.

Burst Flag — Duration: 2.5 μs ± 100 ns. Delay from Line Sync: 5.3 μs ± 100 ns.

RS-232C INTERFACE

Supports EIA Standard RS-232C format to the extent shown below.

Baud — 300 bit/s, 1200 bit/s, 2400 bit/s or 4800 bit/s.

Input/Output — ASCII, serial, asynchronous data. Full duplex input and output.

Character Length — Eleven bits/character, including a start and two stop bits.

Parity — Input: No parity required and, if present, is ignored. Output: No parity sent.

DIGITAL DATA INTERFACE

Parallel, 12 balanced, signal pairs consisting of 10 bits/sample, a clock, a timing reference signal.

Sampling Frequency — Four times color subcarrier. Nominally 14.3 MHz.

Sampling Phase Angle — Referenced to I axis and Q axis.

Dynamic Range — Ten bits/sample: Blanking level (0 IRE) is at digital word 240. Reference white (100 IRE) is at digital word 800 (5.6 LSB/IRE).

Input Logic Levels Terminated in 100 Ω — 10 k ECL compatible.

Output Logic Levels — 10 k ECL compatible.

Digital Input Timing — Setup and hold times are 10 ns before and after the 50% point of the negative transition of the clock.

Output Clock Timing — The 50% point of the leading edge of the clock pulse precedes the data by 5 ns ± 5 ns.

POWER SUPPLY

Line Voltage Range — 90 V ac to 132 V ac. 180 V ac to 250 V ac.

Maximum Power Consumption — 130 W.

Line Frequency — 47 Hz to 63 Hz.

RANDOM NOISE MEASUREMENT SET

1430

1430

Conforms to CCIR Recommendation 568

In-Service Testing

Out-of-Service Testing

Program Material Protected by Fail-Safe Provisions

525/60 or 625/50 Standards

The 1430 provides random noise measurement capabilities on an in-service basis using the spatially adjacent noise matching technique with a waveform monitor. A program channel allows deletion of VITS and/or noise on selected lines in the vertical blanking interval and a monitor channel is provided for making measurements in conjunction with a waveform monitor.

The 1430 has two sections. One section, permanently mounted in the rack, contains inputs and outputs and program protecting material. The second section, containing circuitry and controls, may be easily removed without cable disconnection.

Monitor Channel

The monitor channel has an output independent from program for waveform comparison of the noise on the incoming signal and noise from the internal noise generator. Front-panel controls determine monitor channel parameters with three operating modes: VITS, Full Field, and Out of Service.

In the VITS mode, any line between 10 and 21 in either or both fields may be selected for insertion of the reference noise. The Full Field mode provides insertion on all active lines.

The Out of Service mode is provided for measurements on sources that do not have composite sync. In particular, these include transmission circuits not carrying signals at the time testing is conducted. Horizontal sync is added for waveform monitor synchronization.

In all modes the insertion width is internally set at 26 μ s. Delay between insertion and sync is controlled by the Delay adjustment. A switch and a potentiometer covering a range of 0 IRE to 100 IRE controls the insertion pedestal level.

Monitor channel gain control, with a ± 3 dB range, allows normalizing the signal for a 1 V peak-to-peak signal so that noise measurement relative to 1 V may be made. The internal noise weighting filter may be switched in or out from the front panel for evaluation of the spectral content of the incoming noise. This filter is the monitor channel only and does not affect the program output.

The 1430 may be used on both 625/50 and 525/60 systems but is shipped equipped for 525/60. The 1430 Option 01 is equipped for 625/50. Both models use the unified weighting filter per CCIR Recommendation 568. Insertion loss characteristics are as follows:

Insertion Loss \leq	
1 MHz	5.9 dB
2 MHz	10.2 dB
3 MHz	12.0 dB
4 MHz	13.0 dB
5 MHz	13.6 dB

Program Channel

The Program Channel has a 75 Ω input impedance and unity gain and output impedance of 75 Ω . No program impairment is introduced. A relay provides program signal continuity if the 1430 loses power. Internal programming, readily changeable, controls all deletion parameters. Up to three lines between 10 and 21 in either or both fields may be deleted. The deletion may be varied between the first half, second half, or full active portion of the video line. A pedestal may be inserted in the deleted portion of a line at 10 IRE, 50 IRE, or 100 IRE levels.

CHARACTERISTICS

PROGRAM CHANNEL

- Signal Input Level — 1 V nominal.
- Input Impedance — 75 Ω nominal.
- Input Return Loss — Power On: ≥ 46 dB to 5 MHz. Power Off or Bypass: ≥ 40 dB to 5 MHz.
- Output Impedance (Operating) — 75 Ω nominal.
- Output Return Loss (All) — ≥ 30 dB to 5 MHz.
- Output Blanking, Dc Level — 0 V within 50 mV, for blanking pulses.
- Inserted Pedestal Level — Adjustable to 100 IRE, 50 IRE, 10 IRE, or 0 IRE.
- 2T Pulse to Bar Amplitude — Within 0.25%.
- Mod Sin² Pulse (Chrominance and Luminance) — 100% within 0.5%.
- Waveform, Tilt — Field Rate Squarewave $\leq 0.5\%$, 26 μ s Bar, $\leq 0.5\%$.
- Differential Phase (10% to 90% APL, Standard Input) — Program Output: $\leq 0.15^\circ$.
- Differential Gain (10% to 90% APL, Standard Input) — Program Output: $\leq 0.2\%$.
- Line Time Amplitude Nonlinearity (10% to 90% APL, Standard Input) — $\leq 0.5\%$.
- Random Noise — Program Output: ≥ 75 dB (RMS) down (using weighting and low pass filters, 5 MHz).
- Hum or Transients on Noninserted Lines — ≥ 60 dB down, (using weighted and low pass filters, 5 MHz).
- Spurious Signals During Blanking Lines — ≥ 40 dB down, low pass (5 MHz).
- Signal Attenuation in Delete Mode — 2T Pulse: ≥ 70 dB down. Subcarrier (Color Bars): ≥ 60 dB down. Insertion pedestal: 10 IRE, 50 IRE, and 100 IRE, first half, second half, or entire line (up to 3; 10 to 21) or full field.
- Unwanted Pedestal at Time of VITS Insertion — ≤ 0.7 IRE.
- Time Jitter — ≤ 5 ns.

NOISE

- Pedestal Level — Pedestal Amplitude: 10 IRE, 50 IRE, and 100 IRE.
- Pedestal Position (Insertion Mode Only) — Delay: 10 μ s to 50 μ s.
- Noise Amplitude — 20 dB to 59.5 dB (0 dB = 700 mV RMS).
- Noise Attenuators — Absolute Amplitude: Within 1 dB.
- Noise Spectrum — Energy/Unit Bandwidth: Flat within 6 dB, 15 kHz to 5 MHz.
- Output Impedance — 75 Ω nominal.
- Output Return Loss — ≥ 30 dB.
- Noise Weighting and Low Pass Filter — Per CCIR recommendation 421-2.

AC POWER

- Line Voltage Range — 115 V ac: 90 V to 132 V. 230 V ac: 180 V to 264 V. Standard 1430: Factory set at 115 V ac. 1430 Option 01: Factory set at 230 V ac.
- Maximum Line Current — 0.25 A.
- Maximum Power Consumption — 30 W.
- Line Frequency Range — 48 Hz to 66 Hz.

PHYSICAL CHARACTERISTICS

AUTOMATIC VIDEO CORRECTOR

1440 NTSC AUTOMATIC VIDEO CORRECTOR

REMOTE CONTROL UNIT

REMOTE MONITOR UNIT

1440

Reduces Operating Costs

Extends Transmitter Tube Life and Reduces Maintenance Costs

Maintains Consistent High Quality Color Pictures

Automates Transmitter Modulation Level Control

Maintains Correct Sync-To-Video Ratios During Line Voltage Fluctuations

Automatic VIRS Referenced Correction of:

- Overall Video Signal Amplitude
- Chrominance to Luminance Gain Ratio
- Black Level
- Chrominance Phase
- Burst Gain
- Sync Gain

Optional Closed Loop Capabilities for Greater Efficiency and Economy in Transmitter and VTR Operations

The 1440 VIRS Automatic Video Corrector gives fully automatic correction of video gain, chrominance to luminance gain ratio, black level (set up), chroma phase, burst amplitude, and sync amplitude errors. With this corrector in your facility, the quality of the program signal is rigidly maintained. Ordinary changes and even many severe distortions are automatically corrected.

Video gain correction is referenced to the 50 IRE level of the VIRS. Chrominance to luminance gain ratio and burst phase corrections are referenced to the amplitude and phase of the VIRS chrominance respectively. Set up level correction is referenced to the 7.5 IRE level of the VIRS. Sync and burst gain corrections are controlled respective to their standard amplitudes.

Auxiliary Units

In most applications, the usefulness of automatic correction is enhanced by a Tektronix Remote Control Unit. You can conveniently select corrector modes and manually correct six signal parameters with this unit. The remote unit allows easy adjustment of the parameter's preset values for operation in the absence of a reference signal. Automatic correction value adjustments are also provided.

The Tektronix Remote Monitoring Unit provides meter indications of the amount of correction applied to the signal.

CHARACTERISTICS

Input Impedance — 75 Ω nominal.

Video Delay — 145 ns.

Output Impedance — 75 Ω .

Linear Waveform Distortions (Maximum) — Field Time: 0.5%, Line Time: 0.5%. Short Time: T Pulse/Bar: 2%. 2T Pulse/Bar: 1%.

Nonlinear Waveform Distortions — Differential Gain (10% to 90% APL): 0.5%. Differential Phase (10% to 90% APL): 0.5%. Dynamic Gain (10% to 90% APL): Picture 0.5%, sync 0.5%. Chrominance/Luminance Intermodulation: 0.5%. Line Time Nonlinearity: 0.5%.

Unweighted Video Signal to Random Noise Ratio — ≥ 60 dB to 5 MHz.

Spurious Subcarrier — -60 dB.

Field Time Tilt Correction — 25% Tilt on Input Signal: Will be reduced to $\leq 1\%$.

Clamping Characteristics — 10% to 90% APL or 90% to 10% APL. Recovery within one line to within five IRE without overshoot. Slow clamp option provided to reduce keyboarding when used with noisy signals. Hum Reduction: 1 V hum on input signal can be reduced to ≤ 25 mV.

Maximum Correction Ranges — Video Level at Input: ± 6 dB. Sync Level at Input: ± 3 dB. Chrominance/Luminance Gain: ± 3 dB. Burst Level: ± 6 dB Burst/Chrominance Phase: $\pm 25^\circ$. Black Level Set Up: ± 10 IRE.

Reduced Correction Ranges — Video Level: ± 2 dB. Sync Level: ± 3 dB. Chrominance/Luminance Gain: ± 3 dB. Burst/Chrominance Phase: $\pm 25^\circ$. Black Level Set Up: ± 5 IRE.

Dc Error-Signal Output — Source Impedance: 10 $k\Omega$. Open Circuit Voltage: 10 V for remote metering and telemetry. Six Outputs: Video gain, sync gain, burst gain, relative chroma gain, burst phase, and set up.

Chroma/Luminance Gain Correction (+3 dB to -3 dB)
-2T Pulse/Bar Ratio — 110% maximum and 92% minimum.
T Pulse/Bar Ratio: 125% maximum and 85% minimum.
2T Pulse Preshoot: 5% maximum. T Step Overshoot: 5% maximum. T Step Risettime: 95 ns minimum and 155 ns maximum.
Chrominance/Luminance Delay: 10 ns minimum and 10 ns maximum. VIR Signal Correction Rate: 0.35 s (90% correction without overshoot).

POWER SUPPLY

Line Voltage Range — 115 V ac $\pm 10\%$ and 230 V ac $\pm 10\%$.

Maximum Power Consumption — 35 W.

Line Frequency Range — 48 Hz to 66 Hz.

AUTOMATIC VIDEO MEASUREMENT

1980 ANSWER

Complete Video Measurement Capability

Waveform Digitizer to Capture Video Signal

ANSWER BASIC Software for Measurements, Analysis and Report Generation

Remote Terminal Capability

The 1980 ANSWER Automatic Video Measurement Set provides total video measurement capabilities and offers maximum versatility and testing power. Special features provide quality measurement performance for a wide variety of applications.

Programmability

The 1980 can be programmed using ANSWER BASIC to make specific measurements required for a wide range of video applications. Comprehensive software packages (Options 01, 04, 05 and 06) are available from Tektronix. The instrument can be tailored for a specific operation, automatically performing a single measurement or a group of measurements continuously, on operator demand, or at prescheduled times. The results can be returned in report format, with or without graphics, on a variety of terminals and printers. ANSWER's microprocessor control and ROM memory give you extensive flexibility. Format or standard changes can be made without the expensive modifications or recalibrations associated with analog test equipment.

High Measurement Accuracy

The 1980 provides consistent measurement accuracy with high repeatability. Special features like signal offset, gain control, dither generation, and signal averaging can be used to minimize possible errors. Using these features can significantly reduce noise on the incoming signal and provide an effective resolution of 11 bits. This means you can use the 1980 for the most stringent measurement problems and have fast accurate results. Due to its digital nature ANSWER has very few internal adjustments, providing a high degree of reliability over long periods of time.

Amplitude, Phase and Timing Measurement

All type of measurements can be programmed into the 1980, including sync, burst, and bar amplitudes, differential gain and phase, and timing measurements. The 1980 can tell you immediately if video signals are within acceptable or legal limits.

Remote Operation

The 1980 can also be operated from a remote terminal over telephone lines. With Option 12 (Autocall), it can even be programmed to automatically telephone a remote terminal under user specified conditions, e.g., an out-of-limits signal. The 1980 can be used in a wide range of applications including unattended and remote transmission systems, and systems under computer control.

Display Terminal

ANSWER requires the use of a terminal for display. We offer several, including the 4105 and 4107 13 inch Color Graphics terminals. Standard RS-232C interfaces ensure compatibility with a wide range of other terminals and printers.

Available Measurement Programs

Application programs taking full advantage of the 1980's capabilities can be purchased from Tektronix to make most NTSC and PAL video broadcast measurements.

The flexibility of software-based measurements, unavailable in analog instruments, means that the 1980 can be tailored to a wide range of applications for the analysis, measurement, and testing of baseband video signals.

RS-232C Compatibility

ANSWER has five RS-232C (ASCII coding) Ports. This means the instrument can be adapted to a wide range of applications, including unattended and remote systems and computer control.

CHARACTERISTICS

SIGNAL HANDLING

Inputs — A and B (user selectable).

Impedance — 75 Ω .

Return Loss — Video: ≥ 46 dB to 5 MHz.

Signal Level — 0.5 V to 2 V p-p; sync negative.

Coupling — Dc or ac nonfloating (user selectable).

Clamp — Selection: Fast, slow, or off (user selectable). Level: Sync tip or back porch.

Hum Rejection — Fast: > 36 dB. Slow: ~ 1 dB.

Signal Averaging — Noise Reduction: 15 dB; with 32 line averaging and incoming signal-to-noise ratio of 46 dB or less. Dynamic Range: 2.5 V maximum; with 0 offset. Gain Range: 0 times to 15.5 times in 0.5 increments. Offset Range: 0 LSB to 248 LSB ± 0.5 LSB (8 LSB increments); referred to input at unity gain. Noise Floor: -72 dB (0 dB = 714 mV).

Distortions — Differential Gain Error: $\leq 0.5\%$. Differential Phase Error: $\leq 0.4^\circ$. Luminance Nonlinearity Error: $\leq 1.0\%$. Amplitude/Frequency Error (0 MHz to 5 MHz): 0 dB ± 0.25 dB; 7.16 MHz = ≥ 46 dB. Delay/Frequency Error (0 MHz to 5 MHz): ≤ 20 ns.

SYNCHRONIZATION

Modes — Internal: Satisfactory operation with 26 dB signal-to-noise ratio (Sound-in-Syncs disabled). Channel A and B (user selectable). External: Channel A and B (user selectable).

Amplitudes — Internal Mode: 143 mV (20 IRE) minimum; negative going sync on incoming signal. External Mode: Minimum: 0.2 V p-p into 75 Ω , composite sync. Maximum: 8.0 V p-p into 75 Ω , composite sync.

ANALOG TO DIGITAL CONVERSION

Resolution — 8 bits; 11 bits effective with dither.

Accuracy — RMS: ± 0.25 LSB ($\pm 0.1\%$). Peak: ± 0.5 LSB ($\pm 0.2\%$).

Conversion Rate — 20 MHz maximum.

Monotonicity — All 256 codes present and in sequence with no polarity reversals.

Sampling Rate — NTSC: 910 x horizontal frequency. PAL: 1135 x horizontal frequency.

Note: User selectable means that the function is controlled from the keyboard.

DIGITAL PROCESSING

Signal Memory — Video Acquisition Memory Capacity: 32 k samples. Video Acquisition Memory Controller Sampling Modes: Line rate, field rate or block sampling between two points on signal. Save Value: Multiples of eight. Skip Value: Multiples of two. Picture Monitor Bright-Up Pulse Output: Amplitude: ~ 240 mV. Termination: Internal in 75 Ω .

Real Time Clock — Internal Reference Stability: 10 P/M total over $+10^\circ\text{C}$ to $+50^\circ\text{C}$; crystal controlled. External Input Frequency: 1 MHz. External Input Amplitude: 0.3 V to 4.0 V.

Microcomputer — User Memory: 32 k words. Nonvolatile Memory: 8 k words.

Software Control — TEK ANSWER BASIC.

DIGITAL INTERFACE

Access Ports — Interface: RS-232C; (ASCII code). Number: 5; 3 DCE*1 (full duplex), 2 DTE*2 (full duplex).

Baud Rate — Five Ports: Up to 9600; user programmable.

Automatic Call-Up — RS-366 (optional).

User Operation — Via keyboard (ASCII).

*1 DCE = Data Communication Equipment

*2 DTE = Data Terminal Equipment

ENVIRONMENTAL CHARACTERISTICS

Temperature Range — Operating: 0°C to $+50^\circ\text{C}$. Nonoperating: -55°C to $+75^\circ\text{C}$.

Altitude Range — Operating: Sea level to 4572 m (15,000 ft). Nonoperating: Sea level to 15 240 m (50,000 ft).

PHYSICAL CHARACTERISTICS

Dimensions	Cabinet		Rackmount	
	mm	in	mm	in
Width	429	16.9	483	19.0
Height	355	14.0	355	14.0
Depth	593	24.0	644	22.0
Weights \approx	kg	lb	kg	lb
Net	25.0	55.0		

INCLUDED ACCESSORIES

Left rackmounting adaptor (367-0279-00); right rackmounting adaptor (367-0280-00); tracks (351-0104-03); 15 ft RS-232C modem connecting cable (012-0939-00); rubber cabinet feet (348-0068-00); power cord (161-0066-01); rack slides (351-0623-00); manual.

With the Option 06 Dual Standard Applications Software, ANSWER can make automatic or operator-initiated measurements on both PAL and NTSC video signals. The video standard in use on the incoming video signals is specified by the user, and thereafter Option 06 makes all measurements accordingly.

This program combines all features of Option 04 (NTSC Video Monitoring) and Option 05 (PAL video monitoring) into one program. The characteristics remain the same as in those programs.

The Option 06 program is stored in PROMS on two circuit boards which plug into the 1980 base unit.

ORDERING INFORMATION

For Base Unit Plus Software, Order:

1980 ANSWER with Option 01 —
NTSC Applications Software **\$26,000**

1980 ANSWER with Option 04 —
NTSC Monitoring Software **\$26,800**

1980 ANSWER with Option 05 —
PAL Monitoring Software **\$26,800**

1980 ANSWER with Option 06 —
PAL/NTSC Applications Software **29,5000**

Option 12 — Automatic Call Equipment **+\$500**

For Software Only, Order:

1980 F04 **\$5,800**

1980 F05 **\$5,800**

1980 F06 **\$8,500**

TELEVISION GENERATOR

TSG-170A NTSC TELEVISION GENERATOR

The accuracy and long term stability of the TSG-170A test signals are enhanced by its precision digital to analog converter. Each converter is automatically laser trimmed to 12 bit accuracy.

Color bar blanking width is 10.6 μ s to facilitate verification of proper blanking throughout your system.

The TSG-170A sync generator's stable color standard and unique digital genlock make it ideal for either master generator or slave operation. All outputs are correctly SC-H phased, even if the TSG-170A is locked to an improperly SC-H phased reference input. The digital genlock calculates sync timing and subcarrier phase to properly identify color framing of the input reference signal.

The TSG-170A automatically senses composite video or 3.58 MHz subcarrier reference inputs. It switches to an internal oscillator in the absence of a reference input signal. This high stability crystal oscillator, with its constant temperature oven, ensures long term frequency stability.

Horizontal and subcarrier phasing control settings are stored in non-volatile RAM for digital control of genlock timing. In addition, a separate set of timing controls is provided for sync outputs to simplify system timing. A front panel lockout feature prevents inadvertent changes to the front panel system timing controls.

The TSG-170A has eight sync generator outputs; four fixed and four programmable. Option 1 adds a separate SMPTE bar output for routine studio needs, such as tape leaders, freeing the front panel selected test signals for engineering and maintenance.

An ID of up to 12 alphanumeric characters may be inserted in the SMPTE bar output. This front panel programmable ID is ideal for identifying satellite feeds, and videotapes.

Option 1 also provides a 400 Hz audio tone output, useful for

checking program line continuity and adjusting audio levels. The tone can be adjusted over a 0 to +8 dBm range into 150 or 600 ohms.

Remote operation of test signal selection and timing functions is available by simple ground closure control through a rear panel connector.

TSG-170A NTSC
Television Generator.... **\$4800.00**

TSG-170A Option 1 Adds a separate SMPTE Bars output with 12 character ID and audio tone output. **\$1000.00**

VIDEO BROADCAST TEST EQUIPMENT

MODEL 3705

Envelope Delay Measurement Set

Envelope Delay Measurement Set Model 3705 measures envelope delay over a wide frequency range. It is expressly designed for measuring the envelope delay incurred in equipment used in the transmission and reception of color television signals.

The Model 3705 uses the split-frequency method proposed by Nyquist and Brand: a relatively low frequency, 20 kHz, called a split-frequency amplitude-modulates a video or RF test frequency and the modulated test signal is applied to the equipment "under test". The split-frequency, is demodulated from the output of the equipment "under test" and compared in phase with the split-frequency before modulation.

3705-A1 Envelope Delay Test Set w/Internal Sweep Generator \$7650.00

MODEL 3706-A1 Sideband Analyzer

Sideband Analyzer 3706 by direct display permits thorough examination of the entire sideband response of television transmitters and sideband filters. It can also be used for the examination, evaluation, and adjustments of video circuits. Spurious emissions, low level sidebands, and frequency deviations are accurately pin pointed with the use of 7 crystal markers whose frequencies are of the most interest in a television transmitter's VSB passband. Discrete frequency marking is augmented by a 1 MHz crystal comb frequency marker which provides markers at 1 MHz intervals across the swept band on display.

3706-A1 TV Transmitter Sideband Analyzer, includes VHF channel element (3708-A) \$7500.00

MODEL 6910 Audio DA System

Audio DA System Model 6910 is designed for distribution of audio signals in AM, FM and TV systems. The performance characteristics of the 6910 are in keeping with the high standards of modern audio equipment

Flexibility as to impedances, and expandibility as to the number of single and dual channels available should fill all input and distribution requirements.

6910-A1	Audio D.A. System consisting of:	
6001-A1	Frame	\$ 525.00
6101-A1	Power Supply	525.00
6201-A2	Audio Distribution Amplifier w/terminal board assembly	475.00
4145-A1	Extender	75.00
7300-B1	Audio Monitor	1085.00

VIDEO BROADCAST TEST EQUIPMENT

MODEL 4706-A1 NTSC CHROMA KEYSER DECODER

Using unique new proprietary circuitry, Telemet's NTSC Chroma Keyer Decoder Model 4706 is designed to put your station's existing RGB Chroma Keyer inline, providing zero horizontal delay NTSC Chroma Keying. Also, a comb filter is incorporated in the unit that eliminates chroma crawl.

Another important feature is that the unit can use different encoded video sources. This includes standard and triaxial color TV cameras, video tapes, remotes or any other composite NTSC signal, without restriction to a particular one.

4706-A1\$3,000.00

MODEL 4706-A1

MODEL 7932 12 x 3 AV ROUTING SWITCHER

Audio/Video Routing Switcher 7932 is a modular system that uses 4 in 1 out video cards, and 4 in 1 out audio cards. The audio and video output amplifiers are also separate plug-in cards; therefore, a system can be expanded from 4 x 1 to 4 x 2, 8 x 1, 8 x 3 etc., to a maximum of 12 x 3 in one chassis. For economy, two other chassis are available wired 12 x 1 and 12 x 2 which can be used when it is known that expansion will not be needed.

7932-B1 A/V Routing Switcher w/audio follow and V.I. trigger (remote control version)

12 x 1\$2,300.00
12 x 23,700.00
12 x 35,050.00

Note: Above prices include Switchcraft pushbutton panels with 50' cables.

7932-B2 A/V Routing Switcher w/audio follow and V.I. trigger (self contained version)

12 x 1\$2,240.00
12 x 23,570.00
12 x 34,830.00

Note: Above prices include Switchcraft pushbuttons on front panel.

MODEL 7932

MODEL 7934 AV ROUTING SWITCHER

KEY FEATURES

- Remote Controlled
- Crosspoints and Latching CMOS I.Cs. provide Energy Efficient Design
- Unlimited Control Versatility and Computer Interface with Programmable Switching
- Less than 0.1µs Switching Time, 50mV max instantaneous video change
- V.I. Switching
- Stereo Audio Switching plus Auxiliary. (Can be used for Tally)
- Breakaway Audio available
- Hi level Tally available
- 20 x 10 standard, 400 x 400 possible
- Input Sync Adders optional
- Video DC Restorers optional
- Accurate Color Timing
- Complete accessibility through modular construction
- All boards removable/insertable with power on

NTSC, PAL and SECAMPOR

MODEL 7934

MODEL WU-05

Onyx Distribution Amplifier

This Onyx CCTV Distribution Amplifier allows you to isolate one video input signal into four individual video output signals. The user may install four monitors in four different places. It is lightweight and will give you dependable, long-term operation.

FEATURES

- Compact, solid state, reliability
- Receives an input signal, isolates and increases it, then provides four independent video outputs
- Four video outputs is four equal 75-ohm loads, by its four individual video amplifier circuit
- Convenient, desk top, easy installation

Connection

All ONYX DISTRIBUTION AMPLIFIERS use five BNC Connectors. Connections and cable should be given a continuity test to insure proper installation. An WU-05 Distribution Amplifier accessory model is recommended for distance within 1000' (300M.).

SPECIFICATIONS

Video Input: 1Vp-p to 2Vp-p, 75-ohm, 1 Input
Video Outputs: 1Vp-p to 2Vp-p, 75-ohm, 4 Outputs
Video Gain: Unity
Frequency Response: 2.5Hz to 15MHz to ± 0.3 dB
Bandwidth (-3dB) 1Hz to 15MHz
Input Voltage: 110V 50/60Hz (220V optional)
Power Consumption: 5 Watts
Video Connectors: BNC
Construction: Steel, Silver Gray Baked enamel
Size: 6" x 1.875" x 8.25"
(152(W) x 48(H) x 210(D)mm)
Weight: 2.75 lbs. (1.25kg)

Model WU-05 1-4 \$75.00 5+ \$72.00

WU-05

MODEL WU-07

Onyx Video Amplifier

This Onyx CCTV Video Amplifier is especially for the long cable run compensation. For example: when your video camera is installed from a distance of 3000' (1000M), you will need to use the WU-07 Video Amplifier.

FEATURES

- Compact and lightweight
- Convenient, easy installation, desk top
- Use in those applications where long coaxial cable runs are required
- Restores the high-frequency components of the video signal that are lost in long cable runs
- Produce crisp, clear and constant images despite relatively long distance
- An adjustable voltage gain of 13dB and fully regulated power will supply the user with stable continuous operation

Connection

All ONYX VIDEO AMPLIFIERS use a BNC Connector. Connections and cable should be given a continuity test to insure proper installation. The table shown provides maximum operating distance for Video Cable. An WU-07 line amplifier accessory model is recommended for distance over 1000' (300M.).

Cable Requirements

Max Distance (Feet)	Video (No Amp)	Amplified Video (WU-07)	Max Distance (Meters)
1000'	RG-59U	RG-59U	300M
2000'	RG-11U	RG-59U	600M
3000'		RG-59U	900M
5000'		RG-11U	1500M
6500'		RG-11U	2000M
8600'		RG-15U	2800M

WU-07

SPECIFICATIONS

Input Voltage: 110V 50/60Hz (220V optional)
Power Consumption: 6 Watts
Power: On-Off Switch
Gain/High Frequency Gain: Knob Adjustable
Video Connectors: BNC
Input Level: 0.4 to 2.0Vp-p
Input Impedance: 75 ohms
Maximum Video Gain: 13 dB
Maximum High Frequency Gain: 18 dB
Output Impedance: 75 ohms
Construction: Steel, Silver Gray baked enamel
Size: 6" x 1.875" x 9.25"
(152(W) x 48(H) x 210(D)mm)
Weight: 2.63 lbs. (1.2kgs.)

MARK IV IMAGE ENHANCER

Models 8010N, 8310, and 8410E

Thomson-CSF Broadcast Mark IV Image Enhancer provides truly effective enhancing of the vertical and horizontal detail of a television video signal to produce increased picture sharpness. The Mark IV line of image enhancers (models 8010N, 8310, and 8410E) provides operational compatibility with all types of monochrome and color television cameras.

By comparing each picture element with its adjacent horizontal and vertical elements within a picture field, a detail signal is generated. The detail signal is then combined with the main video signal to enhance the sharpness of the picture element being analyzed.

Using the new combed H and crispening technique, the Mark IV Image Enhancer provides video enhancement without degrading color signal quality by effectively separating chrominance from the detail signal. Combing the detail signal improves the signal-to-noise ratio, allowing more enhancement to be used.

In the automatic mode, the model 8010N Image Enhancer automatically maintains picture sharpness and resolution without double enhancement if a previously enhanced program passes through the unit.

The delay lines are positioned in temperature controlled ovens to insure highest stability and lowest drift. Thus, the unit operates within the temperature range of 0 to 50°C without any readjustments required. The Mark IV Image Enhancer is available for NTSC, PAL, and PAL-M applications.

FEATURES

- With Improved Signal-To-Noise Ratio
- Enhances Network Feeds, Local Origination Programming
- Automatic Sensing Prevents Over-Enhancement
- With Combed H and Crispening
- Available in NTSC, PAL, and PAL-M

8010N	\$4900.00
8310	4900.00
8410E	4900.00

NTSC CHROMA INSERT KEYER

7011

The Model 7011 Chroma Insert Keyer was especially designed for existing color installations. This unit contains its own insert keyer, thus eliminating the need for an external keyer. Installation is direct, and minimal system re-timing is necessary since through delay is less than 25 nanoseconds.

With the Model 7011, noise and "color crawl" are minimized from horizontal transitions. To reduce annoying crawl from the key signal, a unique comb filter is used to separate luminance and chrominance spectrums.

Since bandwidth of the Model 7011 key signal is the bandwidth of the color difference signals, the key is quieter than a full bandwidth key keyers.

APPLICATIONS

- Now the broadcaster can send a signal over a network with a "blue flat" background, and a local scene can be inserted in each city that receives the network signal.
- A program can be recorded on video tape, and played back for post-production editing and chroma keying.
- A single-cable color TV camera can be used to send a composite NTSC signal, with chroma keying done external to the camera control unit.
- Portable "minicameras" can be used to generate a composite NTSC signal, with keying done on a received signal.
- In new studio design, keying can now be done at the output of the composite program switcher.
- No separate RGB switcher is required for chroma keying.
- Furnished with remote control panel.

7011 \$3325.00

COLOR CORRECTION SYSTEM

NTSC Color Corrector, Model 5500B

Sensor, Model 5550, Remote Control, Model 5555

The Color Correction System was designed specifically for use in film chains. Typically, films may exhibit color deficiencies due to exposure and/or developing errors. Color mismatch is another problem which often occurs when sections of different films have been spliced together. Scenes shot from different cameras under different lighting conditions or a string of back-to-back film commercials can all contribute to color imbalance problems.

And now with the advent of ENG, color imbalance and colorimetry pose additional problems. Matching remote camera shots to indoor studio programs or assembling tapes from different locations is "chancy" at best. With the 5500B Color Corrector you will be able to rebalance and match video signals after encoding, either after the play-back tape machine or following the microwave receiver during live coverage.

Thomson-CSF Color Correction System compensates for all of these color balance deficiencies. Available in NTSC and PAL.

Introduction:

Trompeter Electronic's standard coax patching systems, shown on this page, provide limitless flexibility to route signals from one place to another. Two basic versions of Standard Coax patching are available. The RCA 50 ohm with a pin size of .070" and the Western Electric (WE) 75 ohm type with a pin size of .090". Signal degradation occurs above 100 mhz. The two series are not interchangeable but can be intermixed on the same panel along with TEI's audio patch jacks and panel lites (not shown).

Available with up to 5 BNC or TNC connectors.

DATA DISTRIBUTION PANELS:

TEI manufactures signal distribution panels that accommodate from 12 to 52 Bulkhead Cable or Feedthru Jacks illustrated above. All panels are 19" standard rack size in insulated and non-insulated versions. Panels accommodating 24, 32, 40 or 52 lines are double row (as illustrated) and 3 1/2" high. Light gray is the standard color though other colors are available on special order.

TROMPETER ELECTRONICS, INC.

8936 COMANCHE AVENUE, CHATSWORTH, CALIF., 91311 • (818) 882-1020 • TWX: 910-494-1210

A complete line of concentric TWINAX/TRIAX connectors in MINIATURE, SUB-MINIATURE and STANDARD sizes, for military or commercial Data Bus applications, are also available. For this and more, send for our FREE T14A catalog

TWX 910-925-4037

CSP-100-E GROUP/UNIT SELECTION CONTROL & STATUS PANEL

- Source selection by familiar name
- A/V breakaway
- LED statusing
- Loop-thru coax control connection

The CSP-100-E is Utah Scientific's most popular panel. It permits addressing sources by their familiar group name and unit number and provides audio and video breakaway.

CSP-100-E

CSP-10 TEN OR TWENTY-BUS CONTROL AND STATUS PANEL

- Simultaneous statusing of ten buses
- Lower cost per bus
- Optional twenty-bus control at no extra cost
- Loop-thru coax control connection

The CSP-10 controls either ten or twenty buses. It provides continuous statusing of ten buses and audio/video breakaway.

CSP-10

CSP-1610 TEN-BUS ALPHANUMERIC CONTROL & STATUS PANEL

- Alphanumeric displays
- 1600 Name/Number combinations
- A/V-split switching
- Optional twenty-bus programming
- Loop-thru coax control connection

The CSP-1610 alphanumeric ten/twenty-bus controller provides 12 four-character alphanumeric read-outs to permit addressing and statusing sources by their familiar names. Sixteen Name keys with either one or two keystroke Unit identification provides a total of 1600 Name/Number combinations. Separate audio and video preset displays permit both breakaway and A/V-split switching.

CSP-1610

CSP-1601 SINGLE-BUS ALPHANUMERIC CONTROL & STATUS PANEL

- Alphanumeric display
- Familiar name data entry & statusing
- Minimal keystrokes—1, 2, or 3—data entry
- Loop-thru coax control connection

Separate name and unit keyboards permit either one, two or three keystroke data entry addressing each source by its familiar name. Single four-character alphanumeric readout doubles as preset and status display. 1600 name/number combinations available.

CSP-1601

1685 West 2200 South
Salt Lake City, UT 84119
(801) 973-6840 (800) 453-8782
TWX 910-925-4037

AVS-1

AVS-1 SERIES ROUTING SWITCHERS

FEATURES

- Coax Party Line Control with Industry's Widest Choice of Panels
- Refresh Memory with 24-Hour Memory-Save
- Optional Dual Control Cards for "Hot Standby" Redundancy
- Standard BNC Video and Control Connectors
- Single Motherboard for Fully Operational Servicing with Simple Extender Card
- Compact—20 x 20 Audio and Video in 10-1/2-inch Panel Space

Utah Scientific routing switchers are available in two series—Model AVS-1 featuring coax party line controls and 12 matrix configurations in standard sizes up to 150 x 160, and Model CAV-7 Compact Series with inexpensive models up to 50 x 10 or 20 x 20 in size.

The AVS-1 system is available in twelve different packaging configurations and is designed to provide the ultimate in reliability. Neither input fan-out amps nor secondary combining matrices are required, and 100% "hot standby" backup of control cards and power supplies is available. Redundant cooling fans, redundant party lines, and minimal failure mode design further reduce the likelihood and consequence of failure to a bare minimum.

In addition to video and single or multiple audio levels, Utah Scientific offers Metallic Contact, Tally and Regenerative Time Code switching matrices. The Metallic Contact matrix (model RR-384) provides dual circuit, bi-directional switching of control signals or data. It is primarily used in conjunction with machine control systems and for switching serial data such as the CMX' I² signal. The Tally matrix (model CT-384) features a variety of strapping options accepting various control signals originating at video or audio destinations to control tally lights for other devices associated with video and/or audio sources.

Time Code matrices provide full regeneration of time code signals to permit multi-generation time code dubbing without degradation. Two models are available, one with fixed 25 μ sec rise time and the other with frequency-dependent rise time providing readable code in faster shuttle modes.

Thirty different party line control panels are available to suit varying user requirements in the control of AVS-1 matrices. They feature simple loop-through coax control connection and provide true matrix status* based on continuous refreshment from the system memory. *Except CPD/PL

Following are descriptions of some of these panels.

CSP-20/CX-20

CSP-20/CX-20 BUTTON-PER-SOURCE PANELS

FEATURES

- True A & V Stating
- Expandable
- Single Keystroke Selection
- Loop-Thru Coax Control Connection

The CSP-20 provides button-per-source switching with all source names professionally lettered in the write-in strip. Also provided are audio and video breakaway buttons. CSP-20 is shown with CX-20 twenty-button expander panel.

CPD/PL

CPD/PL DESKTOP PARTY LINE CONTROL PANEL

FEATURES

- Battery Powered
- Pull-Out Directory
- Single Coax Connection

The CPD/PL is a battery operated desktop controller for executive offices, meeting rooms, etc.

PLMC-1 PARTY LINE MACHINE CONTROL SYSTEM

FEATURES

- Economical—utilizes "virtual" matrix established via system party line
- Free standing or integrated with AVS-1 routing switcher
- "Hot Standby" control & memory backup available
- Alphanumeric assignment statusing
- Gang Roll/Record/Stop capability
- Machine delegation capability
- Wide variety of standard control and interface panels

The PLMC-1 system has been designed to provide an economical, yet flexible means of controlling various machines such as VTRs, telecine projectors/multiplexers, character generators, satellite receivers, etc. It utilizes serial data transmitted over coax party lines. The data words and system protocol are compatible with the Utah Scientific AVS-1 switching system permitting the machine control system to be integrated with Utah Scientific routing switchers by merely connecting the control panels and machine interface panels to the existing party lines.

Previously available machine control systems have been hardwired, with individual panels dedicated to individual machines, or have required multiconductor interconnection or metallic contact switching matrices to permit machine/panel assignments. In the PLMC-1 system a "virtual matrix" is established over the system's party line thereby eliminating the need for a separate machine control switching matrix.

A PLMC-1 machine control system is composed of four basic elements: a control and memory card to generate polling and refreshment words on four redundant party lines; control panels for assignment of machines to machine control panels; machine interface panels to provide two-way serial-to-parallel interface between the party lines and machines; and machine control and status panels to generate machine commands and read back the machine's identity and status.

MACHINE CONTROL SYSTEM DISTRIBUTION AMPLIFIERS

MCSIP-5 CONTROL & STATUS PANEL

MCSIP-1D COMBINATION CONTROL AND INTERFACE PANEL

MIP-4 MACHINE INTERFACE PANEL

The control and memory function is provided by one or two standard PL-150 circuit cards either as part of a switching system or free-standing. Machine assignment can be accomplished with any of a wide variety of standard AVS-1 system control panels or with custom designed panels. Machine control, interface and delegation is provided by a variety of panels each of which is described herein.

ADA-8 WITH RGM-1
REMOTE GAIN/MIX OPTION

ADA-8 AUDIO DISTRIBUTION AMPLIFIER

FEATURES

- 1-in/8-out or dual 1-in/4-out
- -6 dB to +30 dB gain
- Outputs short-circuit protected
- Front panel test points and level controls
- Redundant power supplies available
- On-card regulators for failure isolation
- .05%/± .05 dB distortion and flatness
- Optional remotely-controlled gain or mix
- Input over-voltage protection
- Can be intermixed with other devices in RF-50 frame

VDA-8 WITH EQUALIZATION
AND CLAMP OPTIONS

VDA-8 VIDEO DISTRIBUTION AMPLIFIER

FEATURES

- 8 outputs per DA, 80 per rack frame
- Optional feedback clamp and cable equalization
- Adjustable path length
- 0.1%/0.1° diff. gain & phase
- Differential input
- Extremely stable
- On-card regulators for failure isolation
- Redundant power supplies available
- Front panel test points and user adjustments

VIDEO EQUIPMENT

FAULT INDICATORS

MODEL VS-2PC VIDEO SQUELCH

The Video Squelch is an automatic two input, one output video switch. The output is determined by monitoring the main input signal. If the main input signal quality degrades below the user predefined setting on the front panel dial, the output is immediately switched to the alternate input signal and a clearly audible alarm is sounded.

VS-2PC	Video Squelch (Insulated RCA's for Audio) \$1000.00
Feature SFS	Squelch Feature Stereo Audio 200.00
Feature SFT	Squelch Feature Audio Terminated 100.00
Feature SFC	Squelch Feature XLR Connectors (3 or 4 pin) 50.00
Feature SFR	Squelch Feature Remote Control 200.00

(Any or all features may be added to the VS-2PC)

SWITCHES AND ALARMS

MODEL VPS-1PC VIDEO ACTIVATED POWER SWITCH

When this failsafe unit senses a video signal, it provides AC power to any device plugged into it. It is useful in remote applications, inaccessible units or any device the user chooses. A kit is available for installation in existing equipment.

VPS-1PC	\$165.00
----------------	-------	----------

MODEL APS-1PC AUDIO ACTIVATED POWER SWITCH

When this failsafe unit senses an audio signal, it provides AC power to any device plugged into it. It is useful in remote applications, inaccessible units or any device the user chooses. A kit is available for installation in existing equipment.

APS-1PC	\$165.00
----------------	-------	----------

MODEL AA-1PC AUDIO ALARM

This failsafe unit is an automatic monitor of your audio signal. A clearly audible alarm will sound upon any loss of audio for 12 seconds. A kit is available for installation in existing equipment.

AA-1PC	\$165.00
---------------	-------	----------

MODEL VA-1PC VIDEO ALARM

This failsafe unit is an automatic monitor of your Video signal. A clearly audible alarm will sound upon any loss of video for 1 second. A kit is available for installation in existing equipment.

VA-1PC	\$165.00
---------------	-------	----------

MODEL RFPS-1PC RF POWER SWITCH

When this failsafe unit senses a preselected TV channel or RF signal it provides AC power to any device plugged into it. A one antenna source may be used to initiate remote units, inaccessible devices, user defined devices or the selective dissemination of information. A kit is available for installation in existing equipment.

RFPS-1PC	\$255.00
-----------------	-------	----------

MODEL RFA-1PC RF ALARM

This failsafe unit is an automatic monitor of your preselected TV channel or RF signal. A clearly audible alarm will sound upon loss of this signal for 1 second. A kit is available for installation in existing equipment.

RFA-1PC	\$255.00
----------------	-------	----------

PARAMETER MEASURING DEVICES

MODEL BPM-1PC BURST PHASE METER

The Burst Phase Meter will save you time, give you a better picture and improve your quality because of the 1/2 degree of accuracy in color burst phase measurements, and 50 nanoseconds accuracy in the H-Phase mode. The Burst Phase Meter is particularly useful in vans and remote situations since it is more cost effective, space efficient and accurate than a vectorscope for these measurements.

BPM-1PC	\$ 765.00
Opt 02 Switchable H and Burst	941.00
Opt 03 with Dual Meters	1089.00

MODEL CPG-1PC CROSS PULSE GENERATOR

This unit is a valuable visual tool for diagnosing video problems in cameras, monitors and checking errors when making duplicate tapes. The Cross Pulse Generator will also show you any skew errors on your helical tape equipment.

CPG-1PC	\$358.00
Opt 01 External Sync	391.00

MODEL 4000 MULTI PHASE AND VIRS INSERTER

This unit adds, passes or deletes the Vertical Interval Reference Signal (VIRS) and monitors burst and H-Phase for accurate control of the color parameters. The meters in this unit allow easier and more accurate quality control than a vectorscope.

4000	\$1850.00

PARAMETER MEASURING DEVICES

DISTRIBUTION UNITS

DISTRIBUTION UNITS

DISTRIBUTION UNITS

MODEL ADA-2PC AUDIO DISTRIBUTION AMPLIFIER

This is a 1 in, 6 out device for distributing audio to a number of devices simultaneously.

ADA-2PC	\$275.00
----------------	-------	----------

MODEL VDA-2PC VIDEO DISTRIBUTION AMPLIFIER

This is a 1 in, 6 out device for distributing video to a number of devices simultaneously.

VDA-2PC	\$275.00
----------------	-------	----------

MODEL PDA-2PC PULSE DISTRIBUTION AMPLIFIER

This is a 1 in, 6 out device for distributing video pulses to a number of devices simultaneously. The outputs are regenerated so that dirty video pulses are effectively cleaned up.

PDA-2PC	\$275.00
----------------	-------	----------

MODEL DA10-2PC DISTRIBUTION AMPLIFIER ASSEMBLY

This is a 5 in, 30 out device for distribution of video and audio signals. The combinations available are 5 which may be ADA-2P's, VDA-2P's or PDA-2P's. A minimum of 4 DA units are required for each order.

DA10-2PC	per Audio DA	\$250.00
	per Video DA	250.00
	per Pulse DA	250.00

MODEL VSDA10-2PC VIDEO STEREO DISTRIBUTION AMPLIFIER

This is a 1 in, 6 out video and a 2 in, 12 out transformer isolated stereo audio device for distributing stereo to a number of units simultaneously. This 19" wide device comes with rack mounts and has a single power cord.

VSDA10-2PC	\$875.00

ADA-2P	200.00	AA-1P	105.00
*VDA-1	140.00	RFA-1P	195.00

*Requires a 12VDC at 70mA supply. • P Requires 117 VAC.

ISOLATORS

MONITORING/COMMUNICATIONS

MODEL PL-1 PARTY LINE SYSTEM

The Party Line System allows the users to communicate either individually or collectively at the same time. These systems are available for either carbon headsets in the Standard station or dynamic headsets in the Deluxe station. The Deluxe model is designed for the Beyer DT 108 and DT 109 headset. One master unit will handle up to ten intercom stations. This allows up to ten conversations to be handled simultaneously with individual volume control for each party. Hard wire reliability means excellent transmission quality is assured at all times. These units may be mounted on cameras or worn on a belt clip.

PLS-1PC Master Unit with Power Supply \$140.00

Standard	Deluxe
PL-1 Intercom Station \$72.00	DPL-1 Intercom Station \$125.00
PL-1BC with Belt Clip 75.00	DPL-1BC with Belt Clip 128.00

MODEL PLC-1PC UNIVERSAL INTERCOM COUPLER

This transformer coupled device allows the user to connect the VAC Party Line System to existing intercoms without interference. This enables the user to substantially expand his communication network.

PLC-1PC \$239.00

UNIVERSAL DISTRIBUTION AMPLIFIER

MODEL UDA UNIVERSAL DISTRIBUTION AMPLIFIER

This unit is designed to be a low cost Universal-Utility Distribution Amplifier. It is a linear amplifier with response from DC to 6 MHz at -3 dB. In the Video mode, the response is related to a signal 2VPP. In Audio mode up to 30 kHz, the output swing is ± 4VPP. All outputs are 75 ohm output impedance. The input impedance can be selected by a switch on the face of the unit and either 75 ohm or 10K ohm is available with the switch.

UDA \$160.00

SYNC GENERATORS

MODEL 100-2PC COLOR SYNC GENERATOR

This unit insures that all the user's cameras, monitors, VCRs, character generators, editing and duplicating equipment are on exactly the same frequency. NTSC H-Drive, V-Drive, Blanking, Burst Flag, Subcarrier, Sync and Black Burst Signals are provided. A three output video distribution amplifier is offered as an option. Height: 1-3/4".

100-2PC \$685.00
 1000A-2PC with VDA (3 output) 845.00

MODEL 5000 COLOR SYNC GENERATOR

This unit includes all the features of the VAC Model 100 Color Sync Generator with the added capability of GenLocking to a NTSC standard (network) or a helical standard (wide range GenLock). Subcarrier phase adjust is provided on the front panel. A video distribution amplifier option is offered.

5000 \$1750.00
 5000DA with VDA (3 output) 1910.00

All Video Aids Cabinets are Rack Mountable for an Additional \$30.00 per unit.

PINPOINT THE PROBLEM AREA

Particular Problem

1. Multiple line intercommunications control, cameras, studio, floor, lights. Need to extend camera, crew, intercom, etc.
2. Tired of turning on everything by hand? Out of reach monitors? Remotes
3. Automatic turn on of other machines when audio is detected in the line.
4. Loss of audio in control rooms, remotes, studios, helicopters, satellite, transmitting VTR's.
5. Loss of video signal.
6. Need black burst, eliminate fuzzy transition.
7. Need additional video output and feeds.
8. Need additional audio outputs and feeds.
9. Update older video equipment, dirty pulse and/or cameras not in sync.
10. Monitoring stereo and/or audio amplifier. Editing, duplicating.
11. Convert Sony TV's to monitors/receivers.
12. Ground loop, distorted picture and/or noise interference.

Inexpensive Solutions

1. Party Line (intercom) System, Party Line Coupler
2. Video Activated Power Switch
3. Audio Activated Power Switch
4. Audio Alarm
5. Video Alarm
6. Black Burst Generator
7. Video Distribution Amplifier
8. Audio Distribution Amplifier
9. Pulse Distribution Amplifier
10. Stereo Headset Amplifier
11. Electro-Optical Isolators
12. Video Line Isolators

Particular Problem

13. Diagnosing video problems, i.e. cameras, monitors reference signals, errors on tape source, duplicating tapes or adjustment, skew errors.
14. Loss of video from cameras, remote vans, helicopters, studios, control centers, transmission, automatic change over.
15. Need to measure color burst to 1/2 degree.
16. Loss of color, loss of flesh tones, fading greens, bright reds, drifting.
17. Distribution of signals, isolating cameras.
18. Color variations between different units, cable and remote.
19. Substitute for vectorscope with more accuracy need to insert VIRS on Line 19.
20. Loss of RF, Automatic Switching.
21. Loss of RF.

Inexpensive Solutions

13. Cross Pulse Generator
14. Video Squelch
15. Burst Phase Meter
16. Color Sync Generator
17. Distribution Amplifier
18. Color Gen Lock Sync Generator
19. Multi Phase and VIRS Inserter
20. RF Squelch
21. RF Alarm

VANNER, INC.

745 Harrison Dr.
Columbus, OH 43204
(614) 272-6263

POWER CONVERTERS

ENG VANNER-VERTERS are the most advanced products designed and engineered for the inversion of electrical power from battery to line current. The high efficiency, regulated control of frequency and voltage, light weight and compact size, and undistorted wave form make it effective for use in ambulances, fire trucks, boats, mobile broadcasting, and utility vehicles. Its efficiency, current control and reliability combine to make this the most outstanding product of its type manufactured today. The following paragraphs outline some of the specific features of the ENG VANNER-VERTER.

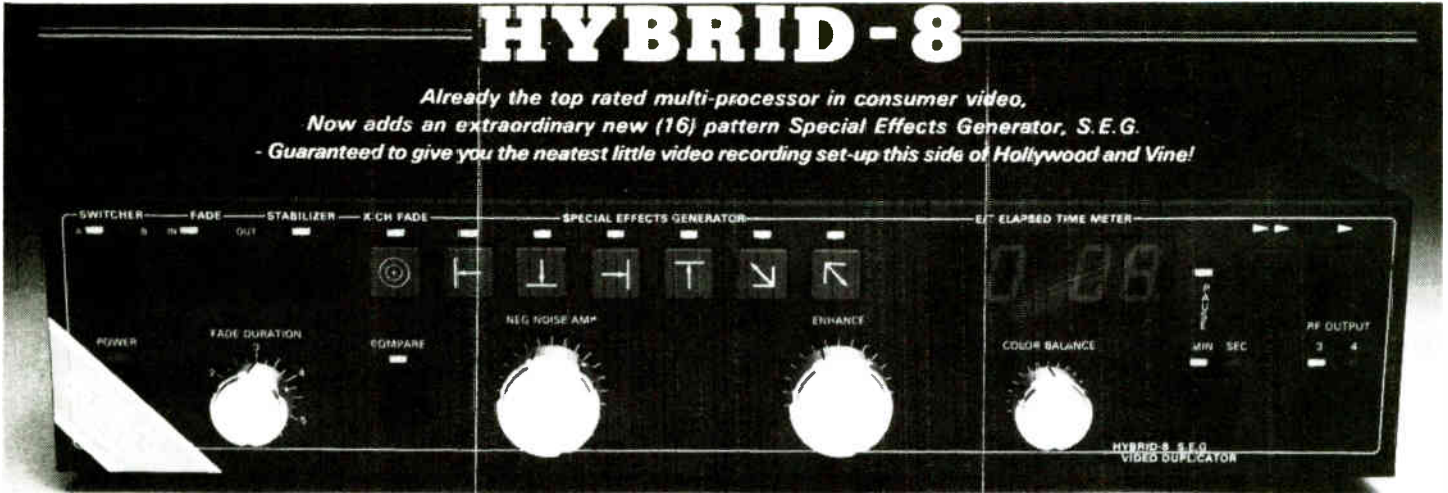

- The Vanner inverter produces full designated wattage continuously regulated 120 volt RMS power from idle to high RPM, and is not affected by high or low deviations in battery voltage.
- Produces a pulse width modulated wave form with less than 14% harmonic distortion.
- Frequency controlled by a 30 parts per million quartz crystal for 60 Hz time base.
- Capable of operating all types of electrical AC loads including resistive and reactive (either inductive or capacitive) without distortion. This is necessary for operating various types of medical and broadcasting equipment.
- Operates on only 30 watts at no load, and is over 87% efficient at full load, for more usable AC power. The 24 volt model, ideally suited for helicopter use, provides 1500 watts continuously with 2200 watts surge and is 92% efficient.
- Light weight — only 26 lbs.
- Compact size — 8 x 6 x 13 inches for convenient installation.
- Lighted remote control switch kit and quick connect battery terminals are standard equipment.
- Guaranteed one full year.

A built in 120 VAC transfer switch is also available for shore power equipped vehicles. Add the suffix 'T' to the part number.

MODEL NUMBER	DESCRIPTION	PRICE EACH
20-1000	ENG VANNER-VERTER, 1000 watts, 12VDC	\$ 899.00
20-1000T	Same as above with built in transfer switch	950.00
24-1500	ENG VANNER-VERTER, 1500 watts, 24VDC	998.00
24-1500T	Same as above with built in transfer switch	1090.00

8 UNITS IN ONE

- (1) **Switcher** electronically switches between (2) sources New V.I.S. (vertical interval switching) technique makes glitch imperceptible.*
- (2) **Enhancer** (3) controls
Enhance improves detail sharpness
NEG. Noise Amp new high tech noise reduction circuit
Color Balance perfects color hues
- (3) **Stabilizer** cancels all copyguard roll automatically
- (4) **Video Distribution Amp** makes up to (3) copies at once
- (5) **NEW Stereo Distribution Amp** (3) Stereo outputs
- (6) **Editing Section** (3) controls:
Fader, fades video and audio,
Duration Control adjusts fade time .5 to 5 seconds
X-CH fade (cross channel fade) out A-switch-in B
- (7) **NEW Special Effects Generator (S.E.G.) and E/T Meter.** Meter counts elapsed tape time to the exact second. Special effects generator creates (4) basic wipe patterns, total of (16) combinations possible.
- (8) **R/F Output** for cable TV enhancement

Everything You Need For EXTRAORDINARY Video!

-HOOK-UP-DIAGRAM-

-PERFORMANCE CHARACTERISTICS-

SWITCHING TECHNOLOGY: All switching is remote to front panel and is affected via digital analogue circuits using pushbutton momentary contact switches. No actual video or audio signals pass through the switches. This advanced technique prevents noise and static normally heard and seen during switching.* V.I.S., Vertical Interval Switching minimizes glitch.*

INPUT SWITCHER: A-B input selector switch allows instant alternation between (2) video sources. Audio is automatically switched right along with video. Switcher is operative with new S.E.G. patterns.

VIDEO AUDIO FADER: The Fader fades your picture in and out at the push of a switch. It is a super aid in editing, allowing you alternation from full bright to black in a graduated way avoiding jerkiness between scenes and lending that dramatic smooth touch to entrances and endings. The auto feature is much superior to manual faders (turning a knob to fade) because when used in conjunction with the fade duration control, auto control assures fade time will be perfectly even and consistent throughout your entire edited presentation. Audio Fader fades sound out and in, synchronized perfectly with video fader. Fabulous results with musical recordings and concert editing.*

X-CH FADE: (Cross Channel Fade) this feature is a special refinement that is both subtle and striking. It's operation is quite simple; after pressing X-Ch Fade button, press Switcher button. Picture fades out on A-channel then switches to fade back in on B-channel. World's most pleasant way to input select** You can also use X-Ch Fade with all S.E.G. patterns, to cross channel wipe.

STABILIZER: (Automatic type) cancels all copyguard. Self adjusts to give rock stable TV picture even with (2) or more forms of copyguard on the same tape. **WARNING:** It is a violation of Federal law to duplicate copyrighted video tapes without permission of copyright holder. The sale of this device should not be construed to imply manufacturers' sanction of use for any illegal activity of any kind. Consult your attorney for answers to all copyright questions

NEGATIVE NOISE AMP: Removes video "snow" or "confetti". Prevents generation loss. Video noise appears on your TV screen as a snowy or blurred image. This problem becomes more acute with multiple generation tapes as aggregated noise builds up. Negative noise amp generates a negative image of all noise present in incoming video signal. Negative noise is then imposed onto positive noise. The effect is noise is nullified or canceled. This negative noise reduction technique helps make it possible to produce superb copies, nearly indistinguishable from a good quality master. The producer's dream of clear, sharp dubs can now be realized!*

When considering video improvement components there are a couple of ways to go. You can buy a bunch of stand alone modules and string them together - with lots of connectors cables - or you can buy a system. HYBRID offers you that alternative - the systems approach. HYBRID is a refined consolidation of (8) different precision engineered video improvement components in one streamlined console. Use Hybrid for Beta or VHS, record and playback. Here is a single system with spectacular video editing, viewing and duplicating capabilities to transform ordinary video into EXTRAORDINARY video! And HYBRID'S a good value too. Purchased elsewhere as modules, comparable features would exceed \$1,000.00 in cost - and that's not including the extras - Hybrid exclusives like pushswitch electronic function selector, L.E.D. E/T Meter, Cross Channel Fade feature, Negative Noise Amp and now new S.E.G. Just review our features and see. You get everything you need, and a little extra, for superb viewing and flawless copies. Why settle for less? Our introductory price includes full 1 year warranty and hand-held remote pause control with S.E.G. and E/T Meter option.

PRICE: \$419.00

ENHANCE: Produces super sharp detail or video edge definition. Control activates very specialized high speed video boost circuit that selectively amplifies and accentuates upper video frequencies - producing a super crisp, clear picture for viewing and for duplication. Upgrades widescreen TV systems with an extraordinary improvement in clarity.

COLOR BALANCE: Life-like colors stand out as this color processor breathes color life back into washed out video taped scenes. Compensator adjusts color hue and detail of outboard video signal. Especially appropriate for color improvement with home video cameras by compensating for inherent non-linear chroma band pass characteristics or color fringing. This important control colors the difference between bleak and beautiful copies.

E/T METER: Elapsed record time can now be measured to the second. Meter functions include fast forward, slow forward, reset and minute-second select. Meter registers time during recording and can be remotely paused with a hand held control, when recording deck is paused. This system is much superior to a VCR odometer which measures non-linearly and is inherently inaccurate. Knowing your elapsed time and thus, time remaining on tape is extremely useful for tape conservation, editing and scheduling.*

VIDEO DISTRIBUTION AMP: Makes (3) copies at once. Automatically supplies correctly regulated output gain. High output channel isolation safety feature prevents electrical malfunction of one slave VCR from damaging functions of others; a critical consideration in multiple production applications.

STEREO DISTRIBUTION AMP: Regulated voltage to (3) stereo audio outputs assures correct power to drive 3 slave VCR's or to interface with your stereo system.*

R/F OUTPUT: R/F (radio frequency) modulation is channel 3-4 selectable with a convenient pushbutton switch mounted on the front panel. With this fine feature you can stabilize and enhance all your video movies out of the Hybrid and direct to your TV eliminating the need for a second VCR. R/F output can additionally be used to supply video to power a second TV set. Since R/F section is internal to Hybrid no cumbersome noise inducing cables are necessary.

WARRANTY: Full 1 year warranty, covering all parts and service is in force with the sale of each Hybrid. Extended service policy is also available to cover all parts and labor for a full 24 months beyond original period at a cost of \$29.95. Request policy at time of purchase.

SPECIAL EFFECTS GENERATOR: Hybrid's new S.E.G. is a practical editing tool. With S.E.G. you can add professional style fades and wipes to your home video movies or duplicates. You'll probably use the (3) basic patterns most often, horizontal, vertical and corner. But if you wish, you can operate (2) or more patterns simultaneously to give you the (16) extraordinary combinations illustrated below. For a softer effect you can, even fade and wipe simultaneously. Duration control varies wipe duration, and yes, Fade and X-Ch Fade buttons create wipe to black and X-Ch wipe (wipe out on A-Channel - switch - then wipe back in on B-Channel) all automatically.

VIDEOLINK XANTECH CORPORATION

12950 Bradley Ave.
Sylmar, CA 91342
(818) 362-0353 (800) 843-5465

CABLES/ADAPTORS/ CONNECTORS

CABLES (RF)

5004/5014

High quality, 75 ohm cables in a variety of convenient lengths have molded (not crimped on) male F-type connector on each end. Use for interconnecting all types of video equipment.

5004 Length — 3' F-F \$7.29
5014 Length — 6' F-F 7.99

5104/5114

High quality, 75 ohm cables in a variety of convenient lengths have molded (not crimped on) male F-type connectors on one end and right angle quick connect F-type connector on the other end. For use when one end of cable is frequently switched between various video components.

5104 Length — 3' F-QC \$7.99
5114 Length — 6' F-QC 9.99

5204

Use for interconnecting two VHS VCR's for dubbing purposes. Interconnecting video components that use RCA jacks such as video enhancers, video stabilizers. All VHS VCR's utilize special video and audio inputs and outputs with RCA jacks. TV monitors, projection TV's and some newer home TV's are also equipped with RCA jacks for the transmission of pure video and audio signals.

5204 Length — 6' RCARCA \$7.99

5504

This kit provides high quality — shielded, 6 foot long video and audio cables for dubbing from one VCR to another. Connector and adaptors that permit dubbing from VHS to VHS, Beta to Beta or VHS to Beta are included.

5504 Dub Kit: \$22.95
2 Gold #5204 Cables
2 Gold #576 Adaptors (RCA-Mini)

CABLES (Audio Video)

UNIVERSAL DUBBING KIT

CABLES (RF)

NOW FEATURING NEW "FLEXI LINK" RG-59U COAXIAL CABLE!

500/501/502/503

High quality, 75 ohm cables in a variety of convenient lengths have molded (not crimped on) male F-type connector on each end. Use for interconnecting all types of video equipment.

500 Length — 3' \$4.95
501 Length — 6' 5.95
502 Length — 15' 6.95
503 Length — 25' 9.19

510/511

High quality, 75 ohm cables in a variety of convenient lengths have molded (not crimped on) male F-type connectors on one end and right angle quick connect F-type connector on the other end. For use when one end of cable is frequently switched between various video components.

510 Length — 3' (QC) \$6.95
511 Length — 6' (QC) 6.95

CABLES (Audio Video)

520/521/522

Use for interconnecting two VHS VCR's for dubbing purposes. Interconnecting video components that use RCA jacks such as video enhancers, video stabilizers. All VHS VCR's utilize special video and audio inputs and outputs with RCA jacks. TV monitors, projection TV's and some newer home TV's are also equipped with RCA jacks for the transmission of pure video and audio signals.

520 Length — 6' \$ 4.95
521 Length — 10' 7.95
522 Length — 10' (pair) 12.95

UNIVERSAL DUBBING KIT

CONNECTORS

560

This kit provides high quality — shielded, 6 foot long video and audio cables for dubbing from one VCR to another. Connector and adaptors that permit dubbing from VHS to VHS, Beta to Beta or VHS to Beta are included. \$14.95

570

Male F-type Plug (75 ohm (2 per card). Use to make up interconnecting cables or TV antenna leads. \$1.79

571

75 ohm Round Wire to Right Angle Quick Connector. Save time if cables are frequently switched. Convert the ends of round 75 ohm cables to right angle quick connectors. \$2.49

ADAPTORS CONNECTORS

572

Double Female "F" Jack. A handy connector that allows connection of two lengths of round 75 ohm cable that have male F-type connectors. Can also be used as panel mount connector. \$1.79

573

RCA Jack to "F" Plug Adaptor. Converts F-type male connector to RCA type jack. RCA jacks are usually found on video games, computers and other video accessories such as enhancers, stabilizers, etc. \$3.95

574

Adaptor. Converts RCA plug to female F-type jack that will accept F-type plug and round 75 ohm wire. ... \$3.69

575

Quick Connect F Plug Adaptor. Ideal where cables or antenna leads are frequently switched. Converts female end of round 75 ohm cables to quick connect, push on/pull off style. \$3.69

576

RCA Jack to Mini plug Adaptor. Converts VHS dubbing cables to Beta style so you can dub from VHS to a Beta VCR. \$2.39

577

Mini Jack to RCA Plug. Converts Beta dubbing cables to VHS style so you can dub from Beta to a VHS VCR. \$2.39

578

75 ohm Terminator. Provides constant 75 ohm "load" on unused inputs/outputs to maintain the proper system balance. \$1.59

580

Flush Mount 75 ohm Wall Plate. Wall plate provides a finished-professional look where 75 ohm round antenna lead passes through a wall. Includes built-in 75 ohm "F" jack. \$3.49

581

BNC Jack to 75 ohm "F" Plug. Professional level video equipment utilize BNC connectors for fast, positive hookup. This adaptor allows connection of round 75 ohm cables, with conventional "F" type threaded connectors to BNC jacks. \$6.95

THE STC SYSTEM

The Videomedia STC (serial transport control) system represents a major breakthrough in remote control capability. It is a modular system that can fulfill virtually any remote control requirement and is flexible enough to change when you change or add to your existing system. The STC system will function as a universal remote system without the limitations placed on the operator using discrete remote control panels. Using the STC system allows the user to customize and even totally automate any or all components in the system. The name may be a little misleading in that transports are not the only things that can be remote controlled. Any device that has remote control capability such as routing switchers, film chains, audio decks, VTRs, and even transmitter parameters.

The Videomedia STC (serial transport control) system is based upon a unique two wire communications system between the controlled devices and the master transmitting unit (MSTC). This differential transmission system allows the controlled devices to be located long distances from the master control device (up to one mile using twisted pair wires, or around the world using a modem). Multiple master transmitting units (MSTC) may be incorporated in the system for control of devices from several remote locations.

Each device (or group of devices) to be controlled by the STC system must have a receiving module attached to it. One receiving module (RSTC) can control up to six devices in parallel. Each master control unit (MSTC) may command and monitor up to 63 RSTC units or 378 maximum transports. Multiple MSTC units can be on the line in systems where the user desires more than one remote location. The MSTC master control module will accept control from any external computer via an RS-232 port. This feature allows the end user to automate his system with any conventional computer using the Videomedia MSTC operational data format which we supply the code to at no charge for use with STC products.

Master Units (MSTC)

Master units are of one basic type, available in different packages for various applications. They are all capable of controlling up to 63 remote units and conversing with other master units. In addition, they may be interfaced to any external computer or RS-232 control. Master units are available in 1-3/4" rack mount (one or two per mount), or as a local keyboard input device known as the MSTC-2/PK.

Remote Units (RSTC)

RSTC-1

This is a unidirectional, non-addressable, commands-only module. It supplies no transport function feedback to the operator. This system is suitable for duplicating applications where low cost and mass transport control is required.

RSTC-2

This is a bi-directional, individual addressable, command and status module. Applications for its use include universal remote control systems, sequencing systems and station automation systems.

Supporting Units

MAFV-1

The MAFV-1 is a 10 input, 1 output, single channel, audio follow video switcher.

MAFV-2

The MAFV-2 is identical to the MAFV-1 except it provides stereo audio switching.

Serial Transport Control Systems

MSTC-1	Master control module can control up to 64 RSTC-1 receiving units	\$1300.00
STC-2-PS	1-3/4" rack mount unit and power supply will house 2 MSTC-1 modules	200.00
RSTC-1	Receiver/control module. One per transport required	190.00
MSTC-2/R1	Master remote control module. Single unit rack mount version	1650.00
MSTC-2/R2	Dual master control modules. Rack mount version	2900.00
MSTC-2/PK	Stand alone master control module with keyboard	1950.00
RSTC-2	Remote receiving module	275.00
STC2-CRT	CRT status display generator	1750.00
MAFV-1	10X1 serial controlled audio follow video routing switcher	1900.00
MAF-2	As above with 2 channel audio	2100.00
VMC-101C	Tone encoder, backspace tone placement module (for Q-Star)	900.00
VMC-101S	As above for SPOT-Q	900.00
	Control cable and connector for any U-Matic or 1/2" VTR. For use with MSTC-1 and 2 systems	75.00

AUTOMATION SYSTEM

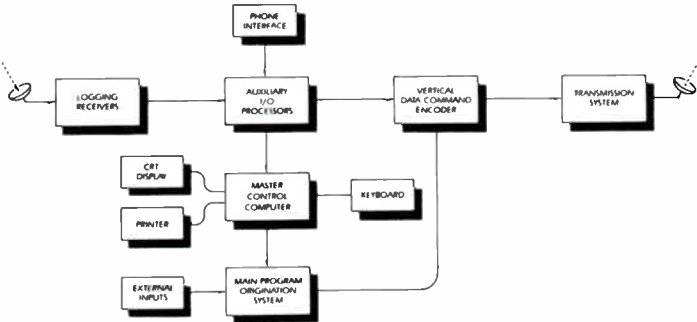

SPOT-Q

Low cost computerized VTR sequencing system. Controls up to 54 VTRs and up to 6 switchers in up to 24 pre-programmed events. Applications include commercial spot playback and channel automation. (order 1 RSTC-2 unit per VTR to be controlled). System includes 1 MSTC-2PK and 1 MAFV-1 10X1 audio follow video switcher. This unit is not upgradable to the VMC-200 system.

VIDEOMEDIA, INC.

211 Weddell Drive
Sunnyvale, CA 94089
(408) 745-1700

CONTROL PRODUCTS

VMC-200 MASTER CONTROL SYSTEM

This system will control up to six source VTRs, film chains, etc. (Additional units up to 255 are optional.) It will control the random access functions of each source, as well as automating their playback times and positions. This unit incorporates a terminal, modem, dual 8" floppy drives, a real-time clock and a printer port. It can receive its programming instructions either locally (terminal) or from a disk. Each source or sequence of sources may be activated manually, from the real-time clock or from a preceding sequence. The system generates a report at the operator's request for confirmation of the day's run activity. The VMC-200 will also pre-program, automatically, up to 99 remote locations using the VMC-201 at that location.

Control Automation System

The VMC-200 is a computerized version of the VMC-100 sequencing system, but incorporates many additional features and capabilities. It allows the broadcaster or cablecaster the capability of total random access of any group of commercials or program material from any of a group of tapes loaded in different VTRs. The accessing method incorporates Micro-Loc which allows for frame accurate programming automation and does not require tones or any timing reference that needs to occupy an audio channel. There are three basic standard versions of the system, and many broadcasters will find the need to incorporate all three operating modules.

The VMC-200 utilizes the STC components as machine control devices. All VMC-200 systems include customized programming in the base price to assure the customer of a system tailored to his specific needs. The customer merely needs to define his system in terms of how many sources (up to 255), how many channels of simultaneous operation (up to 63) and what kind of hardware is to be controlled and automated. Because the VMC-200 is software based, and no two systems requirements will be the same, you will find the VMC-200 to be the most powerful and cost effective automation system available. Options such as Auto-Logging, Auto-Billing and Vertical Data Command (VDC*) are available on any VMC-200 system regardless of size. All logging, billing and custom report forms will be customized to the customer's requirements from our standard data base.

*VDC is a Videomedia exclusive development for transmitting and receiving control and logging data during the vertical interval of the television signal. It is the only system in the industry that provides 100% verification that a program segment has, in fact, been transmitted. Contact your authorized Videomedia distributor for detailed information.

VMC-200 \$27,000.00

VMC-201 REMOTE OPERATING AUTOMATION SYSTEM

Accepts commands for execution from VMC-200 via modem or pre-programmed disk. System includes control computer, dual 8" disk operating system, printer port, real time clock, MAFV-1 10 x 1 vertical interval AFV switcher and hardware to control 6 devices. (Order additional RSTC-2 units for up to 255).

VMC-201 \$13,500.00

VMC-202 STATION MANAGEMENT & TRAFFIC CONTROL CENTER

Station management and traffic control center. Features contract generator, cuts sheet generator, log generator, sales tracking and report generator, word processor, data base management for up to 8 channels of operation. Center includes computer, dual 8" disk operating system, terminal, and software.

VMC-202 \$28,500.00

OPTIONS AND ACCESSORIES

- VMC-250** Auto-billing and report generating software for use with the VMC-202. Includes menu driven data base management and account billing software. Generates "make good" schedules and maintains "active account data" as well as print out invoices for commercial time actually run. This software package is custom formatted to individual operating parameters \$12,000.00
- VMC-260** Videc integrated operational software package. Used in conjunction with the VMC-200 and the Videc-1 package. Provides all programming necessary to supply and receive data commands as well as 100% feedback of commercial spot verification data actually aired 3000.00
- VIDEC-1** Vertical interval data encoder, decoder set for wireless remote control and commercial data verification. This unit includes the frame, power supply, encoder module, decoder module and line finder/cleaner module 4250.00
- VIDEC-2** Encoder module (installs in Videc-1). For additional control channel encoding 2495.00
- VIDEC-3** Decoder module (installs in Videc-1). For additional channel of control data 1695.00
- VDC-1** Rack mount frame and power supply will house three Videc-2 or Videc-3 modules 850.00

PVS-6A
Audio Follow Video Passive Switcher

FEATURES

- 100% passive - no power requirements • Low insertion loss • Low video/audio crosstalk • Six video/audio (unbalanced) inputs • One video/audio (unbalanced) output • BNC video connectors • Barrier strip audio connection • 1 3/4" rackmount height • Can mount three units side by side using a Videotek DAT-1 (rackmount tray) **\$190.00**

PVS-6
Passive Video Switcher

FEATURES

- 100% passive - no power requirements • Low insertion loss • Low video crosstalk • Six video inputs/One video output • 1 3/4" rackmount height • Can mount three units side by side using a Videotek DAT-1 (rackmount tray) **\$110.00**

10x1 ROUTING SWITCHER SERIES
Audio Follow Video With Breakaway Feature

FEATURES

- Ten video inputs, bridging/Two video outputs • Two audio inputs for each video channel • Video/Audio latching breakaway control • Balanced/Unbalanced audio inputs or outputs • Overnight channel memory • Vertical interval switching • Momentary contact push buttons w/changeable legends and "LED" audio/video indicators • 1 1/4 inch rackmount or free standing with rubber feet.

RS-10A	10x1 Vertical Interval Switcher w/ Two Audio Channels & Audio (or) Video Breakaway Feature	\$1285.00
RS-10ARC	Remote 10x1 Vertical Interval Switcher w/ Two Audio Channels & Audio (or) Video Breakaway Feature	1855.00
RS-10ARC-LS	Same as RS-10ARC, but with Switching capability at the Local and Remote Locations	2070.00
RS-10ARC/L	Local portion of RS-10ARC-LS only	1498.00

OPTIONS (RS-10ARC, RS-10ARC-LS)

RSP-1	10x1 Remote Switching Panel (May be added to RS-10ARC or RS-10ARC-LS to provide a Second Remote Switching Location)	\$642.00
RCT-1	Remote Connector Kit	30.00
CR-1	Cable for Remote99/ft.

ROUTING SWITCHERS

VIS-1200
12x1 Video Only Routing Switcher

FEATURES

- Twelve video inputs, bridging Two isolated video outputs • Twenty-four hour channel memory • Vertical interval switching • Momentary contact illuminated push buttons with changeable legends (1 3/4" rackmount)

\$360.00

12x1 ROUTING SWITCHER SERIES
Video Only Routing Switcher

FEATURES

- Video inputs, bridging/Two video outputs • Overnight channel memory • Vertical interval switching • Momentary contact push buttons w/changeable legends and "LED" video indicators • 1 1/4 inch rackmount or free standing with rubber feet.

RS-12	12x1 Vertical Interval Switcher, Video Only	\$ 995.00
RS-12RC	Remote 12x1 Vertical Interval Switcher, Video Only	1224.00
RS-12RC-LS	Same as RS-12RC, but with Switching Capability at the Local and Remote Locations	1295.00

Options (RS-12, RS-12RC, RS-12RC-LS)

RSP-2	12x1 Remote Video Switching Panel with Rackmount Kit	\$225.00
RRK-2	Remote Rackmount Kit	110.00
BLK-2	Blank Panel	60.00
RCT-2	Remote Connector Kit	42.00
CR-2	Cable for Remote	1.22/ft.

