Square D Locking Plates

To Adapt Square D Meter Trims to Standardized Switches

No. 24352

The complete line of Square D meter trims, 11000 series, can be used with the standardized switches. This is accomplished by means of locking plates which fit into the standard opening in the combination type end wall, or in the case of locking plate, Cat. No. 22383, fit into the end opening of the switch.

The locking plates which make it possible to use the 11000 series meter trims on standardized switches, provide for the 30, 60 and 100-ampere switch installations when the combination end wall having the standard opening is used. On 30-ampere switch installations the end wall type locking plates fitting into the end opening of the switch are also provided.

For 30-ampere Switch Installations

*24352	Shutter Type	\$.20
22383	End Wall Type	.40

*Used in combination end wall, Cat. No. 22329.

For 60 and 100-ampere Switch Installations

Cat. No.	Description	Price Each
*24483	Shutter Type	\$.30

*Used in combination end wall, Cat. No. 22429.

Square D Steel Meter End Walls

For 30-ampere Switches

When desired, meter end walls, which fit into the end opening of the standard switch, can be supplied. The terminal chamber of the meter sets down into the opening and the meter end wall is fitted over the terminal chamber. Meter end walls are furnished for each type of meter in common use. When this type meter wall is desired for Square D 60 or 100-ampere installations, the meter end designed for the 2-pole, 100-ampere switches of other manufacturers fits all Square D 60 and 100-ampere types.

Square D Steel Meter Shutters

Designed to enclose the meter terminal chamber and the conductors between the switch and the meter. Meter terminal chamber projects into opening at top of switch. With the adoption of the standard opening, all that is necessary is to remove the blank steel shutter, install the meter and insert a metal meter shutter into opening.

Interlocking mechanism is designed to permit accessibility for inspection to qualified persons. An inherent weakness of many enclosed switches is their inaccessibility to inspection, without disconnecting the load and shutting down production.

Bull Dog Safety Type Switches are so designed that the interlocks may be temporarily neutralized to permit of a thorough inspection of the switch in any position. This is very important—lack of inspection to any mechanical or electrical apparatus may result in dangerous conditions.

Springs where used, are designed so as to allow a wide factor of resiliency and to be normal when not functioning. Springs, however, are only an auxiliary. Bull Dog Safety Type Switches can be opened and closed even if the springs should break or be intentionally removed. Springs serve only to accelerate the action.

“Bull Dog” Safety Type Switches are quick (positive) make and quick-break.

After the action is started the opening and closing of the switch is beyond the control of the operator, on all sizes that may be used as operating switches. The opening and closing mechanism is independent of the springs, which are merely used to increase the speed of action, a highly desirable and necessary feature where safety type switches are opened and closed under load.

A few switches of the larger sizes and higher voltages, as well as all double throw switches, are listed without quick-make and quick-break features, since such switches are generally used for disconnecting purposes only—not under full load. If desired, however, they may be equipped with auxiliary quick-break attachments at a slight additional cost.

The switch may be removed from the box as a unit, without removing the operating mechanism or removing the cabinet from the wall. The inter-locking operating mechanism may be removed as a unit, without necessarily removing the switch from the box. Parts are standardized and made by dies designed for the particular part so that replacement parts can readily be secured, if required.

We have avoided barriers, shields and all features which would hide the operating parts of the switch, as the switch parts should be seen and immediately adjusted or repaired if required, at any time fuses are replaced.

When the switch parts are covered it is impossible of course to see and repair in time any defects which might possibly have developed, and these parts should be readily visible to the electrical maintenance man whenever cabinet is opened.

Bull Dog Safety Type Switches are not designed as to make it impossible for the experienced electrician to get in touch with live metal parts but are so designed that it is impracticable to come in contact with live metal parts, without intent.

The box dimensions were determined by actually wiring up the switches, taking time studies of the period required to properly connect them without subjecting the cable insulation to any undue strains.

All switch parts (except 30-amp. porcelain base switches) are built-up, milled, soldered and pinned. The jaws are flared to ensure easier entry of the blade and to eliminate arcing points from contact surfaces.

Bull Dog Safety Switches

Switch Blades and Crossbar Construction

Illustration shows the blade and crossbar construction used in 30, 60 and 100-ampere Bull Dog Safety Switches, while in 200, 400, 600, 800 and 1200-ampere switches heavier type blades are used.

The crossbar consists of a steel rod, insulated by a one-piece horn fibre tube. Each blade has a fibre bushing through which the insulated crossbar is inserted, thereby giving a double insulation

and making it impossible for any of the blades to become loosened from the crossbar. This is the only construction which assures the operator that all blades of the switch are Open when the handle indicates the Off position. The main function of a switch is to fully open and close a circuit. With Bull Dog blade and crossbar construction the performance of the function at all times is assured.

The blades of Bull Dog Safety Switches are reversible. Should any blade become injured, turn it over and a new perfect contact surface is available.

Specifications

STEEL BOX is made of high grade, Code Gauge Steel, baked black enamel finish.

OPERATING HANDLE is provided with stops for the On and Off position so that the switch cannot be forced beyond the established limits.

The box proper is provided with conduit knockouts to meet almost any condition.

Special drillings will be furnished, when specified on order at 50 cents net per hole.

SWITCH BASES are of highest grade electrical slate, exceptionally thick, to stand the heavy service required of them.

Where parts are fastened together with screws or bolts, lock washers are invariably used.

CASTINGS have been avoided and forged parts used instead.

All bearings and bearing points are of drawn steel, ensuring a wide bearing surface and preventing raw edges which would otherwise cut into and weaken the movable elements.

SWITCH COVERS are of highest grade steel with a drawn panel. The main object of the drawn panel is to make the box proper shallow, thereby making the switch more accessible.

Locking Features

Illustration shows Bull Dog Safety Switch Cabinet with the door locked and the Switch in the On position.

By using three different locks, it is possible for the foreman, electrical maintenance man and millwright to each separately lock the Switch Off—a most desirable safety feature while repairs or changes are being made by the electrical or millwright departments. It also makes it possible for the foreman to lock the Switch Off whenever required.

NOTE.—The same lock is ordinarily used to accomplish the two-fold purpose of locking the switch box closed and the switch Off. Should occasion require it is also possible to lock the switch in the Off position and leave the cover latch in neutral.

Bull Dog Type A Safety Switches

Quick Make, Quick Break, Not Fusible

All 250 and 500-volt switches, 600-ampere and over, and 600-volt switches, 400-ampere and over are for disconnecting only, not to be opened under full load but can be opened under light load.

Bull Dog Safety Motor Starting Switches

Quick Break, Fusible at Bottom for N. E. C. Fuses

Straight Connected

To connect up Bull Dog Safety Motor Starting Switches all that is necessary is to bring the line wires and connect to the terminals marked Line and the load wires to the terminals marked Load. With the three-

pole switch—three wires in and three wires out.

The throwing On of the switch is one operation, in one direction. All that is necessary is to hold the handle in the starting position, until the motor develops its speed. Then by taking the hand off the handle the switch automatically goes into the running position. The removal of the pressure of the hand from the handle releases the shunt blades and throws the fuses into circuit, thereby protecting the motors in the running position.

With the Bull Dog Safety Motor Starting Switch it is not necessary to over-fuse the motor, since the shunt blades carry the excess current required for the motor to attain normal speed.

Safety Features

The switch is provided with interlocks, so that the switch will not be thrown On when the door is open; and so that the door can not be opened when the switch is in the running position.

Means are provided so that a qualified electrician may inspect the switch in any position. (This avoids the necessity of shutting down the motor to inspect the switch or fuses.)

Switch blades and fuses are dead when the switch is in the Off position.

It is impossible for one blade to stay in when the switch is thrown to the Off position. All blades must come out.

The blades are doubly insulated with horn fibre. The blades are reversible. In event that a blade should become damaged, it can be turned over.

All switch parts may be removed from the cabinet, without disturbing the box or conduits.

Switch may be operated with all springs removed. This feature avoids shut-downs of production, and allows for the running of motors, until such time as the electrician can make necessary repairs.

Junior Type C Enclosed Switches

Quick Make, Quick Break, Single-throw, Three-pole

Junior Switches are designed for use where severe service conditions do not exist. In analyzing the enclosed switch field, there are many conditions where switches are infrequently operated and where the possibility of severe overloads cannot reasonably exist.

For such purposes, Junior Switches, enclosed and externally operated, but without interlocking features, meet the requirements. The fact that lighter parts can be used because of the lighter service requirements, together with the omission of interlocking features makes it possible to manufacture Junior Switches at considerably less cost and offer them to the trade at a figure which should materially increase the use of enclosed switches.

Designed so that positive make and break is assured at all times. It is impossible for any of the blades to become detached from the crossbar.

Only one spring is used to perform both the functions of quick make and quick break. The mechanism is so designed that in the event of breakage or removal of this spring, the switch may still be fully opened or closed. Stops are provided in both the open and closed position so that the switch cannot be forced beyond its established limits.

The 30-ampere sizes generally are provided with a heavy porcelain base reinforced to reduce breakage to a minimum. 60-ampere to 200-ampere inclusive, as well as some of the 30-ampere sizes are mounted on heavy high grade electrical slate bases.

The steel enclosing cabinets are of handsome design with drawn panels, black enamel or luminized finish. The switch can be locked in the open position, provision being made for three locks. The door can be locked closed. Many knock-outs are provided in the cabinets which are liberally proportioned to facilitate the making of adjustments which may become necessary but chiefly to allow access for quickly and safely wiring up the switch and thus reducing the cost installed.

Seco Meter Service Switches

Sealed Service Side Fuse Type

For Single-phase and Direct Current Service

30-ampere Capacity

No. 9523

The Seco Switch is a complete meter service unit of the switch-fuse-meter connected type and provides a main switch and cutout, service side fuses, full meter protection, and testing facilities, all sealed within the cabinet so that none but an authorized person may have access to them.

Acco Meter Service Switches

Accessible Service Side Fuse Type

For Single-phase and Direct Current Service

30-ampere Capacity

No. 9353

The Acco Switch provides a complete meter service unit including main switch and cutout, with meter protective and testing facilities. It is of the switch-fuse-meter connected type.

When the switch is at "Off" position, the slide cover may be opened and fuses removed with assurance that fuse contacts are Dead; the switch cannot again be moved to "On" until the slide is closed.

Seco and Acco Standardized Meter Service Switches

Service Switches

60-ampere Capacity

For Single-phase and Direct Current Service

No. 9536

Seco and Acco Meter Service Switches are of the switch-fuse-meter type. They are so constructed that the fuses and testing facilities are carried on the face and the switch on the back of the block. The switches comprise a complete meter service unit including main switch and cutout, service side fuses, full meter protection and testing facilities.

Noark Standardized Meter Service Switches for Single-phase and Direct Current Service

2-wire

30, 60 and 100 Amperes

The Noark Service System is a complete line of standardized service installation devices which provides for all electrical service entrance and meter service requirements; single-phase, polyphase and direct current. All the control requirements and other essential features are embodied in a single, compact convenient unit arrangement. All live parts, such as switches, cutouts and contacts, and all connecting wires are entirely enclosed. Standardized fittings provide the flexibility necessary to care for any type of meter and for any combination of circuits.

The Noark Meter Service Switch provides all essential meter service requirements in a single unit which incorporates the following:

- 1.—Protection of life and property.
- 2.—Safety service switch, externally operated.
- 3.—Service cutout.
- 4.—Insurance against tampering and current theft.
- 5.—Meter-connection block.
- 6.—Meter-testing device.
- 7.—Lock-off, for Service Suspension.

A Noark Meter Switch includes the switch-out block with its switch, fuse receptacles, meter connections and testing contacts, mounted in and completely enclosed by the safety cabinet.

The cabinet has removable, interchangeable end-walls, which snap-lock into place. One of these carries hinged cover, the other has an opening through which the terminal chamber of the meter (either top or bottom connected) projects into the cabinet. For side-connected meters, simple adapter fittings are used.

*Westinghouse O. A-A 5-10-ampere meter and Westinghouse O. A-E 5-10-ampere meter are in different size cases with different size terminal chamber widths. End-walls for these meters are listed separately as above. Be sure to note terminal chamber width given with each, and be sure it corresponds with the width of the terminal chamber of the Westinghouse meter with which end-wall is to be used.

**The terminal chamber width of Sangamo Type H-2 meters

having serial numbers 2001000 and over has been increased in width over the width previously used on the same capacity Sangamo Type H-2 meters. In ordering, note terminal chamber width as given above with end-wall for these meters.

†When these meters are used without terminal chamber cover, end-wall is provided with terminal cover extension. Order catalogue No. 909773, price and standard package same as listed above.

Noark Standardized Universal Service Switches

Accessible Branch Plug Fuses

For Single-phase or Direct Current Service

Noark Universal Service Switch for Services Requiring Not to Exceed 4 Branch-circuit Fuses

This switch which combines the service entrance and meter service switch with the branch-circuit distribution essentials, being of standardized construction, naturally uses all the standardized endwalls and accessories, such as adapters, troughs and bushings.

Provides everything that may be had with a Noark Standardized Meter Service Switch, namely:

1. Enclosure of all live parts for the protection of life and property.
2. Safety service switch externally-operated.
3. Service cutout.
4. Insurance against tampering and current theft.
5. Meter connection block.
6. Meter testing device.
7. Lock-off, for service suspension.
8. The distribution branch cut-out block.

9. Enclosure of all branch-circuit wire connections.
10. Enclosure with ready and safe accessibility of the branch-circuit fuses.

This switch is made only in the 30-ampere size and only for plug fuses. There are several arrangements providing the different main and branch-circuit combinations, including 2 or 3-wire branch-circuits. Some of the devices provide for up to 2 branch-circuits, single-fused or double-fused, others provide for up to 4 branch-circuits, single-fused.

The cabinet is of the standardized 30-ampere dimensions, and takes standardized 30-ampere endwalls. It is fitted with a flat main cover hinged to the cover-hinging endwall at the lower end of the cabinet. On the outside of the main cover is an auxiliary cover which encloses the branch or load-side fuses. The handle, operating the main service switch within the cabinet, is on the right-hand side. It may be locked on or off on the outside of the cabinet, by seal or padlock, through the medium of the On and Off stop projections secured to the side-wall of the cabinet.

The porcelain base on which switch and fuse parts are mounted is supported on brackets projecting from each side-wall of the cabinet. The main switch is on the rear face of this base. The main fuses, connected on the service-side of the meter, are on the upper edge of the base. The branch or load-side fuses are on the front face of the base. When the main cover of the cabinet is closed, these outwardly facing branch fuses project through the opening in the main cover, which fits closely around the fuse receptacles so as to make it impossible to fish through into the cabinet from the outside when the main cover is sealed. Consequently, though the fuses connected to the service-side of the meter are sealed and inaccessible to anybody except authorized persons, the load-side branch-circuit fuses are at all times accessible to the consumer.

*This switch may be used for either 2-branch (single-fuse), or 1-branch (single-fuse).

**When ordering complete with endwall, state type and catalogue number of endwall desired.

Anderson Type L Automatic Time Switches
Double or Triple-pole, High Tension, Oil Break

This type of switch is constructed for handling alternating current up to and including 6600 volts, and is furnished either two or three-pole. This apparatus is used in connection with small current transforming apparatus where the lamps can safely be connected to the secondary coil of transformer in its position of maximum voltage. Prices listed below are for complete apparatus, including oil chamber and sufficient oil to fill same to working level.

For Potentials Not Exceeding 3300 Volts

Cat. No.	Cap. Amps.	No. of Poles	High with Terminals	DIMENSIONS, INCHES			Ship. Wt., Lbs.	Price Each
				Width	Depth			
11039	25	2	20 1/2	11	7	83	\$120.00

11080	25	2	20 1/2	11 1/2	8	94	\$200.00
11081	50	2	20 1/2	11 1/2	8	94	220.00
11084	25	3	22	19	8	129	240.00
11085	50	3	22	19	8	129	270.00

For the Sunday or holiday cut-out attachment installed in any of the above, add \$14.00 to price.

For the double daily operation attachment installed in any of the above, add \$14.00 to price.

For the time extension device installed in any of the above, add \$14.00 to price.

Type L Time Switches may have either the time extension or the double daily operation attachment, but cannot have both.

A 110-volt heating coil in switch tank only, is standard equipment in all the above. 220-volt coil supplied if so stated on order.

Anderson Type SL Automatic Time Switches
Double or Triple Pole, Oil Break
Electrically Wound

The Type SL is for controlling circuits up to 6600 volts. The switch is so designed that the current has a quick make and break and is opened and closed in a tank of oil.

Prices listed below are for complete apparatus, including oil chamber and sufficient oil to fill same to working level.

Specify on order full particulars of winding circuit.

For Potentials not Exceeding 3300 Volts

Cat. No.	Cap. Amp.	No. of Poles	High with Terminals	DIMENSIONS, INCHES			Ship. Wt., Lbs.	Price Each
				Wide	Deep

11105	50	3	23 1/2	19	9	137	†400.00

*One gallon of oil, included in list price, shipped with each switch.

†Two gallons of oil included in list price, shipped with each switch.

‡Three gallons of oil, included in list price, shipped with each switch.

The Sunday or holiday cut-out attachment, the double daily operation attachment and the time extension device cannot be put in any Type SL Electrically Wound Time switch.

A 110-volt heating coil in switch tank only, is standard equipment in all the above. 220-volt coil supplied if so stated on order.

For season changing device, add \$40.00 to price.

Wooden housings complete: For the 25 and 50-ampere, 2 and 3-pole 3300 volts, and the 2-pole 6600 volts add \$20.00 to list price; for the 3-pole 25 and 50-ampere 6600 volts add \$28.00 to list price.

Tork Clocks

For Turning Electric Lights On and Off Regularly

A Tork Clock is one of the simplest devices obtainable for automatically controlling the daily use of electric light with no other personal attention than a weekly winding. Simple to install. Simple to use.

Plain instructions for winding and setting are permanently and conveniently mounted in every Tork Clock.

Can be padlocked.

Once set and wound weekly, it turns the lights on and off at the same times every day. Switch may be turned on or off by hand without resetting the time motor. The time motor may be set on time without disturbing the times fixed for on and off operations.

10-day—On and Off Daily at Times Set

Cat. No.	Description	Price Each
15	15 Amperes, Single-pole, Indoor Type	\$20.00
215	15 " " " Outdoor "	25.00
130	30 " Double-pole Indoor "	25.00
230	30 " " " Outdoor "	30.00
166	15 " " Single-pole, Double Throw Indoor Type	25.00
266	15 Amperes, Single-pole, Double Throw Outdoor Type	30.00

Twice-a-day Attachment

TD Dial with Four Arms for Turning Lights On and Off Twice a Day with Tork Clock \$2.00

Standard package contains ten Tork Clocks, not assorted, and consists of five cartons of two Tork Clocks each.

Tork Clock Service

A Tork Clock has three principal parts: The case or housing, which once installed need never be disturbed.

The No. 10 time motor, the clock movement which is used in all Tork Clocks, which may be removed by loosening three screws without touching the electrical connections.

The switch unit, which may be removed by loosening one screw and removing the wires from the binding screws.

Time motors or switch units sent in for repair are systematically rebuilt, re-tested, any worn or damaged parts replaced, and re-timed as good as new. Time motors and switch units may be exchanged by mail or at any Tork Service Station for new units at the exchange price. In no event should the case be disturbed or shipped in.

Cat. No.	Parts Exchanged	Price Each
10	Time Motor Used in All Tork Clocks	\$4.00
SP	Switch Unit Used in Nos. 115 and 215 Clocks	6.00
DP	" " " " 130 " 230 "	8.00
SPDT	" " " " 166 " 266 "	8.00

Tork Service as a Guaranty

Motors are lubricated with a special oil which retains its lubricating properties at low temperatures. Any oil, however, will congeal in time, and Tork Time Motors should be exchanged every two years. Any parts which have given less than one year's service and which are claimed to be defective in any manner, may be exchanged at any Tork Service Station upon the payment of the exchange price as a deposit, which the Tork Service Station will agree to refund if the Service Department's report after examination of the part returned indicates such refund in order.

Tork Timers

No Winding—"On" and "Off" Whenever Set

Tork Timer Set for Automatic Operation

Tork Timer in Normal Position

Operates by setting the pointers and cocking the switch. The pointers are set at the hours at which the switch will automatically turn "On" and, later, "Off." The switch is cocked by turning it until the indicator shows red.

Pointers may be turned back to the normal position at any time if desired.

A Tork Timer turns "On" and "Off" (or "Off" only if desired) at any desired times within 12 hours after setting. Tork Timers do not tell time. The timer movement does not even run except while timing the automatic release of the switch, which may also be used constantly for any control.

A Tork Timer responds instantly at any time to any desire for any operation within these limits.

Simple to install and to operate.

10-ampere Tork Timers may be attached to an ordinary wall switch box or may be connected to conduits direct without additional junction box.

30-ampere Tork Timers may be connected to conduits direct without additional junction box, and are also adapted for making connections through back of case with installation on electric ranges and similar locations.

Tork Timers do not run the switch by the power of a clock movement and are guaranteed against defects in material and workmanship without time limit.

Sherman Soldering Lugs

U. S. Pat. Reissue 14401

Lugs are seamless all around. The solder cannot leak out at the closed end. Also better conductivity is secured. Round end lugs in small sizes are recommended. These soldering lugs or drawn copper terminals are now approved and listed by the Underwriters' Laboratories. The requirements are very exacting, and the designs and dimensions have been very carefully worked out to secure rating as approved fittings.

*Circular mils.

Sizes 1/4 to 3/16 inch furnished round end, unless otherwise specified. Sizes 5/16 inch and larger furnished square end unless otherwise specified.

STUD HOLE.—Size or position of stud hole may be changed or lugs furnished without stud holes at no additional charge. Any variation should be carefully specified.

TINNING.—Lugs tinned inside of tubular portion will be furnished at extra charge, depending on size.

MARKING.—For identification, as approved fittings, lugs will be marked with letter S and Underwriters' rating in amperes, placed crosswise of the flat portion at wire end.

To Select Terminals According to the

Sherman Soldering Lugs

Two-hole

Two-hole lugs are made from seamless tubing and furnished square end, unless otherwise specified.

Flat portion (E) may be made to order either longer or shorter but tubular portion (D) cannot be changed.

STUD HOLE.—Size or position of stud hole may be changed or lugs furnished without stud holes at no additional charge. Any variation should be carefully specified.

TINNING.—Lugs tinned inside of tubular portion will be furnished at extra charge, depending on size.

MARKING.—For identification as approved fittings, lugs will be marked with letter S and Underwriters' rating in amperes, placed crosswise of the flat portion at wire end.

Sherman Drawn Copper Connectors

The connector consists of two seamless terminals, so constructed that when bolted together both halves are in perfect alignment, and no part projects beyond the circumference of the tubular portion, so that a piece of flexible conduit or fibre sleeve may be slipped over the entire connection for insulation.

While two pieces are required to make one complete connector, they are described and listed by single pieces. Connectors are not shipped assembled, as they cannot be applied in that way.

On account of its small size, only the 1/4-inch connector is made wider than tubular part.

Size Wire (A) In.	B & S Gauge	APPROXIMATE DIMENSIONS, INCHES						Approx. Wt., Lbs. per 1000	
		B	C	D	E	F	G	H	
1/4	8	.186	1 1/4	3/8	1 1/2	1 3/2	3/2	3/8	9

These sizes have two stud holes. Two bolts and nuts are required for each complete connector, consisting of two pieces.

Sherman Fixture Connectors

Made of heavy brass. Has two heavy non-removable head-end screws and a brass sleeve. The Sherman Fixture Connector cannot rust and assures high conductivity.

Will connect all wires up to No. 12 with a maximum of two No. 12 solid or three No. 14 in either end.

Packed in small containers, insuring neat shelf stock and safe deliveries.

Carton, 100 each. Standard package, 500. Standard package weight, 12 pounds.

Price.....per 100 \$10.00

Sherman Set Screw Connectors

Number Plainly Stamped on Each Connector. A great help in re-ordering and saves much time and possible mistakes in sorting small mixed stocks.

Screws Heavily Galvanized, Hence Rust-proof. This prevents rusting in dealer's stock, and enables consumer to use connectors over again when removed from temporary work.

Neatly Boxed and Plainly Labeled. Insuring neat shelf stock.

These connectors are made from solid brass rod; all dimensions and proportions are carefully held to accurate size.

Four-screw connectors are made also with hole clear through, and two-screw connectors can be furnished in divided wall style.

NOTE.—On 30 to 200 ampere, drawn copper lugs will be regularly furnished, unless otherwise specified. Over 200 ampere, cast copper lugs will be supplied.

Universal Test Clips

This clip saves time in electrical work which requires quick temporary connections. Each clip can be used over and over again. For use with test sets, voltmeters, on shop testing devices, by telephone linemen, as a helix clip, by meter departments, by railway signal inspectors, in laboratories, in radio work, etc.

Universal Battery Clips

Battery clips are for use as a quick and ready means of connecting portable storage batteries for charging. They are lead coated to resist acid fumes.

No.	Description	Price Each
48B	Lead Plated B Battery Clip, Spread of Jaw 1/2-inch.	\$.07 1/2
24A	15-ampere, Spread of Jaws, 1-inch for Radio Batteries.12 1/2
21A	Clip only, 35-ampere, Spread of Jaws 1 1/2 Inches, for Automobile Batteries.20
11A	Clip only, 100-ampere, Spread of Jaws 1-inch, for Discharge Tests.65

No. 48B Universal Battery and Radio Clips

For use on B storage batteries. Made of steel, lead-plated. Lead coating protects the metal against acid. Has teeth on one jaw and notch on other.

Polarity indications; + for positive, plain for negative.

Cat. No.	Size Spring	Jaw Spread Inches	Length Inches	Price Each
48B	14-pound	3/8	1 3/4	\$1.15

No. 45 Pee Wee Universal Battery Clips

No. 45 is made of steel, nickel-plated finish.

Teeth on both jaws and 11-pound spring assures good contact.

Jaw spread, 3/8 inch.

For use on dry batteries and other points where lack of space is a factor.

Price, No. 45. each \$.10

No. 3 Assortment Sherman Wire Fittings

For Radio

This assortment includes only those articles which are in common use.

Packed in substantial and handsome boxes, arranged for counter display.

Consists of the following: 300 No. 19, 150 No. 20, 175 No. 22, 100 No. 23, 150 No. 34, 150 No. 35 and 50 No. 3 terminals; 50 No.

60 cord tips; 40 battery connectors; and 20 Sherman fixture connectors.

Size of box, 5 3/8 x 9 1/2 x 1 1/4 inches.

Weight, 2 1/4 pounds.

Price, No. 3 Complete. each \$12.00

No. 2527 Frankel Extension to Clips

Brass, nickel-plated.

Extension attached to clip, to reach obstructed and crowded corners that are out of reach of the clip.

Price, No. 2527, Extension only. each \$.40

No. 2544 Frankel Battery Charging Clips

Heavy steel with rivet pin. Lead plated. Fits any terminal. Length, 4 inches.

Price, No. 2544. . . each \$.50
 " Springs only.05

No. 2535 Frankel Electric Testing Clips

Made of brass, nickel plated.
Flattened back with bolt and nuts to attach connector.

Price, No. 2535.....each \$.60

No. 2533 Frankel Electric Testing Clips

Made of brass, nickel-plated.
Tapped for set screw.
Drilled to slip 1/8 inch.

Price, No. 2533.....each \$.48

No. 2530 Frankel Electric Testing Clips

Brass, nickel-plated.
Especially adapted for fine wire or charging light batteries.

Price, No. 2530.....each \$.20

No. 2534 Frankel Electric Testing Clips

Brass, nickel-plated.
Drilled with 1/8-inch hole.
Has screw back.

Price, No. 2534.....each \$.48

No. 2539 Frankel Electric Testing Clips

Made of brass, nickel-plated.
This is a radio clip, especially designed for finest work.

Price, No. 2539.....each \$.14

No. 2542 Frankel Electric Testing Clips

Nickel silver.

The pin pierces the insulation and makes a positive connection. Use teeth for fine wires. Has nut, bolt and washer making an extra strong connection.

Price, No. 2542.....each \$.65

No. 2523 Frankel Electric Testing Clips

Brass, Nickel-plated

It has no pin to pierce the insulation. Used for charging light batteries, etc.

Price, No. 2523.....each \$.40

Frankel Electric Testing Clips

The pin pierces the insulation and makes a positive test connection. Use teeth for fine wires.

For electrical tests or temporary connections, requiring no skinning, no taping of wires.

Price, No. 2521, Brass, Nickel-plated.....each \$.40
" " 2538, Nickel Silver....." .50

Small Rectangular Connectors

1 7/8 x 1 1/16 x 7/16 Inches

Convenient for making and breaking a circuit rapidly and frequently. Can be used on any battery circuit.

Price, No. 6536, Rectangular Connector Complete.....each \$.70

Medium Rectangular Connectors

1 7/8 x 1 1/4 x 3/4 Inches

For connecting portables, fans, small motors, etc. It is provided with two eye screws, one at each end, which can be used for anchoring the cord should it be deemed advisable to do so. Can also be looped together by this means, so that when separated the two parts can be located and connected without delay. Will make and break a circuit for any apparatus or lights using 15 amperes or less. Standard package, 200.

Price, No. 6535, Rectangular Connector Complete.....each \$.90

" " 6537, Plug Only....." .56

" " 6538, Receptacle Only....." .56

Large Rectangular Connectors

2 1/8 x 1 7/8 x 3/4 Inches

This connector can be used with safety for making and breaking 25 amperes on 125-volt circuits.

For experimental and demonstrative purposes.

For stage lighting, connecting motors and numerous other applications it will prove a reliable quick acting circuit controller.

A hole is provided in the larger part of the connector for tying the conducting cord, which eliminates all strain on the binding screws. The contact receptacles and plugs are separated by one inch of hard rubber composition, which makes a perfect insulation between the current carrying parts.

Price, No. 6540, Rectangular Connector Complete.....each \$1.20

" " 6539, Plug Only....." .75

" " 6543, Receptacle Only....." .75

Midget Separable Connectors—Small Size

The screw caps on each end are made of hard composition and will prevent shocks to the user, and also protect the connections of wires and binding posts, and prevent grounding or other troubles caused by exposed contacts and current-carrying parts.

This connector is used extensively on automobiles and launches, for connecting battery electric lamp circuits and other places where a quick connector is desired.

Price, No. 6501, Separable Connector Complete.....each \$.35

" " 6480, Plug Only....." .22

" " 6481, Receptacle Only....." .22

No. 3 Fahnestock Binding Posts

No. 30 Fahnestock Test Connectors

Made of special copper bronze spring metal. Two large clips riveted together. Both snap over the line. Made for different size wire. Used for test poles or for party line work. Length over all, 1 5/8 inches. Width, 5/8 inch. In ordering, state kind and size of wires to be connected.

Price, No. 30, Bronze.....	each	\$.15
----------------------------	------	--------

No. 31 Fahnestock Test Connectors

One large and one small clip riveted together. Large clip snaps over the line wire. The small clip does not snap over, and will take up to and including No. 10 B. & S. Used for attaching drop or jumper wires to line on junction poles or party lines. Length over all, 1 5/8 inches. Width, 5/8 inch. In ordering, state kind and size of wires to be connected.

Price, No. 31, Bronze.....	each	\$.10
----------------------------	------	--------

No. 33 Fahnestock Test Connectors

Temporary connector for emergency work and test sets. Will snap over a No. 8 B. W. G. Wire.

Price, No. 33, Bronze.....	each	\$.15
----------------------------	------	--------

THIS END SNAPS OVER THE WIRE

No. 34 Fahnestock Test Connectors

One end snaps over the line. Made in only one size. Snaps over a No. 12 B. W. G. Wire.

Other end does not snap over wire but will take any size wire up to No. 9 B. W. G.

Length over all, 2 3/4 inches. Width, 5/8 inch.

Price, No. 34, Bronze.....	each	\$.10
----------------------------	------	--------

Eby Binding Posts

Midget

Tapped base; size 5/16 x 3/8 inches. Slot will take No. 15 bus wire. 10 amperes.

Buddy

Solid stem 1/2 inch; size 3/8 x 1/2 inch. Slot will take No. 12 bus wire. 25 amperes.

Corporal

Tapped base; size 3/4 x 1/2 inch. Slot will take No. 12 bus wire. 25 amperes.

Dossert Solderless Connectors

Type A Two-way Connectors

Type A connector is for use on cable, stranded or solid wire rod and tubing. The connector should not

be used on a cable that is subjected to heavy strains. Sleeve is tapered at both ends and slotted lengthwise.

Type B Two-way Connectors

Is for use on stranded wire or cable only and is designed to make a joint which will withstand heavy tensile strains.

Type B connector is fitted with rings, one of which fits over bare cable, while the other is forced under first or second layer of strands, giving great tensile strength. Not made for conductors smaller than No. 0.

Type C Two-way Connectors

Type C two-way connector is furnished with round nuts and nipples which fit it for use on high-tension circuits. All connectors can be furnished

Type C in either Type A or B. When ordering state type desired, and give circular millage or gauge number of wire and state whether wire is solid or stranded. For example: 12 two-ways, Type C, Type A for 0000 stranded wire.

Reducers

Reducer is made in two-ways and three-ways. Illustration shows a Two-way Reducer. Used for connecting solid or stranded conductors of different diameters end to end. For cable it can be furnished either Type A or B.

When ordering reducers, state type desired, and give circular millage of cable or diameter of rod, or gauge number of wire and state whether wire is solid or stranded.

Elbows

The elbow is used to connect conductors that are at right angles to each other. It consists of a right angle nipple, two compression nuts, and two tapered compression sleeves when Type A, or two sets of rings when Type B. The elbow can be

furnished for any two sizes of cable, wire, rod or combinations of same. When ordering, give same information as is required for Type A or B Two-way Connectors.

Three-way Connectors

The three-way connector is used to make a three-way splice when the cables are at right angles to each other, that is, to splice two main wires or cables in a straight line and at the same time connect a branch wire to the main.

Type A can be furnished to connect any three sizes of wire, cable, rod or combinations and Type B to connect any three sizes of cable.

Cable Taps

The cable tap is used to connect a branch wire, rod or bleeder to a main wire, rod or bleeder. It does not splice the main, but simply clamps on to it. Equalizers are combinations of two cable taps. They can be furnished to equalize the load on any two sizes of cable.

Front Lugs

The front-connected lug is used for connect-

ing wires and cables to flat bus bars or front-connected switches, and for terminals on large machines used in the generation and conversion of current such as rotary converters, etc. The wire end of lug is equipped with a tapered nut and sleeve, by means of which the cable is held in the lug and electrical contact secured.

Dossert Solderless Connectors

Type Y Connectors

Type Y connector is used to make a three-way splice when the cables are not at right angles to each other. It consists of the Y-shaped three-way nipple, three compression nuts, and three tapered compression sleeves when Type A, or three sets of rings when Type B. Branches are double prongs and stem single prong. The special Y is used to make a three-way

splice when all cables are parallel to each other. It consists of a U-shaped three-way nipple, three compression nuts, and three tapered compression sleeves when Type A, or three sets of rings when Type B.

Back Lugs

Back-connected lug is used to connect wire or cable to bolt or stud. Wire end of lug is equipped with tapered nut and sleeve, by which cable is held in lug and electrical contact secured. The lug is connected to stud or bolt in the usual manner by means of contact nuts.

Angle Lugs

Angle lug is furnished with rectangular or round contact surface, the dimensions of which correspond respectively with those of front or back-connected lugs for the corresponding sizes of wire or cable. Can be furnished to connect cable at any angle, but standard angles are 45 and 90 degrees. Contact surface is furnished undrilled, but, if desired, bolt holes will be drilled without extra charge.

Swivel Lugs

Swivel lug is used to connect two wires or cables at any angle to the same stud or bolt. It consists of two lugs with round contact surfaces, and with the wire hole (nut) of each lug offset to one side, thus permitting a swiveling motion. They can be furnished to connect any two sizes of wire or cable to the same stud or bolt. When ordering, give circular millage of wire, and state whether wire is solid or stranded.

Insulating Covers

Insulating cover is furnished with Dossert Two-way Connectors in all sizes from 250000 C.M. to No. 14 inclusive. The sizes are No. 4 for all sizes of wires from No. 14 to 4, inclusive, solid and stranded, No. 1 for connector taking Nos. 1, 2 and 3 wires, No. 00 for No. 0 and 00 conductors, and the 250000 C.M. for 0000 and 250000 connectors.

Type F Stud Connectors

This stud connector consists of a nipple, which is equipped with a regular tapered nut and compression sleeve to take a certain size wire. The other end is tapped and threaded to receive the stud. In ordering give diameter and threads per inch of stud that connector is to be screwed onto, the gauge number of wire, and state whether wire is solid or stranded.

Type M Stud Connectors

This stud connector is used to connect wire or cable to flat strip or block. When ordering, give diameter and length of stud and number of threads per inch, circular millage of cable, and state whether wire is solid or stranded.

Type S Cable Anchors

Type S cable anchor is used to connect the end of cable to a strain insulator for the purpose of anchoring it, and can be used on stranded conductor only.

**Dossert Solderless Connectors
Type R Cable Anchors**

Type R cable anchor is used to anchor one cable and to take a branch wire off the anchored cable. It can be used on stranded conductor only. Consists of a Type B elbow and a clevis for the strain insulator, so arranged that the pull will be exerted on one cable only. It can be made for any two sizes

of stranded conductor. When ordering, give the circular millage of cable or gauge number of wire, and number of strands in conductor.

Type E Cable Anchors

Type E cable anchor is used to splice and anchor two cables that are at right angles to each other, and can be used on stranded conductor only. Consists of a Type B elbow and one eye for attaching the strain insulator by means of a guy rope. The eye is so arranged that both cables will be under tension when a strain is put on the guy rope. When ordering, give circular millage of cable or gauge number of wire, and number of wires in conductor.

Service Box Lugs

Used to connect wire to fuse. By the use of a sleeve with different size wire holes the same lug may be used for connecting all wires from a certain predetermined size down to the smallest size used. When ordering, give width of lug, diameter of binding screw, circular millage or gauge number of wire, and state whether wire is solid or stranded.

Service Box Plugs

This Service box plug is furnished with a round shank for making connection to fuse. When ordering, give diameter and length of plug or shank, circular millage or gauge number of wire, and state whether wire is solid or stranded.

Grounding Caps

The grounding cap is used for connecting ground wires to the end of a pipe. One end of the cap is threaded to take a standard gas pipe, while the other end is fitted with a compression nut and tapered sleeve, by means of which wire is connected to cap.

When ordering, give size of gas pipe and circular millage or gauge number of wire, and state whether solid or stranded. Special sizes will be made according to specifications at reasonable prices.

How to Order Dossert Connectors

Use the proper name of connector desired.

In ordering Type A connectors for concentric laid cables, give circular millage of cable, or exact diameter of cable, or exact diameter of one wire, and number of wires. Type A for solid wires, rods and tubing; give gauge number of wire, or exact diameter of rod, wire or tube, or circular millage of rod. Type A, for rope laid and flexible cable; state if cable is rope laid or flexible and give circular millage or gauge number, or exact diameter, or send sample of cable. The diameter for given size of rope laid or flexible cable is considerably larger than that of the same size concentric laid cable.

For Type B it is necessary to know the number of wires in a cable in furnishing Type B connectors, for the reason that the diameter of the core over which the inner ring fits varies according to the number of wires in the cable.

Do not use the words T joints or tees. In ordering connectors of that character, state plainly three-way or cable taps.

In ordering the smaller sizes of connectors from No. 0000 down, please be sure and state whether for stranded or solid wire.

Frankel Solderless Connectors

Frankel solderless connectors constitute a complete line of connectors for splicing either stranded or solid wire, without the use of solder.

As the compression nut is screwed on to the connector, the slotted jaw grips the cable firmly.

No. 2560 Two-way Connectors

Two-way connectors are used to splice two conductors of the same size end to end.

No. 2562 Elbow Connectors

Elbow connectors are used to connect conductors at right angles, these conductors being of the same or any two different sizes.

No. 2586 Reducer Connectors

Reducers are used for connecting two conductors of different sizes of cable or solid wire. They are especially useful in connecting solid round buses on switch-

boards to feeder cables.

No. 2568 Front Connector Lugs

Front connector lugs are used for connecting solid wire or cable to generator terminals on large machines or to flat bus bars or front-connected switches. These connectors are made with rectangular contact surface undrilled, but will be furnished drilled when so specified, without addition to list price.

No. 2569 Back Connector Lugs

Back connector lugs are used for connecting solid wire or stranded cable to bolts or studs, and are made with round contact surface. Contact surfaces are undrilled, but where desired they will be furnished drilled when so specified, without addition to list price.

No. 2570 Angle Connector Lugs

Angle connector lugs are made with round or rectangular contact surface at an angle of 45 degrees to the connector. Contact surfaces are undrilled but where desired they will be furnished drilled without addition to list price.

No. 2572 Right Angle Connector Lugs

Right angle connector lugs are made with round or rectangular contact surface at an angle of 90 degrees to the connector. Contact surfaces are undrilled but where desired they will be furnished drilled when so specified, without addition to list price.

No. 2561 Three-way Connectors

Three-way connectors are used to make a main line splice that is on a straight line, and a branch splice off of the main. If the main does not have to be cut except to make this connection, use a cable tap as listed on another page. They can be furnished to connect any three sizes of solid wire or stranded cable.

Frankel Solderless Connectors

No. 2575 Cable Tap Connectors

Cable taps are used to connect a branch of solid wire or stranded cable to main cable or wire. The tap consists of a hook for clamping on the main, and a connector attached to the shank of the hook for taking the branch. The hook is provided with an inner shoe, which can be adjusted by turning the shank or post of the tap.

The cable is connected to the main by placing the hook over the wire or cable from which the insulation has been removed and then inserting the shoe and screwing up the post until contact is made. The branch is connected up by inserting the bared end of the wire or cable in the connector and tightening up the compression screw.

No. 2576 Equalizer Connectors

Equalizers are used to equalize the load on two power cables that run parallel or at right angles to each other. They are made by combining two cable taps and are installed in the same manner that a cable tap is connected to a main. Furnished with connecting rod straight or bent, as desired.

No. 2574 Swivel Lugs

Swivel lugs are used to connect two parallel cables to the same stud or terminal. Also to provide a means of connecting two or more cables at any desired angle.

No. 2558 U Connectors

Frankel U connectors are used where it is desired to connect the ends of two parallel leads together such as resistance or heating element units. U connectors can be supplied with outlets of two different sizes if desired.

When ordering, specify distance between centers of outlets. Prices upon application.

No. 2559 Y Connectors

Frankel Y connector is used to make a three-way splice when the cables are not at right angles to each other.

This connector can be furnished to connect any three sizes of wire, cable or rod. When ordering, state sizes required and type of wire or cable.

Prices of Y connector for different combinations on application.

No. 2563 Plug-stud Connectors

Plug-stud connectors are used for connecting stranded cable or solid wire to a threaded stud or rod.

No. 2564 Stud Connectors

Stud connectors are used to connect wire or cable to block terminals by screwing the stud end of the connector into a threaded hole, or to strap terminals by inserting the stud end through a hole in the strap and clamping by a nut on the end of the stud.

Frankel Solderless Connectors

No. 2565 Grounding Tap Connectors

Used to connect wire or cable to a gas pipe for grounding a circuit. The pipe end of the connector is threaded.

No. 2566 Service Box Plugs

Used for making connections to fuses where a round stud is required on the connector for use in a screw clamp terminal.

No. 2587 Cable Anchors
Used to connect the end of a cable to a strain insulator for the purpose of anchoring it.

No. 2589 Cable Anchors

Used to splice and anchor 2 cables that are at right angles to each other. Consists of an elbow connector and one eye for attaching the strain insulator by means of a guy rope.

No. 2588 Cable Anchors

Used to anchor one cable and to take a branch wire off the anchored cable.

No. 2597 Collets

Frankel Collet consists of a threaded and split collar from which radiate 1, 2, 3, 5, 7, or 9 Frankel Fittings; particularly valuable for use with reactance coils.

Prices

For price of swivel lugs double price of lugs.

Equalizers are same price as 2-way connectors, plus special price of bar.

For price of special size cable tap, take two-thirds of price of larger end, plus one-third of price of small end.

Reducers are priced by taking one-half of each end, and adding.

3-ways are priced by taking one-third of each end, and adding.

Cable anchor style No. 2587 is same price as 2-way connector No. 2560.

Cable anchor style No. 2588 and No. 2589 are same price as 3-way connector No. 2561.

Collets are made in any combination of sizes. When ordering, specify size of center hole, size and kind of wire or cable, and number of outlets required. All collets are special.

Frankel Solderless Connectors

Specify type of conductor—solid, stranded, I.P.S. sizes, flexible, or special.

List prices cover connectors with plain finish for solid wire, stranded or flexible cable. Connectors for special size rod, tube, flexible or rope laid cable, are priced on application.

To order, specify style number, B & S gauge number or circular millage of conductor, and state whether for solid or stranded cable.

Strain connectors are made by cutting grooves on inside of slotted jaw. Add 15 per cent for this type.

Extra charges for patterns and design in development work, of special connectors.

Dimensions on request.

Benjamin Convertible Cut-out Bases

With Flush Safety (Dead Front) Covers

30 Amperes, 125 Volts

No. 59904

No. 59804

Base is one-piece porcelain with 3-point support which insures safe mounting.

Two styles of covers—flush and overhanging.

Overhanging covers are for use with standard surface mounting or flush type cut-out boxes. They fit snugly to inside of cut-out boxes and form gutters.

Covers are made of sheet insulation. Removal of covers is easy; gives access to all connections.

The fuse receptacles are designed so that it is impossible to "substitute with a penny" when a fuse blows. The compact grouping of these receptacles produces bases of comparatively small area. Large binding screws insure permanent connection and easy installation.

With Flush Safety Cover

Cat. No.	No. of Circuits		Size of Base Inches	Std. Pkg.	Net. Wt. Lbs., Ea.	Price Each

59816	16	8	10 x 12 x 3 1/2	1	6 7/8	7.50

These cut-out bases can be easily converted into 4 ordinary circuits as illustrated below.

Single Fused Branches 2 to 2 Wire

Single Fused Branches 3 to 2 Wire

2 Wire, 125-volt Mains
2 Wire, 125-volt Branches
8 Single Fused Branches

3 Wire, 125, 250-volt Mains
2 Wire, 125-volt Branches
8 Single Fused Branches

Double Fused Branches 2 to 2 Wire

*Double Fused Branches 3 to 2 Wire

2 Wire, 125-volt Mains
2 Wire, 125-volt Branches
4 Double Fused Branches

3 Wire, 125, 250-volt Mains
2 Wire, 125-volt Branches
4 Double Fused Branches

*This diagram does not apply to Cat. Nos. 59904 and 59804.

In addition, these cut-outs can be used for 3-wire branch circuits and individual metering of branch circuits.

Bryant Pyrotite Mica Cap Plug Fuses

Enclosed, with Hexagonal Window in Cap

125 Volts, for 15 Amperes and Less

Cat. No.	Cap. Amps.	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each	Schedule J3

Clearsite Plug Fuses

Non-renewable

Clearsite Plug Fuses mount the fuse link within the fuse body, thereby giving clear vision of the link. The drop-out type of link is used which lessens the internal operating pressure. The fuse body is made of heat-resisting molded insulation, black in color.

H & H Fuse Plugs

Schedule F

125 Volts

This Plug is renewable, it is only necessary to insert a new core. There is no metal to touch. As the old style flaring top has been done away with, there is plenty of room between the plugs to get a grip with the fingers. Std. pkg., 100.

Economy Renewable Cartridge Fuses

Ferrule and Knife Types

The absence of powdered filler eliminates the uncertain performance and varying ratings found in fuses in which filling material is used.

There is nothing in the fibre shell except the drop-out renewal link. The air space provided permits of rapid gas expansion with low pressure on account of small amount of metal in the link.

These fuses are made in ferrule and knife blade types. In the knife blade type there are no end holes and thus the direct venting of fire is eliminated. Gases are retarded by resilient and metal end washers which close both ends of fuse; and gases escape through the provision made by the clearance of the threads by which the brass cap is fastened.

The centering washer aligns and centers the blade parts which permits flexibility, thus allowing the blades to be adjusted into the clips in which the fuse is inserted.

Economy End Washers

For Knife Blade Type Fuses

When fuses are blown, the end washers may become damaged or bent to such an extent that replacement will be necessary before renewal can be made. A set of end washers consists of one metal and one of resilient material.

Outlet hoods can be furnished in the straightway type and for the various standard conduit sizes listed only. Straightway hoods can be adapted readily to side or back connection by use of a conduit elbow. If hoods are required for use with conduit other than the above standard sizes, the use of pipe reduction bushings is suggested as a ready means to adapt hoods to larger or smaller pipe.

*Two-pole switches, Types I-6-A to I-11-A inclusive, are equipped with two hooks operated simultaneously by one lever, in conformance with ruling of Underwriters' Laboratories that it be impossible to open the circuit by pulling one fuse only. In ordering specify Cat. No. and Type.

†For direct-current 3-wire circuits, these switches are equipped with two hooks operated by single lever; multi-phase circuits with three hooks operated simultaneously by one lever. Direct-current 3-pole switches equipped with solid neutrals.

600-volt boxes supplied with all hooks operated by one lever.

Buss Open Link Fuses

The listing below covers all popular and necessary sizes and types and is simplified to aid in buying this material.

Buss open link fuses can be obtained with many other styles of terminals and in larger capacities. When in need of any open link fuses not listed below send sample or complete description.

Fuses listed are not standard stock material. Great care should therefore be exercised in ordering this material as it is not returnable.

110 to 1000 Amperes
Terminal Nos. 7, 16, 10 or 28

Amp.	STANDARD No.	TERMINAL Slot In.	Width In.	Other Terminals	Car-ton	Std. Pkg.	Price Each
1 to 30	1	3/16	3/8	0, 2, 3	20	100	\$.10
35 " 60	3	3/16	9/16	2, 5	20	100	.14
65 " 100	5	1/4	11/16	7	10	50	.20

650 " 1000	28	5/8	2 1/8	25, 30	5	25	2.00

In ordering, be sure to specify exact amperage and centers desired. Unless otherwise specified, standard terminals as listed above will be furnished. The terminals listed under heading Other Terminals can also be obtained without additional cost.

Standard Railway Link Fuses

Amp.	Center to Center, In.	Terminal Slot, In.	Car-ton	Std. Pkg.	Price Each
50 to 100	2 1/4	5/16	10	50	\$.20
110 " 150	2 1/4	5/16	10	50	.30

Type D Link Fuses

Amp.	Center to Center, In.	Terminal Slot, In.	Car-ton	Std. Pkg.	Price Each
50 to 300	2 7/8 to 2 5/8	1/4	10	50	\$.15

Large Open Link Fuses

Terminals of cold rolled copper, entirely flat, one edge being slotted to receive the fuse strip.

Amp.	No.	TERMINAL Size In.	Thickness In.	Car-ton	Std. Pkg.	Price Each
1 to 1500	51	2 1/2 x 2 1/2	1/4	2	10	\$12.00
1 " 2000	52	3 x 3	1/4	2	10	14.00
1 " 2000	53	3 x 3	3/8	2	10	16.00
1 " 2500	54	3 1/2 x 3 1/2	3/8	2	10	20.00
1 " 3000	55	4 x 4	3/8	2	10	24.00

When ordering, specify exact amperage, center to center dimensions and size of hole required. If more than one hole is desired a sketch of the fuse must be submitted and 50 cents added to price for each additional hole.

Buss Fuse Wire

Buss fuse wire and strip will carry indefinitely current 10 per cent in excess of the values shown under heading capacity and will open the circuit in one minute when subjected to 50 per cent overloads of such ratings.

This is based on a distance between contacts or terminals of 2 inches.

Standard package, 25 pounds.

Buss Fuse Strip

Packed in 5-pound cans. All in one piece. Each strip is marked at the inner end of the coil with the ampere rating.

Standard package, 25 pounds.

Bryant Neutral Wire Fuseless Plugs

30 Amperes, 125 Volts
Schedule II

Can be inserted in neutral fuse receptacle of triple-pole cut-out base and soldered in place.

Designed to make possible compliance with the specifications of the National Electrical Code Rule which requires the omission of fuses from the grounded side of the line except at the cut-out base just preceding the lamp socket or other translating device.

Front connected fuse terminals are furnished with short screws, requiring heads to be countersunk.

Back connected fuse terminals are furnished with studs long enough for 2-inch slate or marble mounting.

NOTE.—Plain finish will be sent unless otherwise specified.

Columbia Steel Cabinets

National Electrical Code Extract Regarding Cutout Boxes and Cabinets

Thickness of Metal

	No. 16 U. S. Gauge— $\frac{1}{16}$
	No. 14 U. S. Gauge— $\frac{3}{64}$
	No. 12 U. S. Gauge— $\frac{7}{64}$
	No. 10 U. S. Gauge— $\frac{3}{32}$

Cutout Boxes and Cabinets with Hinged Doors and Screw Covers Types A, AX, AG and Screw Cover Pull Boxes

No. 16 gauge is used where no surface area exceeds 360 square inches and if no single dimension is over 24 inches.

No. 14 gauge is used where no surface area exceeds 1000 square inches and if no single dimension is over 40 inches.

No. 12 gauge is used where no surface area exceeds 1500 square inches and if no single dimension is over 60 inches.

No. 10 gauge is used for any cabinet larger than noted above

Cutout Boxes and Cabinets with Removable Doors and Trims

No. 16 gauge box, No. 14 gauge trim, is required where no surface area exceeds 360 square inches and no single dimension is over 24 inches.

No. 14 gauge box, No. 12 gauge trim, is required where no surface area exceeds 1000 square inches and no single dimension is over 40 inches.

No. 12 gauge box, No. 12 gauge trim, is required where no surface area exceeds 1500 square inches and no single dimension is over 60 inches.

No. 10 gauge box, No. 10 gauge trim, is required for cabinets larger than noted above.

Hardware

The code requires that all cutout boxes and cabinets be provided with a catch. On the smaller Type A cabinets, a friction catch is permitted; on the smaller flush cabinets a turn catch is satisfactory, on the larger flush cabinets, a cupboard catch is best.

A lock may be used if desired but if furnished, must be in addition to the regular catch; a combined lock and catch may also be used in place of separate locks and catches.

Where single doors are over 48 inches high, they must have a three-point catch operated by a single knob or handle holding the doors closed at the center, top and bottom; where the door exceeds 24 inches in width, double doors must be provided, regardless of its height operated by a three-point catch.

Weatherproof Cabinets

For wet location and outdoor service, cabinets and cutout boxes must be so designed and constructed that a beating rain or moisture running down conduits or wall will not allow water to enter. They must be provided with external fastenings for mounting. Hinges must be of cast metal or of sheet bronze. Threaded holes for conduits must be reinforced to provide metal at least $\frac{1}{4}$ inch in thickness. Bushed holes for open wiring must not be located either in the top or back except when special hood fittings are provided, and when located in the sides must be formed to provide a downward direction for wires leaving the cabinet. Devices made of sheet metal lighter than No. 10 U. S. gauge must be galvanized by the hot dip process after forming and assembly. Cabinets and cutout boxes made of sheets No. 10 U. S. gauge in thickness or heavier need not be galvanized after forming and assembly, provided galvanized sheets are used and all cut edges are painted. Other materials must be treated to give protection from corrosion.

Gutters—All Types

Cutout boxes or cabinets containing cutouts or panelboards require separate wiring gutters where more than four circuits are connected in the cabinet, unless the wires enter the cabinet directly opposite the terminals.

Columbia Type A Surface Cabinets

For Cut-outs, Service Switches and Panel Boards

CONDUIT DRILLING.—Cabinets are regularly furnished with knockouts for 1/2-inch conduit spaced evenly on all sides. Specify if boxes are wanted without knockouts. For special conduit drilling, a small extra charge is made.

Knockouts other than 1/2-inch can be supplied if required.
SIZES AND THICKNESS OF STEEL.—Cabinets are listed in standard sizes and gauges (thickness). Cabinets of any size and thickness of steel up to 3/16-inch thick can be made to order.
GALVANIZED CABINETS.—Type A Cabinets in any size can be furnished in galvanized steel. Add 50 per cent to prices.
WEATHERPROOF CABINETS.—These cabinets can be made with slant tops, rubber gaskets and solid brass catches, for exposure to the weather. Black japan or galvanized.
HOLES FOR CUT-OUT, SWITCHES, ETC.—Furnished at cost of one cent per hole per box. For tapped holes, add two cents per box.

BOXES WITHOUT COVERS.—If boxes are required without covers, deduct 20 per cent from prices. A flange will be supplied on front edges for mounting a wood trim or other cover if specified on order.

SCREW COVERS.—All cabinets will be furnished with screw covers at the same price, if so specified.

The boxes listed below are made of sheet steel of the required thickness to conform with Board of Underwriters' requirements, and bear the Underwriters' labels.

Columbia Type P Flush Cabinets
For Cut-outs, Service Switches and Panel Boards

These cabinets are provided with removable steel trim and door Plain type without ornamental beads; body is formed from one piece of steel with corners folded in and securely welded.

Finished in black baked japan. Regularly equipped with knob and turn catch.

Cabinets having surface area of over 360 square inches are furnished with vault handle.

Cabinets can be supplied with any style hinges, catch or lock.

Holes for cut-outs, switches, etc., add one cent per hole per box net. For tapped holes, two cents per hole net. Minimum 50 cents net per order.

CONDUIT DRILLING.—Cabinets are regularly furnished with knockouts for 1/2-inch conduit. For special conduit drilling an extra charge will be made. Knockouts other than 1/2-inch are furnished at a net charge of 50 cents for each variation from 1/2-inch. This covers any number of knockouts in any number of boxes.

Panel Board Cabinets

This style cabinet is especially adapted for panelboards. Give size of panel, or specify maker's name and manufacturer's number. Sizes not listed at proportionate prices. This style of cabinet can also be furnished for surface work if so ordered.

The boxes listed below are made of sheet steel of the required thickness to conform with Board of Underwriters' requirements and bear the Underwriters' labels.

All boxes are hinged on height unless otherwise specified. When ordering, specify hinged side first.

**Columbia Guttered Type Cabinets
For Flush and Surface Work**

**Type PSG
For Surface—Exposed—Work**

A recent ruling of the Underwriters' Code requires that all cabinets enclosing cut-outs or panelboards over four circuits must have a gutter frame and side wiring spaces or back wiring space, unless the wires leave the cabinet directly opposite the terminals. To take care of this ruling, a line of cabinets has been designed which is the most complete of its kind and can be adapted to almost every kind of cut-out in common use. In addition to those listed, cabinets can be furnished in special sizes to accommodate any style or make of cut-out.

General Description of All Types

CODE STANDARD.—All cabinets listed are National Electrical Code Standard.

GUTTERS.—Cabinets for all cut-outs listed (except Perkins Dead Front Panel Switches) are equipped with steel gutter frames. These frames conceal the side wiring spaces and are provided with bushed holes opposite the terminals of the cut-outs and in the mains.

Both gutter frames and doors are made to allow for a three-inch wiring space around the cut-outs. Cabinets for Perkins Dead Front Panel Switches are especially made so that the cut-outs are mounted on bridges across the back of the cabinet, allowing a back wiring space underneath and around the cut-outs.

HARDWARE.—All cabinets are equipped with steel hinges and cupboard catches. Any style of hardware can be used if desired.

**Type PFG
For Flush—Concealed—Work**

CONDUIT DRILLING.—All cabinets are provided with 1/2-inch conduit knockouts on all sides, unless other conduit drilling is specified.

FINISH.—The standard finish is baked-on japan. If specified, olive green or white enamel can be furnished at an extra charge.

DIRECTORY FRAMES.—Directory frames will be supplied if mentioned on order, at an additional charge of 2.00.

Cabinets up to 24 circuits are listed. Any size cabinet can be furnished to accommodate any number of circuits.

Type PSG

This type is a superior cabinet for surface work and is suitable for any kind of installation. The door and trim is removable and is without ornamentation.

Type PFG

This type is similar to Type PSG, except that it is designed for flush work.

Type CG

This type is made for flush work only.

**Type CG
For Flush—Concealed—Work**

**Columbia Guttered Type Cabinets
For Flush and Surface Work**

**For 2 or 3-wire Main Plug Cut-outs
Double-pole, Double-branch, with Side Gutter Frames**

Crouse-Hinds Panels and Cabinets

Crouse-Hinds Panels and Cabinets

Type A 3-2 Wire Panel with Main Fuse Terminals

Type F 3-2 Wire Panel with Main Lugs

Type DP 2-2 Wire Panel with Main Fuseless Switch

Type BM Cabinet For Surface Mounting

Type DD 2-2 Wire Panel with Main Lugs

Type DK 3-2 Wire Panel with Main Fuse Terminals

Type BN Cabinet For Flush Mounting

Type BT Cabinet For Flush Mounting

Type A 2-2 Wire Panel with Fuseless Main Switch

Type DR 2-2 Wire Panel with Fuseless Main Switch

Type DR 3-2 Wire Panel with Main Fusible Switch

Type O 2-2 Wire Panel with Main Fusible Switch

We are distributors for the complete line of Crouse-Hinds Panelboards and Cabinets.

Safety Panels and Cabinets are listed in this catalogue.

Prices for the following panels and cabinets will be quoted upon request:

Type A Panels

Branches arranged for N. E. C. cartridge fuses with or without knife switches.

Type DD Panels

Branches arranged for Edison plug fuses only.

Type DK Panels

Branches arranged for Edison plug fuses and knife switches.

Type DP Panels

Branches arranged for Edison plug fuses and push button switches.

Type DR Panels

Branches arranged for Edison plug fuses and rotary snap switches.

Type F Panels

Branches arranged for N. E. C. cartridge fuses and rotary snap switches.

Type O Panels

Branches arranged for N. E. C. cartridge fuses and push button switches.

The above types of panels are furnished with main lugs, main fuse terminals, main fuseless switches, or main fusible switches.

Type BM Cabinet

Combination of type B steel box and type M steel trim.

Type BN Cabinet

Combination of type B steel box and type N steel trim.

Type BT Cabinet

Combination of type B steel box and type T wooden trim.

Crouse-Hinds Safety Panels and Cabinets

General Panel Specifications for Types AT, DT, DPS, and EPS

Safety panels and cabinets allow unrestricted use of the circuit switches without the possibility of the operator coming in contact with any live part of the panel. Fuses and live parts are accessible only to persons holding the key to the separate compartment in which they are located. These panels are especially desirable in locations where they are subject to operation by persons unfamiliar with electrical devices.

MATERIAL.—The base consists of the highest grade of black Monson slate free from flaws or metallic veins. All current-carrying parts are made of the best grade of hard drawn copper of 98% conductivity.

FINISH.—The slate is furnished with a rubbed oil finish. All exposed metal parts are finished in polished copper, carefully lacquered, except on contact surfaces.

SPACINGS.—All current-carrying parts are spaced in accordance with the latest requirements of the National Board of Fire Underwriters.

CURRENT DENSITY.—All current-carrying parts are based upon a maximum current density of 1000 amperes per square inch cross-section.

CIRCUIT CONNECTIONS.—All 2 to 2-wire panels are connected so that adjacent poles of adjoining circuits are of the same polarity, but fed separately. All 3 to 2-wire panels are connected for the Edison 3-wire system, having one pole of each circuit connected to the neutral bus bar and the other pole connected to one of the outside bus bars. Adjacent poles of adjoining circuits are of the same polarity, but fed separately.

CIRCUIT STRIPS.—Branch circuit strips are made of $\frac{1}{2}$ -inch by $\frac{1}{16}$ -inch copper.

FUSE ARRANGEMENT.—Branch circuits are arranged for mounting fuses between switches and outgoing circuits.

CAPACITIES.—Mains on all 3 to 2-wire, 125-volts, and 2 to 2-wire, 250-volt panels are figured at 3 amperes per circuit. On 2 to 2-wire, 125-volt panels they are figured at 6 amperes per circuit. The capacities of main connections for various panelboards are given in the schedule where panelboards are listed.

SLATE FRAMES.—Slate frames are made of oiled Monson slate, $\frac{1}{2}$ -inch thick, and telescope the panelboard; slate frames are drilled for circuit wires and slotted for main wires, and are held in position by adjustable corner irons.

CIRCUIT SWITCHES.—For Types AT and DT Panels. Circuits are controlled by 30-ampere, 250-volt tumbler switches developed for use on panels exclusively. Each switch comprises a complete individual unit, consisting of a special high grade composition base on which are mounted the contacts and operating mechanism. This unit, or complete switch, can be easily removed or replaced if necessary. The contacts are formed to make direct connection with bus bars and circuit strips so that no screws are used to carry current. The mechanism is positive, strong, smooth in action, and easily operated. It is quick make, quick break, and double break. An insulating barrier is provided between the blades and contacts, or live parts and the frame and mechanism, so that an arc cannot form between them.

CIRCUIT SWITCHES FOR TYPES DPS AND EPS PANELS.—Circuits are controlled by 10-ampere, 250-volt, indicating push button switches enclosed in porcelain cases. These switches are arranged in pairs horizontally, each pair being connected by a twin yoke which holds the switches the proper distance apart. A steel spacer bar runs vertically between the switches and is attached to the center of each yoke, thus spacing and aligning the switches so that the switch plate or cover may be easily placed in position and held by screws threading into the spacer bar at each end.

Crouse-Hinds Safety Panels and Cabinets

MAIN SWITCHES.—For Types AT and DT Panels. Main switches are quick break and double break. They have laminated brush type contacts and are operated through a non-retardable, self-locking, toggle mechanism by a handle projecting through a cover which is a part of the switch. Main switches are regularly mounted at the top of the panel, and if main fuses are used, they are between the main switch and circuit switches so that when the main switch is opened the panel is completely dead.

Panels will be furnished with main connections at bottom, if so ordered, without change in price or size.

MAIN SWITCHES.—For Types DPS and EPS Panels—Main switches are knife blade type of a substantial design and construction and are regularly mounted at the bottom of the panelboard.

Panels can be furnished with main switches at top, but this necessitates increases in both price and size of panels.

General Cabinet Specifications

BOXES.—Type B steel boxes may be used for either flush or surface mounting. They are formed from one piece of No. 10 U. S. gauge sheet steel overlapped and riveted at the corners. They are the proper size to form a 3 or $3\frac{1}{2}$ -inch wiring compartment or gutter between the sides of the box and the slate frame surrounding the panel.

DRILLING.—Boxes will be drilled for conduit without extra charge, provided complete drilling information accompanies the order. Knockouts will be furnished at the following additions per knockout to list prices: $\frac{1}{2}$, $\frac{3}{4}$, or 1-inch, 10 cents; $1\frac{1}{2}$ or 2-inch, 15 cents.

TRIMS.—Steel trims are made from No. 10 U. S. gauge sheet steel. Mats are in one piece and furnished with adjustable trim fasteners which engage the flanges on the boxes, to hold the trims in place. Doors are secured to the mat by flush butt hinges, welded on, and have an ornamental molding welded around their edges and overlapping the mat, thereby forming a rabbet.

Wood trims are made from plain white oak, $\frac{1}{8}$ -inch thick. Both mat and door are made with square, mortised joints at corners. Doors are hung with flush butt hinges, have wooden panels, are set flush with the mat and close against a rabbet. Trims are lined with No. 16 gauge, black finished sheet steel.

FINISH.—Steel boxes and steel trims are painted both inside and outside with dead black lacquer.

Boxes and trims will be furnished with baked black enamel finish at an advance of 20% in the list prices.

Wood trims are filled and varnished on the outside.

TRIM CONSTRUCTION.—Trims with form S or form S1 construction have one large door opening over the entire panel, which door is provided with a combination Yale lock and spring catch. In the large door is hung a smaller door opening over the circuit switch handles and main switch, if used. This door is provided with a snap catch and polished brass vault handle. Attached to the back of the large door is a shield which covers all parts of the panel exposed by the small door and not covered by the switch covers. This shield prevents access to fuses and contact with live parts by the operator.

Types of Cabinets

Type BMS cabinet is a type B steel box with type MS steel trim for surface mounting.

Type BFS cabinet is a type B steel box with type FS steel trim for flush mounting.

Type BTS cabinet is a type B steel box with type TS wood trim for flush mounting.

Type BMSI cabinet is a type B steel box with type MSI steel trim for surface mounting.

Type BNSI cabinet is a type B steel box with type NSI steel trim for flush mounting.

Type BTSI cabinet is a type B steel box with type TSI wood trim for flush mounting.

Type DT Crouse-Hinds Safety Panels
2-wire, 125-volt Mains

2-wire, 125-volt Branches with 30-ampere Tumbler Switches and Plug Fuse Receptacles

Prices under heading "Panel and Cabinet" include panel, slate frame, box and trim complete. Prices for panels with through feeds or meter loops will be furnished upon request.

Prices do not include fuses.

Panels will be furnished with main connections at bottom, if so ordered, without change in price or size.

FA Panelboard and Cabinet Units

Explanation of Descriptive Catalogue Numbers

With the Frank Adam Electric Company method of descriptive listing your order is fully understood in all details through the various letters comprising each catalogue number. Should a clerical error be made when sending us the order the mistake will at once be noticed and inquiry made. This saves expensive shipments and a great deal of valuable time that occasionally are needlessly wasted when numerals and not descriptive listings are used. These catalogue listings were devised for your convenience and to enable us to give you better and faster service. Please note them carefully and use them in ordering.

FA Drilling (Hole) Template for Steel Box Cabinets

If standard knockouts as shown in catalogue will not be satisfactory, send template, showing layout of holes with order, as we cannot start work on boxes until template is received.

NOTE.—Unless Template is sent with order, boxes will be shipped with standard knockouts.

Are Fronts for Flush or Surface Mounting?

Indicate on Order—Flush or Surface Mounting

How Shall Conduit Enter Box?

Indicate on Order—Back—Center or Front—Conduit Entrance

NOTE.—We will furnish copies of this Template on request.

FA Safety Type Standardized 2-fuse Panel Boards and Cabinets**Type R****Type R3G**

Type R Panel Boards are polarity type and built up of sections made of asbestos composition impervious to moisture. Each section contains one branch circuit. These sections are mounted on back of box, completely assembled, ready for connections to mains and branch circuits.

On account of the small wiring gutter, this type of panel board and cabinet can be used only when feeds for panel terminate in this cabinet. Whenever necessary to run risers through the cabinet, use Type R3G.

These panel boards can be used for either 2 or 3-wire service. Cabinets have 1½-inch gutter; fronts are finished dead black with doors fitted with FA Latch only.

Type R3G Panel Boards are also built up of single circuit sections but the sections instead of being mounted on back of box are mounted on removable steel mounting backs.

This type of panel board is made with main lugs only as they are not wide enough to accommodate main switches or sub feeders. Cabinets have standard 3-inch gutters, with adjustable panel board supports, with fronts finished dead black having doors fitted with FA Latch only.

**Type 2P3BSF**

Type 2P3 Panel Boards are built up of 2 rows of single circuit sections and have the sections mounted on removable steel mounting backs. Main and sub-feeder switches are all safety brush type.

Main fuses are placed under separate locked doors and when used with safety switches cannot be opened unless switches are disconnected.

This type of panel board can be furnished with or without safety main switches. Sub-feeders and increased mains shown on other pages can be used on this type of panel.

Cabinets have standard width gutter with adjustable panel board supports having fronts finished dead black with doors fitted with FA Catch Locks.

FA Safety Type Standardized 2-fuse Panel Boards and Cabinets

Type TP3L

Type TP3F

Type TP Panel Boards are built up with double branch sections made of asbestos composition. Each section has two 30-amperes 250-volt double pole tumbler switches with N. E. C. Edison plug fuse connections.

All sections are mounted on steel panel backs connected complete ready for main and branch circuit connections.

Main fuses are placed under separate locked doors and when used with safety main or sub-feeder switches, the doors cannot be opened unless the switches are disconnected.

Main switches are all safety brush type.

Cabinets have standard width gutters with adjustable panel board supports.

Fronts are finished dead black and regularly furnished with one door equipped with FA Catch Lock as this type of panel board has no live metal parts exposed and when fuses are installed are absolutely safe.

When specified, door in front door as called for below in connection with TC panel boards and cabinets, will be supplied.

Type TC3BSFD

Type TC Panel Boards are also built up with double branch sections, each section having two 30-ampere, 250-volt double pole tumbler switches with N. E. C. cartridge fuse connections.

Mains are equipped same as for TP panel boards above.

The fronts are regularly furnished in "door in door" construction, the inner door permitting access to branch switch handles only is fitted with FA Latch; the main door permitting access to the entire panel board is fitted with FA Catch Lock.

On special order, fronts with one door only, which leaves the panel boards semi-safe, will be furnished, and will not be classed as a safety type panel board.

FA Safety Type Panel Boards and Cabinets

Type R Safety Type—2-fuse

For 2 and 3-wire Service

Mains, 125-250 Volts, 125-volt Branches, with N. E. C. Plug Fuse Connections

Panels are made of sections of molded material. Boxes are made of code thickness steel, 1½-inch gutter. Front is of code thickness steel, painted dead black.

FA Type N2P3 Safety Type 1-fuse Panel Boards and Cabinets

Single Fuse in Branch Circuits as Permitted by 1923 N.E.C.

Type N2P3L with Mains and Grounded Branch Circuit Connections Exposed

Type N2P3L with Mains and Branch Circuit Connections Concealed

This type of panel board is built up complete with moulded sections mounted on steel backs ready for main and branch circuit connections.

Each section has 2 N.E.C. Edison plug fuse connections for 2 branch circuits connected to ungrounded bus bars, the grounded side of branch circuit and main connections are placed at top of board and when connected are concealed by a

blank section. Each connection is properly marked to correspond with markings of ungrounded branch circuits.

Cabinet boxes have standard width gutters between and around sections with adjustable corner supports.

Front is finished dead black and has single doors, equipped with FA Catch Locks.

FA Type N2P3 Safety Type 1-fuse Panel Boards and Cabinets

3-wire, 125-250-volt Mains

2-wire, 125-volt Branches with 30-ampere Single Pole N. E. C. Plug Fuse Connections
Capacity 1923 Code per Branch

Panels are made of sections of molded material. Boxes are made of code thickness steel, gutter type. Front is of code thickness steel, painted dead black; flush or surface.

FA Type NTP3 Safety Type 1-fuse Panel Boards and Cabinets

Single Fuse in Branch as Permitted by 1923 Code

With Mains and Grounded Branch
Circuit Connections Exposed

With Mains and Branch Circuit
Connections Concealed

This type of panel board is built up complete with moulded sections, mounted on steel backs ready for main and branch circuit connections.

Each section has four 30-ampere, 250-volt, single pole tumbler switches with N.E.C. Edison plug fuse connections for controlling ungrounded sides of branch circuits, the grounded side of each branch circuit is fed direct from the bus bar and is not fused.

All unfused branch circuit connections on grounded bus are located at top of board and when connected up are concealed by blank sections. Each branch circuit connection is properly marked to correspond with markings of ungrounded branch circuits.

Cabinet has standard width gutters with adjustable panel board supports.

Front is finished dead black and has single doors equipped with FA Catch Locks.

FA Type NTP3D Safety Type 1-fuse Panel Boards and Cabinets

Single Fuse in Branch Circuit as Permitted by 1923 N.E.C.

With Mains and Grounded Branch Circuit Connections Exposed

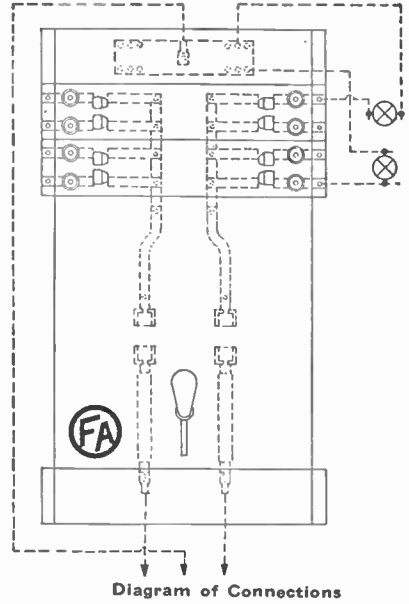

Diagram of Connections

With Main and Grounded Branch Circuit Connections Concealed

Mounted on steel backs ready for main and branch circuit connections. Panel board is built up complete with moulded sections each section having four 30-ampere, 250-volt single pole tumbler switches with N.E.C. Edison plug fuse connections for controlling ungrounded sides of branch circuits, the grounded side of each branch is fed direct from the bus bar and is not fused.

All unfused branch circuit connections on grounded bus are located at top of board and when connected up are concealed by blank sections.

Each branch circuit connection is properly marked to correspond with markings of ungrounded branch circuits.

Cabinet has standard width gutters with adjustable panel board supports.

Front is finished dead black and is of door in door construction, the inner door permitting access to switch handles only is fitted with FA Latch, the main door permitting access to entire panel board is fitted with FA Catch Lock.

FA Type NTP3D Safety Type 1-fuse Panel Boards and Cabinets

3-wire, 125-250-volt Mains

2-wire, 125-volt Branches with 30-ampere Single Pole Tumbler Switches with N. E. C. Plug Fuse Connections
Capacity 1923 Code per Branch

Panels are made of sections of molded material. Boxes are made of code thickness steel, gutter type. Front is of code thickness steel, painted dead black; flush or surface. Door in door construction.

NOTE.—Panels will not be made for less than 4 circuit branches.

The 125-volt panel boards with cartridge fuse connections in branches will be furnished without extra cost.

For 250-volt panel boards with cartridge fuse connection in branches, add 20 per cent. This construction increases all dimensions.

FA Type NKP3 1-fuse Type Panel Boards and Cabinets

Single Fuse in Branch Circuits As Permitted by 1923 Code

With Front Removed Showing Open Gutters and Asbestos Barriers

Diagram of Connections

Complete with Front

This type of panel board, on account of the open knife switches has a base $\frac{7}{8}$ inches dead black finish slate, the ungrounded side of each branch circuit is controlled by a 30-ampere single-pole knife switch with N.E.C. Edison plug fuse connections, the grounded side of each branch circuit is connected direct to the bus bar.

Each branch circuit connection on grounded bus is marked to correspond with branch circuit connections on ungrounded bus bars.

Mains are equipped with lugs only, fuses only, or main knife switch with N.E.C. cartridge fuse connections.

This type of panel board has $\frac{1}{2}$ -inch asbestos barriers, all around same, forming a barrier between panel board and wiring gutter.

Cabinets have standard width gutters with adjustable corner supports with fronts finished dead black having door fitted with FA Catch Lock.

This type of panel board and cabinet is not recommended for the NTP Safety Type Panel Boards and cabinets. Type NTP3 Panel Boards and Cabinets are not much higher in price and are therefore more desirable.

FA Type NKP3 1-fuse Panel Boards and Cabinets

3-wire, 125-250-volt Mains

2-wire, 125-volt Branches with 30-ampere Single Pole Knife Switches with N. E. C. Plug Fuse Connections, Capacity 1923 Code Rating

Panels are made of 1/8-inch slate; dead black finish. Barriers are 1/2-inch transite board with FA Patented Adjustable Corner Supports. Box is of code thickness steel, gutter type. Front is of code thickness steel, finished dead black with FA Catch Lock; flush or surface.

FA Diagram of Connections

For a 12-tenant Circuit, 6-meter Fuse and 6-meter Bar, Meter Control Panelboard Installation, Showing Four 2-wire and One 3-wire Meter

NOTE.—At all points of crossing of the meter bars and circuit bars connection can be readily made with a special connector according to the Type of Meter-control Panelboard specified.

Wiring

The proper circuit wiring for a Meter-control Panelboard installation is to provide a separate circuit to the outlets in each section of space that can be rented either separately or in combination with other sections, or space to meet the requirements of any tenant, in an office, store or warehouse building.

FA Meter Control Panelboards and Cabinets

FA Meter Control Panelboards and Cabinets were designed to take care of the demand for an economical and safe method of metering space in office buildings, arcades, lofts, stores, etc., that may be increased or decreased on demand.

Branch Wiring

Proper care should be taken in your branch circuit wiring by running a circuit to the outlets in each section of space that can be rented either separately or in combination with other sections to meet the possible demand of your tenants.

FA Meter Control Panelboards have the following advantages:

To Owner

The owner saves the expense of rewiring every time there is a change in tenant.

The owner does not have to worry about waste of current as each tenant pays for what he uses.

To Lighting Company

When owner does not care to bother about the tenant's lighting and power bills, the lighting company will take direct control of the distribution of the electric current, and be safeguarded in all of their meter connections by requiring our special sealing devices.

Protection Against Theft of Current

On account of the central stations and building managers desiring protection, we have our cabinets so designed that the connections between the branch circuits and meter busses or wires can be enclosed under separate cover, and can be sealed if desired—so that any change in tenant space can only be made by authorized persons.

See additional cost for these protection covers.

Standardization

We have standardized on 2 distinct types of meter control panelboards, each with 3 types of gutter cabinets, as follows:

FA Type M. B. Bus Bar Type Meter Control Panelboards

The FA Bus Bar Types are recommended when a good job is desired, as this type consists of a set of vertical meter bus bars and a horizontal bus bar for each branch circuit. Each branch circuit bus bar is equipped with a sliding FA Patented Bus Bar Connecting Device which makes it possible to connect any branch circuit or any number of branch circuits to any of the meter bus bars. With this type of meter control panelboard you do not have to remove the front or even disconnect the service when making changes—this feature alone will save enough labor to pay for the complete panelboard within a few years, as any engineer or even janitor can easily move the FA Patented Bus Bar Connecting Device from one meter to another and screw it in the selected position in a few minutes' time, without the use of a screw driver or pliers.

FA Type M. W. Wire Connecting Type Meter Control Panelboards

For your less particular clients, and where first cost is given preference over quality and simplicity, we have designed our FA Wire Connecting Type Meter Control Panelboard, which, although designed to give the same results as our FA Bus Bar Type Meter Control Panelboard, requires more time to make meter changes and these changes cannot be made readily without disconnecting the entire panel, and, some types, it is also necessary to remove the front.

FA Meter Control Panelboards Can Be Furnished with the Following Type Cabinets

Type C Cabinet having space for only meter control panelboards.

Type SFC Cabinets having space in cabinet for panelboard and space in front of meter cabinets for meters.

Type SBC Cabinets having space for panelboard and meters in cabinets.

FA Meter Control Panelboards and Cabinets

Additions and Deductions Main Feeder Connections

All of our standard designs are figured with main switch and main fuse because a number of City Ordinances specify them. If this is changed to main lugs only, the following deductions can be made:

30 Amperes	60 Amperes	100 Amperes	200 Amperes
\$2.60	\$4.60	\$6.00	\$7.30

If main lugs and main fuses are used, the following deductions can be made:

30 Amperes	60 Amperes	100 Amperes	200 Amperes
\$2.25	\$3.90	\$4.90	\$6.00

Meter Fuse Connections

For Each Additional Pair of Meter Fuses without Space for Meter, Add:	
For 30 Amperes.....	\$5.00
“ 60 “.....	6.00
No deduction if a lesser number of meter fuse connections are required.	
For Each Additional Space for 2 Meters over 18 Meters, Types MWSFC and MWSBC.....	\$8.00
“ “ “ Pair of Meter Bars and Meter Space, Types MBSFC and MBSBC.....	25.00

Additional Cost for Branches

Extra Cost per Pair of Tenant Branches over 34 Branches:	
Meter Wire Type.....	\$20.00
“ Bar “.....	30.00
Extra Cost per Pair for Owners' Branches:	
Meter Wire Type.....	\$20.00
“ Bar “.....	30.00
Extra Cost when Switch Is Specified in Either Tenant or Owners' Branches:	
Add for Each Pair of Branches.....	\$8.00

Extra Cost for Inside Door Over Meter Bars To Be Added to Meter Bar Types

On the meter bar type of meter control panelboards, we can furnish, on special order, an additional door (inside the regular door) covering only the meter bar sections. This special door is fastened with the regular standard meter seal device. The additional cost of this special door for sealing up meter connections is as below:

Number of Meter Bars

	PRICE, EACH				
Branches	4-6-8	10-12-14	16-18-20	22-24	26-double Door in Front
4- 6- 8	\$18.00				
10-12-14	20.00	\$25.00			
16-18-20	22.00	27.00	\$32.00		
22-24-26	35.00	30.00	35.00	\$40.00	\$50.00
28-30-32	27.00	32.00	37.00	42.00	52.00

FA Meter Control Panelboards and Cabinets

No Space for Meters

2-fuse

Type MWG Meter Wire Type

MAINS.—Knife switch with cartridge type fuse connections, solid neutral, 125-250 volts.

METER FUSE CONNECTIONS.—30 amperes, S.P., cartridge type.

METER LOOP CONNECTIONS.—Ample space is left between circuit branch sections for all meter wires, each circuit branch having a special clamp wire terminal that will hold wires from No. 14 to No. 6 size and this space is covered with a sheet steel cover held in position by standard meter sealing device.

BRANCHES.—Made of sections of moulded material, with 125-volt, D.P., N.E.C. plug type fuse connections.

CABINETS.—Cabinets are of the standard N.E.C. gutter type. Fronts are finished dead black paint.

Type MWG

Type MBGC

Meter Wire Type—Space in Box for Meters

2-fuse

MAINS.—Knife switch with cartridge type fuse connections, solid neutral, 125-250 volts.

METER FUSE CONNECTIONS.—30 amperes, S.P., cartridge type.

METER LOOP CONNECTIONS.—Ample space is left between circuit branch sections for all meter wires, each circuit branch having a special clamp wire terminal that will hold wires from No. 14 to No. 16 size, and this space is covered with a sheet steel cover held in position by standard meter sealing device.

BRANCHES.—Made of sections of moulded material, with 125-volt D.P., N.E.C. plug type fuse connections.

CABINETS.—Cabinets for panelboards are standard N.E.C. gutter type. Cabinets for meters are standard N.E.C.B.F. type with wood meter boards for supporting meters. Fronts are equipped with combination FA catches and locks and are finished dead black paint.

Benjamin-Starrett Standardized Panel Boards and Cabinets

Introductory

Durability, strength and fine appearance are features of Benjamin-Starrett Panel Boards and Cabinets. The durable qualities of the sectional, molded composition bases have shown their worth in the test of time. Molded composition is impervious to moisture, oil or acid; therefore, its natural high resistance is not affected by absorption. Because of its strength, both dielectric and mechanical, engineers have recognized this material as the most satisfactory for panel boards.

The Benjamin-Starrett method of attaching the molded composition bases to the steel frame, and the design of the frame itself, give a rigid assembly of remarkable strength.

Fine appearance is a result of modern manufacturing methods. Every part is machine made, with an unusually high degree of accuracy.

Changes have been made to meet the requirements of the 1923 Edition of the National Electrical Code and other new features have been added.

THE 1-FUSE PANEL—(Authorized by the 1923 Edition of the National Electrical Code) is one of the new features of Benjamin-Starrett panel board construction.

2-FUSE PANELS—That is, panels having 2 fuses in each wire branch circuit, have been standard and universally used in the past.

THE 1-FUSE PANEL has branch circuits with one fuse per circuit. This form of wiring is used only with 3-wire grounded neutral. One leg of the branch circuit is taken off either the plus or minus main buss, and is fused. The other leg is taken directly off the neutral main buss *without fusing*.

Two Types of Cabinets

DEAD FRONT—This type is equipped with a double door—one small door within a larger one. Opening the large door exposes the full face of the panel; the smaller one gives access only to the switches of the branch circuits. This panel is recommended for installations where branch circuit switches are used by inexperienced persons, and fuses renewed by a maintenance man.

OPEN FRONT—The Open Front Panel is identical with the Dead Front, except that it has a single door which gives access to all the switches and fuses on the face of the board. For this reason it is usually installed where an experienced person is authorized to attend to the switches and fuses. The combined Yale lock, latch and knob prevents tampering and theft of fuses.

Residence Panels

These Residence Panels are exactly suited to the needs of the residence, the small apartment building or the small store building.

They are neat, compact and durable.

They are furnished in three types to meet varying wiring conditions and offering a choice in materials. All types have Safety or Dead Fronts for the protection of the inexperienced persons, who occasionally find it necessary to renew fuses.

Benjamin-Starrett Residence Panels and Cabinets

Type RDG

For

2-wire and 3-wire Service—2-fuse Branches

Mains: 250-125-volt 3-wire, 125-volt 2-wire

Branches: 125-volt Arranged for Plug Fuses Only

For larger installations than the average residence or small business building and when large gutter space is required to accommodate riser cables, Type RDG is recommended. This panel has base of cold molded composition with steel back and has regular panel board mounting.

Cabinet has 3-inch wiring gutter and is furnished for either surface or flush mounting. Door is provided with vault handle latch only and with directory frame.

No. of Cir.	CAT. NOS.		CABINET DIMEN., IN.			Price Each
	Surface Cabinet	Flush Cabinet	Width Outside	Height Outside	Depth Inside

Type SDG

For

3-wire Service—1-fuse Branches

Mains: 250-125-volt

Branches: 125-volt Arranged for Plug Fuses Only

When the grounded neutral system with one fuse per branch, as allowed by the 1923 Code, is to be installed, Type SDG Panel is recommended, especially under similar conditions to those suggested for Type RDG.

Cabinet has 3-inch wiring gutter and is furnished for surface or flush mounting. Door is furnished with vault handle latch only and with directory frame.

Type RD

For

2-wire and 3-wire Service—2-fuse Branches

3-wire Service—1-fuse Branches

Mains: 250-125-volt 3-wire, 125-volt 2-wire

Branches: 125-volt Arranged for Plug Fuses Only

Universal application to all house wiring systems is provided for in the Type RD Residence Panel.

The panel is made of porcelain and has a dead front cover. Cabinet has 2-inch wiring space and can be furnished for surface or flush mounting. Door is provided with vault handle latch only and with directory frame.

NOTE.—Panels arranged for cartridge fuses but otherwise the same as panels listed on this page, will be furnished at the above prices.

Bare and Insulated Wires

General Information

Stocks

From our catalog it will be seen that the Western Electric Company carries in stock a supply of many different types and sizes of wire covering a wide range of uses and at a considerable variation in price. We carry at our various distributing houses a considerable stock of material, which, in addition to the large reserve stock carried by the manufacturers from whom we buy, gives this company a unique and comprehensive assortment. We handle thousands of types of wires, bare and insulated, suitable for general purposes, and, of course, in addition, special wires and cables for aerial, underground, submarine, mine, signal, telephone, and telegraph service.

Factory Facilities

Factory facilities for the manufacture of rubber covered wires and cables have been continually improved, so that to-day the Western Electric Company is in a position to offer its customers unsurpassed facilities for the production of rubber insulated wires, and we are as well able to have produced promptly special wires and cables such as are used by the railroads, the mines and the United States Government.

Price and Quality

The Western Electric Company sells its wires and cables at prices consistent with the quality of material used, and our customers will find that we are in line with other manufacturers producing high grade wire.

Special Wires

Although the foregoing refers principally to the standard types of rubber covered wire, the same holds good to other classes of rubber covered wire handled by the Western Electric Company. We are in a position to furnish not only material from a large stock of wires and cables, which meet these ordinary specifications, and from which shipment can usually be made as soon as order is received, but we also have exceptional facilities for executing promptly all orders for emergency or special cables even of the most complicated construction.

Service

Our distributing houses are so well located and our stocks are so large that we are able to give customers service of a quality that cannot be exceeded by any of our competitors in any part of the country, and salesmen can unhesitatingly assure their customers that all stock of Western Electric wire receives the most careful scrutiny and inspection by men experienced in that line of work.

Bare and Insulated Wires

Wiring of Buildings

Classes of Wiring—Wiring Rules

CLASSES OF WIRING. Wires may be installed in buildings:

- (1) In conduits or raceways.
- (2) On porcelain knobs.

If the wiring must be enclosed, two systems are available:

- (1) Concealed conduit wiring.
- (2) Concealed knob and tube wiring.

If the wiring may be exposed, three systems are available:

- (1) Open conduit wiring.
- (2) Metal raceway wiring.
- (3) Exposed knob and cleat wiring.

In general, the above systems are used as follows:

CONCEALED CONDUIT WIRING. Public buildings, office buildings, hotels, apartment houses and high class residences.

CONCEALED OR KNOB AND TUBE WIRING. Inexpensive frame houses, where it is not a serious drawback that wall and floors must be opened to make repairs.

OPEN CONDUIT WIRING. High class factories, power stations, warehouses.

METAL RACEWAY WIRING. Office buildings, factories, warehouses and garages.

EXPOSED KNOB AND CLEAT WIRING. Factories and mills.

Selections of Wires and Cables for Given Service

The type of wire or cable to use for a given service cannot always be determined without a knowledge of both the conditions of service and the capabilities of the various types of wires and cables available. The following tables give a general idea of the types used for various services:

- A. Wires and cables for indoor use.
- B. Flexible cords.
- C. Wires and cables for outdoor use.
- D. Wires and cables for vehicles.
- E. Wires and cables for ships.
- F. Wires and cables for mines.
- G. Telegraph wires.
- H. Telephone wires.

A description of each type of wire or cable will be found under the given name in the catalog section of this book.

A. Wires and Cables for Indoor Use

Type of Wiring	Condition of Service	SINGLE CONDUCTOR*		MULTIPLE CONDUCTOR	
		Smaller than No. 6 A.W.G.	Larger than and No. 6 A.W.G.	Smaller than and No. 6 A.W.G.	Larger than and No. 6 A.W.G.
Flexible conduit	Dry places	AC	AC	AC	AC
	Damp places	ACL	ACL	ACL	ACL
Concealed knob and tube	R	{ R Double braid R Double braid RL RL }
	R		R	R
Conduit	{ Dry places	R	RL	R	R
	{ Damp places }				
Fixtures	In fixtures	F
	Open	{ Ordinary places	R	{ R Double braid SB or SBW or SBW }
{ Extra hot places, Power stations, Substations, etc. }		Station Cable		
On electric machines	Flexible connections	Apparatus Cable	
On motion picture machines	{ Flexible connections }	Motion Picture Machine Cable	

*Except in power stations, substations, etc., single-conductor cables are not allowed by the National Electrical Code, for pressures over 600 volts between wires. No wires for over 35 volts are allowed in buildings other than those mentioned above.

Key to Type Letters

(National Board of Fire Underwriters' Type Letters)

Letter	Type	Name
R	Rubber Insulated.....	Code House Wire
S B	Slow Burning	Slow Burning "
S B W	" " Weather-proof	" " Weather-proof Wire
A C	Armored Braided.....	Armored Wire
A C L	" " and Leaded.....	Leaded Armored Wire
R L	Rubber, Lead.....	Lead Covered Cable
F	Rubber Insulated.....	Fixture Wire

B. Flexible Cords

Use	Type Letter	Name
As pendants or portables in dry places.....	C	Lamp cord
Where not subject to hard usage.....	PD	Twisted portable
	PO	Parallel cord
	SJ	Type SJ
For hard usage.....	P	Reinforced cord
	S	Hard service cord
	CA	Armored cord
Pendants damp places.....	PA	Armor reinf. cord
	CB	Brewery cord
	CC	Canvasite cord
	S	Hard service cord
	SJ	Type SJ
	PWp	Reinforced cord wp.
	PkWp	Packhouse cord
Portable damp places.....	PAWp	Armored reinf. cord wp.
	S	Hard service cord
	SJ	Type SJ
Theatre Stages.....	T	Stage Cable
Theatre Borders.....	S	See type S above
	B	Border light cable
Elevator lighting and control	E	Elevator cable
	S	See type S above
Portable heaters.....	H	Heater cord

C. Wires and Cables for Outdoor Use

Use	Name
Aerial on messenger cable...	Aerial cable
Connecting suspended arc lamp to pole.....	Mast-arm cable
	Deck cable (See B. flexible cords)
Portable.....	Paper insulated cable or varnished cambric insulated cables with lead sheath
On wall (outdoors).....	Varnished cambric insulated cables with steel tape armor
On vibrating structures.....	Park cable
Buried in the ground.....	Signal wire
Signal wires in trunking, etc...	Paper insulated cable
In ducts.....	Armored submarine cable
Under water.....	

D. Wires and Cables for Elevators

Connecting controller on car to stationary equipment...	Elevator control cable
Connecting lights on car to source of supply.....	Elevator lighting cable
Wiring lights on elevators..	Code, house wire

Bare and Insulated Wires

Continued

Railroad Cars and Locomotives

Use	Name
Lighting by axle or similar systems.....	Car lighting cable
Connecting controllers, contactors, etc., of multiple unit cars.....	Train cables
Lighting of cars from traction circuits.....	Car cable
Wiring electric headlights..	Headlight wire

E. Wires and Cables for Ships

Use	Name
General wiring in conduits..	30% Hevea house wire, stranded if larger than No. 12
Exposed wiring.....	Basket-weave armored cable
Portables for use on decks, etc... ..	Deck cable

F. Wires and Cables for Mines

Use	Name
Open wiring to three-phase motors.....	Mine cable, triplex
Operating locomotives, hoists, drills, etc.....	Mine cable, twin (flat)
Operating mining locomotives which are run on steel track rails available for return current.....	Mine cable, single conductor
Hanging in shaft.....	Armored cable (with rubber insulation)

G. Telegraph Wires

Use	Name
Outdoor wiring.....	See telephone wires
Indoor wiring.....	Special. Information on request

H. Telephone Wires and Cables

Use	Name
Indoor wiring	Telephone wire, interior
Short runs of wire suspended in rings and similar outdoor use where span is short.....	Telephone wire, bridle
In ducts.....	Dry core cable
Connecting terminals on poles to subscribers' premises by a span.....	Telephone wire, drop
Connections in central offices between different switchboard terminals and outside cable terminals....	Telephone wire, distributing frame
Joining ends of cable conductors to terminals.....	Telephone wire, pot-head
Underground entrances to subscribers' premises... ..	Telephone wire, lead covered

Bare and Insulated Wires

Continued
Underwriters' Laboratories and Seal

The Underwriters' Laboratories is a Corporation which maintains laboratories for the examination and testing of appliances and devices, and enters into contracts with the owners and manufacturers of such appliances and devices respecting the recommendation there-

of to insurance organizations.

Its chief financial support has been received from the National Board of Fire Underwriters under whose general direction the work is carried on. It does its work for service and not for profit.

The Underwriters' Laboratories prescribe certain standards which must be met by the users in order to obtain fire insurance.

The principal method of carrying out this supervision of listed products is by inspection at the factories by the Laboratories' engineers and the labeling of standard materials whereby they may be recognized wherever found. In addition, systematic supplementary examinations and tests are made at the laboratories of samples of labeled goods purchased in the open market.

The labels for wire are issued in seven denominations which are of the same size and of the general appearance shown by the following illustrations:

The seven denominations vary only with respect to the length of wire which they represent, and are as follows:

100, 200, 250, 300, 400, 500 and 1000 feet.

The blank space at the bottom of the label is for a serial number by means of which a record is kept of the name of the manufacturer and the date of manufacture.

Code Cables and Wires

Code wires are made in accordance with the requirements of the National Electrical Code and are inspected by the National Board of Fire Underwriters, whose label is attached to each length certifying that it has passed inspection.

Type letters are assigned to wires in order to briefly indicate the construction details. The following type designations are applied to all rubber covered wires intended for use in indoor lighting and power equipment. A description of each type will be found under the name indicated below.

Type Letter	Name
A C	Rubber Insulated Wires for use in Armored Cables.
A C L	Lead Covered Wires for use in Armored Cables.
B	Border-Light Cable.
C	Lamp Cord.
C A	Armored Cord.
C B	Brewery "
C C	Canvasite "
E	Elevator Lighting Cable. Elevator Control Cable.
H	Heater Cord.
P	Reinforced Cord.
P A	Armored Reinforced Cord.
P A Wp	Moisture-proof Armored Reinforced Cord.
P k Wp	Packhouse Cord.
P O	Parallel Cord.
P D	Twisted Parallel Cord.
P Wp	Reinforced Cord, Moisture Proof.
RF 64	Fixture Wire " Insulation.
RF 32	" " " "
RF	" " " "
R	Code, House Wire Single Conductor.
R D	" " " Two
R D L	Lead Covered Rubber Insulated Cable, Two Conductor.

Type Numerals	Maximum Working Pressure Volts	Type Numerals	Maximum Working Pressure Volts
15	1500	50	5000
25	2500	70	7000
35	3500		

For example a No. 4 single conductor rubber insulated wire, intended for a 1100 volt circuit, would be designated by R-15.

**Rubber Covered Wire Data
Insulation**

Habirshaw wires and cables are insulated with rubber, varnished cambrie or paper.

Three standard and several special grades of rubber compounds are made. The highest standard grade, known as 30 per cent. hevea compound, is favored for pressures exceeding 2500 volts, and many engineers prefer to use it for all pressures exceeding 600 volts. It is also used for low pressure work where the greatest reliability and permanence is desired, as in high grade buildings and railway signal work. Habirshaw 30 per cent. hevea compounds are made in accordance with either the specification of the Joint Rubber Insulation Committee, which is used by the War Department, the Navy Department and other branches of the Government, and by the most important railroads, lighting companies, and industrial organizations, or the specification of the railway signal engineers (A. R. A. Signal Division), which is used by the signal departments of the principal railroads.

An intermediate grade of rubber compound, known as "Red Core" contains over 25 per cent of rubber, and was developed by the Habirshaw Research Laboratories to obtain the longest life, in proportion to the cost. "Red Core" wires are intermediate in cost between 30 per cent hevea and Code wires. The long life of "Red Core" wire is demonstrated by its extraordinary showing when subjected to accelerated ageing tests.

"Black Core" rubber compound is used for the ordinary wiring of buildings. It is made with over 20 per cent of rubber in accordance with the requirements of the National Electrical Code, and is inspected by representatives of the Underwriters' Laboratories in order to be certified that it is in accordance with the regulations of the National Board of Fire Underwriters. "Black Core" wire, however, not only meets with the requirements of these regulations, but exceeds them by a wide margin, the circumstance to which it owes its high reputation. Indeed, it has been the policy of the Habirshaw company to make the name "Black Core" represent a standard of quality.

Varnished cambrie insulation is used to some extent for large cables in buildings. It is particularly useful for high pressure cables in power stations and substations.

Paper insulation is used for outside cables but not generally for cables in buildings.

Thirty Per Cent Hevea Wire and Cable

Thirty per cent hevea rubber insulated wires and cables are used in place of Code wires, wherever circumstances justify the extra expenditure, to obtain added safety and longer life.

Wires of this grade are recommended for public buildings and high class dwellings, and for general use for voltages over 2500.

Habirshaw 30 per cent hevea rubber compound is made in accordance with the specification of the Joint Rubber Insulation Committee.

This Committee was appointed at a conference of users and manufacturers of rubber insulation in which the United States Government and several of the principal railroad companies and manufacturers participated to develop a specification and an analytical procedure for the highest rubber grade insulation. After six years of research the Committee presented a report containing a specification which was approved by the Standards Committee of the American Institute of Electrical Engineers and published by order of the Board of Directors in the Proceedings of April, 1917.

Among the important organizations which have adopted this specification are the American Electric Railway (Engineering) Association, the American Society for Testing Materials, The Association of Railway Electrical Engineers, The Baltimore & Ohio Railroad Company, The Interborough Rapid Transit Company (New York), New York Central Railroad Company (Electrical Department), The Panama Canal, and the Signal Corps U. S. Army. (Copies of this specification may be obtained from the American Society for Testing Materials.)

All types of rubber insulated wires and cables are made with 30 per cent hevea rubber compound if so ordered.

Rubber Covered Wire Data

Red Core Wire

Red Core wire is a distinctive product of the Habirshaw Research Laboratories, developed to meet the demand for wire of a quality intermediate between the 30 per cent hevea and code grades.

It is insulated with a compound which has been found by experience and experiment to be of a remarkably permanent character. It is made in all the various forms usually made with code compound except cords.

Black Core Wire and Cable

Habirshaw Black Core wire is code wire, made by an organization with a generation of experience in rubber-covered wire manufacture in back of it, and three well equipped research laboratories to keep it abreast of the times.

Black Core wire is made in single and double braid, or lead sheath and with one, two or more separately insulated conductors. See under "Code Wires and Cables" for a list of all types of wires and cables insulated with Black Core Compound.

While Habirshaw Black Core compound is intended primarily to meet the requirements of the National Electric Code, it possesses decidedly superior electrical, mechanical and chemical properties.

Code Requirements

Habirshaw Rubber Covered House Wire
Three Conductor—Solid

Each conductor of the Three-Conductor Rubber Covered House Wire is insulated by Black Core rubber compound. The covering over insulation is a 2 to 6 A. W. G., one rubber filled tape, and an 8 to 14 A. W. G., one saturated braid.

The conductors are grouped by twisting. They are filled with jute, covered by one rubber filled tape. The whole is covered by a saturated cotton braid.

Size A.W.G.	Thickness of Insulation Each Conductor 64ths Inch	Diameters Over Outside Braid Inches	Weight per 1000 Ft. Lbs.
2	4	.98	885

10	3	.57	209
12	3	.53	158
14	3	.49	125

Habirshaw Code House Cable
Three-conductor—Stranded

The 3-conductor stranded code house cable is used under the same conditions as solid 3-conductor code house cable unless greater flexibility is required, especially in larger sizes.

Number of conductors, three.

Range of sizes, 0000 to 14 A. W. G., stranded.

Insulation on each conductor, "Black Core" rubber compound.

Covering over insulation, 0000 to 6 A. W. G., one rubber filled tape, 8 to 14 A. W. G., one saturated braid.

Grouping of conductors, twisted.

Fillers, jute.

Covering over jute, one rubber filled tape.

Covering over all, one saturated braid.

Reels

Some sizes and kinds of wires necessarily must be shipped on reels.

In such cases the reels will be billed at cost and credited at full billing value, less return freight charges, if returned to mill within six months of shipping date.

Obtain return tags and shipping instructions before shipping reels.

**Habirshaw Lead Covered Cable
Three-conductor, Stranded**

600 Volts, N. E. C. S.

Three-conductor lead covered cable, stranded, is used for three-phase circuits where extra flexibility is required in the smaller sizes and always in the larger sizes where solid conductors would make the cable too stiff to handle.

Contains three conductors. Sizes range from 0000 to 14 A. W. G. Each conductor insulated with Black Core rubber compound. Insulation covered by rubber filled tape. Conductors twisted, filled with jute. Rubber-filled tape covering over jute. Lead sheath covering over all.

Size A.W.G.	No. of Strands Concen- tric	Thick- ness Insul- ation 64ths In.	Thick- ness Lead Sheath 64ths In.	Diam. Over Lead In.	Wt. per 1000 Ft. Lbs.	Type of Pkg.	Ft. in Pkg.	Approx. Ship. Wt. of Pkg. Lbs.

Habirshaw Park Cable

Park cables are used for transmission and distribution where it is preferable to bury the cables directly in the ground rather than to put them in ducts. Any kind of cable will be furnished with park cable covering, but the following types are in general use for distribution purposes.

Standard park cables (0-600 volts). Number of conductors, one to three.

Insulation on each conductor, "Black Core" rubber compound for 1500 volts or less. For higher voltage, special high voltage rubber.

Covering over insulation, rubber filled tape. Covering over tape, lead sheath.

Covering over lead sheath, asphalted jute.

Protective armor, two ungalvanized steel tapes, wound in the same direction, the outer tape covering the spaces between turns of the inner tape.

Outside covering, asphalted jute.

Park cables with galvanized steel tapes will be furnished when so specified.

Habirshaw Park Cable with a single strip overlapping steel tape armor can be supplied. Complete data furnished upon application.

Single Conductor

Twin Conductor, Flat

Put up on reels containing 1000 feet.

Habirshaw Rubber Insulated High Pressure Wire and Cable

The National Electrical Code recognizes the following working pressures:

- Low-pressure, 600 volts or less.
- High-pressure, 600 to 3500 volts.
- Extra-high pressure over 3500 volts.

High-pressure CABLES (i.e. from 600 to 3500 volts) may be brought into buildings only as metal sheathed multiple conductor cables in metal conduit.

EXTRA-HIGH PRESSURE CABLES (i.e. for over 3500 volts) may not be brought into or over buildings except power stations and substations.

High-pressure cables (i.e. from 600 to 3500 volts) may be insulated with "Black Core" or "Red Core" compound, but we recommend Habirshaw 30 per cent. hevea rubber insulation.

The following table gives the thickness of insulation recommended by Habirshaw for various alternating voltages.

Thickness of Insulation—64ths Inch

Size A. W. G.		600*	1500	2500	3500	5000	6000
		Volts	Volts	Volts	Volts	Volts	Volts
No. 14	to No. 8, incl.	3	6	8	10	12	14
" 6	" " 2, "	4	7	9	10	12	14
" 1	" 0000, incl.	5	8	10	10	12	14
250000	" 500000 C.M., incl.	6	9	10	11	12	14
550000	" 1000000 C.M., incl.	7	10	10	12	12	14
1250000	" 2000000 C.M., incl.	8	10	10	12	14	16

Size A. W. G.		7000	8000	9000	10000	11000
		Volts	Volts	Volts	Volts	Volts
No. 14	to No. 8, incl.	16	18	20	22	24
" 6	" " 2, "	16	18	20	22	24
" 1	" 0000, incl.	16	18	20	22	24
250000	" 500000 C.M., incl.	16	18	20	22	24
550000	" 1000000 C.M., incl.	16	18	20	22	24
1250000	" 2000000 C.M., incl.	18	18	20	22	24

NOTE.—In the case of multiple-conductor cables, the thickness of insulation on each conductor should correspond with the maximum effective working voltage across that insulation.

*House wire for voltages up to 600, whether Code, Red Core or 30 per cent. hevea.

Habirshaw Sector Cable
Paper Insulated

Sector cables are used in preference to round conductor cables because for a given outside diameter they have a greater carrying capacity. Habirshaw sector cable has been designed so as to secure all possible advantages of that type of cable to the maximum degree. There are seven such features to which attention may be called as follows:

1. Stability of form.
2. Flexibility.
3. Economy of size.
4. Maximum heat dissipation.
5. Minimum dielectric stresses.
6. Minimum dielectric losses.
7. Minimum injury to paper in manufacture.

The carrying capacity of sector cable is approximately the same as that of a round conductor cable of the same conductor cross-section.

Habirshaw Paper Insulated Cable

This cable has the advantage of cheapness, durability, low dielectric losses, and high current-carrying capacity.

The insulation consists of Manila paper applied helically to the conductor, and then saturated with a mineral oil compound which constitutes the essential insulation. In order to retain this oil the cable must have a sheath of lead.

Habirshaw Paper Insulated Cables have particularly low dielectric losses without sacrifice of dielectric strength. Great care is also taken to make the cable flexible at all temperatures at which it is likely to be operated.

Paper insulated cables are made in all sizes from No. 4 A. W. G. to 2,000,000 circular mils, and with any number of conductors within the usual limits.

Habirshaw Mast-arm Cable

Mast-arm cable is used where a flexible cable, capable of passing over a pulley, is required to connect arc-lamps suspended from a mast-arm or bracket to the feeder line where the lamps must be lowered for maintenance purposes.

Number of conductors, 2. Range of sizes, 6 and 8 A. W. G. Stranding, flexible. Insulation on each conductor, "Black Core" rubber compound. Thickness of insulation, code standard. Covering over insulation, one saturated cotton braid.

Grouping of conductors, parallel. Covering over all, 2 saturated cotton braids.

Habirshaw Control Cable

Train control cables are used for connecting the controllers, contactors, etc., of multiple unit trains, and are installed in conduits under the floor of the car body.

Number of conductors, five to thirty.

Usual size, 19 No. 25 A. W. G.

Separator, soft cotton wind.

Insulation on each conductor, rubber compound of quality specified.

Thickness of insulation each conductor, 3/4 inch.

Covering over insulation, colored dry cotton braid.

Grouping of conductors, twisted.

Fillers, dry jute.

Covering over filler, one rubber filled tape.

Covering overall, two saturated cotton braids.

It is usual to have a different colored braid on each conductor in order to facilitate the identification of circuits.

Upon receipt of inquiry stating conditions of service, our Engineering Department will furnish additional data.

Habirshaw Armored Submarine Cable

Armored cable, or submarine cable, as it is sometimes called, is used under water for crossing rivers, bays and lakes.

Armored cable may be insulated with paper, varnished cambric or rubber compound. If insulated with paper or varnished cambric, a lead sheath is required. If insulated with rubber compound, a lead sheath is preferable, but may be omitted where the water, in which the cable is to be laid, does not contain injurious impurities. If the cable is rubber insulated and not lead covered, it has a rubber filled cotton tape.

The leaded or taped core is served with jute yarn, run through hot asphalt compound, then armored with galvanized steel wires, *run through hot asphalt compound, served with two layers of yarn and finally run through asphalt compound.

The asphalt and jute over the armor may be omitted, if desired.

Upon receipt of inquiry stating the conditions of service, our Engineering Department will furnish additional data.

*Hot asphalt compound is also applied during armoring at the points where the armor wires come into contact, insuring complete sealing of the armor.

Reel Capacities

Curves Showing Reel Capacity for Cable Diameters Up to 3 Inches

Diameter of Cable.....1.60 inches
 Length of Cable..... 730 feet
 Reel to Use..... 48-inch

Habirshaw Fire Alarm Cable

Fire Alarm cable is used to connect fire alarm boxes on streets and in buildings with fire department headquarters.

Such cables are usually made according to customers' specifications. However, in general, the insulation consists of 30 per cent hevea rubber compound, the conductors are laid concentrically with jute fillers, each layer being taped, and the cable has an outside covering consisting of a lead sheath.

Upon receipt of inquiry stating conditions of service, our Factory Engineering Department will furnish additional data.

Habirshaw Signal Wire and Cable

American Railroad Association Signal Division Standard

Railway signal wire is made to conform with the exacting specifications of the American Railroad Association Signal Division Standard and represents the standard engineering practice in this line. Standard practice means a great deal more to the railway signal engineer than to most others, as upon the reliability of signals depends the safety of millions of passengers.

The present American Railroad Association Signal Division Standard specification for rubber insulation is a development resulting from a study of the manufacture, inspection and use of rubber insulated wire extending over a period of many years, by a strong and representative committee of signal engineers who have given considerable time and attention to this subject. The specification has undergone changes in this time and every change has improved the product and confirmed the opinion of signal engineers as to the excellent quality of the insulation which it exacts.

Habirshaw has specialized on A. R. A. Signal wire and makes the following types:

I. Rubber Insulated Signal Wire for 660 Volts or Less

Number of conductors, one or two.
 Range of sizes, 0 to 18 A. W. G., solid.
 Insulation on each conductor, A. R. A. Signal Division compound.
 Covering over insulation, one cotton braid, 3/64 inch thick, weatherproof.

Thickness of insulation, No. 0-2 A. W. G., inclusive, 3/64 inch; 4-8 A. W. G., inclusive, 5/64 inch; 9-14 A. W. G., inclusive, 3/16 inch; 16-18 A. W. G., inclusive, 1/8 inch.

Shipped on reels or in coils as ordered. If in coils the following lengths are standard: No. 6 A. W. G., 1000 ft.; 8-12 A. W. G., inclusive, 1500 ft.; 14 A. W. G., 2000 ft.

II. Aerial Braided Cable for 660 Volts or Less

Number of conductors, as specified.
 Range of sizes, 4 to 16 A. W. G. (not necessarily all the same size in a given cable).
 Insulation on each conductor, A. R. A. Signal Division compound.

Fillers, dry jute.
 Covering over each layer, rubber filled tape.
 Covering over all, one saturated cotton braid, 3/64 inch thick.
 Thickness of insulation, No. 4 A. W. G., 3/64 inch; 6-9 A. W. G., inclusive, 1/16 inch; 10-14 A. W. G., inclusive, 1/8 inch; 16 A. W. G., 3/16 inch.

Cables of more than three and less than seven conductors are made with jute or sisal center. One wire in each layer is taped for a tracer.

Cables will be shipped on reels.
 Above cables can be furnished lead covered if required.

Habirshaw Corona-proof Cable

Used out-of-doors where rubber insulation is desirable, yet must be proof against the deteriorating effects of the elements and the oxidizing action of Corona discharges. It is a cable insulated with a special rubber compound, especially developed for this service, covered with a layer of tape, enclosed in one or more saturated cotton braids.

This cable is used for aerial distribution circuits at voltages of 2200 and over. Also for special purposes where extra high voltages are used.

Upon receipt of inquiry stating conditions of service, our Engineering Department will furnish additional data.

Habirshaw Aerial Cable

Aerial transmission cable is used mostly for the transmission of power between 6,600 and 25,000 volts where it is uneconomical to construct subways and where the conditions for open wire construction are unfavorable. It is especially useful where existing pole lines are congested or along suburban streets lined with heavy shade trees, as well as for certain types of crossings over or under highways and railroads. For the three-conductor cable, paper insulation with lead sheath is the most satisfactory. For the smaller sizes the weight does not exceed the weight of cables commonly used by the Telephone Companies in aerial construction. For larger sizes, however, the weight is somewhat greater but offers no special difficulty in installing.

Upon request our Engineering Department will advise as to the most desirable type of cable to be used under specified conditions.

Habirshaw Varnished Cambric Insulated Cable

Varnished cambric insulated cable is used:

- a. In power stations and sub-stations for connecting machinery and apparatus of all voltages (see Apparatus Cable and Station Cable).
- b. In buildings in place of rubber insulated cable, especially for the larger sizes.
- c. For low voltage underground distribution, where special reliability is desired.
- d. On vibrating structures where paper insulation cannot be used due to the crystallization of the lead sheath.

Varnished cambric insulation consists of varnished cambric tapes applied helically to the conductor with intervening layers of mineral base grease. The turns of tape overlap and the joints in successive layers are staggered. They are also reversed at least every three layers.

