**80000 Series Square D Industrial Switches**  
**Quick Make and Quick Break—Single Throw**

**COVER CONTROL—INDIVIDUAL BASES**

All switch parts are mounted on individual insulating bases making it possible to remove and replace any switch part from the front of the switch in a few minutes' time.

Positive quick make and quick break action prevents the arc from holding and burning blades and jaws.

Square D cover control makes it impossible to open the cover when the switch is in the on position. It also prevents the operation of the switch with the box cover open.

**250 Volts—Fused**

**Square D Motor Starters**

**Straight Connected—Quick Make and Break Single Throw**

The running fuses are shunted by the use of a set of auxiliary blades during the starting period. The circuit is not opened going from the starting to the running position.

Square D cover control makes it impossible to open the cover when the switch is on or to operate switch when the cover is open.

**Cover Control

**Square D Service Entrance Switches  
Compensator and Meter Test Type  
Individual Bases**

The compensator provides 2 taps, one for a direct line circuit for starting, the other for a local fused circuit for running. Switch may be arranged to have the fuses on the line side of the switch or, by removing links on compensator side, depending on design of compensator. The switch has a quick-break mechanism. By removing the links the 78000 line switch becomes a meter testing switch, which consists of a cutout and switch mounted on same base.

Removable ends make it possible to use Square D meter trims. Shipped with one end plate in bottom opening.

## Square D 2-Pole Plug Receptacles and Attachment Plugs

250 Volts, 30 Amperes

All live parts of the receptacle are contained in sheet steel box.

Fuses and terminals are mounted on porcelain. Receptacles may be fused up to 30 amperes, 250 volts.

Attachment plug is of the polarity type, shaped so that it cannot be reversed when inserting in receptacle. Cable or flexible cord passes through handle and is fastened to terminals at either side of plug by means of contact screws.

Weight: No. 5001, 4 1/4 pounds; No. 5021, 1/4 pound.  
Price, No. 5001, Plug Receptacle..... each \$6.20  
Price, No. 5021, Attachment Plug..... each 2.40

## Square D End Plates for Entrance Switches

Used with the 77000 and 78000 lines of entrance switches. Adapter end plates can be supplied which fit into the top opening of the switch box into which the meter trims fit.

Cat. No. 18483 is fitted with a Square D meter trim.

## Square D Test Plugs and Sockets

Designed to facilitate keeping a record of the rate of power consumption of each motor without loss of production.

To make test, instrument is plugged in, at top and bottom of switch, and switch thrown off. Current is then caused to flow through meter.

**Square D Meter Service Switches**

Accessible Main Fuses

Fuses and Blades Dead When Switch Is Open

Single Phase—D.C.—Polyphase

30, 60, 100 Amperes—Meter Test—125-250 Volts  
2 or 3-Wire Service

No. 30331, Flap Open

No. 10373, Open

Designed for use in connection with meter service, with the main line fuses so located at the front of the switch, that the customer may have access to them for replacement, after first throwing the switch lever to the Off position then raising the auxiliary cover or flap. Opening the flap does not afford access to the switch mechanism proper, this mechanism being under the main cover and sealed.

**Square-D Meter Service Switches**

With Accessible Main Fuses

Polyphase

The switches are designed for 2-phase and 3-phase, 3-wire systems, having each leg of the service fused and switched.

Both the fuses and switch blades are ahead of the meter and are dead when switch is in Off position. An interlocking device also makes it impossible to close the switch when auxiliary cover or flat covering fuses is open.

When testing with these devices either or both current coils of the meter may be disconnected without interrupting customer's service. This is accomplished by means of the meter testing links or blades.

### Universal—Ganging Type—For Banked Installations

#### 1, 2 and 4-Branch Circuits with Fused and Solid Neutral

Cat. No. 13211  
Main Cover Open

The cabinet of this switch is in the form of an inverted T and the switches may then be ganged or banked without the use of connecting troughs or nipples. The over all length of the wiring gutter at bottom of each switch is 10 1/4 inches.

For wiring troughs to obtain other meter centers than those permitted by the width of the switch itself and also for vertical wiring troughs to connect 2 or more banks of switches. Nos. 20735, 20736 and 20737.

At the end of each bank of switches use trough closing plate No. 20533.

## No. 5000 Wigginton Voltage Testers

For Use on All Low Tension Circuits

Designed to replace the ordinary lamp for indicating voltages. Requires no lamp. Enclosed in a rugged fibre case. Place one wire in each side of the circuit and the indicator shows what the voltage is. Tester also indicates whether a.c. or d.c. Long rubber covered lead wires are provided. Steel strands in wires make the leads capable of resisting strains without breaking. Fibre handles insulate the lead wires. Sharp points make it possible to pierce the insulation of wires without destroying the insulation. Used to locate open circuits, blown fuses, or motors running single phase.

**Square D Locking Plates**

To Adapt Square D Meter Trims to Standardized Switches

No. 24352

The complete line of Square D meter trims, 11000 series, can be used with the standardized switches. This is accomplished by means of locking plates which fit into the standard opening in the combination type end wall, or in the case of locking plate, Cat. No. 22383, fit into the end opening of the switch.

The locking plates which make it possible to use the 11000 series meter trims on standardized switches, provide for the 30, 60 and 100-ampere switch installations when the combination end wall having the standard opening is used. On 30-ampere switch installations the end wall type locking plates fitting into the end opening of the switch are also provided.

**Square D Steel Meter End Walls**

For 30-ampere Switches

When desired, meter end walls, which fit into the end opening of the standard switch, can be supplied. The terminal chamber of the meter sets down into the opening and the meter end wall is fitted over the terminal chamber. Meter end walls are furnished for each type of meter in common use. When this type meter wall is desired for Square D 60 or 100-ampere installations, the meter end designed for the 2-pole, 100-ampere switches of other manufacturers fits all Square D 60 and 100-ampere types.

\*Cat. Nos. 21301 and 21323 are similar except that No. 21301 is used with meter terminal cover and holding stud in place, while No. 21323 is used with terminal cover and holding stud removed.

## Square D Steel Meter Shutters

Designed to enclose the meter terminal chamber and the conductors between the switch and the meter. Meter terminal chamber projects into opening at top of switch. With the adoption of the standard opening, all that is necessary is to remove the blank steel shutter, install the meter and insert a metal meter shutter into opening.

## Square D Cabinet Supported Fuse Blocks

The cabinet supported fuse block is a double-pole cutout for Edison plug fuses. It provides accessible branch fuses and fits into the U-shaped twistout openings in the side of the standardized cabinet. Each switch may be fitted with one or two fuse blocks. The cover of the block is kept closed by means of a spring.

Fuse blocks may be fitted not only to 30-ampere cabinets, but by using locking plate Cat. No. 20531 will fit both 60 and 100-ampere Square D cabinets.

Cat. No.	Amp.	Poles	Volts	Price Each
1021	30	2	125	\$1.55

## Square D Connecting Troughs

Connecting troughs are used to connect standardized switches in gang installations. The trough fits into the U-shaped opening in the side of the cabinet and affords an easy and convenient method of enclosing the bus wires.

The use of troughs eliminates the need for conduit, lock washers and bushings.

Cat. No.	Length In.	Price Each	Cat. No.	Length In.	Price Each
20733	3 1/2	\$.50	20738	8 1/2	\$.90

## Square D Locking Plates

Used with connecting troughs and fuse blocks with 60 and 100-ampere standardized switches. The locking plate fits over the trough closing the opening left in the switch box and is locked in place by the cover.

Price, Cat. No. 20531.....each \$ .20

## Bull Dog Safety Switches

Interlocking mechanism is designed to permit accessibility for inspection to qualified persons. An inherent weakness of many enclosed switches is their inaccessibility to inspection, without disconnecting the load and shutting down production.

Bull Dog Safety Type Switches are so designed that the interlocks may be temporarily neutralized to permit of a thorough inspection of the switch in any position. This is very important—lack of inspection to any mechanical or electrical apparatus may result in dangerous conditions.

Springs where used, are designed so as to allow a wide factor of resiliency and to be normal when not functioning. Springs, however, are only an auxiliary. Bull Dog Safety Type Switches can be opened and closed even if the springs should break or be intentionally removed. Springs serve only to accelerate the action.

"Bull Dog" Safety Type Switches are quick (positive) make and quick-break.

After the action is started the opening and closing of the switch is beyond the control of the operator, on all sizes that may be used as operating switches. The opening and closing mechanism is independent of the springs, which are merely used to increase the speed of action, a highly desirable and necessary feature where safety type switches are opened and closed under load.

A few switches of the larger sizes and higher voltages, as well as all double throw switches, are listed without quick-make and quick-break features, since such switches are generally used for disconnecting purposes only—not under full load. If desired, however, they may be equipped with auxiliary quick-break attachments at a slight additional cost.

The switch may be removed from the box as a unit, without removing the operating mechanism or removing the cabinet from the wall. The inter-locking operating mechanism may be removed as a unit, without necessarily removing the switch from the box. Parts are standardized and made by dies designed for the particular part so that replacement parts can readily be secured, if required.

We have avoided barriers, shields and all features which would hide the operating parts of the switch, as the switch parts should be seen and immediately adjusted or repaired if required, at any time fuses are replaced.

When the switch parts are covered it is impossible of course to see and repair in time any defects which might possibly have developed, and these parts should be readily visible to the electrical maintenance man whenever cabinet is opened.

Bull Dog Safety Type Switches are not designed as to make it impossible for the experienced electrician to get in touch with live metal parts but are so designed that it is impracticable to come in contact with live metal parts, without intent.

The box dimensions were determined by actually wiring up the switches, taking time studies of the period required to properly connect them without subjecting the cable insulation to any undue strains.

All switch parts (except 30-amp. porcelain base switches) are built-up, milled, soldered and pinned. The jaws are flared to ensure easier entry of the blade and to eliminate arcing points from contact surfaces.

**Bull Dog Safety Switches**

**Switch Blades and Crossbar Construction**

Illustration shows the blade and crossbar construction used in 30, 60 and 100-ampere Bull Dog Safety Switches, while in 200, 400, 600, 800 and 1200-ampere switches heavier type blades are used.

The crossbar consists of a steel rod, insulated by a one-piece horn fibre tube. Each blade has a fibre bushing through which the insulated crossbar is inserted, thereby giving a double insulation

and making it impossible for any of the blades to become loosened from the crossbar. This is the only construction which assures the operator that all blades of the switch are Open when the handle indicates the Off position. The main function of a switch is to fully open and close a circuit. With Bull Dog blade and crossbar construction the performance of the function at all times is assured.

The blades of Bull Dog Safety Switches are reversible. Should any blade become injured, turn it over and a new perfect contact surface is available.

**Specifications**

**STEEL BOX** is made of high grade, Code Gauge Steel, baked black enamel finish.

**OPERATING HANDLE** is provided with stops for the On and Off position so that the switch cannot be forced beyond the established limits.

The box proper is provided with conduit knockouts to meet almost any condition.

Special drillings will be furnished, when specified on order at 50 cents net per hole.

**SWITCH BASES** are of highest grade electrical slate, exceptionally thick, to stand the heavy service required of them.

Where parts are fastened together with screws or bolts, lock washers are invariably used.

**CASTINGS** have been avoided and forged parts used instead.

All bearings and bearing points are of drawn steel, ensuring a wide bearing surface and preventing raw edges which would otherwise cut into and weaken the movable elements.

**SWITCH COVERS** are of highest grade steel with a drawn panel. The main object of the drawn panel is to make the box proper shallow, thereby making the switch more accessible.

**Locking Features**

Illustration shows Bull Dog Safety Switch Cabinet with the door locked and the Switch in the On position.

By using three different locks, it is possible for the foreman, electrical maintenance man and millwright to each separately lock the Switch Off—a most desirable safety feature while repairs or changes are being made by the electrical or millwright departments. It also makes it possible for the foreman to lock the Switch Off whenever required.

**NOTE.**—The same lock is ordinarily used to accomplish the two-fold purpose of locking the switch box closed and the switch Off. Should occasion require it is also possible to lock the switch in the Off position and leave the cover latch in neutral.

**Bull Dog Type A Safety Switches**

**Safety Interlocks**

**Double Throw**

**Not Fusible**

**Bull Dog Type C Safety Switches**

**Quick-Make, Quick-Break**  
**Single Throw—Fusible**  
*Schedule G*

No. BJF221S

Bull Dog Type C (punched clip) externally operated switches are designed for use where severe service conditions do not exist to warrant investment in the more ruggedly constructed, machine made, Type A Switch.

Quick-make and quick-break is a feature of the Bull Dog Type C line. As a safety factor quick-make is more important than quick-break, as it prevents unintentional operation of the switch, because of the conscious effort required to compress the quick-make spring.

Only one spring is used to perform both the functions of quick-make and quick-break. The operation of the switch is not dependent on this spring, however. The switch could be operated if the spring broke or were removed.

The blade and crossbar construction is unique. There is no chance for a blade to remain in contact after the handle is pulled to the "off" position.

\*\*125 volts.

\*Equipped with removable end plate.

**Bull Dog Type A Safety Motor Starting Switches**

**Quick-Break—Straight Connected**  
**Single Throw—Fusible**  
*Schedule F*

A set of auxiliary blades shunts the fuses during the starting period.

The switch is provided with interlocks, so that it will not be thrown "on" when the door is open; and so that the door cannot be opened when switch is in the running position.

Means are provided so that a qualified electrician may inspect the switch in any position. This avoids the necessity of shutting down the motor to inspect the switch or fuses.

**Seco Standardized Meter Service Switches**  
**Sealed Service Side Fuse Type**

**For Single-Phase and D.C. Service**  
 30, 60 and 100 Amperes

This is a complete meter service unit of the switch-fuse-meter connected type and provides a main switch and cut-out, service side fuses, full meter protection, and testing facilities, all sealed within the cabinet so that none but an authorized person may have access to them.

For testing purposes separate switches are provided on the load side of the meter.

The Seco conforms to standard cabinet dimensions, using all standardized endwalls and accessories.

Specify type of endwall desired when ordering.

## Seco Meter Service Switches

Sealed Service Side Fuse Type

For Single-phase and Direct Current Service

30-ampere Capacity

No. 9523

The Seco Switch is a complete meter service unit of the switch-fuse-meter connected type and provides a main switch and cutout, service side fuses, full meter protection, and testing facilities, all sealed within the cabinet so that none but an authorized person may have access to them.

Cat. No.	Volts	Poles	Fusing	Switch Blades	Neutral	Test Blades	Std. Pkg.	PRICE, EACH

## Acco Standardized Meter Service Switches

Accessible Service Side Fuse Type  
For Single-Phase and D.C. Service

30, 60 and 100 Amperes

A complete meter service unit including main switch and cutout, with meter protective and testing facilities. Of the switch-fuse-meter connected type. When switch is at off position, slide cover may be opened and fuses removed with assurance that fuse contacts are dead; switch cannot again be moved to on until slide is closed.

Separate switches are provided on load side of meter for testing purposes.

Uses all standardized endwalls and accessories.

Specify type of end-wall desired when ordering.

## Noark Branch Circuit Attachments

For Single-Phase and D.C.

30 Amperes, 110-220 Volts

2 and 4 Circuits, Plug Fuses

Cat. No. 9423, 2-Circuit

Attachments for use with standardized meter service switches consist of a specially designed fuse block enclosed in a metal cabinet with hinged cover, permitting ready access to the fuses, while a dead front protecting plate conceals all wiring and prevents contact with live parts. Provided with a threaded coupling and lock nut to attach to a standard meter service switch through the center knockout of the cover hinging endwall.

Assembled with the necessary wires (identified neutral) for connection to the meter service switch cabinet. Wires are so arranged that they may be connected on either a 2 or 3-wire feed.

### 2-Fuse Type

Two 2-wire circuits, single fused, solid neutral.

One 2-wire circuit, double fused.

One 3-wire circuit, solid neutral.

### 4-Fuse Type

Four 2-wire circuits, single fused, solid neutral.

Two 2-wire circuits, double fused.

Two 3-wire circuits, solid neutral.

One 3-wire circuit and two 2-wire circuits, single fused, solid neutral.

Standard package, 10.

Price, No. 9423 2-Circuit.....each \$3.10  
Price, No. 9443 3-Circuit.....each 4.10

## Noark Standardized Universal Meter Service Switches

Accessible Branch Plug Fuses  
For Single-Phase and D.C. Service  
30 Amperes

This switch is of the switch-fuse-meter type in which blades, fuses, and all current-carrying parts are dead when switch is in off position. Service switch, service fuses, and all service connections are sealed and accessible only to authorized persons. Branch circuits or load side fuses are accessible at all times.

Any combination of single or double fusing of a service with either single or double fusing of the branch circuit may be secured.

Testing contacts are provided so meters may be tested without interruption of service. Switch uses all standard endwalls and accessories such as adapters, troughs, etc.

**Noark Doall Standardized Meter Service Switches**

For Single-Phase and D.C. Service

30, 60 and 100 Amperes

The Noark Service System is a complete line of standardized service installation devices which provides for all electrical service-entrance and meter service requirements for single-phase, poly-phase and d.c. All requirements are embodied in a single, compact, convenient unit including the cutout block with switch, and fuse receptacles, meter connections and testing contacts. All are mounted in and completely enclosed by the safety cabinet.

Interchangeable endwalls snap-lock into the cabinets. The meter terminal chamber projects through the opening in the endwall into the cabinet. A simple adapter is used in the case of a side connected meter. Standardized fittings provide unlimited flexibility in banked installation arrangements.

This complete provision for all essential requirements incorporates the following advantages:

1. Protection of life and property.
2. Safety service switch, externally operated.
3. Insurance against tampering.
4. Service cutout.
5. Meter connection block.
6. Meter testing device.
7. Lock-off, for service suspension.
8. Distribution branch cutout block.
9. Enclosure of all branch-circuit wire connections.

\*Westinghouse O. A. 5-10 ampere meters are in different size cases with different size terminal chamber widths. Endwalls for these meters are listed separately, as above. In ordering be sure to note terminal-chamber width.

†When these meters are used without terminal-chamber cover, endwall is provided with terminal cover extension. Order catalog No. 909773, price and standard package same as listed above.

††Shutter type endwalls have an opening 5 1/4 x 2 1/4 inches in the 30-ampere size, and 7 x 2 3/4 inches in the 60 and 100-ampere size, closed with a blank shutter. All blank shutters are provided with the two standard knockouts for meters with standardized terminal chambers; the smaller knockout fits 5 to 15-ampere meters, and the larger knockout fits 25 to 75-ampere meters. Meter fitting shutters for old style meters are sold separately as listed above

Sauter Time Switches

Type S-15-II

The function of a time switch is to close and to open an electrical circuit at pre-determined hours, i.e., to automatically operate a switch at the desired time, generally twice a day.

The 14-day clock movement is used only in the 15-ampere, double-pole switch. It has a 6-jewel lever type escapement and a simple and rugged clock train of gears. It is an excellent time keeper irrespective of temperatures. Six full turns of the winding key keep the clock running and the time switch operating for 2 weeks without attention.

The 40-day clock movement is used with switches only up to 15-ampere capacity. It has a lever type escapement with 11 jewels and an Invar metal balance wheel unaffected by temperature. One full winding will keep the time switch operating for 40 days without attention.

Self-Winding clock movement is used in all switches over 15-ampere in capacity and also obtainable in 2 and 10-ampere switches. This is a large and rugged clock. Has perfect time keeping accuracy under indoor or outdoor conditions.

Electric motor is not used in the 14-day and 40-day hand-wound clocks. In the self-winding clock of less than 10 amperes it is used only to re-wind the clock movement. In the switches of 10 amperes and over, it is used immediately before switching-time, both to re-wind the separate switch main-spring and to re-wind clock. This second spring thereby gets ample power for quick make-and-break action of the electric switch. The motor is series universal for use at 115 and 230-volt, d.c. or a.c. of any frequency.

Type ZM

The astronomic dial can be supplied only on electrically wound clocks. Its function is to automatically re-set the daily switching operations in accordance with the gradual change of local sun-time, wherever the time switch operates a lighting circuit either on an all night or on a part night schedule.

Examples: Street lights come on automatically a quarter hour after sunset and stay on automatically till half an hour before sunrise, correcting their tripping time from day to day as the season progresses. Electric signs come on 5 minutes after sunset, till any desired fixed time of night.

Most types of Sauter Time Switches can be furnished equipped with a special 7-day dial for omitting all switching operations Sundays. For indoor use, (or outdoor use when protected from direct contact with elements) switches come in dust-proof pressed steel case. For outdoor use in a weather-proof cast iron case or galvanized pressed steel case. For underground use they come in a submersion-proof cast iron case.

Type ZEE

Type HZS

Sauter Time Switches

Continued

Selection of type:

The amperage and voltage of the circuit to be timed will govern the choice of type. (If the circuit is over 15-ampere or over 250 volts, there are only the motor operated switches.)

The schedule of operating hours governs the choice of dial:

If the times of switching are to repeat themselves at the same moment every day till re-set, a clock with plain dial is selected.

If the times of switching on or off or both on and off are to change every day with local sun-time, a clock with astronomic dial is selected.

If the switching is to be omitted on Sundays, a clock with the additional Sunday cut-out is specified.

Inquiries should give the following information:

1. Amperage of circuit to be controlled.
2. Voltage of circuit to be controlled.
3. Program of operation.
4. Is a plain dial or an astronomic dial desired.
5. Is a Sunday cut-out desired.
6. Is the switch for indoor, outdoor or underground installation.

Hand-Wound Clocks (Dustproof Case)

Nos. S-15-II is a 14-day clock; the Nos. ZME-2-I, 10-I and 15-II are 40-day clocks.

Symbol	Amperes	Volts	Type	Oil Re-quired Gals.	PLAIN DIAL Ship. Wt., Lbs.	Price Each	ASTRONOMIC DIAL Ship. Wt., Lbs.	Price Each

†For Sunday cut-out add \$25.00 to price.

†These primary voltage switches have a 110/230-volt operating and control motor which is fed generally from an adjacent secondary distribution circuit. However, with certain of these switches, an in-built transformer is furnished to make the apparatus independent of any outside source for its control secondary voltage.

†This switch has a transformer for the motor. The ratio is 19:1. This transformer can be used on 4600-volt primary and on 2300-volt primary, 40-60 cycles.

= This switch is for underground installation (for example in manholes), wherever a watertight primary voltage time switch is needed. Switch is immersion-proof.

NOTE.—Switch oil is not included, neither in the price nor in the weight. A good grade circuit breaker oil must be used.

**Anderson Type L Automatic Time Switches**  
Double or Triple-pole, High Tension, Oil Break

This type of switch is constructed for handling alternating current up to and including 6600 volts, and is furnished either two or three-pole. This apparatus is used in connection with small current transforming apparatus where the lamps can safely be connected to the secondary coil of transformer in its position of maximum voltage. Prices listed below are for complete apparatus, including oil chamber and sufficient oil to fill same to working level.

**For Potentials Not Exceeding 3300 Volts**

Cat. No.	Cap. Amps.	No. of Poles	DIMENSIONS, INCHES			Ship. Wt., Lbs.	Price Each
			High with Terminals	Width	Depth		
11039	25	2	20½	11	7	83	\$120.00
11040	50	2	20½	11	7	83	130.00
11043	25	3	21	14	7	102	144.00
11044	50	3	21	14	7	102	160.00

**For Potentials Not Exceeding 6600 Volts**

11084	25	3	22	19	8	129	180.00
11085	50	3	22	19	8	129	196.00

For the Sunday or holiday cut-out attachment installed in any of the above, add \$14.00 to price.

For the double daily operation attachment installed in any of the above, add \$14.00 to price.

For the time extension device installed in any of the above, add \$14.00 to price.

Type L Time Switches may have either the time extension or the double daily operation attachment, but cannot have both.

A 110-volt heating coil in switch tank only, is standard equipment in all the above. 220-volt coil supplied if so stated on order.

**Anderson Type SL Automatic Time Switches**  
Double or Triple Pole, Oil Break  
Electrically Wound

The Type SL is for controlling circuits up to 6600 volts. The switch is so designed that the current has a quick make and break and is opened and closed in a tank of oil.

Prices listed below are for complete apparatus, including oil chamber and sufficient oil to fill same to working level.

**For Potentials not Exceeding 3300 Volts**

Cat. No.	Cap. Amp.	No. of Poles	DIMENSIONS, INCHES			Ship. Wt., Lbs.	Price Each
			High with Terminals	Wide	Deep		
11098	25	2	22	11	8	92	*\$200.00

11105	50	3	23½	19	9	137	†276.00

\*One gallon of oil, included in list price, shipped with each switch.

†Two gallons of oil included in list price, shipped with each switch.

‡Three gallons of oil, included in list price, shipped with each switch.

The Sunday or holiday cut-out attachment, the double daily operation attachment and the time extension device cannot be put in any Type SL Electrically Wound Time switch.

A 110-volt heating coil in switch tank only, is standard equipment in all the above. 220-volt coil supplied if so stated on order.

For season changing device, add \$20.00 to price.

Wooden housings complete: For the 25 and 50-ampere, 2 and 3-pole 3300 volts, and the 2-pole 6600 volts add \$20.00 to list price; for the 3-pole 25 and 50-ampere 6600 volts add \$28.00 to list price.

**Tork Clock Switches**

**10-Day Clock Switches**

Tork 10-Day Clock Switches are widely used for turning electric lights, or anything else electrical on and off on regular daily schedules. They are simple to set, easy to wind once a week with a definite stop to prevent overwinding. Simply install in place of any other switch. The clock part or time motor is built as a dust-proof unit, easy to remove with a screwdriver.

An extra pair of operating pins can be ordered for additional daily on and off operation.

Cat. No.	Poles	Capacity	Case	Movement	Price Each
115	1	15 Amps. 125 Volts	Indoor	10-Day	\$20.00
130	2	30 Amps. 250 Volts	Indoor	10-Day	25.00
166	1	Single-Pole, Double Throw	Indoor	10-Day	25.00
111	2	Momentary Contact	Indoor	10-Day	25.00
215	1	15 Amps. 125 Volts	Outdoor	10-Day	25.00
230	2	30 Amps. 250 Volts	Outdoor	10-Day	30.00

**Windless Clock Switches**

Windless Clock Switches perform the same operation as 10-day Clock Switches with the additional advantage of requiring no hand winding. Furnished for a.c. or d.c. 110 to 220 volts current.

*730	2	30 Amps. †250 Volts	Indoor	Windless	\$60.00
*830	2	30 Amps. †250 Volts	Outdoor	Windless	65.00

**Combination Type Clock Switches**

Combination Type Clock Switches consist of a No. 115 Tork Clock and a magnetic contactor. They are not connected and are to be installed separately. Prices include the contactor and Tork Clock.

76062	2	*A.C., 60 Amps.	Indoor	10-Day	\$50.00
75062	2	*D.C., 60 Amps.	Indoor	10-Day	70.00
76102	2	*A.C., 100 Amps.	Indoor	10-Day	75.00
75102	2	*D.C., 100 Amps.	Indoor	10-Day	125.00

**Novitas Astronomical Dial Time Switches**

For turning lights on at sunset and off at sunrise in specified latitudes.

Cat. No.	Poles	Ampers	Capacity	Case	Movement	Price Each

\*When ordering, specify a.c. or d.c., voltage, and number of cycles if a.c.

†Refers to switch capacity only.

‡Oil break.

Prices and specifications on Tork Switches for use with high voltage and for special switching operations furnished on request.

## Tork Windless Clocks

A.C. or D.C.

Furnished for any specified voltage of d.c. or a.c., whether it be the common 110-125-volt current, the less common 220-volt service, a 32-volt farm lighting plant or a 6-volt battery.

### The Movement

The Tork Clock Windless movement is of fine and sturdy construction throughout. All wheels and pinions are cut. The balance staff runs in ruby bearings. Both balance wheel and hair spring are made of special materials so that time-keeping is unaffected by ordinary temperature changes.

### Reserve Power for Emergencies

When first connected to current supply, a reserve spring winds for about 20 seconds after which the clock operates with the reserve spring in a fully wound condition as long as it is connected. The main spring is electrically wound every 2½ minutes. The clock will run for 24 hours without current if the supply is interrupted. When the current supply is resumed the reserve spring is fully rewound at once.

### Guarantee

Guaranteed to be regulated within 30 seconds per week between 40 and 100 degrees Fahrenheit, while electrically connected. Fitted with micrometer regulator permitting definite regulations as small as 2 seconds in 24 hours. Every clock is closely regulated before shipment and the movement sealed.

### Cost of Operation

The cost of current for operating a Tork clock is less than one cent per year.

## Tork Surface Type Windless Wall Clocks

For any wall.

Furnished with 6 feet of cord and attachment plug.

When ordering, specify a.c. or d.c., voltage, if a.c. give number of cycles.

No.	DIAL INCHES	CASE INCHES	Price Each
1508	8	11¾	\$40.00
1512	12	17¼	50.00
1518	18	25¾	75.00

## Tork Flush Type Windless Wall Clocks

For use where suitable outlet boxes are provided. A 4¼-inch square outlet box, 2½ inches deep (Universal Key No. 72171) or any other approved box providing smaller space should be used.

Specify a.c. or d.c., voltage, number cycles.

No.	DIAL INCHES	CASE INCHES	Price Each
1608	8	10¾	\$40.00
1612	12	14¾	50.00
1618	18	22¾	75.00

## Tork Double-Faced Windless Hanging Clocks

When ordering, specify a.c. or d.c., voltage and if a.c. give number of cycles.

No. 2018-T, same as No. 2018 but with glass dials illuminated from within and with full chain switch, \$250.

No.	DIAL INCHES	CASE INCHES	LENG. OVER ALL FT.	Price Each
2012	12	15	3	\$125.00
2018	18	21½	5	200.00

Additional Length ..... per foot \$2.00

## No. 2512 Tork Program Signal Windless Wall Clocks

\* Operates bells, sirens or other signal devices on any desired daily schedule. Duration of each signal, 12 seconds; minimum intervals between signals, 5 minutes.

Furnished with 10 pins for 10 signals in 24-hour period Case, Flemish oak.

Diameter dial, 12 inches; case, 17½ inches. Price, No. 2512 ..... each \$100.00

## No. 2124 Tork Double-Faced Windless Street Clocks

Mechanically Controlled by No. 2106 Interior Wall Clock

No. 2124 Street Clock has 24-inch glass dials illuminated from within.

No. 2106 interior wall clock has 6-inch dials. Oak case is 9 inches high and 8 inches wide.

Price, No. 2106 Interior Wall Clock with Hands, and Mechanism Only for Outside Clock No. 2124. each \$115.00

## Hartford Cackle Time Switches

Designed for use in poultry houses to turn the lights on, automatically, at a predetermined time. The clock is a standard one-day movement. It is encased in a heavy, drawn-steel, dust-proof case. Requires daily winding.

The base on which the movement is mounted is of heavy steel, and this, with all supporting parts is japanned to prevent rusting. The switch proper has over-size electrical contacts, and is of the quick make and break type, capacity, 10 amperes, single pole. The entire time switch is compact, has a neat and pleasing appearance, plain figures, is an easily read, accurate time piece.

Price, Cackle Time Switches ..... each \$12.50

**Tork Windless Clocks  
For Residences and Offices**

The fine timekeeping qualities of Tork Windless Clocks are due partly to the unique uniformity of driving power which is their exclusive feature, and also to the fine quality of the movement which includes a jeweled and compensated balance.

These clocks are not dependent for performance upon any outside regulation or control. Just plug a Tork Windless Clock into the lighting circuit and it will immediately wind up fully and run in that condition while current is supplied. For emergency interruptions of current supply, a 24-hour reserve is provided. The finest timekeeping is obtained when there are no long current interruptions.

No. 6105

Brown toned solid mahogany case with 5-inch silver-plated dial etched in 2 colors. Cast gold-plated bezel with invisible hinge.

Price, No. 6105.....each \$55.00

No. 6206

Solid mahogany case with carved scrolls, brown toned and highlighted. Has 6-inch silver-plated dial etched in 2 colors with cast gold-plated bezel and invisible hinge.

Price, No. 6206.....each \$61.00

No. 6306

Solid mahogany case with fine carving, brown toned and highlighted. Has 6-inch silver-plated dial etched in 2 colors with cast gold-plated bezel and invisible hinge.

Price, No. 6306.....each \$85.00

No. 6406

Solid black walnut case handsomely carved. A fine piece of cabinet work. Has 6-inch silver-plated dial etched in 2 colors with cast gold-plated bezel and invisible hinge.

Price, No. 6406.....each \$90.00

**G-E Copper Cable Terminals**

With Rounded Corners—1 Stud Hole

Schedule G, Class 1

No. 2282

Made of pure, seamless copper tubing assuring high conductivity, freedom from fractures and long life.

Knowing the difficulties often experienced with lop-sided or undersized cable pockets, improperly drilled, stud-holes, etc., special care is always exercised to insure the maintenance of the specified dimensions.

In both depth and inside diameter, the cable pockets of G-E Terminals are of generous size, freely accommodating the cable for which they are rated without filing.

NOTE.—When cable with rope core is used, rope must be removed to allow cable to fit terminal.

## Sherman Soldering Lugs

U. S. Pat. Reissue 14401

Lugs are seamless all around. The solder cannot leak out at the closed end. Also better conductivity is secured. Round end lugs in small sizes are recommended.

These soldering lugs or drawn copper terminals are now approved and listed by the Underwriters' Laboratories. The requirements are exacting, and the designs and dimensions have been carefully worked out.

\*Circular mils. Sizes 1/4 to 15/16-inch furnished round end, unless otherwise specified. Sizes 15/16-inch and larger furnished square end unless otherwise specified.

STUD HOLE.—Size or position of stud hole may be changed or lugs furnished without stud holes at no additional charge. Any variation should be carefully specified.

TINNING.—Lugs tinned inside of tubular portion will be furnished at extra charge, depending on size.

MARKING.—For identification, as approved fittings, lugs will be marked with letter S and Underwriters' rating in amperes, placed crosswise of the flat portion at wire end.

To Select Terminals According to the N.E.C. Ratings Governing Knife Switches, Use the Following Equivalents

Capacity...amperes	30	60	100	200	400	600	800	1000
Size Lug...inches	1/4	3/8	1/2	1 1/16	1 1/16	1 1/16	1 3/4	2 1/16

## Sherman Soldering Lugs

### Two-Hole

Two-hole lugs are made from seamless tubing and furnished square end, unless otherwise specified.

Flat portion (E) may be made to order either longer or shorter but tubular portion (D) cannot be changed.

TINNING.—Lugs tinned inside of tubular portion will be furnished at extra charge, depending on size.

MARKING.—For identification as approved fittings, lugs will be marked with letter S and Underwriters' rating in amperes, placed crosswise of the flat portion at wire end.

Sherman Heavy Duty Soldering Lugs

N.E.L.A. Standard

2-Bolt Tongue

These lugs are made of best quality seamless copper tubing.

Lugs Nos. 8, 8-A, 9-A, 10 and 11 have a sufficient socket diameter to take rope core

cables of sizes listed without removing core. Core can be drilled out and space filled with copper plug or solder.

Blank lugs furnished when specified; otherwise regular bolt holes as listed. Special drilling may be had if specified. Straight lugs regularly furnished. Angle lugs 45 and 90-degree when specified at extra price. Plain finish unless otherwise specified. Special finishes as follows at added prices: Rosin dipped, cadmium plated, tinned inside only and tinned all over. Special dimensions may be made to order with dimension E other than regular or special drilling of stud holes, at added cost.

**STUD HOLE.**—Size or position of stud hole may be changed or lugs furnished without stud holes at no additional charge. Any variation should be carefully specified.

**MARKING.**—Dimensions in tables represent standards required and approved by Underwriters. All lugs which come up to these standards, whether special or regular, are stamped for identification with letter S and N.E.C. rating in amperes across flat portion at wire end.

**FLUXING.**—Inside of wire hole may be treated with non-acid flux, making lugs ready for soldering, at slight additional charge.

**TINNING.**—Lugs tinned inside of tubular portion at additional expense, depending on size.

**AUTOMOBILE WORK.**—Seamless lugs from 3/8 to 5/8 inch inclusive are particularly adapted for automobile work.

## Sherman Heavy Duty Angle Lugs

45-Degree

90-Degree

Straight lugs may be bent in the field, but this should be done only after annealing in large sizes. Dimensions the same as for straight lugs, except F, as given below.

Approx. Dimensions F, Inches

## Sherman Drab Copper Connectors

The connector consists of two seamless terminals, so constructed that when bolted together both halves are in perfect alignment, and no part projects beyond the circumference of the tubular portion, so that a piece of flexible conduit or fibre sleeve may be slipped over the entire connection for insulation.

While two pieces are required to make one complete connector, they are described and listed by single pieces. Connectors are not shipped assembled, as they cannot be applied in that way.

On account of its small size, only the 1/4-inch connector is made wider than tubular part.

Size (A) In.	Maximum Stranded Wire B & S Gauge	APPROXIMATE DIMENSIONS, INCHES							Approx. Wt., Lbs. per 1000
		B	C	D	E	F	G	H	
1/4	8	.186	1 1/4	3/8	1 3/2	1 3/2	3 3/2	3/8	9

These sizes have two stud holes. Two bolts and nuts are required for each complete connector, consisting of two pieces.

**Sherman Set Screw Connectors**

Number Plainly Stamped on Each Connector. A great help in re-ordering and saves much time and possible mistakes in sorting small mixed stocks.

Screws Heavily Galvanized, Hence Rust-proof. This prevents rusting in dealer's stock, and enables consumer to use connectors over again when removed from temporary work.

Neatly Boxed and Plainly Labeled. Insuring neat shelf stock.

These connectors are made from solid brass rod; all dimensions and proportions are carefully held to accurate size.

Four-screw connectors are made also with hole clear through, and two-screw connectors can be furnished in divided wall style.

## Universal Test Clips and Insulators

No. 24 Clip Only

No. 27 Clip with No. 29 Insulator

Test clips save time in electrical work requiring quick temporary connections. May be used over and over again. Insulators are packed separately, 5 red, 5 black to a box.

### Screw Connection

No.	Description	Spread of Jaws, In.	Wt., Lbs. per 100	Price Each

## Universal Radio and Battery Clips

No. 45

Nos. 45 Pee Wee, 27 and 48-B Clips are adapted for connecting to dry cells, binding posts and to the terminals of any radio apparatus.

No. 24-A is for A batteries. No. 21-A is a ground clip, equally suitable for series or constant potential charging in battery work. No. 11-A for high discharge test.

Screw connection on all clips. No solder required.

No.	Description	Length of Jaws, Inches	Spread of Jaws, Inches	Approx. Weight per 100 Pounds	Price Each
45	Pee Wee, Cadmium-Plated...	1 1/2	3/8	1 1/2	\$.05

## No. 2527 Frankel Extension to Clips

Brass, nickel-plated.

Extension attached to clip, to reach obstructed and crowded corners that are out of reach of the clip.

Price, No. 2527, Extension only.....each \$ .40

## No. 2544 Frankel Battery Charging Clips

Heavy steel with rivet pin. Lead plated. Fits any terminal. Length, 4 inches.

Price, No. 2544 ..each \$ .50  
" Springs only .. " .05

## No. 2535 Frankel Electric Testing Clips

Made of brass, nickel plated. Flattened back with bolt and nuts to attach connector.

Price, No. 2535.....each \$ .60

## No. 2533 Frankel Electric Testing Clips

Made of brass, nickel-plated.

Tapped for set screw.

Drilled to slip 1/8 inch.

Price, No. 2533.....each \$ .48

## No. 2530 Frankel Electric Testing Clips

Brass, nickel-plated.

Especially adapted for fine wire or charging light batteries.

Price, No. 2530.....each \$ .20

## No. 2534 Frankel Electric Testing Clips

Brass, nickel-plated.

Drilled with 1/8-inch hole.

Has screw back.

Price, No. 2534.....each \$ .48

## No. 2539 Frankel Electric Testing Clips

Made of brass, nickel-plated.

This is a radio clip, especially designed for finest work.

Price, No. 2539.....each \$ .14

## No. 2542 Frankel Electric Testing Clips

Nickel silver.

The pin pierces the insulation and makes a positive connection. Use teeth for fine wires. Has nut, bolt and washer making an extra strong connection.

Price, No. 2542.....each \$ .65

## No. 2523 Frankel Electric Testing Clips

Brass, Nickel-plated

It has no pin to pierce the insulation. Used for charging light batteries, etc.

Price, No. 2523.....each \$ .40

## No. 2554 Frankel Bleeder Taps

To facilitate making taps from main feeder in small narrow spaces.

**Dossert Solderless Connectors****Type A 2-Way Connectors**

Type A connector is for use on cable, stranded or solid wire rod and tubing. The connector

should not be used on a cable that is subjected to heavy strains. Sleeve is tapered at both ends and slotted lengthwise.

**Type B 2-Way Connectors**

Is for use on stranded wire or cable only and is designed to make a joint which will withstand heavy tensile strains.

Type B connector is fitted with rings, one of which fits over bare cable, while the other is forced under first or second layer of strands, giving great tensile strength. Not made for conductors smaller than No. 0.

**Type C 2-Way Connectors**

Type C 2-way connector is furnished with round nuts and nipples which fit it for use on high-tension circuits. All connectors can be furnished Type C in either Type A or B. When ordering, state type desired, and give circular millage or gauge number of wire and state whether wire is solid or stranded. For example: 12 two-ways, Type C, Type A for 0000 stranded wire.

**Reducers**

Reducer is made in 2-ways and 3-ways. Illustration shows a 2-way reducer. Used for connecting solid or stranded conductors of different diameters end to end. For cable it can be furnished either Type A or B.

When ordering reducers, state type desired, and give circular millage of cable or diameter of rod, or gauge number of wire and state whether wire is solid or stranded.

**Elbows**

The elbow is used to connect conductors that are at right angles to each other. It consists of a right angle nipple, 2 compression nuts, and 2 tapered compression sleeves when Type A, or 2 sets of rings when Type B. The elbow can be furnished for any 2 sizes of cable, wire, rod or combinations of same. When ordering, give same information as is required for Type A or B 2-way connectors.

**3-Way Connectors**

The 3-way connector is used to make a 3-way splice when the cables are at right angles to each other, that is, to splice 2 main wires or cables in a straight line and at the same time connect a branch wire to the main.

Type A can be furnished to connect any 3 sizes of wire, cable, rod or combinations and Type B to connect any 3 sizes of cable.

**Cable Taps**

The cable tap is used to connect a branch wire, rod or bleeder to a main wire, rod or bleeder. It does not splice the main, but simply clamps on to it. Equalizers are combinations of 2 cable taps. They can be furnished to equalize the load on any 2 sizes of cable.

**Front Lugs**

The front-connected lug is used for connect-

ing wires and cables to flat bus bars or front-connected switches, and for terminals on large machines used in the generation and conversion of current such as rotary converters, etc. The wire end of lug is equipped with a tapered nut and sleeve, by means of which the cable is held in the lug and electrical contact secured.

**Dossert Solderless Connectors****Type Y Connectors**

Type Y connector is used to make a three-way splice when the cables are not at right angles to each other. It consists of the Y-shaped three-way nipple, three compression nuts, and three tapered compression sleeves when Type A, or three sets of rings when Type B. Branches are double prongs and stem single prong. The special Y is used to make a three-way

splice when all cables are parallel to each other. It consists of a U-shaped three-way nipple, three compression nuts, and three tapered compression sleeves when Type A, or three sets of rings when Type B.

**Back Lugs**

Back-connected lug is used to connect wire or cable to bolt or stud. Wire end of lug is equipped with tapered nut and sleeve, by which cable is held in lug and electrical contact secured. The lug is connected to stud or bolt in the usual manner by means of contact nuts.

**Angle Lugs**

Angle lug is furnished with rectangular or round contact surface, the dimensions of which correspond respectively with those of front or back-connected lugs for the corresponding sizes of wire or cable. Can be furnished to connect cable at any angle, but standard angles are 45 and 90 degrees. Contact surface is furnished undrilled, but, if desired, bolt holes will be drilled without extra charge.

**Swivel Lugs**

Swivel lug is used to connect two wires or cables at any angle to the same stud or bolt. It consists of two lugs with round contact surfaces, and with the wire hole (nut) of each lug offset to one side, thus permitting a swiveling motion. They can be furnished to connect any two sizes of wire or cable to the same stud or bolt. When ordering, give circular millage of wire, and state whether wire is solid or stranded.

**Insulating Covers**

Insulating cover is furnished with Dossert Two-way Connectors in all sizes from 250000 C.M. to No. 14 inclusive. The sizes are No. 4 for all sizes of wires from No. 14 to 4, inclusive, solid and stranded, No. 1 for connector taking Nos. 1, 2 and 3 wires, No. 00 for No. 0 and 00 conductors, and the 250000 C.M. for 0000 and 250000 connectors.

**Type F Stud Connectors**

This stud connector consists of a nipple, which is equipped with a regular tapered nut and compression sleeve to take a certain size wire. The other end is tapped and threaded to receive the stud. In ordering give diameter and threads per inch of stud that connector is to be screwed onto, the gauge number of wire, and state whether wire is solid or stranded.

**Type M Stud Connectors**

This stud connector is used to connect wire or cable to flat strip or block. When ordering, give diameter and length of stud and number of threads per inch, circular millage of cable, and state whether wire is solid or stranded.

**Type S Cable Anchors**

Type S cable anchor is used to connect the end of cable to a strain insulator for the purpose of anchoring it, and can be used on stranded conductor only.

## Dossert Solderless Connectors

### Type R Cable Anchors

Type R cable anchor is used to anchor one cable and to take a branch wire off the anchored cable. It can be used on stranded conductor only. Consists of a Type B elbow and a clevis for the strain insulator, so arranged that the pull will be exerted on one cable only. It can be made

for any two sizes of stranded conductor. When ordering, give the circular millage of cable or gauge number of wire, and number of strands in conductor.

### Type E Cable Anchors

Type E cable anchor is used to splice and anchor two cables that are at right angles to each other, and can be used on stranded conductor only. Consists of a Type B elbow and one eye for attaching the strain insulator by means of a guy rope. The eye is so arranged that both cables will be under tension when a strain is put on the guy rope. When ordering, give circular millage of cable or gauge number of wire, and number of wires in conductor.

### Service Box Lugs

Used to connect wire to fuse. By the use of a sleeve with different size wire holes the same lug may be used for connecting all wires from a certain predetermined size down to the smallest size used. When ordering, give width of lug, diameter of binding screw, circular millage or gauge number of wire, and state whether wire is solid or stranded.

### Service Box Plugs

This Service box plug is furnished with a round shank for making connection to fuse. When ordering, give diameter and length of plug or shank, circular millage or gauge number of wire, and state whether wire is solid or stranded.

### Grounding Caps

The grounding cap is used for connecting ground wires to the end of a pipe. One end of the cap is threaded to take a standard gas pipe, while the other end is fitted with a compression nut and tapered sleeve, by means of which wire is connected to cap.

When ordering, give size of gas pipe and circular millage or gauge number of wire, and state whether solid or stranded. Special sizes will be made according to specifications at reasonable prices.

## How to Order Dossert Connectors

Use the proper name of connector desired.

In ordering Type A connectors for concentric laid cables, give circular millage of cable, or exact diameter of cable, or exact diameter of one wire, and number of wires. Type A for solid wires, rods and tubing; give gauge number of wire, or exact diameter of rod, wire or tube, or circular millage of rod. Type A, for rope laid and flexible cable; state if cable is rope laid or flexible and give circular millage or gauge number, or exact diameter, or send sample of cable. The diameter for given size of rope laid or flexible cable is considerably larger than that of the same size concentric laid cable.

For Type B it is necessary to know the number of wires in a cable in furnishing Type B connectors, for the reason that the diameter of the core over which the inner ring fits varies according to the number of wires in the cable.

Do not use the words T joints or tees. In ordering connectors of that character, state plainly three-way or cable taps.

In ordering the smaller sizes of connectors from No. 0000 down, please be sure and state whether for stranded or solid wire.

## Dossert Solderless Connectors

### Types A, B and C

Size of Conductor	Price, Each

500000	C. M. Main, No. 00 Branch	1.70
500000	C. M. Main, and Branch	2.00

## Extra Sleeves

Insulated Cable Tap Cover

Dossert Connectors of a given size may be used on cable of a smaller size by changing the sleeves. For example: a connector for No. 4 stranded cable may be sleeved to take any smaller size down to No. 14, either solid or stranded, a different sleeve being used for each size of wire or cable.

Size of Nut	Size of Cable	Price per 100	Size of Nut	Size of Cable	Price per 100

00	00-12	14.00	0000	1-12	20.00

## Frankel Solderless Connectors

Frankel solderless connectors constitute a complete line of connectors for splicing either stranded or solid wire, without the use of solder.

As the compression nut is screwed on to the connector, the slotted jaw grips the cable firmly.

### No. 2560 Two-way Connectors

Two-way connectors are used to splice two conductors of the same size end to end.

### No. 2562 Elbow Connectors

Elbow connectors are used to connect conductors at right angles, these conductors being of the same or any two different sizes.

### No. 2586 Reducer Connectors

Reducers are used for connecting two conductors of different sizes of cable or solid wire. They are especially useful in connecting solid round buses on switch-

boards to feeder cables.

### No. 2568 Front Connector Lugs

Front connector lugs are used for connecting solid wire or cable to generator terminals on large machines or to flat bus bars or front-connected switches. These connectors are made with rectangular contact surface undrilled, but will be furnished drilled when so specified, without addition to list price.

### No. 2569 Back Connector Lugs

Back connector lugs are used for connecting solid wire or stranded cable to bolts or studs, and are made with round contact surface. Contact surfaces are undrilled, but where desired they will be furnished drilled when so specified, without addition to list price.

### No. 2570 Angle Connector Lugs

Angle connector lugs are made with round or rectangular contact surface at an angle of 45 degrees to the connector. Contact surfaces are undrilled but where desired they will be furnished drilled without addition to list price.

### No. 2572 Right Angle Connector Lugs

Right angle connector lugs are made with round or rectangular contact surface at an angle of 90 degrees to the connector. Contact surfaces are undrilled but where desired they will be furnished drilled when so specified, without addition to list price.

### No. 2561 Three-way Connectors

Three-way connectors are used to make a main line splice that is on a straight line, and a branch splice off of the main. If the main does not have to be cut except to make this connection, use a cable tap as listed on another page. They can be furnished to connect any three sizes of solid wire or stranded cable.

## Frankel Solderless Connectors

### No. 2575 Cable Tap Connectors

Cable taps are used to connect a branch of solid wire or stranded cable to main cable or wire. The tap consists of a hook for clamping on the main, and a connector attached to the shank of the hook for taking the branch. The hook is provided with an inner shoe, which can be adjusted by turning the shank or post of the tap.

The cable is connected to the main by placing the hook over the wire or cable from which the insulation has been removed and then inserting the shoe and screwing up the post until contact is made. The branch is connected up by inserting the bared end of the wire or cable in the connector and tightening up the compression screw.

### No. 2576 Equalizer Connectors

Equalizers are used to equalize the load on two power cables that run parallel or at right angles to each other. They are made by combining two cable taps and are installed in the same manner that a cable tap is connected to a main. Furnished with connecting rod straight or bent, as desired.

### No. 2574 Swivel Lugs

Swivel lugs are used to connect two parallel cables to the same stud or terminal. Also to provide a means of connecting two or more cables at any desired angle.

### No. 2558 U Connectors

Frankel U Connectors are used where it is desired to connect the ends of two parallel leads together such as resistance or heating element units. U connectors can be supplied with outlets of two different sizes if desired.

When ordering, specify distance between centers of outlets.

Prices upon application.

### No. 2559 Y Connectors

Frankel Y Connector is used to make a 3-way splice when the cables are not at right angles to each other.

This connector can be furnished to connect any 3 sizes of wire, cable or rod. When ordering, state sizes required and type of wire or cable.

Prices of Y connector for different combinations upon application.

### No. 2563 Plug-Stud Connectors

Plug-stud Connectors are used for connecting stranded cable or solid wire to a threaded stud or rod.

### No. 2564 Stud Connectors

Stud Connectors are used to connect wire or cable to block terminals by screwing the stud end of the connector into a threaded hole, or to strap terminals by inserting the stud end through a hole in the strap and clamping by a nut on the end of the stud.

## Frankel Solderless Connectors

### No. 2565 Grounding Tap Connectors

Used to connect wire or cable to a gas pipe for grounding a circuit. The pipe end of the connector is threaded.

### No. 2566 Service Box Plugs

Used for making connections to fuses where a round stud is required on the connector for use in a screw clamp terminal.

### No. 2587 Cable Anchors

Used to connect the end of a cable to a strain insulator for the purpose of anchoring it.

### No. 2589 Cable Anchors

Used to splice and anchor 2 cables that are at right angles to each other. Consists of an elbow connector and one eye for attaching the strain insulator by means of a guy rope.

### No. 2588 Cable Anchors

Used to anchor one cable and to take a branch wire off the anchored cable.

### No. 2597 Collets

Frankel Collet consists of a threaded and split collar from which radiate 1, 2, 3, 5, 7, or 9 Frankel Fittings; particularly valuable for use with reactance coils.

### Prices

For price of swivel lugs double price of lugs.

For price of special size cable tap, take two-thirds of price of larger end, plus one-third of price of small end.

Reducers are priced by taking one-half of each end, and adding.

3-ways are priced by taking one-third of each end, and adding.

Cable anchor style No. 2587 is same price as 2-way connector No. 2560.

Cable anchor style No. 2588 and No. 2589 are same price as 3-way connector No. 2561.

Collets are made in any combination of sizes. When ordering, specify size of center hole, size and kind of wire or cable, and number of outlets required. All collets are special.

## Frankel Solderless Connectors

Specify type of conductor—solid, stranded, I.P.S. sizes, flexible, or special.

0	3/4	3/8	0000	1	1/2

Prices upon application.

List prices cover connectors with plain finish for solid wire, stranded or flexible cable. Connectors for special size rod, tube, flexible or rope laid cable, are priced on application.

To order, specify style number, B & S gauge number or circular milage of conductor, and state whether for solid or stranded cable.

Strain connectors are made by cutting grooves on inside of slotted jaw. Add 15 per cent for this type.

Extra charges for patterns and design in development work, of special connectors.

Dimensions on request.

**Ideal Wire Connectors**  
Solderless—Tapeless

A copper-coated steel spring with a carrying capacity equal to that of the wires to be joined is mounted in the crown of a strong insulating material. The spring threads on the wires and makes a positive contact between them. Just skin the wires and screw on the connector, like a nut on a bolt. One size will join solid to solid wires, stranded to stranded wires, or solid to stranded wires.

Made in two sizes: Black universal connector for two No. 18 to four No. 14 wires. Brown large universal connector for four No. 14 to three No. 10 wires.  
Price ..... carton of 100 \$3.25  
Price ..... package of 1000 30.00

**Medium Rectangular Connectors**

1 7/8 x 1 1/4 x 3/4 Inches

For connecting portables, fans, small motors, etc. It is provided with two eye screws, one at each end, which can be used for anchoring the cord should it be deemed advisable to do so. Can also be looped together by this means, so that when separated the two parts can be located and connected without delay. Will make and break a circuit for any apparatus or lights using 15 amperes or less. Standard package, 200.

Price, No. 6535, Rectangular Connector Complete each \$ .90  
" " 6537, Plug Only " .56  
" " 6538, Receptacle Only " .56

**Large Rectangular Connectors**

2 1/8 x 1 7/8 x 3/4 Inches

This connector can be used with safety for making and breaking 25 amperes on 125-volt circuits.

For experimental and demonstrative purposes.

For stage lighting, connecting motors and numerous other applications it will prove a reliable quick acting circuit controller.

A hole is provided in the larger part of the connector for tying the conducting cord, which eliminates all strain on the binding screws. The contact receptacles and plugs are separated by one inch of hard rubber composition, which makes a perfect insulation between the current carrying parts.

Price, No. 6540, Rectangular Connector Complete each \$1.20  
" " 6539, Plug Only " .75  
" " 6543, Receptacle Only " .75

**Small Rectangular Connectors**

1 7/8 x 1 1/16 x 7/16 Inches

Convenient for making and breaking a circuit rapidly and frequently. Can be used on any battery circuit.

Price, No. 6536, Rectangular Connector Complete each \$ .70

**Fahnestock Binding Posts**

**Fahnestock Test Connectors**

No. 30

Made of special copper bronze spring metal. Two large clips riveted together. Both snap over the line. Made for different size wire. Used for test poles or for party line work. Length over all, 1 5/16 inches. Width, 5/8 inch.

In ordering, state kind and size of wires to be connected.

Price, No. 30, Bronze ..... each \$ .15

No. 31

One large and one small clip riveted together. Large clip snaps over the line wire. The small clip does not snap over, and will take up to and including No. 10 B. & S. Used for attaching drop or jumper wires to line on junction poles or party lines. Length over all, 1 5/16 inches. Width, 5/8 inch.

In ordering, state kind and size of wires to be connected.  
Price, No. 31, Bronze ..... each \$ .10

No. 33

Temporary connector for emergency work and test sets.

Will snap over a No. 8 B. W. G. Wire.  
Price, No. 33, Bronze ..... each \$ .15

No. 34

One end snaps over the line. Made in only one size. Snaps over a No. 12 B. W. G. Wire.

Other end does not snap over wire but will take any size wire up to No. 9 B. W. G.

Length over all, 2 3/4 inches. Width, 5/8 inch.

Price, No. 34, Bronze ..... each \$ .10

GE2440	1	25	75	\$4.00

## Clearsite Plug Fuses Non-Renewable

Clearsite Plug Fuses mount the fuse link within the fuse body, thereby giving clear vision of the link. The drop-out type of link is used which lessens the internal operating pressure. The fuse body is made of heat-resisting molded insulation, black in color.

## G-E Standard Fuse Plugs

National Electrical Code Standard  
Schedule G Class 3

The G-E Standard Fuse Plugs are of two-piece construction. The screw shell is fastened in place by means of a bottom porcelain button which prevents the screw shell working loose and breaking the circuit. It also makes it possible to remove the fuse plug intact even if firmly seated in the cutout.

Standard package, 500. Pkg. weight, 45 pounds.

**G-E Locking Plugs**

*Schedule G Class 1*

These plugs are furnished in two types—one to lock circuit open, central station wishes to temporarily discontinue furnishing current, and one to lock circuit closed, making triple-pole cutouts meet the electrical code requirements that on three-wire grounded service the neutral be unfused.

**No. GE2538—Lock Circuit Open**

GE2250	10	100	2	\$ .20

**GE2303 Grounded Circuit Plugs**  
*Schedule G (Class 1)*

This is a simple device designed to convert any double fuse plug cutout into a single fuse cutout with one unbroken side merely by screwing it into the grounded side of the cut-out.

No.	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GE2303	50	100	2	\$ .05

**Bryant Neutral Wire Fuseless Plugs**

**30 Amperes, 125 Volts**  
*Schedule H*

Can be inserted in neutral fuse receptacle of triple-pole cut-out base and soldered in place.

Designed to make possible compliance with the specifications of the National Electrical Code Rule which requires the omission of fuses from the grounded side of the line except at the cut-out base just preceding the lamp socket or other translating device.

Cat. No.	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
559	75	300	15	\$ .05

**Trico Fuse Pullers and Replacers**

Trico Fuse Pullers and Replacers are sturdy and convenient tools. The hands do not come in contact with live electrical parts.

The laminations are manufactured by a new method of punch-shaving, which produces smooth and strong edges. They are made from the highest grade of genuine super-strength gray horn fibre. Double width near the pivot. They are securely riveted together and will give a lifetime of safety first service.

Price, Midget Size, 5 Inches Long	each	\$ .35

Price, Giant Size, 12 Inches Long	each	3.00
Price, Jumbo Size, 20 Inches Long	each	12.00

**Benjamin Convertible Cut-out Bases**

**With Flush Safety (Dead Front) Covers**  
**30 Amperes, 125 Volts**

No. 59904

No. 59804

Base is one-piece porcelain with 3-point support which insures safe mounting.

Two styles of covers—flush and overhanging. Overhanging covers are for use with standard surface mounting or flush type cut-out boxes. They fit snugly to inside of cut-out boxes and form gutters.

Covers are made of sheet insulation. Removal of covers is easy; gives access to all connections.

The fuse receptacles are designed so that it is impossible to "substitute with a penny" when a fuse blows. The compact grouping of these receptacles produces bases of comparatively small area. Large binding screws insure permanent connection and easy installation.

**With Flush Safety Cover**

Cat. No.	No. of Circuits Sgl. Pole Fusing	Dbl. Pole Fusing	Size of Base Inches	Std. Pkg.	Net Wt. Lbs., Ea.	Price Each

2 Wire, 125-volt Branches  
4 Double Fused Branches

\*This diagram does not apply to Cat. Nos. 59904 and 59804. In addition, these cut-outs can be used for 3-wire branch circuits and individual metering of branch circuits.

## Buss Fuse Wire

Buss fuse wire and strip will carry indefinitely current 10 per cent in excess of the values shown under heading capacity and will open the circuit in one minute when subjected to 50 per cent overloads of such ratings.

This is based on a distance between contacts or terminals of 2 inches.

Standard package, 25 pounds.

## Buss Open Link Fuses

The listing below covers all popular and necessary sizes and types and is simplified to aid in buying this material.

Buss open link fuses can be obtained with many other styles of terminals and in larger capacities. When in need of any open link fuses not listed below send sample or complete description.

Fuses listed are not standard stock material. Great care should therefore be exercised in ordering this material as it is not returnable.

110 to 1000 Amperes  
Terminal Nos. 7, 16, 10 or 28

Amp.	No.	STANDARD Slot In.	TERMINAL Width In.	Other Terminals	Car-ton	Std. Pkg.	Price Each
1 to 30	1	3/16	3/8	0, 2, 3	20	100	\$1.10
35 "	60	3/16	9/16	2, 5	20	100	.14
65 "	100	1/4	1 1/16	7	10	50	.20
110 "	200	3/8	3/4	12, 16	10	50	.30

F 664	60	8.70
F 1064	100	9.50
F 2064	200	14.40
A 4064	400	39.60
A 6064	600	63.70

The 30 and 60-ampere fuse blocks have ferrule type clips.

The 100 and 200-ampere fuse blocks have formed clips.

The 400 and 600-ampere fuse blocks have milled in clips.

Fuse blocks over 600 amperes are made with multiple milled parts for each pole.

## D & W Enclosed Fuse Cutouts

0-600 Amperes—250 Volts  
Schedule FC—Class 1

No. 91101

No. 91103

**Economy Renewable Cartridge Fuses**

Economy Fuses always operate at rated capacities. The drop out renewal link is quickly and easily replaced and the restoration of a blown Economy Fuse to its original efficiency is the work of a few moments only.

In operation only the drop out portion of the renewal link is destroyed. This link being the least expensive part of the fuse, a substantial saving annually in fuse maintenance costs is possible as compared with the use of the one-time fuse.

These fuses operate successfully under all conditions of service without filling material of any description. Fuses bear the "Und. Inspected" label in all capacities from 0 to 600 amperes in both 250 and 600 volts.

## Economy End Washers

For Knife Blade Type Fuses

When fuses are blown, the end washers may become damaged or bent to such an extent that replacement will be necessary before renewal can be made. A set of end washers consists of one metal and one of resilient material.

Price, No. 9201 for 65 to 100 Amps. 250 Volts. per set	\$.02
Price, No. 9202 for 101 to 200 Amps. 250 Volts. per set	.03
Price, No. 9203 for 201 to 400 Amps. 250 Volts. per set	.04
Price, No. 9204 for 401 to 600 Amps. 250 Volts. per set	.05
Price, No. 9601 for 65 to 100 Amps. 600 Volts. per set	.02

## Union Instrument Protecting Fuses

Fibre Tube

This fuse is particularly suited for protecting switchboard instruments, pilot lights, etc. It has no definite rating but will open on approximately 1/2 ampere.

*8255	1/2	1 1/8	1 1/2	3/8	20 100	1 1/2	....	\$.25
8260	1/2	2	2 1/2	5/8	20 100	5	....	.25

8275	1/2	4 1/2	5	3/4	10 100	11 1/2	....	.40

\*No. 8255 is for 250-volt service only.

When ordering fuses of special dimensions, give the length over caps, distance across cap and clip, thickness of blade, length over all and diameter of tube.

Fuses of intermediate ampere capacity have same dimensions as those given above for minimum and maximum capacities.

**Union Instrument Protecting Fuses**

Approved by the National Board of Fire Underwriters

Glass Tubes—Brass Caps

This is a small glass tube for rosettes and attachment plugs, and for the protection of instruments and pilot lights on switchboards.

For service on circuits not over 250 volts.

**Columbia Type A Surface Cabinets**

For Cut-Outs, Service Switches and Panel Boards

**CONDUIT DRILLING.**—Cabinets are regularly furnished with knockouts for 1/2-inch conduit spaced evenly on all sides. Specify if boxes are wanted without knockouts. For special conduit drilling, a small extra charge is made.

Knockouts other than 1/2-inch can be supplied if required.

**SIZES AND THICKNESS OF STEEL.**—Cabinets are listed in standard sizes and gauges (thickness). Cabinets of any size and thickness of steel up to 3/16-inch thick can be made to order.

**GALVANIZED CABINETS.**—Type A Cabinets in any size can be furnished in galvanized steel.

**WEATHERPROOF CABINETS.**—These cabinets can be made with slant tops, rubber gaskets and solid brass catches, for exposure to the weather. Black japan or galvanized.

**HOLES FOR CUT-OUT, SWITCHES, ETC.**—Furnished at cost of one cent per hole per box. For tapped holes, add two cents per box.

**BOXES WITHOUT COVERS.**—If boxes are required without covers, deduct 20 per cent from prices. A flange will be supplied on front edges for mounting a wood trim or other cover if specified on order.

**SCREW COVERS.**—All cabinets will be furnished with screw covers at the same price, if so specified.

The boxes listed below are made of sheet steel of the required thickness to conform with Board of Underwriters' requirements, and bear the Underwriters' labels.

## Columbia Type P Flush Cabinets For Cut-outs, Service Switches and Panel Boards

These cabinets are provided with removable steel trim and door. Plain type without ornamental beads; body is formed from one piece of steel with corners folded in and securely welded.

Finished in black baked japan. Regularly equipped with knob and turn catch.

Cabinets having surface area of over 360 square inches are furnished with vault handle.

Cabinets can be supplied with any style hinges, catch or lock.

Holes for cut-outs, switches, etc.,

add one cent per hole per box net. For tapped holes, two cents per hole net. Minimum 50 cents net per order.

**CONDUIT DRILLING.**—Cabinets are regularly furnished with knockouts for 1/2-inch conduit. For special conduit drilling an extra charge will be made. Knockouts other than 1/2-inch are furnished at a net charge of 50 cents for each variation from 1/2-inch. This covers any number of knockouts in any number of boxes.

### Panel Board Cabinets

This style cabinet is especially adapted for panelboards. Give size of panel, or specify maker's name and manufacturer's number. Sizes not listed at proportionate prices. This style of cabinet can also be furnished for surface work if so ordered.

The boxes listed below are made of sheet steel of the required thickness to conform with Board of Underwriters' requirements and bear the Underwriters' labels.

All boxes are hinged on height unless otherwise specified.

When ordering, specify hinged side first.

All boxes are hinged on height unless otherwise specified. When ordering, specify hinged side first.

## Columbia Steel Cabinets

### National Electrical Code Extract Regarding Cutout Boxes and Cabinets

#### Thickness of Metal

	No. 16 U. S. Gauge— $\frac{1}{16}$
	No. 14 U. S. Gauge— $\frac{3}{64}$
	No. 12 U. S. Gauge— $\frac{1}{64}$
	No. 10 U. S. Gauge— $\frac{3}{64}$

#### Cutout Boxes and Cabinets with Hinged Doors and Screw Covers Types A, AX, AG and Screw Cover Pull Boxes

No. 16 gauge is used where no surface area exceeds 360 square inches and if no single dimension is over 24 inches.

No. 14 gauge is used where no surface area exceeds 1000 square inches and if no single dimension is over 40 inches.

No. 12 gauge is used where no surface area exceeds 1500 square inches and if no single dimension is over 60 inches.

No. 10 gauge is used for any cabinet larger than noted above.

#### Cutout Boxes and Cabinets with Removable Doors and Trims

No. 16 gauge box, No. 14 gauge trim, is required where no surface area exceeds 360 square inches and no single dimension is over 24 inches.

No. 14 gauge box, No. 12 gauge trim, is required where no surface area exceeds 1000 square inches and no single dimension is over 40 inches.

No. 12 gauge box, No. 12 gauge trim, is required where no surface area exceeds 1500 square inches and no single dimension is over 60 inches.

No. 10 gauge box, No. 10 gauge trim, is required for cabinets larger than noted above.

#### Hardware

The code requires that all cutout boxes and cabinets be provided with a catch. On the smaller Type A cabinets, a friction catch is permitted; on the smaller flush cabinets a turn catch is satisfactory, on the larger flush cabinets, a cupboard catch is best.

A lock may be used if desired but if furnished, must be in addition to the regular catch; a combined lock and catch may also be used in place of separate locks and catches.

Where single doors are over 48 inches high, they must have a three-point catch operated by a single knob or handle holding the doors closed at the center, top and bottom; where the door exceeds 24 inches in width, double doors must be provided, regardless of its height operated by a three-point catch.

#### Weatherproof Cabinets

For wet location and outdoor service, cabinets and cutout boxes must be so designed and constructed that a beating rain or moisture running down conduits or wall will not allow water to enter. They must be provided with external fastenings for mounting. Hinges must be of cast metal or of sheet bronze. Threaded holes for conduits must be reinforced to provide metal at least  $\frac{1}{4}$  inch in thickness. Bushed holes for open wiring must not be located either in the top or back except when special hood fittings are provided, and when located in the sides must be formed to provide a downward direction for wires leaving the cabinet. Devices made of sheet metal lighter than No. 10 U. S. gauge must be galvanized by the hot dip process after forming and assembly. Cabinets and cutout boxes made of sheets No. 10 U. S. gauge in thickness or heavier need not be galvanized after forming and assembly, provided galvanized sheets are used and all cut edges are painted. Other materials must be treated to give protection from corrosion.

#### Gutters—All Types

Cutout boxes or cabinets containing cutouts or panelboards require separate wiring gutters where more than four circuits are connected in the cabinet, unless the wires enter the cabinet directly opposite the terminals.

## Columbia Guttered Type Cabinets

### For Flush and Surface Work

Type PSG  
For Surface—Exposed—Work

A recent ruling of the Underwriters' Code requires that all cabinets enclosing cutouts or panelboards over four circuits must have a gutter frame and side wiring spaces or back wiring space, unless the wires leave the cabinet directly opposite the terminals. To take care of this ruling, a line of cabinets has been designed which is the most complete of its kind and can be adapted to almost every kind of cut-out in common use.

In addition to those listed, cabinets can be furnished in special sizes to accommodate any style or make of cut-out.

The resourcefulness of cut-out manufacturers has brought upon the market several styles of cut-outs which, when mounted in a guttered cabinet, make the installation superior to that of a regular plate panelboard, with a considerable saving in cost.

### General Description of All Types

**CODE STANDARD.**—All cabinets listed are National Electrical Code Standard.

**GUTTERS.**—Cabinets for all cut-outs listed (except Perkins Dead Front Panel Switches) are equipped with steel gutter frames. These frames conceal the side wiring spaces and are provided with bushed holes opposite the terminals of the cut-outs and in the mains.

Both gutter frames and doors are made to allow for a three-inch wiring space around the cut-outs. Cabinets for Perkins Dead Front Panel Switches are especially made so that the cut-outs are mounted on bridges across the back of the cabinet, allowing a back wiring space underneath and around the cut-outs.

**HARDWARE.**—All cabinets are equipped with steel hinges and cupboard catches. Any style of hardware can be used if desired.

**CONDUIT DRILLING.**—All cabinets are provided with  $\frac{1}{2}$ -inch conduit knockouts on all sides, unless other conduit drilling is specified.

**FINISH.**—The standard finish is baked-on japan. If specified, olive green or white enamel can be furnished at an extra charge.

**DIRECTORY FRAMES.**—Directory frames will be supplied if mentioned on order, at an additional charge of \$2.00.

Cabinets up to 24 circuits are listed. Any size cabinet can be furnished to accommodate any number of circuits.

#### Type PSG

This type is a superior cabinet for surface work and is suitable for any kind of installation. The door and trim is removable and is without ornamentation.

#### Type PFG

This type is similar to Type PSG, except that it is designed for flush work.

Type PFG  
For Flush—Concealed—Work

Prices do not include cut-outs. Other sizes can be made at proportionate prices. Give arrangement of cut-outs and switches, size of gutter frame and cabinet. These cabinets are also made in the above styles for any type of cut-out required.

When ordering, specify type of cabinet and Cat. No.

**Columbia Metal Cabinet Sizes  
For 2-pole Plug Fused Entrance Switches**

The size of cabinet which is adapted for a two-pole, 125-volt plug fused entrance switch is 4½ inches wide, 9 inches long and 3½ inches deep.

**For 3-pole Plug Fused Entrance Switches**

The size of cabinet which is adapted for a three-pole, 125-250-volt plug fused entrance switch is 6 inches wide, 11 inches long, and 3½ inches deep.

**Box Sizes Required for Wiring  
Steel Cabinets**

2-Pole

3-Pole

Two-pole fused entrance switch takes box 4½x9x3½.  
Three-pole fused entrance switch takes box 6x10x4.

## Crouse Hinds Panelboards

## General Specifications

Both Doors Closed

**BASES AND COPPER PARTS.**—The bases are made from selected natural black Monson slate. This slate is without flaws or metallic veins, and has very high insulating qualities. All copper parts are made of high grade, hard drawn copper of 98 per cent conductivity.

Small Door Open, Giving Access to Switches

**FINISH.**—The slate is furnished with a rubbed oil finish which gives a pleasing dead black appearance, and which, if marred or scratched, can easily be renewed by rubbing with an oily cloth. All exposed copper parts are polished and carefully lacquered except on contact surfaces.

**CONSTRUCTION.**—These panelboards are constructed not only to comply with but to exceed the requirements of the Underwriters' Laboratories, Inc., and bear their label.

**CIRCUIT CONNECTIONS.**—Two to two-wire panelboards are connected in the regular manner, adjacent poles of adjoining circuits being of the same polarity, but fed by separate circuit strips. Three to two-wire panelboards are connected for the Edison 3-wire system: that is, each branch circuit has one pole connected to the neutral busbar and the other pole connected to one of the two outside busbars. Three to two-wire panelboards can be arranged for 3-phase system distribution with the connections so made that the load is balanced on each phase as nearly as the number of circuits will permit.

**CIRCUIT STRIPS.**—Branch circuit strips are made of  $\frac{1}{2}$  by  $\frac{1}{16}$ -inch copper, formed in such a manner as to make direct connections to the main busbars, reducing the number of parts and contact joints to a minimum.

**CURRENT DENSITY.**—Current carrying parts are based upon a maximum current density of 1000 amperes per square inch cross section.

**CIRCUIT FUSE EQUIPMENT.**—All type A panelboards have the circuits equipped with clips for 1 to 30-ampere, cartridge fuses. These clips are formed from spring phosphor bronze. On some panelboards they are mounted on special composition bases.

All type D panelboards have the circuits equipped with receptacles for plug fuses. One of the receptacles is molded from special black composition. The others are porcelain with exposed surfaces black glazed. Each is fitted with a gilding metal screw shell. Complete receptacle includes housing, screw shell, brass pieces, and fastening screws.

## Crouse Hinds Panelboards

## General Specifications

Continued

Large Door Open, Giving Access to Fuses

**CIRCUIT SWITCHES.**—Knife switches are 30-ampere capacity equipped with substantial composition handles into which the blades are molded. Contact clips and hinge standards are each formed from one piece of  $\frac{1}{2}$ -inch by No. 16 gauge copper. The contact clips are flared at the top to insure proper entrance of the blades. Blades are made of  $\frac{1}{2}$ -inch by No. 12 gauge copper. Hinge joints are held under compression by spring washers and as the blades and contacts are ground in, a perfect contact is assured. Tumbler switches are 30-ampere, 250-volt. They consist of a special composition base on which is mounted the strong, positive, easy operating mechanism with indicating metal handle, and the heavy contact terminals comprising a sturdy, compact, durable unit with ample capacity to carry any reasonable overloads.

**CIRCUIT WIRE CONNECTORS.**—Phosphor bronze spring binding connectors especially designed to hold the circuit wires, can be furnished in place of binding nuts without extra charge, if specified. These connectors make positive contact and circuit wires can be connected quickly and easily without tools.

**CIRCUIT NUMBERS.**—The number of each circuit, except on safety panelboards, is shown by a white numeral inlaid on top of a black composition button which is firmly fastened to the base between terminals. On safety panelboards a double card holder is fastened to the steel switch cover just above the handles of each pair of switches. Ruled cards are supplied which are handy for lettering.

**MAIN SWITCHES.**—Main switches on all but types AT and DT safety panelboards are standard knife switches of substantial design and construction. They are equipped with special composition spade handles. Main switches on types AT and DT safety panelboards have laminated brush contacts and are quick break, double break, and non-retardable. They are simple and rugged in construction and will handle much more than their rated capacity. They are operated by a handle which projects through a shield that covers all other parts of the switch.

**SLATE FRAMES.**—Frames are made of oiled Monson slate  $\frac{1}{2}$ -inch thick and telescope or surround the panelboard. They are slotted for main feed and branch circuit wires and are held in position by adjustable corner brackets.

**CORNER BRACKETS.**—Adjustable corner brackets are made with a base section or panel clamp and an upright section or frame clamp. The panelboard rests on a part of the base sections which hold it  $\frac{3}{8}$  of an inch from the back of the box and it is held in position by set screws. The base sections have 2 elongated fastening holes to allow for adjustment and are held to the back of the box by 2 screws and large washers. The frame clamp sections are fastened to the base sections by a screw and the slate frame is held securely by tightening the wing nuts at each corner. The frame may be installed after the wiring is completed and it can be removed complete by taking out the screws, or it can be removed in sections after the trim is in place by taking off the wing nuts and inside clamp pieces.

**SHIPPING CLAMPS.**—When a panel board, slate frame and cabinet are shipped together, shipping clamps are provided to keep the panelboard and frame from jarring loose and causing breakage.

## Benjamin-Starrett Panel Boards and Cabinets

### Standard Galvanized Steel Boxes

**CONSTRUCTION.**—One piece of code gauge galvanized steel, over-lapped and riveted at corners with  $\frac{3}{4}$ -inch flange turned inwardly all around outside edges. This flange adds materially to the rigidity of the construction.

**GUTTER SPACE.**—All boxes for standard panel boards have 4-inch gutter space.

**DEPTH.**—Standard steel boxes are made deep enough to allow  $\frac{1}{8}$ -inch clear space back of panel boards and not less than  $\frac{1}{2}$ -inch clear space between door and current carrying parts on panel boards.

**DRILLING AND KNOCKOUTS.**—Boxes will be drilled for conduits without extra charge provided complete drilling information accompanies order. This information must be available before work can be commenced. On application, data sheets for laying out box drilling dimensions will be furnished.

A sufficient number of  $\frac{1}{2}$  and  $\frac{3}{4}$ -inch knockouts are provided in top of cabinet to accommodate the total number of branch circuits supplied by the panel. One-half this number are provided in bottom of cabinet.

**FLUSH OR SURFACE ADAPTATION.**—All standard steel boxes are made with flanges turned inwardly and can, therefore, be used for either flush or surface installation.

## Benjamin-Starrett Panelboards and Cabinets

Benjamin-Starrett Panelboards are easily and economically installed and incorporate features that insure low maintenance and efficiency in operation. A particularly advantageous feature of these panelboards is that all parts are removable from the front. They are compact and well proportioned and thus add to the appearance of any wiring installation.

### Features of Benjamin-Starrett Panelboards

**BASES.**—Molded composition, strong, fireproof, of high dielectric strength and unaffected by heat, moisture, oil or acids.

**PANEL.**—Indestructible in that molded base units are mounted on steel back. Barriers and switch plates are of steel.

**SWITCHES.**—Both single and double pole tumbler type are 30-ampere 250-volt heavy duty with quick break and make mechanism. All knife switches are 30-ampere heavy duty type.

**SAFETY TYPE.**—The cabinet for this panel is of the door-in-door construction, the large door giving access to mains and branch fuses, and small door to branch switches only. Large door is equipped with Yale lock and key and small door with latch only.

This type of panel is recommended for installations where branch circuit switches are manipulated by inexperienced persons and where it is desired to keep fuses under lock and key.

**PROTECTIVE TYPE.**—This type panel has a dead front protective shield covering the face of the panel which prevents accidental contact with any live part while changing fuses or operating switches. The cabinets have a single door with a

**SWITCH PLATES.**—Individual for each 4-branch circuit on 1-fuse panels; 2-fuse panels have individual switch plates for each pair of branch circuits.

**CAPACITY.**—All current carrying parts are based on maximum current density of 1000 amperes per square inch cross section.

**MAIN CONNECTIONS.**—Furnished in 30, 60, 100 and 200 amperes capacity in 5 standard types: Main Lugs Only, Fusible Main Knife Switches and Fusible Main Brush Switches.

### Types of Panelboards

combined spring latch and knob and a Yale lock.

Cabinets for panels having Fusible Main Knife switch have 2 doors: 1 door for the knife switch and the other for the branch fuses.

Panels with Fusible Mains have a small door in the protective shield, giving access to the main fuses.

**OPEN TYPE.**—This type panel is identical to the Safety Type except that it has a single door which gives access to all the fuses and switches on the face of the panel. This panel is recommended for installations where the manipulation of switches and the renewal of fuses are attended to by authorized persons. Equipped with combined Yale lock, latch and knob.

Type NLPT

### 1-Fuse Panels

These Panels are polarity type with a solid neutral bar to which the grounded conductors of the branch circuits are attached.

Panels and cabinets can be furnished in the types listed below:

#### Safety Type

**TYPE NSPT.**—Branches, 30-ampere, 250-volt single pole tumbler switches, for plug fuses; mains, 125-250-volt.

#### Protective Type

**TYPE NLPT.**—Branches, 30-ampere, 250-volt single pole tumbler switches, for plug fuses; mains, 125-250-volt.

### 2-Fuse Panels

#### Safety Type

These panels are arranged for 2 fuses for each 2-wire branch circuit.

Panels and cabinets can be furnished in the types listed below.

**TYPE SPT, 2-2-WIRE.**—Branches, 30-ampere, 250-volt double pole tumbler switches, for plug fuses; mains 125-volt.

**TYPE SPT, 3-2-WIRE.**—Branches 30-ampere, 250-volt double pole tumbler switches, for plug fuses; mains, 125-250-volt.

#### Protective Type

**TYPE LPT, 2-2-WIRE.**—Branches, 30-ampere, 250-volt double pole tumbler switches, for plug fuses; mains, 125-volt.

**TYPE LPT, 3-2-WIRE.**—Branches, 30-ampere, 250-volt double pole switches, for plug fuses; mains, 125-250-volt.

#### Open Type

**TYPE OCT, 2-2-WIRE.**—Branches, 30-ampere, 250-volt double pole tumbler switches for cartridge fuses; mains, 125-volt.

**TYPE OCT, 3-2-WIRE.**—Branches, 30-ampere, 250-volt double pole tumbler switches, for cartridge fuses; mains, 125-250-volt.

**TYPE OPK, 2-2-WIRE.**—Branches, 30-ampere, knife switch, for plug fuses; mains, 125-volt.

**TYPE OPK, 3-2-WIRE.**—Branches, 30-ampere, knife switch, for plug fuses; mains, 125-250-volt.

## Benjamin-Starrett Little Sentry Panel Boards with Cabinets

For Residences, Apartment Buildings, Small Stores, Schools, Small Factories and Similar Places Having from 4 to 12 Branch Circuits

Little Sentry Panels are ready for installations. Require no preliminary labor or adjustment. No rear connections to make. Trim, panel, fuse strips, and fuse receptacles can all be removed from the front. Wiring terminal of fuse receptacle is one piece and is held in place by two small bolts. Contact is made with the entire base of the fuse shell.

Safety is assured the user because a protective shield covers all live metal parts.

The following features make easy installation of Little Sentry Panels:

Panel is easily removed for pulling in wires by a quarter turn of 4 screws.

Fuse strip is removed by taking out 2 screws at top and bottom.

Each neutral branch connection is opposite fuse for that circuit simplifying the tracing of circuits.

Easy access to neutral bar by removal of fuse strip eliminating the bunching of wires at end of panel.

Fuse receptacles easily removed from panel without disturbing wiring.

Blown fuse can easily be located. The slot in the receptacle base makes it simple and safe to use a test lamp.

### Type NP Little Sentry Panels with Cabinets

For 3-Wire Service

Mains: 125-250-Volt

1-Fuse Branches

Branches: Arranged for Plug Fuses Only

Cat. No.	No. of Circuits	BOX DIMENSIONS, INCHES			Approx. Weight Pounds	Price Each

FA Panelboard and Cabinet Units

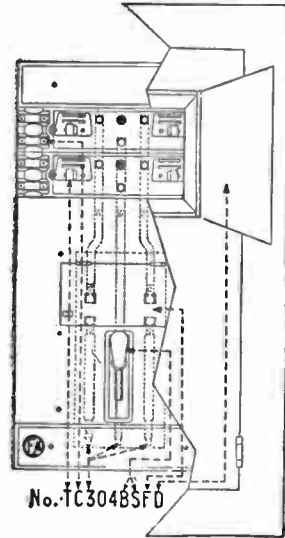

Explanation of Descriptive Catalogue Numbers

With the Frank Adam Electric Company method of descriptive listing your order is fully understood in all details through the various letters comprising each catalogue number. Should a clerical error be made when sending us the order the mistake will at once be noticed and inquiry made. This saves expensive shipments and a great deal of valuable time that occasionally are needlessly wasted when numerals and not descriptive listings are used. These catalogue listings were devised for your convenience and to enable us to give you better and faster service. Please note them carefully and use them in ordering.

