The instrument is composed of an oscillator, a bridge and a selective amplifier. The oscillator output is coupled into the bridge through a shielded isolation transformer. A switch is provided which connects either a high or low impedance winding across the bridge, consisting of two fixed resistors, the unknown impedance and the standard. A variable resistor between the two fixed resistors makes it possible to read the percentage difference between the unknown and the standard on a specially calibrated dial. A high gain selective amplifier indicates the balance of the bridge. The general method of testing is the comparison of an unknown component with a standard component of the same type. Accurate percentage measurements are obtained by the use of precision components in the arms of the bridge. The use of a high gain amplifier and adequate internal shielding assures a very sharp and distinct balance.

A visual null indicator, consisting of a meter used in connection with the high gain amplifier makes it possible to use the No. 1010-A Bridge as a precision limit bridge in production testing.

## TYPE 1410 DISTORTION METER

### USES

The Type 1410 Distortion Meter may be used in the laboratory or in production testing of receivers, amplifiers and oscillators.

### DESCRIPTION

The instrument consists of a capacitive input attenuator, a low impedance output preamplifier, a null T network and a high gain vacuum tube voltmeter.

The signal to be measured is applied to the capacitive input attenuator, which reduces it sufficiently so that it may be fed into a three stage distortionless amplifier. The output impedance of this amplifier is 1 ohm due to the high amount of inverse feed back applied. In order to prevent the amplifier from being driven into non-linearity, a monitoring circuit is included in the instrument.

The attenuated signal is fed into a null T network which completely eliminates the fundamental. The residual signal consists wholly of harmonics and noise, and this is measured by the vacuum tube voltmeter.

The null T network is switched out of the circuit and the signal level is attenuated by a calibrated resistive divider. When the voltmeter indicates the same level as the level of harmonics, the divider reads the percentage distortion directly.

### FEATURES

The high sensitivity of the instrument permits measurements to be made on signals as low as 0.2 volts to an accuracy of 0.1%. Signals as high as 1000 volts may be applied to the input terminals directly.

The frequency range of the instrument is 20 kc to 1 mc. in 10 overlapping ranges. Frequencies up to 3 mc. are passed without attenuation by the amplifier circuits, so that distortion measurements can be made on fundamental frequencies up to 1 mc.

An isolation transformer and line filter provided with the instrument prevent any feedback through the power line.

### SPECIFICATIONS

**Frequency Range:** 20 kc to 1 mc.

**Input Impedance:** 500,000 ohms shunted by 70 mmfd. (plus capacity of input cable) on all ranges but the 0.1 volt range. The shunt capacity on this range is 800 mmfd.

**Accuracy:** Harmonic Distortion can be measured accurately to 0.1%.

**Sensitivity:** Distortion levels of 0.1% can be read accurately for a signal input as low as 0.2 volts. Maximum input signal is 1000 volts rms.

**Elimination Characteristics:** Eliminates fundamental completely while attenuating second harmonic approximately 3%.

**Power Supply:** 105:125 volts, 50-60 cycles.

**Dimensions:** 19 $\frac{3}{4}$ " x 16 $\frac{3}{4}$ " x 15 $\frac{3}{4}$ ".

**Net Weight:** 60 pounds.

## FREED DECADE CAPACITORS

Freed decade capacitors are high quality capacitors designed for use in wave filters, tuned circuits and equalizers for audio and supersonic frequencies where a rather large variable capacitance is desired. Their stability, accuracy and low dissipation factor make them especially useful during the preliminary design period when capacitance values are determined experimentally.

Each decade is variable from 0 to 10 by use of 11 position selector switch. The losses in the switches and mountings are kept low by the use of special low loss, impregnated switch wafers. A positive detent mechanism allows the switch to be set accurately. The accuracy is  $\pm 1\%$  at frequency of 1 kc.

## PORTABLE FIELD STRENGTH METERS

UHF-VHF . . . gives direct reading in microvolts

**Model 510 Dealer Net \$124.50**

Lets one man do the work of two — in less time, with greater accuracy. He can take the meter on the roof, locate and orient the antenna by himself — even before running lead-in. On master antenna systems he checks each outlet, quickly, without guesswork. This efficiency reduces call-backs, builds confidence, makes larger profits.

Continuous tuning through VHF and UHF TV channels 2 to 83, FM Broadcast bands and VHF aviation communications bands (50-220 Mc and 260-940 Mc). Vernier type scale for accurate logging. Direct reading in microvolts.

High sensitivity assures better installations particularly in fringe UHF areas; 5 to 50,000 microvolt graduations on VHF, 50 to 100,000 on UHF. 3 i.f. stages; i.f. 20 Mc. High selectivity — 5 Mc bandwidth at 6 DB down. Permits separate measure-

ments of audio and video portions of carrier. 300 ohms input. Phone-jack. Operates from self-contained batteries. Standard dry cells — 3 45-volt B and 2 1½-volt A. Rugged case of non-corrosive aluminum. Size 11 x 8½ x 6 in. Weight 9 lbs. less batteries. Sold less batteries.

Pocket Size VHF . . . completely transistorized

**Model 520 Dealer Net \$49.50**

A low cost field strength meter that performs all the functions of the larger Model 510 except that it gives you relative readings — not direct. For VHF only. Smaller, lighter, fits pocket of work jacket.

Simplified switch tuning (channels 2-13). Sensitivity control regulates panel meter and audio. 300-ohm input. Phone-jack. Operates from self contained batteries. Durable case of black hi-impact phenolic, with brushed aluminum shell. Size 8 x 4 x 2 in. Weight 2 lbs. with batteries.

## AC POWER "VAMP" METER

**Model 530 Dealer Net \$37.50**

Nothing like it on the market. Does the work of two ordinary meters. Specially designed for contractors, installation personnel, utility servicemen who work with major appliances, air conditioners, etc. Indicates fuse requirements. Tests capacity of any outlet before use. Gives you voltage and amperage of any appliance in use.

Tests AC volts 0-130, AC amps 0-30, watts 500-1000-1500, or horsepower ½ 1-1½. Can pre-test an outlet for capacity to supply up to 1500 watts or to start and run a motor up to 1½ H.P. Can give voltage and current consumption of appliance under load — even while additional dummy load is applied to circuit to test its effect. Has built in overheat control.

Fine appearance — hi-impact phenolic and perforated aluminum, recessed meter faces and knobs. Cord set wraps around side of instrument in space provided. Small size — only 8 x 4 x 2 in. Lightweight — no transformers. Completely self-contained — no outside probes or accessories required.

## DUAL MARKER INJECTOR

- BEST FOR B & W TV LABORATORIES!
- ABSOLUTELY A MUST FOR COLOR TV!

### The Dual Marker Injector SAVES TIME

- ... in alignment jobs
- ... in adjusting broad-band amplifiers
- ... in critical marking in color and monochrome TV
- ... does not disturb circuits being adjusted
- ... offers more accuracy

**SCALA DUAL MARKER INJECTOR (SMI-53X)** (patent applied for)— Nothing else to buy—it works with your present marker generator, sweep generator, and oscilloscope.

Made by Scala, developers of the original bypass marker injector system.

The simplest, most legible, and most economical marker injector—and it requires less than 2,000 microvolts of signal!

#### THE SECOND MARKER MAKES EVERYTHING SIMPLER—

With two marks on the response curve, you don't have to re-set the marker or the sweep-generator frequency or attenuator.

Now you can realign with accuracy, simplicity, and speed that dual mark techniques make possible on manufacturers' assembly lines.

Receiver characteristics don't affect the marker size, so there is no stage-by-stage reconnecting.

The marker generator can be calibrated against the Scala Dual Marker Injector's crystal oscillator without interrupting alignment procedure.

#### FOR LABORATORIES, COLOR TV, AND RADAR, TOO—

The extremely critical frequencies used in color TV chassis and radar equipment are no problem for the man with a Dual Marker Injector. You simply replace the easily accessible crystal on the front panel with one of another frequency (1 to 4.5 MC) and you are thoroughly equipped for the job. No worries about accuracy, marker size, or disturbing 6AG5 circuit being tested.

#### SPECIFICATIONS—

Two 6AG5 high-frequency isolating mixers; selected diode detector; one 6SL7 Xtal osc-amp.; one 6SN7 video and marker mixer; one 5Y3 rectifier; one 4.5 MC crystal ( $\pm 0.2\%$ ). Useful to 250 megacycles. Shipping weight: 13 lbs. At leading jobbers, **\$79.50**.

**SCALA SUPER MARKER INJECTOR (SMI-53)** Same as above, less dual mark feature and built-in crystal oscillator. At leading jobbers, **\$67.50**

ELECTRICAL TEST LABORATORY  
Pocket Size!**

**DON'T SEND A MAN TO DO A BOY'S JOB!**

Are the technicians in your laboratories and shops using expensive meters and instruments for simple continuity and voltage checks? Speed up production through the use of the tool specifically designed for this application. A meter should be used only when the value of voltage, resistance or current must be known. Under any other conditions a Circuitracer will provide the required information faster and easier than expensive, bulky meters.

*Satisfaction  
Unconditionally Guaranteed*

The CIRCUITRACER is the only electrical tester (other than expensive meters) that can test dead circuits, low voltage live circuits AND high voltage live circuits. It is made of the finest materials available and is designed for long life.

**CIRCUIT TESTING WITH A CIRCUITRACER IS FASTER** because the signal light is in the tip at the point of contact. This makes it possible to determine the existence of a circuit or voltage without removing the eyes from the test point to read a meter.

**SAVE METER REPAIR MONEY BY USING DESCO CIRCUITRACERS.** An overvoltage across a meter usually results in extensive damage which takes the meter out of service until repaired or replaced. The worst that can happen to your Circuitracer is a burned out lamp that can be replaced by the operator in less than a minute. Total cost, ten or fifteen cents for the lamp!

# Sub-Miniature PILOT LIGHTS

## Two Terminal • Fully Insulated

*The Ultimate in Compactness*

(Illustrations are approx. actual size)

**THESE PILOT LIGHTS CONFORM TO ALL APPLICABLE MILITARY SPECIFICATIONS.**

For **FRONT** of Panel Insertion:  
Requires single 17/32" clearance hole.

For **BACK** of Panel Insertion:  
Requires single 15/32" clearance hole.

**EASY LAMP REPLACEMENT:** All assemblies (whether for front or rear insertion) have this important feature: The plastic domes or metal caps are easily removed from front of panel — thus making the lamps accessible for easy lamp replacement. Please refer to our Form L-156A which describes these units in detail.

**PLASTIC DOME — OMNIDIRECTIONAL:** The unique "stovepipe" lens, moulded of high heat plastic, radiates light in all directions. Heavy plastic walls are reinforced by threaded brass insert. This fitting receives lamp well up into plastic dome for maximum light dispersion.

**LENS WITH MESSAGE — easily positioned.** A DIALCO exclusive is the specially designed cap-and-lens (as shown at right). By pressing on spring-mounted lens and rotating in either direction the legends may be positioned *after* installation of the assembly.

**INSULATED:** Lamp, socket, and all connections are completely insulated from the bushing and panel to which it is attached.

**FINISH:** Black nickel.

**LIGHT SOURCE:** T-1 1/4 midget flanged incandescent lamps. Available in the following voltages.

For operation on 105-125V. or 210-250V. . . . The required resistor is an integral part of the unit — BUILT IN. (See below.) Also, simple external resistors for all higher voltages.

All of these assemblies are listed by Underwriters' Laboratories, Inc.

Fig. 15

Multivue caps

The new NE-51 lamp is especially useful for pilot lights to be operated on commercial voltages. It has a distinctive orange-red glow and consumes very little current.

### MULTI-VUE or CLEAR CAPS

In addition to the advantages given by the provision of the built-in resistor, these assemblies offer another feature that is especially important in obtaining effective indication with the NE-51 lamp. The "Multi-vue" cap shown at the left gives a high degree of visibility by directing an increased amount of light toward the eye when the indicator is viewed from any angle. When it is desirable to view the electrodes directly, the CLEAR CAPS shown below are very effective. For concentrating the light into a beam the metal lens holders are equipped with convex lenses as shown.

## CONNECTORS FOR SINGLE CONDUCTOR CABLE FOR MICROPHONES - SPEAKERS - PICK-UPS - JACKS

(using cable shield for second conductor)

The fittings shown here are designed for use with standard metal shielded single conductor cable up to  $\frac{1}{4}$ " diameter. These connectors are heavily constructed from solid brass and all exposed parts are chrome plated and highly polished.

The cable end connectors are provided with rugged wire spring protectors which prevent sharp bends at the connection. The protector is soldered to the cable sheath and secured in the connector by a set screw so that all strain is relieved from the conductor.

No. 101

**No. 101 MALE CONNECTOR FOR CABLE** — With spring protector to prevent sharp bending of cable. Solders to cable sheath — secured by set screw.

## FUSETRON DUAL-ELEMENT Fuses and Fuse Holders

*for Protection of Radios, Instruments and Electronic Equipment*

### BUSS "QUICK-BLOWING" FUSES

600 Volt.  $1\frac{3}{32} \times 1\frac{3}{8}$  inch. Fibre tube. For protection of control circuits or fluorescent lighting circuits or wherever a fuse with "quick-blowing" characteristics is desirable. Listed as approved by Underwriters' Laboratories for voltages up to 600, 0 to 5 amperes.

Voltage	Symbol	Amperes	List Price
600 or less	BBS	1, 2, 3 or 5	\$0.18

Fuseholder for BBS fuses. Use HPC-L fuseholder or No. 3845 single pole, side barrier porcelain fuse block. Only BBS fuses (or others with exact same dimensions) will fit these holders. This assures replacement of proper size fuse.

