TAYLOR MANUFACTURES SPECIAL TUBE TYPES FOR MANY INDUSTRIAL AND COMMERCIAL APPLICATIONS. CONTACT OUR APPLICATION ENGINEERING DEPARTMENT FOR YOUR REQUIREMENTS OF SPECIAL PURPOSE TUBE TYPES.

# CETRON ELECTRONIC TUBES

Engineered and Manufactured by Continental Electric Co.

## CETRON PHOTOTUBES

CETRON phototubes are either of the gas-filled or of the vacuum type. With the gas-filled type, greater effective response is obtained, particularly in low impedance circuits, while the vacuum type is recommended where maximum stability is desired.

CETRON phototubes are selected as to their sensitivity and priced accordingly. Phototubes of the Super Class A/B or Q are generally used for experimental purpose where very high sensitivities are required; Class C or R mostly for motion picture equipment; Class D for relay work, etc.

## CETRON RED SENSITIVE PHOTOTUBES

CETRON red sensitive phototubes are available in three sensitivity classes, A/B, C and D. The CETRON gas-filled red sensitive tubes comprise the most complete line of phototubes designed for sound reproduction. For complete engineering specifications, write for our PC 8/9.

## CETRON BLUE SENSITIVE PHOTOTUBES

CETRON blue sensitive phototubes are available in two sensitivity classes, Q and R. The gas-filled CETRON blue sensitive tubes comprise a most complete line for sound reproduction work from dye recorded film. For complete engineering specifications, write for our PC 8/9.

## CETRON LEAD SULFIDE PHOTOCELLS

CETRON lead sulfide photo conductive cells are made in a variety of miniature types. They are also available in a variety of sensitive areas and resistances. CETRON lead sulfide photocells are available in three sensitivity classes, A, C and D. For complete engineering specifications, write for our lead sulfide literature.

Continental Electric also manufactures a complete line of special purpose photocells, such as the CE-5, CE-7, CE-8, CE-10, CE-12, CE-15, CE-18, CE-26, etc. We will be happy to work with you on design and development problems, also on any special phototubes your application may require. Full data, price, etc. on special phototubes will be forthcoming upon request.

WRITE FOR INDIVIDUAL TUBE DATA SHEETS FOR FULL DETAILS.

This is Britain's famous power amplifying tube . . . for years the favorite tube of experimenters and research laboratories; acknowledged in every country of the world to be the finest tetrode ever made. It is currently used in the Leak, Williamson, Radio Craftsmen and other fine amplifiers.

The KT66 is a versatile power tetrode with a number of useful applications. It may be used in the output stage of an audio-frequency power amplifier, either tetrode-connected for maximum sensitivity and power output or triode-connected for high quality working. In transmitting circuits using frequencies up to 30 Mc/s it may also be used as an oscillator or as a radio frequency amplifier.

A high slope, indirectly heated beam tetrode, the KT66 is suitable for either single or push-pull audio operation and may be employed as a beam tetrode with aligned grids. This alignment of the grids reduces losses in the screen and makes for the highest possible power conversion efficiency. With this system of construction high orders of power output may be obtained with a low screen dissipation, and the anode is designed to dissipate 25 watts continuously with a reliable life performance.

**THE FINEST AUDIO TUBE EVER MADE!**  
**KT66**

NOTE: The KT66 and the American tube 6L6 can work interchangeably in any circuit; the pins and connections of both are identical.

**PRECAUTIONS IN USE**

- For the prevention of parasitic oscillation, always connect a resistance of 100/300 ohms close to the screen grid terminal of the valve holder. When used as a triode this resistance is connected between screen and anode. A control grid (stopper) resistance of 10,000 ohms to 50,000 ohms is also recommended.
  - The maximum permissible D.C. resistance from control grid to cathode is limited to 0.5 megohms for auto bias and 0.1 megohm for fixed bias application.
  - The heater-cathode voltage should not exceed 100 volts when used as a cathode-coupled driver valve, the heater and cathode should be joined and a separate heater supply used for each valve.
  - In push-pull applications showing a large change in anode current between the quiescent and full output conditions, a choke input smoothing circuit having a good regulation should be used. A badly regulated supply will lead to a fall in power output and/or excessive quiescent anode dissipation.
  - The use of a common auto-bias resistance is not recommended except in applications where the maximum anode dissipation is not attained under any condition of operation.
  - Ventilation: Adequate ventilation around the bulb should be provided.
- The circuit information given does not imply any license under any patents which may be involved.

## Model 3715-A

This amplifier is as fine in performance as its functional and modern design suggests. The beautiful gray and silver case, with its illuminated, full-view control panel, is high lighted by distinctive red plastic control knobs. The amplifier has an undistorted output of 15 watts with a peak of 18 watts. It utilizes push-pull beam power output tubes, inverse feedback that reduces harmonic distortion, and has three input channels with separate volume controls that permit mixing of two microphones and a phonograph simultaneously.

One of the most completely satisfying mobile Amplifiers ever offered for general use. The "Moto-Master" combines a 30-watt amplifier of tone and quality, with a phono pickup of new design, that plays all 12" and smaller records. Market research proves its capacity is more than ample for the majority of needs.

This high gain unit operates on either a 6 volt DC storage battery or 117 volt 60 cycle AC line current. Conversion from one type of current to another is achieved by simply removing one plug and inserting the other. Current consumption on battery is reduced by a power economizer switch. High fidelity; improved wide range tone controls; beam power output tubes; and two microphones inputs and one phono input, each with separate volume controls are features of the "Moto-Master".

Turntable speed of 78 r.p.m. New type crystal pickup stays "in the groove."

# LEAK "POINT ONE"

## Britain's Best AUDIO AMPLIFIER

Frequency Response  
20-20,000 cycles,  $\pm 0.1$  db.

Harmonic Distortion:  
0.1% at 1000 cycles; 10w.  
Intermodulation Distortion:  
0.4%, 40 & 7000 c.p.s.

**REMOTE CONTROL  
PRE-AMPLIFIER RC/PA/U**  
For use only with Leak Amplifiers

**TL/12 12W. TRIPLE LOOP  
POWER AMPLIFIER**  
All valves replaceable with  
Standard U.S. Tubes

A Leak two-stage feedback tone-control pre-amplifier of negligibly low distortion in which resonant circuits or resonant filters are not used. This pre-amplifier is a complete re-design, electronically, of the original RC/PA and of the modified version previously supplied to the U.S. market. The RC/PA/U will meet world conditions of use, and it embodies not only the best features of the previous models but every refinement suggested by users in Britain and the U.S., with additions considered desirable by ourselves.

Will operate from Audak, G. E. or Pickering Cartridges; from any moving coil microphone; from any radio unit.

Equalization circuit: Proper equalization positions for LP records, Foreign or American recordings of all speeds.

Switching for Pick-up, Microphone and FM-AM tuner, with automatic alterations of tone-control characteristics.

Controls: Input Selector; Bass Gain and Loss; Treble Gain and Loss; Volume with AC on-off switch to permit switching of remotely placed power amplifier.

Output Impedance: 0-30,000 ohms at 20 kc.p.s.

Panel light serves as a visual reminder.

Chassis: 10" x 3" x 2 3/4" high.

Front Panel: 10 3/4" x 3 1/4".

The Leak Amplifier offers exceptional performance and reliability in a manner acceptable both to the amateur enthusiast and the professional communications engineer seeking the highest available standard of sound reproduction. Incorporates a Leak 3 stage triple loop feedback circuit, the main loop giving 26 db. feedback and covering the complete amplifier from input to output terminals.

Push-pull triode output stage, 400 V. on Anodes. No H. V. electrolytic smoothing or decoupling condensers. Impregnated transformers; tropically finished components. H. V. and L. V. supplies for pre-amp. and radio units. **Distortion:** 1/10 of 1% at 1000 c.p.s. and 10 w. output; no significant increase at any other frequencies. **Hum and noise:** minus 80 db. on 10 w. **Frequency response:**  $\pm 0.1$  db. from 20 c.p.s. to 20,000 c.p.s. **Sensitivity:** 160 mV. **Damping factor:** 40, with negligible variation throughout power range. **Input impedance:** 1 meg. **Output impedances:** 2, 7-9, 15-20, and 28-36 ohms. **Stability margins:** Gain, 10 db.  $\pm 3$  db.; Phase,  $20^\circ \pm 10^\circ$ . **Dimensions:** 12 1/2" x 10" x 8 1/4" high.

The Leak triple Loop feedback circuit (the main loop giving 26 db. feedback over 3 stages and the output transformer) results in the following major advantage:

In the TL/12 amplifier the hum and noise levels fall within—80 db. and—72 db. relative to 10 watts. This amount of power, as hum and noise, is inaudible from the most efficient loudspeakers. Notice particularly that the feedback is taken from the low side of the output transformer. Many circuits show it as taken from the anode side, which will result in higher hum levels than without feedback.

In this amplifier, due to the magnitude of feedback, there can be no rise of voltage to cause "boom" in the loudspeaker at the frequency of bass resonance, and the capability of a loudspeaker to reproduce transients, especially low-frequency transients, is astonishingly improved.

### UNEXCELLED RADIO-PHONOGRAPH REPRODUCTION —

Used with the RC/PA/U pre-amplifier and complementary equipment, the TL/12 power amplifier offers music lovers reproduction that is unsurpassed by any equipment at any price.

### LABORATORY USE —

as a stabilized-gain audio-frequency power amplifier.

Remotes can originate calls to any master in the circuit, but cannot talk with other remotes. Model JS Remote may originate a call to only one master. Model JS-6 Remote may originate a call to as many as six masters. Remotes with switch can be installed for private or non-private use.

Each master can have his own private hook-up of remotes. The remotes may or may not originate calls to the individual master. Masters can call each other regardless of whether master being called has its power on or off.

Illustration shows less than the maximum number of units possible in installation.

A JMP-6 Master may be connected to a total of six other units and a JMP-12 Master to a total of twelve other units. These units may be other masters or the JL, JS, and JS-6 Remotes, or the MB-8N Booster Amplifier. All of these units may be mixed.

# TALK-A-PHONE

## INTER-COMMUNICATION SYSTEMS FOR INDUSTRY • STORES • OFFICES • HOMES

Known wherever inter-communication is used as the World's finest system, TALK-A-PHONE is designed, developed, and precision-engineered by the leader in its field, with more than a quarter-century experience in electronics. TALK-A-PHONE stations are designed to withstand continuous day and night use; and are built to give you years of dependable service. The Armed Forces; Governmental Agencies; America's giant industrial firms, with highly complex and elaborate intercom needs depend on TALK-A-PHONE.

### ONE MODEL DOES EVERYTHING

TALK-A-PHONE's patented, exclusive "DYNASONIC" features gives you one model that "Does Everything." The same unit can be used for every type of application, whether it be as all Master Stations, or a Master and Staff Stations, or a number of Masters inter-mixed with Staff Stations. The Master Stations may talk with any other Master in the system as well as with all Staff Stations. Six, twelve, twenty and thirty capacity Master Stations can be used within the same system. The Staff Station may answer Master Stations and originate calls to one, two or six Master Stations, depending on its capacity. Staff Stations converse with Master Stations only. Staff Stations are not connected to electrical outlet.

Through its "DIFFERENTIAL STAFF" feature, TALK-A-PHONE permits any Staff Station to be used as either "Private" or "Non-Private", and also permits some Staff Stations to be "Private" and others "Non-Private" in the same system. "Private" Staff Stations have complete privacy, and no other station can "listen-in". Persons at "Non-Private" Staff Stations can answer from a distance up to 50 feet from the unit without leaving work. All Master and Staff Stations are assured of privacy, except where by choice, Staff Stations are designated as "Non-Private", in which case the Master Station can "listen-in" on the "Non-Private" Staff Stations.

Now . . . Talk-A-Phone brings you REDIPOWER, The Master Station that automatically supplies the right amount of power needed (up to a full 20 watts) at any time, for any Station in the system. This prevents any volume weakness where a number of Stations are being called simultaneously, or where a high noise level exists. REDIPOWER, which does away with the need for special boosters in many cases, is available in 12, 20, and 30 Station capacity.

**BEAUTIFULLY STYLED:** The Bakelite walnut cabinet of the "CHIEF FORTY-NINER" is unsurpassed in simplicity of design and appearance.

**TRANSLUCENT LIGHTING** further enhances its beauty as well as indicating whether the unit is "on" or "off."

**MULTI-MAGIC SELECTOR:** A patented exclusive TALK-A-PHONE feature. Twelve, twenty, thirty station capacity in SAME BEAUTIFUL CABINET with only TWELVE PUSH BUTTONS. Six-station Master has six push buttons.

**HOLD-A-MATIC CONFERENCE CONTROL:** TALK-A-PHONE "HOLD-A-MATIC" feature. ALLOWS CONFERENCE between THREE or a GROUP OF STATIONS by merely selecting desired buttons.

**UNI-TRANS:** Gives you "DICTATION CONTROL."

**VOICE RANGE POWER:** The powerful, rugged amplifier gives you amazing, brilliant "voice range" power. Stations may be up to 3000 feet apart.

**DEPENDABILITY:** PROVED IN BILLIONS OF HOURS OF ACTUAL USE.

**PRIVACY EARPHONE:** Optional equipment on Master Stations. Provides listening privacy; and conversation with other Masters without continuous operation of touch bar.

**CRADLE PHONE:** Optional equipment to provide completely private conversations.

### QUAM ADJUST-A-CONE SUSPENSION

While in other speakers, the spider is cemented in place with no means of accurate final adjustment, the QUAM method permits precision centering of the voice coil in a final production operation.

### QUAM U SHAPED COIL POT

A patented feature used throughout the QUAM replacement line, provides an unbroken flux path of sufficient cross section to carry the full energy of the magnetic field.

MODEL 10-P  
Flush Mounting Grille

MODEL NP-832  
8" PM Speaker

The 10-P Flush Mounting Grille and the NP-832 8" Speaker combination is being used extensively by particular Sound Engineers.

Standard Series speakers, although moderately priced, are exceptionally good in performance and are highly recommended for use in radio and television receivers, recorders, public address equipment, intercommunication systems and similar applications. Models listed on this page have been completely redesigned in every detail. Magnetic structures have been designed to achieve maximum gap energy, cones selected for uniformity of response, and all speakers are completely dust-proof. Models listed are standard fidelity response only. Standard Series speakers are finished in aluminum.

**ALNICO 5 PM MODELS**

These PM speakers embody the highly efficient Alnico 5 magnets which insure long life and highest efficiency. Because Alnico 5 magnets are many times more powerful, ounce for ounce, than their predecessors, speakers so equipped offer obvious advantages: lighter weight, for savings in shipping costs; and smaller size, for savings in space in cabinet installations.

## AUDITORIUM SPEAKERS

The first highly-efficient large-size speaker was designed and produced by JENSEN in 1928. It was named the "Auditorium" and never were critics more consistent in its endorsement as the utmost in heavy-duty speakers. For more than 20 years JENSEN Auditorium speakers have set the highest standards for efficiency, response characteristics and faithful performance. Today, the Auditorium line has been completely redesigned and comprises undeniably the best known and most highly respected speakers available, second only to JENSEN Coaxials. They are recommended for theatres, public address systems, fine electronic musical instruments, where the utmost in quality reproduction and power handling ability are required.

Instead of the former practice of stating frequency limits of loudspeakers in cycles, the f-f region between the minimum useful limit for music and maximum limit for hearing has been divided into eight steps, each of which is just distinguishable from the next as an audible difference for music. The rating of a speaker is determined from the highest interval in which loudness is maintained at a significantly high percentage of normal. The table above relates the ratings to hearing and typical applications.

## JENSEN HYPEX PROJECTORS

Because of the Hypex formula (Patent 2,338,262) giving wider sound distribution and greatly improved acoustical performance, JENSEN Hypex projectors are superior to the usual "exponential" type horns. The Alnico 5 unit is entirely enclosed within the one-piece rigid horn yet easily removed and replaced. Stainless steel and other corrosion-resistant materials and specially treated steel parts insure against weather exposure. Models VH-24, VH-20 and VH-15 have mounting brackets with clutch-type heavy "U" trunnions which afford complete flexibility of adjustment with positive locking into desired position. Weatherproof terminal boxes provide easy, solderless connections with no exposed terminals. Model VH-91 has a universal mounting bracket which permits pointing in any direction and secure locking by a single wing nut.

## HYPEX "Three-sixty" PROJECTORS

Designed for the reproduction of speech and music signals at high efficiency where high noise levels exist. The Hypex formula, made famous by JENSEN Hypex projectors, is incorporated in their design giving greatly improved acoustical performance. With the sound distributed over a circle, they are especially suitable for installations where coverage of relatively large areas and suspension from the ceiling are desired. Model VR-11 is recommended for speech reproduction while Model VR-241, of larger size, is intended for speech and music reinforcement. Driver unit has phenolic diaphragm; VR-241 uses same diaphragm as VH-24 and VH-20; VR-11 uses same diaphragm as VH-15 and VH-91. VR-241 is equipped with weatherproof terminal box with connecting cable passing through rubber grommet and leads attached to screw terminals provided. VR-11 has two-conductor rubber-covered cable for connections. Both equipped with heavy eyebolt at top for suspension.

## THE "HYPEX" HORN FORMULA

### — An Exclusive Jensen Feature

"Hypex" comes from the mathematical term "hyperbolic exponential," which describes the important difference between Jensen projectors and those based on the simple exponential theory. Jensen research discovered a better, more efficient horn formula which maintains effective acoustic loading right down to acoustic cut-off and all Jensen Hypex\* Projectors have this exclusive feature for better performance. For the facts on this development and a complete description of horn behavior, write for Technical Monograph No. 5, "Horn-Type Loudspeakers."

## IMPEDANCE MATCHING TRANSFORMERS

Loudspeakers are relatively low-impedance devices with voice coil impedance values ranging from 3 to 50 ohms. Vacuum tube power output stages on the other hand, are high-impedance devices with impedance load rated anywhere from 1,000 to 14,000 ohms. To reconcile these widely differing impedances, output or impedance matching transformers must be inserted between the signal output and the loudspeaker voice coil. To determine which transformer is to be used in any given case, first of all find out the impedance of the loudspeaker in question and then locate for that speaker the

transformer which will match nearest the impedance of the signal source. Differences of the order of 10% are usually of no importance but if a close match cannot be obtained, it is best to select an impedance value which will present a higher rather than lower-than-rated impedance to the output tubes. Thus where a 5,000-to-16 ohm transformer is needed, it would be better to select a 6,000-to-16 ohm unit than a 4,000-to-16 ohm unit. For full and complete treatise on impedance matching, consult Jensen Technical Monograph No. 2. (Price 25c).

### ADJUSTABLE IMPEDANCE

**Type "ZX"** For matching conventional "plate" impedance values. Adjustments are easily made with flexible lead and pin-tip jack. Impedance values: voice coil, 4,500, 7,000, 10,000 and 14,000 ohms. All except voice coil are center-tapped for push-pull tubes.

RADIAL HORNS and SPEAKERS  
PM DRIVER UNITS

## Re-Entrant Trumpets, Radial Horns and Speakers

RE-35 RE-50 RE-60

RACON re-entrant horns and speakers are designed to deliver highly concentrated sound with great efficiency over long distances. This is due to true exponential design throughout and the elimination of all vibratory members and sound dissipating devices. The base and inside tone arms are husky aluminum castings and bell is a heavy gauge aluminum spinning. The RE-35, RE-50 and RE-60 incorporate reflectors made of patented RACON ACOUSTIC MATERIAL to prevent resonant effects. All models are supplied with "U"-bracket mounting (ratchet swivel type on request). Finish is in weatherproof hard baked gray hammertone. RE-60 & RE-50 recommended for maximum low frequency music reproduction. RE-35 and RE-25 best suited for incidental music and high speech intelligibility.

The SR-35R and SR-60R are weatherproof radial re-entrant horns designed to project sound over an area of 360 degrees. The centre reflectors are of patented RACON ACOUSTIC MATERIAL and the defectors are aluminum spinnings covered with this same non-vibratory material. Standard "U" bracket supplied. Thread size is 1 1/8"-18, permitting the use of any driver unit listed below. The SR-60R is ideal for church tower sound installations and the SR-35 for incidental music and speech.

SR-35R SR-60R

SR-15R SR-12R

The SR-15R and SR-12R are rated at 25 and 10 watts respectively and are supplied complete with built-in 15 ohm\* driver units. These models are intended primarily for speech in paging and "talk back" systems and are completely weatherproof. Supplied with cast swivel ratchet and wall bracket.

## Waterproof Permanent Magnet Driver Units

The driver unit is the most important single element in a successful public address system. In these five new driver units, primary emphasis is on: high continuous power handling capacity with ample reserve

for overload peaks up to 100%, maximum conversion efficiency, response ranges suitable for every type sound system, and waterproof construction.

These five units employ Alnico V magnets and Armeo magnetic iron throughout. All soft steel parts are doubly plated to prevent corrosion. An automatic electromagnetic cut-out switch is used in the magnetizing process, assuring maximum flux density in the gap and high uniformity. Units are individually measured for flux density. Each unit is tested with special equipment for power handling capacity as well as a 350-volt ground test.

Long life plastic diaphragms and formers are supplied with aluminum wound voice coils to increase efficiency. Voice coil leads are non-fatiguing beryllium copper, insuring lifetime performance. All units are completely waterproof, yet permit ready replacement of diaphragm where needed.

### EXPLOSION PROOF DRIVER UNITS

The model XP-1 and XP-2 explosionproof driver units are listed under REEXAMINATION SERVICE of Underwriter's Laboratories, file E 17959.

Model XP-1 is specifically approved for use in Class I, group C & D locations where vapors present an explosion hazard. Model XP-2 is specifically approved for use in Class II, group E, F & G locations where explosive dusts are present.

Both units incorporate a husky non-corrosive aluminum casting, with access to the driver unit by means of a removable cast back cover plate. Ample room internally for line-matching transformers up to 30 watts where required. A serrated mounting bracket permits easy installation. For use with any straight or re-entrant horn. The casting is tapped for standard 1/2" conduit. Power: 30 watts continuously, with peaks up to 60 watts. High sensitivity permits use as a microphone-speaker in "talk-back" systems. ## STRAIGHT EXPONENTIAL TRUMPETS

Output from any straight trumpet is approximately 2 DB higher than corresponding re-entrant type because it lacks the attenuation inherent in all re-entrant horns. "Stormproof" Trumpets are made of non-vibratory RACON ACOUSTIC CLOTH. Weather-treated for indoor or outdoor use. "All Aluminum" Trumpets are made of

heavy gauge aluminum spinnings with rolled beaded edge and cast aluminum throat sections. "Unbreakable" Trumpets are made of heavy gauge aluminum spinnings reinforced and damped with Patented RACON ACOUSTIC MATERIAL. Large sizes are useful for church chime systems, C-D systems, airports and stadiums, parks, playgrounds, music festivals, for both speech and music. Smaller sizes for railroad and bus terminals, waiting rooms, factories.

List Price \$2.50

MODEL PA-30

Recommended for reproduction of chimes, carillons, organ music. Ideal for rental work, high efficiency, maximum distance penetration. Built-in transformer with various impedances and for 70 V. systems.

MODEL SA-HF

Meets all PA and industrial requirements. For heavy noise areas, speech or quality music.

MODEL MA-25

Fills low cost requirements without compromising quality. Rugged, weatherproof. Highly efficient to 6000 cycles.

MODEL SA-30

Completely die-cast aluminum housing makes it a "must" in hazardous locations or rough service. Built-in transformer with various impedances and for 70 V. systems.

The reflex trumpet, pioneered by University represents the most efficient modern method of converting electrical power into acoustic energy. Conversion efficiencies as high as 30-40% are achieved, as compared with 2-10% ordinarily obtained with cone speakers.

University Trumpets are completely weatherproof for any location, any climate. They receive meticulous attention during fabrication, right down to the rust-proofed hardware. All castings and exponentially spun air column members must conform, uniformly, to the time-tested, performance-proven University formula of flare rate.

The four trumpet sizes available cover every public address requirement. Model GH has a very low frequency cut-off especially suited for reproduction of finest musical programs. Model LH is recommended for general applications requiring good music and speech characteristics. PH, with slightly higher cut-off, is suggested where economy must be considered in planning the system. Model SMH is designed primarily for voice reproduction where a heavy duty 25 watt speaker must be relied on for continuous, highly intelligible speech reinforcement. Models SMH and PH give excellent coverage of wide-angled areas; the LH and GH provide greater distance penetration.

### BREAKDOWN-PROOF DRIVER UNITS

University Drivers incorporate exclusive built-in features that guarantee finer performance, long trouble-free service. W-shaped Alnico 5 magnet assembly reduces reluctance losses, avoids surface leakage. Waterproof, multi-impedance line matching transformers are included in some models. University drivers give full-rated performance at both extremes of the spectrum. Special bi-sectional mechanism automatically centers diaphragm/voice coil assembly in the voice coil gap on magnet top plate. This "rim-centering" results in permanent voice coil concentricity and greater conversion efficiency.

## LOUDSPEAKERS AND REPRODUCER EQUIPMENT

### PAGING AND INTERCOM SPEAKERS

Recommended for general purpose paging and talk-back applications, these speakers reproduce with crisp clarity for maximum penetration through areas with high noise intensity. Offer high efficiency, wide frequency range, small size, high power handling capacity and waterproof breakdown-proof construction.

Employing the famous University reflex design and hermet-

ically sealed driver units, these speakers are conservatively rated, and capable of lifetime, trouble-free operation. Specially controlled rising frequency characteristic results in exceptional penetration of high ambient noise levels with unusually high intelligibility. Remarkable sensitivity make them ideal for talk-back, and for conversion of simple intercom sets into excellent paging and talk-back systems.

### DIRECTIONAL AND RADIAL TYPE SPEAKERS

### WIDE ANGLE SPEAKERS

LIST PRICE  
\$35.00

**COBREFLEX-2 WIDE ANGLE SPEAKER**—By popular demand, a new heavy duty wide angle, paging speaker designed to be used with any of the University screw-in heavy duty driver units, and designed to withstand the most grueling climatic and mechanical abuses. Horn employs a new principle of dual exponential reflex expansion which produces a remarkably uniform 120° x 60° field pattern. Low frequency cut-off is 250

cycles. The speaker is of heavy die-cast aluminum construction, versatile "U" bracket mounting with serrated swivel joints for positive locking. All parts, including the hardware, double-treated against corrosion.

The perfect answer for covering wide areas with a minimum of speakers. Very effective in coping with reverberation problems since the sound can be controlled in the vertical, horizontal and axial planes. Ideal as well for use as wide angle mid-range reproducer in multiple speaker hi-fi systems. Supplied less driver.

**MODEL 2W-25 TWO-WAY PAGING SPEAKER**

The economical and practical means of covering two opposite areas effectively and efficiently. A single 25 watt driver serves both reflexed horns through a carefully designed "T" acoustic coupler. Each horn has a wide 120° sound projection pattern. Clever mounting bracket permits sound projection 10° downward or outward. No energy is lost in unoccupied space. Driver included.

### RADIAL REFLEX PROJECTORS

FOR 360° HORIZONTAL DISPERSION

The answer for applications requiring uniform 360° dispersion with a minimum of speakers. Higher conversion efficiency of radial reflex projectors using driver unit mechanisms has increased their popularity over radial cone speakers, especially in industrial applications. Reproduction of chime and liturgical music in church towers are also natural applications. Using a 2YC connector, single projectors can operate from 50-60 watt amplifiers.