## FA Drilling (Hole) Template for Steel Box Cabinets

If standard knockouts as shown in catalogue will not be satisfactory, send template, showing layout of holes with order, as we cannot start work on boxes until template is received.

NOTE.—Unless Template is sent with order, boxes will be shipped with standard knockouts.

### Dimensions of Conduit, Bushings and Spacing of Same

#### Rigid Enameled Steel Conduit

Internal Diameter Inches	Hole in Box Inches	Center to Center Inches
1/2	7/8	1 3/8

## FA Safety Type Standardized 2-Fuse Panel Boards and Cabinets

Type R

Type R3G

Type R Panel Boards are polarity type and built up of sections made of asbestos composition impervious to moisture. Each section contains two branch circuits. These sections are mounted on back of box, completely assembled, ready for connections to mains and branch circuits.

On account of the small wiring gutter, this type of panel board and cabinet can be used only when feeds for panel terminate in this cabinet. Whenever necessary to run risers through the cabinet, use Type R3G.

These panel boards can be used for either 2 or 3-wire service. Cabinets have 1½-inch gutter; fronts are finished in white lacquer with doors fitted with FA Latch only.

Type R3G Boards are also built up of single sections but the sections instead of being mounted on back of box are mounted on removable steel mounting backs.

This type of panel board is made with main lugs only as they are not wide enough to accommodate main switches or sub-feeders. Cabinets have standard 3-inch gutters, with adjustable panel board supports, with fronts finished in black lacquer having doors fitted with FA Latch only.

Type 2P3BSF

Type 2P3 Panel Boards are built up of 2 rows of single circuit sections and have the sections mounted on removable steel mounting backs. Main and sub-feeder switches are all safety brush type.

Main fuses are placed under separate locked doors and when used with safety switches cannot be opened unless switches are disconnected.

This type of panel board can be furnished with or without safety main switches. Sub-feeders and increased mains shown on other pages can be used on this type of panel.

Cabinets have standard width gutter with adjustable panel board supports having fronts finished in black lacquer with doors fitted with FA Catch Locks.

## FA Safety Type Standardized 2-Fuse Panel Boards and Cabinets

Type TP3L

Type TP3F

Type TP Panel Boards are built up with double branch sections made of asbestos composition. Each section has two 30-ampere 250-volt double pole tumbler switches with N. E. C. Edison plug fuse connections.

All sections are mounted on steel panel backs connected complete ready for main and branch circuit connections.

Main fuses are placed under separate locked doors and when used with safety main or sub-feeder switches, the doors cannot be opened unless the switches are disconnected.

Main switches are all safety brush type.

Cabinets have standard width gutters with adjustable panel board supports.

Fronts are finished in black lacquer and regularly furnished with one door equipped with FA Catch Lock as this type of panel board has no live metal parts exposed and when fuses are installed are absolutely safe.

When specified, door in front door as called for below in connection with TC panel boards and cabinets, will be supplied.

Type TC3BSFD

Type TC Panel Boards are also built up with double branch sections, each section having two 30-ampere, 250-volt double pole tumbler switches with N. E. C. cartridge fuse connections.

Mains are equipped same as for TP panel boards above.

The fronts are regularly furnished in "door in door" construction; the inner door, permitting access to branch switch handles only, is fitted with FA Latch; the main door permitting access to the entire panel board is fitted with FA Catch Lock.

On special order, fronts with one door only, which leaves the panel boards semi-safe, will be furnished, and will not be classed as a safety type panel board.

## FA Safety Type Panel Boards and Cabinets

### Type R Safety Type—2-Fuse

For 2 and 3-Wire Service

Mains, 125-250 Volts, 125-Volt Branches, with N. E. C. Plug Fuse Connections

Panels are made of sections of molded material. Boxes are made of code thickness galvanized steel, 1½-inch gutter. Front is of code thickness steel, white lacquer finish.

FA Type N2P3 Safety Type 1-Fuse Panel Boards and Cabinets

Single Fuse in Branch Circuits

Type N2P3L with Mains and Grounded Branch Circuit Connections Exposed

Diagram of Connections N2P3L Panels

Type N2P3L with Mains and Branch Circuit Connections Concealed

This type of panel board is built up complete with moulded sections mounted on steel backs ready for main and branch circuit connections.

Each section has 4 N.E.C. Edison plug fuse connections for 4 branch circuits connected to ungrounded bus bars, the grounded side of branch circuit and main connections are placed at top of board and when connected are concealed

by a blank section. Each connection is properly marked to correspond with markings of ungrounded branch circuits.

Cabinet boxes have standard width gutters between and around sections with adjustable corner supports.

Front is finished in black lacquer and has single door, equipped with FA Catch Locks.

## FA Type NTP3 Safety Type 1-fuse Panel Boards and Cabinets

## Single Fuse in Branch Circuit

With Mains and Grounded Branch  
Circuit Connections Exposed

Diagram of Connections

With Mains and Branch Circuit  
Connections Concealed

This type of panel board is built up complete with moulded sections, mounted on steel backs ready for main and branch circuit connections.

Each section has four 30-ampere, 125-volt, single pole tumbler switches with N.E.C. Edison plug fuse connections for controlling ungrounded sides of branch circuits, the grounded side of each branch circuit is fed direct from the bus bar and is not fused.

All unfused branch circuit connections on grounded bus are located at top of board and when connected up are concealed by blank sections. Each branch circuit connection is properly marked to correspond with markings of ungrounded branch circuits.

Cabinet has standard width gutters with adjustable panel board supports.

Front is finished in black lacquer and has single door equipped with FA Catch Lock.

## FA Type NTP3 Safety Type 1-Fuse Panel Boards and Cabinets

3-Wire, 125-250-Volt Mains

2-Wire, 125-Volt Branches with 30-Ampere Single Pole Tumbler Switches with N. E. C. Plug Fuse Connections  
Capacity 1928 Code per Branch

Panels are made of sections of molded material. Boxes are made of code thickness galvanized steel, gutter type. Front is of code thickness steel, black lacquer finish; flush or surface.

One door construction.

NOTE.—Panels will not be made for less than 4 circuit branches.

## FA Type NTP3D Safety Type 1-Fuse Panel Boards and Cabinets

## Single Fuse in Branch Circuit

With Mains and Grounded Branch  
Circuit Connections Exposed

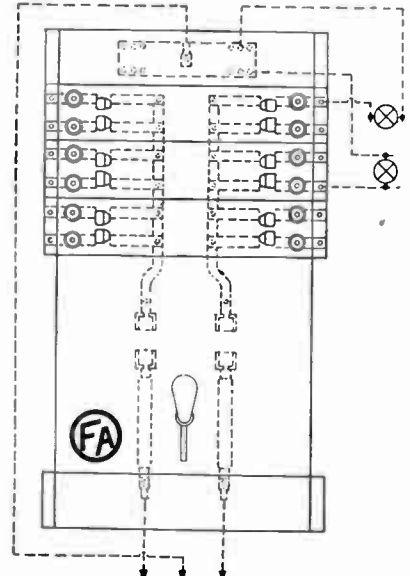

Diagram of Connections

With Main and Grounded Branch  
Circuit Connections Concealed

Mounted on steel backs ready for main and branch circuit connections. Panel board is built up complete with moulded sections each section having four 30-ampere, 125-volt single pole tumbler switches with N.E.C. Edison plug fuse connections for controlling ungrounded sides of branch circuits, the grounded side of each branch is fed direct from the bus bar and is not fused.

All unfused branch circuit connections on grounded bus are located at top of board and when connected up are concealed by blank sections.

Each branch circuit connection is properly marked to correspond with markings of ungrounded branch circuits.

Cabinet has standard width gutters with adjustable panel board supports.

Front is finished in black lacquer and is of door in door construction, the inner door permitting access to switch handles only is fitted with FA Latch, the main door permitting access to entire panel board is fitted with FA Catch Lock.

## FA Type NTP3D Safety Type 1-Fuse Panel Boards and Cabinets

3-Wire, 125-250-Volt Mains

2-Wire, 125-Volt Branches with 30-Ampere Single Pole Tumbler Switches with N. E. C. Plug Fuse Connections  
Capacity 1928 Code per Branch

Panels are made of sections of molded material. Boxes are made of code thickness galvanized steel, gutter type. Front is of code thickness steel, black lacquer finish; flush or surface. Door in door construction.

KP232KSF	32	200	24	79	6	15	70	583	250.00

NOTE.—Panels will not be made for less than 4 circuit branches.

The 125-volt panel boards with cartridge fuse connections in branches will be furnished without extra cost.

For 250-volt panel boards with cartridge fuse connection in branches, add 20 per cent. This construction increases all dimensions.

## FA Type NKP3 1-Fuse Type Panel Boards and Cabinets

## Single Fuse in Branch Circuits

With Front Removed Showing Open Gutters and Asbestos Barriers

Diagram of Connections

Complete with Front

This type of panel board, on account of the open knife switches, has a  $\frac{1}{8}$ -inch dead black finish ebonized asbestos lumber base. The ungrounded side of each branch circuit is controlled by a 30-ampere single-pole knife switch with N.E.C. Edison plug fuse connections, the grounded side of each branch circuit is connected direct to the bus bar.

Each branch circuit connection on grounded bus is marked to correspond with branch circuit connections on ungrounded bus bars.

Mains are equipped with lugs only, fuses only, or main knife switch with N.E.C. cartridge fuse connections.

This type of panel board has  $\frac{1}{2}$ -inch asbestos barriers, all around same, forming a barrier between panel board and wiring gutter.

Cabinets have standard width gutters with adjustable corner supports with fronts finished in black laquer having door fitted with FA Catch Lock.

This type of panel board and cabinet is not recommended, for the NTP Safety Type Panel Boards and cabinets are not much higher in price and are therefore more desirable.

## FA Type NKP3 1-fuse Panel Boards and Cabinets

3-wire, 125-250-volt Mains

2-wire, 125-volt Branches with 30-ampere Single Pole Knife Switches with N. E. C. Plug Fuse Connections  
Capacity 1928 Code Rating

Panels are made of 7/8-inch Ebonized Asbestos Lumber; dead black finish. Barriers are 1/2-inch transite board with FA Patented Adjustable Corner Supports. Box is of code thickness galvanized steel, gutter type. Front is of code thickness steel, black lacquer finish with FA Catch Lock; flush or surface.

## FA Diagram of Connections

For a 12-tenant Circuit, 8-meter Fuse and 8-meter Bar, Meter Control Panelboard Installation, Showing Five 2-wire and One 3-wire Meter

NOTE.—At all points of crossing of the meter bars and circuit bars connection can be readily made with a special connector according to the Type of Meter-control Panelboard specified.

### Wiring

The proper circuit wiring for a Meter-control Panelboard installation is to provide a separate circuit to the outlets in each section of space that can be rented either separately or in combination with other sections, or space to meet the requirements of any tenant, in an office, store or warehouse building.

**FA Meter Control Panelboards and Cabinets**

FA Meter Control Panelboards and Cabinets were designed to take care of the demand for an economical and safe method of metering space in office buildings, arcades, lofts, stores, etc., that may be increased or decreased on demand.

**Branch Wiring**

Proper care should be taken in your branch circuit wiring by running a circuit to the outlets in each section of space that can be rented either separately or in combination with other sections to meet the possible demand of your tenants.

FA Meter Control Panelboards have the following advantages:

**To Owner**

The owner saves the expense of rewiring every time there is a change in tenant.

The owner does not have to worry about waste of current as each tenant pays for that which he uses.

**To Lighting Company**

When owner does not care to bother about the tenant's lighting and power bills, the lighting company will take direct control of the distribution of the electric current, and be safeguarded in all of their meter connections by requiring our special sealing devices.

**Protection Against Theft of Current**

On account of the central stations and building managers desiring protection, we have our cabinets so designed that the connections between the branch circuits and meter busses or wires can be enclosed under separate cover, and can be sealed if desired—so that any change in tenant space can only be made by authorized persons.

See additional cost for these protection covers.

**Standardization**

We have standardized on 2 distinct types of meter control panelboards, each with 3 types of gutter cabinets, as follows:

**FA Meter Control Panelboards and Cabinets**

**Additions and Deductions**

**Main Feeder Connections**

All FA standard design meter control panelboards have fusible main switch to comply with a number of city ordinances. If main lugs only are required, the following deductions apply:

All FA standard design meter control panelboards have fusible main switch to comply with a number of city ordinances. If main lugs only are required, the following deductions apply:

60 Amperes	100 Amperes	200 Amperes
\$4.60	\$6.00	\$7.30

If main fuses only are required, the following deductions apply:

60 Amperes	100 Amperes	200 Amperes
\$3.90	\$4.90	\$6.00

**Additional Charge for Meter Bars, Meter Fuse Connections and Meter Space**

Additional meter fuses without space for meter, type MWGC, add:

For 30-Amperes	per pair \$5.00
For 60-Amperes	per pair 6.00

No deduction for less number of meter fuse connections than listed.

Additional Meter Bars, no Meter Space, Type MBGC

Additional Space for Meters Over 18 Meters, Types MWSFC and MWSBC

Additional Meter Bars and Meter Space, Types MBSFC and MBSBC

Additional 30-Ampere S. P. Disconnecting Knife Switch for Meter Fuse Connections

**Additional Charge for Branches**

Tenant Branches Over 34:	
Meter Wire Type	per pair \$20.00
Meter Bar Type	per pair 30.00

**FA Type M. B. Bus Bar Type Meter Control Panelboards**

The FA Bus Bar Types are recommended when a good job is desired, as this type consists of a set of vertical meter bus bars and a horizontal bus bar for each branch circuit. Each branch circuit bus bar is equipped with a sliding FA Patented Bus Bar Connecting Device which makes it possible to connect any branch circuit or any number of branch circuits to any of the meter bus bars. With this type of meter control panelboard you do not have to remove the front or even disconnect the service when making changes—this feature alone will save enough labor to pay for the complete panelboard within a few years, as any engineer or even janitor can easily move the FA Patented Bus Bar Connecting Device from one meter to another and screw it in the selected position in a few minute's time, without the use of a screw driver or pliers.

**FA Type M. W. Wire Connecting Type Meter Control Panelboards**

For your less particular clients, and where first cost is given preference over quality and simplicity, we have designed our FA Wire Connecting Type Meter Control Panelboard, which, although designed to give the same results as our FA Bus Bar Type Meter Control Panelboard, requires more time to make meter changes and these changes cannot be made readily without disconnecting the entire panel, and, some types, it is also necessary to remove the front.

**FA Meter Control Panelboards Can Be Furnished with the Following Type Cabinets**

Type GC Cabinet having space for only meter control panelboards.

Type SFC Cabinets having space in cabinet for panelboard and space on front of meter cabinets for meters.

Type SBC Cabinets having space for panelboard and meters in cabinets.

**Owners' Branches:**

Meter Wire Type	per pair \$20.00
Meter Bar Type	per pair 30.00

When Switch is Specified in Either Tenant or Owners' Branches:

Add for Each Pair of Branches.....per pair \$8.00

**Extra Charge for Inside Door Over Meter Bars To be Added to Meter Bar Types Only**

On the meter bar type panelboards, an additional door (under the regular door), can be furnished on special order, covering only the meter bars. This special door is fastened with the regular standard meter seal device. The charge for this special door is as follows:

**Number of Meter Bars**

Branches	PRICE, EACH				
	6-8	14-16	18-20	22-24	26-Double Door in Front
4-6-8	\$18.00				
10-12-14	20.00	\$25.00			
16-18-20	22.00	27.00	\$32.00		
22-24-26	35.00	30.00	35.00	\$40.00	\$50.00
28-30-32	27.00	32.00	37.00	42.00	52.00

When main switch and meter fuse connections must also be arranged for sealing, the main cabinet door is divided into 2 sections, each with separate lock. One section opening over the branch circuits and the other over the main switch and meter fuse connections.

Add for this Feature..... \$7.00

## FA Meter Control Panelboards and Cabinets

Type MWGC

No Space for Meters

2-Fuse

Type MWGC Meter Wire Type

PANEL.—Made of sections of molded material.

MAINS.—125-250-V. 3-wire; capacity, 1928 code per branch.

BRANCHES.—30-ampere D. P. N. E. C. plug fuse connections.

METER FUSE CONNECTIONS.—30-ampere, S. P. cartridge type. Ample space is left between circuit branch sections for all meter wires and this space is covered with a sheet steel cover held in position by standard meter sealing device. Each circuit branch has a special clamp type wire terminal that will hold wires from No. 14 to No. 6 size.

Box.—Code thickness galvanized steel, gutter type.

FRONT.—Code thickness steel. Black lacquer finish. Flush or surface.

## FA Type MBSBC Meter Control Panelboards and Cabinets

### Meter Bus Bar Type—Space in Box for Meters

2-Fuse

Prices and dimensions are based on the use of a.c. house type meters. Prices and dimensions for installations where d.c. or other types of a.c. meters are used will be quoted upon application. Meters are not included in prices.

Cabinets under 62 inches wide are regularly furnished with one meter compartment at left of panelboards as illustrated. Meter compartments at both sides will be furnished at increased cost. Cabinets 62 inches in width or greater are regularly furnished with meter compartments at both sides of panelboard.

PANEL.—Made of sections of molded material.

MAINS.—125-250-volt 3-wire; capacity, 1928 code per branch.

BRANCHES.—30-ampere D. P. N. E. C. plug fuse connections.

METER FUSE CONNECTIONS.—30-ampere, S. P., cartridge type.

BOX.—Code thickness galvanized steel, gutter type for panelboard. Cabinets for meters are standard B. F. type with wood boards for supporting meters.

FRONT.—Code thickness steel. Black lacquer finish. Flush or surface.

**Bare and Insulated Wires**

**General Information**

**Stocks**

We carry at our various distributing houses large stocks of wire and cables, which, in addition to the large reserve stock carried by the manufacturers from whom we buy, gives this company a unique and comprehensive assortment. We handle thousands of types of wires, bare and insulated, suitable for general purposes, and, of course, in addition, special wires and cables for aerial, underground, submarine, mine, signal, telephone, and telegraph service.

**Factory Facilities**

Factory facilities for the manufacture of rubber covered wires and cables have been continually improved, so that to-day the Graybar Electric Company is in a position to offer its customers unsurpassed facilities for the production of rubber insulated wires, and we are as well able to have produced promptly special wires and cables such as are used by the railroads, the mines and the United States Government.

**Price and Quality**

The Graybar Electric Company sells its wires and cables at prices consistent with the quality of material used, and our customers will find that we are in line with other manufacturers producing high grade wire.

**Special Wires**

Although the foregoing refers principally to the standard types of rubber covered wire, the same holds good to other classes of rubber covered wire handled by the Graybar Electric Company. We are in a position to furnish not only material from a large stock of wires and cables, which meet these ordinary specifications, and from which shipment can usually be made as soon as order is received, but we also have exceptional facilities for executing promptly all orders for emergency or special cables even of the most complicated construction.

**Service**

Our distributing houses are so well located and our stocks are so large that we are able to give customers service of a quality that cannot be exceeded by any of our competitors in any part of the country, and salesmen can unhesitatingly assure their customers that all stock of Graybar Electric wire receives the most careful scrutiny and inspection by men experienced in that line of work.

**Bare and Insulated Wires**

**Wiring of Buildings**

**Classes of Wiring—Wiring Rules**

**CLASSES OF WIRING.** Wires may be installed in buildings:

- (1) In conduits or raceways
- (2) On porcelain knobs.

If the wiring must be enclosed, two systems are available:

- (1) Concealed conduit wiring.
- (2) Concealed knob and tube wiring.

If the wiring may be exposed, three systems are available:

- (1) Open conduit wiring.
- (2) Metal raceway wiring.
- (3) Exposed knob and cleat wiring.

In general, the above systems are used as follows:  
**CONCEALED CONDUIT WIRING.** Public buildings, office buildings, hotels, apartment houses and high class residences.

**CONCEALED OR KNOB AND TUBE WIRING.** Inexpensive frame houses, where it is not a serious drawback that wall and floors must be opened to make repairs.

**OPEN CONDUIT WIRING.** High class factories, power stations, warehouses.

**METAL RACEWAY WIRING.** Office buildings, factories, warehouses and garages.

**EXPOSED KNOB AND CLEAT WIRING.** Factories and mills.

**Selections of Wires and Cables for Given Service**

The type of wire or cable to use for a given service cannot always be determined without a knowledge of both the conditions of service and the capabilities of the various types of wires and cables available. The following tables give a general idea of the types used for various services:

- A. Wires and cables for indoor use.
- B. Flexible cords.
- C. Wires and cables for outdoor use.
- D. Wires and cables for vehicles.
- E. Wires and cables for ships.
- F. Wires and cables for mines.
- G. Telegraph wires.
- H. Telephone wires.

A description of each type of wire or cable will be found under the given name in the catalog section of this book.

**A. Wires and Cables for Indoor Use**

Type of Wiring	Condition of Service	SINGLE CONDUCTOR*		MULTIPLE CONDUCTOR	
		Smaller than No. 6 A.W.G.	and Larger No. 6 A.W.G.	Smaller than No. 6 A.W.G.	and Larger No. 6 A.W.G.
Armored Cable	Dry places			Armored Cable	
	Damp places			Armored Cable Leaded	
Concealed knob and tube		R		R	
				Double braid	
Conduit	Dry places			R	RD or AC
	Damp places	R	RL	Double braid	Double braid
				RL	RDL or ACL
Fixtures	In fixtures	F			
Open	Ordinary places				
	Extra hot places, Power stations, Substations, etc.	R	SB or SBW	R Double braid or SBW	
				Station Cable	
On electric machines	Flexible connections			Apparatus Cable	
On motion picture machines	Flexible connections			Motion Picture Machine Cable	

\*Except in power stations, substations, etc., single-conductor cables are not allowed by the National Electrical Code, for pressures over 550 volts between wires. No wires for over 35 volts are allowed in buildings other than those mentioned above.

### Key to Type Letters

(National Board of Fire Underwriters' Type Letters)

Letter	Type	Name
R	Rubber Insulated.....	Code Wire
S B	Slow Burning.....	Slow Burning Wire
S B W	" " Weather- proof.....	" " Weather- proof Wire
A C	Armored Braided.....	Armored Wire
A C L	" " and Leaded.....	Leaded Armored Wire
R L	Rubber, Lead.....	Lead Covered Cable
F	Rubber Insulated.....	Fixture Wire
RD	Rubber Insulated.....	Twin Wire (Flat)

### Railroad Cars and Locomotives

Use	Name
Lighting by axle or similar systems.....	} Car lighting cable
Connecting controllers, contactors, etc., of multiple unit cars.....	
Lighting of cars from traction circuits.....	} Car cable
Wiring electric headlights..	

### B. Flexible Cords

Use	Type Letter	Name
As pendants or portables in dry places.....	C	Lamp cord
Where not subject to hard usage.....	PD	Twisted portable
	PO	Parallel cord
	SJ	Light usage cord
	P	Reinforced cord
For hard usage.....	S	Hard service cord
	CA	Armored cord
	PA	Armor reinf. cord
	CB	Brewery cord
Pendants damp places.....	CC	Canvasite cord
	S	Hard service cord
	SJ	Light usage cord
	PWp	Reinforced cord wp.
Portable damp places.....	Pkwp	Packinghouse cord
	PAWp	Armored reinf. cord wp.
	S	Hard service cord
Theatre Stages.....	SJ	Light usage cord
	T	Stage Cable
Theatre Borders.....	S	See type S above
	B	Border light cable
Elevator lighting and control	E	Elevator cable
	S	See type S above
Portable heaters.....	H	Heater cord

### E. Wires and Cables for Ships

Use	Name
General wiring in conduits..	} 30% Hevea house wire, stranded if larger than No. 12
Exposed wiring.....	
Portables for use on decks, etc.....	} Deck cable

### F. Wires and Cables for Mines

Use	Name
Open wiring to three-phase motors.....	} *Mine cable, triplex
Operating locomotives, hoists, drills, etc.....	
Operating mining locomotives which are run on steel track rails available for return current.....	} *Mine cable, twin (flat)
Hanging in shaft.....	
	} *Gathering Reel cable single conductor, 2-conductor Flat or concentric
	} Armored cable (with rubber insulation). Bore Hole cable

\*Either braided or rubber sheathed.

### C. Wires and Cables for Outdoor Use

Use	Name
Aerial on messenger cable...	Aerial cable
Connecting suspended arc lamp to pole.....	Mast-arm cable
	Deck cable (See B. flexible cords)
Portable.....	Paper insulated cable or varnished cambric insulated cables with lead sheath
On wall (outdoors).....	Varnished cambric insulated cables with steel tape armor
On vibrating structures.....	Park cable
Buried in the ground.....	Signal wire
Signal wires in trunking, etc..	Paper insulated cable
In ducts.....	Armored submarine cable
Under water.....	

### D. Wires and Cables for Elevators

Connecting controller on car to stationary equipment..	} Elevator control cable
Connecting lights on car to source of supply.....	
Wiring lights on elevators..	} Elevator lighting cable
	} Code, house wire

### G. Telegraph Wires

Use	Name
Outdoor wiring.....	See telephone wires
Indoor wiring.....	} Special. Information on request

### H. Telephone Wires and Cables

Use	Name
Indoor wiring	Telephone wire, interior
Short runs of wire suspended in rings and similar outdoor use where span is short.....	} Telephone wire, bridle
In ducts.....	
Connecting terminals on poles to subscribers' premises by a span.....	} Dry core cable
Connections in central offices between different switch-board terminals and outside cable terminals.....	
Joining ends of cable conductors to terminals.....	} Telephone wire, drop
Underground entrances to subscribers' premises.....	
	} Telephone wire, distributing frame
	} Telephone wire, pot-head
	} Telephone wire, lead covered

**Underwriters' Laboratories and Seal**

**Insulation**

The Underwriters' Laboratories is a Corporation which maintains laboratories for the examination and testing of appliances and devices, and enters into contracts with the owners and manufacturers of such appliances and devices respecting the recommendation

thereof to insurance organizations.

Its chief financial support has been received from the National Board of Fire Underwriters under whose general direction the work is carried on. It does its work for service and not for profit.

The Underwriters' Laboratories prescribe certain standards which must be met by the users in order to obtain fire insurance.

The principal method of carrying out this supervision of listed products is by inspection at the factories by the Laboratories' engineers and the labeling of standard materials whereby they may be recognized wherever found. In addition, systematic supplementary examinations and tests are made at the Laboratories of samples of labeled goods purchased in the open market.

The labels for wire are issued in seven denominations which are of the same size and of the general appearance shown by the following illustration:

The 7 denominations vary only with respect to the length of wire which they represent, and are as follows:

100, 200, 250, 300, 400, 500 and 1000 feet.

The blank space at the bottom of the label is for a serial number by means of which a record is kept of the name of the manufacturer and the date of manufacture.

**Code Cables and Wires**

Code wires are made in accordance with the requirements of the National Electrical Code and are inspected by the National Board of Fire Underwriters, whose label is attached to each length certifying that it has passed inspection.

Type letters are assigned to wires in order to briefly indicate the construction details. The following type designations are applied to all rubber covered wires intended for use in indoor lighting and power equipment. A description of each type will be found under the name indicated below.

Type Letter	Name
A C	Rubber Insulated Wires for use in Armored Cables.
A C L	Lead Covered Wires for use in Armored Cables.
B	Border-Light Cable.
C	Lamp Cord.
C A	Armored Cord.
C B	Brewery Cord.
C C	Canvasite Cord.
E	Elevator Lighting Cable. Elevator Control Cable.
H	Heater Cord.
P	Reinforced Cord.
P A	Armored Reinforced Cord.
P A Wp	Moisture-proof Armored Reinforced Cord.
Pk Wp	Packinghouse Cord.
P O	Parallel Cord.
P D	Twisted Parallel Cord.
P Wp	Reinforced Cord, Moisture Proof.
R F 64	Fixture Wire $\frac{1}{4}$ " Insulation.
R F 32	Fixture Wire $\frac{1}{8}$ " Insulation.
R F	Fixture Wire $\frac{1}{4}$ " Insulation.
R	Code, Wire Single Conductor.
R D	Code, Wire Twin Conductor (Flat).
R D L	Lead Covered Rubber Insulated Cable, 2-Conductor.
R L	Lead Covered Rubber Insulated Cable, Single Conductor.
S	Hard Service Cord.
S B	Slow Burning Wire.
S B W	Slow Burning Weatherproof Wire.
S J	Light Usage Cord.
T	Stage Cable.
WP	Weatherproof Wire.

Type Numerals	Maximum Working Pressure Volts	Type Numerals	Maximum Working Pressure Volts
15	1500	50	5000
25	2500	70	7000
35	3500		

For example, a No. 4 single conductor rubber insulated wire, intended for a 1100-volt circuit, would be designated by R-15.

Habirshaw Wires and Cables are insulated with rubber varnished cambric or paper.

Three standard and several special grades of rubber compounds are made. The highest standard grade, known as 30 per cent hevea compound, is favored for pressures exceeding 2500 volts, and many engineers prefer to use it for all pressures exceeding 600 volts. It is also used for low pressure work where the greatest reliability and permanence is desired, as in high grade buildings and railway signal work. Habirshaw 30 per cent hevea compounds are made in accordance with either the specifications of the American Society for Testing Materials which is used by several branches of the government, and by the most important railroads, lighting companies, and industrial organizations, or the specifications of the American Railway Association Signal Division, which is used by the signal departments of the principal railroads.

An intermediate grade of rubber compound, known as "Engineers' Grade," was developed by the Habirshaw Research Laboratories to obtain the longest life in proportion to the cost. "Engineers' Grade" wires are intermediate in cost between 30 per cent hevea and code wires. The long life of "Engineers' Grade" wire is demonstrated by its extraordinary showing when subjected to accelerated ageing tests.

"Black Core" rubber compound is used for the ordinary wiring of buildings. It is made with over 20 per cent of rubber in accordance with the requirements of the National Electrical Code, and is inspected by representatives of the Underwriters' Laboratories in order to be certified that it is in accordance with the regulations of the National Board of Fire Underwriters. "Black Core" wire, however, not only meets with the requirements of the regulations, but exceeds them by a wide margin, the circumstance to which it owes its high reputation. Indeed, it has been the policy of the Habirshaw Company to make the name "Black Core" represent a standard of quality.

The above grades are all in accordance with the best commercial standards, but Habirshaw also makes a grade known as Corona-Proof which is far above any commercial standard and represents the high development of the art.

Varnished cambric insulation is also used for large cables in buildings. It is particularly useful for high pressure cables in power stations and substations.

Paper insulation is used for outside cables but not generally for cables in buildings.

**Thirty Per Cent Hevea Wire and Cable**

Thirty per cent hevea rubber insulated wires and cables are used in place of Code wires, wherever circumstances justify the extra expenditure, to obtain safety and longer life.

Wires of this grade are recommended for public buildings and high class dwellings, and for general use for voltages over 2500.

Habirshaw 30 per cent hevea rubber compound is made in accordance with the specifications of the American Society for Testing Materials, which was approved by the Standards Committee of the American Institute of Electrical Engineers and published by order of the Board of Directors in the Proceedings of April, 1917. (Copies of this specification may be obtained from the American Society for Testing Materials.)

All types of rubber insulated wires and cables are made with 30 per cent hevea rubber compound if so ordered.

## Rubber Covered Wire Data

### Intermediate Grade Wire

Intermediate Grade wire is a distinctive product of the Habirshaw Research Laboratories, developed to meet the demand for wire of a quality intermediate between the 30 per cent hevea and code grades.

It is insulated with a compound which has been found by experience and experiment to be of a remarkably permanent character. It is made in all the various forms usually made with code compound except cords.

### Black Core Wire and Cable

Habirshaw Black Core wire is code wire, made by an organization with a generation of experience in rubber-covered wire manufacture in back of it, and three well equipped research laboratories to keep it abreast of the times.

Black Core wire is made in single and double braid, or lead sheath and with one, two or more separately insulated conductors. See under "Code Wires and Cables" for a list of all types of wires and cables insulated with Black Core Compound.

While Habirshaw Black Core compound is intended primarily to meet the requirements of the National Electric Code, it possesses superior electrical, mechanical and chemical properties.

Test Voltage	Code Requirements
14-18 A. W. G.	1500
6-2	2000
1-0000	2500
Return after stretch 2 to 5 ins.	2½ in.
Breaks when stretched from 2 in. to	6 in.
Tensile strength, lbs. per sq. in.	500

†Single coils paper wrapped.

NOTE.—Corrugated paper used on reels up to 42 inches, inclusive. Lagging used only when specified. Sizes 48 to 84 inches inclusive, lagged.

**Reels**

Some sizes and kinds of wires necessarily must be shipped on reels.

In such cases the reels will be billed at cost and credited at full billing value, less return freight charges, if returned to mill within six months of shipping date.

Obtain return tags and shipping instructions before shipping reels.

**Habirshaw Rubber Covered House Wire 3-Conductor—Solid**

Each conductor of the 3-Conductor Rubber Covered House Wire is insulated by Black Core rubber compound. The covering over insulation is a 2 to 6 A.W.G., one rubber filled tape, and an 8 to 14 A.W.G., one saturated braid.

The conductors are grouped by twisting. They are filled with jute, covered by one rubber filled tape. The whole is covered by a saturated cotton braid.

Size A.W.G. Gauge	No. of Strands	Rubber Wall 64th Inch	Approximate O.D. Inches	Std. Pkg. Feet	Type Package	Shipping Wt., Lbs. per 1000 Feet
14	1	3	.480	1000	Reel, 30"	185

6	1	4	.760	1000	Reel, 36"	545
4	1	4	.850	1000	Reel, 36"	720

NOTE.—Corrugated paper used on reels up to 42 inches, inclusive, lagging used on above sizes only when specified. Sizes 48 to 84 inches inclusive, lagged.

**Habirshaw Code House Cable**

3-Conductor—Stranded

The 3-conductor stranded code house cable is used under the same conditions as solid 3-conductor code house cable unless greater flexibility is required, especially in larger sizes.

Number of conductors, 3.

Range of sizes, 500,000 cm to 14 A. W. G., stranded.

Insulation on each conductor, "Black Core" rubber compound.

Covering over insulation, 500,000 cm to 6 A.W.G., one rubber filled tape, 8 to 14 A. W. G., one saturated braid.

Grouping of conductors, twisted.

Fillers, jute.

Covering over jute, one rubber filled tape.

Covering over all, one saturated braid.

## Habirshaw Lead Covered Cable

Stranded Twin Flat Conductor

600 Volts, N.E.C.S.

Used under the same conditions as stranded single conductor lead covered wire. Sizes range from 0000 to 14 A.W.G., stranded. Black Core rubber compound insulation on each conductor. Rubber filled tape or braid covering over insulation. Conductors grouped parallel. When specified, round cable with 2 conductors twisted will be furnished. Covering over all is lead sheath. Type letter R D L.

Size A.W.G.	No. of Strands Concentric	Thickness of Insulation 64ths Inch	Thickness of Lead Sheath 64ths Inch	Diameter Over Lead Inches	Approx. Ship. Wt. Lbs. per 1000 Ft.

4/0	19	5	5	.870x1.585	3835

## Habirshaw Lead Covered Cable

600 Volts, N.E.C.S.

Used for 3-phase circuits. Stranded are used where extra flexibility is required in smaller sizes and always in larger sizes where solid conductors would make cable too stiff to handle.

Contains 3 conductors. Sizes range from 500,000 cm. to 14 A. W. G. Each conductor insulated with Black Core rubber compound. Insulation covered by rubber filled tape. Conductors twisted, filled with jute. Rubber-filled tape covering over jute. Lead sheath covering over all.

**Habirshaw Parkway Cables**

Single Conductor

2-Conductor, Flat

Parkway cables are used for transmission and distribution where it is preferable to bury the cables directly in the ground rather than to put them in ducts. Any kind of cable will be furnished with park cable covering, but the following types are in general use for distribution purposes.

Standard parkway cables (0-600 volts). Number of conductors, one to three.

Insulation on each conductor, "Black Core" rubber compound for 5000 volts or less. For higher voltage, special high voltage rubber.

Covering over insulation, rubber filled tape. Covering over tape, lead sheath.

Covering over lead sheath, asphalted jute.

Protective armor, two ungalvanized steel tapes, wound in the same direction, the outer tape covering the spaces between turns of the inner tape.

Outside covering, asphalted jute.

Parkway cables with galvanized steel tapes will be furnished when so specified.

Habirshaw Parkway Cable with a single strip overlapping steel tape armor can be supplied. Complete data furnished upon application.

## Habirshaw Rubber Insulated High Pressure Wire and Cable

The National Electrical Code recognizes the following working pressures:

Low-pressure, 600 volts or less.

High-pressure, 600 to 3500 volts.

Extra-high pressure, over 3500 volts.

HIGH-PRESSURE CABLES (i.e. from 600 to 3500 volts) may be brought into buildings only as metal sheathed multiple conductor cables in metal conduit.

EXTRA-HIGH PRESSURE CABLES (i.e. for over 3500 volts) may not be brought into or over buildings except power stations and substations.

High-pressure cables (i.e. from 600 to 3500 volts) may be insulated with "Black Core" or Intermediate Grade compound, but we recommend Habirshaw 30 per cent heavy rubber insulation.

The following table gives the thickness of insulation recommended by N. E. Code for various alternating voltages.

### Thickness of Insulation—64ths Inch

Size A.W.G.	600 Volts	1500 Volts	2500 Volts	3500 Volts
No. 14 to No. 8, incl.....	3	6	8	10
No. 6 to No. 2, incl.....	4	7	9	10
No. 1 to 0000, incl.....	5	8	10	10
250000 to 500000 C.M., incl.....	6	9	10	11
550000 to 1000000 C.M., incl.....	7	10	10	12
1250000 to 2000000 C.M., incl.....	8	10	10	12

Size A.W.G.	5000 Volts	6000 Volts	7000 Volts
No. 14 to No. 8, incl.....	12	14	16
No. 6 to No. 2, incl.....	12	14	16
No. 1 to 0000, incl.....	12	14	16
250000 to 500000 C.M., incl.....	12	14	16
550000 to 1000000 C.M., incl.....	12	14	16
1250000 to 2000000 C.M., incl.....	14	16	18

NOTE.—In the case of multiple-conductor cables, the thickness of insulation on each conductor should correspond with the maximum effective working voltage across that insulation.

\*House wire for voltages up to 600, whether Code, Intermediate Grade or 30 per cent heavy.

## Habirshaw Sector Cable

Paper Insulated

Sector cables are used in preference to round conductor cables because for a given outside diameter they have a greater carrying capacity. Habirshaw sector cable has been designed so as to secure all possible advantages of that type of cable to the maximum degree. There are seven such features to which attention may be called as follows:

1. Stability of form.
2. Flexibility.
3. Economy of size.
4. Maximum heat dissipation.
5. Minimum dielectric stresses.
6. Minimum dielectric losses.
7. Minimum injury to paper in manufacture.

The carrying capacity of sector cable is approximately the same as that of a round conductor cable of the same conductor cross-section.

## Habirshaw Paper Insulated Cable

This cable has the advantage of cheapness, durability, low dielectric losses, and high current-carrying capacity.

The insulation consists of Swedish wood pulp paper applied helically to the conductor, and then saturated with a mineral oil compound which constitutes the essential insulation. In order to retain this oil the cable must have a sheath of lead.

Habirshaw Paper Insulated Cables have particularly low dielectric losses without sacrifice of dielectric strength. Great care is also taken to make the cable flexible at all temperatures at which it is likely to be operated.

Paper insulated cables are made in all sizes from No. 4 A. W. G. to 3,000,000 circular mils, and with any number of conductors within the usual limits.

## Habirshaw Mast-arm Cable

Mast-arm cable is used where a flexible cable, capable of passing over a pulley, is required to connect arc-lamps suspended from a mast-arm or bracket to the feeder line where the lamps must be lowered for maintenance purposes.

Number of conductors, 2. Range of sizes, 6 and 8 A. W. G.

Stranding, flexible. Insulation on each conductor, "Black Core" rubber compound. Thickness of insulation, code standard. Covering over insulation, one saturated cotton braid.

Grouping of conductors, parallel. Covering over all, 2 saturated cotton braids.

## Habirshaw Control Cable

Station control cables are used for the remote control of outdoor or automotive substations and are installed in conduit being either braid or lead covered.

Number of conductors, 1 to 7.

Usual size, 19 No. 22 A. W. G. or 37 No. 22 A. W. G.

Separator, soft cotton wind.

Insulation on each conductor, rubber compound of quality specified.

Thickness of insulation each conductor, 3/64 or 1/16 inch.

Covering over insulation, colored dry cotton braid.

Grouping of conductors, twisted.

Fillers, dry jute.

Covering over filler, one rubber filled tape.

Covering over all, two saturated cotton braids or lead as specified.

It is usual to have a different colored braid on each conductor in order to facilitate the identification of circuits.

Upon receipt of inquiry stating conditions of service, our Engineering Department will furnish additional data.

**Habirshaw Armored Submarine Cable**

Armored cable, or submarine cable, as it is sometimes called, is used under water for crossing rivers, bays and lakes.

Armored cable may be insulated with paper, varnished cambric or rubber compound. If insulated with paper or varnished cambric, a lead sheath is required. If insulated with rubber compound, a lead sheath is preferable, but may be omitted where the water, in which the cable is to be laid, does not contain injurious impurities and does not attain an unusually high temperature. If the cable is rubber insulated and not lead covered, it has a rubber filled cotton tape.

The leaded or taped core is served with jute yarn, run through hot asphalt compound, then armored with galvanized steel wires, \*run through hot asphalt compound, served with two layers of yarn and finally run through asphalt compound.

The asphalt and jute over the armor may be omitted, if desired.

Upon receipt of inquiry stating the conditions of service, our Engineering Department will furnish additional data.

\*Hot asphalt compound is also applied during armoring at the points where the armor wires come into contact, insuring complete sealing of the armor.

**Reel Capacities**

**Curves Showing Reel Capacity for Cable Diameters Up to 3 Inches**

**Example**

Diameter of Cable.....	1.60 inches
Length of Cable.....	730 feet
Reel to Use.....	48-inch

**Habirshaw Fire Alarm Cable**

Fire Alarm cable is used to connect fire alarm boxes on streets and in buildings with fire department headquarters. Such cables are usually made according to customers' specifications. However, in general, the insulation consists of 30 per cent hevea rubber compound, the conductors are laid concentrically with jute fillers, each layer being taped, and the cable has an outside covering consisting of a lead sheath.

Upon receipt of inquiry stating conditions of service, our Factory Engineering Department will furnish additional data.

**Habirshaw Signal Wire and Cable**

**American Railroad Association Signal Division Standard**

Railway signal wire is made to conform with the exacting specifications of the American Railroad Association Signal Division Standard and represents the standard engineering practice in this line. Standard practice means a great deal more to the railway signal engineer than to most others, as upon the reliability of signals depends the safety of millions of passengers.

The present American Railroad Association Signal Division Standard specification for rubber insulation is a development resulting from a study of the manufacture, inspection and use of rubber insulated wire extending over a period of many years, by a strong and representative committee of signal engineers who have given considerable time and attention to this subject. The specification has undergone changes in this time and every change has improved the product and confirmed the opinion of signal engineers as to the excellent quality of the insulation which it exacts. Habirshaw also makes a higher grade signal wire known as "Corona" signal wire which is recommended for locations where operating conditions are exceptionally severe.

Habirshaw has specialized on A. R. A. Signal wire and makes all standard types including the following:

**I. Rubber Insulated Signal Wire for 660 Volts or Less**

Number of conductors, one or two.  
Range of sizes, 0 to 18 A. W. G., solid.  
Insulation on each conductor, A. R. A. Signal Division compound.  
Covering over insulation, one cotton braid, 3/64 inch thick, weatherproof.

Thickness of insulation, No. 0-2 A. W. G., inclusive, 3/64 inch; 4-8 A. W. G., inclusive, 1/16 inch; 9-14 A. W. G., inclusive, 1/8 inch; 16-18 A. W. G., inclusive, 3/16 inch.

Shipped on reels or in coils as ordered. If in coils the following lengths are standard: No. 6 A. W. G., 1000 ft; 8-12 A. W. G., inclusive, 1500 ft; 14 A. W. G., 2000 ft.

**II. Aerial Braided Cable for 660 Volts or Less**

Number of conductors, as specified.  
Range of sizes, 4 to 16 A. W. G. (not necessarily all the same size in a given cable).  
Insulation on each conductor, A. R. A. Signal Division compound.

Fillers, dry jute.  
Covering over each layer, rubber filled tape.  
Covering over all, one saturated cotton braid, 3/64 inch thick.

Thickness of insulation, No. 4 A. W. G., 1/16 inch; 6-9 A. W. G., inclusive, 1/8 inch, 10-14 A. W. G., inclusive, 1/4 inch; 16 A. W. G., 3/8 inch.

Cables of more than three and less than seven conductors are made with jute or sisal center. One wire in each layer is taped for a tracer.

Cables will be shipped on reels.  
Above cables can be furnished lead covered if required.

## Habirshaw Corona-Proof Cable

Used out-of-doors where rubber insulation is desirable, yet must be proof against the deteriorating effects of the elements and the oxidizing action of Corona discharges. It is a cable insulated with a special rubber compound, especially developed for this service, covered with a layer of tape, enclosed in one or more saturated cotton braids.

This cable is used for aerial distribution circuits at voltages of 2200 and over. Also for special purposes where extra high voltages are used.

Upon receipt of inquiry stating conditions of service, our Engineering Department will furnish additional data.

## Habirshaw Aerial Cable

Aerial transmission cable is used mostly for the transmission of power between 6,600 and 25,000 volts where it is uneconomical to construct subways and where the conditions for open wire construction are unfavorable. It is especially useful where existing pole lines are congested or along suburban streets lined with heavy shade trees, as well as for certain types of crossings over or under highways and railroads. For the three-conductor cable, paper insulation with lead sheath is the most satisfactory. For the smaller sizes the weight does not exceed the weight of cables commonly used by the Telephone Companies in aerial construction. For larger sizes, however, the weight is somewhat greater but offers no special difficulty in installing.

Upon request our Engineering Department will advise as to the most desirable type of cable to be used under specified conditions.

## Habirshaw Varnished Cambric Insulated Cable

Varnished cambric insulated cable is used:

a. In power stations and sub-stations for connecting machinery and apparatus of all voltages (see Apparatus Cable and Station Cable).

b. In buildings in place of rubber insulated cable, especially for the larger sizes.

c. For low voltage underground distribution, where special reliability is desired.

d. On vibrating structures where paper insulation cannot be used due to the crystallization of the lead sheath.

Varnished cambric insulation consists of varnished cambric tapes applied helically to the conductor with intervening layers of mineral base grease. The turns of tape overlap and the joints in successive layers are staggered. They are also reversed at least every three layers.

Varnished cambric insulated cable is usually covered as follows:

Apparatus cable, saturated cotton braid.

Station cable, a rubber filled cotton tape and a flameproof braid.

Building mains, a rubber filled cotton tape and two saturated cotton braids.

Underground cable, lead sheath.

Cable for outdoor structures, a rubber filled cotton tape, two galvanized steel tapes, and a layer of asphalted jute under and over the armor.

Upon receipt of inquiry stating conditions of service, our Engineering Department will furnish additional data.

## Habirlite

## Habirshaw Headlight Wire Single Conductor

Habirshaw wire is used where resistance to oil heat, sulphur fumes and steam is essential. Standard sizes, 10 to 14 A. W. G., solid. Wrapping, soft cotton wind, saturated. Insulation, heat proof compound insoluble in mineral oils, non-hygroscopic, chemically inert to reagents and flexible to breaking point of wire. Covering, three cotton braids saturated with heat resisting compound.

Size A.W.G.	Diameter Overall Inches	Weight Lbs. per 1000 Ft.	Type of Package	Feet in Package	Shipping Weight of Package
10	.220	51	10 coils in box	10000	540
12	.200	37	10 coils in box	10000	390
14	.190	29	10 coils in box	10000	310

## Habirshaw Battery Charging Cable 2-Conductor

Battery charging cable is used for connecting storage batteries of automobiles to the stationary charging outfit. Also used largely by railroads for charging train lighting batteries on electric baggage trucks both in the charging rooms and for boosting while in position under railroad cars and on the baggage trucks. Range of sizes, 0000 to 8 A. W. G., stranded. Insulation on each conductor, "Black Core" rubber compound. Covering over insulation, one saturated braid. Grouping of conductors, twin (flat), except No. 0 and larger, which are round. Fillers, jute (for No. 0 and larger, only). Covering over both conductors, two saturated braids.

Size A.W.G.	No. of Strands	Thickness of Insulation 64ths Inch	Outside Diameter Inches	Weight per 1000 Feet Lbs.	Type of Package	Feet in Package	Shipping Weight of Package Lbs.
0000	259	5	1.720	2220	Reel	1000	2870
0000	133	5	1.590	1750	Reel	1000	2400
00	133	5	1.474	1520	Reel	1000	2170
0	133	5	1.368	1265	Reel	1000	1915

6	61	4	.446x .802	317	Reel	1000	397
8	61	3	.375x .660	210	Reel	1000	290

## Habirshaw Mine Cable, Single Conductor

### Locomotive or Gathering Reel Cable

Single conductor mine cable is used for operating gathering reel locomotive run on steel tracks which can be used for the return current.

Number of conductors, one.

Range of sizes, 2 to 6 A. W. G., flexible.

Insulation, "Black Core" rubber compound.

Covering over insulation, rubber filled tape.

Covering overall, one extra heavy or seine-twine (as specified), extra tight weatherproof braid.

Size A.W.G.	No. of Strands	Thickness of Insulation 64ths Inch	Outside Diameter Inch	Weight per 1000 Feet Lbs.	Type of Package	Feet in Package	Shipping Weight of Package Lbs.
2	133	4	.59	337	Reel	1500	685
3	133	4	.55	271	"	1500	586
4	133	4	.52	234	"	1500	431
6	133	4	.46	167	"	1500	330

**Habirshaw Twin Mine Cable**  
Flat

Twin (flat) mine cable is used for gathering reel locomotives, cutting machines, hoists, drills, and other electrical machines in mines.

Number of conductors, two.

Range of sizes, 2 to 8 A.W.G., flexible.

Insulation on each conductor, "Black Core" rubber compound.

Covering over each conductor, one saturated braid.

Grouping of conductors, parallel.

Marker, raised thread in the braid of one conductor.

Covering over all, two or three saturated extra tight braids as specified.

**Double Braid**

Size A.W.G.	No. of Strands	Thickness of Insulation 64ths Inch	Outside Diameter Inches	Weight per 1000 Feet Lbs.	Type of Package	Feet in Package	Shipping Weight of Package Lbs.
2	49	4	1.094x.592	640	Reel	1500	1340

5	49	4	.943x.539	430	"	1500	1025
6	49	4	.891x.513	360	"	1500	720
8	49	3	.743x.439	250	"	1500	555

**Habirshaw Triplex Mine Cable**

Triplex mine cables are used with three-phase motor equipments, and are usually made for pressures up to 600 volts.

Range of sizes, 2 to 8 A.W.G., flexible.

Insulation on each conductor "Black Core" rubber compound.

Covering over insulation, one saturated cotton braid or rubber-filled tape.

Grouping of conductors, twisted.

Fillers, jute.

Covering over filler, rubber filled tape.

Covering over all, one or two saturated extra tight braids.

Size A.W.G.	No. of Strands	Thickness of Insulation 64ths Inch	Outside Diameter Inches	Weight per 1000 Feet Lbs.	Type of Package	Feet in Package	Shipping Weight of Package Lbs.
2	49	4	1.203	1020	Reel	1500	2180
4	49	4	.997	725	"	1500	1548
6	49	4	.890	525	"	1500	1248
8	49	3	.730	345	"	1500	703

**Habirshaw Flameproof Cable**

Flameproof cable is used about power houses in the vicinity of switchboards and apparatus where special fireproof protection is desired. This method of protection consists essentially in impregnating the braided covering with a flameproof paint, and may be used in connection with any conductors having braided covering, when so specified.

**Annunciator Wire**

**Regular**

Insulated with two winds of cotton yarn applied in opposite directions, saturated with a special wax compound and highly polished. This makes a very compact insulation. Furnished either on spools containing about 7 lbs., or exactly 1 lb. and in 1-lb. and 1/2 lb. coils, and packed in cases containing approximately 200 lbs. Furnished in colors and styles as follows: either plain copper or tinned; plain copper furnished unless otherwise ordered; red, blue, red and white, brown, brown and white, white, olive, yellow, yellow and white, blue and white, green, green and white and special colors where possible for us to obtain proper colored yarns.

**Single Conductor**

Size B. & S.	Wt. Lbs. per 1000 Ft.	NET ADDITIONS TO BASE			
		6-7-lb. Spools	1-lb. Spools	1/2-lb. Coils	1-lb. Coils
14	15	\$ .06	\$ .11	\$ .08	\$ .07
16	9.5	.08	.13	.10	.09
18	6.5	.11	.16	.13	.12
20	4.5	.18	.23	.20	.19
22	3.2	.22	.27	.24	.23

Tinned wire furnished on application at \$.02 1/2 per pound extra.

**Twisted Pairs**

Size B. & S.	Wt. Lbs. per 1000 Ft.	6-7-lb. Spools
14	30	\$ .08
16	19	.10
18	13	.13
20	9	.20
22	7	.24

Tinned wire furnished on application at \$.02 extra.

**Damp-proof Office Wire**

This wire is double braided, the inner braid saturated with black weatherproof compound. The outer braid is specially treated with wax, highly polished and will not collect dust. Damp-proof office wire is carried regularly in the following colors: red, red and white, blue, blue and white. It is put up in coils of about 10 lbs. each, or on spools of 5 lbs. each, and packed in cases of approximately 200 pounds each.

Sizes 16 and 18 wire, in red, red and white, blue, blue and white, are also carried in duplex wire, being two separately insulated conductors under one braid.

**Single Conductor**

Size B. & S.	Wt. Lbs. per 1000 Ft.	NET ADDITIONS TO BASE	
		In 10-lb. Coils	On 5-lb. Spools
14	20	\$ .12	\$ .17

		In 10-lb. Coils	On 5-lb. Spools
18	10	\$ .16	\$ .21

**Duplex Double Conductor**

Size B. & S.	Wt. Lbs. per 1000 Ft.	Net Additions to Base In 10-lb. Coils	
14	35		\$ .14
16	27		.16
18	18		.18

Tinned wire furnished on application.

**Annunciator Cables**

This cable is designed for connecting the annunciator in an elevator car with the push buttons on the different floors.

Each conductor is composed of 16 strands of No. 30 B. & S. gauge soft untinned copper wire and insulated with two reverse wrappings of cotton and one cotton braid. The insulated conductors are then cabled (using a steel supporting strand if desired, in order to give extra tensile strength, but ordinarily supplied without same) then covered with two cotton braids, the inner one being white and the outer one black. This is a dry cable, and the outer braids are not flameproof.

Prices on application.

## SAFETY CABLE PRODUCTS

PAPER  
CAMBRIC  
RUBBER  
LEAD COVERED  
STEEL ARMORED  
CABLES

### A-A RED INTERMEDIATE

A special rubber compound designed for high grade installations where long life and continuity of service are required.

Insulation and braid are red, insuring a wire easily identified both before and after installation and affording the architect and engineer protection against substitution.

All copper is of the highest conductivity, uniform in diameter, free of flaws and evenly coated with tin of sufficient thickness to protect conductors against chemical action.

The compound (A-A Red) contains not less than 25 per cent high grade rubber and is applied to the copper conductor in such manner as to give uniform walls of insulation, the minimum thicknesses of which are shown on the following page, together with the mechanical and electrical characteristics.

### A-A 30 PER CENT

The gray compound containing 30-33 per cent by weight of new, unused Hevea rubber, distinctive from National Electrical Code black and intermediate red, as well as the green braid, assure the architect, engineer and owner of no substitution of grades and enable them to identify the quality of product specified.

## Parac Rubber Covered Wires and Cables

For 600 Volts and Under

Parac rubber insulated wires and cables conform to the rules and regulations of the National Electric Code.

The test characteristics of the insulation, physical, chemical and electrical, largely exceed those stipulated by the National Board of Fire Underwriters and are established, not on the minimum required, but on the high standard of the company that produces Parac.

## Parac Rubber Covered Wires and Cables

Continued

### Circular Mills Feeder Cables Double Braid

The wires comprising circular mills cable are laid up in a manner to give great flexibility when insulated and braided.

Cables with a greater or lesser number of wires than shown in table, composing the strand will be furnished only on special order.

## Safe-T-Flex Single Strip Steel Armored Cable

This is a product especially designed to meet requirements for street and boulevard lighting and for further use in all classes of underground installations requiring insulated copper conductors with a protective covering against mechanical injury.

As the uses for steel armored cable have increased, the need for flexibility and more perfect protection for the insulated conductors has been responsible for the development in the art of making cables under the general class of Parkway or suburban cables. While cable, double stripped, with 2 flat steel tapes, has served satisfactorily for the conditions that have been met over the many years during which this type has been used, the apparent need for a flexible interlocking type makes available Safe-T-Flex. This is of single strip construction, the arch of which is designed to give the maximum mechanical protection against crushing load and at the same time affording flexibility beyond that available in the older type. The joints operate on a ball and socket plan, providing maximum flexibility and full protection for the conductors contained therein.

Safe-T-Flex construction may be used on any type or size of conductors, for any standard voltage or under any condition of service ordinarily met with where park cable is used.

This type cable is further recommended for use in train control and other service where it is essential to have the conductors protected not only against possible injury after installation, but during the time that the cable is in transit.

Prices upon application.

## Rome Trenchlay Non-Metallic Underground Cable

For Working Pressure up to and Including 5000 Volts

Designed particularly for secondary circuits, rural extensions, street lighting circuits, airport lighting and all low and medium-voltage underground installations. It is especially adapted to higher-amperage street lighting circuits.

Trenchlay differs from all other underground cables. Older forms were built by adding one or more protective sheaths to existing cable structures. Instead of depending on a single thickness of some easily punctured material, the whole structure of Trenchlay is a plastic, ageless, changeless seal. It is built from the most highly refined forms of the best rot, moisture, acid and alkali-resisting materials. Under the tough, outer sheaths of Trenchlay cable is a homogeneous anhydrous structure that is tough and flexible and unaffected by the heavy strains of installation.

Water cannot reach the vitals of Trenchlay from the outside, for the conductors are completely sealed in an asbestos sheath impregnated with asbestos base caulk that is impervious to water. Nor will water wick in from open ends, cuts or abrasions. The fibre sheaths are too well filled, too well saturated with long-life compounds.

Trenchlay is unaffected by earth acids or alkalis. It will not corrode, rust or crystallize. Electrolysis, stray currents, and sheath loss troubles have been entirely eliminated.

Trenchlay is 68 per cent lighter than steel-taped cable. It is far more flexible than any metal-sheathed cable. Can be installed without a specially trained crew and costs much less.

Rome Trenchlay control cable and signal cable are manufactured with the same exclusive asbestos sheath and asbestos base caulk.

**SIZES AND MULTIPLES.**—Cable will be furnished in sizes and multiples listed in accompanying specification table.

**CONDUCTOR.**—Soft drawn tinned copper, solid or stranded as listed in accompanying specification table.

**RUBBER WALL.**—Rome Nokrono rubber compound unless otherwise specified.

**FIRST SHEATH.**—Single wrap of rubberized cloth tape, in colors for ready identification.

**SECOND SHEATH.**—Cotton braid thoroughly saturated with special saturant and then completely filled with asbestos base caulk.

**ASSEMBLY.**—Twin conductor types laid parallel; multiple conductor types twisted.

**CAULKING.**—After cabling, the valleys between individual conductors are thoroughly filled with asbestos base caulk so as to provide a symmetrical cross section.

**THIRD SHEATH.**—Asbestos braid of thickness shown in accompanying specification table. This braid completely filled with special saturant and then completely covered with asbestos base caulk.

**FOURTH AND FIFTH SHEATHS.**—Double wrap of closely butted anhydrous laminated non-metallic kraft armor. The outer surface of this armor is well coated with asbestos base caulk.

**FINAL SHEATH.**—Closed and tightly served sheath of thoroughly saturated jute. This sheath finished with special finishing compound and well dusted with soap stone.

**PUT UP.**—1000 feet on reels, or where large sizes do not permit reeling of 1000-foot lengths, to be furnished in the longest lengths permitted by reel dimensions.

Approximate outside diameters or widths listed above are figured with ample average tolerances and represent maximum dimensions.

**Tirex Rubber Armored Cable**

The flexible copper conductors are insulated with a rubber compound of high dielectric strength containing a minimum of 30 per cent of new Para rubber.

The inner jacket is a 40 per cent Para rubber compound and fills the interstices between the conductors.

The outer jacket or rubber armor contains a high percentage of new Para rubber and is securely locked to the cable.

A double reinforcement of hard twisted seine twine between the jackets adds greatly to the wearing qualities of Tirex Cables.

The outer covering or rubber armor effectively protects the cable and safeguards the user.

Tirex Cables, being all rubber, do not absorb moisture and are not appreciably affected by oils or acids under ordinary industrial conditions.

**Tirex Single Cable—600 Volts**

For use wherever a single conductor portable cable is needed. Specially suitable for electric mine locomotives of the gathering reel type when it is necessary to leave the trolley wire in the main entry and enter rooms to pick up or place cars.

To insure adequate tensile strength the conductors of Tirex Single Conductor Cable are reinforced with steel strands.

**Tirex Rubber Armored Cable**

Maximum flexibility is obtained by proper stranding of the copper conductors and the omission of stiff, fibrous braids and fillings. Tirex Cables never kink.

The smooth, clean, outer surface of Tirex Cables does not collect and hold dirt and grease. It may easily be wiped clean when soiled.

Rigid electrical tests are made during the manufacture of Tirex Cables. These tests insure the integrity of every length.

The rubber armor has remarkable wear-resisting properties and protects the cable from outside injury.

## Type S Tirez All Rubber Portable Cord

For Electrical Tools and Appliances

Tirez fits standing bushings. It is most satisfactory for portable lamps, tools or other appliances. Oils and acids have no appreciable effect upon it and the clean, smooth outer surface does not collect dirt or grease. The conductors are copper wire, stranded and cotton wound. Insulation is 30 per cent. The insulated conductors are twisted and covered with a high-grade rubber jacket which entirely fills the interstices between the conductors. Electrical tests are applied to each length of cord after 12 hours' submersion in water.

Two and three-conductor Nos. 14, 16 and 18 and 2-conductor No. 12 are packed in special cartons containing approximately 250 feet each (from 200 to 270 feet), so constructed that the cord may be drawn out as needed without disturbing the remainder of the coil.

\*There are no N. E. C. standards for 1-conductor rubber sheathed flexible cord.

Prices upon application.

## Type SJ Tirez Portable Cord

2-conductor

Recommended for pendent drop lights, floor or table lamps, vacuum cleaners and small electrical tools and apparatus.

It is suitable for portable use in offices, dwellings and reasonably dry places where conditions are not so severe, and for pendent use in manufacturing plants and garages.

The cord is practically wearproof, never frays or kinks and is so flexible that its full length is always available without delay or annoyance.

The outer covering or rubber armor is smooth and attractive in appearance and is furnished in black or green as desired.

The colors are permanent and the wear and tear of ordinary service has no appreciable effect on them.

The insulation of each conductor is of a distinctive color for identification and polarity marking.

Tirez is packed in convenient cartons containing approximately 250 feet each, (from 200 to 270 feet) so constructed that any desired length may be removed without disturbing the remainder of the coil.

Other lengths may be obtained in coils or on reels.

16	1 1/32	58	18	3/4	45

Prices upon application.

## Tirez Shot Fire Cable

Two-conductor

Suitable for rough work in damp or wet places. Not affected by acid, gas or oil.

The particular features which will appeal to the shot firer, are the small diameter of about 1/4 inch and the light weight of 4 1/2 pounds to 100 feet.

Cable is flexible and has adequate tensile strength for the work for which it was designed. Does not kink or snarl.

Furnished in coils of 250 feet. Prices on application.

\*This size does not bear Underwriters' tags.

## Duracord Single Conductor Cable

This cable is made up in extra flexible stranding, rope lay with code thickness of 30 per cent rubber, and with a heavy woven cover on the outside

which is impregnated with a water-proof, oil-resisting compound. Used as welding cables, mine cable and motor leads.

**Whitney Blake Automotive Cables**

The best quality electrolytic copper, accurately drawn to size and carefully annealed, is used in all conductors.

The rubber used in these wires and cables is of the best grade, carefully compounded with the skill gained by years of experience, assuring a product of long life and serviceability. Easy-stripping characteristics, but firmly holds the fine strands of wire. The varnished cambric tape used is of the best quality obtainable, and has high dielectric strength.

Standard wires are covered with a brown color braid of hard glazed yarn which is varnished or lacquered. The varnish used is a clear insulating varnish evenly applied producing a moisture and oil resisting coating. Blue tracer threads are also woven in the braid. Specification wires will be made with braid of any color desired.

Armored cables are protected with a galvanized steel ribbon armor, half oval in section, which gives maximum flexibility and longest wearing qualities.

Wires calling for a weatherproof finish are first saturated with a compound which thoroughly penetrates the braid. A second coating of a special compound is then applied and highly polished to a uniform texture.

**7 MM. Spark Plug Cable**

**TYPE No. 703 PLAIN.**—For use between plugs and magneto, or distributor, where a very high quality high tension cable is desired. Made in accordance with S.A.E. specifications.

**TYPE No. 713 BRAIDED.**—For use between plugs and magneto, or distributor, where a high quality high tension cable is desired. Made in accordance with S.A.E. specifications.

**TYPE No. 704 PLAIN.**—For same use as type 703. This is a still higher quality high tension cable than type 703 and is made for extremely long life and resistance to Corona deterioration. Conforms to S.A.E. specifications.

**TYPE No. 702 PLAIN** } For use between plugs and magneto, or distributor.

**TYPE No. 712 BRAIDED** }

**TYPE No. 714 SECONDARY CABLE** is a new type added recently—Dimensions are given in the following table. This cable is designed for extremely long life and will practically indefinitely withstand the so-called "Corona Tests" which cause plain high tension cables to fail in a short time. The rubber is protected by a specially finished flexible black enameled fine cotton braid from oil, gasoline and moisture. Full details and samples will be furnished upon application to the factory.

**3/32-Inch Spark Plug or Secondary Cable**

**TYPE No. 611 BRAIDED.**—For use between plugs and magneto, or distributor, when a cable of good quality but smaller diameter is desired. Nominal overall diameter, 3/32 inch.

**9 MM. Braided Secondary, Type 912 Secondary or High Tension Cable**

**9 MM. Spark Plug Cable**

**TYPE No. 902 PLAIN** } For use with high voltage magneto or coils.

**TYPE No. 912 BRAIDED** }

**Whitney Blake Automotive Wires and Cables**

**No. 14 B. & S. Duplex Lighting Type 142-D Primary Cable**

The rubber insulated lighting cables all have an insulation of high grade rubber compound, 1/32 inch thick. They are covered with a close braid of hard glazed cotton yarn varnished or lacquered, are flexible and will withstand a great amount of wear.

**Single Lighting or Primary Cable**

**TYPE No. 102.**—For use as a low voltage generator cable, where amperage carried is high. Suitable for bus lighting.

**TYPE No. 122.**—For use as a low voltage wire for very large headlights or main lighting and ignition currents lead from battery or generator. Suitable for lighting circuits on small buses or large ones using 12 or 32 volt systems.

**TYPE No. 142.**—For general primary or lighting use, battery to coil, headlights, interior body wiring, etc.

**TYPE No. 162.**—General utility lighting or primary wire, sufficiently heavy for majority of low voltage circuits.

## Grico Flexible Cords

Lamp Cord—Type C. Single or Twisted Pair with Cotton or Silk Braid Over Each Conductor

Parallel Cord—Type PO. Has Cotton Braid Over Each of Two Conductors Laid Parallel Under Cotton or Silk Outer Braid

The conductors of our regular cords are composed of a number of 30 B. & S. bare annealed copper strands, grouped into a cable of the required capacity, as follows: No. 8 B. & S., 165 strands; No. 10 B. & S., 104 strands; No. 12 B. & S., 65 strands; No. 14 B. & S., 41 strands; No. 16 B. & S., 26 strands; No. 18 B. & S., 16 strands; No. 20 B. & S., 10 strands; No. 22 B. & S., 7 strands. Sizes smaller than No. 18 are not approved by the Underwriters.

NEW CODE INSULATION.—(Approved by Underwriters) require  $\frac{1}{32}$ -inch wall on number 16 and number 18 B. & S.;  $\frac{3}{64}$ -inch wall on number 14 and larger;  $\frac{1}{64}$ -inch wall of rubber now approved by Underwriters for use on Types P, PO and PWP for 18 B. & S. Gauge only.

COMMERCIAL INSULATION.—(Not Approved by Underwriters) requires  $\frac{1}{64}$ -inch wall of rubber of a grade but slightly lower in quality than New Code Rubber. We can also furnish  $\frac{1}{64}$ -inch wall of New Code Insulation.

### Seven Points to Cover When Ordering Graybar Flexible Cords

Amount Feet	Size B. & S. Gauge	Insulation	Conductors	Style	Finish	Color
		†New Code Old Code Commercial $\frac{1}{64}$ In. New Code	Single Twisted Pair Three Conductor	Lamp Cord Parallel Cord Reinforced Cord Special Cords	Cotton Rayon Weatherproof	Use Standard Colors as per Color Card
Examples	1000	New Code	Twisted Pair	Lamp Cord	Cotton	Green & Yellow
	500	Old Code	Single	Lamp Cord	Rayon	Black

\*Wp. saturated with a weatherproof compound. †Braids saturated with a flameproof compound. When ordering please use the trade name.

## Grigo Special Flexible Stage Cable and Packing House Cord

Constructed to withstand severe abrasion. Conductors are reinforced with jute and rubber jacket. The cord is then covered with an outer weatherproof braid.

## Grigo Special Flexible Deck Cable

Watertight flexible cord, made to stand severe abrasion. Made as follows: Two conductors of new code cotton braided cord, twisted together, reinforced by jute, and a rubber jacket. It is then covered with a weatherproof braid.

## Grigo Special Flexible Border Light Cable

The construction of border light cables corresponds with canvasite cord, but consists of 2 or more conductors and has 2 outer braids weatherproofed.

## Grigo Special Flexible Heater Cord

Conductor consists of a number of small copper strands grouped into a cable, cotton wrapped, insulated with a thin wall of rubber compound asbestos wound.

## Grigo Special Flexible Canvasite Cord

An acidproof flexible cord, unusually tough and durable. For use in tanneries and other places where mechanical and chemical conditions are severe. Made up similar to Brewery Cord except that it has an extra weatherproof braid.

## Grigo Special Flexible Brewery Cord

A weatherproof lamp cord which conforms in all respects with the requirements of The National Board of Fire Underwriters. This is a specially designed cord for use in breweries and other places where dampness is prevalent.

## Whitney Blake Inside Telephone Wire

Packed in coils in burlap bags. Furnished in single, twisted pair or triple conductors. A tracer thread is used in all conductors.

Gauge B.&S.	Description	Wt., per 1000 Ft.	Coil Lengths, Ft.
19	Twisted Pair, Olive Green Finished...	20	200-1500
20	Twisted Pair, Olive Green Finished...	19	200-1500

## Whitney Blake Outside Telephone Wire

Furnished in coils. Single and triple conductor, when specified.

Gauge B.&S.	Description	Wt., per 1000 Ft.	Coil Lengths, Ft.
17	Weatherproof, Copperweld Wire.....	33	200-1500
14	Weatherproof, Copper Wire.....	60	200-1500
17	Weatherproof, Twisted Pair, Bronze Wire	33	200-1500
17	Weatherproof, Parallel Bronze Wire.....	33	200-1500

## Whitney Blake Bridle Telephone Wire

Furnished in coils. Single conductors, when specified.

Gauge B.&S.	Description	Wt., per 1000 Ft.	Coil Lengths, Ft.
18	Twisted Pair, Weatherproof Braid....	33	200-1500
16	Twisted Pair, Weatherproof Braid....	42	200-1500

## Whitney Blake Outside Drop Wire

Stronger and lighter than copper and quite as flexible. Conductor is a high grade non-rusting steel insulated with good grade rubber compound, cotton braided and weatherproofed. The sizes most generally used are as follows:

Gauge	Description
19 BWG (18 B. & S.)	3/4 Inch Diam.; Twisted Pair
18 BWG (16 B. & S.)	5/8 or 3/2 Inch Diam.; Twisted Pair
16 BWG (14 B. & S.)	1/2 Inch Diam.; Twisted Pair
14 BWG (12 B. & S.)	3/4 Inch Diam.; Twisted Pair

## Whitney Blake Flameproof Telephone Wire

Gauge B. & S.	Description	Wt., per 1000 Ft.	Coil Lengths, Ft.
16	Single, Twisted or Triple Conductor...	38	200-1500
20	Single, Twisted or Triple Conductor...	17	200-1500
22	Single, Twisted or Triple Conductor...	13	200-1500
18	Single Ground or Sub-station Wire....	13	200-1500

## Whitney Blake Pot Head Wire

Standard wire is either 19, 20 or 22 B. & S. gauge in single or twisted conductor. Insulation is suitable to withstand effects of the hot sealing compound and outside exposure without a protecting braid. One conductor of the twisted pair has a double ridge on insulation insuring quality. Weight, per 1000 ft., 19 lbs. Coil length, 200-1500 ft.

## Armco Galvanized Iron Drop Wire

For Outside Service

Stronger and lighter than copper and quite as flexible. Manufactured from Armco (American Ingot) Iron, universally known to be the only pure iron manufactured today. It is guaranteed 99.84 per cent pure iron (minimum), is equal or superior to the genuine Swedish, Norway and other brands of pure irons. The purity of iron has a great deal to do with its rust-resisting power. Its uniformity assures uniform conductivity, no pitting to cause weak spots and eventually breaks, uniform strength throughout, 65,000 to 75,000 pounds tensile strength per square inch; mass conductivity 18 per cent as compared to steel at 12 per cent. The conductor is thoroughly galvanized, insulated with a high-grade rubber compound on which is woven a braid, weatherproof and twisted together. The sizes most generally used are as follows: Gauge No. 14 BWG, No. 16 BWG, No. 18 BWG and No. 19 BWG.

Prices upon application.

## Telegraph Wire

Wires are furnished in strict accordance with the standard specifications of the largest telegraph companies of this country. They are a high-class product and furnished in all sizes as required. The sizes ordinarily specified are Nos. 14, 16, 18 single and twisted, with a weatherproof braid, and No. 18 in twisted pair and triple, with gray braid, with tracer in one conductor. Flameproof wires in size No. 16 single and twisted are also used by the telegraph companies.

**Deltabeston Fixture Wire—Plain  
Single Conductor—Stranded**

The flexible conductor is insulated with a 1/2-inch wall of asbestos fiber, purified by a special process. Felted asbestos fixture wire is recommended for all classes of fixture wiring, etc., and is especially adapted for fixtures in which the temperature liable to be attained by some parts are such as to render the use of rubber covered wires or cords either undesirable or impracticable. It can be "fished" through fixtures with the utmost ease. Standard length, 250 feet. Furnished on spools.

Size B. & S.	Diam. Over All In.	Stranding B. & S.	Wt., Lbs. per 1000 Ft.
10	0.180	65/28	42
12	0.157	66/30	29
14	0.137	41/30	20
16	0.119	26/30	14
18	0.107	16/30	10

**Colored Finish, Plain**

Single conductor fixture wire, plain, similar to that described above, can be finished with gray, cream, old brass or bronze colored filling compound at an increase in price.

**Single Conductor—Solid**

Either the black finish or colored finish fixture wire described above can be furnished with solid conductor where extreme flexibility is not necessary.

**Deltabeston Fixture Wire  
Cotton and Art Silk**

This is the plain, black finish fixture wire with a braided outer covering of art silk or cotton. It is especially adapted for fixtures on which the wiring is exposed to view. It has a small diameter and is neat and attractive in appearance. This wire is furnished in single and two conductors.

**Single Conductor  
Plain with Braid**

Size B. & S.	Diam. Overall In.	Standard Length of Spools, Ft.	Wt., Lbs. per 1000 Ft.
12	0.179	250	29
14	0.167	250	22
16	0.149	250	16
18	0.137	250	12

**Duplex**

Two Plain Conductors Twisted Together and Braided

Size B. & S.	Diam. Overall In.	Standard Length of Spools, Ft.	Wt., Lbs. per 1000 Ft.
12	0.333	250	59
14	0.294	250	44
16	0.258	250	32
18	0.234	250	23

**Parallel**

Two Plain Conductors Laid Flat and Braided Together

**Twisted Pair**

Two Plain Conductors Each Braided and Twisted Together

Size B. & S.	Diam. Overall In.	Standard Length of Spools, Ft.	Wt., Lbs. per 1000 Ft.
12	0.358	250	60
14	0.324	250	45
16	0.288	250	33
18	0.264	250	25

**Deltabeston Boiler Room Wire**

This wire is generally furnished in sizes 8, 10, 12 and 14 B. & S. with 1/4-inch felted asbestos insulation, lead covered, to prevent absorption of moisture. Prices quoted on application.

**Deltabeston Heater Cord  
2-Conductor, Stranded  
Style A, Asbestos Braid Overall**

For service where rubber is not necessary, felted asbestos heater cord is satisfactory. Each conductor is composed of 30 B.&S. gauge copper wires stranded together and insulated with a 1/2 inch wall of pure asbestos fiber. This is filled with a compound which gives it high dielectric strength and provides a tough, pliable insulation.

Style A is a fire-proof cord. The twisted conductors are covered with an asbestos braid.

The felted asbestos insulation does not deteriorate with age. The insulation so cements the wires that, even should some of them break, the fine strands will not penetrate the outer covering and cause short circuits.

Size B.&S.	Diameter Over All Inches	Strand-ing B.&S.	Wt. Lbs. per 1000 Ft.	Size B.&S.	Diameter Over All Inches	Strand-ing B.&S.	Wt. Lbs. per 1000 Ft.
12	.399	66/30	87	16	.323	26/30	52
14	.359	41/30	67	18	.299	16/30	41

**2-Conductor, Braided**

The braided conductor is made by braiding 34 B.&S. gauge copper wires instead of stranding 30 B.&S. wires.

**Style C, Glazed Cotton Braid Overall**

## Deltabeston Round and Rectangular Magnet Wire

In the manufacture of felted asbestos insulated magnet wire, soft drawn copper of at least 98 per cent conductivity is used.

The insulation is asbestos fiber treated by a special process which removes all impurities. The asbestos is applied in an adhesive, uniform, smooth mass of approximately the same wall thickness as double cotton covered magnet wire. It is finally treated with a special compound which renders it both moistureproof and tough. Notwithstanding its toughness, the insulation is so flexible that it does not crack or break even when sharp bends are made. The standard color of finish is black, but white finish can be supplied, at the same price.

The desirability of rectangular sections is evident, because a greater cross section of copper is secured. Since felted asbestos magnet wire is now procurable in nearly all sizes and shapes, the advantages of flat or square wires may be had together with the benefits derived from a fireproof insulation.

The satisfactory application of an asbestos covering on flat and square magnet wires presents certain difficulties not encountered in the insulating of round wires. To apply a smooth, uniform covering over the rounded corners as well as on the flat surfaces of the wire is obviously essential. This is accomplished with absolute certainty.

Insulation thickness is approximately equal to that of double cotton covered magnet wire.

Standard full spool for rectangular magnet wire, any size 200 pounds.

Square and Rectangular Magnet Wire

Increasing attention is being given to the economies to be secured by the substitution of Square or Rectangular for round magnet wire. When round wire is used, considerable space is wasted, even when turns are fitted together as closely as possible, whereas the waste spaces are filled when square or rectangular wire is used, and a greater current carrying capacity secured.

Square Magnet Wire

Square magnet wire can be furnished in all sizes from number 14 to 0000 B. & S. gauge. (In computing the gauge the diameter of round wire is comparable to the thickness of square wire.) Sizes smaller than No. 14 cannot be regularly procured owing to the difficulty of winding.

Rectangular Magnet Wire

Rectangular magnet wire sizes have not, as yet, been standardized but can be supplied in sizes from .410 to .020 in thickness and from .460 to .064 in width and the regular insulation is double cotton wound. Rectangular wire is not carried in stock, but made specially on order, and in view of this, orders should not be for less than 200 pounds of any size.

Prices on square and rectangular magnet wire will be quoted upon application.

## O.K. Slow-Burning Triple Braided Wire

Solid

All 3 braids of cotton thoroughly saturated with white fireproof compound. The compound used on the outer braid becomes very hard, but still the wire retains its flexibility. As this insulation does not deteriorate in a continued high temperature, it is especially suitable for engine and boiler rooms, furnaces and foundries.

## O.K. Weatherproof Hard-Drawn Copper Wire

Copper Wire

Triple Braided

These wires are insulated especially for the telephone and telegraph trade and railway signal work, combining the highest conductivity with the greatest tensile strength.

Size B.&S. Gauge	Cap. Circ. Mils	Approx. Wt., Lbs. per Mile	Std. Pkg. Coil
8	16510	395	1/2 Mile
9	13090	325	1/2 Mile
10	10380	280	1/2 Mile
12	6530	185	1/2 Mile
14	1407	139	1/2 Mile

## O.K. Weatherproof Twisted Pairs

For Inside Use Only

One conductor of plain copper, and one of tinned copper. These wires are insulated with two reversed winds of cotton yarn, covered with a close protecting braid, all thoroughly saturated with "O.K." Weatherproof Compound, and finished with a hard and lasting polish. The conductors are then twisted together. These pairs are extensively used in interior telephone work.

Size B.&S. Gauge	Approx. Wt. Lbs. per 1000 Ft.	Std. Pkg., 100 Lbs. Bundles	Weight
14	53	4	25
16	32	4	25
18	23	4	25
19	20	4	25

## Hard-Drawn Bare Copper Wire

These wires are drawn accurately to specification, in either B. & S. or N.B.S. gauge. They are designed especially for telephone, telegraph, and railway signal work.

They are put up in approximately 200-pound coils, and are thoroughly wrapped for shipment.

Size	Diam. in Mils	Cap. Circ. Mils	Weight Pounds per Mile
8B.&S.	128.	16510	264

12N.B.S.	104.	10816	173
14N.B.S.	80.	6400	102

## O.K. Weatherproof Iron Wire

Double and Triple Braided

These wires are extensively used in telephone and telegraph work, and have the same insulation as regular "O.K." weatherproof line wires.

Size B. W. Gauge	APPROX. WT., LBS. PER MILE		Std. Pkg. Coils
	Double Braided	Triple Braided	
8	470	520	1/4 Mile
9	400	450	1/3 Mile

12	230	260	1/2 Mile
14	150	175	1/2 Mile

Phillips Bare Copper Wire

Phillips Bare Copper Wire

Solid Conductor  
Annealed or Hard-Drawn

Concentric Strands

These wires are drawn accurately to gauge according to specification. They are of the highest conductivity and greatest tensile strength. They are regularly drawn to B.&S. gauge and annealed, and all will be filled accordingly unless otherwise stated.

## Extra Double Galvanized Telephone and Telegraph Wire

The Indiana Steel & Wire Company's process of galvanizing (Crapo Patents) overcomes the inherent defects in certain grades of galvanized wire, more especially those which approach pure iron. The use of the process results in a perfect mechanical bond between the zinc coating and the iron base metal, thus insuring a protective coating which will not crack or peel even if the wire is bent or twisted abruptly, as when wrapped around its own diameter.

Aside from the introduction of a molten salt treating bath which in no way adversely affects the finished product, the process follows closely the old standard hot-dip method of applying a zinc coating. The molten salt bath is of such composition as to prepare the surface of the iron base metal so that after being made chemically clean, fluxed and dipped in the molten zinc, the resulting galvanizing is thick, non-peeling, and contains the maximum amount of pure zinc which means the best possible protection against corrosion.

Extra Best Best (E. B. B.) is highest in electrical conductivity, having a range of electrical resistance of 4700 to 5000 mile ohms.

Best Best (B.B.). Slightly higher in resistance than E. B. B. but combines conductivity with tensile strength to make a popular grade, having a maximum electrical resistance of 5600 mile ohms.

Steel is designed for short-line service, where electrical conductivity can be sacrificed for tensile strength. Maximum resistance 6500 mile ohms.

All grades galvanized under the same improved process.

Size B.W.G.	Diam. In.	Wt., Lbs. per Mile	Miles Wire in Bundle	APPROX. BREAKING STRAIN, LBS.		
				E. B. B.	B. B.	Steel
4	.238	811	1/4	2929	2271	2433

Prices upon application.

## American Galvanized Arc Lamp Chain

Made in three sizes: Nos. 31 and 33 for suspending arc lamps, and No. 35 for suspending incandescent lamps. It is heavily galvanized and rust-proof.

Put up on 500 or 1000-foot reels.