### PANEL MOUNTED HOLDERS for $1\frac{3}{32} \times 1\frac{1}{2}$ inch Fuses

Screw type knob. Molded phenolic body. Holder attached to panel by screws or rivets. Strong coil spring provides contact pressure on ends of fuse. Normal current carrying capacity 22 amperes. Listed as approved by Underwriters' Laboratories for 15 ampere rating for any voltage up to 250.

HPC (for FNM and KLM fuses) List Price \$0.60

HPC-L Holder for  $1\frac{3}{32} \times 1\frac{3}{8}$  inch Fuses. Like HPC Holder. Has Underwriters' Laboratories approved listing for 5 ampere rating and any voltage up to 600.

HPC-L (for BBS fuses) Prices on request.

### PANEL MOUNTED HOLDERS for $\frac{1}{4}$ inch Fuses

Can be used on panels up to  $\frac{3}{16}$  inch thick. Bayonet type knob. No

screw driver is needed.

Side terminal is held mechanically as well as by solder. Heat of soldering wire to it will not cause it to loosen.

Vibration will not cause failure of terminals as they are designed to stand severe service.

Neoprene washer and steel locking nut furnished with each holder.

Wire hole in terminals; .115 inch.

Normal current carrying capacity; 15 amperes.

Listed as approved by Underwriters' Laboratories.

HJM for  $\frac{1}{4} \times 1$  inch fuses (AGX, SFE 14) List Price \$0.46

HKP for  $\frac{1}{4} \times 1\frac{1}{4}$  inch fuses (ABC, AGC, SFE20, MDL, MDX, MTH) .46

### IN-THE-LINE HOLDERS for $\frac{1}{4}$ inch fuses

For mounting fuse in wire. Holders consist of body and bayonet type knob — two contacts ready to be staked on ends of wire — and a contact pressure spring.

Holders can also be mounted in panel up to  $\frac{3}{16}$  inch thick by means of a No. 9969 Spring nut (Nut not furnished). Flat area on holder permits locking against rotation.

Normal current carrying capacity: 15 amperes.

Symbol List Price

HDI for  $\frac{1}{4} \times 1$  inch fuses (AGX, SFE 14) \$0.20

Takes No. 18 or smaller wires.

20 ampere size is an SFE 20 fuse.

Sizes larger than 30 ampere are not recommended as clips or fuse holders would not permit fuse to carry such high currents. If surges or starting currents make heavier fuse necessary, use MDL Fusetron dual-element fuses.

### FUSETRON FUSES, $\frac{1}{4}$ x $1\frac{1}{4}$ inch

DUAL-ELEMENT SLOW BLOWING TYPE

Stop needless blows from starting currents or surges. Fuse link operates only on very high overloads or short-circuits. Thermal cutout functions on low overloads — cannot operate quickly at any load, so long time-lag is obtained. Yet protection is afforded against short-circuits or continued overloads.

**313000 Series Littelfuses**—Slo-Blo fuses with high time-lag to withstand heavy surges—quick on shorts. Designed for circuits with equipment having high inductive or capacitive surges, such as magnets, solenoids, etc., and for circuits with heavy starting currents, such as motors and lamp circuits. Anti-fatigue construction (compound element, with spring and resistor) makes these fuses ideal for intermittent-duty circuits on vibrators, control circuits, hi-tension electric fences, small magnets, coils, etc. "Pioneered by Littelfuse."

## AIRCRAFT LITTELFUSES—ANTI-VIBRATION TYPE

Especially designed for Aircraft Service. Characteristics: High Mechanical Strength—Resistance to Fatigue—Long Vibration Life

4 AG Aircraft Fuse showing reinforced twisted element

Bakelite-enclosed 4 AB Fuse

**CONSTRUCTION:** Glass-enclosed. Littelfuse Locked Cap Assembly (no cements) prevents loosening of caps. High visibility transparent label for amperage. Elements mechanically depolarized by twisting at 90° (see illustrations) are braced against extreme vibration. "Gooseneck" non-crystallizing fuse element takes up expansion and contraction. Ratings 5 amps. or less use Spring and Link. Service life six times simple wire. The 4 AG and 5 AG sizes are supplied for Aircraft services for their strength and greater carrying capacity than 3 AG fuses.

**CURRENT RATING:** Rated to NEC specifications to carry 10% overload indefinitely, to blow on 35% overload within 1 hr., and 100% overload within 2 min.

**VOLTAGE RATING:** Voltage at which fuses will break without arcing over, or bursting under short circuit conditions.

**VIBRATION FACTOR:** Minimum hours these fuses endure our Magnetic Vibrator operating 120 cycles a second, while carrying the rated current. Acceleration is 10 times the worst field conditions.

**BAKELITE-ENCLOSED:** 4AB and 5 AB fuses recommended where severe overloads might shatter glass.

# LITTELFUSE

“Quicker than a Short Circuit”

TAB WIDTH VARIES WITH AMPERAGE

## THE LIMITED CURRENT (L.C.) LINE OF FUSES AND FUSE HOLDERS

END STAMPING IDENTIFIES SPECIFIC FUSE AMPERAGE.

"C" IS REGULAR FUSE.  
"N" IS SLO-BLO FUSE.

Here is a completely new approach to circuit protection to completely eliminate the possibility of over-fusing circuits.

This has been accomplished by a combination of three different fuse lengths and seven different widths of bayonet locking tabs on the fuse caps.

The fuse post is made to accept only the size amperage range and type (regular or slo blo) in its range. For example: a 1 amp. slo blo fuse is 1 1/4" long with .115 to .120 width tabs. The holder used with this will only accept a slo blo fuse (N type) above 3/4 to 1 1/4 amps.

The holder is a ruggedly designed unit, molded from high strength bakelite.

It snaps into a predetermined chassis mounting hole and locks into place by means of a quick snap-in type lock washer. It can be pressed into place by hand or simple tools.

The fuse locks into the holder by means of a bayonet lock which permits easy and quick insertion and removal of fuses.

Both solder connections are behind panel making the installation of the unit simple and inexpensive.

# COMPONENT RECTIFIERS

## Vac-u-Sel\*, COPPER-OXIDE, AND GERMANIUM

Rectifiers for practically any d-c power requirement are available from General Electric. Vac-u-Sel rectifiers are a new, high-quality type of selenium rectifier

produced by an exclusive G-E sphere-type, vacuum-evaporation process. In addition, General Electric also makes a full line of copper-oxide and germanium rectifiers.

### GENERAL ELECTRIC *Vac-u-Sel* RECTIFIERS

- 63 VOLT PEAK INVERSE
- 130 C AMBIENT OPERATION
- 80,000 HOURS LIFE EXPECTANCY

The special vacuum-evaporation process employed in making Vac-u-Sel rectifiers makes possible the outstanding performance characteristic of this selenium rectifier. With G-E Vac-u-Sel rectifiers, you can now match performance requirements for life expectancy, ambient operating temperature, and atmospheric protection, as well as electrical characteristics. Two (2) new rectifier cells make up the new line of Vac-u-Sel rectifiers: a 26-volt and a 45-volt cell. Both are high-temperature cells.

The 26-volt cell is a long-life, standard industrial cell with a life expectancy of 80,000 hours at normal current rating at 35 C ambient. The 26-volt cell can meet operating requirements up to 130 C at full voltage. Current need not be derated where shorter life is acceptable. Life expectancy at 130 C is 1000 hours.

The 45-volt cell has a 63-volt peak inverse voltage. Unlike most 45-volt rectifiers, this is a true, long-life industrial cell. Frequently, this rectifier may be substituted for those employing 26-volt cells. Since fewer cells are required, savings of up to 30 per cent in cost, and up to 35 per cent in the size of the stacks are possible. Life expectancy of the 45-volt cells at normal current rating at 35 C ambient is 60,000 hours, and they can be used at ambient temperatures up to 110 C.

All Vac-u-Sel rectifiers operate with exceptionally low forward-voltage drop and low reverse leakage, and their margin of superiority in these characteristics increases with service. All Vac-u-Sel rectifiers undergo extensive testing and grading, and matched cells are used in assembling stacks. A variety of finishes and mounting arrangements are available to meet virtually any requirements. Write for Bulletins GEA-5935 (miniatures); GEA-6273 (standard).

#### COPPER-OXIDE RECTIFIER STACKS

G-E copper-oxide rectifier stacks offer these outstanding features:

- No unforming
- Ability to withstand momentary current overloads
- Ability to withstand momentary voltage overloads
- Long life with little aging
- Highest efficiency at low voltages

These features of G-E copper-oxide rectifiers make them especially suited for certain types of magnetizing circuits,

which require the rectifier to withstand high current inrush and momentary voltage overload.

Perhaps the most widespread use of copper-oxide rectifiers is in the field of circuit-breaker operation. Here, the unique characteristics of copper-oxide rectifiers are especially important.

The above features also make G-E copper-oxide rectifiers ideal for the following applications: Blocking • Metering • Polarizing relays • High-speed relays • Electroplating • Electrolytic reduction • Telephone and telegraph equipment • Control contactors • Low-voltage, high-current power supplies • Testing equipment • High-voltage surge protectors • D-c welders. Write for Bulletin GEA-5699.

\*Trade-mark of General Electric Co.

#### INDUSTRIAL GERMANIUM RECTIFIERS

G-E industrial rectifiers offer these outstanding features:

- Lowest forward drop per ampere pere square inch
- Best current output, smallest size, and lightest weight per watt output of existing metallic rectifiers
- High efficiency
- No unforming
- Negligible aging

These new G-E germanium metallic rectifiers are of the broad-area type. Their very low forward-voltage drop gives excellent regulation. The high output voltage per cell permits the use of fewer cells, and rectifying properties are instantaneous since they do not require artificial forming. G-E germanium rectifiers can be operated at extremely high current densities, and a large d-c output is obtainable from a very small germanium rectifier.

The regulation is less than 6 per cent when operated at the high current densities permissible with germanium rectifiers. With most metallic rectifiers, regulation is usually between 15 and 20 per cent at their normal current densities. Germanium rectifiers have a broad application in power conversion where size and weight requirements are at a premium. Write for Bulletins GEA-5773 (industrial rectifiers); GEA-6224 (power supplies); GEA-6297 (anodizing and electroplating).

Complete information on Vac-u-Sel, copper-oxide, and germanium rectifiers is available from your nearest G-E Apparatus Sales Office, or by writing to Section 640-443, General Electric Company, Schenectady 5, N. Y.

TYPE B-2

TYPE C-4

Schauer copper oxide rectifiers for instrument and other uses are processed and individually tested to meet the requirements of the user. Versatile processing techniques make possible variations in characteristics for special or unusual applications. Each rectifier is rated conservatively for long life and dependable operation.

Size "B" Rectifiers are encapsulated—fully sealed in special formula polyester plastic in attractive red color. Cells are specially processed with vacuum evaporated gold contact areas to give maximum efficiency, stable operation and low aging characteristics. All rectifiers are supplied with 3" leads, color-coded. (Red, positive; black, negative; yellow, A.C.) Plastic encapsulated rectifiers have lead insulation imbedded in the plastic for better sealing, eliminating short circuits at the rectifier. Lead lengths of other

The values in the table above are those for the conditions of a resistive or inductive load, an ambient temperature of 35° C (95° F), and normal convection cooling with the rectifiers installed with the plates in a vertical position. For operating conditions of higher ambient temperatures and other type loads refer to the derating table at the right.

More and more engineers choose Radio Receptor Selenium Rectifiers for their power applications. Rugged, dependable and highly efficient, these flexible units are giving long and satisfactory service in such diversified installations as the toll gates of N. Y.'s Triborough Bridge, elevators in more than 150 skyscrapers in New York and Chicago and mag-amp regulators used aboard many U.S.N. submarines.

The stacks shown above are those which are normally in stock at your distributor and are adaptable for a wide range of applications. Many other types available for special applications.

**TECHNICAL CHARACTERISTICS**

Power supply requirements for every radio, television and instrument use—ranging from small AC-DC receivers to large-screen TV—can be met with available Kool-Sel rectifiers. A summary of the important engineering characteristics of each Kool-Sel type is given on this page. You should consider the use of Kool-Sel components for the following applications:

**RADIOS and RADIO-PHONOGRAPHS** — Low-cost, efficient rectifiers for radios and radio-phonograph combinations are Kool-Sel KS-65, KS-75 and KS-150. The needs of most 5-tube chassis are met by the KS-65, while the KS-75 and KS-150 are used in sets with larger current requirements.

**RADIO ACCESSORIES** — TV boosters, UHF converters, phonograph oscillators, intercoms and the like gain compactness and dependability when you use small, cool-running Kool-Sel. Type KS-65 is suitable for most of these uses.

**TELEVISION** — High-voltage power supplies in television receivers — including color sets — use Kool-Sel rectifiers, Catalog Nos. KS-200, KS-250, KS-300, KS-350, KS-400 and KS-500. These rectifiers, used in voltage doubler or voltage tripler circuits, provide proper B-plus voltage, eliminating the size, cost, weight and hum problems of power transformers.

**LABORATORY INSTRUMENTS, POWER SUPPLIES, AMPLIFIERS** — Rectified high voltage through the use of voltage doubler and tripler circuits, for equipment where current requirements run as high as 500ma, may be provided with Kool-Sel rectifiers. Catalog Nos. KS-200, KS-250, KS-300, KS-350, KS-400 and KS-500 will be found useful for laboratory power supplies, DC filament supplies, motion picture projectors, amplifiers, test equipment and other specialized uses.

