## PRICES

Prices found in this catalogue are revised to agree with the latest lists at the time of issue. It is understood that they are subject to change without notice and are, therefore, not offered by us as a quotation. It is contemplated that all prices are for shipment from our warehouse unless otherwise specified, except such goods as are shipped regularly direct from factories, in which cases prices are for factory delivery unless otherwise specifically agreed upon.

## ORDERS

When possible, we have placed opposite each article a list number. When ordering material, kindly order by the list number and give a description of the article required.

You are requested to specify the routing over which you prefer shipments to be made. In the absence of specific instructions, we shall use our best judgment in selecting the route, but we are not responsible for extra drayage expenses at destination.

## TERMS

Our terms are 30 days net from date of invoice.

Payments may be made by check, bank draft, postal or express money order, drawn to the order of or endorsed to the order of the Graybar Electric Company, Inc.

Payments in currency through the mails even if registered are not recommended and are at sender's risk. We are not responsible for loss or miscarriage of the mails.

Receipts are not issued for remittances unless requested. Our endorsement on remittance is acknowledgement of the receipt of the funds.

We solicit new accounts on a credit basis, and in order to give prompt service, request that where you are not rated by the Commercial Agencies, references or other information of a credit character be forwarded with the order. These will be immediately acted upon, and the results held in strict confidence for our sole use and, when reasonably satisfactory, shipment will follow with all possible dispatch.

To avoid the delay incidental to communicating with references, etc., it would be mutually convenient, when immediate shipment is desired, to instruct us to ship C. O. D. by express, or parcel post (insured if so instructed) or by freight subject to sight draft through a local bank against bill of lading.

We shall advise the terms on future orders promptly after communications from references are received.

## RETURNED GOODS

To save transportation charges, and to facilitate the handling of goods upon receipt, you are requested not to return goods without having obtained shipping instructions from us.

## SHIPMENTS

As experienced packers are employed, and as reasonable care is used in packing, we cannot be held responsible for breakage in packages which are delivered in "good order" by the carrier.

Shipments of glassware are made at your risk.

Goods ordered to be shipped by parcel post will be sent only at the purchaser's risk of loss or damage.

## Now the Shoemaker can stick to his last

In the olden days, nearly every man who manufactured anything had also to do his own selling, often by trudging from village to village.

Nowadays, this job is done by the Distributor who, like Graybar Electric Company, makes a highly specialized business of bring-

ing products to users quickly and economically.

The dramatic growth of Graybar Electric—briefly summarized on the next two pages—is particularly interesting because it typifies the growth of this new economic era.

# FROM "GRAY AND BARTON" TO . . "GraybaR"

*the story of sixty years.*

THE story of the Graybar Electric Company as a distributor goes back to a day when folks had never heard of telephones, of washing machines, of electric lights or of many other electrical conveniences which are commonplace today. It goes back to a day when the electrical industry could hardly have been called an "industry."

Among the men of vision who in that day helped lay

the foundations of the electrical industry, history records two who were outstanding. They were Elisha Gray and Enos M. Barton, who in 1869 founded the Gray and Barton Company which was to become, over half a century later, the Graybar Electric Company.

From the very beginning the firm of Gray and Barton grew with the growing uses which were discovered for electricity. From a mere

**Elisha Gray**

*Founders in 1869 of Gray and Barton,  
now Graybar Electric Company.*

**Enos M. Barton**

handful of men and from its small workshop it expanded until it filled great warehouses and offices in all of the principal cities of the country. From the handling of the crude batteries, bells and buzzers of the early days, it eventually became headquarters the country over for everything electrical from signalling systems to street lights, from percolators to power line poles.

During these years of its development the firm name was changed twice. In 1872 it became the Western Elec-

tric Company and in 1925 the Supply Department of that company assumed its present name, the Graybar Electric Company, in honor of the founders Gray and Barton.

Thus, while the name Graybar is comparatively new in fact, it is old in association, in tradition and in experience. It represents the accumulated knowledge of 60 years of intensive electrical experience. And now, as in the old pioneering Gray and Barton days, it represents quality in everything electrical.

*A bronze tablet in the great hall of the Graybar Building in New York City.*

## **An All American electrical supply service**

Graybar service covers the continent . . . It crosses mountain ranges and rivers . . . It reaches into distant cities.

Through its own 71 well-stocked distributing houses, Graybar service

brings you your electrical supplies exactly as and when and where you want them . . . in all, some 60,000 items selected to meet the electrical requirements of all America.

## No. 12 Graybar Two-Speed Clothes Washers

**SIZE.**—Occupies a floor space 25 inches square. Capacity approximately 8 pounds.

**APPEARANCE.**—A combination of gleaming nickel and soft tones of gray, or black and white with nickel trimmings.

**TWO-SPEED AGITATOR.**—Fast and slow. The Fast speed for the average family wash. The Slow speed for the more particular things that require extra care in handling. At Fast speed the agitator oscillates approximately 1/2 revolution (at a speed of approximately 60 cycles per minute); at Slow speed 1/3 revolution. Action is controlled by positive clutches easily operated by a single selective control lever. The 4-vane aluminum agitator has a square base scientifically designed to give proper flow of water over the vanes and to throw clothes away from the center.

**WATER PUMP.**—2-bladed centrifugal type gear driven from the washer motor. Drains tank in 2 minutes. Operated by a small lever located on the outside of the machine. Rubber drain hose hangs securely on outside of washer. Tank is also self draining; no shut-off valves.

**PROTECTED PORCELAIN TANK.**—Made of one-piece Armco iron completely vitreous porcelain enameled, pure white on the inside. Completely supported and clamped between rubber mountings and protected from blows and injury by the steel shell which is 1/2 inch away from the outside of the tank. Tank is 14 1/2 inches deep and 22 inches in diameter. Cover is copper nickel-plated and polished on both sides.

**FRAME.**—Cylindrical steel shell 23 inches in diameter and 21 inches deep. Mounted on 3 braced pressed steel legs with self-lubricating Atlaslite casters.

**WRINGER.**—Pressed steel, cadmium plated then nickel-plated and highly polished. Top section is separable. Double drain board 13 1/2 inches long; has a slope of 15 degrees. Tilting water board; wringer swings and locks into any one of 8 operating positions. Soft rubber rolls 2 inches in diameter and 12 inches long, revolve in either direction. Simplified tension release, no gears—no oiling. Wringer can be operated while agitator is running.

**MECHANISM.**—Belt drive for first speed reduction and worm gearing for second speed reduction. Fully enclosed.

**CORD.**—8 feet; of waterproof cord and unbreakable attachment plug.

**MOTOR.**—1/4 h.p. Approximate rating, 300 watts. Furnished for any frequency of voltage. Operates agitator and wringer at the same time.

**LUBRICATION.**—Automatic oiling system for gear mechanism. Water pump lubricated by grease cup. Motor lubricated from oil pipes accessible from outside of machine.

Shipping weight, 250 pounds.

Price, No. 12.....each      East of Rockies      West of Rockies  
\$165.00      \$175.00

## Graybar Whirl-Dry Clothes Washers

This small practical washer has an unlimited field. It is used where the large clothes washer is impractical because of lack of space, or where there is not enough washing to warrant the purchase of a large washer.

The outstanding features of this washer are its portability and compactness, and the fact that it not only washes by electricity but rinses and dries as well and is self-emptying.

All parts touching clothes are nickel-plated copper.

Can be attached to any electric outlet.

Has a 1/6 h.p. universal motor. Controlled by a heavy duty switch conveniently located in base. Operates from a lamp socket and uses less than a cent's worth of electricity an hour.

Tank is 13 1/2 inches in diameter and 10 1/2 inches deep. Zinc coated steel. Feet, 8 3/4 inches in diameter pure gum rubber supports.

Spinner-basket, 12 1/2-inch diameter; 7 1/2 inches deep. Sheet copper—brass paddles.

Drive unit—gears—accurately machined and constructed of high grade materials.

Drive shafts are hardened and ground steel cadmium-plated. Gear case is of die castings. High grade bronze bearings. Seamless steel tubing spinner post, heavily zinc-coated.

Lubrication, semi-fluid oil by splash. Has an oil and water separator space between tank and gear case making it impossible to get oil in water or water in the gear case.

Ten-foot rubber-covered cord with rubber plug moulded integral with cord.

Washes 2 pounds of clothes at a time. Uses only 4 gallons of water.

Overall dimensions: diameter, 16 1/2 inches; height, 18 inches.

Complete washer, 37 1/2 pounds; shipping weight, 55 pounds.

Price.....each \$59.50

On this and following pages are shown  
GRAYBAR APPLIANCES AND RADIOS.

Comprising the only complete line of its kind and supported by strong national advertising, and by a comprehensive plan of dealer co-operation, the Graybar Quality Line becomes of unusual interest to enterprising dealers.

Detailed information on Radio and Appliances is available from your nearby Graybar House.

## No. 4 Graybar Table-Top Ironer

A combination ironer and kitchen table. Electrically heated and electrically driven—no extra wiring required.

**SIZE.**—Length of roll, 30 inches. When closed it is a handy little table 36 inches long, 18 inches wide, 32½ inches high.

**APPEARANCE.**—Black and white. Top is white porcelain enamel with black enamel edge; body is white enamel with nickel finished controls and trimmings. Legs are black enamel equipped with rubber tired casters.

**ROLL.**—30 inches long, steel shell, 5¼ inches in diameter; 6 inches when covered with a special knitted padding, a layer of light weight duck, and an outer covering of muslin with draw string fastenings at both ends. Makes 7 r.p.m. and irons at the rate of 11 feet per minute. Roll is free and revolves easily in either direction.

**SHOE.**—Full floating shoe swiveled at back to supporting arm, self aligning, full contact against roll. White nickel on special aluminum alloy. Electrically heated with single heat switch conveniently fitted in double receptacle with motor switch, located at right of receiving board. Entire surface of shoe is accessible for cleaning.

**CONTROLS.**—Power operated, selective, either by finger bar at top of gear case on right, or by knee lever, at left under receiving board. Knee control can be adjusted to suit convenience of operator. Folds up out of sight and out of the way when not in use.

**SAFETY RELEASE.**—If electric service fails while ironer is in operation, shoe can be released from roll by moving the emergency hand control.

**PRESSURE FEATURE.**—Rolls can be held stationary and shoe can be operated against roll for pressing.

**FEED BOARD.**—Made of wood, enameled white. May be swung away from roll when full open end is to be used.

**POWER TRANSMISSION.**—Direct connected from motor to worm and gear speed reduction. All mechanism fully enclosed and self lubricated.

**MOTOR.**—½ h.p. Motors rated as follows: 110 volts, 60, 50, 40, 30 and 25 cycles; 220 watts, 60 cycles; 110 and 220 volts d.c. Motors use about 175 to 250 watts.

**LUBRICATION.**—A can containing ½ pint of medium engine oil comes with each ironer. The entire contents of this can is poured into gear casing by removing screw plug at top of gear casing. No further attention need be given as pump on gearing circulates the oil automatically. Once a year a few drops of motor oil should be put in oil cups, on motor.

Shipping weight. 240 pounds.

## Graybar Portable Sewing Machines

Graybar Electric Sewing Machines all produce a lock stitch.

**PORTABILITY.**—Can be used wherever there is an electric outlet, and tucked away out of sight when not in use.

**EASE OF OPERATION.**—A slight pressure on the control starts the motor. It responds instantly and is always under full control.

**FOOT CONTROL.**

—A small foot pedal controls the motor on these portable types. A slight touch on the foot control starts the machine, increasing the pressure increases the speed, lessening it decreases the speed.

**MOTOR.**—A 1/20 h.p. universal motor. Machines are made from 110 to 120 volts d.c. or a.c. 25 to 60 cycle circuits. Machines for other voltages and frequencies, including 32 volts can be furnished at a slight additional cost. One cent's worth of electricity will operate a sewing machine for about 2 hours.

**FINISH.**—Models with genuine walnut veneer cabinets and covers that lock securely. One model with a metal base and rubberized cover.

**ATTACHMENTS.**—A set of attachments with each machine.

## No. 1 Shuttle—Wooden Base

Has the conventional shuttle, ¾ size head, automatic tension release, automatic bobbin winder, enclosed needle bar. A round motor is attached to the back of the machine.

Shipping weight, 60 pounds.

		East of Rockies	West of Rockies
Price, No. 4 . . . . .	each	\$165.00	\$175.00

		East of Rockies	West of Rockies
Price, No. 1 . . . . .	each	\$57.50	\$60.00

## Graybar Portable Sewing Machines No. 2A Rotary with Built-In-Motor and Sewing Light

The motor is an integral part of this machine, encased in the arm, completely protected from dust or damage. Smooth running and silent. Small hand wheel adds to the symmetry of the machine. Electrical connections are simplified. Beneath the motor is the terminal box with two receptacles, one for the rheostat and one for the conductor cord. A 4-foot cord is attached permanently to foot control rheostat. There is a separate 6-foot conductor cord for current supply. A sewing light attached to front of machine throws a direct ray of light on work as it goes through machine. Electric current for lamp is taken from conductor cord. No extra connection is necessary. Tension automatically adjusts itself to thick or thin goods. Automatic bobbin winder, motor operated; improved stitch regulator.

Shipping weight, 65 pounds.

Price, No. 2A.....	each	East of Rockies	West of Rockies
		\$75.00	\$77.50

### No. 11 Shuttle—Metal Base

Same as the No. 1 except for the metal base and flexible rubberized cover instead of the wooden cabinet. This reduces both price and weight.

Shipping weight, 45 pounds.

Price, No. 11.....	each	East of Rockies	West of Rockies
		\$45.00	\$47.50

### No. 4 Two-Spool

Full size head; rotating principle; all improvements of Rotary; no bobbins to wind; sews direct from two spools; finish—dark walnut on oak.

Shipping weight, 70 pounds.

Price, No. 4.....	each	East of Rockies	West of Rockies
		\$80.00	\$82.50

## Graybar Console Type Sewing Machines

The console cabinet types of sewing machines fit in harmoniously with the furnishings of any room.

Equipped with rotary head with built-in-motor and sewing light. Have adjustable knee control located at right on the inside of the table. Operates as easily as the foot control. When not in use knee control folds out of the way of the closed door.

### No. 5A Console Type

Built of the best American walnut and walnut veneer with rubbed satin finish. When closed it measures 35 inches long, 18½ inches deep and 30 inches high.

The cover is hinged at the back and when opened for sewing is supported by a gate leg that swings to either side and is not visible when the cabinet is closed. The sewing surface provided by the table and cover is more than adequate. There are 2 pockets on the inner side of the door for instruction books and patterns; also a drawer in the cabinet and a shelf for the attachments.

Shipping weight, 145 pounds.

Price, No. 5A.....	each	East of Rockies	West of Rockies
		\$140.00	\$145.00

### No. 7A Cabinet Type

This model meets the demand for a quality cabinet at a popular price. It is of a simple pleasing design sturdily built of walnut and walnut veneer with a satin finish.

When closed it measures 24 inches long, 18½ inches deep and 30 inches high.

Hinged cover lifts and drops to the left, making a spacious working surface. Front of the cabinet is a hinged door which swings back and forms a support for cover. On the inside of the door are 2 compartments for attachments and instruction books.

Shipping weight, 119 pounds.

Price, No. 7A.....	each	East of Rockies	West of Rockies
		\$105.00	\$107.50

## Graybar Two-Fan Vacuum Cleaners

These Graybar Vacuum Cleaners embody the two fan principle—a development by which the speed of the motor and resultant noise are reduced, but not the volume of air necessary for efficient cleaning. The two fans are small in diameter and work in tandem. It is the simple principle of two fans working on the same job at a lower rate of speed and accomplishing the same results as one fan working away at a high speed. These cleaners are built unusually low. Convenient for cleaning under beds and large pieces of furniture. They take up exceptionally small storage space, because when handle is locked in horizontal position the cleaner can be stood on end against the wall.

### No. 20 Two-Fan Vacuum Cleaner

The No. 20 is a powerful cleaner—the Big Ben of the family.

Moves easily over the floor coverings. Body is of aluminum casting polished all over; supported on 3 molded rubber wheels. The 2 forward wheels are rubber tired and support the nozzle. They are made adjustable to regulate the nozzle height. There are 4 notches in which the nozzle adjustment lever may be regulated to clean efficiently different thicknesses of floor covering.

The motor-driven brush has Chinese bristles set in tufts in spiral formation in a steel spindle. As the bristles wear down an adjustment plate provides for lowering the brush accurately and evenly the entire length. There are 5 notches on this cleaner. Each notch lowers the brush a fraction of an inch.

Brush is held firmly in spring sockets and is driven by an endless flat rubber belt from a speed reducing pulley on motor

shaft. A spare belt is furnished with each cleaner.

Bag is equipped with a clip type emptying clamp. An extra flap of material at throat of bag prevents dust from dropping back into cleaner. Detachable support on handle. Breach type connection to fan outlet.

A flip of the trigger type control switch, conveniently located just below where the hand rests, turns the current on or off.

Tubular steel handle with curved grip, insulated at bottom by fibre sleeve, fits into socket at top of bail. Easily removed by loosening wing nut. Combination tilting and handle holding device operated by foot.

Twenty feet of conductor cord with unbreakable plug makes it convenient to clean several rooms from one outlet. Detachable plug at base of handle.

Horizontal 1/8-h.p. universal motor, approximately 8000 r.p.m. Can be used on 110 volts a.c. or d.c. and a.c. of 25 to 60 cycles frequency. Motors for higher voltage operation can be obtained. Fully enclosed, accurately fitted and protected from dust; air cooled. High grade, large size motor brushes. Double fan in tandem, steel blades.

No oiling necessary. The rotating parts of both motor and brush are mounted on ball bearings which are packed in grease and sealed at the factory.

Cost of operation is approximately 2 cents an hour on a 10-cent rate.

Nozzle opening, 12 1/2 inches. Overall dimensions: width, 15 inches; length, 12 1/2 inches. Height at highest point of body, 6 1/2 inches. Weight, 14 pounds.

Price, No. 20	each	East of Rockies \$60.00	West of Rockies \$62.50
---------------	------	-------------------------	-------------------------

### No. 25 Two-Fan Vacuum Cleaner

This cleaner is exceptionally easy to use. It is unusually light in weight, weighing only 10 pounds, easy running yet powerful enough to do the cleaning in the average home. It is of the same general construction as the No. 20 except that it has a permanently adjusted nozzle and the special brush adjustment provides for 3 adjustments instead of 5.

The nozzle opening measures 8 3/4 inches. Overall dimensions: width, 10 3/4 inches; length, 11 inches. Height at highest point of body, 6 inches.

Weight, 10 pounds.

Price, No. 25	each	East of Rockies \$40.00	West of Rockies \$42.00
---------------	------	-------------------------	-------------------------

### No. 30 Handy Cleanerette

This cleaner takes the place of attachments and yet it is a complete cleaner consisting of a motor, short handle, self supporting bag, nozzle and brush that slips on nozzle, and 20 feet of cord. It weighs only 4 pounds, and from the front of the nozzle to the tip of the handle it measures only 14 1/2 inches. Nozzle opening is 4 5/8 inches.

Suction and shape of nozzle combine to make this a thoroughly efficient cleaner for stair runners, upholstered furniture, radiators, mattresses, clothing and automobiles.

Nozzle and fan housing are an integral part made of cast aluminum and polished. Motor is finished in gray enamel and the handle is of wood black enameled.

The gray dustproof bag is self-supporting by a contained spring wire loop; it runs parallel with the motor and handle. A black fibre tube with slot slides easily over large end of bag. Breach type connection to fan outlet makes it easy to detach bag. Bag may be removed and cleaner used as a blower.

A tumbler switch mounted in motor case is conveniently located. Universal motor, 100 watts. Ball bearings require no oiling.

Cost of operation is a cent an hour based on the 10-cent rate.

Price, No. 30	each	East of Rockies \$13.50	West of Rockies \$14.50
---------------	------	-------------------------	-------------------------

## Construction Features of Crawford Electric Ranges

## No. 18-93 Crawford Electric Ranges

### Crawford Automatic Controls

The operation of these ingenious labor-saving devices is simple, positive and accurate. They are mounted on the range itself with the plug-in feature. Each control is wired into the range in such a manner as to actuate at the point of setting a dependable solenoid switch. This switch locks itself on and off, eliminating the hums and chatters so prevalent in automatic controls, and insures a positive and reliable contact.

### Crawford Time Controls

A self-contained unit which may be added to any Crawford Automatic Electric Range, for turning the oven heat on and off at any predetermined time within a period of 20 hours. Can be placed at any convenient spot on top of the range, or it may be fastened to the back of shelf or oven top.

Finished in white enamel. Instructions for operation are placed just below the dial.

This timer is unique in the simplicity of the setting operation. There is only one hand: turn this first to the right, to the number of hours lapsing between the time of setting and the time it is desired to turn the oven heat off; then to the left, to the number of hours that it is desired to have the heat turned on. Operated by a standard clock mechanism. Can be removed for cleaning and oiling by pulling plug which attaches it to the control circuit.

The movement within the timer is an 8-day movement. One winding is sufficient for many weeks of ordinary cooking.

### Crawford Temperature Controls

The temperature control insures constant regulation of oven temperatures. It is mounted on the side of the oven nearest the cooking top and close to the front of the oven. Installed here, the actuating member is not affected by the radiant rays from heating units, so that the device operates only on true air temperatures of the oven.

Control is positive in action, and when set at the desired temperature, the oven heat will be automatically maintained at that temperature so long as the oven switch is turned on. Its positive action is produced by the expansion and contraction of a copper tube within which is a carbon rod extending nearly across oven enclosure. For that reason its operation is not governed by heat at any spot in oven, but by true average oven temperature. Will maintain oven heat within a few degrees of temperature at which it is set. The current in the control circuit is on only momentarily.

Control is attached to oven with plug-in feature. Control does not break a circuit. Current is controlled by solenoid switch so that circuit is always made and never broken within thermostat itself, thus eliminating usual wear and tear from arcing.

### Calibration and Adjustment

The temperature control is sealed in such a manner that oven moisture, which would cause corrosion or interference with adjustments, cannot reach its operating parts.

Although thermostat is easily calibrated and adjusted, it is suggested that it be opened only by those familiar with its operation. Recalibration, if necessary, is done without removing or opening the temperature control. Loosen the slotted screws on the end of the thermostat and move the adjustment to the right or left to make the control agree with the thermometer to which it is being calibrated. The slotted screws are then tightened and the control is in proper adjustment.

No. 18-93 RPA

A large oven, together with 4 top units, furnishes ample cooking capacity for large families, tea rooms or small clubs.

It is finished in 2-tone vitreous enamel. The sheet metal parts are white, and the cooking top, front, and door frame are light gray vitreous enamel.

Made with either right or left-hand oven. The Crawford Automatic Control is standard with this range.

No. 18-93 RPAU

**Crawford Utility Bases**

The Crawford Utility Base is made in enamel finish only. Made in 3 sizes to fit the Nos. 14-61, 16-83 and 18-93 models of Crawford Electric Ranges. It not only enhances the beauty of those models, but it is a real utility.

Unique with Crawford is the base with the disappearing door—a patented feature with 5 distinct points of superiority in its favor.

**Disappearing Doors**

To open either of the 2 closet doors, simply pull the nickel knob at the top nearest the door to be opened. It operates easily and positively. No stooping is necessary. When opened, the door disappears from view like the door of a modern bookcase, making access convenient. The construction makes possible, if desired, the opening of both doors together. The doors do not come out into the room as they would if swung on hinges. There is no chance of the doors sticking. To close the door, push the nickel knob back, and the door adjusts itself again in the closed position.

At the back of the base is a wing nut for adjusting the tension of the opening and closing of the doors to the particular requirements of the housewife.

**Simple Construction**

The patented floor operating mechanism is sturdily and simply built—nothing to get out of order—no hinges to loosen—no sliding grooves to get out of alignment or adjustment.

**Integral Frame Construction**

The front frame of the Crawford Utility Base is one solid casting, finished in light gray vitreous enamel. When the range is set in place, it has the appearance of a solid enamel front, forming a complete assembly from the floor up.

**Heated Compartment**

Each compartment is arranged so that an electric heater may be installed in either or both compartments, converting the utility base into a practical warming closet. A special portable unit with control switch attached may be installed at any time.

**Easily Cleaned**

The base is set on cast iron legs, finished in gray vitreous enamel of ample height to allow for easy cleaning underneath.

**No. 16-83 Crawford Electric Ranges**

No. 16-83 RW

Ranges have ample capacity in both oven and surface units for cooking requirements of the average home.

These ranges are made with either right or left-hand ovens.

Non-automatic ranges are equipped with a side wall oven heat indicator. Can be furnished with the Crawford Automatic Control.

No. 16-83 RW has a black Japan finish, with white splashers, panels and utility drawer. Has an enameled cooking top.

No. 16-83 RPT is finished in 2-tone vitreous enamel of white and light gray.

## No. 14-61 Crawford Electric Ranges

For bungalows, apartment houses, and small cottages Crawford has developed a range of unusual quality at a low price.

Ranges are made with either right or left-hand oven, as are all the other Crawford cabinet models. May be had in 3 distinct finishes, so that the No. 14-61 will satisfy adequately all demands for that type of range.

The No. 14-61 black has a black velvet japan finish with vitreous enamel splashers, door panel and switch panel.

The No. 14-61 RWO is a semi-enameled range, like the one described above, excepting that it has a white vitreous enamel oven top and gray vitreous enamel cooking top.

The No. 14-61 is also made in full enamel finish. The standard equipment for the No. 14-61 in full enamel finish is with an oven temperature control, to which may be added a time control, as with any Crawford Automatic Range.

Another attractive feature in the No. 14-61 range is the addition of the utility base.

All types of this range have the exclusive features and points of superiority found in the larger ranges. These ranges have large ovens, although the over all length is only 36 inches. Has the usual height cooking top.

Cast iron construction has been used wherever it increases the durability of the range. The front frame, cooking top, switchboard support, and legs are of cast iron.

The non-automatic types of this range are equipped with side wall oven heat indicators. All ranges have center heat top units—one of the units of high capacity for quick cooking. The oven units are of the removable grid type and are interchangeable. Broiling is done in the top of the oven.

Monel lead wires to top units, reciprocating switches, shelf-type door with adjustable spring all go to make this range the best value.

## No. 14-61 Crawford Electric Ranges

No. 14-61 RPT

This range is a rare combination of beauty, quality and utility, at a moderate price.

It is designed for homes that are limited in kitchen space.

Finished in 2-tone vitreous enamel. The oven can be either on the right or left hand side.

This range has an automatic control and can also be supplied with a utility base, if desired.

## No. 14-61 RWO Crawford Electric Ranges

Particularly adapted to apartment house use. Has ample capacity for the requirements of the average family.

Has a cast iron frame construction and heavily insulated oven. A right or left-hand oven can be supplied. Also automatic control, if desired.

**No. 16-51 Crawford Electric Ranges**

To provide an electric range with real cooking capacity, where there is limited kitchen space, Crawford has produced the No. 16-51 model.

This type of range is especially desirable for kitchenettes, small apartments or camps. If necessary, it can be placed in front of a window, where the sill is of average height, by using the range without the splasher and high shelf.

Made in 2 standard finishes—durable baked black japan and semi-enamel finish. Either may be had with high shelf and white enamel splasher. The castings on the semi-enamelled range are finished in light gray vitreous enamel, giving the appearance of an all-enamel range.

A side wall oven heat indicator is standard equipment on the left side of the oven.

This range is of high quality throughout, being of the same high standard and having the same features as the higher priced and more elaborate ranges.

**Shelf Type Doors**

The Crawford Adjustable Shelf Type Door has unique construction. Each door may be adjusted by the taking up of a wing nut, so that the tension is suited to the strength of the operator. The door is balanced so that it cannot drop from its own weight when the door catch is disengaged.

Not only does this patented construction allow ease of operation and adjustment, but the spring is so designed that it practically eliminates all door spring troubles. Should it be necessary at any time to remove the door, this is easily accomplished by the loosening of 2 bolts on the front frame casting. This allows the door to be taken off and replaced in a moment.

This door will withstand the abuses to which oven doors are usually subjected. It will hold any weight of food that may be placed upon it.

Prices upon application.

**Crawford Electric Ranges**

Particular attention is called to the simple construction and to the material used in the electrical assembly of Crawford Electric Ranges.

**Reciprocating Switches**

Reciprocating switches of ample capacity are standard equipment on all models.

**Units**

**Oven Unit**

The oven unit is of the grid type, made of a heavy band iron frame of rust-resisting metal.

The terminal prongs are rigidly supported in a special insulated block, which is bolted securely to the band iron frame. The unit is constructed so as to eliminate warping entirely. The resistance wire is suspended in such a manner that a more efficient circulation of heat is obtained than from the usual oven unit.

**Top Unit**

The method of supporting and fastening the surface units in the cast iron frame not only gives the advantage of many points of support, but allows such freedom of motion to the unit itself that the danger of breakage from expansion and contraction is practically eliminated. Close examination of the unit will show the ease with which resistance wire may be replaced when necessary. All terminal bolts in Crawford units are of monel metal with monel nuts, thus preventing oxidization and corrosion from heat and moisture.

**Switchboard**

The Crawford Patented Switchboard has outstanding features that commend it. It has heavy bus construction, reciprocating switch equipment and a terminal designed to make it easy to connect to the supply circuit.

## Crawford Electric Ranges Ovens

Particular attention is called to the detail of oven construction, uniform in Crawford Electric Ranges.

The oven linings in all types are of vitreous enamel—inside and out—with the exception of the Nos. 14-61 and 16-51. In the Nos. 14-61 and 16-51 the oven linings are of coated metal. Both forms of construction are rust-resisting.

Crawford Electric Ovens are ventilated to provide for proper escape of moisture under various cooking conditions. They are equipped with rack guides, so built as to make possible any combination desired, within the oven enclosure.

The ovens are built with rounding corners, making cleaning an easy matter. Units, oven racks, and, in the larger ranges, oven rack guides are easily removed for cleaning.

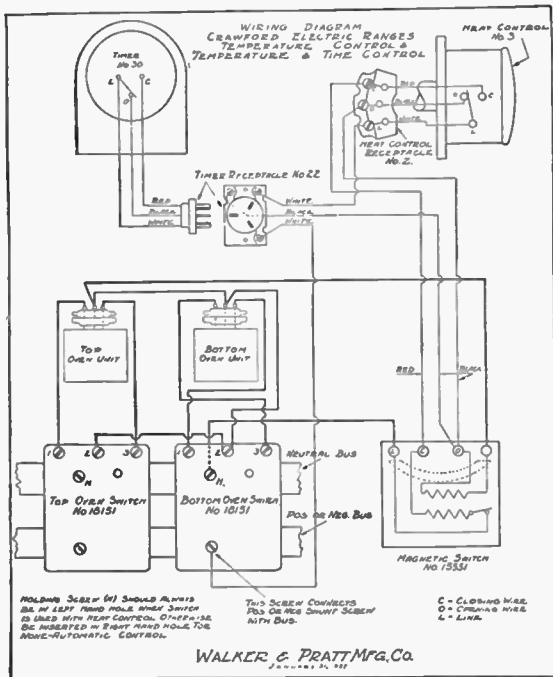

Crawford Electric Ovens are heavily insulated. The permanence and positiveness with which the oven door catch and latch engage, assure a tight door when closed properly.

Broiling is done in the top of the oven. Enameled broiling pans are standard equipment.

### Wiring

The wiring to the oven unit terminals and to the solenoid switch on automatic ranges is housed in one conveniently located chamber at the back of the range—readily accessible. The oven unit terminals are rugged and free from all possibility of trouble arising at that point. Clips on these terminals are also made of heavy monel metal. The connection between the unit terminals and the oven terminal plug is such that the unit slides in and out easily on guides provided to hold it in its proper place. All the lead wires from switches to the surface heating units are monel metal. This assures absence of trouble originating from oxidation or corrosion, under heat. Lead wires are fastened to units by large nuts, which are removed easily when servicing becomes necessary. Leads are supplied with friction washers permanently fastened to wires, assuring good contact at all times.

### Wiring of Automatic

The diagram shown is typical of the wiring for Crawford Automatic Temperature Control Ranges, and temperature and time control ranges. To examine or replace the thermostat, remove the 4 hold-on screws and pull the thermostat out of its plug-in socket. The timer is even easier to remove. When this is done, timer receptacle automatically closes the circuit, so that range may be operated with temperature control only, while timer is being cleaned or repaired.

## Type T Crawford Electric Water Heaters

An improved type of electric hot water storage heater. All vital parts are of lasting quality for continuous and economical duty. Once installed, the heater runs itself, turning on and off, as required, maintaining water at the temperature for which the automatic is set.

Crawford tank types, or complete storage systems, fill the requirements of home-owners desirous of a complete unit. They are also particularly adapted for use on the lines of electric service companies desiring a surplus night power load. The No. T-2442 storage system was designed for that use, and when used in conjunction with a synchronous motor time switch, installed so as to control the water heating circuit, this system will store ample hot water for a day's use. Installations of this type can also be metered on a kilowatt hour basis, as the circuit can be independently controlled, to utilize night power.

Tank is sufficiently insulated so that temperature of water, heated the previous night, will be maintained for use during the following day.

These heaters possess the following improvements:

Compact construction. Heating units are within tank, but do not come in contact with water or air.

Extra heavy galvanized steel tank and heavy piping.

Easy to install—a complete unit ready for use.

Internal circulation provided by means of insulated flow pipe, increasing materially the efficiency of operation.

A variable automatic temperature control provides hot water at any desired temperature.

Independent, hand-operated switch on connection box permits heater to be used non-automatically, if desired.

Entire system is designed to keep water hot economically.

System is insulated with proved insulation, encased in steel, finished in gray and is supported on gray vitreous enamel legs.

Heating units are removable without shutting off water or touching plumbing.

A safety link prevents accidental overheating. A faucet is provided for draining the system.

Made in 2 capacities: 20 and 42 gallons. The 42-gallon size is designed and adapted for surplus night power use with a low density, where such systems are desirable.

Crawford adjustable temperature, automatic control, plug-in type, is standard equipment built into the hot water storage systems.

No.	T-1220	T-2442
Capacity	20 gallons	42
Wattage	1200	2400
Voltage	110	220
Total Height	45 inches	56
Outside Diameter	18 inches	22
Size of Pipe Connections	3/4 inches	3/4

Also supplied: 2400-watt heater in 20-gallon tank, No. T-2420; 1200-watt heater in 42-gallon tank, No. T-1242.

Prices upon application.

**Crawford Outside Circulation Electric Water Heaters**

**Type W  
For A.C. Only**

Type W-5

An all cast iron heater of the non-rusting type. Porcelain enamel lining of the cylinder prevents formation of rust and insulates against accidental short circuits to ground. Heating units are of the open coil type, placed within the body of the heater. Heating units are so arranged that heater will continue to operate, when coils are connected in multiple, until both coils are burned out.

Heater is provided with safety links that melt and open circuit, should it for any reason become overheated.

Made in 2 sizes: 3 and 5 kilowatts.

An, on and off, double pole control switch furnished with each heater. Automatic temperature control is a separate attachment.

Type	Wattage	Voltage	Total Height Inches	Outside Diameter Inches	Pipe Connections, Inches	Capacity Gallons
W-3	3000	220	12 $\frac{1}{4}$	6 $\frac{1}{2}$	$\frac{3}{4}$	30
W-5	5000	220	14 $\frac{1}{4}$	6 $\frac{1}{2}$	$\frac{3}{4}$	40

**Type H**

Made of brass and can be readily taken apart for cleaning. All sizes above 1200 watts are of the multiple unit type.

Assembly consists of a deep-drawn, one-piece, brass shell with a flanged end, for bolting on head. Head is a brass casting, in which are inserted the inner tubes or sheaths for the heating units.

In assembly, head is bolted to shell, extending tubes into dome of shell. Heating units are inserted in inner tubes and cover is placed over head casting to shield electrical connections. This patented construction makes possible the removable unit feature. A burned-out heating unit can be as easily replaced without draining the heater.

Fusible patented safety links are used as a safeguard against overheating from any cause. Link is of special alloy, tested so that it will melt and open electric circuit, cutting off the source of heat before damage is done.

Type H-48

Type	Wattage	Voltage	Total Height Inches	Outside Diameter Inches	Pipe Connections, Inches	Capacity Gallons
H-12	1200	110	12 $\frac{3}{4}$	4 $\frac{7}{8}$	$\frac{1}{2}$	20
H-24	2400	220	12 $\frac{3}{4}$	4 $\frac{7}{8}$	$\frac{1}{2}$	30
H-48	4800	220	12 $\frac{3}{4}$	6 $\frac{3}{8}$	$\frac{1}{2}$	40
H-72	7200	220	12 $\frac{3}{4}$	7 $\frac{5}{8}$	$\frac{1}{2}$	60

Removable type heating units are all the same size (1200 watts) 110 volts. Automatic temperature control may be attached to Type H Heaters, the same as to Type W heaters.

**Crawford Automatic Controls**

Type W-5 Automatic

This is a separate unit which may be attached to the outside of any Crawford Type H or W Water Heater.

It is a self-contained unit with a thermostat, having adjustable setting, so that user may set it to obtain any given temperature of hot water. Dependable for water heater service.

The automatic control for hot water storage systems is built into the complete unit.

Made in 2 sizes: Type S fits W-3, H-12 and H-24; Type D fits W-5, H-48 and H-72. Control coils are wound for 110 volts and will be shipped that way unless otherwise specified.

Detailed instructions for installation are packed with each control.

**Crawford Electric Hot Plates**

Type 1-B

Type 2-E

Made in 2 finishes and in 3 sizes.

The black finish plates (B Type) are finished all over in a black japan finish. The enamel plates (E Type) have top, legs and switch front castings finished in gray enamel.

Reciprocating switches and durable electrical construction make these hot plates most serviceable.

Type 3-E

CAT. No.	HEATING UNITS		Total Wattage	DIMENSIONS, INCHES			
	Black	Enamel		1000	1500	Height	Width
1-B	1-E	1	1000		6 $\frac{1}{2}$	14	14
2-B	2-E	1 1	2500		6 $\frac{1}{2}$	14	23
3-B	3-E	2 1	3500		6 $\frac{1}{2}$	14	33

Prices upon application.

**Crawford Electric Ranges**

Prices and terms printed in Wholesale Price List.

**Model Code**

- R—Right-Hand Oven
- L—Left-Hand Oven
- S—High Shelf
- W—Enamel Cooking Top
- O—White Oven Top
- C—Warming Closet
- U—Utility Base
- X—One Side of Utility Base Heated
- H—Semi-Enamel
- P—All Enamel
- T—Temperature Control
- A—Time and Temperature Control

**Instructions for Ordering**

State size number of range and add code letters, to indicate particulars and equipment to be shipped with range. Example: An 18-inch oven range with oven on right, all enamel finish, time and temperature controls, warming closet and utility base with heater would be written, 18-93 RPACUX.

When ordering controls, specify whether a.c. or d.c. and cycles. Unless otherwise specified, heating units and controls will be furnished for connection to standard 3-wire service, 220 volt (110 volt units) a.c., 60 cycle. Special arrangements of units or voltages other than standard are furnished at an extra charge.

Specify whether shipment is to be by rail, water, express, parcel post. Give routing and lines to be used. In absence of instructions, goods will be shipped and routed at the discretion of the manufacturer.

**Guarantee**

Manufacturer guarantees these ranges and water heaters against mechanical and electrical defects, and is ready to exchange all parts which prove defective within a year.

**Claims for Breakage or Loss**

Claims for breakage or loss should be presented to the carrier, as the manufacturer's responsibility ends on delivery of shipment in good order to the carrier. The manufacturer is always ready to give assistance to secure settlement of claims.

**Repairs**

Refer to Repair Parts Catalogue for details of exchange, credit and orders for repairs.

## No. K1228 M-B Electric Toasters

Aranium Plated  
220 and 250 Volts

This is a tip and turn style toaster.

Simply open the door and the bread turns ready to be toasted on the other side.

Approximate shipping weight, standard package of 6, 25 pounds.

Price, No. K1228.....each \$7.50

## No. K336/7 M-B Electric Percolators

Aranium Plated  
32, 220 and 250 Volts

No. K336/7 is a 7-cup percolator.

With ebonized handle and paneled sides with engraved decorations.

Approximate shipping weight, standard package of 3, 16 pounds.

Price, No. K336/7.....each \$17.00

## No. K1617 M-B Electric Waffle Irons

Aranium Plated  
32, 220 and 250 Volts

This waffle iron makes a 7-inch waffle in about 2 minutes, evenly browned on both sides at the same time.

The paneled top and embossed design on the tray make this iron an attractive one.

Ivory finish handle.

Cast aluminum grids.

Approximate shipping weight, standard package of 6, 53 pounds.

Price, No. K1617.....each \$18.00

**M-B Fuselink Protective Devices for Percolators**

Fuselink may be replaced without the use of tools.

An extra fuse is attached to inside of baffle plate.

Contacts are brass to brass, nickel plated and are made under pressure; there is no trouble from open circuits in percolator due to expansion and contraction of contacts under heat. Protective device

and electric element can be replaced using only a screwdriver. Fuse is made with brass ends, and when it operates the fuse metal drops away clean from these ends; it does not soften or melt in the middle, and cannot arc. The water-pump is simple and effective; easy to clean.

Price, No. 54.....	each \$1.10

645 Watts

Has cast aluminum grids.

Made with red, blue, green or yellow handles.

Approximate shipping weight, standard package of 6, 48 pounds.

Price, No. 1601.....each \$13.00

**6-Pound Household Irons**

These irons are built to give a lifetime of satisfactory service. Their perfect balance makes them easy to handle without tiring the wrist. They heat quickly and evenly with a little extra heat toward the point where it is most needed.

Non-heating handle and sturdy attaching plug stay cool. Made for use with separate stand or with an attached heel stand.

**No. 1618 M-B Waffle Irons**

This waffle iron is distinctly original in design. It is exceptionally low and especially attractive.

Turquoise handles and cord to match. Makes a 7-inch waffle.

Packed 6 in a box.

No.....	1618
Length, Handle to Handle.....	inches 14
Diameter Tray.....	inches 11½
Watts.....	660
Shipping Weight.....	pounds 64
Price.....	each

**M-B Electric Waffle Irons**

32, 220 and 250 Volts, 645 Watts

M-B Electric Waffle Irons make a thick waffle, 7 inches in size, which can be divided into 4 portions.

Waffle is evenly browned on both sides at once. Makes a waffle in 2 minutes.

An exclusive feature is the rough around the edge of the iron. This catches any over-run of batter and prevents it dripping down on the base.

Has cast aluminum grids.

Extreme diameter, 9½ inches.

Furnished complete with cord and switch plug.

**No. 1616**

Made of brass, nickel plated.

Approximate shipping weight, standard package of 6, 53 pounds.

Price, No. 1616...each \$15.00

**No. 1615**

Made of brass, nickel plated.

Approximate shipping weight, standard package of 6, 57 pounds.

Price, No. 1615.....each \$15.00

**No. 1601**

Nickel plated.

Approximate shipping weight, standard package of 6, 48 pounds.

Price, No. 1601.....each \$12.50

**No. 400 M-B Electric Pancake Cookers**

32, 220 and 250 Volts, 645 Watts

This pancake cooker bakes both sides of the pancake at once. An expanding hinge allows for the rise so that a pancake of even thickness is insured.

The cooker is insulated between the top and the base; thus the base never gets hot—allowing it to be lifted while the cooker itself is still hot. There is no danger of damaging the table or the table cloth.

The cooker is decorated by delicate chasing on the top and is finished in highly polished nickel. The grids are cast aluminum.

With the cooker, pancakes can be served deliciously hot just as they are baked—no running to the kitchen for a new batch. Cooks a pancake in a little over a minute.

Extreme diameter, 9½ inches. Diameter of pancake, approximately 7 inches.

Full instructions furnished with each cooker.

Price, No. 400.....each \$12.50

## M-B Electric Toasters

## No. 1232 M-B Toastwatch Toasters

### No. 1229 Tip and Turn Toasters

32, 220 and 250 Volts, 600 Watts  
 Holds 2 full size slices of bread. Tip door open a little way, drop in slice of bread and close. Tip door all the way open and bread turns over.

Made of brass, nickel plated; chased design. Width base, 8½ inches; height, 7½ inches.  
 Shipping weight, standard package of 6, 25 pounds.  
 Price, No. 1229.....each \$6.75

A clock mechanism shuts off the current after the bread has toasted from ½ to 3 minutes as desired. This prevents burning.

The toaster is the tip and turn type—after the bread toasts on one side, simply lower the door and the bread turns ready for toasting on the other side.

Packed 6 in a carton.

No. ....	1232
Size Base .....	inches 5¼x8½
Height .....	inches 8
Watts .....	600
Shipping Weight .....	pounds 34
Price .....	each .....

### No. 1228 Tip and Turn Toasters

32, 220 and 250 Volts, 600 Watts  
 Same as the No. 1229, except for design. Width base, 8½ inches; height, 7½ inches.  
 Shipping weight, standard package of 6, 25 pounds.  
 Price, No. 1228.....each \$5.00

### No. 1227 Double Unit Toasters

220 and 250 Volts, 550 Watts  
 Has 2 elements that toast bread on both sides at once. Makes a slice of toast in 52 seconds. Takes a full size slice of bread.

Drop a slice in toaster, wait less than a minute, press the button and the toast is ready.  
 Made of brass, nickel plated, with simple relief design.  
 Width base, 9 inches; height, 6¾ inches.  
 Shipping weight, standard package of 6, 25 pounds.  
 Price, No. 1227.....each \$8.50

### No. 1223 Toasters

32, 220 and 250 Volts, 550 Watts  
 Equipped with toaster rack. Nickel plated. With detachable plug and 6 feet of cord. Not equipped with reversible feature.  
 Width, 7¾ inches; height, 9¾ inches.  
 Shipping weight, standard package of 6, 25 pounds.  
 Price, No. 1223.....each \$5.00

### No. 1225 Reversible Toasters

32, 220 and 250 Volts, 600 Watts  
 Holds 2 full slices of bread. Toast holder has easy opening door which stays open while bread is inserted. Door is closed by a simple spring. Toast is turned by turning knob on either

side of toast holder. Nickel plated.  
 Width base, 7¾ inches; height, 7½ inches.  
 Shipping weight, standard package of 6, 25 pounds.  
 Price, No. 1225.....each \$6.50

### No. 1226 Reversible Toasters

32, 220 and 250 Volts, 600 Watts  
 Same as the No. 1225 toaster, except equipped with toaster rack.  
 Nickel plated. Width base, 7¾ inches; height, 9¾ inches.  
 Shipping weight, standard package of 6, 27 pounds.  
 Price, No. 1226.....each \$7.00

### No. 1412 Nickel-Plated Toaster Trays

Catches the crumbs and saves the table cloth.  
 Price, No. 1412, Oblong Tray, 7½x12 Inches.....each \$2.25

## M-B Electric Heating Pads

220 and 250 Volts  
 A soft, flexible pad covered with eiderdown. Can be used in any position. Gives a gentle heat that is soothing, because it is continuous and even.

When proper temperature is reached, thermostat automatically shuts off current, alternating between off and on while pad is in use.

Has 3 heats: high, low and medium.  
 Equipped with washable slip cover and 10-foot cord with detachable plug. Packed in attractive display cartons.  
 Shipping weight, standard package of 3, 6¼ pounds.  
 Price, No. 682/1, Pad, Coral Cover and Cord.....each \$8.00  
 Price, No. 682/2, Pad, Green Cover and Cord...each 8.00  
 Price, No. 682/3, Pad, Robin's Egg Blue Cover and Cord.....each 8.00

## M-B Electric Curling Irons

With swivel plug to prevent cord twisting. Clamp is removable. Finished in nickel plate. Handles finished in lustre enamel; furnished with a silk cord.

Shipping weight, standard package of 12, 10½ pounds.  
 Price, No. 110/1, Rose.....each \$3.50  
 Price, No. 110/2, Blue.....each 3.50  
 Price, No. 110/8, Ivory.....each 3.50

 Price, No. 12, Set of 3 Tips.....each 1.50

**No. L-82 Everhot High Speed Hot Plates**

A wall outlet type, 8-inch range burner.

When right hand burner is on full, left burner will not operate. Food may be started

cooking on right burner, then current cut down and left side turned to high, medium or low. Nickel chromium resistance wire distributes heat over burner surface. Nickel-plated top.

With 8-foot heater cord. In all voltages and higher than standard wattage when desired.

Length, 22 inches; width, 13 3/8 inches; height, 5 3/8 inches. Right-hand burner consumes 1100 watts on high, 400 watts on medium, 275 watts on low; left burner, 700 watts on high, 350 watts on medium, 175 watts on low.

Price, No. L-82, Shipping Weight, 16 1/2 Pounds. each \$15.00

**No. L-81 Everhot High Speed Hot Plates**

An 8-inch range burner; nickered top, 8-foot cord.

Length, 12"; width, 13 3/8"; height, 5 3/8". Maximum consumption: high, 1100; medium 500; low, 275 watts.

Shipping weight, 10 1/2 lbs. Price, No. L-81. each \$8.50

**No. G-12 Everhot Electric Griddles**

Makes 4 large pancakes. Fries steak, bacon, etc.

Heats up quickly, cooks fast or slow as desired, and maintains cooking temperature consistently.

Cooking may be controlled by a 3 heat Diamond H heater switch. Cooking surface, 12 inches square. Cast aluminum top, 3/8 inch thick, warp-proof. Sheet steel skirt, enameled a glossy black. Nickel-plated handles with baked ebonized grips. Height, 5 1/2 inches.

Maximum consumption at 110 volts, 1100 watts; on medium 700 watts; low, 275 watts. Furnished in all voltages.

Price, No. G-12, Shipping Weight, 12 3/4 Pounds. each \$16.50

**Everhot Jr. Combination Electric Cookers**

**Thermal Food Container and Fireless Cooker**

**No. EC-Jr. 8. Single Heat**

Nickered steel body trimmed in dull ebony enamel.

Five-quart aluminum cooking compartment. Has bail with wooden handle. With 2 No. 161 2-quart utensils with self-locking covers, No. 5A utensil hook, 6-foot cord with connector and 2-piece plug. Height, 13 3/8 inches; diameter, 10 inches.

Watts, 440.

Shipping weight, 15 pounds.

Price, Model No. EC-Jr. 8. each \$10.00

**No. EC-Jr. 10, 2 Heats**

Same as Model No. EC-Jr. 8, except this model has 2 heats: high heat, 400 watts; low heat, 100 watts.

Price, Model No. EC-Jr. 10, Ship. Wt., 17 Lbs. each \$12.50

**Everhot Wall-Outlet Electric Ranges**

**Model No. RA100**

Designed for use on a table.

Equipped with two 8-foot heater cords with connectors and plugs; one No. RP-112 broiler pan, No. RP-113 baffle, 2 No. RP-105 shelves, one No. RP-115 book of instructions.

Finished in French gray, aluminum, bronze and nickel trim.

Maximum current consumption, 1320 watts, 110 volts. Contains 3 elements:

hot plate, 660 watts; broiler, 660 watts and oven burner, 220 watts (low). Heat is regulated by plugging into the several terminals. There are 12 different variations of heat.

Height, 17 1/2 inches; width, 16 3/8 inches; length, 18 5/8 inches. Height of oven, 8 3/8 inches; width, 11 inches; depth, 12 1/4 inches.

Packed one in a carton. Shipping weight, 85 pounds. Price, Model No. RA100. each \$49.50

**Model No. RA101**

A warming oven designed for restaurant, hotel, institutional and laboratory use.

The heating element, located in the bottom of the oven, consumes 300 watts on high and 150 watts on low.

Furnished in any standard voltage and wattage desired. Inside of oven, height, 9 1/4 inches; width, 11 inches; length, 12 1/4 inches. Other dimensions same as No. RA100.

Finished in aluminum bronze lacquer. Packed one in a carton. Shipping weight, 65 pounds.

Price, Model No. RA101. each \$48.00

Model Nos. RA100 and RA101 may also be secured in higher wattages up to a maximum of 1100 watts for each element; also with 3-heat reciprocating switch control. Prices upon application.

**Everhot Cabinet Model Electric Cookers**

Models EC1 and EC2 cookers come in 1 and 2 compartment models. Each is neatly finished in a harmonious gray enamel with bright nickel trimmings.

They are equipped with the Everhot 4-Station Current Control Switch (may be turned either right or left to high, medium, low or off) and the Everhot Temperature Dial.

All the necessary utensils for complete cooking are furnished of heavy seamless aluminum.

Model No. EC1

**Model No. EC1**

Over all dimensions: height, 30 inches; length, 16 inches; width, 19 inches.

Equipped with 1 No. 234 4-quart utensil; 1 set No. 246C triplicate utensils; 2 No. 163 bake pans; 1 No. EC17 rack; 1 No. 5 tongs; 1 No. EC18 book of instructions and recipes; 10-foot heater cord with connector and separable plug.

Shipping weight, 105 pounds. Price, Model No. EC1. each \$39.50

**Model No. EC2**

Over all dimensions: height, 30 inches; length, 32 inches; width, 19 inches.

Equipped with 1 No. 234 4-quart utensil; 1 set No. 246C triplicate utensils; 2 No. 163 bake pans; 1 No. 48 double boiler combination; 2 No. EC17 racks; 1 No. 5 tongs; 1 No. EC18 book of instructions and recipes; two 10-foot heater cords with connectors and separable plugs.

Shipping weight, 175 pounds. Price, Model No. EC2. each \$74.50

## No. ECK-5 Everhot Cookerettes

110 to 120 Volts, 600 Watts

Designed to slip out of the way when not in use.

Cooks a complete meal at one time. The control, along with the temperature dial in the cover of the cooker, allows operator to cook as fast or as slow as wanted.

Steel body, gray enameled; blue handle, nicked hardware.

Diameter, 19 inches; height, 17½ inches; depth of compartment, 9¼ inches.

Equipped with 1 set No. 245C half-round utensils, 1 No. 234 4-quart utensil, No. 5 tongs, No. ECK-17 adjustable utensil rack. No. EC-18 book of directions and recipes, 10-foot heater cord with connector and separable plug.

Shipping weight, 45 pounds.  
Price, No. ECK-5.....each \$29.50

## Model No. RA200 Everhot Wall-Outlet Electric Ranges

110 Volts, 1320 Watts

The hot plate, broiler and oven of this range permit the preparation of an entire meal including steaming and roasting, at one time.

Has an even heat, either high or low as desired.

The removable parts allow ready access for cleaning.

Equipped with 1 set No. 245C half-round utensils, one roasting pan No. 13, two 8-foot heater cords with connectors and plugs, No. RP112 broiler pan, No. RP113 baffle, 2 No. RP105 wire shelves, No. RP115 book of instructions.

Finished in French gray, Nile green or delft blue, trimmed in nickel.

Contains 3 heating elements: hot plate, 660 watts; broiler, 660 watts; oven burner, 200 watts (low). Heat is regulated by plugging into the several terminals. There are 12 different variations of heat.

Height over all, 39¾ inches; length (front to back), 18½ inches; width, 18 inches; length of legs, 22 inches; width of steel skirt, 6 inches.

Shipping weight, 95 pounds.

Packed one to a carton; legs are detached for shipping.

Price, Model No. RA200.....each \$59.50

## No. 599 Hanksraft Automatic Electric Egg Cookers

The No. 599 egg cooker cooks 4 eggs at one time.

Starts in 5 seconds by pouring in 2 teaspoons of water. The degree of cooking is regulated by the amount of water used.

Stops when eggs are cooked just the way one wants them.

Has an attractively decorated porcelain base and top with a nickel-plated cover.

There are no wire coils to burn out; no moving parts.

For use on 110 volts a.c.

Standard package, 4.

Price, No. 599.....each \$5.50

## Everhot Electric Table Stoves

Model No. T-2, 2 Heats

110-120 Volts, 600 Watts

Model No. T-2

High and low heats. Burners may be operated separately or together, both burners operate together at low heat. Cooking may be started on full heat and continued on low.

Diameter of burner, 5¼ inches; length over all, 18¼ inches; width over all, 8½ inches; height, 4¾ inches.

Equipped with 6-foot heater cord.

Packed fully assembled in a carton.

Shipping weight, 9¼ pounds.

Price, Model T-2.....each \$8.50

Model No. S-1, Single Heat

110-120 Volts, 600 Watts

This single burner Everhot has separable handle which slips under frame at any point around stove (except under the connector guard) and holds it firmly. In this way the stove may be carried.

Diameter burner, 5¼ inches; length over all, 9¼ inches; height, 4¾ inches.

Equipped with 6-foot cord.

Shipping weight, 4¾ pounds.

Price, Model No. S-1.....each \$5.00

Model No. S-3, 3 Heats

110-120 Volts, 600 Watts

This model has 3 heats: high, medium and low. These heats are controlled by a reciprocating 4-station range switch. With separable handle and 6-foot heater cord.

Burner is 5¼ inches in diameter; length over all, 11½ inches; width over all, 9¼ inches; height, 4¾ inches.

Shipping weight, 5½ pounds.

Price, Model No. S-3.....each \$6.75

Model No. T-3, 3 Heats

110-120 Volts, 500 Watts

Model No. T-3

Has 3 heats in each burner: high, medium and low; controlled by a reciprocating 4-station range switch.

Medium heat consumes 300 watts, low heat, 150 watts.

Diameter burner, 5¼ inches; length over all, 18¼ inches; width over all, 11½ inches; height, 4¾ inches.

Equipped with one 6-foot heater cord.

Shipping weight, 11 pounds.

Price, Model No. T-3.....each \$13.50

Model No. T-4, 3 Heats

110, 120 or 220 Volts, 500 Watts

This model has a single switch control. Either burner can be operated separately on full, or both burners together. Burners operating separately consume 500 watts; both together consume 1000 watts.

Diameter burner, 5¼ inches; length over all, 18¼ inches; width over all, 11½ inches; height, 4¾ inches.

Equipped with 6-foot heater cord.

Shipping weight, 11 pounds.

Price, Model No. T-4.....each \$12.50

Everhot Special, Single Heat

The Everhot Special has the same high quality as the other models. The only difference between it and the No. S-1 is that the heater cord is attached permanently to the element.

Diameter over all, 8¼ inches; height, 4¾ inches.

Shipping weight, 3 pounds.

Price.....each \$3.50

**Graybar Reflector Heaters**

Solid copper reflector highly polished, lacquered to prevent corrosion.

Has copper finished guard to protect element. Can be removed easily to facilitate cleaning of reflector bowl.

The handle is always cool, making the heater convenient to carry. Equipped with 7-foot cord.

The Reflector Heater gives even distribution of heat; no hot spots because of focusing of element. Element axial cone of nichrome wire on two-piece lava core. It screws into a receptacle of standard Edison type lamp socket design.

Has sturdy base. Friction joint permits it to be tilted to any angle.

Radio bronze finish.

Packed 1 in a carton; 6 in a case.

Cat. No.	Diameter Reflector Inches	Height Inches	Watts	WEIGHT, POUNDS		Price Each

**Majestic Bathroom Wall Insert Heaters**  
With Single Heat Switch

110 or 220 Volts, 1000 or 2000 Watts

These heaters will give the bathroom a comfortable warmth in a few minutes. Will not catch dust or dirt. Water thrown on this heater while in operation will not injure it.

Made in 1000 and 2000-watt capacities.

Standard finish is vitreous white enamel.

Extra charges for baffle plate heaters and for heaters furnished in other than standard finishes or voltages. May be furnished in colors to match colored tile bathrooms at an extra charge.

**No. 15 Majestic Wall Heaters**

110 or 220 Volts A.C. or D.C.

Two Elements—Each 500 Watts

With 2 heating elements of 500 watts each per hour and control switch.

Standard finish, white vitreous enamel. In colors to match colored tile bathrooms, at additional cost.

Height of front, 20 inches; width, 14 7/8 inches. Height of body, 18 1/8 inches; width, 12 1/4 inches; depth, 3 3/4 inches.

Packed one in a case. Shipping weight, 35 pounds.

Price, No. 15.....each \$30.00

**No. 18 Majestic Wall Heaters**

110 or 220 Volts A.C. or D.C., 650 Watts

With Single Heat Switch

With one heating element. Standard finish, white vitreous enamel. In colors to match colored tile bathrooms, at additional cost.

Height of front, 16 inches; width, 16 inches. Width of box or body which fits into wall opening, 12 1/2 inches; height, 13 3/8 inches; depth, 3 3/8 inches.

Shipping weight, 23 pounds.

Price, No. 18.....each \$18.00

**No. 20 Majestic Wall Heaters**

110 or 220 Volts, A.C. or D.C., 650 Watts

One heating unit. White vitreous enamel finish. May be furnished in colors to match tile at an additional cost.

Height of front, 15 1/2"; width, 15 1/2". Height of body, 12 1/4"; width, 12 1/4"; depth, 3 1/2".

One in a case. Weight 23 1/2 pounds.

Price, No. 20. ea. \$16.00

## Model 1H Utica Electric Portable Furnaces

Single Heat—1000 Watts

A quick, efficient miniature warm air furnace. Sides and base are always cool. Nothing to fill, spill or explode. Requires no care or cleaning. Operates on any wall or floor outlet.

Duco finished in antique gold and 4 popular 2-tone effects.

The element is of Nichrome JV wire.

Equipped with 8 feet of cord and attachment plug to fit floor or wall outlet.

Price, No. 1H, Complete... each \$12.50

Price, Case of 6 Containing Solid

Color or 2 Antique Gold and

## Utica Electric Portable Furnaces

Made in 3 models.

All models furnished with 8-foot cord and attachment plug. Duco finished in antique gold and four 2-tone effects.

MODEL 3H.—1000 watts, 3-heat switch controlled at 3 stages: 300, 700 and 1000 watts. Combination element of Nichrome IV wire. After sufficient temperature rise is obtained it may be held by operating on lower stages of control.

Price, Model 3H..... each \$15.00

MODEL E.—660 watts, single heat.

Price, Model E... each \$10.00

## No. 1423 M-B Non-Automatic Irons

330 Watts

Convenient for traveling and desirable for ironing dainty clothing and children's garments.

Curling tongs may be heated by putting iron on its stand and inserting tongs in slot in stand.

Nickel plated finish.

Complete with cord and stand.

Weight, 3 pounds. Shipping weight of 6, 34 pounds.

Price, No. 1423..... each \$4.00

## No. 1456 M-B Automatic Irons

550 Watts

Equipped with a heat control that is designed to insure perfect operation. When iron heats up to suitable ironing temperature "snap" and automatically the electric current has shut off. While iron remains hot enough it is not using electricity. Before temperature has dropped so that iron is too cool to

use effectively "snap" the current is turned on again by the heat control.

Finished in nickel; body is paneled. Has round corners.

Weight, 6 pounds. Approximate shipping weight, standard package of 6, 51 pounds.

Price, No. 1456..... each \$7.75

## No. 10 Graybar Quick Heating Iron

A quality iron at an exceptionally low price.

Equipped with a 3-point heel rest design to give maximum stability.

This iron is rated at 550 watts and can be supplied in the following standard voltages: 95, 110, 220 and 250. Irons can be built for special voltages including a 32-volt iron, which has a permanently attached cord.

HEATING ELEMENT.—Nichrome wire hand-laced through mica sheets.

ASBESTOS Baffle.—A sheet of asbestos placed between heating element and pressure plate throws the heat downward and insures quicker heating.

CONTACT PINS.—Made of non-corroding material, removable without taking iron apart.

SHAPE.—Flared sole plate—extra heavy. Pointed nose slips easily into gathers and around buttons. Smooth rounded corners.

CORD.—High grade heater cord.

HANDLE.—Black enameled; stays cool. Placed to give even balance.

IRONING SURFACE.—Machined ground and polished smooth.

FINISH.—Highly polished nickel.

Weight, 6 pounds. Shipping weight, 7 pounds.

Price, No. 10..... each \$5.50

PACKING.—The carton for this new iron is designed to save space. Note from the sketch how two cartons fit together. There are six of these cartons in a standard package.

## No. 6 1/2 B American Beauty Irons

The 6 1/2-pound iron is the exact size, weight, and shape for general all around household and laundry use.

Extra large ironing surface. Has large, comfortable, always cool wood handle. Has round noncorroding contacts and a durable composition switch plug, always cool enough to handle.

Made in the following standard voltages: 95-104,

105-120, 121-130, 190-209, 210-240, 241-260.

**American Beauty Electric Glue Pots**

The outer body of these pots is cast iron, thoroughly galvanized before painting. The heating element is readily removable and is attached to the bottom of the inner cast iron receptacle, thus allowing all heat generated to be efficiently utilized. The inner vessel is of seamless copper, spun in one piece and is equipped with a bail and wiping rod.

Arranged for three heats, with multiple series winding. Full heat maximum wattage, intermediate one half maximum and low heat one quarter maximum. The latter is arranged to give just enough heat to keep the glue contents at a proper working temperature.

Made in the following standard voltages: 95-104, 105-114, 115-125, 190-209, 210-229, 230-250.

**American Beauty Soldering Irons**

Element core and shank of copper tip are heat treated

and will not readily corrode or oxidize. The heating element of nickel chromium ribbon, insulated with pure mica, is kept in intimate contact with core by means of a patented compression winding, preventing overheating of the element. With 6-foot cord and attachment plug. Copper tips of standard size drawn copper rod, 3/8, 5/8, 7/8 and 1 1/8 inches in diameter. Made in the following standard voltage ranges: 95-104, 105-120, 121-130, 190 209, 210 240, 241-260.

**Vulcan Electric Soldering Tools**

These heating devices can be connected to any lighting socket and will operate with identical results on either direct or alternating current. They are wound for standard voltages as follows: 104, 110, 115, 120, 125, 220 and 230 volts. An extra charge of \$1.00 is made for special voltages. Each tool has a one-piece wooden handle, which can be unscrewed and slid back to give access to the terminals, and is equipped with a 6-foot cord and a separable plug.

## Vulcan Dealers' Display Selling Board

This display selling board permits the dealer to show the full assortment of 8 sizes. Each size helps to sell the others. The full assortment meets the requirements of the entire field of soldering.

There is a correct size of soldering iron for each class of soldering for the best results.

This handsome board is furnished with the purchase of 8 sizes of tools and tips mounted on same and one extra of each of the 4 smallest tools and tips (Nos. 600, 700, 100 and 500) for a small stock, making 1 dozen tools and 1 dozen tips.

## Jewell Automatic Temperature Regulators

Type J-8, Jeweled Clock Thermostat

Type J-8 has a jewelled balance clock especially developed for thermostatic control. Clock will automatically lower temperature to any degree at night and automatically raise the temperature at any predetermined time in the morning. Necessary only to wind periodically.

Type J-1 one-day has morning and evening control feature but it is necessary to wind clock and alarm once every 24 hours.

Type J-O plain pattern is like the other thermostats except it has no clock. Used where clock control is unnecessary. Indicator at all times is set by hand.

All are equipped with wall plate making it unnecessary to handle thermostat when connecting wires.

The Type J-E electric motor is the shaded pole type. It is simple in operation and silent and neat appearing.

It has no armature, armature windings, commutator, brushes, brush holders, brush holder springs or brush holder bearings. The rotor is the only primary moving part.

Line voltage is taken into the motor and is automatically reduced to low voltage for the thermostatic circuit.

The Type J-S spring motor is fitted with a spring of sufficient size to operate motor from 60 to 75 times on one winding. Two ordinary dry cells are required, or city lighting circuit reduced to 12 volts through special transformer, may be used to trip the motor. Easily wound from front and indicator shows whether winding is needed.

The type J-G gravity motor is similar in operation to the spring motor, except that the motive power is supplied by a 10-pound weight. Gives 20 to 25 operations, in average basement, to one weight adjustment.

Type J-S Spring Motor

### Limiting Devices

The use of a limiting device insures greater economy in heating plant operation and provides a safety device which prevents overheating and possible damage to the heating system. To obtain the best results from automatic heat regulation include a limiting device with the thermostat and motor. See price list for model numbers.

Model	Description	Shipping Wt., Lbs.	Price Each
J-8	8-Day Clock Thermostat.....	3	\$60.00

To obtain the list price of a complete regulator, add the list prices of the units to be ordered; the necessary fittings for installation are included. State clearly that a regulator is wanted and list the models that are wanted by model number.

Extra charge of \$2.50 net for current specifications other than 110-volt, 60-cycle A.C. for the J-E motor.

Batteries not furnished. Any standard make of dry cell is satisfactory.

**No. 10 Hamilton Beach Drink Mixers**

For the fountain that wants speed, ease of operation, sanitation and durability, this mixer meets those requirements. Sanitary and easily operated.

Motor starts as cup slides into position, and stops when cup is removed. Motor is 110 volts universal. Motor case is splash-proof, nickel-plated and highly polished.

Upright is of sanitary white porcelain enamel.

Mixer comes complete with cord, plug and double-drink, nickel-silver cup.

Shipping weight, 16 pounds.  
Price, No. 10 .....each \$22.00

**Hamilton Beach Electric Drink Heaters**

110-120 Volts A.C. or D.C.

A new fountain convenience.

This heater heats drinks while they are being mixed. It fits on the drink mixer in place of the regular cup.

Makes hot fountain drinks in 2 minutes at a cost of only 1/8 cent a drink for electricity.

The patented separable cup and heater eliminates short circuits; allows cup to be washed on Rowe or other washers. Operates from light socket. Fits mixers: H-B No. 10, H-B No. 8, H-B No. 2, Gilchrist No. 22 and others.

Price .....each \$9.75

**Hamilton Beach Hair Dryers**

115 Volts, A. C. or D. C.

Ideal for professional use in barber shops and beauty parlors, or for hard service in a large family.

Handy in a drafting room for quick-drying blue prints, in photograph galleries for all drying, and for medical heat treatment.

The case is of finest solid aluminum, triple-buffed and polished.

The convenient button in the handle controls the motor, as well as the cold and hot blasts, which are evenly distributed, by the improved high velocity muzzle.

Fan is fully enclosed.

Weight packed, 5 pounds.

Price, No. 2 .....each \$22.50

**No. 3 Hamilton Beach Junior Hair Dryers**

115 Volts, A.C. or D.C.

Light, simple and powerful. Can be held in the hand or set in the stand at any desired angle, leaving hands free for scalp massage while hair is drying. Adjustment is instantaneous and automatic. Stays where it is put and stand is quickly detachable. Beautifully finished in old ivory.

Fan is fully enclosed, eliminating any chance of catching the hair. Dries the heaviest head of hair in a few minutes.

Gives hot or cold blast by simply turning the switch.

Price, No. 3 Junior Stand-Type .....each \$14.90

**Type A Hamilton Beach Vibrators**

For home use. Compact and strong. Consists of one vibrator, with cord and attachment plug for connecting to electric light fixture, and six applicators, all packed in a handsome carrying case of black leatherette lined with satin. A speed regulating switch permits motor to be run fast or slow.

The following applicators are furnished with this machine: Nos. 1 and 4 hard rubber for body; No. 2 soft rubber for face; No. 3 velvet sponge for face; No. 6 soft rubber for head; and No. 7 soft rubber with 12 prongs. Revised edition, library bound book, "Health and How to Get It" furnished free.

Price, Type A Complete .....each \$19.50

**Type C Hamilton Beach Vibrators**

Used by physicians, nurses and masseurs. Of heavier construction and has a more powerful motor than the vibrator for home use. For cases requiring energetic treatment. Packed in a black leatherette case, plush lined.

Following applicators are furnished with machine: Nos. 1 and 4 hard rubber for body; No. 2 soft rubber for face; No. 3 velvet sponge for face; No. 6 soft rubber for head; and No. 7 soft rubber with 12 prongs. Revised edition, library bound book, "Health and How to Get It" furnished free with vibrator.

Price, Type C Complete .....each \$28.50

**Type D Hamilton Beach Vibrators**

For family use and for the professional hair dresser and masseur who calls on patrons at their homes. Has no speed regulator. Instantly stopped or started by button in handle. Motor is universal and operates on either a.c. or d.c. Following applicators furnished with machine: Nos. 1 and 4 hard rubber for body; No. 2 soft rubber for face; No. 3 velvet sponge for face; No. 6 soft rubber for head; and No. 7 soft rubber with 12 prongs.

Revised edition, library bound book, "Health and How to Get It" furnished free with vibrator.

Price, Type D Complete .....each \$16.50

**Type F Hamilton Beach Vibrators**

Provided with a speed controlling device. It gives both the rubbing and percussion strokes and is guaranteed against electrical and mechanical defects. Packed in black leatherette carrying case, lined with satin.

Following applicators furnished with this machine: Nos. 1 and 4 hard rubber for body; No. 2 soft rubber for the face; No. 3 velvet sponge for face; No. 6 soft rubber for the head; and No. 7 soft rubber with 12 prongs. Revised edition, library bound book, "Health and How to Get It" furnished free with vibrator.

Price, Type F Complete .....each \$18.50

## Hamilton Beach Home Motors

This motor can be attached to any sewing machine, old or new. Set the pulley of the motor underneath the handwheel of the machine and slight pressure of the

foot on the speed control starts the motor.

- Price, Motor with Speed Control, Cord and Plug. ea. **\$18.50**  
 " Fan Attachment..... " **3.00**  
 " Grinder and Polisher Attachment..... " **1.50**  
 " Cake Mixer Attachment.... " **5.00**

## Hamilton Beach Fit-All Sew E-Z Brackets

This bracket is readily adjustable to any make or model sewing machine. Attaches in belt holes very ingeniously and is permanent.

Swings under head. Sews fast or slow or speeds between. Controlled by a slight pressure on the speed pedal. Operates on both A.C. or D.C., 105 to 115 volts, 25 to 60 cycles.

Furnished with speed pedal, cord and plug.

Price ..... each **\$19.25**

## Hamilton Beach Tailor Type Sewing Motors

The tailor type motor fits and operates practically all types and models of light tailor machines.

Size of Motor.—Diameter, 3 1/4 inches; length, 5 1/2 inches, length of shaft, 7 3/4 inches. Size of pulley, 6 inches. Weight, 4 3/4 pounds.

Motor wound for 115 volts, a.c. or d.c., 25 to 60 cycles. Watts, 41 lowest speed, 70 at highest.

Shaft extension outside of motor is equipped with friction attachment for winding bobbins.

Furnished with speed control, cord and plug.

Price, Tailor Type Motor..... each **\$28.50**

## National Detachable Sewing Lamps

This lamp is so constructed that there is no glare to hinder the operator of the machine. There is a brilliant light on the needle and the work. Lamp fits all makes of treadle and electric sewing machines.

End of reflector is covered. A pull chain is provided.

Heavily nickel-plated finish.

With 6-foot cord and plug to fit any standard socket and wall outlet and Mazda lamp bulb.

Special voltage bulbs are extra.

Price, Complete with 110-Volt Bulb..... each **\$3.95**

## Sturtevant Ventilating and Exhaust Fans Design 5

Propeller fans are usually installed to exhaust directly to out-of-doors, and are effective for ventilating kitchens, bakeries, laundries, garages, lodge rooms, engine rooms, toilets, stores, small theatres, and all kinds of industries where ventilation is needed, and for drying many materials, such as photo plates, blue prints, plaster, etc. Sturtevant Design 5 Exhaust Fans will deliver nearly as much air when operating reversed, so they can readily be used for blowing in.

Kind of Room	No. of Minutes in Which Air Should Be Changed	Kind of Room	No. of Minutes in Which Air Should Be Changed
Bakeries.....	3-5	Garages.....	5-7
Kitchens.....	3-5	Engine Rooms.....	5-10
Smoking Rooms.....	3-5	Offices.....	6-10
Toilets.....	3-5	Lodge Rooms.....	7-10
Laundries and Dry Cleaning Plants.....	5-7	Plating and Galvanizing Rooms..	7-10
		Theatres.....	7-10

Theatres and Auditoriums are usually figured on the basis of 20 to 30 cubic feet per person per minute.

Do not use for installation with duct systems.

\*Furnished in 110 and 220 volts, 60 cycles only.

D.C. motor for 115-230 volts only. Sizes No. 5 and larger can be furnished for 550 volts at 10 per cent extra. D.C. motors are furnished with closed type starter and regulator for 50 per cent speed reduction.

Single-phase motors are thrown directly on the line. When required, regulator for speed reduction 30 per cent can be furnished for all sizes of single phase, except size No. 3, at an extra price. Polyphase motors are thrown directly on the line. The speed cannot be regulated. All motors enclosed type.

Prices of vertical fans upon application.

## Sturtevant Big Midget Portable Blowers

Delivers dry air for removing dust from machinery. Compressed air ordinarily contains moisture; this blower shoots dry air. Does away with air lines and lugging a

hose around, and work is reached from all sides. Has 1/2 h.p. universal motor, 110 or 220 volts; speed, open outlet, 9895 r.p.m., closed outlet, 11100 r.p.m.; volume delivered, 43.2 cubic feet per minute; air velocity, 14820 feet per minute; static pressure, outlet closed, 16.62 ins. water; inside diameter nozzle, 3/4 inch.

Furnished with 20 feet cord and plug; switch in handle. Weight, 7 Pounds.

Price..... each **\$44.00**

**Graybar 12 and 16-Inch 6-Blade Ventilating Fans**  
A.C. and D.C.

These fans are intended for mounting in walls or partitions to exhaust into free air. They are employed for removing fumes, odors and foul air.

The 12-inch fan will displace about 1000 cubic feet of air per minute, and the 16-inch fan about 1500 cubic feet per minute.

The fans are supported in a ring frame complete and ready for mounting in wall or ceiling.

Motors are designed with light weight drawn steel casings. The motor, brackets and supporting ring are finished in baked black enamel. The fan blades are polished brass.

Where it is necessary to install ventilating fans for vertical operation special bearings can be furnished at \$1.00 net extra. Fans with these special bearings are not carried in stock.

Speed controllers with 4-position regulating switches providing 3 running speeds can be furnished when specified.

Controllers are not necessary unless speed control is required. The 25-cycle a.c. series commutator type requires no starter.

**3-Speed, 4-Position Speed Controller**

*Front and Side View of Ventilating Fan.*

Shipping weight, 42 and 50 pounds.

**Graybar Sturtevant Wind-O-Vane Ventilating Fans**

**Fan Mounted in Window Board**

This Wind-O-Vane draws the hot air, steam and fumes out of the kitchen. A simple turn of the knob at the bottom, reverses the blades and changes the fan into a cooling fan which sends refreshing breezes into the room.

Made of polished aluminum throughout; will not rust.

Easily installed in 20 minutes. An adjustable mounting board to fit window in which fan is to be installed is screwed fast to inside of window casing at top and inside of upper window sash. Then fan is bolted to window board. This done, the fan is ready for operation. Plug the cord into the nearest electric light socket or wall outlet and the fan starts.

Fan does not interfere with opening or closing of window.

Lubrication, wool packed bearings.

Fan hub is pierced so as to cool motor.

Fan wheel, 13 inches; thimble over all, 16 inches. Number of blades, 6; diameter of blades, 13 inches.

Current, a.c. or d.c.; voltage, 110; h.p., 1/70. Speed, 600 r.p.m. Capacity, 600 cubic feet per minute.

Motor for any current 110 volt can be supplied.

Weight, 15 pounds.

Price.....each \$53.25

Price, Window Panel.....each 8.00

**Graybar 9-Inch Non-Oscillating Fans**

A.C. and D.C.

Made in series commutator and induction types. Construction is of drawn steel, with adjustable pedestal for tilting and slotted bases for wall mounting. Base bottoms are felt-covered. A single-speed toggle switch is mounted in the base. Finished in black with brass blades. Complete with 6-foot cord and plug.

Can be furnished without pedestal, fitted with a swinging bracket. Can be mounted on window casing for drawing

in, exhausting, or circulating air, without removing screens or sash. Extra hinge brackets can be furnished if it is desired to move fan to different locations.

Shipping weight, 8 pounds.

## Graybar 9-Inch Oscillating Fans

A.C. and D.C.

Fans are of series commutator and induction types. Construction includes a drawn steel motor base and pedestal which are adjustable for desk and wall mounting. Other features are a slotted base, a felt-covered bottom and a single-speed toggle switch in base. Ring mounted double bearings support oscillating trunnions. Double worm oscillating reduction gear is packed in grease. The 76-degree oscillating arc is constant. Equipped with 6-foot cord and plug.

Oscillation of these fans cannot be started or stopped while fan is running, neither can supporting ring be swivel adjusted to change direction range of oscillation.

Shipping weight, 9 pounds.

## Graybar 12-Inch Non-Oscillating Fans

A.C. and D.C.

These fans have drawn steel motor cases and pedestals. They are fully adjustable and have slotted bases for wall mounting. The a.c. motors are the induction type except the 110-volt, 25-cycle models. These and the d.c. models have series commutator type motors.

Speeds are regulated by a 4-position switch in the base.

The operating characteristics of these fans show a high degree of efficiency in design and construction.

Base bottoms are felt-covered to prevent scratching and creeping.

Finished in black enamel, with brass blades. Complete with 8-foot cord and plug.

Shipping weight, 31½ pounds.

## Graybar 12 and 16-Inch Oscillating Fans

A.C. and D.C.

Oscillating gear is mounted at back of motor case and consists of a double worm reduction enclosed in a box. Connecting rod swings at one end on a stud fastened to supporting ring, and at the other end on the crank pin.

Motor is supported in ring by 2 diametrically opposite bearings, reducing friction and bearing load when operated in tilted position. Oscillation may be started or stopped while fan is running, by means of the knurled control knob on top of gear case. Universal swiveling provides complete lateral, and tilted adjustment. Full

sweep range is 90 degrees. Fan speed control is by a 4-position switch mounted in pedestal base.

Fan bottoms are felt-covered. Finished in black enamel with brass blades. Complete with 8-foot cord and plug.

Shipping weight, 12-inch fan, 36 pounds; 16-inch fan, 42 pounds.

### Special Types

Marine Type Fan.

The 12 and 16-inch fans can be furnished with enclosed motors, on special orders, for use in factories and industrial plants or other locations in which damp and dirty conditions prevail.

Special types of fans also furnished for marine and railway uses or for places where impregnated windings or enclosed motors are necessary for protection from atmospheric conditions. Such fans are built on special requisitions only, and are furnished only in non-oscillating models. Prices will be submitted on specifications.

Extra for Nickel Finishes.....each \$4.25

Prices for colored spray enamel finishes and electroplating, upon application.

Graybar 4-Blade Ceiling Fans

32-Inch

For installations not requiring the maximum of air circulation. The d.c. fan motors have a 2-pole, laminated field structure with drum wound armatures. The a.c. motor has universal wound field coils with series connection. Coil connections are protected by horn fibre tubing snapped in place after soldering. Wooden wedges hold coils in place.

A.C. fans have 3 metallic blades in unit assembly, finished in aluminum; d.c. fans have hardwood blades finished in natural oak. Other parts enameled in black. A snap switch for single speed is employed with d.c. fans. A pull cord 2-speed switch is standard with a.c. fans.

Prices are for standard fans in regular finish and include insulated hanger, canopy and 2 hooks (fixture stud and screw hook) but do not include hanger pipe. Enameled iron hanger pipe, 1/2 inch, threaded both ends, will be furnished when specified at 50 cents per foot.

Special finishes, to order.

Shipping weight, 38 to 48 pounds.

15	6 1/6	...	...

In providing pipe for suspending fans the above table will be found convenient for determining proper length pipe for a given ceiling height in order that under side of fan may be 7 1/2 feet from floor; 32-inch fans require 1/2-inch pipe; 52-inch fans, 3/4-inch pipe.

52-Inch

Lighting Combinations with Ceiling Fans

Specifications should signify if for: 1.—Wall switch for both fan and light. 2.—Wall switch for fan, pull switch for light. 3.—Wall switch for light, pull switch for fan. 4.—Pull switches for both fan and light.

Prices, less glassware and lamps, quoted upon receipt of specifications.

Wall Regulators

Regulators give approximately the same speed reductions as obtained with switch and regulating coil. Above combinations 1 and 2, contemplate the use of wall regulators where speed control is desired.

# RADIO

Graybar also distributes a complete line of Radio Receiving Sets, sold only through duly appointed agents.

Further details pertaining to these sets and their distribution will be sent upon request from your nearest Graybar house.

**GRAYBAR 330—Super-Heterodyne**—A single control, illuminated dial, eight-tube receiver with two stages of radio frequency amplification, oscillator, first detector, two stages of intermediate frequency amplification, second (power) detector and one stage of audio frequency amplification. Cabinet is 5-ply Walnut Veneer with fluted corner posts. Overhanging top and bottom. Uses seven UY-227, one UX-171-A and one UX-280 Radiotrons.

Overall dimensions—Width 29½ inches, Height 10½ inches, Depth 11 inches.

### No. 560AW Western Electric Loud Speaking Telephones

The No. 560AW loud speaking telephone is a portable sound projecting device mounted on a metal stand suitable for placing on the table of a living room.

The projector consists of 2 cones of specially selected material, having their bases cemented together. The apex of one cone is connected by a driving rod to an electro magnetic unit that responds to current impulses from the radio receiving set and thereby causes the cones to vibrate and reproduce the sound that is being sent out by radio telephony.

The design of the No. 560AW loud speaking telephone is such that the low notes of the 'cello, organ and piano and the brass instruments of the lower register are faithfully reproduced. This gives to the reproduction of instrumental music true depth and richness, thus making it satisfy the most exacting. But while particular stress has been laid on the reproduction of the low notes, because this is the more difficult, it should be borne in mind that the No. 560AW loud speaking telephone reproduces the high notes of the scale with great fidelity.

This telephone may be used in connection with any radio receiving set or audio-frequency amplifier capable of operating an ordinary type of loud speaker. As a rule 2 stages of audio-frequency amplification will be sufficient.

However, to obtain the best volume and quality of reproduction, it is advantageous to use a receiving set or amplifier which contains a power tube in the last stage.

The cones are approximately 24 inches in diameter and the distance between the apex of the front cone and the grating at the back is about  $6\frac{1}{2}$  inches. The whole assembly stands approximately  $26\frac{1}{2}$  inches high and weighs 8 pounds. No additional battery is required to operate this loud speaking telephone.

#### Replacement Parts

P-217555, Paper Cone.  
P-204895, Thumb Screw.  
No. 862 cord, 6 feet long unless otherwise specified.

#### No. 15B Bracket

Consists of the parts required for mounting the No. 560AW loud speaking telephone on a wall. Bracket mounts to the wall by means of 2 round head wood screws or 2 nails fastened in a vertical line approximately  $5\frac{1}{8}$  inches apart.

Prices upon application.

### No. 1002C Western Electric Telephone Head Sets

The No. 1002C head set is of the same design as those supplied to the U. S. Army and Navy during the war.

The cases of the individual receivers are of brass nickel-plated.

The inductance of each of the coil windings is held within exceedingly close limits by measurements made with a special type of alternating current Wheatstone bridge. The 2 coils employed in each receiver are each wound with copper wire to a direct-current resistance of approximately 550 ohms. This gives a total of approximately 2200 ohms D. C. resistance when the 2 receivers are connected in series. The alternating current impedance of the receivers connected in series when measured at voice frequencies is approximately 20000 ohms.

The pole pieces of the receiver are made of a special grade of silicon steel which insures the maximum alternating magnetic field with a minimum loss due to eddy currents.

Head band is made to fit comfortably. Head pieces are formed of non-corrosive phosphor bronze spring wire, covered with a heavy textile webbing and are equipped with adjustable yokes, slide rods and thumb screws to clamp the yokes in any desired position. Cord is covered with a black mercerized cotton braid and is equipped with tips which are concealed when attached at the receiver end, and with pin tips on the apparatus end. Cord is arranged to connect the receivers in series.

#### Replacement Parts

509W, Complete Receiver Units  
P-99768, Ear Cap  
P-98387, Diaphragm  
No. 1B, Head Band  
No. 763, Cord

Prices upon application.

### No. 6045A Graybar Amplifiers

For use with radio receiving sets and loud speakers in the home.

Reproduces the subtle differences of sounds of different frequencies and enables loud speakers to produce full volume without overloading the last stage of amplification.

This amplifier combines in one simple compact unit, a high quality amplifier and a current supply set which obviates the necessity of A, B and C batteries for the amplifier and B batteries for the radio receiver. The necessary energy is obtained from standard 100-120-volt, 50-60-cycle a.c. house lighting circuit. Batteries with their acids and other inconveniences are entirely unnecessary. When used in conjunction with a suitable radio receiver having at least one stage of audio frequency amplification, will furnish sufficient electrical energy to assure good loud speaker volume without perceptible distortion.

The advantages of this amplifier are: constant voltage, no B batteries to deteriorate, thereby frequently introducing battery noise; no additional space is required; much less weight than B batteries; tubes are long lived; sufficient power to provide good loud speaker volume without distortion.

Approved by the National Board of Fire Underwriters.  
For detailed information request bulletin No. T-826-A.

## No. 6025B Western Electric Amplifiers for Loud Speaking Telephones

A good loud speaking telephone requires more electrical energy for its proper functioning than most audio-frequency amplifiers in common use are able to deliver without overloading the vacuum tube in the last stage.

It is generally possible to secure ample volume with these amplifiers, but at the expense of the quality of reproduction due to the distortion which results from this overloading. The No. 6025B amplifier is intended for use as an adjunct to a loud speaking telephone to furnish sufficient undistorted electrical energy at audio-frequencies so that the loud speaking telephone may function at maximum capability.

It consists essentially of a single stage amplifier with a self-contained current supply set for both the vacuum tubes used in it. It employs 2 Western Electric No. 205D vacuum tubes, one as an amplifier and the other as a rectifier.

Bottom View Showing Connections

No batteries are required for the operation of this amplifier. The only current supply necessary is the ordinary 110-volt, 60-cycle A. C. house lighting current. No other form of house lighting can be used with this apparatus. The house lighting supply is transformed, rectified and filtered by the self-contained current supply set so as to properly energize the amplifier without the use of batteries. The amplifier consumes about 40 watts, that is, it takes about the same power as a medium sized incandescent bulb.

Top View with Cover Removed

When used in conjunction with a radio receiving set this amplifier is not intended to provide all the audio-frequency amplification necessary for proper loud speaking telephone operation, but only that portion of the amplification where there is most likely to be overloading, that is, the last stage. Thus if satisfactory volume is obtained in a headset from the detector tube of a radio receiving set one stage of ordinary audio-frequency amplification plus the No. 6025B amplifier will provide sufficient energy to operate a loud speaking telephone so as to be audible throughout a good sized room.

The amplifier is equipped with a cord to connect it to a radio receiving set and also a cord with a plug to connect it to the lighting circuit. A switch in the latter cord is furnished to turn the power on or off and is the only control on the amplifier. The apparatus is contained in a metal cabinet.

### Replacement Parts

No. 205D vacuum tubes (orders should state "intended for use in No. 6025B amplifier.")

No. 196 cord, 6 feet long.

If a complete cord, switch and plug assembled together for connecting the amplifier to the lighting circuit are required they may be obtained from a dealer or the nearest Western Electric House and should be ordered as follows:

P-168816 cord and plug assembly.

Prices upon application.

## Radiotron WD11 and WX12 Dry Cell Tubes

WD11

WX12

WD11 Dry Battery Radiotron has a special base designed for use in sets having special sockets. It is an excellent detector and audio frequency amplifier. The filament may be heated from a single dry cell.