Varnished cambric insulated cable is usually covered as follows:

Apparatus cable, saturated cotton braid.

Station cable, a rubber filled cotton tape and a flameproof braid.

Building mains, two saturated cotton braids.

Underground cable, lead sheath.

Cable for outdoor structures, a rubber filled cotton tape, two galvanized steel tapes, and a layer of asphalted jute under and over the armor.

Upon receipt of inquiry stating conditions of service, our Engineering Department will furnish additional data.

**Habirshaw Habirlite Headlight Wire
Single Conductor**

Habirshaw wire is used where resistance to oil heat, sulphur fumes and steam is essential. Standard sizes, 10 to 14 A. W. G., solid. Wrapping, soft cotton wind, saturated. Insulation, heat proof compound insoluble in mineral oils, non-hygroscopic, chemically inert to reagents and flexible to breaking point of wire. Covering, three cotton braids saturated with heat resisting compound.

Size A. W. G.	Diameter Overall Inches	Weight Lbs. per 1000 Ft.	Type of Package	Feet in Package	Shipping Weight of Package
10	.220	51	10 coils in box	10000	540
12	.200	37	10 " " "	10000	390
14	.190	29	10 " " "	10000	310

**Habirshaw Automobile Starting Cable
S. A. E. Standard, Single Conductor**

Automobile starting and charging cable is used for connecting the batteries to the starting motor and generator, of a gasoline propelled car. Range of sizes, 2 to 00 A. W. G., stranded. Insulation, "Black Core" rubber compound. Intermediate covering, one overlapping strip of varnished cambric. Over all covering, one (2 coat) varnished braid, $\frac{1}{4}$ inch thick.

Size A. W. G.	No. and Size of Strands	Thickness of Insulation 64ths Inch	Diameter of Braid Inches	Weight per 1000 Feet Lbs.	Type of Package	Feet in Package	Shipping Weight of Package Lbs.
00	133 No. 20	4	.66	565	Reel	1000	745
0	133 " 21	4	.61	463	"	1000	543
1	133 " 22	4	.56	383	"	1000	463
2	133 " 23	4	.53	327	"	1000	407

NOTE.—The size to be used depends upon the length installed. The S. A. E. recommends No. 1 for 5 ft. No. 0 for 7 ft., and No. 00 for 9 ft. lengths. It is common practice to use $\frac{1}{4}$ inch of insulation covered with two saturated braids.

**Habirshaw Battery Charging Cable
Two Conductor**

Battery charging cable is used for connecting storage batteries of automobiles to the stationary charging outfit. Also used largely by railroads for charging train lighting batteries on electric baggage trucks both in the charging rooms and for boosting while in position under railroad cars and on the baggage trucks. Range of sizes, 0000 to 8 A. W. G., stranded. Insulation on each conductor, "Black Core" rubber compound. Covering over insulation, one saturated braid. Grouping of conductors, twin (flat), except No. 0 and larger, which are round. Fillers, jute (for No. 0 and larger, only). Covering over both conductors, two saturated braids.

Size A. W. G.	No. of Strands	Thickness of Insulation 64ths Inch	Outside Diameter Inches	Weight per 1000 Feet Lbs.	Type of Package	Feet in Package	Shipping Weight of Package Lbs.
0000	259	5	1.720	2220	Reel	1000	2870

6	61	4	.446x .802	317	"	1000	397
8	61	3	.375x .660	210	"	1000	290

Habirshaw Basket Weave Armored Cable

Basket weave armor is a wire braid similar in construction to the ordinary cotton braid, used for covering wires. It is usually made of galvanized soft steel wire, but is sometimes made of brass or copper. The warp and woof of this fabric each consist of between five and fourteen ends, depending upon the size of cable, the usual size of wire being 0.0126 inch in diameter. The strands or ends are laid closely together, flat and parallel, firmly binding the core.

Basket weave is used for two purposes. First as a mechanical protection, and second, as a means of grounding the outside of high voltage cables in order to prevent static disturbances. The former application is by far the more important. Examples of its use are as follows:

a. Wiring of ships. Basket weave armor affords mechanical protection without the use of conduits, which are objectionable on shipboard, due to the difficulty of closing them at the watertight bulkheads. Furthermore, conduits on ships are difficult to repair and are liable to sweat.

b. Portable cables in machine shops. Basket weave armor affords mechanical protection without interfering with flexibility where cables lie on the floors of machine shops, where they are liable to be trodden upon and yet must be free to be moved about.

c. Mine cables. In mines where the work is not of a sufficiently permanent character to warrant the use of conduits, basket weave affords the necessary mechanical protection.

d. High voltage cables. Basket weave armor is used on high voltage cables especially if rubber insulated, in order to prevent the formation of static charges.

Upon receipt of inquiry stating conditions of service, our Engineering Department will furnish additional data.

Habirshaw Flameproof Cable

Flameproof cable is used about power houses in the vicinity of switchboards and apparatus where special fireproof protection is desired. This method of protection consists essentially in impregnating the braided covering with a flameproof paint, and may be used in connection with any conductors having braided covering, when so specified.

Habirshaw Mine Cable, Single Conductor

Locomotive or Gathering Reel Cable

Single conductor mine cable is used for operating gathering reel locomotive run on steel tracks which can be used for the return current.

Number of conductors, one.

Range of sizes, 2 to 6 A. W. G., flexible.

Insulation, "Black Core" rubber compound.

Covering over insulation, rubber filled tape.

Covering overall, one extra heavy or seine-twine (as specified), extra tight weatherproof braid.

Size A.W.G.	No. of Strands	Thickness of Insulation 64ths Inch	Outside Diameter Inch	Weight per 1000 Feet Lbs.	Type of Package	Feet in Package	Shipping Weight of Package Lbs.
2	133	4	.59	337	Reel	1500	685
3	133	4	.55	271	"	1500	586
4	133	4	.52	234	"	1500	431
6	133	4	.46	167	"	1500	330

Habirshaw Twin Mine Cable Flat

Twin (flat) mine cable is used for gathering reel locomotives, cutting machines, hoists, drills, and other electrical machines in mines.

Number of conductors, two.

Range of sizes, 2 to 8 A.W.G., flexible.

Insulation on each conductor, "Black Core" rubber compound.

Covering over each conductor, one saturated braid.

Grouping of conductors, parallel.

Marker, raised thread in the braid of one conductor.

Covering over all, two or three saturated extra tight braids as specified.

Double Braid							
Size A.W.G.	No. of Strands	Thickness of Insulation 64ths Inch	Outside Diameter Inches	Weight per 1000 Feet Lbs.	Type of Package	Feet in Package	Shipping Weight of Package Lbs.

Habirshaw Triplex Mine Cable

Triplex mine cables are used with three-phase motor equipments, and are usually made for pressures up to 600 volts.

Range of sizes, 2 to 8 A.W.G., flexible.

Insulation on each conductor "Black Core" rubber compound.

Covering over insulation, one saturated cotton braid or rubber-filled tape.

Grouping of conductors, twisted.

Fillers, jute.

Covering over filler, rubber filled tape.

Covering over all, one or two saturated extra tight braids.

Size A.W.G.	No. of Strands	Thickness of Insulation 64ths Inch	Outside Diameter Inches	Weight per 1000 Feet Lbs.	Type of Package	Feet in Package	Shipping Weight of Package Lbs.
2	49	4	1.203	1020	Reel	1500	2180

6	49	4	.890	525	"	1500	1248
8	49	3	.730	345	"	1500	703

Reels

Some sizes and kinds of wires necessarily must be shipped on reels.

In such cases the reels will be billed at cost and credited at full billing value, less return freight charges, if returned to mill within six months of shipping date.

Obtain return tags and shipping instructions before shipping reels.

Tirex Rubber Armored Cable

The flexible copper conductors are insulated with a rubber compound of high dielectric strength containing a minimum of 30 per cent of new Para rubber.

The inner jacket is a 40 per cent Para rubber compound and fills the interstices between the conductors.

The outer jacket or rubber armor contains 60 per cent of new Para rubber and is securely locked to the cable.

A double reinforcement of hard twisted seine twine between the jackets adds greatly to the wearing qualities of Tirex Cables.

The outer covering or rubber armor effectively protects the cable and safeguards the user.

Tirex Cables, being all rubber, do not absorb moisture and are not appreciably affected by oils or acids under ordinary industrial conditions.

**Tirex Single Cable—Paper Separator
600 Volts**

When the insulation is removed the conductor is left clean, ready for connecting to terminals or battery lugs. These cables are exactly like Tirex rubber-armored locomotive and mining machine cables, excepting that a paper tape is placed between the insulation and conductor which prevents the rubber compound from adhering to the copper. The outer protection is a 60 per cent rubber sheath under which is a serving of heavy seine twine which securely locks the sheath to the cable and prevents tearing or stripping.

Tirex Rubber Armored Cable

Maximum flexibility is obtained by proper stranding of the copper conductors and the omission of stiff, fibrous braids and fillings. Tirex Cables never kink.

The smooth, clean, outer surface of Tirex Cables does not collect and hold dirt and grease. It may easily be wiped clean when soiled.

Rigid electrical tests are made during the manufacture of Tirex Cables. These tests insure the integrity of every length.

The rubber armor has the wearing qualities of a first class automobile tire and will last many times as long as a braided or woven fibrous covering.

Concentric, Two-conductor

Type S Tirez Portable Cord

The rubber covering of Tirez has the toughness and wearing qualities of a high grade automobile tire. Tirez will render continuous, satisfactory service for a long period of time even under most severe and trying conditions.

Oils, acids, etc., have no appreciable effect upon it and the clean, smooth outer surface will not collect dirt or grease. Its cleanliness and light weight commend it to all users of portable tools.

The flexible copper conductors are adequately insulated with a 30 per cent Para rubber compound; the insulation of each conductor being a distinctive color for identification and polarity marking. The outer jacket, containing a high percentage of Para Rubber is a guarantee against interruption of service from outside causes.

Two or three-conductor Nos. 18, 16 and 14 and two-conductor No. 12 are packed in special cartons containing 250 feet each, so constructed that the cord may be drawn out as needed without disturbing the remainder of the coil. All sizes are furnished in special lengths as ordered.

***One-conductor**

*There are no N.E.C. Standards for the one-conductor rubber sheathed flexible cord. Prices upon application.

Type SJ Tirez Portable Cord

2-conductor

Recommended for pendant drop lights, floor or table lamps, vacuum cleaners and small electrical tools and apparatus.

It is suitable for portable use in offices, dwellings and reasonably dry places where conditions are not so severe, and for pendant use in manufacturing plants and garages.

The cord is practically wearproof, never frays or kinks and is so flexible that its full length is always available without delay or annoyance.

The outer covering or rubber armor is smooth and attractive in appearance and is furnished in black or green as desired.

The colors are permanent and the wear and tear of ordinary service has no appreciable effect on them.

The insulation of each conductor is of a distinctive color for identification and polarity marking.

Tirez is packed in convenient cartons containing 250 feet each, so constructed that any desired length may be removed without disturbing the remainder of the coil.

Other lengths may be obtained in coils or on reels.

Furnished in coils of 250 feet. Prices on application. *This size does not bear Underwriters' tags.

Duracord Single Conductor Cable

This cable is made up in extra flexible stranding, rope lay with code thickness of 30 per cent rubber, and with a heavy woven cover on the outside

which is impregnated with a water-proof, oil-resisting compound. Used as welding cables, mine cable and motor leads.

Size	Stranding	Amp. Cap.	Shipping Wt. Lbs. per 1000 Ft.	Size	Stranding	Amp. Cap.	Shipping Wt. Lbs. per 1000 Ft.

Other sizes made on orders of 5000 feet or over.

Automotive Cables

The best quality electrolytic copper, accurately drawn to size and carefully annealed, is used in all conductors.

The rubber used in these wires and cables is of the best grade, carefully compounded with the skill gained by years of experience, assuring a product of long life and serviceability. Easy-stripping characteristics, but firmly holds the fine strands of wire.

The varnished cambric tape used is of the best quality obtainable, and has high dielectric strength.

Standard wires are covered with a brown color braid of hard glazed yarn which is varnished. The varnish used is a clear insulating varnish evenly applied producing a moisture and oil resisting coating. Blue tracer threads are also woven in the braid. Specification wires will be made with braid of any color desired.

Armored cables are protected with a galvanized steel ribbon armor, half oval in section, which gives maximum flexibility and longest wearing qualities.

Wires calling for a weatherproof finish are first saturated with a compound which thoroughly penetrates the braid. A second coating of a special compound is then applied and highly polished to a uniform texture.

7 MM. Plain Secondary, Types 702, 703

7 MM. Braided Secondary, Types 711, 712, 713

7 MM. Spark Plug Cable

TYPE No. 703 PLAIN.—For use between plugs and magneto, or distributor, where a very high quality high tension cable is desired. Made in accordance with S.A.E. specifications.

TYPE No. 713 BRAIDED.—For use between plugs and magneto, or distributor, where a very high quality high tension cable is desired. Made in accordance with S.A.E. specifications.

TYPE No. 702 PLAIN
TYPE No. 712 BRAIDED
TYPE No. 711 BRAIDED } For use between plugs and magneto, or distributor.

3/32-inch Spark Plug or Secondary Cable

TYPE No. 611 BRAIDED.—For use between plugs and magneto, or distributor, when a cable of good quality but smaller diameter is desired.

9 MM. Braided Secondary, Type 912

Secondary or High Tension Cable

9 MM. Spark Plug Cable

TYPE No. 902 PLAIN } For use with high voltage magnets or coils.
TYPE No. 912 BRAIDED }

TYPE No. 714 SECONDARY CABLE is a new type added recently—Dimensions are given in the following table. This cable is designed for extremely long life and will practically indefinitely withstand the so called "Corona Tests" which cause plain high tension cables to fail in a short time. The rubber is protected by a specially finished flexible black enameled fine cotton braid from oil, gasolene and moisture. Full details and samples will be furnished upon application to the factory.

Automotive Wires and Cables

No. 14 B. & S. Duplex Lighting Type 142-D Primary Cable

The rubber insulated lighting cables all have an insulation of high grade rubber compound, 1/32 inch thick. They are covered with a close braid of hard glazed cotton yarn varnished, are flexible and will withstand a great amount of wear.

Single Lighting or Primary Cable

TYPE No. 102.—For use as a low voltage generator cable, where amperage carried is high. Suitable for bus lighting.

TYPE No. 112.—For use as a low voltage generator cable, where amperage carried is high. Suitable for bus lighting.

TYPE No. 122.—For use as a low voltage wire for very large headlights or main lighting and ignition currents lead from battery or generator. Suitable for lighting circuits on small buses or large ones using 12 volt systems.

TYPE No. 142.—For general primary or lighting use, battery to coil, headlights, interior body wiring, etc.

TYPE No. 162.—General utility lighting or primary wire, sufficiently heavy for majority of low voltage circuits.

Starting cable can also be insulated with acid proof rubber. Prices upon application.

Automotive Wires and Cables

Flexible Cords

Method of Packing No. 18 Green and Yellow N. C. Cotton Lamp Cord Other Types and Sizes Packed in Coils

Single Armored Cable
 TYPE NO. 129.—For use in charging circuits and for very large headlights when wire is subject to chafing and abrasion.
 TYPE NO. 149.—For use on single contact lighting circuits. Conductor is of sufficient size to fill the majority of requirements. The armor resists abrasion.

TYPE NO. 169.—For use in all small amperage lighting circuits, such as small headlight, dash, tail, tonneau, horn, etc., when desirable to protect against abrasion.

Duplex Armored Cable
 TYPE NO. 129D.—For use as above where two wires are required, making neater and quicker installations.

TYPE NO. 149D.—For use on ungrounded lighting circuits where double contact lamps are used or where it is desired to run two wires together protected against abrasion.

TYPE NO. 169D.—For same use as the single type except on ungrounded systems or to run two wires together.

Armored Lighting Cable

Insulation consists of one layer varnished cambric well overlapped, and one paraffined cotton braid. Copper is not tinned.

Type No.	Size B. & S. Gauge	No. of Conductors	Stranding	Approx. Max. Diam. Over All	Approx. Wt. Lbs. per 1000 Ft.

Special Harness for Passenger Cars and Trucks Built to Manufacturers' Specifications

Quality is the predominating feature of our regular and special flexible cords and cables, as listed hereinafter. Every step in the manufacture of our products is carefully inspected and no expense is spared to produce the best obtainable flexible cords and cables.

Our aim is not only to meet the requirements, as set forth by the National Board of Fire Underwriters, but surpass them. A sample of Western Electric Flexible Cord, which we will gladly furnish, will firmly convince you that it is a quality product.

A large stock of all standard cords is always available so as to give prompt and satisfactory service.

Packing—Lamp Cord

Lamp Cord is packed in sealed containers, light, easy to handle and convenient to store in small spaces. Study the accompanying illustration.

The cartons are strong reinforced pasteboard boxes, each one bearing a full description of its contents.

CAPACITY.—250 feet in coil form, uncoiling from center.

Four cartons are placed in one strong corrugated container, which is sealed with a heavy gummed strip bearing our trademark at short intervals. This forms our standard package, as illustrated.

The following cords put on spools when requested at no extra charge:

No. 18—1/64 and 1/32 Type C Silk and Art Silk	500 feet
" 18—1/64 " 1/32 " PO " " " "	500 "
No. 18—Fixture 1/32 Cotton Mercerized Silk and Art Silk	500 "
No. 18—1/64 Single Cotton Mercerized Silk and Art Silk	1000 "
No. 20—1/64 Type PO Silk and Art Silk	500 "

Special Flexible Cords

Special weatherproof flexible cords are packed in coil form, securely wrapped with burlap. Each coil is clearly labeled.

Flexible Lamp Cord

Conductor consists of strands of number 30 B. & S. bare copper, cotton wound, rubber covered, and braided with glazed cotton, mercerized cotton, or silk. When the individual wires of the strand are tinned and concentrically laid, the cotton wind is eliminated unless requested.

OLD CODE INSULATION.—(Not Approved by Underwriters) requires the same diameters as New Code, but slightly lower in quality.

Flexible Cords

Lamp Cord—Type C. Single or Twisted Pair with Cotton or Silk Braid Over Each Conductor

Parallel Cord—Type PO. Has Cotton Braid Over Each of Two Conductors Laid Parallel Under Cotton or Silk Outer Braid

The conductors of our regular cords are composed of a number of 30 B. & S. bare annealed copper strands, grouped into a cable of the required capacity, as follows: No. 8 B. & S., 165 strands; No. 10 B. & S., 104 strands; No. 12 B. & S., 65 strands; No. 14 B. & S., 41 strands; No. 16 B. & S., 26 strands; No. 18 B. & S., 16 strands; No. 20 B. & S., 10 strands; No. 22 B. & S., 7 strands. Sizes smaller than No. 18 are not approved by the Underwriters.

NEW CODE INSULATION.—(Approved by Underwriters) requires $\frac{3}{32}$ -inch wall on number 16 and number 18 B & S; $\frac{1}{16}$ -inch wall on number 14 and larger; $\frac{1}{32}$ -inch wall of rubber now approved by Underwriters for use on Types P, PO and PWP for 18 B. and S. Gauge only.

COMMERCIAL INSULATION.—(Not Approved by Underwriters) requires $\frac{1}{8}$ -inch wall rubber of a grade but slightly lower in quality than New Code Rubber. We can also furnish $\frac{1}{16}$ -inch wall of New Code Insulation.

Seven Points to Cover When Ordering W. E. Flexible Cords

Amount Feet	Size B. & S. Gauge	Insulation	Conductors	Style	Finish	Color*
Examples	1000	18	New Code	Twisted Pair	Lamp Cord	Green & Yellow

*Wp. saturated with a weatherproof compound. †Braids saturated with a flameproof compound. When ordering please use the trade name.

Special Flexible Stage Cable and Packing House Cord

Constructed to withstand severe abrasion. Conductors are reinforced with jute and rubber jacket. The cord is then covered with an outer weatherproof braid.

Special Flexible Deck Cable

Watertight flexible cord, made to stand severe abrasion. Made as follows: Two conductors of new code cotton braided cord, twisted together, reinforced by jute, and a rubber jacket. It is then covered with a weatherproof braid.

Special Flexible Border Light Cable

The construction of border light cables corresponds with canvasite cord, but consists

of two or more conductors and has two outer braids weatherproofed.

Special Flexible Heater Cord

Conductor consists of a number of small copper strands grouped into a cable, cotton wrapped, insulated with a thin wall of rubber compound asbestos wound.

Special Flexible Canvasite Cord

An acidproof flexible cord, unusually tough and durable. For use in tanneries and other places where mechanical and chemical conditions are severe. Made up similar to Brewery Cord except that it has an extra weatherproof braid.

Special Flexible Brewery Cord

A weatherproof lamp cord which conforms in all respects with the requirements of The National Board of Fire Underwriters. This is a specially designed cord for use in breweries and other places where dampness is prevalent.

Inside Telephone Wire

Packed in coils in burlap bags; each coil specially wrapped in heavy craft paper. Furnished in single or triple conductors when specified. A tracer thread is used in all conductors.

Gauge B.&S.	Description	Wt., per 1000 Ft.	Coil Lengths, Ft.
19	Twisted Pair, Olive Green Finished....	22	200-1500
20	" " " " " "	19	200-1500

Outside Telephone Wire

Furnished in coils. Single and triple conductor, when specified.

Gauge B.&S.	Description	Wt., per 1000 Ft.	Coil Lengths, Ft.
17	Weatherproof, Copper Steel Wire.....	36	200-1500
14	" " Wire.....	65	200-1500
17	" Twisted Pair, Bronze Wire.....	39	200-1500
17	" Parallel Bronze Wire.....

Bridle Telephone Wire

Furnished in coils. Single conductors, when specified.

Gauge B.&S.	Description	Wt., per 1000 Ft.	Coil Lengths, Ft.
18	Twisted Pair, Weatherproof Braid.....	33	200-1500
16	" " " " " "	42	200-1500

Outside Drop Wire

Stronger and lighter than copper and quite as flexible. Conductor is a high grade non-rusting iron insulated with good grade rubber compound, cotton braided and weatherproofed. The sizes most generally used are as follows:

Gauge	Description	Inch Diam. In.;	Twisted Pair
19 BWG (18 B.& S.)	7/64	"	"
18 BWG (16 B.& S.)	9/64	"	"
16 BWG (14 B.& S.)	5/32	"	"
14 BWG (12 B.& S.)	3/16	"	"

Flameproof Telephone Wire

Gauge B. & S.	Description	Wt., per 1000 Ft.	Coil Lengths, Ft.
16	Single, Twisted of Triple Conductor...	38	200-1500
20	" " " " " "	19	200-1500
22	" " " " " "	16	200-1500

Pot Head Wire

Standard wire is either 19, 20 or 22 B. & S. gauge in single or twisted conductor. Insulation is suitable to withstand effects of the hot sealing compound and outside exposure without a protecting braid. One conductor of the twisted pair has a double ridge on insulation insuring quality. Weight, per 1000 ft., 19 lbs. Coil length, 200-1500 ft.

Armco Galvanized Iron Drop Wire

For Outside Service

Stronger and lighter than copper and quite as flexible. Manufactured from Armco (American Ingot) Iron, universally known to be the only pure iron manufactured today. It is guaranteed 99.84 per cent pure iron (minimum), is equal or superior to the genuine Swedish, Norway and other brands of pure irons. The purity of iron has a great deal to do with its rust-resisting power. Its uniformity assures uniform conductivity, no pitting to cause weak spots and eventually breaks, uniform strength throughout, 65,000 to 75,000 pounds tensile strength per square inch; mass conductivity 18 per cent as compared to steel at 12 per cent. The conductor is thoroughly galvanized, insulated with a high-grade rubber compound on which is woven a braid, weatherproof and twisted together. The sizes most generally used are as follows: Gauge No. 14 BWG, No. 16 BWG, No. 18 BWG and No. 19 BWG. Prices upon application.

Telegraph Wire

These wires are furnished in strict accordance with the standard specifications of the largest telegraph companies of this country. They are a high-class product and can be furnished in all sizes as required. The sizes ordinarily specified are Nos. 14, 16, 18 single and twisted, with a weatherproof braid, and No. 18 in twisted pair and triple, with brown and black braid. Flameproof wires in size No. 16 single and twisted are also used by the telegraph companies.

**Deltabeston Fixture Wire—Plain
Single Conductor—Stranded**

The flexible conductor is insulated with a $\frac{1}{32}$ -inch wall of the best grade of asbestos fiber, purified by a special process. Felted asbestos fixture wire is recommended for all classes of fixture wiring, including fixtures for gas filled incandescent lamps, car fixtures, etc., and is especially adapted for fixtures in which the temperature liable to be attained by some parts are such as to render the use of rubber covered wires or cords either undesirable or impracticable. Felted asbestos fixture wire is smooth and flexible so that it may be "fished" through fixtures with the utmost ease. Standard length, 250 feet. Furnished on spools.

Size B. & S.	Diam. Overall In.	Stranding B. & S.	Wt., Lbs. per 1000 Ft
10	0 180	65/28	42
12	0 157	66/30	29
14	0 137	41/30	20
16	0 119	26/30	14
18	0 107	16/30	10

Single Conductor—Solid

Either the black finish or colored finish fixture wire described above can be furnished with solid conductor where extreme flexibility is not necessary. Price is five per cent less than similar fixture wire with stranded conductor.

**Deltabeston Fixture Wire
Cotton and Art Silk**

This is the plain, black finish fixture wire with a braided outer covering of art silk or cotton. It is especially adapted for fixtures on which the wiring is exposed to view. It has a small diameter and is neat and attractive in appearance. This wire is furnished in single and two conductors.

**Single Conductor
Plain with Braid**

Size B. & S.	Diam. Overall In.	Standard Length of Spools, Ft.	Wt., Lbs. per 1000 Ft.
12	0.179	250	29
14	0.167	250	22

18	0.264	250	25

Deltabeston Boiler Room Wire

This wire is generally furnished in sizes 8, 10, 12 and 14 B. & S. with $\frac{1}{8}$ -inch felted asbestos insulation, lead covered, to prevent absorption of moisture. Prices quoted on application.

**Deltabeston Heater Cord
Two Conductor, Stranded**

Style A, with Asbestos Braid Overall			Style D, with Glazed Cotton Braid on Each Conductor		
Size B. & S.	Diam. Overall In.	Wt., Lbs. per 1000 Ft.	Size B. & S.	Diam. Overall In.	Wt., Lbs. per 1000 Ft.

16	0 258	32	16	0 312	35
18	0 234	23	18	0 282	26

Standard length of above, 250 feet. Furnished on spools.

Two Conductor, Braided

Styles A, C, D and E heater cord can be furnished with braided conductor instead of stranded conductor at an increase in price of 15 per cent. The braided conductor is made by braiding 34 B. & S. gauge copper wires instead of stranding 30 B. & S. gauge copper wires as in the stranded conductor. Where the cord is subjected to excessive bending this will be found to prolong the life of conductor.

**Deltabeston Stove Wire
Solid Conductor**

This wire is recommended for the wiring of electric stoves and ranges, in and around ovens, in boiler rooms and similar places where excessive moisture is not present. Standard finish is white but black finish can be supplied at same price, if so desired.

Size B. & S.	Diam. Overall In.	Standard Length of Coils, Ft.	Wt., Lbs. per 1000 Ft.

Deltabeston Round Magnet Wire

The insulation is pure asbestos fibre treated by a special process which removes all impurities. The asbestos is applied in an adhesive, uniform, smooth mass of approximately the same wall thickness as double cotton covered magnet wire. It is finally treated with a special compound which renders it both moisture proof and tough. Notwithstanding its toughness the insulation is so flexible that it does not crack or break even when sharp bends are made. A careful inspection of the finished wire is made which insures a perfect, uniformly insulated product.

Standard color of finish is black, but white finish can be supplied at same price when customer desires to apply own compounds to wire after forming in coils.

In the manufacture of Deltabeston wire soft drawn copper of at least 98 per cent conductivity is used. Each reel is tested to satisfy the manufacturer's rigid specifications for uniformity of diameter, elongation, tensile strength and conductivity.

Deltabeston magnet wire has exceptional heat resisting qualities, in fact it is indestructible by any temperatures to which it may be subjected in commercial service. It is unequalled for use in the manufacture and repair of coils for railway, mining and mill type motors, electric locomotive headlights, lifting magnets and in all other apparatus in which severe temperature rises occur.

White enamel (known as W. E.) finish Deltabeston magnet wire is not only fireproof but also acid and oilproof and the special compound used makes the insulation so tough that it will even withstand hammer blows.

It is especially desirable for armature coils and for use when service conditions are extremely severe.

The price is approximately 10 per cent higher than standard Deltabeston.

Deltabeston Rectangular Magnet Wire

The use of flat and square magnet wires is rapidly increasing. Since a greater cross section of copper is secured the desirability of this form of wire is evident. Until Deltabeston insulation was obtainable on rectangular wires, their use was somewhat limited to motors in which the temperature rises were normal. Since Deltabeston is now procurable in nearly all sizes and shapes, the advantages of flat and square wires may be had together with the benefits derived from a fireproof insulation.

The satisfactory application of an asbestos covering on flat and square magnet wires presents certain difficulties not encountered in the insulating of round wires. To apply a smooth, uniform covering over the rounded corners as well as on the flat surfaces of the wire is obviously essential. The manufacturer has so perfected his methods of manufacture that this is achieved with absolute certainty. The insulation adheres tightly to the conductor and although it is tough, its tenacity is unaffected by sharp bends.

Square and Rectangular Magnet Wire

Increasing attention is being given to the economies to be secured by the substitution of Square or Rectangular for round magnet wire. When round wire is used, considerable space is wasted, even when turns are fitted together as closely as possible, whereas the waste spaces are filled when square or rectangular wire is used, and a greater current carrying capacity secured.

Square Magnet Wire

Square magnet wire can be furnished in all sizes from number 14 to 0000 B. & S. gauge. (In computing the gauge the diameter of round wire is comparable to the thickness of square wire.) Sizes smaller than No. 14 cannot be regularly procured owing to the difficulty of winding.

Rectangular Magnet Wire

Rectangular magnet wire sizes have not, as yet, been standardized but can be supplied in sizes from .410 to .020 in thickness and from .460 to .064 in width and the regular insulation is double cotton wound. Rectangular wire is not carried in stock, but made specially on order, and in view of this, orders should not be for less than 200 pounds of any size.

Prices on square and rectangular magnet wire will be quoted upon application.

193 Alloy Resistance Wire

This alloy serves successfully in low temperature air heaters, and makes good elevator controllers and rheostat resistances. The upper limit is 1200° F. It gives satisfaction in the finer gauges up to 30. It is a nickel-iron-chromium alloy with much the same characteristics as Climax but is more resistant to oxidation and rusting and gives longer service. 193 Alloy is made in the form of wire and ribbon.

Specific resistance per circular mil-foot, 180 ohms, at 20° C.

Temperature coefficient, .00027 per degree C., between 20° C. and 100° C. Specific gravity, 8.5. Weight, per cubic inch, .307 pound.

The composition commonly known as Nickel Silver is that containing 18 per cent of nickel. Its resistance varies somewhat in different lots, according to temper, and is approximately 19 times that of copper.

Thirty per cent nickel silver wire has a resistance approximately 28 times that of copper.

Prices quoted upon application.

Annunciator Wire

Regular

Insulated with two winds of cotton yarn applied in opposite directions, saturated with a special wax compound and highly polished. This makes a very compact insulation. Furnished either on spools containing about 7 lbs., or exactly 1 lb. and in 1-lb. and 1/2 lb. coils, and packed in cases containing approximately 200 lbs. Furnished in colors and styles as follows: either plain copper or tinned; plain copper furnished unless otherwise ordered; red, blue, red and white, brown, brown and white, white, olive, yellow, yellow and white, blue and white, green, green and white and special colors where possible for us to obtain proper colored yarns.

Single Conductor

Tinned wire furnished on application at \$.02 extra.

Damp-proof Office Wire

This wire is double braided, the inner braid saturated with black weatherproof compound. The outer braid is specially treated with wax, highly polished and will not collect dust. Damp-proof office wire is carried regularly in the following colors: red, red and white, blue, blue and white. It is put up in coils of about 10 lbs. each, or on spools of 5 lbs. each, and packed in cases of approximately 200 pounds each.

Sizes 16 and 18 wire, in red, red and white, blue, blue and white, are also carried in duplex wire, being two separately insulated conductors under one braid.

Tinned wire furnished on application.

Annunciator Cables

This cable is designed for connecting the annunciator in an elevator car with the push buttons on the different floors.

Each conductor is composed of 16 strands of No. 30 B. & S. gauge soft untinned copper wire and insulated with two reverse wrappings of cotton and one cotton braid. The insulated conductors are then cabled (using a steel supporting strand if desired, in order to give extra tensile strength, but ordinarily supplied without same) then covered with two cotton braids, the inner one being white and the outer one black. This is a dry cable, and the outer braids are not flameproof.

Prices on application.

O. K. Weather-proof Solid Copper Wire
For Outside Construction Uses

This wire is insulated with three close cotton braids, all thoroughly saturated with O. K. Weather-proof Compound. The outer braid is smoothly polished.

O. K. Slow Burning Solid Copper Wire

Especially suited for use in engine and boiler rooms, furnaces and foundries.

This wire has three close braids of cotton, all saturated with a white fire-proof compound. The compound used on the outer braid becomes hard, but the wire still retains its flexibility.

O. K. Slow Burning Stranded Copper Wire

This wire has three close braids of cotton, all saturated with a white fire-proof compound. The compound used on the outer braid becomes hard, but the wire still retains its flexibility.

American Brand Weatherproof Copper Wire
For Outside Construction Uses
Triple Braid—Solid Conductor

This wire is triple braided with cotton and thoroughly saturated with scientific American Brand Weatherproof Compound, the outer braid being saturated with a highly waxed finish which is polished, making the wire uniform, pliable and durable.

Triple Braid Stranded Conductor—Feeder Cables

The stranded conductor wires and feeder cables are insulated with three braids of cotton and thoroughly saturated with scientific American Brand Weatherproof Compound; the outer braid finished with high polished wax, giving the wire a uniform and durable coating that will not crack in handling and bending.

The strands shown in table below are carried in stock, but strands of greater or lesser number of wires can be furnished on order.

American Brand Weatherproof Copper Wire
For Outside Construction Uses
Double Braid Solid Conductor

The double braid wire is made up of two closely woven braids. The one next to the conductor is saturated with American Brand Weatherproof Compound and the outer braid is saturated with highly waxed finish and polished, making it durable and flexible. Only to made order.

American Brand Slow Burning Underwriters' Copper Wire

Triple Braid Solid Conductor—White Finish

Especially suitable for boiler rooms, furnaces and foundries. This wire does not sustain combustion and according to a recent report of the Underwriters' Laboratories, the samples submitted do not sustain combustion even after the fifth application of the flame for one minute. The wire is easily distinguished from all other makes by one red and one green thread woven in the middle braid. All white.

American Brand Weatherproof Hard Drawn Copper Wire

For Outside Construction Uses Triple Braid—Solid Conductor

This wire is especially insulated for telephone and telegraph purposes as well as railway signal work, combining the highest conductivity and greatest tensile strength.

Double braid made to order. Twisted pair made to order.

American Brand Weatherproof Iron Wire

For Outside Construction Uses Double and Triple Braid

The conductor used in this wire is BB. double galvanized telephone and telegraph iron wire, meeting the required laboratory tests, and is insulated with American Brand Weatherproof Compound with highly polished and durable finish, and is extensively used for telegraph and telephone requirements.

Always put up in standard size coils, properly wrapped in burlap.

Hard Drawn Copper Trolley Wire

Hard drawn trolley wire is furnished in any of the standard styles, round, grooved, or figure eight.

Trolley wire furnished in sizes 4/0-1/0 inclusive put up on 40-inch reels containing approximately 2000 pounds each or on 32-inch reels containing approximately 1000 pounds each.

The cross sections of the various styles and sizes are shown herewith.

Size B. & S.	Circular Mils	Pounds per Mile	Size B. & S.	Circular Mils	Pounds per Mile

American Galvanized Arc Lamp Chain

Made in three sizes: Nos. 31 and 33 for suspending arc lamps, and No. 35 for suspending incandescent lamps. It is heavily galvanized and rust-proof.

Put up on 500 or 1000-foot reels.

Extra Double Galvanized Telephone and Telegraph Wire

The Indiana Steel & Wire Company's process of galvanizing (Crapo Patents) overcomes the inherent defects in certain grades of galvanized wire, more especially those which approach pure iron. The use of the process results in a perfect mechanical bond between the zinc coating and the iron base metal, thus insuring a protective coating which will not crack or peel even if the wire is bent or twisted abruptly, as when wrapped around its own diameter.

Aside from the introduction of a molten salt treating bath which in no way adversely affects the finished product, the process follows closely the old standard hot-dip method of applying a zinc coating. The molten salt bath is of

such composition as to prepare the surface of the iron base metal so that after being made chemically clean, fluxed and dipped in the molten zinc, the resulting galvanizing is thick, non-peeling, and contains the maximum amount of pure zinc which means the best possible protection against corrosion.

Extra Best Best (E. B. B.) is highest in electrical conductivity, having a range of electrical resistance of 4700 to 5000 mile ohms.

Best Best (B. B.) Slightly higher in resistance than E. B. B. but combines conductivity with tensile strength to make a popular grade, having a maximum electrical resistance of 5600 mile ohms.

Steel is designed for short-line service, where electrical conductivity can be sacrificed for tensile strength. Maximum resistance 6500 mile ohms.

All grades galvanized under the same improved process.

Universal Insulator Supports

Universal Insulator Supports are specially designed malleable iron clamps for securing insulators in any position to open steel framework for wiring mills, foundries, factories, shops, bridges, piers, elevated railways, subways, train sheds and similar structures. They are easily attached, and by their use, electric wiring for lights, motors, generators, cranes, etc., can be installed with a saving of labor and material.

The principal advantage of the single set screw feature is the three-point contact which is more rigid and secure than the four-point contact. A wrench can be used more freely than when two set screws were close together.

Cat. No.	Size of Support Inches	Standard Tapping for Screws and Bolts (See Note A)	Price per 100
500	1	1/4-inch—20 (No. 14-20)	\$20.00
501	1 1/2	3/8 " —18 (" 18-18)	34.00
502	2	3/8 " —16 (" 24-16)	46.00
503	2 1/2	1/2 " —13	68.00

Prices include leather washers for insulators, but do not include machine screws or bolts for insulators.

Table of Wires, Insulators, Supports and Screws

Showing No. 500 Support with Two No. 5 1/2 Split Insulators Support is Tapped Special for No. 10-24-thread Machine Screw

Showing No. 502 Support with No. 3 1/2 Insulator. Support is Tapped Standard for No. 24-16-thread Machine Screw

These combinations of wire sizes, insulators and supports should be followed only after consideration of the problem in hand, taking account of character of work and stresses involved, strength of insulators, etc. Table shows largest size of wires suitable for insulators listed; smaller wires may, of course, be used as desired.

Special Porcelain Tubes

To obtain list price of floor, curved and curved end, split and cross-over tubes, multiply as follows:

Solid Floor Tubes

Multiply list by three. For list price on these tubes add three inches to length of standard tubes.

Split Floor Tubes

Multiply list by six. For list price on these tubes add three inches to length of standard tubes.

Headless Tubes Above Eight Inches Long

Multiply list by 4. On these tubes measurements are to be computed over all.

Headless Tubes Eight Inches Long and Under

Same list as standard tubes. On these tubes measurements are to be computed over all.

Curved and Curved End Tubes

Multiply list by three. On these tubes measurements are to be computed over all.

Split Regular Tubes

Multiply list by 10. On these tubes measurements are to be computed under head.

Cross-over Split Tubes

Multiply list by 12. On these tubes measurements are to be computed between heads.

Cross-over Solid Tubes

Multiply list by six. On these tubes measurements are to be computed between heads.

Add 50 per cent to list for glazed tubes.

For tubes larger than 1 3/4 x 24 inches, a standard package is 50.

Barrel size is 20-inch head and 30-inch stave.

A standard package or unit container cannot be made up of assorted sizes.

A standard package is a barrel for which a charge will be made. When ordered put up in paper boxes, or in wooden or corrugated boxes of kegs containing 500 or 1000 pieces or pairs, an additional charge will be made. Prices for special packages will be furnished upon application.

Vitrified Clay Conduit

Square Duct, Single

The conduit clays are of peculiar character in being naturally compounded by having the proper fluxing materials associated in relatively correct proportions in a high grade plastic fire clay which possesses certain necessary properties rarely found in other clays. In burning, these fluxing materials in combination in the one clay, produce vitrification of the clay mass, one of the most essential features of good conduit. Also the salt glazing of clay is caused by a chemical reaction and few clays are favored with properties giving a successful salt glaze finish.

Single-duct Conduit

Single-duct conduit permits of the breaking of joints. It allows two heavy insulating walls between all cables where multiple duct conduit only allows for one. Single-duct conduit is thus adapted particularly for the building up of high-service trunk lines for the transmission of power and light. It is also used for the construction of single-cable terminals and laterals of low tension and telephone lines.

Round Duct Single

It is also used for the construction of single-cable terminals and laterals of low tension and telephone lines.

Square Duct, Single					
Length of Piece Feet	Duct Feet in Piece	Approx. Wt. Lbs. per Duct Foot	Diam. Duct Inches	Duct Feet in Min. Carload	Price per Duct Ft.

1.5	1.5	12	4 1/8	5000	.25

Two and Three-duct Multiple Conduit

The two and three-duct standard conduit is intended for the laying of two or three cables in terminals or laterals from the main trunk line, or for the purpose of building up trunk lines to the number of ducts required. On account of the narrow lateral diameter of this ware, it has been found impossible to manufacture this style of conduit in pieces longer than two feet, and insure good, straight pieces. In many cases it will prove cheaper to lay an extra duct in the longer multiple conduit, especially if the future contemplates the use of the extra duct.

Four, Six and Nine-duct Multiple Conduit

Telephone and telegraph specifications ordinarily demand a larger percentage of four, six or nine-duct than of the smaller forms. These designs are the more economical and permit of considerable saving in installation over the smaller forms. There is no constructive reason why single-duct conduit should take the place of multiples in building up a telephone trunk line. The long multiples present the advantage of economy, constructive simplicity, working efficiency and ease in pulling cables.

Dowel Pins

Metal dowel pins are made of commercial wrought iron. They are circular in cross section, 3 inches long, 5/8 inches in diameter of shaft, with a thin collar projection mid-way into the shaft to prevent the pin from slipping more than half-way into the conduit hole. C. P. C. Conduit is reamed about the dowel pin holes to allow the conduit pieces to make a close-butt-joint over the dowel pin collar.

Prices upon application.

Bermico Fibre Conduit

Socket Joint Type

Bermico fibre conduit is manufactured in a long established pulp and paper plant that specializes in high grade products. It is produced under standardized conditions under the supervision of expert chemists and engineers.

The pure spruce pulp fibre is converted into 8-foot lengths of conduit in automatic machines which produce a higher degree of precision than any skilled operative could produce, wall thicknesses for example being gauged automatically to the thousandth of an inch.

Automatically regulated and elaborate machinery is used to slowly dry and season the conduit, overcoming the defects of ordinary drying methods such as blistering, warping, etc. The result is straight, tough, uniform tubes all exactly up to standard.

Impregnating is effected in great steel sealed chambers forcing out all moisture and forcing in the binding material under correct temperature conditions and for the right length of time.

Machining is done automatically, both ends of the conduit being milled at once insuring uniformity.

Sleeve Joint Type

The use of only first quality materials, expert supervision and exactness of construction results in a product which meets the highest standards for dielectric and physical strength, moisture absorption and uniformity.

Lengths: approximately 8 feet, except 2 and 2½-inch sizes which are 5 feet; 3-inch can be furnished in 5 and 8-foot lengths.

Bermico Fibre Conduit Bends and Fittings

45° Bend, 36-inch Radius

Bends 2 and 2½-inch are furnished in approximately 5-foot lengths.

Bends 3-inch and larger are furnished in approximately 8-foot lengths.

Prices on bends are based on 5-foot lengths. Bends over 5 feet long will be charged as listed below and an extra charge will be made on the straight conduit basis for that part over 5 feet.

An extra charge will be made for bends of special degree or radius, for cutting to special length, furnishing material to sketch, and material cut to waste.

Bermico Fibre Conduit Field Machines

Creosoted Wood Conduit

SHOWING 4-INCH MANDREL IN POSITION READY TO FORM END ON 4" CONDUIT

The Bermico Conduit Field Machine for sleeve, general and socket joints enables the conduit-laying crew to machine a short length of conduit to a perfect fit.

The machine is light, portable, inexpensive and ensures a finished conduit possessing tight joints. Both types of machine carry all mandrels, cutting tools, tool holders, and other parts required for machining joints on 2, 2½, 3, 3½, 4, 4½ and 6-inch conduit, including necessary adjusting and tightening wrenches. No wrenches or other tools should be used except those supplied with the outfit.

The taper or angle for all joints is set by manner the machine is assembled at factory and cannot be changed. It is set exactly right, and remains so.

The screw-joint type machine cuts the standard male thread, and finishes thread complete in one operation. Operator can only vary the depth of cut, and a little practice will enable him to get correct depth. This type carries also a cutting tool for trimming the entering end of the conduit before thread is cut. This trim is made quickly and ensures a tight seat for the conduit-end when butted end to end.

While spare parts may be obtained, each conduit machine is assembled in a rugged cabinet with a padlocked lid which also functions as the operating stand for the machine when in use. This cabinet contains a tool compartment in which all accessory parts are snugly held, handy for instant use. If the machine is properly closed and padlocked when not in use, there should be no occasion for buying duplicate parts.

Parts for Conduit Field Machine

- No. 1.—Expanding Mandrel Adapters for 6-inch Conduit
 - No. 2.—Expanding Mandrel Adapters for 4½-inch Conduit
 - No. 3.—Expanding Mandrel Adapters for 4-inch Conduit

 - No. 21.—Mandrel-expanding Shaft and Lever
 - No. 22.—Washer for End of Mandrel Shaft
- Prices and special catalogue upon application.

This material is manufactured from yellow pine at the plants at Norfolk, Virginia, and Atlanta, Georgia and from Douglas fir at our plant at Tacoma, Washington; creosoted full vacuum treatment is an economical and satisfactory conduit for the carrying of all forms of lead cable and wires.

Comes in random lengths.

Outside measurement, 4½x4½ inches.

Has a 3-inch hole in center, a mortise at one end and a tenon on the other.

It is in general use by the large telegraph companies and telephone companies all over the country and by many railroads.

Uses for which it is adapted:

RAILROADS.—Trunking, underground signal wires, high tension transmission lines, yard drainage where clay conduit is easily broken through, and system is usually placed on the surface of the ground.

TELEPHONE COMPANIES.—All underground work.

TELEGRAPH COMPANIES.—All underground work.

POLICE AND FIRE ALARM SYSTEMS.—For carrying wires, either high or low tension under ground.

CENTRAL STATIONS.—For distribution mains and services.

SPECIFICATION CREOSOTED CONDUIT.—Free from large, unsound or loose knots, or other defects which would impair strength. Creosoted steam and vacuum treatment, dead oil of coal tar under pressure either 12 pounds per cubic foot (full cell) or 8 pounds per cubic foot (empty cell) as ordered.

Any additional information regarding the practicability of installing this conduit will be furnished upon request.

Prices on application.

**Rigid Steel Conduit
Enamelled Conduit**

Enamelled conduit is manufactured from mild drawn steel tubing. Before enameling, the tubing is thoroughly cleaned and freed from dirt, grease, scale, silicates and burrs. This process leaves an absolutely clean surface for the application of the compound.

Galvanized Conduit

Galvanized conduit is manufactured from mild steel tubing of the best quality. The ends are carefully reamed to facilitate the fishing of wires. All tubes are thoroughly cleaned both inside and outside by special process before being heavily coated with zinc.

Sherarduct

Sherarduct Rigid Conduit is made of full weight mild spellerized steel tube and finished under the famous sherardizing process. In this process pure zinc is alloyed with the steel tube both inside and outside to form a rustproof finish which is so entirely a part of the pipe that it cannot be knocked or chipped off.

Standard Sizes of Conduits

For the Installation of Wires and Cables

As Adopted and Recommended by the National Association of Electricians

Based on the use of not more than three 90-degree elbows in runs taking up to and including No. 10 wires, and two elbows for wires longer than No. 10. Wires Nos. 8 and larger are stranded.

Single wire combinations are based on straight run without elbows. Special permission is required of the inspection department having jurisdiction for the installation of more than nine wires in the same conduit.

In ordering, specify finish desired.

New York Ground Clamps

Type A

For use on signalling systems, telephone and telegraph circuits. Furnished in three sizes or with strap in coils.

Size In.	Price Per 100	Size In.	Price Per 100
1	\$8.00	3	\$12.00
2	10.00		

Type B

For heavy circuits — no soldering required. Post drilled for any two sizes: Either No. 4, 6, 8, 10, 12 or 14 wire.

Type A

Size Inches	Price per 100	Size Inches	Price per 100
1	\$31.00	3	\$35.00
2	33.00	4	37.50

Type D

For electric light and motor work. Lug used for soldering wire to clamp.

Size Inches	Price per 100	Size Inches	Price per 100
1	\$31.00	3	\$35.00
2	33.00	4	37.50

Tinned Copper Strap

Furnished in coil which can be "cut as needed" depending on size of pipe. This is particularly economical on large pipes. Coils of strap put up in 10-foot lengths.

Order by inch sizes, stating whether strap is wanted cut to length and attached at one end or in coils, to be cut by consumer as needed.

Strap, for any type, furnished in 10-foot coils instead of inch sizes, if so desired.

- 100 1-inch straps equal to 70 feet in coils.
- 100 2-inch straps equal to 100 feet in coils.
- 100 3-inch straps equal to 130 feet in coils.
- 100 4-inch straps equal to 160 feet in coils.

Sherman Ground Clamps

An all copper, one-piece clamp which can be drawn up tight. The roll portion for soldering is turned in to rest against opposite tongue of clamp, preventing the two ends from tipping together when tightened; holding the ears parallel, and insuring large amount of drawing power.

Can be used for both soldered and solderless connections.

Cat. No.	Size Pipe Inches	Carton	Std. Pkg.	Approx. Wt. Lbs., Std. Pkg.	Price Each
1	3/8 to 1	100	1000	110	\$.20

T & B Adjustable Conduit Hangers

Type A fits beams 2 3/4 to 7 3/8 inches; Type B fits beams 7 to 12 inches.

Adjustable and will support any number of conduits from one to eight, which may run at any angle with the beams and close against the beam, or far enough below to permit a second line of conduits to be run above. Clamps are made of stamped steel.

Ovalduct Conduit and Fittings

Sherardized

Ovalduct Conduit

Ovalduct Conduit is made in 10-foot lengths from seamless drawn steel tube sherardized inside and outside, then enameled upon the interior.

It readily takes a duplex wire and may be bent to conform to wiring conditions. The system includes complete fittings, elbows, couplings, bushings for fittings to special boxes and adapters adapting the Ovalduct to regular 1/2-inch conduit.

Ovalduct Conduit is made of 1/8-inch metal and the cross section of the tube is elliptical, the shorter diameter being 3/8-inch and the longer one 5/8-inch.

Ovalduct Ceiling or Outlet Box

Designed for use in making alterations and additions to conduit work in completed fireproof structures where the original wiring has been installed in standard rigid iron conduit.

The use of Ovalduct Conduit makes the channeling of the ceilings or walls unnecessary. It is laid in a small groove in the plaster and fastened to the ceiling or walls with short tie wires which are fished around the tile through two small holes or strapped on.

By the use of Ovalduct, an extension may be made by simply channeling the plaster, installing and burying the Ovalduct in the plaster. Special ceiling boxes with oval knockouts are made, and where an extension is to be made from a standard conduit outlet the old ceiling box is removed, the Ovalduct Box installed in its place, the Ovalduct Tubing run to the necessary point and a similar Ovalduct Outlet Box installed at the proper or desired point.

Blake Insulated Staples

Illustrations Are Actual Size

The fibre insulation of Blake Insulated Staples is of double thickness where it contacts with the wires and of sufficient length to safely insure against injuring the wires in driving the staples over them, even if they be driven most carelessly. At no point can the wires come in contact with an uninsulated part of the staple. The staples may be driven over two or more wires without danger of causing a short circuit or even a ground.

Nos. 1 and 5 are for use in hardwood; Nos. 3 and 6 are for general use. Nos. 1 and 3 are for single wire and twisted pair; Nos. 5 and 6 for extra heavy pair wire and twisted 3-wire.

Packed 100 in a small container—10 small containers (1000 staples) per carton.

No. 20 Blake Cleats

Made of compressed wood. For use in places where Blake Staples will not hold, as on plastered walls and similar places. The center partition protects the wire from the nail or screw.

Price, No. 20.....per 1000 \$2.75

No. 18 Milonite Perfection Insulated Nails

Recommended for installing two-conductor or three-conductor twisted insulated wire.

They are easy to handle and install and prevent short circuiting.

Furnished in light oak, dark oak, dark green and black.

Made with shank 1/2, 5/8, and 7/8 inch long.

Price, No. 18, All Lengths.....per 1000 \$2.50

Leather Nail Heads

Required where porcelain insulators or porcelain cleats are installed by the use of nails, as they provide protection to the insulator or cleat when the nail is driven in.

Packed in boxes which weigh one pound each and contain about 1000 nail heads.

Price.....per box \$1.00

Non-metallic Flexible Conduit

Composed of closely woven canvas. To the lining is cemented a layer of spirally wound fiber strip which acts as the framework of the tube. Over this framework is a tightly woven envelope of cotton coated with a compound containing finely divided mica.

It is moisture proof and stands a very severe fire test. It is regularly examined and labeled by the Underwriters' Laboratories and each length is fished before leaving factory.

Size 3/2 inch is .05 inch larger than nominal size. Sizes 1/4 inch to 1 inch are .07 inch larger than nominal size. Sizes 1 1/4 inch to 2 inch are .125 larger than nominal size.

Lying here it is just a coil of metal-covered wire. But properly installed in your home by a capable contractor, and connected to the light and power company's lines, it becomes a path charged with energy.

Put plenty of backbone into your home

HERE'S a backbone that will save yours. It's an electrical spinal column—a coil of metal-covered wire that encloses and protects wires, just as your backbone encloses and protects nerves. And these wires, like your nerves, are a pathway for energy.

An electrical contractor will install this conduit

There's an expert at your service to wire your house effectively so that you will get the most out of electric service. Your electrical contractor—he knows.

He knows where a switch or an outlet should be placed to save steps. Where a fixture should be located to give the best light. And many other things, big and little, that spell convenience.

But convenience isn't all. How about reliability? Your electrical contractor will make valuable recommendations on this point. He'll suggest the proper switches, fuses, conduit, etc.—the kind that will last as long as your house stands—the only kind that will prove economical. And the only kind he can get at the Western Electric warehouse.

The electrical backbone described above will make all housework easy. That is, if you use Western Electric appliances in connection with it. One of these, the vacuum cleaner, is built around a big idea—the channeled nozzle—that cleans rugs cleaner. Ask to see it.

Ovalflex Flat Armored Cable

Ovalflex has the great advantage over round armored cable in that its depth is from $\frac{3}{8}$ -inch to $\frac{1}{4}$ -inch less. On this account, it can be readily covered by the thickness of plaster commonly used on brick and tile surfaces, while round armored cable cannot. It can be bent edgewise to about the same radius as ordinary armored cable, and flatwise to a much smaller radius. On account of these features, surface installations of Ovalflex are neat and inconspicuous and may be used in many places where surface installations of round armored cable would not be tolerated.

Size B. & S	Description	Feet per Coil	Wt., Lbs. per 1000 Feet	Price per 1000 Feet
14-2	2 No. 14 Conductors	125	320	\$93.00
14-3	3 " 14 "	125	...	125.00

Ovalflex Fittings

The fittings for Ovalflex are few and simple. They include a 4-inch box, a $3\frac{1}{4}$ -inch box and a 4-inch extension ring. The large box is commonly used for concealed work, and the small one for exposed work, with any suitable type of standard cover in either case. The extension ring is for tapping from outlet boxes for surface extensions with Ovalflex or for tapping from concrete boxes for concealed extensions in the plaster.

Price, No. 2176.....per 100 \$26.60

Flexsteel Flexible Conduit

Walls will not open under severe strain. It is so constructed as to meet extreme bending possibilities and to give the greatest flexibility, and when bent it stays put and in place. The interior, like the exterior, is flat and presents an especially smooth fishing surface.

Flexsteel Armored Conductors

The perfectly flat, smooth exterior results in great advantages in cutting, stripping and pulling around corners, joists, etc. The opposed channel construction of the strip allows the utmost range of flexibility, and will not spread no matter how small the radius to which bent. Steel strip used is thoroughly annealed and zinc coated. Distinguishing braids on each conductor permit certain and quick identification of polarities.

T & B Dead Ground Cable Boxes For Armored Conductors

Nos. 553, 554 and 555

Nos. 556 and 557

These boxes have a simple, yet effective connecting and grounding device, based on the wedge and inclined plane principle, which entirely does away with the multiplicity of parts required in boxes of other makes.

The mechanical and electrical connection between box and armor is perfect. They are easy to install.

Boxes are galvanized.

Shallow boxes are 3 inches in diameter by 3/4 inch deep.

Standard package, 100.

Cat. No.	Description	Std. Pkg.	Wt., Lbs. per 100	Price per 100

568	For Combination Gas and Electric, to Slip 3/8-inch Gas Pipe	100	50	22.00

National Metal Molding and Fittings

Sherardized

The old No. 222, which was made in 2 parts, cap and base, is replaced with the new No. 022 which is a neat, oval-shaped, single tube. The new style is of the same dimensions as the old and presents the same neat appearance. More than enough room is provided to easily fish 2 wires.

The old No. 333 is now replaced with the new No. 033 which is the same as the old standard except that the method of attachment to fittings and devices has been greatly improved and it comes with base and capping assembled. However, it can be easily separated. Besides, it has been made slightly roomier so that 4 wires may be fished without difficulty.

In the past, Metal Molding base was secured to elbows, tees, boxes, etc., by screws engaging key hole shaped slots which had to be punched by special tool. In each metal molding fitting and device there are now springy tongues into which the molding may be pushed and made to fit firmly and snugly, without punching holes.

National Metal Molding

No. 033

No. 022

No. 033 is a 2-piece Metal Molding for 2, 3, or 4 wires which is shipped assembled. It may be installed assembled as a conduit by those who prefer to fish wires. If it is desired to lay the wires in, it may be easily separated by prying up capping at one end with screw driver, then sliding screw driver along the length of molding between cap and base.

No. 033 is 1 inch wide, 2/4 inch high; 8 feet 4 inches long, and packed 12 lengths in a bundle.

No. 022 is a neat single tube for 2 wires. Ample room is provided for fishing of wires.

No. 022 is 5/8 inch wide, 1 3/32 inch high, 10 feet long, and packed 10 lengths in a bundle.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt. Lbs. Std. Pkg.	Price per 100 Ft.

No. 400 Receptacle Bases for Fluted Shell Devices

Base is provided with tongue and groove. No. 033 Molding is pushed directly into fittings, the end must be protected by No. 500 bushing.

Cat. No.	For Use with Molding No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price per 100
400	022 or 033	5	50	16	\$36.00

No. 441 Single Adapters

Single adapter for connecting No. 022 or No. 033 Metal Molding to flush devices.

For use in picking up circuits from outlets in concealed work equipped with a single switch or outlet box.

Four twist-outs for 033 Molding. No. 022 Molding may be connected by means of adapter No. 300.

Cat. No.	For Use with Molding No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price per 100
441	022 or 033	10	10	3½	\$54.00

No. 442 2-gang Adapters

2-gang adapter for connecting No. 022 or No. 033 Metal Molding to flush devices.

For use in picking up circuits from existing outlets in concealed work.

Eight twist-outs for 033 Molding. No. 022 Molding may be connected by means of adapter No. 300. To install flush devices in new work, any 2-gang switch box may be attached to plate similarly to single box No. 438.

Cat. No.	For Use with Molding No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price per 100
442	022 or 033	1	10	5¾	\$150.00

No. 438 Flush Switch and Receptacle Boxes

To be recessed in wall for No. 022 or No. 033 Metal Molding.

With No. 022 Molding use No. 300 adapter.

No. 438 includes a shallow switch box 1⅝ inches deep. It requires a hole 2¼ inches wide by 3 inches long.

Cat. No.	For Use with Molding No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price per 100
438	022 or 033	10	10	6	\$80.00

No. 439 1-gang Surface Switch and Receptacle Boxes

One-gang surface box for switches and receptacles for No. 022 or No. 033 Molding.

With No. 022 Molding use No. 300 adapter.

This box is 1¾ inches deep, 3⅞ inches wide and 4⅞ inches long. It will take any shallow device and practically all old style deep switches and receptacles.

Cat. No.	For Use with Molding No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price per 100
439	022 or 033	1	10	8	\$75.00

No. 440 2-gang Surface Switch and Receptacle Boxes

Two-gang surface box for switches and receptacles for No. 022 or No. 033 Metal Molding.

With No. 022 Molding use No. 300 adapter.

This box is 4 7/8 inches high, 5 inches wide and 1 3/4 inches deep.

Will take any shallow device and practically all old style deep switches and receptacles.

Cat. No.	For Use with Molding No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price per 100

No. 418 National Metal Molding Punches

For 033 Molding Only

The new push-fit method of attaching Metal Molding base to fittings and the plan of installing the molding does away with the need for punching keyhole slots in ends of molding. However, for those who have stocks of fittings equipped with screws, or who prefer to install the base separately and lay in the wires, No. 418 is listed.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
418	1	1	12	\$8.00

No. 422 National Metal Molding Shears

For 033 Molding Only

Metal Molding No. 022 must be cut by a file or a hacksaw with fine-toothed tubing blade. No. 033 Molding may be cut with a hacksaw when backing and capping are assembled or capping and base may be cut separately without No. 422 Shear.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
422	1	1	8	\$6.85

Wiremold Conduit and Fittings

General Description

Wiremold Conduit is made in both two and four-wire sizes. It is furnished in ten-foot lengths and is designed for surface wiring exclusively.

The base and capping is permanently assembled at the factory, hence conductors cannot be laid into it as in similar materials, but must be fished in all cases.

The base is galvanized and its capping is finished with special, high-grade enamel of neutral tint particularly selected to blend with colorings of average walls and ceilings.

Wiremold Conduit and its accompanying fittings require no special tools of any kind for assembly; only a screw driver, hack saw and No. 600 Wiremold Bender are needed for installation.

Like rigid conduit, Wiremold is furnished with one coupling to each length, as shown in Fig. 1.

To install Wiremold, push the coupling forward until screw hole is clear and then fasten to wall with a No. 8 flat head screw as shown in Fig. 2. Slip the next length over edges of coupling as shown in Fig. 3 and close up as in

Fig. 4. Base plates of all Wiremold Fittings are provided with coupling tongues similar to the tongue shown in broken end view of a fitting base plate in Fig. 5. Wiremold Conduit is connected with Wiremold Fittings by simply shoving the ribs in the upper side edges over the coupling tongues as shown in Fig. 6.

Wiremold Conduit

No. 700 Wiremold Conduit System for surface wiring is designed for use in large installations requiring four-wire circuits, such as factories, railroad buildings, lofts, warehouses, department stores, office building, hospitals, school buildings and the like.

No. 500 is for smaller installations requiring two-wire circuits.

Wiremold conduit is rolled from high grade sheet steel and is so finished that the portion which lays against the surface wired over is galvanized, while the section visible after installation is finished in a neutral tone enamel that will blend with any color scheme and act as a ground coat for graining or staining. Also covers with one coat of flat white.

Furnished in standard ten-foot lengths with one coupling to each length, like pipe.

Wiremold Conduit and its accompanying fittings require no special tools of any kind for assembly and only screw driver, hack saw, 32 tooth, flexible back type, and No. 600 Wiremold Bender for installation.

Cat. No.	Size	Unit Pkg.	Wt., Lbs. Unit Pkg.	Price per 100 Ft.
500	2-wire	100 Ft.	33	\$12.00
700	4-wire	100 "	36	15.00

No. 5701 Wiremold Base Couplings

One No. 5701 Base Coupling is furnished with each length of No. 501 and No. 700 Wiremold Conduit, but extra couplings must be used where short lengths are installed.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5701	50	500	9	\$.03

Wiremold Conduit Bushings

For use wherever Wiremold enters fittings. The bushing is slipped into the end of Wiremold and should be installed in all cases before molding is assembled with fittings. It is locked tightly in place by the base plate of fittings.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
502	50	500	5	\$.03
702	50	500	2	.03

No. 5703 Wiremold Supporting Clips

Designed to support Wiremold in the middle of lengths. It is secured to the wall with a No. 8 flat head wood screw and Wiremold snapped into it. The screw hole is slotted to allow clip to be adjusted.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each

No. 5719 Wiremold Corner Boxes

Designed to provide in a single fitting, with abundant splice room, for the many corner junctions and other combinations, such as, twisted elbow, twisted tees, twisted cross, that can be made with Wiremold Conduit.

Consists of a base plate provided with four holes for No. 8 flat head supporting screws and two knockouts for 1/2-inch pipe or BX connector, also four tongues on side edges and one tongue in back center for slip joint connections with both No. 500 or No. 700 Wiremold Conduit, and a cover piece. The cover piece has four double twistouts making it possible to use this fitting with both No. 500 or No. 700 Wiremold Conduit. Note that this fitting is reversible.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5719	5	50	21	\$.31

No. 5720 Wiremold Narrow Fittings

A small, rigid, straight line fitting for use with Wiremold conduit in wiring places having narrow dimensions, such as wall

cases, store windows, show cases, etc.

Has a base with exceptionally long tongues to provide a rigid connection with both No. 500 or No. 700 Wiremold conduit, and a cover equipped with a male nipple to take any standard 1/8-inch socket for reflectors. Tongues of the base are scored to permit breaking them off to make a dead end and the cover has double twistouts to permit making extensions with both No. 500 or No. 700 Wiremold conduit.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5720	5	50	11	\$.41

No. 5721 Wiremold One-piece Rosettes

An all steel rosette for drop cords and may also be used with a 1/8-inch male loop for chain pendants. Base is provided with tapped hole for use of contact block when desired and cover has four double twistouts for use with both Nos. 500 or 700 Wiremold conduit.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5721	5	100	33	\$.27

No. 5724 Wiremold Fixture Rosettes

Steel rosette with contact block for taps, fibre insulation washer to hang heavy drop cords and special chase nipple with lock-nut to hang 3/8 or 1/2-inch fixtures. Cover has four double twistouts for use with both Nos. 500 or 700 Wiremold conduit.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5724	5	50	20	\$.59

No. 5725 Wiremold Receptacle Bases

All steel, equipped with ready-to-wire tap block and standard fluted or wrinkled ring, so that any standard Schedule B device designed to fit fluted or wrinkled socket caps may be mounted upon it. Cover has four double twistouts for use with both Nos. 500 or 700 Wiremold conduit.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5725	5	100	42	\$.61

No. 5726 Wiremold Keyless Receptacles

All steel keyless standard Edison type, equipped with special, easy-to-wire keyless socket interior and designed for use at lighting outlets or at any point where a screw type receptacle is desired. Cover has four double twistouts for use with both Nos. 500 or 700 Wiremold conduit.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5726	5	100	42	\$.79

No. 5727 Wiremold Attachment Plugs

Made up of a steel housing in which is mounted a standard, easy-to-wire, 10-amp. attachment plug base with double T slots for plug caps having either tandem or parallel blades. Cover has four double twistouts for use with both Nos. 500 or 700 Wiremold conduit.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5727	5	100	42	\$.91

No. 5728 Wiremold Utility Boxes

Has a base with two holes for No. 8 flat head supporting screws and a knockout for 1/2-inch pipe or BX connector, also four tongues for slip joint connections with both Nos. 500 and 700 Wiremold Conduit. In addition the cover has a 3/8-inch knockout in which there is a 1 1/2-inch flanged hole with a plug for use as a junction box and by pushing the plug may be used as a rosette for drop cords.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5728	10	100	39	\$.24

No. 5729 Wiremold Condulet Type Utility Boxes

Has a base with two holes for No. 8 flat head supporting screws and knockout for 1/2-inch pipe or BX connector, also four tongues on ends and sides for slip joint connections with both No. 500 and No. 700 Wiremold Conduit. The cover piece has four double twistouts for use with both No. 500 and No. 700 Wiremold Conduit, and an opening which will take all standard 1/2-inch condulet covers.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5729	10	100	35	\$.23

No. 5731 Wiremold Blank Covers

For use with Nos. 5732 and 5733 boxes where they are used as pull or junction boxes or for hanging light pendant fixtures with large stems, as it is provided with a 1/2-inch pipe knockout.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5731	5	100	8	\$.11

No. 5732 Wiremold Outlet Boxes

Designed as a base for a standard five-ampere snap or toggle switch but may also be used as a junction or pull box and for mounting back wired fittings with 2 1/2-inch base. Cover has four double twistouts for use with both Nos. 500 or 700 Wiremold Conduit.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5732	5	100	23	\$.33

No. 5733 Wiremold Outlet Boxes

Outside dimensions: Diameter, 3 inches; height, 1 inch. Device screw spacing: 1 1/2-inch, 1 3/8-inch, 1 3/4-inch centers.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5733	5	100	27	\$.51

No. 5736 Wiremold Blank Covers

A 4-inch blank cover for use with boxes Nos. 5737, 5738, 5739 and 5739A where they are used as a pull or junction boxes or for hanging 1/2-inch fixtures or drop cords.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5736	5	100	13	\$.14

No. 5748 Wiremold Surface Type Switch Boxes

Consists of a base plate with four holes for No. 8 flat head supporting screws and a knockout for 1/2-inch pipe or BX connector, also four tongues for slip joint connections, with both Nos. 500 and 700 Wiremold Conduit, and a cover piece.

An ideal fitting for use with Call or Signal systems.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5748	1	20	13	\$.63

No. 5749 Wiremold Flush Switch and Receptacle Boxes

Made in single gang only. Consists of a switch box with 4 holes for No. 8 flat head supporting screw and four tongues for slip joint connections with both Nos. 500 and 700 Wiremold Conduit, and a cover piece.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5749	1	20	13	\$.79

No. 5750 Wiremold Push Switch Boxes

Made in single gang only. For use in installing any shallow type push switch with Wiremold, and consists of a shallow type flush switch case and a special cover with standard openings for push buttons and mounting screws.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5750	1	20	14	\$.73

Wiremold Flush Switch and Receptacle Adapters

For use in picking up and extending a circuit in both Nos. 500 and 700 Wiremold Conduit from existing outlets.

Adapters are not complete fittings in themselves but are designed to mount over the old switch box found in a wall at existing switch and receptacle outlets.

Cat. No.	No. in Gang	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5751	1	1	20	9	\$.65
5752	2	1	10	7	1.09
5753	3	1	10	9	1.15

No. 5737 Wiremold Extension Boxes

Primarily designed for use in extending Nos. 500 and 700 Wiremold Conduit from existing outlets, its base plate having four tongues for slip joint connections, and special slots for attaching to 3¼ and 4-inch boxes.

Both base and cover are split so that it may be installed by simply dropping canopy.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5737	5	50	28	\$.61

No. 5738 Wiremold Fixture Boxes

Primarily designed for use in hanging fixtures but is also equipped with screw holes in its cover to permit mounting any device which may be hung on a 3¼-inch or 4-inch box. The base has four tongues for slip joint connections with Wiremold Conduit and the cover is provided with abundant splice room and has four double twistouts for use with both Nos. 500 and 700 Wiremold Conduit. With the use of No. 5736 Wiremold Blank Cover this fitting may be used as a junction box. Outside dimensions: diameter, 4¾ inches; height, 1 inch. Fixture and device screw spacings on 2¾ and 3½-inch centers. Base has four holes for fixture studs and five knockouts for ½-inch pipe or BX connectors.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5738	5	50	30	\$.49

No. 5739 Wiremold 6¾-inch Fixture Boxes

Primarily designed for use in hanging fixtures with canopies up to 6¾ inches in diameter, but can also be used for any device which may be mounted on 3¼ or 4-inch boxes.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5739	5	20	22	\$.63

No. 5739A Wiremold 6¾-inch Extension Boxes

For use in extending Wiremold conduit from existing fixture outlets. Both the base and cover are split so they may be installed by simply dropping canopy.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5739A	5	20	22	\$.86

Wiremold Box Connectors

Nos. 5781 and 5781-A are for use to couple Nos. 500 and 700 Wiremold Conduit to fittings having knockouts for ½-inch and ¾-inch pipe.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5781	5	50	3	\$.25
5781-A	5	50	4	.25

Wiremold Pipe Couplings

Nos. 5782 and 5782-A are for use in coupling Nos. 500 and 700 Wiremold Conduit to ½-inch or ¾-inch pipe.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5782	5	50	4	\$.38
5782-A	5	50	7	.38

No. 5783 Wiremold ½-inch Elbow Box Connectors

For use where an elbow coupling between Wiremold and fittings, having knockouts for ½-inch conduit is necessary.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5783	5	20	3	\$.48

No. 5784 Wiremold ½-inch Elbow Pipe Couplings

For use where a direct elbow coupling must be made between Wiremold and ½-inch conduit.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5784	5	20	4	\$.53

No. 5785 Wiremold Combination Connectors

Cat. No.	Wt., Lbs. Std. Pkg.	Price Each
5785	8	\$.45

Unit pkg., 5; std. pkg., 50.

No. 588 Wiremold Open Work Couplings

No. 588 is designed for use where a tap is made from No. 500 Wiremold to open work, as in coming out to meter, fractional horse power motors and similar devices.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
588	5	20	4	\$.29

No. 701 Wiremold Reducing Connectors

No. 701 four-wire connector is used to connect No. 700 Wiremold with No. 500 Wiremold fittings.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
701	10	100	7	\$.16

No. 600 Wiremold Benders

A light hand tool that bends or offsets Wiremold on close, easily finished radii.

Handle not furnished. Use about two feet of ½-inch pipe.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
600	1	10	25	\$ 2.00

No. BO Wiremold Bracket Outlets

A safe, permanent, neat fitting bracket that can be attached to any side-wall fixture and always ready for use. Avoids unscrewing lamps and removing shades. Equipped with standard plug and No. 14 wire to meet all appliance requirements. Furnished in brass finish to harmonize with most fixtures. Prices for special finishes upon application.

Cat. No.	Unit Pkg.	Std. Pkg.	Price Each
BO	5	50	\$.60

No. CO Wiremold Ceiling Outlets

A simple, rugged unit to provide a convenient outlet in kitchens or other places where the only electrical connection is through a ceiling fixture. This unit consists of a short length of Wiremold Conduit and a box with its base plate permanently attached to the conduit. Unit may be extended from any ceiling canopy for attaching a pendant with plug. An ideal outlet for any electrical appliance. Finished in white enamel.

Cat. No.	Unit Pkg.	Std. Pkg.	Price Each
CO	1	10	\$.62

No. WO Wiremold Window Outlets

This unit consists of a short length of Wiremold Conduit permanently attached to base plate of 4-inch round box and assembled for 16-inch centers or, centers less than 16 inches may be made by cutting the conduit of each unit. Base plate of box is equipped with 5 tongues and its cover with 5 twistouts to permit making extensions of any number of units at any desired angle. Cover of box is provided with standard screw spacings to take all 3-inch or 4-inch box porcelain receptacles.

Cat. No.	Unit Pkg.	Std. Pkg.	Price Each
WO	1	10	\$.62

No. 5786 Wiremold Adjustable Connectors

Eliminates offsetting wiremold conduit in connecting with surface type panel cabinets. The base has a chase nipple with locknut in an elongated slot in the bottom to connect with knockout in cabinet and to permit of adjusting fitting flush with wall. In the back is a knockout for 1/2-inch pipe and a tongue at the end for slip joint connection with No. 500 or No. 700 wiremold conduit and a cover piece as shown. The cover piece just as it comes from factory will fit No. 500 conduit and by breaking off the crescent-shaped twistout will fit No. 700 conduit.

No. 2365 National Cable and Loom Boxes

No. 2365

Made of stamped steel. Clamps will hold standard armored cables or flexible non-metallic tubing in same box. No. 2365 is 3¼ inches in diameter and ¾ inch deep. If No. 8-32 screws, ½ inch long, are inserted in the tapped cover lug holes, standard 3¼-inch outlet box covers may be used. Large base sockets and other devices may also be fastened to it. No. 2366 is identical with No. 2365 except that instead of stud, a

sleeve is provided for attachment to combination gas and electric outlets. Furnished with set screw, which screws and binds it to the pipe.

Straight Box Hangers and Studs

No. 900 Straight Box Hanger

No. 900 Hanger with Box Attached

The straight box hanger and stud is furnished complete. Stud is slotted, allowing free movement along the bar, yet may easily be tightened by the locknut in any selected place. Makes it possible to set box at desired spot although conduit may be a little off length.

Cat. No.	Length of Bar Inches	Unit Pkg.	Std. Pkg.	Wt., Lbs. per 100	Price per 100

No. 901 Loom Box and Bar Hangers

The No. 901 Loom Box and Bar Hanger provides a 3 1/4-inch outlet box, 2 loom clamps, adjustable fixture stud and support. There are 8 knockouts in the bottom, all of which are easily accessible. There is no slipping when the loom clamp takes hold. Drill and tap holes are provided so that the clamps may be reversed to cover the desired knockout or additional clamps may be furnished if desired.

Bar is 18 inches long with adjustable fixture stud.

Standard finish, black enamel.

Boxes can be furnished less clamps, also with ears.

No. 2175 National Duplex Connector

The National Duplex Connector not only takes less time to install than two single connectors, but it insures neater work. It also saves about 6 inches of cable at every outlet of the sort indicated.

The holes for conductors in No. 2175 are 3/4 inch the same as for standard 3/8-inch single connectors. It will thus take any standard make of No. 14-2 or 14-3 armored conductors, or 3/8-inch flexible conduit, as well as National No. 12-2.

Standard package, 100. Unit package, 20. Standard package, weight 25 pounds.

Price, No. 2175..... per 100 \$18.00

No. 902 Conduit Box and Bar Hangers

For Conduit and Armored Cable

The No. 902 Conduit Box and Bar Hanger provides a 4-inch outlet box having five 1/2-inch conduit knockouts, fixture stud and support used with bushings and locknuts on rigid iron conduit installation or with box connectors on flexible steel conduit work.

The patented sliding fixture stud allows free movement on bar yet may be easily tightened by the locknut in any selected place.

Bar is 18 inches long with adjustable fixture stud.

Standard finish, black enamel.

Can be furnished with ears if desired.

National Sectional Switch Boxes

4170 4160 4164

National Sectional Switch Boxes are solid. Any number of units may be assembled in a gang and the knockout removed, without danger of loosening the sections. Instead of the spacers being merely held in the position the wireman happens to place them, setting up the screws actually forces the parts tightly together. These boxes are designed so that the spacers used for making up gangs, are exactly the same as those used in single boxes. Boxes are black enameled. Standard package quantity is 100.

Boxes with Beveled Corners and 5/8-inch Knockouts for Loom With or without Loom Clamps

Cat. No.	Description	Depth In.	Wt. Lbs. Std. Package	Price per 100
4160	Box, without Clamps	2	65	\$16.00
4162	Spacer, without Clamps	2	33	13.00
4164	Box, without Clamps	2 1/2	74	18.00
4166	Spacer, without Clamps	2 1/2	37	14.00

For boxes (Cat. No. 4161, 2 inches deep and 4165, 2 1/2 inches) and spacers (4163, 2 inches and 4167, 2 1/2 inches) with loom clamps—add to above prices \$1.50 per hundred.

Boxes with Square Corners and 1 1/16-inch Knockouts for Armored Cable

Cat. No.	Description	Depth In.	Wt. Lbs. Std. Package	Price per 100
4168	Box, with Clamps	2 1/2	76	\$20.00
4169	Spacer, with Clamps	2 1/2	38	16.00

Boxes for shallow partitions or outside walls. Square corners, with 1/2-inch knockouts in ends, for rigid conduit or armored cable, and 5/8-inch knockouts in sides, for loom.

Cat. No.	Description	Depth In.	Wt. Lbs. Std. Package	Price per 100
4170	Box	1 1/2	65	\$18.00
4171	Spacer	1 1/2	35	14.00

The above box and spacer are without ears. If boxes with ears are desired (4171 for box, and 4173 for spacer) add to the above prices \$2.25 per hundred. Where ears are exposed as in old work, standard switch plates are not long enough to cover this box.

Types S, C and A Gem Sectional Switch Boxes

For Non-metallic Flexible Conduit

Equipped with reversible and sliding ears which have an adjustment of 1/2 inch up to 3/4 inch, suitable for both old and new work.

Types S, C and A boxes are square-cornered and are particularly adapted for new work on account of the space that is available in corners for wiring, bushing etc.

Length, 3 inches; width, 2 inches.

Knockouts, 5/8 inch, 2 in each side, 2 in each end and 4 in bottom.

Regularly finished with coat of black insulating enamel. Galvanized at a slight advance in price.

Gem Sectional Switch Boxes

With Lath Support and Mounting Bracket

Gem Sectional Switch Boxes for loom, armored cable and conduit are now available equipped with lath support and mounting bracket.

Two lugs bent inward on the mounting bracket provide a gauge that automatically squares the box with the joist on which it is fastened.

These boxes have the same features as the regular Gem Sectional Switch Boxes and can be ganged with ease.

With Bevel Corners

Nos. 170 and 170A Union Sectional Switch Boxes

For Loom or Rigid Conduit

No. 170 box is four inches long, two inches wide and 1 1/8 inches deep. The end outlets are for 1/2-inch conduit, the two outlets in each side for loom or 3/8-inch flexible conduit. Not provided with external supporting ears. Has one mounting hole in bottom. Particularly adapted for thin partition and outside wall work. No. 170A box is a single sectional box same as No. 170 but is provided with external ears for attaching to wall or plaster.

No. Cat.	Depth Inches	No. of Gangs	Ears	Std. Pkg.	Wt. Lbs. per 100	Price Each

**No. 155 Union Sectional Switch Boxes
For Rigid Conduit**

For Push Button Switches and Plug Receptacles

The No. 155 single switch box provides ample room for making splices, taps or junctions. Both the top side cover-plates can be removed by loosening the screws, which permits easy access to the wires. The box is 4 inches long, 4 inches wide. Two knockouts in each side, two in each end for 1/2-inch or 3/4-inch conduit. Screw centers 3 3/7 inches.

FINISH.—Regularly supplied with black enamel or galvanized finish. When finish is not specified black enamel will be furnished.

Cat. No.	Depth Inches	No. of Gangs	Std. Pkg.	Wt., Lbs. per 100	Price Each

160S	2 5/8	Spacer	100	49	.26

FINISH.—Regularly supplied with black enamel or galvanized finish. When finish is not specified, black enamel will be furnished.

Gem Sectional Laundry Boxes

Designed to prevent the theft of current which is so often the case in apartment buildings. Each box is equipped with a hinged cover and lug for padlocking.

The box complete consists of the unit as shown mounted in the regular Gem B Conduit Switch Box. The unit

can be inserted in any of the regular Gem switch boxes by removing the ears and using the same screws to fasten the fitting.

The Gem Laundry Box can be built into any number of gangs from single boxes, each unit having its own cover.

FA Competition Type Floor Boxes

Made for cement and granolithic type floor work. Pressed steel ring with cover is readily adjustable, for a variation of 3/4 inch; also made special for greater variation and is made a permanent part of box and floor by means of a fine cement mortar grouting.

Box is 4 inches round by 3 1/4 inches deep. Made of drawn steel. Four sides are made flat, each side and bottom with 1/2-inch knockout. Contractor can ream knockouts to 1-inch conduit size. Round gasket in groove, makes box watertight at any angle. Drawn steel flange ring, complete with gasket and removable cover fitted with flat plug, also with composition bushing.

Cat. No.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
FB5	24	112	\$5.00

Each floor box described above is packed in an individual carton.

Price does not include receptacle.

FA Reversible Cover Floor Boxes

Adjustable floor boxes are made for cement and granolithic type floor work. Pressed steel ring with cover is readily adjustable for a variation of 3/4-inch; also made special for greater variation and is made a permanent part of box and floor by means of a fine cement mortar grouting.

The reversible cover when not in place leaves a clear opening of 3 inches for connecting wires and installing receptacle. Any standard universal flush receptacles with ears removed can be installed by means of special steel hangers furnished with box.

The box is of drawn steel, 4 inches round by 3 1/4 inches deep. Four sides made flat, two sides and bottom with 1/2-inch knockouts, and two sides with 3/4-inch knockouts. Contractor can ream knockouts to 1-inch conduit size. Round gasket in groove makes box watertight at any angle. The cover is of drawn steel, flanged ring, complete with gasket and permanent cover rim and reversible cover, fitted with flat plug, also with composition split bushing.

Cat. No.	Std. Pkg.	Weight of Standard Package	Price Each
FB345	24	112	\$6.00

Receptacles not furnished. Each floor box packed in individual carton. Floor boxes are simple to install.

Type 300 and 301 Single Floor Boxes

Adjustment 3 to 3 3/4 inches. Cast iron, octagonal box body, galvanized.

Stock boxes four 1/2-inch tapped conduit holes, 3 of which are plugged.

The 3/4 and 1-inch holes drilled and tapped when specified. Cover sets flush with top of adjustable flange on a gasket having an opening, into which any of

the Type 800 fittings can be used. Lugs are cast on adjustable flange for installing any standard type of plug receptacle, in which case No. 813 nozzle is used.

Fullman Non-adjustable Floor Outlets

No. 477

Sectional View

No. 477 Outlets

The design and construction of the No. 477 outlet is simple. It has few parts, small outside dimensions and plenty of room inside for wiring. Fitted with Hubbell Receptacle and Bell Nozzle. The receptacle is locked in position with a flat steel ring which also serves as a support for the bell nozzle or flush brass plug. This construction permits use of only one rubber gasket.

Cover plate is 3½ inches in diameter with 2-inch opening for bell nozzle or flush brass plug.

Height, 3¼ inches to top of cover plate.

There is one conduit hole in each side and two in bottom tapped for ½-inch conduit. Three of the holes are plugged.

All brass parts are brushed brass finish. All iron and steel parts are Sherardized to prevent rust.

Comes in standard packages of 25 complete outlets.

Special brass flange rings can be furnished at an extra charge if outlets are to be used in granolithic, cement, marble or similar flooring to prevent chipping when cover is removed.

Complete outlet, as furnished, consists of box body, porcelain plug and receptacle, flat steel ring, rubber gasket, brass cover plate, flush brass plug and bell nozzle.

Net weight each, 2½ pounds.

Price, No. 477, Complete.....each \$4.00

No. 490 Outlets

Complete outlet is similar to No. 477 and consists of Nos 481, 482, 484 and 487 parts listed below. The No. 465 and 467 nozzles can be used in cover plate.

Net weight each, 1¾ pounds.

Price, No. 404.....each \$2.27

Patterson Non-adjustable Floor Boxes

Patterson Non-adjustable Floor Outlet Boxes are designed for wood floor work and for work where it is unnecessary to have the plates of the boxes adjustable.

Boxes shown on this page are double gasketed throughout, thoroughly waterproof; all parts, except floor box itself, are heavy cast bronze; the box is galvanized iron.

In No. 3000 standard 10-ampere receptacles are provided with plugs. With other floor boxes on this page, receptacles and plugs cannot be used.

Iron floor boxes are regularly drilled and tapped for four 1/2-inch conduit entrances, two in sides and two in bottom, adapting them to flexible or rigid conduit work without extra drilling. They will be furnished, when specially ordered to take 3/4-inch conduit on two sides and 1/2-inch on bottom. Removable plugs are furnished closing all but one outlet.

Cardboard shims are furnished with each box and with these shims bronze plate can be easily brought flush with the floor without taking extreme care in cutting; the setting of a Patterson Floor Box is thus made quicker and easier than any floor box on the market.

Receptacles may be removed from box for easy wiring by simply loosening two screws.

Rubber gasket fits into undercut of bronze plate, so that it does not easily fall out.

Patterson Floor Outlet Boxes may be set with an expansion bit guaranteeing rapid work.

Nos. 3000 and 3000B

No. 3000 with Outlet Nozzle and Flush Disc

No. 3000B with Blank Bronze Plate

**With Outlet Nozzle and Flush Disc
Furnished Complete with 10-ampere, 250-volt
Receptacle and Plug**

Cat. No.	Diam. Plate, In.	Bronze All, In.	Depth Over, In.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each

No. 3000BN with Double Outlet Nozzle

R&S Non-adjustable Floor Boxes

A high grade floor box intended for use in wood flooring, easy to install and can be firmly secured.

Box is made of galvanized cast iron, floor plate of heavy brass and provided with suitable gaskets to make it watertight.

These fittings are furnished with or without receptacles and plugs, providing for uniformity when used for either high or low tension installations.

Height, 3 1/4 inches; diameter of floor plate, 3 1/2 inches. Two 1/2-inch outlets on sides; two 1/2-inch

outlets on bottom; three outlets plugged. Cannot be tapped for larger conduit. Receptacle and plug, 10 amperes 250 volts, furnished with No. 2580. All parts of these floor boxes are interchangeable and various available combinations of boxes and accessories can be furnished. Each box is packed in a strong carton.

No. 2580

Furnished complete with receptacle, plug, cone nozzle and 2 1/4-inch diam. ter flush cap. Weight, about 2 1/2 pounds.

Price, No. 2580.....each \$2.85

No. 2590

Plain box and cover with 1/2-inch pipe flush cap. Weight, about 1 3/4 pounds.

Price, No. 2590.....each \$2.35

No. 2591

Consists of plain box and cover with 2 1/8-inch diameter flush cap; same as 2580 but without receptacle, plug and cone nozzle. Weight, about 1 3/4 pounds.

Price, No. 2591.....each \$2.80

R&S Bulb Type Tees

The bulb type tee fittings are designed to accommodate a composition connector, which is furnished in connection with a retaining ring, which holds the connector in place.

The adjustable top will accommodate a cone nozzle used in connection with the connector, and will also take our standard line of receptacles with extensions.

A maximum vertical adjustment of 1 inch is provided.

No. 2626

No. 2625

Consists of a cast iron tee body drilled for 1/2-inch conduit; heavy brass adjustable top, and 2 1/8-inch diameter blind cap with 1/2-inch flush plug.

Price, No. 2625.....each \$2.90

No. 2626

Consists of a cast iron tee body drilled for 3/4-inch conduit, heavy brass adjustable top, 2 1/8-inch diameter blind cap containing 1/2-inch flush plug.

Price, No. 2626.....each \$3.00

No. 2627

Consists of a cast iron tee body for 1-inch conduit, and a heavy brass adjustable top, with 2 1/8-inch diameter blind cap, containing a 1/2-inch flush plug.

Price, No. 2627.....each \$3.10

No. 2635

Same as No. 2625 except that a special beveled flange and blind cap are provided for use with linoleum flooring.

Price, No. 2635.....each \$3.50

No. 2636

Same as No. 2635 except that the cast iron tee is tapped for 3/4-inch conduit.

Price, No. 2636.....each \$3.60

No. 2637

Same as No. 2635 except that cast iron tee is tapped for 1-inch conduit.

Price, No. 2637.....each \$3.75

R&S Adjustable Floor Boxes

No. 2502

No. 2502

The same as No. 2500 with the addition that a heavy brass flange ring is provided, which prevents the chipping of the finished floor on frequent removal of the cover plate.

Price, No. 2502.....each \$3.75

No. 2503

The same as No. 2501 with the addition of a heavy brass flange ring to prevent chipping of the finished floor on frequent removal of the cover plate.

Price, No. 2503.....each \$4.15

R&S Adjustable Floor Boxes

No. 2512

R & S Adjustable Floor Boxes are of simple design, making them easy to install by reducing the number of parts comprising a complete fitting to a minimum. They are ruggedly designed to withstand the rough usage to which they are put. All surfaces and exposed parts are carefully machined to blend harmoniously with the most elaborate decorations.

No. 2511

Single-gang rectangular adjustable floor box, consisting of cast iron box, heavy brass adjusting flange, rubber gasket, and a brass cover containing a 1/2-inch pipe size flush cap.

Price, No. 2511.....each \$6.25

No. 2512

Two-gang rectangular floor box and consists of a two-gang cast iron box, heavy brass adjusting flange, rubber gasket and two brass covers containing 1/2-inch flush cap.

Price, No. 2512.....each \$7.80

No. 2513

Three-gang rectangular floor box, consisting of a three-gang cast iron box, heavy brass adjusting flange, rubber gasket and three brass covers with 1/2-inch flush caps.

Price, No. 2513.....each \$11.85

No. 2514

Four-gang rectangular floor box, consisting of a four-gang cast iron box, heavy brass adjusting flange, rubber gasket and four brass covers with 1/2-inch flush caps.

Price, No. 2514.....each \$15.65

No. 365

Special rectangular floor box.

Price, No. 365.....each \$11.00

R & S Adjustable Floor Outlets

Shallow Type

Galvanized cast iron box with bosses for conduit and provided with a heavy brass adjustable top fitted with combination 2 1/8-inch diameter and 1/2-inch pipe size flush cap.

These fittings are not adapted for a self contained receptacle and plug.

All parts of these floor outlets are interchangeable. The adjustment is 3/8-inch vertical only and the outlets are from 1/2 to 1 inch.

Packed in bulk only.

Style A

No. 2651

Style A is designed for use in uncovered cement floor.

Minimum height is 2 5/8 inches and diameter of floor plate is 2 7/8 inches.

Size Conduit Inches	One Outlet		Two Outlets Straight Through		Two Outlets Right Angle		Approx. Net Weight Pounds

R & S Floor Outlets

Elbows, Tees and Adjustable Tops

Future requirements for service connections may be anticipated by systematically studding the floor with these outlets, all radiating from one or more pull boxes, from which any changes or additions may subsequently be made by the pulling of wires.

The complete outlet consists of a galvanized iron long radius conduit fitting, and brass adjustable top with watertight cap, which can be raised or lowered to meet the final surfacing of floor.

Elbows

CONDULETS

Condulets are an important factor in any conduit installation, as they simplify wiring problems and produce a finished appearance.

In casting Condulets a soft gray iron is used. This insures great strength and ruggedness, and enables them to resist the action of acid fumes, gases, and moisture. Each Condulet is specially designed to meet a certain requirement, and there is one for practically every need. Furthermore, since each type is designed to meet one rather than several requirements, it is possible to make it so compact and neat that it improves rather than detracts from the general appearance of the conduit system.

The hubs have a tapered thread to insure a tight joint, and an integral bushing which protects the insulation of the wire from abrasion by any burrs that may be on the end of the conduit.

There are Condulets that take a great variety of covers and wiring devices; those that can be used as junction boxes only; those that house a switch or plug receptacle, or both; and those that may be classed as special conduit outlets.

Condulets are easy to install, which represents a saving in labor.

Special bulletins will be furnished on application showing a wide variety of types of Condulets, which, owing to lack of space, it was impossible to list in this catalogue.

“Condulet the Job”

Type A Obound Condulet Bodies

Galvanized or black enamel finish. Take Obound covers and Condulettos. Also other wiring devices, see Pages 422 to 424, Condulet catalogue No. 2000.

Type CO Obound Condulet Bodies

Galvanized or black enamel finish.

Take Obound covers and Condulettos, or other wiring devices, see Pages 422 to 424, Condulet catalogue No. 2000.

This type provides an offset of four inches in a conduit system often encountered in brick walls of varying thickness.

Cat. No.	Size Inches	Std. Pkg.	Wt. Lbs.	Lbs. Std. Pkg.	Price Each
CO1	1/2	50	75		\$.50
CO2	3/4	50	95		.65

Type COV Obound Condulet Bodies

Galvanized or enamel. Take Obound covers and Condulettos. Also other wiring devices, see pages 422 to 424, Condulet catalogue No. 2000.

When connected by a nipple of suitable length, two COV bodies form a cross-over for two or more pipes or conduits.

For 2 1/2 and 3-inch sizes, to cross over 3 1/2-inch conduit, use CO7 and CO8 respectively.

Cat. No.	Size In.	Std. Pkg.	Wt. Lbs.	Lbs. Std. Pkg.	Price Each	Cat. No.	Size In.	Std. Pkg.	Wt. Lbs.	Lbs. Std. Pkg.	Price Each

Type LBL Obround Condulet Bodies

Galvanized or black enamel finish. Take Obround covers and Conduletts. Also other wiring devices, see pages 422 to 424, Condulet catalogue No. 2000.

Cat. No.	Size In.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
LBL1	1/2	50	60	\$.65
LBL2	3/4	25	40	.80
LBL3	1	25	55	.95

Type LBR Obround Condulet Bodies

Galvanized or black enamel finish. Types LBR, LBL, LFT and LU bodies of same size may be assorted to make a standard package.

Cat. No.	Size In.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
LBR1	1/2	50	60	\$.65
LBR2	3/4	25	40	.80
LBR3	1	25	55	.95

Type LFT Obround Condulet Bodies

Galvanized or black enamel finish. Wiring devices, pages 422 to 424, Condulet catalogue No. 2000.

Cat. No.	Size In.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
LFT1	1/2	50	90	\$1.05
LFT2	3/4	25	60	1.15
LFT3	1	25	75	1.30

Type LU Obround Condulet Bodies

Galvanized or black enamel finish. For wiring devices, see pages 422 to 424, Condulet catalogue No. 2000.

Cat. No.	Size In.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
LU1	1/2	50	80	\$.65
LU2	3/4	25	55	.80
LU3	1	25	60	.95

Type LBA Obround Condulet Bodies

Flanged. Galvanized or black enamel finish.

Cat. No.	Size In.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
LBA1	1/2	50	100	\$.80
LBA2	3/4	25	60	.90
LBA3	1	25	70	1.10
LBA4	1 1/4	10	40	1.80
LBA5	1 1/2	10	60	2.00
LBA6	2	5	40	3.00

Type LBV Obround Condulet Bodies

Flanged. Galvanized or black enamel finish.

Cat. No.	Size In.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
LBV1	1/2	50	100	\$.80
LBV2	3/4	25	60	.90

LBV5	1 1/2	10	60	2.00
LBV6	2	5	40	3.00

Type LFM Obround Condulet Bodies

Flanged. Galvanized or enamel. Take Obround covers and Conduletts, or other wiring devices.

Cat. No.	Size In.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
LFM1	1/2	25	65	\$1.15
LFM2	3/4	25	75	1.30
LFM3	1	25	85	1.55

Type TM Obround Condulet Bodies

Flanged. Galvanized or black enamel finish. Take Obround covers and certain other wiring devices.

Cat. No.	Size In.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
TM1	1/2	25	80	\$1.30
TM2	3/4	25	90	1.45
TM3	1	25	100	1.70

Type BM Obround Condulet Bodies

Flanged. Galvanized or black enamel finish. Take Obround covers and Conduletts. Also other wiring devices, see pages 422 to 424, Condulet catalogue No. 2000.

Cat. No.	Size In.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
BM1	1/2	25	70	\$1.15
BM2	3/4	25	75	1.30
BM3	1	25	85	1.55

Type DF Obround Condulet Bodies

Flanged. Galvanized or black enamel finish. Take Obround covers only.

Cat. No.	No. of Hubs	Size In.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
DF1	1	1/2	25	75	\$1.15
DF2	1	3/4	25	85	1.30
DF3	1	1	25	95	1.55

Type DM Obround Condulet Bodies

Flanged. Galvanized or black enamel finish. Take Obround covers and Conduletts. Also other wiring devices, see pages 422 to 424, Condulet catalogue No. 2000.

Cat. No.	No. of Hubs	Size In.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
DM1	2	1/2	25	75	\$1.35
DM2	2	3/4	25	85	1.50
DM3	2	1	25	95	1.75

Type OCB Condulet Branch Extensions

Galvanized or black enamel finish. For Condulet bodies of the Obround series. Take covers. Furnished with screws. Provide a means of making extensions to existing conduit installations by bridging from one Condulet to another through the cover opening.

Cat. No.	For Condulet Bodies Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each

G-H Series Condulet Bodies

Without Adjustable Bar

The bodies of the G-II series without adjustable bar differ from those with the adjustable bar in the following particulars: First, the adjustable bar is omitted; second, the flange of the body is drilled and tapped for four screws.

This series does not have so wide a range of application as the series with the adjustable bar: the variety of wiring devices which can be mounted is limited to those whose fastening screw hole centers are the same as those of the Condulet bodies to which they are to be attached.

A complete series of covers, connection blocks, and Conduletts is made for use with the Condulet bodies of this series.

The fastening screws are furnished with, and so retained in the covers, connection blocks and Conduletts that they cannot fall out.

Wiring devices, page 418, Condulet catalogue No. 2000.

Type G Condulet Bodies

Without Adjustable Bar

Galvanized or black enamel finish. Take covers, Conduletts or other wiring devices, see page 418, Condulet catalogue No. 2000.

Norbitt Condulettos

For Condulet Bodies of the J-K Series

These fittings are weatherproof, and can be installed either in or out of doors. Made in two parts—base and cap. The base is secured to the Condulet body by a single center screw. The cap is secured to the base by two screws which also complete the electrical connection.

Furnished with gasket and fastening screw.

Conduletto Lamp Receptacles

With Shade Holder Groove

If specified, will be furnished with lamp grip, at slight addition to list price. Furnished with gasket and fastening screw.

Standard package, 200.

Weight, standard package, 130 pounds.

Price, No. CC227g.....each \$.45

Conduletto Lamp Receptacles

Without Shade Holder Groove

If specified will be furnished with lamp grip, at slight addition to list price. Furnished with gasket and fastening screw.

Standard package, 200.

Weight, standard package, 130 pounds.

Price, No. CC227.....each \$.40

Conduletto Plug Receptacles

Hubbell Attachment

6 Amperes

Furnished with gasket and fastening screw.

Standard package, 100.

Weight, standard package, 60 pounds.

Price, No. CC5.....each \$.50

Conduletto Plug Receptacles

Hubbell Polarity

Furnished with gasket and fastening screw.

Standard package, 100.

Weight, standard package, 60 pounds.

Price, No. CC20.....each \$.65

Conduletto Cord Rosettes

For use where it is desired to install a drop cord light or other similar extension or connection.

Furnished with gasket and fastening screw.

Standard package, 200.

Weight, standard package, 140 pounds.

Price, No. CC332.....each \$.35

Conduletto Fixture Rosettes

With 1/8-inch Male Nipple

For use where it is desired to attach socket or other fitting having 1/8-inch threaded opening, direct to the Conduletto.

Elliptical, for the RJ-RK series bodies. If specified, will be furnished with lamp grip, at slight addition to list price

Furnished with gasket and screws.

Standard package, 200

Weight, standard package, 100 pounds.

Price, No. RK527g.....each \$.45

SK Series Condulets

Condulets of the SK series are for use in concealed conduit installations, particularly in concrete construction. They will take blank covers, or covers with hubs, and are drilled and tapped to take fixture studs or wiring devices. If specifically ordered, drilling for fixture studs will be omitted.

The bodies are provided with two lugs on the outside for nailing to the wooden forms, holding them in place while the concrete is being poured.

There are two blank covers, one of which has countersunk fastening screw holes for flat head screws. This cover is particularly adapted for installations in floors or sidewalks, as the heads of the screws will be flush with the face of the cover. The other cover is furnished with round head screws.

A gasket is made for use with blank covers so that when used with any Condulet of the SK series, an excellent watertight junction box is provided.

Assortments

ASSORTMENTS.—Black enameled and galvanized Condulets of the same type and size may be assorted to make a standard package.

Black enameled and galvanized covers of the same style may be assorted to make a standard package.

SPECIAL ASSORTMENTS.—Any assortment of 100 black enameled and galvanized Condulets of the SK series will be considered a standard package.

Any assortment of 100 black enameled and galvanized covers of the SK series will be considered a standard package.

Type VSB Portable Protected Vaporproof Lanterns

Takes 75-watt Mazda C lamps, 60-watt Mazda B lamps or any lamp not exceeding 2 3/4 x 6 1/8 inches. Furnished with bail, key receptacle with lamp grip, gaskets, globe, and guard.

Cat. No.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
VS075	10	75	\$10.00

Type LM Portable Protected Lanterns

Takes 15 and 25-watt Mazda G18 1/2 lamps, 25 and 50-watt Mazda P19 lamps, or any lamp not exceeding 3 3/4 inches in length. Furnished with receptacle with lamp grip, cord clamp, plain wire glass front, and gasket.

Cat. No.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
LM50	5	50	\$10.00

Type VS Vaporproof Portable Hand Lamps

Type VS hand lamps for extension cords are well suited for use in garages, refineries, bakeries, flour mills, grain elevators, marine work, or wherever inflammable vapor, dust, or moisture is present.

The globe screws into the body and is protected by a guard. If armored cord or flexible conduit is to be used with these hand lamps, CGU or CGV connectors of the proper size should be ordered.

Type VS Portable Hand Lamps Screw Guard

Vaporproof, with 5 3/8-inch globe. Takes 60-watt Mazda B lamps or any lamp, not exceeding 2 3/4 x 5 5/8 inches.

Aluminum, scratch brush finish. Furnished with receptacle, gaskets, globe, guard, cord guard spring, and water-tight stuffing box in handle.

If specified on order, lamp receptacle with lamp grip will be furnished at slight addition to list price.

Standard package, 25. Weight, standard package, 70 pounds. Price, No. VS060.....each \$6.15

Guard for Type VS Portable Hand Lamps

Screw Guard

Galvanized iron. Will accommodate globe 5 3/8 inches long.

Standard package, 25.

Weight, standard package, 30 pounds. Price, No. VS0955.....each \$2.00

Clear Glass

For use with type VS portable hand lamps.

Cat. No.	Length In.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each

For 40-watt S19 or 60-watt S21 Lamps

LPH160	10	25	\$3.50
--------	----	----	--------

Any assortment of 25 Types LPG and LPH Safety Hand Lamps will be considered a standard package.

Arktite Circuit-breaking Plugs and Receptacles

Type AJX Plug Receptacle Condulet; Plug Inserted

Arktite Plugs and Receptacles embody an entirely new principle in plug and receptacle construction, which meets the demand for circuit-breaking plugs and receptacles in capacities heretofore considered impractical.

The arc formed by pulling the plug is so completely confined in a chamber of insulating material that it is impossible to form a short circuit or ground. The air and gases confined in the chamber expand rapidly and smother the arc.

The Arktite series of plugs and receptacles protect the current carrying parts; enclose the contact parts in separate chambers of insulating material; break the circuit in separate chambers, and provide a means for effectively grounding portable apparatus.

The Arktite series is made in 2, 3 and 4-pole; for 10, 30, 60, 100 and 200-ampere; 250-volt A.C. or D.C. or 600-volt A.C. The 10-ampere receptacle housings are mounted on Form 10 Condulets of the QE series. The 30 and 60-ampere receptacle housings are mounted on Form 20 Condulets of the QE series. The 100 and 200-ampere receptacles are mounted on Types AJ and AJX Condulets.

Information on Rating

The Underwriters limit the use of plugs and receptacles as circuit-breaking devices to 100 amperes, 125 volts, and 75 amperes, 250 volts. For higher amperages and voltages, they require a switch in series with the plug and receptacle. They also will permit the use of all approved plugs and receptacles as disconnecting devices on all voltages up to and including 600 volts A.C.

However, exhaustive tests prove that all Arktite plugs and receptacles can be safely used as circuit-breaking devices at the listed ampere ratings on 250-volt A.C. or D.C., or 600-volt A.C. circuits.

For quick reference the above information is given in the following schedule:

Rating	CIRCUIT-BREAKING DEVICES			Disconnecting Devices All Voltages up to 600 A.C. Amperes
	VOLTS A.C. OR D.C.			
	125 Amperes	250 Amperes	600 Amperes	
Crouse-Hinds'	10 to 200	10 to 200	10 to 200	10 to 200
Underwriters'	10 " 100	10 " 75	10 " 200

Unless otherwise specified, Arktite plugs and receptacles will be marked with the Underwriters' rating for circuit-breaking devices. The 200-ampere Arktite plug will be marked with the Underwriters' maximum rating for a disconnecting device. If Arktite plugs and receptacles are to be used at Crouse-Hinds' ratings; order by catalogue number, and add, Crouse-Hinds' Rating.

These devices are marked by their simplicity of construction. Contact members in the receptacle are fingers and those of the plug are tubes, each of a single piece of alloy brass machined to an accurate fit. Receptacles have two phosphor bronze detent springs which hold the plug in the receptacle housing against the weight of the cable.

The retaining ring, which holds the interior parts in position, can be removed or replaced in a few seconds, so that the plug and receptacle can be taken apart and reassembled quickly and easily, making these devices easy to wire.

Type QEF with Spring Door Plug Receptacle Housing Plug Inserted

Type CP Arktite Circuit-breaking Non-watertight Plugs

250-volt A. C. or D. C.; 600-volt A. C.

For round flexible cord or cable and flexible conduit or armored conductor.

Aluminum handles with strain relief clamp.

Scratch brush finish.

Any assortment of Arktite circuit-breaking plugs and receptacles aggregating \$100.00 list value or more will be considered an assorted standard package.

Type CP Plain Plugs

Two-pole, 10-ampere plug is furnished with cord reinforcement.

Grounding Rings

For 3 or 4-pole Receptacles

Where it is required to use a ground wire having a current capacity equal to that of the circuit wires in ground-portable devices through Arktite receptacles, it is necessary to use a grounding ring which must be ordered separately.

To complete the grounding connection on the 10, 30 and 60-ampere receptacle, a grounding ring is clamped between the receptacle housing and the conduit. The flexible lead on the grounding ring is connected to the extra contact finger in the receptacle.

On the 100 and 200-ampere receptacle the extra contact finger must be permanently grounded by means of a flexible cable connected to the soldering lug on the inside of the conduit. No ring is used between housing and conduit.

10-ampere

Cat. No.	Standard Package	Wt., Lbs. Std. Pkg.	Price Each

QE Series Condulets

Form 108

Weatherproof, galvanized or black enamel finish. Take round base lock snap switches. Furnished with adjustable bar and screws.

These Condulets are for installations exposed to the weather or where it is desired to protect the switch from mechanical injury.

They are made in two parts: body and housing. The body is furnished with an adjustable bar for mounting the switch. The hubs are cast solid with the body and have an integral bushing and tapered thread. The housing is fastened to the body by four screws and is provided with a hole for inserting the key that operates the switch.

The QE series, form 108, does not give the same degree of protection from meddling that is obtained when a padlock is used with the QE series, form 1096.

Any assortment of 100 black enameled and galvanized Condulets of the QE series, form 108, will be considered a standard package.

Type QEE Condulets

QE Series Condulets

Form 1096

These Condulets are for installation exposed to the weather or where it is desired to protect the switch or receptacle from mechanical injury.

They are made in two parts: body and housing. The body is furnished with an adjustable bar for mounting the switch or attachment plug receptacle. The hubs are cast solid with the body and have an integral bushing and tapered thread. The housing is fastened to the body by four screws and is provided with a self-closing spring door.

The door can be locked with a padlock to prevent unauthorized persons operating the switch.

The housing can be mounted so that the door will be hinged at 90, 180 or 270 degrees from the position shown in the illustrations.

Any assortment of 100 black enameled and galvanized Condulets of the QE series form 1096, will be considered a standard package.

Type QEE Condulets

QE Series Condulets

Forms 106 and 206

Two-pole Condulets are furnished with 30-ampere, 250-volt receptacle RQH302, which takes plug RQ302. Three-pole Condulets are furnished with 30-ampere, 250-volt receptacle RQI1303, which takes plug RQ303. Plugs, see end of QE series, forms 1066 and 2066.

Consists of two parts: body and receptacle housing.

They are weatherproof and easy to wire. The wires can be drawn out of the body and the connections with the receptacle made in the open. After this is done, the wires are pushed back into the body and the receptacle housing is fastened to the body by four heavy screws. This operation also securely clamps the receptacle in place.

There is no danger of the operator injuring his knuckles when inserting or removing the plug. Receptacle is protected from damage as it sets back in the housing.

Any assortment of 25 black enameled and galvanized Condulets of the QE series, forms 106 and 206, will be considered a standard package.

QE Series Condulets

Forms 1066 and 2066

Plug receptacle Condulets with spring door. Black enamel finish. Two-pole Condulets are furnished with 30-ampere, 250-volt receptacle No. RQI1302, which takes plug No. RQ302. Three-pole Condulets are furnished with 30-ampere, 250-volt receptacle No. RQI1303, which takes plug No. RQ303.

These Condulets are weatherproof and exceptionally easy to wire. The wires can be drawn out of the body and the connections with the receptacle made in the open. After this is done, the wires are pushed back into the body and the receptacle housing is fastened to the body by 4 heavy screws. This operation also securely clamps the receptacle in place.

Any assortment of 25 black enameled and galvanized Condulets of the QE series, forms 1066 and 2066, will be considered a standard package.

Type FF Condulets
2 or 3-wire, 250 Volts

These are service entrance Condulets, fusible and weather-proof. Wiring devices, pages 436 to 438, Condulet catalogue No. 2000. Take main line fuse cutouts.

The service wire enters the bottom of the fuse cutout compartment through a porcelain bushing, thus preventing grounding, even though the insulation becomes damaged.

Furnished with removable conduit hub plate, cutout fastening plate, porcelain bushings, screws and bolts, but without cutouts.

Any assortment of 50 black enameled and galvanized Condulets of the FF series will be considered a standard package.

LA Series Aisle Light Condulets

Take 10-watt S-14 Mazda B lamps or any lamp not exceeding 1 3/4 x 4 1/4 inches. Furnished with lamp receptacle.

These Condulets are shallow and when installed at the end of a row of seats do not obstruct the aisle. The front of the Condulet is easily removed, facilitating the renewal of lamps. No glass is used. If a more subdued light is desired colored bulbs (preferably green) can be used.

The light is so shielded that it is not objectionable to spectators or performers.

Type LA—For Orchestra Floors

Y Series Condulets

Galvanized or black enamel finish. Take fuse cutouts. Furnished with cutout fastening plate, screws and bolts. Hubs are cast solid with body.

These Condulets have sheet metal doors with spring catches, except types Y and YC, 30 or 60-ampere, 600-volt, 3-wire, which have cast iron doors with spring catches.

If specifically ordered, the Condulets and covers will be drilled for a seal wire, at a slight advance in the list price.

These Condulets are designed to take wires which will enter the grooves or terminals of the fuse cutout of the same rating as the Condulet. The additional space in the hubs is for the passage of extra wires.

Any assortment of 50 black enameled and galvanized Condulets of the Y series will be considered a standard package.

Type Y Condulets

Galvanized or black enamel finish.

Take main line fuse cutouts.

Furnished with cutout fastening plate, screws and bolts, but without cutouts.

Wiring devices, pages 436 to 438, Condulet catalogue No. 2000.

YY Series Condulets

Take fuse cutouts. Furnished with cast iron door, cast iron hinges, and spring catches, removable conduit hub plates, cutout fastening plate, screws and bolts for cutout fastening plate.

The removable hub plates provide flexibility in installing, especially where the installation will not permit turning the conduit or Condulet.

The hubs are tangent to the back of the Condulet body; but by reversing the conduit hub plate, a projection frequently can be avoided without offsetting the conduit.

Wiring devices, pages 436 to 438, Condulet catalogue No. 2000. Plug receptacle housings, see end of ZP series.

Any assortment of 50 black enameled and galvanized Condulets and Condulet bodies of the YY series will be considered a standard package.

Type YY Condulets

Without Hub Plates

For types YY, YYC and YYQ Condulets. Galvanized or black enamel finish. Take main line fuse cutouts. Furnished with cast iron doors, cutout fastening plate, and screws and bolts for cutout fastening plate.

If specified, a cabinet lock and key, in addition to the spring catch, will be furnished at an advance in list price.

YW Series Condulets

Take fuse cutouts.

Watertight galvanized or black enamel finish. Furnished with cast iron door, gaskets, cutout fastening plate, screws and bolts.

Have gasketed cast iron doors with adjustable eye-bolt hinges. An eye-bolt with a wing nut clamps the door tight. The wing nut is constructed to permit the insertion of a pad-lock whereby the door can be locked.

Wiring devices, pages 436 to 438, Condulet catalogue No. 2000.

Conduit hub plates, see end of YY series. Plug receptacle housings, see end of ZP series.

These Condulets are designed to take wires which will enter the grooves or terminals of the fuse cutout of the same rating as the Condulet. The additional space in the hubs is for the passage of extra wires.

Any assortment of 25 black enameled and galvanized Condulets and Condulet bodies of the YW series will be considered a standard package.

Type YW Condulets

Without Hub Plates

Galvanized or black enamel finish. For types YW, YWC and YWQ Condulets. Take main line fuse cutouts. 250 and 600 volts.

Furnished with cast iron door, gaskets, cutout fastening plate and bolts for cutout fastening plate.

*YW886036 and 776016 are 600 volts.

*Large hub is on cutout end of Condulet.

Types FH and FHF Condulets

Covers, see end of FS and G-II series with adjustable bars. Type FH is for use with heating devices requiring not more than 660 watts. Receptacle C337g, which can be used for a pilot lamp, is furnished with the Condulet. Type FHF is for use with heating devices requiring more than 660 watts; therefore provision is made for a cutout.

Type FH Condulets

For control of heating devices. Galvanized or black enamel finish. Take round base wiring devices or covers, and flush rectangular wiring devices with surface style covers. Furnished with receptacle C337g, adjustable bar, and screws. Form 10 is also furnished with form 5 adapting ring.