Standard rectifiers are connected internally according to one of the five circuit diagrams shown.

Series 500, 160 and 160-C are the well known standard line of instrument rectifiers and are constructed to the highest standards of quality. Construction is conventional.

TUA (tubular, axial leads) and TUR (tubular, radial leads) construction is desirable especially in rectifiers designed for high voltage operation. Total enclosure of the stack however limits heat radiation necessitating derating of cells.

ERM (external resilient member) construction insures maintenance of optimum stack pressures regardless of ambient or operating temperatures. Rectifiers in ERM construction are smaller, lighter and cheaper.

## MODEL 4300 RECEIVER

The RME 4300 is a completely new amateur receiver of professional quality incorporating many deluxe features usually found only in higher priced models. Designed specifically for communications on amateur frequencies, the Model 4300 has a large, evenly graduated, illuminated dial covering the following six bands: 1.76 to 2.2 mc; 2.48 to 4.26 mc; 6.98 to 7.32 mc; 13.98 to 14.43 mc; 20.8 to 21.52 mc; 26.95 to 29.8 mc. Smooth, even tuning without backlash is provided by the unique differential, ball planetary type tuning knob with choice of 7.5-to-1 or 1-to-1 ratios by selection of coaxially mounted rims; triple spaced plates in tuning condenser greatly reduce microphonic susceptibility.

Selectivity control offers four positions; nose of curve is 3 kc wide without crystal filter with attenuation 60 db down seven kc above or below desired frequency. Crystal filter has phasing control for variable rejection of unwanted adjacent signals. High sensitivity of 2 microvolts for 10 db signal-to-noise ratio; excellent image rejection; extremely low noise figure. Temperature-compensated components with heavy steel chassis, sturdy steel cabinet and pressure-cast control panel hold drift to  $\pm 0.1\%$  for first 20 minutes with zero drift after warm-up. Extreme stability permits single sideband reception with or without adapters. BFO injection control for accurate carrier frequency insertion for SSB operation.

Other features include "S" meter calibrated in steps of 6 db from S1 to S9, plus 10 db units over S9; automatic noise limiter of the peaked type set for 85% modulation, may be switched in and out of circuit; front panel frequency correction control to set frequency exactly at any scale point. Antenna trimmer on front panel permits peak adjustment for different antennas. Smooth acting RF gain control with 6 db attenuation for each 5 degrees rotation; function switch selects receiver operation—MGC-BFO, AGC-AM phone, AGC-SSB, MGC-SSB. Two coaxial jacks provided for addition of Model 4301 single sideband adapter or other adapters; 4-ohm speaker terminals; antenna connections for doublet and Marconi-type; transmitter relay control.

Controls: Dual-speed tuning, AF gain, BFO pitch, BFO injection, antenna trimmer, calibration adjust, band selector, RF gain—on-off, function switch, stand-by—receive—transmit switch, crystal filter selectivity selector, crystal filter phasing-selector control, ANL on-off. Tubes: 6CB6 RF, 6U8 Det.-Osc., 6CB6 1st IF, 6U8 2nd IF-BFO, 6T8 2nd Det.-ANI-1st AF, 6AQ5 AF output, 5Y3 Rect., OA2 voltage regulator. 117 v. 50-60 cycle AC.

## MODEL 4301 SIDEBAND DETECTOR-SELECTOR

The Model 4301 is a new sideband detector-selector which provides outstanding, easy-to-tune SSB reception of both carrier present and carrier suppressed types. Using the cables supplied, the Model 4301 plugs directly into the Model 4300 receiver, forming an attractive, functional addition. Easily connects between the IF and audio stages to any other communications receiver.

Complete with built-in power supply, the Model 4301 has an extremely stable BFO, balanced detector circuit, and accurate phase shift network. Included are adder and subtractor circuits to provide single side reception of either upper or lower sideband separately, double sideband or normal carrier reception or normal receiver operation. Selection is made with panel-mounted rotary switch which provides instantaneous switching between upper and lower sideband with 40 db attenuation of unwanted sideband; this feature improves system selectivity and SNR for standard AM and CW reception as well as SSB.

Controls: Sideband selector, vernier frequency control, on-off switch. Tubes: 2-12AT7, 12AX7, 6AL5, plus selenium rectifier.

Sturdy steel case and cast aluminum control panel in attractive instrument gray finish. Size: 10" h. x 8 1/2" w. x 10" d. Shipping Weight, 16 lbs. Net Each. . . . . \$75.00

## MODEL 4302 SPEAKER

Housed in a sturdy steel case with cast aluminum front panel, the Model 4302 speaker is styled to and finished to complement perfectly the Model 4300 and other quality receivers. For operation with any receiver having 4-ohm speaker output terminals. The acoustic properties of the unit are tailored for optimum readability in communications operation. Finished in anti-glare instrument gray. Size: 10" h. x 8 1/2" w. x 5 1/2" d. Shipping Weight, 6 lbs. Net Each. . . . . \$17.50

## T-90 BANDMASTER TRANSMITTER

The T-90 is the result of our long study concerning the operating requirements of most amateurs. Sufficient power to "get out" on all bands, either fixed or mobile, under today's QRM conditions, plus space limitations of the average home, has been the prime objective in its design. The many refinements contributing to smooth and efficient operation which have been incorporated in the T-90, have up to this time been found only in transmitters selling at a much higher price. A close study of the following features will provide convincing evidence that the T-90 is the transmitter YOU WANT for your shack or car. DIMENSIONS (overall): Cabinet 12 $\frac{3}{8}$ " wide, 10 $\frac{1}{2}$ " deep, 6 $\frac{3}{4}$ " high; weight 17 $\frac{3}{4}$  lbs. Factory built and tested complete with tubes, less power supply. **\$179.50\*** Amateur Net

## R-9 BANDMASTER RECEIVER

In our further studies of amateur requirements, we found that the ultimate desire of all was to have equipment which "went together." The difficulty of installing odd sizes of cabinets has always been a source of irritation to the neat and efficient operator. The R-9 is physically an identical twin to the T-90. Now at last, without any reservation, you can have fixed station performance either in your shack or in your car. This highly stable all-band double conversion receiver has a versatility and a number of refinements which have never before been offered in such small space. Price is complete with tubes. Dimensions same as transmitter. **\$149.50\*** Amateur Net

## The Oscilloscopes and the Amplifier Sweep

The oscilloscopes in their packaged form are entirely adequate for many laboratory as well as industrial and communication uses. As a transmitter modulation monitor, no additional equipment or accessories are required. By the addition of such units as sweeps, pulse generators, amplifiers, servo sweeps, etc., all of which can be conveniently and neatly constructed on companion rack panels, the original basic scope unit can be expanded to serve any conceivable application.

Here again the research engineer is freed of the drudgery of time consuming mechanical construction and other such details of the basic scope before being able to proceed with his specialized work.

The oscilloscopes are designed for standard rack mounting and incorporate mu-metal shielding and power supply as well as functional controls.

## LABORATORY DELAY LINE STANDARDS

The Millen delay line kit effectively provides a means for the development and design engineer to check the affect of various delays in their actual developmental setups without the time loss and expense of producing separate lines for each trial. Increased requirement for time delay circuits in radar, color television and other modern electronic applications has presented a problem to the design and development engineer as it has been both time consuming and expensive to obtain delay lines for developmental work as each line was necessarily cut to the estimated delay and any change in requirements necessitated the fabrication of a new delay line. The Millen delay line kit is designed to provide a ready means of obtaining various delays from .10 microseconds through 2 microseconds in increments of .05 microseconds except at the extreme ends of this range. The lines may be used repeatedly without deterioration as they are hermetically sealed, the smaller lines in glass tubes, the 1 microsecond line in a metal container.

Actual delay as measured by phase shift method are marked on each delay line. The laboratory calibration of each delay line is accurate to  $\pm 0.002$  microseconds on all of the .10 microsecond, .25 microsecond and .03 microsecond lines and  $\pm 0.01$  microsecond on the 1 microsecond line. Combination of delay lines supplied makes possible the following delays:

0.10 $\mu$ s.	0.55 $\mu$ s.	1.10 $\mu$ s.	1.55 $\mu$ s.
0.20	0.60	1.20	1.60
0.25	0.65	1.25	1.65
0.30	0.70	1.30	1.70
0.35	0.75	1.35	1.75
0.40	0.80	1.40	1.80
0.45	0.90	1.45	1.90
0.50	1.00	1.50	2.00

Characteristic impedance — 1350 ohms  $\pm 20\%$ .

Each set consists of:

NOMINAL DELAY	TOL.	CALIBRATION TOLERANCE
2—0.10 $\mu$ s.	$\pm 0.01$ $\mu$ s.	$\pm 0.002$ $\mu$ s.
2—0.25 $\mu$ s.	$\pm 0.025$ $\mu$ s.	$\pm 0.002$ $\mu$ s.
1—0.30 $\mu$ s.	$\pm 0.03$ $\mu$ s.	$\pm 0.002$ $\mu$ s.
1—1.00 $\mu$ s.	$\pm 0.05$ $\mu$ s.	$\pm 0.01$ $\mu$ s.

### PHYSICAL DIMENSIONS:

0.1  $\mu$ s.— $1\frac{1}{2}$ " dia. x  $4\frac{1}{8}$ " long  
 0.25  $\mu$ s.— $1\frac{1}{2}$ " dia. x  $7\frac{1}{8}$ " long  
 0.30  $\mu$ s.— $1\frac{1}{2}$ " dia. x  $7\frac{1}{8}$ " long  
 1.00  $\mu$ s.— $4\frac{3}{4}$ " x  $4\frac{3}{4}$ " x 1"

All seven lines are mounted in a metal case  $9\frac{1}{2}$ " x 5" x  $1\frac{3}{4}$ " for convenience in storing and safety in handling.

## Delay Lines and Networks

The James Millen Mfg. Co., Inc. has been producing continuous delay lines and lump constant delay networks since the origination of the demand for these components in pulse formation and other circuits requiring time delay. The most modern of these is the distributed constant delay line designed to comply with the most stringent electrical and mechanical requirements for military, commercial and laboratory equipment.

Millen distributed constant line is available as bulk line for laboratory use and in either flexible or metallic hermetically sealed units adjusted to exact time delay for use in production equipment. Lump constant delay networks may be preferred for some specialized applications and can be furnished in open or hermetically sealed construction. The above illustrates several typical lines of both types. Our engineers are available to assist you in your delay line problems.

### **Mu Metal Shields**

The James Millen Mfg. Co. Inc. has for many years specialized in the production of magnetic metal cathode ray tube shields for the entire electronics industry, supplying magnetic metal shields to manufacturing companies, laboratories and research organizations. Stock shields are immediately available for all of the more popular sizes and types of cathode ray tubes as well as bezels for 2", 3" and 5" size tubes.

Many production problems, however, make desirable special shields designed in conjunction with the specialized requirement of the basic apparatus. Herewith, are illustrated a number of such custom built shields. Our custom design and fabrication department is at the service of our customers for the development and manufacture of magnetic metal shields of either nicoloi or mumetal for such specialized applications.

## Grid Dip Meters

Millen Grid Dip Meters are available to meet all various laboratory and servicing requirements.

The 90662 Industrial Grid Dip Meter completely calibrated for laboratory use with a range from 225 kc. to 300 mc. incorporates features desired for both industrial and laboratory application, including three wire grounding type power cord and suitable carrying case.

The 90661 Industrial Grid Dip Meter is similar to the 90662 except for a reduced range of 1.7 to 300 mc. It likewise incorporates the three wire grounding type cord and metal carrying case.

The 90651 Standard Grid Dip Meter is a somewhat less expensive version of the grid dip meter. The calibration while adequate for general usage is not as complete as in the case of the industrial model. It is supplied without grounding lead and without carrying case. The range is 1.7 to 300 mc. Extra inductors available extends range to 220 kc.

The Millen Grid Dip Meter is a calibrated stable RF oscillator unit with a meter to read grid current. The frequency determining coil is plugged into the unit so that it may be used as a probe.

These instruments are complete with a built-in transformer type A.C. power supply and interterminal terminal board to provide connections for battery operation where it is desirable to use the unit on antenna measurements and other usages where A.C. power is

not available. Compactness has been achieved without loss of performance or convenience of usage. The incorporation of the power supply, oscillator and probe into a single unit provides a convenient device for checking all types of circuits. The indicating instrument is a standard 2 inch General Electric instrument with an easy to read scale. The calibrated dial is a large 205° drum dial which provides seven direct reading scales, plus an additional universal scale, all with the same length and readability. Each range has its individual plug-in probe completely enclosed in a contour fitting polystyrene case for assurance of permanence of calibration as well as to prevent any possibility of mechanical damage or of unintentional contact with the components of the circuit being tested.

*The Grid Dip Meters may be used as:*

1. A Grid Dip Oscillator
2. An Oscillating Detector
3. A Signal Generator
4. An Indicating Absorption Wavemeter

The most common usage of the Grid Dip Meter is as an oscillating frequency meter to determine the resonant frequencies of de-energized tuned circuits.

Size of Grid Dip Meter only (less probe): 7 in. x 3 $\frac{3}{8}$  in. x 3 $\frac{3}{8}$  in.

## Midget Absorption Frequency Meters

Many amateurs and experimenters do not realize that one of the most useful "tools" of the commercial transmitter designer is a series of very small absorption type frequency meters. These handy instruments can be poked into small shield compartments, coil cans, corners of chassis, etc., to check harmonics; parasitics; oscillator-doubler, etc., tank tuning; and a host of other such applications. Quickly enables the design engineer to find out what is really "going on" in a circuit.

