JMP POLARIZED MERCURY-WETTED CONTACT RELAYS

JMP relays utilize the same capsule with the same general ratings as the JM series. However, greater sensitivity is achieved by permanent magnet biasing. These magnets are factory adjustable over a wide range of operating characteristics. All JMP relays mount in Amphenol 77-MIP-8 sockets. Size: Diameter, 1.31" max.; Seated height 3.105" max.; Overall height 3.665"

JML NON-BRIDGING MERCURY-WETTED CONTACT RELAYS

JML relays employ a Form C non-bridging (break-before-make) contact arrangement. They provide greater sensitivity, faster operation, and somewhat lower contact ratings than the JMP relays. JML relays have a sensitivity approximately six times that of the JMP. Speeds from 3 ms to 1.1 ms are possible, depending upon coil power. Contacts are rated 2 amps max., 500V max. with contact protection. All JML relays mount in Amphenol 77-MIP-8 sockets. Size: Diameter 1.312" max.; Seated height 2.640" max.; Overall height 3.303" max. Weight: 4 ozs.

NEW JMF PRINTED CIRCUIT MODULE RELAYS

JMF relays utilize the same capsule as the JML series, but are designed for mounting on printed circuit boards. They employ a Form C SPDT break-before-make non-bridging contact arrangement. Contacts are rated 2 amps max.; 500 volts max. with contact protection. Details of a simple protection circuit are packed with every relay. Size: Width .612"; Mounted height .625" max.; Length 2.062". Weight 1.25 ozs.

POWER RELAYS

Type 33B. Designed and constructed with a variety of features which contribute to the sensitivity and longevity of the relay. Contacts and terminals are mounted on molded phenolic blocks with integral barriers. Moveable contact blades are made of spring temper phosphor bronze for high conductivity and long life. Adjusting screws on each blade permit close adjustment in the factory for contact gap, over-travel, and pressure. Armature pivots on machined phosphor bronze bearing pins and pivot holes are precision reamed. Adjustment of the armature and yoke assembly allows proper alignment between the armature and pole face. Four 6-32 NC tapped mounting holes in the base allow easy mounting on chassis or bracket.

Types 38, 39, 40, 41, 42, 51. Solid frame solenoids using high-grade steel in all parts of the magnetic circuit. Carefully controlled annealing, after all machining operations are completed, assures maximum efficiency. The frame is dovetailed and staked to the end plate, adding mechanical strength and increasing the performance of the magnetic circuit. Plungers and plunger stops, which are made of annealed and specially processed steel, are available in three standard types for specific operating requirements. Type 51 is a laminated frame solenoid and has been designed and engineered to meet all of the requirements of the highest quality A.C. solenoid. Special production techniques and rigid quality control combine to provide a highly efficient unit. The frame is composed of silicon steel laminations securely riveted to a steel frame. Pole faces are precision ground and equipped with copper shading rings. Silicon steel laminations are also used for the plunger.

HIGH SPEED — LOW LEVEL SWITCHING

"MICROSCAN" RELAYS

A 3PST Form A low noise PC mounting signal switching relay. Applications are low-level computers and industrial control systems. The 3 pole relay has 2 gold alloy contacts for switching dry circuit signals from strain gages, thermocouples, etc. The third pole is heavy duty material for switching a long line "guard" shield from the signal originating point. Low capacitance noise isolation—3 pfd open circuit; 10-4 pfd coil to circuit; .001 pfd pole to pole. Operates bounce free up to 200 PPS rep rate. Insulation: 10K meg min. at 100 VDC. Size: 2 1/2 x 7/8 x 5/8".

LOW NOISE "BOX SHIELDED" TRANSFORMERS

A unique double box shield coil design for "guarded" low level instrument applications. Chopper types yield 150 db ma 1 common mode rejection with balanced windings, low thm microphonic construction in high inductance designs. Mag. shield 35 db. Electroguard power transformers are box shielded for 107 pfd pri to Sec electrostatic transient isolation. Low

"PHOTOCOM" PHOTO ELECTRIC CHOPPERS

RELAYS/SWITCHES/RESISTORS

Solid state "Photocom" signal and control modulators. SPDT models are used as DC/AC signal converters in DC amplifiers, servo amplifiers and pH meters. Solid state contacts eliminate transients, contact bounce and isolate drive noise. Unit may be driven as relay from DC up to 2000 cps over 25,000 hour life. Thermal and electrostatic noise less than 3 micro-volts. High signal input impedances up to 1K megohms can be modulated. Plug-in 7 pin miniature package. Both SPDT and SPST designed for 117 VAC or 150 VDC drive source. Sizes: C4005, C4007—2 1/8 x 3/4" dia. C4825, C4828—1 1/2 x 3/8" dia.

Time Delay Relays and Ballast Tubes

AGASTAT PNEUMATIC TIME DELAY RELAYS

2400 Series. Front screw type terminals. Time delay dials calibrated in min. or sec. DPDT contacts rated 10A/120V, 60 cy. Coils consume 8 watts & operate on 120V. 60 cy & 240V, 60 cy. 4 1/4" x 2 1/2" x 2 7/8". Shpg. wt. 2 lbs.