Size No.	Description	Tensile Strength Pounds	Wt., Lbs. per 1000 Feet	Price per Foot
31	For Heavy Street Fixtures	915	118	\$8.50
33	For Medium Street Fixtures	725	89	8.25
35	For Light Street Fixtures	550	71	7.50

Universal Insulator Supports

Universal Insulator Supports are specially designed malleable iron clamps for securing insulators in any position to open steel framework, for wiring mills, foundries, factories, shops, bridges, piers, elevated railways, subways, train sheds and similar structures. They are easily attached, and by their use, electric wiring for lights, motors, generators, cranes, etc., can be installed with a saving of labor and material.

The principal advantage of the single set screw feature is the three-point contact which is more rigid and secure than the four-point contact. A wrench can be used more freely than when two set screws were close together.

Cat. No.	Size of Support Inches	Standard Tapping for Screws and Bolts (See Note A)	Price per 100
500	1	1/4-Inch—20 (No. 14-20)	\$20.00
501	1 1/2	5/16-Inch—18 (No. 18-18)	34.00
502	2	3/8-Inch—16 (No. 24-16)	46.00
503	2 1/2	1/2-Inch—13	68.00

Prices include leather washers for insulators, but do not include machine screws or bolts for insulators.

Table of Wires, Insulators, Supports and Screws

Showing No. 500 Support with Two No. 5 1/2 Split Insulators Support is Tapped Special for No. 10—24-Thread Machine Screw

Showing No. 502 Support with No. 3 1/2 Insulator. Support is Tapped Standard for No. 24—16-Thread Machine Screw

These combinations of wire sizes, insulators and supports should be followed only after consideration of the problem in hand, taking account of character of work and stresses involved, strength of insulators, etc. Table shows largest size of wires suitable for insulators listed; smaller wires may, of course, be used as desired.

NOTE A.—Items marked require supports to be tapped special for screws or bolts, without extra charge.

NOTE B.—Should have iron washer under screw or bolt head. NOTE C.—B. & D. Cleats also recommended.

Bull Dog Insulator Supports

Bull Dog Insulator Supports are certified malleable iron clamps, galvanized finish for attaching porcelain or glass insulators to exposed steel framework in mill buildings and similar structures.

They are designed to secure a Bull Dog grip on the steel framework with the slightly slanted case-hardened steel set screws. Made in four sizes to accommodate all standard insulators.

No. 400

One-Inch Bull Dog Insulator Supports. Specify No. 10-24 tapping for No. 5 1/2 Split Knobs. Specify No. 14-20 tapping for No. 5 1/2 Solid Knobs.

Packed 200 in a wooden box.

Shipping weight per 100, 25 pounds.

Price, No. 400.....per 100 \$20.00

No. 401

1 1/2-Inch Bull Dog Insulator Supports. Specify No. 14-20 tapping for No. 9419 Split Knobs. Specify No. 18-18 tapping for No. 4 1/2 Solid and No. 33 Split Knobs. Specify No. 18-18 tapping for No. 1 and No. 1 1/2 B & D Cleats.

Packed 100 in a wooden box.

Shipping weight, 55 pounds.

Price, No. 401.....per 100 \$30.00

No. 402

2-Inch Bull Dog Insulator Supports. Specify No. 18-18 tapping for No. 9420 Split Knobs. Specify No. 24-16 tapping for No. 1, No. 2, No. 3 W. G., No. 3 1/2 and No. 24 Solid Knobs. Specify 1/2 inch-13 tapping for No. 26 and No. 30 Solid Knobs. Specify No. 24-16 tapping for No. 2, No. 2 1/2 and No. 3 B & D Cleats.

Packed 50 in a wood box.

Shipping weight per 100, 90 pounds.

Price, No. 402.....per 100 \$45.00

No. 403

2 1/2-Inch Bull Dog Insulator Supports. Specify 3/8 inch-16 tapping for No. 52 Solid Knobs. Specify 1/2 inch-13 tapping for No. 29, No. 49 and No. 53 Solid Knobs. Specify 1/2 inch-13 tapping for No. 3 1/2 and No. 4 B & D Cleats. Specify 1/2 inch-13 tapping for No. 72 Hubbard or No. 450. Wood Pins for DGDP Glass Insulators.

Packed 50 in a wooden box.

Shipping weight per 100, 140 pounds.

Price, No. 403.....per 100 \$75.00

\*Loom.

**Type B Federal Extra Long Porcelain Clamp Bushings**

Can be used with material 5/8 to ¾ inch in thickness. Length over all, 1¼ inches; under head, 1⅝ inches. Will fit No. 10 solid single braid rubber covered wire.

Cat. No.	Diam., In. Inside	Outside	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
B-1	5/8	1¼	250	15	\$.12½

**Federal Porcelain Elbow Type Clamp Bushings**

Special shape for outdoor work, preventing water from entering wire. Also used instead of regular bushing where wires leave surface at an angle. A small projection behind the head, designed to engage a notch which can be made easily in the metal opening, prevents the bushing from turning after the clamping ring is tightened.

**Special Porcelain Tubes**

To obtain list price of floor, curved and curved end, split and cross-over tubes, multiply as follows:

**Solid Floor Tubes**

Multiply list by three. For list price on these tubes add three inches to length of standard tubes.

**Split Floor Tubes**

Multiply list by six. For list price on these tubes add three inches to length of standard tubes.

**Headless Tubes Above Eight Inches Long**

Multiply list by 4. On these tubes measurements are to be computed over all.

**Headless Tubes Eight Inches Long and Under**

Same list as standard tubes. On these tubes measurements are to be computed over all.

**Curved and Curved End Tubes**

Multiply list by three. On these tubes measurements are to be computed over all.

**Split Regular Tubes**

Multiply list by 10. On these tubes measurements are to be computed under head.

**Cross-over Split Tubes**

Multiply list by 12. On these tubes measurements are to be computed between heads.

**Cross-over Solid Tubes**

Multiply list by six. On these tubes measurements are to be computed between heads.

Add 50 per cent to list for glazed tubes.

For tubes larger than 1 3/4 x 24 inches, a standard package is 50.

Barrel size is 20-inch head and 30-inch stave.

A standard package or unit container cannot be made up of assorted sizes.

A standard package is a barrel for which a charge will be made. When ordered put up in paper boxes, or in wooden or corrugated boxes of kegs containing 500 or 1000 pieces or pairs, an additional charge will be made. Prices for special packages will be furnished upon application.

## 2 and 3-Wire Cleats

### Standard Cleats

No. 334

No. 335

No. 350

Any of the sizes listed below can be furnished for either 2 or 3 wires; 2-wire cleats will always be furnished unless 3-wire are specified.

For prices on 3-wire cleats add 10 per cent to 2-wire prices, listed below.

Wire Size No.	No. in Bbl.	Unglazed			White Glazed		
		Cat. No.	Wt. Lbs. per Bbl.	Price per 1000	Cat. No.	Wt. Lbs. per Bbl.	Price per 1000
12-14	*1850	334-UG	385	\$17.60	334-G	390	\$33.10
9-10	1500	335-UG	410	21.90	335-G	405	39.10
2-6	1250	350-UG	395	27.90	350-G	400	55.00

### Mill Type Cleats

These are exactly the same as those listed above excepting that cleats with a heavy 1-inch base are furnished.

For construction in damp places or where cleats are attached to metal supports as in mills, foundries, etc.

12-14	1400	334 1/2-UG	395	\$25.80	334 1/2-G	400	\$41.30
8-10	1100	335 1/2-UG	415	30.80	335 1/2-G	420	46.90
2-6	850	350 1/2-UG	385	36.90	350 1/2-G	390	60.30

\*Can also be furnished packed in paper cartons. Each carton contains 100 cleats, and 10 cartons are packed to a case. The price for cleats packed this way is: No. 334-UG, \$20.70 per case; No. 334-G, \$36.20 per case.

## Duggan Cleats

### One-wire Glazed

- No. 4 holds wires No. 16 to No. 8.
- No. 5 holds wires No. 8 to No. 2.
- No. 6 holds wires No. 030 to 250000.

**Vitrified Clay Conduit**

Square Duct, Single

The conduit clays are of peculiar character in being naturally compounded by having the proper fluxing materials associated in relatively correct proportions in a high grade plastic fire clay which possesses certain necessary properties rarely found in other clays. In burning, these fluxing materials in combination in the one clay, produce vitrification of the clay mass, one of the most essential features of good conduit. Also the salt glazing of clay is caused by a chemical reaction and few clays are favored with properties giving a successful salt glaze finish.

**Single-Duct Conduit**

Single-duct conduit permits of the breaking of joints. It allows two heavy insulating walls between all cables where multiple duct conduit only allows for one. Single-duct conduit is thus adapted particularly for the building up of high service trunk lines for the transmission of power and light. It is also used for the construction of single-cable terminals and laterals of low tension and telephone lines.

Round Duct Single

Length of Piece Feet	Duct Feet in Piece	Square Duct, Single		Duct Feet in Min. Carload	Price per Duct Ft.
		Approx. Wt., Lbs. per Duct Foot	Diam. Duct Inches		
1.5	1.5	11	3 1/2	7000	\$ .25
1.5	1.5	12	4 1/4	5400	.25
<b>Round Duct, Single</b>					
1.5	1.5	10	3 1/4	6700	\$ .25
1.5	1.5	12	4 1/8	5000	.25

**2 and 3-Duct Multiple Conduit**

The 2 and 3-duct standard conduit is intended for the laying of 2 or 3 cables in terminals or laterals from the main trunk line, or for the purpose of building up trunk lines to the number of ducts required. On account of the narrow lateral diameter of this ware, it has been found impossible to manufacture this style of conduit in pieces longer than 2 feet, and insure good, straight pieces. In many cases it will prove cheaper to lay an extra duct in the longer multiple conduit, especially if the future contemplates the use of the extra duct.

Length of Piece Feet	Duct Feet in Pieces	2-Duct, Multiple		Duct Feet in Min. Carload	Price per Duct Ft.
		Approx. Wt., Lbs. per Duct Foot	Diam. Duct Inches		
2	4	10	3 1/4	8000	\$ .25
<b>3-Duct, Multiple</b>					
2	6	10	3 1/4	8200	\$ .25

**4, 6 and 9-Duct Multiple Conduit**

Telephone and telegraph specifications ordinarily require a larger percentage of 4, 6 or 9-duct than of the smaller forms. These designs are the more economical and permit of considerable saving in installation over the smaller forms. There is no constructive reason why single-duct conduit should take the place of multiples in building up a telephone trunk line. The long multiples present the advantage of economy, constructive simplicity, working efficiency and ease in pulling cables.

Vitrified Salt Glazed Clay Conduit

Creosoted Wood Conduit

Dowel Pins

Metal dowel pins are made of commercial wrought iron. They are circular in cross section, 3 inches long,  $\frac{5}{8}$  inches in diameter of shaft, with a thin collar projection mid-way of the shaft to prevent the pin from slipping more than half-way into the conduit hole. C. P. C. Conduit is reamed about the dowel pin holes to allow the conduit pieces to make a close-butt-joint over the dowel pin collar.

Prices upon application.

This material is manufactured from yellow pine at the plants at Norfolk, Virginia, and Atlanta, Georgia and from Douglas fir at our plant at Tacoma, Washington; creosoted full vacuum treatment is an economical and satisfactory conduit for the carrying of all forms of lead cable and wires.

Comes in random lengths.

Outside measurement,  $4\frac{1}{2} \times 4\frac{1}{2}$  inches.

Has a 3-inch hole in center, a mortise at one end and a tenon on the other.

It is in general use by the large telegraph companies and telephone companies all over the country and by many railroads.

Uses for which it is adapted:

**RAILROADS.**—Trunking, underground signal wires, high tension transmission lines, yard drainage where clay conduit is easily broken through, and system is usually placed on the surface of the ground.

**TELEPHONE COMPANIES.**—All underground work.

**TELEGRAPH COMPANIES.**—All underground work.

**POLICE AND FIRE ALARM SYSTEMS.**—For carrying wires, either high or low tension under ground.

**CENTRAL STATIONS.**—For distribution mains and services.

**SPECIFICATION CREOSOTED CONDUIT.**—Free from large, unsound or loose knots, or other defects which would impair strength. Creosoted steam and vacuum treatment, dead oil of coal tar under pressure either 12 pounds per cubic foot (full cell) or 8 pounds per cubic foot (empty cell) as ordered.

Any additional information regarding the practicability of installing this conduit will be furnished upon request.

Prices on application.

**Bermico Multiple Fibre Conduit**

Forty-Eight feet of Bermico Multiple can be laid in a few seconds. Two men can do it. Put one man in the trench and let the other pass him the 6-duct Bermico Multiple. Being light in weight Bermico brings a saving in freight. It is easier to handle, reduces the element of fatigue in workmen and hence keeps the job moving speedily throughout the day. Trenches may be made narrower, with economy in cement and in the labor of excavating and refilling. And then, there is practically no breakage with the Bermico Multiple.

**Cement Block Separator**

**Fibre Insulator and Insulated Iron Band**

The suggested multiple ducts required are not over 6 to insure ease of handling. Bermico Multiple Conduit is manufactured in lengths of 23, 46, 69 and 92 inches. If desired, shipments can be made up entirely of the 92-inch length. While this length covers more distance per unit of installation, it is found that shipments carrying assorted lengths bring about savings at manholes and other places where the shorter pieces fit in.

All lengths of Bermico Multiple adapt themselves to long curves without danger to the carefully constructed sleeve joints. The ducts of this conduit are bound with iron bands, which are equipped with strong fibre insulator to break any induced current which may be set up within the strap. Spacing between ducts can be made according to your specifications. Bermico standard spacing is 1 inch. Each piece of Bermico Multiple Conduit is properly aligned on the accurate cement block separators about which it is bound.

**Bermico Fibre Conduit**

**Socket Joint Type**

Bermico Fibre Conduit is manufactured in a long established pulp and paper plant that specializes in high grade products. It is produced under standardized conditions under the supervision of expert chemists and engineers.

The pure spruce pulp fibre is converted into 8-foot lengths of automatic machines which produce a higher degree of precision than any skilled operative could produce, wall thicknesses for example being gauged automatically to the thousandth of an inch.

Automatically regulated and elaborate machinery is used to slowly dry and season the conduit, overcoming the defects of ordinary drying methods such as blistering, warping, etc. The result is straight, tough, uniform tubes all exactly up to standard.

Impregnating is effected in great steel sealed chambers forcing out all moisture and forcing in the binding material under correct temperature conditions and for the right length of time.

Machining is done automatically, both ends of the conduit being milled at once insuring uniformity.

**Sleeve Joint Type**

The use of only first quality materials, expert supervision and exactness of construction results in a product which meets the highest standards for dielectric and physical strength, moisture absorption and uniformity.

LENGTHS.—Approximately 8 feet, except 1½, 2 and 2½-inch sizes which are approximately 5 feet; 3-inch size is furnished in both 5 and 8-foot lengths.

## Bermico Fibre Conduit Field Machines

SHOWING 4-INCH MANDREL IN POSITION READY TO FORM END ON 4" CONDUIT

The Bermico Conduit Field Machine for sleeve, screw and socket joints enables the conduit-laying crew to machine a short length of conduit to a perfect fit.

The machine is light, portable, inexpensive and ensures a finished conduit possessing tight joints. Both types of the machine carries all mandrels, cutting tools, tool holders, and other parts required for machining joints on 2, 2½, 3, 3½, 4, 4½ and 6-inch conduit, including necessary adjusting and tightening wrenches. No wrenches or other tools should be used except those supplied with the outfit.

The taper or angle for all joints is set by the manner in which the machine is assembled at factory and cannot be changed. It is set exactly right, and remains so.

The screw-joint type machine cuts the standard male thread, and finishes thread complete in one operation. Operator can only vary the depth of cut, and a little practice will enable him to get correct depth. This type carries also a cutting tool for trimming the entering end of the conduit before thread is cut. This trim is made quickly and ensures a tight seat for the conduit-end when butted end to end.

While spare parts may be obtained, each conduit machine is assembled in a rugged cabinet with a padlocked lid which also functions as the operating stand for the machine when in use. This cabinet contains a tool compartment in which all accessory parts are snugly held, handy for instant use. If the machine is properly closed and padlocked when not in use, there should be no occasion for buying duplicate parts.

**Natco Split Clay Conduit**

Single Duct, Round Bore Split 18 Inches Long

Single Duct Square Bore Split 18 Inches Long

6-Duct Split 18 Inches Long

Natco Split Conduit is made in all single and multiple duct forms, both in standard lengths and in short lengths.

It is scored or knifed for splitting apart on the job. This split section makes it easier to replace or repair conduit lines without the necessity of removing cables.

These split sections may also be used to enclose cable joints or splices in place of building manholes. This is of advantage in reducing manhole costs.

**Bends**

Single Duct Curve, Round Bore Split

Natco Single Duct Bends are furnished in all standard size bores, i.e., 3¼-inch and 3½-inch round, and 3½-inch square bore and are furnished in either 45 or 90-degree angles and in 12, 18, 24, 30 and 36-inch radii.

Bends of special angles or of special radii can be made to order on short notice.

The radius of single duct bends is measured from the center line of the duct hole.

These bends are furnished either knifed for splitting apart or are furnished solid without any knifing.

**Natco Transposition Conduit**

Natco Transposition Conduit is supplied in 6, 3, and 2-way multiples, all 24 inches long, with either right hand or left hand twist of 22½ degrees.

It is designed to permit the transposition of conduit lines from a flat to an edge position, or vice-versa, in a distance of 8 lineal feet and back again, if desired, to their original position in another 8 feet. Each transposition of 90 degrees is accomplished by the use of 4 pieces of transposition conduit.

This shape is of considerable advantage in changing the position of the conduit lines to avoid certain underground street obstructions or to change the position of cables on approaching manholes or central offices.

**Natco Slant Clay Conduit**

Single Duct Slant Round Bore Solid

Single Duct Slant Round Bore Split

Natco Slant Conduit is adapted for building curves of various angles and various radii and may be used in place of bends. This is of advantage where the angle or radius of the curve cannot be definitely determined before actual construction is started or where the curve is of unusual or intricate design and under such conditions fills a long felt want.

Unit of Multiple Duct, Slant Conduit

Natco Slant Conduit, both single duct and multiple duct, is supplied in one standard cut—3-degree 10-foot radius, and in all standard size bores and positions. In combination with standard 6-inch short lengths these slants will build curves from 10 to 25 feet in radius and in various angles, ranging from 3 degrees up to 90 degrees.

Slants can also be supplied in special cuts for radii less than 10 feet if desired and can also be furnished knifed for splitting apart. The radius of the slants is measured from the center line of the conduit.

Cables can be easily pulled through curves built of Natco Slant Conduit, and, more important, tight fitting joints are assured.

**Quality Rating on Underground Clay Conduit**

**Inspection Test on Natco Conduit**

Shape	Perfect Score in Points	Percent Free from Defects	Actual Score in Points

		100	98.9

Column 1, above, represents various points of perfection weighted according to their relative importance to the user

Applied to an average lot of Natco Conduit, an actual test inspection (Column 2) was made by a disinterested inspector and in column 3 appears the actual calculated rating.

## Rigid Steel Conduit

Installation of Rigid Steel Conduit in buildings is recognized as the most practicable method of protecting electric wires, and making provision for their replacement when judged advisable. The first requirement of such conduit is that it shall be permanent.

### Sherarduct

Sherarduct Rigid Steel Conduit manufactured from spellerized steel is the impregnable wiring raceway.

Zinc-alloy and pure zinc protection obtained over the inside and outside surfaces in the sherardizing process, and elastic acid-proof enamel baked on, assure permanence under all conditions of moisture and acid corrosion.

Sherarduct elbows, nipples and couplings are manufactured

of the same high grade spellerized steel as Sherarduct conduit, and are given the same zinc and enamel protection against corrosion.

The threads on Sherarduct conduit are cut clean and sharp. The annealed steel bends, cuts, and threads easily because of annealing. Wires slide quickly on glass-like inside enamel of sherarduct.

### Economy

Economy Rigid Steel Conduit is thoroughly coated inside and outside with elastic and acid-proof enamel, for installation under less rigorous corrosive conditions.

It is manufactured of the same high grade spellerized steel as Sherarduct Conduit, and bends easily for offsets and angles. The enamel used on Economy Conduit will not crack or chip off under the roughest handling and remains

intact when Economy is bent. Economy Elbows, nipples and couplings are given the same thorough enamel protection as Economy Conduit.

On sizes of Economy Conduit up to 2 inches inclusive, thread protectors are furnished; on all larger sizes excess enamel is carefully removed from the threads before shipment.

### X Duct

Xduct is electro-galvanized conduit manufactured from spellerized and scale-free tubing, the inner surface raceway is coated with a highly glazed, hard, conduit enamel,

unaffected by acids and alkali, this enamel is elastic and is not affected when the conduit is bent.

### Electroduct

Electroduct is enameled both inside and outside, manufactured from spellerized, scale-free tubing. The enamel will

bend with the conduit without cracking or flaking. Electroduct is full standard weight, threads are cut sharp and clean.

**Rigid Steel Conduit  
Enamelled Conduit**

Enamelled conduit is manufactured from mild drawn steel tubing. Before enameling, the tubing is thoroughly cleaned and freed from dirt, grease, scale, silicates and burrs. This process leaves clean surface for the application of the compound. **Sherarduct**

Sherarduct rigid conduit is made of full weight mild spellerized steel tube and finished under the famous sherardizing process. In this process pure zinc is alloyed with the steel tube both inside and outside to form a rustproof finish which is so entirely a part of the pipe that it cannot be knocked or chipped off.

In ordering, specify finish desired.

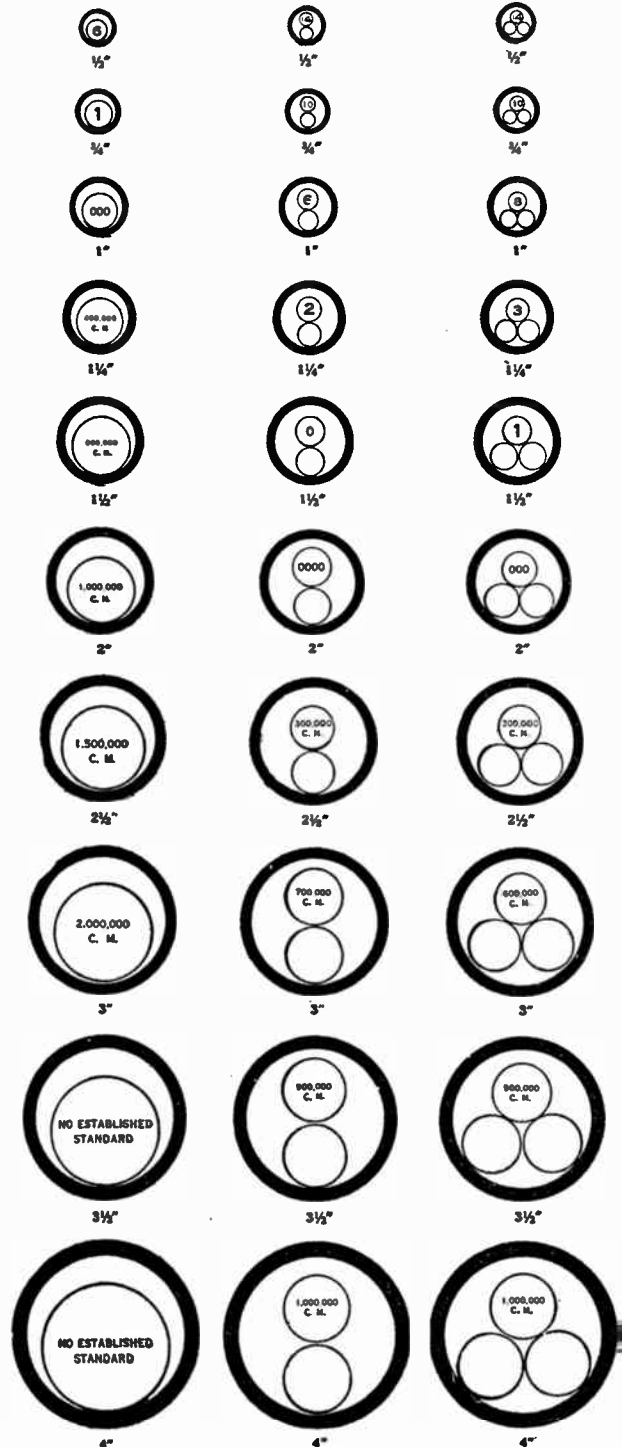

**Standard Sizes of Conduit**

For the Installation of Wire and Cables

As Adopted and Recommended by the National Association of Electricians

Based on the use of not more than three 90-degree elbows in runs taking up to and including No. 10 wires, and two elbows for wires longer than No. 10. Wires Nos. 8 and larger are stranded.

Single wire combinations are based on straight run without elbows. Special permission is required of the inspection department having jurisdiction for the installation of more than nine wires in the same conduit.

**Chase Couplings**

Chase couplings are plain finish but can be galvanized to order.

Cat. No.	Size In.	Std. Pkg.	Wt. per 100 in Lbs.	List Price per 100
830	1/4	100	4	\$10.00
831	3/8	200	5	10.00
832	1/2	200	7	10.00
833	3/4	100	10	12.00

**T & B Erickson Conduit Couplings**

Conduit Union does away with running threads, saving dies and labor. Permits opening of conduit at any desired point. Enables the start of circuit from 2 outlets and makes a good, strong connection at any

point in the run. The pipe ends abut so that no space is left between the lengths of conduit, therefore, it is not necessary to draw the 2 ends of the conduit together. Vibration will not loosen a connection made with an Erickson coupling. The hexagon shoulder and ridges on the outside of the coupling make an easy grip for a pipe wrench.

Cat. No.	Size Inches	Unit Std. Pkg.	Weight Pounds per 100	Price per 100
674	3/8 for 3/8-Inch Conduit	25 100	20	\$32.00

684	4 for 4-Inch Conduit	5 5	600	1600.00

**Sherman Ground Clamps**

An all copper, one-piece clamp which can be drawn up tight. The roll portion for soldering is turned in to rest against opposite tongue of clamp, preventing the two ends from tipping together when tightened; holding the ears parallel, and insuring large amount of drawing power.

Can be used for both soldered and solderless connections.

Cat. No.	Size Pipe Inches	Carton	Std. Pkg.	Approx. Wt. Lbs., Std. Pkg.	Price Each
1	3/8 to 1	100	1000	110	\$.20

602	1/4 x .060	45	4.00
604	3/8 x .060	70	6.00

**No. 1629 Klein's Fish Tape Pullers**

A simple husky come-along for standard size fish tape or snake.

Gives a positive hold that does not injure the wire and will not slip.

This tape puller is light in weight, strong and can be carried in the vest pocket.

Can be modified for round wire on special orders.

Weight each, 3 1/2 ounces.

Price, No. 1629.....each \$1.50

**National Adjustable Fixture Studs**

Nos. 2251 and 2252, unit pkg. 50, std. pkg. 1000. Bolts with nuts, unit pkg. 100, std. pkg. 1000.

Cat. No.	Size In.	Description	Price per 100
2251	3/8	Male	\$5.00
2252	1/2	Male	6.50

## Diamond One-hole Malleable Clamps

Made in all sizes to fit standard steel electric conduit or steel pipe from 3/8 up to 4-inch inside diameter.

The ribbing of the clamp is such as to provide maximum strength with minimum weight.

Furnished at the same price either in a baked black japanned finish or galvanized.

Have but one screw hole and cut in half the expense of screws or expansion bolts and the labor of installing them as compared to the old two-hole strap.

Conduit or Pipe Size, Normal Inside Diam., In.	Cable Size or Outside Diam. Conduit, In.	Diam. Screw Hole In.	Expansion Shield or Anchor Size, In.	Wt. per 100 Lbs.	Std. Pkg.	Price per 100

## T & B Adjustable Conduit Hangers

Type A

Hanger will fit any flange from 2 3/4 to 12 inches. It is adjustable for varying plaster lines and will support any number of conduits from 1 to 8, which may run at any angle with the beams and close against the beam, or far enough below to permit a second line of conduits to be run above.

Additional runs of conduit can be added without interfering with lines already in position. It is not necessary to loosen clamp to meet any condition which may arise. No other conduit hanger will accomplish half as much at twice the cost. Clamps of stamped steel.

Cat. No.	Description	Unit Pkg.	Std. Pkg.	Wt. per 100 Lbs.	Price per 100
700	Type A Clamp (Incl. Bolts) Fits Flange from 2 3/4 to 7 3/8 In.	25	100	33	\$30.00
701	Type B Clamp (Incl. Bolts) Fits Flange from 7 to 12 In.	10	100	62	45.00
702	Type C Clamp (Incl. Bolts) Fits Flange 8 1/2 to 11 3/8 In.	10	100	46	45.00
703	Special Bolts	100	100	6	5.00

Extension used with 2 inner parts of Type A clamp, becomes Type C clamp.

## Wedgtite Pipe Hangers

Furnished with Wedge

Type CHR Installed

Type CHP Installed

Wedgtite Pipe Hangers are quickly and easily installed as only a few blows of a hammer are necessary. They can be used with any I beam, channel, or other structural shape having a lower flange 1/8 to 5/8 inch thick. They consist of two pieces, a hook and a wedge, which is provided with saw teeth so that vibration will not loosen it. The wedge is interchangeable with all types and sizes of hooks.

Types CHP and CHR are made so that one end hooks under the pipe and the other over the flange of the structural shape. The end that hooks over the flange has a groove into which the wedge is driven, tightly drawing the pipe against the flange and securely holding it in position.

Type CHU is wedged to the flange independently of the pipe or group of pipes it is to support. A bolt is used for suspending the pipe, its head resting securely in a pocket in body of hanger. This pocket takes a 1/2-inch bolt. Bolt can be inserted after the hanger has been secured to the flange.

Type CHA consists of a Type CHU Hanger and a bracket to carry 2 or 3 porcelain knobs for wires. Bracket is attached to CHU Hanger with a bolt and nut. Bolt can be loosened and bracket turned to accommodate wires running either parallel with or at right angles to the structural shape.

Any assortment of 100 galvanized Wedgtite Hangers of any type or size will be considered a standard package.

Standard finish is galvanized. Black enamel finish will be furnished if ordered at the same price as galvanized.

### Type CHP Hangers

### Type CHR Hangers

For pipe running parallel with a structural shape.

Cat. No.	Size In.	Std. Pkg.	Wt., Lbs. per Pkg.	Price per Each
CHP1	1/2	100	80	\$.40
CHP2	3/4	100	85	.45
CHP3	1	100	90	.50
CHP4	1 1/4	100	95	.55
CHP5	1 1/2	100	105	.60
CHP6	2	100	115	.65

For pipe running at right angles to a structural shape.

Cat. No.	Size In.	Std. Pkg.	Wt., Lbs. per Pkg.	Price per Each
CHR1	1/2	100	85	\$.40
CHR2	3/4	100	90	.45
CHR3	1	100	100	.50
CHR4	1 1/4	100	105	.55
CHR5	1 1/2	100	110	.60
CHR6	2	100	120	.65

### Type CHU Hangers

### Type CHA Hangers

For suspending a pipe or group of pipes from a structural shape. Takes 1/2-inch hanger bolt.

CHU1	100	100	\$.55
------	-----	-----	-------

For carrying open wires on structural steel work.

CHA2	50	100	\$1.10
CHA3	50	170	\$1.50

### Wedges for Wedgtite Hangers

Cat. No.	Thickness Flange, In.	Std. Pkg.	Wt., Lbs. per Pkg.	Price per Each
CHW1	1/8-1/2	100	15	\$.20
CHW2	1/4-5/8	100	15	.20

**Blake Insulated Staples**

Illustrations Are Actual Size

The fibre insulation of Blake Insulated Staples is of double thickness where it contacts with the wires.

At no point can the wires come in contact with an uninsulated part of the staple. The staples may be driven over two or more wires without danger of causing a short circuit or even a ground.

Nos. 1 and 5 are for use in hardwood; Nos. 3 and 6 are for general use. Nos. 1 and 3 are for single wire and twisted pair; Nos. 5 and 6 for extra heavy pair wire and twisted 3-wire.

Packed 100 in a small container—10 small containers (1000 staples) per carton.

Cat. No.	Quantity	CARTON WEIGHT		STANDARD CASE		PRICE

6	1000	2	7	25000	59	.30	1.80

**No. 20 Blake Cleats**

Made of compressed wood. For use in places where Blake Staples will not hold, as on plastered walls and similar places. The center partition protects the wire from the nail or screw.

Price, No. 20.....per 1000 \$2.75

**Rhodes Wiring Nails and Fibre Insulators**

Tough, compressed fibre heads, selected brads and waterproof, dielectric finish. In boxes of 100; 1000 to carton.

**Telephone**

**Flextube Non-metallic Flexible Conduit**

Made from an especially prepared stiff fiber cord interwoven with a tough yarn. The result is a seamless tube with a smooth, hard, canvas-like roller-bearing interior which affords the best obtainable fishing surface. This interwoven insulating tubing is then treated with a superior moisture and flame resisting compound, is further protected by a strong, tough braiding which is also compounded.

Regularly inspected and labeled by the Underwriters' Laboratories.

## Ovalflex Flat Armored Cable

Ovalflex has the great advantage over round armored cable in that its depth is from  $\frac{3}{16}$  inch to  $\frac{1}{4}$  inch less. On this account, it can be readily covered by the thickness of plaster commonly used on brick and tile surfaces, while round armored cable cannot. It can be bent edgewise to about the same radius as ordinary armored cable, and flatwise to a much smaller radius. On account of these features, surface installations of Ovalflex are neat and inconspicuous and may be used in may places where surface installations of round armored cable would not be tolerated.

## Flexsteel Armored Conductors

The perfectly flat, smooth exterior results in great advantages in cutting, stripping and pulling around corners, joists, etc. The opposed channel construction of the strip allows the utmost range of flexibility, and will not spread no matter how small the radius to which bent. Steel strip used is thoroughly annealed and zinc coated. Distinguishing braids on each conductor permit certain and quick identification of polarities.

## Flexsteel Panel Box Connectors

### EZ Type

For Armored Cable and Flexible Conduit

The clamping strap on EZ Connectors is hinged at one side, instead of being cast integral with the body of the connector. This makes them easier to tighten and gives them a stronger grip that will satisfactorily hold a wider range of materials than connectors of the usual construction.

Sherardized throughout. Clean cut, rust-proof threads.

Will hold 4-4 single and double strip armored cable; 4-3, 4-2, 6-4 double strip armored lead cable; 1-inch single and double strip flexible conduit.

Cat. No.	I.D., In. Open	I.D., In. Closed	Wire Throat In.	Knock-out In.	Car-ton	Std. Pkg.	Price per 100

## T & B Squeeze Combination Couplings

Malleable Iron—Galvanized

For connecting flexible and rigid metallic conduits, also for connecting flexible metallic conduit to outlet boxes by means of chase nipple. One-piece malleable iron, galvanized. Cannot pull apart.

Cat. No.	Size In.	Made to Hold	Unit Pkg.	Std. Pkg.	Wt. Lbs. per 100	Price per 100

235	2	2" S.S. and D.S. Conduit	50	92	75.00	

## T & B 2020 Type Connectors

Holds 14W2, 14W3, 12W2, 12W3, 10W2, 10W3 non-metallic sheathed cable; also 3/8, 1/4, 3/8-inch flexible fibre tubing.

Installed inside or outside of box. Made of steel, galvanized.

Cat. No.	Size In.	Knockout In.	Unit Pkg.	Std. Pkg.	Wt. Lbs. per 100	Price per 100
2020	3/8	1/2	50	2000	3 1/2	\$7.50

## T & B 45° and 90° Squeeze Connectors

Malleable Iron—Galvanized For Flexible Steel Conduit and Armored Conductors

The removable cap eliminates fishing wires and enables one to make a quick and sure connection.

Locknuts are furnished.

Holds 14W2 s.s., 12W2 s.s., 14W3 s.s., 14W2 d.s., 12W2 d.s., 14W3 d.s., 6D solid s.s., 14E s.s., 14W2L, 18EM s.s., 16EM d.s., 18EM d.s., 14E d.s.; 3/8-inch s.s. conduit, 3/8-inch d.s. conduit; 12W3 s.s.

## T & B Slip-In Box Connectors

To install, snap the connector into the knockout; flexible conduit or armored conductor is then slipped into the connector and the screw is tightened.

The tension of the spring will hold the fitting in place.

## No. 1267 T & B Spring Cable Bushings

The bushing protects the insulation of the wire even after it leaves the armor of the cable.

Cat. No.	Made to Take	Unit Pkg.	Std. Pkg.	Wt. Lbs. per 100	Price per 100
1267	No. 14 W2, 14 W3, 12 W2, 12 W3	5000	15	2.50	\$2.50

**National Metal Molding**

National Metal Molding is for light and power circuits up to 300 volts and 2500 watts, to hold two to four wires, 14 or 12 single braid. It is used also for bell, telephone, and signal work taking any number of wires for that class. For rules governing the use of metal molding see section 504-1925 National Electrical Code and 1926 Supplement.

Made in two styles, each in two sizes—one-piece for fishing wires, two-piece for either laying in or fishing wires.

Fittings, elbows, tees, etc., are made for each size, two and four-wire, but are interchangeable for one or two-piece molding. Devices, boxes, sockets, etc., are interchangeable with all four moldings, 033 and 044 entering them directly, and the smaller moldings, 022 and 222, entering by means of No. 300 adapter.

Fastenings: No. 222, use No. 6 flat head wood screws; No. 033, use No. 6 or No. 8 flat head wood screws.

Toggle bolts of equivalent sizes can also be used.

One-piece moldings are fastened with straps or spring clips.

Metal molding is rust-proof, being zinc treated inside and outside by the sherardizing process. The color is a neutral gray. The surface readily takes enamels, oil or water-mixed paints.

Handbook of instructions for installation will be sent upon request.

**2-Piece, for 2 Wires**

Width, 5/8 inch; height, 1 1/2 inch; length, 8 feet 4 inches.

Cat. No.	Unit Pkg. Feet	Std. Pkg. Feet	Wt., Lbs. Std. Pkg.	Price per 100 Feet

322	1	1	2	\$2.00

## Wiremold Conduit and Fittings

### General Description

Wiremold Conduit is made in 2 and 4-wire sizes and Master Size for main and sub-feeders is furnished in 10-foot lengths and is designed for surface wiring exclusively.

The base and capping is permanently assembled at the factory, hence conductors cannot be laid into it as in similar materials, but must be fished in all cases.

The base is galvanized and its capping is finished with special, high grade enamel of neutral tint particularly selected to blend with colorings of average walls and ceilings.

Wiremold Conduit and its accompanying fittings require no special tools of any kind for assembly; only a screw driver, hack saw and No. 600 Wiremold Bender are needed for installation.

Like rigid conduit, Wiremold is furnished with one coupling to each length, as shown in Fig. 1.

Fig. 1

Fig. 2

Fig. 3

Fig. 4

To install Wiremold, push the coupling forward until screw hole is clear and then fasten to wall with a No. 8 flat head screw as shown in Fig. 2. Slip the next length over edges of coupling as shown in Fig. 3 and close up as in Fig. 4.

Base plates of all Wiremold Fittings are provided with coupling tongues similar to tongue shown in broken end view of a fitting base plate in Fig. 5. Wiremold

Fig. 5

Fig. 6

Conduit is connected with Wiremold Fittings by simply shoving the ribs in the upper side edges over the coupling tongues as shown in Fig. 6.

### Wiremold Conduit

New No. 1000 Master Size Wiremold Conduit for main and sub-feeders and No. 700 Wiremold Conduit for branch circuits in large industrial and commercial installations. No. 500 Wiremold Conduit is for smaller installations requiring 2 wire circuits.

Wiremold Conduit is rolled from high grade sheet steel and is so finished that the portion which lays against the surface wired over is galvanized, while the section visible after installation is finished in a neutral tone enamel that will blend with any color scheme and act as a ground coat for graining or staining. Also covers with one coat of flat white.

Cat. No.	Size	Unit Pkg.	Wt., Lbs. per 100 Ft.	Price Each
500	2-Wire	100 Ft.	33	\$12.00
700	4-Wire	100 Ft.	36	15.00
1000	Master Size	100 Ft.	76	31.00

### Master Size Wiremold Base Couplings

One coupling is furnished with each length of Master Size Wiremold Conduit but extra couplings must be used where short lengths are installed.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5701	50	500	9	\$.04
1001	None	100	7	.08

### Wiremold Conduit Bushings

For use wherever Wiremold enters fittings. The bushing is slipped into the end of Wiremold and should be installed in all cases before molding is assembled with fittings. It is locked tightly in place by the base plate of fittings.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each

### No. 5703 Wiremold Supporting Clips

To support Wiremold in the middle of lengths. It is secured to wall with a No. 8 flat wood screw and Wiremold snapped into it. Screw hole is slotted to allow clip to be adjusted.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5703	50	500	8	\$.06

### Wiremold Supporting Straps

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
504	50	500	9	\$.04
704	50	500	16	.06

No. 504

### No. 1005 Wiremold Master Size 1-Hole Straps

For supporting No. 1000 Master Size Wiremold.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
1005	None	200	7	\$.10

### Wiremold Connection Covers

Designed to cover cracks between adjoining lengths of No. 500 or No. 700 Wiremold which have not been cut square enough to make a good appearing joint.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
506	50	500	5	\$.04
706	50	500	5	.04

### No. 5707 Wiremold Multiple Straps

For supporting multiple runs of Wiremold Conduit. As furnished it is for use in supporting three runs and by breaking off the scored section it may be used for supporting two runs of Wiremold.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5707	50	500	15 7/8	\$.05

### Wiremold Ground Couplings

A standard, screwless ground coupling. In installing it, first solder ground wire into its lug and then push the coupling over the base into the grooved edges.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5709	5	100	2	\$.12
1009	None	100	8	.20

### Wiremold Elbows and Tees

No. 5711

No. 5715

No. 5717

No. 5718

Consist of base plates provided with tongues for slip joint connections with No. 500 or 700 Wiremold, and cover pieces. Cover pieces will fit No. 500 Wiremold, and by breaking off twistouts will fit No. 700 Wiremold.

Cat. No.	Description	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5711	90° Flat Elbow....	10	100	12	\$.24
5712	45° Flat Elbow....	5	50	4	.24
5715	Tee.....	5	100	18	.44

5718	Internal Elbow...	10	100	11	.24

**Wiremold Plain Tees and Crosses**

Cat. No.	Description	Unit Pkg.	Std. Pkg.		Price Each
			Qty.	Wt., Lbs.	
515	Tee	5	100	16	\$ .44
516	Cross	5	50	11	.46

**No. 5719 Wiremold Corner Boxes**

Designed to provide in a single fitting, with abundant splice room, for the many corner junctions and other combinations such as twisted elbow, twisted tee, twisted cross, that can be made with Wiremold Conduit.

Consist of a base plate provided with four holes for No. 8 flat head supporting screws and two knockouts for 1/2-inch pipe or BX connector, also four tongues on side edges and one tongue in back center for slip joint connections with both No. 500 and No. 700 Wiremold Conduit, and a cover piece. The cover piece has four double twistouts making it possible to use this fitting with both No. 500 and No. 700 Wiremold Conduit. Note that this fitting is reversible.

Cat. No.	Unit Pkg.	Std. Pkg.		Price Each
		Qty.	Wt., Lbs.	
5719	5	50	21	\$ .56

**No. 5720 Wiremold Narrow Fittings**

A small, rigid, straight line fitting for use with Wiremold conduit in wiring places having narrow dimensions, such as wall cases, store windows, show cases, etc.

Has a base with exceptionally long tongues to provide a rigid connection with both No. 500 or No. 700 Wiremold conduit, and a cover equipped with a male nipple to take any standard 1/8-inch socket for reflectors. Tongues of the base are scored to permit breaking them off to make a dead end and the cover has double twistouts to permit making extensions with both No. 500 or No. 700 Wiremold conduit.

Cat. No.	Unit Pkg.	Std. Pkg.		Price Each
		Qty.	Wt., Lbs.	
5720	5	50	11	\$ .64

**No. 5786 Wiremold Adjustable Connectors**

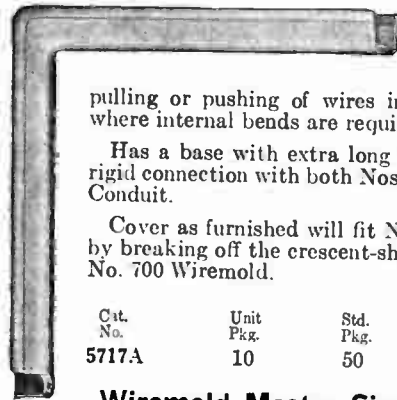

Eliminates offsetting wiremold conduit in connecting with surface type panel cabinets.

The base has a chase nipple with locknut in an elongated slot in the bottom to connect with knockout in cabinet and to permit of adjusting fitting flush with wall. In the back is a knockout for 1/2-inch pipe and a tongue at the end for slip joint connection with No. 500 or No. 700 wiremold conduit and a cover piece as shown.

Cat. No.	UNIT PKG.		STD. PKG.		Price Each
	Quantity	Wt., Lbs.	Quantity	Wt., Lbs.	
5786	5	1 1/4	50	13	\$ .50

**No. 5717A Wiremold Elbow Pull Boxes**

No. 5717A is designed for use as an internal elbow pull box to permit easy pulling or pushing of wires in breaking beams or where internal bends are required.

Has a base with extra long tongues to provide a rigid connection with both Nos. 500 or 700 Wiremold Conduit.

Cover as furnished will fit No. 500 Wiremold and by breaking off the crescent-shaped twistout will fit No. 700 Wiremold.

Cat. No.	Unit Pkg.	Std. Pkg.		Price Each
		Qty.	Wt., Lbs.	
5717A	10	50	18	\$ .60

**Wiremold Master Size Elbows**

**No. 1087 Wiremold Master Size Kick Plates**

For protecting Master Size Wiremold from mechanical injury at intersection of wall and floor when installed as risers.

Cat. No.	Unit Package	Standard Package	Weight, Pounds	Standard Package	Price Each

## No. 5721 Wiremold 1-Piece Rosettes

An all steel rosette for drop cords and may also be used with a 1/8-inch male loop for chain pendants. Base is provided with tapped hole for use of contact block when desired and cover has four double twistouts for use with both Nos. 500 or 700 Wiremold Conduit.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5721	5	100	33	\$ .42

## No. 5724 Wiremold Fixture Rosettes

Steel rosette with contact block for taps, fibre insulation washer to hang heavy drop cords and special chase nipple with locknut to hang 3/8 or 1/2-inch fixtures. Cover has four double twistouts for use with both Nos. 500 or 700 Wiremold Conduit.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5724	5	50	20	\$ .92

## No. 5725 Wiremold Receptacle Bases

All steel, equipped with ready-to-wire tap block and standard fluted or wrinkled ring, so that any standard Schedule B device designed to fit fluted or wrinkled socket caps may be mounted upon it. Cover has four double twistouts for use with both Nos. 500 or 700 Wiremold Conduit.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5725	5	100	42	\$ .96

## No. 5726 Wiremold Keyless Receptacles

All steel keyless standard Edison type, equipped with special, easy-to-wire keyless socket interior and designed for use at lighting outlets or at any point where a screw type receptacle is desired. Cover has four double twistouts for use with both Nos. 500 or 700 Wiremold Conduit.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5726	5	100	42	\$1.26

## No. 5727 Wiremold Attachment Plugs

Made up of a steel housing in which is mounted a standard, easy-to-wire, 10-amp. attachment plug base with double T slots for plug caps having either tandem or parallel blades. Cover has four double twistouts for use with Nos. 500 or 700 Wiremold Conduit.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5727	5	100	42	\$1.40

## No. 5728 Wiremold Utility Boxes

Has a base with two holes for No. 8 flat head supporting screws and a knockout for 1/2-inch pipe or BX connector, also four tongues for slip joint connections with both Nos. 500 and 700 Wiremold Conduit.

In addition the cover has a 1/8-inch knockout in which there is a 1 1/2-inch flanged hole with a plug for use as a junction box and by pushing the plug may be used as a rosette for drop cords.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5728	10	100	39	\$ .46

## No. 5729 Wiremold Condulet Type Utility Boxes

Has a base with two holes for No. 8 flat head supporting screws and knockout for 1/2-inch pipe or BX connector, also four tongues on ends and sides for slip joint connections with both No. 500 and No. 700 Wiremold Conduit. The cover piece has four double twistouts for use with both No. 500 and No. 700 Wiremold Conduit, and an opening which will take all standard 1/2-inch condulet covers.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5729	10	100	35	\$ .50

## No. 5730 Wiremold Contact Blocks

For use with Wiremold Fittings Nos. 5721, 5724, 5725, 5728, 5729, 5732, 5733, 5735, 5738 and 5739.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5730	20	100	6	\$ .16

## No. 5731 Wiremold Blank Covers

For use with Nos. 5732 and 5733 boxes where they are used as pull or junction boxes or for hanging light pendant fixtures with large stems, as it is provided with a 1/2-inch pipe knockout.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5731	5	100	8	\$ .16

## No. 5732 Wiremold Outlet Boxes

Designed as a base for a standard 5-ampere snap or toggle switch but may also be used as a junction or pull box and for mounting back wired fittings with 2 1/2-inch base. Cover has four double twistouts for use with both Nos. 500 and 700 Wiremold.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5732	5	100	23	\$ .52

## No. 5733 Wiremold Outlet Boxes

Designed primarily as a base for all types of standard 5 or 10-ampere switches, but may be used also as a pull or junction box or for mounting various wall sockets for concealed base receptacles and rosettes, ceiling pull switches, etc., bases of which do not exceed 3 inches.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5733	5	100	27	\$ .52

## No. 5734 Wiremold Closed Extension Boxes

For use in extending No. 500 or 700 Wiremold from existing concealed outlets, its base plate having four tongues for slip joint connections with both No. 500 or 700 Wiremold. Cover has four double twistouts and 1/2-inch pipe knockout.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5734	5	20	31 1/2	....

## No. 5736 Wiremold Blank Covers

A 4-inch blank cover for use with boxes Nos. 5737, 5738, 5739 and 5739A where they are used as pull or junction boxes or for hanging 1/2-inch fixtures or drop cords.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5736	5	100	13	\$ .18

**Wiremold Distribution Boxes**

For the distribution of branch circuits of Wiremold; also has screw holes in cover to permit mounting any device which may be hung on a 3 1/4 or 4-inch box.

Base has four holes for fixture studs three knockouts for 1/2-inch pipe and two 3/8-inch knockouts for loom, also tongues on each side for slip-joint connections with both No. 500 and 700 Wiremold.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5735	1	20	17 3/4	\$ .90
1035	None	10	15 1/2	1.32

**No. 5737 Wiremold 4 3/4-Inch Extension Boxes**

Primarily designed for use in extending Nos. 500 and 700 Wiremold Conduit from existing outlets, its base plate having four tongues for slip joint connections, and special slots for attaching to 3 1/4 and 4-inch boxes.

Both base and cover are split so that it may be installed by simply dropping canopy.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5737	5	50	28	\$ .76

**No. 5738 Wiremold 4 3/4-Inch Fixture Boxes**

Primarily designed for use in hanging fixtures but is also equipped with screw holes in its cover to permit mounting any device which may be hung on a 3 1/4-inch or 4-inch box. The base has four tongues for slip joint connections with Wiremold Conduit.

Outside dimensions: Diameter, 4 3/4 inches; height, 1 inch. Fixture and device screw spacings on 2 3/4 and 3 1/2-inch centers. Base has four holes for fixture studs and five knockouts for 1/2-inch pipe or BX connectors.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5738	5	50	30	\$ .76

**No. 5739 Wiremold 6 3/8-Inch Fixture Boxes**

Primarily designed for use in hanging fixtures with canopies up to 6 3/8 inches in diameter, but can also be used for any device which may be mounted on 3 1/4 or 4-inch boxes.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5739	5	20	22	\$1.16

**No. 5739A Wiremold 6 3/8-Inch Extension Boxes**

For use in extending Wiremold conduit from existing fixture outlets. Both the base and cover are split so they may be installed by simply dropping canopy.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5739A	5	20	22	\$1.16

**No. 5745 Wiremold Combination Boxes**

Base has 4 holes for No. 8 flat head supporting screws, a knockout for 1/2-inch pipe, 3 tongues in each end and 1 tongue in each side for slip joint connections with No. 500 or 700 Wiremold. Cover has 3 double twistouts in one end and 1 in each side; also two 1/2-inch pipe knockouts in each side and 1 in one end.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5745	1	20	13 1/2	\$ .90

**No. 5747 Wiremold Shallow Surface Type Switch and Receptacle Boxes**

Designed to permit Wiremold Conduit to be installed close up to door-frames, window-sash and base-boards for shallow surface type switches or receptacle outlets. Base has 4 holes for No. 8 flat head supporting screws, a knockout for 1/2-inch pipe, 3 tongues in each end and one tongue in each side for slip-joint connections with No. 500 or 700 Wiremold. Also furnished in 2 and 3-gangs.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5747	1	20	12	\$ .96
5747-2	1	10	10	1.32
5757-3	1	10	15	1.42

**No. 5748 Wiremold Surface Type Switch Boxes**

Consists of a base plate with 4 holes for No. 8 flat head supporting screws and a knockout for 1/2-inch pipe or BX connector, also 8 tongues for slip joint connections, with both Nos. 500 and 700 Wiremold Conduit, and a cover piece. Also furnished in 2 and 3 gangs.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5748	1	20	13	\$1.09
5748-2	1	10	12	1.46
5748-3	1	10	16	1.52

**No. 5748-S Wiremold Shallow Type Outlet Boxes**

This outlet box is only 1 5/8 inch deep, designed to take standard shallow type duplex receptacles.

Has a base with knockout for 1/2-inch pipe or BX connector, with 8 tongues for slip-joint connections with Wiremold. Cover has 8 double twistouts for use with both Nos. 500 and 700 Wiremold.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5748-S	1	20	11	\$ .83

## No. 5749 Wiremold Flush Switch and Receptacle Boxes

Made in single gang only.

Consists of a switch box with four holes for No. 8 flat head supporting screw and four tongues for slip joint connections with both Nos. 500 and 700 Wiremold Conduit, and a cover piece.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5749	1	20	13	\$1.20

## No. 5780 Wiremold Special Chase Nipples

For use in bushing Wiremold Fittings having covers with 1/2-inch pipe knockout to hang either 3/8 or 1/2-inch fixtures as the nipple is tapped inside for standard 3/8-inch thread and standard 1/2-inch thread on the outside.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5780	5	50	2 1/4	\$.20

## Wiremold Box Connectors

For use to couple Nos. 500 and 700 Wiremold Conduit to fittings having knockouts for 1/2 and 3/4-inch pipe.

Cat. No.	Size Inches	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5781	1/2	5	50	3	\$.40
5781-A	3/4	5	50	4	.40

## Wiremold Pipe Couplings

For use in coupling Nos. 500 and 700 Wiremold Conduit to 1/2 or 3/4-inch pipe.

Cat. No.	Size Inches	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5782	1/2	5	50	4	\$.42
5782-A	3/4	5	50	7	.42

## No. 5783 Wiremold 1/2-Inch Elbow Box Connectors

For use where an elbow coupling between Wiremold and fittings having knockouts for 1/2-inch conduit is necessary.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5783	5	20	3	\$.42

## No. 5784 Wiremold 1/2-Inch Elbow Pipe Couplings

For use where a direct elbow coupling must be made between Wiremold and 1/2-inch conduit.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5784	5	20	4	\$.42

## No. 5785 Wiremold Combination Connectors

Unit package, 5; standard package, 50.

Cat. No.	Wt., Lbs. Std. Pkg.	Price Each
5785	8	\$.30

## No. 588 Wiremold Open Work Couplings

For use where a tap is made from No. 500 Wiremold to open work, as in coming out to meter, fractional horse power motors and similar devices.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
588	5	20	4	\$.46

## No. 5788 Wiremold Open Work Couplings

For use where a tap must be made from Wiremold Conduit to open work.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5788	5	20	5 1/2	\$.27

## No. 701 Wiremold Reducing Connectors

No. 701 four-wire connector is used to connect No. 700 Wiremold with No. 500 Wiremold fittings.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
701	10	100	7	\$.18

## No. 5750 Wiremold Push Switch Boxes

Made in single gang only.

For use in installing any shallow type push switch with Wiremold, and consists of a shallow type flush switch case and a special cover with standard openings for push buttons and mounting screws.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5750	1	20	14	\$1.26

## Wiremold Flush Switch and Receptacle Adapters

For use in picking up and extending a circuit in both Nos. 500 and 700 Wiremold Conduit from existing outlets.

Adapters are not complete fittings in themselves but are designed to mount over the old switch box found in a wall at existing switch and receptacle outlets.

Cat. No.	No. in Gang	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5751	1	1	20	9	\$1.12
5752	2	1	10	7	1.86
5753	3	1	10	9	2.00

## No. 5760 Wiremold Blank Extension Boxes

For use in extending single or parallel runs of both No. 500 or 700 Wiremold from existing switch or receptacle outlets. Base has three tongues in each end and one in each side; cover has three double twistouts in each end and one in each side making it possible to use this fitting with both No. 500 or 700 Wiremold. Also serves as an ideal Mat.

Cat. No.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
5760	1	20	8 3/4	.....

**No. BO Wiremold Bracket Outlets**

A safe, permanent, neat fitting bracket that can be attached to any side-wall fixture and always ready for use. Avoids unscrewing lamps and removing shades. Equipped with standard plug and No. 14 wire to meet all appliance requirements. Furnished in brass finish to harmonize with most fixtures. Prices for special finishes upon application.

Cat. No.	Unit Pkg.	Std. Pkg.	Price Each
BO	5	50	\$ .60

**No. CO Wiremold Ceiling Outlets**

A simple, rugged unit to provide a convenient outlet in kitchens or other places where the only electrical connection is through a ceiling fixture. This unit consists of a short length of Wiremold Conduit and a box with its base plate permanently attached to the conduit. Unit may be extended from any ceiling canopy for attaching a pendant with plug. An ideal outlet for any electrical appliance. Finished in white enamel.

Cat. No.	Unit Pkg.	Std. Pkg.	Price Each
CO	1	10	\$ .62

**No. WO Wiremold Window Outlets**

This unit consists of a short length of Wiremold Conduit permanently attached to base plate of 4-inch round box and assembled for 16-inch centers or, centers less than 16 inches may be made by cutting the conduit of each unit. Base plate of box is equipped with 5 tongues and its cover with 5 twistouts to permit making extensions of any number of units at any desired angle. Cover of box is provided with standard screw spacings to take all 3-inch or 4-inch box porcelain receptacles.

Cat. No.	Unit Pkg.	Std. Pkg.	Price Each
WO	1	10	\$ .62

**No. 51151 4-Inch Square Outlet Boxes**

Black enamel or galvanized finish. Has 1/4-inch nail holes in bottom and sides for fixture studs or nails. Twist out on 2 opposite sides for 1/2-inch gas pipe.

**Five 1/2-Inch Knockouts in Bottom  
Eight 1/2-Inch Knockouts in Sides**

Cat. No.	Depth Inside Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price per 100

## T & B Dead Ground Cable Boxes For Armored Conductors

Nos. 553, 554 and 555

Nos. 556 and 557

These boxes have a simple, yet effective connecting and grounding device, based on the wedge and inclined plane principle, which entirely does away with the multiplicity of parts required in boxes of other makes.

The mechanical and electrical connection between box and armor is perfect. They are easy to install.

Boxes are galvanized.

Shallow boxes are 3 inches in diameter by 3/4 inch deep. Standard package, 100.

Cat. No.	Description	Wt. Lbs. Std. Pkg.	Price per 100
553	Shallow Box for Straight Electric Work, 3/8-inch Fixture Stem	50	\$22.00

## No. FHSB FA Fan Hangers

Front View, Installed

Designed for use with standardized outlet boxes and covers. This fan hanger is furnished with a beveled edge face plate, universal receptacle and special fan supporting part. The fan supporting part is adjustable for plumbing the outlet if box is out of line.

A heavy steel bolt (1/4-20) with brass washer for attaching the fan, is furnished with the unit. This bolt is installed through face plate, or it can be installed from rear of supporting part as a stud and fitted with a fastening nut.

Fan hanger outlets are a permanent fixture, because they are built in at the same time as the rest of the equipment.

The box is not furnished. Any N. E. M. A. 4x4x1 1/2-inch outlet box with N. E. M. A. rectangular opening single switch cover 1/2 inch deep can be used. Nos. 52C13, 52C14, 52C15, 52C16, 52C62 and 72C14 covers, or Appleton No. 8434 cover with 4-inch octagon box may be used.

Cover is 2 3/4x4 1/2-inch struck-up brass with satin brass finish, or black finish; universal receptacle which is included in price. Struck-up bronze plates with natural brush finish can be furnished at an advance of 15 per cent. Prices on finish to match Bakelite, and special finishes upon request, with sample. Special finishes are difficult to match and it is recommended that plates be purchased unfinished, so special finish can be applied locally.

Cat. No.	Car- ton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
FHSB	1	50	29	\$2.50

## R & S Fan Hanger and Outlet

No. 661

Consists of a rugged receptacle of the standard convenience outlet type securely mounted to a sherardized steel plate.

Receptacle will accommodate any of the standard attachment plug caps. Plugs are not furnished. Any standard 4-inch square outlet box with standard switch cover will accommodate this fitting. Box or cover not furnished.

Brass plate 2 3/4x4 1/2x.060 inches thick. Standard finish is brush brass.

Special finishes to order. Adapted for individually illuminated picture mountings and for glow heaters.

No.	Description	Weight Ounces	Price Each
661	With Brushed-Brass Plate	14	\$2.00
662	With Bakelite Finished Plate	14	2.00

## No. 200 T & B Watertight Floor Boxes

No plug is supplied with this box. The strap and receptacle are assembled ready to place in the box.

Approved by National Board.

Packed in a neat, strong box. Weight, 2 1/2 pounds each.

Cat. No.	Description	Price Each
201	Iron Box with 3 Plugs	\$.85
202	Brass Cover (without No. 203 Disc)	1.50
203	Brass Disc for Cover 1 3/4 In. Diam.	.75
204	Brass Nozzle (Fibre Insulating Bushing)	1.25

207	Large Rubber Gasket	.20
208	Small Rubber Gasket	.10
200	Box Complete as Shown	4.00

**No. 100 T & B Floor Boxes**

Approved by National Board. Just the right size for private house work.

Hot galvanized; no rubber bushings to break; no hard taps required for wiring; no screws to hold strap in place; watertight.

Packed in a neat, strong box, clearly marked to show contents.

Weight of complete box, 2 1/2 pounds.

**No. 110 Latrobe Non-Adjustable Watertight Boxes**

No. 110

Cover plates are 3 1/2 inches in diameter.

Illustration shows cut-away view of No. 110 box showing how the tapered unit receptacle fits tapered opening in top of box body.

The No. 208 receptacle is designed to eliminate the use of small screws, receptacle straps, filler plates, complicated assembly, etc. The wireman simply attaches the wires to the receptacle, fastens on the cover plate and the receptacle is ready for use.

Price, No. 110, with Receptacle and Bell Nozzle, each \$4.00

**No. 130 Latrobe Adjustable Watertight Floor Boxes**

Cut-away illustration of No. 130 Box shows how tapered unit receptacle fits tapered opening in adjusting ring.

Furnished complete with receptacle at the factory. Cover plates are 3 1/2 inches in diameter.

Adjustable top with brass edge ring insures cover being absolutely flush with finished floor in fireproof construction.

No. 130 Box with No. 207 Bell Nozzle

Price, No. 130, without No. 207 Nozzle, each \$4.60  
Price, No. 207 Nozzle, each 1.00

**No. 300 Latrobe Midget Floor Receptacle and Box**

Installation in Floor

Approved by the Underwriters' Laboratories for installation in wood floors.

Designed to provide an extremely small flush convenience outlet, 2 inches in diameter, with low installation cost.

For installation under dining tables, in living rooms, show windows, etc. Ideal for all-electric a.c. radio sets. Cheaper to install in old houses than baseboard outlets.

Price, No. 300, each \$2.00

**No. 100 Latrobe Non-Adjustable Watertight Boxes**

Furnished complete with No. 206 Stem Nozzle but without receptacle. Cover plate is 3 1/2-inch diameter with 1/2-inch flush brass plug. Used as a telephone outlet or junction box.

Price, No. 100, each \$3.15  
Price, Less 206 Nozzle, each 2.15

**No. 208 T Slot Receptacles**

This receptacle with tapered sides fits tapered tops of all Latrobe Watertight Boxes and is interchangeable. It is a complete unit and does not have to be taken apart to be wired. Guaranteed against breakage. Broken receptacles replaced: no charge.

Designed to eliminate many of the small parts such as small screws, receptacle straps, filler plates, etc.  
Price, No. 208, each \$ .60

## No. 120 Latrobe Adjustable Watertight Floor Boxes

No. 120 Box with No. 206 Stem Nozzle

Designed for telephone outlet or where permanent connections are made, or as a junction box. Adjustable top with brass edge ring insures cover being absolutely flush with finished floor in fireproof construction. Cover plates are 3½-inch diameter.

Price, No. 120, without No. 206 Nozzle..... each \$3.75  
 Price, No. 206 Nozzle..... each 1.00

## No. 251 Latrobe Adjustable Watertight Floor Boxes

The No. 251 square box is equipped with No. 207 nozzle and No. 208 receptacle.

Cover plates are 3½ inches square and interchangeable with covers of gang boxes as covers harmonize in size and appearance.

Flat sides permit several conduit holes in each side if required.

No. 251 Box with No. 207 Nozzle and No. 208 Receptacle

Price, No. 251, with ½-Inch Plug in Cover..... each \$5.00  
 Price, No. 251, with Receptacle and 2-Inch Plug in Cover..... each 5.80

## No. 252 Latrobe Gang Floor Boxes

No. 252 Box with No. 206 and No. 207 Nozzles

Double, square box furnished with interchangeable 3½-inch square covers.

One or more sections can be furnished with No. 208 receptacles.

Partitions between sections to separate low and high tension wires.

Price, with ½-inch Plug in Cover Plate.... per section \$5.00  
 Price, with No. 208, Receptacle and 2-Inch Plug in Cover Plate..... per section 5.80

## No. 285 Latrobe Double Duplex Nozzles

No. 285

No. 285 Nozzle consists of two standard Duplex receptacles enclosed in heavy brass housing with ½-inch brass pipe extension 3 inches long. Longer pipe extensions can be furnished if desired. Mounted on No. 200 cover plate.

Very neat and compact in appearance and suitable for use with No. 100, 120 and 251 boxes or sections of gang boxes for desk lamps, fans, motor driven office appliances, factory sewing machines, etc. Also used extensively in public libraries and banking rooms or where multiple service is required from one floor outlet.

Price, No. 285..... each \$6.00

## No. 206 Standard Stem Nozzles

Mounted on No. 200 cover plate.

For use at telephone or similar outlets where a permanent connection is made.

No. 206

Price, No. 206..... each \$1.00

## No. 207 Standard Bell Nozzles

Mounted on No. 201 cover plate.

No. 207

For use with all floor boxes equipped with No. 208 receptacles. When the outlet is not in use the bell nozzle is removed and a 2-inch brass plug is screwed into the cover plate.

Price, No. 207..... each \$1.00

## No. 270 Stem Nozzles

Mounted on No. 200 cover plate.

Equipped with ½-inch female thread for armored cable or ½-inch conduit extension.

Especially suitable for running armored cable from floor boxes up to aisle lights in theatres, etc.

No. 270

Price, No. 270..... each \$1.00

## No. 271 Bell Nozzles

Mounted on No. 201 cover plate.

No. 271

Equipped with female thread for armored cable or ½-inch conduit extension.

Price, No. 271..... each \$1.25

## No. 272 Stem Nozzles

Mounted on No. 200 cover plate.

Has wire slot and screw cap. The cap protects the insulation on wires when floor box is installed under a desk or table.

No. 272

Price, No. 272..... each \$1.25

## No. 274 Bell Nozzles

Mounted on No. 201 cover plate.

No. 274

Has wire slot and screw cap. The cap protects the insulation on wires when floor box is installed under desk or table.

Price, No. 274..... each \$1.50

**Fullman Non-Adjustable Floor Outlets**

**No. 477**

PATENTED AND PATENTS PENDING

No. 477

Sectional View of No. 477 Showing Hubbell Receptacle Mounted on Steel Ring

Design and construction of the No. 477 is simple with few parts, small outside dimensions and plenty of room inside for wiring. Fitted complete with Hubbell receptacle and bell nozzle. The receptacle is mounted on a flat steel ring which also serves as a seat for the bell nozzle or flush brass plug. This construction permits use of only one rubber gasket.

Cover plate is 3½ inches in diameter with 2-inch opening for bell nozzle or flush brass plug. Height is 3⅞ inches to top of cover plate.

Conduit holes: 1 in each side and 2 in bottom tapped for ½-inch conduit. Three of the holes are plugged with brass plugs.

All brass parts are brushed brass finish. All iron and steel parts are sherardized to prevent rust.

Standard package, 25 complete outlets.

Complete outlet as described, consists of No. 481 box body, No. 478 porcelain plug, receptacle and flat steel ring, No. 484 rubber gasket, No. 483 brass cover plate, No. 480 flush brass plug and No. 479 bell nozzle.

Weight, 2½ pounds.

Price, No. 477.....each \$5.00

**No. 490**

No. 490

Complete outlet similar to No. 477, consisting of Nos. 481, 482, 484 and 487 parts listed below. Nos. 465 and 467 nozzles can be used in cover plate.

Weight, 1¾ pounds.

Price, No. 490.....each \$2.90

**No. 491**

Complete outlet same as No. 477, except furnished complete with 20-ampere polarized receptacle and plug and No. 466 bell nozzle.

Weight, 2¾ pounds.

Price, No. 491.....each \$5.00

PATENTED AND PATENTS PENDING

Cover plates are 4 inches in diameter, ¼ inch thick sheet brass. The flange ring is ½ inch thick, making the total diameter of the top of box 4¼ inches.

The height of standard box is 3¾ inches over all. Other heights may be had by the following combinations:

No. 402 body with No. 406 adjusting ring, minimum over all, 4¼ inches; with No. 407, 4⅜ inches; with No. 408, 5½ inches.

No. 404 body with No. 405 adjusting ring, minimum over all, 4⅜ inches; with No. 406, 4⅞ inches; with No. 407, 5½ inches; with No. 408, 6⅜ inches.

An adjustment of ½ inch higher may be had on each of these measurements in setting adjusting rings in the No. 476 cement. These boxes can be furnished special with shallow box body making minimum height 3¼ inches over all.

Conduit holes: Standard is 4 holes tapped for ½-inch conduit, 3 of which are plugged with brass plugs, making them water tight. Can be tapped for larger conduit without extra cost to meet requirements when sketches are furnished showing size and location of conduit holes. Only 1 conduit hole can be tapped in each of 4 sides of box bodies. Plugs larger than ½-inch charged for extra.

Receptacles are not furnished unless ordered.

No. 400, Complete

No. 400

No. 401, Complete

Complete standard outlet consisting of No. 402 box body tapped for ½-inch conduit, No. 405 combination adjusting ring and brass flange ring, No. 409 brass cover plate with No. 471 ½-inch brass plug, No. 411 rubber gasket, and No. 476 sealing cement. Weight, 5 pounds.

Price, No. 400.....each \$4.00

**No. 401**

Complete standard outlet consisting of No. 402 box body tapped for ½-inch conduit, No. 405 combination adjusting ring and brass flange ring, No. 410 brass cover plate with No. 472 2-inch brass plug, No. 414 steel plate, forming seat for No. 411 rubber gasket, and No. 476 sealing cement. Weight, 5 pounds.

Price, No. 401.....each \$4.50

At an extra cost, both Nos. 400 and 401 outlets may be had with the special No. 404 deep body box tapped for standard ½-inch conduit or tapped special to meet specified requirements. Special depth adjusting rings, Nos. 406, 407 and 408, can be furnished without extra cost.

## Fullman Gang Floor Outlets

This rectangular gang floor outlet is for supplying a variety of service such as electric lights, fans, telephones, etc., from one point.

It makes a neater appearance than several single outlets grouped near a desk or table.

Lugs are provided in each section for flush type receptacles.

No. 459 cover plates are furnished standard for use

with No. 466 bell nozzle. No. 458 cover plate may be substituted for one or more sections if desired for use with No. 465 or No. 467 nozzles or ½-inch pipe extension. Brass edge frame extends around all cover plates.

Minimum height to top of cover plate is four inches. Box body only is 3¼ inches high. The cover of No. 411 outlet is 5½ inches by 4 inches over all. The cover of No. 412 outlet is 5½ inches by 7 inches over all. Each additional section adds three inches.

End sections are provided with three holes tapped for ½-inch conduit. Intermediate sections have two ½-inch tapped holes. Can be tapped for ¾-inch and 1-inch conduit with room for bushings or for 1¼-inch conduit without room for bushings. Sketches must be furnished showing size and location of conduit holes if special tapping is required.

All brass parts furnished brushed brass finish. All iron and steel parts sherardized to prevent rust.

### Complete Outlets

Complete rectangular outlets are regularly furnished with No. 459 cover plates. Can be provided with No. 458 cover plates when specified.

**FA Competition Type Floor Boxes**

Made for cement and granolithic type floor work. Pressed steel ring with cover is readily adjustable, for a variation of 3/4 inch; also made special for greater variation and is made a permanent part of box and floor by means of a fine cement mortar grouting.

Box is 4-inch octagon shape by 3 1/4 inches deep. Of drawn steel. Four sides are made flat, each side and bottom with 1/2-inch knockout. Contractor can ream knockouts to 1-inch conduit size. Round gasket in groove, makes box watertight at any angle. Drawn steel flange ring, complete with gasket and removable cover fitted with flat plug, also with composition bushing.

Cat. No.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
FB5	24	112	\$5.00

Each floor box described above is packed in an individual carton.

Price does not include receptacle.

**FA Reversible Cover Floor Boxes**

Adjustable floor boxes are made for cement and granolithic type floor work. Pressed steel ring with cover is readily adjustable for a variation of 3/4-inch; also made special for greater variation and is made a permanent part of box and floor by means of a fine cement mortar grouting.

The reversible cover when not in place leaves a clear opening of 3 inches for connecting wires and installing receptacle. Any standard universal flush receptacles with ears removed can be installed by means of special steel hangers furnished with box.

The box is of drawn steel, 4 inches round by 3 1/4 inches deep. Four sides made flat, two sides and bottom with 1/2-inch knockouts, and two sides with 3/4-inch knockouts. Contractor can ream knockouts to 1-inch conduit size. Round gasket in groove makes box watertight at any angle. The cover is of drawn steel, flanged ring, complete with gasket and permanent cover rim and reversible cover, fitted with flat plug, also with composition split bushing.

Receptacles not furnished.

Cat. No.	Std. Pkg.	Weight of Standard Package	Price Each
FB345	24	112	\$6.00

Each floor box packed in individual carton. Floor boxes are simple to install.

**Patterson Non-adjustable Floor Boxes**

Patterson Non-adjustable Floor Outlet Boxes are designed for wood floor work and for work where it is unnecessary to have the plates of the boxes adjustable.

Boxes shown on this page are double gasketed throughout, thoroughly waterproof; all parts, except floor box itself, are heavily cast bronze; the box is galvanized iron.

In No. 3000 standard 10-ampere receptacles are provided with plugs. With other floor boxes on this page, receptacles and plugs cannot be used.

Iron floor boxes are regularly drilled and tapped for four 1/2-inch conduit entrances, two in sides and two in bottom, adapting them to flexible or rigid conduit work without extra drilling. They will be furnished, when specially ordered to take 3/4-inch conduit on two sides and 1/2-inch on bottom. Removable plugs are furnished closing all but one outlet.

Cardboard shims are furnished with each box and with these shims bronze plate can be easily brought flush with the floor without taking extreme care in cutting; the setting of a Patterson Floor Box is thus made quicker and easier than any floor box on the market.

Receptacles may be removed from box for easy wiring by simply loosening two screws.

Rubber gasket fits into undercut of bronze plate, so that it does not easily fall out.

Patterson Floor Outlet Boxes may be set with an expansion bit guaranteeing rapid work.

## R & S Non-Adjustable Floor Boxes

A high grade floor box intended for use in wood flooring, easy to install and can be firmly secured.

Box is made of galvanized cast iron, floor plate of heavy brass and provided with suitable gaskets to make it watertight.

These fittings are furnished with or without receptacles and plugs, providing for uniformity when used for either high or low tension installations.

Height,  $\frac{3}{4}$  inches; diameter of floor plate,  $3\frac{1}{2}$  inches. Two  $\frac{1}{2}$ -inch outlets on sides; two  $\frac{1}{2}$ -inch outlets on bottom; three outlets plugged. Cannot be tapped for larger conduit. Receptacle and plug, 10 amperes 250 volts, furnished with No. 2580. All parts of these floor boxes are interchangeable and various available combinations of boxes and accessories can be furnished. Each box is packed in a strong carton.

### No. 2580

Furnished complete with receptacle, cone nozzle and  $2\frac{1}{8}$ -inch diameter flush cap. Weight, about  $2\frac{1}{2}$  pounds.

Price, No. 2580.....each \$2.85

### No. 2590

Plain box and cover with  $\frac{1}{2}$ -inch pipe flush cap. Weight, about  $1\frac{3}{4}$  pounds.

Price, No. 2590.....each \$2.35

### No. 2581

Furnished complete with 3-wire receptacle, plug, cone nozzle and  $2\frac{1}{8}$ -inch diameter flush cap.

Weight, about  $2\frac{1}{2}$  pounds.

Price, No. 2581.....each \$3.85

## R & S Shallow Type Adjustable Floor Boxes

No. 2504

This floor outlet can be used with a 3-inch floor fill. It is designed and constructed along the same lines as the larger type box. All cast iron parts are galvanized and the adjustable flange and cap are of brass with a machined finish across the top.

The No. 2504 box is furnished complete with a tee slot receptacle, which will accommodate the standard type plug cap and will take the standard No. 2558 cone nozzle same as used in conjunction with the larger type floor boxes. Gaskets are provided to make this box watertight.

**ADJUSTMENTS.**—Ample angular and  $\frac{3}{8}$ -inch vertical.

**OUTLETS.**—Maximum size,  $\frac{3}{4}$  inch. When ordering specify outlets required.

Height,  $2\frac{5}{8}$  inches. Minimum diameter box,  $3\frac{1}{4}$  inches. Diameter flange ring,  $3\frac{3}{8}$  inches.

Cat. No.	Description	Weight Pounds	Price Each
2504	Complete with Tee Slot Receptacle and $2\frac{1}{8}$ -Inch Diameter Flush Cap.....	2 $\frac{3}{4}$	\$7.00
2505	Complete with $\frac{1}{2}$ -Inch Flush Cap but without Receptacle.....	2 $\frac{3}{4}$	6.50
2509	Special Tee Slot Receptacle for Use with No. 2504.....	2 oz.	.50
2558	Cone Nozzle with Composition Bushing..	$\frac{1}{4}$	1.00

**Type A Obround Condulet Bodies**

**Form 7**

Galvanized finish. Take Obround covers and Conduletts.

## Type XM Obround Flanged Condulet Bodies

### Form 7

Galvanized finish. Take Obround covers or wiring devices.

Cat. No.	Size In.	Std. Pkg.	Wt. Lbs. Std. Pkg.	Price Each
XM17	1/2	25	85	\$1.55
XM27	3/4	25	95	1.70
XM37	1	25	105	1.95

## Type CMB Obround Flanged Condulet Bodies

### Form 7

For use in show windows where it is desirable to support conduit line and condulet bodies at a sufficient distance from window to enable use of angle type reflectors.

Galvanized finish. Take Obround covers or wiring devices.

Cat. No.	Size Inches	Standard Package	Wt. Lbs. Std. Pkg.	Price Each
CMB17	1/2	25	75	\$1.25
CMB27	3/4	25	80	1.40

## Type OCB Obround Branch Extensions

### Form 7

For Bridging from One Condulet to Another

Type OCB with Blank Cover Bridging from Type C to B New Obround Condulets

Type OCB with Cover and 2-Wire Porcelain Cover Bridging from Type C to B New Obround Condulets

This extension provides a means of making extensions to existing conduit installations by bridging from one Condulet to another through the cover opening; thereby making it unnecessary to alter or cut into the existing conduit line.

Galvanized finish. Take Obround covers or wiring devices.

Cat. No.	For Connecting Condulets Size, Inches	Standard Package	Wt. Lbs. Std. Pkg.	Price Each
OCB17	1/2 to 1/2	50	35	\$.40
OCB217	3/4 to 1/2	50	40	.50
OCB27	3/4 to 3/4	50	65	.60
OCB317	1 to 1/2	25	35	.70
OCB327	1 to 3/4	25	40	.80
OCB37	1 to 1	25	45	.90
OCB47	1 1/4 to 1 1/4	25	50	1.00

## Obround Covers for Type OCB Extensions

### Form 7

Blank

With Cover Opening

Covers are made both blank and with opening to take Obround covers or Obround wiring devices.

Galvanized finish.

Covers of same size may be assorted to make a standard package.

### Blank Covers

Cat. No.	For Extensions	Std. Wt. Lbs. Pkg.	Std. Pkg.	Price Each
OCB170	OCB17	50	35	\$.25
OCB270	OCB217 and OCB27	50	65	.40
OCB370	OCB317, OCB327 and OCB37	25	60	.55
OCB470	OCB47	25	65	.70

### Covers with Cover Opening

Cat. No.	Size In.	For Extensions	Std. Wt. Lbs. Pkg.	Std. Pkg.	Price Each
OCB171	1/2	OCB17	50	30	\$.30
OCB272	3/4	OCB217 and OCB27	50	60	.45
OCB373	1	OCB317, OCB327 and OCB37	25	55	.65
OCB474	1 1/4	OCB47	25	60	.90

## Obround Gaskets

### Form 7

For Use Between Type OCB Extensions and Type OCB Covers

Cat. No.	Size Inches	For Covers	Std. Pkg.	Price Each
Gask361	1/2	OCB170, 171	200	\$.10
Gask362	3/4	OCB270, 272	100	.10
Gask363	1	OCB370, 373	50	.15
Gask364	1 1/4	OCB470, 474	25	.20

**Threadless Obround Condulets**  
For Standard Conduit with or without Threads

Galvanized Finish  
Take Form 7 Covers and Condulettos

	Cast Iron			
51000G	5 or 10	100	30	\$.20
2000G	20	50	30	.35

**G-H Series Condulet Bodies**

**Without Adjustable Bar**

The bodies of the G-H series without adjustable bar differ from those with the adjustable bar in the following particulars:

First, the adjustable bar is omitted; second, the flange of the body is drilled and tapped for four screws.

This series does not have so wide a range of application as the series with the adjustable bar; the variety of wiring devices which can be mounted is limited to those whose fastening screw hole centers are the same as those of the Condulet bodies to which they are to be attached.

A complete series of covers, connection blocks, and Conduletts is made for use with the Condulet bodies of this series.

The fastening screws are furnished with, and so retained in the covers, connection blocks and Conduletts that they cannot fall out.

Wiring devices, page 418, Condulet catalogue No. 2000.

**Type G Condulet Bodies**

**Without Adjustable Bar**

Galvanized or black enamel finish. Take covers, Conduletts or other wiring devices, see page 418, Condulet catalogue No. 2000.

250 assorted bodies of the G-H series without adjustable bar will be considered a standard package.

Cat. No.	Form	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each

## Type BRG Plug Receptacle Housings

For Condulet Bodies of the GS Series

2-pole housings are furnished with 30-ampere, 250-volt receptacles BR1302 or BR302, which take 2-pole type BP plugs. 3-pole housings are furnished with 30-ampere, 250-volt receptacles BR1303 or BR303, which take 3-pole type BP plugs.

Plugs, see after type BRM.

Type BRG plug receptacle housings with their Condulet bodies make desirable Condulet receptacles for portable devices, especially in marine or similar installations. They make desirable Condulet receptacles for plugs in cold storage plants, boiler rooms, bakeries, flour mills, oil houses, or any place where dust, moisture, or gasproofing plug receptacle Condulets are required.

## Type BRG Plug Receptacle Housings

Plain

For GS series bodies. Galvanized or black enamel finish. Capacity, 30 amperes, 250 volts A. C. Same rating on D. C. if circuit is broken before plug is withdrawn.

Furnished with receptacles and screws.

Any assortment of 25 black enameled and galvanized type BRG plug receptacle housings will be considered a standard package.

FSC371	1	10	70	1.95

**Covers**

**For Condulet Bodies of the FS Series Two-gang Tandem, and Type FH**

Made of sheet steel, galvanized or black enamel finish. Will fit rectangular base wiring devices as designated.

Any assortment of 200 black enameled, galvanized and vaporproof covers will be considered a standard package.

Numerous styles of covers are made in two, three and four-gang.

**Metal Condulet Covers**

**For Single Push Button Switches**

Sheet steel, galvanized or black enamel finish. Furnished with screws.

Standard package, 50. Weight, standard package, 25 pounds.

Price, No. DS7.....each \$ .15

## Metal Condulet Covers

**For Double Push Button, Double Push Button Momentary Contact and Double Push Lock Switches; Also Flush Receptacles**

Sheet steel, galvanized or enamel. Furnished with screws.  
Standard package, 50.  
Weight, standard package, 25 pounds.

