† Except in high-altitude service.  
\* Where a "type to be replaced" carries a multiple designation incorporating a 5500-series number, that type can be directly replaced by the RCA type having the same 5500-series number. For example: the 5557/FG-17, as well as the FG-17, is directly replaceable by the RCA-5557. Likewise, the 5552/651/656, as well as the WL-651/656, is directly replaceable by the RCA-5552.

# CETRON ELECTRONIC TUBES

Engineered and Manufactured by Continental Electric Co.

## CETRON PHOTOTUBES

CETRON phototubes are either of the gas-filled or of the vacuum type. With the gas-filled type, greater effective response is obtained, particularly in low impedance circuits, while the vacuum type is recommended where maximum stability is desired.

CETRON phototubes are selected as to their sensitivity and priced accordingly. Phototubes of the Super Class A/B or Q are generally used for experimental purpose where very high sensitivities are required; Class C or R mostly for motion picture equipment; Class D for relay work, etc.

## CETRON RED SENSITIVE PHOTOTUBES

CETRON red sensitive phototubes are available in three sensitivity classes, A/B, C and D. The CETRON gas-filled red sensitive tubes comprise the most complete line of phototubes designed for sound reproduction. For complete engineering specifications, write for our PC 8/9.

## CETRON BLUE SENSITIVE PHOTOTUBES

CETRON blue sensitive phototubes are available in two sensitivity classes, Q and R. The gas-filled CETRON blue sensitive tubes comprise a most complete line for sound reproduction work from dye recorded film. For complete engineering specifications, write for our PC 8/9.

## CETRON LEAD SULFIDE PHOTOCELLS

CETRON lead sulfide photo conductive cells are made in a variety of miniature types. They are also available in a variety of sensitive areas and resistances. CETRON lead sulfid photocells are available in three sensitivity classes, A, C and D. For complete engineering specifications, write for our lead sulfide literature.

Continental Electric also manufactures a complete line of special purpose photocells, such as the CE-5, CE-7, CE-8, CE-10, CE-12, CE-15, CE-18, CE-26, etc. We will be happy to work with you on design and development problems, also on any special phototubes your application may require. Full data, price, etc. on special phototubes will be forthcoming upon request.

## T-31W10AX TRU-FIDELITY PHONO-AMPLIFIER

Unique in design the Thordarson 10 Watt Phono Amplifier combines versatility of application with Tru-Fidelity performance. Both microphone and phono input channels allow the 31W10AX to be used in conjunction with the High-Fidelity Meissner AM-FM Tuner and other tuners of comparable performance; as a speech amplifier in amateur transmitters; or as the amplifier section in a recording set-up. Little is left to be desired in naturalness and brilliance of tone.

Separate bass and treble controls with both boost and attenuation action assure complete adaptation of the output to all acoustical conditions, plus the pleasure of listening to music the way it is desired to be heard. Production cost is lowered by the mounting of this unit on a simple chassis inasmuch as the amplifier is usually installed in cabinet, no cover is required. **LIST PRICE \$127.50**

|----------------------------|---------------------------------------|---|
| <b>NO distortion</b>       | <b>NO crossover network necessary</b> | <b>NO narrow dispersion angles</b>          |
| <b>NO cumbersome horns</b> | <b>NO additional space required</b>   | <b>NO need for separating sound sources</b> |

**FEATURES:** Real high-fidelity reproduction is not possible with a conventional 12" speaker, which seldom is capable of appreciable response beyond average voice range. However, such a speaker, in conjunction with the new MASCO high frequency tweeter unit HFT-100 will provide excellent fidelity from the lowest bass frequency it is capable of reproducing to the treble frequencies well beyond 15,000 cycles.

The HFT-100 with its patented diffuser is the simplest and most economical method of obtaining distortionless high frequency response. Since no crossover network is required, distortion resulting from the unavoidable phase shift in such networks is not produced.

**DESIGN AND CONSTRUCTION:** The relative low impedance of about 5 ohms permits a series hook-up with an associated low frequency (cone type) speaker. Due to the widely different characteristics of the tweeter and cone speaker, they become mutually compensating when so connected, in that one tends to stabilize the performance of the other.

The HFT-100 incorporates a quasi-cross-over network, thus the need for external filters is eliminated. A gradual slope of the lower end is the result of the design of the moving element in the HFT-100 itself. When applied to the HFT-100 it begins blending in at 900 cycles and attains full effect around 2500 cycles. As the HFT-100 determines its own operating range, it is quite permissible to apply its full power rating over the entire frequency range of a cone speaker-tweeter combination.

By means of a double reflector, uniform distribution of a wide frequency band is achieved. A method has been developed and patented (No. 2135840) which permits efficient utilization of the beam effect of the high frequencies. The short path lengths between the sound generator and the reflectors, together with the correct choice of the materials and finishes, result in a highly efficient unit.

**MOUNTING INSTRUCTIONS:** The HFT-100 with its supporting non-resonant metal bracket is attached to the cone speaker as follows:

- (a) Remove cone speaker from cabinet.
- (b) Match holes of metal bracket of tweeter with cone speaker mounting holes.
- (c) Remount cone speaker and tweeter into cabinet.

**HOOKUP:** The HFT-100 tweeter is wired in series with the cone speaker.

When the source impedance and the cone speaker impedance is **3.2 ohms**, a 10 ohm, 10 watt fixed resistor is connected across the tweeter.

When the source impedance and the cone speaker impedance is **6.8 ohms** no resistor is required.

When the source impedance and the cone speaker impedance is **16 ohms**, a 20 ohm, 10 watt fixed resistor is connected across the cone speaker.

Illustration of a Master-to-Master-to-Remote Inter-Mix Installation:

The above is an inter-mixed system using both Masters and Remotes. Masters may call selectively or to all masters and remotes in the circuit. Master stations can originate calls to any remote at will. Remotes can answer any master from a distance but cannot originate calls nor talk to other remotes. Remotes can originate calls to any master in the circuit, but cannot talk with other remotes. Model JS Remote may originate a call to only one master. Model JS-6 Remote may originate a call to as many as six masters. Remotes with switch can be installed for private or non-private use.

Each master can have his own private hook-up of remotes. The remotes may or may not originate calls to the individual master. Masters can call each other regardless of whether master being called has its power on or off.

Illustration shows less than the maximum number of units possible in installation.

A JMP-6 Master may be connected to a total of six other units and a JMP-12 Master to a total of twelve other units. These units may be other masters or the JL, JS, and JS-6 Remotes, or the MB-8N Booster Amplifier. All of these units may be mixed.

## DS SERIES OF PORTABLE AMPLIFIER SYSTEMS

HAMILTON amplifier systems operate on 110-125 volt, 60 cycles, alternating current. Each system comes complete in all respects, including tubes, microphone, speakers and instructions.

Hamilton amplifier systems are housed in a single three-piece carrying case. Each piece fastens securely and easily. The upper halves each hold a heavy duty Jensen Alnico V speaker, plus a 25-foot cable with plug attached. The lower section of the case contains the perfect tone amplifier. The crystal microphone with shielded plug-in and 25 feet of cable rests in a special holder.

All the controls for the DS series amplifier are on the front panel, along with the toggle power switch, pilot light and protective fuse. Nothing is hidden or hard-to-get-at. The independent volume controls for both channels allow perfect mixing of sound. Bass-treble tone control permits tonal range from deep bass to high treble and allows for acoustical compensation wherever the equipment is used. Each Hamilton amplifier system has its own set of matched tubes, the larger units having the tubes clamped down.

## ALNICO 5 PM LOUDSPEAKERS

All component parts of the new Alnico 5 Loudspeakers are made to the rigid specifications of G-E quality control. This feature, in addition to highly efficient manufacturing skill, combined with the "know-how" of G-E engineers, has made these new superb speakers possible — unsurpassed in fidelity, dependability and durability.

4"

GENERAL ELECTRIC'S new 4-inch speakers are the result of years of intensive engineering research to produce units of reduced size with maximum efficiency for use in small portable and table model receivers. In addition to having the "stay-bright" finish and the aluminum foil base voice coil, the new 4-inch speakers are considerably lighter in weight and more compact. This reduction in weight and space has been accomplished through the use of Alnico 5 magnet material, all-weld construction, and smaller yoke assembly.

5 1/4"

GENERAL ELECTRIC'S 5 1/4-IN. PM speakers have all been designed and developed to provide full, true, low notes and excellent high frequency definition for voice or music reproduction. Skillful designing has been applied to all details to assure the best possible results.

6 1/2"

GENERAL ELECTRIC 6 1/2-inch loudspeakers are the result of years of persistent development to improve performance. Never were ideas introduced and combined with better quality materials. Greater sensitivity and power capacity in more compact space was achieved by these methods.

all size smaller. The speakers are capable of handling full audio power with very little distortion. These speakers are recommended for quality in design and faithful reproducing characteristics.

The NEW ALNICO 5 PERMANENT MAGNET material was chiefly responsible for maintaining the excellent performance of the G-E 8-inch speakers and still keeping the over-

10"

GENERAL ELECTRIC'S new 10-inch P.M. speakers are the result of application of latest developments in scientific laboratory tone reproduction. Especially designed for brilliant reproduction of voice and music. They represent a perfect balance in relative factors of performance ability, cost, and appearance.

12"

GENERAL ELECTRIC'S powerful 12-inch permanent magnet loudspeakers are designed to provide faithful tone reproduction at high levels. They equal or surpass the performance of electro-dynamic speakers of the same size. All weld construction has minimized distortion at maximum operation levels by eliminating vibration.

### G-E LOUDSPEAKER FEATURES

ALNICO 5 MAGNET MATERIAL is one of the great wartime engineering developments. Its energy per unit volume — approximately three times as great as other magnets — has enabled G-E engineers to design a new line of smaller speakers with better performance characteristics.

ALL WELD CONSTRUCTION of the newly designed G-E Alnico 5 Loudspeakers not only reduces the weight and size but also increases the rigidity necessary for perfect alignment of all parts. It also eliminates the possibility of dust and moisture accumulation and simplifies the replacement of damaged cones.

ALUMINUM FOIL BASE VOICE COILS only are used in all G-E permanent magnet speakers. Exact concentric location with the collar of the spider assembly insures excellent alignment. Humidity or excessive temperature variations do not affect the aluminum foil voice coils, making this type of speaker ideal for receivers designed for use in export markets.

## JENSEN HYPEX PROJECTORS

VH-24  
VH-20  
VH-15

VH-91

V-21

Because of the Hypex formula (Patent 2,338,262) giving wider sound distribution and greatly improved acoustical performance, JENSEN Hypex projectors are superior to the usual "exponential" type horns. The Alnico 5 unit is entirely enclosed within the one-piece rigid horn yet easily removed and replaced. Stainless steel and other corrosion-resistant materials and specially treated steel parts insure against weather exposure. Models VH-24, VH-20 and VH-15 have mounting brackets with clutch-type heavy "U" trunnions which afford complete flexibility of adjustment with positive locking into desired position. Weatherproof terminal boxes provide easy, solderless connections with no exposed terminals. Model VH-91 has a universal mounting bracket which permits pointing in any direction and secure locking by a single wing nut.

## HYPEX "Three-sixty" PROJECTORS

VR-11

Designed for the reproduction of speech and music signals at high efficiency where high noise levels exist. The Hypex formula, made famous by JENSEN Hypex projectors, is incorporated in their design giving greatly improved acoustical performance. With the sound distributed over a circle, they are especially suitable for installations where coverage of relatively large areas and suspension from the ceiling are desired. Model VR-11 is recommended for speech reproduction while Model VR-241, of larger size, is intended for speech and music reinforcement. Driver unit has phenolic diaphragm; VR-241 uses same diaphragm as VH-24 and VH-20; VR-11 uses same diaphragm as VH-15 and VH-91. VR-241 is equipped with weatherproof terminal box with connecting cable passing through rubber grommet and leads attached to screw terminals provided. VR-11 has two-conductor rubber-covered cable for connections. Both equipped with heavy eyebolt at top for suspension.

## GENUINE JENSEN WIDE-RANGE SERIES

No longer is truly good listening ruled out by cost or size restrictions. Now music can come to life for everyone, for Genuine JENSEN Wide Range loudspeakers include small sizes as well as large . . . low-cost units as well as more expensive models.

The four new JENSEN Coaxial speakers which replace all previous models embody the latest developments in loudspeaker design: the Wide-Range ACOUSTIC LENS for h-f dispersion (in Model H-510), annular Diaplane radiators, and new Hypex contour h-f horns. As a result these speakers achieve thrillingly realistic instrumental

and vocal tone quality and subtly satisfying "presence" low in cost in comparison with previous highest-quality systems. The term "high-fidelity" applied to these Coaxial systems connotes wider frequency range, greater response uniformity and better polar characteristics.

K-210

K-410  
K-310

Typical of JENSEN leadership is the ACOUSTIC LENS used on Model H-510 Coaxial. This lens acts in conjunction with the h-f horn to distribute h-f radiation uniformly over a wide angle, insuring constant balance and high quality reproduction throughout the whole room.

## BASS REFLEX CABINETS

TYPE M

TYPE D

TYPE B

TYPE H

**Type M CUSTOMODE IMPERIAL CABINET** is a distinguished example of fine furniture, embodying the famous Bass Reflex principle, and designed to enclose a 15-inch JENSEN speaker. Available in either Cordovan or Blonde Mahogany, with harmonizing grille fabric. Four concealed cutouts are provided, any two of which may be used for the Bush-type H-F Range and Level Controls. Foot assembly is furnished loose, so that cabinet may be placed on end or side, as required. There is space atop the cabinet for a large receiver, thus making one compact ensemble.

**Type D IMPERIAL CABINET** is handsomely styled, suitable for any environment, and is well constructed of beautifully striped satin finish veneered walnut, with interlaced bronze strip grille over matching fabric. They are available in two sizes: for 15-inch and for 12-inch speakers. For those requiring the modern touch in home decoration, the Imperial Type B cabinet is also offered in an attractive blonde finish.

**Type B UTILITY CABINET** is designed for those who desire inexpensive but durably built enclosures. They are well constructed of impregnated composition board and finished in hammered brown lacquer. Three sizes are available: for 15-inch, 12-inch and 8-inch speakers. Feet, unmounted are furnished.

**Type H SECTOR CABINET** for 8-inch speakers, is especially designed for installations where multiple speakers are required for public entertainment or paging. With front curved to a 14 1/4" radius, they fit anywhere—in corners, on walls, at intersection of ceiling and wall, or on posts. They may be mounted in pairs or clusters for wide-angle sound distribution. They are perfectly adapted to all interior sound installations because of their reasonable price, small size and high-quality performance due to their Bass Reflex design. They are built around a frame of solid wood; with wood composition replacing the usual plywood panels. Finished in brown lacquer, covering colors may be applied to match the locale of the installation. Brackets and screws are furnished for mounting.

### JENSEN Customode

CUSTOMODE is the JENSEN "building-block" solution for the problem of housing the custom home entertainment system. Shown is only one of countless combinations which may be assembled from a few basic units. Ask for descriptive folder.

Instead of the former practice of stating frequency limits of loudspeakers in cycles, the r-f region between the minimum useful limit for music and maximum limit for hearing has been divided into eight steps, each of which is just distinguishable from the next as an audible difference for music. The rating of a speaker is determined from the highest interval in which loudness is maintained at a significantly high percentage of normal. The table at left relates the ratings to hearing and typical applications.

## IMPEDANCE MATCHING TRANSFORMERS

Loudspeakers are relatively low-impedance devices with voice coil impedance values ranging from 8 to 50 ohms. Vacuum tube power output stages on the other hand, are high-impedance devices with impedance load rated anywhere from 1,000 to 14,000 ohms. To reconcile these widely differing impedances, output or impedance matching transformers must be inserted between the signal output and the loudspeaker voice coil. To determine which transformer is to be used in any given case, first of all find out the impedance of the loudspeaker in question and then locate for that speaker the

transformer which will match nearest the impedance of the signal source. Differences of the order of 10% are usually of no importance but if a close match cannot be obtained, it is best to select an impedance value which will present a higher rather than lower-than-rated impedance to the output tubes. Thus where a 5,000-to-16 ohm transformer is needed, it would be better to select a 6,000-to-16 ohm unit than a 4,000-to-16 ohm unit. For full and complete treatise on impedance matching, consult Jensen Technical Monograph No. 2. (Price 25c).

### ADJUSTABLE IMPEDANCE

**Type "ZX"** For matching conventional "plate" impedance values. Adjustments are easily made with flexible lead and pin-tip jack. Impedance values: voice coil, 4,500, 7,000, 10,000 and 14,000 ohms. All except voice coil are center-tapped for push-pull tubes.

### RE-ENTRANT TRUMPETS

RE-35 RE-50 RE-60

A compact trumpet of the double re-entrant type, made to occupy a small space, yet having a long air column and delivering highly concentrated sound with the greatest efficiency over long distances. RACON RE-ENTRANT TRUMPETS have base and inside tone arm made of aluminum castings, outside bell of heavy gauge aluminum spinning; RE-35, RE-50, RE-60 have center of RACON ACOUSTIC material to prevent resonant effects prevalent in all large reflecting surfaces. Sturdy construction makes them practi-

cally abuse-proof. Supplied with U-bracket mounting (ratchet swivel type on request). RE-60 and RE-50 have wide band frequency characteristics suitable for best musical reproduction. RE-35 and RE-25 most suitable for incidental music and speech. All have high degree of intelligibility and are excellent for indoor or outdoor use. Recommended for chime systems, recreation centres, sound trucks, railroad and bus terminals, arenas, camps, and noisy factories where there is a high noise level to be overridden.

### Waterproof Permanent Magnet Driver Units

The driver unit is the most important single element in a successful public address system. In these four new driver units, primary emphasis is on: high continuous power handling capacity with ample reserve for overload peaks up to 100%, maximum conversion

efficiency, response ranges suitable for every type sound system, and waterproof construction.

These four units employ Alnico V magnets and Armco magnetic iron throughout. All soft steel parts are doubly plated to prevent corrosion. An automatic electromagnetic cut-out switch is used in the magnetizing process, assuring maximum flux density in the gap and high uniformity. Units are individually measured for flux density. Each unit is tested with special equipment for power handling capacity as well as a 350-volt ground test.

Long life plastic diaphragms and formers are supplied with aluminum wound voice coils to increase efficiency. Voice coil leads are the non-fatiguing feather-weight metal type insuring lifetime performance. All units are completely waterproof, yet permit ready replacement of diaphragm where needed.

Designed for use where space is limited, but high noise levels are present. Rail and bus stations, on trains, in locomotives, on docks, on police and fire cars, for intercom systems in schools, hospitals, offices and factories.

### RADIAL RE-ENTRANT HORNS & SPEAKERS

SR-35R  
SR-60R

SR-15R  
SR-12R

A weatherproof double re-entrant type horn and speaker designed to project sound over a complete circumference of 360°. These are constructed to be non-resonant and in models SR-35R and SR-60R the centre reflecting surface is of Racon Patented Acoustic Material. The deflectors are aluminum covered with this same material.

The two larger models can be used for the reproduction of music and speech and all models can be used for announcing and paging. The SR-60R is ideal for reproduction of church chimes.

Models SR-35R and SR-60R employ a standard thread and may be used with any Racon driver unit. Models SR-15 and SR-12R are supplied complete with 15-ohm built-in driver unit.\*\*

#### RADIAL TYPE

CR-6 CR-12

Speaker is designed to project sound over a complete circumference of 360 degrees, distributing the sound with even intensity and emphasizing the high frequency response lacking in direct cone speakers. Particularly adapted for use in factories and in auditoriums where complete coverage is desired. Can be camouflaged to blend with ceiling architecture.

IN ALL RACON RADIAL CONE HOUSINGS the upper deflector is made of heavy gauge steel, back cone cover of steel, and lower deflector of RACON ACOUSTIC material to prevent resonant effects prevalent in all metal reflecting surfaces. Stormproofed for all weather conditions. These cone housings are furnished without speakers.

#### MARINE TYPE

CM-5 CM-8 CM-12

A re-entrant speaker housing of the Marine type for cone operation. Owing to construction this housing can be used outdoors, as well, in all weather and temperatures without damage. Cone diaphragm is protected not only from direct contact of rain, but also from physical damage. Can be used for voice or music reproduction.

IN ALL RACON CONE MARINE SPEAKER HOUSINGS bell is made of heavy gauge aluminum; cone mounting is made of aluminum casting; centre bullet is made of Patented RACON ACOUSTIC material to prevent resonant effects. Material is stormproofed for all weather conditions. Housings are supplied without Cone Speakers.

ST-414  
ST-415

The most efficient horns obtainable. Output from any straight trumpet is approximately 2 DB higher than corresponding re-entrant type with the same input. This is because straight trumpets lack the attenuation from resistance and reflection which is inherent in all re-entrant horns. Will override extremely high noise level, indoors or outdoors.

"Stormproof" Trumpets are made of Racon Acoustic Cloth processed by a patented method which gives a non-vibratory wall, thereby increasing the output of the horn without loss due to wall vibration. Weather-treated for indoor or outdoor use for years of foolproof service.

"All Aluminum" Trumpets are made of heavy gauge aluminum spinning with rolled beaded edge and cast aluminum throat sections.

"Unbreakable" Trumpets are made of heavy gauge aluminum spinning reinforced and damped with Patented Racon Acoustic Material to prevent wall vibration.

Larger sizes are useful for chime systems, airports, stadiums, parks, playgrounds, music festivals, for both excellent speech and music. Smaller sizes for railroad and bus terminals, waiting rooms, factories.

CHU-2

### CELLULAR HORN TWEETERS

Model CHU-2 tweeter provides an economical and effective method of extending the range of conventional cone speakers. When used in conjunction with any well-designed 12"-15" cone speaker, a uniform response range is provided, from the lowest frequency of the cone to the limits of present-day program material. Response is essentially flat to 12,000 cycles, with excellent usable output to 15,000 cycles. Cellular horn design permits wide angle distribution. Designed for a 1000-cycle crossover to assure maximum low frequency cone response by reducing intermodulation distortion and cone "breakup." The CHU-2 must be used with a crossover network for optimum performance. The networks listed below are recommended and when employed, tweeter model CHU-2 may be used with amplifiers having an output rating to 25-30 watts.

**NOTE:** Instructions are packed with each tweeter, providing an easy method of home building a professional type 1000-cycle crossover network.

## REFLEX LOUDSPEAKERS

MODEL LH

The reflex horns pioneered by University represent the most efficient method of converting electrical power into acoustic energy. When used with University driver units, they are capable of conversion efficiencies up to 50% and in addition, provide compactness and weather protection without any sacrifice in performance.

Heavy gauge metal and corrosion resistant finishes on horn and hardware are assurance of trouble-free performance regardless of changes in temperature and humidity. Adjustable UNIVERSITY "U" bracket mounting simplifies installation and holds the speaker firmly locked in any position.

Four models cover every public address requirement. Model GH has the longest air column and is ideal for the reproduction of symphonic music. The model LH with a higher cutoff is designed as a general purpose speaker and is recommended for music transmission where economy without sacrifice of quality is essential. In installations where a smaller horn is required, the Model PH will render excellent service for both speech and music. The Model SMH will find its widest application in the reproduction of speech where clarity and a high degree of intelligibility are necessary. Accessories include Model PMA adapter and 2YC connector.

## BREAKDOWN PROOF DRIVER UNITS

University driver units are breakdown proof and guaranteed for one year. Ratings are conservative and operation over long periods is assured. They are of the PM dynamic type, incorporate highest quality Alnico magnets and one-piece molded phenolic diaphragms. Unique "rim centering" construction eliminates aligning pins and permanently centers the voice coil and head assembly in a much closer magnetic gap. This results in a higher conversion efficiency and misalignment due to shock or vibration is virtually eliminated. Hermetically sealed housings provide complete protection from out-

door exposure and corrosive fumes.

The PA-30 has a 30-watt built-in line matching transformer. Transformer terminals provide 16, 185, 250, 500, 1000, 2000-ohm taps for constant impedance systems and 2 1/2, 5, 10, 20 and 30-watt taps for 70-volt constant voltage systems. Use the PA-30 or SA-HF for high power installations or where occasional overload is a problem. Model MA-25 represents the best "watts per dollar" value of any driver unit made. It combines efficiency, waterproof construction and economy.