Cat. No.	Form	Size Inches	Std. Pkg.	Wt. Lbs. Std. Pkg.	Price Each
FH110	10	1/2	15	95	\$2.50
FH210	10	3/4	15	100	2.60

Type FHF Condulets

Round base wiring devices, pages 414 to 417; cutouts, page 436; flush rectangular wiring devices, page 412 to 414; pilot lamp receptacle, page 412, Condulet catalogue No. 2000.

Furnished with form 5 and form 10 adapting rings, adjustable bars, cutout fastening plate, pilot lamp receptacle, ruby jewel, screws, and bolts.

Cat. No.	Form	Size Inches	Std. Pkg.	Wt. Lbs. Std. Pkg.	Price Each
FHF120	20	1/2	15	130	\$4.65
FHF220	20	3/4	15	140	4.75

Type MFC Condulets

Motor starting safety switch Condulets. Galvanized or black enamel finish. Furnished with fusible knife switch and removable conduit hub plate, one at top and one at bottom.

The mechanism is so arranged that the switch cannot be thrown from the "off" to the "running" position. After it has been thrown to the "starting" position and the operator has released the handle, a spring automatically and quickly carries the switch to the "running" position. A padlock can be used to lock the switch in

either the "off" or the "running" position, or to lock the door.

If specified, a special gasketed door and gaskets for hub plates, will be furnished at an advance of \$2.50 in list price.

Take hub plates of the MF series with one and two hubs.

†Take MF series hub plates, page 360, Condulet catalogue No. 2000.

‡Take MK series hub plates listed below.

MK Series Conduit Hub Plates

Cast iron. Galvanized or enamel. Furnished with screws. Dimensions, 2 5/8 x 5 inches. For 30-ampere, 125 and 250-volt type MK Condulets.

With One Hub

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
MK1	1/2	15	25	\$.45
MK2	3/4	15	25	.55
MK3	1	15	30	.65
MK4	1 1/4	15	30	.75
MK5	1 1/2	15	35	.85

With Two Hubs

MK11	1/2	15	25	\$.60
MK22	3/4	15	25	.70
MK33	1	15	30	.80
MK44	1 1/4	15	30	.90
MK55	1 1/2	15	35	1.00
MK00	Blank	15	20	.30

Type MKS Interlocking Safety Switch and Plug Receptacle Condulets

Without Hub Plates

Galvanized or black enamel finish.

Takes conduit hub plates and Type DP interlocking plugs. Furnished with fusible knife switch arranged for cartridge fuses and plug receptacle housing.

60-ampere, 250-volt

Cat. No.	No. of Poles	Takes Plugs	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each

Hub plate, one-hub, page 360. Condulet catalogue No. 2000.

YK Series Condulets

Take fusible knife switches. Furnished with switch fastening plate, screws and bolts.

Removable switch fastening plate permits mounting the switch and making connections before it is installed.

Door is furnished with a spring catch.

Hubs are cast solid with the body and have an integral bushing and tapered thread.

Any assortment of 25 black enameled and galvanized Condulets of the YK series will be considered a standard package.

Type YK Condulets

Galvanized or black enamel finish.

Take fusible knife switches.

Furnished with switch fastening plate, screws and bolts.

Hubs cast solid with body.

2-pole, 30-ampere, 250-volt

Sheet Steel Door

Table with 5 columns: Cat. No., Size Inches, Std. Pkg., Wt., Lbs. Std. Pkg., Price Each. Rows include YK1302, YK2302, YK3302.

Type ET Condulets

In concealed conduit installations it is frequently possible to save conduit and labor by using this type, as junctions in the conduit system may be made at concealed or inaccessible points.

Where these Condulets are not used, all conduits must be run to an accessible junction box or outlet.

Single runs of conduit may be made from these junctions to the desired outlets, where the necessary taps and splices in the wires can be made.

The hubs have an integral bushing and tapered thread. Galvanized or black enamel finish.

Any assortment of 100 black enameled and galvanized types ET, EY, and ELB Condulets will be considered a standard package.

Cat. No.	SIZE INCHES			Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
	A	B	C

Type ALC Condulet Fixture Joints

For Pendant Fixtures—Always Hang Plumb
For Fixtures with 1/2-inch Stem

The fixture is suspended from a universal joint which assures that the fixture will hang plumb. It also prevents breaking the fixture stem at the point of suspension, due to strains set up by the wind or by hitting the fixture. Permits fixture to swing through an angle of about 20 degrees in any direction from the perpendicular.

Fixture stem cannot turn or twist in this manner as to injure the wires or connections.

The back of Type ALC conforms to the shape of the conduit.

Cat. No.	Size In.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
ALC1	1/2	25	65	\$.75
ALC2	3/4	25	70	.85

Type AOC Condulet Fixture Joints

Type AOC Condulet Fixture Joint fulfills the same purpose as Type ALC, but the Condulet body is of the Obround shape and is provided with a cover fastened on with a wedge nut.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
AOC1	1/2	50	65	\$.75
AOC21	3/4	25	40	.85

Cord Clamps

For 1/2, 3/4, and 1-inch conduit. Galvanized or black enamel finish.

Cat. No.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
Clamp 1	50	20	\$.25

Covers with Cord Clamps

For Condulets of the Obround Series

Drop cord fixtures, especially in industrial plants, are frequently subject to hard usage. The Condulet cover with cord clamp, acts as a safeguard for the upper end of such drop cords, and prevents putting any strain on the soldered connections of the conductors. The hole through the cover is provided with a bushing.

This cover fits any Condulet of the Obround Series in the sizes listed.

Galvanized or black enamel finish.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
19E	1/2	200	80	\$.25
29E	3/4	100	50	.30

Condulet Finishes

Iron Condulets and Covers

Black enamel is the standard finish for Condulets, Condulet bodies and metal covers and will be furnished unless another finish is specified on the order.

Galvanized finish on the exterior and black enamel finish on the interior of Condulets and Condulet bodies will be furnished at the same price as all black enamel finish, when the order specifies galvanized finish. Galvanized finish for metal covers will be furnished, if specifically ordered, at the same price as black enamel finish.

Assortments

Black enameled and galvanized Condulets and Condulet bodies of the same type and size may be assorted to make a standard package. Black enameled and galvanized covers of the same type and size may be assorted to make a standard package. Locomotive Headlight Switches

34 Volts, 24 Amperes—125 Volts, 6 Amperes
250 Volts, 3 Amperes

Type LHSJ without Resistance,
Toggle Switch, and Fuse Receptacle
3 Positions: Dim—Off—Bright

Type LHSJ with Resistance, but
without Toggle Switch and Fuse Receptacle
3 Positions: Off—Dim—Bright

Type LHSJ without Resistance, but
with Toggle Switch and Fuse Receptacle
3 Positions: Front Dim, Rear
Bright—Off—Rear Dim, Front Bright

Type LHSJ without Resistance,
Toggle Switch, and Fuse Receptacle
4 Positions: Rear Bright—Off—
Front Bright—Both Bright

Type LHSJ with Resistance, Toggle Switch, and Fuse Receptacle
5 Positions: Front Bright—Front Dim—Off—Rear Dim—Rear Bright

Locomotive Headlight Switches are furnished in 4 styles: without resistance, toggle switch, and fuse receptacle; without resistance, but with toggle switch and fuse receptacle; with resistance, but without toggle switch, and fuse receptacle; and with resistance, toggle switch, and fuse receptacle.

These switches are of substantial construction. The cover is gasketed, making it dustproof. The body is shallow, not exceeding 2 inches in depth and, therefore, it is especially suitable for mounting in the limited space available in an engine cab.

The switch blade is always in engagement with one of the switch contacts and, therefore, it cannot get out of alignment. The wires are connected to binding screws which make direct connection with the contacts.

The cover is marked to show the condition of the light as indicated by the pointer on the handle. The cover is marked on both sides so that it can be read correctly when the switch is installed with the handle pointing either up or down. The handle is held in position by a spring plunger which engages notches.

All parts are removable without disturbing the body or disconnecting any of the conduit.

Locomotive Headlight Switches

3 Positions: Front Dim, Rear Bright—Off
Rear Dim, Front Bright

34 V., 24 Amp.—125 V., 6 Amp.—250 V., 3 Amp.

Condulets with Cab Ceiling Rosettes

Bayonet Type, Iron Clad

These cab ceiling rosettes are strong, efficient, and convenient devices for quickly putting up, taking down, or exchanging drop cord equipment.

Both the base and cap are of cast iron, protecting strong composition blocks which carry the contacts.

The cast iron parts interlock in such a manner as to prevent any strain being applied to the contacts.

A slight turn of the cap locks it in position and vibration cannot loosen it. No tools are required to disengage the cap from the base.

Connection blocks cannot be used with these Condulets because of the compact design. If connection blocks are required, see listings on following pages.

Type GS

Furnished with Clamp—For Flexible Cord or Armored Cable

With Rosette GS574 for 1/4 to 1/16-inch Diameter Cable

GSC1539617	1/2	10	150	\$12.00
GSC2539617	3/4	10	150	12.45

Standard finish is galvanized or black enamel.

The Condulets consist of Form 5 GS Series with GS577, GS5615, GS5616, or GS5617 rosette.

Any assortment of 15 Condulets with Cab Ceiling Rosettes, 2 and 3 gang, will be considered a standard package.

Type GS Condulets with Cab Ceiling Rosette and Connection Block

Bayonet Type, Iron Clad

These cab ceiling rosettes are strong, efficient, and convenient devices for quickly putting up, taking down, or exchanging drop cord equipment.

Both the base and cap are of cast iron, protecting strong composition blocks which carry the contacts.

The cast iron parts interlock in such a manner as to prevent any strain being applied to the contacts.

A slight turn of the cap locks it in position and vibration cannot loosen it. No tools are required to disengage the cap from the base.

These Condulets differ from those listed previously in that they are furnished with connection blocks and are larger. Each plate of the connection block is provided with three 1/4-inch—20 binding screws.

With 2-pole Block

Furnished with Clamp—For Flexible Cord or Armored Cable

With Rosette GS176 for 1/4 to 7/16-inch Diameter Cable

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each

Condulets with Rosettes

These Condulets consist of a body and a cord or fixture rosette. The rosette is attached to the Condulet by screws.

The rosette is made in 2 parts: a base and cap, both of which are of molded composition. The cap, which is either a cord or a fixture rosette cannot be used without the base. The wires are connected to 2 plates placed on the upper side of the base. Three additional screws on each of these plates permit from 1 to 3 taps. The drop cord or fixture wires are connected to terminals in the cap. When the cap is secured to the base, all connections are completed.

Type G

With H554 Cord Rosette and Connection Block

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
G15754	1/2	25	50	\$.90

Screw Cover Junction Condulets

These Condulets are of liberal dimensions, providing ample space for taps, and for the passage of additional circuits.

The cover is provided with 2 bosses which permit the use of a wrench, screw driver, or bar for turning the cover. If desired, a gasket can be furnished for use between the cover and body.

The over all dimensions of these bodies exclusive of hubs are: diameter, 1/2-inch size, 2 1/2 inches; 3/4-inch size, 2 1/2 inches; 1-inch size, 3 1/2 inches; depth, 1/2-inch size, 1 3/8 inches; 3/4-inch size, 1 3/8 inches; 1-inch size, 1 7/8 inches.

The cover increases the depth 3/16 inch.

The hubs are tapered.

Standard finish is galvanized or black enamel.

These Condulets consist of Form 7 GR Series with connection block CB114 or CB1124.

Any assortment of 25 Screw Cover Condulets with Connection Blocks will be considered a standard package.

Screw Cover Condulets with Connection Block

Cast Iron Body, Cast Brass Cover

These Condulets are of liberal dimensions, providing ample space for taps and for the passage of additional circuits.

The cover is provided with 2 bosses which permit the use of a wrench, screw driver, or bar for turning the cover. If desired, a gasket can be furnished between the cover and body.

The over all dimensions of these bodies exclusive of hubs are: diameter, 4 inches; depth, 1 7/8 inches.

The cover increases the depth 3/16 inch.

The hubs are tapered.

SPECIAL ASSORTMENT.—Any assortment of 25 black enameled and galvanized Condulets listed on this page will be considered a standard package.

GT Series Screw Cover Junction Condulets

Condulets of the GT Series meet the requirements of a junction box. The Condulet is furnished with a cast brass screw cover which is provided with 2 bosses which permit the use of a wrench, screw driver, or bar for turning the cover. If desired, a gasket can be furnished for use between the cover and Condulet.

The over all dimensions of the Condulet exclusive of hubs are: Diameter: Type GTF, 3 1/2 inches, Types GTT and GTX, 4 5/8 inches; depth: Type GTF, 1 7/8 inches, Types GTT and GTX, 3 1/4 inches.

The male threaded hubs will take 1 1/4-inch conduit couplings or Type GTXS sleeves and Type GTXB bushings.

When used with these sleeves or bushings, the Condulet will take 1/2, 3/4 or 1-inch conduit, and the connection to the Condulet forms a union. This arrangement makes it possible to put up or take down a section of the conduit system without disturbing the rest of the system.

GTXS0 is a blank sleeve to plug one of the hubs of the Condulet without the use of the blank bushing GTXB0.

Types GTT and GTX are arranged to take connection blocks CB114, CB132, CB133, or CB1124 connection blocks and 2 porcelain RSA standard terminal blocks with No. 10561 base.

Type GTF

Has two 1 1/4-inch male threaded hubs, which take 1 1/4-inch couplings; and one 1-inch female threaded hub, which takes rigid conduit only.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GTF37	1 1/4-1-1 1/4	10	85	\$2.60

Type GTT

Takes CB114, CB132, CB133, and CB1124 Connection Blocks, Sleeves and Bushings

Cat. No.	Size, Inches of Threaded Hub	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GTT9	1 1/4	10	80	\$2.50

Type GTX

Takes CB114, CB132, CB133, and CB1124 Connection Blocks, Sleeves and Bushings

Cat. No.	Size, Inches of Threaded Hub	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GTX9	1 1/4	10	85	\$2.60

Standard finish is galvanized or black enamel.

Type GTXS Sleeves

For GT Series

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GTXS4	1 1/4	25	20	\$.50

GTXB2	3/4	25	20	.35
GTXB3	1	25	20	.35
GTXB0	Blank	25	20	.35

Type GRN Screw Cover Junction Boxes

Cast Iron Body, Cast Brass Cover

Type GRN, with screw cover, is for use where durable, watertight, junction boxes are required for locomotives, railroad yards and shops. It is provided with a screw cover and the body is provided with 4 bosses, any of which can be tapped for 1/2, 3/4, 1 or 1 1/4-inch conduit. The cover is provided with 2 bosses which permit the use of a wrench, screwdriver, or bar for turning the cover.

Type GRN, with wedge nut cover, has a fastener which securely holds the cover or wiring device in place and it cannot become loosened by vibration. The body is provided with 4 bosses, any of which can be tapped for 1/2, 3/4, 1 or 1 1/4-inch conduit.

Positions of drilling and tapping should be specified according to letters, A, B, C, D, shown on cuts.

To order size by number: 1 is 1/2 inch, 2 is 3/4 inch, 3 is 1 inch, 4 is 1 1/4 inches. For example, GRN82-1234 (GRN82 is the catalogue number of the blank casting with screw cover and 2-wire connection block).

The prices per hole for drilling and tapping are as follows: 1/2 or 3/4 inch, 15 cents; 1 or 1 1/4 inches, 20 cents.

If desired, a gasket can be furnished between the cover and body.

With Connection Block—Form 8

Diameter: Outside, 4 Inches; Inside, 3 5/8 Inches

Cat. No.	No. of Wires	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each

These Condulets consist of Form 10 GS Series with GS126 keyless receptacle and GS124 spring door cover.

Any assortment of 25 Condulets with Spring Door Cover and Keyless Receptacle will be considered a standard package.

Condulets with Type BRG Plug Receptacle

*30-ampere, 250-volt, A.C.

Condulets with threaded housings, listed below, are furnished with gaskets. The holes in the bodies for the fastening screws are blind tapped and are outside of gasket bearing surface, therefore, when a watertight plug or brass cap is used, the Condulet is vapor, gas, and dustproof. These Condulets are well adapted for connections to classification, blizzard, and marker lamps.

2-pole equipments are furnished with receptacle BR1302 and take 2-pole plugs. 3-pole equipments are furnished with receptacle BR1303 and take 3-pole plugs.

*Can be used on 25-ampere, 125-volt D.C. circuits. Standard finish is galvanized or black enamel.

These Condulets consist of Form 5 GS Series with Type BRG 2-pole housings, and Form 10 GS Series with Type BRG 3-pole housings.

Any assortment of 25 Condulets listed in this column will be considered a standard package.

Condulets with Type BRG Plug Receptacle

With Spring Door Housing

*30-ampere, 250-volt, A.C.

These Condulets are well adapted for connecting to classification, blizzard, and marker lamps.

2-pole equipments are furnished with receptacle BR1302 and take 2-pole plugs. 3-pole equipments are furnished with receptacle BR1303 and take 3-pole plugs.

Any assortment of fifteen 3-gang Condulets listed in this column and 3-gang Type GSB in preceding column will be considered a standard package.

Type BRM Condulets with Plug Receptacle

*30-ampere, 250-volt, A.C.

These plug receptacle Condulets furnish a compact, convenient, and rigid receptacle device.

They are especially suitable for semi-permanent or temporary installation either for light or power, as in such installations it is desirable to include a device that will permit the conduit and wiring system to be easily broken and at the same time not sacrifice any of the protective features of rigid or flexible conduit.

These Condulets take plugs for rigid or flexible conduit or armored or other cable.

The threaded Condulets when used with a watertight plug or the brass cap, are vaporproof. These Condulets make excellent devices for installation on locomotives, as they provide means whereby the conduit system can be easily removed or replaced in sections, as is necessary when a locomotive is to receive a thorough overhauling.

2-pole equipments are furnished with receptacle BR2302, which takes 2-pole plugs.

3-pole equipments are furnished with receptacle BR2303, which takes 3-pole plugs.

Condulets with Plug Receptacle

Bayonet Type
*30-ampere, 250-volt, A.C.

These Condulets consist of Form 5 GS Series with 2-pole Type BRG bayonet type plug receptacle housings and Form 10 GS Series with 3-pole Type BRG bayonet type plug receptacle housings. The housings are provided with extension skirt and steel pins which engage the bayonet joint sleeve of Type BP bayonet plugs, insuring a positive connection. 2-pole equipments are furnished with 30-ampere, 250-volt receptacle BR2302, which take 2-pole bayonet type plugs. 3-pole equipments are furnished with 30-ampere, 250-volt receptacle BR2303, which take 3-pole bayonet type plugs. These Condulets are well adapted for connections to classification, blizzard, and marker lamps.

Condulets with Plug Receptacles

With Self Closing Spring Door

*30-ampere, 250-volt, A.C.

Sometimes when plug receptacle Condulets are to be used with plugs having a clamping nut, it is desirable to have self closing spring door that will keep out dirt and protect the receptacle when the plug is removed. These Condulets meet this requirement. The door is pivoted so that when closed it aligns itself with face of the opening in the receptacle housing. These Condulets are furnished with receptacle BR2302 which takes 2-pole plugs.

Types GS and GSC Condulets consist of Form 5 GS Series with Type BRG, 2-pole threaded plug receptacle housing and spring door attachment GS528.

For Rigid Conduit

Cat. No.	Description	Std. Pkg.	Wt. Std. Pkg.	Lbs. Std. Pkg.	Price Each
BP92302	2-pole	10	30	35	\$4.00
BP92303	3 "	10	40	45	6.35

*Can be used on 25-ampere, 125-volt D. C. circuits. Handles are black enamel finish.

**Type LG Gauge Lamp Condulets
Cast Aluminum—Aluminum Finish**

Take Incandescent Lamps with S14 or S17 Bulb, Flexible Conduit, and Armored or other Round Cable

Furnished with Gland Nut, Lead Sleeve or Rubber Bushing, or Adapter, and Lamp Receptacle with Lamp Grip

Type LG Gauge Lamp Condulets are for housing the lamps, illuminating steam and air gauges (single and multiple), water glass and lubricators.

They are of simple construction with hinged doors held in place by a spring catch, giving access to the interior. The bottom is tapped for 5/8-inch bolt for attaching to a bracket on the boiler head or in the cab. The top is provided with a gland nut and lead sleeve for flexible conduit or armored cable or rubber bushing for round cord or cable; or an adapter for rigid or flexible conduit, armored or other round cable. The lamp receptacle furnished is of composition and is equipped with a lamp grip.

††Flexible conduit or armored cable.

If specified on the order, Type LG Gauge Lamp Condulets can be furnished with rubber bushing No. 5, or lead sleeve Nos. 38, 40, 43 or 46, at the same prices as the standard gauge lamps.

Rubber bushing No. 5 takes flexible cord 7/16 to 5/8 inch in outside diameter. Lead sleeve No. 38 takes 35/64 to 19/32 inch; No. 40, 37/64 to 5/8-inch; No. 43, 5/8 to 43/64-inch; No. 46, 43/64 to 23/32-inch armored cord or flexible conduit, outside diameter.

Any assortment of 20 Type LG Gauge Lamp Condulets will be considered a standard package.

Tender Lamps

Take any Medium Screw Base Lamp in S17, S21, G18½, or P19 Bulb

These tender lamps are used as back up lamps on the rear of locomotive tenders. They are weatherproof and the front and side roundels are gasketed.

They are made in 3 styles: with rectangular opening in bottom; with 2 round openings in sides; and with front opening only. The style with 2 round openings in the sides provides ground illumination so that the engineer can see that the lamp is burning. The style with rectangular opening in the bottom not only provides ground illumination, but also throws a light directly downward for coupling.

These tender lamps are furnished with a clear Spreadlite lens, but can be furnished with red lens. The lamp receptacle furnished is provided with a lamp grip.

They are provided with a removable sliding door which is held in position by a cap screw.

Type LDJ

With Rectangular Opening in Bottom
Plain Glass

LD12	½	10	150	\$7.30
LD22	¾	10	155	7.40

Standard finish is galvanized or black enamel. The above tender lamps can be furnished in aluminum at an advance of \$3.50 in the price.

The above tender lamps can be furnished with an externally operated switch at an advance of \$2.00 in the price.

Any assortment of 20 tender lamps listed in this column will be considered a standard package.

Tender Lamps

Take any Medium Screw Base Lamp in S17, S21, G18½, or P19 Bulb

These tender lamps are mounted on a bracket above the top of the locomotive tender in order to illuminate the water hole as well as display a light on the rear of the tender. They are weatherproof and the front, side, and rear roundels are gasketed.

They are similar to Type LD tender lamps but have an opening in the back which will take another lens. They are made in 3 styles: with rectangular opening in bottom; with 2 round openings in sides; and with front and rear openings only. The style with 2 round openings in the sides provides ground illumination so that the engineer can see that the lamp is burning, as well as illuminating the water hole and displaying a light on the rear of the tender. The style with the rectangular opening in the bottom provides ground illumination and throws a light directly downward for coupling, as well as illuminating the water hole and displaying a light on the rear of the tender.

White semaphore lenses are regularly furnished for the front, rear, and side openings of these tender lamps; but a red lens can be furnished in front and a white lens in back at an advance of \$1.25 in the prices, if the catalogue number is followed by RW. The tender lamp then has the red lens showing toward the rear of the locomotive and the white lens illuminating the water hole.

The lamp receptacle furnished is provided with a lamp grip.

Type LDCJ with Through Feed Hubs

With Rectangular Opening in Bottom
Plain Glass

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
LDCJ27	¾	10	210	\$11.90

With 2 Round Openings in Sides

With Front and Rear Openings Only

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
LDCF22	¾	10	190	\$10.80

Standard finish is galvanized or black enamel. Any assortment of tender lamps listed in this column will be considered a standard package.

Tender Lamps

With 8-inch Semaphore Lens

Take 30-34, 110, 115, or 120-volt, 100-watt, Medium Screw Base Lamp in G25 Bulb

These tender lamps are used as back up lamps on the rear of locomotive tenders.

They are furnished with lamp receptacle with lamp grip, and a gasketed weatherproof cover hinged at the top and fastened with a heavy wing nut catch at the bottom.

Type LDBJ with Through Feed Cast Iron

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
LDBJ1	1/2	5	150	\$12.50
LDBJ2	3/4	5	155	12.60
Cast Aluminum				
LDBJ11	1/2	5	75	\$17.00
LDBJ21	3/4	5	80	17.10

LDBF21	3/4	5	80	17.00

Type LEA 2-color Tender Lamps

With Rectangular Opening in Bottom—Plain Glass

The door, which is of substantial construction, is hinged at the top and is held closed by a snap catch. The door contains a clear Spreadlite lens. The door is so arranged that it must be opened in order to operate the key receptacle or to operate the color screen.

This tender lamp is made in one style only, with rectangular opening in bottom. This not only provides ground illumination, but also throws a light directly downward for coupling. Furnished with clear Spreadlite lens, lamp

receptacle G131 with lamp grip, and gaskets.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
LEA18	1/2	10	165	\$10.00
LEA28	3/4	10	170	10.10

2-color Tender Lamps

These tender lamps or back up lights are for mounting on rear of locomotive tenders. They are provided with a 5-inch clear Spreadlite semaphore lens, key receptacle with externally operated key, and 2 rectangular plain glass openings in the bottom. They take any medium screw base lamp in S17 bulb. They are weatherproof, as the door, lens, and openings in the bottom are gasketed. A lever on the outside of the case operates a color screen throwing it between the lamp and the lens when a red light is desired.

Conduit hub plates can be arranged as desired.

Type LEBF for Vertical Conduit at Bottom Cast Iron

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
LEBF18	1/2	5	100	\$14.20
LEBF28	3/4	5	105	14.25
Aluminum				
LEBF181	1/2	5	60	\$18.00
LEBF281	3/4	5	65	18.10

Type LEBJ for Through Feed Horizontal Conduit Cast Iron

Aluminum				
LEBJ181	1/2	5	65	\$18.10
LEBJ281	3/4	5	70	18.20

Standard finish is black enamel for cast iron, and aluminum for cast aluminum.

Any assortment of 10 tender lamps of each group listed above will be considered a standard package.

Type LEF Condulets

With Front Opening Only

Tender lamp Condulets. Galvanized or enamel. Furnished with clear Spreadlite lens, externally operated red screen, externally operated switch, Bryant lamp receptacle No. 4131 with lamp grip, and gaskets.

Take any medium screw base lamp in S17, G18 1/2 or P19 bulb.

Any assortment of 25 black enameled and galvanized Condulets of the LE series will be considered a standard package.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
LEF12	1/2	10	275	\$16.80
LEF22	3/4	10	280	16.90

Type LEJ Condulets

With Front Opening Only

Tender lamp Condulets. Galvanized or enamel. Furnished with clear Spreadlite lens, externally operated red screen, externally operated switch, Bryant lamp receptacle No. 4131 with lamp grip, and gaskets.

Take any medium screw base lamp in S17, G18 1/2 or P19 bulb.

Any assortment of 25 black enameled and galvanized Condulets of the LE series will be considered a standard package.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
LEJ12	1/2	10	280	\$16.90

LGSA00	Aluminum	10	25	7.00

Type LGWA Condulets

Gauge lamp Condulets. Galvanized or enamel. Take incandescent lamps with S14 S17, G18 1/2 or P19 bulb. Furnished with Benjamin receptacle No. 4202 with lamp grip. For flexible armored cord.

Cat. No.	Description	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
LGWA0	Cast Iron	10	65	\$5.00
LGWA00	Aluminum	10	25	7.00

Locomotive Filler Hole and Stack Lamps

For 1/2-inch Rigid Conduit

Types LGUA and LGUB lamps are of substantial weather-proof construction. Each type consists of a cylindrical housing enclosing the receptacle for an incandescent lamp in S17 bulb, and is tapped for rigid conduit.

The lamps are provided with a 3-inch clear semaphore lens, which directs the light as desired.

Type LGUA is especially intended for oil burning locomotives to furnish light for taking on oil and water. It is provided with lugs for fastening bolts.

Type LGUB is similar to Type LGUA lamp except the hub comes out at an angle of about 30 degrees to the axis. No lugs are provided for fastening, the lamp is supported by the conduit. This is practical as the lamp is made of cast aluminum. The light from the lamp enables the engineer or fireman to see the color of the smoke issuing from the stack at night.

Type LGUA Filler Hole Lamps

Cast Iron				
Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
LGUA1	1/2	10	50	\$4.25

Type LGUB Stack Lamps

Cast Aluminum				
Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
LGUB1	1/2	10	35	\$5.50

Standard finish is black enamel for cast iron, and aluminum for cast aluminum.

Any assortment of 10 filler hole and stack lamps will be considered a standard package.

Engineer's Reading Light Condulets

Take Any 25-watt Lamp in S17 Bulb

These Condulets are provided with a shade and guard, in which the lamp bulb and receptacle are fully protected. The shade is cast as part of the Condulet, while the guard is hinged to the Condulet. The composition receptacle furnished, C131, is of the key type and is provided with a lamp grip and metal key.

These Condulets are especially recommended as engineer's reading lamps, and are also suitable for use in railroad shops, roundhouses, and railroad yards. The body and shade are cast iron, and the guard is cast aluminum.

Type LMKB

Cat. No.	Size In.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
LMKB225	3/4	10	35	\$3.40

Type LMK A

Cat. No.	Size In.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
LMKA225	3/4	10	35	\$3.40

Type LMKJ

Cat. No.	Size In.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each

Type LMKL

Cat. No.	Size In.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
LMKL225	3/4	10	40	\$3.59

Standard finish is galvanized or black enamel. Any assortment of 10 Engineer's Reading Light Condulets will be considered a standard package.

No. C131 Lamp Receptacles

Furnished with Lamp Grip and Metal Key

For LMKB, LMKA, and LMKJ Condulets

Cat. No.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
C131	25	12	\$0.85

Locomotive Deck Light Condulets

This Condulet is for locomotive gangways, providing illumination for coal passers. It consists of a Condulet for illuminating, and half shade cast in one piece, and a weather-proof composition lamp receptacle with lamp grip. The half shade is the correct length and size so that when used with a 25-watt lamp in an S17 bulb, the filament is not visible from any point over the rear end of the tender. The diameter of the half shade prevents the use of large headlight bulb in these receptacles.

Type LMD

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
LMD125	1/2	10	25	\$1.80
LMD225	3/4	10	25	1.90

LMG125	1/2	10	20	\$1.80
LMG225	3/4	10	20	1.90

Type LMH

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
LMH125	1/2	10	20	\$1.80
LMH225	3/4	10	20	1.90

Standard finish is galvanized or black enamel.

Any assortment of 20 Locomotive Deck Light Condulets will be considered a standard package.

CL, LP and LO Series Condulet Bodies

CL, LP, and LO series are for ceiling outlets. Take covers, fixtures, attachments, plug receptacle housings or wiring devices. Are suitable for baggage car and general industrial installations.

Condulet bodies of the CL series are provided with a flange in which holes for the mounting screws are drilled. Condulet bodies of the LP series are held in place by pipe straps either around the hubs or around the conduit close to the Condulet body. Condulet bodies of the LO series are provided with four lugs or ears in which holes for the mounting screws are drilled. Any assortment of 100 black enameled and galvanized Condulet bodies of CL, LP, or LO series make a standard package.

The CL, LO, and LP series consist of types other than those listed. Wiring devices: CL series, page 411; LO and LP series, page 421, Condulet catalogue No. 2000.

Type CL Condulet Bodies

Galvanized or enamel. For ceiling outlets. Take covers, fixtures, attachments, housings, or wiring devices.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
CL1	1/2	50	185	\$1.60
CL2	3/4	25	100	1.70
CL3	1	25	110	1.80

Type CLC Condulet Bodies

Galvanized or enamel. For ceiling outlets. Take covers, fixtures, attachments, housings, or wiring devices.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
CLC1	1/2	50	190	\$1.70
CLC2	3/4	25	105	1.80
CLC3	1	25	115	1.90

Type LP Condulet Bodies

Galvanized or enamel. For ceiling outlets. Take covers, fixtures, attachments, housings, or wiring devices.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
LP1	1/2	50	100	\$1.15
LP2	3/4	25	55	1.25
LP3	1	25	60	1.35

Type LPC Condulet Bodies

Galvanized or enamel. For ceiling outlets. Take covers, fixtures, attachments, housings, or wiring devices.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
LPC1	1/2	50	110	\$1.25
LPC2	3/4	25	60	1.35
LPC3	1	25	65	1.45

Type LO Condulet Bodies

Galvanized or black enamel finish. For ceiling outlets. Take covers, fixtures, attachments, housings, or wiring devices.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
LO1	1/2	50	105	\$1.15
LO2	3/4	25	60	1.25
LO3	1	25	65	1.35

Type LOC Condulet Bodies

Galvanized or enamel. For ceiling outlets. Take covers, fixtures, attachments, housings, or wiring devices.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
LOC1	1/2	50	110	\$1.25
LOC2	3/4	25	65	1.35
LOC3	1	25	70	1.45

Type BLMC Condulet Bodies

For deck sill outlets. Galvanized or enamel. Take covers, fixtures, attachments, plug receptacle housings, or wiring devices.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
BLMC1	1/2	50	150	\$1.45
BLMC2	3/4	25	90	1.60
BLMC3	1	25	100	1.75

DSO and DSP Series Condulet Bodies

For deck sill and side wall outlets.

Furnished with cover and screws.

DSP series also furnished with cover gasket.

Plug receptacle housings for BLM, DSO, DSP, JRM, JRR, series page 251, Condulet catalogue No. 2000.

Any assortment of 100 black enameled and galvanized Condulet bodies of the DSO series, or any assortment of 100 of the DSP series will be considered a standard package.

Type DSOC Condulet Bodies

Wiring devices, page 411, Condulet catalogue No. 2000. Take fixtures, attachments or wiring devices.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
DSOC1	1/2	50	190	\$2.30
DSOC2	3/4	25	115	2.50
DSOC3	1	25	120	2.70

Type DSPC Condulet Bodies

For deck sill and side wall outlets. Take fixtures, attachments or wiring devices. Galvanized or enamel.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
DSPC1	1/2	50	190	\$2.45
DSPC2	3/4	25	115	2.65
DSPC3	1	25	120	2.85

Type JRR Condulets

With Hood for Horizontal Conduit

For side wall fixtures. Take fixtures, attachments or wiring devices. 100 assorted make a standard package.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
JRR14	1/2	50	210	\$1.65
JRR24	3/4	25	135	1.75
JRR34	1	25	140	1.90

Type JRR Condulets

With Hood for Vertical Conduit

For side wall fixtures. Take fixtures, attachments or wiring devices. Galvanized or enamel.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
JRR15	1/2	50	210	\$1.65
JRR25	3/4	25	135	1.75
JRR35	1	25	140	1.90

Type JRM Condulets

With Hood for Horizontal Conduit

Wiring devices, page 421 Condulet catalogue No. 2000. Take fixtures, attachments or wiring devices.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
JRM14	1/2	50	315	\$2.85
JRM24	3/4	25	185	3.05
JRM34	1	25	200	3.25

Type JRM Condulets

With Hood for Vertical Conduit

For side wall fixtures. Take fixtures, attachments or wiring devices. Galvanized or enamel.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
JRM15	1/2	50	315	\$2.85
JRM25	3/4	25	185	3.05
JRM35	1	25	200	3.25

Type SOC Condulets
With Hood—For Horizontal Conduit
 For side wall fixtures. Take fixtures, attachments, or wiring devices. 100 assorted make a standard package.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
SOC14	1/2	50	240	\$2.70
SOC24	3/4	25	120	3.00
SOC34	1	25	125	3.20

Type SOC Condulets
With Hood—For Vertical Conduit
 Plug receptacle housings for SO series and type MOC, page 251, Condulet Catalogue No. 2000. Other wiring devices, pages 431 and 432.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
SOC15	1/2	50	245	\$2.70
SOC25	3/4	25	125	3.00
SOC35	1	25	130	3.20

Type MOC Condulets
With Hood—For 3/4-inch Horizontal Conduit

For deck sill outlets. Take fixtures, attachments or wiring devices. Galvanized or black enamel finish. Standard package, 25. Weight, standard package, 95 pounds. Price, No. MOC24.....each \$2.75

Holders

Bronze, 2 1/4-inch. Take reflectors or shades, furnished with receptacle No. PE57. For Condulets of the BLM, CL, DSO, DSP, JRM, JRR, LO, LP, and SO series and type MOC. Distance of top reflector above center contact of lamp, 3/4 inch.

Standard package, 25. Weight, standard package, 60 pounds. Price, No. CRSE1.....each \$6.00

Holders

Iron, galvanized or enamel. Takes Conduletto receptacle No. C337 and reflector No. SH25. For Condulets of the BLM, CL, DSO, DSP, JRM, JRR, LO, LP, and SO series and type MOC.

Standard package, 50. Weight, standard package, 45 pounds. Price, No. SRH2.....each \$5.50

Deep Type Holders

Iron, galvanized or enamel. Takes Conduletto receptacle No. C337 and reflector No. SH25. For Condulets of the BLM, CL, DSO, DSP, JRM, JRR, LO, LP, and SO series and type MOC.

Standard package, 50. Weight, standard package, 75 pounds. Price, No. SRH4.....each \$8.50

Composition Connection Blocks

Furnished with screws. For Condulets of CL, DSO, DSP, JRM, JRR, JRY, LO, LP, and SO series and type MOC.

Standard package, 50. Weight, standard package, 15 pounds. Price, No. CF101.....each \$5.50

Reflectors and Bezels

Reflector for holders Nos. SRH2, SRH3, and SRH4. Bezel for reflectors Nos. SH3, SH6, and SH25.

Cat. No.	Description	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
SH25	Reflector, pore. enam.	25	30	\$1.50
BEZ1	Bezel, brass	25	15	1.00

BO Series Condulets for Ceiling Outlets

These Condulets are suitable for baggage car installation. They are provided with a wide lug on each side of the body in which holes for mounting screws are drilled. This lug matches in width and thickness the strip of molding used to cover the joints between adjacent sheets of headlining.

Connection block No. CF101 can be used in these Condulets with either covers or fixtures, eliminating soldered and taped joints.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
BO1	1/2	50	105	\$1.50
BO2	3/4	25	60	1.60
BO3	1	25	70	1.70

Type BO

Type BOC

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
BOC1	1/2	50	125	\$1.65
BOC2	3/4	25	65	1.75
BOC3	1	25	75	1.85

Covers

For Condulets of the BO, CL, LO, LP, and LQ Series

Blank Cover

Cat. No.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
LO1300	100	155	\$5.50
LO13000	100	40	\$3.30

Hub Cover Cast Iron

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
LOB83	3/8	100	160	\$6.65
LOB84	1/2	100	160	.65

Standard finish is galvanized or black enamel.

Any assortment of 50 Condulets of the BO Series will be considered a standard package. Any assortment of 100 covers listed above will be considered a standard package.

TJ Series Telephone Jack Condulets

These Condulets are designed for telephone jacks. The support for the jack is mounted on the inside of a gasketed metal cover, from which it is properly insulated. When the plug is removed, a lid automatically closes the opening and prevents the entrance of dust, moisture, or insects.

Type TJ

Intended for use under the body of a railway car. It has a swivel base which allows the plug to pull out easily when the car is moved. An insulating bushing is provided, through which the wires pass to the interior of the car.

For Western Electric Jacks Nos. 99 or 152

Cat. No.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
TJ99152	25	115	\$4.50
TJ119	25	115	\$4.50

Type TJD

Intended for mounting on poles or buildings along the right-of-way of a railroad, transmission line, or canal. The line wires enter the Condulet through a 1/2-inch Obround, 2-wire, porcelain cover.

For Western Electric Jacks Nos. 99 or 152

Cat. No.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
TJD99152	25	105	\$4.00

For Stromberg-Carlson Jack No. 119

Cat. No.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
TJD119	25	105	\$4.00

JRY-KRY Series Condulet Bodies

For Side Wall or Car Vestibule Fixtures

Take connection block CF101 and fixtures.

Wiring devices, page 421, Condulet catalogue No. 2000.

Any assortment of 75 black enameled and galvanized Condulet bodies of the JRY-KRY series will be considered a standard package.

Type JRY Condulet Bodies

For Side Wall or Car Vestibule Fixtures

Galvanized or black enamel finish. Take connection block No. CF101 and fixtures.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
JRY1	1/2	50	75	\$.70
JRY2	3/4	25	40	.80
JRY3	1	25	45	.90

Type JRYA Condulet Bodies

For Side Wall or Car Vestibule Fixtures

Galvanized or black enamel finish. Take connection block No. CF101 and fixtures.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
JRYA1	1/2	50	80	\$.85
JRYA2	3/4	25	45	.95
JRYA3	1	25	50	1.05

Type KRY Condulet Bodies

For Side Wall or Car Vestibule Fixtures

Galvanized or black enamel finish. Take connection block No. CF101 and fixtures.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
KRY1	1/2	50	70	\$.65
KRY2	3/4	25	35	.75
KRY3	1	25	40	.85

Type KRYA Condulet Bodies

For Side Wall or Car Vestibule Fixtures

Galvanized or black enamel finish. Take connection block No. CF101 and fixtures.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
KRYA1	1/2	50	70	\$.65
KRYA2	3/4	25	35	.75
KRYA3	1	25	40	.85

Type SRH Fixtures

Consists of holder SRH3 reflector SH25, receptacle, C227, and bezel. Galvanized or black enamel finish. Furnished with screws.

Cat. No.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
SRH357	50	140	\$3.50

Type SRH Holder

Galvanized or black enamel finish. Furnished with screws.

Cat. No.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
SRH3	50	60	\$.75

Type C Receptacle

Furnished with screws.

Cat. No.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
C227	200	120	\$.25

RF Series Car Vestibule Condulets

All the requirements of a car vestibule lamp installation are fully met in the combination of a Condulet body of the RF series, reflector No. SH3, elliptical Conduletto receptacle No. RK527, and a bezel.

When these Condulets are used, either the receptacle or the reflector can easily be removed independently of each other.

The hubs are cast solid with the body and have an integral bushing and tapered thread.

Any G18 1/2 or P19 bulb lamp can be used in reflector No. SH3.

Type RF

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
RF154	1/2	25	80	\$3.50
RF254	3/4	25	80	3.60

Type RFA

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
RFA154	1/2	25	80	\$3.50
RFA254	3/4	25	80	3.60

Type RFC

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
RFC154	1/2	25	85	\$3.60
RFC254	3/4	25	85	3.70

Type RFCA

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
RFCA154	1/2	25	85	\$3.70
RFCA254	3/4	25	90	3.80

No. SH3 Reflectors

For Condulets of the RF Series

Cat. No.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
SH3	25	35	\$1.50

Brass Bezels

For No. SH3 Reflectors

Cat. No.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
Bez. 1	25	15	\$1.00

Standard finish is galvanized or black enamel.

Any assortment of 50 Condulets of the RF Series will be considered a standard package.

Condulets listed above consist of RF Series, elliptical receptacle No. RK527, reflector No. SH3, and bezel Bez. 1.

Type AF Condulets

Signal switch. Galvanized or black enamel finish.

Type AF is a single-pole, double make, nine signal, pull switch. The normal position is open; therefore, operating the switch closes the circuit.

All insulating parts are of high grade material.

The spring is packed in grease and will support a weight of 15 pounds without operating the switch.

The switch is enclosed in a rugged watershedding housing and is fastened to it by four cap screws.

The wires enter through clearance holes in the flange on the switch mechanism.

Cat. No.	Volts	Amperes	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
AF1	250	2	10	130	\$10.00

Type FSCA Cab Connection Condulets

Type FSCA is a connection Condulet for mounting in the roof of a locomotive cab.

It is furnished with cast iron cover No. DS131, No. 12-24 fastening screws, lock washers, and connection block No. CB9323, which has three 1/4-inch-20 binding screws on each outside plate and two 1/4-inch-20 binding screws on the center plate and is mounted on a pedestal.

The Condulet has a special drilling for using this connection block.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
FSCA2302S	3/4	10	40	\$2.50

No. CB9323 Connection Blocks

For Type FSCA Condulets

Cat. No.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
CB9323	25	15	\$1.00

No. DS131 Cast Iron Covers

For Type FSCA Condulets

Cat. No.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
DS131	50	45	\$2.25

DA Series Condulets

For mail car and industrial lighting installations. Furnished with lamp receptacle, 2 1/4-inch reflector holder, steel reflector and lead wires. The reflectors supplied are Ivanhoe-Regent No. 18440, No. 18441, No. 18460, No. 18461 or No. 18470.

If specified, No. PE55 lamp receptacle with lamp grip will be furnished at a slight advance.

When ordering for installation in mail cars, data must be given concerning location of Condulet in car, wattage of lamp, style of bulb, distance from floor to ceiling, finish of reflector and curvature of ceiling.

For body and canopy only, deduct \$9.00.

Type DAC

Type DA

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
DA1	1/2	5	90	\$16.50
DA2	3/4	5	95	16.75
DA3	1	5	100	17.00

GJX1	1/2	25	75	\$1.50
GJX2	3/4	25	80	1.60
GJX3	1	10	45	1.70

Type GJT, 2-gang

Furnished with cover and screws.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GJT12	1/2	10	70	\$2.40

Standard finish is galvanized or black enamel.

Condulets of the GJ Series take Hubbell toggle switches Nos. 8171, 8181, 8191, 8201, 8241, and 8261.

Any assortment of 25 Toggle Switch Condulets will be considered a standard package.

UG Series Condulets

Single receptacle battery charging Condulets, galvanized or black enamel finish.

Especially for storage battery charging outlets in railroad terminals and coach yards.

Furnished with 2-pole round receptacle, spring door, and gaskets. Round receptacle No. BRA100 is rated at 100 amperes, 125 volts, and takes plugs No. BPA100 or BPFA100.

Type UGEL Condulets

Single receptacle battery charging Condulets. Galvanized or black enamel finish.

With round receptacle No. BRA100 and base plate.

Standard package, 5. Wt., std. pkg., 170 pounds. Price, No. UGEL1020 ea. . \$27.25

Type UGEL Condulets

Surface Style

Galvanized or enamel. For two conduits. With round receptacle No. BRA100.

Cat. No.	Size Inches	Std. Pkg.	Wt. Lbs.	Price Each
UGEL422	1 1/4	5	230	\$31.50
UGEL522	1 1/2	5	240	31.90
UGEL622	2	5	250	32.30

Type UGEL Condulets

Underground Style

Single receptacle battery charging Condulets. Galvanized or black enamel finish. With round receptacle No. BRA100.

For two conduits.

Furnished with hub plate and hub cover for 2-inch conduit stem. Conduit stem not furnished.

Cat. No.	Size Inches	Std. Pkg.	Wt. Lbs.	Price Each
UGEL4226	1 1/4	5	355	\$39.25
UGEL5226	1 1/2	5	365	39.65
UGEL6226	2	5	375	40.05

Type UGEM Condulets

Double receptacle battery charging Condulets. Galvanized or enamel.

With round receptacle No. BRA100 and base plate.

Standard package, 5. Wt., std. pkg., 205 pounds. Price, No. UGEM1020... each \$39.25

Types UGCF and UGXF Condulets

Double receptacle battery charging Condulets. Galvanized or black enamel finish.

With round receptacle No. BRA100.

Type UGCF, Surface Style For Two Conduits

Cat. No.	Size Inches	Std. Pkg.	Wt. Lbs.	Price Each
UGCF42	1 1/4	5	305	\$40.50
UGCF52	1 1/2	5	315	40.90
UGCF62	2	5	325	41.30

Type UGXF, Surface Style For Four Conduits

Cat. No.	Size Inches	Std. Pkg.	Wt. Lbs.	Price Each
UGXF42	1 1/4	5	315	\$40.70
UGXF52	1 1/2	5	325	41.10
UGXF62	2	5	335	41.50

Type UGCD Condulets

Underground Style

Galvanized or black enamel finish. Double receptacle battery charging Condulets. Furnished with hub plate and hub cover for 2-inch conduit stem. Conduit stem not furnished.

For two conduits.

With round receptacle No. BRA100.

Cat. No.	Size Inches	Std. Pkg.	Wt. Lbs.	Price Each
UGCD42	1 1/4	5	405	\$47.50
UGCD52	1 1/2	5	415	47.90
UGCD62	2	5	425	48.30

Type UGEN Condulets

Single receptacle battery charging Condulets. With 2-pole rectangular or round receptacle, spring door and gasket. 200-amp. 65-volt receptacle No. BR200 takes plugs BPD200 or BPDFD 200, and may be substituted at an advance of \$1.25.

With Rectangular Receptacle No. BR100

Cat. No.	Size Inches	Std. Pkg.	Wt. Lbs.	Price Each
UGEN5101	1 1/2	5	145	\$18.75
UGEN6101	2	5	155	19.00

With Round Receptacle No. BRA100

UGEN4102	1 1/4	5	145	\$21.25
UGEN5102	1 1/2	5	150	21.50

Type BPF Plugs

With aluminum handle. For battery charging Condulets of the UG series. Two-pole, rectangular for receptacles Nos. BR100 or BR200.

Cat. No.	Volts	Capacity Amperes	Std. Pkg.	Wt. Lbs. Std. Pkg.	Price Each
BPF 100	80	100	5	30	\$12.00

Type BPF A Plugs

Aluminum handle. For Condulets of the UG series. Two-pole, for round receptacle No. BRA100. A spanner wrench furnished free with every shipment of plugs. If ordered separately or additionally, 35 cents.

Capacity: 100-ampere, 125-volt. Standard package, 5. Weight, standard package, 35 pounds.

Price, No. BPFA100.....each \$9.50

BRH Series Condulets

Galvanized or black enamel finish. For storage battery charging outlets, particularly on railroad cars and electric vehicles.

They are made for flexible cable and for conduit. They are furnished with rectangular or round receptacles, which are interchangeable in all the Condulets of the BRH series except BRH1E, which takes the round receptacle only. Receptacles and plugs are polarized. The round receptacle and plug have been designed to eliminate the defects existing in similar receptacles and plugs.

Furnished with 2-pole rectangular or round receptacle and spring door. Rectangular receptacle BR100 is rated at 100 amperes, 80 volts, and takes plug BP100. Round receptacle BRA100 is rated at 100 amperes, 125 volts, and takes plug BPA100. Rectangular receptacle BR200 is rated at 200 amperes, 65 volts, and takes plug BPD200.

Type BRHE Condulets

Furnished with improved M.C.B. bracket and 2-pole, 100-ampere, 125-volt round receptacle No. BRA100. Std. pkg., 10. Weight, std. pkg., 260 pounds. Price, No. BRHE102each \$22.50

BPA100	125	100	10	50	\$8.50

No. BPA105

With aluminum handle. For battery charging Condulets of BRH and UG Series.

2-pole, round, for receptacle No. BRA100.

Takes round duplex cable No. 1 or smaller.

Cat. No.	Volts	Amperes	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
BPA105	125	100	5	30	\$8.50

Type QEEM Condulets

For use on locomotives, either on the front of the cab for making the connections between the cab and handrail or conduit, or on the end of sill for making connections between the locomotive and tender.

The two parts of the connector are polarized by eye bolts which clamp in their respective lugs so that after the connections are once made, it is impossible to incorrectly reconnect the two parts.

Four-pole, 30-ampere, 250-volt; will take either rigid or flexible conduit in the 3/4-inch size. Galvanized or black enamel finish. Furnished with gaskets and screws.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
QEEM2204	3/4	10	125	\$13.70

Type QEGM Condulets

For use on locomotives, either on the front of the cab for making the connections between the cab and handrail or conduit, or on the end of sill for making connections between the locomotive and tender.

Provided with a back hub which permits the conduit to pass through the wall of the cab directly into the Condulet.

Four-pole, 30-ampere, 250-volt; will take either rigid or flexible conduit in the 3/2-inch size. Galvanized or black enamel finish. Furnished with gaskets and screws.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
QEGM2204	3/4	10	140	\$14.10

Type MD Condulets

Connector Condulets, galvanized or enamel. Three-pole, 200-ampere, 250-volt. Furnished with No. MD03 plug.

Cutouts, page 436 Condulet Catalogue No. 2000

Type YE Condulets

With Connection Block and Detachable Hub

For Flexible Conduit

For Rigid Conduit

Type YE Condulet is especially intended for use on locomotives. It provides an easy means for connecting the wiring system on the boiler to that on the cab. A detachable hub plate is provided, which slides into grooves in the Condulet and may be quickly removed when door is open. In addition to this removable plate, the Condulet is provided with 4 bosses, any of which can be tapped for 1/2, 3/4 or 1-inch rigid conduit, but there are no hubs cast solid with the body. The connection blocks provided with these Condulets are equipped with 14-24 R.S.A. binding nuts. Removable plates are made in 2 styles: one for rigid conduit and one for flexible conduit.

Positions of drilling and tapping should be specified according to letters, A, B, C, D, shown on cuts. To order size by number: 1 is 1/2 inch, 2 is 3/4 inch, 3 is 1 inch. For example: YE13-1233 (YE13 is the catalogue number of the Condulet with connection block). The prices per hole for drilling and tapping for rigid conduit are as follows: 1/2 or 3/4 inch, 15 cents; 1 inch, 20 cents.

For Rigid Conduit

Cat. No.	Size, Inches Tapped Hole	No. of Wires	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each

Type GSG Junction Condulets

These Condulets consist of a body and side plates which are listed below. A tight joint is secured between the body, side plates, and cover by use of a composition gasket which is furnished. The hub plate feature makes

it possible to put up a complicated network of conduits without the use of unions or right and left couplings. Hub plates not included in prices of Type GSG below.

This Condulet without cover will take ceiling rosette GS176 and connection block CG132 and CB133, keyless receptacle GS126 and spring door cover GS124, and Form 10, 2 and 3-pole plug receptacle housing.

*A—Inside diameter in inches of split lead sleeve which takes flexible conduit or armored cable.

*B—Size in inches of Condulet or rigid Conduit with which connector can be used.

†A—Inside diameter in inches of rubber bushing which takes round flexible cord or cable.

†B—Size in inches of Condulet hub with which connector can be used.

Standard finish is marine.

SPECIAL ASSORTMENT.—Any assortment of 200 connectors of the CG series will be considered a standard package.

Other sizes of Types CGB and CGK connectors, as well as in the 45-degree angle (CGD and CGL), and 90-degree angle (CGE and CGM) types are listed in Condulet Catalogue No. 2000, pages 371 to 376.

CC Series Flexible Conduit Couplings

For requirements not met by these couplings, see CG series connectors.

Male Thread—For Connecting Flexible Conduit to Condulets

A—Size in inches of flexible conduit with which coupling can be used.

B—Size in inches of Condulet hub with which coupling can be used.

Type CCB

Cat. No.	SIZE, INCHES		Std. Pkg.	Price Each
	A	B		
CCB138	3/8	1/2	100	\$.30
CCB11	1/2	1/2	100	.30
CCB22	3/4	3/4	50	.40

Type CCD—45-degree

Cat. No.	SIZE, INCHES		Std. Pkg.	Price Each
	A	B		
CCD138	3/8	1/2	100	\$.35
CCD11	1/2	1/2	50	.40
CCD22	3/4	3/4	50	.50

	A	B		
CCE138	3/8	1/2	100	\$.35
CCE11	1/2	1/2	50	.40
CCE22	3/4	3/4	50	.50

Female Thread—For Connecting Flexible Conduit to Rigid Conduit

A—Size in inches of flexible conduit with which coupling can be used.

B—Size in inches of rigid conduit with which coupling can be used.

Type CCK

Cat. No.	SIZE, INCHES		Std. Pkg.	Price Each
	A	B		
CCK138	3/8	1/2	100	\$.30
CCK11	1/2	1/2	100	.30
CCK22	3/4	3/4	50	.30

Type CCL—45-degree

Cat. No.	SIZE, INCHES		Std. Pkg.	Price Each
	A	B		
CCL138	3/8	1/2	100	\$.35
CCL11	1/2	1/2	50	.40
CCL22	3/4	3/4	50	.50

Type CCM—90-degree

Cat. No.	SIZE, INCHES		Std. Pkg.	Price Each
	A	B		
CCM138	3/8	1/2	100	\$.35
CCM11	1/2	1/2	50	.40
CCM22	3/4	3/4	50	.50

Standard finish is galvanized or black enamel.

Any assortment of 200 couplings of the CC Series will be considered a standard package.

No. GS148 Hinged Covers

For Type GSG and Form 10 Condulets of the GS Series

No. GS148 is a hinged cover to screw on to any Type GSG Condulet or Form 10 Condulet of the GS Series. It is to take the place of a blank cover, so that the cover will not be lost when it is opened. Standard finish is galvanized or black enamel.

Cat. No.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GS148	10	20	\$1.75

Type LHRM Resistances

For Locomotive Headlight Switch Condulets of the LHS Series

150-watt, 6.94-ampere, 3.12-ohm

The resistance is mounted on an insulating base for use with Type LHSJ locomotive headlight switches, for dimming a 30-34-volt, 250-watt headlight lamp.

It is not enclosed or mounted on the Condulet but is to be mounted exposed on the cab ceiling or elsewhere.

Cat. No.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
LHRM312	10	30	\$6.50

Type UN Condulet Unions

Male Nipple—Brass

Male nipples of these unions are cast iron or cast brass.

In either case the body and the female nipple are of malleable iron.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
UN110	1/2	50	45	\$.60

No. 48241 Pratt Branch Conduit Bodies

Designed primarily for junctions, taps, drop cord work, etc. The design does not readily accept a wiring device, except sockets, etc., that can be connected by means of nipples.

OUTLET.—Three in each side and bottom; one in each end.

For "Exposed wiring," for 1/2 in. Conduit use coupling Cat. No. 1410; for 3/4 in. Conduit use coupling Cat. No. 1420.

For "Concealed" wiring, for 1/2 in. Conduit use coupling Cat. No. 1410; for 3/4 in. Conduit use coupling Cat. No. 1420, or 3/4 in. locknut and bushing. Two 1/4 in. diameter security-screw knockouts are furnished, thus affording an independent support in concealed wiring.

FINISH.—Electro-galvanized only.

NOTE.—Screws for cover-security furnished with the covers

The following package quantities cover all branch conduit covers and bodies: Unit package, 10; standard package, 100; cover unit packages may be combined to make a standard package.

No. 1410 Pratt Conduit Body Couplings

For 1/2-inch conduit. This coupling is so designed that, when assembled with the above bodies, they constitute a complete Pratt Conduit. Standard package, 100.

Price, No. 1410..... per 100 \$13.50

No. 1420 Pratt Conduit Body Couplings

For 3/4-inch Conduit. This coupling is so designed that, when assembled with the above bodies they constitute a complete Pratt Conduit. Standard package, 100.

Price, No. 1420..... per 100 \$20.00

No. 34461 Pratt Deep Conduit Bodies

Designed for the reception of all standard make of flush devices. These flush devices are mounted into this body in the same manner as is now standard practice in switch boxes, or wall cases.

OUTLETS.—One in each side and bottom.

For "Exposed" Wiring, for 1/2 in. Conduit use coupling Cat. No. 1410; for 3/4 in. Conduit use Coupling Cat. No. 1420.

For "Concealed" Wiring, for 1/2-inch conduit use coupling Catalogue No. 1410; for 3/4-inch conduit use Catalogue No. 1420, 3/4-inch locknut and bushing.

FIXTURE STUDS.—Four 1/4 in. diameter knockout holes for standard fixture studs (1 1/2 in centers) are furnished in this Conduit Body. Two of these holes can be used for screw securance to independent support, when used in concealed wiring.

FINISH.—Electro-galvanized only.

NOTE.—Screws for device-securance furnished with the devices.

Package quantities for all deep conduit bodies and covers are as follows: Unit package, 10; standard package, 100; cover unit packages may be combined to make standard packages.

Cat. No.	Inside Dimen. Inches	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price per 100

No. 34R1 Plates for Pratt Deep Conduit Bodies

Blank, for deep conduit body when used without a wiring device.

Cat. No.	Wt., Lbs. Std. Pkg.	Price per 100
34R1	17	\$12.00

No. 34R2 Plates for Pratt Deep Conduit Bodies

For single push button switches with countersunk hole in center.

Cat. No.	Wt., Lbs. Std. Pkg.	Price per 100
34R2	17	\$12.00

No. 34R3 Plates for Pratt Deep Conduit Bodies

For double push button switches and 6-ampere polarity plugs of all standard makes.

Cat. No.	Wt., Lbs. Std. Pkg.	Price per 100
34R3	17	\$12.00

No. 34R5 Plates for Pratt Deep Conduit Bodies

For receptacles, without door (all standard makes) 1 1/8 inches, diameter of hole.

Cat. No.	Wt., Lbs. Std. Pkg.	Price per 100
34R5	16	\$12.00

No. 34R6 Plates for Pratt Deep Conduit Bodies

For receptacles, with door (all standard makes) 1 1/2-in. hole. Can be used with any standard Edison lamp base scores or plug receptacle.

Cat. No.	Wt., Lbs. Std. Pkg.	Price per 100
34R6	17	\$65.00

No. 34R7 Plates for Pratt Deep Conduit Bodies

For double plug receptacles (all standard makes).

Cat. No.	Wt., Lbs. Std. Pkg.	Price per 100
34R7	15	\$20.00

No. 34R8 Plates for Pratt Deep Conduit Bodies

For Hubbell 6-ampere Polarized Plug Receptacle.

Cat. No.	Wt., Lbs. Std. Pkg.	Price per 100
34R8	13	\$20.00

No. 34R9 Plates for Pratt Deep Conduit Bodies

For Chapman Type Receptacles, with doors.

Cat. No.	Wt., Lbs. Std. Pkg.	Price per 100
34R9	17	\$50.00

Plates for Pratt Deep Conduit Bodies

For Hubbell 6-ampere and 20-ampere Polarized Plug Receptacles respectively.

Cat. No.	Wt., Lbs. Std. Pkg.	Price per 100
34R11	17	\$14.00
34R12	16	14.00

No. 34R13 Plates for Pratt Deep Conduit Bodies

For G. E. 20-ampere Polarized Plug Receptacle; 1 3/4 inches, diameter of opening.

Cat. No.	Wt., Lbs. Std. Pkg.	Price per 100
34R13	16	\$14.00

No. 34R14 Plates for Pratt Deep Conduit Bodies

For G. E. Tumbler Switch, remote control work, etc.

Cat. No.	Wt., Lbs. Std. Pkg.	Price per 100
34R14	17	\$20.00

No. 34R15 Plates for Pratt Deep Conduit Bodies

For H. & H. Tumbler Switch; 3/8-inch, diameter of opening.

Cat. No.	Wt., Lbs. Std. Pkg.	Price per 100
34R15	17	\$16.00

No. 34R16 Plates for Pratt Deep Conduit Bodies

For Hubbell Tumbler Switch; diameter of opening, 3/8 inch.

Cat. No.	Wt., Lbs. Std. Pkg.	Price per 100
34R16	17	\$16.00

No. 14241 Pratt Shallow Conduit Bodies

OUTLETS.—One in each side and bottom.

For "Exposed" Wiring, for 1/2-inch conduit use coupling Cat. No. 1410; for 3/4-inch conduit use coupling Cat. No. 1420.

For "Concealed" Wiring, for 1/2-inch conduit use coupling Cat. No. 1410; for 3/4-inch conduit use coupling Cat. No. 1420, or 3/4-inch locknut and bushing.

FIXTURE STUDS.—Four 1/4-inch diameter knockout holes for standard fixture studs (1 1/2-inch centers) are furnished in this conduit body. Two of these holes can be used for screw securance to independent support, when used in concealed wiring.

FINISH.—Electro-galvanized only.

NOTE.—Screws for cover-securance furnished with the covers.

Package quantities on all bodies and covers are as follows: Unit package, 10; standard package, 100; cover unit packages may be combined to make standard packages.

Cat. No.	Inside Dimensions Inches	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price per 100
14241	2 7/8 x 2 1/4 x 1 3/8	10	100	45	\$30.00

No. 14C1 Covers for Pratt Shallow Conduit Bodies

Flat, closed.

Weight standard package, 20 pounds.

Price, No. 14C1 per 100 \$9.00

No. 14C7 Covers for Pratt Shallow Conduit Bodies

Raised, with 1/2-inch knockout, no opening, oval shaped.

Weight standard package, 20 pounds.

Price, No. 14C7 per 100 \$9.00

No. 14C8 Covers for Pratt Shallow Conduit Bodies

Flat, pendant type, 1/8-inch eyelet bushing, for drop cord work.

Weight standard package, 17 pounds.

Price, No. 14C8 per 100 \$10.00

No. 14C11 Covers for Pratt Shallow Conduit Bodies

Flat, pendant type, 3/8-inch eyelet bushing, for drop cord work.

Weight standard package, 17 pounds.

Price, No. 14C11 per 100 \$14.00

No. 14C22 Covers for Pratt Shallow Conduit Bodies

Flat, with 1/8-inch male nipple, swedged into a notch opening.

Weight standard package, 20 pounds.

Price, No. 14C22 per 100 \$25.00

No. 14C23 Covers for Pratt Shallow Conduit Bodies

Flat, with 1/8-inch female nipple, swedged into a notch opening.

Weight standard package, 20 pounds.

Price, No. 14C23 per 100 \$25.00

No. 14C24 Covers for Pratt Shallow Conduit Bodies

Flat, with 3/8-inch male nipple, swedged into a notch opening.

Weight standard package, 24 pounds.

Price, No. 14C24 per 100 \$25.00

No. 14C25 Covers for Pratt Shallow Conduit Bodies

Flat, with 3/8-inch female nipple, swedged into a notch opening.

Weight standard package, 26 pounds.

Price, No. 14C25 per 100 \$25.00

No. 14C28 Covers for Pratt Shallow Conduit Bodies

Flat, for all surface mounted type devices, with screw centers from 7/8 to 1 1/8 inches.

Weight standard package, 13 pounds.

Price, No. 14C28 per 100 \$12.00

No. 14C31 Covers for Pratt Shallow Conduit Bodies

Raised, for Federal Sign Receptacles, intruding tongue, center opening 1 1/2 inches in diameter.

Weight standard package, 16 pounds.

Price, No. 14C31 per 100 \$10.00

Covers for Pratt Shallow Conduit Bodies

Raised. No. 14C32 is for Benjamin Sign Receptacles, 2-screw center opening 1 1/2 inches in diameter. No. 14C34 is for standard A. M. E. S. Sign Receptacles, 2-screw 1 3/8 inches on centers. Weight standard package, 17 pounds.

Price, No. 14C32 per 100 \$10.00
 " " 14C34 " 100 10.00

Covers for Pratt Shallow Conduit Bodies

Raised for sign receptacles, screw ring type. 3/8-inch deep. No. 14C35 has 1 1/2-inch diam. opening, grooved for single protruding lug on porcelain. No. 14C36 has 1 1/2-inch opening, bent under tongue for 5-notched porcelain. Weight standard package, 17 pounds.

Price, No. 14C35 per 100 \$10.00
 " " 14C36 " 100 10.00

No. 14C39 Covers for Pratt Shallow Conduit Bodies

Flat, for all standard fluted catch devices, only shell and device movement to make up complete lamp receptacle, etc.

Weight standard package, 18 pounds.

Price, No. 14C39 per 100 \$30.00

No. 14C47 Covers for Pratt Shallow Conduit Bodies

Raised angle adapter, for reception of Nos. 14C35, 14C36, 14C39 covers.

Weight standard package, 25 pounds.

Price, No. 14C47.....per 100 \$22.00

No. 14C75 Covers for Pratt Shallow Conduit Bodies

Porcelain, with one wire hole, to be used in drop cord work, or construction requiring one lead.

Weight standard package, 20 pounds.

Price, No. 14C75.....per 100 \$12.00

No. 14C76 Covers for Pratt Shallow Conduit Bodies

Porcelain, with two wire-holes, for leads coming from conduit system.

Weight standard package, 20 pounds.

Porcelain, with 3/8-inch female nipple, fastened by a locknut.

Weight standard package, 32 pounds.

Price, No. 14C85.....per 100 \$35.00

Sunbeam Mazda Lamps

General Features of Mazda Lamps

Convenience, reliability, high efficiency and adaptability are some of the features of Mazda lamps which are responsible for their rapid adoption in store, office, factory and public building lighting; in city and suburban homes; in flashlight, hand lantern and automobile service; in street and sign lighting; in mines and many other classes of service. The schedules which follow present the wide variety of sizes in which Mazda lamps are regularly manufactured to meet this widely diversified demand.

Mazda lamps are divided into two general classes: Large style and miniature style.

Notice to Agents and Purchasers

Lamps in the following Standard Price Schedules are separated into two main divisions—the first comprising those for general lighting service—and the second those for special lighting service, such as sign, projection, etc. The relative demand for lamps in each of these divisions is indicated by the classification symbols (I, I-Special, II, II-Special, etc.) appearing on each page under the heading Consignment Classification. This grouping will serve as a guide to agents in determining the stocks of lamps necessary to enable them to supply properly the lamp demand. Lamps not carried in the manufacturer's consigned stock in the custody of the agent, and for which there is only an occasional demand, may be obtained promptly from the serving agent or manufacturer.

The meanings of the classification symbols are as follows:

Classification Symbol I

These are the most popular lamps for general lighting service, and from this group a stock will be maintained in the custody of any agent handling retail, over-the-counter sales.

Classification Symbol I-Special

Lamps so classified are the most important lamps for special lighting service, such as country home, sign, projection, etc., and from this group a stock will be maintained in the custody of any agent having retail demand for any of these lamps.

Classification Symbols II and II-Special

Additional general lighting service lamps (II) and special lighting service lamps (II-Special) available for consignment to agents serving purchase contracts or having other proven demand for such lamps.

Classification Symbols III and III-Special

Further additional general service (III) and special lighting service (III-Special) lamps available for the consigned stocks of Form B agents only, having proven demand for such lamps. These lamps are to be shipped by the Form B agent only on order direct to consumers.

Classification Symbol IV

Lamps of very infrequent demand carried in manufacturers' warehouses for shipment by the manufacturer direct to purchasers at agent's request.

Sunbeam Mazda Lamps

**Extra Charges for Special Features
Frosted Lamps**

The following list additional charges shall be added to the list prices of clear lamps for either white bowl or all-frosting such clear lamps.

Price Clear Lamps Each	List Additional Charge	Price Clear Lamps Each	List Additional Charge
Less than \$1.00	\$.05	\$6.00 to \$6.99	\$.35
\$1.00 to 1.99	.10	7.00 " 7.99	.40
2.00 " 2.99	.15	8.00 " 8.99	.45
3.00 " 3.99	.20	9.00 " 9.99	.50
4.00 " 4.99	.25	10.00 " 10.99	.55
5.00 " 5.99	.30	11.00 " 11.99	.60

Colored and Tinted Lamps (Coated)

With the exception of those lamps specifically listed in these schedules as coated, colored and tinted, and the lamp mentioned in the following paragraph, the prices of lamps in these schedules when furnished in the coated colors and tints listed may be obtained by adding the following list charges to the prices of the clear lamps listed in these schedules or to the prices of the frosted lamps when listed in frosted bulbs only.

In computing the coated, colored and tinted, price of the 25 Watt G18½ bulb lamp for country home lighting service listed herein, add 10 cents to the price shown.

These charges do not apply to lamps other than those listed in these schedules. The colors and tints named are not recommended on any lamps larger than 150 watts.

Price of Clear or Frosted Lamps	Additional Charge for Red, Yellow, Green, Blue or Amber-orange Colors and for Ivory or Flame Tints
Less than \$1.00	\$.15
\$1.00 to 1.99	.25
2.00 " 2.99	.35
3.00 " 3.99	.45
4.00 " 4.99	.55

The extra charges given above apply only to the Manufacturers' standard coated colors and tints.

Natural Colored Lamps

The four lamps in natural colored bulbs listed below cover a large percentage of present demand for natural colored lamps. They will be supplied at additional list charges per lamp over the list prices of clear lamps as indicated.

Watts	Volts	Bulb	LIST ADDITIONAL CHARGE EACH FOR	
			Ruby	Green, Blue and Amber
10	110, 115, 120	S-14	\$.30	\$.20
25	110, 115, 120	S-17	.30	.20
40	110, 115, 120	S-19	.30	.20
60	110, 115, 120	S-21	.35	.25

The extra charges listed above apply only to the four lamps shown above and to the Manufacturers' standard colored glass.

Voltage

As lamps for 110, 115 and 120 volts cover approximately 90 per cent of the demand, lamps for other voltages between 100 and 130 volts are not regularly carried in stock in all places but may be obtained at the same price.

As lamps for 220, 230, 240 and 250 volts cover approximately 90 per cent of the demand, lamps for other voltages between 200 and 260 are not regularly carried in stock in all places but may be obtained at the same prices.

Lamps for 265, 270, 280, 285, 290, 295 and 300 volts may be supplied at the same list prices as those for 275 volts.

Etching

Additional charges for etching letters or designs may be obtained upon application. Style of lettering or design should accompany such application.

Orders for large lamps with customer's etching may be filled either short or in excess, within the limits of 5 per cent; except that on orders for less than 40 lamps the shortage or excess may equal but not exceed 2 lamps.

Etched lamps are not rejectable by the purchaser under the provisions of the standard specifications governing the rejection of clear lamps (see part 1, section 1, clause 3, Standard Specifications for Large Tungsten Filament Incandescent Electric Lamps, April 1, 1923).

Sunbeam Mazda B Lamps

110, 115 and 120 Volts

These lamps constitute more than 75 per cent of the ordinary lamp demand for residence lighting.

Fitted with medium screw base.
Package quantity, 120.

*Package quantity, 200.

Sunbeam Mazda C Daylight Lamps

110, 115 and 120 Volts

The Mazda C Daylight Lamp has a bulb made of special blue glass, to produce light approximating average daylight quality.

It is recommended for stores, offices, display windows and factories whenever it is desired to show colors more nearly in their true daylight appearance than is possible by means of customary artificial light.

To get this effect no other illuminants should be burned in the same room or enclosure. Not recommended for accurate color matching. Special color matching units are available for this purpose.

Sunbeam Mazda B Lamps

For Street Railway Lighting Service

105, 110, 115, 120, 125 and 130 Volts

Selected for amperes and labeled for use five in series on the 525, 550, 575, 600, 625 and 650-volt circuits ordinarily used by electric street railway companies.

As considerable voltage fluctuation is sometimes found in this class of circuits, these lamps are only manufactured for six-voltage groups and care should be taken to see that the voltage group of lamps supplied corresponds closely to the average voltage found on the circuit.

Only the lamps listed below, selected for amperes and for one-fifth the voltage on which they are labeled for use in series, will be supplied at the prices shown.

Fitted with medium screw base.

Decorative Lighting Outfits

Regular Type

Equipped with a plug on one end and a socket on the other. One eight-light unit may be connected with another as easily as putting a bulb in a socket. As many as ten of these units can be connected in a straight line 130 feet long, consisting of 80 lights. Suitable for decorating lawns, interior and exterior of homes, dance halls, churches, bazaars, etc. There are no junction boxes, clusters, nuts, screws or other accessories. Increased simply by screwing the plug in the end of one outfit into the socket at the end of the other outfit.

Candle Type

Furnished complete with eight assorted color Mazda lamps, green parallel cord, composition green sockets, swivel plug at one end and a fire-resisting socket at the other end.

Price, Regular Type each \$3.75
 " Candle " " 4.50

Etch-O-Lite

Etch-O-Lite is applied by dipping the lamp, or other article to be frosted, in the solution. The coating is allowed to remain on the glass for 1½ or 2 minutes, then it is scraped back into the can and the article washed in water and dried. The gloss is removed from the glass leaving a smooth satin-like frosted surface.

Etch-O-Lite will not harm the hands or clothing. It may be shipped by freight, express or parcel post. Containers are guaranteed against leakage for one year.

If Etch-O-Lite solution becomes too thick, it may be thinned to proper consistency by adding a small quantity of Etch-O-Lite thinner.

The dipping machine is used to secure uniform results when bowl frosting lamps.

Reed's Etching Outfits

Standard Outfit

The standard rubber stamp outfit for marking lamps will prevent theft by making it impossible to dispose profitably of lamps so marked. It is being successfully used by prominent manufacturers, railroads and office buildings. Full directions with each outfit.

Showing Etched Globe

Special rubber stamp marking outfits for trade marks, patents, dates or other identification of glass articles are made to order. An ordinary ball-pointed steel pen may be used with this ink for writing on glass. Letters are etched into the surface.

One-half pint can Etching Ink makes 10000 to 12000 impressions.

Price, Standard Outfit, including Ink as shown each \$14.00
 " ½-pt. Can Ink..... " 8.50

Cefco Weatherproof Lamp Coloring

For outdoor use. Guaranteed the life of the lamp in any weather or climate. Requires three days to dry after dipping. Has stood a year's test outdoors, without injury. Colors are red, blue, green, amber, canary, and white opal.

Color	SIZE OF CAN		
	7 oz.	15 oz.	30 oz.
Red	\$1.50	\$2.50	\$4.50
Blue	1.50	2.50	4.50
Green	1.50	2.50	4.50
Amber	1.50	2.50	4.50
Canary	1.50	2.50	4.50
White Opal	1.50	2.50	4.50

Permacolor Semi-weatherproof Lamp Coloring

Permacolor is used where a coloring is desired to last for several weeks outdoors, or somewhat longer than Franco coloring indoors. The coloring will stand rough usage without injury and can be removed readily with wood alcohol when desired.

A beautiful semi-opaque effect can be produced by dipping in white opal first. Allow this to dry and then dip into the desired color. Dip with current on. Lamps will dry in 15 minutes.

Permacolor comes in ruby, blue, red, green, moonlight blue, amber, pink, canary, purple, white opal and clear reducer.

Price, 1/2-pint Bottles	each	\$1.00
" 1 " "	"	1.75
" 1 -quart "	"	3.00

Indoor Lamp Coloring

For stage lighting and indoor lamps of all kinds, Franco coloring is satisfactory. Use our clear reducer for toning down the colors if a tint is desired. Moonlight blue, and red are especially fine for stage use. Nothing more exquisite than our white frosting can be secured anywhere. Franco colors are ruby, blue, red, green, amber, moonlight blue, canary, pink, purple, clear reducer and white frosting.

Price, 4-oz. Bottles	each	\$.50
" 1/2-pint "	"	.75
" 1 " "	"	1.35
" 1-quart "	"	2.50

**Mercury Flip-Flop Flashers
For 110-120 Volts A.C. or D.C.**

This flasher is adapted for wall mounting. In this type the arc is broken in a vacuum tube which will last indefinitely under rated load. Size, 4x6 1/4 x 11 inches. Shipping weight, 7 1/2 pounds.

Single-pole

Cat. No.	Watts per Circuit	Action	No. of Wires	Price Each

2-10	2	9¾x13x15½	69	38.00	10.00

For each additional switch or feeder, add \$5.00 to price.

High-Speed Sign Flashers

This flasher will produce revolving wheels, turning borders, flames, cust, smoke, running water, waving flag, etc. Usually wired in 4 circuits or a multiple of four: 1, 2, 3, 4, etc. All the one's on the first circuit, the two's on the second circuit, etc.

NOTE.—For flags it is preferable to order a special flag flasher at a slight additional cost.

**Capacity, per Switch, D.C., 200 Watts
A.C., 300 Watts**

Cat. No.	No. of Switches	Size Inches	Shipping Wt., Lbs.	Price, Each with Motor	Steel Cabinets Extra
4-IIS	4	9x13x16	60	\$40.00	\$7.00
8-IIS	8	9x13x22	68	52.00	10.00

For each additional switch or feeder, add \$3.00 to price.

**Capacity, per Switch, D.C., 400 Watts
A.C., 600 Watts**

Cat. No.	No. of Switches	Size Inches	Shipping Wt., Lbs.	Price, Each with Motor	Steel Cabinets Extra

8-IIHS	8	9x13½x28	86	68.00	12.00

For each additional switch or feeder, add \$5.00 to price.

Prices are based on 110-120-volt D.C., or 60-cycle motors.

No. 6C Chaser Sign Flashers

D.C., 200 Watts per Switch—A.C., 300 Watts per Switch

Used for producing crawling snakes, chasing rats, etc. Number of circuits should be a multiple of the number of snakes. For each additional switch or feeder add \$2.50.

Cat. No.	No. of Switches	Size Inches	Shipping Wt., Lbs.	Price, Each with Motor	Steel Cabinets Extra
6C	6	11x13x16	72	\$46.00	\$9.00

For each additional switch, add \$3.00.

No. 10S Script Sign Flashers

Capacity, 110 Watts per Switch at 110 Volts

Designed for writing on a word one or more lamps at a time, skyrocket, shooting stars, fireworks, etc.

Cat. No.	No. of Switches	Size Inches	Shipping Wt., Lbs.	Price, Each with Motor	Steel Cabinets Extra
10S	10	11x13x15½	66	\$44.00	\$7.00

For each additional switch up to 50, add \$1.25 each; above 50, \$2.00 each.

Instructions for Ordering

Specify number and wattage of lamps to be controlled by each switch. Whether Mazda or carbon lamps. If Mazda whether they are to be used on low voltage transformer. Kind of current, whether direct or alternating. If alternating give number of cycles. Whether two or three-wire system. Voltage.

If design is complicated, give complete description of the sign, and preferably a sketch showing number of lamps per circuit and how they are to be flashed.

NOTE.—Carrying capacity of 220-volt flashers is 50 per cent less.

Prices based on 110-120-volt D.C. or 60-cycle motors.

**Type HS-14 Half Col-O-Cap
For S-14 Bulbs**

Type HS-14 fits standard 1 3/4-inch diameter bulb (4 candlepower), also 2 1/2, 5, 7 1/2 and 10-watt Mazda sign lamps. In ordering specify size of bulb and color of cap.

Matthews Holdfast Lamp Guards

Mill Type for Brass and W. P. Sockets

For Brass Sockets

For W. P. Sockets

The rigid construction of this guard; the fact that it is permanently clamped to the socket; and the spiral spring cushion in the center make it a protection against the breakage of incandescent lamps. The trap which is clamped across the bottom opening prevents the unauthorized removal of lamps. The guard is locked to the socket by bending the set screw.

The hot lamp cannot get closer than one inch to any inflammable material and the guard does not have to be removed from the socket to replace the lamp.

Approved by all insurance companies and underwriters. Guaranteed 10 years. Collars of guards for brass shell sockets are 1 1/4 inches, for weather-proof sockets, 1 1/2 inches.

Matthews Handy Holdfast Portables

This device is a combination of a specially designed No. MT14 Holdfast Guard with a hook. It is equipped with an extra strong hardwood handle which completely covers and protects

the socket. All contacts can be reached by loosening the set screw on the collar of the No. MT14 Holdfast Lamp Guard. Note that when Matthews Handy Holdfast Portable is lying on the floor that it touches at three points, and for that reason no excessive strain will be put on the guard or handle if it were accidentally stepped on.

Holdfast Shades may be included with order for Holdfast Lamp Guards, Holdfast Adjustables to obtain the maximum quantity prices on each specialty.

Price, Holdfast Shades.....per 100 \$90.00

Loxon Lamp Guards

Theft of incandescent lamps is prevented by the use of Loxon lamp guards. These guards enable the lamps to burn their full life.

Reflector Loxon Lamp Guards

No. 1400

No. 1443

No. 1445

The Loxon Lamp Guard reduces the fire hazard from hot or broken lamps.

It is a prevention against theft and makes it possible for the incandescent lamps to burn their full life.

All guards are heavily tinned.

One key furnished with every dozen guards. Extra keys are 19 cents each net.

Loxons are made to fit Condulets, V.V., Unilet or Triplet Receptacles, also aluminum sockets. Sample fitting must accompany order to insure proper fit.

Thumb Switch Type Portable Lamp Guards

One of the best all around guards for the private and public garage, basements, etc. It has a non-breakable lever socket for one hand operation.

Price, No. 2003, to fit 25 or 50-watt Lamps.....each \$2.80

Crescent Portable Lamp Guards

A strong and convenient portable, made of Bessemer steel, copper-plated. It takes any 3/8-inch keyless socket, but is furnished without socket. Standard brass.

Price, No. 4645, to fit 40-watt Lamps.....each \$2.50
 " " 4676 " " 60 " " " " " " " " " " " " 2.50

Bulldog Portable Lamp Guards

Furnished with key or keyless socket, securely embedded in handle, giving a firm, rigid base.

Price, No. 4675, Key Socket to fit 60-watt Lamps..ea. \$3.50
 " " 2590 Keyless Socket to fit 60-watt Lamps.. " 3.50

Dreadnaught Portable Lamp Guards

A strong portable guard made of Bessemer steel, built to withstand hard usage. Has a porcelain keyless socket fitted with spring contact firmly embedded in handle. Metal part, copper-plated finish.

Price, No. 4000, to fit 60-watt Lamps.....each \$3.50

National Portable Lamp Guards

One-piece; made of steel, heavily tinned, with porcelain keyless weather-proof socket. No. 1451 for 40-watt lamp; No. 1452, 60-watt. Price...each \$2.50

Safety Vapor-proof Portable Lamp Guards

Designed to meet the requirements of the garage or wherever gases or inflammable materials may be used. Has heavy steel frame, strong handle, handy grip hook and vapor-proof receptacle. Heavily tinned finish.

Price, No. 3001, to fit 25-watt Lamps.....each \$5.00

Cable Rack Portable Lamp Guards

Furnished with key or keyless socket securely embedded in handle. Takes 60-watt, 110-volt mazda lamp,

Price, No. 2000, with Key Socket.....each \$2.80
 " " 2001 " Keyless Socket..... " 2.80

Monitor Portable Lamp Guards

A low priced guard furnished without socket. Prevents breakage and helps to reduce danger from hot and broken lamps.

Price, No. 1453, to fit 40-watt Lamps.....each \$1.70
 " " 1454 " " 60 " " " " " " " " " " " " 1.80

No. 445 R & S Bung-hole Lamps

Made entirely of brass and fitted with special 16 c.p. waterproof lamp and stuffing gland for cable.

Price No.445, with Special Lamp.....each \$7.70
 " " 391, Ex. Lamp, 110 Volt..... " 1.10

R & S Non-Watertight Hand Portables

Extra strong, galvanized steel, with hardwood handle and No. 180 weatherproof keyless socket.

Price, No. 473.....each \$3.30
 " " 476..... " 3.30

No. 422 R & S Watertight Hand Portables

Cast brass body, flat brass wire guard, hardwood handle with stuffing gland for cable and screw type globe No. 806.

Price, No. 422.....each \$4.40

No. 222 R & S Watertight Hand Portables

Cast brass body, flat brass wire guard, hardwood handle with stuffing gland for cable and screw type globe No. 806.

Suitable for 40-watt Tungsten lamp.
 Price, No. 222, with Switch.....each \$6.10

No. 528 R & S Watertight Hand Portables

Cast brass body, round brass wire guard, hardwood handle, with stuffing gland for cable and flared type globe No. 870, absolutely vapor proof. Suitable for Edison base ball lamp.

Price, No. 528.....each \$5.50

No. 477 R & S Special Watertight Hand Portables

Extra heavy brass lamp for Submarine use fitted with heavy glass cylinder and flexible support with stuffing gland for cable.

Price, No. 477.....each \$16.50

No. 517 R & S Watertight Hand Portables

Strong, all brass body and round wire guard with hardwood handle stuffing gland for cable and flared type globe No. 882.

Price, No. 517.....each \$8.00

No. 519 R & S Watertight Hand Portables

All cast brass body, round wire guard with cast brass rings, hardwood handle, stuffing gland for cable and screw type globe No. 806.

Price, No. 519.....each \$6.00

Benjamin Fibre Hand Portable Lights

No. 162

For use of repair men in homes, factories, garages, and on telephone and power switchboards. The light weight portable is shockproof because it is made of non-conductive materials. Socket is so mounted that springs which protect lamp from breakage are effective. Has varnished hard maple handle and strong fibre guard and hook. Will not roll when placed on a flat surface. Fibre half shade keeps glare out of user's eyes. 25 or 50-watt mill type lamps should be used.

No. 165, equipped with 2 adjustable hooks, is especially convenient around switchboards and distributing frames.

Cat. No.	Description	Std. Pkg.	Wt. Lbs.	Price Each
162	With 1 Hook.....	10	1 1/2	\$2.40
165	" 2 Hooks.....	10	1 1/2	2.50

Benjamin Vapor Proof Hand Portables

This portable light is handy for use in cramped places and also a safe light in the presence of dangerous gases and vapors. AT-10 25 to 60 watt tubular lamp is protected by a removable, galvanized metal guard with hinged hook, and vapor proof globe. Wooden handle is black and is furnished with stuffing gland. Vapor proof globe only lists at 50 cents each. Prices do not include lamps.

Cat. No.	Description	Std. Pkg.	Wt. Lbs.	Price Each
259VP	With Stuffing Gland in Handle..	10	18	\$3.80
261VP	Less " " " " " "	10	17	3.40

Matthews Holdfast Portables

The No. 4112 is a combination of a specially designed Holdfast Guard with a hook, otherwise the same as 112 W.P. Holdfast Guard, a heavy aluminum weather-proof socket and a reinforced hardwood handle.

The No. 4112S is the same as No. 4112 but has a holdfast shade.

Price, No. 4112	Holdfast Portable.....	per 100	\$440.00
" 4112S	" " " " " "	"	500.00

Matthews Hold-fast Lamp Changers

Price, No. 2	for 15-60-watt Mazda Lamps...each	\$12.00
" 3	" 60-150-watt Mazda Lamps, Up to Five Inches in Diameter.....	each 14.00

Adaptable Lamp Changers

Fits any style of incandescent lamp from 8 C.P. to 100 watts. Furnished without steel poles in 5 1/2-foot sections as desired. In ordering poles, specify length.

Price, Changer Only.....	each	\$6.50
" Steel Pole.....	per section	4.50

Two-ball Cord Adjusters

These adjusters permit the lengthening of the cord to three times its normal length, thereby giving a very wide range to the lamp. When not in use the lamp is pushed up toward the ceiling where it is out of the way.

Style A

Style A is for factories, shops, garages, stock-rooms, etc.

Price, Black.....	each	\$1.15
" Gold.....	"	1.15
" Aluminum.....	"	1.15
" Special Finishes.....	"	1.50

Special finishes are white, blue, green, etc.

Style B

Style B is used in offices, homes, public buildings, etc. It has a polished metal surface and is well finished.

Price, Polished Brass.....	each	\$1.85
" Oxidized ".....	"	1.85
" Brush Brass.....	"	1.85
" Special Finishes.....	"	2.10

Special finishes are nickel, oxidized copper, etc. When equipped with extra heavy loaded lower balls for use with heavy shades, add 40 cents each to above prices.

Automatic Extension Reels

Especially adapted for use in garages, machine shops, etc. Equipped with 25 feet of re-enforced cord, lamp socket, and guard.

Attached to ceiling, beam or conduit. A swivel joining enables lamp to be carried in any direction from reel, returning it automatically when not in use. An automatic lock holds the lamp at any desired distance from the reel.

This reel is approved by the underwriters.

Finished in black japan.

Packed one in package.

Weight of package, 9 pounds.

Price.....each \$15.00

Nos. 1403 and 4635 Wood Adjusting Balls

Made of hard wood and enameled a glossy black.

Price, No. 1403, for Type C Cord.....each \$1.14

Price, No. 4635, Re-enforced Cord.....each .14

Universal Cord Spools

Hard wood, black enameled. Standard size, 3 3/4 inches long, takes 6 feet of cord; Factory size, 5 1/2 inches long, takes 12 feet of cord.

Price, No. 1417, Standard Size.....each \$.07

To be hung by the neck until dead!

SWINGING on a frayed cord, many an ancient electric fixture lingers long after it has served its usefulness. If any like this one are still hanging on in your shop or office, give them decent burial in the junk heap. Clear the way for the more efficient, better-looking units now available to up-to-date business — units that mean safer, pleasanter working conditions and greater production.

That light can be made a real tool of production is a fact proved by many factory owners. In one typical instance improved fixtures were selected, and installed by an expert with an eye to strategic location. Result — gloom and glare were alike corrected, the operatives could now see what they were doing, and production increased 25 per cent.*

There may be shortcomings in your present layout not so apparent as an obsolete fixture but many times more wasteful. Call in a dependable contractor or us to advise you on an adequate and economical installation.

A patented design makes the "99" lighting unit — users tell us — "the easiest fixture in the world to take care of." Ask us about it.

Here is a fixture which "carries its own ceiling." Note the plate above the bowl. This white glazed enamel plate directs the light downward, giving splendid results even where ceiling and walls are dark.

*Write us for the full facts on this and other examples of light as a producer.

Illumination Design

BY PERMISSION OF ENGINEERING DEPT. NATIONAL LAMP WORKS
OF G. E. CO., CLEVELAND, OHIO

Calculations for Lighting Installations

In Table 3 is indicated the lamp wattage which must be supplied per square foot of floor area to produce standard intensities of illumination for various classes of service, when modern reflecting and diffusing equipments of efficient design are used. While not necessary for the calculation of a lighting installation as outlined below there are included in the table these standard values of illumination intensity expressed in foot-candles. They are given as a reference for those who have a foot-candle meter, a small portable instrument for measuring the intensity of illumination of any point, and are therefore in a position to check up the lighting in various interiors. These values will also prove useful to any whose fuller knowledge of illumination design enables them to calculate accurately the exact results for specific units.

For each location two ranges of values are given under "Watts per Square Foot." The proper value for a given interior will generally fall between these two sets of figures. It will depend upon the proportions of the room to be lighted. Where the ceiling is very high compared with the width of the room, there is a large amount of wall area to absorb light and a higher value of watts per square foot will be required than for a wide, low room.

The values for large rooms, Table 3, apply where the width is 4 to 5 times the average height of the ceiling. Small rooms are assumed as those in which the width is not more than 1½ times the ceiling height. Rooms of intermediate proportions will require correspondingly corrected values.

To plan a system of general illumination, proceed as follows:

1—Select reflecting or diffusing equipment suited to the class of installation, having regard for total light output, the distribution of light on surfaces in various planes, glare directly from the units or reflected from polished surfaces, the density of shadows cast and the maintenance required. In Table 1 the more common types of lighting unit are analyzed with reference to these fundamental considerations.

2—Determine from Table 3 the correct value of lamp wattage per square foot of floor area for a room of the given proportions and class of work carried on.

3—Multiply the total area of the room in square feet by the selected value of watts per square foot. This will give the total lamp wattage required.

4—Determine from Table 2 the proper spacing distance for the permissible or desired mounting height, (note that mounting height is the vertical distance between working surfaces and lighting sources).

5—With approximately this spacing, lay out a symmetrical arrangement of outlets and determine the total number required.

6—Divide the total wattage (see 3 above) by the total number of outlets. The result will indicate the approximate wattage of each lamp. From this it will be evident what standard size, 75-watt, 100-watt, 150-watt, etc., should be selected. When in doubt install the larger size of lamp rather than the smaller.

The required value of watts per square foot even for a given intensity and size of room will still be subject to variation, depending upon the reflecting properties of the ceilings, walls and work surfaces, the efficiency of the reflectors and diffusing devices, the size of lamp employed and the character of maintenance service provided. The more decorative equipments are usually less efficient. Somewhat lower wattages than those indicated may be sufficient where the ceiling and walls are very light in color, where the most efficient reflectors of the types employed in the respective classifications are used, the largest sizes of lamps employed, and the lighting units kept free from dust. Likewise, somewhat higher values than those called for may be required where ceilings and surrounding surfaces are very dark, inefficient accessories are supplied, the smallest sizes of Mazda C lamps are employed, or the lighting units are cleaned only at long intervals.

A Guide to the Selection of Reflecting Equipment

It is important that good reflecting equipment be installed. The luminaires shown in these charts illustrate certain types. For example, No. 15 and No. 16 show units of a general type of which there are a great variety made by various manufacturers. Of two or more units of the same type the choice should be governed by considerations of brightness, diffusion, absorption, appearance, and cost.

Illumination on Horizontal Surfaces

Illumination on horizontal surfaces is a prime requisite in offices, drafting rooms and those shops where the problem is to provide the best illumination for sustained vision of flat surfaces on the horizontal or slightly oblique planes in which papers, books and other flat objects are usually examined.

Illumination on Vertical Surfaces

Illumination on vertical surfaces of work or machine parts is fully as important as the lighting of the surface in the horizontal plane. In a consideration of the amount of light necessary for factory illumination, the criterion must be the intensity on all working surfaces, vertical, horizontal, etc.

Favorable Appearance of Lighted Room

Favorable appearance of lighted room refers only to the general or casual effect produced by the complete system and is not intended to rate the unit as to satisfaction from the standpoint of good vision or freedom from eye fatigue.

Direct Glare

This is the most frequent and serious cause of bad lighting. It results among other things from unshaded or inadequately shaded light sources located within the field of vision, or from too great contrast between the bright light source and a dark background or adjacent surfaces.

Reflected Glare

Reflected glare from polished working surfaces is particularly annoying because the eyes are by nature especially sensitive to light rays from below. The harmful effects of this specular reflection can be minimized.

Shadows

Shadows, differences in brightness of surfaces, are essential in observing objects in their three dimensions but are of little value in the observation of flat surfaces. Where shadows are desirable, they should be soft and luminous, not so sharp and dense as to confuse the object with its shadow.

Maintenance

Maintenance depends upon contour of reflector, construction of fixture and condition of ceiling. The rating is based upon the likelihood of breakage, the labor involved in maintaining the units at comparable degrees of efficiency and indication given of need of cleaning.

A Guide to the Selection of Reflecting Equipment

Choice of Reflecting Equipment

Various lighting units are rated in accordance with seven fundamentals, illustrated on following page. The importance of these criteria is different for different classes of work. It must be emphasized that relative importance of various criteria should be carefully weighed with respect to the particular problem at hand. In an office the criteria would rank in importance: (1) direct glare; (2) reflected glare; (3) shadows; (4) efficiency based upon illumination of horizontal; (5) maintenance; (6) vertical illumination. Where lamps are to be hung above a crane in a foundry, the order of importance would be: (1) efficiency based upon illumination on horizontal; (2) vertical illumination; (3) maintenance; (4) shadows; (5) direct glare; (6) reflected glare.

In chart best rating given is A+; D, the lowest, indicates that an installation of units so rated in any particular, will very likely prove unsatisfactory in an installation where this factor is important. Ratings B and C while not equal to A, are decidedly superior to rating D. Rating B, C+ or C in certain respects does not disqualify a unit provided that in the essential requirements of a given location, the unit is rated A or B+.

Table No. 1

Direct Lighting Porcelain Enamel Reflectors

LIGHTING UNIT	EFFICIENCY BASED UPON ILLUMINATION OF HORIZONTAL OR APPLICABLE IN VERTICAL		FAVORABLE APPEARANCE OF LIGHTED ROOM	DIRECT GLARE	REFLECTED GLARE	SHADOWS	MAINTENANCE

*For luminous bowl type, Rate A.

Table No. 2

Spacing and Mounting Height for Lighting Units in Feet

*Mounting Height of Unit	Permissible Distance between Outlets	PERMISSIBLE DISTANCE BETWEEN OUTLETS AND SIDE WALLS		
		In Usual Location Where Aisles and Storage are Next to Wall	In Offices or Where Work Benches are Next to Wall	†Suspension Distance Indirect Units, Ceiling to Top of Reflector
4	6	3	2	1
5	7½	3½	2½	1¼
6	9	4½	3	1½
7	10½	5	3½	1¾
8	12	6	4	2
9	13½	6½	4½	2¼
10	15	7½	5	2½
11	16½	8	5½	2¾
12	18	9	6	3
13	19½	9½	6½	3¼
14	21	10½	7	3½
15	22½	11	7½	3¾
16	24	12	8	4
18	27	13½	9	4½
20	30	15	10	5
22	33	16½	11	5½
24	36	18	12	6
27	40½	20	13½	6¾
30	45	22½	15	7½

*Note permissible distance between outlets depends upon height of light source above work. In offices, work plane corresponds to desk tops, usually 2½ feet above floor; in factories, work plane will often be 3½ or 4 feet above floor. Note, in case of semi and totally-indirect lighting units, figures in this column are height of ceiling above work.

†Based on best distribution of light and efficiency of utilization for standard units. In some installations other considerations may require a different suspension distance.

Present Standards of Illumination

Table No. 3

This table is based upon Mazda C lamps with reflecting or diffusing media in the sizes and of the character, respectively, most often used in modern practice.

The values given are for average, service conditions during the life of the lamps and include allowance for depreciation due to moderate collections of dust, etc.

Building Exteriors.....	3-20	‡	‡

*It must be remembered that, other things being equal, work on dark goods requires a higher illumination than work on light goods.

†The values for watts per square foot may be reduced slightly if the walls and ceilings are very light in color, if the most efficient reflectors or diffusers of the type commonly employed in the several classifications are used, if the maintenance and cleaning service is the best, or if larger sizes of lamps are employed. On the other hand, these values may be increased slightly if the walls, ceiling and surroundings are dark, if inefficient reflecting and diffusing equipment is used or if smaller sizes of lamps are employed.

‡The lighting of show windows and of building exteriors presents special problems. Manufacturers of reflectors and projectors for these fields furnish information as to the proper application of their product.

X-ray "48" Lighting Units

Reflector Used in X-ray "48"

This unit is built around the most powerful reflecting surface, an X-ray reflector which is scientific in design, of permanent efficiency, and low maintenance cost.

The housing is of stamped steel finished in a cream colored washable enamel. It is made in graceful lines and being of cream color is sufficiently neutral to go well with most walls and ceilings used in interiors.

The housing is supported and attached to the special socket by three inconspicuous arms

Bushing and coupling supplied facilitate installation on either 3/8 or 1/2-inch stud or the running-thread piece may be fastened into crowfoot if necessary. One screw terminal and one end of wire are marked in black for correct grounding. They are easy to assemble and install.

99 Screw Type Enclosed Lighting Units

Hanging Type

Ceiling Type

The 99 Screw Type Units are equipped with a 22-gauge brass canopy with rolled edges to produce additional strength and provided with a knockout for canopy switch mounting.

This large, roomy canopy makes installation an easy matter.

A snug fitting holder, also of 22-gauge brass, prevents dirt and insects from entering the globe.

Solid brass, 2-inch links constitute the chain which is attached, at the upper end, to a cast brass hickey.

Porcelain sockets held rigidly within the holder are equipped with No. 14 Deltabeston stranded wire.

Metal parts are finished in statuary bronze.

The superb quality of eased glass in the globe produces maximum efficiency and diffusion with minimum absorption.

When ordering state catalogue number including the letter C (for ceiling type) or H (for hanging type) of fixture.

66 Screw Type Enclosed Lighting Units

Hanging Type

Ceiling Type

The 66 Screw Type Units are equipped with a 22-gauge brass canopy with rolled edges to produce additional strength and provided with a knockout for canopy switch mounting.

The large, roomy canopy makes installation an easy matter.

A snug fitting holder, also of 22-gauge brass, prevents dirt and insects from entering the globe.

Solid brass, 2-inch links constitute the chain which is attached, at the upper end, to a cast brass hickey.

Porcelain sockets held rigidly within the holder are equipped with No. 14 Deltabeston stranded wire.

Metal parts are finished in statuary bronze.

Globes are of the best grade of opal glass.

This unit is suitable for commercial lighting, using a Mazda C lamp, and having adequate diffusion and distribution to produce pleasing illumination without sharp shadows or glare.

Where only an opal unit is desired the "66" gives very efficient service.

When ordering state catalogue number including the letter C (for ceiling type) or H (for hanging type) of fixture.

99 Safety Type Enclosed Lighting Units

Hanging Type

Ceiling Type

The 99 Safety Unit in both ceiling and hanging types is provided with a globe holding device which makes it possible to release or lock the globe by adjusting a single nut. By moving operation pin across a safety slot the glass is held in a grip which centers it while allowing for expansion.

The metal parts are finished in statuary bronze and buffed and polished to insure smoothness of surface and uniformity of color.

The 99 Safety Unit combined with the 99 Standard Glassware represents the highest class of workmanship and comprises a unit of superb quality and appearance.

When ordering state catalogue number including the letter C (for ceiling type) or H (for hanging type) of fixture.

66 Safety Type Enclosed Lighting Unit

Hanging Type

Ceiling Type

The 66 Safety Type Units have an extra large, 22-gauge brass canopy, provided with a knockout for canopy switch mounting.

The large roomy canopy makes installation an easy matter.

A snug fitting holder, also of 22-gauge brass, prevents dirt and insects from entering the globe.

Solid brass, 2-inch links constitute the chain which is attached, at the upper end, to a cast brass hickey.

Porcelain sockets held rigidly within the holder are equipped with No. 14 Deltabeston stranded wire.

Metal parts are finished in statuary bronze.

The glass is opal.

When ordering state catalogue number including the letter C (for ceiling type) or H (for the hanging type) of fixture.

Special Safety Type Enclosed Lighting Units

With 99 Glass

With 66 Glass

Incorporating the patented mechanism described under 99 Safety Unit.

These special safety units have a cast metal spindle at the lower end of the chain. This simple decoration gives the fixture a dignity desired for the better installations.

The lighting efficiency and decorative quality of these units makes them particularly adaptable to store lighting.

Has canopy made of 22 gauge brass with rolled edge to give extra strength.

A knockout is provided for canopy switch mounting and the large, roomy canopy makes installation an easy matter.

Dirt and insects are excluded by the snug fitting globe holder for which 22 gauge brass is also used.

Solid brass 2-inch links are used in the chain and all strain is taken off canopy by a stem and brass hickey.

Porcelain sockets held rigidly in position are used and the wire is No. 14 Deltabeston stranded.

All metal parts are plated statuary bronze finish.

The 99 is cased glass; 66 is opal glass.

When ordering give catalog number including the letter C (for ceiling type) or H (for hanging type) of fixture.

Aglite Fixtures

Aglite canopies are stamped from a single piece of heavy gauge Armco Iron and 3 coats of permanent porcelain enamel are then fused on at 1600 degrees Fahrenheit in electric porcelain enameling furnaces. No metal parts visible; pure white glass shade is attached by means of a concealed metal screw collar which holds glass firmly in place. Installation made direct to house wires in 5 minutes with only screw-driver and pliers. Three colors, white, old ivory and gray.

Types A722 and A723 Aglite Fixtures

Canopy, 4½ inches in diameter. Shade, 6¼ inches in diameter. Length, over all, 7½ inches. Shipping weight, 2 pounds. Wire guards, \$4.00 extra.

Type No.	Description	Std. Price Pkg. Each
A722	Keyless.....	4 \$2.75
A723	Pull Chain.....	4 3.60

Types A724 and A725 Aglite Fixtures

Canopy, 4½ inches in diameter. Extends 8½ inches. Shipping weight, 2 pounds. Wire guards, \$4.00 extra.

Type No.	Description	Std. Price Pkg. Each
A724	Keyless.....	4 \$2.75
A725	Pull Chain.....	4 3.60

Types A729 and A730 Aglite Fixtures

Canopy, 6¾ inches high and 5 inches wide. Extends 9¼ inches. Shipping weight, 3 pounds. Plug receptacle to accommodate any electrical appliances included.

Type No.	Description	Std. Price Pkg. Each
A729	Keyless.....	4 \$4.10
A730	Pull Chain.....	4 4.95

Type A731 Aglite Fixtures

A flush type bracket combining light, plug receptacle and toggle switch. Long switch lever. Shade No. G-196. Wall plate in white porcelain enamel finish. White opal shade.

Especially suitable for hospital use.

Flush plate, 9x3¾ inches. Screws spaced, 6½ inches.

A standard two-gang tandem switch box should be provided for mounting this bracket.

Price, Type A731.....each \$13.50

For 25-watt Mazda B Tubular Lamps

For lighting small windows and cases, coves, etc.

This reflector requires no special fittings. It can be easily installed with conduit, brass tubing or with metallic moulding.

These reflectors, if placed one foot apart, will give a brilliant lighting effect.

Cat. No.	DIMENSIONS, INCHES			Holder	Std. Pkg.	Price Each

No. H-199 X-Ray Hoodette Reflectors

For 15 and 25-watt G-18 1/2 Medium Screw Base Mazda B Lamps Or 25 or 50-watt Mill Type Lamps

Designed for lighting low, shallow windows, outside display cases, wall cases, etc. The light is so controlled that while sufficient light is directed toward the back of the case, the greater part is directed downward and brilliantly illuminates the lower part. No. H-199 includes reflector, socket with cover, and reflector holder attached to socket shell. Black finish.

When installing, the wires are brought up back of the case and enter an outlet box at the top. The switch for controlling the lamps is concealed at one end.

8	63.10	64.05	65.00
9	69.00	69.95	70.90
10	74.90	75.85	76.80

The charge for bending tubing for a case with a single curved end is \$2.50 and for a case with two curved ends is \$3.25. *Standard package outfits.

Method of Installing

Floor Entrance, for Wood Frame Cases

The feed wires enter from underneath the floor of case extending up through the flexible conduit, which is concealed back of one of the front corner posts. Floor entrance outfits can be supplied for same prices as back entrance outfits.

Back Entrance, for All-plate Cases

Feed wires are brought up one of the back posts; tubing extends across the case inside at the top at one end, being connected to the front tube with an elbow. This is a most satisfactory method, as it is not necessary to disturb the trim, move the case or tip it over.

No. 33 X-Ray Show Window Flood Lights

The No. 33 window flood light lights the entire window with a flood of direct light from the 200-watt Mazda C lamp, and concentrates a powerful beam of light in the center of this flood. The purpose of this concentrated beam is to high-light one article in the display without making a sharp ring or cut-off of light, but rather causes the beam to fade away gradually.

It is an inexpensive method of lighting small windows where no other reflector equipment is used.

In windows already wired with reflector equipment it raises the light intensity at one point as compared to the balance of the window.

Regularly furnished with a color frame and four pieces of colored gelatin—red, blue, green and amber. The frame clips on the reflector when color flood lighting is used. Frame and color mediums can be omitted when orders so specify.

All metal parts are finished X-Ray green to match backing on the X-Ray Reflector.

Height over all, 11 inches. Diameter of color frame, 11 5/8 inches.

Furnished complete as shown, with swivel supporting base, socket holder, No. 800 reflector, color frame and four pieces of colored gelatin—red, blue, green, and amber, same as used in No. 66 Color Ray.

Standard package, 1.

No. 88 Hippo X-Ray Show-window Flood Lights

With Center Spot Beam

The Hippo Show Window Flood Light with Center Spot-beam has been designed to concentrate a powerful center spot beam over a small area, which fades away into the light given out over the greater area. It is a powerful light using either the 300, 400 or 500-watt P. S. bulb, mogul base lamp.

It is designed for use in large windows where it is desirable to throw a light of a high intensity, on some one center display.

This floodlight is for use with or without color equipment.

No. 3000 X-Ray Curtis Adapters

The purpose of No. 3000 X-Ray Curtis Adapter is to make the ordinary floor or art lamp a useful as well as ornamental lighting fixture. It consists of a silvered glass X-Ray reflector mounted on an opal glass diffuser. Beneath this is a heavy brass socket which will accommodate two small frosted bulbs for local lighting as well as the larger lamp inside the reflector. The reflector is designed to use any Mazda C lamp from 75 to 200 watts capacity.

The height of the reflector can be adjusted to fit the lamp used.

Adapter Complete

The small illustration shows how the Curtis Adapter is mounted on an art lamp. The adapter lights the entire room with a glareless light. It may be applied to any lamp the top of whose shade is over 54 inches from the floor. The adapter is 9 1/2 inches high and 6 3/4 inches across the top of the reflector.

Adapter Mounted on Lamp

Packed one to a carton.

Price, No. 3000.....each \$14.00

No. 10307 X-Ray Show Window Spotlights

Used in show windows to attract attention to some particular article by concentrating an intense spot of light upon it. Wired with plug and is ready to attach to a regular 3 1/4-inch shade holder or can be bolted to any supporting surface.

Changes in direction, or size of the spot of light are quickly adjustable from outside the unit. For colored light, gelatin color mediums are inserted.

Buss Lights

This light can be used for every purpose. It may be clamped or hung anywhere and is an artistic stand lamp that is neat and attractive. Not just a clamp lamp contraption.

Base plate screws in and out to clamp anywhere. Works like a vise. Slotted hole permits light to be hung on hook or nail. A touch of the hand adjusts the bulb or shade to any position.

Light is 11 inches high. Complete with extra long 9-foot cord and combination plug. Made in two finishes, bronze or brass, at the same price.

Price, without Bulb.....each \$2.00

Benjamin Pear Shaped Half Shades

For use with desk lamps, bracket lamps, oil gauge lamps, etc.
Fits standard brass shell sockets and takes Mazda B lamps up to 40 watts.

Reflector has hinged collar which allows it to swing out and give free access to lamp when making renewals.

Method of Installation

Lighting Curved Show Cases

The illustration above shows the method of installing Benjamin Show Case Lighting fixtures in the curved section of a case. The link sections shown are of soft brass tubing and are easily cut and bent to fit the case. No threading is necessary, because the joints slip together and are held with set screws.

How to Install the Entrance

Tubing is of soft brass and easily cut and bent. No threading is necessary because the joints slip together and are held with a set screw.

Supporting the Lamp Sections

The method of fastening reflector sections to wood or glass cases is by means of especially designed supporting brackets.

Benjamin Show Case Lighting Fixture Combinations

The charts below simplify ordering Benjamin Show Case Lighting Fixtures.

Degree of Illumination

AVERAGE ILLUMINATION.—Should be used where light colored goods, jewelry, etc., are displayed, or where general lighting is not exceptional.

HIGH ILLUMINATION.—Should be used where dark colored goods are displayed, or where the general lighting of the store is exceptionally bright.

For 6 and 8-foot Square Cases

As these lengths of cases are most commonly used, Benjamin Show Case Lighting Fixtures are listed below for them in complete combinations for either an average or high degree of illumination.

Actual Length of Case, Feet	Degree of Illumination	Cat. No.	Price Each	*No. and Lgth. of Sections	Y Minimum Over All Length, Inches	No. of Lamps	Std. Pkg.
6	Av.	25909	\$17.60	3-22"	68	6	1
6	High	25910	21.50	4-16"	66	8	1
8	Av.	25917	22.30	4-22"	90	8	1
8	High	25918	29.75	5-16" & 1-8 1/2"	90 1/2	11	1

For Square Cases from 46 1/2 to 123 Inches

To determine the catalogue number of the proper combination, measure the inside length of the show case, determine the degree of illumination as explained above, and then refer to the first 2 columns of the chart. Then, opposite nearest length and the degree of illumination required, the catalogue number and other relative data will be found.

Price, No. 8734B . . . each \$12.00

Emeralite Portable Lamps

Daylight Screen

The Emeraldite Shade is made of a rich emerald green glass, plated inside with a white opal glass and made the proper shape to give the most efficient distribution of light, protecting the eyes from all glare and strain. The smooth glass shade will not tarnish or collect dust. All Emeraldites designated by No. 8734 are fitted with new type holder and shade which can be detached without disturbing electric wiring. The standards and fixtures are all carefully made of the best materials, heavily weighted and felted. All shades are adjustable to any angle and will accommodate any standard Edison electric lamp up to 60-watt size. All portables furnished complete with shade, pull socket, plug and six feet of cord.

The Daylight Screen consists of a patented glass filter, completely concealed from view, which modifies the glare and closely approximates daylight. Daylight attachments are now included with all No. 8734 Emeraldites without extra charge.

Emeralite Junior Adjustable Lamps

This practical little lamp will clamp, stand or hang any place, and will be found exceedingly useful in any home. It is desirable as a study or reading lamp for children; for the boudoir, or for use on side shelf of grand piano, dressing table or nursery.

The shade can be tilted to any position and, no matter how adjusted, the eyes are always protected from the direct glare of the lamp. Any standard electric lamp can be used.

Base is heavily weighted and felted, and contains an efficient clamp.

Total height of lamp, 12 inches; glass shade, 6 inches diameter.

Benjamin Wireless Stand Lamp Clusters

A newly designed, graceful, neat appearing wireless cluster possessing advantageous features for use in making floor and table lamps, converting oil and gas lamps and making over pottery, wooden and wickerware vases. The wireless stand lamp cluster has a close grouping of sockets which makes it suitable for narrow shades. Each socket has an individual controlling switch working independent of the other.

The electrical connections to both sockets are made at once by simply bringing the wire ends through and fastening under two binding screws.

To harmonize with most fine lamps, standard finish is made Roman Gold. All other finishes are special.

Making Lamps

Vases as well as gas and oil lamps are easily and profitably transformed into electric lamps, by the use of a Benjamin Stand Lamp Cluster and one of several adapters, which are made by reliable manufacturers.

Usually these devices comprise a cover, a short threaded pipe and an expanding claw, which grips the interior of the vase when the cluster stem is tightened, anchoring the cluster in position. Manufacturers of adapters of this kind and similar devices for converting gas and oil lamps are listed in the electrical directories.

Instructions for making such lamps will be sent upon request.

Clusters Complete

Cluster consists of a wireless cluster body, stem with casing and 1/4-inch coupling as shown in illustration. Length is approximately 7 1/2 inches from shade support to bottom of coupling.

Coupling for 1/8-inch pipe connection or flange for attaching to wood, supplied at a small additional cost as listed at bottom of this page.

Benjamin Adjustable Stand Lamp Clusters

This cluster is especially suitable for fine lamps using silk or parchment shades. It has a drawn brass body with two (or three) adjustable, pull chain sockets.

The pull chain sockets are spaced appropriately for cord and tassels and are adjustable to any angle from horizontal to vertical. This adjustable feature is very important. With shallow shades the lamps may be adjusted so as not to be visible to the eye. With deeper shades, any angle of the lamps may be obtained to give the most desirable quality and direction of light, and show off the shade to its greatest advantage.

To harmonize with most fine lamps, standard finish is made Roman Gold. All other finishes are special.

Clusters Complete

Cluster consists of body to which Benjamin Angle Sockets are fastened adjustably, top ornament, stem with casing and 1/4-inch coupling, as shown in illustration. Length is approximately 7 3/4 inches from shade support to bottom of coupling.