Price, No. DS8, Surface.....each \$ .15  
Price, No. DSS8, Flush.....each .15

## Metal Condulet Covers

**For Rotary Flush Switches**

Sheet steel, galvanized or enamel. Furnished with screws.  
Standard package, 50.  
Weight, standard package, 25 pounds.

Price, No. DS9, Surface.....each \$ .15  
Price, No. DSS9, Flush.....each .15

## Metal Condulet Covers

**For Round Flush Receptacles**

Sheet steel, galvanized or enamel. Furnished with screws.  
Standard package, 50.  
Weight, standard package, 25 pounds.

Price, No. DS10, Surface.....each \$ .60  
Price, No. DSS10, Flush.....each .60

## Metal Condulet Covers

**For Hubbell and Arrow-E Toggle Flush Switches**

Made of sheet steel.  
Standard package, 50.  
Weight, standard package, 10 pounds.

Price, No. DS29.....each \$ .15

## Metal Condulet Covers

**For Round Flush Receptacles**

Sheet steel, galvanized or enamel. Furnished with screws.  
Standard package, 50 pounds.  
Weight, standard package, 25 pounds.

Price, No. DS21.....each \$ .25

## Metal Condulet Covers

**For G-E 30-Ampere Flush Plug Receptacles**

Sheet steel, galvanized or enamel.  
Standard package, 50.  
Weight, standard package, 10 pounds.

Price, No. DS35.....each \$ .25

## Metal Condulet Covers

**For Standard Duplex Flush Receptacles**

Sheet steel, galvanized or enamel. Furnished with screws.  
Standard package, 50.  
Weight, standard package, 25 pounds.

Price, No. DS23.....each \$ .30

## Metal Condulet Covers

**For G-E Tumbler Flush Switches**

Sheet steel, galvanized or enamel. Furnished with screws.  
Standard package, 50.  
Weight, standard package, 25 pounds.

Price, No. DS32.....each \$ .15

## Metal Condulet Covers

**For Pilot Lamp Flush Receptacles**

Made of sheet steel.  
Standard package, 50.  
Weight, standard package, 15 pounds.

Price, No. DS49, With Blue Jewel, Surface.....each \$1.00  
Price, No. DSS49, With Blue Jewel, Flush.....each 1.00  
Price, No. DS24, With Ruby Jewel, Surface.....each 1.00  
Price, No. DSS24, With Ruby Jewel, Flush.....each 1.00

## Metal Condulet Covers

**For H.&H. Tumbler Flush Switches**

Sheet steel, galvanized or enamel. Furnished with screws.  
Standard package, 50.  
Weight, standard package, 25 pounds.

Price, No. DS27, Surface.....each \$ .15  
Price, No. DSS27, Flush.....each .15

## Metal Condulet Covers

**Blank**

Galvanized or enamel, furnished with screws.

**Sheet Steel**

Std. Pkg., 50. Wt., Std. Pkg., 25 lbs.  
Price, No. DS100.....each \$ .10

**Cast Iron**

Furnished with gasket.  
Std. Pkg., 50. Wt., Std. Pkg., 40 lbs.

Price, No. DS100G, Surface or Flush.....each \$ .25

## Metal Condulet Covers

**For Double Push Button, Double Push Button Momentary Contact, and Double Push Lock Switches**

With guard, cast iron, galvanized or enamel. Furnished with screws.  
Standard package, 50; weight, standard package, 40 pounds.

Price, No. DS8g.....each \$ .35

## Metal Condulet Covers

**For Round Flush Receptacles**

With spring door. Cast iron, galvanized or enamel. Furnished with screws.  
Standard package, 50.  
Weight, standard package, 45 pounds.

Price, No. DS10g.....each \$1.25

## Metal Condulet Covers—Vaporproof

**With Switch Operating Mechanism**

For double push button switches.  
Cast iron, galvanized or enamel. Furnished with gasket and screws.  
Standard package, 25.

Weight, standard package, 40 pounds.  
Price, No. DS108.....each \$1.75

## Metal Condulet Covers—Vaporproof

**With Switch Operating Mechanism**

For momentary contact switches.  
Cast iron, galvanized or enamel. Furnished with gasket and screws.  
Standard package, 25.  
Weight, standard package, 40 pounds.

Price, No. DS107.....each \$1.75

**Type FS Switches**

**With Cover—For Tumbler Flush Switches with Square Handles**

No. FS132g consists of a standard FS1 Condulet with cover for tumbler switches with square handles. Type FS takes any standard square

handle, single-pole, flush tumbler switch. Price, No. FS132g, 1/2 Inch.....each ....

**Type FSS Fusible Switches**

**With Covers—For Tumbler Flush Switches with Square Handles and Plug Fuse Cutouts**

No. FSS1732 consists of a condulet with one cover for tumbler flush switches with square handles and one for plug fuse cutout. It takes one standard square handle, double-pole, flush tumbler switch and one No. 62965 standard, double-pole, plug fuse cutout.

Price, No. FSS1732 1/2 Inch.....each ....

**Type FSS 2-Gang Fusible Switches**

**With Covers—For Tumbler Flush Switches**

**with Square Handles and Plug Fuse Cutouts**

No. FSS2834 is a 2-gang switch designed for convenience where 2 fusible switches are required. Price, No. FSS2834 3/4 Inch.....each ....

**Type FSF Fan Control Switches**

No. FSF251 consists of a body and cover together with a cutout mounting plate and resistance. It takes one standard square handle, 2-circuit flush tumbler switch; one standard square handle, 2-circuit flush tumbler switch Bryant No. 2892 or similar; and one standard, double-pole plug fuse cutout No. 62965.

When lower double-pole switch is thrown to On position, it starts the fan in low speed. If medium or high speed is desired, switch indicated as medium or high may be thrown in to obtain those speeds; in order to stop fan, throw lower double-pole switch to the Off position. If fan is thrown off with either medium or high switches left in the On position, fan will start in either of those speeds when next it is turned on. Furnished with cover and resistance for 32-volt fan. Price, No. FSF251 3/4 Inch.....each ....

**Type FSF Combination Fan and Light Control Switches**

A 2-gang switch performing the functions of one FSS1732 light control switch and one FSF251 fan control switch. Takes 2 standard

square handle, double-pole, flush tumbler switches; one standard square handle, 2-circuit, flush tumbler switch; Bryant No. 2892 or similar; 2 standard double-pole, plug fuse cutouts No. 62965. Furnished with cover, resistance for 32-volt fan and one RE21 reducer.

Price, No. FSF2281 3/4 Inch.....each ....

**Type FSFR Resistance**

Type D, 2 inch, tapped. For 3-speed fan. Used in Type FSF switches.

Cat. No. ....	FSFR10	FSFR100	FSFR100
Voltage.....	32	64	110
Resistance			
.....ohms	5-10	*25-50	50-100

Price...each ....

\*One half of 100-ohm resistance for 50 ohms, and 2 halves in multiple for 25 ohms.

**J-K Series Condulet Bodies**

Condulets of the J-K series prevent rain, ice, sleet, and snow from coming in contact with current carrying parts.

The cap of the receptacle or rosette is secured to its base by two screws, which also complete the electrical connections. The fastening screws furnished are so retained that they cannot fall out.

Any assortment of 250 black enameled and galvanized bodies of the J-K series will be considered a standard package.

**Type J Condulet Bodies**

Galvanized or black enamel finish. Take Norbitt Conduletts or blank cover.

## Norbitt Conduletts

### For Condulet Bodies of the J-K Series

These fittings are weatherproof, and can be installed either in or out of doors. Made in two parts—base and cap. The base is secured to the Condulet body by a single center screw. The cap is secured to the base by two screws which also complete the electrical connection.

Furnished with gasket and fastening screw.

### Conduletto Lamp Receptacles

#### With Shade Holder Groove

If specified, will be furnished with lamp grip, at slight addition to list price. Furnished with gasket and fastening screw.

Standard package, 200.

Weight, standard package, 130 pounds.

Price, No. CC227g.....each \$ .45

### Conduletto Lamp Receptacles

#### Without Shade Holder Groove

If specified will be furnished with lamp grip, at slight addition to list price. Furnished with gasket and fastening screw.

Standard package, 200.

Weight, standard package, 130 pounds.

Price, No. CC227.....each \$ .40

### Conduletto Plug Receptacles

#### Hubbell Attachment

6 Amperes

Furnished with gasket and fastening screw. Standard package, 100.

Weight, standard package, 60 pounds.

Price, No. CC5.....each \$ .50

### Conduletto Plug Receptacles

#### Hubbell Polarity

Furnished with gasket and fastening screw. Standard package, 100.

Weight, standard package, 60 pounds.

Price, No. CC20.....each \$ .65

### Conduletto Cord Rosettes

For use where it is desired to install a drop cord light or other similar extension or connection.

Furnished with gasket and fastening screw. Standard package, 200.

Weight, standard package, 140 pounds.

Price, No. CC332.....each \$ .35

### Conduletto Fixture Rosettes

#### With 1/8-inch Male Nipple

For use where it is desired to attach socket or other fitting having 1/8-inch threaded opening, direct to the Conduletto.

Standard package, 100.

Weight, standard package, 60 pounds.

Price, No. CC339.....each \$ .40

### Conduletto Fixture Rosettes

#### With 1/8-inch Female Nipple

For use where it is desired to attach socket or other fitting having 1/8-inch threaded opening, direct to the Conduletto.

Standard package, 100.

Weight, standard package, 60 pounds.

Price, No. CC338.....each \$ .40

## RJ—RK Series Condulet Bodies

For installations requiring wiring devices that are weatherproof but not watertight, or where space is limited, these bodies will meet most conditions. Ample space is provided for the unobstructed passage of extra wires.

Any assortment of 250 black enameled and galvanized Condulet bodies of the RJ—RK series will be considered a standard package.

### Type RJ Condulet Bodies

Elliptical opening. Galvanized or black enamel finish. Take elliptical covers and Conduletts or 2-pole plug receptacle housings.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each

Galvanized or enamel. With screws. Any assortment of 100 black enameled and galvanized bodies of PG series make a standard package.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
PGG1	1/2	25	80	\$1.25
PGG2	3/4	25	90	1.40
PGG3	1	10	50	1.55

**SK Series Condulets**

Condulets of the SK series are for use in concealed conduit installations, particularly in concrete construction. They will take blank covers, or covers with hubs, and are drilled and tapped to take fixture studs or wiring devices. If specifically ordered, drilling for fixture studs will be omitted.

The bodies are provided with two lugs on the outside for nailing to the wooden forms, holding them in place while the concrete is being poured.

There are two blank covers, one of which has countersunk fastening screw holes for flat head screws. This cover is particularly adapted for installations in floors or sidewalks, as the heads of the screws will be flush with the face of the cover. The other cover is furnished with round head screws.

A gasket is made for use with blank covers so that when used with any Condulet of the SK series, an excellent watertight junction box is provided.

**Assortments**

**ASSORTMENTS.**—Black enameled and galvanized Condulets of the same type and size may be assorted to make a standard package.

Black enameled and galvanized covers of the same style may be assorted to make a standard package.

**SPECIAL ASSORTMENTS.**—Any assortment of 100 black enameled and galvanized Condulets of the SK series will be considered a standard package.

Any assortment of 100 black enameled and galvanized covers of the SK series will be considered a standard package.

**Type SK Condulet Bodies**

Galvanized or black enamel finish.

Take covers, fixture studs, or 3/4-inch outlet box round base wiring devices with 2 3/4-inch screw centers.

Cat. No.	Size In.	Depth In.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
SK12	1/2	2	50	100	\$1.20

## Type VS Vaporproof Portable Hand Lamps

Type VS hand lamps for extension cords are well suited for use in garages, refineries, bakeries, flour mills, grain elevators, marine work, or wherever inflammable vapor, dust, or moisture is present.

The globe screws into the body and is protected by a guard. If armored cord or flexible conduit is to be used with these hand lamps, CGU or CGV connectors of the proper size should be ordered.

### Type VS Portable Hand Lamps

#### Screw Guard

Vaporproof with 5 3/8-inch globe. Takes 60-watt Mazda B lamps or any lamp not exceeding 2 1/4 x 3 5/8 inches.

Aluminum, scratch brush finish. Furnished with receptacle, gaskets, globe, guard, cord guard spring, and watertight stuffing box in handle.

If specified on order, lamp receptacle with lamp grip will be furnished at slight addition to list price.

Standard package, 25.

Weight, standard package, 70 pounds.

Price, No. VS060 ..... each \$8.15

#### Guard for Type VS Portable Hand Lamps

##### Screw Guard

Galvanized iron. Will accommodate globe 5 3/8 inches long.

Standard package, 25.

Weight, standard package, 30 pounds.

Price, No. VS0955 ..... each \$2.00

#### Clear Glass

For use with type VS portable hand lamps.

Cat. No.	Length In.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
V85	5	25	30	\$.80
V15	5 3/8	25	30	.80

## Safety Hand Lamps

### With Grounding Terminal

Nos. LPG24 and LPH24 safety hand lamps are constructed to withstand the severe service encountered in railroad shops, garages, industrial plants, storehouses and similar places.

A terminal is provided for a safety circuit wire in the connecting cord for grounding the guard and other metal parts not connected with the electrical circuit. This wire should not be smaller than No. 14 B & S.

The handle is of well seasoned maple and is black enameled. A metal bracket on which the ground terminal is mounted also provides a cord strain relief and support for the lamp socket as a unit. The strain relief, being a unit with the lamp socket assembly, provides a more secure support for the cord entirely independent of the handle and the unit is very accessible for making the splice between the lamp cord and the socket terminal wires.

The guard and half shade are made of aluminum alloy, light in weight, but strong and will resist bending or breaking.

The hook, which is large and strong, can be turned so that when the half shade is used the light can be directed as desired.

A compression washer prevents a twisted lamp cord from turning the lamp out of a set position.

### Type LPG, Guard Type

Takes 15 to 60-watt A17, A19, A21, P19, PS20, S17 S19, S21 lamps.

Standard package, 10. Weight, standard package, 20 pounds. Price ..... each \$3.00

### Type LPH, Guard and Half Shade Type

Takes 15 to 60 watt, A17, A19, A21, P19, PS20, S17, S19, S21 lamps.

Standard package, 10. Weight, standard package, 20 pounds. Price ..... each \$3.15

**V Series Condulets**

**Screw Guard**

Vaporproof, galvanized or black enamel finish. Form 75 takes 75-watt Mazda C lamps, 60-watt Mazda B lamps, or any lamp not exceeding 2 3/4 x 6 1/8 inches. Form 200 takes 200-watt Mazda C lamps, 100-watt Mazda B lamps, or any lamp not exceeding 3 3/4 x 8 3/8 inches.

Furnished with receptacle, sealing plate, gaskets, globe and guard.

If specified on order, lamp receptacle with lamp grip will be furnished at a slight advance in list price. For key receptacle, add \$1.00 to list price.

Blue, green, opal, orange and ruby globes can be furnished for Condulet bodies of this series at an advance in list prices.

For reflectors see page 432, Condulet catalogue No. 2000.

Any assortment of 100 black enameled and galvanized iron Condulets of the V series, screw guard, will be considered a standard package.

## Arktite Circuit-breaking Plugs and Receptacles

**Type AJX Plug Receptacle Condulet; Plug Inserted**

Arktite Plugs and Receptacles embody an entirely new principle in plug and receptacle construction, which meets the demand for circuit-breaking plugs and receptacles in capacities heretofore considered impractical.

The arc formed by pulling the plug is so completely confined in a chamber of insulating material that it is impossible to form a short circuit or ground. The air and gases confined in the chamber expand rapidly and smother the arc.

Arktite series of plugs and receptacles protect the current carrying parts; enclose the contact parts in separate chambers of insulating material; break the circuit in separate chambers, and provide a means for effectively grounding portable apparatus.

The Arktite series is made in 2, 3 and 4-pole; for 10, 30, 60, 100 and 200-ampere; 250-volt A.C. or D.C. or 600-volt A.C. The 10-ampere receptacle housings are mounted on Form 10 Condulets of the QE series. The 30 and 60-ampere receptacle housings are mounted on Form 20 Condulets of the QE series. The 100 and 200-ampere receptacles are mounted on Types AJ and AJX Condulets.

### Information on Rating

The Underwriters limit the use of plugs and receptacles as circuit-breaking devices to 100 amperes, 125 volts, and 75 amperes, 250 volts. For higher amperages and voltages, they require a switch in series with the plug and receptacle. They also will permit the use of all approved plugs and receptacles as disconnecting devices on all voltages up to and including 600 volts A.C.

However, exhaustive tests prove that all Arktite plugs and receptacles can be safely used as circuit-breaking devices at the listed ampere ratings on 250-volt A.C. or D.C., or 600-volt A.C. circuits.

For quick reference the above information is given in the following schedule:

Rating	CIRCUIT-BREAKING DEVICES			Disconnecting Devices	
	Volts A.C. or D.C.		600 Amperes	All Voltages up to 600 A.C.	
	125 Amperes	250 Amperes		600 Amperes	10 to 200 Amperes
Crouse-Hinds'	10 to 200	10 to 200	10 to 200	10 to 200	10 to 200
Underwriters'	10 " 100	10 " 75	.....	10 " 200	10 " 200

Unless otherwise specified, Arktite plugs and receptacles will be marked with the Underwriters' rating for circuit-breaking devices. The 200-ampere Arktite plug will be marked with the Underwriters' maximum rating for a disconnecting device. If Arktite plugs and receptacles are to be used at Crouse-Hinds' ratings; order by catalogue number, and add, Crouse-Hinds' Rating.

These devices are marked by their simplicity of construction. Contact members in the receptacle are fingers and those of the plug are tubes, each of a single piece of alloy brass machined to an accurate fit. Receptacles have two phosphor bronze detent springs which hold the plug in the receptacle housing against the weight of the cable.

The retaining ring, which holds the interior parts in position, can be removed or replaced in a few seconds, so that the plug and receptacle can be taken apart and reassembled quickly and easily, making these devices easy to wire.

**Type QEF with Spring Door Plug Receptacle Housing Plug Inserted**

## Type CP Arktite Circuit-breaking Non-watertight Plugs

250-volt A. C. or D. C.; 600-volt A. C.

For round flexible cord or cable and flexible conduit or armored conductor.

Aluminum handles with strain relief clamp.

Scratch brush finish.

Any assortment of Arktite circuit-breaking plugs and receptacles aggregating \$100.00 list value or more will be considered an assorted standard package.

### Type CP Plain Plugs

Two-pole, 10-ampere plug is furnished with cord reinforcement.

AJX99203	1	85	85	\$97.00
4-pole				
AJX99204	1	90	90	\$107.00

**Grounding Rings**

For 3 or 4-pole Receptacles

Where it is required to use a ground wire having a current capacity equal to that of the circuit wires in ground-portable devices through Arktite receptacles, it is necessary to use a grounding ring which must be ordered separately.

To complete the grounding connection on the 10, 30 and 60-ampere receptacle, a grounding ring is clamped between the receptacle housing and the conduit. The flexible lead on the grounding ring is connected to the extra contact finger in the receptacle.

On the 100 and 200-ampere receptacle the extra contact finger must be permanently grounded by means of a flexible cable connected to the soldering lug on the inside of the conduit. No ring is used between housing and conduit.

**10-ampere**

Cat. No.	Standard Package	Wt., Lbs. Std. Pkg.	Price Each
CR106	25	5	\$.50

**30 or 60-ampere**

Cat. No.	Standard Package	Wt., Lbs. Std. Pkg.	Price Each
CR606	25	10	\$.65

**Conduit Hub Plates**

For Types AJ and AJX Condulets

Cast iron, galvanized finish. Furnished with screws.

Any assortment of 25 galvanized conduit hub plates for Types AJ and AJX Condulets will be considered an assorted standard package.

**YYP8 Series Conduit Hub Plates**

With One Hub Straight

## Type QE Weatherproof Housings

For Condulets of the QE Series

Black enamel finish.  
Furnished with an adjustable bar for mounting the switch or attachment plug receptacle on the condulet.

### With Spring Door

When mounted on condulets of the QE series Nos. QE 1096 and QE2096 housings are for enclosing round base thumb knob snap switches and attachment plug receptacles.

Provided with a self-closing spring door. This door can be locked with a padlock.

Cat. No.	For Condulet, Form	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
QE1096	10	25	65	\$1.65
QE2096	20	25	100	2.05

### With Opening for Switch Key

When mounted on condulets of the QE series, Nos. QE108 and QE208 housings are for round base lock snap switches.

Cat. No.	For Condulet, Form	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
QE108	10	25	40	\$ .85
QE208	20	25	50	1.20

## Type QE Plug Receptacle Housings

For Condulets of the QE Series

For Type BP 30-Ampere, 250-Volt A.C. Plugs

Black enamel finish.

Type BP 30-ampere, 250-volt a.c. plugs are of the round prong type, each prong engaging a female contact in the receptacle. 2-pole housings are furnished with 30-ampere, 250-volt a.c. receptacle BR302, which takes 2-pole plugs; 3-pole housings are furnished with 30-ampere, 250-volt a.c. receptacle BR303, which takes 3-pole plugs.

When threaded housings are mounted on condulets and used with a watertight plug or the brass cap, condulets are vapor proof.

Plugs and receptacles are polarized. Housing is provided with a clip which makes contact with the shell of the plug, effectually grounding the plug through the conduit system.

The plug and receptacle contacts are self-aligning, and the receptacle contacts are completely enclosed in a body of molded insulating material. The prongs of the plug are protected by a steel sleeve.

Wires can be connected directly to the receptacle binding screws, avoiding soldered and taped joints.

### Plain

Furnished with receptacle and screws for form 10 condulets.

Cat. No.	No. Poles	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
QE302	2	25	75	\$3.00
QE303	3	25	80	3.50

### With Spring Door

Furnished with receptacle and screws for form 10 condulets.

Cat. No.	No. Poles	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
QE6302	2	25	90	\$4.60
QE6303	3	25	100	5.30

### Threaded

Furnished with receptacle, gaskets and screws for form 10 condulets.

Cat. No.	No. Poles	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
QE7302	2	25	75	\$3.20
QE7303	3	25	80	3.75

### Threaded, with Brass Cap

Furnished with receptacle, gaskets, and screws for form 10 condulets.

Cat. No.	No. Poles	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
QE8302	2	25	85	\$4.15
QE8303	3	25	95	5.10

## Type QE Plug Receptacle Housings

For Condulets of the QE Series

For Type RQ 30-Ampere, 250-Volt Plugs

Black enamel finish.

2-pole housings are furnished with 30-ampere, 250-volt receptacle RQH302, which takes plug RQ302; 3-pole housings are furnished with 30-ampere, 250-volt receptacle RQH303, which takes plug RQ303.

### With Spring Door

The receptacle is protected by a self-closing door, which can be padlocked.

Cat. No.	For Condulet, Form	No. Poles	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
QE1066	10	2	25	80	\$3.60
QE2066	20	3	25	130	5.10

### Plain

Cat. No.	For Condulet, Form	No. Poles	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
QE106	10	2	25	55	\$2.80
QE206	20	3	25	90	4.10

For Type BP 50-Ampere Electric Vehicle Charging Plugs

Black enamel finish.

Furnished with 2-pole, 50-ampere, 125-volt receptacle BR50, which takes plugs BP50 or BP53, or any 50-ampere plug conforming to the American Electric Vehicle Association Standard.

These housings are intended for use in electric garages when mounted on condulets of QE series.

### With Spring Door

For form 10 condulets.  
Standard package, 10. Weight, standard package, 50 pounds.  
Price, No. QE1076.....each \$9.20

### Plain

For form 10 condulets.  
Standard package, 10.

Weight, standard package, 35 pounds.

Price, No. QE107.....each \$7.40

For Type BP 60-Ampere, 600-Volt Plugs

Furnished with 3-pole, 60-ampere, 600-volt receptacle BR6036, which takes BP plugs.

### Plain

Watershedding. For form 20 condulets.

Standard package, 10. Weight, standard package, 40 pounds.

Price, No. QE6036.....each \$6.45

### With Spring Door

Weatherproof. Protected by a self-closing spring door which can be padlocked.

For form 20 condulets.

Standard package, 10. Weight, standard package, 50 pounds.

Price, No. QE66036.....each \$7.95

### Threaded

Furnished with gasket so that when watertight gasketed plugs with brass clamping nut are used, the installation is watertight.

For form 20 condulets.

Standard package, 10. Weight, standard package, 40 pounds.

Price, No. QE76036.....Price \$6.70

### Threaded, with Brass Cap

Furnished with a gasket and gasketed brass cap which makes the housing watertight when the plug is removed and the cap is substituted.

For form 20 condulets.

Standard package, 10. Weight, standard package, 55 pounds.

Price, No. QE86036.....each \$8.95

**Type FF Condulets**  
2 or 3-Wire, 250 Volts

These are service entrance Condulets, fusible and weather-proof. Wiring devices, pages 436 to 438, Condulet catalogue No. 2000. Take main line fuse cutouts.

The service wire enters the bottom of the fuse cutout compartment through a porcelain bushing, thus preventing grounding, even though the insulation becomes damaged.

Furnished with removable conduit hub plate, cutout fastening plate, porcelain bushings, screws and bolts, but without cutouts.

Any assortment of 50 black enameled and galvanized Condulets of the FF series will be considered a standard package.

Cat. No.	Size In.	30 Amperes		Price Each
		Std. Pkg.	Wt., Lbs.

**LA Series Aisle Light Condulets**

Take 10-watt S-14 Mazda B lamps or any lamp not exceeding 1 3/4 x 4 1/4 inches. Furnished with lamp receptacle.

These Condulets are shallow and when installed at the end of a row of seats do not obstruct the aisle. The front of the Condulet is easily removed, facilitating the renewal of lamps. No glass is used. If a more subdued light is desired colored bulbs (preferably green) can be used.

The light is so shielded that it is not objectionable to spectators or performers.

**Type LA—For Orchestra Floors**

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each

LAR323	1	25	140	2.95

**Y Series Condulets**

Galvanized or black enamel finish. Take fuse cutouts. Furnished with cutout fastening plate, screws and bolts. Hubs are cast solid with body.

These Condulets have sheet metal doors with spring catches, except types Y and YC, 30 or 60-ampere, 600-volt, 3-wire, which have cast iron doors with spring catches.

If specifically ordered, the Condulets and covers will be drilled for a seal wire, at a slight advance in the list price.

These Condulets are designed to take wires which will enter the grooves or terminals of the fuse cutout of the same rating as the Condulet. The additional space in the hubs is for the passage of extra wires.

Any assortment of 50 black enameled and galvanized Condulets of the Y series will be considered a standard package.

**Type Y Condulets**

Galvanized or black enamel finish.

Take main line fuse cutouts.

Furnished with cutout fastening plate, screws and bolts, but without cutouts.

Wiring devices, pages 436 to 438, Condulet catalogue No. 2000.

**2-wire, 30-ampere, 250-volt**

## YY Series Condulets

Take fuse cutouts. Furnished with cast iron door, cast iron hinges, and spring catches, removable conduit hub plates, cutout fastening plate, screws and bolts for cutout fastening plate.

The removable hub plates provide flexibility in installing, especially where the installation will not permit turning the conduit or Condulet.

The hubs are tangent to the back of the Condulet body; but by reversing the conduit hub plate, a projection frequently can be avoided without offsetting the conduit.

Wiring devices, pages 436 to 438, Condulet catalogue No. 2000. Plug receptacle housings, see end of ZP series.

Any assortment of 50 black enameled and galvanized Condulets and Condulet bodies of the YY series will be considered a standard package.

### Type YY Condulets

#### Without Hub Plates

For types YY, YYC and YYQ Condulets. Galvanized or black enamel finish. Take main line fuse cutouts. Furnished with cast iron doors, cutout fastening plate, and screws and bolts for cutout fastening plate.

If specified, a cabinet lock and key, in addition to the spring catch, will be furnished at an advance in list price.

**YW Series Condulets**

Take fuse cutouts.

Watertight galvanized or black enamel finish. Furnished with cast iron door, gaskets, cutout fastening plate, screws and bolts.

Have gasketed cast iron doors with adjustable eye-bolt hinges. An eye-bolt with a wing nut clamps the door tight. The wing nut is constructed to permit the insertion of a padlock whereby the door can be locked.

Wiring devices, pages 436 to 438, Condulet catalogue No. 2000.

Conduit hub plates, see end of YY series. Plug receptacle housings, see end of ZP series.

These Condulets are designed to take wires which will enter the grooves or terminals of the fuse cutout of the same rating as the Condulet. The additional space in the hubs is for the passage of extra wires.

Any assortment of 25 black enameled and galvanized Condulets and Condulet bodies of the YW series will be considered a standard package.

**Type YW Condulets**

**Without Hub Plates**

Galvanized or black enamel finish. For types YW, YWC and YWQ Condulets. Take main line fuse cutouts. 250 and 600 volts.

Furnished with cast iron door, gaskets, cutout fastening plate and screws and bolts for cutout fastening plate.

\*YW886036 and 776016 are 600 volts.

## Type ZF Condulets—Single Without Covers and Hub Plates

Take waterproof gasketed switch covers, double push button switches, and main line fuse cutouts. Furnished with cast iron door, gaskets, cutout fastening plate, and screws and bolts for switches and cutout fastening plates. Take YYP5 hub plates at end of YY series, or BRY5 housings at end of ZP series, and 30-ampere, 250-volt, 2-wire cutouts.

Standard package, 15. Weight, standard package, 195 pounds.  
Price, No. ZF55302, 2-wire..... each \$5.60

## Type ZF Condulets—Two-gang Without Covers and Hub Plates

Take vaporproof gasketed switch covers, double push button switches, and main line fuse cutouts. Cutouts, pages 436 and 437; switches, page 414, Condulet catalogue No. 2000. Take MF hub plates and 30-ampere, 250-volt, 3 or 4-wire cutouts.

Std. pkg., 15. Wt., 360 lbs.  
Price, No. ZF304..... each \$8.50

## MF Series Conduit Hub Plates For ZF Series 2-gang Bodies

Cast iron, galvanized or black enamel finish. Furnished with screws.

Any assortment of 50 black enameled and galvanized hub plates of the MF series will be considered a standard package.

## MF Series Conduit Hub Plates With One Hub

For ZF Series 2-gang Bodies

Dimensions, 2 3/4 x 6 1/8 inches. Furnished with screws.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each

## Blank Hub Plates and DS Covers

For ZF Series 2-gang Bodies

Standard package, 15. Weight, standard package, 35 pounds.  
Price, No. MF00..... each \$8.85  
" " DS108 Cover..... " 1.75

## Type ZG Series Condulets

Condulets of the ZG series take mill type snap switches with protective covers, and cartridge or plug fuse cutouts. They are particularly suited for the control of small motors and electrically driven machines.

Take Bryant-Perkins No. 2597 or General Electric No. 151394 three-pole snap switch with cast iron protective cover and fuse cutouts.

25 assorted ZG series Condulets make a standard package.

## Type ZG Condulets

Cast iron, with sheet steel door. Galvanized or black enamel finish. Takes 3-wire, 600-volt main line cutouts.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
ZG33036	1	10	225	\$8.00
ZG43036	1 1/4	10	230	8.15

## Type ZGC Condulets

250-Volt

Cutouts, pages 436, 437 and 439, Condulet catalogue No. 2000. Galvanized or black enamel finish. Takes 250-volt, 3-wire, main line cutouts.

Furnished with cutout fastening plate, screws and bolts.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
ZGC1303	1/2	15	155	\$3.60
ZGC2303	3/4	15	160	3.70
ZGC3303	1	10	110	3.80

## Types FH and FHF Condulets

Covers, see end of FS and G-H series with adjustable bars.

Type FH is for use with heating devices requiring not more than 660 watts. Receptacle C337g, which can be used for a pilot lamp, is furnished with the Condulet. Type FHF is for use with heating devices requiring more than 660 watts; therefore provision is made for a cutout.

## Type FH Condulets

For control of heating devices. Galvanized or black enamel finish. Take round base wiring devices or covers, and flush rectangular wiring devices with surface style covers. Furnished with receptacle C337g, adjustable bar, and screws. Form 10 is also furnished with form 5 adapting ring.

nished with receptacle C337g, adjustable bar, and screws. Form 10 is also furnished with form 5 adapting ring.

Cat. No.	Form	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
FH110	10	1/2	15	95	\$2.50
FH210	10	3/4	15	100	2.60

## Type FHF Condulets

Round base wiring devices, pages 414 to 417; cutouts, page 436; flush rectangular wiring devices, pages 412 to 414; pilot lamp receptacle, page 412, Condulet catalogue No. 2000.

Furnished with form 5 and form 10 adapting rings, adjustable bars, cutout fastening plate, pilot lamp receptacle, ruby jewel, screws, and bolts.

Cat. No.	Form	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
FHF120	20	1/2	15	130	\$4.65
FHF220	20	3/4	15	140	4.75

\*In some localities a ground wire must have a capacity equal to that of the circuit wires. This necessitates an extra conductor for grounding, and the plug and receptacle must have an extra pole to which the grounding conductor is connected. Where it is desired to ground the frame of a portable device in this manner, use a 2-pole switch with a 3-pole receptacle.

**Conduit Hub Plates**

Cast iron; black enamel finish.

## Type MT Safety Switch Condulets

Without Hub Plates

Without Undervoltage Release

For use with all kinds of small motor-driven machinery particularly in textile mills. Protects the switch operator and the person renewing fuses; cannot be operated by accident. Non-watertight. Black enamel finish.

Furnished with tumbler switch and guard plate.

Operating handle and under-voltage release coil are on outside of conduit. Handle is so interlocked with door that door cannot be opened until switch is opened, nor can switch be closed until door is closed.

Standard package, 5.

## Type ZT Safety Switch Condulets

Without Hub Plates

Without Interlock Release

Type ZT Condulets are watertight; galvanized finish.

With tumbler switch and gasketed cover with fuse door.

Can be used to control small motors up to 2 h.p. With thermal cutouts they can be used to control motors up to 5 h.p.

The machine operator or any other person can change fuses or thermal cutouts in these condulets with safety.

Standard package 5.

†Plug fuses. ‡250-volt cartridge fuses. §600-volt cartridge fuses. ¶Westinghouse plug type thermal cutouts. ||General Electric thermal cutouts.

**YK Series Condulets**

Take fusible knife switches. Furnished with switch fastening plate, screws and bolts.

Removable switch fastening plate permits mounting the switch and making connections before it is installed.

Door is furnished with a spring catch.

Hubs are cast solid with the body and have an integral bushing and tapered thread.

Any assortment of 25 black enameled and galvanized Condulets of the YK series will be considered a standard package.

**Type YK Condulets**

Galvanized or black enamel finish.

Take fusible knife switches.

Furnished with switch fastening plate, screws and bolts.

Hubs cast solid with body.

**2-pole, 30-ampere, 250-volt**

## Type ET Condulets

In concealed conduit installations it is frequently possible to save conduit and labor by using this type, as junctions in the conduit system may be made at concealed or inaccessible points.

Where these Condulets are not used, all conduits must be run to an accessible junction box or outlet.

Single runs of conduit may be made from these junctions to the desired outlets, where the necessary taps and splices in the wires can be made.

The hubs have an integral bushing and tapered thread. Galvanized or black enamel finish.

Any assortment of 100 black enameled and galvanized types ET, EY, and ELB Condulets will be considered a standard package.

Cat. No.	SIZE, INCHES			Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
	A	B	C			
ET 1	1/2	1/2	1/2	100	420	\$1.25
ET21	1/2	1/2	3/4	50	210	1.45
ET31	1/2	1/2	1	50	230	1.55

ET 4	1 1/4	1 1/4	1 1/4	10	80	2.65
ET54	1 1/4	1 1/4	1 1/2	10	90	2.95
ET64	1 1/4	1 1/4	2	5	50	3.30
ET65	1 1/2	1 1/2	2	5	55	3.75

## Type EY Condulets

In concealed conduit installations it is frequently possible to save conduit and labor by using this type, as junctions in the conduit system may be made at concealed or inaccessible points.

Where these Condulets are not used, all conduits must be run to an accessible junction box or outlet.

Single runs of conduit may be made from these junctions to the desired outlets, where the necessary taps and splices in the wires can be made.

The hubs have an integral bushing and tapered thread. Galvanized or black enamel finish.

Any assortment of 100 black enameled and galvanized types EY, ET, and ELB Condulets will be considered a standard package.

Cat. No.	SIZE, INCHES			Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
	A	B	C			
EY 1	1/2	1/2	1/2	100	330	\$1.05
EY21	1/2	1/2	3/4	50	170	1.15
EY31	1/2	1/2	1	50	190	1.25
EY32	3/4	3/4	1	25	110	1.45
EY43	1	1	1 1/4	25	130	1.90
EY 4	1 1/4	1 1/4	1 1/4	10	75	2.30
EY54	1 1/4	1 1/4	1 1/2	10	85	2.50
EY64	1 1/4	1 1/4	2	5	50	2.70

## Type ELB Condulets

In concealed conduit installations it is frequently possible to save conduit and labor by using this type, as junctions in the conduit system may be made at concealed or inaccessible points.

Where these bodies are not used, all conduits must be run to an accessible junction box or outlet.

Galvanized or black enamel finish.

Any assortment of 100 black enameled and galvanized types ELB, ET, and EY Condulets will be considered a standard package.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
ELB1	1/2	100	250	\$ .75
ELB2	3/4	50	155	1.00

Type ALT Cushion Fixture Hanger

## Type UNJC Cushion Fixture Hangers

For Pendent Fixtures

Type UNJC is provided with a spring which carries the weight of the fixture and absorbs any shocks due to vibration or other causes. This hanger is for supporting suspension type fixtures and can be used in conjunction with condulets. Has galvanized finish. Any assortment of 100 galvanized type UNJC Fixture hanger will be considered a standard package. \*Male threads given first.

Cat. No.	Size Inches	WEIGHT, POUNDS		Price Each

## Type AOC Fixture Hanger Condulets

For Pendent Fixtures—Always Hang Plumb  
For Fixtures with 1/2-Inch Stem

Galvanized finish. Similar to Type ALC ball fixture hangers except the Condulet is of the Obround shape.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
AOC1	1/2	25	40	\$.75
AOC21	3/4	25	40	.85

## Covers with Cord Clamps

Galvanized Finish

Drop cord fixtures, especially in industrial plants, are frequently subject to very hard usage. The condulet covers with cord clamps act as a safeguard for the upper end of such drop cords, and prevent any strain on the soldered connections of the conductors. The hole through the cover is provided with a bushing. When the lamp socket is provided with a similar cord clamp, the drop cord is effectually protected against hard usage.

Nos. 192 & 292

### For Condulets of the Obround Series

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
192	1/2	200	80	\$.25
292	3/4	100	50	.30

### For Condulets of the G-H Series

H1092	*10	100	45	\$ .30
-------	-----	-----	----	--------

\*Form. Without adjustable bar.

## Condulet Finishes

Iron Condulets and Covers

Black enamel is the standard finish for Condulets, Condulet bodies and metal covers and will be furnished unless another finish is specified on the order.

Galvanized finish on the exterior and black enamel finish on the interior of Condulets and Condulet bodies will be furnished at the same price as all black enamel finish, when the order specifies galvanized finish. Galvanized finish for metal covers will be furnished, if specifically ordered, at the same price as black enamel finish.

## Assortments

Black enameled and galvanized Condulets and Condulet bodies of the same type and size may be assorted to make a standard package. Black enameled and galvanized covers of the same type and size may be assorted to make a standard package. Black enameled and galvanized Condulet accessories of the same type and size may be assorted to make a standard package.

## Locomotive Headlight Switches

34 Volts, 24 Amperes—125 Volts, 6 Amperes  
250 Volts, 3 Amperes

Type LHSJ without Resistance, Toggle Switch, and Fuse Receptacle

3 Positions: Dim—Off—Bright

Type LHSJ with Resistance, But without Toggle Switch and Fuse Receptacle

3 Positions: Off—Dim—Bright

Type LHSJ without Resistance, Toggle Switch, and Fuse Receptacle

4 Positions: Rear Bright—Off—Front Bright—Both Bright

Type LHSJ with Resistance, Toggle Switch, and Fuse Receptacle

5 Positions: Front Bright—Front Dim—Off—Rear Dim—Rear Bright

Locomotive Headlight Switches are furnished in 3 styles: without resistance, toggle switch, and fuse receptacle; with resistance, but without toggle switch, and fuse receptacle; and with resistance, toggle switch, and fuse receptacle.

These switches are of substantial construction. The cover is gasketed, making it dustproof. The body is shallow, not exceeding 2 inches in depth and, therefore, it is especially suitable for mounting in the limited space available in an engine cab.

The switch blade is always in engagement with one of the switch contacts and, therefore, it cannot get out of alignment. The wires are connected to binding screws which make direct connection with the contacts.

The cover is marked to show the condition of the light as indicated by the pointer on the handle. The cover is marked on both sides so that it can be read correctly when the switch is installed with the handle pointing either up or down. The handle is held in position by a spring plunger which engages notches.

All parts are movable without disturbing the body or disconnecting any of the conduit.

**Locomotive Headlight Switches**

34 V., 24 Amp.—125 V., 6 Amp.—250 V., 3 Amp.

**3 Positions: Dim—Off—Bright**

The 1/2 and 3/4-inch Condulets will not take connection blocks CB132 and CB133. The 1-inch size, of all types except GRCA, will take these blocks.

Any assortment of 25 Screw Cover Junction Condulets will be considered a standard package.

## Condulets with Wedgnut Cover

These Condulets are of liberal dimensions, providing ample space for taps, and for the passage of additional circuits.

The cover is provided with a wedge nut fastener which securely holds the cover or wiring device in place and it cannot become loosened by vibration. Gasket is furnished between the cover and body.

The overall dimensions of these bodies exclusive of hubs are: Diameter, Form 4, 2 1/4 inches; Form 7, 3 1/2 inches. Depth, Form 4, 1 3/8 inches; Form 7, 2 1/4 inches. The cover increases the depth, 1/2 inch.

Standard finish is black enamel.

Form 4 Condulets listed on this page will not take connection blocks CB114, CB132, CB133 or CB1124. The Form 7 Condulets, of all types except Types GRCA and GRU will take connection blocks.

SPECIAL ASSORTMENT.—Any assortment of 25 black enameled and galvanized condulets listed on this page will be considered a standard package.

## Type GRN Screw Cover Junction Box Condulets

Form 8 and Form 9

Take Connection Blocks

With Cast Brass Screw Cover

Type GRN is for use where durable, watertight junction boxes are required for locomotives, railroad yards and shops. It is provided with a screw cover and the body is provided with 4 bosses, any of which can be tapped for 1/2, 3/4, 1 or 1 1/4-inch conduit. The cover is provided with 2 bosses which permit the use of a wrench, screwdriver, or bar for turning the cover.

Type GRN is not arranged so that it can be tapped for rear hub.

DIMENSIONS—The depth of body is 2 5/16 inches outside and 2 1/8 inches inside. Depth of body and cover, 3 3/16 inches. Depth of body over mounting bosses for connection blocks, 1 3/4 inches. Total inside approximate depth over mounting bosses, 2 inches. Outside diameter: Form 8, 4 inches; Form 9, 4 5/8 inches. Inside diameter: Form 8, 3 5/8 inches; Form 9, 4 inches.

Positions of drilling and tapping should be specified according to letters, A, B, C, D, shown on cuts.

To order size by number: 1 is 1/2 inch, 2 is 3/4 inch, 3 is 1 inch, 4 is 1 1/4 inches. For example, GRN82-1234 (GRN8) is the catalogue number of the blank casting with screw.

The prices per hole for drilling and tapping are as follows: 1/2 or 3/4 inch, 15 cents; 1 or 1 1/4 inches, 20 cents.

If desired, a gasket can be furnished between the cover and body.

Form 8 and Form 9 take any connection block listed on page 48 of bulletin 2096 or page 141 of conduit catalogue No. 2000.

Form 9, also takes 2 porcelain RSA standard terminal blocks with No. 10561 base.

Body is cast iron, galvanized or black enamel finish.

Cover is cast brass, marine finish.

Style	Cat. No.	Outside Diameter Inches	Inside Diameter Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Lbs. Price Each
Form 8	GRN8	4	3 5/8	10	80	\$2.60
Form 9	GRN9	4 5/8	4	10	100	3.00

## Type GRN Wedge Nut Cover Junction Box Condulets

Form 8 and Form 9

Take Connection Blocks

With Wedge Nut Cover

This condulet is similar to type GRN listed above except the cover is provided with a Wedge-nut fastener that securely holds it in place and it cannot become loosened by vibration. The dimensions are the same as above except the depth of body and cover is 2 1/8 inches, and total inside approximate depth over mounting bosses is 1 3/4 inches. The same connection blocks can be used.

Positions of drilling and tapping should be specified in same way as described above. A gasket is furnished for use between the cover and body.

Made of cast iron, galvanized or black enamel finish.

Style	Cat. No.	Outside Diameter Inches	Inside Diameter Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Lbs. Price Each
Form 8	GRN86	4	3 5/8	10	80	\$1.60
Form 9	GRN96	4 5/8	4	10	100	2.00

**Type BRM Plug Receptacle Condulets**

\*30-Ampere, 250-Volt, A. C.

Galvanized finish.

These plug receptacle Condulets furnish a compact, convenient, and rigid receptacle device.

They are especially suitable for semi-permanent or temporary installation either for light or power, as in such installations it is desirable to include a device that will permit the conduit and wiring system to be easily broken and at the same time not sacrifice any of the protective features of rigid or flexible conduit.

These Condulets take plugs for rigid or flexible conduit or armored or other cable.

The threaded Condulets when used with a watertight plug or the brass cap, are vaporproof. These Condulets make excellent devices for installation on locomotives, as they provide means whereby the conduit system can be easily removed or replaced in sections, as is necessary when a locomotive is to receive a thorough overhauling.

The plugs and receptacles are polarized. The receptacle housing is provided with a clip which makes contact with the shell of the plug, effectually grounding the plug through the conduit system.

The plug and receptacle contacts are self-aligning, and the receptacle contacts are completely enclosed in a body of molded insulating material. The prongs of the plug are protected by a steel sleeve.

Made in two parts instead of one which facilitates making the wire connections to the receptacle.

2-pole condulets are furnished with 30-ampere, 250-volt receptacle BR2302; 3-pole condulets are furnished with 30-ampere, 250-volt receptacle BR2303.

\*Can be used on 25-ampere, 125-volt D. C. circuits.

Any assortment of 25 Types BRM Condulets will be considered a standard package.

**Type BRME Plug Receptacle Condulets**

30-Degree Angle

\*30-Ampere, 250 Volt A.C.

Galvanized finish.

Type BRME plug receptacle condulets are for mounting on the wall or on the frames of portable machines, by means of two heavy lugs. The condulet is mounted at such an angle with the surface to which it is attached, that there is no danger of the operator injuring his knuckles when inserting or removing the plug.

They are especially suitable for semi-permanent or temporary installation either for light or power, as in such installations it is desirable to include a device that will permit the conduit and wiring system to be easily broken and at the same time not sacrifice any of the protective features of rigid or flexible conduit.

These condulets take plugs for rigid or flexible conduit, or armored or other cable.

The plugs and receptacles are polarized. Plug and receptacle contacts are self-aligning.

2-pole condulets are furnished with 30-ampere, 250-volt receptacle BR2302; 3-pole condulets are furnished with 30-ampere, 250-volt receptacle BR2303.

## Type BP Plugs

With Clamp for Flexible Conductor, Flexible Conduit or Armored Conductor

For Use with Types BRD, BRG, BRM, BRME and GE Plug Receptacle Housings

The 30-ampere plugs are arranged for soldered terminals. The 20-ampere plugs are equipped with binding screw terminals. Plugs so equipped with binding screw will not take wires larger than No. 12; consequently these plugs are rated at 20 amperes.

Provision is made on these plugs for a grounding wire in the cable to connect the frame of the portable device to the shell of the plug. The grounding or safety circuit is completed through the shell of the plug, the detent spring, the receptacle housing and the conduit system.

Galvanized is the standard finish. This is necessary in order to insure a perfect ground between all metal parts in the grounded or safety circuit.

### For Flexible Cable

\*Can be used on 20-ampere, 125-volt d.c. circuits; or on 20-ampere, 250-volt d.c. circuits if circuit is broken before plug is withdrawn. †Can be used on 25-ampere, 125-volt d.c. circuits; or on 30-ampere, 250-volt d.c. circuits if circuit is broken before plug is withdrawn.

(a) Clamp opening 1/2 to 27/32 inch takes most 2-wire and 3-wire rubber sheathed, fabric sheathed and deck cables Nos. 14 to 8. (b) Clamp opening 1/2 to 7/8-inch takes 3/4 and 1/2-inch flexible conduit, Nos. 14 to 8, 2 or 3-conductor armored cable, and most 2 and 3-wire rubber sheathed, fabric sheathed and deck cables Nos. 14 to 8. (c) Clamp opening 5/8 to 1 1/8 inches takes 1/2 and 3/4-inch flexible conduit, Nos. 10 to 6, 3-conductor armored cable and most 3 and 4-wire rubber, sheathed, fabric sheathed and deck cables Nos. 12 to 6.

**Type BRM Receptacles for Extension Cable Connectors**

**2-Pole Connectors Furnished with 30-Ampere, 250-Volt Receptacle BR2302**

**3-Pole Connectors Furnished with 30-Ampere, 250-Volt Receptacle BR2303**

With Plug

Receptacle at the other end, can be used with portable apparatus having a plug mounted directly on the machine as well as for an extension cable. Provision is made for a safety circuit wire in the cable, which can be connected to the metal housing of the receptacle at one end and to the safety circuit terminal in the plug at the other end.

Threaded watertight when used with plugs with clamping nut. Galvanized finish.

Cat. No.	No. of Poles	Diameter Cable Inches	Standard Package	Wt., Lbs. Std. Pkg.	Price Each
BRM70532	2	1/2 to 5/8	25	45	\$3.55

**Type BR Double Receptacles for Extension Cable Connectors**

**2-Pole Connectors Furnished with Two 30-Ampere, 250-Volt Receptacles**

**3-Pole Connectors Furnished with Two 30-Ampere, 250-Volt Receptacles**

Type BR receptacles for cable connectors are for use with Type BP 20 and 30-ampere, 250-volt plugs when connecting cables are made up with a plug at each end and receptacles are mounted both at the source of supply and on the portable machine. The receptacle sleeve or contact is continuous from one

side of the connector to the other so that no wiring is required. When connecting cables are made up with 3-pole plugs at each end, the phase rotation at one end should be A-B-C, while that at the other end should be A-C-B. Otherwise, 3-phase motors will be reversed when an additional cable is connected in.

Threaded watertight when used with plugs with clamping nut. Galvanized finish.

BR3	3	10	50	8.50

**Type LG Gauge Lamp Condulets Cast Aluminum—Aluminum Finish**

Take Incandescent Lamps with S14 or S17 Bulb, Flexible Conduit, and Armored or other Round Cable

Furnished with Gland Nut, Lead Sleeve or Rubber Bushing and Lamp Receptacle with Lamp Grip

Type LG Gauge Lamp Condulets are for housing the lamps illuminating steam and air gauges (single and multiple), water glass and lubricators.

They are of simple construction with hinged doors held in place by a spring catch, giving access to the interior. The bottom is tapped for 5/8-inch bolt for attaching to a bracket on the boiler head or in the cab. The top is provided with a gland nut and lead sleeve for flexible conduit or armored cable or rubber bushing for round cord or cable; or an adaptor for rigid or flexible conduit, armored or other round cable. The lamp receptacle furnished is of composition and is equipped with a lamp grip.

\*Round cord or cable.

†Flexible conduit or armored cable.

††Flexible conduit or armored cable.

If specified on the order, Type LG Gauge Lamp Condulets can be furnished with rubber bushing No. 5, or lead sleeve Nos. 38, 40, 43 or 46, at the same prices as the standard gauge lamps.

Rubber bushing No. 5 takes flexible cord 7/16 to 5/8 inch in outside diameter. Lead sleeve No. 38 takes 35/64 to 19/32 inch; No. 40, 37/64 to 5/8-inch; No. 43, 5/8 to 43/64-inch; No. 46, 43/64 to 23/32-inch armored cord or flexible conduit, outside diameter.

Any assortment of 20 Type LG Gauge Lamp Condulets will be considered a standard package.

## Tender Lamp Condulets

Take any Medium Screw Base Lamp in S17, S21, G18 1/2, or P19 Bulb

These tender lamps are used as back up lamps on the rear of locomotive tenders. They are weatherproof and the front and side roundels are gasketed.

They are made in 3 styles: with rectangular opening in bottom; with 2 round openings in sides; and with front opening only. The style with 2 round openings in the sides provides ground illumination so that the engineer can see that the lamp is burning. The style with rectangular opening in the bottom not only provides ground illumination, but also throws a light directly downward for coupling.

These tender lamps are furnished with a clear Spreadlite lens, but can be furnished with red lens. The lamp receptacle furnished is provided with a lamp grip.

They are provided with a removable sliding door which is held in position by a cap screw.

### Type LDJ

With Rectangular Opening in Bottom Plain Glass

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
LDJ17	1/2	10	170	\$8.40
LDJ27	3/4	10	175	8.50

With 2 Round Openings in Sides Semaphore Lens

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
LDJ15	1/2	10	175	\$9.60
LDJ25	3/4	10	180	9.70

With Front Opening Only

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
LDJ12	1/2	10	155	\$7.40
LDJ22	3/4	10	160	7.50

### Type LD

With Rectangular Opening in Bottom Plain Glass

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
LD17	1/2	10	160	\$8.30
LD27	3/4	10	165	8.40

With 2 Round Openings in Sides Semaphore Lens

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
LD15	1/2	10	170	\$9.50
LD25	3/4	10	175	9.60

With Front Opening Only

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
LD12	1/2	10	150	\$7.30
LD22	3/4	10	155	7.40

Standard finish is galvanized or black enamel. The above tender lamps can be furnished in aluminum at an advance of \$3.50 in the price.

Any assortment of 20 tender lamps listed in this column will be considered a standard package.

**Tender Lamp Condulets**

Cast Iron

With 8-Inch Semaphore Lens

Take 30-34, 110, 115, or 120-volt, 100-watt, Medium Screw Base Lamp In G25 Bulb

Furnished with lamp receptacle with lamp grip, and a gasketed weatherproof cover hinged at the top and fastened with a heavy wing nut catch at the bottom.

**Type LDBJ for Through Feed Horizontal Conduit**

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
LDBJ1	1/2	5	150	\$12.50
LDBJ2	3/4	5	155	12.60

**Type LDBF for Vertical Conduit at Bottom**

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
LDBF1	1/2	5	150	\$12.40
LDBF2	3/4	5	155	12.50

**Type LEA 2-Color Tender Lamp Condulets**

The door is hinged at the top and held closed by a snap catch. Is so arranged that it must be opened in order to operate the key receptacle or color screen. Made in one style only, with rectangular opening in bottom. Furnished with clear Spreadlite lens, lamp receptacle C131 with lamp grip, and gaskets.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
LEA18	1/2	10	165	\$10.00
LEA28	3/4	10	170	10.00

**2-Color Tender Condulet Lamps**

Provided with a 5-inch clear Spreadlite semaphore lens, key receptacle with externally operated key, and 2 rectangular plain glass openings in the bottom. They take any medium screw base lamp in S17 bulb. They are weatherproof, as the door, lens, and openings in the bottom are gasketed. A lever on the outside of the case operates a color screen throwing it between the lamp and the lens when a red light is desired.

Conduit hub plates can be arranged as desired.

**Type LEBF for Vertical Conduit at Bottom Cast Iron**

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
LEBF18	1/2	5	100	\$14.20
LEBF28	3/4	5	105	14.25

**Type LEBJ for Through Feed Horizontal Conduit Cast Iron**

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
LEBJ18	1/2	5	105	\$14.25
LEBJ28	3/4	5	110	14.35

Standard finish is black enamel.

**Locomotive Filler Hole and Stack Lamps**

For 1/2-inch Rigid Conduit

Types LGUA and LGUB lamps are of substantial weather-proof construction. Each type consists of a cylindrical housing enclosing the receptacle for an incandescent lamp in S17 bulb, and is tapped for rigid conduit.

The lamps are provided with a 3-inch clear semaphore lens, which directs the light as desired.

Type LGUA is especially intended for oil burning locomotives to furnish light for taking on oil and water. It is provided with lugs for fastening bolts.

Type LGUB is similar to Type LGUA lamp except the hub comes out at an angle of about 30 degrees to the axis. No lugs are provided for fastening, the lamp is supported by the conduit. This is practical as the lamp is made of cast aluminum. The light from the lamp enables the engineer or fireman to see the color of the smoke issuing from the stack at night.

**Type LGUA Filler Hole Lamps**

Cast Iron

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
LGUA1	1/2	10	50	\$4.25

**Type LGUB Stack Lamps**

Cast Aluminum

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
LGUB1	1/2	10	35	\$5.50

Standard finish is black enamel for cast iron, and aluminum for cast aluminum.

Any assortment of 10 filler hole and stack lamps will be considered a standard package.

**Engineer's Reading Light Condulets**

Take Any 25-watt Lamp In S17 Bulb

These Condulets are provided with a shade and guard, in which the lamp bulb and receptacle are fully protected. The shade is cast as part of the Condulet, while the guard is hinged to the Condulet. The composition receptacle furnished, C131, is of the key type and is provided with a lamp grip and metal key.

These Condulets are especially recommended as engineer's reading lamps, and are also suitable for use in railroad shops, roundhouses, and railroad yards. The body and shade are cast iron, and the guard is cast aluminum.

**Type LMKB**

Cat. No.	Size In.	Std. Pkg.	Wt. Lbs. Std. Pkg.	Price Each
LMKB225	3/4	10	35	\$3.40

**Type LMKK**

**Type LMKL**

Cat. No.	Size In.	Std. Pkg.	Wt. Lbs. Std. Pkg.	Price Each
Type LMKJ LMKL225	3/4	10	40	\$3.50

Type LMKJ

Type LMKL

Standard finish is galvanized or black enamel.

Any assortment of 10 Engineer's Reading Light Condulets will be considered a standard package.

## No. C131 Lamp Receptacles

Furnished with Lamp Grip and Metal Key

For LMKB, LMKA, and LMKJ Condulets

Cat. No.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
C131	25	12	\$ .70

## Locomotive Deck Light Condulets

This Condulet is for locomotive gangways, providing illumination for coal passers. It consists of a Condulet for illuminating, and half shade cast in one piece, and a weather-proof composition lamp receptacle with lamp grip. The half shade is the correct length and size so that when used with a 25-watt lamp in an S17 bulb, the filament is not visible from any point over the rear end of the tender. The diameter of the half shade prevents the use of large headlight bulb in these receptacles.

### Type LMD

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
LMD125	1/2	10	25	\$1.80

LMA125	1/2	10	20	\$1.80
LMA225	3/4	10	20	1.90

### Type LMG

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
LMG125	1/2	10	20	\$1.80
LMG225	3/4	10	20	1.90

### Type LMH

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
LMH125	1/2	10	20	\$1.80
LMH225	3/4	10	20	1.90

Standard finish is galvanized or black enamel.

Any assortment of 20 Locomotive Deck Light Condulets will be considered a standard package.

## Type CL Condulet Bodies

Galvanized finish. For ceiling outlets. Take fixtures and connection block.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
CL1	1/2	50	185	\$1.60
CL2	3/4	25	100	1.70
CL3	1	25	110	1.80
CL4	1 1/4	25	140	2.15

## Type CLA Condulet Bodies

Galvanized finish. For ceiling outlets. Take fixtures and connection block.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
CLA1	1/2	50	185	\$1.60
CLA2	3/4	25	100	1.70
CLA3	1	25	110	1.80

## Type CLL Condulet Bodies

Galvanized finish. For ceiling outlets. Take fixtures and connection block.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
CLL1	1/2	50	190	\$1.70
CLL2	3/4	25	105	1.80
CLL3	1	25	115	1.90

## Type CLC Condulet Bodies

Galvanized finish. For ceiling outlets. Take fixtures and connection block.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
CLC1	1/2	50	190	\$1.70
CLC2	3/4	25	105	1.80
CLC3	1	25	115	1.90
CLC4	1 1/4	25	145	2.25

## Type CLT Condulet Bodies

Galvanized finish. For ceiling outlets. Take fixtures and connection block.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
CLT1	1/2	50	200	\$1.75
CLT2	3/4	25	110	1.85
CLT3	1	25	120	1.95
CLT42	*1 1/4-3/4	25	150	2.30

\*1 1/4-inch mains, 1/2 and 3/4-inch branches.

## Type CLX Condulet Bodies

Galvanized finish. For ceiling outlets. Take fixtures and connection block.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
CLX1	1/2	50	210	\$1.85
CLX2	3/4	25	115	1.95
CLX3	1	25	125	2.05
CLX41	*1 1/4-1/2	25	155	2.30
CLX42	*1 1/4-3/4	25	160	2.35

\*1 1/4-inch mains, 1/2 and 3/4-inch branches.

**Type LOB Fixtures**

For Mounting on Condulets of CL and LO Series

No. LOB101

**For Storage Section Lighting**

Takes 50-watt, 32, 64 or 110-volt A21 or PS20 Train Lighting Lamps.

Price, No. LOB101, Complete with Holder, Lamp Receptacle GS1621 and RLM 12-Inch Reflector (SH50)..... each .....

Price, No. LOB104, Holder Only with Lamp Receptacle, Gasket and Screws..... each .....

**Reflectors**

Price, No. SH50 Reflector for No. LOB 101 Fixture..... each .....

**For Door and Lavatory Lights**

Consists of holder, lamp receptacle GS1621 and reflector.

No. SH50

Take train lighting lamps.

Price, No. LOB102, For 25-Watt, 32, 64 or 110-Volt, S-17, A19 or PS16 Lamps..... each .....

Price, No. LOB103, For 50-Watt, 32, 64 or 110-Volt, A21 or PS20 Lamps..... each .....

**Fixture Bases**

For Mounting on Condulets of CL and LO Series

**With Straight Hub**

Furnished with receptacle and canopy.

Cat. No.....	DAH13	DAH15
Size.....inches	1	1½
Price.....each		

**Reflectors**

Opal glass, medium density for reflector holders.

Price, No. SH40..... each .....

**Type LP Condulet Bodies**

Galvanized or enamel. For ceiling outlets. Take covers, fixtures, attachments, housings, or wiring devices.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
LP1	½	50	100	\$1.15
LP2	¾	25	55	1.25
LP3	1	25	60	1.35

**Type LPC Condulet Bodies**

Galvanized or enamel. For ceiling outlets. Take covers, fixtures, attachments, housings, or wiring devices.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
LPC1	½	50	110	\$1.25
LPC2	¾	25	60	1.35
LPC3	1	25	65	1.45

**Type LO Condulet Bodies**

Galvanized finish. For ceiling outlets. Take fixtures and connection block.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
LO1	½	50	105	\$1.15
LO2	¾	25	60	1.25
LO3	1	25	65	1.35

**Type LOA Condulet Bodies**

Galvanized finish. For ceiling outlets. Take fixtures and connection block.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
LOA1	½	50	105	\$1.15
LOA2	¾	25	60	1.25
LOA3	1	25	65	1.35

**Type LOC Condulet Bodies**

Galvanized finish. For ceiling outlets. Take fixtures and connection block.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
LOC1	½	50	110	\$1.25
LOC2	¾	25	65	1.35
LOC3	1	25	70	1.45

**Type LOL Condulet Bodies**

Galvanized finish. For ceiling outlets. Take fixtures and connection block.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
LOL1	½	50	110	\$1.25
LOL2	¾	25	65	1.35
LOL3	1	25	70	1.45

**Type LOT Condulet Bodies**

Galvanized finish. For ceiling outlets. Take fixtures and connection block.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
LOT1	½	50	120	\$1.35
LOT2	¾	25	70	1.45
LOT3	1	25	75	1.55

## Type BLMC Condulet Bodies

For deck sill outlets. Galvanized or enamel. Take covers, fixtures, attachments, plug receptacle housings, or wiring device.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
BLMC1	1/2	50	150	\$1.45
BLMC2	3/4	25	90	1.60
BLMC3	1	25	100	1.75

## Holders

Bronze, 2 1/4-inch. Take reflectors or shades, furnished with receptacle No. PE57. For Condulets of the BLM, CL, LO, and LP series. Distance top of reflector above center contact of lamp, 3/4 inch.

Standard package, 25. Weight, standard package, 60 pounds.

Price, No. CRSE1 .....each \$6.00

## Holders

Iron, galvanized or enamel. Takes Conduletto receptacle No. C337 and reflector No. SH25. For Condulets of the BLM, CL, LO, LP, and SO series.

Standard package, 50.

Weight, standard package, 45 pounds.

Price, No. SRH2 .....each \$5.50

## Deep Type Holders

Iron, galvanized or enamel. Takes Conduletto receptacle No. C337 and reflector No. SH25. For Condulets of the BLM, CL, LO, LP, and SO series.

Standard package, 50.

Weight, standard package, 75 pounds.

Price, No. SRH4 .....each \$8.50

## Composition Connection Blocks

Furnished with screws. For Condulets of CL, LO, and LP series.

Standard package, 50.

Weight, standard package, 15 pounds.

Price, No. CF101 .....each \$5.50

## Reflectors and Bezels

Reflector

Bezel

Reflector for holders Nos. SRH2, SRH3 and SRH4.

Bezel for reflectors Nos. SH3, SH6 and SH25.

Cat. No.	Description	Std. Pkg.	Wt. Lbs. Std. Pkg.	Price Each
SH25	Reflector, Porcelain Enamel	25	30	\$1.50
BLC1	Bezel, Brass	25	15	1.00

## BO Series Condulets for Ceiling Outlets

These Condulets are suitable for baggage car installation. They are provided with a wide lug on each side of the body in which holes for mounting screws are drilled. This lug matches in width and thickness the strip of molding used to cover the joints between adjacent sheets of headlining.

Connection block No. CF101 can be used in these Condulets with either covers or fixtures, eliminating soldered and taped joints.

### Type BO

Cat. No.	Size Inches	Std. Pkg.	Wt. Lbs. Std. Pkg.	Price Each
BO1	1/2	50	105	\$1.50
BO2	3/4	25	60	1.60
BO3	1	25	70	1.70

### Type BOC

Cat. No.	Size Inches	Std. Pkg.	Wt. Lbs. Std. Pkg.	Price Each
BOC1	1/2	50	125	\$1.65
BOC2	3/4	25	65	1.75
BOC3	1	25	75	1.85

## Covers

For Condulets of the BLM, BO, CL, LO, and LP Series

### Blank Cover

Cat. No.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
LOB00	100	155	\$5.50

### Sheet Steel

LOB000	100	40	\$3.00
--------	-----	----	--------

### Hub Cover

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
LOB83	3/8	100	160	\$.65
LOB84	1/2	100	160	.65

Standard finish is galvanized or black enamel.

Any assortment of 50 Condulets of the BO Series will be considered a standard package. Any assortment of 100 covers listed above will be considered a standard package.

## TJ Series Telephone Jack Condulets

These condulets are arranged with bracket to take Western Electric Telephone Jack No. 200. The support for the jack is mounted on the inside of a gasketed metal cover, from which it is properly insulated. When the plug is removed, a lid automatically closes the opening.

### Type TJ

Intended for use under the body of a railroad car.

Has a swivel base which allows the plug to pull out easily when the car is moved. An insulating bushing is provided, through which the wires pass to the interior of the car.

Furnished with insulating bushing and jack support attached to gasketed metal cover

Standard package, 25.

Price, No. TJ200 .....each \$4.50

### Type TJD

Intended for use on poles or buildings along the right-of-way of a railroad, transmission line or canal.

The line wires enter the condulet through a 2-wire porcelain cover.

Furnished with 2-wire porcelain cover and jack support attached to gasketed metal cover.

Standard package, 25.

Price, No. TJD200 .....each \$4.00

**JRY-KRY Series Condulet Bodies**

For Side Wall or Car Vestibule Fixtures

Take connection block CF101 and fixtures.

Wiring devices, page 421, Condulet catalogue No. 2000.

Any assortment of 75 black enameled and galvanized Condulet bodies of the JRY-KRY series will be considered a standard package.

**Type JRY Condulet Bodies**

For Side Wall or Car Vestibule Fixtures

Galvanized or black enamel finish. Take connection block No. CF101 and fixtures.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
JRY1	1/2	50	75	\$.70
JRY2	3/4	25	40	\$.80
JRY3	1	25	45	\$.90

**Type KRY Condulet Bodies**

For Side Wall or Car Vestibule Fixtures

Galvanized or black enamel finish. Take connection block No. CF101 and fixtures.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
KRY1	1/2	50	70	\$.65
KRY2	3/4	25	35	\$.75
KRY3	1	25	40	\$.85

**Type KRYA Condulet Bodies**

For Side Wall or Car Vestibule Fixtures

Galvanized or black enamel finish. Take connection block No. CF101 and fixtures.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
KRYA1	1/2	50	70	\$.65
KRYA2	3/4	25	35	\$.75
KRYA3	1	25	40	\$.85

**Type SRH Fixtures**

Consists of holder SRH3 reflector SH25, receptacle, C227, and BEZ1. Galvanized or black enamel finish. Furnished with screws.

Cat. No.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
SRH357	50	140	\$3.50

**Type SRH Holder**

Galvanized or black enamel finish. Furnished with screws.

Cat. No.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
SRH3	50	60	\$.75

**Type C Receptacle**

Furnished with screws.

Cat. No.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
C227	200	120	\$.25

**RF Series Car Vestibule Condulets**

All the requirements of a car vestibule lamp installation are fully met in the combination of a Condulet body of the RF series, reflector No. SH3, elliptical Conduletto receptacle No. RK527. A bezel should always be used to give a proper finish to the installation. When these Condulets are used, either the receptacle or the reflector can easily be removed.

The hubs are cast solid with the the body and have an integral bushing and tapered thread.

Any G1 1/2 or P19 bulb lamp can be used in reflector.

**Type RF**

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
RF153	1/2	50	140	\$2.50
RF253	3/4	25	75	2.60
RF353	1	10	40	2.90

**Type RFA**

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
RFA153	1/2	50	140	\$2.50
RFA253	3/4	25	75	2.60
RFA353	1	10	40	2.90

**Type RFC**

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
RFC153	1/2	50	150	\$2.60
RFC253	3/4	25	80	2.70
RFC353	1	10	45	3.00

**Type RFCA**

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
RFCA153	1/2	50	155	\$2.70
RFCA253	3/4	25	85	2.80
RFCA353	1	10	50	3.10

**No. SH3 Reflectors**

For Condulets of the RF Series

Cat. No.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
SH3	50	65	\$1.50

**Brass Bezels**

For No. SH3 Reflectors

Cat. No.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
BEZ1	50	20	\$1.00

Standard finish is galvanized or black enamel.

**Type AF Mine Signal Switches**

A single-pole double make, quick break, mine signal pull switch. The normal position is open; operating switch closes the circuit.

Spring is packed in grease and supports weight indicated in column "Initial Pull" without starting to close switch. The weight indicated in column "Final Pull" is required to operate switch, but this includes weight of pull rope.

Standard package, 10. Black enamel finish.

Cat. No.	*Initial Pull Pounds	Final Pull Pounds	Total Weight of Pull Rope Including Moisture, Pounds	Additional Pull Required to Operate Switch Pounds	Price Each
AF- 7	7	10	7 to 0	3 to 10	\$10.00
AF-10	10	15	10 to 0	5 to 15	10.00
AF-15	15	25	15 to 0	10 to 25	10.00

AF-75	75	100	75 to 0	25 to 100	10.00
AF-100	100	150	100 to 0	50 to 150	10.00

## Type FSCA Cab Connection Condulets

For mounting in the roof of a locomotive cab.

Furnished with cast iron cover No. DS131, No. 12-24 fastening screws, lock washers and connection block No. CB9323, which has three 1/4-inch-20 binding screws on each

outside plate and two 1/4-inch-20 binding screws on center plate and is mounted on a pedestal.

Condulet has special drilling for using connection block.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
FSCA2302S	3/4	10	40	\$2.50

## No. CB9323 Connection Blocks

For Type FSCA Condulets

Cat. No.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
CB9323	25	15	\$1.00

## No. DS131 Cast Iron Covers

For Type FSCA Condulets

Cat. No.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
DS131	50	45	\$.25

## Toggle Switch Condulets

Condulets of the GJ Series take round base toggle switches. The switch is installed complete with its insulated cover, and is raised from the back of the Condulet to allow wires to enter the switch from the back.

Toggle switch is not included in prices below.

### Type GJ

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GJ1	1/2	25	60	\$1.10
GJ2	3/4	25	65	1.20

### Type GJC

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GJC1	1/2	25	65	\$1.20
GJC2	3/4	25	70	1.30

### Type GJL

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GJL1	1/2	25	65	\$1.20
GJL2	3/4	25	70	1.30

### Type GJT

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GJT1	1/2	25	70	\$1.40
GJT2	3/4	25	75	1.50

### Type GJX

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
GJX1	1/2	25	75	\$1.50
GJX2	3/4	25	80	1.60
GJX3	1	10	45	1.70

Standard finish is galvanized or black enamel. Condulets of the GJ Series take Hubbell toggle switches Nos. 8171, 8181, 8191, 8201, 8241, and 8261.

## UG Series Condulets

Single receptacle battery charging Condulets, galvanized or black enamel finish.

Especially for storage battery charging outlets in railroad terminals and coach yards.

Furnished with 2-pole round receptacle, spring door, and gaskets. Round receptacle No. BRA100 is rated at 100 amperes, 125 volts, and takes plugs No. BPA100 or BPFA100.

### Type UGEL Condulets

Single receptacle battery charging Condulets. Galvanized or black enamel finish.

With round receptacle No. BRA100 and base plate.

Standard package, 5. Wt., std. pkg., 170 pounds. Price, No. UGEL1020 ea. \$27.25

## Type UGEL Condulets

### Surface Style

Galvanized or enamel. For two conduits. With round receptacle No. BRA100.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
UGEL422	1 1/4	5	230	\$31.50
UGEL522	1 1/2	5	240	31.90
UGEL622	2	5	250	32.30

## Type UGEL Condulets

### Underground Style

Single receptacle battery charging Condulets. Galvanized or black enamel finish. With round receptacle No. BRA100.

For two conduits.

Furnished with hub plate and hub cover for 2-inch conduit stem. Conduit stem not furnished.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
UGEL4226	1 1/4	5	355	\$39.25
UGEL5226	1 1/2	5	365	39.65
UGEL6226	2	5	375	40.05

## Type UGEM Condulets

Double receptacle battery charging Condulets. Galvanized or enamel.

With round receptacle No. BRA100 and base plate.

Standard package, 5. Wt., std. pkg., 205 pounds. Price, No. UGEM1020... each \$39.25

## Types UGCF and UGXF Condulets

Double receptacle battery charging Condulets. Galvanized or black enamel finish.

With round receptacle No. BRA100.

### Type UGCF, Surface Style For Two Conduits

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
UGCF42	1 1/4	5	305	\$40.50
UGCF52	1 1/2	5	315	40.90
UGCF62	2	5	325	41.30

### Type UGXF, Surface Style For Four Conduits

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
UGXF42	1 1/4	5	315	\$40.70
UGXF52	1 1/2	5	325	41.10
UGXF62	2	5	335	41.50

**Type UGCD Condulents**

**Underground Style**

Galvanized or black enamel finish. Double receptacle battery charging Condulents. Furnished with hub plate and hub cover for 2-inch conduit stem. Conduit stem not furnished.

For two conduits.

With round receptacle No. BRA100.

Cat. No.	Size Inches	Std. Pkg.	Wt. Lbs.	Price Each
UGCD42	1 1/4	5	405	\$47.50
UGCD52	1 1/2	5	415	47.90
UGCD62	2	5	425	48.30

**Type UGEN Condulents**

Single receptacle battery charging Condulents. With 2-pole rectangular or round receptacle, spring door and gasket. 200-amp. 65-volt receptacle No. BR200 takes plugs BPD200 or BPF200, and may be substituted at an advance of \$1.25.

**With Rectangular Receptacle No. BR100**

Cat. No.	Size Inches	Std. Pkg.	Wt. Lbs.	Price Each
UGEN5101	1 1/2	5	145	\$18.75
UGEN6101	2	5	155	19.00

**With Round Receptacle No. BRA100**

UGEN4102	1 1/4	5	145	\$21.25
UGEN5102	1 1/2	5	150	21.50

**Type BPF Plugs**

With aluminum handle. For battery charging Condulents of the UG series. Two-pole, rectangular for receptacles Nos. BR100 or BR200.

Cat. No.	Volts	Capacity Amperes	Std. Pkg.	Wt. Lbs.	Price Each
BPF 100	80	100	10	50	\$12.00
BPF200	65	200	10	60	13.00

**Type BPF A Plugs**

Aluminum handle. For Condulents of the UG series. Two-pole, for round receptacle No. BRA100. A spanner wrench furnished free with every shipment of plugs. If ordered separately or additionally, 35 cents.

Capacity: 100-ampere, 125-volt. Standard package, 5. Weight, standard package, 60 pounds.

Price, No. BPF A100.....each \$9.50

**BRH Series Condulents**

Galvanized or black enamel finish. For storage battery charging outlets, particularly on railroad cars and electric vehicles.

They are made for flexible cable and for conduit. They are furnished with rectangular or round receptacles, which are interchangeable in all the Condulents of the BRH series except BRHE, which takes the round receptacle only. Receptacles and plugs are polarized. The round receptacle and plug have been designed to eliminate the defects existing in similar receptacles and plugs.

Furnished with 2-pole rectangular or round receptacle and spring door. Rectangular receptacle BR100 is rated at 100 amperes, 80 volts, and takes plug BP100. Round receptacle BRA100 is rated at 100 amperes, 125 volts, and takes plug BPA100. Rectangular receptacle BR200 is rated at 200 amperes, 65 volts, and takes plug BPD200.

**Type BRHE Condulents**

Furnished with improved M.C.B. bracket and 2-pole, 100-ampere, 125-volt round receptacle No. BRA100. Std. pkg., 10. Weight, std. pkg., 260 pounds. Price, No.

BRHE102...each \$22.50

**Type BRHA Condulents**

Furnished with improved M.C.B. bracket and 2-pole receptacle.

Cat. No.	Std. Pkg.	Wt. Lbs.	Price Each
*BRHA101	10	240	\$17.50
†BRHA102	10	250	20.25

\*Rectangular receptacle. †Round receptacle.

**Type BRH Condulents**

Housing for M.C.B. bracket. With 2-pole receptacle.

Cat. No.	Std. Pkg.	Wt. Lbs.	Price Each
*BRH101	10	130	\$12.50
†BRH102	10	140	15.25

\*Rectangular receptacle. †Round receptacle.

**Types BP and BPD Plugs**

With aluminum handle. For battery charging Condulents of BRH and UG series. Two-pole, rectangular, for receptacle No. BR100.

Standard package, 10. Weight, standard package, No. BP100, 55 pounds; No. BPD, 60 pounds. Price, No. BP100, 100-Ampere, 80-Volt.....each \$11.00 Price, No. BPD200, 200-Ampere, 65-Volt.....each 12.00

**Type BPA Plugs**

With aluminum handle. For battery charging Condulents of BRH and UG series. Two-pole, round, for receptacle No. BRA100.

Capacity, 100 amperes, 125 volts. Standard package, 10. Weight, standard package, 50 pounds. Price, No. BPA100.....each \$8.50

**Type MD Condulents**

Connector Condulents, galvanized or enamel. Three-pole, 200-ampere, 250-volt. Furnished with No. MD03 plug.

Cat. No.	Size Inches	Std. Pkg.	Wt. Lbs.	Price Each
MD3	1	10	220	\$25.50
MD4	1 1/4	10	230	25.75
MD5	1 1/2	10	240	26.00

**Type MDA Condulents**

Connector Condulents, galvanized or black enamel finish. Furnished with connection block, wire hole cover, removable sliding cover, and screws. Three-pole, 100-ampere, 125-volt.

Cat. No.	Size Inches	Std. Pkg.	Wt. Lbs.	Price Each
MDA438	1 1/4	10	125	\$8.15
MDA538	1 1/2	10	130	8.35

**MDA Attachment for Type MDA Condulents**

This attachment provides for the use of flexible conduit with the type MDA Condulents. For three-pole receptacle. Size of flexible conduit, 1 1/4 inches.

Standard package, 10. Weight, 50 pounds. Price, No. MDA39.....each \$1.50

## Condulets for Main Line Fuse Cutouts

Condulets listed below furnish a compact housing for cutouts and connection blocks. No cutout fastening plate is used, the wiring device being attached directly to the bottom of the Condulet.

All of these Condulets have cast iron doors and, with the exception of YAJ, are gasketed and have adjustable hinges.

### Type YAC

Watertight

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
YAC1302	1/2	15	100	\$4.00
YAC2302	3/4	15	105	4.10
YAC3302	1	10	110	4.20

### Type YAN

Watertight—Not Drilled or Tapped for Conduit

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
YAN302	...	15	90	\$4.00

### Type YAS

Watertight

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
YAS32302	1-3/4-1	15	100	\$4.50

### Type YAJ

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
YAJ1302	1/2	15	100	\$2.75

### Type YAL

Watertight

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
YAL2302	3/4-3/4	15	105	\$4.10

### Type YAR

Watertight

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
YAR2302	3/4-3/4	15	105	\$4.10

## Connection Blocks

For Condulets Listed Above

30-ampere, 65-volt

Cat. No.	No. of Wires	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
YA3	3	15	25	\$1.50
YA4	4	15	30	2.00

Standard finish is galvanized or black enamel.

Any assortment of 25 Condulets listed in this column will be considered a standard package.

Cutouts, page 436 Condulet Catalogue No. 2000

## Type YE Condulets

With Connection Block and Detachable Hub

For Flexible Conduit

For Rigid Conduit

Type YE Condulet is especially intended for use on locomotives. It provides an easy means for connecting the wiring system on the boiler to that on the cab. A detachable hub plate is provided, which slides into grooves in the Condulet and may be quickly removed when door is open. In addition to this removable plate, the Condulet is provided with 4 bosses, any of which can be tapped for 1/2, 3/4 or 1-inch rigid conduit, but there are no hubs cast solid with the body. The connection blocks provided with these Condulets are equipped with 14-24 R.S.A. binding nuts. Removable plates are made in 2 styles: one for rigid conduit and one for flexible conduit.

Positions of drilling and tapping should be specified according to letters, A, B, C, D, shown on cuts. To order size by number: 1 is 1/2 inch, 2 is 3/4 inch, 3 is 1 inch. For example: YE13-1233 (YE13 is the catalogue number of the Condulet with connection block). The prices per hole for drilling and tapping for rigid conduit are as follows: 1/2 or 3/4 inch, 15 cents; 1 inch, 20 cents.

### For Rigid Conduit

Cat. No.	Size, Inches Tapped Hole	No. of Wires	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
YE1023	1/2	3	10	175	\$6.20
YE1024	1/2	4	10	180	6.80
YE1026	1/2	6	10	185	7.50
YE1028	1/2	8	10	190	8.60
YE2023	3/4	3	10	175	6.25
YE2024	3/4	4	10	180	6.85
YE2026	3/4	6	10	185	7.55
YE2028	3/4	8	10	190	8.65

### For Greenfield Double Strip Flexible Conduit

Cat. No.	Size, Inches Tapped Hole	No. of Wires	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
YE1223	1/2	3	10	175	\$6.35

YE4226	1 1/4	6	10	190	7.80
YE4228	1 1/4	8	10	195	8.90

## Connecting Blocks

For Type YE Condulets

2-Wire

3-Wire

Cat. No.	No. of Wires	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
CB9222	2	25	10	\$1.10
CB9223	3	25	15	1.30

Standard galvanized finish.

Any assortment of 20 black enameled and galvanized Type YE Condulets will be considered a standard package.

**Type FBC Condulets**

Single-pole battery fuse. With 150-amp., 250-volt link fuse block. Fuse screw centers, 2 1/2 in. Where conduit is not required, composition bushing No. CF208 can be used.

Cat. No.	Size In.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
FBC2	3/4	15	145	\$8.90

**Type FBL Condulets**

For single pole battery fuses. Furnished with fuse block, but without fuses. Takes 101 to 200-ampere 250-volt open link fuses.

Cat. No.	Size In.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
FBL2n	3/4	15	180	\$8.80
FBL3n	1	15	190	9.00

**Type FBR Condulets**

For single pole battery fuses. Furnished with fuse block, but without fuses. Takes 101 to 200-ampere 250-volt open link fuses.

Cat. No.	Size In.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
FBR2n	3/4	15	180	\$8.80
FBR3n	1	15	190	9.00

**Type FBX Condulets**

Galvanized or enamel. For battery fuses. Furnished with 150-ampere, 250-volt open link fuse blocks.

The wire terminals are of the soldered lug type. Fuse screw centers are 2 1/2 inches.

Cat. No.	2-pole		Price Each
	Std. Pkg.	Wt., Lbs. Std. Pkg.	
FBX4322	5	185	\$23.85
FBX652	5	205	24.40
FBX4323	3-pole		Price Each
	Std. Pkg.	Wt., Lbs. Std. Pkg.	
FBX653	5	210	29.15

**Type GSG Junction Condulets**

These Condulets consist of a body and side plates which are listed below. A tight joint is secured between the body, side plates, and cover by use of a composition gasket which is furnished. The hub plate feature makes

it possible to put up a complicated network of conduits without the use of unions or right and left couplings. Hub plates not included in prices of Type GSG below.