WX12 and WD12 are identical electrically. WX12 has a standard large UX base to fit the Navy or new standard UX sockets, while WD11 fits only the WD11 socket.

Type	WD11	WX12
A Battery, Volts Supply	1.1	1.1
A Battery, Current Amperes	.25	.25
B Battery, Volts Detector	22½ to 45	22½ to 45
B Battery, Volts Amplifier	90 to 135	90 to 135
Negative C Battery Volts	4.5 to 10.5	4.5 to 10.5
Maximum Diameter Over All inches	1⅜	1⅜
Maximum Height Over All inches	4⅞	4⅞
Price	\$2.50	\$2.50

## Radiotron UV199 and UX199

UV199 and UX199 are the smallest Radiotrons made and are adaptable to portable or home dry battery operated sets. They are equally serviceable as detectors or as high-efficiency radio or audio frequency amplifiers. UV199 will fit only a UV199 socket and UX199 will fit only the standard UX socket.

Filament is 3.0-3.3 volts, .060-.063 amperes.

Type	AMPLIFIER			DIMEN., IN		Price Each
	Detect- or B Bat. Volts	Bat. Volts	C Bat. Volts	Max. Diam.	Max. Lgth.	
UV199	45	90	4½	1⅜	3½	\$2.25
UX199	45	90	4½	1⅜	4⅞	2.25

## RCA Radiotron UX-120

### Power Amplifier

UX-120 is a dry battery power amplifier tube for supplying a large volume of undistorted output to a loud speaker. It is suitable for use only in the last stage of an audio amplifier.

Owners of dry battery receivers will obtain improved quality at high volume by using this efficient amplifier.

It has the standard small UX base.

Length, 4⅞ inches. Diameter, 1⅜ inches.

Filament: 3-3.3 amperes, 125-132 volts. B battery, 135 volts. C battery, 22½ volts.

Price, Radiotron UX-120.....each \$2.50

**Radiotron UX200A**

The Radiotron UX200A is a super-sensitive detector tube and is particularly sensitive on weak signals.

The placing of this Radiotron in the detector socket of a storage battery set in most instances increases the volume on weak signals from distant stations to the extent of the addition of one stage of radio frequency amplification.

Filament voltage, 5; current, .25 ampere.

B Battery, 22½-45 volts.

Price, Type UX200A.....each \$4.00

**RCA Radiotron UX-210**

**Power Amplifier**

A high power amplifying tube capable of handling great volume without distortion. Due to the high plate current, some form of loudspeaker coupling device is required to prevent the high plate voltage from reaching the loudspeaker leads.

The filament may be operated from the 7.5-volt winding of a transformer or from an 8-volt storage battery. It may however be used at reduced output with a 6-volt battery. Plate voltage is usually obtained from a high voltage B-eliminator.

Fitted with standard large UX base.  
Filament: 7.5 volts, 1.25 amperes. B supply, 250-425 volts. C supply, 18 to 35 volts.  
Price, Radiotron UX-210.....each \$9.00

**RCA Radiotron UX-201-A**

**Detector Amplifier**

The UX201A is the standard all around, flexible storage battery tube of radio, good in detector or amplifier circuits, sure to give the best results at the lowest operating cost. It is recognized as the standard storage battery tube.

UX-201-A fits the Navy and standard UX sockets.

Maximum diameter over all, 1 13/16 inches. Maximum length over all, 4 11/16 inches.

FILAMENT: 5 volts, .25 amperes. DETECTOR: B battery, 45 volts. AMPLIFIER: B battery, 90-135 volts; C battery, 4½ to 9 volts.

Price, Radiotron UX-201-A...each \$1.50

**Radiotron UX240**

This Radiotron is a high Mu detector and voltage amplifier and is designed for use in resistance or impedance-coupled amplifier circuits.

Having an amplification factor (Mu) of 30, Radiotron UX240 is particularly suitable for set builders who prefer resistance coupled amplification. Where tubes of general purpose type have heretofore been used in resistance coupled circuits, improved amplification may now be obtained by the use of Radiotron UX240.

Radiotron UX240 employs the thoriated filament. Filament voltage, 5.0 volts. Filament current, 0.25 amperes. Recommended B voltage, 135 to 180 volts.

Price, Type UX240.....each \$2.00

**RCA Radiotron UX-112-A**

**Power Amplifier**

UX-112A is an improved general purpose storage battery tube. While it was designed as a power amplifier for use in the last audio stage, it may also be used for detection or amplification. It is extremely sensitive as a detector and gives excellent results as a radio-frequency or audio-frequency amplifier.

UX-112-A has a coated filament which operates at such a low temperature that only a dull red glow is visible.

Fitted with large standard UX base.  
Filament: 5 volts, .25 amperes. Detector: B battery, 45 volts. Amplifier: B battery, 90-180 volts; C battery, 4½ to 13½ volts.

Price, Radiotron UX-112-A...each \$2.75

**Radiotron UX226**

An amplifier tube that requires no A battery. It is operated from the a.c. lighting socket through a small step-down transformer.

Can be used for radio or transformer coupled audio frequency amplification.

Contains a plate, grid and a heavy filament of the oxide coated type designed to operate at a relatively low voltage.

Equipped with a standard UX base which fits both the push type and Navy type sockets.

Type	FILAMENT Volts RMS	Am- peres	B- Supply Volts	C- Supply Volts	Price Each
UX226	1.5	1.05	90-180	6-13½	\$2.50

**RCA Radiotron UX-171-A**

**Power Amplifier**

A power amplifier tube of low output impedance for use in last audio stage only.

Since the plate current is exceptionally high at maximum voltage, some form of loudspeaker coupling such as an output transformer or a choke coil and by-pass condenser should be used to prevent d.c. from passing through loudspeaker.

The output at 90 volts is exceptionally high, but at this voltage the usual direct connection to the loudspeaker may be used, omitting the loudspeaker coupling.

FILAMENT: 5 volts, .25 amperes. B battery, 90-180 volts. C battery, 16½ to 40½ volts.

Price, Radiotron UX-171-A.....each \$2.75

**RCA Radiotron UY-227**

**Detector**

A general purpose tube containing a heater element which permits operation from a.c. For detection in sets using Radiotron UX-226 in the radio and first audio stages of amplification. Chiefly used as a detector but may be employed in radio and audio frequency amplifier circuits.

Contains 4 elements: plate, grid, heater and a coated cathode electrically insulated from but heated by the heater element. Connections are made to these elements through a 5-prong base.

HEATER: 2.5 volts, 1.75 amperes. DETECTOR: B supply, 45 volts. AMPLIFIER: B supply, 90-180 volts; C supply, 4½ to 13½ volts.

Price, Radiotron UY-227.....each \$4.00

## Radiotron UX280

A full wave rectifying tube that contains a coated ribbon filament which is electrically and mechanically sturdy and which gives high emission with low power input. The plate has a specially treated surface, which causes rapid dissipation of heat.

This Radiotron may be used in any set designed for Radiotron UX213.

Filament voltage, 5 volts; filament current, 2 amperes. A.C. plate voltage (maximum per plate) 300 volts; d.c. maximum output current, 125 milliamperes.

Price, Type UX280.....each \$4.50

## RCA Radiotron UX-222 Radio Frequency Amplifier

A 4 element screen grid tube particularly designed for radio frequency amplification. Introduction of the shielding screen grid between the usual or control grid and plate not only decreases plate to grid feed-back capacity, but also increases the mutual conductance of the tube.

May also be used as an audio frequency amplifier in resistance coupled circuits.

The filament operates at 3.3 volts and .132 amperes, but with a series resistor of 15 ohms it can be connected in parallel with 5-volt filaments. Thus it may be used in either dry or storage battery receivers especially designed for it.

Price, Radiotron UX-222.....each \$6.50

## Radiotron UX281

A half wave rectifying tube that contains a coated ribbon filament which is electrically and mechanically sturdy and which gives a high emission with low power input. Plate has a specially treated surface, which causes rapid dissipation of heat.

Starts at any plate voltage. Noisy operation does not arise from this type of rectifier. It may be used in any set designed for Radiotron UX216B.

Filament voltage, 7.5 volts; filament current, 1.25 amperes. A.C. plate voltage (maximum) 700 volts, d.c. maximum output current, 85 milliamperes.

Price, Type UX281.....each \$7.50

## RCA Radiotron UX-874

### Voltage Regulator

UX-874 is a voltage regulating Radiotron for use in B eliminators in maintaining constant output voltage.

It is so made that when properly connected it maintains a potential of 90 volts to the radio receiver.

UX-874 is an automatic guard which sees to it that the proper plate voltage is always supplied under various loads. Such regulation is of utmost importance for the best operation of any radio set.

UX-874 requires a starting voltage of 125 volts and has an operating current of from 10 to 50 milliamperes.

Fitted with standard large UX base.

Price, Radiotron UX-874.....each \$4.75

## Radiotron UV876

UV876 is a current-regulator or ballast tube. It is used to maintain constant input to the power unit of a radio receiver.

UV876 is a silent sentinel which is always on guard over the line voltage, assuring constant input under normal fluctuations in line voltages.

Unless the current is thus regulated the voltage to the receiver and therefore to its Radiotrons may vary considerably.

The UV876 operates at 1.7 amperes.

The UV876 is equipped with the Mogul screw base.

Price, Type UV876.....each \$6.50

## RCA Radiotron UX-250 Power Amplifier

A power amplifier tube designed for use in the last audio frequency stage of transformer coupled amplifiers. It will provide a far greater loud speaker volume, without distortion, than has heretofore been possible. The filament is of the coated ribbon type, assuring great strength and long life.

Due to the high plate current of Radiotron UX-250, it is essential to use some form of loud speaker coupling such as an output transformer or choke coil and by-pass condenser.

Filament, 7.5 volts, 1.25 amperes.

Maximum overall height, 6 1/4 inches; diameter, 2 1/8 inches.

Has large standard UX base.

Standard package quantity, 12; standard package weight, 24 pounds.

Price, Radiotron UX-250.....each \$11.50

## RCA Radiotron UV-886 Ballast Tube (Current Regulator)

Radiotron UV-886 is a current regulator. It is used in the rectifier-power-amplifier unit of the Model 104 loud speaker and in Radiolas 30 and 30-A when operated from 40 to 45 cycle alternating current. It is also used in the Radiola 32 for operation from 60 cycle alternating current.

Operating current, 2.05 amperes. Mean voltage drop, 50 volts.

Standard package quantity, 25. Standard package weight, 22 pounds.

Price, Radiotron UV-886.....each \$6.50

## RCA Radiotron UX-852 Short Wave Transmitting Tube

Special construction, with the plate and grid leads entering through different sides, reduces inter-element capacity, so this tube has a useful frequency range so wide it will oscillate readily and deliver power on wavelengths down to .7 of a meter. This makes it ideal for 5, 20 and 40-meter work.

Filament arm has standard UX base for use in either push or navy type socket.

Filament, 10 volts, 3.25 amperes. Normal plate voltage, 2000. Output, 75 watts.

Standard package, 4; package weight, 22 1/2 pounds.

Price, Radiotron UX-852.....each \$32.50

**Graybar Inter-Phones**

**Picture Index of Inter-Phone Systems**

These diagrams are intended to show the Ringing Service provided for the various Inter-Phone systems and should not be confused with the wiring diagrams, which are shown in a separate bulletin, "Installing and Maintaining Graybar Inter-Phones."

**System No. 1**

**Selective Ringing—Selective Talking Service  
For 3 up to 24 Stations**

1. Any station can ring selectively any other station.
  2. More than one conversation can take place simultaneously.
  3. Apparatus, operation and appearance, the highest grade obtainable.
- (For systems Nos. 7, 8, 9 and 10 see Apartment House Inter-Phones.)

**System No. 11**

**Selective Ringing—Common Talking Service  
For 3 up to 8 Stations**

1. Any station can ring selectively any other station.
2. Only one conversation can be carried on at a time.
3. Apparatus pleasing in appearance and moderate in cost.

**System No. 12**

**Master and Outlying Stations—Common Talking Service  
For 3 up to 8 Stations**

1. The "master station" can call any one of the "outlying stations," selectively and the outlying stations can call the master station (but not each other).
2. Wall, desk or hand set Inter-Phones may be used interchangeably in this system for both the master and outlying stations.
3. Only one conversation can be carried on at a time.

**System No. 12A**

**Master Annunciator and Outlying Stations  
Common Talking Service  
For 3 up to 20 Stations**

1. Adapted for schools where the principal must call the teachers individually and teachers must call the principal but not each other.
2. Same as System No. 12 except master station is equipped with an annunciator for identifying calls from the outlying stations.
3. The master station annunciator is of the Electrical Reset type.
4. Only one conversation can be carried on at a time.

**Graybar Inter-Phones**

**Picture Index of Inter-Phone Systems**

Continued

These diagrams are intended to show the ringing service provided for the various Inter-Phone systems and should not be confused with the wiring diagrams, which are shown in a separate bulletin, "Installing and Maintaining Graybar Inter-Phones."

**System No. 12B and 12C**

**Master Annunciator and Outlying Stations  
Common Talking Service  
For 3 up to 24 Stations**

1. The "outlying stations" can ring the "master annunciator" station but not each other.
2. Master annunciator station may or may not have push buttons for calling any one of the outlying stations.
3. This system is also designed for replacing existing ordinary annunciator and push button systems (where the wiring is suitable).
4. Only one conversation can be carried on at a time.

**System No. 15C**

**Code Ringing—Common Talking Service  
For 2 up to 6 Stations**

1. A simple private line system (requires only 3 line wires between stations).
2. When a button is pressed at any station the bells of all other stations will ring simultaneously.
3. The various stations are called by signalling each one with a different code.
4. Only one conversation can be carried on at a time.

**System No. 18C**

**Master Annunciator with Connecting Cords  
For 10 up to 70 Stations**

1. From the "master station annunciator" any one of the "outlying stations" can be called selectively, or the master station can be called from the outlying stations.
2. Communication can be established between any 2 outlying stations by means of connecting cords at the master station annunciator.

**System No. 14**

**Private Line  
For 2 Stations Only**

1. For connecting 2 points separated by a mile or less.
2. Only 2 line wires are required for connecting between the 2 stations.
3. Either station can ring and converse with the other.

3. Janitor and laundry can call apartments.

**Graybar Inter-Phones**

**Picture Index of Inter-Phone Systems**

Continued

These diagrams are intended to show the ringing service only, and should not be confused with the wiring diagrams, which are shown in a separate bulletin.

**System No. 20 and 21**

Selective Ringing—Common Talking Service

There are 6 combinations of the No. 20 and 21 System suitable for systems consisting of one vestibule and up to 24 suite Inter-Phones.

SYSTEM NO. 21-H

**System No. 20H and 21H**

1. Vestibule can call apartments and janitor.
2. Apartments can open door and call janitor and laundry.
3. Janitor and laundry can call apartments.

SYSTEM NO. 21-J

**System No. 22**

Sectional Talking Service—Selective Ringing

Sectional talking systems are recommended where the same janitor serves several buildings, each having one or more vestibule entrances or one building having several vestibule entrances.

This system consists of 2 or more common talking systems terminating at one janitor's station and connected so as to permit conversation taking place between each vestibule and apartment group without interference. These systems are coded as No. 22.

System No. 22 is arranged with the vestibule set having the usual hand receiver with flexible armored cord. This system is in turn divided into groups to conform with the service requirements between the vestibule, janitor or tradesmen and the apartment. They are known as Systems 22D, 22G and 22J.

JANITOR ANNUNCIATOR SYSTEM NO. 22-D

JANITOR ANNUNCIATOR SYSTEM NO. 22-G

**System No. 22D**

1. Vestibule can call apartments and janitor.
2. Apartments can open door and call janitor.

**System No. 22G**

1. Vestibule can call apartments and janitor.
2. Apartments can open door and call janitor.
3. Janitor can call apartments.

**System No. 22J**

1. Vestibule can call apartments and janitor.
2. Apartments can open door and call janitor.
3. Janitor can call apartments.

JANITOR ANNUNCIATOR SYSTEM NO. 22-J

## Graybar Inter-Phones

### Description of System No. 1

Selective Ringing—Selective Talking Service

### Inter-Phones for the No. 1 System

Represent the highest standards of design, engineering and refined manufacture. Four types of Inter-Phones are provided, namely, Surface Wall, Flush Wall, Desk and Hand Sets, and they may be used interchangeably in the same system. These sets all incorporate the same important refinements, as listed hereinafter.

### Transmitter and Receiver

The same type and high grade of construction as those used for public telephone exchange service. Due to their character, the transmission is pleasingly uniform and clear throughout the system with a minimum of battery consumption. These transmitters and receivers are familiar to telephone users throughout the world.

### Push Button Keys

The push button keys and their operating mechanism are mounted in a rigid metal frame. In designing this key two operations are arranged for (1) for ringing, and (2) for talking.

Each key consists of a hard rubber push button mounted on a metal plunger, which passes through a hole in a movable locking plate ("m"), (which is under the spring tension). When the button is completely depressed ("B") the spring ("o") makes contact with the ringing battery supply at ("e"), causing the ringing current to flow to the station to which this particular key is connected, and ringing the bell at that station. When the pressure is released, the plunger returns to an intermediate position ("C") breaking the contact and placing the Inter-Phone on the line of the station called ready for conversation. While the conversation is taking place, the plunger is automatically held in the talking position by the locking plate ("m") and held there until the plate is actuated by depressing another button. The pressing of another button causes the locking plate ("m") to release the key so that it assumes its normal position as shown in "A." Talking current for the Inter-Phone is cut off as soon as the receiver is placed back on the switchhook.

## Graybar Inter-Phones

### Description of System No. 1—Continued

Selective Ringing—Selective Talking Service

### No. 1324 Type Wall Inter-Phones

Surface Mounting

No. 1324 Type

The No. 1324 type Inter-Phone is an all metal set having a hinged face plate, movable transmitter and hand receiver. Finished black with nickel trimmings. The face being hinged, makes it possible to easily inspect all connections and apparatus, without disturbing the installation.

This Inter-Phone is furnished in 6, 12, 16, 20 and 24 button sizes.

Code No.	No. of Buttons	DIMENSIONS, INCHES		
		Height	Housing Width	Depth
1324C-6	6	10	6 $\frac{3}{8}$	3 $\frac{1}{8}$
1324C-12	12	10	6 $\frac{3}{8}$	3 $\frac{1}{8}$
1324C-16	16	14 $\frac{5}{16}$	7 $\frac{1}{8}$	3
1324C-20	20	14 $\frac{5}{16}$	7 $\frac{1}{8}$	3
1324C-24	24	14 $\frac{5}{16}$	7 $\frac{1}{8}$	3

### No. 1355 Type Wall Inter-Phones

Flush Mounting

No. 1355 Type

The No. 1355 type Inter-Phone is a flush mounting set having a steel face plate on which is mounted all of the talking and signalling apparatus and a sheet steel outlet box arranged for  $\frac{3}{4}$ -inch conduit. The outlet box can be separated from the set and built into the wall during the construction of the building. The face plate is hinged at the bottom, making all terminals easily accessible for installation or inspection. The set is compact but not crowded, and designed to meet the most exacting requirements. Furnished in 16, 20 and 24 button sizes.

Dull black finish with nickel trimmings.

Code No.	No. of Buttons	DIMENSIONS, INCHES		
		Height	Housing Width	Depth
1355C-16	16	14 $\frac{1}{2}$	6 $\frac{7}{8}$	...
1355C-20	20	14 $\frac{1}{2}$	6 $\frac{7}{8}$	...
1355C-24	24	14 $\frac{1}{2}$	6 $\frac{7}{8}$	...

**Graybar Inter-Phones**

**Description of System No. 1—Continued**

Selective Ringing—Selective Talking Service

**No. 6016 Type Desk Inter-Phones**

The No. 6016 type desk Inter-Phone consists of a desk stand and a metal key box which employ the same operating mechanism as described under "Push Button Keys."

It is the same type of desk stand that is generally used for public telephones, millions of which are in service, its efficiency and dependability being well known.

**Key Box**

The key box is finished in dull black with nickel trimmings and is provided with 4 rubber feet to keep the metal housing from scratching the table or desk. The connecting cord between the key box and the desk stand is 6 feet long. Cable entrances are provided at the bottom and ends of the box. Furnished in 6, 12, 16, 20 and 24 button sizes.

Code No.	No. of Buttons	Desk Stand	Cord Feet	INCLUDES			
				Key Box	DIMENSIONS, INCHES		
				Width	Length	Depth	
6016D-6	6	1140BE	6	328C-6	5	7½	2⅝
6016D-12	12	1140BE	6	328C-12	5	7½	2⅝
6016D-16	16	1140BE	6	328C-16	5¾	10¾	2⅝
6016D-20	20	1140BE	6	328C-20	5¾	10¾	2⅝
6016D-24	24	1140BE	6	328C-24	5¾	10¾	2⅝

**No. 6016 Type Hand Set Inter-Phones**

**No. 6016-H Type Hand Set Inter-Phone**

There are 3 main types of hand set inter-phones having the following general code numbers: 6016-H type, 6016-HR type and 6016-CH type. The selection of one of these 3 types depends upon the individual service requirements, as follows:

**No. 6016-H Hand Set Inter-Phones**

The No. 6016-H set consists of a hand set with hanger and a desk type key box.

**Hand Set**

Hand set is made of brass, nickel-plated, pleasing in appearance and of sturdy construction. This set is recommended for heavy duty and is designed to withstand the rough handling incidental to such service.

**Hand Set Hanger**

The hand set hanger is made of cast metal with black finish and is designed for supporting the hand set to the side of desk or wall when not in use.

**Key Box**

The key box is finished in dull black enamel and is provided with small rubber feet to keep the metal housing from scratching the table or desk. The connecting cord between the key box and the desk stand is 5½ feet long. Cable entrances are provided at the bottom and end of the box furnished in 6, 12, 16, 20 and 24-button sizes.

Code No.	No. of Buttons	Desk Stand	Cord, Feet	INCLUDES			
				Key Box	DIMENSIONS, INCHES		
				Width	Length	Depth	
6016H-6	6	1140BE	6	328C-6	5	7½	2⅝
6016H-12	12	1140BE	6	328C-12	5	7½	2⅝
6016H-16	16	1140BE	6	328C-16	5¾	10¾	2⅝
6016H-20	20	1140BE	6	328C-20	5¾	10¾	2⅝
6016H-24	24	1140BE	6	328C-24	5¾	10¾	2⅝

**Graybar Inter-Phones**

**No. 6016-HR Hand Set Inter-Phones**

The No. 6016-HR set consists of a hand set with hanger and a desk type key box.

**Hand Set**

This is a high efficiency type of hand set for regular inter-phone service. The set is finished in black with nickel trimmings and is recommended in place of the No. 6016-H type when not subjected to heavy service.

**Hand Set Hanger**

A simple nickel-plated hook for hanging the hand set to side of desk or wall.

**Key Box**

The key box is the same as described for the No. 6016-H type inter-phone.

Code No.	No. of Buttons	Hand Set	Cord Feet	Hand Set Hanger	Key Box	INCLUDES		
						DIMENSIONS, INCHES		
						Width	Lgth.	Dpth.
6016-HR-6	6	1003-R	6	141-A	328-C-6	5	7½	2⅝
6016-HR-12	12	1003-R	6	141-A	328-C-12	5	7½	2⅝
6016-HR-16	16	1003-R	6	141-A	328-C-16	5¾	10¾	2⅝
6016-HR-20	20	1003-R	6	141-A	328-C-20	5¾	10¾	2⅝
6016-HR-24	24	1003-R	6	141-A	328-C-24	5¾	10¾	2⅝

**No. 6016-CH Cradle Type Hand Set Inter-Phones**

The No. 6016-CH set consists of a hand set with a cradle type mounting and a desk type key box.

**Hand Set**

The hand set is made of black molded Bakelite and represents the most efficient cradle set available both from a standpoint of design and workmanship.

**Cradle**

The cradle or mounting for supporting the above hand set consists of a metal base finished in black with nickel trimmings. It is arranged for desk mounting for supporting the hand set when not in use. A switch is provided for operating purposes.

**Key Box**

The key box as used with this set is the same as described for the No. 6016-H type inter-phone.

Code No.	No. of Buttons	Hand Set and Cradle	Cord Feet	Key Box	INCLUDES		
					DIMENSIONS, INCHES

## Graybar Inter-Phone Systems

**System No. 1**  
Selective Ringing—Selective Talking

System No. 1—Showing 4 Stations in One System

**SERVICE.**—For use in business organizations, industries, stores, institutions, etc., where frequently, more than one conversation will take place at the same time, where instantaneous connections without loss of time are necessary and where the highest grade of transmission is required.

**OPERATION.**—Each station can (by merely pressing a button) selectively ring and talk with any other station without disturbing the rest of the stations in the system and as many separate conversations can be carried on simultaneously as there are pairs of Inter-Phones. For example, in a system consisting of 6 Inter-Phones, 3 separate conversations can be carried on at the same time.

For each station in the system, one push button key is required in each Inter-Phone. For detail description of these keys and method of operation, refer to the general description.

**CAPACITY.**—The Inter-Phones are available in standard sizes of 6, 12, 16, 20 and 24 buttons.

**TYPES OF INTER-PHONES.**—Wall, desk or hand set Inter-Phones may be used interchangeably in this system.

No. of Buttons	WALL TYPE INTER-PHONES		Desk Set Inter-Phones	Hand Set Inter-Phones
	Surface Metal	Flush Metal		
6	1324C-6	.....	6016M	6016MH
12	1324C-12	.....	6016K	6016KH
16	1324C-16	*1355C-16	6016N	6016NH
20	1324C-20	*1355C-20	6016P	6016PH
24	1324C-24	*1355C-24	6016L	6016LH

\*NOTE.—Dimensions of outlet boxes for these Inter-Phones are outlined on another page.

### Accessories Cable

For connections between the various stations, cable specially designed for Inter-Phones can be supplied. A system requires a sufficient amount of cable for connection to each station, the cable being run by the shortest or most convenient route between the various station locations. This cable includes the necessary number of wire conductors (2 pairs for battery leads and one pair for each station in the system) and is furnished in 3 different types to suit various locations and conditions:

Type	6 Stations	12 Stations	16 Stations	20 Stations	24 Stations
Fireproof Braid	No. 134B	No. 141B	No. 157B	No. 158B	No. 136B
Green Cotton	.....	.....	.....	.....	.....
Braid	No. 155B	No. 156B	.....	.....	.....
Lead Covered	No. 134B	No. 141B	No. 157B	No. 158B	No. 136B

These cables are listed in detail elsewhere.

### Cable Terminals

A cable terminal should be used wherever a junction is to be made between cables. For example: Where an outside lead-covered cable is connected to an interior cable, or wherever a branch is taken off from the main cable. In cases where the cable can be run direct to the Inter-Phone, no cable terminal is necessary. The number of cable terminals required should be determined by the installer. For 6 and 12 button systems use the No. 19A cable terminals. For 16, 20 and 24 button systems use the No. 19B cable terminals.

Cable terminals are described in more detail elsewhere.

### Batteries

Not more than 1 dozen Blue Bell dry cells will be necessary for operating the system. (Five cells for the talking circuit; 4 to 7 cells for the ringing circuit, depending upon length of line.) The cells can be placed in the basement or any other accessible place.

Detailed information for installing, including wiring diagrams, battery requirements, cable connections, etc., are included in our bulletin, "Installing and Maintaining Graybar Inter-Phones," which will be furnished upon request.

## Graybar Inter-Phones

Description of Metal Wall Inter-Phones  
Nos. 1527C and 1539C Types

Selective Ringing—Common Talking Service

No. 1527C-2 Type

No. 1539C-1 Type

### General

The Nos. 1527C and 1539C Inter-Phones represent the highest development yet attained toward the standardization of design and construction of Common Talking Type Inter-Phones.

This result is due to the exceptional engineering skill employed in producing a universal Inter-Phone that is simple, yet pleasing in design; compact, yet with every part accessible for instant inspection; rugged, yet light in weight and efficient in operation.

### Construction and Flexibility

The principal features of these Inter-Phones are:

Surface and flush type Inter-Phones so wired as to be adaptable for use in any of our "Common Talking" Inter-Phone systems.

An interchangeable push button arrangement provides for readily furnishing Inter-Phones from stock in capacities of 1, 2, 3, 4, 6 and 8 buttons as required.

Circuit labels in each Inter-Phone together with an envelope containing strap wires and a diagram of connections give clear, concise instructions for universally connecting the completely equipped sets for any of our Common Talking Systems.

The push button arrangement provides for the future growth of an Inter-Phone system by simply ordering push button units of the required capacities without having to remove or dismantle the sets from the system. (This assumes that cable including spare wires is originally installed.)

### Finish of Inter-Phones

The metal parts of the Nos. 1527C and 1539C Inter-Phones with the exception of the transmitter and bells are treated with the Parker Rustproof Process. This consists of treating the parts in a hot chemical bath, which changes the surface of the metal to a non-rusting basic phosphate.

The protecting surface provided by the Parker Process does not add an additional coating of some other non-oxidizing material, but it is practically a part of the metal itself and prevents rust from spreading if it should start by the exposure of the bare metal at any spot.

Durable black enamel baked on (over the Parkerized surfaces) provides a tough elastic, non-chipping finish, 2 coats of the enamel being applied on surfaces exposed to view.

**Graybar Inter-Phones**

Continued

**No. 1527C Type Wall Inter-Phones**

Surface Mounting

No. 1527-4 Type

Interior of Housing

Backboard

The No. 1527C Type Inter-Phone has a surface mounting metal housing which contains all of the talking and signalling apparatus, also a metal backboard, which is furnished for mounting the set to the wall.

The housing of the set is of rugged construction, being formed out of sheet steel and is equipped with hinge hooks which match up with slots in the base of the metal backboard. This arrangement permits fastening the backboard in place on the wall and then mounting the housing unit to it.

The hinge arrangement of this set enables the installer to swing down the housing unit from the backboard (see illustration), for making connections to the terminals; also to permit interior inspection of the set at any time after its installation.

The metal backboard is designed to permit the entrance of wires or cabling from either the top, bottom or center of the set; also, a metal guide ring is located near the cable entrance at the base of the backboard so that the connecting wires may be looped through this ring to hold them in place and provide a proper bending point when the housing is swung forward.

The finish is durable dull black enamel with nickel trimmings (see general notes on "Finish of Inter-Phones").

Code No.	No. of Buttons	For Systems	DIMENS. HOUSING, INCHES		
			Height	Width	Depth
1527C-0	0	7, 20 and 21	7½	5	2⅝

Flush Mounting

No. 1539C-2 Type

Outlet Box

Back of Face Plate

The No. 1539C type Inter-Phone has a flush steel face plate on which is mounted all of the talking and signalling apparatus, also a metal outlet box which is furnished for mounting the set in the wall.

The outlet box is of unique design in that metal aligning strips are fastened at the top and bottom front of the box (see illustration), so as to properly align the set after the face plate unit is fastened to the outlet box (in case the outlet box is installed out of plumb). It is equipped with adjustable ears for mounting it in the wall, the same as are furnished on standard sectional outlet boxes. Knockouts are provided at both the top and bottom for the entrance of ½-inch conduit or connecting wires.

The face plate support for installer is an added feature of this set, consisting of a wire hook mounted on a small card with printed instructions for its use. This hook is for temporarily supporting the Inter-Phone face plate, of flush type sets, during installation, so that the wires may be readily connected to the terminals by the installer.

The finish is durable dull black enamel with nickel trimmings (see general notes on "Finish of Inter-Phones").

## Graybar Inter-Phones

### Description of Inter-Phones

Selective Ringing—Common Talking Service  
No. 6034 Type Desk Set Inter-Phones

A compact type of desk Inter-Phone embodying all of the necessary talking and signalling equipment and retaining in design the same general appearance of the standard type of desk telephone.

The stands are equipped with watch-case receivers and finished in dull black enamel with nickel trimmings, presenting a neat and attractive appearance.

The desk stands of the Nos. 6034AP and BE Inter-Phones are each equipped with a push button and buzzer. The push button is

No. 6034 BE

mounted in a convenient position in the stem of the stand for signalling purposes and the buzzer is mounted in the base of the stand for receiver calls.

The 4 and 8-button types of Inter-Phones have the push buttons mounted in the base of the desk stands (including blank name plates) for signalling the various stations in a system, also a separate bell is furnished for receiving the calls.

## Graybar Inter-Phones

### Description of Inter-Phones

Selective Ringing—Common Talking Service

### Nos. 6042 and 6043 Types Hand Set Inter-Phones

The Inter-Phone transmitter and receiver are a part of the hand set, which can be held and operated with one hand, leaving the other free. A bar marked "Press to talk" mounted in the hand set handle is held down by the natural position of the hand while talking. When not in use, the hand set can be hung on a hook or laid down in any position. The hand set is finished in dull black.

Apparatus Unit (or Box). In connection with most "one button" hand sets it is necessary to use Apparatus Units containing terminals and other accessories. Two types can be furnished.

No. 383 Type

### Surface Mounting

Surface mounting apparatus Units (No. 383 type) are equipped with an insulated base, black finished round metal cover and nickel hook. Approximate size 3 1/16 inches in diameter by 1 3/16 inches deep.

No. 382 Type Apparatus Unit

### Flush Mounting

No. 12J07 Face Plate

Type AA Switch Box

Flush mounting apparatus Boxes (No. 382 type) are intended to be set in the wall and are equipped with a brush brass finished face plate. These boxes consist of three parts—a Gem A Union sectional switchbox, an apparatus unit and a face plate. The face plate is 4 1/2 x 2 3/4 inches, the wall box 2 x 3 x 3 inches deep.

An important point to be observed is that wall box and face plate are the same as those used in electric light wiring for push button switches. Sets furnished either complete, including wall box and face plate, or minus these parts.

### How Hand Sets Are Connected to Apparatus Units

With the surface apparatus unit the hand set cord is permanently attached to the hand set and apparatus unit.

With the flush apparatus box the hand set cord is permanently attached to the box. Except the Numbers 6042E and K (systems 12A and 12B). These cords are equipped with plugs. The plug can be inserted or removed from the receptacle located in the center of the face plate.

This feature makes it possible to discontinue telephone service at any point by simply removing the plug and the hand set.

## Graybar Inter-Phones

### Description of Annunciators

#### Annunciators for Systems 8, 9, 12A, 12B and 12C

These annunciators are equipped with electric reset drops. The drop indication is a white arrow which points directly at the name card. When reset, the arrow drops out of view behind the name card. The front of the annunciator protecting the drops is plain glass and as the arrow is between the glass and the dull black background, it can be easily seen from any angle.

For Systems 12C, 20J and 21J

For Systems 8, 9, 12A and 12B  
Janitor Annunciator—Nos. 8904 to 8925

No. 18C system annunciators equipped with answering cord only. No connecting cords furnished unless ordered separately.

Annunciators do not include the hand sets which must be ordered separately as listed.

### Hand Set Inter-Phone for Annunciators

FOR SYSTEM No. 10.—Nos. 1003-K hand set or 1320-BF desk stand.

FOR SYSTEM Nos. 18C, 20J and 21J.—No. 1003-K hand set.

## Graybar Inter-Phone Systems

System No. 11

Selective Ringing—Common Talking

System No. 11—Showing 4 Stations in One System

SERVICE.—For use in establishments where conversations can be limited to one at a time.

OPERATION.—Each Inter-Phone in the system is equipped with a number of push buttons (one for each other station in the system). By depressing the button marked with the name or number of the station wanted, the bell at that station will ring and there only.

Any station in the system can selectively ring any other station. Only one conversation can be carried on at a time.

CAPACITY.—The wall type Inter-Phones can be furnished in capacities of 2, 3, 4, 6 and 8 buttons, accommodating 3, 4, 5, 7 and 9 stations respectively in a system.

The desk and hand set Inter-Phones are furnished in capacities of 4 and 8 buttons, accommodating 5 and 9 stations respectively in a system.

TYPES OF INTER-PHONES.—Wall, desk or hand type Inter-Phones may be used interchangeably in the same system. The Inter-Phones as coded below are described in detail elsewhere.

No. of Buttons	Wall Type Inter-Phones Surface	Inter-Phones Flush	Desk Set Inter-Phones	Hand Set Inter-Phones
2	1527C-2	*1539C-2	.....	.....
3	1527C-3	*1539C-3	.....	.....
4	1527C-4	*1539C-4	6034M or BJ	6034AZ or BG
6	1527C-6	*1539C-6	.....	.....
8	1527C-8	*1539C-8	6034P or BK	6034BB or BH

\*For dimensions of outlet boxes, refer to another page.

### Accessories

#### Retardation Coils

A No. 51H retardation coil must be ordered separately for installation near the battery of each system.

#### Cables

For connection between the various stations, cable especially designed for Inter-Phones can be furnished. This cable includes 3 common wires and one individual wire for each station.

Description	CODE, Nos.		
	With Fire-proof Braid	With Green Cotton Braid	With Lead Covering
For 3 and 4 Button Systems..	161	142	161
For 6 and 8 Button Systems..	162	...	162

NOTE.—Cables are described in detail elsewhere.

#### Connecting Blocks

Where a junction is to be made between cables, or wherever a branch is taken off the main cable, a connecting block should be used. In cases where the cable can be run direct to the Inter-Phone, the connecting block is not required.

#### Batteries

Five Blue Bell dry cells are required for the operation of this system, when the distance between the 2 stations farthest apart is 750 feet or less, and Inter-Phone cable, listed above, is used. On lines of greater length it is recommended that instead of increasing the number of battery cells to more than 5, larger wire be used.

**Graybar Inter-Phone Systems**

**System No. 12**

**Master Station—Common Talking**

**SERVICE.**—Consists of one centrally located "Master Station" Inter-Phone to which are connected other "outlying station" Inter-Phones. The system provides for communication from a central point to different stations and vice versa.

**OPERATION.**—The Master Station Inter-Phone is equipped with a number of push buttons; one for each outlying station in the system. By depressing the button marked with the name or number of the outlying station wanted, the bell at that station will ring and there only.

The outlying stations are equipped with only one button which will ring the master station when depressed.

Only one conversation can be carried on at a time.

**CAPACITY.**—One Master Station and from 2 to 8 outlying stations.

**TYPE OF INTER-PHONES.**—Wall, desk and hand set Inter-Phones may be used in this system for either the master or outlying stations.

**Accessories**

**Retardation Coils**

A No. 51H retardation coil must be ordered separately with each master station Inter-Phone and installed near the battery of the system.

**Wiring**

For connections between the outlying stations and the master station either cable or insulated wires can be used, depending largely upon the layout of the system. Three common wires are required throughout the system, and in addition, one individual wire from the master to each outlying station. Where there is a long run of a large number of wires, it will be found economical to use cable, and at all distributing and junction points, to install connecting blocks. From these connecting blocks separate wires can be run to the Inter-Phones. The sizes of cable and the number of connecting blocks required should be determined in accordance with the installation instructions. Cables and connecting blocks are described elsewhere.

**Batteries**

Five Blue Bell dry cells are required for the operation of this system when the distance between the master station and most distant outlying station is 750 feet or less and No. 22 B. & S. gauge wire (as in the case of Graybar cable) is used.

On lines of greater length it is recommended that instead of increasing the number of battery cells to more than five, larger wire be used. This should be determined in accordance with the installation instructions.

The Blue Bell dry cells can be placed in the basement or any other accessible place.

**NOTE.**—Detailed information covering wiring diagrams, connection of wires and cables, connecting blocks, etc., can be found in our booklet, "Installing and Maintaining Inter-Phones," which will be furnished upon request.

No. of Metal Wall Type Inter-Phones		Desk Set Inter-Phones		Hand Set Inter-Phones	
Buttons	Surface	Flush			
2	1527C-2	*1539C-2	.....	.....	.....
3	1527C-3	*1539C-3	.....	.....	.....
4	1527C-4	*1539C-4	6034M or BJ	6034AZ or BG	
6	1527C-6	*1539C-6	.....	.....	.....
8	1527C-8	*1539C-8	6034P or BK	6034BB or BH	

**Outlying Station**

1	1527C-1	*1539C-1	6034AP	*6042K
.....	.....	.....	.....	**6042E
.....	.....	.....	.....	6043E

\*For dimensions of outlet boxes refer to separate listing of these Inter-Phones.

\*\*No. 6042E is same as No. 6042K, but without face plate and wall box. For details see listing elsewhere.

**Graybar Inter-Phone Systems**

**System No. 12A**

**Master Annunciator System**

**2-Way Ringing—Common Talking**

**SERVICE.**—Especially adapted for schools where the principal may call the teachers individually and the teachers can call the principal.

Similar to the No. 12 system except that the master station includes an annunciator for identifying the calls from the outlying stations.

Only one conversation can be carried on at a time.

**OPERATION.**—The master station Inter-Phone includes a push button block having as many buttons as there are outlying stations, also one extra button for electrically resetting the annunciator drops. To call an outlying station, the push button marked with the name or number of the party wanted is depressed. This rings the bell at the station selected and there only.

Each outlying station Inter-Phone is equipped with a push button which signals the master station when depressed. This call will also be registered at the master station by the operation of the annunciator drop corresponding to station calling.

**CAPACITY.**—One master station and 3 up to 20 or more outlying stations.

**Types of Inter-Phones**

**Master Stations**

To consist of the following:

1. A desk set Inter-Phone with a 5½-foot flexible conductor cord.
2. A push button block with or without weighted base and having a flexible conductor cord of any length desired.
3. A connecting block.
4. A surface type annunciator.

Each item must be ordered separately and in accordance with the following code numbers and capacities can be furnished.

No. of Outlying Stations	No. of Buttons	**PUSH BUTTON BLOCK			ANNUNCIATOR				
		LIST No.	Wood	Weighted	Des't Stand Code No.	Connecting Block Code No.	Wood of Type	No. of Drops	Metal Type
3	4	104A	7900	7900	1320BF	6G	401	4	407
5	6	106A	790	798	1320BF	6G	401	6	407
7	8	108A	7910	7990	1320BF	6G	401	8	407
10	12	.....	7921	79010	1320BF	6B	401	10	407
14	16	.....	7930	79020	1320BF	6B	401	14	407
17	20	.....	793	7902	1320BF	6F	401	18	407

\*One button of the push-button block is required for every 8 annunciator drops for electrically resetting drops.

\*\*Connecting cords for push-button blocks may be ordered separately in any length (6 feet of cord being the average length).

**Outlying Stations**

Wall, Desk or Hand Set Inter-Phones may be used. The Inter-Phones are the same as specified for the Outlying Stations of System No. 12.

**Accessories**

**Retardation Coils**

A No. 51H retardation coil must be ordered separately for installation near the battery of each system.

**Wiring**

Two common wires are required throughout the system and in addition 2 individual wires from the master to each outlying station. Cable or insulated wires may be used. Where there is a long run of a large number of wires, it will be found economical to use cable and at all distributing and junction points, to install connecting blocks. From these connecting blocks separate wires can be run to the Inter-Phones.

## Graybar Inter-Phone Systems

### Master Annunciator Systems Nos. 12B and 12C

#### 1-Way or 2-Way Ringing—Common Talking

SERVICE.—Provides for communication between a master station annunciator and a number of outlying stations.

The master annunciator is equipped with a hand set Inter-Phone, and can be obtained with or without push buttons.

#### System No. 12B—One-Way Ringing

(Annunciator without push buttons) enabling the outlying stations to ring the master station but the master station cannot ring the outlying stations.

#### System No. 12C—2-Way Ringing

(Annunciator equipped with push buttons, one for each outlying station) enabling the outlying stations to ring the master station and the master station to ring the outlying stations individually.

OPERATION.—Each outlying station is equipped with a push button which signals master station when depressed. Call will also be registered at master station by operation of annunciator drop corresponding to station calling.

#### Master Stations

This consists of a black finished hand set with a 3-foot cord and an annunciator with hook for holding hand set.

Annunciator and hand set must be ordered separately.

Finish of annunciator is golden oak. Light or dark oak finish can be furnished without additional charge.

No. of Drops	System 12B List No.	System 12C List No.	No. of Drops	System 12B List No.	System 12C List No.
4	1204-B	1204-C	16	1216-B	1216-C
6	1206-B	1206-C	20	1220-B	1220-C

12	1212-B	1212-C	.....	.....	.....

#### Hand Sets

A No. 1003D hand set must be ordered separately with each annunciator.

#### Outlying Stations

Wall or hand set Inter-Phones may be used.

No. of Buttons	METAL WALL TYPE INTER-PHONE		HAND SET INTER-PHONES	
	Surface	Flush	Surface	Flush
1	1527C-1	*1539C-1	6043D	6042M *6042D

\*Same as No. 6042M, without face plate and wall box.

#### Accessories

##### Wiring

For one-way ringing service (annunciator without push buttons) one wire, common to all stations in the system and in addition, one individual wire from master station to each outlying station. For 2-way ringing service (annunciator equipped with push buttons) one-wire common to all stations in the system also 2 individual wires from master to each outlying station.

##### Batteries

Only one battery is required for the operation of the system. This should consist of 3 or 4 Blue Bell dry cells, where the distance between the master station and the farthest outlying station is 250 feet or less and No. 22 B. & S. gauge copper wire is used. On lines of greater length it is recommended that instead of increasing the number of dry cells to more than 4, larger wires be used as follows:

- 250 to 400 ft. use 20 B. & S. gauge copper wire.
- 400 to 600 ft. use 18 B. & S. gauge copper wire.
- 600 to 1000 ft. use 16 B. & S. gauge copper wire.

## Graybar Inter-Phone Systems

### System No. 14

#### 2-Station Private Line

SERVICE.—For use where only 2 stations are required and where the sets are distantly located from each other.

Only 2 wires are used for connecting the Inter-Phones; dry cells being required at each station.

NOTE.—Refer also to other pages for description of Inter-Phone outfits composed of 2 wall or hand set Inter-Phones and the necessary installing material complete.

OPERATION.—Either station can ring the other by simply depressing the push button of the set.

TYPE OF INTER-PHONES.—Wall, desk or hand set Inter-Phones may be used interchangeably.

The Inter-Phones listed below are described in detail where listed separately.

No. of Buttons	METAL WALL TYPE INTER-PHONES		Desk Set Inter-Phones	HAND SET INTER-PHONES	
	Surface	Flush		Surface	Flush
1	1527C-1	*1539C-1	603413E	6043P	6042AE *6042AF

\*No. 6042AF is same as No. 6042AE but without face plate and wall box.

No. 1527C-2 Type

No. 1539C-1 Type

#### Wiring and Battery Requirements

A battery of 3 Blue Bell dry cells is required at each station to furnish current for talking and ringing if the length of line is less than 750 feet. If the length of the line is increased, additional dry cells are required at each station to insure satisfactory ringing. The following list indicates the additional dry cells required at each station:

Length of Line Between Stations	ADDITIONAL NUMBER OF CELLS FOR EACH STATION B. & S. GAUGE COPPER WIRE			
	No. 12	No. 14	No. 16	No. 18
750 to 1000 ft.	1	1	1	2
1000 to 1500 ft.	1	1	1	3
1500 to 2000 ft.	1	2	3	..
3000 to 4000 ft.	2	3	..	..
4000 to 5000 ft.	2	..	..	..
5000 to 6000 ft.	3	..	..	..

**Graybar Inter-Phone Systems**  
**System No. 15-C**  
**Code Ringing—Common Talking**

Showing 4 Stations in One System

**SERVICE.**—A simple and inexpensive system for small residences, warehouses, stores or mercantile establishments, where only a few stations are required and the number of calls between the stations are not frequent.

Requires only 3 line wires throughout the system for 2 or more stations.

Only one conversation can be carried on at a time.

**OPERATION.**—Each station is equipped with one push button which, when depressed rings the bells at all the other stations.

The various stations are called by signalling each one with a different code ring; for instance: 2 rings for Station No. 2, 3 rings for Station No. 3, etc.

If more than 6 stations are in service, signalling code mistakes are likely to occur, due to the possibility of misunderstood signals. System No. 11 is recommended where the initial installation comprises more than 4 or 6 stations.

**NOTE.**—In case only 2 stations are required (wall or hand set Inter-Phones), complete equipment ready for installation can be obtained by referring to Inter-Phone outfits.

**CAPACITY.**—Two to 6 stations may be operated in this system. More stations can be added but at the expense of ease and certainty in signalling.

**TYPE OF INTER-PHONE.**—Wall, desk or hand set Inter-phones may be used in the system. The Inter-Phones coded below are described in detail elsewhere.

No. of Buttons	METAL WALL TYPE INTER-PHONES		Desk Set Inter-Phones	HAND SET INTER-PHONES	
	Surface	Flush		Flush	Surface
1	1527C-1	*1539C-1	6034BE	*6042AE	6043P
..	.....	.....	.....	**6042AF	.....

\*For dimension of outlet boxes refer to separate listings elsewhere.

\*\*No. 6042AF is same as 6042AE, but without face plate and wall box, see separate listing of Hand Sets.

**Accessories**  
**Retardation Coils**

A No. 51H retardation coil must be ordered separately and installed near the battery of the system.

**Wiring**

Three wires are required for connecting the Inter-Phones for 2 or more stations.

**Batteries**

Five Blue Bell dry cells are required for the operation when the length of the line is 750 feet or less, and not more than 4 stations are to be used, connected by Nos. 20 or 22 B. & S. gauge copper wire. If more than 4 Inter-Phones are required or if the line is longer than 750 feet, larger wires should be used in accordance with the installation instructions. The Blue Bell dry cells can be placed in the basement or any other accessible place.

**Graybar Inter-Phone Systems**  
**Master Annunciator System No. 18C**  
**Non-Interfering**

Showing Master and 3-Outlying Stations

**SERVICE.**—For use in hotels, clubs, schools, hospitals, etc., to provide for communication between a central or master station and a larger number of outlying stations, as follows:

1. The Master Station can selectively ring and talk with any of the outlying stations and the outlying stations can call the Master Station.

2. Communication can be arranged between any two outlying stations through the medium of one or two connecting cords at the Master Station.

No connection can be made between this system and a public telephone system.

**OPERATION.**—The Master Station Annunciator consists of a number of drops and jacks (one for each outlying station in the system), a push button for ringing, a hand set Inter-Phone and a cord and plug for calling and answering.

1. To call an outlying station, the Master Station operator inserts the plug into the jack corresponding to the station wanted and depresses the ringing button of the annunciator. The operator converses with the outlying station by pressing the talking lever of the Hand Set Inter-Phone.

2. Each outlying station Inter-Phone is equipped with a push button for ringing the Master Station and at the same time operating one of the annunciator drops, thereby registering the call. The Master Station operator answers by inserting the answering plug into the jack corresponding to the drop operated and pressing the talking lever of the hand set.

3. If one outlying station wishes to converse with another outlying station, a connection can be established by means of a pair of connecting cords (equipped as part of the annunciator when so specified), each cord terminating in separate plugs. This connection is effected as follows:

The Master Station operator withdraws the answering plug from the jack of the station calling, inserting in its place one of the connecting cord plugs, and proceeds to call the station wanted as explained above, in item 1. Having secured an answer from the station wanted, the operator again withdraws the answering plug and inserts in its place the other plug end of the connecting cord. This completes the connection between the two outlying stations.

An annunciator supervisory feature is provided to indicate the termination of a conversation between outlying stations. Where a large number of connections are required between outlying stations, our No. 1801 lamp signal, Private Exchange Switchboard, is recommended.

**Master Station Annunciators**

Annunciators regularly equipped with answering cord only. No connecting cords furnished unless ordered separately. Connecting cords, when ordered, will be shipped with supervisory signals to indicate termination of the conversation.

Code No.	No. of Drops and Jacks	DIMENSIONS, INCHES

## Graybar Inter-Phone Systems

### Master Annunciator System No. 18C—Continued Non-Interfering

#### Outlying Stations

Wall or hand set Inter-Phones may be used. The Inter-Phones as coded below are described in detail elsewhere.

No. of Buttons	METAL WALL INTER-PHONES		HAND SET INTER-PHONES	
	Surface	Flush	Flush	Surface
1	1527C-1	1539C-1	6042D	6043G
			*6042M	

\*No. 6042M is same as No. 6042D, but with face plate and wall box.

#### Hand Set Inter-Phone for Annunciator

This consists of a No. 1003K hand set.

#### Connecting Cords

If Inter-communication between outlying stations is desired, one or two pairs of connecting cords may be ordered as described under Operation (Item 3).

No. 6042 Type

No. 6043 Type

#### Accessories Wiring

One wire, common to all stations in the system is required, and, in addition, two individual wires between the master and each outlying station. Where there is a long run of a large number of wires, it will be found economical to use cable and install cable terminals or connecting blocks at all distributing and junction points. From there, the installation can be continued by means of separate wires to the various outlying stations. The size of cable and number of connecting blocks should be determined by the installer in accordance with the installation requirements.

Cables, cable terminals and connecting blocks are listed elsewhere in detail.

No. 1527C-2 Type

No. 1539C-1 Type

#### Batteries

Five or more Blue Bell dry cells are required for operating the system. The cells can be placed in the basement or any other accessible place.

Detailed information for installing, including wiring diagrams, battery requirements, cable connections, etc., are included in our bulletin, Installing and Maintaining Graybar Inter-Phones, which will be furnished upon request.

## Graybar Inter-Phones

### Description of Apartment House Inter-Phones Selective Talking—Non-Interfering Service Vestibule Inter-Phones for Systems Nos. 7, 8, 9, and 10

The vestibule equipment for Systems Nos. 7, 8, 9 and 10 consists of the No. 1562 type Inter-Phone and any number of letter boxes.

#### No. 1562 Type Vestibule Inter-Phones With Armored Receiver Cord

The No. 1562 type vestibule Inter-Phone has a metal case with bronze brass finish, arranged for flush mounting. This Inter-Phone is provided with the same type of push button keys as the No. 1 System Selective Ringing—Selective Talking System and permits the Vestibule and Suites as well as the Janitor and Suite Inter-Phones to carry on conversations at the same time without interference with each other.

The Inter-Phones are furnished in 7, 13, 17, 21 and 25 button keys, each button representing one apartment, except the last or odd button which represents the Janitor. The function of each of these keys, when operated, is to establish connections between the Vestibule and the called Station. When a push button is pressed all the way down the bell on the corresponding station is rung. When the pressure is released, the key assumes an intermediate position, thereby breaking the ringing contact and connecting the called line for conversation. The key is automatically held in this intermediate position by a locking plate until the operation of another button releases the key and restores it to its normal position. Talking current is cut off when the receiver is replaced on the switchhook. The lower or odd button (for calling the janitor) is non-locking in the operating position. This provides a means for releasing the other buttons in the set should some one maliciously operate all of them at one time. The Vestibule Inter-Phone is provided with a watchcase receiver and flush type transmitter. The receiver is equipped with a flexible armored cord for its protection.

No. 1562 Type

#### Brush Brass Finished Face Plate and Metal Outlet Box

Code No.	No. of Buttons	DIMENSIONS, INCHES		Code No.	No. of Buttons	DIMENSIONS, INCHES	
		FACE PLATE Height	FACE PLATE Width			FACE PLATE Height	FACE PLATE Width
1562C-7	7	19½	10	1562C-21	21	19½	10

1562C-17	17	19½	10				

The armored receiver cord complete with receiver is coded as "No. 524W receiver."

#### Vestibule Mail Boxes

The mail boxes may be obtained in groups of 3 to 16, being assembled complete in units and master-locked for mounting in single or double rows. The boxes are finished in bronze brass, other finishes are special.

The overall dimensions of the individual mail boxes are 5 inches in width and 19½ inches in height.

Selective Talking—Non-Interfering Service

**Janitors' and Tradesmen's Inter-Phones**

No. 1350C-25 Type

**No. 1350 Inter-Phones—Surface Type**

The No. 1350 type janitor's and tradesmen's wall Inter-Phone has a surface mounting metal case with black finish. No bell is provided in this set as it is used with an annunciator when calls are to be received at this station. These Inter-Phones are made in 7, 13 and 25 button sizes, the construction and operation being the same as outlined under Vestibule Inter-Phones. The lower or odd button in each Inter-Phone is non-locking in operation and provides connection with the vestibule Inter-Phone.

No. of Buttons	Code No.	SYSTEM No.		DIMENSIONS OF HOUSING INCHES		
		For Janitor	For Tradesmen	Height	Width	Depth

25	1350C-25	8 and 9	9 and 10	14 <sup>5</sup> / <sub>16</sub>	7 <sup>1</sup> / <sub>8</sub>	3

JANITOR'S ANNUNCIATORS.—Annunciators for systems 8, 9 and 10 are described elsewhere.

**Coil and Condenser Box**

The coil and condenser box is required for each vestibule, janitor's (either wall Inter-Phone or annunciator) or tradesmen's station. This apparatus is necessary in order that separate conversations may be carried on simultaneously between the vestibule, janitor and tradesmen's Inter-Phone and 3 apartments, without having the conversations interfere with each other. The condenser provides a path for the high frequency talking currents, which cannot pass through the high impedance retardation coil.

Wooden case furnished in golden oak.

Description of Apartment House Inter-Phones  
Common Talking Service

### Vestibule Inter-Phones for No. 21 Systems

Continued

#### Vestibule Equipment

The vestibule equipment consists of the following units, each of which must be ordered separately.

A No. 1524-E type loud speaking Inter-Phone.

A push-button plate.

Mail boxes (as required).

No. 1524-E

No. 424-A  
Push Button  
Plate

The apparatus to be selected from the following groups.

#### No. 1524-E Type Loud Speaking Vestibule Inter-Phone System No. 21

Eliminates, as far as possible, all projecting and removable parts, such as the transmitter, receiver and switch-hook; also to safeguard theft of receiver and the cords.

The set consists of a flush mounting face plate. A push button is mounted at the bottom of the plate for talking and listening purposes. The transmitter and receiver units mount on the back, and an embossed metal transmitter mouthpiece is located on the upper section of the face plate. The receiver unit contains a loud speaking horn; the flare end of the horn is attached to the lower part of the face plate which is perforated and covered with a protecting screen. An outlet box is furnished for mounting the set in the wall.

Bronze brass finish. Face plate, 5x16½ inches.

Above set is equipped with a janitor call button.

#### Vestibule Push-Button Plates

Designed to mount on either side of the vestibule Inter-Phone. A card holder is provided opposite each button.

Push button plates can be obtained in 2 different sizes.

## Graybar Apartment House Inter-Phones Systems 7, 8, 9 and 10

Selective Ringing—Selective Talking—Non-Interfering Service

No. 1562 Type

**SERVICE.**—Provides service between the vestibule apartments, janitor and tradesmen. The systems are planned throughout with the utmost care to give the most reliable service.

Systems Nos. 7, 8, 9 and 10 cover requirements of most apartment houses. One system may be expanded into another at any time by the use of additional apparatus.

These systems are designed for selective ringing and talking or non-interfering service, making it possible for the master station, such as the vestibule, the tradesmen and the janitor to communicate with different apartments simultaneously without interference with each other.

**OPERATION.**—The vestibule, janitor's and tradesmen's Inter-Phones are equipped with push button keys (one for each apartment station). By depressing the button marked with the name or number of the apartment desired, the bell at that station will ring and there only.

Can be provided with one or two push buttons for ringing the janitor's station or operating an electric door opener.

Separate conversation may take place simultaneously between the vestibule, janitor or tradesmen and different apartments.

**TYPE OF INTER-PHONES.**—Wall type Inter-Phones are specified throughout for the various systems.

Accessories for Systems Nos. 7, 8, 9 and 10.

#### Coil and Condenser Box

One retardation coil and one condenser are required for each vestibule, janitor's (either wall Inter-Phone or master annunciator) or tradesmen's station.

#### Cable

For connecting the various stations, either cable or insulated wires can be used, depending largely upon the layout of the building. Where there is a long run of a large number of wires (for instance, between the janitor, vestibule, and tradesmen Inter-Phones or for the vertical riser from floor to floor) it will be found economical to use cable, and to install cable terminals or connecting blocks at all of the distributing and junction points.

For connecting the Inter-Phones of the various apartments to these distributing points, insulated wires (No. 22 B. & S. gauge) can be used. This data should be used when selecting the cable.

#### Cable Terminals

Cable terminals and connecting blocks are described in detail elsewhere.

#### Batteries

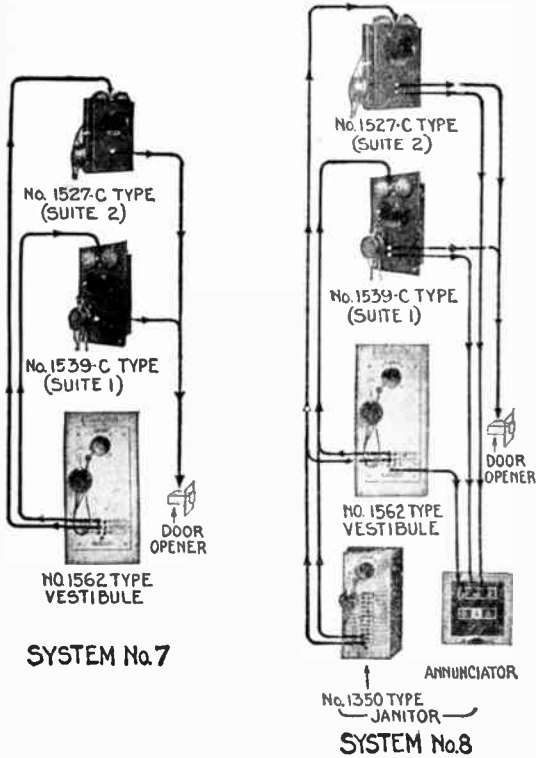

Not more than 12 Blue Bell dry cells will be necessary for operating any of the above systems (5 cells for the talking circuits and 4 to 7 cells for the ringing circuits, depending upon the length of the line). The cells can be placed in the basement or any other accessible place.

#### Door Opener

If a door opener is included in the system, additional dry cells will be required. Generally 2 or 3 cells have been found sufficient for this purpose.

Any standard type of door opener may be used.

- 1539C-2 Flush wall Inter-Phone, 2 buttons, for janitor and door.

##### Tradesmen

2 or more No. 1350 type Inter-Phones.

##### Janitor

- 1 annunciator switchboard and
- \*\*1 or more No. 295 type coil and condenser boxes.

##### Wiring and Battery Requirements

- \*2 wires common to entire system.
- 2 wires for each suite Inter-Phone.
- 5 wires for connecting each vestibule to janitor, tradesmen's sets and coil and condenser box.

Battery to furnish operating current.  
1 door opener and miscellaneous installing material.

**NOTE.**—\*\*One retardation coil and one condenser are required for the janitor's annunciator and each vestibule and tradesmen's Inter-Phone.

\*One common wire can be omitted if door opener is not required.

## Graybar Apartment House Inter-Phones

System No. 20

Selective Ringing—Common Talking

**SERVICE.**—The No. 20 Inter-Phone Systems are designed to provide an inexpensive and reliable means of communication between vestibule, apartments, janitor's quarters, laundry and tradesmen's entrance. This system differs from Systems Nos. 7, 8, 9 and 10 (as described on the preceding pages) in that only one conversation can be carried on at a time, as all sets are connected to one talking circuit.

There are 6 combinations of the No. 20 System, differing from each other in the number of locations in the apartments which are to be connected for inter-communicating service. The operation of each of these combinations, however, is the same.

**OPERATION.**—The vestibule Inter-Phone is equipped with a push button for calling the janitor. Each letter box is provided with 2 or 3 compartments and below each compartment a push-button is mounted. To call an apartment, the push-button having the name of the apartment wanted is depressed; this rings the bell at the apartment selected and there only.

The apartment Inter-Phones can be provided with push-buttons for operating the door opener, calling the janitor, laundry or any other station in accordance with the combination selected.

The janitor's, laundry and tradesmen's Inter-Phones can be arranged either for receiving calls from the other stations without being able to signal back, or for receiving calls and for signalling back to any one of the apartments.

Only one conversation can be carried on at a time.

**TYPES OF INTER-PHONES.**—Wall type Inter-Phones are specified throughout for the No. 10 Systems.

**TYPES OF SYSTEMS.**—(See descriptions on following pages.)

#### Accessories for No. 20 Systems

The cabling, terminals, door opener (if required) for these systems are the same as outlined for Systems 7, 8, 9 and 10.

#### Battery Requirements

For the operation of each system a battery of not more than five Blue Bell dry cells is required. These can be placed in the basement or any other accessible place.

#### System No. 20A

**SERVICE.**—Vestibule can call apartments; apartments can open door.

##### Vestibule

1 No. 1520R Inter-Phone, push button plate and mail boxes as required.

##### Apartments

- 1527C-0 Surface Wall Inter-Phone, or

## Graybar Inter-Phone Systems

### Apartment House Service

#### System No. 21

##### Selective Ringing—Common Talking

### General Information

The No. 21 Inter-Phone Systems are designed to provide communication between vestibule, apartments, janitor's quarters, laundry and tradesmen's entrance.

This system has the same service requirements as system No. 20, except that the vestibule equipment consists of a loud-speaking, cordless type Inter-Phone which eliminates all projecting parts and provides against theft of receivers and cords.

There are 6 combinations of the No. 21 system, differing from each other in the number of locations in the apartments which are to be connected for inter-communicating service. The operation of each of these combinations, however, is the same.

To call one of the apartments from the vestibule, the box push-button (under the name of the party wanted) is depressed, which rings the bell of that apartment. The vestibule party next depresses the button at the bottom of the telephone set, and keeps it depressed while awaiting reply, and while conversing with the apartment party.

The apartment Inter-Phones can be provided with push-buttons for operating the door opener, calling the janitor, laundry, or any other station in accordance with the combination selected.

The janitor's, laundry, and tradesmen's Inter-Phones can be arranged either for receiving calls from the other stations without being able to signal back, or for receiving calls and for signalling back to any one of the apartments.

Only one conversation can be carried on at a time.

Wall type Inter-Phones are specified throughout for the No. 21 systems.

### Accessories for No. 21 Systems

The cabling, terminals, and door opener, if required, for these systems are the same as outlined for systems 7, 8, 9 and 10.

### Battery Requirements

For the operation of each system 3 sets of dry batteries are required, each set to consist of 3 dry cells. The batteries can be placed in the basement, or any other accessible place.

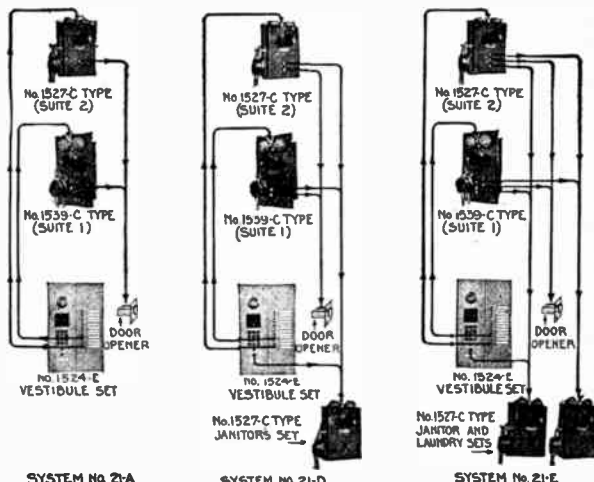

Detailed information covering wiring diagrams, connections of wires and cables, connecting blocks, etc., can be found in our booklet, "Installing and Maintaining Graybar Inter-Phones," which will be furnished upon request.

### Graybar Inter-Phone Outfits

**GENERAL.**—Where intercommunication is desired between two points in the home or in business, Western Electric Inter-phones can be furnished in "a-pair-in-a-package" outfit; that is, two Inter-phones complete with all the installing materials and instructions necessary to put them up. The outfits do not, however, include batteries, which must be ordered separately. For average conditions four or five dry cells will be sufficient.

**SERVICE.**—Consists of two wall or hand set type Inter-phones suitable for a private telephone line between house and barn or garage, or for a line that is wholly within a house, also for use in offices or shops between two buildings or in one building.

**OPERATION.**—Either station can ring and talk to the other.

#### Outfit No. 17

This outfit consists of 2 No. 1003 type hand sets with all material required to install a simple intercommunicating system between 2 points not over 80 feet apart, and where the wire will be wholly indoors and not exposed to weather conditions or moisture. The material, in addition to the hand sets, consists of 2 connecting blocks with mounting screws, 80 feet of insulated twisted pair copper wire, 60 insulated nails for fastening wire, 2 hooks for holding hand sets, 2 bells, 2 battery connectors and illustrated installing instructions.

#### Outfit No. 30

No. 1527C-1 Inter-phones

This outfit includes 2 surface wall No. 1527C-1 inter-phones and 1 No. 51H retardation coil in one box but no installing or wiring material.

### Graybar Inter-Phone Outfits

Continued

#### Outfit 31

No. 6043P  
Inter-phones

This outfit includes 2 hand set type No. 6043P inter-phones and No. 51H retardation coil in one box but no installing or wiring material.

#### Outfits Nos. 30A and 31A

These outfits are for use where the wiring is to be run entirely under cover and not exposed to moisture or weather.

Outfit No. 30A includes one No. 30 outfit in one box and another box containing installing material (described below).

Outfit No. 31A includes one No. 31 outfit in one box and another box containing installing material (described below).

The wiring material furnished with the No. 30A and No. 31A outfits consists of 75 feet of insulated 3-conductor copper wire, 2 battery connectors, insulated nails for fastening wires and illustrated installing instructions.

#### Outfits Nos. 30B and 31B

These outfits are for use where the wiring is to be run in the open between or outside of buildings, and exposed to weather and moisture.

Outfit No. 30B includes one No. 30 outfit in one box and another box containing installing material (described below).

Outfit No. 31B includes one No. 31 outfit in one box (described above) and another box containing installing material (described below).

The wiring material furnished with the No. 30B and No. 31B outfits consists of 150 feet of outside 3-conductor copper wire, 2 brackets with screws, hooks and knobs to attach wires to building, 2 porcelain tubes to insulate wires when entering building, 2 battery connectors, 25 insulated nails for fastening wires inside building, and illustrated installing instructions.

This standard package idea for Inter-phones has been devised as a means of assisting purchasers in selecting the proper equipment for their needs without requiring them to make a study of the subject. At the same time it assures them of getting uniformly good materials, and in the proper amounts. The outfits are packed in a box ready to be sold over the counter or mailed by parcel post.

## Edwards Annunciators

### Special Annunciator Features

### No. 80 Hand Reset Drops

Schedule T

Used in all hand reset annunciators. Price, No. 80..... each \$4.00

### No. 4 Electric Reset Drops

## No. 409 Edwards Flush Type Annunciators

Electric Reset

8 Volts D.C. or 16 Volts A.C.

Schedule T

An all metal case. Standard finish is black; mahogany or oak at no extra charge; special finishes, upon application.

No. 4 drop is used. The current consumption of the drop both for indicating and resetting is below the average.

The audible signal is a new type double adjustment buzzer. Reset buttons are regularly furnished on case. Connectors only can be furnished without extra charge.

Add 3 inches to height and width for trim. Six-foot cord included if specified.

Weight is for annunciator in shelf package. Prices include steel wall box.

No. of ARRANGEMENT			DIMENSIONS, INCHES			Weight Pounds	Price Each
Drops Across	Down	Height	Width	Depth			
4	2	2	8 <sup>7</sup> / <sub>8</sub>	7	3 <sup>7</sup> / <sub>16</sub>	4 <sup>1</sup> / <sub>4</sub>	\$60.00
6	3	2	8 <sup>7</sup> / <sub>8</sub>	8 <sup>1</sup> / <sub>2</sub>	3 <sup>7</sup> / <sub>16</sub>	5	66.00

## Nos. 130 and 130D Edwards Elevator Annunciators

Hand Reset

6 Volts D.C. or 8 Volts A.C.

Schedule T

All metal cases of symmetrical design with best quality grained wood or plain color finishes. Audible signal is a new buzzer specially designed for the purpose.

Standard finish, black; mahogany or oak, no extra charge; special finishes, upon request.

In ordering the No. 130D, give number of drops, not number of floors and correct marking for the drops.

Weight is for annunciator in shelf package.

No. of Drops	ARRANGEMENT		DIMENSIONS, INCHES			Weight Pounds	Price Each
	Across	Down	Height	Width	Depth		
3	1	3	11 <sup>1</sup> / <sub>2</sub>	3 <sup>5</sup> / <sub>8</sub>	3 <sup>1</sup> / <sub>4</sub>	1 <sup>7</sup> / <sub>8</sub>	\$13.94

**No. 10 Edwards Return Call Annunciators**

**Hand Reset**

6 Volts D.C. or 8 Volts A.C.

*Schedule T*

Used in hotels, institutions, etc., for the purpose of calling the room and acknowledging from the room that the call has been heard, or vice versa.

This type of annunciator is designed to eliminate the large number of wires necessary if the standard annunciator bells, and pushes are used.

An all metal case, surface type. Standard finish is black; mahogany or oak at no extra charge. Special finishes, upon application.

Weight is for annunciator in shelf package.

No. of Drops	ARRANGEMENT		DIMENSIONS, INCHES			Weight Pounds	Price Each
	Across	Down	Height	Width	Depth		
10	5	2	12 <sup>5</sup> / <sub>8</sub>	11 <sup>1</sup> / <sub>4</sub>	3 <sup>5</sup> / <sub>8</sub>	10	\$44.12

Additional Drops ..... 5.40  
For flush type add \$10.00 per annunciator.

**Edwards Lamp Annunciators**

Standard Operating Voltage, 16 to 24 Volts A.C or D.C.

*Schedule T*

OPERATION.—If locking pushes, toggle or push button switches are used, the lamps will remain lighted while the switch is on, and will be extinguished while the switch is off. If standard momentary contact pushes are used, relays are supplied in a separate case with the reset button on the annunciator. If specified, relays can be mounted in the annunciator case, which, however, adds greatly to its size and does not improve its appearance.

In ordering, specify operating voltage, finish, with or without relays; if with relays, whether they are to be in separate case or in annunciator; if opaque glass type, whether 7/8 or 1 1/4-inch numerals.

**Bull's Eye Type**

No. 421, For Surface Wall Mounting

No. 422, For Flush Wall Mounting

No. 423, For Desk

Equipped with 3/8-inch opal signals arranged over card racks. Lamps are easily changed from front by removing opals. All metal case and trim.

Standard finish, brush brass or bronze for flush type; black or mahogany for surface types.

Illustration shows standard method of construction with all mech-

anism on back of front plate, which is mounted directly on metal wall box. In larger size annunciators it is advisable for easier installation to have front plate hinged to a trim which fastens directly to metal wall box. This method of construction can be followed if specified.

No. of Signals	Price Each	No. of Signals	Price Each	No. of Signals	Price Each
2	\$40.00	12	\$116.00	24	\$215.00
4	46.00	14	136.00	28	234.00

Add for 1 1/4-Inch Numerals, per Signal ..... 1.00  
Add for 110 Volts, per Signal ..... 1.00  
Add for Relays, per Signal ..... 8.00

No. 424

## Bryant Silent Call Hospital Signal Systems

The Bryant Silent Call Hospital Signal Systems are the result of 15 years of effort and experience. Over 19,000 Bryant calling stations with their associated signal equipment have been installed in over 400 hospitals in America and foreign countries.

No. 102

The Bryant System is especially designed for summoning nurses in hospitals and similar institutions. It provides a means for transmitting a signal of one or as many patients as desired, using lights instead of bells, reducing noise and confusion and aiding in efficient management. In the wall adjacent to the patient's bed is installed a calling station like No. 102 or 162 here illustrated. A linen cord connected to the lever of the control switch in the calling station is placed where the patient can easily reach it. A gentle pull on the cord operates the control switch and lights the signal lamps. There is a "door light" in the corridor, over the room door of the patient who has placed the call. This signals the nurse, she attends the patient and cancels the call at the bedside by restoring the lever of the control switch to its original position.

No. 162

Other lights called "pilot lights" are placed at intersections of hallways, in diet kitchens and other desirable places. Annunciators showing by numbered light signals the exact rooms from which the calls originate are often placed at nurses' stations and in Superintendent's offices.

The Bryant System includes annunciator signals, bells or buzzers when specified.

No. HSA-28

Plug receptacles for current consuming devices such as fan motors, heating pads, reading lamps, etc. are made a part of the calling system as desired.

This system is instantaneous, quiet and dependable.

No. HS-40

In this column are illustrated some of the units which are assembled to meet the simplest requirements of the smallest hospital and the most comprehensive needs of the largest institutions.

This system operates on standard lighting voltage and for this reason costs less to install and operate properly.

A complete catalogue No. H.S. 622 illustrating and describing this equipment—how to lay out, specify and install a complete system for any hospital—will be sent promptly on request.

## Bryant Magnetic Control Switch Type Hospital Signal Systems

The convenience of any hospital signal system is to enable the patient to summon a nurse and for the nurse to call a doctor. The Bryant System insures that each patient's wants are attended to by a system that is positive in operation. Simplicity, low cost and low maintenance charges are obvious advantages.

The Bryant Magnetic System embraces all these features in the following ways:

In the wall adjacent to the patient's bed is installed a calling station like Nos. 10, 11, 13 and 17 illustrated in this column, and cord with a push button attached is placed where the patient can reach it. The patient's slightest touch on the push button operates the magnetic control switch. Instantly colored lights appear at strategic points to notify the nurses. The light appears in the corridor over the patient's door. Wherever nurses may be they will see the signal which will guide them to the proper patient.

The nurse must visit the patient in order to cancel the call, which she does by pushing the button of the control switch in the patient's room. Only those signals operated by that particular switch are extinguished by the cancellation of that call.

The system is complete in itself and is connected to the regular electric service supply. There are no other parts—no motor-generators, transformers or batteries.

No. 10

No. 11

No. 13

This magnetic control type system is also suited to large or small hospitals and is so flexible that it will adapt itself to any hospital's needs.

No. 17

The bulletin No. H. S. 1023 illustrating and describing this system will be forwarded immediately upon application.

**Edwards Nurses' Call Systems**

The system provides an efficient method of calling nurses to the patient's bedside by silent visual signals or a combination of silent and audible signals, as desired.

When a ward patient operates the station, it lights a lamp in the station, over the ward door, in the corridors, diet kitchens, utility rooms, nurses' stations, etc.; as many or as few signals at the necessary points for quick response to the call.

In private rooms the operation is the same except that it is unnecessary to have a lamp in the bedside station.

When the nurse responds to the call, she extinguishes all signals at the bedside controlled by that station.

The system is so arranged that the failure of one lamp at any location does not affect the operation of any of the other lamps.

There are 2 types of stations: pendant push or pull cord.

All bedside or other stations are furnished in either type desired. The pendant push type consists of necessary length of cord with a plug on one end to fit the station receptacle and on the other end a pendant push of the locking type. The patient sends in the call by pressing the push button, which remains locked. The nurse resets the call by depressing a collar which allows push button to return to its normal position.

The pull cord station has a toggle type mechanism in the station, and the patient is equipped with the necessary length of cord. Station is operated by simply pulling the cord, and the nurse resets it by pushing toggle back to its normal position.

The operation of either type station causes any desired buzzer signals to sound momentarily. After once operated, continued operation by the patient will not affect any of the lamp signals, but will cause any buzzer signals to sound again.

The information given here is necessarily brief. A complete bulletin is available giving full details on calling systems for all type installations.

**Private Room Calling Stations**

Used in private rooms or in wards where no bed lamp signal is necessary. When patient operates station, various lamps are lighted and buzzer sounded as previously described.

Provided with a mounting bridge and a separate finished face plate. Fits any standard single gang switch box or outlet box, with single gang cover with opening  $2\frac{7}{8} \times 1\frac{7}{64}$  inches. Supplied in pendant push or pull cord types.

One station can be made to serve 2 beds through the use of 2 cord stations. Standard finishes are brush brass or white enamel. No outlet box is supplied.

No. 7001

No.	Type	Description
7001	Pendant Push	For 1 Bed
7002	Pendant Push	For 2 Beds
7301	Pull Cord	For 1 Bed
7302	Pull Cord	For 2 Beds

**Ward Calling Stations**

Used in wards of more than 2 beds. Provided with pilot light. Fits any standard outlet box with single gang cover with opening  $2\frac{7}{8} \times 1\frac{7}{64}$  inches.

Can also be supplied in pull cord toggle switch type. One station can be made to serve 2 beds through the use of a 2-cord station.

Standard finish of plate, brush brass or white enamel.

No outlet box is supplied.

No.	Type	Description
7011	Pendant Push	For 1 Bed
7012	Pendant Push	For 2 Beds
7311	Pull Cord	For 1 Bed
7312	Pull Cord	For 2 Beds

No. 7011

**Edwards Nurses' Call Systems**

Continued

**Wall Calling Stations**

Designed for use in bathrooms, toilets, operating or examining rooms.

Operating mechanism is mounted directly on the station; no cord or plug required. Will fit any deep type outlet box with a single gang cover with opening  $2\frac{7}{8} \times 1\frac{7}{64}$  inches.

No outlet box is supplied.

Standard finish is brush brass or white enamel.

No. 7003

Push Button  
Toggle

**Balcony Calling Stations**

For use in open balconies.

Face plate is provided with a hinged cover to protect the receptacle when not in use. A rubber basket to mount between the wall and face plate is supplied. Station is complete with 12 feet of cord.

One station can be made to serve 2 beds through the use of a 2-cord station. Will fit any standard outlet box with single gang cover with opening  $2\frac{7}{8} \times 1\frac{7}{64}$  inches.

Standard finish is black Duco. No outlet box is supplied. Can also be furnished with pull cord toggle switch.

No. 7021

No.	Type	Description
7021	Pendant Push	For 1 Bed
7022	Pendant Push	For 2 Beds
7321	Pull Cord	For 1 Bed
7322	Pull Cord	For 2 Beds

**No. 7031 Corridor Lamp Stations**

No. 7031

This station is mounted in corridor over room doors.

It is equipped with a neat glass dome lamp signal held in place by a mounting ring which is hinged to the plate and kept closed by means of a snap catch.

Will fit any standard outlet box with 2-gang cover having an opening  $2\frac{7}{8} \times 3\frac{3}{64}$  inches.

Standard finish is brush brass or white enamel.

No outlet box is supplied.

**No. 7037 Flush Buzzer Stations**

For diet kitchens, utility and work rooms, where no lamp signals are required or as extension audible signals. Equipped with a mild toned buzzer mounted behind face plate and with a cutout switch.

Fits any standard outlet box with single gang cover with opening  $2\frac{7}{8} \times 1\frac{7}{64}$  inches.

Standard finish is brush brass or white enamel. No outlet box is supplied.

No. 7037

## Edwards Nurses' Calling Systems

Continued

### No. 7033 Single Dome Pilot and Buzzer Stations

For diet kitchens, utility rooms, work rooms, etc. where individual room signal is not required.

Equipped with neat glass dome lamp signal and a low-toned buzzer mounted behind station and a buzzer cutout switch. Will fit

any deep type outlet box with a 3-gang cover with opening  $2\frac{7}{8} \times 5\frac{3}{4}$  inches.

Standard finish is brush brass or white enamel. No outlet box is supplied.

### No. 7035 Bull's Eye Type Multiple Lamp and Buzzer Stations

Used in diet kitchens, utility rooms and work rooms where ward and private indications are desired.

Furnished marked for as many indications as necessary. No outlet box supplied up to 8 lamps. Eight lamp stations or over, special outlet box supplied. Standard 2-lamp station requires

No. 7035

an outlet box with 2-gang cover with opening  $2\frac{7}{8} \times 3\frac{35}{64}$  inches.

Each additional pair of lamps increases size of plate by one gang. Stations having over 8 lamps require special arrangement and standard outlet boxes cannot be used.

Standard finish is brush brass or white enamel.

### No. 7041 Nurses' Flush Annunciators

No. 7041

Used at the nurses' station to indicate the individual room calling. Equipped with a mild toned buzzer inside of case with a cutout switch mounted in trim. It is of flush metal type with hinged glass door. Glass marked as ordered with blocked out figures or letters on back of glass which are not visible until lamp is lighted. Special flush outlet boxes are supplied.

Standard finish is white enamel.

Due to long experience in the signaling field, the engineering departments can offer many helpful suggestions. Service is always available to architects and hospital officials, for which no charge is made.

Prices upon application.

## Edwards Fire Alarm Systems

Detailed information with complete data and wiring diagrams is available in the Edwards Fire Alarm catalogue, which will be sent upon request.

### Open Circuit Systems

These systems consist of simple break glass stations and standard vibrating bells. Various types of bells are adaptable to fire alarm systems, the choice depending on the type and quality of bell desired and the operating current that is to be used for the system.

In open circuit systems the operation of a station causes the bell to sound continuously until system is turned off, and thereby gives a general alarm of fire only. These systems must be tested regularly. A fire alarm annunciator may be used to show the location of the station operated; but if this feature is desired, the closed circuit coded alarm system is much more efficient and little higher in price when the cost of the annunciator and necessary wiring for it is considered.

### Coded Closed Circuit Systems

These systems give maximum protection in that lines and devices are continually supervised with a small current, and should there be an open circuit a trouble bell will ring immediately. Code type stations are used and the operation of any station causes the single stroke bells to sound a coded alarm, giving the location of the station operated.

The most common practice is to operate the system directly from the lighting circuit, either d.c. or a.c. Battery operated systems of this type use electro-mechanical bells to reduce the current consumption. There is less trouble and chance of failure with systems operated from lighting circuit than with battery operated systems. Batteries must be watched and cared for by some competent person. Charging apparatus must be provided.

### Pre-Signal Coded Systems

Recommended for hospitals, hotels, institutions and places where it is not advisable to sound a general alarm of fire until an investigation has been made and such action is deemed necessary. Pre-signal type stations are used in these systems, the operation of which causes a coded alarm to sound on one circuit of bells only, known as the pre-signal or pilot circuit, these bells being located in the engineer's office, manager's office, etc. Fire can be investigated immediately and if it is serious the general alarm can be turned in from any station by an authorized person possessing a key. The key is inserted in the station and the station operated in the usual way, which will cause a general coded alarm to sound on all bells.

### Apparatus

Code stations for all systems are made in flush and surface type and also in 2 styles: one where to sound the alarm the door is opened and the lever pulled and the other where it is necessary to break a glass before door can be opened.

## Edwards Standard Code Fire Alarm Stations

For Use in Closed Circuit Fire Alarm Systems

Schedule T

### No. 1275

Mechanical movement is simple in design; gear wheels are cut. Separable conduit attachment. Code signal sounded 4 times at each operation. When lever is released it automatically disengages. No winding necessary.

Cover of box provided with spring hinge. Silent or bell tests may be made, using key supplied with station.

Depth,  $7\frac{5}{8} \times 4 \times 5$  inches. Weight, 8 pounds. Price, No. 1275, for Surface Conduit, each \$38.00

### No. 1275-2

Same as No. 1275; locked door with glass window is substituted, making 2 operations to sound alarm. Breaking glass opens door; pulling lever sounds alarm.

Weight, 8 pounds. Price, No. 1275-2, for Surface Conduit, each \$55.00

**Edwards Standard Code Fire Alarm Stations**

For Use in Closed Circuit Fire Alarm Systems

Schedule T

**No. 1276**

Gears wheels are cut, not stamped. Separable conduit attachment. Code signal sounded 4 times at each operation. When lever is released it automatically disengages. No winding necessary.

Cover of box provided with spring hinge. Silent or bell tests may be made, using key supplied with station.

Height, 8 1/2 inches; width, 7 5/8 inches including flange back. Height of box, 7 3/8 inches; width, 5 1/4

inches; depth, 3 3/8 inches. Weight, 9 pounds.  
Price, No. 1276, For Concealed Conduit.....each \$46.00

**No. 1276-2**

Same as No. 1276; locked door with glass window is substituted, making 2 operations to sound alarm. Breaking glass opens door; pulling lever sounds alarm.

Weight, 9 pounds.  
Price, No. 1276-2, For Concealed Conduit.....each \$63.50

**Edwards Pre-Signal Code Fire Alarm Stations**

For Use in Pre-Signal, Closed Circuit Fire Alarm Systems

Schedule T

Same construction as the Nos. 1275 and 1276, except that signal is sounded at pre-determined place only, allowing investigation, after which general alarm can be sounded by inserting key and pulling lever at any station.

- No. 1275-DO.....each \$52.00
- No. 1276-DO.....each 60.00
- No. 1275-2-DO.....each 62.00
- No. 1276-2-DO.....each 70.00

**For Sirens**

Standard code and pre-signal code stations can be arranged with slow movement, for which add to list \$20.00. Because of the heavy current demand of most sirens, it is advisable to use the No. 240 relay. Full information as to intended use should be given in ordering this type station.

No. 1276-2

**Edwards Non-Code Fire Alarm Stations**

6 to 110 Volts

Schedule T

**No. 224 Flush Break-Glass Station**

No. 224

With hinged front so test operation is same as actual alarm operation. Size, 3 1/16 x 4 3/8 inches, to fit standard single switch box. Test key, hammer and chain with each station. Open circuit type furnished if not specified. Finish, red enamel.

Weight, 1 pound.

Price, No. 224, Open Circuit.....each \$6.25  
Price, No. 224C, Closed Circuit....each 10.00

**No. 225 Surface Break-Glass Station**

Same as above but with cast fitting for surface wiring. Fitting can also be mounted on standard switch box for use with concealed wiring but where it is desired to have stations protrude from wall to be visible from a distance.

Weight, 3 1/4 pounds.

Price, No. 225 Open Circuit.....each \$7.25  
Price, No. 225C Closed Circuit.....each 11.00

**Edwards Fire Alarm Control Boxes**

Schedule T

**S.S. Control Panels**

For direct connection of fire alarm system to 110-volt d.c. lighting service. Where 220-volt, 3-wire service is available, trouble bell operates directly on 110-volt service, but if this is not available, battery operation of same is arranged. All instruments, etc., mounted on slate panel, which is enclosed in a steel cabinet.

Door is secured with lock and has a glass panel.

Price includes trouble bell. Knockouts provided on 2 sides and bottom of case for conduit.

Price, Single Circuit System.....each \$250.00  
Price, Additional Circuits.....each 45.00

**S.S.A. Control Panels**

For a.c., otherwise same construction and price as S.S.

**P.S.S. Pre-Signal Panels**

For d.c., same as S.S. panel. For dual operation.  
Price, Single Circuit System.....each \$350.00  
Price, Additional Circuits.....each 45.00

**P.S.S.A. Pre-Signal Panels**

For a.c., otherwise same construction and price as P.S.S.

**E.M.B. Control Panels**

For use with systems operated by primary battery. Panel provides means of supervising with a low current. Operating current is automatically switched in and out of alarm system as required. Construction of panel, same as above.  
Price includes trouble bell.

Price, Single Circuit System.....each \$250.00  
Price, Additional Circuits.....each 45.00

**Edwards Central Control Fire Alarm Stations**

Schedule T

**No. 229**

Used to sound coded alarms or signals and for location at headquarters or telephone central in localities where fire alarms are telephoned.

With 6 code wheels. Code wheel desired is placed on shaft. Pulling lever automatically winds movement and releases it, sounding code 4 times. Weight, 26 pounds.

Price, No. 229.....each \$150.00  
Price, Extra Wheels.....each 5.00

**No. 229S**

Similar to No. 229 except for operation of motor-driven sirens, the code being sounded twice only. In ordering, give make of siren, operating current, code, etc.