18x1 AFV ROUTING SWITCHER
With Breakaway & Computer Interface

FEATURES

- 18 loop thru video inputs • 18 stereo & data channel audio inputs (balanced/unbalanced) • +24dBm audio headroom • Vertical interval line 10 switching • Edit pulse for user controlled switching times • RS-422 computer control interface • Optional RS-232 computer control interface • Computer control, menu driven for ease of operation • 15 selectable communication baud rates • Single line coax remote bus control • Multi-local addressing for remote selection of different locals • FCC approved EMI filtering

\$2795.00

OPTIONS

RS-183ARC	Remote Control RS-183A	\$3495.00
RS-183ARC-L	Additional Local for RS-183ARC	2720.00
RS-183ARC-LS	Same as RS-183ARC w/switching at both the Remote & Local Locations	3565.00
RSP-3	18x1 Remote Switching Panel (may be added to RS-183A or RS-183ARC-LS to provide a Second Remote Switching Location)	770.00

Model APM-2RA
Dual Input Rackmount Audio Program Monitor

- FEATURES**
- The slim-line APM-2RA requires only 3-1/2" of vertical rack space
 - 100% Solid State
 - 2 Inputs — Balanced/Unbalanced
 - 3 Pin male XLR/RCA phono jack input connections
 - Internal 3" x 5" speaker
 - Two meter sensitivity ranges
 - Hi/Low input impedance select
 - A/B mix capability
 - Headphone jack with speaker defeat
 - 105VAC — 132VAC RMS, 48Hz — 66Hz
 - Lower power consumption makes the APM-2RA ideal for mobile applications

APM-2RA \$425.00

Model APM-8R
8 Input Rackmount Audio Program Monitor

- FEATURES**
- The slim-line APM-8R requires only 3-1/2" of vertical rack space
 - 100% solid state
 - 8 inputs — Balanced/Unbalanced
 - Barrier strip input/output connections
 - Internal 3" x 5" speaker
 - 10 watt amplifier
 - 5 meter sensitivity ranges
 - 0dBm, 600ohm line output
 - Calibrated tone output
 - A-B channel mix capability
 - Hi/Low input impedance select
 - 115/230VAC — 50/60Hz mains input select
 - + 12VDC battery operation
 - Connector removable PC board for serviceability

APM-8R \$799.00

Model APM-2RS
Stereo Audio Program Monitor

- The slim-line APM-2RS requires only 3-1/2" of vertical rack space
- 100% Solid State
- Stereo Inputs — Balanced/Unbalanced
- 3 Pin male XLR/RCA phono jack input connections
- Internal 3" x 5" speaker
- Two display sensitivity ranges
- Hi/Low input impedance select
- Stereo headphone jack with speaker defeat
- 105VAC — 132VAC RMS, 48Hz — 66Hz
- Low power consumption makes the APM-2RS ideal for mobile applications

APM-2RS \$493.00

DEMODULATORS & AUDIO PROGRAM MONITORS

Model DM-4RA
Television Tuner/Demodulator

The Videotek Model DM-4RA Demodulator was designed specifically for Broadcast, CATV, Microwave Modulation and CCTV applications. The unit receives "off-the-air" signals, processes these signals and provides dual buffered composite video, audio and 4.5MHz Aural Subcarrier outputs.

- FEATURES**
- Varactor express tuning system with band select fine tuning presets
 - Channels — VHF 2-13, UHF 14-83
 - Low noise
 - Low chrominance/luminance differential gain & phase (maintains IRE color burst standards)
 - Regulated power supplies
 - Audio level indication via LED on front panel
 - Audio-video level controls on front panel
 - The slim-line DM-4RA requires only 3-1/2" of vertical rack space
 - Automatic fine tuning (AFT) with defeat switch, accurate tracking of all 82 channels
 - Dual buffered and short circuit protected aural outputs
 - SAW filter IF Technology for high quality gain and bandwidth characteristics

DM-4RA \$899.00

Model DM-40RA
Television Cable Ready Tuner/Demodulator

DM-40RA

- FEATURES**
- Low noise
 - Low chrominance/luminance differential gain and phase (maintains IRE color burst standards)
 - Regulated power supplies
 - Internal audio monitoring 2" speaker
 - Audio-video level controls on front panel behind access door
 - The slim-line DM-40RA requires only 3-1/2" of vertical rack space
 - Frequency synthesized 10-key express tuning with non-volatile memory
 - 100% solid state circuitry for long term reliability
 - Dual buffered and short circuit protected video and audio outputs
 - Two monitor outputs are sourced by the 4X1 input switcher
 - Cable-adaptable tuning circuitry for instant access to cable TV midband (A-I) and superband (J-W) channels in addition to standard VHF (2-13) and UHF (14-83) channels — 125 channels in all
 - RM-723 Multi-Function Express Commander Infrared remote control unit with 10-key multi-function command capability: complete VHF/UHF/cable TV channel selection, sequential up-down channel search, last channel memory, display-channel number appears in TV/monitor video out jack for a few seconds then reduces in size. Channel display is superimposed in video on upper right hand corner, channel clear, power on/off, antenna switch and video/audio line input selection. When used with Videotek's RGB/VM-19A and RGB/VM-25A, remote control of picture level, sound mute, volume control, and power on/off is available
 - Internal 4X1 video switcher permits selection of three external video inputs plus internal demod from the front of the DM-40RA or from the remote control via a one button sequence selection
 - Coax type 75 ohm "F" connectors are used to provide VHF/UHF antenna inputs, aux. cable input and converter output for a scramble decoder. The aux/ant RF inputs may be selected from the DM-40RA front panel behind the door or via the remote control. Indicators on the DM-40RA front panel display which mode has been selected
 - Three video inputs are BNC looped thru with a 75 ohm termination switch
 - Three stereo external audio inputs are provided that follow the video selection. These are loop thru Hi-Z inputs

DM-40RA \$1495.00

800 SERIES

800 SERIES DISTRIBUTION AMPLIFIERS

Videotek's 800 Series Distribution Amplifiers are engineered to meet critical video distribution needs in all types of applications. The 800 Series is based on the TR-800 eight bay modular tray and PS-800 power supply. Up to eight distribution amplifier modules may be mounted in the TR-800 tray, in addition to a second PS-800 power supply for backup in case of primary supply failure.

The VDA-816S is a standard video DA with one looping single ended input and six outputs. Up to 300 feet of Belden 8281 may be equalized via a front card equalizer adjustment.

The VDA-816 is a precision video clamping DA with one looping differential or single ended input and six outputs. An optional EQ-800 card may be added to the VDA-816 to allow front panel adjustment of equalization up to 1000 feet of Belden 8281.

VDA-816 Precision Video Clamping DA Module

FEATURES

Front card output level adjustment • Front card equalizer adjustment when optional EQ-800 equalizer card is employed • Can equalize up to 1000 feet of Belden 8281 • Switchable clamping or DC restoration • Modular plug-in card • One looping differential or single ended input and six outputs.

VDA-816 **\$375.00**

TR-800 Modular DA Tray

FEATURES

Eight bay modular two rackmount high tray • Will accept any combination of VDA-816 precision DAs or VDA-816S standard DAs • Also permits the use of a redundant back-up PS-800 supply • Comes standard with a single PS-800 supply.

TR-800 **\$750.00**

VDA-816S Standard Video DA Module

FEATURES

Front card output level adjustment • Front card equalizer adjustment can equalize 300 feet of Belden 8281 cable • Modular plug-in card • One looping single ended input and six outputs.

VDA-816S **\$250.00**

PS-800 Redundant Power Supply

FEATURES

Provides unregulated ± 16 VDC to the TR-800 rack tray • An additional PS-800 can be installed as a back-up supply in case of primary supply failure.

PS-800 **\$199.00**

EQ-800 Equalizing Module for VDA-816. Equalizes up to 1000 feet of Belden 8281 **\$65.00**

EX-800 Extender Card for Servicing DA Modules **90.00**

DISTRIBUTION AMPLIFIERS

VDA-16

PDA-16

ADA-16

SDA-14

DISTRIBUTION AMPLIFIERS

VDA-16 Video Distribution Amplifier

FEATURES

One looping video input • Six isolated video outputs • Front panel output level adjustment • Cable equalizer front panel adjustment (300 ft. Belden 8281) • Front panel input/output test points • Front panel LED power indicator • BNC input/output connectors • Rack-mountable using Videotek DA tray option DAT-1.

VDA-16 **\$325.00**

ADA-16 Audio Distribution Amplifier

FEATURES

One balanced/unbalanced audio input • Six balanced audio outputs • Front panel output level adjustment • Front panel input/output test points • Front panel LED power indicator • Barrier strip input/output connectors • Rackmountable using Videotek DA tray option DAT-1.

ADA-16 **\$325.00**

PDA-16 Pulse Distribution Amplifier

FEATURES

One looping pulse input • Six pulse outputs • Front panel input/output test points • Front panel LED power indicator • BNC input/output connectors • Rackmountable using Videotek DA tray option DAT-1.

PDA-16 **\$325.00**

SDA-14 Subcarrier Distribution Amplifier

(SDA-14P, PAL/SDA-14PM, PAL-M)

FEATURES

One looping subcarrier input • Four isolated subcarrier outputs • Regeneration technique removes noise & distortion from input signal • Available for NTSC, PAL, PAL-M • Front panel 0°-360° output phase adjust w/0° preset • Front panel input/output test points • Front panel LED power indicator • BNC input/output connectors • Rackmountable using Videotek DA tray option DAT-1.

SDA-14 **\$450.00**

H & V VIDEO IMAGE ENHANCER

The H & V Enhancer minimizes detail loss. The visual clarity of pictures is significantly improved when used with Videotape Productions and Video Projection Systems and the editing and duplication of $\frac{3}{4}$ " and $\frac{1}{2}$ " recordings. Other applications which will benefit from the use of the H & V Enhancer include video camera taping and film-to-tape transfers.

The image enhancer features 2H processing of vertical detail, noise reduction and split screen

OPERATING CONTROLS

- Enhance/ Split-Screen/Bypass** Enable/Disable enhancer circuitry for total picture comparison
- Chroma, normal/ - 1H delay** The - 1H (minus one line delay) feature is especially useful when dealing with systems that introduce a one line chroma delay or smear i.e. PAL decoders, single tube color cameras, etc.
- Front Panel Power on/off**

VARIABLE CONTROLS

- Split-Screen position** . . . Operates only when Enhance/ Split-Screen/ Bypass switch is in the Split-Screen mode
- Horizontal Detail** Controls horizontal enhancement of only low amplitude textural picture information
- Horizontal Aperture** Controls horizontal enhancement of high frequency picture information
- Vertical Aperture** Controls amount of vertical enhancement
- Enhancement Noise Reduction**
- Coring** Used to minimize noise amplified by enhancement
- Black** Reduces enhancement in areas of low picture luminance which decreases the visibility of enhancement-amplified noise

comparison. 2H processing utilizes information from three successive lines to form a symmetrical enhancement signal. Noise usually increased by enhancement is minimized by a combination of two techniques: coring which reduces noise in all areas of the picture and a Level-Dependent circuit which suppresses enhancement in the darker areas of the picture where noise is more visible. A split screen mode allows side-by-side comparison of unenhanced and enhanced video. **\$1295.00**

SPECIFICATIONS

- Video Input Level**5 to 1.5 V (1 V p-p nom.)
- Video Output Level** Unity in reference to input
- Frequency Response** Within +1, - 3 dB to 4.5 MHz (NTSC). Y/C crossover 2.9 MHz (all variable controls counter-clockwise, enhance switch in enhance position)
- Maximum Enhancement** Greater than +12 dB for H. Detail, H. Aperture, or V. Detail
- NOTE:** Excess enhancement is clipped above 20% of peak video white and below 25% of sync (referenced to back porch). Clippers will adapt to changes of video level within the limits of the video input specification. Enhancement is gated off during both horizontal and vertical blanking intervals.
- Vertical Tilt** Less than 2%
- Video Inputs** 1 (high impedance loop-thru w/75 ohm termination switch)
- Video Outputs** 4
- Connectors** 1 special (enhance signal on 50% setup with sync) BNC (standard)—RCA Phone Connectors available
- Power** 110 Vac 20 Watts—220 Vac available on request
- Cabinet Type** Rack-mount with detachable mounting brackets
- Dimensions** Height 1 $\frac{3}{4}$ "
Width 17"
Depth 11 $\frac{3}{8}$ "
Weight 7 lbs.
- Shipping Weight** 14 lbs.
- PAL (4.43 MHz)/SECAM available on request

SEG-100 Special Effects Generator

All transitions can be done automatically or manually. With the MANUAL feature, effect patterns can be retained on the viewing screen for setup prior to using the automatic (AUTO) function, or for creating vignettes, segues, and framing.

Standard fade-to-black and wipe-to-black are both possible with a variable color background matte in place of the black matte. Cut directly from one source to the other while retaining any background effects in the MANUAL mode.

Pattern edges are variable from a hard, clean transition to a soft, halo-like effect achieved by mixing the video information at the pattern edge.

The first eleven locations on the pattern keypad have two possible basic shapes; the ALTERNATE key selects the second pattern, which is not displayed on the keypad.

Pattern effects shapes are variable with SLANT. A virtually infinite variety of shapes are possible with the Special Effects Generator. ALTERNATE pattern shapes are also variable with SLANT.

Automatic transition time is variable from one-half second to as long as five seconds. Audio is faded with video when using AUTO; audio is retained when using the MANUAL function.

SEG-100 \$469.95

CHANNELPLUS™ Video Multiplexers

A ChannelPlus video multiplexer allows users to watch and/or record all of their video sources on all their TVs and VCRs without any switches or added wiring. Picture quality is often improved because ChannelPlus uses the direct video and audio outputs available from sources such as VCRs, VDPs, cameras, satellites, computers, etc. ChannelPlus assigns each source to an unused UHF channel, adding them onto the existing antenna or cable system. All TVs in the home view the added channels by simply tuning to them.

H2V Dual Channel Video Multiplexer. Accepts two composite video + audio (stereo or mono) inputs \$199.95

H3V Triple Channel Video Multiplexer. Accepts three composite video + audio (stereo or mono) inputs \$269.95

HRV Combo RF/Video Multiplexer. Accepts one video + audio input & one channel 3 or 4 input \$239.95

GUARD STABILIZER Copyguard Remover and Stabilizer

You will find a wide selection of movies, concerts and special programs available for rental or sale on prerecorded video cassette. Most of these video cassettes are copyguarded to prevent you from making your own copy. But no system is perfect; certainly not this one. In fact, the guard that keeps you from copying may also keep you from watching. Many television sets will not play prerecorded tapes because the copyguard makes the picture roll, jitter, turn to snow, or disappear all together. The GUARD STABILIZER stops this nonsense at the source, by completely removing the copyguard from the video signal. Simply connect the GUARD STABILIZER in line between your two VCRs... and feed the VHF output from the second VCR to the TV. Adjust the lock control for a stable picture. Once the control is set, the tape will play all the way through without further adjustment. If you have a TV monitor or TV projector with direct video input, you can also connect the GUARD STABILIZER in line between VCR and TV.

Guard Stabilizer \$69.00

IVE-100 Integrated Video Enhancer

Use the IVE-100 Integrated Video Enhancer to correct for sharpness and detail losses that occur during recording and viewing of video tapes, to improve sharpness and detail of live, off-the-air or video-camera pictures, to eliminate copyguard-induced vertical roll and jitter, to reduce the probability of vertical roll and breakup (due to dropouts) during dubbing (tape-to-tape recording), and to aid in the cutting of commercials.

The IVE-100 is designed for use with one or two VCRs. With one VCR it can be used while viewing to improve picture quality. With two VCRs, a tuner and one VCR, or a camera (equipped for RCA-phonop connection) and one VCR, it can be used to improve recordings as you make them.

The IVE-100 instruction Manual gives complete and easy-to-follow instructions for installation and use, including detailed instructions on how to use enhancement to improve your own recordings. It even includes beginner-oriented instructions on how to cut commercials.

IVE-100 \$229.00

0704 S.W. Bancroft St.
Portland, OR 97201
(503) 223-4884 TWX 910-464-5156

DETAILER III Video Image Enhancer

The Detailer III Image Enhancer seems to offer two of just about everything: Two systems for enhancement, two systems for enhancement noise reduction, and two systems for enhanced-vs-unenhanced picture comparison. 4 selectable video/stereo-audio inputs let you connect four separate video sources and switch back and forth between them. 4 video/stereo-audio outputs and video/audio distribution amplifier let you send a picture to 4 separate video devices without loss of video or audio level — make up to 4 identical recordings at the same time. Available now in black. **\$349.00**

RF MODULATOR Video to VHF Converter

The RF MODULATOR can adapt your TV receiver to accept direct video and audio inputs from any video component. This allows you to use an image enhancer with one VCR to improve tape playback or off-the-air viewing. Or to connect your camera, portable VCR or computer direct to your TV. Simply connect audio and video to the inputs on the RF MODULATOR... and the modulator RF output to the antenna terminals on your TV... or to one of the inputs on your RF switcher. You can also use the RF MODULATOR to feed the output of a single VCR to two TV sets at the same time with little or no signal loss. This allows people to watch the same tape at the same time in separate locations. In addition to the RF output, the modulator provides loop-through audio and video outputs. This allows you to make a separate output connection to a VCR or video monitor... or to any other component that has a video input. **\$149.00**

PROC AMP Color Processing Amplifier

The PROC AMP is a video processing amplifier designed to correct color and contrast errors. It can also be used to create fade-outs and fade-ins, or to remove color side effects from black and white programs. The chroma gain and phase controls adjust color level and tint, while the luminance gain control adjusts contrast/brightness in very much the same manner as the contrast and color controls on a TV set. The PROC AMP controls have greater range, however, and can operate during recording, not just during playback when it is often too late to make adequate correction. The luminance gain control is also supported by a level meter to insure accurate adjustment. Recordings exhibiting shifts in color saturation or tint, or recordings which appear too dark or too bright benefit greatly from PROC AMP correction. Camera-recorded scenes can also be adjusted for overall correction or to match one shot with another, or to balance one camera to another. Four distribution-amplified outputs are also provided for feeding multiple VCRs and/or monitors. **\$349.00**

STEREO SYNTHESIZER With DNR™ Noise Reduction

The STEREO SYNTHESIZER is a sophisticated sound processor designed to simulate the directionality and body of stereo audio in as natural a way as possible. The incoming monaural signal is separated by frequency division into five overlapping bands, which when delivered in varying proportions to the left and right channels, produce a continuously directional sound. Both high and low frequencies travel to each channel just as they would for an actual stereo recording. The sound placement can be altered using the two dimension controls, and the overall directionality adjusted using the separation control. In addition, DNR™ dynamic noise reduction is incorporated to suppress videotape hiss which would normally be reproduced when connecting VCR audio to a good sound system. Use the SYNTHESIZER to playback mono videotapes in synthesized stereo. Or to make synthesized stereo recordings on your stereo VCR. And use it to remove high frequency hiss for any tape, stereo or mono. **\$249.00**

SERIES II

Series II enhancement components give the VCR or video camera user a lot for a minimal price: quality and dependability; easy-to-follow instructions; simple, plug-in installation (for most applications); a two-year limited warranty. Available now in black.

The Series II Detailer® Image Enhancer is designed to improve picture detail and sharpness, and improve recordings as you make them. It incorporates enhancement and noise reduction features — and can be used between two VCRs, a VCR and an RF modulator/TV combination (for viewing purpose only), or a video camera and one VCR. **\$99.95**

The Series II Stereo Synthesizer is designed to improve TV and VCR sound quality for recording or listening purposes. It incorporates a patented stereo simulation system, a separation control, dimension controls, and a hiss filter — and can be used between a TV (with audio output), VCR, or other mono (monaural) sound source and a stereo receiver, stereo VCR, or stereo recorder. **\$129.00**

The Series II Integrated Video Enhancer is designed to improve picture detail and sharpness, eliminate copyguard, and improve recordings as you make them. It incorporates enhancement, stabilization, noise reduction, and RF modulation features — and can be used between a VCR, video camera, or video disc player and a VCR/TV combination (for recording purposes) or TV (for viewing purposes only). **\$159.00**

CORDGARD™ ELECTRICAL CORD DUCTING

A quick, inexpensive way to keep people from tripping over electrical cords that must be run across floors or flat surfaces. Comes complete and ready to use; includes double-faced adhesive tape to prevent sliding on smooth surfaces, or, it can be permanently attached with epoxy cement. For carpeted floors, ribbed slots on the bottom prevent movement. The ducting is made of tough, flexible vinyl and can be used indoors or outdoors. Measures 3"W x 9/16"H. Center channel will accept cords up to 7/16" diameter and is slit for easy cord insertion. The standard color is beige which will harmonize with every decor; other colors are available on special order.

These multiple outlet strips have passed the rigid testing of Underwriters Laboratories and bear the UL label. Many models also have CSA certification. All models are designed to exceed NEC requirements and meet OSHA standards. All units are rated 15 amperes, 125 VAC, 60 Hz, 1875 watts, continuous duty and have "U" ground outlets, circuit breaker protection, 14/3 SJT power supply cords, and grounded steel cases. CSA certified units are indicated by an asterisk following the model number.

THE PREMIER GROUP

New designs feature a slim, contoured shape and color-coordinated case and components. Model ULA4E has 4 outlets; Model ULA4TME has 4 outlets and illuminated master switch; Model ULA6E has 6 outlets; Model ULA6TME has 6 outlets and illuminated master switch. All have circuit breaker protection. **Case Color:** Beige. **Model ULA4 Series—Overall Size:** 9 1/4" lg. x 2 3/8" w. x 1" h. **Mounting:** Type III on 8 1/4" centers. **Model ULA6 Series—Overall Size:** 12" lg. x 2 3/8" w. x 1" h. **Mounting:** Type III on 10 15/16" centers.

POWER MASTER™ Line Monitor Power Conditioners

Solid-state electronic plug-in devices, whether they be a simple calculator, an expensive instrument, or a computer system, are subject to very hostile environments caused by electrical disturbances coming through the utility power lines that feed them, or generated by electrical equipment within a building. Usually, the solution to this problem has been the installation of a "dedicated" or separate power line to the wall receptacle that powers the sensitive equipment. Even with this expensive installation, equipment damage, memory failure, erroneous data input and output caused by thunderstorms, equipment switching, and other "electrical pollution", are still common occurrences.

Power Master Line Monitor Power Conditioners eliminate the requirement of a separate, dedicated, branch circuit. They have the latest solid-state technology. Most models have multi-stage filter networks, continuous voltage spike protection, RFI, EMI, and EMP noise rejection, anti-ground loop design, shielded power cords, and more, all in

POWER LINE CONDITIONERS

one package. Your equipment can work without interruption even when the power conditioner is dissipating a high voltage spike. Also, all models have an easily resettable 15 amp circuit breaker in the rare case of a voltage spike that exceeds the design limits of the power conditioner.

Power Master Line Monitor Power Conditioners protect against spike damage by filtering both the hot line and the neutral line. In addition, the filter is bidirectional, it dissipates both incoming spikes and outgoing spikes created by your equipment. The Power Master filter system is passive, it operates only when a voltage spike occurs. When a spike is sensed, the Power Master instantaneously clamps or reduces the over-voltage to a level that is safe for use by your equipment. The spike, depending upon its voltage and the design of your Power Master, is harmlessly dissipated, either in the form of heat, through the grounding system, or both. All noise-protected models have a three-stage passive noise filter system, a high frequency filter and a low frequency filter that operate in the transverse mode, the common mode, or both. The high and low frequency filters overlap to give double protection in the mid-range frequencies where it is needed the most.

MODEL LM 1100

MODEL LM 1100

Model LM 1100 is a wall plug-in unit designed for use at the wall receptacle. Ready to use, just plug it in. Provides one "U" ground duplex outlet accommodating two plugs. Contains one metal-oxide varistor for spike protection. Case is steel with baked-on black finish; outlets are also black. Measures 4-1/8" x 3-1/4" x 1-5/16". Weighs just 1-1/2 lbs.

- Max. Spike Energy Dissipation: 50 joules one time, 25 joules with repeated usage, self-restoring
- Max. Spike Voltage: 6000 volts
- Clamping Spike Voltage: 325 volts
- Surge Current Clamping Ratio: No greater than 2.03:1
- Max. Spike Current: 2000 amps
- Clamping Response Time: 10 nanoseconds or less
- Environment: For indoor use in dry location

Model LM1100 Power Line Conditioner — Net Each \$39.95

MODEL LM 2100

MODEL LM 2100

The Model LM 2100 is a wall plug-in unit designed for use at the wall receptacle. Ready to use, just plug it in. Provides one "U" ground duplex outlet for two plugs. Unit contains six-stage filter network providing isolated voltage spike and noise protection for each outlet. Case is steel with baked-on black finish; outlets are black. Measures 5-1/2" x 4-1/2" x 1-5/16" and weighs 4 lbs.

- Max. Spike Energy Dissipation: 50 joules one time, 25 joules with repeated usage, self-restoring
- Max. Spike Voltage: 7000 volts
- Clamping Spike Voltage: 225 volts
- Max. Spike Current: 2000 amps
- Surge Current Clamping Ratio: No greater than 1.5:1
- Clamping Response Time: 10 nanoseconds or less
- Noise Rejection Frequency Response: 1kHz to 100MHz
- Attenuation: 20 to 40dB (volt ratio)
- Noise Protection: Transverse mode
- Environment: For indoor use in dry locations

Model LM 2100 Power Line Conditioner — Net Each \$104.95

MODEL LM 1200

MODEL LM 1200

The Model LM 1200 is a strip type power line conditioner with 3 "U" ground duplex outlets accommodating 6 plugs. Contains 3 metal-oxide varistors for isolated spike protection. Case is steel with baked-on beige finish; outlets, power cord, and illuminated master switch are also beige. Measures 11-15/16" x 2-5/16" x 1" and weighs just 2 lbs. Mounts by means of keyhole slots on 10-15/16" centers. Power cord is 14/3 SJT 9 feet long.

- Max. Spike Energy Dissipation: 50 joules one time, 25 joules with repeated usage, self-restoring
- Max. Spike Voltage: 6000 volts
- Clamping Spike Voltage: 325 volts
- Surge Current Clamping Ratio: No greater than 2.03:1
- Max. Spike Current: 2000 amps
- Clamping Response Time: 10 nanoseconds or less
- Environment: For indoor use in dry locations

Model LM 1200 Power Line Conditioner — Net Each \$47.95

MODEL LM 2200

MODEL LM 2200

The Model LM 2200 is an outlet strip type power line conditioner providing 8 outlets, each of which has isolated spike protection. A six-stage filter network provides voltage spike and noise protection. Case is steel with baked-on beige finish; the outlets, power cord, and illuminated master on-off switch are also beige. Unit measures 20" x 2" x 1" and weighs 6 lbs. Power cord is 14/3 SJT 9 feet long. Mounts by means of end slots on 19-3/4" centers.

- Max. Spike Energy Dissipation: 50 joules one time, 25 joules with repeated usage, self-restoring
- Max. Spike Voltage: 7000 volts
- Clamping Spike Voltage: 225 volts
- Max. Spike Current: 2000 amps
- Surge Current Clamping Ratio: No greater than 1.5:1
- Clamping Response Time: 10 nanoseconds or less
- Noise Rejection Frequency Range: 1kHz to 100MHz
- Attenuation: 20 to 40dB (volt ratio)
- Noise Protection: Transverse mode
- Environment: For indoor use in dry locations

Model LM 2200 Power Line Conditioner — Net Each \$157.45

LM 3100 SERIES

Model LM 3100

The Model LM 3100 is a wall plug-in unit designed for use at wall receptacle. Provides two hospital-grade outlets with isolated spike protection. A six-stage filter network provides voltage spike and noise protection. Case is steel with baked-on beige finish; outlets are also beige. Unit measures 5-1/2" x 4-1/2" x 1-5/16" and weighs 5 lbs.

- Max. Spike Energy Dissipation: 50 joules one time, 25 joules with repeated usage, self-restoring
- Max. Spike Voltage: 7000 volts
- Clamping Spike Voltage: 225 volts
- Surge Current Clamping Ratio: No greater than 1.5:1
- Max. Spike Current: 2000 amps
- Clamping Response Time: 10 nanoseconds or less
- Noise Rejection Frequency Range: 1kHz to 100MHz
- Attenuation: 20 to 40dB (volt ratio)
- Noise Protection: Transverse and common modes
- Leakage Current: Leakage to ground lead does not exceed 10 microamperes
- Environment: For indoor use in dry locations.

Model LM 3100 Power Line Conditioner — Net Each \$157.45

Model LM 3200

Model LM 3200 is a strip type power line conditioner providing 8 outlets. A six-stage filter network provides voltage spike and noise protection. Each outlet has isolated grounding and isolated spike protection. Case is steel with baked-on beige finish; the hospital-grade outlets are ivory, shielded power cord is black, master on-off switch has black housing and amber illumination. Unit measures 20" x 2" x 1" and weighs 7 lbs.

- Max. Spike Energy Dissipation: 50 joules one time, 25 joules with repeated usage, self-restoring
- Max. Spike Voltage: 7000 volts
- Clamping Spike Voltage: 225 volts
- Max. Spike Current: 2000 amps
- Surge Current Clamping Ratio: No greater than 1.5:1
- Clamping Response Time: 10 nanoseconds or less
- Noise Rejection Frequency Range: 1kHz to 100MHz
- Attenuation: 20 to 40dB (volt ratio)
- Shielded Power Cord Attenuation: Up to 60dB
- Noise Protection: Transverse and common modes
- Leakage Current: Leakage to ground lead does not exceed 10 microamperes
- Environment: For indoor use in dry locations.

Model LM 3200 Power Line Conditioner — Net Each \$262.45

POWER LINE CONDITIONERS

LM 4000 SERIES

Models LM 4100 and LM 4200 offer the best spike protection with the highest overvoltage handling capability and the quickest response time. The series also offers the best noise suppression in both the common and transverse modes. Both models have RFI-shielded power cords and isolated, hospital-grade, double-wipe, grounding outlets for additional protection against noise. Included in both models is an AC voltmeter with color-coded scale to visually indicate that an undervoltage condition exists. An undervoltage sensing and warning system is also included. When the incoming line voltage drops to 105 volts or less, the warning system, consisting of a red light and a buzzer, will activate. If the low voltage is still within the operating range of the equipment, the operator can then choose to shut off the buzzer by means of a cutoff switch. The red pilot light, however, remains on, acting as a constant reminder until the line undervoltage is corrected.

Model LM 4100

The Model LM 4100 is designed for rack or panel mounting with end slots on 18-1/4" x 3" centers. Eight hospital-grade, "U" ground outlets are provided on the back of the unit. The front of the unit contains the master on-off switch, voltmeter, auto-manual switch, warning buzzer, and warning light. Case is steel with baked-on black enamel finish; front cover is spun aluminum, outlets are ivory, power cord is black, switches are black, on indicator light is green, and undervoltage indicator light is red. A seven-stage filter network provides voltage spike and noise protection with each outlet having isolated spike protection. Front plate measures 19" L x 3-15/32" W; the back cover measures 17" L x 3-11/32" W x 2-3/8" D. Unit weighs 15 lbs.

- Max. Spike Energy Dissipation: 300 joules one time, 150 joules with repeated usage, self-restoring
- Max. Spike Voltage: 10,000 volts
- Clamping Spike Voltage: + / -20 volts as it appears on the sine wave; 190 volts, max.
- Max. Spike Current: 6000 amps
- Surge Current Clamping Ratio: No greater than 1.63:1
- Clamping Response Time: 5 nanoseconds or less
- Noise Rejection Frequency Range: 1kHz to 100MHz
- Attenuation: 40 to 60dB (volt ratio)
- Shielded Power Cord Attenuation: Up to 60dB
- Noise Protection: Transverse and common modes
- Leakage Current: Leakage to ground lead does not exceed 10 microamperes
- Environment: For indoor use in dry locations.

Model LM 4100 Power Line Conditioner — Net Each \$524.95

Model LM 4200

The Model LM 4200 is a console type unit with sloping front and back panels; the front panel contains on-off switch, auto-manual switch, voltmeter, "on" indicator light, undervoltage indicator light, and warning buzzer. The back panel contains 8 outlets and a circuit breaker. The eight outlets are hospital-grade, "U" ground type. Each has isolated spike protection. Case is steel with woodgrain vinyl finish; outlets are ivory, power cord is black, switches are black, "on" indicator light is green, warning indicator light is red. A seven-stage filter network provides voltage spike and noise protection. Unit measures 13-1/2" L x 4-1/8" W x 4-7/8" H and weighs 15 lbs.

- Max. Spike Energy Dissipation: 300 joules one time, 150 joules with repeated usage, self-restoring
- Max. Spike Voltage: 10,000 volts
- Clamping Spike Voltage: + / -20 volts as it appears on the sine wave; 190 volts, max.
- Max. Spike Current: 10,000 amps
- Surge Current Clamping Ratio: No greater than 1.63:1
- Clamping Response Time: 5 nanoseconds or less
- Noise Rejection Frequency Range: 1kHz to 100MHz
- Attenuation: 40 to 60dB (volt ratio)
- Shielded Power Cord Attenuation: Up to 60dB
- Mode Noise Protection: Transverse and common
- Leakage Current: Leakage to ground lead does not exceed 10 microamperes
- Environment: For indoor use in dry locations.

SPIKE AND NOISE SUPPRESSORS

DG115-S

DG115-P

DATAGARD® Spike and Noise Suppressors

Protects computers from system downtime, equipment failure, erroneous data and added service expense due to spike and electronic noise disturbances on the power line.

The DG115 Series includes 3 models:

- DG115-S 12" strip for multiple plug-in, 6 outlets
- DG115-P Wall plug-in unit, 2 outlets
- DG115-C Console unit, 6 outlets

All models have a single-stage spike filter and single-stage noise filter and provide protection to each outlet. Circuit breaker guards against power overloads.

LINEGARD™ POWER CONDITIONERS WITH SPIKE PROTECTION

DG315-R

DATAGARD® Spike and Noise Suppressors

Protects computers from system downtime, equipment failure, erroneous data and added service expense due to spike and electronic noise disturbances on the power line.

DATAGARD 315 Series Spike and Noise Suppressors from SL WABER provide an industrial grade three-stage spike filter and four-stage noise filter, to protect against moderate to catastrophic spikes and virtually all unwanted noise interference coming through the wall outlet. Without DATAGARD, your computer may exhibit loss of stored data, false input/output and equipment failure. And that means system downtime and costly service calls...computer disasters!

The DG315 Series includes 3 models:

- DG315-P Wall plug-in unit, 2 outlets
- DG315-S 16" strip, 6 outlets
- DG315-R 19" Rack or panel mount, 6 outlets

All three models feature a seven-stage filter network (each outlet has spike protection) and 15 amp circuit breaker protection, to avoid power overloads.

AUDIO PROGRAM MONITORS/ MONITOR AMPLIFIER

AMP-1 AND AMP-2 AUDIO PROGRAM MONITORS

The AMP-1 and AMP-2 offer a dual 3" x 5" speaker system for high quality audio reproduction and a VU meter to monitor audio line levels.

Conveniently packaged, only 3-1/2" high and 4" deep, these compact units may be used in portable, mobile and studio applications.

The single input AMP-1 may be ordered with either balanced or unbalanced inputs and the AMP-2 may be ordered in the same manner with switchable dual inputs.

The high performance and low cost of the AMP-1 and AMP-2 will make them welcome additions to your video production system.

AMP-1 Unbalanced Single Input	\$275.00
AMP-1B Balanced Single Input	285.00
AMP-2 Unbalanced Dual Inputs	315.00
AMP-2B Balanced Dual Inputs	335.00
AMP-2C Dual Balanced and Unbalanced Inputs, Switchable	360.00

SPECIFICATIONS

Inputs:	Single input balanced or single input unbalanced (AMP-1) Dual inputs balanced or dual inputs unbalanced (AMP-2) Dual inputs balanced or unbalanced, selectable (AMP-2C)
Connectors:	Balanced-XLR Unbalanced-RCA
Headphone Jack:	Front panel mounted 1/4" cutout type
VU Meter:	May be calibrated at 0 dBm, +4 dBm or +8 dBm at 0 VU
Power Output:	2.5 watts maximum at 1 kHz
Meter Response:	10 Hz to 50 kHz ± 3 dB
Amplifier Response:	25 Hz to 50 kHz ± 3 dB
Input Impedance:	Unbalanced 10K (typical) Balanced 600 ohms
Maximum Input:	AC: 3 Volts RMS (+12 dBm) DC: ±5 VDC
THD:	Typically less than 2% at 2 watts from 25 Hz to 20 kHz
Hum Rejection (balanced inputs only):	-45 dB
Size:	3.438" high x 19" wide x 4" deep
Weight:	7 lbs., 8 ozs.
Power:	110 VAC 50/60 Hz 20 watts max. Seven foot 3-wire AC cord supplied

AMP-3 AUDIO MONITOR AMPLIFIER

The AMP-3 is a compact, rack mounted audio monitor/amplifier designed for use in any system application where accurate monitoring of line audio is necessary.

The three individually controlled channel inputs allow the AMP-3 to be used in editing suites with new generation VTRs or as a control room audio monitor with the third channel used as an intercom input.

A convenient push-button switch array enables the operator to choose between the three inputs, mix inputs and select internal, external or both speakers.

An easily visible, fast responding LED bargraph VU meter is incorporated into the AMP-3 and may be calibrated for different input levels.

The amplifier section provides an output to drive an external speaker with minimal distortion and extremely accurate audio reproduction. A high quality internal speaker is in a separate, acoustically insulated compartment within the unit. A front panel mounted 1/4" phone jack is also provided for headphone use.

AMP-3 Audio Monitor Amplifier	\$650.00

COLOR 300

VIDEO 300

VIDEO 310A

COLOR 300

The Amdek Color 300 is a high quality, composite (NTSC) color monitor for use with a wide variety of personal computers. The inexpensive price of the Color 300 makes it the ideal alternative to a color TV in a home computer environment. The attractive cabinet makes the Color 300 aesthetically compatible with any home computer.

FEATURES

- Quality 260 (horizontal) dots x 300 (vertical) line resolution provides a vivid color display for games and graphics
- 13" black matrix (dark bulb) picture tube (CRT) provides for sharper contrast
- Built-in speaker and audio amplifier for those computers that do not contain speakers, but do have sound capabilities
- Head phone jack to facilitate educational applications or private audio
- Easy access, front-mounted operator controls
- Capable of providing up to 40 columns x 25 lines of text
- FCC and UL approved for use in the office or in the home
- Capable of supporting 1) A standard composite color video signal (NTSC) and, 2) Separate chrominance and luminance video signals such as those provided by the Commodore 64
- Optional tilt/swivel stand for more flexibility in viewing angles

Color 300 \$349.00

VIDEO 310A

The Amdek Video 310A has TTL inputs (intensity controlled) for compatibility with the IBM PC computer. The 12" screen produces sharp, vivid text or displays and may be ordered with green or amber phosphor CRT to suit your preference. The industrial grade cabinetry has a handy built-in carrying handle and is styled to enhance the appearance of any computer set-up. The screen surface is non-glare to reduce eye fatigue and distracting reflections. Other design features include a 18MHz bandwidth and 960 lines (center) resolution for a sharp, clear picture.

FEATURES

- Fully compatible with IBM Personal Computer monochrome printer card (includes intensity bit)
- 80 x 24 character display capability
- Non-glare screen, amber or green phosphor CRT
- 18MHz bandwidth
- Built-in handle for portability

Video 310A \$230.00

VIDEO 300

Everything about the Amdek 12" Video 300 monitor is designed for easy reading and operation. It's compatible with most personal computers, using a composite video signal to produce sharp, vivid text or displays. The Video 300 is styled to enhance the appearance of any system and the non-glare screen permits no-strain viewing without distracting reflections. The CRT may be ordered with amber or green phosphor to suit your preference. Other design features include an 18MHz bandwidth and 960 lines (center) resolution for a sharp, clear picture. Lightweight and portable, the Video 300 has industrial grade cabinetry with a built-in carrying handle. It's both UL and FCC approved.

FEATURES

- Green or amber phosphor for easier viewing
- Non-glare screen eliminates distracting reflections
- 18MHz bandwidth
- 80 x 24 character display
- Lightweight (17 lbs.)

Video 300 (Amber) \$199.00

COLOR 700

COLOR 600

COLOR 700/710 SERIES

The Amdek Color 700 Series consists of two models, the Color 700 and the Color 710. The 700 Series was designed to provide superior resolution. Both models include a .31mm dot pitch CRT for sharp text and graphics resolution. The attractive cabinet makes the Color 700 Series aesthetically compatible with any personal computer.

FEATURES

- Up to 720 (horizontal) dots x 240 (vertical) lines resolution with Color 700. Up to 720 x 480 (interlaced) no flicker due to long persistence phosphor CRT with Color 710. Ultra-high resolution for demanding color graphics applications
- 13" black matrix CRT (Color 700) provides for sharper contrast. High contrast, etched glass CRT (Color 710) limits glare to provide more comfortable viewing
- Switchable color matrix allows full 16 IBM (PC, XT, PC Junior or Apple) (II, IIc, IIe, III) colors
- A text switch changes text color from white to green for easier reading
- Easy access, front-mounted operator controls
- Capable of providing up to 80 columns x 25 lines of text display
- FCC and UL approved for use in the office or in the home
- Optional tilt/swivel stand for more flexibility in viewing angles

Color 700	\$699.00
Color 710	799.00

COLOR 600

The Amdek Color 600 is a high resolution, RGB video input color monitor for use with a variety of personal computers. Its 13 black matrix picture tube provides excellent text and graphic resolution. The attractive cabinet makes the Color 60 aesthetically compatible with any personal computer.

FEATURES

- Quality 640 (horizontal) dots x 240 (vertical) lines resolution provides a vivid color display for use in graphics applications
- 13" black matrix (dark bulb) picture tube (CRT) provides for sharper contrast
- Built-in speaker and audio amplifier for those computers with RGB output that do not contain speakers, but do have sound capabilities
- Head phone jack to facilitate educational applications or private audio
- Switchable color matrix allows full 16 IBM (PC, XT, PC Junior or Apple) (II, IIc, IIe, III) colors
- A text switch changes text color from white to green for easier reading
- Easy access, front-mounted operator controls
- Capable of providing up to 80 columns x 25 lines of text display
- FCC and UL approved for use in the office or the home
- Optional tilt/swivel stand for more flexibility in viewing angles

Color 600	\$599.00
-----------------	----------

COLOR 500

COLOR 500

The Amdek Color 500 is a high quality, video monitor which is capable of supporting both RGB and composite (NTSC) video inputs. In addition, it also provides an auxiliary mode which enables the monitor to display inputs from a Video Cassette Recorder. This video input signal flexibility and other features make the Color 500 an ideal monitor for a variety of personal computers.

FEATURES

- Quality 560 (horizontal) dots x 240 (vertical) lines resolution in the RGB mode, and 320 (horizontal) dots x 240 (vertical) lines resolution in the composite (NTSC) provide a vivid color display for games and graphics
- 13" black matrix (dark bulb) picture tube (CRT) provides for sharper contrast
- Capable of providing up to 80 columns x 25 lines of text display in RGB mode; 64 columns x 25 lines in composite (NTSC) mode
- Comb filter feature provides improved text and graphics resolution in the composite (NTSC) video mode
- Built-in speaker and audio amplifier for those computers that do not contain speakers, but do have sound capabilities
- Head phone jack to facilitate educational applications or private audio
- Switchable color matrix in RGB mode allows full 16 IBM (PC, XT, PC Junior) or Apple (II, IIc, IIe, III) colors
- A text switch changes the text color from white to green for easier reading (RGB mode)
- Auxiliary mode allows the Color 500 to receive inputs from an alternate video source (e.g. VCR) and provide superior picture quality vs that offered by a television set
- Easy access, front-mounted operator controls
- FCC and UL approved for use in the office or in the home
- Optional tilt/swivel stand for more flexibility in viewing angles

6VM917

Professional 6-inch American-made monitor features a 600-line horizontal resolution, 100% solid-state circuitry; compact desktop, rack-mount or console mount design; easily replaced regulator and deflection transistors; readily accessible components; rigidly constructed frame with easy-to-remove chassis assembly. Intercompartment shielding prevents cross-talk; coaxial connectors mounted at 60-degree angle; front-mounted major controls and adjustments; and external sync provisions. Metal cabinet. 7" x 5-7/8" x 10-7/8", 8-3/4 lbs. **\$380.00**

6VM917T

Triple-six monitor. Three 6-inch monitors in a row with rack/desk top metal cabinet. 7" x 17-1/4" x 10-7/8", 28 lbs. **\$975.00**

9VM967

Low price, general purpose 9-inch monitor features 700 line horizontal resolution, convenient up-front operating controls, simplified service adjustments and time lapse VTR capability. Heavy duty single chassis construction. 8-3/4" x 8-3/4" x 10-1/4", 16 lbs. **\$195.00**

12VM968

Economy priced 12-inch monitor features 12MHz bandwidth, 800 line horizontal resolution, carrying handles. Rear panel controls allow in-field underscanning. Metal cabinet. 11-1/2" x 12-1/4" x 12-1/4", 21 lbs. **\$235.00**

12VM968-02

With green phosphor screen. **\$245.00**

12DM973-04

Low-profile,, low-priced monochrome monitor features 18MHz amplifier bandwidth, 800 line resolution and 80 characters by 25 lines display capability. Ideal for computer word processing use. Standard green phosphor screen. 11" x 14-3/4" x 12-1/4", 13-3/4 lbs. . **\$159.00**

12DM973-03

With amber phosphor screen. **\$169.00**

14VM971

Low profile 14-inch monitor features 12MHz bandwidth, 800 line horizontal resolution and carrying handles. Metal cabinet. 10-3/8" x 15-1/2" x 12-7/8", 29 lbs. **\$299.00**

14VM971-03

With green phosphor screen. **\$310.00**

14VM939

The 14-inch screen offers top picture quality, solid-state reliability and unitized construction at modest cost. Styling is attractive, with shadow blue finish and aluminum control panels. Key features are: 100% solid-state circuitry, except for CRT; 800-line (or better) resolution; front-panel operating controls; regulated power supply; VTR compatibility; plug-in module incorporation of major components; CRT bleeder discharge system, and switchable D.C. restoration. The unit complies with federal rules governing X-radiation. Metal cabinet. 10-1/2" x 15-5/8" x 12-7/8", 29 lbs. **\$570.00**

17VM922

The 17-inch model features silicon 100% solid-state circuitry (except CRT) for maximum performance stability, long life reliability and low power drain and heat; 800-line (or better) resolution, front-panel operating controls, regulated power supply to counteract power line fluctuations, and fast AFC action for optimum VTR operation. The model also includes bleeder discharge systems for CRT, and black porch clamp DC restoration. All major components incorporated in plug-in modules for ease of maintenance and minimum down time. Metal cabinet. 15-1/2" x 16-1/4" x 11-7/8", 33 lbs. **\$625.00**

MONOCHROME VIDEO MONITORS & ACCESSORIES

23VM952

The 23-inch CRT display monitor features front "slide out circuitry" for reduced down time and instant on-the-spot servicing and also permits in-the-wall installation in areas where rear access is impossible. Silicon 100% solid-state circuitry provides maximum performance and stability, long life reliability and low power drain and heat. All major controls are front mounted for easy access and operation. Power supply is regulated to prevent raster size or brightness deviation due to line voltage fluctuations. The monitor features a superior gray scale and VTR capability. 17-3/4" x 22-1/2" x 16-1/2", 60 lbs. **\$830.00**

VC-809

High quality CCTV camera features automatic light control of 50,000:1 for remarkable clarity and detail even in the lowest light levels. 4-1/2" x 2-3/4" x 9-5/8", 3-3/8 lbs. Lens not included **\$219.95**

SK-976

Video Security Kit contains VC-809 camera lens, 9VM967 monitor, bracket and cable. 26 lbs. **\$545.00**

PROJECTORS

BARCODATA III

High Resolution Video/Graphics Projector

The Barcodata III is designed for critical computer imaging/video applications where compatibility with high scan rate graphics systems is a requirement. The Barcodata III creates superb large screen imaging of computer generated 80 column text and graphics on any flat or curved screen. All Barcodata III projectors are equipped with flexible remote control facilities and feature dual switchable horizontal/vertical scan frequency presets with remote control tuning of second preset frequencies.

FEATURES

- High light output: 440 lumens • Resolution: 875 lines in RGB, 475 lines in Video • Optional 30MHz wideband RGB amplifier for up to 1250 lines resolution in RGB • Variable screen size: 5 to 10 ft. diagonal
- Optional lens set for up to 20 ft. diagonal • Switch selection of: ceiling/desk mounting, front/rear screen projection • Multistandard composite video loop-through inputs (NTSC 3.58/NTSC 4.43/PAL/SECAM) • RGBS analog/TTL inputs • IBM-PC compatible, supports 16 colors • Dual switchable horizontal/vertical scan frequency presets with remote tuning capability • Scan ranges: Horizontal 15-32kHz, Vertical 50-100Hz.

- 90-00050** BARCODATA III with Delta II-D f/1.0 flat field high resolution lenses Minimum screen size 4 x 3 ft. Maximum screen size 8 x 6 ft. **\$16,250.00**
- 90-00050C** BARCODATA III with Delta II DT-AC f/1.0 flat field high resolution large screen lenses. Minimum screen size 5 x 3-3/4 ft. Maximum screen size 16 x 12 ft. **17,000.00**
- 90-00060** BARCODATA III - RGB with Delta II-D f/1.0 flat field high resolution lenses equipped with wideband RGB amplifier - provides 1250 lines resolution with 30MHz bandwidth (-3dB)* Minimum screen size 4 x 3 ft. Maximum screen size 8 x 6 ft. **16,250.00**
- 90-00060C** BARCODATA III - RGB with Delta II DT-AC f/1.0 flat field high resolution large screen lenses - equipped with wideband RGB amplifier - provides 1250 lines resolution with 30MHz bandwidth (-3dB)* Minimum screen size 5 x 3-3/4 ft. Maximum screen size 16 x 12 ft. **17,000.00**

* Deletes composite video input capability — accepts RGB signals only. Requires a stand alone chroma decoder for composite video applications.

BARCOVISION II

High Resolution Video/Graphics Projector

The Barcovision II is designed to provide exceptionally high light output and truly outstanding picture definition on any flat or curved screen. All Barcovision II projectors are equipped with flexible remote control facilities and are designed to accommodate a wide range of composite video and RGB sources.

FEATURES

- High light output: 440 lumens • Resolution: 850 lines in RGB, 475 lines in Video • Variable screen size: 5 to 10 ft. diagonal • optional lens set for up to 25 ft. diagonal • Switch selection of: ceiling/desk mounting front/rear screen projection • Multistandard composite video loop-through inputs (NTSC 3.58/NTSC 4.43/PAL/SECAM) • RGBS analog/TTL inputs • IBM-PC compatible: supports 16 colors • Dual switchable horizontal/vertical scan frequency presets. • Scan ranges: Horizontal 15-17kHz, Vertical 50-100Hz.

- 90-00070** BARCOVISION II with Delta II-D f/1.0 flat field high resolution lenses Minimum screen size 4 x 3 ft. Maximum screen size 8 x 6 ft. **\$9775.00**
- 90-00080** BARCOVISION II with Delta II-M f/1.0 large screen lenses. Minimum screen size 4 x 3 ft. Maximum screen size 14 x 10-1/2 ft. **9775.00**

BARCODATA III

BARCOVISION II

RCVDS

Remote Controlled Video/Data Source Selector

The RCVDS is a modular RGB/composite video switching system which allows up to ten input signals to be interfaced to the Barcovision II or Barcodata III projectors. The system consists of a main frame unit supplied with a hand held wireless infrared remote control unit and user selected input modules, and is designed to accommodate a wide range of input signals with varying display parameters and scan frequencies.

The RCVDS allows remote control of: input switching, contrast, brightness, color intensity/tint, input dim mode, scan frequency mode and projector off, and may be controlled by either a wireless infrared signal or hardwired remote connection. An optional hardwired remote infrared receiver is available for applications where remote control unit and RCVDS main frame are located in different areas.

ADVERTISING MONITOR

PAD 2740

PAD 2740 AND PAD 2240 PUBLIC ADDRESS DISPLAY

The BARCO PAD's are stand alone public address displays providing colorful timed cycling of messages and graphics.

Features

- Clearly Readable up to a Distance of 16 feet
- Easy Editing through Optional Typewriter-styled Keyboard
- Programmable Display Sequencing for 32 to 64 Pages in Non Volatile Memory
- Fully Automatic Start of Message Cycling after Switching on the Power
- Modular Construction
- Manual/Remote Programming

Applications

As an information and advertising medium in: shops, supermarkets, department stores, mobile shops, banks, cinema's, airports, hotels, post-offices, fuel stations, railway and bus stations, hospitals, exhibitions, fairs, shows, traffic info centers, plant and office signalling, sales instructions, advertisement in cars, vans, etc.

Versions

This version offers storing for 32 message frames. Kit for extension of up to 64 message frames optional. The 32 page version also offers video facilities (automatic

choice of video when activated) and an RS 232 port for data dump and load.

Data line transmission possible.

Display

12 lines of 40 characters or semi-graphics with 7 foreground and 7 background colors.

MONITORS

CM 22, CM 33 HRC, CM 51 HRC PROFESSIONAL COLOR MONITORS

Barco CM Series color monitors fulfill a wide range of display applications where good picture quality and stability are essential requirements. High resolution dot mask in-line gun CRT's provide precise stable convergence, eliminating the need for readjustments. All models are available with NTSC (PAL or SECAM optional) composite video and RGBS loop-through inputs, and employ Barco's advanced modular design concept to facilitate ease of maintenance.

Features

- Dot mask in-line gun CRT's • H/V delay/pulse cross display • Blue gun only mode • Switchable underscan
- Front panel cut-off/gain adjustments • Front panel preset • RGB/video fast insertion • Internal loudspeaker

Special Features of the CM 22:

- AKB auto color temperature stabilization • Switchable comb filter • AC/DC power operation

Common Specifications

Electronic Gun System:

High Focus Voltage Bipotential, In-Line Electronic Gun.

Scanning format:

Factory adjusted 4 to 3 aspect ratio underscan.
Normal scan switchable.

RGB Amplifier Performance:

15kHz to 7MHz + 1dB - 3dB
Gradual roll-off.

Power requirements:

120 V AC - 15% + 12%
45Hz to 65Hz.

Power consumption:

14" and 20":

With white field and beam current limiter working 135W.
With standard test pattern and controls to average position 95W.

Max. power consumption 135W.

9":

Max. 70W on 120V

Max. 77W on 14V

Average 60W

CM-22 Dimensions:

8.62H x 8.58W x 18.66D inch

Weight net: 22 lbs. (10kg)

CM 33 HRC Dimensions:

10.47H x 15.94W x 15.20D inch

Weight net: 37 lbs. (17kg)

CM 51 HRC Dimensions:

17.72H x 18.31W x 21.85D inch

Weight net 77 lbs. (35kg)

MONOCHROME MONITORS

TVM 3 SERIES MONOCHROME MONITORS

The B.V.C. professional monochrome monitors are measurement instruments for use in broadcasting, industrial and educational applications where quality and reliability are most required.

Developed from the reliable CTVM series, these monitors have been designed to produce a sharp clear picture, free from distortion.

Two screen sizes are available: a 37 cm (14 inch) and a 51 cm (20 inch) monitor.

Facilities considered to be essential including colour subcarrier filter, pulse cross, size switch, remote control, internal/external sync offer broadcast-oriented operating features and controls.

The monitors are available as a table top unit or as a rack mountable unit for use in OB vans and in VTR monitor bridges.

FEATURES

Reliability:

High reliability has been designed into the B.V.C. TVM 3.

Modular construction:

All parts mounted on interchangeable plug-in boards.

Rugged construction:

All-metal case.

All solid state:

Fully transistorized circuitry.

Multiple inputs:

Provision for 2 composite inputs and external sync input.

Controls:

All primary controls are available on the front panel.

Remote control:

Remote input selection.

Maintenance:

Use of all plug-in modular construction allows for high speed on-location parts replacement.

9060

9100

MODELS 9100/9060 Professional Series Oscilloscopes

Models 9100 and 9060 Oscilloscopes offer many similar features. Both include three channel vertical inputs; two with 5mV/Div. maximum sensitivity and the third with selectable 500 mV/Div. or 100mV/Div. sensitivity. There is a rear panel output for channel 1. This permits the user to conveniently monitor channel 1 with a counter or other device, eliminating the need to connect another test probe to the circuit. The horizontal section features dual timebases and a delayed sweep function. The trigger section includes a TV sync separator for improved triggering on complex video waveforms, plus a trigger view (CH 3) switch for looking at the trigger signal without changing probes or cables.

Several new innovations for these oscilloscopes include a Linear Focus control, Trigger Level Lock control and Dynamic Bias Circuitry. The Linear Focus control focuses the trace regardless of intensity. The Trigger Level Lock control makes trigger level adjustment automatic over a wide range of signals. Dynamic Bias Circuitry reduces power consumption by minimizing the power requirements during idle periods or for displaying low frequency signals. When high frequency signals are displayed, power consumption automatically switches to maximum.

Special features unique to the Model 9100 Oscilloscope include: Three DC to 100MHz vertical amplifiers. Up to 1mV/Div. sensitivity may be obtained at 20MHz bandwidth with the X5 Magnifier switch on. The horizontal time bases range from 0.5 Sec./Div. to 20nS/Div., and there is a X10 Magnifier switch to extend the range to 2nS/Div. Other features include a 6 inch (152mm) rectangular CRT with 18KV acceleration potential for brighter traces, plus an internal illuminated graticule.
..... \$1,595.00

Special features unique to the Model 9060 Oscilloscope include: Three DC to 60MHz vertical amplifiers. Up to 1mV/Div. sensitivity may be obtained at 20MHz bandwidth with the X5 Magnifier switch on. The horizontal time bases range from 0.5 Sec./Div. to 50nS/Div., and there is a X10 Magnifier switch to extend the range to 5nS/Div. Other features include a 6 inch (152mm) rectangular CRT for brighter traces, plus an internal illuminated graticule. Both oscilloscopes feature plug-in module construction for easier maintenance.

COLOR MONITORS

MC 22 BA

Color Precision Monitor 9" High Resolution

FEATURES

- High resolution in-line-gun color picture tube
- Black matrix
- EBU or U.S. phosphors
- Color temperature 6500K, convertible to 3200K
- Beam current feedback
- Inputs: CCVS + RGB signals
- R, G, B, can be individually selected
- Remote control
- Portable, robust design
- Suitable for single or double installation in 19" racks or DIN cabinets (interchangeable with M 24 BA/BB)
- Mains or battery operation

The MC 22 BA monitor has been developed for assessing the quality of television pictures and can be used for all color standards by fitting appropriate PCBs. This new, portable, lightweight monitor can be powered directly from the mains or, optionally, from batteries. In the case of mains failure, the monitor switches automatically to battery operation (option). Thanks to its low weight and small size, the MC 22 BA is ideal for ENG/EPF work. For installation, i.e., in OB vehicles, two MC 22 BA monitors can be fitted directly side by side. The EBU phosphor coordinates of the MC 22 BA-A1 and the U.S. phosphor coordinates of the MC 22 BA-A2 correspond with the standards for professional color control. **POR**

MC 22 BA

MC 37 BA-B2

Color Monitor 15" High Resolution

FEATURES

- High resolution delta gun color picture tube
- U.S. phosphor
- Black matrix
- Three CCVS input + RGB input
- NTSC comb filter
- Blue only display as black/white pictures
- Monochrome display
- Automatic and manual degaussing
- Active convergence switching with separate corner correction
- Color temperature switchable 6500K/3200K
- Pulse cross
- (R-Y) (B-Y) output for vector display

This monitor has been developed especially for precise measurement and viewing of television pictures. This monitor uses high resolution delta gun, black matrix, U.S. phosphor picture tube. The monitor is equipped with a comb filter decoder. Dual standard is available as an option. **\$5,770.00**

MC 37 BA-B2

MC 51 BA-B2

Color Monitor 20" High Resolution

FEATURES

- High resolution delta gun picture tube
- U.S. phosphor
- Black matrix
- Color temp switchable 6500K/3200K
- Active convergence switching with separate corner correction
- Automatic and manual degaussing
- Blue only display as black/white picture
- Monochrome display
- Pulse cross
- (R-Y) (B-Y) output for vector display

This monitor is equipped with a high resolution delta gun color picture tube with U.S. phosphors and meets or exceeds standards set for professional broadcast color monitoring. It has three CCVS inputs and an RGB input which can be selected in the control panel. All the adjustment controls are easily accessible in a sliding tray which can be pulled out when necessary. It has a comb filter decoder and can be fitted with another set of decoders for dual standard operation. **\$5,398.00**

IRT COLOR MONITOR COMPARATOR

D6500°K MODEL MK II IRT COLOR MONITOR COMPARATOR

A Battery-Powered Visual Comparator for Quick and Precise Color Temperature Adjustment and Gray-Scale Balance of Color Monitors to the Recommended World Standard of D6500°K.

Features

- Matching accuracy uninhibited by average ambient light, distracting colors, or other monitors
- Optical illusion that kine face and comparator are on the same plane
- Reference surface texture appears similar to kine face texture
- Device independent of phosphor variations
- Lever adjustment to change reference from high-light to low-light brightness
- Light weight, small size and tripod mount for convenience
- Long bulb life—built-in meter and potentiometer to adjust lamp current
- Endorsed by major Color Monitor Manufacturers

The IRT comparator is a simple auxiliary device which permits quick and accurate adjustments by direct color comparison of the TV kine. The comparator (which may be hand-held or tripod mounted) is presented to the face of the kine, displaying either a gray-scale or window signal. The operator, looking through the device's ocular, will observe a circular field where half of the area is a direct view of the kine face and the other half is the illuminant-D reference. This reference is produced by the reflected light emitted from a specially selected bulb and is filtered through conversion filters and stabilized by a control to a constant current. A neutral wedge filter is positioned in front of the reference area to change brightness in the comparator from peak white at 19 Ft. Lamberts to low-light brightness at 0.95 Ft. Lamberts. The operator adjusts the monitor's screen and gain controls so that the kine white balance will match with the comparator in both high-lights and low-lights.

Specifications

- Color Temperature: D6500°K + /-200°K
- Battery-Powered by: 5 C-Cells
- Battery Life Expectancy: 15 hours
- Bulb Current Consumption: 90 %
- Tripod Mount: 3/8"-16"

MK II \$1500.00

9-INCH CABINET MODEL

14-INCH CABINET MODEL

17-INCH CABINET MODEL

9-INCH DUAL RACK MODEL

17-INCH RACK MODEL

9600 SERIES MONOCHROME MONITORS

- Automatic Video Level
- 800-Line Center Resolution
- Back Porch Gated DC Restoration
- Interchangeable Solid-State Plug-in Modules
- Continuous-Duty Operation
- Loop-Through Input
- Regulated Power Supplies
- Differential Input Available by Jumper Selection
- 525/60 U.S. and 625/50 CCIR Scan Rates

The 9600 Series professional quality monochrome television monitors feature Cohu's exclusive Automatic Video Level Control. This feature makes it possible to maintain a set contrast level independent of signal strength. For example, in a CCTV system having multiple camera inputs, the monitor display will maintain the contrast level as set within monitor input requirement limits, regardless of which camera output is displayed.

All monitors have three modes of operation, automatic video level control with dc restoration, dc restoration only, and manual operation only. The operational mode is selected by a three position switch. In the automatic video level control mode, the blanking level and the contrast level are held constant. The dc restoration mode maintains a constant blanking level, however, the contrast level can vary as a function of input signal. The manual operation mode (OFF position) allows viewing of changes in both the blanking level and the contrast level as a function of input signal variation.

The monitors feature high quality cathode-ray tubes with excellent geometry, a P4 phosphor (9300K) with a gray filter glass, and 800-line center resolution. The monitors also incorporate differential video inputs in which long line/interference pickup on the cable shield is reduced by 25 dB with up to 4V p-p maximum hum component. They accept composite or noncomposite video inputs and external sync, when required, with all inputs having loop-through capability. They

operate at scan rates of 525 lines/frame (60 Hz/sec) and 625 lines/frame (50 Hz/sec) with input signals that meet EIA RS-170 specifications and CCIR specifications, respectively.

9600 Series TV monitors are of solid-state, modular construction with interchangeable plug-in circuit boards. The reliable, continuous-duty operation of the monitors makes them well suited for a wide variety of surveillance, industrial, computer, educational and broadcast applications. The series includes three picture tube sizes: 9-inch (22.86 cm), 14-inch (35.56cm) and 17-inch (43.18cm) which are available in both cabinet and rack models (the 9-inch is also available in a dual rack configuration). Available options include: (1) CRT Phosphors P31, P39 and P42; (2) left, right, and dual mounts for the 9-inch rack model; (3) rack slides for the 14- and 17-inch models; (4) a yoke mount for the 17-inch model; (5) remote contrast and brightness control; (6) external drive capability; (7) a tally light, and (8) an underscan switch.

The 9600 Series monitors are designed for long-term, stable operation with minimum downtime. Ease of maintenance is simplified by the plug-in modular construction.

COLOR MONITORS

6200 SERIES: 19 and 13-Inch Color

Class 1 master studio monitor incorporates fixed convergence precision in-line CRT, RGB and NTSC switchable inputs, optional comb filter and Conrac Colormatch™ phosphors. Other desirable professional features includes superb white field and brightness uniformities and pulse cross display. 19 and 13 inch models are available in cabinet, rack-slide or chassis-only configurations.

ENA SERIES:

9 and 12-Inch Monochrome

A cost effective, 650-line resolution monochrome display for industrial, data processing, and educational installations. Meets all EIA RS-170 specifications. Horizontal AFC is optimized to meet the requirements of industrial tape recorders. Chassis, rack or cabinet models available. A dual 9-inch model will fit in a 19-inch rack and requires only 8-3/4-inch of vertical rack space.

ENA Series Monochrome	Price	Options	Model ENA	Price

MODEL 7211

Model 7211 High-Resolution Color CRT Display

Conrac's finest color display offers our proprietary high-resolution circuitry, shadow mask CRT design, 0.31mm dot pitch, and 1080 horizontal pixels (at 1225-line scan), and accepts RGB composite video inputs in both EIA RS170 and EIA RS343 formats. 13" and 19" CRT models are available.

Here is why the 7211 keeps you in the forefront of technology...PIL technology. Conrac's Precision In-Line Gun provides easy setup and minimal maintenance. The gun design in the 7211 eliminates time-consuming reconvergence adjustments by a combination of very close gun manufacturing tolerances and corrections built into the tubes's yoke. As a result, when compared to a delta-gun design, the 7211 has fewer parts and needs less service.

Adaptive packaging...The 7211 size and compact shape are designed for greatest integrating flexibility. Our 19" display comes in two front panel heights—17.5" or 15.75"—and fits into the same space as our high-resolution monochromatic CRT display. For still greater flexibility, you can order the 7211 with no front panel and relocated controls, giving a 14-inch front height. Other configurations include rack-slide or cabinet options.

- 40 MHz video bandwidth
- Dynamic focus
- Designed to minimize service downtime
- Selectable scan frequencies
- Weight-saving aluminum frame improves heat dissipation
- Preset calibration controls
- High-density shadow mask CRT
- Worldwide power adaptability

MODEL 2400

Model 2400 High-Resolution Monochrome CRT Display

With features that represent the current state of technology, Conrac's best monochrome monitor meets the needs of many diverse applications for a high-resolution display. These include computer graphics and alphanumeric for CAD/CAM, process control, and similar systems. When equipped with its inverted video option, the 2400 is extremely well suited for medical imaging systems. Color-quality glass...A particularly impressive attribute of the 2400 is its combination of brightness with nearly perfect corner-focus characteristics. The reason is Conrac's use of color-quality glass, which permits higher voltages to enhance both focusing and brightness.

- Dynamic focus
- Selectable scan frequencies
- Application versatility
- Wide video amplifier bandwidth
- Preset calibration controls
- Electronic raster centering
- Differential video input
- Modular electronics packages
- Choice of cabinet, rack-slide, or chassis-only configurations

65 kHz Raster Scan Color Graphic Display Monitor

FEATURES

- 65 kHz horizontal scan rate
- 60 Hz vertical refresh rate
- 1083 non-interlaced lines per frame
- Self-diagnostic status indicators
- 110 MHz wideband video amplifier

APPLICATIONS

19-inch display for finely detailed, non-interlaced images generated for computer-aided design (CAD), computer-aided engineering (CAE), architecture, engineering and construction (AEC), computer-aided design and drafting (CAD/D) and other applications demanding highest resolution in full color.

Model 7351 can be supplied in full cabinet, rack-slide or chassis-only configurations, and can be custom-configured to meet specific OEM requirements.

7351

SPECIFICATIONS

Visual Performance

Resolution	1280H x 1024V format (non-interlaced)
CRT Pitch	0.31 mm.
Linearity and Geometry	Within a centrally located 10.5" (267 mm) circle, no point deviates by more than 2% from its proper position (Ball Chart Method).
Raster Size Regulation	Less than 1% change from zero to 100% APL at 20 fL.
Brightness	20 fL nominal - 45 fL maximum.

CONVERGENCE

Maximum Error by Zones:

Maximum Convergence Error:

	Center	Zone A	Zone B
	0.15 mm (0.006 in.)	0.4 mm (0.016 in.)	0.6 mm (0.023 in.)

Max CRT Display Area	Height 297 mm (11.6 inches) Width 396 mm (15.5 inches) Area 11598 mm ² (180 inches ²)
Aspect Ratio	4 to 3 standard. 11, 5:4 available within 350 mm x 267 mm rectangle.

Circuit Performance

Pulse Performance	Rise time = 3 nsec Fall time = 3-1/2 nsec
Black Level	Black level shift less than 1% change of peak

Stability	luminance from 10% to 90% APL
Interlace Performance	Better than 90%
Scan Rates	Horizontal — 65 kHz ± 2.5 kHz Vertical — 47 Hz - 63 Hz
Horizontal Retrace Time	3.0 μsec maximum
Vertical Retrace Time	600 μsec maximum
SYNC SELECTION	
Sync Selection	Jumper plug on video processor board permits selection of either internal or external sync.
Internal	Composite horizontal and vertical sync combined on green video channel.
External	BNC connector for external composite horizontal and vertical sync.
Input Connections	Three separate BNC connectors for RGB inputs, each parallel-wired with a second BNC connector for loop-through operation, and switch-selectable impedance matching — high Z or 75 ohms.
External Sync	Single BNC connector for external sync input with parallel-wired second BNC connector for loop-through operation. Switch-selectable impedance matching — high Z or 75 ohms.

INPUT SIGNAL CHARACTERISTICS

Composite RGB Video	1 V p-p nominal. 1 V ± 6 db acceptable. Sync negative.
Non-composite RGB Video	7 V p-p nominal. 7 V ± 6 db acceptable. Black negative.
External Sync	4 V p-p nominal. 1.0 V to 8 V p-p acceptable Negative going pulses.

CONTROLS

Operator Controls	Power, Degauss, Brightness.
Maintenance and set-up controls	Located on PCB's.

General

OPERATING ENVIRONMENT

Temperature	32°F (0°C) to 122°F (50°C).
Humidity	10% to 90% relative non-condensing.
Altitude	Up to 10,000 Ft (3,000 meters).

POWER REQUIREMENTS

Voltage	90-132 VAC/180-265 VAC selectable.
Frequency	50-60 Hz ± 10%
Power Consumption	200 watts maximum @ 117 VAC

WEIGHT

Cabinet	68.00 lb. (30.91 kg).
Rack Mtg.	59.00 lb. no slides (26.82 kg) 66.00 lb. with slides (30.00 kg).
Chassis only	56.00 lb. (25.45 kg).

OPTIONS

- Naked, Cabinet or Rack Slide version.
- Anti-glare screen/contrast filters available.
- External horizontal and vertical drive 1-8 V negative.
- Digital Degaussing, On-Off & Brightness, remote or on chassis.
- Hard Copy output.
- External anti-glare filters: Polaroid, Sunflex, OCLI, Homolite.
- Direct etch CRT.

SUPER WONDER-LITE® VIDEO SCREENS

Da-Lite makes choosing the right projection screen easy with a video line designed in appropriate video formats and projection surfaces that reflect the projected image at its best and brightest.

Super Wonder-Lite is Da-Lite's exclusive new silver lenticular screen surface created for Video Data Projection. It's available in popular sizes

on tripod, wall/ceiling and Fast-Fold® portable models.

Da-Lite's matchless variety of models in correct formats and picture surfaces meet the many varied requirements of video projection. Choose from wall and ceiling models, electric screens, Da-Lite Polacoat® in-wall rear projection, heavy-duty tripod and portable Fast-Fold.

PICTURE KING

Model: Picture King

Type: Extra heavy duty tripod

Construction: Spring roller in embossed metal case; Camlok Metal Roller System; Automatic fabric lock, automatic leg lock, extra heavy extruded gable type constructed aluminum legs, full range height adjustment, plunger locks for positive stops, built-in keystone eliminator.

Picture Surface: Super Wonder-Lite silver lenticular for Video projection. Video format. Black masking borders on all four sides.

Nominal Diagonal Size	Over-All Screen Size	Approx. Shipping Wt.	Price
60"	37" x 50"	23 lbs.	\$258.00

Model: Deluxe Model B

Type: Wall or Ceiling Model

Construction: Embossed metal case; Camlok Metal Roller System; spring roller with embossed metal case, automatic fabric tensionizer holds screen in open position.

Picture Surface: Super Wonder-Lite silver lenticular fabric for Video projection. Video format. Black masking borders on all four sides.

Nominal Diagonal Size	Over-All Screen Size	Approx. Shipping Wt.	Price
60"	37" x 50"	15 lbs.	\$180.00
6'	45" x 60"	17 lbs.	210.00

Accessories: Extension wall mounting brackets
 No. 23 adjustable\$20.00
 No. 11 non-adjustable 14.50
 No. 6 non-adjustable 7.50
 T-Bar Scissor Clip for dropped ceilings: \$6.50 per pair.

Model: Fast-Fold

Type: Free Standing Portable Frame

Mounting: Screen is grommeted and suspended in frame on springs.

Construction: Frame and legs 1" square hard alloy structural aluminum tubing etched and anodized; frame height adjustable on legs in 6" increments. Folding frame can be tilted for keystone elimination.

Picture Surface: Super Wonder-Lite silver lenticular with 8" black masking borders on all four sides for Video projection. Video format.

Nominal Diagonal Size	Over-All Screen Size	Approx. Shipping Wt.	Price
100"	63" x 84"	54 lbs.	\$945.00
10'	72" x 96"	55 lbs.	1045.00

Accessories: Presentation accessories of skirt and wings in velour draperies.

Note: Prices include frame, legs, Super Wonder-Lite picture surface and carrying case.

Cut-to-Size
 36 Square Feet Minimum Per Sq. Ft. \$5.00

FLAT SCREENS FOR VIDEO

FLAT SCREENS FOR VIDEO

Draper proudly presents the first comprehensive line of flat screens especially designed for video projection. A complete range of sizes are available for front or rear projection, portable or permanent mounting and manual or electrical operation. All are in 3:4 video format, with special video masking.

VIEWING SURFACES

Roller Operated Screens

- **Fiberglass Matt White.** Our most popular viewing surface. Offers a broad viewing angle, uniform light distribution, and excellent resolution. Gain 1.0. Easy to clean. Recommended for use with ceiling mounted projectors.
- **Fiberglass Glass Beaded.** Narrower viewing angle, some loss of resolution. Gain 1.5. Cannot be cleaned - not recommended for areas where cigarette smoke accumulates.

Cinefold and Cineperm

- **Flexible Matt White.** Vinyl with a delicate emboss for uniform brightness. Excellent resolution. Easy to clean.
- **Cineflex Rear Vision.** Vinyl film impregnated with miniscule optical lenses. Excellent resolution. Gain 2.5. Medium viewing angle.

Cinescreen Rigid Rear Screens

Available in glass or acrylic substrate. Optical coatings for every application.

HOW TO ORDER VIDEO SCREENS

Specify:

- 1 — Model name and viewing surface
- 2 — Diagonal measurement
- 3 — Request "Video Masking"

The overall and viewing area dimensions shown here are for your information. We do not need them to fill your order.

Our Most Popular Models and Sizes are included in this price list.

We can manufacture all of our screen models in 3:4 formats with video masking. We will be pleased to quote on your special requirements.

Special sizes are our specialty — No requirements too large or too small.

This information is based on manufacturers published literature. Inclusion in this chart does not constitute an endorsement. Draper welcomes literature and information on any products which may have been omitted.

SELF-CONTAINED VHS VIDEO SYSTEM

EIKIVISION 1/2" VHS

Features:

- Big 9" Color Monitor
- Standard 1/2" VHS. The world's most popular video format with up to 8 hours of continuous play with T-160 tape (6 hours with T-120 tape).
- 7-Day Touch-Button Programming
- Rugged Tape Handling Mechanism. With industrial quality direct drive motors and a minimum of belts to wear out.
- Pause control for discussion and review
- Video search to locate important program sections, at five times normal tape speed, forward or reverse
- Convenient Optional Remote Control
- Headphone jack for private listening
- Front-Load convenience. Inserts and ejects tapes quickly and easily.

TAPE SPEED	PLAY/RECORD TIME	
	T120	T-160
SP 33.35 mm/sec.	2 hours	2 hours 40 minutes
EP 11.12 mm/sec.	6 hours	8 hours

OPTIONAL ACCESSORIES:

REMOTE CONTROL:	PLAY, STOP, FORWARD AND REVERSE SEARCH, PAUSE. 16' (5 METER) CABLE
CARRYING CASES:	A). LIGHTWEIGHT KORDURA FABRIC CARRYING CASE WITH SHOULDER STRAP. B). REUSABLE, HEAVY DUTY SHIPPING CASE WITH OR WITHOUT REMOVABLE CASTERS

Specifications:

POWER REQUIREMENTS:	120 VOLTS 60 HZ, 70 WATTS
TELEVISION SYSTEM:	EIA STANDARD 525 LINES 60 FIELDS N.T.S.C. COLOR SIGNAL
PLAYBACK/RECORD SYSTEM:	V.H.S. (1/2" CASSETTE FORMAT) LUMINANCE: FM AZIMUTH RECORDING CHROMINANCE: CONVERTED SUBCARRIER, DIRECT RECORDING
VIDEO SEARCH:	5 X EP-11.12mm/sec
TAPE COUNTER:	MECHANICAL 4 DIGITS
VIDEO INPUT:	.5 to 2.0 V-P-P, 75 OHMS, RCA type jack
VIDEO OUTPUT #1	1.0 V-P-P, 75 OHMS, RCA type jack
VIDEO OUTPUT #2:	1.0 V-P-P, 1.0 K OHMS, RCA type jack
CRT DISPLAY:	9" COLOR MONITOR (diagonal measure)
AUDIO AMPLIFIER:	1.0 WATT
SPEAKER:	8 CM
AUDIO INPUT:	.078 V RMS, 50 K OHMS, RCA type jack
AUDIO OUTPUT:	.38 V RMS, 1 K OHMS, RCA type jack
OPERATING TEMPERATURE:	41° f to 104° f (+5° c to +40° c)
OPERATING HUMIDITY:	35% to 80%
STORAGE TEMPERATURE:	4° f to 140° f (-20° c to +60° c)
SIZE:	13 1/2" H x 17 3/4" W x 15 1/2" D
WEIGHT:	37 LBS. (17KG)

EV-10	Eikivision Video Display System	\$1395.00

ECM 1301

ECM 1301 HIGH RESOLUTION COLOR VIDEO MONITOR

Designed with the discriminating user in mind, ECM 1301 provides high performance with an extra degree of flexibility. At the leading edge of monitor technology, this quality display readily moves from one applications segment to another as a result of inherent design features and selective interface modules. Now there is a monitor to meet the following array of video display requirements:

- Business productivity microcomputers
- Scientific desk top computers
- End user/O.E.M. CAD/CAM Graphics systems

FEATURES

- 13" RGB display
- Self-converging, in-line 90° CRT
- .31mm pitch
- 720 x 512 pixels
- 25MHz bandwidth
- 14.5 to 25KHz horizontal scan
- Horizontal phase CTL
- Long persistence phosphor
- 80 character resolution
- 8 user controls
- Flexibility through custom interfaces
- Attractive styling
- All metal enclosure
- 13"H x 17.5"W x 17.2"D (33 x 44.5 x 43.7cm)
- Weight: 52 lbs. (23.6Kg)

RGB/RS170

INTERFACE MODULES RGB/RS170

INPUTS

- RGB with separate or combined horizontal/vertical sync
- RGB with sync on green
- 75 ohm termination — switchable
- Video loophthrough
- Inputs adjustable to 5 volts peak to peak video
- Power supply — 12 volts
- Automatic Sync selection
- Connects to ECM-1301 via 8 Pin Molex connector

Additional Modules

1. IBM PC
2. APPLE III

IBM is a registered trademark of International Business Machines Corporation. In Canada, IBM is a registered user.