Coupling for 1/8-inch pipe connection No. 5099, or flange for attaching to wood No. 5094 will be supplied at 5 cents advance in list.

Mfrs. No.	No. of Lights	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each

878	3	10	7	2.90

Stand lamp clusters are regularly packed assembled in individual cartons. For manufacturers' use, clusters will be furnished in bulk in quantities of 100 or more, when so specified.

Ben-ox Interchangeable Devices
A Benjamin Product

The Old Way
Soldered and Taped Joints

Ben-ox is an improved line of equipment designed to meet present-day requirements for use in the lighting of industrial plants, hotels, office buildings, stores, public buildings and hospitals.

In addition to serving the purpose of ordinary lighting equipment, Ben-ox has the following advantages:

EASY TO INSTALL.—The old material and time wasting taped and soldered joints are no longer necessary. Simply attach Ben-ox mounting element to outlet box by tightening two screws. Then loop the wires around terminal screws and slip the Ben-ox Canopy into place. The equipment thus installed is called a Ben-ox Basic Unit. See illustrations below.

Side View of Ben-ox Mounting Element in Place

The New Way
Bottom View of Ben-ox Mounting Element in Place

The Mounting Element Plus Canopy Plus Canopy Supporting Ring Makes Up the Ben-ox Basic Unit

Mounting Element

Canopy

Supporting Ring

To this Ben-ox Basic Unit may be attached any style of lighting equipment. See illustrations on following pages.

Ben-ox Basic Unit

INSPECTION AND APPROVAL.—When the Ben-ox Basic Unit is in place, immediate inspection and final approval can be secured before the tenant arrives or before the use of the space is determined. Later when the use is known, any style of equipment can be put in place with the ease of attaching a lamp bulb.

LIGHTING EFFICIENCY EASILY MAINTAINED.—Dirt accumulations diminish the available light output. Without the use of tools, Ben-ox equipment may be taken down, thoroughly cleaned and replaced just as easily.

OUT OF THE WAY FOR THE DECORATORS.—During periods of redecorating and cleaning, injury to brass work (splashing of painters' material) or glassware breakage is avoided by removing the Ben-ox equipment.

LIGHTING EQUIPMENT EASILY TRANSFERRED.—Ben-ox equipment in one room or part of plant can be taken down and reconnected in another location without disturbing the wiring in any way and with the ease and same manner as that of removing and replacing a lamp bulb. Expansion of the business and future tenants' needs, present lighting equipment problems best solved by Ben-ox.

FUTURE CONVENIENCE.—At some future date, if the lighting equipment should become out of style, a speedy substitution can be made without requiring tools.

Ben-ox Ceiling Units

Keyless

660 Watts, 600 Volts—Medium Base

Ben-ox Keyless Units are for use in offices, stores, hospitals, restaurants, etc. They have definite advantages of greater usefulness and economy. Holders are of standard sizes to take all forms of modern glassware. Units may be attached to the ears of standard 3 1/4 and 4-inch outlet boxes.

Standard package, 10.

Examples of Ben-ox Combinations

All Ben-ox Devices have identical threads for coupling together.

Ben-ox Keyless Outlet Box Fitting No. 4980 is easily attached to any standard 4-inch box. If a 200-watt reflector is wanted, simply screw on Cat. No. 14200.A.

*For 25 and 50 Watt mill type lamps.

**For small Mazda B type, also mill type lamps.

†The height is taken as from bottom of reflector to top of neck where the screw collar is attached.

Ben-ox Keyless and Pull Chain Sockets

Ben-ox Sockets have an interior of the 2-piece easy-to-wire type consisting of a terminal base and Benjamin lamp grip. Bin ling screws are extra large and are easy to reach for making connections. Sockets with natural copper finish are for "weatherproof" work.

Keyless Sockets

660 Watts, 600 Volts—Medium Base

When used without reflector, threaded clamping ring is supplied to support interior. When used with Ben-ox Reflector, the threaded holder supports socket interior.

With Clamping Ring—For use without Reflector

Ben-ox Pendant Unit Connectors

Pendant Unit Connector

3-chain Fixture Hook

Single Chain Loop

Ben-ox pendant unit connectors provide means for connecting various types of pendants to Ben-ox Basic Units.

For Chain or Drop Cord Pendants

Connectors Nos. 4845 and 4850 may be attached to Ben-ox Basic Units. Electrical contact is made against the wiring terminal base and mechanical connection with the Ben-ox Thread. They are tapped 3/8 inch or bushed for drop cord, as indicated. No. 4845 will take three chain hook, No. 4847, or Single Chain Loop, No. 4849. With this type of connector the pendant is grounded to the conduit system. Where insulating joint is required a fibre disc insulator will be supplied for this purpose at no extra charge. Finish, acid bronze.

Cat. No.	Description	Std. Pkg.	Wt. Lbs. Std. Pkg.	Price Each
*4845	Pendant Unit Connector, Tapped 3/8-inch	10	3	\$.70
*4850	Connector for Drop Cord	10	3	.75
4847	3-chain Fixture Hook, 3/8-inch Thread	10	1	.30
4849	Single Chain Loop, 3/8-inch Thread	10	5/8	.20

Ben-ox Chain Supporting Rings

3-chain Supporting Ring

Chain supporting ring No. 4848 is used as a support for a bowl with three chains. Electrical connection is made through a drop cord and socket connected to the ceiling unit by a Benjamin No. 904 swivel attachment plug. This arrangement may be applied to either Ben-ox pull chain or keyless ceiling units such as No. 4825 and No. 4807.

Cat. No.	Description	Std. Pkg.	Wt. Lbs. Std. Pkg.	Price Each
4848	3-chain Supporting Ring	10	5/8	\$.35

Ben-ox Threaded Shade Holders

Any Ben-ox Holder will fit any Ben-ox Socket or ceiling unit. All Ben-ox one-piece holders are equipped with one or more neck screws with locking spring so that vibration cannot loosen screws and allow glassware to drop. Fitter positions with respect to the lamp filament accord with modern standards.

Mounting Stirrups

For mounting Ben-ox or other wiring devices on outlet boxes, condulets, etc. May be attached to fixture stud, with locknut or by screws threaded to box. Inside bolt holes are on 1 1/2-inch centers; outside pair, tapped, on 2 3/4-inch centers. For 4-screw support, two stirrups are used in a crossed position. On 3 1/4-inch boxes with only two supporting ears, adding the proper stirrup, see listing, gives the other 2-screw supports.

How To Make Lighting Calculations
For Benjamin Porcelain Enamelled Steel Reflectors

Chart C—Area Intensity and Size of Lamp Guide
The Proper Lamp Size

Using the recommendations of the Illuminating Engineering Society in table on the preceding page, as a guide, adopt for the purposes of illustration, 8 foot candles as being the intensity for a buffing and grinding room. Under the condition assumed, suppose this room is divided into equal parts of 12 feet by 12 feet each, like the layout on previous page. Then each division to be lighted is 144 square feet. Next referring to Chart C, locate the intersection of a line opposite 150 square feet (this figure taken for convenience in place of 144) and the line above the figure 8 (foot candles). This intersection is seen to be near the curved line representing the 150-watt lamp, which is the size to adopt in this case.

To Find Area

For instance, in designing a lighting system, it may be decided to use a 200-watt Mazda C lamp and obtain an intensity of 3 foot candles. By following the lines carrying these respective quantities to their intersection, the area which this lamp will cover at this intensity is shown as 500 square feet.

To Find Intensity

If it is desired to light 400 square feet with 200-watt lamps and the query is, what intensity will result? The answer shown by the chart is 3 3/4.

To Find Size of Lamp

Suppose it is wished to obtain 11 foot candles of intensity over an area of 400 square feet. What size of lamp shall be used? Looking at the chart the perpendicular line above 11 foot candles intersects the horizontal line opposite 400 square feet at the curve of the 500-watt lamp.

How to Make Lighting Calculations for Benjamin Porcelain Enamelled Steel Reflectors

Selecting the Type of Reflector

Each type of Benjamin Reflector has a character of distribution which makes it more suitable to certain applications. Their uses are briefly set forth as follows:

R L M DOME—For general illumination where it is desired to light both upright and flat surfaces; to eliminate sharp shadows by good diffusion; to avoid reflected glare from the surfaces lighted and to avoid glare by having the angle of light cut-off agree with all state lighting codes. Suitable for mounting heights of approximately 8 to 18 feet. Angle of cut-off, 17½ degrees.

BOWL—For general illumination where the lighting of horizontal surfaces is of first importance and where a high intensity is required in a relatively small area; also where reflectors must be mounted high above working plane.

SHALLOW BOWL—For general illumination where the lighting requirements are of an extensive character and where eye shielding is not considered of first importance.

The Number of Lighting Units

For illustration, assume a room, 36x73 feet, a mounting height of 10½ feet (this is usually determined by the height of ceiling) and the use of the R L M Reflector.

Reference to Chart D gives a spacing distance, on the R L M Reflector of 12 feet for this mounting height. The next step is to divide the area to be lighted, into equal parts, 12 feet square and locate one unit in the center of each division. This relationship of mounting height and spacing distance will give uniform illumination over the entire area.

In case the overhead construction of the building does not lend itself easily to this layout, it is possible to divide the area to correspond to the bays of the overhead construction. If this is done, it must be borne in mind that the spacing distance for a given mounting height should not be greater than the ratio given in Chart D and that a large number of small units is preferable to a small number of large units.

Method of Using Chart D

Each of the diagonal lines drawn across Chart D represents one of the three chief types of Benjamin Reflectors. The distance between reflectors when they are properly installed is in constant proportion to the mounting height. This ratio is the same for all reflectors of any one type but the ratio of each type is different from that of the others.

Finding the Proper Height

One purpose of Chart D is to show the proper mounting height for reflectors when the outlets are already in place and the spacing is therefore known.

For instance, if the distance between outlets is sixteen feet and the R L M Standard Dome Reflector is to be used, first find the intersection of the vertical line extending from 16 feet on the scale at the bottom of the chart and the diagonal line representing the R L M Standard Dome. The horizontal line which would cross at this intersection would run to 13¼ on the scale. This therefore is the proper mounting height.

Where the installation is to be entirely new, the chart can be used in a similar manner, to find the proper spacing based on a desired mounting height.

Degrees of Illumination Recommended by Illuminating Engineering Society

Together with Recommendations of the State Lighting Codes

The figures given are degrees of illumination on work, expressed in foot-candles.

Benjamin Glassteel Diffusers

With Type R R Threaded Hood

A Union of Reflector and Glass Diffusing Bowl

No. 26300, 200-watt

In addition to the accepted merits of the porcelain enameled steel reflector this combination offers the following advantages:—

1. Light is permitted to reach the ceiling which softens the contrast between the working plane and the space above the reflector. This increases eye comfort and enhances the cheerfulness of the room.
2. The brightness of the unit is reduced to about 3 or 5 candlepower per square inch which further reduces eye effort resulting from both direct and reflected glare.
3. Protection of the glass from excess breakage because surrounded by the steel reflector.
4. Exceptionally good appearance of the lighted unit.
5. Reflection and diffusion favorable to the needs of the daylight lamp.

General Features

The total light output of the Glassteel Diffuser with a clear lamp is equal to that of an R L M reflector and bowl-enameled lamp of corresponding size.

The Glassteel Diffuser directs light on the ceiling (about 7 per cent) and also more light on higher angles than the other equipment mentioned.

Comparison of corresponding brightness favors the Glassteel equipment, which is 3 or 5 against 15 candlepower per square inch of the R L M reflector and bowl-enameled lamp.

The most notable results of the Glassteel Diffuser are softening of shadows and the reduction of direct and reflected glare.

Construction

HOOD.—Hood is of porcelain enameled steel with Benjamin R R Thread.

SUPPORTING FITTING.—X Type, tapped for 1/2-inch conduit.

SOCKET.—Porcelain, two-piece, easy-to-wire type.

REFLECTOR.—Reflector is porcelain enameled steel in two sizes with Benjamin Type R R Threaded Neck permitting easy removal of the reflector for cleaning. The reflector has six apertures at the top for the passage of light to the ceiling. It also embodies a globe holder of the set screw type.

FINISH.—White porcelain enamel with small neat dark blue bead at bottom edge of both hood and reflector.

With Pendent Hood

Prices do not include wires or lamps.

Benjamin Reflector Sockets

Porcelain Enameled Steel

USES.—Each type of reflector performs a definite service. See individual description immediately above each listing.

REFLECTORS.—Seamless Crysteel porcelain enameled steel. They are weather-proof and may be used for indoor and outdoor service.

SOCKETS.—National Electrical Code Standard. Sockets are two-piece porcelain, keyless, easy-to-wire type with Benjamin Lamp Grip which prevents loosening and falling of lamps under vibration.

Locking Type Socket will be supplied with reflectors up to and including 200 watt sizes at an advance of 40 cents each. Key, No. 1399, at \$1.00 each. Pull chain socket with lamp grip will be supplied with reflectors up to and including 200 watt sizes at an advance of 80 cents.

FITTINGS.—Reflectors are supported by heavy cast fitting, independent of socket, making the whole fixture uniformly strong.

TAPPING.—Fitting tapped for 1/2-inch iron pipe regularly furnished; 3/4-inch tapping or 1/2-inch insulating bushing, No. 1265 for drop cord use, furnished if specified at no advance in price.

FINISH.—Reflectors are Benjamin green porcelain enamel outside; white inside.

Benjamin Parabolites

Porcelain Enameled Steel

Characteristic Distribution of Curve

Plane Through Major Axis

No. 1235, 100-150-watt

Plane Through Minor Axis

The Benjamin Parabolite is a specially designed fixture for the illumination of aisles, platforms, and other long narrow areas indoors or outdoors.

The reflector is porcelain enameled steel, white inside, and black outside. The socket is porcelain, keyless two-piece, easy-to-wire type with lamp grip. The separable X fitting is regularly tapped 1/2-inch and will be tapped 3/4-inch if specified, at no advance in price. The light is projected in a narrow stream with a low cut-off on each side.

Prices do not include wires or lamps.

Benjamin Elliptical Angle Reflectors

Installation Data

For Illumination In and Around Industrial Buildings

The Elliptical Angle Reflector-socket has proven advantageous in many industries, for example: Mills, foundries and yards where cranes interfere with overhead suspension of lighting equipment; finishing departments of automobile factories; in printing plants, lighting presses so that interior parts can be observed; in paper and pulp mills, where broken parts of an overhead lamp might seriously damage the product; in rubber tire factories, on tire rolling machines and bending machines; to light washing racks in garages; in textile mills, lighting print rolls and inspection tables; in rug departments, lighting display racks.

Above is a top view of the Elliptical Angle Reflector. Distribution curves are made on perpendicular planes through the lines marked AA, BB, and CC.

Diagram below illustrates the installation for interior illumination. Details indicated by letters on diagram refer to corresponding letters in table below, which gives the most commonly used mounting heights and spacing distances for all sizes of Elliptical Angle Reflector-sockets.

If some particular conditions are not covered by table, and special recommendations are required, correspondence is invited.

Benjamin Elliptical Angle Reflectors
Porcelain Enameled Steel

Benjamin Elliptical Angle Reflectors
Porcelain Enameled Steel

No. 5525
Side View

No. 5525
Front View

There are many places in industrial plants where lighting requirements cannot be satisfied with overhead illumination alone. Traveling cranes sometimes preclude the use of pendant fixtures. Vertical surfaces and deep recesses, such as shelving, must be better lighted.

The Benjamin Elliptical Angle Reflector satisfies perfectly these, as well as many similar cases, requiring illumination from the side.

The Elliptical Angle Reflector is also a most effective unit for sign, bill and bulletin board lighting.

Imposing buildings, large structures, and other contrasts clamor for recognition during the day. The attention value of the best billboard, poster or sign is lessened because of these. At night, however, all lose their prominence. If the message is well illuminated it becomes a better advertisement by night than by day. It then works day and night. The darkness "stands" it out in bold relief.

Benjamin Elliptical Angle Reflectors, in addition to the usual flux of light cast directly in front of the reflectors, direct a wide distribution horizontally.

Illumination is thus built up "in between" the units, where it would be otherwise weak. This gives an even distribution over the entire area.

The letters of the table indicating dimensions refer to corresponding letters in the diagram below.

This is a safe guide for use when installing Benjamin Elliptical Angle Reflectors.

Characteristic Distribution Curves

Above is a top view of the Elliptical Angle Reflector. Distribution curves are made on perpendicular planes through the lines marked AA, BB, and CC.

Table of Spacing Distances
For Sign Board Lighting

Cat. No.	Size of Lamp Watts	A Height Board Feet	B Distance Out Feet	C Distance From End Feet	D Distance Apart Feet	E Angle From Vertical
5522	75	2-4	3	2½	5	17°
5525	100	5-6	4	3	6	17°
5525	150	7-8	4½	3¼	6½	17°
5526	200	9-12	5½	4	8	20°
5537	300	13-16	6½	5	10	20°
5537	500	17-21	9	6½	13	20°
5538	750	22-25	12	8½	17	20°
5538	1000	26-30	15	10	20	20°

Reflectors are of porcelain enameled steel and are weather resisting. Socket is N. E. C. Standard, keyless two-piece porcelain easy-to-wire type with lamp grip which prevents lamps from becoming loosened by wind or vibration. Nos. 5522, 5525 and 5526 are regularly tapped for ½-inch pipe; ¾-inch, if specified. Nos. 5537 and 5538 are regularly tapped for ¾-inch iron pipe.

Cat. No.	Size of Lamp Watts	DIMENS., INCHES	Net Wt. Lbs. Ea.	Std. Pkg.	Price Each
5522	60, 75	8 7/8 x 13 1/4	12 3/8	2 3/4	10 \$4.20
5525	100, 150	8 7/8 x 13 1/4	14	3	10 4.20
5526	200	11 1/8 x 16 3/8	16 1/2	3 5/8	10 5.40
5537	300, 500	13 7/8 x 19 7/8	19 5/8	3 3/4	5 8.70
5538	750, 1000	13 7/8 x 19 7/8	21 3/8	4 1/8	5 9.00

Prices do not include wires or lamps. A self locking socket, to prevent lamp theft, is supplied with Nos. 5522, 5525 and 5526 at an advance of 40 cents list. For coupling to increase to 1 or 1¼-inch, add 20 cents to list price.

Benjamin Type R. R. Threaded Fixtures

Where dirty or smoky atmospheric conditions make the frequent and thorough cleaning of reflectors necessary, Type R. R. Fixtures make the work less difficult and hazardous. Without the use of tools, reflectors may be removed and given a thorough washing. They are replaced just as easily. Every threaded reflector will fit any threaded hood in the Benjamin Type R. R. Line.

CONSTRUCTION.—Hoods are pressed steel, porcelain enameled or cast as indicated in listing. All are threaded to take Type R. R. Reflectors listed in opposite column. Sockets supplied with hoods are described in the next paragraph.

SOCKETS.—National Electrical Code Standard; keyless and pull chain types have lamp grip.

Keyless medium base socket is arranged so that it may be converted to Mogul base without disturbing the wiring.

To prevent theft or unauthorized exchange of lamps, the locking socket is effective; locking socket key No. 1399, lists at \$1.00—listings below do not include key.

REFLECTORS.—Reflectors are porcelain enameled steel with screw thread to accommodate all hoods listed below.

FINISH.—Pressed steel hoods are green porcelain enameled; cast hoods are green paint enameled. Reflectors are green porcelain enameled outside; white inside.

IMPORTANT.—All Type R. R. Reflectors and Hoods are interchangeable; for this reason, they are listed separately. When ordering complete fixtures, specify the catalogue number of both the reflector and hood desired.

Benjamin Two-piece Locking Sockets

Medium Base—660 Watts, 600 Volts

For the prevention of theft.

Locks lamp in place automatically without the use of key. The latter is needed only when a lamp must be withdrawn for any reason.

The locking device is pushed out of the way when lamp is screwed into socket but any attempt to reverse the action causes the locking arrangement to grip lamp base.

No. 586 may be substituted for body of No. 88 sockets now in use, without interference with wiring.

1399	Key	1	1/8	1.00

Benjamin Canopy Type Aligners
With or Less Shock Absorbers

No. 3355

The reasons for the use of flexible suspension fittings are two:

1.—It is practically impossible to set every outlet box straight, yet correct industrial lighting depends greatly upon the lighting equipment hanging plumb. Therefore, a fixture aligner is essential to good illumination as well as good appearance.

2.—Most industrial or manufacturing buildings are subject to the vibrations induced by moving machinery. Under these conditions, the shock absorbing feature in Benjamin Fixture Aligners protects the lamps and tends to prolong their life.

No. 3355 has flexible knuckle and shock absorber. Supported by a strap with slots to slip over the screws on the ears of standard 3 1/4-inch and 4-inch outlet boxes. No. 3359 is the same as No. 3355, less shock absorber. These aligners may also be mounted on fixture stud by use of stirrups. Canopy attaches to outer edge of straps by a thread. Finish is galvanized.

Furnished with either a light, medium or heavy shock absorber. Light springs are for fixtures weighing 1 to 3 pounds, medium for 3 to 8 pounds, and heavy for those weighing 8 to 16 pounds. Specify the spring desired otherwise medium weight will be supplied.

Showing How Fixture Assumes a Vertical Position when Outlet Box is not Set Level

Benjamin Shade Holder Reflectors

Type N

Type A

Type B

Benjamin Shade Holder Reflectors are for use where it is desired to attach reflectors to existing fixture equipment already installed. The strong rigidly attached Benjamin holders, furnished with these reflectors, have 2 principal advantages:—They place the reflector in the proper position with relation to the lamp, giving correct light distribution, and impart that strength and permanency to the reflector, necessary for a satisfactory and lasting job.

Type P

Type B Shade Holder Reflector is designed for attaching to any standard brass shell socket. This socket is the one commonly found in existing interior lighting installations.

Type N Shade Holder Reflector is fitted with a neck so shaped as to fit any standard 2 1/4-inch shade holder.

Type P Shade Holder Reflector is equipped with a holder which will fit any standard porcelain socket.

Type S Shade Holder Reflector has a screw threaded holder to fit Benco Sockets and Type S Outlet Box Fittings.

Type A Shade Holder Reflector has Ben-Ox Threaded Holder which attaches to Ben-Ox Sockets and Units.

FINISH.—Benjamin green porcelain enamel outside; white inside.

Type S

Benjamin Dome Shade Holder Reflectors

Reflector and Lamp Manufacturers' Standard

No. 14100N
100-150-watt

For general illumination when it is desired to avoid reflected glare from the surfaces lighted and to avoid direct glare by having the angle of light cut-off agree with all state lighting codes.

Benjamin Gas and Vapor Proof Fixtures

**Ceiling or Outlet Box Type
With Dome Reflector and Enclosing Globe**

Cat. No. 6541

Designed for use where atmospheric conditions are severe and where mounting must be on the ceiling.

The reflector is dome type and has an angle of cut-off 17 1/2 degrees. Porcelain enameled steel, green outside, white inside.

The base is either a cast iron or brass outlet box which will be tapped, when specified, for 1/2-inch conduit on 1 to 4 sides or top, as required.

Where certain chemicals are used, such as sulphur, the brass outlet box is recommended.

Guard is of tinned wire, with brass threaded supporting ring.

The enclosing globe used is Cat. No. 6867.

Specify tapping when ordering. Supplied not tapped for conduit entrance unless specified.

No. 15103N Benjamin Show Window Reflectors

Porcelain Enameled Steel

No. 15103N

No. 15106N

No. 15103N is especially recommended for deep windows. It is an elliptical angle reflector and, owing to the broad character of distribution, may be mounted on wide spacings when there is to be a limited number of reflectors in each window.

No. 15106N, because of its narrow shape, may be mounted on close centers and is, therefore, recommended for shallow windows. It is also especially suitable for flush mounting with false ceilings.

Both of these reflectors have Type N neck for standard 2 1/4-inch shade holders.

Either of these reflectors may be used in windows of ordinary depth and usual proportions. Lamps ranging from 75 watts to 200 watts may be used.

Cat. No.	*Size of Lamp Watts	Diam. Size In.	Reflector Ht., In.	Std. Pkg.	Wt., Lbs. Std.	Price Each
15103N	100, 150	8 1/2 x 13 1/2	11	10	16 1/4	\$3.50
15106N	100, 150	12 1/4 x 8 3/4	7 5/8	10	15	3.50

*75-watt may be used by inserting No. 91 socket extension.

200-watt lamp may be used by inserting No. 4387 shade holder extension.

Benjamin Dust Tight Glass Covers

The best lighting equipment in steel mills and foundries seldom operates efficiently for any length of time. Dust and soot soon make the installation frequently less than 50 per cent efficient.

The dust tight glass cover easily attaches to Benjamin reflectors and effectively keeps out the dirt.

Dust and soot cannot collect on the lamp and in the reflector to destroy the clean surface, lighting efficiency.

With the dust tight glass cover the clean maintenance of equipment becomes an easy matter.

It is only necessary to wipe outer surface of glass disk and the original light output is restored.

Dust tight glass covers fasten to Benjamin 12, 14, 16 and 18-inch dome reflector-sockets, 14 and 16-inch shallow bowl reflector, 12-inch bowl reflector-socket and 12-inch Type RR bowl sockets, 12, 14, 16 and 18-inch Type RR dome reflectors, 14 and 17-inch Type RR fluted bowl and 12 and 14-inch Type RR symmetrical angle reflectors.

Attachment can be made direct to units already installed. Construction.—Holder of cast aluminum is divided into 2 parts. The upper half slips into place over the reflector bead and the lower half containing the clear glass disk, with a circular rubber gasket, clamps rigidly to it.

Cover hinges to permit easy changes of lamps.

Benjamin Dust-tight Drop Cord Fixtures

No. 659

No. 659 is a dust tight fixture, especially for drop cord work in mills, elevators, granaries, etc. It affords a high degree of protection by reason of the substantial construction and heavy screw globe which encloses the lamp.

Hood is of copper. Porcelain bushing for drop cord has 3/2-inch cord opening. Ample space is provided for cord knotting. Finish of hood is natural copper.

Cat. No.	Size of Lamp Watts	Description	Std. Pkg.	Price Each
659	*25, 50	Copper Hood	10	\$1.80

*Takes 25 and 50-watt mill type lamps only.

Prices do not include wires or lamps.

Benjamin Moisture and Dust Proof Fixtures

These fixtures are for use in refrigerating plants, engine rooms, plating rooms, mills, etc., where it is desirable to protect the lamp and live electrical parts from the deposit of moisture, dust and dirt.

Fixtures without Guard

Weatherproof hood of copper regularly tapped for 1/2-inch stem, easy-to-wire porcelain socket with Benjamin Lamp Grip and screw globe of heavy clear glass.

No. 665

Asbestos gasket between globe and hood makes the fixture tight.

Finish, natural copper.

Benjamin Wireless Cluster Bodies

Series Type

No. 15 1/2

No. 34 1/2 T

Series Wireless Clusters are used largely on street railway circuits, or wherever it is desired to use 110-volt lamps or other 110-volt devices in series, on higher voltages, either for indoor or outdoor service.

They are regularly furnished without flange, but a 3/8-inch steel flange No. 3200 or 3100 may be specified without additional charge.

Series connections are standard. Series-multiple and other special connections can be furnished either 3 or 4-wire. Diagram of possible connections will be sent upon application.

Standard finish is brushed brass.

Type 1 1/2—Diameter of Base, 4 Inches

35 1/2 T	5 "	10	14	2.50

Three supporting screw holes are equally spaced on a 3 3/8-inch circle.

Benjamin Multiple Wireless Cluster Bodies

No. 82

No. 23

Clusters are regularly furnished with steel supporting flange tapped for 3/8-inch iron pipe stem. Cast iron flange with larger tapping can be furnished if desired.

Where clusters are to be attached by screws, individual listings for screw hole centers should be consulted.

Cat. No. 2452 shade holder attaches to these clusters to take shades with 2 1/4-inch fitter.

Price includes flange No. 3800 on Type 8 and flange No. 3200 on Type 2.

Types 8 and 2 have 2 supporting screw holes spaced on 1 3/4-inch centers.

Standard finish is brushed brass.

Benjamin Multiple Wireless Clusters

No. 34T

Benjamin Wireless Clusters are serviceable for ceiling and pendent fixtures, domes, portable stand lamps and indirect units. Prices include steel flange No. 3100 tapped for 3/8-inch iron pipe. Standard finish brushed brass.

Three supporting screw holes are equally spaced on a 3 5/8-inch circle.

Wireless Clusters Type 3T are designed for a relatively close grouping of lamps. Prices include flange No. 3100 on Type 3T, tapped for 3/8-inch iron pipe. Standard finish is brushed brass.

Sampson Access System Universal Clamps and Fittings

The Access Universal Clamp not only increases the flexibility of Access Lighting but is indispensable to the machinist, builder, contractor, electrician and handy-man-about-the-house. This clasp suspends, holds and joins together, as well as holds apart 2 or more objects. It is easy to install and flexible to use. The economic application and value of these fixtures apply to at least 50 per cent of all manufacturing operations where human eyes are needed to guide and direct.

Substantially, all Access Universal Fixtures are made of some combination of the units as shown.

Type FA Flexible Arms

This flexible arm is made 24 inches long. It absorbs vibration, protects lamps, bends easily with one hand and stays put. Packed 10 in carton. Standard package, 50.

Price, Type FA.....each \$2.00

No. L $\frac{1}{2}$ -90° Access Split Elbows

This elbow clamps up as a stiff joint.

It is strong and durable and when used with the 90 degrees bent pipe it makes a Universal joint.

Price, No. L $\frac{1}{2}$, Complete.....each \$.38

No. 1/2P Access Arm Pipes

The variables of Access Fixtures are the arm sections. They are cut and swaged in the standardized lengths of bent and straight sections as follows:

Length Inches	STRAIGHT SECTIONS		BENT SECTIONS, 90°	
	No.	Price Each	No.	Price Each
15	P1500	\$.25	P1590	\$.35

No. ST Access Swaging Tool

Access swaging tool replaces the die stock, reamer, Stilson wrench, etc.

Cut off the conduit, insert swaging tool, a few blows with a hammer rounds the inner edge and flares the outer, over which the Access fittings clamp securely on the conduit which has not been weakened by threads.

It is simple, strong and durable.

Price, No. ST.....each \$1.25

No. G542 Access Fixtures

This fixture is principally used for ceiling attachment when ceilings are over 12 feet 6 inches high. It can be used on open or conduit wiring. There are a large number of operations where it is of great advantage.

This fixture for 10 to 11-foot ceilings consists of one AB 1/2, one P3000, one P3090, one F. A., one KS10 key socket, 1 Sha 730 shade.

Length over all, 90 inches.

Longer or shorter lengths may be ordered at 1 per cent inch more or less.

Prices for wiring fixtures will be sent upon request.

In the place of any Access clamp shown with a fixture any clamp may be ordered.

Access Fixtures have lengths that are sufficient for the average type of machine.

Large fixtures may be ordered as follows: By adding the letter A, B, or C to the group number of any fixture 6, 12, or 18 inches respectively will be added. This will allow the fixture to cover an area the diameter of which will be 1, 2, or 3 feet greater than that listed.

No. G523 Sampson Access Lighting Fixtures

Typical Installation of Sampson Access System

This is the large lathe lighting fixture. The larger size calls for one universal section of 90-degree bent pipe and one access elbow is added. This increases the flexibility of movement and gives further range.

This fixture is valuable for turret lathes in which case they are not attached to carriage.

No. G523 has a 6-foot range of movement in any direction.

Price, No. G523, Complete.....each \$4.96
 " Clamping Device, Extra 2 AUC 104..... " 1.32

No. G505L Sampson Access Lighting Fixtures

This fixture being clamped securely to the carriage beneath the cap screws of the gibb, makes easy and quick attachment.

Because it moves with the carriage, quick sight at points of operation is permitted.

Furthermore, the flexible arm may be moved to any required position beyond either side, above, or below the lathe.

This flexibility of movement is particularly adaptable to boring and setting-up operations.

The one hand, easy adjustment, stay-put qualities and lamp protection features, make it a necessity.

This excess fixture as shown has a range of 3 feet 6 inches in any direction in addition to carriage movement.

Price, No. G505L, Complete.....each \$4.20
 " Clamping Device, Extra 2 AUC 104..... " 1.32

Davis Sunlight Projectors

For Use with the 500, 400 or 300-watt Standard PS Bulb, Sunbeam Mazda C Lamps

MOUNTING.—Each projector equipped with cradle mounting suitable for either horizontal or perpendicular surface.

HOUSING.—16-gauge sheet aluminum stamping, 15 1/2 inches in diameter, with cast iron socket housing on top, and constructed so that projector may be made weatherproof with standard 15 1/8-inch clear, or colored, heat-resisting glass front.

FRONT GLASS.—To be supplied at additional cost as indicated in prices below. Clear, heat-

resisting glass, 15 1/8 inches in diameter.

REFLECTOR.—Polished aluminum; last operation in manufacture of housing indicated above is to spin same true to an efficient projective contour—the inside of this is then highly polished and becomes the reflector of this unit.

SOCKET.—Benjamin Composition Mogul No. 7905 with lamp grip.

WIRE.—Two leads of 14-gauge, extra flexible, heat-resisting and weatherproof wire.

MAXIMUM LENGTH OF AREA LIGHTED.—500 feet.

SPREAD OF BEAM.—39 degree.

RECOMMENDED MOUNTING HEIGHT.—15 to 50 feet.

FINISH.—Rust-resisting rubberized black enamel.

HEIGHT.—19 inches, over all.

DIAMETER.—15 1/2 inches, over all.

DEPTH.—9 inches, over all.

WEIGHT.—10 pounds, complete with glass front. Shipping weight, 25 pounds.

Price, with Front Glass.....each \$30.00
" without Front Glass....." 22.00

Davis Search-light Projectors

For Use with the 500, 750, 1000 and 1500-watt Standard G Bulb, Mazda C Lamps

Searchlight Base Mounted

MOUNTING.—Each projector equipped complete with combination base and bracket.

HOUSING.—Weatherproof, Arme-co Steel, 12½ inches in diameter, with rear door hinged at the side.

FRONT GLASS.—Clear, heat-resisting glass, 12½ inches in diameter.

REFLECTOR.—Glass, 11 inches in diameter, ground and polished true to contour on both sides. Silvered, coppered, and backed with heat-resisting compound which also prevents the copper and silver being attacked by gases or fumes of any kind.

FOCUSING MECHANISM.—Hand-operated from outside of projector.

SOCKET.—Benjamin composition Mogul No. 7905 with lamp grip.

WIRE.—Two leads, 14 gauge, extra flexible, heat-resisting, and weather-proof wire.

FINISH.—Rust-resisting rubberized black enamel.

HEIGHT.—20 inches when supplied with standard mounting equipment. Special mountings can be furnished, in accordance with requirements, at a slight additional cost.

DEPTH.—11 inches.

WEIGHT.—20 pounds. Shipping weight, 35 pounds.

Price.....each \$72.00

No. 1W Flood-light Projectors

For Use with the 1000 or 750-watt Standard PS Bulb, Sunbeam Mazda C Lamps

MOUNTING.—Each projector equipped complete with combination base and bracket.

HOUSING.—Weatherproof, cast-iron, 14 inches in diameter, with cast-iron front and rear doors hinged at bottom. This unit is also manufactured with the barrel of Armeo steel instead of cast-iron.

FRONT GLASS.—Clear, polished wire glass, 13½ inches in diameter, scored. **NOTE:** Clear, or colored, heat-resisting glass fronts can be furnished with this unit at a slight additional cost.

REFLECTOR.—Glass, 12½ inches, of two types: Hammered glass to project a great flood and eliminate glare, and clear glass to project a stronger and narrower flood. Each is silvered and coppered, and backed with a heat-resisting compound which also prevents the copper and silver being attacked by gases or fumes of any kind. Clear glass furnished unless otherwise specified.

FOCUSING MECHANISM.—Hand-operated from the outside of unit, and equipped with a locking nut.

SOCKET.—Benjamin Composition Mogul No. 7905 with lamp grip.

WIRE.—Two leads, 14 gauge, extra flexible, heat-resisting, flame-proof and weatherproof wire.

MAXIMUM LENGTH OF AREA LIGHTED.—1000 to 1500 feet.

SPREAD OF BEAM.—With hammered glass reflector, 24 degrees. With clear glass reflector, 18 degrees.

AVERAGE MOUNTING HEIGHT RECOMMENDED.—50 to 75 feet.

FINISH.—Rust-resisting rubberized black enamel.

HEIGHT.—28 inches, over all.

DIAMETER.—15 inches, over all.

DEPTH.—11 inches, over all.

WEIGHT.—60 pounds. Shipping weight, 80 pounds.

Price, No. 1W.....each \$68.00

No. 1W Base Mounted

No. G-5 Davis Beam-light Projectors

For Use with the 500-watt Standard, G Bulb Sunbeam Mazda C Lamps

No. G-5 Base Mounted

MOUNTING.—Each projector equipped complete with combination base and bracket.

HOUSING.—Weatherproof cast aluminum, 15 inches in diameter, with cast-iron front door hinged at side.

FRONT GLASS.—Clear, heat-resisting glass, assembled in such a manner as to make the unit weatherproof, 15¼ in. diameter. Also, furnished in colors—ruby, amber, green and blue at slight additional cost.

REFLECTOR.—Plain glass, 13¼ inches in diameter, silvered and coppered, and backed with heat-resisting compound which also prevents the silver and copper being attacked by gases or fumes of any kind.

FOCUSING MECHANISM.—Hand-operated from outside of unit, and equipped with a locking nut.

SOCKET.—Benjamin Composition Mogul No. 7905, with lamp grip.

WIRE.—Two leads of 14 gauge, extra flexible, heat-resisting and weatherproof wire.

MAXIMUM LENGTH OF AREA LIGHTED.—500 feet.

SPREAD OF BEAM.—19 degrees.

FINISH.—Rust-resisting, rubberized black enamel.

HEIGHT.—21½ inches, over all.

DIAMETER.—16½ inches, over all.

DEPTH.—8 inches, over all.

WEIGHT.—20 pounds. Shipping weight, 34 pounds.

Price, No. G-5.....each \$47.00

No. PS-5 Davis Flood-light Projectors

For Use with the 500, 400 or 300-watt Standard PS Bulb, Sunbeam Mazda C Lamps

MOUNTING.—Complete with combination base and bracket.

HOUSING.—Weatherproof cast-aluminum, 15 inches in diameter, with cast-iron front door hinged at side.

FRONT GLASS.—Clear heat-resisting glass, 15¼ in. diameter. Also furnished in colors—ruby, amber, green and blue at slight additional cost.

REFLECTOR.—Hammered glass, 13⅞ inches in diameter, silvered and coppered, and backed with heat-resisting compound which also prevents the silver and copper being attacked by gases and fumes of any kind.

FOCUSING MECHANISM.—Hand-operated from outside; equipped with locking nut.

SOCKET.—Benjamin Composition Mogul No. 7905 with lamp grip.

WIRE.—Two leads of 14 gauge, extra flexible, heat-resisting and weatherproof wire.

MAXIMUM LENGTH OF AREA LIGHTED.—500 feet.

SPREAD OF BEAM.—36 degrees.

FINISH.—Rust-resisting rubberized black enamel.

HEIGHT.—22½ inches, over all.

DIAMETER.—16½ inches, over all.

DEPTH.—8 inches, over all.

WEIGHT.—20 pounds. Shipping weight, 34 pounds.

Price, No. PS-5.....each \$47.00

No. PS-5 Bracket Mounted

No. G-250 Davis Beam-light Projectors

For Use with the 250-watt Standard, G Bulb Sunbeam Mazda C Lamp

No. G-250 Base Mounted

MOUNTING.—Each projector equipped complete with combination base and bracket.

HOUSING.—Weatherproof, cast-aluminum, 13 inches in diameter, with cast-iron front door hinged at side.

FRONT GLASS.—Clear, heat-resisting glass, 12½ inches in diameter, assembled in such a manner as to make the unit weatherproof. Can also be furnished in colors—ruby, amber, green and blue at slight additional cost.

REFLECTOR.—Glass, 11¾ inches in diameter, silvered and coppered, and backed with

heat-resisting compound which also prevents the copper and silver being attacked by gases or fumes of any kind.

FOCUSING MECHANISM.—Hand-operated from outside of unit, and equipped with a locking nut.

SOCKET.—Benjamin Composition Edison No. 7902 complete with lamp grip and two 24-inch leads of wire described below.

WIRE.—Two leads of 14 gauge, extra flexible, heat-resisting, and weatherproof wire.

MAXIMUM LENGTH OF AREA LIGHTED.—250 feet.

SPREAD OF BEAM.—24 degrees.

FINISH.—Rust-resisting, rubberized black enamel.

HEIGHT.—19 inches, over all.

DIAMETER.—14 inches, over all.

DEPTH.—8 inches, over all.

WEIGHT.—17 pounds. Shipping weight, 31 pounds.

Price, No. G-250.....each \$35.00

No. PS-2 Davis Flood-light Projectors

For Use with the 200-watt Standard, PS Bulb Sunbeam Mazda C Lamp

MOUNTING.—Each projector equipped complete with combination base and bracket.

HOUSING.—Weatherproof, cast-aluminum, 13 inches in diameter, with cast-iron front door hinged at side.

FRONT GLASS.—Clear, heat-resisting glass, 12½ inches in diameter, assembled in such a manner as to make the unit weatherproof; can also be furnished in colors—ruby, amber, green and blue at slight additional cost.

REFLECTOR.—Hammered glass, 11¾ inches in diameter, silvered and coppered, and backed with heat-resisting compound which also prevents copper and silver being attacked by gases or fumes of any kind.

FOCUSING MECHANISM.—Hand-operated from outside of unit, and equipped with a locking nut.

SOCKET.—Benjamin Composition Edison No. 7902, complete with lamp grip and two 24 inch leads of wire described below.

WIRE.—Two leads of 14 gauge, extra flexible, heat-resisting, and weatherproof wire.

MAXIMUM LENGTH OF AREA LIGHTED.—200 feet.

SPREAD OF BEAM.—43 degrees.

RECOMMENDED MOUNTING HEIGHT.—15 to 25 feet.

FINISH.—Rust-resisting rubberized black enamel.

HEIGHT.—20 inches, over all.

DIAMETER.—14 inches, over all.

DEPTH.—8 inches, over all.

WEIGHT.—18 pounds. Shipping weight, 32 pounds.

Davis Projection Units and Their Application

The Davis Projector consists of a standard, PS or G Bulb Mazda C lamp mounted in front of a parabolic reflector, all enclosed in a weatherproof case.

A focusing attachment is provided to regulate the projected beam. This regulator makes Davis Projection a practical and economical method of lighting large areas where it is not easy or desirable to install complicated or extensive wiring.

Davis Projection Units are manufactured in 8 standard types:

1. Search-light Projector
2. Flood-light Projector No. 1W
3. Beam-light Projector G-5
4. Flood-light Projector PS-5
6. Beam-light Projector G-250
7. Flood-light Projector PS-2
8. Utility Projector, Model RR
9. Sunlight Spot and Flood Light Projector

The advantages of Davis Projectors are:

- Ability to light evenly large areas at low cost.
- Suitability for emergency lighting or for lighting areas over which it is impractical to place wires.
- Portability, lending flexibility to the installation.
- Low installation cost.
- Ease of installation.
- Simplicity of maintenance.
- Unobtrusive in daytime.
- Weatherproof.
- Long-lived under the most severe or deteriorating atmospheric conditions.
- Safety in the presence of gas or oil fumes.
- Adaptability to base or bracket mounting, according to requirements.
- Simplicity of outside focus adjustment.

Applications

Advertising: As a means of illuminating bill-boards, display-windows, show-rooms, and signs; also for aerial and spectacular advertising.

Bathing beaches, arenas, play-grounds, ball parks, etc.

Buildings: Architectural exterior and interior; also for statutory, etc.

Construction: To allow a safe twenty-four hour working day in building, excavating, steel raising, tunnel and ship-ward work, oil rigs, etc.

Protection: Reveals obstacles in passages between buildings and in and around yards and extends the area under the watchman's eyes. The degree of protection to persons and property is increased, as is the effectiveness of policing.

Railroad: In railroad work, they are used extensively to illuminate roundhouses, turntables, classification yards, teaming yards, station platforms, emergency lighting, etc.

Type RCA Crouse-Hinds Imperial Incandescent Floodlight Projectors

Swivel Base, Quadrant Mounting—Hand Control

Heat-resisting semaphore lens in the front door and heat-resisting prism glass reflector on inside of the rear door are not affected by lamp heat, gases, rain or snow.

Case and door are cast iron, finished inside and out with baked-on enamel. Focusing mechanism is cast brass.

Designed to take 300 to 1000-watt, 110 or 220-volt, Type C Mazda lamps in a PS52 bulb. The lamp may be adjusted from the outside of the casing by turning two wing screws. The adjustment may be made vertically and horizontally, so that the beam of light may be concentrated or spread.

With 12-inch Semaphore Lens and 6-inch Prism Reflector—300 to 1000 Watts

Cat. No.	Style of Lens	Weight Pounds	Price Each
29845	Clear Semaphore	70	\$63.00
29841	Spread "	70	63.00
29843	Diffusing "	70	63.00

Type RCE Crouse-Hinds Imperial Incandescent Floodlight Projectors

Swivel Base, Trunnion Mounting—Hand Control

3/4 Front View

Rear View

Heat-resisting semaphore lens in the front door and heat-resisting prism glass reflector on inside of the rear door are not affected by lamp heat, gases, rain or snow.

Case and door are cast iron, finished inside and out with baked-on enamel. Focusing mechanism is cast brass.

Designed to take 300 to 1000-watt, 110 or 220-volt, Type C Mazda lamps in a PS52 bulb. The lamp may be adjusted from the outside of the casing by turning two wing screws. The adjustment may be made vertically and horizontally, so that the beam of light may be concentrated or spread.

With 12-inch Semaphore Lens and 6-inch Prism Reflector—300 to 1000 Watts

29846	Clear Semaphore	72	\$65.00
29842	Spread "	72	65.00
29844	Diffusing "	72	65.00

Type SDA Crouse-Hinds Imperial Incandescent Floodlight Projectors

Swivel Base, Quadrant Mounting—Hand Control

Mounted on a cast iron swivel base which permits it to be turned at will in any direction. It is also equipped with a quadrant, likewise of cast iron, which provides means for elevating or depressing the beam. Thus it is possible to turn the beam of light upon the object to be illuminated. Casing is made of black japanned, alloy-coated iron (rust-resisting), is weatherproof and ventilated to dissipate heat given off by lamp.

With 9 5/8-inch Reflectors—150 Watts

Cat. No.	Style of Reflector	Wt. Lbs.	Price Each

28623	Polished Aluminum	50	29.00

With 16-inch Reflectors—500 Watts

28714	Crystal Glass Mirror	90	\$62.00
28624	Nickel Plated Copper	82	37.00
28625	Polished Aluminum	82	35.50

Type SDE Crouse-Hinds Imperial Incandescent Floodlight Projectors

Swivel Base, Trunnion Mounting—Hand Control

Supported on trunnions with star-wheel for locking in position to hold the beam at any desired elevation. The casing is black japanned, alloy-coated (rust-resisting), is thoroughly weatherproof and ventilated to dissipate heat given off by lamp. The reflectors are true paraboloids; metal reflectors are spun over accurate steel forms, while glass reflectors are ground, buffed and polished on both surfaces. Backing on glass reflectors conforms to the navy standard.

With 9 5/8-inch Reflectors—150 Watts

Cat. No.	Style of Reflector	Shp. Wt., Lbs.	Price Each
29069	Crystal Glass Mirror	51	\$20.25
29070	Nickel-plated Copper	45	18.00

With 12-inch Reflectors—250 Watts

28688	Crystal Glass Mirror	60	\$36.00
28689	Nickel-plated Copper	54	32.00
28690	Polished Aluminum	54	31.00

With 16-inch Reflectors—500 Watts

28715	Crystal Glass Mirror	100	\$64.50
28711	Nickel-plated Copper	92	39.50
28712	Polished Aluminum	92	38.00

Type SDX Crouse-Hinds Imperial Incandescent Floodlight Projectors

Lever Control

Designed for river, harbor and pleasure craft and can also be used to advantage on watch towers. It has an effective range of 2000 feet and light can be elevated or depressed 45 degrees and revolved at will. The casing is black japanned, alloy-coated sheet iron. Pedestal is a substantial iron casting, finished with black japan. Reflectors are true paraboloids, metal reflectors being spun over accurate steel forms, while glass reflectors are ground, buffed and polished on both surfaces. The backing on these glass mirrors is in accordance with the Navy standard.

Resistance can be furnished for operation on voltages other than 105-130 volts.

Spread and diffusing glasses for producing wide-angle beams will be furnished on request.

With 12-inch Reflector—250 Watts

Cat. No.	Style of Reflector	Wt. Lbs.	Price Each
29779	Crystal Glass Mirror	73	\$122.00
29780	Nickel-plated Copper	70	118.00
29781	Polished Aluminum	70	117.00

With 16-inch Reflector—500 Watts

29830	Crystal Glass Mirror	91	\$150.00
29831	Nickel-plated Copper	83	125.00
29832	Polished Aluminum	83	123.00

Prices do not include incandescent lamps.

Type SDLN Crouse-Hinds Imperial Incandescent Floodlight Projectors

Stationary Mounting, Sheet Steel or Copper Case Lever Control

Type SDLN is to be mounted on the roof of the pilot house or tower.

The projector revolves on a ball thrust bearing enclosed in a water-shedding housing.

The lever control for vertical adjustment locks automatically in any position within its range of movement. The horizontal adjustment is independent of, but may be operated with, the vertical adjustment.

The number boxes are water-tight, will take two 3-inch Arabic numerals, and a 40-watt Mazda lamp. These lamps are on an independent circuit.

The projector is fitted with a three-way focusing mechanism enabling accurate focusing.

Case is coated with black japan which is baked after application.

Extra length control stem can be furnished at an additional price.

With 16-inch Reflector—500 Watts

Style of Reflector	Steel Case			Copper Case		
	Wt. Lbs.	Cat. No.	Price Each	Cat. No.	Price Each	
Crystal Glass Mirror	190	29617	\$215.00	29623	\$230.00

Polished Aluminum	180	29619	188.00	29625	203.00	

Type RME Crouse-Hinds Imperial Incandescent Floodlight Projectors

Type RME is a new, rugged, cast-iron floodlight for portable use. It is to be used where it is desired to transport the light to the job. It is invaluable around railroad shops and yards where repairs must be made to heavy apparatus, and a strong light is necessary. It can be used to great advantage when working under cars and locomotives.

Finished with black japan, which is baked after application.

Prices do not include incandescent lamps.

Type RAS Crouse-Hinds Imperial Incandescent Floodlights

Porcelain Enameled Reflector with Cast-iron Door Frame 12-inch Reflector—75 Watts

Type RAS Floodlight

Enclosing Door and Frame for Type RAS Floodlight

Designed for suspension direct to a rigid conduit system and offers full protection against the accumulation of dirt and corroding vapors to both the incandescent lamp and the reflecting surface of reflectors. The reflector itself is a standard 75-watt RLM reflector which gives an ideal distribution for industrial purposes. It is of solid top type with the lamp receptacle entirely within the reflector. The reflector is enameled on both the inner and outer surfaces, the enamel being evenly applied in several coats. Especially designed for use with 75-watt Mazda C lamps, although 100 and 150-watt lamps may be used if desired.

Cat. No.	Description	Wt. Lbs.	Price Each
29808	Complete with Clear, Convex, Heat-resisting Glass	15	\$17.50
29809	Enclosing Door and Frame Only, for Type RAS Floodlight	15	10.00

Prices do not include incandescent lamps.

Type RM Crouse-Hinds Reflectors

With Clear Semaphore Lens

Type RM can be installed in any desired position. Light is projected at a right angle to the surface against which reflector is mounted. This reflector constitutes a durable and efficient lighting fixture for railroad roundhouses, turn-tables, ash pits, etc., as well as meeting illumination requirements in industrial plants. In steel mills, Type RM reflectors are used variously on larry, scale and bin-filling cars, to light runway where skip cars dump into

hopper at top of blast furnace, to give illumination for operators attaching peel at charging boxes; also to illuminate gauges and the approach tables in rolling mills, and to light crane yards.

One lighting system for roundhouses that has satisfactorily met every requirement involves the illumination of each aisle by three Type RM reflectors. Two of these reflectors are mounted on the front wall, about 8 feet from the floor.

For Series or Multiple Circuits

The New York State Highway Law requires illumination of all speed limit signs. The following is an excerpt from this law:

"Each city or village shall have placed conspicuously within 15 feet of the traveled portion of each main public highway where the city or village line crosses the same, or at a point within the limits of such city or village on such highway and within 15 feet of the traveled portion of every main highway where the rate of speed changes, on posts on both sides of the highways, at the

point where the speed limit is reduced, or changed, signs adequately illuminated between sunset and sunrise and of sufficient size to be easily readable by a person using the highway."

Possibly other states have similar laws, but whether or not such a law is in effect, the illumination of speed limit signs is desirable as it removes the opportunity of any driver using the excuse that he did not see the sign. This law, while perhaps not in existence in a good many states, will, doubtless, be adopted in the near future. Type HDA Projector was designed to illuminate these speed limit signs, and does so with excellent effect.

It is customary to connect these projectors to the street lighting circuits. This insures the illumination of the signs during the period required by law. When so connected it is unnecessary to employ an attendant to turn the lights on and off, individually.

Type HDA Projector, when furnished for multiple lighting circuits, is equipped with a push and pull socket mechanism, thereby permitting the use of any PS bulb up to and including the 200-watt PS-30 lamp, or GS bulb up to and including 150-watt G-25 bulb.

When projector is furnished for series circuits it will take a series lamp up to and including a 7.5-ampere in an S-24 1/2 bulb.

The series type of projector has been listed so that it can be purchased either equipped with a series standard film socket or a series regent Type C film socket. In this case the lamp socket is not adjustable as the focal point is fixed.

The Type HDA Projector has a sheet steel case. Furnished with 3 feet of duplex weather-proof wire.

The following lamps may be used:

Series Burning

Lumens	Bulb	AVERAGE VOLTS			
		4 Amperes	5.5 Amperes	6.6 Amperes	7.5 Amperes
600	S-24 1/2	11.0	8.1	6.8	6.3
800	S-24 1/2	13.9	10.0	8.4	7.8
1000	S-24 1/2	16.5	12.0	10.0	9.4

Multiple Burning

Watts	Volts	Bulb	Watts	Volts	Bulb
100	110-115-120	PS-25	100	220-230	PS-25
150	110-115-120	PS-25	200	240-250	PS-30
200	110-115-120	PS-30

Type HDA with 9 5/8-inch Reflector

29996	" Medium Screw Base Socket.....	18	21.00

Prices do not include incandescent lamps.

Forms S and M Crouse-Hinds Lenses for Imperial Projectors and Floodlights

Form S Convex Spread Lens Form M Convex Diffusing Lens

It is sometimes advisable to use certain light-control devices on floodlight projectors. The function of these light control devices is to change the spread of the beam of light in one or in both directions.

Form S convex spread lens is used for spreading the beam of light in one direction only. This lens is made in various sizes for all Crouse-Hinds Imperial Floodlight Projectors. The light rays are spread at right angles to the direction of the ribs, that is, when the ribs are vertical the beam is spread in the horizontal direction, but the divergence of the beam in the vertical is not changed at all. By loosening the clamping screws on the inside of the door the lens may be turned in any desired direction.

Form M convex diffusing lens spreads the natural beam of light in 2 directions.

These lenses are made of heat-resisting glass which will not crack due to temperature changes. They are generally convex in shape though flat lenses are supplied when grid doors are specified.

Crouse-Hinds Imperial Floodlight Projectors and Floodlights are all listed with clear front glasses. In the majority of cases clear, convex, heat-resisting front glass is the standard equipment, although, in certain cases where small wattage lamps are used, ordinary flat (not heat-resisting) glass is used. In cases where the standard equipment includes clear, convex, heat-resisting front glass, the projectors or floodlights may be equipped with convex, heat-resisting spread or diffusing lenses at an increase in price equal to the difference between the clear convex glass and the spread or diffusing convex lens as given below. However, when the standard equipment includes clear, flat glass, the prices given below must be added to the prices of the projectors if convex, heat-resisting spread or diffusing lenses are substituted.

Clear, Convex, Heat-resisting Front Glass

Cat. No.	For Types of Projectors	Diam. In.	Price Each
HL6800	SDA, SDE, and SDR, 9 3/8-inch	9 3/8	\$2.00
HL6813	RM, RME, and RMU, 10-inch	10	2.50

Crouse-Hinds Special Bases and Brackets

For Imperial Floodlight Projectors

No. HL6816 Wheel Base

There are cases where one of these special designs in bases or brackets is required for making the best installation of projectors. Each of these has been designed to meet a special type of installation as described in the following paragraphs.

Any of these bases and brackets may be used with either Type SD or Type SC projectors.

No. HL6816 is a large wheel base, 17 1/2 inches in diameter. This base is used principally on portable projectors so that they cannot be tipped over when set upon uneven surfaces.

No. HL6817 is a large pedestal base, 17 1/2 in. in diameter, with a pedestal of sufficient height to bring the center of the projector 4 1/2 feet from the base.

A base of this type is particularly suitable for construction work to replace the less powerful flare lamps.

No. HL6817 Pedestal Base

No. HL6818 Cross-arm Base

No. HL6820 Short Pole Bracket

No. HL6818 is a base designed for mounting on a standard wooden cross-arm. The stud of the base is 1 1/4 inches in diameter and will therefore fit any standard insulator pin hole. This stud is 6 1/2 inches long and is threaded back 3 inches so that it may be fastened securely to any cross-arm of standard dimensions, which are 3 1/2 by 4 1/2 inches or 4 by 5 inches.

No. HL6820 is a short pole bracket, 18 inches long. This bracket is made of bar iron 2 1/2 inches wide and 1/4-inch thick.

The pole ends of the bracket and brace are drilled for using 5/8-inch lag screws.

Cat. No.	Description	Wt. Lbs.	Add to Price of Projector
HL6816	Wheel Base		\$1.00
HL6817	Pedestal Base		2.00
HL6818	Cross-arm Base		.75
HL6820	Short Pole Bracket		5.00

The Moth and The Flame

AS moths fly to the flame, so dollar bills go where streets are brightest. That's a thought to make any man a strong advocate of a Great White Way in his city.

For brilliant lights are hard to resist. People flock to them—neighbors from the suburbs and folks from miles around. They see the new things on display, and they buy. The whole town benefits by the dollars nightly drawn to its Great White Way.

Wherever there are shops and theatres, restaurants and garages, street lighting is a sure way to build up trade. A safe way, too, for light is the arch-enemy of crime, the best accident insurance.

Think over these very practical advantages that go with the beautifying of your business streets.

One type of lighting standard that many cities use for their White Ways. Western Electric has other types, too.

KING ORNAMENTAL STANDARDS

“The World’s Standard of Comparison”

While ornamental lighting standards are primarily intended to give better lighting at night to streets, parks, and highways, yet another and as important a function is that they beautify both in the daytime and during the hours of darkness.

King designers have long studied street lighting in its relation to every type of location where ornamental standards may be used effectively. Design has been applied to King lighting standards from a practical as well as æsthetic standpoint. There is a purpose for design in lighting standards, and that purpose has been the fount of King creations.

It is important here, that we emphasize the scientific aspect of the design problem as applied to ornamental standards. It is not sufficient that a standard be merely ornamental, it must be a thing of beauty without sacrificing strength or economy of installation and upkeep. Beyond that it must be designed for permanency. It is upon these rocks of experience that so frequently the ordinary foundry wrecks the best of intentions.

There is a series of King designs for each type of location. These designs harmonize with every possible environment. From the extensive range of King designs, any city or town, any association of business men, or any park board contemplating an ornamental lighting system can select the particular design to harmonize with the architectural surroundings.

King ornamental lighting equipment is made in every known type; the single unit, 2-light cluster, combination pole and bracket, bracket and traffic and building newels. Whatever type is required, it may be had in the particular design preferred.

King Ornamental Standards
Flemish Design with Novalux Tops

No. 45A

No. 45B

No. 45C

The Flemish design introduces an element of extreme simplicity in combination with an accepted form of decorative style. This style was largely used during the Colonial days for metal objects such as andirons, chandeliers, candlesticks and similar articles and is quite appropriate for the decorative treatment of modern street lighting in American cities.

Graceful lines have been combined with sharpness of detail and smoothness of surface. It has a touch of simple elegance.

The success of the first small standards was so pronounced and the unanimous approval of the critical so emphatic that this design has been made available in 3 sizes, thereby enabling one to select a size which would harmonize with the buildings and a height which would give proper distribution of light on the streets.

Factory finish: 2 coats of black mineral paint.

King Ornamental Standards

Flemish Design

King Flemish No. 45

This standard is especially recommended for installation on wide streets with high buildings and along parkways and boulevards where the posts will be spaced a considerable distance apart. The lamp center height is correct to give an even distribution of light when the larger size lamps are used.

King Flemish No. 59

This is the ideal size standard for the average city which does not have unusually wide streets or extremely high buildings. It is of such proportions as to present an artistic effect, which can be obtained only when each member harmonizes

and blends with the other and with the surroundings on the thoroughfare.

King Flemish No. 44

The distinctiveness and beauty of the Flemish design is carried out in every respect in this standard. It is especially suitable for installation in smaller cities and towns where wide streets and high buildings do not predominate. It, however, has sufficient size to be in keeping with its general surroundings and is of ample height to properly and efficiently illuminate average streets and building fronts.

King Ornamental Standards

French Design with Novalux Tops

No. 62D

This French design was evolved with the express purpose of producing an ornamental standard possessing those characteristics which will appeal to persons whose artistic taste is not confined to the conventional classic post with a fluted column surmounted by the usual foliated capitol and plain ball globe. The glass canopy, ornamental globe band, urn shape globe, ornate holder, panelled column and well proportioned base, all bear a characteristic relation to each other and produce a complete unit harmonizing in every respect.

When illuminated, the silhouette of this French design is particularly graceful and attractive. All dark spots and objectionable shadows are entirely eliminated and from an artistic standpoint the existing beauty of the thoroughfare is greatly enhanced.

For blending into the changing background of a street and harmonizing with all types of architecture, for lending dignity and beauty to boulevards and elegance to parkways, this French design is recommended.

Factory finish; 2 coats black mineral paint.

King French No. 62

This design is offered to those cities planning a beautiful and intensive system of whiteway illumination. When large capacity illuminants are installed, it was found necessary to provide larger glassware than is ordinarily used, so that all the light produced may be utilized.

It is also necessary to increase the mounting height of the glassware so as to give the desired intensity and lighting effect with good distribution. Increasing the size and height of the glassware means an increase in the dimension of the supporting standard.

Most careful attention has been given to the increased dimensions of the design in order to insure a symmetrical lighting unit with proportions perfect in every respect.

King French No. 61

Both from an artistic and engineering standpoint, King French No. 61 will meet every requirement of an ideal lighting standard unless the conditions encountered in planning the system are unusual. Cities with streets and boulevards of average width and towns with buildings of average height are best served by an ornamental lighting standard of this size and design. Many cities throughout the country whose system of street lighting has attracted attention are using this standard because of its artistic value and general adaptability.

King French No. 63

Under certain conditions a lower lamp center than that of No. 61 will be recommended by illumination engineers, and for this reason this height of standard is offered to those who prefer this beautiful French design. This standard has ample height to properly distribute the light in a most efficient and pleasing manner when lamps of smaller capacity are used on streets where the buildings are of average height.

No. 62E

King Ornamental Standards
French Design

King French No. 62

This design is offered to those cities planning a beautiful and intensive system of whiteway illumination. When large capacity illuminants are installed, it was found necessary to provide larger glassware than is ordinarily used, so that all the light produced may be utilized.

It is also necessary to increase the mounting height of the glassware so as to give the desired intensity and lighting effect with good distribution. Increasing the size and height of the glassware means an increase in the dimension of the supporting standard.

Factory finish; 2 coats black mineral paint.

King French No. 61

Both from an artistic and engineering standpoint, King French No. 61 will meet every requirement of an ideal lighting standard unless the conditions encountered in planning the system are unusual.

King French No. 63

Under certain conditions a lower lamp center than that of No. 61 will be recommended by illumination engineers and for this reason this height of standard is offered to those who prefer this beautiful French design. This standard has ample height to properly distribute the light in a most efficient and pleasing manner when lamps of smaller capacity are used on streets where the buildings are of average height.

King Ornamental Standards
Community Design with Novalux Tops

No. 17A

No. 17B

No. 17C

This King Community design was created for those who prefer a relatively plain standard, emphasizing graceful lines and well proportioned plain surfaces, instead of fluted columns and ornamental bases. This design has a large octagonal base which sweeps gracefully into a well proportioned tapered octagonal column. Surmounting the column is a beautifully modelled member which blends the column

into a suitable round support for the glassware. Taken as a whole, the base, column, holder, glassware and top ornament, produce an artistic and pleasing effect which would be impossible had the design not been most carefully worked out in every detail.

Factory finish; 2 coats black mineral paint.

King Ornamental Standards
Community Design

King Community No. 17

This standard has ample dimensions for installation in front of large buildings and sufficient height to the lamp center for large capacity lamps. It is a massive, gracefully, well proportioned standard and will add dignity and attractiveness to a thoroughfare.

King Community No. 16

This standard is suitable for white way lighting in the

smaller cities and villages, and for residence sections of large cities. It makes an attractive installation because it is pleasing in appearance, has ample dimensions and is well proportioned.

King Community No. 53

This size standard is particularly in demand where a beautiful small, plain post is desired. Especially suitable for lighting residence sections or the white way illumination of smaller cities and villages.

King Ornamental Trolley Pole Brackets

King Bracket No. 1002

This bracket was designed especially for trolley pole use. It is known to the trade as King's State Street Bracket. The bracket is gracefully built up and out from the side of the steel trolley pole, producing a neat and finished appearance. Enough ornamentation has been used to break up the plain surfaces. The bracket arm has ample dimensions to give massiveness and elegance. The pole plate is 48 inches long; the lamp center is 18 inches from the steel pole and the arm extends 24 inches overall. Can furnish this bracket with wall plate for mounting on building fronts, concrete posts or pillars at a slight additional cost.

This bracket is equipped with Form 12 Novalux Unit; consisting of an ornamental globe holder, 124 alabaster rippled globe, 1124 alabaster rippled canopy with ornate holder band and top ornament; either series film or mogul multiple socket, and all necessary screws for assembling.

King Bracket No. 1227

The design of this bracket harmonizes well with the varying styles of building architecture found along the streets. The ornamentation, while not elaborate, gives the bracket a most pleasing appearance and favorable mention has been accorded its graceful lines and attractive appearance when illuminated at night.

This bracket can be made individual for a city by casting a monogram on it. A panel suitable for such a monogram or emblem is provided on each side of the arm, and on an order of fifty or more, this design with a raised, gold letter monogram cast on both sides without additional charges will be furnished.

This bracket is equipped with a Form 8 Novalux Unit, which consists of a globe holder of ornate design which harmonizes with the bracket arm, 109 alabaster rippled globe, 1109 alabaster rippled canopy with holder and top ornament; either series film or mogul multiple socket, and all necessary bolts and screws for assembling.

NOTE.—Brackets painted black, furnished complete with necessary bolts and clamps for installation, lamps and wiring not included. When ordering give exact outside diameter of the trolley pole section at point where pole plate and clamps attach.

A 6-inch (6 $\frac{5}{8}$ -inch outside diameter) tubular pole section is generally standard size.

King Ornamental Trolley Pole Brackets

King Bracket No. 1231

This design will exactly answer all requirements where a scroll type bracket is desired. It makes an excellent looking installation and has been adopted in several cities with entire satisfaction.

All ornamental parts are well defined and the leaf design has been carried throughout the different parts. The bracket clamps to the pole with two sets of ornamental clamp members. The top clamp is threaded to receive a 2 $\frac{1}{2}$ -inch tube arm section and the bottom one serves as a support for the handsome one-piece cast scroll.

On the outer end of the tube section, an appropriate torch effect globe holder is provided for the support of the diffusing glassware. The bracket is waterproof in construction and designed for enclosed wiring.

Equipped with a Form 8 Novalux Unit, 109 alabaster rippled globe, 1109 alabaster rippled canopy, with holder and top ornament; either series film or mogul multiple socket and all necessary bolts and screws for assembling.

Where Bates Expanded trolley poles are being used, attaching clamps can be furnished at a slight additional cost.

King Bracket No. 1005

This bracket is similar to No. 1231 but is intended for use where larger size lamps will be adopted, and where a more intense illumination is desired. A Form 9 Novalux Unit, including an ornamental casing for holding the glassware, 107 alabaster rippled globe, 1107 alabaster rippled canopy with holder and top ornament is furnished with this bracket. Either series film or mogul multiple socket and all necessary bolts and screws for assembling.

NOTE.—Brackets painted black, furnished complete with necessary bolts and clamps for installation lamps and wiring not included. When ordering, give exact outside diameter of the trolley pole section at point where pole plate and clamps attach. A 6-inch (6 $\frac{5}{8}$ -inch outside diameter) tubular pole section is generally standard size.

Ornamental Concrete Posts

All concrete lighting standards will be furnished in gray granite (Mica Spar) and gray Portland cement. Other colors must be especially arranged for. White cement may also be used.

Steel reinforcing rods cast entire length of post and extending below the base for anchoring to foundations.

The finish of granite and Mica Spar gives a pleasing and artistic effect both by day and night.

Railway Signal Posts

Concrete posts for signal systems, crossing sign posts and other special posts are made according to the requirements of the purchaser. Prices quoted on receipt of blue prints.

Special Designs and Products

At times special designs are required by committees and engineers. We will quote on special work and assist in designing lighting standards and other pre-cast concrete work.

Type H

For gasoline stations, bridge railings, building entrances and all installations of similar nature where a post is required for mounting on concrete or brick piers.

Height, 3 feet.

Type H

**Ornamental Concrete Standards
Chicago City Beautiful**

Height—11 Feet

Octagonal or round head furnished—please specify. For commercial and residence street lighting. Form No. 9 General Electric Unit is recommended for this standard. Adopted by the City of Chicago and many business associations for community lighting.

Octagonal

Residential Concrete Standards

City of Chicago Type

This is a small concrete post, very suitable for residential districts of or adjacent to cities. It is used extensively in the city of Chicago for residential lighting.

Height, 11 feet; to center of light, 12 feet 6 inches.

Height—10 and 12 Feet

For residential street lighting the ten-foot height is recommended. Also recommended for private estates and small parks. Especially adapted to the ornamental lantern lighting unit.

The twelve-foot height for wide streets, boulevards and main highways where a post of heavier construction is required for safety and to harmonize with the surroundings.

Ornamental Concrete Standards

Type A

Height, 10 Feet

For all street lighting where a post of slender design is preferred.

Ornamental Concrete Standards

This is a 13-foot octagonal concrete post with Form 12 Novalux lighting unit.

Saratoga[®] and lantern units are recommended for this post. Furnished with or without butt foundation.

Type C

Height, 7 Feet

For safety islands, driveways, bridge railings, building courts, gasoline stations.

Both the ornamental lantern and advertising globes are used to a great extent in this type.

Safety Islands

A safety island of strong design made to withstand heavy shocks. On account of the natural light gray color of the post the attention of the motorist is attracted to it both day and night.

Ornamental Concrete Posts
Chicago—Garfield

Used by the South Park System, Chicago, for Garfield Boulevard. Height of post, 13 feet; to center of light, 14 feet 6 inches.

Ornamental Concrete Standards
Chicago—Grand

Used by the South Park System in Chicago for Grand Boulevard. Has great strength and a design which is unusual. The embossed design above base and fluted column are exclusive features. Height of post, 14 feet; to center of light, 15 feet 6 inches.

Street Lighting Ball Globes

SNOW-WHITE.—Snow-White is a beautiful pure white diffusing glass. It illuminates perfectly, uniformly and does not show any lamp filament nor bright spot on the globe surface. The daylight appearance recommends it strongly for all Street Lighting Systems.

INLITE.—Inlite is a fine semi-translucent glass and very white for this character of glass. Used where it is necessary to match existing glassware of this type—the kind which shows the lamp filament.

INLAND C. R. I.—Inland C. R. I. (Crystal roughed inside) is a clear glass sandblasted inside.

INLAND RUBY AND GREEN.—Inland Ruby and Green are solid and true colored glasses.

SHIPPING.—Glassware is shipped at Consignee's risk. The common carrier is responsible for safe delivery. Any claims should be made immediately to the latter.

No. 257649 Form 15 Novalux Traffic Lighting Units

Straight Multiple—100-125 Volts

View of Unit with Door

The Form 15 Novalux Unit is a type of light especially designed to illuminate the traffic officer.

Suspended on a guy wire stretched between 2 poles at a street crossing, this unit hangs directly above the officer and throws him into strong relief to approaching traffic at a distance up to 1500 feet. In this flood of illumination, which is a concentrated beam of light equivalent to 5500 c-p., he effectively guides approaching car drivers and forestalls accidents at night as he forestalls accidents in the daytime, efficiently. Thus the Novalux Unit is a practical aid to automobile drivers and traffic policemen alike, by affording an

essential means of protection to life and limb and property at difficult street crossings after dark.

This is a straight multiple type unit equipped with Type I-20 parabolic silvered and coppered glass reflector and clear glass door. The unit complete includes the hanger for span wire suspension to which it is rigidly fastened.

Cat. No.	Wattage of Lamp	Shp. Wt., Lbs.
*257649	100, 150 or 200	50

*Catalogue number does not include Mazda lamp.

Prices upon application.

Novalux Bracket and Center Span Highway Units

The extended use of the automobile has brought with it a serious and irritating problem. Each car must provide sufficient road illumination to permit stopping or changing the direction of travel. The unrestricted light beams, however, are a serious menace to the safety of other drivers or pedestrians. The severity of the effects of glare is greatly increased in the case of headlights because of the extreme contrast with the dark surroundings. First, local ordinances and finally, state laws have been passed to regulate not only the size of the head lamp but the direction of its rays. It is impossible however, strictly to enforce these conditions, and as a result the danger from glaring headlights is still a menace.

The Requirements

The failure of other methods induced a study of the problem from another viewpoint. Highway lighting must be uniform and general. The road must furnish the light and not the automobile. On that basis a lighting system would embody many of the characteristics of an ordinary street lighting system with certain modifications to meet the new conditions imposed.

1. The intensity of light on the road surface must be fairly uniform.
2. The rays of light must be confined to the road surface and not spread out equally in all directions.
3. The height of the lamp must be sufficient to remove the light source from the normal line of vision.
4. The fixture must accommodate a fairly small lamp and yield a high degree of illumination. It must apply the utmost efficiency in distributing this illumination by bending all upward and outward rays.

The Fixture

The Novalux Highway Unit is a double searchlight. It consists of two sets of parabolic reflectors with the Mazda lamp mounted in the center and filament at the focal point of both sets. Each set has three white-enamelled steel reflectors. The inside reflector intercepts the light rays that would ordinarily go beyond the outer edge of the outside reflector and directs it toward the road surface. There are openings in the lower part of all reflectors so that proper illumination will be given below the fixture.

For best results, these openings should be parallel with the road. It is for this reason that the unit is supported by a universal bracket instead of a long rigid pipe. This bracket permits adjustment for space between the post and the side of the road and also for curves and hills.

Recommended Spacing

State Highway with Dense Traffic	200 to 300	Feet Spacing
" " Less	300 " 400	" "
Improved Road	400 " 500	" "
Country Road	500 " 600	" "
Mounting Height	30 Feet or More above the Road Surface	
Size of Lamp	250 Candlepower

**Form 11 Novalux Projector Type
Traffic Lighting Units
Straight Multiple—100 to 125 Volts**

View of Unit Showing Unit Equipped with Clear Glass

The Form 11 Novalux Unit is a type of light especially designed to illuminate the traffic officer. Suspended on a guy wire stretched between 2 poles at a street crossing, this unit hangs directly above the officer and throws him into strong relief to approaching traffic at a distance up to 1500 feet. In this flood of illumination, which is a concentrated beam of light equivalent to 5500 c-p, he effectively guides approaching car drivers.

Made with a genuine glass reflector, heavily silvered and with a copper backing. This glass mirror, which is the highest type of reflecting surface obtainable, makes it an efficient unit. Owing to the special process of covering the silver with copper plating, the silver cannot rub off, crack or peel. Enclosed, top and sides in a conical-shaped water-tight housing which protects it against all weather conditions, rain, snow, sleet and the like.

Supplied with or without a door. The door is of glass and protects the lamp against dust and smoke and is easily cleaned.

Holophane Refractors for Novalux Brackets and Center Span Highway Units

No. 259402 Wide Beam Refractor

No. 260509 Narrow Beam Refractor

To meet the requirements for highway lighting, the Novalux Highway Units with Holophane Refractors have been developed, for use with Mazda series lamps.

The illustrations show the 2 types of Holophane refractors. Each refractor comprises 2 pieces. The inside piece carries horizontal refracting prisms on its outer surface which turn the upward light rays downward and the downward light rays upward, to obtain the correct distribution of light in a vertical plane. The outside piece of the refractor carries vertical refracting prisms on its inside surface redirecting the light laterally or sideways to obtain the correct lateral distribution of light. These 2 pieces of refracting glass are nested and clamped together, enclosing the prisms within a dust-tight chamber. When the refractor is mounted in the fixture, the complete lighting unit is essentially dust-tight and the outer surfaces smooth and nearly vertical.

It is important that the refractor always be oriented properly with reference to the road so that the beams of light will be directed onto the roadway and not out into the fields. To insure proper orientation, 3 notches, unequally spaced, are provided in the flange of the refractor and these engage corresponding lugs in the holding ring.

When the fixture is properly mounted on the pole with reference to the roadway, the glass cannot be inserted in any other than the correct position.

Prices upon application.

Form 6 Novalux Pendent Units

The Form 6 units embody the very latest ideas in design, both of an artistic and mechanical nature.

They are made for use with the 5.5, 6.6 or 7.5 amp. straight series Mazda lamps and for use with the 4000-lumen 15 amp., 6000-lumen and 10000-lumen 20 amp. Mazda series lamps. The units for operating the high candle-power lamps are equipped with self-contained auto-transformers so that they can be operated on standard constant current circuits of either 6.6 or 7.5 amperes.

The 6000-lumen 20-amp. unit has a tap for a 4000-lumen 15-amp. lamp. The 10000-lumen 20 amp. unit has a tap for a 6000-lumen 20 amp. lamp. In selecting a unit, provide for future improvements by being able to operate the next larger size of lamp.

Characteristics

The high operating temperature of these lamps has been compensated for by ventilating the earlier fixture designs. However, if the exposed surfaces of the fixture and glassware provide sufficient area, ample cooling can be provided in an air-tight unit by radiation and conduction. Such a unit is dustproof, bugproof and moistureproof.

Construction

The Form 6 Novalux unit is air-tight. Internal temperatures are so low that life of lamps is in no way lessened. Advantages are obvious; when an enclosing globe is used, no dust can collect in lamp bulb or on inner surface of globe. The loss of light due to accumulation of dirt on these surfaces runs as high as 40 per cent even where units are cleaned once a month. The elimination of dust and dirt is a great stride toward higher efficiencies and better service. Such a fixture is absolutely watertight and bugproof.

Types

The following combinations of light distributing equipment can be used with the Form 6 Unit:

1. No. 87 LIGHT CARRARA OUTER GLOBE. Recommended for secondary business districts where the spacing is close and where it is desired to direct a certain amount of light upward.
2. No. 87 LIGHT CARRARA OUTER GLOBE AND 20-IN. REFLECTOR. Recommended for residential districts where the spacing is not over 250 ft.
3. No. 120 LIGHT ALABASTER RIPPLED GLOBE. Recommended in place of the No. 87 Globe.
4. HOLOPHANE BOWL REFRACTOR AND 20-IN. REFLECTOR. Recommended for the lighting of main thoroughfares and residential districts where the spacing is over 250 ft.
5. HOLOPHANE BAND REFRACTOR AND 20-IN. REFLECTOR. Recommended as an alternative to the bowl type for installations where it is desirable to have an inconspicuous piece of glassware.
6. HOLOPHANE DOME REFRACTOR AND RIPPLED OUTER GLOBE. Particularly recommended for all classes of lighting where bowl or band refractors have been used in the past.
7. No. 125 LIGHT ALABASTER DIFFUSER. This combination is offered as an alternative to those with refractors. The No. 125 bowl diffuser can be substituted for either the bowl refractor or 8 1/2-inch band refractor using the same holder. It gives a useful light distribution with an attractive sparkling effect.

Rippled Globes

The rippled globe has minute protuberances and depressions in its inner surface. This breaks up the light, provides adequate diffusion. The absorption is practically that of clear glass.

The rippled globe is superior to the ordinary diffusing globe in that:

1. Its efficiency is 15 to 30 per cent higher.
 2. Its appearance is better since it is the only glass which lends sparkle to the Mazda lamp.
 3. It permits the use of the Holophane dome refractor.
- When the rippled globe is compared with the bowl refractor, the former is found to have the following advantages:
1. More light—15 per cent more total lumens.
 2. Less absorption during operation.
 - One surface exposed to dust and smoke instead of three.
 3. Uniform distribution.
 4. Improved appearance.
 - A larger secondary source of light.
 - Sparkling—not dead.

Form 1 Novalux Industrial Lighting Units

Description

The Form 1 Novalux fixture (canopy type) is a lighting unit designed for industrial service. These units have been referred to as the Hog Island fixtures because the first large installation of them was made at the American Shipbuilding Corporation, Hog Island, Pa.

The fixture consists of the Form 1 Novalux top and the luminous arc canopy and globe. This combination permits the use of a band refractor large enough (10½ in.) to accommodate the 1000-watt Mazda "C" lamp. An internal reflector may be used in the place of the refractor and, when this is done, the fixture may be equipped with either a clear or a diffusing globe.

In installations where the fixture is to be hung in such a position that light is wanted on only one side, a suitable globe is furnished. In this case half the globe is silvered and copper coated and is thus converted into a mirror reflector 180 degrees wide. Globes of this kind are used largely around sides of shipbuilding ways and also around the outer edge of foundries and other large areas where important work is being done.

The Form 1 industrial unit is a straight multiple fixture and no room is provided inside for an auto transformer.

The top of the lamp can be arranged for either eye suspension or bracket suspension.

These units can be furnished for operating 300-, 400-, 500-, 750- or 1000-watt lamps but, when a large area is to be lighted, it is important to install a light source of very high candle-power.

At Hog Island the units are mounted on poles 50 ft. high. Each unit is equipped with a 10½-in. band refractor, a No. 14 clear globe and a 1000-watt lamp. Four units are mounted on each pole so that the combined candle-power gives abundant illumination over an enormous area.

218210	Internal Reflector Cat. No. 308789 and No. 14 Diffusing Globe	31.25

Prices do not include brackets or Mazda lamps.

Type RO Automatic Constant Current Transformers

For Street Lighting—Pole or Station Mounting
2300 Volts—60 Cycles

Because of its construction accurate alignment is not necessary, and it may be installed at an angle of from 5 to 10 degrees from the vertical and still give perfect regulation. It is oil-cooled. The oil used is of a quality that will not freeze at 25 degrees below zero. This device permits direct connection to the line through an automatic time switch or a manually operated oil switch, thus eliminating the use of a control panel.

The secondary of the Type RO transformer is always connected to the lighting circuit and it is recommended

that the primary side be properly protected. For this purpose primary cut-outs Cat. No. 104227 should be used. These cut-outs should be installed back of the controlling switch.

Cat. No.	kW. Output	Secondary Amp.	Oil Gal.	APPROX. WT., LBS. INCLUDING OIL Net	Ship.
246268	1.0	6.6	20	400	550
246269	2.0	6.6	25	550	750
246270	3.0	6.6	25	600	800
246271	5.0	6.6	30	700	900
246272	7.5	6.6	40	725	925
246273	10.0	6.6	40	750	950
257347	15.0	6.6	60	1060	1300
257348	20.0	6.6	60	1100	1400
257349	25.0	6.6	110	2000	2300
257350	30.0	6.6	110	2000	2300

†kW. output at unity power-factor load.

‡No. 10-C oil is regularly supplied and included in the price. If transformers are to be operated where the temperature does not fall below freezing, No. 12 Transil oil may be used and from the net price of the transformer should be deducted an amount based on the number of gallons used at 10 cents per gallon.

Suspension hooks are furnished with all Type RO transformers, except 15 and 20-kw. sizes.

Subway Type RO Constant Current Transformers

For A.C. 6.6 Amperes Series Lighting Circuits

‡2300 Volts, 60 Cycles

The Subway Type RO Transformer is almost identical with the pole type, except that it is enclosed in a specially designed waterproof tank. The electrical and operating characteristics are the same also, except that the primary power-factor has been improved to 80 per cent. These transformers are available in the same type of construction and kw. ratings as the pole type in sizes from 1 to 20 kw. It is necessary, however, on the 25 and 30 kw. size subway transformer to construct it in a double-deck type, due to the necessity for the transformers to be narrow enough to be lowered and installed in a manhole, the cover of which is only 32 inches in diameter, maximum. The 4 leads, are

each brought out at a separate terminal, the terminals being spaced equally on the outer surface of the tank. The weight is a small percentage increase over the weight of pole Type RO. The size and the amount of oil, especially on the larger sizes, is somewhat less than is required for a similar rated pole type.

These new transformers are to be standard for 2300-volt, 60-cycle 6.6 rating but may be furnished for 25, 30, 40 or 50 cycles with primary voltages from 13,500 down to 110 and with secondary currents varying from 2.5 to 30 amperes.

Lightning arresters are recommended to be used on all sizes on both the primary and secondary for protection, the same as on the pole type. Cutouts may be used but are designed for aerial service and are not subway type devices.

All transformers have single circuit secondaries.

273696	30	18.70	75	2080	2380	1750.00

*In order to compensate for ohmic and reactive losses in a straight series load circuit and fluctuations of voltage or frequency in the supply circuit, all of these transformers have sufficient additional load carrying capacity over normal kw. output rating.

†For special voltages other than 2300 or double voltages, 6.6 or 7.5 amperes, 60 cycles, add 10 per cent.

For 50 cycles use 60-cycle prices.

For 25, 30 or 40 cycles, 2300 volts, 6.6 or 7.5 amperes, add 20 per cent.

For special voltages other than 2300, 6.6 or 7.5 amperes, and 25, 30 or 40 cycles, add 25 per cent.

For 7.5 ampere secondaries use 6.6 ampere prices.

For special secondary current ratings other than 7.5 amperes, information will be furnished upon application.

Type RV Series Constant Current Transformers
60 Cycles, 2300 Volts

Alternating current is generally supplied at constant potential but when lamps or other apparatus requiring constant current are used it is necessary to provide some means for transforming from constant voltage to constant current. This change must be made in the most efficient manner and is accomplished with the Constant Current Transformer.

These transformers are guaranteed to regulate from full load to no load and to maintain the current constant within one per cent above or below the normal current rating for which they were designed. This is an essential feature because in a series lighting system any excessive variation in current will cause the lamps to burn out.

The Kw. output is at unity power factor load.

In order to compensate for ohmic and reactive losses in the load circuit and fluctuations of voltage and frequency in the supply circuit all transformers of this type have sufficient additional load carrying capacity above rated KW output rating.

All transformers have single circuit secondaries but the 40, 50, 60 and 70 kw. size may be operated multi-circuit.

Prices of constant current transformers for other commercial voltages, frequencies or secondary currents will be quoted upon application.

Series Panels for Incandescent Systems

*2200 Volts, 25 to 140 Cycles

Standard panels are blue Vermont marble, (right reserved to furnish marble or compound at option unless otherwise specified) 1 1/4 inches thick mounted on a self-supporting frame work of 1-inch pipe, 64 inches high. The primary switches are of the tubular expulsion fuse type and the secondary switch of the plug type. All instruments and meters have the standard dull black finish and the supporting frame work a black Japan finish.

Type RV Series Constant Current Transformers

FK-41 Oil Circuit Breaker Panels

For 1 Transformer and 1 or 2 Lamp Circuits

Type RF Automatic Substation Constant Current Transformers

For A.C. 6.6 Amperes Series Lighting Circuits

2300 Volts, 60 Cycles

Front View without Wire Cage

PANEL EQUIPMENT:

- One ammeter, Type R-6, 5-amp. with movable marker.
- Two or three oil circuit breakers, Type K-41 non-automatic d-p.s-t. 4500-volt 60 amperes—mounted on back of panel.
- Two fuses s-p., 2500-volt—mounted on an insulating base on supports back of panel.
- One current transformer.
- One or two card holders.
- One name plate.

WATTHOUR METER EQUIPMENT:

- One watthour meter, Type IS-4, 110-volt, 5-ampere single-phase.
- One current transformer, Type W-12.
- One potential transformer, 2200/110-volt, 50-watt, 60-cycle with fuses.

For 2 Transformers and 1 Lamp Circuit per Transformer

PANEL EQUIPMENT:

- Two ammeters, Type R-6, 5-amp. with movable marker.
- Four oil circuit breakers, Type K-41 non-automatic d-p.s-t. (2 primary and 2 secondary).
- Four fuses, s-p., 2500-volt mounted on 2 insulating bases on supports back of panel.
- Two current transformers.
- Copper connections back of panel.
- Two card holders.
- Two name plates.

WATTHOUR METER EQUIPMENT:

- Two watthour-meters, Type IS-4, 110-volt, 5-amperes single-phase.
- Two current transformers, Type W-12.
- Two potential transformers 2200/110-volt, 50-watt, 60 cycles with fuses.

All previous station Type RV constant current transformers have been so designed that it is necessary to latch the moving coil apart so that in starting the operator would have to release the moving coil and allow it to drop to load position to prevent a current surge in the main series circuit.

The Type RV transformer requires the attention of an operator at least twice in every 24 hours and therefore it is desirable on account of the advent of the automatic substation to eliminate this feature if possible, even at the expense of a slight reduction in operating characteristics from the Type RV.

Realizing the growth in popularity of the outdoor automatically regulated transformer, viz.: Type RO, it is quite natural that an effort should be made to produce a transformer along the same general characteristics as the Type RO, but for indoor operation where no attendants are available and the presence of oil is undesirable. A new transformer has been designed which is essentially the same as the Type RO but is air-cooled and has no oil except the small amount used in the dashpot for damping purposes.

This new transformer is known as Type RF and can be built in practically any capacity and for any commercial voltage, frequency, and secondary current but it is recommended that on account of the high secondary voltage, capacities not exceeding 40 kw. be used.

Sizes from 25 to 40 kw. are furnished with multi-circuit secondary.

The operating characteristics are almost identical with the Type RO transformers except the full load primary power-factor which is 80 per cent.

This Type RF Transformer has 100 per cent more inherent reactance than the Type RV and therefore under practically any condition of load it gives better protection to modern lamps. The outfit is so designed that it can be started up automatically with coils together with only one lamp on the circuit regardless of capacity of transformer, and the current surge being slight will not be sufficient to destroy the lamp.

The weight and size is approximately 10 per cent greater than a similar rated Type RV.

These new Type RF Transformers have sufficient additional capacity to compensate for line reactance, resistance losses and fluctuations in primary voltages and frequency when operating with a straight resistance load.

Prices upon application.

**Type SL Series Transformers
For Street Lighting**

Pole Type

The Type SL transformer is used for supplying current to one or a small number of lamps connected in series and located where the high potential of the ordinary constant current series circuit would be objectionable.

The field for this transformer necessarily lies in the vicinity of constant current series circuits as it is designed to operate from a circuit where the current is held constant.

Certain classes of lighting require lower potential than that obtainable from series arc or incandescent circuits and, to provide for this, companies would be compelled to run multiple circuits from

the Central Station, often at a considerable expense, if it were not for the Type SL transformer.

Some of this low-voltage lighting is supplementary to the regular street lighting system and, filling the same function, it is desirable to control it simultaneously with the streetlights. The Type SL transformer affords an ideal method for this control as the low-voltage circuit is turned on and off with the closing or opening of the main constant current transformer circuit.

Some of the places where these transformers can be used to advantage are:

1. In isolated side streets or alleys where it is desired to install a few series incandescent lamps.
2. On poles, elevated structures, etc., where it is expedient to place a series circuit but where high potential would be objectionable.
3. On bridges.
4. In underground circuits leading to ornamental poles.
5. In installations for fire alarm boxes, police boxes or letter boxes.
6. For lighting isles of safety.
7. For house lighting near series circuits where constant potential is not available.

Subway Type

The connections of the Type SL are shown in the accompanying diagram.

The primary winding is connected in series with the main series circuit so that under all conditions of load on the secondary, the primary carries the full current of the main circuit which is maintained at its normal value by a constant current regulating device.

In order to limit the open circuit voltage on the larger sizes, a protective device is connected in multiple with the secondary of the transformer. The

Connections of Type SL Transformer with Protective Device

protective device is a film cut-out similar to the standard film cut-out used in connection with series incandescent lamps but having a breakdown voltage in excess of the secondary load voltage of the transformer. When the secondary circuit becomes open-circuited, the impedance voltage of the transformer builds up until the film breaks down thus short circuiting the secondary winding. The transformers will operate on short circuit indefinitely.

The open circuit voltage of the small transformers is limited by the design of the magnetic circuit which permits the saturation of the iron with no current in the secondary.

Type IL Series Transformers

For Operating 6.6, 15 and 20-ampere Mazda Series Lamps on A. C. Constant Current Circuits 60 Cycles

Ornamental Post Type

Ornamental Post or Subway Type

Aerial Type

These series transformers allow the use of high efficiency series lamps where high potential is impracticable and unsafe. No film cutout is required since each lamp is independent of the others in the circuit. In case of an accident to one or more, the remainder of the lamps on the circuit burn without interruption.

They protect the lamps from surges in the line.

They are a valuable adjunct to "Safety First" in ornamental street lighting, because they insulate the pole and lamp from the high tension series circuit and permit the use of high efficiency series lamps in business districts where ordinances prohibit high tension wires above the street surface.

For use with pendent units, the transformers can be mounted on the cross arms of the poles.

They save the expense of high-voltage conductors, heavy insulation and high tension cutouts.

When lamp wattage varies between 8 per cent above and 20 per cent below normal, secondary current will not vary more than 1.0 per cent with normal primary current and frequency.

*Special transformers can be furnished for any commercial circuit or c-p. lamps. Prices on application.

†The 100/250 c-p. transformers are 1:1 ratio and two secondary leads supply 6.6 ampere for the 100 or 250 c-p lamps.

The 250/400 c-p. transformers have three secondary leads supplying 6.6 amperes for the 250 c-p. lamps and 15 amperes for the 400 c-p. lamps. The 400/600 c-p. sizes also have three leads which furnish 15 amperes for the 400 c-p. lamp and 20 amperes for the 600 c-p. The 600/1000 c-p. and 1000/1500 c-p. have only two secondary leads as the current required for the 600 c-p. and the 1000 c-p. as well as on the 1500 c-p. is the same.

‡The maximum voltage which can be obtained by means of a voltmeter.

Prices quoted upon application.

Remote Control Apparatus

Street Lighting—Series Systems

CR2810-1304-A Combination Series Relay and Coil Contactor

The multiple oil switch will make, break and carry continuously 59 amperes. The whole unit is easily suspended by iron straps, from a pole cross arm. A special feature of this unit is the lever on the top of the case, which may be moved into 3 different positions. The first position allows the apparatus to function automatically. The second position short circuits the series relay and locks open the coil contactor so that no matter if the series circuit is turned on, the contactor will still be off and the transformer or line may be worked on with perfect safety. Position three engages the oil contactor without the series relay being energized which allows the transformer to be thrown into operation manually in case of failure of the control series circuit or for testing purposes.

Type CR2810-1235-B Oil Contactor Potential Transformer at Left

When the feeder potential is above 2300 volts a separate relay and contactor are required. The contactor recommended is the Type CR2810-1235-B. This device is a double-pole single-throw oil switch which may be used on any frequency up to 60 cycles, po-

Type PL-33 Relay for Operating a Type CR2810-1235-B Contactor

tential up to 4400 volts, and currents up to 50 amperes. The contacts are closed by a 110 or 220-volt solenoid, energy for which is supplied by a potential transformer connected across the feeder circuit. The contacts, solenoid and potential transformer are all included in a single weatherproof housing suitable for pole mounting. In conjunction with this contactor, a relay connected in the series control circuit or some other device must be used to close the low-voltage constant potential circuit through the potential transformer secondary and the operating solenoid of the contactor.

A series relay, Type PL-33, is supplied to close the low-voltage constant potential circuit. It consists of a compact operating coil insulated for 10,000 volts and suitable for connection in any commercial series lighting circuit, and a simple low-voltage single-pole single-throw contact contained in a weatherproof housing.

Full particulars and prices upon application.

Benjamin Water-tight Junction Boxes
Standard—With Plain Cover and Gasket

No. 6701

Standard Junction or Outlet Boxes are 1½ inches deep inside, 4½ inches in diameter outside, and are supplied in either brass or iron. They are provided with side boss for plunger key stuffing box, and have mounting bosses in bottom, tapped for No. 8-32 screws, which are spaced to accommodate interchangeably Benjamin connecting blocks, receptacles and switches. Boxes are also tapped for the No. 10-24 brass screws furnished to fasten cover.

TAPPING.—Boxes are regularly furnished not tapped for conduit.

PLUNGER KEY.—Key Type boxes are arranged with water-tight stuffing box and furnished with plunger key for operating key receptacles or switches.

COVER.—Brass, No. 6920, or iron, No. 6921.

GASKET.—Rubber gasket, No. 6945, makes water-tight connection.

FINISH.—Brass boxes and covers are regularly unfinished, but can be finished in dead black when specified. Iron boxes and covers are dead black.

Benjamin Water-tight Junction Boxes
With Mounting Lugs, Plain Cover and Gasket

These outlet or junction boxes are the same as the standard boxes, Nos. 6900 to 6903, except that they have two mounting screw lugs on the side.

TAPPING.—Boxes are regularly furnished not tapped for outlets. They have four bosses spaced 90 degrees which may be tapped for ½, ¾ or 1-inch conduit. A ½ or ¾-inch outlet may be tapped in bottom of box.

PLUNGER KEY.—Boxes are arranged for water-tight stuffing box and furnished with plunger key for operating key receptacles or switches, as specified.

COVER.—Brass, No. 6920, or iron, No. 6921.

GASKET.—Rubber gasket, No. 6945, makes water-tight connection.

FINISH.—Brass boxes and covers are regularly unfinished but can be finished in dead black when specified. Iron boxes and covers are dead black.

Benjamin Water-tight Connecting Blocks
With Standard Water-tight Junction Boxes

Rating: 30 Amperes, 125 Volts

No. 6707

CONNECTING BLOCK.—One set of binding screws and three sets of clamp connectors which permit taking off branch circuits as necessary. Feed wires may be passed through without cutting, and clamped firmly without soldering or taping joints. Base is of high heat molded insulating material. Supporting screw holes are spaced 1¾ inches on centers.

JUNCTION BOX.—Standard junction box, brass, No. 6900 or iron, No. 6901.

TAPPING.—Box is regularly furnished not tapped for conduit but no charge is made for tapping when specifications are given with order.

COVER.—Brass, No. 6920, or iron, No. 6921.

GASKET.—Rubber gasket, No. 6945, making water-tight connection.

FINISH.—Brass boxes and covers are regularly unfinished but can be supplied in dead black finish when specified. Iron boxes and covers are dead black.

Benjamin Twin Fuse Receptacles and Water-tight Connecting Blocks

With Standard Water-tight Junction or Outlet Boxes
30 Amperes, 125 Volts

No. 6709

RECEPTACLE.—For Edison Plug Fuses only. Equipped with two sets of clamp connectors which permits one or two circuits to be connected. Fuses not furnished. Receptacle is attached to connecting block by two screws which serve as center contacts for fuse plugs. Receptacle and block are of high heat insulating material. Connecting block is like that furnished with Nos. 6706 and 6707.

JUNCTION BOX.—Standard water-tight junction box, brass, No. 6900, iron, No. 6901.

TAPPING.—Box is regularly furnished not tapped for conduit. No charge is made for tapping when specifications are given with order.

COVER.—Special brass cover, No. 6922.

GASKET.—Rubber gasket, No. 6945, making water-tight connection.

FINISH.—Brass parts are regularly unfinished, but can be supplied in dead black finish when specified. Iron parts are dead black.

Benjamin 3-blade Water-tight Plug Receptacles

In Standard Water-tight Junction Boxes
Rating: 660 Watts, 250 Volts

RECEPTACLE.—3-blade, for use with three-blade attaching plugs Nos. 6762 and 6764. Has base of high heat molded insulating material.

THREE-BLADE PLUG.—Not furnished unless specified. Has cast brass body with insulating parts of molded composition. Gasketed swivel ring makes water-tight connection.

COVER.—No. 6924, brass only.

Junction box, outlets for conduit, gasket, finish same as for Nos. 6708 and 6709.

Benjamin Edison Screw Base Water-tight Plug Receptacles

In Standard Water-tight Junction Boxes
Rating: 660 Watts, 250 Volts

RECEPTACLE.—Plunger key or keyless receptacles with base of high heat molded insulating material, regularly supplied with one set of binder screws. Two sets supplied if specified.

JUNCTION BOX.—Standard, No. 6900, brass, or No. 6901, iron, are keyless; No. 6902, brass, or No. 6903, iron, are key type.

TAPPING.—Box is regularly furnished not tapped for conduit. No charge is made for tapping when specifications are given with order.

FINISH.—Brass parts are regularly unfinished, but can be supplied in dead black finish when specified. Iron parts are dead black.

Benjamin 2-pole Water-tight Receptacles and Plugs

With Standard Water-tight Junction Boxes
Rating: 15 Amperes, 125 Volts

No. 7751

RECEPTABLES.—Are keyless for use with attaching plugs Nos. 7863 and 7864. Have base of high heat molded insulating material.

ATTACHING PLUGS.—Regularly furnished with No. 7863; No. 7864 supplied if specified.

Have cast brass body and base of molded insulating material with copper sheath. Gasketed swivel ring makes water-tight connection.

JUNCTION BOX.—Standard water-tight brass No. 6900 or iron, No. 6901.

TAPPING.—Boxes are regularly furnished not tapped for conduit.

COVER.—Brass cover, No. 7880.

GASKET.—Rubber gasket makes water-tight connection, No. 6945.

FINISH.—Brass parts are regularly unfinished, but can be supplied in dead black when specified. Iron boxes are dead black.

Benjamin 2 and 3-pole Water-tight Plug Receptacles

With Standard Water-tight Junction Boxes
Rating: 30 Amperes, 250 Volts D.C. or 440 Volts A.C.

No. 7766 with No. 7861 Plug

RECEPTABLES.—Keyless, with high heat molded composition base, has double spring contacts, arranged for 3-pole connection. The same receptacle is made 2-pole by omission of one contact.

ATTACHING PLUGS.—Polarized, have cast brass body and molded composition base with copper sheath. Not designed to break circuit under full load. Gasketed swivel ring makes water-tight connection. Plug No. 7861 will be arranged for No. 10 or No. 8 rubber covered portable cable if specified.

TAPPING AND FINISH.—Same as above.

COVER.—Brass cover, No. 7880.

GASKET.—Rubber gasket makes water-tight connection, No. 7879.

Benjamin 2 and 3-pole Water-tight Plug Receptacles

With 45° Angle Water-tight Junction Boxes
Rating: 30 Amperes, 250 Volts D.C. or 440 Volts A.C.

No. 7719 with No. 7862 Plug

RECEPTACLES.—Keyless with base of molded composition. Has double spring contacts for 3-pole connection. Same receptacle is made 2-pole by omission of one contact.

ATTACHING PLUGS.—Polarized, have cast brass body and molded composition base with copper sheath. Not designed to break circuit under full load. Gasketed swivel ring makes water-tight connection. Plug No. 7681 will be arranged for No. 10 or No. 8 rubber covered portable cable if specified.

JUNCTION BOX.—4½-inch iron, 45 degree angle.

TAPPING.—Box is tapped for ½-inch pipe connection at top and may also be tapped for ½-inch connection at rear, if specified.

COVER.—Brass, with screw cap and chain.

GASKET.—Rubber gasket makes water-tight connection.

FINISH.—Brass parts are regularly unfinished, but can be supplied in dead black when specified. Iron parts are dead black.

Benjamin Industrial Bells
Vibrating and Single Stroke Types

CONSTRUCTION.— Brass casing 4½ inches in diameter tapped for ½-inch pipe connection with three lugs for attaching to wall. Cover is brass. Gong is bell metal. Tapper rod has water-tight stuffing box. Mechanism is insulated from casing. Contacts are coin silver, ½-inch in diameter. Contact springs are of spring bronze. Contact adjusting screw is self locking. Connectors are binding screw type. Bells will operate on a very small current flow. For use on battery and D. C. circuits, 120 volts. Special voltages up to 120 D. C. supplied on order.

No. 8379

FINISH.—Bell is black nickel. Case is dead black.

Cat. No.		Size Gong In.	Type	Wt. Lbs. Each	Price Each
Water-tight					
8378	3		Vibrating	4¼	\$13.20

8491	6	5	9.35
8492	8	6½	12.95

Specify voltage when ordering.

Benjamin Single Water-tight Push Buttons
High Voltage

No. 8493

CONSTRUCTION.— Brass casing, with two mounting lugs, is supplied tapped for ½-inch conduit one-way, side or rear entrance. Side entrance buttons may be furnished tapped ½ or ¾-inch one or two-way when specified. Brass cover threaded for connection to box furnished with unmarked name plate. Plates with standard marking will be furnished at an advance of 18 cents each.

Prices for special markings on request. Positive acting quick make and break mechanism, is for high or low voltage circuits carrying inductive loads. Connectors are binding screw type. Waterproof raw-hide gasket covers button completely. Dead black finish.

Benjamin Water-tight Toggle Switches
 With Standard 4 1/2-inch Water-tight Outlet Box
 Rating: 30 Amperes, 125 Volts; 20 Amperes, 250 Volts

No. 6877

This heavy duty water-tight toggle switch was developed for use in the oil industry, in fields, refineries, filling stations, etc., where exposed to strenuous service and weather conditions. Well suited for work in coal mines, power houses, and similar places.

DOUBLE POLE SWITCH.—Sturdily constructed with plunger key control. Porcelain base with screw holes spaced 2 3/8 inches on centers. Mechanism is positive acting, quick make and break type, which breaks on both

sides of the circuit at two points.

JUNCTION OR OUTLET BOX.—Standard keyless outlet box is regularly supplied in either brass No. 6900, or iron No. 6901, as specified.

OUTLET BOX COVER.—Furnished with water-tight stuffing box and plunger key, in either brass or iron to match box.

WATER-TIGHT CONNECTIONS.—Seigelite gasket.

TAPPING.—Boxes regularly furnished not tapped for conduit. Specify tapping.

Benjamin Cargo Lights

No. 3093

FITTINGS.—Fixture has heavy fittings, for suspending fixture by rope, and is provided with water-tight stuffing box for cable.

REFLECTOR.—Extra heavy 1-piece bowl reflector of steel.

GUARD.—Strong galvanized wire guard is held in position by an adjustable galvanized iron band which fits over bead of reflector.

Guard has wire loop to which a light rope may be attached for purpose of tipping fixture to throw light at any angle.

RECEPTACLE.—Benjamin wireless cluster body.

LAMPS.—Mazda B lamps 25 to 60-watt may be used.

FINISH.—Reflector is paint enameled black outside, white inside. Fittings and guard are heavily galvanized.

Cat. No.	Number of Lights	Kind of Reflector	Size Reflector Inches	Wt., Lbs. Each	Price Each

3095	6	"	16	5	15.10

Prices do not include wire or lamps.

R&S Marine Switches and Receptacles

10 Amperes, 125 Volts

This device is a combination of two marine switches, one receptacle and plug.

Size of box, 6x2 3/4 inches. Furnished in brass box only.

No. 1490, Complete, each \$8.25
 " 452, Plug Only, " 1.25

R & S Pendant Type Vapor Proof Fixtures
 Fitted with R.L.M. Dome Type Porcelain Enameled Steel Reflectors

Pendant Type

FINISH.—Standard finish, excluding reflector, black oxidized throughout. Special finishes on request.

GLOBES.—Prices include clear globes. Additional charge for Frosted, Opal, Ruby or Green Globes on request.

GUARDS.—Guards are of heavy gauge round brass wire with threaded cast brass ring.

REFLECTORS.—Can be furnished without reflectors. For maximum efficiency use Type C Mazda Lamp.

R & S Marquise Type Steam Tight Fixtures

With Screw Globe

This type of fixture is suitable for all outdoor lighting, in damp, moist or dusty places, and is used in marine work, warehouses, etc. It is however, not recommended for use where exposed to explosive or highly inflammable gases or vapors, or for continued submersion in fluids.

The fixture consists essentially of a threaded base or box, into which is screwed a threaded glass globe which seats on a rubber gasket.

Weatherproof, with opal, ground or clear glass screw globe, especially made for illuminating the borders of Hotel and Theatre Marquise.

Made for 40-watt size lamp only.

Boxes drilled and tapped for 1/2 and 3/4-inch conduit as directed, without extra charge.

Nos. 610, 611 and 612 have iron box for conduit with brass base and lamp receptacle.

Nos. 613, 614 and 615 have brass base, no box, no receptacle, intended for use where wiring and receptacle are in channel iron of marquise.

Nos. 616, 617 and 618 have brass base, no box, but with back connected lamp receptacle for use where wiring in channel iron of marquise.

In ordering Nos. 610, 611 or 612 specify size and number of outlets.

Rail Bonds

Selection of Bonds

Welding Steel-faced Rail Bonds with Arc Welder

In construction where the rails are exposed the concealed type of bond is desirable as its location prevents it from outside injury and possibility of theft. The short "U" shape arc weld type bond attached to the head or ball of the rail is quite frequently used on account of its ease of installation and ready inspection. This type of bond is not recommended for "T" rails under 55 pounds. Theft of this bond is discouraged owing to the difficulty of removing it from the rail and the small amount of copper obtainable.

Operating conditions, section of rail and other elements form such an important part in the selection of the proper type and form of bond to be used that recommendations cannot be made without complete information covering the conditions to be met. In a general way the following suggestions may be helpful in determining the selection of bonds to meet standard conditions.

For city track construction where the rails are embedded in the pavement, the concealed type stud terminal bond is preferable, providing there is ample space under the joint plate to permit its use. Under circumstances where this type of bond is impracticable, a long single conductor arc weld or stud terminal type is recommended. For rebonding or bonding track which has been laid, the arc weld or acetylene type of bond, designed to be attached to the head of the rail, may be used to advantage as it can be installed without disturbing the pavement or removing the splice bars.

The manufacturer will gladly submit recommendations with drawings showing how best to meet any bonding conditions. Its engineering department is always at the service of customers to give expert advice on this important subject.

Mine Bonding

The bonds often used in mines, consisting of channel pins and short lengths of copper wire, are frequently found to be in such poor condition and of such high resistance that the return current leaves the rails and follows adjacent pipe lines and streams of water on its way back to the power house.

Where the rails are usually light in section and the nature of the roadbed permits excessive movement of the joints, cable bonds of either the stud terminal or arc weld type, long enough to span the splice bar, should be used.

For small rails when the full current capacity is to be utilized Forms D, SF-4 or SF-6 bonds installed around the plates, are recommended, and, if given proper care in installation, give excellent results.

The bonds should be installed on the inside of the rail as close under the heads of the track bolts as possible. This reduces to a minimum the possibility of damage to the bonding when cars are derailed. Actual observation shows that bonds installed in this manner have been run over by the wheels of derailed cars without material injury to the bonds.

Form SF Arc Weld Bonds

Form SF-1 Bond

Form SF1 single conductor and Form SF2 double conductor bonds are for application to the ball, or head of the rail. These bonds have concave steel terminals designed to form the proper angle between the bond and the rail to secure the best results.

Form SF-2 Bond

Form SFA-3 Bond

Form SFA3 ribbon conductor bonds are attached to the ball or head of the rail. These bonds are furnished in two standard lengths, $7\frac{1}{2}$ inches for bolt spacings 5 inches and over and 6 inches when bolt spacing is 5 inches and under. Other lengths can be furnished when required.

Form SF-4 on T Rail

Form SF4 bonds are designed with terminals to fit the angle between the base and the web of the rail, the weld being made to the rail web along the top and end of the terminal. This bond can be furnished with either solid wires or stranded conductor.

Form SF-5 Bond

Form SF-5 bonds are applied to the head of the rail and used in connection with Weber Joints.

Form SF-6 Bond

Form SF-6 bonds are intended for application around the splice bar, the terminals being welded to the top of the rail flange. The terminals of these bonds are semi-circular in section and by placing the flat side against the rail the welding process can be carried along both sides as well as the end of the terminals. This bond can be furnished with either solid wire or stranded conductor.

Form SF7 bonds are designed for application to the underside of the rail base with the T portion of the terminal projecting about two-thirds of its width beyond the rail base, the weld being made on the top side of the terminal and lower flange of rail. As this type of bond is attached to the underside of the rail, it may be used to advantage where exposed type of bonds are subject to theft. This form of bond is also well adapted for cross bonding and can be welded to either the top or bottom of the base of the rail.

Form SF-7 Bond

In ordering arc weld bonds specify: the type, capacity, solid or flexible conductor and the over all length, measured from the outer edge of the terminals when the conductor is straight and extended.

Steel electrodes are not furnished with bond orders.

Form SF Arc Weld Bonds

†To determine the proper straight and extended length of bond it is generally recommended that a bond 7 inches longer than the joint plate for the 0 and 00 sizes and a bond 8 inches longer than the joint plate for 000 and 0000 sizes be used. The formed length will be 1 inch shorter than the straight and extended length.

Form SF-8

The Form SF-8 Arc Weld Bond is intended for application around the splice bar, the terminal being welded to the top of the rail flange. The terminal is flattened out and tapered down to a thin edge at the end which design affords a large welding surface.

With the tapered terminal the process of welding is simplified and it is much easier for an operator to secure a satisfactory weld than with terminal having more abrupt angle.

In ordering arc weld bonds specify the type, capacity, solid or flexible conductor and the over all length, measured from the outer edge of the terminals when the conductor is straight and extended.

Steel electrodes are not furnished with bond orders.

Forms H and HS Oxy-acetylene Weld Bonds

Form H-5 Bond

The Form H-5 bonds are for use on Weber Joints. The terminals and conductor are arranged so as to permit installation on the head of the rail with the conductor lying on top of the joint block.

Forms HS-1 and HS-2 bonds have steel terminals and are less expensive than those having forged copper terminals. If care is used in installing they give satisfactory results.

The terminals have sloping surfaces providing a groove to permit building up the weld from the lowest possible point on the rail head.

Form HS-1 Bond

The bonds may be used on Weber Joints by straightening out the loop and welding the terminal to the rail in an inverted position.

Form HS-1 is single conductor, if double conductor is desired, order should specify Form HS-2.

Form HS-2 Bond

Forms H-1 and H-2 Bonds

Form H-1 bonds are for standard four-bolt joints having at least 5 inches between center track bolts.

These bonds can be used as cross bonds or for bonding around special work.

Form H-3 Bond

Form H-1 is single conductor; if double conductor is desired, order should specify Form H-2.

The Form H-3 bonds are for use on rail joints having small clearance between the center track bolts.

Compressed Stud Terminal Bonds

The studs of these bonds are of solid copper of exact size and have a depression on the center of the bottom surface for centering the compressor screw when installing.

This type of bond is installed by use of a screw compressor exerting a pressure of approximately 20 tons. The compressing portion of the inner screw of the compressor is so designed that a rivet head cannot be formed on the terminal until the hole has been completely filled, even to the pores of the steel. The rivet or button head seals the union, and insures practically a moisture-proof joint. A solution of red lead and linseed oil may be applied to the terminal and adjacent steel, after compression. This will effectually seal the joint against the entrance of moisture.

To effect radial expansion of the copper in the hole equally in all directions, the inner screw of the bond compressor should be centered in the depression in the end of the terminal.

Holes should be drilled with well sharpened tools so that the walls and edges of the hole will be smooth and free from burrs and other irregularities. Bond holes should be of the exact diameter of the bond stud to be inserted.

Oil should not be used in the drilling of holes, as all traces of it cannot readily be removed from the hole, and oil will prevent proper contact between the copper and the steel. A solution of soda and water or plain water may be used, but care should be exercised to see that the hole is wiped perfectly dry before the terminal is inserted. Bonds should not be installed in damp weather. If these simple precautions be disregarded, the efficiency of the bonding will be greatly affected.

Tubular Stud Terminal Bonds

These bonds are like compressed stud terminal bonds except that the studs are drilled for expanding radially in the holes in the rails. The illustration shows a sectional view of a tubular terminal expanded into a steel block representing the web of a rail. The effects of the expansion by the taper punch and drift pin are clearly shown.

The same general precautions in regard to drilling the rail and preparing the terminals should be taken as with compressed terminals. Greater care should be used, however, in having the hole drilled to size to insure the best results. After inserting the terminal in the hole, a long taper punch, well lubricated with oil or grease, is driven entirely through the terminal. The diameter of the punch is $\frac{1}{16}$ inch larger than the hole in the terminal and it therefore forces the copper in the terminal radially against the walls of the hole. A short drift pin $\frac{1}{32}$ inch larger than the maximum diameter of the taper punch is then driven home in the terminal, thus completing the expansion. In driving in the drift pin the copper of the terminal is slightly further expanded and a portion lying close to the pin is forced along by the pin out through the hole in the rail and expanded into a bell mouth. The diameter of the hole through the terminal is increased about $\frac{1}{8}$ inch by the action of the taper punch and drift pin, forcing the copper into intimate contact with the steel rail. Tubular terminal bonds are particularly advantageous in rebonding on paved streets and around special work where dense traffic forbids the somewhat longer operation of installing compressed terminal bonds.