Price, No. 229S, Weight, 26 Pounds.....each \$190.00  
Price, Extra Wheels.....each 5.00

**No. 1290 Edwards Weatherproof Fire Alarm Cases**

Schedule T

For protection of fire alarm stations for outside installation.

Drilled to receive 1/2 or 3/4-inch conduit. Vault handle latch or lock. Size, 12x10x6 1/2 inches.

Weight, 32 pounds.

\*Price, No. 1290 each \$35.90

Price, Strap Key for Return Tests each 3.75

Price, Glass in Door.....each 5.80

\*When used with No. 1275 type of station, cover of latter is omitted, for which an allowance of \$2.90 is made.

## Edwards Non-Code Fire Alarm Stations

Schedule T

### No. 2240 Semi-Flush Break-Glass Stations 6 to 220 Volts

Of heavier construction than the No. 224 with slate insulation as required by some fire prevention authorities. Test key, hammer and chain furnished with each station.

Weight, 2 pounds.

No. 2240, Open Circuit... each \$15.50

Price, No. 2240C, Closed Circuit... each 19.25

### No. 2241 Surface Break-Glass Stations 6 to 220 Volts

Same construction as the No. 2240 but with separable conduit fitting drilled top and bottom for 1/2-inch conduit unless otherwise specified. Finish, red enamel.

Test key, hammer and chain with each station.

Weight, 4 pounds.

No. 2241 Open Circuit... each \$15.50

Price, No. 2241C, Closed Circuit... each \$19.25

### No. 77 Surface Break-Glass Stations Low Voltage Only

No test. Open circuit only. Diameter, 3 3/4 inches. Standard finish, polished brass rim, red center.

Weight, 7 ounces.

Price, No. 77... each \$2.45

Price, Glass for Any Station... each .44

Price, Hammer and Chain for Any Station... each .60

### No. 114 Edwards Fire Alarm Annunciators Hand Reset

6 Volts D.C. or 8 Volts A.C.

Schedule T

For use in local open circuit fire alarm systems using break-glass stations. The operation of the station causes the corresponding drop in the annunciator to indicate and bell on annunciator to ring. By the master switch on annunciator all bells in building can then be rung, or by individual switches can be rung singly or in certain sections of building.

Surface type, metal case.

Standard finish is mahogany, oak or black. Special finishes, upon application.

No. of Drops	ARRANGEMENT		DIMENSIONS, INCHES			Weight Pounds	Price Each
	Across	Down	Height	Width	Depth		
10	5	2	17 1/2	12 3/8	5	10 1/2	\$45.98
12	6	2	17 1/2	13 3/4	5	11 1/2	55.16
14	5	3	22	12 3/8	5	13	65.54
16	6	3	22	13 3/4	5	14 1/4	74.02
18	6	3	22	13 3/4	5	14 1/2	83.00
20	7	3	22	15 1/8	5	15 3/4	91.92
22	6	4	26 1/2	13 3/4	5	17 1/4	105.78
24	6	4	26 1/2	13 3/4	5	17 1/2	110.30
Additional Drops, per Set of 2.....							13.42

## Edwards Bells for Coded Fire Alarm Systems

Schedule T

### No. 23F, For A.C. Lighting Circuit

### No. 24F, For D.C. Lighting Circuit

These bells are correctly designed for series operation on the various types of closed circuit systems. They are neat in appearance and of excellent construction.

Size Inches	Weight Pounds	Price Each	Size Inches	Weight Pounds	Price Each
4	4	\$19.25	10	8	\$38.50
6	5	24.75	12	11	42.60
8	6	28.90	..	..	.....

## Edwards Electro Mechanical Bells

### For Battery Systems Nos. 133 and 1331

Schedule T

Operated by a strong spring mechanism which is released by an exceptionally small flow of current. The mechanism is entirely insulated from the case. The binding posts are on the side. The hammer, when released, makes a full revolution, passing under the gong to an inclined plane and strikes the gong with the great force gathered in the revolution. Recoil causes it to drop and become locked in its original position.

Finish: red frame, black gong; all black if desired.

Size Inches	Weight Pounds	Price Each	Size Inches	Weight Pounds	Price Each
6	22	\$82.40	10	27	\$87.97
8	24	84.95	12	30	95.75

## Edwards Bells For Non-Coded Fire Alarm Systems

Non-code systems use the standard type of vibrating bell the choice of which depends entirely upon the operating current, 110 volts a.c. or d.c., battery or transformer and also on the type of bell construction preferred.

For battery use Nos. 100, 222 or 17; for transformer use Nos. 510 or 551; for a.c. lighting circuit use Nos. 551 or 100; for d.c. lighting circuit use No. 100.

## No. 2197 Edwards Pen Registers

This automatic register registers in ink on paper the number of the fire alarm box operation. Indication consists of a number of short dashes and forms a permanent record of the system. Self starting and stopping. Resistance, 20 ohms; open circuit only. Can be used

with relay for closed circuit.

Price, No. 2197, Single Pen, Weight 7 Pounds... each \$168.50

Price, No. 2197, Double Pen, Weight, 1 3/4 Lbs. .... each 180.00

## No. 5985 Edwards Paper Winders

This automatic paper winder is for use with the No. 2197 register. It winds and holds paper neatly as delivered by the register.

Price, No. 5985... each \$13.50

**Edwards Tank Sentinels**

**For House Tanks, Fire Standpipe and Sprinkler Systems**

Used where a supply of water is maintained for sanitary or fire purposes. The closed circuit equipment is recommended for installation in all buildings where automatic or manually controlled pumping systems are employed.

Open circuit alarms employ current only during the period that alarm is registering. Failure of current or trouble in wiring system are not supervised.

Open and closed circuit alarms can be used in industrial and chemical plants, where liquids are stored in tanks.

**Non-Supervised House Tank Systems**

**Gravity Tank Switch**

An open circuit, audible and visual alarm indicating high and low water in gravity or pressure tanks. Operates from a.c. or d.c. lighting service mains. System requires the following control panel with High and Low relays, signal lamps, control switch, alarm bell, etc.: for d.c., No. 1206; for a.c., No. 1207; gravity tank switch with weatherproof housing and copper ball float, No. 1202, or pressure gauge switch, No. 1203.

**Supervised Fire Standpipe or House Tank Systems**

A closed circuit, audible and visual alarm indicating high and low water in fire standpipe or house tanks. Operates from lighting service mains. System requires the following units: control panel with High, Low and Trouble indicating relays, milliammeter, control switch, fuses, signal lamps and test keys.

**Standpipe Alarm**

Mounted in a steel cabinet with locked door having a glass face: for d.c., No. 1208; for a.c., No. 1209; 6-inch alarm bell: for d.c., No. 1001 d.c.; for a.c., No. 1001 A.C.; 4-inch trouble bell: for d.c., No. 1001 T.D.; for a.c., No. 1001 T.A.; gravity tank switch with weatherproof housing and copper ball float, No. 1200, or pressure gauge switch, No. 1201.

**Supervised Sprinkler Systems**

**Sprinkler Alarm**

A closed circuit, audible and visual alarm indicating high and low water in gravity or pressure tanks and water flow through sprinkler piping. Operates from a.c. or d.c. lighting service mains. System requires the following: control panel with High, Low and Trouble indicating relays, milliammeter, control switches, test keys and fuses. Indicating relays with each tank and water flow valve. Panel mounted in steel cabinet with locked door having a glass face: for d.c., No. 1210; for a.c., No. 1211; gravity tank switch with weatherproof housing and copper ball float for each gravity tank, No. 1200; pressure gauge switch for pressure tank, No. 1201; 6-inch alarm bell: for d.c., No. 1001 D.C.; for a.c., No. 1001 A.C.; 4-inch trouble bell: for d.c., No. 1001 T.D.; for a.c., No. 1001 T.A.; 8-inch water flow bell: for d.c., No. 1001 D.C.; for a.c., No. 1001 A.C.

Specify current and voltage. Prices upon application.

**Faraday Fire Alarm Control Cabinets**

*N.E.C. Standard—Schedule T*

**For Regular, Pre-Signal, or Dual-Operated Fire Alarm Systems**

Designed for the control and supervision of Faraday Fire Alarm Circuits. They consist of ebony-asbestos or slate panels having mounted thereon necessary controller-relays. Trouble-relays, time-limit-cutouts, meters, terminals, fuses, etc., all being enclosed in heavy pressed steel fireproof cabinets with Yale locked doors. Glass windows are provided in doors to permit ready reading of meters without opening the doors.

Cabinets are finished in glossy vermilion, and all instruments and control mechanisms are back connected, mounted on ebony-asbestos or slate panels.

Gong-circuits are equipped with variable resistance permitting them to be easily and accurately balanced with regard to the number of gongs on each circuit up to their individual limit, 8 to 10 gongs on 100-110-volt A.C. circuits and 14 gongs on 110-125-volt D.C. circuits.

Terminals on panels are latest type Underwriters' pattern, with each terminal plainly marked so that the connections of circuit wires to mains, boxes, gongs and trouble bells can be readily made by any good electrical man.

Designed for surface-wall mounting but may be supplied for flush mounting, if required, at a slight additional charge.

Standard package is one.

**For Regular Systems**

Cat. No.	To Operate From	No. of Gongs	No. of Circuits	Price Each
1A	110-125 Volts D.C.	1 to 14	1	\$250.00

## Faraday Industrial Fire Alarm Systems

N.E.C. Standard

### System A Electrically Supervised Code-Ringing, Closed-Circuit

For 110-125-Volt D.C. Circuits  
Using Non-Clockwork Single-Stroke D.C. Gongs

Used where several floors are under one roof rather than several isolated buildings.

Plain type code-ringing fire alarm boxes are used.

Positive non-interfering type boxes may be used; consult the engineering department.

Circuits, instruments and apparatus are constantly

under electrical test. Trouble of any nature on any part of the system, or failure of operative current is automatically indicated by ringing of trouble bell.

### System C—Pre-Signal or Dual-Operated Type

For 110-125-Volt D.C. Circuits  
Using Non-Clockwork Single-Stroke D.C. Gongs

Used where several floors are under one roof rather than many isolated buildings.

For installation where it is desired not to alarm all the occupants of the building immediately upon a fire being discovered, but to first notify the members of the fire brigade. The operation of the box sounds the code on certain gongs called pilots located where they may be heard by the fire brigade. Should it be deemed necessary to sound a general alarm, this may

be done by any member of the fire brigade from any box by means of a special key, the signal then sounding on the general gongs as well as the pilots.

All circuits, instruments and apparatus are constantly under electrical test. Trouble of any nature on any part of the system, or failure of operative current is automatically indicated by ringing of trouble bell.

### System F

For 100-110-Volt A.C. Circuits  
Using Non-Clockwork Single-Stroke A.C. Gongs

For factories, warehouses, lots, schools, etc., where several floors are under one roof rather than several isolated buildings.

Standard is 50-60 cycles; 25, 30 and 40 cycles to order.

For use where a dependable supply of a.c. is available at all hours.

Main circuits, box circuits and gong circuits are constantly under electrical test.

Trouble of any nature on any part of the system, or failure of operative current is automatically indicated by ringing of trouble bell.

## Faraday Industrial Fire Alarm Systems

N. E.C. Standard

### System H—Pre-Signal or Dual-Operated Type

For 100-110-Volt A.C. Circuits  
Electrically Supervised, Code-Ringing, Closed-Circuit  
Using Non-Clockwork Single-Stroke A.C. Gongs

Used where several floors are under one roof rather than many isolated buildings. For installations where it is desired not to alarm all the occupants of the building immediately upon a fire being discovered, but to first notify the fire brigade. Operation of the box sounds the code on certain gongs called pilots located where they may be heard by the fire brigade. When it is necessary to sound a general alarm, this may be done

by any member of the fire brigade from any box by means of a special key, sounding signal on general gongs as well as pilots. Standard, 50-60 cycles; 25, 30 and 40-cycle to order.

### System J—For Storage Battery Operation

Electrically Supervised  
Single-Code-Ringing  
Closed-Circuit, Using  
Electro-Mechanical  
Gongs and Non-Code Boxes

Used where one standard code 4-4, or similar, indicating Fire is desired—the announcement of exact location being unnecessary.

When glass on non-code-ringing break-glass box is broken, it trips a pre-wound pre-set master code box which transmits its signal on the gongs, and when finished, rings a trouble bell which calls attention to necessity of resetting master-code-box, also replacing glass in non-code-ringing break-glass box.

### System K—For Storage Battery Operation

Doubly-Electrically Supervised, Code-Ringing, Closed-Circuit  
Using Electro-Mechanical Gongs

Used where code-ringing systems are desired which indicate point of origin of alarm. Circuits, instruments and apparatus are constantly under electrical test, and special circuits are provided so that batteries themselves are supervised. Trouble of any nature on any part of the system, or failure of operative current is automatically indicated by ringing of trouble bell.

Operated from same storage batteries as are used for clock systems in schools, provided these batteries are of sufficient capacity and voltage for both systems.

### System L—For Patterson Battery Set or Transformer Operation

Open-Circuit, Non-Supervised, Non-Code-Ringing  
Using Vibrating Straight Electric Gongs

Used where open-circuit, non-supervised fire alarm systems must be installed because of limited funds available.

Employs 2 types of gongs, depending on the source of current; if primary battery is to be used, battery gongs must be ordered; if transformer is used, transformer gongs must be ordered.

## Faraday Municipal Fire Alarm Systems

### System M

For Storage Battery Operation—Electrically-Supervised, Code-Sending, Closed Circuit

For cities, towns and large industrial plants, desiring high class equipment.

For convenience in wiring, the circuits may be divided into as many as 4, if necessary. It employs positive non-interfering or succession Faraday Fire Alarm Boxes in weatherproof cases, electro-mechanical gongs and single-stroke tappers, punch registers and for the automatic sounding or broadcasting of alarms, Faraday Compressed Air Horns or Steam Whistles are used. Manual transmitters may also be used with this system—these devices being designed for installation in police headquarters, telephone exchanges where permitted, etc., for the purpose of sounding coded signals on fire alarm circuits without the necessity of transmitting them from the fire alarm boxes, they permit the sounding of a fire alarm which may have been telephoned to police headquarters or a telephone exchange. Circuits, instruments and apparatus are under electrical test.

### System T

For Storage Battery Operation—Electrically-Supervised, Code-Sending, Closed Circuit

For cities, small towns and smaller industrial plants where the keeping down of initial cost is of first consideration. Where not more than 20 boxes would be used.

Used in places where protection afforded by a closed-circuit code-sending fire alarm system is desired, but where, because of limited funds available, a medium-cost system must be installed. Employs plain type code-sending fire alarm boxes in weatherproof cases, electro-mechanical gongs and single-stroke tappers for sounding signals transmitted from boxes, and compressed air horns, steam whistles, etc. for sounding of general alarm. Compressed air horns and steam whistles may be coded and thus the same signal, transmitted by boxes or manual transmitters may be sounded rapidly and clearly. All circuits, instruments and apparatus are constantly under electrical test.

Complete catalogue on fire alarm apparatus, on request.

## No. 2040 Faraday Surface Type Fire Alarm Boxes

Open-Circuit, Non-Code-Ringing—For Systems J and L

For systems where it is not required that location of box from which signal originates be indicated by automatic code-ringing of gong and where failure of operative current or derangement of circuits or apparatus is not required to be automatically indicated. With phosphor bronze springs and plunger contacts.

A break-glass box, finished in English vermilion, for 1/2-inch conduit. Height, 5 1/4 inches; width, 3 1/4 inches; projects 3 1/8 inches from wall.

Price, No. 2040.....each \$15.50  
Can be furnished for Closed Circuit at \$19.25. Specify  
Cat. No. 20400.

Extra glasses, 44 cents; chain and hammer, 60 cents.

## No. 2042 Faraday Flush Type Fire Alarm Boxes

Open-Circuit, Non-Code-Ringing—For Systems J and L

A break-glass box, finished in English vermilion, for concealed work, made for 1/2-inch conduit. Height, 5 1/4 inches; width, 3 1/4 inches; projects 1 inch from wall.

For systems where it is not required that the location of box from which the signal originates be indicated by automatic code-ringing of the gong.

Heavy phosphor bronze springs and plunger contacts.

Price, No. 2042.....each \$15.50

Can be furnished for Closed-Circuit at \$19.25. Specify  
Cat. No. 20420.

Extra glasses, 44 cents; chain and hammer, 60 cents.

## Faraday Code-Ringing Fire Alarm Boxes

N.E.C. Standard-Schedule T

Positive Non-Interfering Type—Large Size For Fire Alarm System A

Nos. 3124 and 3125

Positive non-interfering boxes are so designed that, should more than one box be pulled at the same time, a clear signal will be transmitted from the first box that takes the line. Jumbling of signal or interference between boxes is impossible.

All types are equipped with local non-interference pulls so that after the lever has once been pulled down and released, the signal cannot be intentionally or unintentionally disarranged by manipulation of the lever.

Mechanisms are protected by dustproof glass cases under seals and inner shells made of aluminum to assure dependability, etc.

Boxes are finished in glossy vermilion and are supplied with conduit entrances for 1/2 or 3/4-inch conduit as specified

Cat. No.	Description	Price Each
3122	Enclosed Pull-Lever, Surface.....	\$92.00
3123	Enclosed Pull-Lever, Semi-Flush.....	96.00
3132	Break-Glass Pull-Lever, Surface.....	112.00
3133	Break-Glass Pull-Lever, Semi-Flush.....	116.00
3124	Weatherproof Pull-Lever, No Test.....	176.00
3125	Weatherproof Pull-Lever, With Test.....	186.00
3134	Weatherproof Break-Glass Pull-Lever, No Test	196.00
3135	Weatherproof Break-Glass Pull-Lever, With Test	206.00

## Plain Type—Large and Small Sizes

For Fire Alarm Systems A, F and K

Plain type boxes, although possessing all the features designed for perfect timing of code-signals and impossibility of sending any but the pre-arranged signal from any box will, under certain circumstances, interfere with each other and cause a jumbled code to be transmitted.

Boxes should only be used where the chances of more than one box being pulled are comparatively remote, or where, from lack of available funds, the lowest price box must be used.

Standard package is one.

Cat. No.	Large Size		No. 2032	Each
	Description			
4022	Enclosed Pull-Lever, Surface.....			\$56.00
4023	Enclosed Pull-Lever, Semi-Flush.....			60.00
4032	Break-Glass Pull-Lever, Surface.....			76.00
4033	Break-Glass Pull-Lever, Semi-Flush.....			80.00
4024	Weatherproof Pull-Lever, Surface.....			140.00
4034	Weatherproof Break-Glass Pull-Lever, Surface			150.00
	<b>Small Size</b>			
2022	Enclosed Pull-Lever, Surface.....			\$38.00
2023	Enclosed Pull-Lever, Semi-Flush.....			46.00
2032	Break-Glass Pull-Lever, Surface.....			55.00
2033	Break-Glass Pull-Lever, Semi-Flush.....			63.00
2025	Weatherproof Pull-Lever, Surface.....			71.00
2035	Weatherproof Break-Glass Pull-Lever, Surface			77.00

All plain type boxes, except small size semi-flush, will be furnished tapped top and bottom for 1/2 or 3/4-inch conduit, as specified.

Small size semi-flush plain type boxes are provided with knockouts in top, bottom, sides and back for 1/2 and 3/4-inch conduits.

## Edwards Watchman's Time Detectors

Magneto or Battery Type—With or Without Clock

The Edwards Watchman's Time Detector records accurately and indelibly (by puncture on a paper dial) every visit of the watchman to every station, and the time of the visit.

The magneto type is approved by the National Board of Fire Underwriters and by the Associated Factory Mutual Fire Insurance Companies. No battery type is approved, irrespective of make.

Insurance rates are materially reduced by the installation of a Watchman's Time Detector.

The advantages of the system are:

1.—A record cannot be made unless the

watchman has visited the station.

2.—The record cannot be changed. It is a puncture on paper.

3.—A special device registers the opening and closing of door. The record cannot be tampered with.

4.—The dial cannot be torn as there is a cut-out system preventing prolonged contact of point and paper.

5.—Installation is facilitated by plainly marked connections. Wiring is simplest possible, one common wire from instrument to all stations, and an individual wire from each station to the instrument.

6.—All factory made connections are soldered.

The apparatus consists of heavy brass plate on which are mounted:

1.—An arm indicator (Magnets and armature) at the end of which is a pin for making record. One for each station in plant.

2.—An eight-day clock.

3.—Metal disc with guides for holding paper.

4.—A guide arm with opening for each pin.

5.—Special device which records opening and closing of door.

6.—Binding posts.

Case is simple in design and constructed of heavy oak.

### No. 75 Magneto Type—With Clock

No. of Stations	DIMENSIONS, INCHES			Price Each
	Height	Width	Depth	
4	31 3/4	17 1/2	5 1/2	\$280.00
6	31 3/4	17 1/2	5 1/2	290.00
8	31 3/4	17 1/2	5 1/2	305.00
10	31 3/4	17 1/2	5 1/2	315.00
12	31 3/4	17 1/2	5 1/2	345.00
15	31 3/4	17 1/2	5 1/2	360.00

25	18	17 1/2	5 1/2	281.00

No. 97 battery type, same prices and dimensions as No. 75.

No. 98 battery type, same prices and dimensions as No. 76.

Prices include a year's supply of dials, but do not include magneto or battery stations.

## Edwards Magneto Stations

No. 161

Wood case with removable handle.

Cat. No.	Description	Price Each
161	Magneto Station	\$18.85

Handles, one for every three stations, additional, \$1.25 each.

No. 161P

Wood case portable type with carrying strap. No. 72 plug and three feet of cord.

Cat. No.	Description	Price Each
161P	Magneto Station	\$28.25

Handles, one for every three stations, additional, \$1.25 each.

No. 162

Metal case, weatherproof for outdoor use, with removable handle.

Cat. No.	Description	Price Each
162	Magneto Station	\$21.95

Handles, one for every three stations, additional, \$1.25 each.

No. 163

Flush metal case, with removable handle.

Cat. No.	Description	Price Each
163	Magneto Station	\$22.50

Handles, one for every three stations, additional, \$1.25 each.

## Edwards Battery Stations

Standard finish is nickel. Old or polished brass can be furnished, if specified.

Keys, one with every three stations, furnished at \$.50 each, additional.

No. 211

No. 211

Flush type, fits standard push button switch box. Price, No. 211

No. 211A

Surface type, 2 3/4 inches in diameter. Price, No. 211A

## Edwards Paper Dials

A year's supply is furnished with every instrument. Additional dials will be supplied as follows:

Price, 1-10 Stations	per 1000	\$20.00
" 11-15 "	"	28.00
" 16-20 "	"	28.00
" 21-25 "	"	28.00

**Faraday Hold-up Protection Systems**

*N.E.C. Standard*

These systems are designed to reduce to a minimum, not only the liability of financial losses through day hold-ups or night robberies of banks, jewelers, payroll departments, cashier's departments, etc., but also prevent, to a large extent, loss of life among officials and employees.

Electrically supervised, closed-circuit, Faraday Hold-Up Protection Systems are slightly higher in price than some types of open-circuit, non-supervised systems but are dependable at all times as all parts are under constant electrical test. The use of these systems is strongly recommended over the use of open-circuit, non-supervised systems.

Electrically supervised, closed-circuit types are made in 6 systems:

DHU for 110 volt D.C. lighting circuits for day hold-up only.

DHUN for 110 volt D.C. lighting circuits for day hold-up and night burglary protection.

AHU for 110 volt A. C. lighting circuits for day hold-up only.

AHUN for 110 volt A.C. lighting circuits for day hold-up and night burglary protection.

WBHU for primary battery for day hold-up only.

WBHUN for primary battery for day hold-up and night burglary protection.

**Faraday Hold-Up Protection Control Cabinets**

**Open-Circuit Non-Supervised Systems**

Protection systems are also supplied in open-circuit non-supervised type. They are not as dependable as closed-circuit constantly supervised systems and are not recommended except where the cheapest type system must be installed.

**Faraday Foot-Rail Contactors**

For Use with Hold-Up Protection Systems

Send for complete catalogue on Faraday Hold-Up Protection Systems.

**Type B Federal Sirens**

**Single Head**

An electrically operated sound signaling device for very small villages and communities. The ideal starting and quitting signal for electrically operated mines, quarries, ranches, plants, factories, etc. The distance penetration is about 3/4 to one mile, depending on wind and surroundings.

Price, 3-H.P. Single-phase, 60-cycle, A.C. 110 or 220 Volts ..... each \$330.00  
 Price, 3-H.P. 2 or 3-phase, 60-cycle A.C. 110, 220, 440 or 550 Volts.....each 300.00  
 Price, 3-H.P. D.C., 110 to 600 Volts..... " 300.00

**Type B Federal Sirens**

**Double Head**

For use as a general alarm in small towns and cities having volunteer fire department. Has a sound penetration radius of 1 1/2 to 2 miles under ordinary conditions.

Has two 15-inch diameter revolving fans, or cylinders, in the sounding mechanism. Size, 38 inches long, 21 inches high, 19 inches wide. Weight, boxed, 400 to 500 pounds.

Price, 5-H.P. Single-Phase, 60-Cycle, A.C. 110 or 220 Volts ..... each \$455.00  
 " 5-H.P. 2 or 3 " 60 " A.C. 110, 220, 440 or 550 Volts. " 400.00  
 " 5-H.P., D.C. 110 to 600 Volts ..... " 400.00

**Remote Control Switches**

Permits operation of sirens from distant localities. Two push buttons included.

Price, D.C. or A.C., Any Frequency up to 550 Volts, with Steel Case. .each \$50.00  
 Price, Extra Buttons. .... each 5.00  
 Price, Boxes with Glass Fronts for Buttons.....each 10.00

**Federal Automatic General Alarm Control**

For Operating Electric Sirens

This device automatically performs the "on and off" function of a knife switch. It is invaluable in places where there is no one to operate the knife switch after an alarm has been received. Can be used in conjunction with remote control device. Consists of a motor driven rotary switch mounted in a heavy steel, weatherproof case. Complete as shown in illustration.

The use of this device insures the proper tone effect from the siren.

1—Weatherproof steel case.  
 2—Belt drive from motor or direct connected if desired.  
 3—Worm gear reduction.  
 4—1-20 H. P. motor, in any class current up to 440 volts.  
 Price.....each \$55.00  
 Price, Same but with Automatic Stop .....each 90.00

**Type A Federal Sirens**

This outdoor Type A Siren takes the place of bells, gongs, whistles, etc., wherever electricity is available. There are no gears or vibrating parts. This siren with double horn gives increased efficiency, greater volume, and pleasing tone.

Length over all, 17 inches; diameter of

horn, 10 inches; diameter of body, 5 3/4 inches.

Weight, packed in carton, 18 pounds.

Price, Type A, with Universal Motor, 1/2 H.P., A.C. or D.C., 6 to 250 Volts. Duco Finish.....each \$37.50

Price, with Brass Brushed and Lacquered or Nickel-Plated Finish.....each 50.00

**Federal Triple-A Electric Sirens**

Used as village fire alarms; serves also as a signal in industrials, factories and mines.

Consists of 3 Type A sirens mounted on a triangular steel base. These 3 sirens are connected in parallel and operate from one push-button switch. Each siren has approximately 1/3 h.p. making a total of 1 h.p.

The tone of each of the 3 sirens is different from that of the other 2, giving a pleasing combination of 3 tones. Has a sound radius of from 3/8 to 1/2 mile under normal conditions.

Entirely enclosed; nothing to rust or corrode. Motor housings, stators and rotors are die cast from aluminum. Horns and weatherproof housings over motor cascs are seamless deep spun. Entire unit is finished in red Duco.

Easy to operate and requires little or no attention. Perfect lubrication is assured by oiling 2 or 3 times a year.

The 3 universal G-E Motors total 1 h.p. and operate on either a.c. or d.c., any phase or cycle. Voltage, 6 to 250.

Length, one side of base, 19 inches. Diameter of largest horn, 10 inches.

Shipping weight, 85 pounds.

Price, Including Push Button.....each \$125.00

**Type C Federal Electric Sirens**

Used on fire and police motor vehicles, ambulances, motor boats and yachts.

Streamline design; visible parts including bracket and base are nickel-plated; may be furnished in brass finish, buffed, brushed or lacquered.

Motor housing and horn are of spun brass; base of cast brass; stator and rotor of aluminum. Siren may be adjusted in either a horizontal or vertical position.

G-E 1/2-h.p. motor, a.c. or d.c. any phase or cycle. Voltage, 6 to 250.

Has a sound radius of 1/4 mile.

Length over all, 11 1/2 inches. Diameter horn, 7 inches. Price, Type C, Shipping Weight, 12 Pounds.....each \$40.00

**Pyrene Fire Extinguishers**

With Bracket

1-Pint

(Auto)

Pyrene Extinguishers are safest for use on electrical fires of all kinds and for fires starting in oil, paint or other highly inflammable materials. The liquid is non-conductive and will not injure electrical equipment.

The contents will not freeze at 50° below zero. Needs no recharging until used.

The 1-pint size is made especially for the modern car. It contains enough liquid to extinguish any incipient automobile fire.

The 1 and 1 1/2-quart sizes (not pint size) are labeled by the Underwriters' Laboratories.

The 1-quart extinguishers are packed 6 to a carton; liquid, 1-quart can, 20 to carton; 1 1/2-quart can, 10 to a case; 1-gallon can, 4 to a case; 1-pint extinguishers, in unit packages of 6, 2 packages of 12 to a carton.

Prices below include black bracket.

In Metal Box

Size Extinguisher	Price, Each		
	Brass Extinguisher	N.P. Extinguisher	Extra Brackets
1-Pint	\$9.00	\$10.00	\$ .75

Price, Glass Fronts.....each	.25

**Weatherproof Double Projector Howlers**

No. 8788

The Projector Howler offers an effective and economical means of projecting sound from a central point up and down a passageway or platform.

This howler has cast iron body, with 2 mounting lugs and is tapped at side for 1/2-inch pipe connection. Two drawn brass, bell type sound projectors are attached to pressed steel front cover.

The sounding mechanism for the Double Projector Howler is of the vibrator type, furnished for d.c. or a.c. circuits, and is standard Benjamin Industrial Howler construction. All joints in case are gasketed to make mechanism weather-proof. Finish is baked black enamel. Red enamel finish will be furnished at \$1.00 advance in list price.

Cat. No.	Connection Inches	Voltage	Wt., Lbs. Each	Price Each
8788	1/2 Conduit	†D.C.	8	\$18.75
8790	3/2 Conduit	*A.C.	7	16.25

\*110 volts, 60 cycles is standard on Benjamin a.c. horns. However, any voltage from 6 to 250, and any frequency from 25 to 60 cycles, may be specified at an advance of 50 cents list. Voltages and frequencies must be specified when ordering.

†110 volts is standard for all Benjamin d.c. horns. However, any voltage from 6 to 250 may be specified at an advance of 50 cents list. Specify voltage when ordering.

**Benjamin Industrial Signals**

**No. 8326-A Heavy Duty Non-Weatherproof Howlers**

Has pressed steel body with approved insulated side entrance for open wiring. The one-piece, drawn brass, bell type sound projector is rigidly attached to a heavy pressed steel cover which also carries the mounting bracket. Wire connections are easily accessible by loosening two screws and removing back. Finished in baked black enamel.

Cat. No.	Type of Projector	Connection	Voltage	Wt. Lbs.	Price Each
8326-A	Brass Bell	Open Wiring	*	2 1/4	\$12.50

\*Standard voltage is 110 volts d.c., but any voltage from 6 to 250 d.c., inclusive, may be specified at an advance of 50 cents. Specify voltage when ordering.

**Alternating Current Industrial Howlers For Series or Multiple Operation**

These howlers may be operated on either multiple or series circuits and will work well even in connection with vibrator or single stroke gongs, etc.

When used in series with other electrical devices special windings are furnished which allow passage of sufficient current to operate the other devices on same line. A 10 per cent variation in voltage will not affect the satisfactory working of the howler. Weatherproof types are recommended when signals are to be used outdoors. Sounding mechanism is of the vibrator type. The vibrations are the result of the alternating current cycles and no make-and-break contacts are required. No adjustments are needed.

**Heavy Duty Weatherproof Howlers**

No. 8346-H

Has a.c. mechanism; construction and finish same as for Cat. No. 8326-H.

Cat. No.	Type of Projector	Connection	Voltage	Wt. Lbs.	Price Each
8346-H	Brass Bell	1/2-In. Conduit	**	4 3/4	\$12.50
8357-A	14-In. Conical	1/2-In. Conduit	**	5 1/4	13.75

\*\*Standard winding is for 60 cycles, 110 volts a.c., but any voltage from 6 to 250 a.c., inclusive, may be specified at an advance of 50 cents. Specify voltage and frequency when ordering.

**Factory Non-Weatherproof Howlers**

No. 8152-L

Has a.c. mechanism; construction and finish same as for Cat. No. 8326-A. Cat. No. 8152-L is exactly like No. 8355-A except that it is equipped with a 9-inch conical sound projector which tends to confine the volume of tone in one direction.

Cat. No.	Type of Projector	Connection	Voltage	Wt. Lbs.	Price Each
8355-A	Brass Bell	Open Wiring	**	2 1/4	\$10.00
8152-L	9-In. Conical	Open Wiring	**	2	8.75

\*\*Standard winding is for 60 cycles, 110 volts a.c., but any voltage from 6 to 250 a.c., inclusive, may be specified at an advance of 50 cents. Specify voltage and frequency when ordering.

**No. 8152-S Mine Type Weatherproof Howlers**

Has pressed steel body and front cover with mounting bracket attached to front cover and a one-piece, drawn brass bell type sound projector. Electrical connections are made to insulated wire leads entering front cover. Made weatherproof by gasket and by sealing wire entrance. Finished in baked black enamel.

Cat. No.	Type of Projector	Connection	Voltage	Wt. Lbs.	Price Each
8152-S	Brass Bell	Open Wiring	**	2 1/4	\$12.50

\*\*Standard winding is for 60 cycles, 110 volts a.c., but any voltage from 6 to 250 a.c., inclusive, may be specified at an advance of 50 cents. Specify voltage and frequency when ordering.

**Benjamin Weatherproof Fire Alarm Howlers**

No. 8360

Specially built for use on fire alarm systems operating under stringent regulations. The Industrial Commission of the State Department of Labor, New York City, has approved them for use with standard fire alarm boards.

In series, without condenser, eight 14-volt or fourteen 8-volt howlers may be used, but where fourteen 14-volt howlers are used a condenser must be supplied on the panel board. The 110-volt howlers may be used for open circuit work where a time limit fuse or switch is inserted in the circuit. The use of 8-volt and 14-volt signals on one circuit is permitted. D.C. howlers are for use on multiple circuits only. The sounding mechanism for Benjamin Fire Alarm Howlers is of the vibrator type. These signals have cast iron body tapped for 1/2-inch pipe connection. A one-piece, drawn brass, bell type sound projector is rigidly attached to a pressed steel front cover. Signal is made weatherproof by gasket. Finished in red enamel.

Cat. No.	Type of Projector	Connection	Std. Voltage	Wt. Lbs.	Price Each
8360	Brass Bell	1/2-In. Conduit	*110 D.C.	5 3/4	\$16.00
8864	Brass Bell	1/2-In. Conduit	8 A.C.	4 3/4	15.25
8865	Brass Bell	1/2-In. Conduit	14 A.C.	4 3/4	15.25
8866	Brass Bell	1/2-In. Conduit	*110 A.C.	4 3/4	15.25

\*Standard voltage is 110 volts, D.C. or A.C., but any voltage from 6 to 250 inclusive, D.C. or A.C., may be specified at an advance of 50 cents. Specify voltage when ordering.

**Benjamin A.C. Industrial Buzzers**

The sounding mechanism of these buzzers is of the vibrator type. The vibrations are the result of the alternating current cycles and no make-and-break contacts are used. These buzzers will operate indefinitely without adjustment or attention, under all commercial conditions on either multiple or series circuits. Mine buzzer No. 8299-M may be used outdoors as well as indoors.

**Heavy Duty Mine Buzzers**

Open wiring type No. 8299-A has heavy stamped steel enameled case and 8-inch wire leads sealed in for outside connection.

Conduit type No. 8299-M has cast brass cover and is tapped for 1/2-inch pipe connection.

Finish, baked black enamel.

No. 8299-M

Cat. No.	Type Body	Connection	Std. Voltage	Wt. Lbs.	Price Each
8299-A	Stamped	Open Wiring	†110 A.C.	1 3/4	\$7.50
8299-M	Cast	1/2-In. Conduit	†110 A.C.	1 3/4	11.25

**No. 8279-A Office and Factory Buzzers**

One-piece pressed steel front cover has side opening with approved insulated wire entrance for open wiring.

Back plate is pressed steel, with mounting brackets top and bottom. This is an effective and reliable signal for offices, stock rooms, shipping rooms, etc., where a weatherproof signal is not necessary. Finished in black enamel.

Cat. No.	Type Body	Connection	Std. Voltage	Wt. Lbs.	Price Each
8279-A	Stamped	Open Wiring	†110 A.C.	1 3/4	\$5.75

†May be wound for voltages as high as 250 volts a.c. when specified, at no advance in price.

## Benjamin Industrial Signals

For Calls and Warnings in Factories, Yards, Warehouses, Etc.

In Use in a Machine Shop

In the routine of business, getting men when needed at the office or telephone, is frequently difficult.

A well-installed calling system with the right signals in the line, however, makes it possible to reach any executive at once and without disturbance or loss of time to employees.

Benjamin Industrial Howlers have a peculiar pitch and penetrating tone which makes them most effective and satisfactory signals.

They are ruggedly made and perfectly assembled so that daily performance may be expected for years; their maintenance is less than other forms of signals.

Benjamin Howlers are made for either indoor or outdoor use on direct current or alternating current circuits.

These howlers are satisfactory for use as factory superintendent's and foreman's calls; tell-tale or warning, for water tank levels, steam or gas pressures, sprinkler systems, etc.; burglar alarms; traffic warnings for street crossings; draw bridge signals; in mines, municipal fire stations; at railroad crossings; for signaling the opening and closing hours of labor.

### Direct Current Industrial Howlers For Multiple Circuits

These howlers may be employed successfully on circuits as high as 250 volts.

When six or eight direct current howlers are to be used on one circuit, not less than 32 volts should be used.

Sounding mechanism, vibrator type, has silver make-and-break contact points. An especially constructed condenser across contact points prevents arcing.

Vibrator springs of the best grade spring material are mounted independently of the armature.

Self-locking adjusting screw, reached through projector, regulates tone volume and pitch of note.

### No. 8326-H Heavy Duty Weatherproof Howlers

Has cast iron body, tapped for 1/2-inch pipe connection.

The one-piece, drawn brass, bell type sound projector is rigidly attached to a heavy pressed steel cover.

A gasket between cover and body makes the signal weatherproof.

Finished in baked black enamel.

Cat. No.	Type of Projector	Connection	Voltage	Weight Pounds	Price Each
8326-H	Brass Bell	1/2-in. Conduit	*	5 3/4	\$15.00
8358-A	14-in. Conical	1/2-in. Conduit	*	6 1/2	16.25

\*Standard voltage is 110 volts, direct current, but any voltage from 6 to 250 direct current, inclusive, may be specified at an advance of 50 cents.

Specify voltage when ordering.

## Benjamin Motor Driven Signals

For Multiple Circuits

A weatherproof signal of unusual tone and penetration. Used indoors or out where service requirements are exacting. For use in steel mills, railroad shops, foundries and all locations where noise is excessive.

Pitch of signal is correct for cutting through conflicting noise. Suited for coding as there is no lag or coasting of motor to blur the coded signal.

Signal has heavy cast body, weatherproof rubber gaskets, drop-forged, heat-treated alloy steel ratchet and diaphragm anvil, phosphor bronze armature bearings and automatic wick-feed lubrication. Motor is series wound for starting power and has correct r.p.m. to produce penetrating tone. A set screw at rear of housing controls volume and pitch.

Standard voltage: 110 volts, 60 cycles a.c. or 110 volts, d.c. Special voltages up to 250 volts d.c. and 210 volts a.c. and frequencies from 25 to 50 cycles available at advances over prices. Power consumption, 55 watts.

Finished in baked black enamel. Red enamel furnished at an advance of \$1.25.

The double projector type motor-driven signal is used where sound is to be projected in opposing directions from a central location.

Conduit connection, 1/2 inch.

Net weight, 14 1/2 pounds.

Cat. No.	Projector	Voltage	Price Each
8175	Single Cast	110 A.C.	\$35.00
8176	Single Cast	110 D.C.	35.00
8180	Double Bell	110 A.C.	38.75
8181	Double Bell	110 D.C.	38.75

## Benjamin Heavy Duty High Voltage Push Buttons

Rating: 5 Amperes, 125 Volts

No. 8493

No. 8734

For use with industrial signals. Quick, positive make-and-break mechanism is mounted on base of high heat molded insulating material.

Brass casing with mounting lugs. Casing will be tapped for 1/2 or 3/4-inch pipe, 1 or 2-way, if specified, without extra charge.

Finished in dead black.

### Non-Locking—Single Button

Cat. No.	Description	Weight Pounds	Price Each
8493	Open Circuit Type	1 1/8	\$3.60
8874	Closed Circuit Type	1 1/8	3.60

8734	Open Circuit Type	1 1/8	4.00

When ordering, specify size and number of outlets required.

**Benjamin Master Relay Panels**

**For Controlling 110 to 250-Volt Current to Industrial Signals**

No. 8301C

slate panel and encased in a heavy sheet steel box with cover and lock.

Standard windings of relay coil are for 4 to 6 volts d.c. Special windings for other d.c. voltage can be furnished when specified.

Finish of box is black enamel.

Weight, 18 pounds.

Cat. No.	Magnet Winding for Primary Circuit of	Price Each
8301C	4 to 6 Volts D.C. Only	\$45.00
8301D	Special Voltage, D.C. Only	47.50

**Benjamin Name Plates for Water-tight Push Buttons**

No. 8501

No. 8502

These name plates are regularly supplied blank, but standard markings (list of which is shown on another page.) may be specified.

Cat. No.	Type	For Use on	Price Each
8501	Curved	Single Buttons	\$.18
8502	Straight	Two-gang "	.18

Either style of name plate may be obtained with special markings.

Prices upon application.

**Signal Eng. Air Horns with Electric Valves**

Made of brass. For use on closed circuit fire alarm systems, a.c. or d.c. where compressed air is available. Also for general signalling purposes where conditions are noisy.

In ordering, give type designation, volts and cycles.

Type AEA1 for A.C., Polished Finish	each	\$100.00
Type DEA1 for D.C., Polished Finish	each	100.00
Type FAEA for A.C., Fire Red Enamel Finish	each	105.00
Type FDEA for D.C., Fire Red Enamel Finish	each	105.00

**Signal Eng. Air and Steam Whistles with Electric Valves**

Used on closed circuit fire alarm systems a.c. or d.c. where compressed air is available; also for general signalling purposes where conditions are noisy.

Whistle chambers 1 and 1½ inches in diameter require ¾-inch air or steam line; 2 inches in diameter require ½-inch air or steam line.

Air Whistles		Diam. Chamber, In.	Price Each
A.C. TYPE	D.C.		
AWA1	DWA1	1	\$45.00
AWA2	DWA2	1½	50.00

Steam Whistles			
AWS1	DWS1	1	\$70.00
AWS2	DWS2	1½	75.00
AWS3	DWS3	2	100.00

**Klaxon Industrial Horns**

An electric motor driven signal sounding device. Types shown can be furnished to operate on electrical current of 5 to 230 volts d.c. and 10 to 460 volts a.c. A series resistance is supplied with the 220-volt d.c. instrument for adapting it to 240 or 250 d.c. circuits. Should be operated only on circuits of voltage for which instrument is intended. Weatherproof housings are fitted with brackets for wall mounting and are tapped for conduit. Instruments are finished in fire red enamel and are identical in all respects except their projectors.

In ordering, specify the type desired, voltage and if a.c. or d.c. and cycles if current is a.c.

Type WS

**Type WS**  
Has a short projector, producing a harsh, piercing note. Especially fitted for indoor use under severe noise conditions. Length, 7½ inches.

Shipping weight, 25 pounds.  
Price, Type WS... each \$30.00

Type W

Furnished with a ram's horn shaped projector which directs its deep tone downward. Suitable for overhead or outdoor use. Length, 12 inches.

Shipping weight, 25 pounds.  
Price, Type W... each \$30.00

Type WL

Has a long bell projector. Deep penetrating note of great carrying power. Recommended where long distances are to be covered. Length, 14¼ inches.

Shipping weight, 25 pounds.  
Price, Type WL... each \$30.00

## Jefferson Wizard Bell Ringing Transformers

For residences or small flat buildings. Will operate door bells, buzzers, annunciators, and door openers. For 100-120 volts; 25 watts. Secondary, 10 volts. Size, 2 3/8 x 2 3/8 x 2 3/8 inches. Weight, 1 pound. Price, No. 230-101, 50-133 Cycles...each \$1.25 Price, No. 230-102, 25-40 Cycles...each 1.50

## Jefferson Nucode Bell Ringing Transformers With Round or Square Cover

Mounted on an outlet box cover. Round cover fits 3 1/4 and 4-inch octagon boxes; square cover fits 3 1/4 and 4-inch octagon and 4-inch square boxes.

Knockout in cover permits hanging a drop cord from same outlet box. Transformer wires do not interfere with lighting wires. Grounded to prevent shocks and possibility of fires.

Depth, 2 1/4 inches; width, 2 3/8 inches; height, 2 1/4 inches.

Cat. No.	Capacity Watts	Volts	PRIMARY Cycles	Secondary Voltages	Wt. Lbs.	Price Each

No. 230-141

## Jefferson Heavy Duty Bell Ringing Transformers

When the current demand is greater than the capacity permitted with the small transformers, the heavy duty types should be used. Examples of such uses are large apartment buildings, hotels, factories, schools, etc.

The core and windings are hermetically sealed in a heavy metal case. Standard winding will operate on 100 to 120 volts a.c., 50 to 133 cycles.

### Type A

Type A is designed for heavier signal work and installations that require more power than is generated by the Micode or Tri-volt Type. Three secondary voltages; 6, 14 and 20.

Capacity Watts	Dimensions Inches	Weight Pounds	Cat. No.	Price, Each 60 Cycles	Cat. No.	Price, Each 25 Cycles
50	3x3 3/4 x 4	4	231-101	\$5.00	231-102	\$6.00

### Type B

Type B Heavy Duty is designed primarily to take care of large installations and operate a greater number of bells and other signal devices than the smaller type transformers. Three secondary voltages; 6, 14 and 20.

75	3 3/4 x 4 1/8 x 6	7 1/2	231-111	\$7.00	231-112	\$9.00
----	-------------------	-------	---------	--------	---------	--------

### Type C

Type C will operate large a.c. bells, bells on installations up to 20 bells ranging in size from 2 1/2 to 16 inches in diameter. Suitable for schools, factories, mines, etc. Delivers four voltages; 6, 12, 18 and 24.

125	3 3/4 x 4 1/8 x 6	9	231-121	\$9.00	231-122	\$11.00
-----	-------------------	---	---------	--------	---------	---------

### Type D

Type D delivers 15, 25 and 40 volts and is designed to take care of large bells, where extra long lines are used, and to operate the old-style d.c. bells which require a higher voltage than the transformer bell.

125	3 3/4 x 4 1/8 x 6	9	231-131	\$10.00	231-132	\$12.50
-----	-------------------	---	---------	---------	---------	---------

### Type E

Type E is designed for unusually large installations. Secondary voltages, 6, 12, 18 and 24. Can be supplied with any desired secondary voltages at slight additional cost.

250	5 1/2 x 5 1/4 x 4 1/2	15	231-141	\$18.00	231-142	\$22.00
-----	-----------------------	----	---------	---------	---------	---------

### Type F

Type F has an output of 500 watts, secondary voltages, 6, 12, 18 and 24. This transformer can be furnished with any desired secondary voltages at slight additional cost.

500 7 1/4 x 6 1/4 x 5 23 231-151 \$28.00 231-152 \$35.00 For 220-volt 50 to 133 cycle transformers, add 15 per cent to list prices.

## No. 230-131 Jefferson Porcelain Klad Bell Ringers

This transformer has the combined advantages of all-steel and all-porcelain construction. It is especially adapted to basements and other rooms which are finished and decorated and where a black metal case transformer might be out of harmony.

May be installed using either nails or screws without danger of chipping the case. No projecting lugs to break off.

For 100 to 120 volts. Cycles, 50 to 133. Capacity, 25 watts. Secondary, 10 volts.

Price, No. 230-131.....each \$1.50

## Jefferson Universal Toy Transformers For Use on A.C. Only

Little Jeff No. 535-111 delivers 6 secondary voltages from 5 1/2 to 9 1/4 volts in 3/4-volt steps, and is recommended for all American Flyer, Borgfeldt, and Dorfan 0-gauge outfits.

Little Jeff No. 535-101 delivers 6 secondary voltages from 5 1/2 to 13 volts in 1 1/2-volt steps. For all Bing, Ives or Lionel 0-gauges, outfits.

Type No. 3

Midget No. 535-121 delivers 18 secondary voltages from 5 1/2 to 22 1/2 volts in 1-volt steps with permanent voltages of 6 and 12 volts. Will operate all Ives 0-gauge and Nos. 691, 692, 705, 710 and 711 standard gauge outfits; American Flyer trains, standard or 0-gauge outfits; Lionel trains, all 0-gauge trains and Nos. 342, 347, 350, 351 and 352 standard gauge outfits.

No. 2 delivers 30 secondary voltages from 5 1/2 to 23 volts in 3/4-volt steps. Permanent voltages from 4 1/2, 9 and 13 1/2 volts. Will operate all standard gauge Lionel trains, and Ives Nos. 703, 704, 705, 706 and 710 train outfits; Christmas tree lighting outfits up to sixteen 14-volt lamps.

No. 3 delivers 30 secondary voltages from 1 to 30 volts in 1-volt steps. Permanent voltages 6, 12, 18 and 24 volts. Operates all types of trains up to the largest and most expensive; recommended for standard gauge outfits when extra cars and accessories are to be used. Will operate Christmas tree lighting outfits up to thirty-two 14-volt lamps.

25-40	25	25	60	2.70

### No. 860P, Single Pole

60	25	25	60	\$2.50
25-40	25	25	60	2.70

For 220-volt primary add 15 per cent to price.

**Jefferson Gaseous Tube Transformers**

No. 938-103

the length depending upon the pressure of the gas in the tubing. It will deliver 25 milliamperes to any range of tubing within its capacity. This information also applies to transformers Nos. 933-102, 938-104, 933-108, 938-109 which are the same except for the primary voltage and frequency.

No. 933-151 is for tubing from 18-20 millimeters in diameter and where a little stronger brilliancy is desired. This transformer will deliver 50 milliamperes within its capacity.

No. 933-121 is used mainly for the portable type of sign or those incorporating the use of small size tubes. Their narrow cases make them especially adaptable to narrow frames. One high tension terminal is placed at each end to facilitate wiring. Liberally designed for coolness of operation.

No. 938-121

No. 933-123 delivers 25 M.A. output and where short lengths of tubing are desired, will operate at the same brilliancy as No. 938-103.

No. 933-131 is for signs using tubing from 8 to 10 millimeters in diameter. Has a capacity of 15 milliamperes.

No. 938-161 is for operating short lengths of tubing.

No. 933-171 is similar in design to No. 933-161 except that it has a narrower case and is recommended for specialties in tubes where short lengths are desired.

No. 938-111 is used mainly for aeroplane beacon lights, decorative effects, etc. Has a capacity of 3000 volt amperes, a secondary voltage of 6000 volts and a milliamperage rating of 300. Will operate tubes from 3/4 to 1 inch, or from 25 to 34 millimeters in diameter.

**Jefferson Constant Duty Oil Burner Transformers**

Nos. 638-221 and 638-222, 12000 Volts—24 M.A.  
Nos. 638-231 and 638-232, 14000 Volts—20 M.A.

No. 638-221 is a 12000-volt transformer designed for constant operation of the insulated electrode assembly only. It delivers a hot and powerful spark.

The secondary is grounded to the case mid-point to equalize stress on electrode insulators. Special construction reduces radio interference.

Nos. 638-221 and 638-231: Length, 8 5/8 inches; height, 5 1/8 inches; width, 5 1/8 inches. Nos. 638-222 and 638-232: Length, 12 1/4 inches; height, 5 1/16 inches; width, 5 1/8 inches.

The primary end is furnished with female fitting for straight conduit attachment and a porcelain bushing for open wiring, or with a box and cover attached for connection to rigid conduit. Cover is plain; box has one 1/2-inch knockout in each end and bottom and 3 in each side.

Cat. No.	Volts	Cycles	SECONDARY		Weight Pounds	Price Each

**No. 638-191 Jefferson Gas Igniters**  
5000 Volts—15 M.A.—Constant Duty

Furnished only in the insulated type; can be connected and used as a grounded unit.

Cat. No.	PRIMARY		SECONDARY		Wt. Lbs.	Price Each
	Volts	Cycles	Volts	Output Capacity M.A. Watts		
638-191	100-120	50-133	5000	51 25 5 1/4	5 1/4	\$12.00

## Jefferson Box Type Vibrating Coils

Designed to light gas pilots or for direct ignition of the atomized oil.

### No. 105

An intermittent coil for operating on 110-volt a.c. or d.c. line. Must not be used unless protected by being cut out of circuit at end of 30-second period.

Oak case is 3 inches high; base is 5 1/2 inches long and 3 1/4 inches wide. With two 12-inch leads for connection.  
Price, No. 105.....each \$6.00

### No. 51

A 6-volt type coil. Can be operated from a 6-volt battery or coupled with low-voltage transformer. Equipped with 3 binding posts.  
Price, No. 51.....each \$4.00

## Jefferson Low Voltage Transformers

Designed for service wherever low voltage a.c. is necessary, such as the operation of electrically controlled valves, thermostatic circuits, thermostats, magnetic relays, etc.

Five different transformers supply a type for every requirement. Capacities range from 35 to 150 watts and are furnished with any desired secondary voltage. Built in accordance with the requirements of the Underwriters' Laboratories covering such transformers.

Can be furnished for 110 or 220-volt a.c. systems.  
Prices upon application.

## Edwards Toy Transformers

For 110-120 Volts, 60 Cycles, A.C.

### Schedule T

Packed in attractive cartons.

### No. 870, 50 Watt

Fifty watt capacity with a secondary voltage of 3 to 18 in 3-volt steps. Voltage is controlled at will by moving switch lever, without change of binding posts. Will operate 0 gauge small trains, and smaller airplanes, motors, etc.  
Price, No. 870, Weight 3 1/2 Pounds.....each \$4.25

### No. 871, 75 Watt

Same design as No. 870 but has twice the capacity and greater voltage range (3 to 24 in 3-volt steps). Operates the average toy train on both 0 and standard tracks. Recommended for use where No. 870 might lack in capacity.  
Price, No. 871, Weight 6 Pounds.....each \$7.10

### No. 872, 101 Watt

Has a variable secondary voltage from 2 to 30 in 2-volt steps which is controlled without changing binding post connections. Permanent voltage for lights, signals, etc., 6 and 14.  
Price, No. 872, Weight 7 1/2 Pounds.....each \$10.60

Add 20 per cent to price for 25 and 40 cycles.

## No. 86 Edwards Steel Case Bell Ringing Transformers

Primary 110 Volts, 25-40 or 60 Cycles

### Schedule E

Correctly designed for the proper operation of all signaling devices.

Cycles	Watts	Std. Pkg.	Wt. Lbs.	Price Each
60	25	50	54	\$1.28
25-40	25	50	54	1.48

For 220-volt primary add 15 per cent to price.

## No. 87 Edwards Porcelain Case Bell Ringing Transformers

Primary 110 Volts, 25-40 or 60 Cycles

### Schedule E

For average door bell and door opener installations.

Cycles	Watts	Std. Pkg.	Wt. Lbs.	Price Each
60	25	50	97	\$1.55
25-40	25	50	97	1.75

For 220-volt primary add 15 per cent to price.

## No. 86ER Edwards Bell Ringing Transformers

Fits on 3/4 and 4-Inch Octagon and Square Boxes

Primary 110 Volts, 25-40 or 60 Cycles

### Schedule E

Correctly designed for the proper operation of all signaling devices.

This transformer is of the exact wattage, voltage and other characteristics necessary to eliminate guess work on the part of the contractor or jobber.

For 220-volt primary add 15 per cent to price.

Cycles	Watts	Standard Package	Weight Pounds	Price Each
60	25	50	60	\$1.55
25-40	25	50	60	1.75

## No. 86T Edwards Steel Case Bell Ringing Transformers

Primary 6-8-14 Volts, 60 Cycles or 110 Volts, 25-40 Cycles

### Schedule E

These transformers are of the exact wattage, voltage and other characteristics necessary to eliminate guesswork on the part of the contractor and jobber.

Cycles	Watts	Std. Pkg.	Wt. Lbs.	Price Each
60	25	50	56	\$1.55
25-40	25	50	56	1.75

For 220-volt primary add 15 per cent to price.

**No. 86ES Edwards Bell Ringing Transformers**

Fits On 3/4 or 4-Inch Octagon and Square Boxes  
Primary 110 Volts, 25-40 or 60 Cycles

Schedule E

Correctly designed for the proper operation of all signaling devices.

Cycles	Watts	Std. Pkg.	Wt. Lbs.	Price Each
60	25	50	35	\$1.55
25-40	25	50	65	1.75

For 220-volt primary add 15 per cent to price.

**Edwards Heavy Duty Type Transformers**

Primary 110 Volts, 25-40 or 60 Cycles  
Secondary 8-16-24 Volts

Schedule T

These transformers adequately cover the signaling device field with a greater range of capacities.

Cat. No.	Cycle	Watts	Wt. Lbs.	Price Each
88	60	50	3	\$5.15
88	25-40	50	3	5.66
89	60	75	5	7.73
89	25-40	75	5	8.50

2	2 3/8 x 1 3/4	25	1.70	.	.....	..	.....

**No. 730 Edwards Buz-a-bels**

Schedule E

A combination bell and buzzer on one frame, under one cover.

One binding post is for the common battery supply, the other two being, one for the buzzer and one for the bell.

The cost is half as much as a single bell or buzzer of quality.

Operates equally well on battery or transformer.

Tested to 40000 operations on 15 volts A. C. which is more than 15 years of actual experience.

Standard package, 100.

Price, No. 730.....each \$1.20

**Edwards Nubels**

Schedule Q

**No. 735 Nubel**

The No. 735 Nubel is a double magnet bell that operates perfectly on battery or transformer. It has phosphor bronze springs, silver contacts and new code binding posts. Grey enamel finish.

Standard package, 100. Shipping weight, standard package, 45 pounds. Price No. 735.....each \$6.64

**No. 736 Buzzer**

The No. 736 Edwards Buzzer is of the same construction as the No. 735 Nubel.

Standard package, 100. Shipping weight, standard package, 32 lbs.

**No. 737 Combrel**

The No. 737 Edwards Combrel is a double magnet bell and double magnet buzzer on one frame with the complete mechanism except the binding posts under a neat cover. For the apartment and flat. Has grey enamel finish that may be repainted. Gives excellent operation on battery or transformer.

Standard package, 50.

Shipping weight, standard package, 56 pounds.

Price, No. 737.....each \$1.12

**No. 738 Tubel**

The No. 738 Edwards Tubel consists of 2 double magnet bells of different tone on one frame with the complete mechanism except the binding posts under a neat cover. For small residence work, apartments and flats. Has grey enamel finish that may be repainted to match surroundings if desired. Gives excellent operation on battery or transformer.

Standard package, 50.

Shipping weight, standard package, 64 pounds.

Price, No. 738.....each \$1.20

**No. 26 Edwards Constant Ringing Drops**

Schedule T

Nos. 26B and 26C are attached to the main line; closing of circuit drops plunger, closing local circuit and causes bell to ring continuously until plunger is pushed into place. Standard drop is the No. 26B. When it is desirable to have drop in operation cut its own magnets out of the circuit the No. 26C is used. Either type operates on transformer.

No. 26T is wound to a resistance of 1250 ohms for connection across ringer terminals of a standard magneto or common battery telephone operating on a.c. ringing current of 75 to 90 volts at 16 to 20 cycles. This drop closes a circuit to an auxiliary loud ringing bell.

Price, No. 26B.....each \$2.70  
Price, No. 26C.....each 3.92  
Price, No. 26T.....each 5.00

## Edwards Iron Box Bells and Buzzers

Schedule E

Dixie Bell

Hammer rod, ball and armature are all 1 piece. Rod is swaged to prevent bending in operation. Hammer ball is under the gong to prevent disarrangement. The armature is pivoted at the nearest point to the cover where there is practically no side motion.

Class C bell is non-adjustable; resistance, 2 ohms only.

Class B bell is adjustable; resistance, 2 ohms only.

Finish, black enamel, nickel trimmings.

Dixie Buzzer

\*Buzzer. \*\*Fancy Gong.

## No. 222 Edwards D.C. Buzzers

6 to 8 Volts D.C.

Schedule E

Constructed on the vibrating reel principle. A heavy duty, adjustable d.c. buzzer. Carbon contacts are used. Black enamel finish.

Cat. No.	Size In.	Std. Pkg.	Price Each
222	3x3	5	\$7.15

## No. 156 Edwards Monitor Bells

Battery or Transformer Operation

Schedule T

An entirely self-contained bell that presents a neat appearance.

The hammer rod moves on a straight line and strikes the inside of the gong. This allows the bell to be made weather, bug and dust proof.

The springs are phosphor bronze, the contacts pure

hard-drawn silver. Has a 3-inch gong, nickel, base is finished in black.

Weight, 1¼ pounds.

Price, No. 156, Vibrating.....each \$1.80

Price, No. 156, Single Stroke.....each 2.30

## No. 182 Edwards Street Car Signals

Battery or Transformer Operation

Schedule T

A self-contained bell.

The hammer rod strikes the cast iron case.

The noise given is distinctly different from the usual type of buzzer.

This signal is mounted on a gasket and is entirely waterproof.

Finished in black enamel.

Diameter, 3 inches.

Weight, 1¼ pounds. Weight of rubber gasket, 1 ounce.

Price, No. 182.....each \$3.00

Price, Rubber Gasket.....each .40

## No. 222 Edwards Clapper Type Bells

For 6-48 Volts D.C.

Schedule E

No. 222 Standard

For use in schools, etc.

The vibrating unit gives power and long life. Its construction is arranged to allow full operation of the armature spring over its entire length with a mechanical breaking of the circuit entirely independent of spring action. When circuit is broken, and armature returns to normal position, it is not stopped abruptly but continues past the normal point of contact and gains momentum for the repetition of the operation.

Two wire entrances are provided; one at the top for surface wiring and one at the back for concealed wiring. Both are sealed with wax which may be knocked out.

Conduit fittings are made so that they may be installed with conduit and bell placed thereon after wires are pulled through. Fittings are drilled top and bottom for ½-inch conduit unless ¾-inch is specified. A pipe plug is furnished for use when bell is on end of line.

Conduit Type

### No. 222 Standard

Size In.	Weight Pounds	Price Each	Size In.	Weight Pounds	Price Each
3	2	\$8.85	10	12½	\$25.55

6	¾	\$7.50
8	1	8.00
10	1⅞	9.00
12	2½	10.50

No. 222 P.G.

### No. 222 F.G. Full Grid Type

Add to Standard bell as follows:

Size Inches	Weight Pounds	Price Each
6	2¼	\$8.00
8	3¼	8.75
10	5½	10.00
12	7	12.00

No. 222 F.G.

### No. 222Y Yard Type With Protective Hood

Add to Standard Bell for No. 222Y.....each \$25.00

Special voltage up to 30 volts at no charge.

No. 222Y

**No. 16 Edwards Flush Buzzers**

Battery or Transformer Operation

*Schedule T*

Used in offices, hospitals, residences, where the appearance of the usual surface type buzzer is objectionable. Buzzer is mounted on back of a standard switch plate to fit standard switch box. Operates on transformer.

Standard finish, brush brass; nickel at no extra charge. Special finishes, upon application.

Weight, metal plate, 3/4 pound; bakelite plate, 9 ounces.

Price, No. 16, Metal Plate, each \$2.50

Price, No. 16, Bakelite Plate ..... each 2.75

**No. 160 Edwards Loud Signal Buzzers**

*Schedule T*

Consists of the movement of the No. 156 monitor bell mounted on a bracket so that hammer strikes against the solid brass plate. This produces a loud sound distinctly different from a bell or buzzer and is particularly adaptable for alarm systems where a distinctive sound is desired.

It is made to fit a standard switch box.

Price does not include switch box.

Standard finish, brush brass or nickel plate.

Price, No. 160 ..... each \$5.50

**No. 136 Edwards Surface Return Call Stations**

*Schedule T*

Designed for installation in existing buildings. Provides a neat appearing plate mounted on a shallow cast box which provides entrance for conduit or open wires as desired. The audible signal is an Edwards Double Adjustment Lungen Buzzer, and the station is completely wired for installation with the special Edwards No. 265 Return Call Push.

The cast box is rubberoid black, the plate is brushed brass or nickel. Special finishes, upon application.

Bakelite plate can be furnished if desired at an additional charge of 25 cents. Weight, 1 1/2 pounds.

Price, No. 136 ..... each \$4.50

**No. 137 Edwards Flush Return Call Stations**

*Schedule T*

A flush plate of pleasing design for mounting on a standard single gang switch box. The audible signal is an Edwards Double Adjustment Lungen Buzzer, and the station is completely wired for installation with the special Edwards No. 265 Return Call Push

Standard finish is brushed brass or nickel plate. Special finishes, upon application.

Bakelite plate can be furnished if desired at an additional charge of 25 cents.

Weight, 1/2 pound.

Price, No. 137 ..... each \$4.00

**No. 138 Edwards Indicating Return Call Station—Schedule T**

For use where it is desirable to indicate that a call has been made to the room during the occupant's absence.

It fits a standard 2-gang switch box. The audible signal is a Double Adjustment Lungen Buzzer. The visible signal is a white arrow outlined through a small round glass window. One push button is for the return call, the other to reset the indicating arrow.

Price, No. 138, Push and Buzzer, Wt. 1 Lb. .... each \$12.00

**No. 242 Edwards Relays**

For Alternating Current Only

*Schedule T*

Open or closed circuit.

Multiple carbon contacts with a capacity up to 15 amperes.

Magnets have laminated core and may be wound for operation on 6 to 250 volts A. C.

Each relay on slate base mounted in iron box with hinged cover and knockouts.

Price, No. 242 ..... each \$40.00

**No. 1238 Edwards Dixie Relays**

*Schedule T*

Meets the requirements of service. Has all the necessary features of a pony relay. Can be used for open or closed circuit by merely reversing contact screws.

Adjustment is simple and positive. Arrangement has been made so that adjustment, length of break, etc., may be easily observed. Contacts are pure hard drawn silver.

Standard resistance, 20 ohms.

Weight, 1 1/4 pounds.

Price, No. 1238 ..... each \$6.00

**No. 240 Edwards D.C. Relays**

For Operation on 6 to 250 Volts D.C.  
Open or Closed Circuits

*Schedule T*

Carbon contacts, capacity, 25 amperes. Can be arranged to open or close up to 4 separate circuits at once with current capacity of not over 10 amperes per circuit, (prices upon application).

Mounted on slate base in iron box with knockouts.

Used in fire alarm control panels and for handling heavy loads where push button or remote

control is desired. Weight, 9 1/2 pounds.

Price, No. 240 ..... each \$70.00

## No. 510 Edwards Clapper Type Bells For Transformer and 110-Volt A.C. Lighting Circuits

### Schedule E

These bells are designed with laminated magnets and specially constructed armature for efficient operation on transformer where a bell with contacts is desired. The contacts are silver, having a large area and excellent current carrying capacity. They are easily replaceable.

**No. 510 Standard**  
Conduit fittings are made so that they may be installed with conduit and bell placed thereon after the wires are pulled through. Fittings are drilled top and bottom for 1/2-inch conduit unless 3/4-inch is specified. A pipe plug is furnished for use when bell is on end of line.  
Standard package, 5 assorted.

Conduit Type

Buzzer

Buzzer	1 3/4	7.15	15.40

## No. 551 Edwards Plunger Type Bells

For All A.C. Voltages  
Schedule E

A no-contact, polarized bell. For traffic signals, mines, warehouses and all standard signaling purposes.

Binding posts and all parts are completely covered; as hammer rod operates in a straight line, the hole in the cover is but little larger than the rod itself, which makes the bell bug and dust proof. Rustproof gongs are standard equipment, and with the addition of a rubber gasket the bell is weatherproof.

There are no contacts to wear, stick or replace. No pivots, coil springs or points of friction.

No adjustment. The only wearing part is where the hammer strikes the gong and the mechanism automatically adjusts itself to this.

Approved by the National Board of Fire Underwriters.  
Standard package, 5 assorted.

No. 551, Single

**Edwards Plunger Type Recti Bells**  
For Battery, A.C. and D.C. Lighting Voltages

Battery Bells—Schedule E  
Lighting Circuit Bells—Schedule T

Brass hammer rod is so suspended at the armature that easy operation with no side motion is assured. The striking end of the rod is suspended by the case itself.

Springs of phosphor bronze act as demagnetizer between magnet head and armature when stroke has been made.

Contacts are carbon (except in 3 and 4-inch sizes where they are silver). Made from standard 10 mm. headlight rod. Iron case, japanned; with felt gasket, oil treated.

Bell metal gong, finished in black to match the case.

220B	4	11.90	17.95	\$24.10	\$19.95	\$25.10

Buzzer

**Edwards Single Stroke Bells**

For Fire and Signaling Systems

Schedule T

No. 23 (D.C.)  
No. 24 (A.C.)

Showing Movement and Compact Construction

Solenoid type construction, giving a loud, clear ring. Operation is quick and precise, ideal for all coded signaling purposes. The construction eliminates springs and pivots. Entire mechanism is under gong. For surface conduit work a separable box is furnished with knockouts on all sides. Box can be mounted flush and an extension cover is furnished for mounting bell.

Operated either in series or multiple, but will be furnished for the latter unless specified. When conduit type is ordered, flush fitting is supplied unless otherwise specified.

For signaling systems: No. 23 (d.c.); No. 24 (a.c.).

For fire alarms: No. 23F (d.c.); No. 24F (a.c.).

Size Inches	Weight Pounds	PRICE, EACH		
		6-48 Volts	110-125 Volts	220-250 Volts
4	4	\$15.10	\$19.25	\$20.60

10	8	31.60	38.50	41.25
12	11	35.75	42.60	45.40

**No. 1740 Edwards Watertight Vibrating Bell and Buzzers**

6 to 30 Volts D.C.  
Schedule T

Used in mines, shipyards, and places where chemical gas is present, in addition to its standard use on ships.

Iron case, drilled to receive 1/2 or 3/4-inch conduit.

Case and mechanism are assembled to withstand heavy shocks and vibrations.

Price, Buzzer, Weight 4

Size.....inches	3	4	6	8
Weight.....pounds	5	5	6	7
Price, No. 1740.....each	\$19.50	22.20	32.10	39.50

**No. 17 Edwards Economy Skeleton Bells**

Schedule E

A fully insulated, loud ringing bell for all ordinary purposes.

The outstanding feature of the Economy is the intensified stroke armature.

Size Inches	Std. Pkg.	Price Each
3	8	\$5.55
4	8	6.58
5	8	7.80
6	12	8.82
8	6	14.37
10	4	21.34
12	4	27.50

## Edwards Electro-Mechanical Bells For Fire Alarm and Other Systems Requiring Low Current Consumption

### Schedule T

Operated by a strong spring mechanism which is released by an exceptionally small flow of current. The mechanism is entirely insulated from the case. The binding posts are on this side.

No. 133

No. 1330

The hammer, when released, makes a full revolution, passing under gong to an inclined plane and strikes gong with great force gathered in revolution. Recoil causes it to drop and become locked in its original position.

**VOLTAGE.**—Battery, 110 volts d.c., 110 volts a.c. for open circuit; closed circuit bells can be furnished for battery and 110 volts, d.c. only.

**NUMBER OF STROKES.**—500 strokes per winding are guaranteed and this number is generally exceeded.

**WINDING KEYS.**—Furnished with each order. One for every 6 balls or less. Additional keys, \$3.00 list.

**FINISH.**—Red frame, black gong. All black if desired.

**RUN DOWN SIGNAL.**—Indicates when bell needs winding. Add to list, \$6.00.

### Standard Types

**TYPE S, SINGLE STROKE.**—Open or closed circuit d.c. Open circuit only a.c.

**TYPE A.**—Constant ringing as long as circuit is closed.

**TYPE B.**—Constant ringing as long as circuit is open.

**TYPE C.**—Constant ringing when circuit is closed, even though it be opened again. Add to list \$10.00.

**TYPE D.**—Constant ringing when circuit is opened, even though it be closed again. Add to list \$10.00.

The above types are furnished in 3 styles of bells as follows:  
**SURFACE CONDUIT TYPE.**—No. 1330 for 3/4 or 1/2 inch if specified.

**CONCEALED CONDUIT TYPE.**—No. 1331, same as above.

**NON-CONDUIT TYPE.**—No. 133.

Size Inches	Weight Pounds	PRICE, EACH		Add to List for Full Grid	*Add to List for 110 Volts
		No. 133	Nos. 1331 and 1330		
6	22	\$72.40	\$82.40	\$7.00	\$18.00

18	42	147.50	157.50	.....	18.00

\*A.C. bells furnished for open circuit only.

## No. 750 Bronx Watchcase Buzzer

### Schedule E

A brass case, heavily nickel plated; phosphor-bronze springs, silver-contacts.

Cat. No.	Height Inches	Diam. Inches	Std. Pkg.	Price Each
750	3/8	1 3/4	20	\$1.25

## No. 5006 Graybar Pull Cord Switches

Generally used in parlor ear coaches.

Operates bus signal buzzers; also used as a stop light switch.

Overall block dimensions, 1 3/8 x 2 3/16 x 1 3/32 inches deep.

Prices and specifications upon application.

## No. 5003 Graybar Bus Signal Buzzers

Graybar Bus Signal Buzzers are of the totally enclosed type. A steel cover mounted over the mechanism, houses the unit and protects it from dirt and the weather.

All buzzers are thoroughly insulated and tested at a high voltage breakdown. The magnets are wound with enameled wire, assuring protection from moisture and short circuited turns.

For battery operation, either 6 or 12 volts. In ordering, state voltage required. The resistance of the buzzers is made high to utilize a minimum amount of current when operating. For other voltages, prices upon application.

Overall dimensions, 3 3/16 x 3 3/16 x 1 1/8 inches

Resistance, 15 ohms; voltage, 12. Dry or storage battery.

Prices and specifications upon application.

## No. 5000 Graybar Combination Vibrating and Single Stroke Bells

This bell makes it possible to combine 2 signals in one bell. Adaptable for double deck buses, the vibrating action being used for passenger's signal while single stroke action is for conductor's signal.

Guard extends partially over the gong. Supplied with 4-inch diameter gongs; stainless steel covers finished in black.

Over all dimensions, 8 3/4 x 4 inches.

Resistance, 15 ohms; voltage, 6 or 12. Dry or storage battery.

Weight, 2 3/4 pounds.

Specify voltage when ordering.

Prices and specifications upon application.

## No. 5004 Graybar Door Step Light Switches

For operating step lights. Heavy gauge bronze face plate, nickel finish. Plunger head is of stainless steel. Electrical contacts are enclosed in bakelite base.

Can be used to make and break circuits carrying as high as 10 amperes.

Dimensions: 2 1/2 inches high; 1 inch wide; 1 1/2 inches deep.

Packed in individual cartons containing switch, mounting screws and bumper plate.

Prices and specifications upon application.

## No. 5005 Graybar Bus Signal Push Buttons

For bus service requirements.

Formed to permit mounting on narrow window posts or installing on moulding. The cover of highly polished nickel finish is fastened to the bakelite base by 2 binding screws.

Mechanism is completely insulated. Contact springs are made of genuine phosphor bronze of the double-break, self-cleaning type, insuring positive action at all times.

Buttons are easily wired as terminal screws have large heads with upset ends to prevent their locking out when connections are looped. Connection permits looping of signaling circuit, eliminating splicing and soldering at each push button station. Overall dimensions, 1 1/2 x 1 inch.

Prices and specifications upon application.

**Faraday Vibrating D.C. Signal Gongs**

*N.E.C. Standard—Schedule E*

**Enclosed Type, Weatherproof**  
For Battery and D.C. Light and Power Circuits  
**Neck Patterns**

Recommended wherever d.c. and battery gongs are to be exposed to dust, dampness or mechanical injury.

Equipped with high-power armatures. Breakage of tension springs does not disable gong. Contacts are regularly Platinoid but pure platinum will be furnished at an additional price, when so ordered. Bauer-barff finished gongs.

Gongs must be wired in multiple.

Specify model number and voltage when ordering.

\*Standard packages: Battery non-guarded gongs, 5 assorted. All other gongs in this column, 1.

Full cast iron grid can be furnished for Model C at same prices as screen-guarded gongs when so specified; when ordering, designate by adding "Cast-Grid," to Cat. Nos.

For surface and flush-conduit installations, neck patterns shown above will be furnished with separable conduit-box backs having combination 1/2 and 3/4-inch knockouts. Specify "Conduit-Box Pattern," and add \$10.00 to prices.

Rectangular or cow gongs can be furnished on Model A. Add \$5.00 to list price of A-6 for 3 1/2x5-inch gong and add "35" to model number. Add \$10.00 to list price on A-8 for 4 1/2x6-inch gong and add "46" to model number.

**Faraday Vibrating D.C. Signal Gongs**

*N.E.C. Standard—Schedule E*

**Enclosed Type, Weatherproof**  
For Transformer and A.C. Light and Power Circuits  
**Neck Patterns**

These gongs are designed for operation on 12-18-volt a.c. bell-ringing transformers, and 100-110-volt and 220-250-volt a.c. light and power circuits, 50-60 cycles standard—25, 30 and 40 cycles to order.

Mechanisms are dust and weatherproof; they have renewable carbon-contacts, laminated magnet-cores, and sturdy pivoted armatures with substantial double-locked back-tension adjustments. All insulation is bakelite.

Specify model number, voltage and cycles when ordering.

\*Standard packages: 12-18-volt transformer non-guarded gongs, 5 assorted. All other gongs in this column, 1.

Full cast iron grid can be furnished for Model CT at the same prices as screen-guarded gongs when so specified; when ordering, designate by adding the word "Cast-Grid" to the catalogue numbers.

For surface and flush-conduit installations, neck patterns shown above will be furnished with separable conduit-box backs having combination 1/2 and 3/4-inch knockouts. Specify "Conduit-Box Pattern," and add \$10.00 to above list prices.

Rectangular or cow gongs can be furnished on Model AT. Add \$5.00 to list price of AT-8 for 3 1/2x5-inch gong and add "35" to model number. Add \$10.00 to list price of AT-8 for 4 1/2x6-inch gong and add "46" to model number.

## Faraday Polarized Vibrating Steel-Clad Signal Gongs and Buzzers

N.E.C. Standard—Schedule E

### No Contact—Non-Sparking

For 18-24-30-Volt Transformer and 100-110-Volt and 220-250-Volt A.C. Light and Power Circuits

### Neck Patterns

Designed for operation on 18-24-30-volt a.c. heavy duty transformers, and 100-110-volt and 220-250-volt a.c. light and power circuits; 50-60 cycles standard—25, 30 and 40 cycles to order. 18-24 volt (or 30 volt) taps of heavy duty transformers must be used.

May be wired in series, as well as multiple.

These gongs and buzzers have no contacts and are non-sparking; adaptable for places where gases or dust might cause explosions.

Mechanisms and binding posts are completely enclosed and protected. Furnished weatherproof for outside use at an addition to price of \$2.00.

For surface or flush conduit installation provided with separable conduit-box-backs, having 1/2 or 3/4-inch knockouts, as specified at an addition to price of \$1.00.

Standard package: 18-24-30-volt transformer ATL gongs, 5 assorted; all other gongs, 1.

## Faraday Polarized Vibrating Steel-Clad Signal Gongs and Buzzers

N.E.C. Standard—Schedule E

### No Contact—Non-Sparking

For 18-24-30-Volt Transformer and 100-110-Volt and 220-250-Volt A.C. Light and Power Circuits

Mechanisms and binding posts are completely enclosed and protected. Furnished weatherproof for outside use at an addition to price of \$2.00.

For surface or flush conduit installation provided with separable conduit-box-backs, having 1/2 or 3/4-inch knockouts, as specified at an addition to price of \$1.00. Packed 1 in a standard package.

YTN- 8	48.70	63.65	78.65
YTN-10	67.35	85.30	103.25
YTN-12	73.55	91.50	109.45

Rectangular or cow gong can be furnished on Models ATN-6, ATN-8, YTN-6, YTN-8, as follows: Add \$5.00 to price of ATN-6 or YTN-6 for 3 1/2 x 5-inch gong and specify Model No. ATN-35 or YTN-35, respectively. Add \$10.00 to price of ATN-8 or YTN-8 for 4 1/2 x 6-inch gong and specify Model No. ATN-46 or YTN-46, respectively.

For conduit patterns add letter P to Model Nos. and \$4.00 to price of 3 and 4-inch gongs; \$5.00 to price of 6 and 12-inch gongs.

**Faraday Single-Stroke Solenoid A.C. Signal Gongs**

*N.E.C. Standard—Schedule T*

**Enclosed Type, Weatherproof**

For Transformer and A.C. Light and Power Circuits

**Neck Patterns**

Faraday Single-Stroke Solenoid A.C. Gongs follow in design and construction the latest engineering practice. Mechanisms will not hum or lag; double strokes are impossible; blows on the gong are loud and unmuffled. The top opening through which the solenoid plunger operates is closed by a patented spring-cap, keeping out all dust.

Made regularly for multiple operation on 12-18-volt, 100-110-volt and 220-250-volt 50-60 cycle circuits (25, 30 and 40-cycle to order); also made for operation in series up to 10 gongs on 110-volt 60-cycle only, at the same price as 100-110-volt gongs, but must be specified when ordered.

Specify model number, voltage and cycles when ordering.

**Model ATS Non-Guarded Gongs**

Cat. No. and Size Gong	Std. Pkg.	PRICE, EACH		
		12-18 Volt Trans.	100-125 Volts A.C.	220-250 Volts A.C.
ATS- 6	1	\$26.80	\$39.50	\$52.20
ATS- 8	1	33.20	48.15	63.10
ATS-10	1	54.90	72.85	90.80
ATS-12	1	70.85	88.80	106.75

**Model BTS**

**Half-Grid-Guarded Gongs**

Cat. No. and Size Gong	Std. Pkg.	PRICE, EACH		
		12-18 Volt Trans.	100-125 Volts A.C.	220-250 Volts A.C.
BTS- 6	1	\$33.95	\$46.65	\$59.35
BTS- 8	1	42.95	57.90	72.85
BTS-10	1	67.50	85.55	103.50
BTS-12	1	88.05	106.00	123.95

**Model CTS**

**Full-Screen-Guarded Gongs**

Cat. No. and Size Gong	Std. Pkg.	PRICE, EACH		
		12-18 Volt Trans.	100-125 Volts A.C.	220-250 Volts A.C.
CTS- 6	1	\$47.70	\$60.40	\$73.10
CTS- 8	1	59.40	74.35	89.30
CTS-10	1	88.10	106.05	124.00
CTS-12	1	112.70	130.65	148.60

Full cast iron grid can be furnished for Model CTS at the same prices as screen-guarded gongs when so specified; when ordering, designate by adding the word "Cast-Grid" to the model number.

Neck patterns listed above will be furnished, when so ordered, with separable conduit-box-backs with combination 1/2 and 3/4-inch knockouts, adaptable to both surface and flush-conduit installations. Specify "Conduit-Box-Pattern" and add \$5.00 to above list prices.

Rectangular or cow gongs can be furnished on Model ATS. Add \$5.00 to list price of ATS-6 for 3 1/2 x 5-inch gong and add "35" to model number. Add \$10.00 to list price of ATS-8 for 4 1/2 x 6-inch gong and add "46" to model number.

Made also in Underdome and Monitor Patterns.

## Faraday Vibrating A.C. Signal Gongs

N.E.C. Standard—Schedule E

Enclosed Type, Weatherproof

For 18-24-30-Volt Transformer and A.C. Light and Power Circuits

Underdome Patterns

No contact, floating-on-line, non-sparking.

**Model UTX**  
Non-Guarded Gongs

UCTX-10	1	101.60	119.55	137.50
UCTX-12	1	130.05	148.05	165.95

Underdome patterns are regularly furnished, without extra charge, with 1/2-inch conduit-entrance (3/4-inch if so specified) in frame-casting for surface-conduit-installation. Will be furnished, when so ordered, with separable conduit-box-backs, adaptable to flush conduit installation, with 1/2 or 3/4-inch knockouts, as specified. Specify conduit-box-pattern and add \$10.00 to above prices.

## Faraday Single-Stroke Solenoid A.C. Signal Gongs

N.E.C. Standard—Schedule T

Enclosed Type, Weatherproof

For Transformer and A.C. Light and Power Circuits

Underdome Patterns

The top opening through which the solenoid plunger operates is closed by a patented spring-cap, keeping out dust.

Made for multiple operation on 18-24 or 30-volt, 100-110-volt and 220-250-volt, 50-60-cycle standard (25, 30 and 40-cycle to order) also made for operation in series up to 10 gongs on 110-volt 50-60-cycle only, at same price as 100-110-volt gongs, but must be specified when ordered; 18-24 or 30-volt taps of heavy duty transformers must be used.

Specify model number, voltage and cycles when ordering.

**Model UTS**  
Half-Grid-Guarded Gongs

UCTS-10	1	107.60	125.55	143.50
UCTS-12	1	136.05	154.00	171.95

Furnished with 1/2 or 3/4-inch conduit entrance in frame-casting for surface conduit installation. Can be furnished with separable conduit box backs, with 1/2 or 3/4-inch knockouts, adaptable to flush-conduit-installations, at \$10.00 additional.

## Faraday Skeleton Bells

Schedule E

Model O Vibrating Type

For Battery Circuits Only

Faraday Model O Skeleton Bells meet the requirement of a good signal gong with exposed mechanism.

They have high-power patented pivoted-armatures giving twice the volume of sound that ordinary construction affords; full-insulated mechanisms, back-tension adjustments, non-turning contact and binding posts, adjustable locking side-contacts and cylindrical trunnion bearings.

Breakage of tension springs cannot disable gong.

Contacts regularly platinum, but will be furnished pure platinum, if specially ordered, at additional price.

Wound to any special resistance at standard list additions; also furnished converted-single-stroke when specially ordered at \$2.50 net additional, but for important single-stroke work multiple gear single-stroke bells are recommended.

Cat. No. and Size Gong	Resistance Ohms	Std. Pkg. Ass't	Price Each	Cat. No. and Size Gong	Resistance Ohms	Std. Pkg. Ass't	Price Each
O-2 1/2	3	5	\$5.70	O-10	5	5	\$24.85

O-8	5	5	16.00				

## Faraday-Ekla Skeleton Bells

Schedule E

Model Z Vibrating Type

For Battery Circuits Only

Faraday-Ekla Skeleton Bells are slightly lower in price than Faraday and admittedly not as desirable for important signal work.

They have reed-type armatures with substantial back-tension adjustments, side-contacts and non-turning binding posts.

Frames finished in dull black enamels, gongs polished nickel.

Pure silver contacts, wound to any special resistance, at standard list additions shown elsewhere in the catalogue; will be furnished converted-single-stroke, when specially ordered at \$2.50 net additional but for important single-stroke work, multiple-gear single-stroke gongs are recommended.

Cat. No.	Size Gong Inches	Resistance Ohms	Std. Pkg. Assorted	Price Each
Z- 2 1/2	2 1/2	3	5	\$5.25

**Faraday Electro-mechanical Signal Gongs**

Schedule T

Enclosed Type, Vibrating or Single Stroke

Open and Closed Circuit Types for Battery, D.C. and A.C. Circuits

Electro-mechanical gongs are designed to give a very loud, powerful signal, with a minimum of current. The blow itself on the gong is struck by a heavy ball on the end of a lever, released by the electric current, but operated by a powerful clock spring.

Faraday Electro-mechanical gongs give approximately 700 blows with one winding, and at \$6.00 net additional per gong they will be furnished, when specially ordered, with reliable rewind signal contactor to which may be connected a tell-tale bell to give notification whenever a gong needs re-

winding. It will also give warning if, from any cause, the main spring of the mechanism should break.

Regularly furnished with knockouts for 1/2 or 3/4-inch conduit, as specified, in four sides of the box.

STANDARD FINISH.—Dull black enamel with gunmetal gongs. Cases, when specially ordered, will be furnished without additional charge, in English vermilion finish.

CTX-12	1	101.35	119.35	137.25
CTX-14	1	108.30	129.20	150.20

Model ATX can be furnished with Protective Hood at an addition of \$25.00. Specify Model YTX.

Full cast-iron grid can be furnished for Model CTX at same prices as screen-guarded gongs when so specified; when ordering designate by adding the word "cast grid" to model number.

Neck patterns listed above are regularly furnished, at no extra charge, with 1/2-inch conduit-entrance in frame casting, for surface-conduit-installations. Will be furnished, when so ordered, with separable conduit-box-backs with combination 1/2 and 3/4-inch knockouts, adaptable to both surface and flush-conduit installations. Specify conduit-box-pattern and add \$10.00 to above prices.

When specified for traffic signals gongs will be supplied with hardened steel bearings, lubricating oil cups, etc., at an additional cost of \$10.00 net per gong.

Rectangular or cow gongs can be furnished on Model ATX.

Add \$5.00 to price of ATX-3 for 3 1/8x5-inch gong and specify Model No. ATX-35.

Add \$10.00 to price of ATX-8 for 4 1/4x6-inch gong and specify Model No. ATX-46.

MCTX-12	1	101.35	119.30	137.25

With standard separable conduit-box-backs adaptable to both surface and flush-conduit installations. With 1/2-inch knockouts, but when specially ordered, will be furnished with 3/4-inch.

## No. 2502 Faraday Fire Alarm Trouble Bells

N.E.C. Standard—Schedule T

### With Special Toned Gongs

Used with fire alarm control cabinets to indicate by continuous ringing, breaking of circuit-wires, failure of operative current, etc. Conduit box backs; with high power armatures. Mechanisms are enclosed and have rubber gaskets protecting them from dust and dampness.

One bell is required for each closed circuit fire alarm system, except System K which requires 2 bells.

Specify whether bell is to operate from batteries or from light and power circuits. Standard package is one.

For Systems	To Operate On	Price Each
A, C, F, H, K	Battery	\$20.00
A, C	110-125 Volts D.C.	27.00
F	100-110 Volts A.C.	27.00

## No. 200 Edwards Hand Trips

### For All Types of Bells

Schedule T

For mines and installations where an alarm signal cannot be dependent on electricity.

May be furnished on any bell over the 6-inch size, so mechanical operation is assured if operating current fails.

Add to price of bell as follows:

Size In.	Wt. Lbs.	Price Each
6	2 1/2	\$10.00
8	2 1/2	15.00
10	5	25.00
12	5	36.00
14	8	56.00
16	8	65.00
18	8	75.00

**Signal Call Systems**

24, 110 or 220 A.C. or D.C.