Types 90605 thru 90609 are extremely small and designed primarily for engineering laboratory use where they

will be handled with reasonable care. The most useful combination being the group of four under code No. 90600 and covering the total range of from 3.0 to 140 megacycles. When purchased in sets of four under code No. 90600 a convenient carrying and storage case is included. Series 90601 are slightly larger and very much more rugged. They are further protected by a contour fitting transparent polystyrene case to protect against damage and dirt. This latter series is designed primarily for field use and are not quite as convenient for laboratory use as the 90605 thru 90608 types. All types have dials directly calibrated in frequency.

## EXPLANATION OF TYPE NUMBERS

The first portion of the type number indicates the capacity per section in mmfd. The following letter indicates the frame size or type. A second letter "D" indicates a two-section type—"A" differential, "B" butterfly. The final number multiplied by 100 is the approximate peak break-down voltage.

## TYPE "M" CAPACITORS

Requiring a panel area just  $\frac{3}{8}$ " wide by  $\frac{3}{4}$ " high, these diminutive capacitors provide the perfect answer to problems encountered in the design of compact radio frequency equipment. Bridge type stator terminal provides extremely low inductance path to both stator supports. Soldered plate construction, oversize bearing, and heavily anchored stator supports insure extreme rigidity. Relatively large beryllium copper compression spring rotor contact provides steady torque—rotor stays "put" where set. Rotor contact nickel plated—all other metal parts nickel plated. Seatite end frames DC-200 treated. Mounting bushing threaded  $\frac{1}{4}$ "-32 with flats to prevent turning—mounting nut furnished. Peak voltage 1250 volts on .017" spaced units—850 volts on 160-130 which is spaced .013"— $\frac{3}{16}$ " diameter shaft\* slotted for screwdriver adjustment. JOHNSON Miniature Air Variables are available in production quantities with the following features: 1. Locking bearing. 2. 180° stop. 3. Various shaft extensions. 4. High torque. 5. Silver or other platings.

\*Instrument type tuning knob to fit  $\frac{3}{16}$ " shaft available. (See knob and dial section of this catalog.)

## TYPE "L" CAPACITORS

A superior quality general purpose capacitor by JOHNSON embodying important advances in design and construction. The rotor bearing and stator support rods are actually soldered directly to the ceramic (steatite) end frames making the capacitor virtually vibration proof. A special split sleeve tension bearing and silver plated beryllium copper contact provide constant torque and smooth, silent capacity variation. Heavy brass soldered plates and large diameter tie rods provide great rigidity. Plating is heavy nickel. Bearings threaded  $\frac{3}{8}$ "-32, mounting nut provided. Removable chassis mounting brackets can be used to mount auxiliary equipment. Plate spacing .030". Available with .020", .060" and .080" spacing as well as special platings, shaft lengths and stator terminal locations in production quantities. Models with 6-32 tapped mounting posts soldered to end frame are also available on special order.

## JOHNSON KNOBS AND DIALS

A distinctive line of matching knobs and dials, derived from a new basic knob design. Knobs have twelve well defined flutes and present an essentially round appearance.

Tough, scratch resistant black phenolic is used for all molded parts (meets MIL-P-14). Metal dial scales have an etched satin chrome finish. This contrasts greatly with deeply etched and filled engraving, provides maximum legibility under poor lighting conditions. All types have accurately centered metal inserts for  $\frac{1}{4}$ " shafts except 116-214-2.

Variations available, such as special shaft sizes, scales or indicators in production quantities.

## TUBE SOCKETS

A new standardization program calculated to simplify the selection of sockets and to provide complete specifications for standard, industrial and military requirements has been instituted recently. By reducing the number of variations in special socket types, it will permit the maintenance of stocks of military and industrial types as well as standard sockets and provide shorter delivery cycles on quantity orders. Specifications for the three variations of each socket type are as follows:

### BAYONET SOCKETS—GENERAL SPECIFICATIONS

**Standard** (designated -1) A commercial grade socket suitable for general requirements. Porcelain bases, glazed top and sides—phosphor bronze contacts, cadmium plated .0002. Nickel plated hardware. Bayonet shells are etched aluminum.

**Industrial** (designated -100) Superior in quality to Standard types, Industrial types have glazed steatite bases, DC200 treated. Phosphor bronze or beryllium copper contacts, .0005 silver plated. Aluminum bayonet shells, iridite No. 14 treated. Fungus resistant cushion washers under contacts.

**Military** (designated -200) Top quality for military requirements. Glazed L4 steatite bases, DC200 treated. Beryllium copper contacts .0005 silver plated. Hot tin-dipped terminals—brass bayonet shells, .0003 nickel plated. Threaded hardware .0002 nickel plated, unthreaded hardware .0003. Fungus resistant cushion washers under contacts.

### WAFER SOCKETS—GENERAL SPECIFICATIONS

**Standard** (designated -1) A commercial grade socket suitable for general requirements. Glazed steatite base is DC200 treated—contacts are of plated brass with steel springs. Etched aluminum shields on shielded types.

**Industrial** (designated -100) Superior in quality to Standard types, Industrial types have glazed steatite bases, DC200 treated. Contacts are phosphor bronze with beryllium copper springs .0005 silver plated. Shields on shield types are iridite No. 14 treated aluminum. Fungus resistant cushion washers under contacts.

**Military** (designated -200) Top quality for all military requirements. Glazed steatite bases, DC200 impregnated. Phosphor bronze contacts and beryllium copper springs silver plated .001—hot tin-dipped solder terminals. Fungus resistant glass base melamine cushion washers iridite No. 14 treated aluminum shields on shielded types. Entire socket protected for 200 hour salt spray test.

## STANDARD VARIABLE CAPACITORS

### "BFC" CAPACITORS

**FEATURES**—The "BFC" "butterfly" type capacitor has very low minimum capacity, low inductance and isolated rotor for use in VHF applications as a series capacitor with no rotor connection. For dual split-stator capacitor use, it has a low-loss positive rotor contact. Mechanical and electrical symmetry and stator terminal locations minimize circuit inductance.

**CONSTRUCTION**—Brass rotors and stators are soldered and nickel-plated. The contact wiper is heavily silver plated beryllium copper. Tapped studs on the silicone treated steatite front panel permit mounting the capacitor without grounding the rotor. The sleeve type bearing is nickel-plated brass.

**SPECIFICATIONS**—Straight line capacity. 90° rotation from minimum to maximum capacity position. Air gap is 0.030" nominal. Tested at 1200 V. R.M.S., 60 cycles between rotor and each stator.

High Speed Ball-Bearing Models Also Are Available.

### "MAC" CAPACITORS

**FEATURES**—The "MAC" provides the low minimum capacity essential for use as a trimmer in the VHF range. It was engineered to achieve the smallest dimensions practical to meet the requirements of a miniaturized component.

**CONSTRUCTION**—Its silicone treated steatite base is only 3/8" x 5/8". Rotor and stator are soldered assemblies and are of brass, nickel-plated. Rotor and stator terminals are positioned to permit short leads. The threaded bearing is provided with flat sides to permit single hole mounting.

**SPECIFICATIONS**—Straight line capacity. Screwdriver adjustment. Air gap is 0.017" nominal. Tested at 750 V. R.M.S., 60 cycles.

### "APC" CAPACITORS

**FEATURES**—The "APC" trimmer capacitor originated by Hammarlund over twenty years ago is still widely recognized as the standard capacitor of its type. Its use is indicated in all classes of equipment where a compact, high quality air dielectric trimmer is required. It was designed to resist effects of temperature, moisture and vibration. Silicone treated steatite insulation is used to insure high leakage resistance.

**CONSTRUCTION**—Brass rotor and stator plates are soldered to brass supports. Nickel-plated phosphor bronze wiper assures positive rotor contact. All metal parts are nickel-plated. Terminals are hot-tin dipped. Tapped brass mounting studs fastened to silicone treated steatite base permit mounting capacitor without grounding the rotor.

**SPECIFICATIONS**—Straight line capacity characteristic. Available either with hexagonal collar on slotted shaft to permit rotor adjustments to be made with wrench or screwdriver or with 1/2" extended shaft for knob control or shaft coupling. "APC-C" Lock Type now also available through distributors. Air Gap is 0.015" nominal. Tested at 600 V. R.M.S., 60 cycles.

### "MAPC" CAPACITORS

**FEATURES**—The "MAPC" capacitor is representative of Hammarlund's efforts to meet the demand for smaller dependable components. It is a scaled-down version of the popular "APC" with everything reduced except the quality and performance characteristics. For example, an "MAPC" is about half the size and weight of an "APC." Lower minimum capacities and low inductance make the "MAPC" suitable for VHF use.

**CONSTRUCTION**—The standard "APC" construction is used in this capacitor. Rotors and stators are fabricated by soldering brass plates to supporting members and nickel-plating the assemblies. Nickel-plated Beryl. Copper wiper assures positive rotor contact. Tapped brass mounting studs fastened to silicone treated steatite base permit mounting capacitor without grounding rotor.

**SPECIFICATIONS**—Straight line capacity. Available either with screwdriver or socket wrench adjustment or with 1/8" extended shaft for knob control or shaft coupling. "MAPC-C" Lock Type now also available through distributors. Air Gap is 0.0135" nominal. Tested at 600 V. R.M.S., 60 cycles.

## STANDARD VARIABLE CAPACITORS

### "HFA" and "HFBD" CAPACITORS

**SINGLE SECTION CAPACITOR**—The "HFA" is a single section tuning capacitor similar to the "HF" except that larger plates permit wider air-gaps for the same capacitance values. Resultant higher break-down ratings extend the use of the capacitor into the high frequency low-power transmitter field. A threaded sleeve bearing permits single hole mounting and the bracket supplied may be used for base mounting. A lug type terminal mounted with the bearing provides an efficient rotor connection.

**DOUBLE SECTION CAPACITOR**—The "HFBD" is a dual, balanced rotor transmitting capacitor employing front and rear panels plus a ball-thrust rear bearing, but other incorporating constructional features identical to the smaller "HFA." An insulated shaft extension safeguards operating personnel from the high voltages which may be applied to the rotor. The small size, rugged construction, balanced rotor and range of capacitance values and breakdown voltages make this capacitor ideally suited to many applications.

**SPECIFICATIONS**—Straight line capacity. Air gaps and test voltages are as indicated in table. However, "HFBD" breakdown voltages are doubled and capacitance values approximately halved when stator sections are connected in series.

### "RMC" CAPACITORS

**FEATURES**—The "RMC" was designed specifically for applications requiring an "MC" type tuning capacitor with very rigid construction. Its sturdy frame consists of heavy gauge aluminum end panels held together by three aluminum tie rods. It has a brass sleeve front bearing and a single ball thrust rear bearing for smooth tuning and a high degree of resetability. The rotor contact is a forked silver plated beryllium copper spring wiping against a wide disc on the rotor. The plate shape and other constructional features are the same as on the "MC." Tapped holes in front panel and in inverted mounting permit a wide variety of assembly methods.

**SPECIFICATIONS**—Straight line capacity. Air gap is 0.0245" nominal. Tested at 1000 V. R.M.S., 60 cycles.

### "VU" CAPACITORS

**FEATURES**—The "VU" is a uniquely designed UHF tuning capacitor using completely original concepts. With its conventional "lumped constant" circuits, rather than tuned cavity techniques, can be efficiently used up to 500 megacycles. In addition to employing the capacitor sections in series to eliminate the rotor wiper, the design also utilizes Pyrex balls to form precision bearings and to completely isolate the rotor. Thus, noise generated by rubbing metal-to-metal contacts and variable resistance paths in the bearings have been totally eliminated. Circuit connections are made to threaded studs on each stator. This permits vacuum tube and inductor to minimize circuit inductance. The symmetrical design is ideal for tuned circuits operating up to 500 megacycles.

**CONSTRUCTION**—Rotors and stators are of brass with plates soldered in precisely located grooves and then silver plated to increase the "Q" of the capacitor. The insulation is silicone treated stearite. All lengthwise frame members are of brass to minimize temperature effects. Base mounting brackets are provided.

**SPECIFICATIONS**—The capacity characteristic approaches a straight line frequency curve as indicated by nominal values in table. Air gap is .0168" nominal. Tested at 700 V. R.M.S., 60 cycles, between rotor and each stator.

## STANDARD VARIABLE CAPACITORS

### "MC" and "MCD" CAPACITORS

**FEATURES**—The "MC" is a versatile single section tuning capacitor designed to give the equipment engineer a choice of mountings, connections and capacity characteristics. The threaded brass front bearing and tapped aluminum end brackets permit panel or base mounting. A rotor stop permits 180° clockwise rotation for increasing capacity. "MC-S" capacitors have a straight line capacity characteristic. "MC-M" units have offset plates resulting in a "Midline" characteristic which more equally spaces frequencies. "MC-X" units are wide-spaced for high voltages. For optimum performance all Hammarlund "MC" capacitors have silver plated beryllium copper wiping contact, silicone-treated steatite insulation, soldered nickel-plated brass rotors and stators, rotor shaft supported on

**SPECIFICATIONS**—Straight line or "Midline" capacity characteristic. Single-spaced types have 0.0245" nominal air gap and are tested at 1000 V. R.M.S., 60 cycles. Wide-spaced ("X") types have 0.0715" nominal air gap and are tested at 1750 V. R.M.S., 60 cycles.

bearings at both front and rear of capacitor.

The "MCD" is a split-stator panel-mounted capacitor with all the "MC" features. Stators have terminals on both sides. Stators on single-spaced capacitors are separated by a shield. Wide-spaced units have no shield.