Type 2412. Time delay on pull-in. Timing cycle begins when coil is energized. Coil kept energized throughout time setting preceding DPDT contacts transfer from de-energized to energized position. Coil de-energized: contacts retransfer immediately (25 m-sec). Coil de-energized during timing cycle, contacts remain de-energized & timing mech. resets to start position for full time cycle on next energization of coil.

Type 2422. Time delay on drop-out. Coil energized: DPDT contacts transfer & stay in transfer position. De-energization coil:

Time delay begins. Timing cycle: contacts stay energized. End time delay setting: contacts transfer back to de-energized position. Coil re-energized during timing cycle: contacts energized produce full time delay upon next de-energization if coil remains de-energized through time setting.

Type 2432. Double head unit provides independent delay of contact transfer on both energized & de-energized cycles of coil. 6 1/2" x 3 3/4" x 3 1/8". Shpg. wt. 2 1/2 lbs. Auxiliary Switch Kits: Type "T" SPDT contacts rated 10A/120V, 60 cy. attached to Type 2412 or 2422. 2412 units: "T" switch provides 2-step timing. Switch transfers time delay up to 30 sec. Type "L" switch gives immediate transfer of contacts both on energization and de-energization cy. of coil.

AMPERITE BALLAST TUBES

Rugged units provide low-cost automatic voltage and current regulation, operate equally well on AC or DC. As supply voltage increases, ballast tube resistance increases, holding load voltage constant. Regulating action is based on high temperature coefficient of resistance element and heat dissipation qualities of gas-filled tube. Av. shpg. wt., 8 oz.

HOW TO ORDER CAM TIMERS

Locate desired time cycle duration in "Gear Assemblies" chart below, and order gear-and-rack assembly listed in left-hand column. Appropriate foundation (motor-switch) units appear at top of "Time Cycle" columns: CM types are single-circuit, recycling; MC types are multi-circuit recycling; RC types are multi-circuit, single-time-cycle (see detailed descriptions below): Example: Suppose 4 circuits are to be controlled, with a 30-second time cycle, recycling. Order gear-and-rack assembly A12, stock number 24F315, and note that foundation unit MC2 is required. At bottom of page, locate MC2 under heading "4 SWITCH CHASSIS" and order stk. no. 62F2010.

Note: in some cases RC0, RC1, MC0 and MC1 units may require a special high-torque motor.

To determine need of larger motor, multiply time cycle (in seconds) by 2/3; result will be maximum number of switches that can be operated by a standard unit. For example, with a time cycle of 9 seconds, up to 6 switches may be operated by a standard motor; if more circuits are to be controlled, order a high-torque motor. On RC0 and MC0 units, add \$27.50 to listed price for high-torque motor; on RC1 and MC1 types price must be increased by \$29.50.

Alternate Ordering Information: specify desired time cycle, number of switches, operating voltage and frequency. Such information may expedite delivery by allowing NEWARK to ship model in stock with desired time cycle.

INDUSTRIAL TIMER

RB AUTOMATIC RESET DELAY TIMER

Provides an adjustable delay between the closing of one circuit and the subsequent operation of the timer load switch. The timer delay is initiated with a sustained switch closure to the synchronous motor of the timer. Series RB automatically resets to the start setting when the sustained start circuit is opened, and the timer is then ready to perform

another timing function. Versatile back panel or front mounting. Directly interchange physically and electrically with Haydon type RG. Timing cycles ranging from 5.6 sec. to 4 min. and 40 sec. Contact rating: 15 amps non-inductive @ 115/60 115/60V AC oper. Shpg. wt., 1 lb.

ES1B

AC20A03

ES1B LINEAL MEASURING ROTARY ACTUATOR SWITCH

For measuring lengths of paper, fabric, lumber, rope and wire-and-rotary switching to open and close a circuit with each shaft revolution—this heavy duty switch has an expected count or contact life of 100,000,000. Available as an actuator switch with mounting bracket only. Can be used to actuate any electric counter, cut-off device solenoid or other electrical equipment. Rated maximum speed: 1,000 RPM.

AC20A03 MEASURING WHEEL

The AC20A03 lineal measuring wheel is carefully ground to exactly 12 inches in circumference with rubber tire. Used with the ES1B rotary switch where each revolution makes and breaks a circuit for each foot of lineal measurement. 1/4" shaft diameter.

Rotary and Lever Switches

SUB-MINIATURE ROTARY SWITCHES INCLUDING SROS STYLE TO MIL-S-3786B
V and X Types

● Space saving. Deck wafers are epoxy-glass fabric laminations per MIL-P-18177C GEB. Deck rotor meets MIL-I-10A. Water contacts are 90% silver alloy, gold-plate, double wiping for low contact resistance, and self cleaning. Frame, detent mechanism, and shaft are stainless steel. Initial contact resistance: .005 ohms max. Dielectric strength 1000 volts RMS. Insulation resistance exceeds 100,000 megohms. Current carrying capacity: 5 amp. at standard ambient conditions. Current breaking capacity: 750MA at 30 DCV; 300 MA at 120 DCV; 1 amp at 115 ACV. non-inductive. All V and X types include A7505 knob. Positive 30° indexing. (Also available with 60° or 90° indexing). Nominal 1" diameter. Patented Series 7000 provides a full 12 live switching contacts per deck. Series 5000 has the same water design but provides nearly twice the switching capability per deck, with up to 12 contacts on the front and up to 12 contacts on the rear of the same dual-duty deck. SROS types designed for top reliability ratings of MIL-S-3786B. C indicates highest temp-life rating, 25,000 rotational cycles -65°C to +125°C; 3 for vibration grade 3, 10 to 2000 cps; M for medium-impact.