Apple III is a registered trademark of Apple Computer Inc.

SM-36

SM-36 MODULATOR

The new Electrohome Model SM-36 is today's answer to Modulator design. Its full output +56 to 62dBmV in any desired channel from 54-300MHz makes stocking installing and backup 36 times easier. It uses synthesis for stability and total agility in your cable system.

FEATURES

- Total agility means that only one unit has to be stocked that will cover all channels in the low, mid, high and super bands.
- SAW filtered for adjacent channel operation.
- Front panel metering of output channel, audio deviation and video modulation.
- R.F. mute on channel change.
- Only 1.75" high in standard E.1.A 19" rack — 13" deep.
- Simple "on the job" setup.
- Canadian Standards Association (C.S.A.) certified.

SR-24

SR-24 SATELLITE RECEIVER

The Electrohome model SR-24 is the ultimate in satellite receivers designed exclusively for the cable systems market.

FEATURES

- Microprocessor control for ease of operation and optimum performance.
- Frequency synthesis for both video and audio eliminates frequency drifting, while continuous tuning ensures the ultimate in noise-free reception.
- Interference problems are under total control with this receiver. Individual channel fine tuning, synthesized oscillators and IF loop, combine with the SAW filter to minimize your terrestrial problems.
- A full 30MHz SAW filtered IF bandwidth for state-of-the-art performance — compatible with today's and tomorrow's scrambling systems.
- Continuously variable audio synthesized from 5.0-8.0MHz.
- If that were not enough, consider these extras:
 - RF loophthrough to simplify multiple receiver installations.
 - Redundant LNB powering for increased reliability.
 - Level meter — Analog and Digital for maintenance and ease of installation.
 - Keyboard lock to prevent unauthorized tampering.
 - Non-volatile memory to protect against power failures.
- Canadian Standards Association (C.S.A.) certified.

MONOCHROME VIDEO MONITORS

Electrohome's full range of monochrome video monitors is designed to international performance standards. Cabinets are constructed of a new Steltex textured steel for added durability. Attractive beige and earth brown tones have been utilized to further enhance the styling of each monitor design.

FEATURES

- Front operated A—B switching
- 18 MHz bandwidth
- Scanguard* circuit for size stability
- Primary and major secondary controls front accessible
- Internal/External sync capability
- Excellent black level stability
- Common mode rejection
- AC cord winder (9", 12", 15", 17")
- Switchable power supply for 110/220/240 volt operation
- Universal AC interlock
- Long life LED pilot light
- Wide variety of options

*Scanguard is a special Electrohome development for EVM 19/20 models to keep picture sizes constant over a wide range of brightness changes.

Operating and Service

Front Controls and Features:

On-off Switch
LED Pilot Light
Reduced Scan Switch
VTR Switch
Horizontal Hold
Focus (screw driver adjust)
Vertical Hold
Height (screw driver adjust)
Brightness
Contrast
A-B Switch
Volume Control (only with optional audio module)

Rear Panel:

Input "A"-2 BNC Connectors.
loop-through
Input "B" or Ext Sync
2 BNC connectors, loop-through
2 Termination Switches
Ext -Int Sync Switch
AC Connector
Fuse Holder
Width Control

Internal Controls:

Preset Contrast
Preset Brightness
Black Level Control
Vertical Linearity
Horizontal Frequency centering Control
Horizontal Phase (video centering)
AC-DC Coupling Link (Factory set to DC position)
Voltage Regulator Control
Size Regulation Control
Reduced Scan Width Coil

Video Circuits

Input Circuits:

Input via BNC connectors with isolated signal ground
Termination: $75\Omega \pm 5\%$
Return Loss: $\geq 26\text{db}$
Common Mode Rejection better than 40db up to 6Vp-p

Video Amplifier:

Input Signal 0.5-2Vp-p sync negative
Gain: 35db
Bandwidth: 9" & 12" CRT: 100Hz-18MHz $\pm 3\text{db}$ at 30Vp-p at CRT cathode.

15" CRT: 100Hz-18MHz $\pm 3\text{db}$ at 30V p-p
17" CRT: 100Hz-18MHz $\pm 3\text{db}$ at 35V p-p
23" CRT: 100Hz-18MHz $\pm 3\text{db}$ at 30V p-p

Deflection Circuits

Vertical Deflection:

Adjustable from 130% to 65% of scan
Adjustment by size switching circuits and height control
Vertical Rate: Adjustable from 40Hz to 65Hz by vertical Hold control
Vertical Retrace: 650 μsec

Horizontal Deflection:

Adjustable from 115% to 80% of scan
Adjustment by size switching circuits and width controls
Horizontal scan rates:
Standard 15.75 KHz to 18KHz
Option 18 KHz to 22.5 KHz
Horizontal Retrace 7.5 μsec

Deflection Angles:

9" & 12" CRT's 90°
15" & 23" CRT's 110°
17" CRT 114°
NOTE: For operation of the monitors at horizontal scan rates other than standard TV rates consult the Service Manual.

Display

Display:

All monitors have 4:3 aspect ratio
Front switchable from 105% to approx 85% of full picture size
Vertical linearity: $\pm 2\%$ of picture height
Horizontal linearity: $\pm 2\%$ of picture height

Geometry:

$\pm 2\%$ by EIA Ball chart.
Interlace: 45/55 non tunable
Picture Size Stability: $\pm 2\%$ change from 0 to 30ft/l
peak brightness at 90% APL
Resolution: (Polished face plate and P4 phosphor)
15", 17" and 23" CRT's: 1000 TV

lines centre, 800TV lines corners at 30 ft/l (300 lux)
Standard 9" CRT's 750 TV lines centre 600 TV lines corners at 30 ft/l (300 lux).
Standard 12" and Optional 9" CRT's. 800 TV lines centre, 650 TV lines corners at 30ft/l (300 lux)

Power Supply

High Voltage:

9" & 12" CRT's 12KV at 0 μa
15" CRT's 17.5KV at 0 μa
17" CRT's 18KV at 0 μa
23" CRT's 19.5KV at 0 μa

Input Power:

9" & 12 CRT's 120V (220-240V), 50/60Hz 45 Watts
15", 17" & 23" CRT's 120V (220/240V) 50/60Hz 60 Watts

Asynchronous Operation:

All V19 and V20 monitors are designed for asynchronous operation e.g. there is no discernible movement of the display if the vertical and power line frequency differ

Environment

Maximum Operating Range:

0° C to +50° C
Humidity: 90% non-condensing
Altitude: to 10,000 feet (3040 meters)

Storage:

-40°C to +65°C

Electrohome's policy is to meet or exceed safety standards and regulations of: CSA, HWC, FCC, DHHS, UL
Television standards: EIA, CCIR.

All performance specifications apply for line variations from 100 to 132V (200-260V)
Due to constant research and product improvement, specifications are subject to change without notice

VIDEO PROJECTION SYSTEMS

Model EDP-58 Large Screen Monochrome Projection Monitor

The Electrohome EDP-58 monochrome projection monitor is specifically designed for large screen, high resolution video displays of alphanumeric and graphic information from computer generated signals. It is uniquely designed to synchronize with almost all CRT-type computer terminals available today.*

Extremely compact, the high brightness monochrome projector permits large group viewing in normal office lighting environments. Crisp, big picture impact replaces the need for several conventional sized monitors.

The EDP-58 is ideal for demonstrations of new computer hardware and software developments. Classroom teaching of computer programming is made easy. It is equally dramatic for customer or trade show presentations.

Lightweight, it can be moved from room to room. A precision f/1.0 lens is user focusable for 4 ft. to 10 ft. (1.2m to 3m) diagonal screens. The EDP-58 also features a scan reverse switch for rear screen projection.

This modular, solid state unit is versatile, rugged and reliable, matching today's fast moving information needs. Set-up and operating ease, even by non-technical personnel, is inherent in the design of the EDP-58. It eliminates audience fragmentation and permits each viewer to enjoy maximum impact from data/graphics presentations.

The versatile, solid state EDP-58 projection monitor is a compact, 24.75" x 14" x 8" (69cm x 36cm x 21cm) and weighs only 45 lbs. (20.4kg). Designed for ceiling, pedestal or desk stand mounting, the unit offers tremendous flexibility for display presentations.

Stylish, the case and trim are made of textured steel and molded plastics. There is a rear carrying handle. A front trim protects the precision lens.

Precision optics and high speed electronics provide up to 1300 line resolution capability for sharp data/graphics display, exceeding 80 characters/line.

Easy to use operator controls are on the rear panel; service controls are accessible through the control panel. Also featured is video loop thru, keystone adjustment and D.C. restoration.

Data approved P53 green phosphor is standard. Optional phosphors available to match terminal manufacturer standards.

The versatile EDP-58 may be used on many different screen materials and sizes, including flat and rear projection screens. Electrohome offers an accessory 6 ft., (1.8m) high gain, curved screen for viewing in higher ambient light areas. Rugged and durable, it features a washable reflecting surface. The screen has adjustable wall mounting hardware. Accessory legs are available for freestanding display applications.

Electronic circuitry in the EDP-58 data/graphics projection monitor permits interfacing with almost all CRT computer terminals on the market today. The unit employs stabilized power supplies and picture-size circuitry that allows operation over a wide range of scanning frequencies without internal modifications.

For some terminals not supplying composite video outputs, an economical Electrohome designed interface module may be used. The module simply supplies the necessary composite video (via coaxial cable) to the input on the EDP-58.

The functional, easy to use control panel (shown) features convenient loop-thru BNC inputs to interface directly either with video terminals or the interface module.

Convenient user controls located on the rear control panel include Power Switch, Brightness and Contrast.

Other less frequently required set-up controls—Electrical Focus, Keystone Correction, Picture Size, Vertical, Horizontal Hold—are

EDP-58

recessed to allow access for set-up adjustments. Easy rear panel optical focusing of the lens permits use with various screen sizes.

The EDP-58 video projection monitor is compatible with composite video signals in NTSC, PAL, CCIR and SECAM systems. Large monochrome pictures may be displayed directly from most VTR, Videodisc and television camera outputs.

EDP-58*	Projection Monitor	\$3895.00
IM-56	Interface Module	155.00
Harness	Wiring Harness	85.00
PB-56	Pedestal Base	390.00
DS-58**	Desk Stand	150.00
MY-56	Ceiling Mount	65.00
VS6-56	Curved Screen 6 feet	495.00
SL-1000	Elevating Legs	145.00
CC-56	25' BNC/BNC Coaxial Cable	35.00

*Special order phosphors (other than green P1)
—A minimum of 10-12 weeks lead time prior to product shipment
—A premium of \$600.00 per unit

**Desk stand requires a Ceiling Mount (MY-56)

*An optional Interface Module may be needed for your particular CRT terminal.

EDP-58 (Cont'd)

PERFORMANCE DATA AND SPECIFICATIONS

Resolution

- Up to 1000 lines resolution

Brightness

- 300 footLamberts peak on axis on a 6' (1.5m) diagonal 10 gain screen
- 500 lumens total light output (Std. P53 Phosphor)

Display

- Green P53 phosphor standard, other phosphors available on special order
- Throw distance approx. 1.25x screen diagonal size
- Continuously focusable from 4.5' (1.4m) diagonal projected picture to 10 ft. (3m) diagonal
- Aspect ratio 3:4
- Keystone circuitry to correct picture for projection angles up to $\pm 10^\circ$ vertically from screen axis

Operating and Service Controls

Front External

- Curved/flat screen lens focus adjustment

Rear External

- Single knob optical lens focusing
- Power on-off switch
- Brightness control
- Contrast control
- Video input 75 Ω termination switch
- AC power input
- Electrical focus

Rear Internal (accessible)

- Keystone correction
- Vertical size (height)
- Vertical hold
- Horizontal size (width)
- Horizontal hold
- Primary fuse (1.5A slow blow std.)
- Reversed Scan Switch for rear screen projection

Internal

- 120/220/240/AVC plug connection (120 VAC std.)
- Vertical Linearity adjust
- Dynamic Focus adjust (Horizontal)
- Dynamic Focus adjust (Vertical)
- Horizontal Video Centering adjust
- D.C. Restoration switch: 1. back porch clamp (STD) 2. sync tip clamp
- G2 bias supply adjust

Video Circuits

Input

- 2 BNC connectors (looped through)
- 75 Ω $\pm 1\%$ terminated
- 25k ohm shunted by 12pf open
- Input level 0.5 to 2.0V p-p sync negative
- Differential (floating) input rejects 14 V p-p of power line hum voltage

Frequency Response

- 20MHz bandwidth $\pm 3dB$

D.C. Restoration

- Back porch keyed clamp internally switchable to sync tip clamp

Gain

- Min. video gain 40 dB or 100X
- Max. video output 110V p-p drive

Deflection Circuits

Vertical Deflection

- Size: adjustable from 20% overscan to 10% underscan
- Frequency range: from 45 Hz to 80 Hz
- Retrace time less than 0.5 milliseconds

Horizontal Deflection

- Size: adjustable from 20% overscan to 10% underscan
- Frequency range: 15 kHz to 33 kHz
- Retrace time: less than 6 microseconds

High Voltage

- 32.0 KV regulated to better than $\pm 1\%$

Power Requirements

- 120 VAC $\pm 10\%$ can be internally re-connected for 220 VAC $\pm 10\%$ or 240 VAC $\pm 10\%$
- Line Frequency 50 or 60 Hz nominal
- Power 120 watts max.

Environment

Maximum Operating Range

- Temperature: 0° to 35°C
- Humidity: 0-90% non condensing
- Altitude: 0-10,000 ft. (3,000m)

Storage

- Temperature: -30° to 65°C

One year parts and labor warranty.

Due to constant research, specifications are subject to change without notice. Manufacturers of television display equipment in monochrome and color standards for data, industrial, commercial and educational users.

This product is designed to meet or exceed safety standards and regulations of: FCC, DHHS, HWC and is CSA certified and UL listed.

This product is covered by U.S.A. patents 4414494, 4393336. Other patents pending.

**COLOR LARGE SCREEN
DATA/GRAPHICS
VIDEO DISPLAY**

**Model ECP 1000 + Color Projector for Computer
Graphics/Data or Video Tapes**

Electrohome ECP 1000+ is the ideal projection system for ceiling mounted installation.

But it is also very portable—unlike other color projection units.

The difference results from our breakthrough in Laser Aligned Dichroics (LAD) that automatically converges colors within the unit and projects a brilliant image through a single lens.

So it takes only a few minutes for a non-technical person to set up ECP 1000+ for a perfect presentation.

Other systems have three lenses and dozens of controls that must be separately and meticulously adjusted to converge colors on the screen. Since that can take hours of work by a trained technician, those other systems weren't really designed to provide portable convenience and versatility.

Whether you use it in a permanent installation or as a portable system, ECP 1000+ performance must be seen to be believed.

It projects computer graphics in brilliant color and sharp detail. High resolution, together with 40 and 80 character display, makes computer data easy to read.

The most advanced system for today is so advanced, it's ready for tomorrow. Because it was designed as a computer projection system, it also provides the ultimate performance from video tapes, video discs and off-air signals. In fact, ECP 1000+ is ready for the next generation of high definition video. And because it's so portable and can be set up in minutes, any room can be a teleconference center.

• **Conveniently portable or convenient ceiling mount.**

You can make frequent use of your ECP 1000+ system because you can readily move it from room to room and from meeting to meeting. The easy-rolling cart has a compressed system for precise and effortless height adjustment. A special ceiling mount is available for more permanent installations.

• **Readily adapted to most color and monochrome computers.**

ECP 1000+ is compatible with most corporate and personal computer terminals. Because it can project monochrome as well as color, you can benefit from ECP 1000+ portability and superb projection of video tapes even before you make the move to color computers.

• **No guess work about what plugs into where.**

No one can possibly make a mistake when setting up an ECP 1000+ presentation. One cable plugs all computer and video tape signals, as well as remote control, into the projection unit. Other systems not designed for portability have as many as twelve cables that confuse the set-up and clutter the meeting room.

• **Only three operating controls.**

Once again—there's no guesswork. The on/off brightness and contrast controls are clearly identified and readily accessible at the rear of the unit. Or they can be operated with the remote control unit.

• **Adaptable to various screens.**

For further versatility, your ECP 1000+ can be operated with front and rear screens of various sizes—including those you may already be using for your film and slide presentations. Or for ultimate performance, use the special Electrohome curved high brightness screen. ECP 1000+ electronically adjusts the image size to different screen sizes at the turn of a knob.

• **Automatic positioning in relation to screen.**

As with all color computer and video tape projection systems, the unit must be correctly positioned in relation to the screen for precise optical focus.

With other systems that can be a matter of trial and error. But there's no guesswork with ECP 1000+ and it takes only seconds. Two rangefinder lights project arrows on the screen. When the two arrows meet to form an X, you know the projection unit is in the correct position for proper focus.

• **One external lens makes the portable difference.**
This is the most dramatic breakthrough that makes ECP 1000+ so portably different from comparable systems. Laser Aligned Dichroics (LAD) converges all colors within the unit and projects the image through a single lens. Other systems have three separate lenses and dozens of controls that must be meticulously adjusted by a technician to converge colors on the screen.

• **No need to dim the lights.**
The image is bright and clear even with normal or partially subdued lighting—especially if you use the curved high brightness screen.

• **One-button remote control automatic switching between computer and video tape images.**
You just touch one button to move back and forth between computer and video tape segments of the presentation. The effect is smooth and professional with no delays or adjustments because image frequency and size are locked in as you switch from computer to video.

• **Removable modules simplify service.**
Most functions are contained in four modules that are readily removed by a service technician to simplify maintenance procedures.

ECP 1000 +	\$13,995.00
ECP 1000 + NTSC Decoder	1,290.00
ECP 1000 + Cart	550.00
ECP 1000 + Ceiling Mount	200.00
Extension Cable (For NTSC Decoder 25')	90.00
VS6-56 Curved 6 ft. Screen	495.00
SL-1000 Elevating Legs	145.00
BNC to 10-pin Cable Accessory	155.00
General Purpose Color Interface Wiring Harness (for above)	85.00

ECP-1000 + (cont'd)**PERFORMANCE DATA AND SPECIFICATIONS****Brightness**

- 140 ft.-lamberts peak on axis on a 6 ft. diagonal 10 gain screen.
- 260 lumens total peak white output

This measurement taken under actual operating conditions with a focused raster of a data signal — not maximum unfocused, non-usable brightness

Resolution

- Optical resolution 600 lines.
- Electronics are capable of synchronizing up to 1000 line systems.

Display

- Single lens dichroic design converges colors accurately inside the projector, not at the screen.
- High gain front and rear screens may be used with no color shift due to viewing angle.
- May be used with flat screens.
- Electronic pincushion circuits correct separately for top, bottom, and side pincushion for flat screen display.
- Throw distance of 87-1/2" (internally adjustable).
- Wide electronic size control allows 2 knob easy adjustment of picture size from 5 ft. through 7 ft. diagonal.
- Aspect ratio of 3:4.
- Keystone circuitry to correct picture for projection angles up to ± 15 degrees vertically from screen axis. Easy 1 knob adjustment.
- Range finder lights will assist in positioning the projector at the right distance from the screen for the best optical focus.

Video Circuits**Input**

- Input level 0.5 to 2.0V p-p, sync negative or positive. $75 \Omega \pm 1\%$ terminated.
- Differential (floating) input rejects 14 V p-p of power line hum voltage.
- Automatically switches to separate sync or sync on green.
- Separate sync is automatically accepted in either polarity.
- 10 pin multi connector for RGB sync and remote brightness and contrast.

Frequency Response

- 30MHz bandwidth ± 3 dB.

D.C. Restoration

- Back porch keyed clamp (internally switchable to sync tip clamp).

Gain

- Minimum video gain 40dB or 100X.
- Maximum video output 120V p-p drive.

Deflection Circuits**Vertical Deflection**

- Size: automatically regulated over frequency range and adjustable from 20% underscan to 20% overscan.
- Frequency Range: automatically locks from 45 Hz to 100 Hz.
- Retrace Time: less than 0.5 milliseconds.

**Horizontal Deflection**

- Size: automatically regulated over frequency range and adjustable from 20% underscan to 20% overscan.
- Frequency Range: automatically locks from 15KHz to 33KHz.
- Retrace Time: less than 7 microseconds.

High Voltage

- 32.0 Kv regulated to better than $\pm 1\%$.

Power Requirements

- 90 VAC to 132 VAC can be internally reconnected for 180 VAC to 264 VAC.
- Line frequency 50 to 60 Hz nominal.
- Power 250 watts maximum.

Operating and Service Controls**Control Module (Upper Right)**

- Power on/off switch (3.5 AMP circuit breaker).
- Contrast control
- Brightness control
- Range finder lights switch
- RGB drive levels (screwdriver adjust)
- Remote brightness/contrast LED's (lit in remote function).

Set-Up Module (Upper Left)

- R & B horizontal centering controls.
- R & B vertical centering controls.
- Normal/test switch (cross hatch pattern).
- RGB cut-off switches.
- RGB screen controls (screwdriver adjust).
- Master electrical focus control.
- RGB individual electrical focus controls (screwdriver adjust).
- Red & blue raster rotation (screwdriver adjust).

Deflection Module (Lower Right)

- Keystone correction control.
- Vertical hold control.
- Vertical hold auto/manual switch.
- Vertical size control (height).
- Vertical linearity control (screwdriver adjust).
- Horizontal hold control.

- Horizontal hold auto/manual switch.
- Horizontal size control (width).
- Horizontal phase control (video centering, screwdriver adjust).

Convergence, Module (Lower Left)

- Top Pincushion control (N-S).
- Bottom Pincushion control (N-S).
- Side Pincushion control (E-W).

All controls below are screwdriver adjust.

- Red vertical and horizontal bow.
- Red & blue vertical keystone.
- Red & blue horizontal linearity.
- Red & blue skew.
- Red & blue height.
- Red, green, blue horizontal linearity.
- Red, green, blue width.
- Blue vertical bow.

Input Panel

- Top to bottom optical focus adjust.
- Signal input connector.
- A.C. power input.
- Power ON pilot light.

Environment**Maximum Operating Range**

- Temperature: 0 to 35°C.
- Humidity: 0 to 90% non-condensing.
- Altitude: 0-10,000 ft. (0 to 3000m)

Storage

- Temperature: -30°C to 65°C.

Regulatory Approvals

- UL approved
- Meets FCC and DHHS requirements.
- CSA certified

Weight

- 75 lbs.
- Shipping Weight: 107 lbs.

Accessories Included

- 25' signal cable, 10 pin keyed.
- RGB and Sync splitter for BNC connections.
- Projector mounting studs and knobs.

ELECTRONIC SYSTEMS PRODUCTS, INC.

VIDEO PROJECTION

AQUARAY-RGB

- Compatible with most medium resolution computers
 - Smallest, Brightest Projector
 - Lowest Cost Per Lumen
 - Lightweight, Portable
 - Easy Installation, Quiet Operation
 - Exclusive Microcomputer Control
 - Self-Diagnostic Capability
 - Liquid-Cooled Tubes, Super Cooling Chamber*
 - High resolution coated lenses
 - Two-Control Throw Distance Adjustment
 - Modular Quick Change Tube Assembly
 - Overvoltage and Overcurrent Protection
 - Automatic NTSC/PAL sensing
 - Master Keystone Control
 - Interchangeable Electronic Assemblies
 - Pushbutton Remote Control
 - Simple Distance Adjustment
 - Front or Rear Projection
- (*Invented by ESP)

ELECTRICAL

- Microprocessor controlled including self-diagnostics
- Digital remote control using a small two-wire cable
- Digital numeric display for projector operating status
- Built-in test generator for set up and registration (16 functions)
- Complies with all HHS and FDA requirements
- Front or rear projection
- Automatic video gain control
- Integral comb filter for improved luminance resolution
- Band pass response to 16MHz
- Master keystone control; wide range correction (+/-20°)
- Liquid-coupled lens and liquid-cooled tubes
- Switch mode power supplies for efficiency, cooler operation and reduced weight
- Full-line isolation, photo-optically coupled high voltage regulator
- Overvoltage and overcurrent protection
- Slow high voltage turn on to protect against electrostatic arcing
- Automatic NTSC/PAL sensing
- 110-220V switchable international power control
- Full focus modulation for corner clarity
- Built-in crosshatch and crosshair generator to facilitate registration
- Differential video amplifier input

Light Output: 400 lumens peak white
 Resolution: 1000 lines per picture width (up to 800 scan lines)
 Video Input: NTSC composite video with negative sync (IVp-p typical)
 Video feed-through capability
 Differential amplifier input for hum rejection
 Video Sources: Computer and graphics terminals (NTSC/RGB signals)
 Video recorder (VCR)
 Remote tuner
 Satellite receiver (TVRO)
 Video disc player
 Camera
 Scanning Rate: 50Hz - 100Hz vertical frequency range/RGB mode
 15,000Hz - 20,000Hz horizontal frequency range/RGB mode (up to 800 scan lines)
 Minimum blanking time (6 microseconds)
 Cathode Ray Tubes: 35KV at 1 mA each (average current)
 Non-browning, strontium-filled glass
 Liquid-cooled phosphors
 Electrostatically focused
 Power Input: 115VAC 60Hz or 220VAC 50Hz
 Power Consumption: 300 watts (average)

REMOTE CONTROLLER

- Flat membrane keyboard with tactile feedback
- Serial digital transmitter using a two-wire cable
- Operator controls on front: on-off, stand-by, picture control, tint
- Set-up controls on back: centering for red and blue, brightness set, color set, test generator on-off and pattern selector feature
- Picture controls: brightness, contrast, color, tint
- Standby (blackout) feature
- LED power indicator

MECHANICAL

- Rugged—aluminum I-beam construction
- Easily accessible master board
- Simple throw distance adjustment
- Quiet operation
- Accessible, interchangeable electronic assemblies for easy maintenance
- Arc protected; encapsulated HV leads and connectors
- Quick change tube modules
- Easy inverted mounting:
7° lens offset for close ceiling mounting

Optics: High resolution coated f/1.0 lenses

Weight: 53 lbs.

Dimensions: 7½"H x 21"W x 24½"L

Throw Distance: 1.5 times image width
(6' W image is 9' throw distance)

Image Size: 4' - 20' wide image on flat or curved screen
(some variation depending on lenses used)

Cable Lengths: 6' AC power cord
25' remote control cable (easily extended)

Mount: May be mounted in almost any location;
floor, table, ceiling (full swivel)

AQUARAY-RGB \$7495.00

OPTIONAL ACCESSORIES

f/1.0 wide screen lenses (4'-20') **\$830.00**
 Ceiling mount bracket **150.00**
 Special remote control cable lengths
 25 ft. **75.00**
 50 ft. **110.00**
 75 ft. **170.00**
 100 ft. **200.00**
 Optical wedges (for small screens) **500.00**
 Phone jack type cable lengths
 25 ft. **38.00**
 50 ft. **75.00**
 75 ft. **107.00**
 100 ft. **143.00**

AQUASTAR III C

AQUASTAR III C

- Compatible with most High Resolution Computers
- Modular Quick Change Tube Assembly
- Liquid-Cooled Tubes, Super Cooling Chamber*
- Overvoltage and Overcurrent Protection
- Master Keystone Control
- Interchangeable Electronic Assemblies
- High Light Output — 500 Lumens
- Easy Installation & Registration
- Front or Rear Projection
- High Performance
- Wide Horizontal/Vertical Frequency Range
- Simple Distance Adjustment

(* Invented by ESP)

ELECTRICAL

- Compatible with most Medium and High Resolution Graphic Displays
- Front or Rear Projection
- Integral Comb Filter for Improved Resolution
- RGB Inputs with Separate Gain Controls, TTL Compatible
- Wide Band Pass Video Amps, Response to 30MHz
- Automatic Video Gain Control
- Separate Sync or Sync on Green
- Switch Mode Power Supplies for Efficient, Cooler Operation and Reduced Weight
- Full-Line Isolation, Photo-Optically Coupled High Voltage Regulator
- Complies with all HHS and FDA Requirements
- Interlaced and Non-Interlaced Syncs
- Overvoltage and Overcurrent Protection
- Slow High Voltage turn on to protect against Electrostatic Arcing
- Sensitive Components protected from High Voltage Static Discharges
- Independent RGB Gain Controls — Red, Green, Blue
- Master Keystone Control; wide range correction (+/-20°)
- Liquid-cooled Lens and Liquid-cooled Tubes
- Fully Regulated Focus, High Voltage and Registration Circuits
- Full Focus Modulation for Corner Clarity
- Built-in Crosshatch and Crosshair Generator to Facilitate Registration

- Light Output** • 500 lumens peak white
- Resolution** • 1350 lines per picture width (up to 1400 scan lines)
• 330 NTSC video
• Up to 200 characters per picture width
• Exceeds 1024 pixel rates

VIDEO PROJECTION

- Video Input**
- NTSC composite video with negative sync (1V p-p typical)
 - RGB inputs with separate syncs or sync on green
 - PAL, SECAM and modified NTSC decoders (optional)
 - Video feed through capability
- Video Sources**
- Computer and graphics terminals (NTSC/RGB signals)
 - Video recorder (VCR)
 - Remote tuner
 - Satellite receiver (TVRO)
 - Video disc player
 - Camera
- Scanning Rates**
- 25Hz to 180Hz vertical frequency range/RGB mode
 - 14,000Hz to 42,000Hz horizontal frequency range/RGB mode (up to 1400 scan lines)
 - Minimum blanking time — 6 microseconds
- Cathode Ray Tubes**
- 36KV at 1 mA (average current)
 - Non-browning, strontium-filled glass
 - Liquid-cooled phosphors
 - Electrostatically focused
- Power Input** • 115VAC 60Hz (220VAC 50Hz optional)
- Power Consumption** • 400 Watts

REMOTE CONTROLLER

- Power On-Off Switch; LED Power/Failure Indicator
- Standby (blackout) Switch
- Signal Source Selector Switch (RGB, composite video, test)
- Picture Controls—Brightness, Contrast, Color, Tint, Detail
- Master Focus
- Set-up Controls: Horizontal/Vertical Centering — Red, Blue
- Remote Control Box uses DC and Low Voltages for Long Distance Cabling Compatible with Common Electric Power Code Requirements

MECHANICAL

- Rugged — Aluminum I-Beam Construction
- Video Feed-Through Capability
- Accessible, Interchangeable Electronic Assemblies for easy Maintenance
- Parallel Lenses for Simple Screen Size Change (two-knob adjustment)
- Convenient Back Panel Registration Controls
- Quiet Fan

- Optics** • High resolution, coated f/1.0 lenses
- Weight** • 75 lbs; (33.7kg)
- Dimensions** • 9 1/2" H x 20" W x 28 1/2" L (22 x 51 x 72cm)
- Throw Distance** • 1.5 times image width (6' wide image is 9' throw distance)
- Image Size** • 4' to 12' wide image high resolution lenses on flat or curved screen (optional lenses available for larger screen sizes up to 25' wide)
- Cable Lengths** • 6' AC power cord
• 15' remote control cable (optional lengths available)
- Mount** • May be mounted in almost any location; floor, table, ceiling

Aquastar III C	\$9,995.00

AQUASTAR 600

AQUASTAR 600 COMPUTER/VIDEO PROJECTOR

Provides remote control capability of easily switching up to 8 RGB, and 8 NTSC and 8 stereo audio signals with no further need for adjustments...

FEATURES

- Simple installation and registration
- Front or rear projection
- Compatible with most high resolution computers
- Wide horizontal/vertical frequency range
- High light output—500 lumens
- Exceeds 1024 pixel rates
- Self-diagnostic capability
- Overvoltage and overcurrent protection
- Interchangeable electronic assemblies
- Modular quick change tube assembly
- Liquid-cooled tubes, super cooling chamber (invented by ESP)

Electrical

- Remote control of horizontal and vertical hold
- Storage of 8 preset horizontal and vertical hold values in RGB
- Integral comb filter for improved resolution
- RGB inputs with separate gain controls, TTL compatible
- Wide band pass video amps, response to 30MHz
- Automatic video gain control
- Separate sync or sync on green
- Switch mode power supply for efficient, cooler operation and reduced weight
- Full-line isolation, photo-optically coupled high voltage regulator
- Complies with all HHS and FDA requirements
- Interlaced and non-interlaced syncs
- Sensitive components protected from high voltage static discharges
- Master keystone control
- Fully regulated focus, high voltage and registration circuits
- Full focus modulation for corner clarity
- Built-in test pattern to facilitate ease of registration

Aquastar 600 **\$12,995.00**

Optional Accessories

Infra-red remote control	\$295.00
IBM PC interface box	395.00
f/1.0 wide screen lenses (4' to 25')	830.00
Ceiling mount bracket	150.00
Optical wedges (for small screens)	500.00
Floor stand	245.00
Projection screens: Front: 60 x 80"	1125.00
Rear: 38 x 50"	420.00
Rear: 47 x 62"	700.00
Quad standard decoder	995.00
Phone jack type cable lengths: 25 ft	38.00
50 ft	75.00
75 ft	107.00
100 ft	143.00

VIDEO PROJECTOR/ SWITCHER

ESP VIDEO SWITCHER

HIGH DEFINITION ESP VIDEO SWITCHER

FEATURES

- Up to 8 RGB, 8 video, and 8 stereo audio inputs
- Micro-processor controlled
- Micro-processor remembers up to 8 levels for horizontal, vertical scan rates and audio levels
- Horizontal and vertical frequency control with memory on any channel
- Computer terminal control via RS-232 input
- Stereo audio switching
- Stereo/mono switch
- All remote connectors are telephone modular connectors
- Gain and brightness level adjustment on each RGB input to match output levels between channels
- Bright LED channel indicator
- Modular design
- 19" rack-mountable or decor cabinet

This switcher has been developed for use with ESP's Aquastar 600 video projector to meet the needs of those who require wide bandpass, control, and distribution of computer (RGB), video, and audio signals.

The system may be housed in a 5-1/4" high, 19" wide rack-mountable enclosure or it may be supplied in an attractive decor cabinet for desk/table top installation.

The switcher is expandable to accommodate up to 8 computer (RGB) inputs and/or 8 video inputs with stereo audio (internally switchable to monaural). Paralleling switchers for more outputs is possible.

Individual preset for horizontal and vertical hold on each RGB channel allows easy switching between computers at the touch of a button, from personal computers to high resolution CAD/CAM systems. Individual gain and brightness controls match all output levels.

The system is micro-processor controlled, accessed by front panel controls or remotely via an optional wired remote control station or an infra-red wireless transmitter. The switcher may be controlled also by a computer keyboard via RS-232 interconnect.

Pushbutton operation offers automatic switching between input signal sources. The effect is smooth and professional switching with no delays or adjustments. Image and frequency are locked up as selections are made between channels. A bright LED digit channel indicator prominently displays which input has been selected.

ESP — Rackmount, basic 2-channel **\$2495.00**
ESP — Table-top, basic 2-channel **2695.00**

Optional Accessories

Infra-red or wired remote control	\$295.00
IBM PC interface box	395.00
Modular input assemblies for system expansion	each 325.00
Delta-II-tac 12 ft. high resolution lenses	1095.00

ELMO

70 New Hyde Park Road
New Hyde Park, NY 11040
(516) 775-3200

VIDEO SYSTEM

VP-10 ASTRON VIDEO PRESENTATION UNIT

FEATURES

- Compact, portable
- Weighs 18 lbs. with batteries
- 4" EIA standard color monitor
- Monitor elevates to 15° angle
- Separate controls for power/volume, contrast, tint, color, brightness, and vertical hold
- Built-in 3-inch speaker
- Video cassette recorder utilizes a 4-head video system driven by 4 quartz servo-controlled direct-drive motors
- Delivers studio quality reproduction of over 240 horizontal line resolution
- Noiseless playback even when using special effects mode
- The VP-10 can operate for 90 minutes on one charge
- With optional AC or car adaptor, VP-10 can record or play for up to 8 hrs.

VP-10 SNAP-IN RECHARGEABLE BATTERY PACKAGE

Complete Package Includes:

- ELMO Astron 4" Color Monitor, EM-10
 - Video Presentation Housing, SC-10
 - Astron Professional VHS Recorder, ER-10
 - Soft Carrying Case w/Shoulder Strap
 - 2 ea. BP10 Rechargeable Batteries
 - Charger for 2 Batteries Simultaneously, EA-BC10 (110/220V operating voltage)
 - 12-Function Remote Control
- 6200DC** \$1575.00

VP-10 AC PACKAGE

Complete Package Includes:

- ELMO Astron 4" Color Monitor, EM-10
- Video Presentation Housing, SC-10

VP-10

Astron Professional VHS Recorder, ER-10
Soft Carrying Case w/Shoulder Strap
2 ea. PA10 AC Adaptors (110/220V Operating Voltage)
12-Function Remote Control
6200AC \$1665.00

The capabilities of the ELMO Astron VP-10 can be expanded at any time with the addition of the following accessories.

- ELMO EC-10 Color Video Camera
- ELMO ET-10 Tuner/Timer
- Car Adaptor

ADDITIONAL ACCESSORIES

- 6604 EA-BC10** 2-Battery Charger (110/220V Operating Voltage) \$ 65.00
- 6601 EA-BP10** Snap-In Rechargeable Battery 42.50
- 6602 EA-PA10** AC Adaptor (2 required) 125.00
- 6605** Soft Carrying Case (as replacement) 49.90

EC-10 COLOR VIDEO CAMERA

FEATURES

- Under 2 lbs.
 - f/1.4, 4x zoom lens
 - 1/2" Saticon® tube
 - Automatic white balance
 - Exclusive FOCUSFREE™ control
 - Indoor/outdoor color temperature setting
 - VHS and Beta compatible
 - Scanning—525 lines
 - Built-in unidirectional condenser microphone
 - 56W x 230H x 270Dmm
 - 1.96 lbs.
- 6052** Color Video Camera \$499.95

EC-10

- 6555** TD-30A VHS to Beta adaptor cable, adapts EC-10 for use with Beta System recorders 75.00
- 6553** VHS extension cable, 33 ft. (for use with EC-10) 59.95
- 6503** Beta extension cable, 33 ft. (for use with Astron) 49.95
- 2955** Soft case for EC-10 26.20

ET-10 TUNER/TIMER

FEATURES

- 14 Day/4 program timer
 - One-touch timer recording (OTR)
 - Fluorescent liquid crystal display
 - 16 Function infrared remote control
 - 14 Position/107 channel cable ready
 - Automatic battery charging
 - 8-1/2"W x 2-3/4"H x 10-3/4"D
 - 7.1 lbs.
- 6600** Tuner/Timer \$425.00

ET-10

ER-10 VIDEO CASSETTE RECORDER, PORTABLE VHS

- #### FEATURES
- Under 6 lbs. including rechargeable battery
 - 4 Video heads plus quartz-servo direct drive motors
 - Special effect playback features—still, frame advance, variable slow motion, plus SP, LP, SLP playback
 - Multi-function fluorescent liquid crystal display
 - 2-Speed recording and 3-speed playback
 - 12 Function wired remote control
 - One-piece diecast chassis
 - Auto rewind
 - Permits video adding/audio dubbing
 - 2-3/4"H x 8-7/16"W x 10-3/8"D
- 6100** Video Cassette Recorder \$899.95
- 6602** EA-PA10 AC adaptor for cassette recorder, for use instead of tuner. Provides both AC and battery charging functions (110/220V Operating Voltage) 125.00
 - 6601** EA-BP10 interchangeable rechargeable battery for cassette recorder, requires either ET-10 tuner or EA-PA10 AC adaptor for recharging. Up to 2 hrs. use with 3 hour recharging; 6 to 8 hours recommended to maximum battery life 42.50
 - 6500** Carrying case for recorder with front pocket for camera and extra battery. 59.95

Prices and Specifications Subject to Change Without Notice.

The Galaxy 2200 Video Centre has a rugged industrial design for sales and training.

Galaxy Audio Visual's Small Contribution to Big Business

The Galaxy 2200 Video Centre is an easy-to-operate, tough, versatile combination color monitor with 1/2" VHS/VCR system, designed specifically for the professional salesman or trainer.

The Galaxy 2200 has all of the features you liked in the Galaxy 2100 plus a screen that is approximately 56% larger and much more... Built right into the front panel of the Galaxy 2200 are: Freeze action, Slow motion, Frame to frame picture advance, Forward and reverse visible search. In its own small way, it's a big help for any business. Weighing only 16 lbs., and about the size of a briefcase, it's truly portable. With its optional battery pack, it can be used anywhere in the world, or may be plugged into any car lighter, or wall socket.

Looking at its large built-in color TV screen, you can make intimate color TV presentations to small groups. With its built-in RF modular you can connect quickly to any large TV set, or multiple of sets, and give color presentations to larger groups. If you need to edit tape, the Galaxy 2200 gives you many of the options you'd get in a professional studio. It dubs audio, edits video, and does sound-on-sound mixing. And with any video camera, it records programs up to eight hours long, and does the same thing for on-air programming, with its optional tuner. Three industrial grade recording heads insure professional picture quality, and rugged design and video tape-component miniaturization are why Galaxy Audio Visual is so well known as the leader in building professional equipment for professionals. After all, with our famous Super-8 Desk-top Presenters, we revolutionized business presentations. In short, Galaxy 2200 Video Centre is a big surprise in a small package. Or a small wonder for big business.

SPECIFICATIONS

Video	NTSC color EIA standard 1/2" VHS cassette
Recording	Rotary 2 head helical scan azimuth recording
Monitor	Color 5" diameter monitor fine pitch flat face type 55° deflection
Speaker	8 x 12 cm, 16 ohm
Power	Three sources available: 1) 110V 60Hz AC wall current 2) Rechargeable battery pack 3) Car battery, DC 12V
Dimensions	16.9"W x 5.5"H x 11.0"D
Weight	16.5lbs.
Jacks	Video and audio input and output, RCA type. Camera, microphone, headset, DC 12V connector, RF and remote

FEATURES

- Micro-processor controls
- Swing away carrying handle
- Tape and/or accessory storage
- Earphone
- Matching 300-75 Ohm transformer
- Coaxial cable with RF connections
- Built-in RF modulator
- Humidity protection device
- Color, tint and bright controls
- Recording: SP for two hours; LP for four hours and EP for six hours. Eight hour recording possible with T-160 tape. Playback speed is automatically selected
- Automatic alignment control removes break-up from center of picture

Galaxy 2200™ Video-Centre w/AC Adaptor and Wall Plug

1/2" VHS Video Recorder with built-in 5" monitor and micro-processor controls. Three selectable recording speeds to record up to 8 hours. Playback speed automatically selected. Professional Studio features including audio dub, video editing and sound on sound mixing. Swing away carrying handle. Storage for tape and/or accessories. Weighs only 16.5 lbs. (7.5 kilos). Size: 16.9"W x 5.5"H x 11.0"D. Three way power available: A/C Adaptor included; Battery Pak, and Automobile Battery Cord are optional accessories. Record with any video camera or use TU-2201 color tuner. RF output: Channel 3 or Channel 4. Package includes cassette tape, earphone, matching transformers, coaxial cables.

ACCESSORIES

Color tuner — TU-2201 **\$325.00**

With programmable timer for VHF/UHF operation (select channels 2 thru 83). Unit can be set to automatically record 6 programs for two weeks. Quartz clock.

Master remote control — RM-2202 **\$45.00**

Palm-sized unit allows you to adjust the rate of slow motion and control the play, record, audio dub, freeze frame, fast forward, reverse, visible forward and reverse search, frame-by-frame advance and tracking functions.

Battery pack — BP-2203 **\$79.00**

Twelve volt rechargeable supplies approximately 60 minutes of continuous playback or recording per charge. Full charge takes approximately 6 to 8 hours.

Battery charger — BC-2204 **\$89.00**

For battery pack, operates off A/C power.

Car battery cord — DC-2208 **\$29.00**

For true portable power to operate Galaxy 2200 Video Centre from automobile lighter socket.

Travel-all bag — TB-2206 **\$79.00**

Cushioned Travel-All Bag. Convenient shoulder strap for easy carrying. Holds Galaxy 2200, tapes and accessory items.

Shipping case — SC-2207 **\$159.00**

Rugged shipping case with custom tailored foam interior. Holds Galaxy 2200, accessories and tapes.

Attache case — AT-2211 **\$120.00**

Deluxe Executive Attache case to carry the Galaxy 2200—extra room for accessories.

Heads 3 Video Heads—2 for SP/LP/EP, one for special effects. 1 full track audio video erase head. 1 combination head for control track, audio erase and audio record/play. 3 Heads/single housing

Tape Speed With T-120 Video Cassette:
2 hours playback/recording (SP)
4 hours playback/recording (LP)
6 hours playback/recording (EP)

RF Output Channel 3 or Channel 4

RF Input VHF 75 ohm UHF 300 ohm

Included Items 2— Coaxial cable with F-type connectors
1— Matching transformer 300-75 ohm
1— Matching transformer 75-300 ohm
1— Cassette tape
1— AC Adaptor
1— Earphone
1— RF isolator switch
1— Adjustment screwdriver

PROJECTORS

TALARIA™ TELEVISION PROJECTION

For more than a decade, General Electric professional large screen video projectors have been helping groups understand, enjoy and remember presentation material. Through technology developed by General Electric engineers, projector performance has improved continuously.

The Talaria projector line, featuring General Electric exclusive light valve technology, offers models that can display presentations more powerfully, in more situations, to more people than any models offered before. This was accomplished by developing important new capabilities.

High Levels Of Brightness

General Electric has added three new color projectors with twice the brightness of the brightest color models previously offered. These new projectors are designed to perform where image size or room lighting would otherwise pose viewing problems. The high light output provides high contrast for crisp, clear pictures in any application.

With the new option of light output levels, you can buy the brightness capability you need. (See specifications for ratings of each model's light output). These projectors weigh no more than prior models — a very transportable 145 lbs.

Exclusive General Electric Design

The Talaria projector line uses an improved version of the exclusive General Electric single light valve system featured in our previous lines. All projectors are designed for trouble-free operation. In fact, some users program the projector to start up with an electric timer, and operators simply select the video input for the desired picture. The quality of the picture is consistent from use to use. With the General Electric unique light valve, no manual registration or convergence of colors is required.

Technical Description

General Electric professional Talaria television projectors accept electrical video signals which are converted into an optical image which is projected onto a screen using the single optical path light valve system.

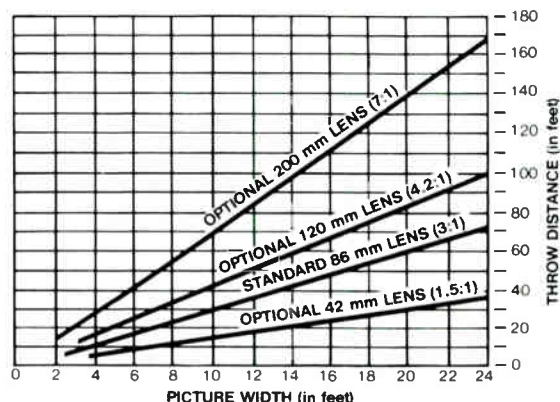

The projectors are completely self-contained, with all electronics, control, and power circuitry integrated into a single unit. They can be used for front or rear projection, using any conventional projection screen.

Signal Processing And Display

In color and monochrome models, input signals are used to amplitude modulate high frequency carriers which velocity modulate the electron beam, as it scans the raster. This results in a diffraction grating (three diffraction gratings for color projectors) being formed on a transparent fluid surface.

In color projectors, light passes through dichroic filters, input bar system, and fluid surface. Schlieren output bar system and projection lens produce color representations of the electrical video signal on the display screen surface. In monochrome projectors, the light path is similar but without color separation.

Throw Distance vs. Picture Width

Flexibility

As a result of developments in optics, the Talaria projector line offers a highly efficient lens system to provide the image size you require. Lens objectives are available in any one of the four throw distance to screen size ratios most convenient for your room dimensions with no picture degradation or loss of brightness. Lens objectives may be designed for special situations (i.e., Cinemascope — 3D — High Definition TV — Wide Screen).

Also offered is an optional system that automatically adjusts for any of the three most often used TV scanning and encoding standards in the world. When you use the projector in areas which do not employ the NTSC standard, you are not hampered by the need for extra hardware or signal conversions. All color projectors designed for 525 or 625 line operation have built-in video switchers and accept composite video or RGB video inputs. Among the signals accepted by Talaria projectors are outputs from tape, videocassette and video disk players, off-air TV tuners, video cameras, teletext, satellite receivers, closed-circuit television (CCTV) systems and most computer-generated displays that provide a television compatible signal, including alphanumeric and graphic data. Some computer-generated displays require an interface to provide signals for projectors.

COMPUTERIZED INTERACTIVE TELEVISION SYSTEMS

Computerized Interactive Television is an extremely powerful instructional delivery system.

GenTech's CIT systems allow educators, managers and trainers to use an exciting new technique to increase human productivity through more effective learning. The technologies of computers and television are combined in developing unique interactive video education programs that work like this:

A student views a segment of video...the computer presents questions on the material just viewed...the

student responds via a computer keyboard or hand-held keypad...if correct, a congratulatory message is received and the program continues...if incorrect, the material is automatically reviewed, or the student views a remedial portion of the video. Student responses are then assessed and can be stored for later retrieval by the instructor.

ETS-2000 INTERACTIVE TELEVISION SYSTEM (VIDEOTAPE)

The ETS-2000 is a one-on-one interactive instructional system that allows a student to respond to programmed questions while viewing a videotape program. The video controller (interface) card enables a microcomputer to precisely control a videotape player for interlacing educational video segments with computer-assisted instruction and testing modules.

ETS-2000 System Components: Interface Card, Instruction Manual, Connecting Cables and Operating Software **\$595.00**

LDI-2100 INTERACTIVE TELEVISION SYSTEM (VIDEODISC)

The LDI-2100 is a one-on-one interactive instructional system designed for use with laser videodisc programs and hardware. A student responds to programmed questions while viewing a videodisc program. The video controller (interface) card effectively marries the microcomputer with the speed and quality of the videodisc player for interlacing educational video segments with computer-assisted instruction and testing modules.

LDI-2100 System Components: Laser Disc Interface Card, Instruction Manual, Connecting Cables **\$399.00**

Application Software Available

MultiPoll™ Diskette and user guide **\$ 995.00**
 MultiTest™ Diskette and user guide **1295.00**
 MultiFeud™ Diskette and user guide **1295.00**
 MultiSurvey™ Diskette and user guide **1295.00**
 MultiPursuit™ Diskette and user guide **1295.00**

MTS-3000 MULTITERM GROUP RESPONSE SYSTEM (TAPE OR DISC)

The MTS-3000 System allows expansion of the ETS-2000 and LDI-2100 interactive systems from one-on-one modes to classroom or seminar modes. Up to 128 people may interact simultaneously via hand-held keypads (multiple systems may be linked for groups exceeding 128 people). MultiTerm may be used with or without television for group interaction with live lecture and demonstration.

MTS-3000 Starter Package Components: MultiLink Unit, ten (10) MultiTerm Keypads, 25 ft. Cable, Instruction Manual, RS 232 Connecting Cable, MultiTerm System Disk with hardware test and blind polling application and 2 MultiTap Junction Boxes . . . **\$4695.00**

MTS-3000 Expansion Package Components: Five (5) MultiTerm Keypads, 12 ft. Cable and MultiTap Junction Box **\$1495.00**

LIVE—THE LANGUAGE FOR INTERACTIVE VIDEO ENHANCEMENT

LIVE is a set of easy-to-use programming commands for implementing sophisticated interactive video programs. LIVE provides a very high degree of control of the videoplayer in extending the programming capabilities of Applesoft for interactive video. Extensive programming knowledge is not necessary to easily program interactive video modules. LIVE represents the industry's most advanced programming system for maximizing the computer in developing interactive video programs.

LIVE Components: Instruction Manual and Software Diskette (SuperPILOT, Applesoft or Pascal must be purchased separately) **\$295.00**

DIGITAL STORAGE OSCILLOSCOPES

VC-6041 40MHz/2 Channels 4000 Words/Channel

Features

- Suitable for repetitive frequencies up to 40MHz
- Storage of transient event of up to 10MHz with pre-triggering
- Storage of long-term data
- High-definition storage display
- CRT = 6" square with 12kV acceleration potential. Useful Screen Area: 8 x 10div (1 div = 10mm), Non Storage Function • Vertical Deflection = Bandwidth and Rise time: DC to 40MHz (-3dB), 8.8ns or less (normal), DC to 7MHz (-3dB), 50ns or less (magnifier), Deflection Factor: 5mV/div to 5V/div \pm 3%, 10 steps (normal), 1mV/div to 1V/div \pm 5%, 10 steps (magnifier), Modes: CH1, CH2, ALT, CHOP, ADD, DIFF • Horizontal Deflection = Time Base: 0.2 μ s/div to 0.2s/div \pm 3%, 19 steps. Maximum sweep rate to 20ns/div with magnifier extended • X-Y Operation (CH1: X, CH2: Y) = Phase Difference: 3° or less from DC to 50kHz, Digital Storage Function • Memory Capacity: 4.096 word/channel x two channels, Vertical Resolution: 8 bit, Horizontal Resolution: 400 steps/div, Maximum Sampling Speed: 40MHz (single trace mode), 20MHz (dual trace mode), 10MHz (single sweep mode) • Data Acquisition (Data update method) = Normal Storage Mode, Average Mode, Hold Mode, Single Sweep, Roll Mode, Data Save, Pretrigger, Data Output Analog Output, Digital Output, Cursor Display, X-Y Display • Power Supply = AC100V/120V/220V/240V \pm 10%, 50Hz or 60Hz • Dimensions = 13.1"W x 7.6"H x 18.7"D (330 x 190 x 470mm) • Weight = 15kg/31 lbs.

VC-6041UG (includes GP-1B) \$5855.00
VC-6041UX (less GP-1B) 4950.00

VC-6015 10 MHz 2 Channels 1000 Words/Channel

Features

- Usable as both a conventional oscilloscope and a digital storage scope
- Pretriggering allows capture of events before the trigger point
- Convenient free-run mode for use in recording repeating events
- A hold function maintains one stored waveform while another is captured
- Recording function enables a pen recorder to be used to create a hard copy of stored waveforms
- CRT = 6" square with 2kV acceleration potential Display Area: 8 x 10 div (1 div = 10mm) • Memory = Memory Capacity: 1000 words/channel (1 word = 8 bit), Writing Speed: 1 μ s/word to 10ms/word • Vertical Deflection = Sensitivity: 5mV/div to 5V/div \pm 5% 10 calibrated steps, Bandwidth: DC to 10MHz-3dB (oscilloscope mode), DC to 100kHz-3dB (storage mode), Modes: CH1, CH2, DUAL, ADD, DIFF (oscilloscope modes), DUAL, CH1 (CH2 HOLD), CH2 (CH1 HOLD) • X-Y Operation (CH1: X, CH2: Y) = Phase Difference: DC to 50kHz within 3° • Horizontal Deflection = Sweep Time: 1 μ s/div to 0.2s/div \pm 3% (oscilloscope mode), 0.1ms/div to 1s/div \pm 3% (storage mode), Max Sweep Rate: 100ns/div at x 10 Magnifier extends (oscilloscope mode) • External Output = Recorder: CH1, CH2 full-scale \pm 4V • Power Supply = AC100V/120V/220V/240V \pm 10% • Dimensions = 12.3"W x 7.1"H x 16.2"D (310 x 180 x 410mm) • Weight = 10kg/22 lbs.

READOUT OSCILLOSCOPE

V1100A DC ~ 100MHz 4 Trace, Delayed Sweep

Three Digital Display Functions

- The AC voltage (50Hz ~ 10MHz), DC voltage, and frequency (120Hz ~ 99.9MHz) of the Channel 1 input signal can be measured and the results displayed digitally on the CRT screen
- An electronic CRT screen cursor may be used to digitally display such values as ΔT , $1/T$, phase, ground potential (Vabs), ΔV , and ratio (%)
- The sweep and vertical axis sensitivity setting values are displayed digitally on the CRT screen
- Dimensions: 13"W x 6.3"H x 16"D
- Weight: 22 lbs.

V-1100A \$2490.00

V-1100A Specifications

Readout functions	Digital Measurement functions	DVM	DC voltage: Corresponds to screen AC voltage: 50Hz ~ 10MHz	CH1 only	Display: 3 digits + units

V-1070 DC ~ 100MHz 4 Trace, Delayed Sweep

The V-1070, a low cost version of the V-1100, using the built-in micro-computer, displays the panel setting information on the CRT as follows:

Vertical deflection factors, uncalibrated warning, magnification warning, vertical input coupling, band limiter, CH2 inversion, horizontal sweep times for both A time and B time bases and trigger sources for both, uncalibrated warning for A sweep time, sweep magnification warning, delay time and 10X probe indicators for CH1 and CH2.

Further vertical deflection factors and sweep times are displayed on the CRT with the converted values at the magnificated modes automatically. Dimensions: 13"W x 6.3"H x 16"D. Weight: 22 lbs.

V-1070 \$1950.00

V-1050F DC ~ 100MHz, Quad Trace, Delayed Sweep

• CRT = 6" square with 20kV acceleration potential • Vertical Deflection = Sensitivity: 5mV/div to 5V/div \pm 2%, Max. Sensitivity: 0.5mV/div \pm 4% at x 10 Magnifier extends, Bandwidth: DC to 100MHz (-3dB), DC to 5MHz (-3dB) at x 10 Magnifier extends, Modes: CH1, CH2, ALT, CHOP, ADD (DIFF) • Horizontal Deflection = A Time Base: 20ns/div to 0.5s/div \pm 2%, B Time Base: 20ns/div to 50ms/div \pm 2%, Max. VM-43

VM-910A

VM-900A

B & W Solid State monitor with 500 lines resolution; Portable (9.6"W x 9.2"H x 9.3"D) and lightweight (13.5 lbs.) Deflection linearity of less than 2%. Other specs similar to VM-906A. **\$180.00**

VM-910A 9" Monitor

The Hitachi VM-910A is a solid state black and white video monitor that displays video signals from Hitachi CCTV cameras, VTRs and other signal sources.

FEATURES

- **Reliability**
Solid state circuitry using an IC and silicon transistors ensures high reliability.
- **500 lines horizontal resolution**
Horizontal resolution in excess of 500 lines is achieved at picture center.
- **Stable picture**
Even played back pictures of VTR can be displayed without jittering.
- **Looping video input**
Video input can be looped through with built-in termination switch.
- **External sync operation** (available as option for U and C types)
- **Compact construction**
Two monitors are mountable side by side in a standard 19-inch rack.
- **Front Panel Controls**
Brightness, contrast, vertical hold, horizontal hold, power ON/OFF.

Dimensions: 8.6"W x 8.6"H x 9.2"D (219 x 219 x 234mm)

Weight: 13.2lb. (6 Kg.) **\$225.00**

VM-173

VM-129 12" Monitor

The Hitachi VM-129 is a solid state black and white video monitor that displays video signals from Hitachi CCTV cameras, VTRs and other signal sources. This model ensures stable picture with low distortion and high resolution. A DC restoration circuit is built-in.

FEATURES

- **Reliability**
Solid state circuitry using an IC and silicon transistors ensures high reliability.
- **700 lines horizontal resolution**
Horizontal resolution in excess of 700 lines is achieved at picture center.
- **Excellent linearity**
Deflection linearity is less than 1%.
- **Stable picture**
Even played back pictures of VTR can be displayed without jittering.
- **Looping video input**
Video input can be looped through with built in termination switch.
- **DC restoration switch**
- **External sync operation** (available by slight modification)
- **Front Panel Controls**
As on VM-910

Dimensions: 12.5"W x 11.2"H x 12.5"D (318 x 284 x 316mm)

Weight: 22 lb. (10 Kg.) **\$360.00**

VM-906A

VM-906A 9" Monitor

The VM-906A is an IC-incorporated, transistorized video monitor. It offers high resolution and high deflection linearity.

This model is a high-grade video monitor capable of fulfilling all requirements.

FEATURES

- **Reliability**
Solid state circuitry using an IC and silicon transistors ensures high reliability.
- **700 lines horizontal resolution**
Horizontal resolution in excess of 700 lines is achieved at picture center.
- **Excellent linearity**
Deflection linearity is less than 1%.
- **Stable picture**
Even played back pictures of VTR can be displayed without jittering.
- **Looping video input**
Video input can be looped through with built-in termination switch.
- **DC restoration switch**
- **External sync operation** (available as option for U and C types)
- **Compact construction**
Two monitors are mountable side by side in a standard 19-inch rack.
- **Front Panel Controls**
As on VM-910A

Dimensions: 8.6"W x 8.6"H x 9.2"D (219 x 219 x 234mm)

Weight: 14.3lb. (6.5 Kg.) **\$285.00**

VM-129

VM-173 17" Monitor

The Hitachi VM-173 is a solid state black and white video monitor that displays video signals from Hitachi CCTV cameras, VTRs and other signal sources.

FEATURES

- **Reliability**
Solid state circuitry using an IC and silicon transistors ensures high reliability.
- **700 lines horizontal resolution**
Horizontal resolution in excess of 700 lines is achieved at picture center.
- **Excellent linearity**
Deflection linearity is less than 2%
- **Stable picture**
Even played back pictures of VTR can be displayed without jittering.
- **Looping video input**
Video input can be looped through with built-in termination switch.
- **DC restoration switch**
- **External sync operation** (available as option for U and C types)
- **Front Panel Controls**
As on VM-910

Dimensions: 16.1"W x 15.2"H x 13.3"D (408 x 386 x 337mm)

Weight: 37.5lb. (17 Kg.) **\$395.00**

Rack Mount Adapters

VM-9-2RP Rack Panel (19") for mounting 2VM-910 or 906 **\$46.00**

CM-182

Hitachi 18" color video monitor (for NTSC) employing an in-line-type picture tube, provides sharp pictures with excellent color fidelity. Model CM-182 is ideally suited for broadcast and medical TV applications which demand accurate colorimetry. The CM-182 ensures a stable color presentation and excellent performance at a reasonable cost.

- Hitachi's innovative in-line-type color picture tube ensures reproduction of an extremely bright picture with vivid color.
- By incorporating integrated circuits, color synchronizing and color decoding circuits can reproduce and maintain delicate color hues.
- Aperture correction circuit offers sharp pictures without ringing.

Type	CM-182
Color System	NTSC
Color Decoding	3 axes decoding in narrow band
Video Input	1.0Vp-p (VBS) 75 ohms or high, BNC connector
Sync Input	
Resolution	Horizontal: More than 370 lines at center (at monochrome signal) Vertical: More than 350 lines at center
Signal-to-noise Ratio	More than 46dB
Deflection Linearity	Less than 2% (within the central zone of diameter = picture height)
CRT	18" In-line-type 90° Deflection 470EFB22 or equivalent
Ambient Temperature	0 to 40°C (32 to 104°F)
Power Requirements	U and C types 117 AC + /-10% 60 Hz, 80W
Dimensions (W x H x D)	464 x 440 x 459mm (18.3 x 17.3 x 18.1")
Weight	Approx. 30 kg (66 lbs.)

VM-45

CT1951
COLOR TELEVISION 19"

- Signal Tracker System
- Lighted Channel Indicator
- Quick-Start
- Memory Fine Tuning (VHF)
- Earphone and Record Jacks

Low Power Consumption

This powerful video system operates on only 88 watts average, 110-120 volts, 60 cycles AC.

Cabinet

Cabinet finish is wood-grain vinyl over wood products for beauty, strength and durability.

Dimensions: Model CT1951

Measures 25-1/4"W x 18-1/16"H x 18-3/4"D and weighs 48.5 lbs.

CT1951..... \$419.95

Quick-Start

Hitachi's Quick-Start feature provides the viewer with sound instantly and with the picture appearing in about 4 seconds after the set has been turned on. Hitachi is able to achieve this without having current flowing when the set is turned off.

Memory Fine Tuning (VHF)

Hitachi's Memory Fine Tuning means that the fine tuning only has to be set once for each channel. The television automatically memorizes the setting so the viewer never has to adjust it again, even when the channel is changed.

Solid State UHF Tuner

A special detent-type tuner on all Hitachi Color TV sets allows the viewer to select UHF stations

Dipole Antenna

This Hitachi set comes with a UHF loop and a Dipole antenna.

CATV/MATV

This Hitachi set comes complete with antenna connections providing for a conventional 300 ohm connection and for a 75 ohm connection used for cable television or master antenna distribution systems.

Earphone & Record Jacks

This Hitachi set comes equipped with a separate recording jack that provides for recording while listening to the TV sound. A separate earphone jack and earphones are included for private listening.

Lighted Channel Indicator

The channel selection indicator shows a large, lighted number making it easy to see which channel is on, even from across the room.

Listed by Underwriters Laboratories, Inc.

FCC Certified

- Multi TV Sound Jack • Signal Tracker System • VHF/UHF/36 Cable* Channels • Random Access Electronic Tuning with Infrared Remote Control • Detachable Remote Control • Channel On Screen

Cabinet The cabinet finish is wood-grain vinyl over wood products for beauty, strength and durability.

Dimensions: Measures 35-1/2"W x 22-7/8"H x 22-1/2"D and weighs 102.3 lbs.

Hitachi Video System All Hitachi Color Television sets feature a new generation, 100% solid-state video system. This system consists of miniaturized, high performance integrated circuits (IC's) similar to those used in advanced space flight technology. All the components have been matched and balanced to work together as a totally integrated video system. This system has been designed to use less electricity.

Multi TV Sound Jack The multi TV sound jack, with an optional MTS adaptor (model VTMS2) and your separate stereo Hi-Fi system will enable you to receive TV broadcasts with stereo sound. If the broadcast is bilingual, a touch of a switch on the MTS adaptor will change the language.

Signal Tracker System Hitachi's all new Signal Tracker System is the most technologically advanced color control system. Monitoring the signal the instant it enters the color TV, the Signal Tracker System adjusts and corrects to immediately compensate for incoming signal variations, including broadcast signal errors. The new Hitachi Signal Tracker System assures the best and most accurate picture at every instant.

Random Access Electronic Tuning with Infrared Remote Control Any VHF, UHF, or up to 36 cable* channels can be tuned instantly and precisely with pushbutton ease. Just enter any channel number and the channel changes quickly and silently.

The channel immediately appears, tuned electronically to its exact frequency with crystal controlled accuracy. The circuit automatically locks on the signal to prevent drifting or shifting.

The advanced remote control system employs a precise infrared beam and has pushbutton controls for turning the set on and off, random channel selection, channel up and down, raising, lowering or muting the volume. When the set is turned on, a "memory" recalls the volume level and last channel viewed.

Detachable remote control hand unit slips into a special pocket on the front where it will fully control the set. It can also be removed to function as a remote control hand unit and a cover automatically covers the hand unit storage area to provide a finished design appearance.

Low Power Consumption This powerful video system operates on only 112 watts average, 110-120 volts, 60 cycles AC.

Channel On Screen Each time the channel is changed or when the recall button on the remote control is used the channel number appears in the lower right hand corner of the screen. This easy-to-read display lasts for just a few seconds and disappears automatically.

CT4532A

Contrast Picture Control This Hitachi feature allows the viewer to touch up the contrast, brightness and color simultaneously, even with the Signal Tracker engaged.

CATV/MATV This Hitachi set comes complete with antenna connections providing for a conventional 300 ohm connection and for a 75 ohm connection used for cable television or master antenna distribution systems.

Hitachi's Better Backing 10/2/1 Television Limited Warranty Hitachi's limited warranty covers transistors for 10 years, picture tube and parts (except cabinet and accessories) for 2 years, and 1 full year of free carry-in service (in-home for 19" and larger color TV). For the full provisions of Hitachi's limited warranty on this product, see the warranty sheet which is available upon request at any Hitachi dealer.

CT2550\$759.95

*Local cable companies may require special adaptors for receiving regular or d"premium" programs.

CT4532A 45" PROJECTION TELEVISION

Hitachi 45" Color Television has large 45" diagonal screen — over 3 times larger than a 25" screen. With a picture bright enough for complete, comfortable viewing in a well lighted room.

FEATURES

- 36 Cable* channel capability • High brightness, wide-angle viewing on 45" diagonal screen • Hi-Fi sound from two 5" woofers and two 2" tweeters • Random Access Electronic Tuning w/Infrared Remote Control • Comb filter • Full audio and video input jacks • 10/2/1 Limited Warranty • Signal Tracker System™ • Channel and Time on Screen • Swing-away doors

CT4532A\$2895.95

COMPONENT TV

Hitachi has developed a complete new system. Now you can have a complete component video system that integrates all functions; video tape recorders, video discs, stereo audio systems, games, computers and TV receivers. The CT2020/3020 is the nerve center since it is first a high performance 20"/25" color TV receiver with full function remote control. In addition, a set of jacks on the back and function switches on the front are provided for switching to any of the many video sources.

HUGHES AIRCRAFT COMPANY

Industrial Products Division
6155 El Camino Real, Carlsbad, CA 92008
(619) 931-3000 TWX 910-322-1393

LARGE SCREEN DATA/GRAPHICS PROJECTOR

MODEL 700 GRAPHICS PROJECTOR

- High brightness, even in normal room light.
- High resolution.
- Real-time operation.
- Front or rear projection.

The Hughes 700 graphics projector combines high intensity illumination with the exclusive Hughes liquid crystal light valve to generate bright, high resolution, real-time projected displays ranging in size from 12 inches to 12 feet. It displays computer-generated alphanumeric, symbols and graphics in raster scan format. The inherent simplicity of this unique design results in a rugged, durable unit with long life and low maintenance cost.

For:

- Teleconferencing of all types.
- CAD/CAM design conferences.
- Computer assisted instruction.
- Computer training.
- Customer and sales support.
- Command and control.
- Simulation and modeling.
- Situation and status information.
- High resolution facsimile display.
- Graphics and alphanumeric displays for any large meeting.

Projection Mode:	Front or rear, operator selectable.	
Light Output:	Greater than 600 lumens (modulated, total useable area) Open gate: 1100 lumens.	
Display Characteristics:	Dark symbols on light background; operator may select colors, contrast and inverted modes.	
Contrast Ratio:	Greater than 20:1.	
Resolution:	Greater than 1000 TV lines per raster height.	
Input Signal:	Integral circuitry accepts most computer terminal video outputs including U.S. and European raster standards. Either composite video or video with external sync can be used.	
Total Raster Lines:	Field Rate	Interlace
250-625	50-75 Hz	1:1
525-1225	50-75 Hz	2:1
Video Amplifier Response:	30 MHz at 6 dB	
Line Power:	115 V, 1300 watts, 50/60 Hz	
Turn on Time:	Immediate; no warm-up period required.	
Mechanical:	Dimensions 10Hx20Wx27D in. (225Hx510Wx690D mm)	
Lamp Housing:	Pre-aligned modular unit.	
Cooling:	Ambient air fan directed 50°F to 104°F.	
Weight:	100 lbs (45 kg).	

Applications assistance in evaluating proposed uses is available.

COLOR MONITORS

9-SERIES COLOR MONITORS — In Line Gun CRT Type

Now, broadcasters have a second line of high-resolution color monitors to choose from; IKEGAMI's 9-Series Color Monitors. Like the RH-Series, these monitors were built to serve the professional. The 9-Series offer you in-line gun CRT's that do away with the bother of always having to adjust the convergence. You'll find the 9-Series easier to maintain with convenient pull-out panels on the front of the monitors. And to put you in step with the 80's, the 9-Series have a new streamlined look coupled with the merit of low power consumption.

FEATURES

- In Line Electron Gun: The CRT has an in-line electron gun; thus eliminating the need for convergence adjustments.
- High-Resolution CRT: The display produces crisp, precise images because the monitors use a fine-pitch, dot-mask CRT. A black matrix effect is provided on the CRT screen, enabling pictures to be displayed with a high contrast ratio even under bright lights — more than 600 TV lines at center.
- Pulse Cross Circuit: For observing sync signals, a pulse cross circuit with three functions has been included V. DELAY, H. DELAY, and V.H. DELAY
- Protective Circuits: The power supply and high voltage circuits are equipped with excess-current and excess-load protection, to prevent the CRT from being damaged. Sweep failure detection circuits are also utilized for CRT protection
- Signal Generator: Internal cross-hatch signal generator facilitates a convenient means of checking deflection linearity
- Video Input System: A 3 video input system is used with a selector switch located on the front panel
- Signal Demodulation: The IQ standard is used for color signal demodulation; remarkably faithful color signals are reproduced
- Automatic Frequency Phase Control: Extremely accurate color locking is possible with AFPC system
- Keyed Back Porch Clamp System: A keyed back-porch clamp system is used, to prevent black level fluctuation.
- Comb Filter: The monitors have a comb filter for maintaining high-resolution in color images. Color trap/comb filter selection is possible
- Degauss Circuit: Internal degaussing circuit is provided. In addition, the CRT is equipped with a magnetic shield to prevent interference from external magnetic fields.
- Residual Subcarrier Test: A switch is provided for checking if residual subcarrier is present on the incoming signal
- Matrix Switching: A matrix switching circuit is provided to reproduce color similar to a TV receiver or NTSC standard
- Selectable Time Constants: Three types of horizontal-AFC time constants are selectable
- Optional Functions: RGB operation, Switching between RGB and NTSC operation

10" SERIES RH MONITORS

The TM10-9RH portable professional color monitor complements Ikegami's broad range of 14" (13V), 20" (19V) and 25" (23V) broadcast color monitors. Using a 10" (8.5V) high resolution shadow mask cathode ray tube with a self-converging in-line gun, the TM10-9RH can be operated from AC or DC Power and is available in cabinet or rackmountable versions. The rackmountable versions are 8-3/4" high and are furnished in single, dual, single with adjacent WFM space or single with adjacent Vectorscope space configurations.

American standard matched phosphors are utilized in NTSC versions of the TM10-9RH. Features including pulse cross, keyed back porch clamp, pre-set contrast/hue/saturation/brightness controls, on-demand degaussing, aperture correction, dual video inputs, sync mode selection, color/monochrome selection, individual electron gun cut-off switches, remote control capability, etc. are standard.

COLOR MONITORS

IKEGAMI 10-SERIES HIGH RESOLUTION DELTA GUN COLOR MONITORS

TM14-10RH/TM20-10RH

The 10-Series of high resolution color monitors were developed specifically for higher image quality in TV production and are available in 13V and 19V versions. The high-resolution delta-gun CRT has realized high-resolution, high brightness, and the newly developed convergence circuit greatly facilitates convergence adjustment and operation.

Functions include:

- 3 video inputs each with bridging BNC connectors
- External sync input with a bridging BNC connector
- Pulse cross for examination of horizontal and vertical blanking interval
- Underscan/overscan selection switch
- Switchable AFC time constants for 2 msec, 0.5msec, and 7msec
- Push-button control for degaussing CRT Shadow Mask
- Blue phase verification — The Blue Gun On/Off switch facilitates chroma level and hue adjustments
- Preset controls for contrast, brightness, chroma level, and hue
- Residual sub-carrier verification, for evaluation of input signal condition
- Color/monochrome selection switch, to facilitate white balance adjustment
- Trap/Comb selection switch
- Corrective Matrix permits rotation of color decoding vectors towards NTSC aim points
- Multi-turn potentiometers are used for RGB Background controls, GB Gain control, Preset controls, and Height/Width controls for easy operation
- A tally lamp is provided

19" Rackmountable

TM14-10RH's are available in cabinet or rack configurations occupying 10-1/2" height. The TM20-10RH configurations are available in cabinet or rack configuration occupying 15-3/4" height.

RH SERIES COLOR MONITORS

For professional high-quality color reproduction IKEGAMI "RH" Series Color Monitors TM14-2RHA and TM20-8RH.

These two high-resolution color TV monitors are faithfully serving hundreds of satisfied customers around the world where precise color monitoring is an absolute necessity. The comb filter in the decoder, the high-resolution CRT, the excellent stability and durability, and the facilitated maintenance . . . all these merits put the TM14-2RHA and TM20-8RH at the top of their field.

Installable in 19" rack mounts, IKEGAMI "RH" Series Color Monitors are widely applicable for color monitoring from the studio, control room, telecine room to remote O.B. van, and other uses.

FEATURES

- **High resolution CRT**
 High-resolution color cathode ray tube provides bright, clear pictures. Highly condensed dots (dot pitch: 1/2 (TM14-2RHA), 1/1.5 (TM20-8RH) of that of conventional color monitors) promise excellent picture quality — more than 600 TV lines at center.
- **19" rackmount**
 Installable in 19" rackmount by applying chassis tracks.
- **Comb filter**
 A comb filter prevents deterioration of resolution in reproducing color signals. The number of TV lines is more than 600 at the screen center.
- **AFPC system**
 An AFPC (Automatic Frequency Phase Control) system is adopted in the color lock circuit for accurately detecting color phase demodulation and ensuring faithful color reproduction.
- **Pulse cross circuit**
 A pulse cross circuit is contained to facilitate VTR sync signal checking. The vertical delay and horizontal delay can also be effected independently.
- **Sync gate lock system**
 The sync gate lock system in brightness pulse causes no influence on linearity. Also, since picture output is DC-restored by a feedback gate clamp, the black level is stabilized and input signals are always faithfully reproduced.
- **Normal/underscan function**
 A normal/underscan function is provided.
- **Preset brightness/contrast**
 By presetting, the fixed level of brightness and contrast can be gained merely by switching, resulting in easy operation.
- **Remote control**
 Color/monochrome selection, video input selection, sync selection, and black level compensation of setup signal can be remote controlled.
- **Active convergence circuit**
 Adopting an active convergence circuit, screen adjustment has been greatly facilitated.
- **Countdown pulse drive system**
 Employing a countdown pulse drive system in the vertical sync circuit, excellent interlacing is assured, while vertical sync regulation becomes unnecessary.
- **Degauss circuit**
 An incorporated degauss circuit avoids the influence of a magnetic field. Wherever a monitor is installed, by merely operating a switch, any magnetic influence can be shut out.
- **Optional functions**
 1. RGB operation
 2. Switching between RGB and NTSC operation
 3. R-Y and B-Y signal outputs (TM14-2RHA)

TM20-8RH

TM14-2RHA/N

14" and 20" Series 8RH Monitors - Delta Gun Tube

- TM14-2RHA/N. 14" NTSC Rack Mount, Less Case and Chassis Tracks
- TM14-2 RHA/N/RGB. 14" NTSC/RGB Rack Mount, Less Case and Chassis Tracks
- TM20-8RH/N. 20" NTSC, Less Case, Requires T-TM20 for Rack Mounting
- TM20-8RH/N/RGB. 20" NTSC/RGB, Less Case, Requires T-TM20 for Rack Mounting

Optional Accessories for Series RH

- T-TM14. Rack Mount Chassis Tracks for all TM14-2RHA
- T-TM20. Rack Mount Chassis Tracks for all TM20-8RH
- HC-TM14. Case for all TM14-2RHA
- C-TM20. Case for all TM20-8RH

3-Series Monochrome Monitors

- New, professional monochrome monitor using high-resolution electron gun CRT
- IC and silicon transistor circuitry
- Excellent geometry and linearity
- Horizontal and vertical delay switches
- Underscan switch
- Keyed back-porch clamp system
- Two video inputs
- Modular construction, quick-disconnect circuit boards common to 9" and 14" CRTs
- Remote operation — Tally on/off, video A/B, and sync INT/EXT
- Switchable DC restoration

Ikegami's new 3-Series—the PM9-3H and PM14-3H—are professional monochrome monitors. The 3-Series have been designed to give a studio engineer the equivalent of a fine precision instrument for monitoring important reference pictures. The 3-Series offer superior performance, extremely high quality, and compact construction unmatched by other monochrome monitors. In addition, the 3-Series are built specifically for continuous operation in broadcast television applications.