Steel drift pins are included in all shipments of tubular terminal bonds. Taper punches are supplied when ordered.

Ribbon Bonds

Form A, Solid Terminals—Form AT, Tubular Terminals

The ribbon bond is particularly adapted to use under joint plates where the restricted space demands extreme compactness of design. The conductor of this bond is composed of thin copper ribbons with the greatest width in the horizontal plane, thus affording maximum flexibility in the vertical plane or in the direction of the greatest movement of the joint. The tucking of the conductor provides flexibility for the longitudinal movement of the rails.

Form A-5 Solid Terminal Ribbon Bond

Form AT-5 Tubular Terminal Ribbon Bond

Forms A-5 and AT-5 bonds have conductors equally divided in upper and lower branches and the tucking is located in the center of the bond. They are particularly adapted for single bonding large, girder and T-rails. The balanced bond can also be used on ordinary T-rails having special joint plates or on many of the patented joints. In double bonding large girder rails with two rows of track bolts, tee balanced bond will usually be found to give greater clearances.

Form A-6 Solid Terminal Ribbon Bond

Form AT-6 Tubular Terminal Ribbon Bond

Forms A-6 and AT-6 bonds have the conductor equally divided in upper and lower branches and the tucking is offset from the center of the bond. They are used in double bonding large girder and high T-rails. The bond holes are located at unequal distances from the ends of the rail making it necessary to offset the tucking so as to avoid interfering with the insertion of the track bolts or the terminals of the second bond. Unless otherwise specified the tucking is offset 1 inch from the center of the bond as this is suitable for most conditions.

Form A-7 Solid Terminal Ribbon Bond

Form AT-7 Tubular Terminal Ribbon Bond

Forms A-7 and AT-7 unbalanced, center-tucked bonds having unequally divided conductors and the tucking located in the center of the bond are especially suitable for bonding T-rails having greater space below the track bolt than above.

Form A-8 Solid Terminal Ribbon Bond

Form AT-8 Tubular Terminal Ribbon Bond

Forms A-8 and AT-8 have conductors unequally divided and tucking is offset from the center.

Form B Ribbon Bonds

Form B bonds may be used on rails where the inner track bolts are located so as to permit drilling of the bond holes between the ends of the rails and the first bolt holes.

Form C Ribbon Bonds

The Form C beveled head bond is adapted to use on the foot of T-rails having suspended joints. It is particularly suited to bonding third rails.

The terminal heads are beveled to correspond with the angle of the rail foot. As in the other ribbon bonds the conductor laminations are so disposed as to give maximum flexibility in the vertical plane. To determine the correct length of terminals for Form C bonds, inquiries and orders should be accompanied by a sketch of the rail cross section with measurements.

Forms F and FT Cable Bonds

Form F-5 Solid Terminal Cable Bond

Form FT-5 Tubular Terminal Cable Bond

Forms F-5 and FT-5 bonds have conductors equally divided in upper and lower branches and the tucking is located in the center of the bond. The conductor consists of many fine strands all wound in the same direction with a short pitch. This form of bond is adapted to single bonding large girder and T-rails or the medium sizes of T-rails with special joint plates.

Form F-6 Solid Terminal Cable Bond

Form FT-6 Tubular Terminal Cable Bond

The conductors of Forms F-6 and FT-6 bonds are equally divided in the upper and lower branches and the tucking is offset from the center of the bond. These bonds are used in double bonding large girder rails and high T-rails when the bonds are placed one on each side of the rail and the terminals are staggered necessitating the offsetting of the tucks so as to avoid interference with the insertion of the track bolts or the terminal of the second bond.

Form F-9 Solid Terminal Cable Bond

Form FT-9 Tubular Terminal Cable Bond

The Forms F-9 and FT-9 bonds have conductors equally divided in the upper and lower branches pressed into approximately a triangular shape, thereby affording proper clearances for medium sizes of T-rails having restricted space above the track bolts. The tucking is located at the center of the bonds.

Forms F and FT Cable Bonds

Form F-10 Solid Terminal Cable Bond

Form FT-10 Tubular Terminal Cable Bond

Forms F-10 and FT-10 bonds are similar to Forms F-9 and FT-9 except that the tucking is offset for double bonding. For the standard track bolt drillings, offsetting one inch from the center of the bond will locate the tucking at a point opposite the ends of the rails, and avoid interfering with the track bolts.

Forms D and DT Cable Bonds

Form D Solid Terminal Cable Bond

Form DT Tubular Terminal Cable Bond

Forms D and DT cable bonds have terminals with offset shanks. The sleeve portion diverges from the web of the rail at an angle of 20 degrees thereby avoiding any sharp bends in the conductor in spanning a joint plate. The shanks of bonds to be used under the plate are at right angles to the terminal studs.

Forms D and DT cable bonds should be at least 6 inches longer than the joint plate which they are to span. The length is measured between centers of terminals when the bond is straight and extended.

Form D Solid Terminal Stud End Bond

Form DT Tubular Terminal Stud End Bond

Stub end cable bonds are useful in bonding the various parts of special track work to the main bond around such special work. A stub end bond has but one terminal and a short length of conductor usually 12 inches long, but can be supplied in any length.

Orders should specify length from center of terminal to end of bond.

Forms E and ET Solid Wire Bonds

Form E-2 Solid Terminal Wire Bond

Form ET-2 Tubular Terminal Solid Wire Bond

The Form E-2 and ET-2 bonds are formed so as to provide proper clearance around the joint plate. A bond having a formed length of 6 inches longer than the joint plate should be used.

Forms E and ET Solid Wire Bonds

Cross Bonding

Form E-1 Solid Terminal Solid Wire Bond

Form ET-1 Tubular Terminal Solid Wire Bond

Cross bonds should be at least 10 inches longer than the track gauge. This length permits burying the conductor in the ground, reducing the liability of loss by theft.

The length is measured between centers of terminals when the conductor is straight and extended.

Stub End Solid Wire Bonds

Form E Solid Terminal Stub End Bond

Form ET Tubular Terminal Stub End Bond

Stub end solid wire bonds also are used for bonding the various parts of special track work to the main bond around such special work.

Form M Twin Stud Terminal Bonds

Form M-1 Twin Terminal Cable Bond

Form M-1 bonds may be used on all joints where the distance between the two inner track bolts is such as will not interfere with the U-shaped conductor.

The Form M-2 bond has terminals like those of the Form M-1 bond and is made in any required length of conductor. It is used for cross bonding and spanning long distances.

Form M-3 Twin Terminal Cable Bond

The conductor of the Form M-3 bond emerges from one side of the terminal and is used on joints having very short spacing between the inner track bolts.

Form M-5 Twin Terminal Cable Bond

The Form M-5 bond is used on Weber Joints.

Rail Bond Prices

Stud Terminal Bonds Not Listed

Intermediate sizes of conductor cross section in price schedule take price of next larger conductor cross section having smallest diameter terminal listed.

Intermediate diameters of terminals, other than those covered by the following schedule, take price of next larger diameter terminals.

Standard List Prices and Standard Weights for Terminal Stud Bonds Having Larger Intermediate Diameter Terminals Than Shown in Previous Column

When Diam of Terminals in Inches Desired Is	ADD TO STANDARD PRICES For Terminals in Inches	Per 100 Bonds Class Y	ADD TO STANDARD WEIGHTS For Terminals in Inches	Wt., Lbs. per 100 Bonds
9/16	1/2	\$1.30	1/2	2.6

1	3/4	3.15	6.3
1 1/8	3/4	3.20	6.4

Twin Stud Terminal Bonds

Twin terminal bonds are measured from a point in the center of a line drawn through the center of the two studs to the same point in the other terminal when bond is straight and extended.

The list price of twin terminal bonds is based on the largest size terminal scheduled for bond or equivalent cross section and length.

Conductor Section	Length In.	Wt., Lbs. per 100	Price per 100
00	7	61	\$55.30
0000	7	85	66.50
0000	7 1/2	87 1/2	67.75
0000	8	90	69.00

300,000	8	128	89.80
350,000	7 1/2	138 1/2	97.50
350,000	8	143	100.00

Bonds with Tinned Studs

For tinning any standard type stud terminal bond, including twin stud, add \$3.00 per 100 bonds.

Bonds with Extra Large Terminal Cap

Providing for soldering in addition to compression, add \$7.00 per 100 bonds for stud of 7/8-inch diameter and smaller; for those having terminal diameters, larger than 7/8 inch, add \$10.00.

Form R-1 Removable Mine Bonds

Form R-1 bonds are for use on temporary tracks only. The conductor is made of flexible copper strand, soldered into steel terminals. These bonds are installed or removed very easily, being merely driven in or out with a hammer. This does not injure the bond terminals and they can be reinstalled when tracks are moved.

Conductor Term.	Diam. In.	PRICE PER 100 BONDS					
		23-in.	24-in.	25-in.	26-in.	27-in.	28-in.

Separate Bond Terminals

Rail Bonding Tools
Lovejoy Track Drills

Form K-1 Solid Separate Terminal

Form KT-1 Tubular Separate Terminal

Form K-2 Solid Separate Terminal

Form KT-2 Tubular Separate Terminal

Separate bond terminals are furnished drilled and tinned for soldering to the conductor, which may be scrap trolley wire or feeder cable. They are useful in bonding special work where many different distances are to be spanned. Form K-1 terminals have shanks parallel to the web of the rail while the shanks of the Form K 2 terminals are at right angles to the web of the rail.

*No tools.

†Terminals made from the same dies are indicated by the alphabetical letters a, b, c, d, e, f, g, opposite the weights. The discrepancy in weight for the same terminal is due to the larger drilling for the conductor.

Rail Bonding Tools
Double-twin Spindle Drills

This machine drills all four holes at one time in the head of T-rails for the Twin Stud Terminal Bond. The drills are operated by a hand lever, or motor driven if desired.

Each spindle is provided with an adjusting sleeve so that each drill may be set independently of the others. Each machine is equipped with a gauge for determining the depth of the holes.

The levers by which the machines are operated are detachable so that the tools may be moved easily from place to place.

Each drilling machine is equipped with one set of drills.

Cat. No.	Description	Wt., Lbs. Each	Price Each
103470	Hand-operated Double-twin Spindle Drill	125	\$360.00

Little Giant Portable Electric Grinders

It carries an emery wheel 8 inches in diameter, is equipped with connecting cable and switch for 460 to 600-volt circuits.

Cat. No.	Wt., Lbs. Each	Price Each
103477	82	\$105.00

Hand Screw Compressors

The compressor has a cylindrical sleeve which, in any position, is free to slide in or out of the frame with a single thrust, permitting quick adjustment. A quarter turn sets the sleeve, and the inner screw ram makes the compression on the terminal.

All compressors are designed for 7/8-inch diameter terminals.

Cat. No.	Description	Wt., Lbs. Incl. Wrench Each	Price Each

Portable Bond Testers
Direct Reading

Two types, Standard Sensibility Type SBT and High Sensibility Type HBT, which include the instrument proper and a folding contact bar with handle and flexible connecting leads. The case of the instrument is arranged with a double hinged cover which opens downward forming, with a leather strap passed around the neck, a means of supporting the instrument in use.

The contact bar carries renewable hacksaw blade contacts.

For places where current in rails is small or intermittent or for new construction, High Sensibility Type HBT is recommended, current being obtained from portable storage batteries or from the portable storage battery equipment listed below.

Cat. No.	Description	Wt., Lbs. Each	Price Each
142949	Type SBT, Complete with Bar and Leads	6	\$115.00
246703	HBT, " " " " " "	6	144.00
246704	Portable Storage Battery Equipment, Complete for Use with Type HBT Bond Tester	45	144.00

**Rail Bonding Tools
Type AW Resistor Arc Welders**

400/650-volt Resistor Arc Welder with Remote Control

This equipment consists of a spirally wound resistance wire, assembled in a light, durable frame from which it is thoroughly insulated.

The unit operates directly from the trolley circuit and is particularly applicable to the welding of rail bonds and fish plates, the building up of low spots on rails, etc.

It is light in weight and is equipped with handles for carrying. The current is regulated by single-pole knife switches, four in number, so that the welder can easily adjust the current to the requirements of the work.

200/275-volt Resistor Arc Welder with Trolley Hook

The 200/275-volt resistor is supplied with a short trolley hook of sufficient length to reach the overload trolley wire in mines. It is equipped with 10 feet of 37/35-0.007 extra flexible cable. Where a longer pole is required, the resistor can be supplied with a jointed 15-ft. pole and 22 feet of the same cable. A 200-ampere knife switch disconnects the welding lead from the line.

The 400/650-volt resistor can be supplied either with or without remote control. When remote control is furnished a contactor or magnetic switch and normally open foot-operated push-button stations are connected in the welding circuit so that in case the operator "freezes" the electrode to the work, he can break the welding circuit by releasing the push-button, and free his electrode. To close the circuit again, the operator presses the push-button with his foot.

When remote control is not furnished, the resistor is supplied with a single pole knife switch which opens the electrode circuit.

All units employ a special resistance wire and insulation which will operate at high temperatures and will withstand repeated heating and cooling without injurious effect. Exposure to the weather will not injure the insulation or resistance wire. When used indoors the floor should be protected from the radiated heat.

A metallic electrode holder, Cat. No. 224291, is furnished with each unit. It is equipped with 20 feet of 37/35-0.007 extra flexible cable.

Cat. No.	Voltage Range	Current Range	No. of Voltage Taps	Wt., Lbs. Each	Price Each
1950832G1	200-275	60-200	2	60	\$250.00
1950832G2	200-275	60-200	2	70	280.00
*1950813G1	400-650	60-200	1	220	610.00
1950813G2	400-650	60-200	1	200	560.00

*Furnished with remote control.

Electrode Holders

Electrode holders are of two general types, one for metallic electrode and one for carbon electrode welding. The metallic holder can be used with wire up to and including 1/4-in. in diameter and the carbon holders with 1/2 and 1-in. carbon electrodes.

Cat. No.	Description	Wt., Lbs. Each	Price Each
224289	For 1-in. Carbon Electrode.....	12	\$26.00
224290	" 1/2-in. Carbon Electrode.....	7	19.00
2648860G1	" 1/4-in. Metallic ".....	2 1/2	5.00

Railway Line Material

The standard line material listed in the following pages is the result of wide experience in the design and manufacture of devices to meet every haulage requirement.

The insulating material used in the various suspensions, strain insulators, etc., is suitable for use under special conditions of high temperatures and is beyond the possibility of injury from any service temperatures.

The rust-resisting finish given these devices, unless otherwise stated in the tables, is applied by the electric oven sherardizing process.

In mines where acids are found in the mine water, sufficient in strength to cause a deterioration of a zinc coating, the japanned finish is preferred. It is recommended that a coat of heavy asphaltum paint be applied from time to time after installation.

Every effort has been made to include in the standard lists all the devices required in approved railway line construction.

Form A1 Brackets for Wood Poles

No. 40009

Pole brackets listed represent some of the standard forms called for in modern railway line construction and include the three styles of tube, the use of which has been approved in the best practice. The wrought iron pipe referred to in the table is standard welded gas and water pipe, and the structural tubing is a special high carbon steel tube with butt joint, which, because of the great stiffness of the material, does not require a welded seam.

Form H Suspensions

Form H suspensions consist primarily of malleable iron shells into which the insulation holding the studs is permanently moulded. A load of over five tons is required to pull the stud from this form of suspension in the large size and about three tons in the small size.

Straight Line

600 Volts

These are made in two sizes, 3¼ inches and 3½ inches in diameter, each of which is furnished with either 5/8-inch or ¾-inch stud. The 3½-inch suspension has extra heavy shell and arms and is designed for the heaviest construction.

No. 25980

Each of these suspensions, being in one piece, is held against turning by the span wire, and cannot, therefore, become unscrewed as a result of vibration in service. Special leather washers to permit adjustment in seating the ear boss against the suspension are listed. All metal parts including the stud have standard sherardized finish.

Over all length, 6½ inches; arm yoke accommodates 3/8-inch span wire.

Cat. No.	SHELL		Diameter Stud In.	Approx. Wt., Lbs. per 100	Price per 100
	Diameter In.	Height In.			
25980	3¼	2	5/8	210	\$105.00

143559	Leather Washer for 5/8-inch Stud			5	4.00
143560	" " " ¾ " "			6	4.00

Form H Straight Line Suspensions

1200 Volts

These suspensions and the 3½-inch straight line 600-volt suspensions are identical, except that the arms are replaced by clevises to which giant or wood strain insulators are shackled.

Form H suspensions consist primarily of malleable iron shells into which the insulation holding the studs is permanently moulded. A load of over five tons is required to pull the stud from this form of suspension in the large size and about three tons in the small size.

Each of these suspensions, being in one piece, is held against turning by the span wire, and cannot, therefore, become unsewed as a result of vibration in service. Special leather washers to permit adjustment in seating the ear boss against the suspension are listed. All metal parts including the stud have standard sherardized finish.

With 2-inch Giant Strain Insulators

Over all length between centers of outer eyes, 12¼ inches; diameter of shell, 3½ inches.

Form H Suspension Arms

Arm is removable, malleable iron, sherardized. Approximate weight, 110 pounds per 100.

Price, No. 128424.....per 100 \$30.00

Form H Bracket Suspensions

Consists of the standard 3¼-inch shell to which the bracket arm clamp is hinged, thus providing the flexibility required to care for vibration in the trolley wire.

For suspensions for 2-inch pipe the height from car seat to bracket arm clamp is 5⅞ inches; for 1½-inch pipe the height is 4⅞ inches; diameter of shell, 3¼ inches. All metal parts including stud have standard sherardized finish.

No. 25992

Form H Bridge or Ceiling Suspensions

600 Volts

This suspension is used when the head room is unlimited. The diameter of the stud is ⅝-inch.

Approximate weight, 230 pounds per 100. Price, No. 27370.....per 100 \$110.00

Form H Low Ceiling Suspensions

600 Volts

Distance between centers of screw slots, 4 inches; thickness of slotted ears, ⅜ inch; diameter of shell, 3 inches; height, 1⅞ inches.

Cat. No.	Description	Approx. Wt., Lbs. per 100	Price per 100
1431861	Low Ceiling Suspension ⅝-inch Stud, Sherardized.....	125	\$85.00

Form H Flat Top Suspensions

These suspensions may be attached directly to the mine roof by means of expansion bolts or to timbers by means of special lag screws.

The expansion bolts are not forced above the mine roof and are therefore easily recovered.

Cat. No.	Diam. Stud In.	Material	Approx. Wt., Lbs. per 100	Price per 100
125330	⅝	Malleable Iron, Sherardized	210	\$110.00

Form H Low Suspensions

With Boss

A triple petticoat suspension which affords extra long creepage surface.

Approximately 8500 pounds downward pull or 2000 pounds side pull is required to remove stud from shell.

Suitable for mines having limited head room.

Approximate weight, 125 pounds per 100.

Price, No. 1436318.....per 100 \$85.00

Form H Low Flat Top Suspensions

No. 165189

This suspension is only 1⅞ inches high from car seat to top of flange. The large top bearing surface is particularly advantageous in meeting the side strains on curves and grades.

Diameter of top flange, 4 inches; diameter of shell, 3¼ inches; length from car seat to top of flange, 1⅞ inches.

Cat. No.	Diameter of Stud Inches	Material	Approx. Wt., Lbs. per 100	Price per 100
165189	⅝	Malleable Iron, Sherardized	175	\$110.00

Form H Flat Top Suspensions

Shallow Groove

Can be furnished with compound moulded in one shallow groove as shown or with triple petticoat same as Cat. No. 1436318.

Furnished with shallow groove unless otherwise specified.

All metal parts have standard sherardized finish.

Cat. No.	Flange Diameter, Inches	Shell Diameter, Inches	Stud	Approx. Wt., Lbs. per 100	Price per 100
1431862	3½	3	⅝	165	\$90.00

Form H3 Straight Line Suspensions

600 Volts

These suspensions are made in one size, 3 inches in diameter and with 5/8-inch studs. Length over all, 6 1/2 inches.

Cat. No.	Description	Approx. Wt. Lbs. per 100	Price per 100
11220	Straight Line Suspension, 5/8-in. Stud, Malleable Iron Sherardized.	170	\$105.00

Form H3 Single Curve Suspensions

600 Volts

Has the same interior construction as the straight line. The shell is provided with a clevis into which the removable arm is fastened by a pin.

The length between center line of pull-off eye, 4 1/2 inches; height above center of pull-off eye, 2 7/8 inches; diameter of pull-off eye, 9/16-inch. Thickness of arm at eye, 1/2-inch; diameter of shell, 3 inches. Shell and stud have standard sherardized finish.

Cat. No.	Description	Approx. Wt. Lbs. per 100	Price per 100
128651	Single Curve, 5/8-in. Stud, Malleable Iron Sherardized.	230	\$135.00

600 Volts

Length between centers of pull-off eyes, 9 inches; height above center of pull-off eyes, 2 7/8 inches; diameter of pull-off eyes, 9/16-inch; thickness of arm at the eyes, 1/2-inch; diameter of shell, 3 inches.

Cat. No.	Description	Approx. Wt. Lbs. per 100	Price per 100
128652	Double Curve Suspension, 5/8-in. Stud, Malleable Iron Sherardized.	230	\$170.00

Form H3 Bridge or Ceiling Suspensions

600 Volts

No. 105705

For use under bridges and elevated structures where head room is limited. The top of Cat. No. 64560 is designed to be countersunk in the supporting timber, bringing the top of the ear hub 1/4 inch below the bottom of the timber.

Cat. No. 105705 has the supporting arms at its top so that it may be attached to the overhead structure without countersinking. 1/2-inch screws are required for the supporting arms. Sherardized finish; 5/8-inch stud.

Cat. No.	Location of Arms	Approx. Wt. Lbs. per 100	Price per 100
64560	Bottom	140	\$90.00
105705	Top	140	\$90.00

Form H3 Low Mine Suspensions

This mine suspension is like the low bridge suspension in its internal design and will be found useful in places of limited head room.

The low mine suspension is adapted to use with the standard roof bolt and wedges or with expansion bolts.

Made of malleable iron, sherardized.

Cat. No.	Ht. from Ear Seat to Shell Top, Inches	Diam. Shell at Top, In.	Height Boss Above Shell, In.	Diam. Stud, In.	Approx. Wt. Lbs. per 100	Price per 100
64561	1 1/4	3	5/8	5/8	150	\$90.00

Form HJ Flat Top Suspensions

Deep Groove

Compound is moulded in one deep groove which gives it a greater creepage surface between the stud and sheet.

Recommended for use in mines having excessive moisture or dust.

Height from ear seat to top of flange, 2 1/4 inches.

Cat. No.	Flange	DIAMETER, INCHES Shell	Stud	Approx. Wt. Lbs. per 100	Price per 100
261737	3	3	5/8	190	\$90.00

Form H5 Combination Suspensions

Designed so that it may be attached direct to mine roof by use of standard expansion bolt, or in case there is considerable variation in height of mine roof same suspension may be attached to lower end of 1 1/4-inch pipe, the upper end of which has been wedged into a hole drilled into the mine roof. A simple and effective method of attaching the pipe to the mine roof is to slot the pipe with hack saw for a distance of 3 inches, the wedging effect being obtained by driving the pipe into a hole in the roof over a tapered wooden plug.

Cat. No.	Ht. In.	DIAMETER, INCHES Shell	Top Flange	Approx. Wt. Lbs. per 100	Price per 100
261777	2 3/8	3	2 1/4	175	\$105.00
269770	3 5/8	3 1/2	2 1/4	225	130.00

Roof Fastenings Expansion Bolts

The expansion bolts consist primarily of a malleable iron shell 1 1/4 inches in diameter, a 5/8-inch roof bolt and a conical nut by means of which the shell is expanded when in position. Sherardized finish.

The roof drilling should be 1 1/4 inches in diameter.

Cat. No.	Length In.	Wt., Lbs. per 100	Price per 100
63334	4	100	\$42.00
68397	4	105	48.00
66336	6	110	55.00
116070	6	115	61.00

Roof Fastenings

Roof Plugs and Lag Screws

No. 34137

No. 36310

The Forms H and II3 suspensions may be attached to the mine roof by means of the wooden plug and gimlet point lag screw threaded to fit the suspension and projecting 3 inches above it. The plug is drilled axially for the screw and is driven into the hole in the mine roof.

Cat. No.	Description	Approx. Wt., Lbs. per 100	Price per 100
34137	Wooden Plug (3 in. by 1½ in.)	10	\$6.00
36310	Lag Screw (⅝ in. by 3⅞ in. special) Sherardized	25	9.00

Roof Wedges and Bolts

The bolt is slotted near the top and the upper wedge is arranged to engage it so as to prevent turning of the bolt in screwing up the suspension.

When the suspension is removed from the bolt the whole device is loosened in the hole by a blow with a hammer and may thus be readily recovered.

For Forms H and H3

Insulator Pins

No. 178893

The mine insulator pins are designed for supporting feed wires in and about mine and industrial haulage plants. They consist of a malleable iron bayonet pointed pin and porcelain knob.

The pin is 8½ inches long; the knob is 2 inches high by 2½ inches in diameter with a ¼-inch groove.

The mine feeder wire insulator is designed for supporting feeder wire cables in and about mines where cable is supported from mine roof. Catalogue numbers cover complete insulator with 6-inch expansion bolt.

Small size for 300000 c. m. and under. Distance from top of clevis to lower edge of spool, 4½ inches. Clearance between bolt head and bottom of groove in insulator, 1¼ inches.

Large size for 1000000 c. m. and under. Distance from top of clevis to lower edge of spool, 6¾ inches. Clearance between bolt head and bottom of groove in insulator, 2¾ inches.

Form J3 Economy Ears

Economy Ears are made by a new process whereby the natural hardness and fine grain of the cast surface, both inside and outside of the lips, are retained.

These ears have extra deep grooves and 3/8-inch thick lips which almost meet when peened around the wire, providing extra metal for wear under the center of the ear. The bottom edges of the lips are gradually tapered up at the ends for a distance of about 1/2 of the length of the ear, which design, together with the machine grinding for an equal distance on the sides, practically eliminates any pounding or hammer blows from the trolley wheel, resulting in prolonged life.

These ears conform to the A. E. R. A. standard.

Form J Improved Clinch Ears

This ear is designed to be used without solder. The wire is held by peening the lips over the wire at the bottom and by the two lugs over the ends of the wire at the top. This ear is used with grooved wire. The lips run the full length of the ear.

Cat. No.	Length In.	Size Wire	Tap In.	Material	Approx. Wt., Lbs. per 100	Price per 100
222244	15	00	5/8	Bronze	150	\$180.00

Form J3 Clinch Ears

Economy Type—For Round Wire

These ears have extra deep grooves and 3/32-inch thick lips which almost meet when peened around the wire providing extra metal for wear under center of the ear. A gradual taper in thickness toward the ends and a side tapered grinding, extending from the ends, eliminates any pounding or hammer blows from the trolley wheel.

Cat. No.	Length Inches	Size Wire	Tap Inches	Approx. Wt., Lbs. per 100	Price per 100

Form R3 Ears

These ears are made of bronze and are provided with large drop-forged steel wedges for holding the wire. The tensile strength of the ear is greater than the largest size wire it is designed for, and with standard wedges will hold a wire worn 50 per cent of its original size.

116144	Clamping Screw for Cat. No. 16379...	6	3.00

Form M Clamping Ears for Mines

Form M mechanical clamping ears are for use in mine trolley construction.

The clamp permits the single operation of turning the nut to fasten the ear onto the suspension and grip the trolley wire. It is made of malleable iron and is 2 3/8 inches high, 3 1/2 inches long with excellent wheel clearance.

It has a 5/8-inch tap. Sherardized finish. For 00, 000, 0000 wires.

The feeder ear is similar to the plain ear except that a bronze feeder boss suitable for 4/0 feeder cable is added.

*Has bronze feeder boss.

Form L Clamping Ears

These ears are made with 5/8-inch tap only. They are made of malleable iron sherardized, and allow perfect wheel clearance.

The special wrenches No. 193540 are included, free, in each shipment.

Spherical Strain Insulators

Made in two sizes having diameters 2 1/4 inches and 2 3/4 inches. Smaller size is suitable for a working load of 1000 pounds, the average tensile strength is 3000 pounds. The 2 3/4-inch size has an average tensile strength of 5000 pounds, and is suitable for a working load up to 2000 pounds. Both sizes are subjected to a potential test of 5000 volts.

Insulated Turnbuckles

Insulated turnbuckles, sometimes called Brooklyn Strain Insulators, are provided with drop-forged steel eyebolts. Turnbuckles have malleable iron casting with eyebolts sherardized to prevent rusting. The casting is made in two halves which fit around the head of the insulated portion fastened together with hollow set screws, thus affording a resistance to tensile strain limited only by the ultimate breaking point of the solid metal.

Cat. No.	Diam. Bolt, In.	Finish	Wt., Lbs. per 100	Price per 100

Drawbridge Frogs

Cat. No.	Description	Approx. Wt., Lbs. per 100	Price per 100
16395	Nos. 00, 000 and 0000 Wire, Bronze.	875	\$1800.00

Frogs similar to the above but for No. 0 wire are furnished if desired.

Forms G and G2 Trolley Frogs

Forms G and G2 frogs are made with different divergent angles. The following table gives the range of distance from track switch point to track frog with which each set of frogs may be most satisfactorily used:

Frog Distance	Divergence Angle	Trolley Frog
Up to 22 Feet	20°	
From 20 to 30 Feet	15°	
Above 28 Feet	8°	

The minimum frog distance given in the table with which the 15 degree frogs may be used to best advantage corresponds to a turnout radius of 40 feet, but when suburban cars, using high speed trolley wheels, run over city tracks it is advisable to use 15 degree rather than 20 degree frogs throughout the city construction.

To insure smooth transition of the wheel between tongue and pan, the pans of all Form G frogs have, at each end, an inclined plane rising at a very acute angle from the horizontal, which receives the flange of the wheel.

Forms K and K2 Crossings, Uninsulated
For Round and Grooved Wire

Adjustable, with Deflector Bars

Form K adjustable crossings are adjustable for any angle between 30 and 90 degrees.

The body parts are malleable iron and the end tongues are of bronze.

When crossings having deflector bars are required additional clamp castings and longer bolts are supplied so that the bars and end tongues are tightened into place in one operation.

Adjustable, with-out Deflector Bars

Automatic Sectionalizing Switches
Type SW-6, Form A-1

Automatic sectionalizing switches improve the efficiency of direct current feeder systems by permitting all section feeders to be placed in multiple. This is accomplished by connecting the switch directly across the section insulators which, while giving all the advantages of the non-sectionalized system, does not in consequence of the automatic operation of the switch, do away with the beneficial results gained from a sectionalized system.

The Type SW-6 Form A1 switch has a continuous capacity of 800 amperes with an overload adjustment of from 600 to 1200 amperes.

This switch is recommended to customers wishing to improve their operating conditions without the large outlay for feeder copper generally necessary. Recommended for use in the original layout of a feeder system, since by its adoption, a smaller cross-section of feeder copper can be utilized.

Price, No. 1917172, Weight, 235 Pounds each \$250.00

Mine Roof Drills

This machine, though light in weight, is of strong design and capable of fast work. It can be set for drilling holes at any angle by simple adjustments. The standard posts give a long range of extension and meet all ordinary mine conditions. The drill can readily be carried, set up, and operated by one man. It can be furnished with any length post and with feed bar having 8, 10, 12 or 14 threads per inch as required.

An ordinary ratchet handle or a double-action ratchet handle can be furnished if desired.

Wrenches for Ears and Suspensions

Fig. 1 Combination Wrench

This wrench is of malleable iron, sherardized. Specify same wrench for both ear and suspension wherever possible.

One wrench will be furnished free of charge with each direct shipment; one additional wrench with every 100 ears or suspensions when shipment is made to agent's stock.

This wrench is made of 5/16-inch hexagon steel, sherardized. It is used for hollow clamping screws in forms L and L2 ears.

One wrench will be furnished

free of charge with each shipment and one additional wrench with every 25 ears.

Globe Cold Drawn Seamless Steel Trolley Poles

These poles are made in two designs, A and B. A has a reinforcement 16 inches long and B has a longer reinforcement to meet varying and severe conditions.

They are made of the best grade of basic open hearth steel of the following analysis:

Carbon10-18% Phosphorus . .not over .045%
Manganese .30-50% Sulphur " .045%

Elastic limit is from 60,000 to 70,000 pounds per square inch.

No. 4 More-Jones Trolley Harps

M-J No. 4 Trolley Harps accommodate 4 to 5-inch wheels; 1 1/2 inches between contact washers and regularly furnished with 1/2 and 5/8-inch solid cold rolled steel axles. Harps of malleable iron.

Prices upon application.

No. 6 More-Jones Trolley Harps

M-J No. 6 Trolley Harps, the latest and most improved design, on the bottle principle, to prevent catching or fouling the overhead. For 6-inch wheels, 1 3/4-inch length of hub; equipped with 3/4 or 7/8-inch hollow lubricating shaft. Harps of malleable iron, very light, strong and efficient.

Prices upon application.

M-J Wheel and Harp Parts

- No. 1—Contact Spring for No. 4 Harp.
 - No. 2—Contact Washer for No. 4 Harp.
 - No. 3—Contact Spring for No. 6 Harp.
 - No. 4—Contact Screw.
 - No. 5—Solid C. H. Steel Shaft.
 - No. 6—Hollow C. H. Steel Lubricating Shaft.
 - No. 7—Graphite Bushing.
 - No. 8—Cotter Pin.
- Contact spring and washer of phosphor-bronze.

Wood Poles

Selection of poles for outside wire lines is based on three determining factors:

- 1—Species of wood to meet specific requirements;
- 2—Quality of the poles;
- 3—Service on shipments.

Species

The first factor—that a certain species of wood is best fitted for one kind of installation to the exclusion of other species—is fully recognized by the Western Electric Company. In recognition of this we have available in various pole yards throughout the country one or more of the five species that are generally used for poles—(1) western red cedar, (2) northern white cedar, (3) creosoted yellow pine, (4) chestnut, (5) cypress, (6) juniper.

Logs Cut in the Interior of the Woods Are Hauled to the Lumbering Railroad Track by Oxen

Pole Quality

Poles sold by Western Electric Co. are quality products in the best sense of the term. All conform to nationally accepted standards. Inspections are thorough. Poles are inspected and measured on the ground immediately after felling and stripping. Another inspection is made before they are placed in stock. A third inspection takes place before shipping.

All poles that are delivered are guaranteed to be in accordance with the specifications under which they are ordered.

Service on Shipments

At Minneapolis, and Everett, Washington, cedar poles are concentrated, handled by steam equipment, etc. The stock runs fifty thousand poles and more.

The many bases of supply for pine, chestnut and cypress are so situated throughout the regions in which these woods are grown that shipments can be made in any quantity and at any time.

Emergency service is always available to supply needs when the unforeseen happens.

Preservative Treatment for Wood Poles

Showing piping arrangement in pump room in National Pole Cedar Treating Plant at Minneapolis. They are so flexible that they can be put into any tank either through the top or the bottom and so arranged that a continuous circulation of oil can be maintained. In this room are two 2500GPM pumps operated by 240 h. p. motors. The oil can be changed from hot to cold in any one of these treating vats within three minutes.

Description

Fifteen years of scientific observation of experimental lines, by engineers of the largest pole users in the United States has demonstrated that the life of poles can be increased by the proper butt-treatment. A prominent engineer, after making a careful study, made this statement: "If a satisfactory penetration is obtained in the ground line area, I am convinced that the life of a pole, butt-treated in creosote, will depend upon the mechanical wear of the pole above."

Another prominent engineer says, "The depth of penetration of the preservative exercises the controlling influence on the durability of poles. At least ninety per cent of the chestnut, western red cedar and northern white cedar poles butt-treated with creosote by the open-tank process were sound after eleven to fourteen years' service. The slight decay in the relatively small number of the poles affected was usually in small pockets and occurred in checks through the treated wood."

This additional expenditure for treating poles with preservative is a sound investment because the initial investment for the pole itself and cost of erection has been amortized at the end of its natural life as an untreated pole. The percentage of increased life depends largely on the soil and climatic conditions existing in the locality in which they are set, the size of the pole and the kind of treatment given.

Users are assured by results obtained in experimental lines in all parts of the country, that a good penetration at the ground line will greatly increase the life of a pole. This more than doubles its value, as the original factor of safety is maintained far beyond the replacement date of the untreated pole.

Six standard ways of treating poles have been accepted:—

1. Brush treatment at individual pole yards.
2. AA treatment with open tanks (15 minutes hot creosote).
3. A treatment with open tanks (15 minutes hot carbolineum). More expensive, but no more efficient than the AA treatment. We do not supply this treatment.
4. B treatment with open tanks (4 hours hot—2 hours cold creosote).
5. Pressure treatment throughout the entire length of the pole.
6. Puncturing treatment guaranteeing penetration.

If the best material and workmanship are used, any one of these methods is beneficial but varies in degree of success with the grade of material and workmanship. The first four methods can be used profitably only with seasoned poles. Authorities agree that penetration and oil stability are essential to lasting results. Any method selected insures greater line life if pure distillate of coal tar is used. The purity of the distillate is of paramount importance.

Preservative Treatment for Wood Poles

One of the Butt Treating Vats Showing View of 130,000 Gallon Reserve Creosote Tank at Minneapolis Plant

Brush Treatment

Brush treatment of poles consists in applying hot preservative to the surface of a pole with a brush. This method is not in general use among pole dealers, but is used by operating companies for local treatment.

For effective brush treatment the highest boiling point coal tar distillate obtainable is essential. High boiling creosote oils penetrate the wood readily. They are free from black and sticky tars that do not penetrate but concentrate on the outer wood cells. Western Electric "Sozol" was developed for this work.

Sozol

Sozol is for brush application for poles and all line construction woods including chestnut, cedar, pine and fir.

From a quality standpoint there is nothing on the market comparable with it. It is pure distillate of coal tar, that is, it is a product obtained directly by distilling off the volatile products of coal tar, and when obtained it is not adulterated by adding any other substances. It is not a by-product, that is, the distillation process is primarily for the purpose of securing this particular oil—not for some other distillate of coal tar in which this oil or a modification of it would come off in the distilling process. All creosote wood preserving oils have two faults in a greater or less degree. Either they are so thin and volatile that when applied with a brush or by open tank method, they partially evaporate or leak out and their preservative qualities are thus impaired; or, they are adulterated with heavier coal tar oils and these heavier constituents clog up other cells of the wood and prevent the penetration required for effective treatment.

This new oil, Sozol, is of much higher specific gravity and greater body and, in consequence, is more stable than ordinary pure creosote oils sold for wood preserving. It is not as volatile as these oils; at the same time, it has absolutely no viscous properties which interfere with effective penetration as in the case of mixed oils. In short, it has absolute permanency with maximum penetration. It is more than a creosote oil, it is a special wood preservative.

Sozol is supplied in drums, barrels and cans.

Preservative Treatment for Wood Poles

Treatment B

Treatment B provides for submersion of pole butts in hot creosote for several hours, after which the bath is changed to cold creosote, the duration of each immersion depending upon several factors, but principally upon the degree of seasoning. The intent of treatment B is to give poles as near a full sap penetration as possible but there is no guarantee penetration of one-half of the sap wood on B treatments. This method has a recognized place in the industry.

Pressure Treatment

Pressure treatment, or cylinder treatment impregnating the entire length of the pole, is not required for the preservation of the more durable species of wood, such as chestnut, northern white cedar and western red cedar, as these are subject to rapid decay only at the ground line. Pressure treatment is applied, however, to the different species of Southern pine. This we cover fully under pine poles.

Puncturing Treatment

Scientific Pentrex Method Worth More Money

The perforating process of Pentrex treatment of cedar poles is the logical result of the development of the open-tank or non-pressure process treatment of timber with creosote.

The preservative value of creosote has been recognized for many years and, as a treatment for cedar poles, was first applied with a brush. However, it was found that the painting did not get the creosote into the smaller and deeper season checks and cracks, so the poles were dipped into the creosote. This treatment was named AA and was specified as a continuous immersion for fifteen minutes in creosote heated to not less than 212° F., and not more than 230° F.

Scientific B Treatment, Average Penetration, $\frac{1}{32}$ -inch

The penetration secured by the AA treatment was so shallow and unreliable that the time of treatment was lengthened to a period of from four to six hours in creosote ranging from 212° F. to 230° F. and an immediately succeeding bath in cold creosote for two hours at not more than 110° F. This treatment was called B. By this process a much deeper penetration was secured and better results in service were obtained, but it was found that the absorption was very irregular. In fact, in seasoned timber of apparently the same condition, so no poles absorbed the creosote readily and showed a good penetration while others gave evidence of no more than a surface treatment. Likewise, in the same pole there might be a full sapwood penetration at one point, whereas, in an area but a few inches away there might be no penetration. This uneven absorption naturally led to very uncertain results in service because, after the poles were set in line and were subjected to the various conditions of the seasons with the resultant checking and parting of the fibres, the cracks descending from the upper untreated portion of the pole entered the treated area and where they ran through the shallow treatment they opened up and exposed untreated timber. This permitted the fungi to come in direct contact with untreated fibres with the resultant infection and rotting of the wood within the pole behind the layer of treated timber. This action proved that any treatment was only as effective as the protection given by the shallowest penetration at any point in the ground line area.

This conclusion necessitated the development of a uniformly deep penetration. Much research and experimental work was done to develop a treating process which would give this result.

Puncturing Treatment for Wood Poles

Continued

Average Penetration of Punctured Section, $2\frac{1}{32}$ -inch, by our Scientific MethodAverage Penetration, $1\frac{1}{32}$ -inch, Unscientific Hand Punctured Treatment

A microscopic study of cedar shows the wood to be very porous. It is made up of long, hollow longitudinal fibres which are spindle-shaped cells, arranged in rings from the pith to the bark. These rings of cells form the annular rings. These fibres, besides furnishing support for the tree, provide means for the movement of the sap. Other than the longitudinal fibres are the medullary rays or cells which extend radially from the pith into the bark. There are no passages in the timber other than the cells within these longitudinal fibres and medullary rays and the sap moves from cell to cell through minute pits or pores which connect adjoining cells at their points of contact.

Although cedar fibre will absorb from 12 per cent to 15 per cent of its oven dry weight in water it will not absorb creosote. Examination, under the microscope, of treated cedar discloses creosote within the cells but shows no absorption in the fibre. Consequently, in order to obtain penetration in cedar the movement of creosote must be by means of the openings in the cells and not through the cell fibre.

If the conditions within the timber remain unchanged after being cut, not so much difficulty would be experienced in treating it, but such is not the case. The sap is a watery solution of sugars, starches, resins, etc., and, while the tree is alive, is constantly in solution and circulating, but, when the timber is cut, peeled and begins to season, some of the water from the sap evaporates and concentrates the sugars and resins which seal up most, if not all, of the minute pits or pores between the adjoining cells.

This accounts for the difficulty in impregnating so-called seasoned cedar and the facility in treating green, water driven, or weathered cedar. In the green timber the sap is still in solution and all passages are open. With water-driven timber some of the sap has been dissolved and leached from the cells. While in weathered timber, although the water has evaporated from the sap and left the sugars and resins obstructing the pits and pores, yet the extreme seasoning has caused minute checks which have opened up the fibres between the adjoining cells and thus permitted the movement of creosote through the cells.

Consequently, as it is impracticable to treat only weathered, green or water-driven timber, it became necessary to devise a mechanical means for opening radial passages into seasoned timber to permit the movement of creosote in the cells.

Puncturing Treatment for Wood Poles

Continued

Showing Pentrex Machine Ready to Receive Pole Coming In from Left for Perforating. Note Carriage in Low Position, which is Afterwards Raised to Head of Machine

No external pressure is applied. The movement of creosote in the cells is entirely dependent on the action of capillary attraction. This is created by first applying heated creosote ranging from 212° to 223° F. for a continuous period of eight hours, thereby vaporizing the moisture in the sapwood, causing it to expand $1\frac{1}{273}$ times its volume for every degree of heat through which it passes and partially expelling it from the timber and then applying an immediately succeeding bath in cold creosote from 110° F. to 150° F. The cold treatment contracts the vapors, forms a partial vacuum within the cells and draws the surrounding creosote into the timber. This action creates an appreciable longitudinal creep or movement but does not produce much penetration radially or tangentially.

The loss in strength to a pole through perforation has been determined to be in direct proportion to the percentage of the circumference cut away in a horizontal plane and to the depth of the incision.

A scientific machine for perforating, therefore, meets the existing structural conditions in cedar. It was designed to cut radial passages through the fibre just to the depth of the required penetration. The incisions cut the fibres, opened the ends of the longitudinal cells, and provided passage for the movement of creosote so that with the least amount of timber cut in a horizontal plane and with perforations only to the depth of the required penetration, a complete saturation of the fiber was obtained between all perforations.

There are many other perforating machines in operation, but they have been designed with no consideration of the conditions of cedar with the result that their perforations are made deeper than necessary and are spaced so close that the timber is weakened to a great extent and, in many cases, the sapwood is so mutilated that it is made no more than a loosely adhering shell. Even though such perforating may produce the required penetration, it is detrimental to the pole, inasmuch as the strength of the pole is greatly reduced and the sapwood is made a weakened shell which will not withstand the abuses of service.

Some apply perforating by means of a studded belt or plate. These belts, or plates, are about eighteen inches long by six inches wide and contain from seventy-five to one hundred and twenty-five teeth. A mallet is used to pound the teeth into the timber. When the plate is removed, the teeth, which are binding the timber between them, tear the fibres and in many cases loosen the outer sapwood from the heartwood. This produces a very weak and unsatisfactory condition. Furthermore, it is impossible to obtain uniform depth of perforation and impregnation by using belts or plates because the body holding the teeth is not flexible and cannot follow the crevices and irregularities of the timber. On the other hand, the teeth of our machine are inserted into the timber in such a way as to insure a uniform depth of perforation regardless of the uneven surface over which it has to work.

Puncturing Treatment for Wood Poles

Continued

Pentrex Machine with Pole in Position Ready for Puncturing. The Oil Lift that Raises the Lower Carriage into the Head of the Machine and Acts as a Cushion while the Machine Is in Operation

It was thought at first that if the same penetration could be obtained in a cedar pole without perforating as with perforating, that better service results could be obtained. Experience has proven the contrary to be true. If creosote were not volatile, and if its preservative value were of indefinite existence and if the layer or treated timber around the outside of the pole were never broken, then a creosoted area on the surface, regardless of depth of penetration, would be sufficient to preserve the pole indefinitely. It has been found, however, in green and even in seasoned poles, that season checking occurs after the poles are set in line. But in perforated poles, these checks descending from the upper untreated section run out when they reach the treated, perforated area. Thus the perforating protects the poles, not only in securing a deeper, more uniform impregnation, but also in providing means of relieving the stresses which cause checking in treated ground line section thereby insuring constant and complete protection against infection of the timber.

Two of these proper method Pentrex machines are at the Minneapolis transfer yard where the National Pole Company maintains an average stock of 80000 poles. Thus, one machine can handle 3/8-inch orders, and the other 1/2-inch orders without stopping to change the knives or change substitution of the order. A third machine is operated by the National Pole Company at Everett, Washington. These yards handle this work for us.

It is felt that studies by means of an increment borer could well be made by pole users. One large Central Station, whose engineers make such studies independent of the operating department, reported informally, that our Pentrex Treatment was 30 per cent more efficient than some others on their yards. In making increment borings, the oil in the outside of the boring is naturally smeared by the augur indicating a deeper penetration than the actual.

For a real test, therefore, take a sharp knife, such as a razor blade, and split the boring in half and examine the penetration on the inside. Rest the boring on a smooth clean board when doing this.

There is also much opportunity for the use of Lufkin special pole tapes in checking circumferences at the six-foot point on poles purchased under "Class" specifications.

Red or Western Cedar Poles

National Electric Light Association Specifications

Same as A. T. & T. Co. Specification

The material desired under these specifications consists of poles and guy stubs of the best quality of either seasoned or live green cedar of the dimensions hereinafter specified. The poles covered by these specifications are of Western white cedar, otherwise known as red cedar, Western cedar or Idaho cedar. Seasoned poles shall have preference over green poles, provided they have not been held for seasoning long enough to have developed any of the timber defects hereinafter referred to. All poles shall be reasonably straight, well proportioned from butt to top, shall have both ends squared, sound tops, the bark peeled, and all knots and limbs closely trimmed.

When the dimension at the butt is not given, the poles shall be reasonably well proportioned throughout their entire length. No pole shall be over six inches longer or three inches shorter than the length of which it is accepted. If any pole is more than six inches longer than is required, it shall be cut back.

Minimum Dimensions of Poles in Inches

Length of Poles Feet	MINIMUM TOP CIRCUMFERENCE

90	61	58

Quality of Timber

DEAD POLES.—No dead poles and no poles having dead streaks covering more than one quarter of their surface shall be accepted. Poles having dead streaks covering less than one quarter of their surface shall have a circumference greater than otherwise required. The increase in the circumference shall be sufficient to afford a cross-sectional area of sound wood equivalent to that of sound poles of the same class.

TWISTED, CHECKED OR CRACKED POLES.—No poles having more than one complete twist for every twenty feet in length, no cracked poles and no poles containing large season checks shall be accepted.

CROOKED POLES.—No poles having a short crook or bend, a crook or bend in two planes or a reverse crook or bend shall be accepted. The amount of sweep measured between the six foot mark and the top of the pole, shall not exceed one inch to every six feet in length.

"CAT FACES."—No poles having "cat faces," unless they are small and perfectly sound and the poles have an increased diameter at the "cat face," and no poles having "cat faces" near the six foot mark or within ten feet of their tops shall be accepted.

SHAVED POLES.—No shaved poles shall be accepted.

WIND SHAKES.—No poles shall have cup shakes (checks in the forms of rings) containing heart or star shakes, which enclose more than 10 per cent of the area of the butt.

BUTT ROT.—No poles shall have butt rot covering in excess of 10 per cent of the total area of the butt. The butt rot, if present, must be located close to the center in order that the pole may be accepted.

KNOTS.—Large knots, if sound and trimmed close, shall not be considered a defect. No poles shall contain hollow or rotten knots.

MISCELLANEOUS DEFECTS.—No poles containing sap rot, woodpecker's holes or plugged holes, and no poles showing evidence of having been eaten by ants, worms or grubs, shall be accepted.

MARKING.—Every pole shall be scored with a cross at a point ten feet from the butt.

Red Cedar Poles

Western Red Cedar Association Official Specifications

Minimum Carloads

Minimum weights required to make carload lots of poles:
 Cars loaded with 35' or shorter poles..... 40,000 lb.
 Cars loaded with 40' poles or 40' and shorter poles. 50,000 lb.
 Loads containing any 45' or longer poles (double or overhand loads)..... 66,000 lb.
 Triple loads..... 99,000 lb.

The above minimum weights will be used in all instances excepting as follows:

Sales covering shipments to be made from Eastern yards will be figured on minimum weights shown in tariffs under which the shipment moves.

Poles under tentative N. E. L. A. Western Red Cedar specifications 1922 will be priced on application.

Cedar Poles

Tentative Specification Western Cedar Poles Studied by the N.E.L.A. in 1922

To make available complete specification information on all species of poles, the following specification known as tentative N.E.L.A. Standard is published.

This specification for Western red cedar poles was before the Association in the year 1922-23 and has been adopted as standard by a few of the operating companies.

Increment Borers

By turning this instrument it is forced to any desired depth into the pole being examined, and a core, the boring, may be withdrawn from it, which is a complete cross section of the wood.

The depth of penetration of the creosote is determined by its color; the condition of the wood, the annular rings, etc. are clearly visible.

This is the recognized method of determining creosote penetration. The holes do no harm if they are carefully plugged with tight-fitting creosoted plugs.

Prices upon application.

Northern White Cedar Poles

Otherwise Known as Maine Cedar, Michigan Cedar or Canadian Cedar

Northern White Cedar Association Specifications Top Measure Poles

All posts and poles shall have been cut from live, green, growing Northern White Cedar timber.

PERCENTAGES OF MAXIMUM DEFECT.—Not more than 10 per cent. of the number of pieces of any lot or shipment shall contain the maximum crook or butt rot.

VARIATION IN SIZES.—If not to exceed 2 per cent. of the pieces in any lot or shipment are below the minimum size, and there is an equal number of pieces as large as the minimum of the next larger size, the shipment shall be considered as conforming to these specifications so far as size is concerned.

LENGTHS.—Any post or pole 7 feet to 18 feet inclusive may be either two inches longer or two inches shorter than its specified length. Any pole 20 feet and longer may be short of its specified length one-half an inch for each five feet of its length, or it may be six inches longer than its specified length.

MANUFACTURE.—All posts and poles shall be peeled and knots closely trimmed.

KNOTS.—Knots are permitted if sound, smoothly trimmed and do not plainly impair the strength of the pole or post.

SHORT KINKS.—Short kinks not permitted.

ROT.—

- (a) Sap or skid rot not permitted.
- (b) Poles 16 feet and longer having minimum top sizes, of the dimensions required, must have sound tops. Poles 16 feet and longer having tops one inch or more in circumference above the minimum top sizes, may have one pipe rot not more than one-half inch in diameter. Posts or poles 7 feet to 14 feet inclusive, pipe rot is permitted.
- (c) Butt and ring rot combined shall not exceed 10 per cent. of the area of the butt.

TWIST.—Winding twist permitted unless very unsightly and exaggerated.

CAT FACES.—Cat faces permitted if sound, and if their distance from the top of the pole is not less than 20 per cent. of the length of the pole in 30 feet and shorter poles, and 25 per cent. on 35 feet and longer poles.

DISCOLORATION.—Discoloration not considered a defect under these specifications.

CROOK OR SWEEP.—1. Posts or poles 7 feet to 14 feet inclusive. One-way sweep not exceeding maximum shown in Table No. 2 is permitted.

2. Poles 16 feet and longer.
(a) BELOW GROUND LINE.—Sweep not to exceed diameter of butt.

(b) ABOVE GROUND LINE.—Reverse sweep, and two-way sweep, meaning a sweep in two planes allowed providing line drawn from center of pole at top to center of pole at ground line (see Table No. 2) does not leave the pole at any point. One-way sweep allowed not to exceed maximum shown in Table No. 2.

BUTT ROT.—The Association Specifications admit butt rot to the extent of 10 per cent. of the total area of the butt.

CROOK.—The rules admit a crook one way of 5 inches on a 25-foot pole, 6 inches on 30-foot pole, 7 inches on a 35-foot pole, measuring the crook from a point 6 feet from the butt to the top of the pole.

The creosoted pine pole has many natural advantages which account for its wide-spread use and popularity. Probably the greatest single incident that has ever occurred to confirm the judgment of engineers in the selection of this pole was the terrific sleet storm of December 1924. The most notable feature of the whole storm was the remarkable manner in which creosoted pine poles withstood the great ice and wind loads.

The creosoted pine pole has a long life because it is permanently fortified against decay by the high grade creosote oil injected under heavy pressure. The uniformly deep penetration of the preservative into the wood is due to the use of highly developed Western Electric specifications both for the manner of treatment and for the creosote oil.

Creosoted pine is the strongest of the pole woods. Hence it is standard practice in pine line construction to use smaller poles or fewer poles per mile, thus reducing costs.

The strength of the creosoted pine pole does not decrease during years of service. Long after installation the factor of safety of a pine line is as great as when it was first built.

Specifications permit the use of only the best creosote produced in either America or Europe and the use of this high grade oil explains the cleanliness and non-bleeding qualities of Western Electric poles.

The natural taper of the yellow pine, which can be counted on as 1 inch in 8 to 10 feet, explains its symmetry, uniformity and attractiveness in the line.

Quick delivery of these poles can be made, for large quantities of all sizes are maintained at the plant ready for immediate shipment. At any time our representative will gladly call on a customer personally for a discussion of his requirements. Technical data will be supplied upon request.

Pine Pole Conductivity

The question as to whether treated poles have less resistance than untreated poles and for that reason are a source of danger to line men called upon to work on them, has been a subject of considerable discussion, particularly where poles treated throughout their full length are used. A committee of the American Wood Preservers' Association reporting at its 1922 convention had the following to say on the subject:

1. The distribution engineer is concerned with insulator and cross-arm resistance, the pole resistance forming but a small fraction of the circuit to the ground.

Creosoted Yellow Pine Poles

Continued

2. Creosote and gas oil are the preservatives in general use for pole preservation, and the experimental data show that they increase resistivity of timber.

3. Steel poles and cross-arms are in common use on transmission lines.

The N.E.L.A. agrees that pole conductivity does not enter seriously into transmission or distribution line construction.

**Wood Preservation
Development of the Art**

As long ago as fifty years the term "Commercial Creosote Oil" could be referred to, with confidence in what the term meant; but in recent years the term has been abused. "Commercial Creosote Oil" as the term is used today, more generally refers to a much inferior substance to that defined by this term in years gone by. The "Commercial Creosote Oil" of today can be, and generally is, a mixture of low grade, inferior Creosote Oil and tar. Despite the fact that the specifications are usually written to limit the tar content, this percentage sometimes runs all the way up to ninety-five per cent and is used under the indefinite term "Commercial Creosote Oil."

Real coal tar Creosote Oil is a pure distillate, free from admixture of any kind. A mixture of Creosote Oil and tar is not in reality a Creosote Oil. It is therefore necessary for the buyer to be extremely careful not to be misled by a reference to a mixture as "Creosote Oil" whether termed "Commercial" or otherwise.

Pure creosote oil, of high gravity—means stability. The same gravity can be falsely made up by adding coal tar to a light volatile creosote oil.

At cutting, wood contains a high percentage of moisture which must be eliminated to allow the entrance of the preservative.

Removing this moisture is called seasoning. This can be accomplished by natural seasoning, or seasoning in air, requiring proper piling for a period of 2½ to 4½ months. It may also be accomplished by artificial, or seasoning by steam. This requires only a few hours and has the advantage of sterilizing and opening the pores of the wood rendering it receptive to the preservative.

The difference in these two processes when properly handled is small but no other single item of the preservation process requires closer attention than seasoning. Poles at this stage of manufacture must be perfectly sound and in the best possible condition, otherwise an internal rot is set up which may prove most insidious and destructive to line life.

Creosoted Yellow Pine Poles

Continued

Wood Preservation

Developments of the Art

Continued

We always recommend the best creosote oil in the empty cell process, which where a minimum quantity of oil is used, is the most stable; a pure coal tar distillate will have more oil left in the pole in five years with 6 pounds used in the original treatment, than would be found in the pole treated with 12 pounds of the adulterated creosote oil.

Selected white wood and the best Oil unite in forming the efficient Creosoted Yellow Pine Pole.

The Western Electric Company guards, by scientific specifications written in detail, against both inferior products and the manipulation of the best products by man. It selects its poles and it selects, with equal care, its Creosote Oil.

The best grade of wood preservative known to science—Creosote Oil, a pure distillate of coal tar—in combination with the best wood, makes the best Creosoted Yellow Pine Pole.

We advocate full cell process, 12 pounds of Western Electric Specification No. 4227 Oil per cubic foot of wood, for heavy duty and approximate life of forty years.

We advocate same oil, empty cell treatment 8 pounds final retention, for a cheaper and less important pole, probably good for twenty-five years.

American Telephone & Telegraph Co.

Specifications No. 4229 for Creosoted Yellow Pine Poles

Adopted in 1924 as Revising and Replacing Specification No. 4209

These specifications cover poles of creosoted southern pine, divided into classes with respect to dimensions and framed for various purposes as hereinafter described. All orders should state the length and the circumference class desired.

General

Poles shall be of southern yellow pine (long leaf, short leaf, Cuban or loblolly), well proportioned from butt to top, scund, straight and free from defects, except as hereinafter set forth.

Quality of Timber

GENERAL.—All poles shall be free from decay, rot, dote, red heart, dead streaks, brashy wood, cracks, and bird holes. Poles shall be free from all other defects exceeding in amount the allowances hereinafter specified. (See requirements below in reference to knots and holes.)

TIMBER.—All poles shall be cut from live timber. Poles may be cut from trees which have been worked for turpentine, but no part of any section of the tree which has been exposed in this operation shall extend above a plane 3 feet below the ground line as hereinafter set forth in the table entitled Minimum Dimensions of Poles in Inches—Circumference.

INSECT DAMAGE.—The scoring or channeling of the pole surface by insects working under the bark shall not be classed as insect damage. Holes or tunneling entering the body of the poles and indicating attack by ants, worms, grubs or other insects, shall be considered insect damage. Insect damage is permitted to the following extent: pin-holes, circular in outline, less than ¼ inch in diameter, not greater in number than 15 per 4 square inches shall be permitted in unseasoned poles. Similar holes in seasoned poles shall also be permitted in case their depth does not exceed 1 inch.

GRAIN.—No pole shall have more than 1 complete twist of grain in any 20 feet of length.

American Telephone & Telegraph Co.

Specifications No. 4229 for Creosoted
Yellow Pine Poles

Continued

SHAKES AND CHECKS (Before Treatment).—The tops of poles shall be free from shakes. Shakes in the butt surface not over 1 foot in depth and extending over more than $\frac{1}{4}$ of the circumference are permitted, provided they are at least 1 inch distant from the edge of the butt. Shakes over 1 foot in depth or shakes extending over more than $\frac{1}{4}$ of the circumference shall be permitted only when they fall inside a circle whose center is the pitch center of the piece and whose diameter is one half the diameter of the butt. Checks starting from the pitch center of the butt shall not extend to the edge of the butt surface. The top and side surfaces of the pole shall be free from large or injurious checks.

SCARS.—No pole shall have had a catface or other form of scar located within 2 feet of the ground line. The distance of the ground line from the butt shall be as hereinafter set forth under the heading Table of Dimensions. Scars located in other sections of the pole shall be smoothly trimmed so as to remove all bark and all surrounding or overhanging wood not completely intergrown with the wood of the body of the pole. Such trimming shall not result in abrupt changes in the contour of the pole surface or have a depth of more than 1 inch, except that where the diameter of the pole at the location of the scar is more than 10 inches, the depth may be $\frac{1}{10}$ of the diameter.

The distance to the axis of the pole from trimmed surfaces located between 2 feet below the ground line and the butt shall not be less than the radius of the pole at a point 2 feet above the ground line.

KNOTS AND HOLES.—Knots over 1 inch in diameter, showing discoloration or softness of fibre, indicating possible decay, shall be neatly gouged to a depth of not more than $\frac{1}{2}$ of the diameter of the pole at the point where the knot is located to permit determination of the character and extent of decay. Sound wood shall not be unnecessarily removed. The gouging should be done in such a manner as to insure drainage of water from the hole when the pole is set. Where such gouging reveals the presence of heart rot or punk rot, the pole shall be rejected. Knots under 1 inch in diameter need not be gouged. Knots showing hollow pith centers shall be reamed to a diameter of $\frac{3}{8}$ inch and plugged with the creosoted wooden plugs shown in the drawing appended to these specifications. All poles shall be free from nails, spikes and other metal. Holes over 1 inch deep left by the withdrawal of nails or spikes, which will not drain water, shall be completely filled with the creosoted wooden plugs shown in the drawing.

BUTTS AND TOPS.—The tops of poles shall be free from pith holes. Pith holes shall be permitted in the butts of poles. Buttsilvering due to felling shall be permitted if the distance from the outside circumference is not less than $\frac{1}{4}$ of the butt diameter and the height is not more than 1 foot.

Preparation for Treatment

BARK.—Outer bark shall be completely removed from the surface of all poles. No patch of inner bark left on the pole surface shall be more than $\frac{1}{4}$ inch wide or 4 inches long. No 2 patches of inner bark shall be separated from each other by less than 6 inches.

TRIMMING AND SAWING.—All knots shall be trimmed close. Completely overgrown knots, where the covering wood does not rise more than 1 inch above the main surface of the pole, need not be trimmed. All poles shall be neatly sawed at the butt along a plane which shall not be out of square with the axis of the pole by more than 2 inches per foot of butt diameter. Beveling at the edge of the sawn butt surface not over $\frac{1}{2}$ of the diameter in width or an equivalent area, if unsymmetrically located, shall be permitted.

American Telephone & Telegraph Co.
Specifications No. 4229 for Creosoted Yellow
Pine Poles

Continued

FRAMING.—Before poles are subjected to the creosoting process they shall be framed in accordance with the terms of the order. When the order calls for a guy stub the pole shall only be roofed as indicated in appended drawing. When the order calls for a cable pole the pole shall be roofed and fitted with 1 bolt hole as indicated in the appended drawing. When the order calls for a brace the upper end of the pole shall be shaped and framed in accordance with the details shown in the appended drawing. Braces shall satisfy specification requirements for the dimensions of the class ordered before framing is begun. The 14, 28, 33 and 38-inch braces shall satisfy at 4 feet from the butt the dimensional requirements specified at 6 feet from the butt for poles 2 feet longer.

When the order calls for a pole the pole shall be roofed and gained in accordance with the details shown in the appended drawing.

The number of gains applied shall be as shown in the following table for the class and length of the pole.

Required No. of Gains	No. OF FEET						Class D	Class E	Class F
	Class AAA	Class AA	Class A	Class B	Class C	Class D			
6	25 or Over	26 or Over	25 or Over	25 or Over	25 or Over	
5	22	22	22	22 or Over	
4	20	20	20	20	20 or Over	
3	18	18	18	
2	16	16	16 or Over	

No gains shall be cut in class G.

Each gain shall be of the dimensions shown in the drawing appended hereto. The distance between gains and the distance between the uppermost gain and the ridge of the roof shall be as shown in this drawing. A $2\frac{1}{2}$ -inch hole shall be bored through the pole at the center of each gain. This hole shall be perpendicular to the face of the gain. The removal of wood between the upper edge of the top gain and the roof is permitted, provided the surface is at no point below the level of the face of the top gain.

Differences in level between gains on the same pole shall be such that straight edges 30 inches long are placed on the faces of the finished gains so as to extend 15 inches on either side from the center line of the pole and are sighted in the direction of the length of the pole, the straight edges in any 2 gains will not depart from parallelism by more than $\frac{1}{16}$ -inch at their ends.

The gains on poles showing sweep or curvature shall be located on the concave side of the pole. In case the pole shows sweep or curvature in more than 1 direction, the concave side with the greatest curvature shall be gained.

When the order specifies a lesser or a greater number of gains than is required for poles above or is accompanied by drawings describing framing different from that shown on the appended drawings, the instructions of the order shall be followed in framing the pole.

Dimensions and Shape

DIMENSIONS—LENGTH.—Poles under 50 feet in length shall not be over 3 inches shorter or 6 inches longer than their nominal length. Poles 50 feet or over in length shall not be over 6 inches shorter or 12 inches longer than their nominal length.

CIRCUMFERENCE.—Poles shall be classified with respect to their circumference at 6 feet from the butt and at their top in accordance with the table set forth below. This table gives the minimum allowable circumference at 6 feet above the butt and at the top for poles of each class and length listed and shall not preclude the acceptance of poles having greater circumferences at these points of measurement than those given in the table. The top dimensional requirement shall be understood to apply at a point corresponding to the minimum length permitted for the pole.

STORAGE.—When poles treated under these specifications have for any reason to be held in storage, they shall be stacked in close piles (either parallel or crosswise) on treated or other non-creosoting skids. The skids shall be of such dimensions and so arranged as to support the poles without producing noticeable distortion of any of them. The skids shall be so placed that no part of any pole shall be in permanent water, or in contact with the underlying soil.

Appendix A

Definitions

The following terms are defined for the purpose of these specifications and the definition given for each term shall apply wherever the term is used.

LIVE TIMBER AND DEAD STREAKS.—Live timber is that cut from trees which were standing and living at the time of cutting. Dead streaks start from the butt and are portions of the sap-wood in which the life processes had ended prior to the cutting of the tree, differing therein from wounds, such as catfaces, scars and turpentine cuttings where the growth of new wood and the accumulation of resin show that life processes are still acting to repair the injured part.

SHAKES.—Shakes are splits or openings which cause a separation of the wood between annual rings.

CHECKS.—Checks are splits or openings which cause a separation of the wood in a radial direction.

CRACKS.—Cracks are breaks or fractures in the grain of the wood.

CATFACES OR SCARS.—Catfaces or scars are surface depressions in the body of the pole, generally elliptical in shape, resulting from tree wounds where healing has not re-established the normal cross section of the pole.

SWEEP.—Sweep is the deviation of a pole from straightness. Sweep shall be measured as indicated in diagram No. 1.

SHORT CROOKS.—Short crooks are localized deviations from straightness which within any section of 5 feet or less in length reach an amount of more than 5 inches.

KNOT DIAMETER.—The diameter of a knot is its diameter measured at the surface of the pole in a direction at right angles to the lengthwise axis of the pole.

GROUND SECTION.—The ground section of the pole is that part lying between its butt and the plane perpendicular to its longitudinal axis at a point 2 feet above the ground line.

ABOVE-GROUND SECTION.—The above-ground section of a pole is the part lying between its top and the upper end of the ground section.

BRASHY WOOD.—Wood fibre is brashy when it has become brittle and lifeless through weathering or decay or is deficient in density through peculiarity of tree growth.

WATER DRAINAGE.—Holes, hollows and notches required to drain water shall be so shaped that they will retain water when the pole is set.

DISTANCE FROM BUTT.—Where distance from butt is specified, the measurements shall be made from a plane whose distance from the butt is equal to the nominal length of the pole.

Dist. of Ground Line Lgth. from Pole Butt Ft. Feet	DIMENSIONS POLE, INCHES									
	CLASS D		CLASS E		CLASS F		CLASS G			
	6 Feet from Butt	Top	6 Feet from Butt	Top	6 Feet from Butt	Top	6 Feet from Butt	Top	6 Feet from Butt	Top

45 6 1/2	17	32		
50 7	17	33 1/2		

SHAPE.—Poles shall be free from short crooks. Poles may have sweep in 2 planes or sweep in 2 directions in 1 plane provided that a straight line connecting the center of the butt with the center of the top does not at any intermediate point pass through the external surface of the pole. When sweep is in 1 plane and 1 direction only, the amount between the top and the butt shall not be greater than that specified for the length of the pole in the following table.

Length Pole Feet	Maximum Sweep Inches	Length Pole Feet	Maximum Sweep Inches	Length Pole Feet	Maximum Sweep Inches

30	6	60	12	90	18
35	7	65	13		

Treatment

All poles before being treated shall satisfy all requirements set forth above applying to poles in the white.

Unless otherwise ordered, poles shall be impregnated with not less than 12 pounds of dead oil of coal tar per cubic foot of wood or its equivalent, in accordance with the requirements of the specifications for creosoting timber hereinafter referred to. (See oil specification No. 4227.)

22.5	1.329	1.364	1.399	1.436	1.473	1.511
23	1.378	1.413	1.449	1.485	1.523	1.562

The following specification is intended to obtain an empty cell treatment for the poles; if the material to be treated is in a different condition as to moisture and seasoning, material for each retort charge shall be selected as to condition of moisture so that there will be no great difference in degree of seasoning in any one charge. Only perfectly sound poles shall be treated and all framing shall be done before treatment. The treating plant shall be equipped with indicating and recording gauges and other necessary apparatus for accurately observing and recording the treating process. Above the level of the creosoting cylinder there shall be an overhead drum for the purpose of determining that the cylinder is full of preservative and free from air and the gauge reading indicating a full cylinder shall not be taken until the preservative is seen to overflow through the valve on top of this drum. There shall also be a sap drum below the level of the cylinder by means of which sap and condensation shall be removed continuously. The treating plant must have all the necessary chemicals, a laboratory and laboratory apparatus to enable the quality of preservative to be determined.

Air-seasoning

In air-seasoning, the poles shall be stacked in such a manner as to provide free air circulation and minimum contact between individual pieces in each stack. These stacks shall be placed on treated or otherwise permanent skids at least 6 inches above the ground on a well drained storage yard free from vegetation and decaying wood, so located that prevailing winds strike them freely. Alleys between the stacks shall be wide, continuous and straight. The material shall remain until in the judgment of the inspector it is sufficiently seasoned to obtain the maximum benefit from the treatment.

Seasoning by Steam

When time for air-seasoning is not available, steam-seasoning shall be used. Live saturated steam shall be admitted to the treating cylinder taking care that all air is swept from the cylinder before the outlet valve is closed. Pressure shall then be raised gradually to the maximum temperature desired, this maximum being determined by the treating inspector. It should not be less than 259 degrees F. nor more than 270 degrees F. The duration of the steaming process is dependent upon the degree of seasoning of the poles in the cylinder charge but shall in no case be carried to such an extent as to injure the timber.

Initial Vacuum

After the steaming process has been completed the steam shall be blown off and the treating cylinder exhausted as quickly as possible to as high a vacuum as possible which must be at least 24 inches at sea level or proportionately less at higher altitudes. This vacuum shall be maintained for at least 1 hour or for whatever longer period is necessary, so that the wood may be as dry and free from air as practicable. During the exhaustion process the temperature within the treating cylinder shall be maintained by means of steam under pressure in the closed coils. The cylinder shall be relieved of sap and condensation continuously.

Initial Air Pressure

In the case of air-seasoned poles, initial air pressure is the first step in the treating process. With steam-seasoned poles this step immediately follows the initial vacuum.

The poles shall be subjected to air pressure of sufficient intensity and duration (usually 40 to 70 pounds) to provide under a quick high vacuum the ejection of surplus preservative, and to insure a retention and proper distribution of the stipulated number of pounds of preservative per cubic foot of wood.

To obtain the volume of a Yellow Pine Pole or Stub, record the length in feet, and the butt and top diameters in inches; multiply the length in feet by the factor opposite the butt diameter and under the top diameter.

EXAMPLE: Length of pole, 40 feet. Factor, 1.273.

Butt diameter, 20 inches. $40 \times 1.273 = 50.920$ cu. ft.

Top diameter, 10 inches.

Specifications for the Preservative Treatment of Creosoted Pine Poles

8-pound Rueping Empty Cell Process

Continued Treatment

The creosote shall be introduced between 165 degrees F. and 200 degrees F., the cylinder pressure being maintained constant until the cylinder is filled. The oil must be seen by the inspector to flow from the over-head drum on top of the treating cylinder, thus assuring him that the cylinder is completely filled with the preservative. The pressure shall then be gradually raised to and maintained at a minimum of 150 pounds per square inch until there is obtained the largest gross absorption that can be reduced to the stipulated final retention (i. e. 8 pounds per cubic foot) calculation being based on readings of the working tank gauges and the weight of the creosote at 100 degrees F. During treatment the creosote temperature shall average 180 degrees F. For the purpose of obtaining maximum sapwood penetration this gross absorption shall average not less than 16 pounds of creosote per cubic foot of wood. The quantity of oil for final retention shall be based on the cubic content of wood in the treating cylinder as determined by actual measurement of the top and butt of each pole in each charge. Under no conditions may shortage of oil in one charge be offset by an excess in another; the minimum final retention in each case must be 100 per cent of the quantity of creosote specified.

Final Vacuum

After pressure is completed and the cylinder is emptied of oil a sufficient vacuum shall be promptly created and maintained until the timber can be removed from the cylinder free from dripping oil.

Preservative

Creosote used in the treatment of these poles to comply with each of the following: A. T. & T. Co. Creosote Specification No. 4229 which includes No. 4227 Oil; American Wood Preserver's Association Standard, Creosote specifications for grade 1; American Railway Engineering Association Standard, Creosote Specification for grade 1.

12-pound Bethel Full Cell Process

The following specification is intended to obtain a full cell treatment for the poles; and if the material to be treated is in a different condition as to moisture and seasoning, material for each retort charge shall be selected as to condition of moisture so that there will be no great difference in degree of seasoning in any one charge. Only perfectly sound poles shall be treated and all framing shall be done before treatment. The treating plant shall be equipped with indicating and recording gauges and other necessary apparatus for accurately observing and recording the treating process. Above the level of the creosoting cylinder there shall be an overhead drum for the purpose of determining that the cylinder is full of preservative and free from air and the gauge reading indicating a full cylinder shall not be taken until the preservative is seen to overflow through the valve on top of this drum. There shall also be a sap drum below the level of the cylinder by means of which sap and condensation shall be removed continuously. The treating plant must have all the necessary chemicals, a laboratory and laboratory apparatus to enable the quality of preservative to be determined.

Air Seasoning

In air-seasoning, the poles shall be stacked in such a manner as to provide free air circulation and minimum contact between individual pieces in each stack. These stacks shall be placed on treated or otherwise permanent skids at least 6 inches above the ground on a well drained storage yard free from vegetation and decaying wood so located that prevailing winds strike them freely.

Specifications for the Preservative Treatment of Creosoted Pine Poles

12-pound Bethel Full Cell Process

Continued

Air-seasoning Continued

Alleys between the stacks shall be wide, continuous and straight. The material shall remain until in the judgment of the inspector it is sufficiently seasoned to obtain the maximum benefit from the treatment.

Seasoning by Steam

When time for air-seasoning is not available, steam-seasoning shall be used. Live saturated steam shall be admitted to the treating cylinder taking care that all air is swept from the cylinder before the outlet valve is closed. Pressure shall then be raised gradually to the maximum temperature desired, this maximum being determined by the treating inspector. It should not be less than 259 degrees F. nor more than 270 degrees F. The duration of the steaming process is dependent upon the degree of seasoning of the poles in the cylinder charge but shall in no case be carried to such an extent as to injure the timber.

Initial Vacuum

After the steaming process has been completed the steam shall be blown off and the treating cylinder exhausted as quickly as possible to as high a vacuum as possible which must be at least 24 inches at sea level or proportionately less at higher altitudes. This vacuum shall be maintained for at least 1 hour or for whatever longer period is necessary so that the wood may be as dry and free from air as practicable. During the exhaustion process the temperature within the treating cylinder shall be maintained by means of steam under pressure in the closed coils. The cylinder shall be relieved of sap and condensation continuously.

In the case of air-seasoned poles initial vacuum will be the first step in the treating process.

Treatment

The creosote oil shall be introduced without breaking the vacuum, at a temperature of not less than 165 degrees F. and not more than 200 degrees F. until the cylinder is filled to overflowing. The oil must be seen by the inspector to flow from the overhead drum on top of the treating cylinder, thus assuring him that the cylinder is completely filled with the preservative. During treatment the temperature shall average 180 degrees F. The pressure on the preservative shall be applied gradually until such an amount of oil has been injected into the poles as to provide maximum penetration and a final retention of 12 pounds of creosote per cubic foot, calculation being based on readings of the working tank gauges and the weight of the creosote at 100 degrees F. Also, cubic contents of the poles shall have been determined by actual butt and top measurements of each pole in each charge and the quantity of oil injected shall be based on the cubic content figure obtained from these measurements. Under no conditions may shortage of oil in one charge be off-set by an excess in another; the minimum final retention in every case must be 100 per cent of the quantity of creosote specified.

Final Vacuum

After the pressure period is completed and the cylinder is emptied of oil, a sufficient vacuum shall be maintained until the timber can be removed from the cylinder free from dripping oil.

Preservative

Creosote used in the treatment of these poles to comply with each of the following: A. T. & T. Co. Creosote specification No. 4229 which includes No. 4227 Oil; American Wood Preserver's Association Standard, Creosote Specification for Grade 1; American Railway Engineering Association Standard, Creosote Specification for Grade 1.

**American Telephone and Telegraph Co.,
Specifications No. 4227 for Coal Tar
Creosote**

**For Use Only in Supplying
A. T. & T. and Associated Cos.
General**

The material desired under these specifications is that known as dead oil of coal tar or coal tar creosote. It shall consist wholly of distillates of gas tar produced by the destructive distillation of bituminous coal either in the manufacture of coal gas or in the manufacture of coke by the by-product process. It shall be without adulteration.

Information shall be furnished on request as to the origin of the oil and the names of the parties through whose hands it may have passed. A copy of any analysis of the oil that may have been made prior to its use shall also be furnished.

The right is reserved to take representative samples of the oil and test the same wherever desired.

Requirements

All coal tar creosote furnished under these specifications shall conform to the following requirements:

1st. The oil shall have a specific gravity at 38 degrees Centigrade, as compared with water at 15.5 degrees Centigrade of not less than 1.03.

2nd. The oil shall be thoroughly liquid at a temperature of 38 degrees Centigrade.

3rd. When 100 grams of the oil are distilled in accordance with the requirements of the specifications for the analysis of dead oil of coal tar or coal tar creosote hereinafter referred to.

(a) Not more than 5 per cent shall distill off up to 205 degrees Centigrade.

(b) Not more than 40 per cent shall distill off up to 235 degrees Centigrade.

(c) Not more than 80 per cent shall distill off up to 315 degrees Centigrade.

(d) Not less than 60 per cent shall distill off up to 360 degrees Centigrade.

(e) The oil shall not contain more than 2 per cent of water.

(f) The quantity of tar acids present in the fractions distilling below 300 degrees Centigrade shall not exceed 10 per cent, measured by volume, of the total sample distilled.

(g) The subphonation residue from the fraction distilling between 300 degrees Centigrade and 360 degrees Centigrade shall not exceed 2 per cent, measured by volume, of the said fraction.

4th. The constituents of the oil insoluble in benzol shall not exceed 0.50 per cent by weight.

5th. When oil is intended for use in the treatment of wood duct it shall be free from acids of the acetic series and their salts.

Analysis

The oil shall be analyzed in accordance with the methods outlined in the specifications for the analysis of dead oil of coal tar or coal tar creosote hereinafter referred to.

Handling and Storage

HANDLING.—The prevention of decay is dependent upon the continuity of the external treated layer of wood. Care shall be taken in handling poles to preserve the continuity of the treated layer. Pole tongs, cant-hooks and other pointed tools capable of producing indentations of more than 1 inch in depth shall not be used on poles treated under these specifications. Pole tongs shall be handled as to preclude their tearing away from any pole. Treated poles shall not be dragged along the ground.

Standard Specifications for Creosote Oil

American Wood Preserver's Association No. 1 Oil

Creosote used in treatment of Western Electric pine poles complies with this specification, also with A. T. & T. creosote specification No. 4227, also with A. R. E. A. creosote specification for grade 1. This specification was formerly published as A. T. & T. No. 3713.

(1) The oil shall be a distillate of coal-gas tar or coke-oven tar. It shall comply with the following requirements:

(2) It shall not contain more than 3 per cent of water.

(3) It shall not contain more than 0.5 per cent of matter insoluble in benzol.

(4) The specific gravity of the oil at 38 degrees C. compared with water at 15.5 degrees C. shall be not less than 1.03.

(5) The distillate, based on water-free oil, shall be within the following limits:

Up to 210 degrees C., not more than 5 per cent.

Up to 235 degrees C., not more than 25 per cent.

(6) The residue above 355 degrees, if it exceeds 5 per cent, shall have a float-test of not more than 50 seconds at 70 degrees C.

(7) The oil shall yield not more than 2 per cent coke residue.

(8) The foregoing tests shall be made in accordance with the standard methods of the American Wood-preservers' Association. (See manual—creosote, analysis.)
Approved, 1917; adopted, 1921; amended and adopted, 1923.

Owing to the complexity of the chemical composition and physical properties of coal-tar creosote oil, and to the fact that some of the same compounds and properties which characterize coal-tar creosote are found in certain petroleum derivatives, the determination of the purity of creosote oil is difficult. When there is not certain assurance that the oil is a pure product, the following tests will aid in arriving at an opinion as to its coal-tar origin:

(a) Fraction distilling between 210 and 235 degrees C. is usually solid or contains some solids when cooled to 25 degrees C.

(b) All of the fractions up to 315 degrees C. contain tar acids in varying amounts, usually at least 1 per cent, calculated on the amount of the fraction tested. (See manual—creosote, analysis, tar acids.)

(c) The specific gravity of the fraction 235 and 315 degrees C. is usually not lower than 1.025 and specific gravity of the fraction between 315 and 355 degrees is usually not lower than 1.085 and 38 degrees C. compared with water at 15.5 degrees C. However, some pure-tar distillates fall slightly below these limits.

If the oil does not comply with at least one of the foregoing tests it is undoubtedly not a pure coal-tar creosote.

**Specification No. 3782 for Dead Oil of Coal Tar for
Brush and Open Tank Treatments**

Extract

This oil is standard stock with us for open tank work.

GENERAL.—The material desired under these specifications is that known as dead oil of coal tar or coal tar creosote, obtained through the distillation of coal tar produced by the destructive distillation of bituminous coal at a temperature high enough to yield a tar consisting mainly of compounds of the aromatic series. It shall be without adulteration.

Information shall be furnished on request as to the origin of the oil and the names of all parties through whose hands it may have passed. A copy of any analysis of the oil that may have been made prior to its offering shall also be furnished. The right is reserved to take representative samples of the oil and test the same wherever desired.

NOTE.—When unseasoned timber is being treated by the cylinder pressure process using steam for seasoning, the oil may contain not more than five (5) per cent of water. But in case more than two (2) per cent of water is present in the oil, the quantity of the preservative added to the timber shall be increased by an amount sufficient to ensure that the required amount of oil computed on a water-free basis has been taken up by the timber.

Specifications No. 3782 for Dead Oil Coal Tar for Brush and Open Tank Treatment

Continued

REQUIREMENTS.—All dead oil of coal tar furnished under these specifications shall conform to the following requirements:

1ST.—The oil shall have a specific gravity of at least one and three-hundredths (1.03) at thirty-eight degrees Centigrade (38° C.).

2ND.—The oil shall be thoroughly liquid at a temperature of thirty-eight degrees Centigrade (38° C.).

3RD.—When one hundred grams of the oil are distilled in accordance with the requirements of the specifications for the Analysis of Dead Oil of Coal Tar or Coal Tar Creosote hereinafter referred to—

(a) Not more than eight (8) per cent shall distill off up to 210° C.

(b) Not more than thirty-five (35) per cent shall distill off up to 235° C.

(c) Not more than eighty (80) per cent shall distill off up to 315° C.

(d) The oil shall not contain more than two (2) per cent of water.

(e) The quantity of tar acids present in the fractions distilling below 300° C. shall not exceed ten (10) per cent (measured by volume) of the total sample distilled.

(f) The sulphonation residue from the fraction distilling between 300° C. and 360° C. shall not exceed one and one-half (1½) per cent of the said fraction.

4TH.—The constituents of the oil insoluble in benzol shall not exceed five-tenths (0.5) per cent by weight.

Specification No. 3783 for Liquid Grade Dead Oil of Coal Tar (Extract)

Some prefer this specification over No. 3782 for use in winter. It is about 15½% more expensive than No. 3782.

GENERAL.—The material desired under these specifications is a liquid grade of dead oil of coal tar or coal tar creosote, to be obtained through the distillation of a coal tar produced by the destructive distillation of bituminous coal at a temperature high enough to yield a tar consisting mainly of compounds of the aromatic series. It shall be without adulteration.

Information shall be furnished on request as to the origin of the oil and the names of all parties through whose hands it may have passed. A copy of any analysis of the oil that may have been made prior to its offering shall also be furnished. The right is reserved to take representative samples of the oil and test the same wherever desired.

REQUIREMENTS.—All dead oil of coal tar furnished under these specifications shall conform to the following requirements:

1ST.—The oil shall have a specific gravity of at least one and eight-hundredths (1.08) at fifteen degrees Centigrade (15° C.).

2ND.—The oil shall be thoroughly liquid at a temperature of five degrees Centigrade (5° C.).

3RD.—When one hundred grams of the oil are distilled in accordance with the requirements of the specifications for the Analysis of Dead Oil of Coal Tar or Coal Tar Creosote hereinafter referred to—

(a) Not more than one (1) per cent shall distill off up to 210° C.

(b) Not more than ten (10) per cent shall distill off up to 235° C.

(c) Not less than twenty-five (25) per cent and not more than sixty (60) per cent shall distill off up to 300° C.

(d) The oil shall not contain more than one (1) per cent of water.

(e) The quantity of tar acids present in the fractions distilling below 300° C. shall not exceed eight (8) per cent (measured by volume) of the total sample distilled.

(f) The sulphonation residue from the fraction distilling between 300° C. and 360° C. shall not exceed one and one-half (1½) per cent of the said fraction.

4TH.—The constituents of the oil insoluble in benzol shall not exceed five-tenths (0.5) per cent by weight.

Chestnut Poles

Chestnut is recommended for poles that are intended for lines where the service conditions call for strength and durability.

The long close fibre of chestnut will successfully withstand severe storm. Chestnut poles for heavily loaded lines in exposed districts have a good degree of permanency.

Chestnut poles have exceptionally large butts. Thus chestnut poles will last longer than others when attacked by butt rot.

Western Electric Chestnut Poles are selected poles—selected with unusual care by a corps of field men constantly covering the entire chestnut belt from Maine to Alabama.

Specifications 4166 for Chestnut Poles—Adopted by A. T. & T. Co. Year 1921

Replacing Specifications 1948 and 4138 Tentative Specification N. E. L. A. Year 1923

In 1924 the A. T. & T. adopted amendment No. 2 on following page.

All poles shall be of sound, live white chestnut, squared at both ends, reasonably straight, well proportioned, from butt to top, peeled and knots trimmed to the surface of the pole.

Blighted poles may be furnished, provided they satisfy the requirements of the specifications.

Shaved poles on which the sapwood has decayed are acceptable, provided all decayed sapwood is removed in such a manner as to avoid abrupt changes in the contour of the pole. Measurements of circumference shall not be made until all decayed sapwood has been removed.

If customers desire to buy on Top specification—

Use Class B for value and for weight of 8-inch top.

Use Class C for value and for weight of 7-inch top.

Eight-inch top is minimum of 25 inches around.

Seven-inch top is minimum of 22 inches around.

It would be more in keeping with fact to refer to A Measurement Poles or B Measurement Poles than to Class A or Class B.

Class AA is an A pole with 5 feet cut off the top. Class AAA is an AA pole cut back 5 feet.

Class A poles for four or more crossarms. Class C for two crossarms.

The dimensions of the poles are according to the following tables:

Length of Pole Ft.		6 Ft. from Butt In.		Wt. Lbs.	Class A		6 Ft. from Butt In.		No. to Car-load

Chestnut Poles

Amendment No. 2 to Specifications No. 4166

The following changes in the requirements have been approved and were made effective in 1924 by the A. T. & T. Company.

For the clause headed Dimensions in the section covering Dimensions, Shape and Finish, the following clause has been substituted:

DIMENSIONS:—Length: Poles shall not be over six (6) inches shorter or twenty-four (24) inches longer than the length specified in the order.

Measurements of length shall be made from the average level of the faced part of the butt surface to the most distant part of the top surface.

Poles shall be classified with respect to their circumferences at six (6) feet above the butt, and at their top, in accordance with the table set forth below.

This table gives the minimum allowable circumference at six (6) feet above the butt and at the top for poles of each class and length listed and shall not preclude the acceptance of poles having greater circumferences at these points of measurement than those given in the table.

Top circumference requirements shall apply at a distance from the butt six (6) inches less than the nominal length of the pole.

Minimum Circumferences of Poles in Inches

Wood Poles

View of Seaport Pole Yard

Cypress Pole Specifications

QUALITY OF TIMBER.—The poles shall be the best quality black or red cypress, live, green wood, squared at both ends, reasonably straight, well proportioned from butt to top, peeled, and knots trimmed close. The timber shall be free from wind shakes, decayed or loose knots, worm holes, or other defects that would weaken its strength. The top and butt of the poles shall show no indication of rot.

DIMENSIONS.—The dimensions of the poles shall be according to the tables, the top measurement being the minimum heart diameter measurement at the top of the pole, and the butt the minimum heart diameter at the butt of the pole.

Depth of Pole Setting

In sandy or swamp ground, oil barrels or casks set in the ground will materially assist in securing substantial pole foundations. The following specifications are recommended for the depth in feet of holes:

Solid Ground			Soft Ground		
Line (Height)	Poles (Depth)	Corners	Line	Corners	Solid Rock
22	5	5	5	5	3
25	5	5½	5½	6	3
30	5	5½	6	6½	3½
35	6	6½	6½	7	4
40	6½	7	7	7½	4
45	6½	7	7	7½	4½
50	7	7½	7½	8	4½
55	7½	8	8	8½	5
60	8	8½	8½	9	5½
65	8½	9	9	9½	5½

Guy stubs should be set not less than 7 feet in any soil except solid rock.

Cedar Poles for Electric Light Work

Wind Pressures

Velocity	37	53	65	75	83	91	105	119	130
Pounds per Sq.									

Ft.	5	10	15	20	25	30	40	50	60
-----	---	----	----	----	----	----	----	----	----

The pressures given above are such as would be exerted against a flat surface set perpendicularly to the direction of the wind. For a cylindrical surface like a pole or wire, the effective pressure is two-thirds of what it would be for a square surface of the same area as the cylinder. It is considered that an allowance of from 20 to 30 pounds per square foot of area for pole lines is ample. The above table was calculated from Professor Langley's formula, $P = .0036V^2$, in which P is the pressure per square foot of surface in pounds, and V is the velocity of the wind.

General Construction Rules

SIZE OF HOLES.—The holes should be large enough to permit the free entrance of the poles, and should be full size at the bottom so as to admit of the use of tampers.

TAMPING POLE HOLES.—All pole holes, except those in very hard gravel or rock formations, should be tamped so thoroughly that the necessity for hauling away excess dirt is obviated.

PROTECTING POLES.—Where corner poles or other poles are exposed to injury from whittling, pole butt should be well painted and heavily sanded. If this is not sufficient in any special case, the pole butt should be wound with No. 10 galvanized wire, spaced ½ inch apart, painted and sanded.

PAINTING POLES.—The top and gans of all poles should be painted with one or more coats of approved paint. All poles which are protected by strain plates or shims from the cutting of messengers or guys, should be painted with one or more coats of approved paint on the space occupied by the strain plate.

FACING ARMS (CITY CONSTRUCTION).—At long spans the cross arms should be placed on the side of the poles away from the long spans. Arms on poles should face the originating source of the lead, or face to face, depending on the general condition, except corner pole: then it should face the corner. At the terminals of a lead, the last two poles should face away from the originating source. On corners, arms should face the point of intersection of curb lines, thus facing each other. First arm each side of the corner should ordinarily face the corner.

ON CURVES.—Arms each side of center of curve should face the center of curve.

LOCATION OF POLES AND ANCHORAGES.—Special attention should be given to location of poles, where the ground washes badly, where there are cuts or excavations, and along the banks of creeks or streams. Do not locate poles along the edges of cuts or embankments.

General Construction Rules

Continued

SPACING POLES.—In locating pole line, if it becomes necessary to either reduce or lengthen distance between poles on account of obstacles, objections of property holders, etc., the preference should be for the shorter spans.

LOCATION OF POLES AT STREET CROSSINGS.—In leading away from the originating end of the line when a cross street is reached, pole should not be located on the corners, but should be spaced to fall on the property line. In this connection, alleys may be regarded as street crossings.

ON STREETS.—Poles and stubs on streets should be set inside of and as near the curb line as possible.

IN ALLEYS.—Poles in alleys should be set as close as possible to the side lines of the alleys.

ON PROPERTY LINES.—Poles on streets should be located on or near property lines.

DISTRIBUTION OF POLES.—In distributing the poles, care should be taken to select the heaviest poles for corners and terminals and to place the straightest and best-looking poles on streets and in front of residences.

POLE FITTING AND SETTING—TRIMMING.—All poles that are rough in appearance should be smoothed, and knots should be trimmed close. Top of pole should be leveled with one cut of saw at right angles to length of pole, and edge should be beveled ¾ of an inch with a draw-knife.

FRAMING POLES.—Poles should be raised at the top and placed in a framing buck so that the heaviest sag or curve will be nearest the ground. If the pole be crooked or badly shaped it should be turned with cant hooks until the best side for framing is brought uppermost and the pole securely chocked. In this position it should first be roofed. Seven inches should be measured from the top of the pole, and this point should be the center of the top gans. The succeeding gans should be spaced 18 inches on centers. Gans should be leveled with a straight edge or sighting sticks.

NOTE.—In alleys, poles stepped in line with alley as high as 12 to 15 feet; then turn at right angles to alley and continue to the top. This is to prevent liability of danger to top wagons in narrow alleys.

BUTTING POLES.—Every pole should be squared across the bottom before setting. This should be done with a crosscut saw, and not with an ax.

BRACES AND CROSS-ARM FITTING.—Arms should be sighted and leveled at right angles to pole length, and not parallel with the ground. This includes all corner poles.

A spirit level should not be used for leveling arms.

CANTING ARMS ON CORNERS.—When a lead makes a double corner or changes from one side of the street to the other, the last arm should set at right angles to the line of direction leading to the corner, and the first arm leading away should set at right angles to the line of direction leading away from the corner.

If the change of direction forms an angle of less than forty-five degrees, one or both corner arms may be canted slightly to secure the greatest space between lines. This should not be permissible where the angle is forty-five degrees or over.

CANTING ARMS ON SINGLE-POLE CORNERS.—The arm should set in a line that will divide in half the angle formed by the two lines of direction of the route.

On curves the inside of the arms should point to the common center of a circle of which the lead curve forms the circumference.

Single pole corners are not desirable and should not be used when the pull is over 20 feet, unless it is an unavoidable case.

GUY STUBS.—A guy stub in no case should be smaller in diameter at butt or top than the pole it supports, and should be as straight as possible on account of the tendency to buckle. A stub at the head of heavy lines should be as massive as possible.

A guy stub should be raked to position before filling hole, and should not be set straight and raked with the anchor guys. In the proportion that stub is curved or buckled its strength is decreased. No stub should be raked less than 24 inches.

Guy stubs holding a strain greater than a one-arm lead should measure 12 inches across the top or more, if procurable

Bates Expanded Steel Poles

Wood Crossarms

Street Lighting Pole

One-piece Pole Used as a Strut

Bates One-piece Expanded Steel Poles are manufactured with specially designed, patented machinery at such a low manufacturing cost as to justify their universal adoption in permanent installations requiring stability and efficiency.

They contain all the advantages of riveted fabricated structures and eliminate the disadvantages.

Bates Poles are made of one piece of steel. They are not fabricated. They are made from specially rolled H sections of low carbon, open hearth steel.

The sections are first sheared cold, then expanded while hot in an expanding machine having a pulling capacity of 250 tons. By this method every pole is automatically tested in the process of manufacture; the slightest imperfection in the steel is promptly and positively exposed.

All of the surfaces of a Bates Pole are accessible for inspection, cleaning and painting. There are no pockets nor places in which water, dirt or other injurious materials may collect.

This condition also permits a smaller factor of safety to be used, as if the pole is properly maintained by painting, the opportunity for corrosion is not as great.

Accessibility insures not only a low maintenance expense, but also greater reliability.

Giant Rainier Fir Trees

The prime requisites in a crossarm are lightness, strength and durability: some engineers stress one quality and some another, but Rainier Fir is the best answer for all sorts of uses and conditions: however, we are equally able to furnish long leaf yellow pine crossarms, and creosoted arms, in either fir or yellow pine.

This is the arm most widely used and most generally preferred; its use is by no means confined to this country; for instance, this arm was selected for the lines of the American Expeditionary Forces in the world war.

The United States Forestry Service has made elaborate tests of different woods and with results almost uniformly favorable to fir for crossarms; certainly for lightness and strength, and continuing strength over a period of years, Rainier fir is in a class by itself. Exceptional cases are well established of a line life of these arms up to fifty years. Another advantage is that they need no treatment whatsoever, which subject is covered hereinafter.

Rainier fir crossarms do not require painting or the use of any preservative; are more than double the necessary strength with a large "factor of safety"; they live in actual service for many years.

Long-leaf yellow pine crossarms are manufactured in the Gulf Region, and when they have a large heart content, are strong and durable.

Short-leaf yellow pine (and long-leaf sapwood) crossarms, should be creosoted (pressure treatment) before being put into service; this treatment prolongs the life of the arms for many years, but great care should be exercised that only pure distillate oil is used and the treatment given by a reliable creosoting company.

Creosoted yellow pine crossarms should be made from short-leaf yellow or long-leaf yellow pine; sapwood is no objection, as it has the necessary strength and takes oil readily. Only pure distillate creosote (dead oil of coal tar) should be used; this assures a clean surface, free from "goo"; the treatment consists, first of full seasoning by steam and vacuum; second, of impregnation with preservative under high pressure.

Wood Crossarms

A Load of Yellow Pine Arms Going into the Cylinder to be Creosoted

We maintain at each warehouse a liberal stock of the genuine Rainier fir arm, in order to give customers service when in need of arms quickly. Many central stations and crossarm users find it more satisfactory and economical to buy their entire supply from these stocks as they need arms rather than to take a carload at a time and carry the investment themselves over an uncertain period of time.

A good many public utilities require from time to time small lots of arms of special size and manufacture, that is, other than those hereinafter listed as standard. We will be glad at any time to stock any special arm for a customer under a special contract arrangement, and any of our representatives will be glad to go into this matter fully on request. We have also at Chicago, Minneapolis, Centraha, Wash., and New Haven, Conn., large stocks of blank arms, which can be cut to length and bored according to your special requirements. This is merely another link in the chain of Western Electric service on crossarms.

TREATMENT OF RAINIER ARMS.—In some localities it is occasionally found necessary to color crossarms, so as to distinguish them from arms used for other purposes. As previously stated the genuine Rainier fir arm does not require any preservative treatment, and we recommend that if a color is necessary the arms be dipped in the proper stain, which our Pacific Coast mills are prepared to do.

We recommend, however, that a Rainier arm be dipped in a hot solution of pure distillate creosote oil, if that will answer the purpose of color. This treatment tends to prevent an arm from checking and to protect it from woodpeckers, and from the inroads of termites, etc. Unless color is demanded, this is a useless expense.

All arms bored for one 5/8-inch center bolt and 3/8-inch brace bolts unless otherwise specified, except as shown in "Standard" table.

MINIMUM CARLOAD WEIGHTS.—Fir from Pacific Coast Mills, 38,000 pounds. Small cars are scarce and weight of at least 50,000 pounds should be figured on. Cars to contain as high as 90,000 pounds can be had. Smaller cars are available in the Southern Yellow Pine Regions—minimum weight, 34,000 pounds.

Standard arms are manufactured as shown in table; orders for special arms should be accompanied by sketch or blueprint showing exactly what is wanted, and are subject to delay in manufacture.

CREOSOTE OIL DIP TREATMENT.—Hot dip treatment (immersion for five minutes in hot creosote oil). This treatment can be given only at Pacific Coast Mills, Mississippi mills, Louisiana mills, Virginia mills, and Chicago and Minneapolis warehouses.

If board measure of arm is wanted, add one-half inch to height and width of finished arm; if length runs into inches take next higher foot length; multiply height by width in inches; divide by twelve, and multiply by length in feet.

All dimensions are subject to the usual manufacturing variations; crossarms long in stock show some shrinkage from original dimensions.

Weight creosoted crossarms—full cell—12 pounds treatment—add 15% to untreated weight.

Weight creosoted crossarms—empty cell—8 pounds—add 10% to untreated weight.

Any change required from standard spacings, pin holes or bolt holes as here given, must be distinctly specified on the order.

RAINIER FIR CROSSARMS:

MATERIAL— Sound, live, yellow Douglas fir; close-grained (at least eight rings per inch); straight grained (not out of parallel to edge of arm in central section more than five degrees).

PROHIBITED— Rot, dot, loose heart, loose or rotten knots, shakes and splits.

ALLOWED— Warp up to 1/8 inch off-set per lineal foot: sound knots up to one inch diameter, but not at pin holes or in clusters; pitch pockets up to 8 inches in length; season checks up to one inch in depth; sap-wood up to 25 per cent of volume of arm.

MANUFACTURE— Best commercial practice; kiln dried in sizes up to 3 3/4 x 4 3/4 finished; planed on all four sides; pin holes accurately centered, smooth and not badly broken out by bits in boring; dimensions as shown, with commercial variations.

SELECT FIR: Sound lumber; well machined; free from loose or unsound knots: free from knots over one and one-half inch diameter; pitch pockets over twelve inches long, loose heart, rot or wormholes.

LONG-LEAF YELLOW PINE: Genuine Long-Leaf Yellow Pine, guaranteed every arm at least 1/8 heart in volume, and free from knots (except small, sound knots, not over one inch in diameter), or other defects that would impair the strength of the arm.

VIRGINIA YELLOW PINE: Free from loose or unsound knots or other defects which would impair the strength of the arm.

CREOSOTED CROSSARMS AND CONDUIT: Free from large, unsound or loose knots, or other defects which would impair strength: creosoted steam and vacuum treatment—dead oil of coal tar under pressure—either 12 lbs. per cu. ft. (full cell) or 8 lbs. per cu. ft. (empty cell) as ordered.

How to Describe a Crossarm (In Placing Your Order)

- STATE—A—Quantity wanted.
- B—Material and quality (or grade).
- C—Treatment (if any).
- D—Width, in inches (and fraction).
- E—Height, in inches (and fraction).
- F—Length, in feet and inches.
- G—Number pin holes.
- H—Size of pin holes.
- I—Spacing between pin holes (center - side - end).
- J—Size center bolt hole.
- K—Size brace bolt holes.
- L—Space between brace bolt holes.

For example, the standard Bell Telephone Crossarm is described—"Rainier Fir, unpainted, 3 1/4 x 4 1/4"-10', bored for 10, 1 3/32" pin holes, spaced 16" center, 12" sides, 4" end, one 5/8" center bolt hole, two 3/8" brace bolt holes 42" apart."

Important

In ordering crossarms, be very careful to specify just what is wanted, and, if other than standard boring, send sketch or blue print with order. Arms specially made are of no use for general stock, and cannot be taken back if mistake is made in ordering.

Wood Pins

Specifications

MATERIAL.—Pins shall be sound, reasonably straight grained, yellow or black locust (or Oak, as called for), free from knots, checks, sap wood, brash-wood, cracks, etc., except as hereinafter specified.

SAP WOOD.—Sap wood is permitted on the shoulder of the pin provided it does not extend into the tenon.

CHECKS.—Season checks not over 1/8 inch deep are permitted provided they do not appear elsewhere than in the shoulder and lower half of the tenon.

KNOTS.—Pins shall be free from loose or unsound knots; sound knots not exceeding 1/4 inch in diameter are permitted on the shoulder and lower half of the tenon.

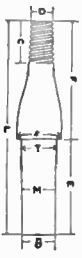

GRAIN.—The grain of the wood shall be reasonably parallel to the axis of the pin; irregularities in grain which are wholly confined to the section within one inch of the bottom of the tenon shall be permitted.

WORM HOLES.—Worm holes and channels not over 1/8 inch diameter are permitted provided they do not impair the holding power of the thread or the placing of the nail, in the pin, and provided that they shall not appear in over 10 per cent of pins in any shipment.

DIMENSIONS.—Pins are usually made from unseasoned wood due to difficulty of securing and manufacturing seasoned timber. Pins after seasoning shall be of the dimensions shown in drawing, or as ordered (with allowable variations as shown).

FLAT SHOULDERS.—One flat surface is permitted, provided the wood is not cut away to the depth of the shoulder at any point of the circumference; in the bottom one-fourth of the tenon irregularities in shape which do not involve the removal of more than one-quarter of the cross-section called for in the drawing are permitted; provided these defects do not occur in more than 10 per cent of the pins furnished.

THREADS.—All pins shall have four threads per inch; the thread shall be smooth and of uniform pitch; the thread shall taper 1/16 inch in diameter to 1 inch in length.

Wood Brackets, Pole Steps and Cobs

Specifications

MATERIAL.—Sound, reasonably straight grained, Oak, free from knots, checks, sap wood, etc., except as hereinafter specified.

SAP WOOD.—Permitted up to 25 per cent of volume of bracket.

CHECKS.—Season checks not over 1/8 inch deep are permitted provided they do not appear within two inches of the thread.

KNOTS.—Brackets shall be free from loose or unsound knots; sound knots not exceeding 1/2 inch in diameter permitted below the shoulder, but not in lower 3-inch section of bracket.

GRAIN.—Grain of the wood shall be reasonably parallel to the axis of the bracket.

WORM HOLES.—And channels not over 1/8 inch diameter are permitted provided they do not impair the holding power of the thread, or the nail holes; and provided that they shall not appear in over 10 per cent of the brackets furnished in any shipment.

DIMENSIONS.—After seasoning, dimensions with allowable variations shall be as shown; Wane allowed in body of bracket not exceeding 1/4 inch; irregularities in body of bracket not to exceed 10 per cent of volume.

THREADS.—All brackets shall have four threads per inch; the thread shall be smooth and of uniform pitch; the thread shall taper 1/16 inch in diameter to 1 inch in length.

MANUFACTURE.—All workmanship shall be of best commercial grade.

STANDARD PACKAGE.—Nos. 1, 3, 4 and 5, 25 per bundle. Nos. 2 and 6, 20 per bundle.

It is the practice to furnish oak pins and brackets "dipped in red paint," without extra charge; this treatment is of little or no protective value, and we earnestly recommend instead, a dipping in hot Cresote Oil, at a slight additional charge; not only does this make a clean bracket, but gives a preservative value, and a lasting effect.

No. 1054 Thomas 10-inch Porcelain Disc Link Type Hewlett Insulators

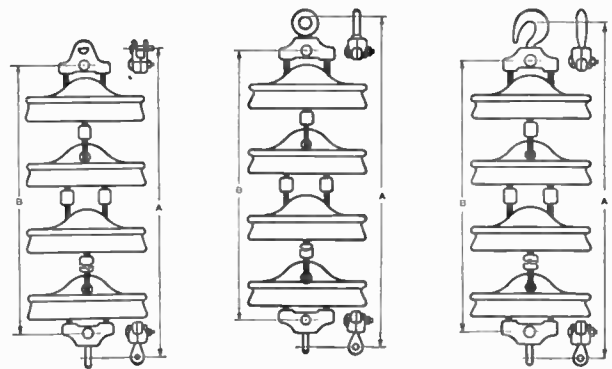

No. 1054

Note the adaptability and variety of fittings manufactured for use with the Thomas Link Type Hewlett Insulator. The terminal hooks, eyes and connectors are drop forged steel. The adapters are so constructed as to allow the terminal fittings to be set either parallel with the transmission line or at right angles. The connecting links are of soft copper and readily shape themselves to conform with the curvature of the cableway in the insulator, when put in tension. The couplers are of cast bronze and the locking spring clips are of a high grade of phosphor bronze. The clevis adapters are malleable cast iron and can be furnished in two sizes, namely; 5/16 opening fitted with 1/2-inch cotter pin or with an 1/8-inch opening and fitted with a 5/16-inch cotter pin.

When ordering, always mention both Catalogue and Type Number, Type Numbers indicate number of units in string. Catalogue Number..... 1054

Type A Memco Clark Insulator Clamps

Replacing Tie Wires for Clamping Insulators to Conductors

The clamping jaws are bolted together with tie pieces of heavy solid copper with

button heads engaging holes in the clamps. Once the conductor is gripped by the clamping jaws, it serves as a part of the clamp itself.

When ordering, the following information should be supplied:

- 1.—Name and number of insulator, or fill in dimensions on sketch.
- 2.—Solid or stranded wire used.
- 3.—Conductor, bare or insulated.
- 4.—Exact outside diameter of conductor.

These clamps are supplied of either special high tensile strength compositions, or of malleable iron protected by a heavy coating of zinc and with steel bolts and nuts sherardized. Malleable iron clamps cannot be supplied in lots of less than 100.

Prices upon application.

Type C Memco Clark Insulator Clamps

Especially Adapted for Small Heavy Insulators at Railroad Crossings

There are suitable bushings of soft copper or aluminum provided, depending upon the conductor.

It also provides when furnished with lead bushings, to amply protect the insulator, an excellent means of holding insulated conductors in place.

Type C clamp provides rigid construction and is recommended for use on lines strung under considerable tension, such as steel messenger lines, etc.

The clamp is also used with small insulators on the transmission line and also proves serviceable in the power house for attaching bus bars to insulators.

Prices upon application.

Pointed Bars

Bar is 4 feet long with sharp curved end of tool steel.

Shaving Tools

Has broad chisel edge attached to steel pipe handle, 5 feet long.

Hubbard Hub Guards and Pole Protection Strips

Hubbard Drive Caps and Points

Hot Galvanized

Standard 3/4-inch inside diameter pipe of conduit unthreaded, can be easily converted into an effective ground by the use of Hubbard Drive Caps and Points. Made of malleable iron and galvanized with pure zinc by the hot-dip process. The point is inserted into end of pipe, usually about 8 feet long, and seated by a few blows of hammer. Cap is placed over other end and pipe is ready for driving. By the time pipe has been driven to desired depth, cap will be firmly attached as shown. Connection is made by filling hole in cap with molten solder and inserting ground rod.

Hubbard Clamp Type Anchor Rods

Hot Galvanized

Where stiff high strength guy wire is used it is not only a difficult job, but a costly one to make up and clamp the strand to the regular guy rod and wire rope thimble. With the clamp type anchor rod it is now possible to secure a stiff guy wire in less than one quarter of the time. The upper U-bolt is removed and hook of block inserted in bolt hole giving a direct pull on guy wire. Clamp is so designed that the greater the strain, the tighter the grip.

Hubbard Strain Plates and Guy Shims

Hot Galvanized

Strain plates and guy shims are used to keep the guy strand from cutting into the pole, which not only injures the pole, but retains moisture about the strand and accelerates corrosion. From two to four plates are required per pole, depending on its diameter. Strain plates are made from 14-gauge galvanized steel plates. Guy shims are furnished either hot galvanized or plain.

Hubbard Heavy Type Steel Guy Clamps

Hot Galvanized

This type of clamp has recently been adopted as the standard of the N. E. L. A. and A. T. & T. Co. It is a heavy clamp made of plates 2 inches wide by 3/8 inch thick

and is equipped with 5/8-inch special heat-treated steel bolts. Sides are punched so that bolts may be assembled either side.

This clamp has a combination of a long, smooth clamping surface and powerful bolts, giving it greater holding power than is found in other types. Heavy bolts will not twist off or strain when the nuts are tightened.

Hubbard Drop-forged Eye Nuts

Hot Galvanized

No. 7501

Drop-forged eye nuts were designed for use on the threaded ends of 1/2 or 5/8-inch machine bolts passed vertically through cross arms for attaching suspension type insulators. They are also useful for dead ending lines. By their use a second eye may be added to the 1/2 or 5/8-inch eye bolts, which permits the attachment of a back guy to the same bolt that supports the insulators to dead ended wire.

Cat. No.	Diam. Bolt Inches	Eye Width Inches	Eye Length Inches	Wt., Lbs. per 100	Price per 100

Peirce Detachable Pole Steps
Hot Galvanized

Lag Screw Type

Back Type

Two styles of detachable pole steps are made. The lag screw type and the back type.

To install the former, slip the plate, which acts as a bearing surface for the step, over the lag and screw the lag in the pole until the plate bites into the wood. The step slides down in a groove on each side of the head of the lag. When the step is removed nothing but the well rounded head of the lag extends from the pole.

The back type is attached by two 1/2-inch lag screws. The step fits in a special slot in the back and is kept from turning by 2 projections thrown out on the back.

Hubbard Lag Screws

Hot Galvanized

Fetter Drive

Gimlet Point

Fetter drive lag screws have become practically standard for construction work because of their greater holding power. Threads do not tear the wood. Fetter drive screws will be furnished on all orders except for 1/4 and 5/8-inch, which are furnished with gimlet points only, unless otherwise specified.

Hubbard Double Arming Bolts

Hot Galvanized

The double arming bolt, used with four square washers, represents a much more economical means of tying cross arms together than the old method of a wooden block with a hole through it and a long machine bolt.

The points are finished and prices include four square nuts but no washers.

Hot Galvanized

Where it is necessary to clear buildings or trees without the use of high poles, extension fixtures of the A. T. & T. Co. design furnish a very rigid and economical construction. They are designed for supporting either 6 or 10 pin arms, No. 8051 Back Brace being used with 6, and No. 8052 with 10 pin arms.

Prices do not include bolts.

Peirce Pole Seats

Hot Galvanized

The frames and braces of all styles are of 1x1/2-inch channel steel. The wood seats are 1 1/4-inch cypress, boiled in creosote. The bars of the all steel seats are 3/8-inch square steel, let into the frame in such manner as to leave no projecting ends. There is no strain on the riveted joints. The bars are placed with corners up to prevent slipping. They are shipped completely assembled in bundles of five.

No. 9035 Hubbard Pole Balconies

Hot Galvanized

The frame, braces and guard rails are open hearth steel having a tensile strength of 55000 to 65000 pounds per square inch. All steel work of the balcony is galvanized by the hot dip process. The wooden platform is thoroughly seasoned oak, painted with 2 coats of standard green pole paint. Upright angles are made of 1½x1½x¾-inch steel, the platform angles of 1¾x1¾x¾-inch, and guard rail of ¼x1¼-inch flat steel.

The price includes all bolts for fastening the parts together but not the bolts for attaching to the pole.

Cat. No	Size of Seat Inches	Style of Seat	Ship. Wt. Lbs., per 100	Price per 100
9035	14¼x29¾	Wood, Painted	6500	\$3000.00

Hubbard Cable Suspension Clamps

Hot Galvanized

These are the standard A. T. & T. Company's Cable suspension clamps, the one-bolt type being used for light cables and on cable arms, and the three-bolt clamp for heavy cables and long spans. The one-bolt clamp is furnished without a bolt, as the ¾-inch through bolt is used both for attaching the clamp to the pole and tightening the clamp on the stand. The three-bolt clamp is furnished with two ½-inch high carbon steel track bolts.

Cat. No.	Type	Length In.	Size Strand In.	Wt., Lbs. per 100	Price per 100

Hubbard Universal Messenger Hangers

Hot Galvanized

The universal hanger is forged from open hearth steel with a specially curved groove, which allows it to be used at corners as well as on straight runs.