Type 30. For industrial control, limit, safety applications. Polyethylene diaphragm provides a positive switch seal with unlimited life, minimizes "pumping" by its minute movement and also eliminates customary problems of tearing and cracking. "O" ring prevents extrusion of gaskets. Aluminum diecast housing provides rugged enclosure, 1/2" — 14 internal top conduit hub, 15 amps 125/250/480 V AC, .5 amps @ 115 V DC. Size: 3"x1"x2"x 1/2". Shpg. wt., 10 oz.

TRIPLE POLE

SUBMINIATURE

Type 36. Compact triple pole double break switch. Three exclusive Butterfly double break mechanisms offer a mechanical life of 20 million cycles. Rated at 10 amps 125/250 VDC. Simultaneous handling for up to 6 circuits in a single switch. Uses 76 series actuators. 1.187x.796x.250. Shpg. wt., 1 oz.

LIGHTED PUSHBUTTON

SWITCHES

Series 01. Stationary lamp socket. There is a wide selection of lens cap shapes, sizes, and colors. Non turn positive snap on lens caps. Front of panel lamp servicing without any tool. Choice of projected color or solid colored lens illumination. Uses T-1 1/4 screw base lamp. Less lamp.

Lighted push button switches cut control console costs by combining indicating and manual switching functions in a single compact package. Serves as the color and/or legend coded panel indicator and actuates one or more subminiature snap-action switches. The single light Type 01 replaces conventional systems of separate panel lights and push-button or toggle switches, thus reducing panel size requirements and installation time. Designed for commercial and military use to meet the requirements for MIL-S-22885. Consists of a removable lens cap and a switch-lamp socket assembly. For greater reliability the lamp socket remains stationary when the pushbutton is actuated. The basic switch is the Licon type 16 subminiature doublebreak miniature doublebreak long life switch rated up to 10 amps. Maint.: 4 3/8 x 2 1/2 x 2 3/32". Moment: 4 3/8 x 1 1/2 x 2 3/32". Shpg. wt., 2 oz.

LENS CAP

Designed to serve as indicator screen and push-button. Choice of solid color (brightly illuminated when lit, color shows when unlit) and projected color, (white translucent screen color shows only when lit). Positive lens cap positioning and orientation is insured by snap on, snap off fastener and keying tab.

Waldom Solderless Terminals Produced

To eliminate circuit failure in barrier blocks, WALDOM has produced exactly the right shape and width terminal to fit the above barrier blocks. They cannot turn sideways, loosen, arc, or fail. Give neat, line appearance, available in three tongue styles:

- A. SPADE TONGUE—Easiest to install, loosen screw a few turns.
- B. FLANGED SPADE—More reliable than spade.
- C. RECTANGULAR TONGUE—Most reliable.

Amphenol Connectors

AMPHENOL BLUE RIBBON® CONNECTORS

Barrier polarization type connectors are designed for interconnecting electronic sub-assemblies, circuit switching, rerouting and other multi-contact applications. Interlocking design of mating dielectric bodies provide positive polarization. The dimensional stability and high tensile strength of Amphenol

"Blue" dielectric make this type of polarization possible. Float mounted receptacle corrects misalignment of plug and receptacle. Corrosion resistant, stainless steel molded-in mounting plates and housing. Rated: 5 amps, 800 volts DC at sea level, 300 volts at 70,000 ft. altitude. Av. Shpg. Wt., 3 oz.

Series UHF RF connectors will operate satisfactorily at frequencies up to 200 megacycles without any special precautions, and used at frequencies up to 500 megacycles under certain conditions. These connectors will also handle all peak voltages up to 500 without danger of breakdown. Large single and twin-contact connectors are provided with rubber sealing gasket for weather-proofing, while small single and twin-contact types can be waterproofed by application of Amphenol 307 Silicone Compound to mating insulator surfaces. All metal surfaces are silver-plated and covered with a protective coating to prevent tarnishing. Beaded chains for caps are nickel-plated brass. Shipping weight each, 4 oz. approx.

Amphenol Connectors

Small, weatherproof low-voltage connectors with bayonet action for quick-disconnect applications. Non-constant impedance types for RG-55 and 58/U cables, and modified types for RG-59, 62, and 71/U cables. Shells, couplings, and male contacts are accurately machined from brass... springs are beryllium copper. All parts are silver-plated. Improved Series BNC connectors (Note 1) are constant-impedance 50 ohm types with excellent electrical performance up to 10,000 megacycles. Modified UG-290/U connector: (Note 2) are for RG-62 and 71/U cables, and are not matched. Shp. wt. 3 oz. ea.