## PAGING AND INTERCOM SPEAKERS

These speakers are reflex air column horns with built-in hermetically sealed driver units. Models CR, 1B8, and MIL are directional and model IBR has a radial deflector for uniform 360° dispersion. They are capable of continuous use for intercommunication and paging on shipboard, docks, leading platforms, terminals and industrial plants.

Model CR can handle 18 watts of input power continuously, making it useful for high power alarm or announcing systems. Models IB8 and IBR have a continuous power handling capacity of 12 watts, which recommends them for paging or announcing in noisy industrial

areas. The models MIL and MIS with a 3 watt continuous power capacity are efficient intercommunication speakers. The model MIS is a small unit designed for flush panel mounting.

Though capable of producing adequate volume with low power, these speakers can handle more power than any other speaker of comparable size and weight. Modernization of old sound systems is easily accomplished by replacement of obsolete speakers with any of these models. Standard voice coil impedances permit installation without changes in the existing line or amplifier.

## RADIAL REFLEX PROJECTORS

Re-entrant horns with radial deflectors for uniform 360° sound distribution cover large areas and override high noise-levels, without blasting. The long air column of the RHL and its low frequency cutoff make it well suited for music and general applications. The smaller model RPH, with a somewhat higher cutoff, will serve for both music and speech. The RSH finds wide application for high clarity reproduction of speech. ## SUPER POWER SPEAKERS

UNIVERSITY super power speakers are the answer to every public address installation where tremendous amounts of concentrated power must be transmitted over long distances.

The Model 4A4 incorporates 4 PM driver units mounted on the back of a heavy cast mounting plate. Each driver opens into a reflexed air column on the front of the mounting plate. The four air columns feed into a common bell. Compactness makes them ideally suited for aeroplane broadcasting and use in Church towers, stadiums, etc.

In the Models B-6 and B-12, the PM driver units are mounted circumferentially on a rugged "tone chamber" casting which provides individual acoustic paths from each driver unit to a mixing chamber at the center of the casting. The patented design of the mixing chamber and the acoustic paths minimizes high frequency cancellation.

All speakers are completely waterproof and characterized by their ruggedness. Power ratings are conservative and projection ranges are often exceeded in actual operation. Speakers of this type were recently heard 15 miles in a carillon installation at the Empire State Building in New York City. "U" brackets permit a vertical swing of approximately 120° and locking in any position. Models B-6 and B-12 are supplied with horns suitable for voice reproduction essentially as standard equipment. For music, order substitute TYPE C HORN capable of response down to 100 cps. NOTE: Model 4A4 is sold and shipped less driver units. Standard driver units Model 8A-HF or MA-25 may be used.

## RAILROAD AND MARINE TYPES

UNIVERSITY marine and railroad type speakers are submergence, shock and vibration proof and are unaffected by live steam. Their reflex air columns are built of rugged castings and are equipped with Alnico V PM dynamic units. Speakers may be made blastproof on order.

Models MSR, MM-2TC, MM-2 and MM-2F have hermetically sealed housings and built-in driver units. Models MSR and MM-2TC have space for volume control and line matching transformer. Tapped

holes provide access to volume control and for receiving a conduit. Both are designed for bulkhead or wall mounting — the Model MM-2F may be flush mounted and the MM-2 has a swivel mounting bracket.

These speakers will operate efficiently under the most arduous conditions — on ships, docks, in railroad yards or locomotive cars, — in mines, laundries and mills — wherever dirt, salt spray, humidity, fungus, dusts and vapors constitute a hazard.

- MODEL 7102 APPROVED FOR CLASS II, GROUPS E, F, G

Introduction of Models 7101 and 7102 Explosion-Proof Speakers now makes it possible to install loudspeaker systems in locations where flammable liquids, gases, dust and other combustibles are present. Approved by Underwriters' Laboratories for Class I and II locations, Models 7101 and 7102 permit industries heretofore denied the advantages of sound, paging and intercom facilities, to proceed immediately with 100% safe installations. In addition to approved explosion-proof construction, these speakers represent the last word in rugged design.

Features of this speaker include a 2 1/2-ft. air column, re-entrant type trumpet, a heavy duty driver unit with "W" shaped Alnico V magnet, response to 10,000 cps and continuous power capacity of 25 watts integrated program material. Voice coil impedance is 16 ohms, and a husky line matching transformer is included and built into the driver unit housing, tapped for 45, 500, 1000, 1500 and 2000-ohm inputs. Dispersion angle is 95°. Cable entrance is threaded for 1/2" conduit. "U" type mounting bracket permits over 180° variation of mounting angle.

## UNIVERSITY POWRMIKE SOUND SYSTEM

COMPLETE • PORTABLE • NO TUBES • NO AMPLIFIER • NO A.C.

UNIVERSITY Powrmike features a microphone of completely new design that makes possible an effective, voice-amplified system without vacuum tube amplifier. It operates from any 6-volt D.C. source, wet or dry cell type batteries or vehicle ignition systems. Powrmike is completely portable, low in cost and requires no service or installation. Instant operation by depressing the switch bar on the microphone. Articulation and intelligibility are excellent. Sound output is ample to cover small crowds and provides good sound projection to over 100 feet. Under favorable conditions, this range is increased considerably. Powrmike is not intended to supplant conventional tube amplifying systems where higher power or music distribution is desired. But for applications needing only small area coverage and efficient voice reproduction, Powrmike is ideal. Powrmike is unconditionally guaranteed for one year.

## WEATHERPROOF AND INDOOR LINE MATCHING TRANSFORMERS

MODEL CTR-20

The new UNIVERSITY line of matebing transformers is designed for use with UNIVERSITY loudspeakers in indoor and outdoor installations. Since most UNIVERSITY loudspeakers are capable of frequency response to 10,000 cps. and beyond, these transformers have been designed to assure perfect performance throughout the range of the speakers with which they are used. Only the highest grade metal is employed. Grade A fine gauge silicon laminations. Insulation withstands 1000-volt breakdown tests between windings and case. Efficiency is exceptionally high.

Model CTR-20 houses the Model 5420 transformer in a heavy DIE CAST case. Mounting may be made to a wall or other flat surface by means of screws using the bracket which is an integral part of the one-piece casting. A strap bar is also supplied for mounting the CTR-20 to trumpet

"U" brackets; and for the UNIVERSITY Paging Speakers the CTR-20 cover plate accommodates the three mounting holes of the triangular mounting bracket. This makes the case a combination mounting support for both the transformer

itself and the speaker. Gland nut cable entrances assure watertight protection against corrosive agents.

Model 5414 is a heavy duty transformer with taps especially selected for use on both constant impedance and constant voltage systems without need for further calculations. Frequency response characteristics are exceptionally good, making it ideal for use with High Fidelity equipment capable of response to beyond 15,000 cps. Heavy core enables very low frequencies to be handled with high efficiency.

No matter what the application or the impedance required, one of these new versatile UNIVERSITY line matching transformers can be used to do a dependable job.

### MODEL 6201 COAXIAL SPEAKER

RESPONSE 45-15,000 CPS.  
CONT. POWER 25 WATTS  
SOURCE IMPED. 8 OHMS  
DIMENSIONS 12 1/2" DIA., 8 1/4" DEEP  
NET WEIGHT 7 LBS.

LIST PRICE \$75.00

The exciting realism and tingling sense of "presence" when listening to the University Model 6201 is due, in part, to use of the same dual range principle employed in expensive theatre systems. Program material is divided into two bands. The low notes are handled by the large one-piece molded cone of the "woofer" section, and the treble tones by the highly efficient "tweeter" driver unit and horn. The result is uniform, balanced response and full range reproduction, free from distortion.

A built-in inductance-capacitance-resistance 2000-cycle crossover network assures optimum operation of the woofer and tweeter. The high frequency control, supplied completely wired to the speaker, permits variable adjustment of the "balance" between high and low frequency acoustic output. Another important feature is the coaxially mounted University "Cobra" shaped tweeter horn which provides a high frequency arc that blends with the low frequency output of the cone to form a uniform area of sound 80 wide, without the customary loss of "highs" when listening at angles considerably off speaker axis. Model 6201 can be installed quickly and easily. The mounting bolt circle is RMA standard for complete interchangeability with other 12" speakers. Tweeter horn is flush with woofer rim and entirely self-supporting. Capable of handling 25 watts of integrated program material continuously, Model 6201 is perfect for public address—monitoring—general sound reinforcement in theatres, churches, auditoriums, concert halls—and anywhere else a rugged, high power, weather resistant high fidelity speaker is required.

### EXCLUSIVE UNIVERSITY W SHAPED PERMANENT MAGNETS

W SHAPED MAGNET of gold dot Alnico V is another engineering feat responsible for the exceptional performance of these speakers. Heretofore, in ring and slug type magnets, field structures were heavy assemblies requiring "keeper" cups or "U" forms which were also a part of the magnetic return path and which had to be secured in place by bolts, cement, or welded joints. The powerful University W shaped 24-oz. magnet eliminates the necessity for a return keeper and there are no welded or cemented joints in the magnetic path, since the complete magnet structure is the magnet itself.

The W principle avoids reluctance which is present at the joints of other types, and results in a considerable reduction of stray magnetic fields and surface leakage. Greater concentration of the magnetic energy in the voice coil gap results, and flux density is thus considerably higher than in conventionally designed units. The oversized voice coil is wound on a 2-inch duralumin support for greater power handling capacity and efficiency, and set in an air gap which is independent of the actual magnet position, due to the unique design of the top plate and magnet assemblies. This assures permanent voice coil concentricity with the gap inner and outer circumferences.

### WIDE RANGE WEATHERPROOF COAXIAL SPEAKERS

The Model WLC is a HIGH FIDELITY co-axial speaker with a response range essentially flat from 50-10,000 cycles. It includes a weatherproof 12" cone speaker, a unit-driven tweeter and a built-in crossover network. Corrosion-resistant, all metal construction permits constant exposure regardless of temperature and humidity. Ideally suited for concert bands, drive-in theatres and all indoor or outdoor installations where high quality reproduction of music and voice are essential. A sturdy mounting bracket facilitates installation and permits tilting and locking the speaker in any desired position.

Model 6200 answers the need for a top quality but moderately priced high fidelity speaker. A 3" dia. duralumin dome at the apex of a specially curved one-piece molded cone reinforces the high frequency response, extending it to well beyond 10,000 cps. Like the 6201 Coaxial speaker, the model 6200 cone is also given a special rim treatment which minimizes the possibility of diaphragm distortion and serves to add to the life of the cone by preserving its flexible member.

The rugged University W Magnet assembly, an oversized voice coil wound on dural form, and a unique method of dissipating heat generated within the speaker mechanism by utilizing filtered air circulated by the back pressure of the speaker diaphragm are factors contributing to the high efficiency of model 6200. Construction of this speaker is typical of University high standards. The Hi Freq. dome is especially treated against fungus and corrosive agents, all close tolerance parts and hardware are both cadmium-plated and irridated, and the speaker finished with the finest hard-baked enamel on two coats of anti-rust and corrosion treatments.

Model 6200 is a versatile 30-watt powerhouse suitable for both high and low level applications where price is an important factor but quality of construction and reproduction must not be compromised.

## HIGH FREQUENCY TWEETER SPEAKERS

UNIVERSITY Tweeter are designed for use with any cone speaker to provide a dual-speaker combination having extended frequency response up to the limits of audibility. Since the average cone speaker seldom reproduces effectively above 6500 cycles, while even low priced amplifiers far exceed this range, these tweeters offer great opportunity to attain quality reproduction at very low cost. They can be connected to the voice coil of any PM or field excited cone speaker through a simple, economical, high-pass filter network. The various models shown offer ample diversity to meet the requirements of any installation.

**MODEL 4407 COAXIAL TWEETER ADAPTER** fits any standard 12" cone speaker. It can be installed with minimum effort. Response is essentially flat from 2000 to 15,000 cycles which adds the brilliant "highs" so frequently carried through all stages of amplification only to be lost in the bottleneck of a single element reproducer. It is a perfect answer in every wide range application where performance, ease of installation and economy are important factors.

**MODEL 4401 SINGLE TWEETER** mounts readily in any cabinet and is recommended for use with 8" to 15" cone speakers with amplifiers rated up to 15-20 watts. Cone speaker acts as woofer reproducing low frequencies, tweeter takes over at 2000 cycles and above. Features unusually wide horizontal dispersion.

**MODEL 4402 DUAL TWEETER** is generally similar to Model 4401 except horizontal angle of dispersion is greater. The dual driver units permit variation of impedance (6-8 ohms in parallel; 12-16 ohms in series) and provide double power capacity—with woofer, 25 to 30 watts.

**MODELS 4403 and 4409 TWEETERS** are new models with lower cut-off frequency. Recommended for use with larger diameter cone speakers for a crossover frequency down to as much as 600 cycles. Their ability to handle reproduction of a greater portion of the audio range is advantageous because of the superior efficiency of the University driver unit and horn transducer, which avoids operating the woofer in the range of cone break-up. The exclusive University "Cobra" formula horn shape combines unusually wide horizontal dispersion with optimum vertical projection.

## UNIVERSITY CROSSOVER NETWORKS

- Choice of Copocitor or LC Type Networks — only paper dielectric capacitors used.
- Complete with Variable Attenuator to balance high and low frequencies.

MODEL 4405

**MODEL 4405 HIGH PASS FILTER** — affords an economical means of preventing low frequencies from entering the tweeter circuit. All frequencies above 2000 cycles are routed to the tweeter. Frequencies below 2000 cycles are shunted to the cone speaker. This inexpensive filter or its equivalent is recommended for use with 2000 cycle tweeters. Case is die-cast aluminum.

**MODELS 4410 and 4420 FILTERS** — Crossover frequency of 4410 is 600 cycles, 4420 is 2000 cycles. Genuine L/C filter effectively blocks "highs" from entering the woofer — results in cleaner reproduction. The 4410 or equivalent must be used with 4408 and 4409 tweeters and the 4420 or equivalent may be used with 4407, 4401 and 4402 tweeters to prevent damage from low frequency entry.

## "DR" RE-ENTRANT — REFLEX — PROJECTORS

*Non-resonant - Stormproof - Uniform Response-Rugged Construction*

The modified exponential taper developed in Atlas DR projectors has proven to be most efficient for overall performance. All acoustic sound paths are smooth and flowing without steps or pockets to create conditions of turbulence, frequency cancellation and resultant signal distortion.

The costly and elaborate tooling necessary for the production of Atlas DR projectors is clearly reflected in superior performance, lasting service and consistent results.

Heavy "U" bracket is securely fastened to a main body casting which will not fail when subjected to extreme stress, strain and vibration. 1 3/8"-18 thread.

The clutch mechanism is inner-lined with a wear-proof bakelite locking collet which grips without jamming, slipping, or sudden dropping. All bases are functionally designed to offer maximum stability for a given base weight. The maximum base mass is located at the outer periphery of the casting where the concentrated

weight is most useful. All bases include self-leveling, shock-absorbent base pads, plus three additional "anti-tip" points located between the base pads. The complete tube assemblies of all models are "super-chrome" plated, assuring "life-time" wear. All models terminate in a  $\frac{3}{8}$ "-.27 carefully machined thread.

## NEW AUTOMATIC "Sleeve Action" MICROPHONE STAND

Quiet . . . No Rasp . . . Smooth . . . No Jolt or Jar

This amazing new automatic "Sleeve Action" clutch mechanism is a fully automatic means of adjusting the height of a microphone stand. A slight downward pressure on the "Sleeve Action" control permits the telescoping section to be lowered. To raise the stand, the telescoping tube can be grasped at any point and simply extended. The new "Sleeve Action" is built

for life-time use. It cannot creep or change position without a deliberate pressure on the actuating sleeve control.

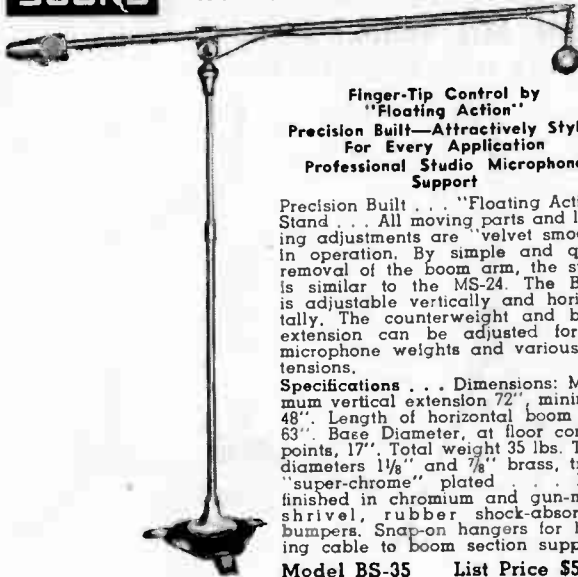

The quality of materials, plating, and general specifications are identical to the "Full Grip" models described above. The "Sleeve Action" stand is available in two models; either full chrome or shrivel base.

## VR2 DYNAMIC MICROPHONE

### A Microphone with a NEW IDEA and a NEW USEFULNESS

For the first time, the many desirable characteristics found only in several different types of microphones have been combined in a single unit. The VR2 has an easily accessible external adjustment of the most important acoustical reactors in the dynamic microphone. A smooth change from a communication-type response, with a cutoff below 500 c. p. s., through a flat response to an augmented bass, attained by a simple, positive adjustment.

The response adjustment on the VR2 has a very broad effect and does not introduce narrow peaks. It is different from anything previously introduced.

Complete with 12½' cable and plug at microphone providing balanced line. Dull chrome finish. Net wt. less cable, 15 ozs. Hgt. 4". Greatest diameter 3".

## C6 CRYSTAL MICROPHONE

**EXTREME SENSITIVITY.** New crystal driving lever, twice as efficient as previously used, produces twice the voltage output with equal sound pressure.

**BROADER RESPONSE.** Results of new construction include extension of both low and high end.

**BASS END IMPROVED.** Naturalness insured by improvement in low frequency response.

**LONGER LINES.** By increasing the voltage output, the cable length may be increased proportionately. In laboratory tests, regular cables 250 feet in length have been used with a net voltage sufficient to operate any standard high gain amplifier.

**MECHANICAL NOISE REDUCED.** Mechanical and stand noise is no longer a factor. The C6 method of crystal mounting reduces mechanical noises by 12 db.

**LESS AMPLIFIER AND INDUCED NOISE.** The high output of this microphone assures a very desirable signal-to-noise ratio.

## D9A Unidirectional MICROPHONE

THE D9A DYNAMIC, a pressure-velocity combination microphone, with pick-up from front only, broad frequency response and high output, plus the usual dynamic microphone qualities of ruggedness, immunity to weather conditions, and circuit adaptability, should fill the majority of requirements.

The D9A Microphone is recommended for public address and general sound installations because its energy response field (cardioid of revolution) excludes extraneous pick-up and reduces feed-back by two-thirds. May be used for close talking due to the modified velocity section which also reduces wind noises to a minimum.

The above graph illustrates the average response characteristics for the D9A and D9AT. Voltage output levels, for 1 bar sound pressure (1 bar=1 dyne per sq. cm.) of the high and low impedance models. For 10 bar signal the output will be 20 db. higher.

## D4T DYNAMIC MICROPHONE

A QUALITY, LOW-PRICED, MOVING-COIL MICROPHONE. For general use where clear speech and natural music reproduction is required. This new AMERICAN microphone is a very efficient instrument, having a broad range, from 60 to 7500 c.p.s., and high output of -56 db (0 db=1 v/bar). The utility value lies not only in the quality and type of response but also in mechanical features, such as light weight (approximately 10 1/2 oz.), a full 180° vertical angular setting, and positive friction lock at the swivel.

The D4T, high impedance, is equipped with a single-contact, shielded plug. The 50, 200 and 500 ohm models are equipped with a two-conductor plug and have a balanced line out.

The D4 model is of voice-coil impedance, approximately 30 ohms. Lines up to several hundred feet may be used on all models except the high impedance, where line should be restricted.

The complete assembly includes 12 1/2 feet of shielded, rubber-covered cable and shielded plug. Finished in platinum chrome. Standard mounting, 5/8" x 27 thread.

## C7 CRYSTAL MICROPHONES

The development of the new American Crystal Microphones, Model C7H and Model C7L, represents many features which have been available only in several previous types. The response characteristics have been chosen so that the C7 can be used equally well for recording with a minimum amount of amplifier equalization and also for public address. **A new system of coupling the crystal element to the diaphragm is employed which produces a smoother response and 100% greater efficiency equivalent to double the output of usual direct drive type of coupling.** High or low impedance may be had in the Model C7. An efficient transformer is used to reduce the inherent high impedance of the crystal generator to standard line impedances. Long lines with negligible losses may be used.

The curved arm with off-set head was designed to provide optimum tracking for both ten and twelve inch records with minimum wear of record and stylus. Base of the arm is designed for single hole mounting. Assembly includes CR-1A Crystal Cartridge, twenty-four inch single conductor shielded wire, arm rest, mounting hardware and complete mounting instructions.

## CR1A CRYSTAL CARTRIDGE

CR-1A Cartridge is a high output, wide range unit, which incorporates a number of new developments in cartridge design. High output and improved response are obtained by a unique method used to drive the crystal element. The cartridge is supplied with pin plug connectors for ease of

assembly into the arm—no soldering iron is required. The needle chuck design incorporates a "locked-in" feature whereby the chuck is prevented from moving when tension or pressure is applied to the needle screw. This feature also insures that the needle socket will remain centrally located in its opening in the cartridge. High needle point compliance and minimum record chatter are thereby guaranteed. The cartridge will operate satisfactorily with any conventional needles; however, its high-frequency response will vary somewhat with the type needle used. Best operation will be obtained with off-set needles using sapphire or precious metal stylii.

**TELEVISION BOOSTERS  
MODELS AT-1 AND AT-1B**

● A superior, new type of television booster offering a vast new scope of enjoyment for receiver owners. Ability to improve reception more effectively and extend the fringe area starts with the principle of "more tubes, stronger signal." A variable gain control knob permits reduction of signal strength to prevent picture distortion when the signal input is greater than that required. The failing of many boosters—showing a "peak" on some channels and "fall-off" on others—has been eliminated. These units provide extremely high gain, and do it throughout the television spectrum. Dual tuning controls allow separate tuning for picture and sound. Available in handsome furniture-finish mahogany or blond cabinets. The letter "B" in model numbers designates blond cabinet.

## PICKUPS FOR SLOW SPEED AND STANDARD 78 RPM RECORDS

### MODEL 6D CRYSTAL TURNOVER PICKUP

● Switches from 33 1/2 or 45 RPM records to standard 78 with turnover knob at front. Plays both types of records at only eight-gram needle pressure, thus has no extra mechanism to change pressure when knob is turned, eliminating a potential source of trouble and varying reproduction quality. Employs LQD-1 Double-Needle Cartridge. Mounts seven inches from turn-table center, die-cast curved arm finished in dark brown Hammerlin.

### MODEL 7D CRYSTAL TURNOVER PICKUP

● Newly designed cast aluminum arm employing Astatic's sensational new smooth response cartridge, the tiny turnover type ACD Crystal Cartridge. Arm design affords minimum tracking error and balanced groove sidewall pressure, resulting in reduced tracking distortion and longer record and needle life. Cartridge rotates in improved snap-action turnover mechanism. Light brown Hammerlin finish.

### 400-D TURNOVER PICKUP

● Turnover type transcription pickup adapted from famous Astatic Studio Master "400" conventional transcription arm. Plays 33 1/2, 45 or standard 78 RPM recordings at eight-gram needle pressure. Employs LQD-1 Double-Needle Crystal Cartridge. Notable excellence of frequency response, particularly at low frequencies. Gracefully curved, die-cast arm in light brown Hammerlin finish.

### MODEL FL-33 PICKUP

● Does the work of three pickups. Its U-J Crystal Cartridge for either 33 1/2 or 45 RPM records is easily, instantly replaceable with the U-78-J Cartridge for playing standard records. No adjusting of needle pressure, nothing else to be done. Cartridges slip in and out like barrel and cap of non-threaded fountain pens. Special Type "U" Taper-Lock replaceable needle has tongue and groove arrangement to hold in position, removes merely by gripping small tab at rear of needle and sliding towards rear of cartridge. Novel design at base of FL-33 eliminates tone arm resonances, assures perfect tracking. Die-cast arm, finished in high gloss black and polished aluminum.