The 3-Series monitors are a unique blend of high reliability, ease of maintenance, superior picture quality, energy efficiency, and low power consumption. The monitors provide years of service-free use. They employ only the best components. The monitors also incorporate the latest technology, ICs, and silicon transistor circuitry.

The 3-Series monitors have modular circuit boards which can be quickly disconnected for ease of maintenance and operation.

The PM9-3H is a 9" monitor available in a dual rack mount version. Either the left or the right positions can be left blank for insertion of a waveform monitor.

The PM14-3H is a 14" monitor with a cast aluminum front for improved rigidity and appearance. The design of the monitor is compatible with VTR over-console mounting applications. Rack mount versions are also available. Design and styling of the PM14-3H drop-in model are compatible with Ikegami TM14-9RH and TM14-2RHA color monitors. The video drive circuit of the monitors uses a keyed backporch clamp system to prevent black level fluctuations. The monitors also offer differential gain distortion of less than 5% with 30Vp-p of cathode-ray tube drive.

The PM14-3H provides horizontal and vertical delay switches for displaying a pulse cross pattern; the PM9-3H has a single switch for the same function. In this mode, brightness is automatically increased for better observation of the sync pulses.

Other standard features:

- Underscan switch — permits inspection of picture edges
- Tally light
- Two video inputs (A/B)
- 120/240V AC 50/60Hz operation
- EIA or CCIR scanning standards operation

PM14-3H

PM9-3H

Specifications

■ GENERAL

Power	AC 100-120-220-240V ±10% 50-60Hz approx. 30VA
Ambient temperature	15°C ~ +50°C 90% or less relative humidity (non condensing)
External dimensions	PM9-3 222(W) x 213(H) x 285(D) mm PM14-3 483(W) x 265(H) x 340(D) mm
Weight	PM9-3 approx. 7 kg PM14-3 approx. 15 kg
Connectors	Video input — BNC type (2 systems) Sync input — BNC type (1 system) Remote input
Front panel controls	Video A/B Sync INT/EXT H and V delay switches (single switch for PM9-3) Size NOR/WIDE Contrast Brightness Power ON/OFF

■ RATING

Input signal	2 video inputs 1 sync input
Input level	Video signal VS 1.0Vp-p or (±) 7Vp-p positive Sync signal 1~4Vp-p
Input impedance	Video input High impedance. Bridge connection (Return loss 40dB (100Hz~4.2MHz)) Sync input High impedance. Bridge connection (Return loss 40dB (5MHz))
Output level CRT	30Vp-p (at CRT drive voltage) PM9-3 230BTB4 PM14-3 340BK84
Phosphor colorimetry	P4 phosphor, 9300 K
Operation	continuous
Video display screen	NOR/UNDER switching system pulse cross circuit provided

■ PERFORMANCE

Mechanical vibration	No disturbance picture by shock, i.e. microphonic, etc., when dropped spontaneously from 50mm height
Resolution	Center More than 600TV Lines Corner More than 500TV Lines
Power voltage fluctuation	Should the power voltage fluctuates in the range of ±10% against the rated input voltage, monitor is operated stable and picture quality does not deteriorate

■ VIDEO CIRCUIT

Max. gain	Max. contrast More than 34dB
Frequency response	100kHz reference. 60Hz~8MHz +3dB (at 30Vp-p of output level)
Waveform	(When square wave of rise time (t _r) 0.05μsec is supplied at video input connector.) Rise time 250kHz, Less than 0.1μsec Overshoot 250kHz, Less than 8% Sag 60Hz, Less than 5% Less than 5% DG (at rated output 30Vp-p)
Linearity	
Noise	Coherent noise -46dB Hum noise -55dB Others -55dB (except blanking period) Aboves measured at output terminal in condition of terminating video input 75Ω and contrast VR maximum

■ DEFLECTION CIRCUIT

Sync stability	The stability of operation shall be met for the following conditions (1) Internal sync a Video input level changed against rated value. -10dB b For video amplitude changes of 4) to 120% and sync levels greater than -6dB (0.15 to 0.3V sync) (2) External sync Sync signal input level 1~4Vp-p
Horizontal AFC time constant	Approx. 2msec
Deflection distortion: High voltage circuit	less than 2% of picture height
(1) High voltage:	12kV
(2) High voltage fluctuation:	±2% in range of 0~350μA as 100μA reference

BARCODATA VIDEO PROJECTION SYSTEM

Exclusive Distributors of all Barco/Barcodata Video Projectors in the Western Hemisphere.

BARCODATA 32 THREE-LENS REFRACTIVE OPTICS

Special Features

- Registration: 13-zone (1%).
- Accepts positive or negative logic.
- Horizontal syncs delay.
- High/low intensity.
- Improved computer blue resolution (green in blue ratio adjustable from 0 to 50%).
- Scanning rates: NTSC (525 lines, 60 field), CCIR (625 lines, 50 field).
- Horizontal: 15625-17500 (standard frequency); 16500-32000 (second frequency).
- Vertical: 50/60 Hz automatic adjustable up to 100 Hz (standard frequency); 60-100 Hz (second frequency).
- Interlaced or non-interlaced syncs.
- Self-diagnostic indicators.
- Keystone correction: $\pm 25^\circ$.

General Characteristics

- Model and Type: BARCODATA three-lens refractive optics.
- Video Format: Multi-standard—PAL, SECAM, NTSC 3.58, NTSC 4.43. Automatic sense and display.
- Size: 9.25" x 22.25" wide x 32.6" long.
- Light Weight: 81.5 lbs.
- Power Requirements: 110 VAC/220 VAC, + 10% -15%. Frequency independent 40 Hz to 100 Hz.
- Power Consumption: 250W maximum.

Optical Characteristics

- Light Output: maximum 450 lumens.
- Minimum Screen Size: 3' x 4'.
- Maximum Screen Size: Using Delta II-D lenses 6' x 8'. If Delta II-M lenses are used it will enlarge to 18' x 24'.
- Geometrical: Error measured horizontally and vertically $\pm 1\%$.
- Throw Distance: 1.5X screen width.
- Screen Application: Front or rear projection. Flat or curved screen (Flat screen—180° viewing angle without loss of brightness).
- Simplified Scan Reversal: Capable of ceiling, floor and rear-screen applications.

System Controls

Local

- 9-zone registration; focus—red, green, blue; tube cut-off switch—red, green, blue G2 voltage—red, green, blue; contrast; brightness; color; tint (NTSC mode only); decoder (NTSC 3.58/NTSC 4.43); video/RGB; fast/slow sync select (for VCR use).

Remote: (up to 300 feet).

- Controls on Remote Control Box: Brightness contrast, saturation and hue controls; switch for following modes: RGB Analog (S on green); RGB TTL; RGB Analog external S; video; (NTSC mode only); decoder (NTSC 3.58/NTSC 4.43); fast/slow sync select (for VCR use).

Vertical and horizontal scanning frequencies; standard and adjustable frequencies select.

List Price \$16,465.00 FOB,NY

"THE SWITCHER" VIDEO AND DATA SOURCE SELECTOR

FEATURES

- Especially designed for use with the BARCODATA projector offering a standard video and data frequency range (from 15kHz to 32kHz).
- Completely modular design adaptable to your needs.
- Accepts up to 10 plug-in input modules in any combination between Composite Video, RGB TTL and RGB Analog.
- Immediate remote controlled access to any input.
- Preset contrast level and picture positioning (phase) for each input.
- 19" rack compatible, 3 units height.

The Video and Data Source Selector is a tailor made solution offering immediate remote controlled access for up to 10 different sources (Video, RGB, TTL, RGB Analog) connected to the BARCODATA.

INPUTS

Composite Video

Video: BNC
Audio: DIN (stereo)

RGB TTL

D9 connector

RGB Analog

4 x BNC for RGB Sync.

Each input module can be plugged into every input slot. The BARCODATA is given all information to adapt to the corresponding input. An internal power supply provides the necessary voltage + 18 V and + 5 V.

OUTPUTS

Composite Video

Video: BNC
Audio: DIN (stereo)

RGB TTL

D9 connector

RGB Analog

4 x BNC for RGB sync.

INTERACTIVE IMAGE COMMUNICATIONS SYSTEMS

DISCON® 1000 Integrated Videographic Teleconferencing System Camera Station/Control Center

DISCON 1000 is the most powerful member of the DISCON family. A fully integrated videographic teleconferencing system, DISCON 1000 offers all features inherent in other DISCON systems and more. Using ordinary telephone lines, users can touch a stylus to the DISCON Interactive Graphics Display to transmit and annotate any image that can be captured by a video camera or created by a video compatible professional computer. DISCON 1000 is the ideal communications tool for decision-making, problem solving, crisis management, and education.

DISCON 1000 provides a 19-inch interactive graphics display, separate video outputs for operator and audience, the ability to have two separate FastScan** transceivers, and substantial expansion capability. A typical DISCON 1000 configuration includes a Document Station and Control Center. Custom features, packaging, operating software, and room design are available.

The Control Center mounted graphics processor features multi-point communications controller, digitizing sensor surface with switching control for video input and output, seven color graphics option and color background image displayed on 19" RGB monitor.

DISCON 1000 Control Center \$62,000.00

The Camera Station includes viewfinder monitor, bogan lighting (high resolution color camera is extra).

DISCON 1000 Camera Station \$2,825.00

DISCON® 725 Compact Videographic Teleconferencing System

DISCON 725 is a compact, modular, integrated teleconferencing system designed for the small conference room, desktop, or even the plant floor. DISCON 725 combines the full-color, high resolution transceiver capabilities of FastScan™ with the seven color annotation capabilities of the DISCON 500.

Any image that can be captured by a video camera or created by a video compatible professional computer can be shared by decision-makers at remote locations. With a touch of the stylus to the DISCON Interactive Graphics Display, users can draw directly onto the video image and instantly transmit graphics over ordinary telephone lines. The DISCON display can also be used as a color display terminal for a professional computer.

DISCON 725 \$44,000.00

DISCON® 500 Videographic Annotation System

The DISCON 500 is designed to operate in conjunction with a customer's own pre-installed freeze-frame video conferencing system and provides the same interactive graphics capability as the DISCON 1000. It also operates as a stand-alone audiographics system utilizing the same unique color and symbol characteristics as described with the DISCON 1000. The DISCON 500 consists of a display unit including a stylus-controlled sensor surface, a color monitor and an electronic microprocessor module. While the DISCON 500 does not provide error correction and network control of the background images supplied by the customer's freeze-frame system, it does retain

these features for the superimposed graphics which conference participants add to such images. The DISCON 500 offers the same ability to annotate in multiple colors and symbols as the DISCON 1000. The DISCON 500 can also be used as an "electronic blackboard" in which there is no background image. Principal blackboard applications are expected to be in tele-teaching and as an added component to ordinary voice-only telephone conferences.

NTSC System \$23,300.00
PAL System 24,800.00

TELESTRATOR® 440

The Model 440 includes all of the Model 100 capabilities plus an ability to work in seven colors. The 440 also permits the use of a large number of standard and custom symbols for specialties, such as sports, weather, current events and business news, together with many other functions, such as automatic straight line-connect, automatically sized and shaped rectangles, and other drafting aids. In addition, Model 440 can be supplied with custom software capable of producing animated effects. This system is designed for pre- and post-production settings, as well as for "on-air" use.

FEATURES

- 13-inch diagonal color monitor • Stylus selection of modes and symbols • Symbol and mode indication in upper right corner of screen on Local display only • Local stylus-selectable crosshair for exact stylus positioning • Moving symbol mode ("write-thru" cursor) • Eraser with exact-size symbol • Adjustment-free stylus calibration • Digital accuracy and repeatability • Color options • Variable symbol size option • Variable symbol orientation option • Symbol animation option • Customized menu selection with personality modules • Remote control options • High resolution (1024 x 480) for smooth graphics

Basic System including 12 customer-specified standard symbols and expansion capability.

NTSC System \$19,600.00
PAL System 20,600.00

TELESTRATOR® 100 Monochrome Graphics (colorizable)

The TELESTRATOR systems allow television commentators and others communicating with video audiences to instantly add explanatory markings, annotations and symbols to live scenes, instant replays and pre-recorded video materials. The Model 100 is a simple to operate monochrome system that is a natural for use during live coverage of events, i.e., news, sports, presentations.

FEATURES

- 13-inch diagonal color monitor • All symbol and mode selection by stylus • Symbol and mode indication in upper-right corner of screen on Local display only • Local crosshair (stylus selectable) for exact stylus positioning • "Write-thru" cursor mode—moving symbol • Eraser with exact size symbol • Automatic stylus calibration—no adjustments required • Digital accuracy and repeatability • High resolution (1024 x 480) for smooth graphics

Complete NTSC (525 line, 60Hz) system \$13,500.00
Complete PAL (625 line, 50Hz) system 14,500.00

JENSEN SOUND LABORATORIES

4136 North United Parkway
Schiller Park, IL 60176
(312) 671-5680 (800) 323-0707

AUDIO/VIDEO COMPONENTS

AVS-3250 Video Monitor

Jensen Video Monitors are designed to provide color image reproduction usually found only in the professional studio. The precise definition and brilliant picture of the 25" Jensen Video Monitors are the result of uncompromising quality in every detail of engineering and manufacture. High technology active circuitry stabilizes the picture, while a comb filter is employed to enhance luminance and resolution. Color and image balance for key video parameters can be controlled by preset circuitry or manually varied. Offered in true monitor format, without audio or tuner circuitry, this monitor provides the maximum flexibility for use in video or personal computer applications.

AVS-3250 \$890.00

AVS-5250 Speaker System

Jensen's Audio + Video Speaker Systems embody the latest in loud-speaker technology and design. A specially designed low frequency system consisting of a 5-1/4", polypropylene cone driver along with a passive radiator produces bass response normally found only in the most sophisticated audio systems. Brilliant high frequency performance is ensured by the 1" soft dome driver with high energy samarium cobalt magnets. All driver magnetic structures are specially shielded to prevent interference with the operation of video monitors or television receivers.

AVS-5250 \$230.00/pr.

AVS-6200 Hi-Fi Stereo Videocassette Recorder (VHS)

GENERAL FEATURES

- 139-channel, cable-ready frequency synthesizer tuning with remote control channel selection and switchable automatic frequency control
- Wireless infrared remote control with all primary functions and direct access channel selection
- 8-event/14-day programmable recording with clock/timer featuring repeat function, tape speed selection and backup power for memory/clock functions
- 4-digit electronic tape counter/time remaining indicator for record and playback modes
- Instant record/sleep timer feature for recording up to 4 hours and 59 minutes
- Tape search using counter memory or auto-encoded cue signal detection for locating the start of desired programs
- Insert editing capability on video, Hi-Fi and selectable normal audio tracks
- Up to eight hours of continuous audio + video or audio-only recording
- Microprocessor-controlled tape transport with feather-touch operation
- Display dimmer switch
- Quartz-locked, direct drive head drum and capstan motors. Assures precise speed accuracy with low wow and flutter
- RF output for connecting AVS 6200 to TV (channel 3 or 4)
- Multi-pin input connector for remote video camera
- Rear panel AC outlet (unswitched)

VIDEO FEATURES

- Double-gap integrated 4-head configuration. Delivers high quality video recording and playback in normal and special effects modes
- Noise-free field-still, frame advance and slow-motion playback
- Dynamic Aperture Control (DAC) switch. Assures increased picture clarity
- High video signal-to-noise ratio (greater than 45dB). Provides improved picture quality

AVS-3250 VIDEO MONITOR w/AVS-5250 SPEAKERS

AVS-6200 HI-FI STEREO VCR

- Horizontal resolution at 240 lines. Delivers better image sharpness
- 8-speed tape transport with forward search and reverse speeds (1/40, 1/20, 1/10, 1/5, 1X, 3X, and 7X normal speed)
- Three playback speeds (SP, LP, and EP)
- Two recording speeds (SP, EP)
- Automatic backspace recording. Provides smoother transitions between scenes
- Normal and slow tracking controls
- Picture sharpness control

AUDIO FEATURES

- AFM (audio frequency modulation). Assures high fidelity, low noise, wide dynamic range audio recording and playback
- Dolby®B noise reduction for stereo normal recording and playback (compatible with conventional VHS equipment)
- Stereo simulcast recording capability
- Audio limiter. Automatically adjusts recording levels on normal and Hi-Fi tracks (switchable on Hi-Fi track)
- Two separate stereo audio outputs: Hi-Fi only, Hi-Fi/normal (mixed output, continuously variable from front panel)
- LED recording level and peak level indicators
- Stereo headphone jack for private monitoring of Hi-Fi, normal or mixed audio outputs
- Audio dubbing on normal tracks with separate left and right channel MIC inputs

AVS-6200 \$1399.00

PORTABLE BRIEFCASE SYSTEM TBR-160U

JVC®

FEATURES

- Custom Attache Case Housing — 18-1/4"H x 14"W x 6-1/2"D
- Built-In Compartment for Literature, Notes, Pens, etc.
- BR-1600U VHS Videocassette Recorder
- TM-63U 5" Color Monitor
- Self-Contained Battery Power

TBR-160U

TBR-160U VHS PRESENTATION SYSTEM

A complete VHS video system in a briefcase, the TBR-160U is ideal for sales presentations, training programs — any one-on-one video application. The TBR-160U consists of a super-small VHS recorder (BR-1600U) and a 5" color monitor (TM-63U), battery system and accessories — all wired and ready to go in an attractive briefcase.

Compact 2-6 Hour VHS Recorder/Player.

The BR-1600U is the smallest and lightest 2-6 hour videocassette recorder JVC has ever offered. It uses standard VHS cassettes (available everywhere) and can playback tapes recorded in the 2, 4, or 6 hour modes. Its 4 video heads assure top picture quality. Connections are provided for not only the system's 5" monitor, but also for an ordinary TV receiver. A plug-in remote control is also included.

5" Color Monitor. As a compliment to the compact video deck, JVC engineers developed a companion monitor that is not only compact in size, but has excellent picture quality. The TM-63U monitor contains a flat-surface 5" (diagonal) in-line picture tube for high resolution and vivid, true-to-life colors. Audio signals are reproduced clearly through a built-in 3-1/8" speaker.

Exclusive Power System. One key to the convenience of JVC's new briefcase system is the exclusive power pack which supplies power to both the VCR and to the monitor. Termed the BBTR-160U, this 2 ampere hour NiCad pack is designed to power both units for about 1 hour continuously, before recharging. A micro charger is supplied with the system. In addition, an optional AC adaptor (AA-P1663U) is also available.

Attractive Briefcase. All components are housed in an attractive briefcase. Also there's a compartment provided which is designed for papers, literature, etc. All necessary cables are provided, and the system is fully wired and ready to go.

Provided Accessories

BR-1600U Portable VHS recorder/player; TM-63U 5" Color Monitor; BBTR-160U Power system including: BB-16 NiCad battery, CB-16 Battery charger, SSB-16 Shoe Cable Adaptor, CN-100U Cable Assembly (RCA-RCA); ATTAC-10 Briefcase

PRICING/ACCESSORIES		Suggested List Price
TBR-160U	Portable Briefcase System	\$1620.00
TBR-160AC	Portable Briefcase System (AC version — includes AC Adaptor instead of DC Battery System)	1440.00
BBTR-160U	Rechargeable Battery System for TBR-160U	300.00
AA-P1663U	AC Adaptor for TBR-160U	120.00

COLOR VIDEO MONITOR/RECEIVER C-2082UM

JVC®

FEATURES

- 19" Diagonal Color Monitor/Receiver
- Comb Filter for Improved Color and Detail
- Dual Audio Channels
- Skew Control
- VC-202U Monitor Cable Included

C-2082UM

C-2082UM 19" VIDEO MONITOR/ RECEIVER WITH STEREO SOUND

To separate the chrominance and luminance components, an improved comb filter is used — this results in better color and finer detail. With video signals, the C-2082UM has a maximum resolution of 350 lines, and with broadcast signals its maximum resolution is 330 lines.

Dual audio channels make the C-2082UM ideal for use with a VCR equipped with stereo sound. External speaker terminals are provided for the connection of a pair of component-quality speakers to make the most of the improved 2-channel audio amplification circuit; a switch is provided which allows switching between these external speakers and the built-in speakers.

And being a receiver, direct tuning of VHF and UHF broadcast frequencies is possible with 12 preset stations selectable by pushbutton tuning. Front panel controls are provided for switching between the sources connected to the three rear sets and one front panel set of video and audio jacks.

BNC connectors are used for the connection of video components, and a standard 8-pin input/output connector is provided for the connection of an additional VCR. The video and audio signals of the channel to which the C-2082UM is tuned are output from this terminal as well as from the TV Out Jack

A unique skew control is provided; this is to eliminate the distortion at the top of the picture which sometimes occurs when a stretched video tape is played back.

The two pairs of connectors are each linked for the bridge connection of video components; input and output components can be connected to either of each pair of connectors.

For convenience when working with monochrome video signals, color can be switched off.

Suggested List Price \$795.00

SPECIFICATIONS

Type:

Color Video Monitor/Receiver

Reception System:

NTSC system

Channel Coverage:

VHF 2 ~ 13
UHF 14 ~ 83
(twelve channel preset system)

COLOR VIDEO MONITOR/RECEIVER C-1483UM

C-1483UM

FEATURES

- Modern, Professional Styling
- Wireless Remote Control with Volume, Channel Select, Power On/Off
- High Focus II CRT
- Comb Filter
- Electronic Tuner
- 8-Pin EIAJ Input
- BNC Video Input (Loop-Thru)

C-1483UM COLOR VIDEO MONITOR/RECEIVER

The C-1483UM is designed for use by institutions and videophiles who require more features, reliability and higher resolution pictures than those offered by a regular TV. It has an electronic VHF/UHF tuner, so 83 channels can be received and it has input/output and audio/video terminals for the connection in a comprehensive audio/video system. Features that add to its cost/performance are its improved resolution comb filter, digital display of channel and audio level and its full-function remote control, provided for ease of operation which is particularly useful when used in a visual training setup.

Newly-Developed U Mark-IV Chassis uses the high-density circuitry making possible compact styling, a lower power consumption and longer service life.

Comb Filter Resolution of 330 lines with video signals and 300 lines with broadcast signals for better color and finer detail.

83-Channel Electronic VHF/UHF Tuner with scan tuning from the remote control or front panel; 12 channels can be preset for direct tuning via the remote control.

Two Input BNC Connectors (each linked for the bridge connection) are available for the connection of video components, and an 8-pin EIA VTR socket is provided for the playback and recording of an additional VCR. The mode select buttons (TV, VIDEO or VTR) are provided on the front panel. The signal selected by the mode button is always output at the LINE OUT terminal on the rear panel for easy editing/dubbing/mixture of video sources.

Remote Control enables direct channel selection or scan tuning; it also makes possible volume control and instantaneous muting.

Front Panel Digital Display of channel and audio volume.

Superior Sound with improved audio circuit and 3" diameter circular speaker.

COLOR VIDEO MONITOR TM-R9U

JVC®

FEATURES

- Two Selectable Video Inputs
- Internal/External Sync, Comb Filter
- Underscan, Pulse Cross
- Blue Check Switch
- Tally Lamp
- Remote Control of Front Panel Switches
- AC or 12/24 VDC Power Supply
- .47mm Dot Pitch In-Line Picture Tube
- Carrying Handle
- Double Rack Mount Option

TM-R9U

TM-R9U 9" COLOR MONITOR

The TM-R9U is a multi-purpose monitor designed for a wide variety of applications and suitable for use in even the most demanding broadcast environments. Whether in a rack mount studio installation, or in a portable configuration, the TM-R9U offers the features that professionals demand in a high-performance, modestly priced monitor.

Excellent Picture Quality. A newly-developed color demodulator and comb filter provide accurate color reproduction along with excellent definition. The TM-R9U boasts a high resolution of more than 310 lines. Variations in black level are suppressed by a pedestal clamp system.

Dual Video Inputs, Sync Input. Separate loop-thru video inputs/outputs are provided for two separate video sources. These may be switched either from the front panel, or from an external remote control switch (customer provided) connected to the remote terminal on the rear panel.

A loop-thru input is also provided for Ext Sync. Termination (75 ohm) are provided for all loop-thru inputs.

Pulse Cross, Under Scan, Blue Check.

The pulse cross switch shifts sync phase so that the blanking portions of the video signal (horizontal and vertical) can be viewed on the screen.

For more accurate monitoring, the scan size can be switched to the underscan mode — either from the front panel, or by remote control. In addition, a blue check circuit facilitates adjustment with a color bar signal.

Metal Cabinet, Compact Size, Rack Mount.

The TM-R9U is the most compact 9" studio-type monitor offered to date. It is housed in a rugged, metal cabinet which can be mounted in a standard 19" rack, using the optional RK9U rack mount kit. With this kit, two TM-R9Us can be mounted side by side, or one TM-R9U can be mounted next to a waveform monitor (by adding the ADP9U adaptor).

PRICING/ACCESSORIES		Suggested List Price
TM-R9U	9" Color Monitor	\$700.00
RK-9U	Rack Mount Kit for TM-R9U Monitor.....	120.00
ADP-9U	RK-9U Adaptor for Waveform Monitor	95.00

SPECIFICATIONS

Input Signal:

Video x 2: VS 1.0V p-p or V 0.7V p-p (positive). Audio x 2: S 1-4V p-p or VS 1.0V p-p

Input Impedance:

Video signal: 75 ohm or high impedance (switchable)
External sync: 75 ohm or high impedance (switchable)

CRT:

9" stripe flat-face sharp-corner medium-high resolution tube

Active Screen Size:

Horizontal 173 (6-13/16")
Vertical 136 (5-3/8")

Power Supply:

AC 120V, 60Hz;
33W (typical) DC 12V/24V;
26W (typical)

Dimensions:

8-13/16"W x 8-3/4"H x 13-5/16"D
(223 x 222 x 348mm) (except rubber stand, connectors and power plug)

Weight:

23 8 lbs. (10.8kg)

Resolution:

More than 310 lines at center

Frequency Response:

Up to 5MHz more than -3dB with 100kHz as reference (including aperture correction)

S/N:

Better than 50dB (except sync noise)

FEATURES

- 350 Line Resolution
- Comb Filter
- Two Video Inputs (loop-through)
- 8-Pin EIAJ & BNC Connectors
- 4" Round Speaker (1 channel)

TM-2084U

TM-2084U

19" COLOR VIDEO MONITOR

People are increasingly using 1/2" video-cassette recorders for applications in which only a few years ago they would have used 3/4" U-format equipment; this is because of the ease of use of 1/2" recorders and the wide range of applications that they are suitable for, achieved with lower running cost and no loss in signal quality. However, the new high-quality multi-function 1/2" equipment uses connectors with a different standard; this is why JVC has developed the TM-2084U, a high-performance 19" video monitor with BNC as well as 8-pin EIAJ input terminals.

A special comb filter. Provided in the TM-2084U to separate the chrominance and luminance components more fully for greater detail and better color than a conventional monitor

Two pairs of bridge-connected video input terminals. One pair with BNC terminals and one pair consisting of a BNC terminal for output and an 8-pin EIAJ exclusively for input. Selection between the sources is done using front-panel pushbuttons with LED indicators showing which input is being used

Bridge-connection of video component. Using both pairs of terminals is possible, with switchable 75 ohm terminal resistors built into the TM-2084U; this is convenient, making it possible to connect to a multi-monitor system

Controls are provided. For adjustment of picture sharpness, color density and tint as well as brightness, contrast and V-hold

SPECIFICATIONS

Suggested List Price \$675.00

FEATURES

- 14" Flat Face, In-Line Sharp Corner Picture Tube
- 2 Composite Video Inputs (BNC Loop Thru)
- Separate RGB Analog Inputs (BNC Loop Thru)
- Under Scan
- Notch Filter with On/Off Switch
- Internal/External Sync
- Color/B & W Switch
- 400 Line Horizontal Resolution
- Remote Control Function
- Tally Light on Front Panel
- Degaussing Switch on Front Panel
- Comb Filter
- Metal Cabinet (Rack Mount Option)

TM-R14U

TM-R14U 14" COLOR VIDEO MONITOR

The TM-R14U is a compact, high quality multi-function color video monitor designed for a wide variety of broadcast and professional applications. It's two composite video inputs and RGB analog inputs allow it to be connected to almost any video installation.

Excellent Picture Quality. The TM-R14U utilizes a flat face, in-line sharp corner CRT with a dot pitch of 0.43mm for exceptional resolution. Picture sharpness is further assured through the use of a high quality comb filter which separates luminance and chrominance components. A notch filter (switchable) effectively eliminates chrominance interference, thus further improving picture quality. Horizontal resolution is greater than 400 TV lines.

RGB And Composite Video Inputs. Two pairs of loop-thru composite video inputs are provided, each with 75 ohm termination switches. In addition, non-composite analog inputs are provided for the individual red, green, and blue channels using BNC connectors. Signals from many graphics units and three-tube color cameras may be connected to the RGB inputs. When viewing composite video signals, the color circuits can be de-selected with the Color/B & W switch.

Internal/External Sync. A BNC connector is provided for an external sync signal. (External sync must be used in the RGB mode.) Switching between internal and external sync can be done either from the front panel, or remote control (not included).

Underscan, Blue Check. For more accurate monitoring, the scan size can be switched to the underscan mode — either from the front panel, or by remote control. (Remote control not included.) In addition, a blue check circuit allows viewing of only the blue portion of the composite signal. This is useful when adjusting the monitor with a color bar signal.

Remote Control Function. A multi-pin (XLR-type) connector is provided on rear panel for connecting an external remote control unit. Many front panel switches (input select, int/ext sync, notch, color on/off, blue check, scan size) can be remotely controlled by contact closures through this connector. (Remote control unit is not included.)

Metal Cabinet, Rack Mount Option. The TM-R14U is housed in a very compact, rugged, metal cabinet which can be mounted in a standard 19" rack, using an optional rack mount kit. AC power connections are made using a detachable grounded power cord.

VIDEO PROJECTORS

NOVABEAM® MODEL ONE

Receiver/Monitor

The Novabeam® Model One-A Receiver/Monitor, like a conventional TV set, comes with a built-in television tuner for off-air reception. Digital push-button selection of 105 UHF and VHF channels with random access is provided on the projector, along with all the usual color TV controls. In addition, a wireless infrared remote control lets you select individual channels, scan through them all, adjust volume, and turn the set on and off from your favorite viewing position.

Direct audio and video inputs are provided for two additional video program sources, while a third can be connected to the antenna terminals as with a conventional TV set (a convenient switch on the control panel lets you select among them). Audio and video outputs are provided for recording, as is a volume-controlled audio output that lets you play the sound of your video program sources through your stereo system if you prefer. To receive TV broadcasts, you connect your 75 or 300 ohm antenna to the projector as you would to any TV set.

Monitor

The Novabeam® Model One-A Monitor is ideal if you already have, or are planning, a system of several individual video components. It does not have a built-in TV tuner, letting you use the tuner built into your VCR, or a separate component tuner such as our T-1 or T-2, for off-air reception. That's not only flexible and convenient; it can save you money as well.

With the Model One-A Monitor, all controls and direct video and audio jacks for two video sources are located on a separate Video Control Center, rather than on the projector itself (inputs for a third source are provided on the projector). That lets you place the Control Center wherever it's most convenient, such as next to your other video components, and you'll never have to touch the projector. Because your video sources connect to the Control Center, there's only one cable connecting to the projector. And you can, if you wish, play the sound of your video sources through your stereo system.

LARGE SCREEN PROJECTOR/TUNER

KLOSS NOVABEAM® MODEL TWO WITH CURVED SCREEN

Novabeam® Model Two Portable Projection Monitor

Model Two Portable Projection Monitor comes complete with a separate 5' diagonal-measure high gain projection screen. The new two-piece system provides the brightest picture ever in Novabeam projection television, and has been designed specifically for use in well-lit surroundings.

The Model Two curved screen system consists of an ultra-compact video projection monitor essentially identical in form, size and function to the original Model Two video projection monitor, and a separate curved 5' screen for wall mounting (floor standing legs are available at extra cost). Where the original Model Two was designed to project a picture directly on a white wall or conventional flat screen for viewing in subdued room lighting, and thus minimize the impact of projection TV on the viewer's living space, the new system uses a separate high gain screen to provide an ultra bright picture in environments where lighting cannot be easily controlled. The high brightness combined with the screen's ambient light rejection properties means the picture can be viewed without significant loss of contrast in surprisingly well-lit environments. Since the difference between this Model Two and the original version are the tubes' field of focus, a specific projector must be ordered. They are not interchangeable

\$2800.00

The Novabeam Model Two curved screen system is a monitor design, without tuner, allowing the viewer to choose from a wide range of programming sources and accessories. Controls and program source inputs, like all Novabeam monitor sets, are provided on a separate Video Control Center which can be located wherever convenient. Only one cable connects the projection monitor to the control center, which features a full range of controls including contrast, brightness, color, tint, detail, video source selection, power, volume and convergence testing.

** Novabeam and * Novatron are registered trademarks of Kloss Video Corporation*

Model T-1 Component TV Tuner With Remote Control

The Model T-1 Tuner is a high performance, 105 channel component TV tuner, perfect for use with Novabeam projection monitors or other high quality monitors. It is supplied cable-ready, has a multiplex output and comes complete with an infrared remote control unit that features volume level adjustments as well as channel selection and scanning. The LED channel readout is bright and easy to read.

Dimensions: 11 1/2" W x 3" H x 9" D. Weight: 7 lbs., 4 ozs. (approx.)

Remote Control (Transmitter)

The Remote Control features Power ON/OFF, Direct channel selection by 10-key keypad, Channel search Up/Down selection, Volume Up/Down control and Audio Mute. Range of operation: 25 feet or more. Uses two (2) size AAA 1.5V batteries (5-1/16" L x 2-1/4" W x 5/8" D). Weight: 3.17 ozs.

\$250.00

Model T-2 140 Ch. Component TV Tuner

\$300.00

Model Two 5' Curved Screen

The Novabeam Model Two curved system's ultra bright picture results from its combination of 5' picture size, the high gain screen, and the high light output of the three tube Novatron® projection technology featured in all of Kloss Video's Novatron projection systems. In addition to its picture brightness, the system can fit with ease into a wide variety of viewing environments. Both screen and projector are of a manageable size, the projection distance (four feet) is comparatively short, and the ultra compact portable projector can be tucked out of the way against the wall when not in use and easily realigned by use of a unique system of crossfiring light beams. Yet it provides a truly big, 5' picture with an unparalleled combination of brightness and clarity, all at unprecedented low cost.

VIDEO PROJECTORS

VIDEOBEAM® MODEL 2000

VIDEOBEAM® HIGH RESOLUTION, HIGH DEFINITION, 6.5' PROFESSIONAL VIDEO PROJECTOR

High resolution video projection monitor system specifically for the high quality display of computer generated color graphics and other video information. Featuring RGB inputs and high resolution, high-definition optics and electronics, the new VIDEOBEAM® Model 2000 is a two piece projection system capable of reproducing 132 characters per line complete with a 6.5' diagonal measure high gain screen for professional applications.

To provide a large, 22 square foot display unmatched in sharpness and clarity, the VIDEOBEAM Model 2000 employs a specially refined, high resolution version of the Novatron® projection tube technology designed and manufactured by Kloss Video for its Novatron projection television systems.

The high light output of the special Novatron projection tubes, ultra small high definition spot size, high resolution optics, and optimized video circuitry all combine to result in a unique combination of resolution, definition, and display brightness. A high gain 6.5' screen which rejects ambient light is supplied so that the display can be viewed without having to darken the room. Because a composite video input is supplied as well as RGB inputs, virtually any high quality video source can be used with the VIDEOBEAM Model 2000. **\$6000.00**

VIDEOBEAM™ is a trademark of Kloss Video Corporation. Novatron® and Novabeam® are registered trademarks of Kloss Video Corporation.

NOVABEAM® MODEL TWO, WITH CEILING MOUNT

NOVABEAM® MODEL TWO CEILING MOUNT PROJECTION TV

The ceiling mount version projects a 5'4" diagonal-measure picture directly onto a plain white wall or conventional flat projection screen. Unlike the original Model Two, which sits on the floor in front of the projection surface, the Model Two ceiling mount's ultra compact projector comes complete with the hardware necessary to mount the projector up out of the way on the ceiling. Thus the Novabeam Model Two ceiling mount takes up no floor space, and impacts less overall than any other system on the viewer's living space.

The new Novabeam Ceiling Mount, like the original floor standing model, is a monitor design without tuner, allowing the viewer to choose from a wide range of program sources and accessories. All controls and program source inputs are provided on separate video control center which can be located wherever convenient. In addition to the savings entailed by the monitor design, the cost of the new Model Two ceiling mount is kept low by its requiring no special screen, and by the manufacturing efficiency of Kloss Video's own highly automated Novatron projection tube facility. **\$3000.00**

LBO-513A 15 MHz, Single Trace, 1mV Sensitivity

LBO-514A 15 MHz, Dual Trace, 1mV Sensitivity

The single trace LBO-513A and the dual trace LBO-514A are compact 5-inch oscilloscopes that offer maximum performance at low cost. Equipped with both vertical and horizontal magnifiers, they have 1-mV sensitivity with X5 magnification and a maximum sweep speed of 0.1 μ s/cm (0.2 s/cm to 0.5 μ sec in 18 calibrated steps plus X5 magnification). Rise time of both oscilloscopes is 23 ns with normal and automatic, + or - triggering. The LBO-514 provides both chop and alternate dual trace displays.

The model LBO-514AP is available with a higher intensity CRT and internal graticule.

LBO-513A \$470.00
LBO-514A 595.00

LBO-516 100 MHz, Dual Time Base

The Dual Time Base Oscilloscope LBO-516 features full three channel capability, alternate triggering for simultaneous display of two asynchronous signals, alternate time base and eight trace capability. Excellent triggering sensitivity, along with HF reject, video sync separators, alternate channel triggering and trigger slope and level controls with preset make obtaining a jitter-free display a simple task. The LBO-516 also features variable trigger holdoff, line triggering for observation of line related signal components and auto, normal and single sweep modes. The vertical input section of this scope offers 500 μ V sensitivity, and add, subtract and X-Y modes. The dome mesh PDA CRT with 20 kV/2 kV accelerating potential provides a bright, crisp trace, even at high sweep rates. And, a CH-1 output is provided on the front panel so that an additional instrument, such as a frequency counter, may be easily connected.

LBO-516 \$1395.00

LBO-518 100 MHz, Four Channel, Dual Time Base

The LBO-518 is a versatile 100 MHz quad channel alternate time base oscilloscope. It features front panel four channel operation, individual or simultaneous display of main and delayed time bases and alternate channel triggering for simultaneous viewing of asynchronous signals. Separate, independent comprehensive triggering facilities for both main and delayed time bases include HF reject, LF reject, video sync separator, alternate channel triggering and trigger level control with preset. Also included are variable trigger hold-off, line triggering and auto, normal and single sweep modes.

A dome mesh PDA CRT with 20 KV accelerating potential allows critical observation of fast rise time signals at low repetition rates, events which are often difficult to observe due to limited trace intensity.

The vertical input section features 0.5 mV sensitivity, a 20 MHz bandwidth limiter, beam finder and add/subtract modes. Even with all these capabilities, the LBO-518 is still small enough to stow under your airline seat!

LBO-518 \$2050.00

LBO-522 20 MHz, Dual Trace, 0.5mV Sensitivity

The LBO-522 is an economical 20 MHz oscilloscope versatile enough for almost any lab or field work within its frequency range. The input sensitivity of 0.5 millivolts allows observation of extremely low level signals easily on its 8 x 10 cm rectangular CRT equipped with an internal graticule. Alternate triggering provides a stable display of two waveforms, unrelated in frequency, simultaneously. The unit features a full range of triggering controls including HF reject to filter unwanted noise from the display and line triggering for the observation of line frequency related signal components. A CH-1 rear panel output is standard which permits using the LBO-522 as a sensitive, accurate pre-amplifier to drive other less sensitive instruments. The units "human engineered" front panel ensures easy, error-free operation.

LBO-522 \$695.00

LBO-523 40 MHz, Dual Trace 0.5mV Sensitivity

The LBO-523 is a 40 MHz oscilloscope economically designed for applications requiring medium bandwidth and extensive triggering facilities where costly features such as delayed sweep and signal delay lines are impractical. Trigger controls include variable hold-off, alternate channel triggering, HF reject, vertical and horizontal TV coupling and line source triggering. The vertical input sensitivity of 0.5mV, add and subtract modes and a CH-1 output connector add to the unit's total capability. Complex waveforms can be viewed easily even at highest sweep rates without readjusting the front panel controls due to its bright PDA CRT with 7 KV accelerating potential and an auto focus feature. The LBO-523 is well suited for many design, production, repair and educational test requirements.

LBO-523 \$895.00

LBO-524/524L 40 MHz, Dual Trace Dual Time Base

The LBO-524 is designed to meet a broad range of applications in design, testing and servicing of both analog and digital circuits and equipment. Its large 8 x 10cm PDA CRT provides sharp bright displays even at highest sweep rates. Comprehensive triggering controls including holdoff, alternate triggering and delayed sweep triggered functions permit stable displays for even the most complex signals. With 0.5 millivolt sensitivity, extremely low level signals can easily be observed. A channel 1 output is available on the rear panel to drive other less sensitive instruments such as a frequency counter with an input level as low as 500 microvolts. The dual time base permits accurate observation and time interval measurements of complex waveforms. The Model LBO-524L is also equipped with signal delay lines to allow observation of pre-trigger information.

LBO-524 \$ 995.00
LBO-524L 1050.00

OSCILLOSCOPES

LBO-525L

LBO-310A

LBO-51MA

LBO-525L 50-MHz TWO CHANNEL DUAL TIME BASE

The LBO-525L is a simple-to-operate 50 MHz two channel oscilloscope that still offers all of the flexibility and advanced features required for critical applications.

The LBO-525L has a true calibrated delayed time base with both run after A and trigger after A modes for jitter-free operation. 500 μ V maximum sensitivity and 20 ns maximum sweep speed allow analysis of low level and high frequency signals, while still offering a maximum input rating of 600 V (DC plus AC peak).

The LBO-525L has an illuminated internal graticule for precise measurements and photography and 12 KV CRT accelerating potential for maximum trace intensity even when observing transients at high sweep speeds.

LBO-525L \$1195.00

LBO-308S/308PL 20 MHz, DUAL TRACE, 3" PORTABLE

The LBO-308S and 308PL deliver "lab performance" in a compact package that's perfect for field work. Its broad range of capabilities include 2-mV sensitivity, 17.5 ns rise time, X-Y operation with full sensitivity, and add/subtract modes not normally available in oscilloscopes of this size. It may be operated from either 115/230 VAC, 50-60 Hz, 12 VDC or a 1.5-hour battery pack (LBO-308S only). The battery pack mounts internally and is automatically charged whenever the unit is connected to a source of AC power. The 3-inch rectangular CRT has an internal graticule. The LBO-308S and 308PL have 18 calibrated sweep rates with a X5 magnifier (0.1 μ s/div. max) and calibrated 12-step attenuators. A rugged, compact scope with performance unsurpassed in its price range.

The model LBO-308PL offers a higher intensity CRT for viewing narrow pulses at low repetition rates and contains signal delay lines which permit viewing the leading edges of pulses.

LBO-308S \$ 950.00
LBO-308PL 1195.00

LBO-310A 4-MHz RECURRENT SWEEP

The LBO-310A is a compact, general purpose instrument designed to provide long, reliable service in production test, repair, and educational applications. Its simple front panel with a minimum of controls makes it ideal for use by production personnel, students, and non-technical operators. Its low cost opens up many applications where waveform monitoring might otherwise be economically prohibitive. Sensitivity is 20 mV/division. Sweep frequencies range from 10 Hz to 100 kHz.

LBO-310A \$305.00

LOC-7005 OSCILLOSCOPE CALIBRATOR

The LOC-7005 is an oscilloscope calibrator which combines the functions most needed to test, repair, and calibrate oscilloscopes into one compact instrument. The LOC-7005 provides three outputs:

- An amplitude output to calibrate the vertical axis of an oscilloscope. It provides a .25mV-100 V square wave in a 1-2.5-5 step sequence. Output frequencies are 100 Hz, 1 kHz and 10 kHz with a 100 ns rise time.
- A time marker output to calibrate the time base (sweep speed) of an oscilloscope. The marker interval is from 0.05 μ s-1 s in a 1-2-5 step sequence at 0.1 V p-p.
- A fast rise time square wave to check the pulse response and rise time of an oscilloscope. The rise time of the square wave is less than 3 ns at amplitudes of 20 mV, 40 mV or 80 mV. The output frequency is 100 kHz.

The LOC-7005's small size and versatility make it the ideal instrument for service and calibration facilities which must maintain their own field service and general purpose oscilloscopes.

LOC-7005 \$1395.00

LBO-51MA X-Y DISPLAY MODULE

The LBO-51MA features a large 8 x 10cm aluminized, post deflection acceleration CRT for a bright trace. An internal 8 x 10 graticule is optional. Input sensitivity is adjustable from 50 to 150mV/cm and the X and Y axis bandwidth is 3 MHz (-3dB). The input coupling (AC or DC) and polarity can be selected by internal switches. The Z-axis (intensity modulation) input has a bandwidth of 4 MHz, producing clear alphanumeric displays.

In its standard configuration, the LBO-51MA is designed for half-rack mounting and includes front panel controls for power, intensity, focus and horizontal and vertical position. Screwdriver adjustments are provided for vertical and horizontal gain, astigmatism and trace rotation. Special configurations are available with provisions for user-supplied controls, custom external graticules, other CRT phosphors, higher or lower input deflection factors, and other modifications to accommodate particular user requirements.

TEST EQUIPMENT

LBO-5860A

LBO-5860A/L WAVEFORM MONITOR

The LBO-5860A/L Waveform Monitor permits displaying the Vertical Interval Test and Reference Signals by a front panel line selector. Lines 14 through 21 ("A" model) or lines 7 through 21 ("L" model) can be selected from field one or two without interference from the active portion of the video signal, a feature normally available only on more expensive, full rack mount units. The instrument also has a blanking output to blank the companion Vectorscope during the active portion of the video signal, allowing differential gain and phase measurements to be accomplished easily. The CRT features an internal graticule and 7KV accelerating potential for bright, easy-to-read displays. Total RGB and YRGB (YRGB optional) capability is available and horizontal sweep speeds of 2 H (2 line), 1 μ /div (expanded 2 line), 2 V (2 fields) and 2 V MAG (expanded 2 fields) are standard. The LBO-5860A/L is half rack mountable and can be rack mounted side by side with the LVS-5850B Vectorscope. The LBO-5860A/L is also available in a PAL/SECAM version, the LBO-5861A.

LBO-5860A NTSC (Lines 14-21 Line Select) \$2050.00
LBO-5860L NTSC (Lines 7-21 Line Select) 2300.00

PAL VECTORSCOPE

Leader also offers a PAL version vectorscope, the LVS-5851A. This unit is suitable for broadcasting PAL systems using 625 horizontal lines (625 H), 50Hz vertical or field rate (50 V), 4.43MHz sub-carrier color systems and types B, C, D, G, H, I, and K synchronization standards. This unit is similar to Leader's LVS-5850B NTSC vectorscope, and all specifications are identical except where noted above.

LVS-5851A 2200.00

LVS-5850B

LBO-5825

LBO-5825 DIGITAL STORAGE OSCILLOSCOPE

The LBO-5825 is a versatile 35MHz, Two-Channel Digital Storage Oscilloscope. Packed with features that are not normally found on DSOs of its class, it has a true 5MHz digital sampling rate, allowing detailed observation of relatively short transients. Also, individual A/D converters for each channel ensure that a point-by-point comparison of channels may be made. The 1K word by 2 channel memory allows over 1000 points per channel to be stored. The Memory Protect feature allows storage of reference waveforms. For example, the upper and lower limits of an amplitude adjustment may be stored in memory. Also, a battery back-up of the memory is provided, so the scope may be transported while retaining the content of the memory for up to two weeks. X-Y recorder outputs are provided for hard copy of waveforms. Up to 9 div of pre-trigger view allows observation of critical pre-trigger events that often gives clues in determining the causes of transients. The AUTO/ERASE mode is used so that the screen may be constantly updated, and the ROLL mode provides the 5825 with a chart-recorder capability.

In addition, the LBO-5825 is a Two-Channel, 35MHz Real Time Oscilloscope. With many of the features of Leader analog Oscilloscopes, its 500 μ V sensitivity, coupled with Channel 1 output and complete triggering facilities allows this scope to be used in a number of conventional applications. Backed by Leader's outstanding reputation, the LBO-5825 is the perfect scope for research and development, service, and production environments.

LBO-5825 \$3850.00

LVS-5850B VECTORSCOPE

The LVS-5850B Vectorscope provides a convenient method for observing and measuring the relative phase and amplitude of chrominance signal components. It utilizes a unique technique which electronically displays the "inner boxes" which represent error limits of $\pm 2.5^\circ$ and ± 2.5 IRE units. This improves the accuracy of phase and amplitude adjustments by eliminating errors due to CRT non-linearities. The LVS-5850B includes three loop-through inputs including a dedicated external subcarrier reference input which is front panel selectable. Either of the two composite video loop-through inputs can also be selected as the reference signal and all three inputs can be displayed individually.

The unit is also equipped with a Z-axis blanking input to provide blanking during the active portion of the video signal and unblanking during the VITS signal for a stable, jitter-free display. A test circle pattern is also selectable for a quick calibration check of the instrument. Another front panel push button provides for either 100% or 75% amplitude levels. A gain control, with a detented calibrated position, provides for continuous amplitude adjustment. A phase control permits rotating the display through 360° . The LVS-5850B is supplied in a protective carrying case or in a 1/2" rack width configuration.

VM-69

Oscilloscope Glossary

Accelerating Potential—The potential applied to the CRT to accelerate the electrons emitted from the cathode. As a general rule, the higher the accelerating potential, the brighter the display. This is especially important at fast horizontal sweep speeds and multiple traces or to observe rapid transients.

Add/Subtract—These modes allow the displaying of the algebraic sum or difference of two signals. The subtract mode is especially useful in measuring signals not referenced to ground and eliminating unwanted signals common to both inputs such as hum.

Alternate Channel—A function that allows more than one channel to be displayed by alternately switching the vertical input to the CRT between two (or more) input channels at the end of each sweep. Used at sweep speeds of 0.2 mS/div or faster, this mode will result in a flickering display at slower sweep speeds. In this case, the Chop function should be used.

Alternate Time Base—A feature that allows the main and delayed time base to be displayed simultaneously.

Alternate Trigger—A function that allows the sweep to be triggered alternately by two different triggers, which, in conjunction with an alternate channel function, allows the display of two signals asynchronous.

Auto Triggering—A feature that allows the sweep circuit to free run and display a base line in the absence of an input signal. Automatically switches to triggered sweep mode when a signal is applied.

VM-70

Prices and Specifications Subject to Change Without Notice.

Bandwidth—The frequency range of signals that an oscilloscope will display with less than a 3 dB rolloff in amplitude.

Chop—The Chop function switches the vertical channel input to the CRT, usually at a rate of approximately 250 kHz, to simultaneously display more than one channel. Used for sweep speeds of 0.5 mS/div or slower, the alternate channel function should be used at faster sweep speeds.

Common Mode Rejection—The attenuation of a common signal (in dB) that appears between the signal high input and ground and the low input and ground.

Coupling—The manner in which a signal or trigger is connected to the oscilloscope's internal circuitry. DC coupling allows all components of the signal to pass; AC coupling blocks any DC component. HF reject and LF reject insert high or low frequency rejection filters in the input circuitry.

Deflection Coefficients (Sensitivity)—The signal amplitude required for a vertical deflection of 1 division; adjusted by the vertical volts/division control. Sensitivity is the smallest amplitude signal that yields one major division of deflection.

Delay, Signal—The amount of time (usually nanoseconds) between the beginning of the horizontal sweep and the vertical input signal; allows viewing of pre-trigger phenomena. This is accomplished by inserting a delay line in the signal channel.

Delayed Sweep—A second time base (sweep) that can be started after a variable delay from the start of the main (undelayed) time base. This allows any selected portion of the main time base signal to be expanded and displayed over the entire CRT.

Dual Time Base—A feature that allows the sweep speeds of the two calibrated time bases to be set independently.

Graticule—A grid or scale either etched or overlaid on the CRT face for making amplitude and frequency measurements. An internal, illuminated graticule is parallax-free and required for precise measurements. It is also ideal for photography.

Hold-Off—Allows the operator to choose, by altering the dead time between the end of one horizontal sweep and the start of the next, on which trigger to synchronize in a complex trigger signal.

Jitter, Delay Time—The term used for describing the horizontal instability of a waveform displayed in the delayed sweep mode.

Lisajous Pattern—This pattern results when using external horizontal and vertical input signals in the X-Y mode. When the X and Y input controls are properly adjusted, the size and shape of the pattern allows phase shift to be measured.

Rise Time—The time it takes for an oscilloscope display to rise from 10% to 90% of the amplitude of an applied step voltage.

Trigger—The signal that starts the horizontal sweep. The trigger can be either derived from the vertical input signal or from a variety of external sources, either directly or harmonically related to the vertical input signal frequency.

Trigger View—A function that displays the signal being used for triggering the sweep.

TV-H, TV-V Triggering—Coupling modes that insert sync separators in the trigger circuitry to allow triggering at the vertical or horizontal sync rates of a composite video signal.

X-Y Mode—Instead of using the oscilloscope's internal circuitry to generate the horizontal sweep signal, an external signal is applied. This allows phase and swept frequency response measurements to be made.

Z-Axis Modulation—Also known as intensity modulation, an externally applied signal is used to blank or intensify the trace. Typically used in video applications, in the X-Y mode, for time or frequency marking.

MODEL ICM-214

MODEL ICM-219

200 SERIES COLOR VIDEO MONITORS

The Lenco ICM NTSC color monitors are compact, stable studio monitors. They are designed for applications where a high quality monitor is needed and the expense of a calibrated test monitor is not justified. The latest technological design concepts using the modern PIL tube and discrete regulated high voltage power supply make these color monitors ideal for the broadcast, teleproduction and industrial markets.

The I.C.M. Series of color monitors have been engineered to exact specifications for performance and stability. The design criterion was to provide a high quality monitor for applications that do not require a calibrated test monitor. The design concept of this monitor makes it a very universal device for the broadcast, teleproduction and industrial environment.

Many of the features found in the ICM-214 and the ICM-219 color monitors center around the CRT. The ICM color monitors incorporate both 14" and 19" black matrix slot mask Precision-In-Line (PIL) tubes. Excellent resolution and simplified convergence are achieved with the use of this tube. Convergence controls, convergence amplifiers and a built-in cross hatch generator are eliminated by using the PIL tube. The CRT is capable of displaying a white window with a maximum usable brightness of 100 foot candles with a one volt peak-to-peak input signal.

The semi-modular design of the ICM color monitor series is constructed around six modules: horizontal and vertical sweep, low and high voltage power supplies, decoder and the video amplifier. Horizontal and vertical sweep and the low and high voltage power supplies are the same design as the modules used in Lenco's professional calibrated color monitors. The NTSC decoder used in the monitor has a decoding error of less than 2 1/2. This decoder coupled with a video amplifier that is mounted directly on the CRT provides excellent frequency response, resolution and a distortion free display. All of these combinations allow the

picture to be viewed without masking any distortions or noise.

The ICM series of color monitors use a discrete non-scan derived high voltage power supply. An unregulated DC voltage of approximately 34 volts DC enters the high voltage unit and outputs a regulated 25 KV supply for the CRT. With this power supply, raster size will change less than 1% of picture height from 0% to 100% APL at 35 foot candles. This ultra stable high voltage is independent of horizontal and vertical sweep, but with the loss of either sweep will shut off the high voltage unit and protect the CRT.

The quality of the color monitor starts at the inputs to the monitor where differential amplifiers are incorporated for maximum hum rejection. Other features of the monitor are automatic degauss, adjustable underscan and internal/external sync selection. Each time the monitor is turned on, the degaussing circuit is automatically activated to remove any built-up magnetic field on the CRT. Sufficient range was built into the horizontal and vertical size controls to produce a fully overscanned or underscanned display. An easy access internal/external sync selector switch is located on the rear panel of the monitor.

The 200 Series color monitors carry the Lenco two year warranty with the exception of the picture tube. The CRT has a one year warranty.

The cabinets were carefully selected for a modern and an aesthetically pleasing look. The tube mask around the tube is flat black for minimum screen reflection.

200 Series Equipment

- ICM-214-6** 14" Color Monitor with 2 NTSC Inputs and Adjustable Underscan. .61mm Slot Mask CRT **\$1,700.00**
- ICM-219-6** 19" Color Monitor with 2 NTSC Inputs and Adjustable Underscan. .61mm Slot Mask CRT **\$1,900.00**

COLOR MONITORS

PCM-514

500 SERIES EQUIPMENT

PROFESSIONAL COLOR VIDEO MONITORS

The Lenco PCM-500 Series NTSC/RGB color monitors are compact, stable master studio monitors. They are designed to meet or exceed the most demanding of professional broadcast and teleproduction requirements.

These monitors are manufactured to the latest state of the art design using the modern PIL tube to meet the high standards for performance and stability. The Precision In-Line Gun (PIL) cathode ray tube has several advantages over the Delta-gun tube. The simplified convergence adjustments required with the PIL tube enhances the reliability and reduces the maintenance time of the monitor. The PCM-500 Series monitors, using the modern PIL tube, are ideal test instruments in the studio for adjusting cameras to prevent subtle changes in color scene content when switching from one camera to another.

PROFESSIONAL 14" COLOR MONITORS

The Lenco PCM-514 NTSC/RGB Color Monitor is a compact, stable, master studio monitor designed to meet or exceed the most demanding signal evaluation in broadcast and teleproduction. This monitor is also an ideal unit for instrumentation and for VTR monitor bridge applications.

Lenco color monitors are manufactured to the latest state of the art design using the modern PIL tube to meet today's high performance and stability standards. Due to the simplified convergence, enhanced reliability and reduced maintenance time of this PIL monitor, the PCM-514 becomes an ideal test instrument to adjust cameras and to prevent subtle color scene changes when switching between cameras.

Since required vertical rack space is only 10.5 inches, this monitor will ideally fit the overhead bridge of a VTR.

PCM-514-4 NTSC and RGB Color Monitor with Pulse Cross and Underscan, Standard CRT is .41mm Dot Mask Matrix **\$3990.00**

PCM-519

PCM-519 SERIES AND PCM-522

The Lenco PCM-519 Series NTSC/RGB color monitors are compact, stable master studio monitors. They are designed to meet or exceed the most demanding of professional broadcast and teleproduction requirements.

These monitors are manufactured to the latest state of the art design using the modern PIL tube to meet the high standards for performance and stability. The Precision In-Line gun (PIL) cathode ray tube has several advantages over the Delta-gun tube. The simplified convergence adjustments required with the PIL tube enhance the reliability and reduces the maintenance time of the monitor. The PCM-519 monitors are available with 0.4mm dot matrix Crt as well as a 0.6mm slot mask matrix CRT. The PCM-522 is available with a 0.6mm slot mask matrix CRT only. These monitors using the modern PIL tube are an ideal test instrument in the studio for adjusting cameras to prevent subtle changes in color scene content when switching from one camera to another.

Model PCM-519 is a cabinet unit that rackmounts in a standard 19" equipment rack simply by adding the optional slides. The PCM-522 is also a cabinet unit that can be rackmounted by adding slides, but it will require a 22" equipment rack. Tube description for the required CRT is available on the back page of the specification sheet.

PROFESSIONAL 19" COLOR MONITORS

MONOCHROME MONITORS

PMM-911

PMM-920

PMM-942

Professional Quality PMM-900 Series Monochrome Monitors

FEATURES:

- Professional Quality
- Modular Construction
- Cross Pulse Option
- 900 Lines Resolution
- Underscan Option
- Regulated Low and High Voltage

The Lenco PMM-900 Series Monochrome Monitors are the most advanced design of professional monochrome video monitors in the industry. The 900 Series monitor is a high resolution display device for use in broadcasting, industrial, and educational facilities where quality and reliability are most required.

The 100% modular chassis consists of five individually shielded circuit modules that plug in directly from the rear of the chassis. This unique and exclusive feature simplifies any required servicing allowing for a minimum of down time. The five plug-in modules are common to all the 900 Series monitors regardless of CRT size.

The PMM-900 Series Video Monitors are designed for continuous operation and to give stable pictures without adjustment. The regulated low and high voltage power supplies maintains constant picture size and brightness with line voltages between 105 and 130 volts AC (or 210 to 260 volts AC).

The Lenco PMM-900 Series monitor's 900 line center resolution provides outstanding picture clarity which is necessary in most studio and educational facilities. This sharp, bright picture provides excellent viewing even under high ambient lighting conditions. This is extremely important to ensure full details when used in surveillance or observation systems.

Video response is down 3 dB at 20 MHz providing for 900 line center and 750 line corner resolution. Differential gain of the video amplifier is less than 5% for 50 volt kinescope drive. Size of the raster can be switched from the front to show all four sides and corners. Optional cross pulse features can be provided to display the sync signals in the picture area for analysis. DC restoration is standard and is switchable on the rear panel.

The PMM-900 Series Video Monitors meet or exceed all EIA RS-170 specifications and are compatible with 525/60 U.S. and 625/50 CCIR scan rates.

VM-73

Lucasey products for broadcast and video users are constructed of

A SUPERIOR SELECTION OF NON-LOCKING, HEAVY-DUTY CEILING MOUNTS

MODELS CB-M19, CB-M20, CB-M25

This is the top of the Lucasey line — three models with different size platforms accommodate small, medium and large monitors. Each may be mounted on permanent ceilings or hung through false ceilings (mounting escutcheon furnished on an optional/extra basis). Each of the three ceiling mounts offers full 360° swivel and 45° tilt for universal viewing. Simple installation and clean-line appearance highlight the many features of these sturdy brackets.

WALL MOUNTS FOR HEAVY LOADS AND TIGHT SPACES

MODEL WB-M25

A tough wall bracket to exceed just about every overload requirement. Simple, positive installation features make this one a favorite with AV service personnel. Rugged swivel arm engineering.

MODEL WB-S78

Special engineering allows adherence to clearance codes in low ceiling rooms. Easy installation and removal with minimum 6½ foot clearance assured; fixed tilt and variable swivel make it a perfect choice for modern hospitals.

MODEL CB-M19

Swivel: 360°
Tilt: To 45°
Color: Chocolate Brown
Material: Heavy Gauge Steel
Vertical Dimension: 18" standard 1" pipe
Ceiling Flange: 7½" diameter; ¾" mounting holes (8); 1" pipe thread
Platform Size: 27½" x 15½"; 20½" height opening
Weight Load: Up to 150 lbs.
Non-Locking
Shipping Weight: 31 pounds

\$100.40

MODEL CB-M20

Swivel: 360°
Tilt: To 45°
Color: Chocolate Brown
Material: Heavy Gauge Steel
Vertical Dimension: 18" standard 1¼" pipe
Ceiling Flange: 7½" diameter; ¾" mounting holes (8); 1¼" pipe thread
Platform Size: 25½" x 18½"; 25½" height opening
Weight Load: Up to 175 lbs.
Non-Locking
Shipping Weight: 37 pounds

\$125.00

MODEL CB-M25

Swivel: 360°
Tilt: To 45°
Color: Chocolate Brown
Material: Heavy Gauge Steel
Vertical Dimension: 18" standard 1¼" pipe
Ceiling Flange: 7½" diameter; ¾" mounting holes (8); 1¼" pipe thread
Platform Size: 32" x 19½"; 25½" height opening
Weight Load: Up to 175 lbs.
Non-Locking
Shipping Weight: 42 pounds

\$125.00

MODEL WB-M25

Swivel: 0° to 75° (side to side)
Tilt: 5° (Fixed)
Color: Chocolate Brown
Material: Heavy Gauge steel
Projection: 27¼" (to and of mounting plate)
Knockout Holes: ¼"
Wall Plate Size: 10" x 18" on 16" hole centers
Platform Size: 32" x 19½"
Weight Load: 170 pounds
Non-Locking
Shipping Weight: 35 pounds

\$125.00

MODEL WB-S78

Swivel: 0° to 15° (side to side)
Tilt: 10° (Fixed)
Color: Chocolate Brown
Material: Heavy Gauge steel
Projection: 19½" (to end of mounting plate)
Platform Size: 23" x 10½"
Knockout Holes: ¼"
Weight Load: Up to 100 pounds
Non-Locking
Shipping Weight: 13 pounds

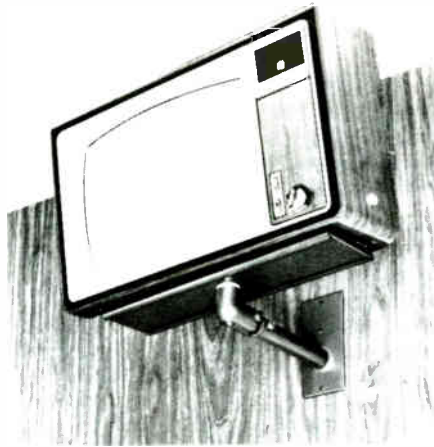

\$52.55

heavy gauge steel with baked-on epoxy finish — a true, lifetime investment.

The Lucasey Universal Security System is designed around a steel mounting plate with cutout configurations to fit most models. For non-locking requirements, the set is simply attached to the universal plate. To convert to a locking mode, the Lucasey locking kit is available. It includes a pin tumbler key, locking plug, and bottom holding plate. The assembled unit hides the mounting screws, blocking access to the mounting plate and receiver by unauthorized personnel.

The Lucasey locking principle is protected under U.S. Patent No. 3724798

MODEL 707

The pioneer bracket of the Lucasey line permits viewing from anywhere in the room by simply adjusting the clutch control. Platform rotates to a 360° swing with the widest angle swivel in the industry. Rugged, durable, tamperproof.

MODEL 1700

The 1700 Series offers fixed tilt in an economical bracket where total security is not required. It fills the need for key controlled, semi-security applications, without sacrificing Lucasey strength, clean-line styling and ease of installation.

MODEL 3100

Lucasey 3100 Series offers clean line styling and positive locking in a television bracket that may be installed quickly and simply. Designed to accommodate large or small sets, these brackets save valuable floor space.

MODEL 7100

This bracket has been designed for - and is being used in - modern institutions throughout the country. Lucasey has included all of their exclusive features in the Model 7100 - with load bearing capability to handle the largest color sets.

MODEL 9000

The Lucasey Model 9000 features full swivel, tilt and angle variations to allow viewing from any location in school, hospital or meeting rooms. Simply installed, this versatile unit releases floor and/or wall space for other uses.

MODEL 707

Swivel: 360°
Tilt: To 90°
Angle: ±15°
Color: Chocolate Brown
Material: Heavy Gauge steel and die-cast aluminum
Projection: 15"
Platform Size: 20" x 5"
Weight Load: 60 pounds
Locking: Five tumbler lock; keyed alike in singles or masterkeyed
Shipping Weight: 18 pounds

\$35.55

MODEL 1700

Swivel: 360°
Tilt: 15° (Fixed)
Color: Chocolate Brown
Material: Heavy Gauge steel
Projection: 19½"
Platform Size: 23" x 10½"
Weight Load: Up to 100 lbs.
Locking: Five tumbler lock; keyed alike in singles or masterkeyed
Shipping Weight: 13 pounds

SELF-CONTAINED VHS VIDEO SYSTEMS

VHS 760/764

VHS 760 and 764 PORTABLE VIDEO SYSTEMS

These fully integrated single unit systems are designed to play or record, utilizing a standard 1/2" videocassette. 3-way power supply makes them especially easy to travel with, and each weighs only 22 lbs.

With a 7" diagonal screen mounted above the deck, the new VHS 760 and 764 are convenient for the viewer, as well. They each occupy only 9" of desk space. Although portable, the VHS 760 and 764 offer many functions normally found on a standard size VHS: 2, 4 or 6 hour speeds for record or playback; multiple remote functions; full TV reception and auto rewind. The VHS 764 employs a 4-head helical scan providing noiseless and jitter-free still picture and slow-motion special effects. Additional capabilities of both include large screen monitor hookup, RF in, audio/video in and out, and 10-pin camera input.

For sales, training or any business travel or office use, the VHS 760 and 764 offer a new combination of lightweight practicality and technical expertise.

SPECIFICATIONS VHS 760

Dimensions:

9" Wide x 12" High x 12" Deep

Screen:

7" Diagonal, NTSC Color. Positioned above VHS deck for easy viewing

Weight:

22 lbs.

Tape System:

Rotary 2-head helical scan. Standard VHS 1/2" tape deck

Features:

Choice of 2, 4 or 6 hour speeds for record/playback; Auto Rewind; Remote Control; Freeze Frame; Single Frame Advance; Slow Motion

3-Way Power:

AC and DC. Battery and auto lighter adaptor available

Additional Capabilities:

Hookup to large screen monitors. Full TV reception; RF out; Audio/Video in and out; 10 pin camera input

VHS 760 2-Head Rotary Helical Scan.

SPECIFICATIONS VHS 764

Dimensions:

9" Wide x 12" High x 12" Deep

Screen:

7" Diagonal, NTSC Color. Positioned above VHS deck for easy viewing

Weight:

22 lbs.

Tape System:

Rotary 4-head helical scan. Standard VHS 1/2" tape deck

Features:

Choice of 2, 4 or 6 hour speeds for record/playback; Auto Rewind; Remote Control

Noiseless Special Effects:

Freeze Frame; Single Frame Advance; Slow Motion

3-Way Power:

AC and DC. Battery and auto lighter adaptor available

Optional:

Continuous run switch

Additional Capabilities:

Hookup to large screen monitors. Full TV reception; RF out; Audio/Video in and out; 10 pin camera input

VHS 764 4-Head Rotary Helical Scan.

ACCESSORIES:

V-68 Battery Pack

12 volt 4 amp hour lead acid rechargeable battery. Clips on back of VHS 760/764, when attached fits in carrying cover. Approximate running time, 1 hour. Weight 3.2 lbs.

V-58 Battery Charger— Domestic .

Charges V-68 battery packs in 12-14 hours. Operates on 115 volts wall current.

V-60 Voltage Converter Step-Down Transformer .

V-63 Carrying Case

Textured Vinyl Carrying Cover padded soft construction, makes it easy to carry VHS 760/764, pocket for remote control.

V-64 Shipping Case

Shipping Case for VHS 760/764 Heavy gauge durable construction. Lined with 1/2" ester foam. Accommodates VHS 760/764 and Carrying Cover.

V-52 Cable .

Audio-Video Recording Cable allows for recording from VHS 760/764 built in TV monitor or external video player or monitor. RCA jack or BNC adaptable.

V-55 Car Battery Adaptor

Car Battery Adaptor provides power to VHS 760/764 using a car battery (via lighter socket) as the source.

VHS 1200

VHS 1260/1264

VHS 1200 PORTABLE VIDEO SYSTEM

SPECIAL FEATURES

- Noiseless freeze frame
- All concealed controls—accessible from front
- RF out
- Audio/video out

This fully integrated, single unit system with 12" diagonal picture is designed for exhibits, in store POP, and training.

The VHS 1200 utilizes standard 1/2" videocassettes. It features as an option a unique end-of-program sensor. When set in its unattended mode, the videocassette automatically rewinds and replays. All controls are concealed, yet are accessible from the front of the unit.

The VHS 1200 is for playback only (no record feature)—consequently the price is relatively low.

OSCILLOSCOPES

MS-15

MS-230

MS-215

Single-Trace Oscilloscopes

MS-15, 15MHz. • Portability — 2.7" H x 6.4" W x 8.0" D • Weighs only three pounds • Lowest price — batteries and charger included • External and internal trigger • Time base — 0.1 microseconds to 0.5 seconds-per-division • 21 time base settings • Automatic and line sync modes • Vertical gain — 0.01 to 50 volts-per-division • 12 vertical gain settings • Vernier controls — sweep and gain • Calibrated sweep and gain functions • Battery or line operation • Power consumption less than 15 watts • Internal calibrator.

The MS-15 Miniscope weighs only three pounds, is physically small at 2.9 inches high by 6.4 inches wide by 8 inches deep. Vertical bandwidth is 15 megahertz. The graticuled rectangular viewing area is four division high by five division wide. Division spacing is 0.25 inches.

Internal and external triggering are provided along with automatic and line synchronization modes as well as a horizontal input. There are 12 vertical gain settings from 0.01 volts to 50 volts per division. Twenty-one time base settings from 0.1 microseconds to 0.5 seconds per division are included. An optional 10-to-1 probe and a carrying case are also available. **\$466.00**

Dual-Trace Oscilloscopes

MS-215, 15 MHz. • Portable — 2.9" H x 6.4" W x 8.0" D • Weighs only three pounds including batteries • Moderately priced — batteries and charger included • Dual-trace — two channel capability • Separate, chopped or alternate sweep modes • External and internal trigger • Time base — 0.1 micro seconds to 0.5 seconds per division • 21 time base settings • Automatic and line sync modes • Vertical gain — 0.01 to 50 volts per division • 12 vertical gain settings • Vernier controls — sweep and gain • Calibrated sweep and gain functions • Battery or line operation • Power consumption less than 15 watts • Internal calibrator

This incredible dual-trace, 15-megahertz oscilloscope is battery or line operated and weighs only three pounds. Separate, chopped and alternate dual-trace sweep modes are included, as well as internal and external sync modes. The time base controls provide 21 settings with a range from 0.1 microseconds per division to 0.5 seconds per division. There are 12 vertical gain settings for each channel providing a range from 0.01 to 50 volts per division, for each.

Packaging size is a small 2.9 inches high by 6.4 inches wide by 8.0 inches deep.

The MS-215 is furnished complete with two input cables, battery charger and rechargeable batteries.

Options include a leather carrying case with neck strap and belt loop for versatile hands-free operation and a 10-to-1, 10-megohm probe. **\$596.00**

MS-230, 30 MHz. • Portable — 2.9" H x 6.4" W x 8.6" D • Weighs only 3.6 pounds including batteries • Moderate price — batteries and charger included • Dual-Trace — two channel capability • 30 — megahertz bandwidth • Separate, chopped or alternate sweep modes • External or internal trigger • Time base — 0.1 microseconds to 0.5 seconds per division • 21 time base settings • Automatic and line sync modes • Vertical gain — 0.01 to 50 volts per division • 12 vertical gain settings • Vernier controls — sweep and gain • Battery or line operation • Low battery indicator • Internal calibrator

Non-Linear Systems increased the number of its Miniscope oscilloscopes to three with the introduction of its Model MS-230, 30-megahertz, battery operated, dual-trace miniscope. Small package size is 2.9 inches high by 6.4 inches wide by 8.6 inches deep. Weight is 3.6 pounds, including batteries.

The MS-230 features alternate, chopped and separate sweep modes. Internal and external trigger modes are included. There are 12 vertical gain settings for each channel's range from 0.01 to 50 volts per division. Time base settings number 21 from 0.05 microseconds to 0.2 seconds per division. Verniers are provided for time base and vertical amplifier adjustment.

The MS-230 Miniscope includes a horizontal input channel and an internal calibrator. The graticule consists of 0.25 inch divisions arranged five across and four high. The MS-230 comes complete and ready to use. Included are input cables and a battery charger permitting battery or line operation.

Accessories include a 10:1, 10-megohm probe and a leather carrying case with shoulder strap and belt loop. **\$779.00**

MODULAR TI-2000 TELE-IMAGER™

- Desk-Top Cabinet Design
- Full and Quad Screen Display Modes
- Three Transmit Speeds for All Requirements
- Exclusive "Pix-Alert"™ Signalling Feature
- Quick Installation — Uses Modular Phone Jacks
- Save Pictures on Ordinary Audio Tape
- Uses Standard CCTV Accessories
- Automatic Switching from Picture to Voice
- No External Phone Coupler Needed
- FCC Approved for Direct Telephone Connection
- Easy to Operate Pushbutton Controls
- Automatic Mode Sends Continuous Pictures

TI-2000

PORTABLE TI-2500 TELE-IMAGER

All The Features Of The TI-2000, Plus...

- Two Pages of High Resolution Memory
- Dual Video Outputs. View Both Pages At Once
- Self-Contained Video Monitor
- Lightweight and Compact
- Protective Front Panel Cover
- Built-In Line Cord Storage

TI-2500

The Tele-Imager

The first of a new generation of low cost freeze-frame video communications systems that can send and receive high quality "snapshots" of live video pictures over regular telephone circuits, twisted pair, or voice grade radio channels. The Tele-Imager can capture video frames from any standard monochrome or color video camera or video tape recorder. These captured images may be then saved and played back on any standard audio tape recorder such as cassette or reel to reel.

Compact and lightweight, the Tele-Imager utilizes state-of-the-art microprocessor technology. A simplified, lighted control panel has been designed with the user in mind.

TI-2000 \$2995.00
TI-2500 3750.00

SPECIFICATIONS

Memory Capacity: 1 page of 256 x 256 pixels (TI-2000)
2 pages of 256 x 256 pixels each (TI-2500)

Gray Scale: Pixels are quantized to 64 shades

Scan Rates: 8 seconds at 128 x 128
16 seconds at 256 x 128
32 seconds at 256 x 256

INPUTS

Video: Standard Composite Video — 525 line, 60Hz., 1.0 Volt p-p white positive, sync neg., 75 ohms BNC Type Input Connector.

Telephone: Standard RJ-11C Modular Jack for direct connection to single line U.S. telephone system and any FCC registered telephone instrument.

Audio Tape Recorder: 100 mV Nominal into 1,000 ohms

OUTPUTS

Video: Standard Composite Video — 525 line, 60Hz., 1.0 Volt p-p white positive, sync neg., 75 ohms BNC Type Output Connector.

Telephone: Standard RJ-11C Modular Jack for direct connection to single line U.S. telephone system and any FCC registered telephone instrument.

Audio Tape Recorder: 100 mV Nominal into 1,000 ohms

CT-10010M 100" Screen

Color Video Projection System w/Remote Control

The CT-10010M large screen color video projection system provides high image quality. Three 7-inch projection CRTs are used in an in-line configuration with f/1.1 lenses to attain a resolution of 450 lines using an NTSC input, which increases to a resolution of 550 lines (or 2000 characters) with an RGB input. New high voltage circuitry delivers 4.2 foot-Lamberts of luminance (screen gain = 1). Thus a bright, highly viewable picture can be displayed on almost any curved or flat screen.