MICROMINIATURE CONNECTORS

All 50 ohm conductors are matched to 50 ohm cables with excellent results through S band. The following specifications indicate the high performance possible with Microdot. Voltage rating: rated 850 volts peak. Finish: all shield parts are silver plated .0002 min., for 48 hour salt spray rating; all center contact parts are gold plated .00003 min. Dielectrics: all "Teflon" (except for occasional Epoxy and other seals). Insulation Resistance: all over 10¹¹ ohms. Contact Resistance: all less than 0.002 ohms. The two types of connectors listed are differentiated by the prefix of the type number with "S" meaning Screw type and "SOS" meaning Slide-On type. Since cable sizes vary, the code above is completed with a suffix (of the type number) for the characteristic impedance of attaching cables, as "S-50", "SOS-93". Avg. Shipping wt., 1 oz.

FIT-221. This improved all purpose extruded tubing shrinks 50% (2:1 ratio) with only 5% longitudinal shrinkage. Fewer sizes cover more applications. When a temperature of approximately 275°F is applied for seven seconds, the tubing returns to predetermined size and forms permanent tight fitting mechanical bond, even over irregularly shaped materials. Tubing retains form stability throughout its temperature range of -67°F to +572°F. Shrinking

done by Heat Gun, oven radiant heat, dipping in hot liquid, or hot iron. Clear tubing may be used where jacketed, printed components or cable data is visible and inspection of components is desired. FIT-295 POLYOLEFIN SEMI-RIGID TUBING

Engineered to provide maximum mechanical strength at stress or connection points. Strong, heavy wall abrasion-resistant, extruded tubing slips easily over object to be covered. FIT-295 is clear—can be used so that jacketed printed component or cable data is clearly visible. Also allows inspection of insulated components, cable or ter-

minations. Shrinkable temperature at 275°F or 135°C. Will not cold-flow or melt, but retains form stability throughout temperature range. Shrinkage ratio: 2:1 (50%). Tensile strength (min.): 2500 PSI. Non-corrosive. Shrinking method: hot air gun, oven heat, radiant heat, hot liquids or heating with soldering iron or flame.

Each Size of FIT-25 Sold only in the ONE color and Standard Packages as shown.

FIT 300 SELF ENCAPSULATING POLYOLEFIN TUBING

Easily-used encapsulation tubing product. When a temperature of 275°F (135°C) is applied, the outer wall shrinks while the inner wall melts and flows to eliminate voids and provide moisture proof encapsulation. Becomes a hard, tough,

homogenous molding upon cooling. Good for use on electrical cable junctions and splices; as a mechanical shield for rough edges; and as a vibration shield. Fraction in Type No. shows size. Sold only in standard pkgs. as shown.

- Will not Crack or Become Brittle During Aging!
- Will not Shrink During Soldering!
- Conforms to MIL-1-22129B

Unmatched by any other type of tubing for use in electrical applications at high frequencies and temperatures; continuous operation at 250° C. retaining its flexibility throughout temperature range. At high frequencies, dielectric strength is many times that of other insulating materials; is chemically inert having a moisture absorption. Thin wall tubing, TFT 200, permits miniaturization and compactness. Application where high heat resistant, flexible, non-flammable, chemical solvent and erosion-resistant material is required. Electrical and chemical properties conform to MIL-1-22129B. Natural only. Standard wall tubing, TFT-250 has characteristics similar to TFT-200, but for use in application where additional dielectric values and mechanical strength are necessary. Colors: Natural only. Min. order 100 feet.

—Microphone and Instrumentation Cable Belden

MICROPHONE AND INSTRUMENTATION CABLES—SHIELDED

General purpose shielded cables, for all stage, studio and instrumentation applications. Rubber types have rubber-insulated tinned copper conductors, tinned copper-braid shield, black rubber jacket overall, except +black neoprene jacket. Vinyl types are similar, but have polyethylene-insulated conductors, chrome vinyl jacket. *Miniature cables having tinned cadmium-bronze

conductors. Rubber cables have greater abrasion and impact resistance, are extra-flexible—will lie flat without kinking. Plastic cables have lower capacitance, greater ozone and oil resistance, lighter weight. Neoprene and rubber types are recommended for outside use, cold weather applications. All types available only in spool sizes listed.

Fig. 3

Fig. 5

Fig. 2

Fig. 4

Fig. 6

Type 8290. SHIELDED & JACKETED ENCAPSULATED TWIN LEAD. TV lead-in for best color and 82 channel reception. Low losses per 100 ft., eliminates interference caused by line pick up, can run thru gutters, conduits, and underground. No matching transformers. Terminals on both ends.

Fig. 2. Type 8285. PERMOHM All-Weather 300-ohm twinlead. 2 parallel Copperweld conductors, orange polyethylene insulation and web between conductors, encapsulated in cellular polyethylene oval jacket. Delivers 3 to 136 times more power than ordinary flat lead-in for strong, clear signals on all channels despite industrial contamination, salt spray, wet weather, rain, ice, fringe area reception. An excellent color, UHF, VHF cable. See Antenna Hardware page for "E-Z" standoff insulators.

Fig. 3. Type 8275. CELLULINE. 2 parallel Copperweld conductors with inert-gas-filled unicellular polyethylene core. Lower

losses because of lower dielectric constant. Uniform electrical characteristics, because moisture between conductors is eliminated. Thick polyethylene outer jacket and less wind-resistant round shape result in longer lasting, more efficient line for UHF, VHF and color. No end sealing required.