MODEL RLH has longest air column and is recommended for maximum low frequency response; RPH for both music and speech and RSH where reproduction of speech is most important.

### SUBMERGENCE-PROOF SPEAKERS

University "submergence-proof" speakers go beyond the normal requirements of commercial and industrial speakers. They are built for applications demanding the utmost ruggedness and immunity to salt spray, gasses, live steam, and specially harmful dusts and fungus. Designed originally to U. S. Navy "submergence" specs, all models shown will continue to function even when under water, drain automatically, and will provide reliable, uninterrupted service with negligible maintenance under the most grueling conditions.

**MODEL MM-2TC** — Bulkhead-mounted, directional speaker providing a dispersion of 120°. Includes provision for a transformer and attenuator. Accessible from front, with cable entrance and control at bottom. (Also available complete with 5420 transformer and T-pad, Model MM2TC-T.)

**MODEL MM-2F** — Similar to Model MM-2 but designed for flange mounting. Permits flush mounting in wall, ceiling, bulkheads, dashboards or wherever appearance is important, or projecting objects might suffer damage.

The University Diffusicone Models bring within every music lovers' grasp the endless pleasures of true Concert Hall Quality reproduction—at amazingly low cost—and with no need for undue concern over the location of the speaker. Diffusicone is the answer to the long needed basic improvement in the performance of ordinary extended range speakers. Ideal for flush ceiling installations.

### Dual horn arrangement produces radial pattern

Exclusive dual horn arrangement sets up two distinct sound wave paths. High audio frequency sound waves are directive—tend to propagate along speaker axis. This is overcome by splitting energy into 2 paths, along path of both inner and outer horns. Diffraction then occurs to the more stubborn very high frequencies by passing the wavefront of the radial or outer horn through small orifices which terminate this radial projector. Diffraction takes place as a consequence of the relationship between the aperture diameter and the wave lengths of the frequencies in question. Result is exceptional uniform response.

## LOUDSPEAKERS AND REPRODUCER EQUIPMENT

### HIGH FREQUENCY TWEETER SPEAKERS

Featuring new "reciprocating flares" principle, the greatest advance in wide angle horn design! Eliminates poor uniformity of response caused by variations in intensity and resultant dips and peaks. Also prevents shifts in energy level between vertical and horizontal planes and production of unequal amounts of sound in the two planes. University engineers have perfected these properly loaded exponential high frequency horns which provide maximum efficiency without detrimental spatial distribution defects. Only University tweeters offer these highly important performance advantages. Exclusive "reciprocating flares" formula of horn expansion is positive assurance of superior reproduction.

For use in two-way or as high frequency unit in 3-way system.

#### MODEL 4401 2000 CYCLE TWEETER

Handles the output of amplifiers up to 25 watts when used with PM or field excited 8-15 inch cone speakers. Features "reciprocating flares" one piece horn, breakdown proof diaphragm, light weight voice coil suspension and heavy Alnico V magnet.

#### MODEL 4408-4409 COBRA HORN TWEETER

New models designed for wide range reproduction requiring a crossover down to as low as 600 cycles. Recommended for two and three way speaker systems, for the high fidelity enthusiast who seeks highest quality, and for professional reproduction.

Features one-piece aluminum "cobra" horn with optimum vertical and horizontal dispersion.

#### MODEL 4402 WIDE ANGLE DUAL TWEETER

Has electrical, mechanical and acoustical characteristics which make it the most versatile high frequency tweeter available. Essentially flat response from 2000 to 15,000 cycles with uniform dispersion. May be used with woofers of from 4 to 16 ohms impedance, and with amplifiers rated up to 50 watts.

#### MODEL 4407 CO-AXIAL TWEETER ADAPTER

## ATLAS 'DR' WEATHERPROOF DOUBLE-REENTRANT PROJECTORS

**Non-Resonant • Uniform Response • Sturdy • Stormproof  
Compact • Demountable**

The modified exponential taper developed in Atlas projectors has proved most efficient for overall performance. All acoustical paths are clean and uniform. Reflex turns are smooth and flowing. These important features eliminate turbulence, frequency cancellation and resultant signal distortion. Ruggedly constructed of heavy castings, precision stampings, accurate die castings and uniform metal spinnings. All metal-to-metal surfaces insulated with non-vibratory material. Bell rim dampened and mechanically protected with formed rubber rim. All metals specially processed by chemical and electro-chemical means to impart complete weather-protection. Heavy "U" bracket mountings, securely fastened to main body casting of each model, do not fail even under extreme stress, strain or vibration. 1 3/8" - 18 thread. For greatest efficiency and low frequency response, the larger size horns are recommended. The smaller horns are excellent where space and cost limitations pertain.

## ATLAS RADIAL DRIVER UNIT PROJECTORS

**Non Resonant • Dual Rubber Rims • Uniform 360° Coverage • 100% Stormproof**

One of these projects often is more efficient for large and high noise level areas than several ordinary projectors. Both models suited for general speech and music. Improved all-aluminum construction provides smooth, uniform response. Completely stormproof, finished in durable neutral gray enamel. Thread 1 3/8" - 18. Use of H-2U two-unit adapter doubles power output for single projector high power application.

# Britain's Finest Loudspeakers

# Wharfedale

Despite their modest price, all Wharfedale Speakers are fitted with cast chassis resulting in greater rigidity, less resonance and better air loading. All models except the 8" Bronze have cloth suspension cones which improve transient response by adding dissipation to the edge of the cone, with reduced reflection of the flexural waves. This type of cone suspension also reduces the bass resonances of the speaker unit, resulting in a more level impedance curve and improves the transient or decay element. Such refined quality of reproduction is only available with Wharfedale cloth suspension.

Warmly received by quality enthusiasts, the Super 12/CS/AL has a remarkably level response between 30 and 18,000 cycles when adequately baffled. Cloth suspension and low cone resonance reduces transient distortion to an absolute minimum and eliminates irritating "boom" associated with stiffly suspended cones. Critical listeners will hear the true bass which is so seldom heard. Wharfedale's exclusive cone and carefully wound aluminum voice coil achieve amazingly clean highs, without introducing peaks in the upper middle register.

The high quality of this speaker is uniformly maintained in production since it does not rely on subsidiary diaphragm resonances, which can cause intermodulation distortion. The Super 12/CS/AL has proved superior to many more expensive combinations in general listening quality and pleasing sound.

This speaker has been designed specially for the average sized room where loud volume is often irritating. It requires little power to give the refined quality of which it is capable. The cloth suspended cone of the W10/CSB has truly remarkable ability to reach maximum quality at low levels. This speaker also makes an excellent tweeter in a two-way speaker system and maintains highs that are clean and brilliant without being penetrating.

## ROYAL High-Fidelity Speakers

"SOUND IN DESIGN"

### THE SPEAKERS WITH THE "ROYAL BLUE" CONE

New engineering advances in cone design are among the important reasons the Permoflux ROYAL BLUE CONE SPEAKERS compare in acoustical performance with the finest speakers — regardless of size or price. Laboratory tests prove that Permoflux Royal Speakers produce a smooth, faultless flow of tone over an unusually large band of frequencies — 12,000 cycles in width. It's the new improved cone that provides this outstanding performance.

Slots on the edge of the cone (an exclusive Permoflux development) and an extra large spider provide super-soft suspension of cone. This greatly increases the low-frequency response. Slotted edge of cone is treated to give it additional strength.

### EXTRA HIGH-FREQUENCY RESPONSE

The cone of the "Royal Eight" (See "A" at right) is curvilinear and deeper than the regular speaker cone of the same diameter ("B"). Also, the throat of the cone (X) is given a special stiffening treatment. The result is a highly increased response at the upper end of the audio frequency scale.

The Permoflux "CHAMPION" Line of permanent magnet type loudspeakers is the most compact line of replacement speakers on the market today. The Champion line is designed to provide a speaker for every replacement need without the necessity of stocking a great number of sizes and models. The universal mounting bracket (above) provides the utmost in versatility.

Following are some of the outstanding features that make these speakers a typical high quality Permoflux product.

- (1) Magnets are wedge mounted and cemented to yoke assembly thereby eliminating possibility of molecular change in magnet metal such as may be occasioned when magnet is spot welded. Result is higher efficiency.
- (2) Unique voice coil construction maintains constant air gap, reducing possibility of rubbing.
- (3) Impregnation of non-metal parts to insure resistance to high humidity conditions.

Highest quality magnetic material and optimum design for flux path used in yoke and pole stem assembly, thereby providing low reluctance flux path, permitting higher efficiency with a smaller magnet.

# TANNOY AUDIO THRU BEAM INSTRUMENTS

## TANNOY DUAL CONCENTRIC LOUDSPEAKER SYSTEM

This twin Loudspeaker system consists of a direct radiator low frequency unit mounted concentrically with a horn-loaded high frequency unit. The voice coils of both Loudspeaker systems are fed through a specially designed crossover network. The frequency response of both units is intrinsically level and the wide frequency response is not obtained by trick effects, such as cone break-up or diaphragm resonance. The design of the low frequency cone, which forms the final section of the high frequency horn, is such that even distribution of high frequencies is obtained over a wide angle and in order that the low frequency diaphragm shall move as a true piston, the body thickness has been increased and the surround is specially treated to prevent the setting up of subsidiary resonances. In the design of this Loudspeaker, great care has been taken to ensure that the entire system is truly aperiodic which, together with its wide frequency range result in really outstanding reproduction.

This Loudspeaker unit is available in two forms — a 15" version, capable of handling up to 25 watts which is particularly useful for use with high quality Sound Reinforcement systems and a 12" version capable of handling up to 15 watts, which finds its main application in high quality Phonograph and Radio reproducing systems. A suitable Cabinet design for these applications is the corner mounting Bass Reflex type of Cabinet.

There is no doubt that where the input source is of sufficiently high quality, the "TANNOY" Dual Concentric Loudspeaker system is well in advance of any type of Loudspeaker hitherto commercially available.

The above response curve relates to a 15" dual concentric, the response of a 12" unit is substantially the same in all respects.

# TV BOOSTERS and MICROPHONES

Astatic

KNOWN THE WORLD OVER CONNEAUT, OHIO

## TELEVISION BOOSTERS

### MODELS AT-1 and AT-1B

● A superior type of television booster. Ability to improve reception more effectively than ordinary boosters starts with the principle of "more tubes, stronger signal." A variable gain control knob permits reduction of signal strength to prevent picture distortion when the signal input is greater than that required. The failing of many boosters—showing a "peak" on some channels and "fall-off" on others—has been eliminated. These units provide extremely high gain, and do it throughout the television spectrum. Dual tuning controls allow separate tuning for picture and sound. Available in handsome furniture-finish mahogany or blond cabinets. The letter "B" in model number designates blond cabinet.

Model	Code	List Price
AT-1	ASAMI	\$54.50
AT-1B	ASAMH	56.50

### "SCANAFAR" MODEL CT-1

● Newest booster development on the market that matches the notable improvements in new receiver front-ends. Results are a new minimum noise figure with maximum gain. Band width (over 7 megacycles on all channels) and picture definition characteristics are excellent. The new Scanafar employs a balanced, cascaded circuit with a neutralized 6J6 tube driving a 6BQ7, the highly touted "quiet tube." Both tubes are used over the entire TV frequency range. Test this new Astatic unit where other boosters cause picture deterioration and/or fail to improve reception. By your own comparison, you will see the vast difference and superiority of advanced booster design.

# ASTATIC PICKUPS

## FOR SLOW SPEED AND STANDARD 78 RPM RECORDS

### MODEL 6-D CRYSTAL TURNOVER PICKUP

● Switches from 33½ or 45 RPM records to standard 78 with turnover knob at front. Plays both types of records at only eight-gram needle pressure, thus has no extra mechanism to change pressure when knob is turned, eliminating a potential source of trouble and varying reproduction quality. Employs LQD-1 Double-Needle Cartridge. Mounts seven inches from turn-table center, die-cast curved arm finished in dark brown Hammerlin.

### MODEL 7 CRYSTAL TURNOVER PICKUPS

● Model 7-CAC-D employs revolutionary new Astatic "Twin CAC" turnover cartridge, two complete cartridge assemblies back to back on a common plate. See cartridge description, following page, for sensational performance qualities. Pickup model 7-D employs Astatic's popular "smooth response cartridge," the tiny ACD turnover. Cast aluminum arm design affords minimum tracking error and balanced groove sidewall pressure, resulting in reduced tracking distortion and longer record and needle life. Cartridge rotates in improved snap-action turnover mechanism. Light brown Hammerlin finish.

### 400 SERIES TURNOVER PICKUPS

● Transcription pickups adapted from famous Astatic Studio Master "400." Notable tracking excellence, low needle talk. Gracefully curved, cast aluminum arm in light brown Hammerlin finish. Model 400-CAC-D employs revolutionary new Astatic "Twin CAC" turnover cartridge, two complete cartridge assemblies back to back on a common plate. Model 400-D employs Astatic's popular "smooth response cartridge," the tiny ACD turnover.

### MODEL 507-L-29 PICKUP

● Bedrock price, with full professional performance standards retained. The new L-29 Crystal Cartridge employed is notable for high output, which affords excellent results in use with standard phonograph amplifiers, where other lower output cartridges are not satisfactory. Has universal, screw-type needle chuck to receive standard needles. Plays 33½, 45 or 78 RPM records simply by using proper needle. Pickup is furnished without needle. Die-cast arm finished in opalescent grey Hammerlin. New, anti-friction swivel base.

**FOR COMPLETE SPECIFICATIONS SEE CHART ON PAGE D-7**

### 510 SERIES—CRYSTAL, MAGNETIC AND CERAMIC PICKUPS

FOR COMPLETE SPECIFICATIONS SEE CHART ON PAGE D-7

## AC SERIES CRYSTAL AND CERAMIC CARTRIDGES

● New mechanical drive system affords new low in inertia, for extraordinary smooth response, new tracking excellence, low needle talk. Miniature size belies BIG full-throated performance. Weighs approximately five grams. Has easily replaceable Type "A" Needle with one-mil sapphire tip for slow speed records or special All-Groove tip for all record types. Models available with ceramic elements, immune to severe climates, as well as crystal. Model AC-J has correct mounting brackets to fit RCA and similar 45 RPM changers as well as other slow-speed units. AC-RJ has special brackets to fit special RCA 45 RPM changer (replaces RCA 76257 Cartridge).

## THE CAC SERIES CRYSTAL CARTRIDGES

● The tiny new unit which has won the praise of experts as the "ultimate" for slow speed records. Internally equalized to follow Columbia Records Inc. ideal frequency response for the recording characteristics of LP records. Aluminum housing with standard 1/2" mounting holes to fit most tone arms, has adapter plate to mount in RCA and similar 45 RPM changers. Uses Q-33 needle, easily replaceable without tools, and with one-mil sapphire or diamond tipped needle for slow speed records, or special All-Groove sapphire tip for all record types.

## THE GC CERAMIC CARTRIDGE

● First major stride in cartridges employing ceramic elements since Astatic pioneered in this type unit. The first with replaceable needle. Takes "Type G" needle—with either one-mil sapphire tip radius or special All-Groove tip for all record types—which slips from its rubber chuck with a quarter turn sideways. Resistance to high temperatures and humidity is not the only additional advantage. Output has been increased over that of any ceramic cartridge available. Light weight and low needle pressure make it ideal for a great variety of modern applications. Fits standard 1/2" mounting and RCA 45 RPM record changers.

## THE U-J CRYSTAL CARTRIDGE

● The record player owner slips out this cartridge in a second and slips in the U-78-J (below) when he wants to change from 33 1/2 or 45 to 78 RPM records. Replaces Philco part 45-1609, fits Columbia Model 101 player, and Astatic PL Series pickups. Gives stellar performance. Secures itself in the pickup on slip-in principle, the same as barrel and cap of some modern fountain pens. No changing of needle pressure, nothing else to be done. Five-gram needle pressure. Replaceable sapphire stylus with one-mil tip radius. The U-J replaces, and is interchangeable with, the discontinued Astatic LP-33.

## THE U-78-J CRYSTAL CARTRIDGE

● Interchangeable with U-J Cartridge (above), to play 78 RPM records. Five gram needle pressure. Has three-mil tip radius replaceable sapphire needle. The U-78-J replaces the discontinued Astatic LP-78.

## THE LT-5-AG CRYSTAL CARTRIDGE

● New high compliance in a low-cost cartridge. The greatly improved tracking ability allows reduced needle pressure and subsequent extension of both record and needle life. Employs D-AG Osmium Tipped All-Groove Needle for all record types. Stamped aluminum housing.

## L-29 CRYSTAL CARTRIDGE

● High performance quality in a new, low-cost unit. Notably high output permits use with standard phonograph amplifiers, where other cartridges prove unsatisfactory. Universal screw type needle chuck receives any standard needle for microgroove or standard groove records. Stylus not furnished.

## THE "TWIN CAC" MODEL CAC-D-J CRYSTAL TURNOVER CARTRIDGE

● The first major advancement in turnover cartridges. Unlimited in reproduction clarity, fidelity and brilliance of tone. It is equal to the finest in single-needle types, the Astatic CAC-J, and surpasses all others. Revolutionary new design principle combines two complete CAC cartridge assemblies, back to back, on a common plate. Output and response characteristics of each side established independently of the other and, thus, for the first time, ideal for each side: 0.8 volt at 1 kc. on Audiotone 78-1 test record and 0.7 volt on RCA 12-5-31-V test record. Frequency range, 30 to 11,000 cycles. Needles independent of each other, free of interaction. Needle pressure, 10 grams. Unique but simple switching device in turnover mechanism connects only the cartridge or side being used to amplifier phonograph input. Furnished complete with turnover bracket and knob assembly, with standard 1/2" mounting holes. Wiring terminating in pin connectors, graduated for two dimensions now standard on lead wire connectors. Easily installed without soldering. Equipped with Type Q (3-mil) and Type Q-33 (1-mil) sapphire tipped needles.

## THE ACD-J DOUBLE-NEEDLE CRYSTAL AND CERAMIC CARTRIDGES

● Newest Astatic double-needle, turnover cartridge — featuring smooth response, tiny size and light weight. Extraordinary performance made possible by a mechanical drive system with a new low in inertia. Total weight approximately 5 grams. Easily replaceable Type "A" Needles. Model ACD-1J replacement cartridge for ACD-2J assembly. Model ACD-2J complete with turnover assembly and knob, as illustrated. All are available with ceramic instead of crystal elements, for immunity to extremes of climate. (See table for details.)

## THE LQD DOUBLE-NEEDLE CRYSTAL CARTRIDGE

● The LQD Cartridge — for 45, 33 1/2 and 78 RPM Records — quickly became the first choice of many of the nation's largest users, on the basis of comparative listening tests, and is, today, the PROVIDED TOP PERFORMER for turnover type pickups. Outstanding for excellence of frequency response, particularly at low frequencies. A gentle pry with pen-knife removes ONE "Q" needle for replacement... without disturbing the other needle, without removing cartridge from tone arm. Gentle pressure snaps new needle into place. Stamped aluminum housing. Model LQD-1J, illustrated, complete with needle guards and spindle for turnover knob. Model LQD-1JB complete with entire turnover assembly and knob.

## THE LT-4 DOUBLE AND SINGLE-NEEDLE CRYSTAL CARTRIDGES

● New high output, low-cost cartridge with Type "D" precious metal needles. Model LT-4M, illustrated, with single needle for slow speed records; LT-4-AG with All-Groove Needle for all records; LT-4D double-needle turnover type; LT-4D-1 same as LT-4D except equipped with needle guards and spindle for turnover knob. Stamped aluminum housing.

## MI-2J-33 MAGNETIC CARTRIDGE

● Peak fidelity of reproduction that LASTS, even under the most consistent service or adverse climatic conditions. Troublesome, costly armature balancing problems eliminated. Mumetal housing provides increased shielding effect for maximum reduction of hum. Fixed needle with one-mil sapphire stylus tip.

## "MONOPLEX" SUPER-CARDIOID CRYSTAL

MODEL 737A

A high-output, unidirectional microphone that ranks far above ordinary crystal microphones. The Super-Cardioid "Monoplex" is TWICE AS UNIDIRECTIONAL AS THE CARDIOID. It has a 14 to 1 front to rear pickup ratio and REDUCES PICKUP OF RANDOM SOUND BY 73%! The "Monoplex" employs the same type of acoustic phase-shifting network used in the

Shure Broadcast microphones. New moisture-proofed "Metal Seal" crystal for long operating life. Case pivots at rear, can be pointed toward desired sound or upwards for horizontal plane pickup. The "Monoplex" is excellent for high-quality public address, communications, recording and similar applications. Operates under adverse conditions of background noise and reverberation where a conventional microphone would be practically useless. Built-in cable connector. Standard  $\frac{5}{8}$ "—27 thread. Height 4". Width  $3\frac{3}{8}$ ". Thickness  $1\frac{7}{8}$ ". Shipping weight  $2\frac{1}{4}$  lbs. Rich satin chrome finish.

## NEW "SMALL UNIDYNES"

**MODEL "556S"**  
(For Broadcast)

The "Small Unidynes" are the only small sized uni-directional moving coil dynamic microphones. They are completely new microphones with improved performance, yet retaining all of the highly desirable features of the world famous original "Unidynes." The internal unit, based on the Shure-patented "Uniphase" principle, has been designed for high overall efficiency and extended peak-free frequency response. Rugged coil construction also provides greater immunity of the moving coil system to abnormal atmospheric conditions and mechanical shock.

Model "55S" and Model "556S" are considerably smaller than the original Model "55" and Model "556" and are ideal for installations where it is desirable to keep the microphone size to a minimum and still retain operating efficiency.

The "Small Unidynes" are "Perfect Performers"—ideal for high quality public address, theatre-stage sound systems, recording and remote broadcasting. Because of the unusual ruggedness and reliability, Model "55S" is also recommended for fixed station use in the Police, Fire and Transportation services. For studio broadcasting and television use and similar applications where the utmost in quality is desired, Model "556S" is recommended. "Small Unidynes" reduce reflection and reverberation, decrease random noise energy pickup by approximately 67%, allow performer to stand at a distance from the microphone 75% greater than is possible with non-directional (omnidirectional) microphones, have smooth response from 40-15,000 c.p.s. at front—dead at rear. Standard 5/8"—27 thread. Both are supplied with a 20 foot, high-quality cable and plug assembly. Model "556S" features a Cannon connector, and it also has a special newly designed shock isolation unit of live rubber construction.

Dimensions for both units: case 3 5/16" high; 2 3/16" wide, 3 3/16" deep.  
Shipping weight: "55S" 3 3/4 pounds; "556S" 4 1/4 pounds.

## PHONOGRAPH PICKUPS

Like the popular Shure Cartridges, each Shure Phonograph Pickup has been designed to meet specific requirements. There is at least one model for each type of reproduction desired—standard (78 RPM), fine-groove (33½ and 45 RPM), or single-needle "All Purpose" and dual-needle "Turnover" for playing all types of records. Each tone arm is scientifically curved and balanced for faithful tracking, and designed to emphasize the best qualities of the cartridge with which it is equipped.

## C6 CRYSTAL MICROPHONE

**EXTREME SENSITIVITY.** New crystal driving lever, twice as efficient as previously used, produces twice the voltage output with equal sound pressure.

**BROADER RESPONSE.** Results of new construction include extension of both low and high end.

**BASS END IMPROVED.** Naturalness insured by improvement in low frequency response.

**LONGER LINES.** By increasing the voltage output, the cable length may be increased proportionately. In laboratory tests, regular cables 250 feet in length have been used with a net voltage sufficient to operate any standard high gain amplifier.

**MECHANICAL NOISE REDUCED.** Mechanical and stand noise is no longer a factor. The C6 method of crystal mounting reduces mechanical noises by 12 db.

**LESS AMPLIFIER AND INDUCED NOISE.** The high output of this microphone assures a very desirable signal-to-noise ratio.

**SWIVEL HEAD.** All angles for semidirectional and nondirectional pick-up are provided by the  $\frac{5}{8}$ " x 27 (standard) mounting connector.

Complete with 7' cable and plug at microphone. Polished chrome finish. Net weight 8 oz. Over-all height 3". Diameter  $2\frac{3}{8}$ ".  $\frac{5}{8}$ "x27 thread provided for suspension or stand mounting.

## D9A Unidirectional MICROPHONE

**GUARANTEED to produce 30% MORE VOLUME (power) than any microphone at twice the list price. UNIDIRECTIONAL, True CARDIOID pattern pickup, frequency response good to 10,000 c. p. s.**

**Actual Tests are Convincing Arrange for Test with your Jobber**

**THE D9A DYNAMIC**, a pressure-velocity combination microphone, with pick-up from front only, broad frequency response and high output, plus the usual dynamic microphone qualities of ruggedness, immunity to weather conditions, and circuit adaptability, should fill the majority of requirements.

The D9A Microphone is recommended for public address and general sound installations because its energy response field (cardioid of revolution) excludes extraneous pick-up and reduces feed-back by two-thirds. May be used for close talking due to the modified velocity section which also reduces wind noises to a minimum.

The above graph illustrates the average response characteristics for the D9A and D9AT. Voltage output levels, for 1 bar sound pressure (1 bar=1 dyne per sq. cm.) of the high and low impedance models. For 10 bar signal the output will be 20 db. higher.

Net weight, 2 1/2 lbs. Packed weight, 4 lbs. Height, 7"; depth, 2 1/4"; breadth, 2 1/2". Standard 5/8-27 thread provided for suspension or stand mounting. Finish: Satin Chrome.

## D4T DYNAMIC MICROPHONE

**A QUALITY, LOW-PRICED, MOVING-COIL MICROPHONE.** For general use where clear speech and natural music reproduction is required. This new AMERICAN microphone is a very efficient instrument, having a broad range, from 60 to 7500 c.p.s., and high output of -56 db (0 db=1 v/bar). The utility value lies not only in the quality and type of response but also in mechanical features, such as light weight (approximately 10 1/2 oz.), a full 180° vertical angular setting, and positive friction lock at the swivel.

The D4T, high impedance, is equipped with a single-contact, shielded plug. The 50, 200 and 500 ohm models are equipped with a two-conductor plug and have a balanced line out.

The D4 model is of voice-coil impedance, approximately 30 ohms. Lines up to several hundred feet may be used on all models except the high impedance, where line should be restricted.

The complete assembly includes 12 1/2 feet of shielded, rubber-covered cable and shielded plug. Finished in platinum chrome. Standard mounting, 5/8" x 27 thread.

## ATLAS MICROPHONE STANDS featuring SPECIAL FULL-GRIP VELVET-ACTION CLUTCHES

Maximum Stability • Maximum Quiet & Ease  
Maximum Wear

The "Full-Grip" Clutch offers an extended length clutch body, permitting a secure, full-hand grip. The clutch mechanism is inner-lined with a wear-proof bakelite locking collet which grips without jamming, slipping, or sudden dropping. All bases are functionally designed to offer maximum stability for

a given base weight. The maximum base mass is located at the outer periphery of the casting where the concentrated weight is most useful. All bases include self-leveling, shock-absorbent base pads, plus three additional "anti-tip" points located between the base pads. The complete tube assemblies of all models are "super-chrome" plated, assuring "life-time" wear. All models terminate in a 5/8"-27 carefully machined thread.