### MODEL FLC-33 PICKUP

● The same important advancements in pickup engineering as the FL-33, in handsomely curved styling. Offers the same operating advantages, such as the three-in-one feature: one pickup plays 33 1/2, 45 and 78 RPM Records without changing needle pressure or making other adjustments, with the simple switching of slip-in cartridges. Perfect tracking, at only five-gram needle pressure, is assured by the revolutionary new base mounting assembly.

### FLT-33 TRANSCRIPTION PICKUP

● Never before, a pickup of such professional instrument quality and precision. Like the FL-33, this sleek transcription model employs the U-J Crystal Cartridge with one mil tip-radius needle, instantly replaceable with the U-78-J for playing 78 RPM Records. In addition, the U-TR Cartridge with 2.5 mil tip-radius may be inserted to play standard lateral broadcast transcriptions. Special ball-bearing, anti-resonance base is adjustable to desired height, as is unique arm-rest. Feather-touch needle pressure of five grams is accomplished by a revolutionary hinged division of the arm, which also contributes to perfect tracking and elimination of surface noise. Die-cast arm and base look their fine instrument part, with finish in telephone black. All three "U" Series Cartridges are available with diamond stylus tips instead of the regular sapphire.

### THE FT FILTER-TRANSFORMER

● For broadcast station use with "FL" and "FLT" Series Pickups, to filter and match high impedance output of pickup to low impedance mixer circuits. Has output impedances of 37.5, 150 and 250 ohms.

Code ASXMR.....List Price \$28.50

## CARTRIDGES

### FOR SLOW SPEED AND STANDARD 78 RPM RECORDS

#### THE AC-J CRYSTAL CARTRIDGE

● Astatic's newest crystal cartridge development. New mechanical drive system affords new low in inertia, for extraordinary smooth response, new tracking excellence, low needle talk. Miniature size belies BIG, full-throated performance. Weighs only 5 grams. Easily

replaceable Type "C" Needle with one-mil sapphire stylus tip for slow speed records or special All-Groove tip for all record types.

- \*All-Groove Needle Model.

#### THE GC CERAMIC CARTRIDGE

● First major stride in cartridges employing ceramic elements since Astatic pioneered in this type unit. The first with replaceable needle. Takes "Type G" needle—with either one-mil sapphire tip radius or special All-Groove tip for all record types—which slips from its rubber chuck with a quarter turn sideways. Resistance to high temperatures and humidity is not the only additional advantage. Output has been increased over that

of any ceramic cartridge available. Light weight and low needle pressure make it ideal for a great variety of modern applications. Models GC-J and GC-AG-J (All-Groove Needle Model) fit standard 1/2" mounting and RCA 45 RPM record changers. Model GC-1J fits RMA No. 2 Specifications for top mounting .458" mounting centers.

- GC-J —Code ASWZK ..... List Price \$7.40
- GC-AG-J —Code ASWZM ..... List Price 7.40
- GC-1J —Code ASWZII ..... List Price 7.40

#### THE CQ CRYSTAL CARTRIDGE

- \*All-Groove Needle Model.

#### THE L-92-33 CRYSTAL CARTRIDGE

● High performance quality in a new, low-cost unit. Notably high output permits use with standard phonograph amplifiers, where other cartridges prove unsatisfactory. Reality of tone and absence of surface noise are almost unbelievable. Universal, screw type needle chuck receives any standard micro-groove needle. Stylus not furnished.

Code ASWTS ..... List Price \$6.00

#### THE MG-J MAGNETIC CARTRIDGE

● Peak fidelity of reproduction that LASTS, even under the most consistent service or adverse climatic conditions. Unchanging characteristics are result of radical reversal of engineering precedent and drastic simplification, which eliminate need for delicate handling and other common sources of trouble with magnetic type units. Troublesome, costly armature balancing problems also eliminated. Mumetal housing provides increased shielding effect for maximum reduction of hum. Replaceable "G" Type Needle with one-mil sapphire stylus tip for slow speed records or special All-Groove tip for all record types.

#### THE LQD DOUBLE-NEEDLE CRYSTAL CARTRIDGE

● The LQD Cartridge — for 45, 33 1/2 and 78 RPM Records — quickly became the first choice of many of the nation's largest users, on the basis of comparative listening tests, and is, today, the PROVED TOP PERFORMER for turnover type pickups. Outstanding for excellence of frequency response, particularly at low frequencies. A gentle pry with pen-knife removes ONE "Q" needle for replacement . . . without disturbing the other needle, without removing cartridge from tone arm. Gentle pressure snaps new needle into place. Stamped aluminum housing. Model LQD-1J, illustrated, has needle guards and front bracket for turnover knob. LQD-J furnished without guards or bracket.

- LQD-J —Code ASXAL ..... List Price \$9.50
- LQD-1J—Code ASXAM ..... List Price 9.50

#### THE U-J CRYSTAL CARTRIDGE\*

● The unparalleled performance and triple duty service of the FL Series Pickups is largely due to the U-J Crystal Cartridge. A child can slip it instantly from the pickup and slip in the U-78-J or U-TR Crystal Cartridges to switch from 33 1/2 and 45 to 78 RPM records or broadcast transcriptions. ## SHURE MULTI-IMPEDANCE SUPER-CARDIOIDS

"556" SUPER-CARDIOID  
(For Broadcast)

The new Shure Super-Cardioid Dynamic Microphones are Multi-Impedance Microphones—giving you three microphones in one. Gives you a choice of low, medium, or high impedance in one unit. Model "556" is specially designed for Broadcasting. Held within extremely close tolerances in frequency response. Features internally isolated cartridge and external vibration absorbing unit. Model "55" is a "General Purpose," high-quality dynamic. It is identical to the "556" in appearance with the exception of the external vibration absorbing unit. Following is technical data covering both models: Reduces reflections and reverberation—decreases random noise pickup by 73%. Smooth response from 40 to 15,000 cycles over wide angle at front—dead at rear. Single unit construction accomplished through Shure "Uniphase" principle (Patented). Floating moving coil system. Swivel head. Standard  $\frac{5}{8}$ "—27 thread. "556" has convenient terminals for attaching longer length cables. "55" has built-in connector. Case  $\frac{1}{4}$ " high,  $\frac{3}{4}$ " wide,  $\frac{3}{2}$ " deep. Ship. wts.: "556",  $\frac{3}{2}$  lbs.; "55", 4 lbs.

## PRESTO 64-A TRANSCRIPTION TURNTABLE

The Presto 64-A transcription turntable offers the following features which are of major importance to the owner and operator: Unusual mechanical simplicity . . . low mechanical disturbance . . . perfect speed accuracy . . . extreme ruggedness for long continuous operation . . . instantaneous selection of desired speed . . . and no requirements for mechanical adjustments.

This transcription turntable is directly gear driven and employs two separate motors, one for 33-1/3, and the other for 78.26 rpm. There is no friction device of any kind in the mechanism and no mechanical shift is required to change speeds. To select 33-1/3 rpm, 78 rpm or "off," the operator merely throws a three position switch. These changes may be made as rapidly as desired while the turntable is in motion with no damage to the mechanism. Only one motor at a time is in operation. The transmission "over runs" the motor which is not turning and thus does not carry it along in rotation although the stationary motor is never disengaged from the mechanism.

### SPECIFICATIONS

**Standard Equipment:** The 64-A transcription turntable includes the electro-mechanical gear drive, turntable and cabinet. A reproducer and network is not included.

**Speed Accuracy:** No deviation from 33-1/3 and 78.26 rpm.

**Noise Level:** Mechanical noise originating in the equipment over 50 db below program level.

**Power Requirements:** Approximately 75 watts from a 115 volt, 60 cycle line. Motors are of the 1800 rpm synchronous type and are available for other voltages and frequencies at additional cost.

**Mounting:** Turntable and gear drive mounted in heavy wood cabinet 24x24x33 inches (61x61x84 cm.). Finished in two tones of grey lacquer. List Price, \$495.00

## PRESTO 6-N RECORDER AND 90-B AMPLIFIER

The PRESTO 6-N Recorder and 90-B Amplifier is the ideal recording equipment for portable or stationery operation.

The 6-N Recorder is outstanding in its suitability for broadcast stations because it offers all the qualifications for good recordings, including master records, at the most economical price. It is ideal for the station requiring delayed broadcast of network programs, and for reference recordings.

The 6-N standard equipment includes the Presto 1-D cutting head, spiraling feed screw, vertical damper, time scale and pick-up. It is available for microgroove recording at addition cost.

The Presto 90-B recording amplifier contains all the facilities necessary for operation on remote assignments, but with all overall performance found only in high-fidelity studio equipment.

It consists of three preamplifiers with individual gain controls, a mixer circuit, a master gain control and recording amplifier. Provision is made for connecting the Presto 161-A automatic equalizer (radius compensator).

A five-position selector switch provides the following characteristics: 1—flat response, 30 to 15,000 ±1 db; 2—NAB 33 1/3 rpm recording; 3—present day 78-rpm recording; 4—NAB playback; and

5—automatic equalization. The flat response can be modified by variable bass and treble controls, giving emphasis up to a maximum of 20 db at 100 and 7,500 cycles per second or 20 db de-emphasis at 7,200 cycles per second.

Noise is 55 db below recording level and distortion at maximum output is less than 1.5%.

The use of input and output selector switches makes the 90-B amplifier unusually flexible. It permits combining the signals of three microphones or of two microphones and either one of two pick-ups. By using the "Line" position, recordings can be made from an incoming program line. The output selector has three positions; playback (public address), continuous recording and simultaneous recording. While recording, the line jack provides a monitoring outlet or permits feeding a program line at the correct level.

The correct level is monitored by means of a Weston Type 30 VU indicator with illuminated scale and its closely controlled electrical and dynamic characteristics make it an ideal volume indicator for recording.

## PORTABLE TAPE RECORDER TYPE PT-900

### GENERAL DESCRIPTION

The Presto PT-900 Portable Magnetic Tape Recorder is a professional high quality unit especially designed for both studio and remote recording. It is complete in two portable cases: one, containing the 900-R1 recorder mechanism and the bias and erase

oscillator; the other, containing the 900-A1 amplifier system in one half and the power supply in the other half; weight is about 40 and 35 pounds for each case, respectively.

### FEATURES

**High fidelity equipment**—meets with all broadcast requirements.

**Portable Unit**—two carrying cases.

**Two-speeds**, 15 and 7½ in./sec.

**Recording time** 16 or 32 minutes.

**Fast rewind** (50 sec.) in either recording speed.

**Fast forward** (3 times forward speed).

**Movable guide** saves wear of heads on fast rewind.

**Three plug-in heads**: 1-Erase; 2-Record; 3-Playback.

**Azimuth adjustment** for playback head.

**Two separate amplifiers**—record and playback.

**Four input channels**. (Three microphone & one line).

**Suitable** for use as a remote amplifier.

**Instantaneous monitoring** direct from the tape.

**Dynamic range** better than 55 db.

The Presto 900-R1 Recorder consists of a single dual-speed hysteresis type synchronous motor and idler-connected drive to capstan and reels, three individual plug connected magnetic heads (erase, record

and play-back), erase and bias oscillator, system selector switch, speed change toggle switch, fast forward lever and record safety button, and separate rewind motor.

The Presto 900-A1 Amplifier unit consists of two distinct amplifiers: one, for recording or remote assignments; the other, for playback or monitoring. The use of separate record and playback amplifiers together with separate record and playback heads permits instantaneous monitoring of the tape.

The excellent design, quality of materials and high grade workmanship make the Presto PT-900 the outstanding recorder in its field. In performance it is comparable to the larger studio tape recorders but, because of its portability, it is limited to a maximum reel size of 7 inches. This permits approximately 16 or 32 minutes of recording at a tape speed of 15 or 7½ inches per second, respectively.

### SPECIFICATIONS

**Motor**: Dual speed (1800 and 900 rpm) hysteresis synchronous type, capacitor start and run.

**Signal-to-Noise Ratio**: Better than 50 db for the overall system at full modulation. Full modulation being the level at which a 400 cps input will produce 2% RMS overall distortion.

**Output Level**: Recording amplifier . . . + 21 dbm; playback amplifier . . . + 28 dbm.

**Frequency Response\*\***: Both amplifiers—substantially flat from 50-15000 cps; overall response at 15 inches per second—substantially flat from 50-15000 cps; overall response at 7½ inches per second—flat from 50-7500 cps.

**Meter**: Standard 4 inch illuminated dial VU meter checks recording and output levels, bias and erase currents.

**Output Impedance**: 500/600 ohms.

**Input Impedance**: Microphones—80 or 250 ohms.

**Line Input**—high impedance bridge.

**Dimensions**: The mechanical unit, including the oscillator, mounts in a leatherette covered portable case 16" x 11¼" x 14" overall. The amplifier case is in two sections: one containing the amplifiers measures 20" x 9" x 8¾" deep; the other, containing the power supply, measures 20" x 9" x 8¾" deep; thus, the overall dimensions are 20" x 9" x 17".

### PRICES

The Presto PT-900, consisting of the 900-R1 mechanical section and the 900-A1 amplifier and power supply, is sold at \$695.00.

The 900-R1 alone is \$350.00.

The SA-9 Switch Box is \$40.00. This unit is used to connect two 900-R1's to one 900-A1 for continuous recording over longer periods of time than is possible with the PT-900 alone. Rack mounting types of the PT-900, and SA-9 are the same price as portable types.

## Recitalist A PORTABLE, 3-SPEED, HIGH FIDELITY PHONOGRAPH FOR MUSICIANS, SCHOOLS AND ADVERTISING AGENCIES

- for authentic music reproduction
- for absolute tonal balance
- for a pleasing blend of brilliant highs with natural bass.

The REK-O-KUT Recitalist is the only full-range, three (3) speed portable phonograph that balances the response characteristics of amplifier, speaker and speaker enclosure. By carefully compensating the natural resonances of these three components, undesirable reverberations are eliminated.

Whether the Recitalist is played for hundreds in an auditorium (with volume raised) or for you alone, while relaxing in the comfort of your living room (with volume greatly subdued) — you will feel the animated presence of the artists evoked for an enchanting and realistic visit.

The POLYPHONIC SELECTOR, an engineering feature exclusive with REK-O-KUT, maintains tonal balance and equalization for the particular selection being played on any type of record, whether it be a standard pressing, high fidelity broadcast transcription, or long playing micro-groove — of American or foreign make.

The Recitalist is a "flexible" instrument. A microphone input enables "mixing" of live music or voice, simultaneously with a recording being played on phono . . . or, as a high fidelity public address system. By connecting an FM or AM tuner in the radio input, the Recitalist becomes a superb broadcast amplifier.

## PREAMPLIFIER MODEL 130H

EQUALIZES THE BASS RESPONSE OF RECORDS AND TRANSCRIPTIONS AND PROVIDES THE NECESSARY GAIN FOR HIGH-QUALITY MAGNETIC PICKUPS.

The Pickering 130H Preamplifier is designed to operate with any high-quality amplifier having a high impedance input. It is self-powered, operates from the 115 volt AC line, and is installed by simply plugging in.

Model 130H is unique in its accuracy of equalization, being superior to most broadcast station equipment in this respect. Further, the intermodulation and harmonic distortion is lower than good engineering practice requires in professional equipment.

The 130H Preamplifier represents the most advanced design ever achieved in phonograph preamplifiers, and like all Pickering Audio Equipment, symbolizes maximum performance.

### TECHNICAL SPECIFICATIONS

This Compensator permits each individual record to offer all of its quality without compromise . . . permits getting the maximum use out of scratched and worn records. Its six positions correctly equalize for all of the established recording characteristics including microgroove and standard records, domestic and foreign.

The Pickering Record Compensator is a most important addition to any record player equipped with an amplifier system having a high gain preamplifier, such as the Pickering 130H. It is easily installed, and like all Pickering Audio Equipment, symbolizes maximum performance.

# ... FOR RECORD REPRODUCTION

## PICKUP ARM — MODEL 190

The only arm capable of

Optimum Performance on both Microgroove and Standard Records.

Much distortion in playing records can be caused by an inadequate pickup arm, regardless of how good the cartridge. The most common causes of distortion inherent in the operation of conventional arms are poor tracking and excessive record and stylus wear. These undesirable qualities are a result of improper lateral and vertical moments of inertia and an incorrect relationship between the two. Further, many arms cause tracking error which creates needless distortion.

The Pickering 190 Pickup Arm is designed to overcome the disadvantages of all conventional arms, the shortcomings of which have been severely accentuated by the advent of LP microgroove records. Extensive investigation by Pickering engineers disclosed that reproducer arms which perform well on 78 RPM phonograph records and standard transcriptions will not necessarily produce good results on LP microgroove records. In fact no commercially available arm was found which would meet all of the requirements for this type of service.

The 190 Pickup Arm embodies all the features determined as significant and important to enable a high-quality cartridge to meet the stringent requirements for playing LP records without distortion and free of record and stylus wear: 1—The ratio of vertical-to-lateral moment of inertia is as low as possible . . . 2—The vertical mass has been minimized in order to track any record without imposing extra vertical load on grooves. It plays badly warped records just as well as flat ones . . . 3—There is no spurious arm resonance at any frequency . . . 4—Pivot

friction is lower than 3 gram centimeters and the bearings are rugged and trouble-free . . . 5—The arm is statically balanced about the vertical axis to eliminate tendency to jump grooves when subjected to bumping or jarring . . . 6—Offset head reduces tracking error to less than plus or minus 2½" . . . 7—Stylus point is protected against contact with anything but the record grooves. It cannot strike the turntable mat or center-pin. It plays all size records up to 17¼" O.D. In addition to these important design considerations, the 190 Pickup Arm features: Sensitive tracking force adjustment . . . height adjustment for turntables from ½" to 2" high . . . one-hole mounting and self-contained levelling screws . . . plug-in cartridge holder . . . magnetic arm rest . . . stylus point completely visible for starting and cueing records . . . 16¾" long.

List Price . . . \$40.00

Pickering Cartridges used with the Model 190 Arm require 50% less vertical tracking force than is required when using conventional arms.

## THE ONLY LOUDSPEAKER WITH ACOUSTICALLY ADJUSTABLE BASS RESPONSE . . . LOW-COST . . . HIGH-QUALITY . . . WITH SMOOTH WIDE-RANGE RESPONSE AND LOW DISTORTION . . . IT SATISFIES THE MUSICAL EAR.

## LOUDSPEAKER MODEL 180L

The Pickering 180L Loudspeaker grew out of the realization that most loudspeakers of the wide-range type produce unmusical disturbances, whereas the restricted-range speakers to which sensitive listeners turn for relief destroy most of the character of the sound. Furthermore, other high-quality loudspeakers are expensive, and either compromise acoustical design for the sake of appearance or ignore appearance to achieve acoustical performance.

There are no compromises in the Pickering 180L Loudspeaker; the use of different principles result in a design which fulfills all acoustic requirements . . . in a cabinet style which harmonizes with any interior decoration and occupies less floor space than any other loudspeaker. It is designed to produce wide-range, low distortion sound at ear level. This is an important factor in achieving realism and musical satisfaction which can never be approached by loudspeakers located near the floor.

### GRAPH SHEETS

Four extremely useful tools for the audio engineer. These specially designed graph sheets save endless time:

601 — Reactance-Freq. Graph. The elements of reactance, capacitance, and inductance all related in one simple graph. Net price \$1.00 pad of 50 sheets.

602 — dbm — Impedance Graph. The four variables: power (W), voltage (V), current (ma), and Impedance or Resistance ( $\Omega$ ) are acquainted in such a manner that given any two of these electrical quantities the other two may be graphically determined. A decibel scale in dbm (decibels below or above 1 milliwatt) parallels the power ordinate. Net price \$1.00 pad of 50 sheets.

603 — Attenuator-Design Graph. In this universal pad design chart here presented for the first time, the resistance in ohms for each branch of the pad may be determined by multiplying the values found at the lower horizontal scale by the impedance of the line into which the pad is to be inserted. It covers balanced and unbalanced T and Pi pads. Net price \$1.00 pad of 50 sheets.

604 — Semi-log, 3-cycle Graph. Designed expressly for the audio range. It has the unique virtue of starting at 20 cps. and covering three logarithmic cycles to 20,000 cps. On the vertical scale are 10 divisions per inch over 7 inches. Net price per pad 50 sheets \$1.00.

(All prices subject to change without notice.)

MODEL 125 — Clarkstan Audio Sweep Frequency Generator. A Clarkstan development for testing the behavior of audio and other alternating electrical apparatus with respect to frequency and associated phenomena. The generator operates in the audio range from 40 cps. to 10,000 cps. The complete frequency range is regularly recurrent so that the signal may be used in conjunction with an oscilloscope. The sweep frequency is governed 20 synchronizing pulses per second. Provides an instantaneous evaluation of the performance of amplifiers at various settings of tone control and pick-up correction

### OTHER CLARKSTAN PRODUCTS

Industrial Microscope for inspection work in shops, laboratories and research.

Alpha Counter for qualitative and quantitative analysis of radio active ores, such as thorium, uranium, etc.

Rubber Hardness Gauge to measure the Shore hardness of all rubber and other elastomers. Accurately measures rubber hardness within any of the commercial manufacturing tolerances.

### AUDIO SWEEP FREQUENCY TRANSCRIPTION

The Sweep Frequency Transcription is a new method of making instantaneous frequency response runs. It has been designed with all correction factors included in the original recording, therefore, no charts or graphs are needed. Before the development of the Sweep Frequency Transcription, the tone record was used for frequency response measurements on playback systems. This method was both time consuming and laborious. If adjustments were required, a new frequency run was required after each adjustment. Now all that is needed is a cathode ray oscilloscope and a Sweep Frequency Transcription for instantaneous response measurements. Only a few quick adjustments on the equalizer circuits and the job is done. For complete frequency checking of all broadcast transmission equipment and components for production testing of phonographic reproducers, filter networks, audio amplifiers, preamplifiers, tone control systems and components.

*Triumph*

MODEL RC-80

**THE WORLD'S  
FINEST 3 SPEED  
RECORD CHANGER**

**Plays All Records: Fully Automatic With Automatic Stop!**

**The lowest price at which any Garrard Changer  
has ever been sold!**

Introducing several ingenious innovations in 3 speed record changers, the RC-80, nevertheless, retains the watch-like custom construction which has made Garrard acclaimed by music lovers the world over.

The Garrard "Triumph" plays all types of records now in use, 33-1/3 - 45 - 78 rpm, regardless of diameter (7"-10"-12") or size of spindle hole. Once records are placed on the player and simple settings made, action is completely automatic, with unfailing switch-off at the end of the last record. Tone arm is automatically returned to rest position.

The new changer is surprisingly simple in operation. It has one turntable, one tone arm, one set of switches. But over-simplification has been avoided in the interests of quality and standards of performance. Certain features previously found in Garrard instruments have been retained because good basic engineering demands them. For example, record changing is accomplished by the same tried-and-true pusher-type platform mechanism proven best in previous Garrard models.

45 r.p.m. records are played exactly as intended by the manufacturer. A special spindle is provided with each changer to accommodate these records. No "spiders" or artificial inserts are necessary; the pusher platform is not even used.

Any modern type of quality pick-up can be used for standard and micro-groove reproductions. Crystal, magnetic or variable reluctance cartridges can be selected by the customer.

The "Triumph" is heavily built for long, rugged service. It cannot sag or warp. Repairs and adjustments can be made inexpensively on parts which, in most other machines, would require expensive replacement in their entirety.

Minimum cabinet dimensions are 15 1/2" long x 13 1/4" wide x 5 3/4" clearance above and 3 1/2" clearance below the top of motor board.

RC-80 — AC Model Dual voltage motor 100/130 and 200/250 volts, 60 cycles. 50 cycle pulley available. Less cartridge. . . Net Price \$36.80

FOR 78 R.P.M. ONLY

Model 65/D — AC. Model, Dual Voltage Motor for 110/130 and 200/250 volts, 50/60 cycles; less cartridge.....Net Price \$48.00

Model 65/U — Universal AC-DC Model; 25/60 cycles; 110/130 and 200/250 volts; furnished less cartridge.....Net Price \$57.75

The RC-65 is built to rigid specifications, using superior parts, and is fastidiously machined and assembled to assure trouble-free performance.