Fig. 4. Type 8230. WELDOHM. Copperweld conductors have 1/2 times greater strength than plain copper for long-lasting installation.

Type 8225. 300-ohm flat twinlead with bare copper conductors, brown polyethylene insulation for best weathering.

Fig. 5. Type 8222. 72-ohm transmission line. 2 parallel copper conductors, brown polyethylene insulation.

Fig. 6. Type 8464. 4-conductor flat rotor cable. Bare copper conductors, one tinned for polarity. Chrome vinyl insulation. **Type 8488.** Eight-conductor round rotor cable. Bare copper conductors, color-coded insulation, chrome vinyl jacket.

POLYFOAM COAXIAL CABLES

Cellular polyethylene dielectric material provides lower weight, cost, capacitance, and attenuation than standard RG types. Widely used in commercial transmitter applications such as community TV and in ham stations. The dielectric constant is 1.50 as compared to 2.25 for solid polyethylene. It has a specially compounded non-contaminating black polyethylene jacket providing improved weather and abrasion resistance.

NEON SUB-MINIATURES MS25257

Uses tiny T-2 Neon Glow Lamp (designated as NE-2J). Since Neon lamps require a resistor to limit the lamp current, in Dialco assemblies the resistor is BUILT-IN as an integral part of the unit (a patented feature—U.S. Pat. No. 2,421,321). For use on 105-125 volts AC or DC with high heat plastic. Stovepipe lens is molded of high heat plastic, gives 180° lens spread. Shank of lens holder is crimped in 3 evenly spaced places to

secure the lamp. Lens holder unscrews from front of panel for easy replacement of lamp. An anti-rotation notch on the face of the flange prevents rotation of unit while mounting nut is being tightened. Mounting bushing is aluminum with black anodize finish. Steel internal-tooth lockwasher and hex mounting nut are cadmium plated and coated with iridite. Terminals are brass, hot-tinned, with elongated slots. Less lamp. Size 1 1/2 x 3/8". Shpg. wt. 2 oz.

FERRIMIC CUP CORE ASSEMBLIES

Temperature Compensated Cup Core Assemblies. Designed for filter applications requiring precision tuneable inductors having low loss characteristics over a wide temperature range. Used at frequencies from audio to 500 KC with Q value as high as 850. Specific inductance (L/1000 turns) is accomplished by inserting a precision ground air gap in center post of one or both cup cores in a matched pair. Size and tolerance of air gap controls inductance per 1000 turns. Adjustment beyond specific inductance of cup cores is provided by trimmer assembly. All cup cores have a positive linear temperature coefficient of effective permeability and inductance. Over a given temperature interval this is expressed as:

Ferrite Rod loop antennas designed to receive the standard broadcast band (540-1850Kc) when used with proper tuning capacitor. Figures C, D & E are supplied with a mounting board which can be easily removed if an alternate method of mounting is desired, others have mtg. bracket. They make excellent antenna for conventional vacuum tube and transistor receivers. Type 705-A has adjustable inductance to permit peaking antenna stage by sliding coil along ferrite rod. The 2000 series have a secondary which is over-coupled for maximum gain stability with a variation of output and are designed to match an input impedance of approximately 600 ohms. Type 6300 antenna coil replaces a loop antenna and is supplied with 18" of antenna wire. It is screw adjustable. Average Shpg wt.: 3 oz.

Designed for maximum efficiency and highest impedance at specific operating frequencies. Eliminates the designer's task of attempting to choose the best coil for a particular application from miscellaneous and often insufficient design data. Designed to cover the major amateur, industrial and citizens bands and will also operate efficiently at frequencies approximating the recommended frequencies.

ADAPTERS AND EXTENDERS

Basic plug and socket structure used in standard test adapters. Circuits can readily be opened for current measurements, or cross-connected in many ways for experimental purposes. Models 1262, 1263, and 1264 are socket extenders. These shift wear from the socket itself to the adapter. Sockets have highest grade beryllium copper contacts. Av. shipping wt., 2 oz.

Vector Structures For Circuitry

VECTORBOARD AND MICRO VECTORBOARD

Vectorboard and new Micro Vectorboard pre-punched terminal board provide overall grids of holes especially useful in bread-boarding as well as production. New Micro Vectorboard patterns accept flat pack leads spaced multiples of .05" and is useful for cordwood packaging. Fig. A and AA have 0.093" holes on .265" centers. Fig. F: 0.062" holes on .2" centers. Fig. G: 0.062" holes on alternate intersections of 0.1" grid. Pattern H (not shown) has 0.062" holes on 0.1" centers. "B" has 0.062" holes on 1/16" centers. Pattern M has .025" holes on .05" centers. "P" has .042" holes on 0.1" centers. #4 self-tap screws can be engaged in the .093" holes or #2 in the .062" holes. Boards may be broken off along the hole lines as desired. Pattern G is especially useful for subminiature circuitry. The holes on alternate intersections of a standard 0.1" grid make it possible to mount most "top-hat" transistors base down by passing the leads directly through the holes. *2 oz. copper, 1 side. **2 oz. copper, 2 sides.