## DYNAMIC Headsets

"SOUND IN DESIGN"

Permoflux Monaural and Binaural Headset (Binaural has PL-68 plug.)

Permoflux Dynamic Headphones employ actual moving coil type motor assemblies produced under conditions rivalling those used in finest watch-making traditions. Design and construction tolerances are maintained that were unbelievable in the Electronic Art only a short time ago. Frequency response obtained reproduces the full orchestral scale within range of average human hearing. Combined with the above outstanding performance characteristics are: compact design, sealed assembly, light weight, high resistance to impact, ability to withstand high humidity and extremes of temperature and altitude.

Permoflux Headphones have been test proven by U.S. Armed Forces, the nation's leading artists and broadcast engineers. Permoflux Headphones are also widely used in group training for deaf children and with audiometer equipment for testing hearing.

### BASIC BINAURAL THEORY

Basically in binaural recording two microphones are used. Each receives sound as normally received by human ears. The sound picked up by each microphone is recorded and amplified separately. When replayed, each sound channel is fed to the earphone corresponding to the microphone that picked it up. (See diagram). This gives a startling sense of realism and figuratively transports the listener "through" the recording medium to the position occupied by the microphones.

NOTE: All prices are net, f.o.b. Whitestone, New York and subject to change without notice.

## Turret-Head Arm

No more messy multiple pickup installations with several arms, equalizers, switches.

One arm, one equalizer do the trick—up to three cartridges in the Turret Head Arm. Equalizer with 4 NAB curves for lateral, two for vertical.

Merely turn a knob on the pickup to select proper cartridge with correct diamond tip for required record. Stylus pressure is adjusted automatically.

New viscous damping eliminates arm resonance; also greatly reduces danger of breakage in handling.

## A True Moving Coil Reproducer

A cartridge for every requirement — 78 standard, 33-1/3 transcription, microgroove, vertical. Select only the ones you need. You may be sure of close tolerances in dimensions of the diamond tip to fit the groove for maximum efficiency and minimum distortion.

Frequency response — 30-12,000 cycles.

Unusual mechanical construction allows high compliance to heavily modulated grooves.

Output unequalized — 3 millivolts. Output impedance — 80 ohms, but can be fed into any higher impedance including the grid of a tube.

## Pic-Sync Tape Recorder

Each time you retake a sound track, film production costs go up. The waste of film stock and the time delay for processing increase operating cost immeasurably. You eliminate these extra costs with the Fairchild PIC-SYNC Tape Recorder. Play back the sound at once . . . check it . . . erase the track . . . retake the sound before the talent, the set and crew are disbanded.

## NOW USE

### PIC-SYNC Tape Recorders for ALL Original Sound Tracks

1. 1/4" tape costs 80% less than 16mm magnetic film.
2. 1/4" tape requires 50% less storage space.
3. 1/4" tape recorded quality practically as good as "live" for dubbing or TV broadcast purposes.
4. 1/4" tape noise level far lower than sprocket driven tape or film. This is vital in multiple dubbing operations.

## Thermo Stylus Kit

Applies heat directly to cutting jewel, reducing basic surface noise to vanishing point. Records at least 20 db lower noise level.

Minimizes mechanical loading of the cutter by disk material, thus increasing high frequency response, especially at small diameters.

Invaluable for microgroove, standard 33-1/3 and 45 r.p.m. speeds.

Available for Fairchild, RCA and Presto Cutterheads.

Easily installed and operated. Includes heat control and calibrated meter.

## PRESTO 64-A TRANSCRIPTION TURNTABLE

The Presto 64-A transcription turntable offers the following features which are of major importance to the owner and operator: Unusual mechanical simplicity . . . low mechanical disturbance . . . maximum speed accuracy . . . extreme ruggedness for long continuous operation . . . instantaneous selection of desired speed . . . and no requirements for mechanical adjustments.

This transcription turntable is directly gear driven and employs two separate motors, one for 33-1/3, and the other for 78.26 rpm. There is no friction device of any kind in the mechanism and no mechanical shift is required to change speeds. To select 33-1/3 rpm, 78 rpm or "off," the operator merely throws a three position switch. These changes may be made as rapidly as desired while the turntable is in motion with no damage to the mechanism. Only one motor at a time is in operation. The transmission "over runs" the motor which is not turning and thus does not carry it along in rotation although the stationary motor is never disengaged from the mechanism.

### SPECIFICATIONS

**Standard Equipment:** The 64-A transcription turntable includes the electro-mechanical gear drive, turntable and cabinet. A reproducer and network is not included.

**Speed Accuracy:** No deviation from 33-1/3 and 78.26 rpm.

**Noise Level:** Mechanical noise originating in the equipment over 50 db below program level.

**Power Requirements:** Approximately 75 watts from a 115 volt, 60 cycle line. Motors are of the 1800 rpm synchronous type and are available for other voltages and frequencies at additional cost.

**Mounting:** Turntable and gear drive mounted in heavy wood cabinet with in-laid linoleum top is 24 x 24 x 38 inches (61 x 61 x 84 cm.) List Price, \$495.00

## PRESTO 6-N RECORDER AND 90-B AMPLIFIER

The PRESTO 6-N Recorder and 90-B Amplifier is the ideal recording equipment for portable or stationery operation.

The 6-N Recorder is outstanding in its suitability for broadcast stations because it offers all the qualifications for good recordings, including master records, at the most economical price. It is ideal for the station requiring delayed broadcast of network programs, and for reference recordings.

The 6-N standard equipment includes the Presto 1-D cutting head, spiraling feed screw, vertical damper, time scale and pick-up. It is available for microgroove recording at addition cost.

The Presto 90-B recording amplifier contains all the facilities necessary for operation on remote assignments, but with all overall performance found only in high-fidelity studio equipment.

It consists of three preamplifiers with individual gain controls, a mixer circuit, a master gain control and recording amplifier. Provision is made for connecting the Presto 161-A automatic equalizer (radius compensator).

A five-position selector switch provides the following characteristics: 1—flat response, 30 to 15,000  $\pm 1$  db; 2—NAB 33 1/3 rpm recording; 3—present day 78-rpm recording; 4—NAB playback, and

5—automatic equalization. The flat response can be modified by variable bass and treble controls, giving emphasis up to a maximum of 20 db at 100 and 7,500 cycles per second or 20 db de-emphasis at 7,200 cycles per second.

Noise is 55 db below recording level and distortion at maximum output is less than 1.5%.

The use of input and output selector switches makes the 90-B amplifier unusually flexible. It permits combining the signals of three microphones or of two microphones and either one of two pick-ups. By using the "Line" position, recordings can be made from an incoming program line. The output selector has three positions; playback (public address), continuous recording and simultaneous recording. While recording, the line jack provides a monitoring outlet or permits feeding a program line at the correct level.

The correct level is monitored by means of a Weston Type 80 VU indicator with illuminated scale and its closely controlled electrical and dynamic characteristics make it an ideal volume indicator for recording.

The PT-920 tape recorder has been developed for fully professional recording work and hence no compromise has been made with quality of materials and workmanship. The PT-920 has been designed especially for broadcast stations and recording studios and has found wide acceptance among colleges and universities as well.

This recorder consists of a three-motor drive system, separate erase, record, and reproduce heads and two separate amplifiers—one for recording and the other for monitoring. This arrangement permits instantaneous monitoring of the tape. The equipment takes standard RMA 7" reels. Continuous recording with two mechanical sections (type RC-7) and one amplifier section (A-920) may be done by interconnecting the units through the SA-10 changeover switch.

The PT-920 may be had on standard 19" relay rack mounting panels. Simply specify: "for rack mounting." Price same as in carrying cases.

## RC-10-24 TAPE RECORDER

The RC-10-24 is an extremely high quality rack mounting tape recorder for both RMA reels and NAB hubs. Maximum tape capacity is 2400 feet (nominal). This recorder incorporates a three-motor drive system with solenoid operated brakes and capstan pressure pulley. All functions are selected by push-button switch. The recorder may be completely connected to remote controls, either directly or by using relays.

The panel measures 19" wide by 24 1/2" high and is normally rack mounted although the recorder will operate in any position. Separate recording and reproducing heads are provided so that the tape may be monitored during recording.

The 900-A2 or the 901-A1 amplifiers are for use with the RC-10-24.

The three-motor drive system eliminates the complex mechanical arrangements which require frequent adjustment. This system also makes possible very fast speeds forward and reverse. This recorder has proven to be exceptionally reliable and trouble-free even under continuous periods of operation.

### SPECIFICATIONS

Reels 7" and 10 1/2". Standard tape speeds 7 1/2 and 15"/sec.

Fast Speeds, forward and reverse: 250"/sec.

Frequency response 50 - 15,000 cps at 15"/sec. and 50 - 7,500 cps at 7 1/2"/sec.

Dynamic range 55 db.

Instantaneous speed accuracy .15% at 15"/sec.

## TL-10 PRESTO TAPE DRIVE

Presto offers an ingenious tape transport mechanism which can be quickly installed on any sixteen inch turntable. This mechanism derives its power from the turntable—it has no motors of its own. The present model is for tape reproduction only—no crasing or recording is included. No amplifier is provided. The equalized output of the playback head may be fed directly into standard speech input equipment.

The TL-10 Tape Drive consists of a triangular shaped cast chassis which mounts on two small posts fastened to the turntable panel. One point of the triangle carries the tape capstan and this rests directly on the center pin of the turntable to which the TL-10 is attached. A belt drive from the under side of the capstan rotates the take-up reel through a slip clutch. The reproducer head and guide pulleys are located on the upper side of the chassis and the equalizer network is placed below.

Two capstans are available for 15 or 7 1/2 inches per second tape speed based on the turntable speed of 78 rpm. Rewinding is achieved by transferring the empty reel to the take-up spindle and releasing the drag on the supply spindle. Specify type of turntable when ordering the TL-10.

The output of the head and equalizer is sufficiently high to be fed directly into a high quality preamplifier such as found in standard broadcast speech input equipment. An unusual type of capstan is employed, consisting of a wheel, relatively large in diameter, and having a rubber rim. The tape is wrapped around this capstan 180° and obtains very great traction against the rubber surface.

## RC-10-14 TAPE RECORDER

The RC-10-14 is similar in most respects to the RC-10-24, differing only in the panel size and the control switch arrangement. The panel is 19" x 14" and is frequently mounted in the CS-10 carrying case although the unit may be rack mounted also. The function switch is the rotary type and also mechanically operates the idler pressure pulley. The same three-motor drive and solenoid braking is used as on the RC-10-24.

The RC-10-14 recorder with the 900-A2 amplifier, in carrying cases, constitute portable equipment of the highest quality—equal in performance to the best studio recorders.

## WORLD'S TWO GREATEST HI-FIDELITY PORTABLE PHONOGRAPHS

THE  
*Rhythmaster*

THE  
*Recitalist*

### BOTH OFFER 3 INSTRUMENTS IN ONE

★ PHONOGRAPH ★ P.A. SYSTEM ★ BROADCAST RECEIVER (used with FM Tuner)  
Indispensable for Recreation Centers, Broadcast Stations,  
Advertising Agencies, Schools, Hospitals, Record Collectors, Musicians, Etc.

THE RHYTHMASTER AND THE RECITALIST are the only full-range portable phonographs that balance the response characteristics of amplifier, speaker and speaker enclosure. By carefully compensating the natural resonances of these three components, undesirable reverberations are eliminated, and truly lifelike sound reproduction is achieved.

THE POLYPHONIC SELECTOR, an exclusive Rek-O-Kut engineering triumph, found only in the Recitalist and the Rhythmaster, maintains the proper relationship between the highs and lows when the record is played at any volume, either very softly or very loud! Thus, the high notes of the violins, chimes, triangles, cymbals, etc., are always reproduced clearly and distinctly in all their original beauty and cannot be drowned out by the loud passages of the brasses and percussion instruments.

THE RHYTHMASTER'S PATENTED CONTINUOUSLY-VARIABLE SPEED TURNTABLE plays records not only at 33 1/2, 45 and 78 R.P.M., but at ANY speed variation from 25 to 100 R.P.M. Not only will the CVS Turntable play your records back at the exact pitch and tempo they were recorded, but also at any increased or decreased tempo to fit a particular need: ★DANCING:—Set the rhythm of your folk-dance, tango, rumba to your own taste. ★PHYSICAL EDUCATION:—Set the rhythm most suitable for teaching swimming, exercises, etc.

★MUSICIANS:—(1) You can now set the pitch of your records to your own personal interpretation of any recording. (2) You can set the pitch of the record to match the pitch of your piano or other instrument for purposes of accompaniment. ★SCHOOLS:—Invaluable tool for teaching music, band instruments, languages, typing, dancing, gymnastics, etc. ★RECREATION CENTERS, CAMPS, COMMUNITY CENTERS:—Powerful amplifier and speaker afford undistorted volume to cover an assemblage of 500 people or more.

THE RHYTHMASTER AND RECITALIST ARE BOTH "FLEXIBLE" INSTRUMENTS. (1) A microphone input enables "mixing" of live music or voice simultaneously with a recording being played. (2) Can be used as a high fidelity public address system. (3) By connecting an AM or FM Tuner, these phonographs become superb broadcast receivers.

## THE PICKERING CARTRIDGE

There is a Pickering Cartridge Reproducer for every record playing and transcription use . . . Professional, Laboratory and Home Phonograph.

120  
and 140  
Series

**Models D-120M, S-120M, D-140S and S-140S**, with diamond or sapphire stylus, are without equal; they produce the finest quality reproduction of

lateral recordings; they are the choice of professional audio engineers.

MODELS D-120M AND S-120M are for playing standard records and transcriptions requiring 2.5 mil styli. MODELS D-140S AND S-140S are for long playing, microgroove records; 33 $\frac{1}{3}$  and 45 RPM.

**Model R-150**, featuring a replaceable diamond or sapphire stylus is specifically designed to produce optimum quality record response with standard home record playing phonographs. The R-150 is designed for 78 RPM shellac records. The high frequency response is attenuated by mechanical means above 8000 cycles.

Series  
R-150

All Pickering Cartridges will fit practically any arm made for a standard pickup. Their ingenious "Keystone Clip" mounting permits adaptation to a wide variety of arm shapes and sizes; also permits adjustment of the stylus position for minimum tracking error. Special adapter-clips are available for Webster-Chicago and Garrard changers.

With the exception of the stylus point, all Pickering Cartridges are covered by an unconditional guarantee, provided the cartridge has not been opened nor subjected to extraordinary abuse. Every Pickering Cartridge, before leaving the factory, is carefully tested for FREQUENCY RESPONSE, WAVEFORM DISTORTION, OUTPUT LEVEL, TRACKING PRESSURE, and in addition, optical inspection of the stylus polish and shape, mechanical inspection of moving parts and electrical inspection of the pickup coil are made on each unit. Reports from users reveal absolute stability, amazing ruggedness and complete insensitivity to the effects of temperature and humidity.

# PICKERING HIGH QUALITY AUDIO COMPONENTS

## PREAMPLIFIER MODEL 230H

EQUALIZES THE BASS RESPONSE OF RECORDS AND TRANSCRIPTIONS AND PROVIDES THE NECESSARY GAIN FOR HIGH-QUALITY MAGNETIC PICKUPS.

The Pickering 230H Preamplifier is designed to operate with any high-quality amplifier having a high impedance input. It is self-powered, operates from the 115 volt AC line, and is installed by simply plugging in.

Model 230H is unique in its accuracy of equalization, being superior to most broadcast station equipment in this respect. Further, the intermodulation and harmonic distortion is lower than good engineering practice requires in professional equipment. The 230H Preamplifier represents the most advanced design ever achieved in phonograph preamplifiers, and like all Pickering Audio Equipment, symbolizes maximum performance.

### TECHNICAL SPECIFICATIONS

**FREQUENCY RESPONSE:** Within 2 db from 40—20,000 cps. Compensates for 6 db per octave loss below 500 cps. . . . **OUTPUT:** High impedance, 2 volts average from phonograph records. (For 500/600 ohm output at -10 dbm use Pickering 600G transformer, available as accessory equipment.) . . . **DISTORTION:** Not more than 0.2 percent intermodulation at normal output level. Not more than 0.4 percent intermodulation at +10 db over normal level. Not more than 1.7 percent intermodulation at +20 db over normal level. . . . **HUM LEVEL:** -56 db below maximum signal. . . . **INSTALLATION:** Unit furnished with 6 ft. approved cord which can be connected to wall socket or amplifier. Input socket—standard type; matching plug furnished with unit. Output—terminal strip. Rubber shock mounts provided. . . . **DIMENSIONS, WEIGHTS AND TUBES:** Size of preamplifier: 7½ inches long, 3½ inches deep and 4½ inches high. Weight: 2 lbs. 6 oz. Tubes: 6C4, 6x4, 6AU6 (any good, standard brand).

## RECORD COMPENSATOR MODEL 132E

Provides the flexibility required to properly equalize for the different recording characteristics used by various record manufacturers.

The Pickering Record Compensator permits proper equalization of the amplifier system to produce optimum reproduction of individual records; because all linear circuit elements are used it has no inherent distortion. This Compensator permits each individual record to offer all of its quality without compromise . . . permits getting the maximum use out of scratched and worn records. Its six positions correctly equalize for all of the established recording characteristics including microgroove and standard records, domestic and foreign.

The Pickering Record Compensator is a most important addition to any record player equipped with an amplifier system having a high gain preamplifier, such as the Pickering 230H. It is easily installed, and like all Pickering Audio Equipment, symbolizes maximum performance.

### SWITCH POSITIONS

- 1—EUROPEAN RECORDS, this group covers HMV, English Decca, FFRR 78's, and American pressings of European recordings.
- 2—VICTOR, 33½ and 45 rpm recordings.
- 3—VICTOR 78, no high frequency roll-off, 500 cycle turn-over.
- 4—CAPITOL, and for most 78 rpm domestic records, including Columbia, Decca, MGM, etc.
- 5—COLUMBIA, and for most makes of 33½ rpm microgroove recordings.
- 6—NOISY RECORDS, this position permits playing of old noisy records with objectionable hiss removed.

### TECHNICAL SPECIFICATIONS

**INPUT:** High impedance magnetic cartridge . . . **OUTPUT:** To feed into high-gain amplifier which has 6 db per octave rise below 500 cycles per second, and which has an input resistance of 47,000 ohms . . . **INSTALLATION:** Unit can be mounted in any position (on panels up to ¾ inch thick) by means of threaded bushing. Since no power is required to operate the Record Compensator only a single connection has to be made to a suitable preamplifier. Input connection—standard socket. Matching plug furnished with unit. Maximum distance between record compensator and preamplifier input 20 inches, cable supplied . . . **DIMENSIONS AND WEIGHT:** Size of unit: 1¾" square by 3½" overall, less switch shaft. Weight: 6½ oz.

... FOR RECORD REPRODUCTION

**PICKUP ARM — MODEL 190**

The only arm capable of

**Optimum Performance on both Microgroove and Standard Records.**

Much distortion in playing records can be caused by an inadequate pickup arm, regardless of how good the cartridge. The most common causes of distortion inherent in the operation of conventional arms are poor tracking and excessive record and stylus wear. These undesirable qualities are a result of improper lateral and vertical moments of inertia and an incorrect relationship between the two. Further, many arms cause tracking error which creates needless distortion.

The Pickering 190 Pickup Arm is designed to overcome the disadvantage of all conventional arms, the shortcomings of which have been severely accentuated by the advent of LP microgroove records. Extensive investigation by Pickering engineers disclosed that reproducer arms which perform well on 78 RPM phonograph records and standard transcriptions will not necessarily produce good results on LP microgroove records. In fact no commercially available arm was found which would meet all of the requirements for this type of service.

The 190 Pickup Arm embodies all the features determined as significant and important to enable a high quality cartridge to meet the stringent requirements for playing LP records without distortion and free of record and stylus wear: 1 — The ratio of vertical-to-lateral moment of inertia is as low as possible . . . 2 — The vertical mass has been minimized in order to track any record without imposing extra vertical load on grooves. It plays badly warped records just as well as flat ones . . .

- 3 — There is no spurious arm resonance at any frequency . . .
- 4 — Pivot friction is lower than 3 gram centimeters and the bearings are rugged and trouble-free . . .
- 5 — The arm is statically balanced about the vertical axis to eliminate tendency to jump grooves when subjected to bumping or jarring . . .
- 6 — Offset head reduces tracking error to less than plus or minus 2½° . . .
- 7 — Stylus point is protected against contact with anything but the record grooves. It cannot strike the turntable mat or center-pin. It plays all size records up to 17¼" O.D. In addition to these important design considerations, the 190 Pickup Arm features: Sensitive tracking force adjustment . . . height adjustments for turntables from ½" to 2" high . . . one-hole mounting and self-contained levelling screws . . . plug-in cartridge holder . . . magnetic arm rest . . . stylus point completely visible for starting and cueing records . . . 16¾" long.

**Pickering Cartridges used with the Model 190 Arm require 50% less vertical tracking force than is required when using conventional arms.**

**MODEL 163A EQUALIZER**

**Model 163A Equalizer** A loss-type equalizing network for use with the Model 161M Pickup. It is designed to compensate for most of the commonly encountered record characteristics. Position 1 — flat high frequency response to over 15,000 cps. Low frequency rise to give full compensation from 500 to 40 cycles. Position 2 — flat high frequency response. Low frequency response approximately 5 db. below position 1. Position 3 — for NAB or Orthacoustic transcriptions. Position 4 — Low frequencies same as position 2. High frequencies sharply attenuated to reduce surface noise. Attenuation starts at 4000 cycles. Position 5 — low frequencies same as position 1. High frequencies same as position 4. 250/600 ohms output, — 60 lb. Size 3½ x 3¼ x 5 inches. Shipping weight 2 lbs.

**EACH PICKERING PICKUP AND CARTRIDGE IS UNCONDITIONALLY GUARANTEED**

With the exception of the stylus point, all models of the Pickering Cartridge Reproducer and Pickering reproducing equipment, are covered by an unconditional guarantee provided that the unit has not been tampered with nor subjected to extraordinary abuse. ## REPRODUCTION AND TEST EQUIPMENT

### AUDIO SWEEP FREQUENCY TRANSCRIPTION

The Sweep Frequency Transcription is a new method of making instantaneous frequency response runs. It has been designed with all correction factors included in the original recording, therefore, no charts or graphs are needed. Before the development of the Sweep Frequency Transcription, the tone record was used for frequency response measurements on playback systems. This method was both time consuming and laborious. If adjustments were required, a new frequency run was required after each adjustment. Now all that is needed is a cathode ray oscilloscope and a Sweep Frequency Transcription for instantaneous response measurements. Only a few quick adjustments on the equalizer circuits and the job is done. For complete frequency checking of all broadcast transmission equipment and components for production testing of phonographic reproducers, filter networks, audio amplifiers, preamplifiers, tone control systems and components.

## AUDIO SWEEP FREQUENCY GENERATOR

**MODEL 125** — Clarkstan Audio Sweep Frequency Generator. A Clarkstan development for testing the behavior of audio and other alternating electrical apparatus with respect to frequency and associated phenomena. The generator operates in the audio range from 40 cps. to 10,000 cps. The complete frequency range is regularly recurrent so that the signal may be used in conjunction with an oscilloscope. The sweep frequency is governed by 20 synchronizing pulses per second. Provides an instantaneous evaluation of the performance of amplifiers at various settings of tone control and pick-up correction

networks, wire recorders, film recorders, broadcast and aircraft receivers, motion picture sound equipment, loud speakers, microphones, transformers, filters, pickups, pre-amplifiers and cutting heads. Net price Model 125 complete with scanning disc \$165.00.

**MODEL 130.1** — Scanning disc, 40 cps. to 10 kc. disc only. \$12.20 net price.

**MODEL 130.2** — Scanning disc 40 cps. to 7500 cps. disc only. \$12.20 net price.

## GRAPH SHEETS

Four extremely useful tools for the audio engineer. These specially designed graph sheets save endless time:

**601** — Reactance-Freq. Graph. The elements of reactance, capacitance, and inductance all related in one simple graph. Net price \$1.00 pad of 50 sheets.

**602** — dbm — Impedance Graph. The four variables: power (W), voltage (V), current (ma), and Impedance or Resistance ( $\Omega$ ) are acquainted in such a manner that given any two of these electrical quantities the other two may be graphically determined. A decibel scale in dbm (decibels below or above 1 milliwatt) parallels the power ordinate. Net price \$1.00 pad of 50 sheets.

**603** — Attenuator-Design Graph. In this universal pad design chart here presented for the first time, the resistance in ohms for each branch of the pad may be determined by multiplying the values found at the lower horizontal scale by the impedance of the line into which the pad is to be inserted. It covers balanced and unbalanced T and Pi pads. Net price \$1.00 pad of 50 sheets.

**604** — Semi-log, 3-cycle Graph. Designed expressly for the audio range. It has the unique virtue of starting at 20 cps. and covering three logarithmic cycles to 20,000 cps. On the vertical scale are 10 divisions per inch over 7 inches. Net price per pad 50 sheets \$1.00.

## CLARKSTAN KNOBS

Attractive one-piece knobs accurately machined from DURAL add the professional appearance to control panels. All knobs have fluted sides and have screw-type mounting for round or flat shafts to fit standard 1/4" shafts. Back of all knobs recessed 3/4" dia. by 5/64" deep to accommodate panel bushing nut. Complete with quencher, carrying case, radioactive samples and instructions for use. Net price: \$5.00.

## Light Concentrator

Provides bright spot illumination for close work. Lens clips easily on regular 40 to 100 watt frosted bulb, concentrating light in a 4" diameter at 12" from bulb. Steps up light intensity by 5 times. A Fresnel type lens 1/8" thick by 2 1/2" dia., does the work of a much thicker ordinary type lens. Effective focal length 2 1/2". Net \$1.00 each.

## PHONOMOTORS

### New 3-Speed Phonomotors for Record Players

Drive  $33\frac{1}{3}$ , 45, and 78.26 r.p.m. Records

The new Alliance 3-speed record player Phonomotors, Models JPT8 and JPT9, are so advanced in design that mechanical operation is unexcelled! There are no rubber bands or belts to slip, snap, distort, or stretch . . . no needle shafts to indent tires under stall. A totally new motor assures minimum rumble, hum, and unequalled speed regulation! Motor has minimum height — no external fan — electronically dynamic balanced rotor — new vibration reduction mounting! Driving mechanism assures unimpaired performance at all speeds — has fewer moving parts! These units are furnished with 8" or 9" O.D. turntables designed for records with either the conventional or the RCA  $1\frac{1}{2}$ " diameter center holes. A removable center disc is provided to fit the  $1\frac{1}{2}$ " diameter center holes. This disc is reversible and will go on either way. Its height is designed for ease of record handling.

**PHONOMOTOR MODELS JPT 8 AND JPT 9**  
(with 8" and 9" O.D. turntables, respectively).

**NOMINAL RATING**— $33\frac{1}{3}$  or 45 r.p.m. for 5 gram stylus force and 78.26 r.p.m. for 10 gram stylus force with 117 volts, 60 cycles, 0.3 amps., and  $14\frac{1}{2}$  watts input.