Single hole or base mounting. Special spacing, capacity values, finishes and other modifications are available to manufacturers on special order.

**DOUBLE SECTION CAPACITOR**—The "HFD" dual capacitors, like the "HF" singles, incorporate advanced features providing for maximum efficiency at high frequency. Soldered brass plates are nickel-plated. Aluminum front and rear end panels are mounted on a heavy silicone treated steatite base. Wide front and rear bearings with individual silver plated beryllium copper wipers for each section assure long life and maximum contact efficiency. Single hole panel mount or base mounting. Electrostatic shield between sections. Terminals are provided on both sides of each stator to permit mounting tube and inductor on opposite sides.

## STANDARD VARIABLE CAPACITORS

### "FC" and "FNC" COUPLINGS

**FEATURES**—The "FC-46-S" is an insulated flexible coupling designed to provide for mechanical ganging of shafts even though angularly misaligned. The smallest dimensions have been incorporated consistent with the rugged construction necessary for general service. A high degree of electrical isolation is achieved through the use of silicone treated steatite insulation. Flashover voltage is approximately 5000 V. R.M.S. Brass hubs and spring temper phosphor bronze flexible arms are nickel plated. An exclusive and important feature of this coupling is its characteristic of uniform side-thrust through 360° of rotation. This eliminates tendency to vibrate at high speeds, minimizes bearing wear and assures accurate tracking.

The "FNC-46-S" is a non-insulated coupling for use where electrical continuity between shafts is required. The flexible arms are held securely to a nickel plated brass ring instead of an insulator.

#### STANDARD STOCK TYPES

CODE FC-46-S	Insulated flexible coupling
CODE FNC-46-S	Non-insulated flexible coupling

### "NZ-10" CAPACITORS

**FEATURES**—The "NZ-10" is a compact transmitter neutralizing capacitor designed for easy and accurate adjustment. The rotor is attached to a fine-thread lead screw which may be adjusted with smooth and precise action by a screwdriver and locked securely by a readily accessible clamping screw. A stop prevents shorting of plates at maximum capacity. Long leakage paths to ground from both rotor and stator are provided. Glazed steatite insulators and smoothly rounded aluminum plates minimize flashover.

**SPECIFICATIONS** — Capacity is adjustable from 2.3 to 10 mmf. Peak voltage rating is 3000 V. at maximum capacity (minimum gap) position.

## SPECIAL VARIABLE CAPACITORS FOR ALL NEEDS HAMMARLUND CUSTOM ENGINEERED CAPACITORS

Hammarlund has for many years been considered the foremost designer and producer of variable capacitors for special military, scientific and precision applications. Should you have a special capacitor requirement, your engineers will find the services of our capacitor design group to be of inestimable value.

Illustrated are two communications receiver multiple-section tuning capacitors and a single-section frequency meter capacitor. All of these capacitors feature

exceptionally precise calibration accuracy, the highest possible degree of resetability, essentially zero temperature coefficient, close tolerances on starting and running torque, high "Q" under adverse operating conditions and complete freedom from noise. To produce these and similar capacitor designs involve the techniques of metallurgy, gearing, finishing, bearing design, ceramics, vibration and shock—to mention but a few. These techniques are possessed to a high degree here at Hammarlund.

Should you have need for facilities such as ours, we will welcome your inquiry.

**#1523** ..... Net 24.50

Includes special balun for balance and match of folded dipole driven element to 52 ohm coax.

# GONSET *Communications Equipment*

Highly effective 15 and 20 meter, 2 element rotaries with element lengths only 16 1/2' tip-to-tip. Performance closely approaches full length antennas in all kinds of weather. Lightweight... TV-type rotator can be used readily. Bow-tie elements for broad banding, very high "Q" center loading inductors for lowest possible losses.

Single 52 ohm coax feed with link coupling and "Magic match" termination assures low VSWR, symmetry, balanced pattern. Antennas are factory tuned, require no field adjustments.

The 10 meter Bantam includes the same features as the 15 and 20 meter types. Its boom length is about 5' and element lengths are approximately 9' long.

A Booster element is available for use with the 20 meter Bantam for improved performance when this antenna is operated on 10 meters.

## 10 METER 3 ELEMENT BEAM...

Pre-tuned and matched, full length 10 meter beam. T match and coax balun, (supplied) assure low SWR and symmetry over wide band width. Gain is more than 8 db (1/2 wave dipole reference) and FBR exceeds 20 db at peak frequency. Boom is 10', 1 1/2" and stub mast 40", 1 1/4" galvanized steel tubing. Elements are 3/4" aluminum alloy. Strong, lightweight, easy assembled.

With coax balun and stub mast ..... net 34.50

## 13 ELEMENT YAGI FOR 2 METER DX...

13 elements on 24' boom—reflector, folded dipole driven element and 11 wide spaced directors.

Factory set at 144.2 mcs but can be optimized higher in band by trimming elements. Can be mounted for either horizontal or vertical polarization. Open wire line or coax feed possible.

### RELAYS USING VACUUM SWITCHES

Type R and RH Vacuum Switches are available from Jennings mounted as relays for indoor use. They may be mounted with contacts normally open or normally closed or two switches may be mounted in a single pole double throw arrangement. Either ac or dc solenoids may be used. Insulation between the switch and its actuating solenoid is provided by a 2 to 8 inch puller rod providing 40 to 100 kv insulation. CE grade phenolic laminate is recommended for dc or 60 cycle use; Grade G7 silicone glass laminate or alumina ceramic is recommended for radio frequency applications.

## VARIABLE TOROIDAL INDUCTORS

Now the advantages of the Rotoroid principle of inductance variation — simplicity, stability, linearity, and high "Q"— can be realized economically in the numerous applications where toroid with a limited variation of inductance is desired. Using similar construction to the Rotoroid, the Adjustoroid allows a total inductance variation of approx. 10%.

## FILTERS TO REDUCE OR ELIMINATE TELEVISION INTERFERENCE

The sources of television interference are most often short wave broadcasting stations, amateur radio transmitting stations, diathermy equipment, X-ray equipment, automotive ignition noises or similar sources. The basic problem of eliminating this interference is that of rejection of the signals received from these sources.

### LF-601 LOW PASS FILTER

Interference to television receiver reception caused by transmissions from an amateur station can be caused by harmonics or by shock from the transmitter. The shock from the transmitter fundamental can be cured at the television receiver with a Bud HF-600 high pass filter. Harmonics can be greatly reduced or eliminated at the transmitter by use of a Bud LF-601 low pass filter.

The LF-601 high attenuation low pass filter has the following characteristics:

1. Minimum attenuation of 85 decibels on all frequencies above 54 megacycles and a minimum of 93 decibels above 70 megacycles.
2. Maximum rejection is adjustable from 55 to 90 megacycles. This tunable feature provides two slots at least 100 decibels down.
3. The cut-off frequency is 42 megacycles.
4. The unit will easily handle a full kilowatt modulated on a reasonably flat line.
5. The insertion loss is less than one DB.
6. Since the design of this filter provides an adjustable feature, the unit can be used with either 52 ohm or 72 ohm coax.
7. Each inductance is in an individually shielded compartment.
8. All capacitors used are variable.

Catalog No.  
LF-601

Dealer Cost  
\$14.85

### HF-600 HIGH PASS FILTER

The HF-600 high pass filter is designed to have a cut off frequency at 42 megacycles, thus this filter rejects signals from 0 to 42 megacycles. It is within this range that the majority of signals causing interference would be received. Since there is no attenuation above 42 megacycles, picture strength or quality is not affected.

This unit is easily installed and complete installation instructions are included. The filter is housed in an attractive aluminum case 3 1/4" x 2 1/8" x 1 3/8".

HF-600

### GIMIX GX-79

The Bud Gimix is a multipurpose unit requiring no batteries or power supply. It is calibrated for use on the 10, 15, 20, 40 and 80 meter amateur bands. No additional coils are needed as the one coil does the work on all bands. It can be used as a Wave-Meter, a Monitor, a Field Strength Indicator, a Carrier Shift Indicator and a sensitive Neutralizing Instrument. Operating instructions supplied with each unit.

## BUD FEED-THROUGH AND BASE MOUNTED NEUTRALIZING CONDENSERS

In circuits utilizing tubes with the grid lead terminated in the base a feed-through type of neutralizing condenser is particularly suited. One hole is required for mounting of feed-through condensers. Neutralizing condenser illustrated is feed-through type. Plates are made of aluminum rounded at edges to cut down losses. After proper tuning is attained, movable plate can be locked with the knurled nut.

No. 852 is ideal for popular low power beam tubes.

## GIANT TRANSMITTER CONDENSERS

BUD GIANT TRANSMITTER CONDENSERS are built with a sturdy frame consisting of 3/16" thick aluminum end plates, connected by 3/8" diameter duraluminum rods. Formed brackets at top and bottom of end plates provide for mounting these units, and permit placing of associated inductances directly on the condenser.

Rotor and stator plates are accurately stamped from 0.064" thick highly polished aluminum with all edges rounded to minimize corona loss and danger of peak-voltage flash-over. The plates are separated by accurately machined duraluminum spacers that insure a constant air-gap throughout the entire length of the condenser.

The large two-finger rotor-contact spring, made from plated spring brass, assures positive contact with noise-free operation. Steatite bars insulate the stator, and are placed well outside the electrostatic field to keep dielectric losses at a minimum.

Available in both single and dual section.

In single section: .250" air gap available in 195 mmfd., 345 mmfd. and 530 mmfd. capacities. .500" air gap available in 55 mmfd., 95 mmfd., 150 mmfd. and 255 mmfd. capacities. .750 air gap available in 50 mmfd., 75 mmfd., 110 mmfd. and 160 mmfd. capacities. 1" air gap available in 55 mmfd., 85 mmfd. and 105 mmfd. capacities.

In dual section: .250" air gap available in 100 mmfd., 215 mmfd., and 320 mmfd. capacities. .500" air gap available in 55 mmfd., 80 mmfd., and 110 mmfd. capacities. 1.750" air gap available in 30 mmfd., 52 mmfd. and 70 mmfd. capacities. 1" air gap available in 35 mmfd. capacities.

## MASTER TRANSMITTING CONDENSERS

All tie-rods in this series are insulated by glazed Steatite pillars, thus completely eliminating all closed metallic loops in the condenser frame. A special outstanding feature, developed by BUD engineers, is that of placing the positive double wiping rotor contact between the two sections at the center of the rotor. These features contribute to perfect circuit balance and eliminate the majority of difficulties encountered in high frequency equipment due to parasitics, circulating currents and poor neutralization. Use BUD condensers throughout and be trouble free.

Available in both single and dual section.

In single section: .200" air gap available in 25 mmfd., 50 mmfd., 75 mmfd., 100 mmfd. and 145 mmfd. capacities. .300" air gap available in 35 mmfd., 55 mmfd., 75 mmfd. and 100 mmfd. capacities.

In dual section: .200" air gap available in 25 mmfd., 35 mmfd., 50 mmfd., 75 mmfd. and 100 mmfd. capacities. .300" air gap available in 50 mmfd. capacity.

## JUNIOR CONDENSERS

Electro-soldered plate assemblies are featured in the construction of these condensers. This assures correct plate spacing, overall rigidity and light weight. Losses are reduced to a minimum by this method of assembly. End plates are rigidly constructed. The frame has formed angles on top and bottom for mounting the condenser in any position which allows associated tuning inductance to be mounted on the condenser frame. The edges of the brass rotor and stator plates are rounded and the assemblies are cadmium plated. Ainsmag insulation is used throughout. Large surface front sleeve bearing and ball and cup rear bearings provide constantly smooth operation. A two finger spring brass pressure contact wiper assures noise-free and positive rotor contact at all times. The low minimum capacities of these units make them especially suitable for multi-band applications where a high ratio of maximum to minimum capacity is desired.

Available in both single and dual section.

In single section: .051" air gap available in 50 mmfd., 100 mmfd., 145 mmfd., 250 mmfd. and 340 mmfd. capacities. .078" air gap available in 25 mmfd., 55 mmfd., 110 mmfd., 150 mmfd., 190 mmfd. and 245 mmfd. capacities. 1.144" air gap available in 20 mmfd., 55 mmfd., 80 mmfd. and 105 mmfd. capacities. .175" air gap available in 18 mmfd., 40 mmfd., 55 mmfd. and 100 mmfd. capacities.

# R. F. CHOKES - COUPLINGS

## LATTICE WOUND R. F. CHOKES

For all general purpose applications requiring a high quality choke at a reasonable price, this line finds wide acceptance. Each choke is wound from silk-covered enameled copper wire on a white ceramic bobbin. Leads are terminated with two convenient soldering lugs. Chokes can be mounted with a 6-32 screw

through the center of the form, and each winding is thoroughly impregnated against moisture. The wide range of sizes fills practically every choke requirement in standard radio circuits. Choke base diam. 1-1/16". distance between ends of leads 1 1/2"

## TRANSMITTING CHOKES

Here are two heavy duty R. F. Chokes that can really take it in high powered transmitter plate circuits. Each choke is wound on 9/16" dia. Steatite rod, has connection lugs and a mounting foot. All chokes have a heavy ceramic coating which prevents moisture absorption and enables them to withstand momentary overloads without collapsing the individual pies.

Consists of five graduated pies wound in continuous winding. Care has been taken to prevent any of the pies from being resonant on an amateur band and to keep the distributed capacity at a minimum. Overall height 3 1/4".