The supplied wired remote control unit allows for convenient adjustment and switching of brightness, contrast, tint, color, sharpness, vertical hold, power on/off and static convergence (with a built-in crosshatch test pattern generator). In addition, the remote control unit incorporates a Line/VTR switch, Video/RGB switch and a Test switch. The CT-10010M can be installed for front/rear or ceiling/floor projection applications

Features:

- Three 7" projection lenses used in an in-line configuration
- Resolution: 450 Lines with NTSC input and 550 lines (or 2000 characters) with RGB input
- Standard accessory wired remote control
- Luminance of 4.2 foot-Lamberts and a luminous flux of 270 lumens at white peak
- High quality projection on almost any flat or curved screen up to 100" (diagonal)
- Comb filter improves resolution and reduces chroma noise

SPECIFICATIONS

Power Source: 120V AC, 60Hz
Power Consumption: 139W (average)
Projection Tubes: 7" high brightness CRTs (RGB)
Lenses: 138.32mm focal length
Resolution: 450 TV lines (composite); 550 TV lines (RGB)
Video IN/OUT Connector: BNC and 8-pin VTR
Video Input Impedance: 75 ohms/Hi-Z
Input Signals: NTSC; 1V p-p composite, neg. sync
 RGB; 1V p-p or TTL level
Screen Size: 50" to 100" diagonal
Luminous Flux: 270 lumens at white peak
Ambient Operating Conditions: 32° F to 104° F (0° C to 40° C); 20% to 80% humidity
Dimensions: 12 1/2" (H) x 24 1/16" (W) x 30 1/8" (D)
 318 x 614 x 767mm
Weight: 105.6 lbs. (48.0kg)
Included With Unit: ET-10R Remote Control Unit

CT-130V VCR Monitor

Introducing the Panasonic CT-130V VCR/Monitor TV combination unit designed for high quality video presentations. The CT-130V is a space saving unit that measures only 15-1/2" across and 16" from front to back. The front loading VCR mechanism comes equipped with a 10-function wired remote control keypad and a locking front panel cover for tamper free operation. The CT-130V is easy to set-up and does not require any connections other than plugging it into an AC outlet. Operational modes include auto-repeat and noise-free still playback. Boasting a host of valuable features, the CT-130V can be a potent communications device in your organization. Applications range from employee training and education, to sales presentations and product demonstrations. Two (2) Auto Repeat modes; end of program and zero counter repeat.

CT-130V \$1395.00

Features Designed for Operational Convenience

- Auto-repeat for unattended presentations or guidance purposes
- Versatile noise-free playback modes including Still, Frame Advance, and Cue & Review (in the SLP mode)
- 10-function wired remote control
- SP/SLP tape speeds with 8-hour record capability (using NV-T160 cassettes in the SLP mode)
- Bright, clear 13" diagonal screen for excellent picture quality
- Front locking cover provided for tamper free operation
- Video input and monitor output
- Camera remote jack
- BNC-RCA adaptor

Specifications

AG-HT240 VIDPAK II CARRYING CASE

The AG-HT240 Vidpak II combines deck and monitor into a lightweight and functional portable video presentation system.

FEATURES:

- Designed for AG-2400 VHS Recorder, CT-500V Color Monitor and AG-B12 AC Adaptor
- Out-of-Sight Audio and Video Cables Included
- Special R.F. Barrier Prevents VCR-Monitor Interference
- Meets FAA Guidelines for Under-Seat Use on Airlines
- Facilitates Use of Components Separately or as Integrated Unit.

Panasonic introduces the AG-HT240 Vidpak Carrying Case. Designed to exclusively house the AG-2400 VHS recorder, CT-500V color monitor, and the AG-B12 plug-in AC power adaptor, the AG-HT240 Vidpak combines the deck and monitor into a functioning portable video presentation system. Its special out-of-sight cable connection design, easy access to controls, and light weight make the Vidpak ideal for point-of-sale presentations. The units are

easily removed for other applications and the case meets FAA size requirements for under-seat airline carrying.

The AG-HT240 Vidpak features a rugged construction with reinforced frame. A special metal recorder/monitor barrier prevents RF interference. Also included is a provision for two VHS tapes and 2 RCA cables for video and audio connection.

Professionals know that interactive video is a faster, more effective training tool than linear instruction. After all, interactive video stimulates students to learn at their own pace. And, perhaps most important of all, interactive video increases comprehension. The result: A better-trained and more productive employee. Now Panasonic makes interactive video as easy for trainers as it is effective for trainees. With the only interactive video system that's easy to program, easy to use and easy on the trainer.

NV-K100 Interactive Computer

- The compact microprocessor-controlled computer is designed to easily interconnect with Panasonic solenoid-operated VHS Players or Recorders: NV8170, NV8200, NV8500; and Panasonic 3/4" Video Players or Recorders: NV9240, NV9600, AU700
- Other compatible VHS Players or Recorders to the NV-K100 are the AG-6100, AG-6200 and AG-6300
- Program data is recorded onto one of the tape's audio channels
- This program data is then decoded by the computer as the video tape is played
- Computer memory is constantly updated by the reading of the recorded data as needed
- This technique allows the system to have access to a large amount of program data without permanently recording program data into the computer memory, thus affording a very flexible cost-effective system.

STUDENT ADDRESS UNIT

- 18 button key pad that plugs into computer
- The unit is as simple to operate as a hand-held calculator.

NV-K110 Master Tape Programmer

- Used with a video recorder and monitor
- Step-by-step instructions for master programming are displayed on a monitor
- The master tape programmer is used to identify the start and end points of each individual segment
- A cue tone is automatically recorded on the tape's audio dub channel at the start points of each segment
- The location address of each segment is automatically encoded on the audio dub channel in the first 90 seconds of the tape
- Entered answer data for each segment is encoded on the audio channel just behind the cue tone
- A choice of four questioning methods exists for each segment: VTR Play, VTR Pause, Workbook, and Character Display
- For each possible answer the Program designer can assign an individual score value and the access point or branch number to which, depending on the trainee's answer, the answer will proceed
- Partial Data Change Mode allows for easy updates and changes of Segment Answer Data
- Easily interconnects with 1/2" VHS Player/ Recorders NV-8200, NV-8500, AG-6200 and AG-6300; 3/4" Player/ Recorders NV-9240, NV-9600 and AU-700.

NV-K120 Text Writer

- A single page character generator, 32 characters across, 15 lines
- Information from the text writer is digitally encoded on the audio dub channel
- This saves valuable editing time by enabling text to be added after the video editing process is complete
- Through simple audio dubs the program designer can return to the tape at any time and revise questions, with no need for video editing
- By eliminating the need for more complicated and time consuming video edits, the program designer is afforded the ability to transform existing linear programs into basic interactive programs simply through the use of audio dubs.

KX-K150 Printer (Optional)

- Hard copy verification of all decisions made by the trainee
- Student ID#, date, title of program, degree of answer correctness
- Score achieved for particular question
- Time taken to make decision
- Total time taken vs. time allowed
- And total score vs. total potential score.

SWING 'N TILT UNIVERSAL JOINT

For use with 12", 18" and Double Pivotellis
To angle the TV, Speaker or Monitor up or down.

MODEL UL

\$27.95

CHOICE OF BASEPLATE?

SCREWTYPE—an effective way to support wood-based equipment. Support is provided by the "H" shaped baseplate to which equipment is fastened by four wood screws. Also if wood platform is desired.

LIMPET—The Pivotelli Limpet actually grips the cabinet of the equipment with rubber-lined clamps and is adjusted by you to support equipment in its exact center of balance.

Pivotelli wall brackets mount onto wood or metal studs and masonry walls.

MONITORS/VIDEO TUNER/ PREAMPLIFIER

MODEL 619

Proton 600M Video Monitor

In the Proton 600M such factors as a high performance comb filter, precision-wound deflection yoke, high frequency flyback transformer, and a sophisticated power supply combine to accomplish the goal.

The quality of the picture is further aided by a system of "picture clarification" circuits which insure that the details of every picture are retained for reproduction. And a separate series of "color stabilization" circuits preserve subtle color nuances.

The screen itself is completely framed in a streamlined all-black cabinet. Every control is concealed. Nothing detracts from the image itself.

The Proton 600M provides you with a choice of three color modes. In the AUTO mode, the Proton 600M automatically adjusts itself for the most natural fleshtones.

In the VIR mode, the system calibrates itself to a color information signal contained within the program material.

In the MANUAL mode, all internal circuits are overridden and you take control.

With its OPC (Optimum Picture Control) circuitry engaged, the Proton 600M will interpret ambient lighting conditions and accurately adjust the picture brightness for the best viewing level.

The Proton 600M will shut itself down after five minutes without a video input—whether the tape ends or the station signs off the air.

The Proton 600M has a frequency response in excess of 4.7MHz and is able to actually provide more than 370 lines of resolution.

600M 19" Monitor.....\$650.00

Proton 302 Speakers

The Proton 302 two-way speaker system provides true hi-fidelity performance in a size that precisely matches the cabinet of the 600M monitor.

302pr. \$130.00

Proton 600T Video Tuner/Preamplifier

As a high performance video tuner, the Proton 600T offers you multi-band tuning capable of receiving 127 channels, including those from your cable system.

As a preamplifier of tremendous capabilities, the Proton 600T makes a most intelligent control center.

The Proton 600T stands apart from the competition in its complete dedication to excellent performance—both audio and video. It is certain to appeal to those of you who value sound as much as sight, and who place unrelenting demands on both.

- Dedicated Circuitry. Audio signals differ dramatically from video signals, so the Proton 600T makes no attempts to process the two together. Instead, separate IF stages are employed, and each has been carefully perfected for handling a specific type of signal. This results in an excellent signal-to-noise ratio for both audio and video.
- Rapid Accurate Tuning. Inside the Proton 600T, an advanced Frequency-Locked Loop tuning system combines extremely accurate

tuning with the fastest scanning rate of any system currently available. This convenient method of tuning seeks out and stops only on active stations.

- Multiple Inputs. Up to two RF sources and two composite video sources can be simultaneously connected to the Proton 600T. Build your own video system around any combination of tapes, discs, games, computers, cable, or off-air broadcasts.

- Multiple Outputs. The video signal selected by front panel or remote control is sent to two separate video outputs; one for viewing and one for taping, or two for viewing and two for taping. The option is yours.

- Multiplex Output for stereo TV decoder.

600T Tuner/Preamplifier\$400.00

Proton 619 19" Color Receiver/Monitor

PERFORMANCE SPECIFICATIONS

Monitor

- Overscan: Typically 5% • Picture Size Variation: less than or equal to 0.6% from 96 to 144V (Line Voltage) • Black Level Retention: DC Restoration via Keyed Back-Porch Clamping • Usable Luminance: greater than or equal to 800 LUX; typically 1350 LUX Peak White (Black Level at Detent) • Geometric Distortion: less than or equal to 2.5%; typically 0.7% • Video Bandwidth: approximately 4.7MHz (To estimate resolution capabilities [chassis], multiply video bandwidth by 80) • Horizontal Resolution: exceeds NTSC Broadcast Standard (4.25MHz)

Tuner/Preamplifier

- Tuning Range: VHF 2-13; UHF 14-83; Cable-Mid Band (A-1); Super Band (J-W); Hyper Band (AA-TT) • Tuning Speed (Scan Time): VHF/UHF less than or equal to 6 Seconds; Cable less than or equal to 5 Seconds • AGC Range: greater than or equal to 80dB, typically 90dB • Audio Frequency Response (VCR, Disc): 20Hz-30kHz +/- 1.5dB • Tone Controls: Bass and Treble + 10dB, -15dB • Inputs: RF1—VHF 75 ohms, UHF 300 ohms; RF2—(Cable) 75 ohms; Video 1—(VCR) 1.0V p-p Composite Video 75 ohms; Video 2—(Disc) 1.0V p-p Composite Video 75 ohms; Audio 1—(VCR) 150-300mV at 47K ohms 2 Channel (L and R); Audio 2—(Disc) 150-300mV at 47K ohms 2 Channel (L and R) • Outputs: Video 1—(VCR) Fixed Level 1.0V p-p Composite Video 75 ohms; Audio 1—(VCR) Fixed Level 2 Channel (L and R); Audio 2—(AUX) Variable Level 2 Channel (L and R) • Connectors: Video and Audio—RCA Phono Jacks • Power Requirement: AC 120V 60Hz 105W • Internal Audio System 3.5 Watt Mono Power Amp Built-in Full Range Speaker • Dimensions: Width 70.2cm/27.5"; Height 46.0cm/18.5"; Depth 49.6cm/20.5" • Shipping Weight: 70 lbs (31.8kg)

619 Receiver/Monitor.....\$850.00

Proton 602M 25" NTSC Color Video Monitor

FEATURES

- Remarkably Low Overscan (typically 5%) for up to 15% more of the image
- Exceptionally Stable Power Supply and DC Restoration for truer blacks and brilliant whites
- Superior Geometric Linearity (typically 99.3% accurate) for straighter lines and more precise shapes
- Exclusive Proton Deflection Yoke assures excellent convergence
- Video Bandwidth greater than 4.7 megahertz for Horizontal Resolution in excess of 380 lines
- Pure Black Cabinet for enhanced picture quality
- High Performance Comb Filter
- Automatic Shutdown
- Separate Video/Audio Inputs
- RGB Input
- 10 Watt Stereo Amplifier
- Video Output

602M Video Monitor.....\$1100.00

COLOR RECEIVER/MONITOR

I. GENERAL SPECIFICATIONS

Color Standard	525 line NTSC Color
Chassis	CTC 131 all solid state, unitized
Power Requirements	120 VAC ± 10%, 60 Hz
Power Consumption	Not to exceed 157 watts. Av 134W
Power Cord	Type SJT 3-wire, 20 ft long, shielded
Service Adjustments	Accessible behind rear panel cover
Certification	U.L. Commercial

II. MECHANICAL SPECIFICATIONS

Height	21 3/4" . 55 2 cm
Width	25 1/4" . 64 1 cm
Depth	19" . 46 26 cm
Shipping weight	106 lbs
Cabinet	Rosewood Veneers on fiberboard
Picture Tube	25" 110 COTY Precision in-line with High Potential, Bipotential gun, Super Arched Shadow Mask and striped, pigmented phosphors

B. AUDIO SPECIFICATIONS—per channel (stereo)

Audio Output	internal spkr: 1.8 W/ch (α 5% T.H.D) external spkr: 1.3 W/ch (α 5% T.H.D) (stereo) hi-fi outputs: 1.5 V RMS max. (volume controlled), 600 ohms impedance Selected output: 200 mV RMS max., 600 ohms impedance
Audio Inputs	680mV RMS, 16K ohms impedance
Frequency Response	50-15,000 Hz
Stereo Performance	BTSC System, 3 channels (stereo L, R, Audio B)
Stereo Mono Switching	Automatic
Speaker Type	2 ea —5" Woofer, 2" Tweeter
Speaker Impedance	internal: 16 ohms nominal external: 6 ohms or greater

C. VIDEO SPECIFICATIONS

Contract Range	5 : 1 min. (8 : 1 typical)
D C Gain	Luminanced Ch. 90% min. with blanking level clamp
Luminance Bandwidth	4.2 MHz (limit)
Resolution	350 lines
Video input output	1 Volt PP, 75 ohms, negative sync
Comb Filter Rejection	greater than or equal to 25 dB (3.58 MHz)
920 KHz Attenuation	45 dB min.
Hue Color Range	± 40° nominal
Color Matrix Angles (AutoColor Off)	B-Y + 2° R-Y + 93° ± 15° G-Y + 258° ± 15°
Gain Ratios	R-Y = 1:1 B-Y = 1.2 (± 0.2):1 G-Y = 0.33 (± 0.1):1
AGC Gain (Chroma)	+ 2 dB max. with -14 to + 6 dB chroma input
Chroma Bandwidth	Q 500 KHz, I = 1.5 MHz
Vertical Interface	40 60
Horizontal and Vertical size tracking with Beam	less than 3%
Vertical Scan Capability	full scan 105-135V RMS line voltage (α max beam)
H.V (α Zero Beam)	28.2 kV nom.
(α Max. Beam)	26.0 kV
AFC Phase Response	less than or equal to 10 lines
Light Output	Peak: 350 FT-L

D. RGB SPECIFICATIONS

Resolution	500 lines min.
Bandwidth	6.2 MHz
RGB Enable—TTL Compatible:	
Hi (color on)	min. 2.4 V. (no current required as Monitor has internal 3.65 V. pull-up voltage through 75 ohm resistor)
Lo (color off)	less than 1.5 V.; less than 50 ohms impedance; able to draw min. 30 ma.
Sync.	-0.25 V.—1 V. PP negative polarity.

MONOCHROME MONITORS

TC1112

TC1115

TC1910

TC1105, TC1105X Monitors

Resolution More than 600 lines at center.
Amplifier Bandwidth Greater than 7 MHz
High Voltage 8.5 kV nominal
Sweep Linearity Better than 8%.
Sweep Geometry Better than 2%.
DC Restoration Selectable
Synchronization Internal or external. Switch selectable.
Picture Tube 5 in. diagonal. Rimband implosion protection.
Scanning Rate:
TC1105 — 60 fields/sec, 525 line
TC1105X — 50 fields/sec, 625 line.

Video Input:
Level — 1.0 V p-p video or composite, sync negative (0.5 to 2.0 V p-p). High Z or 75 ohm termination
Connectors — Two BNC Loop-through

External Sync Input:
Level — 4.0 V p-p negative. (2 to 5 V p-p). High Z or 75 ohm termination
Connectors — Two BNC Loop-through

Front Panel Controls:
Rotary Knob — Power On/Off with pilot light, Horizontal Hold, Vertical Hold, Brightness, Contrast
Screwdriver — Focus, Height, Width

Rear Panel Switches Video Termination (HiZ/75 ohm); DC Restoration (On/Off); Sync Selection (Int/Ext); External Sync Termination (HiZ/75 ohm)

Supply Voltage:
TC1105 — 120 V, 60 Hz
TC1105X — 220 V, 50 Hz.

Power 16 watts, approx.
Power Cord 3-wire with plug.

Operating Environment:
Ambient Temperature — +14 to +122° F (-10 to +50° C).
Humidity — Less than 90%.

Size 147 mm W x 180 mm H x 250 mm D (5.8" x 7.1" x 9.8")
Weight 3.0 kg (6.7 lbs).

TC1105MK Rack Mount Kit

For mounting one, two, or three TC1105 or TC1105X monitors in a standard EIA 19" rack.

Size 480 mm W x 177 mm H x 270 mm D (19" x 7" x 10.6")
Weight 2 kg (4.3 lbs)

TC1112 Video Monitor

General:
Fast warm-up time — less than 10 seconds

Resolution 700 lines
Amplifier Bandwidth 9 MHz or better
Synchronization Internally derived

Picture Tube 12 inch (31 cm) diagonal 90 deflection aluminized integral implosion protection.

Input 0.5 to 2.0 V p-p, sync-negative composite video High impedance or 75 ohm termination

Connectors Two BNC for looped-through video

VM-96

Supply Voltage 108 to 132 V, 60 Hz
Power 33 watts at 120 VAC
Power Cord 3-wire, 3-prong-plug
Cabinet:
Material — Metal with plastic front
Finish — Non-reflecting brown
Dimensions — 358 mm W x 261.5 mm H x 297 mm D (14.09" W x 10.29" H x 11.67" D)
Weight — 8 kg (17.6 lbs) approx
Shipping Information:
Weight — 9.2 kg (20.3 lbs) approx

TC1115 Video Monitor

Resolution 800 lines
Amplifier Bandwidth 15 MHz or better
High Voltage 14.0 kV
DC Restoration Switchable peak clamped
Synchronization Internally derived.

Picture Tube 15 inch (38 cm) diagonal, 110 deflection Integral implosion protection

Input 0.5 to 1.5 V p-p, sync-negative, composite video High impedance or 75 ohm termination

Connectors Two UHF for looped-through video

Supply Voltage 108 to 132 V, 60 Hz
Power 43 watts at 120 VAC
Power Cord 3-wire, 3-prong plug

Cabinet:
Material — Metal with plastic front
Finish — Non-reflecting brown
Dimensions — 398 mm W x 372 mm H x 310 mm D (15.7" W x 14.6" H x 12.2" D)
Weight — 12 kg (26.5 lbs) approx

TC1119 Video Monitor

Resolution 800 lines.
Amplifier Bandwidth 15 MHz or better
High Voltage 15.5 kV

Linearity 4% max
DC Restoration Switchable On Off
Synchronization Internally derived

Picture Tube 19 in. (diagonal) 184-sq in viewing area integral implosion protection.

Input 0.5 to 1.5 V p-p, sync-negative, composite video High impedance or 75 ohm termination

Connectors Two UHF for looped-through video

Supply Voltage 108 to 132 V, 60 Hz
Power 68 watts at 120 VAC
Power Cord 3-wire, 3-prong plug

Cabinet:
Material — Metal with plastic front
Finish — Non-reflecting brown
Dimensions — 526 mm W x 456 mm H x 370 mm D (20-11/16" W x 17-15/16" H x 14-9/16" D)
Weight — 27 kg (59.5 lbs) approx

TC1910 Video Monitor And Single/Twin Rack Mount

Resolution Better than 700 lines
High Voltage 11 kV
Linearity 2% or better
DC Restoration Front-Panel-Adjustable

Synchronization Internally derived
Picture Tube 9 V, 9-inch (diagonal) 90 deflection Aluminized Integral implosion protection 44-sq inch viewing area

Input 0.5 to 2.0 V p-p, sync-negative, composite video High impedance/75 ohm termination switch on rear panel

Connectors Two BNC for looped-through video

Supply Voltage - AC or DC:
DC — 12 to 16 V*
120 V, 60 Hz — 105 to 130 V
*DC Power Cord (optional) TC1313

Power:
AC Supply Voltage — 30 watts at 120 V, 60 Hz
DC Supply Voltage — 15 watts at 12 VDC

AC Power Cord 3-wire with grounded plug 6 ft

Cabinet Material:
Monitor — Brown, vinyl coated metal case with black plastic front
Rack Bezel — Sheet metal Light metallic grey finish

Dimensions:
Monitor — 8.69 in. W x 8.56 in. H x 9.80 in. D (220 x 217 x 249 mm)
Rack — See drawing

Weight:
Monitor — 12.4 lbs (5.64 kg)
Rack — 5.0 lbs (2.28 kg)

Humidity 10 to 80% relative, non-condensing
Altitude 10,000 ft (300 m)

Shipping Info:
Monitor —
Dimensions — 14.4 in x 13.1 in x 13.0 in (365 x 333 x 330 mm)
Weight — 13.8 lbs (6.25 kg)

PROFESSIONAL COLOR MONITORS

XM-900

XM-1300

XM-1900

XM-900 9" PROFESSIONAL COLOR MONITOR

The XM-900 9" professional utility color monitor is designed for studio, field production and editing applications. The monitor is ideal for studio use or other fixed applications, but can also function on 12 to 24 volt battery power for complete portability.

An optional rack mount adaptor allows side-by-side mounting of either two XM-900s or one XM-900 and a WFM or vectorscope, by using an additional WFM mounting kit.

Frequent convergence adjustments are not necessary, since the XM-900 uses an in-line electron gun. Adjustments remain stable through wide temperature ranges and long periods of time.

Front panel controls include vertical hold, tint (hue), color, brightness and contrast, as well as sync, color and scan select switches. Blue check and pulse cross switches are also incorporated into the panel.

The blue check circuit cuts off the red and green guns. A color bar signal allows correct adjustment of color phase and level controls in this mode.

The XM-900 has an automatic/manual degauss circuit which degausses the monitor each time power is turned on. A 0.47mm phosphor trio pitch cathode ray tube and a comb filter combine to make 310-line resolution available at all times.

Normal or fast time constants for the deflection AFC can be selected by the rear panel skew switch. In the fast time constant mode, non-timebase corrected signals from a VTR can be displayed without flagging disturbance at the top of a picture.

The monitor itself is housed in a rugged metal cabinet to ensure durability. This also minimizes the effect of external magnetic fields.

XM-900 \$700.00
XM-9DR Double Rack Adaptor 120.00
XM-9WR WFM Adaptor Kit for XM-9DR 95.00

XM-1300 HIGH-RESOLUTION BROADCAST COLOR MONITOR

High-resolution CRT features 0.31mm dot pitch producing over 600 lines resolution. Standard U.S. controlled phosphors are used, assuring accurate color reproduction and matching with existing high quality studio monitors. Comb filter is provided for maximum resolution and to minimize cross color interference. A front panel switch allows for selection of either the comb filter or a notch filter, whichever is needed.

Two video inputs as well as direct RGB inputs are provided. The RGB signals can be from an analog video source or TTL for computer display. H-delay and V-delay functions are provided for a pulse cross display.

Fast (0.5ms) or slow (7ms) AFC time constants can be selected. This allows you to optimally view a noncorrected VTR signal or a signal with stable time base.

Normal and under-scanned picture modes are provided. Hue, chroma, contrast, brightness and aperture are individually adjustable or can be switched to preset for a precisely calibrated display.

White balance, black balance, individual gun switches and other service adjustments are located behind a separate hinged door on the front panel. This prevents accidental misadjustment of the monitor by non-technical people.

An automatic/manual degauss circuit neutralizes the XM-1300 from the effects of magnetic fields. With its low power consumption and highly reliable parts, including ICs, the high resolution picture remains sharp and stable even after many years of use. The diecast aluminum front mask is made for professional use guaranteeing excellent durability and reliability.

XM-1300 \$2995.00
XM-13RMK (Rackmount Kit) 120.00

XM-1900 19" HIGH RESOLUTION BROADCAST COLOR MONITOR

Type C controlled phosphor for precise colorimetry is incorporated in the new XM-1900 19", high resolution color monitor. A 0.44mm dot trio pitch allows an outstanding 600 lines of resolution. Reliable, durable ICs and other high quality components are used in the XM-1900. These not only ensure stable performance and long life for the monitor, but also reduce power consumption. Monitor ruggedness is further enhanced by a diecast aluminum front mask.

The XM-1900's unique comb filter minimizes cross color interference. The monitor detects the presence or absence of burst and automatically selects the optimum display mode. Manual controls are provided to handle unusual situations.

Picture quality is further enhanced by an automatic degauss circuit that removes magnetism due to external fields every time the power is turned on.

A hinged metal cover for service adjustment controls prevents accidental misadjustment. White and black balance and individual gun switches can be set without fear of inadvertent misadjustment.

Two video and direct RGB inputs can be selected by switches to allow input from cameras and peripheral equipment. The RGB inputs accept signals from both an analog-video source and TTL (transistor-transistor logic).

Other outstanding features of the XM-1900 include independent horizontal and vertical delay circuits and a cross-pulse mode if both are activated. Normal (7.0 msec.) or fast (0.5 msec.) time constants for the deflection AFC can be selected with the front panel AFC/fast/slow switch as well.

PVM-8020

PVM-4000

PVM-4000 Trinitron®

4" Color Video Monitor/Viewfinder

- Dependable Trinitron® color system with 3.7" diagonal screen
- Advanced power supply switching regulator
- Sync signal checking via HV Delay (pulse cross) switch
- Blue-only picture display for hue and VTR playback checks
- Two separate video input connectors, rear panel selectable
- Tally lamp and LED tally indicator
- EIA standard 19" rackmountable with RMM-1800
- Intercom system
- Swing-out viewing stand
- Retractable utility grip
- Detachable anti-glare hood
- Optional VLC-4000 carrying case
- Weight: approx. 5 lbs., 8 oz. Approx. 5 lbs. 15 oz. with mounting adaptor and hood
- Dimensions: approx. 4-3/8"H x 4-1/4"W x 13"D including projecting parts and controls. Approx. 6-3/8"H x 4-1/2"W x 14-3/8"D with mounting adaptor and hood.

\$1000.00

PVM-5300 Trinitron®

Triple 5" Color Video Monitor

The PVM-5300, three high performance 5" (diagonal) monitors mounted side-by-side in a single housing. It is the ideal studio monitor for camera or preview monitoring.

- Fits 19" EIA standard rack
- External sync input terminals
- Loop-through receptacles for both video and sync
- Set-up switch for easy adjustment of white balance and horizontal static convergence
- Weight: 52 lbs., 7 oz.
- Dimensions: 7"H x 19"W x 16-1/2"D

\$2300.00

PVM-8200T Trinitron®

8" Color Video Monitor

This versatile 8" rack mount color studio monitor can be easily combined with a waveform monitor or vectorscope or with one more PVM-8200T for dual color monitoring.

- Line (A) Line (B) selection
- Easily mounted into an EIA standard 19" rack with an optional mounting bracket (MB-500) to hold two PVM-8200Ts
- External sync can be acceptable
- Loop-through connections for video and sync
- In place of two PVM-8200Ts, a waveform monitor or a vectorscope can be installed by using an optional mounting attachment (MB-501)
- BNC connectors allow simple and quick cable connection
- Available as a dual color monitor PVM-8200MB (two PVM-8200Ts and an MB-500)
- Weight: 26 lbs., 7 oz.
- Dimensions: 9-1/8"H x 8-1/2"W x 20-1/2"D

\$785.00

PVM-8200MB Trinitron®

Dual 8" Color Monitor

- Weight: 26 lbs., 7 oz.
- Dimensions: 9-1/8"H x 8-1/2"W x 20-1/2"D

\$1590.00

PVM-8020 Trinitron®

8" Color Video Monitor

The PVM-8020 is ideal for field production. It is a perfect companion to the DXC-M3A camera and the VO-6800 U-Matic recorder for location shooting.

- Microblack Trinitron® tube
- 3-way AC/DC operation
- Built-in stand
- Supplied hood
- Push-to-lock controls

- 2 video input/output
- 6-pin DIN connector for optional TU-1110 TV tuner
- Blue-only, normal/underscan and HV-Delay

30" Color TV Receiver/Monitor

Enjoy the very best in studio viewing with the world's largest color video monitor. A 30" screen plus Sony's outstanding Trinitron® color system make it the perfect unit for large audience presentations or public events.

- Line/VTR/TV Selection
- VHF/UHF Synthesizer Tuner with Automatic Station Memory that holds up to 14 channels
- Velocity Modulation System and Comb Filter for improved Resolution
- Audio Power Output for External Speaker (10W)
- Front Panel Controls including CRT Adjustment and Manual Degauss
- Remote Commander (RM-503) controls power On/Off, Channel Selection, Sound Level and Sound Muting
- Loop through capability for Multiple Monitor Connection
- Weight approx: 275 lbs., 9 oz.
- Dimensions: 29-3/8"H x 33-7/8"W x 22-7/8"D **\$7800.00**

CKV-1900F

19" Color TV Receiver

- 19" diagonal Screen with Trinitron® Color System
- Independent F-type VTR-In Connector for Reproducing the Playback Picture and Sound from the RF/VHF Output of a VTR
- VTR/(RF)/TV Selection
- Synthesizer VHF/UHF Tuning System with Automatic Station Memory that holds up to 14 Active Channels
- LED Digital Channel Display
- Sub-Volume Control to Pre-Adjust Volume
- Side Panel Mounts for Safety Chain
- Weight: 61 lbs., 12 oz.
- Dimensions: 20"H x 20-1/2"W x 18-5/8"D **\$649.00**

CVM-2560

25" Color TV Receiver/Monitor

A large screen, 25" measured diagonally, full color monitor in a streamlined, compact design. This remote controllable

unit employs a velocity modulation system as well as a comb filter for distinctly improved resolution and is an ideal unit for studios, classrooms, public events or any other large screen type of information display.

- 390 Lines (Video), 340 Lines (TV)
- Line/VTR/TV Switchable
- VHF/UHF Synthesizer Tuner with Automatic Preset Tuning of up to 16 Active, Local Channels
- LED Digital Channel Indicator
- Velocity Modulation System and Comb Filter (COMB/TRP Filter Switch) for Improved Resolution
- Built-In Speaker (3W) plus External Speaker Output (10W)
- RM-606W Remote Commander Controls power On/Off, Channel Selection, Sound Level and Sound Muting
- Channel Lock Switch and Remote On/Off Switch
- Loop through capability for Multiple Monitor Installations
- Sub-volume Control for Presetting Initial Sound Level
- Versatile Output Connectors: TV Out, Monitor Out, Line Out
- Weight: 136 lbs., 6 oz.
- Dimensions: 25.5"H x 27"W x 19.2"D **\$1715.00**

Sony CVM-1271

Super Fine Pitch 12" Trinitron® Color TV Receiver/Monitor

- High Resolution — more than 500 Lines with Video Input
- 10-Key VHF/UHF Express Tuning™ plus Sequential Up/Down Channel Selector and LED Channel Indicator
- Line/VTR/TV Input Selector
- Monitor/Line/TV Video Outputs
- AFC Slow/Fast Switch
- Comb Filter improves Picture Quality — no Color Spill or Color Noise Distortion
- Up/Down Volume plus Sub-Volume Control for Presetting Initial Sound Level
- Rackmountable with optional MB-502 Rack Attachment plus optional SLR-102 Slide Rail
- Color Temperature Selector
- Weight: 32 lbs., 2 oz.
- Dimensions: 13-13/16"H x 13-1/2"W x 15-3/16"D **\$795.00**

PVM-411

PVM-411 Quadruple 4" Monochrome Monitor

Four independently controlled 4" screen (measured diagonally) monochrome monitors in a single rackmount unit. Fits EIA standard 19" rack. Individual unit shielding minimizes magnetic crosstalk distortion. Spot-killer circuitry prevents phosphor burns when bright images remain on-screen for extended periods. Loop-through capability enhances use in multiple location production and surveillance applications. Individual front-mounted contrast, brightness, V-hold and H-hold controls. Weight: 35 lbs. 4 oz. Dimensions: 5-1/4"H x 19"W x 12-1/2"D.

PVM-411 Quadruple 4" Monochrome Monitor **\$1275.00**

PVM-122 12" High Resolution Monochrome Video Monitor

- 1000 lines of horizontal resolution at center
- Selectable scanning systems: Normal/Underscan
- DC clamp switch provides a stable reference for black level
- External sync input
- Selectable A/B line inputs with front switch
- Loop-through BNC connectors for Line, A/B and Sync
- Built-in speaker for audio monitoring
- Tally lamp
- Weight: 21 lbs. 11 oz.
- Dimensions: 12-3/16"H x 12"W x 12-3/16"D

\$450.00

PVM-91

9" High Resolution Monochrome Video Monitor

A high resolution black and white monitor whose picture precision makes it an ideal unit for use as a computer display, a calibration device for color video cameras, CCTV applications and a studio control room monitor.

- 800 lines of horizontal resolution at center
- Selectable scanning systems: Normal/Underscan

- DC clamp switch provides a stable reference for the black level
- Accepts an external sync
- Loop-through BNC connectors for video and sync
- Can be installed/rackmounted as a dual video with the MB-500 optional mounting bracket monitor
- Can be installed with a waveform monitor or a vectorscope by using an MB-501 optional mounting bracket
- Weight: 12 lbs., 12 oz.
- Dimensions: 8-3/4"H x 9"W x 10"D

\$345.00

PVM-91

PVM-122

**VIDIMAGIC
FP-60 COLOR VIDEO PROJECTOR**

Sony has performed their magic on video again. They've combined a TV tuner, a Betamax® recorder/player and a revolutionary single lens video projector into one incredibly compact and lightweight presentation system. Advanced Sony design and technology means easy set-up, operation, and most of all, magical video presentation.

VIDIMAGIC FEATURES

- A complete video presentation system that is compact, lightweight, easy to set up and simple to use
 - Single lens color video projector
 - Betamax® recorder/player
 - 181 channel cable ready TV tuner
 - Public address system
 - Loudspeaker
- Revolutionary new 5.25" high-brightness Indextron™ designed for the single tube color projection system
- Super easy set-up with absolutely no registration headaches, just focus and it's ready
- Variable projection size allows use of screens from 30" to a giant 200" (measured diagonally). Even a white wall can be used as an instant screen
- Built-in Betamax recorder/player with Beta II & III record/playback, BetaScan®, Beta Skipscan™, linear time counter, external video in/audio in
- Built-in 181 channel VHF/UHF/CATV tuner with 10 key direct tuning
- Built-in public address system. The addition of the optional RM-27 Remote Control/Microphone allows for narration over the video playback/TV program as well as for use as an independent PA system
- RM-27 Remote Control/Microphone with remote control functions for the VCR (PLAY/STOP/REW/FF/PAUSE) & built-in microphone
- Motor-driven focusing system for accuracy and ease-of-operation
- Adjustable projection angle from 7 to 20 degrees makes picture positioning a snap
- MPX and audio outputs plus video and audio inputs facilitates connection with other audio/video equipment
- On-screen TV channel indication
- On-screen sound volume and picture bar displays
- Convenient built-in power cord retainer

GENERAL

Color System: NTSC System

Test Signal: Focus marker is incorporated

Speaker: 2" x 3 3/8" (5cm x 9cm)

Audio Output: 3W

Power Requirements: 120V AC, 60 Hz

Power Consumption: 110W

Dimensions: 9 3/4"H x 8 3/4"W x 26 3/8"D (246 x 220 x 668mm)

Weight: 34 lbs., 3 ozs. (15.5kg)

Inputs: VHF/UHF: 75 ohm/300 ohm antenna connector (F-type), VIDEO: 1V p-p, 75 ohms unbalanced, sync negative (phono type), AUDIO: -10dBs, high impedance (phono type), MIC: -60dBs, low impedance (mini-jack), REMOTE: 8-pin DIN

Outputs: AUDIO: adjustable -10dBs (max) low impedance phono type, MPX: 0.0775 Vrms (phono type), EARPHONE: 8 ohm earphone (mini-jack)

Remote Connector: 8-pin DIN, for connection with the optional RM-27 Remote Control Unit

FP-62	Stand alone Video Projector	\$2150.00

RVP-460
High Resolution Rear Projection
Color Video System

The RVP-460 is an ultra-compact, high resolution rear projection video system with a giant 46" screen. Advanced projection tube, lens and screen technology create a picture sharp enough to reproduce computer-generated graphics and characters. Features include multiple video and audio input connectors including a separate RGB input.

FEATURES

- Ultra compact size with giant 46" screen
- Exclusive tri-fold optics system with unique and extremely compact Delta Lens
- Exclusive coolant-sealed picture tubes produce 30% brighter picture (100 Ft-L) and improve viewing in normal ambient light conditions
- Special front-coated mirrors and super bright f1.0 aspherical lens elements minimize light loss and yield brighter pictures
- One-piece acrylic screen with patented lenticular surface on one side and fresnel lens on other side reject ambient light and improve contrast
- Convertible screen provides choice of optical path angles to adjust to viewers eye level—standing or seated (± 1.8 degrees vertically)
- High resolution: RGB more than 500 lines, Video more than 450 lines, RF more than 340 lines
- RGB input accepts both analog RGB or digital RGB with 80 character x 25 line color display
- 10 key frequency synthesis express tuning system provides direct access to selected channel with no presetting necessary
- 105 channel cable-adaptable tuning circuitry with Cable TV-Midband (A-I), Cable TV-Superband (J-W), VHF (2-13) and UHF (14-83)
- Multi-Function Remote Commander[®] controls power, 10 key Express tuning, direct or sequential up/down Channel selection, volume, muting, brightness, color, hue, picture matrix sound on/off, tone enhance and antenna selection
- On-screen color bar tuning display
- Multiple video and audio inputs with 8-pin and BNC connectors facilitate easy connections with audio, video and computer systems
- Matrix Sound[™] with twin audio amplifiers (10W + 10W) and separately enclosed bass reflex speakers
- Built-in casters and handles permit simplified positioning anywhere in viewing environment
- Optional modular base elevates unit and provides handy locked storage

Inputs/Outputs:

Signal	Connector	Signal Level	Remarks
Video Input	[VTR] 8 pin pins 2 & 6	1 V (p-p) \pm 0.2 V	NTSC 75 Ohms sync negative
	[VIDEO IN] BNC connector and phone jack		
	[RGB IN] 4 BNC connectors	Composite RGB: 1V (p-p) \pm 0.2V or non-composite RGB: 0.7V (p-p) \pm 0.15 Sync: 0.5V (p-p) to 6V (p-p), 75 Ohms, sync negative	Sync is selected automatically between composite RGB signal and external sync
Video Output	[VTR] 8 pin (pins 3 & 4)	1V (p-p) \pm 0.2V	NTSC, 75 Ohms sync negative
	[VIDEO OUT] BNC connector		
Audio Input	[VTR] 8 pin (pins 1 & 5)	- 5 dB (436 mV rms)	47k Ohms
	[AUDIO IN] 2 phono jacks		
	[LINE IN] 2 phono jacks		
Audio Output	[VTR] 8 pin (pins 7 & 8)		10k Ohms 1 kHz 100% modulation
	[AUDIO OUT] 2 phono jacks		

RVP-460 46" color rear video projector.
Displays 80 characters x 25 lines with RGB
input. Cable-adaptable tuner. **\$4,440.00**

VPH-722Q1/1020Q1 HIGH RESOLUTION COLOR VIDEO PROJECTION SYSTEMS

The Sony VPH-722Q1 and 1020Q1 Universal Video Projectors create large, clear video images on flat screens, on high gain curved screens, and even on flat white walls when the use of a screen is impossible or impractical. These two new lightweight, bright, easy-to-operate color video projectors allow business, professional, government and educational spokespersons to bring the dynamic impact and the excitement of video to all their presentations.

The VPH projectors may be set up at table height, floor mounted on a low rise pedestal or mounted from the ceiling. In addition, they may be used for high resolution front or rear video projection. New picture tubes, new lenses and new circuitry create incredibly brightened, sharper pictures. Images are clear and crisp enough to reproduce computer generated graphics and characters (80 x 25 characters) by digital or analog RGB signal.

The projectors are uniquely compact and transportable, and exceptionally simple to operate. They can be set up quickly and easily by anyone, without assistance and without special technical training. They are ideally suited for video teleconferencing, institutional and industrial training as well as for video theaters, schools and other educational facilities using VTR and data curriculum materials.

With Optional
Ceiling Mount

VPH-722Q1

Color video projector, portable. Factory adjusted for 72" flat screen. Displays 80 characters X25 lines w/RGB input.
(Without screen) **\$5850.00**

VPH-1020Q1

Same as above except factory adjusted for 100" flat screen.
(Without screen) **\$5850.00**

VPH-2020Q1

200" Universal projector. Floor type, ceiling mount or rear projection. 3 picture tubes, built-in speakers, greater than 200 lumens, remote controllable. Horizontal resolution—600 lines RGB. 150-250" screens **\$6495.00**

SPECIFICATIONS

Optical

Projection System: 3 picture tubes, 3 lenses, direct projection system

Picture Tube: 5.5 inch high-brightness monochrome tubes, coolant sealed

Projection Lens: High-performance acrylic lenses F1.0/130mm

Projected Picture Size:

VPH-722Q1: 72" measured diagonally

VPH-1020Q1: 100" measured diagonally

Picture Brightness (obtained with a curved screen of gain 13):

VPH-722Q1: More than 130 fL

VPH-1020Q1: More than 65 fL

Throwing Distance:

VPH-722Q1: Approx. 97-3/4" (2,480mm)

VPH-1020Q1: Approx. 132-3/4" (3,368mm)

Viewing Distance:

VPH-722Q1: 10 to 66 ft. (3 to 20m)

VPH-1020Q1: 13 to 83 ft. (4 to 25m)

General

Color System: PAL, SECAM, NTSC, and NTSC 4.43, systems switched automatically

Resolution:

More than 600 TV lines (RGB inputs)

More than 400 TV lines (video line inputs)

RGB Inputs: Character display capacity 2000

characters (80 letters x 25 lines)

Horizontal frequency: 15.75 kHz

Vertical frequency: 60 Hz

Test Signal: Cross-hair/crosshatch test pattern, generator is incorporated

Speaker: 2" x 3 5/8" (5cm x 9cm) 2 units

Power Requirements:

VPH-722Q1/VPH-1020Q1:

120V AC 50/60 Hz—Preset

100-240V AC

50/60 Hz

Power Consumption:

VPH-722Q1/VPH-1020Q1: 165W (max.)

Dimensions: 10-1/4" x 20" x 23-5/8" (HWD)

with the brackets pushed down, including projecting parts and controls

Weight: 57 lb. 5 oz. (26kg)

SUPPLIED ACCESSORY

AC power cord

OPTIONAL ACCESSORIES

VLC-722 Carrying Case **\$450.00**

VPR-722 Remote Control Unit **\$400.00**

**SMI-7075 VIDEOTIZER
 FOR SONY MICROCOMPUTER SMC-70/70G**

The Sony's VIDEOTIZER takes you to a new world of graphics and images with much easier and faster input capability than a keyboard and a tablet.

It allows you to make a picture file for computer with the images from any NTSC composite video source, such as Video Camera, VTR, Video Disk and so on.

And more, enhances the usages of SMC-70/70G as an eminent presentation tool, and a special effect equipment for video post-production, with the mosaic effect capability.

The picture file made by VIDEOTIZER has compatibility with "Graphics Editor" and "Video Titrer" in the PIC. file format.

FEATURES

- Field Still — Can freeze the video picture with resolution of 448 x 262 pixels*
- Color Mode — 2 planes of 256 colors, 448 x 262 pixels*
- B&W Mode — 2 planes of 256 gray scales or 16 planes of user sliceable binary mode, 448 x 262 pixels*
- * SMC-70/70G 320 x 200 pixels
- Write-in Speed — 1/60 sec (1 field real timing)
- Built-in Genlock capability for any NTSC video input
- Mosaic Effect
- 1 pixel can be enlarged up to 32 times for a special mosaic effect

SMI-7075 \$2900.00

SPECIFICATIONS (Inputs/Outputs)

- Video Input:** BNC Type, 1.0Vp-p 75 ohms, sync negative
- B&W Video Output:** BNC Type, 1.0Vp-p 75 ohms, sync negative
- RGB Video Output:** BNC Type, 0.7Vp-p 75 ohms
- Composite Sync Output:** BNC Type, 4.0Vp-p 75 ohms
- Keying Signal Output:** BNC Type, 0.7Vp-p 75 ohms, without sync signal
- RGB Multi-Input:** 25-pin Connector
- RGB Multi-Output:** 25-pin Connector

VIDEOMASTER

FEATURES

- 5-1/4" color monitor
- Full size 1/2" VHS format
- Four head deck
- Only 22 lbs.
- Fits under an airplane seat
- Complete accessory line

Videomaster is geared for the sales, marketing or training professional. It can be operated with both AC and DC (using an accessory battery pack), has a built-in battery charger, retains a ten-pin connector for easy camera hook-up and boasts rotary 4-head helical scan, azimuth recording for superior playback, pause and slow motion (with the use of remote control).

The unit utilizes full size 1/2" VHS cassettes, has top-mounted loading and function controls, has a fold down arm which acts as both a carrying handle and an elevation device and comes equipped to accept a full range of accessories. Videomaster is constructed to withstand rugged use, and comes in a matte industrial black finish to complement its business-like design.

ACCESSORIES

- A nickel-cadmium battery pack
- R/F modulator
- VHF color tuner
- Wireless remote control
- Dust cover
- Soft carrying cover
- Attache-style carrying case
- A heavy duty shipping case

SPECIFICATIONS

- Format:** 1/2" VHS Portable Recorder/Player with monitor built-in. Rotary 4 head Helical Scan, Azimuth Recording.
- Speed:** SP, LP & EP (Records and Plays up to 8 hours).
- Monitor:** 5" Diagonal. Tint, Color, Contrast and Brightness Control Knobs.
- Speaker:** 0.5W, 8 ohm.
- Loading:** Top Loading (Cassette).
- Features:** (Front Panel or Top) Play, Stop, Record, Cassette Ejection, Pause, Counter, Rewind/Fast Forward (high speed and viewable), Counter Reset, Audio Volume, Power Switch, After Recording, Insert, Tracking, Sensor for Wireless Remote Control and Auto-Rewind. (Slow motion available with use of Remote Control only).
- Indicator Lamp:** Play, Stop, Pause, Record, After Recording, Battery Warning, Dew Light.
- Earphone Jack:** Included (Disengages internal speaker when in use).
- Video In/Out:** Included.
- Video Input:** 0.5-2.0Vp-p (75 ohm RCA Connector).
- Video Output:** 1.0Vp-p (75 ohm RCA Connector).
- Video S/N:** 45dB Over.
- Ten Pin Connector:** Included.
- Audio Input:** Microphone -67dB (mini jack).
Line -20dB (RCA Connector).
- Audio Output:** Line -6dB (RCA Connector).
- Audio Hertz:** 70Hz - 8kHz Audio Output: Line (Standard)
- Resolution:** Over 240 Lines (Standard)
- Measurements:** 15"W x 5.5"H x 16"D.
- Weight:** 22 lbs.
- Power:** AC 117V, DC 12V (Battery Pack Extra Option).

VIDEOMASTER \$995.00

VIDEO MEASUREMENT VECTORSCOPIES

R520A NTSC VECTORSCOPE

R520A/R521A/R522A

Luminance Amplitude

Chrominance Amplitude and Phase

Precision Differential Phase

Precision Differential Gain

The Tektronix R520A Series vectorscopes include three basic instruments. These are the R520A for NTSC, the R521A for PAL, and the R522A for PAL-M.

DISPLAYS

The vector display shows the relative phase and amplitude of the chrominance signal on polar coordinates. To help identify these coordinates, the graticule has points corresponding to the proper phase and amplitude of the primary and complementary colors: R (Red), B (Blue), G (Green), Cy (Cyan), Y_L (Yellow), and M_G (Magenta).

Any errors in the color encoding, video tape recording, or transmission processes that change these phase and or amplitude relationships cause color errors in the television picture. Polar coordinate displays, such as those obtained on the R520A, R521A, and R522A CRT, have proven to be the best method for displaying these errors.

The polar display permits measurement of hue in terms of relative phase of the chrominance signal with respect to the color burst. Amplitude is expressed in terms of the displacement from center (radial length) toward the color point which corresponds to 75% (or 100%) amplitude of the particular color being measured.

The outer boxes around the color points correspond to phase and amplitude error limits ($\pm 10^\circ$, $\pm 20\%$). For the R520A (NTSC) the inner boxes indicate $\pm 2.5^\circ$ and 2.5 IRE units, and correspond to phase and amplitude error limits per EIA specification RS-189, amended for 7.5% setup. For the R521A (PAL) and R522A (PAL-M), the inner boxes indicate $\pm 3^\circ$ phase angle and $\pm 5\%$ amplitude

An internally generated test circle used with the vector graticule verifies quadrature accuracy, horizontal to vertical gain balance, and gain calibration for chrominance signal amplitude measurements. Two methods of measuring phase shifts are provided. You can accurately read large phase shifts from the parallax-free vector graticule. A precision calibrated phase shifter with a range of 30° , spread over 30 inches of dial length, is provided for measuring small phase shifts.

CHARACTERISTICS

Graticule — Two separate graticules provide reference for vector and line sweep displays. The parallax-free vector graticule, or the luminance graticule, is automatically selected and edge-lighted concurrent with operating mode selection.

Z-Axis Input — The Z-Axis Input connector accepts external trace-brightening pulses for intensifying a portion of the display during the time of interest.

Video Inputs — Dual BNC input connectors for each channel permit 75 Ω loop-through operation with a return loss < 46 dB to 5 MHz (exceeds CCIR recommendation 567, Part D and D2). Amplitude range is 0.7 V to 1.4 V video (sync tip to peak white).

AC POWER

Mains Voltage Range — 90 V ac to 136 V ac or 180 V ac to 272 V ac

Mains Frequency — 47 Hz to 63 Hz

Power Consumption — 95 W maximum at 115 V ac/60 Hz (Rear panel selector provides rapid accommodation to six line-voltage ranges. Factory set at 115 V ac for the R520A and R522A and 230 V ac for the R521A.)

ENVIRONMENTAL CHARACTERISTICS

Operating Temperature Range — 0°C to $+50^\circ\text{C}$ ambient

PHYSICAL CHARACTERISTICS

INCLUDED ACCESSORIES

Smoke-gray filter, installed (378-0581-00), rackmounting hardware, and slide-out assembly (351-0195-01), manual

ORDERING INFORMATION

R520A NTSC Vectorscope	\$8,525
R521A PAL Vectorscope	\$8,050
R522A PAL-M Vectorscope	\$9,540

OPTIONAL ACCESSORIES

75 Ω Voltage Step-Up Termination — When used with a Tektronix vectorscope, the 75 Ω Voltage Step-up Termination provides an X5 increase in chrominance amplitude and lets you make more accurate Differential Gain and Differential Phase measurements. Input impedance to the termination is a constant 75 Ω . Use of the termination requires a source of external sync to the vectorscope.

Voltage Step-up Termination — For use with R520A (NTSC), R522A (PAL-M) Vectorscopes. Order 011-0100-01 \$85

Voltage Step-up Termination — For use with the R521A Vectorscope. Order 011-0109-00 \$120

Single Sideband Chroma Amplitude Corrector — Designed for use with a Tektronix vectorscope in transmitter applications where a vestigial sideband signal is being demodulated with a detecting diode. The corrector provides an X2 increase in chrominance amplitude and passes luminance components with little or no attenuation. Input impedance is 75 Ω .

Chroma Amplitude Corrector — For use with R520A (NTSC), R522A (PAL-M) Vectorscopes. Order 011-0107-01 \$110

Chroma Amplitude Corrector — For use with R521A Vectorscope. Order 011 0108-01 \$120

Recommended Camera — For Display Photographs. C-59AP with mounting adaptor 016-0295-01. See camera section of this catalog for information.

R520A Cradle Assembly — For mounting the R520A in a WECO backless rack. Order 426-0667-00 \$40

Rackmount to Cabinet Conversion Kit — Order 040-1153-00 \$50

WAVEFORM MONITORS

1485R Option 01 PAL/NTSC Dual Standard Waveform Monitor (Rackmount)

1480 SERIES

1480 Series

**Bright CRT Especially Suitable
for Vertical Interval Testing**

Advanced Measurement Modes

**Amplitude Measurement Accuracy
Approaching 0.2%**

Digital Selection of Line and Field

Probe Input Option

15-Line Display for VTR Applications

The 1480 Series waveform monitors have excellent amplitude measuring accuracy and many unique operating modes that enable you to work more precisely and accurately. The monitoring needs of CCU, VTR, control room, transmission facilities, transmitter, and special systems are met by the use of 1480 Series waveform monitors. The 1485C and 1485R PAL/NTSC dual standard monitors (see photos) represent the essentials of all seven monitors in the 1480 Series. The differences between the monitors in the series are essentially confined to what lines in the vertical interval are selectable, what filters are selectable in the response mode, and in the field selection modes. Dual-Standard Monitors recognize the signal standard in use automatically and indicate that standard with front panel indicators.

CHARACTERISTICS VERTICAL DEFLECTION

Inputs — Input A and B are 75 Ω high impedance loop-through. Return loss is ≥ 40 dB from dc to 5 MHz in a 75 Ω system. Aux Video Input is internally terminated in 75 Ω . Return loss is ≥ 34 dB from dc to 5 MHz.

Scale Factor — A and B input calibrated 1.0 V ± 7 mV, 0.5 V ± 15 mV, 0.2 V ± 7 mV, (0.05 V ± 2.5 mV Option 06) volts full scale. Variable: Range for each scale factor at least $\pm 40\%$ to -50% . Aux Video Input 1.5 dB gain.

Maximum Input Voltage — 2 V p-p (ac coupled), ± 1.5 V dc \pm peak ac (dc coupled).

Frequency Response

FLAT: 50 kHz to 5 MHz $\pm 1\%$ (1.0 V F.S., VAR in detent), 5 MHz to 8 MHz ± 2 , -3% , 8 MHz to 10 MHz ± 2 , -6% . Typically within ± 2 , -15% to 18 MHz and typically -3 dB at 20 MHz.

Low Pass: Attenuation ≥ 14 dB, 500 kHz and above. 3.58 MHz Bandpass: Amplitude within $\pm 1\%$ of amplitude in Flat response position. Bandpass ≈ 600 kHz. 4.43 MHz Bandpass: Amplitude within $\pm 1\%$ of amplitude in flat response position. Bandpass ≈ 800 kHz. IRE: Conforms to IEEE Standard 205, 1972.

Linear Waveform Distortion

Pulse/Bar Ratio: $\pm 1\%$. For NTSC or PAL 2T Pulse or NTSC T Pulse.

Short Time: Preshoot, overshoot, ringing $< 1\%$ of NTSC or PAL T Pulse and Bar.

Line Time: Tilt or rounding $\leq 1.0\%$. Field Time: (Ac coupled) $< 1\%$.

Nonlinear Distortion — Differential Gain: $< 0.5\%$.

Dc Restorer — Keyed type, may be turned off. Clamping

point: Back Porch/Sync Tip. Time Constant: FAST reduces mains hum ≥ 26 dB, SLOW reduces mains hum < 0.9 dB.

Calibrator — Amplitude selected by dc Restorer switch. Sync Tip: 1 V $\pm 0.2\%$. Back Porch: 714 mV or 700 mV $\pm 0.5\%$.

HORIZONTAL DEFLECTION

Time Base — 5 μ s and 10 μ s timing accuracy $\pm 2\%$ (center 10 divisions); 5 μ s and 10 μ s linearity $\pm 1\%$ (center 10 division).

External Sync Input — Two loop-through high impedance, with ≥ 46 dB return loss in a 75 Ω system. Inputs are slaved to A and B input or to A external sync input only.

External Sync Input Requirements — 400 mV to 2 V composite video or 200 mV to 8 V composite sync.

Field Selector — Positive selection of Field 1 or Field 2 in the NTSC system. Positive selection of 1, 2, 3, 4, or 1 & 3, 2 & 4 in the PAL systems.

Line Selector — Dig: Selects lines 9 to 22 NTSC, line 9/322 to line 22/335 PAL, line 9/272 to line 22/285 PAL-M. Var: Approx line 20 of the selected field to line 4 of the next related field. 15 lines: Identical to Var, except 15 successive lines are displayed.

Sync — AFC horizontal frequency range is 15.75 kHz ± 200 Hz. Maximum Jitter with Respect to Input Sync: 10 ns with 4 V RMS hum (30 ns with the addition of -36 dB white noise). Direct horizontal frequency up to < 20 kHz. Maximum Jitter with Respect to Input Sync: 12 ns with 4 V RMS hum (90 ns with the addition of -36 dB white noise).

OUTPUTS

Line Strobe — TTL amplitude pulse. Pulse coincident with line or lines selected by VAR, 15 LINE or DIG modes of DISPLAY switch.

Picture Monitor — Output of incoming video with Line Strobe added. Output impedance is 75 Ω . Output gain adjusted to unity with respect to A and B video input.

Aux Video — Output of incoming video. 75 Ω output impedance. Gain adjustable to unity with respect to A and B video input.

OTHER CHARACTERISTICS

RGB/YRGB Staircase Input — ≈ 12 V for 12.7 divisions deflection. RGB sweep length internally selected for $1/3$ normal sweep. YRGB sweep length internally selected for $1/4$ normal sweep length.

Mains Voltage — Ranges 100 V ac, 110 V ac, 120 V ac, 200 V ac, 220 V ac, 240 V ac $\pm 10\%$. Frequency 48 Hz to 62 Hz, maximum power consumption 75 W. At factory, 1480, 1482 preset for 110 V ac. 1481, 1485 preset for 220 V ac.

CHARACTERISTICS (OPTION 01)

10X Probe Channel — Scale Factor: 1 V, 0.5 V, 0.2 V full screen with 10X attenuator probe. Gain Range: $\pm 10\%$. Tilt: $< 5\%$ on 50 Hz. Squarewave High Frequency Response: $< 3\%$, 25 Hz to 5 MHz. Referenced to 50 kHz. Input Resistance 1 M Ω , $\pm 2\%$, not including probe. Input RC Product: 20 μ s, $\pm 1\%$, not including probe. BNC connector accepts most Tektronix probes.

10X Probe Calibrator — Output voltage 1,000 V ± 0.005 V or 0.995 V to 1.005 V.

SLOW SWEEP CHARACTERISTICS (OPTION 07)

Duration — 4 to 12 s, variable with front panel control.

Linearity — $\pm 5\%$ of full-screen over the length of the sweep.

Indicator — Front panel indicator on when slow sweep is operating but sweep is not running.

Triggering Signal — APL change $\approx 10\%$ to 90% (Bump or Bounce), front panel selectable for either + or - level change.

Sensitivity — 400 mV to 2 V p-p composite video with APL change.

Rate — ≈ 0.2 Hz, free-runs at rates < 0.2 Hz or with no triggering signal.

Input — Internal or External.

50Hz/60 Hz Squarewave Triggering — Sensitivity: 400 mV p-p minimum to 3 V p-p maximum. Input Impedance: ≈ 10 k Ω ac coupled (Rear Panel loop-through connectors not return loss compensated.)

INCLUDED ACCESSORIES

Two BNC right angle adaptors (103-0031-00); One pair rack-mount ext DWR Slides (351-0195-01); various external grati-cules (see matrix below); manual.

1710B WAVEFORM MONITOR

1710B SERIES WAVEFORM MONITORS

- Burst Phase Indicator
- Dual Filter Display
- Half Rack Width
- Bright CRT Display
- Internal Graticule
- DC Operation
- Available in NTSC and PAL Standards

The 1710B Series Waveform Monitors provide all of the commonly used display modes. In addition, the 1710B Series adds relative burst phase indication and dual filter display. All of this in a cost effective package for the user who wants high quality at a low price. These new monitors are mechanically compatible and retrofit into an existing system that uses half rack width, 5 1/4" waveform monitors.

Because of its extreme light weight, low power consumption, and DC operation (field installable kit) the 1710B Series is ideal for field production, mobile operations, and any other application where space, power consumption and/or portability are prime considerations.

Easy Operation. This monitor was also designed with the user in mind. Controls have clear nomenclature and are laid out in a logical order. This makes the operation of this powerful tool easier than one might expect.

Burst Phase Indication. The relative burst phase between inputs is displayed on the LED bar graph. The center green LEDs indicate the two signals are phase matched. The yellow ones warn the phase is slipping out of an acceptable range. Finally, the red LEDs flag an unacceptable amount of phasing error. This feature allows one instrument to do the complete job of timing and phasing in a basic television system.

Dual Filter Display. The dual filter display allows the user to view both the complete video signal and the luminance information at the same time using just one instrument. This eliminates the need for switching back and

forth between filters and makes the instrument easier to operate. Ideal for camera setup.

Bright CRT Display. The bright CRT display permits use of the 1710B Series in high ambient light conditions. Brightness remains high in the magnified sweep modes enhancing the 1710B's use in system timing applications. The internal graticule is parallax-free to reduce errors and improve its monitoring and measuring capabilities.

ELECTRICAL SPECIFICATIONS

VERTICAL DEFLECTION SYSTEM

Frequency Response:

FLAT Within 5% of the response at 50kHz from 50kHz to 6MHz. The response at Fsc is within 2% of the response at 50kHz.
L PASS At least 40dB attenuation at Fsc

Transient Response:

Pulse to Bar Ratio: 0.99:1.00 to 1.01:1.00

Ringing: 2% or Less

Overshoot: 2% or Less

Tilt (Field Rate Square Wave, Vertical Window, or 25 μs Bar): 1% or Less

Gain Range:

Input signals between 0.25V and 2.0V can be adjusted to 140 IRE (NTSC) or 1V (PAL) display

Maximum Absolute Input Level:

±2V (dc + peak ac)

Deflection Accuracy:

1710B 1V input for 140 IRE display within 2%

1711B 1V input displays 1V within 2%

DC Restoration:

DC Restorer Clamp: Time Back Porch

Low Frequency Response at: 50Hz Attenuation of 50Hz on Input Signal 20% or less

Blanking Level Shift with 10% to 90% APL Change

1710B APL changes from 50% to either 10% or 90% will cause blanking level shift of 1 IRE unit (7 mV) or less.

1711B APL changes from 50% to either 10% or 90% will cause blanking level shift of 7.2 mV or less

Blanking Level Shift Due to Presence or Absence of Burst: 1% or less of 100% video

HORIZONTAL DEFLECTION SYSTEM

Sweep:

Sweep will occur in all Horizontal mode settings with or without synchronization

Synchronization

Sweep will synchronize to composite video C 5V p-p to 2.0V p-p or to composite sync 143mV p-p to 8V p-p

2FLD Sweep Repetition Rate

Equal to frame rate of applied video or external sync

2H Sweep Repetition Rate:

Equal to half line rate of applied video or external sync

Timing Accuracy:

1 μs/div Sweep within 2%

Linearity (1 μs/div):

Within 2%

Differential Linearity (1 μs/div):

Within 3% 0.1 div (0.5 minor div) or less compression or expansion of a center screen 4 div signal, when positioned anywhere horizontally

POWER SOURCE

Mains Voltage Ranges:

115V (90-132V)

230V (200-250V)

Mains Frequency Range:

48Hz to 66Hz

Power Consumption:

25 Watts (85.25 BTU/hour) maximum

CALIBRATION SIGNAL

Frequency:

100kHz ± 1kHz

Amplitude:

1V within 1%

PHYSICAL CHARACTERISTICS

Dimensions:

5.25"H x 8.42"W x 16.875"L

(13.3 x 21.4 x 42.9cm)

WAVEFORM AND VECTOR MONITORS

528A/1420 SERIES

528A/1420 Series

Parallax-Free Internal Graticule

Half Rack Width

Proven Performance

Available in NTSC, PAL, PAL-M Models

The 528A Waveform Monitor and 1420 Series vectorscopes and X-Y monitors provide complete monitoring of your video signal. One 528A and one 1420 Series monitor mounted side by side in the optional rack adaptor provide a continuous display of both the luminance and chrominance information of your video signal, whether your signal is in the NTSC, PAL, or PAL-M format.

These monitors are ideally suited for use in camera, VTR, video production and post production monitoring applications. They all have simple-to-understand and easy-to-use controls.

CHARACTERISTICS (528A)

Inputs — Two Rear Panel BNC Connectors (A and B): Provide two 75 Ω loop through connectors (normally ac coupled but may be easily modified for dc coupling).

Video Output — The displayed signal is provided at the Video Out rear panel connector.

Dc Restoration — Slow acting back porch dc restoration.

Calibrator — An internal calibration signal provides a convenient reference to verify the deflection factor. Calibrator amplitude is 1.0 V p-p ± 1%.

TIME BASE

Provides four time base operating modes, baseline visible in each mode with no external video or sync inputs.

EXTERNAL SYNC

Input Signal Levels — 1.5 V to 4.5 V p-p (composite sync will synchronize sweeps).

YRGB AND RGB

The 528A can be used with color camera processing amplifiers that provide the necessary signal switching and staircase signals.

CHARACTERISTICS (1420, 1421, 1422)

Chrominance Bandwidth — Upper 3 dB Point Fsc
· 550 kHz, 100 kHz, Lower 3 dB Point Fsc 550 kHz
· 100 kHz

Vector Phase Accuracy — Within 1°

Phase Control Range — 360° continuous rotation with goniometer

Input Amplitude Range — 1 V ± 6 dB

Front Panel Gain Control Range — Unity to ± 12 dB Unity to ± 6 dB

Input Return Loss — At least 46 dB to 5 MHz.

Differential Phase — 1° or less

Differential Gain — 1% or less

AC POWER

Line Voltage Ranges — 99 V ac to 132 V ac and 198 V ac to 250 V ac (528A) 90 V ac to 132 V ac and 180 V ac to 250 V ac (1420 Series)

Typical Power Consumption — 48 W (528A) 45 W (1420, 1421, 1422)

Mains Frequency — 48 Hz to 66 Hz

SAFETY

528A Waveform Monitors are CSA556B certified. With cover or carrying case installed they meet the requirements for listing under UL 1244. 528A's without a cover are UL recognized components.

PHYSICAL CHARACTERISTICS (528A/1420 SERIES)

Net (without cabinet)	5.9	13.0
Shipping	9.1	20.0

INCLUDED ACCESSORIES

9-pin plug connector for 528A (136-0099-01); manual; 75 Ω termination for 1420, 1421, 1422 (011-0102-00).

ORDERING INFORMATION

These instruments are configured for rackmounting and are shipped without cases or covers. To configure for bench or portable use, order appropriate optional accessories.

528A Option 01 Waveform Monitor (for use with 525 line systems) **\$2,300**

Option 03 — (Modified for use with 625 line systems and for 230 V ac power, unless otherwise specified) **NC**

1420 Option 01 Vectorscope (for NTSC, factory wired for 115 V ac power) **\$2,820**

1421 Option 01 Vectorscope (for PAL, factory wired for 230 V ac power) **\$2,920**

1422 Option 01 Vectorscope (for PAL-M, factory wired for 115 V ac power) **\$3,185**

OPTIONAL ACCESSORIES

Cover — Unfinished aluminum, no handle or feet. Order 437-0100-01 **\$60**

Carrying Case — Painted, with handle and feet. Order 390-0018-01 **\$85**

Camera — Use standard C-59AP, C-4 Option 02, or standard C-5C (See camera section of this catalog)

Side-by-Side Rack Adaptor — (For two half-rack instruments) Order 016-0115-02 **\$225**

Blank Panel — For rack adaptor. Order 016-0116-00 **\$42**

TEKTRONIX, INC.

P.O. Box 500
Beaverton, OR 97077
(503) 627-7111 Telex 151754

1740 SERIES

1740 Series

Two Instruments in One

Optional Dc Power Capability

Bright CRT Display

R-Y (V-Axis) Mode

VITS Monitoring

RGB/YRGB Display Capability

Remote Control Capability

Available in NTSC, PAL, and PAL-M

Similar to the 528A and 1420 Series products, the 1740 Series provides all the basic waveform monitoring and vectorscope functions but in a single, compact package. In addition the 1740 Series adds dc power operation (optional), single line vertical interval display which is internally preset, an R-Y sweep mode for differential phase measurements, and remote control of waveform vector mode and most of the front panel sweep and vertical amplifier response functions.

The 1740's half-rack width package allows easy installation where space and power requirements are important considerations. The 1740 is mechanically compatible with the 528A, 602, 1420 and 1750 Series instruments.

Typical applications include video signal monitoring in VTR bridges, camera control units, production switcher consoles, and in mobile vans and field productions.

EXTERNAL REFERENCES INPUT

Dc Input Impedance — 15 k Ω
Return Loss — At least 40 dB from 50 kHz to 6 MHz

RGB YRGB MODE

Will display either a 3 step or 4-step RGB YRGB display.
Staircase Amplitude — A 10 V input will result in a horizontal display of 9 divisions \cdot 4 major divisions.
Maximum Operating Staircase Signal Voltage — 12 V p-p ac component. Signal voltage not to exceed \cdot 12 V dc \cdot peak ac.

VECTOR MODE

Chrominance Bandwidth
Upper 3 dB point F_{sc} \cdot 500 kHz \cdot 100 kHz
Lower 3 dB point F_{sc} 500 kHz \cdot 100 kHz
Vector Phase Accuracy — Within 1.25 degrees
Vector Gain Accuracy — 1740 Within 1.25 IRE
1741 1742 Within 1.25%
Quadrature Phasing — Within 0.5 degrees

SUBCARRIER REGENERATOR

Pull-In Range — 1740 Within 50 Hz of F_{sc}
1741 1742 Within 10 Hz of F_{sc}
Phase Shift with Subcarrier Frequency Change — 1740 Within 0.5 degrees from F_{sc} to (F_{sc} \cdot 50 Hz) or F_{sc} to (F_{sc} \cdot 50 Hz)
1741 1742 Within 0.5 degrees from F_{sc} to (F_{sc} \cdot 10 Hz) or F_{sc} to (F_{sc} \cdot 10 Hz)
Phase Shift with Burst Amplitude Change — Within 2 degrees from nominal burst amplitude to \cdot 6 dB
Phase Shift with Reference Switched Between Internal and External References — Within 0.5 degrees
Phase Shift with Input Channel Change — Within 0.5 degrees
Phase Shift with X5 Gain — Within 2 degrees
Phase Shift with Variable Gain — Within 1 degree as gain is varied from \cdot 3 dB to 6 dB
Phase Control Range — 360 degrees continuous rotation

DISPLAY CHARACTERISTICS

Differential Phase — Within 1 degree
Differential Gain — Within 1%
Variable Gain Range — 1740 Input subcarrier signals between 28 IRE and 140 IRE can be adjusted to normal burst vector length
1741 1742 Input carrier signals between 210 mV and 1.0 V can be adjusted to normal burst vector length

CRT DISPLAY

CRT Viewing Area — 80 mm x 100 mm
Accelerating Potential — Nominally 15 kV

GRATICULE

Waveform — Internal, variable illumination
Vector — External, variable illumination. Illuminated with VECTOR or R-Y mode selected

POWER SOURCE

Mains Voltage Ranges — 100 V (90 V to 100 V), 120 V (108 V to 132 V), 220 V (200 V to 242 V), 240 V (218 V to 250 V)
Mains Frequency Range — 48 Hz to 66 Hz
Power Consumption — 50 W maximum in ac, 30 W nominal in dc

DC BATTERY OPERATION (OPTION 07)

Voltage Input Range — 11 V to 16 V
Over Voltage and Polarity Reversal Protection — Fuse blows if \cdot 20 V dc or opposite polarity is applied to the dc INPUT
Under Voltage Protection — Instrument shuts down when battery voltage (under load) is below 9 V
Battery Current — 3.5 A or less at 12 V.

WAVEFORM/VECTOR MONITORS

ENVIRONMENTAL CHARACTERISTICS

Temperature — Operating 0 C to \cdot 50 C Nonoperating 55 C to \cdot 75 C
Altitude — Operating 4500 m (15,000 ft) Nonoperating 15,000 m (50,000 ft)

CERTIFICATION

Safety/EMC — UL 1244

Beaverton, OR 97077
(503) 627-7111 Telex 151754

1750 SERIES

1750 Series

Two Instruments in One

SCH Phase and Color Framing

R-Y (V-Axis) Mode

RGB/YR GB Mode

Remote Control Capability

The Tektronix 1750 Series offers comprehensive monitoring and measurement of television signals, including SCH phase and color framing, in one compact unit. While similar in appearance to the 1740 instruments, the 1750 has enhanced performance in each of its operating modes.

The unique new SCH phase display presents horizontal sync timing relative to reference subcarrier (burst) for verification of signal format and color framing. This mode enables easy analysis and monitoring of these important characteristics of the television signal, a task which previously required complex techniques, highly skilled operators and/or additional instrumentation. The 1750's SCH phase and color frame displays are derived from the standard composite signals. No extra pulses or added signal details are required.

The 1750's SCH capability makes it particularly valuable in production and editing environments where maintenance of SCH phase and color frame are critical considerations. Applications include VTR bridges, camera control units, switcher consoles, master control, mobile and field production units, and in maintenance operations supporting any of these areas.

The 1750's half-rack package allows easy installation in environments where space and power requirements are important considerations. The 1750 is mechanically compatible with 528A, 602, 1420, and 1740 Series Tektronix instruments.

Waveform Mode

The waveform mode vertical response is controlled by selectable flat, chroma, and luminance (IRE) filters. A backporch slow clamp is controllable from the front panel. An internal jumper reprograms the clamp timing for sync lip operation.

The 1750 has pushbutton selection of H, 2H, V, and 2 V horizontal sweeps. A magnifier provides calibrated sweep speeds of 1 μ s/div, 0.5 μ s/div, and 0.2 μ s/div at the line display rates, and about 20X magnification of the vertical rate display. The faster sweep speeds are useful for determination of horizontal blanking pulse widths, risetimes, and other timing details of the signal, while the magnified vertical sweep allows viewing of the vertical blanking interval.

The internal calibrator signal in the 1750 is useful for verification of both video amplitude and sweep timing calibration. Crystal control of the calibrator waveform provides an accurate 1V p-p squarewave and 10 μ s timing interval.

The sweeps may be locked to the selected signal (A or B input), or to a separate external reference input. The horizontal rate sweeps may be triggered by the selected source (which presents a stable display in the presence of sync jitter) or may be AFC controlled (which displays sync jitter for analysis). Use of the AFC sweep control can also reposition the H sweep for more convenient timing measurements.

The 1750 Series has front panel line and field selection, an LED readout of the selected line number, and a video output with a strobe pulse on the displayed line. The 1750 (NTSC) will display line 8 thru 23 of either monochrome field (color fields 1.3 or fields 2.4). The 1751 (PAL) will display lines 6 thru 21 or 319 thru 334. The line selection range may be extended to any line of the frame by the use of rear panel remote control input in conjunction with the front panel controls.

The line selection function is operational in waveform, R-Y, and vector modes. These features provide convenient in-service monitoring or measurement of field blanking interval test or data signals.

R-Y (V-Axis) Mode

In this mode the display is similar to a waveform display with the demodulated chrominance signal on the vertical axis and the selected sweep on the horizontal axis. Any demodulation axis may be set with the phase control; properly setting the display of burst in the vector mode will ensure R-Y axis decoding when the R-Y mode is selected.

There are differential phase markings on the graticule for use in this mode. Resolution of differential phase error is about twice that of vector measurement techniques, and the displayed errors may be correlated with time and luminance amplitude by using modulated staircase or modulated ramp test signals.

WAVEFORM/VECTOR MONITORS

SCH Phase Mode

This display is a combination of the burst vectors of the vector display and a bright dot on the outer degree circle of the vector graticule. The position of this "sync dot" around the circle represents the timing (phase) of the horizontal sync edges relative to the reference subcarrier. An individual signal may be analyzed for proper format (for proper SCH phase) without any additional reference.

Since it is possible for two signals to be properly formatted but not properly timed to each other (i.e., a color framing error exists), the 1750 has provision for using an external reference input for its subcarrier phase reference. When the external reference mode is used, the display shows the burst phase and sync timing of the selected signal relative to the burst of the reference signal, simultaneously indicating the SCH phase of the selected input signal and its color frame relative to the external reference signal.

INCLUDED ACCESSORIES

Power cord assembly (161-0066-00), clear filter (378-0219-00), contrasting filter (378-0221-01), female remote connector, 25 pin (131-0569-00), 9 pin (131-1006-00), remote connector housing, 25 pin (200-1667-00), 9 pin (200-1170-00), strain relief, 25 pin (358-0314-00), 1.0 A fuse (159-0022-00), 0.5 A fuse (159-0032-00), instruction manual (070-4472-00).

ORDERING INFORMATION

1750 Waveform/Vector Monitor (for NTSC Applications) \$5,900
1751 Waveform/Vector Monitor (for PAL Applications) \$5,900

OPTIONAL ACCESSORIES

Battery Pack — Order BP1 \$550
Snap-On Front Cover — High impact plastic
Order 200-1566-00 \$18
Modular Carrying Case — Portable case with handle, feet, and battery mounting lugs (lugs are required to mount the BP1). Order 020-1241-01 \$120
Carrying Case — Painted (blue), with handle and feet
Order 390-0018-01 \$85
Cover — Unfinished aluminum, no handle or feet
Order 437-0100-01 \$60
Side-By-Side Rack Mount — For mounting two half-racks (1750, 528A, etc.) in a standard 19 in rack
Order 016-0115-02 \$225
Blank Panel — For the side-by-side rack mount
Order 016-0116-00 \$42
Flip Stand Feet — For modular carrying case, stands extend normal feet for tilted viewing (two required).
Order 348-0618-01 \$5.75
Viewing Hood — For high ambient light environments
Order 016-0475-00 \$8.25
Camera — Use C-30 Option 01 with adaptor 016-0269-03, or C-5C Option 02 or 04, or standard C-4.

MAINTENANCE ACCESSORIES

Extender Board — 64 pin Order 670-7980-00 \$47
Extender Board — 32 pin Order 670-7981-00 \$55
Extender Cable — Order 067-0709-00 \$45
Deflection Leads Extender Cables — (Four each)
Order 196-0939-00 \$6.00

Capability for Front Panel Switching
of External Sync Inputs

NTSC, PAL and Multistandard Decoders
Available

Precise Decoders with Outputs to Provide
Vector Display on External X-Y Monitor

Unique Monochrome (White) Display
of Decoded Blue Signal for Critical
Analysis of Color Noise

The Tektronix 650HR Series color picture monitors are designed for exacting applications where picture quality and signal quality analysis are particularly important. The 650HR uses a Trinitron CRT with resolution capabilities which exceed the performance of encoded television signals. The decoders have sufficient chroma channel bandwidth to pass all of the information in standard signals.