### Powr-Pakt Model MS Motor

The Alliance Powr-Pakt Model MS motor is suitable for driving toys or other light loads. It is an adaptation of the quiet, smooth running motor which is used to power the Models MPS8, MPS9, and MPS10 Phonomotors. It measures  $3\frac{1}{8}$ " x 2" x

$1\frac{3}{4}$ " not including the  $\frac{7}{16}$ " long shaft extension which has an  $\frac{11}{64}$ " diameter. Rotation is clockwise facing the shaft extension. Its self aligning bearings are of the porous bronze oilless type.

**NOMINAL RATING**—2800 r.p.m. at full load with 117 volts, 60 cycles, 0.3 amps., and 16 watts input. More detailed specifications are available upon request.

### SINGLE SPEED

### 78 R.P.M. Phonomotor

(With 8 inch and 9 inch  
O.D. turntables,  
respectively).

This model MP8 Phonomotor is practically regarded as a standard power source! Operates on 110 or 220 volts, is made for 50 or 60 cycles, 16 watts input. Has no gears—runs at an even speed—has smooth, quiet, positive friction-rim drive. Ample proportioned bearings with large oil reserves assure long life. Motor and idler plate are shock mounted to minimize vibration transfer to turntable and motor board. Forced ventilation gives cool operation—the slip-type fan avoids any possible injury. Mounting plate maintains correct turntable height, regardless of mounting board thickness.

GARRARD

## 3 SPEED MANUAL RECORD PLAYER

Minimum cabinet dimensions - 12" left to right; 13" front to rear; 2 3/4" clearance above and 3 3/4" clearance below the top of motor board.

Model M - AC Model  
Dual voltage motor  
100/130 and 200/250,  
60 cycles. (50 cycle  
bushing available)

Model MC - Same  
as Model M, but  
complete with Dual  
Stylus Turnover  
Crystal Cartridge.

Here, at a moderate price, is the manual record playing machine perfected by Garrard for record enthusiasts who demand perfection in playing performance and who prefer to play one record at a time. The Model M adjusts precisely to all speeds, 33 1/3, 45 and 78 RPM, and is particularly desirable for those whose library of long-playing records is extensive.

*Simple, Foolproof Operation! The unit is started by moving tone arm to right . . . shuts off automatically at end of record.*

The Model M is identical to the renowned 3-speed Garrard Triumph Record Changer, Model RC80 (details of which will be found on the inside pages), with the exception of the record changing mechanism. It therefore retains all the advantages of tested, sturdy Garrard "watch-type" construction and precision parts.

Featuring a *four-pole heavy duty motor* with armature balanced in operation, the Model M runs silently and evenly . . . without hum or speed variation. The heavily weighted turntable eliminates rumble and insures flywheel action. Here, as on the Model RC80, will be found Garrard's exclusive true-tangent tone arm which tracks silently and gives genuine "floating" response, eliminating "drag" and reducing record groove wear.

The Model M is equipped with interchangeable plug-in heads of universal design. It will therefore accommodate virtually any crystal or magnetic cartridge, including the Audak, Pickering and GE twist models.

A special disk is supplied with the Model M so that 45 RPM records can be easily played without the necessity of plugging up the large center hole on each individual record.

# 3-SPEED RECORD CHANGER

FULLY AUTOMATIC  
WITH  
AUTOMATIC STOP!

**MODEL  
RC-80**

Minimum cabinet dimensions - 15 1/2" left to right; 13 3/4" front to rear; 5 3/4" clearance above and 3 1/2" clearance below the top of motor board.

**RC-80** - AC Model Dual voltage motor 100/130 and 200/250 volts, 60 cycles. (50 cycle bushing available) Less cartridge.  
**RC-80-C** - Same as RC-80 but complete with Dual Stylus Turnover Crystal Cartridge.

**RC-80-DC** - Same as RC-80, but for Direct Current only.  
**RC-80-C/DC** - Same as RC-80-DC, but complete with Dual Stylus Turnover Crystal Cartridge.

Introducing several ingenious innovations in 3 speed record changers, the RC80, nevertheless, retains the watch-like custom construction which has made Garrard acclaimed by music lovers the world over.

The Garrard "Triumph" plays all types of records now in use, 33 1/3-45-78 rpm, regardless of diameter (7"-10"-12") or size of spindle hole. Once records are placed on the player and simply settings made, action is completely automatic, with unfailing switch-off at the end of the last record. Tone arm is automatically returned to rest position.

The RC80 changer is surprisingly simple in operation. It has one turntable, one tone arm, one set of switches. But over-simplification has been avoided in the interests of quality and standards of performance. Certain features found for many years in Garrard instruments have been retained because good basic engineering demands them.

For example, record changing is accomplished by the same tried-and-true pusher-type platform mechanism proven best in previous Garrard models.

45 rpm records are played exactly as intended by the manufacturer. A special spindle is provided with each changer to accommodate these records. No "spiders" or artificial inserts are necessary.

The Garrard RC80 is equipped with interchangeable plug-in heads of universal design. It will therefore accommodate virtually any crystal or magnetic cartridge, including the Audak, Pickering and GE twist models.

The "Triumph" is heavily built for long, rugged service.

It cannot sag or warp. Repairs and adjustments can be made inexpensively on parts which, in most other machines, would require expensive replacement in their entirety.

**GARRARD SALES CORP.**

**NEW YORK 13, N. Y.**

**HEAVY DRIVE SHAFT:**  
A unique feature! Exclusive with Garrard!  
Drive shaft for 33 1/2 rpm and 45 rpm is heavy, thus obtaining more consistent quality at critical low speeds. Wows and wavers eliminated.

**TRIPLE SPEED SWITCH:**  
Speed changes are clearly marked, easily made. The RC-80 plays 33 1/2, 45 and 78 rpm. Records are placed on the player and simple settings made. Action is then completely automatic, including automatic shut-off after last record of any size.

**CONVENIENT START-STOP-REJECT LEVER:**  
Start, stop and reject lever are combined and located conveniently away from tone arm.

**PUSHER TYPE PLATFORM:**  
Adjusts simply to 7"-10"-12" records regardless of diameter or size of spindle hole.  
No record changing mechanism has been developed to equal the performance of the precision pusher platform. For records with standard center holes, the pusher platform is the only method that gives positive gentle record operation.

**PULL-AWAY IDLER WHEEL:**  
Avoids flattening of drive wheel when changer is not operating.

**AUTOMATIC STOP:**  
Ensures positive and unfolding action at end of any type record.

**BALANCE-MOUNTED TONE ARM:**  
Parallel lift tone arm construction guarantees true tangent tracking. Disturbing resonance eliminated.

**INTERCHANGEABLE PLUG-IN HEADS:**  
Carefully engineered to accommodate user's choice of crystal or magnetic cartridges for standard and micro-groove reproduction, such as Astatic, Pickering, Audak and GE twist models.

**WEIGHTED TURNTABLE:**  
RC-80 turntable is heavily weighted to give flywheel action so that any variations in the drive motor are not reflected in record reproduction. No turntable rumble.

**HEAVY DUTY SILENT 4-POLE MOTOR WITH ABSOLUTELY NO RUMBLE:**

Speed maintained throughout a wide variation in line voltage. There is no appreciable speed variation operating unit "cold" with a full load or "hot" with one record, regardless of weight, thickness or diameter of records.

**IMPORTANT!**

Only a 4-pole motor can assume no hum when used with sensitive magnetic pickups.

**TWO INTERCHANGEABLE SPINDLES:**

Easily inserted, the two Garrard Spindles accommodate all records as they were made to be played. (If user prefers one spindle can be used throughout simply by plugging center hole of 45 rpm records.) a: Typical Garrard spindle for standard center holes. b: Easily inserted wide spindle, for 45 rpm records, remains stationary when record is played. Only a small collar revolves, assuring longer center hole and record wear.

**PRECISION GROUND GEARS:**  
Perfectly meshed to insure constant smooth action and years of service.

**MUTING SWITCH:**  
No sound while changer operates on run-in or run-off grooves. Continuity of music undisturbed by noises.

**WATCH-LIKE CONSTRUCTION:**  
All parts are precision made, fastidiously assembled and simple to adjust.

A complete stock of replacement parts is readily available to all Garrard owners.

**SIMPLE INSTALLATION:**

Mounting holes are identical with former Garrard models, so that replacement is very simple. Unique spring suspension.

**FROM TOP TO BOTTOM... Every feature tested for finest performance. Manufactured to highest engineering standards under rigid quality control.**

The Garrard 201B/5 variable speed motor is the latest version of the famous 201V unit, as produced for the U. S. Navy and the British Admiralty.

The 201B/5 is a continuously variable motor, governor-controlled and adjustable to all speeds between 25 rpm and 90 rpm. It is equipped with speed regulating levers and marked with indicated positions so that precise settings can be easily made at 33 $\frac{1}{3}$ , 45 and 78 rpm.

The unit is set on an extension arm so that 16" transcription records can be properly speed-controlled.

Ideal for use where a tor is required. It is a continuous variable motor, self-starting, induction type unit, and is fitted with the patented Garrard Governor to insure perfect regularity.

A unique feature is its "one shot lubrication." The only maintenance required is to sparingly lubricate the main bearings in the gears through the single oiling point, which is located in the top of the center spindle.

Model 201B/5 — Continuously variable AC Model Dual voltage motor 110/130 and 200/250 volts, 40/60 cycles.

**GARRARD CARRYING CASE**

AUDIOTAPE has excellent high frequency response.

AUDIOTAPE has low distortion.

AUDIOTAPE has no low-frequency modulation noise.

## For truly fine recording and reproduction

For more than a decade, Audiodiscs have consistently maintained their position of eminent leadership in every field of instantaneous disc recording. A survey of radio stations completed in Jan. 1952 shows that, in actual use, Audiodiscs lead all other makes by a 3-to-1 margin.

A superior lacquer coating, applied to the mirror-smooth aluminum base by a patented process, gives these outstanding advantages: maximum uniformity of coating, permanent resistance to humidity, longer stylus life, freedom from audible background scratch, long playback life, brilliant frequency response, and freedom from deterioration with age.

## Walco DIAMOND NEEDLES COST LESS PER PLAY THAN ANY OTHER KIND!

Because WALCO DIAMOND NEEDLES take a perfectly smooth, "ball point" polish and because of the hardness of diamond, keep that polish, the need for further needle replacement is eliminated. Use WALCO DIAMOND NEEDLES wherever economy of operation, perfect reproduction, and longest record life are a consideration.

LP OSMIUM TIP after 15 hours use. Note the contour of the needle when new. This needle will permanently injure vinyl record surfaces if continued in use.

LP SAPPHIRE TIP after 75 hours use. Faithful reproduction is no longer possible at this stage and this needle should be replaced as soon as possible.

LP DIAMOND TIP after 500 hours. Because of the astonishing hardness of diamond (90 times harder than sapphire), no wear is evident. This needle can be used to play hundreds of additional records with perfect safety.

**SPECIFY Walco AND BE SURE OF THE FINEST NEEDLES AT LOWEST COST**

No first class audio system can possibly maintain the high fidelity response possible of it with a worn needle in the tone arm. Install a WALCO DIAMOND needle for the ultimate in unvarying high fidelity.

### How to Utilize the MILLER Replacement Needle Chart

To determine the specific needle used in any player, it is necessary to first inspect the cartridge in the record player tone arm. Note the cartridge brand name and serial number or letter. This is easily accomplished by lifting the tone arm and reading the numbers stamped on the cartridge.

Now locate the group of needles, i.e., Astatic, Shure, Electro-Voice or other brand. The cartridge identification shown opposite the caption "manufacturer's cartridge series" will then identify the exact needle required. It is now only necessary to determine whether you desire a sapphire or metal tip as indicated by the code letter "M" for metal and "S" for sapphire and the tip size as indicated for microgroove, standard, or all-groove.

The MILLER REPLACEMENT NEEDLE ILLUSTRATED CHART is designed to make your sales and inventory easier.

**NOTE:** All Miller replacement needles listed with the jewelled (Syn.) tip are available with Diamond Styli upon request.

CONSTANT OUTPUT

## MAGNETIC SOUND-RECORDING TAPE

FOR ALL MAKES OF TAPE RECORDERS

- **CONSTANT OUTPUT** assured by new electronic monitoring method. The playback level of a continuously recorded tone during coating controls compensating adjustments to the coating machinery.
- **GREATER DYNAMIC RANGE**, high output with minimum background rumble results from combining the highly uniform oxide dispersion with tape surfaces specially polished in production to eliminate even microscopic irregularities.
- **HIGH FREQUENCY RESPONSE** of Soundcraft tape conforms to the standards set by the industry and, due to elaborate control methods, remains constant from one production lot to the next.
- **POLISHED SURFACE** of Soundcraft tape by a specially-developed buffing process insures maximum head life and eliminates the mechanical "squeal" caused occasionally by excessive tension of the tape on the heads.
- **HIGH OUTPUT** assured by Soundcraft's highly-engineered, uniform oxide dispersion giving maximum sensitivity.
- **LONG LIFE** for thousands of recordings and replays at high output is assured by complete erasability without special equipment and by Soundcraft's absolute adherence oxide coating.
- **LONG HEAD LIFE**. Low-friction oxide-coating vehicle covers each of the uniform-sized particles of oxide with a tough microscopic film that prevents any abrasive material from touching magnetic heads. This vehicle or binder, moreover, contains nothing that can rub off and gum head surfaces.
- **LONG STORAGE LIFE** is guaranteed by safety film type plastic and high tensile paper base materials. Under average indoor temperatures and humidities, Soundcraft tapes will not become brittle, stretch, or shrink.
- **HIGH ADHERENCE** of the coating to the base is effected by preprocessing the base material before coating. This method assures that Soundcraft oxide coating will neither flake nor rub off.
- **MECHANICAL UNIFORMITY** is assured by precision, rotary shearing of the wide stock into individual tapes and by the special coating formulation that prevents curling. Soundcraft tape tracks straight and winds flat.

## FAMOUS NAME SOUND RECORDING DISCS

"THE BROADCASTING STATION STANDARD"

### 10 SOUNDRAFT FEATURES

- Greater dynamic range of Soundcraft discs exceeds highest broadcasting requirements.
- Inaudible surface noise. Soundcraft microscopically filters all impurities out of coating materials and dries wet coatings with conditioned, dust-free air.
- High-frequency response to 15,000 cps. Soundcraft coating formulation combines proper physical texture with wax-like low cutting-friction.
- Dependability from batch to batch regardless of season. The Soundcraft disc plant makes its own weather, eliminates mysterious humidity troubles.
- Uniform cutting for both conventional and micro-groove recording. Soundcraft discs, to minimize minute variations in groove depth, are manufactured with the flattest, smoothest, aluminum bases obtainable.
- Long stylus-life assured. Soundcraft coating purity and low-friction reduce stylus wear and eliminate recording failures from stylus damage.
- 1,000 or more playings. Soundcraft's sealed-in lubricant for low needle-friction reduces wear to the point where dust in grooves and needle quality are chief controlling factors.
- Long storage-life, recorded or new. Under normal conditions Soundcraft discs cut and play after years of storage.
- Improved diameter effects. Soundcraft's superior coating formula minimizes high frequency loss and actually lowers surface noise as diameter decreases.
- Easy-to-pick-up thread. The Soundcraft coating is compounded with an exclusive ingredient to make thread throw toward center, and to minimize static charge.

## TELEVISION CALIBRATOR (WR-39C)

Now—in one compact, portable unit—the new RCA WR-39C provides crystal-controlled markers for all TV frequencies—

included in this one instrument is a crystal-calibrated variable frequency oscillator, two crystal-controlled oscillator stages with three crystals supplied, a wide-band modulator stage for internally modulating the output at audio and rf frequencies, and an audio amplifier with speaker.

In addition to its function as a marker generator, the WR-39C can be used as a heterodyne frequency meter to identify unknown frequencies. The vfo, when tuned to any TV channel and modulated with the 0.25-Mc crystal oscillator, will put vertical bars on the raster; or when modulated with an external audio oscillator will put horizontal bars on the raster. Thus the instrument can be used for making linearity adjustments in the absence of a test pattern.

The WR-39C may also be modulated by the video signal from a television set, which makes it in effect a 12-channel miniature TV transmitter. Sugg'd User Price: \$242.50\*

### Check these important features!

- ✓ Crystal-controlled markers, 4.5 Mc removed from main marker for television if alignment
- ✓ Crystal-controlled markers, 250 kc removed from main marker for sound-discriminator alignment
- ✓ Provision for injection of external marker
- ✓ Internal audio and rf modulation of variable frequency oscillator
- ✓ Crystal-calibrated heterodyne frequency meter
- ✓ Crystal-controlled 4.5-megacycle output for alignment of TV receivers employing inter-carrier sound
- ✓ Marker oscillator operates on fundamental on all bands
- ✓ Sound and picture carriers marked on dial

## TV SWEEP GENERATOR (WR-59B)

The WR-59B is a high-quality sweep generator which is used extensively for the design, manufacture and servicing of TV sets. It generates fundamental oscillator sweep-frequencies, preset on switch positions for TV channels 2 to 13. IF and video frequency coverage is produced by a separate calibrated control with continuous tuning from 300 kc to 50 Mc.

Sweep width is continuously variable, and output level is exceptionally flat in all positions. The rf output cable termination can be adjusted to match balanced or unbalanced loads; the rf output level is variable over wide limits by means of a coaxial-type piston attenuator. The unit develops a sweep signal for a scope; a phasing control is provided. An additional feature is return-trace blanking which produces a zero-reference line on the cathode-ray tube for measurement of instantaneous voltages. The unit is complete with rf and if output cables. Shipping weight, 35 lbs. Sugg'd User Price: \$274.50\*

## RADIO & TV SERVICING WITH LOAD-CHEK

### RANGES

**WATTS—AC or DC:**  
0-500 (50 division scale)  
0-1000 (50 division scale)

**VOLTS—AC or DC:**  
0-150 (65 division scale)

The LOAD-CHEK for the first time makes it possible for every technician to utilize what is perhaps the simplest and quickest of all service methods—servicing by Power Consumption Measurements, long proven by auto-radio servicemen as a rapid method of localizing troubles in auto radios. Triplet Model 660 is the first Wattmeter to be produced at moderate cost, and with the proper ranges, to bring this short-cut method within the reach of every radio and TV serviceman.

Following are only two of many time-saving uses of this new instrument:

**Locating A Short**—The chassis tag may show a normal consumption of 225 Watts. Simply plug the power cord of the chassis into LOAD-CHEK (no loose ends to connect or be in the way). Note the reading—which should be possibly 350 Watts. By

Model 660

removing the rectifier tube you can determine at once which side of the tube the short is on. With a soldering iron and long-nosed pliers you can check through the chassis, locate and correct the trouble without having to lay down tools or to check with lead wires!

**Replacing Burned-Out Resistors**—With the chassis to be repaired plugged into a LOAD-CHEK MODEL 660, note the wattage reading with the burned out resistor circuit open. Now replace the resistor. Should the increase in watts be greater than the resistor rating, it indicates an extra load has caused the trouble which has not been cleared. LOAD-CHEK is made-to-order for the busy serviceman because it's a Time-Saver; and at its moderate cost can be standard equipment on every service bench.

INSTRUMENTS THAT STAY ACCURATE

## MODEL 260 Set Tester

World's Most Popular  
High Sensitivity Set Tester  
For RADIO and TELEVISION

There are more Simpson 260 high sensitivity volt-ohm-milliammeters in use today than all others combined. No other instrument of its kind has approached the world-wide popularity of the Simpson 260. In no other tester of its kind will you find the combination of useful ranges, accuracy, ruggedness, beauty and sensitivity developed to such a high degree of perfection.

Removal of the Model 260 from its heavy, handsome case of molded bakelite, will disclose how it differs from most set testers. You will see a sub-panel with a score of small recesses each holding a separate resistor or other component. You will notice complete absence of cable wiring. All connections are short and direct, thus offering a strength and firmness of assembly and the finest of insulation to reduce chances of shorts. All components are readily accessible. The front panel is a thing of beauty and long life. Pin jacks are recessed so no metal parts are exposed. All figures and symbols are molded into a heavy Bakelite panel and filled with durable white for long wear and legibility.

At 20,000 ohms per volt the 260 is highly dependable, rugged and accurate. Its practically negligible current consumption assures remarkably accurate voltage readings. It provides DC current readings as low as 2 microamperes and up to 10 amperes. Dependable resistance readings can be made up to 20 megohms and as low as 1/5 ohm. With the 260 you can measure automatic frequency control diode balancing circuits, grid currents of oscillator tubes and power tubes, bias of power detectors, automatic volume control diode currents, high-mu triode plate voltage, as well as a wide range of other measurements which cannot be checked with ordinary servicing instruments.

## MODEL 480 FM-TV GENESCOPE

*Ideal For Servicing Ultra Sensitive TV Receivers*

In addition to a signal source, the Model 480 Genescope includes a high sensitivity oscilloscope of unique advanced design, complete in every detail and equipped with a high frequency crystal probe for signal tracing.

The variable oscillator sections are mounted one on each side of the oscilloscope section and are provided with large precision vernier dials having a 20:1 ratio and 1000 division logging scales. They are easy to read and can be quickly set to an exact frequency.

Modern FM and TV development and servicing requires the use of test equipment made to exacting standards. With this in mind we offer you the Genescope with the assurance that everything possible has been done to make it the most accurate, flexible and convenient instrument available.

Multiple shielding, generous bypassing of all power leads entering oscillator enclosures and adequate line input filtering eliminates excessive leakage and oscillator interaction.

Step and continuously variable attenuators on both AM and FM sections provide minutely controlled signal levels from a few microvolts for fringe area peaking operations to a magnitude suitable for single stage alignment.

A self contained impedance matching network is adjustable to any receiver input, balanced or unbalanced, in a matter of seconds.

Values available include 300 ohm and 75 ohm termination with or without an intermediate attenuator pad and with or without an isolating condenser, open termination for maximum voltage output with or without isolating condenser and many other useful combinations.

The center section of the Genescope contains the oscilloscope and all associated controls. The cathode ray tube of the oscilloscope is mounted vertically in the case in order to conserve bench space. The pattern on the tube is brought into view by use of a highly polished adjustable mirror at the top of the cabinet. The mirror may be quickly adjusted for any position of the operator. The tube face is placed well below the top surface of the cabinet in order to shield it from incident light thus producing a clear, sharp image unhampered by narrow angle light shields. The mirror when closed provides adequate protection for the cathode ray tube when not in use.

Direct connection to vertical and horizontal deflection plates and other internal functions are available through removable cover on the front panel.

## MODEL 303 VACUUM TUBE VOLT-OHMMETER

The new Simpson 303 really is a versatile instrument. It can be used as an electronic DC voltmeter, an ohmmeter, an AC voltmeter, an AF voltmeter, an RF voltmeter (with accessory probe), an output-meter, and an FM indicator.

The 303 truly is a worthy companion of the world famous Simpson Model 260 Volt-Ohm-Milliammeter. Simpson engineers spent months of painstaking research in the laboratory, working in close co-operation with TV set manufacturers to produce the 303. This ruggedly built instrument has a dimension of only 120 cubic inches, and is 60 to 70% more compact than any similar instrument. In achieving this compactness for greater portability Simpson did not sacrifice accuracy or functional value. Its large 4½-inch meter is easy to read.

Features such as low current consumption and wide voltage and resistance ranges make the 303 an extremely versatile instrument.

Like all other instruments bearing the Simpson name, the 303 is of the highest quality construction throughout, but sells at an amazingly low price.

## MODEL 266 VACUUM TUBE VOLTMETER

Ideal for TV - AM - FM

Extremely accurate and packed full of important features. This fine Simpson instrument offers a 1 volt range for the full scale deflection necessary in measuring low RF voltages; a zero center switch embracing all DC voltage ranges for discriminator circuit alignment; a special probe with low input capacitance of approximately 4 micro-microfarads for checking RF voltages.

DC volt input resistance ranges from 50 to 200 megohms; AC volt input impedance at 60 cycles is approximately 10 megohms. The primary of the power transformer is well-regulated—holding close control over filament as well as plate voltage, and the DC input circuit is filtered so that the pressure of superimposed alternating currents does not affect DC measurements.

Model 266 is housed in a sturdy case with lead compartment in rear of case. There is a large, clearly marked 4½" meter for quick, easy readings.

## MODEL 476 MIRROSCOPE

Simpson takes pleasure in presenting the new and revolutionary Model 476 Mirroscope.

The objectives behind the design of the Model 476 were to eliminate certain inherent disadvantages found in the conventional type of oscilloscope.

By use of the Mirroscope principle the 5" cathode ray tube is mounted in a vertical position. This construction reduces bench space requirement to an area of only 9" x 8" thereby permitting better concentration of associated equipment for any type of test procedure.

The cathode ray image is reflected from a high grade mirror mounted in the adjustable cover at the top of the cabinet, thus the viewing surface is brought near eye level when the instrument is used on benches of normal height. The mirror angle is quickly and easily adjusted to any position of the operator.

The cover with integral side wings forms an effective shield against external light sources or may be closed down for protection of the tube and mirror when the instrument is not in use.

The upright construction permits location of controls and connections for maximum convenience and allows for internal cathode ray tube connections at the front of the panel instead of the rear.

These and many other advantages will be disclosed when the construction and specifications of the Model 476 Mirroscope are considered fully.

### SENSITIVITY:

Vertical direct	— 12 volts rms per inch.
Vertical amplifier	— 20 millivolts rms per inch.
Horizontal direct	— 14 volts rms per inch.
Horizontal amplifier	— 38 millivolts rms per inch.

Horizontal trace expansion is over 4 times tube diameter. This makes it possible to examine minute portions of a response pattern for finer detail.

Linear Sweep frequency is continuously adjustable in five overlapping ranges from 15 cycles to 60,000 cycles. Internal, external or line frequency synchronization with variable amplitude is available.

Means for intensity or "Z axis" modulation is provided. Approximately 14 volts peak will blank a trace of normal intensity.

The vertical amplifier frequency response is within 3DB from 20 cycles to over 300,000 cycles and is usable to well over four megacycles. Square wave slant and overshoot is held to less than 5 per cent of amplitude. This response will be found adequate for all phases of television receiver service including observation and diagnosis of Sync. signals.

### INPUT IMPEDANCE:

Vertical direct	- 10 megohms, 15 mmf.
Horizontal direct	- 10 megohms, 15 mmf.
Vertical amplifier	- 300,000 ohms, 30 mmf.

## MODEL 488 FIELD STRENGTH METER

The Simpson Model 488 Television Field Strength Meter provides means for the measurement of Television signals in any locality.

Although special consideration was given to fringe area applications in the design of this instrument it will be found of extreme value in all types of installations.

Location of maximum signal areas, antenna orientation, comparison of antenna systems, adjustment of boosters and checking antenna and lead-in installations are only a few of the many functions available.

Full scale sensitivity of the lowest range is approximately 50 microvolts and is an outstanding feature for those concerned with fringe area installations where maximum efficiency must be attained. Three additional ranges of approximately 500, 5000 and 50000 microvolts extends the usefulness of the Model 488 into areas of higher signal strength.

The large 4½ inch modernistic meter is easily read from a considerable distance and all controls and connections arranged for greatest accessibility.

## MODEL 335 Plate Conductance Tube Tester

### With Simpson Patented "No Backlash" Roll Chart

Model 335 tests tubes under conditions simulating actual use in a radio set. The dial indicates percentage of rated plate conductance which is closely related to mutual conductance since amplification factor remains constant throughout the life of a tube. With a minimum of settings a reading is quickly obtained which is a percentage of the tube's rated value.