## IRON CORE R. F. CHOKES

The efficiency of any circuit requiring an R. F. choke will be definitely improved by utilizing one of these chokes with a finely divided molded metallic core. The improved "Q" possible with this construction results from the D. C. resistance of these chokes being from 40 to 50% less for a given inductance than for regular air-core types. Thus, the D. C. voltage drop through the choke is considerably less, yet the choking action is equally as good. Windings are made with silk-covered enameled wire terminated on convenient soldering lugs, and the chokes are mounted in small square shield cans measuring 1 1/2" x 1 1/2" x 1-7/16".

## BUD HIGH VOLTAGE FLEXIBLE COUPLINGS

A new type spring construction in these couplings permits a wide gap between shaft connections, freedom from back-lash, and unusual flexibility. The springs are attached to glazed Steatite discs 1 1/2" in diameter and 3/16" thick, and the overall diameter of the finished coupling is 1-15/16". Coupling accommodates standard 1/4" shaft.

## HEAT RADIATING PLATE AND GRID TUBE CONNECTORS

Bud heat radiating connectors fit all sizes of industrial and transmitting vacuum tubes. These connectors serve a dual purpose, not only are they useful to make connections to plate or grid terminals, but they provide a large heat radiating surface that will dissipate heat from the glass seal and tube element. Eight sizes fit all grid and plate leads and also provide sufficient heat radiation for any tube operating in the range of 50 to 2000 watts. All radiators are machined from special aluminum rod. Edges are rounded to minimize corona loss.

# RELAY RACKS—CABINET RACKS

## ADD-A-RACK SERIES

It always has been necessary to buy special racks without louvers on one side to obtain maximum interior space with a minimum of floor space. Now, you no longer need to buy an entire new cabinet when you want additional space. When multiple rack units are required, we not only offer additional racks at a lower cost, but provide a sturdier, better looking assembly. Only Add-A-Rack series can accomplish this savings.

Illustration A shows the two Add-A-Rack cabinets assembled together. Illustration B shows the unique and ingenious method of adding a unit to your present equipment. Instead of buying an entirely new outfit, you purchase, as a unit, four parts: 1. The door, 2. the top, 3. the bottom, 4. an Add-A-Rack Coupling Unit. The right or left side of your present relay rack is removed and replaced by the Add-A-Rack Coupling Unit. Next, the top and bottom are fastened into place. The side taken from the first rack is then fastened onto the second rack. Place the additional

door into position and you now have two racks, properly and efficiently coupled together. In the same simple way, more racks can be added at any time. Every one will be in a continuous one piece assembly.

## SPECIAL SHEET METAL FABRICATION

Now, Bud Radio, through its Metal Products Division, offers greatly increased facilities for the production of special sheet metal items. New machinery has been added, departments have been modernized and streamlined, and new methods have been developed.

We make over four hundred different sheet metal products as stock items, which are illustrated elsewhere in this catalog. Often a slight change in one of our standard items will eliminate the necessity of special tools and dies, thereby reducing costs greatly. Since we produce thousands of sheet metal products, every month, for ourselves and for leading firms throughout the country, we are able to

effect economies in production which mean lower prices and faster delivery.

Our expanded facilities, expert workmanship, years of experience and manufacturing "know how" assure high quality products. In addition, our Engineering Staff is always available for consultation and advice. We suggest that you send us your blueprints for estimate.

Whether the quantity be one, ten, one hundred, one thousand or many thousands, we are interested in the opportunity to be of service to you.

Illustrated on this page are a few examples of specially fabricated sheet metal products.

# TYPE "C" UNIVERSAL CABINET RACKS

## TYPE "PX" AND "FX" SERIES RACKS FOR 19" & 24" WIDE PANELS—18" & 24" DEEP

### WITH REAR DOOR ONLY

No. PX-6718

### WITH FRONT & REAR DOOR

No. FX-6718

These Universal Cabinet Racks are similar in construction to our standard Type "C" Racks, except that the design has been modified to facilitate the location and mounting of chassis supports, sliding shelves, and standard sliding devices. In addition, all racks, with and without front doors, have adjustable panel mounting angles, which may be positioned on the sides of the racks from front to back.

You now have available a complete line of cabinet racks similar in design, with or without front doors, with open or closed sides, which can be used singly or grouped together in continuous rows. Where racks with solid sides of the same height are used, they may be set up and intermixed for 19" and 24" panels, with rear doors only, or with front and rear doors; the racks are available for 19" wide panels, in 18" and 24" depths, and for 24" wide panels in 24" depths. The same group arrangement can be made with racks with open sides on Pages J-92 and J-93.

All racks with rear doors only are equipped with regular vertical trim strips to cover the panel mounting screws. However, where sliding drawers and custom assembled sliding chassis are used, these standard trims will interfere with the operation of such drawers. To overcome this difficulty, optional "Narrow-Type" vertical trims (same as racks with front doors) are available which permit free operation of sliding drawer equipment. Although such trims expose panel mounting screws, they do maintain the conventional appearance of these racks. Vertical corners of the rack proper are full cabinet design, so the edges of panels are recessed with trims removed.

The grooved bolt retainers on the sides of all racks, which are primarily used for adjusting the position of panel mounting angles, also serve as a means for bolting the Vertical Side Supports shown on Page J-94. To these side supports may be attached chassis brackets, shelves, slides, etc., as described on that page. Other arrangements which can be made with our "FR" or "PR" (Detachable Type) Cabinet Racks are shown on Page J-92:

Advantages of "UNIVERSAL" Type Racks may be summarized as follows:

1. A complete line of racks to provide unit row type assembly, or for use as single racks.
2. Racks with or without front doors, for either 19" or 24" wide panels may be used singly, or in rows, intermixed as required.
3. The panel mounting angles on ALL racks are fully adjustable, and may be set at any position from front to back.
4. Vertical Side Supports (see Page J-94) for attaching chassis brackets, shelves, slides, etc., may be installed without drilling or fitting.
5. Either regular or "Narrow Type" vertical corner trims are available without additional cost.
6. A simplified method is provided for installing standard or custom-built slides.
7. Available finishes are black or grey ripple enamel, primer coat only, grey hammertone or aluminum grey lacquer.

**PLEASE SPECIFY FINISH DESIRED WITH YOUR ORDER, THANK YOU.**

In this group are shown our standard "PX" type racks, 24" deep. The racks at the end positions are for 24" wide panels, and 19" wide panels are used on the two center racks. Regular width vertical trim strips covering the panel mounting screws are used in this arrangement.

Similar groupings could be made using "PX" racks of the same height in 18" or 24" deep racks, using 19" or 24" wide panels. All of the racks in this group have solid sides.

# TYPE "C" UNIVERSAL CABINET RACKS

**TYPE "PR" & "FR" SERIES RACKS  
FOR 19" & 24" WIDE PANELS — 18" & 24" DEEP  
With Open Sides and Detachable Side Panels**

**WITH REAR DOOR ONLY**

**No. PR-6718**

**WITH FRONT & REAR DOORS**

This Cabinet has Detachable Side Panels mounted.

**No. FR-6718**

These **UNIVERSAL CABINET RACKS** are similar to those listed on the preceding pages except that they are constructed with **OPEN SIDES** and **DETACHABLE SIDE PANELS**. The illustrations at the left and right show how these units look with the side panels removed; the illustration above shows an FR Type Rack with the detachable side panels in place.

In the price list on the opposite right-hand page (Page J-93), you will note that the last two columns list the matching detachable side panels; prices are **per pair**. The illustrations below are typical assemblies of multiple installations; many others are possible.

**UNIVERSAL CABINET RACKS** (with detachable side panels as shown herewith, or with solid sides — on preceding pages) facilitate the location and mounting of chassis supports, shelves, sliding shelves, and standard sliding devices. Panel mounting angles may be positioned at the sides of the racks at any location from front to back.

Advantages of "UNIVERSAL" Type Racks may be summarized as follows:

1. A complete line of racks to provide unit row type assembly, or for use as single racks.
2. Racks with or without front doors, for either 19" or 24" wide panels may be used singly, in rows, or intermixed.
3. The panel mounting angles on ALL racks are fully adjustable, and may be set at any position from front to back.
4. Vertical Side Supports (see Page J-94) for attaching chassis brackets, shelves, slides, etc., may be installed without drilling or fitting.
5. Either regular or "Narrow Type" vertical corner trims are available without additional cost.
6. A simplified method is provided for installing standard or custom-built slides.
7. Available finishes are black or grey ripple enamel, primer coat only, grey hammertone or aluminum grey lacquer.

In this group, types "PR" and "FR" racks are intermixed.

Racks for 24" wide panels are used on the ends, whereas the three center racks are for 19" wide panels. Three of the racks have front as well as rear doors. The position of the racks can be interchanged as desired.

Similar groupings can be made with our "PX" (Solid Sides) Cabinets as illustrated on Page J-90.

This typical group consists of racks with open sides, using types "PR" and "FR" racks intermixed. Narrow trim strips are used throughout, because racks with front doors are in the assembly.

If "PR" racks (with rear doors only) were in the group exclusively, either regular width or "narrow" type trims could be installed at your option. Detachable side panels are installed on the end racks.

## DOUBLE WIDTH ROLLER TRUCKS

It is often necessary to mount groups of 2 of our type "C" enclosed racks on roller trucks. The

truck illustrated above is used for that purpose. They are similar to our heavy duty trucks (page J-101), except that they have been reinforced with heavier steel because of their greater length.

They are supplied with 6 - 3" diameter wheels with heavy duty type casters. Due to the numerous possible sizes, we are unable to list prices, but they are available upon receipt of your requirements. Please advise finish required. They may be obtained in black or grey ripple, grey hammertone enamel, grey lacquer, or primer coat only.

## SLIDING SHELF UNITS

These sliding shelves may be mounted on all of the relay racks listed by us, as they are screw mounted to the front panel mounting angles, the same as regular panels.

Basic Slide Assembly SD-1916

The basic assembly illustrated is sold as a complete unit. Chassis may be bolted directly to the sliding shelf; panels may be attached to the shelf using standard chassis brackets listed on Page J-105. Formed panels with a minimum height of 7" are recommended.

The forward movement of shelves for 18" deep racks is 13 1/4"; for 24" deep racks, it is 17 1/4". The shelf may be quickly removed from the slide while it is in an extended position.

The illustration shows a sliding shelf unit with the slide carrier in a vertical position. This type affords the maximum load capacity, but reduces the usable shelf space to 15 5/8" wide. The shelf height is only 1".

We also list shelves with slide carriers mounted horizontally under the shelf. This method permits the use of 17" wide chassis, but reduces the load capacity. The shelf height is increased to 1 3/4". All parts on both types are zinc plated.

# TYPE "A" CHANNEL RELAY RACKS

## FOR 19" WIDE PANELS

### DELUXE TYPE

No. RR-197

OUR NEW DELUXE CHANNEL TYPE RELAY RACK extends the utility and applicability of the standard channel relay rack.

The panel space has been changed to 77"x19", to match a standard height used on enclosed cabinet racks.

The upright channels have been modified to an 8" overall depth, which when combined with a formed recess for the panels, greatly increases the rigidity of the rack. The edges of the panels are not exposed.

The rack is drilled and tapped for 10-32 screws at both front and back permitting the optional use of either panels, or dish type chassis mounted to the racks at both front and back. The full panel space of 77"x19" is available on the back, the same as the front.

The clear distance between panel mounting flanges (from front to back) is 6 3/4". It is practicable to use this 6" depth as an enclosure for dish type chassis listed on Page J-105. When such chassis are mounted at the back, the addition of standard or hinged type panels (see Pg. J-102) will make a rack enclosure with a clear depth of 6 3/4". The top cross-brace is provided with a grille for ventilation where needed.

The top brace and the vertical channel members are securely welded together. The base and rear braces are shipped knocked down, with all necessary bolts for assembly. Panel mounting screws are also supplied.

# UTILITY DESK ASSEMBLIES

*Standardized Units Adaptable to Individual Requirements*

## General Description

**SINGLE UNIT ASSEMBLY**

The above illustrates how brackets are mounted. They are used for mounting chassis, standard shelves, or drawers. With all sides open, easy access saves considerable time in assembly.

The combination of a control cabinet mounted on a table, desk or similar support has been in general use in the electronics industry for some time. Due to the various functions for which it may be employed, such equipment has assumed various forms, arrangements and sizes, requiring costly, custom-built construction to achieve their purpose.

While it is obvious that no particular fixed design can serve every demand, we have devised a group of **standardized units**, the combination of which is readily adaptable for control stations, testing apparatus, sound distribution systems, and similar applications.

The **line drawing on the opposite page** is a composite view of a complete equipment in which have been grouped various available components. Essentially, it consists of a desk cabinet or turret, a 71" long table top, and two pedestals. Other arrangements include a 51" long table top, a pedestal and end table support, and a smaller desk cabinet; where a single pedestal only is needed, a 25" wide table top and suitable desk cabinet is listed.

The sizes and specifications of the various units are catalogued on the following pages. There are several features which warrant your consideration, particularly the pedestal. Note that all doors of the pedestal are easily removable, allowing complete access to the interior **from all sides**. (See illustration at left.) Each side of the four supporting posts has also been drilled and tapped on "universal" centers, making it possible to mount standard rack panels or doors on any or all sides, at your preference. Each door is equipped with a "push-button" spring catch, plus a lock with interchangeable keys. The use of the lock is optional.

Another time-saving aid is the method of supporting apparatus in the interior of the pedestal. Universal brackets are easily attached to any of the four sides by utilizing the tapped panel mounting holes. The brackets are slotted, so that almost continual vertical adjustment may be made. They may be used to support regular 17" wide chassis, or standard shelves. The shelves are suitable for mounting amplifiers, power supplies, record changers, etc.