Signal call service is primarily an addition to telephone service, providing an efficient means of completing telephone calls by promptly locating all important members of an organization regardless of their whereabouts—calling them to the nearest branch telephone.

**Chime Signal**

The Signal Call sending station may be furnished with sectional key units giving either 10, 20, 40 or 60 code numbers.

The unit system of design makes possible the changing from 10 to 20 code numbers and additions of units of 20 numbers with the same ease as in adding units to a sectional bookcase. All connections are made automatically.

The designated "call" sounds three times and automatically stops, allowing the maximum number of "calls" in a given time. The red jeweled lamp remains lighted while a call is being sounded.

The case is of solid brass, finished in black enamel.

Special finish upon request.

**Soft Tone Bell**

Voltagess, 24, 110 or 220 A.C. or D.C.

The 10 and 20 call is 7¼ inches long, 7½ inches wide and 6½ inches deep; 40 call, 7½ inches high; 60 call, 9¾ inches high.

In ordering, state number of code numbers; voltage; and, if A.C., number of cycles.

Write the nearest Graybar Electric Branch for Bulletin A-50 covering this service in detail.

At the same time is provided a code signal system for broadcasting special messages.

The Signal Call is usually placed on the switchboard. Pressing one of the keys starts the mechanism, operating the code number corresponding on signal devices distributed so as to be heard anywhere on the premises.

The operating unit is a magnetic movement (no motor) with jeweled bearings and centralized make and break.

**Musical Tone Bell**

**Signal Eng. Single Stroke Bells**

18 to 250 Volts A.C.—6 to 250 Volts D.C.

For calling systems, fire alarm systems, etc. Use type designation and specify volts and cycles. For fire alarm with red finish prefix "F" to type designation. **Non-Weatherproof**

Universal outlet box, 3x4x2 inches, is included in price. Fits all gongs from 4 to 12 inches. All mechanism is covered by bell shell.

**Black Parkerized Special Steel Gong Shells**

Size.....inches	4	6	8	10	12

\*Fits standard rectangular switch box (not furnished).

†Fits universal outlet box (included in price).

††Used for trouble signal.

## Signal Eng. Thermostatic Relays

For operation by temperature control thermostats, 3 wire (common high and low). Designed to eliminate sparking at contacts of control instrument. Used on oil burners, refrigerators, ovens, pyrometers, etc.

When voltage of coil and contact load is same, use Series J or 1 circuit relay. When voltage of coil and contact load differ, use Series U or 2 circuit relay.

Use type designations and specify operating voltage and cycles of coil: also load on contacts.

Style H Housing (Stamped Steel) 6½x8x3 Inches

Style W Housing (Cast Iron Weatherproof) 6¼x9½x3½ Inches

1 Circuit (Series J) Relay (Model 1) 4x4x2¼ Inches Overall

2 Circuit (Series U) Relay (Model 3) 4x4x2¼ Inches Overall

†Without housing: omit letter H and deduct \$1.00 from price.

**No. 620 Dixie Jr. Edwards Push Buttons**

Fully insulated, frame not grounded and at no time carries current. Phosphor bronzed scraping contacts. Self-forming binding posts take any size wire and facilitate connecting. Non-turnable pearl center. Standard finish, nickel. For 5/8-inch hole.

Standard package, 50.  
Price, No. 620.....each \$ .39

**No. 59 Midget Edwards Push Buttons**

Frame is not insulated. Non-turnable pearl center. Self-forming binding posts take any size wire.

Standard finish, nickel. For 3/4-inch hole.

Standard package, 50.

Price, No. 59.....each \$ .77

**No. 625 Edwards Colored Center Push Buttons**

*Schedule E*

For 5/8-inch hole. Has a raised center of white, black, red or blue. White is standard. Center protrudes and spring is softened. Nickel finish; brass at no extra charge.

Luminous centers, .50 cents extra.  
Price, No. 625, Wt., 1 Lb.....each \$ .45

**No. 621 Dixie Jr. Edwards Push Buttons**

Turned from brass rod, a high grade push of heavy construction. The center is condensite and protrudes 3/8 inch.

For 5/8-inch hole. Standard finish, nickel. Standard package, 1.

Price, No. 621.....each \$ 1.40

**No. 622 Dixie Escutcheon Edwards Push Buttons**

Turned from brass rod, of heavy construction. The center is condensite and protrudes 3/8 inch. Equipped with a retaining escutcheon. Side springs are unnecessary.

Fully insulated, frame not grounded and at no time carries current. Phosphor bronzed scraping contacts. Self forming binding posts take any size wire and facilitate connecting. For 1/2-inch hole. Standard finish, nickel. Standard package, 1.

Price, No. 622.....each \$ 1.45

**Edwards High Voltage Push Buttons**

*Schedule E*

A quick break push with heavy contacts.

Standard finish, nickel; brush brass at no extra charge.

Cat. No.	Voltage	Description	Std. Pkg.	Wt. Oz.	Price Each
85	110	Standard Type, Fits 3/4-Inch Hole....	10	1	\$ 2.40

850A	...	Hard Rub. Bushing for No. 85A.....	1	1	1.65

**Edwards 4-Contact Push Buttons**

*Schedule E*

**No. 260**

Will close 3 circuits at once. For use where annunciators, bells and other devices are to be operated at same time but it is not desirable to operate them in multiple. By strapping contacts it is often used on single circuits to obtain additional current carrying capacity of multiple contacts. Fits 3/4-inch hole. Phosphor bronze springs.

Standard finish, nickel; brush brass, no extra charge.  
Price, No. 260, Weight 2 Ounces.....each \$ 1.40

**No. 260C**

Same as No. 260. Closed circuit; for 3/4-inch hole.  
Price, No. 260C, Weight 2 Ounces.....each \$ 2.05

**No. 265 Return Call Edwards Push Buttons**

The frame is not grounded. A return signal to signify that call has been heard may be installed, using three wires instead of the usual four. For 3/4-inch hole. Std. pkg., 1.  
Price, No. 265.....each \$ 1.90

**No. 116 Slow Break Edwards Push Buttons**

Used in automobile controller handles, etc. Turned from brass rod. Wiping phosphor bronze contacts. Phosphor bronze springs. Condensite center. Contact member molded into condensite. For 1/2-inch hole. Standard finish, nickel. Standard package, 1.  
Price, No. 116.....each \$ 1.30

**Edwards Flush Push Escutcheons**

*Schedule E*

For use on plaster or where larger than the midget push is required. The iron plate is first secured to the wall. There being a number of screw holes, it is always possible to engage a lath. The brass plate is then placed over the iron plate and the push button pressed into place.

The spring clips on side of button grip the iron plate securely, holding the button and top plate in place.

Standard finish, nickel; brass at no extra charge.

Standard package, 25. Weight, 12 ounces.

Price, No. 60, For 5/8-Inch Push.....each \$ .30  
Price, No. 61, For 3/4-Inch Push.....each .30

**No. 261 Edwards Flush Push Stone Escutcheons**

No. 261 Stone Escutcheon is a plain flanged casting for cementing into stone or tile work.

Drilled for 3/4-inch push. The No. 260 is recommended.

On this escutcheon the standard finish is Bauer Barff.

Standard package, 1.

Price, No. 261.....each \$ 3.50

## No. 262 Edwards Conduit Push Buttons

Furnished complete with attachment as illustrated, to fit 1/2-inch conduit. The attachment is so made as to allow the installation to be vapor proof and is used by hotels and apartment houses for bathrooms, etc. Inside the threaded brass pipe is a vertical rod which enables the attachment to be screwed on to conduit with a pair of pliers, piece of slotted pipe, etc., eliminating the use of a Stilson wrench. A special adaptation of the No. 621 push, with a wider flange and other features arranged for this attachment, is used. This is numbered 621C.

Standard finish, nickel. Standard package, 1.

Price, No. 262, Complete.....each \$3.70  
 " " 621C, Push Button Only..... " 2.00

## No. 600 Edwards Bronx Push Buttons

The No. 600 is 2 1/4 inches in diameter with a black composition center. The mechanism is insulated and is recessed to allow the use of No. 14 wire. Standard finish, satin brass. Standard package, 100.

Price, No. 600 Bronx.....each \$1.18

## No. 603 Edwards Bronx Push Buttons

The No. 603 is 1 3/4 inches in diameter with a black composition center. The mechanism is insulated and is recessed to allow the use of No. 14 wire. Standard finish, satin brass. Standard package, 100.

Price, No. 603, Bronx.....each \$1.18

## No. 606 Edwards Bronx Push Buttons

Schedule E

A one-piece type, all metal button. Size, 1 3/8 x 2 3/8 inches.

Finished in satin brass. Other finishes add .02 cents each net.

In individual boxes. Standard package, 50; weight, 3 1/2 pounds.

Price, No. 606.....each \$.25

## No. 605 Edwards Bronx Pushes

This is an all-metal 1-piece type push, of excellent construction, well insulated.

Size, 1 1/4 x 3 1/2 inches.

Standard finish is satin brass. For all other commercial finishes, add 2 cents net.

Packed, with screws, in individual boxes for convenient shelf use.

Standard package, 50.

Weight, standard package, 4 3/4 pounds.

Price, No. 605.....each \$.35

## Edwards Bronx Card Holder Push Buttons

No. 601

An all-metal, one-piece type push button. Packed with screws in individual boxes.

Card racks are arranged so that a slot for inserting card is at

each end of rack. Push can be mounted any way desired without card falling out.

Mechanism is insulated and recessed to allow use of No. 14 wire and still leave room between screws and wall, there being no chance of grounding. Wire is fastened directly to same screw that holds one side of contact spring; pushing the button makes a contact on one screw only. Fiber is recessed so wire cannot slip out of place. Standard finish, satin brass.

No. 602

Cat. No.	Description	Size Inches	Std. Pkg.	Wt. Lbs. Std. Pkg.	Price Each

**No. 608 Edwards Bronx Push Buttons**

*Schedule E*

An all-metal, one-piece type push button. This push button is well insulated.

Finished in satin brass. All other commercial finishes add .02 cents each net. Satin brass and oxidized copper can be shipped from stock.

Size, 2x4 $\frac{1}{8}$  inches.

Packed in individual boxes, with screws.

Standard package, 50. Weight, 8 pounds.

Price, No. 608.....each \$ .40

**No. 609 Edwards Bronx Push Buttons**

*Schedule E*

This push button is of excellent construction and is well insulated. All-metal, one-piece type.

Standard finish is satin brass. Other commercial finishes add .02 cents each net. Satin brass and oxidized copper can be shipped from stock.

Size, 2x4 $\frac{1}{2}$  inches.

Packed in individual boxes, with screws.

Standard package, 50. Weight, 8 pounds.

Price, No. 609.....each \$ .40

**No. 604 Edwards Bronx Plate Type Push Buttons**

The dimensions of the No. 604 push are small enough to allow its use in many places where the common plate type of push is too large to be adaptable. It is 3 $\frac{3}{8}$  inches long and 1 $\frac{1}{8}$  inches wide.

The mechanism is entirely insulated and is recessed to allow the use of No. 14 wire and still leave plenty of room between the screws and the wall, there being no chance of grounding. The wire is fastened directly to the same screw that holds one side of the contact spring; pushing the button makes a contact on one screw only, thereby assuring a positive contact. Standard finish, satin brass. Standard package, 50.

Price, No. 604, Bronx .....each \$ .35

**No. 610 Edwards Bronx Pushes**

*Schedule E*

This push is of the all-metal, one-piece type. It is of excellent construction, well insulated.

Packed, with screws, in individual boxes for convenient shelf use.

Price, No. 95, Standard Package,	1	each	\$6.50
" " 95A	1	"	13.00
" " 95B	10	"	7.95
" Extra Keys,"	1	"	.80

## Edwards Burglar Alarm Springs

Schedule E

Window springs should be placed in the frame several inches above the lower end of the upper sash—and the same distance below the upper end of the lower sash. Each sash should be mortised so that the nosing of the spring will be set in the recess when the window is closed. The mortise should be continued (beyond the necessary point) to permit the opening of the window for ventilation. It is advisable (although not necessary) that this system of installation be followed. Without the mortise anyone trying to enter the house and knowing of the window springs can easily open the window gradually, and hold the spring depressed with the finger.

The Edwards Springs when used properly as described are classified as follows:

Open circuit window springs—nosing in normal position contact is broken.

Closed circuit window springs—nosing in normal position contact is established.

Open circuit door springs—plunger in normal position contact is established.

Closed circuit door springs—plunger in normal position contact is broken.

## No. 2696 Eveready Shot Firing Units

A small, compact, light-weight, battery-powered shot firing device approved by the U. S. Bureau of Mines for use in mining. Also suitable for use on the surface, in quarries, in stump blasting, in fact wherever blasts are to be fired one at a time. The unit is safe, as the blast cannot be fired accidentally. The wires leading from the cap are fastened to a special plug and, to fire, it is necessary to insert this plug in a small socket in the end of the device and hold it there against the pressure of a spring. Nickel finish. Price does not include cells.

Cat. No.	Size Inches	Standard Package	Price Each
2696	8½x1½	20	\$2.25

## No. 4753 Eveready Unit Cell Lanterns

A sturdy and thoroughly practical general utility flashlight.

Equipped with extension type bail handle, beveled lens, octagonal lens ring and positive switch.

Finished in gun metal.

As the light stands on its own base, it is ideal for campers, farmers and general use around a house.

Size 3½x4¼ inches. Unit package, one. Three unit cells are required per case.

## Model H Federal Electric Lanterns

Opened

light from reflector. Equipped with 6-volt, 4-cell battery and 5-volt, 0.15 ampere white Mazda bulb.

Lighted and extinguished by means of a switch so placed as to be out of the way of accidental operation or injury. Doubly insulated against shorting and protected from freezing. No exposed metal parts which come in contact with the ground are in contact with either pole of the battery at any time.

The Federal Battery is recognized for steady strength and long-life illumination. When used with Mazda 5-volt bulb it will give 28 to 35 hours of intermittent service.

Will fit the coat pocket when the three folding legs are clustered. Compact for the autoist's tool box.

Built with high polish aluminum body.

Net weight, 2¼ pounds; shipping weight, 3 pounds. Height over all, handle up, 14¼ inches; folded, 9½x7x4 inches.

## No. 6 Eveready Columbia Ignitor Batteries With Screw Connections

A special high grade cell designed for all heavy service. It is particularly adapted for motor ignition. A set of ignitors will keep the engine running smoothly until every bit of current is exhausted.

Equally satisfactory for motor boats, gas engines, and in fact, any service where a reliable, long life battery is needed.

These batteries are carefully packed and from fresh stock, guaranteed to reach their destination in perfect condition.

Voltage, 1½.

Width, 2½ inches.

Height, 6 inches.

Packed 50 to a standard package. Weight of standard package 120 pounds.

Price, No. 6.....	each	\$.45
-------------------	------	-------

**No. 6 Columbia Red Label Batteries**

Where steady service is demanded over a considerable period of time, Columbia Red Label Batteries prove reliable, efficient and economical. This is particularly true where the current drain is small, such as in telephone, bell, burglar alarm and toy service.

Columbia batteries will, however, stand up under hard service. They are satisfactory ignition batteries.

Equipped with either screw or Fahnestock connections, as desired.

These cells come from fresh stock, are carefully packed and guaranteed to reach their destination in perfect condition.

Size.....inches 2½x6  
Price, No. 6.....each \$ .45

**Columbia Gray Label Batteries**

This battery is especially designed for telephone work and light-drain service.

Fahnestock spring binding posts are furnished without extra charge when requested.

Voltage, 1½.  
Diameter, 2½ inches.  
Height, 6 inches.

Quantity in standard package, 50.

Approximate weight of standard package, 120 pounds.

Price.....per cell \$ .40  
Price, in Broken Packages...per cell .34  
Price, in Standard Packages...per cell .30

**No. 7111 Eveready Dry Cell Radio A Batteries**

Vertical Type, 1½ Volts

A single 6-inch dry cell battery having 2 screw knurls and put up in an attractive round paper jacket.

Connected in various combinations to meet the requirements of WD-11, UV-199 and all other dry cell tubes.

Furnished in round jackets and with screw knurls.

Initial voltage of 1½ volts.  
Width, 2½ inches; height, 6 inches.  
Standard package, 50.

Weight, standard package, 120 pounds.  
Price, No. 7111.....each \$ .50

**Eveready Columbia Hot Shot Batteries**

Cells are connected by soldered copper strips and encased in a single metal container. The advantages of this new type covering are the ability to withstand rough usage, water-proof, thoroughly insulated to prevent internal short circuits and a woven fabric handle for convenience in carrying.

**No. 485 Eveready Layerbilt Radio B Batteries**

Vertical Type, 45 Volts, Medium Size

Made of flat layers of current producing elements compressed one against another, so that every cubic inch inside the battery case is completely filled with electricity-producing material. For sets of 4 tubes or more.

Equipped with 3 Fahnestock clips giving voltages of 22½ and 45.

This battery is 8¾ inches long, 3¼ inches wide and 7½ inches high.

Weight, 9½ pounds.

Price, No. 485.....each \$2.95

**No. 486 Eveready Layerbilt Radio B Batteries**

Vertical Type, 45 Volts, Heavy Duty

Made of flat layers of current-producing elements compressed one against another, so that every cubic inch inside the battery case is completely filled with electricity-producing material. For sets of 4 tubes or more.

Equipped with 3 Fahnestock Clips giving voltages of 22½ and 45.

Length, 8¾ inches; width, 4¾ inches; height, 7¾ inches.  
Weight, 14¼ pounds.

Price, No. 486.....each \$4.25

**No. 770 Eveready B Batteries**

Vertical Type, 45 Volts, Heavy Duty

For use on multi-tube sets having 4 tubes operating at 90 or more volts without a C battery, and on practically all sets with 5 or more tubes using 90 volts or over, with or without a C battery.

With 3 Fahnestock Spring Clip Connectors giving voltages of 22½ and 45.

Length, 8¾ inches; width, 4¾ inches; height, 7¾ inches.

Weight, 13¾ pounds.

Price, No. 770.....each \$4.00

**No. 772 Eveready B Batteries**

Vertical Type, 45 Volts

A 45-volt vertical B battery. Variable voltage taps omitted.

For sets having 3 tubes or less, and for self-contained multi-tube receivers where there is not sufficient space for installing heavy duty batteries.

Length, 8¾ inches; width, 3¼ inches; height, 7½ inches.

Weight, 9 pounds.

Price, No. 772.....each \$2.75

## No. 768 Eveready B Batteries

Horizontal Type, 22½ Volts

Suitable for portable sets where light weight and small size are essential, and for self-contained sets having battery compartments too small to permit the installation of a larger B battery.

It has plus 6, plus 18 and plus 22½-volt taps, which permit of its use as a C battery in connection with power tubes.

Length, 4⅞ inches; width, 2⅞ inches; height, 2¾ inches.

Weight, 1 pound, 9 ounces.

Price, No. 768.....each \$1.75

## No. 771 Eveready Radio C Batteries

Vertical Type, 4½ Volts

A 4½-volt unit, containing 3 cells, provided with 3 Fahnestock Spring Clip Terminals.

May be used in either the filament or A circuit, the plate or B circuit or the grid or C circuit.

A 4½-volt C battery is sufficient with most tubes when B battery voltages of not over 80 or 90 volts are used, and the signal is ordinarily loud.

For B battery voltages up to 120 volts from 6 to 9 volts of C battery gives better results.

Length, 4 inches; width, 1⅜ inches; height, 3 inches. Weight, 14 ounces.

Price, No. 771.....each \$0.60

## Other Eveready Radio Batteries

\*Special batteries not regularly carried in stock.

## No. 155 Fahnestock Battery Connectors

Slip this connector over any type of screw binding post. Broken and loose connections are thus eliminated. Flexible wire is soldered to spring clip.

Will not corrode.

Fig. 3566

Price, No. 155.....each \$0.05

## Edison Primary Cells

Edison Primary Cells are furnished in capacities ranging from 75 to 1000-ampere hours. The sizes best adapted for telephone work are 75, 250, 400 and 500-ampere hour types, for average conditions, and the 1000-ampere hour cells for heavy duty service or when it is desirable to bring the renewal periods far apart.

The characteristics of this battery, which make it particularly well suited for telephone service, are: Uniform voltage under continuous discharge; extremely low and constant internal resistance; freedom from depreciation when the circuit is open; long life, with no attention between renewals; indicator panels in plates, which accurately show the approach of exhaustion in ample time to arrange for renewal and suitability for either open circuit (intermittent discharge) or closed circuit (continuous discharge) work.

The initial open circuit voltage of all Edison Primary Cells is 0.95. The closed circuit voltage averages 0.60 to 0.65 depending on the rate at which the cells are discharged.

### Use of Cells

Edison Primary Cells are used extensively for the following purposes: Local battery telephone exchange switchboards; telephone train dispatching (talking circuits); intercommunicating telephone systems; small common battery telephone systems; private branch exchange switchboards; pole changers, supervisory lamps and relays; telegraph work (local sounder and main line circuits); railway signals and crossing bells; railway interlocking plants; gas and gasoline engine ignition; low voltage motors; battery dental engines; fire, police and burglar alarms; auxiliary fire alarm systems (closed circuit); mine signals, bell systems and annunciators; program and self-winding clocks; electroplating; highway beacon lighting; chemical analysis and other school work.

## Type 75 Edison Primary Cells

Capacity, 75-Ampere Hours

Well suited for telephone work. Adapted to all classes of service where dependable capacity, uniform voltage and reliability are necessary requisites.

With round glass jar. Size overall, 3x7½ inches.

At a continuous discharge of 100 milliamperes this cell will deliver 80 ampere hours to a cut-off voltage of .6. It is capable of sustained discharges up to 750 milliamperes or intermittent up to 1 ampere.

When the battery exhausts it is customary to replace with new cells and discard the entire exhausted battery; expensive jars or heat-resisting glass are not used with this type.

Price, Type 75.....each \$0.90

## Type S-202 Edison Primary Cells

Capacity, 200-ampere Hours

With rectangular heat-resisting glass jar. Size over all, 3⅜x6x11 inches. Inside dimensions, 2⅞x5¼x9 inches.

Adapted for intercommunicating telephone systems, railway train dispatching systems, stationary gas or gasoline motors, electric clock systems, small motors, etc.

Use 5 cells for stationary gas or gasoline motors having make and break ignition and 8 cells for jump spark.

ELECTRIC COMPANY

**Type S-208 Edison Primary Cells**

Capacity, 200-ampere Hours

With heat-resisting glass jar. Size over all, 5 $\frac{3}{4}$ x9 inches. Inside dimensions of jar only, 5x7 $\frac{1}{2}$  inches.

Adapted for stationary gas or gasoline engines, electric motors, burglar alarms, bell systems, program and self-winding clocks, annunciators, electric time stamps, mine signals, intercommunicating telephone systems, etc. Use 5 cells for stationary engines having jump spark ignition.

Type S-208 supersedes old Type Q cell.

**Type S-252 Edison Primary Cells**

Capacity, 250 Ampere Hours

With rectangular heat resisting glass jar. Size over all, 3 $\frac{1}{2}$ x6x12 $\frac{1}{2}$  inches. Inside dimensions of jar only, 2 $\frac{7}{8}$ x5 $\frac{1}{4}$ x10 inches.

The Type S-252 Cell is the most perfectly balanced of any of the cells of less than 500 ampere hours capacity. The other low capacity cells were designed to meet certain requirements, with definite specifications as to size, etc. In developing this cell, no restrictions were placed on the laboratory and the result is a cell with the zinc, copper-oxide and electrolyte nicely

proportioned and the element suspended high in the solution where its action is not interfered with by the dense solution at the bottom of the cell.

This cell is recommended for railway telephone dispatching transmitters; intercommunicating telephones; self winding and program clocks; fire and burglar alarm systems; radio "A" batteries, etc.

Initial open circuit voltage, 0.95. Average closed circuit voltage, 0.6 to 0.65 per cell. Maximum recommended continuous current 1 ampere. Maximum recommended intermittent current, 1.5 amperes.

**Types S-402 and S-404 Edison Primary Cells**

Capacity, 400-ampere Hours

These are the popular types in the 400-ampere hour cells. In capacity and operating characteristics they are the same. Therefore, it is only a question of which shape of jar is preferred and while the barrel shaped jar has the greater mechanical strength, the rectangular is particularly well suited for locations where space is limited.

The cells are adapted for telephone transmitter, inter-rupter and pole-changer operation, private branch exchanges, intercommunicating systems, fire and burglar alarm systems, self-winding and program clock systems, railway signaling, etc.

The maximum recommended continuous current is 2 amperes and the maximum intermittent current is 3 amperes. The initial open circuit voltage is 0.95 and the average closed circuit voltage 0.6 to 0.65 per cell.

**Type S-402**

With rectangular heat-resisting glass jar. Size over all, 5 $\frac{1}{2}$ x6 $\frac{1}{2}$ x12 $\frac{1}{4}$  inches. Inside dimensions of jar only, 5x6x10 inches.

## Type S-403 Edison Primary Cells

Capacity, 400-ampere Hours

With cylindrical heat resisting glass jar. Size over all, 7 1/4 x 11 inches. Inside dimensions of jar only, 6 1/8 x 8 3/4 inches.

The Type S-403 is the successor of the old Edison Lalande Type RR Cell which was used extensively for telephone work, gas engine ignition, etc. The older type was converted into the Type S-403 several years ago, by the use of Type 403 covers, which were furnished with the improved style renewals. The S-403 is still furnished for the benefit of custom-

ers who wish to keep their cells uniform, when making additions to or changes in their battery. However, the S-402 and S-404 are the more efficient cells and should be used when an entire new battery is purchased.

The 400-ampere hour cells are suitable for telephone transmitter, interrupter and pole-changer operation, private branch exchanges, intercommunicating systems, fire and burglar alarm systems, self winding and program clock systems, railway signaling, etc.

The maximum recommended continuous current is 2 amperes and the maximum intermittent current is 3 amperes. The initial open circuit voltage is 0.95 and the average closed circuit voltage 0.6 to 0.65 per cell.

Type	Description	Price Each

400	Can Caustic Soda	.36
400	Bottle Battery Oil	.09

## Types S-502 and M-502 Edison Primary Cells

Capacity, 500-ampere Hours

The 500-ampere hour cells are furnished with either multiple or single plate elements. The letter M before the reference number indicates multiple plate, 2 copper-oxide and 3 zinc plates. The letter S indicates single plate, 1 copper-oxide and 2 zinc plates.

The cells are used for telephone and telegraph service; railway signal, fire and burglar alarm systems, highway beacons, and in many other fields where a high capacity cell is desirable.

For service in which the load frequently goes to 3 amperes, or where the cells are exposed to low temperature, the multiple plate cells are recommended. For service in which the load does not go over 2 1/2 amperes and the cells are protected from the cold, the single plate type will fully meet the requirements. Initial open circuit voltage, 0.95. Average closed circuit voltage 0.6 to 0.65 per cell. Maximum recommended continuous current for single plate types, 2 amperes; for multiple plate types, 2.5 amperes. Maximum recommended intermittent current for either types, 3 amperes.

### Type S-502 Single Plate Element

With rectangular heat-resisting glass jar. Size over all, 5 1/2 x 6 1/2 x 12 1/4 inches. Inside dimensions of jar only, 5 x 6 x 10 inches.

M-502

Type	Description	Price, Each
S-502	Complete Cell	\$4.80
S-500	Renewal	2.15
<b>Separate Parts</b>		
502	Jar	\$2.20
502	Cover	.45
...	Wing Nuts and Washers	per set .20
S-500	Element	1.90
500	Caustic Soda	per can .42
500	Oil	per bottle .09
For Type M-502 cell, renewal and element, add 20 cents. Prices of the other parts are the same.		

## Types S-504 and M-504 Edison Primary Cells

Capacity, 500-Ampere Hours

For telephone and telegraph service, railway signal, etc. With barrel-shaped heat-resisting glass jar. Size over all, 7 x 12 1/4 inches; inside dimensions of jar, 6 x 10 inches.

Type	Description	Price Each
S-504	Complete Cell	\$4.80
S-500	Complete Renewal	2.15
<b>Separate Parts</b>		
504	Jar	\$2.10
504	Cover	.55
...	Wing Nuts and Washers	per set .20
S-500	Element	1.90
500	Caustic Soda	per can .42
500	Oil	per bottle .09
For Type M-504, cell, renewal and element, add 20 cents.		

## Types S-507 and M-507 Edison Primary Cells

Capacity, 500-Ampere Hours

For traffic signals and other classes of work where there is a possibility of rough usage. Has cylindrical enameled-steel jar. Size overall, 7 1/4 x 12 inches.

Type	Description	Price, Each
S-507	Complete Cell	\$5.00
S-500	Complete Renewal	2.15

### Separate Parts

S-507	Jar	\$2.50
S-507	Cover	.55
S-507	Rubber Gasket	.25
S-507	Clamps	set of 3 .75
...	Wing Nuts and Washers	per set .20
S-500	Element	1.90
500	Caustic Soda	per can .42
500	Oil	per bottle .09
For Type M-507 cell, renewal and element, add 20 cents.		

## Type M-1002 Edison Primary Cells

Capacity, 1000 Ampere Hours

The 1000 ampere hour cells are furnished with either rectangular or cylindrical jars. Type M-1001 is the specification for the cell with the cylindrical jar and M-1002 for the rectangular. The prices are the same.

This size was developed to meet demand for a battery that would operate efficiently in classes of service where heavy discharges are required for long periods. In railway signaling these cells are used for operating remote controlled switch movements, color light signals and track circuits. In the general trade for any heavy duty work or where it is desirable to bring the renewal periods as far apart as possible.

Initial open circuit voltage, 0.95 per cell; the average closed voltage, 0.6 to 0.65. The cells can be discharged continuously up to 4 amperes and intermittently up to 6 amperes.

### Type M-1002

With rectangular heat-resisting glass jar. Size over all, 6 1/2 x 8 3/8 x 14 inches. Inside dimensions of jar only, 5 x 6 x 12 3/4 inches.

Type	Description	Price, Each
M-1002	Cell Complete	\$8.50
M-1000	Renewal	4.25
<b>Separate Parts</b>		
1002	Jar	\$4.80
1002	Cover	.55
...	Wing Nuts and Washers	per set .20
M-1000	Element	3.50
1000	Caustic Soda	per can .85
1000	Oil	per bottle .09

### Type M-1001

With cylindrical heat-resisting jar. Prices same as for Type M-1002.

**G-E Tungar Battery Chargers**

For Charging All Radio A and B and Auto Storage Batteries

Form B—25 to 133 Cycles—115 to 230 Volts

The 2-ampere charger will take care of all radio and auto battery charging requirements at home. Has combination trickle charge and full rate feature. The 5-ampere will charge larger radio and auto batteries. Both have insulating transformer.

2-Ampere Tungar

**2-Ampere Chargers**

Will charge 6-volt battery at 2 amperes or trickle rate of 3/4 ampere; 12-volt battery at 1 ampere; 2 or 4-volt battery at 1 ampere; 24 to 96-volt B battery at 1/10 to 1/4 amp.

**G-E Tungar Bulbs**

2-Ampere

5-Ampere

No. 195528 is designed for renewal purposes in the old design 2-ampere Tungars. Also adapted for other chargers which are not equipped to use Cat. No. 277465 bulb which has 3 points of contact in base. Wire adapter permits making connection to plate at tip of bulb. Maximum voltage capacity, 60 volts at current not over .25 ampere.

In the No. 277465 all 3 contacts are made through base. Charges a 6-volt A storage battery at 2 amperes and a 120-volt B storage battery at not over .25 ampere.

No. 189048 should not be used where voltage requirements are over 30 volts except when charging B storage batteries at not over .25 ampere.

No. 189049 bulb is used with larger Tungars having a charging capacity of 75 volts at not over 6 amperes.

**Old Design, 2-Ampere**

189049	6	75	6 1/2	3	3	8.00

**G-E Tungar Battery Chargers**

6-Battery Type

This 6-battery Tungar is a real profit maker for the smaller shop. It will charge the average battery in a day and a night.

Repair shops, filling stations and tire dealers can bring in extra profits with a 6-battery Tungar in addition to giving customers charging service.

Car dealers and fleet truck owners will find that a 6-battery Tungar greatly reduces up-keep expense by keeping batteries in first class condition at the lowest possible cost. It does away with the trouble and delay of sending batteries out to be charged.

Five outstanding features of this charger are:

Increased capacity—6 batteries—6 amperes.

Economical on 1 or 6 batteries.

Can be operated from a lamp socket—no special wiring is necessary.

New simplified regulating control.

Takes up little space. Weighs only 29 pounds.

Cat. No.	A.C. Volts	Frequency	Net Weight Pounds	Price Each
16x871	115	60/50	29	\$60.00
16x872	115	25/40	35	72.00

**G-E Tungar Battery Chargers**

15-Battery Type for Public Garages and Battery Service Stations

Will charge 1 to 15 three-cell auto or radio batteries (or their equivalent) at 6 amperes. Will also charge radio B batteries in 48-volt sections.

This Tungar provides increased capacity at lower cost. Bulbs give long uniform life. There are no moving parts.

It is equipped with a current regulating switch, a meter, snap switch controlling both a.c. and d.c. circuits and a 2-position tap switch. A 9-inch length of BX cable is provided for connection to the a.c. supply.

Form A—A.C. Volts: Normal 115—Limits 105/125

**Renewal Tungar Bulbs**

Shipping weight, 3 pounds.

Price, No. 189049.....each \$8.00

## G-E Double Duty Tungar Battery Chargers

For Large Garages and Battery Service Stations

Capacity, 1 to 30 three-cell auto or radio batteries (or equivalent) at 6 amperes; 1 to 15 three-cell batteries or equivalent at 12 amperes. Will also charge radio B storage batteries in 48-volt sections.

The double duty Tungar provides one-day charging service at the lowest possible cost. It will charge 15 batteries in an average of 20 hours at a rate starting at 12 amperes which taper automatically to a low safe finishing rate of 4 to 5 amperes.

It has two charging circuits, each having an ammeter, current regulating switch and tap switch. The snap switch controls both the a.c. and d.c. circuits. A 9-inch length of BX cable is provided for connection to the a.c. supply.

Form B—A.C. Volts: Normal 115—Limits 105/125

Above prices include two No. 189049 Tungar bulbs.

The No. 9X649, 230-volt outfit is considered standard.

### Renewal Tungar Bulbs

Shipping weight, 3 pounds.

Price, No. 189049.....each \$8.00

\*Maximum capacity, twenty 3-cell batteries.

## G-E Tungar Trickle Chargers

For Continuous Operation with Low Capacity 4 or 6-Volt Radio A Storage Batteries

Form B—60 Cycles—115 Volts

Designed to be permanently connected with a low capacity A battery in the radio set. Can be safely installed in the radio cabinet or console. There is nothing that requires frequent attention. Cannot overheat and damage battery or set, and is approved and listed as standard by National Board of Fire Underwriters. Insulating transformer makes it impossible to damage Radiotrons.

Sturdy construction is assured as the transformer is embedded in compound and the charger completely encased.

Four terminals provide capacity for all requirements with either 2 or 3-cell batteries.

WEG-565	7¾	7¾	⅜	9⅞	8¾	13⅞	87.0

\*The intermittent rating in amperes is the current the battery will give discharging 4 hours resting 16 hours, discharging 8 hours resting 16 hours, discharging 8 hours resting 16 hours, and discharging 4 hours to 1.7 volts per cell. This ampere rate multiplied by 24 gives the intermittent ampere hours.

†Negative plates are ⅝-inch thick inside and ⅜-inch thick outside, except 70 and 125 ampere hour sizes which are ⅝-inch throughout.

Negative group has one more plate than positive.

## POWER SWITCHBOARDS

125 AND 250-VOLT TWO-WIRE, DIRECT CURRENT STANDARD UNIT  
CENTRAL STATION SWITCHBOARD

Whenever you are interested in the purchase of any type of switchboard, either for light or power, or both, let us submit figures on our product.

We feel that this catalogue will be in the hands of persons familiar with the electrical line generally and therefore that you are competent to make up a layout of practically any board you may wish a figure on.

With this in mind, we are soliciting your inquiries, asking that you give us detailed information when you submit your drawing, showing sizes of switches, etc.

## 8DC Power and Light Outfits

32-Volt, Direct Connected Type

Typical Installation 8DC Outfit

This outfit consists of a direct connected generator and engine, together with a glass cell battery. It has many of the features listed under the larger 15-DC outfit. The battery rack does not form a part of the outfit as regularly supplied, but can be furnished if desired.

The 8-DC outfit is conservatively rated 750 watts, but actually develops more on battery charging run.

### Specifications

#### Engine

PRINCIPLE.—Single cylinder, vertical, 4 cycle type.

HORSEPOWER.—1½ H. P.

FUEL.—Kerosene or gasoline.

GOVERNOR.—Special design. Centrifugal governor holds uniform speed under all loads.

IGNITION.—Jump spark ignition.

COOLING.—Air cooled. A special protected fan of high efficiency mounted on crankshaft between the engine and generator draws air over the cylinder of engine, keeping temperature of set within proper limits.

BORE AND STROKE.—2¾ by 4 inches.

SPEED.—Approximately 125 R. P. M.

OILING.—A positive splash feed oiling system supplies the lubrication.

#### Generator

VOLTS AND WATTS, AMPERES.—Volts, 36. Watts, 750. Amperes, 21.

DESIGN.—Shunt wound with series winding for starting.

MOUNTING.—Built into the engine, armature mounted on crankshaft of engine.

#### Control Panel

STARTING.—Set starts electrically by pressing button.

STOPPING.—Set automatically stops when batteries are charged. Button provided to stop set manually when desired.

#### Batteries

NUMBER.—16 glass jar cells fully charged.

CAPACITY.—Intermittent rating, 125 ampere hours.

#### Approximate Dimensions

Overall width, 18 inches. Overall length, 28 inches. Overall height, including base, 29 inches.

Type and Size	Intermittent Battery Rating	Approximate Shipping Weight Pounds
8DC-125	3750 Watt Hours	900

Prices upon application.

## 15DC Power and Light Outfits

32-volt, Direct Connected Type

Typical Installation 15DC Outfit

These Power and Light Outfits are time and labor savers. They make it practical for anyone, no matter how remote from central service, to use electricity on farm or country estate or in villages and towns.

The 15DC outfit is one where the gas engine and electrical generator are built on the same shaft. That means steady electric power and electric light three hundred and sixty-five days of the year.

By simply pressing a button you can have electric power and electric light any time and anywhere you want it—electric power to run all the machines you now turn by hand, separator, churn, feed grinder, grindstone, etc. Electric power to do housework too, such as sweeping, washing, ironing, sewing and dishwashing. It will automatically pump the water to the house, barn, dairy, garage and garden. Running water where and when you want it saves countless steps and makes the conveniences of a modern bathroom possible. Electric light makes night work easy; enables you to use all your daylight hours for outdoor work. Eliminates the disagreeable task of filling and trimming kerosene lamps and lanterns. Electric lights are safe.

Electric light in hen houses increases egg production. Tests made by agricultural stations have proved this.

Power and Light takes the drudgery out of farm and country life, adds to their attractiveness and substitutes comfort for discomfort.

The 15DC outfit is economical. It runs on kerosene—very often less than was used to keep oil lamps burning. The kerosene is poured into a tank on the base of the outfit. The capacity of this tank is such that it does not need to be filled during charging period. Easy to operate. A slight pressure on the lever starts it; it stops itself when the battery is charged. It gives the tapering charge which makes the battery last longer.

Has a circulating splash system of lubrication. Simply pour oil into the crank case and the engine does the rest. Oil is sprayed up on the cylinder walls and conveyed by pipe to the main bearing. Runs in a steady stream over the crank pin bearing and keeps every moving part in a bath of oil.

15DC Power and Light Outfits

32-volt, Direct Connected Type

Continued

Every part of the outfit is easy to get at. By taking off four nuts the crank case cover is easily removed, making easy access to every part.

The engine cannot get out of time as the timing gears come off with the crank case plate, and when that is put back, the question of timing is taken care of automatically.

The engine is air cooled and equipped with a throttle governor so that, irrespective of load carried, the speed is always the same.

The outfit is ruggedly built, durable and dependable. With it the user is always sure of plenty of power and plenty of light.

The outfit as supplied under this code number consists of a direct-connected generator and engine, together with a glass cell battery. The battery rack does not form a part of the outfit as regularly supplied, but can be furnished if desired.

Specifications  
Engine

PRINCIPLE.—4 cycles.

FUEL.—Kerosene or gasoline.

FUEL CONSUMPTION APPROX.—1.6 gallons to charge WE G-125; 2 gallons to charge WE G-250.

GOVERNOR.—Special design of throttling governor insuring a uniform speed at all loads.

IGNITION.—Jump spark ignition.

COOLING.—Air-cooled. A fan mounted on flywheel draws air over the cylinder of engine, keeping temperature of set within proper limits.

BORE AND STROKE.—Cylinder bore 3½ inches; stroke 4½ inches.

SPEED.—Speed Engine and Generator, approximately 1000 r.p.m.

OILING.—A splash feed oiling system supplies the lubrication.

PULLEY.—A pulley 4 inches in diameter and 3 inches face is provided on the main shaft to drive auxiliary line shafting or other machinery.

Generator

VOLTS AND AMPERES.—Volts 35-42. Amperes maximum 40.

DESIGN.—Special design of generator to give batteries a "tapering charge."

MOUNTING.—Built up on crank shaft of engine.

Control Panel

STARTING.—Set starts on its own power by pressing starting switch.

STOPPING.—Special regulator provided for automatically stopping set when batteries are fully charged.

OVERCHARGE SWITCH.—Provision is made for occasional overcharging of batteries.

POWER SWITCH.—Provision is made for opening electrical circuits when set is operated for engine power only.

PROTECTION.—Fuses and line switch are provided.

Batteries

NUMBER.—16 glass jar cells fully charged.

CAPACITY.—Intermittent ratings: 125, 185, 250 ampere hours.

Type and Size	Intermittent Battery Rating	Approximate Shipping Weight Lbs.

Information on larger size plants for 110 volts furnished upon request.

Power and Light Outfits

32-volt 15-DC Magneto Type Outfit

The 15-DC Magneto type outfit is designed and built to generate 32-volt current for a wide variety of applications, notable examples being schools, churches, road building work, dredges, traveling shows, service stations, pumping stations, pavilions, summer camps, signal battery charging stations, depots and for use in any place where utility, limited space and dependability are the real factors.

The special features of this outfit are: Unit construction, easily started and stopped, magneto equipped, runs on kerosene, special fueling system, exclusive oiling system, accessibility, air cooled, equipped with power pulley, constant speed, occupies small space and is easily transported.

Specifications  
Engine

PRINCIPLE.—4 cycles.

FUEL.—Kerosene or gasoline.

FUEL CONSUMPTION.—The following quantity of kerosene will be required to charge the batteries when completely discharged:

Approximately 1.6 gallons for WE G-125  
Approximately 2 gallons for WE G-250

GOVERNOR.—Special design of throttling governor insuring a uniform speed at all loads.

IGNITION.—Jump spark ignition.

COOLING.—Air cooled. A fan mounted on flywheel draws air over the cylinder of engine, keeping temperature of set within proper limits.

BORE AND STROKE.—Cylinder bore, 3½ inches.  
Stroke, 4½ inches.

SPEED.—Speed engine and generator, approximately 1000 R. P. M.

OILING.—A splash feed oiling system supplies the lubrication.

PULLEY.—A pulley 4-inch diameter and 3-inch face is provided on the main shaft to drive auxiliary line shafting or other machinery.

Generator

VOLTS AND AMPERES.—Volts 35-42. Amperes, maximum 40.

DESIGN.—Special design to give batteries a "tapering charge."

MOUNTING.—Built into engine, armature mounted on main shaft of engine.

Magneto

High Tension magneto.

15-DC Magneto	700	.....

## Paul Self-Priming Suction Pumps

A pump capable of drawing water through a suction pipe from a level below same without having any working parts extended into the water is called a suction pump. The height or vertical distance from the water level to the pump is the suction lift against which it works. The lift is theoretically limited by laws of nature and practically by resistance to the flow of water in the pump itself and in the piping, also by priming considerations. Suction pumps are not used under normal conditions on lifts over 20 to 24 feet, according to size, with moderate lengths of suction pipes installed air-tight.

On high lifts small pumps of conventional design cause much trouble by becoming unprimed due to air leaks and by being unable to reprime themselves even on moderate lifts. The Paul Pumps are self-priming, and when started up dry they will also reprime themselves under ordinary conditions. For the same reason they will positively charge air into their air chamber and into pneumatic tanks if admitted into the suction side. These valuable features together with extreme simplicity and strength of design, automatic lubrication, absence of wear, accessibility and unusually high efficiency insure dependable service with the least amount of attention.

Paul Pumps are built in two types, according to size, each type in several capacities. All have the same characteristic general features. They are driven by pulleys. The pumps with motors are mounted on rigid cast iron bed plates supported on brackets and form complete, self-contained units.

Pumps driven by electric motors must always be wired through a properly fused hand-switch near the pump. This switch is used for starting and stopping the pump when hand control is desired.

In case of pneumatic tank systems automatic service is obtained by means of a pressure controller connected to the discharge side of the pump or to the tank. The controller automatically closes the circuit and starts the pump at the low pressure and stops the pump by opening the circuit at the high pressure for which it is set.

## Type K Paul Self-Priming Suction Pumps

### Motor Driven

Capacities: 125-360 Gallons per Hour

**SPECIFICATIONS.**—Each complete unit listed below consists of a standard Paul Self-Priming Suction Pump, Type K, mounted on a cast iron bed plate with electric motor, belt, idler, automatic controller wired to motor and connected to discharge pressure, air chambers, air charger, strainer and floor or wall-brackets, as ordered.

Water-direct-from-wall attachments, water relief valves, float switches, extra air chambers, unions and other accessories are described and listed on another page.

## Paul Complete Water Systems

With Paul Type K Self-Priming Suction Pumps

Capacities: 125-60 Gallons per Hour

**SPECIFICATIONS.**—Each complete Unit System listed below consists of a standard Paul Type K Self-Priming Suction Pump mounted on a cast iron bed plate with electric motor, belt, idler, automatic pressure controller wired to motor and piped to discharge pressure, air chambers, air charger, strainer and floor brackets, bolted to a cast-iron sub-base, a pneumatic tank with water gauge and pressure gauge, mounted on the sub-base, piping between pump and tank with stop valve and water relief valve.

With Assembled Systems a complete set of fittings is furnished but no piping between pump and tank.

Water-direct-from-well attachments and other accessories are described and listed on another page. Any of these which can be applied

may be added or omitted in the specification to order.

Over-all dimensions of assembled systems are approximate for pumps and tanks located conveniently close to each other.

**Type US Paul Water Systems**

Capacities 100 to 360 Gallons per Hour

For Shallow Wells

The system may be placed directly upon a level cement floor or it may be raised above the floor upon a cement pier or other convenient sub-structure capable of supporting its weight and eliminating vibration. All that is needed in the way of installation is to connect the suction pipe to the pump and the discharge opening in the tank to the service pipe of the house.

There is one condition that requires a little additional attention of installation and that is when the water level in the cistern or at the supply stands higher than the pump.

The pump is then without a natural suction lift and has a negative suction head, which makes it impossible to charge air and sometimes causes knocking due to lack of air in the air chambers. To avoid such conditions, when installing, place a riser with a stop valve in the suction pipe, formed by a piece of piping, having an air cock at the highest point. By throttling the suction until the pump draws air when running the riser and the air chambers can be charged with air which will make the operation of the pump smooth and quiet for a considerable length of time. The stop valve is left in the throttled position and need not be touched when additional air is required, and the riser should extend to a point above the highest water level to prevent flooding in case the air cock is left open.

The Paul Type US Systems consist of a standard Paul Type K suction pump, a special heavy duty pump motor (all a.c. motors are of the repulsion-induction type), extra heavy galvanized tank (galvanized inside and out), and a standard Paul Type G pressure controller.

Assembled complete with pressure gauge, water gauge, relief valve and all fittings between pump and tank.

Each system shipped completely assembled in one crate.

**Paul Complete Water Systems**

With Paul Type J Deep Well Pumps

Capacities: 120-160 Gallons per Hour

SPECIFICATION.—Each complete system listed below consists of a standard Paul Type J Cushion Stroke Deep Well Pump mounted on a cast iron bed plate with electric motors belt idler, automatic pressure controller wired to motor and connected to discharge chamber, air compressor piped to discharge chamber, floor brackets and a pneumatic tank with water gauge and pressure gauge, tapped for discharge pipe from pump and service pipe.

Well cylinders, pump rods, drop pipe, frost-proof attachments, water-direct-from-well attachments, "shifter carriage" mountings, float switches and other accessories are described and listed on another page. Any of these which can be applied may be added or omitted in the specification to order.

## Speedway Portable Hammers

110 Volts

Type No. 2

uncommon for a tool to save its cost in a week. Every tool is controlled by a switch mounted in the handle and equipped with flexible cord and plug. They may be attached to any lamp socket.

A man drilling by hand strikes from 40 to 65 blows per minute, these hammers from 1000 to 3000. Power cost is negligible, about 15 cents a day for ordinary work. The hammer, when it strikes the blow, is free from the motor and the strength of the blow is constant. Cannot overload the machine, no burning out of armatures.

Speedway Hammers are primarily built for drilling into concrete, stone, brick, etc. Light chipping, channeling, scaling and one hundred and one other uses where a great number of blows is required.

These hammers operate at about 15 per cent of the power cost of operating air tools and without the expenses and inconvenience of compressor, air piping hose, etc. Over handwork, the economy is from 80 to 90 per cent, and it is by no means

Types 4 and 6

### Type No. 2

APPROX. CAPACITY CONCRETE OR LIMESTONE

Type	Current	Drill In. per Min.	Power Consum. Watts	Blows per Min.	Net Wt. Lbs.	Price Each
2	A.C.-D.C.	½	2 150	3000	16	\$150.00
Types 6 and 4						
6	A.C.-D.C.	1	2 240	1800	26	\$185.00
4	D.C.	1	2 240	1800	25	150.00

### Type D-9 Heavy Series

D-9	D.C.	1½	2 660	1100	75	\$240.00
-----	------	----	-------	------	----	----------

Add \$3.00 for 220 volts.

For drilling speed in brick multiply by 2. For drilling speed in granite divide by 2 and use diamond drills.

### Electric Hammer Stands

Useful for Ceiling Drilling, Taking the Strain Off the Operators

For Use with Hammer Type	Stand. No.	Length Feed In.	Minimum Height	Maximum Height	Price Each
2	23	6	4 ft. 6 in.	6 ft. 6 in.	\$10.00

\*Special—Not in stock.

Prices on water-flushed hollow drills, bull points, bush hammers, mill picks, etc., on application.

**Type 49 Speedway Portable Drills**

**1/4-Inch Capacity  
Universal Motor**

Because of its extremely light weight, Type 49 is adapted to use around the home, repair work, tinner's shops, wood-working shops, etc.

Has automatic 3-jaw, self-tightening chuck. Releases by quick wrist snap.

When ordering, specify voltage.

Type	Capacity Steel, In.	Full Load Speed, R.P.M.	Weight Pounds	Price Each
49	1/4	1250	3 1/2	\$16.00

**Type 53 Speedway Portable Drills**

**1/4-Inch Capacity  
Universal Motor**

This drill is used in garages, factories and on installation and maintenance jobs where rugged drilling up to 1/4-inch in steel is demanded.

Has special drawn steel housing to prevent breaking when dropped, to add strength and decrease weight.

Has automatic, self-tightening 3-jaw chuck that opens by quick wrist snap.

Specify voltage.  
Add \$3.00 for 32 to 220 volts.

Type	Capacity Steel, In.	Full Load Speed, R.P.M.	Weight Pounds	Price Each
53	1/4	1000	5	\$25.00

**Type 56 Speedway Portable Drills**

**5/16 Inch Capacity  
Universal Motor**

Type 56 features its great power and comfortable grip. Drawn steel housings.

It has ample power to take care of all drilling in steel up to its rated capacity.

Switch is under constant control of operator.

Has automatic 3-jaw, self-tightening chuck. Releases by quick wrist snap.

Specify voltage.

Type	Capacity Steel, In.	Full Load Speed, R.P.M.	Weight Pounds	Price Each
56	5/16	750	6	\$30.00

Add \$3.00 for 32 or 220 volts.

**Type 60 Speedway Portable Drills**

**Capacity 1/2 Inch  
Universal Motor**

This drill is compact and unusually light in weight.

Castings have given way to drawn steel tubing for motor housing, adding greater strength and at the same time reducing weight.

Equipment includes breast plate, extra side handle, self-tightening 3-jaw chuck, 8-foot rubber lead cord.

Used by garages, repair and machine shops, contractors, installers and maintenance men.

Specify voltage. Add \$3.00 for 32 or 220 volts.

Type	Cap Inches	Full Load Speed, R.P.M.	Weight Pounds	Price Each
60	1/2	400	12	\$48.00

**Type 74 Speedway Heavy Duty Portable Drills**

**1/2-Inch Capacity**

**Universal Motor**

This drill is built to last a lifetime.

Equipment includes breast plate or D handle. Extra side handle, key chuck for straight shank drill bits or No. 1 Morse taper socket and 8-foot lead cord.

Specify voltage.  
Add \$3.00 for 32 or 220 volts.

Type	Cap Inches	Full Load Speed R. P. M.	Weight Pounds	Price Each
74	1/2	400	18	\$75.00

**Type 76 SpeedWay Portable Electric Slate and Marble Drills**

**Universal Motor**

Slate or marble drilling with a portable electric drill can only be accomplished at such a slow speed as is shown in this drill. Disastrous results in burned drill bits will follow the use of the ordinary electric drill designed for metal or wood drilling.

Equipment includes: D handle, or breast plate; lead cord and plug; convenient switch; one diamond point marble drill bit; chuck for drill bits, with key. Voltage must be specified in ordering.

Speed, 105 r.p.m. Weight, 8 pounds.  
Price, Type 76, 110-115 Volts

.....each \$85.00  
Price, Type 76, 220 or 32 Volts.....each \$88.00

**Type 78 SpeedWay Portable Electric Drills**

**5/8-Inch Capacity—Heavy Duty—Universal Motor**

For use in car and boiler shops, on structural work and general heavy duty drilling jobs. Equipment includes: Breast plate (D handle substituted if specified); extra side handle; chuck for straight shank drill bits 0 to 5/8 inch capacity, or Morse taper socket, on specification; chuck wrench; 8-foot lead cord with plug. Pressure screw furnished at extra charge.

In ordering, voltage must be specified.  
Speed, 350 r.p.m. Weight, 21 pounds.

Price, Type 78, 110-115 Volts.....each \$80.00  
Price, Type 78, 220 or 32 Volts.....each \$83.00

**Type 80 SpeedWay Portable Electric Drills**

**1 1/4-Inch Capacity—Heavy Duty—Universal Motor**

For heavy duty drilling in metals up to 1 1/4 inches, and considerably larger in wood and for reaming. Combines maximum power with minimum weight.

EQUIPMENT.—Pressure screw and choice of breast plate or D handle; No. 3 morse taper socket; 8-foot lead cord with plug.

In ordering, voltage must be specified.

Speed, 175 r.p.m. Weight, 45 pounds.

Price, Type 80, 110-115 Volts.....each \$130.00  
Price, Type 80, 220 or 32 Volts.....each \$133.00

## Speedway Portable Drills—Heavy Duty Universal Motor

This is a light, small, heavy duty type of drill. The use of drawn steel tubing has been employed for motor housings.

Drill develops a full 1/2 h.p. at the spindle. Construction features include alloy steel, heat treated and ground gears, ball and thrust spindle, double pole type of switch, key chuck and convenient control switch in a comfortable type handle.

Specify voltage.

Add \$3.00 for 32 or 220 volts.

Type	Cap Inches	Full Load Speed, R.P.M.	Weight Pounds	Price Each
90	5/16	850	7 1/4	\$45.00
92	3/8	750	7 1/2	50.00

## Speedway Portable Drill Stands

The usefulness of a portable drill is greatly increased with the added equipment of a drill stand as shown here.

This stand insures perfect alignment and makes drilling a much easier job. A type for each drill is available.

Type	Class	For Use with Drills Types	Wt. Lbs.	Price Each
210	C	49, 53, 56, 90, 92	9	\$10.00
214	C	60	40	20.00
216	C	72, 74, 78	65	35.00
219	C	82, 83, 84	65	35.00
218	C	80	70	50.00

## Type 114 Speedway Grinding Attachment for Type 60 Drills

A practical and sturdy grinder may be had for the Type 60 drill with this attachment. To operate, remove chuck from drill and in its place quickly screw on belt pulley and fasten drill in place.

Two 5-inch grinding wheels are included.

Price, Type 114 ..... each \$20.00

## Speedway Bench Grinders

All the undesirable features of direct drive have been eliminated in the construction of this grinder.

Belt drive practically eliminates overloading as belt will slip if crowded too fast. Belt drive also eliminates bearing troubles.

Split bearings in grinding shaft can be taken up as wear develops.

Motor is 1/4 h.p.

Standard equipment includes two 4 1/2 x 1/2-inch grinding wheels. Speed is 3600 r.p.m.

Price, Type 116-AC.....each \$42.50

Price, Type 118-DC.....each 47.50

Add \$3.00 for 32 or 220 volts.

## Speedway Portable Electric Screwdriver and Bolt and Nut Tightener Universal Motor

Equipped with Screw Slot Finder

Will drive in maple all size screws from No. 2 to No. 16.

Standard equipment: Lead cord and plug; one finder, driving tang or socket wrench. Extra equipment: Finders for

any size screw; bare driving bits or tangs; chuck for straight shank drill bits.

Price, Type 108.....each \$35.00

Add \$3.00 for 32 or 220 volts.

### Extra Equipment for Types 108 and 110 Grinders

Price, A, Arm for 3-Inch Internal 30000 R.P.M. each	\$20.00
Price, D, Arm for 5-Inch Internal 10000 R.P.M. each	20.00
Price, B, Arm for 10-Inch Internal 10000 R.P.M. each	30.00
Price, E, Arm for 15-Inch Internal 10000 R.P.M. each	35.00
Price, C, Arm for Button Die Grinding. .... each	35.00

## Speedway Portable Electric Screwdriver and Bolt and Nut Tightener Universal Motor

Equipped with Screw Slot Finder

Will drive in maple all size screws from No. 2 to No. 16.

Standard equipment: Lead cord and plug; one finder, driving tang or socket wrench. Extra equipment: Finders for

any size screw; bare driving bits or tangs; chuck for straight shank drill bits.

Price, Type 108.....each \$35.00

Add \$3.00 for 32 or 220 volts.

### Extra Equipment for Types 108 and 110 Grinders

Price, A, Arm for 3-Inch Internal 30000 R.P.M. each	\$20.00
Price, D, Arm for 5-Inch Internal 10000 R.P.M. each	20.00
Price, B, Arm for 10-Inch Internal 10000 R.P.M. each	30.00
Price, E, Arm for 15-Inch Internal 10000 R.P.M. each	35.00
Price, C, Arm for Button Die Grinding. .... each	35.00

## Type 157 Speedway Portable Screwdriver and Nut Tightener Universal Motor

This is a light and compact driver for small and medium screws and nuts.

Drawn steel housings are used.

Standard equipment includes positive clutch; a slip clutch can be included for \$10.00 extra. Special types of gear trains to produce varying speeds for special requirements can also be furnished at \$3.00 extra.

Specify voltage.

Add \$3.00 for 32 or 220 volts.

Price, Type 157.....each \$55.00

## Type 110 Speedway Tool Post Grinders

This grinder is built for external, center and internal grinding.

Cross-feed has been eliminated.

Speed is 10000 r.p.m. heavy duty type. Universal motor, 1/8 h.p. Has 4 1/2-inch diameter grinding wheel. Specify voltage. Add \$3.00 for 32 or 220 volts.

Price, Type 110. each \$27.50

### Extra Equipment for Types 108 and 110 Grinders

Price, A, Arm for 3-Inch Internal 30000 R.P.M. each	\$20.00
Price, D, Arm for 5-Inch Internal 10000 R.P.M. each	20.00
Price, B, Arm for 10-Inch Internal 10000 R.P.M. each	30.00
Price, E, Arm for 15-Inch Internal 10000 R.P.M. each	35.00
Price, C, Arm for Button Die Grinding. .... each	35.00

**Type 176 Speedway Portable Electric Saws**

The Speedway Portable Electric Saw with 6 or 7-inch blade will cut wood, bone, wall or plaster-board, Plymetal, fibre, linoleum, hard rubber, light-gauge soft metal, bakelite and other materials.

It operates from any lighting socket. Has adjustable depth gauge and slipper plate guard for operator's protection. Is

equipped with a return-spring switch in the handle and a dust shield. An 8-foot cord with split plug is furnished; also a 6-inch blade with a maximum cut of 1 5/8 inches.

Voltage, 110 or 220, as specified when ordering.

No load speed, 3600 r.p.m. Weight, 15 pounds.

Price, Type 176, 110-Volt..... each \$75.00

Price, Type 176, 220-Volt..... each 78.00

**SpeedWay Portable Electric Saws**

Have combined depth gauge and saw guard. When not sawing, blade is protected; when ready for work, catch is released, slipper plate drops to a predetermined depth and saw is ready to cut.

Equipment includes switch,

lead cord and plug, wrench and one saw blade.

Universal motor operated on a.c. or d.c., 110 or 220 volts.

Voltage must be specified in ordering.

Type	Blade Inches	Capacity Inches	Speed R.P.M.	Weight Pounds	Price, Each	
					110-115 Volts	32 or 220 Volts
179	8	2 5/8	1500	25	\$165.00	\$168.00
180	10	3 5/8	1500	26	175.00	178.00

**Type 300 Speedway Electric Planer and Router Kit**

Universal Motor

For the wood-working trade. Electric planer planes up to 2 3/8 inches wide and from 1/32 to 3/32 inch deep. Electric router cuts up to 1/8 inch deep. Set has its own grinding rig so that planer blades can be re-sharpened right on the job.

Kit includes motor, planer and cutter, grinding rig, router and cutter, grinding wheel, 1/4-inch chuck for wood-drilling, 2 wrenches and steel carrying case. Specify voltage.

Add \$3.00 for 32 or 220 volts.

Price, Complete..... each \$85.00

Price, Router and Motor Alone..... each 45.00

Price, Planer and Motor Alone..... each 50.00

**Speedway Combination Shops**

The Portable Home Work Shop

Universal Motor

This shop equipment includes portable saw, portable drill portable buffer, etc. The lathe also packs away for carrying in its convenient steel case. Operates from any light socket.

**Model 260-D**

Capacity is 6-inch diameters, 12-inch centers; 30-inch centers optional at \$2.50 extra. Has high torque series wound motor. Operates on both a.c. and d.c. Motor may be removed and converted into portable drill, saw, grinder, etc.

Screw feed type tail stock for quick adjustment.

Tool rest is rigidly constructed; quickly adjusted to all positions. Capacity of face plate is 6 inches in diameter. May also be used to support disk sanders.

Spur center has 3 long, sharp teeth which provide strong grip on work. Accessory arbor supports buffer, grinder and scratchbrush; may be used either in portable or permanent position of motor. Base of thoroughly seasoned wood. Bench saw mounts on lathe rails direct. Useful for cabinet making. Jig saw has tilting top, 10-inch throat. Spring tension on blade. Six extra blades included. Motor may be removed from lathe and attached to portable saw. Handle is included for converting lathe motor into convenient 1/4-inch portable electric drill. Carrying case is of pressed steel construction with carrying handle.

Tool assortment includes the following items:

- 1/8" Carbon Steel Drill Bit
- 1/4" Carbon Steel Drill Bit
- 5" Circular Saw
- 1/4" Keyless Drill Chuck
- Saw Centering Collar and Nut
- 4" Rag Buffing Wheel
- 3" Grinding Wheel
- 4" Wire Scratchbrush
- Gouge Chisel
- Parting Tool
- Leatherette Tool Case

Price, Model 260-D (as shown above)..... each \$95.00

**Model 260-C**

This outfit is the same as Model 260-D above but does not include the Jig-saw or portable saw.

Price, Model 260-C..... each \$75.00

**Model 260-B**

This outfit includes jig saw, motor, portable saw, buffer, grinder, drill handle, chuck, wrench and drill-stand.

Price, Model 260-B..... each \$64.50

**Model 260-A**

This outfit contains 4 tools. It includes jig-saw, portable drill, buffer and grinder.

Price, Model 260-A..... each \$42.50

Specify voltage.

Add \$3.00 for 32 or 220 volts.

**Type 281 Speedway Combination Drill and Saw Kit**

Universal Motor

Five power driven portable electric tools are built into this kit. One power unit is adapted to all 5 to make an attractive price for so practical a set.

The set includes a portable saw, grinding wheel, buffer, scratch brush, motor stand, accessory arbor and steel carrying case. Specify voltage. Add \$3.00 for 32 or 220 volts.

Price, Type 281 ..... each \$42.50

## Speedway Combination Shops 1/4 H.P. Motor

This is a practical wood and metal working combination shop of sufficient capacity that it is even being used in the manual training classroom. It is profitably used by carpenters, cabinet-makers, radio builders and the Home Shop Worker.

### Model 265-D

Capacity is 10-inch diameters, 18-inch centers; 36-inch optional at \$3.00 extra. Noiseless direct drive 1/4 h.p. guaranteed motor. Lubricated by automatic waste packed bearings. Speed is 1750 r.p.m. Switch is in base at the finger tips.

Tail stock is the adjustable screw feed taper socket type with ring and 60 centers. Tool rest is adjustable to all positions. Unusually heavy construction affords rigidity. Nickel-plated.

Capacity of face plate is 10 inches in diameter. Has heavy construction. There are 3 screw holes for attaching work.

Spur center is of machined steel. Has 4 rugged teeth which provide positive non-failing grip. Accessory arbor supports pulleys, grinder, buffer, drill chuck, etc.

Base is single-piece of heavy ribbed, cast iron construction. It provides rigidity, enabling operator to turn down 1/4-inch diameters without chatter.

Assortment of 3 wrenches to provide for all requirements.

Two pulleys for driving bench saw and jig saw.

Jig saw has tilting top, 10-inch throat. It opens up field of curved line design in both wood and light gauge metals. Six extra blades included. Exclusive pressure screw mounting arrangement eliminates vibration.

No. 268 bench saw equipped with 8-inch blade, rip and cut-off fence, mitre gauge, removable filler block for accommodating various makes of cutters or dado heads. A 12x16-inch top tilts 45 degrees for bevel cuts and raises for grooving. Has bronze bearings; heavy casting construction insures lifetime of service.

Tool assortment includes the following items:

- 6" Buffer                    1/4" Carbon Steel Drill Bit
- 6" Scratchbrush        1/4" Carbon Steel Drill Bit
- 5" Grinding Wheel      1/4" Keyless Drill Chuck
- Gouge Chisel            Leatherette Tool Case
- Parting Tool

Price, Model 265-D (As Shown Above) ..... each \$145.00

### Model 265-C

Same as Model 265-D at top of page but does not include the jig saw.

Price, Model 265-C ..... each \$128.00

### Model 265-B

Same as Model 265-D at top of page but does not include bench saw.

Price, Model 265-B ..... each \$112.00

### Model 265-A

This assembly is stripped of all accessories. It includes lathe, motor, face plate, spur center, tool rest, tail stock, wrenches.

Price, Model 265-A ..... each \$70.00

Specify a.c. or d.c.

Add \$3.00 for 32 or 220 volts.

## Rockwood Paper Pulleys

A paper pulley overcomes in a large degree the annoyance and loss caused by a slipping belt. The lighter tension on the belt permits lighter shafting, hangers, etc., reduces consumption of oil and loss from hot bearings. Tighteners are not necessary.

Rockwood Pulleys are used extensively on dynamos, motors, etc.

Prices on larger sizes furnished upon request.

Diam. Inches	Face Inches	Price Each	Diam. Inches	Face Inches	Price Each	Diam. Inches	Face Inches	Price Each

## Some Facts About G-E Motors Distributed by Graybar

For every power application there is a G-E motor and a control to assure the economical, safe and satisfactory operation of that motor. Graybar's 71 distributing houses bring these motors within easy reach.

In matters of research, engineering knowledge and electrical experience the reputation of the General Electric Company needs no comment; it is accepted as a fact that this company stands second to none. In manufacturing facilities, in choice of materials, in the selection and training of workmen, in the inspection of every motor manufactured; in short, in all the factors that go to make up a satisfactory motor for every power job, G-E stands high.

Representative Graybar dealers throughout the country are at your service backed up by power apparatus specialists at our distributing houses. From meter to motor Graybar offers quick service, full information and advice and a reputation for satisfactory dealing on all power apparatus items.

### G-E Type SA A.C. Small Power Motors

Protected Type—Constant Speed  
60, 50, 40 and 25 Cycles, Single-Phase

Revolving primary Type SA motors should be selected as closely as possible for the frequency and voltage on which they are intended to operate, but successful operation may be expected on circuits where the variation of either the frequency or voltage from normal does not exceed 5 per cent. Where both the frequency and voltage vary, the sum of the variations must

not exceed 10 per cent. The starting torque and maximum torque will vary as the square of the voltage, the speed varying directly as the frequency.

Standard direction of rotation is counter-clockwise. Specify direction of rotation when ordering.

\*All frames have waste-packed bearings. Feet are cast integral with end shields. †Model No. does not include pulley or connecting cord with plug.

The waste-packed bearing protected type motors are mechanically interchangeable with the wick-oiled bearing open type motors of the corresponding frames for either A.C. or D.C. types. Footless motors in all frames listed can be furnished in the same ratings at same prices as with feet.

## G-E Type RSA Motors

Form D

110-220 Volts, 25 and 60 Cycles, Single-Phase, A. C.

A constant speed high torque motor. The motor starts as a repulsion motor and at a predetermined speed, a centrifugal device short circuits the commutator and the motor then runs as an induction motor.

Motor does not include pulley or cord and plug. Motors can be furnished wound for 50 and 40 cycles.

### 60 Cycles

Cat. No.	Horsepower	Speed R.P.M.	Frame No.	Shipping Wt., Lbs.

Frame 325 motor has wick oiled bearings; others waste packed. Frame 325 has feet cast integral with frame; others cast integral with end shields. All 1725 r.p.m. motors rated for continuous duty, 40 deg. C. temperature rise; all 1140 r.p.m. motors for continuous duty, 50 deg. C. temperature rise. Cat. Nos. do not include pulleys.

## G-E Types RKT and RKQ Fractional Horse Power Motors

Continuous Duty

Constant Speed, Squirrel-cage Rotor

3 and 2-Phase 60, 50, 40 and 25 Cycles  
Waste-packed Bearings

Rating Type RKT, 1/4-H.P.  
1725 R.P.M.

OPERATING CHARACTERISTICS.—Standard 60-cycle polyphase motors should not be operated on 50-cycle circuits on account of increased heating.

ENCLOSED MOTORS.—Can be furnished when desired.

2-PHASE MOTORS.—Type RKQ, 2-phase, open type motors furnished only on order.

STARTING TORQUE.—175 to 200 per cent of full-load torque with full normal voltage.

STARTING CURRENT.—600 per cent of full-load current with full normal voltage.

MAXIMUM TORQUE.—200 to 250 per cent of full-load torque. SPEED.—Speed regulation or slip is approximately 4 to 7 per cent.

HEATING.—Temperature rise of standard polyphase motors as listed below when operated under normal voltage, frequency and rated output continuously will not exceed 40° C.

VOLTAGE AND FREQUENCY.—Type RKT motors will operate successfully when the combined variation of voltage and frequency does not exceed 10 per cent above or below that given by the name plate stamping, but not necessarily in accordance with the standards established for operation at the normal rating. 440 and 550-volt motors can be furnished in the 60-cycle, 1140 r.p.m., 50, 40 and 25-cycle ratings.

**G-E Type SCR Single-Phase Repulsion Induction Motors**

**Constant Speed**  
 Designed for constant speed, with moderate or heavy starting torque. In starting direct from line, motors take current approximately in proportion to torque. To reduce current values during acceleration Type CR1026 rheostats may be ordered at an extra charge.

**110-220 Volts**

**G-E Portable Farm Motors**

3, 5, or 7 1/2 H. P. at 220 Volts for Single or 3-Phase with 3 Belt Speeds—Push Button Control

This is a convenient, portable unit for driving belted farm machinery. Portable and fixed motors, both a.c. and d.c. can be furnished with control devices, over a wide range of horsepowers, for a variety of applications on the farm.

Each equipment includes a motor, with ball bearings, mounted on a 2-wheel truck and the following accessories: 2 extra pulleys, 1 pulley box, 1 pulley puller, 1 CR7006 starter with relay and push button, 1 plugging receptacle and cable. Single-phase motors have enclosed covers over top and bottom of commutator.

\*Not recommended for belt drive.

†Frame 17A when belted (BD-2) has a larger size bearing and shaft.

For 2200 volts 3-phase or 4-wire, 2-phase, FK-20 (3 or 4-pole) oil circuit breaker with magnetic lock and potential transformer instead of CR7006.

Vertical motors are designed with short shaft extended downward for coupling. The oiling system is self-contained. Operating characteristics will in general be somewhat different from those of corresponding horizontal motors.

Enclosed terminal box for conduit wiring is regularly furnished except with Frames 15 to 17B, but will be supplied with these sizes without extra charge if ordered with motor. No allowance for omission.

**G-E Normal-Torque General Purpose Squirrel Cage A.C. Motors**

**High-Reactance**

**Type FT, 3-Phase; Type FQ, 2-Phase**

**60 Cycles Continuous Duty, 220, 440 and 550 Volts  
40° C. Rise**

The Types FT and FQ General Purpose Motors are in general suitable for application wherever a Type KT motor with compensator is used. They are designed to start on full voltage, giving slightly higher torque but approximately the same starting current as the KT motor with a compensator. Therefore, they

can be considered for general purpose applications.

These motors are completely automatic; no internal switches or brushes are required—just throw the line. They meet N.E.L.A. starting current recommendations except above 30 h.p.

The motors are simple in construction—there is only one insulated winding. The cast rotor winding is enduring and practically indestructible. The dust-proof bearings insure minimum maintenance costs.

Furnished with sleeve or ball bearings.

**G-E Double Squirrel Cage A.C. Motors**

**Type FTR 3-Phase 60 Cycles, 220, 440 and 550 Volts**

**Type FQR 2-Phase 60 Cycles, 220 and 440 Volts**

*Constant Speed, Continuous Duty, 40° C.*

**Type FTR Motor**

The FTR and FQR motors give high starting torque with low starting current. They provide quick and positive acceleration with good overload capacity. They operate without internal switches or centrifugal devices. No compensator is required; for start, run and stop use a magnetic starting switch (CR7006). They have across-the-line starting currents (900 series frames) within National Electric Light Association recommendations. They can be furnished with either sleeve or ball bearings.

The high starting and accelerating torque of types FTR motors are produced through the unique reaction taking place in the double-wound rotor.

The complete rotor winding being essentially a one-piece structure gives a maximum of rigidity, mechanical strength, and freedom from deterioration by age or abnormal operating conditions.

**Rotor—Type FTR Motor**

In addition to the quick, positive acceleration resulting from inherently high starting and accelerating torque, the type FTR is admirably adapted for automatic, semi-automatic, or remote control and for use on machines where portability, weight, or space limitations demand compact and simple control accessories.

†Temperature rating for 2-phase motor in this rating is 50 degrees C.

## G-E Types BD (2-Pole) and CD (4-Pole) D.C. Motors

Constant Speed, Commutating Poles

Iron sliding bases and starting rheostats are included with standard belted motors. Semi-enclosing covers will be furnished on special order. The use of solid enclosing covers increases the temperature rise of motors to which they are applied and therefore modifies the open ratings. Belt tightener attachments, consisting of cast iron ring adjustable idler on pulley end, may be furnished on order.

Motors will operate successfully at normal rated load at any voltage not more than 10 per cent above or below normal, but not necessarily in accordance with the standards of performance established for operation at normal rated voltage.

All standard Types BD and CD shunt wound motors may have speeds increased by field adjustments 25 per cent above normal, maintained rated output.

\*R-301-B has 18 running points. Where 10 running points are sufficient R-302-B may be substituted up to and including 3 h.p., making a price allowance of \$18.00 on controller only.

†For 115-volt ratings not listed, add 10 per cent to 230-volt motor only prices.

‡Temperature rise 40-degree C. over a speed range from 150 per cent of base speed to maximum speed. From 150 per cent down to base speed, motors will operate at rated capacity without injurious heating.

Enclosed terminal box for conduit wiring is regularly furnished; no allowance for omission.

If enclosed non-ventilated ratings are required, refer to the company.

G-E Back Geared Motors

Type KT, 3-phase Motor on Reduction Gear Base

Direct or alternating current motors for use with back geared features, employing steel or fabroil pinions, should be selected so that the horse power rating at any speed does not exceed the limits indicated below.

H.P.	Speed R.P.M.	H.P.	Speed R.P.M.	H.P.	Speed R.P.M.
10	1800	30	1000	60	750
15	1500	40	900	50	720
30	1200	60	800	40	600

If side wall or ceiling installation is desired, platform suspension with standard horizontal equipment is recommended.

Cradle Type

Including Pinion, Gear and Gear Case for Types KT and KQ Motors

The cradle type back-gear attachment is a device which is designed for use with standard motors, with or without standard base. When standard base is used, the back-gear attachment is fitted between the motor and base and dowelled to the motor to ensure alignment being maintained. Ring oiling bearings are used. Gear cases are oil tight, except at the joints and around the shaft.

For addition to the net retail price of standard motor. Sliding base not included, but if wanted, use standard sliding base and price.

Gear case not furnished unless called for on the requisition.

Prices upon application.

## G-E Alternating Current Crane and Hoist Motors

Open or Enclosed  
 Type MTC, 3-Phase Type MQC, 2-Phase  
 220, 440 or 550 Volts

Enclosed Type

Types MTC and MQC are varying speed induction motors for intermittent service; they are of the slip-ring type. Although primarily intended for all classes of work in the broad range of crane and hoist duty these motors are successfully used for many applications outside this field.

550 Volts

**G-E Continuous Rated Medium Speed A.C. Generators**

Types ATB, ATI, AQB and AQI  
For Belt Drive or Direct Connection

60-Cycle, 2 and 3-Phase, 240, 480, 600 or 2300 Volts

Type TS Synchronous Motor  
7500 Series

These generators are designed for direct connection or belting to prime movers. Generators are of the revolving-field, salient-pole, separately excited type, with optional direct connected exciters. A chain-operated, generator field rheostat and a field-discharge resistor are included with each generator; foundation bolts are not furnished.

Types ATB or AQB are not provided with amortisseur windings; generators furnished with amortisseur windings are designated as Type ATI or AQI generators.

Rotor spider and pole pieces are of laminated steel. Poles are held to spider by dovetails.

Type TS Synchronous Motor  
7600 Series

\*Direct connected only, with shaft and 2 bearings.

†This machine for direct connection can be given a rating of 225 kw. at 1.0 p-f., and 180 kw. at 0.8 p-f.

Prices upon application.

**G-E Slow Speed Synchronous A.C. Generators**

Types ATB and ATI—Continuous Rated

60 Cycles, 3-Phase, Separately Excited

For Direct Connection to Steam and Internal Combustion Engines

Standard generators are supplied without base, shaft, bearings, foundation bolts or shaft keys, but with brush-holder support, foundation caps and rheostats. Also supplied with shaft, one or two bearings and with or without base.

Direct-connected or belted exciters can be supplied for all sizes.

Data on 2-phase generators on request.

## G-E Horizontal Water Wheel Driven A.C. Generators

3-Phase, 60 Cycles, Separately Excited

**Water Wheel Driven Generator with  
Pedestal Bearing Mounted on Sub-Base**

These water driven generators combine the highest electrical operating characteristics with a most rugged mechanical construction presenting effective guarantee of uninterrupted service and perfect safety at relatively high speeds. They have proven exceptionally satisfactory during their many years of actual service, and embody in their design and construction the most improved features, resulting in a low cost of operation and a minimum cost of maintenance.

Standard kw. capacities:

At .8 P.F.—50-60-75-100-125-150-175-200

At 1.0 P.F.—62.5-75-93.8-125-156-187-219-250

Prices upon application.

**G-E Slow Speed Engine-Driven  
D.C. Generators**

Types LDR and LDRS—Commutating Pole Type

125 and 250 Volts 2-Wire, 125/250 Volts 3-Wire  
40° C. Rise

For Direct Connection to Steam and Internal  
Combustion Engines

Supplied for either 2 or 3-wire service, shunt or compound-wound for any voltage. Three-wire generators are furnished with 2 collector rings and external auto-transformer for obtaining 3-wire neutral.

Regularly supplied without base, shaft, bearings, foundation bolts or shaft keys. Can also be furnished with shaft, 1 or 2 bearings and with or without base.

**G-E CR1003 Enclosed Heavy Duty Starting  
Rheostats**

Under-Voltage Protection—For Direct Current

For Series, Shunt or Compound-Wound Motors

CR1003 rheostats are suitable for use with series, shunt or compound-wound direct current motors that do not require more than 150 per cent full load torque to start or longer than 30 seconds to attain full speed. They comply with American Standard Resistor Classification Nos. 34 and 35.

When ordering state CR No. and Cat. No. of rheostat.

## G-E CR1026 A.C. Enclosed Starting Rheostats

For Type SCR Repulsion Induction Motors

40, 50 and 60 Cycles, Single-phase

These starters may be used with motors that do not require more than 150 per cent torque to start or longer than 30 seconds to attain full speed. They comply with Amer. Std. Resistor Classification No. 35. They are primarily for use with the single-phase repulsion-induction motors (Type SCR) where the inrush of current resulting from throwing the motor directly upon the line is objectionable. When these motors are started by being thrown directly upon the line they require from 250 to 300 per cent full-load current. While in many cases this starting current may not be objectionable, it is recommended that a starter be installed in every case with the 7½ and 10 h.p. motors and with the smaller motors when it is desired to reduce the starting current.

Starters for use with motors up to and including 5 h.p. 110 volts and 7½ h.p. 220 volts are provided with button contacts. Larger sizes have renewable segments.

The switch, base, and resistor comprise a self-contained unit which may be removed bodily from the enclosing case.

The retaining magnet coil is connected across the line.

Off, Start and Run markings on the cover correspond to the respective switch position.

Starters are operated by an external handle.

Conduit knockouts are provided in the top and bottom of the enclosing case near the back, permitting a straight run of conduit.

### 110 Volts

Cat. No.	H.P. of Motor	Ship. Wt., Lbs.	Price Each

## G-E CR1028 A.C. Enclosed Starting Rheostats

For Slip-Ring Induction Motors

Size No. 2

These rheostats are totally-enclosed in a case provided with convenient conduit knockouts, and are operated by a lever outside the case, thus conforming to safety regulations.

The starting arm is spring-retracted and is held in the running position by a latch, which can be tripped from outside. The secondary circuit is not opened on the dial switch which, to avoid overheating the resistor must be operated to bring the motor up to speed as soon as the primary switch is closed.

Order by catalogue number when the complete motor rating including horse power, revolutions per minute and frame number with which the rheostat is to be used, corresponds to the motor rating listed opposite the catalogue number of the rheostat.

Orders or requests for quotations on rheostats differing from those listed above, should give the full name plate rating of the motor and the amperes secondary current per phase at full load, or the secondary volts per phase at standstill. The secondary volts per phase should be measured with full voltage on the primary, and with all secondary phases open-circuited.

These rheostats control the secondary circuit of the motor only. A primary switch is required in addition for the primary circuit. Push button stations are not required.

**G-E CR1034 A.C. Hand Starting Compensators**

For Squirrel Cage Induction Motors  
Overload Protection by Hand-Reset Temperature Relay  
Undervoltage Protection  
Form K1 Size No. 1  
3-Phase—60 Cycles

Shipping weight, 200 pounds.

CR2824-TC-121  
Relay Mounted

With Ammeter  
Attachment

The CR1034-K1 Compensator consists of an auto-transformer winding with taps, a switching device, an undervoltage protective device, and a 2-coil hand reset temperature overload relay, all self-contained within a sheet metal case. A handle, on the outside of the case, is provided for operating the switch. Compensators are for wall mounting. Pipe supports should be ordered if compensator is to be mounted on the floor.

Auto-transformer starting coils are suitable for heavy and frequent duty starting. Up to and including 50 h. p., 2 taps are provided for 65 and 80 per cent of the line voltage, giving respective line currents equal to 42 and 64 per cent of the across-the-line starting current. Above 50 h.p. taps are provided for 50, 65 and 80 per cent of the line voltage, giving respective line currents equal to 25, 42 and 64 per cent of the across-the-line current.

**Auto-Transformer**

Compensators shipped connected to 65 per cent tap.

**Switching Mechanism**

Oil-immersed; has 3 definite positions: off, starting and running. Necessary oil is furnished.

**Undervoltage Protection**

Provided by retaining magnet which holds switch in running-position. Upon failure of voltage, it releases switch, which automatically returns to off-position. Magnet is energized from full line potential for circuits of 600 volts or less.

**Overload Protection**

Compensator has double acting push-button in front cover. The stop feature—when the button is pressed, it opens the undervoltage release circuit, tripping the switch if it is in the running-position. The double acting mechanism of the push button also opens the contacts and insures that the switch, if in the running-position, will be tripped upon starting to remove the front cover of the compensator.

**Stop-Reset Button**

Reset feature—designed so that in case the overload relay trips due to overload on the motor, by pressing the button the overload relays will be reset.

**Ammeter Attachment**

Consists of a dead-beat indicating ammeter mounted on a pressed steel box. Knockouts for conduit wiring are provided in the top, bottom and sides of the box, and in addition there are four 1/4-inch knockouts in the bottom of the box at the corners for bolting the attachment to the conduit wiring box of the compensator and 4 in the top at the corners that can be used for attaching a similar box containing other accessories such as a disconnecting switch.

Primary ammeters operating directly from the line are furnished for compensators of 600 volts and less.

**Ordering Directions**

Order a CR1034 compensator by size number and catalogue number. Order a CR2824-TC-121 temperature overload relay for size No. 1 compensators only. Relay is included with larger sizes.

## G-E CR1035 Type FP-110 Oil Circuit Breakers A.C.

These switches are especially adapted for the protection of small induction motors which can be thrown directly on the line or can be used in connection with compensators, drum type switches or similar devices employed in starting alternating-current motors. All live parts are enclosed. Frames, oil tanks and calibrating parts are practically dustproof. The frame is provided with a lug to take a padlock by which the switch may be locked in the open position.

All automatic switches, except the triple-pole with undervoltage trip, trip free from the handle and cannot be held closed on overload or short circuit, or left in an intermediate position. The triple-pole switch with undervoltage trip can be held closed.

The handle does not follow the operation of the contacts except on the non-automatic and triple-pole switches, with undervoltage trip. The handles of all switches, except on the triple-pole with undervoltage trip, after tripping automatically, stay in the on-position until the operator turns the handle to the off-position to reset the mechanism before the switch can again be closed.

The frame is arranged for mounting on any flat surface or bracket and is held rigidly by 2 bolts.

The contact parts are insulated from ground and between phases by porcelain insulation, giving a high factor of safety, and are constructed as a unit so that they may be easily removed from or replaced in the frame. The contacts are double-break, opening by gravity, with speed augmented by springs. Contact fingers are so constructed that the burning occurs on a surface other than that used for contacting when the switch is in the closed position.

The switch frame is arranged to take either open or conduit wiring at right-hand end.

All automatic switches equipped with inverse time relays have the time setting controlled by a needle valve. The time setting is easily adjusted to give the proper delay for motor starting without removing the dashpots from the calibrating tubes on which they are mounted.

The current setting recommended is 25 per cent above the normal (full-load) current of the motor for motors with 25 per cent overload guarantee and about 10 per cent above the normal (full-load) current of the motor for continuous rated motors. At this setting the time should be adjusted so that the switch will just fail to trip under starting conditions or in approximately 10 to 15 seconds under starting load. This will give a considerably longer time under ordinary overload conditions, but if the current-setting is correct, this time will allow the switch to trip out with the motor running single-phase before the motor will be injured by such operation.

Switches with undervoltage trip have mechanisms similar to the other automatic switches and except the triple-pole, trip free from the handle.

The undervoltage trip operates at approximately one-half rated voltage. Combinations are listed for 25, 40, 50 and 60 cycles at 110, 220, 440 and 550 volts.

The auto-transformers, where required, are mounted inside the switch, all wiring connections being enclosed.

All switches are triple or 4-pole, single-throw only. For single-phase, use the triple-pole switch, leaving middle pole disconnected, using only one or both series trip coils.

Quick break switches have knob handle.

Quick make and break switches have handle for shipper-rod connection. These are not adapted for operation by hand. Knob handles may, however, be substituted for shipper rod handles where required.

## G-E CR1035 Type FP-110 Oil Circuit Breakers

\*Series coils will carry 25 per cent overload for 2 hours at 45 degrees Centigrade rise or less. The calibration of series coils is from normal (as listed) to twice normal, i. e., 2 to 4, 3 to 6, 25 to 50, 50 to 100, etc.

†The automatic quick make and break switches have shipper-rod handles which are not adapted for hand operation. Knob handles will be furnished at the same price if specified on the order.

‡The under-voltage trip and transformer where required are mounted within the switch frame and when properly adjusted, the switch cannot be held closed unless there is full voltage on the circuit.

The under-voltage coil is reset by the action of the operating handle. The under-voltage coil should be connected across one phase of the load side (if possible) with proper transformer tap (where transformer is used) in circuit. No resistance is required.

§Cat. No. covers switch complete with receptacles for 2 thermal cutouts but does not include the cutouts which must be ordered as a separate item by Cat. No. from following table. Price covers switch complete with 2 thermal cutouts.

¶Includes auto-transformer with taps tagged to indicate proper connection.

**Thermal Cutouts**

The thermal cutouts do not protect the branch circuit from short circuit and cannot be considered as taking the place of branch circuit fuses, which must be installed as specified in the Underwriters' Code.

## G-E Type FP-115 Oil Circuit Breakers

Triple and 4-pole, Single Throw  
Non-automatic, for Manual or Shipper-rod Control

Maximum Rating: With Squirrel-cage Motors: 7½ H.P., 110 Volts; 15 H. P., 220-440-550 Volts  
Maximum Rating: With Slip-ring Motors: 7½ H. P., 110 Volts; 15 H. P., 220 Volts; 30 H. P., 440-550 Volts

**APPLICATION.**—Used to advantage for control of motors on looms and various types of textile machinery; also as disconnecting switches. On account of safety features they will be found useful in replacement of open lever switches.

**SAFETY.**—No exposed live parts; dust proof and fire proof; position of contacts clearly indicated; can be locked in open position.

**MECHANISM.**—Quick make and quick break type suitable for shipper-rod or manual operation.

All parts are supported on a single frame. Easily mounted on wall post bracket, machine frame or flat surface.

Double break in each phase. Contacts are of modified

wedge construction, insuring perfect contact and long life under severe service. No burning of actual contact surfaces.

All parts are die made and interchangeable.  
Overall dimensions: Width, 6¼ inches; depth, 5½ inches; height, 8½ inches; handle extends 3¼ inches above the breaker and projects out 2½ inches.