This Condulet without cover will take ceiling rosette GS176 and connection block CB132 and CB133, keyless receptacle GS126 and spring door cover GS124, and Form 10, 2 and 3-pole plug receptacle housing.

With Cover and Gasket				Without Cover

Blank

Standard finish is black enamel.

SPECIAL ASSORTMENT.—Any assortment of 40 side plates listed above will be considered a standard package.

**Type PR Series Condulets**

For use where durable, watertight, junction Condulets of medium size are required, as in railroad yards and shops. They are also suitable for underneath or overhead car wiring installations.

**Type PRC Condulets**

Galvanized or black enamel finish. Inside dimensions, diameter, 6 1/8 inches; depth, varies with sizes.

Furnished with cast iron cover, gasket, and cap screws.

Cat. No.	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
PRC3	1	15	175	\$4.75
PRC4	1 1/4	15	180	4.95
PRC5	1 1/2	10	125	5.15
PRC6	2	5	65	5.55

**Type PRT Condulets**

Galvanized or black enamel finish. Inside dimensions, diameter, 6 1/8 inches; depth, varies with sizes.

Furnished with cast iron cover, gasket and cap screws.

Cat. No.	SIZE, INCHES			Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
	A	B	C			
PRT3	1	1	1	15	185	\$4.90
PRT4	1 1/4	1 1/4	1 1/4	15	190	5.10

**Type PRX Condulets**

Galvanized or black enamel finish. Inside dimensions, diameter, 6 1/8 inches; depth, varies with sizes.

Furnished with cast iron cover, gasket, and cap screws.

Cat. No.	SIZE, INCHES				Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each

FJC000g	1 1/4	10	130	\$5.75
FJC500g	1 1/2	10	135	5.95

## RS Series Condulets

Galvanized or black enamel finish. Furnished with cast iron cover, gasket and screws. The use of these Condulets provides an easy method of tapping a conduit system, where a Condulet body of this series has been installed in the line, by removing the blank plates and

substituting plates with the desired sizes of hubs. Cover, hub plates, and blank side plates are gasketed, making the Condulet watertight.

Cat. No.	Type	Inside Dimen. Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
RS 1	RS	8 1/2 x 8 1/2 x 4	10	190	\$6.00

## CG Series Connectors

Type CGB with Rubber Bushing

Type CGD

Type CGB

Type CGK

Types CGB, CGD and CGE connectors have a male tapered thread for screwing into the hub of a Condulet. Types CGK, CGL and CGM connectors have a female tapered thread for screwing on to rigid conduit. Connectors with a tapered rubber bushing are for use with round flexible cord or cable. Connectors with a tapered split lead sleeve are for use with flexible conduit and armored or other round cable.

Marine is the standard finish for connectors of the CG series and will be furnished unless another finish is specified on the order. Galvanized finish will be furnished at the same price as marine finish, if specifically ordered.

Connectors of the CG series are listed on pages 127 to 145, Condulet catalogue No. 2096.

Type CGL

Type CGM

## No. 48241 Pratt Branch Conduit Bodies

Designed primarily for junctions, taps, drop cord work, etc. The design does not readily accept a wiring device, except sockets, etc., that can be connected by means of nipples.

**OUTLET.**—Three in each side and bottom; one in each end.

For "Exposed wiring," for 1/2 in. Conduit use coupling Cat. No. 1410; for 3/4 in. Conduit use coupling Cat. No. 1420.

For "Concealed" wiring, for 1/2 in. Conduit use coupling Cat. No. 1410; for 3/4 in. Conduit use coupling Cat. No. 1420, or 3/4 in. locknut and bushing. Two 1/2 in. diameter security-screw knockouts are furnished, thus affording an independent support in concealed wiring.

**FINISH.**—Electro-galvanized only.

**NOTE.**—Screws for cover-security furnished with the covers.

The following package quantities cover all branch conduit covers and bodies: Unit package, 10; standard package, 100; cover unit packages may be combined to make a standard package.

Cat. No.	Description	Wt., Lbs. Std. Pkg.	Price per 100
48C85	Porcelain, with 3/8-inch Female Nipple.	30	\$35.00

**No. 1410 Pratt Conduit Body Couplings**

For 1/2-inch conduit. This coupling is so designed that, when assembled with the above bodies, they constitute a complete Pratt Conduit. Standard package, 100.

Price, No. 1410.....per 100 \$13.50

**No. 1420 Pratt Conduit Body Couplings**

For 3/4-inch Conduit. This coupling is so designed that, when assembled with the above bodies they constitute a complete Pratt Conduit. Standard package, 100.

Price, No. 1420.....per 100 \$20.00

**No. 34461 Pratt Deep Conduit Bodies**

Designed for the reception of all standard make of flush devices. These flush devices are mounted into this body in the same manner as is now standard practice in switch boxes, or wall cases.

**OUTLETS.**—One in each side and bottom.

For "Exposed" Wiring, for 1/2 in. Conduit use coupling Cat. No. 1410; for 3/4 in. Conduit use Coupling Cat. No. 1420.

For "Concealed" Wiring, for 1/2-inch conduit use coupling Catalogue No. 1410; for 3/4-inch conduit use Catalogue No. 1420, 3/4-inch locknut and bushing.

**FIXTURE STUDS.**—Four 1/4 in. diameter knockout holes for standard fixture studs (1 1/2 in centers) are furnished in this Conduit Body. Two of these holes can be used for screw security to independent support, when used in concealed wiring.

**FINISH.**—Electro-galvanized only.

**NOTE.**—Screws for device-security furnished with the devices.

Package quantities for all deep conduit bodies and covers are as follows: Unit package, 10; standard package, 100; cover unit packages may be combined to make standard packages.

Cat. No.	Inside Dimen. Inches	Unit Pkg.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price per 100

## No. 14C1 Covers for Pratt Shallow Conduit Bodies

Flat, closed.

Weight standard package, 20 pounds.

Price, No. 14C1 ..... per 100 \$9.00

## No. 14C7 Covers for Pratt Shallow Conduit Bodies

Raised, with  $\frac{1}{2}$ -inch knockout, no opening, oval shaped.

Weight standard package, 20 pounds.

Price, No. 14C7 ..... per 100 \$9.00

## No. 14C8 Covers for Pratt Shallow Conduit Bodies

Flat, pendant type,  $\frac{1}{8}$ -inch eyelet bushing, for drop cord work.

Weight standard package, 17 pounds.

Price, No. 14C8 ..... per 100 \$10.00

## No. 14C11 Covers for Pratt Shallow Conduit Bodies

Flat, pendant type,  $\frac{3}{8}$ -inch eyelet bushing, for drop cord work.

Weight standard package, 17 pounds.

Price, No. 14C11 ..... per 100 \$14.00

## No. 14C22 Covers for Pratt Shallow Conduit Bodies

Flat, with  $\frac{1}{8}$ -inch male nipple, swedged into a notch opening.

Weight standard package, 20 pounds.

Price, No. 14C22 ..... per 100 \$25.00

**No. 14C23 Covers for Pratt Shallow Conduit Bodies**

Flat, with 1/8-inch female nipple, swedged into a notch opening.  
Weight standard package, 20 pounds.

Price, No. 14C23..... per 100 \$25.00

**No. 14C24 Covers for Pratt Shallow Conduit Bodies**

Flat, with 3/8-inch male nipple, swedged into a notch opening.  
Weight standard package, 24 pounds.

Price, No. 14C24..... per 100 \$25.00

**No. 14C25 Covers for Pratt Shallow Conduit Bodies**

Flat, with 3/8-inch female nipple, swedged into a notch opening.  
Weight standard package, 26 pounds.

Price, No. 14C25..... per 100 \$25.00

**No. 14C28 Covers for Pratt Shallow Conduit Bodies**

Flat, for all surface mounted type devices, with screw centers from 1/8 to 1 1/8 inches.

Weight standard package, 13 pounds.

Price, No. 14C28..... per 100 \$12.00

**No. 14C31 Covers for Pratt Shallow Conduit Bodies**

Raised, for Federal Sign Receptacles, intruding tongue, center opening 1 1/2 inches in diameter.  
Weight standard package, 16 pounds.

Price, No. 14C31..... per 100 \$10.00

**Covers for Pratt Shallow Conduit Bodies**

Raised. No. 14C32 is for Benjamin Sign Receptacles, 2-screw center opening 1 1/2 inches in diameter. No. 14C34 is for standard A. M. E. S. Sign Receptacles, 2-screw 1 1/8 inches on centers. Weight standard package, 17 pounds.

No. 14C32

Price, No. 14C32..... per 100 \$10.00  
" " 14C34..... " 100 10.00

**Covers for Pratt Shallow Conduit Bodies**

No. 14C35

" " 14C36..... " 100 10.00

**No. 14C39 Covers for Pratt Shallow Conduit Bodies**

Flat, for all standard fluted catch devices, only shell and device movement to make up complete lamp receptacle, etc.

Weight standard package, 18 pounds.  
Price, No. 14C39..... per 100 \$30.00

**No. 14C47 Covers for Pratt Shallow Conduit Bodies**

Raised angle adapter, for reception of Nos. 14C35, 14C36, 14C39 covers.

Weight standard package, 25 pounds.

Price, No. 14C47..... per 100 \$22.00

**No. 14C75 Covers for Pratt Shallow Conduit Bodies**

Porcelain, with one wire hole, to be used in drop cord work, or construction requiring one lead.

Weight standard package, 20 pounds.

Price, No. 14C75..... per 100 \$12.00

**No. 14C76 Covers for Pratt Shallow Conduit Bodies**

Porcelain, with two wire-holes, for leads coming from conduit system.

Weight standard package, 20 pounds.

Price, No. 14C76..... per 100 \$12.00

**Covers for Pratt Shallow Conduit Bodies**

No. 14C77 is porcelain, with 3 wire holes, for leads brought out of conduit system to a 3-phase motor. No. 14C78, with 4 wire holes, where 2 sets of leads are brought out of conduit system. Weight standard package, 20 pounds.

No. 14C77

Price, No. 14C77..... per 100 \$13.00  
" " 14C78..... " 100 13.00

**No. 14C82 Covers for Pratt Shallow Conduit Bodies**

Porcelain, with 1/8-inch male nipple, fastened by a locknut.

Weight standard package, 34 pounds.

Price, No. 14C82..... per 100 \$25.00

**No. 14C83 Covers for Pratt Shallow Conduit Bodies**

Porcelain, with 1/8-inch female nipple, fastened by a locknut.

Weight standard package, 32 pounds.

Price, No. 14C83..... per 100 \$25.00

**No. 14C84 Covers for Pratt Shallow Conduit Bodies**

Porcelain, with 3/8-inch male nipple, fastened by a locknut.

Weight standard package, 32 pounds.

Price, No. 14C84..... per 100 \$35.00

**No. 14C85 Covers for Pratt Shallow Conduit Bodies**

Porcelain, with 3/8-inch female nipple, fastened by a locknut.

Weight standard package, 32 pounds.

Price, No. 14C85..... per 100 \$35.00

## Sunbeam Inside Frosted Mazda Lamps

Standard Line  
General Lighting Service  
110, 115 and 120 Volts

Frosting is on the inside. Bulb does not gather dirt. Diffusion is obtained with small loss of light. Used in place of all clear as well as frosted lamps. Pearl-gray bulb harmonizes with any background color.

Fitted with medium screw base.

Watts	Bulb	Over All Length Inches	Std. Pkg.	Price Each
25	A19	3 <sup>5</sup> / <sub>16</sub>	120	\$.20
40	A21	4 <sup>7</sup> / <sub>16</sub>	120	.20

60	A21	5 <sup>1</sup> / <sub>4</sub>	120	.22
100	A23	6 <sup>1</sup> / <sub>16</sub>	60	.35

## Sunbeam Inside Frosted Mazda Lamps

Standard Line  
High Voltage Lighting Service  
220, 230, 240, 250 and 260 Volts

The Standard Line Lamps represent the latest developments in incandescent lamp manufacture. They are easily cleaned and produce better illumination.

Fitted with medium screw base.

Watts	Bulb	Over All Length Inches	Standard Package	Price Each
25	A19	3 <sup>5</sup> / <sub>16</sub>	120	\$.26
*50	A21	4 <sup>7</sup> / <sub>16</sub>	120	.26
100	A23	6 <sup>1</sup> / <sub>16</sub>	60	.43

\*This lamp in 275 and 300 volts for mine lighting service can be obtained at a price of 40 cents each.

## Sunbeam Inside Frosted Mazda Lamps

Standard Line  
Country Home Lighting Service  
28-32 Volts

Fitted with medium screw base. Orders should specify 28-32 volts and Country Home Lighting to distinguish from Train Lighting Lamps.

Prices apply only to Lamps which are designed for an average voltage, as determined by the manufacturer, suitable for operation on 28-32-volt circuits, and do not apply to lamps ordered for individual voltages within this range.

Watts	Bulb	Length Inches	Std. Pkg.	Price Each
15	A17	3 <sup>5</sup> / <sub>8</sub>	120	\$.25
25	A19	3 <sup>15</sup> / <sub>16</sub>	120	.25

100	A23	6 <sup>1</sup> / <sub>16</sub>	60	.40

## Sunbeam Mazda C Lamps

General Lighting Service  
110, 115 and 120 Volts

These lamps constitute a great percentage of the ordinary lamp demand for store and office lighting.

Proper reflector should be provided to protect the eyes from the extremely bright filaments of a Mazda C lamp, especially whenever the lamp is hung low in the usual line of vision.

\*Not recommended for base down burning.

## Sunbeam Mazda C Daylight Lamps

General Lighting Service

110, 115 and 120 Volts

The Mazda C Daylight Lamp has a bulb made of special blue glass to produce light approximating average daylight quality.

Recommended for stores, offices, display windows and factories whenever it is desired to show colors more nearly in their true daylight appearance than is possible by means of customary artificial light.

To get this effect no other illuminants should be burned in the same room or enclosure.

Not recommended for accurate color matching. Special color units are available for this purpose.

### Daylight—Clear—Medium Screw Base

Watts	Style Bulb	Over All Length Inches	Standard Package	Price Each

**Sunbeam Rough Service Mazda Lamps**

110, 115 and 120 Volts

A19

In some classes of lighting service it is necessary to use lamps which are strong mechanically—lamps which will stand a great deal of rough handling. In the Rough Service Lamp, the filament is supported in such a way that it is capable of resisting severe bumps. The superior strength of the filament enables it to give satisfactory service.

P19

Fitted with medium screw base.

Watts	Bulb	Length, Over All, Inches	Std. Pkg.	Price Each
50	A19 Inside Frosted	3 15/16	120	\$.37
*50	P19 Clear	3 7/8	120	.25

\*This lamp is recommended where vibration prevails, such as is produced by heavy or high speed machinery.

**Sunbeam Mazda C Lamps**

High Voltage Lighting Service

220, 230, 240, 250 and 260 Volts

These lamps are higher in price and less efficient than 110, 115 and 120-volt lamps of same wattage and should not be used where it is possible to change their service from 220, 230, 240, 250 and 260 volts to 110, 115 and 120 volts.

## Sunbeam Mazda Lamps

### Intermediate Schedule

The lamps listed on the following schedule, with the exception of the 75-watt lamp in A-23 bulb, are no longer regularly manufactured and will not be shipped to Agents. These prices are given Agents for use in disposing of present stocks.

In the few cases which may arise after present stocks are exhausted, where Purchasers may have bona fide need for the old lamps, Agents may place orders for direct shipment only to Purchasers.

The 75-watt lamp in the A-23 bulb is listed on this schedule to supply the demand for the 75-watt lamp previously manufactured in PS-22 bulb. However, the 100-watt A-23 bulb Standard Line Lamp is recommended for such service.

### General Lighting Service

The above lamps are fitted with medium screw base.

†Orders should specify "Locomotive Cab."

## Sunbeam Mazda Lamps

Extra Charges for Special Features

WHITE, ALL FROSTED AND WHITE BOWL LAMPS.—The following list additional charges shall be added to the list price of clear or inside frosted lamps for either white, all frosted or white bowl finish on such clear or inside frosted lamps. These prices apply only for the manufacturer's standard spray coatings defined below.

WHITE.—The term white refers to an all-over coating of the manufacturer's standard heavy density and the extra charges shown apply only to those lamps for which this coating is standard with the manufacturer.

This coating is standard for all Mazda B lamps, also all Mazda C lamps in A-23 and smaller bulbs. Exception—For daylight and natural colored lamps the light density coating (all frosted) is used.

ALL FROSTED.—The term all frosted refers to an all-over coating of the manufacturer's standard light density and extra charges shown apply only to those lamps for which this coating is standard with the manufacturer.

This coating is standard for all Mazda C lamps in S-24½ and larger bulbs and all Mazda B and Mazda C lamps in daylight and natural colored bulbs.

WHITE BOWL.—The term white bowl refers to a bowl coating of a density which varies according to the type of lamp on which it is supplied. The extra charges shown apply only to those lamps which are furnished in accordance with the manufacturer's standard density as follows:

Heavy density (white)—All Mazda B lamps and all Mazda C lamps in S-24½ and smaller bulbs (except \*\*).

Extra heavy density (bowl enamel)—All Mazda C lamps in PS-25 and larger bulbs (except \*\*).

\*\*Light density (all frosted)—All Mazda B and all Mazda C lamps in daylight and natural colored bulbs.

List Price of Clear or I side Frosted Lamps	List Additional Charge for White, All Frosted or White Bowl	List Price of Clear or Inside Frosted Lamps	List Additional Charge for White, All Frosted or White Bowl
Less than \$1.00	\$.05	\$6.00 to \$6.99	\$.35
\$1.00 to 1.99	.10	7.00 to 7.99	.40
2.00 to 2.99	.15	8.00 to 8.99	.45
3.00 to 3.99	.20	9.00 to 9.99	.50
4.00 to 4.99	.25	10.00 to 10.99	.55
5.00 to 5.99	.30	11.00 to 11.99	.60

Unless otherwise specifically listed in the standard or intermediate schedules, lamps which are listed at the same price clear (or inside frosted) and all frosted or white, will take the usual extra charge when furnished in white bowl.

ETCHING.—Additional charges for etching letters or designs may be obtained upon application to the manufacturer. Style of lettering or design should accompany application.

Orders for large lamps with customer's etching may be filled either short or in excess, within the limits of 5%; except that on orders for less than 40 lamps the shortage or excess may equal but not exceed 2 lamps.

Etched lamps are not rejectable by the purchaser under the provisions of the standard specifications.

VOLTAGE.—Lamps of 105, 125 and 130 volts can be supplied at the same prices as lamps of 110, 115 and 120 volts. For prices of voltages other than 105, 110, 115, 120, 125 and 130 volts apply to the manufacturer.

For prices of lamps in the 220-260-volt range other than 220, 230, 250 and 260, apply to the manufacturer.

SPECIAL BASING.—Prices listed cover only lamps fitted with unskirted bases unless otherwise indicated. Prices of lamps fitted with bases other than listed upon application.

SPECIAL LAMPS.—Any lamp requiring a change in construction from the standard, such as shape or color of bulb, tipped bulb, number of loops in filament, number of anchors, wattage, voltage, amperage, etc., will take a special price.

As it is impossible to always produce an exact quantity of any special lamps ordered, or of any lamps to be made tipped (when listed tipless), or of any lamps to be furnished with natural colored, coated colored or tinted bulbs, all such orders may be filled either short or in excess, within the limits of 10 per cent, except that on orders for 20 lamps or less, the shortage or excess will not exceed 2 lamps.

### Type C-9 1/4 Lamps Furnished Separately

Type C-9 1/4 intermediate base lamps for 110-115-volt multiple service can be supplied separate from sets Nos. 2002 and 2003. Lamps are packed 10 in a carton, only one color in each carton. They cannot be furnished except in multiples of 10 in any one color and will not be shipped in less than carton quantities.

Colors: Red, green, blue, orange and white.

Price.....each \$2.25

## No. 603 Betts Wynk-A-Lyte Flashing Plugs

For window display advertising, counter and show case display. In 100-watt size.

Compensated for temperature changes. Rating based on 110-120 volts. For 6, 8, 32, 220 or 250 volts add 30 per cent.

Dimensions, 1 1/8 x 2 inches. Weight, 1 ounce.

Price, No. 603.....each \$5.50

## No. 100 Noma 8-Light Christmas Tree Lighting Outfits

A Noma extension type outfit. Made of twisted wire throughout.

Equipped with 15-volt Mazda lamps in assorted colors.

For 110-120 volts.

Packed 50 outfits to the carton. Weight per carton, 42 pounds.

Size of standard carton, 16 1/2 x 11 1/8 x 30 inches.

Price, No. 100.....each \$2.50

## No. 3000 Noma 7-Light Multiple Christmas Tree Lighting Outfits

An extension outfit equipped with 120-volt colored new type Mazda lamps. This set lends itself for brighter decorative illumination. No burnt-out lamp can affect the light of the others.

Water-proof construction of rubber wire makes it possible to use set outdoors.

Sockets are of bakelite.

For 110-120 volts.

Packed 50 outfits to a carton, weighing 67 1/2 pounds.

Size of standard carton, 16 1/2 x 12 1/2 x 34 inches.

Price, No. 3000.....each \$4.50

## Betts Thermo-Wynk Flashers

Made with compensated thermostats, thus not affected in the slightest by temperature changes. The contacts are platinum iridium.

No. 670 is the Baby type only, without the receptacle.

Nos. 612 and 613 are furnished with the receptacle as shown. This arrangement saves labor in connecting. Adapted to small window transparencies.

For 6, 8, 32, 220 or 250 volts add 30 per cent to prices.

Nos. 612-613

## Betts Thermo-Wynk Flashers

With compensated thermostats. Platinum iridium contacts. Flashers of 220 watts and over equipped with condensers to minimize ringing. For 6, 8, 32, 220 or 250 volts add 30 per cent to prices. Wattage capacity on 220 to 250 volts is reduced 50 per cent, and on voltages less than 100 the capacity is reduced proportionately to decrease in voltage.

Cat. No.	Volts	Watts	Price Each	Cat. No.	Volts	Watts	Price Each
671	110-125	100	\$ .90	674	110-125	440	\$5.00
672	110-125	220	2.50	676	110-125	660	6.50

**Flash-O-Lite Sokit Flashers**

This is a labor saving flashing socket designed for small window sign transparencies, etc. Finished in dull porcelain and also colored glaze. Three standard timings: slow, medium and fast.

Prices are based on 110-120 volts. For other voltages add 30 per cent.

Wattage capacity on 220 to 250 volt is reduced 50 per cent, and on voltage below 110, capacities are reduced proportionately.

- Price, No. 1012, 60 Watts ..... each \$1.20
- Price, No. 1013, 110 Watts ..... each 1.65
- Price, No. 1014, 200 Watts ..... each 2.75

**No. 1019 Jimbetts Flash-O-Lite Flashers**

This type operates on the same principle as the Sokit and connects into any circuit like an electric bell.

Prices based on 110-120 volts. Prices for other voltages upon request.

Cat. No.	Watts	Price Each
1019	60	\$1.00

**Flash-O-Lite Flip-Flop Flashers**

Flasher with instantaneous make and break. Dependable for its rated load.

Prices based on 110-120 volts. Prices for other voltages upon request.

Cat. No.	Watts	Price Each
501	220	\$3.75

**Flash-O-Lite Flip-Flop Flashers**

The contacts are equipped with extra large platinum — iridium contacts and an arc eliminating condenser. Prices based on 110-120 volts. Prices for other voltages upon request.

Cat. No.	Watts Each Side	Price, Ea.	Cat. No.	Watts Each Side	Price, Ea.
502	440	\$7.50	503	660	\$8.00

In the larger capacities, a number of special thermo units have been designed. For capacities above 440, complete information should be forthcoming, giving wattage, number of circuits, location of flasher (whether indoors or out of doors), and the usual current characteristics.

**Mercury Flip-Flop Flashers**

For 110-120 Volts A.C. or D.C.

For wall mounting. In this type the arc is broken in a vacuum tube which will work satisfactorily under rated load of 1000 watts per circuit. Size, 4x6 1/4x11 inches.

Shipping weight, 15 pounds.

Cat. No.	Action	No of Circuits	No. of Wires	Price Each
900	On and Off	1	2	\$22.00
901	Alternate	2	2	23.00
902	On and Off	2	2	28.00
903	On and Off	2	3	29.00
904	Alternate	4	2	30.00
905	Alternate	4	3	31.00

Sign circuits must be divided to correspond with number of flasher circuits. Specify whether a.c. or d.c.

For 220 volts, add \$2.50; price for other voltages upon application.

**Betts Spelling or On-And-Off Type Sign Flashers**

Used in flashing a whole word or display on and off, in spelling one letter at a time, in traffic controls, call systems, etc.

Spelling flashers are built for 2 actions: Action No. 1 spells out the letters one at a time until all are on, then all off with a brief out period, with operation then repeating. Action No. 2 spells out the letters until all are on, then all off, then all on together, last all off together with the operation then repeating.

**1/2-Inch Brushes Carry—440 Watts D.C. 660 Watts A.C.**

Cat. No.	No. of Brushes	Size Inches	Shipping Weight Pounds	Price Each with Motor	Price Steel Cabinets Extra

15-4	4	22x13x11	74	47.00	9.00
15-5	5	23x13x11	76	51.00	10.00

For each additional switch or feeder add \$5.00 to price.

**Betts High Speed Type Sign Flashers**

A standard mechanism usually assembled in multiples of 4 brushes depending upon load to be flashed. Used to produce flowing or moving effects. Chaser type reproduces crawling snakes, chasing rats, etc., runs at the same shaft speed but is assembled in varying multiples of brushes.

**With 1/2-Inch Brushes—Capacity per Brush on D.C., 250 Watts, on A.C., 330 Watts**

Cat. No.	No. of Brushes	TOTAL CAPACITY, WATTS	Size Inches	Shipping Weight Pounds	Price Each with Motor	Price Steel Cabinet Extra

HHS-16	16	10560 8000	51x13x11	110	103.00	16.50

For each additional switch or feeder add \$5.00 to price.

## No. 6C Chaser Sign Flashers

D.C., 200 Watts per Switch—A.C., 300 Watts per Switch

Used for producing crawling snakes, chasing rats, etc. Number of circuits should be a multiple of the number of snakes.

Cat. No.	No. of Switches	Size Inches	Shipping Wt., Lbs.	Price, Each with Motor	Steel Cabinets Extra
6C	6	8 1/4 x 13 1/4 x 22	80	\$46.00	\$9.00

For each additional switch, add \$3.00.

## No. 10S Script Sign Flashers

Capacity, 110 Watts per Switch at 110 Volts

Designed for writing a word one or more lamps at a time; also skyrockets, shooting stars, fireworks, etc.

Cat. No.	No. of Switches	Size Inches	Shipping Wt., Lbs.	Price, Each with Motor	Steel Cabinets Extra
10S	10	8 1/2 x 13 1/2 x 22	80	\$44.00	\$7.00

For each additional switch up to 50, add \$1.25 each; above 50, \$2.50 each.

### Instructions for Ordering

Specify number and wattage of lamps to be controlled by each switch or circuit. Kind of current, whether d.c. or a.c. If a.c., give number of cycles. Whether 2 or 3-wire system. Voltage.

If design is complicated, give complete description of the sign, and preferably a sketch showing number of lamps per circuit and how they are to be flashed.

NOTE.—Carrying capacity of 220-volt flashers is 50 per cent less.

Prices based on 110-120-volt d.c. or 60-cycle motors.

## Spelling Type Sign Flashers

These machines are used to flash 2 or more circuits such as spelling out a word, or series of words or a sentence, letter-by-letter or word-by-word or line-by-line. When all are on, they hold for an instant, then

all off, then all on, then off, and repeat.

This type of flasher can also be used by increasing and diminishing effects, such as skyrockets, sunsets and sunrises, growing vines and flowers, winding discs and the like.

Capacity per Switch, D.C., 440 Watts;  
A.C., 550 Watts

Cat. No.	No. of Switches	Approximate Size Inches	Shipping Weight Pounds	Price, Each With Motor	Steel Cabinets Extra
1-5	1	8 1/2 x 13 1/2 x 18	70	\$31.00	\$7.00
2-5	2	8 1/2 x 13 1/2 x 18	70	34.00	7.00

Capacity per Switch, D.C., 880 Watts;  
A.C., 1100 Watts

1-10	1	8 1/2 x 13 1/2 x 18	70	\$35.00	\$8.00
2-10	2	8 1/2 x 13 1/2 x 18	70	40.00	10.00

For each additional switch or feeder, add \$5.00 to price.

### Alternate and On-And-Off Flashers

ALTERNATE FLASHERS.—Used for flashing alternate sides of a sign, or 2 or more signs alternately; for signal lights, traffic devices and the like.

ON-AND-OFF FLASHERS.—For flashing one or more signs on and off, for window displays, color changers, call systems, controls, sirens, bell ringers and the like.

Prices are the same as shown above. Prices are based on 110-120-volt d.c. or 60-cycle motors.

### Reco Dimmer Flashers

For sign work, electric fountains, show window, or other decorative lighting effects.

Gradually dimming lights in 50 steps from full bright to dark and back to bright can be furnished.

State complete flashing specifications, number of lamps, size, wattage on each circuit, kind of current, etc.

Single dimmer plates can be supplied in capacity from 1000 to 1700 watts. Any number of dimmer plates may be combined to form a single unit. Prices on request.

### Reco Speed Type Flashers

For spectacular and motion effects; traveling borders, flames, fountains, flags, revolving wheels, lightning, rays, sparks, smoke, waterfalls, twinkling, moving ground, waves, fireworks, dropping coins, rain, juggling balls, etc.

Reco Flashers are used wherever predetermined opening and closing of circuits is required.

Capacity 200 Watts per Brush

Cat. No.	No. of Brushes	Size Inches	Wt. Lbs. Boxed	PRICE, EACH		
				Including Motor	16-Gauge Steel Cabinet	Additional Brushes
S-4-4	4	18x13x11	55	\$40.00	\$9.00	\$3.00

H-1361	1	Slow (15 R.P.M.'s)	25	\$35.00
H-2361	2	Slow (15 R.P.M.'s)	25	37.00

**Reco Laco Color Hoods**

Laco Color Hoods are used for lighting store windows in color, floodlights, spotlights, reflectors, etc.

They fit all standard store window reflectors and lamps, billboard reflectors, footlights, exit lights and wherever color light is wanted.

Furnished in six colors: Flame red, royal blue, tree green, golden amber, daylight, moonlight and blue.

Standard packages of 24 Colorlites, weight 26 pounds, consist of 4 unit packages of 6 each, weighing 5½ pounds.

**Laco Color Hoods—Open Reflector Types**

Size No.	Description	Price, Each	
		Complete	Glass Only
1	For Use on 50-Watt Lamp to 150-Watt Mazda Lamps	\$2.20	\$1.55
2	For 200 and 300-Watt Mazda C Lamps	2.40	1.70
3	For 500-Watt Mazda Lamps	4.00	3.00

**Spot and Floodlights—Interior and Exterior**

2-A	For 200 to 300-Watt Mazda C Lamp, Also 200 to 300-Watt G Lamp	\$2.40	\$1.70
3-A	For 300 to 400-Watt Mazda G Lamp and 500-Watt Mazda C Lamp	4.00	3.00

**Reco Laco Inner Color Plates for Floodlights**

Used principally for color floodlighting buildings, fountains, waterfalls, etc. Color plate consists of metal ring holder and special heat-resisting Laco glass, made from 12 to 36 inches in diameter. For use in all standard floodlights, both for C-2 lamps and G lamps.

Furnished in all colors.

**Reco Combination Holders and Color Hoods**

For exit lights, elevator signals, directional lights, danger lights, back stage lighting, grain elevators, coal or iron mines, canopies, marquees, decorative color effects, electric signs, etc.

Holders made for either ring or flush type of receptacle and fit Standard outlet boxes.

It is dust tight and water proof. A quarter turn of the thread secures the hood.

Supplied in all standard colors—ruby, green, blue, amber, canary, opal and clear glass.

Cat. No.	SF-14	AF-19	AF-21
Outside Diameter	2½ inches	3½	3¾
Price, Hood with Holder	\$ .40	.60	.80
Price, Extra for Wire Guard	.24	.26	.28

**Benjamin Laco Colorlites**

Benjamin Reflectors with Laco Colorlites are effective for color lighting. The Colorlites are glass lamp caps and are fitted with an attaching spring holder to clamp over the lamp. They can be furnished in amber, red, green, blue and true daylight. Glass is undoubtedly superior to any other medium for transmitting color values. It is not subject to distortion or warping and does not wear out. Specify color when ordering.

**Colorlites Complete without Lamp**

Cat. No.	Size Lamp Watts	Std. Pkg.	Wt., Lbs. Std.	Price Each

The Gripion Type Lamp Guard is fastened to the socket by means of plain screws.

Made to fit conduit receptacles, V. V. receptacles, Unilets, Taplets and aluminum sockets, when so specified.

All numbers followed by A fit any W.P. socket with the bottom bead measuring 1 7/8 to 1 11/16 inches in extreme diameter. All numbers followed by B fit any W.P. socket with the bottom bead measuring 1 3/4 inches in extreme diameter.

For W.P. sockets or receptacles with bottom bead measuring 1 1/2 inches in diameter specify regular A number only leaving off the A and substituting the letter N—for example, 1427-N, W. P.

## Matthews Holdfast Lamp Guards

For New Type A Mazda Lamps

For Brass Sockets

For Weatherproof Sockets

The rigid construction of these guards; the fact that they are permanently clamped to the socket; and the spiral spring cushion in the center make it a protection against breakage of incandescent lamps. The trap which is clamped across bottom opening prevents unauthorized removal of lamps. Guard is locked to socket by bending set screw.

The hot lamp cannot get closer than one inch to any inflammable material and the guard does not have to be removed from the socket to replace the lamp.

Approved by all insurance companies and underwriters. Guaranteed 10 years. Collars of guards for brass shell sockets are 1 1/4 inches, for weather-proof sockets, 1 1/2 inches.

**No. 9X282 G-E Portable Hand Lamp Cord Sets**

Set consists of 20-foot No. 16 type SJ G-E-Flex all-rubber cord, G-E-Flex all-rubber cap and portable hand lamp with reflector and guard.

Carton, 1.

Standard package, 25.

Price, No. 9X282..... each \$10.00

**Reelite Extension Portables**

**Drop Cord Type**

250 Watts, 250 Volts

The drop cord type consists of a reel-unit 5 1/2 inches in diameter, carrying 12 feet of rubber covered portable cord. The cord winder is of plural spring type.

Equipped with or without key socket. The base may be attached to any 3/4 or 4-inch outlet box or direct to ceiling. Finished in black enamel.

To operate, simply raise or lower like an ordinary window curtain. Bare lamps should never be used on any lighting unit; standard shades or reflectors can be attached to the socket. For lighting horizontal surfaces, cone or deep bowl reflectors are satisfactory.

These drop cord lights are especially effective over work benches, tables and machines.

Cat. No.	Description	Length of Cord, Ft.	Price Each
1532	Without Socket.....	12	\$9.50
1533	Brass Shell Key Socket.....	12	10.00
1534	Composition Key Socket.....	12	10.00

**Portable Type**

250 Watts, 250 Volts

A portable lamp for use around garages and machine shops. Cord winds just like a curtain roller, allowing just the length of extension required for the job; no cord to lie on the floor and be ruined. When the job is finished, the portable is reeled up out of the way.

Black enameled reel is 7 1/4 inches in diameter. Base will fit 3/4 or 4-inch outlet box or direct to ceiling; 25 feet of rubber covered cord; with or without brass or composition key socket, heavy wire open guard, Loxon guard or vaporproof globe and guard. Will take lamps up to and including 60 watt, except vaporproof which will take 25 or 40 watt lamps only.

1530	Without Wiring Devices, with No. 18 Ga., 3 Conductor Cord (2 Conductors are Connected to the Brushes of the Reelite and the Third Conductor is Grounded to the Frame).....	25	13.00

**Machine Tool Type**

660 Watts, 250 Volts

CONSTRUCTION.—Black enameled reel unit, 7 1/4 inches in diameter, with base for attaching to 3/4 or 4-inch outlet box; 20 feet of extra heavy approved reinforced rubber covered cord and attachment plug connector body. Plural-spring reel insuring long life.

Workmen like to reel up the cord on a Reelite when through using same—it is just like raising or lowering a window shade.

Cat. No.	Type	Length of Cord Feet	Price Each
1523	Connector Body.....	20	\$12.50

## No. 445 R & S Bunghole Lamps

Made entirely of brass and fitted with special 16 c.p. waterproof lamp and stuffing gland for cable.

Price No. 445, with Special Lamp..... each \$7.70  
 " " 391, Ex. Lamp, 110 Volt..... " 1.10

## R & S Non-Watertight Hand Portables

Extra strong, galvanized steel, with hardwood handle and No. 180 weatherproof keyless socket.  
 Price, No. 473..... each \$3.30

## No. 422 R & S Watertight Hand Portables

Cast brass body, flat brass wire guard, hardwood handle with stuffing gland for cable and screw type globe No. 806.

Price, No. 422, 60-Watt..... each \$4.40

## No. 528 R & S Watertight Hand Portables

Cast brass body, round brass wire guard, hardwood handle, with stuffing gland for cable and flared type globe No. 870, absolutely vapor proof. Suitable for Edison base ball lamp.

Price, No. 528, 25-Watt..... each \$5.50

## No. 517 R & S Watertight Hand Portables

Strong, all brass body and round wire guard with hardwood handle stuffing gland for cable and flared type globe No. 882.

Price, No. 517, 60-Watt..... each \$8.00

**Illumination Design**

**Location of Outlets—Adequate Wiring**

The wiring plan is the foundation of the lighting system. Because the cost of relighting is made up so largely of wiring costs, it is more economical to provide wiring adequate for future as well as present needs.

When once outlets are properly installed, a change in type of reflector or in size of lamp, may be made without undue complication; but where spacing of outlets is too great or wiring inadequate, satisfactory results can never be obtained without extensive alteration.

The number of outlets to provide for any given area is determined by maximum allowable spacing between lighting units and is in turn regulated by their height above floor.

**Spacing of Outlets**

The relation between height and spacing is based on distribution of light to procure a reasonably uniform level of illumination on working plane.

The spacing for uniform illumination on work depends upon height of light source above surface to be illuminated, but since most work surfaces are from 2½ to 3½ feet above the floor, the spacing may for practical purposes be considered a function of mounting height of lamps above floor.

When lighting units are mounted as high as the ceiling or roof trusses permit, large and more efficient lamps may be used, while fewer units—to buy, install and maintain—will be necessary. The ceiling height dictates the maximum permissible spacing.

**Layout of Outlets for Large Industrial Building**

Location of outlets is determined by structural features of interior; in many cases, wiring is installed before type of lighting unit is decided upon. Ceiling height automatically regulates maximum permissible spacing, assuming units are mounted as high as possible.

Illustration shows layout of lighting outlets for a large industrial building, indicating the application of data in table below. The 13-foot clearance allows a spacing of 13 feet. For a symmetrical layout in the bays a 10-foot spacing is adopted.

**Table No. 1**

Ceiling Height (Or Height in the Clear) (C) (Feet)	SPACING BETWEEN OUTLETS—FEET		SPACING BETWEEN OUTSIDE OUTLETS AND WALL FEET		Approximate Area per Outlet (At Usual Spacings) (Square Feet)
	Usual (D)	*Maximum (For Units at Ceiling) (E)	Aisles or Storage Next to Wall (A)	*Desks, Workbenches, etc., Against Wall (B)	
8	7	7 ½		3	50-60
9	8	8	Usually	3	60-70
10	9	9		3 ½	70-85
11	10	10 ½	one-	3 ½	85-100
12	10-12	12		3 ½-4	100-150
13	10-12	13	half	3 ½-4 ½	100-150
14	10-13	15		4-5	100-170
15	10-13	17	actual	4-5	100-170
16	10-13	19		4-6	100-170
18	10-20	21	spacing	4-6	100-400
20	18-24	24		5-7	300-500
22	20-25	27	between	5-7	400-600
24	20-30	30		6-8	400-900
26	25-30	33	units	8-9	600-900
30 and up	25-30	40		8-10	600-900

\*Where it is definitely known that some form of indirect lighting will be used, the maximum spacing between outlets may be increased about 2 feet, and the distance from the outside outlets to the wall may be increased by 1 foot.

**Illumination Design**

**Location of Outlets—Adequate Wiring**

**Fig. 1.—Units spaced too far apart for their height furnish uneven illumination. The remedy is to mount the units higher or to space them closer as shown in Fig. 2.**

**Fig. 2.—If the permissible ratio between spacing and mounting height is not exceeded, uniform illumination will be produced. Overlapping of light eliminates shadows.**

With a light source only 8 feet above the floor one unit would be required for each 55 square feet to give uniform coverage; for a 10-foot height a unit for each 125 square feet; 15-foot, 325 square feet; 20-foot, 650 square feet, etc.

**Mounting Height of Lighting Units**

For a 10-foot spacing, units might be dropped to 10 feet above floor as shown by dotted outline of reflector at height H. They are mounted on trusses 12 feet to minimize glare.

**Table No. 2**

Distance Spacing from Between Floor Units (D) (Feet)	Not Less Than (H) (Feet)	Desirable Mounting Height in Industrial Interiors (R)	Desirable Mounting Height in Commercial Interiors (R)	Semi-Indirect and Indirect Lighting	
				Actual Spacing Between Units (D) (Feet)	Recommended Suspension Length of Bowl to Ceiling (S) (Feet)
7	8	12 feet above floor if possible—to avoid glare, and still be within reach from stepladder for cleaning.	The actual hanging height should be governed largely by general appearance, but particularly in offices and drafting rooms, the minimum values shown in Column H should not be violated.	7	1-3
8	8 ½			8	1-3
9	9			9	1-3
10	10			10	1 ½-3
11	10 ½			11	2-3

14	12 ½			14	2 ½-4
16	14			16	3-4
18	15			18	3-4
20	16			20	4-5
22	18	22	4-5		
24	20	24	4-6		
26	21	26	4-6		
28	22	28	5-7		
30	24	30	5-7		

## Layout Suggested for Symmetrical Spacing

Where interiors are divided by columns or ceiling beams into bays, it is usually desirable because of appearance, to locate outlets symmetrically with respect to these structural sections.

**Layout A**  
4 Units per Bay

The most common system for the square bay of usual dimensions.

**Layout B**  
4-2 System  
Equivalent to 3 units per bay; an alternative to 4 per bay where permissible spacing allows.

**Layout C**  
2 Units per Bay

Usually applicable only in narrow bays where width is less than two-thirds the length.

**Layout D**  
1 Unit per Bay  
Satisfactory only where bay size is not greater than the maximum permissible spacing.

**Layout E**  
Staggered System

Where one unit per bay is unsatisfactory and where 4 per bay is unnecessary. Less favorable appearance, certain areas near walls may be inadequately lighted.

**Layout F**  
Interspaced System  
Used in rectangular bays where one unit per bay would exceed permissible spacing in one direction, and where center row will not interfere with future structural arrangements.

## Adequate Wiring Data

The Underwriters' code specifies wiring conditions with regard to fire hazard without giving consideration to the economy of operation. The size of wire for a lighting installation may conform strictly to the code and at the same time the circuits be of such length to cause excessive voltage drop.

### Wattage Capacity per Outlet—Number of Outlets per Circuit

In order that a higher wattage lamp may be used in each outlet at any future date without necessitating a rearrangement of circuits, it is recommended that the capacity per outlet as given in the table be allowed, and in general, the number of outlets per circuit as follows: where capacity is 300 watts or less, not more than 8 per circuit; 300 to 750 watts per outlet, not more than 4 per circuit; where more than 800 watts, not over 2 should be on each circuit.

## Architects' and Electrical Contractors' Wiring Guide

Table No. 3

710-800	.....	.....	1500	750
800-900	.....	.....	1700	850

\*In factories it is often desirable to convert storage areas into work places to meet immediate production needs. Therefore storage areas should be wired according to Class B.

†Class A, for offices, drafting rooms, factories, etc. Class B, for stores and school rooms. Class C, for neighborhood stores, storage areas in factories and basements. Class D, for storage areas in garages and unimportant basements.

## Present Standards of Illumination

The desirable illumination value varies widely, depending on the conditions in any particular installation, such as the accuracy required in the operation, fineness of detail to be observed, and color of goods worked on or handled.

Foot Candles—Table No. 4

	FOOT CANDLES RECOMMENDED	
	Good Practice	Minimum
Auditorium, Church	5	3
Armory, Public Hall	12	8
School, Classroom, Study Room, Library	12	8

Building Exteriors	50-100	25

\*It must be remembered that work on dark goods requires a higher illumination than work on light goods.

Reflectors for Industrial Lighting

R.L.M. Dome with White Bowl Lamp

Glassteel Diffuser with Clear Lamp Manufactured in 200, 300 and 500 Watts

For average industrial conditions.

For high quality industrial lighting. Moderate intrinsic and reflected glare. Seven per cent of total output directed towards ceiling makes for cheerful working conditions, reduced ceiling contrast and reduced glare effect.

Table No. 6

Showing the lamp size required to provide the foot-candle standard of illumination indicated in Table 4.

Calculations take into account the actual spacing per outlet, the type of reflecting equipment and conditions of interior as determined from Table 5.

Figures in first column of table show the area per outlet adequately lighted.

NOTE.—The data for spacing and mounting height of units for a given condition as given in Tables 1 and 2 should not be violated.

Table 5—Interior Conditions Observed

A simple "watts per square foot" specification is unreliable unless applied with the benefit of experienced judgment of various factors which affect the result. Interior finish, size and proportions of the room, type of reflector, and maintenance conditions are variables which must be taken into account. Unless due allowance is made for each of these the results vary, in many cases 5 to 1; the same wattage per square foot might produce 15 foot-candles under certain conditions and only 3 foot-candles under a combination of unfavorable conditions.

FAVORABLE CONDITIONS REQUIRE.—(1) Relatively broad room, that is one in which the width approximates 4 times the ceiling height. (2) Light colored walls and ceilings. (3) Reflector kept clean.

AVERAGE CONDITIONS INVOLVE.—(1) Average room (width about twice height). (2) Medium colored walls and ceilings (3) Ordinary maintenance of equipment.

UNFAVORABLE CONDITIONS INVOLVE.—Relatively narrow room (width about equal to ceiling height). (2) Dark walls and ceilings. (3) Poor maintenance of reflectors.

NOTE I.—Item 1 is substantially equal in importance to 2 and 3 taken together. If 1 is unfavorable and 2 and 3 are favorable, the resultant conditions will be average.

NOTE II.—It will be observed in each case that for a given size of lamp and area per outlet—in other words for a given watts per square foot, the illumination may vary as much as 3 to 1 depending upon whether the conditions are favorable or unfavorable.

## Reflectors for Commercial Lighting

White Glass Enclosing      Dust-Tight Semi-Direct (Clear Top)

## Totally Indirect

Table No. 6

Showing the lamp size required to provide the foot-candle standard illumination indicated in Table 4.

Calculations take into account the actual spacing per outlet, the type of reflecting equipment and conditions of interior as determined from Table 5.

Figures in first column of table show the area per outlet adequately lighted.

For general commercial uses. Recommended diameters not less than: 100-150-watt, 12-inch; 200-watt, 14-inch; 300-watt, 16-inch; 500-watt, 18"

For offices, banking rooms, etc. Moderate glare, good ceiling contrast, moderate shadows. Requires a light toned ceiling.

Suitable where almost entire absence of shadows and glare is demanded as in drafting rooms, art rooms, public interiors, etc.

Area per Outlet Square Feet	Spacing Feet	Conditions	Average Foot-Candles for Lamp Sizes					Average Foot-Candles for Lamp Sizes					Average Foot-Candles for Lamp Sizes

Table No. 7—High Bay Equipment and Installation

The most effective distribution of light in high bays differs slightly from that given by the R. L. M. Dome and Glassteel Diffuser. Because of the relatively greater height of the building in proportion to its width, a concentrated distribution is more effective, since it avoids undue waste of light on the sidewalls. For this reason, units which direct light in a narrow zone are used, with greater overall efficiency than if units with a wider distribution were used.

Foot-Candles in Service with Lamp Size as Indicated

Mount- ing Height Feet	Approx. Spac- ing per Feet	Approx. Sq. Ft. per Outlet	LAMP WATTS				Mount- ing Height Feet	Approx. Spac- ing per Feet	Approx. Sq. Ft. per Outlet	LAMP WATTS			
			300	500	750	1000 1500				500	750	1000	1500
31-36	20x20	400	4.5	8.5	13	18 29	31-36	40x40	1600	3	4.5	7	.....
31-36	20x30	600	3	5.5	8.5	12 19	37-50	30x30	900	3.5	5	7.5	11.5
31-36	30x30	900	2	3.5	6	8 13	37-50	30x40	1200	2.5	4	5.5	8.5
31-36	30x40	1200	.....	3	4.5	6 10	37-50	40x40	1600	.....	3	4	6.5

It is true that as the mounting height of units is increased, the farther apart they may be spaced and still furnish a uniform level of illumination, but it will be observed that where the area per outlet greatly exceeds 1000 square feet, even the 1500-watt lamps are inadequate to provide the foot-candles of illumination recommended for modern practice.

**Shelcrest Lighting Units**

Shelcrest Fixtures are made of genuine bakelite. Holders are screwless safety saddle type. They fit securely under inside neck of glass. Hanging Types have special brass slotted hicky adaptable to various outlet box conditions. Bronze chain 300 pounds tensile strength carries weight of the unit. Have shallow slip canopy with knockout for canopy switch. Canopy held in place by spherical-shaped bushing threaded to top section of stem, forms a ball joint. Stem in 3 sections, each 3/4 inches in diameter 6 inches long, held in perfect alignment, permits lengthening or shortening. The socket is held rigidly in place. The ceiling and suspension types are similar except in Ceiling Type, canopy and socket cover are moulded in one piece and mounting is accomplished by slotted strap.

Finish is permanent, smooth, and Japanese bronze in color.

Shelcrest Fixture parts are numbered and interchangeable; fixtures are supplied wired with asbestos-covered stranded .No. 14 wire, ground leg white, live leg brown.

All fixtures packed in individual cartons 8x8x6 inches clearly labeled, 12 in standard package.

Like the other Graybar fixtures they can be furnished with 99, 66 or reflex glass, plain or decorated, which allows a wide range of effects.

Shelcrest units are available for use in any location where the many advantages in appearance, uniqueness and serviceability are important features.

99 Globes regularly supplied in Cora cased glass can be furnished in Nuite at same prices as corresponding sizes of 66 globes.

Extra length Shelcrest, add 75 cents per 6-inch section or fraction.

666 Bryant canopy switches for Shelcrest unit, add 90 cents each to list.

Shelcrest Fixtures regularly supplied with wires attached. No allowance in price made if ordered with wires unattached.

## Lincrest Lighting Units

Lincrest Fixtures have screwless holder made of 3 metal segments actuated by single operating pin protruding through a safety slot. One easy movement contracts the segments on camera shutter principle, automatically centers the globe without strain on the glass and locks in position.

Fixtures have canopy No. 22 B & S gauge, brass rolled edges, knockout, solid brass slip collar securely fastened and 2 set screws in slip collar.

Suspension type has a cast brass hicky 1/2 and 3/4-inch female thread, stem 3/4-inch heavy brass tubing over iron nipple.

With cast brass loops, brass chain, porcelain socket rigidly mounted in correct position, smooth roomy wire channels.

Overall length suspension fixtures, 26 inches.

Supplied with No. 16 asbestos-covered stranded wire (unattached) with tracer in art silk braid. Finished in heavy plated statuary bronze buffed to a high polish and uniform color.

Like all Graybar fixtures, they can be provided with 99, 66 or reflex globes, plain or decorated. This choice allows a range of effects to meet any condition.

Lincrest Units are available for use in locations which require the best possible type of metal fixtures, where design and appearance are to be emphasized, such as schools, stores, offices, etc., or any other location where the quantity of units to be installed is large and the easy maintenance, due to the patented mechanism, will result in considerable saving.

Special finish can be supplied in white enamel, old ivory, Bauer Barff, or old Brass. Add 10 percent to list.

Packed 1 to a carton, 12 to standard package.

Tube and loop suspension, add 30 cents to prices.

Chain and spindle suspension, add 30 cents to prices.

Extra length chain, add 40 cents per foot or fraction to prices.

Extra length tube, add 70 cents per foot or fraction to prices.

Slip canopy with collet can be supplied on order, add 30 cents each to prices.

For Levolver canopy switch, add 90 cents each to prices.

Flexible joints can be supplied on tube suspension fixtures without additional cost if desired instead of cast loops.

99 Globes regularly supplied in Cora cased glass can be furnished in nuite at same price as corresponding sizes of 66 globes.

Wires supplied unattached.

Stancrest Lighting Units

S6H9920

S6C9920

S5H6620

S6C6620

Stancrest Fixtures are similar in every respect to the Lincrest except the globe holder. It consists of 3/8 inch brass screws threaded through heavy brass lugs securely held in place. Lugs have 5 threads. screws are bevel-pointed to prevent loosening and upset to prevent removal, 4 screws supplied on 6 inch and 3 screws on 4-inch fitters.

Ceiling type supplied with slotted strap and screws to take slotted barrel nuts.

These fixtures are made in both hanging and ceiling types to accommodate all sizes of lamps up to and including 300 watts.

Like all other Graybar Fixtures, they can be furnished with 99, 66 or reflex globes, plain or decorated.

Stancrest Units are available for locations where high class fixtures are required, but where speed in attaching or removing the globe is considered of lesser importance. They have been used with splendid results in offices, schools, hotels, banks, stores, etc.

Finish is heavy plated statuary bronze.

Special finish can be supplied in white enamel, old ivory, Bauer Barff, or old brass, add 10 per cent to list.

Fixtures supplied with wire unattached.

Packed 1 in a carton, 12 in a standard package.

99 globes regularly supplied in Cora cased glass can be furnished in Nuite at same prices as corresponding sizes of 66 globes.

For tube and loop suspension, add 30 cents to list.

For chain and spindle suspension, add 30 cents to prices.

Extra length chain, add 40 cents per foot list or fraction.

Extra length chain, add 70 cents per foot list or fraction.

Flexible joints can be supplied on tube suspension fixtures without additional cost if desired instead of cast loops.

Slip canopy with collet can be supplied on order, add 30 cents each to list.

Levolier canopy switch, add 90 cents each to list.

666 Bryant switch, add 90 cents each to list.

## Faircrest Lighting Units

Faircrest Fixtures have screw type holder consisting of  $\frac{3}{32}$  inch brass screws threaded through heavy brass lugs securely held in place. Lugs have 5 threads. Screws are bevel-pointed to prevent loosening and upset to prevent removal. There are 4 screws supplied on 6-inch holder and 3 screws on 4-inch holder.

Canopy and socket covers No. 22 B & S brass gauge with rolled edges. With knockout in canopy flange, brass chain and loops.

Finished in plated statuary bronze on eggshell surface.

Supplied with No. 16 asbestos-covered stranded wire, tracer in art silk braid. Ceiling types are supplied with slotted strap and screws to take slotted barrel nuts for mounting.

These fixtures are made in both the hanging and ceiling types to accommodate all sizes of lamps up to and including 300 watts.

Like all other Graybar fixtures, they can be provided with 99, 66 or reflex glass, plain or decorated.

The Faircrest Units offer a selection for installation where the fixture allowance is limited but where correct design and lighting results are just as important as in locations that require the types of fixtures, described on the preceding pages.

Packed 1 in a carton, 12 to a standard package.

99 globes regularly supplied in Cora cased glass can be furnished in Nuite at same prices as corresponding sizes of 66 globes.

Tube and loop suspension, add 30 cents to list.

Chain and spindle suspension, add 30 cents to list.

For extra length chain, add 40 cents per foot or fraction to prices.

For extra length tube, add 70 cents per foot or fraction to prices.

Flexible joints can be supplied on tube suspension fixtures without additional cost if desired instead of cast loops.

Slip canopy with collet can be supplied on order, add 30 cents each to list.

Levolier canopy switch, add 90 cents each to list.

666 Bryant switch add 90 cents each to list.

Cora Cased glass is glass in which the opal is confined to approximately  $\frac{1}{3}$  of the total thickness, the other  $\frac{2}{3}$  being clear crystal glass. Cased glass is acknowledged by authorities to be the best obtainable glass for illumination purposes. The clear crystal section is on the outside and gives the globe a smooth, hard, highly polished surface on which it is almost impossible for dust to adhere.

Unless otherwise specified, all 99 globes will be supplied in Cora cased glass.

Nuite glass is a high grade homogeneous opal glass. It differs from the cora cased glass in that the clear crystal section is omitted. It has an exceptionally high efficiency and gives excellent diffusion.

The Reflex Globe is blown in a modified 99 shape, and so treated that the distribution of light is semi-indirect.

The globe is blown in clear crystal glass and carefully annealed. The lower half outside is coated with a special silicate enamel which is fired into the glass. The entire inside surface of the globe is acid etched to eliminate filament images.

The silicate enamel used is a special enamel which has all the properties of opal glass. It is hard and tough, and will not discolor under any conditions.

The standard decorated designs shown are in light tan. Other colors can be furnished on order.

99 globes regularly supplied in Cora cased glass can be furnished in plain Nuite at same prices as corresponding sizes of plain 66 globes.

Other shapes of glass can be furnished if the above does not meet the requirements.

**The Alabax Line**

REG. U.S. PAT. OFF.

**Colors and Decorations**

*"Those Who Know the Facts Insist on Alabax"*

P & S Alabax Porcelain Lighting Fixtures will not stain, rust, mar or peel. They retain their beautiful "fired in" lustre indefinitely. They are not affected by heat, moisture or bright sunlight. They are clean and sanitary and may be easily washed. Soap or lye products will not injure them.

Alabax Porcelain Lighting Fixtures are successfully used everywhere for residential, commercial, institutional and industrial lighting, either in new work or renovation.

All Alabax Lighting Fixtures are manufactured in accordance with the National Electrical Code and are approved by the Underwriters' Laboratories.

Of special interest to the electrical contractor and wireman is the fact that all Alabax Devices are so constructed that an exceptionally small amount of labor is necessary to install them.

Write for the attractive catalogue displaying this line in all of the colors mentioned, and the

useful folder featuring many ideal Alabax installations.

\*\*\*\*\*

For the purpose of condensing, we have indicated in this catalogue the numbers by an abbreviation of the word "Alabax" and the abbreviation is "AL", which letters precede each of the Alabax catalogue numbers.

**Colors and stripe decorations can be supplied on the Alabax Line.**

White glaze is the standard finish on the Alabax line. In addition to the white glazed finish, Alabax devices are available in the following all-over colors and stripe decorations. The colors and stripe decorations are represented by symbols as shown below. In ordering Alabax devices with all-over colors or stripe decorations on them, add the symbol to the catalogue number.

**The plain white glazed device does not need the addition of the symbol.**

Sym- bol	All-Over Colors	Sym- bol	All-Over Colors	Sym- bol	Stripe Decoration
B	Pompeian Green	H	Old Rose	A-1	Blue Stripe
D	Black	J	Olive Green	A-2	Green Stripe
E	Ivory	K	Light Green	A-4	Black Stripe
F	Royal Blue	L	Bronze Brown		
G	Light Blue	M	Orchid		

Example: AL-846 is the device when supplied in standard white glaze. AL-846-A-4 is the device when supplied with the black stripe. AL-846-B is the device when supplied in the Pompeian green all-over finish.

**Assortment of Colors and Stripe Decorations**

Colors and stripe decorations may be assorted to make up a standard package of any one catalogue number.

**P & S Alabax Porcelain Brackets**

For 3/4-Inch, Surface, Plaster Ring and Stud Boxes

*Lamps and Glassware are Not Supplied with Alabax Brackets*

Brackets are regularly supplied completely wired, but can be supplied without leads if so specified. They are furnished regularly with stud adapter, threaded stem and finishing knob.

Length of back, 7 1/2 inches. Width of back, 4 inches. Distance from wall to lamp center, 3 1/8 inches.

Made of pure white glazed porcelain. Gives 5 changes of light. Will cover a 4-inch outlet box. Designed for standard boxes.

Carton, 1. Standard package, 12; weight, 19 pounds.

Price, No. 102, without Glass Shade.....each \$3.00

## No. 33 X-Ray Flood-Ray Show Window Floodlight

The No. 33 window flood light lights the entire window with a flood of direct light from the 200-watt Mazda lamp, and concentrates a powerful beam of light in the center of this flood. The

purpose of this concentrated beam is to high-light one article in the display without making a sharp ring or cut-off of light, but rather causes the beam to fade away gradually.

It is an inexpensive method of lighting small windows where no other reflector equipment is used.

In windows already wired with reflector equipment it raises the light intensity at one point as compared to the balance of the window.

Regularly furnished with a color frame and four pieces of colored gelatin—red, blue, green and amber. The frame clips on the reflector when color flood lighting is used. Frame and color mediums can be omitted when orders so specify.

Height over all, 11 inches. Diameter of color frame, 11½ inches.

Furnished complete as shown, with swivel supporting base, socket holder, No. 802 reflector, color frame and four pieces of colored gelatin—red, blue, green, and amber.

Standard package, 1. Weight, 7 pounds.  
Price, No. 33, Complete.....each \$12.00  
Price, No. 33, without Color Frame and Gelatins.....each 10.00

## No. 303 Portable Flood-Ray Lights

No. 303 consists of the regular No. 33 Flood Light mounted on a portable stand.

Price, No. 303, Complete.....each \$22.00  
Price, No. 303, without Color Frame and Gelatins.....each 20.00

**No. 88 Hippo X-Ray Show Window Flood Lights**

With Center Spot Beam  
For 300-500-Watt Lamps

The Hippo Show Window Flood Light with Center Spot Beam has been designed to concentrate a powerful center spot beam over a small area, which fades away into the light given out over the greater area. It is a powerful light using either the 300 or 500-watt P. S. bulb, mogul base lamp.

It is designed for use in large windows where it is desirable to throw a light of a high intensity, on some one center display.

This floodlight is for use with or without color equipment.

Price, No. 808, without Color Equipment.....each 30.00

**No. 44 Pup X-Ray Show Window Floodlights**

For 100-Watt A-23 Lamp

This floodlight is used with the 100-watt A-23 Mazda lamp to throw a narrow, concentrated beam on featured articles in the window.

Height over all, 7 inches.

Diameter of reflector, 8½ inches.

Furnished complete with swivel supporting base, socket holder and No. 844 reflector. No color equipment.

Standard package of 1 unit weighs 5 pounds.

Price, No. 44, Complete.....each \$9.00

**X-Ray Direct Lighting Reflectors**

These reflectors are of one-piece blown corrugated glass, with a pure silver reflecting surface; green finish outside.

No. 696 gives a concentrated light for billiard tables, etc. No. 700 is a semi-distributing reflector, suited for use over type cases, desks, etc. No. 710 gives an intense light for small areas. No. 844 has a narrow beam spread, for shallow show windows, etc.

**No. 731 X-Ray Hood Reflectors**  
For 100 Watt Mazda Lamp

Designed to light small shallow windows up to eight feet high and approximately ½ to ¾ as deep.

This reflector should be used in windows with no background, or with low background, the upper part of which is mirrored or transparent glass.

The Hood is often recessed in the ceiling of the window, using X-Ray ceiling flange No. 10349.

Width, 8¾ inches; depth, 9 inches; height, 6½ inches. Holder 2¼H. Standard package, 16.

Price, No. 731.....each \$4.00

**No. 7 Scoop Junior Reflectors**

For 60-25-Watt Mazda Lamps

The No. 7 Scoop Junior Reflector is designed for use with 60-25-watt Mazda lamps. It fills a long need for a small reflector to light deep windows less than 5 feet high and for large display cases used inside many stores.

Width, 5 inches; height, 3¾ inches; depth, 4¾ inches. Size holder, 2¼ inches.

Standard package, 20. Weight per standard package, 11 pounds.

Price, No. 7.....each \$2.50

**No. 11 Hood Junior Reflectors**

For 60-25-Watt Mazda Lamps

The No. 11 Hood Junior Reflector is designed for use with the 60-25-watt mill type Mazda lamp, and will light shallow windows less than 5 feet high.

Used for high shallow display cases.

Width, 5½ inches; height, 3¾ inches; depth, 5¾ inches. Size 0 Holder, 2¼ inches.

Standard package, 20. Weight per standard package, 15 pounds.

Price, No. 11.....each \$3.00

**No. 844 Comet Reflectors**

For 100-Watt A-23 Mazda Lamps  
For 3¼-Inch Form A Holder

This is a concentrating reflector with a narrow beam spread of 20 degrees. It has a large number of applications in very shallow show windows, such as drug store windows, in art museums and in handball courts.

Diameter of reflector only 8½ inches; height of reflector only, 4¾ inches.

Standard package, 12. Weight, standard package, 19 pounds.

Price, No. 844.....each \$5.00

## No. 400 X-Ray Jack Show Window Reflectors

\*For 150-Watt Mazda Lamp

The X-Ray Jack No. 400 is used in medium sized deep windows. Its design is such that it gives an even distribution of light from top to bottom of displays with a comparatively high line of trim.

For color-lighting, use X-Ray Color-Ray No. 440.

For recessing this unit in ceiling of window use X-Ray Ceiling Flange No. 11400.

Form X holder included.

\*If a 100-watt A-23 Mazda lamp is used a short, 7/8-inch, socket extension is required.

Cat. No.	DIMENSIONS, INCHES			Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each

Standard package, 2.  
Weight package, 45 lbs.

Price, No. 590, with Socket and Holder ..... each \$25.00

**No. H-199 X-Ray Hoodette Reflectors**

For 50-Watt A-19, 25-Watt A-19 or 15-Watt A-17 Lamps

Designed for lighting low, shallow windows, outside display cases, wall cases, etc. The light is so controlled that while sufficient light is directed toward the back of the case, the greater part is directed downward and brilliantly illuminates the lower part. No. H-199 includes reflector, socket with cover, and reflector holder attached to socket shell. Black finish.

When installing, the wires are brought up back of the case and enter an outlet box at the top. The switch for controlling the lamps is concealed at one end.

Cat. No.	DIMENSIONS, INCHES			Holders Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
	Width	Depth	Height				
H-199	3 1/16	5 3/8	4 1/2	Special 10	14		\$4.75

**No. 5000 Indirect Luminaries**

Equipped with X-Ray reflectors. Adapted for lighting homes, clubs, hotels, stores, etc.

Silvertone finish. Special holders for the X-Ray reflectors permit an adjustment to accommodate two or three 100 or 150-watt lamps. Instructions for methods of wiring are contained in each package. Separate control of each lamp if desired. One lamp can be controlled at pull switch while other lamp can be controlled from wall switch.

Furnished complete with wire and pull switch but unwired and unassembled.

Diameter of bowl, 15 1/2 inches; depth, 4 1/16 inches.

Cat. No.	Size of Lamp	Std. Pkg.	Shp. Wt., Lbs.	Price Each

**No. S-200 X-Ray Scoopette Reflectors**

For 50-Watt A-19 Rough Service or 25-Watt A-19 or 15-Watt A-17 Mazda Lamps

For show case lighting; any can be lighted with it. This unit offers the least possible obstruction to a clear view of the interior of the case, gives even and efficient illumination with complete concealment of the lamp, low current consumption and maintenance, smallest amount of heat and absolute safety from fire risks. No. S-200 includes reflector, socket and cover, housing for reflector, and special clip to hold reflector in place. Black nickel finish.

Cat. No.	DIMENSIONS, INCHES		Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
	Height Inc. Socket	Depth Front to Back			
S-200	4 1/2	3 5/8	10	7	\$4.75

**Complete Outfits**

Complete assortments of finished material necessary for equipping square-end show cases of various sizes with any number of Scoopettes specified are regularly supplied. Material includes a special insulating joint, a push button switch, a special switch box, which is easily installed, all tubing, elbows, T-fittings, Scoopettes, straps or brackets for supporting tubing, cap for end of tubing and sufficient special flexible No. 18 stranded wire to wire entire case. Prices do not include assembling, wiring, installing or lamps.

No. Scoopettes per Case	LENGTH OF CASE, FEET

5	.....	43.50	44.55	45.40
6	.....	.....	50.45	51.30
7	.....	.....	56.35	57.20
8	.....	.....	.....	63.10
9	.....	.....	.....	69.00
10	.....	.....	.....	74.90

The charge for bending tubing for a case with a single curved end is \$2.50, and for a case with two curved ends is \$3.25.

\*Standard package outfits.

**Method of Installing**

**Floor Entrance, for Wood Frame Cases**

The feed wires enter from underneath the floor of case extending up through the flexible conduit, which is concealed back of one of the front corner posts. Floor entrance outfits can be supplied for same prices as back entrance outfits.

**Back Entrance, for All Glass Cases**

Feed wires are brought up one of the back posts; tubing extends across the case inside at the top at one end, being connected to the front tube with an elbow. This is a most satisfactory method, as it is not necessary to disturb the trim, move the ease or tip it over.

## CurtiStrip and X-Raylets

**X-Ray Reflectors Installed in the Show Window on CurtiStrip**

CurtiStrip is a wiring device designed originally for show window and cove lighting, but by no means limited to these fields. It is listed as standard by Underwriters' Laboratories. Ease of installation combined with a minimum number of parts, sturdiness of construction and good electrical conductivity are the characteristics of CurtiStrip and X-Raylets, its standardized fittings.

Time and material costs are reduced to a minimum and a neat, rigid, perfectly aligned installation is assured. All metal parts coated with udylite, a rust-resisting cadmium finish.

### No. 1 CurtiStrip

CurtiStrip is supplied in standard lengths of 10 feet and is easily cut to any desired length with a hack saw. Its cover can be cut into sections (with a pair of tinners' shears) to act as spacers between receptacles, etc. The cover is flat and easily snapped into place in the spring-like groove provided in the channel. Where local inspection permits, 30 No. 14 single braid, rubber-covered wires can be placed in CurtiStrip.

A standard package contains 100 feet.  
Price, No. 1.....per foot \$.60

### No. 5 X-Raylets

The No. 5 is a porcelain receptacle and consists of 2 parts: body and cap. This receptacle is for use with X-ray form X holder and all other types of standard holders.

Packed 10 in a carton. Standard package, 100.  
No. 5-A may be used with other types of X-ray holders.  
Price, No. 5, with Medium Screw Base.....each \$.60  
Price, No. 5A, with Medium Screw Base.....each .60

### No. 6 X-Raylets

An end cap for closing the end of CurtiStrip. Provided with a 1/2-inch knockout for use in leading-in circuits.

Standard package, 10.  
Price, No. 6.....each \$.40

## CurtiStrip and X-Raylets

### No. 9 X-Raylets

This is a strap for holding CurtiStrip on the ceiling.

Standard package, 10.

Price, No. 9.....each \$.15

### No. 10 X-Raylets

A bracket for hanging CurtiStrip in any of 3 positions: Vertical, or left and right horizontal.

Standard package, 10.

Price, No. 10.....each \$.35

### No. 14 X-Raylets

An adjustable elbow for adapting CurtiStrip to any desired angle.

Fishing of wires is entirely eliminated.

Standard package, 1.

Price, No. 14.....each \$1.50

### No. 16 X-Raylets

A coupling for connecting 2 pieces of CurtiStrip together.

It does not reduce the capacity of the wireway.

Standard package, 10.

Price, No. 16.....each \$.40

### No. 18 X-Raylets

A box adapter for connecting CurtiStrip to a standard 4-inch outlet box.

Either 1, 2, 3 or 4 adapters may be used with the box so that CurtiStrip may be run in any or all 4 ways.

Standard package, 10.

Price, No. 18.....each \$.75

### No. 19 X-Raylets

This is a nipple attachment for connecting wiring devices to CurtiStrip.

It can be substituted for the socket in window and cove lighting installations.

This attachment fits a 3/8-inch pipe nipple and can be used with drop cords and other wiring.

Standard package, 10.

Price, No. 19.....each \$.45

### No. 24 X-Raylets

A bracket assembly consisting of a strap, No. 9; bracket, No. 10; a 3/8 x 6 1/4-inch nipple, locknuts and flange. Supplied knocked down.

Standard package, 10 sets.

Price, No. 24.....per set \$1.40

**Benjamin Show Case Lighting Fixtures**

**Lamp Sections**

Lamp sections are completely wired for "through" connection and take T-10 tubular lamps.

Standard finish for parts listed below is dark bronze outside—lamp sections are aluminized inside.

Cat. No.	Description	No. of Lights	†Std. Pkg.	Wt. Lbs. Each	Price Each
4354	12-Inch Lamp Section	1	5	1 1/8	\$4.00
4355	16-Inch Lamp Section	2	5	1 1/4	4.50
4357	22-Inch Lamp Section	2	5	1 1/2	4.70
4338	30-Inch Lamp Section	4	5	2 1/2	7.75
4339	34-Inch Lamp Section	4	5	2 3/4	8.00

4351	8 1/2-Inch Lamp Section	1	5	3/4	\$3.75
*4361	18-Inch Link	5	5	1/2	2.00

\*This unit consists of a section of soft brass tubing (G) which can be cut and bent to fit show case curve, and two end blocks (F and H) for linking lamp sections together.

**Entrance Stem Assembly For Rear Entrance**

Cat. No.	Description	†Std. Pkg.	Wt. Lbs. Each	Price Each
4349	§Complete	5	1 1/16	\$3.50

**For Front Entrance**

§No. 4349 consists of connecting block (F), 33 inches of horizontal tubing of soft brass with 90° bend (E), elbow (D), 33 inches of vertical tubing of soft brass (C), with one end threaded for screwing into floor fitting (B) and outlet box (A).

†No. 4350 consists of outlet box (A), floor fitting (B), 33 inches of soft brass tubing with 90° bend (E), and connecting block (F). After tubing is cut to the required length the straight end must be threaded for screwing into floor fitting.

‡A standard package also consists of any assortment of 5 of the above numbers.

**For Rectangular Cases from 48 to 124 Inches (Inside Length)**

To determine the catalogue numbers of the reflector sections and fittings required for a show case, measure the inside length of the show case and then refer to the first column of the chart. Opposite the nearest length and under the heading "Catalogue Number of Units Required for Show Case" the quantity and catalogue numbers of the reflector section and fittings will be found.

Actual Inside Length of Case, Inches	Catalogue Number of Units Required for Show Case		Net Overall Length of Combination, Inches	No. of Lamps

**Benjamin Show Case Lighting Fixtures**

**For Curved Show Cases and Wall Cases**

These show case fixtures have many advantageous features:

Even illumination of the entire display as fixture extends the whole length of the case.

Inconspicuous in either all glass or wood frame case, as fixture is of very small dimensions and is finished in dark bronze to harmonize with most store surroundings.

Easily and quickly installed without muss or fuss, due to special sectional construction.

Easy replacement of burned out lamps. Old lamps with socket can be removed from fixture with the ease of separating a standard attachment plug—see illustration below at left. New lamp can then be inserted outside of the case and socket replaced.

Designed to take Standard T-10 tubular lamps, which are obtainable at any electrical store.

Standard combinations fit any style or length of case, assuring quick delivery from your contractor and a decided saving in cost as compared with specially built units.

**Method of Installation**

The illustration shows the method of installing Benjamin Show Case Lighting fixtures in the curved section of a case. The Link Sections shown are of soft brass tubing, easily cut and bent to fit the case.

The illustration at the right shows the method of installing Entrance Fittings. Tubing is of soft brass and easily cut and bent.

No special tools are required for installing fixtures.

The method of fastening reflector sections to wood or glass cases is shown below.

At the left is shown the socket which separates like a standard attachment plug, so that lamps can be changed outside of case.

At the right is shown the method of joining sections both mechanically and electrically by tightening up two screws.

At left is shown method of attaching supporting bracket on all glass case.

At right is shown method of attaching the supporting brackets to wood frame case.

## Benjamin Pear Shaped Half Shades

For use with desk lamps, bracket lamps, oil gauge lamps, etc.

Fits standard brass shell sockets and takes Mazda B lamps up to 40 watts.

Reflector has hinged collar which allows it to swing out and give free access to lamp when making renewals.

The inside is aluminized; outside as indicated in the listing.

Cat. No.	Description	Std. Pkg.	Wt. Lbs. Std.	Price Each

LS15D	Decorated Jade	3.00

## Wallace Portable Adjustable Lamps

This lamp stands, hangs, clamps anywhere it is put. It may be tilted at any angle, twisted in any direction, and the shade adjusted to reflect the light where it is wanted.

A handy lamp for traveling, as it may be folded up. It weighs only a pound and takes up but little room.

Has separable plug. Furnished with 8-foot cord.

Price, Brushed Brass and Mahogany Bronze... each \$2.50

## Greist Clamplite Adjustable Lamps

An adjustable lamp that has all the practical features of the higher priced models.

A good-looking utility lamp.

When hung on the wall it looks like a built-in fixture.

Height, 12 inches.

Price, Brass or Mahogany Bronze ..... each \$2.00

**Buss Lights**

This light can be used for every purpose. It may be clamped or hung anywhere and is an artistic stand lamp that is neat and attractive. Not just a clamp lamp contraption.

Base plate screws in and out to clamp anywhere. Works like a vise. Slotted hole permits light to be hung on hook or nail. A touch of the hand adjusts the bulb or shade to any position.

Light is 11 inches high. Complete with extra long 9-foot cord and combination plug.

Price, No. 2002, Plain Bronze (without Bulb).....each \$2.00

**Adjusto-Lites**

Made of solid brass in four finishes: Brass, bronze, nickel and white enamel.

Durable and handsome.

The Adjusto-Lite stands 12½ inches high with 5-inch by 3-inch base.

Shade is 5¼ inches in diameter.

An eight-foot cord with push button socket and two-piece plug is attached to every lamp.

Sold with a five-year guarantee.

The lamp clamps, stands or hangs anywhere. Clamp is felt lined.

Price, Brass Finish.....each \$3.95  
 " Bronze or Nickel Finish..... " 4.45

**No. 45 Dim-A-Lamp Portables**

This lamp is simple in operation. Pushing the stem down will open a clamp, pushing the stem up will clamp the lamp securely on round, square or flat surfaces. Will also hang or stand anywhere. The adjustable shade and socket provide for light at any angle. Standard finishes are brush brass, bronze and ivory. It is furnished with separable plug, Dim-a-lite Socket and 8-foot cord.

Gives five changes of light and saves 30 to 80 per cent current.

Finish	Std. Pkg.	Wt., Lbs.	Price Each

Price, No. 46, 110 Volts.....each \$4.75  
 Price, No. 46, 220 or 32 Volts.....each 4.85

**Thermolite Heat and Light Applicators**

No. 0645 Hand Applicator

The Thermolite is a simple, convenient, but scientific device for duplicating the effect of the sun's rays. It is a well recognized fact that heat and light both relieve and cure. In the Thermolite, light and heat are generated in a special patented electric lamp contained in a reflector so constructed that these soothing agents when applied to the aching parts not only act on the surface of the skin, but penetrate the actual tissue, relaxing the congestion and relieving the pain.

It may be applied with perfect safety for the relief of almost any pain and has been found efficient in the treatment of sprains, bruises, muscular soreness, neuralgia, lumbago, rheumatism, neuritis, stiff neck, stomach and abdominal pains, backache, constipation, headache, head colds, pulmonary effects; also for use in massage and treatments by manipulation, drying hair and many other purposes that require a convenient application of heat.

Thermolites are used and recommended by physicians and patients, and are in use in all government hospitals.

The Thermolite is far superior to hot water bags, poultices and other surface heating appliances on account of its penetrative power and because it is many times more convenient. There is no time wasted in preparation; simply attach to any electric light socket for efficient relief from almost any pain that flesh is heir to. The heat infusion is constant, penetrates deep into the tissues and is practically instantaneous in its operation.

No. 0696 Floor Stand

No. 0645 Folding Stand

**No. 0645 Folding Stand**  
 A convenient stand weighing but 34 ounces. Fits easily in hand case or traveling bag. Telescopic stem can be set at any height from 27 to 68 inches. Length of stand when folded 20 inches.

**No. 0696 Floor Stand**

Ideal for home or office use where portability is not essential. Adjustable from 30 to 62 inches.

Applicator is permanently attached to flexible arm. Finished in white enamel and nickel.

## Ben-ox Interchangeable Devices

A Benjamin Product

The Old Way  
Soldered and Taped Joints

Ben-ox is an improved line of equipment designed to meet present-day requirements for use in the lighting of industrial plants, hotels, office buildings, stores, public buildings and hospitals.

In addition to serving the purpose of ordinary lighting equipment, Ben-ox has the following advantages:

**EASY TO INSTALL.**—The old material and time wasting taped and soldered joints are no longer necessary. Simply attach Ben-ox mounting element to outlet box by tightening two screws. Then loop the wires around terminal screws and slip the Ben-ox Canopy into place. The equipment thus installed is called a Ben-ox Basic Unit. See illustrations below.

The New Way  
Side View of Ben-ox Mounting Element in Place

Bottom View of Ben-ox Mounting Element in Place

The Mounting Element Plus Canopy Plus Canopy Supporting Ring Makes Up the Ben-ox Basic Unit

Mounting Element

Canopy

Supporting Ring

To this Ben-ox Basic Unit may be attached any style of lighting equipment. See illustrations on following pages.

Ben-ox Basic Unit

**INSPECTION AND APPROVAL.**—When the Ben-ox Basic Unit is in place, immediate inspection and final approval can be secured before the tenant arrives or before the use of the space is determined.

Later when the use is known, any style of equipment can be put in place with the ease of attaching a lamp bulb.

**LIGHTING EFFICIENCY EASILY MAINTAINED.**—Dirt accumulations diminish the available light output. Without the use of tools, Ben-ox equipment may be taken down, thoroughly cleaned and replaced just as easily.

**OUT OF THE WAY FOR THE DECORATORS.**—During periods of redecorating and cleaning, injury to brass work (splashing of painters' material) or glassware breakage is avoided by removing the Ben-ox equipment.

**LIGHTING EQUIPMENT EASILY TRANSFERRED.**—Ben-ox equipment in one room or part of plant can be taken down and reconnected in another location without disturbing the wiring in any way and with the ease and same manner as that of removing and replacing a lamp bulb. Expansion of the business and future tenants' needs, present lighting equipment problems best solved by Ben-ox.

**FUTURE CONVENIENCE.**—At some future date, if the lighting equipment should become out of style, a speedy substitution can be made without requiring tools.

## Ben-Ox Keyless Ceiling Units

\*Benjamin Porcelain Enameled Steel Reflectors, with Ben-Ox threaded neck, may be attached if desired.

## Benjamin Sturdox Fixtures

### 2-Piece Easy-to-Wire Lighting Line

A new line of sturdy industrial lighting fixtures which offer durability and economy in maintenance with low original costs.

**Sturdy Construction:** Made to withstand service conditions that would quickly deteriorate ordinary lighting equipment.

**Easy-to-Wire:** 2-piece socket of heavy porcelain is unusually well constructed and exceptionally easy to wire.

**Low Maintenance:** Reflectors may be kept at original lighting efficiency at a very low cost as the Sturdox thread permits the taking down of reflectors for quick and thorough cleaning.

Keyless, Easy-to-wire, 2-piece sockets are standard.

Sockets illustrated below, furnished when specified at an advance in list price:

**16 Combinations of Lighting Fixtures:** Every shape of reflector and style of hood necessary to efficiently meet all ordinary lighting requirements.

**Interchangeable Reflector:** Every Sturdox reflector fits every Sturdox hood. Reflectors may be interchanged without disturbing the wiring.

**Special Benjamin Features:** Sturdox fixtures can be furnished with Shock Absorbing Sockets, Self-Locking Sockets or Pull Chain Sockets.

Complete units consist of combinations of the hoods shown below and the reflectors illustrated at the right.

**Pendent Steel Hood**

## Ben-ox Pendent Unit Connectors

Pendent Unit Connector

3-chain Fixture Hook

Single Chain Loop

Ben-ox pendent unit connectors provide means for connecting various types of pendants to Ben-ox Basic Units.

### For Chain or Drop Cord Pendants

Connectors Nos. 4845 and 4850 may be attached to Ben-ox Basic Units. Electrical contact is made against the wiring terminal base and mechanical connection with the Ben-ox Thread. They are tapped  $\frac{3}{8}$  inch or bushed for drop cord, as indicated. No. 4845 will take three chain hook, No. 4847, or Single Chain Loop, No. 4849. With this type of connector the pendant is grounded to the conduit system. Where insulating joint is required a fibre disc insulator will be supplied for this purpose at no extra charge. Finish, acid bronze.

Cat. No.	Description	Std. Pkg.	Wt., Lbs. Std. Pkg.	Lbs. Price Each
*4845	Pendent Unit Connector, Tapped $\frac{3}{8}$ -inch	10	3	\$.70
*4850	Connector for Drop Cord	10	3	.75
4847	3-chain Fixture Hook, $\frac{3}{8}$ -inch Thread	10	1	.30
4849	Single Chain Loop, $\frac{3}{8}$ -inch Thread	10	$\frac{5}{8}$	.20

## Ben-ox Chain Supporting Rings

3-chain Supporting Ring

Chain supporting ring No. 4818 is used as a support for a bowl with three chains. Electrical connection is made through a drop cord and socket connected to the ceiling unit by a Benjamin No. 904 swivel attachment plug. This arrangement may be applied to either Ben-ox pull chain or keyless ceiling units such as No. 4825 and No. 4807.

Cat. No.	Description	Std. Pkg.	Wt., Lbs. Std. Pkg.	Lbs. Price Each
4848	3-chain Supporting Ring	10	$\frac{5}{8}$	\$.35

## No. 3622 Outlet Box Covers

This outlet box cover is made of galvanized steel.