All table-tops have screw type studs, which are inserted in matching holes already drilled in the pedestals. The desk cabinets have necessary mounting holes, but they have been omitted from the table top to permit a flexible assembly of similar cabinets, or other equipment.

**SPECIFICATIONS:** The Desk Panel Cabinets, Table Tops and Pedestals are constructed of 1/16" thick furniture steel. They are rigidly braced and reinforced wherever necessary, and substantially welded into integral units. No holes have been drilled in the table tops for desk cabinets, to permit cabinets to be located wherever desired.

**FINISH:** Unless otherwise specified, the standard finish for all items on Pages J-106 thru J-109 is medium grey enamel. Black wrinkle, slate grey wrinkle, grey hammer-tone, or prime coat only is available at same price. Samples of above finishes will be mailed upon request.

Screw studs are securely fastened in place, for insertion into matching holes in pedestals. Necessary lock-washers and nuts are included.

No holes have been drilled for desk cabinets, so that cabinets already in use or other control units may be mounted wherever desired.

# EXPAND-A-RACK SERIES

**DESCRIPTION:**

- A. When it is necessary to join two or more racks together, WYCO METAL PRODUCTS offers the "EXPAND-A-RACK" series.
- B. Figure "A" shows two Expand - A - Racks joined together.
- C. Figure "B" illustrates the method of expanding your present rack space. In place of purchasing an additional rack, a unit, consisting of the following items, would be bought: (a) the door; (b) the top; (c) the bottom; (d) an Expand-A-Rack joining unit. The right or left side of your existing relay cabinet rack is dis-assembled and replaced with an Expand-A-Rack joining unit. Following this step, the top and bottom are assembled. The cabinet side removed from the original rack is then fastened onto the second rack. Upon hanging the additional door, two complete racks are now joined together.
- D. Wyco's Expand-A-Rack series may be purchased by one of two methods. One method consists of buying one complete rack (the "W" series) plus one Expand-A-Rack unit. If you already have one of our basic "W" series cabinets, then order an Expand-A-Rack unit.
- E. Supports are electronically welded to the bottom to receive our casters (#RC-100).
- F. There is an ample amount of compound knockouts in the Expand-A-Rack joining unit center partition. This allows cables and leads to be taken from one cabinet to the other.
- G. Available in Grey or Black Wrinkle and Silver Grey Hammertone.

# SLOPING PANEL SUPPORT

## DESCRIPTION:

In answer to many requests from engineers within the industry, WYCO METAL PRODUCTS presents the all-new SLOPING PANEL SUPPORT. As indicated in figures "A", "B" and "C", the SLOPING PANEL SUPPORT allows for mounting of the standard 19" panel in sloping position. This enables the engineer or equipment user to more easily view the rack mounted instrument panel. From these illustrations, it is easy to see that the SLOPING PANEL SUPPORT offers a variety of positions in which a standard 19" panel may be supported in sloping position. The SLOPING PANEL SUPPORT is fabricated of heavy gauge steel and is finished in Black and Grey Wrinkle or Silver Grey Hammertone.

**IMPORTANT!** When ordering SLOPING PANEL SUPPORTS FOR CABINET RACKS THAT HAVE FRONT CORNER VERTICAL TRIM, use catalog prefix "B". In all other cases use catalog prefix "G".

## COMMUNICATIONS RECEIVERS

### NEW HQ-150 COMMUNICATIONS RECEIVER

A new superheterodyne communications receiver in the medium price class featuring built-in Q-multiplier and a 100 KC crystal calibrator. The HQ-150 covers a continuous range of frequencies from 540 KC to 31 MCS, or from 555 meters to 9.7 meters in six bands. Circuitry and tube line-up are the same as the famous Hammarlund HQ-140-XA.

The HQ-150 has extremely high sensitivity and selectivity, plus outstanding frequency stability and image rejection. New, fully illuminated, expanded scale panel meter is incorporated for easier, more accurate readings.

### HQ-140-XA COMMUNICATIONS RECEIVER

An improved version of the famous HQ-140-X. A superheterodyne type receiver that provides all the advantages of modern design and circuitry for the ham and short wave listener. Extremely high degree of sensitivity and selectivity plus improved frequency stability and image ratio. Covers a continuous range of frequencies from 540 KCS to 31 MCS, or from 555 meters to 9.7 meters in six bands.

Band spread tuning is supplied on the four higher frequency bands, with actual calibration in the 80, 40, 20, 15, and 10 meter amateur bands. The outstanding noise limiter and special Hammarlund patented crystal filter reduce noise and interference.

#### FEATURES

Tuning Ranges: 0.54 - 1.32 MCS, 1.32 - 3.2 MCS, 3.2 - 5.7 MCS, 5.7 - 10 MCS, 10 - 18 MCS, and 18 - 31 MCS.

Calibrated Band Spread: 3.5 - 4 MCS, 7 - 7.3 MCS, 14 - 14.4 MCS, 20.9 - 21.6 MCS, and 28 - 30 MCS.

Tube Line-Up: 6C4 Oscillator, 6BA6 RF Amplifier, 6BE6 Mixer, 6BA6 1st IF Amplifier, 6BA6 2nd IF Amplifier, 6BA6 3rd IF Amplifier, 6AL5 Combination Detector and AVC Noise Limiter, 12AU7 1st AF Amplifier and BFO, 6V6GT/G Audio Power Output, OC3/VR105 Voltage Regulator, and 5U4G Full Wave Rectifier.

### PRO-310 COMMUNICATIONS RECEIVER

A beautiful receiver in all respects—appealing in looks and listening. The PRO-310 employs modern etched circuits and plated circuits in the RF section. Ideal for either ham or professional user. All frequencies can be read to 0.05%. Bandspread is continuously calibrated over the entire range from 540 KCS to 35.5 MCS. Exalted BFO and sharp selectivity are built in for SSB operation. Modern circuits and components result in exceptional stability. High image rejection is achieved on all six bands. Double conversion is used on the top four bands. A rugged, sectionalized turret is employed for bandswitching. All operating controls are located for easy, quick and accurate operation.

### SP-600-JX COMMUNICATIONS RECEIVER

The world-famous Hammarlund SP-600-JX receiver is a professional-type for the ham who wants the very finest. Six bands cover the frequency range from 540 KCS to 54 MCS. The SP-600-JX is a 20-tube, dual conversion superheterodyne. Operation of any of the six crystal-controlled fixed frequency channels within the range of the receiver is immediately available. Perfect as a point-to-point or network receiver: Pre-arranged day and night fixed frequencies. Crystal control permits instantaneous selection of desired channels. Stability is 0.001% to 0.01% depending upon frequency. Image rejection is 80 db to 120 db down, and spurious responses are at least 100 db down. Sensitivity is 1 uv cw and 2 uv am, while selectivity for the three non-crystal ranges is from 200 cps to 13 KCS. Radiation is negligible with no cross-talk in multi-receiver installations.

## BASIC SYNCHROS & SERVOMECHANISMS

by Van Valkenburgh, Nooger & Neville, Inc.

There are hundreds of thousands of synchros and servos in operation today! In addition to wide use in the military, aeronautical, and maritime fields, synchros and servos perform an ever-increasing variety of tasks for industry . . . faster and more accurately than is possible manually.

They produce and control rotary motion from a distant point . . . direct the flow of liquids into pre-selected channels . . . operate remotely located valves for mixing purposes . . . control temperature . . . and play a vital part in the growth of Automation!

In all, synchros and servos have created a tremendous interest—both in the jobs they now do, and in the many new tasks they will be called upon to perform as industry swings further and further into automatic controls and production. Untold thousands will be affected by this change-over, and the need for a truly basic text to explain synchros and servos has never been greater. Nothing explains these vitally important devices like "Basic Synchros and Servomechanisms."

These fabulous picture-text books teach synchros and servomechanisms faster and easier! The principles and practice of synchros and servomechanisms are here presented in a manner which permits a rapid grasp of the fundamentals of these vitally important subjects. Over 300 specially prepared illustrations present, explain and make every topic discussed picture clear. 270 pages, 6" x 9", illus. Soft Covers. Cat. No. 180.

# Mandl's Television Servicing

## EASY TO USE

A complete Master Trouble Index, listing 100 trouble symptoms in picture and sound with their possible causes and references to the pages on which directions for servicing are given, makes it easy for you to locate the source of trouble and correct it in minimum time. Detailed trouble-shooting procedures tell you just what to do. Simple, clear explanations show how each unit in the TV receiver functions, with lists of the flaws that may occur in it, what points in the circuitry cause these flaws, how they affect other components, and how they show up on the TV screen. Whether you want specific servicing instructions or further information about any part of the set, you can easily and quickly find it here.

## THE PRACTICAL DETAILS YOU WANT

All the faults likely to occur, including those hard-to-find troubles, are dealt with. And you won't be confused by unnecessary theory. Only the essentials actually needed for practical servicing are given. You'll learn many practical time-saving methods:—simple signal-tracing procedures; how to improve reception in fringe areas; how to trouble-shoot keyed A.G.C. and synchroguide circuits; align I.F. stages; how to use the oscilloscope and other test equipment, and many trade tricks for diagnosing trouble quickly.

## HUNDREDS OF HELPFUL ILLUSTRATIONS

Original photographs, especially made for this book, show you what appears on the screen test patterns when there is a defective picture tube, diathermy interference, and scores of other causes of imperfect pictures. 50 scope patterns give you handy checks for signal tracing and analysis of cir-

cuit performance. Hundreds of large, clear schematics, many from the major manufacturers, show you each circuit in each part of the TV receiver, and helpful block diagrams show you the arrangement of the various parts in the set as a whole.

### What you should know about Cutler-Hammer

Cutler-Hammer has long held the respect of the aircraft industry because this company has been part of the aircraft industry for 35 years. Today, as for the decades past, Cutler-Hammer engineers are working closely with the aircraft industry's leaders... thinking ahead, planning, designing and building for the future. Here is the record:

**1920** Cutler-Hammer designed and manufactured the first line of switches ever created specifically for use in aircraft.

**1938** Cutler-Hammer designed and manufactured the first d-c power relays ever created specifically for use in aircraft.

**1943** Cutler-Hammer designed and manufactured the first a-c power relays ever created specifically for use in air-craft.

**1949** Cutler-Hammer started development of the first environment-free power relays for use in aircraft

**1953** Cutler-Hammer submitted samples and certified test reports on the first hermetically sealed power relay to WADC and Bu. Aer. Cutler-Hammer configuration was adopted as industry standard by ASG.

**1955** Cutler-Hammer designed and manufactured the first one hole mounting Lever Lock aircraft switches.

## AIRCRAFT-TYPE SWITCHES AND INDICATOR LIGHTS

### Snap-Action PUSH BUTTON SWITCHES

#### Momentary Contact

Although conservatively rated for a full 8 amperes, these Hetherington "B" Series switches are actually considerably smaller than conventional ½-amp momentary-contact push-button switches.

The secret of this high rating is the unique Hetherington snap-action mechanism which reduces arcing and contact wear and provides far greater current capacity than the small size and low cost of these switches would indicate. Moreover, this exceptionally positive mechanism provides strongest contact pressure at the point of "break," thus making it impossible to "tease" the switch on or off contact.

**RATING:** 8 Amperes, 115 volts, ac. Underwriters' Laboratories, Inc. Inspected.

**CIRCUIT ARRANGEMENTS:** Single pole-Single throw, with either Normally Open (NO) or Normally Closed (NC) contacts.

**CONSTRUCTION:** Cylindrical, molded phenolic housing seals switch against

dust and moisture. Threaded aluminum bushing swaged to housing. Mounting nut and lockwasher provided. Contacts have heavy silver overlay on a copper base. Highly tinned lug terminals. **DIMENSIONS:** 1 5/8" long by 3/16" diameter, overall. 3/8" long bushing. Mounts in 1/2" diam. panel hole. 2 1/8" long lug terminals.

### Subminiature INDICATOR LIGHTS and SWITCH-LIGHT COMBINATIONS

These tiny, light-weight Hetherington indicator lights are sturdily constructed for military and industrial uses where long, trouble-free service under adverse conditions is a requisite. All types use standard AN-3140 lamps with ratings of 6, 14, 18, or 28 vdc. Removable plastic lens caps available in amber, blue, green, red, or white. Write for details on any type.

**SERIES L1000:** (A) For regular panel mounting in 1 1/2" hole. Supplied with removable insulating bushings, spacers, and ground terminal. Sealed against moisture. 1 3/8" l. by 7/16" diam. Also available for edge-lit panel mounting as Series L2000.

**SERIES L6000:** (B) Subminiature indicator or warning light with exceptionally wide visibility. Unique bevelling of long plastic lens "pipes" light throughout entire periphery. Lens and lamp removable as a unit from the front. For standard or edge-lit panels. Mounts in 3/8" panel hole. Lens extends 2 1/2" beyond panel. 1 1/2" overall length x 1/2" diam. Also available in 2-terminal and "Press-to-Test" styles.

**SERIES L3000:** (C) "Push-to-Test"

indicator lights. Lamp circuit is "tested" by pressing spring-mounted plastic lens to make contact. Available with or without silicone boot for moisture protection. For flange-type mounting in 1/2" hole. Overall length, 1 3/4". Lens extends 1 1/4" from panel.

**SWITCH-LIGHT COMBINATIONS:** (D) Designed originally as hostess call lights, these space-saving Hetherington switches with built-in lights now serve many industrial uses as well. Types include: Push-pull snap switches with auxiliary momentary contact and lamp circuit, Push button momentary contact switch with auxiliary lamp circuit, and Push-on pull-off or Push-off pull-on switch with integral lamp circuit. Switch ratings up to 15 amps, ac-dc. Details on request.