A "mixer" changer, the RC-65 accomodates both 10" and 12" records intermixed in any assortment and in any combination. There are no buttons or switches to throw; it is entirely automatic.

Garrard's speed regulated, governor-controlled motor, using a steel governor disc, is fashioned to give powerful and regulated running at all times. The motor runs silently at maximum record loads without vibration, rumble or speed variations and has a positive automatic stop which shuts the motor off after the last record is played and returns arm to rest.

The Garrard RC-65 offers a replaceable pick-up head which can accommodate any of the popular cartridges available.

Minimum cabinet dimensions are 15" wide x 13" deep x 5½" clearance above the unit plate and 4½" clearance below the unit plate.

## GARRARD MULTI-SPEED Transcription MOTOR MODEL 201-V

The Garrard 201-V dual speed motor is offered exactly as produced for the U.S. Navy and the British Admiralty.

The governor-controlled motor operates at any speed between 33-1/3 and 78 rpm with absolute constancy and without waver or rumble. It is ideally suited for use where truly superior reproduction is required. It is constantly variable, governor-controlled.

Because of its extra-heavy rotor, which is slow-running, the resulting torque makes this motor amazingly smooth and silent. In sheer performance, it is the finest we have to offer. It is a self-starting, induction type unit, and is fitted with the patented Garrard Governor to insure perfect regularity.

A unique feature is its "one shot lubrication." The only maintenance required is to sparingly lubricate the main bearings in the gears through the single oiling point, which is located in the top of the center spindle.

The 201-V is equipped with a Speed Regulator, by means of which a wide range of speeds is possible. It is set on an extension arm so that 16" transcription records can be properly speed controlled.

### 10 GREAT FEATURES

**CONSTANT OUTPUT** built-in by new electronic monitoring method. The playback level of a continuously recorded tone during coating determines requirements for making compensating adjustments to the coating machinery.

**65 db DYNAMIC RANGE**, high output with minimum background rumble results from combining the highly uniform oxide dispersion with tape surfaces specially polished in production to eliminate even microscopic irregularities.

**HIGH FREQUENCY RESPONSE** of Soundcraft tape conforms to the standards that usage in the tape industry has set so that it may be used interchangeably type-for-type with other popular makes.

**LONG LIFE** for thousands of recordings and replays at high output is assured by complete erasability without special equipment and by Soundcraft's tough, no rub-off oxide coating.

**LONG HEAD LIFE**. Low-friction oxide-coating vehicle covers each of the uniform-sized particles of oxide with a tough microscopic film that prevents any abrasive material from touching magnetic heads. This vehicle or binder, moreover, contains nothing that can rub off and gum head surfaces.

**MINIMUM DETERIORATION** is guaranteed by safety-film plastic and high-tensile paper base materials. Under average indoor temperatures and humidities Soundcraft tapes will resist brittleness indefinitely and stretch or shrink a minimum.

**INTERCHANGEABILITY**. Coercive force, output, and frequency response are intentionally identical with those factors in other good quality tapes so that Soundcraft tape may even be spliced into other tapes if so desired.

**HIGH ADHERENCE** of the coating to the base is effected by preprocessing (like priming) the base material before coating. Permits the use of coating material that has no tendency to stick layer to layer.

**MECHANICAL UNIFORMITY** is assured by straight-line rotary-shearing of the wide stock into individual tapes and by a special coating vehicle formulation that prevents curling. Soundcraft tape tracks straight and winds flat.

**WIDE BIAS LATITUDE** of Soundcraft tapes results in high uniform output and low distortion without critical bias adjustments.

## 3" OSCILLOSCOPE (WO-57A)

### High Gain—Wide Band—DC and AC Inputs

The WO-57A is an outstanding innovation in portable oscilloscope design. Especially suited for television, this new scope is excellent for laboratory, factory or shop use . . . for viewing and measuring square waves, pulses, TV sync signals and sine waves.

Incorporating the features of far more expensive instruments . . . and with a sensitivity and response equal to that of many laboratory units . . . the WO-57A is the first inexpensive oscilloscope wholly equipped to handle every TV and Radio Service Job. Direct-coupled amplifiers are used to provide low frequency response flat down to dc. Excellent low-frequency square-wave reproduction, essential for correct sweep alignment, is thus assured. High-frequency square-wave response up to 100 kc enables the WO-57A to reproduce blanking and sync pulse wave shapes with fidelity heretofore unobtainable in moderately priced service-type oscilloscopes. Sugg'd User Price: \$137.50

### Check these important features!

- ✓ Sensitivity—25 millivolts per inch deflection
- ✓ Frequency Response of vertical amplifier—flat with in 3 db from zero to 500 kc; down only 50% at 1 Mc; useful beyond 2 Mc
- ✓ Transient Response—tilt and overshoot less than 2%
- ✓ Utility—provided with frequency-compensated and calibrated step attenuator. Also has vernier control and calibrating voltage source
- ✓ 60-Cycle Sweep—with phasing control
- ✓ Input Capacitance—less than 15  $\mu$ mf with WG-214 accessory probe

### PLUS these outstanding extras . . .

- + Trace Expansion—two times screen diameter for sweep-alignment applications
- + Direct Coupled Vertical Amplifier—separate jacks for DC and AC signal measurements
- + Linear Sweep—range 15 to 30,000 cps, with preset fixed positions for viewing vertical and horizontal TV sync pulses and oscillator waveforms
- + Exclusive—sweep direction reversing switch—positive or negative syncing
- + Push-Pull Amplifiers—produces sharper trace and reduces astigmatism

## TELEVISION CALIBRATOR (WR-39B)

Now—in one compact, portable unit—the new RCA WR-39B provides crystal-controlled markers for all TV frequencies—included in this one instrument is a crystal-calibrated variable frequency oscillator, two crystal-controlled oscillator stages with three crystals supplied, a wide-band modulator stage for internally modulating the output at audio and rf frequencies, and an audio amplifier with speaker.

In addition to its function as a marker generator, the WR-39B can be used as a heterodyne frequency meter to identify unknown frequencies. The vfo, when tuned to any TV channel and modulated with the 0.25-Mc crystal oscillator, will put vertical bars on the raster; or when modulated with an external audio oscillator will put horizontal bars on the raster. Thus the instrument can be used for making linearity adjustments in the absence of a test pattern.

The WR-39B may also be modulated by the video signal from a television set, which makes it in effect a 12-channel miniature TV transmitter. Sugg'd User Price: \$224.50

### Check these important features!

- ✓ Crystal-controlled markers, 4.5 Mc removed from main marker for television if alignment
- ✓ Crystal-controlled markers, 250 kc removed from main marker for sound-discriminator alignment
- ✓ Provision for injection of external marker
- ✓ Internal audio and rf modulation of variable frequency oscillator
- ✓ Crystal-calibrated heterodyne frequency meter
- ✓ Crystal-controlled 4.5-megacycle output for alignment of TV receivers employing inter-carrier sound
- ✓ Marker oscillator operates on fundamental on all bands
- ✓ Sound and picture carriers marked on dial

## TV SWEEP GENERATOR (WR-59B)

The WR-59B is a high-quality sweep generator which is used extensively for the design, manufacture and servicing of TV sets. It generates fundamental oscillator sweep-frequencies, preset on switch positions for TV channels 2 to 13. IF and video frequency coverage is produced by a separate calibrated control with continuous tuning from 300 kc to 50 Mc.

Sweep width is continuously variable, and output level is exceptionally flat in all positions. The rf output cable termination can be adjusted to match balanced or unbalanced loads; the rf output level is variable over wide limits by means of a coaxial-type piston attenuator. The unit develops a sweep signal for a scope; a phasing control is provided. An additional feature is return-trace blanking which produces a zero-reference line on the cathode-ray tube for measurement of instantaneous voltages. The unit is complete with rf and lf output cables. Shipping weight, 35 lbs. Sugg'd User Price: \$274.50

## MODEL 260

Set Tester

World's Most Popular  
High Sensitivity Set Tester  
For Radio and TELEVISION

There are more Simpson 260 high sensitivity volt-ohm-milliammeters in use today than all others combined. No other instrument of its kind has approached the world-wide popularity of the Simpson 260. In no other tester of its kind will you find the combination of useful ranges, accuracy, ruggedness, beauty and sensitivity developed to such a high degree of perfection.

Removal of the Model 260 from its heavy, handsome case of molded bakelite, will disclose how it differs from most set testers. You will see a sub-panel with a score of small recesses each holding a separate resistor or other component. You will notice complete absence of cable wiring. All connections are short and direct, thus offering a strength and firmness of assembly and the finest of insulation to reduce chances of shorts. All components are readily accessible. The front panel is a thing of beauty and long life. Pin jacks are recessed so no metal parts are exposed. All figures and symbols are molded into a heavy Bakelite panel and filled with durable white for long wear and legibility.

At 20,000 ohms per volt the 260 is highly dependable, rugged and accurate. Its practically negligible current consumption assures remarkably accurate voltage readings. It provides DC current readings as low as 2 microamperes and up to 10 amperes. Dependable resistance readings can be made up to 20 megohms and as low as 1/5 ohm. With the 260 you can measure automatic frequency control diode balancing circuits, grid currents of oscillator tubes and power tubes, bias of power detectors, automatic volume control diode currents, high-mu triode plate voltage, as well as a wide range of other measurements which cannot be checked with ordinary servicing instruments.

## MODEL 303 VACUUM TUBE VOLT-OHMMETER

The new Simpson 303 really is a versatile instrument. It can be used as an electronic DC voltmeter, an ohmmeter, an AC voltmeter, an AF voltmeter, an RF voltmeter (with accessory probe), an output-meter, and an Electronic Galvanometer.

The 303 truly is a worthy companion of the world-famous Simpson Model 260 Volt-Ohm-Milliammeter. Simpson engineers spent months of painstaking research in the laboratory, working in close cooperation with TV Set Manufacturers to produce the 303. This ruggedly built instrument has a dimension of only 120 cubic inches, and is 60 to 70% more compact than any similar instrument. In achieving this compactness for greater portability Simpson did not sacrifice accuracy or functional value. Its large 4½-inch meter is easy to read. All components are easily accessible. All of the figures and symbols are molded into a heavy bakelite panel and filled with durable white enamel for long wear and legibility. Almost all of the component parts in the Model 303 have been developed and designed by Simpson and will give many years of good service.

The extremely low current consumption and the wide voltage and resistance ranges make the Model 303 an ideal instrument for Television and various other types of servicing requiring accurate readings.

Following are some of the more important features of the Model 303. It has 10 megohms DC input resistance for all ranges. The DC probe has an isolating resistance of one megohm. The circuit used in the Model 303 is a balanced bridge type using a 12AU7 double triode. All the resistors are 1% carbon film type having negligible voltage coefficient. The Model 303 can be used on variable line voltages. The frequency response is flat to 100,000 cycles up to 60 volts. Above 60 volts the voltage is applied through a voltage dividing resistor network and is flat on power line frequencies. The frequency response when used with the accessory RF crystal probe is flat within plus or minus 10% from 20 kilocycles to 100 megacycles. The AC input impedance when used with an AC cable is approximately 210 m.m.f. shunted by an equivalent resistance of approximately 275,000 ohms. The tubes will last almost indefinitely because they are operated at low filament and plate voltages. The input capacity of the RF crystal probe is approximately 2.5 m.m.f. High voltage probes are available for measuring C.R.T. voltage. This probe provides two high voltage ranges, 0-6000 V. DC and 0-30,000 V. DC. The limiting resistor in the control grid circuit of the 12AU7 tube automatically prevents excessive meter current, thus protecting the instrument when excessive voltage is applied. The entire instrument is fused and the fuse is readily accessible underneath the top panel.

The quality of the Model 303 is consistent with the high standards set up by the Simpson organization and sells at an amazingly low price.

## MODEL 480 FM-TV GENESCOPE

The Simpson Model 480 Genescope is the result of many months of painstaking research and it is offered as our interpretation of a modern FM and TV instrument providing all the necessary signal sources for the proper alignment and servicing of FM and TV receivers.

In addition to a signal source, the Genescope includes a high sensitivity oscilloscope of unique advanced design, complete in every detail and equipped with a high frequency crystal probe for signal tracing.

The variable oscillator sections are mounted one on each side of the oscilloscope section and are provided with large precision vernier dials having a 20:1 ratio and 1000 division logging scales. They are easy to read and can be quickly set for an exact frequency.

Modern FM and TV development and servicing requires the use of test equipment made to exacting standards. With this in mind we offer you the Genescope with the assurance that everything possible has been done to make it the most accurate, flexible and convenient instrument available.

There are many vital components parts in the Genescope, almost all of which have been developed and designed by us and substantial sums have been spent on modern tooling. The care we have taken to properly design and produce these parts is worthwhile assurance that the Genescope will render many years of uninterrupted service and always produce accurate results.

The center section of the Genescope contains the oscilloscope and all associated controls. The cathode ray tube of the oscilloscope is mounted vertically in the case in order to conserve bench space. The pattern on the tube is brought into view by use of a highly polished adjustable mirror at the top of the cabinet. The mirror may be quickly adjusted for any position of the operator. The tube face is placed well below the top surface of the cabinet in order to shield it from incident light thus producing a clear, sharp image unhampered by narrow angle light shields. The mirror when closed provides adequate protection for the cathode ray tube when not in use.

Direct connection to vertical and horizontal deflection plates and other internal functions are available through removable cover on the front panel.

## MODEL 266 VACUUM TUBE VOLTMETER

Ideal for TV - AM - FM

Extremely accurate and packed full of important features. This fine Simpson instrument offers a 1 volt range for the full scale deflection necessary in measuring low RF voltages; a zero center switch embracing all DC voltage ranges for discriminator circuit alignment; a special probe with low input capacitance of approximately 4 micro-microfarads for checking RF voltages.

DC volt input resistance ranges from 50 to 200 megohms; AC volt input impedance at 60 cycles is approximately 10 megohms. The primary of the power transformer is well-regulated—holding close control over filament as well as plate voltage, and the DC input circuit is filtered so that the pressure of superimposed alternating currents does not affect DC measurements.

Housed in a sturdy case of attractive hardwood. The shining silver and black anodized aluminum panel includes a convenient well for holding the AC probe. In addition, there is a large, clearly marked 4 1/2" meter for quick, easy readings, and a compartment in the rear of the case for leads.

## MODEL 351 TV ANTENNA COMPASS

This valuable instrument is another example of Simpson television pioneering. One man can do a better installation job in less time than it used to take two men.

Model 351 takes the physical form of a ruggedly built pocket-size meter which connects by a simple insulation-piercing alligator clip to the video input of the cathode ray tube in the television receiver.

By an extension cord, it is carried to the antenna site. With a test pattern tuned in on the area's weakest station, the antenna is simply located and rotated for maximum deflection of the TV Antenna Compass. It is as simple as that. Identifies ghosts, too. And much more accurate than trusting to the old fashioned "human eye-and-headphones" method of shouting instructions back and forth from the living room to the roof—which has always resulted in only an approximate best orientation of the antenna. Can also be used to peak the RF mixer and oscillator sections. In that way you actually peak the set right on the station itself. Size: 4 3/4" x 4 1/4" x 1 1/8". Weight: 1 lb. ## THE SIMPSON PATENTED "NO BACKLASH" ROLL CHART

The exclusive "No-Backlash" feature automatically takes up the slack in the paper chart and, by keeping the chart in constant tension, makes it impossible to turn the selector wheel without moving the chart. This results in precision selection at all times. The "No-Backlash" feature also prevents the paper chart from tearing, insures proper alignment, and presents at all times a neat, flat surface.

The selector wheel gear ratio makes it possible for tube selections to be obtained with a minimum of effort.

The entire Roll Chart mechanism is securely fastened to the instrument panel. Quick access to the roll chart can be obtained by removing four panel screws, so that the addition of tube data or the mounting of a new chart is a matter of a few minutes.

In addition to the neat, flat reading surface made possible by the "No-Backlash" feature, the lucite window was designed so that only two settings appear, which is especially convenient for the settings of multi-purpose tubes.

## MODEL 340 SIGNAL GENERATOR

75 Kilocycles to 120 Megacycles—fundamentals to 30 Megacycles. From its lustrous black anodized panel to the big nine-inch dial and knife edge pointer that mean easy readability, the Model 340 is an instrument packed with Simpson engineering refinements for greatest utility and long-lasting accuracy.

An electron coupled circuit, using three tubes—full wave rectifier, modulator, and oscillator — and standard 30% modulation at 400 cycles, assures extreme stability and output uniformity. Close settings are permitted by a smooth vernier control.

RF coils provide range of 75-220; 200-600; 550-1700 KC; and 1.5-4.5, 4.2-14; 9-30; 36-120 megacycles. Fundamentals range to 30 MC, and the dial is direct reading to 120 MC.

Shielding in the Model 340 is complete; coils, attenuator, and signal selector being individually shielded. The oscillator and modulator are sealed in a rigidly welded, entirely closed chassis. In addition, the line cord is shielded, thus reducing leakage to a negligible point.

The signal output is controlled through a step attenuator and non-inductive potentiometer, providing smooth and complete control of the signal output. A special jack is provided in the Model 340 to obtain high output on the 120 MC band.

For 105-130 volts, 50-60 cycles.

Twenty-five separate meters at the turn of a switch. That is what you get in the new Simpson Model 221 Roto Ranger. The necessity of reading numerous scales, so common in ordinary volt-ohm-milliammeters, is forever eliminated when you own a Roto Ranger. The chances for errors in making readings are reduced to a minimum. The Model 221 provides a separate direct reading scale for each range and does it automatically. Calibrations are not cramped. Each scale is full size, the same as it would be for a separate instrument. As the selector switch on the panel is moved to the range desired, an ingenious mechanism rotates the proper range into position behind the meter window.

## MODELS 240 and 230 VOLT-OHM-MILLIAMMETERS

These two "Micro-Tester" portables are famous throughout the world for their ruggedness and built-in accuracy. They exemplify the construction features and utility that distinguish the entire Simpson line shown in this section.

Both are shock-proof and incorporate the celebrated Simpson movement with its FULL BRIDGE-TYPE CONSTRUCTION AND SOFT IRON POLE PIECES. Resistors are in matched pairs to provide the greatest possible accuracy for all ranges.

Model 240 — the "Hammeter" — was designed for the additional voltage and sensitivity demanded in radio testing. With its maximum voltage range of 3000 AC or DC, it was the first self-contained pocket portable instrument built expressly to check high voltage and all the component parts of transmitters and receivers.

Model 230, with a maximum voltage of 1000 volts AC or DC, is ideal for most industrial testing. Its ranges are adequate for most line voltages, for telephone, teletype, and general purpose testing.

Both models are housed in heavily molded bakelite cases, with all numbers and symbols recessed in the panel and filled with white enamel for greatest legibility and ease of reading. Both have full size 3" meters.

### MODEL 385 TEMPERATURE INDICATOR

This is the newest addition to the Simpson Appliance Tester line. You will find this a compact instrument which is ideal for measuring temperatures from +70° F to as low as -50° F, where fast accurate temperature readings are important. The scale is designed so that the center portion is expanded, making the most widely used temperatures easy to read. The Model 385 is ideal for use in the refrigeration service field and wherever temperature readings are important, such as deep freeze units, home refrigerators, walk-in coolers and air conditioning units. The temperature readings can be taken at the end of the 15' lead which is supplied with the unit. # ELECTRIC INDICATING INSTRUMENTS For Panel Mounting

*Internal-pivot Direct-current and Radio-frequency Types*

These small panel instruments are particularly suitable for use in radio and other communications equipment where compactness, especially minimum depth behind the panel, is essential. Thinness is obtained by the use of a unique single-unit, high-torque element of the permanent-magnet, moving-coil type. In this element, the pivots, instead of being secured to the outside of the armature winding, are solidly mounted on the inside of the armature shell.

G-E internal-pivot instruments are available in a variety of standard ratings to measure direct current and voltage (Type DW-71), and radio-frequency current (Type DW-72). They are of the 2½-inch classification. The behind-the-panel depth is 0.89 inch of the molded Textolite case.

## OTHER TYPES

Many other types of G-E indicating instruments are available for panel mounting. They include 3½ inch a-c, d-c, r-f, and rectifier types in standard round cases as well as in rectangular cases, such as the one shown below. Also 2½-inch alternating-current and rectifier type instruments. Still other types can be supplied to meet unusual requirements.

## THE ACCEPTED STANDARD TV ALIGNMENT GENERATOR

More in use today than all others combined. Contains 3 most practical markers including Absorption. Marker Range: 19.5 to 48 mc.—Covers all I.F. frequencies in TV receivers.

Contains linear sweep with unusual accuracy to 2%. Hickok iron modulator furnishes symmetrical pattern response curve for easier and more accurate readings.

### THIS 1 INSTRUMENT DOES THIS

1. Visually align a television receiver to any of the 13 present-day television channels from 44 mc to 216 mc.
2. Visually align IF stages of any television receiver—including the old and current bands, and new bands. Marker range—19.5 - 48 mc.
3. Align all traps with a calibrated signal—modulated or unmodulated.—19.5 - 48 mc.
4. Insert a marker—accurate to .05 mc—at any point along the IF response curve. This marker frequency is directly calibrated on a dial  $9\frac{1}{2}$  inches long.
5. Align IF or RF Sections by single stage method—with high output.
6. Attenuate the output down to a very low signal in microvolts.
7. Align a television receiver independent of any local television station. The generator is complete.
8. Align channels 5 through 13 directly by the calibrated FM Oscillator without necessity of heterodyning the oscillator against a fixed oscillator.
9. Highly stable.
10. Makes possible a crystal controlled frequency modulated or unmodulated for any frequency as low as 5 mc to the upper television channel No. 13 at 216 mc.

### THIS IS ANOTHER OUTSTANDING HICKOK "FIRST"

Hickok was first with Dynamic Mutual Conductance—first with the serviceman's FM sweep generator—first with the complete oscillograph including FM sweep oscillator. Now first again with the complete Television Alignment Generator—the latest in a line of fine radio test equipment that has lead the field for over a third of a century.

# Shurite PANEL METERS

Model 550-AC

Model 650-AC

Model 950-DC (or AC)

Model 550-DC  
with Zero Adjuster

Shurite panel meters are attractive, rugged, dependable instruments with accuracy well within 5%. All models have metal cases, telephone-black finish; all require 2 3/8" hole. DC meters are polarized-vane solenoid type, AC meters are double vane repulsion type. All are guaranteed.

● **Guarantee:** All Shurite meters are guaranteed to users against defective workmanship and material, and will be repaired or replaced if sent to the factory postpaid with 40c handling charge within one year after date of purchase.

● **All-metal Dials**—age and moisture resistant, lithographed in black on white for high visibility.

● **Improved Design**—with new coil frames and attached insulators for greater rigidity, yet interchangeable in other respects with similar type of instrument formerly available.

● **Improved appearance**—with concealed coils, full view scales, and attractive styling and finish.

**TYPICAL USES:** Shurite products, with their rugged design, and ability to duplicate readings, enjoy wide acceptance in the electronic and electrical fields. Applications include transmitters, receivers, TV antenna rotator controls, battery indicators, appliances, power sources, battery eliminators, electric fence controllers, and the very popular basic meters in radio test kits.

Shurite products are also specified for battery voltage indicators on emergency lighting, burglary and fire alarm systems, output meters on rectifiers (copper oxide, tungar or selenium types), rate-of-charge indicators, testers for hearing aid and batteries and their chargers, ammeters for plating sets, and polarity indicators for metals analysis.

Other uses range from automotive test equipment to pin-ball circuit testers, and well depth indicators. Shurite has long been the favorite brand for those who take their hobbies and experiments seriously.

## POCKET TYPE METERS

A series of Shurite pocket meters using the Model 450 case is in production. Model 450 has nickel plated case, with two or three terminals, depending on ranges. Ranges suitable for pre-war and post-war batteries, portable radio batteries and many other electrical applications, including polarity indication types have been made, although they are not regularly stocked.

Model 450

For ordering, use stock number regularly listed, changing the first digit to 4. For example, a 0-3 DC ammeter as illustrated becomes Stock No. 4202 as a pocket meter.