The unique blue only mode feeds the decoded blue video signal to the red, green, and blue channels simultaneously. This produces a monochrome display with a high subjective sensitivity to chroma noise, allowing better analysis of video quality.

The chrominance channel may be manually switched to either the monochrome or color modes, or activated automatically by the presence of burst.

Circuits in the Tektronix 650HR Series are designed for color stability and consistency. Outputs are provided from the precision decoders and may be used to drive an X-Y monitor for a vector display. The regulated EHT supply is not affected by extreme changes in APL even when calibrated brightness, at peak white, is set at 30 ftL. Raster size is held within 1%, while excellent clamping maintains a stable black level with a 0% to 100% range of APL.

CHARACTERISTICS

Input Signal Level — 0.5 V p-p minimum composite video 2 V p-p maximum (Exceeds CCIR recommendations 567, Part D and D.2.)

Impedance — Unterminated. High Z bridging inputs loop-through compensated for 75 Ω (not internally terminated). Return Loss: -46 dB to 5 MHz, power on or off, input in use or not.

Maximum Safe Input — Exceeds CCIR Recommendation 451-2 (-5 V peak).

Hum Rejection — Hum is ≥50 dB down when 4 V maximum RMS common mode mains hum signal is applied to the monitor in floating ground mode.

650HR
MONITOR

NTSC Luminance Channel — Bandwidth (notch filter removed) 6 MHz. Subcarrier notch filter automatically removed when burst is not present and Mode switch is in Auto position. Subcarrier notch filter removed when Mode switch is in Monochrome position. Dc Restoration back porch type, not affected by burst. Mains hum reduction due to dc restorer is -6 dB. Amplitude Linearity Within 2%.

NTSC Chrominance Channel — Demodulation Axis: R-Y, B-Y Bandpass 1.3 MHz equiband Gain Range: Preset at 0 dB adjustable from -6 dB to +10 dB

PAL Luminance Channel — Bandwidth (notch filter removed) 6 MHz. Subcarrier notch filter can be removed by changing internal jumper. Subcarrier notch filter normally left in circuit.

PAL Chrominance Channel — Demodulation Axis: U, V Bandpass 1.2 MHz Gain Range: Preset at 0 dB; adjustable from -6 dB to +10 dB

Residual Subcarrier Detection (On Applied Signal) — Color of displayed picture will shift due to any residual subcarrier. This feature can be inhibited by a jumper on the decoder board.

Chrominance/Luminance — Time Error 30 ns Gain Error 3% Delay — Red to green to blue 50 ns

Subcarrier Regeneration — Phase Error: Within 1° with input burst variation of ±10 Hz from subcarrier nominal burst frequency. With Temperature Variation: Within 5° with ambient temperature variation from 0°C to -50°C, with 1° for any 10°C increment within the range 0°C to -50°C. With Input Signal Variation: Within 1° with input signal variations of 3 dB from 1.0 V, within 3° with variation of burst, sync ratio of 5 dB to 10 dB. Breezeaway Stability: 0.2 for burst timing errors including burst width variance (8 to 11 cycles), and breezeaway variance: 0.28 μs. Phase Error Due to Noise: Within 1° with RMS white noise at 24 dB (0 dB 700 mV RMS).

PICTURE

Height — 184 mm (7.2 in)

Width — 244 mm (9.6 in)

Underscan — 20% reduction in both height and width

Aspect Ratio — 4:3

Deflection Linearity — Vertical and Horizontal: 1% of picture height within a central area bounded by a circle whose diameter equals picture height ±2% of picture height outside of central area.

Convergence Error — 1 mm within the central area. Outside of the central area, color separation (misconvergence) is 2 mm.

Unblanking — All active picture elements are displayed (Horizontal retrace is accomplished within 10 μs.)

Color Temperature — 6500 K. Easily adjustable to other standards.

Calibrated Contrast — 30 ftL at peak white of standard 1 V signal.

Calibrated Brightness — Displayed black may be preset to a level appropriate for ambient conditions.

EHT (Extremely High Tension) — 19 kV nominal regulated. Load variations cause 1% picture size variation. Monitor complies, as of date of manufacture, with applicable DHHS standard, under Radiation Control for Health and Safety Act of 1968.

Kinescope Protection — Failure of horizontal or vertical scanning shuts off the EHT. Failure of HV Regulator circuit does not cause EHT to soar excessively. EHT supply is current limited.

Heater Voltage — Regulated dc

SYNC and TIMING

Signal Range — Composite sync 0.5 V p-p to 8 V p-p or composite video 0.5 V p-p to 2 V p-p.

Impedance — Unterminated. High Z bridging inputs loop-through compensated for 75 Ω (not internally terminated). Terminated: 75 Ω. Return Loss: -46 dB to 5 MHz with respect to 75 Ω.

Synchronization — Stable subcarrier regeneration, limited by line sync performance. Line sync white noise immunity is 20 dB. Field sync white noise immunity is 20 dB. Field sync stable with tilt equal to 100% of sync amplitude in vertical blanking. Stable with 20 IRE mains num.

AFC (Two Loop AFC Type) — Phase Corrector: Corrects for phase errors due to side pincushion correction and other effects within the monitor. Slow AFC: Displays timing errors of incoming sync, particularly, 60 Hz or 240 Hz timing errors. Bandwidth is ≥25 Hz. Fast AFC: Largely corrects for incoming sync errors. ≥2 kHz bandwidth.

Scan Delay — Horizontal Delay: ≤1/4 line, displays burst. Vertical Delay: Displays the vertical blanking interval of the input signal expanded ≈2.5 times unless underscan is activated. If the underscan button is depressed, vertical expand is inhibited.

AC POWER

Mains Voltage Range — 115 V: Within 10% (104 V ac to 126 V ac). 230 V: Within 10% (207 V ac to 250 V ac maximum). 650HR, 650HR-1 are factory set for 115 V. 651HR, 651HR-1, 655HR-1 and 652HR-1 are factory set for 230 V.

Crest Factor — ≥1.3.

Mains Current — 1.5 A RMS maximum at 115 V, 60 Hz. 0.75 A maximum at 230 V, 50 Hz. Current is substantially higher during degaussing.

Degaussing Surge Current — 5 A RMS.

Power Consumption — 150 W maximum, 110 W typical.

Mains Frequency — 48 Hz to 66 Hz.

COLOR PICTURE MONITORS

656HR-1

Color Sequencing from Field Identification Signals or Line Burst

Precision Decoding Allows Use of R-Y, B-Y Outputs for Vector Display Measurements

RGB Inputs with Vector Display Outputs

PAL SECAM with Front Panel Control of Decoding Standard

Variable Aperture Correction

Vertical and Horizontal Delay Display Modes

Reduced Chrominance Line Crawl

Indicates Color Sequence Error

Rapid Retrace — Entire Picture Area is Displayed in Reduced Scan

Two Switchable Inputs Isolated from Ground for Hum Rejection

The Tektronix 656HR-1 SECAM color picture monitor is identical in function to the other 650HR Series monitors but is specifically designed for use in SECAM systems. It includes both PAL and SECAM decoders.

Color sequencing is front panel controlled by a three position mode switch. In the Field mode, field identification signals are used for color sequencing and a color display is enabled by the presence of detectable field identification signals. In the Line mode, line burst determines color sequence, and a color display is enabled whenever detectable SECAM subcarrier is present. Use of the Monochrome mode blanks the chrominance channel.

In the internally selectable Forced-Color mode, the very high limiting ratio of the chrominance channel lets you use the monitor to search for very small amounts of crosstalk or other unwanted signals. By displaying the chrominance portion of such signals on a brightened display, you can easily identify the source.

Two PROMs (Programmable Read Only Memories) are used in the monitor for generating accurate timing signals. Their use eliminates the need for many internal adjustments and possible drift related to the timing of internal signals. One of these PROMs is programmed with information corresponding to the lines containing subcarrier (including field identification lines) in 625/50

SECAM systems. The monitor then serves as a check on improper additions or deletions of lines that might possibly occur in improperly adjusted VTRs, processing amplifiers, and switchers.

Chrominance line crawl is greatly reduced by using separate acoustical delay lines; one for D'R and one for D'B. With front panel controls, you can turn off luminance or chrominance, and examine each one separately. Brightness is automatically advanced for easier viewing when luminance is turned off for examination of chrominance. For purity checks, you can set up the equivalent of a flat field display by switching luminance off in a monochrome mode (chrominance off).

The monitor's chroma control has two operating modes. When the control is in, the chrominance is independent of subcarrier amplitude. When the control is out, the chrominance is proportional to subcarrier amplitude. In the first mode, the saturation will vary with incoming video level. In the latter mode, correct saturation will be maintained for varying signal levels. In either mode, both a preset (detent) position and a variable range are available. Switching between the two modes in the preset position provides an indication of abnormal chrominance or luminance amplitude.

CHARACTERISTICS

SECAM PERFORMANCE-LUMINANCE CHANNEL

Bandpass Without Chrominance Trap — (Aperture Corrector set for 0 dB). Amplitude: ± 0.5 dB to 5 MHz. Aperture Corrector Maximum Range: 8 dB; doubled peaked at 2.5 MHz and 7 MHz; ≤ 3 dB between 4.0 MHz and 5 MHz.

Chrominance Filter — Subcarrier Rejection: > 25 dB at 4.250 MHz and 4.406 MHz. < -1 dB at 5.5 MHz. NOTE: The chrominance filter is removed from the luminance channel whenever the display is monochrome.

Pulse Distortion — $< 1\%$ tilt on 50 Hz squarewave. $< 0.5\%$ tilt on 15 kHz squarewave.

Dc Restoration — Back porch type, not affected by burst. Mains hum reduction due to dc restorer is < 6 dB.

Amplitude Linearity — Within 2%.

Luminance Off Facility — Displays chrominance only and automatically advances brightness.

SECAM PERFORMANCE-CHROMINANCE CHANNEL

High Frequency De-emphasis — Matching to Encoder High Frequency Pre-emphasis: Error ≤ 0.5 dB over the range 3.9 MHz to 4.75 MHz; < 3 dB at 2.85.

Drift (Center Frequency) — Within ± 20 kHz.

Luminance Rejection — > 46 dB at 15 kHz.

Limiting Ratio — ~ 60 dB.

Ultrasonic Delay Line Error — ~ 30 ns.

Crosstalk at Input to Discriminators — Between Direct and Delayed Chrominance Signals: Alternate line crawl on display is minimized through the use of separate delay lines for the D'R and D'B chrominance signals.

Discriminator Linearity — Overall: Within $\pm 1\%$. Incremental: Within 1%.

Demodulator Center Frequency — Clamped to crystal reference stabilized within ± 0.250 kHz.

Chrominance Sequence and Color Enable — Chrominance sequence and enable are statistically averaged with hysteresis for best performance under poor signal-to-noise conditions. Field Mode: Based upon field identification signals. Chrominance Amplitude: Disable when chrominance is more than 12 dB low, may be internally selected. Line Mode: normally based upon line burst with no chrominance amplitude disable. An internal jumper provides chrominance amplitude disable if required.

Chrominance Unblanking — Programmed internally according to 625 line 50 Hz SECAM standards. Field identification signals are displayed in vertical scan delay modes.

Saturation — Selectable to treat subcarrier as FM signal or to vary the saturation with incoming chrominance level. Independent of Subcarrier Amplitude: Gain Error $< 3\%$. Dependent on Subcarrier Amplitude: Tracking error $< 5\%$ for signals within ± 3 dB to -6 dB of normal amplitude. Chroma Control Separately Adjustable: ± 6 dB.

Cross Talk — Between R-Y and B-Y ~ 40 dB attenuation.

Chrominance/Luminance Time Error — < 60 ns with properly adjusted bell filter and low frequency de-emphasis.

Sequence Error Indicator — When the front panel red light indicates that the incoming SECAM signal has a chrominance sequence opposite to that indicated by an externally applied 7.8 kHz signal. Also when the monitor is used in the Line mode the light will indicate when the field identification signals are reversed with respect to the Chrominance Sequence present during the active picture.

VECTORSCOPE OUTPUTS

Calibrated Modes (Dots in Boxes) — Selected by front-panel control for either 75% color bars or 25% color bars (SECAM and RGB only). Vector locations are within $\pm 2\%$ of vector magnitude.

Vectorscope Drive Capability — Suitable to drive 10 ft of 75 Ω coaxial cable (unterminated) to X-Y display.

Required X-Y Display Deflection Sensitivity — 0.05 V/cm on both X axis and Y axis.

Required X-Y Display Input Resistance — ≥ 100 k Ω .

RGB Vector Display — R, G, and B input signals are matrixed to form R-Y and B-Y signals which are switched to the rear-panel vector output connectors when the RGB inputs are selected.

RGB Matrix Error — R-Y and B-Y relative output signal amplitudes are within $\pm 2\%$ of desired values when equal R, G, and B signals are supplied.

RGB Centering — Black level is clamped to within ± 9 mV which corresponds to ± 1 mm in the 75% vector display.

Other Inputs and Outputs — 7.8 kHz input, 7.8 kHz output, and field 1 pulse output.

PHYSICAL CHARACTERISTICS

Same as 650HR on previous page.

690SR Color Monitor

High-Resolution 19-Inch Dot-Shadowmask CRT

Precise Color Convergence

Stabilized Color Balance

Rugged Modular Construction

Plug-in Interface (Decoder) Modules

Operates at Various Scan Frequencies

Adjustable Picture Size and Aspect Ratio

The 690SR is designed to meet critical needs for image evaluation and video signal quality control in television, high definition television, and computer imaging environments. The standard high resolution delta gun, dot-shadowmask CRT and precise, stable video processing circuits provide faithful rendition of picture details and ease of closeup viewing. An optional medium resolution CRT provides more uniform screen appearance and tightly controlled phosphor colorimetry for those applications where greater viewing distance or signal limitations ease the requirement for the highest resolution display.

With either of these CRTs, Tektronix' unique color convergence system provides accurate color registration over the entire screen (less than 0.5 mm maximum error, equivalent to less than 0.18% of picture height) so that fine details can be observed anywhere in the picture. Stabilization of the operating point of each gun in the CRT compensates for tube aging and helps to maintain accurate long term color balance without frequent maintenance.

A logical and noninteractive set of convergence controls makes reconvergence a quick and straightforward task. All controls are identified by color-coded patterns and produce a comfortable up-down or right-left motion on the screen with negligible interaction. Several function switches are also located within the front drawer. In general, these switches permit the 690SR to be used either as an accurate picture/signal monitor to display faults if they are present, or as a high quality picture display monitor that provides a clean picture even in the presence of signal defects.

Front panel controls have detent positions so that the monitor may be returned to its preset condition quickly and accurately. Adjustments for the preset positions of front panel controls are located within the lockable front drawer together with virtually all other adjustments needed for routine setup.

Picture size can be adjusted from overscan to underscan without significant loss in convergence or linearity. This feature makes it possible to conduct experiments at various image sizes and aspect ratios or to set the monitor for different system characteristics by readjusting the size and position controls.

690SR COLOR MONITOR

White balance is adjustable to standard D6500 or to other desired standards using controls located in the front drawer. A Setup switch allows the raster height to be reduced to facilitate low-level-light adjustments. Additional features in the television models include horizontal and vertical scan delays, and pulse cross. The CRT is automatically brightened in these modes to facilitate evaluation of blanking interval detail.

The 690SR mainframe is essentially an RGB monitor. The signal conditioning and/or decoding functions are performed in plug-in modular units. The 69M41 provides RGB input, with provision for external sync. The 69M01 is an NTSC decoder with a one line comb. The front control panel for each of these interface modules is also modular and is fitted into the control drawer of the mainframe. (A blank panel is provided with the 69M41 since no controls are needed for the RGB interface.)

All 690SR color monitors are fully enclosed and may be mounted in a standard relay rack. The 690SR complies with UL478 and UL1244, CSA Bulletin 556B, IEC348, and IEC435. The 690SR also complies, as of date of manufacture, with applicable DHHS standards under Radiation Control for Health and Safety Act of 1968 and with FCC/CBEMA standards for electromagnetic-interface control.

Various combinations of interface, CRT, and scan capability are orderable. The following "system" option allows convenient specification of a common configuration.

690SR OPTION 02

The 690SR Option 02 is a NTSC color monitor system that consists of a comb/notch filter/decoder module (69M01 Comb Decoder) installed in a 690SR mainframe.

12 AND 14 INCH COLOR MONITORS

CPD™ now offers a complete line of 12 and 14 inch high resolution and switchable RGB/NTSC color monitors for home, business and industry. Compatible with Apple II, Ile, III; IBM PC, PC Jr. (virtually any personal computer); video tape recorders; TV game and TV tuner.

CPD color monitors incorporate switching regulator power supplies and in-line high contrast CRT's in two sizes to meet all your video requirements. When dependable picture quality and versatility make the difference, make your choice a CPD color monitor.

Features

- Switchable RGB/NTSC
- Compatible with Apple II, Ile, III, IBM PC, PC Jr. Video Tape Recorder, TV Game, TV Tuner
- High Resolution Model 785H x 400V
- Switching Regulator Power Supply
- In-line High Contrast CRT's

COLOR VIDEO PROJECTOR

ULTRA-VISION 2000 PROFESSIONAL COLOR VIDEO PROJECTOR

Model 2000 is a high performance large screen color video projector capable of delivering bright outstanding picture definition on any flat or curved screen.

Designed for consistent performance and high reliability, this projector is especially well suited for large screen video applications providing high quality projection imaging.

FEATURES

- Screen sizes from 7 to 10 ft. diagonal
- Projects onto flat or curved screens
- Front or rear projection
- Floor or ceiling mounting
- Electronic range finder facilities set-up
- Electronic border generator surrounds the picture with a black frame
- Comb filter NTSC decoder with enhancement circuitry provides crisp imaging
- Internal 5-inch loudspeaker with 1.5 watt amplifier
- Liquid-cooled tubes
- Video output drives auxiliary equipment

SPECIFICATIONS

OPTICS

- Lenses:** Three Delta IID-OC Optical-coupled, flat field, f/1.0 high resolution, 3-element acrylic
- Focus:** Adjustable lens barrel rotation with mechanical lock
- Resolution:** Min. of 3 line pairs/mm across 5 inch image diagonal

PICTURE

- Display:** 8 ft. diagonal (6.5 ft. wide x 4.8 ft. high); projector throw distance 10 feet front projection; table mounting

Note: Dealer can reconfigure projector for screen sizes from 7 ft. up to 10 ft. diagonal; and can change to rear projection and/or ceiling mount.

- Throw Distance:** Approx. 1.5 times image width
- Brightness:** 320 lumens peak output
- Resolution:** 330 lines

GENERAL

- Width:** 24 inches
- Length:** 23 inches cabinet, with lens mounted in full focus extension, 30.5 inches
- Height:** 12.5 inches
- Weight:** 80 lbs. net; 90 lbs. shipping
- Color:** Pecan finish with black and metallic accents

ACCESSORIES SUPPLIED

- Phono to Phono 75 ohm video cable, 48", (1), yellow connector
- Phono to Phono shielded audio cable, 48", (1), red connector

Ultra-Vision 2000 \$2095.00

VIDEOMATE[®]

USATCO[®]

UNIVERSAL SATELLITE CORPORATION

Videomate, the family of American Made High Quality, High Resolution Video Projection Devices that are capable of displaying full color images up to 25' diagonal. Dual Focal Element Lenses, in conjunction with a highly optimized 9 Zone Convergence system provide full screen convergence with corner to corner brightness, clarity and resolution.

Videomate Projection Devices have been designed for a wide variety of applications to include Entertainment, Alpha-Numeric Data Display, High Resolution Computer Graphics, Teleconferencing, Educational Training, Sporting Events, and CAD/CAM applications. With Monochrome displays as well as Variable Line Rates, coupled with the ability to interface with NTSC, PAL and SECAM, it's no surprise that Videomate has a projector for your application.

VISUAL/VOICE RESPONSE LEARNING SYSTEM

COLLEGE BOWL® QUIZ-A-MATIC®

Modularized construction permits quick set-up and take down. Extra long cords accommodate any set layout. Number of players can be modified to suit your needs. Patented circuit uses voltage lock-out and solid state construction, instead of digital.

All cords come with strain relieved molded plugs, and gold plated switch contacts. A bright 4" wide red light at each station clearly identifies each contestant and is easily distinguished under studio lighting.

COLLEGE BOWL® QUIZ-A-MATIC® \$603.00

OPTIONS

Remote Chime — provides additional jack on control console to bypass built-in bell and connect to a remote chime. Plug with 12 feet of cord included **add to price \$25.00**

Remote Reset — provides additional jack on control console for connecting to a remote reset switch. Includes wired switch, 25 feet of cord and plug **add to price \$35.00**

Player modification (for modifying the number of players); write for pricing, as this is customized to your needs.

SPECIFICATIONS

Power Requirements: 120 VAC, 60 Hz, 6 watts

Electrical Safety: Grounded, low voltage class 2 transformer circuit. Approved by the City of Los Angeles Electrical Testing Laboratory

Cord Lengths: Power cord, 8 feet; contestant switch cords, 5 feet; teamset cords (from plug to first station), 25 feet. Contestants' stations are on 2 foot centers

Format: Official College Bowl® format consisting of 2 teams of 4. Picks first place and locks out remaining contestants until reset. Bell tone accompanies first response

Note: Use of this system alone will not earn credit towards an official College Bowl® match. Current enrollment and participation in the official College Bowl® program through College Bowl Co., Inc., from their New York headquarters is required.

Guarantee:

One year, parts and labor
(excluding light bulbs).

10 PLAYER MODEL

10 PLAYER QUIZ-A-MATIC®

Contains main control unit with an 8 foot ground, 3 wire power cord; 2 teamsets each with 5 player stations on 2 foot centers and 6 foot cord from first player station to control unit. Tamper-proof construction and heavy duty switches with gold contact for long life.

10 PLAYER QUIZ-A-MATIC® \$329.00

OPTIONS

Remote Chime **add to price \$ 25.00**

Remote Reset **add to price 35.00**

Expansion Jack **add to price 25.00**

Coupling Unit **add to price 50.00**

25 Foot Extension Cord **add to price 40.00**

Deluxe Carrying Case **add to price 100.00**

SPECIFICATIONS

Power Requirements: 120 VAC, 60 Hz, 2 watts

Electrical Safety: Grounded, low voltage transformer circuit. Approved by the City of Los Angeles Electrical Testing Laboratory

System Package: Stores compactly in its 2 foot by 1 foot by 6 inch deep container. Easily set up within one minute. Weighs 9 pounds

Guarantee:

One year, parts and labor.

Pottstown, PA 19464
(215) 327-2292
TWX 710-653-0125

SYSTEM 8

Eight Inch Broadcast Rackmount AC/DC Color Monitor With Comb Filter and Glare Shield.

Includes TSM-5A Waveform Monitor and PVS-6 Switcher

Features Include: Raster size regulation, degauss, keyed back porch clamping, A-B inputs, RGB gun switches, RGB background and drive controls, tally light, medium resolution 350 lines, comb filter, internal/external sync, anti-glare shield, rackmount accessories and Service manual

Options: Pulse Cross, Underscan,
Dimensions: 8 $\frac{3}{4}$ "H x 19"W x 18 $\frac{1}{2}$ "D
Weight: 40 lbs.

Power Consumption/ 40W AC, 33W DC

Power Consumption/

Entire System: 95W

VM-8PRD

Dual Eight Inch Professional Rackmount AC/DC Color Monitor

Features Include: Raster size regulation, degauss, keyed back porch clamping, A-B inputs, RGB gun switches, RGB background and drive controls, tally light, internal/external sync, rackmount accessories and service manual.

Options: Pulse Cross, Underscan,
Dimensions: 8 $\frac{3}{4}$ "H x 19"W x 15 $\frac{1}{4}$ "D
Weight: 57 lbs

Power Requirements: 120VAC 60Hz,
12 or 24VDC

Power Consumption: 40W AC,
33W DC (ea. unit)

VM-8PRW

Eight Inch Professional Rackmount AC/DC Color Monitor with Space Provided for Videotek TSM-5A with Standard Case or VSM-5A with Standard Case.

Features Include: Raster size regulation, degauss, keyed back porch clamping, A-B inputs, RGB gun switches, RGB background and drive controls, tally light, internal/external sync, rackmount accessories and service manual.

Options: Pulse Cross, Underscan,
Dimensions: 8 $\frac{3}{4}$ "H x 19"W x 15 $\frac{1}{4}$ "D
Weight: 32 lbs.

Power Requirements: 120VAC 60Hz,
12 or 24VDC

Power Consumption: 40W AC, 33W DC

VM-8PT

Eight Inch Professional Portable AC/DC Color Monitor

Features Include: Raster size regulation, degauss, keyed back porch clamping, A-B inputs, RGB gun switches, RGB background and drive controls, tally light, internal/external sync and service manual.

Options: Pulse Cross, Underscan,
Dimensions: 9 $\frac{1}{4}$ "H x 8 $\frac{1}{2}$ "W x 16 $\frac{1}{4}$ "D
Weight: 25 lbs.

Power Requirements: 120VAC 60Hz,
12 or 24VDC

Power Consumption: 40W AC, 33W DC

VM-8PR

Eight Inch Professional Rackmount AC/DC Color Monitor

Features Include: Raster size regulation, degauss, keyed back porch clamping, A-B inputs, RGB gun switches, RGB background and drive controls, tally light, internal/external sync, rackmount accessories and service manual.

Options: Pulse Cross, Underscan,
Dimensions: 8 $\frac{3}{4}$ "H x 19"W x 15 $\frac{1}{4}$ "D
Weight: 30 lbs.

Power Requirements: 120VAC 60Hz,
12 or 24VDC

Power Consumption: 40W AC, 33W DC

VM-8PRA

Eight Inch Professional Rackmount AC/DC Color Monitor w/ Speaker Cabinet

Features Include: Raster size regulation, degauss, keyed back porch clamping, A-B inputs, Dual audio inputs, RGB gun switches, RGB background and drive controls, tally light, internal/external sync, rackmount accessories and service manual.

Options: Pulse Cross, Underscan,
Dimensions: 8 $\frac{3}{4}$ "H x 19"W x 15 $\frac{3}{4}$ "D
Weight: 32 lbs.

Power Requirements: 120VAC 60Hz,
12 or 24VDC

Power Consumption: 40W AC, 33W DC

PROFESSIONAL RACKMOUNT COLOR MONITORS

Studio-13 Professional Rackmount Color Monitor

Features Include: 13" Trinitron® Plus color picture tube, 380 lines of resolution, Selectable comb and notch filters, nign voltage regulation, separate H & V delay front panel adjustable, split mode A-B display (front panel adjustable), automatic sync switchover to internal if external sync is lost, external sync indicator, automatic degauss, keyed back porch clamping, A-B-C looping video inputs, RGB video inputs, RGB Gun switches, RGB background and drive controls, Tally light, Underscan, Presets - Chroma/Phase/Brightness/Contrast, ACC defeat (switchable), Selectable time constant (H. AFC), Monochrome select, Set-up select, Aperture control, Rackmount slides, and Service manual

Dimensions: 10½"H x 19"W x 19"D

Weight: 52 lbs.

Power Requirements: 120VAC 60Hz ± 10%

Power Consumption: 85 Watts (avg.), 120 Watts (max.)

HR-130 Broadcast Master Color Monitor RGB/NTSC

Features

- Hi Resolution (600 lines)
- Video Inputs A, B, C/A-B split field adjustable video display
- Linear phase aperture correction
- 1H comb filter, notch filter-selectable
- Pulse cross mode
- Separate H & V adjustable pulse cross delays
- Expanded vertical mode
- Underscan mode H.AFC time constants selectable
- Internal-External sync selectable
- RGB gun kill control
- Color-monochrome mode
- Manual or preset chroma, phase, brightness and contrast front panel controls
- Analog RGB inputs, NTSC-RGB selectable
- Lockable engineering adjustment drawer
- Tally indicator

VM-17PRO 17" Professional Rackmount Color Monitor

Features Include: Raster size regulation automatic degauss, keyed back porch clamping, A-B-C inputs, RGB gun switches, RGB background and drive controls, tally light, internal/external sync, pulse cross, underscan, rackmount slides, presets, aperture control, focus control and service manual.

Dimensions: 17½"H x 19"W x 21½"D

Weight: 70 lbs.

Power Requirements: 120VAC 60Hz

Power Consumption: 73 Watts (avg.), 110 Watts (max.)

VM-13PRO 13" Professional Rackmount Color Monitor

Features Include: Raster size regulation, automatic degauss, keyed back porch clamping, A-B-C inputs, RGB gun switches, RGB background and drive controls, tally light, internal-external sync, pulse cross, underscan, presets, selectable automatic chroma control (ACC) defeat for detection of chroma loss, monochrome-color select, set-up switch, selectable horizontal time constant (H. AFC), aperture control, rackmount slides.

Dimensions: 10½"H x 19"W x 19"D

Weight: 48 lbs.

Power Requirements: 120VAC 60Hz ± 10%

Power Consumption: 55 Watts (avg.), 80 Watts (max.)

VM-13PR 13" Professional Rackmount Color Monitor

Features Include: Raster size regulation, automatic degauss, keyed back porch clamping, A-B-C inputs, Blue Gun, tally light, internal/external sync, rackmount slides, selectable ACC defeat, and service manual.

Dimensions: 10½"H x 19"W x 19"D

Weight: 48 lbs.

Power Requirements: 120VAC 60Hz ± 10%

PROFESSIONAL RACKMOUNT COLOR MONITORS

SPECIFICATIONS

Professional Color Monitors (Except HR-130)

CRT: Trinitron Plus®
Color Standard: NTSC
Video Signal Level: .5V to 1.5V P-P composite video loop thru or switchable to 75 ohm termination, negative sync
Video Inputs A-B-C: Switchable, better than 50 dB at 4 MHz isolation (Except 8")
Connectors: BNC
Raster Regulation: 1%, 0-100% APL, 20 fl.
Luminance Bandwidth: 2 dB/to 3.2 MHz
DC Restoration: Keyed back porch clamping maintains 98% black reference
Pulse Cross: Switchable to display horizontal and vertical blanking intervals
Underscan: Switchable to display 90% of full screen
External Sync: 1V P-P minimum—8V P-P maximum
Comb Filter: Permits extended luminance to be displayed (except VM-13PR, VM-13PRO, VM-17PRO)

Above: Rear Connector Panel for VM-8PT, VM-8PR, VM-8PRW, VM-8PRA, VM-8PRD, System 8.

Right: Rear Connector Panel for VM-13PR, VM-13PRO, Studio-13, VM-17PRO.

19" Analog and Digital RGB/NTSC Monitor

Features

- 19" Trinitron® CRT • Comb filter, 340 lines of resolution • Looping video and audio inputs • 8 pin VTR connectors • A-B input switching • DC restoration • 100% solid-state • Complete chassis AC isolation • Low power consumption • Dual audio amplifiers • Underscan standard • Blue gun standard • 1V or TTL digital RGB inputs, looping BNC or multi pin input • Digital composite or separate horizontal and vertical sync, normal or inverted polarity • Internal-external sync select and looping BNC input • 8 pin DIN connector to work with Videotek DM-40R for full remote control and TV tuner capabilities • Two optional speaker systems \$1745.00

RGB/VM-19A

CD-19HR

19" Analog RGB Monitor

Features

- High resolution CRT capable of a clear display of 4,000 characters (approx. 1,000 pixels in screen center) • Black-matrix CRT Pil-Delta construction for stable, simple convergence of beam registration • Full range analog input • Video channel bandwidth, 50Hz to 25MHz (±3dB) • 3 looping RGB inputs with selectable 75 ohm termination • Internal/external sync auto select • Multiple scan rates • Separate H and V drives • 19" rack mountable • Dynamic focusing • Multi mains input select • Selectable 3:4 or 1:1 aspect ratio

With Cabinet (Underscan Standard) \$3250.00

CD-19HR

CD-13HR

13" Analog RGB Monitor

Features

- High resolution CRT capable of a clear display of 2,000 characters (approx. 700 pixels in screen center) • Black-matrix CRT Pil-Delta construction for stable, simple convergence of beam registration • Full range analog signal input • Video channel bandwidth, 50Hz to 20MHz (±3dB) • 3 looping RGB inputs with selectable 75 ohm termination • Internal/External sync select set internally • Multiple scan rates • Multi mains input select

With Cabinet (Underscan Standard) \$1855.00

Without Cabinet (Underscan Standard) 1635.00

CD-13HR

TSM-5A

VSM-5A

TSM-5A WAVEFORM MONITOR
NTSC/PAL/PAL-M STANDARD
FEATURES

- Compact:** Mounts in 5-1/4" of vertical rack space and one-half standard rack width space
- NTSC:** Standard NTSC, 525 lines, 30 frame (60Hz field rate) scan
- CCIR:** Standard PAL, 625 lines, 25 frame (50Hz field rate) scan
- CCIR:** Standard PAL-M, 525 lines, 30 frame (60Hz field rate) scan

Vertical Frequency

- Response:** 8MHz response
- Graticule:** Internal illuminated graticule; eliminate parallax errors
- Visibility:** High brightness CRT, non-glare contrast filter
- Inputs:** Selectable A/B video looping BNC inputs. AC or DC coupled
- Output:** Separately buffered video out 1 V P-P into 75 ohm termination
- Sync:** Selectable internal/external input
- Filters:** Flat, IRE, Chroma or Differential Gain
- Time Base:** 2 line, 1 line, expanded 2 line, expanded 1 line, 2 field or expanded 2 field
- Line Select:** Selects lines 14 thru 21 of field selected
- Field Select:** Field 1 or 2 selectable
- YRGB/RGB:** 9 pin access connector for monitoring color processing amplifier waveforms
- DC Restoration:** Selectable
- Options:** Standard case, portable case, double rackmount case, blank panel

TSM-5A \$2065.00

VSM-5A VECTORSCOPE
NTSC/PAL/PAL-M STANDARD
FEATURES

- Compact:** Mounts in 5-1/4" of vertical rack space and one-half standard rack width space
- NTSC:** Standard NTSC, 525 lines, 30 frame (60Hz field)
- CCIR:** Standard PAL, 625 lines, 25 frame (50Hz field)
- CCIR:** Standard PAL-M, 525 lines, 30 frame (60Hz field)

Graticule: Internal illuminated graticule; eliminates parallax errors

Visibility: Non-glare contrast filter

Inputs: Selectable A/B Video looping BNC inputs, subcarrier A select, external subcarrier looping BNC inputs, external PAL pulse looping BNC inputs (PAL only)

REF NTSC: Selectable A/B and external subcarrier looping inputs

REF PAL: Selectable A or B and external sub-carrier looping inputs

Test NTSC: Normal/Alternate Line/Test Circle Push Button Selectable

Test PAL/PAL-M: Normal/NTSC Display/Test Circle Push Button Selectable

Options: Standard case, portable case, double rackmount case, blank panel

VSM-5A \$2365.00

OPTIONS (TSM-5A, VSM-5A)

- SCC-1** Single Standard Case \$ 39.00
- PTC-1** Portable Case w/Handle & Sunshield 135.00
- DRC-1** Double Rackmount Case 200.00
- BLK-1** Blank Panel 20.00

Ultralite Projection Screens...The Ultimate in Picture Quality

ULTRALITE PROJECTION SCREENS

Get maximum visual impact with sharp brilliant images. Ultralite's high quality optical coating gives you top fidelity magnification with no distortion or loss of detail.

- Light is evenly distributed across the screen. Color fidelity is uniform and consistent.
- Exceptional image definition is achieved with Ultralite's "controlled" gain across the screen.
- Contrast is improved. Ultralite's special optical coating absorbs extraneous ambient light without loss of image brightness.

Customized Ultralite

- Ultralite 1 for three-gun projection systems. Designed for wide angle viewing.
- Ultralite 2 for single-gun systems, with wider angle viewing and minimum drop-off.
- Custom match the right Ultralite screen to your projection system. A variety of sizes to 7-feet diagonal measurement. Wall-mounted, free-standing or custom packaged to your cabinetry.

Durable And Easy To Maintain

Ultralite's tough, mar-resistant surface tolerates handling and is easily cleaned with conventional detergents.

- The Ultralite Screen Care Kit is a lifesaver, includes a soft, protective dust cover and our specially formulated spray cleaner and screen brightener.
- In the lightweight, portable version, the durable Ultralite screen now allows you to make your TV system fit your decor.

Screen Resurfacing Service

Viscotec can resurface screens for most major projection TV systems — Advent, Kloss, MGA, Sony and others.

- Saves dollars because resurfacing is often half the cost, or less, of buying a new replacement.
- Improves quality, with superior optical characteristics for improved brightness, truer colors and crisper images.

Let Viscotec help you get more out of your projection TV system. Our versatile range of Ultralite screens let you see a superior picture. Our screen resurfacing service assures you of continued good viewing. You can also use Ultralite screens for front projection viewing of slides and films. Our expertise in optical coatings and manufacturing guarantees timely delivery and consistent quality at attractive prices. When you want to experience the ultimate in viewing... team up your projection system with Ultralite.

MODEL	SIZE	PRICE*
Ultralite I or II	4' dia. (32" x 40")	\$165.00
Ultralite I or II	5' dia. (52" x 40")	285.00
Ultralite I or II	6' dia. (62" x 45")	442.50

HARDWARE		
Floorstand	(All sizes)	\$ 67.50
Wall/Ceiling Mounts	(All sizes)	18.00

3401 W. Madison Street
Skokie, IL 60076
(312) 588-2776

NO. 660

Basic unit conical in shape with 4" diameter reflector, 3" depth which produces medium beam spread, fixed focus. Ideal illumination for most lighting applications such as key or fill as main or side light. Housing sunshine gold. 600W quartz lamp included. **\$89.95**

NO. 680

Unique focusing arrangement enables beam adjustment from medium to broad and 3:1 ratio of beam center intensity. Such versatility makes this model adaptable to all lighting situations. Housing surf sand. 600W quartz lamp included. **\$123.95**

Q-BRITE PROFESSIONAL VIDEO AND PHOTO LIGHTS

Q-Brite represents a trio of heavy-duty, compact quartz reflectors for professional use. Constructed of heavy steel housings and scientifically contoured aluminum reflectors using strong swivel yokes with adaptors for either 3/8 or 5/8 stands. Electrical construction includes 3-cond. power cords, heavy rated switches, and ceramic sockets. All models include lamp, safety chain, accessory clips, finger grips.

NO. 960

Specifically designed to give broad, uniform beam ideal for back and background lighting. Measures 4 x 4" with shallow 2" depth. Includes built-in 4-leaf barndoors. Housing black. 600W quartz lamp included. **\$99.95**

NO. 990

A higher intensity broad beam reflector with long life frosted lamp for greater diffusion. Includes 1000W lamp, rated 400 hours in 5-1/2" reflector with heavy-duty switch. Barndoors included. **\$149.95**

4VB BARNDOORS: 4-leaf rotating Barndoors to fit Models 660 and 680 only **\$32.50**

VSD SCRIM: Fine mesh screen framed in aluminum for diffusion. Use singly or in pairs. For all Q-Brite models only. each **\$11.95**

SPECIFICATIONS FOR Q-BRITE MODELS

Model	Lamp	Watts	Amps	Kelvin	Hours	Beam	FCBC
660	DYS	600	5.2	3200	75	45°	100
680	DYS	600	5.2	3200	75	40°-75°*	65-190*
960	DYS	600	5.2	3200	75	60°	60
990	FHM	1000	8.7	3200	400	75°	140

FCBC: Footcandles at Beam Center measured at 10 feet. All models priced to include Lamps as indicated.

*For focusing model indicates extreme from spot to flood position.

SUGGESTED Q-BRITE COMBINATIONS

The versatility of Q-Brite line allows for various combinations to suit your lighting needs. Below are listed several combinations which are more economical than purchased as components.

THE CASE

The case designed for the Q-Brite line is the most versatile and deluxe ever designed. Constructed of solid plywood and covered with tough PVC laminate. All edges and corners reinforced with extruded aluminum. Interior fully foam padded. Vertical partitions adjustable to any size. Includes strong hasp locks and full length piano hinge. Measures 26 x 12 x 9. Holds up to 3 lights, 3 stands, plus accessories. **Case Only \$179.95**

THE STAND

The special Case stand designed to fit in the case provides maximum sturdiness for Q-Brites. 3-sec. stands made of 5/8, 1/2, and 3/8 telescoping tubing, black seamless tubing with star locking knobs. Sections locked in, legs channeled and braced. Elevates to 7 ft. folds to 26"; leg spread 30". **Stand Only \$29.95**

ACME-LITE MFG. CO.

3401 W. Madison Street
Skokie, IL 60076
(312) 588-2776

KOOLVENT REFLECTORS

A line of 6 lights of professional quality made in larger sizes for both efficient quartz lamps and lower priced photoflood lamps.

NO. 010-Q
NO. 010-LL

NO. 010-P
NO. 012-P

NO. 640HD

Each reflector has a specially designed Koolvent housing on the back which keeps the unit cooler and easier to use. Heavy swivelling yoke, 3-conductor grounded power cord, and large control knobs make this suitable for heavy-duty use.

NO. 010-P

10" diameter using #1 (BBA) lamp 250W (not included) in screw-in ceramic socket providing 45° beam spread with 125 fc at beam center at 10 ft.

.....\$51.95

NO. 010-Q

10" diameter using 600W quartz lamp (included) providing 40° beam spread with 150 fc at center at 10 ft. Expected lamp life 75 hours.\$69.95

NO. 010-LL: Same but 500W quartz lamp (included) with 100 fc and 2000 hour life.\$109.95

NO. 012-P

12" diameter for #2 (EBV) lamp 500W (not included) providing 40° beam with 170 fc at center.\$59.95

NO. 025-P

Cone shaped 7" diameter for #1 or #2 photoflood lamp (not included) for narrow beam, 80 to 120 fc.

.....\$59.95

NO. 640-HD

6" diameter using 600W quartz lamp (included) with 60° beam and 90 fc at center at 10 ft. Equipped with 4-leaf rotating barndoors.\$94.95

COMPACT ECONOMY QUARTZ LIGHTING

NO. 710-SL

Compact, low-cost light with big 1000W lighting punch. Includes quartz lamp with 75 hour life in lightweight phenolic housing small enough for gadget bag. Elliptical aluminum reflector for broad beam complete with folding 4-leaf barndoors to control beam. Includes locking swivel, panel switch, heavy power cord, stand adaptor for 3/8 stand.\$119.95

NO. 710-LL

Same as above but with 1000W quartz lamp with 400 hour life rating ideal for longer video taping.

.....\$129.95

LP232 LITEPAK: Deluxe combination of two Model 710SL for total 2000W. Includes two 7 ft. Midelwater Stands, 4 stand extensions, extension cord, lamps. All fitted into deluxe wood case, partitioned and lined.\$439.00

NO. 600

Small, lightweight 6" diameter aluminum reflector which throws broad beam of light. Complete with 600W quartz lamp, double ball swivel, and stand adaptor for 3/8 stand. Electrically fitted with ceramic socket, 10 ft. power cord, 10 amp line switch, cool finger knob. Use for main, side, or back lighting.

.....\$69.95

4BD BARNDOORS: 4-leaf rotating barndoors to fit Model 600 reflector.\$19.95

640BD REFLECTOR: Combination of No. 600 reflector with lamp and 4BD Barndoors.\$84.95

LITECLAMPS

47 MINI SPRING

Medium tension spring clamp for attaching small lights to flat surface or tubing. Has 3/8 stud for light.

.....\$7.95

STUDIO JUMBOLITE

Giant 18" diameter reflector to illuminate entire scene and overall lighting in studio. Comes equipped with amazing 2-in-1 Lamp with large frosted outer envelope for diffusion plus inner quartz lamp for long life and consistency. Produces intense light highly diffused. Lamp 1000W, 27,000 lumens, 500 hours, 3200K. Reflector disassembles into 3 sections for portability. Complete with 10 ft. cable cord and 10 amp line switch.

NO. 923

Complete 3-piece reflector assembly and 1000W QST Lamp\$99.95

NO. 920-RS

Model 923 Reflector assembly and lamp plus heavy-duty Champion stand on roller base.\$283.00

49 PIPE CLAMP

Heavy-duty clamp for heavy lights with adjustable screw lock. Fits flat or tubular surfaces from 5/8" to 2"

No. 49 with 3/8 Light Stud\$23.95

No. 49/5 with 5/8 Light Stud\$23.95

48 GAFFER

Heavy tension spring clamp with large grips for clamping to flat or tubular surface. Has 3/8 stud for light. Fits 5/8 to 2".\$23.95

LOCATION LITEPAKS/ LITE STANDS

LOCATION LITEPAKS

Litepaks provide an economical and convenient way to store and carry all your lighting equipment. A variety is shown below including deluxe and economy lights in both deluxe cases and economy carriers.

LP340BD LOCATION LITEPAKS

Deluxe combination of three Model 600 reflectors including barndoors for use as front, side, and back lighting. Totals 1800 watts of illumination. Complete with lamps, fittings, 3 Flywate stands, stand extensions, extension cord, and 4-leaf barndoors. All contents contained in partitioned plywood case measuring 19" x 12" x 8". **\$445.00**

LP340BD CONTENTS

- 3 No. 600 Reflectors
- 3 No. 4BD Barndoors
- 3 DYH 600W Quartz Lamps
- 1 Deluxe Carry Case
- 3 Flywate Stands
- 3 Stand Extensions
- 1 Extension Cord
- Lighting Plans

NO. LP333:

Same as LP340BD but without Barndoors. **\$389.00**

LP3 LOCATION LITEPAK

An economy 3-way lighting kit that provides a total of 1800 watts of lighting for front, side, and back. Includes 3 No. 600 reflectors with 600 watt Quartz lamps, 3 Flywate Lite Stands with 3 Stand Extensions for total height of 7.5 ft., 12 ft. extension cord, fittings, and lighting diagrams. All contents in partitioned heavy weight paperboard carrier with metal snaplocks and styrene handle. **\$299.95**

LP2 LOCATION LITEPAK

Same as LP3 but a 2-way lighting kit providing 1200 watts of illumination. Contains 2 each of No. 600 reflector, lamps, stands, extensions, etc. in same carrier. **\$209.95**

LP27 LOCATION LITEPAK

Same as LP2 but adds Model 708G Videolite for total 1800 watts. Provides camera mounted light plus side and background light for 3-way triangular lighting for professional effect. Complete with lamps, 2 Flywate Stands and extensions, fittings, and light plans fitted into same carrier as above. **\$279.95**

LP36 DELUXE LITEPAK

Contains deluxe heavy-duty Model 660 Q-Brite Reflectors and heavier duty Casestands in sturdy paperboard carrier with metal snap-latches and styrene handle. Includes 3 No. 660 with 600W DYS quartz lamps, 3 Casestands with stand extensions, 2 rotating 4-leaf barndoors, fittings. **\$355.00**

LP26:

Same as above but 2-way kit including 2 No. 660 with lamps, 2 Casestands, and one Barndoor. **\$239.00**

LITE STANDS FOR EVERY VIDEO AND PHOTO NEED

Lite Stands are an indispensable part of every lighting set-up. They support the light and place it exactly where it is needed. Acme-Lite offers a variety of sizes and prices to suit every need.

FLYWATE

Ultra compact 4-sec closing to a mere 18" and opening to 6 ft. Recommended for lightweight units and where compact portability is needed. **\$29.95**

MIDELWATE

Same design but slightly larger closing to 24"; opens to 7 ft. **\$34.95**

LITEWATE

Basic steel stand with 5/8 tubing offers greatest value. 2-sec closes to 42"; opens to 6.5 ft. **\$19.95**

BANTAMWATE

Same stand but 3-sec closes to 36"; opens to 8 ft. **\$29.95**

WELTERWATE

Deluxe stand for heavier lights offers finest construction and features. 3-sec closes to 31"; opens to 8 ft. Heavier 1" tubing and 31" leg spread. **\$59.50**

HEVIWATE

Same construction but 4-sec with heavier 1-3/8 diameter tubing. Closes to 37"; opens to 12 ft.; leg spread 35" **\$89.50**

7A

Aluminum 5-sec stand offering lighter weight and greater versatility. Sections locked in; legs braced; lock knobs won't fall out. Closes to 19"; opens to 7 ft.; leg spread 32"; weighs 30 oz. **\$36.95**

9A

Same as 7A but closes to 23"; opens to 9 ft.; weighs 36 oz. **\$41.95**

CHAMPION

Heavy duty stand to hold largest lights. Built-in dolly 3" wheels sturdily braced. Folds up compactly. 3-sec with one inch base tubing closes to 39" and opens to 10 ft. Sections locked in; locking clamps prevent denting. **\$119.95**

STAND CONVERTERS

All Acme-Lite stands accept lights with 3/8 fitting except Champion for 5/8. Change size of stand to fit your own light fitting with:

- NO. 35 CONVERTER: Changes 3/8 to 5/8
 - NO. 53 CONVERTER: Changes 5/8 to 3/8
- each **\$5.95**

Prices and Specifications Subject to Change Without Notice.

ACME-LITE MFG. CO.

3401 W. Madison Street
Skokie, IL 60076
(312) 588-2776

These compact lights have been designed to attach directly to the video or movie camera to provide key lighting that automatically follows the lens and action.

VIDEO CAMERALITES

twinlites

MODEL 22-AC and AC
Two individually switched lamps in tandem each 250W operating from 115V wall outlet. One lamp provides 250W for normal room sizes and average beam angle for smaller subjects. Both lamps provide 500W for large areas and wider beam angle for larger subjects. All Twinlite lamps are miniature size with built-in reflectors having faceted surfaces for optimum illumination. Dichroic coating on lamps and phenolic housings provide cool operation. Swivel yoke can mount on stand or video camera. \$129.95

ONE LAMP
Optimum illumination for normal room. Medium beam angle for average subjects.

TWO LAMPS
Increased illumination for large room. Wider beam angle for larger subjects.

Lamp Life	1	175hrs
	2	350hrs
Color Temp		3250K
Beam Angle	1	25°
	2	45°
Watts	1	250
	2	500
Footcandles	2	150fc
	1	300fc

MODEL 32-DC and DC
Two individually switched lamps in tandem for DC operation includes 50W (high intensity) and 100W. Low wattage lamp provides intense light but doubles battery running time while second lamp provides same illumination with wider beam. Use both lamps simultaneously for high light output with wider beam angle. Total unit provides variable light output and beam angle plus double battery running time. . . . \$129.95

FIRST LAMP
Doubles battery running time.

SECOND LAMP
Wider beam angle.

BOTH LAMPS
Increases both illumination and beam angle.

Lamp Life	1	3000hrs
	2	50hrs
Color Temp	1	3075K
	2	3350K

	both	170fc

MODEL 42-AC and DC
Same construction as described above but operates on both DC (battery) and AC power.

Two individually switched lamps in tandem: one 100W operates on 12V battery; other 250W operates on 115V wall outlet. Unit can be used on either type power source with security of having unlimited reserve power when battery runs down. Or both lamps can be used simultaneously on both power sources when additional light and wider beam angle is needed. One power cord to fit battery and one to fit wall outlet each keyed to be used on correct power source. \$139.95

DC LAMP
Use on 12V battery for portability

AC LAMP
Use on 115V circuit for reserve power.

BOTH LAMPS
Increased illumination for large room. Wider beam angle for larger subjects.

ACCESSORIES

4VT BARNDOORS: 4-leaf barndoors attach to front of any Twinlite model to provide accurate control of light pattern. \$24.95

VST SCRIM: Fine mesh screen attaches to front of any Twinlite model to provide soft lighting and diffusion. \$12.95

95 HANDLE: Handle attaches to any Twinlite model for holding light in hand. \$7.95

LIGHTS FOR 115V AC

No. 625 DELUXE FOCUSING VIDEOLITE

Deluxe focusing light which adjusts beam spread to cover entire subject and changes light intensity for size of room. Aluminum reflector in steel housing with yoke. Fits on stand or 94B and includes shoe adaptor. Includes 250W, 3200K quartz lamp with 200 hour rated life. \$79.95

No. 725

Economy videolite with built-in elevated shoe mount (use 94B for cameras without shoe) and includes 250W quartz lamp rated 3200K. 200 hours good for up to 40 video cassettes. \$59.95

725G

Same as above but with wire safety guard and cooler operation. UL approved. \$69.95

No. 708G:

600W quartz lamp, 75 hour for more intense light in larger rooms and groups. Complete with safety guard, bounce bracket, stand adaptor. Includes lamp. For camera mounting see note at bottom. \$59.95

No. 800VL:

100W low-level light for closeups and small areas. Same construction as 708G. Includes lamp. UL approved. \$39.95

NOTE: To mount 708G, 800VL, 710 to top of camera use No. 25 shoe adaptor for cameras having accessory clip; or 94B telescoping handle bracket for other cameras or added height.

AC-DC VIDEO SAFETY LIGHT MODEL 7PBX

No. 7PBX: Model 7PB battery-operated light with Voltage adjuster included to power off either 12V battery or 115V wall outlet without changing lamps or cords. Plug directly into 12V battery (e.g. 12BB or 12BL) with 6 ft. coil cord and cigar plug.

Or insert light cord into Voltage Adjuster plugged into wall outlet and continue without interruption. Total 18 ft. cord. Complete with 100W quartz lamp and elevated bracket with locking camera shoe. Completely safe. Never a dangerous mistake of plugging into wrong voltage. \$119.95

VL-5

AMBICO, INC.

50 Maple Street
Norwood, NJ 07648-0427
(201) 767-4100

Model V-0199

Video Lighting System

A total of 600 watts in an integrated video lighting kit. Adds complete lighting control with stands for back lighting and side lighting. In this kit:

- Two V-0100 Flood/Spot Videolights, each with a 300-watt quartz-halogen lamp, 120 volts
- Two V-0509 Video Lightstands telescope to nine feet. Easy-adjust Positive-action locks and non-skid feet
- Two handgrips and two bases
- Deluxe Fitted Carrying Case to store and carry complete set of lights and stands conveniently and safely

\$349.00

For detailed description of parts see light V-0100 and stand V-0509.

V-0199

V-0170

Model V-0170

AC/DC Flood/Spot Videolight

A versatile quartz-halogen light with brushed reflector to spread soft light. Plugs into a normal 120-volt AC receptacle and comes with 12-volt cigarette lighter plug adapter for car lighter receptacle or battery pack for DC use. Focus adjustment changes light from flood to spot. Includes one 150-watt AC lamp and one 100-watt DC lamp. Heat-absorbing glass Safety-Shield. Tilt Control for 120° bounce lighting.

\$112.95

Model V-0200

Compact 12V Videolight

Portable, 100-watt, quartz-halogen light with cigarette lighter-type plug. Fits directly into car lighter receptacle, 12-volt battery pack, or similar power source. Compact light attaches firmly to camera accessory shoe, extender bracket, lightstand, or tripod. Comes with voltage monitor, cord, and mounting shoe.

- Includes 100-watt quartz-halogen lamp (approximately 50-hour bulb life)
- 3200° Kelvin color temperature gives accurate color reproduction
- Heat-absorbing glass Safety-Shield
- Facet-Focus Reflector provides maximum light dispersion
- Tilt control for 120° vertical adjustment bounce lighting

\$79.95

Model V-0100

Flood/Spot Videolight

Versatility makes this one of the most popular videolights. Bathes subject in warm light for accurate, realistic colors. Comes complete with lamp, handgrip, base for wall or table-top mounting, and instructions.

- Lightweight and compact
- Attaches to camera accessory shoe, handgrip, lightstand, or tripod
- 300-watt quartz-halogen lamp (approx. 70-hour bulb life) Output: 700 foot-candles
- 3200° Kelvin color temperature for accurate color reproduction
- Light beam variable controlled for 30° spot (single subjects) to 50° flood (group shots)
- Facet-Focus Reflector gives maximum light dispersion in both flood and spot positions
- Light intensity at center of beam adjustable from 60 foot-candles in flood to 150 foot-candles in spot configuration at 10 feet
- Heat-absorbing glass Safety-Shield for cooler, safer shooting (Protects video-camera, too)
- Lamp Ejector removes hot lamp without burning fingers
- Tilt Control for vertical 120° adjustment of bounce lighting
- Mounting bracket is offset from video-camera for cooler shooting

\$89.95

Model V-0806

10-Amp-Hour, 12-Volt Belt Powerpack/Videolight Kit

Powers V-0200 videolight for nearly one hour.

- Weighs less than 8 pounds
- Compact 12-volt Videolight, V-0200, included
- 100-watt quartz-halogen lamp included
- Rechargeable lead-acid battery cells are rugged, have high cycle-life and recovery ability
- Batteries in polypropylene cases for protection from shock, temperature, and climate changes
- Fused for greater protection
- Outer packs of water-resistant nylon fabric with foam padding for extra comfort
- Sturdy web belting adjustable and has easy-latch buckle

\$169.95

VIDEO LIGHTING AND ACCESSORIES

Quartz-Halogen Replacement Lamps

Model V-0101 a 300-watt, 120-volt lamp, for V-0100 Videolight. Approximately 70-hour bulb life. **\$25.95**

Model V-0151 a 150-watt, 120-volt lamp for AC operation of Model V-0150 or V-0170. Approximately 70-hour bulb life. **\$25.95**

Model V-0201 a 100-watt, 12-volt lamp for V-0200 Videolight; or for DC operation of V-0150 or V-0170. Approximately 50-hour bulb life. **\$19.95**

Model V-0105

Barndoors

Professional-style Barndoors control light spill; direct maximum light on subject. Screw directly onto V-0100 Flood/Spot Videolight. Hinged doors adjust individually to any angle; fold flat when not needed. **\$19.95**

V-0507

V-0505

Model V-0507

Multiple Accessory Shoe

Allows mounting two lights and a microphone on videocamera to follow the action everywhere. Sturdy, lightweight metal. **\$9.95**

Model V-0505

Extender Bracket

Moves light to side of videocamera for cooler shooting and reduced "head-on" lighting look. Attaches to camera tripod socket and holds V-0100 or V-0200 Videolight. Also keeps power cord conveniently away from camera. **\$9.95**

ULTRALIGHT™ SYSTEM

UltraLight System provides extremely compact, lightweight, and versatile portable lighting. UltraLights become fill, spot, or flood lights according to the selection of quick-change bulbs, filters, and focus adapters. The removable light head module allows bulb changes in the field without direct handling. A working system requires one or more of the power cables/adapters listed as well as a bulb of corresponding voltage.

ULS. UltraLight Single. Single base and head module with single power input and switch. **\$195.00**

ULD. UltraLight Dual. Dual base with two head modules, two switches, and single power input. Bulb voltages must be matched. **ULD** **\$350.00**

UL-HM. UltraLight Head Module. Extra quick-change rugged aluminum module to house alternate or spare bulbs.

UL-HM Package of three **\$195.00**

UL-HM Single **75.00**

ULAC. UltraLight AC Power Supply. Compact AC power supply allows use of low voltage bulbs (12-14v) where AC power is available. Maximum 100 watts of light output (one or two bulbs). 115/230v, 50/60 Hz. 12-14 VAC for lighting applications only. **\$165.00**

Black Beauty Light Head

LG-UD Universal Black Beauty Light Head. With swing-away dichroic filter. Select bulb and cable from lists below. **\$295.00**

Dichro. Dichroic Filter Assembly. For all LG Series Black Beauty Light Heads. **\$85.00**

Bulbs for Black Beauty Light Heads

FAV	12v	100	6	25 min.	\$23.

LGK-30 30 VOLT LIGHTING KIT

Complete Kit Includes:

- LG-UD Black Beauty Light Head with Dichroic Filter Assembly
- LC-30, 5 foot 30 volt power cable
- FBV 30V 250 watt tungsten bulb (one).
- Model 30/13 30V 4 AH battery belt with built-in 110/220 overnight charger
- Heavy duty shipping case with custom fit foam interior
- Typical Run Time: 25 minutes at 250 watts
- Size: 17-1/2" x 7-1/2" x 14"

LGK-30 **\$1195.00**

LIGHTING ACCESSORIES

LC-L 5 Foot Low Voltage (12-15V) Power Cable

For LG-U Light Head. Makes with Anton/Bauer Super D System UniPac Holders and other batteries with 5 pin XLR connectors. ... **\$48.00**

LC-30 5 Foot 30 Volt Power Cable

For LG-U Light Head. Amphenol connector mates with Anton/Bauer 30/13 Battery Belt and other 30 volt batteries **\$55.00**

CLPA Camera Light Power Adaptor

Powers LG-U Light from camera battery. Snaps on between battery and bracket at the rear of any camera. Integral cable plugs directly into LG-U Light Head. Requires 14.4 volt 70 watt bulb. **\$95.00**

UP Snap-On UniPac

Compact Anton/Bauer Snap-On bracket with integral belt loops and 5 foot cable. Allows any Anton/Bauer Snap-On 4 AH NiCad battery to be worn on a pants belt. Cable plugs directly into LG-U (or other 12-15 volt device). Requires 14.4 volt 70 watt bulb. **\$130.00**

Light Head Brackets

These brackets are used for quick custom mounting the Black Beauty and UltraLights on all popular ENG cameras.

Cameras not listed above may use one of the following brackets:

BR STUD: For all cameras with a 1/4-20 threaded accessory hole.

BR UNIV: Universal mount that clamps onto the handle of virtually any camera.

BR SHOE: For all cameras with microphone/accessory shoe.

Price of all Brackets listed. **\$45.00**

STANDS

Super Stand

The bigger your light, the more you need this strong, tall, stable stand. Made of aluminum, it's comparatively lightweight (slightly over 15½ lbs.), yet will support large lighting units such as movie and TV floodlights, including 228mm sockets. Full extension is just under 12 feet. Standard 5/8" stud and 1/4-20 adapter to take strobes, smaller professional Q.H. lights, and other lights. Clamp-on leveller can be ordered which keeps the Super Stand on an even footing, when the terrain isn't. For indoor use, there's an accessory set of 100mm casters.

SPECIFICATIONS

Closed Length: 55.9". Minimum Elevation: 56.3". Maximum Elevation: 143.3". Diameter of base: 64.5". Legs are 30mm diameter aluminum. Sections are respectively, 50, 40, 30mm

3079 \$240.00

ACCESSORIES

Extension Leveller. A 22mm diameter tube which clamps on to one of the legs of the Super Stand and provides a 40cm (15") range of adjustment so that the center column of the stand can be kept level on uneven ground.

3080 \$30.00

Caster Set. 100mm (3.9") diameter casters to provide easier movement when the stand is used indoors.

3081 \$40.00

Cine Stands

Designed to hold heavy lights, reflectors and scrims. The Wind-up 2 and Wind-up 3, Cine and Cine 3 Stands, as well as the Super Stand all accept 1-1/8" (28mm) bushings and supplied with adapters for 5/8" (16mm) and half inch female yoke sockets. The Tall Cine accepts 5/8" bushings and female yoke sockets.

Model 345 Stand

Three section light stand which extends to 11', closes down to 41 ½". It weighs 6 lbs. 4 oz. and will support any of our Monolite units or other lights of comparable weight. The 345 comes with Shepherd casters for easy movement in the studio. Mounting stud is 5/8" for standard studio strobes with 1/4-20 thread adapter.

3082 \$99.95

Model 251 Stand

The workhorse for portable strobe and Q.H. lighting use, the 251 is stable 8' stand. It weighs under 2-1/4 lbs. and closed length is 34-1/4". Mounting stud is 5/8" for standard studio lights with 1/4-20 thread adapter, 42" diameter legs spread.

3086 \$47.95

For use indoors, you can add a set of Shepherd Casters.

3088 \$22.00

Bantam Weight Stand

A six foot light stand, very lightweight for its size and relative sturdiness. For use with small strobes and quartz lighting units. The mounting stud is 5/8" diameter. Closed length is 24-3/4", minimum extension is 32", weight 2 lbs.

ELLIPSOIDAL DESIGNER PATTERNS

9.00

With over 100 precision patterns to choose from you can accent your picture theme or mood not possible any other way so inexpensively. These patterns will fit any standard brand of ellipsoidal fixture. When necessary, the special heat resistant metal can be cut to size with scissors to fit most pattern holders.

CUSTOM PATTERNS from camera ready art (first pattern) **90.00**

LIGHTING KITS

01720-WB PORTA-KIT 6000

Portable "open face" fixtures designed for larger set areas giving maximum footcandles and the ability to diffuse, color the light with field and beam control.

- 2—SLIMLINE II 1000/2000W "Punch Light" with integral (4) way barndoor and 10' power cable with crush proof inline switch and plug
- 2—Accessory Holders (Attaches to Barndoor)
- 2—Gel Diffusion Frame.
- 2—FEY 2000W, 3200K Quartz Lamp
- 3—MINI MAC 1000W "Base Light with integral (4) way barndoor and 25' power cable with inline switch and plug.
- 3—Accessory Holders (attaches to barndoor).
- 3—Gel Diffusion Frame.
- 3—FHM 1000W, 3200K Quartz Lamp
- 4—Medium Weight, Hi-riser Stand Folded 35 3/4", extended 127"
- 2—Gaffers Grip
- 1—Rosco Assortment-Roscolux: 3200K to daylight conversion blue, red, green and blue primary colors, amber and Tough Spun Diffusion Material.
- 1—Rugged Case-partitioned, roomy and light-weight **2350.00**

01730-WB PORTA-KIT 4000

Use as kit 6000 when not as many fixtures are needed and without maximum beam diffusion or colored light is needed.

- 2—SLIMLINE II 1000/2000W "Punch Light" with integral (4) way barndoor and 10' power cable with crush proof inline switch and plug.
- 2—Double Scrim.
- 2—FER 1000W Quartz Lamp.

LIGHTING KITS

01740-WB SLIMLINE II 2000 KIT

Can be used for over all base light. We recommend using with Mini Mac 1000 kit for more versatility. The double kit system is easier to move from location to location.

- 2—SLIMLINE II 1000 2000 with integral (4) way barndoor and 10 ft. power cable with crush-proof inline switch and plug.
- 2—Double Scrim.
- 2—FER 1000W Quartz Lamp.
- 2—FEY 2000W Quartz Lamp.
- 1—Gaffers Grip
- 2—Featherweight High Riser Stand, Folded 30" extended 103"
- 1—Rugged Case-Partitioned, roomy and light-weight. **1250.00**

01610-WB SUPER 600 "ENG" KIT I

Designed for use when 120V AC is not available. The power is a 30 volt DC battery belt which generates a 250W lamp. Both power cords and lamps are included in the kit. Gives more light output per watt than any competitive fixture.

- 1—Frezzi 600, 30 volt DC 125 Volt AC fixture
- 1—120 Volt Cable, 8 ft. with on off switch and plug
- 1—30 volt cable, 8 ft. with on off switch and plug
- 1—Accessory Holder
- 1—Rotating Barndoor
- 1—Daylight Glass Conversion Filter, 3200K to 5400K.
- 1—Hand Grip
- 1—Micro-Featherweight Stand, Folded 18 1/2", extended 78"
- 1—30 Volt "4ah Battery Belt (250W-30 min.) w/charger cable.
- 1—DYS, 600 Watt "3200K Quartz Lamp.
- 1—DYG, 250 Watt "3400K Quartz Lamp.
- 1—ENG Kit I Carrying Case **965.00**

01750-WB MINI MAC 1000 KIT

As described above but generally are used more as a base light and the Slimline II as the key light. They also make excellent copy board lights.

- 3—MINI MAC 1000 with integral (4) way barndoor and 25 ft. power cable with inline switch and plug.
- 3—Double Scrim.
- 3—FHM 1000W Frosted Quartz Lamp.
- 1—Gaffers Grip
- 3—Featherweight High Riser Stand, Folded 30", extended 103"
- 1—Rugged Case-Partitioned, roomy and Light-weight **1055.00**

01760-WB MINI MAC 650 KIT

Same rugged fixtures as above but smaller in size.

- 3—MINI MAC 650 with integral (4) way barndoor and 25 ft. power cable with inline switch and plug.

- 3—Double Scrim.
- 3—FBX 650W Frosted Quartz Lamp
- 1—Gaffers Grip
- 3—Featherweight High Riser Stand, Folded 30", extended 103"
- 1—Rugged Case-Partitioned, roomy and Light-weight **1000.00**

D2-94-LL DP 4 KIT

Light weight kit that is very versatile and unique. Four reflectors can be interchanged to vary the beam pattern from a soft wide angle to a narrow beam long throw fixture.

- 4—dp 1000 fixtures with #1 reflector and 16 ft power cable and inline switch.
- 4—dp barndoors
- 4—ks stands
- 1—dp lampak
- 1—carrying case, partitioned and light weight. **1375.00**

TI-94M-LL T 4 KIT

Versatile, light weight that gives a very wide spread of light or (by moving the reflector doors into the light beam) gives a concentration of light which can be used for bounce light. The kit has

a large selection of accessories.

- 4—tota 1000W fixtures with 16 ft power cable and integral two-leaf reflecting doors.
- 1—tota-brella
- 4—tota-frames
- 2—assorted gels
- 1—lightflector
- 4—tota-flags
- 1—tota-flector
- 4—flexi-shafts
- 1—tota-tatch
- 4—omni-stands
- 1—tota-mount
- 1—tota-clamp
- 1—large space clamp
- 1—gaffer tape
- 1—tota-lampak
- 1—case **1290.00**

01640-WB SUPER 600 "ENG" KIT III

Everyone in TV or photo lighting production must have at least one ENG KIT III. Very efficient light output and light weight.

- 3—Frezzi 600, 30 Volt DC, 125 Volt AC Fixture.
- 3—120 Volt Cable, 8 ft. with on off switch and plug.
- 3—DYS 600W Quartz Lamp
- 3—Accessory Holder
- 3—Four Leaf Barndoor.
- 2—Scissor Mounts.
- 3—Ultra Featherweight Stands, Folded 25 1/4", extended 83 1/2"
- 1—25' Extension Cable, 3-Way
- 1—Rugged Case, Partitioned, Roomy, Light weight **975.00**

CURTAINS, TRACK & ACCESSORIES

CURTAINS—CYC

Cyclorama curtains are seamless up to 125 feet in length and 28 feet in height, the cloth is

inspected before fabrication to assure against weaving flaws and sewn to our rigid specifications. These cycloramas are available in three colors—white, gray, and powder blue green.

Seamless Lino-Weave

This curtain has a 4" heavy duty binding at the top with spring harness snaps on one foot centers. The 2 1/4" bottom hem has a #90 lead tape weight sewn 1" above the bottom of the hem in a separate muslin pocket. The side hems have a 2" heavy duty binding with eyelets of 2" centers for tauting the curtain. Tow cord with handle is provided for easy transporting of curtain. The curtain is flame-proofed and flawless (as per the standards of the mills and converters) and is fabricated to the highest quality workmanship.

	Sq. Ft. (14'9" & under)	Sq. Ft. (14'10" & over)

Seamless Scrim

07038-WB White	2.20	2.95
07039-WB Black	2.30	3.20

TAUTING POLE

Tauting poles are used generally with the cyc curtain to assure proper horizontal tension on the cyclorama. They stand vertical at both ends of the cyc with adjustable claws attached through the vertical eyelet on the curtain. The base is weighted with a sandbag. The curtain is then adjusted to a proper tautness by the pair of poles.

07013-WB	Tauting Pole Base (one Left and one Right Hand)	45.00

CURTAINS—BACKGROUND

SPECTROCOLOR II (TM)

The background curtains are also fabricated to rigid specifications and come in almost any color. Usually it is recommended that the first background curtain be chroma-key blue. This, then permits chroma-keying and when not illuminated may be used to produce a limbo effect.

CYC GROUND ROW

Made of fiberglass for durability and to allow compound curvatures. Color of the ground row matches the white cyclorama curtain. The ground row may be painted to match any color background curtain by using tempa paint and washing with water when production is complete. Hides all cyclorama fixtures. When using top cyc lighting, the ground row is tinted with gels. Works 5 ft. from cyc curtain.

CYC LIGHT GROUND ROW

07085-WB	4 1/2 ft. radius corner section	450.00
07086-WB	8 ft. straight section	475.00

CYC CURTAIN GROUND ROW

07088-WB	9 ft. radius corner section	425.00
07089-WB	8 ft. straight section	375.00

TRACK AND HANGERS

Track and accessories have been selected to assure a perfect installation. Curtain carriers are supplied with the proper trim chain ready to attach the cyc or background curtains. The dual track method is recommended. Track switching can be purchased upon installation or can be installed at a later date. A complete package, ready to install, includes preformed corners, assuring proper diameter for accurate corner illumination and ease of curtain travel.

SUSPENSION

It is most important that the curtains be suspended properly to assure even travel at the studio floor and stability of the track system. Wall brackets are available in 6" increments from the studio wall. Suspension brackets are used where wall mounting is not possible. All brackets assure proper spacing between the tracks. Grid mounted track hangers are available for studios where the grid pipe extends to the studio wall. Hardware is available for the mounting to any type of wall, including hollow.

STUDIO DISTRIBUTION

Rigid, 16 gauge, one-piece 3 1/2" x 4 1/2" steel construction of desired length, with internal wiring to meet all electrical codes. Available with mounting hardware for any possible situation, standard 18" or 24" pigtail with connector of your choice. A unique four circuit cyc box for powering your cyc lights. Unit available completely assembled including 1 1/2" I.D. pipe (not included in price below) ready to hang... saving time and cost at installation. Comes primed and painted with 3" permanent decal assuring circuit identification from the control console.

GRID HARDWARE

All hardware may be purchased to suspend the complete lighting grid system. Included would be load channel, for ceiling mounting positions, all thread, required nuts and bolts, beam clamps, concrete anchors, grid hardware and pipe cut to length.

05107-WB LIGHT PIPE 2.25/ft.

The heart of good lighting is the grid system. It is very important to use 1 1/2" I.D. light pipe.

05194-WB LIGHT PIPE Handling Charge .10/ft.

05109-WB GRID LOCK 10.00

Used to fasten perpendicular 1 1/2" I.D. light pipe together when constructing a grid. Also used for moveable light pipe to place a light at any position in the grid. The grid lock will not let the pipe torque.

05113-WB Beam clamp 3/8", attaches "Load Channel" to most types of angle iron, such as truss deck beams 5.00

05114-WB	Bolt Assembly 3/8", attaches "Load Channel" (as above) when slots are provided by truss deck beams (money savings)	.70
05115-WB	Sleeve Anchor 3/8" (for low PSI density concrete ceiling and floors)	.55
05116-WB	Wedge Anchor 3/8" (for high PSI density concrete ceiling and floors)	1.25
05117-WB	Toggle bolt 3/8" assembly for hollow wall	1.00

05123-WB	Flat Washer, 3/8"	.05
05124-WB	Lock Washer, 3/8"	.05
05125-WB	Connector Strip Bracket Assembly Single Pipe	22.50
05126-WB	Connector Strip Bracket Assembly Double Pipe	28.00
05191-WB	Corner 90 degree Cyc Light Pipe 4 1/2" radius, 1 1/2" I.D. Slip Couplings—both ends	90.00
05192-WB	Pipe Cuts, 1 1/2" I.D.	1.75
05193-WB	Pipe Threads, 1 1/2" I.D.	5.00
05195-WB	Light Pipe Coupling	3.00
05197-WB	Moveable Light Pipe, 6' x 1 1/2" I.D.	15.00
05109-WB	Grid Locks, 1 1/2" x 1 1/2" for Moveable Light Pipe	10.00

STUDIO LADDERS

Designed to meet or exceed all safety standards. These ladders are manufactured to work to grid height providing a 6 ft. reach from ladder platform to grid with a 30" safety rail. The ladder is fabricated from 1" square tubing with all joints welded. Gaffers storage chest and basket for extension cables and other frequently used studio equipment are recommended. The large casters are rubber with toe touch locking. A second ladder is recommended for larger studios. Finished with a prime coat and two coats of durable enamel.

09210-WB	Studio Ladder for 8' Grid	495.00
09211-WB	Studio Ladder for 9' Grid	550.00

CONTROL SYSTEMS

DIMMER BANKS Studio

Quad Dimmer
Modular Bank

MODULAR FLOOR MOUNT CABINET

Available in four heights (42", 59", 77", 85") DCF Cabinets provide independent ventilation for each dimmer, thus preventing cross-temperature effect

and increasing dimmer life. Standard 19" EIA Cabinets utilize tri-chassis dimmer racks and other components for complete system. Dimmers are available in 10, 20, 35, 60 and 100 amp ratings. Contractor access is assured by removable panels on all faces.

Studio dimmer racks are modular to simplify installation and provide customized economy. This system is complete with needed dimmer plug-in modules, wiring, breakers and all other components ready to be set in its permanent location and "hard-wired."

NOTE: SUPPRESSION OF RADIO FREQUENCY INTERFERENCE IN DIMMERS

SCR dimmers utilize rapid switching of electrical current for effective dimming. This rapid switching creates radio frequency interference (RFI) that causes "noise" problems in audio systems. All well-designed dimmers contain choke coils to filter most of the RFI. There is confusion, however, about the best method to describe such filtering. A common approach is to quote total rise time, which does not consider spikes. A more accurate approach is that proposed by Motorola Semiconductor Products in their article AN-295 on RFI suppression, wherein the rate of current rise is recommended to be less than 0.35 amps (350 milliamps) per microsecond. All Electro Controls' dimmers meet or exceed these recommendations.

Custom Built—Price on Application

CONTROL CONSOLES Manual

PLEXUS 200 PT PRESET CONSOLE TO INCLUDE:

(For use with Custom Studio Dimmer Banks when used with (48) Dimmers or Less and an Electronic Patch is Not Desired.)

Compact and lightweight, PT Panels are ideal where space and weight are at a premium but where control capability cannot be compromised. Available

in single scene (PT 100) or two-scene (PT 200) preset, the Master Modules feature Grand and Independent Masters, A and B Scene Masters and on two-scene versions, manual or timed Split Fader. With sixteen 60mm (2 3/8") controllers on each Preset Module, the single scene version contains sixteen channels per module and the two-scene version contains eight channels per module. Non-dim modules are available. Control Power Supply is located in a dimmer cabinet. Control Panel can be ordered for hard wiring or with 52-conductor receptacle(s).

Dimmer Racks

Catalog Number: 60-300

Description

BW Lighting manufactures a complete line of custom built dimmer racks. Each dimmer rack is tailored to fit the particular dimmer style. All dimmer racks include the specified number of spaces for dimmers and non-dims. All input and output power terminals are housed behind the terminal access door.

Construction

The rack consists of welded tubular steel frame in 16 Ga. cold rolled steel closure panels. Entire rack is primed, then painted with two coats of black catalyzed polyurethane paint. Detailed specifications available upon application.

Dimmer Racks

Patch Panel

Description

BW Lighting manufactures a complete line of custom built patch panels. Each patch panel is tailored to fit the end user's specific requirements. All panels are of the cold-patch family and represent complete safety from shock hazard for the operator. Styles available range from wall mount-hanging cord thru free standing retractable (in both under and overhung).

All patch panels include a specified number of receptacles grouped according to individual dimmers and non-dims. There is one drop cord and load circuit breaker for each pigtail and/or receptable in the studio. An ammeter is also included for proper loading of dimmers.

Construction

Panel consists of welded, tubular steel frame and 16 gauge cold rolled steel closure panels. Receptacle panels are made from 16 gauge cold rolled steel. Entire panel is primed, then painted with two coats black catalyzed polyurethane paint.

Detailed specifications available upon application.