## No. CR1047-B1 G-E 3-Pole Starting Switches

Switch is of the tumbler, snap-action type, designed for throwing 2 h.p. motors directly on the line.

The case is dust-tight and is provided with ¾-inch knock-outs in the top and bottom for conduit connections.

When ordering give Cat. No.

Cat. No.	Height	Width	Depth	Shipping Wt., Lbs.	Price Each

## No. CR3144 G-E Field Resistors

For Machine Tool Service

This field resistor consists of CR9000 Form P resistor unit assembled in a well-ventilated box, and mounted on back of the CR3105 drum switch. The leads from the resistor pass through holes in the back of the drum switch frame to the proper terminals within, thus making a self-contained and compact unit.

## G-E CR1038 A.C. Starting Switches For Small A.C. Motors

No. 256911 Switch

CR1038-A1-A2 or B2 Motor Starting Switches consist of a triple or 4-pole, single-throw, quick-make and break switch and two thermal cutouts mounted on a base, totally enclosed in a sheet steel case with operating handle projecting through the front of the case. Cat. No. 256911 and Cat. No. 258206 switches are for use with three-phase or two-phase three-wire motors, while Cat. No. 258205 switch is for use with two-phase four-wire motors.

Overload protection is furnished by two inverse-time thermal cutouts. The cutouts are mounted by two metal strip terminals, each slotted for a holding-down screw.

By reason of the time lag in the heating coil, the momentary inrush starting current will not cause the thermal cutouts to open the circuit. Standard fuses of a rating to protect the thermal cutouts against short circuits must be provided back on the line. This fuse rating is given on the thermal cutout.

Cast iron pedestals have been designed for use with the CR1038-A2 and B2 switches where the thermal cutouts are mounted above the switch.

This design of the CR1038 switch is particularly applicable for pedestal mounting and where it is desired to have the service lines come in at the bottom of the switch.

Each switch is provided with a locking device.

**Ordering Directions**  
Order CR1038 switch by Cat. No.; thermal cutouts by Cat. No. and pedestal by Cat. No.

**G-E Type CR1042-A3 A.C. Enclosed Resistor Starters**

For Squirrel Cage Induction Motors Having Speeds of Less Than 3600 R.P.M.

Under-Voltage and Overload Protection  
3-Phase—60, 50 and 25 Cycles

Designed to keep the inrush currents within limits allowed by N.E.L.A. rules. The voltage at motor terminals at starting averages 82%, giving a starting torque of approximately 65% of that developed when thrown on the line. The resistor capacity is such as to carry 3 times normal full-load current for 15 seconds once every 4 minutes for an hour, without exceeding American Standard temperature limits. Have a single-step resistor. The switching elements are of contactor finger type—strong and readily renewable.

Operated by throwing handle to starting position and holding it there until motor is under way. Releasing handle will cause the starter to automatically throw over to running side without disconnecting motor from line.

Safety type, completely enclosed in a ventilated case externally operated.

	550	55	2829014G12	47.00		

\*Price is for the starting rheostat complete with a CR2824-TC-121-C temperature overload relay. The relay may be omitted at \$6.00.

†The starter is furnished with punched terminals which are rated 30 amperes maximum by the Underwriters. Where the normal current of the motor exceeds 30 amperes, a set of punched tube terminals, Cat. No. 1774499, should be ordered at no increase in price.

The following table gives catalogue number and symbol of the temperature relays and range of the full-load currents of 40-degree motors with which each may be used:

Cat. No.	Relay Symbol	Normal Rating in Amperes	Full-Load Current of Motor in Amperes
2019557G11	TC-121-C11	6.5	4.7-5.8
2019557G12	TC-121-C12	8.0	5.9-7.2
2019557G13	TC-121-C13	10.0	7.3-9.2
2019557G14	TC-121-C14	13.0	9.3-11.6
2019557G15	TC-121-C15	16.0	11.7-14.4
2019557G16	TC-121-C16	20.0	14.5-18.0
2019557G17	TC-121-C17	25.0	18.1-22.0
2019557G18	TC-121-C18	30.0	22.1-28.0
2019557G19	TC-121-C19	40.0	28.1-36.0
2019557G20	TC-121-C20	50.0	36.1-46.0
2019557G21	TC-121-C21	65.0	46.1-58.0
2019557G22	TC-121-C22	80.0	58.1-80.0

**Ordering Directions**

The price of the starter given above includes the relay but the Cat. No. covers the starter only.

1. Order a CR1042-A3 starter by Cat. No.
2. Order a CR2824-TC-121-C temperature overload relay by Cat. No.
3. Order a set of terminals Cat. No. 1774499 if normal motor current exceeds 30 amperes.

**No. CR1135 G-E Semi-Automatic Starters**

For Synchronous Motors  
60, 50 and 25 Cycles—3-Phase

This semi-automatic reduced-voltage starter is recommended for starting medium and high-speed synchronous motors.

The CR1135-A1 starter consists of the following: a.c. line ammeter; d.c. field ammeter; 75-ampere field contactor with auxiliary contact for closing the discharge circuit during starting and stopping; field-actuating relay, which allows field excitation to be applied upon reaching a speed near synchronism; field-discharge resistor; and a CR1034 hand-starting compensator which includes a temperature overload relay.

The CR1135-C1, 2200-volt starter differs from the CR1135-A1 in that the CR1034-K17 compensator is used.

When ordering a CR1135-A1 or C1 starter, give the complete rating of the synchronous motor.

For the CR1135-C1, also order a 1½-kv-a., 2200/220-

No. CR1135-A1

volt, potential transformer and give one of the following Cat. Nos: For 60 or 50 cycles, Cat. No. 79047; for 25 cycles, Cat. No. 36016.

\*Price does not include rheostat mechanism, but the panel is drilled for mounting a CR8001, 12-in. exciter field rheostat. Prices of CR1135-C1 starter include potential transformer.

## G-E CR1263 and CR1264 A.C. Enclosed Speed Regulating Rheostats

For Types MT or MQ Slip-Ring Induction Motors  
For Secondary Control Only, 60 Cycles, 3 or 2-Phase  
110, 220, 440 and 550 Volts

CR1263 and CR1264 Enclosed Rheostats are for use in the secondary circuit of Types MT and MQ slip-ring induction motors to reduce the speed 50 per cent. As they are not connected with the primary circuit of the motor, it is necessary to also install an oil circuit breaker, magnetic switch or similar device to control the primary circuit. They are enclosed in a case provided with convenient knockouts, and are operated by a lever outside the case.

CR1263 Rheostats are intended for use with motors where the torque requirements are practically constant throughout the speed range. The rheostats for motors up to 3 h.p. inclusive provide 50 per cent speed reduction at approximately 50 per cent torque, but have capacity for full load torque. The rheostats listed for motors above 3 h.p. provide 50 per cent speed reduction at approximately full load torque. The resistors comply with Amer. Std. Resistor Classification No. 95.

CR1264 Rheostats are intended for use with motors that drive fans or other machines where the amount of torque required decreases as the speed is reduced. They have sufficient resistance to provide for speed reductions up to 50 per cent at 33 1/3 per cent full-load torque. The resistors comply with Amer. Std. Resistor Classification No. 93.

Both types of rheostats can be used where the torque requirements are somewhat less than the values given above but the speed reduction will be correspondingly less. For example, at 50 per cent full-load torque, the maximum speed reduction that can be obtained with a CR1263 Rheostat is 25 per cent instead of 50 per cent.

A 3 or 4-pole knife switch must be installed to open and close the primary circuit.

## G-E CR1920-A2 and B1 Inverse-Time Protective Cutouts

For A.C. Motors

CR1920-A2

The enclosing cases, containing thermal cutouts, are suitable for use with motor-starting devices where it is desired to obtain inverse-time overload protection, for example, with CR3900 drum type switches.

The CR1920-B1 case has one 3/4-inch knockout in each end. The CR1920-A2 case has three 3/4-inch knockouts in each side and 2 in each end.

### CR1920-A2

Fusible link, Cat. No. 167539 is the same for all cutouts.

**G-E CR2904-A1 Open-Phase and Phase-Reversal Relays**

25 to 60 Cycles, 600 Volts or Less

For use with any motor-starting device that provides under-voltage release or under voltage protection for a motor of 3 H.P. or larger.

A CR2904-A1 panel consists of an open-phase and phase-reversal relay mounted on an insulating base and enclosed in a sheet metal case with knockout holes on top, bottom, and sides, and with hasp and staple for locking the cover closed. Used in connection with the control of a polyphase motor to prevent the motor from starting when a phase of the power circuit is open or reversed, and to cause the motor to be disconnected from the line when a phase of the circuit opens when the motor is running. The relay does not open the motor circuit itself but opens the control circuit to the contactor or circuit breaker which handles the main motor circuit. This makes this panel suitable for use with any hand or automatic control device that provides under voltage release or under voltage protection.

Cat. No.	Continuous Capacity Amperes	Min. Amp. for Operation	Approx. Ship. Wt. Lbs.	Price Each

**G-E CR2990 Thermostats For A.C. or D.C. Circuits**

Thermostat can be accurately adjusted for a wide variation in temperature.

Adjustment will not change from wear or vibration.

Wiping contacts are self-cleaning and do not affect adjustment.

The thermostat is ideal for installations where excessive vibration occurs, such as in railway service, etc. The small size (5 inches square) makes it inconspicuous and easily mounted.

Mechanism is of the quick-break type, supported on frictionless, long-wearing edges.

Will operate satisfactorily in damp places. Particularly suitable for refrigerator work.

All parts accessible and substantial.

Description	Volts	Amp. Cap. Contacts	Ship. Wt. Lbs.	Price Each
For Use on Either Alternating or Direct Current Circuits	110	0.5	7	\$9.00
	220	0.25	7	9.00
	550	0.1	7	9.00

**Type CR2922-A1 G-E Pressure Governors For A. C. or D. C. Circuits**

Type CR2922-A1 Pressure Governor

These governors are recommended for the automatic control of motor-driven pumps, air compressors, etc., and must always be used in connection with a suitable type of automatic starter. The relay is designed to handle the control circuit of any standard G-E d-c. automatic starter and a-c. automatic starter up to 300 amperes. Above 300 amperes it is necessary to insert a CR7002 switch. Only 3 control wires are necessary for connecting the pressure governor to the starter. These governors can be used on any liquid or gas system that will not corrode the bronze Bourdon tube.

To prevent fluctuations of pressure in the discharge pipe from affecting operation, the governor should be connected to the tank by an independent pipe and should not be connected to the discharge pipe from the pump. If this is not feasible, a small air tank of about 10-gallon capacity may be placed between the pressure governor and the discharge pipe. A needle valve may also be found necessary to further prevent fluctuations which affect the operation of the governor.

Shipping weight, 35 pounds.

\*The stop post indicators on the governor may be brought close enough together to give this range between high and low pressures.

†The pound is the full pressure scale rating of the governor. Each governor has a maximum pressure adjustment as indicated in the table.

**Ordering Directions**

Order by CR number and by catalogue number.

Prices for governors for pressures above or below those listed and for other voltages and frequencies will be furnished on application.

## G-E Type CR2927 Pressure and Vacuum Switches

For A.C. or D.C. Circuit—Double-Pole, Double-Break

2 H.P., 110 or 220 Volts, D.C.; 3 H.P., 110 or 220 Volts, Single-Phase, A.C.; 5 H.P., 110 or 220 Volts, 3 Phase, A.C.; and 1 H.P., 550 Volts, A.C. or D.C.

CR2927-S2 Pressure Switch with Unloader

For use with motor-driven pumps or compressors when it is desired to maintain a pressure or vacuum between specified limits. Switches are suitable for handling pilot circuit of any standard a.c. or d.c. automatic starter, or for throwing small motors directly across the line. May be used for controlling the pressure of any gas or liquid which does not cause deterioration of the rubber diaphragm.

Switch consists of a punched-steel case, a pressure chamber with diaphragm, an adjusting spring, a lever system and a switch mechanism.

The 1/2-inch pipe tap in pressure chamber provides for easy connection to pressure line. Pressure chamber with pipe-tap can be rotated through increments of 60 degrees, making installation more convenient. Base is provided with feet, drilled for mounting screws.

Contacts are double-pole, single-throw, double-break. Stationary contacts are silver-tipped. Moving contacts consist of spring-retained, U-shaped, copper punchings which rest on 3 points when contact is made, thus insuring equal pressure on each tip regardless of wear. Terminal screws are provided on stationary contacts and are located so that switch is easy to wire.

Working parts are enclosed. Two 3/4-inch knockouts provide conduit connections. The cover is fastened by one screw. All adjustments and cover can be sealed if desired.

Pressure is transmitted by diaphragm to a pressure plate against the adjusting spring. Movement of pressure plate is transmitted to switch mechanism by means of a lever. Switch mechanism has a snap action which provides a quick make and break of the circuit and prevents arcing.

A range adjustment device is attached to bottom of case to provide any desired opening and closing range between limits specified in table. By means of this device, the range between opening and closing pressures is adjustable from 10 to 30 pounds at low pressure, and from 15 to 40 pounds at high pressure. Range between opening and closing of a vacuum switch is adjustable from 2 to 7 inches at low vacuums, and from 3 to 8 inches at high vacuums.

Standard switch is adjusted to open circuit at high pressure and to close it at low pressure. This operation can be reversed by changing position of fulcrum screws.

Unloader reduces pressure in cylinder of air compressor to atmospheric pressure as soon as pressure switch has opened circuit of driving motor. This action of the unloader reduces starting torque required of motor when pressure switch again closes circuit to start compressor.

Unloader, Cat. No. 1731687G1 for use with pressure switch, can be furnished at \$1.50 each.

### Ordering Directions

Order by CR number, form and Cat. No. If unloader is desired, order by Cat. No.

## G-E Type CR2931 Enclosed Float Switches Forms A, B, C and D

Form D

These float switches have a continuous capacity of 30 amperes, either a.c. or d.c. up to 550 volts. They may be used for throwing motors up to the following capacities directly on the line.

Circuit	H.P. of Motor	Volts	No. of Poles of Switch
A.C.	2	110-220	2
Single-Phase A.C.	3	440-550	2
A.C.	3	110	2 or 4
2 or 3-Phase D.C.	5	220-440-550	2 or 4
	1	115-230-550	2

These switches are drip and splash-proof and are suitable for either tank or sump operation. Shipment is made with the parts assembled for tank operation. If sump operation is desired, the operating parts can be easily reassembled. All electrical parts are enclosed by a heavy

cast-iron weatherproof enclosing case drilled and tapped at the top for 1 1/4-inch conduit. The lower half of the case is removable. The moving contacts are operated by a weighted arm falling over center which gives them a quick motion when opening and closing.

Form A is for clamping to the inside top edge of a tank and is operated by a rod and float. Range, 10 inches to 2 feet.

Form B is for bolting to a tank cover and requires a guide in the cover for the operating rod. Range, 10 inches to 3 1/2 feet.

Form C is for bolting to a tank cover. Range, 10 inches to 3 1/2 feet.

Form D is for bolting to a tank cover and is operated by a chain and float, thus being suitable for any depth of tank or any variation in water level not less than 10 inches.

Cat. No.	Form	No. of Poles	Ship. Wt. Lbs.	Price Each	Cat. No.	Form	No. of Poles	Ship. Wt. Lbs.	Price Each

141639	A	4	95	34.00	141647	C	4	100	36.00
141641	B	2	95	34.00	*141649	D	2	110	34.00
141643	B	4	105	38.00	*141651	D	4	120	38.00

### Forms L and M

Used on control circuits and for throwing small motors up to the following capacities directly in the line.

Circuit	H.P. of Motor	Volts	No. of Poles of Switch
A.C.	1	110	2
Single-Phase A.C.	2	220	2
A.C.	1 1/2	110	2
2 or 3-Phase D.C.	3	220-440-550	2
	1	115	2
	2	230-550	2

All electrical parts are enclosed in a drip and splash-proof enclosing case which is drilled and tapped at the bottom for a 3/4-inch conduit. The moving contacts are actuated by a snap action mechanism which assures a quick break. A double break is provided for each pole. Switches may be used for either sump or tank operation.

Form L is operated by a chain and float. Suitable for any variation in water level not less than 2 inches.

Form M is rod-operated. Range 2 in. 4 ft. 6 in.

Cat. No.	Form	No. of Poles	Shipping Wt., Lbs.	Price Each
*2666739	L	D-p.	40	\$19.00
2666740	M	D-p.	70	19.00

### Form P

For control circuits only; used to interrupt the following maximum currents: On d.c. 1/2 ampere at 250 volts; 1/4 ampere at 600 volts. On a.c. 10 amperes at 110 volts; 5 amperes at 220 volts; 2 amperes at 440 or 550 volts.

Switch is single-pole only, with a double break.

A knockout for 1/2-inch conduit is provided in top of case. May be mounted on horizontal or vertical surface; chain-operated only. Cadmium-plated steel punched parts.

Cat. No.	Form	No. of Poles	Shipping Wt., Lbs.	Price Each
2827795	P	S-p.	10	\$10.00

\*Prices for Forms D, L and P switches include 15 feet of bronze chain; add 15 cents for each additional foot for Forms D and L, 5 cents for each additional foot for Form P.

\*Customer to locate and drill for conduit.

### Directions for Ordering

Specify type and form of station required as CR2940-BS-207-J.  
For the CR2940-BS-11-N station, give voltage of the

circuit if it is to be used for undervoltage protection, or the amperes field current if it is to be used for field protection.

**G-E Type CR2940 Push Button Stations**

BS-211-A BS-212-A

For use in the control circuits of automatic starters. Designed to withstand frequent operation and ordinary rough usage of machine-tool and similar applications.

Stations are divided into 3 general classes: momentary contact, maintaining contact and a combination of momentary and maintaining contacts. With a momentary contact, the circuit is made or broken only as long as the operator's finger depresses the button. This feature is required when the station is used with a starter that must provide undervoltage protection. A maintaining contact holds the circuit open or closed as does an ordinary knife switch.

Five kinds of contacts are used: disk, leaf-spring, copper-bar, silver-button and snap-switch.

A disk contact consists of a silver-plated disk normally held by a spring against 2 stationary top contacts. When button is depressed, disk is moved away from top contacts and makes a circuit between 2 bottom contacts. Disk is self-aligning and can be reversed to give double life.

A leaf-spring contact consists of a phosphor-bronze spring and 2 stationary contacts which are bridged by the spring in operation. This kind of contact is smaller than the disk and has less capacity. There are no upper and lower contacts on one button as with a disk contact.

The third type uses a copper bar which is hinged at one end and makes or breaks contact at the other end. On the BS-79-J, 2 contacts have a common connection which cannot be omitted.

A silver-button contact meets the design requirements of the stations on which it is used better than the disk contact.

Snap-switch type is equivalent to a double-pole single-throw or single-pole double-throw knife switch. Maximum voltage with which these can be used, 230 volts, a.c. or d.c.

All stations except BS-4, BS-8, BS-11-CL, BS-12-DK, BS-73, BS-79 and BS-207 are enclosed in black-enameled cast-iron boxes. The BS-4 and BS-8 boxes are malleable iron and the others are pressed steel. Arrangements are made for conduit connections on all but the types for panel mounting. Standard conduit fittings are usually provided at the bottom of the box, but on the BS-79 and BS-207, which are often used as pendant switches, the fittings are at the top. If it is desired to make the connections at the bottom, the push-button mechanism should be reversed in the box and with the BS-207-J the cover should be reversed to keep locking bar with stop-button. The BS-4 and BS-8 have bosses at top to be drilled for conduit by customer, and BS-73 have knockouts at both top and bottom.

The BS-13-C, BS-207-J and BS-212-A are equipped with a locking bar over stop-button. Locking bar is provided with means for attaching padlock.

Pendant switches are used as portable push-button stations around planers, boring mills and similar machines. They are generally suspended. Any of the BS-79 or BS-207 stations can be furnished for pendant installation.

The BS-11-N is a single-button station that may be used for either undervoltage protection or field protection. Suitable for use only on d.c. circuits.

BS-4-PP and BS-8-E are made dust and watertight by a leather diaphragm under cover and over buttons which extend through holes in cover. Pressure on diaphragm depresses buttons.

BS-11-CL and BS-12-DK stations have an oil tank suspended below conduit box and contact mechanism is immersed in oil. Recommended where there would be danger of explosion from flash at contacts of another station.

The following table gives ampere rupturing capacity of the different kinds of contacts when used in circuits with inductances ordinarily encountered.

Kind of Contact	D.C. Circuits		A.C. Circuits	
	Volts	Amperes	Volts	Amperes
Copper-Bar or Leaf-Spring	115	0.75	110 or 220	2.0
	230	0.4	440 or 550	0.75
	600	0.2		
Disk	115	2.0	110 or 220	8.0
	230	1.0	440 or 550	4.0
	600	0.4		
Silver-Button	115 or 230	5.0	110 or 220	5.0
	600	2.5	440 or 550	2.5
	115	2.0		
Snap-Switch	230	1.0	110 or 220	5.0

**G-E CR3100 D.C. Drum Switches**

**For Series, Shunt or Compound-Wound Motors**

Reversing or Non-Reversing, Armature Points Only, Resistors Not Included

CR3100-2002A Switch

The CR3100 drum switches are arranged for reversing and non-reversing control of series, shunt or compound-wound motors. When ordered for non-reversing service, they are furnished with a stop in the cap plate to prevent operator from reversing the handle.

All switches listed, except the CR3100-R-307-A, have on each contact finger a magnetic blowout that will insure instantaneous interruption of the circuit. A starwheel provides positive action from point to point.

For starting duty, use with CR3130 resistors; for speed regulating duty, use with CR3131 resistors; for crane and hoist duty, use with CR3132 resistors.

Type R-307-A has hole in bottom for leads; no leads furnished; only for starting duty; not recommended for crane, hoist, or regulating duty. Not suitable for use on 550-volt circuits.

Type R-122-P has hole in bottom for leads; no leads furnished; does not open shunt field in off-position; should not be used with motors with intermittent shunt fields; with these motors use CR3100-2002 drum switch.

Types 2002-A to 2004-A inclusive have conduit box for incoming leads; conduit box may be omitted from CR3100-2002 or 2007 drum switches.

All switches are completely covered to prevent accidental contact with live parts. The standard covers are readily removable, designed to exclude dust under normal conditions and, except for the CR3100-R-307-A, are moistureproof.

**Undervoltage and Overload Protection or Dynamic Braking**

The CR3100 drum switches have an off-position reset segment so that they may be used with CR3171 protective panels or with CR3137 dynamic-braking resistors.

**Ordering Directions**

Order a CR3100 drum switch by type number, specifying whether standard or dustproof cover is desired.

State whether motors are series, shunt, or compound-wound and whether reversible or non-reversible.

Type	H.P. RATING						Points Forward	Approx. Wt. Lbs.	PRICE, EACH
	*CONTINUOUS			†INTERMITTENT					
	115 Volts	230 Volts	550 Volts	115 Volts	230 Volts	550 Volts			
R-307-A	3	5	...	...	...	...	3	40	\$26. ....
R-122-P	5	10	15	6	12	20	4	75	54. ....
2002-A	7½	15	30	15	25	35	5	190	79. \$98.
2007-A	15	30	50	20	35	65	5	250	120. 145.
2003-A	20	35	75	25	50	100	7	300	145. 172.
2004B	35	75	150	50	100	200	8	450	250. 280.

\*The continuous rating should be used in all cases when any point on the drum switch will be used for any period exceeding five minutes.

†The intermittent rating should be used for crane, hoist, or other applications when the running-time is not over 50 per cent of the total and the maximum continuous running-time is not over five minutes.

‡Number of resistance steps is one less than number of drum switch points.

## CR3102 Type R-307 D.C. Drum Controllers

For Small Machine-tool and Similar Drives

The CR3102 equipment consists of an R-307 Drum Switch with starting resistor mounted on the back, the latter being protected by a separate enclosing cover.

This equipment is well suited for use with small machine tools and similar drives that require a small, compact and substantially made enclosed starting device.

### Resistor

The resistor for the 5 h.p. 230-volt equipment is designed for 10-seconds starting duty; all other resistors are for 1-minute starting duty.

### Connections

All connections between the resistor and drum switch are made before shipment. In installing the equipment all that is necessary is to pull the line and motor leads in through a hole in the bottom end of the frame and to connect them to terminals provided for the purpose.

### Overload and Under-voltage Protection

When overload and under-voltage protection is desired, a CR3171 protective panel should be used.

### Reversing—Includes Starting Resistor

*Cat. No.	115 Volts	230 Volts	H.P. of Motor	Points Forward and Reverse	Approx. Shipping Wt. Lbs.	Price Each
258344	258347		1	3	50	\$37.00
258345	258348		2	3	50	37.00
258346	258349		3	3	50	37.00
†	†258350		5	3	50	37.00

### Non-reversing—Includes Resistor

Cat. No.	115 Volts	230 Volts	H.P. of Motor	Approx. Shipping Wt. Lbs.	Price Each
2042218	2042221		1	15	\$13.00
2042219	2042222		2	15	13.00
2042220	2042223		3	15	13.00
.....	†2042224		5	15	13.00

\*Catalogue number and price include complete equipment consisting of R-307 controller with starting resistor on back.

†Resistor has capacity for 10-second starting duty only. For heavier duty use R-307 drum switch with CR3130 starting resistor.

‡Not suitable for 5 h.p., 115-volt motor. Use CR3100 drum switch and CR3130 resistor.

## G-E Type CR3105 D.C. Drum Switches

For Use with Adjustable Speed Motors for Machine Tools, etc.

Reversing or Non-reversing Armature and Field Points

### CR3105 Drum Switch Complete with Armature and Field Resistors

CR3105 Drum Switches are provided with armature points for starting duty and field points for continuous duty and are particularly adapted for use with adjustable speed motors for machine tools, etc. The field resistor is controlled by fingers in the same manner as the armature resistor and not by a dial switch in the base of the drum switch.

### Dynamic Braking

The standard CR3105 Drum Switches, with the exception of the R-301-B, can be used with CR3137 resistors for providing dynamic braking at the off position. The R-301-B can be used with 115 and 230-volt motors for dynamic braking but with 550-volt motors it is necessary to use a contactor with the dynamic braking resistor. This requires a slight change in the drum switch. The changed drum switch is known as the R-301-A, having the same price as the R-301-B, and is suitable for use with motors up to and including 15 h. p. on 550 volts.

### Resistor

With motors up to and including 2 h. p. with the R-302 and 3 h. p. with the R-301 drum switches, both the armature and field resistors are mounted directly on the back of the drum switch while in the larger sizes the field resistor only is attached to the drum switch and the armature resistor is furnished as a separate unit.

### Reversible Drum Switches

All CR3105 Drum Switches can be used with reversible or non-reversible motors as each is provided with a nickel-plated stop in the cap plate to prevent reversing. The stop should be removed when used with reversible motors. A name plate on the front explains this feature.

### Under-voltage and Overload Protection

Any of the CR3105 Drum Switches can be used with the CR3170 panel to provide under-voltage and overload protection. When ordering these drum switches for use with the protective panel a statement should be made to this effect upon the requisition so that the correct wiring diagram can be supplied.

### Connection Diagram

A diagram showing the connections of the drum switch and resistor will be found on the inside of the sheet iron enclosing cover.

Type	MAX. H.P. CAPACITY			*POINTS FORWARD AND REVERSE		Approx. Ship. Wt. Lbs.	Price Each
	115 Volts	230 Volts	550 Volts	Armature	Field		
†R-302-B	3	3	...	2	10	75	\$55.00
R-301-B	5	10	15	3	18	85	73.00
R-182-A	12	20	40	4	18	140	115.00
R- 98-B	20	35	70	4	22	200	155.00
†R-166-A	35	65	100	4	22	400	235.00

\*Number of resistance steps is one less than the number of drum switch points.

†No magnetic blowout; not for use on 550-volt circuits.

‡Special form of drum switch required for 550 volt circuit. Do not specify R-166-A, but order R-166 Drum Switch for use on 550 volt circuits.

**No. CR3110 G-E D.C. Drum Switches**

**Armature Points Only  
Use CR3151 or CR3153 Resistors**

**2501-A Drum Switch with Cat. No. 1219233G1 Horizontal Handle Attachment**

This switch is designed for use with crane hoists, and for similar applications where the speed of the motor while lowering is to be controlled by dynamic or electric braking. When a d.c. motor is connected as a generator with resistance across its armature, and driven by the load which is being lowered, it delivers power to the resistor and holds back against the load. The speed of the motor can be accurately controlled by increasing or decreasing the ohmic value of the resistance connected across the armature. This is the principle on which

this switch operates. It is so designed that, if there is not sufficient weight on the hook to overhaul the motor and drums, the motor will assist in driving the hoisting machinery in a downward direction.

Cranes that are equipped with this switch can have high lowering speeds if the particular motors which are used are capable of standing such operation. Front covers are lined with insulating material and are easily removable. On floor-mounted sizes the back covers are removable to facilitate wiring. Dust-tight covers can be furnished and should be specified.

This switch is made up without handle and the handle is stocked separately so that it is necessary to order both the drum switch and the type of operating mechanism desired.

The top plate for the horizontal handle is assembled with the drum switch so that when the vertical handle or rope wheel attachment is ordered it will be necessary to remove the top plate for the horizontal handle and mount the vertical handle or rope wheel attachment in its place. This is a matter of removing and replacing 4 cap screws.

**Table A—Drum Switches**

H.P. RATING INTERMITTENT OR CRANE DUTY			No. OF DRUM SWITCH POINTS		CR3110 Drum Switch Type No.	Approx. Ship. Wt. in Lb.	PRICE, EACH Drum Switch Less Handle	Standard Cover	Dust-tight Cover

**ORDERING DIRECTIONS.**—Order a CR3110 drum switch by type No., specifying whether standard or dust-tight cover is desired. Order a handle by Cat. No. Order, for use with CR3110-2503-A drum switch, a CR4402-C2 contactor panel by Cat. No.

**G-E CR3130 D.C. Starting Duty Resistors**

**For Machine Tool Service**

These resistors are for use with d.c. constant or adjustable-speed motors. Those listed for constant speed motors should be used with the CR3100 and those for adjustable speed motors should be used with the CR3105 drum type switches. Designed primarily for starting duty, but, while they cannot be used for regulating duty continuously, it is possible to use them in this manner for short periods.

**Resistor Units**

For constant speed motors up to and including 2 h.p., 115 volts, 5 h.p. 230 volts and 10 h.p. 550 volts, wire-wound resistor units are used, while cast grid units are used with the other motors. The resistors for adjustable-speed motors up to and including 2 h.p. with the CR3105-R-302 drum switch and 3 h.p. with the CR3105-R-301 drum switch consist of a ribbon unit assembled between sheets of mica attached to a cast iron plate, and are mounted on the back of the drum switch with the field resistor. The resistors for the 3 h.p., 115 and 230-volt motors with the CR3105-R-302 drum switch, and the 5 h.p. 230-volt and 5, 7½ and 10 h.p. 550-volt motors with the CR3105-R-301 drum switch are composed of wire-wound units, while the resistors for the remaining motors consist of cast grid units.

The wire-wound and cast grid units are rigidly supported by tie rods from cast-iron end frames. Perforated sheet iron covers enclose the front and back. All terminals are within the enclosing cover which is suitable for conduit wiring.

**G-E CR3131 D.C. Motor Regulating Duty Resistors**

These resistors are for use with d.c. constant-speed motors in connection with drum switches CR3100 and are designed for continuous duty, giving 50 per cent speed reduction at ¾ full load and 65 per cent speed reduction at full load. Resistors for motors of 2 h.p. and less, 115 volts; 5 h.p. and less, 230 volts; and 10 h.p. and less, 550 volts, consist of Form R wire-wound units. Cast grid units are used for the larger resistors. The units are rigidly supported by tie rods attached to cast iron end frames. Sheet iron covers are placed over the back and front, the latter being perforated in order to insure good ventilation. All terminals are placed within the enclosing cover which is adapted for conduit wiring.

**G-E CR3132 D.C. Intermittent Duty Resistors**

**For Crane and Hoist Service**

These resistors are for use with direct-current motors in connection with CR3100 Drum Type Switches.

The resistors for small motors consist of Form R wire-wound units assembled in a well ventilated box, while for the larger motors, Type SG cast grid units are used.

The cast grid units are assembled in unit type CR9143 (SG) resistor boxes. The use of this type of resistor allows complete boxes to be kept in stock as spares. In case of burned out or broken grids, a complete box can be easily and quickly replaced. Each box contains one size of grids, with taps on one side, thereby simplifying the wiring of the resistor. Tops are so placed that a few boxes will serve as spares for a number of resistors.

Prices upon application.

## No. CR3200 G-E A.C. Drum Switches and CR3232-5 Resistors For Squirrel-Cage Induction Motors

This primary-resistance switch is for use with squirrel-cage induction motors on small cranes, hoists, machine tools, etc., where a small drum switch is desired. Since this is a primary switch, the capacity is rated in horsepower. It is designed for wall mounting, but may be adapted for floor mounting by ordering standard conduit box used on the CR3203-1300J switch.

The CR3200-1250-A is suitable for motors that do not have an overhauling load, that is, on hoists it can be used where worm gearing or automatic, mechanical, load brakes are used.

The CR3200-1250-B is suitable for use where there is an

overhauling load. This switch should be used on hoists where a worm gear is not used. In this case, one-point reverse is provided so that the motor will exert sufficient torque to prevent excessive motor speeds when overhauled by a load.

## G-E CR3202 A.C. Drum Switches For Wound-Rotor Induction Motors Reversing, Primary and Secondary Control

Type 1300-J (Cover Removed)

These drum switches are for use with wound-rotor induction motors, and, owing to the wide range of secondary currents for motors of the same horsepower, are listed according to ampere capacity rather than horsepower capacity.

The CR3202 Drum Switches are made up without handles and the handles are stocked separately so that it is necessary to order both the drum switch and the type of operating mechanism desired.

The top plate for the horizontal handle is assembled with the drum switch so that when the vertical handle or rope wheel attachment is ordered it will be necessary to remove the top plate for the horizontal handle and mount the vertical handle or rope wheel attachment in its place. This is a matter of removing and replacing four cap screws.

These drum switches are built with cast end-frames with cold-rolled steel side bars, hot riveted. This construction provides maximum strength and rigidity. They are accessible for wiring, inspection, and replacement of parts.

Conduit boxes are adapted for conduit connection at bottom, back or sides. Conduit box may be omitted from the 1300-J, 1308-A, and the 1400-J types.

Front covers are lined with insulating material and are easily removable. On the floor-mounted sizes the back covers are removable to facilitate wiring.

The bearings have renewable bushings, the bottom bushing being of a material which requires no oiling. The top bushing is of phosphor bronze.

All contacts subject to burning or mechanical wear are easily renewable.

The finger tips are carried on self-aligning, channel-section, hinged arms. Their position is adjustable to compensate for wear. The contact pressure on a worn tip is the same as on a new tip.

An auxiliary contact, which is closed only in the off-position is placed at the bottom of the drum to give under-voltage protection when the drum is used with a magnetic switch and push-button station.

Operating levers are provided with latches at the off-position. Star-wheels with pawls are used to insure the switches being set on positive contact points.

Terminals for soldered connections are provided for all outgoing leads. These terminals are plainly marked for identification on the connection diagrams.

Suitable connection diagrams and instruction cards are posted on the inside of the front cover of each switch.

### Dust-Tight Covers

For cement-mill or similar service, where switches are subject to excessive non-explosive dust, it is recommended that switches with dust-tight covers be specified. Dust-tight covers are constructed with a felt gasket riveted around the edges. The covers are tightly fitted to the switch frame. Also all openings in the frame, including the conduit box are sealed with compound to exclude dust.

As special fitting and sealing are required, the covers cannot be furnished separately from the switches.

**G-E CR3202 A.C. Drum Switches**

For Wound-Rotor Induction Motors

Reversing, Primary and Secondary Control

These switches have auxiliary contact for use with CR7006 primary switch.

For starting duty, use with CR3221 resistors.

For speed-regulating duty, use with CR3223 resistors.

For crane and hoist duty, use with CR3244 resistors.

\*Starts motor with single-phase secondary.

†These drum switches open two legs of the circuit in the off-position, the third leg running direct to the motor. An additional switch should be installed which will entirely disconnect the motor from the line. If it is desired to have the drum switch open all three legs of the circuit at the off-position, a 2-phase drum switch listed above should be used.

‡These drum switches when used on a 2-phase, 4-wire circuit will open three legs of the circuit at the off-position, the fourth running direct to the motor, in which case an additional line switch is required to entirely disconnect the motor from the line. When used on a 3-phase or 2-phase 3-wire circuit they will open all three legs at the off-position.

§These switches are suitable for either wall or floor mounting. If for wall mounting, conduit box may be omitted. If for floor mounting, conduit box is essential.

3. Order handle by catalogue number.

**G-E CR3204 A.C. Drum Switches**

For Slip-Ring Induction Motors Having 3-Phase Secondaries

Non-Reversing, Secondary Control

Type No. 1501-J

The CR3204 Drum Switches are for use with slip-ring motors having 3-phase secondaries and provide secondary control only. Resistors used with them are connected to prevent opening of the rotor circuit, and a separate primary switch must be used to stop and disconnect motor from circuit. They are provided with auxiliary contacts which permit of connections to either a CR7006 magnetic primary switch or an oil-immersed circuit breaker in the motor primary circuit to afford under-voltage protection on all but the first point of the switch, and overload protection.

When the drum switch is used with a CR7006 magnetic primary switch without a separate push-button station, the handle of the drum switch must always be turned to the first position to close the CR7006 primary switch. The handle of the drum switch must be turned to the off-position to open the primary switch and stop the motor.

When the drum switch is used with a CR7006 magnetic primary switch and a separate push-button station, the handle of the drum switch must be turned to the off-position so that the start-button of the push-button station may be operated to close the CR7006 primary switch.

CONDUIT BOX.—The CR3204-1500-C drum switch is suitable for wall mounting. In making the installation the conduit box should first be secured to the wall or support. The CR3204-1501-J and CR3204-1503-R drum switches are adapted for floor mounting.

SWITCHBOARD MOUNTING.—The CR3204 drum switches for switchboard use are arranged for mounting vertically with the switchboard and are furnished with a bevel-gear mechanism for operating from the front of the panel.

A primary switch is required with CR3204 drum switches. For starting duty use with CR3221 resistors. For machine service regulating duty use with CR3223 resistors. For fan service regulating duty use with CR3224 resistors.

Order CR3204 drum switch by Type No.

Type No.	CURRENT PER PHASE *Starting or Regulating Duty	†Starting or Regulating Duty	Max. Secondary Voltage	Points	Approx. Ship. Wt. Lbs.	PRICE, EACH—SWITCH LESS HANDLE	Standard Cover	Dustproof Cover
§1500-C	....	150	1000	11	140	\$58.00	\$76.00

1503-R	1000	500	1000	11	400	235.00	264.00	

\*Starting duty, if separate short-circuiting switch is used. This rating should be used only when the drum switch will be in circuit not longer than 5 minutes and then short circuited by a separate device, such as a 3-pole, 600-ampere magnetic switch. The CR3204-1503-R drum switches are furnished with an additional auxiliary contact on the last point which will provide an interlocking means between the drum switch and a magnetically operated short-circuiting switch.

†Starting or regulating duty, when no separate short-circuiting switch is used. This rating should be used in all cases where any point on the controller will be used as a running point.

‡Price includes conduit box which may be omitted at \$3.00. §Starts motor with single-phase secondary.

## G-E Heavy Duty A.C. Starting Resistors

Types CR3221, CR3223 and CR3224  
For Slip-Ring Induction Motors  
Constant Torque, 60 Cycles, 2 or 3-Phase

These resistors consist of Type IG grid units assembled in one or more boxes, and are for use with standard slip-ring induction motors having 3-phase rotors.

CR3221 Resistors are designed for starting duty only, and should not be used on applications where the drum switch may be left on an intermediate point. They comply with the American Standard Resistor Classification Nos. 34 and 35.

CR3223 Resistors are designed for speed-regulating machine service, i.e., where the torque is practically constant throughout the speed range. They will provide a speed variation of approximately 50 per cent, under torque conditions corresponding to the horse power guarantees at 50 per cent normal speed of the motors with which they are listed. They comply with the American Standard Resistor Classification No. 94.

CR3224 Resistors are similar to CR3223, but are designed for fan service, i.e., where the torque increases with the speed of the motor. They provide approximately 50 per cent speed reduction at 40 per cent torque, and should be used with ventilating fans, centrifugal pumps, ice cream freezers, and similar machines. They comply with the American Standard Resistor Classification No. 93.

## G-E CR3244 A.C. Intermittent Duty Resistors

For MTC or MQC Motors for Crane Service

60, 50 and 25 Cycles, 3 and 2-phase

These resistors are for use with Types MTC or MQC slip-ring motors for crane duty and comply with Amer. Std. Resistor Classification No. 52. They are not recommended for use with motors where the service differs greatly from that usually experienced in crane work.

Prices on similar resistors for use with motors of other manufacture will be furnished upon application. All requests for prices should include the secondary data of the motors.

These resistors have a permanent block of resistance which gives better regulation during acceleration and prevents the motor from stalling as it enables the motor to exert its maximum starting-torque regardless of how rapidly the operator throws the controller handle to the full running position.

All resistors consist of Type SG cast grid resistor units assembled in one or more boxes. In case the resistor consists of more than one box, the boxes can be bolted together, if desired, to form a single unit. All resistor grids have three supporting lugs equally spaced, requiring the use of only one size of end frame. The tie-rods supporting the units are insulated both from the units and from the end frames. All boxes have the same over all dimensions.

Prices upon application.

## G-E CR3900 Drum Type Switches

For Small A.C. and D.C. Motors

Reversing or Non-reversing—Not for  
Elevator Service

Switch with Standard T Handle

These switches are recommended for throwing small direct and alternating current motors directly across the line.

The RD-80 switches have cast iron boxes with dust tight covers and the holes in the side of the frame through which the leads pass are fitted with rubber bushings.

The RD-417, RD-418, RD-419, RD-420, RD-421 and RD-422 switches have a cast iron frame with sheet metal cap-plate and cover. Two holes are provided in the bottom of the frame for the leads.

### Reversing

### Non-reversing

*RD-419-A	30	30	30	30	15	22	\$19.00
*RD-420-A	30	30	30	30	15	22	19.00

\*These switches have a continuous capacity of 30 amperes but can not be used with motors where the starting current exceeds 45 amperes. When used for throwing small two or three-phase induction motors directly on the line, their use should be limited to the following sizes: 1½ h.p., 110 volts; 3 h.p., 220 volts; 5 h.p., 440 volts, and 7½ h.p., 550 volts.

†This switch is equipped with a spring return attachment which automatically brings the handle to the off-position when it is released.

The pawl and pawl spring are omitted and the switches should be used only where the shipper rod is provided with a spring or other centering device for insuring the handle being thrown to the full running or to the off-position. The handle for shipper-rod operation of the RD-419 may be assembled in the dotted position for counter-clockwise rotation of the cylinder.

In ordering, specify type and form of switch desired.

600	550	*2	1121	1772594G5	134.00	1772623G5	208.00

The CR4002 magnetic switches consist of a contactor or contactors mounted on a slate base, with feet for wall mounting, with or without a sheet metal enclosing case.

Used extensively with accessory switches, such as float switches, pressure governors, push buttons, etc., to control small motors which can be thrown directly on the line. Also used where it is desired to control, from a distance, circuits carrying large currents and where it would be too expensive to run the main leads to the remote points.

The control wires need be only large enough to furnish the requisite mechanical strength and maintain not less than 80 per cent normal voltage at the contactor coils.

These magnetic switches are furnished to operate directly across the line, without the use of any other series resistance for the coils. They are so designed that all parts are open for inspection, and those parts subject to wear can be easily, cheaply and quickly renewed.

The Form A2 requires two control wires between the contactor and the remote control point. A single-pole knife switch, or similar switch, may be used to close the contactor circuit, and the contactor will remain closed until the knife switch is opened, or until voltage fails or becomes low. If voltage fails the contactor will open and remain open until normal voltage is restored, when the contactor will close. This gives undervoltage release.

The Form B2 is similar to the Form A2, with the exception that an interlock is added to the contactor. Three control wires are required between the remote control point and the contactor. A two-button push-button station of the momentary contact type, instead of the knife switch, is used to control the contactor; one button to open and one to close the contactor. In case the voltage becomes low or fails, the contactor will drop out and upon return of normal voltage will not close until the closing push-button is pressed. This gives undervoltage protection.

Forms C2 and D2 are Forms A2 and B2, respectively, enclosed in sheet metal cases which have hinged doors and hasps for padlocking. The connections are made to terminals on the fronts of the panels. The enclosing cases are arranged for conduit connections.

Ordering Directions

Standard

Order a CR4002 switch by Cat. No., if for standard voltage.

If for special voltage, specify voltage, ampere capacity, and number of poles.

Optional Accessories

1. Float switch—CR2931.
2. Pressure governor—CR2922.
3. Pressure switch—CR2927.
4. Push-button station—CR2940.

For Remote Control by Momentary Contact Push-Button Station

\*Consists of two contactors on same base with coils wired in series.

†Price does not include an accessory. See ordering directions.

**G-E D.C. Magnetic Controllers**  
**CR4066, Non-Reversing—CR4068, Reversing**  
**For Shunt or Compound-Wound, Constant-Speed**  
**D.C. Motors**

**CR4066-A2, 3-Point Magnetic Controller**

These controllers are designed for controlling constant-speed, d.c. motors up to 10 h.p., 110 volts and 20 h.p., 235 volts. They may be used with motors that do not require more than 150 per cent full-load torque to start and longer than 15 seconds to obtain full speed. They comply with American Standard Resistor Classification No. 16. The CR4066-A2 non-reversing controllers consist of a solenoid-operated, multi-finger contactor, a temperature overload relay and a dynamic-braking relay, all mounted on a compound base on the back of which is mounted the starting and dynamic-braking resistor. They are provided with a blow-out on the line contact to disrupt the arc.

The CR4068-A2 controllers are suitable for reversing service and each panel contains 2 mechanically interlocked reversing contactors in addition to the devices as supplied on the CR4066-A2 controllers.

The controllers provide 3 or 4 points of acceleration depending on the rating of the motor with which they are used: 3/4 to 3 h.p., 115 volts and 3/4 to 7 1/2 h.p., 230 volts, 3 points; 5 to 10 h.p., 115 volts and 10 to 20 h.p., 230 volts, 4 points.

**G-E Type CR7002 AC. Magnetic Switches**

The CR7002 magnetic switch consists of a multi-pole a.c. contactor mounted on a base, with or without a sheet metal enclosing case. (The CR2810-1265 contactor is self-contained and the open type is not mounted on a base.) These switches are used extensively where it is desired to control from a distance circuits carrying relatively large currents and where it would be too expensive to run the main leads to the remote point. These switches, with the exception of the CR2810-1265 contactor, may be used to control a.c. motors, provided overload protection is not required.

Both the open and enclosed switches are provided with holding interlocks for use in connection with the momentary contact push-button stations. This combination provides undervoltage protection and requires 3 wires between the switch and the push-button station. Where the push-button station is of the maintain-contact type, the interlock does not have to be wired into the circuit. With this combination undervoltage release is provided and only 2 wires are required between the switch and the push-button station.

The CR2810-1265 contactor is single-pole only, with 2 breaks in series. Where a 2-pole switch is needed 2 contactors are used and the coils are connected in multiple. Contactor is self-contained and may be mounted directly on an insulated or non-insulated base by means of 2 bolts or screws. This device was designed to handle non-inductive heating loads at a maximum of 220 volts and should not be used to control motor circuits.

The 75-ampere contactors are furnished either with barriers or with arc chutes and blowout coils. The barrier types have the same contacts for the main and interlock circuits, therefore, a contactor with 2 poles and interlock may be used as a 3-pole device without interlock. This type of contactor on inductive loads is limited in its rupturing capacity to the inrush current of the motors for which it is recommended.

The 600-ampere switches are arranged for floor mounting. In the enclosed type the case runs to the floor so it is not necessary to drill for conduit, the bottom of the case being entirely omitted. These switches are not for use with push-button stations unless an intermediate relay is used. They can be used with a knife switch or drum switch.

**Ordering Directions**

STANDARD.—Order a CR7002 switch by Cat. No. if for standard voltages and 60 cycles. If for special voltages and frequencies, specify the voltage, frequency, ampere capacity and number of poles, and whether open or enclosed.

OPTIONAL ACCESSORIES.—Float switch, CR2931; pressure governor, CR2922; pressure switch, CR2927; push-button station, CR2940.

**Maximum H.P. Ratings**

\*Prices listed cover switches for all standard frequencies but Cat. No. covers 60-cycle switches only.

†Self-contained contactors, unmounted.

‡Two single-pole contactors. Coils connected in multiple.

§Contactor has barriers only. Will carry and break 75 amperes non-inductive load.

△Cat. No. covers CR7006-D31 without relay, but with a set of two copper strips to short-circuit the relay studs.

## G-E CR7005-A4 A. C. Enclosed Magnetic Switches

Closed

Open

The CR7005-A4 Enclosed Magnetic Switches are suitable for throwing small A. C. motors up to 3 h. p., 110 volts; and 5 h. p., 220, 440, 550 and 600 volts, directly on the line. They consist of a 3-pole contactor or magnetically operated switch and a thermal cutout receptacle for 2 thermal cutouts mounted in a sheet steel enclosing case. Incoming leads are easily connected to the stationary contacts which are thoroughly insulated by means of moulded material of which the base is composed. Outgoing leads are connected directly to the porcelain base of the thermal cutouts.

### Enclosing Case

The enclosing case is furnished with a hinged cover which may be locked shut if desired. The enclosing case is provided with ten 3/4-inch knockout holes; 3 at the top, 3 at the bottom, and 2 at each side. Knockout holes are also provided in the top for mounting adapter, Cat. No. 2040400, which is required with the CR1923-A1 disconnecting switch.

### Thermal Cutouts

Particular care should be used to select thermal cutouts of the correct size.

In case of an overload, the links of the cutouts will open the motor circuit, but the line contactor will not open automatically. The door of the enclosing case cannot be opened until the contactor is opened, because of an interlock between them. A conspicuous name plate on the cover calls attention to the fact that the cover cannot be lifted until the magnetic switch is de-energized by pressing the stop-button. This insures the cutouts and their receptacles being dead before the operator can replace blown fuse links.

### Under-voltage Protection or Under-voltage Release

The switch is ordinarily operated by means of a CR2940-BS79J "Start" and "Stop" push-button station. This station is of the momentary contact type and an extra pole is provided on the magnetic contactor to provide an electrical interlock for the holding circuit. If such a push-button station is used and the voltage fails, the contactor will open and will not close automatically on return of voltage, but the Start button must be pressed to restart the motor. This scheme of connections provides Under-voltage Protection. If desired, the switch may be controlled from a number of places simply by installing a suitable number of CR2940-BS79J Push-button Stations.

The switch may also be operated by any master switch of the single-pole single-throw type, as for example, a CR2940-BS30A Push-button Station, a CR2922 Pressure Governor, or a CR2931 Float Switch. In wiring up such switches the connections to the interlock on the contactor should be omitted. The equipment will then provide Under-voltage Release for, when voltage returns, if the master switch is closed, the contactor will close and start the motor automatically. Before deciding to use this scheme care should be taken to be sure that Under-voltage Release, not Under-voltage protection is required.

**G-E CR7005-A4 A.C. Enclosed Magnetic Switches**

Fusible link, Cat. No. 167539 is same for all cutouts.

**Ordering Directions**

The Cat. No. of the switch does not include the push-button station or the two thermal cutouts. They must be ordered as separate items.

- Order a switch by Cat. No.
- Order a push-button or master switch by complete rating.
- Order two thermal cutouts for each switch by Cat. No.

**G-E CR7006 Enclosed Magnetic Switches For Alternating Current Motors**

CR7006-D4

The CR7006 Enclosed Magnetic Switch consists of a three- or four-pole contactor and a two-coil hand-reset temperature overload relay enclosed in a sheet metal case.

With the exception of the contactor, parts of the CR7006-D4, D5 and D7 are similar. The contactor for the CR7006-D4 switch is provided with barriers between the poles. The contactor for the CR7006-D5 is provided with magnetic blowouts. The CR7006-D7 is identical with the CR7006-D5 except that the enclosing case is larger and ventilated to provide more heat radiation and thus give it a higher rating.

The three-pole forms are recommended for three-phase and two-phase three-wire motors and open all lines to the motor. The three-pole switch may be used with two-phase four-wire

motors provided it is permissible to leave one line of the circuit permanently connected to the motor. The four-pole switch should be used for two-phase four-wire motors when all lines must be opened. The CR7006-D5 or -D7 switch cannot be furnished four-pole.

**Overload Protection**

Overload protection is provided by means of a temperature relay, which upon an overload opens the contactor. This relay has two heating elements, one connected in each of two phases, so that it provides full overload protection for single, two, or three-phase motors.

After the relay trips, the contacts must be reset by hand and a resetting device operated from the outside of the case is provided for the purpose. Provision is made for attaching a cord to the resetting device for convenience in resetting the relay when the switch is mounted above the reach of the operator.

**Under-voltage Protection or Under-voltage Release**

The switch is ordinarily operated by means of a CR2940-BST9J "start" and "stop" push-button station. This station is of the momentary contact type and an extra pole is provided on the magnetic contactor to provide an electrical interlock for the holding circuit. If such a push-button station is used and the voltage fails, the contactor will open and will not close automatically on return of voltage, but the "start" button must be pressed to restart the motor. This scheme of connections provides "under-voltage protection." If desired, the switch may be controlled from a number of places simply by installing a suitable number of CR2940-BST9J push-button stations.

The CR7006 switch may also be operated by means of any master switch of the single-pole single-throw type, as for example, by means of a CR2940-BST30A push-button station, a CR2922 pressure governor, a CR2927 pressure switch, a CR2930 or CR2931 float switch, etc. In wiring up switches of this type the connections to the interlock on the contactor should be omitted. The equipment will provide "under-voltage release."

**Enclosing Case**

The enclosing case is provided with a hinged cover which may be locked shut if desired. It is provided with ten 3/4-inch knockout holes; three at the top, three at the bottom, and two at each side.

**Ordering Directions**

- The price of the switch includes switch, overload relay, and push-button station; but the Cat. No. refers to switch.
- Order a switch by Cat. No.
- Order a temperature overload relay by Cat. No.
- Order a push-button or equivalent accessory.
- Order a cover interlock Cat. No. 1773107, if desired.
- Order a set of terminals Cat. No. 1774499, if the normal motor current is over 30 amperes.

## G-E CR7006-D9 Enclosed Magnetic Switches

For Alternating Current Motors

The CR7006-D9 magnetic switch consists of a 3-pole contactor and a 2-coil hand-reset temperature overload relay. It may be used for throwing squirrel-cage motors directly on the line if permitted by the power company. The switch has a more general application as a primary switch in connection with a slip-ring motor, the secondary of which is handled by a drum switch.

primary switch in connection with a slip-ring motor, the secondary of which is handled by a drum switch.

### Overload Protection

Overload protection is provided by a CR2824-TC221 temperature overload relay which is made up of 2 units, one connected in each of 2 phases, so that full protection is provided for 2 or 3-phase motors. Each unit consists of a heating coil surrounded by a brass frame, a V-shaped strip of thermostatic metal rigidly fastened at one end to the brass frame and a contact mechanism normally held closed mechanically by the thermostatic strip but opened when the strip is heated above a certain temperature. The heating coil and the thermostatic strip, the latter bridged by a shunt, are connected in series in a line of the motor circuit.

Heating in the thermostatic strip occurs because of the current flowing through it and also because of the heat which is conducted through the brass frame from the heating coil. For small overloads, the heating coil raises the temperature of the thermostatic strip slowly due to the large volume of the brass frame which absorbs the heat.

With normal current in the thermostatic strip, the heat produced is not sufficient to raise its temperature greatly, but since the heating is proportional to the square of the current flowing through it, the heat produced with 3 or more times normal current is sufficient to cause the relay to trip quickly. Thus the metal frame around the heating coil may represent the iron of the motor and the thermostatic strip may represent the copper of the motor.

For small overloads of long duration the metal frame provides the correct thermal capacity and delays the tripping of the relay, while for large overloads, the heating of the thermostatic strip is accomplished immediately and the relay quickly trips.

The relay is provided with means for adjusting the tripping value over a range of from 80 to 120 per cent of its normal rating. The relay must be reset by hand from inside the switch enclosing case. After the relay has tripped it cannot be reset for about 30 seconds, or until the relay and motor have had an opportunity to cool.

### Under-voltage Protection or Under-voltage Release

The switch is ordinarily operated by means of a CR2940-BS212A start-and-stop push-button station. This station is of the momentary contact type and an extra pole is provided on the magnetic contactor to provide an electrical interlock for the holding circuit. If such a push-button station is used and the voltage fails, the contactor will open and will not close automatically on return of voltage, but the start button must be pressed to restart the motor. This scheme of connections provides under-voltage-protection. If desired, the switch may be controlled from a number of places simply by installing a suitable number of CR2940-BS212A push-button stations.

When this switch is used to handle the primary circuit of a slip-ring motor in connection with any of the listed CR3204 secondary drum switches a start-and-stop push button is not required, as provision is made in the switch for closing the contactor coil circuit as the switch handle is turned to the first point, and to open it in returning the handle to the off-position. This combination of CR7006 magnetic switch and secondary drum switch provides under-voltage protection.

**G-E CR7006-D9 Enclosed Magnetic Switches**

For A.C. Motors

Continued

The CR7006 Switch may also be operated by means of any master switch of the single-pole single-throw type, as for example, by means of a knife switch, a CR2922 pressure governor, a CR2927 pressure switch, a CR2930 or CR2931 float switch, etc. In wiring up switches of this type connections to the interlock on contactor should be omitted. Equipment will provide under-voltage release.

**Enclosing Case**

The enclosing case is provided with a hinged cover which may be locked shut if desired.

Two 2-inch and one 3/4-inch knockouts, for conduit connections, are provided in both the top and bottom of the enclosing case.

**Maximum Horse Power Ratings**

**Ordering Directions**

The price of the switch given above includes the switch, temperature overload relay, and push-button station; but the catalogue number refers to the switch only.

1. Order a CR7006-D9 switch by catalogue number.
2. Order a CR2824-TC221 temperature overload relay by catalogue number.
3. Order a CR2940-B8212A start-and-stop push-button station or equivalent accessory if desired.

**No. CR7006-D20 G-E Enclosed Magnetic Switches**

For A.C. Motors

Suitable for throwing small a.c. motors directly on the line. It consists of a triple-pole, barrier type, magnetically operated contactor and 2 Trumbull inverse time temperature overload relays mounted on a moulded base and enclosed in a drawn-shell steel

enclosing case. Incoming and outgoing leads are easily connected to connection blocks provided near the top and bottom of the base.

This switch, as furnished, is suitable for single and 3-phase applications only, but special coils may be supplied for operation on 2-phase, 3-wire circuits. It cannot be modified for use on 2-phase, 4-wire systems.

**Overload Protection**

Overload protection is provided by 2 Trumbull temperature relays which, on overload, break the coil circuits of the contactor, which opens, thus disconnecting the motor from the line. Each relay consists of a heating element and a thermostatic strip assembled as a unit in the form of a cartridge fuse and mounted on base with fuse clips.

**Undervoltage Protection**

The switch is ordinarily operated by means of a CR2940-B8-79-J start-and-stop push-button station. This station is of the momentary-contact type and an extra pole is supplied on the magnetic contactor to provide an electrical interlock for the holding circuit. If such a push-button station is used and the voltage fails, the contactor will open and will not close automatically on return of voltage. Under this condition, the start-button must be pressed to restart the motor. This scheme of connections provides undervoltage protection. If desired, the switch may be controlled from a number of places by installing a suitable number of CR2940-B8-79-J push-button stations.

The DR7006-D20 cannot be controlled by a master switch or equivalent maintain contact, pressure governor, or thermostat, because of the use of the self-resetting relay.

## No. CR7006-D26 G-E Enclosed Magnetic Switches A.C. Motors

Suitable for throwing small a.c. motors directly across the line. It consists of a triple-pole, barrier-type, magnetically operated contactor with normally open interlock, and 2 hand-reset temperature overload relays mounted on a moulded base and enclosed in a drawn-shell, steel enclosing case. The incoming and outgoing leads are easily fastened to connection blocks provided near top and bottom of base. Switch, as furnished, is suitable for single, 2 and 3-phase application.

### Overload Protection

Overload protection is provided by means of 2 temperature overload relays which, upon an overload open the contactor. Each relay has a heating element connected directly in a phase of the motor circuit. The heat from each heating element is transmitted to a thermostatic strip. Upon the occurrence of an overload, the heat from the element causes the thermostatic strip to deflect, the rate and amount of deflection depending upon the severity and duration of the overload.

### Undervoltage Protection or Undervoltage Release

The switch is furnished with a holding interlock which permits its use with a CR2940-BS-79-J, start-and-stop, momentary-contact type push-button station. If such a push-button station is used and the voltage fails, the contactor will open and will not close automatically on return of voltage, but the start-button must be pressed to restart the motor.

## No. CR7006-D31 G-E Magnetic Switches For A.C. Motors

The CR7006-D31 Magnetic Switch is suitable for throwing squirrel-cage motors directly across the line; or for use as a primary switch for a wound-rotor motor, the secondary of which is handled by a drum controller. It consists of a triple-pole, restricted-blowout-type, magnetically operated contactor with normally open interlock, and 2 hand-reset, temperature overload relays, mounted on a molded base and enclosed in a drawn-shell, steel enclosing case.

Overload protection is provided by means of 2 temperature overload relays which, upon an overload open the contactor. Each relay has a heating element connected directly in a phase of the motor circuit. The heat from each heating element is transmitted to a thermostatic strip. Upon the occurrence of an overload, the heat from the element causes the thermostatic strip to deflect, the rate and amount of deflection depending upon the severity and duration of the overload.

The relay is so designed that the thermostatic strip will deflect far enough to trip the contact mechanism just before the overload will cause the motor to be excessively heated. The operation of either or both relays will trip the contact mechanism so that all phases of the motor are properly protected.

Each relay, with the exception of the heater units, is a fixed part of the switch. The heater units are made up in different capacities and are interchangeable. Each heater unit consists of wire or punched-grid units imbedded in a cement body which is held in place on the relay for 4 screws.

The switch is ordinarily operated by means of a CR2940-BS-212-A, start-and-stop, push-button station. This station is of the momentary-contact type and an extra pole is provided on the magnetic contactor to provide an electrical interlock for the holding circuit. If such a push-button station is used and the voltage fails, the contactor will open and will not close automatically on return of voltage, but the start-button must be pressed to restart the motor. This scheme of connections provides undervoltage protection. If desired, the switch may be controlled from a number of places by installing a suitable number of CR2940-BS-212-A push-button stations.

ORDERING DIRECTIONS.—Order a CR7006-D31 switch by Cat. No. Order 2 relay heater units by Cat. No. Order a CR2940-BS-212-A push-button station. (Provides under-voltage protection.)

**G-E CR7009 A.C. Enclosed Magnetic Reversing Switches**

**Overload Protection by Hand-reset Temperature Overload Relays**

**Under-voltage Protection or Under-voltage Release Depending Upon Accessory Used**

CR7009-B5

**For Reversing Single-phase, Two-phase or Three-phase Motors When Thrown Directly on the Line or When Used with Non-reversing Automatic Starters**

The CR7009 switch consists of two three-pole mechanically interlocked contactors mounted back to back on a compound base, enclosed in a sheet metal case. The contact details of the contactors of the CR7009-B5 switch are the same as those of the CR7006-D4 magnetic switch and those of the CR7009-B6, the same as those of the CR7006-D5 magnetic switch.

The CR7009-B5 switch is suitable, as furnished, for use with single-phase, two-phase, three-wire, or three-phase motors. When used with a two-phase four-wire motor, the reversing connections must be changed by the customer to agree with the diagram furnished. This change can very easily be accomplished.

Since this is a three-pole switch, one of the lines must run directly to the motor. It may also be used to control small direct-current motors (14-ft.-lb. torque or less) where the period of operation does not exceed 30 seconds and where the motor is not operated more than once in the same direction every five minutes.

The CR7009-B6 switch is made up in two forms, one for three-phase or two-phase three-wire, the other for two-phase four-wire. This switch is also suitable for controlling direct current motors on intermittent duty within the time limitations as given above for CR7009-B5. The contactors, being equipped with blowouts, can be used with motors having a full load current of 75 amperes or less.

**Overload Protection**

These switches provide overload protection by means of a CR2824-TC121A temperature overload relay which has two heating elements, one connected in each of two phases, so that it provides full overload protection for single-phase, two-phase or three-phase motors. The relay is provided with calibrating arms for adjusting the tripping value over a range from 80 to 120 per cent of its normal rating. A resetting device operated from the outside of the case is provided for the purpose of resetting the contacts.

**Under-voltage Protection or Under-voltage Release**

The CR7009 switch is ordinarily operated from one or more CR2940-BS13 push-button stations, the combination providing under-voltage protection. It may also be operated by means of a single-pole, double-throw master switch, in which case the connections to the interlock are omitted and under-voltage release is provided.

The top of the enclosing case is provided with small knock-out holes for fastening the adapter (Cat. No. 1775956) which is necessary when a CR1923-A1 disconnecting switch is used. The CR1923-A1 switch provides a convenient means for disconnecting the CR7009 switch and motor from the line for purposes of inspection and repairs.

**Enclosing Case**

The enclosing case is fitted with feet for wall-mounting, so arranged that the base, on which the contactors are mounted is perpendicular to the wall. Knockout holes for conduit fittings are provided at the top of the case close to the edge nearest the wall. Hinged door over each contactor.

**Ordering Directions**

The price of the switch includes switch complete with a CR2824-TC121C overload relay. Cat. No. refers to switch.

Order a CR7009 switch by Cat. No.

Order a CR2824-TC121C relay by Cat. No.

Order a CR2940-BS13 push-button station, or equivalent master switch.

Order, if desired, a CR1923-A1 disconnecting switch by Cat. No. with an adapter, Cat. No. 1775956.

\*Price includes switch complete with a CR2824-TC121A overload relay; Cat. No. covers the switch only. A suitable relay should also be ordered by Cat. No. from the table under Accessories.

\*\*May be used for throwing small direct-current motors on the line on applications where either contactor coil will not be energized more than once every five minutes, no longer than 30 seconds at a time.

**Accessories**

TEMPERATURE RELAY.—May be omitted at \$6.00.

PUSH-BUTTON STATION.—A CR2940-BS13 three-button station should be included at a net price of \$7.00.

MASTER SWITCH.—A single point, forward and reverse, master switch may be used in preference to a push-button station.

DISCONNECTING SWITCHES.—A Cat. No. 2040256 switch, at a price of \$10.00 is recommended for use with these reversing switches. If used, an adapter, Cat. No. 1775956, at 50 cents, is necessary for mounting the disconnecting switch on the enclosing case of CR7009.

## G-E Type CR7022 A.C. Automatic Starters

**CR7022-A3**  
75 Amperes—Primary  
112 Amperes—Secondary

The listed standard CR7022 time-limit accelerating starters are suitable for full-load starting duty according to A.E.S. resistor classification.

These starters may also be applied to fans, centrifugal pumps or conveyors since the initial peaks are sufficiently low for this type of service. The only change necessary is to adjust the definite-time interlock to give maximum time on the first point.

The starters listed are not applicable to chain drives where low starting torque is required. Refer to the Company when starters for such service are desired.

The following table gives the characteristics for various panels.

H.P. Range	Number Accelerating Points	Accelerating Time Sec. Range	Initial Current Peak	A.E.S. Resistor Class
1-15	2	1-5	200%	16
16-75	3	2-10	150%	15
76-150	4	3-15	150%	15

Form A3 panel consists of the following: one 3-pole, barrier-type line contactor; one 3-pole, barrier-type accelerating contactor; one definite-time interlock; one temperature overload relay; one starting resistor mounted back of panel. All apparatus mounted on black compound base in an enclosing case for wall mounting. Form A4 panel is similar to the Form A3 except that it has blowouts on the contactors and also has one more accelerating point.

Form B2 is similar to the Form A4 except that it has larger contactors and either 2 or 3 accelerating points, depending on the size of the motor.

The pendulum interlock gives a time delay of 1 to 5 seconds between accelerating steps. Interlock consists of an escapement similar to that used in clocks, a train of gears, a lever for attaching to a contactor shaft and a set of contacts. When contactor closes, spring is compressed. This applies torque to gears through a ratchet. Escapement lever together with pendulum measures a definite time for a given amount of rotation. After gears have rotated a given amount, ratchet is released and contacts are closed. This energized the next contactor.

Time period is adjusted by turning adjusting nuts.

Gears are made of special fibre compound.

CR9740-10 starting resistors are made of SG cast-iron grids mounted in standard frames for floor mounting.

For 2-phase, 3-wire service, use 3-phase starters. For 2-phase, 4-wire service, use 3-phase starters, running one line directly to the motor. If all 4 lines must be opened a 4-pole, motor circuit switch (CR1924) should be used.

Pressing the start-button causes the primary contactor to close which connects motor to line with all resistance in secondary circuit. A definite time (depending on setting of definite-time interlock) after line contactor is closed, the definite-time interlock operates and causes the first accelerating contactor to close. Accelerating contactors close in sequence with time intervals, until starting resistance is all short circuited. All accelerating contactors except the last one are de-energized in the running position. The magnetizing current is required only for the line contactor and the final accelerating contactor.

Pressing the stop-button, de-energizes the line contactor which disconnects the motor from the line.

On sustained overload, temperature overload relay will operate and de-energize line contactor, disconnecting motor from line. Overload relay is hand reset.

On undervoltage, all contactors will open and it will be necessary to press the start-button to restart. If a snap switch is used motor will start automatically on the return of voltage.

On open phase, line current will increase and overload relay will disconnect the motor from the line before any damage is done to the motor.

## Enclosing Cases for CR7022-B2 Panels

Made of sheet metal sections which are fastened together by small bolts. The fronts are doors arranged for locking. Backs are removable. With the exception of Cat. No. 2808183G13, cases do not extend to the floor.

Resistor for  
Forms A3 and A4  
Included in Panel  
Cat. No.

\*Price for Forms A3 and A4 starters includes panel enclosing case, starting resistor, temperature overload relay and push-button station. Price for Form B2 starters includes

panel, starting resistor, temperature overload relay and push-button station.

†Does not include temperature overload relay.

## CR7051 Automatic Starting Compensators For Squirrel-cage Induction Motors Definite-time Acceleration—Overload Protection 220, 440 and 550 Volts

No. CR7051-J1  
(Side View)

No. CR7051-J1  
Cover Removed

The CR7051 Automatic Starting Compensators are suitable for starting squirrel-cage induction motors that do not require longer than 15 seconds to attain full speed, once every 4 minutes for an hour.

Consists chiefly of an auto-transformer for supplying reduced voltage to the motor for acceleration, a contactor for connecting the auto-transformer to its low-voltage taps during acceleration, a contactor for connecting the motor to the line, a temperature overload relay and a definite-time relay which causes the accelerating contactor to open and the line contactor to close at a pre-determined time.

The auto-transformer has 2 coils for 2-phase motors and 3 coils for 3-phase motors, which gives balanced starting currents and the maximum starting torque per ampere line current. For motors up to 18 h.p., 3 sets of starting taps are provided which furnish 50, 65 or 80 per cent line voltage with respective line currents of 25, 42 or 65 per cent of the current which would be required if no compensator were used. For motors above 18 h.p., 4 sets of starting taps are provided which furnish 40, 58, 70 or 85 per cent line voltage with respective line currents of 16, 34, 49 or 72 per cent of the current that would be required if no compensator were used.

Compensators are shipped with connections made to the set of taps that furnishes 58 or 65 per cent line voltage. Provision is made for conveniently changing them to any other set which may be found more desirable when installing.

An electrical interlock is provided on the starting contactor which prevents the running-contactor from closing until the starting-contactor has opened. As a further safeguard, there is also a mechanical interlock between the 2 contactors.

### CR7051-J1 Compensators, Size No. 1

The CR7051-J1 Compensators are furnished for wall mounting but can be supplied for floor mounting by the addition of pipe supports, Cat. No. 1769917, at an additional price. The accelerating and running contactors are mounted back to back with the auto-transformer and relays mounted below. This reduces the wiring and results in a compact arrangement of all mechanical and electrical parts, completely enclosed in metal case. The enclosing case may be locked to conform with all safety requirements.

### CR7051-K1 Compensators, Sizes No. 2 and 3

The CR7051-K1 Compensators sizes No. 2 and 3 are furnished for floor mounting. They are supported by angle iron frame work and are enclosed in a sheet metal enclosing case which extends to the floor. The hinged front door is provided with means for locking to conform with safety requirements. The cover for the back of the panel is easily removable for making line and motor connections.

### CR7051-L1 Compensators, 2200 Volts

The CR7051-L1 Compensators for 2200 volts are electrically similar to the CR7051-J1 and K-1 compensators for 220 to 550 volts but are of a different mechanical construction. The contacts are oil-immersed, each pole being in an individual compartment. The definite-time accelerating relay, temperature over-relay and electrical interlocks are mounted on a slate base which is enclosed in a sheet metal case. Low-voltage for the control circuit is provided by means of a voltage transformer. The transformer is included in the price of the compensator but must be ordered as a separate item and mounted by the purchaser.

## G-E CR9158 Cage Type Resistors with Enameled Resistor Units

The CR9158 Cage-Type Resistor with enameled resistor units is arranged for wall mounting. The perforated enclosing case which is cadmium-plated to resist corrosion, protects the units and at the same time affords ample ventilation. The units are the 122-watt open-rated size, with an enclosed rating of 85 watts. The resistors are made in 1, 2, 3 or 4-unit sizes, the 4-unit case being used for both the 3 and 4-unit resistors. Units can be connected in series or in parallel as desired and are in most general use on switchboards and in railway signal work.

In ordering, specify CR9158 and give the number of resistor units desired. The desired resistance of each unit should also be given.

*Continuous Watt Capacity	No. of Form QE Units	Approx. Ship. Wt., Lbs.	Price Each
85	1	3	\$1.50
170	2	4	2.55
255	3	5	3.95
340	4	6	4.90

\*Enclosed rating.

\*Price includes temperature overload relay which is included in Cat. No. of CR7051-L1 compensator. Price also includes potential transformer but this must be ordered as a separate item.

**Accessories For Hand Control**

A CR2940-BS-79-J Start and Stop push-button station, which provides under-voltage protection, may be used with CR7051-J1 compensators and CR2940-BS-212-A Start and Stop push-button station with all other forms of CR7051 compensators.

A single-pole knife or snap switch, which provides under-voltage release, can be used in the pilot circuit to start and stop the motor.

**For Automatic Control (Under-Voltage Release)**

To maintain a water level in an open tank between definite limits, use a CR2931 float switch.

To maintain a definite pressure in a closed tank, use a CR2922 pressure governor or a CR2927 pressure switch.

**Ordering Directions**

**For CR7051-J1 Compensators**

1. Order the compensator by CR number and Cat. No. and specify the complete name plate rating of the motor.
2. Order a CR2824-TC-121-C temperature overload relay by Cat. No. 2019557 and group number from table for horsepower, speed and voltage of motor.
3. Order a push-button station or other accessory by its complete description.
4. Order an ammeter attachment by Cat. No.

**For CR7051-K1 Compensators**

1. Order CR7051-K1 compensator by Cat. No.
2. Order a TC-221 temperature overload relay by Cat. No.
3. Order a push-button station or other desired accessory by its complete description.

**For CR7051-L1 Compensators**

1. Order CR7051-L1 compensator by Cat. No.
2. Order one Type H, 1½-kv-a., control circuit transformer.
3. Order a push-button station or other desired accessory by its complete description.

**Model 1 Weston Portable Voltmeters  
For D.C.**

Single and double range instruments are furnished with locking contact and key or will be provided with a reversing switch instead of contact key at an additional cost of \$3.25. Equipped with zero-correcting device.

Metal case, dull black finish, base is of Bakelite.

**Model 1 Weston Portable Ammeters**

For D.C. Single Range

This instrument is accurate, direct reading, compact and serviceable for rapid work. All instruments are self-contained and are only made regularly with a single range.

Instruments have zero-correcting devices.

Bakelite base and sub-base.

Range in Amperes	Number of Scale Divisions	Price Each	Range in Amperes	Number of Scale Divisions	Price Each
1	100	\$68.75	50	100	\$81.25
1.5	150	68.75	100	100	87.75

25	125	81.25	500	100	112.50

**Model 1 Weston Portable Millivoltmeters  
For D.C.**

With Shunts for Ampere Measurements

This millivoltmeter in connection with Weston Patent Alloy Shunts, reads directly in amperes. Shunts of different sizes can be adjusted to same instrument. Measures a current of 2000 amperes with the same degree of accuracy as a current of 1 ampere. If user of this combination desires to employ additional ranges to those for which instrument is already adjusted, purchase additional shunts of ranges required, thus saving expense of an additional instrument. Price, Model 1..... each \$62.50

**Single Range Shunts for Millivoltmeters**

Prices below include adjustment between millivoltmeter and shunts.

Range in Amperes	Price Each	Range in Amperes	Price Each	Range in Amperes	Price Each	Range in Amperes	Price Each
1	\$13.75	30	\$27.50	200	\$48.25	750	\$82.50
3	17.25	50	30.75	300	55.00	1000	110.00

10	20.75	100	41.25	500	68.75	2000	240.75
15	20.75	150	44.75	600	75.75	.....	.....

**Model 1 Type 2 Weston Portable Direct Reading Ohmmeters**

May be operated on ordinary dry cells, thereby dispensing with the necessity of using a troublesome or expensive storage battery as a constant source of e.m.f.

No auxiliary rheostat, voltmeter, or other apparatus is required and as only six dry cells are essential for the highest range instrument (fewer cells being required for the low range instruments) the complete apparatus may be readily carried from place to place as a unit.

If the instrument is connected by its proper binding posts to the battery it then merely becomes necessary to connect the unknown resistance to the two binding posts provided for the purpose; press the contact key and read directly in ohms.

Instruments are made with double and triple ranges, a plug switch serving to make the change from one range to the other.

The instrument is guaranteed to be accurate within 1/4 of one per cent of full scale at any temperature from 10° C (50° F) to 30° C (86° F).

When not indicating, the pointer stands in a free zero position, there being no initial tension on the movable coil springs. Any inaccuracy at zero can therefore be instantly determined and corrected by means of the zero corrector.

Range Ohms	Volts Necessary to Operate	Price Each
0-2.5, 0-25, 25-50	*1.5	\$106.25
0-10, 0-50, 50-100	*1.5	106.25
0-200, 0-1000, 1000-2000	6	112.50
0-300, 0-1500, 1500-3000	9	112.50
0-1000, 0-5000, 5000-10000	24	120.00

\*When used for long periods on the low range it is recommended that 2 cells be used in multiple.

## Model 1 Weston Portable Millivoltmeters For Direct Current

This millivoltmeter may be arranged for use with alloy shunts for current measurements at an additional cost of \$6.25.

Range in Millivolts	Number of Scale Divisions	Price Each	Range in Millivolts	Number of Scale Divisions	Price Each
20	100	\$62.50	**20 } 200 }	100	\$68.75
10-0-10	100	62.50			
*10-0-10	100	68.75	...	...	.....
100-0-100					

\*Supplied with contact key by use of which either range may be employed.  
\*\*Has three binding posts.

## Model 1 Weston Portable Milliammeters For D.C.

### Single Range

500, 10	100	75.00	.....	.....	.....

\*Supplied with resistance box having two coils. When box is connected in series with binding posts marked 10 lower scale is read in volts. A full scale deflection is secured with 10 or 100 volts according to coil multiplier used.

## Model 1 Weston Portable Voltammeters For Direct Current

Model 1 voltammeters of other ranges made on special order.

RANGE		Number of Scale Div.	Price Each	RANGE		Number of Scale Div.	Price Each
Volts	Amps.			Volts	Amps.		
150	1.5	150	\$93.75	150	3	150	\$93.75

## Model 45 Weston Portable Voltmeters For Direct Current

The movement is completely enclosed in an iron case, securely fastened in a wooden carrying box, which protects it from stray magnetic fields. Has zero correcting device.

Double and triple range voltmeters will be furnished when desired in the combinations listed under Model 1 voltmeter. To determine the price of such instruments add \$7.50 for each additional range to the price listed for the highest range.

Box is provided with a hinged cover, which protects the scale and binding posts.

Range in Volts	Number of Scale Divisions	Price Each	Range in Volts	Number of Scale Divisions	Price Each

**Model 280 Weston Miniature Precision Portable Instruments**

For D.C.

These instruments are all the same size and can be carried in any ordinary coat pocket. They are made in a great many varieties of ranges and are admirably adapted to all kinds of commercial and experimental testing that falls within their limits of e.m.f. and current.

**Model 280 Weston Triple Range Portable Voltmeters**

For D.C.

This instrument can be carried in an ordinary coat pocket. It is admirably adapted to all kinds of commercial and experimental testing that falls within its limits of e.m.f. and current.

Provided with zero-correcting device. Case is dust-proof and made of sheet steel which shields magnetic system from any action of external fields.

Made in triple range only.

**Single-Range Millivoltmeters**

\*Provided with external shunt.

**Model 280 Weston Garage Testing Instruments**

This instrument is compact (pocket size) and has a uniform and legible scale, is accurate and serviceable, damped, quick in action, shielded from the disturbing influence of external magnetic fields, permanent and durable. It is adjusted for ranges of 30 and 3 volts and 100 milli-volts (all self-contained), and is provided with external shunts of 3, 30 and

300 ampere rating for use in making current measurements.  
 Price, Model 280, Testing Instrument..... each \$41.25  
 " Carrying Case..... " 8.50  
 " Multiplier for 150-volt Range..... " 5.00

**Model 45 Weston Battery Testing Voltmeters**

This instrument has been developed for the battery service station which is called upon to repair, charge and test batteries on a large scale. It is substantially constructed to withstand hard usage, the vital parts being contained in a cast-iron case about which is a wooden carrying box.

The range is 0.2-0-3 volts, which is particularly adapted for making voltage and cadmium tests on the individual cells of the battery.

Price, Model 45..... each \$41.25  
 " Cadmium Test Cables..... per pair 5.00

**Model 443 Weston Battery Testing Voltmeters**

This instrument meets every requirement for a means of testing the individual cells of a storage battery.

The acid-proof case is of Bakelite. In addition to its normal scale of 0 to 3 volts, this instrument is calibrated so that a portion of its scale is specially divided and figured for making the Cadmium Test. This special test which goes as added equipment has terminal consisting of a spike and a protected Cadmium stick, whereas the cable regularly supplied with the instrument has only the spike terminal.

Price, Model 443 Voltmeter, each \$14.00  
 " Cadmium Test Cable. " 2.75

## Model 341 Weston Portable Voltmeters For A.C. and D.C.

These instruments are electro-dynamometer meters and may be used with equal accuracy on either a.c. or d.c. circuits. They are contained in highly polished mahogany boxes, provided with carrying handles, locks and covers equipped with slip hinges. The weight is approximately 11 pounds, and the dimensions are 8x10 $\frac{1}{4}$ x-5 $\frac{3}{4}$  inches over all.

The entire movable and field coil system is mounted in a double closed iron shield, which effectually protects it from external magnetic field and electrostatic influences.

### Single Range

Range	Approx. Resist. Ohms	Price Each	Range	Approx. Resist. Ohms	Price Each
1	2	\$107.25	30	470	\$99.00
1.5	3	107.25	50	770	99.00

120-60	2700-1350	107.25			

## Model 311 Weston Potential Transformers

Designed for use on circuits of any frequency from 25 to 133 cycles per second.

They have an accuracy better than one-half of one per cent for loads not exceeding 15 volt amperes at any power factor.

The variation in ratio of transformation for various applied voltages within the range of the connected instrument is small.

Range Volts	Price Each
2200-1100 to 110	\$74.25
1100-550 " 110	70.75
440-220 " 110	66.75

## Weston Y-Boxes for Models 310 and 432 Wattmeters

These multipliers are resistors having a definite multiplying constant, the resistance material of which is highly insulated and arranged for proper heat dissipation.

They are so adjusted that the readings of the instrument may be multiplied by a specific constant.

Normal Voltage of Instrument	Normal Line Voltage Constant With Y-Box	MAXIMUM VOLTAGE WITH Y-BOX		PRICE, EACH	
		Model 310	Model 432	Model 310	Model 432
75	3	150	170	\$24.00	\$18.00
150	3	300	340	24.00	18.00
150	4	400	450	30.00	18.00
150	5	500	550	38.00	18.00
150	6	600	750	45.00	18.00

The multipliers listed are those most commonly required, but intermediate ranges or sub-divisions will be provided when so ordered.

## Model 329 Weston Portable Polyphase Wattmeters

These instruments are contained in highly polished mahogany boxes, provided with carrying handles, locks and covers equipped with slip hinges.

This form of instrument really consists of two single phase wattmeters, electrically independent, but having their movable coils mounted on a common shaft, so that they rotate together. Each coil, however, moves in its own system of field coils.

Scales are uniform throughout their entire length, and are 5 $\frac{1}{4}$  inches long.

The pointers are equipped with simple zero setting devices, and are of the Weston triangular truss type with knife edges. To prevent parallax errors mirrors are provided.

Approximate weight, 17 $\frac{1}{2}$  pounds.  
Dimensions overall, 9 $\frac{1}{2}$  x 10 $\frac{1}{2}$  x 8 $\frac{3}{8}$  inches.

**Model 370 Weston Portable Instruments**  
For Alternating and Direct Current

These instruments are electro-dynamometer ammeters, and may be used with equal accuracy on either direct current circuits or on alternating current circuits of any frequency up to 133 cycles per second and of any wave form.

They are contained in polished mahogany boxes, provided with carrying handles, locks and covers equipped

with slip hinges. The weight is approximately 11 lbs., and the dimensions are 8x10 $\frac{1}{4}$ x5 $\frac{3}{4}$  inches over all.

**Milliammeters—Single Range**

**Model 310 Weston Portable Wattmeters**  
For Alternating and Direct Current

These instruments represent the latest development in electro-dynamometer wattmeters and embody many characteristics hitherto considered unattainable in instruments of this class.

They are contained in highly polished mahogany boxes, provided with carrying handles, locks and covers equipped with slip hinges. The weight is approximately 11 lbs., and the dimensions are 8x10 $\frac{1}{4}$ x5 $\frac{3}{4}$  inches over all.

**Scales**

Scales are 5 $\frac{1}{4}$  inches long, are uniform throughout their entire length, and are provided with mirrors to prevent parallax mirrors.

The pointers are of the Weston triangular truss type with knife edges, and are equipped with simple zero setting devices controlled from the outside of the case.

**Ranges**

Double ranges for both the current and voltage circuits are provided. The double current, range feature is obtained by connecting the two field coil sections either in series or in multiple by means of links and binding screws, conveniently located on the top of the instrument. These links are provided with handles to facilitate their manipulation, and are slotted, making it unnecessary to remove them entirely each time the range is changed. The double voltage ranges are controlled by means of independent binding posts.

As each instrument has a number of ranges, a scale cannot be made which is readable with equal facility for all ranges. In each case however, a scale is provided which gives 1, 2 or 5 units per division for the range marked, and simple multiplying factors for the other ranges.

**Special Model for Very Low Power Factors**

 above 750 volts transformers

Effectively shielded from the electric and electrostatic influences, the movable system is maintained within a drawn steel shielding cup.

Motion of the movable system is controlled in any degree by means of an efficient air damper of special design and construction. The damping is of such a quality that the movable system instantly follows circuit fluctuations without undue oscillation.

The pointer is of the trussed type of construction, assuring maximum strength and eliminating vibration at all commercial frequencies. It has a knife-edge tip, which is of valuable aid in obtaining accurate readings.

Model 433 Voltmeter scales necessarily are not uniformly divided throughout their length. By means of special design and construction it has been possible to make the scale divisions nearly uniform over the upper two-thirds of the scale.

**Model 312 Weston Current Transformers**

They have an accuracy better than one-half of one per cent for loads not exceeding 15 volt amperes at any power factor.

The variation in ratio of transformation for various applied voltages within the range of the connected instrument is very small, and for all ordinary measurements no correction is necessary.

Secondary, 5 amperes.  
Capacity, 25 volt amperes.  
Test, 10,000 volts for 1 minute.  
Frequency, 25 to 133 cycles.

Range Amperes	Price Each

50-100-200 " 5	81.75

**Model 313 Weston Current Transformers**

The ranges listed correspond to the primary current for a conductor passing through the opening once. Range can be changed by passing the primary conductor through the opening more than once. Transformer has a short-circuiting switch in the secondary. Designed for use on potentials as high as 2500 volts. Secondary, 5 amperes. Capacity, 25 volt amperes. Test 10,000 volts for 1 minute. Frequency, 25 to 133 cycles.

Range Amperes	Opening Inches	Price Each
1200 to 5	2x3 1/2	\$63.25
1800 " 5	2x4 1/2	66.75
2400 " 5	2x4 1/2	70.75

**Model 461 Weston Portable Multi-range Current Transformers**

There is a wide variety of testing that can only be conveniently and successfully conducted by means of a portable current transformer that is comprehensive as to range of values; accurate within the order of accuracy of any precision portable instrument with which it may be used; compact in size; light in weight; and reasonable in cost.

Model 461 Portable Current Transformer meets all these qualifications.

It has three secondary primary ranges: 10 to 40 amperes to

connections are made by binding posts. The secondary range of 5 amperes and is provided with a short-circuiting switch. The core of the transformer is wound through which one turn of primary will give 40 amperes, two turns 400 amperes, four turns 800 amperes, etc. Hence the range extends from 10 to 800 amperes.

Has a ratio accuracy within the guaranteed accuracy of any standard Weston portable A. C. ammeter when used on circuits of 60 cycle frequency. The error on circuits of 25 cycle frequency is .3 per cent of full load value at 1/2 secondary current. Maximum frequencies from 25 cycles up to 133 cycles and voltages up to and including 2500 volts.

It is compact, its dimensions being 6 1/4 x 4 1/2 x 3 1/2 (158.8x196.9x76.2 m.m.) It is light, weighing 10 pounds (2.84 kilograms).

Price, Model 461 Multi-range Current Transformer

**Model 155 Weston Portable Voltmeters For Alternating Current**

This instrument may be used on circuits of any frequency from 15 to 140 cycles per second without appreciable errors resulting.

Voltmeters are all self-contained. Voltmeters having ranges of 125 volts or higher require 75 milliamperes to produce a full scale deflection. Equipped with zero correcting device.

Dimensions, small size,

7x7 1/8 x 3 3/4 inches; large size, 7 3/4 x 8 3/4 x 4 inches.

**Model 155 Weston Portable Ammeters For Alternating Current**

The ammeters listed may be used on circuits having a difference in potential of 2300 volts.

The current transformers must be used for the measurement of all the alternating currents greater than 10 amperes.

Instrument with zero-correcting device

**Model 433 Weston Portable Voltmeters  
For Alternating Current**

Model 433 Voltmeter is of the electromagnetic or movable iron type depending for its operation upon the mutual repulsion of two properly shaped pieces made from a special iron alloy, one fixed and the other movable, which are polarized by a current passing through a field coil in which they are mounted. The movable piece is fastened to the pointer through a staff so that its motion is communicated to the pointer.