Each tube element is individually connected to the proper potential. Reliable short test is provided and Diodes are tested on low voltage. When you have finished a tube test, the Simpson one button automatic reset returns all switches to the normal position.

Test all receiving tubes, including 9 pin miniatures, and sub-miniatures as used in hearing-aids, etc. Space is provided for new sockets.

## THE SIMPSON PATENTED "NO BACKLASH" ROLL CHART

The exclusive "No-Backlash" feature automatically takes up the slack in the paper chart and, by keeping the chart in constant tension, makes it impossible to turn the selector wheel without moving the chart. This results in precision selection at all times. The "No-Backlash" feature also prevents the paper chart from tearing, insures proper alignment, and presents at all times a neat, flat surface.

The selector wheel gear ratio makes it possible for tube selections to be obtained with a minimum of effort.

The entire Roll Chart mechanism is securely fastened to the instrument panel. Quick access to the roll chart can be obtained by removing four panel screws, so that the addition of tube data or the mounting of a new chart is a matter of a few minutes.

In addition to the neat, flat reading surface made possible by the "No-Backlash" feature, the lucite window was designed so that only two settings appear, which is especially convenient for the settings of multi-purpose tubes.

## MODEL 340 SIGNAL GENERATOR

75 Kilocycles to 120 Megacycles—fundamentals to 30 Megacycles. From its lustrous black anodized panel to the big nine-inch dial and knife edge pointer that mean easy readability, the Model 340 is an instrument packed with Simpson engineering refinements for greatest utility and long-lasting accuracy.

An electron coupled circuit, using three tubes—full wave rectifier, modulator, and oscillator—and standard 30% modulation at 400 cycles, assures extreme stability and output uniformity. Close settings are permitted by a smooth vernier control.

RF coils provide range of 75-220; 200-600; 550-1700 KC; and 1.5-4.5, 4.2-14; 9-30; 36-120 megacycles. Fundamentals range to 30 MC, and the dial is direct reading to 120 MC.

Shielding in the Model 340 is complete; coils, attenuator, and signal selector being individually shielded. The oscillator and modulator are sealed in a rigidly welded, entirely closed chassis. In addition, the line cord is shielded, thus reducing leakage to a negligible point.

The signal output is controlled through a step attenuator and non-inductive potentiometer, providing smooth and complete control of the signal output. A special jack is provided in the Model 340 to obtain high output on the 120 MC band.

Twenty-five separate meters at the turn of a switch. That is what you get in the new Simpson Model 221 Roto Ranger. The necessity of reading numerous scales, so common in ordinary volt-ohm-milliammeters, is forever eliminated when you own a Roto Ranger. The chances for errors in making readings are reduced to a minimum. The Model 221 provides a separate direct reading scale for each range and does it automatically. Calibrations are not cramped. Each scale is full size, the same as it would be for a separate instrument. As the selector switch on the panel is moved to the range desired, an ingenious mechanism rotates the proper range into position behind the meter window.

## MODELS 240 and 230 VOLT-OHM-MILLIAMETERS

These two "Micro-Tester" portables are famous throughout the world for their ruggedness and built-in accuracy. They exemplify the construction features and utility that distinguish the entire Simpson line shown in this section.

Both are shock-proof and incorporate the celebrated Simpson movement with its FULL BRIDGE-TYPE CONSTRUCTION AND SOFT IRON POLE PIECES. Resistors are in matched pairs to provide the greatest possible accuracy for all ranges.

Model 240 — the "Hammer" — was designed for the additional voltage and sensitivity demanded in radio testing. With its maximum voltage range of 3000 AC or DC, it was the first self-contained pocket portable instrument built expressly to check high voltage and all the component parts of transmitters and receivers.

Model 230, with a maximum voltage of 1000 volts AC or DC, is ideal for most industrial testing. Its ranges are adequate for most line voltages, for telephone, teletype, and general purpose testing.

Both models are housed in heavily molded bakelite cases, with all numbers and symbols recessed in the panel and filled with white enamel for greatest legibility and ease of reading. Both have full size 3" meters.

Ruggedly constructed for full load, continuous operation, the Simpson Model 390 is the first tester of its size ever made to give you volt, ampere and wattage readings in one compact instrument. It embraces two ranges each of voltage and current, providing four wattage ranges which cover practically all types and makes of appliances. The panel has volt-ampere combinations clearly indexed to the proper wattage range on the scale, which makes the instrument easy to use. All readings are shown on one meter. In normal position, the meter indicates volts. Ampere and watt readings are obtained by depressing button on the panel. The widely separated binding posts make it possible for the Model 390 to be used as an individual voltmeter or as an ammeter. The Model 390 has a molded bakelite case with all figures recessed in the panel, which are filled with white enamel for better legibility.

## MODELS 391 and 392 AC-DC VOLT-WATTMETERS

Designed for simultaneous reading of volts and watts, each of these handy little testers has two separate 3" square meters, one for volts and one for watts. Each has a built-in cord and plug for connection to the line outlet, and a receptacle for connecting the appliance under test. The ranges for each meter are selected by separate toggle switches recessed in the molded bakelite case. The low power consumption combined with the high efficiency of these instruments results in negligible loss and error in reading.

## MODEL 385 TEMPERATURE INDICATOR

This is the newest addition to the Simpson Appliance Tester line. You will find this a compact instrument which is ideal for measuring temperatures from +70° F to as low as -50° F, where fast accurate temperature readings are important. The scale is designed so that the center portion is expanded, making the most widely used temperatures easy to read. The Model 385 is ideal for use in the refrigeration service field and wherever temperature readings are important, such as deep freeze units, home refrigerators, walk-in coolers and air conditioning units. The temperature readings can be taken at the end of the 15' lead which is supplied with the unit. The lead cord is small in diameter, making it possible to close the door of the equipment, thus obtaining temperature indications under actual conditions.

The probe can also be immersed in liquids where critical temperatures must be maintained.

## Series CR-30 CATHODE RAY TUBE TESTER

TESTS ALL TV PICTURE TUBES  
(Magnetic and Electrostatic)

OSCILLOSCOPE AND INDUSTRIAL CATHODE RAY TYPES

SERIES CR-30 IS A COMPLETE, SELF-CONTAINED INSTRUMENT particularly engineered for the very special needs of reliable, rapid and economical cathode ray tube testing, in the field, shop or laboratory.

Series CR-30 is indispensable to the efficient TV Service-Installation Technician, TV Service Laboratory and wherever one is called upon to answer the performance question, "IS IT THE CATHODE RAY TUBE OR IS IT THE CHASSIS?"

Series CR-30 incorporates a BEAM CURRENT TEST CIRCUIT which checks overall electron-gun performance for Proportionate Picture Brightness. Additional direct testing facilities are provided for positive check of accelerating anodes and deflection plate elements.

The Precision CR-30 should not be confused with mere adapters connecting to ordinary receiving tube testers which were never designed to meet the very specialized needs of CR tube checking. Similarly, it is not to be confused with neon lamp units or similar devices of limited technical merit and which do not check all CR tubes or all tube elements.

### GENERAL AND TECHNICAL SPECIFICATIONS

- ★ Tests All Modern Cathode Ray Tubes—Magnetic and Electrostatic picture tubes, 'Scope Tubes and Industrial Types without removal from carton or TV chassis.
- ★ Tests All CR Tube Elements—Not just a limited few.
- ★ Absolute Free-Point 14 Lever Element Selection System for Short-Check, Leakage Testing and Quality Tests. Independent of multiple base pin and floating element terminations. Affords maximum anti-obsolescence insurance.
- ★ Beam Current Test Circuit checks all CR Tubes and Electron-gun in operation. It is the Electron Beam (and NOT total cathode emission) which traces the pictures or patterns on the face of the CR tube.
- ★ Voltage Regulated, Bridge Type VTVM provides the heart of the super-sensitive, tube quality test circuit. Such high sensitivity is also required for positive check of very low current anodes and deflection plates.
- ★ Multiple Test Sensitivities plus selectable element test potentials permit proper accommodation of all CR tube types, Magnetic and Electrostatic.
- ★ Micro-Line Voltage Adjustment, which is Meter-monitored at filament supply, provides required close control of operating voltages.
- ★ Accuracy of test circuits closely maintained by use of factory adjusted internal calibrating controls; plastic insulated, telephone type cabled wiring; highest quality, conservatively rated components.
- ★ Built-in, High Speed, Roller Tube Chart.
- ★ Test Circuits Transformer isolated from power line.
- ★ 4½" Full Vision Meter with special scale-plate expressly designed for CR tube testing requirements.
- ★ Heavy Gauge Aluminum Panel, etched and anodized.
- ★ PLUS many other special "PRECISION" details and features.

SERIES CR-30—In hardwood, tapered portable case, with hinged removable cover. Extra-Wide Tool and Test Cable Compartment. Overall Dimensions 17¼" x 13¾" x 6¾". Complete with standard picture tube cable, universal CR Tube Test Cable and detailed Instruction Manual.

**Alternating Current**

**Direct Current**

AC and DC types are accurate to within 2% of full scale value at any point on the scale.

DC instruments combine extremely light weight moving elements and powerful alnico magnets to produce a torque to weight ratio which reduces frictional error to a minimum. This high torque to weight ratio permits use of pivots with ample pivot bearing surface to overcome effects of rough handling, shock, and vibration.

AC instruments are accurate over entire range of commercial power frequencies (25 to 125 cycles). These instruments are of repulsion vane type using carefully aged and impregnated field coils and multipliers which are wound with conductors of ample size so that temperature rise of the windings may be maintained at a minimum, even though instrument is subjected to continuous use in the circuit.

Alnico magnets are used to obtain perfected damping characteristics found in no other AC instrument.

## POCKET TYPE METERS

Various Shurite pocket meters using the Model 450 case are in production. Model 450 has bright plated case, with two or three terminals, depending on ranges. Ranges suitable for pre-war and post-war batteries, portable radio batteries and many other electrical applications, including polarity indication types have been made, although they are not regularly stocked.

Model 450

Stock numbers begin with 4 as the first digit. For example, the 0-3 DC Ammeter, as illustrated, is Stock No. 4202. The bulletin, "Shurite Pocket Types", available on request, is periodically revised to indicate pocket meters which are authorized for production. Dealer net price is obtained by adding \$0.40 to the price of 550 Model meters as shown in this catalog at \$1.70 or less, or by adding \$0.30 for meters at \$1.75 or above.

## FLANGE ADAPTER RING

A sturdy flange ring for use with any Model 550 (round) Shurite meter where a flange mount is preferred. Makes appearance similar to Model 650. Wide flange, 2 3/4" dia. Telephone black finish. Screws, lockwashers and nuts included.

Model 5-A, Net.....\$0.18

### MOUNTING DETAILS

All Shurite Panel Meters have flush cases and require 2 5/8" hole. Most standard ranges have 6-32 studs, and are mounted as follows:

### IMPORTANT—HOW TO ORDER:

For all standard models, give: (1) Model Number, (2) Range, (3) Stock Number. If Model number and stock number are not stated, Model 550 will be supplied.

#### ZERO ADJUSTERS (Z)

Zero Adjusters are available only on Models 550-DC and 650-DC. No zero adjuster on models using 950 case. When ordering, add Z to stock number. Example: Stock number for Model 550-DC voltmeter, 0-1 volt range — without zero adjuster is 5101. With zero adjuster, it is 5101-Z.

#### PANEL CALIBRATION (S)

Meters are calibrated for non-magnetic panels. If for magnetic (steel) panel mounting, specify thickness and overall size of panel, and add -S to stock number when ordering, as 5101-S. If thickness of steel panel is not specified, meter will be supplied for .040 panel.

#### VISCOSITY DAMPING (V)

Careful application of new silicone compound on bearing surfaces damps pointer overtravel. Add -V to stock number, as 5406-V, and 5 cents to price. Not regularly stocked; available only on quantity orders.

#### SEE YOUR DISTRIBUTOR

Besides carrying most types, and being able to obtain your other needs on reasonable notice, your authorized Shurite distributor of electronic parts is qualified to suggest the right meter for your need.

## APPLIANCE TEMPERATURE TESTERS

**A NEW IDEA IN TESTERS** — The need for scientific but sturdy portable test equipment in the appliance service field is met by this exclusive line. Here the user profits from J-B-T's wide experience in building field test sets for many well-known manufacturers of ranges, irons, refrigerators, deep freeze units, and similar equipment. All J-B-T testers include the principle of remote reading of temperature, and temperature measures the real usefulness of the appliance. Although called appliance testers, these handy portable testers have found a multitude of uses for trouble-shooting, experimenting and research in industry and in laboratories.

**NEW**

ware. Characteristic of more expensive pyrometers, the 23-JP-1 is automatically compensated for ambient temperature. Thus the tester eliminates calculations, avoids likelihood of serious error as temperatures change inside the instrument itself, and gives fool-proof direct readings. Supplied with attached SA-116 5½" calibrated thermocouple, clip, and convection shield. **\$23.50**

**MODEL 32-JP-3.** This sturdy, fast reading portable is by far the most widely used oven tester in the country. The rigid outer carrying case 6" x 3⅞" x 3¾" is covered in black leatherette; the glass-covered indicator fits in a 3¼" flanged metal case. The dial shows 0-650°F. in 10° divisions readable to 2½°.

Exceptionally fast, continuous response. Automatic compensation for ambient temperature is valuable feature whether the tester is used for service work, sales demonstrations, or inspection. More details on the 32-JP-3 are available in Bulletin JP-103. Price includes attached SA-116 5½" calibrated thermocouple, clip for attaching to grill, and convection shield for steady readings. **\$25.05**

**MODEL 32-JP-4.** Companion tester to the 32-JP-3 with all the features of that tester, plus a leather carrying strap, and binding posts for quick attachment and interchanging of various thermocouples listed on this page, to check irons, washers, waffle-bakers, toasters, roasters, clothes dryers, etc. Range, 0-650°F; black leatherette case 6" x 3⅞" x 3¾". More details on the 32-JP-4 are available in Bulletin JP-104. Price includes SA-116 5½" calibrated thermocouple, clip and convection shield. **\$26.15**

### IRON TESTER

**MODEL 32-JIT.** Self-contained bench type tester; checks all makes of irons; measures thermostat temperatures; and shows open or short circuits. Automatically compensated for room temperature. Also indicates operating temperature of the sole plate (working surface) on non-electric or cordless irons. Black metal case; overall size 10" x 12" x 5½", scale 0-650°F, 15 amp. fuse, 6' cord, 110-volt, 50-60 cycles. **\$31.65**

Note: Orders for 32-JIT Iron Testers are occasionally filled with 23-JIT Iron Testers. Identical with 32-JIT illustrated, but using indicators with all-plastic front.

### ALL-PURPOSE TESTER

**MODEL 61-JRT.** This 9 - in - 1 tester speeds accurate temperature adjustment and current analysis of ranges, refrigerators, etc. Rapidly reads four cold zones, -100° F. to +80° F. up to 14' distant; two heat zones 0-600° F. up to 5½' distant; one voltage range 0-300 AC; and with transformer, two current ranges, 0-30 and 0-60 amperes, AC. Sturdy, polished walnut case 15½" x 10¾" x 4¾" with handle and slip hinges. Two-color etched metal panel. Separate switches protect bulb and ammeter circuits. Requires one standard flash-light cell, replaceable in the field. Temperature scale accuracy ±2% of full scale. AC readings ±5% with rectifier. Accessories listed below may be added for testing irons, grills, roasters, washers, etc. Includes two SA-162 resistance bulbs, two SA-116 thermocouples, necessary electrical leads, and AS-TR-2 built-in transformer. **\$107.25**

For more details, see Bulletin JRT-349.

**MODEL 61-JRT (LESS TRANSFORMER).** Same unit, same scales, except does not read in amperes; AS-TR-2 transformer assembly omitted. **\$93.50**

### THERMOCOUPLES

(See next page for Resistance Bulbs and Transformers)

**SA-116 with SHIELD and CLIP.** Standard flexible No. 22 gauge iron constantan, asbestos insulated, 5½", with attachment clip and convection shield as normally supplied with 23-JP-1, 32-JP-1, 32-JP-2, 32-JP-3, 32-JP-4, 60-JRT and 61-JRT Testers. (See SA-199 for extra quality, glass insulated type). SA-118. **\$1.80**

## TEMPERATURE INDICATORS

**WHERE TO USE:** To determine heat rise of motors, transformers and coils; for laboratory furnaces, inspection set-ups, for remote indication of infra-red and other oven temperatures; and to check temperatures in industrial processes such as heat treating and annealing.

When used with selector switch, permits centralized reading of one to ten thermocouples, as in Diesel exhaust manifold applications.

### MODEL 32-J

**MODEL 32-J PYROMETER IN SN-3 STAND.** Mounted in sloping front black metal stand, 4 1/4" high x 4 7/8" deep x 4 1/8" wide. Compensated for ambient temperature. Medium resistance system, damped for quick reading on 2 7/8" scale, assures ruggedness and pointer stability. To retain the ±2% accuracy of the installation: use only the type and resistance of thermocouple and lead which are provided; do not cut extra lead—coil it—change in length changes calibration. A protection tube is not generally required. Many users find it convenient to keep an extra couple and lead on hand.

## VIBRATING REED FREQUENCY METERS (PATENTED)

J-B-T Vibrating Reed Frequency Meters are used extensively in radio, telephone, and television service, on engine generator sets, in laboratories, in many types of electronic equipment, on panel and control boards in central stations and industrial plants—wherever constant or known frequency is important to efficient operation of equipment. More than ten years of continuous experience covering many thousands of these instruments are your assurance of quality for both commercial and defense applications.

The response patterns differ with the increments of frequency between reeds. For example, at 60 cycles, half-cycle steps give the broad response shown below at left, whereas full cycle steps bring the sharp response at right.

The patented, simplified design used in the J-B-T meter operates on AC or interrupted DC. The instrument consists of a case, base, dial and central mounting frame, with a series of spring steel reeds screwed to a reed mounting bar, individual driving coil surrounding each bank of reeds, permanent magnet, series resistor and terminal studs.

Each reed is adjusted to respond by resonance to but one frequency. As the alternating current (or interrupted direct current) excites the driving coil, the one reed "in tune" with the frequency in the coils will respond by vibrating rapidly because of permanent magnet polarization and induced magnetism from the coil. The instrument is adapted to specified operating voltage by a series resistor. Frequency of the current is read on the graduated face of the instrument.

Above: Models 30-F, 31-F, 33-F, 34-F; 3/4" Metal Case

Below: Models 30-FX, 31-FX, 33-FX, and 34-FX; Molded Case Meets Mounting Dimensions of JAN-I-6; ASAC39.1-1951; and MIL-M-6A (Type MR35)

**ADVANTAGES:** Guaranteed accuracy at reference temperature of 77°F is  $\pm 0.3\%$  or better of the frequency being measured, unless otherwise stated. High fatigue safety factor for continuous operation. Temperature compensations are not required as temperature coefficient of reeds is only approximately 75 parts per million per degree F., negative.

All meters are permanently calibrated at the factory and do not require subsequent adjustment. J-B-T reeds have relatively high Q characteristics, an especially desirable factor in electronic circuits. Accuracy is not affected by wave form or external magnetic fields. Built with no pivoted parts and with lock washers at every critical point, these rugged meters can take rougher treatment than many instruments.

**CAUTION:** If a meter plugged in on a 60 cycle AC power line does not indicate a frequency of exactly 60 cycles, trust the meter! Power supply may momentarily be off-frequency due to changing load conditions beyond the control of the Utility. All J-B-T Vibrating Reed Frequency Meters are accurately calibrated at the factory, entirely independent of frequency of power supply. Production and inspection equipment are checked regularly against National Bureau of Standard frequency signals.

### NOTE ON METER VOLTAGE

J-B-T Vibrating Reed Frequency Meters of all sizes normally are made with two studs and are designed to be connected across one phase of a multi-phase line. The single phase voltage where the meter will be used thus becomes the voltage to be specified for the meter. Special meters with extra studs are made only for the purpose of reading two or more voltages, not additional phases.

#### NULL INDICATORS

Marion Ruggedized Hermetically Sealed Null Indicators are now available in models HS2 and HS3. They are used primarily as bridge and potentiometer balance indicators and in any application where an

instrument with very high sensitivity about the zero or balance point is desired. The sensitivity at this point is 1 microampere per mm. or higher; the meter's shaded pole face and shielded core construction gives sharply logarithmic attenuation as it departs from null point, and provides ample overload protection. This Ruggedized meter opens up new applications for Null Indicators, for it permits use of the null system for precise measurement under field conditions that have been prohibitively severe up to now.

## "SERVICE ENGINEERED" TEST INSTRUMENTS

THE JACKSON ELECTRICAL INSTRUMENT CO., DAYTON 2, OHIO

### DYNAMIC TUBE TESTER

#### Model 648

This tester incorporates the most important engineering advancements in 12 years of tube tester research, such as the Dynamic test method and sequence switching. The Jackson Dynamic test circuit applies separate element voltages to each tube element. Separate load circuits are also used. These voltages and loads have been carefully selected for each tube to meet most ideally the normal operating condition of the tube. The current flowing only in the plate circuit of the tube under test is indicated on the 4 inch meter in easy-to-read terms.

Sequence Switching makes possible **SIMPLIFIED OPERATION**, formerly unattainable in Dynamic test methods. There are actually only three control units to be set according to rotary chart listing for each tube. These are: Heater Voltage (upper left), Plate Control (upper right) and the Sequence Switch (center). The only other adjust-

ments are line voltage control and shorts test.

Fast, Accurate Shorts Test lamp indicates only when tube is shorted. The shorts test control moves only through 4 positions—yet completely tests each tube element for possible shorts or leakage. The tube is tested under a heated cathode condition.

Correct Test Voltage and Load Circuits protect tubes under test against damage by overload. Even low voltage battery types are provided with suitably low operating potentials. The full GOOD-BAD scale of the meter is used for each test. The meter is sufficiently sensitive that special "Low scale" readings are not required (such as for diodes, etc.).

Life-line test shows you accurate forecast of end of tube life. Reduced output caused by over-age gives reduced reading on meter. Lets you catch bad tubes before they actually go bad.

Steel cases and panels finished in gray Ham-R-Tex—approximate net weight of each model 16 pounds.

### AUDIO OSCILLATOR Model 655

The model 655 provides an audio frequency voltage DEVELOPED AT ITS FUNDAMENTAL FREQUENCY. The basic design of this instrument is entirely different from the "beat frequency" type of Audio Oscillator.

#### FEATURES

**Resistance Capacity Tuned Circuit Design**, engineered for improved operating characteristics of audio measurements.

**No Zero Adjustment** — Tuned Fundamental Frequency method provides permanently locked calibration.

**Output Characteristics** — A choice of either transformer coupled or resistive output is available. The Model 655 meets the most exacting requirements as to

**Waveform-Uniform Frequency Characteristics and Output Load Impedance Selection.** A special feature of the output system is the 10 ohm tap for low impedance circuits such as speaker voice coils, etc. **Variable Frequency Selection** throughout the four bands. There are over 33 inches of scale length making Exact settings possible.

**Complete Stability** — The stability of frequency calibration is constant throughout the entire range. The stabilized circuit permits large changes in line voltage to occur without affecting frequency or waveform and having negligible effect on output voltage.

**Simplified Operation** — It is only necessary to select desired Frequency and Output. **There Are No Other**

**Controls** — The possibility of errors in operation is therefore eliminated.

**High Output Power** — More than **Three Times** the output usually available from ordinary audio oscillators.

**Construction** — Frequency dial is glass enclosed so that calibrations cannot become disfigured. Rugged mechanical features assure trouble free operation under service conditions.

#### SPECIFICATIONS

**Frequency Range** — 20 cycles to 200,000 cycles in 4 ranges: 20-200 cycles/200-2000 cycles/2000 to 20,000 cycles/20,000 cycles to 200,000 cycles.

PRECISION  
FOR THE RADIO AND

INSTRUMENTS  
ELECTRONIC INDUSTRY

## Q-METER

TYPE 160-A

Freq. Range 50 kc. to 75 mc.

Radio frequency circuit design often requires the accurate measurement of Q, inductance, and capacitance values. For this application, the 160-A Q-Meter has become the universal choice of radio and electronic engineers throughout the country.

Each component part and assembly used in the manufacture of this instrument is designed with the utmost care and exactness. Circuit tolerances are held to values attainable only in custom built instruments.

The 160-A Q-Meter is designed specifically for the accurate and rapid measurement of Q, inductance, and capacitance. The basic method of measurement consists of measuring the voltage developed across a variable air capacitor connected as an element in a series resonant circuit. Essentially the Q-Meter is comprised of an 8 range RF oscillator, a Q measuring circuit with a main and vernier section tuning condenser, a vacuum tube voltmeter of special design which reads the voltage across the tuning condenser, and a voltage injection circuit which applies an accurately known voltage to the terminals of the series resonant circuit. In operation the Q circuit is resonated by means of the variable Q tuning capacitor and the voltage developed across this capacitor is indicated by means of the vacuum tube voltmeter which is calibrated directly in terms of Q. This method of measuring Q is simple, accurate, and requires only a single operation—resonating the circuit—to measure Q. Variations of this basic method of measurement are employed to determine effective inductance and capacitance as well as the dielectric properties of insulating materials.

### SPECIFICATIONS

**Oscillator Frequency Range:** Continuously variable from 50 kc. to 75 mc. in eight self-contained ranges. (In conjunction with an external oscillator the frequency range of the Type 160-A Q-Meter may be extended from 50 kc. to 1 kc. for coil measurements).

**Oscillator Frequency Accuracy:** Generally better than  $\pm 1\%$ , except the 50-75 mc. range which is approximately  $\pm 3\%$ .  
**Range of Q Measurements:** The Q voltmeter is calibrated directly

in Q, 20-250. The "Multiply-Q-By" meter, which measures the oscillator voltage injected in the Q measuring circuit, is calibrated from x1 to x2 and also at x2.5. The reading of the Q voltmeter scale is multiplied by the setting of the "Multiply-Q-By" meter. Hence, the total range of circuit Q measurements is from 20 to 625. Condensers, dielectrics, etc., which are measured by placing these in parallel with the measuring circuit, may have Q's as high as 5,000.

**Accuracy of Q Measurements:** The accuracy of the direct reading measurement of circuit Q (for Q voltmeter readings between Q=50 and Q=250) is approximately 5% for all frequencies up to the region of 30 mc. and decreases with increasing frequency. Correction may be made for the error above 30 mc. as it is principally a frequency effect. The accuracy of the measurement of condensers, dielectrics, etc. is generally better than 10% for Q's below 5,000 and up to 30 mc.

**Capacitance Calibration Range:** Main tuning condenser 30-450 mmf. calibrated in 1 mmf. divisions from 30 to 100 mmf. and in 5 mmf. divisions from 100 to 450 mmf. Vernier condenser, plus 3 mmf., zero, minus 3 mmf., calibrated in 0.1 mmf. divisions.

**Accuracy of Capacitance Calibration:** Main tuning condenser, generally better than 1% or 1 mmf., whichever is the greater. Vernier tuning condenser,  $\pm 0.1$  mmf. The internal inductance of the tuning condenser at the binding posts is approximately .015 microhenry.