Two ¾-inch high carbon steel track bolts clamp the messenger securely at each pole.

Cat. No.	Dimen. Inches	Length Legs, In.	Wt., Lbs. per 100	Price per 100

8912	1¾x¾	5x3¼	230	61.00

Hubbard Non-breakable Messenger Hangers

Hot Galvanized

The non-breakable hanger is one of the most economical to install. It is placed on a standard through bolt, requiring no extra nuts, and the vertical finger keeps the messenger in place while it is being pulled taut, after which the strand is dropped into the groove and the nut set up. It is made of malleable iron, with back curved up to fit the pole, has a long clamping surface, and supports the cable well away from the pole.

Cat. No.	Size Cable Inches	Wt., Lbs. per 100	Price per 100
8914	⅝ and Smaller	150	\$56.80
8915	¾ " Larger	150	56.80

Hubbard Crossover Clamps

Hot Galvanized

Used for joining two cable messengers when they cross each other at right angles. For telephone work where cables turn corners, or where branch cables leave line at points distant from poles.

Weight, 160 pounds per 100. Dimensions, 1½x1½x3¼ in. Price, No. 8930 Clamps per 100 \$67.00

No. 8929 Hubbard Reinforcing Links

Hot Galvanized

Used on each side of the cable suspension clamp to relieve side strains at corners in the line. Bolted to the pole by ½-inch lag screws.

No. 561 Hubbard Insulated Forks

Hot Galvanized

Used with a standard through bolt for dead ending heavy wires run on Peirce secondary racks. The bolt passes through the pole and allows the taking up of any slack which may accumulate in the line. Furnished complete with a Peirce rack insulator No. 355.

Standard package, 100; weight, 230 lbs. Price, No. 561..... per 100 \$62.40

Hubbard Insulated Forks

Hot Galvanized

By the addition of a standard 5/8-inch through bolt, lag screw or carriage bolt, the insulated forks illustrated may be converted into fork bolts, which simplifies considerably the keeping of stocks.

Fork No. 8820 is made of 1 1/2 x 1/4-inch flat steel, formed so that the head of the through bolt keeps it from turning. It is equipped with insulator No. 357, which is attached by a 3/8-inch bolt.

No. 641 is made of 1 1/4 x 1/2-inch channel steel and is provided with a square bolt hole, into which the square shoulders of a carriage bolt fit, preventing the fork from turning around on the bolt. Insulator No. 357 is also furnished with this fork.

Peirce Mine Brackets

Hot Galvanized

Attached to underside of cross timbers by 5/8-inch or smaller lag screws or hanger screws. Designed to support two wire circuits on standard pin type insulators in mines or timber framed buildings.

Price, No. 216, Wt., 104 lbs. per 100 per 100 \$146.42

Hubbard Standard Western Union Pins

Hot Galvanized

Made in accordance with the specifications of the Western Union Telegraph Co., and the Railway Signal Association. The cobs are of the best grade of air dried oak, turned to fit a gauge and boiled in paraffine to exclude all moisture. The pins are made of stiff, high carbon steel with clean threads, square nuts and clipped, round washers, and are for use with standard insulators having 1-inch pin holes.

Peirce Presteel Pins
Hot Galvanized

The same pin can be used for either steel or wood arms, on any size wood arm, on arms bored for any size of pin.

The pin is fastened to the arm with either a 1/2-inch or 5/8-inch machine bolt. The nut fits within the body of the pin and is held from turning. A wrench is used on the head of the bolt to tighten it.

Peirce Side Clamp Pins and Fuse Block Clamps

Hot Galvanized

No. 4452

No. 5452

These pins and clamps are made entirely of open hearth steel and are hot dip galvanized. They are furnished complete with standard Peirce Cross Arm Straps which are included in the prices.

The side clamp pin binds the fibres of the wood together and thus keeps the arm from splitting and later, rotting. This is especially important for the transformer arm.

Hubbard Ridge Irons

Hot Galvanized

Fastened to pole by four 1/2-inch lag screws, holes staggered to prevent splitting pole top.

Pins not included in prices.

Peirce Forged Steel Pins for Wood Arms

Hot Galvanized

With Drawn Zinc Separable Thimbles

The new Peirce Forged Steel Pin for high voltage insulators is a development of the original Peirce forged steel pin construction, with an important change. A drawn zinc separable thimble has replaced the malleable iron thimble. This change has made possible a much greater strength in the pin than can be secured with a pin of any other type of construction, and a strength which is uniform in all lengths of the pin.

Each of the series is made in two distinct types: The long bolt pin for wood arms and the short bolt pin for steel arms. The pin is a solid forging from a single block of steel, and has neither welds nor joints.

Peirce Forged Steel Pins for Steel Arms

Hot Galvanized

With Drawn Zinc Separable Thimbles

This pin is made in three series of strengths: a 1500-lb. series, a 3000-lb. series and a 4500-lb. series, each developing its rated strength on a dead end pull exerted at the insulator groove, with a deflection of less than 10 degrees. Each of these series is made in heights ranging from 4 to 16 inches above the arm, so that the correct pin for any style of insulator made by the insulator manufacturers can be selected. The taper of the shank of the pin is so designed that a 1500-lb. series, 16-inch pin, will, in spite of its greater lever arm, withstand a strain of 1500 pounds just as a 4-inch pin in the same series will.

Peirce Forged Steel Pins

Hot Galvanized

Peirce Lead Thread Pins are made of a special stiff alloy steel. The top of the pin is threaded for a Peirce separable drawn thimble so that by melting off or otherwise removing the lead thread, the pin may be used with an insulator having a separable drawn thimble cemented into it.

Peirce Forged Steel Pins with separable malleable iron thimbles are forged from a solid bar of open hearth steel. The top of the pin is threaded with a standard 3/4-inch thread 1 3/4-inch long so that it may be used with any separable malleable thimble. Unless otherwise specified, these pins are furnished complete with malleable iron thimbles for cementing into insulators with 1 3/8-inch pin hole.

Peirce Drawn Zinc Separable Thimbles

For Peirce Pins

As these thimbles are included with the pins with which they are listed, it is not necessary to order them separately, except when they are to be cemented into insulators used for replacements.

No. 5051 Thimble, 27/32 inch in diameter, is cemented into insulators with a standard 1-inch pin hole. The 1 1/32-inch Thimble No. 5052 is used with insulators having a 1 3/8-inch pin hole. No. 5053 Thimble, used with the 4500-pound series pin, is cemented into insulators having a 1 1/2-inch or larger pin hole. This thimble is 1 7/16 inches in diameter.

Peirce Lead Thread Separable Thimbles
Drawn Thimble Type

While the cementing of thimbles into the insulators is recommended as being the most dependable method, there are cases, for instance, where wood pins are being replaced with forged steel pins, in which the cost and trouble of cementing the thimbles are too great.

For such conditions standard Peirce drawn zinc thimbles are furnished with lead threads cast on them, so that insulators can be screwed on the thimbles mounted on the pins instead of having the thimbles cemented into the insulators and then screwed on the pins. These thimbles may be used on No. 5100 series forged steel pins, high voltage clamp pins, and pole top pins.

No. 5018 Peirce Lead Thread Thimbles

Malleable Thimble Type

This thimble is made by casting lead threads on the No. 5019 thimble adapter and is used with pins having a standard 3/4-inch center bolt or with Peirce No. 4100 series pin.

The lead thread is made to screw directly into an insulator having a 1 3/8-inch pin hole.

Peirce Presteel Pole Top Brackets

Hot Galvanized

No. 3035

No. 3035 Mounted on Pole

Some engineers like to use the same type of pin for both cross arm and pole top work. The Presteel Pole Top Bracket allows them to use Peirce Steel Pins for both these purposes, which, of course, simplifies stock keeping.

The Presteel Bracket is pressed out of a single plate 1/4 inch thick, with no welds or seams. This construction, besides making it strong enough for use with Peirce Steel Pins, at the same time guarantees that it is free from flaws.

Diameter of pin hole: No. 3035, 5/16 inch; No. 3036, 1 1/16 inches.

Weight, 440 pounds per hundred.

Price, No. 3035.....per 100 \$177.12
 " " 3036....." 100 177.12

Peirce Ridge Brackets

Hot Galvanized

Convenient for carrying a few foreign wires such as signal and fire alarm circuits on pole tops.

The No. 228 is made of 1x1/2-inch steel channel and is for use on poles with 6 3/4-inch diameter tops.

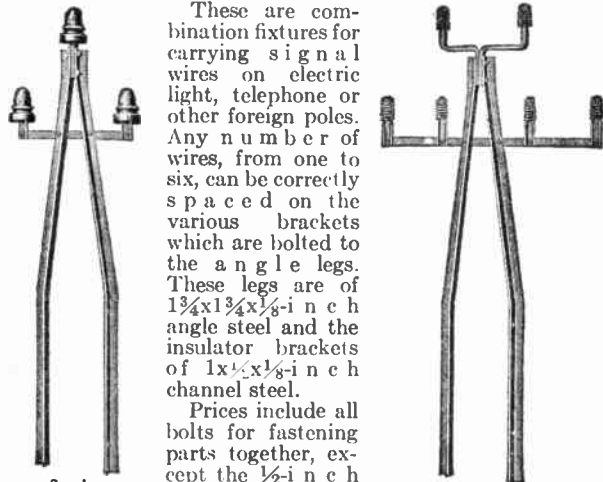

The 3-wire bracket, No. 338, is somewhat heavier than the 228, being made of 1 1/2 x 3/8-inch channel. This bracket is used on poles with 7-inch tops.

The points of these brackets are 4 1/2 inches high and are equipped with Peirce spring threads for 1-inch pin hole insulators. Each bracket is provided with sufficient holes for secure mounting.

Peirce Fire Alarm Fixtures

Hot Galvanized

These are combination fixtures for carrying signal wires on electric light, telephone or other foreign poles. Any number of wires, from one to six, can be correctly spaced on the various brackets which are bolted to the angle legs. These legs are of 1 3/4 x 1 3/4 x 1/8-inch angle steel and the insulator brackets of 1 x 1/2 x 1/8-inch channel steel.

Prices include all bolts for fastening parts together, except the 1/2-inch through bolts, for which 3/8-inch holes are provided.

Hubbard Angle Steel Cross Arms

Hot Galvanized

Steel arms of a given cross section are uniform in strength, and when protected by hot-dip galvanizing, their strength remains uniform throughout the life of the zinc coating, probably thirty years.

Unless otherwise specified, holes will be of the following sizes: for through holes, 1/8 inch; for brace bolts, 7/16 inch for flat braces and 9/16 inch for angle braces; and for pin, 3/8 inch. Quotations on special arms will be given promptly.

Hubbard Pole Top Fixtures

Hot Galvanized

Hubbard Pole Top Fixtures were designed primarily for lines without an overhead ground wire, although off-set bayonets for supporting a ground wire can be furnished when desired.

These fixtures are adjustable to poles having a top dimension of from 6 to 9-inch. Three 5/8-inch through bolts and one 2 1/4-inch square washer are required for attaching the fixture to the pole but are not included in the price. The four 5/8-inch bolts used for holding the parts together are furnished with the fixture.

The arms are made of 3x3x1/4-inch angle steel, the side braces of 3x2x3/8-inch angle. All bending is done hot and the parts are hot-dip galvanized after fabrication insuring a strong fixture for dependable service.

Hubbard Single Bo-Arrow Arms

Hot Galvanized

Hubbard Bo-Arrow Double Arming Sets

Hot Galvanized

Showing Standard Construction on Hubbard Double Bo-Arrow Arms

Fits poles of any diameter. Arrow is slotted at point at which it is bolted to bow. Arm can be adjusted to fit any size of pole top without interfering with vertical alignment of pins or security of attachment of arm to pole.

It allows a triangular wire spacing while leaving the pole top clear for a straight bayonet supporting the overhead ground wire, which is a much stronger construction than a two-pin arm and pole top pin with an offset ground wire bayonet.

Since no two wires are in the horizontal plane, the danger of wires swinging together is greatly reduced, which permits the use of longer spans with a given wire spacing.

The 24 and 30-inch Bo-Arrow Single Arming Sets are made of 2 1/2 x 2 1/2 x 1/4-inch open hearth steel angle, the larger arms of 3 x 3 x 1/4-inch angle.

Through bolts are not included in Bo-Arrow and Bayonet prices on account of the great variation in the lengths required for the different classes of poles used. Three bolts are needed for a single arming set, the proper size being about 2 inches longer than the top diameter of the pole. When bayonets are used with single arms, two washers are required per arm; without bayonets, three washers.

6075	72	75	3 x 3 x 1/4	31	361.62

These sets are adjustable by means of the slots in the cross pieces for poles of from 7 to 11 inches in top diameter. The 36, 42, 52 and 72-inch sets consist of a right and a left-hand Bow, a right and a left-hand straight Arrow; 3 double arming channels or angles, depending on whether forged steel or clamp pins are used; two 3/4 x 1 1/2-inch bolts for fastening Bows and Arrows together and six 5/8-inch bolts for clamping the cross pieces to the arms. These cross pieces are necessary to give sufficient clearance between the two large high voltage insulators required in each line wire, but are not needed on the 24 and 30-inch arms, in which cases two Bows, two straight Arrows and a 5/8 x 12-inch double arming or spreader bolt for fastening the 4 parts together are furnished.

Three through bolts are required for a double set but are not included in the prices on account of the great variation in the lengths necessary for the different classes of poles used.

No washers are required.

Hubbard Corner Bayonets

Hot Galvanized

Two extra through bolts are required for attaching the corner bayonet to a pole. Each corner bayonet consists of one straight piece of angle steel, one bent piece and two 1/2 x 2-inch machine bolts for fastening them together.

Prices cover bayonets punched for attaching ground wire clamps. Bayonets equipped with 1-inch Peirce spring threads for standard insulators in place of clamps can be furnished when specified. Corner bayonets have 5/16-inch holes and slots for through bolts.

Hubbard Ground Wire Bayonets

Hot Galvanized or Plain

The Hubbard open hearth steel angle bayonets represent the most secure and economical means of supporting the overhead ground wire on wood or steel poles.

Corner bayonets are for use at all points at which double arms are required, such as corners in the line, long spans, etc., and are much stronger than straight bayonets, even when the latter are made of extra heavy angles. A corner bayonet consists of two angles, one bent, the other straight, fastened together by two 1/2-inch machine bolts.

Hubbard Belcher Ground Wire Clamps

Hot Galvanized

These clamps will hold any size of wire from No. 8 solid to 3/8-inch stranded. A soft copper sleeve should be wrapped around copper and copper clad steel wires to cover points of contact with the galvanized metal of the clamp.

The Style J provides a secure fastening and one that does not injure the wire in any way, as the wire comes in contact only with rounded surfaces even when an angle is turned in the line, as the link holds it away from the sharp corners of the bayonet. Weight, 44 pounds per 100.

Hubbard Ground Wire Clamps for Bayonets

Rolled Steel—Hot Galvanized

No. 6455

No. 6456

The rolled steel clamp is preferred by some operating men because of its long clamping surface. The ends of the grooves are flared out to prevent cutting the strand, and for the same reason the clamping surface is perfectly smooth. The rolled clamp is made in two styles. Rigid, 2 1/2 inches long, and swinging, 5 1/4 inches long. All necessary bolts are included with clamps.

Weight rigid clamps, 120 pounds per hundred; flexible, 275 pounds per hundred.

Price, No. 6455 Rigid Clamps.....per 100 \$26.40
 " " 6456 Flexible " " 138.60

Hubbard Double Arming Channels

Hot Galvanized

On the double armed poles of high voltage lines with pin type insulators, it is necessary to attach the two pins of each phase wire to the ends of a cross piece bolted across the double arms in order to secure the pine spacing required by the large diameters of the insulators.

The Hubbard Double Arming Channel serves this purpose as it has the necessary rigidity with light weight and low cost, and, by means of the slots for bolting it to the arms, is adjustable for poles of from 7 to 12 inches top diameter, with gains 1/2 inch deep. Channels are 4 inches wide, 1 1/2 inches deep with a 3/8-inch pin hole 2 inches from each end, and 3/16-inch slots for two 3/8-inch machine bolts.

No. 6770 Belcher Strain Yokes

Hot Galvanized

For standard suspension many operating companies are ready to protect their high tension lines by double suspension throughout.

The best way to do this is with two strings hanging at an angle with each other, with one Belcher Strain Yoke and standard conductor suspension clamps.

In dead ending long spans of heavy wire in transmission line construction, it is good practice to use two strings of suspension insulators in parallel on each line wire, so as to decrease the mechanical stress on the insulator units and thus secure a greater factor of safety, both mechanically and electrically. This is often necessary at crossings and at angle turns.

For straight line crossings, as compared with dead ending it has two advantages; the cost of the suspension is half that of dead ending as two strings are used at each tower connection instead of four; also, in case of a broken disc, the line will adjust itself without shock.

Formed of steel plate 1/4 inch thick, hot pressed, to shape and support the 529 strings of insulators 13 inches apart on centers, which is the standard for 10-inch discs. Each yoke is furnished with the five bolts illustrated, and with a hole for the discharge horn bolt.

Discharge or arching horns for use with these yokes can be furnished to meet specifications.

The Belcher Strain Yokes allow all necessary movement in any direction and their reliability is guaranteed by the fact that every part is forged from open hearth steel and hot dip galvanized.

Klauber Universal Dead Ending Clevises Hot Galvanized

No. 555 Clevis

Eye Connection

This clevis is the only one made that will anchor a metal cap strain insulator with any one of the three types of connections—eye, clevis and hook—on the end of a bolt through the side of a cross arm or building. Where a variety of insulators are used, the universal clevis is a necessity. Forged from flat steel 1 1/4 x 5/8 inches, and fits both 1/2 and 5/8-inch bolts. Weight, 94 pounds per hundred. Price, No. 555 Clevises.....per 100 \$37.20

Peirce Dead Ending Insulated Clevises Hot Galvanized

For dead ending primary lines on cross arms. The insulators are of brown glazed wet process porcelain, mechanically and electrically correct for primary work. No. 1339 is suitable for circuits up to 4000 volts, No. 1340, up to 6600.

The yoke of the clevis is made of 3/8 x 1 1/2-inch flat steel and is equipped with a 5/8-inch clevis bolt and brass cotter pin. The hole for mounting No. 1339 is 1/16 inch. For No. 1340 a 3/4-inch oval hole is provided.

No. 176 Peirce Brackets for Duplex Arc-light Drops Hot Galvanized

Owing to the trouble experienced from arc-light duplex drop wires crystallizing and breaking when rigidly tied, this special insulator attachment has been developed.

The attachment consists of a No. 1602 Peirce insulator with metal straps for attaching it to a standard deep groove double-petticoat pin type insulator. This allows the street lighting drop wire to hang free, and as it swings in the wind it bends over a large enough radius to prevent breaking wire.

No.	Insulator Wire Hole Inches	Extension Inches	Wt., Lbs. per 100	Price per 100
176	1/8 x 1/2	3	83	\$64.80

No. 232 McKean Signal Brackets For Railway Signal Work Hot Galvanized

Designed at the suggestion of Mr. A. H. McKean, System Signal Engineer of the Union Pacific and Oregon Short Line.

Used for breaking and dead ending a circuit for signal and train control work.

The metal part of the bracket is pressed from 12-gauge sheet steel and thoroughly hot galvanized after forming. Shaped to fit a roofed arm to which it is attached by a 1/2 or 5/8-inch machine bolt through the cross arm pin hole.

An important feature is the fact that the insulators are made of a solid block of porcelain and are not metal bound. Should the insulators break, the wire would fall clear and not form a closed circuit by coming in contact with the metal part of the bracket. Prices upon application.

Peirce Light Presteel Secondary Racks Hot Galvanized

The Presteel Rack is a lighter form of the No. 350 Peirce Secondary Rack. It is designed to carry No. 3 and lighter wire secondary mains on poles and service wires on buildings, work which does not require the strength of the heavy rack.

Cat. No.	No. of Line Wires	Wire Spacing Inches	Length Over All Inches	Std. Pkg.	Wt., Lbs. per 100	Price per 100

583	5	3	18 3/8	10	548	223.16

Peirce Secondary Racks

Hot Galvanized

Standard Type

No. 350

Strong enough for the heaviest work, with an ample factor of safety. Equipped with No. 355 insulators, although Nos. 356, 455 and 456 insulators can be furnished if desired. The insulators are packed in corrugated paper boxes and the racks are wired in bundles of ten.

The width of the back of the rack is $2\frac{3}{4}$ inches with a slot $\frac{3}{4}$ inch wide between the two angles, which allows the use of $\frac{5}{8}$ -inch through or lag bolts for fastening the rack to the pole.

Cat. No.	No. of Line Wires	DI MEN., IN. Wire Spacing	Length Over All	Std. Pkg.	Shp. Wt., Lbs. per 100	Price per 100

1603	Brown	Dry Process	45	\$12.00

Peirce Heavy Presteel Secondary Racks

Hot Galvanized

No. 278

The heavy Presteel Racks are of sufficient weight and strength for general secondary work; however, for long spans and heavy cable construction Standard Peirce Racks are recommended.

These racks are made of a presteel channel back $1x2x\frac{1}{8}$ inch; presteel channel U-shaped points $\frac{5}{8}x1\frac{1}{4}x\frac{1}{8}$ inch, which are inserted through and riveted to the back, and a $\frac{5}{8}$ -inch through rod for attaching the No. 355 insulators to the points.

The Nos. 278 and 378 are furnished with straps so that they may be used on buildings for making heavy service connections. When used on poles, the straps should be hammered flat against the pole, increasing the bearing surface. The Nos. 1278 and 1378 may be used in connection with Peirce Rack Bands for attaching the racks to tubular steel poles.

Cat. No.	Description	Shp. Wt., Lbs. per 100	Price per 100

Peirce Light Presteel Secondary Racks

Hot Galvanized

These racks were designed for light secondary work. They are especially adaptable, on account of their strength and low cost, for running extensions from secondary mains; for lines where future development is limited; and for house service connections.

The Light Presteel Racks have a presteel channel back $\frac{3}{4}x1\frac{1}{2}x\frac{1}{8}$ inch; presteel channel U-shaped points $\frac{5}{8}x1\frac{1}{2}x\frac{1}{8}$ inch, which are inserted through and riveted to the back, and a $\frac{1}{2}$ -inch through rod for attaching the No. 1606 insulators to the points.

The Nos. 2768 and 3768 racks are intended for use as Pole Service Racks for taking off services opposite the Line Rack. The bolt holes in the back of these racks are spaced the same as on the Peirce Heavy Presteel Secondary Racks, or Standard Peirce Secondary Racks, with extended backs so that they may be attached to the pole.

No. 276

Cat. No.	Description	Shp. Wt., Lbs. per 100	Price per 100

Peirce Extension Brackets for Secondary Racks

Hot Galvanized

No. 3355

By the addition of a pair of these extension brackets, any one of the standard secondary racks may be converted from a 4 to 10-inch extension from the face of the pole or wall. This allows the line wires to comply with regulations specifying a minimum wire clearance of 13 inches from the line wires to the center of the pole.

The curved back type has one $\frac{1}{16}$ -inch hole for a $\frac{5}{8}$ -inch through bolt and two $\frac{9}{16}$ -inch holes for a $\frac{1}{2}$ -inch 1 g screw.

Brackets made of No. 9 gauge steel are 6 inches long, have a 4-inch bearing on pole or wall, and $\frac{5}{8}x2$ -inch carriage bolt.

Cat. No.	Description	Shp. Wt., Lbs. per 100 Pieces	Price per 100 Pairs

3356	Flat " " Walls	250	76.78

Peirce Secondary Racks

Huff Type
Hot Galvanized

No. 248

No. 344

Designed by Mr. B. L. Huff of the Consumers Power Company, and are recommended for secondaries of medium weight.

Consist of presteeled U-shaped points made of 12-gauge steel securely riveted to a 1/4x1 1/4-inch flat steel back.

The insulators are attached to the rack with a 5/8-inch button head bolt.

The mounting holes are 1/16x1 inch for use with either 5/8-inch through bolts or lag screws.

No. 355 brown glazed insulators are standard equipment. These insulators are shipped separately in compartment boxes. The racks are wired together in bundles of ten.

When 4-inch spacing racks are specified, a shield, for attaching over the upper edges of the points, is furnished to prevent injury to the insulation when stringing the wire.

Cat. No.	No. of Line Wires	Wire Spacing	DIMEN., IN. Over All Length	Std. Pkg.	Shp. Wt., Lbs. per 100	Price per 100

Peirce Secondary Racks

Horizontal Type
Hot Galvanized

Peirce Secondary Racks with insulators mounted in a horizontal position are used for heavy cable work.

The porcelain insulator acts as a roller in stringing the cable and entirely eliminates the danger of injury to the insulation.

The weight of the cable rests in the groove of the insulator without depending on a tie wire for support.

These racks are built for heavy duty.

The back is of 1 3/4x5/8-inch channel steel. The front is of 1 1/4x 1/2-inch channel.

Spacers 1/2 inch in diameter are riveted to the back and front channels for additional strength and rigidity.

No. 168

No. 268

The No. 355 insulators, which may be replaced without removing the rack from the pole, are held in place by 5/8-inch bolts.

The mounting holes are 1/16 inch for 5/8-inch bolts.

No. 220 Peirce Suspension Telephone Brackets

For Steel Tower Lines

Hot Galvanized

On steel tower transmission lines it is sometimes advisable to carry the telephone circuits on the towers instead of on a separate pole line. This necessitates heavier wires, on account of the longer spans used. If, however, the telephone circuits are supported by these brackets, hung from messenger cables stretched between towers, the length of span is decreased and the usual No. 10 hard drawn copper wire may be used.

Peirce Cross Arm Distributing Brackets

Hot Galvanized

No. 218

No. 210

The No. 218 Presteel Distributing Bracket is made of No. 9 gauge steel and is strong enough to meet any possible condition that might arise. It is attached to the cross arm by 3/8-inch machine bolts, bolted through the arm. Machine bolts are not included in the price.

Brackets No. 210 are used for taking off service connections from the ends of cross arms. They are adjustable to arms 4x5 inches and smaller. These brackets are made up of 1 1/4 x 1/8-inch angle steel to which presteel points equipped with resilient spring threads, are securely riveted. The Presteel points give greater strength to these brackets than channel points previously furnished. No. 210 supports the wires 13 inches apart.

Peirce Heavy Type Wire Holders

Hot Galvanized

No. 1191

No. 1296

No. 1396

No. 1396

The Heavy Type Wire-holder is intended for heavy services and will take triplex cables, the smaller sizes of duplex or single twisted wires may be used with the wire-holders.

In making the service connection some construction men prefer the use of a single bracket making the tie to the insulator before separating the wires. Other men separate the wires about 2 feet from the building and tie them to separate insulators using 2 or more single brackets or a multi-point bracket.

The rugged construction of these wire-holders makes them suitable for heavy, long span work.

Peirce Corner Pins and Plates

Hot Galvanized

No. 5064 Plate

The special corner pin and cross arm plate were designed for the Duquesne Light Company.

Under test, 2 of these pins mounted under actual working conditions on an angle of 90° withstood a load of 4,200 pounds at which tension one of the insulators failed.

The pins showed no signs of deflection.

No. 5430 Pin

Prices upon application.

Peirce Drop Forged Clamp Pins and Corner Plates

Hot Galvanized

No. 4410 Clamp Pin

For flat and round top arms from 3 1/4 x 4 1/4 to 4 x 5 inches. Fitted with the new copper weld spring thread.

On straight runs the pin with a standard forged cross arm strap is used. The 1/4-inch lugs bite into the arm and prevent displacement.

On angles and corners the plate is slipped under the pin, and holds it rigidly under side strains of 1200 pounds in any direction.

Prices upon application.

No. 5072 Plate

Peirce Drop Forged Cross Arm Straps

Hot Galvanized

The Peirce Drop Forged Cross Arm Straps are drop forged from round steel and have a broad flat bearing on the arm, which holds the pin permanently in place. The flat section is 1/4 x 1 1/2 inch and the round is 5/8 inch.

Peirce Hinged Mast Arms

Hot Galvanized

The hinged arm supports the lamp beyond the line of foliage of the trees and has means of bringing it to the ground or to the pole for cleaning or renewal, thus doing away with the expensive and awkward center span suspension. In this case the arm is hinged near the pole and is lowered by a chain passing over a pulley. The inspector climbs a short distance up the pole, lowers the lamp to meet him, cleans it and pulls it back in place. Arms are made of 1 and 1 1/4-inch channel steel, and the side brackets provided for the lamp leads do away with the long swinging loop which makes the old style mast arm so unsightly.

Prices are for arms only, without hoods, pulleys or chains.

Peirce Presteel Trolley Mast Arms

For Tungsten and Arc Lamps

Hot Galvanized

The strong points of the trolley arm are its safety and simplicity. The long swinging loops of wire are eliminated. The lamp is out of the reach of children, and cannot fall to the street. The trimmer has no trouble operating the Arm under any weather

conditions, and runs no risk of injury by street traffic.

The lamp trimmer climbs the pole, pulls the lamp in by the rod attached to the lamp hanger, and then pushes it back to place by the same rod. There are no chains or ropes to break or become jammed on pulleys. The sliding mechanism is simple, and is completely protected from sleet and ice.

The Arm is pressed from a single length of 14-gauge sheet steel. It is furnished with a 1/2-inch round guy rod, a channel steel back brace to prevent its swinging around the pole, a channel spreader arm, and an operating rod with a sliding carriage which has a 3/4-inch pipe-threaded connection for Tungsten lamps. On this lamp connection is another spreader arm. All parts are hot-dip galvanized.

For arc lamp service the sliding carriage can be equipped with the No. 1504 Insulator. This insulator has a safety hook for engaging the link in the top of the lamp.

Peirce Presteel Trolley Mast Arms

Chain Type
Hot Galvanized

No. 3610

These mast arms, the latest development for street lighting, are made like the Standard Presteel Trolley Arms, except that the carriage is operated by a continuous chain instead of a rod. The chain is completely protected and will operate under any weather condition. The handle may be locked on each revolution for supporting the lamp in any position on the arm, to clear foliage.

The guy rod is fastened to the same side of the pole as the arm. A 1/2-inch lag screw is used. Size of guy rod, 1/2 inch. End of rod is threaded 6 inches for leveling arm.

One standard 5/8-inch through bolt secures both the arm and the back brace. The spreader bracket is adjustable and can be placed at any point on the arm to best suit wiring conditions.

With set screw and locknut for regulating tension on chain. Size of section, 1 3/8 x 2 1/4 inches.

Never-creep Anchors

Twineye

Thimbleye

An ordinary 8-inch auger is all that is required to install all sizes up to and including the 36-inch. The Thimbleye rod is furnished at no extra cost and is so shaped that it holds the cable in a true cylindrical form thus preventing flattening of cable which shifts the greater strain upon a portion of the wires sooner or later resulting in injury. The Twineye, having two thimble shaped orifices is for joint construction or double guying. Prices on Never Creeps with Twineye rods instead of single Thimbleye, add 10 cents to the list prices following.

Never-Creep Anchors

Method of Installing

Locate the spot desired for the anchor rod and measure from that point back from the pole the length of the rod and start the hole at this point. Use an 8-inch auger and bore the hole as nearly at right angles to the line of strain as conditions will allow.

TO DRIVE THE ROD, DROP INSTALLING BAR IN THE HOLE AND DRIVE THE ROD WHILE HOLDING IT IN THE SAME PLANE AS THE BAR. NOTE-ALWAYS USE A NEVER CREEP MAUL. THE WOODEN FACE PREVENTS INJURY TO GALVANIZING.

CATCH THE PLATE BY THE HOLDER ON THE TAMPING BAR. PASS DOWN INTO THE HOLE AND HANG OVER THE HEAD OF THE ROD.

AFTER HANGING THE PLATE OVER THE HEAD PUSH THE ROD THROUGH TO BACK OF HOLE.

TRIP THE HOLDER OFF THE PLATE

Never-Creep Installing Bars

The installing bar is a turned maple handle 10 feet long with a galvanized Never-Creep Holder mounted on one end and a malleable tamp head on the other.

Price.....each \$2.60

Never-Creep Mauls

Price, 4-lb. Maul for 1/2, 5/8, and 3/4-inch Rods...each \$2.25
 " 18 " " " 1-inch Rod..... " 2.60

Chance Heavy Telegraph Augers

Price, Complete.....each \$9.50

NOTICE.—After driving the rod take the installing bar and measure the distance the rod is from the bottom of the hole to be sure the plate will have room to swing freely on the rod without touching the bottom.

After hanging plate on the rod attempt to disengage the holder until the rod has been pushed through to the opposite wall of the hole. This not only allows easier disengagement of the holder but permits the plate to drop and swing freely upon the rod.

Always use a Never-Creep wooden faced iron maul to drive the rod. Don't use a hand axe or hammer. They will batter the eye, injure the galvanizing and ruin the rod.

Matthews Scrulix Anchors

Matthews Scrulix Anchors are screwed into solid ground. They have no moving parts to adjust or that might be carelessly buried unadjusted. Nothing to assemble.

The use of No. 300 Matthews Auger in hard grounds such as adobe, hardpan, gumbo, sun-baked clay, or disintegrated rock easily prepares the way for the quick installation of the Nos. 612R, 658R, 758R and 858R Matthews Scrulix Anchors.

The No. 375 Matthews Auger should be used before attempting to screw down the 858R, 800, 1000 and 1200 Matthews Scrulix Anchors. It will pay to use it in all but soft or sandy ground before installing any of these anchors.

The Nos. 612R, 658R, 758R and 858R Matthews Scrulix Anchors will be furnished with galvanized rods. The Nos. 612R, 658R and 758R are packed in bundles of 4 each. All the rest are shipped singly. There has been no change in the wrench except to make it stronger. Nos. 800, 1000 and 1200 anchors are guaranteed to outlast galvanized steel round rods with a diameter of 1 1/8, 1 1/4 or 1 1/2 inches. The fact that the rods of these anchors are square gives them a greater cross section and makes it possible to use mild steel rods instead of high carbon steel rods. Mild steel rods resist rust better than high carbon steel. A No. 567 wrench must be used with all anchors smaller than No. 800. No wrench is needed for the Nos. 800, 1000 or 1200 anchors.

Everstick Anchors

Two-way Anchor Expanded

Everstick Anchors expand into solid and undisturbed earth at bottom of hole. There is absolutely no backward movement. It is not necessary to pull them up a foot or two to make them firm. The expanding is done by striking the anchor with a tamping bar.

Ordinary standard guy rods used in Everstick Anchors.

Nos. 5 and 6 two-way anchors will take 5/8-inch or smaller rods of any length; No. 6 four-way and No. 8 two-way, 3/4-inch or smaller; Nos. 8 and 10 four-way, 1-inch rod or smaller, any length.

8	8	12 1/2	8x15	120	1.65

Four-way Anchors, without Rods

Same general construction as the two-way anchors but with four prongs instead of two and consequently a greater holding power.

Cat. No.	Size Inches	Weight Pounds	Size, In. Anchor Expanded	Sq. In. of Holding Surface	Price Each
6	6	10	11x11	121	\$1.45
8	8	17 1/2	15x15	225	2.40
10	10	31	19x19	361	3.75

Blackburn's Telescoping Auger Handles

Made in two lengths to bore 8 and 10-foot holes; can be telescoped to shorter length when necessary.

Weight, 17 and 20 pounds respectively. Price each \$3.00

Bierce Guy Anchors

Acts on the principle of the inverted wedge, the conical point being projected upward in the direction of the pull. This construction causes the anchor to get tighter the harder it is pulled.

Directions for Installing

Bore a hole not less than five feet deep with an earth auger of the same diameter as the Bierce Anchor. Use 1/2-inch, 5/8-inch, or 3/4-inch anchor rods, as desired, for 8-inch anchors, and 1-inch rods for the 12-inch size. Attach the anchor to the rod and drop it into the hole with the point up.

There are no adjustments to make after the anchor is in place. Just tamp about 1/2 cubic foot (1 water bucket full)

of coarse (2-inch) broken stone or hard brick firmly around the anchor, and then attach the guy wire. Fill hole and tamp well.

National Double Tube Connectors

These sleeves are manufactured accurately to size from the best grade of pure copper. Each detail of operation has been carefully planned, and a rigid factory inspection weeds out any possible defective material.

When twisted, National Sleeves are drawn so tightly around the conductors as to form practically a welded joint.

Thus the danger of corrosion, due to air and moisture, is entirely eliminated; and instead of building up a high resistance, as is true of the average hand splice, a joint of this type has a ratio of conductivity with the conductor of better than two to one.

National Single Tube Split and Tinned Cable Sleeves

For Large Gauge Telephone Cable

It is not desirable to splice large gauge telephone cables used in long distance or toll line work by ordinary hand methods, as the joints thus formed would take up too much space.

For this work a single tube sleeve is provided, split its entire length and covered with a coating of tin, to permit of easy soldering. In this way the joint is solid and compact and at the same time an extremely efficient electrical connection is obtained.

Bonita Aerial Cable Rings

Attach on the strand by hand easily and quickly. May be used either for new work or reclipping on old cables. May be reused. The ring size is determined by the diameter of the circular opening of the rings when on the strand. May be obtained for any diameter of messenger wire. Specify strand size in each instance. Allow at least 3/4-inch greater diameter of ring than outside diameter of cable to be installed.

Davis Linemen's Safety Chairs

Now made with aluminum wheels, the large corrugations of which negotiate with ease, cable rings, clamps and thimbles without injury to them.

Users of this chair claim that they can apply more rings in a given time and with more ease than can be done with other types of chairs.

The Davis is the ideal chair to use when installing Blackburn's Neverslip cable rings.

Pr.ce. each \$15.00

Bierce Cable Rollers

The Bierce Cable Roller is practically unbreakable, the frame being made of forged steel and the roller of cast iron, protected on both sides by pressed steel disks, insuring the cable from injury and preventing it from catching when being pulled over the roller.

The clamping device, being mounted upon the hinged member, allows the frame to be rigidly clamped in position without placing any side strain on the messenger wire. The frame is so constructed that it will hang safely from the wire before the clamp is tightened.

Price, Plain each \$3.50

No. 2000 Klein's Matlock Cable Rollers

By use of this roller, the work of running aerial cable is greatly expedited. A suitable number of rollers are attached to messenger wire in manner shown in illustration, fastened in place by the T handle screws. Cable is then placed on the maple rollers and carried on to any required distance.

A great many feet of cable can thus be run with ease and in a short time. The maple roller has a metal bushing extending beyond each end. This prevents wear on roller and keeps it in center of frame. Frame is forged of mild steel. Weight, No. 2000-30, 4½ pounds; No. 2000-31, 8 pounds.

Price, No. 2000-30, with Wooden Roller each \$4.75

Seamless Linemen's Rubber Gloves

Made from the finest grade of pure Para rubber combined with the proper chemicals to give maximum durability and non-conducting properties.

Vulcanized by a long, slow, steam cure, which develops to the greatest extent their long-wearing qualities and insures extreme flexibility

under all conditions of weather.

These gloves have the most uniform thickness with no thin spots at finger tips or creases.

Supplied in two types, A and B, both tested to 10000 volts. Type A is a heavy glove and can be used without protector. Type B is a lighter glove in weight and more flexible, soft, and better adapted to use in cold climates. Type B should be covered in doing rough work by the genuine horse-hide leather protector gloves with gauntlets.

All gloves are 14 inches long over all. The standard size is 10, but sizes 10½ and 11 can be furnished. The standard size of protector gloves is 11.

Packed 1 pair in a box.

Linemen's Leather Protector Gloves

No. 585

Linemen's Protector Gloves are made of tanned horsehide of superior quality, soft and flexible, and will not become hard when dried after immersion in water. They are made with welted seams and reinforced thumb strap, in sizes 11, 11½ and up. These gloves are made to protect a rubber glove from wear.

Sizes, 9½, 10 and 10½ are for protection of linemen drawing cable, conduit, etc., or any other outside operation.

No. 524

Nos. 585, 586 and 587 are full length gloves with gauntlet and closed back.

No. 524 is a short glove with extended palm and open back.

Packed, 1 pair in a box.

Marshall's Linemen's Cross Arm Shields

Tested to 20000 Volts

Cross arm protectors dry test. Metal on inside and metal on outside. 1 minute at 10000 volts, ½ minute at 15000 volts, and 10 seconds at 20000 volts.

In ordering cross arm shields, be careful in stating length between pins from center to center and width of cross arm on tip as they have to be made to fit. Made in lengths up to 17 inches from center to center of pins.

Price.....each \$10.00

Marshall's Linemen's Shoes

Test: Place the shoe in 2 inches of water, fill the shoe with water to depth of 1¼ inches at center of shoe. 2 minutes at 5000 volts, 1 minute at 10000 volts and 10 seconds at 20000 volts.

A perfectly insulated rubber shoe which gives linemen on the poles, on the ground and in the manholes absolute protection against pressures up to 20000 volts. It is vulcanized into a solid piece and will not peel nor come apart; nor can it be affected by oil, gasoline or grease. No metal used in any part of its construction.

Each pair of shoes includes 1 pair of specially made stockings. Shoes carried in sizes 7, 8, 9, 10 and 11. Unless special size is specified No. 9 will be sent.

Price.....	per pair	\$12.00

50 Million earthworms rolled into one

IT takes power to dig a nine-foot hole through hard soil in six minutes. But power is just what's back of this husky digger.

The Auto Earth Borer and the Auto Pole Derrick are an unbeatable combination for digging holes and setting telephone and electric light poles. These capable tools are typical of many which Western Electric distributes to save the cost of man power and help speed up your public utility service.

Backing up industry with electrical supplies

Western Electric brings to this city supplies of everything electrical, selected from markets the country over, and stocked in our warehouse downtown—ready for regular or emergency orders.

To wholesale electrical buyers, service like this makes possible a worthwhile economy. Depend on Western Electric, and your own stocks can be largely reduced, with a consequent saving in your investment and expense of storekeeping.

We think it will pay you to look into Western Electric service. Some interesting particulars are available whenever you are.

Orders that go to extremes

Filing an order that ranges from a pair of pliers to a 60-foot telephone pole is all in the day's work with us. Wholesale buyers can secure complete stocks of everything electrical through Western Electric.

Earth Boring and Pole Setting Equipment

Central Station Type Earth Boring Machine

demand of the user. A 6-foot tower allows for boring a hole 6 feet deep; a 9-foot tower is used for boring holes up to 9 feet deep and a 12-foot tower provides for holes up to the 12-foot depth. This tower is of latticed angle iron and is $8\frac{1}{2}$ inches one way by $15\frac{1}{2}$ inches the other and it is possible to tilt it to any angle desired by means of a double acting ratchet wrench. The tower is tilted on a worm made from carbon steel carbonized. This worm has a reduction of 44 to 1.

The augers are all made of special cast steel and are of special designs of the spiral type and can be had in various sizes from 15 inches to 48 inches. Cutting blades are furnished with each auger.

The Central Station Type Machines are equipped as standard with one 24-inch and one 30-inch auger and have a 9-foot tower. This machine will bore a hole 10 feet deep on absolutely level ground, and is rated as a 9-foot size, one foot being allowed for unevenness in ground surface. The boring machine is furnished with a 6-foot turn table which enables the operator to bore holes from either side of the truck as well as from the rear.

The Auger for Boring Through Shale

Bell System Type Earth Boring Machine

Because soil conditions vary it is impossible to state definitely how much work the earth boring machine will do in a given amount of time.

Under favorable conditions, however, the machine will bore a 24-inch hole 7 feet deep in 2 minutes. Under ordinary conditions, holes can be bored and poles dropped into them at the rate of 60 per an 8-hour day. Records furnished by present users are indicative of a saving of from 3 to 5 dollars on each hole bored and pole set.

The machine will dig holes in any kind of soil that can be dug by hand methods without blasting. By using a special auger, supplied by the company, a 24-inch hole 7 feet deep can be dug through the toughest shale in 12 minutes.

The earth boring machine is designed exclusively for FWD trucks and is operated from a special power take-off. To operate any part of the borer the operator must first throw in the rotating earth boring clutch.

The tower on the earth boring machine can be furnished in various lengths to meet the

This turn table gives a range of more than 180 degrees and the auger may be stopped at any point in this semi-circle and a hole bored. The tower may also be tilted from any point within this range. It requires but 15 seconds to turn the table from one extreme position to the other.

In order to relieve the springs of the truck from all strains and shocks when the boring machine is in operation, a positive lock has been provided on the rear springs. These locks are left in place when moving from one hole to another and disengaged only when the truck is traveling for any unusual distance.

The Bell System Type Earth Boring Machine is the same as the Central Station Type except that it is a 6-foot machine. It will, however, bore holes 7 feet deep on absolutely level ground. The auger tower, shaft and chain is, therefore, 3 feet shorter than the Central Station Type.

It will set 35-foot poles, instead of 65-foot. Augers furnished are 20-inch and 24-inch instead of 24-inch and 30-inch. Total weight is 14,300 pounds instead of 15,000.

With the above exceptions, both types of machines are identical and the same amount of extras as outlined in Central Station Type are shipped with machine.

Earth Boring and Pole Setting Equipment

Continued

Dimensions of Earth Boring Machine

A winch is mounted on the front end of the earth boring frame. This winch has a lifting capacity of 5000 pounds and is used in connection with the standard boom or special derrick in the pulling or setting of poles. A steel cable is run from the winch to the top of the boom or derrick over an 8-inch sheave and thence to the pole or other object to be lifted. This sheave has an oilless bronze bushing.

For longer lengths a special derrick is furnished. The special derrick is 25 feet 8 inches long and measures 28 feet from the ground to anchor brackets on the side of the earth boring machine frame and 2 cables are run from the top of the derrick to the front end of the earth borer frame to hold

derrick firmly in place. Stops are provided on the anchor brackets to prevent derrick from falling forward on the truck cab. The derrick has a capacity of 4000 pounds and is made from 3½-inch outside diameter 40 to 45 cold drawn seamless steel tubing with a wall thickness of .134 in. The total weight of the derrick is 350 pounds and it is so designed that it can be quickly set up or taken down. The derrick is carried on the side of the truck and extends 6 feet 4 inches behind the machine when assembled for transportation. The over all length of the chassis with derrick folded is 28 feet. The derrick is made in any length from 22 to 28 feet and will handle poles up to 70 feet in length.

Enclosed Gear Type Earth Boring Machines Mounted on FWD Auto Trucks

In addition to earth boring machines with turntables described and illustrated elsewhere in this catalogue, the FWD Auto Truck can be furnished and equipped with an Enclosed Gear Type Earth Boring Machine as shown in the accompanying illustrations.

Specifications of FWD Model B 3-ton Chassis (A. T. & T. Type)

Tractor construction, motor under hood, left hand drive.

LOAD CAPACITY.—3 tons.

BODY WEIGHT ALLOWANCE.—1500 pounds.

CHASSIS WEIGHT.—7300 pounds.

WHEELBASE.—133 inches.

TREAD.—56 inches.

TURNING RADIUS.—34 feet, 6 inches.

SPEED.—15 $\frac{3}{4}$ miles per hour on high, 7 $\frac{1}{8}$ miles per hour on intermediate, 2 $\frac{1}{2}$ miles per hour on low.

TIRES.—Front, 40x7 inches; rear, 40x5 inches dual.

CYLINDERS.—4, cast in pairs, 4 $\frac{3}{4}$ -inch bore, 5 $\frac{1}{2}$ -inch stroke, offset $\frac{3}{4}$ inch.

CRANK SHAFT BEARINGS.—Diameter, 2 inches; length, front and center, and connecting rod, 3 $\frac{1}{2}$ inches; rear 4 inches long.

WRIST PIN.—Hardened steel, hollow, bearing in cast iron piston, 1 $\frac{1}{16}$ inches in diameter, 3-inch long bearings.

CAM SHAFT.—1-piece forged steel; smallest diameter, $\frac{1}{16}$ inch; 3 bearings.

PISTONS.—Cast iron, 6 $\frac{1}{4}$ inches long.

PISTON RINGS.—3, cast iron, $\frac{1}{4}$ inch wide.

VALVES.—Diameter, 2 $\frac{1}{2}$ inches; lift, $\frac{3}{8}$ inch.

FLYWHEEL.—16 $\frac{3}{4}$ inches in diameter, 3 $\frac{1}{4}$ -inch face. Timing marked thereon.

CRANK CASE AND COVERS.—Aluminum.

WEIGHT OF ENGINE.—600 pounds.

HORSEPOWER.—36.1 S.A.E.; displacement, 389.6 cubic inches.

CONTROL.—Left hand drive and right hand shift. Conventional H. type, shifting gate, 3 speeds forward and 1 reverse. Service foot brake operating on all 4 wheels. Emergency hand brake operates on rear wheel drums. Hand and foot throttle. Spark lever on steering column.

Enclosed Gear Type Earth Boring Machines Mounted on FWD Auto Trucks

Continued

COOLING SYSTEM.—Capacity, 10½ gallons; tubular core radiator with cast tanks and sides. Centrifugal type bronze water pump driven through flexible coupling. 4-blade fan, 22 inches in diameter, driven by 1½-inch belt.

CARBURETOR.—Plain tube type 1¼-inch.

LUBRICATION.—Combined force feed and spray; pressure, 5 to 10 pounds per square inch; capacity, 10 quarts.

TRANSMISSION.—Jaw clutch type with gears always in mesh. Selective. Ratio, 1-1 on high, 2-1 on second, 6.3-1 on low, 4.13-1 on reverse. Gears; 1¼ inches wide; 5-7 pitch; ball and roller bearings exclusively. Runs in oil. Aluminum case.

CENTER DIFFERENTIAL.—Mounted on ball bearings. Driven by 5-inch wide silent chain. Runs in oil. Provided with hand operated lock which is controlled by driver from seat.

SPRINGS.—Alloy steel, semi-elliptic; 2½ inches wide. Front, 42¾ inches long; rear, 52¾ inches long.

CLUTCH.—Multiple disc, running in oil, 12 bronze and 11 steel discs.

GASOLINE CAPACITY.—20 gallons.

UNIVERSAL JOINTS.—Fabric type joint between clutch and transmission. One universal joint on each end of propeller shafts.

AXLES.—Both axles full floating and provided with roller bearings throughout. Ball and socket type in front axle housing, enclosing universal joint on driving shaft. Differentials of bevel gear type.

BRAKES.—Service foot brake, external, transmission type, 11½ inches in diameter by 7 inches wide, mounted on frame cross member. Emergency brake, external, 15¼ inches in diameter by 2¾ inches wide on rear wheel drums.

BEARINGS.—All wheel roller bearings interchangeable.

EQUIPMENT.—Complete set of tools. Tool box, oil cans, horn hub cap, valve and magneto wrenches. Two kerosene side lamps, one kerosene tail lamp.

PAINTING.—Chassis painted in lead color.

CAB.—Inclosed type of wooden frame and sheet steel panels.

NOTE. Body as permanent equipment. Truck available as truck alone by removing 4 bolts and disconnecting at power take-off.

Prices upon application.

Automobile Pole Derricks

H-T Type

The derricks shown adapt the abilities of modern motor trucks to the services of pole line construction and maintenance organizations.

They are designed to be light of weight, and yet be strong for the loads that come upon them.

A crew of from 10 to 12 men was common in the past. The derrick connected with the truck motor takes all the heavy work off the men. The truck crew can be cut to 5 or 6 men.

The saving on direct labor by reduction of crew averages the total cost of truck and equipment each year.

To protect the ideas and labors involved, these derricks are covered by Letters Patent held by the American Tel. & Tel. Co. We are the only licensed manufacturers.

Realizing our success, many have attempted to imitate our derrick, with poor materials and poorly worked out mechanical details. The use of such derricks subjects the truck crews to unusual hazards and risk.

General Specifications of Materials

TUBING.—Special heat-treated seamless drawn steel of from 115,000 to 120,000 pounds tensile strength.

All points taking strain reinforced inside or outside.

SHEAVES.—Forged steel; that for derrick head bushed with self-lubricating bronze.

QUICK HOOK.—Drop forged.

REAR SPINDLE.—Same material specification as derrick tubing.

PAINTING.—One coat of anti rust; one coat of lead enamel, usually red in color, as danger signal.

The metal parts for body of truck are made up in standardized sets and can be attached to practically any 2 or 3-ton truck. Blue print of how to attach them furnished purchasers.

Large assortment of tubing for regular or special derricks always carried in stock.

A complete derrick assembly includes:

- Derrick Proper—1 Right-hand side leg.
- 1 Left-hand side leg.
- 1 Middle leg, upper section.
- 1 " " middle "
- 1 " " lower "
- 1 Apex pin key, snap and chain.
- 1 Floor pocket bolt.
- 2 Connecting pins, key, snap and chain.

- 1 Foot plate.
 - 1 Rear spindle and sheave (length to suit truck body).
 - 1 Tail bolt assembly.
 - 2 Front supports for spindle.
 - 2 Rear " " " " }
 - 1 Floor pocket.
 - 1 Quick hook for end of winch line.
- } Designated as Metal Parts for attaching to truck body.

Automobile Pole Derricks

Continued

Front Support for Rear Spindle

Rear Support for Rear Spindle

Tail Bolt Assembly

B-T Type

Lift as stiff leg from 11 feet 0 inches to 16 feet 0 inches. Lift as mobile assembly approximately 20 feet 0 inches. Suitable for handling poles up to 45 feet 0 inches in length. Poles normally planted and not rock-bound can be removed by this derrick without the use of a shovel.

This derrick can be applied to practically any 2 or 3-ton truck.

This derrick is interchangeable on the same truck with a P-S or Hy. P-S derrick.

Price, B-T Type, Complete.....each \$325.00

P-S Type

Lift as stiff leg from 13 feet 0 inches to 18 feet 0 inches. Lift as mobile assembly approximately 22 feet 6 inches. Suitable for handling poles up to 55 feet 0 inches in length.

The Hy. P-S Type has the same dimensions as the P-S Type, but is made from tubing about 50 per cent heavier and is suitable for heavier service.

The P-S and Hy. P-S Types can be applied to any 2 or 3-ton truck. Both these types are interchangeable with the B-T Type on the same truck.

Price, P-S Type, Complete.....each \$350.00
 " Hy. P-S Type, Complete..... " 400.00

H-T Type

Lift as stiff leg from 16 feet 0 inches to 23 feet 0 inches. Lift in mobile assembly approximately 27 feet 0 inches. Suitable for handling poles up to 70 feet 0 inches in length.

Due to the height of the suspended load above ground, this derrick should not be attached to anything lighter than a 5-ton truck. It is not usually interchangeable with any smaller type.

Price, H-T Type, Complete.....each \$650.00

Hinge Type

The standard types are provided with a foot piece for lower end of middle leg, which fixes the position of derrick head and overhang at rear of truck.

Many times a bank on which a pole is placed or to be placed, or a hedge or deep gutter has prevented the truck being so placed as to be of service.

The Hinge Type Derrick can be changed from one extreme position to the other without the telescoping center leg becoming disengaged. All positions are fixed by use of pins.

The sketch gives an idea of the flexibility of this derrick.

Hinge Type Derricks are made in B-T, P-S and Hy. P-S Types at no extra cost.

Automobile Pole Derricks

P-S and Hy. P-S Types

A= Approximately 22 Feet 6 Inches, Mobile Assembly
B= About 13 Feet 0 Inches, Overhang=About 5 Feet 0 Inches
C Varies from 13 Feet 0 Inches to 18 Feet 0 Inches, Stiff Leg Assembly

Hinge Type

A= Same Maximum Height as Standard Derrick of Same Type and is Variable below that Dimension
B= Same as Standard Derrick and Varies with Position of Derrick

Type D Cable Reel Trailers

Designed by American Telephone & Telegraph Co.'s
Engineers

Trailer in Position for Paying Out

CAPACITY.—Accommodates reels 3 to 7 feet in diameter and 35½ to 48 inches wide.

Cable reel trailers save expense in jacking up reels when paying out cable. Save wear and tear to cable spool. Save price of truck or team for transporting. Trailer on which cable is loaded is pulled by the same truck employed for other work. Saves hazards of accidents.

One man in addition to truck driver is all that is needed to operate this trailer.

It is possible to reduce man hour cost 50 per cent.

The Type D Cable Reel Trailer is equipped with adequate spring suspension, making it possible to pull trailer over roughest places without damaging the cable.

Loading Reel on Trailer

SPECIFICATIONS.—Capacity, 3 tons. Frame: 4 inches, 10½ pounds, steel I-beam. Springs: elliptic, 22¾x3½ inches, 10 leaves. Wheels: S. A. E. 14, 2½x3-inch spokes. Tires, 40x5-inch Goodyear A. W. T. Axles, special; Continental, bell crank, 2½ inches square. Bearings, Timken.

*Telephone Type D

Tread, 64 inches.

Weight, 2145 pounds.

*Central Station Type D

Tread, 76½ inches.

Weight, 2332 pounds.

*Same except Central Station Type accommodates wider reel.

Prices upon application.

Combination Pole and Cable Reel Trailers

Equipped for Hauling Cable Reels

Advantages of the combination pole and cable reel trailer are many.

Central stations which do not have continuous work for cable reel trailers should use this type of trailer. By removing 4 bolts, cable reel saddles can be replaced with special holster, thus converting the cable reel trailer into a pole trailer and vice versa. Trailer will accommodate poles any length. By balancing first pole on trailer, using this pole as a reach, securing from end of pole to truck, remaining poles can be loaded on trailer and bound securely with pole binders and chains to first pole. Flexibility of use in a trailer of this type together with its rugged construction, should make it the choice of central station operators.

Equipped for Hauling Poles

SPECIFICATIONS.—Capacity, 5 tons. Frame: 4 inches, 10½ pounds. Steel I-beam. Wheels: S. A. E. 14, 3x3-inch spokes. Tires, 40x7-inch Goodyear solid A. W. T. Axles, special; Continental, bell crank, 2½ inches square, 40-45 carbon steel. Bearings, Timken. Tread, 64 inches. Weight, 2912 pounds.

Prices upon application.

Models M and H Pole Trailers

Designed by American Telephone & Telegraph Company's Engineers

For Use When the Entire Load Is to Be Carried on the Trailer

Model M—Capacity, 3 Tons

The same truck and truck driver employed for carrying wire, tools, cross arms, and other construction material can pull this trailer loaded with poles.

The trailer is equipped with telescoping tongue permitting hauling poles of various lengths. Tongue is attached to rear of truck by means of military pintle hook hitch which is included in price of trailer.

The small winch bracketed to rear of trailer is used for tightening cable which binds load.

Each trailer is equipped with 2 stationary bolsters on which are mounted steel sliding adjustable uprights held in place by eccentric levers.

Made in 2 different sizes.

Model H—Capacity, 5 Tons

Model M

SPECIFICATIONS.—Capacity, 3 tons. Frame: 72x43 inches, 5-inch channel. Springs: 46x3 inches, 14 leaves, silica manganese steel. Wheels: S.A.E. 14, 3-inch spokes. Tires, 36x5-inch Goodyear solid A.W.T. Axles: Continental drop forged, 2½ inches square. Bearings, Timken. Tread, 56 inches. Bolster: 6-inch channel, 68 inches wide. Bolster stanchions: 18x4 inches, adjustable. Adjustable tongue, 6 adjustments for variable lengths. Weight, 2105 pounds.

Model H

SPECIFICATIONS.—Capacity, 5 tons. Frame: 72x43 inches, 6-inch channel, 13 pounds. Springs: 49x3½ inches, 12 leaves, silica manganese steel. Wheels: S.A.E. 14, 3-inch spokes. Tires, 36x8-inch Goodyear solid A.W.T. Axles: Continental drop forged, 3 inches square. Bearings, Timken. Tread, 58 inches. Bolster: 6-inch channel, 80 inches wide. Bolster stanchions: 18x4 inches, adjustable. Adjustable tongue, 6 adjustments for variable lengths. Weight, 2800 pounds.

Prices upon application.

Model S-2 Pole Trailers

For Use When One-half of The Load Is to Be Carried on The Motor Truck

Model S-2 Trailers are truck built throughout. Have powerful spring and axle suspension. Axle U-bolts are equipped with standard S. A. E. threads and hexagon nuts which insure a tight fit.

Telescoping tongue permits adjustment of the trailer loads of any length up to 30 feet between bolsters. The end of the tongue is equipped with a drop forged pintle hook connecting ring which makes the connection unbreakable.

S-2 Fifth Wheel Bolster Plate

The S-2 fifth wheel bolster plate takes care of unevenness of the road and stabilizes load at any angle, keeping center of gravity at all times directly above axle centers.

Price includes pivoting bolsters for both trailer and motor truck.

Steel sliding blocks are adjustable every chain length. They are arranged to receive ramps to permit fast loading and unloading. The boom rings make a firm lashing for the load. Steel sliding blocks are released by chain on opposite side of trailer.

This eliminates all hazard of accident to workmen.

Price includes military type drop forged pintle hook furnishing an unbreakable connection. Furnished with relief spring taking up destructive strain of starting and stopping. Compensates for variation in turning radius. Is equipped with a positive spring lock.

SPECIFICATIONS.—Capacity, 3 tons. Frame: 68x43 inches, 6-inch channel. Springs: 46x3 inches, 14 leaves. Wheels: S. A. E. 14, 3-inch spokes. Tires, 36x6-inch Goodyear solid A. W. T. Axles: Continental, 2¾x2¾ inches. Bearings, Timken. Tread, 56 inches. Bolsters: 5-inch channel, 72 inches wide. Bolster stanchions, steel sliding blocks equipped with stake pockets. Adjustable tongue, 3 adjustments for variable lengths. Weight, 2110 pounds.

Prices upon application.

Model B-2 Pole Trailers**1-ton General Purpose Trailer**

Can be Used for Hauling One Pole

Or a Number of Poles, if Necessary

The body sills are made of 3-inch channel iron so that trailer may be left out in the yards without fear of warping.

Any small truck or automobile conveying workmen to the job can pull a B-2 trailer loaded with one or more poles.

Model B-2 Trailers are adaptable for paying out wire. Various types of reels can be mounted on spindles attached to trailer body paying out as many as 4 at a time.

The removable rack body makes the Model B-2 Trailer available for tree trimming, and other types of hauling.

The eccentric pole binder securely binds load of any size with least possible effort. Two of these with two 8-foot lengths of chain furnished with each Model B-2 Trailer.

The drop forged upset axle gives strength and durability. Upset axle end is an exclusive feature giving maximum strength at axle spindle.

Each Model B-2 Trailer is equipped with 3 chain tighteners. These tighteners secure the first pole to the trailer and the trailer tongue. Spring arrangements take up slack in chain and prevent stripping of threads.

SPECIFICATIONS.—Capacity, 1 ton. Frame: 3-inch channel, 4 pounds. Springs: semi-elliptic-underslung, 44x2 inches, 9 leaves. Wheels: 32x3 inches artillery, second growth hickory. Tires: 32x3-inch Goodyear solid tires. Axles, 1½ inches square drop forged upset ends. Bearings, Timken. Tread, 56 inches. Adjustable tongue, 2 adjustments. Weight, 626 pounds.

Automatic Hitches for Model B-2 Trailers

Made in the following styles: Ford hitch, straight spring hitch, and tire iron hitch.

Hitch is applied to chassis or springs instead of rear axle, distributing pull throughout frame instead of directly onto transmission unit. Likewise in trailer itself, pull is through frame and springs.

Prices upon application.

Type C Pole Dinkeys

Designed by American Telephone and Telegraph Company's Engineers

For hauling long heavy poles. Has low loading height and is adaptable for rough use. Equipped with solid rubber tires and Timken roller bearings.

Capacity, 3½ tons. Frame, 36x20 inches, seasoned white oak. Wheels, No. 71 New York Sarven flange. Spokes, 12, 2½x2-inch. Tires, 32x5 Goodyear solid A. W. T. Axles, 2¼ square shadbolt. Bearings, Timken. Tread, 35 inches. Bolsters, white oak, reinforced with steel. Weight, 835 pounds.

Prices upon application.

Automotive Winches

Note the heavy-duty construction and sturdy strength of the Western Electric Winch. It has a positive dog-type shaft. This feature is used when paying out cable manually. With clutch engaged, the drum is positively locked to worm wheel.

All controls are located in the cab within easy reach of the truck operator, permitting one man to operate both the winch and the truck. A safety factor and an advantage is that the operator can stop instantaneously while lifting or lowering the load by releasing the truck clutch, the winch being so designed that the load cannot drive the winch.

The Western Electric Winch is a highly efficient unit designed by Public Utility men for Public Utility and many other industrial uses. It can be applied to any make of motor truck. It is capable of a variation in engine speed from 25 to 250 feet per minute. The Western Electric Winch is driven by the truck motor through the truck clutch and transmission by means of a power take-off. In design, materials, workmanship and efficiency this unit offers the user extraordinary value. It is light, safe and strong.

Specifications

Drum—Electric furnace cast steel, machined all over. Drum Shaft—1035 S. A. E. steel heat-treated and ground. Drum Shaft Hanger—Electric furnace cast steel. Worm—Nickel steel hardened, ground and polished. Worm Wheel—Phosphor bronze Worm Bearing Radial—Hyatt. Worm Wheel Housing—Electric furnace cast steel. Worm Bearing Thrust—Large bronze washer between 2 hardened, ground and polished steel washers, one being anchored to the worm and the other to the bearing cap.

Information Required when Ordering

When ordering always place order with local Western Electric Distributing House, giving them the following information: Whether right or left hand worm is desired. Right or left hand steer on truck. Make, model and wheel-base of truck. Has truck standard S. A. E. opening in transmission. Is multiple or single speed winch required. Is niggerhead required. If possible, give location of winch sprocket to front or rear and on right or left side of truck.

Highway Four-wheel Reversible Trailers

Model P-4

These trailers have unusual strength of frame construction and simplicity of design. Frame is reinforced throughout with $\frac{1}{4}$ -inch gusset plate and rigidly reinforced in center.

The Continental axle has ball thrust bearing in the head of knuckle. Machine limits are as close as one-thousandth of an inch.

The drop forged drawbar with double acting coil spring absorbs jars of sudden starting and stopping. The only trailer construction using the freight car principles.

The military type drop forged pintle hook with cushion spring and positive lock is furnished. This hitch is fastened to rear of motor truck.

Model A-4

SPECIFICATIONS.—Capacity, $1\frac{1}{2}$ tons. Body allowance, 1200 pounds. Track, 56 inches. Length of frame, 12 feet. Extreme width, $66\frac{3}{4}$ inches. Extreme length, including drawbar, 175 inches. Height of frame, 33 inches. Width of frame, 34 inches. Depth of frame channel, 4 inches; $5\frac{1}{4}$ pounds. Ground clearance, 11 inches. Axles and bearings: Continental drop forged axles, Timken bearings. Springs: 42x2 inches, 12 leaves. Tires, 32x3 $\frac{1}{2}$ -inch. Wheels, 14, 2-inch spokes. Wheel base, 90 inches. Weight, 1800 pounds.

Model B-4

SPECIFICATIONS.—Capacity, $2\frac{1}{2}$ tons. Body allowance, 1300 pounds. Track, $58\frac{1}{4}$ inches. Length of frame, 12 feet. Extreme width, 70 inches. Extreme length, including drawbar, 175 inches. Height of frame, $36\frac{1}{2}$ inches. Width of frame, 35 inches. Depth of frame channel, 4 inches; $6\frac{1}{4}$ pounds. Ground clearance, $15\frac{1}{4}$ inches. Axles and bearings: Continental drop forged axles, Timken bearings. Springs: 46x3 inches, 10 leaves. Tires, 36x4-inch. Wheels, 14, 2-inch spokes. Wheel base, 86 inches. Weight, 2275 pounds.

Prices upon application.

Equalizer pivots directly under spring drawbar. This device takes up side sway and holds wheels of trailer in perfect alignment with motor truck wheels, at high speed. This device constitutes one of the most perfect trailer steering mechanisms.

Drop forged link connects trailer to pintle hook. This is attached to drawbar with automatic lock pin.

Automatic drawbar lock eliminates necessity of centering drawbar before locking. It is strong and durable.

Springs are of alloyed steel. Both first and second plates form the eye of the spring. This is an exclusive feature. Bronze bushings are used in all spring eyes.

Model N-4

SPECIFICATIONS.—Capacity, 4 tons. Body allowance, 1400 pounds. Track, $66\frac{1}{2}$ inches. Length of frame, 12 feet. Extreme width, $80\frac{3}{4}$ inches. Extreme length, including drawbar, 175 inches. Height of frame, $37\frac{1}{2}$ inches. Width of frame, 40 inches. Depth of frame channel, 5 inches; $6\frac{1}{2}$ pounds. Ground clearance, $14\frac{1}{2}$ inches. Axles and bearings: Continental drop forged axles, Timken bearings. Springs: 46x3 inches, 10 leaves. Tires, 36x5-inch. Wheels, 14, $2\frac{1}{2}$ -inch spokes. Wheel base, 86 inches. Weight, 2795 pounds.

Model P-4

SPECIFICATIONS.—Capacity, 6 tons. Body allowance, 1800 pounds. Track, $68\frac{3}{4}$ inches. Length of frame, 12 feet. Extreme width, $84\frac{1}{2}$ inches. Extreme length, including drawbar, 175 inches. Height of frame, $38\frac{1}{2}$ inches. Width of frame, 40 inches. Depth of frame channel, 6 inches; 10 $\frac{1}{2}$ pounds. Ground clearance, 14 inches. Axles and bearings: Continental drop forged axles, Timken bearings. Springs: 46x3 inches, 14 leaves. Tires, 36x7-inch. Wheels, 14, 3-inch spokes. Wheel base, 86 inches. Weight, 3775 pounds.

Highway Four-wheel Reversible Trailers
Exclusive Features

Reversible Trailer Chassis
Note Unusual Strength of Frame Construction and Simplicity of Design. Frame is Reinforced Throughout with 1/4-Inch Gusset Plate and Rigidly Reinforced in Center

Sectional View of Continental Axle Showing Ball Thrust Bearing in the Head of Knuckle. Machine Limits Are as Close as 1/1000 of an Inch

Equalizer Pivots Directly under Spring Drawbar. This Device Takes up Side Sway and Holds Wheels of Trailer in Perfect Alignment with Motor Truck Wheels, at High Speed. This Device Constitutes One of the Most Perfect Trailer Steering Mechanisms Developed Today

Drop-forged Link Connects Trailer to Pintle Hook. This Is Attached to Drawbar with Automatic Lock Pin

Drop-forged Drawbar with Double-acting Coil Absorbs Jars of Sudden Starting and Stopping. The Only Trailer Construction Using the Freight Car Principles

Military Type Drop-forged Pintle Hook with Cushion Spring and Patented Positive Lock. This Hitch is Fastened to Rear of Motor Truck

Automatic Drawbar Lock Eliminates Necessity of Centering Drawbar Before Locking. It Is Strong and Durable

Springs Are of Alloyed Steel. Note That Both First and Second Plates Form the Eye of This Spring. This is an Exclusive Feature. Bronze Bushings Are Used in All Spring Eyes

No. 329 Simplex Pole Pulling and Pole Straightening Jacks

Automatic Raising and Lowering Jacks

The hinged base is the feature that specifically and successfully adapts the No. 329 Simplex Jack to every phase of pole maintenance work. This jack insures saving in time and labor of the pole crew, no digging around pole, no breaking up of pavement or curbing. Takes but a minute to make jack ready to operate, and but a few minutes for one or two men to pull the heaviest pole, no matter how deep in ground or the character of the soil.

In moving entire pole lines from one location to another, this jack has shown that it insures economies in time, labor and expense over other available methods. Lines moved any distance easily, and without interrupting the service.

Simplex Pole Pulling and Pole Straightening Jacks are furnished complete with 8-foot scarf welded B B B steel chain, fitted with pear shaped link at one end, 5-foot forged steel pinch bar, heat treated, and 10 inch—25 pound I-beam base 24 inches long, with punched hand hole.

No. 329 Simplex is the new and stronger pole pulling and pole straightening jack. Automatic in raising and lowering. No digging or loosening of the earth is necessary, the I-beam base is placed beside the pole—the jack set upon it, the chain slung around the pole—one end of the chain dropped into the forked cap—the jack is operated and the pole comes up.

The photographs illustrate how easily, quickly and safely the Simplex Pole Pulling or Pole Straightening Jack will pull or straighten the largest poles.

No strained backs, no hernia, no damage to or removal of over head equipment, but a quick, positive and clean pole pulling job in a few minutes, where, with all other methods hours are wasted.

No. 329 Simplex Pole Pulling and Pole Straightening Jacks

Automatic Raising and Lowering Jacks
Continued

The final and complete operation of pulling a pole is illustrated and the job was finished in 8 minutes with the use of the No. 329 time saving Simplex Jack.

Cat. No.....	329
Capacity.....	15 tons
Lift.....	24 inches
Height.....	38 "
Weight, Complete.....	193 pounds
Price.....	each \$70.00

No. 318 Simplex Tripping Type Jacks

This jack is built so that the pawls can be tripped and the load dropped from any position. By manipulating the pawls by hand, the load can be lowered one notch by notch. Same standard equipment as the No. 329 Simplex.

Cat. No.....	318
Capacity.....	15 tons
Lift.....	24 inches
Height.....	37 1/4 "
Weight, Complete.....	187 pounds
Price.....	each \$62.50

No. 310 Simplex Emergency Jacks

Automatic raising and lowering. Because of its pivoting base, the No. 310 Simplex can be operated at any angle. An indispensable tool for electric and steam railways, for emergency and shop use in repair yards. Also in any service when timbers, machinery, or other heavy objects are to be lifted or pushed into position.

Its four points of lift, chain, auxiliary shoe, cap and lower foot, enable jack to operate in cramped and difficult positions and handle irregular shaped objects where ordinary jacks many times cannot operate at all.

It pulls poles also.

This jack is smaller and lighter than No. 329, and operates in similar manner. Adapted to handling small poles that can be grabbed by its 5-foot chain.

Equipped complete with 5-foot steel chain, 5-foot forged steel lever bar, and drop forged steel detachable shoe.

Cat. No.	310
Capacity	15 tons
Lift	12½ inches
Height	20½ "
Weight, Complete	104 pounds
Price, No. 310	each \$48.00

No. 87 Simplex Pole Derrick Jacks

Designed to support the rear end of heavy pole, maintenance trucks, when setting poles with a derrick mounted on the truck. Also recommended for use in garages, under heavily loaded truck to relieve pressure on pneumatic tires and springs while standing idle.

Cat. No.	87
Capacity	5 tons
Lift	14 inches
Height	23 "
Weight	35 pounds
Price, No. 87	each \$18.00

No. 47 Simplex Auto Truck Jacks

A rugged, powerful geared jack of proportions and material that have proved it to be the master of every emergency.

It is a miniature of the 35-ton Simplex Railroad Jack, and is used by a number of railroads as a journal jack.

The continuous operation or earning power of the heaviest motor trucks are insured with this jack.

Cat. No.	47
Capacity	7½ tons
Lift	7 inches
Height	12 "
Weight	35 pounds
Price, No. 47	each \$18.00

No. 322 Simplex Cable Reel Jacks

Specially designed for cable reels of 36 inches to 84 inches diameter. Furnished in pairs one right and one left, so that men operating jacks are working on same side of reel, and raising it uniformly. The practical use of steel bracing right and left hand thread, allows for the continuous alignment of the jack, and the oak base, under all conditions of wet and dry weather. Note rigid connections between braces and the oak base.

Automatic double acting jack operating on the upward and downward stroke. Lifts ⅝ inch on each stroke, allowing for the practical leveling of any cable reel.

Base is of No. 1 kiln dried oak. Standard is made of malleable iron. Lever socket is steel. Forging-heat treated rack bar. Drop forged pawls. Hardened steel bearings. Lever pole is forging-heat treated.

Cat. No.	322
Capacity	10 tons
Lift	14 inches

Simplex Portable Cable Reel Jacks

No. 41

No. 81

Jack held on oak base by taper wedged brackets—can be quickly removed and packed in tool box. Made single acting, raising the load on the downward stroke only, and double acting, raising the load on both the downward and upward strokes.

Designed to lift small, but heavy cable reels from 24 inches to 48 inches diameter, and can readily be used for any work, where 1 to 2-ton loads are to be handled.

Simplex Car, Bridge and General Utility Jacks

Simplex Track Jacks

Single Acting—Automatic Raising and Lowering

No. 22

These jacks are especially designed for bridge, track crossing, car body, and heavy construction work. Strong, sturdy frame and base, powerful, rapid and dependable, built without a machine screw, and for rough and abusive service.

No. 22 is a powerful, sturdy 10-ton jack especially suitable for low lift car body and truck purposes on electric railways. As the usual wooden pole furnished with 10-ton jacks would break under heavy overload, it is supplied with a steel lever pole appropriate for its power.

No. 24 and No. 29 are 15-ton jacks especially designed for medium and high lift car body and truck work on electric and steam railways. Massive standards, drop forged steel working parts. Highly efficient and dependable jacks.

The working parts are interchangeable in these jacks and as the parts are all hardened and tempered, the maximum strength is obtained with the minimum weight.

Equipped with oval socket and heavy duty six-foot oval pole, insuring jacks developing maximum power without danger of pole breaking.

Standardized by electric and steam railroads for their mechanical excellence, correct design and dependability.

No. 29

Cat. No.	22	24	29
Capacity tons	10	15	15
Lift inches	12	13	18
Height "	21 1/4	23	28
Weight pounds	58	87	110
Price, Oval Socket with Pole... each	\$25.00	\$38.00	\$40.00
" Square " without Pole. "	24.00	36.00	38.00

Simplex Geared Car Jacks are designed for the easy and safe handling of loaded freight cars, heavy interurban cars, and industrial work, where a heavy duty yet comparatively light and portable jack is required. The geared ratio plus the short fulcrum centers, made practical only by the use of Simplex trunnion bearings cast integral with the lever socket, produces the greatest man power.

No. 126 Simplex is the same as the No. 125 except that it is equipped with a shoe at the bottom of the rack bar. Designed for use in handling heavy machinery and in such work as lowering the bottom of large steel storage tanks.

Built without a machine screw.

No. 135

Cat. No.	125	126	135
Capacity tons	25	25	35
Lift inches	15 1/2	15 1/2	15 1/2
Height "	26 3/4	26 3/4	26 3/4
Weight pounds	150	150	220
Price each	\$100.00	100.00	135.00

No. 217

Simplex Track Jacks embody every desirable feature that goes to make perfect track jacks.

They have fewer working parts. The one inch fulcrum trunnions integral with lever socket eliminates troubles of the bent fulcrum pins of ordinary track jacks. Fulcrum leverage insures easiest, most powerful operation under safest conditions. The arched and unbendable base guarantees a firm and solid foundation at all times. All working parts are crucible steel and drop forgings.

Made from high carbon steel and heat treated.

Double Acting Simplex Track Jacks operate on both upward and downward stroke of lever, and trip from any position. Designed and built to give maximum service with minimum effort. Vertical pawls, one-inch trunnions, short fulcrum, closed end bearings securely locked, insure greater leverage, easier operation, lessens friction, and adds longer life to the jack.

Equipped, when desired, with square lever socket for use with standard lining bar as lever in place of wood axle. This eliminates the breaking of poles and carrying of extra lever poles when the lining bars are always on the job.

No. 217 with Foot Lift

Single Acting Simplex Track Jacks operate on downward stroke of lever, and trip from any position. They combine quick tripping and tooth by tooth lowering.

All parts strongly built of crucible steel and drop forged steel, heat-treated.

Adapted for low, medium and high lift track work.

The man power of the Nos. 216, 217, and 218 is identical because the fulcrum centers are equal in each jack; the parts are interchangeable with the exception of the heights of the standards and the rack bars.

Equipped when desired, with square lever socket same as double acting jacks.

No. 218

Simplex Track Jacks are used and endorsed by the largest railroad system.

No. 1 Cable Reel Jacks

No. 1 with Plain Head

The illustration shows the new pattern cable reel jack which has been designed to fill the need for a strong jack that will carry a heavy load, and at the same time be light enough so as to be easily portable. This jack will swing a 7000-pound reel, and is made in two sizes, either with or without ratchet heads.

It is also constructed with handle to prevent the reel from striking the frame, when rolling.

Cable Reel Jacks

With or without Ratchet Attachments

With Ratchet Attachments

Each set contains 2 jacks, a 6-foot reel bar and a jack bar.

The jacks are locomotive pattern with hardwood bases.

Reel bars are made of high carbon steel. The outfit will swing a reel of any ordinary size and of any weight.

Price, Complete, without Ratchet Attachments, per set	\$42.00
" " " with " " "	53.00

If cable reel bars are not required, deduct \$6.00 from price.

Matthews Adjustable Reels

For Both Pay Out and Take Up

Top View

Side and Bottom View

The five arms can be contracted or expanded to fit the inside diameter of any size coil of wire within its range. Revolving table is made of sheet iron reinforced by a turned over edge which prevents it from being bent out of shape. Edge prevents wire from getting caught under table or cutting itself on a sharp edge when paying out or taking up.

The table rests on four roller bearings when paying out a coil of wire. This prevents the reel from catching on the frame or bending out of shape because of more pressure on one side or the other. Can be operated flat on the ground for paying out wire or in a vertical position for taking up.

Price, without Brake	each	\$130.00	Shipping	{ 107 Lbs.
" with " " " "	"	138.00	Weight	{ 111 "

Oshkosh Folding Take-up Reels

The reel part collapses and automatically throws off the coil at the same time and in an instant is ready for another coil. The frame, made of heavy hardwood, is strong and heavily reinforced throughout and folds up like a hinge.

It can be taken down in a moment merely pulling the pin out of the shaft, throwing off the coil and folding up the frame.

Electric light is the fruit of the labor of men who put up and maintain the pole lines. Western Electric furnishes good tools to erect those poles and good supplies to equip them.

A Spring planting that will bear good fruit

THIS is planting time for electric light poles. Now that the ground is softening up, the light and power companies are adding to their plant and their service.

It is a far-reaching plant, and one which requires constant watchfulness. Twenty-four hours a day men are on the job—up the poles and in the generating station—to give you service at the click of your switch.

Everything electrical— when and where wanted

In all this work, supplies from Western Electric help. And not only tools and supplies for the power line. Western Electric stocks everything electrical for factory, office, store and home.

Your electrical contractor can get Western Electric products on short order from our warehouse here in town. For an installation that you can depend on you need just two things—an experienced contractor and high quality supplies, like Western Electric. And those two you usually find together.

Tools for cultivating the plant

Constant attention by the lighting company is needed to keep their plant in order. These stout tools—pliers, splicing clamp, spur and safety belt—are typical of the lineman's equipment which Western Electric supplies to help maintain service.

No. 915 Oshkosh Tree Trimmers

Made with a light steel head and a thin high grade saw steel knife. Equipped with genuine soft old growth yellow Washington Fir handle 1 1/2 inches in diameter, made in 3 sections, connected with positive locking ferrules. This tree trimmer will easily cut a 1 1/2-inch limb. It is light and works easily.

Cat. No.	Description	Wt., Lbs. Each	Price Each
915	Trimmer Complete	13	\$6.75

No. 3600 Klein's Favorite Tree Trimmers

Head is malleable iron and comprises hook portion with which knife operates and socket into which handle is inserted. Socket is perfectly straight, eliminating necessity of tapering end of handle. Knife is crucible steel and integral with lever and cutting edge is tempered and ground. Will sever a 1-inch branch. Knife is held open by a flat steel spring and is operated by rope attached to end of lever. Two threaded holes are provided for attaching a saw.

Universal Leather Collar Protectors

For Use With Single Eye Cable Grips

By the use of this collar the life of the single eye grip can be greatly prolonged, for many conduits contain more or less sand and foreign matter, which tends to wear the cable grip, especially at a point near the neck.

The leather collar protector is designed to overcome this difficulty and a saving can be effected by its use.

No. 102-1 Klein's Splicing Clamps

A handy pocket size tool adapted specially for telephone troulemem.

Arranged with 5 round holes for bare wire.

Copper wire Nos. 8, 10, 12, 14, 16, B. & S.

Iron wire Nos. 10, 12, 14, 16, 18, B. W. G.

Hammer forged from high grade crucible tool steel. Oil tempered, polished head, black handles.

Size, 8 inches.

Weight per dozen, 6 pounds.

Price, No. 102-1each \$2.60

No. 102-3 Klein's Splicing Clamps

Covers a wide range of wire sizes used in telephone and telegraph line work. Large hole can be used in serving guy wire or messenger strand. The dies fit the wire snugly insuring perfect mechanical and electrical joints.

This clamp is arranged with 5 round holes and one oval hole for bare wire.

Copper wire Nos. 2, 4, 6, 8, 10, 12, B. & S.

Iron wire Nos. 4, 6, 8, 10, 12, 14, B. W. G.

Hammer forged from high grade crucible tool steel. Oil tempered, polished head, black handles.

Size, 10 3/4 inches.

Weight per dozen, 15 pounds.

Price, No. 102-3each \$3.35

No. 105-15 Klein's Splicing Clamps

A convenient pocket size clamp particularly adapted for telephone and telegraph repair work.

This clamp is arranged with openings for twisting double tube sleeves.

Copper sleeves Nos. 8, 10, 12, 14, 17, B. & S.

Iron sleeves Nos. 10, 12, 14, 16, 19, B. W. G.

Hammer forged from high grade crucible tool steel. Oil tempered, polished head and black handle.

Size, 8 inches.

Weight per dozen, 6 pounds.

Price, No. 105-15each \$2.75

No. 105-17 Klein's Splicing Clamps

The unusually wide range of sizes in this clamp makes it particularly valuable for general telephone and telegraph work.

This clamp has 5 sets of chambers for twisting double tube sleeves.

Copper sleeves Nos. 6, 8, 10, 12, 14, 17, B. & S.

Iron sleeves Nos. 8, 10, 12, 14, 16, 19, B. W. G.

Hammer forged from high grade crucible tool steel. Oil tempered, polished head and black handles.

Size, 10 3/4 inches.

Weight, per dozen, 15 pounds.

Price, No. 105-17each \$3.35

No. 132-12 Klein's Combination Wire and Sleeve Clamps

For telephone and telegraph general line and trouble work. This clamp has four round holes for twisting bare wire. Copper wire Nos. 6, 8, 10, 12, B. & S. Iron wire Nos. 8, 10, 12, 14, B. W. G. The reverse side has four double chambers for twisting sleeves. Copper sleeves Nos. 8, 10, 12, 14, 17, B. & S. Iron sleeves Nos. 10, 12, 14, 16, 19, B. W. G. Hammer forged from high grade crucible tool steel. Oil tempered, polished head and black handle. Weight per dozen, 10 pounds. Price, No. 132-12, Size, 9 Inches each \$7.50

No. 132-15 Klein's Combination Wire and Sleeve Clamps

The unusual range of wire and sleeve sizes covered by this clamp makes it practically a universal tool for telegraph, telephone and power line work. Has 5 round holes for twisting bare wire and an oval opening for guy wire or messenger strand. Copper wire Nos. 4, 6, 8, 10, 12, B. & S. Iron wire Nos. 6, 8, 10, 12, 14, B. W. G. Strand opening .467x.624. Reverse side has 5 chambers for twisting double tube sleeves. Copper sleeves Nos. 6, 8, 10, 12, 14, 17, B. & S. Iron sleeves Nos. 8, 10, 12, 14, 16, 19, B. W. G. Hammer forged from high grade crucible tool steel. Oil tempered, polished head and black handles. Weight, per dozen, 16 pounds. Price No. 132-15. each \$4.75

No. 107 Klein's Di-Stock Sleeve Twisters

Made to order only.

Has ample leverage for use on heavy wires beyond capacity of standard splicing clamps or connectors. Can be made for twisting sleeves or bare wires. Illustrations show tools for making double tube joints. High grade crucible steel. Has swing latch with thumb nut to fit over reverse jaw to hold jaws in place.

Special prices on any combination upon application. Specify sizes of wire and sleeve joints tool is intended for.

Open to Receive Wire

No. 1802-30 Klein's Self-locking Troublemens' Blocks

Especially for use with Klein's Wire Grips. No. 1802-30 is furnished with 25 feet 3/8-inch Manila rope, 2 1/2 pounds. Consists of light steel shell blocks galvanized, fitted with snubbing hook to lock load in any position. To lock load, pull luff rope under hook. To release, simply pull rope. Blocks are arranged with spring guard snap hooks. When pulling up wire to make a splice, it may be used with two grips attached to snaps or with hook to anchor to an insulator-pin or other convenient anchorage.

Cat. No.	Description	Wt. Lbs.	Price per Set
1802-30	Galv., with 25 Ft. 3/8-inch Rope	2 1/2	\$4.00

Buffalo Grips Without Pulleys

The jaws may be clamped open at any width, the grip held in one hand and wire inserted, no matter what lineman's position may be.

The harder the pull the firmer the grip, yet without injury to wire or insulation.

No. 1625-20 Klein's Improved Haven's Grips

A heavy grip adapted for handling plain or stranded wire from No. 4 to 3/4 inch in diameter. The particular feature of construction is a swing latch which engages with stud on lower jaw, thus centralizing the pressure on cross bolt which is strongly made of turned machined steel.

Weight per dozen, 69 pounds.

Price, No. 1625-20 each \$7.50

No. 1604 Klein's Haven's Steel Grips

For all around work. Forged from crucible steel. The eccentric or dog is hand cut, hardened and tempered. All rivets are steel, machine turned. Handle and eccentric allows instantaneous hold. A shake of rope on tackle disengages or releases grip. Heavy strain makes it grip tighter. Can be supplied with swing latch.

Cat. No.	Size	Weight per Dozen	Price Each

NOTE.—The manufacture of Chicago Grips with pulleys have been discontinued.

No. 1613 Klein's Chicago Grips for Bare Wire

Main body piece and lever are forged steel. Draw parts are wrought steel. Gripping jaws are machined smooth. Rivets are machine turned. The harder the pull, the tighter the

hold. It pulls straight without leaving kinks in the wire. It is handy to put on and holds itself in place by means of a spring acting on the compressing lever. Arrangement of draw links is so that it does not hang down at right angles and is not in the way of line when grip is put on.

Matthews Slack Pullers

Designed for taking the slack out of wires, guy strand and for the changing of insulators on high tension lines. Takes the place of block and tackle. By its use one man can pull as much strain as four men with block and tackle without any assistance. No slack is lost in deadending with this puller. The pulling power is obtained by a combination of miter and worm gears in combination with a long lead screw on the end of which is a drop forged hook.

Fuller is ruggedly built. Weighs 13 pounds ready to ship and has a take-up of 20 inches.

Price each \$50.00

No. 201 Klein's Diamond Special Side-cutting Pliers

Has handles shaped to the curvature of the hand. Powerful leverage and keen reinforced cutting knives make this plier adaptable for heavy cutting in telephone, telegraph and power line work. Full clearance back of the knife permits use on insulated wire.

Has polished head and handles temper blued. Packed 6 in a box.

Prices upon application.

No. 1004

Klein's Linemen's Pole Climbers

Also Called Spurs or Hooks

Safety is the first and vital point in considering linemen's pole climbers. The lineman going up a pole depends entirely upon his spurs.

To assure utmost dependability Klein Climbers are forged from special steels and are individually tempered. Shanks and gaffs are tested to insure perfect riveting and temper.

Leg iron or shank is made of spring steel, gaff or spur is forged from tool steel.

The shape of Klein Climbers has been carefully considered. It is the result of many years' experience and much practical suggestion from linemen. Klein Climbers have flexible shanks and yield readily to pressure of leg; they do not chafe. Gaff or spur is correct in shape, set of angle and temper. It is hand riveted to leg iron in secure manner.

Klein's Eastern Climbers

When ordering specify length of shank desired. Measure from instep to extreme end. Other than stock sizes to order. Tested before leaving factory.

No. 1901

Stock sizes, 15, 15½, 16, 16½, 17, 17½, and 18 inches. Punched strap loops. Weight, 2⅝ pounds. Pair in a carton. Price, No. 1901.....per pair \$4.10

Price, No. 5211 each \$5.75

No. 5205 Genuine Klein's Tool Belts

Made of select first quality harness leather. The inner or cushion layer, 2 1/4 inches wide, carries the D rings and is lock stitched and riveted to the outer layer and is furnished with a strong drop forged buckle.

The D rings are solid steel drop forgings tested to 1500 lbs. and are of improved design. Surfaces which take the wear of the D rings are protected with copper safety liners riveted to the belt. D rings and buckle are galvanized finish. Solid copper rivets set with burrs; sewed with hot waxed thread, lock stitched. The loop strap is 1 1/4 inches wide, formed into 6 loops.

Made in lengths 34, 36, 38, 40, 42, 44, 46, 48 and 50 inches; figured from end of buckle to middle hole at other end of belt.

Weight per dozen, 32 pounds.
Price, No. 5205, Width, 2 1/4 Inches each \$5.25

No. 5210 Genuine Klein's Tool Belts

Bell System Type

First quality harness leather. Cushion, 3 inches wide, is in one piece to which D rings are secured. Belt straps are in 2 pieces sewed and riveted to cushion at ends. Two plier

keepers are provided; also a tape holder of rawhide. D rings and buckle are solid steel drop forgings tested to 1500 pounds. Galvanized. Rivets are solid copper, hand set with burrs. Sewing is with linen thread, hot waxed and lock stitched. Made in lengths 34, 36, 38, 40, 42, 44, 46, 48 and 50 inches. Specify length required, measuring from end of buckle to middle hole at other end.

Weight per dozen, 38 pounds. Packed individually.

Price, No. 5210 each \$5.95

No. 5250 Genuine Klein's Safety Straps

Standard type. Genuine harness leather of first quality. Sewed with hot waxed harness thread, lockstitched. Rivets are solid copper, set with burrs. Snaps have a solid strap loop with roller and buckle, solid drop forgings tested to 1500 pounds. Strap may be lengthened or shortened. Reinforced at ends with copper safety clasp riveted through double thickness of leather. Snaps and buckle galvanized finish.

No. 5209 Klein's Safety Harnesses

Back

Front

Meets requirements of various safety commissions for use where danger from gassing is present. Working in gassy manholes, gas tanks, oil tanks and even boilers, men are frequently overcome and an emergency arises instantly. This harness provides a sure means by which patient can be brought to safety and danger overcome. Design is such that it slings wearer in a perpendicular position so that he can be readily hauled through an ordinary manhole opening. A solid harness leather back plate 2¼x10 inches is stitched and riveted around the 1¼-inch adjustable belt strap. Back plate also carries a tested drop forged D ring to which the ¾-inch manila life line, 25 feet in length is permanently attached. Shoulder straps are ¾ inch and made adjustable and riveted to belt at single ends. These straps hold belt in position around chest so as not to encumber wearer while working. Weight per dozen, 30 pounds.

Price, No. 5209, with Life Line.....each

Nos. 5107 and 5112 Leather Plier Pockets

No. 5 Millers Falls Tool Holders

No. 5

The tools are made from high-grade steel, carefully tempered and finished

and honed to a fine cutting edge.

These tools are contained in the handle which is hollow with screw cap. The jaws hold with a vise-like grip. Socket and snell threads are carefully cut so as to mesh perfectly and prevent shell from working loose and allowing tools to disengage themselves from the jaws. Cocobolo handles, highly polished. No. 5 has tools without blue finish.

Tools for No. 5

Length of handle, 7 1/2 inches. Length of tools, 4 inches.

Weight, 14 ounces. Packed one in a box.

Price, No. 5, Contains 10 Tools.....per dozen \$39.60

No. 81 Millers Falls Automatic Drills

By turning knurled nut on over end of handle, handle is released and slides down on frame, exposing points. Knurled nut locks magazine securely. Metal partitions in magazine keep each point in place. Size of point is marked against each compartment. Handle is of convenient size to fit the hand comfortably.

Has improved ball chuck, knurled handle and spiral nut of Tobin bronze. Shell cannot be completely unscrewed and lost.

Length, 10 1/2 inches.

Weight, 9 ounces.

Packed one in a box.

Price, No. 81.....each \$2.70

No. 144 Millers Electricians' Boring Machines

This machine is frequently used by carpenters and millwrights who have occasion to bore in overhead joists. Head is equipped with a double ratchet which forces the bit forward continuously as operator pulls handles up and down. Head is less than 3 inches thick and can be used in narrow places.

Interchangeable hardened bearings—runs without friction.

Bits will clear without reverse motion.

Adjustable from 7 to 12 feet. Can be lengthened to 16 feet at small additional cost.

One each of 10/16 and 1/8-inch bits are furnished with each machine.

Below boring attachment for work in old buildings furnished without extra charge.

Tempered steel tubes. Steel sprocket, steel chain. Hardwood handles.

Weight boxed, 40 pounds; net, 18 pounds.

Price, No. 144, Complete.....each \$33.45

Foot Rest for Machines

Foot rest is fastened to the base of the machine by a set screw. Standing squarely on this rest affords a means of further steadying the tool, particularly when used at its extreme height.

Weight each, 3 pounds.

Price.....each \$1.25

No. 441 Auger Bits

This bit is made especially for the No. 144 machine. It has a hole drilled in the end of the round shank to take a cotter pin which holds the bit in the machine.

Carried in 3 sizes with 4 1/2-inch twist, 7 1/2 inches over all.

No. 3109-20 Klein's Combination Steel Lag Screw Wrenches

This wrench is forged from select bar steel. The slot is formed in a cross shape and will fit machine bolts, nuts or lag screws from 3/8 inch to 5/8 inch. The small end of the wrench is arranged for 3/16-inch machine bolts or lag screws. The round hole allows the end of a bolt to come through as the nut is run on.

The jaw is wider at its upper portion and when this wrench is put on a nut or bolt the tendency is to draw the bolthead or nut into the wrench and prevent slipping off. Weight, per dozen, 20 pounds.

Price, Nos. 3109-20, Length, 13 1/2 Inches.....each \$2.50

Millers Falls Hack Saw Frames

Polished and nicked steel, cocobola handle. Adjustable 8 to 12 inches.

No. 1027 Millers Falls Hack Saw Frames

Pistol grip hack saw frames give a comfortable grip. Extensible from 8 to 12 inches.

Price, No. 1027, with One 10-inch Blade...per dozen \$21.00

Millers Falls Hand Hack Saws Flexible—Tungsten

Flexible blades differ from all hard blades in that the teeth only are hardened. Recommended for use particularly on thin sections of soft materials, both sheet and tubing. Superior to the all hard for use in out of the way places, and when frame must be held in other than a normal position.

Electricians, plumbers and steam fitters will find this type of blade more economical than all hard.

Flexible blades should be strained tighter in frame than all hard. Because they stretch more readily tension should be increased frequently while in use.

When starting a new blade in an old cut, give work a greater turn if possible. This will overcome the binding due to wider set of new blade.

Diamond N Drill Holders and Points

Drill Holders

The taper shank on the drill is carefully machined to fit the holder. The transverse hole in the handle is to admit a tapered pin which drives out the point when it is to be removed. The advantage of this drill over the one-piece regular drills is that in the smaller sizes a better grip can be had and a harder blow struck. It is also a great convenience in the reduction in weight of tools to be carried to a job where numerous holes are to be drilled. One holder may be used for many drill points. Worn drill points may be replaced with new drill points and the job continued without interruption. Holder will take drill points from 1/4 to 3/4 inch.

Price.....per dozen \$24.00

Drill Points

The points are provided with tapered shanks to fit the tapered hole in the holder and drift pins are provided to eject the point when replacement is necessary.

Nos. 50 and 53 Peirce Hammer Drills

The Peirce Hammer Drill is a double-ended tool designed for drilling holes easily in brick, stone and concrete. It drills the hole and swages the lead sleeve of the bolt. Holds all sizes of drill points.

The drill cannot become wedged in the hole while drilling as a backward stroke of the hammer instantly releases it.

Injury to the hands of the operator is impossible.

The chuck has a quick release whereby a drill-point may be instantly removed and a sharp one inserted.

Price, No. 50 for Tamping $\frac{1}{4}$ -inch Bolts each **\$17.17**
 " " 53 " " $\frac{3}{8}$ " " **18.28**

Nos. 56-65 Peirce Drill Points

For $\frac{1}{4}$ -inch expansion bolts, $\frac{1}{2} \times 4$ or 6-inch drill points are used; for $\frac{3}{8}$ -inch bolts, $\frac{3}{8} \times 6$ -inch points; for $\frac{1}{2}$ -inch bolts, $\frac{7}{8}$ -inch points, the length of drill point depending on the length of bolt used. One and three-fourths inches of drill point is held inside the chuck. All drill points are measured over all except the 12-inch which are 14 inches over all.

Diamond Rapid Fire Drills

This drill reproduces the same action as is produced with the hand hammer and drill, with greatly multiplied speed.

With every revolution of the crank eight sharp blows are struck. No vibration. Its action is percussive.

Each drill has three adjustments, hard, medium and soft, controlled by a spring lever at the side of the housing. The springs are easily changed by removing the cover of the housing without disarranging or unfastening any of the parts of the mechanism.

Price, Drill Only, without Drill Points each **\$32.00**

Rawplug Complete Outfits

Contains 750 Rawplugs in 49 different sizes and lengths, 3 toolholders, 9 three-point drills and 4 one-point Rawdrills, 1 box containing 50 Rawplugs and 50 screws threaded to the head, 2 drift pins and Rawplug and screw gage. (List price of contents \$29.25.)

Price, Complete Rawplug Outfiteach \$22.00

Rawplugs

For Use with Lag Screws

The Rawplug is a hollow tube of stiffened longitudinal strands of jute fibre so cemented that once in place it is unaffected by moisture or change in temperature. As the screw is turned home in the plug, the jute fibre strands expand, entering the interstices of the material, resulting in a strong and permanent grip. The screw cuts a perfect thread in the Rawplug which permits withdrawing and reinserting the lag screw at any time in the orthodox manner.

The lag screw sizes of Rawplugs are readily adaptable for use in setting motors, generators, pumps, fans, blowers, etc., on concrete foundations. Rawplugs resist and absorb vibration and shock due to the nature of their composition. Uniform pressure is exerted on all sides of the hole throughout the entire length of the plug (the entire length of the thread on the lag screw). The setting of it is accomplished without caulking, or without special tools.

For mounting heavy signs, awnings, pipes, ornamental iron work, wall radiators, motors, etc., to brick, concrete, hollow tile, or any masonry, a permanent and secure holding can be obtained by the use of Rawplugs. Due to the small hole required, a saving is effected in drilling costs.

Packed 25 Rawplugs to box; 12 boxes to a standard package.

No. 550 Millers Falls Radio Socket Wrenches

This wrench converts the No. 55 Radio ratchet screw driver into a ratchet screw driver wrench. Set of 3 sockets that fit snugly on the blade.

Specially milled slot prevents socket from turning on the blade.

Steel casehardened, mottled finish.

Sizes for 1/4, 5/8 and 3/8-inch standard hexagon nuts.

Price, No. 550.....per set \$5.50

No. 21 Atkins Metal Cutting Hand Saws

Will cut all classes of ordinary metal with ease. In 18-inch size it is 1 1/2 inches

wide at the point and 4 1/2 inches wide at the butt. It is 18 gauge on the toothed edge, 20 gauge on the back and gradually tapers to 23 gauge on the point.

The handle is made of thoroughly seasoned applewood, polished, fastened to the blade by medallion and two brass screws. Packed one-third of a dozen in a box. Saws 18 inches long will be shipped unless otherwise specified.

Lufkin Surveyors' Chain Tapes

Etched graduations. Nubian finish; heavy 1/4-inch steel tape. Hardwood reel with long folding winding handle and large drum. Trimmings nickel-plated. Wherever graduated, the steel has a bright raised surface, with figures etched in. Steel is tempered and of best quality so that graduations and figures can never be effaced, but will always show clearly and distinctly. A convenient, strong, durable chain tape for heavy field work. A pair of rawhide thongs is furnished with each tape, (detachable rings instead if specified.)

Tapes in feet are marked feet only every foot, with end feet in 100ths. Tapes in links are marked links and poles, with end links in 10ths. Tapes with end feet marked inches and 8ths, or with extra foot first end to 100ths, numbered from right to left, no extra charge.

Trio Die Stocks for Pipe

Bushings can be removed to clear couplings for threading close nipples. Regularly furnished with one stock, three Little Giant Pipe Dies and three bushings.

Briggs standard right hand taper threads furnished unless otherwise specified. British (Whitworth) standard right hand taper threads furnished at regular prices. Right and left hand pipe dies are furnished at same list.

No.	Cutting Size, In.	Length Stock, In.	Weight Pounds	Price Each
200A	1/8, 1/4, 3/8	28	4 1/2	\$8.50

210B	1/2, 3/4, 1	40	10	11.00

Beaver Square End Pipe Cutters

This pipe cutter cuts like a lathe tool, each turn removing a thin shaving until the pipe is severed. Leaves no burr to be reamed or filed, or to reduce the capacity of the pipe, and threading dies start easily and with less wear.

Rigid, simple and fool-proof in construction.

The knives give hundreds of cuts on the hardest pipe, and are easily resharpened

No.	Cap. Pipe In.	Price Each Complete	Knives Price per Set
1	1/8 to 1	\$18.00	\$1.20
5	1/2 " 2	20.00	3.50

No. 6 Beaverette Easy Working Die Stocks

Threads all four sizes, 1/4 to 3/4-inch, without changing dies or bushings. A thread may be cut while changing dies in other tools. The two sets of dies covering the different thread pitches are held in one plate, instantly adjusted to any size by the single handle.

A universal centering device does away with loose bushings.

The No. 6 is a compact tool, complete without loose parts. Right or left hand, as specified.

Price, No. 6, Complete. each \$15.00
 " Extra Dies, R. or L., 1/8 or 1/4 x 3/8 or 1/2 x 3/4 Inches per set 3.00

No. 25 Beaver Easy Working Die Stocks

Threads all sizes 1, 1 1/4, 1 1/2 and 2-inch, or variations from standard, without changing dies. A universal chuck centers all sizes. No loose bushings.

Close nipples may be cut with this tool. Instantly adjusted—simply shift the handle to size and the tool is ready. It

uses narrow receding dies that draw back with each turn, removing less and less metal, thus cutting a standard taper thread and easing the work as the thread is cut.

Price, No. 25, Complete. each \$30.00
 " Extra Dies 1, 1 1/4, 1 1/2 and 2-inch, R. H. . . . per set 3.50

No. 26 Beaver Easy Working Ratchet Die Stocks

Threads all sizes, 1, 1 1/4, 1 1/2 and 2-inch, without changing dies. Provided with ratchet attachment for cutting in confined places, or can be used as a regular stock. Contains a universal chuck which means pipe is always straight, without grip screws or bushings to bother.

Uses detachable leader screw. The ideal tool for threading in confined places or at the bench.

Price, No. 26, Complete. each \$35.00
 " Extra Dies, 1, 1 1/4, 1 1/2 and 2-inch, R. H. . . . per set 3.50

G T D Spiral Fluted Burring Reamers

No. 243, Half Round Shank

No. 246, Tee Handle

Nos. 241, 242, 242 1/2, 244 Bit Brace Shank

Made of high grade steel and designed for removing burrs caused by cutting pipe, and also for counter-sinking. Ground to adapt them for use in a variety of materials. Spiral flute reduces chattering.

G T D Hinged Pipe Vises

Made of malleable iron. The holes in the base of this vise are so placed that there is ample room to allow the use of an ordinary pipe wrench when bolting down to bench or post. The base is sufficiently strong to permit the omission of the front apron. Can be fastened back from the edge.

Two lugs are cast on the base so that the frame and hook can be reversed.

The jaws furnished with these vises are made of excellent tool steel.

Jaws are carefully hardened and tempered.

Standard Conduit Elbow Formers

Forms standard shaped elbows perfectly and accurately, exactly where desired. Saves time and also material by eliminating waste of pipe.

Price, for 1/2 and 3/4-inch Pipe...each \$30.00

Giant Pipe Pushers

This machine has enormous pushing power through the scientific application of compound leverage. A one-man machine, compact, easily handled, powerful and rapid in operation. Is simple in construction and there is nothing to get out of order because its bed is made entirely of steel with oversize bearings.

With this machine one can do the following things: Push water pipe and gas pipe through the ground; push electric conduit through the earth; draw out and replace damaged pipe; draw lead pipe into the ground; place electric cables underground; drive wells; push open stoppages in sewerage and drains; drain by blind molds and move machinery and buildings. No. 1 is for short pushes.

Martin Portable Vise Stand and Pipe Bender

Small Size, with Hinged Pipe Vise

Small Size, with Chain Vise

Large Size, with Hinged Pipe Vise and Rear Support

This apparatus is designed for use wherever pipe must be cut, threaded or bent. It can be picked up at any time and moved from place to place. There are no bolts, screws or braces to remove. It does not have to be fastened to the floor, walls or ceiling. It will not tilt, upset or skid.

It is convenient for cutting and threading pipe. For these operations, the pipe is fastened in the vise and rests in the bending attachment which keeps it rigid and in line.

Small Size

Equipped with a special device which will bend pipe from 1/8 to 3/4-inch diameter easily without kinking. Capacity, with chain vise, 2-inch pipe; with hinged vise, 2 1/2-inch pipe. Weight complete, with hinged vise, 54 pounds; with chain vise, 50 pounds. Rear support not supplied.

Henderson Portable K-D Pipe Benches

For electricians, gas-fitters, millwrights and all mechanics who cut and thread pipe. The K-D bench can be assembled in a few minutes, saving at least half an hour's time in starting a job as no time is wasted in rigging up a place to mount a pipe vise. When not in use the K-D can be taken apart and stored in a small place.

Height, 39 inches. Weight, 55 pounds. Top, 33x9 1/2x1 1/2 inches, hardwood, finished.

Price.....each \$30.00

Henderson X L Conduit Benders

The Henderson X L Conduit Bender is a stationary bender. Fastens with lag screws or bolts through the clearance holes in the base, to any suitable support.

Simple, powerful and efficient. Designed for the hardest service. Heavy base plate. Three deep grooved detachable bending blocks for 1/2, 3/4 and 1-inch conduit are furnished with each bender.

Price, Complete with Lag Screws.....each \$10.00

Henderson Turnbuckle Pipe and Conduit Benches

A portable bench, powerfully constructed for cutting, threading and bending pipe and conduit. Held in place by a single hook or eyebolt. For each size of pipe, deep grooved detachable bending blocks are furnished, which automatically grip the sides of the pipe while bending, preventing kinking, flattening or slipping, a patented feature. Any bend can be made from a simple offset to a continuous spiral. To make a bend, slip the conduit between the bending bosses and press down; advance the conduit and repeat until the bend is finished.

STYLE NO. 1.—Furnished with two detachable bending blocks for 1/2 and 3/4-inch conduit; capacity of pipe vise, 2 inches. Height, 45 inches. Weight, 45 pounds.

Price, No. 1.....each \$30.00

STYLE NO. 2.—Furnished with five detachable bending blocks for 1/2, 3/4, 1, 1 1/4 and 1 1/2-inch conduit; capacity of pipe vise, 3 1/2 inches. Height, 45 inches. Weight, 170 pounds.

Price, No. 2.....each \$120.00

No. 8 Veeder Telephone Counters

Used in telephone exchanges for making accurate traffic records.

Since it is desirable that telephone exchanges learn periodically the comparative amount of work performed daily by the operators, as well as the total number of calls answered daily, this counter is almost indispensable to an up-to-date exchange. The socket plate is intended to go flush into the keyboard, slightly to the right of the operator, and to remain there permanently. The counter can then be inserted and removed at will.

When ordering, give name and number of counter.

Price, No. 8, Complete with Socket Plate.....each \$2.50
 " Extra Socket Plates..... " .35

No. Z13 Veeder Reset Ratchet Counters

This counter indicates one for each oscillation of the lever, which moves through an angle of 45 degrees. It can be reset to zero by one turn of the knob.

The counter can be furnished with the drive shaft projecting either on the right or left hand side as may be desired and with three, four or five figure wheels.

This counter is regularly equipped with a spring to return the lever to its operating position; but can be omitted if so desired. This counter should never be oiled.

Price, No. Z13.....each \$6.00
 " No. Z13K, Equipped with Pin Tumbler Lock and Two Keys.....each 8.00

No. Z8T Veeder Ratchet Counters with Thumb Lever

This counter indicates one for each oscillation of the lever, which moves through an angle of 45 degrees. Can be reset to zero by one turn of the knob.

Suitable where a hand-operated reset counter is desired.

Furnished with three, four or five figure wheels.

Price, No. Z8Teach \$6.00
 " " Z8T, Equipped with Pin Tumbler Lock and Two Keys.....each 8.00

No. 3420 Klein's Staysalite Linemen's Torches

This torch burns alcohol without odor or noise and stays lit in a wind.

Light and small and is lit or extinguished in a moment, as wanted. Has no adjusting parts.

The Staysalite is carried in the lineman's belt and eliminates the ground man; can be hung directly on the wire under joint to be soldered.

Provided with a cup for holding soldering paste. Can be used as a small heater or soldering iron.

Weight, 1 1/4 pounds.

Price, No. 3420each \$5.00

No. 208 C & L Torches

For Gasoline
Double Needle

A powerful torch, strong and rigid. Burner hook is removable. Upper needle has a wire tip that cleans the orifice, lower needle regulates the flame. Capacity, one quart. Shipping weight, 5 1/8 pounds.

Price, No. 208each \$19.00

No. 210 C & L Double Needle Torches

For Gasoline

Ideal torch for cold and windy weather. The improved double needle burner generates from 200 to 300 degrees more heat. Hook is removable. Capacity, 1 pt. Weight each, 4 1/2 lbs.

Price, No. 210each \$18.00

No. 32 C & L Single Needle Torches

For Gasoline

The tank is heavy gauge brass strongly reinforced on inside. Hook is removable. Has sturdy construction. Capacity, 1 quart. Weight each, 5 1/4 pounds.

Price, No. 32each \$18.00

No. 38 C & L Single Burner Torches

For Gasoline

Used by mechanics for many years. The tank is heavy gauge brass strongly reinforced on inside. Hook is removable. Has sturdy construction. Capacity, 1 pint.

Weight each, 4 pounds.
Price, No. 38each \$17.00

No. 132 C & L Torches

For Gasoline
Single Needle

Makes a perfect fire, whether used indoors or out, in hard wind or extreme cold. A strong blast is generated by a powerful burner. Every desired adjustment quickly made. Capacity 1 quart. Shipping weight 4 1/4 pounds.

Price, No. 132each \$16.00

No. 138 C & L Torches

For Gasoline
Single Needle

Makes a perfect fire, whether used indoors or out, in hard wind or extreme cold. The powerful burner generates a strong blast. The desired adjustments are quickly made. Capacity 1 pint. Shipping weight 3 3/4 lbs.

Price, No. 138each \$15.00

No. 146 C & L Single Needle Torches

For Gasoline

Burner of bronze metal and has open type generator that injects the air which mixes with the gas producing a steady flame. Hook is removable. Capacity, 1 pint.

Shipping weight each, 3 3/4 pounds.

**No. 91 C & L Fire Pots
Single Needle, for Gasoline**

The burner has great generating power and burns either high or low test gasoline. A swivel permits turning the burner up or down. The top section is of steel and can be quickly removed by loosening a set screw and base with burner used as open fire. The heavy gauge drawn steel tank is tinned inside and out which prevents rust and is strongly reinforced and fitted at base with patented cushion band. Has a powerful pump and large filler plug with dust proof cap. Quickly heats pair of 12-pound soldering coppers and pot of lead or solder at the same time.

Price, No. 91each \$26.60

**No. 22 C & L Fire Pots
For Gasoline**

The tank is made of heavy gauge seamless drawn steel, tinned inside and out, and fitted with cushion protection band at base of tank.

It is supplied with brass ears, elbows, and tees, plunger pump on tank, large funnel, and filler plug with dust-proof cap and three-piece coil cup and top plate.

The three-piece coil cup and top plate enables the operator to remove top section by unscrewing three large nuts, exposing the burner and coil.

No coil cup lugs or small nuts to burn off.

Capacity, one gallon.

Price, No. 22each \$20.60

No. 23 C & L Gasoline Coil Fire Pots

The No. 23 Coil Fire Pot has all of the latest patented features.

It is fitted with tinner's shield which is of sheet steel, quickly heating a pair of large size soldering coppers.

The shield is removable, thus making the fire pot excellently adapted to melting metals and various other work.

Shipping weight, 14 pounds.

Price, No. 23each \$23.65

No. 24 C & L Coil Fire Pots

For Gasoline

This fire pot is made especially for elevated and street railway, telephone, electric construction and cable work for public utility use.

It is fitted with Tinner's shield, which is of sheet steel, quickly heating a pair of large size soldering coppers. The shield is removable and will admit an 8-inch pot and quickly melt metals, paraffin or insulating compound.

Weight each, 14 pounds.

Price, No. 24each \$22.90

No. 26 C & L Fire Pots

For Kerosene

The No. 26 Kerosene Fire Pot has a powerful burner that superheats the kerosene gas before it is burned, producing perfect combustion and the maximum degree of heat. The tank is made of heavy gauge seamless drawn steel, reinforced, tinned inside and out, fitted with patented cushion protection band, preventing injury to base of tank, large funnel and filler plug, having dust-proof cap. Has pump attached to tank.

Capacity, 1 gallon. Shipping weight, 13¼ pounds.

Price, No. 26each \$32.50

No. 27 C & L Fire Pots

For Kerosene

Has a powerful burner that superheats the kerosene gas before it is burned, producing perfect combustion and the maximum degree of heat. The tank is made of heavy gauge seamless drawn steel, reinforced, tinned inside and out; fitted with patented cushion protection band preventing injury to base of tank, large funnel and filler plug, having dust-proof cap.

Fitted with a shield or top section for heating soldering coppers. This shield is removable, thus making the fire pot adapted for melting metals and various other work.

Capacity one gallon. Shipping weight, 14½ pounds.