Made as single range or double range instrument. In the case of the double range instruments three binding posts are provided, one of these being common to both ranges.

The voltmeters listed are self-contained. Ranges higher than those indicated can be obtained by means of an external potential transformer in conjunction with a 150-volt range. For ranges above 150 volts a potential transformer must be used.

The instruments are protected from effects of external magnetic fields by a special shielding system being constructed.

The instruments are designed to a proper mechanical design that insures that the pointer is rigid and that the instrument is free from vibration.

**Model 433 Weston Portable Ammeters  
and Milliammeters**

For Alternating Current

Model 433 Ammeters and Milliammeters depend for their operation on the electromagnetic or movable-iron principle.

This principle consists of the mutual repulsion of two properly shaped pieces made from a special iron alloy, one fixed and the other movable, which are polarized by a current passing through a field coil in which they are mounted. The movable piece is fastened to the pointer through a staff so that its motion is communicated to the pointer.

Made in single ranges only. They are all self-contained up to and including 50 amperes.

Ranges above 50 amperes can be obtained by using a current transformer with a 5-ampere instrument. Weston Model 312, 313 and 461 Portable Current Transformers are recommended for this purpose.

For proper protection from the action of external magnetic and electrostatic influences, the movable systems of these instruments are placed in a shielding cup of drawn steel.

By means of a very efficient air damper of special Weston design, motion of the movable system is effectually controlled so that no undesirable oscillation occurs. The pointer follows the circuit fluctuations with rapidity, making it possible to obtain accurate instantaneous readings.

The pointers are of the trussed construction assuring rigidity and absence of vibration. The pointer is provided with a knife-edge tip.

Model 433 ammeter and milliammeter scales have characteristics similar to those of the voltmeter scales. These scales are easily read over their working range. A mirror is provided which, with the knife-edge pointer, facilitates the taking of accurate readings through the elimination of parallax errors.

The instruments may be used on any frequency as high as 500 cycles per second without appreciable error. Errors in indication due to temperature are negligible. These instruments may be left in circuit continuously without overheating or error in the instrument indication.

Width	5 1/8 Inches	128.5 Millimeters

## Model 432 Weston Portable Wattmeters For D.C. and Single-phase A.C.

The Model 432 Wattmeter is an electro-dynamometer instrument having electrically independent potential and current circuits. All of these instruments are made with a single current range and double voltage ranges. Standard normal current ranges are available from 1 ampere up to and including 50 amperes. The voltage range combinations are 75-150 and 150-300 volts. All of the listed ranges are self-contained. Current ranges can be extended beyond 50 amperes by using a 5-ampere instrument in

conjunction with a current transformer. Width overall, 6 1/2 inches. Depth overall, 5 1/4 inches. Height overall, 3 1/2 inches. Scale length, 3.8 inches. Approximate weight, 3 1/4 pounds.

Normal Volts	AMPERES		WATTS		Price Each
	Nor.	Max.	Low Range	High Range	
75-150	1	1.5	75	150	\$50.00
150-300	1	1.5	150	300	57.50

75-150	50	75	3.75 K.W.	7.5 K.W.	60.00
150-300	50	75	7.5 K.W.	15 K.W.	67.50

Resistor multipliers can be furnished for voltage ranges in excess of 300 volts and up to and including 750 volts. Prices upon application. For ranges above 750 volts a Weston Portable Potential Transformer is recommended.

## Model 457 Weston Portable Potential Transformers

Designed to supply the need for a compact light weight transformer which the user can easily and conveniently carry in addition to the measuring instruments with which it is to be used. Consequently, this transformer has been made as small and as light in weight as possible yet maintaining a high degree of accuracy in performance.

The transformer is contained in a neat polished wooden case having a removable cover. It is also provided with a strong carrying strap.

Model 457 potential transformers have two primary ranges, the higher range being four times the value of the lower range. A primary range changing switch is provided which enables either primary range to be brought into use instantly.

The range changing switch is mounted on the bakelite top of the transformer. The knob is of bakelite and bears an index mark so as to show which range is in use. On this top are also mounted the primary and secondary binding posts. Markings on the transformer top clearly indicate which are the primary and which the secondary binding posts. By means of the marking the primary and secondary binding posts of like instantaneous polarity are designated.

Normal	Ratio, Volts		Frequency Cycles	Price Each
	Maximum	to		
2200-500	to 110	3000-750	to 150	\$65.00
2200-550	" 110	2500-625	" 125	65.00
3000-750	" 100	3750-937.5	" 125	65.00

## Model 57 Weston Round Pattern Switchboard Instruments

For D.C.

These instruments are made in three patterns: Regular, for front of board connection. Back connection, in which the binding-posts are carried through to the rear of the switchboard. Flush type, in which a flange is provided for the front, allowing the entire body of the instrument to pass through for connection in the rear of the switchboard.

The cases of these instruments are regularly supplied in No. 11 dull black japan finish. Diameter, 9.5 inches. Shipping weight, 22 pounds.

Ammeters			Ammeters			Ammeters		
Range	No. of Scale Divisions	Price Each	Range	No. of Scale Divisions	Price Each	Range	No. of Scale Divisions	Price Each
1	50	\$37.50	150	75	\$40.50	750	75	\$47.25
5	50	37.50	200	40	42.00	1000	50	48.75

25	50	39.00	150	75	44.25	750	75	54.25

Voltmeters may be made with an additional lower range at an increase in price. These prices are for No. 11 finish dull black japan. No extra charge will be made for above instruments with back connection or flush-type cases. Always specify the style desired when ordering.

## Model 24 Weston Round Pattern Switchboard Instruments

For Direct Current

The cases are supplied in three types: Regular, to be attached directly to and connected from the front of the switchboard; back connected regular, but with binding posts projecting through to the back of the board; and flush type instrument, intended to be countersunk so that the front of the case is practically flush with the face of the board, causing the body of the instrument and the binding posts to project through to the back of the board.

Finished in dull black japan. Specify style desired, when ordering. Diameter, 7 1/4 inches. Shipping weight, 15 pounds.

Ammeters			Ammeters			Ammeters

**Weston Fan-Shaped Switchboard Voltmeters**

**For Direct Current**

Compact in size and have remarkably long, open and legible scales. Each instrument is provided with a zero shifting device.

The standard finish of case is a heavy, rich, dull black japan that has the appearance of hard rubber, and exceptionally durable.

All instruments are of the back connected type and are secured to the switchboard by means of studs projecting from the rear of the case.

**Dimensions**

Model	Width Inches	Height Inches	Scale Inches	Weight
267	4.1	3.35	2.5	1 lb. 9 oz.
269	5 5/8	4 7/8	4	1 lb. 8 oz.

Model 267			Model 269			Model 269		
Range Volts	No. of Scale Div.	Price Each	No. of Scale Div.	Price Each	Range Volts	No. of Scale Div.	Price Each	
1	50	\$16.25	50	\$21.00	20	40	\$21.00	
1.5	30	16.25	75	21.00	30	60	21.00	
2	40	16.25	40	21.00	50	50	21.00	
3	30	16.25	60	21.00	75	75	21.00	
5	50	16.25	50	21.00	100	50	21.00	
8	40	16.25	40	21.00	150	75	21.00	
10	50	16.25	50	21.00	200	40	21.00

Model 267, up to and including 30 amperes, and Model 269, up to and including 50 amperes, furnished with self-contained shunts.

Models 267 and 269, external shunts, have drop of 100 millivolts. Shunts for Model 269 above 150 amperes have 50 millivolts drop.

Zero center ammeters will be furnished without extra charge.

**Model 301 Weston D.C. Radio Panel Instruments**

Model 301 Voltmeters are ideal for filament and plate voltage measurements. Their high internal resistance means that a slight amount of current is drawn for the operation of the instrument. This is of great importance when using dry cell tubes or measuring the B battery because a useless drain on these cells means more rapid replacement.

Made self-contained up to and including 200 volts. Above 200 volts, they are supplied with external resistors; above 150 volts, the instrument is supplied in a bakelite case to provide proper insulating qualities. Voltmeters up to 40 volts have a resistance of 62 ohms per volt; 50 to 150 volts inclusive, 200 ohms per volt; 200 volts, 250 ohms per volt and above 200 volts (with external resistor) 62 ohms per volt.

Diameter, metal case, 3.25 inches; bakelite case, 3.375 inches.

Voltmeters are of the flush type with dull japan finish.

Volts	Description	Price Each	Volts	Description	Price Each
1.5	Filament or Grid	\$8.00	10-0-10	Zero Center	\$8.00
2	Filament or Grid	8.00	100	Plate	11.00
3	Filament or Grid	8.00	150	Plate	11.00
5	Filament or Grid	8.00	†200	Plate	11.75
7	Filament or Grid	8.00	†300	Plate	13.75
8	Filament or Grid	8.00	†500	Plate	17.75
10	Filament or Grid	8.00	†1000	Plate	24.75
15	Filament or Grid	8.00	†1500	Plate	30.75
20	Filament or Grid	8.00	†2000	Plate	36.75
25	Filament or Grid	8.00	†2500	Plate	51.00
30	Filament or Grid	8.00	†3000	Plate	59.75
50	Filament or Grid	8.00			

Cannot be used to measure voltage of a B battery substitute unless substitute can maintain its voltage with a current of .005 ampere, the current required to operate the voltmeter.

**Multipliers for Increasing Range of Voltmeters**

Range with Instrument	300	500	1000	1500
Price	each \$5.00	9.00	16.00	22.00
Range with Instrument	2000	2500	3000	
Price	each \$28.00	42.25	51.00	

**\*Filament Ammeters for Filament Control**

Amperes	1	1.5	2	3	5	8
Price	each \$8.00	8.00	8.00	8.00	8.00	8.00
Amperes	10	15	20	30	50	
Price	each \$8.00	8.00	8.00	8.00	8.00	

**\*Plate or Grid Milliammeters**

For measuring the plate current of vacuum tubes. Will give a deflection for steady or pulsating d.c. and will indicate the average value of a pulsating current.

Bakelite cases are recommended when plate milliammeters are used on circuits exceeding 150 volts and when circuit conditions do not permit the grounding of one side of the instrument, or when desired to match high voltage voltmeters.

Milli-amperes	Price Each	Milli-amperes	Price Each	Milli-amperes	Price Each
1	\$12.00	15	\$8.00	150	\$8.00
1.5	12.00	25	8.00	200	8.00

\*Flush type with dull japan finish.

†Instrument supplied with Bakelite case.

Bakelite case supplied on voltmeter for 150 volts and less at 75 cents extra.

Bakelite case to match high range voltmeters 75 cents extra.

‡Supplied with external resistor.

## Models 167 and 343 Weston Switchboard Wattmeters

For D.C. and Single-phase A.C.

For current ranges in excess of 100 amperes it is necessary to use current transformers.

For voltages above 750 volts for any current range both current and potential transformers must be employed. All current circuits have an overload capacity of double normal value permitting full-scale readings to be made at 50 per cent power factor. Dull black japan finish.

### Model 167

**Models 215 and 356 Weston Power-factor Meters**

**For Alternating Current**

By virtue of a novel mode of construction, the Weston power-factor meter has been rendered practically perfect in its operation. From 3/10 load to full load it indicates the true phase angle to within 1 per cent independent of any variable conditions found on ordinary commercial circuits. Polyphase power-factor meters may be used on any commercial frequency. Single phase meters require a phase-splitting device and, therefore, must be calibrated for the frequency at which they are to operate. The following ranges are regularly carried in stock: 25, 40, 50, 60, 125 and 133 cycles per second. Polyphase power-factor meters are arranged for the following systems: two-phase three-wire, and three-phase three-wire for balanced loads. Meters above 150-volt range are equipped with external resistance box. All meters have the same kind of scale, reading from 0.50 lag to 0.50 lead. Special scales for power-factors as low as 0.30 may be had at slight extra cost. This instrument may also be arranged as a sine or cosine meter. For two-phase four-wire circuits, two-phase three-wire instruments in conjunction with two potential transformers. Polyphase instruments are made for balanced load only.

**Model 215**

Diameter, 9 5/8 inches. Depth, 4 inches. Scale, 6% inches. Polyphase

100 to 125 or 125 to 150 Volts			200 to 250 or 250 to 300 Volts

External resistor furnished on ranges above 150 volts.

**Single-phase**

Single-phase meters require an auxiliary device for splitting the phase, which is mounted in an external box. The price of Single-phase Power-factor Meters, including auxiliary device, is \$13.75 more than the price of corresponding range polyphase meters. They are made for direct connection only up to 300 volts.

When ordering, always specify the frequency.

**Model 356**

Diameter, 7 1/2 inches. Depth, 4 1/2 inches. Scale, 5% inches. Prices given below are for polyphase only.

Single-phase meters including external phase splitting reactors carry list prices \$14.75 more than the corresponding range polyphase meters. Single-phase meters are made for direct connection to circuits of 300 volts maximum. All resistors for all ranges are self-contained. Always specify frequency when ordering.

**Model 151 Weston Round Pattern Switchboard Ammeters**

**For Alternating Current**

The case is provided with a ground terminal which must be connected to earth when the potential difference of circuits exceeds 200 volts. Case is made of cast iron. Diameter, 9.56 inches; depth, 3.15 inches. Length of scale, 6.5 inches. Self cont. up to 500A.

Range in Amps.	Price Each	Range in Amps.	Price Each
1	\$29.50	50	\$29.00

**Model 156 Weston Round Pattern Switchboard Voltmeters**

**For A.C.**

Made for direct connection to circuits up to and including 750 volts. Up to and including the 300-volt range the resistors are self-contained. Above 300 and up to and including 750 volts an external resistor is provided. Voltages above 750 necessitate the use of potential transformers. Fitted with zero-correcting device.

Voltmeter is contained in cast iron case. Diameter of case, 7.25 inches; depth, 3.15 inches; length of scale, 5.25 inches.

Range in Volts	Price Each	Range in Volts	Price Each
75	\$24.00	300	\$30.50

40	22.75	...	....

**Model 214 Weston Frequency Meters**

**For Alternating Current**

Indications are independent of changes of temperature, voltage and wave form, such as may be encountered in the commercial circuits of to-day. Standard meters are made for one voltage, 100 to 125 volts. Every frequency meter is provided with an external box which contains reactors and resistors.

Diameter, 9 5/8 inches. Depth, 4 inches.

**100-125 or 125-150 Volts**

Cycles	Price Each	Cycles	Price Each
25	\$82.50	60	\$82.50
40	82.50	125	82.50
50	82.50	133	82.50

For 200-250 or 250-300 volts, add \$7.00 list to above prices.

## Model 355 Weston Frequency Meters

For Alternating Current

Indications are practically independent of changes of temperature, voltage and wave form, such as may be encountered in the commercial circuits of today. Standard meters are made for one voltage, 100 to 125 volts. Every frequency meter is provided with an external box which contains reactors and resistors.

Diameter,  $7\frac{1}{2}$  inches. Depth,  $4\frac{1}{2}$  inches.  
**100-125 or 125-150 Volts**

Cycles	Price Each	Cycles	Price Each
25	\$78.00	60	\$78.00
40	78.00	125	78.00
50	78.00	133	78.00

For 200-250 or 250-300 volts, add \$7.50 list to above prices.

## Model 226 Weston Synchrosopes

For Alternating Current

Consists of a phase angle indicator mounted with its pointer behind a ground glass scale and illuminated by a small synchronizing lamp. A difference in frequency between machines causes the pointer to swing back and forth. Perfect synchronism is indicated by the pointer remaining at rest in the middle of the scale with the lamp lighted.

Made for 100-125 volts and any commercial frequency up to 60 cycles.

Price, Model 226.....each \$86.00  
 Specify voltage and frequency when ordering.

## Weston Round Pattern Switchboard Instruments

For A.C.

Voltmeters with a range above 300 volts are provided with external resistance.

Every ammeter is tested before shipment for insulation with 4,600 volts for one minute.

The case of each ammeter is provided with a ground terminal, which must be connected to earth when the potential difference of circuits exceeds 200 volts.

Transformers must be used on all circuits carrying over 500 amperes, and a value of 5 amperes for the secondary is recommended. Models 260 and 261 have drawn steel cases.

### Dimensions

Model	Diameter Inches	Depth Inches	Model	Diameter Inches	Depth Inches
260	$7\frac{1}{2}$	$4\frac{1}{2}$	261	$9\frac{5}{8}$	4

Model 260		Model 261	
Range	Price Each	Range	Price Each
5	\$22.25	5	\$28.00

## Models 251 and 252 Weston Round Pattern Switchboard Instruments

For Direct Current

Same instruments as the Models Nos. 57 and 24, except being mounted in drawn steel cases so as to correspond with the alternating current instruments.

Voltmeters are furnished with self-contained resistors for circuits up to and including 300 volts. For higher potentials external resistors are provided arranged for mounting on the back of switchboard.

### Model 251

Voltmeters		Ammeters	
Range Volts	Price Each	Range Amp.	Price Each
130	\$46.75	200	\$46.25

300	33.75	500	32.25
600	38.00	600	33.75
...	...	750	35.50

Voltmeters above 300 volts have external resistors. Ammeters, all ranges, have external shunts.

All ammeters are furnished as millivoltmeters adjusted for use with external shunts only. Prices for lower or higher ranges will be quoted upon request.

## Model 354 Weston Dashboard Ammeters

For Direct Current

Furnished in two styles—(A) Flush style, with a wide flange, so that the instrument can be fastened directly to the dashboard; and (B) Surface style, projecting out from the dashboard, and held in place by the back connection studs, which also serve for making the electrical connections.

Finished in dull black or full nickel, with silver grey or black scales.

Finished in the following ranges: 10-0-10, 15-0-15, 20-0-20, and 30-0-30.

Price.....each \$3.50

When ordering, specify the style, range, finish of scale desired.

## Model 453 Weston Heavy Discharge Battery Testers

To obtain the actual working condition of an automotive storage battery the voltage of each cell of battery should be tested while a relatively heavy current is flowing.

The Model 453 consists of a prod upon which is mounted a direct-current voltmeter having a range of 3-0-3 volts.

Price, Model 453, Complete.....each \$14.00  
 " Prod Only....." 5.50

**Model 429 Weston Round Pattern Switchboard Instruments**

**For Alternating Current**

Model 429 voltmeters, ammeters, and milliammeters operate on the electro magnetic or movable iron principle in which is utilized the repulsion action between a fixed and a movable piece of iron placed within a field coil.

All scales are calibrated by hand in reference to standard instruments. The angle of deflection is approximately 80° and the scale

length 2.7 inches (68.6 m.m.). These scales have the same general characteristics as those of the larger Weston A. C. Instruments, being slightly congested at the lower end but remarkably uniform over the working range, which comprises approximately the upper four-fifths of the scale.

Voltmeters are made self-contained in the listed ranges up to and including 150 volts. Ranges above this value are provided with an external resistor box. For use with potential transformers, the 150-volt instrument can be supplied having the scale calibrated to indicate the primary voltage, if this is desired. Voltmeters are accurate within 1 per cent of full scale value, over the working range of the scale, under normal working conditions on any frequency between 25 and 133 cycles per second. Changes in temperature have no effect on the accuracy of indications, neither are instruments affected by length of time they are left in circuit. Low range voltmeters of this type necessarily require a larger current for operation than the high range instruments. At times, this larger current may become an important factor in altering the normal circuit conditions; therefore, the resistance of each range has been stated in the price list in order that the purchaser may be better enabled to select the proper instrument for his purpose.

Ammeters and milliammeters are self-contained in the ranges listed. Ranges above 50 amperes can be obtained by using a 5-ampere instrument with a current transformer of proper range. When desired, the ammeter will be calibrated to indicate the primary amperes. In cases where an overload capacity is required, a 6 1/4-ampere instrument can be provided with scale calibrated to indicate primary amperes.

Prices will be quoted upon application.

**Model 427 Weston Switchboard Wattmeters For D. C. and Single-phase A. C.**

Model 427 Wattmeters operate on the electro-dynamometer principle; consequently they can be used on both direct and alternating current.

Flush and semi-flush types of cases are provided for this model. In order that the semi-flush case should harmonize with the surface type instruments of the other models, its projection from the switch-board has been made the same as for the other surface type instruments.

These instruments are accurate within 1 per cent of full scale value at any part of the scale, under normal working conditions on direct current or on alternating current of any frequency between 25 and 133 cycles per second and of any wave form met with in commercial practice. Temperature errors are negligible.

The current circuits of these wattmeters are capable of withstanding an overload current of 50 per cent of the normal current without overheating. This feature is of value when the power factor of the circuit is low.

Model 427 Wattmeters are regularly made with self-contained voltage ranges up to and including 250 volts.

Above this value and up to and including 750 volts, an external resistor is provided. Voltage ranges may also be extended by using a potential transformer of suitable range in connection with a 150-volt instrument.

Current ranges are self-contained up to and including 20 amperes normal (30 amperes maximum). For high current ranges, it is necessary to use a current transformer in connection with a 5-ampere instrument.

## Model 496 Weston Rectangular Switchboard Instruments For Alternating Current

These instruments are of the electro-magnetic or movable-iron type.

Each instrument is mounted in a dust-proof iron case which serves to protect the movement from the influence of external magnetic fields.

Case is 5 3/4 inches wide, 6 inches high and projects 4 1/4 inches from front of the switchboard. Designed for back connection and surface mounting

only. Finish, dull black japan.

Scale is 5 1/8 inches in length, hand calibrated.

### Voltmeters

External resistors required for all ranges.

Ranges above 750 volts require the use of potential transformers.

Volts	Number of Scale Divisions	Approximate Resistance Ohms	Price Each
100	50	1300	\$28.00
130	65	1700	28.00
150	75	2000	28.50
300	30	8300	34.75
500	50	14000	36.00
600	60	16600	36.50
750	75	21000	38.50

### Ammeters

Ranges above 10 amperes and 750 volts require the use of current transformers.

Amperes	Number of Scale Divisions	Approximate Resistance Ohms	Price Each
3	30	.13	\$26.50
5	50	.044	26.50
7.5	75	.022	26.50
10	50	.013	26.50

## Model 497 Weston Rectangular Switchboard Power Factor Meters For Alternating Current Single-phase, 2-phase 3-wire and 3-phase

The Power Factor Meter is constructed on the electro-dynamometer principle.

Each instrument is mounted in a dust-proof iron case which serves to protect the movement from the influence of external magnetic fields. Case is 5 3/4 inches wide, 6 inches high, and projects 4 1/4 inches from front of the switchboard. Designed for back connection and surface mounting only. Finish, dull black japan.

Scale is 5 1/8 inches in length, hand calibrated.

External resistors required for all ranges. Current ranges above 5 amperes require the use of current transformers. State actual voltage when ordering.

### Single-phase Meters

Made for direct connection to circuits of 300 volts maximum. Always specify frequency when ordering.

Single-phase meters including external phase splitting reactors carry prices \$14.75 more than the corresponding range polyphase meters as given below.

### 2-phase 3-wire and 3-phase

Made for direct connection to circuits of 750 volts maximum For 2-phase 4-wire circuits use 2-phase 3-wire instruments with 2 potential transformers. All details in regard to ratio and connections of transformers to be used on 3-phase circuits should be given.

Volts	Amps.	Price Each	Volts	Amps.	Price Each
100 to 125	5	\$70.75	400 to 500	5	\$93.00
125 " 150	5	70.75	500 " 600	5	93.00
200 " 250	5	78.00	600 " 750	5	100.50
250 " 300	5	78.00	.....	..	.....

## Model 498 Weston Rectangular Switchboard Single-phase Wattmeters For Alternating Current

This instrument is constructed on the electro-dynamometer principle.

Each instrument is mounted in a dust-proof iron case which serves to protect the movement from the influence of external magnetic fields.

Case is 5 3/4 inches wide, 6 inches high, and projects 4 1/4 inches from front of switchboard.

Designed for back connection and surface mounting only.

Finish is dull black japan.

Scale is 5 1/8 inches in length, hand calibrated.

External resistors required for all ranges.

Current ranges above 5 amperes require the use of current transformers and potential ranges above 750 volts require the use of both current and potential transformers.

Volts	Normal Amperes	Scale	Price Each
100 to 150	5	500 W.	\$63.25
100 " 150	5	750 W.	63.25
200 " 300	5	1 K.W.	67.50
200 " 300	5	1.5 K.W.	67.50
400 " 600	5	2 K.W.	70.75
400 " 600	5	3 K.W.	70.75
600 " 750	5	2.5 K.W.	71.25
600 " 750	5	4 K.W.	71.25

## Model 499 Weston Rectangular Switchboard Polyphase Wattmeters For Alternating Current

This instrument is constructed on the electro-dynamometer principle.

Each instrument is mounted in a dust-proof iron case which serves to protect the movement from the influence of external magnetic fields.

Case is 5 3/4 inches wide, 6 inches high, and projects 4 1/4 inches from front of switchboard.

Designed for back connection and surface mounting only.

Finish, dull black japan.

Scale is 5 1/8 inches in length, hand calibrated.

External resistors required for all ranges.

Current ranges above 5 amperes require the use of current transformers and potential ranges above 750 volts require the use of both current and potential transformers.

Volts	Normal Amperes	Scale	Price Each
100 to 150	5	1 K.W.	\$93.00
100 " 150	5	1.5 K.W.	93.00
200 " 300	5	2 K.W.	104.25

**Model 500 Weston Rectangular Switchboard Frequency Meters**

For Alternating Current

This instrument is of the electro-magnetic or movable-iron type.

Each instrument is mounted in a dust-proof iron case which serves to protect the movement from the influence of external magnetic fields.

Case is 5 3/4 inches wide, 6 inches high, and projects 4 1/4 inches from front of switchboard.

Designed for back connection and surface mounting only.

Finish is dull black japan.

External reactance required for all ranges.

Higher ranges require the use of a potential transformer.

State actual voltage when ordering.

For 220-volt service, add \$7.50 to prices given below.

Volts	Cycles	Price Each	Volts	Cycles	Price Each
100 to 125	25	\$78.00	100 to 125	60	\$78.00
or	40	78.00	or	125	78.00
125 to 150	50	78.00	125 to 150	133	78.00

**Model 501 Weston Rectangular Switchboard Triplex Ammeters**

For Alternating Current

The Triplex Ammeter consists of three separate and distinct ammeter movements mounted one above the other and contained all in one case. Designed for back connection and surface mounting only.

The dust-proof iron case serves to protect the movements from the influence of external magnetic fields.

Case is 5 3/4 inches wide, 15 1/2 inches high, and projects 4 1/2 inches from front of switchboard.

Finish, dull black japan.

Scales are 5 1/8 inches in length, hand calibrated.

Ranges above 10 amperes and 750 volts require the use of current transformers.

Amperes	Number of Scale Divisions	Approximate Resistance Ohms	Price Each
3	30	.13	\$70.00
5	50	.044	70.00
7.5	75	.022	70.00
10	50	.013	70.00

**Model 425 Weston Radio Frequency Instruments**

Consists of a heating element and Weston direct-current permanent magnet movable coil instrument mounted in the same case. They are regularly made as ammeters, milliammeters and galvanometers or current squared meters. All are back connected. These instruments are furnished in dull black finish with either flush or surface type cases. All instruments have a zero adjusting device. The indications are not affected by changes in temperature and are equally accurate on any audio or radio frequencies. The galvanometers and milliammeters cannot be used on direct currents. The power required to operate these instruments is small. They have a safe overload capacity of 50 per cent.

Flush			Surface		
Diam. In.	Depth In.	Scale In.	Diam. In.	Depth In.	Scale In.

115 Milliammeters 5.2 Ohms	50	\$15.00

Specify whether surface or flush type is desired.

**Model 400 Weston Thermo Ammeters**

Weston Model 400 Radio Frequency ammeters or thermo ammeters consist of a heating element and a direct current permanent magnet indicator calibrated to indicate directly the current passing through the heating element.

These instruments are made self-contained with either front or back connection studs for currents up to and including 100 amperes. Above 100 amperes external heating elements must be used. Ranges of 100 amperes or below are also supplied with external heating elements when desired although for the lower ranges it is preferable to use the self-contained instrument.

Instruments for use with external elements are always made back connected.

Indications are not affected by changes in room temperature.

Each instrument has a zero correcting device for rectifying any slight accidental changes in the zero position of the pointer. The standard finish is dull black japan.

## Model 502 Weston Rectangular Switchboard Instruments For Direct Current

These Rectangular D.C. Instruments are of the permanent magnet, movable coil type, similar to the round pattern Model 24 Instruments.

Each instrument is mounted in a dust-proof iron case which serves to protect the movement from the influence of external magnetic fields. Case is 5 3/4 inches wide, 6 inches high, and projects 1 1/4 inches from front of switchboard.

Designed for back connection and surface mounting only. Finish is dull black japan. Scales are 5 1/8 inches in length, hand calibrated.

### Voltmeters

Resistance self-contained up to 800 volts.

The resistance of these instruments is 100 ohms per volt.

Volts	Number of Scale Division	Price Each	Volts	Number of Scale Division	Price Each
120	60	\$27.25	300	30	\$33.75
150	30	28.00	600	30	36.00
250	50	32.25	750	30	38.00

Prices for higher or lower ranges upon application.

### Ammeters

All ammeters are furnished for use with 50 M. V. external shunts only.

Standard 8-foot cables are supplied.

Amperes	Number of Scale Division	Price Each	Amperes	Number of Scale Division	Price Each
250	50	\$29.75	500	50	\$32.25
300	30	30.25	600	30	33.75
400	40	30.50	800	40	37.25

Prices for higher or lower ranges upon application.

## Model 375 Weston Students' Galvanometers

The instrument is mounted on a base, so that the face, or scale is inclined at an angle of 45 degrees. The scale is 2.35 inches in length, is uniformly divided, and is calibrated 30-0-30. Each instrument is provided with a zero-adjusting device. The resistance is approximately 25 ohms. The current required for a millimeter (1 scale division) deflection is 22 micro-amperes.

With one volt, a deflection of 1 millimeter (1 scale division) will be obtained through 45,500 ohms, but as a deflection of 0.2 of a scale division can be readily detected, the galvanometer is, in reality, serviceable through 227,500 ohms.

Price, Model 375.....each \$13.50

## Model 441 Weston Fault-finders

The Fault-finder consists of an ammeter and a voltmeter mounted in a strong, compact carrying box with carrying strap. The ammeter and voltmeter being electrically independent of each other, simultaneous readings of current and voltage can be made.

The voltmeter has ranges of 2-0-30 and 0.2-0-3 volts. The latter range is particularly adapted to making cadmium tests.

Each Fault-finder is provided with a pair of flexible rubber-covered cables.

Price, Model 441.....each \$31.00  
" Cadmium Test Cables.....per pair 2.75

## Matthews Woodpecker Telefaults

Locates trouble on telephone, telegraph, signal and certain classes of electric light and power cables. Only uses one dry cell battery. Maximum voltage only 5 volts.

It does not noise up other working pairs, because of the inductive field created. The tone is like a woodpecker on a pole; it is not a hum.

Price, Type L.....each \$132.00  
Price, Extra Exploring Coil.....each 30.00  
Price, Extra Receivers.....each 14.00

## No. 32 Sterling Charge Indicators

Places a current load on the battery greater than that drawn by all the tubes in any radio set.

Tells at a glance when the A battery needs charging and when the battery on charge has been charged enough.

The test is external. Apply the spur and cord tip momentarily to the battery poles and the red pointer registers instantly.

Full nickel finish. Black dial with a red pointer.

Standard package, 10.

Individually boxed. Weight, 3 ounces.

Price, No. 32.....each \$2.00

## Wathour Loose Leaf Meter Books

The Hall Loose Leaf Meter Book is made in two sizes Nos. 100 and 200.

No. 100 is designed to hold 100 meter sheets.

No. 200 will accommodate 200 sheets. No. 100C consists of a No. 100 cover and 100 sheets.

No. 200C comprises a No. 200 cover and 200 sheets.

Size of leaf is 5x8 1/2 inches.

### No. 100C

Meter book complete with 100 leaves. Price No. 100C.....each \$3.75

### No. 200C

Meter book complete with 200 leaves. Price No. 200C.....each \$4.58

### Covers Only

Price No. 100.....each \$3.00  
" " 200....." 3.23

### Leaves Only

Price in 1000 Lots.....per 1000 \$6.00  
" " 100....." 100 .68

### Indexes

Price.....per set \$2.48

Meter Book Complete

**Duncan Direct Current Watthour Meters**

Models E, EA and ER

Model E

Models E and EA meters are of the series type and are made for capacities as shown in the price list. The Model E meters are also made with astatic field coils and armature in sizes including 25 amperes and larger and when this feature is wanted, please specify Model EA.

Model ER is of the shunted type and is provided with a shunt that is connected in series in the main feeder or line and having flexible

cables that connect it with the field coils of the meter. This arrangement allows only a portion of the main current to pass through the field coils of the Model ER and for this reason it adapts itself most admirably for heavy currents and we are prepared to furnish it for any capacity up to and including 30,000 amperes at either 110, 220 or 500 volts. The armature in the Model ER is slightly different from the armature employed in the other series type models. Its form resembles that of a squirrel cage instead of the coils being wound around the armature, the same as is practiced in the building of a form wound armature for dynamos, and for this reason repairs to the armature are easily taken care of and made at small expense.

**Models E and EA**

The Model ER Watthour Meter is of the shunted type.

The prices listed include, for each meter, one set of 5-foot shunt cables, one shunt for the 2-wire, and two shunts for the 3-wire meter.

When cables in excess of five feet are required and specified, the following extra list prices will be charged.

**Total Length—Shunt to Meter**

6	\$2.65	10	\$14.75	16	\$47.40
8	8.00	12	25.00	20	65.00

Specify normal voltage when ordering.

**Duncan D.C. Watthour Meters**

Model R

The Model F switchboard meter is of the series type and is built in ampere ratings up to 1000 amperes, 2-wire, and 500 amperes, 3-wire. The finish and type of base and cover used are the same as for the Model FR.

Models R and FR are particularly adapted for the measurement of direct currents of high ampere strength. They operate from an external shunt or shunts having a standard voltage drop of 80 millivolts, and so calibrated that the meter takes 15 amperes when full rated current is passed through the shunt.

The mechanism of these 2 models is exactly the same, the difference being in the finish and style of base and cover supplied. Model R is highly finished, the standard being hard rubber black, but polished nickel or polished copper finish can be supplied on request at same price. The base is a smooth aluminum casting and the cover is of plate glass and extruded metal.

Model FR receives a frosted nickel finish. The base is of formed heavy gauge sheet brass and the cover is also of sheet metal with a glass panel front.

## G-E Single-Phase Watthour Meters

Type I-14, 50 and 60 Cycles

Type I-15, 25 Cycles

Self-Contained—Require No Instrument Transformers

This watthour meter is self-contained, that is, requires no instrument transformer, except when the current exceeds 300 amperes, 2-wire, and 150 amperes, 3-wire, a current transformer is necessary, or when the voltage is more than 600 volts, both current and potential transformers are required. In such cases meters for use on the secondary of transformers should be ordered, designating the meters by catalogue number and ratings.

These meters may be used on circuits the voltage of which is not more than 10 per cent above or below the rated voltage of the meter. When ordering meters for voltages outside these limits, the normal operating voltage must be specified.

**G-E Type IP-5 Watthour Meters**

Single-Phase, Prepayment

Where the service to certain classes of consumers must be rendered under somewhat unfavorable conditions from the viewpoint of the usual method of metering, such for instance as transient or shifting populations involving frequent "cutting in" or "out" of service, reading, billing, collecting, etc., such cases may be metered more efficiently and conveniently through the use of the prepayment type of meter.

The Type IP-5 Prepayment Meter is made for this class of service and is arranged so that after the prepayment of one or more coins (25-cent piece) in

the usual manner the consumer may receive energy up to the full amount for which payment has been made. The coin device permits prepayment of from one to twenty coins at a time. When the energy paid for has been used the meter automatically opens the line switch.

The mechanism is entirely mechanical in its operation. The element of the single-phase Type I-14 meter is employed.

Front connected, metal cover, dull black finish.

These meters may be used on circuits the voltage of which is not more than 10 per cent above or below the rated voltage of the meter.

When ordering meters for voltages outside of these limits the normal operating voltage must be specified.

Approximate shipping weight. one in a box, 31 pounds; two in a box, 57 pounds.

**G-E Types IS-4 and IS-5 Watthour Meters**

Single-Phase, for Switchboard Service

The Types IS-4 and IS-5 Meters, made expressly for switchboard service, are of strong and simple construction.

They possess the fundamental features of the Type I-14 worked into an attractive switchboard housing. Their electrical characteristics are, therefore, the same.

They are back-connected, but in order to facilitate testing are equipped with a very convenient form of testing terminal so designed that access to the back of the panel is unnecessary in order to introduce testing instruments, or to cut the meter out of service.

Type IS-5 Glass Cover

They are equipped with micrometer adjustments for full and light loads.

The Type IS-4 is furnished with a cast metal case finished in dull black with the raised parts of polished nickel.

The Type IS-5 is furnished with a glass cover as shown in the illustration, the metal parts being finished in dull black and nickel.

Approximate shipping weight, all voltages: 1 in a box, 65 pounds; 2 in a box, 115 pounds.

## G-E Types DS-6 and DS-7 Watthour Meters For Switchboard Service Polyphase, Alternating Current

Type DS-6

The Type DS-6 and DS-7 meters are designed expressly for switchboard service. In principle they are like the Type D-7 but are provided with housing as shown adapting them for mounting on panels. They possess the same electrical characteristics as the Type D-7. They are provided with special testing terminals so that access to the back of the panel is unnecessary in order to introduce testing instruments or to cut the meter out of service. Micrometer adjustments are provided for full and light load and

for the balance of elements. A suitable power-factor adjustment is also available.

The Type DS-6 is furnished in an attractive cast metal case finished in dull black with raised portions of polished nickel very similar to the single-phase Type IS-4.

The Type DS-7 is furnished with a glass cover, the metal parts being finished in dull black and nickel.

## G-E D.C. Watthour Meters Types CS-3 and CS-4

Type CS-3 is an astatic watthour meter for d.c. service and is especially designed by an astatic arrangement of the armature and field coils for operation with accuracy in the presence of stray fields.

These meters can be furnished in back connected form, known as Type CS-4.

Always state normal operating voltage of circuit when ordering.

## G-E D.C. Watthour Meters

This meter embodies the double or astatic arrangement of field coil and armature as in the CS-3 meter. The magnets are astatically arranged and magnetically shielded by a laminated iron box which totally surrounds them. The resistance for the potential circuit is mounted within the case so that all parts are at the same relative temperature, minimizing errors arising from this source. It is furnished with glass cover, the finish of the meter being dull black and copper.

When ordering, state normal operating voltage of circuit.

### Type CS-3, Side Connected—Metal Cover 2-Wire

### Type CS-4, Back Connected—Metal Cover

When back connected type CS-3 meter is required, it is designated as type CS-4 and can be furnished at the price of the corresponding capacity of Type CS-3 meter plus the addition shown in the table below.

#### Additions for Type CS-4 Meters

The following prices will be added to the price of Type CS-3 meters when back connections are required, the meter then being known as the Type CS-4.				
Ampers	15-150	200-400	600	
Price, 2-Wire	each	\$4.00	\$3.00	\$3.00
Price, 3-Wire	each	5.00	4.00	
Price, Ratchet Device	each			\$7.75

\*For switchboard type meters whose dials are read frequently a faster moving register can be supplied by specifying it on the requisition.

†For 220-volt 3-wire service two 110-volt 2-wire meters are recommended. If required, prices on 3-wire Type G-3 meters will be given upon application.

**G-E Type C-15 D.C. Watthour Meters**

**Type C-15**  
2-wire

The Type C-15 direct-current watthour meter is identical in principle with the Type C-6 meter and retains those essential features of the latter which insure successful operation. It differs, however, in many of its mechanical details, such as in the use of the Type I-14 meter register and magnets, the D-7 meter cover and a material reduction in over-all dimensions and weight.

The back is an aluminum alloy casting following out as far as possible the idea introduced in the I-14 meter, i. e., one central casting to which all parts are attached. The terminal chamber is at the bottom with a separately concealed cover identical with the I-14.

This meter is built only in the smaller ratings of 5 to 15 amperes, 110 and 220 volts, 2 and 3-wire.

Prices upon application.

**G-E Type H Distribution Transformers**

**Single-Phase, 60 Cycles, Self-Cooled**

G-E Single-Phase Distribution Transformers are built on the distributed core, which has been found best adapted both electrically and mechanically to this type of transformer.

Various coil constructions have been developed to meet the particular requirements of designs depending upon unit size and voltage rating. In the larger sizes, circular coils of either disk or cylindrical form are used on account of their greatly superior mechanical qualities, and the facilities they give for rigid mechanical support.

The windings of these G-E Distribution Transformers are carefully dried and filled under

pressure with an insulating compound. This process not only removes all moisture from the insulation and seals the windings against the entrance of moisture, but also makes the winding a solid mass, thus giving it greater mechanical strength and heat conductivity. In the core-wound transformers this treatment is applied to the complete unit, consisting of core and coils. In the form-wound transformers the complete winding is treated as a unit before assembly on the core.

**For Operation on 2200-2300-2400-Volt Circuits**

**APPLICATION.**—By connection of the low voltage leads outside the tank, transformers are arranged for series, multiple of three-wire service, with the exception of sizes 150 and 200 kv-a., which are suitable for series and three-wire service only.

**SERVICE.**—All sizes are suitable for outdoor or indoor installation.

**FUSIBLE PRIMARY CUTOUPS.**—Two cutouts, Cat. No. 104227 are furnished with sizes up to 50 kv-a., inclusive. When cutouts are desired for sizes 75 to 200 kv-a., inclusive, two Cat. No. 6x241 should be ordered separately.

**SUSPENSION HOOKS.**—Suspension hooks are provided with, and included in the weight of all sizes up to 100 kv-a., inclusive.

## G-E Type H Distribution Transformers

Single-Phase, 60 Cycles, Self-Cooled

For Operation on 440-460-480 and 550-575-600-Volt Circuits

APPLICATION.—By connection of the low voltage leads outside the tank, transformers are arranged for series, multiple or three-wire service.

SERVICE.—All sizes are suitable for outdoor or indoor installation.

FUSIBLE PRIMARY CUTOUTS.—Two cutouts Cat. No. 104227 are furnished with sizes up to 10 kv-a., inclusive, in the 440-volt class and with sizes up to 15 kv-a., inclusive, in the 550-volt class. When cutouts are desired for sizes 15 and 25 kv-a., in the 440-volt class or for sizes 25 and 37.5 kv-a., in the 550-volt class, two Cat. No. 6x241 should be ordered separately.

SUSPENSION HOOKS.—Suspension hooks are provided with, and included in the weight of all sizes up to 100 kv-a., inclusive.

**G-E Type H Distribution Transformers**

Single-phase, 60 Cycles, Self-cooled

For Operation on 4000-volt Circuits

These transformers are to provide service where it is more economical or desirable to connect transformers across phases than between line and neutral on 2300-4000 volt Y circuits. The use of these transformers gives the same service voltages as 10:1 ratio transformers connected between line and neutral.

**APPLICATION.**—By connection of the low-voltage leads outside the tank, transformers are arranged for series, multiple or three-wire service, with the exception of 150 and 200 kv-a. which are suitable for series and three-wire service only.

**SERVICE.**—All sizes are suitable for outdoor or indoor installation.

**FUSIBLE PRIMARY CUTOUTS.**—Cutouts are not furnished with these transformers. When cutouts are desired two Cat. No. 6X243 should be ordered separately.

**SUSPENSION HOOKS.**—Suspension hooks are provided with, and included in the weight of all sizes up to 100 kv-a., inclusive.

## G-E Type H Distribution Transformers

**Single-Phase, 60 Cycles, Self-cooled**  
For Operating on 6600-Volt Circuits

**APPLICATION.**—For operation on 6600-volt circuits and for supplying service voltages 600 and below. Transformers of these name plate ratings are also designed for operation as follows:

High Voltage Rating	Low Voltage Rating		
	Line No. 1	Line No. 2	Line No. 3
6600/11430Y/ 6200/6000/5700	to 110/220	220/440	550
7200/12470Y/ 6875/6545/6220	to 120/240	240/480	600

By connection of the low voltage leads outside the tank, transformers having low voltage rating of 115/230 are arranged for series, multiple or three-wire service, with the exception of sizes 150 and 200, which are suitable for series and three-wire service only. Transformers having low voltage rating of 230/460 are suitable for series and multiple service only. Suitable for indoor or outdoor installation.

**SUSPENSION HOOKS.**—Provided with, and included in the weight of all sizes up to 50 kv-a., inclusive.

## G-E Type H Distribution Transformers

**Single-phase, 60 Cycles, Self-cooled**  
For Operation on 6600-volt Circuits

**APPLICATION.**—For operation on 6600-volt circuits and for supplying 2300 or 4000-volt distribution and motors.

Transformers having voltage rating of 6600/11430Y to 2300 are, when operated in bank, suitable for transforming from 6600 to 2300; from 6600 to 4000Y or from 11430Y to 2300. They should not be used connected in Y on both high- and low-voltage sides simultaneously to transform from 11430Y to 4000Y as this connection may result in the presence of excessive stresses in the windings due to harmonic voltages.

**SERVICE.**—All sizes are suitable for outdoor or indoor installation.

**FUSIBLE PRIMARY CUTOUTS.**—Cutouts are not included with these transformers.

**SUSPENSION HOOKS.**—Suspension hooks are provided with and included in the weight of all sizes up to 50 kv-a., inches.

## G-E Type H Distribution Transformers

**Single-phase, 60 Cycles, Self-cooled**  
For Operation on 11000-volt Circuits

**APPLICATION.**—For 11000-volt circuits and for supplying service voltages 600 and below. Transformers of these name plate ratings are also designed for operation as follows:

High Voltage Rating	Low Voltage Rating		
	Line No. 1	Line No. 2	Line No. 3
11000/10450/9900	to 110/220	220/440	550

By connection of the low-voltage leads outside the tank, transformers having low-voltage rating of 115/230 are arranged for series, multiple or three-wire service with the exception of sizes 150 and 200, which are suitable for series and three-wire service only. Transformers having low voltage rating of 230/460 are suitable for series and multiple service only.

**SERVICE.**—All sizes are suitable for outdoor or indoor installation.

**FUSIBLE PRIMARY CUTOUTS.**—Cutouts are not furnished with these transformers.

**SUSPENSION HOOKS.**—Provided with and included in weight of all sizes up to 50 kv-a. inclusive.

## G-E Transil Oil

For Use in Transformers

The General Electric Company furnishes with all its oil immersed transformers, an insulating oil which bears the registered trade name of "Transil" and which has characteristics necessary for the successful operation of transformers of their manufacture.

These characteristics are constantly being checked by means of tests on samples of oil taken from various shipments. For this reason and because the quality of oil used in transformers has such a direct influence on the life and successful operation of this class of apparatus it is obviously important that "Transil" Oil be used in transformers manufactured by the General Electric Company.

Prices and further information regarding "Transil" Oil will be furnished on request.

**G-E Insulator Type Primary Cutouts**

Single Pole, 30 Amperes, 2500 Volts

Cat. No. 104227 cutout is provided with spring catch contact with 2 binding screws.

Price, No. 104227.....each \$2.00

**P & S Porcelain Primary Fuse Blocks**

Single-Pole

30 Amperes, 2500 Volts

This cutout is single-pole and will operate with entire satisfaction under a load of 30 amperes at 2500 volts.

Smooth, highly glazed body.

The plug is designed with a broad hand shield and long heavy fluted handle, for heavy gloves. Will not slip.

Wood screws for fastening the cutouts to the crossarms with each cutout.

**G-E Expulsion Type Primary Cutouts**

The design of these cutouts embodies the following features:

**SAFETY.**—Fuse holder is removed from circuit when door is opened—door closes upward, protecting lineman should cutout be closed on a short circuit—door can be opened or closed by a switch hook; cutout hangs low on the crossarm.

**RELIABILITY.**—Expulsion principle of operation—gases are expelled outside housing—interlocking barriers prevent conducting gas from short-circuiting terminals—high interrupting capacity.

Heavy clips insure good contact and prevent overheating.  
**SIMPLICITY.**—Cutouts are suitable for right or left-hand entrance leads. Link holder can be removed and replaced with one hand; cannot be replaced upside down. Hanger adjustable for 2¼ to 4¼-inch crossarm; fuse holder in which fuses can be renewed easily.

**DURABILITY.**—Glazed porcelain housing with molded compound door and galvanized hanger.

**60 Amperes, 0 to 2500/4000 Grounded Y Volts**

Interrupting Capacity, 1500 Amperes at 60 Cycles  
 Cat. No. 6X243 is a primary cutout complete with link holder in porcelain box. Arranged for both right and left hand entrance. No fuse links.

## G-E D & W Oil Fuse Cutouts

**Subway Type**  
100-200 Amperes

it makes it suitable for use near the source of supply on large systems. Its reliability has been proved by the service records of over 85000 units installed over a period of 12 years and by exhaustive short-circuit tests made under exacting conditions of large generator capacity and low power-factor.

This cutout is available for pole or subway service and for current ratings from 50 to 300 amperes, and voltages up to 7500.

When ordering specify catalogue number and in addition the type, rated ampere capacity and voltage.

The design of this cutout embodies, to a certain extent, the desirable characteristics of both the fusible cutout and the oil circuit breaker. The fusible element is retained, yet a positive, rapid break of the circuit is made under oil. Some desirable features are:

**Safety in renewal**—fuse carrier is locked in place before circuit is closed.

**Safety in operation**—ample strength against internal pressure—are under oil prevents ignition of any inflammable material or gases in manholes.

**Reliability**—fuse element under oil prevents deterioration from oxidation and electrolysis.

**Simplicity**—fuses are quickly and easily replaced.

**Durability**—all electrical parts are protected by the housing from weather and bad atmospheric conditions.

**Quietness**—muffling effect of the venting system results in little noise even when opening heavy short circuits.

**Wide range of application**—capable of close fusing for protection of apparatus against overload as well as heavy short circuits.

The principal function of the Type D oil fuse cutout is the protection of distribution and small power transformers against overload conditions and heavy short circuits by quietly and accurately interrupting the primary supply circuit. It is often used to protect feeders and branch circuits, and for sectionalizing.

Accurate and uniform operation under overload makes this cutout ideal for the protection of apparatus against overload, and its high interrupting capacity

**Pole Type**  
100-300 Amperes

\*The bushings on Cat. No. 4X123 cutout are not the separable sleeve type, but are designed for connection to the cables using standard splicing material.

2500-volt cutouts are suitable for operation on 4000-volt Y-connected circuits with dead grounded neutral. In all cases 2 cutouts are required between lines.

**Transformer Specialties**

**Transformers for Special Purposes**

In addition to standard Type M transformers, the General Electric Company has developed a uniform line of parts for manufacturing any miniature air-cooled transformers ranging from 15 to 5000 watts inclusive, 60 cycles, and from 5 to 3000 watts inclusive, 25 cycles, at voltages of 550 and below. No oil is used for either cooling or insulating purposes.

Type M transformers present a good appearance wherever installed. The construction may be for indoor or outdoor service as desired. By substituting this transformer for batteries or magneto generators, no maintenance or replacement charges due to wear are incurred, less space is required and cleanliness and reliability are assured.

The following are a few representative applications: Electric welding, speed variation of motors, operating of small, low-voltage motors from higher voltage circuits, railway signal lighting two to three-phase transformation.

**G-E Sign Lighting Transformers**

**Primary—110-220 Volts; Secondary—11-22 Volts**

These transformers are used in connection with the lighting of large or small advertising, municipal, civic, or other display signs. They are also used quite extensively for experimental purposes where a standard transformer is needed for producing heavy currents at low voltages.

Primary windings are arranged for series-multiple connection to operate either from 110 or 220-volt circuits. Secondary windings are similarly arranged to give full output at 11 or 22 volts and to permit of three-wire operation. Coils are enclosed in a strong, metal case which is provided with lugs for fastening to the wall, or to the back of the sign.

**G-E Insulating Transformers**

**Primary—110-220 Volts; Secondary—110-220 Volts  
50 to 140 Cycles**

Insulating Transformers are arranged for 1:1 or 2:1 ratio and are manufactured chiefly for uses such as insulating lighting from power circuits; single wire lighting systems in mines; insulating telephone circuits (before rectification) from lighting circuits, etc., and for other transformations to which the rating is adapted. They are used as well for balancing three-wire, 110-220 volt circuits where auto transformers cannot be used. Weights include oil for the Type H sizes. Suitable for indoor or outdoor installation.

**G-E Auto Transformers**

**Single-Phase**

**Primary—220 Volts  
Secondary—110 Volts, 2-Wire  
or 110-220 Volts, 3-Wire**

The auto transformer is an economical substitute for the ordinary transformer, particularly when both voltages are low and a comparatively small change in voltage is desired.

The design is for single-phase, 2-phase or open delta transformation. It is not suitable to transform power 3 to 2-phase from 220 volts to 110 volts. Type M, air-cooled; Type H, oil-cooled.

## G-E Type M Auto Transformers For Conduit Wiring Installations

Primary—220 Volts  
Secondary—110 Volts, 2-Wire  
or 110-220 Volts, 3-Wire

When a comparatively small change in voltage is desired, or where both voltages are low, an auto transformer can be used successfully as a transformer and its reduced capacity will mean a considerable saving.

The use of auto transformers for supplying lighting circuits from power circuits having potentials above 250 volts is not, however, considered good practice.

All sizes are suitable for outdoor installations.

Transformers are air-cooled.

## G-E Type MTQ Auto Transformers 2-phase, 4-wire

MTQ Auto Transformers are designed to transform power efficiently and inexpensively from three to two-phase, 4-wire, or the reverse, with outputs of 1 to 25 Kv-a.

The principal application of the MTQ Auto Transformer is to adapt polyphase motors to existing circuits. They are not suitable, however, for 3-wire, 2-phase service, or to operate motors with interconnected phases.

Suitable for indoor or outdoor installation.

In ordering MTQ Auto Transformers specify whether the two-phase circuit is 3 or 4-wire.

Primary—220 Volts, 2-phase  
Secondary—220 Volts, 2-phase 4-wire

## G-E Type MTQ Auto Transformers Two-phase, 3-wire

MTQ Auto Transformers are designed to transform power efficiently and cheaply from three to two-phase, 3-wire, or the reverse, with outputs of 1 to 25 kva.

The principal application of the MTQ Auto Transformer is to adapt polyphase motors to existing circuits. They are not suitable for 4-wire, 2-phase service, or to operate motors with interconnected phases.

In ordering MTQ Auto Transformers specify whether the two-phase circuit is 3 or 4-wire, in that an auto transformer arranged for a 3-wire circuit is not applicable to a 4-wire circuit, or the reverse.

Primary—220 Volts, 3-phase  
Secondary—220 Volts, 2-phase, 3-wire, 50-140 Cycles, 3 to 2-phase

## G-E Type M Air-Cooled Distribution Transformers

Single Phase  
50 to 140 Cycles

To take care of indoor or outdoor installations particularly indoor where it is impractical to install oil-cooled transformers, the General Electric Company has designed line of air-cooled distribution transformers, capacities 1 to 5 kv-a. inclusive. Primary voltage, 440 and 550; secondary voltage, 110 or 220 volts 2-wire or 220/110 volts 3-wire.

**Keystone Lightning Arresters**

**Type S, for Secondary Protection  
Up to 350 Volts A.C.**

Type S is designed for the protection of 110/120, 115/230, 120/240-volt a.c. secondary circuits, though it may be used for protecting other apparatus on either 2 or 3-wire circuits where the maximum voltage between conductors does not exceed 350. Made only in double pole type.

Type S arrester is regularly supplied with line and ground leads of No. 12 B. U. S. gauge stranded cable, line leads being 36 inches long and ground lead 18 inches long and with hot galvanized strap iron hangers. These hangers are of 12-gauge metal and are provided with 5/16-inch holes on 2-inch centers for accommodating 1/4-inch bolts or lags. All exposed bolts and nuts on the arrester are of hot galvanized iron.

Size, 5x3 inches. Standard package, 12.  
Price, No. 50960.....each \$4.00

**For Neutral Protection  
Voltage Rating, 0-350 Volts**

These arresters are designed for protecting the neutral wire of transformers installed on grounded neutral circuits, where the neutral wire is grounded only at power or substations and not dead grounded at the transformer installations.

**Mounting Brackets for Crystal Valve Lightning Arresters**

Type CA, Standard Equipment Unless Otherwise Specified

Type CB

Type CD

Type CE

The mounting brackets, illustrated above, are for use on crystal valve arresters. Nos. 50935, 50924, 50925, 50926, 50927 and 50931. Type CA bracket is supplied unless other types are specified on order. Choice of above mounting brackets may be had without additional cost.

Type DA, Standard Equipment Unless Otherwise Specified

Type DB

Type DD

Type DE

The mounting brackets, illustrated above, are for use on the heavier crystal valve arresters, Nos. 50932 and 50934. Type DA bracket is supplied unless other types are specified on order. Choice of above mounting brackets may be had without additional cost.

The types CA and DA brackets are designed for cross arm or flat surface mounting and are the type generally preferred by the user. The types CB and DB are saddle type brackets for the standard 3 1/2 x 4 1/2-inch cross arms. The types CD and DD are clamp type brackets designed for use with standard Pierce cross arm straps and may be used with either the No. 1001-2-3-4 or 2001-2-3 or 4 Pierce straps; the Pierce straps are not included as a part of the bracket. The types CE and DE are semi-saddle type brackets bolting to the top of the arm and may be used with any standard arm.

All brackets are made from heavy steel stock, hot galvanized; are riveted and spot welded and the entire assemblies are of great strength and durability and easy to install. Prices upon application.

With Type DA  
Mounting Bracket

Keystone Crystal Valve Lightning Arresters represent the latest development in the design of highly efficient lightning protective apparatus and are the result of some highly successful researches in the rectifying properties and valve characteristics of refractory conducting crystals. They are characterized by the following important advantages:

Low initial or relief voltage for lightning disturbances.

High discharge rate due to low internal impedance.

They are of the true valve with all its attendant advantages.

They suffer no measurable deterioration in service.

Their operating characteristics permit of their handling rapidly recurring discharges over long periods of time without danger of self destruction.

Their impedance decreases as the severity of the discharge increases.

They require no inspection other than a visual inspection.

They are small in size and of low first cost, permitting them to be installed directly on the transformer pole and used to protect small transformers as well as large.

Due to their operating characteristics they have an unusually long life.

Crystal Valve Arresters are regularly provided with line and ground leads of No. 6 B.&S. gauge stranded cable, 18 inches long and with hot galvanized strap hangers.

All voltages specified are maximum phase-phase voltages. For straight single-phase circuits use arresters recommended in Table 1.

Treat single-phase circuits split from 2-phase, and single and 2-phase circuits split from 3-phase circuits in accordance with the recommendations covering the particular type of circuit from which they are split.

For 2-phase 4-wire ungrounded circuits use arresters recommended in Table 1. For 2-phase 3-wire circuits with ungrounded neutral use arresters recommended in Table 1 for the phase wires; for the neutral wire use arresters rated at 71 per cent of the phase-phase voltage.

For the neutral wire of 3-phase 4-wire ungrounded Y circuits use arresters rated at 58 per cent of the phase-phase voltage.

For neutral protection on either 2 or 3-phase circuits where the neutral is solidly grounded, use Types T-300, R. N. or NS arresters. If, due to unbalancing, the voltage between neutral and ground is between 350 and 750 volts, use type CV form S arrester, listed below.

**Garton-Daniels D.C. Lightning Arresters**

**G-E Type OF Oxide Film Lightning Arresters**

The oxide film arrester consists essentially of a number of cells with a gap in series between line and ground. The cells are held together under slight pressure and are arranged in sections or stacks according to the voltage and kind of circuit. Each cell is made of 2 circular brass plates crimped firmly to the edges of an annular piece of porcelain. A powder, lead peroxide, which has low resistance, compactly fills the space between the plates. The inside of the metal plates is covered with a varnish film which is an insulator. The number of cells used in an arrester is such that the voltage per cell is approximately 300 volts.

D.C. arresters, station type, are furnished with polished and lacquered metal work. Pole or car arresters are furnished in either wooden or iron covers as required. Iron covers are, however, not furnished on Types EH, EJ and EK arresters. Both covers are of standard design fitted with insulated bushings for the leading-in wires and the arrester insulated from the cover.

When a lightning voltage sparks over the gaps it is impressed on the cells and breaks down the insulating coating on the metal plates. The breakdown occurs in the form of a minute puncture of the film coating. The metal plates are not punctured. As soon as the film gives way, a discharge current flows through the cells to ground, thus relieving the lightning pressure. The flow of current through the cells immediately causes a chemical change by heat, in the lead peroxide at the point of puncture. The lead peroxide is reduced to red lead and litharge which have a high resistance. Thus, following the lightning discharge, a high resistance amounting practically to insulation is automatically cut into the discharge path. This cuts off the flow of generator current that would otherwise follow the lightning discharge, and the arcs in the gaps die out. If the potential should still, or again, be sufficiently high to break down the gaps, the operation is repeated at some other point on the surface of the varnished plates.

2596671G3	50, 60, 70	3	47	50.00

No. 2923407G1

2906822G3. Use 2 arresters at a single-phase installation between outside wires. A system is considered solidly grounded when no resistance or reactance is used in grounding the neutral.

Suitable for altitudes up to 6000 feet.

## G-E Line Connectors

Suitable where occasional disconnecting is required and where quick disconnecting is not necessary.

Current carrying capacity, 200 amperes.

Can be clamped on any wire from 1/16 to 5/8 inch in diameter. A hole 1/16 inch in diameter is provided for soldering a lead to connector.

Aluminum or brass clamp; two phosphor-bronze spring; two set-screws, zinc-plated steel.

Disconnecting switch hook is required to operate device.

Illustration shows connector attached to pole.

Prices on arresters for voltages higher than 350-750 quoted on request.

## No. 2593165 G-E Aluminum Lightning Arresters

D.C.

Arresters should be installed on each car and at the stations and substations; on each feeder and each generator or synchronous converter.

Suitable for either indoor or outdoor installations. Mounted in a wooden box.

Circuit volts, 500-750. Standard package, 4.

Shipping weight, 45 pounds.

Price, No. 2593165..... each \$50.00

Prices on arresters for voltages higher than 500-750, quoted on request.

## G-E Vacuum Tube Lightning Arresters

For Railway Signal Circuits

No. 148057

No. 1518810

Vacuum tube arrester has standard American Railway Association binding posts. No. 1518810 has 5 terminals, for lines, ground and instruments. No. 1518809 has only 3 terminals, 2 for the lines and one for the ground. No. 144585 has 3 terminals for line, ground and instrument, while No. 148057 has 2, one for line and one for ground.

Cat. No.	Description	Std. Pkg.	Wt., Lbs.	Price Each

148057	2-Terminal, Single-Pole.....	48	70	3.35

**G-E Insulated Choke Coils**

Choke coils are recommended for use with all high-voltage lightning arresters when used on overhead lines. They should not be installed with lightning arresters when used to protect cables over half a mile long, without careful consideration.

**G-E Type LG-116 Disconnecting Switches**

Single-Pole, Single and Double Throw

Indoor Type—Unmounted

2500 or 3500 Volts

Type LG-116 switches are for disconnecting purposes only. They should not be opened under load.

All switches are given an insulations test at least equal to that prescribed in the Standardization Rules of the A. I. E. E. (2¼ x rated voltage—2000 volts).

2500 or 3500-volt switches are for mounting directly on marble bases or on 1½ or 2-inch marble panels. Slate should not be used. Special LG-116 switches on marble bases for 3500 volts can be furnished. These switches parallel the 2500-volt line on bases except that special larger marble bases and special spacing are required.

Back connected switches, 1200 amperes and below, include 2 nuts and 1 terminal per stud.

Front connected switches, 1200 amperes, inclusive, are equipped with a complete set of terminals.

All switches 1600 amperes and above are laminated for bar connections. No terminals are included.

Do not fail to order one or more switch hooks with each equipment, unless previously ordered.

## G-E Type LG-116 Disconnecting Switches

Single-Pole, Single and Double Throw  
Indoor Type—Mounted on Marble Bases  
With Honed Finish and Rounded Edges

2500 Volts

Special Type LG-116 switches paralleling the 2500-volt line can be supplied for 3500 volts. These switches are the same as 2500-volt switches except mounted on special ebony asbestos bases with special spacing. Prices upon request.

## G-E Combination Safety Catches and Opening Devices

For Type LG-116 Disconnecting Switches

These combination safety catches and opening devices are for use on single-throw switches only. Prices on combinations for double-throw switches will be furnished upon application.

They must be used, together in combination form and neither can be used separately.

These devices permit of the release of the catch and the opening of the switch with one operation of the switch hook.

1960395G6	*2000	2	6.00
1960395G7	*3000	2	7.00

\*Require 2 stops per switch.

**G-E Type LG-17B Disconnecting Switches**  
Indoor Type, Single-pole, Single and Double-throw

With Moderate Duty Insulators and Safety Catches Mounted on Oval Metal Bases for Flat Surface or 1/4-inch Pipe Mounting  
15000 Volts

Back connected 1200-amp. and below, have round studs. 1200-amp. back connected, have 2 nuts per stud but no terminals. Adapter plate with 2 terminals and necessary bolts and nuts No. 2609820G1 must be ordered separately if desired. 800-amp. and below, back connected, have 2 nuts and one terminal per stud. Front connected 1200-amp. are complete with 4 hex. head bolts and nuts per clip block but no terminals. Adapter plate with 2 terminals and necessary bolts and nuts No. 262275G1 must be ordered separately if desired. 800-amp. and below, front connected are complete with set of terminals with bolts and nuts. 800-amp. have 4 bolts and nuts per terminal. 200, 400 and 600-amp. have one bolt and nut per terminal complete with a doweled

locking washer. Clip blocks in addition to hole for bolt have 4 small holes in which 2 dowels on locking fit. These projections go through 2 holes in terminal itself and then into 2 of the holes in clip block and prevent terminal from turning or twisting. Terminal can be mounted straight out or swung to either right or left.

When it is desired to mount Type LG-17B switches listed below on 1/4-inch pipe (not included), add for each switch two 1/2-inch half yokes with nut for clamping base to pipe.

**Single-pole, Single-throw**

**G-E Type LG-17C Disconnecting Switches**  
Indoor Type, Single-pole, Single and Double-throw

With Heavy Duty Insulators and Safety Catches Mounted on Rectangular Metal Bases for Flat Surface or 1/4-inch Pipe Mounting  
15000 Volts

When it is desired to mount Type LG-17C switches listed below on 1 1/4-inch pipe (not included) add for each switch four 1/2-inch half yokes with nut for clamping base to pipe.

All switches below have laminated blocks and stud for bar connection. Round back connected studs are not available. Nuts and terminals not recommended on switches above 1200-ampere capacity.

**Single-pole, Single-throw**

## Three-E Disconnecting Switches

### Indoor Type

Cat. No. 10400-Z

This switch has interchangeable parts construction. Has double blades which insure large radiating area and consequent cool operation.

Can be adapted for flat mounting by removing U-bolts.

Can be supplied with or without locking device.

Switches can be supplied in any possible combination of front and back connection. They can be supplied for either single throw, double throw or transfer style on porcelain insulators, for either pipe or flat mounting and for any voltage from 7500 to 25000 and for any amperage from 100 to 3000 and either with or without lock from 300 amperes up. Likewise any switch can be had mounted on either slate or marble base in any of the above types or amperate rates.

Three-E Cable End Bells, both indoor and outdoor, can be furnished in a large number of shapes and sizes to meet any installation condition.

Customers should always specify the following on their orders. Voltage of circuit, number of conductors, gauge of cable, exact overall diameter of cable over lead sheath, type of joint required. (All bells are made to either screw on pipe or clamp, or wipe on cable) if pipe joint size of pipe must be also specified.

If customers will co-operate in giving this information, delays in shipment of material will be avoided.

Type DFP

Can be supplied up to 25000 volts for all types.

Outdoor Bus Supports can be supplied up to 7300 volts for all types and arrangements. Only upright supports are shown here, all other styles can be furnished.

## Three-E Electrical Conductor Fittings

For Wire, Cable, Rod, Tubing and Bar

## Three-E Switchboard Structural Devices

The above illustrations show but a small portion of the Three-E line of pipe fittings. Fittings can be supplied for the popular pipe sizes in all manner of shapes to meet most any conceivable condition.

†Double-pole, 550 Volts					
110572	110584	100	25	15	\$42.00
110576	110588	200	48	32	64.00
110580	110592	300	48	32	70.00

Capacities below 100 amperes, same price.

No overload coils on these breakers.

\*Shunt trip coils are intended for momentary operation only and must not be left in circuit continuously after being energized. Connections should be so arranged that the opening of the circuit breaker will disconnect the shunt trip circuit. If for any reason, however, the shunt trip has to be connected to the line side a circuit opening auxiliary switch should be mounted on the breaker to open the trip circuit.

†Double-pole plain shunt breakers trip both poles, same as overload breakers.

G-E Type CG Air Circuit Breakers

Direct Current, Underload

Underload breakers are calibrated at the factory to trip on 20 per cent of the carrying capacity. They can be set to trip at any point as low as 10 per cent if so specified on the requisition.

## G-E Undervoltage Attachments

For Type CG Circuit Breakers

By the use of undervoltage release attachment, circuit breakers may be arranged to operate on a drop in or cessation of voltage, two or more circuit breakers may be electrically interlocked and by use of a switch to short-circuit undervoltage release, circuit breakers may be tripped from one or more remote points.

### For D.C.

Cat. No.	Voltage of Circuit	Approx. Releasing Voltage	DESCRIPTION OF CIRCUIT BREAKER Cap. Amps.	No. of Poles	Price Each
37539	125	60	3 to 100	Single and Double	\$11.00

43383	600	300	200 and 300	Single and Double	17.00

## G-E Shunt Trip Attachments

For Type CG Circuit Breakers

The shunt trip has been designed to provide for conditions under which the undervoltage attachment can not be successfully applied. It trips the breaker when energized, and should be allowed to remain in circuit only momentarily.

### For D.C. or A.C.

Cat. No.	Voltage of Circuit	DESCRIPTION OF CIRCUIT BREAKER Cap. Amps.	No. of Poles	Price Each

## G-E Type CP Air Circuit Breakers

Alternating Current—Over Current (Overload) Back Connected

Single-pole

Triple-pole

These breakers may be relied upon to open circuits under severe abnormal conditions. Either the breakers may have self-contained features which provide the particular protection desired, or various attachments or auxiliary devices may be added to give that protection.

They are recommended for use on railway, lighting and power switchboards, or for general industrial service. When used for industrial service, each breaker is usually on a base for separate mounting.

These breakers are simple in design and each part is properly proportioned for the work it has to perform, and at the same time all combine to form a symmetrical and attractive device.

†Mounted on 1 1/2-inch base only.

### Nuts and Terminals

All Type CP Air Circuit Breakers are furnished with a complete set of nuts (2 nuts per stud), but will have only one stud of each pole equipped with a terminal. Additional terminals, if required, should be ordered extra.

**G-E Type CP Air Circuit Breakers**

Direct Current—Plain Shunt Trip—Back Connected

Shunt trip coils are intended for momentary operation only and must not be left in circuit continuously after being energized. Connections should be arranged so that the opening of the circuit breaker will disconnect the shunt trip circuit. If, however, the shunt trip has to be connected to the line side, a circuit opening auxiliary switch should be mounted on the circuit breaker to open the trip circuit.

**\*Single-pole—650 Volts or Less**

**G-E Type CK Air Circuit Breakers**

With Laminated Studs

The Type CK 250-volt circuit breakers are recommended for service where large capacity breakers are required for lighting or power installations.

Terminals are not included with the circuit breaker as in many cases busbar connections are used.

Can be furnished from stock in wide range of capacities.

Are designed with ample conducting parts.

Complete line of attachments.

Require small amount of space on panel.

Close easily.

Very heavy and substantial secondaries.

End on contact construction of main brush.

Heavy brush pressure, high efficiency contact and means of adjusting pressure.

Wiping contact, both main brush and secondaries.

Trip easily but cannot jar open.

Handle and tripping button well insulated from live part of breaker.

Each breaker calibrated individually. Wide range of calibration.

Prices on solenoid, motor and pneumatically-operated circuit breakers on request.

Prices on double-pole, overload shunt trip and under-voltage breakers on request.

Always specify frequency when ordering alternating current breakers.

\*Double-pole, two-coil breakers, consist of two single-pole overload breakers, mechanically interlocked.

†Prices on 4000, 6000, 8000 and 12000 amperes A.C. circuit breakers will be quoted on application.

## Type CK-2 Air Circuit Breakers With Laminated Studs

The Type CK-2 650-volt circuit breakers are recommended for any service, however severe, and are especially adapted to large railway installations of any character.

Terminals are not included with the circuit breaker as in many cases busbar connections are used. Where terminals are required, the size and quantity of cable connections vary so widely, depending on the length of run, the line drop allowed and other conditions, that it seems preferable to list them separately so that proper selection may be made to suit each case.

Range of calibration from at least 50 per cent below to 100 per cent above normal rating.

Large handles with guards afford protection to the operator. The frames as well as current carrying parts are alive. Spade handles are standard but straight handles can be furnished.

Especially heavy mechanism and a powerful toggle held by hardened steel catches secure the breakers in closed position and the breakers operate with minimum effort without auxiliary closing mechanism.

## G-E Under-voltage Attachments For Types CK and CK2 Circuit Breakers

In general, D. C. under-voltage devices cause the opening of the air circuit breakers when the line voltage drops to approximately 25 per cent of the normal voltage. The coil is always in circuit and operates with the releasing of its armature.

Releases at approximately one-half rated voltage.

Cat. No. and price includes series resistance for under-voltage coil.

Only one attachment may be used with a single-pole or double-pole breaker. With a single-pole breaker the attachment is mounted on the right-hand side facing the panel; with a double-pole breaker it is mounted symmetrically between poles, and trips the left-hand breaker.

**Type FP7 Pole Line Oil Circuit Breakers**

Pole line oil circuit breakers are usually less adequately protected by lightning arresters than station breakers, and the question of high-voltage strains must be more carefully considered. This is especially true on circuits of voltages of 15,000 volts and below where the line insulators will frequently stand high-voltage test of many times the normal voltage.

In no case should a breaker be selected for any given service having a lower test

voltage than the actual arc over voltage (dry test) of the insulators used on the lines.

The Type FP-7 oil circuit breaker is adapted for use on alternating current series arc systems, for sectionalizing feeder systems, cutting out transformers, and all classes of service requiring a reliable outdoor switch to be operated under load. In many cases the use of one of these breakers in connection with pole type transformers will obviate the necessity for bringing high tension lines into a building.

All Type FP-7 oil circuit breakers are given a dielectric test considerably above that prescribed in standardization rules of the A.I.E.E. For the purpose of comparison with arc-over voltage on line insulators, minimum arc-over voltage for the Type FP-7 breakers is given below:

4500 Volt.....	14000 Volts Test
7500 ".....	22000 Volts Test
15000 ".....	45000 Volts Test

The breaker is enclosed in a substantial weatherproof case consisting of a cast iron frame, with a removable cover which is grooved on the under side to fit closely the edge of the frame and a readily detachable oil tank which fits around a flange on the bottom of the frame. The oil tank has an insulating lining and wooden barriers are provided between poles.

Lugs are provided on the frame for bolting the breaker directly to a flat surface, or supporting it by means of strap-iron hooks, for mounting on transmission pole cross arms in a manner similar to that usually employed for pole type transformers.

Porcelain bushings are provided for incoming and outgoing leads. They are protected from the elements by the overhanging switch frame.

Bushings will take cable up to 3/4 in. diameter for 100-amp. switches and up to 1 in. diameter for 200-amp. switches.

These circuit breakers are equipped with porcelain shields covering terminals and leads in top of breakers, thus greatly increasing the arc-over test.

**G-E Type FK-20 Oil Circuit Breakers**

Type FK-20 Circuit Breakers are used especially for the protection of induction motors in industrial applications.

They are made single-throw only and are for mounting on wall, post or other flat surface. They may be mounted directly on machines by the use of brackets or suitable supports.

All breakers both automatic and non-automatic have toggle in mechanism so that overload or under-voltage features may be added as desired.

All Type FK-20 Oil Circuit Breakers are provided with entrance holes in sides, back and underneath breaker frame for open or conduit connections. The breakers are shipped out with a set of porcelain entrance bushings for open wiring and in the automatic type the leads from the series trip coils are extended through two of the porcelain bushings.

An approved form of making connections to this breaker is by means of conduit boxes. Type FK-20 Oil Circuit Breakers are not recommended for use out of doors, or indoors when directly connected to incoming lines where they will be subjected to surges or other voltage disturbances unless protected by lightning arresters or other surge protective devices.

Dashpots may be adjusted for a time delay from 1 second to about 1 minute. The standard setting recommended is for a time delay of 10 seconds at double the normal full load current of motor. This gives a time delay of about 1/2 minute at 25 per cent overload, and correspondingly less at greater overloads, which affords ample protection against overload, yet prevents breakers from opening on starting currents.

**Magnetic Locks with Undervoltage Trip**

Lock consists of a magnet with a hinged armature which is attached to the under-voltage trip. The armature is designed so as to interfere with an extension on the under-voltage tripping lever and prevents the under-voltage from being set as long as the coil on the magnetic lock is de-energized.

When the locking coil is energized, its armature moves out of interference and the under-voltage trip may be set. In other words, the breaker is locked out with magnetic coil de-energized; unlocked with coil energized.

For Breakers	Amperes	25 Cycles		60-40 Cycles

2500	300	*278479	37.00	*198661	34.00

\*Includes proper auxiliary switch. Does not include auto-transformer but requires the use of separate transformer. Order extra as follows: For 60-cycle voltage transformer, Cat. No. 236088, price \$22.00. For 25, 40 and 50-cycle voltage transformers, Cat. No. 236087, price \$30.00.

## G-E Type FK-20 Oil Circuit Breakers Non-automatic, without Overload Release 2500 Volts or Less

The non-automatic breakers listed have the tripping toggle so that undervoltage or automatic features can be added at any time.

\*Load which the breaker will carry continuously at 30 degrees C. rise or less.

†Series coils will carry 25 per cent overload for 2 hours at 45 degrees C. rise or less.

The calibration of series coils is from normal, as listed, to two times, i.e., 2 to 4, 3 to 6, 60 to 120, etc.

## G-E Type FK-20 Oil Circuit Breakers 2500 Volts or Less

### Undervoltage Attachments\*

All undervoltage attachments listed below include coil W. S. F. 92660 and are common for all breakers listed. The undervoltage mechanism and transformer, where required, is mounted within the breaker frame, and when properly adjusted the oil circuit breaker cannot be closed until undervoltage plunger is lifted by hand to its upper position, when it will hold in if full potential is upon the line.

The undervoltage attachment should be connected across one phase on the load side, if possible, with proper transformer and tap in circuit. No resistances required.

Cat. No.	Circuit		Includes Transformer Mfrs. No.	Approx. Net Wt. Lbs. Extra†	Price Each
	Volts	Cycles

167424	2200	25-40	191394	9	20.00

\*Release at approximately one-half rated voltage.

†Add 5 pounds for boxing if shipped separate from breaker.

‡Auto-transformer with taps tagged to indicate proper connections for various voltages and cycles.

### Gaskets

Order breakers Same as Cat. No. (give Cat. No. of standard breaker), except that it is to be equipped with felt gaskets. Breakers ordered with gaskets will be furnished with gaskets between cover and frame and between frame and oil tank.

Standard Type FK-20 oil circuit breakers, as regularly furnished, are sufficiently dustproof for use in cotton mills and for like service. When, however, these breakers are to be installed in cement or flour mills where the dust is very fine the standard breakers are not tight enough to exclude the dust from the top of the breaker or the oil vessel. In these cases breakers provided with felt gaskets should always be recommended.

Price, for 60-200 Ampere Breaker, 2 and 3-pole. each \$4.75  
 " " 300 " " 2 " 3 " " " 4.75  
 " " 60-200 " " 4-pole..... " 4.75

### Oil Circuit Breaker Covers For Mounting Ammeters

These covers replace the covers ordinarily furnished with the FK-20 breakers and provide a suitable mounting for a Type R-6 ammeter. The rear half of the cover completely houses the ammeter studs and all connections and is removable to permit of easy access to breaker and connections. The front part of cover which supports the ammeter is provided with bushings to take any standard R-6 ammeter within the range of capacities required.

*Cat. No.	Amperes	For Breaker Poles	Mounts R-6 Ammeter Amps.	Approx. Ship. Wt. Lbs. Extra	Price Each
167425	60-200	2 and 3	4-300	50	\$18.00
167426	300	2 " 3	4-400	60	20.00
167427	60-200	4	4-300	60	20.00

\*Ammeters and current transformers, where required, are not included. Order separately.

NOTE.—Series ammeters, R-6, used with Type FK-20 breakers are recommended only for use on circuits 650 volts or less. For voltages above 650 volts, secondary ammeters, 5 amperes with suitable current transformers, should be used. The current transformers are mounted separately, outside of breaker. Secondary ammeters will be calibrated in primary current, if so ordered, without extra charge. Ratio of current transformer with which it is to be used must be specified.

SELECTION OF AMMETERS.—Ammeters for use with induction motors having standard A guarantee (25 per cent overload for 2 hours) should be selected to have full scale deflection equal to or greater than 150 per cent of the normal full load running current.

ORDERING.—In ordering Type FK-20 breakers with cover for ammeter mounting five Cat. No. of breaker (non-automatic or automatic); Cat. No. of undervoltage if required; Cat. No. of special cover as above; also Cat. No. of ammeter and of current transformer if required. The omission of the standard cover will be taken care of without special notice.

**G-E Type FK13 Oil Circuit Breakers**

With Operating Lever For Mounting on 1½ or 2-inch Panels

The Type FK-13 oil circuit breakers are of the single tank type, all poles in one oil tank with insulating barriers between phases.

**CONTACTS.**—The Type FK-13 breakers have wedge contact blades and flared contact fingers. Any arcing, when the breaker is opened, takes place between the flared ends of the contact fingers and the upper edge of the contact blade, thus insuring a long life to the contact surfaces.

**MANUAL OPERATION.**—Type FK-13 oil circuit breakers are listed single or double throw for manual operation as follows:

For mounting directly on back of panel.

For mounting on panel frame 5 inches back of panel.

For mounting on pipe framework remote from panel.

As these breakers are furnished with 45-degree operating levers

they are listed non-automatic and automatic with one, two or three-trip coils.

**SERIES TRIP.**—For circuits above 750 volts the use of transformer trip coil circuit breakers is recommended.

The manufacturer does not recommend the installation of apparatus on the panel or switchboard when that apparatus is subjected to a pressure in excess of 2500 volts. For such installation, remote control apparatus is recommended.

**Non-automatic—Without Overload Release**

†Operating lever equipped with 125-volt direct current trip coil WSF 90094. For use only with circuit-closing overload relay or similar device.

## G-E Under-voltage Attachments

### For Type FK13 Oil Circuit Breakers

A complete line of hinged armature under-voltage attachments for pressures up to and including 550 volts. Above 550 volts, use 110-volt attachment in connection with suitable voltage transformer.

Where no overload features are required, the under-voltage attachment may be used with a special, plain, under-voltage operating lever provided with a tripping toggle for the under-voltage attachment, but, otherwise similar to the non-automatic lever.

Double-throw circuit breakers are usually automatic and would use standard under-voltage attachments as listed. Plain under-voltage, double-throw circuit breakers will require special consideration. Prices on request.

### Plain Under-voltage Operating Levers

#### Addition to Prices of Single-throw Breakers

For Circuit Breaker Mounted on Panel	For Circuit Breaker Mounted on Panel Pipes	For Circuit Breaker Mounted on Remote Control
<b>\$9.00</b>	<b>\$9.00</b>	<b>\$9.00</b>

### Hinged Armature Under-voltage Attachments

Under-voltage release operates at approximately one-half normal voltage.

### Plain Under-voltage Operating Lever

#### Single Throw

Plain under-voltage operating lever not made for double-throw. Use automatic breaker with under-voltage attachment.

**G-E Auxiliary Switches**

For Type FK13 Oil Circuit Breakers

For Use With Type FK13 Oil Circuit Breakers Mounted on Back of 1 or 2-inch Panel or on Panel Pipes 5 Inches Back of Panel

Cat. No.	Function	Approx. Shipping Wt. Lbs.	Price Each
134598	Circuit-Opening	5	\$15.00
134599	" Closing	5	15.00
134600	" Opening and Closing	8	24.00

For Use With Remote Control Type FK13 Circuit Breakers Mounted on Flat Surface or Pipe Framework

134601	Circuit-Opening	\$16.00
134602	" Closing	16.00
134603	" Opening and Closing	28.00

Drilling for attaching the auxiliary switch must be done by the customer except when the auxiliary switch is ordered with the oil circuit breaker and mounted at the factory.

**Bell Alarm Switches**

For Type FK13 Oil Circuit Breakers

Operates Only When the Oil Circuit Breaker Opens Automatically

Price, No. 139335, Wt. 1 Lb. each \$8.00

For Circuit Breakers Mounted on Panel Pipes or Remote Control

Price, No. 139336, Wt. 1 Lb. each \$8.00

**Tank Lifters**

Simple and practical tank lifting devices can be furnished for Type FK13 oil circuit breakers to facilitate handling the heavier oil tanks used on double-throw breakers. For single-throw breakers the weight of the oil tank is hardly sufficient to warrant the use of a tank lifter.

Description of breakers must be given.

**Circuit Breaker Rating**

Cat. No.	Amperes	Volts	Shipping Wt. Lbs.	Price Each
169569	200	3300	40	\$54.00

**Natural Black Slate Panels**

For Type FK13 Oil Circuit Breakers

These small panels for mounting individual Type FK13 oil circuit breakers are made of natural black slate, 1½ inches thick and mounted on 48-inch pipe supports with floor braces. Panels will be drilled only for oil circuit breakers, lever mechanism and under-voltage attachment if the latter is required.

Oil circuit breakers will not be assembled on the panel at the factory and the equipment will be shipped knocked down, panel and breaker in separate cases.

In ordering, specify catalogue number of panel and also catalogue number of oil circuit breaker and under-voltage attachment (if latter is desired) for which the panel is to be drilled.

For Single-throw Circuit Breakers

Cat. No.	Description	No. of Approx. Trip		DIMENSIONS, INCHES			*Price Each
		Trip	Shp. Coils	Height	Width	Thickness	
1842931G1	Non-Automatic	0	100	16	20	1½	\$34.00
1842932G1	Automatic	1	100	16	20	1½	34.00
1842933G1	"	2	100	16	20	1½	34.00

For Double-throw Circuit Breakers

1842934G1	Non-Automatic	0	130	16	24	1½	\$38.00
1842935G1	Automatic	1	130	16	24	1½	38.00
1842936G1	" (two Coil Transformer trip)	2	130	16	24	1½	38.00
1842937G1	Automatic (two coil Series Trip)	2	130	16	24	1½	38.00

\*Add \$2.00 if panel is to be drilled for under-voltage attachment.

**G-E Type FK5 Oil Circuit Breakers**

For Switchboard Service

600, 4500 and 7500 Volts

Manually-operated Non-automatic

The Type FK-5 Oil Circuit Breaker is in extensive use for circuits up to 7500 volts, where a reliable breaker of moderate capacity is required. It is constructed from the best materials and the workmanship is of the highest character, in short, essentials for long service are found in this breaker.

The operating lever now being used adds its advantages to those already possessed by the breaker. Uniformity in the application and appearance of these operating levers; sensitiveness of the tripping toggle; and the improvement in manual operation—these are a few of the advantages obtained.

RATINGS.—The ratings of the breakers are based on the maximum current the breakers will carry continuously without overheating. Therefore, equipment should be selected that has a capacity at least equal to the maximum rating or to the one- or two-hour overload rating of the circuit.

Single, triple and four-pole single-throw breakers can be obtained in all capacities.

The breakers are made in the following capacities:

Volts	Amps.	Poles	Throws
600	300	2, 3 or 4-pole	Single- or Double-throw
600	500	2, 3 or 4-pole	" " "
600	800	2, 3 or 4-pole	Single-throw Only
4500	200	2, 3 or 4-pole	Single or Double-throw
7500	300	2, 3 or 4-pole	" " "
7500	300	1-pole	Single-throw Only
7500	500	2, 3 or 4-pole	Single or Double-throw
7500	500	1-pole	Single-throw Only

OPERATING MECHANISMS.—The following are obtainable: MANUALLY-OPERATED LEVERS.—Non-automatic levers for all breakers.

Automatic levers with one, two, or three-coil secondary overload trip.

TRIP COILS.—For tripping automatically, alternating current trip coils connected directly or by means of relays to the secondaries of current transformers may be used, or coils separately energized from a reliable source of under-voltage alternating or direct current. When separately energized coils are used, circuit-closing relays consisting of one, two or three units are energized from the secondaries or current transformers with their contacts controlling the tripping circuit.

SECONDARY TRIP COILS.—Five ampere coils, for use with current transformers. Coils calibrated at 5, 7 and 9 amperes.

Four ampere coils, calibrated at 4 amperes, for use with current transformers and circuit-opening relays.

Potential coils from 12 to 250 volts, direct current and from 110 to 440 volts, alternating current, for use with circuit-closing relays or other contact-making devices.

SOLENOID MECHANISM.—Solenoid operation can be furnished for 4500 and 7500-volt breakers. (Two breakers may be electrically interlocked to effect double-throw.) Standard solenoid coils are wound for 125, 250 and 600-volt direct current only.

Overload protection for solenoid-operated breakers is obtained by the use of separate current transformers and circuit-closing overload relays.

When breakers are solenoid-operated the same number of current transformers are used as for manually-operated breakers, but one, two or three single-unit circuit-closing alternating current relays are used to connect the low-voltage tripping current to the trip coil of the direct current solenoid.

1912362G9	3	3	15	23.00

\*When shipped separately, these attachments are assembled with supporting plates and bolts.  
 †Current transformers not included.

**Under-Voltage Devices**

**For Use with Manually Operated Type FK5 Oil Circuit Breakers**

Hinged armature under-voltage attachments are listed for pressures up to and including 550 volts. Above 550 volts, use 110-volt attachment in connection with suitable voltage transformer.

The under-voltage attachment is mounted at the left (right-hand not furnished for use with Type HA2 lever) of a single-throw lever mechanism or between the levers of a double-throw mechanism. In the latter case, it acts on the tripping toggle of the right-hand lever, the action being transmitted to the left-hand lever by the cross trip.

**Operates at Approximately One-half Normal Pressure**

For use with manually operated oil circuit breakers of 800 amperes or less, 25 to 60 cycles.

**Auxiliary Switches**

Auxiliary switches for signaling, electrical interlock or control of auxiliary apparatus are frequently required.

For manually-operated Type FK5 oil circuit breaker mounted directly on back of panel or on panel frame 5 inches back, finger-type auxiliary switches are used.

For manually-operated Type FK5 oil circuit breakers mounted remote from panel, rotary type auxiliary switches are used and mounted on the horizontal hanger which is drilled for such accessories at the factory.