To arrive at price, add \$0.40 to catalog price of Model 550 meters sold at \$1.70 or less; add \$0.30 for meters sold at \$1.75 and above. For details, request Bulletin "Shurite Pocket Types."

## FLANGE ADAPTER RING

A sturdy flange ring for use with any Model 550 (round) Shurite meter where a flange mount is preferred. Makes appearance similar to Model 650. Wide flange, 2 3/4" dia. Telephone black finish. Screws, lockwashers and nuts included.

Model 5-A, Net.....\$0.18

## MOUNTING DETAILS

All Shurite Panel Meters have flush cases and require 2 3/8" hole. Most standard ranges have 6-32 studs, and are mounted as follows:

Model 550 DC has long "U" clamp, with overall width of 2 3/8". Depth of case, from front of panel to end of stud, 1 1/8".

Model 550 AC has ring clamp. Depth of case from front of panel to end of stud, 1 1/8".

Model 650 DC has three mounting holes in wide, round flange 2 3/8" dia. 4-36 x 1/8" screws with washers and nuts are supplied. Depth under flange, to end of stud, 1 3/8".

Model 650 AC, same as Model 650 DC, except depth under flange to end of stud is 1 1/8".

Model 950 DC has two mounting holes in rectangular flange 2 5/8" x 2 1/8". 4-36 x 1/8" screws with washers and nuts are supplied. Depth under flange to end of stud, 7/8".

Model 950 AC, same as Model 950 DC, except depth under flange to end of stud is 1 1/8".

## IMPORTANT—HOW TO ORDER

For all standard models, give: (1) Model Number, (2) Range, (3) Stock Number. If Model number and stock number are not stated, Model 550 will be supplied.

## ZERO ADJUSTERS (Z)

Zero Adjusters are available only on Models 550-DC and 650-DC. No zero adjuster on Model 950. When ordering, add Z to stock number. Example: Stock number for Model 550-DC voltmeter, 0-1 volt range—without zero adjuster is 5101. With zero adjuster, it is 5101-Z.

## PANEL CALIBRATION (S)

Meters are calibrated for non-magnetic panels. If for magnetic (steel) panel mounting, specify thickness and overall size of panel, and add -S to stock number when ordering, as 5101-S. If thickness of panel is not specified, meter will be supplied for .040 panel.

## INSTRUMENT AND TESTER SWITCHES (LAMINATED)

### Rotary Selector — Single and Multi-Gang — Non-Shorting and Shorting\*

The switch that's IN LAST PLACE on the trouble-shooter's check list . . . AND PROUD OF IT!

SS-14-2

SS-20-2

**J-B-T Instrument Type Rotary Selector Switches** were designed and developed to meet the need for trouble-free, dependable performance in hard service. These superior switches are used extensively in high quality test equipment, portable instruments, inspection setups and experimental circuits. Available in two basic types—14 and 20 position—the design gives extra contacts in minimum space. One to six decks.

**FEATURES:**

**Reliability**—Rigid, 3-post deck suspension, instead of the usual 2; all parts heavily coin silver plated to meet 200 hour salt spray test; ball bearing action, beryllium-copper spring (phosphor bronze on SS-20), and special design detent wheel assure positive indexing. Laminated plastic decks and rotors selected for maximum mechanical and dielectric strength.

**Exceptional Compactness**—14-position switch takes 13 circuits and "off" in 2" circle; 20-position switch handles 19 circuits and "off" in 2-23/32" circle. Additional decks require only 5/16" spacing per section.

**Low Contact Loss**—Double-grip collector arms, and large-area contacts, silver to silver, result in an average contact resistance of .007 ohms or less during the useful life of the switch.

**Ample Dielectric**—Normal make-and-break with resistance load, 25 Ma. at 300 volts AC or DC; normal carrying capacity (not

make-and-break), 1 amp.; maximum momentary capacity (not make-and-break), 5 amp.; maximum voltage between contacts and ground, 1000 volts R.M.S.; between decks and ground, 2000 volts R.M.S.

\* Standard items, but not regularly stocked; check with your distributor.

**BASIC 14-POSITION:** Knob supplied only on individually packed units—not on bulk orders unless specified. Collector arm placed directly opposite to flat of shaft, unless otherwise specified. Contact lugs and common lugs positioned as shown, 13 contacts per deck. One to six decks; for each additional deck (or gang) add 5/16" to depth. Continuous rotation type supplied unless otherwise specified. Adjustable Stop supplied when requested. Panel locator positioned as shown unless otherwise specified on bulk orders.

**BASIC 20-POSITION:** Knob supplied only on individually packed units—not on bulk orders unless specified. Collector arm placed directly opposite to flat of shaft, unless otherwise specified. Contact lugs and common lug positioned as shown, 19 contacts per deck, continuous rotation types. One to six decks; for each additional deck, add 5/16" to depth. Continuous rotation type supplied unless otherwise specified. Panel locator positioned as shown unless otherwise specified on bulk orders.

# NEW-BUT PROVED-MOLDED ROTARY SELECTOR SWITCHES

Fully Enclosed — Single and Multi-Gang — Shorting and Non-Shorting

MS-14-5

- All moving contacts enclosed — minimizes dirt and corrosion.
- Contact lugs permanently integrated into switch assembly.
- Sturdy construction with 3-post deck suspension, double grip collector arms, and rectangular drive shaft through decks for precision indexing.
- Interchangeable, electrically and mechanically, with J-B-T 14- and 20-position laminated switches, widely used by industry and Armed Services.

**FEATURES:**

For description of rigid 3-post construction; heavy coin silver plating to meet 200-hour salt-spray test; exceptional compactness; .007 ohm average contact resistance; current-carrying capacity and voltage breakdown, see adjoining page on SS-14 and SS-20 laminated switches. Besides fully enclosing all the moving contact parts, the molded switches differ from the laminated construction in the design of the detent mechanism, but both types provide the positive indexing which quickly identifies the superior quality of J-B-T switches.

MS-20-1

**BASIC 14-POSITION MOLDED (MS-14):** 13 circuits and "off" per deck in 2" circle for compactness. Molded end cover regularly supplied on MS-14 series. Knob included with individually boxed units — not on bulk orders unless specified. Collector arm placed directly opposite to flat of shaft, so that knob pointer points to live contact. Common or "off" contact lug is bent down for ready identification. Internal construction: double-grip collector arms hold contact lug on upper and lower surfaces; collector ring is self-wiping. One to six decks add 1/8" per deck (or gang) to depth; for five decks and above, add 1/2" to depth for double indexing mechanism; add 3/8" to depth for adjustable stop mechanism. Continuous rotation type supplied unless adjustable stop (type MAS) is ordered or, on quantity orders, pre-set fixed stops are specified. Panel locator is available on quantity orders when specified; on MS-14-4 and MS-14-6, extra hex nut and longer screw are supplied for inverting supporting screw nearest common, thus converting into panel locator.

**BASIC 20-POSITION MOLDED (MS-20):** 19 circuits and "off" per deck in 2 3/8" circle for compactness. Molded end cover regularly supplied. Knob included with individually boxed units — not on bulk orders unless specified. Collector arm placed directly opposite to flat of shaft, so that knob pointer points to live contact. Common or "off" contact lug is bent down for ready identification. Internal construction: double-grip collector arms and self-wiping collector ring are standard construction. One to six decks; add 1/8" per deck (or gang) to depth. Continuous rotation type supplied; on quantity orders, pre-set fixed stops are available. Panel locator available on quantity orders when specified; on MS-20-4 and MS-20-6, extra hex nut and longer screw are supplied for inverting supporting screw nearest common, thus converting into panel locator.

## APPLIANCE TEMPERATURE TESTERS

**A NEW IDEA IN TESTERS** — The need for scientific but sturdy portable test equipment in the appliance service field is met by this exclusive line. Here the user profits from J-B-T's wide experience in building field test sets for many well-known manufacturers of ranges, irons, refrigerators, deep freeze units, and similar equipment. All J-B-T testers include the principle of remote reading of temperature, —and temperature measures the real usefulness of the appliance.

### IRON TESTER

## VIBRATING REED FREQUENCY METERS (PATENTED)

J-B-T Vibrating Reed Frequency Meters are used extensively in radio, telephone, and television service, on engine generator sets, in laboratories, in many types of electronic equipment, on panel and control boards in central stations and industrial plants—wherever constant or known frequency is important to efficient operation of equipment.

### PRINCIPLE OF OPERATION:

Simple in design, the J-B-T Meter consists of a case, base, dial and central mounting frame, with a series of spring steel reeds screwed to a reed mounting bar, individual driving coil surrounding each bank of reeds, permanent magnet, series resistor and terminal studs.

Each reed is adjusted to respond by resonance to but one frequency. As the alternating current (or interrupted direct current) excites the driving coil, the one reed "in tune" with the frequency in the coils will respond by vibrating rapidly because of permanent magnet polarization and induced magnetism from the coil. The instrument is adapted to specified operating voltage by a series resistor. Frequency of the current is read on the graduated face of the instrument.

### ADVANTAGES:

Some standard models are available in either half cycle or full cycle steps, as shown below on two meters indicating a frequency of 60 cycles.

Above: Models 30-F, 31-F, 33-F, 34-F; Metal Case

Below: Models 30-FX, 31-FX, 33-FX, and 34-FX; Molded Case Meets Mounting Dimensions of JAN-1-6 and AWS

Guaranteed accuracy at normal operating temperatures is  $\pm 0.3\%$  or better of the frequency being measured, depending on the model. High fatigue safety factor for continuous operation. Temperature compensations are not required as temperature coefficient of reeds is only approximately 75 parts per million per degree F., negative.

All meters are permanently calibrated at the factory and do not require subsequent adjustment. Accuracy is not affected by wave form or external magnetic fields. Built with no pivoted parts and with lock washers at every critical point, these rugged meters can take rougher treatment than many instruments.

### CAUTION:

If a meter plugged in on a 60 cycle AC power line does not indicate a frequency of exactly 60 cycles, trust the meter! Power supply may momentarily be off-frequency due to changing load conditions beyond the control of Utility. All J-B-T Vibrating Reed Frequency Meters are accurately calibrated at the factory, entirely independent of frequency of power supply.

## BROWNING UNIVERSAL FM MODULATION MONITOR — MODEL MD-25

A single instrument for monitoring the modulation of all FM transmitters operating in the communications bands from 30 to 162 mc. Provides simple and inexpensive means for checking fixed or mobile transmitters for compliance with FCC limitations on carrier frequency swing due to modulation. Maintenance of frequency swing within the FCC plus-or-minus 15 limit is equally important for reduction of adjacent-channel interference.

The Browning Universal Modulation Monitor checks any communications system working on 30-40, 40-50, 72-76, and 152-156 mc., a feature of special importance to engineers responsible for supervision of several systems, since a single instrument can be used to check all transmitters operating within the above bands.

### ELECTRICAL FEATURES

- An outstanding feature of Model MD-25 is its extreme simplicity of operation. The multi-range band-selector switch is set to the band to be monitored, and the unmodulated transmitter carrier is tuned in precisely. Then the carrier is modulated by voice or audio oscillator, and the frequency swing is read directly from a 4-inch panel meter calibrated to 20 kc. A calibrated discriminator is used to determine modulation swing. The meter also determines precise tuning by indicating limiter voltage or total discriminator voltage. • The meter can be read to better than 1 kc. The meter indicates peak swings of sustained sinusoidal modulation or voice modulation peaks of 0.3 seconds duration or more. • Aural monitoring is provided by means of an audio output which permits attachment of an audio amplifier or phones. Oscilloscope may be attached at the same point for analysis of demodulated signal. • Measurements may be made on signals generating less than 1 millivolt at the antenna input. If the instrument is mounted at the headquarters station, cars be checked while they are on the road. • Tube complement: one 6AK5, four 6AU5, two 6SN7, one each 5Y3, 6C4, 6AL5, 6J6, 6A2.

### MECHANICAL FEATURES

- Model MD-25 is mounted on a standard 8 $\frac{3}{4}$ " rack panel. • Supplied with a portable case 20" wide, 9" high, and 12" deep. • Weight: 40 lbs. Shipping weight: 55 lbs. • Case is readily removable for rack mounting use.

PRECISION INSTRUMENTS  
FOR THE RADIO AND ELECTRONIC INDUSTRY

**Q-METER**  
TYPE 160-A

Radio frequency circuit design often requires the accurate measurement of Q, inductance, and capacitance values. For this application, the 160-A Q-Meter has become the universal choice of radio and electronic engineers throughout the country.

Each component part and assembly used in the manufacture of this instrument is designed with the utmost care and exactness. Circuit tolerances are held to values attainable only in custom built instruments.

The 160-A Q-Meter is designed specifically for the accurate and rapid measurement of Q, inductance, and capacitance. The basic method of measurement consists of measuring the voltage developed across a variable air capacitor connected as an element in a series resonant circuit. Essentially the Q-Meter is comprised of an 8 range RF oscillator, a Q measuring circuit with a main and vernier section tuning condenser, a vacuum tube voltmeter of special design which reads the voltage across the tuning condenser, and a voltage injection circuit which applies an accurately known voltage to the terminals of the series resonant circuit. In operation the Q circuit is resonated by means of the variable Q tuning capacitor and the voltage developed across this capacitor is indicated by means of the vacuum tube voltmeter which is calibrated directly in terms of Q. This method of measuring Q is simple, accurate, and requires only a single operation—resonating the circuit—to measure Q. Variations of this basic method of measurement are employed to determine effective inductance and capacitance as well as the dielectric properties of insulating materials

**SPECIFICATIONS**

**Oscillator Frequency Range:** Continuously variable from 50 kc. to 75 mc. in eight self-contained ranges. (In conjunction with an external oscillator the frequency range of the Type 160-A Q-Meter may be extended from 50 kc. to 1 kc. for coil measurements).

**Oscillator Frequency Accuracy:** Generally better than  $\pm 1\%$ , except the 50-75 mc. range which is approximately  $\pm 3\%$ .  
**Range of Q Measurements:** The Q voltmeter is calibrated directly

in Q, 20-250. The "Multiply-Q-By" meter, which measures the oscillator voltage injected in the Q measuring circuit, is calibrated from x1 to x2 and also at x2.5. The reading of the Q voltmeter scale is multiplied by the setting of the "Multiply-Q-By" meter. Hence, the total range of circuit Q measurements is from 20 to 625. Condensers, dielectrics, etc., which are measured by placing these in parallel with the measuring circuit, may have Q's as high as 5,000.

**Accuracy of Q Measurements:** The accuracy of the direct reading measurement of circuit Q (for Q voltmeter readings between Q=50 and Q=250) is approximately 5% for all frequencies up to the region of 30 mc. and decreases with increasing frequency. Correction may be made for the error above 30 mc. as it is principally a frequency effect. The accuracy of the measurement of condensers, dielectrics, etc. is generally better than 10% for Q's below 5,000 and up to 30 mc.

**Capacitance Calibration Range:** Main tuning condenser 30-450 mmf. calibrated in 1 mmf. divisions from 30 to 100 mmf. and in 5 mmf. divisions from 100 to 450 mmf. Vernier condenser, plus 3 mmf., zero, minus 3 mmf., calibrated in 0.1 mmf. divisions.

**Accuracy of Capacitance Calibration:** Main tuning condenser, generally better than 1% or 1 mmf., whichever is the greater. Vernier tuning condenser,  $\pm 0.1$  mmf. The internal inductance of the tuning condenser at the binding posts is approximately .015 microhenry.

**Voltmeter:** The Q voltmeter is also calibrated in volts. A specially calibrated tube, Type BRC 105-A tube, is used. Replacements may be made without recalibration.

**Power Supply:** 105-120 volts, 50-60 cycles. Also 210-240 volts, 50-60 cycles. Power consumption 50 watts.

**Dimensions:** Height 12.5", length 20", depth 8.5".

**Weight:** 25 lbs.

## Q-METER

TYPE 170-A

The Type 170-A Q-Meter utilizes the same general operating principles and characteristics as the Type 160-A Q-Meter, but incorporates such structural modifications and design refinements as are required for accurate performance at the higher frequencies. This instrument is intended to supplement the low frequency Q-Meter by extending the range of measurement up to 200 mc.

### SPECIFICATIONS

**Oscillator Frequency Range:** Continuously variable from 30 mc. to 200 mc. in three ranges—Calibration accuracy  $\pm 1\%$ .

**Range of Q Measurements:** The Q voltmeter is calibrated directly in circuit Q, from 80 to 300. The "Multiply-Q-by" meter is calibrated from  $\times 1$  to  $\times 4$ , hence the range of circuit Q measurements is from 80 to 1200.

**Accuracy of Q Measurements:** The accuracy of the direct reading measurement of circuit Q is  $\pm 10\%$  up to 100 megacycles and decreases with increasing frequency.

**Capacitance Calibration of Q Capacitor:** Range 11-60 mmfd. calibrated in unit mmfd. divisions. Accuracy: 1% or 0.5 mmfd., whichever is greater. Micrometer dial divided into 100 divisions.

**Power Supply:** 110-120 volts, 50-60 cycles. Also 220-240 volts, 50-60 cycles. Power consumption 50 watts.

# FM SIGNAL GENERATOR

TYPE 202-B

The type 202-B FM Signal Generator has been developed to meet the needs of engineers engaged in the design of FM and television receivers for operation within the frequency range of from 54 megacycles to 216 megacycles.

This instrument has been proportioned for maximum conservation of laboratory bench space, with frequency dial, modulation and output meters positioned at eyelevel for maximum readability. The unit is finished in grey wrinkle enamel with engraved panel and is supplied complete with tubes and standard output cable.

## SPECIFICATIONS

**RF Range:** Frequencies from 54 mc. to 216 mc. are covered in two ranges, 54-108 mc. and 108-216 mc.

**Main Frequency Dial:** The two RF ranges are calibrated directly in megacycles to an accuracy of within  $\pm 0.5\%$ . The dial is also divided in 24 equal divisions for use with the vernier frequency dial.

**Vernier Frequency Dial:** The vernier frequency dial is divided in 100 divisions and is geared to the main dial through a gear train having a 24:1 ratio. The approximate frequency change per vernier division is 26 kc. on the low range and 52 kc. on the high range.

**Frequency Modulation (Deviation):** The FM deviation is continuously variable from zero to 240 kc. The modulation meter is calibrated in three FM ranges (1) zero to 24 kc., (2) zero to 80 kc. and (3) zero to 240 kc. deviation.

**Amplitude Modulation:** The modulation meter is calibrated at 30% and 50% amplitude modulation. AM is continuously variable from zero to 50%.

**Modulation Controls:** Separate potentiometers are provided for continuous control of FM and AM levels.

**Modulating Oscillator:** The internal AF oscillator may be switched to provide either frequency or amplitude modulation; it may also be switched off. External binding posts permit the use of an external AF oscillator for either FM or AM. Both internal and external AF oscillators may be used simultaneously, thus providing either FM or AM at two modulation frequencies simultaneously or simultaneous FM and AM. The internal AF oscillator provides eight fixed frequencies which may be selected by a rotary type switch—50, 100, 400 cycles and 1, 5, 7.5, 10 and 15 kilocycles, accurate to within 5%. The output voltage of the internal AF oscillator is available at the external binding posts for synchronizing or other purposes.

**RF Output Voltage:** The RF output voltage is continuously variable over a range from 0.1 microvolt to 0.2 volts at the terminals of the output cable. The impedance at the RF output jack, looking into the instrument, is 53 ohms resistive. The output cable has a 53 ohm resistance termination at the terminal end hence the output impedance of the unit with cable attached is 26.5 ohms.

**Distortion:** FM distortion at 75 kc. deviation is less than 2% when modulated with the internal AF oscillator or an external AF oscillator having 0.5% distortion or less. At 50% amplitude modulation the distortion is about 5% using the internal AF oscillator and decreases as the modulation percentage is reduced. An external AF oscillator may be employed for amplitude modulation if desired.

**Spurious RF Output:** All spurious RF output voltages are at least 30 db. below the desired fundamental. The RF leakage is very low.

**Fidelity Characteristics:** The deviation sensitivity of the FM modulation system as a function of frequency is constant from dc. to over 10 kc. At 15 kc. the deviation as indicated on the modulation meter is 0.5 db. higher than the true value. The amplitude modulation system is also flat to 10 kc., and departs from nominal by 1.0 db. at 15 kilocycles.

**Power Supply:** The power supply is self-contained in the instrument for use on 60 cycles, 110 volts.

**Accessories:** 203-A Frequency Converter (Frequency range 0.4 mc. to 25 mc.).

**Dimensions:** Height: 17"; Width: 13½"; Depth: 11½".

**Weight:** 35 lbs.

**Price:** \$975.00, F.O.B. Boonton, N. J., U.S.A.

**Frequency Increment Dial:** This dial is calibrated in increments of 10 kc. from plus 250 kc. through zero to minus 250 kc.

**RF Output:** The RF output voltage at the X1 panel jack is continuously variable from 0.1 microvolt to 0.1 volt by means of the 202-B Signal Generator attenuator. For 0.2 volt input to the Univerter, the output is approximately 0.18 volt. The impedance at the RF output jack, looking into the instrument is approximately 60 ohms resistive. # STERLING PANEL METERS

## AMMETERS, VOLTMETERS, MILLIAMMETERS

FOR USE ON DIRECT AND ALTERNATING CURRENT

### A COMPLETE MODERN LINE

These improved STERLING Panel Meters while retaining the accuracy, beauty and ruggedness which have always characterized STERLING instruments, show a modern trend in the gracefully unique arrangement of the broader and more clearly defined scales. The meters for alternating current and direct current are perfectly matched and therefore suitable for mounting on the same panel. D.C. meters are of the permanent magnet, iron vane, solenoid type. A.C. meters supplied with hairspring repulsion type movement. This affords positiveness of action and breadth of movement suggestive of those of the D'Arsonval type. The large needle-tipped pointers and wide, clearly marked scale divisions of these panel meters make them easily read.

STERLING Panel Meters may be had in any of the types illustrated.

Special Panel Meters are made to manufacturer's specifications.

ALL STERLING Panel Meters are guaranteed accurate within 5%.

# Improved **PANEL INSTRUMENTS**

**Alternating Current**

AC and DC types are accurate to within 2% of full scale value at any point on the scale.

DC instruments combine extremely light weight moving elements and powerful alnico magnets to produce a torque to weight ratio which reduces frictional error to a minimum. This high torque to weight ratio permits use of pivots with ample pivot bearing surface to overcome effects of rough handling, shock, and vibration.

**Direct Current**

AC instruments are accurate over entire range of commercial power frequencies (25 to 125 cycles). These instruments are of repulsion vane type using carefully aged and impregnated field coils and multipliers which are wound with conductors of ample size so that temperature rise of the windings may be maintained at a minimum, even though instrument is subjected to continuous use in the circuit.

Alnico magnets are used to obtain perfected damping characteristics found in no other AC instrument.

(Patent No. 2,421,321)

NE-51

For 110 and 220 volts

The new NE-51 lamp is especially useful for pilot lights to be operated on commercial voltages. It has a distinctive orange-red glow and consumes very little current.

**MULTI-VUE CAP**

In addition to the advantages given by the provision of the built-in resistor, these assemblies offer another feature that is especially important in obtaining effective indication with the NE-51 lamp. The "Multi-vue" cap shown at the right gives a high degree of visibility by directing an increased amount of light toward the eye when the indicator is viewed from any angle. When it is desirable to view the electrodes directly, the clear caps shown below are very effective. For concentrating the light into a beam the metal lens holders are equipped with convex lenses as shown.

**BUILT-IN RESISTOR**

PATENTED  
No. 2,421,321

External resistors will be furnished which will permit use of these pilot lights on voltages higher than 220 volts.

This series of pilot light assemblies is unique and has several exclusive features. The resistors are permanently built into the high quality DIALCO designed socket.

This socket is constructed with heavy molded bakelite insulation in which the terminals are securely anchored. The insulated socket is mounted in a threaded bushing equipped with nut and shakeproof washer for mounting on a panel of any usual thickness.

All of these assemblies are listed by Underwriters' Laboratories, Inc.

## CONNECTORS FOR SINGLE CONDUCTOR CABLE FOR MICROPHONES - SPEAKERS - PICK-UPS - JACKS

*(using cable shield for second conductor)*

The fittings shown here are designed for use with standard metal shielded single conductor cable up to  $\frac{1}{4}$ " diameter. These connectors are heavily constructed from solid brass and all exposed parts are chrome plated and highly polished.