Designed for use with X Type fittings, for attaching Benjamin Reflector Sockets direct to the conduit box.

The cover is placed between reflector and top flange, and is provided with four bayonet slots which slip over screws on box.

No other fittings are necessary.

Fits 4-inch outlet box.

Cat. No.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Lbs. Price Each
3622	10	$2\frac{3}{4}$	\$.25

## No. 3380 Benjamin 45-Degree Ball Fixture Aligners

### Outlet Box Cover Type

Consists of a cast iron ball which is mounted between 2 riveted steel plates. Ball is tapped for  $\frac{1}{2}$ -inch iron pipe size. Has hexagon neck for gripping and holding ball when iron pipe is screwed in. Aligner tapped  $\frac{1}{2}$  inch. For standard  $\frac{3}{4}$  and 4-inch boxes.

Permits fixture to hang plumb and protects fixture against mechanical jars and shocks.

Attaches to standard box by means of 2 screws. Slot in cover of aligner eliminates necessity of removing more than one screw. Just remove one screw, back up other, slip aligner in place and replace screw. Tighten both screws to hold aligner in position. Finish, electro galvanized.

Standard package, 10; weight, 6 $\frac{1}{2}$  pounds. Price, No. 3380..... each \$ .30

## Ben-ox Threaded Shade Holders

Any Ben-ox Holder will fit any Ben-ox Socket or ceiling unit. All Ben-ox one-piece holders are equipped with one or more neck screws with locking spring so that vibration cannot loosen screws and allow glassware to drop. Fitter positions with respect to the lamp filament accord with modern standards.

### Acid Bronze Holders

### Mounting Stirrups

No. 4855 Attached to Outlet Box—Box Not Included

For mounting Ben-ox or other wiring devices on outlet boxes, condulets, etc. May be attached to fixture stud, with locknut or by screws threaded to box. Inside bolt holes are on  $1\frac{1}{2}$ -inch centers; outside pair, tapped, on  $2\frac{3}{4}$ -inch centers. For 4-screw support, two stirrups are used in a crossed position. On  $3\frac{1}{4}$ -inch boxes with only two supporting ears, adding the proper stirrup, see listing, gives the other 2-screw supports.

**Benjamin Glassteel Diffusers**  
With Type R R Threaded Hood

No. 26300, 200-Watt

In addition to the accepted merits of the porcelain enameled steel reflector this combination offers the following advantages:—

1. Light is permitted to reach the ceiling which softens the contrast between the working plane and the space above the reflector. This increases eye comfort and enhances the cheerfulness of the room.
2. The brightness of the unit is reduced to about 3 or 5 candlepower per square inch which further reduces eye effort resulting from both direct and reflected glare.
3. Protection of the glass from excess breakage because surrounded by the steel reflector.
4. Exceptionally good appearance of the lighted unit.
5. Reflection and diffusion favorable to the needs of the daylight lamp.

**General Features**

The total light output of the Glassteel Diffuser with a clear lamp is equal to that of an R L M reflector and bowl-enameled lamp of corresponding size.

The Glassteel Diffuser directs light on the ceiling (about 7 per cent) and also more light on higher angles than the other equipment mentioned.

Comparison of corresponding brightness favors the Glassteel equipment, which is 3 or 5 against 15 candlepower per square inch of the R L M reflector and bowl-enameled lamp.

The most notable results of the Glassteel Diffuser are softening of shadows and the reduction of direct and reflected glare.

**Construction**

**HOOD.**—Hood is of porcelain enameled steel with Benjamin R R Thread.

**SUPPORTING FITTING.**—XR Type, tapped for 1/2-in. conduit.

**SOCKET.**—Porcelain, two-piece, easy-to-wire type.

**REFLECTOR.**—Reflector is porcelain enameled steel in two sizes with Benjamin Type R R Threaded Neck permitting easy removal of the reflector for cleaning. The reflector has six apertures at the top for the passage of light to the ceiling. It also embodies a spring globe holder facilitating easy removal of globe for cleaning.

**FINISH.**—White porcelain enamel with small neat dark blue bead at bottom edge of both hood and reflector.

**Pendent Hood Type**  
With Opal Glass Globe

Cat. No.	Size of Lamp Watts	DIMENSIONS INCHES		Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each

Prices do not include wires or lamps.

**Benjamin Reflector Sockets**  
Porcelain Enameled Steel

**USES.**—Each type of reflector performs a definite service. See individual description immediately above each listing.

**REFLECTORS.**—Seamless Crysteel porcelain enameled steel. They are weather-proof and may be used for indoor and outdoor service.

**SOCKETS.**—National Electrical Code Standard. Sockets are two-piece porcelain, keyless, easy-to-wire type with Benjamin Lamp Grip which prevents loosening and falling of lamps under vibration.

Locking Type Socket will be supplied with reflectors up to and including 200 watt sizes at an advance of 40 cents each. Key, No. 1399, at \$1.00 each. Pull chain socket with lamp grip will be supplied with reflectors up to and including 200 watt sizes at an advance of 80 cents.

**FITTINGS.**—Reflector are supported by heavy cast fitting, independent of socket, making the whole fixture uniformly strong.

**TAPPING.**—Fitting tapped for 1/2-inch iron pipe regularly furnished; 3/4-inch tapping or 1/2-inch insulating bushing, No. 1265 for drop cord use, furnished if specified at no advance in price.

**FINISH.**—Reflector are Benjamin green porcelain enamel outside; white inside.

**Benjamin Dome Reflector Sockets**  
R L M Standard

No. 5642, 150-watt

Characteristic Distribution Curve

For general illumination where it is desired to light both upright and flat surfaces and to eliminate sharp shadows by good diffusion.

## Benjamin Parabolites Porcelain Enameled Steel

No. 1235, 150-Watt

Characteristic Distribution of Curve

Plane Through Major Axis

Plane Through  
Minor Axis

The Benjamin Parabolite is a specially designed fixture for the illumination of aisles, platforms, and other long narrow areas indoors or outdoors.

The reflector is porcelain enameled steel, white inside, and green outside. The socket is porcelain, keyless two-piece, easy-to-wire type with lamp grip. The separable X fitting is regularly tapped  $\frac{1}{2}$ -inch and will be tapped  $\frac{3}{4}$ -inch if specified, at no advance in price. The light is projected in a narrow stream with a low cut-off on each side.

Cat. No.	Size of Lamp Watts	DIMENSIONS, INCHES Length	Inches Height	Std. Pkg.	Wt. Lbs.	Price Each
1234	60, 100	21	8 $\frac{1}{2}$	10	3 $\frac{3}{4}$	\$8.00
1235	150	21	9 $\frac{1}{4}$	10	3 $\frac{7}{8}$	8.80
1236	200	21	10 $\frac{1}{8}$	10	4 $\frac{1}{8}$	9.30

Prices do not include wires or lamps.

## Benjamin Elliptical Angle Reflector Sockets Porcelain Enameled Steel

No. 5525  
Side View

No. 5525  
Front View

There are many places in industrial plants where lighting requirements cannot be satisfied with overhead illumination alone. Traveling cranes sometimes preclude the use of pendant fixtures. Vertical surfaces and deep recesses, such as shelving, must be better lighted.

The Benjamin Elliptical Angle Reflector Socket satisfies perfectly these, as well as many similar cases, requiring illumination from the side.

### Used Indoors for

- Craneways in Machine and Erecting Shops
- Round Houses, Ash Pits, Turn Tables
- Foundries with Uni-rail Systems
- Power Rooms
- Switch Boards
- Loading Platforms
- Tool Rooms
- Stock Rooms
- Rows of Shelving
- Time Clocks
- Bulletin Boards
- Rooms with Movable Roofs
- Paper Making Machines
- Bowling Alleys
- Hand Ball Courts

### Used Outdoors for

- Alleys and Runways
- Docks and Yards
- Building Fronts
- Tower Clocks
- Loading Platforms
- Construction Work: Bridges, Viaducts, Tunnels
- Safety Islands at Street Crossings
- Tennis Courts
- Hand Ball Courts
- Bathing Beaches
- Athletic Fields

Reflectors are of porcelain enameled steel and are weather resisting. Socket is N. E. C. Standard, keyless two-piece porcelain easy-to-wire type with lamp grip which prevents lamps from becoming loosened by wind or vibration. Nos. 5522, 5525 and 5526 are regularly tapped for  $\frac{1}{2}$ -inch pipe;  $\frac{3}{4}$ -inch, if specified. Nos. 5537 and 5538 are regularly tapped for  $\frac{3}{4}$ -inch iron pipe.

Cat. No.	Size of Lamp Watts	DIMENSIONS, INCHES Diam.	Inches Height	Net Weight Pounds	Standard Package	Price Each
5522	60, 100	8 $\frac{7}{8}$ x13 $\frac{1}{4}$	12 $\frac{1}{4}$	2 $\frac{3}{4}$	10	\$4.20
5525	150	8 $\frac{7}{8}$ x13 $\frac{1}{4}$	13 $\frac{1}{8}$	3	10	4.20
5526	200	11 $\frac{1}{8}$ x16 $\frac{3}{8}$	15 $\frac{7}{8}$	3 $\frac{5}{8}$	10	5.40
5537	300, 500	13 $\frac{7}{8}$ x19 $\frac{3}{8}$	19 $\frac{5}{8}$	3 $\frac{3}{4}$	5	8.70
5538	750, 1000	13 $\frac{7}{8}$ x19 $\frac{3}{8}$	20 $\frac{7}{8}$	4 $\frac{1}{8}$	5	9.00

Prices do not include wires or lamps. A self-locking socket, to prevent lamp theft, is supplied with Nos. 5522, 5525 and 5526 at an advance of 40 cents list. For coupling to increase to 1 or  $\frac{1}{4}$ -inch, add 20 cents to list price.

**Benjamin Type R R Threaded Fixtures**

Where dirty or smoky atmospheric conditions make the frequent and thorough cleaning of reflectors necessary, Type R R Fixtures make the work less difficult and hazardous. Without the use of tools, reflectors may be removed and given a thorough washing. They are replaced just as easily. Every threaded reflector will fit any threaded hood in the Benjamin Type R R Line.

**CONSTRUCTION.**—Hoods are pressed steel, porcelain enameled or cast as indicated in listing. All are threaded to take Type R R Reflectors listed in opposite column. Sockets supplied with hoods are described in the next paragraph.

**SOCKETS.**—National Electrical Code Standard; keyless and pull chain types have lamp grip.

Keyless medium base socket is arranged so that it may be converted to Mogul base without disturbing the wiring.

To prevent theft or unauthorized exchange of lamps, the locking socket is effective; locking socket key No. 1399, lists at \$1.00—listings below do not include key.

**REFLECTORS.**—Reflectors are porcelain enameled steel with screw thread to accommodate all hoods listed below.

**FINISH.**—Pressed steel hoods are green porcelain enameled; cast hoods are green paint enameled. Reflectors are green porcelain enameled outside; white inside.

**IMPORTANT.**—All Type R R Reflectors and Hoods are interchangeable; for this reason, they are listed separately. When ordering complete fixtures, specify the catalogue number of both the reflector and hood desired.

No. 26003 Showing Key for Lamp Lock Inserted

**Pendent Cast Hood with Socket**

Tapped for 1/2-inch iron pipe stem; 3/4-inch, if specified.

**Benjamin Type R R Threaded Fixtures  
R L M Dome Reflectors**

No. 26014, 150-watt

Finish, outside of reflector is Benjamin green, inside is white porcelain enamel.

Without the use of tools, reflectors may be removed and given a thorough washing. They are replaced just as easily.

Every threaded reflector will fit any threaded hood in the Benjamin Type RR Line.

## Benjamin Porcelain Enamel Steel Sign Reflectors

Side View

Recommended for use on standard poster panel, standard city or suburban bulletin, 3-sheet poster panel, standard store bulletin and other types of signs; also standard highway bulletin, railroad metropolitan or highway bulletin.

A sign reflector combining many new special easy installation features to the well known lighting efficiency of the Benjamin Elliptical Angle Shape.

The elliptical shape has been improved to produce a long straight line cut-off. The result is a higher intensity of uniform illumination over the entire board than is obtainable with any other sign lighting equipment.

The advantages are: easy installation without conduit bending; reflector may be raised or lowered without affecting cut-off; uniform lighting coverage of entire board; accessible socket, simple to wire; inconspicuous on board; each reflector takes 2 sizes of lamps; easy positioning on conduit, large set screw for guy wire attachment.

Elliptical shape reflector; crysteel porcelain enameled steel, green outside and white inside.

Two-piece porcelain socket. Heavy brass fitting, with set screw, tapped 1/2 inch.

Standard package, 9.

**Benjamin Canopy Type Aligners**  
With or Less Shock Absorbers

No. 3355

The reasons for the use of flexible suspension fittings are two:

1.—It is practically impossible to set every outlet box straight, yet correct industrial lighting depends greatly upon the lighting equipment hanging plumb. Therefore, a fixture aligner is essential to good illumination as well as good appearance.

2.—Most industrial or manufacturing buildings are subject to the vibrations induced by moving machinery. Under these conditions, the shock absorbing feature in Benjamin Fixture Aligners protects the lamps and tends to prolong their life.

No. 3355 has flexible knuckle and shock absorber. Supported by a strap with slots to slip over the screws on the ears of standard 3/4-inch and 4-inch outlet boxes. No. 3359 is the same as No. 3355, less shock absorber. These aligners may also be mounted on fixture stud by use of stirrups. Canopy attaches to outer edge of straps by a thread. Finish is galvanized.

Furnished with either a light, medium or heavy shock absorber. Light springs are for fixtures weighing 1 to 3 pounds, medium for 3 to 8 pounds, and heavy for those weighing 8 to 16 pounds. Specify the spring desired otherwise medium weight will be supplied.

Showing How Fixture Assumes a Vertical Position when Outlet Box is not Set Level

## Benjamin Sockets for Type RR and Glassteel Equipment

1500 Watts, 600 Volts

This socket has a universal form of terminal base which takes either medium or mogul socket element and conversion from one to the other can be made without disturbing existing wiring. The mogul socket element referred to is No. 4524 and the medium is No. 4520. Sockets with XR fittings are for use in porcelain enameled steel pendent hoods. Sockets without XR

fitting are for use on all other Type RR hoods.

## Benjamin Dust Tight Glass Covers

A light weight, economical device that will give the reflecting surfaces of Benjamin Industrial Lighting Equipment protection against dust and dirt.

It will give satisfactory service in the average industrial locations where fixtures are exposed only to the dust and dirt of

manufacturing operations. It is not recommended for installation where it will be subjected to acid or alkali fumes, excessive heat or continuous exposure to steam, etc.

Designed for Benjamin Reflector Equipment only. No assurance is given that it will fit other reflectors.

The cover consists of a circular felt gasket, clear glass disc and a one-piece steel retaining band, cadmium finished, having a locking lever with a compression spring.

It is easily attached—the locking lever is first released, which expands the band to its greatest diameter. Then the band is hooked over the reflector bead and the cover pushed up until the band engages the entire edge, after which locking lever is snapped into closed position.

The locking lever with compression spring gives positive tension on the band of the cover at all times. It is virtually impossible for the cover to work itself loose.

The cover in most cases weighs less than the reflector and is easily handled.

Cat. No.	Description	Std. Pkg.	Net Wt., Lbs., Each	Price Each
6408	Cover for 8-Inch Reflector	5	1	\$3.10

6418	Cover for 18-Inch Reflector	5	4 1/4	5.75

## Benjamin Shade Holder Reflectors

Type N

Type B

Type P

Benjamin Shade Holder Reflectors are made of porcelain enameled steel and are for use where it is desired to attach reflectors to existing fixture equipment already installed.

The strong rigidly attached Benjamin holders, furnished with these reflectors, have 2 principal advantages:—They place the reflector in the proper position with relation to the lamp, giving correct light distribution, and impart that strength and permanency to the reflector, necessary for a satisfactory and lasting job.

Type B Shade Holder Reflector is designed for attaching to any standard brass shell socket. This socket is the one commonly found in existing interior lighting installations.

Type N Shade Holder Reflector is fitted with a neck so shaped, as to fit any standard 2 1/4 or 3 1/4-inch shade holder.

Type P Shade Holder Reflector is equipped with a holder which will fit any standard porcelain socket.

Type S Shade Holder Reflector has a screw threaded holder to fit Benco Sockets and Type S Outlet Box Fittings.

FINISH.—Benjamin green porcelain enamel outside; white inside.

## Benjamin Dome Shade Holder Reflectors

Reflector and Lamp Manufacturers' (RLM) Standard

No. 14100N

Characteristic Distribution Curve

For general illumination when it is desired to avoid reflected glare from the surfaces lighted and to avoid direct glare by having the angle of light cut-off agree with all state lighting codes. Angle of cut-off, 17 1/2 degrees.

5560	60, 100, 150	11 3/8	10 3/8	10	3 1/4	\$4.70

Price does not include wires or lamps.

## Benjamin Gymnasium Fixtures

With RLM Dome Reflector

A completely guarded RLM fixture of good appearance, for locations where the lighting fixtures are subjected to frequent jars and hard knocks. Suitable for gymnasiums, indoor baseball courts, volley ball courts, indoor sport arenas, etc.

Special features of this fixture are: longer life; good illumination over horizontal and vertical surfaces; easy lamp removal—large opening in bottom of guard permits passage of lamp; easy cleaning; and attractive appearance.

Each unit consists of heavy gauge steel canopy and wire guard, medium or mogul base keyless socket, Reflector and Lamp Manufacturers' standard dome reflector, and four steel straps for attaching to ceiling. Canopy attaches to straps by means of four large machine screws which are furnished.

Steel canopy and wire guard are white paint enameled. Reflector is white porcelain enameled steel.

## No. 5566 Benjamin Symmetrical Angle Reflectors

With Bull's Eye

A combination warning signal and lighting unit. It has a red light for a warning signal and a white light to show the way. The light shining through a 3<sup>1</sup>/<sub>2</sub>-inch corrugated ruby glass lens in back of reflector, warns drivers to approach cautiously.

Finish, green porcelain enamel outside, white inside.

Porcelain enameled steel reflector; X type fitting tapped <sup>3</sup>/<sub>4</sub>-inch and socket with lamp grip.

Cat. No.	Size Lamp Watts	DIMENS. INCHES		Std. Pkg.	Price Each
		Diam.	Ht.

## No. 32613 Benjamin Elliptical Angle Reflectors

With Bull's Eye

A combination warning signal and lighting unit.

It has a red light for a warning signal and a white light to show the way. Finish, green porcelain enamel outside, white inside. Porcelain enameled steel reflector with 3<sup>1</sup>/<sub>2</sub>-inch corrugated ruby lens in back; X type fitting tapped <sup>3</sup>/<sub>4</sub>-inch, and socket with lamp grip.

Cat. No.	Size Lamp Watts	DIMENS., INCHES		Std. Pkg.	Price Each
		Diam.	Height		
32613	25, 40	9x13 <sup>1</sup> / <sub>4</sub>	9 <sup>1</sup> / <sub>2</sub>	5	\$5.50

## No. 5613 Benjamin Projectolites

An especially designed lighting unit for use wherever light must strike the surface to be illuminated at an acute or grazing angle. The powerful flood light beam of the unit is flattened and broadened by a special lens which directs the greater part of the light to a point farthest from the light source, and a correspondingly smaller portion to the points nearer the reflector. The result is even illumination over the entire surface.

The outside finish of fixture is green paint enamel. Inside reflecting surface is highly polished and is not affected by heat, dampness or even chemical action, except in the case of certain chlorine compounds which attack all metals.

Cat. No.	Lamp Watts	DIMENSIONS, INCHES		Std. Pkg.	Wt., Lbs. Std.	Price Each
		Diameter	Height			
5613	300, 500	12 <sup>3</sup> / <sub>4</sub>	13 <sup>3</sup> / <sub>8</sub>	2	21	\$20.00

## Benjamin Weatherproof Flood Lights

For illuminating wire mesh signs or signs whose depth or position makes flood lighting preferable. Can also be used to flood light small sections of a building.

Reflector is porcelain enameled cast iron with hinged holder containing glass bottom. Removal of winged nut allows holder to swing clear of reflector.

FINISH.—Green porcelain enamel outside, white inside.

Standard tapping, <sup>3</sup>/<sub>4</sub>-inch iron pipe; 1-inch if specified.

Cat. No.	Lamp Size Watts	Diameter Inches	Std. Pkg.	Wt., Lbs. Each	Price Each
5600	150	9	5	13 <sup>1</sup> / <sub>4</sub>	\$15.00
5601	200	9	5	13 <sup>1</sup> / <sub>4</sub>	15.00

\*Also old 100-watt PS lamps, and with socket extension No. 91, 100-watt A Lamps.

## Benjamin Intensifiers

The reflector bowl is of heavy gauge metal with a steel neck which contains focusing apparatus and socket.

A Benjamin Dust-Tight Cover, consisting of glass disc, felt gasket and a steel retaining band, seals the interior of intensifier.

Tapping is <sup>1</sup>/<sub>2</sub>-inch iron pipe size.

All outside metal parts are green paint lacquer finished. The small fixture No. 5603, taking an inside frosted 60 or 100-watt lamp, is equipped with a clear glass cover.

The larger fixture No. 5604, taking a clear 150 or 200-watt lamp, is furnished with an inside frosted glass cover.

The design in both cases is to eliminate glare and give good diffusive properties to the unit. Glass cover is smooth on outside for easy cleaning.

For high intensity illumination of small areas for both commercial and industrial use.

Cat. No.	Lamp Size Watts	Glass Cover	DIMENS., IN.		Std. Pkg.	Net Wt. Lbs., Ea.	Price Each

**Benjamin Sewing Machine Reflectors**

No. 31002B

The Benjamin Sewing Machine Reflector is for localized lighting in connection with power sewing machines. Light is directed right where it is needed. Usually it is best to attach the reflector to a Benjamin Angle Socket, which in turn is supported by whatever supporting fixture the particular conditions necessitate. No. 31002B is paint enameled steel, finished green outside and aluminized inside.

No. 31012B is porcelain enameled, white inside, green outside.

Cat. No.	Size, Lamp Watts	DIMENSIONS, INCHES Diameter Height	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each

31012B	15 to 25	3 5/8 4	10	2 1/2	.90

**No. 15103N Benjamin Show Window Reflectors**

Porcelain Enameled Steel

No. 15103N

No. 15106N

No. 15103N is for windows of usual proportions and for deep windows. It is an elliptical angle reflector and, owing to the broad character of distribution, may be mounted on wide spacings when there is to be a limited number of reflectors in each window.

No. 15106N, because of its narrow shape, may be mounted on close centers and is recommended for shallow windows. It is also especially suitable for flush mounting with false ceilings.

Either of these reflectors may be used in windows of ordinary depth and usual proportions. Lamps ranging from 100 watts to 200 watts may be used. Both of these reflectors have Type N neck for standard 2 1/4-inch shade holders.

Finish: Benjamin green outside, white porcelain enamel inside.

Cat. No.	*Size of Lamp Watts	Diameter Size Inches	Reflector Height Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
15103N	150	8 1/2 x 13 1/2	11	10	16 1/4	\$3.50
15106N	150	12 1/4 x 8 3/4	7 5/8	10	15	3.50

\*100-watt may be used by inserting No. 91 socket extension. 200-watt lamp may be used by inserting No. 4387 shade holder extension.

**Benjamin Gas and Vapor Proof Fixtures**

Ceiling or Outlet Box Type

With Dome Reflector and Enclosing Globe

Cat. No. 6541

Designed for use where atmospheric conditions are severe and where mounting must be on the ceiling.

The reflector is dome type and has an angle of cut-off 17 1/2 degrees. Porcelain enameled steel, green outside, white inside.

The base is either a cast iron or brass outlet box which will be tapped, when specified, for 1/2-inch conduit on 1 to 4 sides or top, as required.

Where certain chemicals are used, such as sulphur, the brass outlet box is recommended.

Guard is of tinned wire, with brass threaded supporting ring.

The enclosing globe used is Cat. No. 6867.

Specify tapping when ordering. Supplied not tapped for conduit entrance unless specified.

**Benjamin Moisture Proof and Dust Proof Fixtures**

These fixtures are for use in refrigerating plants, engine rooms, plating rooms, mills, etc., where it is desirable to protect the lamp and live electrical parts from the deposit of moisture, dust and dirt.

**Fixtures without Guard**

Weatherproof hood of copper regularly tapped for 1/2-inch stem, easy-to-wire porcelain socket with Benjamin Lamp Grip and screw globe of heavy clear glass.

Gasket between globe and hood makes the fixture tight.

Finish, natural copper.

No. 665

**Benjamin Dust-tight Drop Cord Fixtures**

No. 659

No. 659 is a dust tight fixture, especially for drop cord work in mills, elevators, granaries, etc. It affords a high degree of protection by reason of the substantial construction and heavy screw globe which encloses the lamp.

Hood is of copper. Porcelain bushing for drop cord has 3/8-inch cord opening. Ample space is provided for cord knotting. Finish of hood is natural copper.

Cat. No.	Size Lamp Watts	Description	Std. Pkg.	Price Each
659	*25, 40	Copper hood	10	\$1.80

Prices do not include wires or lamps.

**Benjamin Outdoor Fixtures With Gooseneck Support**

Includes steel hood with fitting tapped for 1/2-inch iron pipe stem; 3/4-inch if specified; 1 or 1 1/4-inch at an advance of \$ .20. Ball globe, two-piece porcelain socket with Benjamin Lamp Grip, and 40x3/4-inch gooseneck with No. 5031 pole fitting. Hoods are finished black porcelain enamel; iron parts are galvanized.

All iron parts are galvanized finish.

## Benjamin Type X and Type XR Fittings

These fittings are made separable for easy wiring. The fitting consists of 2 flanges and 2 washers, 1 for either side of the reflector. By this method of construction, the socket and lamp are supported directly by the fixture stem, and the reflector is supported independently between the upper and lower flanges. This makes a weatherproof and rigid connection.

No. 4653

## No. 6A Faries Adjustable Brackets

The stem of No. 6 A is fastened to ceiling or floor with a heavy tripod. The bracket has eyes to slip stem and is fastened with set screw.

The bracket is adjustable to any position, and the lamp can be placed in any inch of space 10 feet in diameter.

Arm made of heavy strap iron and 1/2-inch brass tube, and extends 60 inches.

Standard package 6, one size.

Finish, black japan

For brush brass, nickel, or statuary bronze finishes, add \$2.50.

**No. 40304 Type RRU Crouse-Hinds Floodlight Projectors**

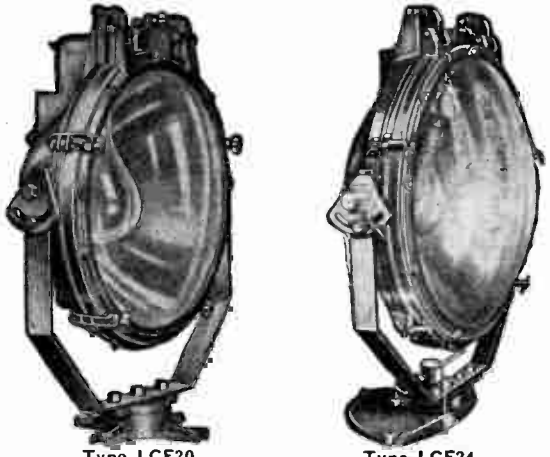

**Medium Range**

Used for lighting roundhouses, turntables, etc., and as a portable unit around railroad shops and yards. Furnished with 11 3/8-inch hammered glass reflector; smooth glass furnished if desired. Cast iron, weatherproof housing; adjustable mounting, with malleable iron base. Composition medium screw base is mounted on a hinged bracket. Door frame is cast iron, hinged at bottom. Lens is clear, convex and heat-resisting.

Height, 20 inches; width, 12 3/4 inches. Takes 200-watt, PS-30 bulb lamp. Galvanized finish. Shipping weight, 50 pounds. Prices upon application.

**Type LCE Crouse-Hinds Floodlight Projectors**  
**Medium and Long Range**

**Type LCE20**  
Simple Trunnion Mounting

**Type LCE24**  
Standard Mounting

The increased efficiency of these projectors allows large areas to be lighted with a smaller number of projectors, with a corresponding decrease in installation cost, lighting load and maintenance costs. When projectors are used for lighting railroad or factory yards, the area immediately beneath the projector between the tower and the place where the main beam strikes is often quite dark. These projectors can be supplied with a large cast-aluminum hood which reflects part of the stray light above the beam to the ground. Hood also prevents dust and soot from falling on the lens.

**HOUSING.**—Cast aluminum alloy; dust-tight; weatherproof. **REFLECTOR.**—Crystal glass with smooth or hammered surface. Type LCE20, 19 1/2-in. diameter; Type LCE24, 24-in.

**MOUNTINGS.**—Steel trunnion on cast iron base. Standard mounting has horizontal and vertical adjustable stops and the floodlight is locked in position by means of hand screws. Simple trunnion mounting has only the vertical adjustable stop and locking adjustments are made by means of a wrench.

**FOCUSING MECHANISM.**—One-way, hand operated by wing nut on outside of case.

**LAMP RECEPTACLE.**—Porcelain Mogul.

**WIRING CONNECTIONS.**—A connection box with cover having threaded hub, and with binding posts for convenient connection is provided on the head of the case. A CGB25 connector or stuffing box is provided for making a watertight connection to the lead wire. This connector has a rubber bushing which will clamp flexible cord from 1/2 to 3/8-inch diameter. CGB240 connector with lead sleeve for connecting to armored cable from 3/8 to 5/8-inch diameter will be supplied without additional charge, if specified on the order.

**DOOR FRAME.**—Cast aluminum alloy, with 2 hinges having loose center section, at top. Door and case are ground to a dust-tight fit.

**DOOR CATCHES.**—Special C clamps.

**LENS.**—Clear, convex, heat-resisting. Spread or diffusing, convex, heat-resisting lens furnished at extra cost.

**LAMPS.**—Type LCE20, 750 or 1000-watt, PS-52 bulb; 1000-watt, G-40 bulb. Type LCE24, 750 to 1500-watt, PS-52 bulbs; 1000 or 1500-watt, G-40 bulbs.

**FINISH.**—Case, natural aluminum; base and trunnion, galvanized.

## Types LCA and LCE Crouse-Hinds Floodlight Projectors

Medium and Long Range

Type LCA12  
Quadrant Mounting

Type LCE16  
Trunnion Mounting

The standard lighting service lamps should be used wherever possible. When a small area must be lighted from a distance, a narrow beam spread is necessary, and for this purpose these projectors are listed with the lamp receptacle arranged for G bulb concentrated filament floodlighting lamps. Cast iron or cast aluminum alloy hoods for reflecting the stray light above the beam down to the ground can be supplied with these projectors.

**HOUSING.**—Cast iron or cast aluminum alloy; dust-tight.

**REFLECTOR.**—12 and 16-inch crystal glass with hammered surface when used with standard lamp, and smooth surface when used with concentrated filament lamp.

**FOCUSING MECHANISM.**—One-way, hand operated by wing nut on rear of case.

**LAMP RECEPTACLE.**—Porcelain medium screw base for 12-inch; Mogul for 16-inch.

**WIRING CONNECTIONS.**—A connection box with cover having threaded hub, and with binding posts for convenient connection is provided on rear of case. A CGB25 connector or stuffing box is provided for making a watertight connection to the lead wire. This connector has a rubber bushing which will clamp flexible cord from 1/2 to 5/8-inch diameter. CGB210 connector with lead sleeve for connecting to armored cable from 3/4 to 5/8-inch diameter supplied without extra charge.

**DOOR FRAME.**—Cast iron or cast aluminum alloy, with 2 hinges having loose center sections, at top. Door and case ground to a dust-tight fit.

**DOOR CATCHES.**—Special C clamps.

**ADJUSTABLE STOPS.**—Floodlights can be supplied with a special trunnion mounting which is provided with 2 adjustable stops. These floodlights can be tipped completely over or turned around, or both, for convenience in relamping and cleaning, and then returned to the exact original setting. Prices upon application.

**LENS.**—Clear, convex, heat-resisting. Spread or diffusing, convex, heat-resisting lens furnished without extra cost if specified on order.

**LAMPS.**—12-inch projector, 200-watt, PS-30 bulb; 250-watt, G-30 bulb. 16-inch projector, 300 or 500-watt, PS bulb; 500-watt, G-40 bulb.

**FINISH.**—Cast aluminum alloy floodlights—case, natural aluminum; base and trunnion, galvanized. Cast iron floodlights, galvanized.

## Types LDA and LDE Crouse-Hinds Floodlight Projectors

Long Range

Type LDA10  
Quadrant Mounting

Type LDE10  
Trunnion Mounting

Designed for long range, narrow beam work. Types LDA10 and LDE10 can be supplied with either ground and polished or blown reflector. The blown reflector is not as accurate and gives a wider beam of lower candle power. Where the narrowest beam is not required, it will be found to be satisfactory.

On account of the construction of the incandescent lamps, these projectors must not be tipped down more than 45° below the horizontal.

**HOUSING.**—Cast iron or cast aluminum alloy, dust-tight, and weatherproof.

**REFLECTOR.**—Crystal glass, 9 5/8, 12 or 16-inch.

**FOCUSING MECHANISM.**—One-way, hand operated by a knurled thumb wheel on the back of the case.

**LAMP RECEPTACLE.**—Porcelain, medium screw base for 9 5/8 and 12-inch; Mogul for 16-inch.

**WIRING CONNECTIONS.**—2 feet of weatherproof cable which enters housing through a watertight stuffing box.

**DOOR FRAME.**—Cast iron or cast aluminum alloy, clamped to case with capped wing nuts. A heavy gasket makes a weatherproof joint.

**LENS.**—Clear, convex, heat-resisting. Spread or diffusing convex, heat-resisting lens can be furnished without additional charge, if specified on the order.

**LAMPS.**—94, 100, 150-watt, P-25 for 9 5/8-inch projector; 250-watt, G-30 for 12-inch projector; 500-watt, G-40 for 16-inch projector.

**FINISH.**—Cast aluminum alloy floodlights—case, natural aluminum; base and trunnion, galvanized. Cast iron floodlights, galvanized.

Prices upon application.

**Crouse-Hinds Floodlight Projectors**

Types PS2 and PS5

Medium Range

Type PS2

Type PS5

Types PS2 and PS5 projectors differ only in size. They are used for lighting areas which are located comparatively close to the projector, such as factory yards, building fronts, amusement parks, swimming pools, trapshooting ranges, etc. Reflectors are designed to intercept and direct into the beam the maximum possible amount of light of the lamp. Hammered surface eliminates the filament images and the uneven appearance of the beam which are generally produced by the large filament of a standard lighting service lamp, and leaves a beam which is wider but much more uniform.

**HOUSING.**—Cast aluminum, weatherproof.

**REFLECTOR.**—Crystal glass, hammered surface, 11 $\frac{1}{8}$  inches for PS2 (catalogue number HIL8745) and 13 $\frac{1}{8}$  inches PS5 (catalogue number HIL8747).

**MOUNTING.**—Adjustable, with malleable iron base that can be bent to fit any surface.

**FOCUSING MECHANISM.**—Hand operated from outside of case.

**LAMP RECEPTACLE.**—Medium screw base for PS2 (catalogue number HL7532); composition mogul for PS5 (catalogue number HL 8755).

**WIRE.**—Two leads No. 14 gauge stranded, weatherproof.

**DOOR FRAME.**—Hinged to case (Cat. Nos. PS2 HIL8779; PS5, HIL8778).

**LENS.**—Clear, convex, heat-resisting.

**LAMPS.**—For PS2, 200-watt PS; for PS5, 300 or 500-watt PS.

**FINISH.**—Case, natural aluminum; base, galvanized.

**Type PS2—200-Watt—11 $\frac{1}{8}$ -Inch Reflector**

Prices upon application.

**Crouse-Hinds Floodlight Projectors**

Types G250 and G5

Long Range

Type G250

Type G5

Types G250 and G5 floodlight projectors differ only in size. They use concentrated filament lamps and have fairly narrow beams. Useful and efficient for lighting small areas and are used extensively for lighting statues and signs.

**HOUSING.**—Cast aluminum, weatherproof.

**REFLECTOR.**—Crystal glass, 11 $\frac{1}{8}$  inches for G250 (catalogue number HIL8740) and 13 $\frac{1}{8}$  inches for G5 (catalogue number HL8743).

**MOUNTING.**—Adjustable, with malleable iron base that can be bent to fit any surface.

**FOCUSING MECHANISM.**—Hand operated from outside of case.

**LAMP RECEPTACLE.**—Medium screw base for G250 (catalogue number HL 7592) and composition mogul for G5 (catalogue number HL8755).

**WIRE.**—Two leads No. 14 gauge stranded, weatherproof.

**DOOR FRAME.**—Hinged to case (Cat. Nos. G250, HIL8779; G5, HIL8778).

## Crouse-Hinds Wide Angle Floodlights

Types BCA16, BCE16, ECA16 and ECE16

### Short Range

**HOUSING.**—Lead coated Armco iron or Keystone copper steel, weatherproof.

**REFLECTOR.**—16-inch, diffusing aluminized metal (catalogue numbers: for BCA and BCE, HL8540; for ECA and ECE, HL8595).

**MOUNTING.**—BCA and ECA, quadrant; BCE and ECE, trunnion.

Type BCE  
Trunnion  
Mounting

Type ECA  
Quadrant  
Mounting

**FOCUSING MECHANISM.**—For BCA and BCE, 2-way, hand operated from top of housing. For ECA and ECE, none.

**LAMP RECEPTACLE.**—Porcelain mogul (catalogue number HL7136).

**WIRE.**—Two 3-foot leads No. 14 gauge stranded weatherproof.

**DOOR FRAME.**—Armco iron or Keystone copper steel, hinged (catalogue number HL1704).

**LENS.**—Clear, convex, heat-resisting. Diffusing, convex, heat-resisting lens can be furnished.

**LAMPS.**—For BCA and BCE, 300 to 1000-watt PS. For ECA and ECE, 300 to 500-watt PS.

**FINISH.**—Baked black enamel.

## Crouse-Hinds Incandescent Searchlights

Types SDX12 and SDX16—Long Range

**HOUSING.**—Lead coated armco iron or Keystone copper steel, weatherproof.

**REFLECTOR.**—Crystal glass (catalogue numbers: 12-inch, HL6325; 16-inch, HL6858).

**MOUNTING.**—Pedestal, cast iron.

**FOCUSING MECHANISM.**—One-way, operated by thumb wheel on back of case.

**LAMP RECEPTACLE.**—Porcelain, medium screw base for 12-inch (catalogue number HL6019), mogul for 16-inch (catalogue number HL7136).

**WIRE.**—2 feet No. 14 gauge stranded, weatherproof wire.

**DOOR FRAME.**—Lead coated Armco iron or Keystone copper steel, hinged at top with one spring catch for 12-inch (Cat. No. HL8770) and 2 spring catches for 16-inch (Cat. No. HL7886).

**LENS.**—Clear, convex, heat-resisting. Spread convex, heat-resisting lens can be furnished.

**LAMPS.**—For 12-inch, 250-watt G-30. For 16-inch, 500-watt G-40.

**CONTROL.**—Lever. Control lever, quadrant and stem are brass.

**FINISH.**—Baked black enamel.

## No. 40515 Type FDV12 Crouse-Hinds Floodlights

For Fountain Use

Designed especially for lighting fountains. Floodlight can be immersed in water, providing the lens is not covered by more than a few inches of water.

Cast aluminum alloy housing, watertight. Has 12-inch crystal glass reflector and porcelain Mogul lamp receptacle. Focused one way, operated from inside of unit.

The door frame is cast aluminum alloy, held against housing by 6 clamps. Lens is clear, convex and heat-resisting; colored, heat-resisting lens can be furnished.

A  $\frac{1}{2}$ -inch tapped hole is provided in the bottom of the case for connection to flexible drain hose and a watertight stuffing box is provided with rubber bushing to clamp cable from  $\frac{1}{2}$  to  $\frac{5}{8}$ -inch in diameter.

Pedestal mounting, which can be raised for reclamping; quadrant or trunnion mounting can be furnished if desired.

Lamp used is 500-watt, G-40, 115-volt. Projector can be arranged for use with 250-watt, G-30, 115-volt lamp if desired.

Height, 31 inches; height raised for reclamping, 37 inches. Case is natural aluminum finished; base and pedestal, galvanized.

Shipping weight, 65 pounds.

Prices upon application.

**Crouse-Hinds Floodlights**

Types RM10, RM12, RME10, RME12, RMU10 and RMU12—Short and Medium Range

Type RM                      Type RME                      Type RMU with Hood

Types RM and RMU floodlights meet lighting requirements in roundhouses, steel mills, on construction work or wherever stationary, strong, gas and moisture-proof illuminating units are desired. When mounted in roundhouses or other buildings where corroding vapors circulate, they offer full protection against the damage to which exposed lights and wiring systems in such locations are subjected.

Type RM floodlights are designed for fastening to a flat surface and projecting light at right angles to the plane of the surface.

Type RMU floodlights have a universal wall bracket, which allows the beam of light to be directed where desired.

Type RME is a rugged, cast-iron floodlight for portable use. Used where it is desired to transport the light to the job. Used when working under cars and locomotives.

**HOUSING.**—Cast iron. Gas and moisture-proof.

**REFLECTOR.**—White enameled steel (catalogue numbers: 10-inch, HL806; 12-inch, HL5322).

Use white enameled reflector for wide spread beam and short range. Hammered glass reflector concentrates light for projection to a greater distance.

**MOUNTING.**—Type RM fastens to a flat surface by four lugs on back. Type RMU has a universal wall bracket. Type RME is trunnion mounting.

**FOCUSING MECHANISM.**—Lamp receptacle mounted on bracket adjustable with screwdriver.

**LAMP RECEPTACLE.**—Porcelain, medium screw base (catalogue number HL674).

**WIRING CONNECTIONS.**—For RM and RMU, 3/4-inch threaded hubs at top and bottom. A pipe plug is furnished to close the unused hub.

**WIRE.**—For Types RM and RME, two 3-foot leads No. 14 gauge stranded. Weatherproof. For RMU, 30 inches steel armored cable with two CGB238 connectors.

**DOOR FRAME.**—Cast iron, gasketed to exclude gas, moisture and dust from interior. Held in place by three swivel bolts with capped wing nuts. (Catalogue numbers: 10-inch, HL5305; 12-inch, HL5317).

**LENS.**—Clear, convex, heat-resisting. Spread or diffusing convex, heat-resisting lens can be furnished.

**LAMPS.**—For 10-inch floodlight, 60 or 100-watt A bulb. For 12-inch floodlight, 150 or 200-watt PS bulb.

**FINISH.**—Baked black enamel.

**Crouse-Hinds Industrial Lighting Units**

Type RAS                      Type RLS

Types RLS and RLU Industrial Lighting Units meet lighting requirements in roundhouses, steel mills or wherever a strong, stationary, gas and moistureproof illuminating unit is desired. When mounted in roundhouses or other buildings where corroding vapors circulate, they offer full protection against the damage to which exposed lights and wiring systems in such locations are subjected.

**HOUSING.**—Type RAS, standard RLM reflectors, enameled on inner and outer surfaces, with rigid cast frame clamped with gaskets to bead of reflector, with sealing compound around top gasket. Type RAS16 has special casting on top which allows 300 or 500-watt lamps to be used. Types RLS and RLU, cast iron or cast aluminum, gas and moistureproof.

**REFLECTOR.**—Porcelain enameled steel. Type RAS, 12, 14 or 16-inch; Types RLS and RLU, 12 or 16 inch.

**MOUNTING.**—Types RAS and RLS, suspension. Type RLU, universal wall bracket.

**LAMP RECEPTACLE.**—Medium screw base for RAS12, RAS14, RLS12 and RLU12 (Cat. No. HL8079); mogul screw base for RAS16; skeleton mogul for RLU16 and RLS16 (Cat. No. HL7012).

**WIRING CONNECTION.**—Type RLS, direct to conduit by 3/4-inch pipe. Type RLU connects to conduit by a flexible, steel armored cable and two CGB238 connectors, making a gas and vaporproof connection.

**DOOR FRAME.**—Cast iron for RAS12; cast aluminum alloy for RAS14 and RAS16. Clamped against a heavy gasket by 3 clamps on RAS12 and RAS14, and 4 clamps on RAS16. Types RLS and RLU, cast iron or cast aluminum, held against an asbestos gasket by 3 swivel bolts and capped wing nuts. Door is hinged on one side (Cat. Nos.: cast iron, 12-inch, HL8070; 16-inch, HL7740; cast aluminum, 12-inch, HL8071; 16-inch, HL7959).

**LENS.**—Clear, convex, heat-resisting. Diffusing, convex, heat-resisting lens can be furnished.

**FINISH.**—RAS12, door and frame, galvanized; RAS14 and RAS16, door and frame, natural aluminum. Types RLS and RLU, cast aluminum, natural aluminum; cast iron, black enamel.

## Type DCB24 Crouse-Hinds Airport Revolving Beacons

Constructed in accordance with the latest Department of Commerce requirements. The housing, trunnion arm and base are cast of aluminum alloy.

The beacon revolves approximately 6 times a minute.

This beacon can be furnished either with or without automatic lamp changer and for 1000-watt, 115-volt T-20 lamp or 1000-watt, 32-volt T-20 lamp.

The standard lens is a 1-piece, heat-resisting lens with deflecting prisms which throw about 15 per cent of the light at an angle of 25° above the horizontal.

Catalogue numbers do not include the flashing mechanism for flashing auxiliary course lights. If this mechanism is desired, the order should so state. The standard motor supplied with this beacon is for 115-volt, 60-cycle, a.c. Motor can be furnished to operate on 115 volts for d.c.

Can be furnished with or without zenith lights in barrel. Catalogue numbers do not include zenith lights.

40525	No	1500	32	T-24

Prices upon application.

## Crouse-Hinds Airport Boundary, Obstacle and Approach Lights

### Boundary Lights

An airport must be outlined with boundary lights to show the shape and extent of the field to the pilot of an incoming ship. The boundary lights are placed 200 to 250 feet apart and 2 to 3 feet above the surface of the field, unless the field is enclosed by a fence, in which case they should be at least as high as the fence.

Made in 2 sizes, one for 15 to 60-watt A bulb lamps and the other for 60 to 100-watt A bulb lamps or series lamps. The globes are of the clamp type.

60 to 100 Watt Multiple

### Obstacle Lights

All obstructions which come within a range of the 7 to 1 gliding angle to the edge of the field must be marked with obstacle lights. These lights are the same as boundary lights except that a red globe is used in place of a white globe.

50 or 60-watt A bulb lamps should be used.

### Approach Lights

The best approaches to the landing area should be marked with lights with green globes placed in the boundary light circuit. These units are called approach lights, and are similar to the boundary light units except that a green globe is used in place of the white globe. These approach or marker lights indicate to the pilot in the air the best portions of the field upon which to land and it is customary for him to land directly over one set of these lights, depending upon wind direction.

50 or 60-watt A bulb lamps should be used.

## No. 40469 Type LCE24 Crouse-Hinds Airport Floodlight Projectors

This projector is provided with a set of vanes or louvers, which cuts off all stray light above the horizontal, thus eliminating glare due to direct rays of lamp. Light from the projector is usually thrown across the runway so that the pilot lands his ship parallel to a row of these lights.

The advantage of lighting a field with these units is that the failure of a single lamp does not materially affect the efficiency of the system. Furthermore, the units may be grouped and spaced so that a pilot never has to land into any of the lights. A few such lighting units may be installed on a small field and more added when the volume of air traffic makes it necessary.

The projector is equipped with a socket to fit a 2½-inch pipe and is designed so that it may be tilted a few degrees above or below the horizontal. It is customary to turn the projector slightly downward so that all of the light is thrown on the landing field and none above the horizontal.

Equipped with 40° spread lens to spread the light in a horizontal plane without changing the natural beam spread of the vertical plane. Spread lenses giving 50° spread or 80° spread will be furnished without additional charge if so specified.

LAMP.—1500 watts, 32-volt, T-24 bulb.

Prices upon application.

### Boundary, Obstacle and Approach Lights

Cat. No.	Globe	Guard	110-VOLT LAMP ACCOMMODATED Watts	Bulb
VAP-3170	Clear	No	15 to 60	A-17 to A-21

VAP-3392	Green	Yes	100	A-23
VAP-3395	Ruby	Yes	100	A-23

The units listed are for use on either a multiple distribution system or a series system, using a series multiple transformer at each boundary light. All units will take lamps having medium screw base receptacles. Boundary lights for 600-1000-lumens series lamps in S-24½ bulb with mogul screw base receptacles can be furnished if desired.

Prices upon application.

**No. 40528 Type AKP Crouse-Hinds Airport Floodlight Projectors**

This projector consists of a glass reflector of such design that the vertical spread is limited to a few degrees but it has a horizontal spread of 180°. Designed to take lamps up to and including 1500-watt with either the Mogul screw or the 2-prong base.

Optically the reflector has the same characteristics as a 180° fresnel lens but is much more efficient since the angle of light utilization is much greater. The projector is equipped with a 3-way focusing mechanism and target setter for accurately focusing the lamps.

Provided with a system of vanes or louvers for cutting off the direct rays of the lamp above the horizontal. The casing is made of cast aluminum and is arranged for mounting on top of 2½-inch pipe and it may be tipped a few degrees up or down for levelling on the field.

LAMP.—1500 watts, 32-volt, T-24 bulb.

Prices upon application.

**No. 40513 Type DCE14 Crouse-Hinds Airway Course Lights**

Consists of a 14-inch diameter parabolic reflector mounted in a cast aluminum casing. It has a standard Mogul screw base receptacle which is mounted on a 2-way focusing mechanism and the barrel of the projector is equipped with peep sights for accurately focusing the lamp.

The front lens is a 40° spreadlite lens made of special red glass.

These course lights are mounted on the same tower with the revolving beacon along the airways and flashed intermittently by means of a code wheel attached to the revolving beacon. They give

the pilot his location and direction to the next beacon. The 2-course lights are flashed alternately.

The casings in which they are mounted are not ventilated and are entirely weatherproof and of such a size that they will readily radiate the heat of a 1000-watt lamp, which under some conditions may be required, although ordinarily a 500-watt lamp is used.

The barrel of the course light is mounted in a trunnion arm so that it may be set at the desired elevation and permanently locked in place.

On the side of the course light, there is a quadrant and pointer for setting it to whatever elevation may be desired.

Bulb T-20 is used.

Prices upon application.

**No. APW-3 Crouse-Hinds Airport Wind Sock Light Fixtures**

The wind sock is a cone of cloth approximately 8 feet long and about 18 inches in diameter at the throat and 6 to 8 inches in diameter at the tail end. This is suspended from a mast so that it revolves freely with the wind. The fixture for lighting the wind sock consists of 4 deep bowl reflectors attached to V condulets arranged in the form of a cross. The arms are 2 feet in length.

Usually 100-watt Mazda lamps in A-23 bulbs are used in each of the reflectors, thus providing adequate illumination for the sock no matter what the direction of the wind.

In the middle of the cross, there is a type VAPX obstacle light with a red globe. This obstacle light is of the small size to take either the 50 or 60-watt Mazda lamp.

The wind sock fixture is designed for attaching to a 1-inch conduit and there is sufficient room in the body of the obstacle light and in the body of the V conduit to splice and pull wires.

The conduit forming the arms of the fixture is ¾-inch.

Prices upon application.

**Crouse-Hinds Airport Ceiling Projectors**

Type DCE14

Type DCE11

For determining the height of the ceiling, 2 projectors are made; one having a 14-inch diameter reflector and a smaller one having an 11-inch diameter reflector. Both of these units are equipped with vanes or louvers to cut off the spill light. Projectors are equipped with 2-way focusing mechanism and peep sights for adjusting the lamp at the focal point of the reflector. They are weatherproof and on the side of each there is a quadrant and pointer for raising the projectors to the desired angle of elevation and computing the ceiling height.

## Form L-23 Novalux Floodlighting Projectors Submersible Fountain Type

This projector is constructed of non-ferrous material. The door frame, casing and trunnion bracket are of special aluminum alloy. Equipped with a servicing device which consists of a large brass tube that screws into a brass base plate; and a smaller tube, assembled to the trunnion bracket, which slides inside of the larger tube. The smaller tube is slotted and fitted with 3 bayonet joints. These engage a stop screw which is assembled into the larger tube and projects inside it. The projector may be raised or lowered so that it can be lifted above the surface of the water in the fountain in order that the front door may be removed and the device serviced or relamped.

The projector has a 3/4-inch pipe tapped hole midway of the casing for a 3/4-inch pipe nipple through which the lead cable passes. The device is also provided with 2 other 3/4-inch tapped holes to which a drain pipe, which may be a rubber hose or a flexible lead cable, can be attached. A sliding screw focusing mechanism is provided which allows the lamp to be moved along the axis of the reflector either up or down by pulling or pushing the bulb. The 16-inch glass reflector is silver plated and coated with electrolytically deposited copper. Method of mounting, is Fig. 20, swivel and pipe stand, clear front door glass. Lamp rating is G-40 lamp, 500-watt; G-40 lamp, 1000-watt; floodlight; mogul base. Shipping weight, 85 pounds.

Price, Cat. No. 304914.....each \$33.00

Plain red, amber, blue or green front door glass can be supplied on special order at an increase in price.

## Form L-9 Novalux Floodlighting Projectors

No. 289487  
Hinged Base

This projector consists of 16-inch medium angle glass coated on the outside with silver. The silvered surface is hermetically sealed with a thick copper coating which obviates the necessity for an outer casing. Glass is secured to cast iron frame which also

No. 195863, Swivel and Trunnion Base

supports lens door. The door is fastened in a closed position. A sponge-rubber gasket between the lens and door frame renders the unit weatherproof. The cast iron socket is adjustable. Two coats of black japan finish are given to all extra parts. Best results are obtained with the 500-watt floodlighting lamp.

There are 3 methods of mounting projector: Fig. 9, hinged to a flat base; Fig. 10, on trunnion fastened to swivel base, wing nuts furnished for adjusting; Fig. 11, on trunnion fastened to pipe stand which is fastened to cast iron base, wing nuts furnished.

Prices upon application.

## Form L-1 Novalux Floodlighting Projectors

Hinged Base

The Form L-1 projector consists essentially of a 16-inch highly polished aluminum parabolic reflector. This is secured to cast iron frame which also supports the lens door. The door is fastened in a closed

No. 189932, Swivel and Trunnion Base

position. A sponge-rubber gasket between the lens and door frame renders the unit weatherproof. The cast-iron socket is adjustable.

There are 3 methods of mounting projector: Fig. 1, hinged to a flat base; Fig. 2, on trunnion fastened to swivel base, wing nuts furnished for adjusting; Fig. 3, on trunnion fastened to pipe stand which is fastened to cast iron base, wing nuts furnished.

Two coats of black japan finish are given to all extra parts. Best results are obtained with the 500-watt floodlighting lamp.

## Form L-20 Novalux Floodlighting Projectors

Cat. No. 257660  
Swivel and Rocker Base

This projector may be operated with a 200-watt, PS-30 general service lamp or 250-watt, G030 floodlighting lamp. A patented 10 1/2-inch parabolic glass reflector, silvered and coppered, is mounted within a sheet-metal casing. A sheet-metal door frame is hinged to the casing and fastened by a hinged bolt and wing nut.

The projector has 1 method of mounting, Fig. 19, rocker fastened to swivel base.

Best results are obtained with the 200-watt service general lamp. If the 200-watt general service lamp is used,

remove the spacer which is placed between the socket and the inside of the socket holder. This change will compensate for the difference in light centers between the two lamps.

Two coats of black japan finish are applied to all external parts.

G-30 Flood-lighting Medium Base	250		40 Deg. Spreddite	304939	

Plain red, amber, blue or green front-door glass can be supplied on special order at an increased price.

# KING ORNAMENTAL STANDARDS

*"The World's Standard of Comparison"*

While ornamental lighting standards are primarily intended to give better lighting at night to streets, parks, and highways, yet another and as important a function is that they beautify both in the daytime and during the hours of darkness.

King designers have long studied street lighting in its relation to every type of location where ornamental standards may be used effectively. Design has been applied to King lighting standards from a practical as well as æsthetic standpoint. There is a purpose for design in lighting standards, and that purpose has been the fount of King creations.

It is important here, that we emphasize the scientific aspect of the design problem as applied to ornamental standards. It is not sufficient that a standard be merely ornamental, it must be a thing of beauty without sacrificing strength or economy of installation and upkeep. Beyond that it must be designed for permanency. It is upon these rocks of experience that so frequently the ordinary foundry wrecks the best of intentions.

There is a series of King designs for each type of location. These designs harmonize with every possible environment. From the extensive range of King designs, any city or town, any association of business men, or any park board contemplating an ornamental lighting system can select the particular design to harmonize with the architectural surroundings.

King ornamental lighting equipment is made in every known type; the single unit, 2-light cluster, combination pole and bracket, bracket and traffic and building newels. Whatever type is required, it may be had in the particular design preferred.

## King Ornamental Standards

## King Ornamental Standards

### Flemish Design with Novalux Tops

### Community Design with Novalux Tops

The Flemish design introduces an element of extreme simplicity in combination with an accepted form of decorative style. This style was largely used during the Colonial days for metal objects such as andirons, chandeliers, candlesticks and similar articles and is quite appropriate for the decorative treatment of modern street lighting in American cities.

Graceful lines have been combined with sharpness of detail and smoothness of surface. It has a touch of simple elegance.

The success of the first small standards was so pronounced and the unanimous approval of the critical so emphatic that this design has been made available in 2 sizes, thereby enabling one to select a size which would harmonize with the buildings and a height which would give proper distribution of light on the streets.

Factory finish; 2 coats of black mineral paint.

No. 45B

No. 45E

No. 16A

No. 16B

This King Community design was created for those who prefer a relatively plain standard, emphasizing graceful lines and well proportioned plain surfaces, instead of fluted columns and ornamental bases.

This design has a large octagonal base which sweeps gracefully into a well proportioned tapered octagonal column. Surmounting the column is an attractive modelled member which blends the column into a suitable round support for the glassware.

Taken as a whole, the base, column, holder, glassware and top ornament, produce an artistic and pleasing effect which would be impossible had the design not been most carefully worked out in every detail.

Factory finish; 2 coats of black mineral paint.

King Ornamental Standards  
Flemish Design

**DESIGN-45b** WT. COMPLETE #510

**King Flemish No. 45**

This standard is especially recommended for installation on wide streets with high buildings and along parkways and boulevards where the posts will be spaced a considerable distance apart. The lamp center height is correct to give an even distribution of light when the larger size lamps are used.

**King Flemish No. 59**

This is the ideal size standard for the average city which does not have unusually wide streets or extremely high buildings. It is of such proportions as to present an artistic effect, which can be obtained only when each member harmonizes

**DESIGN-59b** WT. COMPLETE #470

**DESIGN-44b** WT. COMPLETE #350

**King Flemish No. 44**

The distinctiveness and beauty of the Flemish design is carried out in every respect in this standard. It is especially suitable for installation in smaller cities and towns where wide streets and high buildings do not predominate. It, however, has sufficient size to be in keeping with its general surroundings and is of ample height to properly and efficiently illuminate average streets and building fronts.

Design No. 44 can also be furnished as designated below: Design No. 106-B, 12-foot light center, weight, 285 pounds; Design No. 107-B, 13-foot light center, weight, 300 pounds.

and blends with the other and with the surroundings on the thoroughfare.

## King Ornamental Standards

## French Design with Novalux Tops

This French design was evolved with the express purpose of producing an ornamental standard possessing those characteristics which will appeal to persons whose artistic taste is not confined to the conventional classic post with a fluted column surmounted by the usual foliated capitol and plain ball globe. The glass canopy, ornamental globe band, urn shape globe, ornate holder, panelled column and well proportioned base, all bear a characteristic relation to each other and produce a complete unit harmonizing in every respect.

When illuminated, the silhouette of this French design is particularly graceful and attractive. All dark spots and objectionable shadows are entirely eliminated and from an artistic standpoint the existing beauty of the thoroughfare is greatly enhanced.

For blending into the changing background of a street and harmonizing with all types of architecture, for lending dignity and beauty to boulevards and elegance to parkways, this French design is recommended.

Factory finish; 2 coats black mineral paint.

## King French No. 62

This design is offered to those cities planning a beautiful and intensive system of whiteway illumination. When large capacity illuminants are installed, it was found necessary to provide larger glassware than is ordinarily used, so that all the light produced may be utilized.

It is also necessary to increase the mounting height of the glassware so as to give the desired intensity and lighting effect with good distribution. Increasing the size and height of the glassware means an increase in the dimension of the supporting standard.

Most careful attention has been given to the increased dimensions of the design in order to insure a symmetrical lighting unit with proportions perfect in every respect.

## King French No. 61

Both from an artistic and engineering standpoint, King French No. 61 will meet every requirement of an ideal lighting standard unless the conditions encountered in planning the system are unusual. Cities with streets and boulevards of average width and towns with buildings of average height are best served by an ornamental lighting standard of this size and design. Many cities throughout the country whose system of street lighting has attracted attention are using this standard because of its artistic value and general adaptability.

## King French No. 63

Under certain conditions a lower lamp center than that of No. 61 will be recommended by illumination engineers, and for this reason this height of standard is offered to those who prefer this beautiful French design. This standard has ample height to properly distribute the light in a most efficient and pleasing manner when lamps of smaller capacity are used on streets where the buildings are of average height.

King French No. 61

Both from an artistic and engineering standpoint, King French No. 61 will meet every requirement of an ideal lighting standard unless the conditions encountered in planning the system are unusual.

King French No. 63

Under certain conditions a lower lamp center than that of No. 61 will be recommended by illumination engineers and for this reason this height of standard is offered to those who prefer this beautiful French design. This standard has ample height to properly distribute the light in a most efficient and pleasing manner when lamps of smaller capacity are used on streets where the buildings are of average height.

## King Ornamental Standards

### Community Design

**DESIGN-17a** WT. COMPLETE #483

#### King Community No. 17

This standard has ample dimensions for installation in front of large buildings and sufficient height to the lamp center for large capacity lamps. It is a massive, gracefully, well proportioned standard and will add dignity and attractiveness to a thoroughfare.

#### King Community No. 16

This standard is suitable for white way lighting in the smaller cities and villages, and for residence sections of large cities. It makes an attractive installation because it is

**DESIGN-16a** WT. COMPLETE #430

**DESIGN-53a** WT. COMPLETE #339

#### King Community No. 53

This size standard is particularly in demand where a beautiful small, plain post is desired. Especially suitable for lighting residence sections or the white way illumination of smaller cities and villages.

Design No. 53-A can also be furnished as designated below: Design No. 77-A, 12-foot light center, weight, 260 pounds; Design No. 79-A, 13-foot light center, weight, 275 pounds.

pleasing in appearance, has ample dimensions and is well proportioned.

**King Ornamental Trolley Pole Brackets****King Bracket No. 1002**

This bracket was designed especially for trolley pole use. It is known to the trade as King's State Street Bracket. The bracket is gracefully built up and out from the side of the steel trolley pole, producing a neat and finished appearance. Enough ornamentation has been used to break up the plain surfaces. The bracket arm has ample dimensions to give massiveness and elegance. The pole plate is 48 inches long; the lamp center is 18 inches from the steel pole and the arm extends 24 inches overall. Can furnish this bracket with wall plate for mounting on building fronts, concrete posts or pillars at a slight additional cost.

This bracket is equipped with Form 12 Novalux Unit; consisting of an ornamental globe holder, 124 alabaster rippled globe, 1124 alabaster rippled canopy with ornate holder band and top ornament; either series film or mogul multiple socket, and all necessary screws for assembling.

**King Bracket No. 1227**

The design of this bracket harmonizes well with the varying styles of building architecture found along the streets. The ornamentation, while not elaborate, gives the bracket a most pleasing appearance and favorable mention has been accorded it's graceful lines and attractive appearance when illuminated at night.

This bracket can be made individual for a city by casting a monogram on it. A panel suitable for such a monogram or emblem is provided on each side of the arm, and on an order of fifty or more, this design with a raised, gold letter monogram cast on both sides without additional charges will be furnished.

This bracket is equipped with a Form 8 Novalux Unit, which consists of a globe holder of ornate design which harmonizes with the bracket arm, 109 alabaster rippled globe, 1109 alabaster rippled canopy with holder and top ornament; either series film or mogul multiple socket, and all necessary bolts and screws for assembling.

**NOTE.**—Brackets painted black, furnished complete with necessary bolts and clamps for installation, lamps and wiring not included. When ordering give exact outside diameter of the trolley pole section at point where pole plate and clamps attach.

A 6-inch (6 $\frac{3}{8}$ -inch outside diameter) tubular pole section is generally standard size.

**King Ornamental Trolley Pole Brackets****King Bracket No. 1231**

This design will exactly answer all requirements where a scroll type bracket is desired. It makes an excellent looking installation and has been adopted in several cities with entire satisfaction.

All ornamental parts are well defined and the leaf design has been carried throughout the different parts. The bracket clamps to the pole with two sets of ornamental clamp members. The top clamp is threaded to receive a 2 $\frac{1}{2}$ -inch tube arm section and the bottom one serves as a support for the handsome one-piece cast scroll.

On the outer end of the tube section, an appropriate torch effect globe holder is provided for the support of the diffusing glassware. The bracket is waterproof in construction and designed for enclosed wiring.

Equipped with a Form 8 Novalux Unit, 109 alabaster rippled globe, 1109 alabaster rippled canopy, with holder and top ornament; either series film or mogul multiple socket and all necessary bolts and screws for assembling.

Where Bates Expanded trolley poles are being used, attaching clamps can be furnished at a slight additional cost.

**King Bracket No. 1005**

This bracket is similar to No. 1231 but is intended for use where larger size lamps will be adopted, and where a more intense illumination is desired. A Form 9 Novalux Unit, including an ornamental casing for holding the glassware, 107 alabaster rippled globe, 1107 alabaster rippled canopy with holder and top ornament is furnished with this bracket. Either series film or mogul multiple socket and all necessary bolts and screws for assembling.

**NOTE.**—Brackets painted black, furnished complete with necessary bolts and clamps for installation lamps and wiring not included. When ordering, give exact outside diameter of the trolley pole section at point where pole plate and clamps attach. A 6-inch (6 $\frac{3}{8}$ -inch outside diameter) tubular pole section is generally standard size.

## Ornamental Concrete Standards

Standards are made of fine, strong grades of selected granite aggregates with tested cement of the best quality. Four 3/8-inch round deformed reinforcing bars extending the entire length of the standard, accurately spaced between pipe and outer surface of concrete, give great strength.

A 2-inch pipe is cast directly in center entire length of post, resulting in greater strength.

The hard dense mixture is secured by the tremendous vibrations of special joggling and vibrating machine, combining two of the best methods for mechanically tamping concrete.

All standards can be equipped with the latest type of foundation, the malleable iron spider. Due to its many advantages it is rapidly replacing the butt foundation.

The principal features of the spider foundation are: lower freight cost, lower first cost, lower installation charge, lower maintenance charge, over 30000 standards are now in service with this latest development in concrete standards. The 3-point suspension in this spider provides for the setting of one point toward the direction from which the travel on the street is coming. In case of collision, the foundation bolt threads at this point only strip and the standard assumes a leaning position supported by the other 2 points, the one foundation bolt is rethreaded to a smaller size and standard pushed back in place with slight damage, if any.

### Railway Signal Posts

Concrete posts for signal systems, crossing sign posts and other special posts are made according to the requirements of the purchaser. Prices quoted on receipt of blue prints.

### Special Designs and Products

At times special designs are required by committees and engineers. We will quote on special work and assist in designing lighting standards and other pre-cast concrete work.

### Safety Islands

A safety island of strong design made to withstand heavy shocks. On account of the natural light gray color of the post the attention of the motorist is attracted to it both day and night.

**City of Chicago Type**

A small concrete post, for residential districts. Height, 11 feet; to center of light, 12 1/2 feet.

**Chicago City Beautiful Type**

Octagonal or round head furnished. For commercial and residential street lighting. Height, 11 feet.

**Chicago 10-Foot Octagonal Type**

An attractive and popular concrete standard. Height, 10 feet; to center of light, 11 1/2 feet.

**Chicago Type X Octagonal**

In 4 heights: 10-foot, to center of light, 11 1/2 feet; 12-foot, to center of light, 13 1/2 feet; 13-foot, to center of light, 14 1/2 feet; 15-foot, to center of light, 16 1/2 feet.

**Chicago Grant Park Type**

A standard of rare beauty which is enhanced by age. Height, 14 feet 2 1/2 inches; to center of light, 15 feet 7 1/4 inches.

**Chicago Type X 10-Foot Octagonal**

This shows the Chicago Type X 10-foot Octagonal Standard with Form No. 8 G-E Novalux unit and special adapter with No. 37 Genco globe and canopy.

**Ornamental Concrete Standards**

**Chicago Garfield Type**

Used by the South Park System, Chicago, for Garfield Boulevard.  
Height, 13 feet; to center of light, 14½ feet.

**Chicago Grand Type**

Used by the South Park System, Chicago, for Grand Boulevard.  
Height, 14 feet; to center of light, 15½ feet.

**Chicago Type G**

A star shaped post in use extensively by parks and estates where a post a bit out of the ordinary is required.  
Height, 11 feet; to center of light, 12½ feet.

**Chicago Bridge Type**

For bridge and viaduct railings of every description. Adopted by many states as regular equipment.  
Height, 5 feet.

**Ball Globes**

Snow-white is a pure white diffusing glass. It does not show any lamp filament nor bright spot on the globe surface. Inlite is a fine semi-translucent glass and very white for this character of glass.

Inland C.R.I. (crystal roughed inside) is a clear glass sand-blasted inside. Inland ruby and green are solid and true colored.

Std. pkg., large size globes, 1 per carton.

**Large Sizes**

For street lighting or illumination of large areas.

**Holophane Refractors for G-E Novalux Brackets and Center Span Highway Units**

No. 259402 Wide Beam Refractor

No. 260509 Narrow Beam Refractor

To meet the requirements for highway lighting, the Novalux Highway Units with Holophane Refractors have been developed, for use with Mazda series lamps.

The illustrations show the 2 types of Holophane refractors. Each refractor comprises 2 pieces. The inside piece carries horizontal refracting prisms on its outer surface which turn the upward light rays downward and the downward light rays upward, to obtain the correct distribution of light in a vertical plane. The outside piece of the refractor carries vertical refracting prisms on its inside surface redirecting the light laterally or sideways to obtain the correct lateral distribution of light. These 2 pieces of refracting glass are nested and clamped together, enclosing the prisms within a dust-tight chamber. When the refractor is mounted in the fixture, the complete lighting unit is essentially dust-tight and the outer surfaces smooth and nearly vertical.

It is important that the refractor always be oriented properly with reference to the road so that the beams of light will be directed onto the roadway and not out into the fields.

The refractors are plainly marked so that the lineman can set them in the correct position with relation to pole and road service.

Prices upon application.

## Summary of G-E Units and Equipment

The sketches of the units are drawn to scale in order to indicate size. In general the large units for intensive lighting are on the right, while the left-hand column contains the units for less powerful Mazda lamps.

\*Catalogue numbers do not include Mazda lamp or pole.

†For use with, but not including a Type IL series transformer which should be mounted in the base of the pole or in a manhole.

‡Form F casings (for Union Metal Poles) rest on top of the pole and are bolted in place.

§Form K casings (for King Poles) slip over the shaft of the pole and are fastened by set screws. For Chicago Concrete Post Company standards the Form K casing is used and whenever such unit is specified to them, in an order for standards, they include without additional charge a special adapter.

\*Catalogue numbers do not include Mazda lamp or pole.

†Special auto-transformers can be furnished at an increased price for any a.c. series circuit from 3 to 10 amperes, 25 to 133 cycles.

†These casings rest upon the top of the pole and are bolted in place. They can be used on Union Metal Mfg. Co., King Mfg. Co., Electric Rwy. Equipment Co., and Chicago Concrete Post Co. poles with 5-inch top. A globe seat or adapter is used between top of casing and bottom of globe. The form letters of the casing are based on the size of the adapter: 7-inch—Form O; 8-inch—Form M; 9-inch—Form N; 10-inch—Form 19.

The Form 12 Ornamental Novalux Unit is the latest idea in decorative street lighting. The first ornamental units were ponderous and inefficient, with massive standards. Poles are now slender and unobtrusive and the globes and units are of more graceful and efficient designs.

The Form 12 Ornamental Novalux Unit is recommended for lighting white ways, main thoroughfares and secondary business streets.

This unit has been designed for use with 4000 and 6000-lumen, 6.6-ampere series; 4000, 6000, 10,000, 15,000 and 25,000-lumen high current lamps or 300 to 2000-watt multiple Mazda C lamps. The high current series lamps, except the 25,000-lumen size, can be operated from self-contained auto-transformers or Type IL transformers.

The Form 12 Unit is listed with several different types of glassware. Their selection depends upon preference and the size of lamp to be used. The 1500 or 2000-watt and 25,000-lumen sizes can only be used with the 126 globe and 1126 canopy.

## G-E Form 13 Novalux Ornamental Units

For Poles and Brackets with 4-Inch Tops

For Use with Forms J, 13, JK or 12K Casings (Green Finish)

The Form 13 Novalux Ornamental Unit has graceful lines and is made for use on octagonal poles with 4-inch tops. This unit is recommended for lighting white ways in the smaller towns and villages or secondary business streets and residential streets of larger cities.

The 2500, 4000, 6000 or 10,000-lumen series and 300 or 500-watt multiple Mazda C lamps can be used in this fixture. The high-current series lamps can be used in this unit only with a Type IL transformer at the base of the standard. The Form 13 casing is not large enough to permit the use of a self-contained auto-transformer.

Several designs of rippled globes and several types of refractors can be used in this unit. Their selection depends on preference and the type of distribution necessary to meet requirements.

NOTE.—The Form J and No. 13 casings (for Union Metal Poles) rest upon the top of the pole and are bolted in place. The Form JK and No. 12K casings (for King Poles) slip over the shaft of the pole and are fastened by set screws.

\*Catalogue numbers do not include Mazda lamp or pole.

†Special auto-transformers can be furnished at an increased price for any a.c. series circuit from 3 to 10 amperes, 25 to 133 cycles.

‡The Form Q casing rests upon the top of the pole and is bolted in place. It can be used on Union Metal Mfg. Co., King Mfg. Co., Electric Rwy. Equipment Co., and Chicago Concrete Post Co. poles with 5-inch top.

The Form 16 Ornamental Novalux Unit is a replica of the Form 13 Unit on a larger scale. The same severe and simple Flemish character appears in the casing design and makes it a desirable unit for use on octagonal standards.

The Form 16 Unit is for use with 6000 to 10,000-lumen, 6.6-ampere series; 6000 to 15,000-lumen, 20-ampere series or 300 to 1000-watt multiple Mazda C lamps. The high current series lamps can be operated from self-contained auto-transformers or Type IL transformers at the base of the pole.

The unit is listed with several shapes of globes and several types of refractors. The selection is based on preference and the type of light distribution required. A combination of the Form 16 and Form 13 Units makes it possible to cover a wide range in lamp capacities without sacrificing uniformity of appearance.

G-E Form 18 Novalux Ornamental Lantern Units

Primer Coat of Black Japan

Form 18 Ornamental Lantern

The two sizes in which the Form 18 Novalux lanterns are available meet every requirement of ornamental street lighting besides being useful for the ornamental lighting of certain types of buildings.

The Form 18A small size is made for use with 300 and 500-watt, 2500, 4000 and 6000-lumen, 6.6-ampere series or 4000, 6000 and 10000-lumen high-current series lamps. The Form 18B large size is made for use with 300, 500, 750 and 1000-watt, 4000 or 6000-lumen, 6.6-ampere series or 4000, 6000, 10000 and 15000-lumen high-current series lamps. These high-current series lamps can be operated from IL transformers in the small lantern and auto-transformers or IL transformers in the larger lantern.

On the 18A lantern 8 Cat. No. 1392617 side, and 8 Cat. No. 1392618 canopy, granite opalescent pressed-glass panels should be ordered. On the 18B lantern 8 Cat. No. 1392559 side, and 8 Cat. No. 1392557 canopy, granite opalescent pressed-glass panels should be ordered.

Fixtures of Form 18 units are all cast iron. Non-corrosive fixtures with galvanized casing and other castings of aluminum are furnished at an extra cost. Standard cast iron lantern with all galvanized finish, at extra cost. Standard cast iron lantern with all galvanized finish, at extra cost.

Blown alabaster rippled panels furnished at an extra cost. Cat. Nos. do not include Mazda lamp or pole.

§Form RK (for 4-inch King Poles) casings slip over the shaft of the pole and are fastened by set screws.

## G-E Form 19 Novalux Suspension Lantern Units

### Straight Multiple Type

Novalux lanterns retain the ornamental projections which are a fundamental part of lantern design. The ribs are extended in a graceful fashion.

The Form L19 unit is designed for suspension from ornamental bracket arms. It is particularly useful for parkways, boulevards and residential streets in cities where the Form 18 ornamental lantern is used for whiteway lighting.

The Form 19A small size is made for use with a 300 or 500-watt and the Form 19B large size is made for use with a 750 or 1000-watt Mazda C lamp.

Castings are given one coat of black baking japan at the factory, which is ample protection against the elements until the units are installed when the complete installation is given a final coat of paint. After the inspection of all the parts, shipments are made with the lantern disassembled, thus reducing the cubical contents of the container and the cost of boxing.

On the 19A lantern 8 Cat. No. 1392617 side, 8 Cat. No. 1392618 canopy and 1 Cat. No. 1392615 lower panels should be ordered.

On the 19B lantern 8 Cat. No. 1392559 side, 8 Cat. No. 1392557 canopy and 1 Cat. No. 1392558 lower granite opalescent pressed-glass panels should be ordered.

Fixtures are cast iron. Non-corrosive fixtures with galvanized casing and other castings of aluminum at an extra cost. Standard cast iron lantern at an extra cost.

Cat. Nos. do not include Mazda lamp or pole.

G-E Forms 23A and 27 Novalux Ornamental Units

Form 23A Unit with Stippled Glass Panels and Casing

The Form 23A unit is equipped with an all-metal copper top which is hinged for relamping. A glass paneled top can be furnished at extra cost.

Waist castings are of cast-copper alloy; ribs are of galvanized steel. Copper and bronze surfaces are non-corrosive.

On the Form 23A lantern, 8 Cat. No. 2303561 granite opalescent pressed-glass panels should be ordered.

Cat. Nos. do not include Mazda lamp or pole.

Unit with No. 118 Alabaster Rippled Globe and No. 1118 Alabaster Rippled Canopy

The Form 27 unit is adapted for use with 1000-6000-lumen, 6.6-ampere series, or 200-1000-watt multiple Mazda C lamp, and, since the slender design of the casing does not permit the use of an auto-transformer, a Type IL series transformer is mounted in base of standard.

This unit consists of a cast iron casing, a porcelain receptacle, a globe and canopy.

Casing slips over the shaft of the pole and is fastened by set screws.

Cat. Nos. do not include Mazda lamp or pole.

## G-E Form 32 Novalux Bracket Suspension Units Black Japan Finish

Unit with No. 146  
Medium Alabaster  
Rippled Globe

The Form 32 Novalux suspension is of ornamental character and designed for bracket mounting.

Designed for use with Mazda C incandescent lamps. The straight series lamp of 2500, 4000 or 6000 lumens, for operation on 6.6-ampere circuit is most commonly used. Multiple lamps of 300 or 500 watts can also be used with the glassware listed; however, the 750 or 1000-watt lamp is best suited for use with the large number of 146 globe.

Since the 4000, 6000 and 10000-lumen lamps operate more efficiently on 15 or 20 amperes than on the 6.6-ampere circuit, the use of an auto-transformer or a Type IL transformer for the purpose of stepping up the current is recommended in these instances. Provision is made for mounting an auto-transformer within the casing of this unit. When Type IL transformer is used, it is mounted to pole adjacent to bracket or buried in the ground.

Selection of globes and refractors is determined by the type of unit and the preferred light distribution. All G-E Holophane refractors are applicable to this unit when used in combination with the proper globe.

Unit consists of a collar, tapped for 1/4-inch pipe thread, 2 wet-process insulators, cast iron cover, casing and globe holder.

Cat. Nos. do not include Mazda lamps.

§Special auto-transformers can be furnished for any A.C. series circuit from 3 to 10 amperes, 25 to 133 cycles at an increased price.

## Form 45L G-E Novalux Suspension Units

Sectional View

Recommended for installation in residential sections, on main thoroughfares and on secondary business streets or highways. Suitable for use on any overhead lighting circuit of less than 3500 volts and are readily adapted for series, straight-multiple or IL transformer connection.

Aside from several other important features of design, these units have one outstanding advantage in that all parts are interchangeable. Changes in lamps and glassware combinations are readily made and the requirements of illumination in any district are met with economy of installation and maintenance.

The cast-iron hood is made in 3 interchangeable types: one with a straight pipe tap, one with right-angle pipe tap and one with straight pipe tap and bushings for external wiring and center span installation. The cast-iron hood supports the various types of reflectors—the dome-radial wave (both the 18 and 20-inch), the shallow cast-iron reflector and the deep cast-iron reflector. A hinge and latch may be added to the 2 cast-iron reflectors. This permits the use of a globe or a refractor.

The holder for the globes and refractors consists of a cast-aluminum ring with a phosphor-bronze wire spring attachment, so that the glassware is held at all times under pressure against the reflector surface. This unit is made insect-proof by a felt gasket which is fastened directly to the globe or refractor holder itself.

When the unit is used on a series circuit, a receptacle is required to provide the necessary insulation. This supports the series socket. When it is used in the unit with the dome-radial wave reflector, it is attached directly to the hood by a small bracket. When it is used in the deep cast-iron casing, an adjustable support is used which permits the adjustment for the various sizes of lamps. The multiple type of unit has a small adjustable support for use in the hood when the dome-radial wave reflectors or shallow cast-iron reflectors are used. When installed in the unit with the deep cast-iron reflector, the multiple socket is supported by the same adjustable support that holds the series receptacle.

Cast-iron hood with 1¼-inch pipe tap.

Has adjustable socket support to accommodate lamps of various lengths.

This unit has the following advantages:

Interchangeability and simplicity of parts.

Units adjustable for various sizes of lamps.

Spun-copper fitter on sheet-metal reflector prevents screws from chipping the enamel.

Contour of sheet-metal reflector provides maximum strength with minimum thickness of metal.

New globe and reflector holder of improved construction with felt for seating against reflector and making unit insect-proof.

## Form 45H G-E Novalux Suspension Units

For Use on All Series Circuits

Sectional View—With Sheet-Metal Reflector

Suitable for installation in residential sections, on secondary business streets, or in outlying communities. Wherever overhead series circuits are in operation, these units are applicable both as to appearance and economy of maintenance. They are of simplified design and have, in addition to several other important features, one outstanding advantage in that all parts are interchangeable. Changes in lamps and glassware combinations are readily accomplished.

This unit is equipped with a wet-process porcelain insulator especially designed for use on high-voltage series circuits. Wet-process porcelain has high mechanical and dielectric strength. It will not absorb moisture and its characteristics are permanent. The size, design and construction of the insulator are such as to give complete freedom from breakdown and most economical operation.

Unit consists of a cast-iron hood which supports the wet-process porcelain insulator by 3 screws. The insulator is of sufficient size to permit adjustments for either the 5¾ or 7-inch light center lamps. The receptacle for the socket consists of 2 sets of contacts and reinforcing springs. Each set is fastened to a brass bracket which is in turn held to the side of the porcelain wall by a combination screw and binding post. This passes through a tie lug on the outside of the porcelain and threads into the brass support of the contact and reinforcing spring. The brass brackets are drilled and threaded in 2 places so that when the combination screw and binding posts are tightened in one position, the adjustment is for the 5¾-inch light center lamp, and in the other position is for the 7-inch light center lamp. The binding post and tie lug are on the outside of the porcelain. This facilitates inspection and testing for open circuits.

Both the sheet-metal and the cast-iron reflectors are fastened to the insulator by a unique arrangement which consists of a bronze clamping ring on the outside of the insulator. This is split and so arranged that the ends overlap. It has 3 set screws spaced unequally on its circumference. They pass through the insulator and press against lugs similarly spaced on the reflector. Two of the screws are forced to the end of their threads and are thus held tightly in place. They need never be loosened. The third set screw passes through the lap joint of the ring. This is tightened after the reflector is in place and it tends to spread the ring, an effect which holds this set screw securely at all times. This clamping arrangement not only forms a firm support for the reflectors but also acts as a protection for the insulator as there is practically no strain on the insulator itself.

The sheet-metal reflectors with fire-enamelled finish are of such a contour that maximum strength is obtained without using heavy metal. The fitter, or the part which is held into the insulator, is a copper ring spun on the sheet-metal reflector itself. The screws for holding the reflectors impinge against this spun-copper ring so that there is no chance of the screws chipping the enamel.

**G-E Form 6 Novalux Pendant Units**

Section of Unit with 120 Globe

Pendant units find their widest application in the utilitarian class of lighting. The principal requirements for equipment for this class of lighting are that the best lighting must be obtained at the lowest cost. Lighting units for this service are selected because they give dependable service with low upkeep over a long period of time.

The Form 6 Novalux Pendant Unit is recommended for lighting secondary business streets, residential streets and main thoroughfares where high intensity illumination is required, and overhead wiring is necessary due to economic conditions or in order to line up with existing overhead lines.