70-137 Double track wall bracket 12 in.	14.50
70-138 Double track wall bracket 18 in.	15.50
70-139 Double track wall bracket 24 in.	30.50
70-140 Double track wall bracket 30 in.	39.75
70-141 Double track wall bracket 36 in.	45.50
70-142 Double track wall bracket 42 in.	48.00

Features:

- Ease of installation
- Rigid alignment of splices
- Effortless, walk-along carriers may be pushed or pulled
- Pre-formed corner radii
- All components aluminum or plated or painted steel
- One free set custom track layouts (Additional sets available for fee)

Double Track System 70-100

The double track system is recommended for the seamless Linoweave, and background curtains. The track, corner track sections, track brackets, splicing clamps and all other necessary accessories required to install the double track system are included.

Track Features

Extruded aluminum I-beam. Minimum 14 gauge aluminum with interior horizontal web for additional stiffness and to prevent carriers riding up on the track. Bottom flange has 10° topside slope — inside to outside automatically centering carriers on track.

Carrier Features

1" wheeled, nylon ball-bearing carrier with bumper, 20° included angle between wheels for self centering on track. (One carrier per foot of curtain width, plus one).

Splicing Clamp Features

Extruded aluminum clamp slides over track and may be coincident with hanger bracket to facilitate system layout and installation. Clamp rigidly aligns both spliced track ends resulting in smooth joint. Splicing clamp may also be used as bracket clamp to minimize components.

Important Note

It is recommended that exact inside studio dimensions be sent — carefully noting all obstacles. By so doing, we can often eliminate problems — and save money.

Bracket Clamp Features

Extruded aluminum clamp slides over track firmly attaching track to hanging brackets. Single screw attaches clamp to track — and clamp to bracket, providing quick, easy, one-handed, low maintenance installation.

Wall Bracket Features

Brackets made of 1/4" X 2" heavy duty steel slotted 8" apart, center to center in horizontal leg for mounting ceiling clamps. Three 7/16" holes on vertical leg for attaching to wall.

*CWANA — Complete with all necessary accessories for normal wall installation.

†Normal Installation: Two (2) inexperienced men can install double track system in a 30' X 40' studio in two (2) days.

P.O. Box 470162

Connector Strips

Specifications

This unit shall consist of a 4" X 4" (102 mm X 102 mm) code gauge steel wire-way with removable cover sections for access, labelled with circuit numbers.

Each strip shall have a terminal compartment which shall be factory installed on the right or left end as required which shall contain terminals for feed connection.

The strip shall be provided with heavy steel mounting straps on approximately 5' (1.5m) centers with U-bolts and pipe saddles to grip up to 2" (51 mm) pipe.

Type SEO. 18" (457 mm) cable pigtailed shall be secured by strain reliefs and shall be furnished with three pole grounded type female receptacles. Flush receptacles are available in lieu of pigtailed.

Internal wiring shall be rated at 125°C. Overall length of unit shall be as shown on the drawings, and each pigtail shall be spaced and wired in accordance with the circuit schedule.

Exterior finish shall be catalyzed polyurethane paint and the entire unit shall be listed with Underwriters Laboratories.

Catalog Number:

50-000 Connector Strip (specify length, number and ampacity of pigtailed/receptacles, type of connector and terminal location. **P.O.A.**

Accessories:

50-092 Connector Strip Bracket Assembly, double pipe.
50-093 Connector strip Bracket assembly, horizontal mount
50-094 Other bracket assemblies

Features:

- 4" X 4" cross section made of code gauge steel with screw on cover. Separate cover over terminals.
- Complies with National Electric Code.
- UL listed
- 18" pigtailed attached by strain relief type cable clamps.
- Separate, color coded, HOT, NEUTRAL, GROUND wire to terminal strip for each circuit.
- Primer and two paint coats for superior durability and corrosion resistance.

Note: P.O.A. (Price on Application)

- Each circuit identified by I.D. number on outside of strip and on terminal strip.
- Each strip a solid welded unit.
- Connector Strip Assemblies are fully assembled units ready to hang with connector strip bracket assembly attached. Grid pipe attached if purchased with the connector strip.
- Connector strip system engineered to integrate with the grid system.
- Weight — 6 lbs. per foot (approx.)
- Shipping Weight — 9 lbs. per foot (approx.)

Wall and Grid Box

Specifications

This unit shall consist of a 4" X 4" (102 mm X 102 mm) code gauge steel wire-way with removable cover section for access, labelled with circuit numbers.

The box shall be supplied with wall fasteners for wall boxes and pipe saddles for grid boxes.

Grounded female flush receptacles are standard on all wall and grid boxes. Type SEO. 18" (457 mm) cable pigtailed, secured by strain reliefs, and furnished with grounded female connectors are available in lieu of receptacles.

Exterior finish shall be catalyzed polyurethane paint and the entire unit shall be listed with Underwriters Laboratories.

Catalog Number:

50-WBX Surface Mount Wall Box (specify number and ampacity of receptacles/pigtailed, and type of connector. **P.O.A.**

50-GBX Pipe Mount Grid Box (specify number and ampacity of receptacles/pigtailed, and type of connector. **P.O.A.**

Features

- 4" X 4" cross section made of code gauge steel with screw on cover.
- Complies with National Electric Code.
- UL listed.
- Primer and two paint coats for superior durability and corrosion resistance.
- Each circuit identified by I.D. number on outside of box.
- Each box a solid welded unit.
- Weight — Wall Box with 2 20A receptacles — 2 lbs.
Wall Box with 2 20A pigtailed — 3 lbs.
Grid Box with 2 20A receptacles — 3 lbs.
Grid Box with 2 20A pigtailed — 4 lbs.

Grid Hardware I

Grid Hardware II

Grid Lock

C. Grid Hardware

Specifications

Grid Hardware shall consist of upper suspension mechanism(s), proper length threaded rod, and lower suspension mechanism(s).

All components of a grid hardware system shall be painted or plated for corrosion protection.

Detailed assembly drawings, installation instructions, and layout prints shall be included with grid hardware when system is engineered by BW Lighting. If grid hardware is purchased as components, only assembly drawings shall be included.

Catalog Number:

- 50-100 Grid Hardware as engineered by BW Lighting. **P.O.A.**
- 50-105B Bracket Suspension Assembly.
- 50-105C Concrete Suspension Assembly.
- 50-105I I-Beam Suspension Assembly.
- 50-105L Load Channel Suspension Assembly.
- 50-105P Pipe Suspension Assembly.
- 50-105T Truss (Bar Joist) Suspension Assembly.
- 50-105W Wood Beam Suspension Assembly.

Accessories:

- 50-ALL 3/8 3/8" Threaded Rod.
- 50-ALL 5/16 5/16" Threaded Rod.
- 50-140 Load Channel

Features:

Includes sufficient load channel, all-thread, nuts, bolts, beam clamps, etc. to complete installation of connector strips or pipe grid to I-beams or truss deck based on no greater than 5' centers. Detailed assembly instructions sent with equipment.

D. Grid Pipe

Specifications

All pipe shall be pre-cut to length, have ends deburred, and be painted with a catalyzed wash primer.

Pipe sections which are co-incident with connector strips shall be factory mounted to strips when purchased and delivered at the same time.

Pipe sections shall be spliced together with a sleeve-over type splice. Threaded couplings available at extra cost.

Catalog Number:

50-110 1 1/2" I.D. Steel Pipe	\$3.30
50-111 1 1/4" I.D. Steel Pipe	3.05

Accessories:

50-110SP Splice for 1 1/2" I.D. Pipe	\$ 8.75
50-111SP Splice for 1 1/4" I.D. Pipe	8.50
50-130 Grid Lock	12.75

Features:

- BW Lighting provides engineering services for grid and distribution systems.
- Pipe grid available in any configuration.
- Grid Lock provides positive, secure interconnection of cross gridpipes. Lock has only two component parts and generates a 4,000 lb. grip with a safety factor of 2:1 (8,000 lb. actual grip.)

Note: P.O.A. (Price on Application)

90-220 Ladder for 20 ft. grid	1530.00
90-221 Ladder for 21 ft. grid	1670.00

Features:

- Meets or exceeds new government safety codes
- Made of 1" square steel tubing, all welded construction.
- Steps have non-slip surfaced steel for strength and safety.
- Platform at top with safety rail, toe plate and connecting hand rails.
- Four large casters with foot locks for non-movement working position.
- Base is covered with 3/4" plywood, finished in walnut stain, bolted to steel frame to provide usable shelf.
- Primer and two paint coats for superior durability and corrosion resistance.

Gaffer's Tool and Accessory Box

- Use for expensive or delicate accessories, i.e., spare lamps, footcandle meters, etc. Access is from the top by two lids designed so a lot of space would not be needed for opening. Desk type lock also provided. Tray covers half the box with two subdivisions which may be slid from side to side, or lifted out completely. Box painted to match studio ladder.

90-230 \$295.00

Spectra Candela Footcandle Meter

The footcandle meter is a convenient lightweight instrument for making studio measurements of illumination. It features correction for the color quality of the light and cosine-correction for incident angle of light. The meter has three (3) ranges of sensitivity, 0 to 300 footcandles, 0 to 3,000 footcandles and 0 to 30,000 footcandles. A protective carrying case is also included.

Double-Duty Battery Power and Light Kits

A complete kit combining a miniature 12 Volt Battery Light with integral 8 ft. battery cable, removable handle, ultra-violet filter safety glass, 12 Volt 100 Watt Lamp. Battery Belt or Pack equipped with two 5-pin XLR power outputs, one to power the Light, the other, for a Camera/VTR; 14 hour Overnight Charger, spare 12 Volt Lamp, all contained in a foam-cushioned customized carrying case. Eight models provide a selection of 29 minutes to 1.7 hour run time per charge.

Carrying Case Dimensions for all Models are 7 1/4" x 13" x 1 1/4"

PL-12 Power Light Data

The 12 Volt Power Light is a soft, wide angle focusing light. Its miniature size makes it ideal as a camera-mounted light. Used as a "fill" light outdoors, a "key or fill" indoors.

Features

- Portrait quality
- Variable focusing to change intensity and light coverage
- Less heat and no ultraviolet rays with heat-absorbing Safety Glass Filter

Powerlight: Cat. No. PL-12 with handle and L12V Lamp. Handle is removable. **Switch:** On Powerlight. **Cable:** 8 ft. integral cable with XLR5-12C connector. **Mounting:** Male 1/4-20 stud on swivel "bounce" fixture, 90° vertical, 360° horizontal. **Beam Angle:** Continuously variable from 20° to 80° with heat-insulated knob. **Weight/Size:** 6 ozs., w/o Cable, 2 1/2" diameter, 3 1/8"; front to back. **Lamp:** 12 Volts 100 Watts, 3400°K 50 hour Tungsten-Halogen Lamp, Cat. No. L12V. **Reflector/Safety Glass Assembly:** Bayonet type, removable.

Optional Accessories For PL-12 Powerlight:

Dichroic Filter: Converts 3400°K indoor color temperature to 5500°K outdoor color temperature. **Connector Adaptor:** Converts 5-pin XLR connector on Powerlight's cable to cigarette lighter plug. Cat. No. 5-CLP. **Car Extension Cord:** 6 ft. cable. Permits powering Powerlight from car's cigarette lighter. Cat. No. 6401EX. **Barndoors:** 2-Leaf Barndoors and Holder for lighting effects filters. Cat. No. 2LBD. **Spot Reflector:** Provides spot light for long throw applications and effects. Cat. No. SR12. **PL-12 Camera Mounting Brackets.**

Sun-Gun #6201-A, 12 14.4 & 30 Volts

A unique battery-powered light used by TV News Camera Men and documentary video & film makers all over the world as a 'fill' light outdoors, a 'key' or 'fill' light indoors. For 70, 100, 150, 250 and 350 watt quartz lamps.

Features:

- Soft, wide angle focusing light. Ideal camera-mounted for head-on situations. At 10 ft. flood position throws a 14 ft. wide beam flat from edge to edge, free of hot spots, filament patterns, or halos. Camera man achieves better picture quality balancing 'fill' light to ambient light, and eliminating facial shadows. A heat insulated knob provides for focusing.
- Built-in Swing-Away Dichroic Filter provides 5500°K color temperature with the turn of a knob. Correct color temperature whether indoors or outdoors is always assured without the need for adjusting the camera's filter.
- Accepts 12V 100W, 14.4V 70W, 30V 150W, 250W & 350W Lamps.
- Single finger control of focus and on-off switch.

Cine 60 Sun-Gun Kits

The Sun-Gun Kit consists of: The Cine 60 Sun-Gun Head (with integral Swing-Away Filter Holder, removable handle, integral battery cable), Cat. No. 6201A; Tungsten-Halogen Lamp; Swing-Away Dichroic Filter, Cat. No. 6202; Powerbelt or Powerpak, Std. or Fast Charge; Overnight Charger; Carrying Case, Cat. No. 6207. Sun-Gun Mounting Brackets

For easy, fast mounting and removing Sun-Gun on camera. Two piece set. Consists of precision machined aluminum sleeve with side locking knob for Sun-Gun and stud for camera. Supplied complete with hardware. Available in two diameters 5/8" and 1/2". Types for most cameras are listed below.

Two Piece Set — All Types \$45.00

Cat No. Description (Used On)

- A-1/2 Has male accessory shoe. Mounts on all cameras equipped w/female accessory shoe.
- B-1/2 Has 1/4-20 screw. Mounts on all cameras equipped w/1/4-20 hole. Sony BVP types, etc.
- B1/8 Has 6mm screw. Mounts on Ikegami ITC-730.
- B-1/5 Has 5mm screw. Mounts on JVC KY-1900.
- B1/2-16 Has 3/8-16 screw. Mounts on all Panasonic and Ampex Recams.
- C-1/2 Mounts on RCA TK-76.
- D-1/2 Clamp type. Attaches to camera's handle.
- E-1/2 Mounts on Ikegami HL-79 cameras.
- F-1/2 Mounts on RCA TK-76B, C, and TK-86.

Note: For 5/8" size Sleeve & Stud Set, instead of 1/2. specify 5/8.

Colortran, Inc.

LIGHTING CONTROLS

Colortran offers a comprehensive line of both manual and computerized lighting control consoles to fit any application. Portable manual control units are available to control 6-999 dimmers in either fully manual units or in units with eight presettable recorded scenes. Three different computerized consoles are available for television lighting control: The portable Patchman for the small to medium sized studio; the System Two for larger installations; and the ultimate in lighting control systems, Dimension Five. State of the art dimming is available in the Dimension 192 Rack, available in rating capacities ranging from 1.2kw to 12.0kw all in plug-in configurations.

System Two 168-300 Series
A completely self-contained computerized control console.

Patchman 168-700 Series, the leader in portable lighting control systems, big system features, in a small package.

Dimension 192-192-000 Series
Maximum density dimming...up to 192 2.4kw dimmers or combinations with other ratings all in one rack.

(Optional) as an accessory to Dimension Five. Designer Remote 168-603 with a single display, channel controller, cue controller, two individual faders, and one crossfader which duplicate all main system functions, except for the more limited playback functions.

Dimension Five™ 168-400 Series, the most versatile and logical control system in the world. This is the lighting control system for the future, designed for versatility, ease of operation and for your needs —by Colortran.

(Optional) as an accessory to Dimension Five. A hand held (Focusing Remote) 168-602 is provided to access all dimmers, channels and cues.

Dimension Five—Two color video monitors, comprehensive group mastering, and multiple fader systems make this the ultimate in television lighting control.

LIGHTING

1kw Pole Op Fresnels

FEATURES

- Rugged sheet metal construction with die cast reinforced accessory clips built to withstand trouping and rough handling
- New optical system designed for maximum photometric output
- Double wall construction for optimum cooling
- UL recognized floating diamond four point contact mogul bipost socket (patented)
- All operator controls are thermally insulated
- Rapid turn, rack and pinion focus mechanism for manual and pole operated versions for international applications
- Applications: Key lighting • Wattage: 1000W

100-205 Manual operated \$328.00
100-215 Pole operated 477.00

6" Theatre Fresnel

FEATURES

- Rugged lens door equipped with cool handling positive lock for fast and easy relamping
- High performance low expansion Borosilicate lens delivers maximum intensity in a smooth field
- Thermally insulated, fast track focus mechanism provides 6 to 1 spot/flood focus ratios
- Positive clutch system insures fast, positive, slip free operation
- Applications: Area, side, and back lighting
- Maximum Wattage: 750W

213-2026" Theatre Fresnel \$160.00

Mini-Pro®

FEATURES

- Utility yoke contains finger operated on/off switch
- Recessed power receptacle permits use of detachable 120 or 30 volt power cord
- Completely portable. Designed for stand mounting or hand held operation
- Operates at 30 volts, 120 volts or 240 volts AC/DC
- Safety lock prevents accidental loss of accessories from mounting clips
- Smooth field. No hot spots
- Variable focus produces 3:1 range
- Dichroic Filter available for daylight shooting
- "Quartz" Lamps for high efficiency
- Applications: Key, back, kicker, side lighting
- Maximum Wattage: 650W

100-091 Mini-Pro \$122.00

40°, 30°, 20°, 12° ELLIPSOID

10° ELLIPSOID

5° ELLIPSOID

Ellipsoids

Colortran Ellipsoids are designed to frame areas, project patterns and help you create special effects. They are designed for throws of 14 feet to 140 feet. The Ellipsoid system incorporates: a rugged die cast housing assembly for long reliable service and ease of maintenance. A new high performance optical train with plano-convex lenses permits greater light transmission, fewer aberrations, improved field control and higher efficiency. Lenses are fabricated of low expansion borosilicate glass and may be easily field modified to create 40°, 30°, or 20° field angle in one unit. Lenses are shock mounted in silicone to eliminate possible damage. A new joy stick design assures fast precise filament alignment without tools. A new lens barrel design permits you to easily focus to a hard or soft field edge. A new framing shutter concept enables you to create nearly any three or four sided shape...this unique capability solves virtually every keystone problem. Each shutter travels in its own plane eliminating interference problems. Every unit is equipped with a built-in pattern slot and is available with an optional iris without the loss of other beam shaping capabilities.

40° & 30° Ellipsoid

Incorporates a single 4.5" and 6" diameter plano-convex lens. These units outperform 750 watt and 1kw 6" x 9" and 6" x 12" existing spotlights. They are designed for throws from 14' (4.3m) to 55' (16.7m). \$310.00

20° Ellipsoid

Incorporates a single 6" x 9" plano-convex lens. This unit outperforms 750 watt and 1kw 6" x 16" existing spotlights. Designed for throws from 30' (9.1m) to 67' (20.4m).

\$305.00

12° Ellipsoid

Incorporates a single 6" x 12" plano-convex lens. This unit is equivalent in performance to higher priced generic eight-inch spotlights. Designed for throws from 45' (13.7m) to 80' (24.4m).

\$310.00

10° Ellipsoid

Incorporates a single 8" diameter plano-convex lens. This eight-inch unit is equivalent in performance to existing ten and twelve-inch spotlights. Designed for throws from 55' (16.7m) to 108' (32.9m).

\$446.00

5° Ellipsoid

Incorporates a high transmission 10" diameter plano-convex lens. With its efficient reflector design, single lens optical system and with optional iris assembly it actually outperforms many followspots. It is ideally suited to long-throw applications and is effective from 110' (33.4m) to 140' (42.7m).

\$625.00

Mini-Ellipse

The new Mini-Ellipse establishes a new performance standard. It is designed for throws from 6 feet to 40 feet. It accepts a range of high output Tungsten-Halogen Lamps from 250 watts to 500 watts at 120 volts and 500 watts at 240 volts.

\$165.00

VL-35

ENG/LOCATION LIGHTING KITS

14—Highly flexible kits that set-up fast for the most complex shooting situations.

Colortran's lighting kits are designed for film/ENG lighting anywhere in the world.

14 different kits in 120, 220 and 240 volt versions. Kits are sized to deliver maximum lighting with minimum power consumption.

Fill lights and variable focus spots are available in wattage from 250 to 1000 watts. Lightweight construction and compact design delivers maximum illumination while maintaining complete portability.

PRODUCTION KIT

FEATURES

Designed to illuminate a 15' wide x 10' deep by 10' high area.

Includes lights, stands, accessories, cable, and switch boxes.

Applications include news, sports, weather, commercials, instruction, etc.

Total connected load 45.8 amps at 120 volts.

LOCATION LIGHTING KIT

FEATURES

Accessory holder on Multi-10 simplifies operation.

Designed for more complex lighting setups. One case carries all equipment.

Channel leg stands for reliable support.

Draws 41.6 amps at 120 volts and 14.5 amps at 220 volts.

Contents

BATTERY BELT KIT

BATTERY BELT KIT

FEATURES
Kit comes complete with Battery Belt, Mini-Pro, 30 Volt DC cord, Mini Pro Handle, 9 foot cord for 120 Volt AC power operator (note — requires 120V lamp). Carry Case and 250 Watt 3400 K 30V lamp.

Batteries are rechargeable Nickel-Cadmium Cells and will provide many years of reliable service.

Note — Belt comes complete with 14-hour overnight charger and an integrated cable. Charger designed for 120 and 240 volt input power.

MODULAR MOUNTS & LIGHT CONTROLS

COMPREHENSIVE LIGHT MOUNTING AND CONTROL ACCESSORIES

Selecting and deploying lighting fixtures and control devices to one's exact specifications can be difficult on location or in small, "adapted" studios, where confined quarters, low ceilings, and a shortage of power is the rule rather than the exception.

Recognizing this, Comprehensive has created a new line of light mounting and control devices designed to work with portable lighting fixtures. They offer you much the same freedom and flexibility on location as you would expect in a studio environment. While they each perform a unique function, they share features important to you and your budget.

- **Lightweight and portable** These rugged little devices can fill the nooks and crannies of your present lighting system case, without adding appreciably to your bulk and weight logistics.
- **Generic compatibility** Our light control and mounting devices are designed to work with YOUR lightweight location lights.
- **Designed for economy, not duplication** The modular aspect of our mounting devices eliminates the need to purchase costly parts over and over again, adding to your flexibility, not your overhead.

THE MODULAR STUD MS

Commonly known as the "baby pin", the 5/8" (16mm) diameter stud has become the most prevalent mount for lightweight professional lighting fixtures in use in motion picture and television. Nearly all manufacturers of this type of equipment design their lights to fit, or be adapted to, this mount. We have made this common denominator a modular piece in our system. It can be moved from device to device, thereby saving the cost of having to make repeat purchases of this item. The 3/4" deep 1/4-20 lapped hole in the base of the stud, enables it to be attached to all Comprehensive mounts, as well as many other types of mounts, stands, and rigs with 1/4-20 threaded screws. It's also an ideal building block when nothing will do but an invention of your own.

It conforms, in key mounting dimensions, to the new SMPTE proposed standard for the baby pin, but is an inch and a half longer (4 inches overall) to facilitate interchangeable mounting and add to the versatility of the piece. It features a safety hole through the top for safety wiring of lighting fixtures and a safety mounting groove, which should be standard on all light mounting devices.

CEILING SCISSOR CLIP CSC

For hanging lightweight lighting fixtures from the rails of dropped ceilings so commonly found in modern offices. Used in conjunction with the modular stud and our tilting umbrella/gel frame bracket, it also makes an excellent support for overhead microphones. (Mic must be equipped with 1/4-20 threaded receptacle or 3/8 to 1/4 adapter thread on mic mount.)

COMPREHENSIVE C-CLAMP CC

Our version of the industry's standard hangar for mounting lightweight lights and control devices to pipe, shelves, doors and "two-by-fours" - the Comprehensive C-Clamp accepts pipe and flat surfaces up to 2 inches thick. The pin mount's variable adjustment control makes this C-clamp the most versatile of its type available. Its 1/4-20 threaded

screw, our link to the modular stud, can also be used for microphone mounts and, in an emergency, to mount lightweight still cameras. Here, however, extreme caution should be exercised so as not to perforate the camera's bottom. Use the threaded back-up plate for this and similar applications.

COMPREHENSIVE DOUBLE CLAMP DC

This product eliminates forever the need to transport cumbersome and expensive pole systems to distant locations for the purpose of building temporary overhead rigging for your lights and controls. Two of these clamps, attached to the tops of two stands, will support a length of inexpensive, readily available, electrical or plumbing conduit, on which you can clamp your fixtures. Pipe of this type can be purchased locally from hardware stores, electrical outlets, or plumbing supply shops, used for the shoot and disposed of, all at a fraction of the cost of shipping such items to and from a location. A ten foot length of conduit is an inexpensive and ideal way to hang seamless background paper as well. A pair of these handy clamps is an ideal adjunct to any portable lighting system.

COMPREHENSIVE CAMERA MOUNT CM

Fast, simple, and safe, this is an effective way to attach lightweight fixtures to the camera shoes featured on many of today's video cameras. The mount, tooled from a single piece of sturdy bar aluminum, is fitted with a locking plate to prevent the fixture from sliding off the camera if it's tilted forward. The top of the mount is our standard 1/4-20 threaded screw to accept the modular light mounting stud.

5/8" to 3/8" ADAPTER A5/3

Adapts lights with 1/2" or 3/8" mounting receptacles to stands and clamps with 5/8" pin diameters. Like the 5/8" modular stud, the adapter features a safety undercut to prevent a light from sliding off a suspended mount.

COMPREHENSIVE/GEL UMBRELLA HOLDER GUH

This device enables you to equip 1,000 watt or under focussing spot or flood lights with either an umbrella for soft lighting applications, or a gel frame for color conversion, correction, diffusion, or special effects with gel. The holder has a tilting mechanism which enables the light and the gel frame or umbrella, to be re-oriented as an assembly rather than having to re-position these accessories independently when the light is moved. The top of the unit has a 1/4-20 lock screw that mates to the modular stud. In an emergency, the gel/umbrella holder can be used to support a lightweight still camera or mic mount on top of a light stand, however, the same caution mentioned in the C-Clamp description applies.

BACK-UP PLATE BUP

The 1/4-20 screws, common to most Comprehensive modular mounting devices, can provide temporary support for small cameras, mic mounts, and similar devices with 1/4-20 mounting receptacles. For most of these applications, however, the 3/4" screw length is too long. The back-up plate provides a secure, adjustable mounting surface for devices with shallower maximum mounting depths.

COMPREHENSIVE GAFFER GRIP GG-2

Made of heavy-duty fiberglass and featuring a permanently mounted 5/8" safety undercut stud, the Comprehensive gator-style gaffer grip is an efficient, reliable way to attach lightweight fixtures to shelves, doors, and similar flat surfaces. Use with 5/8" to 3/8" adapter for lights with smaller mounting receptacles. (see fig. 1 inside front cover)

COMPREHENSIVE GEL FRAME GF

The Comprehensive gel frame is designed to work in conjunction with our gel/umbrella holder, but will work equally well with standard "gobo" type devices from a variety of manufacturers in the industry. It's open-sided design facilitates "blending" the effect of the gel on the subject or set. The unique double ball & socket locking mechanism permits the plane of the gel supports to be set at any angle relative to the mounting shaft of the unit. It is sized to accommodate 10" x 12" gels, available in the Comprehensive/Rosco Gel Kits and from other manufacturers in this size. Four gels can be cut from industry standard 20" or 21" x 24" sheet sizes.

COMPREHENSIVE UMBRELLAS

Comprehensive reflective umbrellas convert small, focussing spot lights and flood lights into efficient soft sources, particularly useful in fill light applications. The U-43 and U-30 feature an aluminized surface, the UMMV is white. All provide high reflectivity and true color renditions, based on the color temperature of the lamp in use. Caution: When used in conjunction with focussing spots, light must be adjusted to flood position. Full spot intensity aimed at the center of the umbrella may cause scorching of the umbrella surface.

Modular Light Controls & Mounting:

6144

Medium-Duty Tripod and Fluid-Effect Head

A medium-duty but lightweight assembly featuring a 30 lb. capacity fluid-effect head with adjustable quick-release platform, dual-handle operation, tilt safety stop, fluid-action pan and tilt, and reversible 1/4" or 3/8" camera mounting screw.

Collapsed Length: 30" Weight 14-3/4 lbs.
Extended Length: 70" 3142 Tripod Capacity 65 lbs.
1473 Fluid-Effect Head Capacity 30 lbs.

3148 \$449.95

3148

Compact Tripod with Fluid-Effect Head

Compact and lightweight, this tripod is specially designed for today's lightweight industrial and consumer color cameras.

Collapsed Length: 20"
Extended Length: 54"
Weight: Less than 6 lbs.
Tripod/head Capacity 18 lbs.

6144 \$139.00

LIGHTING KITS Comprehensive Lighting Kits

Virtually all lighting kit suppliers face a similar challenge—selecting component pieces that best handle the requirements of the largest number of users. Comprehensive kits are therefore divided into two general categories: kits featuring a full assortment of accessories for a wide variety of locations, and kits that offer the bare necessities, but provide extra room for accessories of your choice. Either way, Comprehensive lighting kits offer you a substantial savings over purchasing individual component pieces.

(Lamps included)	\$975.00

MINI-COOL PORTABLE, PHOTOGRAPHIC LIGHT

The Mini-Cool is designed especially for photography. All its interchangeable lamps provide light which is essentially free of heat, Infra-red and Ultraviolet radiation. Ultraviolet light has the unwelcome effect on film or videotape of decreasing image contrast (and is harmful to people as well). And many subjects, such as delicate life forms, can be damaged or destroyed by heat.

The Mini-Cool's unique operating features simplify conventional applications and invite new creative uses. It is small and light enough to attach to any video, motion picture or still camera, using the Camera Adaptor supplied. Or it may be handheld, using the handle included with each unit. (The handle has a hollow underside which can be fitted over a 5/8" diameter light stand column or post, but this is recommended only as an occasional practice. A far more secure mounting is provided by the Cool-Lux Stand Adaptor.)

The Mini-Cool is operable from a variety of AC and DC power sources, simply by installing a lamp of corresponding voltage and an appropriate adaptor cord. The lamp socket, switch and wiring are all heavy-duty construction, easily capable of handling DC currents (which are heavier than AC) as well as AC.

A 120-Volt, 250-Watt lamp is included with every Mini-Cool.

C4440 Mini-Cool Standard Pack (AC). Includes one each Mini-Cool Light, FOS-1 Lamp, Camera Adaptor (C4447), and handle (C4441). Supplied in foam carton **\$129.50**

C4460 MINI-COOL AC/DC PACK. Includes all items listed in Standard Pack plus FOS-9 Lamp and 12V DC Adaptor Cord (C4453). Supplied in foam carton **\$159.50**

INTERCHANGEABLE LAMPS. Eleven different lamps are available for your Mini-Cool to enable you to use a wide variety of illumination intensities.

Supplied in foam-fitted carrying case **\$675.00**

C4463 COOL KIT III. 18"L x 16"W x 5-1/2"D. 10 lb. Includes three Mini-Cool Lights, five FOS-1 Lamps, one FOS-3 Lamp, three Stand Adaptors (C4446), one Camera Adaptor (C4447), three Spring-Clamp Mounts (C4452), two Scissor-Clip Mounts (C4469), one Putty-Knife Mount (C4464), one 12V DC Adaptor Cord (C4453), three Extension Cords (C4442), one Cube Tap (C4471), one Daylight Filter (C4448) and one Diffusion Lens (C4449). Supplied in foam-fitting carrying case **\$675.00**

Starpak

FOR STUDIO
WORK
OR LOCATION

Jacques Cousteau's Amazon series took one year to prepare and two years to shoot. Cinematographer Louis Prezelin who has been with the Cousteau team and The Calypso for many years says,

LOUIS PREZELIN

"The STARPAK is the most compact and best equipped lighting package in the market."

4 MINI-COOL™ LIGHTS

- 1 CASE WITH FOAM & KEYS
- 4 STAND ADAPTER
- 2 COLLAPSIBLE LIGHT STAND
- 2 LIGHT FRAMERS (Barn Doors)
- 6 FOS-1 LAMP (120-Volt, 250-Watt, Flood)
- 1 FOS-3 LAMP (12-Volt, 100-Watt, Flood)
- 1 FOS-9 LAMP (12-Volt, 75-Watt, Flood)

- 2 DIFFUSION LENS
- 2 DAYLIGHT FILTER
- 1 HANDLE
- 1 CAMERA ADAPTER
- 2 THREE WAY CUBE TAP
- 2 SCISSOR-CLIP MOUNT
- 1 PUTTY-KNIFE MOUNT

- 2 LARGE SLIDING CLAMP MOUNT
- 2 SPRING-CLAMP MOUNT
- 3 EXTENSION CORD
- 1 CIGARETTE-LIGHTER ADAPTER CORD
- 1 PHOTO DIMMER™
- 2 SPARE NYLON STRAIN RELIEFS
- 1 AUTO BATTERY ADAPTER CORD

Custom-fitted foam provides cavities for all above-listed items. Cavities are also provided for NEW MINI-COOL BARN DOORS and for small tools or accessories.

Starpak is ideal for studio or location shooting. MINI-COOLS operate from AC or DC power sources. AC power consumption (total for four lights) is less than nine amps.

Many times during the filming of the series, "AMAZON" only STARPAKS would permit the shooting of exceptional documents under the most precarious conditions.

Mini-Cools are used by NASA aboard space shuttle flights.

SCENIC BACKGROUNDS

COMMERCIAL, INDUSTRIAL & PORTRAIT PHOTOGRAPHY

EXHIBITS & DISPLAYS

MOTION PICTURE, T.V. & THEATRICAL SCENERY

Materials Used In Construction Of Scenic Backgrounds: All backgrounds illustrated are fabricated of heavy gauge vinyl (30 mil.), a self-extinguishing material that has been approved for use in areas of public assembly. The units which are available "ready-to-use" are those which have been permanently mounted onto sturdy wood frames. As noted below, all units are also available unframed for direct installation onto existing walls.

Paint Finish Selection: As explained in the catalog, most of the units shown are available in several alternative finishes. To obtain any style in a finish other than the one illustrated, merely indicate the particular unit desired (by name and number) then specify that it be painted in whichever alternative finish is desired. All units ordered by name and number alone will be painted as illustrated. As further noted below, all units are also available unpainted. On re-orders of the same style, because they are hand painted to order, all units are sometimes subject to slight variations in color and tone.

Custom Work: In addition to our stock items, we also fabricate customized backgrounds to meet any design specified, i.e. company names and logos, TV station call letters, etc. The size of the customized panels may range anywhere from 2' x 2' up to 4' x 12'. Estimates for custom work not mentioned below are available on request.

Shipping Time: These scenic panels are all made up to order; they are not kept in stock. Normally approximately four weeks is required between placing an order and the shipment of painted panels, whether framed or unframed. Unpainted, unframed-units can sometimes be shipped faster if required. All prices are F.O.B. Studio, Cornwall-on-Hudson, New York. Shipments are sent Freight Collect, via trucking companies or freight forwarders.

MINI-FILL KIT
MODEL MFK4

COMPARE THESE UNIQUE MINI-FILL FEATURES:

- Extremely lightweight—only 12 ozs
- Compact size—2' x 4-1/4'
- Operates from any 12-14.4 or 30 volt battery
- Utilizes the latest high efficiency multi-mirror lamps (20-100 watts)
- Completely serviceable
- Field tested
- Field proven
- Mounts on camera, pistol grip or lightstand
- Dual-lighthead configuration from one power source
- Rugged construction—Built by Frezzolini® —The world leader in portable lighting and power

MINI-FILL KITS

- MFK1** (1) MF12P Mini-fill w/cigarette lighter plug
(1) VB12 Battery pack-12V at 4AH (slow charge only)
(1) VBC Overnight charger (115VAC 60 Hz only) (less carrying case) **\$295.00**
- MFK2** Same as MFK1 plus
(1) MFDF dichroic filter
(1) MFCC carrying case **455.00**
- MFK3** (1) MF12V Mini-fill w/frezzi amp connector
(1) VB12V High performance battery pack w/amp connector

LIGHTING

STIK-UP

STIK-UP

- Compact single source luminaire
- Small, lightweight
- 100 watts, 3000 Kelvin
- Mounts in any position

Stik-up is a small, durable incandescent luminaire. It weighs only 9 oz. with its nine foot cord. Ultra light wire frame construction allows you to mount it where you need it — in any position by almost any means. Tape it to a stand, camera dolly, scenery, furniture. Hang it by picture wire. Stick it up with gaffer tape, masking tape, an alligator clip, even a clothespin! Convenient snap-on extension arms and clips allow you to use color filters, correction filters or diffusion material. And you can take it anywhere, tucked into your briefcase or utility bag.

Stik-up is ideal for television, film and still photography. Its 100 watt, 3000° Kelvin light source makes it an ideal miniature fill light. It creates the subtle reflection of dash lights in a car, the glow of a table lamp or candle, the ambience of a distant skyline. When you're in a tight spot, Stik-up can solve your problem. It's the ultimate trick for your bag of tricks, for better lighting made easier.

STIK-UP KIT

The ready-to-go Stik-up Kit contains three heads, three sets of extension arms, six clips and three lamps. It is available in either a re-usable carton or an Excalibur custom case.

TECHNICAL DATA

- Dimensions: 3' x 3' x 4'Ht
- Weight: 9 oz. with power cord
- Housing: Wire frame and steel
- Reflector: Diffused aluminum
- Lamp: Q100 CL/DC 120 V
- Power Cord: 9' flat BB/B, molded plastic U-ground plug

ORDERING STIK-UP

- 2600 Stik-up Kit: Three heads and accessories
- 2602 Stik-up Kit: In Excalibur custom case
- 2610 Stik-up head
- 2620 Extension arms (set of two)
- 2622 Clips (set of two)
- 2624 Mounting block
- 2020 Lamp
- 2150 Case for three heads and accessories

STIK-UP KIT

CAMRALITE

CAMRALITE

- Unique variable area reflector
- Keeps constant color temperature
- Mounts on any film or video camera

CamraLite is designed to mount on any film or video camera, in close proximity to the lens. It also accepts a 5/8" stud for use on a stand. Soft, yet efficient, it serves to lighten or erase the harsh effect of facial shadows in close-up work. Its reflection adds sparkle and life to the subject's eyes.

CamraLite is light weight and easy to use. It will not overheat or jam if left on during long rehearsals.

HOW IT WORKS

The rear wall of the CamraLite contains a unique variable area reflector, allowing the intensity of the light to be modulated without any fluctuation in the color temperature. As the distance between the subject and camera changes, a constant 3200°K can be maintained by adjusting the reflector. No variation in exposure is required. The reflector is controlled by a convenient shaft on the side of the fixture.

TECHNICAL DATA

- Dimensions: 8 1/2"H x 11 1/2"W x 6 1/2"D
- Length including yoke: 10 3/4"
- Weight: 2 1/2 lbs.
- Control shaft: 14" long. May be attached to either side of fixture
- Cable and connector: 6" high temperature lead, U-ground male plug
- Control: Separate toggle switches for each lamp
- Lamps: 120V/600W BHC/DYS/DYV
120V/420W EKB
30V/250W DYG
220V/650W DYR

ORDERING CAMRALITE

- 2320 Complete CamraLite kit
- 2325 CamraLite head
- 2330 Four-way barndoor
- 2331 Scrim frame
- 2332 Gel frame
- 2340 Lamp: BHC/DYS/DYV

PATTERNS

THE GREAT AMERICAN PATTERN

The Great American Pattern is a custom designed template for use in ellipsoidal spotlights. Made of high quality, durable stainless steel, it is tough enough to stand up under intense heat at the gate. Cut it with scissors to fit any pattern holder.

The Great American Pattern is photo etched in a 4" x 4 1/2" matte. The pattern area does not exceed 3" in diameter. An Adaptor, Cat. #400, is available for use in spotlights with larger pattern holders. The Adaptor is 5-1/8" x 5-1/8".

The Great American Pattern—for projections that range from bold show-stoppers to subtle shadows. Special effects without special equipment, to add new dimensions to your production.

PORTABLE LIGHTS, CONNECTORS AND ACCESSORIES

L20

LP3

LK5

L20 K-Beam™ Quartz Light*

- Complete with 100 watt lamp installed
- Rated at 100 watts, but the unique design of this 12 volt light actually produces about 25% more light than a conventional 100 watt lamp.
- Convenient 5' cord with in-line switch and cigarette plug.
- Has a unique mounting bracket* that allows the L20 to swivel in any direction.
- Precision-engineered design reduces heat build-up. It remains cool to handle; radiates minimal heat from face of lamp.
- Can be shoe mounted or attached to any standard 3/8" post.

*Patents Pending

L20\$89.95

LL5055 Last Light

- Rechargeable glass-halogen spotlight
- Comes with recharger, mounting bracket and 25,000 candlepower GE lamp
- Throws a beam over 500' with up to 2-1/2 hours running time
- Built-in battery withstands severe discharge and temperature changes
- Available in black, beige or red

LL5055\$39.95

LK3075 Knight Light

- Lighter than the Last Light
- Lamp provides over 100,000 candlepower
- Convenient 6' heavy-duty cord with cigarette plug
- Available in black, beige or red

LK3075\$19.95

LP3 AC Power Module

This is the accessory power unit for the L20 K-Beam Quartz Light. Enables you to operate the K-Beam from an AC outlet.

LP3\$59.95

L29 100 Watt Quartz Lamp

Replacement lamp for the L20 K-Beam Quartz Light

L29\$25.95

M30 Deluxe Light Bracket*

This precision-engineered bracket weighs only eight ounces and can be disassembled into three parts for easy, compact storage. The bracket will hold video, still, and movie cameras on the base and Kapco shooting lights or strobes on the 3/8" post. Also attaches to any tripod. A must for hand-held work.

M30\$34.95

M22 Shoe Post

Positive "lock-down" mounting feature and a post that is notched at the top. Use it with the K-Beam light or other 3/8" mounting accessories.

M22\$12.95

M40 Shoe Adaptor

Designed for easy mounting on any stand or the deluxe M30 light bracket. It has a standard shoe mount on top and fits our LB1 (as shown) Dual Light Bracket or any 3/8" light stand.

M40\$7.95

LB1 Dual Light Bracket

For that extra flexibility and convenience when needed, this bracket will hold two K-Beam lights and can be mounted on a light stand or a camera. Or mount one light and any additional accessory suited to a 3/8" post.

LB1\$13.95

LB2050 K-Beam Spotlight

An incandescent lamp with a heavy-duty cord with cigarette lighter plug.

LB2050\$14.95

Special Purpose Item

R37 DC Voltage Converter

Converts 12 volts DC to either 3, 6 or 9 volts for powering most portable televisions, radios, calculators, toys, etc. Equipped with universal adaptor plugs and polarity reversal switch. Can be used with any Kapco pack.

VL-53

SIX STUDIO LIGHTING PACKAGES

These packages have been designed and engineered by Kliegl to cover a broad spectrum of studio lighting applications as they apply to most commercial, educational, and industrial users. Each package has been carefully laid out to ensure that the compliment of lighting fixtures, distribution equipment and the lighting control system will prove adequate in the area for which it is designed.

LIGHTING FIXTURES

LIGHTING FIXTURES—A varying complement of Key, Back, Base, Fill and Set lights, including their accessories, are provided in every package. Pattern Projectors and special Cyc lighting instruments are included in certain packages. All fixtures are provided with 39' leads, C-clamp, safety cable and pin connector.

DISTRIBUTION EQUIPMENT—Wireway connector strips and wall outlet boxes are provided in various quantities for each package in order to ensure proper power distribution throughout the specified studio. Cyc drop boxes are also used in the three larger packages for powering the cyc lighting units.

DISTRIBUTION EQUIPMENT

LIGHTING CONTROL SYSTEM—An SCR multiplexed digital dimming system utilizing the "dimmer-per-circuit" concept has been designed for each of the studio packages. Each system consists of an SCR digital dimmer rack (or pack) and an ENTERTAINER portable, microprocessor-based control console. The digital dimming system uses bi-directional, multiplexed data streams between the console and the dimmer rack. A single 4 conductor, shielded cable replaces the large multi-conductor control cables required in older systems. The accuracy of the system is unaffected by electrical noise, temperature or aging of the components.

In addition to the above, each of the studio packages contains a studio layout and a system riser (flow) diagram. The packages are listed as follows:

LIGHTING CONTROL SYSTEM

CATALOG NUMBER	PACKAGE DESCRIPTION	PRICE
851520	15' x 20' (300 sq. ft.)	\$ 26,600.00
851825	18' x 25' (450 sq. ft.)	37,700.00

854060	40' x 60' (2400 sq. ft.)	166,200.00

Klieglkit 4Q-TV

Portable Kit for
 150 Sq. Ft. Area

Klieglkit 5Q-TV

Portable Kit for
 225 Sq. Ft. Area

The KLIEGLKIT 4Q-TV and 5Q-TV provide the ideal solution to the lighting requirements encountered in the remote TV and film location applications of today. In addition to portability, these kits contain the types of lighting fixtures the lighting professional needs in equipping an O.B. van for Electronic News Gathering.

The two kits are identical except for the inclusion of an additional SPOT head, with accessories, in the 5Q-TV kit. The carrying cases for either kit are the same. This allows one to start with a 4Q-TV kit and later add an additional SPOT or FLOOD head, with accessories, as required.

It is very easy to exchange the standard reflector for the super-spot. This super-spot gives you 770 footcandle at 10 feet distance.

New unique feature:
The use of a special reflex "leaf" enables you to have both key and bounce light at the same time without the danger of blinding. This is particularly useful and practical when working in confined areas. It makes the profi mini the most versatile unit on the market.

To hold a fixture, even the Profi Mini, for a longer time, is tiring. Therefore Kobold offers a telescopic support in leather quive.

For further details and information please contact your nearest KOBOLD distributor:

Kobold SUN LIGHT

from your battery-belt or battery-pack

Kobold

Reporterlight
200/CID

- NEW DAYLIGHT UNIT with 200 W CID lamp
- NEW ELECTRONIC SQUARE WAVE BALLAST
- NEW DESIGN for Reporterlight CID Belt Version and KOBOLD Battery Pack System

Kobold has been selling successfully now its Reporterlight Type 200 EL for 8 years. Today, there is hardly a TV-network that does not use this Reporterlight for its daily news gathering. Based on this long experience and thanks to the progress in the development of new electronic components, Kobold has developed a new concept. This new concept offers the following distinct features:

- 20% less weight for lamphead and ballast.
- 28% higher efficiency and consequently a prolonged operation time viz. 29 min. for 4 Ah version and 50 min. for the 7 Ah version, when fully charged.
- Dimming up to 50% of rated wattage possible.
- Higher reliability and easier servicing for both lamphead and electronic ballast.

The flat design of the electronic ballast enables to attach it to the battery belt.

New also is Kobold's car adaptor, to be used with a 12 volt car battery. This adaptor features a special control that guarantees a constant light output at all time during operation.

For mains operation, Kobold offers a new electronic ballast that operates independantly from the battery electronics.

LAMPHEAD DLf 200 CID

- Housing made of heat resistant GRP material.
- Easy to handle spot to flood focus.
- Coiled power cord with 7-pin amphenol plug.
- Instant, hot re-strike.
- Optimal color temperature after only 20 sec. Maximal light output.

Electronic ballast BE 201

- Square wave ballast with new design.
- Minimum losses and therefor maximum efficiency
- Dimming up to 50% of rated wattage.
- 2-pin connector for battery
- 7-pin connector for lamphead
- Reduced dimensions, light weight.
- Only one printed circuit board.

Mechanical interlock protecting UV safety glass or filter permitting quick, simple and safe lamp replacement. Compact and easy to service built-in ignitor can be replaced by simply removing 2 screws and a connector.

Easy to service: replacement of printed circuit board by only removing 6 screws and 3 connectors.

We also offer our Reporterlight in 3 versions:

1. If you have already a 30 volt battery belt, Kobold offers a supplementary Kit:

Lamphead	DLf 200 CID
4-leaf barndoor	ST 1020
Metal halide lamp	CID 200
Battery-electronic	BE 201
Connection cable	
electronic/belt	DLf 203 CAN
Carrying strap	DLf 082
Diffusion filter	DLf 012 S
Conversion filter	DLf 017 S
Transport case	DLf 207

2. Reporterlight 200 CID-GB:

The transport case DLf 205 has an additional space for a battery belt.

3. Reporterlight 200 CID-KB:

In this Kit, the battery belt is replaced by the battery pack BA-30 EL/4 resp. BA-30 EL/7. These packs are to be connected to the battery electronics BE 201 by means of Kobold's „rapid action“ interlocking system.

The complete unit comprises:

Lamphead	DLf 200 CID
4-leaf barndoor	ST 1020
Metal halide lamp	CID 200
Battery-electronic	BE 201 K
NC-battery	BA-30 EL/4 resp.
	BA-30 EL/7
Carrying strap	DLf 082
Charger	LA-12/30
Diffusion filter	DLf 012 S
Conversion filter	DLf 017 S
Transport case	DLf 206

MINI 250

„Ultra-Light“ Keylight: weight 1.1 lbs on inclusive 2-leaf barndoor and safety glass.

Ideal for use as:

- camera-mounted keylight (use camera-mount adaptor CS 250)
- hand held light (use handgrip HG-KS)
- clamp light (use adaptor AD-16)

Because of the extended range of available dichroic reflector/multi-mirror lamps, the Mini 250 can be mains as well as battery operated. For mains operation, the Mini 250 takes a 250 W, 120 V lamp, whereas for battery operated use 50 W, 75 W, 100 W, 12 V and a 250 W, 30 V lamps are available.

The lamp can be changed easily by removing the 2-leaf barndoor.

The safety glass can be easily replaced by a diffuse filter or a dichroic daylight conversion filter.

Transport case dimensions:
Weight:

20.5" x 15.7" x 4.1"
13.5 lbs

MINI 250 Kit 1

SPECIFICATION:

MINI 250	Keylight	3 x
TR-MINI	Aluminum stand 19/88", 5 8" stud	2 x
TC-1	Table clamp	1 x
HG-KS	Handgrip	1 x
AD-16	Adapter with 5/8" bushing	1 x
MK-250/1	Transport case	1 x

ACCESSORIES:

SG-MINI	Spare safety glass, in pouch
DIF-MINI	Diffusion filter, in pouch
DIC-MINI	Dichroic conversion filter 5500° K, in pouch
UM-MINI	Reflex umbrella white dia 27,5"
U-AD-MINI	Umbrella adaptor
BC-250	Battery connecting cord
P-5	Super-clamp with 5/8" bushing and stud
P-43 R	Alligator clamp with 5/8" stud

MINI 250 Kit 2

portable Kit

SPECIFICATION:

MINI 250	Keylight
BA-12	NiCad battery belt: 12 V, 4 Ah
TA-12	Leather case with carrying strap for BA-12
LA-12	Charger, 120/12 V
HG-KS	Handgrip
MK-250/2	Transport case

Transport case dimensions	Weight

Features

HOUSING made of heat-resistant GRP material; lockable pivoting bracket with 3/8" thread on bracket and 5/8" bushing; ball-bearing axial focusing system; smooth and non-stick operation at any operating temperature; big rear-mounted control knob affording a good grip; 4-leaf barndoor, rotatable by 360° and featuring readjustable leaf clamping and insert for safety glass or filter. Optimum interior ventilation.

Electrical Design

Double insulated cables.

15 ft power cord with on/off switch located at approx. 5 ft from housing, build — in fuse designed for 650 W, 120 V. R 7 s halogen lamps, type FAD.

SPECIFICATION

ST 650 Kit 1

- ST 650 3x 650 W Fill & Bounce Light
- ST 1020 3x 4-Leaf barndoor
- ST 262 3x Aluminum stand; 27/94", 5/8" stud

DS 575 DS 575 A

575 W HMI Soft Light

This unit produces an ultra-soft light at a colour temperature of 5200° K.

The 575 HMI-lamp is placed in an opaline globe which is precisely located in a large parabolic reflector, producing a very diffuse and nearly uniform light pattern at 80° angle and a marginal degradation of approx. 15%.

The broad lateral surfaces of the welded frame support the retaining bracket.

There are 2 versions viz. type DS 575 with a bracket with 1 1/8" stud, for use on a stand, and type DS 575 A being a pole operated unit to be suspended from the ceiling.

The insert of the unit houses the 575 HMI-lamp as well as the ignitor and the power supply cable. The lamp can easily be replaced by simple loosening the two screws at the rear side of the insert.

SPECIFICATION

DS 575

- DLS 060 Soft light head with ignitor circuit, bracket with 1 1/8" stud and protective grid.
- DLf 021 U Power supply with relay system, 120 V, 60 Hz and 10 ft power cord.
- DLf 022 30 ft extension cable.
- DLf 023 575 W HMI-lamp

DS 575 A

- DLS 060 A Pole-operated Soft Light head with ignitor circuit, bracket with 1 1/8" stud and protective grid.
- DLf 021 U Power supply; with relay system, 110 V and 10 ft power cord.
- DLf 022 30 ft extension cable.
- DLf 023 575 W HMI-lamp

Electrical Design

Symmetrically designed ignitor delivering 50% of the starting voltage to either lamp base.

Power cut-off for operator protection when unit is open.

Ballast equipped with hum-free tight-core reactance coils.

Two-chamber ballast design, keeping coils and electrical circuit separate.

Easy access to ballast components by loosening 2 screws and hinging down the front panel.

Front panel of ballast features power switch, fuse, power cord, lamp cable connector and ON/OFF button.

Ballast is for 120 V, 60 Hz. Ballasts for 220 V or 245 V, 50 Hz available upon request.

Performance Data:

Lamp type: HMI 575 W
 Daylight color temperature distribution: 5200° K
 Luminous flux: 49,000 Lm
 Luminous efficiency: 85 Lm/W
 Average life: 750 hours
 Power consumption: 7,0 A
 Efficiency: 56 fc
 Measuring distance: 15 ft

	Dimension	Weight
DLS 060/DLS 060 A:		41.0 lbs
Reflector dia:	25.5"	
Width of bracket:	29.0"	
Height of bracket:	20.0"	
Ballast:	12.6" x 8.7" x 7.1"	16.0 lbs

The 1200 Watt Brite Beam Lamp is the latest development in arc discharge light sources.

Kobold's DL 1200 PAR fixture for this lamp is the latest addition to its line of daylight fixtures. This unit is especially suitable for use in Studios, Theatres and for Television (STTV-market).

Because of the use different lenses, the performance of the DL 1200 PAR exceeds that of a regular 1200 Watt fresnel unit.

Four Lens System Beam Specifications:

Lens		Maximum Intensity (cd)	Total Beam Angle (50%) (V x H)
VNSP	Very narrow spot	1.8×10^6	$7^\circ \times 10^\circ$
NSP	Narrow spot	1.3×10^6	$8^\circ \times 11^\circ$
MF	Medium flood	6.0×10^5	$10^\circ \times 22^\circ$
WF	Wide flood	1.7×10^5	$19^\circ \times 54^\circ$

Performance Data:

Average Rated Life 1000 hrs

Physical

Base Type	G38 Bi Post
Arc Length	13 mm (.51 in.)
Maximum Overall Length	6.89 in
Bulb Diameter	8.1 in
Reflector Coating	Dichroic
Bulb Type	PAR 64

SPECIFICATION

- DLf 030 PAR Head with ignitor circuit, 4 leaf barndoor with filter holder, time counter, yoke with 3/8" thread and 1 1/8" stud
- DLf 031 U Power supply with relay system 120 V, 60 Hz and 10 ft. power cord
- DLf 032 30 ft. extension cable
- DLf 034 PAR Heavy duty aluminum transport case for head, cable and accessories

ACCESSORIES

- DLf 047 Diffusion filter, in pouch
- DLf 048 Conversion filter 3200° K, in pouch
- TR 25 Steel stand: 47/130", 1 1/8" bushing
- TR 513 Brake castor set for above
- TR 514 Extension leg/boom attachment for TR 25
- TR 36 Telescope: 47/86.5" for middle piece of TR 25

Features

- Compact housing (same design as the DLf 1200 S unit).
- Rigidly mounted high voltage ceramic sockets.
- Double insulated high voltage leads.
- Adequate striking voltage to guarantee hot-restrike in all circumstances.
- Special lever construction for quick and easy lamp change.
- Opening in front plate of housing to insert lens.
- No light side-ways after lens is inserted.

Electrical Design

Symmetrically designed ignitor delivering 50% of the starting voltage to either lamp base.

Power cut-off for operator protection when unit is open.

Ballast equipped with hum-free tight-core reactance coils.

Two-chamber ballast design, keeping coils and electrical circuit separate.

Easy access to ballast components by loosening 2 screws and hinging down the front panel.

Front panel of ballast features power switch, fuse, power cord, lamp cable connector and ON/OFF button.

Ballast is for 120 V, 60 Hz. Ballasts for 220 V or 245 V, 50 Hz available upon request.

REPORTERLIGHT 200 EL/D

Electronically controlled, i.e. "flicker-free" 200 W portable HMI-unit for battery or mains operation

200 EL/D-BN Battery/mains-operated unit

SPECIFICATION

DLf 080 D	Head with ignitor circuit, 4 leaf barndoor, filter holder, yoke with 3/8" thread and 5/8" stud and 7.5 ft. cable
DLf 012 S	Diffusion filter, in pouch
DLf 013	200 W HMI lamp
DLf 081 D	Portable electronic ballast with 3-step dimming switch
BA-30 EL 7	NiCad battery pack: 30 V, 7 Ah automatic cut-off for battery protection
DLf 088 U	Mains adapter with charger, voltage range 100-150 V
DLf 082	Carrying strap
DLf 083	Transport case
DLf 017 S	Conversion filter 3200° K, in pouch
HG 10	Handgrip with 5/8" stud

200 EL/D-B Battery-operated unit

SPECIFICATION

DLf 080 D	Head with ignitor circuit, 4 leaf barndoor, filter holder, yoke with 3/8" thread and 5/8" stud and 7.5 ft. cable
DLf 012 S	Diffusion filter, in pouch
DLf 013	200 W HMI lamp
DLf 081 D	Portable electronic ballast with 3-step dimming switch
BA-30 EL 7	NiCad battery pack: 30 V, 7 Ah automatic cut-off for battery protection
LA-12/30 T	Charger with 110/220 V "switch-over" for 30 V - 7 Ah, NiCad battery with 12 hour charger timer, in fully isolated plastic housing
DLf 082	Carrying strap
DLf 083	transport case
DLf 017 S	Conversion filter 3200° K, in pouch
HG 10	Handgrip with 5/8" stud

ACCESSORIES

D 87 S	Spare UV safety glass, in pouch
ST 262	Aluminum stand: 27/95", 5/8" stud
DLf 084	Rain protector shield for battery pack
DLf 086	12 ft. extension cable
DLf 087	Battery tester 24 - 30 V
DLf 088	Mains adaptor with charger, voltage range 150 - 250 V
DLf 089	Leather case for spare NiCad battery
DLf 090	Case for mains adaptor
DLf 091	Telescope: 3 extensions, 13/41", 5/8" stud and quiver
DLf 092	Remote control "on/off" to be fixed on telescope (for use with extension cord only)

Features

HOUSING made of heat-resistant GRP material; lockable pivoting bracket, 3/8" thread on bracket, 5/8" bushing; ball-bearing axial focusing system, smooth and non-stick operation at any operating temperature; big rear-mounted control knob affording a good grip; 4-leaf barndoor, rotatable by 360° and featuring readjustable leaf clamping; mechanical interlock protecting UV glass pane or filter; varnished aluminum housing comprising BATTERY, BATTERY ELECTRONICS and MAINS ADAPTOR; rapid-action link between battery and battery electronics and/or battery electronics and interlocking mains adapter; CHARGING UNIT made of GRP material.

Electrical Design

LIGHTING UNIT featuring symmetrically designed ignitor; pluggable connections for easy disassembly and reassembly of components subject to wear; ON/OFF pushbutton; electrical system interlock operating whenever the lighting unit is open (for a lamp change) or if there is no UV pane; „green" LED display if unit is ready for operation, „red" display signalling imminent battery shutdown;

BATTERY ELECTRONICS having 3 main modules: DC converter including power control, square-wave output switch, ignition driver and unit-function monitor; 3-step lighting control: 100%, 87.5% and 75%; power control featuring a + 5% precision irrespective of battery voltage.

BATTERY having 2 blocks of 14 and 11 NC cells each, 7 Ah; battery tester; green, yellow, and red LEDs indicating battery status; CHARGING UNIT automatic switch-over; 110 V/220 V stabilized power, irrespective of cell number; synchronometer permitting charging times of up to 12 hrs to be set; mains-connection and charging indicator lamps.

MAINS ADAPTER featuring the following major modules: primary converter, rectification and filtering; charging unit fitted with up to 8 hr LED display indicating fully charged battery.

luminous efficiency and distribution for

Power/lighting time ratio. It is obvious that, say, at 150 W power, the lighting time available on a fully-charged battery is superior to the 200 W value by some 50%.

Dimensions and Weight Data:

VL-77

Video 600 Reporter Light

FEATURES

- High intensity halogen light in compact light-weight housing.
- Spot-to-flood possibility.
- Lockable pivoting bracket.
- Build-in fuse in housing.
- Equipped with safety glass.
- Sturdy housing made of heat resistant GRP material.
- For use with 600 W, 120 V, lamp type DYS.

SPECIFICATION

Video 600 Kit 1

- Video 600 3x 600 W Fill & Bounce Light
 ST 1020 2x 4-leaf barndoor
 TR MINI 3x Aluminum stand, 19/88", 5/8" stud
 UM MINI 1x Reflex umbrella, silk-white, round 27.5"
 ST 227 Z 1x Holder for reflex umbrella
 MK 600/1 Transport case

ACCESSORIES

(see also unit ST 650)

- DLf 019 S Safety glass in frame, in pouch
 DLf 012 S Diffusion filter in frame, in pouch
 DLf 018 S Dichroic conversion filter 5500° K in frame, in pouch
 HG 10 Handgrip with 5/8" stud and 3/8" thread
 ST 226 Reflex umbrella, white, round 35"
 ST 222 Reflex umbrella, silver, round 41"
 ST 227 Adaptor for ST 222 and ST 226
 P 43 R Alligator clamp with 16 mm stud

Lamp: DYS, 600 W/120 V

LIGHTING

Lowel systems and kits have been in use since 1959 for video, film and still photography. They are a successful combination of innovative design, high strength materials, and careful workmanship. As a result, the lights and accessories are extremely efficient, lightweight and

durable. Their versatility is unequalled. We have received eight United States patents, an Academy Award Certificate and International acclaim.

Tota-Light

- Interchangeable 1000, 750 and 500 watt tungsten halogen lamps—120 volts • 800 watt lamp—220/240 volts • Patented gull-wing reflector produces remarkably efficient output • Exceptionally wide, smooth beam angle. One unit can provide even illumination of four walls from the corner of a room • Basically non-focusing, however, reflecting doors offer some intensity and spread control • Light control system: umbrella, gel frame, gels, small flags, and others
- Mounting system: stand, wall/door mount, clamps • Weighs only 2 1/4 lbs. (1.02 kg). Closes up compactly for storage/travel • Patent #3,852,582

T1-10 Head \$107.00

Omni-Light

- Interchangeable 650, 600 and 420 watt tungsten halogen lamps—120 volts • 650 watt lamp—220 and 240 volts • 250 watt lamp—30 volts (battery operation) • 100 watt lamp—12 volts (automobile and battery operation) • Unprecedented spot/flood focusing range
- Interchangeable, special purpose reflectors • Uses many Tota-light accessories • Light control system: four way expandable barndoors, high intensity and other reflectors, umbrella, gel frame, gels, snoot, scrims, dichroic filter, cookaloris and others • Mounting system: stand, clamps, wall/door mount • Weighs only 2-5/8 lbs. (1.19kg)
- Patent #4,187,531

01-10 Head \$130.00

DP Light

- Interchangeable 1000, 750 and 500 watt tungsten halogen lamps—120 volts • 1000 and 650 watt lamps at 220 and 240 volts • Wide smooth beam pattern with continuous focusing to intense spot
- Quick change, special purpose reflectors • Convenient, fast, one-hand tilt control • Light control system: four way expandable barndoors, high intensity and other reflectors, large umbrella, gel frame, gels, scrims, dichroic filter, snoot, cookaloris and others
- Mounting system: famous KS stand, clamps, wall mount, and others • Weighs only 3-7/8 lbs. (1.76kg) • US Patent #D210927

D2-10 Head \$145.00

Softlight 2

- 2000 watt maximum capacity. Uses two 1000, 750 or 500 watt lamps at 120 volts or two 800 watt lamps at 220/240 volts • Unit folds in half, nearly flat, for storage/travel • Large, soft-shadow source utilizes aluminized Nomex reflecting surface which will not scorch or discolor
- Light control system: adjustable and fixed barndoors for flare control, subject shading and gel mounting; gels • Mounting system: stand, clamps • Weighs only 8 lbs. (3.63kg) • Both lamps can be switched on and off individually • US Patent #3,712,978

S2-10 Head \$275.00

LIGHTING

STUDIO/INCANDESCENT LIGHTING...THE LT SERIES

LTM has introduced a complete line of Fresnel Studio/Incandescent Lighting instruments from 1,000 watts to 10,000 watts.

These fixtures are ideal for set lighting for motion picture and TV studios.

They all have a wide focusing range which provides precise beam control while maintaining a perfectly smooth, even spread of light.

The LT series are constructed of cast and steel-sheet housing...welded and waterproof. They all use convex fresnel lenses and Type A9 polished aluminum reflectors. Wire safety guards protect the fresnels.

All fixtures are finished in a black enamel with gold accents.

The LT series comes in three different operating versions.

LT1000W-7" Fresnel

- Manual—all controls function by hand \$332.00
- Pole-Operated—the true studio light, used only suspended. The light is actuated from the ground by means of a pole 478.00
- Remote control—the studio light of the future. The LT Remote Control lights feature "joy stick" control for panning (right and left), tilting (up and down), focusing (spot to flood) and on/off from one central control console

LT 1000W-7" Fresnel \$1338.00

- 4-Leaf Rotating Barndoor 49.00
- Hinged Gel Frame 21.00
- Single Scrim Full or Half 9.20
- Double Scrim Full or Half 11.50

LT Mini 1000W-5-1/6" Fresnel (Manual only) \$332.00

LT 2000W-10" Fresnel

- Manual—all controls function by hand \$526.00
- Pole-Operated—the true studio light, used only suspended. The light is actuated from the ground by means of a pole 625.00
- Remote Control—the studio light of the future. The LT Remote Control lights feature "joy stick" control for panning (right and left), tilting (up and down), focusing (spot to flood) and on/off from one central control console

LT 2000W-10" Fresnel \$1743.00

- 4-Leaf Rotating Barndoor 68.00
- Hinged Gel Frame 28.00
- Single Scrim Full or Half 9.20
- Double Scrim Full or Half 11.50

LT 5000 POLE-OPERATED

LT 5000 MANUAL

LT 10,000 POLE-OPERATED

LT 10,000 MANUAL

STUDIO/INCANDESCENT LIGHTING

LT 5000W-12" Fresnel

- Manual—all controls function by hand **\$925.00**
- Pole-Operated—the true studio light, used only suspended. The light is actuated from the ground by means of a pole **1100.00**
- Remote Control—the studio light of the future. The LT Remote Control lights feature "joy stick" control for panning (right and left), tilting (up and down), focusing (spot to flood) and on/off from one central control console **3080.00**
- 4-leaf Rotating Barndoor **88.00**
- Hinged Gel Frame **33.00**
- Single Scrim Full or Half **14.95**
- Double Scrim Full or Half **18.40**

LT 10,000W-14" Fresnel

- Manual—all controls function by hand **\$1339.00**
- Pole-Operated—the true studio light, used only suspended. The light is actuated from the ground by means of a pole **1591.00**
- Remote Control—the studio light of the future. The LT Remote Control lights feature "joy stick" control for panning (right and left), tilting (up and down), focusing (spot to flood) and on/off from one central control console **4455.00**
- 4-leaf Rotating Barndoor **133.00**
- Hinged Gel Frame **63.00**
- Single Scrim Full or Half **16.90**
- Double Scrim Full or Half **18.40**

CYC Lights

LTM's cyc lights use unsymmetrical reflectors which provide even, smooth lighting of cycloramas when hung overhead.

CYC 1000-1000 watts of power, steel-sheet welded construction with wire guard front and color gel frame.

CYC 1000W-CYC Light w/Color Frame \$ 225.00

Cyclomodul

A combination of four CYC 1000s providing the possibility of instant color changes during a scene.

Cyclomodul Four—4-light w/wireguard & 4-color frame \$900.00

Cyclomodul Pole-Operated—w/wireguard & 4-color frame . . 1050.00

THE CONVERTIBLE SOFTLIGHT

Rugged frame constructed of light weight high stress aircraft tubing.

Convertible design with non-removable soft reflector facilitates instant set up and knock down of fixture.

High performance soft reflector coated with easy to clean, ultra high temperature white reflecting surface that resists color temperature shifts associated with conventional painted softlights.

Rotating light bar provides ultimate control of light intensity and direction.

Lamp reflectors designed for maximum lamp cooling.

Wiring operates inside ventilated heat sink channel.

Switches removed from lamp housing for cooler operation.

Complete line of accessories.

2111S

21" 1000 watt convertible softlight for multiple purpose location or studio operation. Supplied with inline switched 25' power cord and choice of plug. Includes rotating light bar feature.

TECHNICAL SPECIFICATIONS:

Size: 21" x 18"

Weight: 18 lbs. w/cable

Rating: 8.3 amp maximum at 1000 watts. 120/240 volts, A.C. or D.C. operation.

Cable: 25' 3 conductor #16 AWG SO power cord with choice of plug.

Switching: Single inline switch.

Lamps: Single Tungsten-Halogen lamp.

2121S

21" 2000 watt convertible softlight for multiple purpose location or studio operation. Supplied with inline switched 25' power cord and choice of plug. Includes rotating light bar feature.

TECHNICAL SPECIFICATIONS:

Size: 21" x 18"

Weight: 18 lbs. w/cable

Rating: 16.6 amp maximum at 2000 watts. 120/240 volts, A.C. or D.C. operation.

Cable: 25' 3 conductor #14 AWG SO power cord with choice of plug.

Switching: Single inline switch.

Lamps: Single Tungsten-Halogen lamp.

2821S

28" 2000 watt convertible softlight for multiple purpose location or grid operation. Supplied with inline switched 25' power cord and choice of plug. Includes rotating light bar feature.

TECHNICAL SPECIFICATIONS:

Size: 28" x 24"

Weight: 21.5 lbs. w/cable

Rating: 16.6 amp maximum at 2000 watts. 120/240 volts, A.C. or D.C. operation.

Cable: 25' 3 conductor #14 AWG SO power cord with choice of plug.

Switching: 2 inline switches.

Lamps: 2 Tungsten-Halogen lamps.

2841G

28" 4000 watt convertible softlight with rotating light bar for multiple purpose location or studio operation. Single 60 amp flush mount grounding pin plug provided for single circuit operation. Requires 0083 or 0083P header cable. Header cable not included in base price.

TECHNICAL SPECIFICATIONS:

Size: 28" x 24"

Weight: 18.5 lbs. w/o cable

Rating: 33.3 amp maximum at 4000 watts. 120/240 volts, A.C. or D.C. operation.

Cable: 1-25' 3 conductor #8 AWG SO header cable attachable to 60 amp flush mount grounding pin plug at switch box required

2842G

28" 4000 watt convertible softlight with rotating light bar for multiple purpose location or studio operation. Two 20 amp flush mount grounding pin plugs provided for two circuit operation. Requires two 0143 or 0143P header cables. Header cables not included in base price.

TECHNICAL SPECIFICATIONS:

Size: 28" x 24"

Weight: 18.5 lbs. w/o cable

Rating: 33.3 amp maximum at 4000 watts. 120/240 volts, A.C. or D.C. operation.

Cable: 2-25' 3 conductor #14 AWG SO header cables attachable to 2 20 amp flush mount grounding pin plugs at switch box required

Switching: 2 switches mounted in permanent switch box attached to pivoting yoke.

Lamps: 2 lamps, individually switched.

3541G

35" 4000 watt convertible softlight with rotating light bar for multiple purpose location or studio operation. Single 60 amp flush mount grounding pin plug provided for single circuit operation. Requires 0083 or 0083P header cable. Header cable not included in base price.

TECHNICAL SPECIFICATIONS:

Size: 35" x 30"

Weight: 22.5 lbs. w/o cable

Rating: 33.3 amp maximum at 4000 watts. 120/240 volts, A.C. or D.C. operation.

Cable: 1-25' 3 conductor #8 AWG SO header cable attachable to 60 amp flush mount grounding pin plug at switch box required.

Switching: 2 switches mounted in permanent switch box attached to pivoting yoke.

Lamps: 2 lamps, individually switched.

3542G

35" 4000 watt convertible softlight with rotating light bar for multiple purpose location or studio operation. Two 20 amp flush mount grounding pin plugs provided for two circuit operation. Requires two 0143 or 0143P header cables. Header cables not included in base price.

TECHNICAL SPECIFICATIONS:

Size: 35" x 30"

Weight: 22.5 lbs. w/o cable

Rating: 33.3 amp maximum at 4000 watts. 120/240 volts, A.C. or D.C. operation.

THE CONVERTIBLE SOFTLIGHT

Rugged frame constructed of light weight high stress aircraft tubing.

Convertible design with non-removable reflector facilitates instant set up and knock down of fixture.

High performance soft reflector coated with easy to clean, ultra high temperature white reflecting surface that resists color temperature shifts associated with conventional painted softlights.

Rotating light bar provides ultimate control of light intensity and direction.

Lamp reflectors designed for maximum lamp cooling.

Wiring operates inside ventilated heat sink channel.

Switches removed from lamp housing for cooler operation.

Complete line of accessories.

3561G

35" 6000 watt convertible softlight with rotating light bar for multiple purpose location or studio operation. Single 60 amp flush mount grounding pin plug provided for single circuit operation. Requires 0063 or 0063P header cable. Header cable not included in base price.

TECHNICAL SPECIFICATIONS:

Size: 35" x 30"

Weight: 22.5 lbs. w/o cable

Rating: 50 amp maximum at 6000 watts. 120/240 volts, A.C. or D.C. operation.

Cable: 1-25' 3 conductor #6 AWG SO header cable attachable to 60 amp flush mount grounding pin plug at switch box required.

Switching: 2 switches mounted in permanent switch box attached to pivoting yoke.

Lamps: 3 lamps with center lamp switched independently of two outboard lamps.

4281G

42" 8000 watt convertible softlight with rotating light bar for multiple purpose location or studio operation. Single 100 amp flush mount grounding pin plug provided for single circuit operation. Requires 0043 or 0043P header cable. Header cable not included in base price.

TECHNICAL SPECIFICATIONS:

Size: 42" x 36"

Weight: 27 lbs. w/o cable

Rating: 66.6 amp maximum at 8000 watts. 120/240 volts, A.C. or D.C. operation.

Cable: 1-25' 3 conductor #4 AWG SO header cable attachable to 100 amp flush mount grounding pin plug required.

Switching: 4 switches mounted in permanent switch box attached to pivoting yoke.

Lamps: 4 lamps, individually switched.

4282G

42" 8000 watt convertible softlight with rotating light bar for multiple purpose location or studio operation. Two 60 amp flush mount grounding pin plugs provided for two circuit operation. Requires two 0083 or 0083P header cables. Header cables not included in base price.

TECHNICAL SPECIFICATIONS:

Size: 42" x 36"

Weight: 27 lbs. w/o cable

Rating: 66.6 amp maximum at 8000 watts. 120/240 volts, A.C. or D.C. operation.

Cable: 2-25' 3 conductor #8 AWG SO header cables attached to 2 60 amp flush mount grounding pin plugs required.

Switching: 4 switches mounted in permanent switch box attached to pivoting yoke.

Lamps: 4 lamps, individually switched.

7716G

77" 16000 watt convertible softlight with rotating light bar for multiple purpose location or studio operation. Two 100 amp flush mount grounding pin plugs provided for two circuit operation. Requires two 0043 or 0043P header cables. Header cables not included in base price.

TECHNICAL SPECIFICATIONS:

Size: 77" x 42"

Weight: 50 lbs. w/o cable

Rating: 133 amp maximum at 16000 watts. 120/240 volts, A.C. or D.C. operation.

Cable: 2-25' 3 conductor #4 AWG SO header cables attached to 2 100 amp flush mount grounding pin plugs required.

Switching: 4 switches mounted in permanent switch box attached to pivoting yoke.

Lamps: 8 lamps, switched 2 per switch.

9951T

Totally unobstructed translucent camera table for highlight control shadow elimination, and special effects photography.

FEATURES INCLUDE:

51" x 100" overall dimension with unobstructed shooting area of 46" x 96"

Adjustable front sweep allows user maximum control of foreground space.

Standard surface is non-reflective matt on one side with glossy surface opposite side.

User may select from numerous commercially available translucent colored or textured surfaces.

Fast, easy, no error assembly and knock down.

Studio cycloramas can be tied directly to a pipe grid, but curtain track is recommended for hanging to allow maximum versatility. The most flexible installation has at least a double-run of track, to permit the size of the shooting area to be changed. Compute the length of each track separately; add any necessary footage for off camera storage. Switchers are used to move curtains from one track to another with ease. An individual curtain track is sold on a "per foot" basis, complete with all necessary accessories for standard installation. This includes: the track channel, as ordered, cut to the nearest even foot. (We do not ship in less than foot increments; i.e., if you need 12 1/2 feet, order 13 feet.) One master carrier, one single carrier per 12 inches of track, and hanging clamps to suspend on 5 foot centers are included. If closer centers are required because of your installation configuration, they must be ordered at additional charge. To order, compute the number of feet. Advise us of this amount. We will ship necessary items for standard installation with instructions for assembly.

#76064 Versatile, I-beam track, for installations up to 75 feet long and 30 feet high, rigged for walk-along operation. Ideal for most motion picture and TV studio cycloramas. This track is shipped straight, for on the job curving. A bending tool for accurate curving is listed and must be ordered separately. Track can be curved without this special tool.
#76064 I-beam track - \$13.83 per foot.

#502 Heavy duty track, used for walk-along installations over 30 feet high or 75 feet long. This track must be factory curved and requires drawings for special radii. Standard radii beginning at 2 feet minimum.

#502 Heavy duty track - \$34.40 per foot, includes curving

PIPE AND WALL BRACKETS

#76374 Bending Tool (For use with #76064 track)

#76450 Pipe Clamps for 1 1/2" I.D. pipes

#76394 Wall Bracket 18", for single cyc track

#76395 Wall Bracket 24", for double cyc track

The following switchers are available to facilitate moving of curtains from one track to another or from storage tracks to set locations.

SWITCHERS FOR #76064 TRACK

#143-2 2-way switcher

#143-3 3-way switcher

4 and 5-way switchers available on request.

SWITCHERS FOR # 502 HEAVY DUTY TRACK

#503 2-way switcher

CYCLORAMA CURTAINS, TRACKS, PIPE GRIDS AND ELECTRICAL DISTRIBUTION DEVICES

CYCLORAMA CURTAINS

Cyclorama curtains are available in various fabrics as listed below. Cycloramas are manufactured to your size specifications with jute webbing triple stitched at the top; snaps for attaching to track; or grommets with tie-lines to tie on pipe; snaps or ties on 12" centers. Bottom finished with either canvas chain picket, with chain, or pipe pocket, without pipe; side finished with 2" hems. Seamed with vertical seams. Horizontal seams and seamless available on special request. All materials supplied flameproofed.

MUSLIN CYCLORAMA

Medium weight, unbleached muslin cycloramas are available in three colors, natural, light blue, and 60% reflectance gray.

With Vertical Seams
 88921 Natural \$.58/sq. ft.
 88922 Light Blue75/sq. ft.
 88923 60% Reflectance Gray85/sq. ft.
 Seamless
 Natural: Hgts. to 18' and any lgth. to 180' POR
 Hgts. to 18-32' and any lgth. to 180' POR
 Light Blue: Hgts. to 18' and any lgth. to 180' POR
 60% Reflectance Gray: Hgts. to 18' and any lgth to 180' POR
 Larger sizes in blue and reflectance gray available on special request.