Price, No. 27each \$35.25

No. 28 C & L Fire Pots

For Kerosene

Used for melting insulating materials, paraffine, rosin, lead, etc.; for boiling water. Has cast top plate and large hood or shield, 9¼ inches in inside diameter. Tank is of seamless drawn steel, tinned outside and in; fitted with cushion protection band.

Burner is made with a generator that superheats the kerosene gas before it is burned.

Brass pump produces air pressure quickly. All parts are strong and can be easily cleaned. Burner jet is also supplied for gasoline.

Capacity, 1 gal. Ship. wt., 17½ lbs.

Price, No. 28each \$34.50

Bar Solder

An alloy of tin and lead, made up in the form of bars for convenience in handling, for making soldered joints in metals, such as lead piping systems, for cable splices and other heavy work.

Price, Solder in Regular Bars..... per pound **\$1.00**

Wire Solder

This solder is an alloy of tin and lead, and is furnished in the form of thin wire for the convenience of wiremen and other electricians in making small joints in conductors and other apparatus.

Price, Wire Solder..... per pound **\$1.00**

Resin Core Flux Solder

This solder is provided with a core of resin which melts on the application of heat and prevents the formation of oxides, thus permitting the making of a strong bond between the metals.

Speco Soldering Sticks

Quick-acting, efficient, convenient, does not gum the hands. Does not let solder flow beyond point where flux is applied. Specially tested for underground cables.

Price..... each **\$1.15**

Speco Soldering Paste

Non-corrosive and protective, quick-acting, economical. Contains no sal ammoniac, which is cause of corrosive after-effects. Tested for Radio wires.

Wt. Ounces	Can Price Each	Wt. Ounces	Can Price Each	Wt. Pounds	Can Price Each

Speco Solid Sal Ammoniac

For cleaning and tinning the soldering copper.

Outlasts 5 times its weight of the old-fashioned "lump," keeps copper in good condition, does not crumble and corrode metal work near job or tools.

Price, 1/2-lb. Cakes..... each **\$1.40**
 " 1 " " " " " **.75**

Speco Soldering Salts

Salts produce vigorous, non-corrosive flux when mixed with water and a little goes a long way. A flux for general work on all metals. Makes a stronger joint than muriatic acid. Use 3 parts water to 1 part Speco Salts.

Price, 1/2-lb. Cans..... each **\$1.45**
 " 1 " " " " " **.60**

Nokorode Radiokits

For radio work. The Radiokit contains a long, thin soldering iron, making it easy to solder wires that are hard to reach with an ordinary iron; a box of Nokorode Paste, a strip of emery cloth, solder and book of directions, "How to Solder" with valuable information on radio work.

Price.....each \$.50

Allen Commutator Lubricant Sticks

Prevents sparking and cures it when applied properly. It prevents cutting by lubricating the commutator surfaces.

Description	Price Each
For Copper or Carbon Brushes	\$.30

Early's Commutator Cement

This cement will stand 3200° F. before it will fuse. Its strength is many hundred pounds to the square inch. It resists oil and moisture, and is not affected by gradual expansion and contractions of heat and cold.

Dielectric strength equals that of porcelain. No special tools or appliances are required. The operation is simple, if directions are followed.

For outside work and damp places give the job a coat of weatherproof insulating paint.

The dryer the cement the better the insulation.

This cement can be used to repair glass, porcelain, metal and all other materials except rubber, vulcanite and black lead.

Price, 1-pound Package, Size 2½ x 5¼ inches..each	\$2.50
" 7 " " " 5 x 10½ " .. "	10.00

Crescent Chatterton Compound

This is an insulating material used chiefly in submarine cable construction to fill the interslices between the strands of the cable conductors.

No. 1 Domestic.....per lb. \$2.00

Manson Tape

Manson Tape is a rubber filled cloth tape for protecting joints against mechanical injury. Easily handled and economical to use.

Color	Width Inches	Lbs. per Roll	Price per Lb.
Black	¾	½	\$1.10
White	¾	½	1.10

Okonite Rubber Tape

A rubber tape of the highest class for making splices or joints which, when properly made, are impervious to moisture.

Color	Width Inches	Lbs. per Roll	Price per Lb.
Black	¾	½	\$1.70

Sticka Black Friction Tape

For all ordinary commercial work. Used to protect the splicing compound on a wire joint from abrasion.

Roll contains ½ pound of ¾-inch tape, length about 56 feet.

Price.....per pound \$.90

Victor Black Friction Tape

Protects the splicing compound on wire joints from abrasion. Suitable for ordinary commercial work.

Roll contains ½ pound of ¾-inch tape, about 72 feet in length.

Price.....per pound \$1.00

Amazon Black Friction Tape

This is a good quality tape and will pass the majority of specifications in use.

Standard rolls contain ½ pound of ¾-inch tape, which is 84 feet in length.

Price.....per pound \$1.25

Victor Black Rubber Splicing Tape

A commercial grade, unvulcanized compound. Will fuse into a homogeneous mass at average air temperature under heat of the fingers. Half-pound roll, .030 inch thick, contains approximately 22 feet. Packed in 50 pound cartons.

Price.....per pound \$1.00

Amazon Gray Rubber Splicing Tape

A compound partially vulcanized which increases dielectric and tensile strength. The adjacent layers adhere readily on a joint and after a few minutes become a solid, homogeneous mass. Passes majority of specifications on splicing compounds.

Measures 24 feet per ½-pound roll. Price.....per pound \$1.25

Grimshaw Tape

Standard rolls contain ½ pound of ¾-inch tape.

Linotape Bias Cut

Linotape is the registered trade mark name under which Empire Oiled Cloth in tape form is sold. Tape is cut in any width from 3/8 inch and above, from all grades of yellow Empire, and black Kablak insulating material.

Linotape is an insulating tape of the highest order. Its virtue rests in the multiplication of oxidized oil films on its surfaces. It has come into general use as the insulating medium for cables of all descriptions, and is used extensively in coil winding, cable splicing, bus bars, and all high tension work. Furnished in rolls guaranteed to contain 72 lineal yards, each roll coated on the edges with paraffin to exclude moisture. Linotape is continuous in the roll.

Vulcanized Fibre Sheets

Hard and Flexible—Red, Gray and Black

Intermediate thicknesses at price of next thinner, but sheets just under a standard thickness from 1/8 inch up, must vary 1/4 inch (.015) or more, from the standard thickness to claim the lower price as an intermediate size. Sheets approximately 44x66 inches. No extra charge for cutting in halves, thirds or quarters; or in two, three or four pieces, provided there is no waste.

Several different thicknesses or colors may be aggregated in one shipment in determining the discount. Cut pieces 12 inches wide or more, containing 4 square feet or more, accompanying an order for sheets may be aggregated with them to determine the sheet fibre and the base price for the pieces, the usual addition being made, however, on the pieces for cutting.

Tubes under 3/8-inch inside diameter are made in lengths of about 3 feet. Over 3/8 inch in lengths of about 3 feet. Tubes will be cut at an additional charge to any required length. For square and rectangular tubes double above list. Intermediate sizes take price of next larger diameter and next thicker wall excepting between 3/16 and 1/4 when they take the price of 3/8 inch.

A variation of .10 inch O.D. is not considered an intermediate size and may be billed as a standard size.

Minimum charge for one order \$2.00 Different sizes can be aggregated in determining the quantity price.

Uncut Sheet Mica

Uncut mica is carefully selected as to quality and sizes it will cut. The different grades will cut assorted sizes as shown in table. All grades are closely trimmed.

**Nos. 1 and 11 India Micanite Plate
For Molding**

No. 1 India Micanite Plate has a smooth surface which does not show any detrimental amount of loose laminations. It softens sufficiently at 140 degrees C. or 284 degrees F. to be readily molded to ordinary shapes without chipping, cracking or breaking.

It is carefully milled to specified thickness, allowing a variation of .002-inch in isolated spots on the thin sizes below .060-inch, and from .003-inch to .005-inch on sizes .060-inch and up.

Average puncture voltage per .001-inch runs from 900 volts on the thinner sizes to 800 volts on the thicker sizes. It must not be used for insulation between copper bars of commutators.

No. 11 India Micanite Plate is made of the same quality of mica films and cement that are used in our No. 1 Plate, but it is not as exact to thickness, and is not made in as many thicknesses. It varies in thickness from plus or minus .003-inch in the case of the .010-inch thick; .005-inch in the case of the 3/32-inch; to plus or minus .010-inch in the case of the 1/8-inch thick.

It becomes flexible when heated, is readily formed into shapes, and is suitable for all general purposes where a variation in thickness is permissible, except for commutator segments, for which it is not intended.

Average puncture voltage, 800 to 900 volts per .001-inch.

**No. 2 India Micanite Plate
For Commutator Segment Insulation**

No. 2 Micanite Plate is made of India Mica, as this variety is recognized as standard for electrical insulation where muscovite mica is used.

It is closely milled and the average thickness will not vary more than .0005-inch from specified thickness. Individual plates will not vary more than .001-inch above or .0015-inch below thickness specified in isolated spots. It cannot be molded.

Its average puncture voltage per .001-inch runs from 900 volts on the thinner sizes, to 800 volts on the thicker sizes.

1249	1/16	1.58	3.8	1.90

No. 2 Micanite Plate can be furnished in special thicknesses, sizes, or patterns. Prices quoted upon application.

**No. 3 Amber Micanite Plate
For Commutator Segment Insulation**

No. 3 Amber Micanite Plate is made of phlogopite or amber mica, which is softer than the muscovite and presents less liability of failure to wear down evenly with the copper bars.

It is closely milled and the average thickness will not vary more than .0005-inch from the specified thickness. Individual plates will not vary in isolated spots more than .001-inch above or .0015-inch below thickness specified. It cannot be molded.

Its average puncture voltage per .001-inch runs from 900 volts on the thinner sizes, to 800 volts on the thicker sizes.

Cat. No.	THICKNESS		Approx. Lbs. per Sheet	Price per Lb.
	Inches	MM.		
1272	.020	0.508	1.2	\$4.75

1282	.060	1.524	3.6	4.00
1283	1/16	1.58	3.8	4.00

No. 3 Micanite Plate can be furnished in special thicknesses, sizes and patterns.

Prices quoted on application.

**No. 4 Micanite Plate
For Flat Work**

This plate is made for flat work and for purposes where accuracy of thickness is not important. It is not milled or surfaced and therefore has a considerable variation in thickness.

It is suitable for all kinds of bases, round or square washers, and for all kinds of apparatus not subject to high heat.

Its non-liability to fracture under extreme vibration is a valuable feature for marine work. It does not take a screw thread, but can be drilled and turned.

Average puncture voltage, approximately 800 volts per .001-inch.

No. 4 plate is not furnished thinner than 1/16-inch.

Cat. No.	THICKNESS		Approx. Lbs. per Sheet	Price per Lb.
	Inches	MM.		
1296	1/16	1.58	3.25	\$1.25

1302	1/2	12.69	26.	1.25

Prices on sheets of No. 4 Micanite Plate, of special size and pattern quoted upon application.

**No. 5 Flexible Micanite Plate
For Cold Forming**

No. 5 Flexible Micanite is made of very thin films of muscovite mica cemented together with a special insulating cement of great flexibility and adhesiveness. This article in many ways presents mica in its most convenient and economical form for electrical insulation. It can be formed or bent to shape without application of heat.

It is an excellent insulator for armature slots, armature, magnet and commutator cores, transformers, field coils, etc.

No. 5 Flexible Micanite Plate cannot be surfaced like No. 1 No. 2, or No. 3 plate. It is therefore subject to some variation in thickness, running from .002-inch to .003-inch on the thinner sizes; from .005-inch to .007-inch on the 1/32-inch thickness, and from .010-inch to .015-inch on the 1/8-inch thickness.

Its average puncture is approximately 600 volts per .001-inch.

Empire Oiled Canvas and Duck

No. 16 is made on a fabric base that has been specially finished to ensure smooth and even coating of the oil. Nos. 22 and 32 ducks have great resistance to mechanical wear and imperviousness to moisture but do not have the same smooth surface as other cloths.

Cat. No.	Quality of Fabric	FINISHED THICKNESS		Approx. Thickness	Average Lbs. per Yard	Approx. Dielectric Strength	Price per Yard
		Inches	MM.	Oil Films Inches			
16	Canvas	.016	0.406	.008	.80	10000	\$.90
22	Duck	.022	0.559	.002	1.00	1.04
32	"	.032	0.813	.002	1.30	1.40

Empire Oiled Silk

Empire Oiled Silk has for a base a closely woven fabric of pure silk. It is an excellent insulation where a material possessing very high insulating qualities combined with extreme thinness and great flexibility is demanded.

Cat. No.	Quality of Fabric	FINISHED THICKNESS		Approx. Thickness	Average Lbs. per Yard	Approx. Dielectric Strength	Price per Yard
		Inches	MM.	Oil Films Inches			
44	Silk	.004	0.102	.00175	.22	5000	\$1.33
55	"	.005	0.127	.00275	.27	6000	1.37
66	"	.006	0.153	.00375	.32	7000	1.41

All the above Empire Cloths, etc., are furnished in standard rolls containing 50 yards. Rolls containing 25 to 100 yards furnished when specified.

Any width cut to order provided order amounts to multiples of 72 square yards.

The dielectric strength in above tables was obtained by placing the insulating material between a 12-inch square copper plate, and copper disc electrodes 1½ inches in diameter using 60 cycle A. C. current.

No. 20 Micanite Cloth

No. 20 Micanite Cloth is made with 1, 2 or 3 layers of high-grade India Mica films, cemented together with overlapping edges into sheet form, the sheet being faced on one side with cotton cloth and the other side with Japanese paper.

It is an excellent composite insulation, the cloth adding mechanical strength, and is often used in conjunction with Empire Cloth and Paper, fish paper, etc., for transformers, field magnets and armature cores. In strip or tape form No. 20 Micanite Cloth is an efficient insulation for wrapping all sorts of conductors, and can be furnished any width from ½ to 36 inches, in rolls approximately 3¾ inches in diameter.

Cat. No.	THICKNESS		Layers of Mica	Approx. Lbs. per Roll	Price per Lb.
	Inches	MM.			
1315	.008	0.203	1	3.3	\$3.50
1316	.011	0.279	2	5.2	3.00
1317	.014	0.356	3	7	2.40

No. 24 Micanite Paper

No. 24 Micanite paper is of the same nature as No. 20 Micanite Cloth except that the material is faced on both sides with Japanese tissue paper instead of cotton cloth, the object being to supply an insulation thinner than Micanite Cloth, but retaining the same thickness of mica film.

Cat. No.	THICKNESS		Layers of Mica	Approx. Lbs. per Roll	Price per Lb.
	Inches	MM.			
1321	.005	0.127	1	2.4	\$3.50

1323	.011	0.279	3	6.	2.50

Empire Oiled Paper

The papers forming the bases all possess the greatest tensile strength consistent with their thickness and have been selected for their uniformity of thickness and freedom from deleterious chemicals. The oil films with which they are coated are of the same nature as the films on Empire Cloth.

The oiled condenser papers, on account of their extreme thinness and high tensile strength, are giving great satisfaction to the manufacturers of induction coils and other delicate work. The thicker papers have been selected for their great tensile strength, density and evenness of texture.

Furnished in rolls 36 inches wide, containing 25 to 50 yards, or in sheet, 36x36 inches.

M. I. C. Insulating Compound

The three grades of M. I. C. Compound are composed chiefly of asphaltum and refined linseed oil. They are non-corrosive. Durable and elastic; impervious to moisture and will withstand very high temperatures. A perfect film of M. I. C. Compound has a puncture voltage of 900 volts per mil. It can be reduced to any desired density or solution with turpentine, benzine or gasoline.

Can be applied by dipping or with a brush. On cloth, paper, etc., it is advisable to apply them by dipping the material in the varnish. If a heavy coating is required, it is well to apply a number of thin coats, allowing each to dry thoroughly.

No. 1 is a glossy, black, baking varnish generally used for armature coils, field and magnet coils, wires and cables, transformers, for covering cloth, paper asbestos, and hard fibre. Bakes hard, but elastic at 300 degrees F. in eight hours. Air dries in six hours.

No. 3 is a glossy, black, air drying varnish used for armature, field and magnet coils, generators, etc.

No. 4 is a glossy, black, air drying varnish for core plates, transformer plates, and for all outdoor work such as overhead line construction, etc. Dust dry in one hour.

No. 16 Ajax Clear Elastic Baking Varnish

An extremely elastic and flexible varnish. Is oil, acid and water-proof.

Has maximum dielectric strength, also longest life under heat. Will bake in from ten to twelve hours at 100° C. (212° F.). Thin with benzine.

Intended for use where extreme flexibility and longest life under heat are required, such as on varnished cloth, large coils, wound and insulated before assembly, etc.

Price, No. 16 in 1-gallon Cans.....	per gallon	\$5.00
" " 16 " 5 " "	"	4.80
" " 16 " Barrels.....	"	4.50

No. 22 Ajax Black Semi-plastic Baking Varnish

A black varnish which dries with a semi-plastic film. Water-proof acid-proof but only fairly resistant to oils. Has maximum dielectric strength and long life under heat. Will bake in from eight to ten hours at 100° C. (212° F.). Thin with benzine.

Suitable for use on field and stator coils and all types of armatures and armature coils, except very high-speed armatures.

Price, No. 22 in 1-gallon Cans.....per gallon **\$2.10**
 " " 22 " 5 " " " " " **1.90**
 " " 22 " Barrels..... " " **1.60**

No. 14 Ajax Clear Quick Elastic Baking Varnish

A strong, tough but elastic varnish. It is oil, acid and water-proof. Has long life under heat and maximum dielectric strength. Will bake in 8 to 10 hours at 100° C. (212° F.). Thin with benzine.

Price, No. 14 in 1-gallon Cans.....per gallon **\$4.30**
 " " 14 " 5 " " " " " **4.10**
 " " 14 " Barrels..... " " **3.80**

No. 18 Ajax Clear Air Drying and Baking Varnish

Oil, acid and water-proof. Has high dielectric strength, similar to No. 17 but has not quite as long life. Bakes in five to seven hours at 100° C. (212° F.), or will air dry in eight to fourteen hours. Thin with benzine.

Price, No. 18 in 1-gallon Cans.....per gallon **\$3.30**
 " " 18 " 5 " " " " " **3.10**
 " " 18 " Barrels..... " " **2.80**

No. 19 Ajax Clear Air Drying Finishing Varnish

A spirit finishing varnish. Has good insulating properties. Oil and moisture-proof.

Will air dry to handle in about 20 minutes, but requires more time if used on coil. Thin with denatured alcohol.

For use as a finishing coat to prevent absorption of oils and moisture.

Price, No. 19, in 1/2-gallon Bottles.....per gallon **\$3.40**
 " " 19 " 5 " Cans..... " " **3.20**
 " " 19 " Barrels..... " " **2.90**

No. 20 Ajax Black Elastic Baking Varnish

An extremely elastic, flexible varnish. Oil, acid and water-proof. Has maximum dielectric strength, also longest life under heat. Will bake in 10 to 12 hours at 100° C. (212° F.). Thin with benzine. May be used on cloth, all types of coils, on both large and small armatures.

Price, No. 20 in 1-gallon Cans.....per gallon **\$5.00**
 " " 20 " 5 " " " " " **4.80**
 " " 20 " Barrels..... " " **4.50**

No. 21 Ajax Black Plastic Baking Varnish

A soft plastic varnish. Water and acid-proof, but not oil-proof. Has maximum dielectric strength and long life under heat. Will bake in 10 to 12 hours at 100° C. (212° F.). Thin with benzine.

Price, No. 21 in 1-gallon Cans.....per gallon **\$2.50**
 " " 21 " 5 " " " " " **2.30**
 " " 21 " Barrels..... " " **2.00**

No. 23 Ajax Black Quick Baking Varnish

A hard, tough, but elastic varnish which is oil, acid and water-proof. Has maximum dielectric strength and long life under heat. Will bake in from 8 to 10 hours at 100° C. (212° F.). Thin with benzine. For use on field and stator coils, large and small armatures.

Price, No. 23 in 1-gallon Cans.....per gallon **\$3.50**
 " " 23 " 5 " " " " " **3.30**
 " " 23 " Barrels..... " " **3.00**

No. 25 Ajax Black Air Drying Varnish

Dries with a fairly hard film. Is acid-proof and water-proof, but not oil-proof. Will air dry in about one hour, but requires four to eight hours in the interior of a coil. Thin with benzine. Suitable for field and stator coils and all types of armatures except small high-speed.

Price, No. 25 in 1-gallon cans.....per gallon **\$2.10**
 " " 25 " 5 " " " " " **1.90**
 " " 25 " Barrels..... " " **1.60**

No. 27 Ajax Underwriters' Black Acid Resisting Insulating Paint

Glossy. For meter boards, switch-boards, conduits, cables, etc., will dry in about 30 minutes. Thin with benzine.

Price, No. 27 in Pint Cans.....per gallon **\$3.30**
 " " 27 " Quart " " " " **2.50**
 " " 27 " 1-gallon Cans..... " " **1.90**
 " " 27 " 5 " " " " " **1.70**
 " " 27 " Barrels..... " " **1.40**

No. 60 Ajax Black Extra Quick Baking Varnish

A quick baking semi-plastic type varnish. Similar to No. 22, but not as long life.

Water-proof and acid-proof, but not oil-proof.

Bakes in from 2 to 4 hours at 100° C. (212°F.).

Thin with benzine.

Used principally on stators of small A.C. motors and other applications, except small high speed armatures, where quick baking is necessary.

Price, No. 60, in 1-gallon Cans.....per gallon **\$2.10**
 " " 60 " 5 " " " " " **1.90**
 " " 60 " Barrels..... " " **1.60**

Nos. 111 and 112 Ajax Pothead Compound

No. 111

A black, asphaltic solid compound, plastic and adhesive. Possesses high dielectric strength and is chemically inert and thoroughly water-proof. It has a low-coefficient of expansion and contraction and will withstand extremes of heat and cold without cracking. The drip point is 85°C (185°F). May be applied by melting and pouring. For use in extremely cold climates and closed type potheads.

Price, No. 111 in 40-lb. Cans.....per pound **\$1.18**
 " " 111 " 10 " " " " " **.24**
 " " 111 " 5 " " " " " **.30**

No. 112

Same as Pothead Compound No. 111, except that the melting point is higher, 105°C (221°F). Intended for use in inverted type potheads and in very hot climates.

Price, No. 112 in 40-lb. Cans.....per pound **\$1.19**
 " " 112 " 10 " " " " " **.25**
 " " 112 " 5 " " " " " **.31**

Western Electric Improved Paper Sleeves

Made of best grade of manilla paper, carefully selected and put up in cartons of 1000 each, sealed ready for shipment.

ARTICLE 1. DEFINITIONS.

Accessible: Not permanently closed in by the structure or finish of the building. (See readily accessible.)

Adjustable Speed Motor: One in which the speed can be varied gradually over a considerable range, but when once adjusted remains practically unaffected by the load, such as shunt motors designed for a variation of field strength.

Approved: Acceptable to the Inspection Department having jurisdiction. In order to avoid the necessity for repetition of examinations by different examiners, frequently with inadequate facilities for such work, and to avoid the confusion which would result from conflicting reports as to the suitability of devices examined for a given purpose, it is necessary that such examinations should be made under standard conditions, and the record made generally available through promulgation by organizations properly equipped and qualified for experimental testing, inspections of the run of goods at factories, and service-value determinations, through field inspections.

Automatic Door: One which closes automatically by means of a device operated by heat.

Branch Circuit: That portion of the wiring system extending beyond the final set of fuses or circuit breakers protecting it, and at points on which current is taken to supply fixtures, lamps, heaters, motors and current consuming devices generally.

Building: A structure which stands alone or which is cut off from adjoining structures by unpierced fire walls.

Cabinet: An enclosure designed either for surface or flush mounting, and provided with a frame, mat or trim, in which swinging doors are hung. (See cutout box.)

Cable: A stranded conductor (single-conductor cable) or a combination of conductors insulated from one another (multiple-conducted cable).

Concealed: Rendered permanently inaccessible by the structure or finish of the building.

Conductor: A wire or cable suitable for carrying an electric current.

Cutout Box: An enclosure designed for surface mounting and having swinging doors or covers secured directly to and telescoping with the walls of the box proper. (See cabinet.)

Disconnecting Switch; Disconnecter: A switch which is intended to open a circuit only after the load has been thrown off by some other means.

Dustproof: So constructed or protected that an accumulation of dust will not interfere with its successful operation.

Dust-tight: So constructed that dust will not enter the inclosing case.

Enclosed: Surrounded by a case which will prevent accidental contact of a person with live parts.

Factory Yard: A plot containing an assemblage of buildings served by an isolated plant, or by a sub-station, or by a master service, and permitting access from building to building within the yard.

Guarded: Covered, shielded, fenced, enclosed or otherwise protected, by means of suitable covers or casings, barriers, walls or screens, mats or platforms, to remove the liability of dangerous contact or approach by persons or objects to a point of danger.

Isolated: Not readily accessible to persons unless special means of access are used.

Isolated Plant: A private electrical installation deriving energy from its own generator driven by a prime mover.

Outlet: A point on the wiring system at which current is taken to supply fixtures, lamps, heaters, motors and current consuming devices generally.

Panelboard: A panel containing busses and fuses with or without switches for the control of light, heat or power circuits of small individual as well as aggregate capacity and usually placed in or against a wall or partition and accessible only from the front. (See switchboard.)

Qualified Person: One familiar with the construction and operation of the apparatus and the hazards involved.

Readily Accessible: Able to be reached quickly without climbing over or removing obstructions or resorting to chair, box or portable ladder. (See accessible.)

Service: That portion of the supply conductors which extends from the street main to the service switch of the building supplied.

Special Permission: The written consent of the head of the inspection department having jurisdiction.

Switchboard: A large, single panel, frame or assembly of panels, on which are mounted, on the face or back or both, switches, fuses, or other automatic protective devices, busses and usually instruments. Switchboards are generally used in generating stations, sub-stations or isolated plants for the direct control of energy derived from generators or transforming apparatus. (See panelboard.)

Totally Enclosed Motor: A motor which is so completely enclosed by integral or auxiliary covers as to practically prevent the circulation of air through the interior. Such a motor is not necessarily air tight.

Ventilated: Provided with a means to permit circulation of the air sufficiently to remove an excess of heat, fumes or vapors.

Waterproof: So constructed or protected that moisture will not interfere with its successful operation.

Watertight: So constructed that moisture will not enter the enclosing case.

ARTICLE 2. GENERAL.

The following recommendations, as well as other recommendations throughout this code, shall be considered advisory, but not mandatory:

It is recommended that in all electric work conductors, however well insulated, be always treated as bare, to the end that under no conditions, existing or likely to exist, can a ground or short circuit occur, and so that all leakage from conductor to conductor, or between conductor and ground, may be reduced to the minimum.

It is recommended that in all wiring special attention be paid to the mechanical execution of the work. Careful and neat running, connecting, soldering, taping of conductors, and securing and attaching of fittings, are especially conducive to security and efficiency.

It is recommended that in laying out an installation, except for constant-current systems, every reasonable effort be made to secure distribution centers located in easily accessible places, at which points the cutouts and switches controlling the several branch circuits can be grouped for convenience and safety of operation. The load should be divided as evenly as possible among the branches, and all complicated and unnecessary wiring avoided.

It is recommended that wire-ways be used for rendering concealed wiring permanently accessible.

It is recommended that architects when drawing plans and specifications make provision for the channelling and pocketing of buildings for electric light or power wires, and also for telephone, district messenger and other signal system wiring.

201. Gauges.

- a. All wire sizes are given in the Brown and Sharpe (American) gauge.

202. Voltages.

- a. Low potential shall mean 600 volts or less.
- b. High potential shall mean between 601 volts and 5000 volts.
- c. Extra high potential shall mean above 5000 volts.
- d. In the preceding paragraphs the potential considered is that at which the circuit operates, whether it is supplied by a generator or by a transformer.
- e. Throughout this code, unless otherwise specifically stipulated, the requirements shall be considered to be based upon the use of low-potential wiring, devices, apparatus and appliances. High potential and extra-high-potential systems are considered in articles 3 and 50.

203. Wire Terminals, Splice and Joints.

- a. Wires larger than No. 8 shall be connected to terminals by soldering into lugs or by solderless connectors, except that branch or tap connections from which not more than 30 amperes are taken may be made by means of suitable clamps. Stranded wires, other than those used in flexible cords, shall be soldered together before being fastened under clamps or binding screws.
- b. Wires shall be so spliced or joined as to be mechanically and electrically secure without solder. The joints shall then be soldered, unless made with a splicing device, and shall be covered with an insulation equal to that on the wires.

204. Railway Systems.

- a. Lighting and power from railway wires shall not be permitted under any pretence from a system to which are connected trolley wires with a ground return, except in electric railway cars, electric car houses, power houses, passenger and freight stations connected with the operation of electric railways.

205. Approved Material, etc.

- a. This code shall be understood to treat only of approved materials, devices, fittings, appliances, machinery, apparatus and methods.

206. General Plan of Investigations.

- a. Materials, devices, fittings, apparatus and appliances designed for use under this code shall be judged chiefly with reference to the following five considerations which also determine the classification by types, sizes, voltages, current capacities and specific uses:

1. Suitability for installation and use in conformity with the requirements of this code.

2. Mechanical strength and durability, including for appliances designed to enclose and protect other equipment, the adequacy of the protection thus provided.

3. Electrical insulation.

4. Heating effects under normal conditions of use and also under abnormal conditions liable to arise in service.

5. Arcing effects.

b. Bases for the mounting of live parts shall be composed of approved non-combustible, non-absorptive insulating material, and the design shall be such that, considering the material used, the base will withstand the most severe conditions liable to arise in service. Holes for supporting screws shall be so located or counter-sunk that there will be at least 1/2 inch, measured over the surface, between the screw head or washer and the nearest live metal part, and in all cases, where between parts of opposite polarity, the screw head or washer shall be countersunk. Holes for supporting screws in link fuse cutout bases shall be kept outside the area included by the outside edges of the fuse terminals. Nuts or screw heads on the under side of the base shall be countersunk and sealed with a waterproof compound.

c. Terminal parts by which wire connections are made shall insure thoroughly good connections even under hard usage. For currents above 30 amperes, lugs into which the connecting wires may be soldered, or approved solderless connectors, shall be provided. For currents of 30 amperes or less the parts to which wiring connections are made shall securely grip the conductors. Heavy clamps or screws with terminal plates having upturned lugs, or solderless connectors, may be used. Lugs or clamps are not required when leads are provided as part of the device.

d. The set screw form of contact shall not be used.

e. All devices provided with terminals for the attachment of wires and intended for connection to more than one side of the circuit shall, unless specifically excepted, have a pair of connecting terminals properly marked for identification, unless the electrical connection between the pair of terminals intended to be connected to the grounded conductor is clearly evident. This requirement shall become effective April 1, 1926.

f. The terminals of devices having a normal current rating of over 30 amperes need not be marked for identification.

g. The terminals of utilization devices need not be marked to indicate the proper connection to the grounded conductor. If the terminals on utilization devices, including single-pole switches are marked, the switch shall not be placed in the identified side of the circuit.

h. The terminals of portable devices need not be marked for identification.

i. Devices, to the terminals of which only one side of the line is connected, need not have terminals marked for identification.

j. Rosettes, attachment plug receptacles without screw shells, and attachment plug caps need not have their terminals marked for identification. When terminals of polarized receptacles for attachment plugs and attachment plug caps are marked for identification, the terminal intended for connection to the grounded wire shall be the marked terminal.

k. Three-wire attachment plug receptacles and three-wire attachment plug caps in which one terminal may be used for the connection of a grounding conductor, shall have such terminal identified in a manner differing from that specified in paragraph m of this section.

l. In the case of devices with Edison screw shells, the identified terminal shall be the one connected to the screw shell. This does not apply to screw shells which serve as plug fuse receptacles.

m. The marking of terminals shall be done by means of a metallic plated coating substantially white in color, as nickel or zinc, or the terminals may be of material substantially white in color. The other terminals shall be of a readily distinguishable difference in color.

n. In the case of screw shell devices with attached leads, the wire attached to the screw shell shall have white or natural gray finish. The finish of the braid on the other conductor shall be of a solid color that will not be confused with the white or natural gray finish which is to indicate the grounded conductor.

o. The maker's name, trademark or other identification symbol shall be placed on fittings and materials, together with such other markings giving voltage, current, wattage or other appropriate ratings as are prescribed elsewhere in this code.

ARTICLE 3. OUTSIDE SUPPLY LINES.

301. Line Wires.

- a. Line wires shall be so placed that moisture is not liable to form a cross connection between them. They shall not be in contact with anything but their supports. They shall be not less than one foot apart except when in conduit or multiple-conductor cable or on approved racks or brackets.
- b. Line wires shall be at least eight feet above the nearest point of buildings over which they pass, and if attached to roofs the roof structures

shall be substantially constructed. Wherever feasible, wires crossing over buildings shall be supported on structures which are independent of the buildings.

302. Joint Lines.

- a. Electric light and power wires shall not be placed on the same cross-arm with telegraph, telephone or other signal wires which enter any building. An exception is made for wires used only for operating purposes by an operating utility and entering buildings used for such purposes. When placed on the same pole with such wires the distance between the two inside pins of each cross-arm shall be not less than 24 inches for circuits operating at a potential to ground not exceeding 300 volts, and shall be not less than 30 inches for higher potentials.
- b. The grounding of metallic sheaths of cables shall conform to the requirements of article 9 of this code.

303. Trolley Wires.

- a. Trolley wires shall be doubly insulated from the ground, wooden poles being considered as one insulation.
- b. Trolley wires and feeders shall be provided with switches which will either disconnect them from the power station, or will so sectionalize them that they may be rendered dead in case of fire along the route.

304. General.

Accidental crosses between different conductors on the same or different pole lines may allow the higher-voltage currents concerned to enter buildings over the lower-voltage conductors over a large section of adjoining territory.

Overhead conductors, if carried close to buildings, tend to hamper the work of firemen in case of fires in the buildings if the raising of ladders is a part of the fire fighting methods employed. With the higher-voltage lines this hampering effect is greater.

It is fully understood that it is impracticable to include in this code rules which will cover in detail all conceivable cases that may arise in overhead line work of such an extended and varied nature, and it is recommended that the inspection department be freely consulted as to the specific methods to be followed in any case of doubt, and that the rules of the National Electrical Safety Code, part 2, be followed.

a. In arranging routes for overhead conductors every reasonable precaution shall be taken to secure locations likely to be permanently useful for the circuits concerned and for necessary developments, including the limitation of present and future proximity to other electrical circuits or other pole lines and the appropriate strength, clearances and separations for the proximity concerned.

b. When separate pole lines are carried in nearer proximity than a distance equal to the height of the taller pole line, or where joint poles are used, the appropriate precautions to limit liability of contact shall include the use of wires, cross-arms, pins, insulators, conductor fastenings and poles of appropriate strength. In each such case the minimum clearances and strength shall be those required by the construction rules of the National Electrical Safety Code, part 2.

c. Open wires of less than 7500 volts between conductors shall be at least three feet horizontally from buildings unless 8 feet higher than the roof. Open wires 7500 volts or more between conductors shall not be installed over buildings other than central stations, sub-stations and transformer vaults. Open wires of voltages between 7500 and 15,000 volts between conductors shall be kept at least 8 feet horizontally, and open wires of more than 15,000 volts between conductors shall be kept at least 10 feet horizontally, from all buildings except those which they serve or central stations, sub-stations and transformer vaults.

d. Where buildings exceed three stories, or 50 feet in height, overhead lines shall be arranged where practicable so that a clear space (or zone) at least 6 feet wide will be left either adjacent to the buildings or beginning not over 8 feet from them, to facilitate the raising of ladders when necessary for fire fighting.

e. Where the lines approach to within 25 feet of a building they shall be so placed that their height from ground will equal the height of the cornice of the building. For closer approach, the heights shall conform to the following table:

Distance of Wire from Building	Elevation of Wire Above Cornice of Building'
Feet	Feet
25	0
20	2
15	4
10	6
5	8

It is evident that where the roof of the building continues nearly in line with the walls, as in Mansard roofs, the height and distance of the line must be reckoned from some part of the roof instead of from the cornice.

ARTICLE 4. SERVICES.

401. General.

a. Wires shall not be so interconnected as to form a shunt around any street fuse or switch.

b. No overhead service, no underground service from a subway, and no service from an isolated plant shall supply more than one building except under one of the following conditions:

- 1. In properties and buildings under single occupancy or management;
- 2. If the service wires are kept out of all buildings but those served; Conductors in conduit or duct placed under 2 inches of concrete beneath a building, or buried in 2 inches of brick or concrete within a wall, are considered outside the building.
- 3. By special permission.

402. Overhead, from Main to Building.

a. Approved weatherproof or approved rubber covering shall be employed on single wires, and approved rubber covering on multiple-conductor cables. Wires shall not be smaller than No. 10 if of soft copper, or smaller than No. 12 if of medium or hard-drawn copper.

b. Wires or cables shall not approach nearer than 8 feet to buildings over which they pass, and, if attached to roofs thereof, shall be supported on substantial structures.

It is recommended that wires passing over a building be supported on structures which are independent of the building.

c. When a service from overhead supply wires to a building is carried underground, the portion of the wires underground and running up the pole to a point at least 8 feet above the ground shall be lead-covered and suitably protected from mechanical injury.

403. On Exterior of Building.

a. Wires or cables which are liable to contact with awnings, swinging signs, shutters or other movable objects shall be enclosed in approved conduit made weatherproof.

b. Wires or cables exposed to the weather shall be supported on petticoat insulators placed at intervals not exceeding 15 feet, this interval being decreased if the wires are subject to disturbance; and the insulators shall be so designed or located as to hold individual wires at least 1 foot apart and at least 2 inches from the surface wired over; provided, however, that brackets, racks, supports or insulators especially approved for the location may be used if they separate individual wires at least 6 inches and are placed at intervals not exceeding 9 feet.

c. Multiple-conductor cables shall be kept at least 6 inches from adjacent woodwork and at least 12 inches from overhanging projections of combustible material, unless approved fittings which afford equivalent protection are used.

d. Wires not exposed to the weather may be supported on glass or porcelain knobs placed at intervals not exceeding 4 1/2 feet and retaining the wires at least 1 inch from the surface wired over. Weatherproof or rubber covering shall be employed on conductors thus run.

404. Entrance.

a. All service wires shall enter the building at a point as near as practicable to the location of the service switch. They shall be rubber-covered from the point of support on the outside of the building nearest the entrance to the service switch and cutout, and shall not be smaller than No. 10.

It is recommended that conductors entering buildings from overhead lines be encased in approved rigid metal conduit having weatherproof threaded joints and equipped with approved service head, and that all wires of same circuit be placed in the same conduit. (See section 503, table 1, for number and size of conductors permitted in service conduit.)

b. The inner end of service conduit shall enter a terminal box or service switch cabinet, or be made up directly to an equivalent device enclosing all live metal parts, but need not be electrically connected to it if free from metallic contact with the ground, and, if necessary, isolated or guarded.

c. Where conduit is not used, drip loops shall be formed on the individual wires which shall then pass upward and inward through slanting non-combustible, non-absorptive, insulating tubes.

d. Where a conduit enters from an underground distribution system, the end within the building shall be sealed with suitable insulating compound so as to prevent the entrance of moisture and gases.

e. In services operating at more than 600 volts, all ungrounded conductors shall, except as provided below, be controlled and protected by an automatic overload circuit-breaker which shall be of suitable rupturing capacity and which shall be located as near as possible to the point where the service enters the building and so that the point from which it is opened or closed will be readily accessible. Each service lead shall have an air-break disconnecter which will disconnect from the supply line all apparatus within the building. If the service does not supply, at the primary voltage, any equipment not contained in a fireproof transformer vault or if it enters only a detached transformer house or inclosure, then suitable disconnectors and suitable fuses may be used and may be installed in the transformer inclosure. If in such cases the voltage does not exceed 2300 volts to ground and the installed transformer capacity does not exceed 50 k.v.a. per phase, suitable fuses without disconnectors may be installed in the transformer inclosure. In all cases where automatic overload circuit-breakers are not installed in the primaries and arranged so that they may be tripped manually from a readily accessible point outside of the transformer vault or inclosure, suitable circuit-breakers or switches and suitable fuses shall be provided in the secondaries as required for low-voltage services elsewhere in this article. Air-break disconnectors and fuses shall be accessible only to qualified attendants.

405. Service Equipment, within Building.

a. In this section the word "switch" shall be construed as including a circuit-breaker that is capable of manual operation.

b. A switchboard, panelboard, oil switch, or an approved cabinet containing a service switch, shall be placed at the nearest readily accessible point to the entrance of the service, either within the building or outside the building wall in a location protected from the weather. Outside service cabinets shall be of an approved weatherproof type.

c. A service switch shall be provided which shall indicate plainly whether it is open or closed. This switch shall be installed in one of the following ways:

1. As an air-break or oil-immersed switch inclosed in a grounded metal case;
2. As an air-break or oil-immersed switch mounted on a switchboard or panelboard which is accessible to qualified persons only.

d. The service switch shall interrupt all conductors of the circuit and disconnect all devices within the building except that:

1. Where the switch, fuses and meter are combined in an approved device or compact combination of such devices having no live parts or wiring exposed, and capable of being sealed or locked, the switch may be so connected that it will not disconnect the fuses or the meter from the supply line; and the potential coils of the meter may be connected on the supply side of the service cutout;
2. Where the switch and fuses are mounted in an approved cabinet having no live parts or wiring exposed and capable of being sealed or locked, the switch blade may be omitted in any grounded conductor if other means is provided within the cabinet for disconnecting such conductor.

e. An enclosed service switch shall be externally operable unless additional switches are provided for control of individual circuits, as recommended below.

It is recommended that where the current of a single circuit, or group of circuits, is separately metered, as in apartment house installations, a switch and cutout be installed to control each such separately metered installation, the switch and cutout being enclosed and the switch being externally operable. The location of this switch and cutout may, or may not, be close to the meter.

f. A switch controlling a 3-wire direct-current or a single-phase system may be so designed that one outside conductor can be opened without opening the other.

g. A fuse or automatic overload circuit-breaker shall be placed in each ungrounded service conductor. When fuses are used they shall be controlled by the service switch except when they are located at the outer end of the service conduit or as provided in paragraph d (1) of this section.

h. No fuse or circuit-breaker shall be placed in a grounded service wire except a circuit-breaker which simultaneously opens all conductors of the circuit.

i. Where not located on a switchboard, live parts of cutout bases or circuit-breakers shall be enclosed.

j. An automatic overload circuit-breaker may be used in place of both service switch and fuse and when not subject to competent supervision shall be of a type specially approved for service conditions.

k. In properties having generating plant or which are served by a master service, the wires running from building to building shall not be considered as service wires, so that fuses or circuit-breakers will not be required where these wires enter buildings, provided the fuse or circuit-breaker next back on the line properly protects the wires within the buildings.

l. Where a group of buildings is supplied from one service or generating plant, provision shall be made so that the service to any one of the buildings may be disconnected. This may be accomplished by a disconnecting switch within the building served or by a feeder switch.

406. Hazardous Locations.

a. Service entrance equipment shall not be located in the extra-hazardous locations described in paragraph b of section 3201 of this Code. If placed where combustible dust or flyings are liable to be present in sufficient quantities to produce an explosive or flammable mixture, such equipment shall be totally inclosed in grounded metal cabinets or cases, with provision for external control only or shall be located in a fire-resistive room provided with a self-closing door.

ARTICLE 5. WIRING METHODS.

501. Open Wiring.

a. Supports shall be composed of approved non-combustible, non-absorptive insulating material, free from checks, rough projections or sharp edges which might injure the insulation on the conductor. If the supports are designed to grip the wires, either screws or nails may be used to fasten the supports in place, but nails shall be long enough to penetrate the woodwork not less than 1/2 the depth of the knob and fully the thickness of the cleat. Cushion washers shall be used with nails.

b. Supports shall provide at least 1/4 inch separation between the securing screw or nail and the wire, and shall be designed for two securing screws if of the split knob (or single-wire cleat) type intended for wires larger than No. 4.

c. Multiple-wire cleats shall be so designed as to separate the wires at least 2 1/2 inches and maintain them at least 1/2 inch from the surface wired over. Such cleats shall not be employed to support wires operating at a potential exceeding 300 volts.

d. Knobs shall be so designed as to maintain the wire at least 1 inch from the surface wired over, and shall conform to the following minimum dimensions.

Size of Wire Inclusive	Size of Base, Inches			Solid Knobs		*Split Knobs Inches
	Circular Diameter	Square or Single Wire Cleats Width	Knobs Length	Depth	Groove Inches Diam.	
14-10	1 1/8	3/4	1 3/4	3/16	7/8	7/8
8-4	1 1/2	1	2	3/16	5/8	5/8
2-00	2	1 1/2	2 1/4	3/16	5/8	5/8
000-3,000,000 C. M. }	2 1/2	1 1/2	2 3/4	3/16	5/8	7/8
400,000-1,000,000 C. M. }	3	1 1/2	3 3/4	3/16	1 1/4	1

*Thickness of cap from top of wire groove.

e. Tubes and bushings shall conform to the following minimum dimensions:

Diameter of Hole Inches	External Diameter Inches	Thickness of Wall Inches	External Diameter of Head, Inches	Length of Head Inches
3/16	3/8	1/16	1 1/2	1/2
3/8	1/2	1/16	1 3/4	1/2
1/2	5/8	1/16	2	1/2
5/8	3/4	1/16	2 1/4	1/2
3/4	7/8	1/16	2 1/2	1/2
1	1 1/8	1/16	2 3/4	1/2
1 1/8	1 1/4	1/16	3	1/2
1 1/4	1 3/8	1/16	3 1/4	1/2
1 1/2	1 5/8	1/16	3 1/2	1/2
1 3/4	2	1/16	3 3/4	1/2
2	2 1/4	1/16	4	1/2
2 1/4	2 3/4	1/16	4 1/4	1/2
2 1/2	3	1/16	4 1/2	1/2

An allowance of 1/64 of an inch for variation in manufacturing will be permitted, except in the thickness of the wall.

f. Wires located in dry places shall be of approved rubber-covered (R), slow-burning weatherproof (SBW), varnished cloth insulated (VC) or slow burning (SB) type.

g. Wires located in damp places or in buildings especially subject to moisture shall be of the rubber-covered type. Wires subjected to corrosive vapors shall be of the weatherproof, varnished cloth or rubber-covered type, as may be directed by the inspection department. Where the environment is such that rapid deterioration of conductors or insulation is probable, the inspection department may require the wires to be suitably enclosed, coated or otherwise protected to better withstand the particular conditions of service.

h. Wires shall not be laid in plaster, cement or similar finish, nor fished for any great distance or where the inspector cannot satisfy himself that the rules have been complied with. Wires shall not be fastened with staples.

i. Twin wires shall not be used, except in conduit or where flexible conductors are necessary.

j. Wires of No. 8 or larger supported on solid knobs shall be securely tied thereto. If wires are used for typing, they shall have an insulation of the same type as that of the wires which they confine.

k. Wires in dry places shall be rigidly supported and for voltages not exceeding 300 volts shall be separated 2 1/2 inches from each other and 1/2 inch from the surface wired over. For voltages from 301 to 600 volts the wires shall be separated 4 inches from each other and 1 inch from the surface wired over. In damp places a separation of at least 1 inch from the surface wired over shall be maintained for all voltages.

Rigid supporting requires under ordinary circumstances, when wiring over flat surfaces, supports at least every 4 1/2 feet, this interval being shortened if the wires are liable to be disturbed. In buildings of mull construction, mains not smaller than No. 8, where not liable to be disturbed, may be separated about 6 inches and run direct from timber to timber, being supported from each timber only.

l. Wires shall not be dead-ended at a rosette, socket or receptacle unless the last support is within 12 inches of the same.

m. Wires exposed to mechanical injury shall be suitably protected by running boards not less than 1/2 inch in thickness and 3 inches in width, or by guard strips not less than 3/8 inch in thickness and at least as high as the insulating supports, placed on each side of and close to the wiring.

Protection may also be secured by resorting to another method of wiring, such as approved conduit or armored cable. This is desirable when crossing floor timbers.

n. Wires in vertical conduits shall be supported at the following intervals:

No. 14	No. 0	Not greater than 100 feet.
No. 00	No. 0000	" " " 80 "
No. 0000	350000 C. M.	" " " 60 "
350001 C. M.	500000 C. M.	" " " 50 "
500001 C. M.	750000 C. M.	" " " 40 "
	above 750000 C. M.	" " " 35 "

The following methods of supporting cables are recommended:

1. By approved clamping devices constructed of or employing insulating wedges inserted in the ends of the conduits.
 2. By inserting junction boxes at the required intervals in which insulating supports of approved type are installed and secured in a satisfactory manner to withstand the weight of the conductors attached thereto, the boxes being provided with covers.
 3. In approved junction boxes, by deflecting the cables not less than 90 degrees and carrying them horizontally to a distance not less than twice the diameter of the cable, the cables being carried on two or more insulating supports, and additionally secured thereto by tie wires if desired.
- o. Vertical wires of No. 2 or larger, shall not be deflected where they enter or leave a cabinet; provided, however, that wires of No. 2 to 250000 C. M. inclusive, if brought into a cabinet or box opposite the panel lugs in which they terminate, may be deflected sufficiently to permit their attachment to these lugs, if the gutter of the cabinet is not less than 4 inches in width.

504. Other Wire Raceways.

- a. Raceways shall be used only in exposed dry locations and where the maximum difference of potential between wires therein does not exceed 300 volts. They shall not be placed in elevator shafts.
- b. Wooden raceways shall be coated, externally and internally, with 2 layers of waterproofing, or shall be impregnated with a moisture repellent. The raceway shall be composed of two parts, a backing and a capping and shall afford suitable protection against abrasion of wires. It shall be so constructed as to thoroughly encase the wire, having a barrier of not less than 1/2 inch in thickness between wires, and having exterior walls which under grooves shall be not less than 3/8 inch in thickness and on sides not less than 1/4 inch in thickness.

It is recommended that only hardwood be used.

c. Metal raceways shall be of such construction as will distinguish them from metal conduit. All surfaces of raceway, elbows, bends and similar fittings shall be suitably protected from corrosion.

d. Metal raceways and their elbows, couplings and similar fittings shall be so designed that the sections can be electrically and mechanically coupled together, while protecting the wires from abrasion. Holes for screws or bolts inside the raceway shall be so designed that when screws or bolts are in place their heads will flush with the metal surface.

e. Wires shall be of approved rubber-covered type, and shall be continuous from outlet to outlet, or from fitting to fitting, no joints or taps being located in the raceway proper.

f. Not more than 4 No. 14 wires, nor any circuit protected by fuses larger than 20 amperes at 125 volts or 10 amperes at 250 volts, shall be placed in any metal raceway.

g. Where alternating current is to be employed in connection with metal raceway work, all wires of a circuit shall be placed in one raceway.

It is recommended that this course be pursued in the case of direct current also, in order to obviate induction troubles if a change is made to alternating current at some later date.

h. Metal raceway shall be continuous from outlet to outlet, or from approved fitting to approved fitting. It may be extended through dry walls or dry partitions if in unbroken lengths where passing through; but, where the wall or partition is damp, or where the raceway passes through a floor, an iron pipe sleeve shall be placed over the raceway and shall extend clear of either side of the wall or partition, or from the ceiling below to a point at least 3 inches above the flooring. Where protection from mechanical injury is necessary, the iron pipe sleeve shall extend to a point at least 5 feet above the flooring.

i. Metal raceways shall be grounded as prescribed in article 9 of this Code, and at a point as near as practicable to the source of supply; provided, however, that this requirement shall not apply to isolated raceway runs not exceeding 25 feet, when these runs are free from metallic contact with the ground and from adjacent grounded metal and are guarded when within reach from grounded surfaces.

j. When combination metal raceways are used both for signal and for lighting and power circuits, the different systems shall be run in separate compartments and the same relative position of compartments shall be maintained throughout the premises, in which case the provisions of paragraph j, section 503, and of paragraphs a to d inclusive, section 6003, of this Code shall be considered as having been observed. When such combination metal raceways are used, ten No. 14 wires shall be permitted in the compartment for light, heat and power circuits. In all other respects, the provisions of this section covering single compartment raceways, shall apply.

505. Armored Cable.

a. Wires of armored cables shall be of rubber-covered type. The armored cable shall carry a distinctive marker throughout its entire length.

b. Where alternating current is to be employed, all conductors of a circuit shall be contained within one armor; provided, however, that concealed extensions from branch circuit outlets in buildings of fireproof construction may be made by means of single, double or triple conductor armored cable with suitable fittings at outlets. This cable shall not be run in concealed spaces but may be laid on the face of the fireproofing and may be plastered over. Such extensions shall be confined to the room or suite in which they originate.

It is recommended that in the case of direct current also all conductors of a circuit be placed within one armor, in order to obviate induction troubles if a change is made to alternating current at a later date.

c. Cable shall be continuous from outlet to outlet, or from fitting to fitting, and the armor shall be mechanically connected to all fittings, the entire cable system being securely fastened in place.

Ordinarily, this involves carrying service cables and house cables into the cut-out box or cabinet, but the requirement may be waived in the case of an underground service.

It is recommended that for all sidewall and partition outlets in concealed work in new buildings under construction outlet boxes having a depth of approximately 1 1/2 inches be provided.

d. A lead sheath shall be interposed between the outer braid and the steel armor where cable is installed in so-called fireproof buildings in course of construction or in such buildings when completed if the cable will be exposed to moisture, or where the cable is exposed to the weather, or in breweries, stables or other damp places; provided, however, that the lead sheath shall not be required if the cable is laid against a brick wall or laid within an ordinary plaster wall, unless these walls are continuously damp.

e. All bends shall be so made that the armor of the cable will not be injured, and the radius of the curve of the inner edge of any bend shall not be less than 1 1/2 inches.

f. The armor shall be grounded as prescribed in article 9 of this Code, and at a point as near as practicable to the source of supply; provided, however, that this requirement shall not apply to service runs of any length or to isolated cable runs not exceeding 25 feet, when these runs are free from metallic contact with the ground and from adjacent grounded metal and are guarded when within reach from grounded surfaces.

506. Decorative Lighting Systems.

a. Temporary installations of approved systems of decorative lighting shall be used only when permission therefor has been granted by the inspection department and where the difference of potential between the wires of any circuit does not exceed 150 volts and where the number of outlets and lamps connected to them is in no case such as to place more than 15 amperes on a branch circuit fuse.

507. Insulation Resistance.

a. A completed installation shall have a resistance between conductors, and between all conductors and ground, not less than:

Up to	5 amperes	4,000,000 ohms
10	"	2,000,000 "
" 25	"	800,000 "
" 50	"	400,000 "
" 100	"	200,000 "
" 200	"	100,000 "
" 400	"	50,000 "
" 800	"	25,000 "
" 1,600	"	12,000 "

b. The above values shall be determined with all cutouts and safety devices in place. If lamp sockets, receptacles, fixtures and other appliances are also connected, the minimum resistance required shall be one half that specified in the table.

ARTICLE 6. CONDUCTORS.

601. Classification and Construction.

a. Wires, cables and cords of all kinds except weatherproof wire shall have a distinctive marking the entire length of the coil so that they may be readily identified in the field. All wires, cables and cords shall also be plainly tagged or marked as follows:

1. The maximum working pressure or voltage for which the wire was tested or approved. This may be omitted for slow-burning, slow-burning weatherproof, and weatherproof wires.
2. The words "National Electrical Code Standard."
3. Name of the manufacturing company and, if desired, trade name of the wire.
4. Month and year when manufactured. This may be omitted for slow-burning, slow-burning weatherproof, and weatherproof wires.
5. The proper type letter for the particular style of wire or cable as given in the following sections for each type of insulation.

b. Conductors, whether solid or stranded, shall not be of smaller size than No. 14 except as allowed for fixture work and for flexible cords.

c. Conductors, whether solid or stranded, shall not be of smaller size than No. 14 except as allowed for fixture work and for flexible cords.

602. Rubber-covered Wire.

a. Classification.

R Rubber covered for voltages	0-600
R15 " " " max. voltages	1500
R25 " " " "	2500
R35 " " " "	3500
R50 " " " "	5000
R70 " " " "	7000
RL Rubber-covered, leaded.	
AC Wires for use in armored cable.	
ACL Leaded wires for use in armored cable.	

b. All National Electrical Code Standard rubber-covered wires shall be examined and tested at the factory and shall be labeled before shipment.

c. All conductors and the individual wires of stranded conductors shall be tinned.

d. Conductors shall be insulated for their entire length with a properly applied and properly vulcanized rubber compound. The insulation shall be of the nominal thickness given in the following table, the requirements of which vary according to the sizes of conductors and the maximum working pressure.

Table of Thickness of Rubber Insulation for Rubber-covered Wires and Cables in 64th Inches.

American or B. & S. Gauge	Size of Conductor	Type					
		R	R-15	R-25	R-35	R-50	R-70
		For Working Pressures	For Working Pressures	For Working Pressures	For Working Pressures	For Working Pressures	For Working Pressures
		600	1500	2500	3500	5000	7000
		Volts	Volts	Volts	Volts	Volts	Volts
		3	6	8	10	12	16
		4	7	9	10	12	16
		5	8	10	10	12	16
		6	9	10	11	12	16
		7	10	10	12	12	16
		8	10	10	12	14	18

*The second column above refers to wires and cables having standardized stranding as given in Table II of section 610. The first column refers to solid conductors and to wires and cables stranded otherwise than in Table II.

For installation rules, see Article 5 of this code.

e. All single conductor rubber-covered wires and cables shall have a covering of fibrous material applied directly to the surface of the insulating wall. For any single conductor wire there shall be at least one braid for sizes from No. 14 to and including No. 8. For all single-conductor cables larger than No. 8 there shall be at least two braids or a tape and a braid. For twin wires and twisted pair wires and for all multiple conductor cables there shall be a fibrous covering on each individual wire and in addition a braid enclosing the bunched conductors. For certain special service conditions, one or more additional coverings of fibrous material or of lead may be required. Fibrous coverings may be either braid or tape, but tape shall not be used for the final outer covering. All braids shall be impregnated with a moisture-proof compound.

f. Lead coverings may be applied to single or multiple conductors. Lead-covered multiple conductor cable with more than two conductors shall, in all cases, have the conductors spirally laid. In all cases, the individual conductors of lead-covered cable shall have a fibrous covering and, except for two conductor cables with conductors parallel, there shall be a fibrous covering over bunched conductors.

g. For conductor sizes No. 8 and smaller the neutral conductor on all 3-wire circuits and one conductor on all 2-wire circuits shall have a continuous identifying marker readily distinguishing it from the other conductors. For rubber-covered wire the identification shall consist of a white or natural gray covering. When one of the circuit wires is to be grounded, the ground connection shall be made to this identified wire.

603. Flexible Cords.

a. All National Electrical Code Standard rubber-covered flexible cords shall be examined and tested at the factory and shall be labeled before shipment.

b. Each conductor shall have a carrying capacity not less than that of a No. 18 wire.

c. The insulation, except for heater cord (Type H), shall consist of a properly applied and properly vulcanized rubber compound of the nominal thickness given in the following table:

Gauge	Thickness, Inches
18 and 16	1/32
14 to 8	3/64

Exceptions: For Types PO, P and PWP with conductors of No. 18 gauge, the rubber insulation may be 1/64 inch in thickness. When Type PO cord has 1/64 inch insulation its use shall be confined to portable lamp fixtures.

When used where the voltage between any two conductors or from any conductor to the ground is over 300 volts, the insulation on flexible cords shall be at least 1/64 inch in thickness for all conductor sizes No. 8 or less, except where Type S cord is used.

d. Each conductor shall, except for heater cord and hard-service cord, be covered with a tight, close wind of fine cotton, or some other method shall be employed to prevent a broken strand puncturing the insulation. Cords of the several types shall conform to the descriptions given in subparagraphs 1-11 inclusive and the table following:

- (Type C.) For general use as pendants in dry places: as portables for use where not exposed to hard usage.
- (Types CB and CC.) These cords should hang freely in air.
- (Type P.) For No. 18 conductors, rubber insulation on this type of cord may be 1/64 inch in thickness.
- (Types PD and PO.) These cords are for use only in offices, dwellings and similar places where not liable to hard usage. When Type PO cord has 1/64 inch insulation its use shall be confined to portable lamp fixtures.
- For Type PD the conductors are twisted together; for Type PO the conductors are laid parallel under the outer braid.
- (Type PWP.) For No. 18 conductors, rubber insulation on this type of cord may be 1/64 inch in thickness.
- (Type E.) For elevator lighting this cord consists of conductors not smaller than No. 14 and for elevator control of conductors not smaller than No. 16.
- (Type SJ.) For general use pendant or portable in wet or dry locations.
- (Type S.) For general use pendant or portable in wet or dry locations and where extra hard service conditions exist, including theatre stages, elevator lighting and control cables and garages.
- (Types SJ and S.) The rubber compounds for the insulation and jacket on these cords is of superior quality.
- (Type H.) For Portable Heating Apparatus: This cord is for use with all smoothing and sad-irons and with other heating devices requiring over 250 watts. The covering may consist of a layer of rubber or other approved material, a covering of asbestos and an outer braid enclosing either all the conductors as a whole, or each conductor separately.

See also further descriptions subparagraphs 1-11 incl. of paragraph d, above.

e. Other types of coverings shall be submitted for special examination and shall be approved before being used.

f. When polarity marking of flexible cords is provided, one conductor shall have a continuous identifying marker readily distinguishing it from the other conductors. This marker shall be a tracer in the braid of any color contrasting with that of the braid or, in the case of cords having no braids the insulation of one conductor shall be of a color readily distinguishing it from the other conductors.

604. Fixture Wire. Types F-32 and F-64.

For construction and installation of fixtures, see article 14.

a. Fixtures shall be wired with approved flexible cord or approved rubber-covered wire; provided, however, that in wiring fixtures where the insulation will be subjected to temperatures in excess of 120 degrees F. (49 degrees C.), wires having approved slow-burning or other heat-resisting coverings shall be used.

b. All National Electrical Code rubber-covered fixture wire shall be examined and tested at the factory and shall be labeled before shipment.

c. The conductors of fixture wires may be either solid or stranded but shall not be smaller than No. 18 gauge. If stranded conductor is used each conductor shall be covered with a tight close wind of fine cotton or some other method shall be used to prevent a broken strand puncturing the insulation. Solid conductors shall be tinned.

d. The insulation shall consist of properly applied and properly vulcanized rubber compound. The thickness of insulation shall be not less than 1/64 inch for No. 18 wire and not less than 1/2 inch for No. 16.

3. Coverings shall be of braided cotton or silk or of other approved material and shall be sufficiently tenacious to withstand abrasion when being pulled into fixtures.

605. Armored Cables and Cord. Types AC, CA, PA and PAWP.

For installation of armored cable see section 505.

606. Varnished Cloth Insulated Wire. Type VC.

For installation see article 5.

607. Slow-burning Weatherproof Wire. Type SBW.

For installation, see article 5. This insulation is not as burnable as weatherproof, nor as subject to softening under heat. It is not suitable for outside work.

a. The insulation shall consist of two coatings, one to be fireproof and the other weatherproof. The fireproof coating shall be on the outside and shall comprise about six-tenths of the total thickness of the wall.

b. The thickness of the completed covering shall be not less than that prescribed in section 602 of this code for rubber insulation of 0-600 volt rubber-covered wires.

608. Slow-Burning Wire. Type SB.

For installation, see article 5. This insulation is especially useful in hot, dry places where ordinary insulations would perish, and where wires are bunched, as on the back of a large switchboard or in a wire tower, so that the accumulation of rubber insulation would result in an objectionable large mass of highly inflammable material.

609. Weatherproof Wire. Type WP.

For installation, see article 5. This wire is for use outdoors, where moisture is certain, and where fireproof qualities are not necessary.

610. Carrying Capacities of Conductors.

a. The following tables, giving the allowable carrying capacities of copper wires and cables of 98 per cent. conductivity, according to the standard adopted by the American Institute of Electrical Engineers, shall be followed in placing interior conductors.

b. For insulated aluminum wire the allowable carrying capacities shall be taken as 81 per cent. of those given in the table for the respective sizes of copper wire with the same kind of insulation.

c. Conductors of size Nos. 18 and 16 shall be used only for flexible cords and for fixture wires.

d. Conductors may be placed in multiple only by permission of the inspection department.

e. Varnished cloth insulated wires smaller than No. 6 shall be used only by permission of the inspection department.

TABLE I. ALLOWABLE CARRYING CAPACITIES OF WIRES.

*These individual strands are odd sizes not listed in the American or B. & S. Wire Tables.

611. General Requirements for Use of Conductors.

a. This article shall apply to wires, cables and cords generally, but the requirements of the other articles of this code shall be complied with as to the selection of conductors and the method of their installation and use in particular locations and classes of work.

b. No wires of size smaller than No. 14 shall be used except as permitted for fixture work and for flexible cords.

c. All splices and joints in conductors shall be made both mechanically and electrically secure without solder. The joints shall then be soldered unless made with some form of approved splicing device. All joints shall be covered with an insulation equal to that on the conductors.

d. Stranded wires, except in flexible cords, shall be soldered before being fastened under clamps or binding screws and, whether stranded or solid, when they have a conductivity greater than that of No. 8 shall be soldered into lugs for all terminal connections, except where an approved solderless terminal connector is used.

e. Wires shall be separated from contact with walls, floors, timbers or partitions through which they may pass by non-combustible non-absorptive insulating tubes, such as glass or porcelain, except at outlets where approved flexible tubing is required.

f. The bushings used shall be long enough to bush the entire length of the hole in one continuous piece, or else the hole shall first be bushed by a continuous waterproof tube. This tube may be a conductor, such as iron pipe, but in that case an insulating bushing shall be pushed into each end of it, extending far enough to keep the wire absolutely out of contact with the pipe.

g. Where not enclosed in approved conduit, raceways or armored cable, and where liable to come in contact with gas, water, or other metallic piping or other conducting material, wire shall be separated therefrom by some continuous and firmly fixed non-conductor creating a permanent separation.

h. In wet places wires shall be so placed that an air space will be left between conductors and pipes in crossing, and the former shall be run in such a way that they cannot come in contact with the pipe accidentally.

It is recommended that wires be run over, rather than under, pipes upon which moisture is likely to gather or which, by leaking, might cause trouble on a circuit.

i. Wires for electric light or power circuits shall not come nearer than 2 inches to any other unenclosed electric light, power or signal wire without being permanently separated therefrom by some continuous and firmly fixed non-conductor. The non-conductor used as a separator shall be in addition to the regular insulation on the wire. Where tubes are used, they shall be securely fastened at the ends to prevent movement along the wire. Departure from the requirements of paragraphs g, h, and i of this section may be permitted, where necessary, by the inspection department.

j. Where exposed to mechanical injury wires shall be suitably protected.

k. When crossing floor timbers in cellars or rooms where they might be exposed to injury, wires shall be installed in approved conduit or armored cable or be otherwise properly guarded. Where running boards are acceptable, they shall be not less than 1/2 inch in thickness and not less than 3 inches in width; where guard strips are acceptable they shall be not less than 3/8 inch in thickness and at least as high as the insulator, and shall be placed on each side of and close to the wires.

l. Protection on side walls shall extend not less than 7 feet from the floor and shall consist of substantial boxing, retaining an air space of 1 inch around the conductors, closed at the top, the wires passing through bushed holes; or approved metal conduit or pipe of equivalent strength may be used.

m. When metal pipe is used in short runs to protect wires the insulation of each wire shall be reinforced by approved flexible tubing extending from the insulator next beyond the pipe at one end to the insulator next beyond the pipe at the other end. The two or more wires of a circuit, each with its flexible tubing, if carrying alternating currents shall, or if direct current, may be placed within the same pipe.

In damp places the wooden boxing may be preferable because of the precautions which would be necessary to secure proper insulation if the pipe were used. With this exception, however, iron piping is considered preferable to the wooden boxing, and its use is recommended. It is especially suitable for the protection of wires near belts, pulleys, etc.

n. When run in unfinished attics, or roof spaces wires shall be considered to be concealed, and when run in close proximity to water tanks or pipes, wires shall be considered to be exposed to moisture. In un-

finished attics or roof spaces, wires shall be considered to be exposed to mechanical injury, and shall not be run on knobs on upper edge of joists, except that in inaccessible roof spaces where wires are run across joists, they may be supported on knobs on the upper edge of each joist.

o. Wires shall not be laid in plaster, cement or similar material.

p. Wires shall not be fastened by staples.

q. Wires shall not be fished for any great distance, nor where the inspector cannot satisfy himself that the requirements of this code have been complied with.

r. Twin wires shall be used only in conduits, or where flexible conductors are necessary.

s. In 3-wire (not three-phase) systems, the neutral shall be of sufficient capacity to carry the maximum current to which it may be subjected.

t. When one of the circuit wires is to be grounded, the circuit shall be so arranged that the grounded conductor is the one identified as prescribed in section 601 b of this code.

u. In alternating current systems in conduit, armored cable and metal raceways, the two or more wires of a circuit shall be placed in the same conduit, armor or raceway.

It is recommended that this course be pursued in the case of direct current also, in order to obviate induction troubles if a change is made to alternating current at some later date.

v. The wiring in any building or group of buildings, including the service connections thereto, shall be so arranged as not to serve as a shunt around any street fuse or switch.

w. Conductors in raceways or on insulators shall not be installed in elevator shafts.

612. Special Requirements for Use of Flexible Cords.

a. When used where the voltage between any two conductors or from any conductor to the ground is over 300 volts, the insulation on flexible cords shall be at least 3/64 inch in thickness for all conductor sizes No. 8 or less, except where Type "S" cord is used.

b. Flexible cord shall be used only for pendants, wiring of fixtures, portable lamps or motors, portable heating apparatus or other portable devices.

c. For all portable work, including those pendants which are liable to be moved about sufficiently to come in contact with surrounding objects, flexible wires and cables especially designed to withstand this severe service shall be used; provided, however, that for portable lamps or other devices which are not liable to be moved about sufficiently to cause abrasion of the insulation, approved flexible cord of Type C may be used.

d. When necessary to prevent portable lamps from coming into contact with inflammable materials, or to protect them from breakage, their flexible cord leads shall be equipped with handle, socket and substantial guard, the guard being securely attached to socket or handle.

e. Unless provided with approved metal armor, flexible cords shall not be used in show windows or in show cases, except that approved portable cord may be used for the purpose of supplying current to portable amps and other devices for exhibition purposes, and flexible cord may be used for chain fixtures.

f. Flexible cords shall be protected by approved insulating bushings where they enter sockets.

g. Flexible cords shall be so connected to all fittings that the strain will be taken from the joints and binding screws.

h. Flexible cords shall, where passing through covers of outlet boxes, be protected by approved bushings especially designed for this purpose; or the cover shall be provided with a smooth, well-rounded surface on which the cord will bear. So-called hard rubber or composition bushings shall not be used.

613. Special Requirements for Use of Conductors in Central and Sub-stations; Including Motor, Transformer and Storage Battery Rooms, etc.

a. Wires shall be exposed to view and supported on approved non-combustible, non-absorptive insulators or, except in storage battery rooms, may be placed in approved metal conduit, tile or other fireproof ducts. Conductors installed in conduit or ducts where exposed to moisture shall be lead sheathed and the sheathing shall be grounded. Except for low potential systems the insulation of the several conductors where leaving the metal sheath of cables shall be thoroughly protected from moisture and mechanical injury by means of a pothead or some equivalent method.

See also article 50.

b. Wires not in conduit shall be kept so rigidly in place that they cannot come in contact. Where they pass through floors or fire walls they shall be carried through individual openings in non-combustible, non-absorptive insulating tubes or their equivalent and not through a common open space.

c. Where conductors are closely grouped as on switchboards, in wire towers, cableways, etc., the conductors shall each have a substantial flameproof outer covering. Flameproofing shall be stripped back on all conductors a sufficient distance from the terminals to give the necessary insulation for the voltage of the circuit on which the conductor is used.

ARTICLE 7. OUTLET BOXES AND CABINETS.

701. Outlet Fittings.

a. Outlet boxes and plates, switch, junction and pull boxes and metal cabinets shall be well galvanized, enameled or otherwise properly coated, inside and out, to prevent oxidation; provided, however, that hardwood may be used for cabinets housing devices of electric railway systems, or of open or concealed work, or wooden raceway.

It is recommended that the protective coating be of conductive material such as tin or zinc, in order to secure better electrical contact.

b. Unused openings in outlet fittings or cabinets shall be effectively closed by metal plugs or plates, affording protection substantially equivalent to that of the wall of the fitting.

c. Openings in outlet fittings or cabinets shall be equipped, either separately or as a part of the fitting, with couplings or bushings which will serve to secure the conduit, raceway or armored cable to the fitting and at the same time protect the wires from abrasion. Where a hardwood cabinet is used with open work or knob and tube work, each open-

ing shall be equipped with a non-combustible, non-absorptive insulating bushing which shall fit securely in the opening and be so closed by the wire and tape, if necessary, as to be dust-tight. In dry places approved flexible tubing may be employed as an insulating bushing if it extends from the last insulating support and is firmly secured in place.

d. Covers of outlet fittings through which flexible cords or duplex wire pendants pass shall be provided with approved bushings, or shall have smooth, well rounded holes upon which the cord or wire may bear. Where wires, other than flexible cord or duplex wire, pass through a metal cover, there shall be provided a separate hole for each wire, said hole being equipped with a non-combustible, non-absorptive insulating bushing.

e. Outlet fittings, and junction or pull boxes not over 150 cubic inches in size, shall be composed of pressed steel not less than 0.078 inch (No. 14 U. S. sheet metal gauge) in thickness, or of cast metal having a wall thickness not less than 1/8 inch.

f. Junction or pull boxes of over 150 cubic inches in size shall be composed of metal and shall conform to the requirements for cabinets and cutout boxes, except that the covers may consist of single flat sheets secured to the box proper by screws or bolts instead of hinges.

Boxes having covers of this form are for use only for enclosing joints in wires or to facilitate the drawing in of wires or cables. They are not intended to inclose switches, cutouts or other control devices.

g. Outlet boxes intended for use where gas outlets are present shall be so designed that they may be securely fastened to the gas pipes in an approved manner.

h. A fixture stud which is not an integral part of the outlet box shall be composed of malleable iron or other approved material.

i. Switch and outlet boxes shall be so designed that they can be securely fastened in place independently of the support furnished by the conduit; provided, however, that approved boxes having threaded connection to exposed conduit may be supported by the conduit itself if the latter is firmly secured in place.

j. Switch and receptacle boxes shall completely enclose the devices on sides and back, and shall provide a substantial support for them. The screws supporting the box shall not be used for the attachment of the device contained therein. Floor outlet boxes shall be so designed as to protect receptacles and attachment plugs from mechanical injury and moisture.

k. Metal covers of outlet boxes shall be of thickness equal to that of the wall of the box, or shall be lined with firmly attached insulating material not less than 1/2 inch in thickness. Covers of porcelain or other approved material may be used if of such form and thickness as to afford the requisite protection and strength.

l. Flush switch and receptacle plates shall be not less than .04 inch in thickness.

m. At each outlet of conduit, metal raceway, armored cable or knob and tube work an approved box or plate shall be employed. In completed installations, the box or plate shall be provided with a cover, unless a fixture canopy is present.

n. At the ends of conduit, armored cable or metal raceway from which wires extend to open wiring or to appliances and where a box or plate is provided as required in the preceding paragraph, approved terminal fittings having a separate bushed hole for each wire shall be provided through which fitting the wires shall pass without splice, joint or tap. This construction shall not be employed at fixture outlets.

o. In buildings already constructed, where conditions are such that neither box nor plate can be installed, these fittings may be omitted by permission of the inspection department, provided the conduit or armored cable is properly bushed and secured in place.

p. Junction boxes, shall be so installed as to be accessible without removing any part of the building except as provided for terminal fittings in section 502, paragraph f of this Code.

An attic which has sufficient headroom but which is reached only by a portable ladder and permanent hatch, is considered permanently accessible.

q. Outlet boxes or plates, switch boxes and cabinets shall be so installed in walls or ceilings composed of plaster on wooden joists or studs that the front edge of the fitting will not set back of the finished surface of the plaster more than 1/4 inch. On wooden walls or ceilings the front edges of the fitting shall be flush with the finished surface, or project therefrom. A plaster surface which is broken or incomplete shall be repaired, so that there will be no gaps or open spaces at the edge of the fitting.

These requirements do not apply to walls or ceilings composed of concrete, tile or other non-combustible material.

r. In making a surface extension from an existing outlet of concealed conduit or armored cable, a box, extension ring or blank cover shall be mounted over the original box and electrically and mechanically secured to it. The extension shall then be connected to this box in the manner prescribed for the method of wiring employed in making the extension.

702. Cabinets and Cutout Boxes.

a. Cabinets and cutout boxes intended for outdoor use shall be of weatherproof type.

b. Cabinets and cutout boxes which contain devices or apparatus connected within the cabinet or box to the wires of more than four circuits, including branch circuits, meter loops, sub-feeder circuits, power circuits from lighting panels and similar circuits, but not including the supply circuit or a continuation thereof, shall have back wiring spaces or one or more side wiring spaces, side gutters or wiring compartments, unless the wires leave the cabinet or cutout box directly opposite their terminal connections.

c. The design and construction of cabinets and cutout boxes shall be such as to secure ample strength and rigidity.

d. The spacing within cabinets and cutout boxes shall be sufficient to provide ample room for the distribution of wires and cables placed in them, and for a separation between metal parts of cabinets or cutout boxes and current carrying parts of devices and apparatus mounted within them as follows:

1. There shall be an air space of at least 1/16 inch, except at points of support, between the base of the device and the wall of any metal cabinet or cutout box on which the device is mounted.

2. There shall be an air space of at least 1 inch between any live metal part (including live metal parts of enclosed fuses) and the door,

unless the door is lined with an approved insulating material or is of a thickness of metal not less than No. 12 U. S. sheet metal gauge (0.109 inch), when the air space shall be not less than 1/2 inch.

3. There shall be a space of at least 2 inches between open link fuses and metal lined walls or metal, metal lined or glass paneled doors.

4. Except as noted above, there shall be an air space of at least 1/2 inch between the walls, back, gutter partition, if of metal, or door of any cabinet or cutout box and the nearest exposed current-carrying part of devices mounted within the cabinet where the potentials do not exceed 251 volts. This spacing shall be increased to at least 1 inch where the potentials exceed 250 volts.

e. Cabinets and cutout boxes shall be deep enough to allow of the closing of the doors when 30 ampere branch circuit panelboard switches are in any position, or when combination cutout switches are in any position, or when other single throw switches are opened as far as their construction will permit.

f. Side wiring spaces, side gutters or side wiring compartments of cabinets shall be rendered tight enclosures by means of covers, barriers or partitions extending from the bases of the devices contained in the cabinet to the door, frame or sides of the cabinet; provided, however, that where the enclosure contains only those wires or cables which are led from the cabinet at points directly opposite their terminal connections to devices within the cabinet, such covers, barriers or partitions may be omitted. Partly enclosed back wiring spaces shall be provided with covers to complete the enclosure.

g. Wooden or composition cabinets, whether for flush or surface mounting, shall be of rigid and substantial design. Doors shall fit closely. The requirements for spacings, barriers and other details of construction, given elsewhere in this section, shall be followed, so far as they apply. Wooden cabinets shall be composed of well seasoned material, at least 3/4 inch in thickness thoroughly filled and painted. They shall be lined throughout with a non-combustible material such as 1/4 inch rigid asbestos board firmly secured in place. Linings of slate, marble or approved composition shall be at least 1/4 inch in thickness. Sheet metal lining shall be at least .063 inch in thickness (No. 16 U. S. sheet metal gauge).

h. Composition cabinets shall conform to the requirements for wooden cabinets, and shall be submitted for approval prior to installation.

ARTICLE 8. AUTOMATIC PROTECTION OF CIRCUITS AND APPLIANCES: Cutout Bases, Fuses, Circuit Breakers; Protection of Wires, Circuits, Motors; Ground Detectors, Other Appliances.

801. Cutout Bases.

a. The requirements of this article shall not apply to attachment plugs, car lighting cutouts or protective devices for signal systems. Cutout bases for link fuses shall be approved only in capacities above 300 amperes and their spacing shall be at least as great as those given in the following table, which applies only to plain, open fuse blocks mounted on slate, marble or composition bases. If the fuse tips overhang the edges of the fuse block terminals, the spacings shall be measured between the nearest edge of the tips.

Ampere Capacity	Minimum Separation of Nearest Metal Parts of Opposite Polarity	Minimum Break Distance
Not over 125 Volts		
301-1500	1 1/2	1 1/2
Not over 250 Volts		
301-1500	2 1/2	2

b. A space shall be maintained between the fuse terminals of link fuses of the same polarity of at least 1/2 inch for voltages up to 125 and of at least 3/4 inch for voltages from 126 to 250. This is the minimum distance allowable, and greater separation shall be provided when practicable.

c. For 3-wire systems link fuse cutouts shall have the break-distance required for circuits of the potential of the outside wires, except that in 125-250-volt systems with grounded neutral the cutouts in 2-wire, 125-volt branch circuits may have the spacings specified for not over 125 volts.

d. Except for sealable service and meter cutouts the fuse terminals of enclosed fuse cutout bases (plug and cartridge types) shall be of either the Edison plug, spring clip or knife blade type, to take the corresponding standard enclosed fuses. They shall be secured to the base by two screws, or the equivalent, so as to prevent them from turning, and shall be so made as to secure a thoroughly good contact with the fuse.

e. End stops shall be provided to insure the proper location of the cartridge fuse in the cutout base.

f. Cutout bases for enclosed fuses shall be classified as regards both current and voltage as given in the following table, and shall be so designed that the bases of one class cannot be used with fuses of another class rated for a higher current or voltage.

STANDARD PLUG OR CARTRIDGE CUTOUTS

Not over 250 Volts	Not over 600 Volts.
0-30 amperes	0-30 amperes
31-60 "	31-60 "
61-100 "	61-100 "
101-200 "	101-200 "
201-400 "	201-400 "
401-600 "	401-600 "

SEALABLE SERVICE AND METER CUTOUTS.

Not over 250 Volts	Not over 600 Volts
0-30 amperes	0-30 amperes
31-60 "	31-60 "
61-100 "	61-100 "
101-200 "	101-200 "

802. Link Fuses.

a. Link fuses shall not be used when of capacities of 300 amperes or less. When used in capacities of from 311 to 1500 amperes, they shall be rated to correspond to the ratings of cutout bases as given in the table of paragraph a, section 801, of this code.

b. Contact surfaces or tips of link fuses shall be of copper or aluminum, having good electrical connections with the fusible part of the strip.

c. Link fuses shall be stamped with 80% of the maximum current which they can carry indefinitely, thus allowing about 25% overload before the fuse melts.

803. Enclosed Fuses.

a. The requirements of paragraphs c to g inclusive, of this section, do not apply to fuses for attachment plugs, ear-lighting cutouts, nor to protective devices for signal systems.

b. The casings of enclosed fuses shall be sufficiently tight so that lint and dust cannot collect around the fusible link and become ignited when the fuse is blown. For non-renewable fuses the fusible wire shall be attached to the terminals in such a way as to make it difficult for it to be replaced when melted.

c. Enclosed fuses shall be classified to correspond with the different classes of cutouts, and shall be so designed that it will be impossible to put any fuse of a given class into a cutout which is designed for a current or voltage lower than that of the class to which the fuse belongs.

d. Enclosed fuses shall be marked with the words "N. E. Code Std." All fuses shall be marked with the ampere capacity. On ferrule contact fuses this marking shall be on the tube or ferrules, and on knife blade fuses on the tubes or caps. In addition to the above marking each cartridge enclosed fuse shall be provided with a paper label, red for 600-volt fuses, navy blue for 250-volt fuses of 15 amperes or less capacity and green for 250-volt fuses of over 15 amperes capacity. The label for cartridge fuses shall bear the following: the name or trademark of the manufacturer and the voltage for which the fuse is designed.

e. Plug fuses of 15 amperes capacity or less shall be distinguished from those of larger capacity as follows: by an hexagonal opening in the cap through which the mica or similar window shows; or by an hexagonal shaped recess in the top of fuses having porcelain or moulded composition tops, and when labels are used with such plug fuses the labels shall also be hexagonal in shape and fill the recess; or on plugs having solid metal caps, by an hexagonal impression either raised or lowered on the caps.

f. The fuse terminals shall be sufficiently heavy to insure mechanical strength and rigidity. The styles of terminals, except for use in sealable service and meter cutouts, shall be as follows:

0-30 Amps.	A. Cartridge fuse (ferrule contact).
	B. Approved plugs or cartridge fuses in approved casings for Edison plug cutouts not exceeding 125 volts, but including any circuit of a three-wire 125-250-volt system with grounded neutral.
31-60 "	Cartridge fuse (ferrule contact) for use also in approved casings for large size Edison plug type 250-volt cutouts.
61-100 "	Cartridge fuse (knife blade contact).
101-200 "	
201-400 "	
401-600 "	
Not over 600 volts.	
0-30 Amps.	Cartridge fuse (ferrule contact).
31-60 "	Cartridge fuse (knife blade contact).
61-100 "	
101-200 "	
201-400 "	
401-600 "	

Cartridge enclosed fuses and corresponding cutout bases, except for sealable service and meter cutouts shall conform to the dimensions given in the table attached.

TABLE OF DIMENSIONS OF THE NATIONAL ELECTRICAL CODE STANDARD CARTRIDGE ENCLOSED FUSE.

Form 1. Cartridge Fuse—Ferrule Contact

Form 2. Cartridge Fuse—Knife Blade Contact Voltage Not Over 250

Rated Capacity Amperes	Length Over Term. Inches	Distance Between Contact Clips Inches	Width of Contact Clips Inches	Diam. of Ferrules or Thick. of Blades Inches	Mn. Outside Tube, In.	Lgh. of Ferrules or Blades, In.	Diam. Tube, Inches	Width Term. Blades, Inches	
									A

401-600	13 1/2	9	2 1/4	1/4	2 1/4	2 1/4	3	2	

804. Circuit Breakers.

a. Automatic overload circuit breakers shall be substantial in construction, and shall have ample metal for stiffness. The contact parts shall be arranged so that thoroughly good bearings are obtained. All breakers

shall be provided with easily accessible means of tripping them by hand with out injury to the operator.

805. General: Fuses and Circuit-Breakers.

a. Fuses or circuit-breakers shall be provided on constant potential circuits to protect all ungrounded wires. A circuit-breaker having one of its poles in the grounded wire of the circuit may be used if it simultaneously opens all the wires of the circuit.

For the use of fuses for lighting and appliance branch circuits, see section 807. For use of fuses or circuit breakers on motor circuits, see sections 808 and 809.

b. Fuses and circuit-breakers shall be of types approved for the specific service and capacity for which they are to be used. The term circuit-breaker as used in this and other sections of this article shall be construed as meaning a device which automatically opens one or more conductors of a circuit with predetermined minimum current overload.

c. A fuse or circuit-breaker shall be placed at every point where a change is made in the size of an ungrounded wire, unless the fuse or circuit-breaker in the larger wire will protect the smaller.

For carrying capacities of conductors, see section 610, and also see reference to capacities of conductors contained in section 808, with special reference to motor circuits.

d. No fuse or circuit-breaker shall be placed in any permanently grounded wire, except a circuit-breaker which simultaneously opens all conductors of the circuit and except as provided in sections 807 and 808 of this Code.

e. Except when placed on switchboards or the equivalent which are located in approved rooms or fireproof electric closets, all cutout bases, circuit-breakers and fused switches shall be enclosed in approved cabinets or cutout boxes or shall be so designed or otherwise protected or located so that live parts will not be exposed to accidental contact. They shall, in all cases, be placed in readily accessible locations.

f. In general, such cabinets shall be placed in a vertical position. By special permission of the Inspection Department such cabinets containing fuses or switches only may be installed horizontally on ceilings, but in such cases, special precautions shall be taken to prevent fuses falling out, or switches opening, due to vibration or other causes. Doors or covers of such ceiling mounted cabinets shall be arranged so as to prevent their accidental opening.

g. Cutout bases, fused switches and circuit-breakers when installed in locations exposed to moisture shall be mounted in approved weather-proof cutout boxes or cabinets.

h. Cutout bases and circuit-breakers shall not be placed where exposed to mechanical injury nor in the vicinity of easily ignitable material nor in places where combustible dust or flyings are liable to be present in the air in sufficient quantities to produce an explosive or flammable mixture. If the occupancy of the premises is such that the last two conditions cannot be avoided all fuses and all circuit-breakers, unless of the dust-tight, oil-immersed type, shall be enclosed in approved metal cabinets. If the occupancy of the building is such that a suitable location free from exposure to mechanical injury cannot be found, an approved metallic inclosure shall be provided.

For equipments in extra-hazardous locations, see article 32.

i. Except as provided in sections 807, 803 and 803 of this code the rated capacity of fuses shall not exceed the allowable carrying capacity of the wire as given in section 610 of this code; and circuit-breakers shall not be set more than 3 per cent. above the allowable carrying capacity of the wire unless a fuse of a rating which properly protects the wires is also installed on the circuit.

j. For the protection of wires having safe carrying capacities exceeding the rated capacity of the largest approved enclosed type fuses, approved enclosed fuses arranged in multiple may be used, provided as few fuses as possible are used and the fuses are of equal capacity and provided the cutout terminals are mounted on a single continuous pair of substantial bus bars. The total capacity of the fuses shall not exceed the safe carrying capacity of the wires. This paragraph shall not apply to motor circuits.

k. Fixture wires or flexible cords of No. 16 or No. 18 gauge shall be considered as protected by 15 ampere fuses.

l. Link fuses may be used only when mounted on approved bases which, except on switchboards, shall be placed in approved cutout boxes or cabinets. A space of at least 2 inches shall be provided between the open-link fuses and metal, or metal lined walls or metal, metal lined or glass paneled doors of cabinets or cutout boxes.

m. Fused rosettes shall not be used.

n. An automatic circuit-breaker, except as provided for generators in article 1002 of this code, when installed without other automatic overload protective devices, shall have one pole in each ungrounded conductor.

o. For all automatic circuit-breakers, the number of overload trip coils shall not be less than shown in the following table:

SYSTEM	NUMBER AND LOCATION OF OVERLOAD PROTECTIVE DEVICES
3 wire 3 phase A.C. ungrounded or with one conductor grounded	2 trip coils, one in each of two ungrounded conductors
3 wire 3 phase A.C. with grounded neutral	3 trip coils, one in each conductor or two trip coils and one fuse
4 wire 3 phase A.C.	3 trip coils, one in each phase, or two trip coils and one fuse
4 wire 2 phase A.C. ungrounded	2 trip coils, one in each phase
3 wire 2 phase A.C.	2 trip coils, one in each outside conductor
4 wire 2 phase A.C. with grounded neutral	4 trip coils, one in each ungrounded conductor, or two trip coils and two fuses
5 wire 2 phase A.C.	4 trip coils, one in each ungrounded conductor, or two trip coils and two fuses
3 wire 1 phase A.C. or D.C.	2 trip coils, one in each outside conductor
2 wire A.C. or D.C. ungrounded or with one conductor grounded	1 trip coil, in ungrounded conductor
2 wire A.C. or D.C. with grounded neutral	2 trip coils, one in each conductor

p. A fuse or a trip coil shall be placed in every ungrounded wire of all grounded circuits except as provided for branch circuits in section 837 of this code.

q. Nothing in this section shall be considered as prohibiting the use of two single-pole circuit-breakers for the protection of ungrounded two-wire circuits.

806. At Services.

For particular equipment at services, see also section 406 of this code.

a. Fuses or circuit-breakers shall be placed in all ungrounded service wires, either overhead or underground, in the nearest readily accessible place to the point where they enter the building, and arranged to cut off

motor name plate current rating, or (e) for circuits having a maximum capacity greater than that for which approved enclosed fuses are rated.

8. Circuit-breakers shall have a continuous current capacity of at least 110% of the name plate current rating of the motor. If the circuit-breaker is of the time limit type its setting shall not exceed 125% and if of the instantaneous type not over 160% of the name plate current rating of the motor.

9. Circuit-breakers shall open all ungrounded conductors of the circuit simultaneously except that for D.C. and single phase A.C. motors on ungrounded circuits one single pole circuit-breaker may be used in each conductor or a single pole circuit-breaker may be provided in one conductor and a fuse in the other. One pole of the circuit-breaker may be placed in a permanently grounded conductor provided the breaker is so designed that the pole in the grounded conductor cannot be opened without opening simultaneously all of the conductors of the circuit.

c. The number of overload trip coils, relays or thermal cutouts shall not be less than shown in the table of section 805 o.

d. A controller for a D.C. motor which has an overload release device operative during the starting as well as the running period may also serve as the automatic overload protective device required by paragraph b.

e. The controller for an A.C. motor may also serve as the automatic overload protective device required by paragraph b, if it is equipped with the number of trip coils called for in the table of section 805 o and if it is operative when in the running position to open all of the ungrounded conductors automatically under overload.

f. Motor running protective devices may be shunted or cut out during the period for starting the motor and the motor shall be considered sufficiently protected during this starting period by the next overload protective device back on the line if the rating of this fuse or the setting of this circuit-breaker is not over 500% of the name plate current rating of the motor.

g. When a switch is used to shunt the motor running protective device during the starting period, it shall be of a type that cannot be left in the starting position.

For motors having large starting currents, such as the squirrel cage type, the shunting or cutting out of service of the running protective device is necessary to avoid opening the circuit during the starting period, unless a time limit circuit-breaker or similar device is used which will prevent the opening of the circuit during this period.

h. Continuous rated motors of 2 horse power or less shall be considered sufficiently protected by the fuses or circuit-breakers protecting the conductors of the motor circuits provided in section 808 of this code.

i. Motors of other than continuous rating or used on other than continuous load duty shall be considered as being sufficiently protected by the fuses or circuit breakers used to protect the conductors of the motor circuits.

810. Protection of Generators.

See section 1002.

811. Protection of Electrically Heated Appliances.

a. Electrically heated appliances each of 6 amperes or 660 watts or less, may be used on branch lighting circuits; appliances each of 1320 watts or less, may be grouped on a special circuit protected by fuses having a rated capacity not greater than 15 amperes. Each complete electrically heated appliance, whether containing one or more heating elements, which is of more than 1320 watts total capacity, shall be supplied by a separate branch circuit.

b. Subdivided circuits of electrically heated appliances need not be separately fused, but individual heating elements of such electrically heated appliances shall be fused if they are rated at more than 30 amperes.

812. Protection of Theatre Footlights and Border Lights.

a. Theatre footlights and border lights shall be so wired that the number of outlets and the lamps connected to them shall in no case be such as to place more than 15 amperes on a branch circuit fuse.

813. Protection of Signs and Outline Lighting.

a. Circuits shall be so arranged that the number of outlets and the lamps connected to them shall in no case be such as to place more than 15 amperes on the branch circuit fuse.

814. Protection of Switchboard Instruments.

a. Enclosed fuses shall be used to protect instruments and pilot lights on switchboards. N. E. Code standard enclosed fuses are preferred but other types may be used provided the rating of such fuses does not exceed two amperes.

815. Protection of Feeders at Supply Stations.

a. Each constant potential circuit entering or leaving a supply station, except grounded neutral conductors of three wire systems, shall be protected from excessive current by an approved automatic overload circuit breaker or by an equivalent device of approved design. Such protective devices shall be located as near as practicable to point where conductors enter or leave the building. For outgoing circuits not connected with other sources of power, however, the protective devices may be placed on the supply side of transformers or similar devices.

ARTICLE 9. GROUNDING.

901. General.

a. Where low potential circuits, arresters, equipment, conduit, armored cable, metal raceways and the like are grounded in accordance with this article, they shall be so arranged that under normal conditions of service there will be no objectionable passage of current over the grounding conductor. Where an objectionable flow of current over a grounding conductor occurs due to the use of multiple grounds, one or more of such grounds shall be abandoned or their locations shall be changed.

b. The connection and contact with the ground shall be permanent and effective, and shall always be made on a water piping system if one is available. The protective grounding of electrical circuits and equipment to water piping systems, when performed in accordance with this article, should always be permitted, since such grounding offers the most efficient protection to life and property and is not injurious to the piping systems.

c. Artificial grounds, such as buried plates, driven pipes or driven rods, shall be embedded below permanent moisture level, where practicable. Each ground shall present not less than 2 square feet of surface to exterior soil. Ground plates of copper shall be at least .06 inch in thickness. Ground plates of iron shall be at least ¼ inch in thickness. Ground pipes of iron or steel shall be galvanized and shall be not less than ¾ inch internal diameter. Approved ground rods shall not be less than ½ inch in diameter. Driven pipes or rods shall be of only one piece when of less than standard commercial length and shall be driven to a depth of at least eight feet regardless of size or number of pipes or rods used.

It is recommended that artificial grounds be located where the ground water level is nearest to the surface.

Additional area will generally be necessary, to meet the requirement of paragraph c of this section.

d. Where a system grounding wire is employed, it shall be effectually grounded at intervals which will satisfy the requirements as to current carrying capacity and resistance prescribed in this article.

e. The combined resistances of the grounding wire and the connection with the ground shall not exceed 3 ohms for water pipe connections nor 25 ohms for buried or driven grounds. Where it is impracticable to obtain with one ground artificial ground resistance as low as 25 ohms, this requirement shall be waived, and two artificial grounds, at least 6 feet apart and with combined area of not less than 4 square feet, shall be provided.

902. Distribution Systems.

a. Two-wire direct current systems shall be grounded as provided herein, if fed from overhead circuits and the voltage of the system does not exceed 300 volts.

It is recommended that 2-wire direct current systems be grounded if a neutral point can be established and if the maximum difference of potential between the neutral point and any other point on the circuit does not exceed 300 volts.

It is recommended that 2-wire direct current systems be not grounded if the potential to ground of either conductor exceeds 300 volts.

b. Three-wire direct current systems shall be grounded as provided in this article and at the neutral, at one or more supply stations but not at individual services.

c. Alternating current systems shall be grounded as provided in this article, if the maximum difference of potential between the grounded point and any other point on the circuit does not exceed 150 volts. Electric furnace circuits need not be grounded.

It is recommended that such systems also be grounded as provided herein if the difference of potential exceeds 150 volts but does not exceed 300 volts.

d. On single phase alternating current systems the ground shall be made at each service on the line side of the service switch before the service is connected to the line. On multiphase alternating current systems the ground shall be made as described for single phase systems if the grounded conductor of the multiphase supply system is brought to the premises for rendering service. By permission of the inspection department the grounding connection for either single phase or multiphase systems may be made on or near the transformer or transformers, or by connection to a system ground wire.

e. For alternating current systems, the point to be grounded shall be selected as follows:

Single phase, 2-wire: on either conductor, and at that point of the system which brings about the lowest voltage from ground of unguarded current-carrying parts of connected devices and also permit of most convenient grounding.

Single phase, 3-wire: on neutral conductor.

Two phase or
Three phase,
Three, four
or five wire
systems.

At that point of the system which brings about the lowest voltage from ground of unguarded current-carrying parts of connected devices and also permits of most convenient grounding.

f. Where only one phase of a 2-phase or 3-phase secondary system is employed for lighting, that phase shall be grounded, and at the neutral conductor if one is used.

g. Where transformers supply a common set of mains, such fuses as are installed shall be so placed as not to leave any portion of the secondary without ground protection after they have been blown.

h. The grounded conductor of an interior wiring system shall have but one grounding connection within the building, except as provided in paragraph b of section 906 of this article.

903. Lightning Arresters and Ground Detectors.

a. The ground connection shall be made at such a point that the grounding conductor will be as short and straight as practicable.

904. Equipment and Metal Raceways.

a. The point of attachment of the grounding conductor to generators, motors, transformers, conduit, armored cable, metal raceway and the like shall, if practicable, be readily accessible.

b. The point of attachment of the grounding conductor to conduit, armored cable and metal raceways shall be as near as practicable to the point where the conductors in the equipment receive their supply.

c. Where the service conduit is grounded, its grounding conductor shall be run from it directly to the ground, no portion of the house conduit being used as a part of the grounding conductor.

905. Grounding Conductors.

a. The grounding conductor shall be of copper or of other metal which will not corrode excessively under the existing conditions and where practicable shall be without joint or splice.

b. No automatic cutout shall be placed in a grounding conductor or its connections, except in a grounding conductor from equipment where its operation will result in the automatic disconnection from all sources of energy of the circuit leads connected to the equipment so grounded.

c. The insulation and installation of the grounding wire for circuits, when not protected by metallic piping, shall comply with all requirements of this code applying to wires of the voltage of the circuit to which the grounding wire is attached. When a circuit grounding wire is installed in metallic piping and is bonded to it at both ends, a bare copper conductor may be used.

d. Ground clamps and all grounding wires which are smaller than No. 4 in size shall be protected from ordinary mechanical injury by being paced where they are not liable to be damaged or by being inclosed in metal, wood or equivalent protective covering. In the case of a lightning arrester grounding wire the protection shall be composed of non-magnetic material, unless the grounding conductor is electrically connected to both ends of the protective covering.

e. Where a secondary system is grounded at the service, the equipment, conduit, armored cable, metal raceway and the like may, with the permission of the inspection department, be connected to the circuit grounding conductor, but otherwise shall have a separate grounding conductor of their own.

f. The path to ground provided for a circuit shall, in general, have ampere capacity sufficient to insure the continuity and continued effectiveness of the path under conditions of excess current caused by accidental grounding of any normally ungrounded conductor of the circuit.

g. The grounding conductor for a direct current system shall have a current capacity not less than that of the largest feeder of the same system leaving the station. In no case shall the grounding conductor be smaller than No. 8.

h. The grounding conductor for an alternating current system shall have an ampere capacity not less than one-fifth that of the conductor to which it is attached. In no case shall the grounding conductor be smaller than No. 8 and it need not be larger than No. 0.

i. The conductor grounding a lightning arrester shall not be connected to an artificial ground provided for circuits or equipment, but shall be kept at a distance of at least 20 feet where practicable. The grounding conductor shall have an ampere capacity sufficient to insure the continuity and continued effectiveness of the path to ground under conditions of excess current caused by or following the discharge of the arrester. No individual grounding conductor shall have an ampere capacity less than No. 6.

j. The size of a conductor (wire or pipe) grounding conduit, armor cable, metal raceways and equipment shall be not less than that given in the following table:

Capacity of Nearest Cutout Protecting Conductors in Conduit Armored Cable Metal Raceway or Equipment	Size of Copper Wire Grounding Conductor	Size of Grounding Pipe
0 to 100 amperes	No. 10	½ inch
101 " 200	" 6	½ "
201 " 500	" 4	¾ "
Over 500	" 2	1 "

No. 18 copper may be used as a conductor grounding portable equipment, the conductors to which are protected by fuses not greater than 15 amperes. For portable equipment using more than 15 amperes, the above table shall be followed.

k. Where instruments, meters, or relays operate with windings or working parts, at a potential of 150 volts or above to ground, the cases and other exposed bare metal parts of these devices insulated from the current carrying parts shall be grounded unless isolated by elevation or protected by suitable insulating barriers or guards or where inaccessible to other than qualified persons, in which case grounding is required only when the voltage exceeds 75 V. The grounding conductor shall be not less than No. 12. Where instruments, meters or relays are operated from current or potential instrument transformers, the cases and other exposed bare metal parts which are insulated from the current carrying parts shall be grounded. The grounding conductor shall be not less than No. 12. If exposed to higher voltages through transformer windings or otherwise, secondary circuits of current and potential transformers of less than 750 volts shall be isolated or grounded unless placed in grounded conduit or other suitable duct, or identified and guarded as required for conductors of the highest voltage to which they are exposed. When a grounding conductor is used it shall be not smaller than the conductor of the secondary circuit.

l. Sections of conduit, armored cable, metal raceways or other equipment shall be bonded together and the whole grounded, or each section shall be separately grounded. Equipment in the immediate vicinity of gas pipes shall be bonded thereto. This requirement shall not apply to service runs or to isolated lengths of conduit, armored cable or metal raceway not exceeding 25 feet, provided the runs are free from metallic contact with the ground and adjacent grounded metal and are guarded when within reach from grounded surfaces.

m. The conductor used for grounding a circuit wire may be used also for grounding equipment, conduit, armored cable, metal raceway and the like where the inspection department has granted permission and the secondary system is grounded at the service; otherwise, separate grounding conductors shall be used for grounding the circuit and for grounding the equipment, conduit, armored cable, metal raceway and the like.

906. Ground Connections.

a. Where a non-conductive protective coating, such as enamel, is provided for equipment, couplings and fittings, such coating shall be completely removed from threads and other surfaces in order to insure a good contact between ground clamp and equipment. Pipes or rods used to provide a ground shall be cleaned of rust, scale, paint, etc., at the point of attachment of the ground clamp. The connection and contact with the ground shall be permanent and effective, and shall always be made on a water piping system if one is available.

The protective grounding of electrical circuits and equipment to water piping systems, when performed in accordance with this article, should always be permitted, since such grounding offers the most efficient protection to life and property and is not injurious to the piping systems.

b. At supply stations, grounding conductors for circuits, equipment and lightning arresters shall be permanently and effectively connected to all available active, continuous, metallic underground piping systems between which no appreciable difference of potential normally exists; otherwise, to one system only. Elsewhere than at supply stations, the grounding conductor shall be connected to at least one such piping system, if available. Gas piping shall be avoided wherever practicable, except as provided in paragraph c of this section. Where underground metallic piping systems are not available, other grounds, which will provide the desired permanence and conductance, may be permitted.

c. The point of connection to the piping system shall be located on the street side of water meters except where the conductor serves as a ground only for equipment, conduit, armored cable, metal raceway; and the like or as a multiple ground for an alternating current secondary. In these latter cases the point of connection may be located near the equipment to be grounded, and care shall be taken to keep the connection with the underground piping system continuous and permanent, by bonding all parts of the piping system which are liable to become physically disconnected, such as at meters and service unions, by means of a shunt consisting of two approved clamps and a conductor of the same size as the grounding conductor. Where practicable, the point of connection shall be in plain sight and readily accessible. When water meters are located outside of buildings or in pits within buildings where piping connections are under concrete or other substantial flooring, the ground connection may be made on the building side of the meters but as close to them as is practicable.

d. The ground conductor shall be attached to the pipe or rod (a) by means of an approved bolted clamp to which the conductor is soldered or otherwise connected in an approved manner, or (b) by means of a brass plug screwed into the pipe and provided with a lug to receive the conductor, or (c) by other approved means.

e. Gas piping systems within buildings shall be used as a ground only when water piping is not available, and then only for grounding equipment; provided, however, that gas piping may serve as the sole ground for small fixtures located at a considerable distance from water piping. Where gas piping is so utilized, it shall be bonded to the water piping system at their point of entrance. Gas piping need not be insulated from otherwise well grounded fixtures.

f. Rails or other grounded conductors of electric railway circuits shall not be used as a ground for other than railway lightning arresters and railway equipment, conduit, armored cable, metal raceway and the like when other effective grounds are available.

ARTICLE 10. ROTATING MACHINERY AND ITS CONTROL APPARATUS.

1001. General.

a. The frame, except for portable motors, shall be grounded if the machine operates at a potential in excess of 150 volts and is accessible to other than qualified persons. Grounding shall be performed in the manner prescribed in article 9 of this code. When the frame is not grounded, owing to the voltage being below 150 or the generator being accessible only to qualified persons or the motor being portable, the frame shall be permanently and effectively insulated from ground.

b. The frames of portable motors which operate at more than 150 volts shall be guarded or grounded.

It is recommended that the frames of portable motors which operate at less than 150 volts be grounded when this can be readily accomplished.

c. If terminal blocks are used, they shall be composed of approved non-combustible, non-absorptive insulating material, such as slate, marble or porcelain.

d. Soft rubber bushings may be used to protect lead wires where they pass through the frame, provided they will not be exposed to oils, grease, oily vapors or other substances having a deleterious effect on rubber. Where so exposed, bushings composed of porcelain, micanite or hardwood treated with a preservative shall be used.

1002. Generators.

a. Generators shall be located in dry places. They shall not be placed in a room where any hazardous process is carried on, nor where they will be exposed to inflammable gases or flyings of combustible materials.

It is recommended that waterproof covers be provided for use in an emergency.

b. Where wooden base frames or wooden floors serve to insulate frames from ground they shall be kept filled with moisture repellent and be kept clean and dry.

c. Direct current, constant potential generators, other than exciters for alternating current machines, shall be protected from excessive current by automatic cutouts of approved design; provided, however, that in central stations where the type of apparatus used and the nature of the system operated make protective devices inadvisable and unnecessary, their omission may be permitted by the inspection department. Single pole protection shall be accepted for 2-wire, direct current generators, if the protective device is actuated by the entire generator current and will completely open the generator circuit.

d. If a generator not electrically driven supplies a 2-wire grounded system, the protective device shall be so placed as to disconnect the generator from all wires of the circuit.

e. Two-wire, direct current generators, used in conjunction with balancer sets to obtain neutrals for 3-wire systems, shall be equipped with protective devices which will disconnect the 3-wire systems in the case of excessive unbalancing of voltages.

f. Three-wire, direct current generators, whether compound or shunt wound, shall be equipped with protective devices, one in each armature lead and so connected as to be actuated by the entire current from the armature. Such protective device shall consist either of a double-pole, double-coil, overload circuit-breaker, or of a 4-pole circuit-breaker connected in the main and equalizer leads and tripped by two overload devices, one in each armature lead. Such protective devices shall be so interlocked that no one pole can be opened without simultaneously disconnecting both leads of the armature from the system.

g. Where a generator and a transformer are intended to operate as a unit for stepping up or stepping down the voltage, and are both located in the same building, a protective device between them shall not be required.

h. Each generator shall be provided with a name-plate giving the maker's name, the rating in kilowatts, if direct current, or kilowatt amperes, if alternating current, the normal volts and amperes corresponding to the rating, and the revolutions per minute.

1003. Motors.

a. Motors shall not be operated in series-multiple or multiple-series except on constant-potential systems where permission has been granted by the inspection department.

b. Motors having brushes or sliding contacts exposed to combustible dust shall be located in separate dust-tight rooms or non-combustible housings provided with effective ventilation from a source of clean air.

c. In places where combustible dust is thrown into suspension in the air in sufficient quantity to produce explosive mixtures, such as in flour mills, grain elevators, etc., or where it is impracticable to prevent dust or flying material collecting in dangerous quantities on or in motors, all motors shall be either of the totally enclosed type or placed in separate dust-tight rooms or non-combustible housings. Such rooms or housings shall be effectively ventilated from a source of clean air.

d. Motors permanently located on wooden floors shall be provided with suitable drip pans, if so required by the inspection department.

e. Adjustable speed motors, if controlled by means of field regulation shall be so equipped and connected that they cannot be started under weakened field, unless this safeguard is incorporated in the design of the machine.

f. Each motor shall be provided with a name-plate giving the maker's name, the ratings in volts and amperes, the normal full-load speed and the interval during which it can operate, starting cold. The time interval given shall be either 5, 10, 15, 30, 60 or 120 minutes, or continuous.

g. Each motor with its starting device shall be controlled by an indicating switch so arranged that the opening of the switch will disconnect all ungrounded leads; provided, however, that this requirement shall not apply to crane motors, considered in article 30 of this code. The switch shall have a continuous duty rating at least equal to 110% of the motor name plate current rating. A double-throw switch used to shunt the motor protective device during the starting period shall be of such type that it cannot be left in the starting position. An automatic circuit-breaker which disconnects all ungrounded wires of the circuit may serve also as a switch. The switch and starting device shall be located within sight of the motor, unless permission to locate them elsewhere is given by the inspection department. A single pole switch may be used to control a 2-wire motor of not over ¼ horsepower operating at a potential not exceeding 300 volts.

h. The switch called for in the preceding paragraph may be omitted if the motor starting device disconnects all ungrounded wires of the circuit, except when auto-transformer starters are used. When auto-transformer starters are used a switch shall be provided on the supply

side of each auto-transformer starter or group of auto-transformer starters and shall be located within sight of the starter or starters controlled.

i. This switch may be of the disconnecting type if it is not intended to be operated under load and if it is so located or locked that it cannot be readily operated by unqualified persons.

j. Alternating current motors operating freight or passenger elevators or cranes that are dependent on phase relation for the direction of rotation shall be protected by approved automatic circuit-breakers (or reverse phase relays) operative in the event of any phase reversal that would cause a reverse motor rotation, or in the event of the motor being connected to the line single phase.

1004. Auto-transformer Starters.

a. Control apparatus, other than auto-transformer starters, shall conform to the requirements of article 17 of this code.

b. The coils and switches of auto-transformer starters used in places where combustible dust or flyings are liable to be present in the air in sufficient quantities to produce an explosive or flammable mixture shall be completely inclosed in a substantial dust proof metal case. All load carrying contacts of such switches shall be oil immersed unless inclosed in a dust-tight metal case.

c. Cases for coils or switches shall afford access to the interior for inspection and oil renewal, and shall be so constructed that when mounted on a plane surface the case will make contact with such surface only at points of support. An air space of at least 1/4 inch shall be maintained between case and surface.

d. The oil tank shall be marked in a suitable manner to indicate the proper oil level. When such device carries a visual oil indicator, the marking shall be for the proper oil level with the starter assembled. If the visual indicator is not used, markings shall indicate the oil level prior to assembling.

e. The switch shall provide an off position, a running position and at least one starting position. It shall be so designed that it cannot rest in a starting position, or in any position which will render inoperative the overload protective devices in the circuit.

ARTICLE 11. TRANSFORMERS: UNDER 600 VOLTS.

1101. Exception.

a. Nothing in this article shall be construed to apply to apparatus or fittings, the operation of which depends either wholly or in part upon special air-cooled transformers embodied in the devices; but all such apparatus or fittings shall be submitted for special examination and approval before being installed.

1102. General.

a. No oil-filled transformer shall be placed within any building other than a central station or a sub-station, except by permission of the inspection department; nor shall such a transformer be attached to a building except by permission of the inspection department and when separated therefrom by substantial supports.

Table 1. (See Article 1201 f.)

Spacings between Parts of Opposite Polarity and Break Distances within the area bounded by contact parts of the switch mechanism.

Voltage	Amps.	Spacing—Inches		Fuses	Marking
		Opposite Polarity	Break Distance		
125 V. DC or AC For switchboards and panelboards only	30	1	3/4	With or Without	—A.125V.
	60	1 1/4	1		
125 V. DC or AC	30	1 1/4	1	With or Without	—A.125V.
	60	1 1/2	1 1/4		
	100	1 1/2	1 1/4		
	200 and *300	2 1/4	2		
	400 and 600	2 3/4	2 1/2		
800 to 6000 incl.	3	2 3/4			
250 V. DC or AC	30	1 3/4	1 1/2	With or Without	—A.250V.
	60	2 1/4	2		
	100	2 1/4	2		
	200 and *300	2 1/2	2 1/2		
	400 and 600	2 3/4	2 1/2		
800 to 6000 incl.	3	2 3/4			
For both 250 V. DC and 500 V. AC	30	2 1/4	2	Without See also paragraph 270	—A.250V. DC, 500V. AC
	60	2 1/4	2		
	100	2 1/4	2		
	200 and *300	2 1/2	2 1/2		
	400 and 600	2 3/4	2 1/2		
800 to 6000 incl.	3	2 3/4			
500 V. A	Same as in IV			With	—A.500V. AC.
600 V. DC or AC	30	4	3 1/2	With or Without	—A.600V.
	60	4	3 1/2		
	100 to 6000 incl.	4 1/2	4		

*The 300-ampere switches, with spacings of the 200-ampere switches, may be used only on switchboards.

Triple-pole switches with 125-volt spacings between blades for use on three-wire systems having 125 volts between adjacent wires and not over 250 volts between outside wires shall be spaced as in II of Table 1 and be marked —A. 125V.

Triple-pole switches with 250-volt spacings between blades, for use on three-wire systems having 250 volts between adjacent wires and not over 500 volts between outside wires, shall be spaced as in III of Table 1, except 30-ampere fused switches to be spaced as in IV; they shall be marked —A. 250V. and if equipped with fuses, fuses shall be of the 600-volt classification.

b. No air-cooled transformer operating at a potential exceeding 600 volts shall be placed within any building other than a central station or a sub-station.

c. The construction of an air-cooled transformer shall be such that when mounted on a plane surface the casing will make contact with such surface only at the points of support, providing elsewhere an air space of at least 1/4 inch between casing and surface. If the surface is composed of combustible material, the air space shall be increased to at least 1 foot, unless a slab of non-combustible, non-absorptive insulating material is interposed.

This will require a slab of slate, marble or soapstone, somewhat larger than the transformer.

This section shall not be construed to apply to bell ringing and other signalling transformers, which operate at a primary voltage not exceeding 250 volts.

d. Transformer cases shall be grounded as provided in article 9 of this code.

ARTICLE 12. SWITCHES.

1201. Construction of Knife Switches.

a. A knife switch shall be deemed to be a switch having electrical connecting parts in the form of hinged or pivoted bars or blades and designed for manual operation.

b. Under the term knife switch shall be included single or multiple pole switches, either with or without fuse terminals, switches having individual bases designed for either front or rear wiring connections; also switch parts without separate bases intended for mounting on switchboards and panelboards.

c. Knife switches shall be plainly marked where the marking can be read after the switch is installed, with the current and the voltage for which the switch is designed. For switches of capacities above 1200 amperes, where the alternating current rating will generally be less than the direct current rating, the marking shall indicate the ampere rating definitely as A. C. or D. C. The frequency in cycles shall also be stated.

d. Pieces carrying or used to hold the break and hinge jaws shall be secured to the base or mounting surface in such a manner as to prevent possible turning.

e. The cross bar shall be secured to each blade in such a manner as to prevent turning and twisting.

f. The spacing given in Table 1 on page 341 and Table 2 below, shall be considered standard and as the minimum allowable, except as otherwise provided for in this article.