**For Breakers Mounted on Back of Panel**

**G-E Type FK35 and FK35Y Oil Circuit Breakers**

**For Switchboard Service—600 and 7500 Volts**

**Manually Operated—Non-automatic**

Types FK35 and FK35Y oil circuit breakers are recommended for use up to 7500 volts on systems where thoroughly reliable breakers of moderate capacity are required.

These breakers are of standard unit construction, each unit consisting of oil tank, cover, insulator studs and contacts, blade and rod. Thus, a single, double, triple or four-pole breaker is made up respectively of one, two, three or four standard units plus frame, breaker mechanism and either manual or solenoid operating mechanism.

Each standard unit is suspended from the frame of the oil circuit breaker by attaching the oil tank cover to the under surface of the frame. Each oil tank is held in position by hook bolts.

The FK35Y oil circuit breakers are similar to the Type FK35 breakers, except that they have removable arcing tips and the operating rods and the blades are slightly different. The interrupting capacities are the same.

**DISTINCTIVE FEATURES.**—Breakers adapted to either vertical or horizontal operation by making one member of breaker mechanism a bell crank.

Interchangeability of breaker units of like rating.

Each phase in separate tank.

Bell alarm auxiliary switch included with all operating levers.

The manufacturer does not recommend the installation of apparatus on the panel or switchboard when that apparatus is subjected to a pressure in excess of 2500 volts.

**For Mounting Directly on Back of Panel**

**Double-pole—Single Throw**

### Double-throw Attachments

Mechanical interlocks are available as attachments to combine for double-throw non-automatic operation.

1.—Any two panel or panel frame mounting, or remote control Types FK35 or FK35Y breakers.

2.—Any Type FK35 or FK35Y breaker with any Type FK32A or FK32B breaker.

For panel or panel frame mounting the interlock is attached to the breaker frame, proper holes for same being provided on the breakers.

For remote control mounting the interlock is attached to the hangers on back of panel, proper holes for same being provided on the hangers.

In ordering specify breakers to be interlocked, form of mounting and distance between centers of operating levers 8, 9, 11, 12, 13 or 16 inches.

Price, Mechanical Interlock..... each \$11.00

### Cross Trip—Automatic Operation

Where operating levers for breakers interlocked for double-throw are equipped with automatic trip attachment in one operating lever only, a cross trip is required between the two levers to trip on both throws.

Where two sets of current transformers are used with automatic trip attachments in both operating levers, or where one set of current transformers is used with automatic trip attachments in both operating levers with trip coils in series in each phase, the cross trip is not required.

In ordering specify distance between centers of operating levers, 8, 9, 11, 12, 13 or 16 inches.

Price, Cross Trip..... each \$3.00

**G-E Type Y-298A Tripping Current Transformers**

For Oil Circuit Breakers

25-125 Cycles, 15000 Volts or Less

400 Amperes and Below

These transformers are for tripping oil circuit breakers. They may be used with any of the standard 4- and 5-ampere trip coils. They are listed in capacities from 5 to 800 amperes at 15000 volts or less.

In general their use is limited to tripping duty only, either directly or in connection with relays, but where high accuracy is not essential a secondary ammeter may be used.

As these transformers are small and inexpensive they may be used very conveniently in installations where series trip has heretofore been recommended.

500 to 800 Amperes

The smaller capacities from 5 to 400 amperes inclusive are equipped with cast metal bases with two-bolt holes, allowing them to be bolted to flat surfaces or pipe supports.

The larger capacities from 500 to 800 amperes inclusive are of the bus type and are supported by the buses or the stud of the oil circuit breaker, no bases being required due to the light weight of these transformers.

**G-E Type HG-7 A.C. Auxiliary Relays**

Single-Pole, 1-Circuit, Circuit-Closing Contacts  
25 and 60 Cycles A.C.

For Mounting on Front of 1/2 or 2-Inch Panel

This relay is larger than the HG-2 and intended to perform heavier duty. When used with potential transformers the 110-volt relay imposes a burden of 2 volt-amperes at 25 cycles, 30 volt-amperes at 60 cycles.

It is of the hinged armature type and its action in opening is supplemented by a compression spring after the coil is de-energized. Front cover is provided with glass window.

The winding will ordinarily withstand low voltage alternating currents continuously applied without any external resistance. There are rare instances where a resistor is used when it is necessary at times that the relay be short circuited but the resistor in this instance will stand full voltage for only one minute.

Particularly adaptable where generous contact capacity and quick action are desired. Contacts will carry 15 amperes continuously and 50 amperes for 1 minute. Will interrupt current at the various voltages indicated below:

Voltage of Control Circuit	24	125	250	600
Contacts Will Break-D.C.	50	15	5	1
Contacts Will Break-A.C.	50	30	10	3

Service, 15 seconds or continuous.

Without Cover With Cover

**G-E Types PQ, PQ2 and PQ3  
Overcurrent Relays**

For Use with Current Transformers Having  
5-Ampere Secondaries  
For Mounting on 1½ or 2-Inch Panels  
Alternating Current—Single Pole—40-60 Cycles

Fig. 1  
PQ Instantaneous  
Circuit-closing

Fig. 2  
PQ Inverse Time-  
limit  
Circuit-closing

Fig. 3  
PQ3 Inverse Time-  
limit  
Circuit-opening

These relays are for use only on 5-ampere secondaries of current transformers. Standard winding has a continuous rating of 5 amperes and is calibrated to operate at 5, 8, 12 and 15 amperes. The volt-ampere burden, 22.5 volt amperes, is sufficiently low to permit using these relays on the same current transformers with meters and other instruments without affecting the accuracy of the instruments.

All time Type PQ relays are regularly equipped with needle valve only. The quick return valve and the quick exhaust valve are not regularly furnished but can be furnished as a separate item. The bellows support has a tapped hole for receiving these valves. This hole is closed by a removable plug which is regularly furnished with the relay.

The standard unit Types PQ, PQ2 and PQ3 overcurrent relays are all of the same general construction, the only difference being in the respective contact elements. All parts are interchangeable, thereby permitting changing any relay to secure the desired contact characteristics by simply adding the necessary parts and omitting those not required. This rule does not apply to the Type PQ2, two-circuit, 3-contact, circuit-closing relay. The Type PQ2 relay is provided with instantaneous closing contacts only.

The 3-spring-finger type of contact cannot always be relied upon to retain their proper alignment with the result that when the plunger operates slowly, as in the case when employing the air bellows, all 3 contacts may not be engaged simultaneously. This condition would cause arcing and the subsequent destruction of the contact tips. The relays are dust-proof both with respect to the contact parts and the calibrating parts. A dustproof cover encloses the contacts, and a shutter encloses the calibrating parts after adjustments have been made. The coil can be replaced without disturbing the upper part of the relay.

These relays can be provided with alternating current or direct current potential coils.

**G-E Type PB-54 Hesitating Solenoid  
Control Relays**

With Blowout Coil  
Totally Enclosed, Single-Pole, One-Circuit  
Circuit-Closing Contacts

48 to 600 Volts, D.C.

For Mounting on ¾ or 1¼-Inch Vertical or Horizontal Pipe

Type PB-54 Relay  
with Cover

Type PB-54 Relay  
with Cover Removed

The Type PB-54 Solenoid Control Relay is made in single-pole units only.

It is provided with a blowout coil and a metal cover. The blowout coil reduces the arc and the burning of contact tips. The metal cover encloses all live parts, thereby providing full safety features.

In general, the Type PB-54 Relay operates to close its contacts through a toggle mechanism actuated by the plunger.

The hesitating feature is obtained by the inductive effect of a heavy copper short-circuited winding located in the spool which delays the drop of the plunger approximately one second after the coil is de-energized.

**Contacts**

Contacts are of copper against copper and will make and break the current given in the following table:

Voltage of Circuit	CONTACTS WILL CARRY AMPERES	
	Continuous	5 Seconds
125	50	200
250	50	100
600	20	40

**Mounting**

The relay is provided with supports for mounting on ¾-inch or 1¼-inch vertical or horizontal pipe.

When it is desired to mount the relay on the front or back of a panel the pipe fitting can be removed and the relay secured by two screws through holes provided for this purpose in the back of the frame.

**For Mounting on ¾-Inch Vertical or  
Horizontal Pipe**

**Twin Pull Button Control Switches**

For Controlling Motor and Solenoid Operated Switches, Circuit Breakers, etc.

Single-pole—Double Throw  
125 to 600 Volts

S-P. D-T. Twin Pull Button Control Switch with Indicating Lamps and Receptacles

Mechanical indicator shows which throw was last operated; Mazda lamps with red and green lenses for indicating, show whether switch or breaker is closed or open.

These switches are equipped with sliding contacts which will handle 10 amperes at 125 volts, 3 1/2 amperes at 250 volts and 1/2 an ampere at 600 volts.

Lamp Receptacle and Lens

**G-E Potential and Synchronizing Plugs and Receptacles**

Synchronizing Plug

The plug and receptacle materially simplifies the synchronizing system of switchboards and the control of potential circuits by making it possible to locate the receptacles in the immediate vicinity of the controlling and indicating devices and by avoiding the grouping of a large number of leads in a small space. Also obviates the necessity of modifying existing panels in regard to the potential and synchronizing connections when panels are added.

Receptacle with Bushing

Receptacle without Bushing

Potential plugs and receptacles are used to connect a voltmeter to any one of a number of generator, battery or feeder circuits, or to any phase of a polyphase circuit.

Synchronizing plugs and receptacles are used for connecting a synchronism indicator or synchronizing lamps to the generator being synchronized.

Plug holders are furnished to provide means for holding the plugs when not in use.

Plug Holder

\*Receptacles without bushings are for replacements; can be mounted in moulded or hard rubber mats of superseded potential or synchronizing receptacles if a socket needs replacing.

**Bryant Wiring Devices with Extra Long Keys**

The medium base key sockets and similar size socket devices have keys 1 inch long, but can have longer keys on special order, which must specify the distance desired between the outside of the shell and the end of the key. Otherwise, if extra long keys are ordered 1 1/2-inch keys will be supplied. The lengths which can be supplied are 1 1/4, 1 1/2, 2 and 2 1/2 inches.

For sockets and other devices with keys longer than 1 inch, add to the price of standard device 5 cents.

Standard package quantity, 100 of one length. No assortment permitted. For gummon key, add 5 cents.

The keys of the candelabra and miniature base devices are 5/8 inch long and this is the only length that can be furnished.

**Bryant Wiring Devices with Removable Push-Buttons**

Nos. 34, 44, 77, 81, 87 and 4181 socket bodies can be supplied, on special order, with removable buttons 2 1/4 inches long over all; standard length is 1 3/4 inches.

For devices with removable buttons add 7 cents to price of standard device.

Standard package quantity, 100. No assortment permitted.

**Bryant Wiring Devices with Metal Keys**

Any Bryant key socket listed in this catalogue can be supplied with a metal key as shown in the adjoining illustration. The key can be detached for finishing. Unless otherwise specified it will be finished the same as the socket. The standard length measures 1 inch from the shell to the end of the key. Other lengths which can be furnished are 1 1/4, 1 1/2, 2 and 2 1/2 inches.

For sockets with 1-inch metal keys, add 10 cents to price of standard socket. For sockets with keys longer than 1 inch, add 15 cents to price of standard socket. Standard package quantity, 100 of one length. No assortment permitted.

**Bryant Wiring Devices for Special Metal Keys**

Any Bryant key socket listed in this catalogue can be supplied with insulated threaded mandrel to receive a special key furnished by the fixture manufacturer. The unthreaded portion is 1/4 inch in diameter. The threaded portion will take a key tapped for No. 6 screw, 32 threads per inch. Add 7 cents to price of standard socket.

Standard package quantity, 100. No assortment permitted.

**Bryant Wiring Devices with Art Keys  
Brush Brass Color**

Key socket bodies and their combinations will, when specified, be furnished with brush brass colored composition keys. The color is permanent because it is moulded into the composition. When Art Keys are desired, specify Art Key, after the catalogue number. The price, schedule, standard package quantity and carton are the same as for sockets with regular keys. Key socket bodies of the same Cat. No. with Art Keys and regular keys may be assorted in unbroken cartons to make up a standard package quantity.

**Bryant Pull Devices with Extension Chain Guides**

Pull devices installed in husks or socket covers require extension chain guides to carry the chain through the cover. These chain guides are not in any way part of the device shell but are attached to the device mechanism. The extension piece, which is 3/7 inch in diameter, can be unscrewed for installation through the hole in the husk and for refinishing. The male threaded portion of the chain guide, which is attached to the device, extends less than 1/8 inch outside of the device shell, making it possible to insert the device in any husk, even though it follows the outline of the device shell closely. This male threaded portion of the chain guide is not interchangeable on New Wrinkle and Wrinklet sockets, but the extension pieces are interchangeable and can be used on any Bryant New Wrinkle and Wrinklet socket which is properly equipped with its own male threaded portion of the chain guide.

Extension chain guides are made only in the following regular lengths: 3/8, 1/2, 5/8, 3/4, 1, 1 1/4, 1 1/2, 1 3/4 and 2 inches.

Add 10 cents to price of standard device.

Standard package quantity, 50 of one length or 100 of assorted lengths. No assortment with devices having regular chain guides permissible.

**Bryant Pull Devices with Chain of Special Length**

The regular length of chain on all pull devices, except as otherwise noted, is 8 inches. Devices with chains shorter than regular will be sold at the same price as regular.

For devices with chains longer than regular, add 10 cents per foot of extra chain per device.

For special, except silver and gold, finishes on chains longer than 1 foot, add 2 cents per foot of extra chain per device.

For silver finish, add 10 cents. Price of gold finish on application.

The standard quantity package will be the same as for standard length. Devices of the same catalogue number with standard and special length chains may be assorted in unbroken cartons to make up the standard package quantity.

**Bryant Sockets and Receptacles with Lamp Grips**

Most mogul base devices and most medium base devices listed in this catalogue can be equipped with a lamp grip, as illustrated, which effectually prevents the lamp from unscrewing.

For devices with lamp grips add 5 cents per outlet to the price.

The standard package quantity will be the same as the regular article.

Devices of the same catalogue number without and with lamp grip may be assorted in unbroken cartons to make up the standard package quantity.

**Bryant Sockets and Receptacles with Left-hand Screw Shell  
Medium Base Only**

For special conditions many of medium base sockets or cut-out bases listed in this catalogue can be fitted with left-hand screw shells, designed to receive lamps similarly equipped.

For medium base devices with left-hand screw shells, add 3 cents to the price for each left-hand screw shell.

The standard package quantity will be the same as the regular article.

Devices of the same catalogue number with left-hand and right-hand screw shells may be assorted in unbroken cartons to make up the standard package quantity.

**Bryant Pull Devices with Linen Cord**

Some pull devices are regularly fitted with a short chain, 10 ft. of linen cord, small size, and a small composition ball. Sockets and other devices which are regularly fitted with 8 inches of chain and a brass ball will, on special order, be furnished with a short chain, 3 feet of linen cord and composition ball at the regular price.

For cords longer than 3 feet, add 1 cent per foot to price.

The standard package quantity will be the same as the regular article. Devices with linen cords may be assorted in unbroken cartons with similar devices with chains of various lengths to make up the standard package quantity.

Connection between chain and cord is made by means of a No. 810 splicing link.

**Bryant Socket Caps with Side Entrance Bushings**

Medium Base Size Only

The caps of most medium base brass shell sockets can be furnished with an insulated bushing as illustrated. The purpose of this construction is to provide a passage for the conductors when the support for the socket is a rod instead of a pipe or tube; or when for any other reason it is impossible or undesirable to pass the conductors through the regular bushing of the socket cap.

No. CX cap is such a cap, being an AA cap with side entrance bushing.

For socket caps fitted with insulated side bushing, add 2 cents to price.

The standard package quantity will be the same as the regular article. Caps of the same catalogue number with and without the insulated side bushing may be assorted in unbroken cartons to make up the standard package quantity.

**Bryant Unassembled Sockets**

Cap

Cap Lining

Shell

Interior and Lining

Sockets, when so specified, will be shipped unassembled. By this is meant that the caps will be packed in one set of cartons, the shells in another set, the cap linings in another set. This should not be confused with sockets shipped knocked-down, which describes the shell, lining and interior complete as one unit, and the cap with its lining complete as another unit. It is advantageous to purchase sockets unassembled only when the purchaser does his own refinishing, in which case orders should specify, polished but not lacquered.

**Socket Reducers**

**Bryant Brylock Lock Attachments**

No. AA-15 with Brylock Attachment No. AA-45, Showing Construction

In public places where the theft of lamps presents a problem, the use of Bryant sockets equipped with the Brylock attachment will stop further loss.

The Brylock attachment consists of a pointed and hardened steel screw supported by a threaded sleeve. The sleeve is fastened into the socket in such a position that when the pointed screw is turned by the special Brylock key it is forced to pierce the metal of the lamp base and effectually prevents the lamp from being turned.

Thus the lamp cannot be removed without the use of the special Brylock key.

Brylock keys are not supplied with Brylock equipped sockets but must be ordered separately.

**Bryant Sockets and Receptacles with Brylock Attachments**

Schedule B

The price of a Bryant socket or receptacle with Brylock attachment is 27 cents per attachment more than the price of the same device without the locking feature.

Devices of the same catalogue number with and without the Brylock attachment may be assorted in unbroken cartons to make a standard package, which will be the same as for the standard device. A standard package of Brylock devices is 100 identical Brylock devices, carton 25; except when the standard package of a regular device is less than 100, or the carton less than 25, under which condition the regular standard package and carton quantities apply to the device when equipped with the Brylock attachment.

DF	B	10	100	35	\$.23

**Bryant Surface and Outlet Box Keyless Receptacles**

660 Watts, 250 Volts  
Schedule B

These receptacles are flat on the back and therefore suitable for use either on outlet boxes or without them.

Approved for use on walls or ceilings containing metal lathing and upon metal surfaces.

Standard finish is brush brass which will be furnished when no finish is specified. Suitable machine screws are furnished for mounting the device on box.

Nos. 4101 and 4103 are regularly fitted with 6-inch leads of No. 14 B.&S. stranded rubber-covered wire. On special order can be fitted with 6-inch leads of No. 14 B.&S. stranded slow-burning wire for 3 cents, or with asbestos braid rubber-covered wire for 12 cents, list additional per device. Leads longer than 6 inches cost additional: Rubber-covered, 9 cents per foot; slow-burning, 18 cents per foot; asbestos braid, 24 cents per foot; these prices cover both leads in all cases. Devices with asbestos braid wire will be sealed with a compound that will not soften under heat. Brylock feature, 27 cents extra.

**For 3 1/4-Inch Outlet Boxes**

Diameter of base, 3 5/8 inches. Height, 1 1/2 inches. Supporting screw spacing, 2 3/4 inches.

Cat. No.	Description	Car-ton	Std. Pkg.	Wt. Lbs.	Price Each
4102	With Binding Screws	1	50	36	\$.45
4103	With Wire Leads	1	50	40	.50

**For 3 1/4 and 4-Inch Outlet Boxes**

Diameter of base, 4 5/8 inches. Height, 1 1/2 inches. Supporting screw spacings, 2 3/4 and 3 1/2 inches.

Cat. No.	Description	Car-ton	Std. Pkg.	Wt. Lbs.	Price Each
4100	With Binding Screws	1	50	55	\$.60
4101	With Wire Leads	1	50	58	.65

**Bryant Surface and Outlet Box Single-Pole Pull Receptacles**

250 Watts, 250 Volts  
Schedule B

**For 3 1/4 and 4-Inch Outlet Boxes**

These receptacles are flat on the back and therefore suitable for use either on outlet boxes or without them.

Approved for use on walls or ceilings containing metal lathing and upon metal surfaces.

Diameter of base, 4 1/2 inches. Height, 2 inches. Supporting screw spacings, 2 3/4 and 3 1/2 inches. Mechanisms are single-pole.

No. 4104

Standard finish is brush brass which will be furnished when no finish is specified. Suitable machine screws are furnished for mounting the device on box.

No. 4105 is regularly fitted with 6-inch leads of No. 14 B.&S. stranded rubber-covered wire. On special order, can be fitted with 6-inch leads of No. 14 B.&S. stranded slow-burning wire for 3 cents, or with asbestos braid rubber-covered wire for 12 cents, list additional per device. Leads longer than 6 inches cost additional: Rubber-covered, 9 cents per foot; slow-burning, 18 cents per foot; asbestos braid, 24 cents per foot; these prices cover both leads in all cases. Devices with asbestos braid wire will be sealed with a compound that will not soften under heat.

Equipped with short No. 6 chain, 10 feet of small linen cord and small composition pendant ball.

Can be supplied with Brylock feature at an addition to price of 27 cents each. For small Undark luminous pendent, add 28 cents.

Cat. No.	Description	Car-ton	Std. Pkg.	Wt. Lbs.	Price Each
4104	With Binding Screws	1	50	69	\$1.30
4105	With Wire Leads	1	50	75	1.35

**Bryant Assembled Sockets**

The following sockets are carried in stock assembled, i.e., the socket body is partially inserted in the cap, but the latching operation is not completed, so that the sockets are easily taken apart for wiring. Each complete socket is separately wrapped in tissue paper. This method of packing sockets is especially advantageous to fixture manufacturers who have frequent use for other than 1 1/2-inch caps. For the average socket user, requiring a considerable variety of bodies, caps and bases, the "knocked-down" method of shipping sockets is decidedly more convenient.

Other combinations of sockets than those listed below will be shipped assembled, when so specified, without extra charge, but such orders will be subject to the delays which are usual in connection with goods that are not carried in stock.

No. AA-10

**New Wrinkle Sockets with 1/8-Inch Cap**

## Bryant Sockets for Flat Pans

Schedule B  
660 Watts, 250 Volts

These sockets are made by soldering 8-inch leads of stranded rubber-covered wire to the terminals of regular No. 95 Wrinklet sockets and covering the tops with wax to hold the bodies in the shells. Used in ceiling pan fixtures by making round holes 1<sup>1</sup>/<sub>4</sub> inches in diameter in the pans and soldering around the holes on the upper side of the pans Bryant No. 549 Uno fixture rings, after which the wires are connected.

Wrinklet caps cannot be used on these sockets. Standard finish, brass polished but not lacquered. Longer leads can be supplied at an advance in price of 4<sup>1</sup>/<sub>2</sub> cents per foot each conductor. Wire lengths cannot be assorted to make up a standard package.

718	H	10	100	30	\$.23

**No. 4235 Bryant Medium Base Reflector**

**Sockets**

Schedule B  
660 Watts, 250 Volts

No. 4235 Front View

No. 4235 Back View

A single piece of ruggedly designed porcelain. The conductors pass through separate holes in the porcelain to the binding screw terminals which are located in shallow recesses at the lamp end of the socket. This construction greatly simplifies both the installation of the socket in the reflector and the connecting of the conductors. The terminal binding screws are extra heavy and long and are staked to prevent being backed out too far.

There are four mounting surfaces or levels accomplished by steps of  $\frac{1}{4}$  inch each, so that it is possible to hold the lamp at four different positions or focuses with reference to the particular style of reflector used.

This socket can be installed with ease in any type of metal reflector regardless of whether the reflector and its holder are made in one piece or separate pieces; it is suitable for use with metal caps tapped to fit either  $\frac{3}{8}$ -inch or  $\frac{1}{2}$ -inch pipe.

No caps are furnished with these sockets. Reflector manufacturers will supply whatever kind of support is best suited to their particular style of reflectors or holders.

The supporting means of the socket may be so arranged in the reflector that the holding screws, as well as the binding screws, are accessible from the lamp end of the socket.

Socket is  $2\frac{3}{8}$  inches in diameter by  $1\frac{3}{4}$  inches deep. Holes for supporting screws are  $\frac{3}{16}$  inch in diameter and are spaced  $1\frac{1}{2}$  inches on centers.

Cat. No.	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
4235	10	100	48	\$.30

## Hubbell Porcelain Candelabra Receptacles for Candle Fixtures

75 Watts, 125 Volts

No. 5686

No. 7042

No. 5819

These receptacles are known as standard round candelabra receptacles, and will take candelabra base lamps.

They are constructed of porcelain and especially designed for use with fixtures equipped with glass candles.

The receptacle screws into a central supporting tube, and the candle, when in place, completely covers both the supporting tube and receptacle. Fitted with both male and female thread.

No. 5812 Receptacle is provided with porcelain skirt  $\frac{1}{4}$  inch longer than standard. Otherwise is identical in construction with No. 5686.

35024	B	10	10	4	\$ .70

## Features of Hubbell Adjustable Candle Sockets

Features of Hubbell Adjustable Candle Sockets are summed up as follows:

1. The hickey can be easily detached, by loosening one screw, making wiring easy.
2. The hickey can be secured at any desired adjustment by the slight turn of one screw.
3. The hickey can be screwed onto the fixture separate from the socket, locked in place by the set screw.
4. The socket can then be located and the wire attached.
5. The candle pull socket hickey is interchangeable with the keyless candle socket.

**Hubbell Pull Sockets with Insulated Chain**

*Schedule B*

Hubbell Pull Sockets may be furnished with insulated chain. For sockets so equipped, add 8 cents to the list price.

Standard package quantity is the same as for the standard socket with which the insulated chain is ordered.

May be furnished on any style of pull socket.

The illustration shows a pull socket with insulating link and detachable tassel assembled.

**Hubbell Extension Eyelets for Pull Sockets**

When sockets are furnished with extension eyelets, add 10 cents to the list price of corresponding socket with regular eyelet.

Standard eyelet sold separately from socket, 5 cents each list. Standard package, 250. If assorted, 100 extension eyelets constitute a standard package.

For special finished eyelets not attached to socket, add 2 cents to list price. Standard finish is brush brass.

Special finished sockets with extension eyelets take same advance as regular sockets, plus extra, as above, for the extension eyelet.

For Standard Sockets	Cat. Nos. For Electrolier Sockets	Schedule	Extension Eyelet Inches	Carton	Std. Pkg.	Wt., Oz. Std. Pkg.	Price Each

## Hubbell Socket Chain, Cord, Acorns and Tassels

No. 7015 No. 5919 No. 6982 No. 3946 No. 7004

Standard finish is brush brass. For special finishes on chain add 2 cents list per foot or fraction.

Full standard packages of 1000 feet No. 5382 chain will be shipped on spools of 200 feet each. Quantities less than 100 feet will be shipped in hanks.

Pull chains less than 8 inches in length with acorns attached, take the same price as regular 8-inch chain or 13 cents.

All standard Hubbell pull sockets are now supplied with No. 3946 new detachable tassel. Standard finish is brush brass. All other finishes on acorns or tassels, add 2 cents to price.

Pull sockets furnished with short chain and 3 feet of cord, complete with acorn instead of 8-inch chain, without extra charge.

Separate chain cut to length with acorn, or chain sold as part of a device, is subject to Schedule B and takes a price of 10 cents per foot or fraction thereof.

Cord, with or without acorn, Schedule F.

Counter cards of 25 luminous acorns can be furnished.

(a) Standard finish on all brass shell devices is brush brass which will be furnished on all orders where no finish is specified. Any electro plated finish on pull chain parts furnished at an addition of 2 cents list. This addition is subject to quantity reduction applying to socket finishes.

(b) Pull devices in white finish but with chain eyelet, chain and acorn in any electro plated finish except brush brass add 2 cents list advance over price shown for key, keyless and push sockets. Pull devices in brush brass finish but chain, tassel and eyelet in any other finish add to list difference between columns 1 and 2 for the finish desired.

(c) All finishes not listed above, including gold, prices on application. Sample should be submitted with inquiry.

Standard and special finishes of one catalogue number may be assorted to make up standard package.

The above prices for special finishes apply to small lots. When ordering in quantity lots of one finish, one shipment, single or assorted catalogue numbers, they are reduced as follows:

- Special Finish on Socket Material and Shade Holders:
  - Lots 250 to 499, finish list price reduced 10%;
  - Lots 500 to 999, finish list price reduced 20%;
  - Lots 1000 and over, finish list price reduced 50%;
- These quantity deductions should be made from list prices of finishes before the trade discounts are figured.

Assembled or unassembled sockets with brush brass but unlacquered shells take same list price as brush brass.

For the convenience of fixture, lamp and specialty manufacturers: Standard and electrolier pull, key, keyless and electrolier push button sockets may be secured disassembled, packed in bulk and finished in old brass, unfinished, or special finishes, i.e., caps, shells, linings and interiors packed separately in a unit container of 250 complete sockets.

Special finishes, on chain and parts other than gold and silver, add to list prices as follows: Chain eyelets, standard or extension, 2 cents; chains, not longer than 1 foot, with or without cords and insulators, 2 cents; brass acorn or tassel, 2 cents; chain splicing link, 2 cents; chain insulator, 2 cents; for any chain, not longer than 1 foot, with any combination of chain eyelet, connector, insulating link, and brass acorn or tassel in one finish, per set, 2 cents; chains, longer than 1 foot, per extra foot or fraction, 2 cents; chain in bulk, per foot, 2 cents. Prices for gold and silver will be quoted on application.

(a) Standard finish is brush brass which will be furnished on all orders where no finish is specified.

(c) All finishes not listed above, including gold, prices on application. Sample should be submitted with inquiry.

(d) These prices should be added to brush brass prices and not "Lacco."

(e) List prices applying to finishes on plates are based on single plates. When ordering in gangs, add 10 cents for each gang beyond the first, regardless of finish except gold.

The above prices for special finishes apply to small lots. When ordering in quantity lots of one finish, one shipment, single or assorted, catalogue numbers, they are reduced as follows:

- 100 to 499 gangs or caps finish, list price reduced 10%.
  - 500 to 999 gangs or caps finish, list price reduced 20%.
  - 1000 gangs or caps and over, finish list price reduced 50%.
- These deductions should be made from the list prices of finishes before trade discounts are figured.

Unfinished devices (except flush plates) or devices polished but not lacquered will be supplied at same list price as devices in standard finish.

Unfinished flush plates, that are polished and buffed, will be supplied at same list price as brush brass plates.

Unfinished flush plates, not polished or buffed (in rough state) will be furnished at same list price as "Lacco" finish plates.

"Lacco" finish is a durable sprayed-on lacquer coating resembling brush brass.

BAKELITE PLATES.—For white, ivory, yellow and blue finishes on Bakelite plates add 20 cents per gang to list price of plate, for grained wood finishes add 50 cents. Prices on all other finishes quoted on application.

## Hubbell Porcelain Sockets

Separate chains not attached to sockets on another page.

Standard finish of exposed brass parts is brush brass and polished nickel.

For special plated finishes on all exposed brass parts except on cap, add to list 2 cents.

For special finishes on metal-covered caps, see third price column.

Standard length of porcelain keys is  $\frac{1}{8}$  inch.

Standard length of chain, 7 inches.

Sockets with chains over 7 inches in length, add to list price per foot, 10 cents, or fraction thereof.

Luminous acorns for chains listed on another page.

Machine screws for mounting, furnished with socket bases.

All porcelain sockets are wired from the cap.

GE2236	B	10	100	18	\$ .76

## G-E Threaded-Catch Shadeholder Socket Bodies

Lighting equipment makers appreciate the convenience and economy of G-E Shadeholder Sockets. They are really a combination husk and socket, two separate parts made up as a single unit.

They may be used wherever a combination of socket and husk is required, as their tasteful design harmonizes with any type of mixture or pendant.

G-E Shadeholder Sockets represent a saving in the first cost of material and, in addition, a real economy in the matter of assembling cost.

They have all the mechanical excellence of standard sockets besides being equipped with the G-E Threaded-catch Fastening for the cap and shell. This consists of a threaded brass ring which forms a union between the two parts and holds them securely no matter how heavy the reflector or how much vibration or strain may be present.

G-E Shadeholder Sockets may be had in pull, key and keyless types with shadeholders, and in any desired finish to match the rest of the fixture.

These bodies are interchangeable with all standard threaded-catch caps. Threaded rings are included with bodies.

### No. GE1671 Threaded-Catch Shadeholder Key Socket Bodies

With 2 1/4-Inch Shadeholders  
250 Watts, 250 Volts

Standard finish, brush brass.

Cat. No.	Sched-ule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE1671	B	10	100	29	\$ .71

### No. GE1838 Threaded-Catch Shadeholder Key Socket Bodies

With 2 1/4-Inch Shadeholders  
660 Watts, 250 Volts

Standard finish, brush brass.

Cat. No.	Sched-ule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE1838	B	10	100	27	\$ .77

### No. GE1672 Threaded-Catch Shadeholder Keyless Socket Bodies

With 2 1/4-Inch Shadeholders  
660 Watts, 250 Volts

Standard finish, brush brass.

Cat. No.	Sched-ule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE1672	B	10	100	25	\$ .65

### No. GE1810 Threaded-Catch Shadeholder Pull Socket Bodies

With 2 1/4-Inch Shadeholders  
250 Watts, 250 Volts

Standard finish, brush brass.

GE1615	B	25	250	12	\$ .20

## No. GE2305 Fluted-Catch Electrolier Lampholder Caps

Schedule B

1/4-inch thread.

Standard finish, brush brass.

Cat. No.	Car- ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE2305	25	50	4	\$ .32

## No. GE1617 Fluted-Catch Electrolier Lampholder Caps

3/8-Inch Thread

Standard finish, brush brass.

Cat. No.	Sched-ule	Car- ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE1617	B	25	50	4	\$ .32

## No. GE1618 Fluted-Catch Electrolier Lampholder Caps

1/8-Inch Thread

90° Angle

Standard finish, brush brass.

Cat. No.	Sched-ule	Car- ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE1618	B	25	50	5	\$ .42

## No. GE1840 Fluted-catch Electrolier Lampholder Caps

1/8-inch Thread

With 7/32-inch Side Outlet Bushing

Standard finish, brush brass.

Cat. No.	Sched-ule	Car- ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE1840	B	25	50	3	\$ .24

## No. GE1619 Fluted-Catch Electrolier Pendant Caps

Compound Bushing

Standard finish, brush brass.

Cat. No.	Sched-ule	Car- ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE1619	B	25	50	2	\$ .20

## No. GE1358 Candle Keyless Lampholders

1/8-inch Extension Hickey

660 Watts, 250 Volts

Cat. No.	Sched-ule	Car- ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE1358	B	25	250	27	\$ .32

## No. GE2311 Candle Keyless Lampholders

1/8-inch Adjustable Extension Hickey

660 Watts, 250 Volts

Adjustable to any over all length between 4 1/8 and 5 3/4 inches. Sturdily built to stand up under actual service conditions.

Cat. No.	Sched-ule	Car- ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE2311	B	25	250	32	\$ .34

## Nos. GE1645 and GE1739 Threaded-Catch Electrolier Key Lampholder Bodies

Threaded ring is part of lampholder body.  
Standard finish, brush brass.

250 Watts, 250 Volts

Cat. No.	Sched-ule	Car- ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE1645	B	25	250	31	\$ .56
GE1739	B	25	250	41	\$ .62

## No. GE1646 Threaded-Catch Electrolier Keyless Lampholder Bodies

660 Watts, 250 Volts

Schedule B

Threaded ring is part of lampholder body.  
Standard finish, brush brass.

Cat. No.	Car- ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE1646	25	250	31	\$ .50

## No. GE1647 Threaded-Catch Electrolier Pull Lampholder Bodies

250 Watts, 250 Volts

Schedule B

Threaded ring is part of lampholder body.  
Standard finish, brush brass.

Cat. No.	Car- ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE1647	25	250	39	\$ .84

## No. GE1841 Threaded-Catch Electrolier Pull Lampholder Bodies

660 Watts, 250 Volts

Threaded ring is part of lampholder body.  
Standard finish, brush brass.

Cat. No.	Sched-ule	Car- ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE1841	B	25	250	44	\$ 1.22

## No. GE1648 Threaded-Catch Electrolier Push Button Lampholder Bodies

660 Watts, 250 Volts

Threaded ring is part of lampholder body.  
Standard finish, brush brass.

Cat. No.	Sched-ule	Car- ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE1648	B	25	250	31	\$ .56

## No. GE1830 Candle Pull Lampholders

250 Watts, 250 Volts

Schedule B

Has 1/8-inch removable extension hickey.  
Standard finish of chains, brush brass.

Cat. No.	Car- ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE1830	10	100	17	\$ 1.50

## No. GE2302 Candle Pull Lampholders

1/8-inch Bushing

250 Watts, 250 Volts

Cat. No.	Sched-ule	Car- ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE2302	B	10	100	17	\$ 1.50

## No. GE2326 Candle Pull Lampholder Bodies

250 Watts, 250 Volts—Schedule B

For adjustable yokes.

Regularly equipped with No. 3 candelabra chain, splicing link and removable ball.

Cat. No.	Sched-ule	Car- ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE2326	B	10	100	16	\$ 1.40

**No. 10x707 G-E Keyless Lampholders**  
 Single Leg  
 1/8-Inch Adjustable Extension Hickey  
 660 Watts, 250 Volts  
 Adjustable to any overall length between 3 3/8 and 5 1/2 inches.

Cat. No.	Schedule	Car-ton	Std. Pkg.	Price Each
GE10x707	B	25	250	\$ .34

**No. GE2327 1-Inch Adjustable Yokes for Candle Pull Lampholder Bodies**

250 Watts, 250 Volts

Schedule B

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE2327	B	25	100	3	\$ .10

**No. GE2328 2-Inch Adjustable Yokes for Candle Pull Lampholder Bodies**

250 Watts, 250 Volts

Schedule B

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE2328	B	25	100	4	\$ .10

**No. GE2501 Candelabra Key Lampholders**

Metal Shell, 1/8-Inch

75 Watts, 125 Volts

With multi-catch fastening.  
 Standard finish, brush brass.

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE2501	G (Class 1)	25	100	9	\$ .78

**No. GE023 Candelabra Keyless Lampholders**

Metal Shell, Multi-Catch Fastening

75 Watts, 125 Volts

Standard finish, brush brass, 1/8-inch cap.

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE023	G (Class 1)	50	100	6	\$ .64

**No. GE024 Miniature Keyless Lampholders**

Multi-catch Fastening—1/8-inch Cap

75 Watts, 125 Volts

Standard finish, brush brass.

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE024	G (Class 1)	50	100	5	\$ .64

**No. GE025 Candelabra Bayonet Base Keyless Lampholders**

Multi-catch Fastening—1/8-inch Cap

75 Watts, 125 Volts

Standard finish, brush brass.

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE025	G (Class 1)	50	100	6	\$ .64

**No. 9444 Candelabra Keyless Lampholders**

Porcelain Shell

75 Watts, 125 Volts

Diameter of stud, 5/16 inch, 27 threads per inch.

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
9444	G (Class 1)	50	100	6	\$ .42

**No. 69444 G-E Candelabra Keyless Lampholders**  
 Porcelain Shell, 1/8-inch Female Thread

75 Watts, 125 Volts

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
69444	G (Class 1)	50	100	6	\$ .42

**No. GE2346 Candelabra Keyless Lampholders**

Schedule G Class 1

With loop hickey, 1/8-inch female thread. Candelabra screw base, porcelain shell.  
 Standard finish, brush brass.

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE2346	G (Class 1)	50	100	6	\$ .42

**G-E Porcelain Pendant Keyless Lampholders**

75 Watts, 125 Volts

With 6-inch No. 18 stranded R.C. wire leads.

Candelabra

## G-E Intermediate Lampholders

Schedule B

### No. GE2609 Key Lampholders

75 Watts, 125 Volts

Has 1/8-inch cap.  
Carton, 25. Standard package, 100. Weight, standard package 10 pounds.  
Price, No. GE2609.....each \$.72

### No. GE2611 Keyless Lampholders

75 Watts, 250 Volts

Has 1/8-inch cap.  
Carton, 25. Standard package, 100. Weight, standard package, 9 pounds.  
Price, No. GE2611.....each \$.66

### No. GE2610 Pull Lampholders

75 Watts, 125 Volts

Has 1/8-inch cap.  
Carton, 25. Standard package, 100. Weight, standard package, 10 pounds.  
Price, No. GE2610.....each \$1.63

### No. GE2623 Keyless Candle Lampholders

75 Watts, 250 Volts

Carton, 25. Standard package, 100. Weight, standard package, 17 pounds.

Price, No. GE2623.....each \$.34

### No. GE2624 Pull Candle Lampholders

75 Watts, 125 Volts

Carton, 25. Standard package, 100. Weight, standard package, 8 pounds.

Price, No. GE2624.....each \$1.50

### No. GE2597 Weatherproof Lampholders

75 Watts, 250 Volts

Carton, 25. Standard package, 100. Weight, standard package, 6 pounds.

Price, No. GE2597.....each \$.24

Standard finish on all brass shell devices is brush brass. Lampholders with wire leads are regularly furnished with 6 inches of No. 18 stranded rubber covered wire.

For lampholders with extra length leads, add 18 cents list per foot or fraction thereof (9 cents per foot per lead).

### No. GE2625 Porcelain Keyless Removable Ring Lampholders

75 Watts, 250 Volts

With binding screw terminals.  
Carton, 25. Standard package, 250. Weight, standard package, 42 pounds.  
Price, No. GE2625.....each \$.24

### No. GE2603 Porcelain Keyless Lampholders

75 Watts, 250 Volts

For neat work. Outside supporting screw holes. Carton, 25. Standard package, 100. Weight, standard package, 17 pounds.

Price, No. GE2603.....each \$.24

### No. GE2626 Porcelain Keyless Sign Lampholders

75 Watts, 250 Volts

Wire grooves parallel with supporting screws. Carton, 25. Standard package, 250. Weight, standard package, 28 pounds.

Price, No. GE2626.....each \$.24

## No. GE1210 Snap-Catch Porcelain Key Lampholder Bodies

250 Watts, 250 Volts

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE1210	B	10	250	29	\$.52

## No. GE2237 Snap-Catch Porcelain Key Lampholder Bodies

660 Watts, 250 Volts

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE2237	B	10	100	30	\$.58

## No. GE1214 Snap-Catch Porcelain Keyless Lampholder Bodies

660 Watts, 250 Volts

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE1214	B	10	100	24	\$.46

## No. GE1218 Snap-Catch Porcelain Pull Lampholder Bodies

250 Watts, 250 Volts

Standard finish of chain is nickel.

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE1218	B	10	100	44	\$1.18

## No. GE1842 Snap-Catch Porcelain Pull Lampholder Bodies

660 Watts, 250 Volts

Standard finish of chain is nickel.

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE1842	B	10	100	29	\$1.62

## No. GE1222 Snap-Catch Porcelain Push Button Lampholder Bodies

660 Watts, 250 Volts

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE1222	B	10	100	30	\$.58

## No. GE1224 Snap-Catch Porcelain Lampholder Caps

10 Amperes, 250 Volts

1/8-inch cap.

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE1224	B	10	100	15	\$.40

## No. GE1225 Snap-Catch Porcelain Lampholder Caps

10 Amperes, 250 Volts

Has 3/8-inch cap.

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE1225	B	10	100	15	\$.48

**No. GE1283 Snap-Catch Porcelain Lampholder Caps**

10 Amperes, 250 Volts

Has 1/2-inch cap.

Cat. No.	Sched-ule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE1283	B	10	100	18	\$ .54

**No. GE1223 Snap-Catch Porcelain Lampholder Caps**

For Pendent Work  
10 Amperes, 250 Volts

Cat. No.	Sched-ule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE1223	B	10	100	13	\$ .20

**No. GE1843 Snap-Catch Porcelain Lampholder Caps**

3/8-inch - 90° Angle

10 Amperes, 250 Volts

With aluminum top.

Cat. No.	Sched-ule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE1843	B	10	100	13	\$1.00

**No. GE1844 Snap-Catch Porcelain Lampholder Caps**

10 Amperes, 250 Volts

1/2-inch, 90-degree angle. Aluminum top.

Cat. No.	Sched-ule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE1844	B	10	100	17	\$1.20

**No. GE799 Porcelain Key Lampholder Bodies**  
With 2-Screw Fastening

250 Watts, 250 Volts

Cat. No.	Sched-ule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE799	B	10	100	27	\$ .52

**No. GE800 Porcelain Keyless Lampholder Bodies**

With 2-Screw Fastening

660 Watts, 250 Volts

Cat. No.	Sched-ule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE800	B	10	100	23	\$ .46

**G-E Porcelain Pull Lampholder Bodies**

With Interchangeable 2-Screw Fastening  
Standard finish of chain is nickel.

Cat. No.	Watts	Volts	Sched-ule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each

**No. GE2283 Porcelain Push Button Lampholder Bodies**

Interchangeable Two-Screw Fastening  
660 Watts, 250 Volts

Cat. No.	Sched-ule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE2283	B	10	100	36	\$ .58

**No. GE797 Porcelain Lampholder Caps**

1/8-Inch

With interchangeable 2-screw fastening.

Cat. No.	Sched-ule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE797	B	10	100	15	\$ .40

**No. GE798 Porcelain Lampholder Caps**

Interchangeable 2-Screw Fastening

Has a 3/8-inch cap.

Cat. No.	Sched-ule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE798	B	10	100	16	\$ .48

**No. GE1278 Porcelain Lampholder Caps**

1/2-Inch with 2-Screw Fastening

Cat. No.	Sched-ule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE1278	B	10	100	18	\$ .54

**No. GE796 Porcelain Lampholder Caps**

Interchangeable 2-Screw Fastening

Pendent Cap

Cat. No.	Sched-ule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE796	B	10	100	12	\$ .20

**No. GE1845 Porcelain Lampholder Caps**

3/8-Inch

90-Degree Angle with 2-Screw Fastening

Cat. No.	Sched-ule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE1845	B	10	100	33	\$1.00

**No. GE802 Porcelain Lampholder Concealed Bases**

Interchangeable 2-Screw Fastening

Cat. No.	Sched-ule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE802	B	10	100	35	\$ .30

**No. GE803 Porcelain Lampholder Cleat Bases**

Interchangeable 2-Screw Fastening

Cat. No.	Sched-ule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE803	B	10	100	21	\$ .28

**G-E Porcelain Lampholder Bases**

With 2-Screw Fastening

3 1/4-Inch Box Bases

Cat. No.	Sched-ule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE806	B	10	50	50	\$ .60

4-Inch Box Bases

Cat. No.	Sched-ule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE807	B	5	50	50	\$ .80

No. 806

## No. GE1625 Porcelain Keyless Lampholders

660 Watts, 250 Volts

Schedule B

Two-screw fastening, two-piece body.  
Regularly furnished with lamp grip.

Cat. No.	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE1625	10	100	40	\$ .70

## No. 278932 G-E Porcelain Fixture Keyless Lampholders

660 Watts, 250 Volts

Schedule B

3/8-inch brass cup. Tapped outside for 1/8-inch lock nut, 2-screw fastening.  
For use with industrial type reflectors.

Cat. No.	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
278932	10	100	35	\$ .80

## No. GE469 Porcelain Keyless Lampholders

2-Screw Fastening

660 Watts, 250 Volts

With 1/2-inch japanned cast metal cap.  
With lamp grips.

Cat. No.	Sched-ule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE469	B	10	100	59	\$1.10

## No. 37695 G-E Keyless Weatherproof Lampholders

660 Watts, 600 Volts

With hole for supporting wire suspension.

Cat. No.	Sched-ule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
37695	B	10	100	38	\$.50

## No. GE040 Keyless Porcelain Weatherproof Pendant Lampholders

Without Shadeholder Groove

600 Watts, 600 Volts

With wire leads, spring center contact.  
Standard length of wire, 6 inches; extra length, 18 cents per foot.

Cat. No.	Sched-ule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE040	B	10	100	32	\$ .32

## No. 9366 G-E Keyless Porcelain Weatherproof Pendant Lampholders

With Shadeholder Groove

660 Watts, 600 Volts

Spring center contact. Standard length wire, 6 inches; extra length, 18 cents per foot.

Cat. No.	Sched-ule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
9366	B	10	100	31	\$.36

## No. 43310 G-E Keyless Weatherproof Pendant Lampholders

Without Shadeholder Groove

660 Watts, 600 Volts

With wire leads, spring center contact. Stand-ard length wire, 6 inches; extra length, 18 cents per foot.

Cat. No.	Sched-ule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
43310	B	10	100	23	\$.36

## No. 60666 G-E Keyless Weatherproof Pendant Lampholders

With Shadeholder Groove

660 Watts, 600 Volts

With wire leads, spring center contact. Stand-ard length wire, 6 inches; extra length, 18 cents per foot.

Cat. No.	Sched-ule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
60666	B	10	100	23	\$.40

## G-E Threaded Catch Textolite Lampholders

Schedule B

This line combines the insulating and heat resisting, qualities of moulded lampholders with simplicity of assembly, ease of wiring and security of fastening.

Textolite is a phenolic compound highly resistant to mois-ture, corrosion, heat, acid fumes and steam and much less subject to chipping than porcelain or compounds.

Caps, shells and keys are a high-lustre rich brown color; external metal parts have a harmonizing plated finish.

No. GE2703

66320	B	5	100	47	\$1.20

**No. GE009 Metal Shell Keyless Lampholders**

660 Watts, 600 Volts

For car wiring.  
Small concealed covered base compound lining, one-piece metal shell.  
Standard finish, brush brass.

Cat. No.	Sched-ule	Car- ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE009	B	10	50	17	\$1.00

**No. GE433 Metal Shell Locking Keyless Lampholders**

660 Watts, 250 Volts

For car wiring. Small concealed covered insulated base, with lamp grip.  
Standard finish, brush brass.  
Locking key is not included.

Cat. No.	Sched-ule	Car- ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE433	B	10	100	33	\$1.42

**No. GE1194 Porcelain Keyless Mogul Base Lampholders**

1500 Watts, 600 Volts

For cleat work.

Cat. No.	Sched-ule	Car- ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE1194	B	5	50	40	\$1.50

**No. 159380 G-E Porcelain Keyless Mogul Base Lampholders**

1500 Watts, 600 Volts

For conduit box and sign work. Takes 2 3/8-inch hole in sign front.

Cat. No.	Sched-ule	Car- ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
159380	B	1	100	111	\$1.70

## G-E Removable-Ring Lampholders

3/16-inch Deep Ring—Porcelain—Keyless—27/32-inch Shallow Body

660 Watts, 250 Volts—N.E.C. Standard  
Schedule B (Exceptions)

Suitable in shallow fixture canopies or pans and signs. May be mounted on standard outlet box covers, G-E Nos. SP14C36, SP52C36 or SP24C36; Universal Nos. 5G, 2G, and 4G respectively. Eight slots in body permit the alignment of the wiring grooves, or the leads, with the feed wires, regardless of the position of the holding lug in the canopy, sign front or box cover. Have removable screw shells which can be removed without disturbing the wiring. Require a hole 1 1/2 inches in diameter for mounting.

Asbestos gaskets are standard. Rubber gaskets can be substituted for asbestos without extra charge.

### With Binding Screw Terminals

Cat. No.	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE2262	10	100	22	\$ .40

### With Protected Binding Screw Terminals

Cat. No.	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE2294	10	100	31	\$ .50

### With Wire Leads

Regularly with 6-inch leads of No. 14 stranded rubber covered wire. For extra lengths, add 9 cents per foot per lead.

Cat. No.	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE2297	10	100	29	\$ .56

### With Well for Pitching Binding Screw Terminals

Cat. No.	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE2598	10	100	23	\$ .40

## G-E Porcelain Removable Ring Pull Lampholders

250 Watts, 250 Volts  
Schedule B

For use in kitchen lighting units, ball-light ceiling canopies, hall, porch and bathroom fixtures, etc.

A 1 1/2-inch hole in the fitter or canopy is required for these lampholders.

On insulated chains insulators are located 2 3/8 inches from the mouth of the eyelet. Asbestos gaskets between the body and removable ring are standard and lampholders so equipped will be regularly furnished. When specified, rubber gaskets will be substituted for asbestos gaskets without extra charge.

With each lampholder an extra double eyelet is provided which can be riveted or spun on the canopy or fitter as a guide for the chain or cord. This bell piece requires a 1 1/4-inch hole.

No. GE2288

### For Ceiling Use

Cat. No.	Equipped with	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE2287	7-In. Chain and 4-Ft. Cord...	10	100	41	\$1.66
GE2288	7-In. Insulated Chain and 4-Ft. Linen Cord	10	100	43	1.82
GE2289	4-Ft. Linen Cord	10	100	45	1.50

### For Wall Use

GE2292	7-In. Chain	10	100	40	\$1.50
GE2293	7-In. Insulated Chain	10	100	43	1.66

On special order, above lampholders can be supplied with 6-inch leads, at an extra charge of 16 cents each. Standard finish on chain is nickelplate.

On special order, brush brass chain will be furnished without extra charge.

## G-E Pull Lampholders with Insulated Chains

Schedule B

Insulation is accomplished by inserting a fibre rod within the chain.

Standard package and carton same as for corresponding standard lampholders. No assortment permitted.

Additional Price, for Pull Lampholders with Insulated Chains..... each \$ .16

## G-E Lampholders with Extension Chain Guides

Schedule B

Lengths: 3/8, 1/2, 5/8, 3/4, 1, 1 1/4, 1 1/2, 1 3/4 and 2 inches. Std. pkg., 50 of one length or 100 of assorted lengths in cartons. Carton quantity same as for corresponding standard pull lamp holders. Pull lampholders with extension eyelets cannot be assorted with standard pull lampholders.

Additional Price, for Pull Lampholders with Extension Chain Guides Assembled on Lampholders..... each \$ .20

## G-E Lampholders with Extra Long Keys

Schedule B

Lengths: 1 1/4, 1 1/2, 2 and 2 1/2 inches. The standard length of keys for lampholders is 7/8 inch. When so specified, lampholders with 1-inch keys can be furnished at same list price and in same standard package quantities.

On orders for lampholders with extra long keys, where length is not specified 1 1/2-inch keys will be furnished.

Standard package, 100 of one length and one catalogue number. Carton quantity same as for corresponding standard key lampholders. No assortment permitted.

Additional Price, for Lampholders with Extra Long Keys..... each \$ .10

## G-E Lampholders with Metal Keys

Schedule B

Standard length of metal key, 1 inch. Standard package, 100 of one length and one catalogue number. Carton quantity same as for corresponding standard key lampholders. No assortment permitted.

Additional Price, for Lampholders with Metal Keys..... each \$ .20

## G-E Lampholder Devices with Lamp Grip

Schedule B

Lamp grips which prevent lamps from unscrewing as a result of vibration can be furnished on any medium base or mogul base lampholder device listed in this catalogue. They are regularly furnished on G-E locking lampholders.

Standard package and carton quantities same as for corresponding standard lampholders. No assortment permitted. Additional Price, for Other Lampholders with Lamp Grips..... each \$ .10

## G-E Lampholder Devices for Type C Lamps

Schedule B

A special heat-proof compound is regularly used for the pitching of current bearing screws in all mogul base lampholder devices.

For medium base lampholder devices pitched with heat-proof compound add to list price of corresponding device, 6 cents. Standard package quantities and carton quantities will be the same as standard lampholders. No assortment permitted.

†White enamel wrought iron and Bauer Barff and verde antique are lacquer finishes. Any other color can be supplied in lacquer finish, the cost depending upon the number of coats required to produce the color desired. Samples should accompany all orders for lacquer finishes in special colors.

\*Standard finish which will be furnished on all orders where no finish is specified.

†Prices on application.

On quantity orders the list prices for special finishes listed in columns 1 to 7 above will be reduced as follows:

250 to 500 Pieces, One Cat. No. One Finish... 10 Per Cent  
500 to 1000 Pieces, One Cat. No. One Finish... 20 Per Cent  
1000 Pieces and Over One Cat. No. One Finish... 50 Per Cent

On quantity orders for materials in columns 8 and 9, the list prices for special finishes listed above will be reduced as follows:

250 to 500 Pieces, One Cat. No. One Finish... 10 Per Cent  
500 to 1000 Pieces, One Cat. No. One Finish... 20 Per Cent  
1000 Pieces and Over, One Cat. No. One Finish... 30 Per Cent

On quantity orders for flush plates in gangs the list prices for special finishes listed above will be reduced as follows:

100 to 500 Gangs, One Finish... 10 Per Cent  
500 to 1000 Gangs, One Finish... 20 Per Cent  
1000 Gangs or Over, One Finish... 50 Per Cent

¶Ceiling, pull and rotary switches only.

§Matte brown lacquer and Matte black lacquer finish for

brass flush plates correspond to the finishes on bakelite plates.

Unbroken cartons of any catalogue number in special finish may be assorted with unbroken cartons of the same catalogue number in standard finish to make up a standard package quantity.

††Prices given are for single flush plates. For additional gangs, add 20 cents list per gang.

Unfinished flush plates, polished and buffed will be furnished at same list price as brush brass plates.

Unfinished flush plates, neither polished nor buffed, will be furnished at same list price as lacquer finish plates.

Devices, except flush plates, polished but not lacquered or unfinished will be supplied at same list price as devices in standard finish.

Prices on all special finishes, other than those listed above, will be quoted on application. Sample of desired finish should accompany order.

Any special finish, other than silver and gold, will be furnished on chains not longer than one foot, chain guides, chain pendants, chain connectors, and chain insulators at 4 cents each list. For silver finishes, 20 cents each list.

¶Tumbler switches only.

\*\*Matte nickel lacquer is a dull-nickel lacquer finish for brass flush plates.

△Furnished on any brass flush plates at same price as old or brush brass.

\*For threaded-catch caps, deduct 4 cents from list prices shown above.

†100 extension chain guides of assorted lengths also constitute a standard package quantity.

For threaded-catch shells complete with ring, add 4 cents each list to these prices.

Separate threaded rings, 4 cents each list. Standard package, 250. Carton, 50.

### Lampholders Unassembled

When it is intended to put on a special finish to match finish on individual fixtures it is often convenient to have lampholders unassembled. When so ordered the lampholder interiors slipped into the shell linings and the cap linings will be packed in one set of cartons, and the shells and caps in another set.

The term "unassembled" and "knocked-down" must not be confused. The former has reference to lampholders unassembled, mentioned above. The latter means that the lampholder is separated into two parts: the body, consisting of shell, shell lining and interior complete; the cap, consisting of cap and cap lining complete.

Unassembled lampholders are usually desired unlacquered.

Unassembled lampholders will be furnished without extra charge.

Standard package and carton same as for corresponding standard lampholders. No assortment is permitted.

## P & S Fluto Porcelain Interchangeable Cleat Bases

Holes for supporting screws are spaced 2 1/8 inches on centers. Outside dimensions of base, 3 1/8 x 2 3/4 inches.

**P & S Anti-Paint Plugs**

Anti-Paint Plugs protect the contact shell cavity during the construction and painting of the sign. Slivers of metal and paint cannot lodge against the current carrying parts. Plugs are easily removed by piercing them with a sharp instrument or blade.

Optional equipment without charge on the following normal Edison base sign receptacles—one-piece: Nos. 54, 5400, 5401, 5403, 5404 and 61777—two-piece: Nos. 427, 432, 4003, 4035, 4109, 4132, 59108, 59427, 61988, 102704. When the plug is desired, specify "With Anti-Paint Plugs."

Standard equipment without charge on Nos. 6054, 6403 and 6878 intermediate base sign receptacles. If desired without anti-paint plugs, the fact should be specified on the order.

**No. 1169 P & S 2-Piece Threaded Chain Guide**

For use with ceiling bands and special spinnings using chain pull devices.

Punch required is 1/8-inch pipe size.

Cat. No.	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
1169	50	50		\$.05

Anti-Paint Plug in No. 5403 Sign Receptacle

## P & S Porcelain Receptacles

For Stage Work, Metal Signs and Outlet Boxes

660 Watts, 600 Volts

Punch required for this receptacle is  $1\frac{3}{8}$  inches in diameter.

Holes for supporting screws are spaced  $1\frac{1}{16}$  inches on centers.

Length of back,  $1\frac{5}{16}$  inches.

**No. 23W Dim-A-Lite Attachments**

For dimming or turning down a single incandescent lamp.

Can be used with either carbon or Mazda lamps up to 40 watts. Suitable for any current, either d.c. or a.c. Operated by a simple pull of chain which gives five changes of light: full, low, dim, nitelite and out.

Portable, interchangeable type. Brush brass finish. Fits any fixture or chandelier socket and takes any ordinary lamp.

Approved by Underwriters. Standard package 100. Weight of standard package, 33 pounds.

Price, No. 23W ..... each \$ .75  
110 volts furnished unless otherwise ordered. Add 10 cents for 220 volts. Add 10 cents for 32 volts.  
For special finishes, add 25 cents.

**No. 33 Dim-a-lite Pull-chain Sockets**

Dim-a-lite pull-chain socket is permanently wired to any electric light fixture or lamp, just the same as an ordinary pull-chain socket. It replaces and improves upon standard pull-chain sockets.

Giving maximum comfort and convenience at minimum cost, Dim-a-lite socket gives five changes of light and saves 30% to 80% current at the meter.

For dimming or turning down a single incandescent lamp. Can be used with either carbon or Mazda lamps up to 50 watts. Suitable for any current, either direct or alternating. Standard package, 100.

Price, No. 33 ..... each \$1.25  
110 volts furnished unless otherwise ordered. Add 10 cents for 220 volts. Add 10 cents for 32 volts.  
For special finishes, add 25 cents.

**No. 732 Bryant Banner Shade-holders**

A two-part device which holds the shade between the two parts. Can be used with shades which have no shade-holder rim and presents a neat appearance. Fastens to the socket by means of the Uno thread.

Standard finish, brush brass.

**Bryant Emergency Shade-holders**

No. 443

Designed specially for use in connection with medium screw base porcelain sockets and receptacles on not over 250 volts. The method of attachment is by means of a screw shell, thoroughly insulated from the holder itself, which threads onto the outside of the screw shell of the lamp socket without in any way interfering with the use of the lamp. May also be used with most porcelain sockets and receptacles of other manufacture. Emergency shade-holders are made with spring grip only.

Standard finish, brush brass.

## Hubbell Pull Socket Attachments

The No. 5957 line listed below is of the same general design as the No. 5828 line. To adapt them for use with porcelain pull sockets the diameter of the shell band is slightly increased. All attachments for 14, 16, 18, 20 and 22-inch reflectors are supplied with a reinforced arm extending from the shell band to the rocker arm to neutralize the increased leverage.

The prices below cover attachments in brush brass finish. Special finishes same advance as socket caps.

## Perkins Flush Push Self-Restoring Momentary Contact Switches

Schedule H

10 Amperes, 125 Volts; 5 Amperes, 250 Volts

In these switches the circuit is closed or opened as the case may be, only while the button is held in. As soon as pressure is released, the switch automatically restores itself to its normal position with a quick action.

Length of porcelain cup, 2 3/8 inches. Width, 1 3/8 inches. Depth, 1 3/8 inches.

Supporting screw spacings: Outside, 3 3/8 inches; inside, 2 3/8 inches.

When ordering combination plates specify P sections to accommodate two-button flush push switches.

Machine screws for mounting these devices on boxes are furnished.

Push-button and push lock switches of the same description may be assorted to make up a standard package quantity, and no other assortment is permissible.

### Push-button Type

Regularly made with one pearl and one black button.

Prices of switches with metal or fibre buttons longer than regular will be quoted upon application. Regular lengths only of standard moulded buttons. Metal buttons are necessary where switches are subjected to heat, add 5 cents for each regular length button. For switches waxed with a compound that will not melt add 20 cents to price of switch which includes metal buttons regular length. For switches with assembling screws soldered, add 10 cents. For switches with buttons of white ivory add 50 cents per button. Luminous buttons, 25 cents each extra.

**Bryant Blank Brass Flush Plates**

Schedule II  
One Horizontal Row

Standard finish, brush brass which will be furnished when no other finish is specified.

Brass mounting screws are packed in the carton with each plate.

A standard package of K plates consists of a sufficient number to cover 100 gangs. A carton is one-fifth of a standard package. K plates may be assorted in various finishes, thicknesses and gangs to make up carton and standard package quantities. No other assortment permitted.

Solid blank plates, brush brass finish, one horizontal row only, when spacings and dimensions are standard, can be furnished at 44 cents per gang, and under the same conditions struck-up blank plates can be furnished at 30 cents per gang when .060 inch thick and at 26 cents per gang when .040 inch thick. For tandem plates, solid only, add 20 per cent.

Unless otherwise specified supporting screws are spaced 3 3/8 inches on centers vertically and 1 3/8 inches on centers horizontally, so that the plate will be attached directly to the ears of the box. When mounting yokes are wanted with the plates, add to the prices shown, 5 cents per gang. When yokes are furnished the plate supporting screws are spaced 2 3/8 inches on centers vertically.

## Bryant Special Finishes

### Special Finishes for Brass Shell Sockets, Socket Type Devices and Parts, Canopy Switches Shade-Holders, Fixture Specialties, Attachment Plug Caps and Flush Plates

**GENERAL.**—The standard finish of all brass shell devices and brass flush plates, unless otherwise noted, is brush brass, which will be supplied when the finish is not specified. Standard and special finishes on all devices of one catalogue number may be assorted to make up the standard package quantity, which will be the same as though all were standard finish.

Assortment of catalog numbers may be made only as indicated in the catalog pages where the devices are listed. Prices on all special finishes other than those listed, including gold, will be quoted on application. Sample of finish desired should always be submitted to avoid mistakes and delays.

Devices will be supplied polished but not lacquered at the same prices as brush brass.

**QUANTITY DISCOUNTS (EXCEPT FLUSH PLATES).**—When devices in special finishes are ordered in quantities the list prices for finishes only will be reduced as follows: Lots of 250-499, one catalogue number, one shipment, one finish, 10 per cent; lots of 500-999, one catalogue number, one shipment, one finish, 20 per cent; lots of 1000 or over, one catalogue number, one shipment, one finish, 50 per cent.

**SURFACE SWITCH COVERS.**—The standard finish on all metal covers of surface switches unless otherwise noted is polished nickel which will be supplied when the finish is not specified. For covers in any other finish, except gold, add to list 10 cents each. Gold finish prices upon application.

**CHAINS AND METAL CHAIN PARTS.**—Chain guides, chains cut in lengths not longer than one foot, and chain parts, singly or in combination, can be supplied in any special finish, except silver and gold, at an addition to list price of 2 cents per unit. For silver finishes add 10 cents list per unit. Gold finish prices on application. These unit prices apply to each foot of chain in cut or uncut lengths. For pull devices in one finish and chain parts in another finish add 2 cents (10 cents for silver) to the list prices given in columns 1, 3 and 6 below.

**FLUSH PLATES.**—The charges given below in column 9 cover all one gang plates. For multiple gang plates these charges cover the first gang only; for the second or any additional gangs of a multiple gang plate the charge is 10 cents list per gang for all special finishes except gold. The prices of gold finishes will be quoted on application.

The list prices for finishes only will be reduced as follows, one finish, one shipment: 100-499 gangs 10 per cent, 500-999 gangs 20 per cent, 1000 or more gangs 50 per cent.

“Perma” Finish is a durable colored lacquer or varnish that resembles brush brass. Any brass flush plate can be supplied in “Perma” finish (the symbol for which is “-P” following the catalogue number) for 4 cents list per gang less than the price of the same plate in brush brass finish.

When ordering brass shell devices in colored lacquers send a sample of the finish desired, otherwise it is not possible to definitely state whether 1, 2 or 3 coats are necessary.

**Bryant Flush Devices**

**EXPLANATION OF GANG.**—All flush plates and flush devices of standard design are made to fit into switch or outlet boxes. When flush devices are arranged side by side they are said to be arranged in gangs and the number of such gangs so arranged is specified.

In this catalogue standard flush plates, one horizontal row only, are designated by the number of such gangs as they are designed to cover. Thus a one-gang plate will cover a one-gang box and the one-gang flush device contained by it; likewise a five-gang plate will cover a five-gang box.

When flush devices are arranged end to end they are said to be "in tandem" and flush plates designed to cover them are called tandem plates, the length of the plates being expressed in gangs to show the number of boxes arranged end to end which they are designed to cover.

Tandem plates are not designated by descriptive catalogue numbers.

**Standard Spacings and Dimensions**

**One-gang Flush Device**

- A—Plate screw spacings usually  $2\frac{3}{8}$  in.
- B—Supporting screw spacings, outside  $3\frac{3}{4}$  in.
- C—Supporting screw spacings, inside  $2\frac{5}{8}$  in.
- L—Length of body or cup, not over  $2\frac{5}{8}$  in.
- W—Width of body or cup, not over  $1\frac{1}{8}$  in.
- D—Depth of body or cup.

**One-gang Flush Plate**

A—Plate screw spacings, usually  $2\frac{3}{8}$  in. On G, H, K, T, T2 and T3 plates it is  $3\frac{3}{8}$  in.

L—Length of plate,  $4\frac{1}{2}$  in.

W—Width of plate,  $2\frac{3}{4}$  in.

T—Thickness of plate, solid, 0.100 in.; .060 stamped, 0.060 in.; .040 stamped, 0.040 in.

**Five-gang Flush Plate**

**One Horizontal Row**

A—Plate screw spacings, usually  $2\frac{3}{8}$  in.

S—Spacings between centers of adjacent gangs always  $1\frac{5}{8}$  in.

L—Length of plate,  $4\frac{1}{2}$  in.

W—Width of plate varies for different number of gangs as follows:

1 Gang . . . . .	$2\frac{3}{4}$ in.	5 Gang . . . . .	10 in.
2 " . . . . .	$4\frac{3}{8}$ "	6 " . . . . .	$11\frac{3}{8}$ "
3 " . . . . .	$6\frac{3}{8}$ "	7 " . . . . .	$13\frac{5}{8}$ "
4 " . . . . .	$8\frac{3}{8}$ "	8 " . . . . .	$15\frac{7}{8}$ "

**Bryant Flush Devices  
Standard Spacings and Dimensions**

Continued

**Three-Gang  
Tandem Flush Plate**  
One Vertical Row

A—Plate screw spacings usually  $2\frac{3}{8}$  inches.

V—Spacings between centers of adjacent tandem devices always  $3\frac{3}{8}$  inches.

W—Width of plate varies according to number of vertical rows.

L—Length of plate varies according to number of devices in tandem as follows:

- 2—tandem  $8\frac{1}{8}$  inches.
- 3—tandem  $11\frac{1}{4}$  inches.
- 4—tandem  $15\frac{3}{8}$  inches.
- 5—tandem 19 inches.
- 6—tandem  $22\frac{5}{8}$  inches.
- 7—tandem  $26\frac{1}{4}$  inches.

**Information Regarding Flush Plates**

**Plates of Special Dimensions  
and Spacings, Solid Only**

Plates of special dimensions or spacings will be billed at 7 cents per square inch in addition to the price of the corresponding standard solid plate. The standard package quantity will be ten plates of one style and size. Schedule H. On quantity orders for identical plates the following list price per square inch reductions will be allowed: 100-499 plates, 10%; 500-999 plates, 20%; 1000 and over, 30%. When plates are other than rectangular in shape the area by which the price is determined will be the size of the smallest rectangular piece from which the specified plate can be cut.

**Hammered Plates, Solid Only**

Plates with hammered finish can be supplied at an advance in list price of 20 cents per gang over the cost of the plate plus any special finish desired.

**Plates to Fit Condulets  
Solid Only**

Flush plates to properly fit FD and FS Condulets should be solid, with round corners and beveled edges and of the following dimensions:

Description	Length Inches	Width Inches
Single . . . . .	4	$2\frac{1}{2}$
Two-Gang . . . . .	4	$4\frac{5}{8}$
Three-Gang . . . . .	4	$6\frac{1}{8}$
Four-Gang . . . . .	4	$7\frac{5}{8}$

When plates are specified, Condulet dimensions, the only extra charge will be 15 cents per plate for the round corners and beveled edges when dimensions and spacings are standard.

The standard package quantity and schedule will be the same as the standard plate. Single and gang plates to fit the same devices may be assorted to make up the standard package quantity. No other assortment is permitted.

**Plates of Special Metals**

Plates of genuine rolled bronze will be furnished at 10 cents list per gang more than the list prices of the corresponding brass plates, and the standard finish will be brush bronze. For genuine bronze plates in polished bronze finish add 10 cents list per gang to the list price of the brush bronze finished genuine bronze plate. Plates of Benedict metal will be furnished at 25 cents list per gang more than the list prices of the corresponding solid brass plates and the standard finish will be polished, which has the appearance of polished nickel. Prices for plates of other metals will be quoted upon application. Plates of special metal may not be assorted with standard plates to make up a standard package. The standard package quantity and schedule will be the same as for the corresponding standard solid brass plate.

## Bryant Flush Plates

### Explanation of Catalogue Numbers for Flush Plates

When specifying flush plates there are three things that must be known: Style of plate; material of which it is made, and the number of gangs.

Except for tandem plates (plates arranged vertically) and combination plates, each listed Bryant flush plate has a catalogue number which describes the kind of plate it is.

OP52 is the catalogue number for a 2-button push switch plate, Templus composition, 2-gang.

OV61 is the catalogue number for a duplex flush receptacle plate, .060-inch stamped brass, 1-gang.

OPF42 is the catalogue number for a plate for one 2-button push switch and a single flush receptacle, .040-inch stamped brass, 2-gang.

OV211 is the catalogue number for a plate with doors for a duplex flush receptacle, solid brass, 1-gang.

In each case the left number 0 indicates a flush plate. See examples.

1. The symbol letter or letters immediately following describe the style of plate. See examples, letters P, V, PF and V2.

2. The figure next to the right-hand figure indicates the material of which the plate is made.

- 1. Indicates brass, .100 inch thick (solid).
- 6. Indicates brass, .060 inch thick, stamped.
- 5. Indicates Templus moulded composition.
- 4. Indicates brass, .040 inch thick, stamped.
- 7. Indicates De Luxe wood veneer plates.

—B used in conjunction with No. 7 indicates the all metal plate of the De Luxe type.

—P after any plate catalogue number indicates that Perma finish is desired.

3. The right-hand figure indicates the number of horizontal gangs wide.

When the simple elements of this number system are learned it will be found easy to specify Bryant plates by catalogue number.

### Examples

NOTE.—Plates in combinations exceeding 10 gangs cannot be furnished in .060-inch or .040-inch. Combination plates can only be furnished in the thickness specified with each section.

### Engraving

Flush plates will be engraved with words or numbers at an addition to the list price of 10 cents per character, standard package quantity 100 characters. Wide and narrow block letters and figures,  $\frac{3}{64}$ , .053,  $\frac{1}{16}$ ,  $\frac{5}{64}$ ,  $\frac{3}{32}$ ,  $\frac{1}{8}$ ,  $\frac{5}{32}$ ,  $\frac{3}{16}$ ,  $\frac{1}{4}$ ,  $\frac{5}{16}$ ,  $\frac{3}{8}$ ,  $\frac{1}{2}$ ,  $\frac{5}{8}$ ,  $\frac{3}{4}$  and 1 in. high, as selected, filled with black, can be made. Schedule will be the same as the plate engraved. Engraved plates may be assorted with standard plates to make up the standard package quantity.

No. OS12  
(Old No. 3692)  
Engraved with  
 $\frac{3}{16}$  In. Wide  
Block Letters

## Bryant Flush Plates

### Plates with Round Corners and Round Edges Solid Only

No. OS11  
(Old No. 3691)

Plates with round corners and round edges, when dimensions and spacings are standard, will be furnished at an addition to the list of solid plates of 15 cents for single plates and 5 cents for each additional section in gang plates.

The standard package quantity and schedule will be the same as the standard plate. Single and gang plates with round corners and round edges to fit the same device may be assorted to make up the standard package quantity. No other assortment permitted.

### Plates with Round Corners and Beveled Edges Solid Only

Plates with round corners and beveled edges, when dimensions and spacings are standard, will be furnished at an addition to the list price of solid plates of 15 cents per plate.

The standard package quantity and schedule will be the same as the standard plate. Single and gang plates with round corners and beveled edges to fit the same device may be assorted to make up the standard package quantity. No other assortment permitted.

No. OS11  
(Old No. 3691)

### Plates with Raised Edges, Solid Only

When ordering plates with raised edges, always give dimension indicated between arrows.

Plates with raised edges are sometimes required when the outlet box projects beyond the surrounding surface. For plates with raised edges not more than  $\frac{1}{2}$  inch high, add to the price of each plate \$1.00 net for one gang and 50 cents net for each additional gang. Upon application, prices will be quoted for plates with edges raised more than  $\frac{1}{2}$  inch.

Round plates with square edges only, no advance in list price over solid plate with beveled edges.

### Plates with Square Edges, Solid Only

Plates with square corners and square edges, when dimensions and spacings are standard, will be furnished at the same price as regular solid plates and may be assorted with regular plates to make up the standard package quantity. Plates with round corners and square edges will be furnished at an addition to the list price of solid plates of 15 cents. The standard package quantity and schedule will be the same as the standard plate. For round plates with square edges, the list price will be the same as the list price of the corresponding solid plate with beveled edges.

No. OS11  
(Old No. 3691)

### Flush Plate Mounting Screws

The requisite flush plate mounting screws are included with each flush plate. When bought separately they will be billed at 75 cents per 100, standard package quantity 100, Schedule H.

Wood screws are sometimes wanted for use in connection with flush plates.  $\frac{3}{4}$ -inch No. 6 oval head brass wood screws can be furnished at \$3.00 per 100, standard package quantity 100, Schedule H.

The standard finish for these screws is brush brass; however, special finishes, when specified, will be furnished without extra charge.

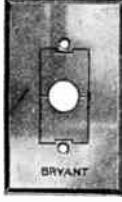

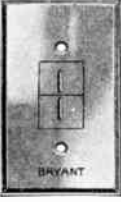

## Bryant Solid Flush Plate Sections

## Schedule H

Combination plates should be described by using the letters shown on cuts of the respective plates, giving the letters in order from left to right, or from top to bottom, as the devices are to be mounted. The standard package quantity is ten plates of one description (not ten gangs). The carton quantity is two plates.

A combination plate cannot be so considered unless it is described by at least two different letters, but letters may be used to describe any desired arrangement of plate sections.

The standard finish of plates is brush brass which will be supplied if no finish is specified. For special finishes see another page.

## Bryant Solid Flush Plate Sections

### Schedule II

The list price, in brush brass finish when dimensions and spacings are standard and the devices are arranged in one horizontal row, will be the sum of the lists as shown. For plates with devices mounted tandem or in more than one horizontal row, add 20 per cent to the sum of the list prices.

The standard package quantity is ten plates of one description (not ten gangs). The carton quantity is two plates.

The standard finish of plates is brush brass which will be supplied if no finish is specified. For special finishes see another page.

**Perkins Expulsion Type Surface Switches**  
For Inductive Loads and Electric Railway Circuits  
With Porcelain Base and Handle, Metal Cover

Schedule II

No. 2171  
with Cover Off

No. 2060, Indicating  
with Cover Off

Expulsion type switches are designed with barriers between parts of opposite polarity which are effective in limiting the arc formed when the circuit is broken. For this reason, they should be used to control inductive loads such as motors.

Because of the difference in operating characteristics of inductive apparatus it is not possible to guarantee expulsion type switches on all inductive loads but they will give better results on inductive loads than the regular type of rotary switches.

While only the 600-volt rating of these switches is National Electric Code standard, the suggested rating at 250 volts is also given for each switch.

It is not advisable, though possible, to convert 600-volt switches into lock switches by the use of No. 2384 rotary switch lock attachment.

The standard finish on all metal covers of surface switches unless otherwise noted is polished nickel which will be supplied when the finish is not specified. For covers in any other finish, except gold, add to price 10 cents each.

**\*Single-pole—5 Amp., 250 Volts; 3 Amp., 600 Volts**

## Perkins Rotary Switch Handles

Schedule H

All Perkins rotary switch handles, except the handle of No. 2597, lock attachments and switch center posts, except Nos. 2635 and 2636 and range switches, are threaded alike, regardless of the size of the switch. Handles differ in external shape and size for purposes of leverage appropriate to the size of the switch. In an emergency, any available handle can be attached to any switch.

Refer to switch listings for definite information regarding handles. Any switch regularly equipped with one of these handles can, on special order, be furnished with any other of these handles without extra charge.

When switches are ordered without handles, deduct 2 cents.

### Round Handles

Cat. No.	Description	SIZE SWITCH IN AMPS.	125 and 250 Volts	250 and 600 Volts	Std. Pkg.	Price Each

## Perkins Security Ratchet-lock Handles

Schedule H

No. 2775

These handles may be substituted for standard round or flat handles on any of the rotary switches listed in this catalogue except Nos. 2597, 2635, 2636 and range switches.

They are attached in the usual manner, but can be removed only with screw driver.

The ratchet principle is employed so that turning the handle backward does no damage either to handle or switch.

For switches fitted with these handles, add 5 cents extra.

Cat. No.	Description	Substitute for No.	Std. Pkg.	Price Each
2775	Round, Composition	2777 and 2778	100	\$.10

**Bryant Range Switch Fusible Sub-bases**

These sub-bases are designed to be mounted in a row and have provisions for bus-wires, heater-wire connections and means for supporting the switch.

The housings for the switches are supplied by the range manufacturer and include supports for the sub-bases, a cover plate bearing the proper dial indications and through which the center posts of the switch mechanisms project, and an easily removed cover for ready access to the fuses. The porcelain indicating handles plainly show the connections to the various heaters.

The main-line connections, or bus-wires, are supported in parallel grooves on the backs of the sub-bases. The wires from the switches to the heating units are connected to the terminal plates on the sub-bases and are carried through holes in the porcelain to suitable terminals on the heater units. To determine the height of any switch mounted on any sub-base add the dimensions "Height to mounting surface," and "Height under handle," or "Height over handle."

## Bryant Range Switch Fusible Porcelain Sub-bases

**Schedule H**  
30 Amperes, 125 Volts  
With Fuse Receptacles Parallel to Switch Center Post

No. 3806

This sub-base may be installed in the range with the fuses either above or below the switch. The bus-wire connections are so devised that the load of the range may be balanced between the neutral wire and each of the two pressure wires. This is accomplished by shifting the contact plate from one pressure wire groove to the other making the proper connections.

Cat. No.	Lgth.	Wdth.	DIMENSIONS, INCHES			Car-ton	Std. Pkg.	Wt., Lbs.		Price Each

## No. 2807 Bryant Range Switch Fusible Porcelain Sub-bases

**Schedule H**  
30 Amperes, 125 Volts  
With Fuse Receptacles at Right Angle to Switch Center Post

The bus-wire connections are so devised that the load is balanced between the neutral wire and each of the two pressure wires by arranging the 3 feed wires in the 3 grooves on the back and on the end of the cut-out base so that the proper wires will be connected to the terminal plates of the proper sub-bases.

## Bryant Double-Pole Range Switch Mechanism Units

Indicating, Complete with Mounting Screws But without Cover, with No. 3822 Porcelain Handle

Series—Parallel, Operating High, Medium, Low, Off  
30 Amperes, 125 Volts; 15 Amperes, 250 Volts

No. 3802

The No. 3822 indicating handles of these mechanisms are so arranged that they may be turned backward or forward. This permits a switch to be operated from Off to either High or Low or from High or Low to Off or Medium without going through any other position.

No. 3802 can be used with sub-bases Nos. 2804, 2806, 3806 and 2807, but is not intended for use with any cover. Can be supplied on special order, with center post of any specified length to fit standard or special handles.

Diameter of base, 2 5/8 inches; height under handle, 2 inches; over handle, 3 inches.

No. 3815 is intended for use with No. 2804 sub-base and No. 3816 cover to make No. 3800 switch.

Diameter of base, 2 5/8 inches; height under handle, 1 25/32 inches; over handle, 2 25/32 inches.

655	H	10	100	27	\$.75

**Bryant Canopy Switches and Parts**

*Schedule II*

All switch stems are 3/8 inch outside diameter, 27 threads per inch. Each switch stem is fitted with two lock nuts, 3/16 inch outside diameter; the outer one 1/4 inch thick, the inner one 3/64 inch thick.

On special order switches will be furnished with the outer lock nut 1/2 inch thick without extra charge. To obtain this assembly add B after any of the following numbers. Also, on special order, switches will be supplied with both lock nuts 3/4 inch diameter, the outer one 1/4 inch thick, the inner one 3/64 inch thick, without extra charge. To obtain this assembly add C after any of the following numbers.

Handle stems are threaded 6x32; length of thread 3/16 inch.

On special order, switches will be supplied with set screw which passes through the center of the handle stem to prevent the handle from unscrewing, at an additional price of five cents. To obtain this assembly, add A after any of the following catalogue numbers.

Standard finish is brush brass. Flash silver will be furnished when specified without extra charge.

**Canopy Switches with Binding Screw Terminals**  
3 Amperes, 125 Volts; 1 Ampere, 250 Volts

## Perkins Push Panel Switches Double-pole Fusing

Each branch is fitted with a double pole switch, which is mounted on a separate base and may be removed without disturbing either main or branch connections.

These switches may be installed in any standard cabinet having a minimum depth of 3 inches. Gutter cabinets may be specified to the exact size of the switch bases as there is 1/2-inch of insulation outside of all current carrying parts.

The covers of these switches are steel, lined with insulating material. Each cover has an overhanging edge which engages with the cover of the adjoining switch, thereby effectively preventing accidental contact with any live parts.

Orders will be filled with switches having glossy black covers.

White enamel covers will be supplied when specified without extra charge. All other finishes on covers, add 50 cents to list.

Can be furnished with luminous button at an addition to list price of 25 cents for each switch button so fitted. Identical switches, regular and luminous, may be assorted.

**With Connections for Two-plug Fuses in Each Branch  
With Safety Covers—Dead Front**

\*The covers of these switches are steel, lined with insulating material. Each cover has an overhanging edge which engages with the cover of the adjoining switch, thereby effectively preventing accidental contact with any live parts. Covers are the same lengths as the bases.

Push-button switches can be converted into push lock switches by substituting, for No. 2523 or No. 2729 push-button mechanisms, No. 2526 or No. 2730 push lock mechanisms respectively.

Orders will regularly be filled with switches having glossy black covers. White enamel covers will be supplied when specified without extra charge. For other finishes on covers, add to price \$.50 each.

†Can be furnished with luminous button at an addition to price of \$.25 for each switch button so fitted. Identical switches, regular and luminous, may be assorted.

\*\*National Electrical Code Standard.

**Perkins Rotary Panel Switches**

**Single-pole Fusing**

Each branch is fitted with a double-pole switch, which is mounted on a separate base and may be removed without disturbing either main or branch connections. On special order, switches will be fitted with expulsion type mechanisms for inductive loads at an additional list price of 30 cents per branch.

These switches may be installed in any standard cabinet having a minimum depth of 3 inches. Gutter cabinets may be

specified to the exact size of the switch bases, as there is  $\frac{1}{2}$  inch of insulation outside of all current carrying parts as required.

One plug fuse receptacle or clips for one cartridge fuse are omitted from one side of the line in each branch. This unfused side should always be the grounded side of the line.

The catalogue numbers of panel switches with fuse omitted from one side of the line in each branch, are the same as similar panel

switches with two fuses in each branch, except that the numeral 0 is added between the second and third figures.

Can be converted into lock switches by removing the handles and substituting Cat. No. 2384 universal rotary switch lock attachment.

Base Receptacles  
with Lift Covers  
\$.98 Each

**M**  
For GE996 or  
GE1367 Type  
Plug Receptacles  
\$1.00 Each

**L**  
Blank  
\*.96 Each

**G**  
Telephone Plate  
with 3/8-Inch  
Compound  
Bushing  
\*\$.00 Each

The arrangement of the devices to be mounted will govern the order of the letters identifying the combination plate desired. For example, a plate for GE1688 Tumbler Switch, GE853 Pilot Lamp Receptacle and GE694 Twin Convenience Outlet mounted horizontally in that order is identified as an IID plate, while a plate for the same devices mounted vertically is identified as an I plate.

Example:  $\begin{matrix} I \\ D \end{matrix}$  plate in brush brass finish is 88 cents +

88 cents + 88 cents which equals \$2.64 + \$0.528 (20 per cent) which is equal to \$3.168.

Standard package—10 plates of one description (not 10 gangs). Carton quantity, one plate. Standard finish is brush brass. Screw holes 2 3/8 inches on centers. Openings on horizontal plates are 1 1/2 inches on centers and on vertical plates 3 3/8 inches on centers.

\*Steel box mounting support furnished.

## G-E Special Flush Plates and Accessories

Plates of Special Dimensions and Screw Spacings  
.100-inch Metal Only

Plates of special dimensions and screw spacings will be billed at 14 cents list per square inch plus the list price of nearest regular solid plate. In no case will charge be less than for a single solid plate. Example: the list price of an ID plate measuring 5 in. x 5 in. would be computed thus:  $5 \times 5 = 25$  sq. in.;  $25 \times 14$  cents = \$3.50;  $\$3.50 + \$1.76 = \$5.26$ .

Standard package quantity—10 plates of one style and size. Carton quantity, one plate.

Schedule G (Class 1).

Detail sketch giving all dimensions and specifications will be required.

Plates with Round Corners and Round Edges  
.100-inch Metal Only

For single plates with round corners and round edges having standard dimensions and screw spacings add 30 cents list to the price of single solid plates. For gangs or combination plates with round corners and round edges add 30 cents list for the first section and 10 cts. list for each additional section.

Standard package, 10 plates of one style.

Carton quantity, one plate.

Plates with Round Corners and Beveled Edges  
.100-inch Metal Only

For single or gang plates with round corners and beveled edges add 30 cents list per plate.

Standard package, 10 plates of one style.

Carton quantity, one plate.

Plates with Square Edges—.100-inch Metal Only

Plates with square corners and square edges having standard dimensions and screw spacings can be furnished at the same price as regular solid plates. For plates with round corners and square edges the additional charge will be the same as given above for round corners and beveled edges.

Standard package, 10 plates of one style.

Carton quantity, one plate.

Plates with Raised Edges—.100-inch Metal Only

Where it is desirable to raise the plate because of obstructions or projections solid plates can be furnished with a raised edge. Quotations for plates of this character will be given upon receipt of detail information, as to the style of plate and height of offset required.

Standard package, 10 plates of one style.

Carton quantity, one plate.

Plates of Special Metal—.100-inch Metal Only

Plates of genuine rolled bronze having standard dimensions and screw spacings can be furnished at 100 per cent. additional to the list price of the corresponding solid brass plate. Plates of Benedict metal can be furnished at double the price of the corresponding solid brass plate. For plates of other metals prices will be quoted upon application.

Standard package quantity, carton quantity and schedule same as for the corresponding standard plate.

No assortment permitted.

### Engraving

Flush plates may be engraved with identifying words or numbers, deeply etched in block design of any desired height. For engraving on plates, add 20 cents per character to the list price of plate to be engraved.

Standard package, 10 plates of one style.

Carton quantity, one plate.

### Flush Plate Screws

Oval head flush plate screws finished to match plates are regularly supplied with all flush plates. When purchased separately these will be billed at \$1.50 list per hundred.

Standard package—100. Schedule G (Class 1).

### Special Finishes

The standard finish on all brass flush plates is brush brass, and this finish will be furnished on all orders where no finish is specified (excepting, of course, where a catalogue number designates a particular finish as is the case on standard lacquer finish plates).

3 Amp., 250 Volts; 5 Amp., 125 Volts

Slotted Base, Pony Type

Standard finish, polished nickel.

Cat. No.	Sched-ule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE240	S	10	100	24	\$ .56

## No. 60449 G-E Single-pole Surface Rotary Switches

5 Amp., 250 Volts; 10 Amp., 125 Volts

Closed Base, Indicating

Standard finish, polished nickel.