Rechargeable Nickel Cadmium Batteries

BURGESS

GULTON BATTERIES

Very low operating cost. Ideal for transistor radio, portable TV, industrial electronic purposes, photoflash, etc. Provide longer life in any operating situation, even after lengthy storage periods. Outstanding service over a wide temperature range. May be recharged many times, have relatively constant potential during discharge, and have excellent charge retention properties. Stand more abuse than any other cell and have good low temperature performance characteristics. Are storage batteries which use one of the best electrochemical systems.

Simple half-wave circuit is all that's required for recharging. Outlast conventional rechargeable batteries by as much as 20 times. Sealed non-gassing, long life, may be stored indefinitely without loss of efficiency. Sintered plate construction, maintenance-free. 1 hour rate capacity.

SUB-SUBMINIATURE PICOFUSES

- Incredibly Small — Less Than 1/4" Long!
- Ceramic Body for High Overload Capacity.

Series 275. A unique concept in fusing for computers, micro-electronic and aero-space circuitry. Designed for circuits of 125 volts or less where short-circuit currents as high as 300 amps occur. High accuracy in blowing time at 300% or higher is ideal for sequential switching, or in circuits requiring redundancy. Blow time 4 hours min. at 100% or rating; 5 sec. max. at 200%. Amperage printed on body. Ceramic body only 1/32" x 9/64" dia.; tin-coated copper leads .025 dia. PicoFuses can be encapsulated, and are available hermetically sealed. 275series has axial leads 1 9/16" long for diode clip or in-circuit mounting.

SUBMINIATURE MICROFUSES

Only .250" dia. x .348" long exclusive of leads. Ideal for printed circuits. Features low resistance and high reliability in ultra-fast blowing characteristics. Series 279000 has 1 inch leads for wiring into circuit. Short circuit interrupting capacity 125 volts, 10,000 amps DC.

Series 273000 has .170 inch leads for plugging into subminiature fuse holder (illustrated below). Blowing specifications: 110% life; 200% 0-10 seconds. Transparent glass cap. Rated at 125 V.

CHEMELEC COMPRESSION INSULATORS

CHEMELEC Stand Off and Feed Thru compression insulators can be compressed into mounting holes and are self fastening, requiring no additional hardware. This reduces assembly time and costs, assures high-speed economical production. The properties of TFE permit press-fit without breakage. Insulators are shock and vibration proof; they can be soldered without damage because of high heat resistance. Excellent electrical characteristics make them easily adaptable to miniaturization and high frequency, high voltage circuits. Insulator body is TFE. Solder terminal is brass except (*) electro tin plated terminal (†) Silver plated terminal. Finish is hot tin dip except where noted. All flashover point readings are short time tested at sea level. Capacitance values are based on a frequency of 1000 KC with units mounted on 1/16" aluminum panel. Average shipping weight, 3 oz.

TERMINAL BOARDS

Standard All-Set terminal boards are scribed into 5 sections. Each section is drilled for 14 terminals, w/10 mounted except 1/2" and 3/16" widths which are drilled for 7, w/5 mounted. Materials used: cotton-fabric phenolic, Mil. Type FBE, Mil. Spec. MIL-P-15035B; epoxy glass-cloth, GEE, MIL-P18177B; nylon-fabric phenolic, NPG, MIL-P-15047B. Ceramic is per MIL-1-10.

Ceramic boards are single section only. 2030-1 has two 4 terminal rows spaced for one watt; and 2036-1 same for two watt resistor mounting size components. 2303-2 has 5 and 2303-3 has 6 terminals in one row. All boards have double turret style terminals. *Indicates feed thru type with double turrets on both sides of board.

ORYX SOLDERING IRONS & ACCESSORIES

LOW VOLTAGE INDUSTRIAL SOLDERING IRONS

Small, lightweight instruments for close-quarter precision soldering of printed circuits, miniature component parts, semiconductors, and fine assemblies. Feather weights of 1/4 to 1 ounce virtually eliminate hand fatigue. All Oryx soldering irons utilize a unique element-in-the-tip design principle. Use of this principle enables these irons to provide high efficiency, quick heat recovery, and cool handles. In addition all irons are polarized, making it possible to directly ground the shaft, tip, and one side of the heating element for maximum safety.

ULTRASONIC CLEANING SYSTEMS

- Self Adjusting, Fail-Safe Generators for Easy, Trouble-Free Operation
- Thorough Cleaning of Objects That Are Impossible to Clean By Conventional Methods

Unique "Autosonic" self-tuning feature automatically handles changes in liquid level, temperature, load size and other variables; a feedback system monitors ultrasonic activity in the tank and makes all necessary adjustments within microseconds. Skilled operators are not needed—the only control is the on-off switch! Tanks are heavy gauge stainless steel; built-in piezoelectric transducers are brazed to the tank surface for trouble

free performance. Fail-safe: malfunction of one component will not cause cascading failure of others. Tanks have outlets to permit installation of drain cocks and circulating systems. Complete cleaning system consists of generator, transducerized tank, and a basket to suspend the object to be cleaned in the tank. All units operate from 120 VAC, 50-60 c., except 1000W unit (220VAC). Output frequency is 28 kc.