SOLID SEAMLESS LINO

A useful fabric, woven so mesh holes are filled for opacity. It is slightly toothed-in texture and is useful for television, since it does not show wrinkles and is non-reflective. Woven in one size approximately, 28 feet wide. Cycloramas made of this fabric are finished at approximately, 27 1/2 feet high, lengths up to approximately 180 feet long.

White POR
 Blue POR
 Reflectance Gray POR
 Black POR

VELOUR CYCLORAMAS

Heavy pile curtain fabric. Comes in two weights, heavy and medium. 100% cotton, flameproof, 54" wide. Cycloramas of this fabric have vertical seams. Colors listed below are in stock. We can supply over 40 other shades. Interesting effects can be accomplished by alternating color panels. Bi-parting curtains, with fullness sewn in, are available on request.

Black	Navy Blue
Flame	Gold
Red	Gray
Bright Blue	

Heavy weight Velour Cycloramas \$1.85/sq. ft.
 Medium weight Velour Cycloramas 1.71/sq. ft.

VELOURETTE CYCLORAMAS

A napped fabric, lighter in weight than velour. Good opacity and useful for economical draperies and cycloramas. 100% cotton, flameproof, 54" wide, cycloramas of this fabric have vertical seams. Bi-parting curtains with fullness sewn in, are available on request.

Black	Bright Blue
Gold	Reflectance Gray
Red	Chroma Key Blue
Forest Green	Beige

Velourette Cycloramas \$1.46/sq. ft.

SPECIAL EFFECTS CURTAINS

Fabrics for special effects are available as follows:

- Lame Curtains
- Rain curtains
- Shimmer curtains
- Sharktooth Scrim drops

Prices on request.

PIPE GRIDS

Useful for small studio installations or where ceiling height does not permit use of live rigging. Used for hanging of cyclorama tracks, electrical distribution devices and lighting fixtures. Minimum size 15 ft. by 20 ft. Consists of 1 1/2" I.D. pipes, dead hung at right angles on 4 ft. centers. Complete with wall brackets and ceiling hangers. Includes standard mounting hardware.

Motorized or counterweight rigging on request.

29730 Pipe Clamp.
 The safest method of clamping two 1 1/2" pipes at right angles to one another \$13.50

ELECTRICAL DISTRIBUTION DEVICES

To allow total flexibility in connecting your lights to your dimming or power system. Connector strips are manufactured to any length in even foot increments with 18", 20 amp pigtailed on any center (multiples of 3") and a choice of pin plug, Edison type or twist lock connectors. Supplied with double hanging brackets to be used on a maximum of 7 ft. centers, for mounting on top of 1 1/2" I.D. pipe. Special hangers available on request. All connector strips are U.L. listed.

Prices on request.

7201 Lee Highway
 Falls Church, VA 22046
 (703) 532-0700

PE 8204

- Sequential multiple 2 hr. Ni-Cad fast Minicharger®
 - Minicharger® reliability with microprocessor controls
 - Charges any combination of four (4) 10-12 cell 4.0 AH ("D") or 7.0 AH ("F") packs sequentially
 - Charges any combination of four (4) 22-24 cell 4.0 AH ("D") or 7.0 AH ("F") packs sequentially
 - High impact sturdy construction
 - Lightweight (5-1/4 lbs.); compact 10-1/4" x 9-3/4" x 5-1/2"
 - Eliminates need for temperature sensors
 - Circuit breaker protected
 - 100% quality tested both electronically and manually
- PE 8204** **\$950.00**

THE PERROTT ON-CAMERA LIGHT

- No heat build up
- Consistent light pattern — No holes — No shadows
- Can be powered with any 14.4 volt battery
- Ultra miniaturized design — sturdy welded construction
- Convenient 5-pin XLR connector
- Handheld or mounts virtually anywhere — camera, light, stand, tripod, accessory shoes, etc.
- 100% quality control inspected, electronically and manually

Specifications

Color Temperature: 3500° Kelvin
 Volts (nominal): 14.4
 Running Time Available:

Amp Hours	Hours
4.0	.75
8.0	1.50

Weight: 1.0 lbs. (Head, 8.0 oz.; cord, 8.0 oz.)
 Size: 2-1/2" x 2-1/2" x 3"
 Connectors: 5-pin XLR
 Lamp Type: FLR

The Perrott On-Camera Light **\$195.00**

NOTE: The Perrott Lite® can be used with virtually any ENG/EFP camera in the field. To double the running time of the Perrott Lite®, use the Perrott PE-52-4 NiCad® Dual Output Belt.

PE 9037 (KWIK-KLIP®) Battery Carrier **\$185.00**
PRB 9037 (Snap-On™) Battery Carrier **185.00**

Basic Purpose: Allows user versatility and economy of using a VTR battery to power camera.

- Features:**
- Mates with KWIK-KLIP® or Snap-On™ battery mount.
 - Impact resistant metal construction.
 - 100% quality inspected both electronically & manually.
 - Spring tension prevents rattle.
 - Configured for Silver-Zinc or Ni-Cad VTR battery.

Size: 5-1/6" x 1-3/4" x 6-3/4"
Weight: .75 lbs.

ROSCO LABORATORIES, INC.

LIGHT CONTROL MEDIA

COLOR MEDIA PRODUCTS

Roscolux

The most durable color filter. Available in 111 colors and diffusers. Sold under the trade name "Supergel" overseas.

Sheets: 20" x 24"	\$ 4.25
Rolls: 24" x 50'	109.50
Swatchbook	2.50

Diffusion Test Kit

Nineteen 10" x 12" sheets of Rosco diffusion materials packed in a handy plastic pack. The kit includes a Technote which details the characteristic of each diffuser. \$19.95

Roscolux Diffusion

A range of filters in the stable Roscolux base, designed to alter the shadow characteristics or the beam shape of a light. Available in 17 colors.

Sheets: 20" x 24"	\$ 4.25
Rolls: 24" x 50'	109.50

Roscolene

The most widely used color media in the world. Available in 62 colors.

Sheets: 20" x 24"	\$ 3.25
Rolls: 24" x 50'	94.00
Swatchbook	2.50

Super Heat Shield

A protective transparent filter of extremely heat stable polymer, specially designed to deflect heat. This product should be placed between the bulb and the color filter, allowing space for the escape of heated air.

1991 2 mil. 20x24	\$ 7.50
-------------------	---------

Roscogel

The traditional color media, still produced in 74 proven colors. Ideal for short run or low budget productions.

Sheets: 20" x 24"	\$ 2.00
Swatchbook	2.50

Safety Frames

The replacement for hazardous metal color frames. Special, heavy-weight, flame retardant fiberboard will not transmit heat to the filter. Remains cool for safe handling.

8620 3½" (4¼ x 4¼)	\$.80
8621 6" (7½ x 7½)	1.05
8622 8" (10 x 10)	1.90
8623 4½" (Mini-ellipse)	.95

UV Filter

A virtually transparent filter, specially coated to absorb ultra-violet rays. The material allows less than 10% transmission below 390 nanometers.

20" x 24"	\$ 4.25
48" x 100 sq. ft.	104.00

Fluorescent Sleeves

For simple and economical control of fluorescent lighting. Clear carrier sleeve is supplied with one insert filter in any of the 62 Roscolene colors. 48" Roscosleeve. \$ 6.00

Prism Filters

Three different styles of holographically produced films that break light up into different effects.

Each filter is 9" square.	\$10.00
---------------------------	---------

Pin Beam Prism Filters

Two styles specially designed for use with pin beams (rain light). These filters are 6" square and are a rigid 10 mils. thick. Each design allows a central beam of light with the prismatic effect radiating outward from its center. Linear and Circle. \$ 9.00

Marcplot

A fresh approach to teaching and creating lighting design. Basic kit includes 220 magnetized markers, a special marking pen and a complete manual written by Marc B. Weiss.

8450 Marcplot kit	\$ 49.95
8451 Marcplot board 24" x 36"	49.95

LIGHT CONTROL MEDIA

CINEGEL PRODUCTS

DAYLIGHT CONVERSION FILTERS

RoscoSun Daylight Conversion Filters are used when shooting in an interior at a 3200 K balance. They are required at windows or other openings to convert incident daylight to an approximation of 3200°K. Partial conversions are utilized where less than full correction (a cooler or bluer daylight appearance) is preferred. All roll materials are 100 sq. ft., 58" wide, and are optically clear.

No.	Name	Description	Price
3401	RoscoSun 85	Converts 5500°K daylight to a nominal 3200°K	\$104.00
3407	RoscoSun CTO	Converts 5500°K daylight to a nominal 2900°K	104.00
3408	RoscoSun 1/2 CTO	Converts 5500°K daylight to a nominal 3800°K	104.00
3409	RoscoSun 1/4 CTO	Converts 5500°K daylight to a nominal 4500°K	104.00
3761	Roscolex 85	Optically clear rigid acrylic. Panel, 51" x 100" Performs same function as Roscosun 85	147.00

NEUTRAL DENSITY FILTERS

RoscoSun Neutral Density Filters reduce the level of incident daylight. Two of the materials also convert daylight to a nominal 3200°K. Except for RoscoScrim (54" wide) all roll materials are 100 sq. ft., 58" wide and are optically clear.

No.	Name	Description	Price
3402	RoscoSun N3	Reduces light intensity <u>one</u> stop.	\$104.00
3403	RoscoSun N6	Reduces light intensity <u>two</u> stops.	104.00
3404	RoscoSun N9	Reduces light intensity <u>three</u> stops.	104.00
3405	RoscoSun 85N3	Reduces light intensity <u>one</u> stop and converts daylight to nominal 3200°K	109.00
3406	RoscoSun 85N6	Reduces light intensity <u>two</u> stops and converts daylight to nominal 3200°K	109.00
3809	RoscoScrim	Perforated material, 54" wide, reduces light intensity <u>two</u> stops with no effect on Kelvin.	104.00
3762	Roscolex N3	Optically clear rigid acrylic panel, 51" x 100". reduces light intensity <u>one</u> stop.	147.00
3763	Roscolex N6	Optically clear rigid acrylic panel, 51" x 100". reduces light intensity <u>two</u> stops	147.00

TUNGSTEN CONVERSION FILTERS

Rosco Tungsten Conversion Filters convert incandescent 3200° Kelvin sources to nominal daylight. These filters offer a deep-dyed base for optical clarity and high heat stability. They are 54" wide, 100 sq. ft.

No.	Name	Description	Price
3202	Tough Blue 50 (Full Blue)	Boosts 3200°K to nominal 5500°K daylight	\$104.00
3204	Tough Booster Blue (Half Blue)	Boosts 3200°K to 4100°K	104.00
3206	Tough 1/2 Booster Blue (Third Blue)	Boosts 3200°K to 3800°K	104.00
3208	Tough 1/4 Booster Blue (Quarter Blue)	Boosts 3200°K to 3500°K	104.00
3216	Tough 1/8 Blue (Eighth Blue)	Boosts 3200°K to 3300°K	104.00

FLUORESCENT LIGHT FILTERS

Standard cool white or daylight fluorescent tubes offer a reasonable approximation of photographic daylight except for their excessive green content. Two separate techniques are available to deal with this situation—balance all sources to the fluorescents or balance the fluorescents to the sources. Rosco Product 3304 is applied to windows or daylight sources and 3306 to 3200°K sources, respectively, to balance them to the fluorescent lights. Rosco Products 3308, 3313, 3314, 3310 and 3311 are applied to the fluorescent lights to convert them to either 3200° Kelvin or nominal daylight. All roll materials are 54" wide, 100 sq. ft., and are optically clear.

No.	Name	Description	Price
3304	Tough Plusgreen	Converts daylight to match fluorescents	\$104.00
3315	Tough 1/2 Plusgreen	Adds partial green to Daylight and 3200°K sources for balancing with fluorescents and discharge lamps. Equivalent to CC15 Green.	104.00
3316	Tough 1/4 Plusgreen	Adds partial green to Daylight and 3200°K sources for balancing with fluorescents and discharge sources. Equivalent to CC075 Green.	104.00
3306	Tough Plusgreen 50	Converts 3200°K sources to match cool white fluorescents	104.00
3308	Tough Minusgreen	Converts cool white fluorescents to nominal daylight by absorbing excess green output.	104.00
3313	Tough 1/2 Minusgreen	Partial green absorbing filter equivalent to 0.15cc Magenta. Useful on some fluorescent types or discharge sources.	104.00
3314	Tough 1/4 Minusgreen	Partial green absorbing filter equivalent to 0.075cc Magenta. Useful on some fluorescent types or discharge sources.	104.00
3310	Fluorofilter	Converts cool white fluorescents to 3200° Kelvin.	104.00
3311	Fluorofilter	Same as 3310 in 4 foot sleeves for covering lamps.	7.75

CINECOLOR

Rosco's Cinecolor range is a series of effects colors available in rolls that are a full 48" wide, 100 sq. ft. ea. \$104.00

ARC LIGHT FILTER

Rosco's Cinegel System offers a wide range of filters for carbon arcs, HMI, CID and CSI lamps. They vary in the character and the amount of color correction provided to deal with the ages of the lamps in use and other operating conditions. All materials are 100 sq. ft., and are fabricated in a deep dyed base for optical and high heat stability.

No.	Name	Description	Width	Price
3107	Tough Y1	A pale straw filter used in U.S. on H.M.I. or white flame arcs to absorb U.V. and reduce Kelvin for daylight balance.	30"	\$104.00
3110	Tough WF Green	Because of generally higher ambient Kelvin, 48" preferred in Europe for the same purpose as Tough Y1.	48"	104.00
3106	Tough MTY	A single filter combining MT2 and Y1 for correction of 5500°K white flame arcs and H.M.I. to 3200°K.	54"	104.00
3102	Tough MT2	When used in combination with Y1, converts white flame arcs to 3200°K. Also useful as an amber conversion filter on H.M.I. and CID conversion.	54"	104.00
3115	Tough 1/2 MT2	A partial amber conversion for use on Arcs and H.M.I.	54"	104.00
3116	Tough 1/4 MT2	Pale amber correction for arcs and H.M.I.	54"	104.00
3134	Tough MT 54	A pale straw correction for white flame arcs or H.M.I.	48"	104.00
3114	Tough UV Filter	A clear slightly tinted filter that absorbs 90% of UV wavelengths below 390 nm. For absorbing UV output of arc sources.	54"	104.00

DIFFUSION MATERIALS

Rosco's Cinegel System includes the broadest range of diffusion material available 18 different products, plus four which combine diffusion and a blue tint to boost Kelvin temperature. All diffusers are 100 sq. ft. "Tough" designation indicates heat stable filter. "Soft" diffusion should be placed at a distance.

No.	Name	Width	Price
3002	Soft Frost	54"	\$ 60.00
3023	Wide Soft Frost	72"	80.00
3004	Half Density	54"	60.00
	Soft Frost		
3014	Hilite	55"	115.00
3032	Light Grid Cloth	43"	85.00
3030	Grid Cloth	40"	85.00
3000	Tough Rolux	49"	80.00
3001	Light Tough Rolux	49"	80.00
3006	Tough Spun	55"	80.00
3007	Light Tough Spun	51"	80.00
3022	1/4 Tough Spun	54"	80.00
3008	Tough Frost	48"	80.00
3009	Light Tough Frost	48"	80.00
3010	Opal Tough Frost	48"	80.00
3011	Tough Silk	54"	80.00
3026	Tough White Diffusion	48"	80.00
3821	RoscoBounce White (W)	48"	45.00

REFLECTION MEDIA

Rosco's reflector materials offer a wide variety of choices for surfacing reflector boards or for use wherever reflected light is required. The product designation generally indicates the quality of the reflection. These materials are fabricated in a durable, washable plastic laminate. They are 100 sq. ft. and 54" wide (except for RoscoBounce W, which is 48" wide).

No.	Description	Price
3801	Roscoflex M (mirror)	\$ 85.00
3802	Roscoflex H (hard)	85.00
3803	Roscoflex S (soft)	85.00
3804	Roscoflex SS (supersoft)	85.00
3805	Roscoflex G (gold tinted)	85.00
3806	Roscoflex C (cool blue tint)	85.00
3807	Roscoflex D (daylight blue/silver)	85.00
3808	Roscoflex F (featherweight)	85.00
3809	Roscoflex W (white/silver)	104.00
	(perforated silver/black)	
3810	Roscoflex W (white/silver)	85.00
3821	RoscoBounce W (white)	45.00

DIFFUSION/BOOSTER MATERIALS

These filters offer the same diffusion properties as those described above, but contain a deep-dyed blue correction, integral to the material, which raises the Kelvin temperature of 3200°K sources. These materials are 54" wide, 100 sq. ft.

No.	Name	Description	Price
3025	Tough 1/2 Diffuses and Booster Frost	increases 3200°K sources to 3300°K	\$85.00
3012	Tough Booster Silk	Diffuses and increases 3200°K sources to 3500°K	85.00
3013	Tough Booster Frost	Diffuses and increases 3200°K sources to 3800°K	85.00
3017	Tough Blue Frost	Diffuses and increases 3200°K sources to nominal daylight.	85.00

ROSCOBOND

Pressure sensitive adhesive for bonding Roscoflex media to aluminum or other non-porous board surfaces.

No.	Description	Price
8202	Roscobond Quart	\$ 6.75
8203	Roscobond Gallon	21.50

ROSCOPAKS

Roscopak materials are lightweight, yet strong and durable. These materials can be taped or tacked to virtually any wall, ceiling or panel and turn that area into an efficient reflector. Each Roscopak consists of 18 sq. ft. of material packaged in a handy pocket size pouch.

No.	Description	Price
8502	RoscoPak F (silver)	\$15.00
8503	RoscoPak D (blue/silver)	15.00
8509	RoscoPak G (gold/silver)	15.00
8510	RoscoPak W (white/silver)	15.00

Aluminum Stands

Strength and stability need not be sacrificed in a lighter weight stand. Smith-Victor aluminum stands offer compactness and portability and are the ideal answer for the photographer on the go.

Standard Models

- SA24 401231** Folding to 14", this 3/8" mount 3-section stand extends to 46" making it ideal for low background lighting. **\$39.95**
- SA28 401233** 8', 3/8" mount 5-section folds to only 22-1/2". **\$54.95**
- SA210 401236** 10' 5-section version of SA28 folds to 27". 3/8" mount. **\$60.00**

Deluxe Professional Stands

- SA8 401232** 8' double-braced tubular leg 5-section stand folds to 3/8" mount. **\$85.00**
- SA10 401235** 10' 5-section version of SA8 folds to 27-1/2". 3/8" mount. **\$87.00**
- SA48 401234** 8' heavy-duty, 5/8" mount 3-section stand for most demanding applications. Folds to 27-1/2". **\$80.00**

Steel Stands

S-V steel stand offers strength, stability, and years of dependable, trouble-free service at the most economical price. Ideal for studio applications, these general purpose stands are available in heights from 6 to 10 feet.

- S2 401228** 6-1/2' 2-section stand folds to 42". 3/8" mount. **\$20.95**
- S3 401229** 8' heavy-duty 3-section stand folds to 36". 3/8" mount. **\$31.95**
- S4 401230** 10' heavy-duty 4-section stand folds to 37". 3/8" mount. **\$36.95**
- S6R 401242** 6' 4-section stand disassembles for easy storage and portability. 3/8" mount. **\$31.95**
- S7 401239** Compact 6' model folds to 22". 3/8" mount. **\$31.95**
- S9 401240** 6' stand is designed to give extra stability with the addition of a 4th leg. 3/8" mount. Folds to 27". **\$34.95**
- S84 401241** 8' 5/8" mount version of S9 folds to 37". **\$36.95**

BR10 401250

This professional 4-legged roller base stand is equipped with a 10 ft., 5/8" mount upright. Solid steel legs feature 4 locking ball-bearing casters to prevent creeping or rolling on uneven surfaces. **\$170.00**

Boom and Boom Lights

More than just an accessory, the boom is truly the professional way to light a subject. The addition of a boom-mounted accent or hair light can mean the difference between a "good" photograph and a "great" photograph.

BP4 401224 This versatile light boom incorporates a 2 lb. counterweight mounted on a 51" steel shaft. An adjustable locking swivel allows for unlimited positioning. Fits all 3/8" mount stands. Also doubles as a microphone boom. **\$57.00**

Stand Extension 401260

Add up to 30" to any 3/8" - 5/8" mount light stand. May also be used as a crossarm to mount 2 light units on a single stand.

401260 Stand Extension 5/8" mount (adds 30") \$12.95

85 Mini Boom 401012 A winning combination — a boom arm and light in one. Using either spot or flood reflector lamps, the mini-boom provides the solution to many lighting problems. 44" aluminum boom with counterweight features a 660 watt swivel socket easily adjusted to any position by means of attached control handle. Unit comes with 12 ft. cord and fits any 3/8" mount stand. **\$49.95**

Mounts

Smith-Victor offers 3 wall mount brackets with various stud lengths to fit a variety of applications. Base plates on all models measure 4" x 6". Wall mounts are ideally suited for permanent installations when a grid system is not feasible. They may also be gaffer-taped to walls for location shooting.

- MP1 401217** 3" long 5/8" dia. stud **\$19.95**
- MP2 401218** 6" long, 5/8" dia. stud **19.95**
- MP4 401220** 9" long, 5/8" dia. stud with 90° bend **\$21.95**

C7 401216 For heavy-duty applications, this professional 5/8" mount, C-clamp is ideal for grid-type applications. Can be clamped to any pipe up to 2" O.D. **\$24.95**

G3-G5 This spring-loaded Lexan® casting takes over where the C1 clamp leaves off. Equipped with a 3" long stud, the gaffer grip clamps to any surface up to 2-1/2" wide. Rubber cleats prevent marring. Pre-drilled to accept an extra stud allowing you to mount 2 lights. Extra studs available.

Gaffer Grips

- G3 401263** 3/8" mount **\$14.95**
- G5 401264** 5/8" mount **14.95**

Model Q250 Video Camera Light

Designed to mount on any video camera shoe, the Model Q250 is a compact 250 watt flood unit featuring a broad, even beam pattern. Lightweight and equipped with an extra long 15' cord, the light can be adjusted to a variety of angles to fill a host of camera situations. Model Q250 will enhance colors and eliminate undesirable shadows. Complete with 250 watt 3200°K, 50 hour quartz lamp and shoe mount bracket.

Specifications:

Model Q250 (401135)

- Rating: 120V — 2.8 amps at 250 watts
- Socket: Miniature 2-pin (G5.3)
- Switch: Unit-mounted
- Cable: 15', 2 wire
- Construction: Phenolic resin
- Mounting: Shoe mount bracket supplied
- Reflector: Etched aluminum

MINI LIGHT PALETTE

MANTRIX 2S

MANTRIX MEMORY

MINI LIGHT PALETTE

An advance in mid-range console design.

FEATURES

- 2-9" high resolution CRT displays with all operational information
- Proportional patch for assigning dimmers and their levels to channels
- 7 overlapping pile-on submasters, 3 inhibitive submasters
- Executes up to 3-part cues
- 3 crossfaders, 1 of which is split
- 200 control channels for up to 384 dimmers
- Special effects package
- Electronic back-up
- Disk for library storage
- Interfaces to any dimmer
- Diagnostics Program

OPTIONS

- Designer's Remote Console
- Remote Control Unit
- Printer
- Remote Monitor
- Full System back-up
- Mantrix™ Manual Console
- Non Dim and Auxiliary Controls

Call for Price

MANTRIX MEMORY

An exciting new control system—Mantrix Memory or Mantrix 2S plus a powerful, easy-to-use memory module.

FEATURES

- Memory may be included initially or added-in later
- Presets may be recorded from the keyboard or from manual potentiometers
- Split handle crossfader with LED display for timed or manual fades
- Level/Rate Control Wheel
- Preset linking and cue insert capability
- LCD display of channel, playback, patch and submaster information
- Solid state cartridge for library storage

CD80 PACKS

Designed for Portable and Wall Mounted Use

Features:

- Compact design: 12-2.4kw, 6-6kw or 6-12kw dimmers in a 23-1/2"W x 20-1/2"D x 8-1/2"H (59.7 x 52.1 x 21.6cm) package
- Toroidal Chokes
- Terminal block phase changer in 2.4 and 6kw Packs
- All electronics on a single, easily accessible card
- Failure indicators for power, overtemp and over voltage
- Multiplexed control wiring and "daisy-chained" connections for expandability
- Available for 220 or 240 volt operation

8124	12-2.4kw Dimmers with 24-Grounded Twistlock Outputs (20 amp)	\$4060.00
8125	12-2.4kw Dimmers with 24-Grounded Pin Connector Outputs (20 amp)	4060.00
8126	12-2.4kw Dimmers with 24-Parallel Blade U Ground Outputs (20 amp)	4060.00
8127	12-2.4kw Dimmers with Terminal Strip for Hard-Wiring	4060.00
8066	6-6kw Dimmers with 6-Grounded Twistlock Outputs (50 amp)	4700.00
8067	6-6kw Dimmers with 6-Grounded Pin Connector Outputs (50 amp)	4700.00
8068	6-6kw Dimmers with Terminal Strip for Hard-Wiring	4700.00
8063	6-12kw Dimmers, 1-100A GP Receptacle per dimmer, camlock plugs	5600.00
8064	6-12kw Dimmers, Hard-Wired	5400.00

ENVIRON® 2

The Environ 2 Architectural Dimming System features modular, off-the-shelf components which can be combined into a custom configuration for any installation.

A variety of control stations includes slider and pushbutton controls, preset capabilities and a Master Station with a number of programmable functions. A wide variety of sizes and types of dimmers is available.

CD80 DIMMER BANKS And MODULES

Compact, High Density Dimmer Banks with Dual 2.4kw, Single 6kw or 12kw Dimmer Modules. Designed for all Theatrical and Television Applications.

Dimmer Racks

Features:

- Extremely shallow - only 17-3/4" (.45m) deep
- Up to 96 plug-in 2.4kw dimmers in 24-1/2" (6.2m) width
- Ideal for dimmer per circuit applications
- Equipped with quiet fans to maintain proper operating temperatures
- Designed to reduce installation costs
- Full length guides and self aligning dimmer connectors for positive dimmer module alignment

Dimmer Modules

Features:

- Heavy gauge aluminum chassis
- Heavy duty, self aligning power and control plug
- Toroidal Chokes
- Plug-in non dim modules available
- 220 and 240V dimmers and nondims available

LIGHTING STAND

TS-33, CB-48, CB-24, VE-24 LIGHTING STAND COMPONENTS

The on-stage professional utilizes the latest technologies to visually create the atmosphere he desires. Through the use of dimmers, barn doors, and control modules, the lighting engineer tries to transform a drab set into an exciting arena. However, due to the lack of achievements in lighting stands, these effects are limited by large, heavy tarnished steel bars which sit ominously on an otherwise aesthetic stage. Ultimate Support Systems has changed this by the introduction of aluminum stands; deep etched and clear anodized, to add to, instead of take away from the desired effect.

In addition to being extremely attractive, Ultimate Support Systems are lightweight. Through the use of aluminum alloy tubing, the entire stand as shown weighs only 12 pounds (5.45 kg). This feature reduces shipping costs as well as physical wear and tear.

Other features include: large, convenient handknobs and easy-to-use fittings; your choice of bolt and wingnut type crossbar, or heavy walled crossbars for clamp type lights.

But there's more... The Ultimate Lighting Stand is built to last. Fittings are constructed of glass reinforced polycarbonate; one of the toughest plastics available. Ultimate Support Systems' attention to details help to insure that this stand can handle years of on-the-road abuse.

The TS-33 Tripod forms the base for this versatile system and comes with a nylon tote bag. The Tripod's excellent stability enables the lights to be extended over 11' (3.35 m) when used in conjunction with the vertical extension.

Ultimate Support Systems gives you the choice... as to how you want to build up your own stand. The modular design allows you to add on the additional parts as you require.

TS-33 \$120.00
TS-33A \$135.00

Add on's to the TS-33 Tripod include:

- (A) CB-48 4' Crossbar (1.22 m), with bolts and wingnuts. Capacity: 8 lights. Two bolts are also provided for attaching power expanders, dimmer packs, etc. Weight: 1-1/2 pounds (.68 kg). **\$40.00**
- (B) CB-24 2' Crossbar (.61 m), with bolts and wingnuts. Comes in pairs. Capacity: 4 lights/pr. Weight: 1-1/2 pounds (.68 kg). **\$40.00**
- (C) HB-48 4' Heavy Crossbar (1.22 m). Heavy walled tubing for clamp type fixtures. Weight: 2-3/4 pounds (1.25 kg). **\$36.00**

- (D) HB-24 2' Heavy Crossbar (.61 m). Heavy walled tubing for clamp type fixtures. Comes in pairs. Weight: 3 pounds (1.36 kg). **\$36.00**
- (E) VE-24 2' Vertical Extension (.61 m). Extending the TS-33 Tripod up to 11 feet (3.35 m). Weight: 1 pound (.45 kg). **\$20.00**
- (F) EXP-550 Expander Bracket for power expanders, dimmer packs, etc. Weight: 1/2 pound (.23 kg). **\$18.00**
- (G) ABG-100 Accessory Bag. Designed to hold up to 2 complete sets of components. **\$25.00**

After the performance, the eleven foot lighting stand compacts to fit into two small tote bags for easy transportation to the next gig.

SPECIFICATIONS

- Height: 5'0" to 11'2" (1.52 to 3.40 m)
- Max. Base Diameter: 62" (1.57 m)
- Load Capacity: 100 lbs. (45.36 kg)
- Weight (as shown): 12 lbs. (5.45 kg)
- Set up time: 3 minutes

Model MVC-1, shown with accessory PT.

Model MVC-2, shown with accessory ROS and TS.

Model MVC-3, shown with accessory ROS.

MVC-1, MVC-2, and MVC-3 MODULAR VIDEO CABINETS

The MVC-1, 2, and 3 accept most popular monitors and playback equipment, providing complete access to both front and back of the electronics.

The MVC Series offers versatility, security, mobility, and attractive storage for video systems. Each module incorporates a welded steel frame for strength, handsome walnut pattern side panels, doors and top, one adjustable shelf, built-in ventilation and accommodations for hook-up wiring. Each system has an assortment of accessories.

SPECIFICATIONS MVC-1, MVC-2 and MVC-3

Dimensions: Each module overall, 31" wide x 33" high x 23" deep. Inside dimensions, 29-1/2" wide x 30-1/2" high x 20-1/2" deep. (Deduct 2-1/2" from inside height for flip-up door.) Casters add 6" to overall height.

Construction: Welded steel frame using 16-gauge uprights and 20-gauge top and bottom. Side panels of walnut grained pattern with plastic overlay on 3/8" particle board. All doors walnut grained pattern overlay on 1/2" particle board with T-molded edges, hinges full-length piano type. Master keyed locks on all doors. Pilaster brackets in each module for 1/2" increment adjustments of shelf. Adjustable steel shelf in each module. Two-inch wiring access holes with plastic grommets supplied in each shelf. Caster sockets arc welded into bottom of each module. Top panel 1/2" walnut grain pattern with T-molded edges.

Castors: 5", ball bearing swivel, two with locking toe brakes. (Standard on models MVC-2 and MVC-3.)

MVC-1: (Illustrated on accessory Pedestal Table) This module includes one swing-up locking door and a fully adjustable shelf. Wiring access holes are provided in the bottom of the cabinet and in the adjustable shelf within the cabinet. The MVC-1 Module can be stacked or positioned on the Pedestal Table accessory. Arc welded caster sockets are provided so that casters may be added if desired. **Shpg. Wt. 103 lbs.**

MVC-1 \$369.25

MVC-2: Identical in size to the MVC-1. It is equipped with two conventional piano-hinged doors, both locking. Wiring access holes are provided both in the bottom and in the adjustable shelf. Heavy-duty 5" casters, two with locking toe brakes are included. **Shpg. Wt. 108 lbs.**

MVC-2 \$385.25

MVC-3: Four locking doors insure easy and immediate access to the back of the video equipment as well as the front. Adjustments can be made without removing the equipment from the cabinet. The front monitor door swings up and slides back into the top of the cabinet leaving a glare shield extending over the monitor screen. Access provisions have been made for equipment hook-up. **Shpg. Wt. 211 lbs.**

MVC-3 \$718.25

ACCESSORIES

ROS Roll Out Shelf: Designed to position at any height within the cabinet and to give easy access to the video recorder/playback, this convenience accessory can be used with either the MVC-1, MVC-2 or MVC-3. The 80-lb. load capacity shelf insures safety for the equipment. **Shpg. Wt. 13 lbs.**

ROS Roll Out Shelf \$58.25

ES Extra Shelf: The adjustable steel shelf will add over four square feet of shelving to the module. **Shpg. Wt. 9 lbs.**

ES Extra Shelf \$25.00

TS Tape Storage Drawer: Provides storage for 32-3/4" video tape cassettes. Designed to position at any height within the cabinet. **Shpg. Wt. 19 lbs.**

TS Tape Storage Drawer \$79.00

PT Pedestal Table: Accommodates the MVC-1 at a height of 30" above the floor. The walnut top mounted on a stylish chrome support will enhance any training room. **Shpg. Wt. 35 lbs.**

PT Pedestal Table \$131.50

A Electrical Assembly: Dual electrical outlets which will mount in the top or bottom, left or right of the MVC-1, MVC-2 or MVC-3. 20 feet of 16/3 stranded wire with molded plug. **Shpg. Wt. 2 lbs.**

A Electrical Assembly \$21.00

Model VT-52C

Model VT-27C

Model VT-38C

MVC-4, MVC-5 and MVC-6 MODULAR VIDEO CABINETS

The MVC 4, 5, and 6 accommodate the larger video equipment. They provide 30% more locking space than the MVC-1, 2, and 3 Series.

SPECIFICATIONS MVC-4, MVC-5 and MVC-6

Dimensions: Each module overall, 36" wide x 38-1/2" high x 27" deep. Casters add 6" to overall height. Door openings, 30" wide x 26-3/4" high. Inside, 33-1/2" wide x 29-1/4" high x 24-1/2" deep.

Construction: Welded steel frame using 16-gauge uprights and 20-gauge top and bottom. Side panels of walnut grained pattern with plastic overlay on 3/8" particle board. All doors, walnut-grained pattern overlay on 1/2" particle board with T-molded edges. Double hinged, double doors front and rear each with 270° sweep. Hinges full length piano type. Master keyed locks on all doors. Pilaster brackets in each module for 1/2" increment adjustments of shelf. One adjustable steel shelf in each module. Equipped with grommets wiring access holes in cabinets and shelves. Top panel 1/2" walnut grain pattern with T-molded edges.

Casters: 5" ball bearing swivel, two with locking toe brakes. (Standard on models MVC-5 and MVC-6).

MVC-4: Consists of the top module of the MVC-6. Use as a table top cabinet. Arc welded caster sockets are provided so that casters may be added if desired. **Shpg. Wt. 120 lbs.**

MVC-4 \$398.50

MVC-5: Same as MVC-4 plus it includes heavy-duty 5" casters, two with locking toe brakes. **Shpg. Wt. 127 lbs.**

MVC-5 \$430.25

MVC-6: Locking doors insure easy and immediate access to the back of the video equipment as well as the front. Access provisions have been made for hook-up. The spacious system offers 27-1/2 cubic feet of locking storage. The top and bottom modules are individually lockable adding convenience and versatility to the system. **Shpg. Wt. 247 lbs.**

MVC-6 \$822.25

ACCESSORIES

RROS Roll Out Shelf: Positions at any height within the cabinets, giving easy access to the video recorder/playback. **Shpg. Wt. 22 lbs.**

TTS Tape Storage \$88.25

A Electrical Assembly: Dual electrical outlets, 20 feet of 16/3 stranded wire with molded plug. **Shpg. Wt. 2 lbs.**

Television equipment and materials not included.

A Electrical Assembly \$21.00

VT SERIES — VIDEO TABLES

Fully hinged, steel-backed double-locking doors protect tapes and accessories. Each cabinet has 5.75 cubic feet of storage space with an adjustable shelf within the cabinet.

The top of the cabinet on the VT-27C is a convenient working height of 27" for video recorders and playback units.

The VT-38C offers a monitor shelf 38" above the floor, providing excellent monitor positioning for individual or small group viewing. Small playback units are positioned on the second shelf.

The television receiver or monitor is 52" high on the top shelf of the VT-52C model for excellent group viewing.

Heavy, ribbed rubber pads on top of each unit reduce noise and provide a non-skid surface. The welded steel tables have charcoal brown enamel finish with walnut wood panels and a sculptured satin chrome locking handle. Two keys furnished.

VT-27C 27-1/2"H, 18" x 30" shelf size, 65 lbs. shpg. wt. . . . \$228.00

VT-38C 38"H, 18" x 30" shelf size, 75 lbs. shpg. wt. \$244.00

VT-52C 52"H, 18" x 30" shelf size, 80 lbs. shpg. wt. \$253.00

ACCESSORIES

VCS Electrical Assembly: 4 power outlets, grounding type, 20 ft. cord, 3-wire, 1250W. **Shpg. Wt. 4 lbs.** \$26.50

VTS Tape Storage Rack: Holds twelve 8" dia. 1/2" video tapes. 1/4" zinc plated steel wire rack with handles and 4 rubber feet.

Shpg. Wt. 3 lbs. \$18.00

AV-552 Safety Belt: Webbed belt for securing the monitor to the table. 10 ft. long, 600 lb. test. **Shpg. Wt. 1 lb.** \$17.00

RUGGED UTILITY TABLE

This rugged utility table with a 300 lb. load capacity especially suited for computer and micro-film reader applications. Spacious walnut pattern wood top with protective T-molding around edges. The all-welded steel frame is finished with baked on charcoal brown enamel. Equipped with decorative casters as standard.

DP-27 27"H, 20" x 36" shelf size, 47 lbs. shpg. wt. \$115.00

OPTIONAL:

GLIDES: Add suffix "G" to model number. Reduce weight by 3 lbs., height by 2". Deduct \$5.00 from price.

4" CASTERS: Add suffix "-4" to model number. Add 2 lbs. to weight, 2" to height. Add \$5.00 to price.

5" CASTERS: Add suffix "-5" to model number. Add 4 lbs. to weight, 3" to height. Add \$10.00 to price.

VFC-100 FOLDING VIDEO CART

Professionals know the convenience of having a high quality, versatile, electronic equipment cart. Available now is the VFC-100, a smooth rolling, all metal constructed vehicle designed to carry the necessary video equipment required for quality field, news gathering, and broadcast production.

Features

- Folds to a mere eleven inches for your storage convenience
- Three heavy duty, independently folding, equipment trays
- Three heavy duty cable hooks
- Heavy duty tripod/cable hook
- 300 lbs. load capacity
- 1" 16 gauge steel tubing frame
- Heavy duty, all terrain, 10" locking pneumatic wheels, or 10" x 1.75" semi-pneumatic wheels (model VFC-50)
- Two, 4", locking, swivel casters
- 2-1/4" ground clearance
- High quality chrome plated finish, or industrial grey enamel (model VFC-121 and VFC-50)

Transit Cases from ANVIL

ANVIL® A.T.A. Cases offer the ultimate in protection. They conform to the Air Transport Association specification 300, Category 1 standards for reusable shipping containers. ANVIL® A.T.A. Cases must withstand the rigors of more than 100 round-trip transittings, on both surface vehicles and aircraft, to qualify for this rating.

In addition to custom-designed models for individual requirements, ANVIL® maintains a design library containing literally thousands of stock Case models which can be shipped as is, or modified to meet your requirements, and shipped without delay.

Case interiors are custom-designed to provide maximum shock absorption and vibration resistance. Soft, resilient unicellular polyfoam is sculptured to fit around your equipment like a glove. Quality control is assured through numerous inspections during and at the conclusion of the manufacturing process.

A.T.A. VIDEO CASES

We can build a strong Case around any broadcast, industrial or educational video product on the market. Just give us the model number of your camera, recorder, monitor or any other component or combination—and we'll give you a Case that will make sure your video components are ready to get the shot when you are, every time!

ANVIL® A.T.A. COMPUTER CASES

Now you can ship individual computer components, or entire mini or micro computer systems, anywhere in the world without the slightest bit of worry. Our new A.T.A. Computer Case catalog contains models for hundreds of different components and system combinations. And mixing components from different hardware manufacturers is as easy as giving us the brand names and model numbers. We'll recommend the Case or Cases required to provide the highest degree of protection possible. And we can custom-design your Cases to provide room for software and peripherals, too.

A.T.A. AUDIO-VISUAL CASES

Want your A/V shows to come off without a hitch, time after time? Pack your gear in ANVIL® Cases—and relax! Our catalog includes models for motion, slide, strip and overhead projectors, as well as multi-image devices and dissolve units. And we've got your sound system covered too! FORGE II® carrying Cases are now available for selected film-based items.

ANVIL® E.I.A. RACKMOUNT CASES

Standard 19 inch rackmount components can be safely and easily moved to your location—shoot ready! ANVIL® offers several variations on the rackmount design: front and rear removable lids with or without shock isolation option, pull-over-lid design (case within a case design), or the popular mixer/rack arrangement providing rackmount space horizontally opposed to standard vertical rack space. Whichever way you go, ANVIL® has the rack case to make for the fastest set-up and strike.

A.T.A. —

Our A.T.A. Spec. 300, Category 1 Cases are constructed using the finest materials available. To form the actual shell, we start with high grade 1/4" plywood, laminated with tough ABS plastic, fiberglass, or aluminum. Aluminum edging is secured into place using machine driven steel rivets. Heavy duty recessed twist-latches and recessed spring loaded handles are used on all A.T.A. Cases. Other features include heavy gauge steel ball corners and edge clamps. The interior is lined with 1" polyester foam to custom-fit the equipment and provide protective shock absorption. Definitely a must for excessive truck or air travel.

LITE FLITE —

Designed for the around town user, LITE FLITE Cases are made with high grade 1/8" plywood laminated with ABS, fiberglass, or aluminum. Aluminum edging is secured to panels using machine driven steel rivet. High quality exterior latches and handles are used on LITE FLITE Cases. As in the A.T.A. Case, the interior is 1" polyester foam lining provided for shock protection.

CUSTOM CASES —

Our especially trained staff of case designers are available by telephone between 9:00 and 5:00 and in person to answer any questions in regards to design or specific case requirements. Their expertise is invaluable in designing for, and fulfilling your particular case needs. Contact our salespersons or our design staff at (213) 466-6181.

Overhead Projector Tables

Whether your overhead projector application requires you to stand-up or sit-down, Bretford has the projector stand to meet your needs. And, our newest line additions guarantee that no matter what size projector you have, we've got the stand to fit it.

From the standard application tables (AOH2741 and AOH2741E) to the top of the line Executive Model (WSOH29E)-All feature adjustable projector height and will enhance the use of any overhead projector on the market. E-models feature an Electrical Unit with 2 outlets, 20 ft. extension cord, and built-in cord winder.

WSOH29E

- ◀ The WSOH29E Executive Overhead Projector Work Station is a functional and elegant work station. This top of the line unit features an adjustable projector well (6" to 10" in 1" increments), convenient accessory drawer, a roomy 10 sq. ft. work surface, full width accessory shelf, and 2" twin-wheel casters. Putty Beige with Oak laminates. Includes electrical assembly. Ships disassembled. *Weight:* 112 pounds. *Dimensions:* 48" W x 29" H x 30" D, Projector Opening-15½" W x 16½" D \$360.00

AOH2741

- The AOH2741 Adjustable Overhead Projector Table works well for stand-up or sit-down applications. Work surface adjusts from 27" H to 41" H in 2" increments, and platform adjusts from 6" to 10" in 1" increments. Features heavy gauge welded steel construction, smooth rounded edges, die pressed shelves. "Quiet-Glide" caster system, 4" casters (2 with locking brake) and arch welded caster sockets. Finished in Black with Walnut vinyl writing surface. *Weight:* 73 pounds. Ships assembled. *Dimensions:* 37" W x 27 to 41" H x 22½" D, Projector Opening-15½" W x 18½" D \$183.50
- The AOH2741E Overhead Projector Table with Electrical Unit. *Weight:* 75 pounds \$208.00

- A. AOH2741 at full height for standing applications
- B. AOH2741 at lowest position for sit-down applications.

Accessories

Casters

Replacement or substitute casters are available for most mobile stands, tables, cabinets, or trucks. Included are 1) Rigid Caster Packs for Mobile Utility Trucks; 2) 5" Caster Packs for easy rolling on carpets and rough surfaces, and 3) WS Caster Conversion kits for computer furniture.

Electrical Assemblies

Designed to attach to all Bretford Audio-Visual and Video furniture. Available assemblies include—1) The E Unit (UL approved) with 2 outlets, 20 ft. 3-wire cord and grounded plug; 2) E-S Unit—same as above with 3 outlets instead of two.

Rubber Mats

Ribbed Rubber Mats provide a protective non-slip surface to keep equipment in place on stands, cabinets, and tables. Available in several pre-cut sizes to fit most Bretford Products.

Safety Belt

Super strength Safety Belt holds valuable monitors in place on slant top shelves. It features a nine foot web strap with buckle and is designed for use on TV/VTR Mobile Equipment Tables.

Slant Bars

Two models available. The Model MPS is designed for use with Contemporary Mobile Equipment Tables, and the Model TVS for Adjustable and Traditional TV Tables. Attaches to top shelf and tilts monitor forward to eliminate glare. Slotted design allows you to bolt equipment in place.

Contemporary, functional design gets you right down to business. With features like steel construction, smooth rounded edges, die pressed shelves and "Quiet-Glide" casters, you'll agree these stands give you the most for your money. Square Lock Design allows fast assembly. Finished in Putty Beige with Black legs. Ships UPS, disassembled.

VTRC70E

Today, you depend on your video equipment more than ever before. It makes good sense to keep it protected. An attractively designed Video Security Center by Bretford provides mobility, but what's more, it locks up your entire video investment in one beautiful cabinet. Each center features a rolling pull-out shelf for the player/recorder and a monitor shelf. Plus all shelves are adjustable to accept a wide variety of equipment and uses. Cabinets combine heavy gauge steel construction, finished in Black with the warm accent of wooden doors finished in Walnut, mar-resistant laminate. Doors swing easily on full length piano hinges—fold back against cabinet for easy access. Positive lock includes 2 keys. Removable, ventilated back panel. Easy rolling, heavy duty 4" ball bearing casters. Electrical assembly with 2 outlets, 20 ft. grounded cord. Additional shelves available. Ships disassembled.

The VTRC70E Video Security Center with one rolling shelf plus 2 movable shelves. *Weight:* 281 pounds. *Dimensions:* 33" W x 72" H x 24" D. Inside- 31" W x 60" H x 22" D \$931.50

VTRC40E

The VTRC40E Video Security Center with one rolling and one movable shelf. *Weight:* 154 pounds. *Dimensions:* 33" W x 38" H x 24" D, Inside-31" W x 30" H x 22" D. \$528.50

VTRC50E

The VTRC50E Midsize Video Security Center with one rolling shelf and 2 adjustable shelves. *Weight:* 171 pounds. *Dimensions:* 28" W x 55" H x 23" D, Inside-26" W x 30" H x 22" D \$633.50

The VTRC90 Video Security Center is the state-of-the-art in video cabinetry. Features an open leg design, adjustable monitor shelf, cord organizer/modesty panel, 3 outlet electrical assembly with 20 ft. grounded cord. Steel construction with 1" square tubular steel legs. Putty Beige baked enamel finish with oak laminate doors which, when folded back, are held in place against the cabinet. 4" casters (2 with locking brakes). Ships disassembled. *Wt.:* 160 lbs. *Dimensions:* 36" W x 58" H x 25" D, Inside-36" W x 32" H x 24" D, Shelf-36" W x 23" D. \$399.00

UPRIGHT CABINET RACKS

SERIES 2000 UPRIGHT

Available in either plain or louvered side and rear door; solid top.

SERIES 2000 INCLINED PANEL

SERIES 2000 UPRIGHT CABINET RACKS

Here are electronic enclosures that do more than house equipment. The sheer square line of the Series 2000, its symmetrical styling is the result of experience and perception Bud designers have. All Series 2000 cabinet racks include welded frame and base, sides, top, and rear door.

Design Features

- Anodized aluminum extrusion top trim.
- "U" braces on sides of all welded 14 gauge steel frame for added strength and rigidity.
- Door, 20 gauge steel.
- Sides and top, 18 gauge.
- Front and rear panel mounting rails tapped 10-32 on E.I.A. universal spacing.
- Accommodate 19" panels.
- Caster brackets pierced for RC-7758 casters.
- One inch diameter knockout holes in base.
- Interiors are accessible from front and rear for easy installation of and maintenance of components.
- Readily removable rear door can be mounted right or left.
- Two pairs of fully adjustable mounting rails are included.
- Shipped completely assembled.

Finishes

Gray textured (GT) or royal blue textured (RB).

INCLINED PANEL CABINET RACKS

Series 2000 Inclined Panel Racks are similar to the upright models in style and construction and can be used in conjunction with them. The front is divided into upright and 20° inclined panel space. Two pairs of fully adjustable mounting rails are in the front upright and sloping panel area, and one pair in the rear.

ADD-A-RACK SYSTEM FOR SERIES 60 AND SERIES 2000 CABINET RACKS

Used to combine two or more enclosures into one integral system.

Design Features: Assembly consists of a welded frame top, bottom and rear door. Aluminum extrusions are included for Series 2000.

Bonus Features: The advantage of using this system is economy. When developing a band of enclosures, costs can be dramatically reduced by using one complete unit and several Add-A-Rack assemblies to obtain the optimum width.

Finishes: Order the same color as the cabinet rack.

CONCORDE SERIES

CONCORDE SERIES UPRIGHT CABINET RACKS

Another choice of cabinet racks from Bud with a personality all their own. One that will add a unique but highly sophisticated appearance to your product. One that appeals to a marketplace looking for new and always better ideas. Concorde Cabinet Racks include welded frame, top, sides and rear door.

Design Features

- "U" braces on 14 gauge steel frame provide assured strength and rigidity.
- Door, 20 gauge steel.
- Sides and top, 18 gauge.
- Front and rear adjustable panel mounting rails, 12 gauge, tapped 10-32 on E.I.A. universal spacing.
- Accommodate 19" panels.
- Caster brackets pierced for RC-7758 casters.
- One inch knockout holes in base.
- Clear anodized aluminum extrusion frames the cabinet. Name plate area has subtle woodgrain inset
- Interiors are accessible from front and rear for easy installation and maintenance of components.
- Shipped completely assembled.

Finishes

Gray textured (GT) or royal blue textured (RB).

Accessories

Concorde Cabinet Racks are available with 24" panel space

CABINET RACKS/ PORTABLE CABINETS

CLASSIC II CABINET RACKS

Refined styling, design simplicity. Rigid plastic extruded front trim frames the front - a few reasons why the Classic II sets your product apart from the conventional.

Classic II Cabinet Racks include welded frame, top, bottom, sides, rear door with flush mounted handle and cam lock.

Design Features

- Light weight, yet support heavier than average loads, since "U" braces on frame provide extra strength and support
- Rear door 20 gauge steel. Front door available. Can be mounted to open left or right.
- Side panels - 18 gauge steel
- Top and bottom - 16 gauge steel
- Adjustable front and rear mounting rails 12 gauge, tapped 10-32 on E.I.A. universal spacing
- 19" wide panels fit openings
- Caster brackets pierced for RC-7756 casters

Finishes

Gray textured (GT) or royal blue textured (RB).

Accessories

Classic II Cabinet Racks are available with 24" panel space.

U.S. Patent Number 224229
Canadian Patent Number 34884

CLASSIC II PORTABLE CABINETS

Whether used independently or as a companion to the Classic II cabinet rack, the design of this distinctive cabinet harmonizes perfectly with the most sophisticated systems. While it's portable, it is equally effective for permanent installations.

Design Features

- Top, bottom and side panels .060 aluminum. Frame, 6063T aluminum extrusions
- Accommodate 19" panels
- Doors and panels not included but are available
- 1/8" aluminum alloy doors attach to mounting rails
- Black thermoplastic flush-type latch

Bonus Features

- Recessed brushed chrome handles are attached to two steel flanges extending the length of the cabinet. This added support assures carrying safety.
- Two 16 gauge steel vertically adjustable chassis supports
- Shipped completely assembled

Finishes

Gray textured (GT) or royal blue textured (RB).

VALURACK 30" DEEP VALUE PRICED

This cabinet rack is another of our Designer Series available for off-the-shelf delivery. It offers the distinctive styling that enhances the value of its contents. The front is attractively framed by rigid vinyl trim with black inserts and a name plate.

Design Features

Entire interior is accessible from front to rear for installing or maintaining components. One pair of horizontally adjustable mounting rails, tapped 10-32 on E.I.A. universal spacing attach to horizontal rail supports. The 20 gauge door has cam lock and flush handle, 18 gauge sides and 16 gauge top and bottom. Mounting brackets in base drilled to accommodate Bud RC-7758 casters or RL-7768 levelers.

Bonus Feature

Shipped unassembled in two cartons. Quick, easy, assembly. No special tools required. Hardware included. NSTA approved packaging.

Finish

Royal Blue Textured (RB).

AVS500 VTR SYSTEM CABINET

This sturdy, all welded, compact, mobile unit provides a convenient VTR center for a range of AV applications and a housing for electronic devices.

Design Features: Top shelf of upper section houses a monitor or display. Clear dimensions of this are 18" high, 26" wide, 22" deep. Lower shelf designed for tape deck or disc player. Overall 65 1/2" x 30" x 24".

Lower section contains two shelves for cassette storage or other material. Top shelf slides out. Area above each shelf is 12". All steel construction.

Bonus Features: Front doors bifold to provide a 270° opening for maximum view when V.T.R. system is operating. Flush mounted cam locks on all doors assure tamperproof storage and maximum security. Four 2" casters are included.

Delivered assembled: Weight 255 lbs.

Finish: Black textured.

RELAY RACKS DELUXE RELAY RACKS

Versatile, economical enclosures house a wide range of electronic equipment and control system.

Design Features: Well-ventilated racks take 19" panels. Rear door has two black thermoplastic catches. If casters are required, specify RC-7756. Top, bottom, sides and rear door, 16 gauge steel. **Shipped knocked down.**

Bonus Features: Contoured front vertical members include 7/64" panel mounting supports drilled and tapped 10-32 on E.I.A. universal spacing.

Finishes: Royal blue textured (RB) and Luster Gray (LG).

SHIELD-A-RACK UPRIGHT CABINET RACKS

Designed to meet FCC emission control requirements. Provides optimum flexibility of component design. Shield-A-Rack offers contemporary styling and rugged construction.

Design Features

- Decorative rigid vinyl trim with woodgrain inserts.
- Doors have locking handles for greater security.
- Two pairs of 12 gauge adjustable mounting rails tapped 10-32 on EIA universal spacing.
- Frame - 16 gauge steel; doors - 18 gauge. 19" panels, fit front and rear openings.
- Shipped completely assembled.

Bonus Features

- Most effective shielding method assures an average EMI/RFI shielding of 55 dB, up to a maximum of over 70 dB, through a frequency range from 30 to 1,000 MHz.
- Doors have wire mesh gasketing to provide best shielding. Gasket is attached with clips for easier repair or replacement.
- Heavy duty hinges and multipoint latching mechanisms on door allow uniform pressure on door gasketing for greater shielding effectiveness.

Finishes

Royal blue textured (RB) and Gray textured (GT).

RACKS

OPEN RELAY RACKS

Ideal for installations where easy access to components is a top priority. Each built for years of solid, trouble-free service, as well as obvious ease of service where frequent attention is desired (i.e. telephone switching systems, etc.).

RR-1263 SERIES

Design Features: Exceptionally strong structure made up of chassis-type base and supporting angles. Uprights, $\frac{3}{4}$ " steel channels, 3" deep; top plate, $1\frac{1}{8}$ " x $3\frac{1}{8}$ ". Rails tapped 10-32 on E.I.A. universal spacing. Base is $19\frac{3}{4}$ " x 22" and drilled for RC-7756 casters. Shipped knocked down.

Finish: Luster Gray (LG) and Black Textured (BT).

Catalog No.	Panel Space	Height	Weight
RR-1263	$31\frac{1}{2}$ " x 19"	$35\frac{5}{8}$ "	36 lbs.

THE STYLIST HEAVY-LOAD-BEARING CABINETS

Decorative rigid vinyl trim with woodgrain insert frames the front of this cleanly designed cabinet. Square corners enhance the unit's contemporary styling and, in turn, enhance the appearance and marketability of your product.

Design Features: 16 gauge steel. Rear fitted with louvered panel; 1 3/4"-high opening for cable access. Front and rear openings accept 19" panels or Stylist doors. Self-adhesive feet furnished.

Bonus Features: Full-width box flanges at top and bottom eliminate tilt and sway even when unit is loaded to its full 500-pound capacity. Cold-rolled steel structure is self supporting, no internal framework. Bustle-type door allows placement of panel behind door for meters, knobs, etc.

Finishes: Royal blue textured (RB) or gray textured (GT).

ACCESSORIES

For Series 2000, Series 60, Valurack, Concorde Series Upright Cabinet Racks.

The following key will indicate the cabinet rack on which the accessories shown on these pages may be used: Valurack (A), Classic II (B), Series 2000 (C), Series 60 (D), Concorde (E). Match the key letter under the accessory with the proper cabinet rack designation.

POWER OUTLET STRIPS

Power outlet strips can be used in cabinets, on walls or along work or test benches. Silver gray housings; no loose wires can come into contact with conductor wires. Strips snap into adjustable mounting clips. Grounding type 15 amp., 125 volt receptacles. 15 amp thermal-type circuit breaker with reset. Models 6 and 66 have 14 gauge 3 wire power cord, others have 12 gauge solid conductor. Both have 6 ft. cords. All components U.L. approved.

POS-9	9	60"	4 1/4 lbs.
POS-11	11	72"	4 3/4 lbs.

*Surge Suppressed

SURGE SUPPRESSOR

A-B-C-D-E

Provides protection to data or word processing equipment and other sensitive electrical equipment from sudden "spikes" or high energy voltage. Prevents equipment damage, lost or distorted data. Clamps transient impulses in 10 Nanoseconds. Maximum "spike" current 2000 amps. 15 amp thermal type, circuit breaker with reset. 14 gauge, 3 wire, 6 foot power cord, all components U.L. approved.

ADJUSTABLE SLIDE DRAWER

Fit cabinets with 19" panel space. Adjustable slides. Support heavy loads even when fully extended. Silver anodized handles.

Panel Finishes

White textured (WH) and Luster Gray (LG)

H-9355 Handle only for drawer.

CASES

STANDARD FEATURES OF CASES

- A.T.A. Style
- Patented double angle construction
- Unique metal to wood to metal riveting
- Hi-density polyester foam
- Heavy grade formica laminate: 1/4" in black, blue, white, red, green, gray, orange or yellow. 1/2" in black, blue, gray (optional aluminum)
- Steel reinforced webbed lid stays (where applicable)
- 1/2" Plywood casterboards on cases with wheels
- Full length piano hinge (where applicable)
- Rust Resistant sessions hardware featuring recessed, spring loaded catches and handles, stacking or ball corners, and heavy duty corner braces
- Custom extruded, deep grooved aluminum valance
- 1/4" or 1/2" furniture grade plywood...no knots
- Combo cases for multiple units, accessories, etc.
- Large variety of rubber or steel casters
- Extra compartments and trays
- 1/4" Plywood laminate with double angle and valance
- Extra handles
- Shock mounting
- Security locks

Camera Cases

Construction workers wear goggles to protect their eyes...CALZONE CASE supplies protection for the delicate "eyes" of your video system...the camera. CALZONE surpasses case industry standards. We construct our products using the same space age materials and technology that developed the units we protect. Advanced FORMICA covers our choice, furniture grade plywood, making a tough laminate that far exceeds plastics or fibers. At CALZONE we innovate, not imitate.

Audio Cases

Tape recorders, audio mixers, turntables, whatever, CALZONE has a case already designed for most audio equipment. Custom cases are also available at no extra charge. For a professional audio production, choose the case designed and built by professionals...CALZONE.

Projector Cases

From the simplest 8mm projector to the most complicated multi-slide set-up, CALZONE has a case designed to suit every need. We utilize every spare inch of space to give the user as many applications as possible. Projector cases have compartments for reels, cables, etc., and can be custom ordered to hold more than one unit.

Monitor Cases

A.V. presentations are only as good as the monitor they are viewed on, and at CALZONE our aim is to get the unit there in operating condition. We construct our A.T.A. style cases by incorporating our patented double angle aluminum. This metal to wood to metal principle insures a permanent, bonded case for years of trouble free transport. Our custom extruded aluminum valance insures an easy closing fit that keeps your monitor in shape and the elements outside. All this, including our precision cut foam, gets the job done.

VTR Cases

With mobile A.V. showcases being a major sales tool for advertising companies and corporate presentations, a need has always existed for high quality travel cases for such delicate equipment. These cases must not only withstand abuse from airlines and truckers, but also be available to meet seemingly impossible deadlines. CALZONE CAN DELIVER.

Rackmount Cases

Most equipment used today that is made rack mountable is made that way for a reason. Equipment made to fit into racks should not be piled onto one another or lined up on the tops of speakers or other equipment. Whether they be power amps, equalizers, cross-overs or effects, you need to protect the delicate equipment that makes up your sound.

Convoy Cases

Ideal protection for around-town and ground transport of small and medium-sized instruments. 1/4" thick ABS plastic, 1/2" charcoal poly-ether foam lined, heavy duty, spring-loaded handles.

Camera Cases

VTR Cases

Projector Cases

Audio Cases

PRO-LINE II SERIES®

Styled after the Calzone A.T.A. approved Escort case, PRO-LINE II offers durable and attractive road case protection, yet, is priced more within the budgets of today's musician and club performer.

PRO-LINE II is made of the same 1/4" luan mahogany plywood as our A.T.A. line and is laminated to an exterior covering of rigid, vinyl tollene.

All PRO-LINE II cases are constructed with Calzones patented double-angle, spring-loaded handles, small, recessed Sessions catches and custom-designed steel corners. High density poly-ether foam lines the interior. PRO-LINE II cases are available for most instruments and equipment as well as selected rack mount sizes.

* PRO-LINE II is a registered trademark of the Calzone Case Company.

A/V & Video Cases

Fiberbilt has designed and engineered a wide range of A/V and Video, shipping and carrying cases specifically for hundreds of commonly used pieces of equipment.

Padded Adjustable Cases

Quick, easy, do-it-yourself partitioning methods to fit your particular needs for carrying or shipping cases.

Padded Partitions

A patented system of thickly padded partitions interlock with each other and with the padded sidewalls of the case by means of the tongue-and-groove principle. Slots spaced 1" apart in the padding of the partitions and sidewalls provide for any compartment arrangement to cushion your equipment perfectly with shock absorbing foam padding. The partitions can be rearranged or added to at any time and the case is fully insulated against heat, cold and dust.

Diced Foam

Diced foam full depth padding "picks out" to provide any shape or size cavity for the ultimate in equipment protection.

An ingenious and very practical new Adapt-A-Case concept lets you "pick out" the contour areas you need from the one-inch thick layers of grid pattern, partially-cut-through foam. The Adapt-A-Case way to provide snug-fit protection for the most delicate equipment.

Sales Aid Cases

Fiberbilt's design and manufacturing expertise can help you achieve the perfect case to display and protect your product so that it remains in tip top condition.

Our stock cases are designed to display specific products to maximum advantage. Our individually designed cases can do the same job for your product no matter what it is.

Just send us your samples, and we will submit a sketch or layout without charge. Cost estimates also submitted on any quantity — whether a single case or thousands. Whatever the product, we have the experience to custom design a case to your exact specifications.

Protective Carrying Cases

Your product, no matter how delicate, is protected by these strong, attractive, and lightweight carrying cases.

Our stock styles can be obtained with either specially die-cut foam inserts and partitions, or with our patented adjustable partitions.

Special cases in any style or size can be manufactured and customized to your specific needs . . . economically, even in small quantities.

Protective Shipping Cases

Your product is protected when shipped by land, sea, or air in one of Fiberbilt's many distinctive and protective shipping cases...rugged, durable, lightweight.

Pick your exterior: Aluminum, Polyplex, or Fiberglass bonded to plywood — to give a lightweight, yet tremendously rigid and durable shell. Or, for lower weight and cost, choose a high density polyethylene case. No matter which you select, you've got a rugged exterior designed for heavy cameras, TV monitors and other delicate equipment that you want to travel safely.

Inside choose special padding, contoured foam, partitions or trays, designed by our engineers to cushion your equipment to take the roughest knocks.

Rack and Shock Mount Cases

Shipping trunks for rack mount electronics, with 2" deep removable covers front and back. A 2" thick layer of shock-absorbing foam between the inner shell and the outer shipping case protects valuable electronic rack units.

Computer Hardware Cases

Fiberbilt manufactures a complete line of cases for shipping and carrying computer equipment. Call for details on a case for your particular piece of equipment.

CARRYING CASES

KVP-1A and KVP-1B

Specially designed for the Sony BVV-1 (with the VA -1 or VA-1V adapters), the **KVP-1's** are constructed of durable DuPont Cordura nylon, long-lasting Evazote closed-cell foam, nickel-plated steel hardware, dependable Velcro closures, and sturdy YKK zippers, the **KVP-1A** and **KVP-1B** allow for easy portability of the recorder and its accessories.

The **KVP-1's** feature hooded openings for easy access to cable ports, convenient openings for attaching external batteries and wireless microphones, and a large pocket for extra batteries and tapes. Also standard are built-in white balance panels, convenient hand and shoulder straps, and a front pocket.

However you decide to use your Betacam, the **KVP-1's** give you the versatility you need.

Kangaroo Super-Tough™

The **Kangaroo Super-Tough** is the first camera case that lets you specify the size, to insure a snug fit for maximum protection for your camera or cam-corder.

The top-loading **Super-Tough** features our exclusive Tri-Fast zipper that lets you open the case three-ways: to either side or all at once. The triple-hemmed, U-shaped aluminum frame, combined with our shock-absorbing Evazote closed-cell foam padding, provides the ultimate in protection without the bulk of a hard case. Zippered inner pockets on both sides hold extra batteries, tripod plate, tapes, headset — all the accessories right at your fingertips. Convenient stand-up hand straps let you grab the case with one hand, while the padded shoulder strap provides comfort over distances.

The **Super-Tough** can be ordered to any length, height, and width, to provide custom-sized protection at a non-custom price.

Kangaroo Raincover

The first functional raincover designed to completely enclose the camera (Sony BVW-3, BVP-3) from harsh weather, while enabling the user to change tapes, batteries, etc. without having to remove the cover. The unique zipper system allows opening and closing around any point, while the clear vinyl panel allows all meters and lights to be easily visible. The camera can also be mounted on a tripod, and is designed with a built in pouch to accommodate the Anton/Bauer battery. There's even a flap on top allowing the unidirectional microphone to be exposed and protected.

Rain, dust or whatever your environment, you can be sure the Kangaroo Raincover will meet the challenge. (Other models available 1st quarter, 1985)

KVP-20

The **KVP-20**, specially designed for the Sony BVW-20, provides the same efficient organization and convenience that goes into all of our Kangaroo Packs. Constructed of the same durable materials that go into all our products, the **KVP-20** features a hooded opening for easy access to cable ports, built-in white balance panel, and a convenient BP-90 battery pocket. Also standard are an ample front pocket and convenient side pocket for carrying tapes.

The **KVP-20** is the ideal addition to complete any Betacam system.

KANGAROO VIDEO PRODUCTS, INC.

10845 Wheatlands Ave. "C"
Santee, CA 92071-2856

CARRYING CASES

Kangaroo Semi-Tough™

The original side-loading camera case, the **Kangaroo Semi-Tough** is ideal for airline travel, or those limited space situations where having your camera with you is a must. The **Semi-Tough** features a rigid frame of tough aircraft aluminum completely surrounding the camera, while a convenient detachable pocket holds batteries, tapes, and cables. The **Semi-Tough** comes complete with hand strap and heavy-duty padded shoulder strap for over-the-shoulder carrying.

The **Semi-Tough** will fit the Ikegami HL-79 series, Sony BVP 300 series, Hitachi FP-10 w/battery, FP-21, FP-22, SK-81, SK-91 and similarly sized color video cameras, complete with the most common 2X extender lens systems.

Kangaroo Nagra Pack

The **Kangaroo Nagra Pack**, designed for Nagra recorders with 5" or 7" tops, provides the same basic convenience and protection that has gone into all of our video packs. The **Nagra Pack** features detachable pockets to hold tapes, batteries, wireless microphone, cables, while the front pocket holds four 7-inch tapes or eight 5-inch tapes. A convenient back flap provides quick access to batteries, while the clear rain flap allows use of controls while still providing protection from inclement weather. There's even a front sleeve to hold a clapboard.

The **Kangaroo Nagra Pack** gives Nagra users the secure, lightweight convenience needed for field recording.

Kangaroo Video Pack

The **Kangaroo Video Pack** provides efficient organization and convenient access for all the gear you need to carry. Designed by a news photographer to meet the rugged demands of ENG field use, the original **Kangaroo Video Pack** was the first recorder bag to provide straps and pockets to hold tapes, batteries, cables, microphones — everything you need to get the job done. Even white-balancing is easy with the built-in white-balance panels. Compact enough for one-man operation, versatile enough for two-man crews, with the **Kangaroo Video Pack** you can pick up and go, knowing that you have everything you need for a simple interview or an all-day SWAT operation.

Kangaroo Gripper™ Strap

The **Kangaroo Gripper Strap** is a heavy-duty shoulder strap that won't slide off nylon parkas, ski jackets, or other slippery material. Padded with our durable Evazote closed-cell foam, the **Gripper Strap's** unique three-way action gives you important shock-absorbing capability to carry even the heaviest equipment more safely and comfortably than ordinary shoulder straps.

The **Gripper Strap** comes with two sliders for easy attachment and adjustable length. It's available in brown, blue, green, orange, and gray. It fits all Kangaroo Video Products carrying cases, and many other bags and cases.

CARTS/CASES

PORTA-BRACE™ CARTS AND CARRIERS FOR ALL YOUR PORTABLE EQUIPMENT

PORTA-BRACE™ GRIP

The Grip is a versatile, heavy-duty cart for studio or field use. It is compact enough to be loaded into a station wagon or van, yet it will hold an extraordinary amount of equipment in a variety of arrangements. Adjustable shelves can be positioned to accommodate a wide range of video systems. Equipment can be secured with a unique strapping system.

Sturdy 16" spoked wheels are mounted on an adjustable axle that can be positioned to balance the loaded cart. An extra set of handles is provided in front, to allow two-person lifting. The Grip comes complete with padded shelves, strapping system, and shock cords. The width of the Grip, between the vertical bars, has been increased to 19½" to provide more carrying space to accommodate standard modular stack-mounted components. Accessories below increase its versatility. Overall size is approximately 27"W x 28"L x 40"H. Weight is 60 lbs.

GRIP ACCESSORIES

Large Utility Case will hold any number of items—tapes, mikes, clamps, cables, etc. Main compartment is 5½"x 11"x 13". Two side pockets are 3"x 4½"x 12". Front pockets is 2"x 9½"x 11½". The case attaches between handles or between wheels.

Utility Case is a two-compartment, nylon zippered case designed to hang in the space between wheels or between handles.

Tripod Quiver holds a tripod snugly, with or without camera attached. The tripod can be quickly removed or left in place for shooting. Two sizes—for large or small tripods.

Light Stand telescopes, can be raised to 8 ft., ½" top stud.

PORTA-BRACE™ BACKFRAME-WHEELBASE SYSTEM

This highly versatile system allows equipment to be carried in either of two comfortable and convenient ways—on the back, or on wheels. The backframe is the original Porta-Brace™ Backpack Carrier, which distributes the weight of recorder and accessories comfortably between shoulders and hips. The recorder is protected in a fitted Porta-Brace™ case that mounts quickly and securely on the frame. The loaded backframe can then be snapped onto the wheelbase, creating a compact, easily maneuvered cart.

The backframe can also be equipped with a Porta-Brace™ camera arm, which supports camera at eye level where it can be swung into shooting position—or out of the way, freeing hands and face.

T-Frame	\$154.00
Wheelbase	\$76.00
See other page for specific recorder case	
CA-L Pouch fits under recorder on frame	\$39.00
Camera Arm available, inquire on correct size and style for your camera	\$52.00

CAMERA CASE FOR SINGLE-TUBE CAMERAS

Each case contains a thick layer of polyester foam, die cut to fit your camera model—fully assembled, with lens, viewfinder, handle, etc., all in place and ready to use. Velcroed straps hold the camera securely couched in this foam cavity. The bottom of the case is protected by hardboard, topped by a layer of rigid foam. The light, tough outer shell is made of two layers of cordura nylon, around a layer of polyethylene foam padding. The case opens, quickly and fully, with a single heavy-duty zipper around three sides.

CASES TO MEET EVERY PROFESSIONAL PORTABLE VIDEO NEED

RECORDER CASES

Porta-Brace™ cases are made for most portable video recorders. All are designed to provide custom-fitted protection in the field while allowing immediate access to controls, connections, and batteries through weather-protected openings.

The cases are constructed of two layers of sturdy urethane-coated Cordura nylon sandwiched around a polyethylene foam core. Zipper closes case around recorder. Access openings are protected by velcroed flaps; cable connections are protected by velcroed rain boot. All cases have sewn-on accessory front pockets and velcroed cable-organizer straps. A white balance is sewn into cover, also a separate white balance card is provided for use away from recorder. All are equipped for attachment of optional accessory pouches as well.

PRODUCTION CASES

Designed for video and film work, this line of general-purpose cases will carry all accessories needed in the field. They take the place of gym bags, cardboard boxes, or milk cartons which traditionally have been used. A large array of accessories can be carried in see-through compartments, movable partitions, and many pockets. Used in combination with Porta-Brace™ recorder cases and camera cases, all needed field equipment can be carried and protected. Constructed on metal frames with hardboard and foam walls, these Cordura™ nylon cases won't sag or collapse under heavy loads.

PRODUCTION CASES

TRIPOD BAGS

Made of the same fine materials as KIWI camera bags, the TP-21 and TP-22 are designed to protect and store your tripods, lighting umbrellas, or light stands. And because they are available in two different sizes, you can choose the one that best suits your equipment. Both bags can be comfortably carried by their attached, padded handles.

SMALL CAMERA BAG

The EP-2 is a small, lightweight pouch designed especially to protect your 35mm automatic rangefinder camera or portable radio. The attached belt loops allow you to secure it to your side for hands-free accessibility.

Model	Description	Size	Wt.	Price
EP-2	Extra Pocket Belt Bag	8x5	5 oz.	\$12.95
TP21	Tripod Bag - Regular (Smoke Only)	31-1/2x8-1/2	15 oz.	34.95
TP22	Tripod Bag - Large (Smoke Only)	39-3/4x11	1 lb. 6 oz.	44.95

COLORS: SMOKE GREY — BLACK — BLUE
(Colors may be substituted, unless no substitution is specified)

CAMERA BAGS & ACCESSORIES

ZOOM HOLSTER

Designed for fast action photography, the Zoom Holster holds and provides quick access to any 35mm SLR with winder and zoom lens attached. It can be secured to your waist through its webbed belt loops, or carried by the CB-9's removable shoulder strap. The top is hinged with VELCRO for easy opening. The Zoom Holster assures you that you'll have your camera available whenever you need it.

TROLLEY/MONITOR STAND

Video System Trolley

(Order Ref. VS/1000 and Platform P27)

The VS/1000 will carry a complete video system (Television receiver/monitor, video recorder and other equipment) as a mobile unit, to give ideal conditions for operating and viewing.

EQUIPMENT ACCOMMODATION

The television receiver locates on the adjustable bearer. This unit will hold cabinets from 400mm (16") to 1000mm (39") wide. Video recorders or other equipment are carried on the platforms which are height adjustable.

Carrying capacity is sufficient to accommodate equipment of up to 115Kg (250 lbs.) in weight. Maximum width of the trolley is only 630mm (25") enabling it to pass easily through narrow doorways.

Trolleys may be dismantled for storage or transportation whenever required.

HOW TO ORDER

To obtain a complete trolley as illustrated quote:

- 1 x VS/1000 Trolley
- 1 x P27 Platform

Television Monitor Stand

(Order Ref. T/32/EP)

- Robust all steel construction provides an exceptional margin of strength. Safe and stable with equipment of up to 90Kg (200 lbs.) in weight.
- The top unit is infinitely adjustable and will hold all television cabinets from 400mm (16") to 1000mm (39") wide.
- Height adjustment can be made by interchanging the standard 800mm (32") column with other lengths available.

The stand, which consists of base, column and top unit, is simple and quick to assemble, and may easily be dismantled for storage or transportation.

The television firmly locates on the adjustable top unit between the arms which extend and lock in position. The set may be screwed to the mounting if required.

6000 SERIES Control Consoles and Equipment Racks

The 6000 Series electronic equipment consoles and vertical rack frames are specifically designed for use in television studios. All 6000 Series racks provide space for standard 19" rackmount panels. Ample equipment space above the writing surface was a primary consideration in the design of the 6000 Series equipment racks.

The Model 6000 Low Bay Control Console consists of a 43" high rack with a writing arm and a sloped opening above the arm. The sloped opening provides 14" of equipment mounting area. An additional 19.25" of vertical opening is provided below the writing arm. Writing arms are 18" in depth. Arms up to 25" in depth may be ordered.

The Model 6100 High Bay Control Console is similar to a Model 6000 Low Bay Console but with an additional 17.5" of vertical rack opening above the sloped opening. This ensures ample equipment space above the writing surface and within easy reach of the operator. The console is 63.625" high.

The Model 6200 Vertical Equipment Rack provides 71.75" of continuous vertical equipment opening. The total height of the Model 6200 is 78".

Up to four consoles or racks may be bolted together and shipped as one unit. Consoles have a continuous writing arm of the proper width, e.g. a two-bay console will have a continuous arm two bays wide. The writing arm hinges down for shipping. Each section is fastened together with 1/4" bolts.

The 6000 Series consoles and racks can be supplied with standard punched rails for Tinnerman type fasteners, or with optional 10-32 tapped, permanently installed, nut strips.

The outside base dimensions of each rack frame are 22" wide by 25" deep. To accommodate floor mounting, 4 each 1/2" diameter holes are provided within the confines of the base near the corners of each rack.

Each console and rack contains two cable-access ports in the rear of the base. Each access port has a rectangular snap-in plastic grommet with an opening of 1.625" x 3.625".

All rack frames are constructed with 14 gauge or heavier steel. All 6000 Series Racks are supplied as standard with rear doors and end bells. The rear doors and end bells are constructed of light gauge steel with reinforcing steel structures on the inside.

All 6000 Series equipment is supplied with light gray frames and dark blue end bells and doors. Customer preferred colors are available upon request. All external surfaces are professionally finished using baked-on epoxy or vinyl paint. All inside surfaces are treated or finished sufficiently to prevent corrosion and oxidation. Writing arms are constructed of white formica over pressed wood. They are supported by a rectangular steel frame attached to the console at each end. The support frames are constructed so as to allow ample cutout area in the surface of the writing arm for the mounting of equipment such as special-effects generators, switchers, and keyboards.

Model 6000-1
 Low Bay Control Console—with 14" sloped opening above an 18" writing arm and 19.25" below writing arm. 22"W x 25"D x 43"H.