This unit was designed for use with Mazda C incandescent lamps. The straight series type lamps in 2500, 4000 and 6000 lumen sizes, for operation on 6.6 amp. constant current circuits, are most commonly used. Multiple lamps of 300, 400, 500, 750 or 1000 watts may also be used. High current series lamps in 4000, 6000 and 10,000 lumen sizes operate much more efficiently at currents of 15 or 20 amperes than at the lower current of standard series circuit. In order to operate these high current lamps from standard series circuits of lower current, an auto-transformer which is concealed in a casing may be used, or a Type IL series transformer mounted on a pole may be used.

Several different kinds of globes and refractors may be furnished with this unit and various types of light distribution are obtained by their use. Any of the combinations listed for this unit are applicable to the classes of lighting for which the Form 6 unit is recommended. Their selection depends on the particular type of unit and light distribution preferred, also the requirements to be met.

**Construction**

The cover is of cast iron and has binding posts in the top for external wiring. The unit is suspended by an insulated eye and this eye is held by two lugs fastened as part of the cover. On the under side of the cover are secured the auto-transformer (if one is used), the receptacle and the lamp. A spun copper casing which conceals and protects the auto transformer and receptacle, fastens to the cover by means of a concealed bayonet joint. The lower end of the casing has a proper concealed support for the reflector, refractor and globe. Felt globe seats are used to make the unit bug-proof and dustproof. The globes and refractors are hinged to allow easy removal of the lamp.

The Form 6 Novalux Unit is completely enclosed when equipped with a globe, yet the internal temperatures are so low that the life of a lamp is in no way lessened by the enclosure. The advantages of a closed unit are obvious; no dust can collect on the lamp bulb or the inner surface of the globe and so reduce the light. Such a fixture is absolutely weatherproof and bugproof.

### G-E No. 257649 Form 15 Novalux Traffic Lighting Units

Straight Multiple—100-125 Volts

View of Unit with Door

The Form 15 Novalux Unit is a type of light especially designed to illuminate the traffic officer.

Suspended on a guy wire stretched between 2 poles at a street crossing, this unit hangs directly above the officer and throws him into strong relief to approaching traffic at a distance up to 1500 feet. In this flood of illumination, which is a concentrated beam of light equivalent to 5500 c-p., he effectively guides approaching car drivers and forestalls accidents at night as he forestalls accidents in the daytime, efficiently. Thus the Novalux Unit is a practical aid to automobile drivers and traffic policemen alike, by affording an

essential means of protection to life and limb and property at difficult street crossings after dark.

This is a straight multiple type unit equipped with Type L-20 parabolic silvered and coppered glass reflector and clear glass door. The unit complete includes the hanger for span wire suspension to which it is rigidly fastened.

### G-E Novalux Bracket and Center Span Highway Units

Bracket Type

beyond the outer edge of the outside reflector and directs it toward the road surface. There are openings in the lower part of all reflectors so that proper illumination will be given below the fixture.

For best results, these openings should be parallel with the road. It is for this reason that the unit is supported by a universal bracket instead of a long rigid pipe. This bracket permits adjustment for space between the post and the side of the road and also for curves and hills.

A 2500-lumen lamp is recommended for the straight series type, and a 200-watt lamp for the straight multiple type. Catalogue numbers and prices do not include lamp or pole.

The Novalux Highway Unit is a double searchlight. It consists of two sets of parabolic reflectors with the Mazda lamp mounted in the center and the filament at the focal point of both sets. Each set has three white-enamelled steel reflectors. The inside reflector intercepts the light rays that would ordinarily go

**G-E Novalux Bracket and Center Span Highway Units**

The extended use of the automobile has brought with it a serious and irritating problem. Each car must provide sufficient road illumination to permit stopping or changing the direction of travel. The unrestricted light beams, however, are a serious menace to the safety of other drivers or pedestrians. The severity of the effects of glare is greatly increased in the case of headlights because of the extreme contrast with the dark surroundings. First, local ordinances and finally, state laws have been passed to regulate not only the size of the head lamp but the direction of its rays. It is impossible however, strictly to enforce these conditions, and as a result the danger from glaring headlights is still a menace.

**The Requirements**

The failure of other methods induced a study of the problem from another viewpoint. Highway lighting must be uniform and general. The road must furnish the light and not the automobile. On that basis a lighting system would embody many of the characteristics of an ordinary street lighting system with certain modifications to meet the new conditions imposed.

1. The intensity of light on the road surface must be fairly uniform.
2. The rays of light must be confined to the road surface and not spread out equally in all directions.
3. The height of the lamp must be sufficient to remove the light source from the normal line of vision.
4. The fixture must accommodate a fairly small lamp and yield a high degree of illumination. It must apply the utmost efficiency in distributing this illumination by bending all upward and outward rays.

**The Fixture**

The Novalux Highway Unit is a double searchlight. It consists of two sets of parabolic reflectors with the Mazda lamp mounted in the center and filament at the focal point of both sets. Each set has three white-enameled steel reflectors. The inside reflector intercepts the light rays that would ordinarily go beyond the outer edge of the outside reflector and directs it toward the road surface. There are openings in the lower part of all reflectors so that proper illumination will be given below the fixture.

For best results, these openings should be parallel with the road. It is for this reason that the unit is supported by a universal bracket instead of a long rigid pipe. This bracket permits adjustment for space between the post and the side of the road and also for curves and hills.

**Recommended Spacing**

State Highway with Dense Traffic	200 to 300 Feet Spacing
"    "    "    Less    "	300 " 400 "    "
Improved Road.....	400 " 500 "    "
Country Road.....	500 " 600 "    "
Mounting Height.....	30 Feet or More above the Road Surface
Size of Lamp.....	250 Candlepower

**Crouse-Hinds 1-Way Traffic Signals**

4 per Intersection

**Horizontal Bracket Mounted Signals**

The horizontal bracket signal must of necessity overhang the roadway, and therefore it is necessary to have the correct road clearance, usually 14½ feet. A horizontally mounted signal at this height gives a good angle of visibility, and is being used generally throughout the country.

Cat. No. 29940—Type TSH11

**Post Mounted Signals**

The tendency toward the use of one-way signals on the four far right corners of the intersection is marked, because such signals are more efficient, and because a more ornamental installation may be obtained with them.

Cat. No. 40000  
Type TSP11  
Underground Feed

There will be no span wire or mast arm projecting over the intersection, and in place of the tubular steel poles used for the overhead signal, the one-way signals are usually mounted on ornamental poles, the design of which harmonizes with the design of the signal and gives an attractive appearance to the installation.

This type of construction is used when a complete new traffic signal installation is made; that is, when it is desired to install the signals on new ornamental poles.

**Vertical Bracket Mounted Signals**

The popularity of the one-way vertically mounted signal on the far right corner has led to the development of a signal which may be mounted on existing poles.

In some cases these are mounted close to the pole so that none of the signal overhangs the roadway, and under these conditions the signal may be mounted at the correct height for visibility, namely 11 feet to the center of the amber lens. If, however, long bracket arms are used, so that the signal overhangs the roadway, it is necessary to have a clearance of 14½ feet, and this requires a pole 19 feet high.

Cat. No. 29932  
Type TSV11

**Cat. No. 45652**

**Automatic Control Cabinets  
Steel Pole Mounting**

Complete with Type D-2 automatic variable timing switch, main line switch, plug fuse cutouts, steady amber switch and flashing amber switch for steel pole mounting.

One-way signals can also be furnished in span-wire and mast-arm mountings.

Prices of all signals upon application.

## Type RM-11 Crouse-Hinds Individual Traffic Signal Units

With Prismatic Diffusing Lenses—Green, Amber and Red

With Diffusing Semaphore Lenses—Green, Amber and Red

When a one-way, one-section signal unit is required, the Type RM-11 may be advantageously used. This unit can be used for railroad signals, traffic towers, bridge approach signals and for scoreboards and many similar uses.

The casings are equipped with 3/4-inch conduit hubs on top and bottom for convenience in wiring and, when so specified on the order, the casings may be tapped on either or both sides for a 1/2-inch conduit.

Signal units with prismatic diffusing lenses are equipped with glass parabolic reflectors, and those with diffusing semaphore lenses are equipped with white porcelain enameled reflectors. The units are designed to take 50-watt, 110 or 220-volt mill type Mazda B lamps in P-19 bulb.

### With Diffusing Semaphore Lenses

Cat. Nos.	Description	Cat. No.
30028	For 110-Volt, 60-Cycle A.C.	30020
30029	For 220-Volt, 60-Cycle A.C.	30021
30030	For 110-Volt, 25-Cycle A.C.	30022
30031	For 220-Volt, 25-Cycle A.C.	30023

Electric flashing beacons are to be used only at those places which are dangerous from a physical point of view, such as blind corners, unexpected dead-end streets, curves, hills, etc., and are to serve as warnings of such dangerous places.

All flashing beacons are regularly furnished with four amber prismatic diffusing lenses and one clear prismatic diffusing lens in bottom. Any combination of colored lenses will be furnished without extra charge.

Type TSS-15 motor flashing switch is furnished with the above beacons.

## Type TSS-15 Motor Flashing Switches

Prices on all beacons upon application.

**Crouse-Hinds 4-Way Traffic Signals**

One per Intersection  
Post Mounted Signals

Type TSP44

Overhead Feed—Cat. No. 40140  
Underground Feed—Cat. No. 30297

The Type TSP-44 isolated signal is used when it is desired to have an ornamental installation. It is for use on wide thoroughfares carrying a heavy volume of traffic, and is usually installed in the center of the intersection, thus dividing the roadway.

It may be used either as an isolated signal or as a part of an electrically interlocked traffic system.

The foundation which is recommended is one which has a 36-inch diameter bottom, 24-inch diameter top, and 30 inches above ground, and extending approximately 18 inches below the surface of the roadway.

The signal may be arranged for either overhead or underground feed, but the latter is preferable.

**Span-Wire Mounted Signals**

One of the most popular types of isolated signals is the one which is to be suspended on a span wire. It can usually be mounted on existing poles, and, if no two poles approximately diagonally opposite are available, other conveniently located poles may be used and a pull-off installed to put the signal over the approximate center of the intersection.

This span-wire type of construction is advisable on narrow roadways or where there are car tracks, when it is desired to use the 4-way center type of signal. The signal should be suspended to give the road clearance required by law, usually 14½ feet.

Cat. No. 30293  
Type TSW44

**Mast-Arm Mounted Signals**

Cat. No. 30289  
Type TSM44

The mast-arm type of signal is usually used at street intersections where there is only one suitable pole available and where it is inadvisable to erect another pole.

It is, of course, not possible with mast-arm construction to put the signal in the center of the intersection because the mast arm would be too long, but if the signal is mounted on a 10-foot mast arm it is visible along both streets and makes a satisfactory installation.

The installation cost of this signal is usually less than the cost of a span-wire signal.

Cat. No. 45652

**Automatic Control Cabinets  
Steel Pole Mounting**

Complete with Type D-2 automatic variable timing switch, main line switch, plug fuse cutouts, steady amber switch, and flashing amber switch for steel pole mounting.

The above types of signals can also be furnished in 2 and 3 ways, and with lights or bells in the bottom. Multi-faced signals with adjustable faces can be furnished in from 2 to 6 ways.

Prices of all signals upon application.

**Crouse-Hinds 4-Way Pedestal Mounted Traffic Signals**

One per Intersection

Type TIA-44 with Base Light Underground Feed      Type TIA-44 with Base Light Overhead Feed

Cat. Nos.	Description	Cat. Nos.
40497	For 110-Volt, 60-Cycle A. C.	40501
40498	For 220-Volt, 60-Cycle A. C.	40502
40499	For 110-Volt D.C.	40503
40500	For 220-Volt D.C.	40504

The Type TIA-44 Isolated Signal is designed for use in wide thoroughfares, carrying a heavy volume of traffic, when it is particularly desired to separate the two halves of the roadway. The signal is usually installed in the center of the intersection, but may be installed in the throat of one street.

The pedestal type signal complete is mounted on top of a permanent concrete foundation, which is approximately 40 inches square at the bottom, 30 inches square at the top, and 30 inches high, and the foundation should extend approximately 18 inches below the surface of the roadway.

The above signal is furnished complete with Type D-2 automatic variable timing switch, main line switch and cutout, flashing amber switch, steady amber switch, and base light switch—within the base casting.

**Foundation Forms**

For All Pedestal Type Signals and Beacons

No. HL8469—Side View

No. HL8469—Top View

Made of No. 10 B & S gauge iron, formed up and butt welded into solid form. It not only serves as a form in which concrete foundation is molded, but also as a permanent protecting shield to the concrete. The top edge is turned over and accurately drilled for setting the foundation bolts, which are furnished with form. It has the correct slope to the sides to insure its illumination by the base light.

Cat. No.	Description	Net Wt., Lbs.
HL8469	Form, 40 Inches Square at Bottom, 30 Inches Square at Top, 30 Inches High	190
HL9172	Form Similar to Above, Except Round, 24 Inches in Diameter at Top and 36 Inches in Diameter at Bottom	190

Prices upon application.

## Crouse-Hinds Automatic Variable Timing Switches

### Cast Aluminum

550 Watts, 110 or 220 Volts, 60 Cycles A.C.

Type D-2

Inclosed in a housing suitable for indoor use.

Each switch is furnished with plug fuse cutouts for motor and signal circuits, main switch, steady amber, and flashing amber,

with or without base light switch. These are mounted on and are part of the timing switch.

Traffic cycle required should be specified on all orders.

Type D-2  
Housing Removed

†Total period. Synchronous timers can be furnished for total periods and frequency of supply circuit other than 60 seconds and 60 cycles, if required.

The total period of Types D-2, DSB-2 and DSR-2 Timing Switches includes the two amber periods.

Prices of all timing switches upon application.

## G-E Type N-1 Novalux Protectors

For Use with Type RO Transformers and

Novalux Controllers

Open circuits in series street lighting systems are unavoidable, especially on aerial circuits and it is desirable that when an open circuit does occur the primary of the main transformer be deenergized. This protector operates in conjunction with a CR7840 Novalux Controller and its function is to open up the switch in the controller as soon as an open circuit takes place.

Mechanism consists of 2 solenoids working in opposition with a common armature. One solenoid is energized by controlling circuit, the other by the load circuit to be protected. Under normal conditions both coils are en-

energized and the common armature remains in its lower position. When an "open" occurs in load circuit, lower solenoid is deenergized and armature rises instantly because of overbalancing force of upper solenoid.

Six quarts of No. 10C oil, included in price.

Cat. No.	Control Circuit	Protected Circuit	Ship. Wt. Lbs. Less Oil	Price Each
13X974	6.6 Amps.	6.6 Amps., Series	45	\$50.00
13X975	6.6 Amps.	7.5 Amps., Series	45	50.00

13X978	110 Volts	6.6 Amps., Multiple	45	50.00
13X979	110 Volts	7.5 Amps., Multiple	45	50.00

## G-E Novalux Lightning Arresters

Pellet-Type Oxide Film Arrester for Primary Protection

For lightning protection on primary side of constant-current transformers, pellet type oxide film arresters are recommended.

Each pellet arrester consists of hundreds of miniature oxide film cells, in series and parallel, allowing high-voltage impulse discharges to go through in a number of parallel paths.

The pellet arrester is sensitive to a continuously applied system voltage above its maximum rating and consequently when using these arresters, voltage ratings must not be exceeded.

The pellet-type arrester can be used, within certain limits, on the load side of the transformers.

Arresters must be thoroughly grounded to obtain best protection, and all connections between arresters, lines and ground should be straight and without turns.

### Pellet and Compression Chamber For Outdoor Service Only

For Systems with Non-Grounded Neutral

2593137	37000	50000	3	3	600	1	436.00

For 2-Phase Systems

Treat installations on quarter-phase, 4-wire systems like two single-phase installations on ungrounded neutral 3-phase systems. Recommendations on arresters for quarter-phase, 3-wire systems on request.

### For Protection of Load Side of Series Lighting Transformers

Single-Pole Cat. No.	Kw. Rating of Transformers (Secondary Amperes (6.6 and 7.5))	Approx. Ship. Wt. Lbs.	Standard Package	Price Each
†2906822G2	1, 2, 3	4	24	\$4.20
2923407G1	5, 7.5, 10, 15	13	12	11.50
2596671G1	20, 25, 30	25	6	21.50
2596671G2	35, 40	37	6	30.00
2596671G3	50, 60, 70	47	3	50.00

\*Ratings apply only to constant-potential circuits, and for installations at altitudes up to 4000 feet. For altitudes above 4000 feet, obtain special recommendations.

†Compression-chamber type; all others are pellet type.

Use one arrester on outside wire at single-phase installation between an outside wire and neutral. Use also on neutral wire a Cat. No. 146187 or 2906822G3, if voltage to ground is not over 300 volts; if, on account of unbalancing, voltage is between 300 and 750 volts, use Cat. No. 2906822G3. Use 2 arresters at a single-phase installation between outside wires. A system is considered solidly grounded when no resistance or reactance is used in grounding the neutral.

**G-E Subway-Type RO Novalux Constant-Current Transformers**

**For A.C. 6.6-Amp. Series Lighting Circuits**  
Single-Circuit Secondaries

A constant-current transformer designed to operate automatically and be mounted in subways or manholes. It can be controlled by Novalux controllers or by any of the present methods of remote control.

Since poles carrying circuits overhead are being removed from many of the city streets, it was found desirable to use some type of transformer which could be mounted underground and thereby connected directly to the underground feeder circuits and to the underground street lighting circuits. This requirement resulted in the development of a subway type RO transformer.

This transformer is almost identical with the pole type, except that it is enclosed in a specially designed cast iron water-proof tank. It is necessary on the 25

and 30-kw. size subway transformer to construct it in a double-deck type, because of the necessity for the transformers to be narrow enough to be lowered and installed in a manhole, the cover of which is only 32 inches in diameter, maximum. The four leads are each brought out at a separate terminal.

Subway transformers are equipped with oil indicating plugs installed in the tanks to indicate the oil level without requiring the removal of the cover. The tanks should be filled with the top oil plug open until the oil runs out and then the plug should be closed. To test for oil level at any time the lower indicating plug should be opened. In case the oil does not flow out, this plug should be closed again and the top plug opened, additional oil being poured in until it flows therefrom. The plug should then be closed again.

If the primary circuit leads into the subway from overhead, pole-type cutouts can be used. If, however, the primary circuit is entirely underground, the D and W subway fuse cutouts must be used.

Prices include oil and hanger hooks.

Cat. No.	Normal Kw. Rating	Primary Amp. at Any Load	Extreme Width Inches	Extreme Height Inches	Gal. No. 10-C Oil	†Approx. Ship. Wt. Lbs.	*Price Each
279687	1	.66	22	38 <sup>3</sup> / <sub>8</sub>	20	640	\$340.00
279688	2	1.29	22	38 <sup>3</sup> / <sub>8</sub>	20	675	350.00
279689	3	1.93	22	38 <sup>3</sup> / <sub>8</sub>	20	705	360.00
279690	5	3.18	28 <sup>1</sup> / <sub>4</sub>	41 <sup>5</sup> / <sub>8</sub>	50	1025	465.00
279691	7.5	4.75	28 <sup>1</sup> / <sub>4</sub>	41 <sup>5</sup> / <sub>8</sub>	50	1100	460.00
279692	10	6.28	28 <sup>1</sup> / <sub>4</sub>	41 <sup>5</sup> / <sub>8</sub>	50	1150	510.00
279693	15	9.39	29 <sup>3</sup> / <sub>4</sub>	46 <sup>1</sup> / <sub>8</sub>	65	1310	550.00
279694	20	12.52	29 <sup>3</sup> / <sub>4</sub>	46 <sup>1</sup> / <sub>8</sub>	65	1455	715.00
279695	25	15.55	29 <sup>3</sup> / <sub>4</sub>	56 <sup>1</sup> / <sub>8</sub>	75	1855	815.00
279696	30	18.70	29 <sup>3</sup> / <sub>4</sub>	56 <sup>1</sup> / <sub>8</sub>	75	1855	870.00

\*For special voltages otherwise standard (other than 2200 to 2400) up to and including 5000 volts, add 10 per cent.

†For special voltages only from 5000 to 13200 and for special double ratings (such as 2300-4600), add 20 per cent.

For variable voltage primaries without taps, apply to the nearest Sales Office.

For special frequency otherwise standard (25, 30 or 40 cycles) in ratings up to and including 20 kw., add 25 per cent.

For 50 cycles, use 60-cycle prices.

For special frequency (25, 30 or 40 cycles) and special voltage (other than 2200 to 2400) up to and including 5000 volts in ratings up to and including 20 kw., add 50 per cent.

For special secondary current otherwise standard (from 5.5 to 20 amperes), use 6.0 ampere prices.

Fuses and cutouts are not included in Cat. No. or price.

†Weight of oil not included—add 7 pounds per gallon.

The 2300-volt tap is good for operation from 2200 to 2400 volts; an extra tap is provided for operation at 2000 volts.

Lightning arresters must be used on all subway-type RO Transformers for protection, if the supply and load circuits are not entirely under ground.

**G-E Pole-Type RO Novalux Constant-Current Transformers**

**For Operating 6.6-Amp. Series Lighting Loads**  
12300 Volts (with 2000-Volt Tap)-60 Cycles

The Type RO is a constant current transformer which operates automatically. It can be mounted on poles in remote districts or where subdivided downtown lighting circuits are desired. It can be controlled by Novalux controllers, time switch, or main oil switch at the station.

Built in sizes ranging from 1 to 30 kw., to operate at any commercial primary voltage and frequency or secondary current, but the standard transformer is for 60 cycles, 2300 volts on the primary and 6.6 amperes on the secondary. The 2300-volt

transformer will operate satisfactorily on from 2200 to 2400 volts and a tap is provided on the primary for operation at 2000 volts without reduction of output.

The RO Transformer is positive and automatic in action, requiring no attendant or substation for starting or shutting down. A Novalux controller or similar remote control device can be used for operating the transformer. These features are combined with the same current regulation through as wide a range as offered by the best station-type constant-current transformer. This feature alone practically guarantees the normal life of the Mazda lamps operating on a circuit controlled by such a transformer. The efficiency is almost the same as for the station-type transformer and the power-factor is 80 per cent at maximum load.

The high internal reactance of the transformer serves to protect the lamps at starting and acts instantaneously to check surges on the line which would otherwise tend to shorten the life of the lamps.

The moving secondary coil with its high repulsion gives almost perfect regulation from full load to dead short circuit. This feature not only protects the lamps from changes in current, because of changes in secondary load, but also protects the lamps from fluctuations in primary voltage.

Prices include oil.

Cat. No.	Normal Kw. Rating	Primary Amp. at Any Load	Extreme Width Inches	Extreme Height Inches	Gal. No. 10-C Oil	†Approx. Ship. Wt. Lbs.	*Price Each

286189	25	15.55	35 <sup>1</sup> / <sub>2</sub>	57 <sup>1</sup> / <sub>2</sub>	85	1085	585.00
286190	30	18.70	35 <sup>1</sup> / <sub>2</sub>	57 <sup>1</sup> / <sub>2</sub>	85	1210	620.00

\*For special voltages otherwise standard (other than 2000 to 2400) up to and including 5000 volts, add 10 per cent.

†For special voltages only from 5000 to 13200 and for special double ratings (such as 2300-4600), add 20 per cent.

For variable voltage primaries without taps, apply to nearest Sales Office.

For special frequency otherwise standard (25, 30 or 40 cycles) in ratings up to and including 20 kw., add 25 per cent.

For 50 cycles, use 60-cycle prices.

For special frequency (25, 30 or 40 cycles) and special voltage (other than 2200 to 2400) up to and including 5000 volts in ratings up to and including 20 kw., add 50 per cent.

For special secondary current otherwise standard (from 5.5 to 20 amperes), use 6.6-ampere prices.

†The 2300-volt tap is good for operation from 2200 to 2400 volts; an extra tap is provided for operation at 2000 volts.

†Weight of oil not included—add 7 pounds per gallon.

All transformers have single-circuit secondaries. If multi-circuit is desired refer to nearest Sales Office.

Lightning arresters must be used on all pole-type RO Transformers on both primary and secondary for protection. They are not included in price and catalog e number.

Suspension hooks are furnished with all Type RO Transformers for pole mounting, but where the net weight exceeds 1000 pounds the transformers must be mounted on a platform to assure safe installation.

## G-E Non-Automatic Station Type RV Novalux Constant Current Transformers

For Operating A.C. 6.6-Ampere Series Lighting Loads

2300 Volts (with 80 Per Cent Load Tap)—60 Cycles

The Type RV is a non-automatic, station-type, constant current transformer designed for use in central stations or substations where an operator is in attendance.

Because of the general adoption of series system for street lighting installations, it is necessary to have a transformer that will convert constant-potential energy to a constant-current energy. This requires a regulating device with a floating coil.

In many instances it is desirable to install a constant-current transformer in a station that is always attended. The RV Transformer is non-automatic and admirably serves this purpose.

Built in standard sizes ranging from 5 to 70 kw. output, or in special sizes for any commercial secondary current or frequency, or for any primary potential up to and including 132000 volts. Standard rating is 60-cycle, 2300 volts on primary, and 6.6 amperes on secondary.

The exceptionally fine regulation of G-E constant-current transformers insures rated lumen output, and full life of lamp. The transformer will maintain the secondary current within 1 per cent above or below normal from full load to short circuit, provided the primary potential and frequency remain at rated values.

Cat. No.	Normal Kw. Rating	Primary Amp.	Primary KV-A. Input	Normal Secondary Load Volts	Secondary Open Circuit Volts	Ship. Wt. Lbs.	Price Each

†*230131	70	37.45	86.20	10600	12750	2550	1130.00

\*Built with multi-circuit secondary. Transformers with multi-circuit secondaries cannot be operated as single circuit. Transformers for single-circuit operation can be furnished at standard prices up to and including 40 kw.; for 50, 60 and 70-kw. sizes, an extra charge will be made.

†Transformers from 35 to 70 kw. will be shipped on 80 per cent tap.

## G-E Plug Switch Panels For Non-Automatic Station Type RV Novalux Constant Current Transformers

6.6 or 7.5 Secondary Amperes, 2300 Volts

Panels are designed for the control of one single-circuit secondary or multi-circuit secondary constant current transformer and either one or two lamp circuits per transformer. Lamp circuits may be either arc or incandescent. All panels are rated on the basis of transformer kilowatt output at unity power-factor. They are designed for separate installation near the transformers they are to control and are not suitable for assembly in a switchboard.

The ammeters are connected in series with the secondary circuits through current transformers, thereby insulating the instrument from the high-voltage circuit and eliminating the need for an insulating cover.

Standard subbases equipped with a watt-hour meter and necessary current and potential transformers are listed.

The panels and subbase are asbestos ebony, 1½ inches thick with ¼-inch bevel, and are mounted on a self-supporting framework of 1¼-inch pipe 64 inches high. Blue Vermont marble may be substituted for asbestos ebony.

Each panel Cat. No. includes panel with framework, 5-amp. Type AR-2 ammeter with 10-amp. scale, current transformer, fused primary plug switches, secondary plug switches, necessary plugs, plug racks, card holders and name plate.

Each watt-hour meter Cat. No. includes one subbase with pipe fittings, 110-volt, 5-ampere Type IS-4 single-phase watt-hour meter, current transformer and potential transformer with fuses and supports.

**G-E Automatic Station Type RF Novalux Constant Current Transformers**

For Operating A.C. 6.6-Ampere Series Lighting Loads  
 12300 Volts (No Taps)—60 Cycles

Type RF with Cage

Designed for use in an unattended substation. Can be used for any indoor installation.

Built in practically any capacity and for any commercial voltage, frequency and secondary current; but it is recommended that, on account of the high secondary voltage, capacities not exceeding 20 kw. be operated with single-circuit secondary. Sizes from 25 to 70 kw. are furnished with multi-circuit secondary.

Can be started up automatically with coil together and with only one lamp on circuit, regardless of capacity of transformer. Current surge not sufficient to destroy lamp.

Transformers are not provided with any taps, either for voltage or for partial load operation. Because constant voltage is maintained in the stations, no primary voltage tap is necessary. Because of high inherent reactance of transformers, if a partial load tap is furnished, operating characteristic will be impaired.

Equipped with protective screening of expanded metal. Balancing mechanism supported on ball bearings.

Cat. No.	Normal Kw. Rating	Primary Amp.	Trans. Kv.-a. Input	Secondary Load Volts	Secondary Open Circuit Volts	Ship. Wt. Lbs.	Price Each
295218	5	3	6.9	758	1035	600	\$400.00

295225	40	24	55.2	6060	8260	1850	860.00
295226	50	30	69.0	7580	10350	2200	900.00
295227	60	36	82.8	9100	12400	2550	1020.00
295228	70	42	96.6	10600	14500	3000	1250.00

For special voltages otherwise standard (other than 2200 to 2400) or special double-voltage ratings (such as 2300/4600 etc.), add 10 per cent. For variable voltage primaries without taps, apply to nearest sales office. For special frequency otherwise standard (25, 30 or 40 cycles) in ratings to and including 50 kw. add 25 per cent. For 50 cycles use 60-cycle prices. For special frequency (25, 30 or 40 cycles) and special voltage (other than 2200 to 2400) in ratings to and including 50 kw. add 50 per cent. For special secondary current otherwise standard (from 5.5 to 20 ampere), use 6.6-ampere prices.

†Built with multi-circuit secondary. Transformers with multi-circuit secondaries cannot be operated as single circuit. Transformers for single-circuit operation can be furnished up to and including 40 kw. at standard prices. For 50, 60 and 70-kw. sizes, add 10 per cent.

Transformers will operate from 2200 to 2400 volts. No primary voltage tap or partial load tap provided. If 80 per cent load tap is desired, add 5 per cent.

‡Lightning arresters must be used on secondary for protection if load circuit is not entirely underground.

## G-E Type SL Novalux Series Transformers

Subway and Aerial Types  
Protective Device and Film Cutouts  
\*For 60-Cycle, 6.6-Ampere Constant-Current Circuits

Pole Type

The Type SL Transformer is an insulating transformer, the primary winding of which is energized from a long series circuit and the secondary of which is used for supplying current to a small number of lamps connected in series and located where the high potential of the ordinary current series circuit would be objectionable.

Certain classes of lighting require a lower potential than is found on long series lighting circuits, and yet as they function similarly, it is desirable to control them simultaneously with the street lights.

The Type SL Transformer affords an ideal method for this control as the low-voltage series circuit is turned on and off

with the closing or opening of the main constant current transformer circuit.

Fixtures with series sockets and film cutouts must be used on these transformers.

The 0.04 to 1-kw. sizes contain no compound; 1 to 5-kw. sizes are compound filled; both are air-cooled. The 5, 7.5 and 10-kw. sizes are oil-filled.

Suspension hooks are furnished with all Type SL Transformers which have a capacity of over 4 kw. If cross arm suspension is required, specify hanger brackets.

Protective devices are included with the transformers except as noted. On subway-type transformers of 0.25 to 4-kw. capacity, the protective device is assembled in the cap of the transformer.

## G-E Type IL Novalux Series Transformers

For Use on 60-Cycle, 6.6-Ampere Constant-Current Circuits

These transformers allow the use of high efficiency series lamps where high potential is impracticable and unsafe. No film cutout is required since each lamp is independent of the others in the circuit. In case of an accident to one or more, the remainder of the lamps on the circuit burn without interruption.

For use with pendent units, transformers can be mounted on the cross arms of poles.

They save the expense of high-voltage conductors, heavy insulation and high tension cutouts.

When lamp wattage varies between 8% above and 20% below normal, secondary current will not vary more than 1.0% with normal primary current and frequency.

### Single Light

For operating one 6.6, 15, or 20-ampere series lamps from 6.6-ampere constant-current circuit.

### Two Light—In Series

For operating two 6.6, 15, or 20-ampere Mazda series lamps (in series) from 6.6-ampere constant-current circuit.

Transformers operate two lamps (in series) on the secondary. To avoid interruption of service fixtures with series sockets and film cutouts must be used. If both lamps on secondary burn out transformers operate with secondary short circuited.

\*Pole Type Base with Primary Couplings and Secondary Wiping Sleeves—Form B-6

Special transformers can be furnished for any commercial current, frequency, or lumen lamps. \*Can be furnished in vault type.

†1000/2500-lumen transformers are 1:1 ratio and secondary leads supply 6.6 amperes for both 1000 and 2500-lumen lamps. 2500/4000-lumen transformers have secondary leads supplying 6.6 amperes for 2500-lumen lamps and 15 amperes for 4000-lumen lamps. 4000/6000-lumen sizes also have leads which furnish 15 amperes for 4000-lumen lamps and 20 amperes for 6000-lumen lamps. 6000/10000, 10000/15000 and 15000/25000-lumen sizes have one set of secondary leads only supplying 20 amperes since the current required on all the leads is the same.

‡Maximum voltage which can be obtained by means of a voltmeter.

§Series sockets with film cutouts must be used with these transformers.

**G-E Novalux Remote-Control Apparatus****All-Night Type, CR7840-1304-A, B, C or D****Controllers**

Designed to control a Type RO pole or sub-way transformer by means of an adjacent series circuit or a multiple pilot wire control circuit. The 1304-A (with series coil) and B (with shunt coil) consist of a 2300-volt multiple oil switch assembled in the same weatherproof casing with a series operating coil insulated for 8000 volts; or a shunt 110-volt operating coil. If furnished for 6600 volts, it is designated as 1304-C (with series operating

coil) and 1304-D (with shunt operating coil).

The series coil will operate on any frequency, but different coils must be furnished for the various current ratings. The shunt coil will operate on circuits from 110 to 125 volts, but different coils must be furnished for the different frequencies. There is a 64-volt drop across the series coil when used on 6.6-ampere, 60-cycle circuit, and the power consumption is 77 watts. The shunt coil takes approximately 26 watts when operated on a 110-volt, 60-cycle circuit, and the inrush is approximately 6 amperes. The multiple oil switch will make, break, and carry continuously 50 amperes at 2300 volts.

The lever on the top of the case may be moved into three different positions.

The first position allows the apparatus to function automatically, so that when the operating coil is energized the controller is operated. The second position deenergizes the operating coil and drops open the controller so that even if the control circuit is turned on, the controller will still be "off" and the transformer or series circuit may be worked on with perfect safety. Position three engages the controller without the operating coil being energized, which allows the transformer to be thrown into operation manually in case of failure of the control circuit or for testing purposes.

**All-Night Latch Type, CR7840-1304-S or T**

Identical with the 1304-A and B, rated 2300 volts, 50 amperes, but is equipped with a special latch with following operation: When the control circuit, either series or multiple, is first turned on, the controller will engage and lock in. If the control circuit fails or is disconnected, the controller still remains engaged. If the control circuit is again energized, the controller still remains engaged but will be unlatched. When the control circuit is again deenergized the controller will drop out. This is designated as the "all-night latch" type, CR7840-1304-S (with series operating coil) and CR7840-1304-T (with shunt operating coil).

The hand lever may be used to close the controller manually and the controller may be disconnected by operating the control coil by means of the hand lever.

**CR7840-1235 Novalux Controllers**

A double or triple-pole, single-throw oil switch. Contacts are rated 50 amperes at 2300 volts and 30 amperes at 4400 volts. Contacts are closed by a 110 or 220-volt solenoid, energy for which is supplied by a potential transformer connected to the feeder circuit. Contacts, solenoid, and potential transformer are all included in a single weatherproof housing suitable for pole mounting.

**CR7840-1334 Novalux Series Control Switches**

Designed to control a low-voltage constant-potential load. It consists of a series operating coil and a single-pole single-throw contact. Series operating coil is insulated for 8000 volts and can be operated on a series circuit of any frequency. It is necessary to specify the current rating of the series circuit in which it is to be used. Contact tips will carry 25 amperes at 125 volts or 15 amperes at 250 volts. Switch is immersed in oil and enclosed in a weatherproof cast iron case.

**G-E Rail Bonds****Selection of Bonds****Welding Steel-Faced Rail Bonds with Arc Welder**

In construction where the rails are exposed the concealed type of bond is desirable as its location prevents it from outside injury and possibility of theft. The short "U" shape arc weld type bond attached to the head or ball of the rail is quite frequently used on account of its ease of installation and ready inspection. This type of bond is not recommended for "T" rails under 55 pounds. Theft of this bond is discouraged owing to the difficulty of removing it from the rail and the small amount of copper obtainable.

Operating conditions, section of rail and other elements form such an important part in the selection of the proper type and form of bond to be used that recommendations cannot be made without complete information covering the conditions to be met. In a general way the following suggestions may be helpful in determining the selection of bonds to meet standard conditions.

For city track construction where the rails are embedded in the pavement, the concealed type stud terminal bond is preferable, providing there is ample space under the joint plate to permit its use. Under circumstances where this type of bond is impracticable, a long single conductor arc weld or stud terminal type is recommended. For rebonding or bonding track which has been laid, the arc weld or acetylene type of bond, designed to be attached to the head of the rail, may be used to advantage as it can be installed without disturbing the pavement or removing the splice bars.

The manufacturer will gladly submit recommendations with drawings showing how best to meet any bonding conditions. Its engineering department is always at the service of customers to give expert advice on this important subject.

**Mine Bonding**

The bonds often used in mines, consisting of channel pins and short lengths of copper wire, are frequently found to be in such poor condition and of such high resistance that the return current leaves the rails and follows adjacent pipe lines and streams of water on its way back to the power house.

Where the rails are usually light in section and the nature of the roadbed permits excessive movement of the joints, cable bonds of either the stud terminal or arc weld type, long enough to span the splice bar, should be used.

For small rails when the full current capacity is to be utilized Forms D, SF-5, SF-6 or SF-8 bonds installed around the plates, are recommended, and, if given proper care in installation, give excellent results.

The bonds should be installed on the inside of the rail as close under the heads of the track bolts as possible. This reduces to a minimum the possibility of damage to the bonding when cars are derailed. Actual observation shows that bonds installed in this manner have been run over by the wheels of derailed cars without material injury to the bonds.

## G-E Form SF Electric Arc Welded Rail Bonds

Used on electric railways and in mines, as the metallic arc welding process enables the bonds to be shaped for and applied to all parts of the rail without the need of special equipment.

Electrodes for arc weld bonds are not furnished free with bond orders. Electrodes are furnished in 17-inch lengths in either  $\frac{3}{16}$  or  $\frac{5}{32}$ -inch sizes.

### Approximate Amount of Welding Wire Required for Installing Arc Weld Bonds

No. of Bonds	Form	Capacity	Lbs. per 100
100	SF-1, 2, 3, 7	2/0	10
100	SF-1, 2, 3, 7	4/0	18
100	SF-5, 6, 8, SFC-5	2/0	14
100	SF-5, 6, 8, SFC-5	4/0	22

### For Head of Rail

Form SF-3-2

Form SF-3 single conductor and Form SF-3-2 double conductor bonds have L shaped terminals and are for application to head of rail.

These bonds have concave steel terminals which give a wide welding surface.

Suitable for either single or double bonding.

The standard overall length up to 4/0 capacity is 7 $\frac{1}{2}$  inches.

Form SF-1 single conductor and Form SF-2 double conductor bonds are similar to Forms SF-3 and SF-3-2, except that they have T shaped terminals which limit their use to single bonding where the bolt spacing is 5 inches or over.

Form SF-1 on Rail Head

### For Base of Rail

Form SF-5

Form SF-5 is designed for installing around splice bar close to web of rail with terminals resting on rail base. In this position bond should be welded to rail web.

Overall length of bond is 8 inches longer than the splice bars for 1/0 and 2/0 capacity, and 9 inches longer for 3/0 and 4/0 capacity.

Suitable for application to head of rail on Weber joints. Overall length of 3/0 and 4/0 bonds is 10 $\frac{1}{2}$  inches. Can be supplied in any length.

Form SFC-5

Form SFC-5 is the same as the SF-5 except that a pointed hook is added as part of the terminal. Hook is thin and pointed at end and can be driven under rail base on top of tie in case there is one in the way. Hook keeps terminals near edge of rail base and is of great advantage in holding the bond in position while welding.

Form SFC-5 on Rail Base

Overall length of bond is 7 inches longer than the splice bars for 1/0 and 2/0 capacity, and 8 inches longer for 3/0 and 4/0 capacity.

## G-E Form SF Electric Arc Welded Rail Bonds

Continued

### For Base of Rail

Form SF-6

Forms SF-6 and SF-8 bonds are designed for application around splice bar, for welding to top of rail base.

Form SF-8

The terminals of the SF-6 bond are semi-circular in section; and by placing the flat side against the rail base, the welding process can be carried along both sides as well as the end of the terminals.

Form SF-6 on Rail Base

The terminals of the Form SF-8 bond are flattened out and tapered down to a thin edge at the ends, which provide a wide welding surface. The welding is carried on the rail up over the tops of the terminals. The feature is advantageous for rails with a narrow base.

The overall length for either bond is 7 inches longer than the splice bars for 1/0 and 2/0 capacity and 8 inches longer for 3/0 and 4/0 capacity.

### Cross Bonds

Form SF 7

The Form SF-7 bond is recommended for all arc weld cross bonding. The entire bond is located below the rail base so that all parts of the bond are thoroughly concealed and protected from derailed mine cars or dragging equipment.

Form SF-7, Installed

The overall length is 6 inches greater than the track gauge, but more allowance can be made where desirable.

Form of Bond	Conductor Section	Schedule	Dimensions, INCHES (Overall) Length	Terminal Contact Area	Weight Pounds per 100	Price per 100
SF-1	00	7 $\frac{1}{2}$	1 $\frac{3}{4}$ x $\frac{7}{16}$	52.5	\$50.60	
SF-2	0000	7 $\frac{1}{2}$	2 $\frac{1}{2}$ x $\frac{1}{2}$	81.0	65.25	
SF-3-2	000	10 $\frac{1}{2}$	2 $\frac{1}{2}$ x $\frac{3}{8}$	84.5	69.85	
	0000	10 $\frac{1}{2}$	2 $\frac{1}{2}$ x $\frac{5}{8}$	97.0	74.05	
SF-5	00	24	2 x $\frac{3}{8}$	107.4	79.30	
	00	28	2 x $\frac{3}{8}$	121.0	86.50	
SFC-5	0000	29	2 $\frac{1}{2}$ x $\frac{5}{8}$	197.4	128.20	
	0000	33	2 $\frac{1}{2}$ x $\frac{5}{8}$	219.0	139.00	
SF-6	00	23	1 $\frac{1}{2}$ x $\frac{5}{8}$	101.0	77.50	
	00	27	1 $\frac{1}{2}$ x $\frac{5}{8}$	117.6	84.70	
SF-8	0000	24	2 x $\frac{3}{4}$	170.4	114.70	
	0000	28	2 x $\frac{3}{4}$	192.0	125.50	
	0000	32	2 x $\frac{3}{4}$	213.6	136.30	
	00	50	1 $\frac{3}{4}$ x $\frac{7}{16}$	195.8	126.10	
SF-7	00	52	1 $\frac{3}{4}$ x $\frac{7}{16}$	202.6	129.70	
	0000	50	2 $\frac{1}{4}$ x $\frac{1}{2}$	310.8	184.90	
	0000	52	2 $\frac{1}{4}$ x $\frac{1}{2}$	321.6	190.30	

In figuring prices of arc weld bonds use price on smallest diameter of terminal listed. Schedule length is overall length measured from outer edge of terminals when conductor is straight and extended.

**G-E Forms H and HS Acetylene Welded Rail Bonds**

**G-E Compressed Stud Terminal Bonds**

Flame weld bonds, except cross bonds, are designed to be attached to head of rail and as they may be installed without removing splice bars or disturbing pavement, they can be used to advantage in connection with re-bonding work or bonding new track.

Bonds of this type are made with drop-forged, all-copper terminals, and with solid steel terminals mechanically attached to the copper conductors.

A copper sleeve is placed around the copper conductor at the point where the conductor emerges from the terminals. This sleeve, by deadening vibration, prolongs the life of the conductor strands.

Flux wire for flameweld bonds is a special composition phosphor bronze wire. It is furnished in only one diameter 3/16 inch by the American Steel & Wire Company. Approximately 20 pounds is required for one hundred 4/0 bonds. It is not furnished free with bond orders.

Form H-3 single conductor and Form H-3-2 double conductor bonds are designed for application to the head of the rail. The L shaped terminals are drop-forged onto the copper conductor. Terminal design permits bond to be used on rail joints having small clearance between center track bolts.

Form H-3-2

Bonds 7 or 7 1/2 inches long are recommended. Can be furnished any length.

Form H-1 single conductor and Form H-2 double conductor bonds are similar to Forms H-3 and H-3-2 except that they have T shaped terminals which limit their use to single bonding where the bolt spacing is 5 inches or over.

Form HS-1 single conductor and Form HS-2 double conductor bonds are for use on head of rail; they are also suitable for cross bonding. Bonds have steel terminals of triangular cross section which are mechanically attached to the copper conductor.

Form HS-2

Bond is installed on rail head with the open side of the terminals against the rail, thus forming a V shaped trough for filler metal. Triangular shape of terminals is of distinct advantage as the bond may be used for cross bonding by straightening out the loop and welding the bond to rail in an inverted position.

Bonds when used on head of rail are usually furnished 7 inches in length; for cross bonding, the single conductor bond is furnished in any length desired.

Form of Bond	Conductor Section	DIMENSIONS, INCHES		Weight Pounds per 100	Price per 100
		Schedule Length	Terminal Contact Area		
H-1, H-2, H-3 and H-3-2	0	7	2x1/2	39	\$44.50
	00	7	2x1/2	51	49.80
	000	7 1/2	2x1/2	72	62.60
	0000	7 1/2	2x1/2	81	65.25
	250000 c.m.	7 1/2	2x1/2	105	72.50
H-5 for Weber joints	00	8	2x1/2	54	51.40

	00	7	...	51	49.80
	000	7	...	70	61.40
	0000	7	...	78	64.00
HS-2	250000 c.m.	7	...	102	71.00
	300000 c.m.	7	...	110	80.80
	350000 c.m.	7	...	124	90.00

Schedule length is the overall length measured from the outer edges of the terminals when conductor is straight and extended and smallest size diameter terminal listed for a corresponding bond section.

The studs of these bonds are of solid copper of exact size and have a depression on the center of the bottom surface for centering the compressor screw when installing.

This type of bond is installed by use of a screw compressor exerting a pressure of approximately 20 tons. The compressing portion of the inner screw of the compressor is so designed that a rivet head cannot be formed on the terminal until the hole has been completely filled, even to the pores of the steel. The rivet or button head seals the union, and insures practically a moisture-proof joint. A solution of red lead and linsed oil may be applied to the terminal and adjacent steel, after compression. This will effectually seal the joint against the entrance of moisture.

To effect radial expansion of the copper in the hole equally in all directions, the inner screw of the bond compressor should be centered in the depression in the end of the terminal.

Holes should be drilled with well sharpened tools so that the walls and edges of the hole will be smooth and free from burrs and other irregularities. Bond holes should be of the exact diameter of the bond stud to be inserted.

Oil should not be used in the drilling of holes, as all traces of it cannot readily be removed from the hole, and oil will prevent proper contact between the copper and the steel. A solution of soda and water or plain water may be used, but care should be exercised to see that the hole is wiped perfectly dry before the terminal is inserted. Bonds should not be installed in damp weather. If these simple precautions be disregarded, the efficiency of the bonding will be greatly affected.

**G-E Tubular Stud Terminal Bonds**

These bonds are like compressed stud terminal bonds except that the studs are drilled for expanding radially in the holes in the rails. The illustration shows a sectional view of a tubular terminal expanded into a steel block representing the web of a rail. The effects of the expansion by the taper punch and drift pin are clearly shown.

The same general precautions in regard to drilling the rail and preparing the terminals should be taken as with compressed terminals. Greater care should be used, however, in having the hole drilled to size to insure the best results. After inserting the terminal in the hole, a long taper punch, well lubricated with oil or grease, is driven entirely through the terminal. The diameter of the punch is 1/16 inch larger than the hole in the terminal and it therefore forces the copper in the terminal radially against the walls of the hole. A short drift pin 1/32 inch larger than the maximum diameter of the taper punch is then driven home in the terminal, thus completing the expansion. In driving in the drift pin the copper of the terminal is slightly further expanded and a portion lying close to the pin is forced along by the pin out through the hole in the rail and expanded into a bell mouth. The diameter of the hole through the terminal is increased about 1/8 inch by the action of the taper punch and drift pin, forcing the copper into intimate contact with the steel rail. Tubular terminal bonds are particularly advantageous in rebonding on paved streets and around special work where dense traffic forbids the somewhat longer operation of installing compressed terminal bonds.

Steel drift pins are included in all shipments of tubular terminal bonds. Taper punches are supplied when ordered.

## G-E Ribbon Bonds

### Form A, Solid Terminals—Form AT, Tubular Terminals

The ribbon bond is particularly adapted to use under joint plates where the restricted space demands extreme compactness of design. The conductor of this bond is composed of thin copper ribbons with the greatest width in the horizontal plane, thus affording maximum flexibility in the vertical plane or in the direction of the greatest movement of the joint. The tucking of the conductor provides flexibility for the longitudinal movement of the rails.

Form A-5 Solid Terminal Ribbon Bond

Form AT-5 Tubular Terminal Ribbon Bond

Forms A-5 and AT-5 bonds have conductors equally divided in upper and lower branches and the tucking is located in the center of the bond. They are particularly adapted for single bonding large, girder and T-rails. The balanced bond can also be used on ordinary T-rails having special joint plates or on many of the patented joints. In double bonding large girder rails with two rows of track bolts, tee balanced bond will usually be found to give greater clearances.

Form A-6 Solid Terminal Ribbon Bond

Form AT-6 Tubular Terminal Ribbon Bond

Forms A-6 and AT-6 bonds have the conductor equally divided in upper and lower branches and the tucking is offset from the center of the bond. They are used in double bonding large girder and high T-rails. The bond holes are located at unequal distances from the ends of the rail making it necessary to offset the tucking so as to avoid interfering with the insertion of the track bolts or the terminals of the second bond. Unless otherwise specified the tucking is offset 1 inch from the center of the bond as this is suitable for most conditions.

Form A-7 Solid Terminal Ribbon Bond

Form AT-7 Tubular Terminal Ribbon Bond

Forms A-7 and AT-7 unbalanced, center-tucked bonds having unequally divided conductors and the tucking located in the center of the bond are especially suitable for bonding T-rails having greater space below the track bolt than above.

Form A-8 Solid Terminal Ribbon Bond

Form AT-8 Tubular Terminal Ribbon Bond

Forms A-8 and AT-8 have conductors unequally divided and tucking is offset from the center.

## G-E Form B Ribbon Bonds

Form B bonds may be used on rails where the inner track bolts are located so as to permit drilling of the bond holes between the ends of the rails and the first bolt holes.

## Form C Ribbon Bonds

The Form C beveled head bond is adapted to use on the foot of T-rails having suspended joints. It is particularly suited to bonding third rails.

The terminal heads are beveled to correspond with the angle of the rail foot. As in the other ribbon bonds the conductor laminations are so disposed as to give maximum flexibility in the vertical plane. To determine the correct length of terminals for Form C bonds, inquiries and orders should be accompanied by a sketch of the rail cross section with measurements.

## Forms F and FT Cable Bonds

Form F-5 Solid Terminal Cable Bond

Form FT-5 Tubular Terminal Cable Bond

Forms F-5 and FT-5 bonds have conductors equally divided in upper and lower branches and the tucking is located in the center of the bond. The conductor consists of many fine strands all wound in the same direction with a short pitch. This form of bond is adapted to single bonding large girder and T-rails or the medium sizes of T-rails with special joint plates.

Form F-6 Solid Terminal Cable Bond

Form FT-6 Tubular Terminal Cable Bond

The conductors of Forms F-6 and FT-6 bonds are equally divided in the upper and lower branches and the tucking is offset from the center of the bond. These bonds are used in double bonding large girder rails and high T-rails when the bonds are placed one on each side of the rail and the terminals are staggered necessitating the offsetting of the tucks so as to avoid interference with the insertion of the track bolts or the terminal of the second bond.

Form F-9 Solid Terminal Cable Bond

Form FT-9 Tubular Terminal Cable Bond

The Forms F-9 and FT-9 bonds have conductors equally divided in the upper and lower branches pressed into approximately a triangular shape, thereby affording proper clearances for medium sizes of T-rails having restricted space above the track bolts. The tucking is located at the center of the bonds.

**G-E Forms F and FT Cable Bonds**

Form F-10 Solid Terminal Cable Bond

Form FT-10 Tubular Terminal Cable Bond

Forms F-10 and FT-10 bonds are similar to Forms F-9 and FT-9 except that the tucking is offset for double bonding. For the standard track bolt drillings, offsetting one inch from the center of the bond will locate the tucking at a point opposite the ends of the rails, and avoid interfering with the track bolts.

**G-E Forms D and DT Cable Bonds**

Form D Solid Terminal Cable Bond

Form DT Tubular Terminal Cable Bond

Forms D and DT cable bonds have terminals with offset shanks. The sleeve portion diverges from the web of the rail at an angle of 20 degrees thereby avoiding any sharp bends in the conductor in spanning a joint plate. The shanks of bonds to be used under the plate are at right angles to the terminal studs.

Forms D and DT cable bonds should be at least 6 inches longer than the joint plate which they are to span. The length is measured between centers of terminals when the bond is straight and extended.

Form D Solid Terminal Stud End Bond

Form DT Tubular Terminal Stud End Bond

Stub end cable bonds are useful in bonding the various parts of special track work to the main bond around such special work. A stub end bond has but one terminal and a short length of conductor usually 12 inches long, but can be supplied in any length.

Orders should specify length from center of terminal to end of bond.

**G-E Forms E and ET Solid Wire Bonds**

Form E-2 Solid Terminal Wire Bond

Form ET-2 Tubular Terminal Solid Wire Bond

The Form E-2 and ET-2 bonds are formed so as to provide proper clearance around the joint plate. A bond having a formed length of 6 inches longer than the joint plate should be used.

**G-E Forms E and ET Solid Wire Bonds  
Cross Bonding**

Form E-1 Solid Terminal Solid Wire Bond

Form ET-1 Tubular Terminal Solid Wire Bond

Cross bonds should be at least 10 inches longer than the track gauge. This length permits burying the conductor in the ground, reducing the liability of loss by theft.

The length is measured between centers of terminals when the conductor is straight and extended.

**Stub End Solid Wire Bonds**

Form E Solid Terminal Stub End Bond

Form ET Tubular Terminal Stub End Bond

Stub end solid wire bonds also are used for bonding the various parts of special track work to the main bond around such special work.

**G-E Form M Twin Stud Terminal Bonds**

Form M-1 Twin Terminal Cable Bond

Form M-1 bonds may be used on all joints where the distance between the two inner track bolts is such as will not interfere with the U-shaped conductor.

The Form M-2 bond has terminals like those of the Form M-1 bond and is made in any required length of conductor. It is used for cross bonding and spanning long distances.

Form M-3 Twin Terminal Cable Bond

The conductor of the Form M-3 bond emerges from one side of the terminal and is used on joints having very short spacing between the inner track bolts.

Form M-5 Twin Terminal Cable Bond

The Form M-5 bond is used on Weber Joints.

## G-E Rail Bond Prices

## G-E Rail Bond Prices

### Stud Terminal Bonds Not Listed

Intermediate sizes of conductor cross section in price schedule take price of next larger conductor cross section having smallest diameter terminal listed.

Intermediate diameters of terminals, other than those covered by the following schedule, take price of next larger diameter terminals.

### Standard List Prices and Standard Weights for Terminal Stud Bonds Having Larger Intermediate Diameter Terminals Than Shown in Previous Column

When Diam of Terminals in Inches Desired Is	ADD TO STANDARD PRICES For Terminals in Inches	Per 100 Bonds Class Y	ADD TO STANDARD For Terminals in Inches	Wt., Lbs. per 100 Bonds
9/16	1/2	\$1.30	1/2	2.6
11/16	5/8	1.60	5/8	3.2
13/16	3/4	2.00	3/4	4
15/16	7/8	2.50	7/8	5
1 1/8	1	6.00	1	12

### Additions for Rail Bonds Having Terminals Longer Than Standard Lengths

Diam of Terminal	DIMEN., IN. Standard Length Not over	Additions to Standard Price per 100 Bonds for Each 1/8 In. Class Y	Additions to Standard Wt., Lbs. per 100 Bonds for Each 1/8 In.
5/8	3/4	1.25	2.5
3/4	3/4	1.75	3.5
7/8	3/4	2.50	5.0
1	3/4	3.15	6.3
1 1/8	3/4	3.20	6.4

### Twin Stud Terminal Bonds

Twin terminal bonds are measured from a point in the center of a line drawn through the center of the two studs to the same point in the other terminal when bond is straight and extended.

The list price of twin terminal bonds is based on the largest size terminal scheduled for bond or equivalent cross section and length.

Conductor Section	Length In.	Wt., Lbs. per 100	Price per 100
00	7	61	\$55.30
0000	7	85	66.50
0000	7 1/2	87 1/2	67.75
0000	8	90	69.00
0000	9 1/2	97 1/2	73.50
250,000	8	118	79.00
300,000	8	128	89.80
350,000	7 1/2	138 1/2	97.50
350,000	8	143	100.00

### Bonds with Tinned Studs

For tinning any standard type stud terminal bond, including twin stud, add \$3.00 per 100 bonds.

### Bonds with Extra Large Terminal Cap

Providing for soldering in addition to compression, add \$7.00 per 100 bonds for stud of 1/8-inch diameter and smaller; for those having terminal diameters, larger than 1/8 inch, add \$10.00.

**G-E Form R-1 Removable Mine Bonds**

Form R-1 bonds are for use on temporary tracks only. The conductor is made of flexible copper strand, soldered into steel terminals. These bonds are installed or removed very easily, being merely driven in or out with a hammer. This does not injure the bond terminals and they can be reinstalled when tracks are moved.

Conductor	Diam. Term. In.	PRICE PER 100 BONDS					
		23-in.	24-in.	25-in.	26-in.	27-in.	28-in.
0	5/8	\$72.10	\$73.60	\$75.10	\$76.60	\$78.10	\$79.60
00	5/8	77.50	79.30	81.10	82.90	84.70	86.50
000	5/8	100.40	102.70	105.00	107.30	109.60	111.90
0000	5/8	112.00	114.70	117.40	120.10	122.80	125.50

Conductor	Diam. Term. In.	PRICE PER 100 BONDS					
		29-in.	30-in.	31-in.	32-in.	33-in.	34-in.
0	5/8	\$81.10	\$82.60	\$84.10	\$85.60	\$87.10	\$88.60
00	5/8	88.30	90.10	91.90	93.70	95.50	97.30
000	5/8	114.20	116.50	118.80	121.10	123.40	125.70
0000	5/8	128.20	130.90	133.60	136.30	139.00	141.70

**G-E Channel Pins**

Made with a straight groove deep enough to avoid cutting the wire in driving. Taper pointed and slightly larger than the hole so, when driven, they make a solid joint. The pins are made of soft steel, copper coated. For temporary work.

Cat. No.	Diam. of Pin, In.	Diam. of Pin Hole, In.	Size of Wire	Wt., Lbs. per 100	Price per 100
134175	3/16	3/32	6	20	\$16.00

**Separate Bond Terminals**

Form K-1 Solid Separate Terminal

Form KT-1 Tubular Separate Terminal

Form K-2 Solid Separate Terminal

Form KT-2 Tubular Separate Terminal

Separate bond terminals are furnished drilled and tinned for soldering to the conductor, which may be scrap trolley wire or feeder cable. They are useful in bonding special work where many different distances are to be spanned. Form K-1 terminals have shanks parallel to the web of the rail while the shanks of the Form K-2 terminals are at right angles to the web of the rail.

Conductor	DIMEN., IN.			TERMINALS				Price per 100

## G-E Rail Bonding Tools Double-twin Spindle Drills

This machine drills all four holes at one time in the head of T-rails for the Twin Stud Terminal Bond. The drills are operated by a hand lever, or motor driven if desired.

Each spindle is provided with an adjusting sleeve so that each drill may be set independently of the others. Each machine is equipped with a gauge for determining the depth of the holes.

The levers by which the machines are operated are detachable so that the tools may be moved easily from place to place. Each drilling machine is equipped with one set of drills.

Cat. No.	Description	Wt., Lbs. Each	Price Each
103470	Hand-operated Double-twin Spindle Drill.....	125	\$360.00

## Little Giant Portable Electric Grinders

It carries an emery wheel 8 inches in diameter, is equipped with connecting cable and switch for 460 to 600-volt circuits.

Cat. No.	Wt., Lbs. Each	Price Each
103477	82	\$105.00

## Hand Screw Compressors

The compressor has a cylindrical sleeve which, in any position, is free to slide in or out of the frame with a single thrust, permitting quick adjustment. A quarter turn sets the sleeve, and the inner screw ram makes the compression on the terminal.

All compressors are designed for 3/8-inch diameter terminals.

108483	Hydraulic Web Bond Compressor for Girder Rails up to 9 Inches High..	190	255.00

**G-E Railway Line Material**

The standard line material listed in the following pages is the result of wide experience in the design and manufacture of devices to meet every haulage requirement.

The insulating material used in the various suspensions, strain insulators, etc., is suitable for use under special conditions of high temperatures and is beyond the possibility of injury from any service temperatures.

The rust-resisting finish given these devices, unless otherwise stated in the tables, is applied by the electric oven sherardizing process.

In mines where acids are found in the mine water, sufficient in strength to cause a deterioration of a zinc coating, the japanned finish is preferred. It is recommended that a coat of heavy asphaltum paint be applied from time to time after installation.

Every effort has been made to include in the standard lists all the devices required in approved railway line construction.

**Form A1 Brackets for Wood Poles**

No. 40010

Pole brackets listed represent some of the standard forms called for in modern railway line construction and include the three styles of tube, the use of which has been approved in the best practice. The wrought iron pipe referred to in the table is standard welded gas and water pipe, and the structural tubing is a special high carbon steel tube with butt joint, which, because of the great stiffness of the material, does not require a welded seam.

Material	Nom. Diam. Inches	Inside Act. Diam. Inches	Outside Diam. Inches	Thickness of Wall Inches	Wt. Lbs. per Ft.

## G-E Form H Suspensions

Form H suspensions consist primarily of malleable iron shells into which the insulation holding the studs is permanently moulded. A load of over five tons is required to pull the stud from this form of suspension in the large size and about three tons in the small size.

### Straight Line

600 Volts

No. 25980

These are made in two sizes, 3¼ inches and 3½ inches in diameter, each of which is furnished with either 5/8-inch or ¾-inch stud. The 3½-inch suspension has extra heavy shell and arms and is designed for the heaviest construction.

Each of these suspensions, being in one piece, is held against turning by the span wire, and cannot, therefore, become unscrewed as a result of vibration in service. Special leather washers to permit adjustment in seating the ear boss against the suspension are listed. All metal parts including the stud have standard sherardized finish.

Over all length, 6½ inches; arm yoke accommodates 3/8-inch span wire.

Cat. No.	SHELL		Diameter Stud In.	Approx. Wt., Lbs. per 100	Price per 100
	Diameter In.	Height In.			
25980	3¼	2	5/8	210	\$105.00

\*Between centers of pull-off eyes. †Between centers of clevis holes.

Any of the above can be furnished with ¾-inch studs. All metal parts have standard sherardized finish.

**G-E Form H Suspension Arms**

Arm is removable. malleable iron. sherardized. Approximate weight, 110 pounds per 100.

Price, No. 128424 ..... per 100 \$30.00

**G-E Form H Bracket Suspensions**

Consists of the standard 3¼-inch shell to which the bracket arm clamp is hinged, thus providing the flexibility required to care for vibration in the trolley wire.

For suspensions for 2-inch pipe the height from ear seat to bracket arm clamp is 5¼ inches; for 1½-inch pipe the height is 4⅞ inches; diameter of shell, 3¼ inches. All metal parts including stud have standard sherardized finish.

No. 25992

Cat. No.	Description	Wt. Lbs. per 100	Price per 100
25992	Bracket Suspension Complete, ⅝-in. Stud for 2-in. Pipe	540	\$250.00

**Form H Bridge or Ceiling Suspensions**

600 Volts

This suspension is used when the head room is unlimited. The diameter of the stud is ⅝-inch.

Approximate weight, 230 pounds per 100. Price, No. 27370 ..... per 100 \$110.00

**G-E Form H Low Ceiling Suspensions**

600 Volts

Distance between centers of screw slots, 4 inches; thickness of slotted ears, ⅝ inch; diameter of shell, 3 inches; height, 1⅞ inches.

Cat. No.	Description	Approx. Wt. Lbs. per 100	Price per 100
1431861	Low Ceiling Suspension ⅝-inch Stud, Sherardized	125	\$85.00

**G-E Form H Flat Top Suspensions**

These suspensions may be attached directly to the mine roof by means of expansion bolts or to timbers by means of special lag screws.

The expansion bolts are not forced above the mine roof and are therefore easily recovered.

Cat. No.	Diam. Stud In.	Material	Approx. Wt. Lbs. per 100	Price per 100
125330	⅝	Malleable Iron, Sherardized	210	\$110.00

**G-E Form HJ Low Ceiling Mine Suspensions**  
Deep Groove—600 Volts  
No. 1431893

The deep groove gives extra long creepage surface and prevents accumulation of coal dust on bottom surface of insulation to stud. Length between centers of holes in lugs, 4¾ inches. Diameter shell, 3 inches. Height above ear seat, 1⅞ inches. Net weight per 100, 170 pounds.

Price, No. 1431893, with ⅝-Inch Stud ..... per 100 \$90.00

Ear seat to top of bearing surface, 1⅞ inches. Diameter of shell, 3 inches; of bearing flange, 3½ inches. Size of stud and top boss, ⅝-inch-11. Net weight per 100, 185 pounds. Price, No. 1431894 ... per 100 \$90.00 Malleable iron, sherardized finish.

**G-E Form HJ Flat Top Suspensions**

Deep Groove

Compound is moulded in one deep groove which gives it a greater creepage surface between the stud and sheet.

Recommended for use in mines having excessive moisture or dust.

Height from ear seat to top of flange, 2¼ inches.

Cat. No.	Flange	DIAMETER, INCHES Shell	Stud	Approx. Wt. Lbs. per 100	Price per 100
261737	3	3	⅝	190	\$90.00

**Form H5 Combination Suspensions**

Designed so that it may be attached direct to mine roof by use of standard expansion bolt, or in case there is considerable variation in height of mine roof same suspension may be attached to lower end of 1¼-inch pipe, the upper end of which has been wedged into a hole drilled into the mine roof. A simple and effective method of attaching the pipe to the mine roof is to slot the pipe with hack saw for a distance of 3 inches, the wedging effect being obtained by driving the pipe into a hole in the roof over a tapered wooden plug.

Cat. No.	Ht. In.	DIAMETER, INCHES Shell	Top Flange	Approx. Wt. Lbs., per 100	Price per 100
261777	2⅜	3	2¼	175	\$105.00
269770	3⅝	3½	2¼	225	130.00

## G-E Roof Fastenings

### Roof Plugs and Lag Screws

The Forms H and H3 suspensions may be attached to the mine roof by means of the wooden plug and gimlet point lag screw threaded to fit the suspension and projecting 3 inches above it. The plug is drilled axially for the screw and is driven into the hole in the mine roof.

Cat. No.	Description	Approx. Wt., Lbs. per 100	Price per 100
34137	Wood Plug (3x1½ Inches)	10	\$6.00
36310	Lag Screw (¾x4 Inches Special) Sherardized	25	9.00
2428433	Wood Plug (4x1½ Inches)	15	8.00
2428435	Lag Screw (¾x5 Inches Special) Sherardized	32	11.00
2428434	Wood Plug (5x1½ Inches)	17	8.50
2428436	Lag Screw (¾x6 Inches Special) Sherardized	39	13.00

### Roof Wedges and Bolts

The bolt is slotted near the top and the upper wedge is arranged to engage it so as to prevent turning of the bolt in screwing up the suspension.

When the suspension is removed from the bolt the whole device is loosened in the hole by a blow with a hammer and may thus be readily recovered.

Cat. No.	Description	Approx. Wt., Lbs. per 100	Price per 100
35691	Lower Roof Wedge, Sherardized	35	\$14.00
35690	Upper Roof Wedge, Sherardized	45	16.00
35689	Roof Bolt (¾ in.-11, 5 in.) Sherardized	40	11.00
41069	Roof Bolt (¾ in.-11, 5 in., with Nut) Sherardized	50	14.00

## G-E Roof Fastenings

### Extension Supports and Combination Clamps with 5/8-Inch Stud

Pipe Clamp

Suspension may be attached to either a 1¼-inch standard pipe fastened vertically in the mine roof or a 1½-inch pipe held horizontally from a side wall or as in outside construction when a 1½-inch pipe cross span or bracket arm is used. Where 1¼-inch standard pipe only is used for supporting the trolley wire from the mine roof the 1¼-inch pipe clamp will be found particularly useful with the flat top suspension.

All are of sherardized finish.

Expansion Case

## G-E Form J3 Economy Clinch Ears

Economy Ears are made by a new process whereby the natural hardness and fine grain of the cast surface, both inside and outside of the lips, are retained.

These ears have extra deep grooves and  $\frac{3}{32}$ -inch thick lips which almost meet when peened around the wire, providing extra metal for wear under the center of the ear. The bottom edges of the lips are gradually tapered up at the ends for a distance of about  $\frac{1}{2}$  of the length of the ear, which design, together with the machine grinding for an equal distance on the sides, practically eliminates any pounding or hammer blows from the trolley wheel, resulting in prolonged life.

These ears are made of bronze and conform to the A.E.R.A. standard.

## G-E Form A Screw Clamp Ears

No. 41047

### 5-Inch Plain

Form A ears are especially adapted for use with grooved or Fig. 8 wires and are suitable for high speed operation.

The lips of the ears are so shaped as to give a four-point bearing in the grooves which prevents any tendency of the wire to roll out of the ear as a result of torsional or transverse stress.

All malleable iron parts and screws have standard sherardized finish.

**G-E Form J3 Economy Feeder Clinch Ears**  
For Round Wire

With Horizontal Feeder Lug

These ears have a horizontal or vertical feeder lug securely riveted to the ear web.

Lugs are drilled to accommodate 2/0 to 4/0 solid or stranded feeder wire. Two square head set screws fasten feeder wire in lug.

Made of bronze. Ear lips are untinned but can be furnished tinned for soldering upon request.

Economy Feeder Ears will be furnished in place of Forms J, J2 and T3 feeder ears formerly listed for round wire.

## G-E Form M Clamping Ears for Mines

With Bronze Feeder Boss

For use in mine trolley construction. The clamp permits the single operation of turning the nut to fasten the ear onto the suspension and grip the trolley wire. It is made of malleable iron, sherardized finish, and is 2 $\frac{3}{8}$  inches high, 3 $\frac{1}{2}$  inches long, with excellent wheel clearance.

Has a  $\frac{5}{8}$ -inch tap and is for use on 00, 000 and 0000 wire.

The feeder ear is similar to the plain ear except that a bronze feeder boss suitable for 4/0 feeder cable is added.

## G-E Form L Clamping Ears

Form L Clamping Ears are made for Nos. 00, 000 and 0000 wires, and with  $\frac{5}{8}$ -inch tap only.

They are made of malleable iron, sherardized, and allow perfect wheel clearance.

The special wrenches No. 193540 are included, free, in each shipment.

Cat. No.	Description	Net Wt., Lbs. per 100	Price per 100

216945	For Grooved Wire	30	48.00

## G-E Form L2 Clamping Ears for Mines

For grooved wire, except No. 261257, which is a universal ear suitable for either Fig. 8 or grooved wire. Made of malleable iron, 1 $\frac{3}{4}$  inches high. Tapped  $\frac{5}{8}$  inch.

Cat. No.	Length Inches	Net Wt., Lbs. per 100	Price per 100
245444	3	41	\$43.00
269759	4 $\frac{1}{2}$	60	46.00
261257	3	41	43.00

## G-E Form W Clamping Ears for Mines

For use on either grooved or Fig. 8 wire, 2/0 to 4/0 in size, and offers no obstruction to the passage of the trolley wheel over the wire. It will also take round wire up to  $\frac{7}{8}$  inch diameter when it is desired to string such wire for feeder purposes for operating pumps, drills, or cutting machines. Feeder may be replaced with standard grooved or Fig. 8 wire providing it is

desired to operate electric locomotives over it.

This ear has unusual holding power.

## G-E Insulated Turnbuckles

No. 280258

Insulated turnbuckles, sometimes called Brooklyn strain insulators, are provided with drop forged steel eyebolts.

No. 280258 turnbuckle has drop forged casting, No. 40802 malleable iron. The casting is made in two halves which fit around the head of the insulated portion. The drop forged castings are riveted together while the malleable iron castings are fastened together with hollow set screws. Swivel bearing is metal to metal and designed so there is no relative motion between insulated portion and adjoining cap. All iron parts are sherardized.

Cat. No.	Description	Approx. Wt., Lbs. per 100	Price per 100
16395	Nos. 00, 000 and 0000 Wire, Bronze...	875	\$1800.00

Frogs similar to the above but for No. 0 wire are furnished if desired.

**G-E Forms G and G2 Trolley Frogs**

Forms G and G2 frogs are made with different divergent angles. The following table gives the range of distance from track switch point to track frog with which each set of frogs may be most satisfactorily used:

Frog Distance	Divergence Angle Trolley Frog
Up to 22 Feet.....	20°
From 20 to 30 Feet.....	15°
Above 28 Feet.....	8°

The minimum frog distance given in the table with which the 15 degree frogs may be used to best advantage corresponds to a turnout radius of 40 feet, but when suburban cars, using high speed trolley wheels, run over city tracks it is advisable to use 15 degree rather than 20 degree frogs throughout the city construction.

To insure smooth transition of the wheel between tongue and pan, the pans of all Form G frogs have, at each end, an inclined plane rising at a very acute angle from the horizontal, which receives the flange of the wheel.

**G-E Form G Trolley Frogs**

## Forms K and K2 Crossings, Uninsulated

For Round and Grooved Wire

Adjustable, with Deflector Bars

When crossings having deflector bars are required additional clamp castings and longer bolts are supplied so that the bars and end tongues are tightened into place in one operation.

Form K adjustable crossings are adjustable for any angle between 30 and 90 degrees.

The body parts are malleable iron and the end tongues are of bronze.

Adjustable, with-out Deflector Bars

For Nos. 0 and 00 Wire

**G-E Form G Crossings, Uninsulated**  
For Round and Grooved Wire  
Right Angle

The principle of the inclined plane to insure smooth transition of the trolley wheel between tongue and pan has been embodied in the design of all Form G crossings.

Cat. No. 11297 is of bronze material.

Cat. No. 103972 is of malleable iron, sherardized.

Both numbers are for Nos. 00, 000 and 0000 wires.

Cat. No. 64170 is similar to Cat. No. 11297, except that in the pan a double groove runway is provided for wheels and

Cat. Nos. 11297 and 103972

heavy extension flanges offer a smooth under-run for sliding collectors.

Cat. No. 64170

## Automatic Sectionalizing Switches

Type SW-6, Form A-1

Automatic sectionalizing switches improve the efficiency of direct current feeder systems by permitting all section feeders to be placed in multiple. This is accomplished by connecting the switch directly across the section insulators which, while giving all the advantages of the non-sectionalized system, does not in consequence of the automatic operation of the switch, do away with the beneficial results gained from a sectionalized system.

The Type SW-6 Form A1 switch has a continuous capacity of 650 amperes with an overload adjustment of from 600 to 1200 amperes.

This switch is recommended to customers wishing to improve their operating conditions without the large outlay for feeder copper generally necessary. Recommended for use in the original layout of a feeder system, since by its adoption, a smaller cross-section of feeder copper can be utilized.

Price, No. 191712, Weight, 235 Pounds . . . . each \$250.00

**G-E Spherical Strain Insulators**

Made in 2 sizes having diameters 2¼ inches and 2¾ inches. Smaller size is suitable for a working load of 1000 pounds, the average tensile strength is 3000 pounds. The 2¾-inch size has an average tensile strength of 5000 pounds, and is suitable for a working load up to 2000 pounds. Both sizes are subjected to a potential test of 5000 volts.

## Wrenches for G-E Ears and Suspensions

Fig. 1, Combination Wrench

Combination wrenches are made of malleable iron, sherardized. They are furnished in various size openings as indicated in the accompanying table and in addition to fitting G-E ears and suspensions, will fit certain popular sizes of competitive ears and suspensions.

One wrench, Cat. No. 278192, will be packed in each standard case of ears or suspensions. On less than standard case shipments, 1 wrench will be furnished with all orders of 100 suspensions or ears, or over.

Wrench, Cat. No. 285585, will be shipped with Cat. No. 484789 suspension.

Wrench, Cat. No. 193540, is made of 5/16-inch hexagonal steel, sherardized. It is used in hollow clamping screw in Forms L and L2 ears.

Two wrenches, Cat. No. 193540, will be packed in each standard case of ears and 1 wrench with each shipment of less than standard case.

These wrenches will be furnished free of charge to the customer.

Fig. No. 2, No. 193540

If any wrench other than that regularly furnished is desired, it will be

necessary to specify Cat. No. on requisition.

Cat. No.	Description
278192	Fits Forms M and W Ears; Suspensions, Nos. 125330, 165189, 204245, 261737, 1431862, 1431894, and 1436318.
285585	Fits Forms M and W Ears; Suspensions, Nos. 125330, 261737, 424992, 484789, 1431862, and 1436318.
295704	Fits Forms M and E Ears; Suspensions, Nos. 125330, 165189, 204245, 261737, 1431862 and 1431894.
280159	Fits Forms M and W Ears; Suspensions, Nos. 125330, 165189, 204245, 261737, 1431862, and 1431894.
248227	Fits Hexagonal Nuts and Hollow Screws in Forms L and L2 Ears; Suspensions, Nos. 424992, and 484789.
194522	Fits Hexagonal Nuts and Hollow Screws in Forms L and L2 Ears.
193540	Fits Hollow Screws in Forms L and L2 Ears.

**G-E Mine Roof Drills**

This machine, though light in weight, is of strong design and capable of fast work. It can be set for drilling holes at any angle by simple adjustments. The standard posts give a long range of extension and meet all ordinary mine conditions. The drill can readily be carried, set up, and operated by one man. It can be furnished with any length post and with feed bar having 8, 10, 12 or 14 threads per inch as required.

An ordinary ratchet handle or a double-action ratchet handle can be furnished if desired.

**Globe Cold Drawn Seamless Steel Trolley Poles**

Poles are made of the best grade of open hearth steel, are of 13-gauge thickness, 1 1/2-inch outside diameter at the large end and 1-inch outside diameter and 3/4-inch inside diameter at the small end.

Each type is reinforced. The reinforcement is inserted in the pole in such a manner that it becomes practically integral with the body of the pole.

Style B has additional strength which is due to the longer reinforcements.

**No. 4 More-Jones Trolley Harps**

M-J No. 4 Trolley Harps accommodate 4 to 5-inch wheels; 1 1/2 inches between contact washers and regularly furnished with 1/2 and 5/8-inch solid cold rolled steel axles. Harps of malleable iron.

Prices upon application.

**No. 6 More-Jones Trolley Harps**

M-J No. 6 Trolley Harps, the latest and most improved design, on the bottle principle, to prevent catching or fouling the overhead. For 6-inch wheels, 1 3/4-inch length of hub; equipped with 3/4 or 7/8-inch hollow lubricating shaft. Harps of malleable iron, very light, strong and efficient.

Prices upon application.

**M-J Wheel and Harp Parts**

- No. 1—Contact Spring for No. 4 Harp.
  - No. 2—Contact Washer for No. 4 Harp.
  - No. 3—Contact Spring for No. 6 Harp.
  - No. 4—Contact Screw.
  - No. 5—Solid C. H. Steel Shaft.
  - No. 6—Hollow C. H. Steel Lubricating Shaft.
  - No. 7—Graphite Bushing.
  - No. 8—Cotter Pin.
- Contact spring and washer of phosphor-bronze.

**Benjamin Water-tight Junction Boxes**  
Standard—With Plain Cover and Gasket

No. 6701

Standard Junction or Outlet Boxes are 1½ inches deep inside, 4½ inches in diameter outside, and are supplied in either brass or iron. They are provided with side boss for plunger stuffing box, and have mounting bosses in bottom, tapped for No. 8-32 screws, which are spaced to accommodate interchangeably Benjamin connecting blocks, receptacles and switches. Boxes are also tapped for the No. 10-24 brass screws furnished to fasten cover.

TAPPING.—Boxes are regularly furnished not tapped for conduit.

PLUNGER KEY.—Key Type boxes are arranged with water-tight stuffing box and furnished with plunger key for operating key receptacles or switches.

COVER.—Brass, No. 6920, or iron, No. 6921.

GASKET.—Rubber gasket, No. 6945, makes water-tight connection.

FINISH.—Brass boxes and covers are regularly unfinished, but can be finished in dead black when specified. Iron boxes and covers are dead black.

**Benjamin Water-tight Connecting Blocks**  
With Standard Water-tight Junction Boxes

Rating: 30 Amperes, 125 Volts

No. 6707

CONNECTING BLOCK.—One set of binding screws and three sets of clamp connectors which permit taking off branch circuits as necessary. Feed wires may be passed through without cutting, and clamped firmly without soldering or taping joints. Base is of high heat molded insulating material. Supporting screw holes are spaced 1¾ inches on centers.

JUNCTION BOX.—Standard junction box, brass, No. 6900 or iron, No. 6901.

TAPPING.—Box is regularly furnished not tapped for conduit but no charge is made for tapping when specifications are given with order.

COVER.—Brass, No. 6920, or iron, No. 6921.

GASKET.—Rubber gasket, No. 6945, making water-tight connection.

FINISH.—Brass boxes and covers are regularly unfinished but can be supplied in dead black finish when specified. Iron boxes and covers are dead black.

Cat. No.	Kind of Box	Description	Wt., Lbs. Each	Price Each
6706	Brass	Complete as Described.....	2½	\$2.85
6707	Iron	" " " " .....	2½	1.85

**Benjamin Twin Fuse Receptacles and Water-tight Connecting Blocks**  
With Standard Water-tight Junction or Outlet Boxes  
30 Amperes, 125 Volts

No. 6709

RECEPTACLE.—For Edison Plug Fuses only. Equipped with two sets of clamp connectors which permits one or two circuits to be connected. Fuses not furnished. Receptacle is attached to connecting block by two screws which serve as center contacts for fuse plugs. Receptacle and block are of high heat insulating material. Connecting block is like that furnished with Nos. 6706 and 6707.

JUNCTION BOX.—Standard water-tight junction box, brass, No. 6900, iron, No. 6901.

TAPPING.—Box is regularly furnished not tapped for conduit. No charge is made for tapping when specifications are given with order.

COVER.—Special brass cover, No. 6922.

GASKET.—Rubber gasket, No. 6945, making water-tight connection.

FINISH.—Brass parts are regularly unfinished, but can be supplied in dead black finish when specified. Iron parts are dead black.

### With 30-Degree Angle Reflector

Cat. No.	Size Lamp Watts	Diameter Reflector, Inches	Wt., Lbs. Each	Price Each
6848	*150	16	6 1/4	\$9.25

\*Takes old 100-watt PS lamps and if No. 91 extension is used, takes 100-watt A lamp.

## R & S Vapor, Gas and Dust-Proof Fixtures

### Screw Globe Type

These fixtures are designed for use in places where dampness, dust, combustible gases or corrosive vapors exist; such as for marine use, out-door use, oil refineries, grain elevators, mines, gas and chemical plants, etc.

They are so constructed that, should the protecting globe accidentally be broken, the fixture body will remain air-tight preventing vapors from entering the conduit line. Fixtures are made in cast iron (electro galvanized), cast brass and cast aluminum alloy.

### Specifications

Brass fixture bodies—standard finish is black oxidized throughout; special finishes upon request.

Iron fixture bodies—standard finish is electro galvanized.

Aluminum fixture bodies and guards—standard finish is natural aluminum color.

Reflectors are made of heavy steel, porcelain enameled green outside, white inside.

Guards are heavy gauge brass round wire, mounted on threaded brass ring; standard finish, black oxidized.

All globes are made of best American flint glass and guaranteed true to size. Only natural colored glass is used. Seating surfaces are ground true and smooth.

High grade cloth inserted rubber gaskets are furnished as standard equipment. Gaskets of other material will be supplied on request.

Receptacles are moulded composition, with shell moulded in base to provide for air-tight condition even though the globe should become broken.

Maximum size of conduit, 3/4 inch. When ordering, specify outlets required.

Standard package, 25.

## R & S Pendent Type Vapor-Proof Fixtures

### With RLM Reflectors

Fixtures are complete with RLM reflector. They are furnished with or without guard.

No. 404

**R & S Marquise Type Watertight Fixtures With Screw Globes**

This type of fixture is suitable for all outdoor lighting in damp, moist or dusty places. It is particularly designed for marquise lighting, and has been used successfully in a number of installations for illuminating the borders of hotel, theatre and auditorium marquise.

Weatherproof, with opal, ground or clear glass globe. Made for lamps up to 60-watt size only.

No. 613

Boxes drilled and tapped for 1/2 or 3/4-inch conduit as directed, without extra charge.

Nos. 610, 611 and 612 have iron box for conduit with brass base and lamp receptacle. In ordering, specify size and number of outlets.