200 WATT SYSTEM

A fully solid-state system. For continuous, heavy duty cleaning for most industrial applications. Features long-life generator, automatic tuning, high efficiency field replaceable transducers, and high power cleaning activity. Will drive any Powertron model 2000 series ultrasonic tank or immersible transducers. Cabinet is mild steel, solvent resistant paint. Freq.: 28 khz nominal. Automatic integral feedback tuning. Freq. maintained regardless of liquid level or part load changes. Size: 15"x10x7" high. Ship. wt. approx. 20 lbs.

Model K-3115. Electric microbrazer allows perfect soldering joints every time. An accurate pre-determined heat pulse is delivered between probe tips each time the foot switch is pressed. Precision soldering, even on miniature plugs and receptacles, can be done even by inexperienced people. Automatic timer with heat pulse is adjustable from $\frac{1}{10}$ to 3 seconds. At high setting, maximum output is 230 watts. Two voltage settings for high and low voltage. Amount of heat delivered is just enough to sweat solder and raise flux to surface. Timer cuts off automatically before insulation burns or base material is damaged. Standard "AN" plugs and receptacles can be soft silver soldered to 750°F . Silver solder brazing on small parts to 1250°F . 115V, 60 cyc. 9 lbs. **125.00**

"CHIEF" REDI-POWER MASTER STATIONS

"Chief" Redi-Power Master Stations have built-in extra power. This added power (up to 20 watts), gives you the additional volume required when calling a number of stations at one time or calling noisy locations. Satisfies need for power boost without eliminating return speech. Volume is self-compensating whether 2, 6 or 12 stations are called simultaneously. Each station receives its pre-determined volume with no division of output when more stations are called at one time. One or more Redi-Power Masters can be combined with regular Chief Masters and staff stations in same system. Other features include: (1) Incoming call chime. (2) Monitoring signal. (3) Dynasonic selector that permits intermixing of Master and Staff Stations and variation of performance. (4) Volume Control. (5) Noise-free voice range power. (6) Multi-magic station selector which enables selection of up to 30 stations with only 12 push buttons. (7) Uni-trans dictation control. (8) Operation on 110-120V. (9) External relay control for use in extremely high noise level areas. (10) In modern, custom-designed cabinets. Charcoal gray and brushed chrome. Size: 13x8³/₈x3¹/₈".

Connected "non-privately", Master can be answered at a distance from the Staff without operation of any controls. "Non-private" Staff may reply to all Masters in the system (whether connected directly to them or not) and can originate calls to one or two, depending upon its capacity. Connected "privately" no one can "listen-in", but any Master can call. Private Staff can originate calls and reply to 1 or 2 Masters depending on its capacity. Staff Stations do not need electrical outlets.

HOW TO DETERMINE CABLE REQUIREMENTS

To inter-connect Master Stations, measure from first Master to second Master only, from 2nd to 3rd Master only, etc., until last unit in system is reached and total. For T-C-4920 use two lengths of 6226 Cable. To connect T-C-41, T-C-20, or T-HP-3 Staff Stations, measure from Staff Station to one Master to which Staff Station originates calls. To connect T-C-42 Staff Stations measure separate length of cable from Staff Station to each Master Station to which staff originates calls.

T-S-111

Can be used in any combination—with all Masters—one Master and Staff Stations—or a number of Masters combined with Staff Stations. 6, 12, and 20 Station Masters, together with Staff Stations can be intermixed in same system. Masters can talk with any other Master, as well as with Staffs. Staff Stations can answer all Masters and can originate calls to one or two Masters, depending upon Staff's capacity. Staff Stations are not connected to electrical outlet.

Exclusive Features: (1) Dynasonic Design enables stations to perform "privately" (so no one can listen in) or "non privately" (for reply without use of controls). The same station can be "private" to one or more Masters and "non private" to others, and retain full communication facilities. (2) Monitoring signal visually indicates to a "non private" station that it is being monitored. (3) Busy signal visibly indicates when station you call is "busy". All units have facility to override "busy signal" for important calls. Incoming call chime. (4) Multi-magic station selector enables selection of up to 30 stations with only 12 push buttons. (5) Uni-trans dictation control. (6) External relay control enables Master to activate external relays for operating siren, gong, light, etc. (7) Reciprocal Power supply—Each Master operates on 110-120 volts AC only and should be plugged in. Where no electrical outlet is available up to 30% of the Masters in the system can operate without being plugged in. (8) Noise free voice range power. The exclusive patented circuit enables performance without noise, hum or distortion, when used with talk-a-phone cable. (9) Hi power staff stations and horns. T-HP-3 provides more than twice the volume of universal Staff. T-C-20 provides about 4 times greater volume . . . more with Redi Power Master. (10) Wall switch combines with Talk-a-phone Horn or Hi Power staff to add origination of call feature. All "Chief" and "Chief Redi-Power" Master Stations come complete with junction box and built in power supply attached by 6' flexible cable. Master size: 14" width, 3¹/₈" height, 8³/₈" depth. For 110-120 volts AC only, U.L. approved.