The cable end connectors are provided with rugged wire spring protectors which prevent sharp bends at the connection. The protector is soldered to the cable sheath and secured in the connector by a set screw so that all strain is relieved from the conductor.

The standard flexible leads are of plastic insulated approved wire, 18 gauge. Usual length is 8 inches; longer leads will be supplied when specified.

(1) Requires 30,000 ohm external resistor with NE48.  
 (2) Has built in 30,000 ohm resistor for NE48.  
 (3) Has built in 200,000 ohm resistor for NE51.  
 (4) Has built in 100,000 ohm resistor for NE51, brighter glow but decreased life.  
 (5) Requires 200,000 ohm external resistor for NE51.  
 (6) See Colored Disc explanation at right.  
 (7) Max. length from front of panel.  
 (8) Do not use with bulb over 3 watts.

COLORED DISCS—Where this designation (6) appears, a colored plastic disc is placed behind a clear sandblasted (frosted) smooth jewel, to conceal color until lighted. Also prevents external light from giving appearance of bulb being lighted.

In addition, lettering, numerals, or insignia may be printed on a plastic disc back of the jewel, and arranged to be visible either continuously or only after lamp is lighted.

### FUSETRON FUSES, $\frac{1}{4}$ x $1\frac{1}{4}$ inch

Glass tube — Dual-Element type

#### A FUSE WITH A LONG TIME-LAG

These fuses avoid needless blows from starting currents or surges. They have a fuse link which operates only on very high overloads or short-circuits — they have a thermal cutout which functions on low overloads — the thermal cutout cannot operate quickly at any load, hence long time-lag is obtained. Yet protection is afforded against short-circuits or continued overloads.

Test specification—carry 110%, open at 135% in 1 hour.

## FUSETRON DUAL-ELEMENT Fuses and Fuse Holders

for Protection of Radios, Instruments and Electronic Equipment

### BUSS FUSE CLIPS for 1/4 inch Fuses

(SFE 4, 6, 9, 14, 20, AGX, AGC, ABC, MDL, MJB, MTH fuses)

Spring bronze clips are made of Herculoy — a bronze of distinctly superior quality for spring clips. This metal gives clips great gripping strength and ability to retain spring under adverse conditions.

Beryllium copper clips combine low electrical resistance with great gripping strength. This means maximum electrical conductivity and results in cooler operation of clips and fuse.

Size of mounting hole; .130 to .135 inch.  
Center of hole to back-stop; .125 to .135 inch;  
Min. length of contact surface; 3/32 inch  
Maximum height; 1 1/32 inch  
Maximum width; 1 1/32 inch

### Other standard fuse blocks and special fuse blocks

If blocks shown do not fit your requirements ask for information on other standard types and sizes.

If special fuse block is required, send description or sketch, showing type of fuse to be used, number of circuits, type of terminals, etc. We welcome such inquiries.

### BUSS FUSE HOLDERS

Make it convenient to mount fuse on any equipment. Changing or inspection of fuse is easy and quick. Holder has removable knob. Fuse projects beyond body of holder and is not held tight on other end when knob is removed.

Fuse and contacts are protected from dirt and fumes. Good contact on fuse is made certain by strong coil spring pressure. Poor contact heating that often causes fuse to blow needlessly is eliminated.

Holder bodies are made of black bakelite. All current carrying parts are of brass or copper. Terminals and all contact parts are bright alloy plated.

### PANEL MOUNTED HOLDERS for 1/4 inch Fuses

Holders are inserted through hole in panel and are locked in place by nut on holder. They can be used on panels up to 5/16 inch thick.

Bayonet type knob requires only quarter turn to remove fuse. No screw driver is needed.

Side terminal is held mechanically as well as by solder. Heat of soldering wire to it will not cause it to loosen or come off.

Vibration will not cause failure of terminals as they are designed to stand severe service.

Neoprene washer and steel locking nut (zinc plated, chromate dipped) furnished with each holder.

Wire hole in terminals; .115 inch.

Normal current carrying capacity; 15 amperes.

Listed as approved by Underwriters' Laboratories.

### IN-THE-LINE HOLDERS for 1/4 inch fuses

These holders are for mounting fuse in wire. Holders consist of body and bayonet type knob — two contacts ready to be staked on ends of wire — a pressure spring that is used under contact in base of holder.

Holders can also be mounted in panel up to 5/16 inch thick by means of a No. 9969 Spring nut (Nut not furnished). Flat spot on holder permits it to be locked against rotation.

Normal current carrying capacity: 15 amperes.

4 AG Aircraft Fuse showing reinforced twisted element

Bakelite-enclosed 4 AB Fuse

## AIRCRAFT LITTELFUSES—ANTI-VIBRATION TYPE

Especially designed for Aircraft Service. Characteristics: High Mechanical Strength—Resistance to Fatigue—Long Vibration Life

**CONSTRUCTION:** Glass-enclosed. Littelfuse Locked Cap Assembly (no cements) prevents loosening of caps. High visibility transparent label for amperage. Elements mechanically depolarized by twisting at 90° (see illustrations) are braced against extreme vibration. "Gooseneck" non-crystallizing fuse element takes up expansion and contraction. Ratings 5 amps. or less use Spring and Link. Service life six times simple wire. The 4 AG and 5 AG sizes are supplied for Aircraft Services for their strength and greater carrying capacity than 3 AG fuses.

**BAKELITE-ENCLOSED:** 4 AB and 5 AB fuses recommended where severe overloads might shatter glass.

**CURRENT RATING:** Rated to NEC specifications to carry 10% overload indefinitely, to blow on 35% overload within 1 hr., and 100% overload within 2 min.

**VOLTAGE RATING:** Voltage at which fuses will break without arcing over, or bursting under short circuit conditions.

**VIBRATION FACTOR:** Minimum hours these fuses endure our Magnetic Vibrator operating 120 cycles a second, while carrying the rated current. Acceleration is 10 times the worst field conditions.

## BAKELITE IN-LINE FUSE RETAINER

Designed to hang in the cable or mount in the chassis, the inline fuse retainer molded of high impact bakelite is primarily for low-voltage applications: car radios, heaters, spot lights, clocks, etc.

More compact, better insulated than old metal types. Spring locked, bayonet type knob opens with a push and twist of the finger tips. Double wall thicknesses of high impact bakelite at critical body angles give crack resistance strength.

Circuit breaks when knob is removed. Shock safe fuse examination and replacement. Body is tapered for ease in installing push-on nuts when mounting in panel. This permits tight locked chassis installation through panel. Simpler construction and assembly makes for greater ease and economy in installation and service.

The following engineering features are of particular interest when considering advantages of this unit at critical points:

155000 Series—For all low-voltage applications, particularly car radios, heaters, light circuits, etc.

- 155004 For 4-amp SFE and 1AG fuses
- 155006 For 6-amp SFE fuses
- 155009 For 9-amp SFE and 7AG fuses
- 155014 For 14-amp SFE and 8AG fuses
- 155020 For 20-amp SFE and 3AG fuses

The disassembled unit consists of the bakelite body receptacle, bakelite knob with metal insert, one spring, two knife-edge rivet contacts.

155000 Series—Assembled with an 8" loop of wire lead:

- 155004A For 4-amp SFE and 1AG fuses
- 155006A For 6-amp SFE fuses
- 155009A For 9-amp SFE and 7AG fuses
- 155014A For 14-amp SFE and 8AG fuses
- 155020A For 20-amp SFE and 3AG fuses

**SERIES 500 UNITS** are for general applications requiring greater output current for meters, relays or other apparatus requiring more than 1 milliampere. Recommended for all such applications at commercial and the lower audio frequencies. Will also operate up to 1,000,000 c.p.s. in special applications wherein accuracy of readings is not essential.

**SERIES 160 and 160-C** are for applications requiring good frequency response over the entire commercial and audio range and especially when the meter, relay or other apparatus requires less than 1 milliampere for operation. In some special applications these units may be operated at frequencies up to 75,000,000 c.p.s. with special circuit treatment.

**SPECIAL TYPES** are available in both series 500 and 160-C. When requesting a quotation on a special type include a sketch of the rectifier required or a circuit dia-

gram showing source and frequency of the input voltage, resistance and kind of load, required load current and the ambient temperatures.

**SERIES 500** Disc diameter .600 inch. Area each disc .15 square inch. Furnished with 3" braided, tinned copper leads. Finished in synthetic lacquer-enamel.

**SERIES 160** Disc diameter .160 inch. Area each disc .02 square inch. Furnished with 3" stranded, tinned thermoplastic covered copper leads. Molded phenolic case. Assembly sealed with specially developed moisture-proof compound.

**SERIES 160-C** Disc diameter .160 inch. Disc area, lead wire and length and moisture-proof seal are identical with Series 160. Dimensions of the case have been reduced to the most compact size. These units may be mounted in a standard midget fuse clip.

## SELETRON RECTIFIERS

SELETRON Selenium Rectifiers are finding use in wider and wider fields of application ranging from half wave stacks for bias supply such as 8Y1 listed at the left, to multiple assemblies capable of delivering many kilowatts. Typical examples of such SELETRON power use are installations operating elevators in more than fifty office buildings in New York and Chicago, an assembly of 48 volts and 10,000 amperes for electrolysis of water, and the spectacular Eveready searchlight on New York's Great White Way.

### TELEVISION "HOW IT WORKS" (Supplement to TV Manual Vol. 1)

A GOLD MINE OF PRACTICAL FACTS

Here is practical theory. The first chapter deals with the transmission and reception of television signals in general, giving you a clear over-all picture. The second chapter deals with frequency standards; the next with antennas. Television "How It Works," then goes into descriptions of the various portions of a television receiver: the r-f, oscillator, converter circuits in the front end; the sound channel; the video i-f system and deflector; the video amplifier and d-c

restorer, the sync and sweep circuits, picture tubes, power supplies. The conclusion covers alignment and servicing problems. The entire book carries the practical right along with the theoretical, ending up with the when and why of certain operations in television receiver maintenance. (Cat. No. 101)

### UNDERSTANDING VECTORS AND PHASE IN RADIO

by John F. Rider and Seymour D. Uslan

A Shorthand method to easier understanding of Radio theory, the text is written for every man in radio and electronics who has not had the advantage of technical training. Vectors are the engineer's shorthand—a picturegraph adopted to eliminate mathematical and complex waveform presentations; an understanding of which is necessary in following developments in FM and Television. ## TELEVISION INSTALLATION TECHNIQUES

By Samuel L. Marshall

Television Instructor,

George Westinghouse Vocational High School

Eliminate the nuisance of unnecessary return service calls. Be sure when you make an antenna installation that it will remain intact. It will mean lower costs, higher profits, and savings in valuable time. All these can be achieved in your TV installation activities by using this completely practical "how to do" book. Theory is discussed only where necessary.

Whether the installation is in a metropolitan, suburban, or fringe area, all the necessary mechanical requirements, down to the last detail, are thoroughly discussed. This may be for a short chimney-attached mast, or for an installation of a tower, including the foundation.

Winds and ice loads are responsible for many installation failures. They cost you time and money. Know for sure all the factors of a good installation, from the top-most element of the antenna, to the ground connection on the receiver terminal board.

Receiver adjustments in the home, transmission lines, antenna location—in fact all information necessary for the TV antenna installer is discussed here. It is a practical book from cover to cover.

Every man who is actively engaged in this specialized field of operation, or the man who contemplates entering it, needs this book because of its dollar-making, time-saving contents.

By E. N. Phillips, W. G. Sterns, N. J. Gamara

The authors, members of the Collins Radio Company Research Laboratory, develop the thesis that a shielded transmission line with a continuous slot along its axial length is the most convenient tool for measurements in the frequency spectrum above 100 megacycles per second. Properly equipped with a scale along its axial length and an index to show the position of a probe for the exploration of the field between the conductors, the equipment described in this monograph can be used to measure wavelength, velocity of propagation, impedance, electrical length and attenuation in four-terminal networks.

### D.C. VOLTAGE DISTRIBUTION (Cat. No. 121)

Only a casual glance at the schematics of any of the multi-tube sets will convince you that the distribution of the D.C. voltage to the tube elements is complicated. The many different forms these systems take should be recognized and understood. You should know thoroughly how the value of resistance and wattage rating of each resistor is calculated and why.

### RESONANCE AND ALIGNMENT (Cat. No. 122)

Do you know what happens when you tune a circuit to resonance? In order to align a receiver, oscillator, or transformer properly, so that maximum efficiency is attained, you must be familiar with more than just the mechanical operation. Are you familiar with I.F., oscillator, R.F. and detector alignment for all types of circuits—single, double and triple tuned systems?

### AUTOMATIC VOLUME CONTROL (Cat. No. 123)

Automatic volume control has now become a standard feature of every well made receiver. Are you familiar with every type in use and can you recognize one system from another by examining the schematic? Do you know how various types of tubes are used in each circuit? Noise suppression systems, time delay circuits—audio-frequency volume expander systems and other such networks have greatly increased servicing problems.

## *The Radio Amateur's Handbook*

Over a period of more than twenty years *The Radio Amateur's Handbook* has grown from a small manual of amateur operating to the world's most valuable and widely-used radio book. Just as amateur techniques and developments have often been forerunners of professional engineering, and the amateur body itself become a training ground in providing executives, engineers and technicians for the radio industry, so has this standard manual of amateur communication become the all-purpose volume of radio.

The 1950 edition retains the material on theory, principles and design which made the *Handbook* so valuable. It has been revised and integrated with constructional data. This is not only of value to the practicing radioman but to the student as well, for it gives him practical applications and examples of the theory he is learning. As a text, the *Handbook* is probably more used in radio schools and colleges than any other single volume.

In constructional material, no publication equals the *Handbook* in practical utility, its treatment of radio communications problems in terms of how-to-do-it rather than by abstract discussions and abstruse formulas. There are few radio manufacturers, schools, engineering firms, experimental laboratories and military communications units which do not possess at least one copy of this valued and modern reference work.

Text, data book, constructional manual, operating reference book — it is all these and more. Its annual rewriting assures a modern up-to-date text, so necessary in a science so fast moving and progressive as radio. Yet in this virtually continuous modification there has always been the objective of presenting the soundest and proved aspects of current engineering practice rather than the merely new and novel.

## *A Course In Radio Fundamentals*

The prime function of the book is to help the individual home student. The radio amateur is essentially a practical man. He has to be, because usually he builds his own equipment and he must make it work. His guide in that work is usually *The Radio Amateur's Handbook*, published by the League. Splendid as that famous book has proved, there has been a widespread need for a guide which would assist in studying it and which would facilitate a real absorption of radio principles. Such a course of study is contained in this book. It is a highly-developed application of the time-tested principle of "learning by doing." Written around the *ARRL Handbook*, the course has been so thoroughly proved and has helped so many people that the individual student undertaking it may be assured that, if he follows its precepts literally and exactly, performs the experiments, and examines himself honestly by the test questions, he *cannot fail* to learn the principles of radio.

## *Hints & Kinks*

Amateurs are noted for their ingenuity in overcoming by clever means the minor and major obstacles they meet in their pursuit of their chosen hobby. An amateur must be resourceful and a good tinkerer. He must be able to make a small amount of money do a great deal for him. He must frequently be able to utilize the contents of the junk box. *Hints and Kinks* is a compilation of hundreds of good ideas which amateurs have found helpful, including conversion procedures for war surplus. It will return its cost many times in money savings — and it will save hours of time.

## *The A. R. R. L. Antenna Book*

The present edition of the ARRL Antenna Book represents an accumulation of ten more years of the amateur's experience in both war and peace in making the all-important ever fascinating "sky wire" carry signals to the ends of the earth. The data contained in this book are the result of practical experience both of the authors and hundreds of amateurs who have contributed to the practical know-how that this book expresses.

The book has two principal divisions. Chapters 1 through 5 deal with the principles of antennas and transmission lines, wave propagation and its relationship to antenna design, and the performance characteristics of directive antenna systems. These five chapters might be called a textbook on antennas; they enable the reader to design a system of his own to fit his particular needs. Beginning with Chapter 6, there is a series of chapters in which complete data are given on specific designs for the various amateur bands. The amateur who has not studied the first section, or who wishes to avoid the necessity for making his own calculations, will find in these chapters the information necessary for putting up the system that appeals to him. The remaining chapters deal with the highly important mechanical features of construction and related subjects such as determining geographical directions.

This required twice as big a book as the previous edition but we are sure you will find it well worth more than the nominal cost.

## *How To Become A Radio Amateur*

The standard elementary guide for the prospective amateur. Tells what amateur radio is, and how to get started. Special attention is given the needs of the "Novice" — proposed new class of amateur license. It features equipment which is simple in construction, yet with a high degree of flexibility permitting the various units to fit into the more elaborate station layouts which inevitably result as the amateur progresses. Complete operating instructions and references to sources of detailed information on licensing procedure are given.

**Price 50c**

## *The Radio Amateur's License Manual*

To obtain an amateur operator's license you must pass a government examination. The License Manual tells how to do that — tells what you must do and how to do it. It makes a simple and comparatively easy task of what otherwise might seem difficult. In addition to a large amount of general information, it contains questions and answers such as are asked in the government examinations. If you know the answers to the questions in this book, you can pass the examination without trouble.

**Price 25c**

## *Learning the Radiotelegraph Code*

This booklet is designed to train students to handle code skillfully and with precision. Employing a novel system of code-learning based on the accepted method of sound conception, it is particularly excellent for the student who does not have the continuous help of an experienced operator or access to a code machine. It is similarly helpful home-study material for members of code classes. Adequate practice material is included for classwork as well as for home-study. There are also helpful data on high-speed operation, typewriter copy, general operating information — and an entire chapter on tone sources for code practice, including the description of a complete code instruction table with practice oscillator.

IFL, IFM, IFN and IFO transformers operate at 10.7 Mc. and are designed for use in FM Superheterodyne receivers. Coils are precision wound on grooved polystyrene forms and tuning is accomplished by movable iron cores. Bandwidth is not affected by tuning slug position. The transformer cans are 1 3/8" square and stand 3/8" above the chassis. Two 6-32 spade bolts are provided for mounting.

The IFL transformer is a 10.7 Mc. FM discriminator transformer suitable for use in conventional FM receiver discriminator circuit and is linear over a band of ±100 Kc.

The IFM transformer is a 10.7 Mc. IF transformer with a 150 Kc. bandwidth at 1.5 db attenuation. Approximate stage gain of 30 is obtained with IFM Transformer and 6SG7 tube.

The IFN transformer is a 10.7 Mc. IF transformer with a 100 Kc. pass band at 1.5 db attenuation. Approximate stage gain of 30 is obtained with IFN Transformer and 6SG7 tube.

The IFO transformer is a 10.7 Mc. FM discriminator transformer of the ratio type and is linear over a band of ±100 Kc.

SA:4842 Net \$4.50

A 456 kc. discriminator transformer for narrow band frequency modulation. This unit is the nucleus of the NFM adapter described by Harrington and Bartell in November 1947 QST. Two slug-tuned secondaries are employed and discrimination is accomplished by resonating one at approximately 10 kc. above, the other at approximately 10 kc. below the center frequency of the i.f. channel.

## TRANSMITTER COIL FORMS

The Transmitter Coil Forms and Mounting are designed as a group, and mount conveniently on the bars of a TMA condenser. The larger coil form, Type XR-14A, (not illustrated) has a winding diameter of 5", a winding length of 3 3/4" (30 turns total) and is intended for the 80 meter band. The smaller form, Type XR-10A, has a winding length of 3 3/4" and a winding diameter of 2 1/2" (26 turns total). It is intended for the 20 and 40 meter bands.

Either coil form fits the PB-15 plug. For higher frequencies, the plug may be used with a self-supporting coil of copper tubing. The XB-15 Socket may be mounted on breadboards or chassis, as well as on the TMA Condenser.

## BUFFER COIL FORMS

National Buffer Coil Forms are designed to mount directly on the tie bars of a TMC condenser using the PB-5 Plug and XB-5 Socket. Plug and Socket are of molded R-39.

The two coil forms are of steatite, left unglazed to provide a tooth for coil dope. The larger form, Type XR-13, is 1 3/4" in diameter and has a winding length of 2 3/4". The smaller form, Type XR-13A, is 1" in diameter and provides a winding length of 2 3/4". Both forms have holes for mounting and for leads.

## EXCITER COILS

There is a National exciter coil for every application. AR-15 coils are mounted on 5 pin bases which fit any standard 5 contact tube socket. AR-16 coils are mounted on the well known National PB-16 plug which fits the National XB-16 socket. The AR-17 coils have 6 pin bases which fit standard 6 contact tube sockets and the link windings of this series have center taps which may be grounded for harmonic reduction. All center link models are center tapped for use in balanced circuits. Insulation polystyrene and steatite. For use where plate power input does not exceed 50 watts. Available with fixed or swinging end or center links for all amateur bands, 6 through 80 meters.

The XR-16 Coil Form (not illustrated) fits the PB-16 Plug-in Base; it has a winding length of 1 3/4", diameter 1 1/4"

**TYPE LMT**

A heavy duty transmitting condenser that completely eliminates troublesome closed loops, vastly simplifying the problem of unwanted harmonics. The rotor shaft is completely insulated from the end plates. Long leakage path (higher safety factor). Plates and parts are extra heavy with highly polished rounded edges to prevent flash-over. Adjustable stator plate mounting and end bearings. Available in single-stator, double-stator, or double-stator right angle center drive models. Same capacities and prices as National TML Condenser. Condensers with right angle drive add \$3.90 to price shown.

**TYPE TML**

is a heavy duty job throughout. The frame structure (rugged aluminum castings with dural tie bars) and precision bearings assure permanent rotor alignment. All plates are extra thick with rounded and polished edges. This, plus specially treated steatite insulators and a husky self-cleaning rotor contact, provides high flashover, current and voltage ratings.

## PRECISION CONDENSERS

Originally developed for the famous HRO and NC-100 receivers, National PW and NPW condensers and drive units are well known to professional and amateur radio men throughout the world. Sturdily constructed of the finest materials and carefully adjusted by skilled hands, they have become "standard specifications" for applications requiring smooth, precise control and high re-set accuracy.

The Micrometer Dial reads direct to one part in 500. Division lines are approximately  $\frac{1}{4}$ " apart. The drive, at the mid-point of the rotor, is through an enclosed preloaded worm gear with 20 to 1 ratio. Each rotor is individually insulated from the frame, and each has its own individual rotor contact. Stator insulation is steatite. Plate shape is straight-line frequency when the frequency range is 2:1.

PW Condensers are available in 1, 2, 3 or 4 sections, in either 160 or 225 mmf per section. Larger capacities cannot be supplied.

### PW-D

The Micrometer Dial used on the condensers and drives above is available separately. It revolves ten times in covering the complete range and as there is no gear reduction unit furnished, the driven shaft will revolve ten times, also. The PW-D dial fits a shaft  $\frac{5}{16}$ " in diameter.

## MULTI-BAND TANK ASSEMBLIES

The unique MB-150 Multi-Band Tank tunes all amateur bands from 80 through 10 meters with 180° rotation of the shaft; the coils are never changed. The unit is built around a circuit which tunes to two harmonically unrelated frequencies at the same time. Thus, it becomes possible to cover a wide frequency range and yet maintain a reasonably constant L/C ratio. 3" wide x  $8\frac{1}{4}$ " high (including the GS-10 standoffs) x 9" long overall including the  $\frac{1}{4}$ " dia. shaft and output terminals.

Features of the MB-150:

- (1) For use as the all-band plate tank in push-pull or single-ended stages running up to 150-watts input (1500 volts peak). It is ideal for a pair of 807s or 809s or a single 829B.
- (2) Separate link coupling coil has special clips which adjust to match impedances up to 600 ohms directly. Output couples into a higher powered amplifier, an antenna or an antenna tuning network.
- (3) Fast band changing is accomplished without handling coils, thus removing one of the danger points in the amateur station.

MB-150 Multi-Band Tank Assembly Net \$18.75

### MB 40L LOW-POWER MULTI-BAND TANK

Same principle as the famous MB-150. Logical application as grid circuit for tubes having MB-150 in plate circuit. Will handle 40 watts input if link kept loaded. Net \$9.90

**THE RME 84  
FOR HOME—PORTABLE OR MOBILE OPERATION**

RME 84 at right, VP-2—6 volt power pack with cable attached, optional for RME 84 in center, CM-1—Carrier Level "S" Meter with cord and plug, optional for RME 84 at left.