**Voltmeter:** The Q voltmeter is also calibrated in volts. A specially calibrated tube, Type BRC 105-A tube, is used. Replacements may be made without recalibration.

**Power Supply:** 105-120 volts, 50-60 cycles. Also 210-240 volts, 50-60 cycles. Power consumption 50 watts.

**Dimensions:** Height 12.5", length 20", depth 8.5".

**Weight:** 25 lbs.

# FM SIGNAL GENERATOR

TYPE 202-B

Frequency Range 54 mc. to 216 mc.

The type 202-B FM Signal Generator has been developed to meet the needs of engineers engaged in the design of FM and television receivers for operation within the frequency range of from 54 megacycles to 216 megacycles.

This instrument has been proportioned for maximum conservation of laboratory bench space, with frequency dial, modulation and output meters positioned at eyelevel for maximum readability. The unit is finished in grey wrinkle enamel with engraved panel and is supplied complete with tubes and standard output cable.

## SPECIFICATIONS

**RF Range:** Frequencies from 54 mc. to 216 mc. are covered in two ranges, 54-108 mc. and 108-216 mc.

**Main Frequency Dial:** The two RF ranges are calibrated directly in megacycles to an accuracy of within  $\pm 0.5\%$ . The dial is also divided in 24 equal divisions for use with the vernier frequency dial.

**Vernier Frequency Dial:** The vernier frequency dial is divided in 100 divisions and is geared to the main dial through a gear train having a 24:1 ratio. The approximate frequency change per vernier division is 26 kc. on the low range and 52 kc. on the high range.

**Frequency Modulation (Deviation):** The FM deviation is continuously variable from zero to 240 kc. The modulation meter is calibrated in three FM ranges (1) zero to 24 kc., (2) zero to 80 kc. and (3) zero to 240 kc. deviation.

**Amplitude Modulation:** The modulation meter is calibrated at 30% and 50% amplitude modulation. AM is continuously variable from zero to 50%.

**Modulation Controls:** Separate potentiometers are provided for continuous control of FM and AM levels.

**Modulating Oscillator:** The internal AF oscillator may be switched to provide either frequency or amplitude modulation; it may also be switched off. External binding posts permit the use of an external AF oscillator for either FM or AM. Both internal and external AF oscillators may be used simultaneously, thus providing either FM or AM at two modulation frequencies simultaneously or simultaneous FM and AM. The internal AF oscillator provides eight fixed frequencies which may be selected by a rotary type switch—50, 100, 400 cycles and 1, 5, 7.5, 10 and 15 kilocycles, accurate to within 5%. The output voltage of the internal AF oscillator is available at the external binding posts for synchronizing or other purposes.

**RF Output Voltage:** The RF output voltage is continuously variable over a range from 0.1 microvolt to 0.2 volts at the terminals of the output cable. The impedance at the RF output jack, looking into the instrument, is 53 ohms resistive. The output cable has a 53 ohm resistance termination at the terminal end hence the output impedance of the unit with cable attached is 26.5 ohms.

Copyright by U. C. P., Inc.

**Distortion:** FM distortion at 75 kc. deviation is less than 2% when modulated with the internal AF oscillator or an external AF oscillator having 0.5% distortion or less. At 50% amplitude modulation the distortion is about 5% using the internal AF oscillator and decreases as the modulation percentage is reduced. An external AF oscillator may be employed for amplitude modulation if desired.

**Spurious RF Output:** All spurious RF output voltages are at least 30 db. below the desired fundamental. The RF leakage is very low.

**Fidelity Characteristics:** The deviation sensitivity of the FM modulation system as a function of frequency is constant from dc. to over 10 kc. At 15 kc. the deviation as indicated on the modulation meter is 0.5 db. higher than the true value. The amplitude modulation system is also flat from dc. to 10 kc., and departs from nominal by 1.0 db. at 15 kilocycles.

**Power Supply:** The power supply is self-contained in the instrument for use on 60 cycles, 110 volts.

**Accessories:** 203-A Frequency Converter (Frequency range 0.4 mc. to 25 mc.).

**Dimensions:** Height: 17"; Width: 13½"; Depth: 11½".

**Weight:** 35 lbs.

**Price:** \$975.00, F.O.B. Boonton, N. J., U.S.A.

## LOW FREQUENCY "Q" INDICATOR TYPE NO. 1030

### USES

The Type 1030 Low Frequency "Q" Indicator measures directly the "Q" factor of coils. The instrument can also be used to measure the inductance of coils, distributed capacity, impedances, and dielectric losses. The "Q" Indicator can be used to study the magnetic properties of iron, such as stability of iron cores in function of applied voltages, and iron losses as a function of the frequency.

### FEATURES

The main and essential feature of the instrument is that the "Q" factor is read directly without any complicated computations. The possibility of measuring "Q" through the whole audio and supersonic frequency range is provided. The setting up and the measuring of the "Q" of coils is practically instantaneous. The instrument is unaffected by line voltage variations, is entirely self-contained and A.C. operated. Both meters ("multiply-by" and "Q") are protected against overloads and cannot be burned out. The effective frequency range for "Q" measurements is 50 to 50,000 cycles. Due to the fact that the R. C. Oscillator frequency range is from 20 to 200,000 cycles, comparative "Q" Measurements can be made below 50 cycles and above 50,000 cycles. Since the "Q" factor appears as a relative quantity, i.e., a ratio of two voltages, the tracking of the two meters is such that a reasonably good accuracy of "Q" factors is obtained for frequencies above 50,000 cycles. The terminals of the variable decade condensers are available directly on the front panel of the instrument and can therefore be used as a high quality precision variable condenser. The R. C. Oscillator and variable impedance amplifier can be used as a separate low frequency generator with a maximum output power of five watts into a 50 ohm load. The "Q" scale is calibrated from 0 to 50. A high accuracy of measurement is obtained, since for any position of the multipliers, a total of "Q" variation from 0 to 50 is read on a 4 inch meter. "Q" factors of coils can be measured with up to 50 volts across the coil, and therefore makes it possible to determine the stability and the variations of the "Q" factor of coils in function of the applied voltage. The voltage fed into the series circuit is variable from 10 volts to .01 volt.

### SPECIFICATIONS

**Range of "Q" Measurements:** The range of "Q" factors is from .5 to 500 over the frequency range from 50 to 50,000 cycles. The accuracy of "Q" measurement is approximately 5% for frequencies up to 50,000 cycles.

**Oscillator Frequency Range:** Continuously variable from 20 to 200,000 cycles in four ranges.

**Frequency Accuracy:** 1% under normal temperature conditions. The frequency stability is better than 2% over a long period of time.

**Output Impedance and Voltage:** Four output impedances are available.

- (a) 10 ohms impedance — 10 V Output Voltage
- (b) 1 ohm impedance — 1 V Output Voltage
- (c) .2 ohm impedance — .1 V Output Voltage
- (d) .1 ohm impedance — .01 V Output Voltage

Those Impedances are measured at 50,000 cy.

**Variable Condenser:** The variable condenser is composed of a 10 x 1 mf., 10 x 0.1 mf., 10 x 0.01 mf., 10 x 0.001 mf. decade condenser and a 0.001 mf. variable air condenser.

**Power Supply:** The instrument is entirely self-contained and A.C. operated. Total consumption 200 watts.

## TYPE 1110-A INCREMENTAL INDUCTANCE BRIDGE

**Frequency Range:** The bridge is calibrated and adjusted at both 60 and 1000 cycles, but can be used at any frequency up to 10,000 cycles. Errors resulting from stray capacity increase with frequency. Coils having a high inductance should be measured at a low frequency to avoid resonance effect.

**Range of Superimposed D.C.:** On multiplier switch position L X 100 the D.C. is limited to 10 ma.

On the position L X 10, the D.C. is limited to 250 ma.  
On all other positions the D.C. can be one ampere maximum.

### USES

The Incremental Inductance Bridge is designed for measuring the inductance of Iron Core components at any frequency up to 10,000 cycles. Inductors can be measured with a superimposed direct current, therefore, the bridge will measure the incremental inductance of coils. The bridge can be used for determination of storage factor, "Q", either at a given frequency in function of the applied voltage or at a given voltage in function of the applied frequency. The bridge can be used by the manufacturers of iron core components, such as filter chokes, high Q coils, and iron core audio and supersonic frequency components. Due to its very wide inductance range the instrument can be used as a general purpose laboratory inductance bridge.

### SPECIFICATIONS

**Inductance Ranges:** One millihenry to one thousand henries in five ranges. Inductance values are read directly from a four dial decade and a multiplier switch. The last range may be extended to 10,000 henries through the use of an external resistance.

**Conductance Ranges:** One micromho to one mho in five ranges, read directly from a four dial decade and a multiplier switch. This conductance represents the reciprocal of the A.C. resistance of the coil.

**"Q" Range:** "Q" is measured as the product of Inductance (L) and Conductance (G). The range of "Q" measured on the bridge is 0.5 to 100. Measurement of inductance is independent of the values of "Q".

**Accuracy:** 1% through the frequency range from 60-1000 cycles 2% for frequencies from 1000 to 10,000 cycles. This accuracy is decreased for extreme positions of the multiplier. Conductance measurements 5% from 60-1000 cycles.

**Mounting:** The bridge is supplied in a walnut cabinet or on special order for standard rack mounting.

## MODEL 1040 A.C.-V.T. VOLTMETER

### USES

The type 1040 Vacuum Tube Voltmeter is a high impedance wide frequency range voltmeter which can be used at audio and supersonic frequencies. It is particularly recommended for (1) vibration studies involving very low frequencies, (2) frequency characteristics and gain measurements on amplifiers, (3) transmission losses on telephone circuits: filter and carrier systems up to 250,000 cycles, and (4) acoustic measurements, such as, determination of frequency response of microphones and loudspeakers. Because of the high sensitivity of the instrument, the voltmeter can be advantageously used as a null detector in A.C. bridge measurements. In addition to its use as a voltmeter, the instrument can be used as an ammeter to measure a wide range of currents by connecting it across suitable resistors.

### FEATURES

Because of the low input capacity, a high value of input impedance is maintained over the five ranges of the voltmeter. A balanced rectifier, a balanced D.C. amplifier circuit, and a high amount of degeneration throughout the amplifier makes it independent of line voltage variations and changes in tube characteristics. A very important feature of the instrument is the logarithmic voltage scale of the meter. With this type of scale, the percentage accuracy of reading is uniform over the entire scale. Another advantage of the logarithmic scale is that it provides a uniform decibel scale which is a very valuable feature in sound and communication measurements. A zero adjustment and full scale adjustment are provided. These two controls serve for all ranges and no re-setting is necessary when switching from one range to another. The time constant of the instrument is adjusted in order to read very low frequencies of 7 to 10 cycles without any vibration of the needle. The circuit of the meter is arranged so that it can not be burned out by any overload of the instrument. The vacuum tube voltmeter is small, compact, entirely self-contained, A.C. operated.

### SPECIFICATIONS

**Voltage Ranges:** .001 volts to 100 volts in five ranges (.01, .1, 1, 10, and 100 volts full scale).

**Accuracy:** 2% on full scale on all five ranges, on sinusoidal voltages.

**Waveform Error:** The instrument is a peak voltmeter calibrated to read RMS values. On distorted waveforms, the percentage deviation of the reading from RMS values may be as large as the percentage of the harmonics present.

**Frequency Ranges:** 10 to 200,000 cycles, .1 db. variation from 20 cycles to 150,000 cycles; .50 db. variation from 10 cycles to 200,000 cycles.

**Input Impedance:** Equivalent to 500,000 ohm resistance in parallel with a 15 MMF. condenser.

**Stability:** Effect of variation in line voltage from 100 volts to 125 volts is 1%. Effect in changes of tubes is less than .5%.

**Scale:** Logarithmic voltage scale calibrated from 1 to 10 plus a linear decibel scale calibrated from 0 db. to 20 db.

**Meter:** 4" suppressed zero 1 MA meter protected against overloads.

**Power Supply:** The instrument is entirely self-contained and operates on 100-125 volts, 50-60 cycles. Total consumption, 40 Watts.

**Dimensions:** 4 7/8" High x 5 5/8" Wide x 9 7/8" Long.  
**Weight:** 12 pounds.

## NO. 1010 COMPARISON AND LIMIT BRIDGE

### USES

This instrument is a comparison and limit bridge for use in both laboratory and production testing of resistors, condensers and inductors. The manufacturer of these components can use it for production tests, the user for incoming inspection and acceptance tests. The instrument is particularly useful for laboratory work (bridge or filter-) where very accurate components are required.

### FEATURES

For precision and production testing, the bridge has many advantages. Power line operation and the visual indicator make the instrument completely self-contained. It can be used in noisy locations. Its small size and light weight permit the instrument to be moved easily and to be set up wherever necessary.

### SPECIFICATIONS

**1—Frequency:** Three frequencies are available: 50-60 cycles, 1000 cycles, and 10,000 cycles.

The 50 or 60 cycles are taken from the line. The 1000 and 10,000 cycles are generated by an oscillator and are accurate to within 10%.

**2—Range:** Two comparison ranges are provided: 10% and 20%. They are selected by a rotary switch. In the 10% position the percentage is read directly on a calibrated dial. In the 20% position the reading of the dial is multiplied by two.

**3—Resistor Measurements:** Resistors from 10 ohms up to 1 megohms are measured by the comparison method at 60 cycles. Resistors of greater value than 1 megohm can be measured by using the instrument as a limit bridge.

## NEW TELEVISION VIDEOMETER

This fine new instrument is the first of its kind. Now available to rapidly and accurately solve your service problems. Does in minutes many of the TV servicing jobs that would require hours by other methods.

The 650 has a new timer circuit which delivers video pulses of 60 cycles, 900 cycles, 15,750 cycles and 315 kc., singularly or in any combination, both positive and negative output. Pulses are all locked together and crystal controlled for greater accuracy.

Pulses can be used directly, metered in peak-to-peak volts or to modulate the self-contained RF oscillator.

RF oscillator covers all TV channels in two bands (2-6 and 7-13), all on fundamentals. RF output is metered at all times from 1 to 10,000 microvolts with calibrated attenuation and variable percentage modulation. RF can be externally modulated with video frequencies from 5 cycles to 4 MC with variable percentage modulation on all channels.

Self-contained, substitute external video amplifier, 5 cycles to 4 MC with a variable gain from 0 to 10, with high input impedance, low output impedance and metered peak-to-peak voltage output.

Includes horizontal and vertical sawtooth voltages which can be directly substituted for vertical and horizontal oscillator in a TV receiver. Both the vertical and horizontal sawtooth amplitude is sufficient to give full raster deflection and in the case of flyback type high voltage power supplies the horizontal sawtooth can be used to light up the picture tube.

The 650 also contains an AC line voltage scale for instantaneous check on line voltage fluctuation, a common source of TV trouble.

This HICKOK Videometer is truly an all-purpose video generator, and a must for the income-minded, successful and aggressive TV service technician.

Will rebroadcast a TV picture on any channel, to any number of TV receivers.

### Accurate, Stable, High Sensitivity with AC and DC AMPLIFIERS

Model 670: The more exacting requirements of today's television maintenance have made it necessary for the service technician to have a good 'Scope. The HICKOK Model 670 is designed with DC amplifiers to provide excellent square wave response — even down to DC.

Many TV receivers are so far out of alignment that extreme 'Scope sensitivity is necessary to properly show the response curve. The 670 provides this extra sensitivity — to 10 MV per inch.

To properly view all TV frequencies a wide band vertical amplifier is necessary. The 670 provides for this need by having a band width to beyond 2 MC. Push-pull amplifiers and polarity reversing switches are also new features you will find most useful in the 670.

### TECHNICAL FEATURES:

Highest practical sensitivity: 0.01 (10 millivolts) RMS per inch.

Demodulator circuit for viewing modulation on RF signal.

Recurrent linear sweep; 3 cycles to 50,000 cycles.

Reversing switches for both horizontal and vertical deflection.

Fixed sweep frequency for horizontal and vertical wave forms to TV receivers.

Both negative and positive synchronizing.

Line phasing control (approximately 180°).

Wide band vertical amplifier, useful beyond 2 MC.

Direct coupled, balanced (push-pull) amplifiers for both vertical and horizontal deflection.

Provision for Z-axis modulation.

Permits the study and analysis of wave forms, and other electric and magnetic phenomena. Excellent square wave response.

Provides for the visual testing and alignment of amplitude and frequency modulated receivers, as well as television equipment when used with a frequency modulated RF oscillator or sweep generator.

Provides the means for measuring voltages and frequencies of AC signals, hum, gain and distortion in audio amplifiers.

### TELEVISION RF MARKER and Crystal Calibrator

A perfect companion for the HICKOK 610-A TV Alignment Generator to provide the most complete, overall TV alignment including UHF and VHF.

The 680 is designed to rapidly solve the growing TV front-end maintenance problems. Thousands of TV front-ends are failing daily due to age. The usual procedure of returning these units to the manufacturer for replacement has become increasingly difficult. Now, with the 680 you can build a big business on repairing TV front-ends yourself — to crystal accuracy. The 680 has directly calibrated channel, sound and picture frequencies accurate to .05%. Covers the ranges of 53-89 MC and 174-217 MC on fundamentals and to 868 MC on harmonics.

The 680 also is a crystal standard with choice of 3 crystals provided by means of a front panel switch. (A 2.5 MC crystal is supplied.) The built-in magic eye provides a visible zero beat indicator; a phone jack is also provided for an audible indicator. The 680 can be used as a heterodyne frequency meter for calibrating other generators up to 900 MC.

This fine instrument is the latest HICKOK development and can be used as a crystal standard in the shop, laboratory or factory, to check oscillators, generators and front-end or over all response curve of a TV receiver to an accuracy of .05%.

## BROWNING UNIVERSAL FM MODULATION MONITOR — MODEL MD-25A

A single instrument for monitoring the modulation of all FM transmitters operating in the communications bands from 30 to 162 mc. Provides simple and inexpensive means for checking fixed or mobile transmitters for compliance with FCC limitations on carrier frequency swing due to modulation. Maintenance of frequency swing within the FCC plus-or-minus 15 Kc limit is equally important for reduction of adjacent-channel interference. Peak flasher indicates excessive modulation.

The Browning Universal Modulation Monitor checks any communications system working on 30-40, 40-50, 72-76, and 152-162 mc., a feature of special importance to engineers responsible for supervision of several systems, since a single instrument can be used to check all transmitters operating within the above bands.

### ELECTRICAL FEATURES

- An outstanding feature of Model MD-25A is its extreme simplicity of operation. The multi-range band-selector switch is set to the band to be monitored, and the unmodulated transmitter carrier is tuned in precisely. Then the carrier is modulated by voice or audio oscillator, and the frequency swing is read directly from a 4-inch panel meter calibrated to 20 kc. A calibrated discriminator is used to determine modulation swing. The meter also determines precise tuning by indicating limiter voltage or total discriminator voltage.
- The meter can be read to better than 1 kc. The meter indicates peak swings of sustained sinusoidal modulation or voice modulation peaks of 0.3 seconds duration or more.
- Aural monitoring is provided by means of an audio output which permits attachment of an audio amplifier or phones. Oscilloscope may be attached at the same point for analysis of demodulated signal.
- Measurements may be made on signals generating less than 1 millivolt at the antenna input. If the instrument is mounted at the headquarters station, cars can be checked while they are on the road.
- Tube complement: one 6AK5, four 6AU6, three 6SN7, one each 5Y3, 6C4, 6AL5, 6J6, VR-150.

### MECHANICAL FEATURES

- Model MD-25A is mounted on a standard 8¾" rack panel.
- Supplied with a portable case 20" wide, 9" high, and 12" deep.
- Weight: 40 lbs. Shipping weight: 55 lbs.
- Case is readily removable for rack mounting use.

## **WATERMAN RAYONIC TUBE DEVELOPMENTS**

3 SP

Since the introduction of Waterman RAYONIC 3MP1 tube for miniaturized oscilloscopes, Waterman has developed a rectangular tube for multi-trace oscilloscopy. Identified as the Waterman RAYONIC 3SP, it is available in P1, P2, P7 and P11 screen phosphors. The face of the tube is 1 1/2" x 3" and the over-all length is 9 1/4". Its unique design permits two 3SP tubes to occupy the same space as a single 3" round tube, a feature which is utilized in the S-15-A TWIN-TUBE POCKETSCOPE. On a standard 19" relay rack, it is possible to mount up to ten 3SP tubes with sufficient clearances for rack requirements. All RAYONIC cathode ray tubes are available in P1, P2, P7 and P11 phosphors. We are authorized to supply 3SP1, 3JP1 and 3JP7 with JAN stamp. All RAYONIC tubes listed below operate on 6.3 volts heater with .6 amp. current.

## POCKETSCOPE®

HI, WIDE and HANDSOME POCKETSCOPES are characterized by small size, light weight, and outstanding electrical performance. All units have frequency compensated attenuators as well as non-frequency discriminating gain controls. All units have both periodic and trigger sweeps from  $\frac{1}{2}$  cycle to 50KC. The amplifiers are direct coupled thus frequency response starts from 0 cycles. No peaking coils are used, thus, the transient response is good. Full expansion of trace, both vertical and horizontal, is built in. Means for amplitude calibration are provided. DC coupling in POCKETSCOPES provides unusual stability of the trace, regardless of the line voltage changes or variations of impedances in the

input circuit. The HI, WIDE and HANDSOME POCKETSCOPES are the outgrowth of Waterman pioneering of the first commercial miniature oscilloscope, which has proved to be useful and reliable over a period of years. Combination filter and graph screens are used for better visibility, thus traces can be observed even under high ambient light conditions. Binding posts for convenience of connections, with an effective shield, are used. S-14-A has sensitivity of 10 mv/inch with pass band above 200KC. S-14-B has sensitivity of 50 mv/inch with pass band above 1 megacycle. S-15-A is similar to S-14-A except that it has two independent CR Tubes for multi-trace oscilloscope work. Accessories such as carrying cases and probes are available.

S-11-A

The Model S-11-A Industrial & Television POCKETSCOPE is a small, compact, lightweight instrument for observation of repetitive electrical circuit phenomena. The Industrial & Television POCKETSCOPE is a complete cathode ray oscilloscope incorporating the cathode ray tube, vertical, horizontal, and intensity amplifiers, linear time base oscillator, blanking, synchronization means and self-contained power supply. The Industrial & Television POCKETSCOPE can be used, not only for AC measurements, but for DC as well, inasmuch as it has vertical and horizontal amplifiers which are capable of reproducing faithfully within  $-2$  db, from 0 to 200KC. The sensitivity of the vertical and horizontal amplifiers is high and is in the order of 100 mv rms/in.

S-12-B

Model S-12-B RAKSCOPE has the features of S-11-A POCKETSCOPE, plus. The RAKSCOPE is JANized and the government model number is OS-11. The Sweep, from 5 cycles to 50KC is either repetitive or triggered. Vertical and horizontal amplifiers are 50 millivolts rms per inch with band pass from 0 to 200KC. Special calibrating circuitry is provided for frequency comparison. Both the vertical and horizontal amplifiers are identical and use no peaking. The panel is only 7" high and the scope fits standard rack. The functional layout of the control permits ease of operation.

## VACUO JUNCTIONS (THERMOCOUPLES)

Illustration 4 times actual size.

### GENERAL INFORMATION.

#### Insulation.

Vacuo Junctions are electrically insulated from the heaters, and tested to 100 volts D.C.

#### Resistance Tolerances.

Resistance tolerances for Heater or Thermo-Couple are plus or minus 10%.

#### Sensitivity Tolerances.

The nominal output of 7 millivolts is subject to a variation of plus or minus 12%.

#### Current Overload.

The current ratings can be exceeded by a 50% overload without risk of damage to the Thermo-Couple for continuous running. The millivolts output at any overload within this limit can be calculated by relating it to the square of the current approximately.

The Heater will withstand transient overloads of 100%, but there is a risk of burning out if this overload is maintained.

#### General.

Owing to the extremely fine gauges employed it is not possible to guarantee any closer tolerances.

#### Temperature Co-efficient.

The over-all temperature co-efficient of the Thermo-Couple does not exceed 0.2% per degree centigrade. This temperature co-efficient, generally speaking, is of no value because the Thermo-Couples, being used invariably with indicating galvanometers, it is the over-all temperature co-efficient of couple and galvanometer which is important, and this can only be ascertained experimentally, the interacting factors being too numerous for estimation or calculation.

# SUPERIOR TEST EQUIPMENT

The New Model TV-11

## TUBE TESTER

### Specifications:

- Tests all tubes including 4, 5, 6, 7, Octal, Lock-in, Peanut, Bantam, Hearing-aid, Thyatron, Miniatures, Sub-Miniatures, Novals, Sub-Minars, Proximity Fuse Types, etc.
- Tests for "shorts" and "leakages" up to 5 Megohms.
- Uses the new self-cleaning Lever Action Switches for individual element testing. Because all elements are numbered according to pin-number in the RMA base numbering system, the user can instantly identify which element is under test. Tubes having tapped filaments and tubes with filaments terminating in more than one pin are truly tested with the Model TV-11 as any of the pins may be placed in the neutral position when necessary.
- The Model TV-11 does not use any combination type sockets. Instead individual sockets are used for each type of tube. Thus it is impossible to damage a tube by inserting it in the wrong socket.
- Free-moving built-in roll chart provides complete data for all tubes.
- Newly designed Line Voltage Control compensates for variation of any line voltage between 105 Volts and 130 Volts.

### EXTRA SERVICE

The Model TV-11 may be used as an extremely sensitive Condenser Leakage Checker. A relaxation type oscillator incorporated in this model will detect leakage even when the frequency is one per minute.

### \* NOISE TEST

Phono Jack on front panel for plugging in either phones or external amplifier will detect microphonic tubes or noise due to faulty elements and loose external connections.

The Model TV-11 operates on 105-130 Volt 60 Cycles A.C. Comes housed in a beautiful hand-rubbed oak cabinet complete with portable cover. Size 11 1/4" x 13" x 6". Shipping Weight 15 lbs.

## SIGNAL GENERATOR

Provides Complete Coverage for A.M.-F.M. and TV Alignment

### SPECIFICATIONS

- ★ Generates Radio Frequencies from 100 Kilocycles to 60 Megacycles on fundamentals and from 60 Megacycles to 240 Megacycles on powerful harmonics.
- ★ Accuracy and stability assured by use of permeability trimmed Hi-Q coils.
- ★ R.F. available or modulated by the internal audio oscillator.
- ★ Built in 400 Cycle sine wave audio oscillator used to modulate the R.F. signal also available separately for audio testing of receivers, amplifiers, etc.
- ★ Oscillator Circuit: Uses a miniature high frequency type of acorn triode in a Hartley circuit to insure a high degree of stability. By using the same type of triode as a buffer amplifier, complete and positive isolation between the R.F. oscillator and the attenuator is attained.
- ★ Attenuator: A 3 step ladder type of attenuator is used. Each step of the attenuator is controlled by a separate attenuator control thus providing intermediate level steps.
- ★ Tubes used: 955, as R.F. Oscillator, 955 as Modulated Buffer Amplifier, 6SN7 as Audio Oscillator and Power Rectifier.

The Model 660 comes complete with coaxial cable test lead and instructions.