Nos. 613, 614 and 615 have brass base, no box, no receptacle, intended for use where wiring and receptacle are in channel iron of marquise.

Cat. No.	Description	Weight Pounds	Price Each
610	Complete with Opal Globe No. 808.....	3	\$2.75

## Wood Poles

In requisitioning poles the 3 principal determining factors are as follows:

- 1—Species of wood to meet specific requirements;
- 2—Quality of the poles;
- 3—Service on shipments.

### 1—Species

Certain species of wood are best fitted for one kind of installation. In recognition of this we have available in various pole yards one or more of the 5 species that are generally used for poles: (1) western red cedar, (2) northern white cedar, (3) creosoted yellow pine, (4) chestnut, (5) lodgepole pine.

### 2—Pole Quality

Poles sold by the Graybar Electric Company are a quality product. All conform to nationally accepted standards. Inspections are thorough.

### 3—Service on Shipments

At Minneapolis, and Everett, Washington, cedar poles are concentrated, handled by steam equipment, etc. The stock runs fifty thousand poles and more.

At Texarkana, Texas, and Beaumont, Texas, the largest wood preserving plant thus far ever built makes available a service on pine poles never before undertaken by any producer.

Emergency service is always available to customers when the unforeseen happens.

## Preservative Treatment for Cedar Poles

Showing piping arrangement in pump room of National Pole Cedar Treating Plant at Minneapolis. They are so flexible that they can be put into any tank either through the top or the bottom and so arranged that a continuous circulation of oil can be maintained. In this room are two 2500GPM pumps operated by 240 h. p. motors. The oil can be changed from hot to cold in any one of these treating vats within 3 minutes

### Description

Years of scientific observation by engineers of the largest pole users in the United States has demonstrated that the life of cedar poles can be increased by the proper open tank butt-treatment. If a satisfactory permeation is obtained in the ground line area, the life of a pole, butt-treated in creosote, will depend upon the mechanical wear of the pole above.

Unless there is a thorough and even permeation, decay will occur in small pockets and in checks through the treated wood.

Proper treatment more than doubles cedar pole value, as the original factor of safety is maintained far beyond the replacement date of the untreated pole.

Five methods of treating cedar poles are:

1. Brush treatment at individual pole yards.
2. AA treatment with open tanks (15 minutes hot creosote).
3. A treatment with open tanks (15 minutes hot carbolineum). More expensive, but no more efficient than the AA treatment. We do not supply this treatment.
4. B treatment with open tanks (4 hours hot—2 hours cold creosote).
5. Puncturing treatment guaranteeing permeation.

If the best material and workmanship are used, any one of these methods is beneficial but varies in degree with the grade of material and workmanship. The first four methods should be used only with seasoned poles. Authorities agree that penetration and oil stability are essential to lasting results. Any method selected insures greater line life if pure distillate of coal tar is used. The purity of the distillate is of paramount importance.

Poles in the cylinder ready to seal the door and begin treatment. The largest creosoting cylinder in the treating industry. It is one of the cylinders located at the Texarkana Plant of the International Creosoting & Construction Company and measures 165 feet long and 9½ feet in diameter.

These poles are 100 feet long. We carry poles of all sizes at all times

## Preservative Treatment for Cedar Poles

One of the Butt Treating Vats Showing View of 130,000 Gallon Reserve Creosote Tank at Minneapolis Plant

### Brush Treatment

Brush treatment of poles consists in applying hot preservative to the ground line surface of a pole with a brush. This method is not in general use among pole dealers, but is used by operating companies for local treatment.

For effective brush treatment the highest boiling point coal tar distillate obtainable is recommended. High boiling creosote oils penetrate more readily and are free from black and sticky tars that do not penetrate but concentrate on the outer wood cells. Graybar Electric "Sozol" has been developed for this work.

### Sozol

Sozol is for brush application for poles and all line construction woods.

From a quality standpoint there is nothing on the market comparable with it. It is pure distillate of coal tar, that is, it is a product obtained directly by distilling off the volatile products of coal tar, and when obtained it is not adulterated by adding any other substances. It is not a by-product, that is, the distillation process is primarily for the purpose of securing this particular oil—not for some other distillate of coal tar in which this oil or a modification of it would come off in the distilling process. All creosote wood preserving oils have two faults in a greater or less degree. Either they are so thin and volatile that when applied with a brush or by open tank method, they partially evaporate or leach out and their preservative qualities are thus impaired; or, they are adulterated with heavier coal tar oils and these heavier constituents clog up outer cells of the wood and prevent the penetration required for effective treatment.

Sozol is of high specific gravity and greater body and, in consequence, is more stable than ordinary pure creosote oils sold for wood preserving. It is not as volatile as these oils; at the same time, it has absolutely no viscous properties which interfere with effective penetration as in the case of mixed oils. In short, it has permanency and maximum property. It is more than a creosote oil, it is a special wood preservative of stability.

Sozol is supplied in drums, barrels and cans.

## Preservative Treatment for Cedar Poles

### Treatment B

Scientific B Treatment, Average Penetration,  $\frac{5}{32}$ -Inch

Treatment B provides for submersion of pole butts in hot creosote for several hours, after which the bath is changed to cold creosote, the duration of each immersion depending upon several factors, but principally upon the degree of seasoning. The intent of treatment B is to give poles as near a full sap penetration as possible but there is no guarantee.

### Pressure Treatment

Pressure treatment, or cylinder treatment impregnating the entire length of the pole, is not required for the preservation of the more durable species of wood, such as chestnut, northern white cedar and western red cedar, as these are subject to rapid decay only at the ground line. Pressure treatment is applied, however, to the different species of Southern pine. This we cover fully under pine poles.

### Puncturing Treatment

#### Permax Method Worth More Money

The perforating treatment of cedar poles is the logical development of the open-tank process.

The preservative value of creosote has been recognized for many years and, as a treatment for cedar poles, was first applied with a brush. However, it was found that the painting did not get the creosote into the smaller and deeper season checks and cracks, so the poles were dipped into the creosote. This treatment was named AA and was specified as a continuous immersion for fifteen minutes in creosote heated to not less than 212° F., and not more than 230° F.

The penetration secured by the AA treatment was so shallow and unreliable that the time of treatment was lengthened to a period of from four to six hours in creosote ranging from 212° F. to 230° F. and an immediately succeeding bath in cold creosote for two hours at not more than 110° F. This treatment was called B (see above). By this process a deeper penetration was secured and better results in service were obtained, but it was found that the absorption was irregular. In fact, in seasoned timber of apparently the same condition, some poles absorbed the creosote readily and showed a good penetration while others gave evidence of one surface treatment. Likewise, in the same pole there might be a full sapwood penetration at one point, whereas, in an area but a few inches away there might be little penetration. This uneven absorption naturally led to very uncertain results in service because, after the poles were set in line and were subjected to the various conditions of the seasons with the resultant checking and parting of the fibres, the cracks descending from the upper untreated portion of the pole entered the treated area and where they ran through the shallow treatment they opened up and exposed untreated timber. This permitted the fungi to come in direct contact with untreated fibres with the resultant infection and rotting of the wood within the pole behind the layer of treated timber. This action proved that any treatment was only as effective as the protection given by the shallowest penetration at any point in the ground line area.

This conclusion necessitated the development of a uniformly deep permeation. Much research and experimental work was done to develop a treating process which would give this result.

## Puncturing Treatment for Cedar Poles

Showing Permex Machine Ready to Receive Pole Coming in from Left for Perforating. Note Carriage in Low Position, which is Afterwards Raised to Head of Machine

A microscopic study of cedar shows the wood to be very porous. It is made up of long, hollow longitudinal fibres which are spindle-shaped cells, arranged in rings from the pith to the bark. These rings of cells form the annular rings. These fibres, besides furnishing support for the tree, provide means for the movement of the sap. Other than the longitudinal fibres are the medullary rays or cells which extend radially from the pith into the bark. There are no passages in the timber other than the cells within these longitudinal fibres and medullary rays and the sap moves from cell to cell through minute pits or pores which connect adjoining cells at their points of contact.

Although cedar fibre will absorb from 12 per cent to 15 per cent of its oven dry weight in water it will not absorb creosote. Examination, under the microscope, of treated cedar discloses creosote within the cells but shows no absorption in the fibre. Consequently, in order to obtain penetration in cedar the movement of creosote must be by means of the openings in the cells and not through the cell fibre.

If the conditions within the timber remain unchanged after being cut, not so much difficulty would be experienced in treating it, but such is not the case. The sap is a watery solution of sugars, starches, resins, etc., and, while the tree is alive, is constantly in solution and circulating, but, when the timber is cut, peeled and begins to season, some of the water from the sap evaporates and concentrates the sugars and resins which seal up most, if not all, of the minute pits or pores between the adjoining cells.

## Puncturing Treatment for Cedar Poles

Continued

Permex Machine with Pole in Position Ready for Puncturing. The Oil Lift that Raises the Lower Carriage into the Head of the Machine and Acts as a Cushion while the Machine is in Operation

In our Permex treatment no external pressure is applied. The movement of creosote in the cells is entirely dependent on the action of capillary attraction. This is created by first applying heated creosote ranging from 212° to 223° F. for a continuous period of eight hours, thereby vaporizing the moisture in the sapwood, causing it to expand 1/273 times its volume for every degree of heat through which it passes and partially expelling it from the timber and then applying an immediately succeeding bath in cold creosote from 110° F. to 150° F. The cold treatment contracts the vapors, forms a partial vacuum within the cells and draws the surrounding creosote into the timber. This action creates an appreciable longitudinal creep or movement but does not produce much penetration radially or tangentially.

The loss in strength to a pole through perforation has been determined to be in direct proportion to the percentage of the circumference cut away in a horizontal plane and to the depth of the incision.

A scientific machine for perforating, therefore, meets the existing structural conditions in cedar. It was designed to cut radial passages through the fibre just to the depth of the required penetration. The incisions cut the fibres, opened the ends of the longitudinal cells, and provided passage for the movement of creosote so that with the least amount of timber cut in a horizontal plane and with perforations only to the depth of the required penetration, a complete saturation of the fiber was obtained between all perforations.

There are many other perforating machines in operation, but they have been designed with no consideration of the conditions of cedar with the result that their perforations are made deeper than necessary and are spaced so close that the timber is weakened to a great extent and, in many cases, the sapwood is so mutilated that it is made no more than a loosely adhering shell. Even though such perforating may produce the required penetration, it is detrimental to the pole, inasmuch as the strength of the pole is greatly reduced and the sapwood is made a weakened shell which will not withstand the abuses of service.

Some apply perforating by means of a studded belt or plate. These belts or plates are about eighteen inches long by six inches wide and contain from seventy-five to one hundred and twenty-five teeth. A mallet is used to pound the teeth into the timber. When the plate is removed, the teeth, which are binding the timber between them, tear the fibres and in many cases loosen the outer sapwood from the heartwood. This produces a very weak and unsatisfactory condition. Furthermore, it is impossible to obtain uniform depth of perforation and impregnation by using belts or plates because the body holding the teeth is not flexible and cannot follow the crevices and irregularities of the timber. On the other hand, the teeth of our machine are inserted into the timber in such a way as to insure a uniform depth of perforation regardless of the uneven surface over which it has to work.

**Puncturing Treatment for Cedar Poles**

Continued

Average Penetration of Punctured Section, 2 1/2-Inch, by our Permex Method

Average Penetration, 1 3/32-Inch, Unscientific Hand Punctured Treatment

It was thought at first that if the same penetration could be obtained in a cedar pole without perforating as with perforating, that better service results could be obtained. Experience has proven the contrary to be true. If creosote were not volatile, and if its preservative value were of indefinite existence and if the layer or treated timber around the outside of the pole were never broken, then a creosoted area on the surface, regardless of depth of penetration, would be sufficient to preserve the pole indefinitely. It has been found, however, in green and even in seasoned poles that season checking occurs after the poles are set in line. But in perforated poles, these checks descending from the upper untreated section run out when they reach the treated, perforated area. Thus the perforating protects the poles, not only in securing a deeper, more uniform impregnation, but also in providing means of relieving the stresses which cause checking in treated ground line section thereby insuring constant and complete protection against infection of the timber.

Two of these proper Permex machines are at the Minneapolis transfer yard where the National Pole & Treating Company maintains an average stock of 80000 poles. Thus, one machine can handle 3/8-inch orders, and the other 1/2-inch orders without stopping to change the knives or change substitution of the order. A third machine is operated by the National Pole & Treating Company at Everett, Washington. These yards handle this work for us.

It is felt that studies by means of an increment borer could well be made by pole users. One large Central Station, whose engineers make such studies independent of the operating department, reported informally, that our Permex Treatment was 30 per cent more efficient than some others on their yards. In making increment borings, the oil in the outside of the boring is naturally smeared by the auger indicating a deeper penetration than the actual.

For a real test, therefore, take a sharp knife, such as a razor blade, and split the boring in half and examine the penetration on the inside. Rest the boring on a smooth clean board when doing this.

There is also much opportunity for the use of Lufkin special pole tapes in checking circumferences at the six-foot point on poles purchased under "Class" specifications.

**American Telephone & Telegraph Co. Specifications No. 6060 for Butt Treating Cedar Poles**

Replacing Specification No. 4287

This specification outlines the requirements for the butt treatment of cedar poles which are prepared for treatment by perforating the ground line section.

**Material Requirements**

**POLES.**—Poles treated under this specification shall conform to all of the requirements of the specification and drawings covering untreated poles of timber referred to in order. When order calls for seasoned poles, poles to be treated shall not have a moisture content greater than 33 per cent. When seasoned poles are not called for, poles to be treated may have a moisture content not greater than 50 per cent.

**PRESERVATIVE.**—Preservative used for impregnating poles ordered under this specification will hereinafter also be referred to as oil. Preservative shall conform to requirements of Specification for Dead Oil of Coal Tar for Brush and Open Tank Treatments hereinafter referred to.

**STORAGE OF POLES PRIOR TO TREATMENT.**—Poles which are stored at treating plant prior to treatment shall be stacked on land from which vegetation has been removed. Bottom layer of any pile of poles held for seasoning shall be supported upon treated or other non-decaying skids in such a manner that no part of the pole shall be less than 1 foot above the surface of the ground.

**Preparation for Treatment**

All outer and inner bark shall be completely removed from all parts of the surface of the pole which are included in minimum length of treated section hereinafter specified. Reduction of circumference, at any point in the section to be perforated, in shaving or cleaning to prepare for treatment shall not exceed 1/2 inch.

A section of the pole surface 3 feet in length and extending completely around the circumference shall be perforated as hereinafter described, so that the upper line of perforations shall not be less than 9 inches nor more than 15 inches above the ground line given for the pole length in the following table:

Length of Pole . . . feet	20 or Less	22	25	30	35	40
Distance of Ground Line Above Butt . . . feet	4	4 1/2	5	5 1/2	6	6
Length of Pole . . . feet	45	50	55	60	65	70
Distance of Ground Line Above Butt . . . feet	6 1/2	7	7 1/2	8	8 1/2	9

Perforations shall be made by teeth designed to cut the wood fibres on a diagonal across the full width of the perforation. The thickness of the teeth shall not be more than 1/8 inch. Width of teeth shall be such that length of perforations measured along pole, will not conflict with spacing of perforations hereinafter prescribed. Teeth shall be inserted into pole to a depth of not less than 3/8 inch nor more than 1/2 inch.

The sum of the widths of all perforations in any encircling row shall not exceed 30 per cent of the circumference at the location of the row.

The pattern of perforations shall be in accordance with the drawing hereinafter referred to.

In any cases where the machine misses and fails to make any of the perforations called for by the system required or by its approved equivalent, the missed places shall be filled in by hand so as to establish the correct pattern.

**Treatment**

**LENGTH OF SECTION TO BE TREATED.**—The minimum length of treated section of a pole shall be in accordance with the following table. The maximum length shall not exceed the figures in this table by more than 2 feet. In all cases the uppermost perforations shall be submerged.

Length of Pole . . . . . feet	20	22	25	30	35	40
Minimum Distance of Plane at Upper End of Treated Section from Butt of Pole . . . . . feet	5	5 1/2	6	6 1/2	7	7
Length of Pole . . . . . feet	45	50	55	60	65	70
Minimum Distance of Plane at Upper End of Treated Section from Butt of Pole . . . . . feet	7 1/2	8	8 1/2	9	9 1/2	10

## American Telephone & Telegraph Co. Specifications No. 6060 for Butt Treating Cedar Poles

### Treatment—Continued

**METHOD OF TREATMENT.**—The pole butts shall be treated by immersion in the preservative to the depth herein before specified. The immersion to this depth shall be continuous, except for the time occupied in making changes from hot to cool oil or from cool to hot oil as hereinafter specified.

For not less than 8 hours, the temperature of the oil in contact with surface of poles shall be maintained between limits of 212 degrees F. and 230 degrees F. At the end of this period, either oil shall be allowed to cool or hot oil shall be removed from tank and cool oil immediately substituted for it. If latter procedure is followed, change of oil shall be made within a period of 15 minutes.

Pole butts shall remain in this cool oil for at least 2 hours. At the end of this period, poles shall not be removed from treating tank unless temperature of oil has fallen to between 110 and 150 degrees F. and the pole butts shall have remained in oil between these temperatures for at least 10 minutes.

Subsequent to the immersion in cool oil the poles may be immersed in a bath of hot oil whose temperature shall not exceed 230 degrees F. for not more than 10 minutes.

### Storage and Handling

**STORAGE OF TREATED POLES.**—If for any reason the treated poles have to be held in storage for more than 2 weeks, they shall be stacked in close piles upon treated or other non-decaying skids. The skids shall be of such strength and such dimensions as to support the poles without producing noticeable distortion of any of them. The skids shall be of such height that no part of any pole shall be less than 1 foot above the surface of the soil.

**HANDLING OF TREATED POLES.**—The protection of treated poles from decay is dependent upon the continuity of a relatively thin treated layer which has been impregnated with preservative. Care shall be taken to avoid injury of the treated butt when the poles are moved to new locations. Treated poles shall not be dragged along ground. Cant hooks, pole tongs and other tools which might cut or bruise the surface layers of poles shall not under any condition be applied to the treated section.

### Inspection

The manufacturer shall furnish proper facilities at his plant for the inspection of this material for the requirements of this specification. Samples for analysis of preservative for use under this specification may be taken whenever desired from any container in which it is being stored or used.

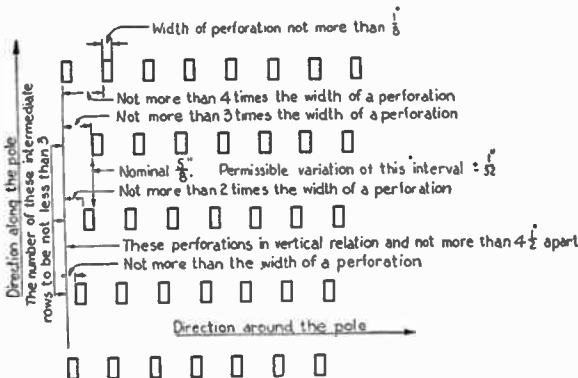

### Supplementary Specification and Drawing

The following specification and drawing are supplementary to this specification:

Specification for Dead Oil of Coal Tar for Brush and Open Tank Treatment.

Drawing No. 47-L-85—Cedar Poles—Pattern for Perforating Poles to Facilitate Treatment.

### Cedar Poles—Pattern for Perforating Poles to Facilitate Treatment

Repeat the pattern as many times as required to perforate prescribed 3 feet of pole surface and to encircle pole.

**Red or Western Cedar Poles**

**National Electric Light Association Specifications**

Same as A. T. & T. Co. Specification

The material desired under these specifications consists of poles and guy stubs of the best quality of either seasoned or live green cedar of the dimensions hereinafter specified. The poles covered by these specifications are of Western white cedar, otherwise known as red cedar, Western cedar or Idaho cedar. Seasoned poles shall have preference over green poles, provided they have not been held for seasoning long enough to have developed any of the timber defects hereinafter referred to. All poles shall be reasonably straight, well proportioned from butt to top, shall have both ends squared, sound tops, the bark peeled, and all knots and limbs closely trimmed.

When the dimension at the butt is not given, the poles shall be reasonably well proportioned throughout their entire length. No pole shall be over six inches longer or three inches shorter than the length of which it is accepted. If any pole is more than six inches longer than is required, it shall be cut back.

**Minimum Dimensions of Poles in Inches**

Length of Poles Feet	Class A	Class B	Class C	Class D
	28	25	22	18½
20	30	28	26	24
25	34	31	28	26
30	37	34	30	28
35	40	36	32	30
40	43	38	34	32
45	45	40	36	..
50	47	42	38	..
55	49	44	..	..
60	52	46	..	..
65	54	48	..	..
70	55	50	..	..
75	56	52	..	..
80	57	54	..	..
85	59	56	..	..
90	61	58	..	..

**Quality of Timber**

**DEAD POLES.**—No dead poles and no poles having dead streaks covering more than one quarter of their surface shall be accepted. Poles having dead streaks covering less than one quarter of their surface shall have a circumference greater than otherwise required. The increase in the circumference shall be sufficient to afford a cross-sectional area of sound wood equivalent to that of sound poles of the same class.

**TWISTED, CHECKED OR CRACKED POLES.**—No poles having more than one complete twist for every twenty feet in length, no cracked poles and no poles containing large season checks shall be accepted.

**CROOKED POLES.**—No poles having a short crook or bend, a crook or bend in two planes or a reverse crook or bend shall be accepted. The amount of sweep measured between the six foot mark and the top of the pole, shall not exceed one inch to every six feet in length.

**"CAT FACES."**—No poles having "cat faces," unless they are small and perfectly sound and the poles have an increased diameter at the "cat face," and no poles having "cat faces" near the six foot mark or within ten feet of their tops shall be accepted.

**SHAVED POLES.**—No shaved poles shall be accepted.

**WIND SHAKES.**—No poles shall have cup shakes (checks in the forms of rings) containing heart or star shakes, which enclose more than 10 per cent of the area of the butt.

**BUTT ROT.**—No poles shall have butt rot covering in excess of 10 per cent of the total area of the butt. The butt rot, if present, must be located close to the center in order that the pole may be accepted.

**KNOTS.**—Large knots, if sound and trimmed close, shall not be considered a defect. No poles shall contain hollow or rotten knots.

**MISCELLANEOUS DEFECTS.**—No poles containing sap rot, woodpeckers' holes or plugged holes, and no poles showing evidence of having been eaten by ants, worms or grubs, shall be accepted.

**MARKING.**—Every pole shall be scored with a cross at a point ten feet from the butt.

**Red or Western Cedar Poles**

**Western Red Cedar Association Official**

**Specifications**

**Top Measure Poles**

8	30	550	8	65	1850
6	35	450	9	65	2200
7	35	550	8	70	2200
8	35	650	9	70	2600
9	35	800	8	75	2600

Poles under tentative N. E. L. A. Western Red Cedar specifications 1922 will be priced on application.

## Cedar Poles

### Tentative Specification Western Cedar Poles

Studied by the N.E.L.A. in 1922 but Not Officially Adopted

To make available complete specification information on all species of poles, the following specification known as tentative N.E.L.A. Standard is published.

This specification for Western red cedar poles was before the Association in the year 1922-23 and has been adopted as standard by a few of the operating companies.

Lgth Ft.	Ground Line Distance from Butt Ft.	AAA		AA		A		B

## Increment Borers

By turning this instrument it is forced to any desired depth into the pole being examined, and a core, the boring, may be withdrawn from it, which is a complete cross section of the wood.

The depth of penetration of the creosote is determined by its color; the condition of the wood, the annular rings, etc. are clearly visible.

This is the recognized method of determining creosote penetration. The holes do no harm if they are carefully plugged with tight-fitting creosoted plugs.

Prices upon application.

## Northern White Cedar Poles

Otherwise Known as Maine Cedar, Michigan Cedar or Canadian Cedar

### Northern White Cedar Association Specifications Top Measure Poles

All posts and poles shall have been cut from live, green, growing Northern White Cedar timber.

**PERCENTAGES OF MAXIMUM DEFECT.**—Not more than 10 per cent. of the number of pieces of any lot or shipment shall contain the maximum crook or butt rot.

**VARIATION IN SIZES.**—If not to exceed 2 per cent. of the pieces in any lot or shipment are below the minimum size, and there is an equal number of pieces as large as the minimum of the next larger size, the shipment shall be considered as conforming to these specifications so far as size is concerned.

**LENGTHS.**—Any post or pole 7 feet to 18 feet inclusive may be either two inches longer or two inches shorter than its specified length. Any pole 20 feet and longer may be short of its specified length one-half an inch for each five feet of its length, or it may be six inches longer than its specified length.

**MANUFACTURE.**—All posts and poles shall be peeled and knots closely trimmed.

**KNOTS.**—Knots are permitted if sound, smoothly trimmed and do not plainly impair the strength of the pole or post.

**SHORT KINKS.**—Short kinks not permitted.

**ROT.**—

- (a) Sap or skid rot not permitted.
- (b) Poles 16 feet and longer having minimum top sizes, of the dimensions required, must have sound tops. Poles 16 feet and longer having tops one inch or more in circumference above the minimum top sizes, may have one pipe rot not more than one-half inch in diameter. Posts or poles 7 feet to 14 feet inclusive, pipe rot is permitted.
- (c) Butt and ring rot combined shall not exceed 10 per cent. of the area of the butt.

**TWIST.**—Winding twist permitted unless very unsightly and exaggerated.

**CAT FACES.**—Cat faces permitted if sound, and if their distance from the top of the pole is not less than 20 per cent. of the length of the pole in 30 feet and shorter poles, and 25 per cent. on 35 feet and longer poles.

**DISCOLORATION.**—Discoloration not considered a defect under these specifications.

**CROOK OR SWEEP.**—1. Posts or poles 7 feet to 14 feet inclusive. One-way sweep not exceeding maximum shown in Table No. 2 is permitted.

- 2. Poles 16 feet and longer.
  - (a) **BELOW GROUND LINE.**—Sweep not to exceed diameter of butt.
  - (b) **ABOVE GROUND LINE.**—Reverse sweep, and two-way sweep, meaning a sweep in two planes allowed providing line drawn from center of pole at top to center of pole at ground line (see Table No. 2) does not leave the pole at any point. One-way sweep allowed not to exceed maximum shown in Table No. 2.

**BUTT ROT.**—The Association Specifications admit butt rot to the extent of 10 per cent. of the total area of the butt.

**CROOK.**—The rules admit a crook one way of 5 inches on a 25-foot pole, 6 inches on 30-foot pole, 7 inches on a 35-foot pole, measuring the crook from a point 6 feet from the butt to the top of the pole.

Lengths, Ft.	Maximum Sweep, in.	Between Points	Ground Line

Pine Poles Ready for Quick Shipment Stock Length, 16 to 75 Feet

The creosoted pine pole has many natural advantages which account for its wide-spread use and popularity. Probably the greatest single incident that has ever occurred to confirm the judgment of engineers in the selection of this pole was the terrific sleet storm of December, 1924. The most notable feature of the whole storm was the remarkable manner in which creosoted pine poles withstood the great ice and wind loads.

Our creosoted pine pole has a long life because it is permanently fortified against decay by the high grade creosote oil injected under a heavy pressure. We recommend a uniformly deep penetration of the preservative into the wood as developed by the International specifications for the manner of treatment and American Wood Preservers' Association standard specification for Grade 1 creosote.

Creosoted pine is the strongest of the commonly used pole woods. Hence it is standard practice in pine line construction to use smaller poles or fewer poles per mile, thus reducing costs.

The strength of the creosoted pine pole does not decrease during years of service. Long after installation the factor of safety of a pine line is as great as when it was first built.

Specifications permit the use of only the best creosote produced in either America or Europe and the use of this high grade oil explains the cleanliness and non-bleeding qualities of Graybar Electric poles.

The average taper of the yellow pine pole, which can be counted on as approximately 1 inch in 10 feet explains its symmetry, uniformity and attractiveness in the line. It must be remembered that this figure is an average over all lengths and sizes, and being an average cannot invariably be applied to individual poles or to one individual size or to one individual order.

Quick delivery of these poles can be made, for large quantities of all sizes are maintained at the plant ready for immediate shipment. At any time our representative will gladly call on a customer personally for a discussion of his requirements. Technical data will be supplied upon request.

Wood Preservation

Development of the Art

As long ago as fifty years the term "Commercial Creosote Oil" could be referred to, with confidence in what the term meant; but in recent years the term has been abused. "Commercial Creosote Oil" as the term is used today, generally refers to an inferior substance to that defined by this term in years gone by. The "Commercial Creosote Oil" of today can be, and generally is, a mixture of low grade, inferior Creosote Oil and tar. Despite specifications usually written to limit the tar content, this percentage sometimes runs all the way up to ninety-five per cent and is used under the indefinite term "Commercial Creosote Oil."

Real coal tar Creosote Oil is a pure distillate, free from admixture of any kind. A mixture of Creosote Oil and tar is not a Creosote Oil. It is therefore necessary for the buyer to be careful not to be misled by a reference to a mixture as "Creosote Oil" whether termed "Commercial" or otherwise.

**Creosoted Yellow Pine Poles**  
Wood Preservation  
Developments of the Art  
Continued

Pure creosote oil, of high gravity—means stability. The same gravity can be falsely made up by adding coal tar to a light volatile creosote oil.

**Seasoning**

At cutting, wood contains a high percentage of moisture which must be eliminated to allow the entrance of the preservative. Removing this moisture is called seasoning. This can be accomplished by natural seasoning, or seasoning in air, requiring proper piling for a period of 2½ to 4½ months. It may also be accomplished by artificial, or seasoning by steam. This requires only a few hours and has the advantage of sterilizing and opening the pores of the wood rendering it receptive to the preservative.

The difference in these two processes when properly handled is small but no other single item of the preservation process requires closer attention than seasoning. Poles at this stage of manufacture must be perfectly sound and in the best possible condition, otherwise an internal rot is set up which may prove most insidious and destructive to line life.

We always recommend the best creosote oil in the empty cell process, which where a minimum quantity of oil is used, is the most stable; a pure coal tar distillate will have more oil left in the pole in five years with 6 pounds used in the original treatment, than would be found in the pole treated with 12 pounds of the adulterated creosote oil.

Selected white wood and the best Oil unite in forming the efficient Creosoted Yellow Pine Pole.

The Graybar Electric Company guards, by scientific detail specifications, against both inferior products and the manipulation of the best products by man. It selects its poles and it selects, with equal care, its Creosote Oil.

Creosote Oil, a pure distillate of coal tar—in combination with the best wood, makes the best Creosoted Yellow Pine Pole.

We advocate same oil, empty cell treatment 8 pounds final retention, for a cheaper pole, probably good for 40 years.

**American Telephone & Telegraph Co.**  
**Specifications No. 6050 for Creosoted**  
**Southern Yellow Pine Poles**

Adopted in 1928 as Revising and Replacing Specification  
Nos. 4209 and 4429

This specification is for use in supplying the American Telephone and Telegraph Company and Associated Companies of the Bell Telephone System.

The material desired under this specification consists of creosoted Southern yellow pine poles, divided into classes with respect to dimensions and framed for various purposes as hereinafter described.

Orders under this specification should state the length and circumference class desired and should specifically call for

- "Poles" when framing with gains and bolt holes is desired; or for
- "Cable Poles" when framing only with bolt holes for the attachment of cables is desired; or for
- "Guy Stubs" when roofing only is desired; or for
- "Braces" when framing for a push brace is desired.

If framing differing from the forms hereinafter described is desired, the order should include full details.

The specification and drawings are supplementary so that a detail described in either is to be interpreted as a requirement just as if it appeared in both.

**Definition of Terms**

The following definitions shall apply in this specification:

**BLUE SAP STAIN.**—Is a bluish stain of sapwood, caused by the action of certain molds and fungi, that is not accompanied by softening or other disintegration of the wood.

**CHECKS.**—A check is a lengthwise separation of the wood fibres caused by forces set up within the wood due to shrinkage during seasoning.

**A HEART CHECK.**—Is one extending from the pith toward, but not to, the surface of the piece.

**CRACKS.**—Are fractures across the lengthwise fibres of the wood resulting usually from mechanical stresses.

**American Telephone & Telegraph Co.**  
**Specifications No. 6050 for Creosoted**  
**Southern Yellow Pine Poles**

Nos. 4209 and 4429

Continued

Poles in process of seasoning. Illustration shows the uniformity and symmetry of pine poles and shows a part of the large stock carried on hand at all times; quick shipment is possible

**Definition of Terms**

**DECAY, ROT, DOTE AND RED HEART.**—Decay is disintegration of wood substances due to the action of wood-destroying fungi. Rot and dote mean the same as decay. Red heart is the incipient stage of a destructive heart rot.

**DISTANCE FROM BUTT.**—Where distance from butt is specified, the measurements shall be made from the average level of the sawn butt surface.

**FACE OF POLE.**—The face of a "pole" is the side on which the gains are located. The face of a "Cable Pole" or a guy stub is the side under the peak of the roof. The face of a push brace is the side on which the notch is located.

**GRAIN.**—Spiral-grained or twist-grained wood is that in which the fibres take a winding course around the tree, as though the tree has been twisted about its axis.

**INSECT DAMAGE.**—Holes or tunnels entering the body of the pole and indicating attack by worms, grubs or insects shall be considered insect damage. The scoring or channeling of the pole surface by insects working under the bark, but not into the sapwood, shall not be classed as insect damage.

**KNOT DIAMETER.**—The diameter of a knot is its diameter measured at the surface of the pole in a direction at right angles to the lengthwise axis of the pole.

**LIVE TIMBER AND DEAD STREAKS.**—Live timber is that cut from trees which were standing and living at the time of cutting. Dead streaks start from the butt and are portions of the sapwood in which the life processes had ended prior to the cutting of the tree, differing therein from wounds—such as catfaces, scars and turpentine cuttings—where the growth of new wood and the accumulation of resin show that life processes are still acting to repair the injured part. Scars or catfaces are surface depressions in the body of the pole, generally elliptical in shape, resulting from tree wounds where healing has not reestablished the normal cross-section of the pole. A shake is a lengthwise separation of the wood fibres between annual growth rings. Short crooks are localized deviations from straightness which, within any section of five (5) feet or less in length, reach an amount of more than five (5) inches. Sweep is the deviation of a pole from straightness. Sweep shall be measured as indicated in diagram.

**Standard Dimensions and Shape**

The poles shall be of the designs and dimensions shown. Where maximum or minimum dimensions are shown or indicated by allowable variations, the dimensions shall be within the limits specified. Where limits are not shown, the dimensions shall correspond reasonably to the stated figures.

**LENGTH.**—Poles under fifty (50) feet in length shall not be over three (3) inches shorter or six (6) inches longer than their nominal length. Poles fifty (50) feet or over in length shall not be over six (6) inches shorter or twelve (12) inches longer than their nominal length.

The length of all poles, except push braces, shall be the distance between the butt and the base of the roof. The length of braces shall be as shown on the drawing "Framing of Creosoted Yellow Pine Cable Poles, Guy Stubs and Braces" hereinafter referred to.

Southern Yellow Pine Poles**

Adopted in 1928 as Revising and Replacing Specification  
Nos. 4209 and 4429  
Continued

**Standard Dimensions and Shape**

**CIRCUMFERENCE.**—Poles shall be classified with respect to their circumference in accordance with the following table entitled "Minimum Circumferences Creosoted Yellow Pine Poles." This table gives the minimum allowable circumference at six (6) feet from the butt and at the top for poles of each class and length listed, but it does not preclude the acceptance of poles having greater circumferences at these points of measurement than those listed in the table. The top dimensional requirement shall be understood to apply at a point corresponding to the minimum length permitted for the pole.

50	7	17	33 1/2	..	..	..	..	..	..		

**SHAPE.**—Poles shall be free from short crooks. Poles may have sweep in two planes or sweep in two directions in one plane, provided that a straight line connecting the center of the butt with the center of the top does not at any intermediate point pass through the external surface of the pole.

Where sweep is in one direction only, the amount between the top and the butt shall not be greater than one (1) inch for each five (5) feet of length.

**Material Requirements**

All poles shall be cut from live Southern yellow pine timber (*Pinus palustris*, *Pinus echinata*, *Pinus taeda*, *Pinus caribaea*, and *Pinus rigida serotina*).

All poles shall be free from decay, rot, dot, red heart, dead streaks, cracks and bird holes. Poles shall be free from all other imperfections exceeding in amount the allowances specified.

Blue sap stain and hollow pith centers in the tops or butts of poles or in knots are not imperfections under this specification.

**INSECT DAMAGE.**—Insect damage is permitted to the following extent: Pin holes circular in outline, less than one sixteenth (1/16) of an inch in diameter, and not greater in number than fifteen (15) per four (4) square inches.

**GRAIN.**—No pole shall have more than one complete twist of grain in any twenty (20) feet of length.

**Shakes and Checks (Before Treatment)**

**SHAKES.**—The tops of poles shall be free from shakes. Shakes in the butt surface not over one (1) foot in depth and extending over not more than one quarter (1/4) of the circumference are permitted, provided they are at least one (1) inch distant from the edge of the butt.

**American Telephone & Telegraph Co.  
Specifications No. 6050 for Creosoted  
Southern Yellow Pine Poles**

Adopted in 1928 as Revising and Replacing Specification  
Nos. 4209 and 4429  
Continued

Poles in process of seasoning. Illustration shows storage yard of the International Creosoting & Construction Company, illustrates the uniformity, symmetry and general good appearance of this manufacturer's poles

**Shakes and Checks (Before Treatment)**

Shakes over one (1) foot in depth or shakes extending over more than one quarter (1/4) of the circumference shall be permitted only when they fall inside a circle whose center is the pith center of the piece and whose diameter is one half (1/2) the diameter of the butt.

**CHECKS.**—The top and side surfaces of the pole shall be free from injurious checks. Heart checks are permitted in the butt surface.

**SCARS.**—No pole shall have had a turpentine face, a cat-face or other form of scar located within two (2) feet of the ground line hereinbefore established in the table entitled "Minimum Circumferences Creosoted Yellow Pine Poles."

In other sections of the pole, scars, which have been smoothly trimmed so as to remove all bark and all surrounding or overhanging wood not completely intergrown with the wood of the body of the pole, are permitted, provided

(1) That such trimming does not result in abrupt changes in the contour of the pole surface or have a depth of more than one (1) inch, except that where the diameter of the pole at the location of the scar is more than ten (10) inches, the depth may be one tenth (1/10) of the diameter; and

(2) That the circumference of the pole at any point on trimmed surfaces located between the butt and a point two (2) feet below the ground line is not less than the circumference at the ground line.

**KNOTS AND HOLES.**—Knots over one (1) inch in diameter, showing discoloration or softness of fibre, indicating possible decay, shall be neatly gouged, to a depth of not more than one fifth (1/5) of the diameter of the pole at the point where the knot is located, to permit determination of the character and extent of decay. Sound wood shall not be unnecessarily removed. The gouging should be done in such a manner as to insure drainage of water from the hole when the pole is set. Where such gouging reveals the presence of rot in the heart wood, the pole shall be rejected.

Knots under one (1) inch in diameter need not be gouged. All poles shall be free from nails, spikes and other metal.

**Preparation for Treatment**

**BARK.**—Outer bark shall be completely removed from the surface of all poles.

No patch of inner bark left on the pole surface shall be more than one quarter (1/4) of an inch wide or four (4) inches long. No two patches of inner bark of these dimensions shall be separated from each other by less than six (6) inches. Slivers or spots of inner bark of lesser dimensions shall not be considered in applying the requirement for minimum distance between patches.

Adopted in 1928 as Revising and Replacing Specification  
Nos. 4209 and 4429

Continued

### Preparation for Treatment

**SAWING AND TRIMMING.**—All knots shall be trimmed close. Complete overgrown knots, where the covering wood does not rise more than one (1) inch above the main surface of the pole, need not be trimmed.

All poles shall be neatly sawed at the butt along a plane which shall not be out of square with the axis of the pole by more than two (2) inches per foot of butt diameter.

Beveling at the edge of the sawn butt surface not over one-twelfth ( $\frac{1}{12}$ ) of the diameter in width (or an equivalent area, if unsymmetrically located) shall be permitted.

**FRAMING.**—Before poles are subjected to the creosoting process they shall be framed in accordance with the terms of the order.

When the order calls for "guy stubs," the poles shall only be roofed as shown in the appended drawing.

When the order calls for "cable poles," the poles shall be roofed, and fitted with one (1) bolt hole as shown in the appended drawing. The peak of the roof shall be located on the concave side of poles showing sweep or curvature, and on the concave side of greatest curvature in case the pole shows sweep or curvature in more than one direction.

When the order calls for "braces," the upper end of the poles shall be shaped and framed in accordance with the details shown in the appended drawing. Braces shall satisfy specification requirements for the dimensions of the class ordered before framing is begun. The 14-foot, 28-foot, 33-foot and 38-foot braces shall satisfy at four (4) feet from the butt the dimensional requirements specified at six (6) feet from the butt for poles two (2) feet longer.

When the order calls for "poles," the poles shall be roofed and gained in accordance with the details shown in the appended drawing. The number of gains applied shall be as shown in the following table for the class and length of the pole:

Required No. of Gains	No. OF FEET							
	Class AAA	Class AA	Class A	Class B	Class C	Class D	Class E	Class F
6	25 or Over	26 or Over	25 or Over	25 or Over	25 or Over	.....	.....	.....
5	.....	.....	22	22	22	22 or Over	.....	.....
4	.....	.....	20	20	20	20	20 or Over	.....
3	.....	.....	.....	.....	18	18	18	.....
2	.....	.....	.....	.....	.....	16	16	16 or Over

No gains shall be cut in class G.

Each gain shall be of the dimensions shown in the drawing appended hereto. The distance between gains and the distance between the uppermost gain and the peak of the roof shall be as shown in this drawing. A twenty-one thirty-seconds ( $\frac{21}{32}$ ) inch hole shall be bored through the pole at the center of each gain. This hole shall be perpendicular to the face of the gain. The removal of the wood between the upper edge of the top gain and the roof is permitted, provided the surface is at no point below the level of the face of the top gain.

Differences in level between gains on the same pole shall be such that if straight edges thirty (30) inches long are placed on the faces of the finished gains so as to extend fifteen (15) inches on either side from the center line of the pole and are sighted in the direction of the length of the pole, the straight edges in any two gains will not depart from parallelism by more than one sixteenth ( $\frac{1}{16}$ ) of an inch at their ends.

Adopted in 1928 as Revising and Replacing Specification  
Nos. 4209 and 4429

### Preparation for Treatment

Continued

The gains on poles showing sweep or curvature shall be located on the concave side of the pole. In case the pole shows sweep or curvature in more than one direction, the concave side with the greatest curvature shall be gained.

When the order specifies a lesser or greater number of gains than is hereinbefore required for "poles," or is accompanied by drawings describing framing different from that shown on the appended drawings, the instructions of the order shall be followed in framing the pole.

**MARKING.**—All poles shall be clearly marked with a marking hammer, scribe or branding iron. The mark shall not be less than one (1) inch in height. The center of the mark shall be located on the face of the pole within two (2) inches above or below a point ten (10) feet from the butt.

Legible hammer marks showing the circumference, classification and length of pole shall be applied to the butts of all poles.

### Treatment

All poles before being treated shall satisfy all requirements hereinbefore set forth.

Unless otherwise ordered, poles shall be impregnated with not less than twelve (12) pounds of coal tar creosote per cubic foot of wood, in accordance with the requirements of the specification for Creosoting Timber hereinafter listed.

See specification for Creosote Oil.

**HANDLING.**—Care shall be taken in handling poles to preserve the continuity of the treated layer. Pole tongs, cant hooks and other pointed tools capable of producing indentations of more than one (1) inch in depth shall not be used on poles treated under this specification. Pole tongs shall be so handled as to preclude their tearing away from any pole. Treated poles shall not be dragged along the ground.

**STORING.**—When, for any reason, poles treated under this specification have to be held in storage, they shall be stacked in close piles (either parallel or crosswise) on treated or other non-decaying skids. The skids shall be of such dimensions and so arranged as to support the poles without producing noticeable distortion of any of them. The skids shall be so placed that no part of any pole shall be in permanent water, or in contact with the underlying soil.

**SHIPMENT OF POLES.**—It is desired that poles be shipped on flat cars. Gondola cars or other cars having fixed sides shall not be used for shipment except when flat cars are not available for shipping within the time limit in an order. When a shipping time limit is not given in an order, shipment in other than flat cars shall only be made when permission to do so has been obtained from the purchaser of the poles.

Poles, when loaded, shall be secured in position by stakes of adequate strength, placed in the sockets on the side of the flat car, and by wiring from the stakes on one side of the car to stakes on the other side in accordance with the rules and specifications of the railroad association of the district in which the shipment originates, or in the absence of such rules and specifications, in accordance with the rules and specifications of the railroad initially receiving the shipment.

### Inspection

The manufacturer shall furnish proper facilities at his plant for the inspection of this material for the requirements of this specification.

**Top Specification Poles—Top Measurement Only**

These Poles Furnished as Specified: In Either 8-pound Empty Cell, (Rueping), 12-pound Empty Cell, (Rueping) or 12-pound Full Cell, (Bethel) Treatment

Large Stocks of All Lengths Maintained Ready for Immediate Treatment and Shipment

To obtain the volume of a Yellow Pine Pole or Stub, record the length in feet, and the butt and top diameters in inches; multiply the length in feet by the factor opposite the butt diameter and under the top diameter.

EXAMPLE: Length of pole, 40 feet. Factor, 1.273.  
Butt diameter, 20 inches. 40x1.273 = 50.920 cu. ft.  
Top diameter, 10 inches.

## International Creosoting & Construction Co. Specifications for the Preservative Treatment of Creosoted Pine Poles

The following specifications list treatments as follows:  
Rueping process, using 8 pounds of creosote per cubic foot of wood.

Rueping process, using 12 pounds of creosote per cubic foot of wood.

Bethel process, using 12 pounds of creosote per cubic foot of wood.

This does not mean that only the above number of pounds of creosote per cubic foot of wood can be used in the Rueping and the Bethel processes. Eight and twelve pounds are named because they are the amounts of creosote usually specified. Any other quantity of creosote, within the range of good treating practice, will be furnished in either process, if the customer so desires.

### 8-Pound Rueping Empty Cell Process

The following specification is intended to obtain an empty cell treatment for the poles; if the material to be treated is in a different condition as to moisture and seasoning, material for each retort charge shall be selected as to condition of moisture so that there will be no great difference in degree of seasoning in any one charge. Only perfectly sound poles shall be treated and all framing shall be done before treatment. The treating plant shall be equipped with indicating and recording gauges and other necessary apparatus for accurately observing and recording the treating process. Above the level of the creosoting cylinder there shall be an overhead drum for the purpose of determining that the cylinder is full of preservative and free from air and the gauge reading indicating a full cylinder shall not be taken until the preservative is seen to overflow through the valve on top of this drum. There shall also be a sap drum below the level of the cylinder by means of which sap and condensation shall be removed continuously. The treating plant must have all the necessary chemicals, a laboratory and laboratory apparatus to enable the quality of preservative to be determined.

#### Air-Seasoning

In air-seasoning, the poles shall be stacked in such a manner as to provide free air circulation and minimum contact between individual pieces in each stack. These stacks shall be placed on treated or otherwise permanent skids at least 6 inches above the ground on a well drained storage yard free from vegetation and decaying wood, so located that prevailing winds strike them freely. Alleys between the stacks shall be wide, continuous and straight. The material shall remain until in the judgment of the inspector it is sufficiently seasoned to obtain the maximum benefit from the treatment.

#### Seasoning by Steam

When time for air-seasoning is not available, steam-seasoning shall be used. Live saturated steam shall be admitted to the treating cylinder taking care that all air is swept from the cylinder before the outlet valve is closed. Pressure shall then be raised gradually to the maximum temperature desired, this maximum being determined by the treating inspector. It should not be less than 259 degrees F. nor more than 270 degrees F. The duration of the steaming process is dependent upon the degree of seasoning of the poles in the cylinder charge but shall in no case be carried to such an extent as to injure the timber.

#### Initial Vacuum

After the steaming process has been completed the steam shall be blown off and the treating cylinder exhausted as quickly as possible to as high a vacuum as possible which must be at least 24 inches at sea level or proportionately less at higher altitudes. This vacuum shall be maintained for at least 1 hour or for whatever longer period is necessary, so that the wood may be as dry and free from air as practicable. During the exhaustion process the temperature within the treating cylinder shall be maintained by means of steam under pressure in the closed coils. The cylinder shall be relieved of sap and condensation continuously.

#### Initial Air Pressure

In the case of air-seasoned poles, initial air pressure is the first step in the treating process. With steam-seasoned poles this step immediately follows the initial vacuum. The poles shall be subjected to air pressure of sufficient intensity and duration (usually 40 to 70 pounds) to provide under a quick high vacuum the ejection of surplus preservative, and to insure a retention and proper distribution of the stipulated number of pounds of preservative per cubic foot of wood.

## Specifications for the Preservative Treatment of Creosoted Pine Poles

### 8-pound Rueping Empty Cell Process

Continued

#### Treatment

The creosote shall be introduced between 165 degrees F. and 200 degrees F., the cylinder pressure being maintained constant until the cylinder is filled. The oil must be seen by the inspector to flow from the over-head drum on top of the treating cylinder, thus assuring him that the cylinder is completely filled with the preservative. The pressure shall then be gradually raised to and maintained at a minimum of 150 pounds per square inch until there is obtained the largest gross absorption that can be reduced to the stipulated final retention (i. e. 8 pounds per cubic foot) calculation being based on readings of the working tank gauges and the weight of the creosote at 100 degrees F. During treatment the creosote temperature shall average 180 degrees F. For the purpose of obtaining maximum sapwood penetration this gross absorption shall average not less than 16 pounds of creosote per cubic foot of wood. The quantity of oil for final retention shall be based on the cubic content of wood in the treating cylinder as determined by actual measurement of the top and butt of each pole in each charge. Under no conditions may shortage of oil in one charge be offset by an excess in another; the minimum final retention in each case must be 100 per cent of the quantity of creosote specified.

#### Final Vacuum

After pressure is completed and the cylinder is emptied of oil a sufficient vacuum shall be promptly created and maintained until the timber can be removed from the cylinder free from dripping oil.

#### Preservative

Creosote used in the treatment of these poles to comply with each of the following: A. T. & T. Co. Creosote Specification No. 6050 which includes No. 4227 Oil; American Wood Preserver's Association Standard, Creosote specifications for grade 1; American Railway Engineering Association Standard, Creosote Specification for grade 1.

### 12-pound Bethel Full Cell Process

The following specification is intended to obtain a full cell treatment for the poles; and if the material to be treated is in a different condition as to moisture and seasoning, material for each retort charge shall be selected as to condition of moisture so that there will be no great difference in degree of seasoning in any one charge. Only perfectly sound poles shall be treated and all framing shall be done before treatment. The treating plant shall be equipped with indicating and recording gauges and other necessary apparatus for accurately observing and recording the treating process. Above the level of the creosoting cylinder there shall be an overhead drum for the purpose of determining that the cylinder is full of preservative and free from air and the gauge reading indicating a full cylinder shall not be taken until the preservative is seen to overflow through the valve on top of this drum. There shall also be a sap drum below the level of the cylinder by means of which sap and condensation shall be removed continuously. The treating plant must have all the necessary chemicals, a laboratory and laboratory apparatus to enable the quality of preservative to be determined.

#### Air Seasoning

In air-seasoning, the poles shall be stacked in such a manner as to provide free air circulation and minimum contact between individual pieces in each stack. These stacks shall be placed on treated or otherwise permanent skids at least 6 inches above the ground on a well drained storage yard free from vegetation and decaying wood so located that prevailing winds strike them freely.

## Specifications for the Preservative Treatment of Creosoted Pine Poles

### 12-pound Bethel Full Cell Process

Continued

#### Air-seasoning

Continued

Alleys between the stacks shall be wide, continuous and straight. The material shall remain until in the judgment of the inspector it is sufficiently seasoned to obtain the maximum benefit from the treatment.

#### Seasoning by Steam

When time for air-seasoning is not available, steam-seasoning shall be used. Live saturated steam shall be admitted to the treating cylinder taking care that all air is swept from the cylinder before the outlet valve is closed. Pressure shall then be raised gradually to the maximum temperature desired, this maximum being determined by the treating inspector. It should not be less than 259 degrees F. nor more than 270 degrees F. The duration of the steaming process is dependent upon the degree of seasoning of the poles in the cylinder charge but shall in no case be carried to such an extent as to injure the timber.

#### Initial Vacuum

After the steaming process has been completed the steam shall be blown off and the treating cylinder exhausted as quickly as possible to as high a vacuum as possible which must be at least 24 inches at sea level or proportionately less at higher altitudes. This vacuum shall be maintained for at least 1 hour or for whatever longer period is necessary so that the wood may be as dry and free from air as practicable. During the exhaustion process the temperature within the treating cylinder shall be maintained by means of steam under pressure in the closed coils. The cylinder shall be relieved of sap and condensation continuously.

In the case of air-seasoned poles initial vacuum will be the first step in the treating process.

#### Treatment

The creosote oil shall be introduced without breaking the vacuum, at a temperature of not less than 165 degrees F. and not more than 200 degrees F. until the cylinder is filled to overflowing. The oil must be seen by the inspector to flow from the overhead drum on top of the treating cylinder, thus assuring him that the cylinder is completely filled with the preservative. During treatment the temperature shall average 180 degrees F. The pressure on the preservative shall be applied gradually until such an amount of oil has been injected into the poles as to provide maximum penetration and a final retention of 12 pounds of creosote per cubic foot, calculation being based on readings of the working tank gauges and the weight of the creosote at 100 degrees F. Also, cubic contents of the poles shall have been determined by actual butt and top measurements of each pole in each charge and the quantity of oil injected shall be based on the cubic content figure obtained from these measurements. Under no conditions may shortage of oil in one charge be off-set by an excess in another; the minimum final retention in every case must be 100 per cent of the quantity of creosote specified.

#### Final Vacuum

After the pressure period is completed and the cylinder is emptied of oil, a sufficient vacuum shall be maintained until the timber can be removed from the cylinder free from dripping oil.

#### Preservative

Creosote used in the treatment of these poles to comply with each of the following: A. T. & T. Co. Creosote specification No. 6050 which includes No. 4227 Oil; American Wood Preserver's Association Standard, Creosote Specification for Grade 1; American Railway Engineering Association Standard, Creosote Specification for Grade 1.

## Specifications for the Preservative Treatment of Southern Yellow Pine Poles

### 12-Pound Rueping Empty Coil Process

\*See Explanatory Note on Page 843

#### General

The following specification is intended to obtain an empty cell treatment for the poles; and if the material to be treated is in a different condition as to moisture and seasoning, material for each retort charge shall be selected as to condition of moisture so that there will be no great difference in degree of seasoning in any one charge. Only perfectly sound poles shall be treated. The treating plant shall be equipped with indicating and recording gauges and other necessary apparatus for accurately observing and recording the treating process. Above the level of the creosoting cylinder there shall be an overhead drum for the purpose of determining that the cylinder is full of preservative and free from air and the gauge reading indicating a full cylinder shall not be taken until the preservative is seen to overflow through the valve on top of this drum; there shall also be a sap drum below the level of the cylinder by means of which sap and condensation shall be removed regularly. The treating plant must have all the necessary chemicals, a laboratory, and laboratory apparatus to enable the quality of preservative to be determined.

#### Air Seasoning

In air seasoning, the poles shall be stacked in such a manner as to provide free air circulation and minimum contact through individual pieces in each stack. These stacks shall be placed on treated or otherwise permanent skids at least 6 inches above the ground on a well drained storage yard free from vegetation and decaying wood so located that prevailing winds strike it freely, and each layer shall be separated by creosoted strips. Alleys between the stacks shall be wide, continuous, and straight. The material shall remain until in the judgment of the inspector it is sufficiently seasoned to obtain the maximum benefit from the treatment.

#### Seasoning by Steam

When time for air seasoning is not available, steam seasoning shall be used. Live, saturated steam shall be admitted to the treating cylinder taking care that all air is swept from the cylinder before the outlet valve is closed. Pressure shall then be raised gradually to the maximum temperature desired, this maximum being determined by the treating inspector. It should not be less than 259 degrees F., nor more than 270 degrees F. The duration of the steaming process is dependent upon the degree of seasoning of the poles in the cylinder charge but shall in no case be carried to such an extent as to injure the timber.

#### Initial Vacuum

After the steaming process has been completed the steam shall be blown off and the treating cylinder exhausted as quickly as possible to as high a vacuum as possible which must be at least 24 inches at sea level or proportionately less at higher altitudes. This vacuum shall be maintained for at least 1 hour or for whatever longer period is necessary, so that the wood may be as dry and free from air as practicable. During the exhaustion process the temperature within the treating cylinder shall be maintained by means of steam under pressure in the closed coils. The cylinder shall be relieved of sap and condensation continuously.

#### Initial Air Pressure

In the case of air seasoned poles, initial air pressure is the first step in the treating process. With steam seasoned poles this step immediately follows the initial vacuum.

The poles shall be subjected to air pressure of sufficient intensity and duration (usually 40 to 70 pounds) to provide under a quick high vacuum the ejection of surplus preservative, and to insure a retention and proper distribution of the stipulated number of pounds of preservative per cubic foot of wood.

#### Treatment

The creosote shall be introduced between 170 and 200 degrees F., the cylinder pressure being maintained constant until the cylinder is filled. The oil must be seen by the inspector to flow from the overhead drum on top of the treating cylinder, thus assuring him that the cylinder is completely filled with the preservative. The pressure shall then be gradually raised to and maintained at a minimum of 150 pounds per square inch until there is obtained the largest gross absorption that can be reduced to the stipulated final retention (i.e. 12 pounds per cubic foot) calculation being based on readings of the working tank gauges and the weight of the creosote at 100 degrees F. The quantity of oil for final retention shall be based on the cubic content of wood in the treating cylinder as determined by actual measurement of the top and butt of each pole in each charge. Under no conditions may shortage of oil in one charge be offset by overage in another; the minimum final retention in each case must be 100 per cent of the quantity of creosote specified.

#### Final Vacuum

After pressure is completed and the cylinder is emptied of oil, a sufficient vacuum shall be promptly created and maintained until the timber can be removed from the cylinder free from dripping oil.

#### Preservative

See creosote specification.

### Standard Specifications for Creosote Oil for Ties and Structural Timber

#### Grade 1

- 1.—\*The oil shall be a distillate of coal gas tar or coke-oven tar. It shall comply with the following requirements:
- 2.—It shall not contain more than 3 per cent of water.
- 3.—It shall not contain more than .5 per cent of matter insoluble in benzol.
- 4.—The specific gravity of the oil at 38 degrees C., compared with water at 15.5 degrees C., shall not be less than 1.03.
- 5.—The distillate, based on water-free oil, shall be within the following limits: Up to 210 degrees C, not more than 5 per cent; up to 235 degrees C, not more than 25 per cent.
- 6.—The residue above 355 degrees C., if it exceeds 5 per cent, shall have a float test of not more than 50 seconds at 70 degrees C.
- 7.—The oil shall yield not more than 2 per cent of coke residue.
- 8.—The foregoing tests shall be made in accordance with the standard methods of the American Wood-Preservers' Association.

#### Specification for Creosote

NOTE.—Creosote of Grades 2 and 3 are also available, both are inferior to Grade 1 and are therefore not used by the International Company.

The above is the standard specification for Grade 1 creosote.

\*Owing to the complexity of the chemical composition and physical properties of coal tar creosote oil, and to the fact that some of the same compounds and properties which characterize coal tar creosote are found in certain petroleum derivatives, the determination of the purity of creosote oil is difficult.

## American Telephone and Telegraph Co., Specifications No. 4227 for Coal Tar Creosote

For Use Only in Supplying

A. T. & T. and Associated Companies

#### General

The material desired under these specifications is that known as dead oil of coal tar or coal tar creosote. It shall consist wholly of distillates of gas tar produced by the destructive distillation of bituminous coal either in the manufacture of coal gas or in the manufacture of coke by the by-product process. It shall be without adulteration.

Information shall be furnished on request as to the origin of the oil and the names of the parties through whose hands it may have passed. A copy of any analysis of the oil that may have been made prior to its use shall also be furnished.

The right is reserved to take representative samples of the oil and test the same wherever desired.

#### Requirements

All coal tar creosote furnished under these specifications shall conform to the following requirements:

1st. The oil shall have a specific gravity at 38 degrees Centigrade, as compared with water at 15.5 degrees Centigrade of not less than 1.03.

2nd. The oil shall be thoroughly liquid at a temperature of 38 degrees Centigrade.

3rd. When 100 grams of the oil are distilled in accordance with the requirements of the specifications for the analysis of dead oil of coal tar or coal tar creosote hereinafter referred to.

(a) Not more than 5 per cent shall distill off up to 205 degrees Centigrade.

(b) Not more than 40 per cent shall distill off up to 235 degrees Centigrade.

(c) Not more than 80 per cent shall distill off up to 315 degrees Centigrade.

(d) Not less than 60 per cent shall distill off up to 360 degrees Centigrade.

(e) The oil shall not contain more than 2 per cent of water.

(f) The quantity of tar acids present in the fractions distilling below 300 degrees Centigrade shall not exceed 10 per cent, measured by volume, of the total sample distilled.

(g) The subphonation residue from the fraction distilling between 300 degrees Centigrade and 360 degrees Centigrade shall not exceed 2 per cent, measured by volume, of the said fraction.

4th. The constituents of the oil insoluble in benzol shall not exceed 0.50 per cent by weight.

5th. When oil is intended for use in the treatment of wood duct it shall be free from acids of the acetic series and their salts.

#### Analysis

The oil shall be analyzed in accordance with the methods outlined in the specifications for the analysis of dead oil of coal tar or coal tar creosote hereinafter referred to.

**Standard Specifications for Creosote Oil****American Wood Preserver's Association Grade 1 Oil**

Creosote used in treatment of Graybar Electric pine poles complies with this specification, also with A. T. & T. creosote specification No. 4227, also with A. R. E. A. creosote specification for grade 1. This specification was formerly published as A. T. & T. No. 3743.

- (1) The oil shall be a distillate of coal-gas tar or coke-oven tar. It shall comply with the following requirements:
- (2) It shall not contain more than 3 per cent of water.
- (3) It shall not contain more than 0.5 per cent of matter insoluble in benzol.
- (4) The specific gravity of the oil at 38 degrees C. compared with water at 15.5 degrees C. shall be not less than 1.03.
- (5) The distillate, based on water-free oil, shall be within the following limits:  
Up to 210 degrees C., not more than 5 per cent.  
Up to 235 degrees C., not more than 25 per cent.
- (6) The residue above 355 degrees, if it exceeds 5 per cent, shall have a float-test of not more than 50 seconds at 70 degrees C.
- (7) The oil shall yield not more than 2 per cent coke residue.
- (8) The foregoing tests shall be made in accordance with the standard methods of the American Wood Preservers' Association. (See manual—creosote, analysis.)  
Approved, 1917; adopted, 1921; amended and adopted, 1923.

Owing to the complexity of the chemical composition and physical properties of coal-tar creosote oil, and to the fact that some of the same compounds and properties which characterize coal-tar creosote are found in certain petroleum derivatives, the determination of the purity of creosote oil is difficult. When there is not certain assurance that the oil is a pure product, the following tests will aid in arriving at an opinion as to its coal tar origin:

- (a) Fraction distilling between 210 and 235 degrees C. is usually solid or contains some solids when cooled to 25 degrees C.
- (b) All of the fractions up to 315 degrees C. contain tar acids in varying amounts, usually at least 1 per cent, calculated on the amount of the fraction tested. (See manual—creosote, analysis, tar acids.)
- (c) The specific gravity of the fraction 235 and 315 degrees C. is usually not lower than 1.025 and specific gravity of the fraction between 315 and 355 degrees is usually not lower than 1.085 and 38 degrees C. compared with water at 15.5 degrees C. However, some pure-tar distillates fall slightly below these limits.

If the oil does not comply with at least one of the foregoing tests it is undoubtedly not a pure coal-tar creosote.

**Dating Nails**

The dating nail (illustrated above) is placed in every International Creosoted Pine Pole at a point 12 feet from the butt. It shows the year of treatment and the monogram of the International Creosoting & Construction Company and thus serves as a permanent record through which the customer will know who furnished the poles and how long they are lasting.

**Specifications No. 3782 for Dead Oil Coal Tar for Brush and Open Tank Treatment****(Extract)**

This oil is standard stock with us for open tank work.

**GENERAL.**—The material desired under these specifications is that known as dead oil of coal tar or coal tar creosote, obtained through the distillation of coal tar produced by the destructive distillation of bituminous coal at a temperature high enough to yield a tar consisting mainly of compounds of the aromatic series. It shall be without adulteration.

Information shall be furnished on request as to the origin of the oil and the names of all parties through whose hands it may have passed. A copy of any analysis of the oil that may have been made prior to its offering shall also be furnished. The right is reserved to take representative samples of the oil and test the same wherever desired.

**NOTE.**—When unseasoned timber is being treated by the cylinder pressure process using steam for seasoning, the oil may contain not more than five (5) per cent of water. But in case more than two (2) per cent of water is present in the oil, the quantity of the preservative added to the timber shall be increased by an amount sufficient to ensure that the required amount of oil computed on a water-free basis has been taken up by the timber.

**REQUIREMENTS.**—All dead oil of coal tar furnished under these specifications shall conform to the following requirements:

- 1st.—The oil shall have a specific gravity of at least one and three-hundredths (1.03) at thirty-eight degrees Centigrade (38°C.).
- 2nd.—The oil shall be thoroughly liquid at a temperature of thirty-eight degrees Centigrade (38°C.).
- 3rd.—When one hundred grams of the oil are distilled in accordance with the requirements of the specifications for the Analysis of Dead Oil of Coal Tar or Coal Tar Creosote hereinafter referred to—
  - (a) Not more than eight (8) per cent shall distill off up to 210° C.
  - (b) Not more than thirty-five (35) per cent shall distill off up to 235° C.
  - (c) Not more than eighty (80) per cent shall distill off up to 315° C.
  - (d) The oil shall not contain more than two (2) per cent of water.
  - (e) The quantity of tar acids present in the fractions distilling below 300° C. shall not exceed ten (10) per cent (measured by volume) of the total sample distilled.
  - (f) The sulphonation residue from the fraction distilling between 300° C. and 360° C. shall not exceed one and one-half (1½) per cent of the said fraction.
- 4th.—The constituents of the oil insoluble in benzol shall not exceed five-tenths (0.5) per cent by weight.

**Specification No. 3783 for Liquid Grade Dead Oil of Coal Tar****(Extract)**

Some prefer this specification over No. 3782 for use in winter. It is about 15½% more expensive than No. 3782.

**GENERAL.**—The material desired under these specifications is a liquid grade of dead oil of coal tar or coal tar creosote, to be obtained through the distillation of a coal tar produced by the destructive distillation of bituminous coal at a temperature high enough to yield a tar consisting mainly of compounds of the aromatic series. It shall be without adulteration.

Information shall be furnished on request as to the origin of the oil and the names of all parties through whose hands it may have passed. A copy of any analysis of the oil that may have been made prior to its offering shall also be furnished. The right is reserved to take representative samples of the oil and test the same wherever desired.

**REQUIREMENTS.**—All dead oil of coal tar furnished under these specifications shall conform to the following requirements:

- 1st.—The oil shall have a specific gravity of at least one and eight-hundredths (1.08) at fifteen degrees Centigrade (15° C.).
- 2nd.—The oil shall be thoroughly liquid at a temperature of five degrees Centigrade (5° C.).
- 3rd.—When one hundred grams of the oil are distilled in accordance with the requirements of the specifications for the Analysis of Dead Oil of Coal Tar or Coal Tar Creosote hereinafter referred to—
  - (a) Not more than one (1) per cent shall distill off up to 210° C.
  - (b) Not more than ten (10) per cent shall distill off up to 235° C.
  - (c) Not less than twenty-five (25) per cent and not more than sixty (60) per cent shall distill off up to 300° C.
  - (d) The oil shall not contain more than one (1) per cent of water.
  - (e) The quantity of tar acids present in the fractions distilling below 300° C. shall not exceed eight (8) per cent (measured by volume) of the total sample distilled.
  - (f) The sulphonation residue from the fraction distilling between 300° C. and 360° C. shall not exceed one and one-half (1½) per cent of the said fraction.
- 4th.—The constituents of the oil insoluble in benzol shall not exceed five-tenths (0.5) per cent by weight.

**Depth of Pole Setting**

In sandy or swamp ground, oil barrels or casks set in the ground will materially assist in securing substantial pole foundations. The following specifications are recommended for the depth in feet of holes:

Line (Height)	Solid Ground		Soft Ground		Solid Rock
	Poles (Depth)	Corners	Line	Corners	
22	5	5	5	5	3
25	5	5½	5½	6	3
30	5	5½	6	6½	3½
35	6	6½	6½	7	4
40	6½	7	7	7½	4
45	6½	7	7	7½	4½
50	7	7½	7½	8	4½
55	7½	8	8	8½	5
60	8	8½	8½	9	5½
65	8½	9	9	9½	5½

Guy stubs should be set not less than 7 feet in any soil except solid rock.

**Cedar Poles for Electric Light Work**

Height Feet	Size Top Inches	Average Wt., Lbs. Each	No. of Poles to a Car	Height Feet	Size Top Inches	Average Wt., Lbs. Each	No. of Poles to a Car
25	5½	225	130	40	6	800	80
25	6	250	100	40	7	900	75
28	7	400	80	45	6	900	70
30	5	300	110	45	7	1000	65
30	6	350	90	50	6	1200	55
30	7	420	75	55	6	1400	45
35	6	550	100	..	..	..	..

**Wind Pressures**

Velocity	37	53	65	75	83	91	105	119	130
Pounds per Sq. Ft.	5	10	15	20	25	30	40	50	60

The pressures given above are such as would be exerted against a flat surface set perpendicularly to the direction of the wind. For a cylindrical surface like a pole or wire, the effective pressure is two-thirds of what it would be for a square surface of the same area as the cylinder. It is considered that an allowance of from 20 to 30 pounds per square foot of area for pole lines is ample. The above table was calculated from Professor Langley's formula,  $P = .0036V^2$ , in which P is the pressure per square foot of surface in pounds, and V is the velocity of the wind.

**General Construction Rules**

**SIZE OF HOLES.**—The holes should be large enough to permit the free entrance of the poles, and should be full size at the bottom so as to admit of the use of tampers.

**TAMPING POLE HOLES.**—All pole holes, except those in very hard gravel or rock formations, should be tamped so thoroughly that the necessity for hauling away excess dirt is obviated.

**PROTECTING POLES.**—Where corner poles or other poles are exposed to injury from whittling, pole butt should be well painted and heavily sanded. If this is not sufficient in any special case, the pole butt should be wound with No. 10 galvanized wire, spaced ½ inch apart, painted and sanded.

**PAINTING POLES.**—The top and gaens of all poles should be painted with one or more coats of approved paint. All poles which are protected by strain plates or shims from the cutting of messengers or guys, should be painted with one or more coats of approved paint on the space occupied by the strain plate.

**FACING ARMS (CITY CONSTRUCTION).**—At long spans the cross arms should be placed on the side of the poles away from the long spans. Arms on poles should face the originating source of the lead, or face to face, depending on the general condition, except corner pole; then it should face the corner. At the terminals of a lead, the last two poles should face away from the originating source. On corners, arms should face the point of intersection of curb lines, thus facing each other. First arm each side of the corner should ordinarily face the corner.

**ON CURVES.**—Arms each side of center of curve should face the center of curve.

**LOCATION OF POLES AND ANCHORAGES.**—Special attention should be given to location of poles, where the ground washes badly, where there are cuts or excavations, and along the banks of creeks or streams. Do not locate poles along the edges of cuts or embankments.

**General Construction Rules**

Continued

**SPACING POLES.**—In locating pole line, if it becomes necessary to either reduce or lengthen distance between poles on account of obstacles, objections of property holders, etc., the preference should be for the shorter spans.

**LOCATION OF POLES AT STREET CROSSINGS.**—In leading away from the originating end of the line when a cross street is reached, pole should not be located on the corners, but should be spaced to fall on the property line. In this connection, alleys may be regarded as street crossings.

**ON STREETS.**—Poles and stubs on streets should be set inside of and as near the curb line as possible.

**IN ALLEYS.**—Poles in alleys should be set as close as possible to the side lines of the alleys.

**ON PROPERTY LINES.**—Poles on streets should be located on or near property lines.

**DISTRIBUTION OF POLES.**—In distributing the poles, care should be taken to select the heaviest poles for corners and terminals and to place the straightest and best-looking poles on streets and in front of residences.

**POLE FITTING AND SETTING—TRIMMING.**—All poles that are rough in appearance should be smoothed, and knots should be trimmed close. Top of pole should be leveled with one cut of saw at right angles to length of pole, and edge should be beveled ¼ of an inch with a draw-knife.

**FRAMING POLES.**—Poles should be raised at the top and placed in a framing buck so that the heaviest sag or curve will be nearest the ground. If the pole be crooked or badly shaped it should be turned with cant hooks until the best side for framing is brought uppermost and the pole securely choeked. In this position it should first be roofed. Seven inches should be measured from the top of the pole, and this point should be the center of the top gaen. The succeeding gaens should be spaced 18 inches on centers. Gaens should be leveled with a straight edge or sighting sticks.

**NOTE.**—In alleys, poles stepped in line with alley as high as 12 to 15 feet; then turn at right angles to alley and continue to the top. This is to prevent liability of danger to top wagons in narrow alleys.

**BUTTING POLES.**—Every pole should be squared across the bottom before setting. This should be done with a crosscut saw, and not with an ax.

**BRACES AND CROSS-ARM FITTING.**—Arms should be sighted and leveled at right angles to pole length, and not parallel with the ground. This includes all corner poles.

A spirit level should not be used for leveling arms.

**CANTING ARMS ON CORNERS.**—When a lead makes a double corner or changes from one side of the street to the other, the last arm should set at right angles to the line of direction leading to the corner, and the first arm leading away should set at right angles to the line of direction leading away from the corner.

If the change of direction forms an angle of less than forty-five degrees, one or both corner arms may be canted slightly to secure the greatest space between lines. This should not be permissible where the angle is forty-five degrees or over.

**CANTING ARMS ON SINGLE-POLE CORNERS.**—The arm should set in a line that will divide in half the angle formed by the two lines of direction of the route.

On curves the inside of the arms should point to the common center of a circle of which the lead curve forms the circumference.

Single pole corners are not desirable and should not be used when the pull is over 20 feet, unless it is an unavoidable case.

**GUY STUBS.**—A guy stub in no case should be smaller in diameter at butt or top than the pole it supports, and should be as straight as possible on account of the tendency to buckle. A stub at the head of heavy lines should be as massive as possible.

A guy stub should be raked to position before filling hole, and should not be set straight and raked with the anchor guys. In the proportion that stub is curved or buckled its strength is decreased. No stub should be raked less than 24 inches.

Guy stubs holding a strain greater than a one-arm lead should measure 12 inches across the top or more, if procurable.

## Wood Crossarms

Virgin Old-Growth Douglas Fir

The prime requisites in a crossarm are lightness, strength and durability; some engineers stress one quality and some another, but Rainier Fir is the best answer for all sorts of uses and conditions; however, we are equally able to furnish long leaf yellow pine crossarms, and creosoted arms, in either fir or yellow pine.

Rainier is the arm most widely used and most generally preferred; its use is by no means confined to this country; for instance, this arm was selected for the lines of the American Expeditionary Forces in the world war.

The United States Forestry Service has made elaborate tests of different woods and with results almost uniformly favorable to fir for crossarms; certainly for lightness and strength, and continuing strength over a period of years, Rainier fir is in a class by itself. Exceptional cases are well established of a line life of these arms up to fifty years. Another advantage is that they need no treatment whatsoever, which subject is covered hereinafter.

Rainier fir crossarms do not require painting or the use of any preservative; are more than double the necessary strength with a large "factor of safety"; they live in actual service for many years.

Long-leaf yellow pine crossarms are manufactured in the Gulf Region, and when they have a large heart content, are strong and durable.

Short-leaf yellow pine (and long-leaf sapwood) crossarms, should be creosoted (pressure treatment) before being put into service; this treatment prolongs the life of the arms for many years, but great care should be exercised that only pure distillate oil is used and the treatment given by a reliable creosoting company.

Creosoted yellow pine crossarms should be made from short-leaf yellow or long-leaf yellow pine; sapwood is no objection, as it has the necessary strength and takes oil readily. Only pure distillate creosote (dead oil of coal tar) should be used; this assures a clean surface, free from "goo"; the treatment consists, first of full seasoning by steam and vacuum; second, of impregnation with preservative under high pressure.

## Wood Crossarms

Showing how the Big Firs are Felled

We maintain at each warehouse a liberal stock of the genuine Rainier fir arm, in order to give customers service when in need of arms quickly. Many central stations and crossarm users find it more satisfactory and economical to buy their entire supply from these stocks as they need arms rather than to take a carload at a time and carry the investment themselves over an uncertain period of time.

A good many public utilities require from time to time small lots of arms of special size and manufacture, that is, other than those hereinafter listed as standard. We will be glad at any time to stock any special arm for a customer under a special contract arrangement, and any of our representatives will be glad to go into this matter fully on request. We have also at Chicago, Minneapolis, Centralia, Wash., and Newark, N. J. large stocks of blank arms, which can be cut to length and bored according to your special requirements. This is merely another link in the chain of Graybar Electric service on crossarms.

**TREATMENT OF RAINIER ARMS.**—In some localities it is occasionally found necessary to color crossarms so as to distinguish them from arms used for other purposes. As previously stated, the genuine Rainier fir arm does not require any preservative treatment, and we recommend that if a color is necessary the arms be dipped in the proper stain, which our Pacific Coast mills are prepared to do.

We recommend, however, that a Rainier arm be dipped in a hot solution of pure distillate creosote oil, if that will answer the purpose of color. This treatment tends to prevent an arm from checking and to protect it from woodpeckers, and from the inroads of termites, etc. Unless color is demanded, this is a useless expense.

All arms bored for one  $\frac{5}{8}$ -inch center bolt and  $\frac{3}{8}$ -inch brace bolts unless otherwise specified, except as shown in "Standard" table.

**MINIMUM CARLOAD WEIGHT.**—Fir from Pacific Coast Mills, 38,000 pounds. Small cars are scarce and weight of at least 50,000 pounds should be figured on. Cars to contain as high as 90,000 pounds can be had. Smaller cars are available in the Southern Yellow Pine Regions—minimum weight, 34,000 pounds.

Standard arms are manufactured as shown in table; orders for special arms should be accompanied by sketch or blueprint showing exactly what is wanted, and are subject to delay in manufacture.

**CREOSOTE OIL DIP TREATMENT.**—Hot dip treatment (immersion for five minutes in hot creosote oil). This treatment can be given only at Pacific Coast Mills, Mississippi mills, Louisiana mills, Virginia mills, and Chicago and Minneapolis warehouses.

If board measure of arm is wanted, add one-half inch to height and width of finished arm; if length runs into inches take next higher foot length; multiply height by width in inches; divide by twelve, and multiply by length in feet.

All dimensions are subject to the usual manufacturing variations; crossarms long in stock show some shrinkage from original dimensions.

**Wood Crossarms**

**Specifications**

**RAINIER FIR CROSSARMS:**

- MATERIAL**— Sound, live, yellow Douglas fir; close-grained (at least eight rings per inch); straight grained (not out of parallel to edge of arm in central section more than five degrees).
- PROHIBITED**— Rot, dote, loose heart, loose or rotten knots, snakes and splits.
- ALLOWED**— Warp up to 1/8 inch off-set per lineal foot; sound knots up to one inch diameter, but not at pin holes or in clusters; pitch pockets up to 8 inches in length; season checks up to one inch in depth; sap-wood up to 25 per cent of volume of arm.
- MANUFACTURE**— Best commercial practice; kiln dried in sizes up to 3 3/4 x 4 1/4 finished; planed on all four sides; pin holes accurately centered, smooth and not badly broken out by bits in boring; dimensions as shown, with commercial variations.

**WESTERN STANDARD GRADE FIR.**—This grade covers all crossarms up to 4x5 inches, inclusive, finished size either way; the arms shall be: reasonably straight grained, well manufactured from sound, live seasoned lumber (green lumber prohibited) 75 per cent heart, by volume; free from rot, dote, loose-heart, loose or unsound knots, shakes, splits boxed heart, warp in excess of 1/8-inch off-set per foot, sound knots in clusters or larger than 1 1/4 inches in diameter, pitch-pockets more than 8 inches long, season checks more than 1 inch deep and any other defect that seriously impairs strength.

**LONG-LEAF YELLOW PINE:** Genuine Long-Leaf Yellow Pine, guaranteed every arm at least 7/8 heart in volume, and free from knots (except small, sound knots, not over one inch in diameter), or other defects that would impair the strength of the arm.

**VIRGINIA YELLOW PINE:** Free from loose or unsound knots or other defects which would impair the strength of the arm.

**CREOSOTED CROSSARMS AND CONDUIT:** Free from large, unsound or loose knots, or other defects which would impair strength; creosoted steam and vacuum treatment—dead oil of coal tar under pressure—either 12 lbs. per cu. ft. (full cell) or 8 lbs. per cu. ft. (empty cell) as ordered.

**How to Describe a Crossarm (In Placing Your Order)**

- STATE**—A—Quantity wanted.
- B—Material and quality (or grade).
- C—Treatment (if any).
- D—Width, in inches (and fraction).
- E—Height, in inches (and fraction).
- F—Length, in feet and inches.
- G—Number of pin holes.
- H—Size of pin holes.
- I—Spacing between pin holes (center - side - end).
- J—Size center bolt hole.
- K—Size brace bolt holes.
- L—Space between brace bolt holes.

For example, the standard Bell Telephone Crossarm is described—"Rainier Fir, unpainted, 3 3/4"x4 1/4"-10', bored for ten 1 1/8" pin holes, spaced 16" center, 12" sides, 4" end, one 5/8" center bolt hole, two 3/8" brace bolt holes 42" apart."

**Important**

In ordering crossarms, be very careful to specify just what is wanted, and, if other than standard boring, send sketch or blue print with order. Arms specially made are of no use for general stock, and cannot be taken back if mistake is made in ordering.

**Wood Pins**

**Specifications**

**MATERIAL.**—Pins shall be sound, reasonably straight grained, yellow or black locust (or Oak, as called for), free from knots, checks, sap wood, brush-wood, cracks, etc., except as hereinafter specified.

**SAP WOOD.**—Sap wood is permitted on the shoulder of the pin provided it does not extend into the tenon.

**CHECKS.**—Season checks not over 1/8 inch deep are permitted provided they do not appear elsewhere than in the shoulder and lower half of the tenon.

**KNOTS.**—Pins shall be free from loose or unsound knots; sound knots not exceeding 1/4 inch in diameter are permitted on the shoulder and lower half of the tenon.

**GRAIN.**—The grain of the wood shall be reasonably parallel to the axis of the pin; irregularities in grain which are wholly confined to the section within one inch of the bottom of the tenon shall be permitted.

**WORM HOLES.**—Worm holes and channels not over 1/8 inch diameter are permitted provided they do not impair the holding power of the thread or the placing of the nail in the pin, and provided that they shall not appear in over 10 per cent of pins in any shipment.

**DIMENSIONS.**—Pins are usually made from unseasoned wood due to difficulty of securing and manufacturing seasoned timber. Pins after seasoning shall be of the dimensions shown in drawing, or as ordered (with allowable variations as shown).

**FLAT SHOULDERS.**—One flat surface is permitted, provided the wood is not cut away to the depth of the shoulder at any point of the circumference; in the bottom one-fourth of the tenon irregularities in shape which do not involve the removal of more than one-quarter of the cross-section called for in the drawing are permitted; provided these defects do not occur in more than 10 per cent of the pins furnished.

**THREADS.**—All pins shall have four threads per inch; the thread shall be smooth and of uniform pitch; the thread shall taper 1/8 inch in diameter to 1 inch in length.

## Wood Brackets, Pole Steps and Cobs

### Specifications

**MATERIAL.**—Sound, reasonably straight grained, Oak, free from knots, checks, sap wood, etc., except as hereinafter specified.

**SAP WOOD.**—Permitted up to 25 per cent of volume of bracket.

**CHECKS.**—Season checks not over 1/8 inch deep are permitted provided they do not appear within two inches of the thread.

**KNOTS.**—Brackets shall be free from loose or unsound knots; sound knots not exceeding 1/2 inch in diameter permitted below the shoulder, but not in lower 3-inch section of bracket.

**GRAIN.**—Grain of the wood shall be reasonably parallel to the axis of the bracket.

**WORM HOLES.**—And channels not over 1/8 inch diameter are permitted provided they do not impair the holding power of the thread, or the nail holes; and provided that they shall not appear in over 10 per cent of the brackets furnished in any shipment.

**DIMENSIONS.**—After seasoning, dimensions with allowable variations shall be as shown; Wane allowed in body of bracket not exceeding 1/4 inch; irregularities in body of bracket not to exceed 10 per cent of volume.

**THREADS.**—All brackets shall have four threads per inch; the thread shall be smooth and of uniform pitch; the thread shall taper 1/8 inch in diameter to 1 inch in length.

**MANUFACTURE.**—All workmanship shall be of best commercial grade.

**STANDARD PACKAGE.**—Nos. 1, 3, 4 and 5, 25 per bundle. Nos. 2 and 6, 20 per bundle.