When Mounted on Same Surface	When Clear of Surface
Not over 125 V. 3/4 inch	1/2 inch
" " 250 V. 1 1/4 inches	3/4 "
" " 600 V. 2	1 "

It is recommended that switches above 1000 ampere capacity be not used to break currents, but only as disconnecting switches.

g. When fuse terminals are provided the spacings for such terminals shall conform to the requirements of article 8 of this code.

h. Switches rated above 600 amperes at 600 volts and 600 amperes at 250 volts, and therefore exceeding the capacities of standard sizes of cartridge enclosed fuses, may be arranged for fuses in multiple, provided as few fuses as possible are used, and the fuses are of equal capacity, and the multiple terminals for each pole are mounted in common.

i. Switches marked with the combined rating, 250 volts, D. C. or 500 volts, A. C. shall not be provided with fuse terminals.

j. Switches having fuse terminals and intended for use in ungrounded branch circuits shall have fuse terminals in each pole.

k. Auxiliary contacts of a renewable or quickbreak type or the equivalent shall be provided on all 600-volt switches designed for use in breaking currents from 200 to 1000 amperes, inclusive.

It is recommended that such auxiliary contacts be provided on all direct current switches rated at over 250 volts.

l. Barriers designed to be placed between the poles of switches and not located within the influence of the arc formed by the opening of the switch shall be of non-absorptive insulating material. Barriers placed between the poles of switches and located within the influence of the arc shall be of non-combustible, non-absorptive, insulating material.

m. Barriers designed to be placed between poles of switches at hinge jaws shall be of such size and so located as to provide a separation between contact parts measured in the shortest insulating surface path over the barrier equal to that required for switches without barriers, and to provide a separation between other current-carrying parts, as provided in paragraph f of this section.

n. Barriers placed between the poles of switches at the break jaws, and, therefore, located within the influence of the arc formed by the opening of the switch, shall be of such size and so located as to provide a separation between contact parts measured in the shortest path through air over the barrier equal to that required for switches without barriers.

o. Switches designed for double throw and having three or more poles, shall not have front-connected terminals for the hinge contacts of the inner poles unless standard switch spacings between adjacent live metal parts of opposite polarity are secured either by increased spacing between poles or by the use of barriers as provided for in paragraphs l, m and n, of this section.

1202. Installation of Switches; General.

a. Switches shall not be placed where exposed to mechanical injury nor in the immediate vicinity of easily ignitable material, nor be located in places where combustible dust or flyings are liable to be present in the air in sufficient quantities to produce an explosive or flammable mixture. When the occupancy of the building is such that the above conditions cannot be complied with, switches, circuit-breakers and similar devices, unless of the dust-tight, oil-immersed type shall be inclosed in approved metal boxes or cabinets and shall be of the externally operable type.

See article 32 for switches in extra hazardous locations.

b. Switches shall always be placed in dry, accessible places, and be grouped as far as possible.

c. Switches when located where exposed to moisture as in basements and similar places, shall be mounted in approved boxes or cabinets, and when located in wet places or outside buildings shall be mounted in approved weatherproof switch boxes or cabinets.

1203. Position and Connection of Knife Switches.

a. Single-throw knife switches shall be so placed that gravity will not tend to close them. Double-throw knife switches may be mounted so that the throw will be either vertical or horizontal as preferred, but if the throw be vertical a locking device shall be provided, so constructed as to insure the blades remaining in the open position when so set.

b. When practicable switches shall be so wired that blades will be dead when the switch is open.

It is recommended that up to 250 volts and thirty amperes, approved in-detecting snap switches, instead of knife switches, be used on lighting circuits.

1204. Number of Poles Required for Switches.

a. Single pole switches shall never be used as service switches, except as permitted in section 405 of this code, nor be placed in any neutral or grounded wire. Three-way and four-way switches shall be classed single-pole switches and shall be so wired that only one pole of the circuit will be carried to the switch.

b. On constant potential circuits, all service switches and all switches controlling circuits supplying current to motors or heating devices, unless otherwise provided in this code, shall be so arranged that the opening of the switch will disconnect all the ungrounded wires.

c. Where a circuit-breaker serves as a switch, it shall conform to the requirements of this section as to the number of poles.

1205. Mounting of Snap Switches and Flush Switches.

a. Surface mounted snap switches shall be supported at outlets when possible by 3/4-inch blocks, fastened between studs flush with back of lath, except when approved fittings or outlet boxes which will give proper support are used. When this cannot be done, base blocks not less than 3/4 inch in thickness securely screwed to the lathing shall be provided.

b. Sub-bases of non-combustible, non-absorptive insulating material, which will separate the wires at least 1/2 inch from the surface wired over, shall be installed under all snap switches used in exposed knob and cleat work. Sub-bases shall also be used in raceway work; but they may be made of hardwood or they may be omitted if the switch is approved for mounting directly on the moulding.

c. Where flush switches or receptacles are used, whether with conduit systems or not, they shall be enclosed in an approved switch or outlet box constructed of iron or steel, in addition to the porcelain enclosure of the switch.

1206. Special Types of Switches.

a. In central stations and sub-stations oil circuit-breakers and switches shall, wherever practicable, be isolated from other switches and electrical apparatus.

b. Time switches, sign flashers and similar appliances shall be of approved design and enclosed in approved cabinets.

ARTICLE 13. SWITCHBOARDS AND PANELBOARDS.

(This Article does not apply to switchboards or portions thereof used exclusively to control signal circuits operated by batteries, but does apply to the charging panels where current is taken from light or power circuits.)

1301. Switchboards: Location and Accessibility.

a. Switchboards shall be so placed as to reduce to a minimum the danger of communicating fire to adjacent combustible material.

b. Switchboard shall not be built up to the ceiling, a space of 3 feet being left, if possible, between the ceiling and the board. The space back of the board shall be kept clear of rubbish and shall not be used for storage.

c. Switchboards shall be accessible from all sides when the connections are on the back.

It is recommended that all switchboards be set out from the wall, but they may be placed against a brick or stone wall when the wiring is entirely on the face.

d. Switchboards shall be so located that they will not be exposed to moisture.

1302. Switchboards: Material and Wiring.

a. The bases of switchboards shall be made of non-combustible material.

b. Bus-bars, if rigidly mounted, may be of bare metal.

c. If the wiring is on the back, there shall be a clear space of at least 18 inches between the wall and the apparatus on the rear of board.

d. Insulated conductors where closely grouped as in rear of switchboards shall each have a substantial flameproof outer covering.

e. Flameproofing shall be stripped back on all conductors a sufficient distance from the terminals to give the necessary insulation for the voltage of the circuit on which the conductor is used.

f. In wiring switchboards, the ground detector, voltmeter, pilot lights and potential transformers shall be connected to a circuit that is protected by 15 ampere fuses. This circuit shall not carry over 660 watts.

g. On switchboards where instruments, meters, or relays operate with windings or working parts, at a potential of 150 volts or above to ground, the cases and other exposed bare metal parts of these devices insulated from the current carrying parts shall be grounded unless isolated by elevation or protected by suitable insulating barriers or guards or where inaccessible to other than qualified persons, in which case grounding is required only when the voltage exceeds 750. The grounding conductor shall be not less than No. 12. Where instruments, meters or relays are operated from current or potential instrument transformers, the cases and other exposed bare metal parts which are insulated from the current carrying parts shall be grounded. The grounding conductor shall be not less than No. 12. If exposed to higher voltages through transformer windings or otherwise, secondary circuits of current and potential transformers of less than 750 volts shall be isolated or grounded unless placed in grounded conduit or other suitable duct, or identified and guarded as required for conductors of the highest voltage to which they are exposed. When a grounding conductor is used it shall be not smaller than the conductor of the secondary circuit.

h. When instruments, meters or relays are operated from current or potential instrument transformers, the cases and other exposed bare metal parts which are insulated from the current carrying parts shall be grounded. The grounding conductor shall be not less than No. 12. If exposed to higher voltages through transformer windings or otherwise, secondary circuits of current and potential transformers of less than 750 volts shall be isolated or grounded unless placed in grounded conduit or other suitable duct, or identified and guarded as required for conductors of the highest voltage to which they are exposed. When a grounding conductor is used it shall be not smaller than the conductor of the secondary circuit.

When a grounding conductor is used it shall be not smaller than the conductor of the secondary circuit.

When a grounding conductor is used it shall be not smaller than the conductor of the secondary circuit.

When a grounding conductor is used it shall be not smaller than the conductor of the secondary circuit.

When a grounding conductor is used it shall be not smaller than the conductor of the secondary circuit.

When a grounding conductor is used it shall be not smaller than the conductor of the secondary circuit.

When a grounding conductor is used it shall be not smaller than the conductor of the secondary circuit.

When a grounding conductor is used it shall be not smaller than the conductor of the secondary circuit.

When a grounding conductor is used it shall be not smaller than the conductor of the secondary circuit.

When a grounding conductor is used it shall be not smaller than the conductor of the secondary circuit.

When a grounding conductor is used it shall be not smaller than the conductor of the secondary circuit.

When a grounding conductor is used it shall be not smaller than the conductor of the secondary circuit.

When a grounding conductor is used it shall be not smaller than the conductor of the secondary circuit.

When a grounding conductor is used it shall be not smaller than the conductor of the secondary circuit.

When a grounding conductor is used it shall be not smaller than the conductor of the secondary circuit.

When a grounding conductor is used it shall be not smaller than the conductor of the secondary circuit.

When a grounding conductor is used it shall be not smaller than the conductor of the secondary circuit.

When a grounding conductor is used it shall be not smaller than the conductor of the secondary circuit.

When a grounding conductor is used it shall be not smaller than the conductor of the secondary circuit.

When a grounding conductor is used it shall be not smaller than the conductor of the secondary circuit.

When a grounding conductor is used it shall be not smaller than the conductor of the secondary circuit.

When a grounding conductor is used it shall be not smaller than the conductor of the secondary circuit.

When a grounding conductor is used it shall be not smaller than the conductor of the secondary circuit.

When a grounding conductor is used it shall be not smaller than the conductor of the secondary circuit.

When a grounding conductor is used it shall be not smaller than the conductor of the secondary circuit.

are used, the spacings shall be at least as great as those prescribed in articles 8 and 12 respectively, of this code.

The spacings given in the second column shall apply to the distance between the raised main bars and between these bars and the branch bars over which they pass.

It should be noted that the above distances are the minimum allowable, and it is recommended that greater distances be adopted wherever the conditions will permit.

ARTICLE 14. FIXTURES, LAMP SOCKETS AND RECEPTACLES, PLUG RECEPTACLES AND OTHER OUTLET DEVICES.

1401. Construction of Fixtures.

a. Fixtures shall be composed of metal or wood, or such other material as may have been submitted for examination and approved. Materials other than metal shall be reinforced by metal or the fixtures shall be otherwise constructed to secure the requisite mechanical strength.

b. In all fixtures not made entirely of metal, wireways shall be lined with metal unless approved armored conductors with suitable fittings are used. This requirement shall not apply to wireways in glass, marble or similar non-absorptive, non-combustible insulating materials.

c. All methods of fastening arms, sockets, bodies, supports, and receptacles by threading, soldering, brazing or otherwise, shall be such as to secure in every case ample strength and reliability, and to prevent turning. Screw joints shall have not less than five threads engaging. Tubing used in making threaded arms and stems shall be composed of metal having a thickness not less than .04 inch. It shall not be kinked, flattened or cracked.

d. All burrs and fins in wireways shall be removed and all sharp edges rounded, where practicable, so that wires may be drawn in and withdrawn without injury. Fittings having smooth, rounded edges, shall be placed at entrance to casings of fixture stems.

e. Fixtures exposed to moisture, whether located indoors or outdoors, shall be so constructed that water cannot enter the wireways, sockets or other electrical parts.

f. Fixture studs which are not parts of outlet boxes, hickeyes, tripods and crowfeet shall be made of malleable iron or other approved material.

g. All fixtures shall, where practicable, be sufficiently ventilated. All forms of fixtures in which the wiring is liable to be exposed to temperatures in excess of 120 degrees F. (49 degrees C.) shall be so designed or ventilated and installed as to operate at temperatures which will not cause deterioration of the wiring.

h. Canopies and outlet boxes or plates shall, taken together, provide ample space for the reception of the wires and their connecting devices.

i. Receptacles having exposed terminals shall not be placed in canopies unless completely enclosed in metal.

j. Canopy insulators, used where insulating joints are required, shall be of approved type and shall be securely fastened in place, so as to separate the canopies effectively and permanently from the conducting surfaces from which they are intended to be insulated.

A strip of a good grade of hard fiber, 1/8 inch in thickness, securely attached to the canopy at the ends and at intermediate points in such a manner that the strip will extend at least 3/8 inch beyond the upper edge of the canopy rim, will be accepted. Where this is impracticable, a flat sheet of said fiber, cut to conform to the general outline of the canopy and having the edges of the sheet at least flush with the edges of the canopy may be employed, if permanently attached to the canopy.

k. Insulating joints shall be composed of materials especially approved for the purpose. Those which are not designed to be mounted with screws or bolts shall have a substantial exterior metal casing, insulated from both screw connections.

1402. Wiring of Fixtures.

a. No conductor shall be smaller than No. 18. On chains or other movable parts stranded conductors shall be used, unless the wires are completely enclosed in metal. Where the fixture is externally wired, wires shall be secured in a manner which will not tend to cut or abrade the insulation, and shall be protected from abrasion where they pass through sheet metal pans, canopies, etc. No splice or tap shall be located within an arm or a stem.

It is recommended that approved splicing devices or approved plug connections be used for attaching the fixture wires to the circuit wires.

b. Each fixture shall be so wired that all screw shells of sockets are connected to the same fixture stem wire or supply wire or terminal. A fixture stem wire or supply wire connected to the screw shells of sockets shall be identified by means of a white or natural gray covering, or by means of a tracer thread contrasting with the color of the covering, or by means of a band of paint contrasting with the color of the covering and located as near as possible to the point where the wire leaves the fixture. If a white or natural gray covering is employed the covering of all other fixture stem or supply wires in the fixture shall be of a contrasting color. If a tracer thread is employed there shall be no such thread in the covering of any other fixture stem or supply wire. A terminal attached to the screw shells of sockets shall be marked in the manner specified in section 206 e to n of this code.

It is recommended that the wire connected to the screw shells be identified by means of a white or natural gray covering.

c. Chain fixtures shall be wired with flexible conductors so arranged that the weight of the fixture will not put tension on the conductors.

d. Approved fixture wire, approved flexible cord or approved rubber-covered wire shall be employed, unless the wiring is exposed to temperatures in excess of 120 degrees F. (49 degrees C.) in which case conductors having slow-burning or other heat-resisting covering shall be used. Fixtures intended for outdoor use shall be wired with approved rubber-covered conductors. Wires shall always be so disposed as to avoid exposure to high temperatures as far as practicable. Fixtures intended for use in rooms where inflammable gases may exist shall consist of rigid stems, internally wired with approved rubber-covered conductors, soldered directly to the circuit, and shall be equipped with vaportight globes.

e. Fixture wires or the individual conductors of flexible cords used where the voltage between any two conductors or between any conductor and the ground is over 300 volts, shall have insulation at least 3/64 inch in thickness for sizes No. 8 and smaller, unless Type S cord is used.

f. Wires of different systems shall not be contained in or attached to a fixture; nor shall electric gas lighting wiring, other than for the frictional system, be attached thereto.

g. All wiring shall be free from short circuits and grounds, and shall be tested for these defects prior to being connected to the circuit.

1403. Installation of Fixtures.

a. Straight electric fixtures shall be grounded except as described in 1 and 2 below.

1. Fixtures mounted on metal ceilings or side walls, or on walls or ceilings containing metal lathing, shall be grounded or shall be insulated from their supports by approved insulating joints or by ap-

When Mounted on the Same Surface	When Held Free in Air
Not over 125 volts 3/4 inch	1/2 inch
" " 250 " 1 1/4 inches	3/4 "
" " 600 " 2 "	1 "

At switches or enclosed fuses, parts of the same polarity may be placed as close together as convenience in handling will allow.

At link fuses at not over 125 volts the spacings between parts of the same polarity shall be not less than 1/2 inch and at not over 250 volts, not less than 3/4 inch.

These spacings are intended to prevent the melting of a link fuse by the blowing of an adjacent fuse of the same polarity.

The spacings given in the first column shall apply to the branch conductors where enclosed fuses are used. Where link fuses or knife switches

proved insulating fixture supports, and canopy insulators shall be used.

2. Fixtures in open wiring, knob-and-tube work or wooden raceways and not on metal ceilings or side walls nor on plaster walls or ceilings containing metal lathing need be neither grounded nor insulated.

b. Fixtures shall be considered as grounded when mechanically connected in a permanent and effective manner to metal conduit, armored cable or metal raceway systems or to a separate grounding wire not smaller than No. 14, or to gas piping which is grounded in the manner specified in Article 9 of this code.

c. Combination gas and electric fixtures shall be insulated from their supports by approved insulating joints, placed as close as possible to the ceiling or wall, and canopy insulators shall be used.

d. Fixtures having so-called flat canopies, tops or back shall not be installed where outlet plates are used.

It is recommended that for all sidewall and partition outlets in concealed work in new buildings under construction outlet boxes having a depth of approximately 1½ inches be used.

e. No externally wired fixture shall be located in the immediate vicinity of especially inflammable material; nor shall any externally wired fixture other than of the chain type be placed in a show window. Armored cord pendants shall be considered to be internally wired fixtures.

f. Where a gas pipe, outlet box, plate or other fitting which will provide proper support is required by this code or is present, the fixture shall be attached thereto; otherwise the fixture shall be attached to a ¾-inch block fastened between studs or floor timbers and flush with the back of the lathing, or if this method can not be employed a wooden base block not less than ¾ inch in thickness shall be provided.

g. Gas pipes shall be covered with insulating tubing back of the insulating joint or blind hickey. Where outlet tubes are used, they shall be of sufficient length to extend beyond the joint or hickey, and shall be firmly secured in place.

h. Fixtures shall be so installed that the connections between the fixtures and the branch circuit wires will be easily accessible for inspection without requiring the disconnecting of any portion of the wiring, unless the fixture is attached by an approved plugging device.

1404. Lamp Sockets and Receptacles.

a. Lamp holding devices shall be classed according to diameters of lamp bases, as candelabra, medium and mogul base, to be known respectively as ½-inch, 1-inch and 1½-inch nominal sizes, with ratings as specified in the table following this paragraph. Switched sockets shall be of such construction that the switching mechanism interrupts the electrical connection to the center contact. The switching mechanism shall not interrupt the electrical connection to the screw shell unless connection to the center contact is simultaneously interrupted. This requirement shall become effective September 1, 1926.

Class	Nominal Diam.	Key			Keyless		
		Watts	Volts	Max. amp. at Any Voltage	Watts	Volts	Max. Amp. at Any Voltage
		75	125	2½	75	125	1
Candelabra	½ in.	250	250	2½	660	250	6
Medium	1 in.	(a)	660	250	660	600	6
		(b)			1500	250	
Mogul	1½ in.				1500	600	

(a) This rating may be given only to sockets having a switch mechanism which produces both a quick "make" and a quick "break" action.

(b) Ratings to be assigned later, pending further discussion with manufacturers.

Miniature sockets and receptacles having screw shells smaller than the candelabra size may be used for decorative lighting systems, Christmas tree lighting outfits, and similar purposes.

For exceptions for medium base key sockets and receptacles see Article 40, Small Isolated Plants.

It is recommended that 660-watt sockets and receptacles be used wherever the attachment of flexible cords thereto is likely.

Receptacles for attachment plugs (appliance and convenience outlets) are strongly recommended in order to facilitate the use of electrical appliances which, otherwise, must be connected to sockets designed primarily only as lamp holders.

b. The inside of metal shells shall be lined with insulating material, which shall absolutely prevent the shell from becoming a part of the circuit, even though the wires inside the sockets should become loosened or detached from their position under the terminal screws.

c. The lining shall not extend beyond the metal shell more than ¼ inch, but shall prevent any current-carrying part of the lamp base from being exposed when a lamp is in the socket.

d. The cap shall be lined.

In sockets and receptacles of standard forms a ring of any material inserted between an outer metal shell of the device and the inner screw shell for insulating purposes and separable from the device as a whole, is considered an undesirable form of construction. This does not apply to the use of rings in lamp clusters or in devices where the outer shells is of porcelain, where such rings serve to hold the several porcelain parts together, and are thus a necessary part of the whole structure of the device.

e. The socket as a whole shall be so put together that parts will not rattle loose or fall apart under the most severe conditions they are likely to meet with in practice. The base of the socket shall be secured or held in the shell in such a manner as to prevent turning or displacement relative to the shell.

f. Lead wires furnished as a part of sockets and intended to be exposed after installation shall be of approved stranded, rubber-covered wire, not less than No. 14 gauge (No. 18 gauge for candelabra sockets), and shall be sealed in place.

g. If the socket is not attached to a fixture, the inlet shall be equipped with an approved insulating bushing which, if threaded, shall be not smaller than ¾ inch in size. The edges of bushings shall be rounded and all inside fins removed in order to provide a smooth bearing surface for the wire.

It is recommended that bushings having holes ½ inch in diameter be employed with plain pendant cord, and holes ⅝ inch in diameter with reinforced cord.

h. In places where combustible dust or flyings are liable to be present in the air in sufficient quantities to produce an explosive or inflammable mixture, dust-tight fixtures enclosing lamps and sockets shall be used. Such fixtures shall be supported by conduit hangers or chains to prevent any strain on the wires. Where rubber-covered wire is used it shall have insulation not less than 3/64 inch thick.

i. Sockets and receptacles installed over specially inflammable material shall be of the keyless type and, unless individual switches are provided, shall be located at least 7½ feet above the floor, or shall be otherwise so located or guarded that the lamps cannot readily be backed out by hand.

j. When necessary to prevent portable lamps from coming into contact with inflammable materials, or to protect them from breakage, their flexible cord leads shall be equipped with handle, socket and substantial guard, the guard being securely attached to socket or handle.

k. Weatherproof sockets, especially approved for the location, shall be employed in damp or wet places or where corrosive vapors exist. If not attached to fixtures, they shall be hung from separate stranded wires not less than No. 14 which are soldered directly to the circuit wires but supported independently thereof.

It is recommended that these wires be twisted together, if the pendant is longer than 3 feet.

l. Receptacles shall be supported in the same manner as specified for fixtures in section 1403-f of this code.

m. Flush receptacles shall be enclosed in approved metal boxes in addition to the insulating enclosure of the receptacle mechanism.

n. Attachment plugs and receptacles located in floors shall be enclosed in approved metal boxes especially designed for the purpose. Where the location is free from mechanical injury or moisture, a departure from this requirement may be permitted by the inspection department.

o. Receptacles of the Edison base type shall be located not less than four feet from the floor unless for use only as lamp holding devices.

1405. Rosettes.

a. When designed for use with exposed wiring, rosettes shall be provided with bases which shall have at least 2 holes for supporting screws, shall be high enough to keep the wires and terminals at least ½ inch from the surface wired over, and shall have a porcelain lug under each terminal to prevent the rosette being placed over projections which would reduce the separation to less than ½ inch.

b. When designed for use with conduit boxes or wire raceways, rosette bases shall be high enough to keep wires and terminals at least ¾ inch from the surface wired over.

c. Fuseless rosettes shall be rated at 660 watts, 250 volts, with a maximum current rating of 6 amperes.

d. Fused rosettes shall not be used.

ARTICLE 15. LAMPS.

1501. Arc Lamps.

a. Arc lamps shall be equipped only with such resistances or regulators as are enclosed in non-combustible cases, said resistances or regulators being treated as sources of heat. An incandescent lamp shall not be used as resistance or regulator. Economy and compensator coils shall be mounted on non-combustible, non-absorptive insulating supports, such as glass or porcelain, providing an air space of at least 1 inch between frame and support. Such coils shall generally be treated as sources of heat.

b. Arc lamps shall be equipped with globes and spark arresters. The globe shall be guarded by a wire netting having a mesh not exceeding 1¼ inches. The globe, netting and spark arrester shall not be required where the lamp is of enclosed arc type.

c. Outdoor arc lamps shall be suspended at least 8 feet above the sidewalk. Indoor arc lamps shall be hung out of reach, or be suitably protected.

d. Leads to arc lamps shall have a current carrying capacity approximately 50 per cent. in excess of the normal current of the lamp. If the leads are larger than No. 14 and the lamp suspension provides for raising and lowering, the leads shall be composed of stranded wires.

e. There shall be provided a cutout for each lamp or series of lamps.

1502. Mercury Vapor Lamps.

a. Enclosed mercury vapor lamps shall be equipped with only such resistances or regulators as are enclosed in non-combustible cases, such resistances or regulators being treated as sources of heat. Where these resistances or regulators are subject to flyings of lint or combustible material, all openings in their casings shall be covered by fine wire gauze.

b. A cutout shall be provided for each enclosed mercury vapor lamp or series of lamps, except where not more than five lamps are contained in a single frame and lighted by a single operation. By permission of the inspection department, lamps may be so grouped that not more than 4000 watts will be dependent upon one cutout.

c. Fixtures carrying enclosed mercury vapor lamps shall be wired with insulated conductors not smaller than No. 12. Taps from circuit wires to points of suspension of fixtures shall not exceed 18 inches in length.

1503. Gas-filled Incandescent Lamps.

a. Gas-filled incandescent lamps shall not be equipped with medium bases if above 250 watts rating, nor with mogul bases if above 1500 watts rating. They shall not be located in show windows nor where liable to contact with inflammable material unless installed in approved fixtures equipped with shades or guards or suitably designed to operate at a safe temperature.

b. Indoor fixtures carrying gas-filled incandescent lamps shall be wired with conductors having approved heat-resisting insulation. Outdoor fixtures shall be wired with conductors having approved rubber covering.

ARTICLE 16. ELECTRICALLY HEATED APPLIANCES.

1601. Exception.

a. This article shall be construed to apply only to electrically heated appliances intended for use on circuits operating at a potential exceeding 50 volts.

1602. General.

a. Each electrically heated appliance shall be provided with a name plate, giving the maker's name and the normal capacity in volts and amperes or in volts and watts.

b. Each smoothing iron, sad-iron and other portable electrically heated appliance, which is intended to be applied to combustible material, shall be equipped with an approved stand.

It is strongly recommended that each such electrically heated appliance or group of electrically heated appliances be used with an approved signal or with an approved protective device.

c. Wires supplying smoothing irons, sad-irons and all portable electrically heated appliances requiring more than 250 watts shall conform to the requirements for heater cord, as prescribed in section 603, article 6 of this code. Wires supplying stationary electrically heated appliances shall conform to the requirements for rubber-covered wire, as prescribed in section 602, article 6 of this code; provided, however, that heat-resisting covering shall be used in place of rubber where wires outside the terminal box are subjected to a temperature in excess of 120 degrees F. (49 degrees C.)

d. Electrically heated appliances each of 6 amperes or 660 watts or less may be used on branch lighting circuits. Electrically heated appliances each of 1320 watts or less may be grouped on a separate branch circuit equipped only with approved plug receptacles and not with lamp sockets. This separate branch circuit shall be protected by fuses having a rated capacity not greater than 15 amperes.

c. Each complete electrically heated appliance, whether containing one or more heating elements which is of more than 1320 watts total capacity shall be supplied by a separate branch circuit and shall be controlled by an indicating switch readily accessible, which switch shall disconnect all ungrounded wires supplying the appliance.

f. Switches controlling the individual units of electric ranges, etc., shall not be considered as taking the place of the switch required by paragraph e of this section, but an approved attachment plug and receptacle may serve in lieu of the switch.

g. Portable electrically heated appliances having a capacity not exceeding 6 amperes or 660 watts may be connected individually to lighting circuits.

h. Subdivided circuits of electrically heated appliances need not be separately fused, but individual heating elements of such electrically heated appliances shall be fused if they are rated at more than 30 amperes.

i. Each portable electrically heated appliance shall be equipped with an approved plug connector so designed that the plug may be pulled out to open the circuit without leaving any live parts so exposed as to render likely accidental contact therewith. The connector may be located at either end of the flexible conductor or inserted in the conductor itself.

1603. Stationary Electrically Heated Appliances.

a. Each electrically heated appliance which is obviously intended by size, weight and service to be secured in a fixed position shall be so placed as to furnish ample protection between the appliance and adjacent combustible material.

b. Metal frames of stationary electrically heated appliances, operating on circuits above 150 volts to ground shall be grounded; provided, however, that where this is impracticable, grounding may be omitted by permission of the inspection department, in which case the frame shall be permanently and effectively insulated.

It is recommended that the frame be grounded in all cases.

c. Wires supplying stationary electrically heated appliances shall, if not in conduit, be so located as to be protected from mechanical injury and moisture.

It is recommended that conduit be employed.

ARTICLE 17. RESISTANCE DEVICES.

1701. Construction.

a. Rheostats, resistance boxes and equalizers intended for use in dusty or liny places or where exposed to flyings of combustible material shall be so constructed as to confine and quickly extinguish any arc or flame caused by the burning out of the resistive conductor and shall be equipped with dustproof face plates. For locations other than those above specified, these devices may be of any approved type.

b. Reactance coils shall be composed of non-combustible material, mounted on non-combustible bases and treated generally as sources of heat.

c. Condensers shall be provided with non-combustible cases and supports, and shall be installed in the manner provided for other apparatus operating with equivalent voltages and currents.

d. Resistance devices shall be so constructed that when mounted on a plane surface the casing will make contact with such surface only at the points of support, an air space of at least 1/4 inch being maintained between the casing and the surface.

e. The terminals of motor-starting rheostats shall be marked to indicate the part of the circuit to which each terminal is to be connected, as "line," "armature" and "field."

f. Fixed and movable contacts shall be so designed and so connected to the resistive conductor that there will be a minimum of arcing and consequent roughening of the contacts, even with careless handling or in the presence of dirt. In motor-starting rheostats, the point or plate on which the arm rests when in the starting position shall have no electrical connection with the resistive conductor.

g. Motor-starting rheostats shall be so designed that the contact arm cannot be left on intermediate segments. Such rheostats, if intended for use on direct current circuits, shall be equipped with automatic devices which will interrupt the supply before the speed of the motor has fallen to less than one-third its normal value.

h. Where insulated wire is used for connections between resistance elements and the contact device of a rheostat, except for motor starting service, the insulation shall be of the slow-burning type. For large rheostats and similar resistances where the contact devices are not mounted upon them the connecting wires having slow-burning insulation may be so arranged in groups that the maximum difference of potential between any two wires in any group shall not exceed 75 volts. Each group of wires shall either be mounted on non-combustible, non-absorptive insulators giving at least 1/2 inch separation from the surface wired over, or especially where it is necessary to protect the wires from mechanical injury, each group of wires may be encased in flexible tubing and placed in approved conduit, the flexible tubing extending at least 1 inch beyond the ends of the conduit.

1702. Installation.

a. Resistance devices shall be placed on a switchboard, or at a distance of at least 1 foot from combustible material, or shall be separated therefrom by a slab or panel of non-combustible, non-absorptive material, such as slate, soapstone or marble. This slab shall be somewhat larger in area than the resistance device and shall be secured in position by its own supports which shall be independent of those fastening the resistance device to the slab. Bolts which support the resistance device shall be countersunk at least 1/2 inch below the rear surface of the slab and shall be covered with insulating material. The slab shall have a thickness proportioned to the size and weight of the resistance device, in order to provide proper mechanical strength, and this thickness shall be not less than 1/2 inch.

b. Where exposed live parts of an auto-transformer starter are liable to accidental contact, a railing shall be placed around them.

1703. Lamp Resistances.

a. Where protective resistances are necessary in connection with automatic rheostats, incandescent lamps may be used, provided they do not carry or control the main current nor constitute the regulating resistance of the device.

b. When used as resistance, lamps shall be mounted in porcelain receptacles attached to non-combustible supports and shall be so arranged that they cannot have impressed upon them a voltage greater than that for which they are rated. They shall in all cases be provided with a name plate, which shall be permanently attached beside the porcelain receptacle or receptacles and stamped with the wattage and voltage of the lamp or lamps to be used in each receptacle.

c. Incandescent lamps may be used for the purpose of resistances in series with other devices, by permission of the inspection department and

when mounted in porcelain receptacles upon non-combustible supports and when so arranged that they cannot have impressed upon them a voltage greater than that for which they are rated.

ARTICLE 18. STORAGE OR PRIMARY BATTERIES.

1801. General.

a. Wiring and appliances supplied by storage or primary batteries shall be subject to the general requirements of this code which apply to wiring and appliances fed from generators developing the same difference of potential.

For battery installations for small isolated plants of less than 50 volts, see article 40 of this code.

1802. Special Requirements.

a. The battery room shall be thoroughly ventilated.

b. Wiring shall be exposed, and shall be installed in accordance with the requirements of section 501 of this code, except that in battery rooms, varnished cloth or tape insulations on conductors shall not be permitted.

c. Storage batteries shall be mounted on non-absorptive, non-combustible insulators, such as glass or thoroughly vitrified glazed porcelain.

d. Metal susceptible to corrosion unless suitably protected against attack from acid or acid spray, shall not be employed in the cell connections of storage batteries.

ARTICLE 19. LIGHTNING ARRESTERS.

1901. In Stations.

a. A lightning arrester shall be connected to each overhead wire entering a station.

b. Lightning arresters shall be located in readily accessible places, away from combustible materials and as near as practicable to the point where the wires enter the station.

c. Lightning arresters shall be well isolated from other equipment and, if of the oil-filled type, shall be placed in a fireproof room or compartment.

d. Lightning arresters shall be grounded as provided in article 9 of this code.

e. All choke coils, or other attachments inherent to the lightning protection equipment, shall have an insulation from the ground or other conductors at least equal to the insulation required at the points of the circuit in the station.

f. Kinks, coils and sharp bends in the wires between arresters and outdoor lines shall be avoided as far as practicable.

1902. Radio Equipment.

See article 37.

1903. Signal Systems.

See article 60.

1904. Grounding.

See section 903.

ARTICLE 30. CRANES AND HOISTS.

3001. General.

a. The requirements of this article shall be deemed to be additional to, or amendatory of, those prescribed in articles 1 to 19, inclusive, of this code.

3002. Wires.

a. Wires, other than bare collector wires, shall be of approved rubber-covered or of approved slow-burning type.

b. Rubber-covered wire shall be not smaller than No. 12.

c. Slow-burning wire shall be employed only between resistance and contact plates of rheostats or where exposed to severe external heat. Wires between resistances and contact plates shall conform to the requirements of section 1701, paragraph h, of this code, except that such wires, if exposed to moisture, shall be of the rubber-covered type.

3003. Installation of Wires.

a. Exposed wiring, other than collector wires, shall be supported 1 inch from the surface wired over, 2 1/2 inches apart for voltages up to 300, and 4 inches apart for voltages between 301 and 600; provided, however, that in dry places where space is limited, each wire may be separately encased in approved flexible tubing securely fastened in place.

3004. Collector Wires.

a. Collector wires shall be secured at the ends by means of approved strain insulators, and shall be so mounted on approved insulators that the extreme limit of displacement of the wire will not bring the latter within less than 1 1/2 inches from the surface wired over.

b. Main collector wires carried along runways shall be rigidly and securely attached to insulating supports placed at intervals not exceeding 20 feet. When run horizontally, such wires shall be separated not less than 6 inches; when run otherwise, not less than 8 inches. Where necessary, intervals between insulating supports may be increased up to 40 feet, the separation between wires being increased proportionately.

c. Bridge collector wires shall be kept at least 2 1/2 inches apart and, where the span exceeds 80 feet, insulating saddles shall be placed at intervals not exceeding 50 feet.

It is recommended that the distance between wires be greater than 2 1/2 inches, where practicable.

d. Sizes of collector wire shall conform to the following table:

Distance Bet. Rigid Supports	Size of Wire
0—30 Feet	No. 6
31—60 "	" 4
Over 60 "	" 2

3005. Collectors.

a. Collectors shall be so designed as to reduce to a minimum the sparking between them and the collector wire.

3006. Switches and Cutouts.

a. The main collector wires shall be protected by a cutout and the circuit shall be controlled by a switch. The cutout and switch shall be so located as to be readily accessible from the floor.

b. Where cranes are operated from cabs, the cutout and switch specified in paragraph a of this section shall be inserted in the leads from the main collector wires, and shall be so located in the cab as to be readily accessible to the operator.

c. Where more than one motor is employed on a crane, each motor with its leads shall be separately protected by a cutout in accordance with the provisions of articles 8 and 10 of this code; provided, however, and are controlled as a unit by one controller, the pair of motors with their leads may be protected by a single cutout. This cutout shall be located in the cab if there is one.

3007. Controllers.

a. If the crane operates over readily combustible material, the resistances shall be placed in a well ventilated cabinet composed of non-combustible material, so constructed that it will not emit flame or molten metal.

If the resistances are located in a cab, this requirement may be met by constructing the latter of non-combustible material enclosing the sides of the cab from the floor to a point at least 6 inches above the tops of the resistances.

3008. Grounding.

a. Motor frames, tracks and the entire frame of the crane shall be grounded as prescribed in article 9 of this code.

ARTICLE 31. ELEVATORS.**3101. General.**

a. The requirements of this article shall be deemed to be additional to, or amendatory of, those prescribed in articles 1 to 19, inclusive, of this code.

3102. Wires and Cables.

a. The flexible or traveling cables of the operating and lighting circuits shall be of approved rubber-covered types, and shall have a substantial flameproof outer covering. They may be run in properly bushed approved conduit where attached to the car, or may be run exposed and attached directly to the outer surface of the car extending thence to switches or fixtures within the car.

b. Conductors for lighting cables shall be not smaller than No. 14, and for control cables not smaller than No. 16.

c. Conductors, other than lighting and control cables, where located in shafts shall be encased in approved conduit or armor. Split tees and elbows may be used on conduit work except where the pipe contains feeders.

d. Signal wires, other than those receiving energy from primary batteries or approved bell transformers, shall be encased in approved conduit equipped with approved terminal bushings having an individual outlet hole for each wire.

e. The wires of motor circuits between motors and control panel may be grouped together without any extra insulation of the separate wires, provided the complete group is either taped or corded and painted in a manner to make same a rigid, self-supporting form, not over 3 feet long and not in a position liable to mechanical damage or subject to a temperature in excess of 120 degrees F. (49 degrees C.)

f. All wires between main circuit resistances and the back of control panels shall each have a flameproof outer covering as prescribed in section 1701, paragraph h, of this code. All other wiring on control panels may be of the rubber-covered type, provided the wires are laid flat against the panel and held in such a manner as to be immovable and free from mechanical injury, and are not subjected to a temperature exceeding 120 degrees F. (49 degrees C.)

In a few cases it may be necessary to bunch wires of the operating circuit on the rear of the control panel. This is permitted, provided the wires are taped, and painted with an insulating paint.

3103. Switches.

a. A switch disconnecting all ungrounded wires of the motor circuit shall be located within sight of the motor, unless permission to locate it elsewhere is given by the inspection department.

b. In garages, hatch limit switches and other spark-emitting devices shall be placed at least 4 feet above the line of the lowest floor level.

3104. Grounding.

a. Conduit or armored cable attached to elevator cars need not be grounded.

b. Motor and motor generator sets mounted on metal beams which form part of the structural metal frame of a building shall be deemed to be grounded.

c. The shifting cable need not be grounded if provided with approved strain insulators.

ARTICLE 32. EXTRA-HAZARDOUS LOCATIONS.**3201. General.**

a. Extra-hazardous locations shall comprise rooms or compartments in which highly inflammable gases, liquids, mixtures or other substances are manufactured, used or stored in other than original containers.

b. The requirements of this article shall be deemed to be additional to, or amendatory of, those prescribed in articles 1 to 19, inclusive, of this code.

Service equipment, section 406, par. a.
Fuses and circuit-breakers, section 805, par. h.
Motors and control, section 1003, par. c; section 1004, par. b.
Switches, section 1202, par. a.
Lamps and receptacles, section 1404, par. h, i and j.
Resistance devices, section 1701, par. a.

3202. Wiring.

a. Armored cable or conduit shall be employed as the wiring method.

3203. Enclosure of Lamps and Devices.

a. Lamps shall be inclosed in guarded vapor-proof globes.

b. Devices and apparatus which tend to create sparks or arcs and thus ignite the highly inflammable contents shall not be placed in extra-hazardous locations unless such devices and apparatus are of the totally enclosed type, especially approved for the location.

3204. Special Precautions.

a. Switches and motors shall not be located under any hood or in any vent pipe.

ARTICLE 33. GARAGES.**3301. General.**

a. The requirements of this article shall be deemed to be additional to, or amendatory of, those prescribed in articles 1 to 19 inclusive, of this code.

b. A garage shall be deemed to be a building or portion of a building in which one or more self-propelled vehicles carrying volatile, inflammable liquid for fuel or power are kept for use, sale, storage, rental, repair, exhibition or demonstration purposes, and all that portion of a building which is on or below the floor or floors on which such vehicles are kept and which is not separated therefrom by tight, unpierced fire walls and fire resistive floors.

3302. Wiring.

a. Where floor area is sufficient to permit the storage of more than two vehicles, approved conduit or approved armored cable shall be employed as the wiring method; provided, however, that approved metal moulding may be employed in offices and show rooms. Where the floor space will accommodate not more than two vehicles, any approved wiring method may be employed.

b. Outlet and junction boxes shall be located at least 4 feet above the floor.

c. A approved reinforced cord shall be used for pendant lamps.

3303. Portables.

a. Approved portable cord designed for rough usage, such as hard service cord, stage cable or packinghouse cord, shall be used to connect portable lamps, motors or other appliances. The portable cord shall carry the male end of an approved pin-plug connector, or equivalent, the female end being of such design or so hung that the connector will break apart readily at any position of the cable. The connector shall be kept at least 4 feet above the floor.

b. Portable lights shall be equipped with approved keyless sockets of moulded composition or metal-sheathed porcelain type, the socket being provided with handle, hook and substantial guard.

3304. Charging Cables.

a. Approved stage cable shall be used for charging purposes.

b. Connectors shall be of approved type and of at least 50 amperes capacity, and shall be so designed or so hung that at least one will break apart readily at any position of the cable. Live parts shall be guarded from accidental contact. The fixed, or wall, connector shall be kept at least 4 feet above the floor and, if not located on a switchboard or charging panel, shall be guarded from accidental contact.

3305. Switchboards and Charging Panels.

a. Where spark producing devices are not located at least 4 feet above the floor, or placed in vaporproof enclosures, switchboards and charging panels shall be located in a room or inclosure provided for the purpose.

3306. Generators and Motors.

a. Generators or motors which do not actually form part of the vehicle equipment shall be of the totally enclosed type, or located at least 4 feet above the floor. When the motor is located more than 4 feet above the floor and is not of the totally enclosed type, it shall be equipped with wire screens of not less than No. 14 mesh, placed over openings at the commutator end.

3307. Special Precautions.

a. Cutouts, switches and receptacles shall be placed at least 4 feet above the floor. Cutouts and switches attached to portable apparatus shall be placed in approved cabinets.

b. Cutouts and switches shall be enclosed in approved boxes or cabinets unless placed on switchboards of charging panels in the manner prescribed in section 3305 of this code.

c. Hatch limit switches of elevators shall be located at least 4 feet above the lowest floor level.

ARTICLE 34. MOTION PICTURE STUDIOS.**3401. General.**

a. The requirements of this article shall be deemed to be additional to, or amendatory of, those prescribed in articles 1 to 19, inclusive, of this code.

b. A motion picture exchange, factory, laboratory or studio shall be deemed to be that building or portion of a building in which moving picture films are manufactured, exposed, developed, printed, rewound, repaired, stored, etc.

3402. Wiring.

a. Approved conduit, metal raceway or armored cable shall be employed as the wiring method.

b. Side wall lamp outlets shall consist of receptacles enclosed in approved outlet boxes equipped with open-end guards riveted to the covers of the boxes.

c. Pendant lamps shall be suspended by means of approved reinforced cord, armored cord or armored cable and shall be protected by substantial wire guards.

d. Each lamp portable shall be composed of approved hard service flexible cord, approved composition or approved metal-sheathed porcelain keyless socket, handle, hook and substantial guard. The cord shall carry the male end of an approved pin-plug connector or equivalent, the female end being of such design or so hung that the connector will break apart readily at any position of the cord. The connector shall be kept at least 1 foot above the floor.

e. At patching tables, approved composition or metal-sheathed porcelain keyless sockets shall be employed and shall be equipped with suitable means to guard lamps from mechanical injury.

f. In film-storage vaults lamps shall be installed on rigid fixtures and inclosed in vaporproof globes. Such lamps shall be controlled by a double pole switch, located outside the vault. Electric motors or portable lamps shall not be placed in the vault.

g. Motors shall be of the enclosed type. Rheostats shall be placed in cabinets which enclose all live parts, leaving only the operating handles exposed.

ARTICLE 35. MOTION PICTURE PROJECTORS AND EQUIPMENT.**3501. General.**

a. The requirements of this article shall be deemed to be additional to, or amendatory of, those prescribed in articles 1 to 19, inclusive, of this code.

b. The so-called professional types of projectors, such as are commonly used in theatres and motion picture houses, shall be located in fireproof booths.

The professional projector employs a film which is 1 3/4 inches wide and has on each edge 5.4 perforations per inch.

c. Projectors of the non-professional or miniature type, if employing only approved slow-burning (cellulose acetate or equivalent) film, may be operated without a booth.

3502. Projectors of Professional Type.

a. The arc lamp house shall be composed entirely of metal having a thickness not less than No. 24 U. S. sheet metal gauge (.025 inch) except where the use of approved insulating material is necessary. Details of construction shall conform to the requirements of section 1501 of this code. An incandescent lamp inclosure shall conform to the above requirements so far as may be practicable.

b. Wires not smaller than No. 4 shall be employed to supply the projector outlet.

c. Rheostats, transforming devices and any substitute therefor, shall be of types expressly designed and approved for the purpose. They shall be judged as component parts of the projector equipment as to installation and location.

d. Top and bottom magazines shall be so designed in some approved manner as to prevent the entrance of flame. No solder shall be used in their construction. The front side of each magazine shall consist of a door swinging horizontally and equipped with a substantial latch.

e. An automatic shutter shall be provided and permanently attached to the gate frame. The construction of the shutter shall be such as to shield the film from the beam of light whenever the film is not running at operating speed.

f. Motor-driven projectors shall be of a type expressly designed and approved for such operation. Such projectors shall be used only by permission of the inspection department, and when the projector is in charge of a qualified operator.

3503. Enclosures for Projectors of Professional Type.

a. The enclosure shall be constructed of suitable fireproof material, shall be properly lighted and shall be large enough to permit the operator to walk freely on either side of or back of the projector.

b. Ventilation shall be provided by means of a vent pipe having a cross-sectional area of not less than 78 square inches, and such vent pipe shall lead to the outside of the building or to a special non-combustible flue. The vent pipe shall be kept at least 1 inch from combustible material or separated therefrom by approved non-combustible, heat-insulating material not less than ½ inch in thickness.

c. Draft in vent pipe shall be maintained by an exhaust fan having a capacity of at least 50 cubic feet per minute. The fan motor shall be so installed that fumes passing through the flue cannot come in contact with it, shall be connected to the emergency service and shall not be controlled from the booth.

d. Openings in the enclosure shall be equipped with doors or shutters of fire-resisting material equivalent to that of the enclosure. Such door or shutter shall entirely close its opening, and shall be arranged to be held in the closed position by spring hinges or equivalent devices.

e. Rewinding of films shall be performed in the enclosure if practicable; otherwise, in a separate fireproof room provided for the purpose. Extra films shall be kept in individual metal boxes having tight-fitting covers. Reels carrying films under examination or in process of rewinding shall be enclosed in magazines or approved metal boxes similar to those of the projector, and not more than 2 feet of film shall be exposed.

f. A motor-generator installed in the projector enclosure shall have the commutator end or ends suitably protected from mechanical injury by wire screens or other suitable means.

3504. Projectors of Non-professional Type.

a. Motion picture projecting machines not intended for installation and use in permanent and ventilated booths shall be permitted only for projecting film of an approved slow-burning (cellulose acetate or equivalent) type.

b. All such equipment shall be expressly approved, including current-controlling devices and other essential operating parts.

c. The source of illumination of the projected view shall be an incandescent lamp of a pattern expressly intended for steroptic use or for motion picture projection.

d. Rheostats, transformers, switches and other current controlling devices shall be attached to and form an integral part of the projector or its housing and shall have no live parts exposed.

e. The slow-burning (cellulose acetate or equivalent) film shall have a permanent distinctive marker for its entire length identifying the manufacturer and the slow-burning character of the film stock.

f. Machines shall be marked with the name or trademark of the maker, and with the voltage and current rating for which they are designed, and shall also be plainly marked, "For use with slow-burning films only."

ARTICLE 36. ORGANS.

3601. General.

a. The requirements of this article shall be deemed to be additional to, or amendatory of, those prescribed in articles 1 to 19 inclusive, of this code. They shall be deemed to apply to those electrical circuits and parts of electrically operated organs which are employed for the control of the sounding apparatus and keyboards.

3602. Source of Energy.

a. The source of energy shall be either a self-excited generator rated at not over 15 volts, or a primary battery.

b. The generator shall either be permanently and effectively insulated both from ground and from the motor driving it, or both generator and motor frames shall be grounded as prescribed in article 9 of this code.

3603. Cables.

a. All wires, except common return wires inside the organ proper, the organ sections and the organ console, shall be cabled.

b. The separate wires of the cable shall be not smaller than No. 26, and shall have either rubber, cotton or silk insulation. The cotton or silk may be saturated with paraffine, if desired.

c. The separate wires shall be either bunched or cabled. In either event they shall be enclosed in one or more braided outer coverings. A tape may be substituted for an inner braid. The outside covering of a cable not run in conduit shall either be flameproof, or covered with a closely wound fireproof tape.

d. The common return wire shall be not smaller than No. 14, shall be of either the rubber-covered or the slow-burning type and shall not be contained in the cable. It may be run in contact with the cable or placed under an additional covering inclosing both cable and return wire.

3604. Workmanship and Material.

a. All wiring and devices within the organ or any of its parts shall be neatly disposed and securely fastened.

b. It is not found to be either necessary or feasible in organ structures to require the use of non-combustible, non-absorptive insulating material for the supports or enclosures of current carrying parts.

c. Cables between parts of the organ and between the console and the organ shall be installed in a workmanlike manner, shall be securely fastened in position and shall be kept from contact with other wires. Conduit may be used, but shall not be required.

3605. Fuses.

a. Circuits shall be so subdivided and protected at the source by approved enclosed fuses of not over 30 amperes rating that every wire will be protected by one or more such fuses. No other fuses in the organ circuits shall be required.

ARTICLE 37. RADIO EQUIPMENT.

3701. General.

a. The requirements of this article shall not apply to equipment installed on shipboard, but shall be deemed to be additional to, or amendatory of, those prescribed in articles 1 to 19, inclusive, of this code.

b. Transformers, voltage reducers, keys and other devices employed shall be of types expressly approved for radio operation.

3702. For Receiving Stations Only.

a. Antenna and counterpoise outside buildings shall be kept well away from all electric light or power wires of any circuit of more than 600 volts, and from railway, trolley or feeder wires, so as to avoid the possibility of contact between the antenna or counterpoise and such wires under accidental conditions.

b. Antenna and counterpoise where placed in proximity to electric light or power wires of less than 600 volts, or signal wires, shall be constructed and installed in a strong and durable manner, and shall be so located and provided with suitable clearances as to prevent accidental contact with such wires by sagging or swinging.

c. Splices and joints in the antenna span shall be soldered unless made with approved splicing devices.

d. The preceding paragraphs, a, b, and c, shall not apply to light and power circuits used as receiving antenna, but the devices used to connect the light and power wires to radio receiving sets shall be of approved type.

e. Lead-in conductors shall be of copper, approved copper-clad steel or other metal which will not corrode excessively, and in no case shall they be smaller than No. 14, except that bronze or copper-clad steel not less than No. 17 may be used.

f. Lead-in conductors on the outside of buildings shall not come nearer than 4 inches to electric light and power wires unless separated therefrom by a continuous and firmly fixed non-conductor which will maintain permanent separation. The non-conductor shall be in addition to any insulating covering on the wire.

g. Each lead-in conductor shall enter the building through a non-combustible, non-absorptive, insulating bushing slanting upward toward the inside or by means of an approved device designed to give equivalent protection.

h. Each lead-in conductor shall be provided with an approved protective device (lightning arrester) which will operate at a voltage of 500 volts or less, properly connected and located either inside the building at some point between the entrance and the set which is convenient to a ground, or outside the building as near as practicable to the point of entrance. The protector shall not be placed in the immediate vicinity of easily ignitable stuff, or where exposed to inflammable gases or dust or flyings of combustible materials.

i. If an antenna grounding switch is employed, it shall in its closed position form a shunt around the protective device. Such a switch shall not be used as a substitute for the protective device.

It is recommended that an antenna grounding switch be employed, and that in addition a switch rated at not less than 30 amperes, 250 volts, be located between the lead-in conductor and the receiver set.

j. If fuses are used, they shall not be placed in the circuit from the antenna through the protective device to ground.

k. The protective grounding conductor may be bare and shall be of copper, bronze or approved copper-clad steel. The protective grounding conductor shall be not smaller nor have less conductance per unit of length than the lead-in conductor and in no case shall be smaller than No. 14 if copper nor smaller than No. 17 if of bronze or copper-clad steel. The protective grounding conductor shall be run in as straight a line as possible from the protective device to a good permanent ground. Preference shall be given to water piping. Other permissible grounds are grounded steel frames of buildings or other grounded metal work in the building, and artificial grounds such as driven pipes, rods, plates, cones, etc. Gas piping shall not be used for the ground.

l. The protective grounding conductor shall be guarded where exposed to mechanical injury. An approved ground clamp shall be used where the protective grounding conductor is connected to pipes or piping.

m. The protective grounding conductor may be run either inside or outside the building. The protective grounding conductor and ground, installed as prescribed in the preceding paragraphs k and l, may be used as the operating ground.

It is recommended that in this case the operating grounding conductor be connected to the ground terminal of the protective device. If desired, a separate operating grounding connection and ground may be used, this operating grounding conductor being either bare or provided with an insulated covering.

n. Wires inside buildings shall be securely fastened in a workmanlike manner and shall not come nearer than 2 inches to any electric light or power wire not in conduit unless separated therefrom by some continuous and firmly fixed non-conductor, such as porcelain tubes or approved flexible tubing, making a permanent separation. This non-conductor shall be in addition to any regular insulating covering on the wire.

o. Storage battery leads shall consist of conductors having approved rubber insulation. The circuits from storage batteries shall be properly protected by fuses or circuit-breakers rated at not more than 15 amperes and located preferably at or near the battery.

3703. For Transmitting Stations Only.

a. Antenna and counterpoise outside buildings shall be kept well away from all electric light or power wires of any circuit of more than 600 volts, and from railway trolley or feeder wires, so as to avoid the possibility of contact between the antenna or counterpoise and such wires under accidental conditions.

b. Antenna and counterpoise where placed in proximity to electric light or power wires of less than 600 volts, or signal wires, shall be constructed and installed in a strong and durable manner, and shall be so located and provided with suitable clearances as to prevent accidental contact with such wires by sagging or swinging.

c. Splices and joints in the antenna and counterpoise span shall be soldered unless made with approved splicing devices.

d. Lead-in conductors shall be of copper, bronze, approved copper-clad steel or other metal which will not corrode excessively and in no case shall be smaller than No. 14.

e. Antenna and counterpoise conductors and wires leading therefrom to ground switch, where attached to buildings, shall be firmly mounted 5 inches clear of the surface of the building, on non-absorptive insulating supports such as treated pins or brackets, equipped with insulators having not less than 5 inches creepage and air-gap distance to inflammable or conducting material, except that the creepage and air-gap distance for continuous wave sets of 1000 watts and less input to the transmitter, shall be not less than 3 inches.

f. In passing the antenna or counterpoise lead-in into the building a tube or bushing of non-absorptive, insulating material, slanting upward

toward the inside, shall be used and shall be so insulated as to have a creepage and air-gap distance of at least 5 inches to any extraneous body, except that the creepage and air-gap distance for continuous wave sets of 1000 watts and less input to the transmitter, shall be not less than 3 inches. If porcelain or other fragile material is used it shall be protected where exposed to mechanical injury. A drilled window pane may be used in place of a bushing provided creepage and air-gap distance as specified above is maintained.

g. A double-throw knife switch having a break distance of at least 4 inches and a blade not less than $\frac{1}{4}$ inch by $\frac{1}{2}$ shall be used to join the antenna and counterpoise lead-in to the grounding conductor. The switch may be located inside or outside the building. The base of the switch shall be of non-absorptive insulating material. This switch shall be so mounted that its current-carrying parts will be at least 5 inches clear of the building wall or other conductors, except that for continuous wave sets of 1000 watts and less input to the transmitter, the clearance shall be not less than 3 inches. The conductor from grounding switch to ground shall be securely supported.

It is recommended that the switch be located in the most direct line between the lead-in conductors and the point where grounding connection is made.

h. Antenna and counterpoise conductors shall be effectively and permanently grounded at all times when station is not in actual operation and unattended, by a conductor at least as large as the lead-in and in no case smaller than No. 14 copper, bronze, or approved copper-clad steel. This protective grounding conductor need not have an insulated covering or be mounted on insulating supports. The protective grounding conductor shall be run in as straight a line as possible to a good permanent ground. Preference shall be given to water piping. Other permissible protective grounds are the grounded steel frames of buildings and other grounded metal work in buildings and artificial grounding devices such as driven pipes, rods, plates, cones, etc. The protective grounding conductor shall be protected where exposed to mechanical injury. A suitable approved ground clamp shall be used where the protective grounding conductor is connected to pipes or piping. Gas piping shall not be used for the ground.

It is recommended that the protective grounding conductor be run outside the building.

i. The operating grounding conductor shall be of copper strip not less than $\frac{1}{4}$ inch wide by 1/32 inch thick, or of copper, bronze, or approved copper-clad steel having a periphery, or girth, of at least $\frac{3}{4}$ inch, such as a No. 2 wire, and shall be firmly secured in place throughout its length.

j. The operating grounding conductor shall be connected to a good permanent ground. Preference shall be given to water piping. Other permissible grounds are grounded steel frames of buildings or other grounded metal work in the building, and artificial grounding devices such as driven pipes, rods, plates, cones, etc. Gas piping shall not be used for the ground.

k. When the current supply is obtained directly from lighting or power circuits, the conductors whether or not lead covered shall be installed in approved metal conduit, armored cable or metal raceways.

l. When necessary to protect the supply system from high-potential surges and kick-backs there shall be installed in the supply line as near as possible to each radio-transformer, rotary spark gap, motor and generator in motor generator sets and other auxiliary apparatus one of the following:

1. Two condensers (each of not less than 1/10 microfarad capacity and capable of withstanding 600-volt test) in series across the line with mid-point between condensers grounded; across (in parallel with) each of these condensers shall be connected a shunting fixed spark-gap capable of not more than 1/32 inch separation.

2. Two vacuum tube type protectors in series across the line with the mid-point grounded.

3. Resistors having practically zero inductance connected across the line with mid-point grounded.

It is recommended that this third method be not employed where there is a circulation of power current between the mid-point of the resistors and the protective ground of the power circuit.

4. Lightning arresters such as the aluminum cell type.

ARTICLE 38. SIGNS AND OUTLINE LIGHTING.

3801. General.

a. The requirements of this article shall be deemed to be additional to, or amendatory of, those prescribed in articles 1 to 19, inclusive, of this code.

3802. Material.

a. Metal used in the construction of sign boxes, cabinets or outline troughs shall be not less than No. 28 U. S. sheet metal gauge (0.156 inch). It shall be galvanized, treated with at least three coats of anti-corrosive paint, or otherwise suitably protected from corrosion.

b. With the exception of wood employed for the external decoration of signs and kept at least 2 inches distant from the nearest socket or receptacle, signs shall be constructed entirely of metal or other approved non-combustible material.

c. The design shall be such as to afford ample strength and rigidity, to render the box or trough practically weatherproof, to enclose all terminals and wiring other than the leads, and to provide drainage for each compartment by means of one or more holes, each not less than $\frac{1}{4}$ inch in diameter.

d. A separate, completely enclosed, accessible weatherproof approved box or cabinet shall be provided to contain cutouts, flashers, non-weatherproof transformers or other similar devices placed on or within the body or structure of a sign or on the exterior of a building.

e. Raceways shall not be employed for outline lighting.

3803. Sockets and Receptacles.

a. Sockets and receptacles for sign and outline lighting shall be of the keyless porcelain type, and if for sign use shall be so designed as to afford permanent and reliable means to prevent turning. Terminals of sign receptacles shall be kept at least $\frac{1}{2}$ inch from metal of the sign; provided, however, that where open work is employed as the wiring method, this separation shall be at least 1 inch. Miniature receptacles shall not be employed for outdoor work.

3804. Wiring.

a. Wire of approved rubber-covered type, and not smaller than No. 14, shall be used.

b. Wires shall be neatly run, and so disposed and fastened as to be mechanically secure.

c. Wires shall be soldered to terminals of receptacles, and exposed parts of wires and terminals shall be treated to prevent corrosion.

d. Approved bushings shall be employed to protect wires passing through walls or partitions of the structure. Sign leads not encased in conduit or metal armor may be cabled before passing through non-combustible, non-absorptive bushings.

e. Wires on outside of sign structure, except as provided in section 3805 of this code, shall be enclosed in approved conduit or metal armor. Where armor is employed an approved lead sheath shall be placed over the wire insulation.

f. Outline lighting shall be protected by its own cutout and controlled by its own switch.

g. Circuits shall be so arranged that the number of outlets and the lamps connected to them shall in no case be such as to place more than 15 amperes on the branch circuit fuse.

3805. Open Wiring.

a. Open work may be employed as the wiring method for outline lighting and for signs on roofs or open ground, where not subject to mechanical injury.

b. Where wires are connected to approved receptacles which hold them at least 1 inch from the surface wired over, and which are placed at intervals not exceeding 1 foot, the receptacles themselves shall be considered to afford the necessary support and spacing of the wires. Where the interval between receptacles exceeds 1 foot but is less than 2 feet, an additional non-combustible, non-absorptive insulator maintaining a separation and spacing equivalent to the receptacle shall be used.

c. Where flexible tubing must be employed in outline lighting, the ends shall be sealed and painted with a moisture repellent and the tubing shall be kept at least $\frac{1}{2}$ inch from the surface wired over.

3806. Grounding.

a. Troughs used for outline lighting shall be grounded as provided in article 9 of this code.

ARTICLE 39. THEATRES; INCLUDING MOTION PICTURE HOUSES.

3901. General.

a. The requirements of this article shall be deemed to be additional to, or amendatory of, those prescribed in articles 1 to 19, inclusive, of this code.

b. A theatre shall be deemed to be that building, or part of a building, regularly or frequently used for dramatic, operatic, motion picture or other performances or shows, or which has a stage for such performances used with scenery or other stage appliances.

c. Emergency lights shall be deemed to be exit lights and all lights necessary to properly illuminate lobbies, stairways, corridors and other portions of the theatre to which the public has access, which are normally kept lighted during the performance.

3902. Services.

a. Where the supply can be obtained from two separate street mains, two separate and distinct services shall be installed, one service being of sufficient capacity to supply current for the entire equipment of the theatre, the other service being of sufficient capacity to supply current for all emergency lights. Where the supply cannot be obtained from two separate sources, the feed for the emergency lights shall be taken from a point on the street side of the main service fuses.

b. Where the source of supply is an isolated plant located in the building an auxiliary service of capacity sufficient to supply all emergency lights shall be obtained from some outside source, or from an adequate storage battery installed upon the premises.

3903. Auditorium.

a. Approved conduit, metal raceway or armored cable shall be employed as the wiring method.

b. Receptacles shall be inclosed in boxes.

c. Not more than one set of fuses shall be interposed between service fuses and exit lights.

d. Emergency lights shall not be connected to or controlled by the stage lighting control, but from the lobby or other convenient place in the front of the theatre.

e. All fuses shall be enclosed in approved cabinets.

3904. Stage.

a. Approved conduit or armored cable shall be employed as the wiring method.

b. The switchboard shall be of the dead-front type, and shall carry a metal hood running the full length of the board and protecting the latter from falling objects.

c. Dimmers shall be so connected that they will be dead when their respective circuit switches are open.

d. Footlights shall be wired by either the conduit or the armored cable method, receptacles being inclosed in approved boxes, or the wires shall be encased in metal trough composed of No. 20 U. S. sheet metal gauge (.375 inch), treated to prevent oxidation. Conductors shall be soldered to receptacle terminals, which shall be kept at least $\frac{1}{2}$ inch from the metal of the trough.

e. Footlights, border lights and proscenium side lights shall be so wired that the number of outlets and the lamps connected to them shall in no case be such as to place more than 15 amperes on a branch circuit fuse.

f. Borders and proscenium sidelights shall be constructed as prescribed in paragraph d of this section, shall be suitably stayed and supported, and shall be so designed that the flanges of the reflectors or other adequate guards will protect the lamps from mechanical injury and from accidental contact with scenery or other combustible material.

g. Border cables shall be of approved type and suitably supported. They shall be employed only where flexibility is required.

h. Approved slow-burning wire shall be used for wiring the border.

i. Borders shall be suitably suspended. If wire rope is used each length shall be insulated by at least one strain insulator, placed close to the border.

j. Stage and gallery pockets shall be of approved type, and controlled from the switchboard. Feeds for arc pockets shall be not smaller than No. 6, and the receptacles shall have a capacity of not less than 35 amperes. Feeds for incandescent pockets shall be not smaller than No. 12, and the receptacles shall have a capacity of not less than 15 amperes. Feeds to pockets shall be of ample size to supply all receptacles therein at full rating. Plugs for arc and incandescent pockets shall not be interchangeable.

k. Lamps installed in scene docks shall be so located and guarded as to be free from mechanical injury.

l. Curtain motors shall be of the inclosed type.

m. Where stage flue dampers are released by an electrical device, the circuit operating the latter shall be normally closed, and shall be controlled by at least two approved single-pole switches enclosed in approved iron

boxes having self-closing doors without locks or latches, one switch being placed at the electrician's station and the other where designated by the inspection department. The device shall be designed for the full voltage of the circuit to which it is connected, no resistance being inserted. It shall be located in the loft above the scenery and shall be enclosed in a suitable iron box having a tight, self-closing door.

3905. Dressing Rooms.

a. Approved conduit or armored cable shall be employed as the wiring method.

b. Pendants for lights shall be composed of approved reinforced cord, armored cable or armored cord.

c. Lamps shall be protected by approved guards sealed or locked in place.

3906. Portable Arc Lamps.

a. Arc lamps shall be substantially constructed entirely of metal not less than No. 20 U. S. sheet metal gauge (.0375 inch), except where approved insulating material is necessary. The design shall be such as to provide proper ventilation while retaining sparks, and to prevent carbons or other live parts of lamp from making contact with metal of hood.

b. Hoods for other than lens lamps shall have the front opening equipped with a self-closing hinged door frame carrying either wire gauze or glass. Hoods for lens lamps may have a stationary front, and a solid door on either back or side.

c. Mica shall be used for the insulation of the lamp frame.

d. Arc lamp frames and standards shall be so installed and guarded as to prevent their becoming grounded.

e. The switch on the standard shall be of such design that accidental contact with any live part will be impossible.

f. Stranded connections in lamp and at switch and rheostat shall be provided with approved lugs.

g. Rheostats shall be enclosed in a substantial properly ventilated metal case affording a clearance of at least 1 inch between case and resistance element. If the rheostat is mounted on the standard, a clearance of 3 inches above the floor shall be maintained.

h. A qualified operator shall be employed for each lamp, or for each two lamps not more than 10 feet apart and so placed that one operator can properly watch and care for both.

3907. Portable Bunches.

a. Substantial metal shall be employed and the wiring shall not be exposed.

b. Where the cable passes through the metal, an approved bushing shall be employed, and the cable shall be so anchored as to relieve the connections of any mechanical strain.

3908. Portable Strips.

a. Portable strips shall conform to the requirements of paragraphs d, e and f of section 3904, of this code.

b. Where the cable passes through the metal an approved bushing shall be employed, and the cable shall be so anchored as to relieve the connections of serious mechanical strain.

3909. Portable Plugging Boxes.

a. The construction shall be such that no current-carrying part will be exposed.

b. Each receptacle shall have a current carrying capacity of 30 amperes, and shall be protected by approved fuses mounted on slate or marble bases enclosed in a fireproof cabinet equipped with self-closing doors.

c. Bus-bars shall have a current carrying capacity equal to the sum of the ampere ratings of all the receptacles. Approved lugs shall be provided for the connection of the master cable.

3910. Portable Conductors.

a. Pin-plug connectors shall be so designed that tension on the cable will not cause serious mechanical strain on the connections. The female half shall be attached to the live end of the cable.

b. Flexible conductors used from receptacles to arc lamps, bunches and other portable equipments shall be approved stage cable except that for the purpose of feeding a stand lamp under conditions where conductors are not liable to severe mechanical injury, an approved reinforced cord may be used, provided cutout designed to protect same is not fused over 15 amperes capacity.

3911. Lights on Scenery.

a. Brackets shall be wired internally, and the fixture stem shall be carried through to the back of the scenery, where a suitable bushing shall be placed on the end of the stem. Fixtures shall be securely fastened in place.

3912. String or Festooned Lights.

a. Joints in wiring shall be staggered where practicable.

b. Lamps enclosed in lanterns or similar devices shall be equipped with approved guards.

3913. Special Electrical Effects.

a. Devices used for simulating lightning, waterfalls, etc., shall be so constructed and located that flames, sparks, etc., cannot come in contact with combustible material.

ARTICLE 40. SMALL ISOLATED PLANTS.

4001. General.

a. The requirements of this article shall be deemed to be additional to, or amendatory of, those prescribed in articles 1 to 19, inclusive, of this code.

b. This article shall be deemed to apply particularly to isolated plants which employ as their prime mover a stationary internal-combustion engine, with its necessary fittings, connected to an electric generator either with or without an auxiliary storage battery with its control devices, and operating at a potential of less than 50 volts.

c. Attention shall be given to the relatively low voltage at which these plants operate, thus requiring a greater current for equivalent energy and making necessary a greater ampere capacity of conductors, fittings, devices and appliances, as compared with those of the standard 0-600 volt classification used on commercial circuits.

4002. Sockets and Receptacles.

a. Standard lamp sockets and receptacles of the 250-volt classification shall be used. Sockets and receptacles of the 250-volt, 25-watt classification shall not be used for currents greater than 3½ amperes.

b. Lamp sockets and receptacles shall be rated at not less than 40 watts each, for purposes of installation.

4003. Automatic Cutouts.

a. Fuses shall be so placed that no set of small motors, small heating appliances or incandescent lamps, nor more than 8 lamp socket or receptacles, requiring more than 320 watts, shall be dependent upon one cutout.

b. The fuses in the branch circuit shall not exceed 10 amperes rating.

4004. Batteries.

a. Batteries shall be located in rooms or spaces having natural means of ventilation.

b. Battery jars and cells, if not composed of insulating material such as glass or hard rubber, shall be mounted on insulating supports of glass or porcelain.

4005. Grounding.

a. The grounding of circuits or frames of engine or generator shall not be required.

ARTICLE 50. SYSTEMS AND VOLTAGES OF OVER 600 VOLTS.

5001. Series Arc Lighting.

a. Constant current systems shall not be installed in buildings, except by permission of the inspection department.

b. Wires shall be of approved rubber-covered type and shall be kept in plain sight except where the inspection department requires that they be encased.

c. Wires shall be supported on glass or porcelain insulators which rigidly separate the wires at least 8 inches and maintain them at least 1 inch from the surface wired over. This requirement shall not apply to locations where such separations are impracticable, as inside lamps, on hanger boards, etc.

d. Wires on sile walls shall be encased in a boxing as provided in section 501, paragraph o, of this code.

e. Wires crossing floor timbers in cellars or rooms where they might be exposed to injury shall be installed on running boards or protected by guard strips as provided in section 501, paragraph m, of this code.

f. The service shall enter through an approved double-contact switch, mounted in a moisture-proof non-combustible case, so located as to be readily accessible to police or firemen. This switch shall be of the indicating type, shall close the main circuit and disconnect the branch wires when turned "off" and shall be so designed that it will automatically continue its action when once started. It shall prevent an arc between the points under all circumstances.

g. Arc lamps shall conform generally to the requirements of article 1501, of this code. When hanger boards are not used, lamps shall be hung from insulating supports other than their conductors.

h. Incandescent lamps shall be suspended from hanger boards by rigid pipes, and shall not be attached to gas fixtures. Each lamp shall be provided with an automatic cutout. No electro-magnetic switching device shall be employed, nor shall the lamps be connected in multiple-series or series-multiple.

5002. Vacuum Tube Systems.

a. The tube shall be so installed as to be free from mechanical injury or contact with inflammable material. Coils and regulating apparatus shall be mounted on approved non-combustible non-absorptive insulating bases and inclosed in a well ventilated grounded approved steel cabinet having walls not less than 1/10 inch in thickness, the ventilation being so designed as to prevent the emission of flame or sparks.

b. Wiring leading to the above cabinet shall conform to the requirements of article 5 of this code, if such wires operate at a potential not exceeding 300 volts.

5003. Wiring.

a. Circuits operating at more than 7500 volts between conductors shall not be installed in buildings other than central stations, sub-stations or transformer vaults.

b. Elsewhere than in central stations, sub-stations, and generator, transformer, switching, and motor rooms, all apparatus and wiring connected to circuits of more than 600 volts shall be completely inclosed by substantial shields or casings, and when these shields or casings are of metal they shall be grounded as prescribed for the grounding of equipment in article 9 of this code, and the conduit shall properly enter and be secured to such shield or casing, or to suitable terminal boxes secured or bolted to the casing.

c. Generator, switching and motor rooms containing apparatus operating at more than 600 volts shall be securely locked to limit access to qualified persons only.

d. Elsewhere than in central stations, sub-stations, and generator, transformer, switching and motor rooms, all wiring of circuits of more than 600 volts shall consist of approved multiple-conductor, grounded metal-sheathed cable inclosed in approved grounded conduit. Where the cable is not exposed to moisture, the metal sheath may be omitted by permission of the inspection department. Where moisture is absent, the metal sheath need not be continued over splices; but where the metal sheath is required over the rest of the cable the ends of the sheath shall be belled out and bounded around the splices by No. 6 copper wire and ground clamps.

e. Air-break disconnectors shall be installed between oil switches used as service switches and the supply wires.

f. Where a cable emerges from its metal sheath, the insulation of the several conductors shall be thoroughly protected from moisture and mechanical injury by a pothead or equivalent device.

g. Open work may be employed in central stations, sub-stations, generator, transformer and switching rooms and motor rooms adjoining an outside wall where the wires entering the motor room are not in conduit, provided the wires are rigidly supported on glass or porcelain insulators which keep them at least 1 inch from the surface wired over and 8 inches apart except at apparatus and devices.

Rigid supporting requires supports about 4½ feet apart when wiring along the flat surfaces under ordinary conditions.

5004. Motors.

a. Motors operating at a potential exceeding 2500 volts to ground shall not be installed elsewhere than in central stations, sub-stations and generator and motor rooms.

5005. Transformers and Apparatus.

a. Transformers installed in central stations and sub-stations shall be so located that fire and smoke from burning coils or boiling oil will be unlikely to do harm.

It is recommended that air cooled transformers be isolated as much as possible, and that, if air blast is employed, the ducts be fireproof.

It is further recommended that oil-filled transformers be placed in a compartment constructed in accordance with section 5007 of this code.

b. Transformers shall not be installed in buildings other than central stations or sub-stations, except by permission of the inspection department. Where such permission has been granted, transformers shall be located as near as possible to the point at which the primary wires enter the building and shall be contained in an enclosure of fire-resistive material large enough

to provide an air space of at least 6 inches on every side of the transformers. This enclosure shall be securely locked, access being allowed only to authorized persons, and shall be thoroughly ventilated.

It is recommended that ventilation be secured by means of a chimney or flue leading out of doors.

c. Transformer cases shall be grounded as prescribed for the grounding of equipment in article 9 of this code; provided, however, that cases or frames of transformers used exclusively to supply current to switch-board instruments need not be grounded if they are installed and guarded as required for the maximum potential at which they operate.

d. For oil-filled transformers which are not located in central stations or substations, the inclosure required by paragraph b of this section shall consist of fireproof vault construction in accordance with section 5007 of this code. This shall not apply to the control circuit transformer furnished with control equipment. These transformers shall be considered as subject to the requirements applying to the equipments with which they are used.

e. For transformers in electric furnace rooms, the requirements of this section and of section 5007 shall be followed so far as practicable; provided, however, that by permission of the inspection department, oil-filled transformers having a total rating of 75 k.v.a. or less, may be located in electric furnace rooms of fire-resisting construction, if surrounded by concrete curbs not less than 6 inches high and forming a basin of sufficient capacity to retain all the oil used in such transformers.

This is to guard against the possibility of molten metal from the furnace coming in contact with the transformer casing, and also to prevent oil from the transformers reaching the furnace.

5006. Switches.

a. Oil circuit-breakers and switches shall be isolated from other switches and electrical apparatus wherever practicable. When operated at a potential exceeding 7500 volts, they shall be of the remote control type, and shall be placed in separate fireproof cells or compartments.

It is recommended that oil switches used to control transformers be located in the transformer vault.

b. All switches including disconnectors shall be so located that the point from which they are operated is safely accessible to qualified and authorized persons.

5007. Transformer Vaults.

a. The enclosure shall consist of concrete not less than 6 inches in thickness, or of brick not less than 8 inches in thickness, except that when the total transformer capacity so enclosed is not over 100 kilo-volt-amperes the above thickness may be reduced to 4 inches, provided approved fireproof material is employed and the construction of the vault is specifically approved by the inspection department.

It is recommended that outside walls of the building, if of fireproof construction, constitute one or more of the walls of the vault or enclosure.

b. The enclosure shall be provided with means for ventilation which will prevent the development of room temperatures in excess of those at which the transformers installed therein may be safely operated. Limiting temperatures shall be determined in accordance with and in the manner prescribed by the standardization rules of the American Institute of Electrical Engineers, and temperatures under full load shall not exceed the values given in such rules. All ventilating openings not connected to chimneys or flues shall be provided with automatic or manually controlled dampers to prevent the emission of smoke or fire.

It is recommended that damper controls be arranged to be operated from a point outside the vault.

c. Where practicable, a suitable drain shall be provided which will carry off any accumulation of oil or water that may collect in the vault. Floor and drain shall have a pitch of not less than $\frac{1}{4}$ inch per foot. In vaults containing transformers having a total capacity of 100 kilo-volt-amperes or less the drain may be omitted if the enclosure is so constructed as to retain all the oil used within the vault.

d. Unless access is from outside the building only, the doorway to the vault shall be thoroughly closed by means of an approved tight-fitting fire door. A door sill not less than 4 inches in height shall be provided. In all cases the sill shall be of sufficient height to confine within the vault the oil from the largest transformer installed.

5008. Static Condensers.

a. Static condensers of the type made up of small units, each of which contains less than three gallons of oil, may be installed in power houses or factory buildings if combustibles are kept well away from them. In rooms containing combustible dust or flying material, condensers shall be inclosed.

If condensers are accessible to other than qualified persons a non-combustible grille or guard around them may be desirable.

b. Condensers which have all units in single tanks filled with oil shall be installed as required for transformers in section 5005.

c. For transformers used with static condensers, the requirements of section 5005 shall be followed; provided, however, that by permission of the Inspection Department, oil-filled transformers intended for and used only with static-condenser installations and not subject to lightning disturbances may be installed in rooms of non-combustible construction and occupancy. Such transformers shall be of sufficient capacity to allow for ordinary rises in voltage; they shall be surrounded by concrete curbs not less than 6 inches high which form a basin of sufficient capacity to retain all the oil contained in the transformers; and be protected by an automatic overload circuit-breaker (or other protective device and switch) set to operate at a current corresponding to not over 150% of the rated capacity of the condenser.

5009. Service Equipment.

In services operating at more than 600 volts, all ungrounded conductors shall, except as provided below, be controlled and protected by an automatic overload circuit-breaker which shall be of suitable rupturing capacity and which shall be located as near as possible to the point where the service enters the building and so that the point from which it is opened or closed will be readily accessible. Each service lead shall have an air-break disconnecter which will disconnect from the supply line all apparatus within the building. If the service does not supply, at the primary voltage, any equipment except that contained in a fireproof transformer vault, or if it enters only a detached transformer house or inclosure, then suitable disconnectors and suitable fuses may be used and may be installed in the transformer inclosure. If in such cases the voltage does not exceed 2300 volts to ground and the installed transformer capacity does not exceed 5) k.v.a. per phase, suitable fuses without disconnectors may be installed in the transformer inclosure. In all cases where automatic overload circuit-breakers are not installed in the primaries and arranged so that they may be tripped manually from a readily accessible point outside of the transformer vault or inclosure, suitable circuit-breakers or switches and suitable fuses shall be provided in the secondaries as required for low-voltage services in article 4 of this code.

Air-break disconnectors and fuses shall be accessible to qualified attendants only.

ARTICLE 60. SIGNAL SYSTEMS.

6001. General.

a. The provisions of this article shall apply to telephone, telegraph (except radio), district messenger and call-bell circuits, fire and burglar alarm and similar systems.

Such systems are hazardous only because of their liability to become crossed with electric light, heat or power circuits.

6002. Outside Wires.

a. Outside wires shall be placed in underground ducts or strung on poles. They shall not be run across or attached to roofs except by permission of the inspection department.

b. Underground wires shall not be placed in a duct, handhole or manhole containing electric light or power wires. Where a handhole or a manhole is divided into sections by means of partitions of brick, concrete or tile, each compartment shall be considered as a separate handhole or manhole.

c. Overhead wires shall not be attached to a crossarm carrying electric light or power wires, nor shall they, when on the exterior walls of buildings, be brought closer than 4 inches to electric light or power wires unless one system is in conduit or is permanently separated from the other system by a continuous and firmly fixed non-conductor, additional to the insulation on the wires.

d. The metal sheath of aerial cables which are liable to contact with electric light or power wires shall be interrupted close to the entrance to a building by an insulating joint or equivalent device.

e. The distance between the two inside pins of any crossarm of a pole carrying signal and electric light and power wires shall be not less than 24 inches.

It is recommended that signal wires, being smaller and more liable to break and fall, be placed on the lower crossarms.

f. Aerial cables of the metal-sheathed type may have paper or other suitable insulation. If the metal sheath is omitted each wire shall have $\frac{1}{2}$ inch rubber insulation and the bunched wires shall be covered with a substantial braid.

g. Wires from the last outdoor support to the protector, and wires attached to buildings shall conform to the requirements of paragraph f of this section, and in addition shall carry a substantial braid on each wire. Where not in conduit, such wires shall be separated from woodwork and supported on glass or porcelain insulators.

h. Wires shall enter buildings either through non-combustible, non-absorptive, insulating bushings, or through approved rigid conduit. Conduit or bushings shall slope upward from the outside, or, where this cannot be done, drip loops shall be formed in the wires immediately outside the point of entrance. The conduit shall be equipped with an approved service head. More than one wire may enter through one conduit or bushing.

6003. In Buildings; Generally.

a. Wires beyond the protector, or wires inside buildings where no protector is employed, shall be neatly arranged and secured in place in a convenient, workmanlike manner. They shall not approach nearer than 2 inches to any electric light or power wire unless one system is in conduit or the two systems are permanently separated by a continuous and firmly-fixed non-conductor, additional to the insulation on the wires.

The wires would ordinarily be insulated, but the kind of insulation is not specified, as reliance is placed on the protector to stop all dangerous currents. Porcelain tubes or approved flexible tubing are considered suitable non-conductors.

b. Wires bunched together in a vertical run shall have a fire-resisting covering sufficient to prevent the carrying of fire from floor to floor. This requirement shall not apply if the wires are encased in non-combustible tubing, or are located in a fireproof shaft having fire stops at each floor.

c. Signal wires and electric light and power wires may be run in the same shaft if the two systems are separated at least 2 inches, or if either system is encased in non-combustible tubing.

d. Signal wires shall not be placed in a tube containing electric light or power wires.

e. Transformers or other devices supplying current to signal systems from electric light or power circuits shall be of a type expressly approved for such service. The secondary wiring shall conform to the requirements of this article, and the primary or the charging circuit wiring to the requirements of articles 1 to 19, inclusive, of this code.

6004. In Buildings; Where the Distribution System Consists of Aerial Wires.

a. An approved protector shall be placed as near as practicable to the point of entrance to the building. The protector shall be mounted on a non-combustible, non-absorptive insulating base and shall consist of an arrester between each line wire and ground and a fuse in each line wire, the fuses protecting the arrester. The protector terminals shall be plainly marked to indicate "line," "instrument" and "ground."

b. The protector shall not be placed in the immediate vicinity of easily ignitable material or inflammable gases, or dust or flyings of combustible material.

c. Where the entire street circuit is run underground a protector shall not be required unless the circuit within the block is so placed as to be liable to accidental contact with electric light or power wires operating at a potential exceeding 250 volts.

6005. Grounding.

a. The ground conductor of the protector shall consist of not less than No. 18 copper, having $\frac{1}{2}$ inch rubber insulation, covered with a substantial braid. Where necessary it shall be guarded from mechanical injury.

b. The ground conductor shall be run in as straight a line as possible to a permanent and effective ground. Where connection is made to a gas pipe, attachment shall be made between the meter and the street main. In every case the attachment shall be made as close to the earth as practicable.

A suitable ground may be obtained by connection to either a water pipe or a gas pipe, preferably to the former. A ground rod or pipe driven into permanently damp earth is acceptable, in the absence of a piping system.

c. The ground conductor shall be attached to the pipe by means of an approved bolted clamp to which the conductor is soldered or otherwise connected in an approved manner, or the pipe shall be tinned with rosin flux solder after which the conductor shall be wrapped around the pipe and thoroughly soldered to it.

d. Steam or hot water pipes shall not be employed as a ground for protectors.

Tables

Units of Measure

The electrical units are derived from the following mechanical units of the metric system:

METER.—A unit of length equal, approximately, to one ten-millionth part of a quadrant of a meridian of the earth taken through Paris; or, approximately, to 39.37 inches.

GRAMME.—Unit of weight. Weight of a cubic centimeter of water at a temperature of 4 degrees centigrade.

SECOND.—Unit of time. The time of one swing of a pendulum making 86,400 swings in a solar day.

Electrical Units

VOLT.—Such an electromotive force as would cause a current of one ampere to flow against a resistance of one ohm. Such an electromotive force as would charge a condenser of the capacity of one farad with a quantity of electricity equal to one coulomb.

OHM.—The practical unit of electric resistance. Such a resistance as would limit the flow of electricity under an electromotive force of one volt, to a current of one ampere, or one-coulomb-per-second.

MEGOHM.—1,000,000 ohms.

AMPERE.—The practical unit of electric current. A rate of flow of electricity transmitting one coulomb per second. The current of electricity which would pass through a circuit whose resistance is one ohm, under an electromotive force of one volt.

COULOMB.—The practical unit of electric quantity. Such a quantity of electricity as would pass in one second through a circuit conveying one ampere. The quantity of electricity contained in a condenser of one farad capacity, when subjected to the E. M. F. of one volt.

FARAD.—The practical unit of electric capacity. Such a capacity of a conductor or condenser that one coulomb of electricity is required to produce therein a difference of potential of one volt.

MICROFARAD (MFD).—One-millionth of a farad.

WATT.—A unit of electric power. A volt-ampere. The power developed when 44.25 foot-pounds of work are done in a minute, or 0.7375 foot-pound of work is done in a second.

JOULE.—A volt-coulomb or unit of electric energy or work. The amount of electric work required to raise the potential of one coulomb of electricity one volt. Ten million ergs.

Ohm's Law

Ohm's law is a method of expressing relationship existing between the electromotive force, current and resistance, and is practically the basis of most electrical computations. It is expressed in various forms, as follows:

$$\text{Current Flow} = \frac{\text{Electromotive Force}}{\text{Resistance}} \text{ or, } I = \frac{E}{R}$$

Electromotive force equals the current flow multiplied by resistance.

Electromotive Force = Current Flow x Resistance, or $E = I \times R$.

Resistance equals the electromotive force divided by the current flow.

$$\text{Resistance} = \frac{\text{Electromotive Force}}{\text{Current Flow}} \text{ or, } R = \frac{E}{I}$$

I = Amperes. E = Volts. R = Ohms.

Electromotive force varies directly as the current and resistance.

Resistance varies directly with the electromotive force and inversely as the current.

Current varies directly with the electromotive force and inversely as the resistance.

Mil

The "mil," whose expressed value is $\frac{\text{One}}{\text{One-Thousandth}}$ (.001)

of an inch, is the practical basis for determining the diameters and thereby the area of all wires used as electric conductors. The diameters being given, the area is obtained by the well-known rule, "the area of a circle, in circular units, is equal to the square of its diameter"; hence the square of the diameter of a wire expressed in mils equals the area of its cross section.

$D^2 = A$, which area is expressed in Circular Mils or CM. hence $D^2 = CM$.

Metric System of Weights and Measures

Measures of Lengths			
1 Millimeter =	0.001 Meter	=	0.0394 Inch
1 Centimeter =	0.01 Meter	=	0.3937 Inch
1 Decimeter =	0.1 Meter	=	3.937 Inch
1 Meter =	1 Meter	=	39.37 Inch
1 Dekameter =	10 Meters	=	393.7 Inch
1 Hectometer =	100 Meters	=	328 Feet 1 Inch
1 K lometer =	1000 Meters	=	3280 Feet 10 In.
1 Myriameter =	10000 Meters	=	6.2137 Miles

It will be noticed that 10 Millimeters equal 1 Centimeter, 10 Centimeters equal 1 Decimeter and so on.

Measures of Volumes			
1 Milliliter =	0.001 Liter	=	0.061 Cu. In.
1 Centiliter =	0.01 Liter	=	0.6102 Cu. In.
1 Deciliter =	0.1 Liter	=	6.1022 Cu. In.
1 Liter =	1 Liter	=	0.9081 Quarts
1 Dekaliter =	10 Liters	=	9.081 Quarts
1 Hectoliter =	100 Liters	=	2 Bu. 3.35 Pks.
1 Kiloliter =	1000 Liters	=	1.308 Cu. Yds.

Weights			
1 Milligrm. =	0.001 Gramme	=	0.0154 Grain
1 Centigrm. =	0.01 Gramme	=	0.1543 Grain
1 Decigrm. =	0.1 Gramme	=	1.5432 Grains
1 Gramme =	1 Gramme	=	15.432 Grains
1 Dekagrme. =	10 Grammes	=	0.3527 Ounce
1 Hectogrme. =	100 Grammes	=	3.5274 Ounces
1 Kilogramme =	1000 Grammes	=	2.2046 Pounds
1 Myriagrme. =	10000 Grammes	=	22.046 Pounds

Measures of Surface			
1 Hectare =	10000 Sq. Meters	=	2.471 Acres
1 Are =	100 Sq. Meters	=	119.6 Sq. Yds.
1 Centiare =	1 Sq. Meter	=	1.550 Sq. Ins.

Field Current in D. C. Dynamos

It has been found that a fair average for the field amperes of different sized dynamos, is as follows:—

K. W.	1	5	10	20	30	50	75	100
Per Cent	8	6	5	4	3.5	3	3	2.75

The field current (expressed as a percentage of full load current on lines) is determined with all of the resistance out, that is, with rheostat on first notch.

Copper Wire Resistance

The basis for computation of resistance of copper wires is a wire one foot long and one circular mil of cross section known as a mil-foot, and which has a resistance of 24° C., or 75° F., of about 10.7 Ohms. The resistance of a copper wire varies directly as its length and inversely as its cross section: hence,

The resistance (R) of a copper wire is equal to its length (D) multiplied by the resistance of a mil-foot and divided by the cross section in circular mils (CM).

$$\text{Or, } R = \frac{D \times 10.7}{CM} \text{ also}$$

The cross section (CM) in circular mils of a wire is equal to its length (D) multiplied by the resistance of a mil-foot, divided by its resistance (R).

$$CM = \frac{D \times 10.7}{R} \text{ also}$$

The length (D) of a wire is equal to the cross section in circular mils (CM) multiplied by its resistance (R) and divided by the resistance of a mil-foot.

$$D = \frac{CM \times R}{10.7}$$

Wiring Formula

Ohm's law is practically the basis for the various formulae in general use for determining the proper size of wire to use to carry various currents. It is essential to know the amount of current expressed in amperes, the distance, and to decide upon the loss to allow in transmission; the best rule is as follows:

The cross section (CM) of the necessary wire is found by multiplying twice the distance one way (2D) by the amount of current expressed in amperes (C) and this by the resistance of one mil-foot (10.7) and dividing by the loss in transmission expressed in volts (v).

or, $CM = \frac{2D \times C \times 10.7}{v}$ or, $CM = \frac{D \times C \times 21.4}{v}$

Latent heat of evaporation of water = 966 B.T.U.
 Latent heat of melting of water = 142 B.T.U.
 To evaporate 1 lb. water from and at 212° = 16.859 K.W. minutes
 To evaporate 1 lb. water from and at 212° = 0.281 K. W hours
 Weight per cu. ft. of water = 62.42 lbs.
 Weight per gallon of water = 8.33 lbs.

SUMMARY.—The things to be remembered regarding B. & S. gauge copper wire are the following:

A wire which is three sizes larger than another wire has half the resistance, twice the weight and twice the area. A wire which is ten sizes larger than another wire has one-tenth the resistance, ten times the weight and ten times the area.

No. 10 wire is 0.10 inch in diameter (more precisely, 0.102); it has an area of 10,000 circular mils (more precisely, 10,380); it has a resistance of 1 ohm per thousand ft., at 20 degrees Centigrade (68 degrees Fahrenheit), and weighs 32 pounds (more precisely, 31.4 pounds) per thousand feet.

The weight of one thousand feet of No. 5 wire is 100 pounds.

The relative values of resistance (for decreasing sizes) and of weight and area (for increasing sizes) for consecutive sizes are: .50, .63, .80, 1.00, 1.25, 1.60, 2.00.

The relative values of the diameter of alternate sizes of wire are: .50, .63, .80, 1.00, 1.25, 1.60, 2.00.

CIRCULAR MILS.—The conductors of large sizes are usually specified in circular mils. For example, 500,000 circular mils, 750,000 circular mils.

To find resistance, drop one cypher from the number of mils; the result is the number of feet per ohm.

To find weight, drop four cyphers from the number of circular mils and multiply by the weight of No. 10 wire.

Wiring for D. C. Motors

How to Use Motor Tables

The table shown on previous page is compiled on a basis of 1 volt loss for convenience in using the table on other percentages of loss. It is usual to allow a loss of more than 1 volt for motor service. In such case, divide the distance by the loss allowed, which will give the number of feet in which a loss of 1 volt will occur. Find this number of feet on the table at the horse power and voltage required and you will have necessary size of wire.

EXAMPLE.—A 5 horse power 220-volt motor, 400 feet from service, at 8 volts loss.

EXPLANATION.—A loss of 8 volts for 400 feet would be equal to a loss of 1 volt for 50 feet (400 divided by 8 equals 50). By referring to table we find that to carry a 5 horse power, 220-volt motor, 50 feet with a volt loss, a 6 B. & S. wire is required, which means that the same wire would be required to do the work called for by the example.

Always take the nearest number above rather than below in the table to the number of feet actually required. Do not use a smaller wire than given in following table.

Connections and Data on D.C. Generators and Motors

The various types of direct current motors and generators are known relatively by the field windings, as series, shunt, compound and interpole. They are generally self-exciting but can be separately excited, in which case they are usually supplied with current from an outside source, such as a storage battery or another generator.

SERIES.—The field flux increases as the load current increases. In a series wound machine the field winding is in series with the armature. The speed of a series motor varies with the load. Its torque also increases with the increase of load and decreases with speed. The armature is at the highest speed at no load, and minimum speed at full load. Series motors are mostly used for driving exhaust fans, traction work, etc.

SHUNT.—The field flux is practically constant at all loads. In a shunt wound machine a small portion of the current is shunted through the field winding. Shunt wound motors run at almost constant speed, with constant E. M. F. even though the load varies. Shunt wound generators are used for storage batteries, or any duty which requires a variation of E. M. F. Shunt wound motors are most suited for general work such as driving counter shafts, and constant speed machinery.

COMPOUND.—The field flux increases slightly with the load current. In a compound wound machine the field has two sets of windings, a shunt winding and a series winding. The shunt winding furnishes the initial field strength, while the series winding furnishes a varying field strength, increasing or decreasing with the load. This automatic variation of field excitation maintains a constant voltage if from a generator, and an automatic speed control if used as a motor on constantly varying loads requiring automatic torque variation. Mostly used for elevator service.

INTERPOLE.—The interpole motor or generator is sometimes known as "commutating pole type," because of its having an extra set of poles for the purpose of producing sparkless operation under extreme conditions of service. The field windings of the interpole machine are made series, shunt or compound. Highly recommended for all classes of service in preference to other types.

Alternating Current Generators and Motors

ALTERNATING CURRENT GENERATORS are built in two types, known respectively as revolving field and revolving armature. The common names of the two sets of windings are rotor and stator. The revolving field type machine is the most commonly used type, because of the field current having only to pass through the brushes and collector rings and the high tension wires are all stationary. Alternating Current Generators are separately excited. That is, the field current is supplied from an auxiliary D. C. generator, known as an exciter. The current supplied from an A. C. Generator alternates in direction at regular intervals, and from this characteristic is derived the terms "frequency" or "cycles," which always has a numerical value which defines the period of the alternations. The most generally adopted systems operate at either 60 cycles, 7200 alternations, or 25 cycles, 3000 alternations, while there are some Central Stations which supply either 40 cycle, 50 cycle, or 133 cycle current. Alternating current is generated single, two or three phase, two and three phase systems being the most generally used, because of their being better adapted for the operation of large motors.

ALTERNATING CURRENT MOTORS are constructed single, two and three phase, and of many different types, and for all frequencies and synchronous speeds.

SINGLE-PHASE MOTORS.—Single-phase motors are built in several different types, viz.: Repulsion, Repulsion Induction, and Induction Types, and are for constant or variable speed service. The Repulsion Induction Type is the most generally used of all single-phase motors and furnished for constant and variable speed.

POLYPHASE INDUCTION MOTORS.—Polyphase Induction Motors are built in two types viz.: Squirrel Cage and Slip-Ring or Wire Wound Rotor Types. The Squirrel Cage Rotor Type motor has a nearly constant speed (starting torque high), and is the type most generally used for driving machinery. The Slip-ring motor is adapted for speed variation ranging from 50% to 100% and is also used for constant speed service. Both Squirrel Cage and Slip-ring type motors can be supplied for any frequency or voltage and for different speeds.

STARTING TORQUE.—The starting torque of a constant speed motor is twice full load torque on full voltage. In general, the torque varies as the square of the applied voltage. The reason for using a reduced E. M. F. at starting is to reduce the sudden shock which may throw off belts or cause mechanical injury, and to reduce the starting current. When 50% voltage is applied to the motor, half full load torque is given.

SYNCHRONOUS MOTORS are principally used for power factor correction and are also sometimes called "Synchronous Condensers," because they can be operated at a leading current to raise the power factor of an A. C. system. Synchronous motors for driving power are equipped with an extra starting winding, which will give from 30% to 50% full load torque, and will operate at a constant or synchronous speed with no slip. It is advisable to have one or more synchronous motors on all A. C. systems.

STARTING OF SYNCHRONOUS MOTORS.—The starting of synchronous motors differs from the starting of induction motors, due to the fact that they have a field which is supplied from an auxiliary, known as an exciter. Before starting the motor, first see that the field discharge switch is open from the field of the motor, but the motor field must be short circuited through the field discharge resistance. To stop the motor, first turn the rheostat back to the zero power factor position, then open the field switch and throw off the compensator, the switches and rheostat being in position for next starting. If a synchronous motor which has sufficient starting torque to meet the load conditions should fail to start when the current is thrown into the stator windings, it is probably due to the "standing" relation of the field to the stator windings, because of there being an equal number of stator to rotor coils, and should they both be in a central position to each other, the rotor will not have any starting torque. To remedy this move the rotor a slight distance in either direction, and the motor will then start.

Wiring Data for Three-phase Motors

Where two or more motors are installed on one circuit, wire used should be equivalent to that needed for running loads of all motors plus 50 per cent of running load of the largest motor on the circuit.

General Wiring Formula

For Alternating and Direct Current Circuits

The following general formula may be used to determine the size of copper conductors, volts loss in lines, current per conductor, and of copper per circuit for any system of electrical distribution.

$$\text{Area of conductor, circular mils} = \frac{D \times W \times C}{P \times E^2}$$

$$\text{Volts loss in lines} = \frac{P \times E \times B}{100}$$

$$\text{Current in main conductors} = \frac{W \times T}{E}$$

$$\text{Pounds copper} = \frac{D^2 \times W \times C \times A}{P \times E \times 1000000}$$

W = Total watts delivered.

D = Distance of transmission (1 way) in feet.

P = Loss in line in per cent of power delivered, that is, of W.

E = Voltage between main conductors at receiving or consumer's end of circuit.

For continuous current C = 2160, T = 1, B = 1, and A = 6.04.

System	Value of A	PER CENT POWER FACTOR				
		100	95	90	85	80
Single-phase	6.04	2160	2400	2660	3000	3380
Two-phase (4-wire)	12.08	1080	1200	1330	1500	1690
Three-phase (3-wire)	9.06	1080	1200	1330	1500	1690

System	Value of A	PER CENT POWER FACTOR				
		100	95	90	85	80
Single-phase	1.00	1.05	1.11	1.17	1.25	
Two-phase (4-wire)	.50	.53	.55	.59	.62	
Three-phase (3-wire)	.58	.61	.64	.68	.72	

The value of C for any particular power factor is obtained by dividing 2160, the value for continuous current, by the square of that power factor for single-phase, and by twice the square of that power factor for three-wire three-phase, or four-wire two-phase.

The value of B depends on the size of wire, frequency and power factor. It is equal to 1 for continuous current, and for alternating current with 100 per cent power factor and sizes of wire given in the preceding table of wiring constants.

The figures given are for wires 18 inches apart and are sufficiently accurate for all practical purposes provided the displacement in phase between current and E. M. F. at the receiving end is not very much greater than that at the generator. For example, the constants should not be applied at 125 cycles if the largest conductors are used and the loss 20 per cent or more of the power delivered. At lower frequencies, however, the constants are reasonably correct even under such extreme conditions. They represent about the true values at 10 per cent line loss, are close enough at all losses less than 10 per cent, and often, at least for frequencies up to 40 cycles, close enough for even much larger losses. Where the conductors of a circuit are nearer each other than 18 inches, the volts loss will be less than given by the formula, and if close together, as with multiple conductor cable, the loss will be only that due to resistance.

The value of T depends on the system and power factor. It is equal to 1 for continuous current and for single-phase current of 100 per cent power factor.

The value of A and the weights of the wires in the table are based on .00000302 pound as the weight of a foot of copper wire of 1 circular mil area.

In using the above formula and constants, it should be particularly observed that P stands for the per cent loss in the line of the delivered power, not for the per cent loss in the line of the power at the generator; and that E is the potential at the end of the line and not at the generator.

When the power factor cannot be more accurately determined, it may be assumed to be as follows for any alternating system operating under average conditions: Incandescent lighting and synchronous motors, 95 per cent; lighting and induction motors together, 85 per cent; induction motors alone, 80 per cent.

In continuous current three-wire systems, the neutral wire for feeders should be made of 1/2 the section obtained by the formula for either of the outside wires. In both continuous and alternating current systems, the neutral conductor for secondary mains and house wiring should be taken as large as the other conductors. The three wires of a three-phase circuit and the four wires of a two-phase circuit should be made all the same size, and each conductor should be of the cross section given by the first formula.

General Wiring Formula

For Alternating and Direct Current Circuits

25 Cycles

Table with columns: Size of Wire B. & S., Area Wire Cir. Mils, Wt., Lbs. Bare Wire per 1000 Ft., Resistance Ohms per 1000 Ft. at 20° C., and VALUE OF B PER CENT POWER FACTOR (95, 90, 85, 80).

40 Cycles

Table with columns: Size of Wire B. & S., Area Wire Cir. Mils, Wt., Lbs. Bare Wire per 1000 Ft., Resistance Ohms per 1000 Ft. at 20° C., and VALUE OF B PER CENT POWER FACTOR (95, 90, 85, 80).

60 Cycles

Table with columns: Size of Wire B. & S., Area Wire Cir. Mils, Wt., Lbs. Bare Wire per 1000 Ft., Resistance Ohms per 1000 Ft. at 20° C., and VALUE OF B PER CENT POWER FACTOR (95, 90, 85, 80).

125 Cycles

Table with columns: Size of Wire B. & S., Area Wire Cir. Mils, Wt., Lbs. Bare Wire per 1000 Ft., Resistance Ohms per 1000 Ft. at 20° C., and VALUE OF B PER CENT POWER FACTOR (95, 90, 85, 80).

Amperes in Alternating Current Circuits

By Permission of the Electrical World

The following tables give the amperes per lead wire per kilowatt for single-phase and three-phase balanced loads. The single-phase table can be used for two-phase balanced loads by using a current value corresponding to twice the stated potential of the circuit or by dividing the current value at the potential of the circuit by two.

This table was derived from the following formulas:

For single-phase circuits: Amperes per wire = watts ÷ (volts × power factor).

For three-phase circuits: Amperes per wire = total watts ÷ (volts between wires × power factor - √3).

For two-phase circuits: Amperes per wire = total watts ÷ (volts between wires of one phase × power factor × 2).

In making the computations the number of watts was assumed as 1000, and the amperes were computed for various values of e.m.f. to a sufficient number of decimal places to insure accuracy.

The values for intermediate power factors can be approximated from the tables. For lower power factors, the value of the current for unity power factor can be divided by actual power factor of the circuit or multiplied by the reciprocal of this power factor.

Single-phase Circuits

Amperes for One Kilowatt at Different Power Factors

Table with columns: Volts, POWER FACTOR IN PER CENT (100, 95, 90, 85, 80), and 75, 70. Rows list amperes for voltages from 100 to 800.

Amperes in Alternating Current Circuits

Three-phase Circuits—Continued

Amperes per Wire for One Kilowatt at Different Power Factors

Table with columns for Volts (225-350, 240-250, 330-450, 500-800, 900-1300, 1400-1800, 1900-2300, 2400-3500, 4000-6600, 7000-11000, 12000-16000, 17000-25000, 30000-45000, 50000-60000) and rows for Power Factor in Per Cent (100, 95, 90, 85, 80, 75, 70).

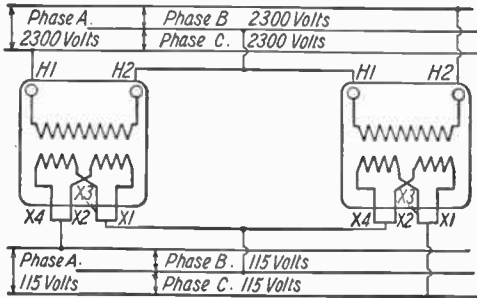

Transformer Connections

No. 1

Three phase 3 wire "Closed Delta" primary to three phase 3 wire "Closed Delta" secondary.

No. 2

Three phase 3 wire "Open Delta" primary to three phase 3 wire "Open Delta" secondary. "Open Delta" connection, as shown, will deliver only 87 per cent of rated capacity and may cause line disturbance due to unbalancing. Only recommended in case of emergency.

No. 3

Three phase 3 wire "Closed Delta" primary to 3 phase 4 wire "Star" secondary.

No. 4

Three phase 4 wire "Star" primary to three phase 4 wire "Star" secondary.

NOTE.—Connections shown are for 2300 volts primaries, with secondaries arranged for 20 to 1 ratio. To change secondaries for 230 volts or 10 to 1 ratio, connect X2 and X3 together (in series) in each transformer, first disconnecting X2 and X3 from X1 and X4.

Transformer Connections

Continued

No. 5

Single-phase 2-wire primary to single-phase 3-wire and also 3-wire secondary.

See note.

Two-phase 4-wire primary to two-phase 4-wire secondary. Connect transformers, one on each phase as per diagram Fig. 5. See note.

No. 6

Three-phase 4-wire "Star" primary to three phase 3-wire "Closed Delta" secondary.

See note.

No. 7

Diagram showing connections of Pittsburgh method of transformation, three-phase 3-wire to two-phase 4-wire and three-phase 3-wire. Transformers are here connected in "Closed Delta," using three single-phase units.

No. 8

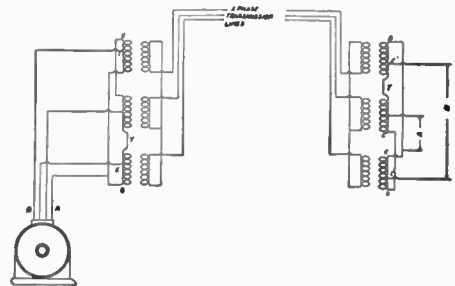

Diagram showing connections of Pittsburgh method of transformation, three-phase 3-wire to two-phase 4-wire. Transformers are here connected in "Star," using three single-phase units.

Transformer Capacity for Motors

In selecting proper size transformers for motors for either 1, 2 or three-phase 1-KVA transformer capacity should be allowed for each motor horse power.

NOTE.—Connections shown are for 2200 volts primaries, with secondaries arranged for 20 to 1 ratio. To change secondaries for 220 volts or 10 to 1 ratio, connect 2 and 3 together (in series) in each transformer, first disconnecting 2 and 3 from 1 and 4. To change primaries from 2200 volts line as shown to 1100 volts line, disconnect B and C, and connect B to A and C to D in each transformer.

ALPHABETICAL INDEX, 1926 YEAR BOOK

A					
Acco Switches, Meter Service	412	Appliance Switch Plugs, Bryant	68	Balconies, Pole, Hubbard	846
Acorns, Socket Chain, Hubbell	293	Switches, Toggle, Hubbell	373	Ball Cord Adjusters	685
Adaptable Lamp Changers	685	Appliances, Heating, Crawford	57-59	Eyes, Hubbard	855
Adapter Bodies, Bryant	318	Heating, M-B	62-68	Globes, Street Lighting	753
Hickeys, Bryant	276	Arc Lamp Chain	530	Lamp Adapters	696
Adapters, Candelabra, Porcelain,		Lamp Suspension Insulators,		Balls, Exit, Triangular	702
P & S	303	Peirce	870	Glass	700
Chapman to Edison, Bryant	323	Welders, Rail Bonding	790	Socket, Bryant	271, 277
Conduit, Ovalduct	545	Arc-light Drop Brackets, Peirce	861	Bands, Pole, Hubbard	849
Cord, Spool	685	Arktite Plugs, Circuit-breaking,		Pole, Peirce	863
Duplex, Spartan	319	Non-watertight	615	Bank Hold-up Alarm Systems,	
Lamp, Ball	696	Plugs, Circuit-breaking, Water-		Edwards	84
Lamp, Curtis, X-Ray	706	tight	615	Protection Systems, Faraday	91, 92
Metal Molding, National	553, 555	Plugs and Receptacles, Circuit-		Bar Solder	926
Mogul, Benjamin	311	breaking	614, 615	Bare Wire, Copper	530
Outlet Box, P & S	305	Receptacles and Condulets, Cir-		Barrier Switches, H & H	384, 385
Ovalflex	548	cuit-breaking	617	Barrow Reels	893
Parallel Blade, Benjamin	338	Armored Cable, Habirshaw	514, 516	Bars, Crow	895
Receptacle, Hubbell	337	Cable, Ovalflex	548	Digging	895, 896
Spartan to Edison	318	Conductors, Flexsteel	548	Installing, Never-Creep	871
Thimble, Peirce	854	Lamp Cord, Flexsteel	548, 549	Pointed	839
Wiremold	560	Arms, Bo-Arrow, Hubbard	858	Tamping	896
Adjustable Bench Brackets	731	Break, Peirce	865	Base Couplings, Wiremold	558
Brackets, Faries	731	Cross, Benjamin	727	Bases, Attachment Plug, Hubbell	
Ceiling Fixtures	731	Mast, Benjamin	729		333, 334
Wall Brackets	731	Mast, Peirce	869, 870	Box, Porcelain, Bryant	314
Adjusters, Cord, Ball	685	Suspension, Trolley	793	Canopy, Metal Molding, National	553
Adjustable-lite Portable Lamps	708	Arresters, Lightning, Magnetic		Cutout, Convertible, Benjamin	430
Aerial Cable, Habirshaw	515	Blowout	221	Cutout, Fuse, Plug, Bryant	429
Aglite Lighting Fixtures	698	Lightning, Multigap	220	Lamp, Portable, Esrobert	712
Air Circuit Breakers	227-233	Lightning, Oxide Film	219, 220	Plug Receptacle, New Wrinkle	258-260
Aisle Light Condulets, Type LA	621	Lightning, Vacuum Tube	221	Projector, Floodlight, Crouse-	
Alarm Systems, Fire, Edwards	80-84	Assortments, Condulet	629	Hinds	741
Systems, Hold-up, Bank, Edwards	84	Attachment Plug Bases, Hubbell		Receptacle, Metal Molding,	
Aligners, Fixture, Benjamin	722		333, 334	National	553
Alley Braces, Hubbard	845	Plug Caps, Bryant	317, 318	Receptacle, New Wrinkle, Bryant	269, 270
All-Nite-Lite Transformers	218	Plug Caps, Hubbell	332, 333, 336	Receptacle, Porcelain, Bryant	281
Aluminum Sockets, Bryant	274	Plug Lamp Receptacles, Hubbell	333	Receptacle, Wiremold	559
Sockets, P & S	310	Plug Receptacles, Square D	404	Rosette, Condulet, Type GS	639
Amazon Friction Tape	927	Plug Rubber Casing	332	Socket, Bracket, Bryant	315
Rubber Tape	927	Plugs, Benjamin	338	Socket, K-W, Bryant	281
Ammeters, Battery Testing,		Plugs, Bryant	319	Socket, New Wrinkle	
Sterling	197	Plugs, Hubbell	332, 336, 337		252-254, 258-260, 269, 270
Dashboard, Weston	197	Plugs, Multiple, Hubbell	335	Socket, Porcelain, Bryant	279
Portable, Weston		Plugs, Square D	404	Socket, Porcelain, Hubbell	296
	181, 183, 185, 187, 188	Plugs, Wiremold	559	Socket, Quick Catch, Hubbell	290
Precision, Weston	183	Attachments, Burglar Alarm,		Switch, New Wrinkle	
Radio Frequency, Weston	197	Edwards	127		258-260, 264-266
Switchboard, Weston	189-191, 193-196	Dim-A-Lite	312	Switch, Porcelain, Bryant	366
Ammoniac, Sal, Soldering	926	Lock, Switch, H & H	386	Bases and Bodies, Receptacle, Por-	
Amperage of A. C. Circuits	964, 965	Pull, Hubbell	292, 293	celain, Bryant	320
Amplifiers, Telephone, Loud		Switch, Quick Break, FA	397	Basket Weave Armored Cable,	
Speaking	52	Auger Bits	909, 910	Habirshaw	516
Anchor Rods, Hubbard	840	Handles, Telescoping Black-		Habsirshaw	516
Wrenches	872	burn's	872	Bates Steel Poles	829
Anchors, Cable, Dossert	424, 425	Augers, Digging	872	Batteries, Carbon, Samson	105
Cable, Frankel	427	Telegraph	871	Dry, Blue Bell	96
Guy	840, 871-873	Auto Transformers	216, 217	Dry, Columbia	96
Screw, Rawlplug	916	Automobile Ignition Cable	519	Dry, Radio, Eveready	96, 97
Anderson Time Switches	416	Lighting Cable	519, 520	Flashlight, Eveready	94
Angle Iron Braces, Hubbard	845	Pole Derricks	882, 883	Gravity	105
Sockets, Bryant	274	Spark Plug Cable	519	Primary, Edison	98-101
Annunciator Cable	526	Starting Cable	519	Radio, Storage	97
Wire	526	Starting Cable, Habirshaw	515	Storage	144
Annunciators, Deveau	92	Automotive Winches	887	Storage, Titan	104
Edwards	75-78	Access Fixtures, Sampson	732-734	Battery Burners, Pyrotip	218
Fire Alarm, Edwards	82	Axes	918	Chargers	102-104
Fire Alarm, Faraday	92	B			
Inter-phone	12, 13	Back Braces, Crossarm, Hubbard	844	Charging Cable, Habirshaw	515
Antenna Insulators, Radio	834	Bags, Tool	907-909	Charging Clips	421
Apartment Inter-phones	18-26				

	Page		Page		Page
Battery Connectors, Fahnestock	105	Benjamin Diffusers	718	Blocks, Connection, Condulet,	Page
Coppers	105	Dust Proof Fixtures	727	Type FSCA	657
Hydrometers	146	Fixture Aligners	722	Connection, Condulet, Type GS	598
Lanterns	94	Fixture Fittings	729	Connection, Condulet, WD Series	609
Sets, Patterson	98, 99	Fixtures, Crossing	724	Connection, Conduletto, Type	
Stations, Watchman's	93	Fixtures, Viaduct	724	G-H	594
Switches, Edwards	125	Gas Proof Fixtures	724, 726	Fuse, Condulet, Type GS	598