## SCALE PRINTING MACHINE

Prints lettering, numbers and divisions on meter scales, dials, name plates, labels, etc. Uses standard printers type obtainable everywhere. Not intended for production work but rather for those special jobs which are one of a kind. Does a neat printed job in a jiffy. The Model 1000 Junior machine finds the most use where the divisions are already drawn in and the scale requires numbers and letters. The Model 1500 Standard machine (illustrated) provides in addition, division printing features.

1000 JUNIOR SCALE PRINTING MACHINE.....	\$45.00
1500 STANDARD SCALE PRINTING MACHINE	95.00

Prices do not include printers type.

## RUBBER CIRCUIT STAMPS

These handy rubber stamps provide clear sharp impressions of all the most widely used radio and electrical circuit symbols. Not only saves considerable drawing and drafting time but provides a neater-looking appearance as well. Available in two popular sizes. Stamps may be purchased separately or in complete sets. When ordering, specify stamp number and size.

(Patent No. 2,421,321)

NE-51

For 110 and 220 volts

The new NE-51 lamp is especially useful for pilot lights to be operated on commercial voltages. It has a distinctive orange-red glow and consumes very little current.

All of these assemblies are listed by Underwriters' Laboratories, Inc.

**BINDING SCREWS**

### MULTI-VUE CAP

In addition to the advantages given by the provision of the built-in resistor, these assemblies offer another feature that is especially important in obtaining effective indication with the NE-51 lamp. The "Multi-vue" cap shown at the right gives a high degree of visibility by directing an increased amount of light toward the eye when the indicator is viewed from any angle. When it is desirable to view the electrodes directly, the clear caps shown below are very effective. For concentrating the light into a beam the metal lens holders are equipped with convex lenses as shown.

### BUILT-IN RESISTOR

PATENTED  
No. 2,421,321

External resistors will be furnished which will permit use of these pilot lights on voltages higher than 220 volts.

This series of pilot light assemblies is unique and has several exclusive features. The resistors are permanently built into the high quality DIALCO designed socket.

This socket is constructed with heavy molded bakelite insulation in which the terminals are securely anchored. The insulated socket is mounted in a threaded bushing equipped with nut and shakeproof washer for mounting on a panel of any usual thickness.

## CONNECTORS FOR SINGLE CONDUCTOR CABLE FOR MICROPHONES - SPEAKERS - PICK-UPS - JACKS

*(using cable shield for second conductor)*

The fittings shown here are designed for use with standard metal shielded single conductor cable up to  $\frac{1}{4}$ " diameter. These connectors are heavily constructed from solid brass and all exposed parts are chrome plated and highly polished.

The cable end connectors are provided with rugged wire spring protectors which prevent sharp bends at the connection. The protector is soldered to the cable sheath and secured in the connector by a set screw so that all strain is relieved from the conductor.

#### A FUSE WITH A LONG TIME-LAG

These fuses avoid needless blows from starting currents or surges. They have a fuse link which operates only on very high overloads or short-circuits — they have a thermal cutout which functions on low overloads — the thermal cutout cannot operate quickly at any load, hence long time-lag is obtained. Yet protection is afforded against short-circuits or continued overloads.

## FUSETRON DUAL-ELEMENT Fuses and Fuse Holders

*for Protection of Radios, Instruments and Electronic Equipment*

### BUSS FUSE CLIPS for 1/4 inch Fuses

(SFE4, 6, 9, 14, 20, AGX, AGC, ABC, MDL, MJB, MTH fuses)

Spring bronze clips are made of Hercules — a bronze of distinctly superior quality for spring clips. This metal gives clips great gripping strength and ability to retain spring under adverse conditions.

Beryllium copper clips combine low electrical resistance with great gripping strength. This means maximum electrical conductivity and results in cooler operation of clips and fuse.

Size of mounting hole; .130 to .135 inch.  
Center of hole to back-stop; .125 to .135 inch.  
Min. length of contact surface; 3/32 inch  
Maximum height; 1 1/32 inch  
Maximum width; 1 1/32 inch

### Other standard and special fuses, fuse blocks and fuse holders

If the fuses, blocks and holders shown do not fit your requirements ask for information on other types.

Fuses and fuse mountings to meet JAN and Military specifications also are available.

If you have a special problem in protection send description or sketch giving number of circuits, type of fuse, terminals, etc., desired. We welcome such inquiries.

### BUSS FUSE HOLDERS

Make it convenient to mount fuse on any equipment. Changing or inspection of fuse is easy and quick.

Holder has removable knob. Fuse projects beyond body of holder and is not held tight on other end when knob is removed.

Fuse and contacts are protected from dirt and fumes.

Good contact on fuse is made certain by strong coil spring pressure. Poor contact heating that often causes fuse to blow needlessly is eliminated.

Holder bodies are made of black bakelite. All current carrying parts are of brass or copper. Terminals and all contact parts are bright alloy plated.

### PANEL MOUNTED HOLDERS for 1/4 inch Fuses

Holders are inserted through hole in panel and are locked in place by nut on holder. They can be used on panels up to 3/16 inch thick.

Bayonet type knob requires only quarter turn to remove fuse. No screw driver is needed.

Side terminal is held mechanically as well as by solder. Heat of soldering wire to it will not cause it to loosen or come off.

Vibration will not cause failure of terminals as they are designed to stand severe service.

Neoprene washer and steel locking nut (zinc plated, chromate dipped) furnished with each holder.

Wire hole in terminals; .115 inch.

Normal current carrying capacity; 15 amperes.

Listed as approved by Underwriters' Laboratories.

- HJM for 1/4 x 1 inch fuses (AGX, MJB, MJW, SFE 14) \$0.40  
HKP for 1/4 x 1 1/4 inch fuses (ABC, AGC, SFE20, MDL, MTH) .40

### IN-THE-LINE HOLDERS for 1/4 inch fuses

These holders are for mounting fuse in wire. Holders consist of body and bayonet type knob — two contacts ready to be staked on ends of wire — a pressure spring that is used under contact in base of holder.

Holders can also be mounted in panel up to 3/16 inch thick by means of a No. 9969 Spring nut (Nut not furnished). Flat spot on holder permits it to be locked against rotation.

Normal current carrying capacity: 15 amperes.

## AIRCRAFT LITTELFUSES—ANTI-VIBRATION TYPE

Especially designed for Aircraft Service. Characteristics: High Mechanical Strength—Resistance to Fatigue—Long Vibration Life

4 AG Aircraft 1 Fuse showing reinforced twisted element

Bakelite-enclosed 4 AB Fuse

**CONSTRUCTION:** Glass-enclosed. Littelfuse Locked Cap Assembly (no cements) prevents loosening of caps. High visibility transparent label for amperage. Elements mechanically depolarized by twisting at 90° (see illustrations) are braced against extreme vibration. "Gooseneck" non-crystallizing fuse element takes up expansion and contraction. Ratings 5 amps. or less use Spring and Link. Service life six times simple wire. The 4 AG and 5 AG sizes are supplied for Aircraft services for their strength and greater carrying capacity than 3 AG fuses.

**BAKELITE-ENCLOSED:** 4 AB and 5 AB fuses recommended where severe overloads might shatter glass.

**CURRENT RATING:** Rated to NEC specifications to carry 10% overload indefinitely, to blow on 35% overload within 1 hr., and 100% overload within 2 min.

**VOLTAGE RATING:** Voltage at which fuses will break without arcing over, or bursting under short circuit conditions.

**VIBRATION FACTOR:** Minimum hours these fuses endure our Magnetic Vibrator operating 120 cycles a second, while carrying the rated current. Acceleration is 10 times the worst field conditions.

## HIGH VOLTAGE SELENIUM RECTIFIERS

Sarkes Tarzian high voltage selenium rectifiers are designed for use in photo-flash supplies, cathode ray oscilloscopes, television receivers, high potential test equipment, and electronic equipments used by military forces.

Designated as Type 0 for current ranges to 5 milliamperes and as Type 1 for current ranges to 25 milliamperes, the units are available in half wave, full wave bridge, and center tap stacks. Both types are available with voltage ratings to 4000 in a single unit and hundreds of thousands of volts by using multiple units in series. In center tap and bridge circuits the maximum allowable D.C. current is 10 MA for Type 0 and 50 MA for Type 1 assemblies.

The Type 0, in a glass enclosure is hermetically sealed for high humidity operation (Half Wave units only) and mounting is by means of silver plated ferrules. The bakelite enclosed Type 0 rectifiers are designed for normal commercial use and electrical connection is made by means of axial pigtail leads. For inverse voltage ratings to 208 volts A.C. the unit is self supporting; longer assemblies require a mounting clip.

The Type 1 rectifier is available only in square bakelite enclosures. The unit, normally supplied, is not hermetically sealed; however, it is possible to "capsulize" the Type 1 rectifier for high humidity applications.

SELETRON Selenium Rectifiers are finding use in wider and wider fields of application ranging from half wave stacks for bias supply such as 8Y1 listed at the left, to multiple assemblies capable of delivering many kilowatts. Typical examples of such SELETRON power use are installations operating elevators in more than 100 office buildings in New York and Chicago; an assembly of 48 volts, 10,000 amps for electrolysis of water, and the spectacular Eveready searchlight on New York's Great White Way.

Standard rectifiers are connected internally according to one of the five circuit diagrams shown.

Series 500, 160 and 160-C are the well known standard line of instrument rectifiers and are constructed to the highest standards of quality. Construction is conventional.

TUA (tubular, axial leads) and TUR (tubular, radial leads) construction is desirable especially in rectifiers designed for high voltage operation. Total enclosure of the stack however limits heat radiation necessitating derating of cells.

ERM (external resilient member) construction insures maintenance of optimum stack pressures regardless of ambient or operating temperatures. Rectifiers in ERM construction are smaller, lighter and cheaper.

# Now, The Plain Truth about easy tv servicing

Learn how official service data direct from the set manufacturer's own engineering and testing laboratories can solve the most difficult tv and radio repairs, quickly and permanently!

No one knows his receiver better than the manufacturer.

Isn't it common sense that the men who design and build the receiver know the most about it? They are responsible for the receiver's performance and when a weakness is discovered, they are the first to determine the necessary permanent correction. The servicing information issued by the manufacturer's engineering department is certainly the most complete; because it contains not only the whole story on each model but includes *changes* in the receiver which the service technician must know in order to make a permanent repair! For example: A major set manufacturer found that a capacitor overheated and broke down. A conventional replacement of the defective capacitor would mean repeat calls and customer dissatisfaction because the overheating and eventual breakdown would re-occur. So he developed a permanent cure—rearrangement of the circuit wiring. The only way you could repair this trouble would be to have the *complete* factory data!

How to get this vital information.

There are only two ways to get the complete unabridged manufacturers' servicing data: one way is to write the manufacturers direct. However, by doing this you run the risk of mail delay while your customer's set gathers dust, plus the difficulty of organizing the material once it's received.

The other way—the only practical way—is to buy this data in complete, easy-to-read published form. **THIS MEANS RIDER SERVICING DATA!** For 23 years Rider, and Rider alone, has been the only source for getting the whole story—the complete story, including all manufacturers' production changes—in accurate, organized, unedited form. You get large, easy-to-follow schematics . . . explanation of circuits . . . stage by stage alignment curves . . . page after page of trouble-shooting test patterns . . . waveforms . . . *complete* factory parts lists and values . . . clear, enlarged chassis views . . . circuit changes . . .

and much, much more, all guaranteed to match the set you're working on. This has made servicing *easy* for countless thousands of service technicians.

Replacement parts listings.

Beginning with TV Pack 57 and by special arrangement with the receiver manufacturers, Rider lists replacement parts. Only those parts are listed which meet the original equipment specifications as established by the receiver manufacturer. We and the parts manufacturer *guarantee* that the suggested replacement performs like the original—or your *full money back*. This guarantee protects you—it assures you rapid repairs—minimum call-backs—public acceptance—and profitable operation.

Rider servicing data designed to meet your needs.

Whether you are a part-time or full-time service technician—independent or employed—you can afford Rider servicing data in this convenient, easy-to-use form.

*Rider Tek-File.*

TV, radio and allied data.

The newest way to get complete Rider servicing data. The *only* difference between Rider manuals and Tek-File is the package. In manuals you buy the data of many manufacturers in one volume. In Tek-File packs you buy the same data—but only for one, two, or a few manufacturers at a time according to your needs. Each numbered Tek-File pack contains standard file folders with all servicing data for the manufacturer's models printed on the pack's tamper-proof label. These folders are designed for house calls and easy bench use in the shop. Perfect for the specialist on certain brands of receivers . . . the part-time service technician . . . the engineer and the independent or employed serviceman. Price only **\$2.00** per pack.

As an additional Tek-File service, many packs contain Tek-File Handies. These are 3" x 5" index cards giving manu-

facturer-tested trouble cures plus production changes made by the manufacturer's own engineering department.

Compile your Rider Manuals by subscription to Tek-File.

Tek-File contains the same factory-authorized information that is published in Rider Manuals. You can compile your own volume of Rider servicing data on a monthly basis *before* the actual publication of a Rider Manual. Subscribe through your jobber for those Packs that contain *new* TV and Radio servicing data issued each month. About 15 Packs make up a Rider Manual. Rider-released service data is the best there is, because it is set manufacturer conceived!

**DON'T BE SWITCHED!**

There is only one Rider Tek-File. It is *not* the same as any other publisher's service. If your jobber doesn't carry Rider Tek-File **DON'T BE SWITCHED** . . . write us direct—we'll sell you! Please include your jobber's name. **Combat unfair press . . . combat national ads that say "fix your own set"!** You can do this if you use Rider Manuals and Tek-Files because then you can tell your customers that you are using *factory-prepared, official, authorized, complete servicing information.*

**TRY A PACK!** Once you've tried Rider Tek-File we are convinced you'll never use any other service. Make this simple test. Use Tek-File for seven days—if you're not convinced, return it to us and receive full refund!

*Free Rider Tek-File Index.*

Rider Tek-File indexes covering all issued packs are available at your jobbers. If your jobber doesn't have Rider Tek-File Indexes—write us direct . . . it's free.

## *The Sign of Successful Servicing*

**RIDER MANUALS ARE THE GREATEST**

**DOLLAR FOR DOLLAR VALUE IN SERVICING DATA!**

*It is more than coincidence* that practically every successful servicing shop has a complete set of RIDER MANUALS. It is the direct result of their *profit-making, time-saving* value. Here you find data on alignment, i.f. peaks, operating voltages, parts lists and parts values, voltage ratings of condensers, wattage ratings of resistors, coil resistance data, gain data, dial drives, in fact, all information necessary to speedier, more profitable servicing.

*The financial success* of your service shop depends, in addition to your time and energy, on the equipment and reference information you use. When it comes to servicing data you need information to cover every receiver that comes in for repair, not just data on a few popular models. In AM-FM servicing there's only one source that is thoroughly complete, that offers the *most* for the *least*—RIDER MANUALS.

**PROVEN BEST** by 23 years of continuous **TEST**, RIDER AM-FM MANUALS contain this substantial amount of information in 22 volumes to date.  
**32,902 Pages . . . 28,968 Models . . . 15,320 Chassis**

**Competent, progressive servicemen prefer RIDER AM-FM MANUALS for these reasons:**

**GREATEST COVERAGE**—Each individual volume is thoroughly up-to-date as of the period covered. Not just a smattering of material from representative producers is included, but *all* data issued during the period, by the manufacturers. This includes the pilot models and *all production changes*, which are absolutely vital to successful and profitable AM-FM servicing. You know for **SURE** you have it in RIDER MANUALS.

**FACTORY-AUTHORIZED FACTS**—Accurate, reliable servicing information that comes from the manufacturers themselves is included in RIDER MANUALS. The manufacturer has the final word on his own product. He is thoroughly familiar with his production runs, and as such, is the *only* authority competent to issue data for them. This assures faster, more accurate servicing, and consequently time saved, which means money to you.

**LOWER COST**—RIDER MANUALS deliver data at approximately a penny per receiver chassis. No other service of a similar nature can claim such economical cost. In the long run RIDER MANUALS are the *cheapest* and the *best* for the money.

**SYSTEMATICALLY ORGANIZED**—The rugged loose-leaf binding and accurate index assure systematic, easy access to information—and a long useful life. You don't lose material. It's where you want it when you want it. Volume I published 23 years ago is still producing profits for its owners.

Every Service Technician, Set Manufacturer, Design and Research Laboratory, Component Parts Manufacturer, Public Library, Vocational School Library, High School and College Library—**SHOULD OWN** a complete set of RIDER MANUALS. They're "The Greatest Compilation of Radio Service Data Ever Assembled."

## Ghirardi's Complete New Service Training Course!

Here's the new Ghirardi guide to modern Radio-TV servicing by professional methods! . . . a book that can help give your earning power a big boost by teaching you to work faster, more efficiently on every receiver service job! Fully modern, profusely illustrated and covering television and record-player servicing procedures as well as all present day AM and FM radio types. It provides complete practical training in every step of the work.

### RADIO & TELEVISION RECEIVER TROUBLESHOOTING & REPAIR

820 pages, 417 illustrations, Price \$6.75  
(Cat. No. UC-52-1)

This latest Ghirardi book starts with a careful analysis of radio-TV components and why they fail. Next you get a comprehensive guide to up-to-date service methods — from quick analyses which often disclose the trouble quickly, to "static tests" of voltage, current, capacitance and inductance, and thence to "dynamic" methods including signal tracing and signal injection.

From here you proceed to a clear understanding of special problems in communications receivers, ac/dc and battery sets, television receivers, record changers and others. The sections on television servicing are arranged so that you can find answers to specific TV problems almost instantly.

Big chapters on TV and radio receiver alignment greatly simplify this often puzzling procedure. Six chapters are devoted to every phase of component repair and replacement, tuning problems, loud speaker troubles and other vital servicing subjects. Over 400 illustrations and a summary of each chapter make things doubly easy to understand. All subjects are handled in a manner so you can't fail to understand them! No really practical service procedure has been omitted!

## Ghirardi's Guide to Circuits and Their Problems

Get to the heart of your servicing problems faster and more profitably with the one new book that tells you all you need to know about radio and TV circuits. Starting with an explanation of AM and FM processes and characteristics, Radio, TV Receiver Circuitry and Operation progresses to a complete understanding of ALL basic circuits — their operation — what they consist of — how to recognize them quickly — how each circuit is related to others — how to trace troubles quickly.

### RADIO & TELEVISION RECEIVER CIRCUITRY & OPERATION

688 pages, 417 illustrations, 6x9, Price \$6.00  
(Cat. No. UC-52-2)

Actually, there are only a few really basic circuits in radio and TV receivers. Learn these from A to Z and even the most complicated of the countless circuit variations won't bother you! You'll handle tough repair jobs in half the usual time! Backed with this great new Ghirardi book, you'll be able to understand new circuit developments and their variations as soon as they appear — without laborious study and constant reference to manufacturer's service notes. In short, Receiver Circuitry and Operation is the ideal book for the man who wants to be equipped with the real "know-how" for the job that spells more efficient work, better jobs, and bigger pay!

N Dial Net \$4.50  
AD Dial Net \$3.00

The four-inch N and AD Dials have engine divided and die stamped scales respectively. The N Dial has a decimal vernier; the AD Dial employs a pointer. The planetary drive has a ratio of 5 to 1, and is contained within the body of the dial. 2, 3, 4, 5 or blank scale. Fits 1/4" shaft. Specify scale.

B Dial Net \$2.70  
"Velvet Vernier" Dial, Type B, has a compact variable ratio 6 to 1 min., 20 to 1 max. drive that is smooth and trouble free. The case is black bakelite. 1 or 5 scale. 4" dia. Fits 1/4" shaft. Specify scale.

BM Dial Net \$2.10  
The BM Dial is a smaller version of the B for use where space is limited. The drive ratio is fixed. Although small in size, the BM Dial has the same smooth action as the larger units. 1 or 5 scale. 3" dia. Fits 1/4" shaft. Specify scale.

AM Dial Net \$2.25  
The original "Velvet Vernier" mechanism in a metal skirted dial 3" in dia. ratio 5 to 1. It is available with 2, 3, 4, 5 or 6 scale and fits 1/4" shaft.

MCN Dial Net \$2.70

The MCN dial has been scaled down to lend itself ideally to mobile installations and small converters and tuners. It may also be mounted on the standard 3 1/2" rack panel where such mounting may be desirable. The dial provides three calibrating scales and a 0-100 logging scale. On the rear side of the dial, the mechanism extends 1/4" below the dial frame. 2 3/4" H. x 3 7/8" W.

SCN Dial Net \$3.00

The SCN dial provides the same dial scales as the ACN dial but in a reduced size. It is used where economy of panel-mounting space is desirable and where a smaller dial would be out of proportion with the size of the panel. 4-7/16" H. x 6 1/4" W.

ICN Dial Net \$6.00

The ICN dial meets those hundreds of requests from amateurs the world over for an illuminated ACN dial. Two dial lights mounted on the top corners of the dial provide efficient and even illumination on all bands. The dial window has been blanked out in semi-circular shape to prevent shadow casting. Dial scales are the same as those used on the ACN dial. 5 1/8" H. x 7 1/4" W.

ACN Dial Net \$3.30

**XLA**

### XLA

A low-loss socket for the 6F4 and 950 series acorn tubes for frequencies as high as 600 Mc. Conventional by-pass condensers may be compactly mounted between the contact terminals and the chassis. Low contact resistance, short and direct leads and low and constant inductance are features.

### TURRET SOCKET ASSEMBLIES

**TSA-1, TSA-2** Designed for our 7-pin and 9-pin miniature tube sockets. Permits compact sub-assembly wiring at base of socket. Cadmium-plated brass center support has a standard length of two inches. Silver-plated brass terminal studs. Available either with holes through which leads can be drawn, or with solid studs. Center supports of varying lengths and other types of terminals can be supplied to manufacturers in quantity.

**XOA-7** (mica-filled bakelite)

**XOR-7** (mica-filled bakelite)

These high quality sockets for the 7 pin miniature tubes have silver plated beryllium copper contacts that correctly grip the tube pins close to the base of the tube to provide the short leads and low inductance so necessary in ultra-high frequency design.

A novel feature of these new sockets is the interchangeability of the contacts, which are easily removed for replacement. This permits the use of a mixture of axial (XOA) and radial (XOR) type contacts in the same socket to obtain the shortest possible leads, or minimum size in tight places. The above sockets all mount with two 4-40 screws on .875" centers. Chassis cutout should be 3/4" dia. Shields for use with these sockets are available.

**XOA-9** (mica-filled bakelite)

**XOR-9** (mica-filled bakelite)

These sockets are for the new 9-pin miniature tubes. The XOR-9 (not illustrated) has radial contacts. Each has all of the features described above for the 7-pin types and they also mount with 4-40 screws. Mounting center dimension is 1 1/8", the chassis cutout should be 13/16" dia.

### TC SERIES MINIATURE TUBE CLAMPS

Easy to assemble — just two

pieces — a spring clip and a base of stainless steel. Base mounts in same holes, using same screws or rivets, as sockets. Easy to remove tube, simply snap off spring clip. Made to government specifications. Types available for all standard miniature tubes.

Type No.	Tube Body Length	Type Socket
TC-1	1 1/8"	7-pin
TC-2	1 1/2"	7-pin
TC-3	2"	7-pin
TC-4	1 1/8"	9-pin
TC-5	1-9/16"	9-pin
TC-6	2"	9-pin

### TYPE AMT

A larger and sturdier model of the TMK condenser. The frame is extremely rigid, with mounting feet a part of the end plates. Heavy steatite insulation.

The solid aluminum tie bar across the top of the condenser acts as a mounting for AR-18 series coils in the double stator models.

The double stator models are available in either standard end drive (D series) or center-drive (DG series) with 1/4" dia. shaft extension.

### TYPE TMA

This is a larger model of the popular TMC. The frame is extremely rigid and arranged for mounting on panel, chassis or stand-off insulators. The plates are of heavy aluminum with rounded and buffed edges. Insulation is steatite located outside of the concentrated field.

### TYPE LMT

A heavy duty transmitting condenser that completely eliminates troublesome closed loops, vastly simplifying the problem of unwanted harmonics. The rotor shaft is completely insulated from the end plates. Long leakage path (higher safety factor). Plates and parts are extra heavy with highly polished rounded edges to prevent flash-over. Adjustable stator plate mounting and end bearings. Available in single-stator, double-stator, or double-stator right angle center drive models. Same capacities and prices as National TML Condenser.

### TYPE TML

is a heavy duty job throughout. The frame structure (rugged aluminum castings with dural tie bars) and precision bearings assure permanent rotor alignment. All plates are extra thick with rounded and polished edges. This, plus specially treated steatite insulators and a husky self-cleaning rotor contact, provides high flashover, current and voltage ratings.

**MINIATURE CONDENSERS:**

Type PS variable condensers are compact silver plated units of soldered construction for use as semi-fixed bandsets or padders. Base is steatite — bearing is "snug" but smooth. PSR models are screw-driver adjust type; PSE have 1/4" diameter shafts both ends; PSL are similar to PSR but include rotor shaft lock.

**Type M-30**

The M-30 is a tiny (13/16" x 9/16" x 1/2") mica trimmer — 30 mmf. max. — steatite base.

**Type W-75, 75 mmf.**

**Type W-100, 100 mmf.**

Small air-dielectric padding condensers having a very low temperature coefficient. They are mounted in 1 1/4" diameter aluminum shields and have 1/4" hex heads for socket-wrench adjustment.

The UM condensers are low-loss, aluminum plate staked construction miniature variables designed for UHF converters, VFOs and the like — minimum capacity is exceptionally low. The UMs can be mounted in PB-10 or RO shield cans and have 1/4" dia. shafts front and rear for ganging (see pages 21, 23 and 24 for shield cans and couplings). Plates: straight-line-cap., 180° rotation. Dimensions: Base 1" x 2 1/4", mtg. holes on 5/8" x 1-23/32" centers, 2-5/16" max. length.

The UMB-25 and UMB-50 are differential (balanced stator) models. UM-10D and UMA-25 are double-spaced and the latter is bolted construction for experimental capacity reduction. Hardware for panel or chassis mounting is supplied with all UM condensers.

**NEUTRALIZING CONDENSERS:**

**NC-600U**

With standoff insulator

**NC-600**

Without insulator

For neutralizing low power beam tubes requiring from .5 to 4 mmf., and 1500 max. total volts such as the 6L6. The NC-600U is supplied with a GS-10 standoff insulator screwed on one end, which may be removed for pigtail mounting.

**"TU BY" CONDENSERS**

Tubular condensers providing short r.f. path between plate and cathode for tubes having the plate connection at the top. Design reduces harmonics and helps eliminate

parasitics. 3,000 volts or 1,500 volts. 15 mmfd.

**STN**

## PRECISION CONDENSERS

Originally developed for the famous HRO and NC-100 receivers, National PW and NPW condensers and drive units are well known to professional and amateur radio men throughout the world. Sturdily constructed of the finest materials and carefully adjusted by skilled hands, they have become "standard specifications" for applications requiring smooth, precise control and high re-set accuracy.

The Micrometer Dial reads direct to one part in 500. Division lines are approximately 1/4" apart. The drive, at the mid-point of the rotor, is through an enclosed preloaded worm gear with 20 to 1 ratio. Each rotor is individually insulated from the frame, and each has its own individual rotor contact. Stator insulation is steatite. Plate shape is straight-line frequency when the frequency range is 2:1.