Cat. No.	Sched-ule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
60449	S	10	100	33	\$1.08

## No. 60447 G-E Single-Pole Surface Rotary Switches

5 Amperes, 250 Volts; 10 Amperes, 125 Volts

Slotted base, indicating.  
Standard finish, polished nickel.

Cat. No.	Sched-ule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
60447	S	10	100	34	\$1.08

## No. 60955 G-E Three-way Surface Rotary Switches

3 Amp., 250 Volts; 5 Amp., 125 Volts

Closed Base

Standard finish, polished nickel.

Cat. No.	Sched-ule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
60955	S	10	100	30	

## No. 60954 G-E Three-way Surface Rotary Switches

3 Amp., 250 Volts; 5 Amp., 125 Volts

Slotted Base

Standard finish, polished nickel.

Cat. No.	Sched-ule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
60954	S	10	100	31	\$ .96

## No. 60456 G-E Three-way Surface Rotary Switches

5 Amp., 250 Volts; 10 Amp., 125 Volts

Closed Base

Standard finish, polished nickel.

Cat. No.	Sched-ule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
60456	S	10	50	18	\$1.52

## No. 60455 G-E Three-way Surface Rotary Switches

5 Amp., 250 Volts; 10 Amp., 125 Volts

Slotted Base

Standard finish, polished nickel.

Cat. No.	Sched-ule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
60455	S	10	50	18	\$1.52

## No. 60459 G-E Four-way Surface Rotary Switches

2 Amp., 250 Volts; 5 Amp., 125 Volts

Closed Base

Standard finish, polished nickel.

Cat. No.	Sched-ule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
60459	S	10	30	12	\$1.72

## No. 60458 G-E Four-way Surface Rotary Switches

2 Amp., 250 Volts; 5 Amp., 125 Volts

Slotted Base

Standard finish, polished nickel.

Cat. No.	Sched-ule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
60458	S	10	30	12	\$1.72

## No. 60952 G-E Double-pole Surface Rotary Switches

5 Amp., 250 Volts

Closed Base, Indicating

Standard finish, polished nickel.

Cat. No.	Sched-ule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
60952	S	10	100	31	\$1.28

## No. 60950 G-E Double-pole Surface Rotary Switches

5 Amp., 250 Volts

Slotted Base, Indicating

Standard finish, polished nickel.

Cat. No.	Sched-ule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
60950	S	10	100	30	\$1.28

## No. 60453 G-E Double-pole Surface Rotary Switches

10 Amp., 250 Volts

Closed Base, Indicating

Standard finish, polished nickel.

Cat. No.	Sched-ule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
60453	S	10	100	38	\$1.52

## No. 60451 G-E Double-pole Surface Rotary Switches

10 Amp., 250 Volts

Slotted Base, Indicating

Standard finish, polished nickel.

Cat. No.	Sched-ule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
60451	S	10	100	34	\$1.52

## No. 68388 G-E Double-pole Surface Rotary Switches

20 Amp., 250 Volts

Closed Base, Indicating

Standard finish, polished nickel.

Cat. No.	Sched-ule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
68388	S	1	30	28	\$3.00

## No. 68386 G-E Double-pole Surface Rotary Switches

20 Amp., 250 Volts

Slotted Base, Indicating

Standard finish, polished nickel.

Cat. No.	Sched-ule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
68386	S	1	30	25	\$3.00

## G-E Surface Rotary Switches

2 Amperes, 250 Volts; 5 Amperes, 125 Volts

Closed base, indicating.  
Standard finish, polished nickel.

Cat. No.	Sched-ule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
60462	S	10	30	12	\$1.72
60466	S	10	30	12	\$2.00

**G-E Surface Rotary Switches**  
2 Amperes, 250 Volts; 5 Amperes, 125 Volts

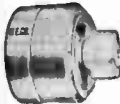

Slotted base, indicating.  
Standard finish, polished nickel.

2-Circuit						
Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each	
60461	S	10	30	11	\$1.72	
3-Circuit						
60465	S	10	30	12	\$2.00	

**No. GE890 Single-pole Porcelain Surface Rotary Switches**

3 Amp., 250 Volts; 5 Amp., 125 Volts

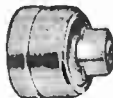

Closed Base, Indicating, Pony Type

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each	
GE890	S	10	100	48	\$ .72	

**No. GE891 Single-pole Porcelain Surface Rotary Switches**

3 Amp., 250 Volts; 5 Amp., 125 Volts

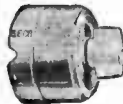

Closed Base, Pony Type

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each	
GE891	S	10	100	47	\$ .64	

**No. GE888 Single-pole Porcelain Surface Rotary Switches**

3 Amp., 250 Volts; 5 Amp., 125 Volts

Slotted Base, Indicating, Pony Type

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each	
GE888	S	10	100	48	\$ .72	

**No. GE889 Single-pole Porcelain Surface Rotary Switches**

3 Amp., 250 Volts; 5 Amp., 125 Volts

Slotted Base, Pony Type

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each	
GE889	S	10	100	47	\$ .64	

**No. GE834 Single-pole Porcelain Surface Rotary Switches**

5 Amp., 250 Volts; 10 Amp., 125 Volts

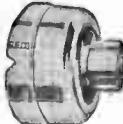

Closed Base, Indicating

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each	
GE834	S	10	30	20	\$1.24	

**No. GE832 Single-pole Porcelain Surface Rotary Switches**

5 Amp., 250 Volts; 10 Amp., 125 Volts

Slotted Base, Indicating

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each	
GE832	S	10	30	18	\$1.24	

**No. GE837 Three-way Porcelain Surface Rotary Switches**

5 Amp., 250 Volts; 10 Amp., 125 Volts

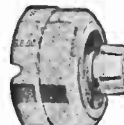

Closed Base

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each	
GE837	S	1	10	6	\$1.68	

**No. GE836 Three-way Porcelain Surface Rotary Switches**

5 Amp., 250 Volts; 10 Amp., 125 Volts

Slotted Base

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each	
GE836	S	1	10	6	\$1.6	

**No. GE843 Four-way Porcelain Surface Rotary Switches**

2 Amp., 250 Volts; 5 Amp., 125 Volts

Closed Base

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each	
GE843	S	1	10	6	\$1.88	

**No. GE842 Four-way Porcelain Surface Rotary Switches**

2 Amp., 250 Volts; 5 Amp., 125 Volts

Slotted Base

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each	
GE842	S	1	10	6	\$1.88	

**No. GE840 Double-pole Porcelain Surface Rotary Switches**

10 Amp., 250 Volts

Closed Base, Indicating

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each	
GE840	S	1	10	6	\$1.68	

**No. GE838 Double-pole Porcelain Surface Rotary Switches**

10 Amp., 250 Volts

Slotted Base, Indicating

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each	
GE838	S	1	10	6	\$1.68	

**G-E Porcelain Surface Rotary Switches**  
2 Amperes, 250 Volts; 5 Amperes, 125 Volts

Slotted base, indicating.

2-Circuit

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each	
GE844	S	1	10	6	\$1.88	
3-Circuit						
GE848	S	1	10	6	\$2.16	

**No. GE1172 Double-Pole Surface Pull Switches**

10 Amp., 250 Volts

Closed base, side outlet.  
With 8-foot No. 31/2 black ventilator cord.  
Standard finish, polished nickel.

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each	
GE1172	S	1	10	6	\$2.36	

**No. 280492 G-E Reversing Pull Switches**

5 Amp., 250 Volts; 10 Amp., 125 Volts

Closed base, side outlet.  
With 8-foot black ventilator cord. Cir-  
cuits, 1, 2 and off. Polished nickel finish.

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each	
280492	S	1	10	6	\$2.36	

### No. GE911 Single-pole Surface Rotary Switches

**5 Amp., 600 Volts**  
**Closed Base, Indicating**  
 Standard finish, polished nickel.

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE911	S	10	50	18	\$1.52

### No. GE909 Single-pole Surface Rotary Switches

**5 Amp., 600 Volts**  
**Slotted Base, Indicating**  
 Standard finish, polished nickel.

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE909	S	10	50	18	\$1.52

### No. GE921 Single-pole Surface Rotary Switches

**10 Amp., 600 Volts**  
**Closed Base, Indicating**  
 Standard finish, polished nickel.

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE921	S	10	50	40	\$3.40

### No. GE919 Single-pole Surface Rotary Switches

**10 Amp., 600 Volts**  
**Slotted Base, Indicating**  
 Standard finish, polished nickel.

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE919	S	10	50	40	\$3.40

### No. GE913 Three-way Surface Rotary Switches

**5 Amp., 600 Volts**  
**Closed Base**

Standard finish, polished nickel.

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE913	S	10	50	20	\$1.80

### No. GE912 Three-way Surface Rotary Switches

**5 Amp., 600 Volts**  
**Slotted Base**  
 Standard finish, polished nickel.

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE912	S	10	50	18	\$1.80

### No. GE923 Three-way Surface Rotary Switches

**10 Amp., 600 Volts**  
**Closed Base**

Standard finish, polished nickel.

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE923	S	1	50	45	\$3.40

### No. GE922 Three-way Surface Rotary Switches

**10 Amp., 600 Volts**  
**Slotted Base**  
 Standard finish, polished nickel.

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE922	S	1	50	45	\$3.40

### No. GE917 Double-pole Surface Rotary Switches

**5 Amp., 600 Volts**  
**Closed Base, Indicating**  
 Standard finish, polished nickel.

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE917	S	10	50	20	\$2.00

### No. GE915 Double-pole Surface Rotary Switches

**5 Amp., 600 Volts**  
**Slotted Base, Indicating**  
 Standard finish, polished nickel.

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE915	S	10	50	20	\$2.00

### No. GE927 Double-Pole Surface Rotary Switches

**10 Amperes, 600 Volts**

**Closed base, indicating.**  
 Standard finish, polished nickel.

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE927	S	1	50	45	\$3.80

### G-E No. 21644 Porcelain Surface Rotary Switches

**3 Amperes, 600 Volts**  
**3-Way Closed Base**  
 Chocolate glazed finish.

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
21644	S	1	20	20	\$1.52

### G-E Single-Pole Combined Rotary Switches and Enclosed Fuse Cutouts

**Slotted Base**  
**Schedule S**  
**Porcelain**

**Non-Indicating—5 Amperes, 600 Volts**

Cat. No.	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
27682	1	25	44	\$2.80

**Indicating—5 Amperes, 600 Volts**

Cat. No.	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE116	1	25	50	\$3.00

**Indicating—10 Amperes, 600 Volts**

Cat. No.	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE626	1	25	53	\$3.60

No. GE116

### Composition

**Indicating—3 Amperes, 600 Volts**

Cat. No.	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
88984	1	25	53	\$4.20

**Indicating—10 Amperes, 600 Volts**

Cat. No.	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE628	1	25	53	\$4.60

No. 88984

### G-E Enclosed Indicating Fuses

**600 Volts**  
**Schedule F Class 1**

Used with combined rotary switches and cutouts.

Cat. No.	Am-peres	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
28839	3	10	100	5	\$ .30
GE439	5	10	100	5	.40
GE679	10	10	100	5	.40

**No. 60598 G-E Lock Attachments**

For Rotary Switches with Handles, Tapped 8-32

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
60598	S	10	100	3	\$ .32

**No. GE299 Lock Attachments**

For Rotary Switches with Handles, Tapped 10-32

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE299	S	10	100	3	\$ .32

**No. 60599 G-E Locking Keys**

For Nos 60598 and GE299

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
60599	S	10	100	2	\$ .20

**No. GE2308 Keys for Locking Tumbler Switches**

For Nos. GE1755 to GE1758, Inclusive

*Schedule S*

Cat. No.	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE2308	10	100	2	\$ .20

**No. GE2250 Keys for Locking Push Switches and Locking Plugs**

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE2250	S	10	100	2	\$ .20

**No. 170717 G-E Surface Rotary Switch Handles**

For 5 and 10-amp., 250-volt and 5-amp. 600-volt Rotary Switches—Tapped 8-32  
Round Compound Handles

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
170717	S	10	100	3	\$ .12

**No. 170713 G-E Surface Rotary Switch Handles**

For 5 and 10-amp., 250-volt and 5-amp. 600-volt Rotary Switches—Tapped 8-32  
Winged Compound Handles

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
170713	S	10	100	5	\$ .12

**No. 170714 G-E Surface Rotary Switch Handles**

For 5 and 10-amp., 250-volt and 5-amp. 600-volt Rotary Switches—Tapped 8-32  
Winged Porcelain Handles

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
170714	S	10	100	5	\$ .12

**No. GE857 Single-pole Ceiling Pull Switches**

5 Amp., 250 Volts; 10 Amp., 125 Volts  
Slotted Base, Bottom Outlet

With 8-foot black ventilator cord. Standard finish, polished nickel.

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE857	S	10	30	18	\$2.00

**No. GE248 Single-pole Ceiling Pull Switches**

5 Amp., 250 Volts; 10 Amp., 125 Volts  
Closed Base, Bottom Outlet

With 8-foot black ventilator cord. Standard finish, polished nickel.

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE248	S	10	30	18	\$2.00

**No. GE859 Double-pole Ceiling Pull Switches**

10 Amp., 250 Volts  
Slotted Base, Bottom Outlet

With 8-foot black ventilator cord. Standard finish, polished nickel.

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE859	S	1	10	6	\$2.36

**No. GE250 Double-pole Ceiling Pull Switches**

10 Amp., 250 Volts  
Closed Base, Bottom Outlet

With 8-foot black ventilator cord. Standard finish, polished nickel.

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE250	S	1	10	7	\$2.36

**No. GE858 Three-way Ceiling Pull Switches**

5 Amp., 250 Volts; 10 Amp., 125 Volts  
Slotted Base, Bottom Outlet

With 8-foot black ventilator cord. Standard finish, polished nickel.

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE858	S	1	10	6	\$2.36

**No. GE249 Three-way Ceiling Pull Switches**

5 Amp., 250 Volts; 10 Amp., 125 Volts  
Closed Base, Bottom Outlet

With 8-foot black ventilator cord. Standard finish, polished nickel.

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE249	S	1	10	7	\$2.36

**No. GE1294 Single-Pole Ceiling Pull Switches**

5-Amperes, 250 Volts  
10 Amperes, 125 Volts

Has 3/4 and 4-inch box base, bottom outlet. With 8-foot black ventilator cord. Standard finish, polished nickel.

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE1294	S	1	10	13	\$2.50

**No. GE1296 3-Way Ceiling Pull Switches**

5 Amperes, 250 Volts; 10 Amperes, 125-Volts

Has 3/4 and 4-inch box base, bottom outlet. With 8-foot black ventilator cord. Standard finish, polished nickel

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE1296	S	1	10	14	\$2.86

**G-E Combined Switches and Current Taps**

660 Watts, 250 Volts  
Schedule G (Class 6)

Fits any standard plug cap. Independent control of light and outlet for appliances.

Cat. No.	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE2295	10	50	15	\$1.50

## No. GE558 Single-pole Pendant Push-through Switches

3 Amp. 250 Volts; 6 Amp., 125 Volts

Pendant Cap

Standard finish, brush brass.

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE558	G (Class 1)	10	100	14	\$1.00

## No. GE1305 Single-Pole Pendant Push-Through Switches

3 Amp., 250 Volts; 6 Amp., 125 Volts

Pendant Cap with Porcelain Strain Relief

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE1305	G (Class 1)	10	100	23	\$1.00

## No. GE683 Single-pole Porcelain Pendant Push-through Switches

3 Amp., 250 Volts; 6 Amp., 125 Volts

Pendant Cap

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE683	G (Class 1)	10	100	13	\$.80

## Single-Pole Through Cord Composition Tumbler Switches

3 Amperes, 250 Volts; 6 Amperes, 125 Volts

Schedule G—Class 1

3/32-Inch Cord Holes

Cat. No.		Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
Brown Textolite	GE2532	10	50	6	\$1.00
Black Textolite	GE1584				

## Single-Pole Through Cord Composition Tumbler Switches

3 Amperes, 250 Volts; 6 Amperes, 125 Volts

Schedule G—Class 1

1 3/32-Inch Cord Holes

Cat. No.		Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
Brown Textolite	GE2531	10	50	6	\$1.00
Black Textolite	GE1301				

## No. GE629 Single-Pole Surface Rotary Switch and Cutout

20 Amperes, 250 Volts

Compound. Slotted base, indicating.

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE629	S	1	25	53	\$4.60

## No. GE1299 Single-Pole Flush Miniature Tumbler Switches

3 Amperes, 250 Volts; 5 Amperes, 125 Volts

Schedule S

Textolite

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE1299	S	10	100	11	\$.85

## No. GE1300 Single-pole Miniature Flush Switch Plates

Standard finish, frosted nickel.

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE1300	S	25	100	4	\$.20

## No. GE1372 Two-gang Miniature Flush Switch Plates

Standard finish, frosted nickel.

Cat. No.	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE1372	S	10	50	10	\$.40

## G-E 3 and 4-gang Miniature Flush Switch Plates

Standard finish, frosted nickel.

Cat. No.	No. in Gang	Schedule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE1373	3	S	5	25	12	\$.60
GE1374	4	S	1	10	10	\$.80

## No. GE2325 Canopy Rotary Switches

3 Amperes, 125 Volts—1 Ampere, 250 Volts

Schedule G—Class 1

Reversible lock-nut of special design adapts switch to canopies of design adapts switch to canopies from 1/2 to 1/16 inch thick. Six-inch leads of No. 18 stranded rubber-covered fixture wire furnished.

**No. 59 Levolier Link Switches**

Used between 2 links of chain on lighting units having small canopies. Takes the place of the pendant switch. No extra wire needed.

Carton, 10; standard package, 100.

Price, No. 59..... each \$ .55

**No. 3316 P & S Pull Canopy Switches**

With Stem and Lock Nut

3 Amperes, 125 Volts; 1 Ampere, 250 Volts

Standard finish of chain, stem and lock nut is brush brass. For special finish on chain and lock nut, add 2 cents.

The diameter of the switch stem is 13/32 inch.

Punch, 1/8 inch pipe size.

Fitted with short chain and cord. Outlet box fitters or washers for 1/2-inch knockout supplied with each switch.

Cat. No.	Car- ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
3316	10	100	19	\$.75

**P & S Porcelain Pull Canopy Switches**

250 Watts, 250 Volts

Standard finish of chain, stem and lock nut is brush brass.

The diameter of the switch stem is 13/32 inch. Punch 1/8-inch pipe size.

Fitted with short chain and cord with ball. For special finish on chain and lock nut, add 2 cents to list.

Outlet box fitters or washers for 1/2-inch knockout supplied with each switch.

Cat. No.	Car- ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
3317	10	100	19	\$.65

## P & S Canopy Switches

3 Amperes, 125 Volts; 1 Ampere, 250 Volts

### Narrow Canopy Switches with Parallel Wires

The stem on P & S 3306 is of sufficient length to use with canopies not more than 1/16-inch thick. P & S 3307 may be used with canopies up to 1/4 inch thick.

Fitted with 6 inches of No. 18 B & S stranded fixture wire. Longer wires furnished specially at 4 1/2 cents per foot each conductor.

P & S 3306 and 3307 may be assorted to make standard package quantities.

No. 3307

Cat. No.	For Canopies Thickness Inches	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each

3307	1/4	10	100	8	.60

### Fixture Supporting Canopy Switches

With Rotating Stem and Locknuts

P & S 3312 is a combination canopy switch and bracket supporting stem. The stem is 1/8-inch pipe size and 1 5/16 inches long. Stem turns on switch body for adjusting in assembly.

Cat. No.	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
3312	10	100	11	\$.65

## P & S Pull Fixture-Body Switches

For Lighting Units

3 Amperes, 125 Volts; 1 Ampere, 250 Volts

No. 3055

Standard finish of chain is brush brass. No extra charge for nickel. Special finish on short chain, 2 cents list extra; on long chain, 10 cents list extra.

Bottom nipple on all Fixture-Body Switches is 1/8 inch.

Each switch is fitted with 6-inch No. 16 stranded rubber-covered N.E.C. standard wires.

Each chain is fitted with chain connector and tassel.

Short chain and 6-foot linen cord with ball can be supplied instead of 3-foot chain, without extra charge. Extra cord beyond 6 feet, 1 cent list per foot.

**Hubbell Shallow Flush Toggle Switches**

**With Porcelain Base and Square Handle**

*Schedule F*

No. 8801

Will fit in 1½-inch switch boxes. Supporting screw holes spaced 3¼ inches on centers.

Wide plaster cars are standard equipment on the 8801 line of switches.

These wide cars are scored so as to be readily removed if desired.

Switches with narrow aligning lugs are recommended for use with screwless bakelite plates and may be had when so specified. Wide plaster cars can not be used with screwless bakelite plates.

Both brown and black handles are standard.

Brown furnished unless otherwise specified.

These switches are regularly furnished not grounded. If desired with ground shunt to frame, suffix letter G.

## Hubbell Duplex and Triplex Switches

Individual Switches Rated at 5 Amperes, 125 Volts;  
2 Amperes, 250 Volts  
*Schedule F*

### Common Feeds

No. 8833

Each switch consists of a small trigger action toggle switch movement, made up in gangs of two or three, mounted in a single porcelain box which is small enough to be installed in a standard single outlet box.

All switches in the gang have a common terminal on one side which simplifies the wiring as compared to the ordinary three-gang installation.

The Nos. 8821 and 8831 Switches may be used as electrolier switches and all the circuits or any part of them may be thrown off by a single movement of the hand. Brown toggle handles are standard.

### Duplex Switches—2-Gang

Cat. No.	Description	Car-ton	Std. Pkg.	Wt., Lbs.	Lbs. Pkg.	Price Each
8821	Two Single-Pole Units	2	10	3		\$ .85
8823	One Single-Pole, One 3-Way Unit	2	10	3		.95

### Triplex Switches—3-Gang

8831	Three Single-Pole Units	2	10	3		\$ 1.10
8833	Two Single-Pole, One 3-Way Unit	2	10	3		1.30

### Separate Feeds

Although common feed switches are desirable from the standpoint of facilitating installing, separate feed Duplex and Triplex Switches are furnished so that if trouble develops on one line the other circuit will not be affected.

Brown toggle handles are standard.

### Duplex Switches—2-Gang

Cat. No.	Description	Car-ton	Std. Pkg.	Wt., Lbs.	Lbs. Pkg.	Price Each
9821	Two Single-Pole Units	2	10	3		\$ .85

Brush brass and nickel plate are standard finishes for switch covers.

Brush brass covers furnished unless otherwise specified. Special finishes listed on another page.

**Hubbell Toggle Appliance Switches**

6 Amperes, 125 Volts  
3 Amperes, 250 Volts

Schedule F

No. 8745

No. 8650

No. 8656

These appliance switches are suitable for use with all kinds of electrically operated apparatus.

When installed, only the short toggle hand and lock nuts are visible, the switch being suspended from the metal surface of appliance or apparatus and held in place by 2 lock washers, making a decidedly neat, convenient and effective switch.

Depth of switch base, ¾ inch; diameter, 1¼ inches.

Standard finishes are brush brass or polished nickel. Brush brass furnished unless otherwise specified. For special finishes, see another page.

\*Carton quantity is 10 gangs.

†A standard package of push button switch plates consists of 100 single plates or equivalent in gangs.

**Hubbell Screwless Bakelite Plate Assortments, Special Finishes and Features**

**Assortments**

Any and all Hubbell Screwless Bakelite Plates, irrespective of kind, type or number of gangs per plate, may be assorted to make up standard package quantities.

**Special Finishes**

For white, ivory, yellow and blue sprayed-on enamel finishes, add 20 cents per gang to list price of plate. On gang plates, add 20 cents for first gang and 10 cents list for each succeeding gang. For specially tinted colors, to match sample, add 35 cents list to list price of plate. On gang plates, add 35 cents for first gang and 17½ cents list for each succeeding gang.

For grained wood finishes, add 50 cents per gang to list price of plate; and on gang plates, add 50 cents for first gang and 25 cents for each succeeding gang. Samples of special finished bakelite plates should accompany orders for such material, and where they do not come under the above classification of finishes, price will be quoted on application. The additional discounts for quantities in excess of standard package as applied to brass plates do not apply to special finished bakelite plates.

**Engraved, Emblematic and Luminous Insert Plates**

There has been an insistent demand among clubs, fraternity organizations, hotels and theaters for emblematic and decorative plates.

Hubbell Screwless Bakelite Plates may be furnished with engraved emblems, crests or coat of arms. They are particularly suitable for these features, in that no screw heads or exterior fastenings mar the dignity of the design. The plate can also be furnished in colors to harmonize with the emblem. These emblems can be engraved or emblematic buttons may be inserted in the plates.

When ordering plates with emblems or engravings, suffix the letter E with description of engraving or button desired.

Screwless bakelite plates may also be furnished with Cat. No. 7212 luminous insert. When ordering the luminous insert, suffix letter L to Cat. No.

**Engraving—Characters**

Ten cents list per letter on plates having 5 letters or numerals or more. Plates having less than 5 letters or numerals add 50 cents to list price of plate.

**Engraving—Emblems**

Plates with engraved standard emblems add \$1.00 list per engraving to price of plate.

**Emblematic Buttons**

Plates with standard emblematic buttons take an additional list price of 75 cents per button.

**Luminous Insert**

Plates equipped with No. 7212 luminous insert take an additional list price per plate of 25 cents per button.

**Hubbell Bakelite Screwless Plates**

Rear of Plate Showing Spring Holding Clips

These plates are molded of genuine bakelite and have no screws or other external fastenings to mar their finish and beauty. The absence of metal screws insures perfect insulation of plate surface from mechanism.

Screwless plates are regularly furnished in brown. Black bakelite plates supplied when desired without extra charge.

Screwless Bakelite Plates may also be had in attractive special finishes to match color scheme of rooms. Sample of finish should accompany order. For special features and finishes, see another page.

These plates save time in installing. No building up of switches or outlet to bring them up to plaster line. Switches and outlets are wired in usual way. Then, while still out of wall box, metal underplate is secured to them by screws, after which they are fastened to wall box in regular way. Switches or outlets are quickly drawn up to plaster line, and into strict alignment, by simply adjusting under plate screws.

The screwless cover-plates are snapped into position after painting and papering. No screws to bother with.

Cadmium finished steel under-plate supplied with each cover plate except sectional plates, without extra charge.

Under-plates for sectional plates must be ordered separately under their respective catalogue numbers. See another page.

**Hubbell Sectional Bakelite Screwless Plates**

Sections for switches and convenience outlets are of same dimensions and may be interchanged to form combinations. Sectional plates are not made in duplex type.

To insure perfect alignment of Sectional Cover Plates, it is necessary that steel under plates be in one piece. Sections are, therefore, packed without under plates and under plates should be ordered separately under their respective Cat. Nos.

**For Square Handle Switch**

## Diamond H Momentary Contact Switches

This is a special push button switch for use in connection with remote control switches. The mechanism is similar to that of the regular diamond H push button switch and is so arranged that a snap contact is made by pressing either of the buttons and a quick break is obtained when the button is released. Both buttons cannot be pressed at the same time. This switch fits all standard conduit boxes and uses a regular Diamond H push button plate. It can be fitted with a lock attachment, if desired.

Can be furnished with luminous buttons. Add to list price of any switch 25c per switch list. For switches with buttons longer than regular add to list price 40c per switch. White or red ivory switch buttons 50c per button list extra.

**Diamond H 20-ampere Rotary Flush Switches**

No. 1322 Switch

The 20-ampere Flush Switches have the same mechanism as the 20-ampere surface type which is enclosed in a heavy porcelain base which is practically unbreakable. They are made in both single and double pole types, either with or without indicating dial, as may be desired.

Single pole, 20 amperes, 125 volts.  
 Double pole, 20 amperes, 250 volts.  
 Base 3 inches x 2 1/2 inches deep.  
 Supporting screw holes 3 1/2 inches center to center.

\*100 single plates or assorted in gangs equivalent to a standard package.

**Diamond H Combination Plates**

Push Button Switch      Indicating Bull's-eye      Automatic Receptacle

Combination plates are made in both horizontal and tandem styles, and can be furnished in a number of different combinations and finishes. Special combination made on short notice.

The tandem form of plate is very attractive and is preferred by many to the horizontal gang plate ordinarily used, even when restricted horizontal space does not necessitate its use.

Polished nickel, polished brass, old or brush brass, polished bronze and oxidized copper are standard finishes. Special finishes can be furnished at an additional charge.

Twenty-five units assorted in standard package. Solid brass plates only. Switches, receptacles, etc., not included in the price of combination plates.

Cat. No.	Description	Price Each
1460	Push Button Switch and Bull's-eye	\$1.75
1461	Rotary Switch and Bull's-eye	1.85
1462	Receptacle, Bull's-eye and Push Button Switch	2.65

1464	Receptacle and Push Button Switch	1.40
1466	Bull's-eye and Receptacle Tandem	2.10
1468	2 Push Button and Bull's-eye	2.25

**Diamond H Remote Control Switches**

A Remote Control or magnetically operated switch is used where it is desired to control a certain load from a remote point, so remote that it would be inexpedient and expensive to run the heavy mains from the load to the point of control and return. This would mean an unnecessary loss of voltage and a heavy expenditure for copper and conduit.

A Remote Control Switch is installed as near the load as practicable and three small wires, for moderate distances No. 14, are run from this switch to the manual momentary contact switch located at the desired point of control.

By extending these control wires and connecting in momentary contact switches, the points of control may be increased to any desired number.

The momentary contact switch is normally in an open position and connects the common control wire alternately with the other two which are in series with the opening and closing coils respectively of a Remote Control Switch.

The principal use of the Remote Control Switch is for the control of large groups of lights in public buildings, theatres, train sheds, isolated sections of plants or docks, individual buildings, etc.

**Type F Single Throw**

For Potential Not Exceeding 250 D. C. Volts or 440 Volts A. C.

Type F Remote Control Switches consist of the required number of contacts mounted on a slate base. Switches of this type are used extensively with auxiliary switches, tank switches, pressure gauges, thermostats, momentary contact switches, etc., to control small motors which can be thrown directly on the line.

Cat. No. 610

Type F Remote Control Switches will operate directly across the line without the use of any other series resistance for the coils. Three control wires are required between the remote control point and the Type F switch.

A 2-button push button switch of the momentary contact type is used as control; one button to open, and one button to close the Remote Control Switch.

## Diamond H Remote Control Switches

### Type A Single Throw, No Voltage, Release

For Potential Not Exceeding 250 Volts D. C. or 440 Volts A. C.

Cat. No. 630

In the Type A switch, the closing coil is of comparatively low resistance and requires current only while the switch is closing, being automatically cut out the instant the switch locks in the closed position. The high resistance coil takes but a small fraction of an ampere and is in circuit while the switch remains closed. An interruption of this circuit either from failure of current supply, or by the opening of the control switch, allows the armature, which this high resistance coil holds suspended, to drop, releasing the ball-locking device of the main armature and allowing the switch to open by gravity. The manual control is effected by a single-pole switch, or when more than one point of control is desired, by 3 and 4-way switches. Switches are furnished for either alternating or direct current, but with different windings. It is necessary, therefore, to specify the type of service on which the switch is to be used. This switch is particularly desirable where the service is subject to interruption. Upon the failure of the service, the switch automatically opens and prevents injury to the device controlled by the switch in case of sudden resumption of service. In many cases, however, it is desired and can be furnished if specified, that the switch will close upon resumption of service.

The Type A switch is suitable for intermittent service, such as vacuum cleaners. One pair of wires and single-pole switches of any type at each point of control can be used, instead of three wires and the more expensive momentary contact switches. When so wired, the switch closes on completion of the circuit by any of the single-pole switches. The switch may be also controlled by the use of 3 and 4-way switches, in which case it can be thrown on at any point of control or off at any other point of control.

**H & H Double-Pole Double-Throw Switches**

*Schedule S*

10 Amperes, 250 Volts

These switches give the same control of circuits as double-pole double-throw knife switches. They are particularly well suited for motor circuits.

Connections: 1, Off, 2, Off

Operation: 1st snap, circuit No. 1. 2nd snap, off. 3rd snap, circuit No. 2. 4th snap, off.

Screw holes spaced 2 1/8 inches. Base, 2 1/8 inches.

Cat. No.	Style Base	Style Cover	Car-ton	Std. Pkg.	Wt. Lbs.	Lbs. Std. Pkg.	Price Each

**H & H Reciprocating Switches**

*Schedule S*

20 Amperes, 250 Volts

Reciprocating switches are arranged so that the handle can be turned backward or forward. For instance, when the switch has been turned to low speed or heat, it can be turned to high, or back to off without going through high. Dials furnished: Slow, fast, off, or start, run, off, or arc, iac., off.

No. 3051

Screw holes spaced 3 3/8 inches. Base, 4 1/4 inches. Height over all, 3 1/4 inches.

## H & H Tri-Use Surface Switches

For Pipe Taplets, Wood and Metal Molding

Schedule S

Designed for use on 1/2, 3/4, and 1 1/4-inch standard oblong type of pipe taplets.

May also be mounted on V. V. Fittings, with rectangular openings, by the use of V. V. Cover No. 43SS.

For wood molding, the switch is wired and mounted on the molding. The molding capping is then cut off square and butted up against the ends of the switch.

For National Metal Molding, Paiste Adapter No. 4075 is required.

**Single Pole—5 Amperes, 125 Volts; 3 Amperes, 250 Volts**  
Screw holes spaced 2 5/8 inches. Height, 2 inches.

**H & H 2-Circuit 600-Volt Barrier Switches**

Schedule S

**For Electric Railway Use**

These two-circuit barrier switches are frequently used to control combination arc and incandescent headlights, giving the connections: "Arc," "Off," "Incandescent," "Off."

They are also used to alternately throw the headlights and tail lights into circuit, and for similar combinations of lights.

**5 Amperes, 600 Volts**

Screws spaced  $1\frac{25}{32}$  in. Base,  $1\frac{5}{16}$  in. Height,  $2\frac{5}{16}$  in.

2910	" Round	100	2 1/4	.06
2156	Porcelain Wing Handle	100	3	.06
5011	" Round	100	3	.06

**For 20-ampere, 125-250-volt Switches**

5005	Composition Wing Handle	100	3 1/2	\$ .06
2157	Porcelain	100	5	.06

**For 30-ampere, 125-250-volt Switches**

4242	Composition Wing Handle	100	4	\$ .06
2218	Porcelain	100	5	.06

## H & H Unremovable or Clutch Handles

A handle called a clutch handle can be supplied on 5 and 10-ampere, 125-250-volt switches, except on switches with porcelain covers. It can also be supplied on 3 and 5-ampere, 600-volt switches. The clutch handle is turned in the regular way to operate the switch, but can be turned backward without dropping off and cannot be removed until a small screw is taken out. Clutch handles can be attached to switches only at the factory at an extra charge of 5 cents and must be plainly specified on orders.

## H & H Rotary Flush Switches

30-Ampere, 250-Volt

### Schedule S

Used where flush switch of attractive appearance are desired for heavy duty.

These switches require a 2-gang wall case, No. 902. Outside supporting screw holes spaced 3 1/2 inches on centers; inside holes spaced 2 3/16 inches. Depth, 1 1/8 inches.

These switches take the 20-ampere, No. 5010 lock attachment.

Adjusting frame, for aligning switches in gang furnished free upon application.

No. 3004 with No. 3054 Plate

### Single-Pole

Cat. No.	Description	Car-ton	Std. Pkg.	Wt., Lbs.	Price Each
3061	Non-Indicating	1	10	16	\$ 1.90

## H & H Push-Button Switches

### Schedule S Standard Type

Switch blades are the heavy knife type and never break. Contacts are of phosphor bronze. Working parts are case-hardened. Button with pearl center indicates current on.

Depth of switch without plate,  $1\frac{3}{64}$  inches. Outside supporting screw holes spaced  $3\frac{1}{2}$  inches on centers; inside supporting screw holes,  $2\frac{1}{16}$  inches on centers.

Cat. No.	Description	CAPACITY, AMPS.		Car- ton	Std. Pkg.	Wt., Lbs.	Price Each
		125 V.	250 V.				
2081	Single Pole	10	5	10	100	49	\$ .45

2084	Four-Way	10	5	10	10	9	1.00

## H & H Momentary Contact Switches

### 6 Amperes, 250 Volts

#### Schedule S

No. 2061

Pressure on the button closes the circuits as long as button is held in. Releasing opens the circuit. Quick make and break.

The 2-circuit type has 2 separate, single-pole switches, each controlling a separate circuit. Both buttons cannot be operated at the same time. The 2-circuit type takes regular push plates, and single circuit Plate No. 3515.

#### Circuit Normally Open—Closed by Pushing Button

Cat. No.	Description	Car- ton	Std. Pkg.	Wt., Lbs.	Price Each
2061	2-Circuit	10	10	11	\$2.40
2061L	2-Circuit Lock	10	10	11	2.85

3661	Single-Circuit	10	10	11	1.90
3661L	Single-Circuit Lock	10	10	11	2.35

Depth of base,  $2\frac{3}{16}$  inches.

#### Shallow Type—Circuit Normally Open—No Rating

For battery circuits or lighting circuits provided that the remote-control switch opens the solenoid-energizing circuit.

Cat. No.	Description	Car- ton	Std. Pkg.	Wt., Lbs.	Price Each
2363	2-Circuit ( $1\frac{1}{2}$ Inches Deep)	10	10	8	\$1.50
2364	2-Circuit ( $1\frac{1}{2}$ Inches Deep) Lock	10	10	9	3.00

Depth of base,  $1\frac{1}{2}$  inches.

#### Nutmeg Type

### 10 Amperes, 125 Volts, or 5 Amperes, 250 Volts

Cat. No.	Description	Car- ton	Std. Pkg.	Wt., Lbs.	Price Each
1609	Single-Pole, Normally Open	10	10	7	\$ .85
1606	Single-Pole, Normally Closed	10	10	7	.85
1610	Double-Pole, Normally Open	10	10	7	1.20
1607	Double-Pole, Normally Closed	10	10	7	1.20

Depth of base, 1 inch. Switches have 1 button and take Plate No. 3515.

All the above switches have standard supporting screw-hole spacing.

#### Plate with 1-Button Opening

### For Momentary Contact Switch No. 2179

Cat. No.	Description	Car- ton	Std. Pkg.	Wt., Lbs.	Price Each
3515	For 1 Switch	1	10	40	\$ .50

## H & H Tumbler Switches

### 6 Amperes, 125 Volts—3 Amperes, 250 Volts Schedule S

The switch with the patented balanced movement, considered by many to be the smoothest, easiest action devised for a tumbler switch.

Carton, 2. Standard package, 10.

Cat. No.	Description	Wt. Lbs.	Price Std. Pkg. Each
21095	2-Circuit (2 Levers)	4	\$ .85
21096	3-Circuit (3 Levers)	4	1.10
21098	Single Pole and 3-Way (2 Levers)	4	.95

## Plates for Tumbler Switches

### Schedule II

Plates for 2 and 3-lever switches may be assorted in different finishes, thicknesses or gangs to make standard packages; cannot be assorted with each other. No assortments on Hegemite plates. With Duro finish at 4 cents less per gang; add "D" to catalogue number.

Plate dimensions, height and length: 1 gang,  $4\frac{1}{2} \times 2\frac{3}{4}$  inches; 2 gang,  $4\frac{1}{2} \times 4\frac{1}{16}$  inches; 3 gang,  $4\frac{1}{2} \times 6\frac{3}{8}$  inches.

Carton, 2 gangs. Standard package, 10 gangs.

#### Struck-Up, .040-Inch Brass

Cat. Nos.	Description	Wt. Lbs. Std. Pkg.	Price Each
21232	For 1 Switch	3	\$ .14

21321	For 3 Switches	3	1.02

#### Hegemite (Molded)

8969	8970	For 1 Switch	4	\$ .15
------	------	--------------	---	--------

## H & H Automatic Door Switches

### Schedule S

For automatically operating a light upon the opening and closing of a door. All H & H door switches have a roller-tip plunger, which rolls across the edge of the door as it closes, and prevents friction and strain on the switch mechanism.

Each door switch is enclosed in a rolled steel base, which eliminates the trouble resulting from broken and chipped bases.

With every switch is furnished a small round plate with screw, for placing on the edge of door, where plunger strikes it. The shell of the switch is of sheet steel .081 inch in thickness. Dimensions of plate,  $3\frac{3}{4} \times 1\frac{1}{4}$  inches. Opening required,  $2\frac{5}{8} \times 1\frac{1}{16}$  inches. Depth,  $1\frac{3}{4}$  inches.

### (Single Pole—6 Ampere 125 Volts; 3 Ampere, 250 Volts)

Cat. No.	Description	Car- ton	Std. Pkg.	Wt., Lbs.	Price Each
2022	Light On when Door is Open	1	25	20	\$2.25
2023	Light On when Door is Closed	1	10	10	2.25

#### Iron Boxes for Door Switches

Dimensions,  $1\frac{1}{4} \times 2\frac{7}{8} \times 2\frac{3}{4}$  inches;  $\frac{5}{8}$  and  $\frac{7}{8}$ -inch knock-outs on ends and bottom.

3047	For One Door Switch	1	25	21	\$ .40
------	---------------------	---	----	----	--------

## No. 1161 H & H Luminous Screws

### Schedule II

The luminous material in H & H Plate Screws contains real radium and is self-illuminating lasting for years without the necessity of exposure to sunlight.

Cat. No.	Car- ton	Std. Pkg.	Wt. Lbs. Std. Pkg.	Price Each
1161	10	100		\$ .25

**H & H Flush Switches**

## H & H Struck-Up Brass Push Switch Plates

Schedule II

Edges are swaged to a greater thickness than face, thereby strengthening plate. Screw holes are deeply countersunk so as to allow edge of screw hole to rest on crossbar of switch. Will not dip under pressure of the screws.

The standard finish on all plates except where noted, is old or brush brass which will be supplied unless otherwise specified. Finish is attractive.

Standard package, 100 gangs. All plates for push switches may be assorted.

## H & H Plates

For Double Telephone Outlets

Schedule II

No. 3244

Plates up to 8 gangs will be furnished at 32 cents per gang in old brass, and 28 cents per gang in Duroplate finish.

Screw holes spaced 2 3/8 inches on centers.

Furnished complete with 3/8-inch hard rubber bushing.

Standard package, 100 gangs. All telephone plates may be assorted.

**H & H Plates**  
Schedule II

**Struck-Up and Solid Brass Combinations**

Standard combination plates of at least two different units are made up to order, from the units listed below. If spacings or dimensions differ from the standard units, special plate prices apply. The price of any combination plate is the sum of the prices of the units making up the combination.

The same symbol letters are used for .040, .060, and solid brass combination plates, and the thickness of the metal desired should be specified as well as the letters. Solid brass plates will be supplied when no thickness of metal is specified.

Old or brush brass finish is standard, but Duro finish will be supplied when specified at the prices given below. When no finish is specified, old or brush brass will be supplied.

The standard package is 10 separate plates of the same combination and thickness, and the carton quantity is 2.

Symbol Letter	Description	PRICE, EACH	
		Old Brass	Duro Finish
B	Round Bull's-Eye for Nos. 2999 and 3099	\$.44	\$.40

X	For Rotary Lock Switch	.50	.46

Above units may be arranged in any combination, horizontal or vertical. When combined in tandem, or vertical, add 20 per cent to the prices shown.

**H & H Plates**  
Schedule II

**Symbols for Plates in Combinations**

Standard combination plates of at least two different units are made up to order, from the units listed below. If spacings or dimensions differ from the standard units, special solid plate prices apply.

The price of a combination plate is the sum of the individual prices of the component plates. For a tandem combination, or a combination plate in which the gangs are placed in more than one row, add 20 per cent to the prices shown. For example, if plate PBD were a tandem plate, the price would be \$1.57 plus 20 per cent or \$1.88.

Standard package is 10 separate plates of the same combination.

Standard finish is old or brush brass.

## H & H Special Solid Plates

Schedule II

All plates, the dimensions or spacings of which differ from standard units, are figured at 7 cents per square inch plus the price of the regular unit or units composing the plate. The area charge of 7 cents per square inch is subject to the following discounts:

- 100 to 500 plates of one description, 10 per cent.
- 500 to 1000 plates of one description, 20 per cent.
- 1000 plates and over of one description, 30 per cent.

The standard package is 10 plates of one size and description, not gangs.

When special plates are not rectangular in shape, the charge will be for a plate of the size of the smallest rectangular piece from which the specified plate can be cut. In no case shall any special plate sell at a price less than the corresponding standard plate.

Genuine rolled bronze plates will be furnished at 10 cents per gang more than the price of the corresponding solid brass plate. Standard finish is brush bronze. Other finishes take regular advances. The standard package is the same as the corresponding brass plate, but assortments may not be made. Always send a clear sketch giving all dimensions and detailed specifications.

### Solid Plates with Round Corners

Solid plates with round corners and round edges, additional price for single gang, 15 cents.

Extra price for additional gang, 5 cents.

Solid plates with round corners and beveled edges, additional price per single gang, 15 cents.

### Solid Plates without Bevel Edges

If spacings and dimensions are standard, such solid plates will be furnished without extra charge, otherwise the special solid plate prices apply as given above.

### Plates with Return Edges

These plates are used when the wall case or switch box projects from the wall. For plates having a return edge of not more than 3/4 inch add \$1.00 extra for a single gang plate, and 50 cents extra for each additional gang. Price upon application for large quantity.

### Engraving

The practice of engraving flush plates for identification of individual switches in gangs is popular. The lettering is deeply etched in block design and can be made of any desired height. For engraving on plates, price per letter, 10 cents. Standard packages, 100 characters.

### Flush Plate Screws

All regular H & H Plate Screws are finished with pointed ends and are thereby more readily attached to the base plate of a switch or receptacle.

Cat. No.	Description	Carton	Std. Pkg.	Price per 100
1150	Standard 3/8-Inch Plate Screw... Longer Plate Screws, up to and Including 1-Inch.....	100	100	\$ .75
1161	Luminous Plate Screws.....	10	100	.25ea.
8980	Hegemite Plate Screws, Com- plete with Cap and Body.....	20	100	.05ea.
8980-1	Body for No. 8980.....	20	100	.025ea.
8980-2	Cap for No. 8980.....	20	100	.025ea.

The standard finish of brass plate screws is old brass or Duroplate. Special finishes supplied on order. Standard Hegemite plate screws are mahogany color, but black screws will be supplied when specified without extra charge.

### Plate Screw-Hole Spacings

The standard spacings for plates to be attached to switches and receptacles is 2 3/8 inches on centers, except rotary flush plates, and No. 2033 which is 2 1/2 inches.

Gang plates are spaced 1 13/16 inches on centers horizontally and 3 5/8 inches vertically.

### Finishes

Prices are given for old or brush brass finished plates and Duroplate. The standard finish is old or brush brass, which will be supplied when no finish is specified.

### Combination Plates

The units in such combinations must be standard in all particulars, as otherwise the plates are classed as special solid plates and are priced accordingly.

### Tandem Plates

Plates in tandem or vertical gangs can be furnished in solid brass and take a 20 per cent advance over horizontal gangs.

## The Bryant Spartan Line of Attachment Plugs and Receptacles

The Bryant Spartan Line is composed of a variety of attachment plug caps, bodies and receptacles which incorporate the two main features of Interchangeability and Standardization. They are the standard in general use.

The Spartan design has become accepted as standard throughout the United States and Canada, and is being used extensively in the making of plug devices for both surface and flush installations.

The original Spartan design for both parallel  $\ominus$  and tandem  $\omin�$  slots was the "Quad" slot arrangement, thus:  $\omin�$ . For purposes of standardization, this design is now being replaced by the "T" slot arrangement, thus:  $\omin�$ .

Spartan receptacles are designed to receive plugs with prongs or blades which are either parallel  $\ominus$  or tandem  $\omin�$ . Thus the trade-name Spartan is derived from the two words which are descriptive of the design of these interchangeable devices.

Spartan Plugs are made in two separable pieces. One is the cap with parallel blades. The other is the screw base body with parallel slots into which the blades of the cap are inserted. The combined cap and body form the complete plug.

All Spartan caps fit all Spartan bodies and receptacles. And all Spartan devices are interchangeable with all other makes of standard parallel-blade attachment plug devices.

### The Spartan Polarity Feature

WIDE SLOT  
Quad Slots

WIDE BLADE  
Polarity Cap

WIDE SLOT  
T Slots

When it is desired that an attachment plug cap fit into a receptacle in only one way, not reversible, thus providing a polarized connection, Spartan polarity caps should be ordered by substituting for the first letter K of any Spartan cap, the letter M to indicate polarity cap. Thus: A KA cap with polarity feature is known as an MKA cap and an MKK cap is a polarity cap, in all other respects exactly like a KK cap.

Polarity (M) caps differ from standard Spartan (K) caps only in the greater width of one prong. This wide prong will not fit the narrow slot of the two parallel slots of either the quad slot or T slot receptacles. It will fit the wide slot: This feature is shown in the illustration above. Because of this wide prong, a polarity cap can be inserted into a standard slot receptacle in only one way.

Polarity (M) caps cost the same, their schedule, discount, standard package and carton quantities and their weights are the same as similar standard Spartan (K) caps.

## Bryant Spartan Standard Composition Caps

## Bryant High Capacity D. D. Receptacles and Plugs

Schedule II  
25 Amperes, All Voltages Up To 250 Volts Maximum

This receptacle has been developed in response to the demand for a device having a carrying capacity suitable for atmospheric heaters, moving picture machines, and other portable current-consuming apparatus requiring a large amount of current. The hole in the plug is  $\frac{3}{4}$  inches in diameter, and is designed for No. 10 portable cable which should be used when the receptacle is to be loaded to its full capacity.

No. 2568 high capacity flush switch may be used for controlling the current to this receptacle, and these two devices may be mounted together on a Y-Z combination flush plate in which case a four-gang switch box is required for mounting.

Receptacle cup;  $2\frac{5}{16}$  inches long;  $3\frac{1}{2}$  inches wide;  $2\frac{1}{2}$  inches deep. Requires a two-gang box. Supporting screw spacings (four holes)  $3\frac{1}{2}$  inches vertically and  $1\frac{1}{8}$  inches horizontally.

Suitable machine screws for mounting on box are furnished. When ordering combination plates, specify Z section to accommodate No. 446 receptacle.

Standard finish for plugs is brush brass. Perma finish for plugs when ordered alone is same as for brush brass. Plugs ordered with special finish plates are given same finish free of extra charge.

Cat. No.	Description	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each

621	R	10	30	16	\$ .50

## No. 622 Bryant 20-ampere Polarized Receptacles

20 Amperes, 250 Volts

Porcelain Surface Receptacle for Concealed Wiring

Approved to carry 20 amperes at all voltages up to 250 volts. They are particularly suitable for use on farm lighting and other 32-volt circuits for supplying current to flat irons and other current consuming devices drawing 400 to 660 watts.

Diameter of base is  $2\frac{1}{2}$  inches. Height,  $1\frac{1}{2}$  inches. Holes for supporting screws spaced  $1\frac{1}{2}$  inches on centers.

Cat. No.	Sched-ule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
622	R	10	30	15	\$ .50

## No. 556 Bryant 20-ampere Polarized Receptacles

20 Amperes, 250 Volts

Suitable for use on farm lighting and other 32-volt circuits for supplying current devices drawing 400 to 660 watts. Receptacle is  $2\frac{5}{16}$  inches high,  $1\frac{1}{8}$  inches wide, 1 inch deep. Outside supporting screw holes,  $3\frac{3}{8}$  inches on centers; inside holes,  $2\frac{3}{8}$  inches. Receptacles regularly shipped with composition boss, which projects through plate, glazed black. White, when specified, will be sent without extra charge. When ordering combination plates, specify F selections for No. 556 Receptacles.

**Bryant Porcelain Surface Heater Control Combinations**

*Schedule H*

10 Amperes, 125-250 Volts

**Non-Fusible**

No. 466

Combination of a 10-ampere, 250-volt, d.p. indicating switch with a Spartan receptacle, and, in parallel with it, a receptacle for a pilot lamp. For cleat, concealed or molding work. Supporting screw spacings, 1 1/16 x 3 1/2 inches.

Nos. 466 and 766 have bases 4x5 inches and are equipped with No. 2781 porcelain handles. On special order can be furnished with expulsion type mechanism especially designed for inductive loads, at an advance in price of 30 cents each. Nos. 5466 and 5766 have bases 4 1/2 x 5 1/16 inches. Equipped with No. 6202 porcelain handles. No. 5734 switch mechanism is of the reversible rotation type and is designed for heater control service. Nos. 766 and 5766 are recommended for voltages not exceeding 125 volts.

**Bryant Bull's Eye Plates**

A Section

The B section consists of an F plate into which has been fastened a No. 736 bull's eye jewel.

The A sections should be used only in large combinations so that any lamp can be replaced without removing the whole plate.

When A and B plates are desired with ventilated jewels No. 737, they should be ordered by catalogue No. followed by the words, with No. 737 jewel.

The cost of any plate with No. 737 jewels instead of the standard No. 736 jewels is 50 cents additional for each No. 737 jewel specified. Unless otherwise specified ruby jewels will be furnished. Green, clear, amber, opalescent or blue jewels can be furnished on special order without extra charge. Standard finish, brush brass.

**Bryant Brass Plates with No. 736 Ruby Jewel**

For One No. 427 or No. 627 Receptacle *Schedule H*

Standard package, 30. Carton, 10. Assortment of plates is permitted. When combination plates longer than three gangs are ordered it is advisable to specify A sections instead of B sections.

The price of B plates, solid brass only, in gangs, when dimensions and spacings are standard, is 59 cents per gang.

Brass mounting screws are furnished. Standard finish, brush brass.

## No. 413 Bryant Bull's Eye Combinations

Switch and No. 736 Ruby Jewel  
with Solid Plate, Push-Button Switch, Ready-  
Wired, 2-Gang

Schedule II

10 Amperes, 125 Volts

Consists of 1-piece porcelain cup, 2<sup>9</sup>/<sub>16</sub> inches long, 3<sup>1</sup>/<sub>2</sub> inches wide, 1<sup>1</sup>/<sub>16</sub> inches deep, with 8 supporting screw holes, spaced 3<sup>3</sup>/<sub>32</sub> inches and 2<sup>13</sup>/<sub>16</sub> inches on centers vertically and 1<sup>3</sup>/<sub>16</sub> inches on centers horizontally, for installation in a standard 2-gang outlet box. This cup incorporates a No. 427 receptacle and a No. 2520 receptacle which is fitted with a No. 2523 double-pole switch mechanism.

No. 413

All electrical parts are properly connected together by brass shunts and the device is ready for connection to line wires and load wires.

The No. 427 receptacle is regularly fitted with a No. 618 lamp, but will take a Form H lamp, 2-candle power, clear pear shape bulb, carbon filament, candelabra base, 125 volts.

A solid brass plate No. OPB12 with No. 736 ruby jewel is furnished to cover the working parts. The standard finish is brush brass which will be furnished when no finish is specified. For Perma finish, deduct 4 cents per gang from the price. For other finishes consult special list.

Brass mounting screws are packed in the carton with each plate and suitable machine screws are furnished for mounting switch device on the box.

Can be furnished with luminous insert in button at an addition to price of 25 cents each. Identical devices, regular and luminous, may be assorted.

Cat. No.	Description	Car- ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
413	Ready-Wired	1	10	25	\$2.65

## No. 437 Bryant Bull's Eye Combinations

Schedule II  
660 Watts, 125 Volts

With No. OPBE solid plate, double-pole switch, No. 1708 receptacle, ready-wired.

One-piece porcelain cup, 2<sup>9</sup>/<sub>16</sub> x 5<sup>3</sup>/<sub>32</sub> x 1<sup>1</sup>/<sub>16</sub> inches, with eight supporting screw holes spaced 3<sup>3</sup>/<sub>32</sub> and 2<sup>9</sup>/<sub>16</sub> inches on centers vertically and 3<sup>3</sup>/<sub>8</sub> inches on centers horizontally for installation in a standard three-gang outlet box. This cup incorporates a No. 2520 cup with a No. 2523 double-pole push-button switch mechanism, a No. 427 receptacle and a No. 1708 receptacle, all internally connected and ready for connection to the line wires.

When the switch is on, the lamp is lighted and the receptacle is alive.

Solid brass plate No. OPBE13 with No. 736 ruby jewel is furnished to cover the working parts.

Standard finish is brush brass which will be furnished when no finish is specified. Perma finish, deduct 4 cents per gang.

Suitable machine screws for mounting this device are furnished and brass mounting screws are packed in the carton with each plate.

Can be furnished with luminous handle or button at an addition to price of 25 cents each. Identical devices, regular and luminous, may be assorted.

A No. 619 lamp, 32 volts, can be furnished on special order with the No. 427 receptacle instead of the No. 618, 125 volts, regularly furnished.

## Bryant Pilot Combinations

One Switch and One Lamp with Brass Guard  
Ready-Wired, One-Gang

Schedule II  
10 Amperes, 125 Volts

No. 2959

Each combination consists of a one-piece porcelain cup, 2<sup>9</sup>/<sub>16</sub> x 1<sup>1</sup>/<sub>16</sub> x 1<sup>1</sup>/<sub>16</sub> inches, with supporting screw holes spaced 3<sup>3</sup>/<sub>32</sub> and 2<sup>13</sup>/<sub>16</sub> inches on centers vertically for installation in a standard one-gang outlet box. This cup incorporates a switch and a candelabra base receptacle ready-wired in multiple, and has two terminals with binding screws on each end.

A No. 618 lamp is fitted in the receptacle and the whole is covered by an M. 060-inch plate. This lamp cannot be removed without removing the plate.

The lamp is in circuit when the switch is closed, so this device can be used for remote control of cellar lights, garage and attic lights, and in many other places where a tell-tale is desired.

One No. 2126 key is furnished with each No. 469 switch.

Standard finish is brush brass. For Perma finish, deduct 4 cents per gang. Special finish, see another page.

Suitable machine screws for mounting this device are furnished and brass mounting screws are packed in the carton with each plate.

Price of No. OM61 plate is \$1.30, schedule II, standard package, 10, carton 1.

The price of any combination without No. OM61 plate is \$1.30 less than the price given below.

When ordering combination plates, specify M sections to accommodate the combinations listed.

## H & H Receptacles with Closing Shutters

10 Amperes, 250 Volts

No. 2850  
Receptacle

No. 2301  
Plate

No. 2002  
Plug

These receptacles are used in baseboards and floors. The openings are equipped with automatic shutters, which open and close as the plug is inserted and withdrawn, thus keeping out dust and dirt and always insuring bright, clean contacts.

There is a demand for these receptacles for dining-room floors,

because the use of indirect lighting fixtures affords no convenient socket for attaching percolators, toasters, and other devices. When under a rug, two small holes can be made in the rug (without cutting) for inserting the prongs of the plug. The prongs are insulated to the points, so there is no danger of short circuits. The plug is unbreakable, and is pushed to admit heavy lamp cord. Where carpet or rug is thick, use plug No. 2133 with extra long prongs.

## Hubbell 2-Wire Polarized Porcelain Flush Receptacles

30 Amperes, 250 Volts

*Schedule H*

This receptacle is made throughout of a special black porcelain, the face of which is finished black glaze. Supporting lugs are of heavy metal, and have mounting holes suitably spaced to fit a standard 2-gang outlet box 2 inches deep or over. Entrance slots, to receive cap blades, are arranged to prevent the reversing of polarity. Contact blades are of heavy gauge copper.

It is recommended that this receptacle be controlled by a switch.

No. 7127 cap is made of black composition, steel covered and fitted with adjustable cord grip. Binding screws are extra large and are protected by an insulating disc which fits down over the blades, completely closing in the wiring terminals. Contact blades are of heavy gauge copper and are polarized. Exposed metal parts are galvanized finish to prevent corrosion.

Plate is made of .060-inch brass of standard 2-gang size, 4 1/2 x 4 1/8 inches. Standard finish is brush brass. For special finishes see another page. The advance for the special finish should be figured in accordance with paragraph E in foot notes listed elsewhere.

## Hubbell 3-Wire Polarized Porcelain Flush Receptacles

30 Amperes, 250 Volts  
*Schedule H*

A receptacle of rugged construction, made throughout of a special black porcelain, the face of which is finished with black glaze.

The supporting lugs are of heavy metal, with mounting holes suitably spaced to fit a standard 2-gang outlet box 2 inches deep or over.

Entrance slots, to receive cap blades, are arranged to prevent the reversing of polarity. Contact blades are of heavy gauge copper.

This receptacle should be controlled by a switch.

Cap No. 7113 is black composition, steel covered and fitted with adjustable cord grip. Binding screws are extra large and are protected by an insulating disc which fits down over the blades, completely closing in the wiring terminals. Contact blades are of heavy gauge copper and are polarized. Exposed metal parts are galvanized finish to prevent corrosion.

Plate is .060-inch brass, of standard 2-gang size, 4 1/2 x 4 1/8 inches. Standard finish is brush brass. For special finishes see another page. The advance for the special finish should be figured in accordance with paragraph E in footnotes shown elsewhere.

## Suitable Fittings for Hubbell 30-Ampere Polarized Flush Receptacles

The 2 and 3-wire 30-ampere receptacles will fit the following fittings:

APPLETON ELECTRIC Co.—19025, 19026, 19010, 19011 Boxes. GSC-2 Cover on GSB-2 Box. 8486 Cover on 4-SJ-1/2, 4-SJ-4/8, 4-SJD-1/2, 4-SJD-3/4, 4-SJD-1 Boxes. 8469 and 8469-A Covers on 4-S-1/2, 4-S-3/4 and "4-S Special" Boxes. 14097 Cover on type FS two-gang Unilet fits 7070 only. 14098 Cover required for 7112.

CHICAGO FUSE MFG. Co.—102G and 102GS Covers on 101, 102 and "102 Special" 4-inch Square Boxes. 110G Cover on 110 and 111-4 1/8 Boxes. 160 Sectional Box. 322 Cover on 302 Box.

CROUSE HINDS Co.—Two-gang FS series Condulets. Covers for use with 7070 on these condulets are S-612—surface type. SS-612—flush type.

Covers for use with 7112 on these condulets are S-622—surface type and SS-622—flush type.

NATIONAL METAL MLDG. Co.—24K, 24KK and 24KL Covers on 2400, 2401, 2402, 2403, 2404, 2405 and 2410 Boxes. 25K Cover on 2500, 2501, 2514, 2515 and 2590 Boxes. 30C2 Cover on 3002 and 3012 Boxes. 4230 and 4231 Boxes.

PRATT CHUCK Co.—52C18 and 52C21 Covers on 51151 and 52151 Boxes.

TAPLET MFG. Co.—Two-Gang FS series Taplets. Hubbell Plate Nos. 7072 and 7114 will fit above Taplets.

GENERAL ELEC. Co.—SP52C17 and SP52C18 Covers on SP51151 and SP52151 4-inch Square Boxes. SP6751 Cover on SP6733 Box.

STEEL CITY ELEC. Co.—2GC Cover on 2G Box. and Cat. Nos. 52C17, 52C18, 52C19 on 51151 and 52151 boxes, and 72C18 Cover on 72171 box.

THOMAS & BETTS.—32 (Box and Cover Complete).

## Hubbell Composition Separable Attachment Plugs

**Pony Size—Parallel Blade**  
**With Composition Cap**  
 660 Watts, 250 Volts  
*Schedule H*

No. 7000

Regularly furnished in solid black composition but may be had in solid brown composition at same price.

Cat. No.	Description	Cord Hole, In.	Car-ton	Std. Pkg.	Wt., Lbs.	Price Each
7000	Plug, Oval Cord Hole	$\frac{3}{8} \times \frac{9}{32}$	25	500	63	\$ .15

## Hubbell Composition Polarized Attachment Plugs

**With Composition or Brass Covered Caps**  
 660 Watts, 250 Volts  
*Schedule H*

Polarization is effected by providing a cap with one wide and one narrow blade which fit in corresponding slots in plug base.

All Hubbell Plugs and Receptacles having double T slots will take polarized caps Nos. 6764 and 6773.

Nickel-plated screw shells are standard on all attachment plugs.

Cat. No.	Description	Cord Hole, In.	Car-ton	Std. Pkg.	Wt., Lbs.	Price Each
6989	Plug Complete		25	250	35	\$.20
6764	Cap	$\frac{13}{32}$	25	250	18	.10
6773	Brass Covered Cap	$\frac{13}{32}$	25	250	18	.25
5917	Plug Body		25	250	18	.10

## Hubbell Composition Separable Attachment Plugs

**Pony Size—Parallel Blades**  
**With Metal Covered (Armored) Cap**  
 660 Watts, 250 Volts  
*Schedule H*

No. 7243

Contact blades will fit double T slots. Nickel-plated screw shells are standard.

Cat. No.	Description	Cord Hole, In.	Car-ton	Std. Pkg.	Wt., Lbs.	Price Each
7243	Plug, Oval Cord Hole	$\frac{3}{8} \times \frac{9}{32}$	25	250	40	\$.20
7001	Body Only		25	500	40	.07
7220	Cap, Oval Cord Hole	$\frac{3}{8} \times \frac{9}{32}$	25	250	25	.13

## No. 5826 Hubbell Cartridge Fuse Attachment Plugs

660 Watts, 250 Volts—Schedule H

Complete with 6-ampere Type C baby fuse. If wanted without fuse, deduct 25 cents from the price. Fuse length overall,  $1\frac{1}{2}$  inches. Diameter,  $1\frac{13}{32}$  inch.

Cat. No.	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5826	10	50	18	\$.75

## Hubbell Bakelite Fuse Plugs Tandem Blades—6 Amperes, 125 Volts

For use where small cartridge fuses up to 6-amp. are desired on both sides of the line. Furnished less fuses. Will receive 2 ferrule type enclosed cartridge fuses, overall length  $1\frac{1}{2}$  inches, diameter of ferrule  $1\frac{13}{32}$  inch.

Cat. No.	Sched-ule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
7132	H	10	30	8	\$.70

## Hubbell Te-Caps

660 Watts, 250 Volts

No. 6771

Hubbell Te-Caps are furnished with either tandem or parallel blades. Attached to an appliance or lamp cord, they serve as ordinary plug caps, and in addition provide T slots, into which may be plugged the tandem or parallel blades of any other plug cap.

They are made of composition.

No. 6772

## Hubbell Twin Te-Taps

10 Amperes, 250 Volts; 15 Amperes, 125 Volts

A multiple plug made of strong, black composition, designed to convert a single convenience outlet into a duplex.

Also converts a No. 1708 screw plug flush receptacle into a duplex convenience outlet by first screwing a standard attachment plug base into wall outlet and then inserting No. 7035 Te-Tap with parallel blades.

Can be used with all convenience outlets excepting those having lift cover plates.

Cat. No.	Description	Sched-ule	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
7010	Tandem Blades.....	H	10	10	5	\$.50

**No. 6900 Hubbell Triplex Table Taps**

10 Amperes, 250 Volts; 15 Amperes, 125 Volts

This device combines three Hubbell double T-slot outlets, arranged in multiple, with a connector plug, and may be fastened to the underside of a table or to a wall surface by means of two screws through

countersunk holes at either end, or may be used portably on table or desk.

The body is molded without break or seam of black composition, and is backed with green base.

Furnished complete with cord connector body, No. 5964 attachment plug cap, and 8 feet of black silk-covered cord.

Cat. No.	Schedule	Carton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
6900	H	1	5	10	\$3.00

**No. 7020 Hubbell Switch-Plugs for Ceiling Fixtures**

3 Amperes, 250 Volts  
6 Amperes, 125 Volts

Schedule H

Provides a switch for independent control of the light and an ever ready standard T-slot outlet for electric iron, toaster or other electrically operated appliance.

Outlet can be used without switching on the light.

The Hubbell Switch-plug is highly desirable for kitchen units and may also be adapted for many other uses.

Cat. No.	Description	Carton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each

## No. 7052 Hubbell 2 to 3-Wire Composition Plug Adapters

10 Amperes, 250 Volts; 15 Amperes, 125 Volts

Schedule H

This adapter has two tandem blades for insertion in any standard convenience outlet while the other end is equipped with three slots to take standard 10-ampere 3-wire caps as listed on another page.

Grounding of the third blade of the adapter is accomplished by the use of a binding post at the side of the body.

Cat. No.	Description	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
7052	Adapter, 2 to 3-Wire	10	30	12	\$ .40

## No. 7284 Hubbell 3-Wire Cord-Grip Motor Plugs

Polarized

30 Amperes, 250 Volts  
Schedule H

Composition.

The adjustable Cord-Grip accommodates cords from 5/8 to 1 inch in diameter.

The adjustable clamp grips the cord securely, thus relieving the strain from binding posts, and prevents the cord from unraveling.

9251	Grounded Cap	10	20	9	.85

## Hubbell Switch-Taps and Plates

Schedule II

No. 7163 with No. 7211 Plate

A combination switch and outlet, two in one. It is recommended for use in any place where a switch control is required for a ceiling light and electric service from a convenience outlet.

With No. 7163, a quarter turn of the tap which is a switch and the lights are on. A quarter turn to the left and the switch is off. The double T-tap is wired independently and is alive at all times. It is small enough to fit any standard single gang outlet box.

The No. 7164 is a combination of double T-slot receptacle, controlled by a double-pole switch. In this hook-up the switch is used exclusively for the purpose of controlling the double T-slot outlet.

The switch mechanism is regularly furnished "not grounded." If desired with ground shunt to frame, suffix the letter "G."

Face receptacle regularly furnished brown; black may be had at same price.

Switch, 5 Amperes, 250 Volts  
Receptacle, 10 Amperes, 250 Volts or  
15 Amperes, 125 Volts

**Hubbell Bakelite Convenience Outlet Plates**

Sand Blast and Ribbed Finish

*Schedule II*

No. 7093

These plates are made of genuine bakelite, and are regularly furnished in brown. Black plates can be supplied on special order without extra charge.

No. 7094

The top surface of the Sand Blast plate has a Sand Blast finish, set off by a narrow polished border. The top surface of the Ribbed plate gives a satin finish effect and is moulded into the plate.

The No. 7094 Duplex Plate is furnished with a steel support which materially strengthens the narrow bridge of bakelite between the two receptacle openings.

This feature prevents breakage when the plate is fastened to the receptacle too tightly or when the plate does not come flush with the wall surface.

Double outlet plates have two tapped holes per gang, each supplied with a 3/8-inch composition bushing.

All kinds of telephone plates may be assorted to make standard package or carton quantity.

Double outlet solid plates beyond 3 gangs can be furnished at 50 cents list per gang for brush brass.

Any of these plates can be supplied in Lacco brass finish at a reduction of 4 cents list per gang.

Special finishes listed on another page.

## Hubbell Combination Brass Plates

Schedule H

Hubbell Combination Plates are made in 100-inch solid brass, struck up .060 and .040 inch brass. The standard finish is brush brass. If desired in Lacco finish specify and deduct 4 cents per gang from list prices. The advance for special finishes should be added to brush brass list prices. If

plates are ordered by letter only and no finish is specified, brush brass will be supplied. A combination plate must be made up of 2 or more different letters. For example, AA is not a combination plate.

Standard package of special combination plates consists of 10 plates of one combination. To determine the list price of any combination plate add together the separate list of the plates making up the combination. When arranged in more than one row, or tandem, add 20% to the list. Combination plates will be spaced horizontally  $1\frac{1}{8}$  and vertically  $3\frac{1}{8}$  inches on centers.

For plates requiring special dimensions or screw spacings which are not standard, see elsewhere. In ordering combination plates use the letters and thickness of metal with illustrations in the same relative position as marked, for example, B C G .060 inch would cover a plate to take one toggle switch, one bull's-eye, and one single convenience outlet—the bull's-eye to be in the middle, to be made of .060-inch brass.

For dimensions of gang plates, see another page.

**No. 903 Benjamin Swivel Attachment Plugs**  
660 Watts, 250 Volts

**With Fibre Ring**  
Swivel shell permits plug to be attached or removed without twisting cord. Has fibre insulating ring, porcelain base, and molded bushing with 1 3/32-inch opening for cord.

Cat. No.	Description	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
903	With 1 3/32-Inch Cord Opening	100	6 1/4	\$ .15

**No. 903F Benjamin Swivel Attachment Plugs**  
660 Watts, 250 Volts

**For Reinforced Cord**

For the appliance service that requires a heavy reinforced cord, No. 903F should be an important part of the equipment. It has a heavy molded bushing with a 1/2-inch cord opening that will take any heavy reinforced cord or flexible armored cable whose outside diameter does not exceed 1/2-inch.

A flat metal set screw grips cord tightly, protecting both the cord and binding screw connection with plug.

Cat. No.	Description	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
903F	With Bushing, 1/2-inch Opening	100	9 3/8	\$ .50

**No. 904 Benjamin Swivel Attachment Plugs**  
660 Watts, 250 Volts

**With Molded Ring**

Equipped with swivel shell which allows plug to be turned into or out of socket without twisting cord. Fitted with molded insulating ring and bushing with 1 1/8-inch opening for cord.

Cat. No.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
904	100	9 3/8	\$ .18

**No. 916 Benjamin Heavy Duty Swivel Attachment Plugs**  
660 Watts, 250 Volts

For railroad and heavy work. Has chuck type bushing which takes a firm grip on any of the standard portable cords up to 2 5/16 to 3 5/16 inch outside diameter.

Cat. No.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
916	10	3	\$ .80

**Benjamin Attachment Plugs**  
**With Parallel Blades**  
660 Watts, 250 Volts

No. 1001 is the standard type of separable plug in common use. It consists of a standard parallel blade cap No. 938 and polarized base No. 940. No. 938 is of strong high heat molded insulating material with gripping-bead to facilitate removal. It has large binder screws and standard parallel blades. No. 939 is same but has polarized blades. No. 940 base is same material and is polarized. It will fit any medium screw base socket.

Cat. No.	Description	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
1001	Std. Cap and Base	250	31 1/4	\$ .20
1010	Polarized Cap and Base	250	31 1/4	.20

939	Pol. " "	100	6 1/4	.10
940	" Base	250	15 5/8	.10

**No. 1006 Benjamin Parallel Blade Adapters**

Designed to change a standard slotted base receptacle into a medium Edison screw base outlet, or to connect an appliance with a 1-piece screw base attachment plug, to a slotted base receptacle. Parallel blades have standard spacings.

Cat. No.	Description	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
1006	Brass Shell, Fibre Lined	10	5/8	\$ .25

**No. 122 Benjamin Two-way Plugs**  
660 Watt, 250 Volts

Molded body, brass trim. Desirable where an inconspicuous device is more important than the position of the outlets.

Cat. No.	Description	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
122	Multiple	10	2	\$ .60

**No. 77 Benjamin Swivel 2-Way Plugs**  
660 Watts, 250 Volts

One-piece molded bakelite. Friction swivel on plug end permits the side outlet to be turned to any direction for an extension cord. Lamp outlet hangs straight down.

Cat. No.	Description	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
77	Multiple	10	2 1/2	\$ .75

**No. 1080 Benjamin 2-Way Plugs**  
660 Watts, 250 Volts

Side outlet of molded material, takes standard parallel blade cap. Screw plug is swivel type which permits adjustment of side outlet to any point of circle. Standard shade holder can be used.

Cat. No.	Description	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
1080	Multiple	10	2 1/2	\$ .60

**Benjamin 2, 3, and 4-way Plugs**  
660 Watts, 250 Volts

Fit any medium screw base socket or wall receptacle. Require no wiring.

Cat. No.	No. of Lights	Description	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each

93	3	Multiple	10	6	.75
94	4	"	5	3	1.60

**No. 292 Benjamin Pull Plugs**  
660 Watts, 250 Volts

One outlet is equipped with a pull chain mechanism which permits turning the lamp on and off without interfering with the use of an appliance on the other outlet.

Cat. No.	No. of Lights	Description	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
292	2	Multiple	10	6	\$ 1.00

**No. 942 Benjamin Plug Twin Sockets**  
660 Watts, 250 Volts

For corners and in flush receptacles with doors which prohibit the use of other plural plugs. Swivel shell. Lies close to the wall, and occupies little space.

Cat. No.	Description	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
942	Multiple	10	2 3/4	\$ .75

**No. 960 Benjamin Swivel Separable Attachment Plugs**  
660 Watts, 250 Volts

The No. 960 Swivel Separable Attachment Plug is especially convenient for use in attaching portable household electrical appliances to either screw base sockets or parallel blade slotted receptacles.

Where it is desired to make attachment to parallel blade slotted receptacles, the plug cap readily separates from its base for the purpose. Base and cap are of molded composition, polished. Approved by N. B. of F. U.

Cat. No.	Cord Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
960	1 3/8	10	1 1/2	\$ .50
Price, No. 961, Base Only				each \$ .30
" " 962, Cap				" " .20

**No. 1083 Benjamin 3-way Plugs**

660 Watts, 250 Volts

A new 3-way plug which provides 2 side outlets to take standard parallel blade attaching caps and 1 Edison base outlet at the bottom. Threaded shell at bottom accommodates standard 2 1/4-inch shade holders and permits the lamp to hang straight down. Plug has black molded composition body and brass socket shell.

A handsomely colored dispenser-display stand is furnished free with every 10 devices.

Cat. No.	Description	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
1083	Multiple	10	2 1/4	\$ .75

**No. 1042 Benjamin 2-way Plugs**

660 Watts, 250 Volts

Made to give double service on convenience outlets. It lies close to the wall and is practically safe from accidental breakage. The blades fit any standard parallel slotted receptacle. Finish, brushed brass.

Cat. No.	Description	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
1042	Multiple	10	2	\$.50

**No. 808 Benjamin 2-way Plugs**

10 Amperes, 250 Volts

A neat, compact 2-way plug which provides 2 outlets to take any standard form parallel blade attachment caps. Depressed surface around slots makes easy entrance for slots.

Body is made of black, high heat, molded composition and is polished. The parallel blades fit any standard slotted receptacle. An attractively colored dispenser-display box is furnished with every 10 plugs.

Cat. No.	Standard Package	Wt., Lbs. Std. Pkg.	Price Each
808	10	1 3/4	\$.50

**No. H206 Hemco Tee-Prong Plugs**

660 Watts, 250 Volts

Designed to fit all standard prong-type receptacles and for standard prong-type attachments. Has self locating feature for attaching attachment plugs. Molded of bakelite.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
H206	5	100	15	\$.50

**No. H207 Hemco Trip-Prong Plugs**

660 Watts, 250 Volts

This plug fits close to the baseboard. It is molded in one piece of Bakelite. Shock-proof, heat-proof and mar-proof.

Cat. No.	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
H207	5	100	20	\$.60

**Hemco Pul-Cord Attachment Plugs**

This attachment plug is molded of bakelite. It is not affected by heat or moisture.

In the center of the cap is located a bridge over which the cord ends are placed. This eliminates the strain at the point of contact of cord and terminal when the cap is removed from an appliance by pulling on the cord. A barrier on this bridge separates the 2 wires, thus eliminating possibilities of short circuits. Unit package (display), 10 plugs; standard package, 100 plugs.

## No. GE1370 Composition Polarity Caps

20 Amperes, 250 Volts  
Schedule G, Class 1

9/16-Inch Cord Holes

Cat. No.	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE1370	10	30	8	\$.60

## No. GE1369 Surface Polarity Plug Receptacles

Concealed Base  
20 Amp., 250 Volts  
Schedule G Class 1

Cat. No.	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE1369	10	30	12	\$1.00

## No. GE1368 Surface Polarity Plug Receptacles

Cleat Base  
20 Amp., 250 Volts  
Schedule G Class 1

Cat. No.	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE1368	10	30	16	\$1.00

## No. GE1367 Flush Polarity Plug Receptacles

Shallow—One-piece—Black Glazed Porcelain  
20 Amp., 250 Volts  
Schedule G Class 1

Fits No. 49491 plate.

Cat. No.	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE1367	10	30	15	\$1.50

## No. 59197 G-E Polarity Caps

Porcelain, 13/32-Inch Cord Hole  
30 Amps., 250 Volts  
Schedule G, Class 1

Cat. No.	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
59197	5	25	11	\$.60

## No. 59200 G-E Composition Polarity Caps

30 Amperes, 250 Volts  
Schedule G, Class 1

2 1/32-Inch Cord Hole

Cat. No.	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
59200	5	25	9	\$.90

## No. 59198 G-E Surface Polarity Plug Receptacles

Concealed Base—Porcelain  
30 Amp., 250 Volts  
Schedule G Class 1

Cat. No.	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
59198	5	25	21	\$1.00

## No. 59201 G-E Surface Polarity Plug Receptacles

Concealed Base—Moulded Compound  
30 Amp., 250 Volts  
Schedule G Class 1

Cat. No.	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
59201	5	25	16	\$1.60

**G-E Polarity Plug Receptacles**

30 Amperes, 250 Volts

Schedule G—Class 1

**No. GE996 Flush Polarity Plug Receptacles**

Compound top, porcelain base.

Cat. No.	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE996	10	30	18	\$1.70

**No. GE997 Flush Plates**

For 30-ampere polarity plug receptacle. Standard finish, brush brass.

Cat. No.	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE997	10	30	6	\$2.28

**Triple-Pole Polarity Caps**  
2 1/32-Inch Cord Hole

Cat. No.	Description	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each

59325	5	20	9	\$ .20

**G-E Triple-Pole Heavy Duty Polarity Caps**

40 Amperes, 250 Volts—60 Amperes, 125 Volts  
Schedule G, Class 1

No. 6X547

Black compound.

Carton, 1. Standard package, 10. Weight, standard package of No. 6x547, 18 pounds; No. 6x540, 19 pounds.

Price, No. 6X547, With Straight BX Connector...each \$2.80  
Price, No. 6X540, With Angle BX Connector...each 3.00

No. 6X540

**No. 13X149 G-E Triple-Pole Polarity Plug Receptacles**

30 Amperes, 250 Volts  
Schedule G (Class 1)

Polarity cap with clamp, grip for .625 to .750 inch and grounding clips. Black compound.

Cat. No.	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
13X149	1	10	8	\$2.00

**No. 13X150 G-E Triple-Pole Polarity Plug Receptacles**

30 Amperes, 250 Volts  
Schedule G (Class 1)

Polarity cap with clamp, grip for .625 to .750 inch and grounding clips. Porcelain. 5/8 to 3/4-inch cord gap.

Cat. No.	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
13X150	1	10	9	\$1.60

**No. 6X542 G-E Porcelain Triple-Pole Flush Polarity Plug Receptacles**

40 Amperes, 250 Volts  
60 Amperes, 125 Volts  
Schedule G

Fits SP72C101 cover for 4 1/16" outlet box. Carton, 1. Std. pkg., 10; wt., 12 lbs. Price, No. 6X542...each \$6.20

**Flush Plates with Grounding Clip Slots**  
Standard finish, brush brass. Carton, 1. Std. pkg., 10; weight, 10 pounds.

No. 6X541, Brass...each \$2.00  
No. 6X548, Steel...each 1.00

**No. GE2240 Triple-pole Polarity Caps**

Compound, 1 3/32-inch Cord Hole  
10 Amperes, 250 Volts; 15 Amperes, 125 Volts  
Schedule G (Class 1)

Cat. No.	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE2240	10	50	6	\$ .50

**No. GE2481 Triple-Pole Polarity Cord Connector Bodies**

10 Amperes, 250 Volts, 15 Amperes, 125 Volts  
Schedule G, Class 1  
1 3/32-Inch Cord Hole  
Black compound.

Cat. No.	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE2481	10	50	8	\$1.00

**No. GE1806 Triple-pole Surface Polarity Plug Receptacles**

Concealed Base

10 Amperes, 250 Volts; 15 Amperes, 125 Volts  
Schedule G (Class 1)

Cat. No.	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE1806	10	30	13	\$1.00

**No. GE1805 Composition Triple-Pole Flush Polarity Plug Receptacles**

10 Amperes, 250 Volts; 15 Amperes, 125 Volts  
Schedule G—Class 1

Shallow, one-piece.

Cat. No.	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE1805	10	50	20	\$1.70

**No. GE853 Pilot Lamp Receptacles**

For 125 Volts  
Schedule G Class 1

This receptacle has porcelain base in which a two candlepower lamp is mounted in an adjustable socket.

Cat. No.	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE853	10	30	14	\$1.40

**No. GE2633 Heater Plugs**

With Universal Contacts  
660 Watts, 250 Volts  
Schedule G (Class 6)

Brown Compound.

Cat. No.	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE2633	10	100	22	\$ .44

## No. GE2602 Heater Plugs

With Universal Contacts

660 Watts, 250 Volts  
Schedule G, Class 6

Black compound.

Furnished in decorative carton.

Cat. No.	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE2602	10	100	23	\$.84

## No. 2X623 G-E Extension Cord Sets

10 Amperes, 250 Volts  
Schedule G, Class 6

A 6-foot brown silk cord with brown compound pony attachment plug cap and connector body. Furnished in decorative carton.

Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
10	50	21	\$1.20

## No. GE2594 Heater Cord Sets

660 Watts, 250 Volts  
Schedule G, Class 6

6-foot asbestos heater cord, black compound attachment plug and heater plug with universal contacts.

Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
1	100	57	\$1.20

## No. GE2725 Heater Cord Sets

660 Watts, 250 Volts—Schedule G (Class 6)

6-foot No. 17 asbestos heater cord, brown compound attach. plug and heater plug with tumbler switch and universal contacts.

No.	Carton	Pkg.	Each
GE2725	1	100	\$1.36

## Bryant Appliance Switch Plugs

6 Amperes, 125 Volts—3 Amperes, 250 Volts  
Schedule H

No. 752

The No. 668 Templus permits control of appliance by means of indicating tumbler switch.

No. 752 is for heating devices with  $\frac{3}{16}$ -inch round contact pins spaced from  $\frac{1}{16}$  to  $\frac{25}{32}$  inches on centers.

No. 668

Cat. No.	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
668	10	50	22	\$1.00
752	10	50	22	.90

Contacts, 50 pairs in package; weight, 1 pound.

No. 668C..... per pair \$.20

## No. H250 Hemco Heater Plugs

Moulded of an especially compounded material, known for its mechanical strength. This makes the plug practically unbreakable. Unaffected by the heat of any electrical appliance in regular service. Natural glossy finish.

Cat. No.	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
H250	10	100	17	\$.45

## No. H253 Hemco Cord Set

This cord set combines the Hemco Pul-Cord Attachment Plug at one end with the Hemco Heater Plug at the other. Six feet of flexible cord is used. Unit package (display) consists of 5 sets, standard package 50 sets.

Price. No. H253..... each \$1.50

## G-E Standard Composition Single Convenience Outlets

10 Amperes, 250 Volts; 15 Amperes, 125 Volts  
Schedule G, Class 6

Shallow, one-piece, for plates without doors. With small mounting ears, side wired.

GE2256	1 Twin	10	50	28	\$1.60

**Solid Textolite Plates without Doors**

Their stippled finish (either black or brown) will harmonize with any decorative treatment, making them ideal for homes and other buildings where the desire for beauty is dominant. On the other hand, the fact that they are strong, stainless and non-corrosive suggests them as the logical choice for use in industrial and commercial buildings. The black plates blend perfectly with wrought iron or Bauer Barff office partitions. For mahogany trim, the brown plates are ideal.

Plate screws with Textolite heads cannot be used with these plates

**R & S Swimming Pool and Fountain Fixtures**

Russell & Stoll manufacture a line of fixtures for underwater lighting that is watertight and thoroughly dependable.

Illustrated is a watertight outfit, which pivots in a recess box, allowing the fixture to be adjusted to the most efficient lighting angle; it is water cooled, being entirely surrounded by water when installed. By lifting the lighting unit out of the pivot bearings the fixture can be raised to the surface and relamped in a few minutes without draining the pool or disturbing the current carrying line. Designed to accommodate a type G-30, 250 or 400-watt lamp.

Prices and detailed information upon application.

**R & S Weather-Proof Type Receptacles and Plugs**

**2-Wire Polarized**

100 Amperes, 250 Volts

Receptacle and plug are ruggedly designed, with slate interior and heavy bronze spring contacts. Plug is made of composition with a hard maple wood handle and heavy protecting sleeve.

Box and cover, japanned cast iron (galvanizing extra). Cover gasketed and provided with gasketed spring flap door. Box 8x7x3 inches deep. Outlets, 2-inch maximum conduit in any side. Specify outlets required.

**R & S Fixture Hanger Devices**

**Fixture Hanger Boxes**

Designed for supporting and lowering fixtures or chandeliers in theatres, lobbies and auditoriums from the floor above, thus providing an easy means for relamping and cleaning. The circuits of the chandelier are disconnected by means of single-pole plugs, the safety devices are removed, the supporting nut is unscrewed, and the fixture then lowered by means of a special winch previously connected to the eye of the chandelier by steel cable.

These fixture hanger boxes are made in several different styles and capacities and complete information will be sent upon request. Full details, i.e., weight of fixture, thickness of floor, size conduit required and number of circuits should be given in the inquiry.

Prices upon application.

**Portable Winches**

This winch is especially arranged for use in connection with the fixture hanger boxes listed above.

The gear is so constructed that it cannot run down without manual operation of the crank.

The winch is portable, therefore only one is required for any number of fixtures.

Prices and complete information upon application.

**R & S Armored Type Cable Extension Connectors**

**2, 3 and 4-Wire Polarized**  
15, 30 and 60 Amperes, 250 Volts

These connectors are especially designed for use where conditions are severe. The interiors of connectors are protected by a cast aluminum housing, having great strength and resistance to acid fumes.

The housings contain a rugged, adjustable cable grip entirely concealed. Both interiors are of the best grade of moulded material, and are fitted with accurately machined contact members, which have provision for direct wire connection, eliminating all lugs.

Assembly of these parts insures full floating and self-alignment of the contact members.

Female End of Connector

Male End of Connector

**R & S Angle Type Receptacles and Plugs**

**2, 3 and 4-Wire Polarized**  
15, 30 and 60 Amperes, 250 Volts

Angle Type Receptacle

An important feature of this improved line of receptacles and plugs is the provision for an additional conductor for the grounding of portable electric tools, thereby conforming with the latest regulations governing portable equipment.

**Receptacle Housing**

The receptacle housing is an extra heavy galvanized iron casting provided with gaskets and hinged spring flat cover, and having the following features:

Positive polarization to insure correct assembly of contact members.

Provision for grounding to meet the latest requirements.

External rib to provide visual indication for plug insertion.

Concealed hinge spring packed with grease insures positive and easy action of flap cover.

Assembly of interior parts permits full floating and self-alignment of contact members.

Large conduit bosses and ample space for wiring facilitate installation.

Plug for Use with Angle Fitting

**Plug Housing**

A sturdy silicon aluminum alloy casting having great strength and resistance to acid fumes; light in weight and convenient to handle, with:

A rugged, adjustable cable grip entirely concealed.

An external rib which fits into a corresponding groove in the receptacle housing.

An assembly of the interior parts insuring full float and self-alignment of the contact members.

**Interiors**

The receptacle and plug interiors are of the best grade of moulded material and are fitted with accurately machined contact members, which have provision for direct wire connections, eliminating all lugs.

The ground contacts are plated for identification and make direct contact through heavy springs to the receptacle housing.

When ordering, specify outlets required.