SUBMINIATURE DYNAMIC

Model BK-12A. Neutral color makes it inconspicuous when worn around neck or attached to clothing. The BK-12A weighs just 20 grams and has a wide-range frequency response of 60 to 18,000 cycles, with proper speech balance. Impedance voice coil permits use with 30 to 250 ohm unloaded inputs without changing the microphone's impedance. Pick-up characteristics are non-directional. Elimination of output transformer makes magnetic hum sensitivity lower than comparable microphones. Micron-mesh acoustical filter provides dirt and moisture protection. Careful design, improved materials and manufacturing techniques. Repairs can be made in the field by the replacement of the cartridge and/or cable if necessary. Accessories include: Lavalier holder, tie clip holder, and cable clip. All accessories are gold plated to give pleasing jewelry-like appearance. $\frac{3}{4}$ " dia. x $1\frac{1}{2}$ " L.

● NEW 50 Mk II AUTOMATIC TURNTABLE

Excitingly new and different, this unit features a lightweight tubular arm with resiliently mounted non-adjustable counterweight. Unlike other models, the stylus pressure of the 50 Mk II is easily set by moving a pointer on the side of the arm. Once pressure is set with use of stylus pressure gauge, marking (1 gram intervals) on arm are used as guide. Longer markings indicate increased pressure. Most dramatic feature is the manual cueing and pause device which permits the placing of tone arm on a record in any position by use of cueing lever. Device also acts as a pause mechanism. Lift cueing lever and arm stays above record as long as desired. When lowered, playing cycle continues right where it left off. Tone arm safety catch, automatic intermix operation, sensitive trip with Dupont Delrin, and motor are similar to the features of the 40 Mk II. 4-speed. With line cord, 2 audio cables, plug-in shell (less cartridge). Shpg. wt: 11 lbs.

New stylus pressure adjustment incorporates knurled camera type dial for easy, accurate setting of tracking force. Includes new manual cueing and pause device. Also features tubular and dynamically-balanced counterweight-adjusted tone arm. Tubular overarm. Needle pivots for arm bearings. Tone arm safety catch. Special double shielded 4-pole shaded motor. Automatic intermix operation. Supersensitive trip. DuPont Delrin offsets friction. Less cartridge. Shpg. wt: 14 lbs.

Ultra-sensitive trip. Exclusive pusher platform for automatic play when desired. With line cord, 2 audio cables, plug-in shell (less cartridge), std. and manual spindles, and manual 45 rpm adaptor. Shpg. wt: 19 lbs.

A special adaptor placed over the automatic spindle makes it possible to repeat records as often as desired. Further features include the dynamically balanced, counterweight adjusted tone arm of Afrormosia wood. Calibrated stylus pressure scale with click settings. Automatic play, when desired, with revolutionary pusher spindle DuPont Delrin trip mechanism with magnetic repulsion. 12" balanced anti-mag. turntable with anti-static turntable mat. 4-pole motor. VIKING "MATCHBOX" ANTENNA MATCHING UNITS

Bandswitching antenna matching units match a wide range of impedances and tune out large amounts of reactance on all amateur bands 80 thru 10 meters. Also provide separate matching of receiver. Heavy-duty relay switches antenna and grounds receiver antenna terminals during trans-

mitting. Directional coupler for SWR measurements may be used separately. Tuning is broad enough to cover large portion of band with one setting. 20 db harmonic suppression. Maroon and grey finish. Approved for FCDA matching funds.

KILOWATT MATCHBOX

Model 250-30-3. Kilowatt Matchbox designed to handle unbalanced line impedances from 50 to 2000 ohms, balanced line impedances from 50 to 1500 ohms. The antenna change-over system includes a time delay circuit for the relay, providing "fast make—slow break" action to prevent arcing or sticking of relay contacts. The feature also protects the transmitter and the receiver components from possible damage by high voltage transients during antenna change-over switching. Feed-through insulators are provided for connecting balanced or unbalanced lines. A standard SO-239 connector is provided for 52 ohm coaxial lines. Unit is also capable of tuning out large amounts of capacitive or inductive reactance. Revolutionary design of circuit does away with the annoying use of "plug-in" coils and completely eliminates "load-tapping" necessary in other couplers. In SSB mode, the unit is rated up to 3 kilowatts P.E.P. input. (With directional coupler). Dimensions: 17 1/4 x 12 1/8 x 10 7/8". Shipping weight, 27 lbs.

FANON

NEW SELECTIVE CB CALL SYSTEM

MODEL CT-5

- Signals 5 transceivers selectively on each channel
- Avoids unwanted calls
- Efficient and convenient

One of the most annoying aspects of CB operation—that of continually having to listen to unwanted calls and constant "hash" (noise) on the air, now has been eliminated. Model CT-5 is a compatible unit that plugs into built-in sockets on the base of Fanon models L-2000 and DCL-50 transceivers. From the completely quiet "standby" position, these units are always ready to selectively call or receive from other CT-5 equipped transceivers. Any one other unit can now be called without disturbing the others. Simply choose the designated number for the unit being called and a frequency control tone will alert just that party, bypassing the other units. Once alerted, transceivers go into normal voice transmission. The other units, not being alerted, remain in "standby" and are not disturbed by the conversation. Up to 10 Fanon transceivers can be selectively called with the CT-5 (5 on Channel A plus 5 on Channel B). Shpg. wt. 1 lb.