PW Condensers are available in 1, 2, 3 or 4 sections, in either 160 or 225 mmf per section. Larger capacities cannot be supplied.

**PW-1R** Single section right

**PW-1L** Single section left

**PW-2R** Double section right

**PW-2L** Double section left

**PW-2S** Single section each side

**PW-3R** Double section right; single left

**PW-3L** Double section left; single right

**PW-4** Double section each side

**NPW-3** Three sections, each 225 mmf.

Similar to PW models, except that rotor shaft is perpendicular to panel.

**NPW-O**

Uses parts similar to the NPW condenser. Drive shaft perpendicular to panel. One TX-9 coupling supplied.

**PW-O**

Uses parts similar to the PW condenser. Drive shaft parallel to panel. Two TX-9 couplings supplied.

## PW-D

The Micrometer Dial used on the condensers and drives above is available separately. It revolves ten times in covering the complete range and as there is no gear reduction unit furnished, the driven shaft will revolve ten times, also. The PW-D dial fits a shaft 5/16" in diameter.

## MULTI-BAND TANK ASSEMBLIES

The unique MB-150 Multi-Band Tank tunes all amateur bands from 80 through 10 meters with 180° rotation of the shaft; the coils are never changed. The unit is built around a circuit which tunes to two harmonically unrelated frequencies at the same time. Thus, it becomes possible to cover a wide frequency range and yet maintain a reasonably constant L/C ratio. 3" wide x 8 1/4" high (including the GS-10 standoffs) x 9" long overall including the 1/4" dia. shaft and output terminals.

MB-40L

Radio's Master — 17th Edition

J-12

Features of the MB-150:

- (1) For use as the all-band plate tank in push-pull or single-ended stages running up to 150-watts input (1500 volts peak). It is ideal for a pair of 807s or 809s or a single 829B.
- (2) Separate link coupling coil has special clips which adjust to match impedances up to 600 ohms directly. Output couples into a higher powered amplifier, an antenna or an antenna tuning network.
- (3) Fast band changing is accomplished without handling coils, thus removing one of the danger points in the amateur station.

### MB 40L LOW-POWER MULTI-BAND TANK

Same principle as the famous MB-150. Logical application as grid circuit for tubes having MB-150 in plate circuit. Will handle 40 watts input if link kept loaded

FOR HOME—PORTABLE  
OR MOBILE OPERATION

RME 84 at right, VP-2—6 volt power pack with cable attached, optional for RME 84 in center, CM-1—Carrier Level "S" Meter with cord and plug, optional for RME 84 at left.

**The Coverage Is Complete .540 to 44 Megacycles**

An important feature is the continuous coverage ranging from 540 kc to 44 megacycles. This coverage, in addition to providing for the regular broadcast band, takes in the 80, 40, 20, 15 and 10-11 meter amateur bands. The calibration is made on a 7 inch diameter scale. In addition, a smooth-running vernier dial gives band spread on any setting of the main scale. The vernier scale makes five complete revolutions for the 180 degree rotation of the tuning condenser.

**Seven Tubes Have Been Chosen For The RME 84**

1. A 6BJ6 radio frequency amplifier is ahead of the first detector.
2. A 6U8 is used as a first detector and radio frequency oscillator.
3. A 6BJ6 serves as the first IF operating at 455 kc.
4. A 6BJ6 second IF further amplifies the signal.
5. A 6I16 serves as second detector and noise limiter.
6. A 6SL7 serves as BFO and first a.f. amplifier.
7. The 6G6G provides the final audio frequency output.
8. A 5Y3GT is the power rectifier tube.

**Portability Built Into The RME 84**

Conscious of the fact that many thousands of amateurs want a receiver for portable operation, the new RME 84 is equipped with a special socket connection making possible connections to either a B battery and an A battery supply or a similar source of power such as an external vibropack. 135 volts of B and 6 volts of A battery will operate the RME 84 at full power. The drain on the B battery is only 32 milliamperes at 135 volts and the 6 volt A battery provides 1.5 amps, including the two dial lights.

The new noise limiter, of the series type, performs exceptionally well. Also made available for future use with the RME 84 is a signal strength meter to be connected through the special socket located on the rear of the chassis apron.

**SENSITIVITY:** The average sensitivity of the RME 84 is of the order of 2 microvolts over the entire range of the instrument.

**MC-53 MOBILE CONVERTER for 2, 6, and 10-11 meters**

The ever increasing demand for mobile equipment and the desire to have portable mobile equipment available for emergency use, which is uniform in performance and operation, has prompted RME to add a mobile converter to the universally popular and efficient line of other converters; namely, the VHF 152A and the HF 10-20.

The MC-53 covers three frequency ranges: 26.5-30 mc, 49.5-54.5 mc and 143.5-149 mc. Each range has its own individual coaxial input connector at an input impedance of 75 ohms. Individual antennas may, therefore, be used for each frequency range and coupled separately. The output cable of the MC-53 converter is connected to the auto-radio antenna socket, the output frequency being 1550 kc into the conventional radio receiver of the car. With an antenna change-over switch in the converter and a separate input connector provided for broadcast reception, the MC-53 may be cut in or out of the antenna circuit at anytime for either high frequency or broadcast reception with a flip of the switch.

The MC-53 requires 200-250 volts at 30 milliamps, which is available from the car radio power supply. The ON-OFF switch has a third position, marked BATT. A separate lead is provided on the converter which may be connected to an auxiliary 6 volt source, and give high-stability operation independent of the car battery voltage. A dry battery source may be employed, since only 150 milliamps are required to heat the oscillator tube heater, and the dry batteries

will last a long time. Such operation is optional with the operator.

The tuning mechanism consists of a high ratio worm gear drive, very rugged and stable. The main tuning knob is located on the side of the cabinet.

An automatic noise clipper circuit is incorporated in the MC-53 as an integral part of the unit. It is mounted inside the converter cabinet and comes complete with an interconnecting cable to be hooked up with the car radio. The tube complement is as follows: 6AK5 rf amplifier; 12AT7 detector and oscillator; OA2 voltage regulator.

Overall size of the cabinet 5 3/4" wide, 4 7/8" high, 5 1/4" deep. Finished in dark grey enamel, weight 4#. Complete with tubes and cables. CODE: MONCO.

### VARIABLE FREQUENCY OSCILLATOR

The No. 90711 is a complete transmitter control unit with 6SK7 temperature-compensated, electron coupled oscillator of exceptional stability and low drift, a 6SK7 broad-band buffer or frequency doubler, a 6A67 tuned amplifier which tracks with the oscillator tuning, and a regulated power supply. Output sufficient to drive an 807 is available on 160, 80 and 40 meters and reduced output is available on 20 meters. Close frequency setting is obtained by means of the vernier control arm at the right of the dial. Since the output is isolated from the oscillator by two stages, zero frequency shift occurs when the output load is varied from open circuit to short circuit. The entire unit is unusually solidly built so that no frequency shift occurs due to vibration. The keying is clean and free from all annoying chirp, quick drift, jump, and similar difficulties often encountered in keying variable frequency oscillators.

**NEW BUD ADD-a-RACK SERIES**

It has always been necessary to buy special racks without louvers on one side to obtain a maximum of panel space with a minimum of floor space. Now, you no longer need to buy a whole new cabinet when you want additional panel space. Through our new and exclusive Add-a-Rack series, BUD not only offers additional racks at a lower cost, but provides you with a sturdier, better looking assembly.

The illustration at top shows two Add-a-Rack cabinets assembled together. The illustration below shows the unique and ingenious method of adding a unit to your present equipment. Instead of buying an entire new outfit, you purchase only four parts: (1) a door (2) a top (3) a bottom and (4) an Add-a-Rack coupling-unit. The right (or left) hand side of your present relay rack is removed and replaced by the Add-a-Rack coupling-unit; next, a top and bottom is fastened into place, and the side taken from the first rack is fastened on the second rack which has been added. Place the additional door into position and you have two racks properly and efficiently coupled together. In the same simple way, more racks can be added at any time and every one will be in a CONTINUOUS ONE-PIECE assembly.

This series is available in two ways. (1) a double unit consisting of two racks and the Add-a-Rack coupling unit, (2) Add-a-Rack unit, consisting of a door, a top, a bottom and an Add-a-Rack coupling-unit. These units are furnished with all necessary assembling and panel mounting hardware.

## Special Sheet Metal Fabrication Facilities

NOW, BUD RADIO, through its Metal Products Division, offers greatly increased facilities for the production of special sheet metal items. New machinery has been added, departments have been modernized and streamlined and new methods have been developed.

We make over 400 different sheet metal products as stock items. Often a slight change in one of our standard models will eliminate the necessity of special tools and dies, thereby reducing costs. Since we produce thousands of sheet metal products every month for ourselves and for

leading firms throughout the country we are able to effect economies in production which mean lower prices and faster delivery.

Our expanded facilities, expert workmanship, years of experience and manufacturing "know-how" assure high quality products. In addition, our engineering staff is always available for consultation and advice. Send us your blue prints for estimates.

Illustrated above are a few examples of specially fabricated sheet metal products.

### BUD GIANT TRANSMITTER CONDENSER—Single Section

BUD GIANT TRANSMITTER CONDENSERS are built with a sturdy frame consisting of 3/16" thick aluminum end plates, connected by 5/8" diameter duraluminum rods. Formed brackets at top and bottom of end plates provide for mounting these units, and permit placing of associated inductances directly on the condenser.

Rotor and stator plates are accurately stamped from .0064" thick highly polished aluminum with all edges rounded to minimize corona loss and danger of peak-voltage flash-over. The plates are separated by accurately machined duraluminum spacers that insure a constant air-gap throughout the entire length of the condenser.

The large two-finger rotor-contact spring, made from plated spring brass, assures positive contact with noise-free operation. Steatite bars insulate the stator, and are placed well outside the electrostatic field to keep dielectric losses at a minimum.

### BUD MASTER TRANSMITTING CONDENSERS—Dual Section

All tie-rods in this series are insulated by glazed Steatite pillars, thus completely eliminating all closed metallic loops in the condenser frame. A special outstanding feature, developed by BUD engineers, is that of placing the positive double

wiping rotor contact between the two sections at the center of the rotor. These features contribute to perfect circuit balance and eliminate the majority of difficulties encountered in high frequency equipment due to parasitics, circulating currents and poor neutralization. Use BUD condensers throughout and be trouble free.

**BUD NEUTRALIZING AND HIGH FREQUENCY TUNING CONDENSERS**

This line of condensers will fill every neutralizing and high frequency tuning requirement that modern circuits pose. The two-pillar construction makes this unit unusually sturdy and eliminates any possibility of capacity variation due to vibration. The movable plate is adjusted by means of the threaded shaft to which it is attached, and it is permanently locked in any position by the lock-nut provided. Any loose thread is taken up by a special nut and locked operation. Plates have rounded edges, Steatite insulation is used.

**BUD FEED-THROUGH AND BASE MOUNTED NEUTRALIZING CONDENSERS**

In circuits utilizing tubes with the grid lead terminated in the base a feed-through type of neutralizing condenser is particularly suited. One hole is required for mounting of feed-through condensers. Neutralizing condenser illustrated is feed-through type. Plates are made of aluminum rounded at edges to cut down losses. After proper tuning is attained, movable plate can be locked with the knurled nut.

No. 890 and No. 852 are ideal neutralizers for popular low power beam tubes. No. 890 condenser is based mounted only.

For applications requiring a constant padder capacity under all temperature and humidity conditions, these units are ideal. They lend themselves readily to I. F. transformer applications, fixed tuned circuits for exciters, ganged condenser air trimmers, and plug-in-coil padding as they fit inside of standard 1 1/2" diameter coil forms. Rotor and stator assemblies are made up of brass plates (.015" thick) and rods electrically soldered into a solid unit and then are bright cadmium plated. Insulation is Steatite. Each unit may be adjusted in capacity by either a screw-driver or a 1/4" hex. wrench.

**PANEL BEARING ASSEMBLIES**

Nos. PB-530 and PB-531 consist of a regular 1/4" shaft bearing with 6" and 3" length of 1/4" brass rod inserted and held in place by washers to prevent shaft from shifting. These two assemblies will facilitate the panel control of condensers, potentiometers, etc., which must be mounted a distance from the panel. Bearing fits in 13/32" hole and on panels up to 5/16" thick. No. PB-532 is bearing only without shaft.

### LATTICE WOUND R. F. CHOKES

For all general purpose applications requiring a high quality choke at a reasonable price, this line finds wide acceptance. Each choke is wound from silk-covered enameled copper wire on a white ceramic bobbin. Leads are terminated with two convenient soldering lugs. Chokes can be mounted with a 6-32 screw the center of the form, and each winding is thoroughly impregnated against moisture. The wide range of sizes fills practically every choke requirement in standard radio circuits. Choke base diam. 1-1/16", distance between ends of leads 1"

### TRANSMITTING CHOKES

Here are two heavy duty R. F. Chokes that can really take it in high powered transmitter plate circuits. Each choke is wound on 9/16" dia. Steatite rod, has connection lugs and a mounting foot. All chokes have a heavy ceramic coating which prevents moisture absorption and enables them to withstand momentary overloads without collapsing the individual pies.

Consists of five graduated pies wound in continuous winding. Care has been taken to prevent any of the pies from being resonant on an amateur band and to keep the distributed capacity at a minimum. Overall height 3 3/4".

### HEAT RADIATING PLATE AND GRID TUBE CONNECTORS

Bud heat radiating connectors fit all sizes of industrial and transmitting vacuum tubes. These connectors serve a dual purpose, not only are they useful to make connections to plate or grid terminals, but they provide a large heat radiating surface that will dissipate heat from the glass seal and tube element. Eight sizes fit all grid and plate leads and also provide sufficient heat radiation for any tube operating in the range of 50 to 2000 watts. All radiators are machined from special aluminum rod. Edges are rounded to minimize corona loss.

### IRON CORE R. F. CHOKES

The efficiency of any circuit requiring an R. F. choke will be definitely improved by utilizing one of these chokes with a finely divided molded metallic core. The improved "Q" possible with this construction results from the D. C. resistance of these chokes being from 40 to 50% less for a given inductance than for regular air-core types. Thus, the D. C. voltage drop through the choke is considerably less, yet the choking action is equally as good. Windings are made with silk-covered enameled wire terminated on convenient soldering lugs, and the chokes are mounted in small square shield cans measuring 1 1/2" x 1 1/2" x 1-7/16".

## “APC” MICRO CAPACITORS

The “APC” originated in the Laboratories of the Hammarlund Mfg. Co over twenty years ago and because it is the most widely copied Air Trimmer today, it speaks eloquently for the soundness of its engineering design.

These units feature all brass soldered construction, nickel plating, silicone treated steatite panels, and precision formed rotor contact springs, combined with Hammarlund quality, make this capacitor a necessity for peak performance in today's rigid requirements.

Available in stock sizes as listed with a standard nominal air gap of .015" with a test voltage of 600 V. RMS, 60 cycles. Other air gaps available are .0195", .025", .030", .045". ## “HFD” MICRO DUAL CAPACITORS

The “HFD” while available as listed and having the same electrical characteristics per section as the “HF” is also one of the most flexible designs to stem from the Hammarlund Laboratories.

This unit has two heavy aluminum end brackets mounted on silicone treated steatite base for strength and stability, long sleeve front bearing and rear bearing, individual silver plated beryllium contact springs on each section for noiseless operation. An electrical shield is provided between sections. This capacitor is 1-1/2" high x 1" wide, with 1/2" long 1/4" shaft.

Modifications of basic design to include up to five sections of varying capacities are obtainable. This is truly a unit which can be tailored to the engineers individual requirements. Either single hole or base mounting are standard with all versions of this capacitor.

## "MC" AND "MCX" CAPACITORS

The "MC" and "MC-X" capacitors available with SLC or midline plates are widely used in all applications for frequencies up to 60 megacycles, and are designed to satisfy the most critical and exacting requirements. Vibration proof for Aircraft, Marine and mobile use. These units are of brass soldered nickel plated construction with silicone treated steatite insulation outside of the electrostatic field to reduce dielectric losses and to insure maximum efficiency under various conditions of humidity and temperature. A beryllium copper silver plated rotor contact spring and precision sleeve bearings give noise free operation. "MC" types have a nominal .0245" air gap tested at 1000 V. RMS 60 cycles. "MC-X" types have a nominal .0715" air gap tested at 1750 V. RMS 60 cycles. The "MC" family have 1/4" shaft with rear extension for gang operation. The whole series have rotational stops which nominally permit increasing capacity with clockwise rotation of shaft. "S" types are 1-11/16" wide and 2-3/4" high. "M" types are 2-3/32" wide and 2-7/8" high. These dimensions include swing of rotor plates.

## "RMC" CAPACITORS

The "RMC" was born out of the electronic industries demand for the extreme rigidity this capacitor affords. It utilizes the "MC-S" type soldered brass plate assemblies incorporated in a ruggedized frame consisting of aluminum end plates and three tie rods. A front sleeve bearing and single ball thrust rear bearing are used together with a positive rotor contact spring. The resulting unit has many applications where ruggedness is required.

Code	Capacity
RMC-50-S	50. mmf.
RMC-100-S	105. mmf.
RMC-140-S	143.5 mmf.
RMC-325-S	327. mmf.

Two removable brackets at the top of panels make for easy mounting of components or with the two tapped holes at the bottom and tapped holes in the panel permit three mounting possibilities. The same air-gaps as the "MC" are available. Dimensions are 1-13/16" wide x 1-11/16" high with 1/4" shaft.

## FLEXIBLE COUPLINGS

These flexible couplings come both insulated and non insulated. The insulated "FC-46-S" employs a silicone treated steatite body and provides maximum insulation. It is 13/16" in width and 1-1/4" in diameter. The metal body of the non insulated "FNC-46-S" is 23/32" wide with a diameter of 1-1/4". Both take 1/4" shafts and will compensate for considerable misalignment.

## "HFA" AND "HFAD" CAPACITORS

The "HFA" is a high efficiency, high frequency transmitting type capacitor of unusual design. All parts are brass, soldered and nickel plated mounted on treated steatite end panel  $1\frac{3}{8}$ " x  $1\frac{1}{2}$ " with  $\frac{1}{4}$ " shaft.

The "HFAD" is a dual unit with balanced opposed sections of the same type construction with two end panels  $1\frac{3}{8}$ " square and  $\frac{1}{4}$ " shaft. Both these units are ideal for low power portable transmitters and are available in 3 stock spacings: "A" .020", "B" .030", and "E" .070". The "E" type also has round edge plates. Both of these units may be single hole panel or base mounted.

Code	Capacity	Type
HFAD-25-B	25 mmf.	Dual
HFA-100-A	102 mmf.	Single
HFA-140-A	145 mmf.	Single
HFA-10-B	9 mmf.	Single
HFA-15-B	16 mmf.	Single
HFA-25-B	25 mmf.	Single
HFA-50-B	50 mmf.	Single
HFA-100-B	100 mmf.	Single
HFA-15-E	16 mmf.	Single

## "HFB" TRANSMITTING CAPACITORS "HFB D"

The "HFB" while similar in most respects to the "HFA" types have insulated  $\frac{1}{4}$ " shaft extensions which permit high voltage to be applied to the rotor without danger to the operator. This allows a higher tube voltage for a given plate spacing and results in a less expensive, more compact unit.

The "HFB D" is the dual version with the same features with each section in balanced opposition. Both use  $1\frac{3}{8}$ " square steatite panels and are base mounted.

Code	Capacity
HFB D-50-C	50 mmf.
HFB D-100-C	105 mmf.
HFB D-35-E	37 mmf.
HFB D-65-E	63 mmf.
HFB-50-C	48 mmf.

## "VU" UHF CAPACITOR

The "VU" Capacitors offer completely silent electrical operation made possible through the use of pyrex glass ball bearings making them adaptable in circuits up to 300 mc. These new bearings completely eliminate wiping contacts and metal sleeves. Elimination of rotor contacts by use of series stators permits a more symmetrical design of the capacitor itself and consequently allows better circuit layout. Two sets of threaded studs are provided, so that a vacuum tube may be mounted on one side and inductor on the other side of the capacitor to minimize lead inductance. The stator sections provide a low inductance path between the two sets of stud contacts. Panel size is  $1\frac{7}{8}$ " x  $1\frac{7}{8}$ ". Shaft size  $\frac{1}{4}$ ". These units are supplied in standard sizes as listed in all brass soldered silver plated construction and may be obtained as specially calibrated precision units. ## REPLACEMENT I. F. TRANSFORMERS

(Double Tuned)

These transformers are an essential part of the stock of every serviceman and dealer. In many cases they will give better performance than the original transformer. All have been pretuned and should require only slight adjustment after installation. Leads are color coded, and the transformers are assembled in aluminum shields. These transformers may be used as replacements in most makes of receivers using transformers of the same physical size. Be sure to order a transformer of the correct frequency.

## A NEW LINE OF CARDWELL MIDGET CONDENSERS FOR V.H.F.

PL-6113

PL-6076

Cardwell offers a new line of 90 degree condensers with butterfly rotor plates, fulfilling a demand created by engineers and amateurs since the publication of an article "Stabilizing The 144 Megacycle Transmitter" in April, 1946 "QST." Also see pages 351 to 353 inclusive in the 1946 ARRL Radio Amateurs Handbook. PL-6113 and PL-6076 are specified in these articles. Features of these 90 degree midget condensers are as follows:

Electrical Symmetry  
Low Distributed Inductance.

No Moving Contacts.

Plates easily removable to change capacity range.

Isolantite Insulation.

Single Hole Mounting.

Small Size; 1 7/16" x 1 13/32" per general outline dimensions for differential "Trim-Airs" as shown on Page 6 of Catalog No. 46.

These condensers are made to fit all standard Cardwell "Trim-Air" hardware.

Note maximum and minimum capacity values shown are measured from stator-to-stator and are effective values as used when a coil is connected stator-to-stator, with rotor floating.

## TYPE "P" LIGHT HEAVY TRANSMITTING CAPACITORS

Designed to accommodate capacitance values up to 150 mmfd. per section in a dual section type having an airgap of .500", the "P" type construction permits higher capacity for a given airgap, and therefore a shorter frame than the "T" type construction. Typical Cardwell sturdiness is built-in, and the "P" type is probably the lightest transmitting condenser built for its size, yet completely satisfactory for heavyweight use. No single section types are catalogued; parallel or series connect for double or half single section capacity listed in table.

## B & W FARADAY SHIELDED LINKS

... fit all B & W variable link air inductors

These shielded links effectively reduce harmonic or spurious signal radiations normally transferred by capacity coupling. Adaptable to all conventional link coupled circuits, the B & W Faraday Shielded Links materially aid in the reduction of TV and BC interference. They may be used with external antenna tuning units or, in conjunction with harmonic reduction filters of the low-pass or band-pass types. It is impossible to specify the exact number of link turns required because loading is affected greatly by the antenna input impedance and this is not generally known with any degree of accuracy.

On 10 and 20 meters, a one turn link is normally satisfactory for 50 ohm lines, two turns for 75 ohm lines and three turns for lines having higher impedances. For average conditions our two turn link should suffice.

## B & W TVI LOW-PASS FILTERS

- Provide extreme attenuation to all harmonics above 30 mc
- Eliminate individual filters for each band
- Handle 1 kilowatt with ease
- Insertion loss less than .25 db

Three years of intensive study of TVI problems made possible the B & W Faraday Shielded Link. Its natural companion, the B & W Low Pass Filter, was developed concurrently and is now available. Properly installed in accordance with our recommendations, this filter enables you to attenuate all frequencies above 50 megacycles, approximately 75 db or more, throughout the entire television band.

The B & W Low Pass Filter consists of two "m" derived end sections and three mid-sections of constant K type. Each section is contained in a completely sealed copper compartment to prevent inductive transfer of unwanted frequencies from section to section. Complete installation instructions and recommendations to aid you in eliminating TVI are given in "Filter-Facts," packed in each unit. Individual copies of "Filter-Facts" are also available for 15 cents. Filters are supplied in hammered gray metal cabinets 2 1/2" x 2 1/2" x 12" and weigh 2 1/4 lbs.

## UNIVERSAL ADJUSTABLE COILS

These Adjustable - Inductance Ferrocart (Iron-core) coils will replace the Broadcast band coils in practically any receiver.

Continuously variable in inductance over a wide range, these coils will accurately "track" with the other coils in the receiver when properly adjusted. The exact inductance of the old coil is easily matched by a simple screwdriver adjustment, regardless of the value of the tuning condenser.

High "Q" iron cores used in these coils add gain and selectivity to the receiver. The oscillator coil provides complete adjustment for intermediate frequencies between 175 and 520 kc. May be used in either "cut-plate" tuning condenser or padded circuits. Available shielded or unshielded, furnished with complete instructions. 1 3/4" square by 2 1/2" high.

## TYPES "E" AND "F" VARIABLE CAPACITORS

Designed as rugged, compact units for medium and low power transmitters, type E and F capacitors are in a class by themselves. They have more capacity per cubic inch and occupy less panel space for their rating than any other capacitor on the market.

Points of superiority: Heavy aluminum plates, .032" thick, with rounded edges for maximum voltage rating — Heavy aluminum tie rods 1/4" diameter for frame strength and rigidity — Steatite insulation — mount with stator up to reduce capacity to ground — heavy phosphor bronze contact springs, cadmium plated — Center contact on dual models — Chassis or panel mounting — Stainless steel shafts.

In addition to mounting foot shown, removable single hole brackets are furnished so that capacitor may be inverted from position shown, or other components mounted above.

## JOHNSON TYPE "L" VARIABLES (167 Series)

Perfected ceramic soldering assures permanent rigidity and maintenance of capacitance. JOHNSON ceramic soldering leaves a bond which is stronger than the rugged end plates themselves. There are no eyelets, nuts or screws to work loose which would cause stator wobble and fluctuations in capacity.

Split sleeve tension bearing assures silent operation on highest frequencies. Ceramic end plates, 1 3/8" square with 2 mounting posts tapped for 6-32 screws on 1 1/2" centers. Mounting (M) dimension is 1/2" more than L dimension.

Two sets of stator contacts. Corrosion resistant, bright alloy plating has low electrical resistance.

These new variables are suitable for the severest conditions of portable-mobile operation. Other capacities and spacings on special order in production quantities.

## COUPLINGS

All JOHNSON couplings are manufactured with high quality, low loss insulation, accurately machined and suitably finished metal parts. Each is capable of many thousands of operating cycles without failure due to fatigue. DC "breakdown" ratings derated in accordance with good engineering practice. The phosphor bronze springs of the -250 and -251 series couplings provide flexibility without backlash and adjust to minor shaft misalignments. Rigid types -252, -262 and -261 meet the requirements of accurate shaft alignment and high torque. The -259 and -2593 are bar type couplings recommended for high voltages or very high frequencies. The -264 is a small bakelite insulated flexible coupling for DC or low voltage RF applications.

## JOHNSON AIR WOUND INDUCTORS

Swinging link inductors for amateur bands 160 thru 6 meters; 150, 500 and 1000 watt sizes. Two inductance values for each band permits choice of appropriate L/C ratio dictated by amplifier plate voltage and plate current. Polystyrene insulation, Steatite bases and heavier wire sizes insure highest efficiency. HCS—Inductors match high voltage, low current tubes. LCS—Inductors match low voltage, high current tubes.