**The Coverage is Complete .540 to 44 Megacycles**

An important feature is the continuous coverage ranging from 540 kc to 44 megacycles. This coverage, in addition to providing for the regular broadcast band, takes in the 80, 40, 20, 15 and 10 meter amateur bands. The calibration is made on a 7 inch diameter scale. In addition, a smooth-running vernier dial gives band spread on any setting of the main scale. The vernier scale makes five complete revolutions for the 180 degree rotation of the tuning condenser.

**Seven Tubes Have Been Chosen For The RME 84**

1. A 7B7 loctal radio frequency amplifier is ahead of the first detector.
2. A 7S7 loctal is used as a first detector and radio frequency oscillator.
3. A 7B7 serves as the first IF operating at 455 kc.
4. A 7B7 second IF further amplifies the signal.
5. A 7K7 loctal acts as second detector and first audio amplifier.
6. Another 7K7 provides the beat frequency and acts as noise limiter.
7. The 6G6G provides the final audio frequency output.
8. A 5Y3GT is the power rectifier tube.

**Portability Built Into The RME 84**

Conscious of the fact that many thousands of amateurs want a receiver for portable operation, the new RME 84 is equipped with a special socket connection making possible connections to either a B battery and an A battery supply or a similar source of power such as an external vibropack. 135 volts of B and 6 volts of A battery will operate the RME 84 at full power. The drain on the B battery is only 32 milliamperes at 135 volts and the 6 volt A battery provides 1.5 amps. including the two dial lights.

The new noise limiter, of the series type, performs exceptionally well. Also made available for future use with the RME 84 is a signal strength meter to be connected through the special socket located on the rear of the chassis apron.

**SENSITIVITY:** The average sensitivity of the RME 84 is of the order of 2 microvolts over the entire range of the instrument.

**RME 84, CODE HANDY,** complete for 115 volt, 60 cycle operation and for use with external battery supply. May also be had for 230 volt, 25 cycle operation at additional cost. f.o.b. Peoria, Illinois, Net Selling Price **\$98.70**

**VHF-152A  
3 BAND  
CONVERTER**

Reception on the new high frequencies, 50 to 54 mc. and 144 to 148 mc. bands, and better reception on the 27 to 29.7 mc. band, using the double detection system, image free, at a cost which any amateur can afford—that is what the new VHF-152 is designed to give. . . . Every owner of a communications receiver can, with the acquisition of this new converter, do a much better job of working high frequency signals than is possible with most any higher priced, specially designed receiver.

This converter provides an order of stability at 50 mc. much higher than most communications receivers have when operating at 5 mc. New engineering design and construction make this possible.

Miniature tubes are used, a 6AK5 rf amplifier and a 6J6 detector and a 6J6 oscillator complete the converter proper. The built-in power supply uses a 5Y3GT rectifier tube and a VR150 voltage regulator. The three bands are calibrated to cover the full sweep of a seven-inch diameter scale, indirectly illuminated. . . . The tuning mechanism is of the same sturdy, positive construction characteristic of all RME units. Smooth, velvety operation of the large knob makes operation a pleasure.

The sensitivity of the VHF-152 is of the order of 2 microvolts. Its output frequency is 7000 kc.

Separate connections are provided for the 10, 6 and 2 meter antennas and for the antenna used with the receiver. Each band has its own especially designed antenna input circuit of approximately 300 ohms impedance. The input of the receiver is changed from the VHF-152 output to the receiver antenna by a front panel switch. Another front panel switch selects the 10, 6 or 2 meter band for VHF-152 operation.

Interconnecting plug and cord are also furnished, which permanently connect the VHF-152 direct to the input terminals of the receiver.

The cabinet is designed to match the RME-45 communications receiver, both in streamlined appearance and in two tone gray and black crinkle finish.

Dimensions are as follows: 11" high, 12" wide, 11" deep, with hinged lid. Standard operation is for 115 volt, 50-60 cycle power source.

Complete with tubes, interconnecting plug and cord. **CODE: HAMPY,** f.o.b. Peoria, Illinois, Net Selling Price **\$86.60.**

**THE HF 10-20 CONVERTER**  
For 10-11-15 and 20 Meters

Because of the double conversion system, the HF 10-20 provides outstanding and imageless reception on 10-11-15 and 20 meters. And it's an especially vital adjunct to those receivers that tune only up to 18 mc. or possess inadequate bandspread. The HF 10-20 provides an average of 7.8 linear inches of calibrated bandspread on each of the three bands. Images are non-existent. The output (I. F. frequency) of the HF 10-20 is 7 mc. It can be used with any all-wave or amateur receiver. Features include provision for separate antennae, self-contained power supply, antenna selector switch, band selector and high gain. The increase in gain, depending on the receiver and receiving conditions, is approximately 30 DB over the entire range of frequencies covered. Tubes used are a 6BA6 RF amplifier and a 6J6 twin triode mixer. Built-in power supply uses a 5Y3GT rectifier and a VR150 voltage regulator. A Break-In & Monitoring Device for CW & Fone

The "Boomerang" is the solution to rapid and efficient break-in, and the avoidance of needless QRM. Dots and dashes are heard in the headphones or the speaker while sending—a great help in perfecting the fist and avoiding errors.

When the key is down, any signal normally going through the receiver is automatically suppressed. Raise the key and instantaneously the receiver functions.

The "Boomerang" can be used as a handy monitor for phone operation, as a code practice oscillator and a tone modulator. Tubes include a 7K7, a 6SL7 and a 6x4 rectifier. Cabinet is two-tone grey finish.

JOHNSON C and D condensers are sturdily constructed to give trouble-free operation under the most severe service. Only the finest materials are employed yet these units are lower in price than any other quality condensers.

All dual models have center rotor connections, to insure balanced operation at ultra-high frequencies. Heavy laminated phosphor bronze contact springs insure low resistance circuits.

Important features include: Heaviest aluminum plates of any similar condenser, .051" thick—Stearite insulation—Large laminated rotor brushes—Center rotor contacts on all dual condensers—Heavy 5/16" diameter aluminum tie rods for frame strength and rigidity—1/4" cadmium-plated steel shafts.

Supplied with single hole mounting brackets which fit either top or bottom of end plate so that stators may be mounted to top or bottom as preferred.

Panel space, Type C, 5 1/2" wide x 5 3/8" high panel space, Type D, 4 1/4" wide x 4" high.

Mounting (M) dimension, on both C and D Types, 7/8" more than L dimension.

## TYPE H CONDENSER

Two End Plates Single End Plate

The Type H condenser was designed for aircraft transmitters and combines a minimum of weight and size with simple but rugged construction. Capacities and spacings are provided for low and medium power stages. Use of steatite for end plates avoids any possibility of "short circuit loops" and permits panel mounting with both rotor and stator insulated from ground. Has aluminum plates .020" thick. End plate 1 1/2" square. Capacity measurements are taken with condenser in position shown above.

Mounting (M) dimension is 1/4" more than the L dimension.

## NEW JOHNSON TYPE L VARIABLES (167 Series)

Ceramic Soldered for Stability, Strength

With the introduction of this new line of air variables, JOHNSON brings many important design advantages never before available.

Outstanding feature of these is the use of perfected ceramic soldering which assures absolute—and permanent—rigidity and strength, absolute—and permanent—maintenance of capacities!

There are no eyelets, nuts or screws to work loose, causing stator wobble and fluctuations in capacity. JOHNSON ceramic soldering leaves a bond which is stronger than the rugged steatite end plates themselves. There's nothing to come loose, because the stator terminals, mounting posts and rotor bearings are ceramic soldered!

Silent operation on the highest frequencies is assured with a split sleeve tension bearing that also prevents fluctuations in capacity.

These new variables are ideal for peak efficiency even under the severest conditions, such as portable—mobile operation.

Two sets of stator contacts are provided for connecting components to either side of condenser without appreciably increasing inductance of the circuit. New bright alloy plating is used. It has high corrosion resistance and possesses lower electrical resistance than other common platings.

End plates are ceramic, 1 3/8" square with 2 mounting posts tapped for 6-32 screws on 1 1/8" centers.

Mounting (M) dimension is 1/4" more than the L dimension. Other capacities and spacings available on special order.

### TYPE J CONDENSER

The Type J condenser is a midget with big condenser characteristics. It has wider spacing than most small types, yet occupies little more space and is ideal for oscillator and low power stages. The spacing is .025" and universal type mounting brackets make possible a variety of mountings including chassis, panel, or inside tube socket type inductors. Steatite end plate is 1 1/8" wide.

### EXPLANATION OF CATALOG NUMBERS

The first part of the catalog number indicates the capacity per section in mmfd. The following letter indicates the frame size or type. A second letter D indicates a two-section type. The final number multiplied by 100 is the approx. peak breakdown voltage.

## TYPE G CONDENSER

The Type G condenser is extremely popular as a neutralizing condenser for medium and low power stages. It is also widely used for grid and plate tuning at high and ultra-high frequencies. A wide range of capacities and spacing make it adaptable to many applications. It has a single end plate of steatite and low minimum capacity. .032" rounded aluminum plates, universal mounting bracket, locking nut, and front and rear shaft extensions are among the outstanding features.

## TYPE N CONDENSER

Small mounting space requirements, extremely high voltage rating in proportion to size, fine adjustment with uniform voltage breakdown rating throughout the full capacity range, and low cost, make these neutralizing condensers ideal for the modern transmitter. "Plates" are aluminum cups supported on a steatite frame with cast aluminum mounting bracket. Because of the design these condensers will withstand much higher voltage than conventional flat plate condensers of the same

spacing. The N375 has been improved and now features a bushing for the guide shaft for greater stability and a beaded lower cup for high voltage rating. Peak R.F. Breakdown Ratings at 2 Mc.; N125 8,500, N250 11,500, N375 14,500.

## COUPLINGS

All JOHNSON insulated shaft couplings are characterized by best steatite insulation properly proportioned for electrical and mechanical strength, by accurate metal parts heavily plated, by advanced design, and by skillful manufacture.

The phosphor bronze springs of the -250 and -251 series couplings provide flexibility without backlash and adjust to minor shaft misalignments. Rigid types -252, -262 and -261 meet the requirements of accurate shaft alignment and high torque.

## NEW JOHNSON AIR-WOUND HAM INDUCTORS

**A Coil to Match Your Tube —  
A Link to Match Your Line**

With these new JOHNSON Ham Inductors and "plug-in" Swinging Link Assemblies the amateur can instantly match coil to tube — link to line.

### Heavier Windings on All Models

Efficiency is further increased because coil windings are a wire-size larger than on most available inductors — resulting in less heating, lower loss and consequently higher efficiency.

The new JOHNSON Inductors and "plug-in" Link Assemblies fit all conventional inductor assemblies.

**HCS**—Inductors match high voltage, low current tubes — swinging link type.  
**LCS**—Inductors match low voltage, high current tubes — swinging link type.  
**HCF**—Inductors match high voltage, low current tubes — semi-fixed link.  
**LCF**—Inductors match low voltage, high current tubes — semi-fixed link.

## NEW JOHNSON FARADAY SHIELD

Illustrated above is JOHNSON 500HCS40 inductor, 238-172 jack bar, and 238-179 arm with 238-303 shield, hood, and lead assembly installed.

JOHNSON Faraday shields will reduce TVI caused by capacitive coupling. Designed for JOHNSON plug-in links, they are equally effective and easily installed on other links including non-plug-in types. The screen itself is a metallic plating on polystyrene sheets and is attached to the link with polystyrene cement. Grounded hood and copper braid effectively complete the shielding. Link impedance is relatively unchanged and plug-in link flexibility unimpaired. Made in two sizes and offered as the Faraday shield only or as a complete assembly.

## INSULATORS AND BUSHINGS

JOHNSON insulators were introduced in the early twenties, and soon established the sort of dominance that occurs occasionally when one line offers more in choice of style and size; in advanced but practical design; and in mass production economy than others. This position has been maintained through the years by careful attention to the product, the line, and the needs of the user.

JOHNSON insulators are specifically designed for high frequencies. Insulating materials were selected after exhaustive laboratory tests. Superior grade, low absorption, well glazed electrical porcelain, and Grade L 4 or better steatite are used.

Of the insulators appearing under the headings "Steatite" all but the 500 series and the 135-55 are offered in this finer material for the first time. Their dielectric losses are but a fraction of those for the same parts in porcelain, and they are particularly recommended for high frequency work.

In addition to fine quality insulating materials the JOHNSON line distinguishes itself with perfection of ceramic design; logical proportions; clean-cut, accurate molding; and high grade nickel-plated brass hardware, with milled (not stamped) nuts.

### STAND-OFF AND CONE INSULATORS

The stand-off insulators feature heavy, breakage-resistant bases and adequate "glaze grooves" around mounting screw holes. Numbers 135-65, 135-66, 135-67 and 135-68 have unbreakable, drawn and etched aluminum bases.

The No. 500 cone insulator series are steatite for better high frequency insulation. Threads are tapped directly into the ceramic. Furnished complete with machine screws, brass and cushion washers.

### THRU-PANEL INSULATORS AND BUSHINGS

In the thru-panel and bushing series special attention has been given to obtaining high mechanical strength through heavier construction and at the same time increasing the breakdown voltage. Flat mounting surfaces with cushion washers eliminate breakage. Bottom pieces have long internal and external portions for higher breakdown voltage rating, and grooved surfaces to increase leakage path. Jack types have terminals permitting connection above as well as below the panel.

JOHNSON lead-in bushings are designed to have even greater mechanical strength and long leakage path in proportion to size. Numbers 135-53 and 135-54 are supplied as single porcelain parts including cushion washers.

Nos. 135-50 and 135-55 are steatite and have a special interlocking feature which permits mounting on thin panels without extra spacing washers.

Nos. 20, 20J, 22, 22J and 24 are now also steatite with heavily plated brass hardware.

## RADIO CABINETS

### FLOOR MODELS—REAR DOOR ONLY

These beautiful JOHNSON cabinets feature unique adjustable rails for standard relay panels. These rails may be moved forward or backward to suit the user, making vertical chassis construction practical by allowing additional room at the front for mounting components so they project forward.

Other exclusive features include recessed toe spaces at front and sides; inside ventilation with inlets at the bottom of the cabinet and outlets in the top, allowing cabinets to be placed directly against other objects without restricting the air circulation; rear door with positive handle lock, which may be installed to hinge either way.

Side panels and rear doors are constructed of heavy (.051") aluminum for lightness, and sturdy steel frames, tops, and bottoms for strength. Rails for panels are tapped for 10-32 screws and will accommodate either Amateur or Western Electric notched panels. Shipped knocked-down, for your convenience and to save you freight, easily assembled in a few minutes with screws and nuts which are furnished. Available in either fine black wrinkle or a beautiful silver gray wrinkle.

### STEEL CHASSIS

JOHNSON steel chassis have all of the superior features of the aluminum described below, except the ease of machining. The "bright alloy" plating used has high conductivity, resists corrosion, and has a more permanent finish than zinc or cadmium. The result is a stronger and more durable chassis that looks better and affords greater satisfaction. The next time you buy a chassis, try JOHNSON and find the difference for yourself.

### ALUMINUM CHASSIS

JOHNSON chassis have many definite points of superiority. Accurate butt joints in the ends fit closely, preventing "working" or movement when the chassis is subjected to twisting strains. Gaskets applied to the bottom skirts with multiple spot-welds, add to the rigidity so that the practical equivalent of a solid drawn chassis is obtained. The absence of the conventional double thickness of metal in the corners, makes possible the mounting of components in the corner if desired. Most sizes of JOHNSON chassis use heavier gauges of material than corresponding sizes of conventional chassis. Fabricated of extra heavy special alloy aluminum, the strength of the aluminum chassis is adequate for the heaviest power supplies. The ease with which they can be drilled or machined makes them worth more, for most applications, than the small additional cost over steel.

### STEEL BOTTOM PLATES

Add to the attractiveness of your equipment by giving it a commercial appearance with JOHNSON chassis bottom plates. These 20 gauge "bright alloy" plated steel bottom plates, while designed to fit the JOHNSON line of chassis, will fit any standard chassis. They will provide protection for components as well as effective RF shielding. Bosses in each corner prevent marring of finished surfaces. Chassis mounting holes punched and self tapping screws furnished.

### KNOBS AND DIALS

JOHNSON knobs and dials feature fresh, advanced styling with all the utility of the old standard types. The molded phenolic knobs have twelve well defined flutes, with large gripping area. The knob faces are somewhat convex and the sides are slightly tapered contributing to their pleasing appearance on finished equipment.

Accurately molded from tough, thermosetting plastic and with beautiful satin chrome scales, these dials will retain their new appearance indefinitely. Every knob and dial has a brass set screw insert molded in place. In creating this distinctive, functional line, compatibility with existing knobs was carefully considered.

The 2 3/8" knob is available with an aluminum "spinner," similar to the one shown on the 116-208 counter-dial, making it ideal for gear drives or variable inductors.

Except for 116-214-2, listed below, all knobs and dials are for 1/4" shafts.

In addition to the items listed JOHNSON is also prepared to furnish many variations on special order in quantity. This includes pointer types, vernier drives, and special graduations on metal skirts. Write to JOHNSON about your requirements.

### COUNTER-DIAL

Simple, rugged, attractive, easy to install, the new JOHNSON counter-dial is a positively calibrated drive for gear reduction assemblies and rotary variable inductors. - Front Panel Band Switching
- 100 Watts Phone Output
- 115 Watts CW Output
- VFO Input Provision
- Dual Power Supplies
- Complete with Cabinet
- Pi-Network Coupling

### A FACTORY ENGINEERED TRANSMITTER

The JOHNSON Viking I is a factory-designed and engineered transmitter, not another collection of parts called a kit. Months were spent in its development by JOHNSON engineers and many of the parts were developed and manufactured especially for it. The whole job was done as though JOHNSON were going to put it in production. An elaborate instruction book was prepared, including detailed photographs and step-by-step instructions for the assembling and wiring.

A completely self-contained, band-switching transmitter delivering full output throughout its range, consisting of the 160, 80, 40, 20, 15, and 10-meter bands, as well as adjacent frequencies.

### TECHNICAL DESCRIPTION

RF section, a 6AU6 oscillator drives a 6AQ5 buffer which drives a Raytheon 4D32 final. An 829B can also be used with slightly less output. Audio section, a 6AU6 into a 6AU6 into push-pull 807 modulators. Frequency response has been limited to the range 300 to 3000 cycles. 5R4 HV rectifiers, 5Z4 LV rectifier, and 6AL5 bias rectifier complete the tube line-up. Dual power supplies for better regulation. Rotary variable inductor and variable condenser geared together give a uniform "Q" and better efficiency throughout the tuning range. Pi-section output tank will load into a wide variety of antennas and effectively reduce the harmonic content of the output.

### EVERYTHING NEEDED IS INCLUDED

## JOHNSON UNIVERSAL ROTOMATIC ANTENNA ARRAY

Rotomatic Control Box

The new JOHNSON Rotomatic Antenna is truly UNIVERSAL because its construction allows it to be set up in a variety of different combinations and types of booms. The main boom is special alloy steel tubing to which the elements are attached with clamps allowing any spacing or combination of elements.

### ROTOMATIC, THE DELUXE ROTARY BEAM

Simple to erect and built to last a lifetime. Heavy, over-size gears, bearings, and shafts. Precision design and workmanship. All weather

construction, heavy duty, interference-free motor. Remote control box with selsyn direction indicator. Weatherproof RF relay box for switching with dual beams. Both parasitic and phased arrays available.

### THE NEW JOHNSON PHASED ARRAY

Based on the same principles used to build JOHNSON phasing equipment for broadcast stations, the new phased (all elements driven) arrays give decidedly better forward gain and front-to-back ratio than the parasitic arrays. Before you buy any beam, investigate the new JOHNSON Rotomatic and particularly the JOHNSON phased array. Write for complete Rotomatic catalog today.

## TELEVISION COILS

These components when used in a properly designed circuit can provide a gain of approximately 10,000 X in the picture I.F. amplifier with overall response as illustrated. The sound I.F. system can supply a gain of approximately 7,000 X from the converter grid to the grid of the last I.F. tube and a discriminator slope sensitivity of approximately 0.08 volts/kc. with 1.0 volt signal level at the last I.F. amplifier tube grid. The overall sound I.F. and discriminator response is linear over 150 mc.

 The No. 90711 is a complete transmitter control unit with 6SK7 temperature-compensated, electron coupled oscillator of exceptional stability and low drift, a 6SK7 broad-band buffer or frequency doubler, a 6A67 tuned amplifier which tracks with the oscillator tuning, and a regulated power supply. Output sufficient to drive an 807 is available on 160, 80 and 40 meters and reduced output is available on 20 meters. Close frequency setting is obtained by means of the vernier control arm at the right of the dial. ### RF POWER AMPLIFIER

This 500 watt amplifier may be used as the basis of a high power amateur transmitter or as a means for increasing the power output of an existing transmitter. As shipped from the factory, the No. 90881 RF power amplifier is wired for use with the popular RCA or G.E. "812" type tubes, but adequate instructions are furnished for readjusting for operation with such other popular amateur style transmitting tubes as Taylor TZ40, Eimac 35T, etc. The amplifier is of unusually sturdy mechanical construction, on a 10 1/2" relay rack panel. Plug-in inductors are furnished for operation on 10, 20, 40 or 80 meter amateur bands. The standard Millen No. 90800 exciter unit is an ideal driver for the new No. 90881 RF power amplifier.

## A NEW LINE OF CARDWELL MIDGET CONDENSERS FOR V.H.F.

PL-6113

PL-6076

Cardwell offers a new line of 90 degree condensers with butterfly rotor plates, fulfilling a demand created by engineers and amateurs since the publication of an article "Stabilizing The 144 Megacycle Transmitter" in April, 1946 "QST." Also see pages 351 to 353 inclusive in the 1946 ARRL Radio Amateurs Handbook. PL-6113 and PL-6076 are specified in these articles. Features of these 90 degree midget condensers are as follows:

Electrical Symmetry  
Low Distributed Inductance.  
No Moving Contacts.

Plates easily removable to change capacity range.  
Isolantite Insulation.

Single Hole Mounting.

Small Size; 1 7/16" x 1 13/32" per general outline dimensions for differential "Trim-Airs" as shown on Page 6 of Catalog No. 46.

These condensers are made to fit all standard Cardwell "Trim-Air" hardware.

Note maximum and minimum capacity values shown are measured from stator-to-stator and are effective values as used when a coil is connected stator-to-stator, with rotor floating.

## TYPE "P" LIGHT HEAVY WEIGHT TRANSMITTING CAPACITORS

Designed to accommodate capacitance values up to 150 mmfd. per section in a dual section type having an airgap of .500", the "P" type construction permits higher capacity for a given airgap, and therefore a shorter frame than the "T" type construction. Typical Cardwell sturdiness is built-in, and the "P" type is probably the lightest transmitting condenser built for its size, yet completely satisfactory for heavyweight use. No single section types are catalogued; parallel or series connect for double or half single section capacity listed in table.

## Announcing --- "GONSET LINE"

LOW LOSS OPEN WIRE LINE (lowest loss lead-line manufactured)

The new GONSET LINE is the answer to television and amateur lead line requirements. Its extremely low loss (lowest loss line manufactured) makes it ideal for any lead in use where highest efficiency is desired. The loss of GONSET LINE is less than 1/6th that of ordinary molded, 300 ohm ribbon (when new) and still less when molded ribbon ages. GONSET LINE utilizes air for insulation, with polystyrene for spacers every 6 inches. Due to air insulation and polystyrene spacers it is practically not affected by weather such as ordinary molded ribbon. GONSET LINE therefore, is ideally suited for television reception in fringe and beach areas as well as long runs.

The wire itself is 18 gauge double formvar spaced 1". It is packaged with a continuous strip of corrugated paper to make easy handling.

Universal screw eye type of insulators are available that will take either GONSET LINE or ordinary molded ribbon. The impedance is 450 ohms, and will substitute for 300 ohm ribbon without any special matching. There are, however, 450-300 ohm transformers available for those who wish to experiment.

**UNIVERSAL ADJUSTABLE COILS**

These Adjustable - Inductance Ferrocart (iron-core) coils will replace the Broadcast band coils in practically any receiver. It is no longer necessary to order hard-to-get "exact duplicates" when an Antenna, R.F. or Oscillator coil requires replacement.

Continuously variable in inductance over a wide range, these coils will accurately "track" with the other coils in the receiver when properly adjusted. The exact inductance of the old coil is easily matched by a simple screwdriver adjustment, regardless of the value of the tuning condenser.

High "Q" iron cores used in these coils add gain and selectivity to the receiver. The oscillator coil provides complete adjustment for intermediate frequencies between 175 and 520 kc. May be used in either "cut-plate" tuning condenser or padded circuits. Available shielded or unshielded, furnished with complete instructions. 1 1/4" square by 2 1/2" high.

**"PLASTIC" I. F. TRANSFORMERS**

Particularly suitable for use in small receivers, where space is at a premium and yet superior performance is required, these remarkable transformers are only 1 1/4" square and 2 1/2" high! Made in a complete series of frequency ranges and positions, they will provide results second to none in any type of receiver.

The one-piece molded plastic coil-form and trimmer-base eliminates many separate parts that were required with other types of construction. The assembly is, therefore, simpler and more rigid. The iron core series are highly recommended for use in compact receivers and auto sets where only one I-F stage is permitted. It is not recommended that they be used in a two-stage system because of their high-gain which would cause instability and oscillation.

## THE NEW FMX PHASE MODULATOR

The new MEISSNER FMX Phase Modulator is designed exclusively for use with the Model EX Signal Shifter. Combination of the two — the FMX Modulator and EX Signal Shifter — gives the radio amateur a complete low power phone and CW transmitter at a very low price. Higher power, up to one KW, can be obtained with a power amplifier driven by the Signal Shifter.  
The deviation control of the FMX Phase Modulator allows a swing of 5 to 10 KC on all amateur frequencies including the 80-meter band. Input for high impedance crystal or dynamic mike is provided. Any class C amplifier that the Signal Shifter is capable of driving becomes a phase modulated amplifier.  
The FMX Modulator is installed in the position normally occupied by the power supply, the latter becoming a remotely located unit.  
Plate and filament voltages for the FMX are secured from the Signal Shifter power supply.  
Tubes required are 6SL7, 6SG7, and 6V150.  
The FMX Phase Modulator is another precision-built product, designed by MEISSNER for the discriminating amateur who wants only the best.

### NEW BUD ADD-o-RACK SERIES

It has always been necessary to buy special racks without louvers on one side to obtain a maximum of panel space with a minimum of floor space. Now, you no longer need to buy a whole new cabinet when you want additional panel space. Through our new and exclusive Add-a-Rack series, BUD not only offers additional racks at a lower cost, but provides you with a sturdier, better looking assembly.

The illustration at top shows two Add-a-Rack cabinets assembled together. The illustration below shows the unique and ingenious method of adding a unit to your present equipment.

Instead of buying an entire new outfit, you purchase only four parts: (1) a door (2) a top (3) a bottom and (4) an Add-a-Rack coupling-unit. The right (or left) hand side of your present relay rack is removed and replaced by the Add-a-Rack coupling-unit; next, a top and bottom is fastened into place, and the side taken from the first rack is fastened onto the second rack which has been added. Place the additional door into position and you have two racks properly and efficiently coupled together. In the same simple way, more racks can be added at any time and every one will be in a CONTINUOUS ONE-PIECE assembly.

This series is available in two ways: (1) a double unit consisting of two racks and the Add-a-Rack coupling unit, consisting of a door, a top, a bottom and an Add-a-Rack coupling-unit. These units are furnished with all necessary assembling and panel mounting hardware.

These chokes were designed to meet the requirements of builders of ultra-high frequency receivers and transmitters. Consists of ceramic rod with a single layer winding terminated with strap leads at each end. Particularly suitable for use on 2 or 6 meters. CH-570 is supplied with a mounting foot and is sometimes used as a filament choke in certain types of high frequency oscillator and amplifier circuits.

**IRON CORE R. F. CHOKES**

The efficiency of any circuit requiring an R. F. choke will be definitely improved by utilizing one of these chokes with a finely divided molded metallic core. The improved "Q" possible with this construction results from the D. C. resistance of these chokes being from 40 to 50% less for a given inductance than for regular air-core types. Thus, the D. C. voltage drop through the choke is considerably less, yet the choking action is equally as good. Windings are made with silk-covered enameled wire, terminated on convenient soldering lugs, and the chokes are mounted in small square shield cans measuring 1 1/4" x 1 1/4" x 1 1/4".

## "MC" AND "MCX" CAPACITORS

The "MC" and "MC-X" capacitors available with SLC or midline plates are widely used in all applications for frequencies up to 60 megacycles, and are designed to satisfy the most critical and exacting requirements. Vibration proof for Aircraft, Marine and mobile use. These units are of brass soldered nickel plated construction with silicone treated steatite insulation outside of the electrostatic field to reduce dielectric losses and to insure maximum efficiency under various conditions of humidity and temperature. A beryllium copper silver plated rotor contact spring and precision sleeve bearings give noise free operation. "MC" types have a nominal .0245" air gap tested at 1000 V. RMS 60 cycles. "MC-X" types have a nominal .0715" air gap tested at 1750 V. RMS 60 cycles. The "MC" family have 1/4" shaft with rear extension for gang operation. The whole series have rotational stops which nominally permit increasing capacity with clockwise rotation of shaft. "S" types are 1-11/16" wide and 2-3/4" high. "M" types are 2-3/32" wide and 2-7/8" high. These dimensions include swing of rotor plates.

## "RMC" CAPACITORS

The "RMC" was born out of the electronic industries demand for the extreme rigidity this capacitor affords. It utilizes the "MC-S" type soldered brass plate assemblies incorporated in a ruggedized frame consisting of aluminum end plates and three tie rods. A front sleeve bearing and single ball thrust rear bearing are used together with a positive rotor contact spring. The resulting unit has many applications where ruggedness is required.

Two removable brackets at the top of panels make for easy mounting of components or with the two tapped holes at the bottom and tapped holes in the panel permit three mounting possibilities. The same air-gaps as the "MC" are available. Dimensions are 1-13/16" wide x 1-11/16" high with 1/4" shaft.

## FLEXIBLE COUPLINGS

These flexible couplings come both insulated and non insulated. The insulated "FC-46-S" employs a silicone treated steatite body and provides maximum insulation. It is 13/16" in width and 1-1/4" in diameter. The metal body of the non insulated "FNC-46-S" is 23/32" wide with a diameter of 1-1/4". Both take 1/4" shafts and will compensate for considerable misalignment.

## "HFA" AND "HFAD" CAPACITORS

The "HFA" is a high efficiency, high frequency transmitting type capacitor of unusual design. All parts are brass, soldered and nickel plated mounted on treated steatite end panel  $1\frac{1}{8}$ " x  $1\frac{1}{2}$ " with  $\frac{1}{4}$ " shaft.

The "HFAD" is a dual unit with balanced opposed sections of the same type construction with two end panels  $1\frac{1}{8}$ " square and  $\frac{1}{4}$ " shaft. Both these units are ideal for low power portable transmitters and are available in 3 stock spacings; "A" .020", "B" .030", and "E" .070". The "E" type also has round edge plates. Both of these units may be single hole panel or base mounted.

## "HFB" TRANSMITTING CAPACITORS "HFBD"

The "HFB" while similar in most respects to the "HFA" types have insulated  $\frac{1}{4}$ " shaft extensions which permit high voltage to be applied to the rotor without danger to the operator. This allows a higher tube voltage for a given plate spacing and results in a less expensive, more compact unit.

The "HFBD" is the dual version with the same features with each section in balanced opposition. Both use  $1\frac{1}{8}$ " square steatite panels and are base mounted.

## "VU" UHF CAPACITOR

The "VU" Capacitors offer completely silent electrical operation made possible through the use of pyrex glass ball bearings making them adaptable in circuits up to 300 mc. These new bearings completely eliminate wiping contacts and metal sleeves. Elimination of rotor contacts by use of series stators permits a more symmetrical design of the capacitor itself and consequently allows better circuit layout. Two sets of threaded studs are provided, so that a vacuum tube may be mounted on one side and inductor on the other side of the capacitor to minimize lead inductance. The stator sections provide a low inductance path between the two sets of stud contacts. Panel size is  $1\frac{1}{8}$ " x  $1\frac{1}{8}$ ". Shaft size  $\frac{1}{4}$ ".

These units are supplied in standard sizes as listed in all brass soldered silver plated construction and may be obtained as specially calibrated precision units. Calibration table and complete description furnished on request.

## BUTTERFLY CAPACITOR

The "BFC" Butterfly type of capacitor is designed to meet the demand for an opposed rotor and stator (90 degree rotation) capacitor for use in commercial VHF equipment. The rugged design of this unit lends itself to mobile use and its brass soldered construction with symmetrical design provides easy association with other components for electrical circuit symmetry. Furnished in standard sizes as listed mounted on silicone treated steatite panel  $1\frac{3}{8}$ " square. Two studs on  $1\frac{3}{8}$ " centers are provided for panel mounting. Shaft size is  $\frac{1}{4}$ ".

Modifications may be obtained and by the addition of a rear panel with special ball bearing both front and rear a unit may be obtained for continuous rotation at speeds up to 2400 R.P.M. The "BFC" is also obtainable in different plate spacings and capacities on special order.

## Model ARC-101-100—TWO-STAGE BOOSTER

The new 2-Stage version of the famous ANCHOR TV BOOSTERS is recommended by a national research organization. The ANCHOR 2-Stage Pre-amplifier will increase original TV signal strength five times. This unit incorporates many new engineering features which include a radically new switching method of tube and circuit components in RF stage (Pat. Pend.) through which maximum gain and bandwidths are achieved. Single knob control for tuning and switching (Pat. Pend.) make this unit outstanding in simplicity and ease of operation. No other adjustments are necessary. It reduces interference to a minimum and increases signal strength for excellent pictures and greater contrast on all channels (as shown in charts), especially effective in "fringe" areas — provides good reception in locations formerly considered unsatisfactory. Exclusive simultaneous iron core tuning of input and output circuits results in uniform response on all channels. Reduces interference caused by AM, FM, short wave or Amateur Stations, as well as interchannel interference in strong signal areas. Cleans up noise and "snow" patterns—permits good reception from an indoor antenna in normal service areas. Most stable non-regenerative unit available—it is the unit that is not returned. ANCHOR 2-STAGE BOOSTER is ideal for show room demonstration permitting operation of several sets at one

time using separate indoor antennas instead of outdoor antennas. For 300-ohm lines. Modernly styled with streamlined plastic escutcheon and soft mahogany leatherette finish. Illuminated Pointer Size,  $4\frac{1}{8} \times 8\frac{3}{8} \times 4\frac{1}{4}$ . With 2-6AK5 tubes and selenium rectifier. Complete instructions supplied. For 105-125 volts. 50-60 cycles. Shipping weight, 6 lbs. ARC-101-100

Last year the ANCHOR Single-Stage BOOSTER improved television reception for 1 out of every 4 TV Set Owners. Thousands of apartment dwellers, suburban and fringe area residents the nation over demonstrated their preference by making ANCHOR the Number One BOOSTER in sets sold. ANCHOR developed this recognition only through its own top-notch performance by being able to deliver sharp, snow-free pictures in most difficult conditions.

Now ANCHOR has added the new Two-Stage BOOSTER and vastly improved Single-Stage BOOSTER to their line to bring television, and the finest television reception, to everyone. The New ANCHOR Pre-Amplifier Will Out-perform Any Two-Stage BOOSTER on the market.

## Model ARC-101-75—SINGLE-STAGE BOOSTER

SINGLE STAGE  
ARC-101-75

This new ANCHOR Single-Stage BOOSTER incorporates all of the features of the Two-Stage Model ARC-101-100. The outside case is changed slightly to differentiate one from the other. It is modernly styled with streamlined plastic escutcheon and soft mahogany leatherette finish. This unit is manufactured to take the place of the original ARC-101-50 and is competitively priced. It will outperform any other Single-Stage BOOSTER on the market as well as some Two-Stage BOOSTERS. This Single-Stage unit greatly

reduces interference and increases the original signal strength approximately 3 times (as shown in charts) for excellent pictures and sharp definition on all channels. It is especially recommended for low signal areas nearer cities where there may be any number of interference problems. Size,  $4\frac{1}{8} \times 8\frac{3}{8} \times 4\frac{1}{4}$ ". With 1-6AK5 tube and selenium rectifier. For 100-125 volts, 50-60 cycles. Shipping weight,  $5\frac{1}{2}$  lbs.

# MALLORY ROTARY SWITCHES

## Multi-Section Rotary Switches

**APPLICATION**—Ideally suited for test equipment, meter switching, and low current switching in industrial applications, including machine tool equipment. Also miscellaneous electronic devices, such as medical equipment, navigation instruments, and radar.

**DESCRIPTION**—All contacting members are silver plated, except rotor contact slugs, which are solid silver. This insures low contact resistance. The high lift of the contact springs provides a wiping and self-cleaning action to insure good electrical contact. The index spring, made of durable phosphor-bronze reinforced with web, prevents fracture failure and insures long-life operation.

An adjustable stop feature permits selection of the desired number of positions for extremely flexible use. The insulation used in all sections is high-grade phenolic resin. All switches supplied with  $\frac{3}{8}$ " diameter,  $\frac{3}{8}$ " long brass bushing, and 2" long shaft, grooved for easy cutting at popular lengths.

All switches have  $\frac{1}{2}$ " spacing between sections, excepting the three and four-section, which have 1" spacing. If closer spacing is required between sections, the switch can be dis-assembled and spacers cut to proper length.

**ACCESSORIES**—One Mallory No. 366 knob, one No. 232 nut, and one No. 227 lock washer furnished with each switch. See Miscellaneous Items section for Dial Plates.

**PACKAGING**—One switch and accessories per display carton.

# MALLORY SELECTOR, TAP AND LEVER ACTION SWITCHES

## Ceramic Section Selector Switches

**APPLICATION**—These switches are ideal for highly efficient critical radio frequency circuit applications. Suitable for radio receivers and low-power transmitter circuits. They find widespread use in laboratories, by manufacturers of transmitters, receivers, test equipment and other electronic apparatus, and by experimenters and amateurs.

**DESCRIPTION**—Ceramic insulation minimizes RF losses and retards moisture absorption. Indexing mechanism is the "hill-and-valley" type providing a definite "snap" indexing action. An adjustable stop feature is designed into the index assembly to permit a choice of 2 to 11 positions. All current-carrying parts are heavily silver-plated. The contacts are of the double-wiping, self-cleaning type, which insures low contact resistance over an extended temperature range. All switches supplied with  $\frac{3}{8}$ " diameter,  $\frac{3}{8}$ " long brass bushing and 2" long shaft grooved for easy cutting at popular lengths. All types non-shorting.

The two-section switch has  $\frac{1}{2}$ " spacing between sections. The three-section switch has 1" spacing.

**ACCESSORIES**—One Mallory No. 366 knob, one No. 232 nut, and one No. 227 lock washer furnished with each switch.

## Lever Action Switches

**APPLICATION**—These switches are particularly adapted to centralized radio, sound distribution, public address equipment, and intercommunication equipment for school installations of loud-speaker systems and office communication systems.

**DESCRIPTION**—The housing and mounting bracket of these switches are one integral part, which assures rigidity, and the design lends itself to the support of the section, thus preventing warping of the section or distortion in alignment of contacts. A smooth contact surface is guaranteed by the use of the exclusive Mallory "wrap-around" method of securing the terminal through the holes in the phenolic resin section. The phenolic resin is high grade for maximum insulation. The 5000 series have elongated mounting holes in the bracket, spaced from  $2\frac{3}{16}$ " to  $2\frac{3}{8}$ " apart. The 6000 and 7000 series have mounting brackets with round holes spaced  $1\frac{1}{2}$ " apart. Switches may be mounted singly or grouped in multiple mounting with  $\frac{3}{8}$ " between lever arm centers to facilitate conventional rack and panel installations.

**ACCESSORIES**—One knob, two 6-32 bolts and nuts are furnished with each switch.

## Jack Switches

**APPLICATION**—Ideally suited for use in laboratories, test panels, meter circuits, and other equipment where variable circuit combinations are accomplished through the leaf spring type assembly.

**DESCRIPTION**—The Standard Jack (or long frame type) may be used where space is no factor, as the frame extends straight back from panel mounting. The spring stack is assembled on a horizontal line with the frame. Constructed with knob and shaft that rotates through the bushing, operating a cam to actuate the spring which accomplishes the circuit switching.

The Junior Jack (or short frame type) is made with the frame supporting the spring stack at right angles. Because of the short springs used, it requires a minimum of space for mounting. The actuation of the springs is the same as for the Standard Switch. Frames on both Standard and Junior types are cadmium plated. Brass bushings and phosphor bronze springs are nickel plated. The fine silver contacts insure good electrical and low resistance contact. Both switch types are suitable for mounting in a single hole  $\frac{7}{16}$ " diameter on panels up to  $\frac{1}{4}$ " thick.

**ACCESSORIES**—One Mallory black phenolic resin knob, one No. 232 nut, and one No. 225 washer furnished with each switch.

**PACKAGING**—One switch and accessories per display carton.

# MALLORY JACKS

## Jacks

**APPLICATION**—These jacks provide a conventional receptacle where it is desirable to open or close auxiliary circuits by use of a combination of spring assemblies actuated by insertion of connection plugs. Excellent for head sets, hand sets, or microphone cord and plug connections, for meter testing cord and plug connections, or as a receptacle for any device where desirable to connect or disconnect by cord and plug. Fit all Mallory #75 and 76 plugs.

**DESCRIPTION**—The long frame jacks are provided with a variety of spring combinations. The spring stackups are mounted horizontally to the frame. The jack is designed to mount in a single  $\frac{7}{16}$ " hole in panels up to  $\frac{5}{16}$ " thick. Fits all standard Mallory plugs of two and three conductor types.

The Junior Jack (sometimes called "short frame" jack) is made with the frame supporting the spring stack at a right angle with the short springs requiring only  $1\frac{5}{16}$ " space back of panel for mounting. Bushings are made to mount in single  $\frac{7}{16}$ " diameter holes in panels up to  $\frac{5}{16}$ " thick. Fits all standard Mallory plugs.

The Midget Jack is very compact (with shorter frame and springs than the Junior types), being extremely useful where bare minimums of space exist. Will mount in a single  $\frac{3}{8}$ " diameter hole in panels up to  $\frac{1}{4}$ " thick.

The Infant Jack (sometimes referred to as a "pup" jack) is the smallest single circuit jack manufactured to accommodate the conventional 2-way phone plug tip and sleeve connection.

All jacks are made with cadmium-plated frames. Brass bushings and phosphor bronze springs are nickel plated. Fine silver contacts provide a jack with excellent electrical contact and low-contact resistance.

**ACCESSORIES**—One Mallory No. 232 nut and one No. 225 washer furnished with each long frame Junior and A-1 (Infant) Jack. Two nuts and one washer furnished with all Midget Jacks.

**PACKAGING**—One switch and accessories per display carton.

## Jacks

**APPLICATION**—Ideal for telephone switchboard types of applications, as well as industrial applications where a more compact jack is required for close strip panel mounting.

**DESCRIPTION**—Although limited to three circuit combinations, these jacks serve the same purpose as the Mallory Standard Long Frame Jacks, but employ a special frame angle to provide greater support. The bushing is plain, unthreaded, and the jack is mounted by means of a screw through the panel mounting plate at the base of the bushing. Bushing fits all standard Mallory plugs of two and three conductor types. The springs are assembled horizontally to the frame. The frames are steel cadmium plated. Brass bushings and phosphor bronze springs are nickel plated. The fine silver contacts provide an excellent electrical contact and low contact resistance.

**ACCESSORIES**—None furnished.

**PACKAGING**—One jack per display carton.

# SMALL SWITCHES, LIMIT SWITCHES, AND MAGNETIC RELAYS

## SMALL SNAP-ACTION SWITCH, G-E SWITCHETTE CR1070-C103

This lightweight switch mechanism lends itself especially to applications where space is limited and long life required.

The Switchette is operated by movement of the spring-return button located in the housing. This button can be actuated by a lever, bellows, or other means. Snap-action, double-break-contact construction gives the G-E Switchette a high current rating and makes it suitable for applications where the vibration is severe.

### FEATURES AND ADVANTAGES

1. Small (approximately 1¼ in. by ½ in. by ½ in.) and weighs only 9 grams (0.02 lb).
2. Resists vibration and corrosion.
3. Phenolic-resin operating button provides safety from live parts during operation.
4. Contact tips are 99.95 per cent pure silver.
5. Particularly suited to electronic applications because of negligible amount of contact bounce.
6. Five terminal arrangements are available, including the two shown above.
7. Wide variety of forms available, for example, three basic contact arrangements: single-circuit, normally open; single-circuit, normally closed; and two-circuit, normally open and normally closed. Also many special forms.

Switchettes are available in ratings up to 10 amperes at 115 or 230 volts a-c. Write for Bulletin GEA-3818.

## LIMIT SWITCH, CR1070-D101

This sturdy, open-type limit switch is operated by a plunger which provides ¾-inch overtravel. The contact mechanism of this device is the G-E Switchette, which can be wired to control one normally open circuit and one normally closed circuit. Rated 10 amperes at 230 volts a-c. Write for Bulletin GEC-197.

Open-type limit switch with push-rod operation

## GENERAL PURPOSE RELAY, CR2790-E

The CR2790 relay is a compact, attractively finished device for use either as a motor starter or a relaying unit. Available in either an open form or enclosed in a general-purpose or explosion-proof housing. Three contact arrangements available: single-pole, single-throw; double-pole, single-throw; and double-pole, double-throw. In the open form, all three contact arrangements use the same base, which facilitates mounting. In the enclosed form, the U-shaped cover makes wiring and servicing convenient. Rated 10 amp. continuous, 110/120 volts a-c.

### Applications

Control of pilot circuits in response to remote control switch or thermostat, or for direct control of small motors.

As a fractional-horsepower motor starter, or in conjunction with a magnetic switch controlling larger motors, heating or lighting circuits, and signal systems. Bulletin GEC-257.

For high radio frequency control. Entirely hum-

## TRANSMITTER RELAYS

Type 400

free where intended for A.C. operation, and highly efficient on D.C. supplies. All metallic parts are cadmium and chromium plated.

Standard coils are for 110V A.C. and may also be used for 24V D.C. However, they will also be supplied for lower A.C. or D.C. voltages at no increase in price.

## KEYING RELAYS

Type 101K—A.C.  
Type 201K—D.C.

Designed expressly for use in Keying Circuits where it is desired to use low voltage across the key to control high voltage transmission through the Relay contacts. The heavy duty coil and strong return spring makes possible an exceptional keying speed. Two sets of  $\frac{1}{4}$ " Pure Silver contacts in series allow a carrying capacity of 2500 volts. The complete unit, mounted on a  $\frac{3}{16}$ " Bakelite base with binding posts for coil connections, has over-all dimensions of 3" x 2" x  $\frac{1}{8}$ " and is obtainable for A.C. operation to 115 volts or D.C. operation to 60 volts.

List Price.....\$6.65

## TIME DELAY RELAYS

Type 305B—N.O.  
Type 355B—N.C.

Particularly suited for use where short time delays (10 sec. to 1 min.) are required, these Relays are available with both normally open and normally closed thermostats. Types 300 and 350 respectively, the former being widely used for pre-heating tube filaments, etc. The contact combination on both models is Double Pole Single Throw with  $\frac{1}{4}$ " Pure Silver contacts. Mounted on  $\frac{3}{16}$ " Bakelite bases measuring  $3\frac{3}{4}$ " x  $2\frac{3}{8}$ " x  $1\frac{1}{2}$ " with binding posts for coil connections. Standard operating voltage is 110 A.C.....List Price \$10.28

Low voltage units are available on special order.

## LATCHING RELAYS

Series 600

These Relays are highly desirable for applications where it is impractical to have the holding coil in constant service. When the coil actuating the contact arrangement is momentarily energized, the armature is locked in the closed position, and may be released electrically (Type 600) or manually (Type 650).