### TOGGLE, ROTARY and "PUSH-PUSH" SWITCHES

Cam-roller action Hetherington switches positively cannot be "teased off" contact. Cylindrical anodized aluminum case reduces size by 25% over conventional rectangular switches. Continuous current ratings of 40 amps at 28 vdc or 115 vac. Write for details on any type.

**SERIES T1000:** (A) Bat-handle toggle switch. Available in: SP-ST on-off, SP-DT on-on, SP-ST momentary on—normally off, SP-ST momentary off—normally on, SP-DT on—momentary on. Mounts in 1 1/8" hole. Overall length inc. toggle: 2 3/8".

**SERIES R1000:** (B) Snap-action, rotary switch available in SP-ST or

SP-DT. Mounts in 1 1/8" hole. Overall length inc. 3/4" long shaft: 1 3/4".

**SERIES J100:** (C) "Push-Push" switch providing maintained contact with push button operation. SP-ST push-on push-off, or SP-DT available. Mounts in 3/4" hole. Overall length 2 1/8".

## CARTER TELEPHONE JACKS

### SPECIFICATIONS

**CONTACTS:** Silver-zinc alloy is standard. Coin silver, fine silver and others can also be supplied in production quantities.

**BUSHING:** Plain brass is standard. Available with nickel-plate when specified.

**SPRINGS:** Finest grade nickel silver with soldering terminals hot tinned for easy soldering.

**INSULATION:** Spacers made of high grade laminated phenolic.

**FRAME:** Frame and face plate cadmium plated steel. Frame and face plate are electrically welded to form one integral unit. This provides outstanding strength and superior ability to "stand the gaff." Where paramount quality and ruggedness is desired this telephone jack is recommended.

Carter "imp" Telephone Jacks can be supplied in many circuit combinations to suit your requirements. They are ideal for use in telephone, broadcast studio and audio equipment.

## CARTER IMP JACKS

These are the smallest jacks available for use with standard phone plugs. They come in a wide variety of circuits, as shown below. Mount in a single  $\frac{3}{8}$ " diam. hole, panels up to  $\frac{3}{32}$ " thick. More detailed catalog information available on request.

### "Imp" SHORT JACKS

**J-1 Open Circuit "imp" Short Jack**—Has tip and sleeve circuits only.

**J-2 Closed Circuit "imp" Short Jack**—Similar to J-1 with an additional spring making contact with tip spring until plug is inserted.

**J-3 Microphone "imp" Short Jack**—A new 3-conductor jack having tip, ring and sleeve circuits. Fits standard 3-circuit  $\frac{1}{4}$ " dia. microphone plugs.

Inquire regarding JAN Specs. Jacks and Plugs

## LEAF SPRING STACK ASSEMBLY SWITCHES

Low-cost, practical, dependable Contact Switch Assemblies can be supplied by Carter to meet innumerable different specifications and arrangements. It is impractical to catalog the many possible combinations, and for that reason we suggest you write in about your requirements.

## LONG AND SHORT FRAME JACKS

**LONG JACKS . . .** The original long jacks were adapted from the telephone switchboard jacks. Long rugged, phosphor-bronze springs parallel to the plug axis give precise action. These jacks take minimum panel mounting space, less than the short jacks. Supplied with nickel-plated Palnut.

**SHORT JACKS . . .** Carter short jacks are small and compact, but do a full-sized job. Depth behind the panel is cut down by placing the tempered nickel-silver springs parallel to the panel. High quality sheet phenolic and tubular ebonite insulators are used throughout—no paper or fibre used in Carter Jacks. Supplied with nickel-plated Palnut.

Short and long jacks mount in single  $\frac{3}{8}$ " hole in panels up to  $\frac{1}{16}$ " thick. Fit of the plug in the jack is not affected by the thickness of the panel. Fit all standard plugs in two and three conductor types. Cadmium plated steel frame. All contacts between springs are fine silver, giving minimum contact resistance.

## CARTER "Imp" PLUNGER SWITCH

- Wiping-Rotating Action
- Minimum Arcing
- No Impact Load on Plunger

Variations in construction now in process for air craft type MIL-S-6745 (AN-S-20a) series AN 3021 and AN 3027 also all-purpose type MIL-S-3950 series MS35058 and MS35059.

### REGULARLY TESTED TO MEET ADVERSE OPERATING CONDITIONS

**Overload . . .** Tested to make and break at 50% overload for brief periods. To assure performance of these switches with their comparatively heavy current ratings, J-B-T features ample size **solid coin silver contacts and rocker arms** instead of clad or brazed construction. Contact resistance is under 0.005 ohms. High dielectric exceeds 1000 volts r.m.s. at 60 cycles at sea level.

**Cold and Heat . . .** Specialized aircraft lubricant facilitates mechanical and electrical operation at both low and high temperatures (-67°F to 185°F).

**Vibration and Shock . . .** No momentary make or break or mechanical damage during stringent shake tests and 75 G's drop test.

**High Humidity . . .** Materials, dull finish on outside metal parts (as required by Armed Services specifications) and lubricant enable switches to withstand tropical climates.

**Salt . . .** Meet 100 hour Salt-Spray Test QQ-M-151a which is twice the required minimum of JAN-S-23.

**Rugged Service . . .** Generously proportioned and substantially built for extra life. For instance, both screw-type terminals and solder lugs easily withstand a 30 pound pull test. Operating cycles far in excess of minimum specified as acceptable. Springs are stainless steel. Quality standards are maintained by in-plant testing of production samples to meet adverse operating conditions.

## INSTRUMENT AND TESTER SWITCHES (LAMINATED)

### Rotary Selector — Single and Multi-Gang — Non-Shorting and Shorting

SS-14-2

J-B-T Instrument-type Rotary Selector Switches are used widely in quality test equipment, portable instruments, inspection setups and avionics where trouble-free, dependable performance is of major importance. Available in two basic types—14 and 20 position—the design gives extra contacts in minimum space. One to six decks.

#### FEATURES:

**Reliability**—Rigid, 3-post deck suspension, instead of the usual 2; all current carrying parts are brass or phosphor bronze, silver flashed and then heavily plated with fine silver to meet 100 hour salt spray test; ball bearing action, beryllium-copper balanced spring (SS-14); leaf-type (SS-20), and sharp detent assure positive indexing. Springs of both switches are generally replaceable without disturbing soldered connections. Laminated plastic decks and rotors selected for maximum mechanical and dielectric strength. Insulation resistance above 50,000 megohms.

**Exceptional Compactness**—14-position switch takes 13 circuits and "off" in 2" circle; 20-position switch handles 19 circuits and "off" in 2-23/32" circle. Each deck above first adds only 5/16".

SS-20-2

**Low Contact Loss**—Double-grip collector arms, and large-area contacts, silver to silver, result in an average contact resistance of .007 ohms or less during the useful life of the switch.

**Ample Dielectric**—AC or DC; normal carrying capacity (not make-and-break), 1 amp.; maximum momentary capacity (not make-and-break), 5 amp.; maximum voltage between contacts 1,500 volts R.M.S.; between decks and ground, 2000 volts R.M.S.

**Military Variations**—The following can be supplied on special order at extra cost: (a) laminated plastic, Type PBE-P per Spec. MIL-P-3115B; (b) vacuum impregnation of rotors, decks, spacers, and ceramic spacers with approved fungicides; (c) hot tin dip on contact surfaces to be soldered; (d) 14 to 20 live positions, no off, (add suffix F, as SS-14-2F); (e) common position in non-standard location.

**BASIC 14-POSITION: 1 1/4" Bar knob** supplied only on individually packed units—not on bulk orders unless specified. **Collector arm** placed directly opposite to flat of shaft, unless otherwise specified. **Contact lugs** and common lugs positioned as shown below, 13 contacts per deck. **One to six decks**; for each additional deck (or gang) add 5/16" to depth. **Continuous rotation type** supplied unless otherwise specified. **Adjustable Stop** normally is supplied on standard cataloged switches. **Fixed Stops** can be supplied on quantity orders at moderate cost. **Panel locator** positioned as shown unless otherwise specified on bulk orders.

**BASIC 20-POSITION: 2" Bar knob** supplied only on individually packed units—not on bulk orders unless specified. **Collector arm** placed directly opposite to flat on shaft, unless otherwise specified. **Contact lugs** and common lugs positioned as shown, 19 contacts per deck, continuous rotation types. **One to six decks**; for each additional deck, add 5/16" to depth. **Continuous rotation type** supplied unless otherwise specified. **Panel locator** positioned as shown unless otherwise specified on bulk orders.

#### SWITCH KIT (Laminated Phenolic)

Most of the 14 and 20 position laminated switches, plus special variations as needed, can be assembled quickly from the kit shown on an adjoining page. Designers, service engineers, laboratories, and industrial maintenance departments will especially appreciate the convenience, flexibility, and time saved.

## UNIQUE — MOLDED ROTARY SELECTOR SWITCHES

Fully Enclosed — Single and Multi-Gang — Shorting and Non-Shorting

MS-14-2

- All moving contacts enclosed — minimizes dirt and corrosion.
- Sturdy construction with 3-post deck suspension, double grip collector arms, and rectangular drive shaft for precision indexing.
- Interchangeable, electrically and mechanically, with SS-14 and SS-20 laminated switches widely used by industry and Armed Services.

MS-20-1

### FEATURES:

For description of rigid 3-post construction; heavy fine silver plating to meet 100-hour salt-spray test; excep-

tional compactness; .007 ohm average contact resistance; insulation resistance above 50,000 megohms; current-carrying capacity and voltage breakdown; see adjoining page on SS-14 and SS-20 laminated switches. Besides fully enclosing all the moving contact parts, the molded switches differ from the laminated construction in the design of the detent mechanism, but both types provide the positive indexing which quickly identifies the superior quality of J-B-T switches. Test results are available on request covering certain procedures of MILE-5272A on insulation resistance; high and low temperature and temperature shock; humidity; altitude; salt spray; vibration; fungus resistance; rain, sand and dust; explosion; shock; and endurance values.

**BASIC 14-POSITION MOLDED (MS-14):** 13 circuits and "off" per deck in 2 3/8" circle for compactness. Molded end cover regularly supplied. 1 1/4" Bar knob included with individually boxed units—not on bulk orders unless specified. Collector arm placed directly opposite to flat of shaft, so that knob pointer points to live contact. Common or "off" contact lug is bent down for ready identification. Internal construction: double-grip collector arms hold contact lug on upper and lower surfaces; collector ring is self-wiping. One to ten decks add 1/8" per deck (or gang) to depth; for eleven decks and over, add 1/16" to depth for double indexing mechanism; add 1/8" to depth for adjustable stop mechanism. Continuous rotation type supplied unless adjustable stop (type MAS) is ordered or, on quantity orders, pre-set fixed stops are specified. Panel locator is available at extra cost on quantity orders when specified; on MS-14-4 and MS-14-6, extra hex nut and longer screw can be supplied for inverting supporting screw nearest common, thus converting into panel locator.

**BASIC 20-POSITION MOLDED (MS-20):** 19 circuits and "off" per deck in 2 5/8" circle for compactness. Molded end cover regularly supplied. 2" Bar knob included with individually boxed units—not on bulk orders unless specified. Collector arm placed directly opposite to flat of shaft, so that knob pointer points to live contact. Common or "off" contact lug is bent down for ready identification. Internal construction: double-grip collector arms and self-wiping collector ring are standard construction. One to seven decks; add 1/8" per deck (or gang) to depth. Continuous rotation type supplied; on quantity orders, pre-set fixed stops are available. Panel locator available at extra cost on quantity orders when specified; on MS-20-4 and MS-20-6, extra hex nut and longer screw can be supplied for inverting supporting screw nearest common, thus converting into panel locator.

## LEVER ACTION SWITCHES, KITS AND SPECIAL SWITCHES

3- and 4-Position Lever Switches — New 5-Position — Unique 6-Pole Double-throw per Deck

**SS-14-1L4F-2**  
Two-Deck Lever-Action Switch

drawing below. Variations in mounting hole sizes, lever length, and tapped mounting holes can be supplied on long runs involving set-up charges. Switches are normally individually boxed with mounting hardware and KN-17 black pointed knob as illustrated. Spacing between single decks: recommended  $\frac{3}{4}$ ", minimum  $\frac{3}{8}$ ". Also see list of available mounting plates.

**Spring Return Type.** Single deck 3-position switches also may be ordered with spring return. Lever returns to position 11, giving momentary action at positions 9 and 10 (Model Suffix—R).

**Two-Deck Lever Action Switches.** These use the same strong parts, 3-pole suspension and double-grip collector arms as the one-deck type, but are specified where quality is the prime requirement. Spacing is  $\frac{3}{8}$ " between decks, the same distance as TV twinlead wires. Non-shortening (break before make) positive action, individually boxed including KN-17 knob and hardware. Recommended spacing between decks  $\frac{1}{2}$ "; minimum spacing  $\frac{1}{8}$ ".

### MOUNTING PLATES

These .035" stamped steel plates in black crackle finish simplify alignment of standard 3-position 1-deck switch models having symbol 1L3. Separation is  $\frac{3}{4}$ " between switches; all plates are  $2\frac{5}{8}$ " high.

- PL-36,  $\frac{3}{4}$ " long, for one switch ..... **\$0.30**
- PL-37,  $1\frac{1}{2}$ " long, for two switches ..... **.40**
- PL-38, 3" long, for four switches (illustrated)..... **.45**

Dimensions A=13/32" on 1-deck Switches; 23/32" on 2-deck. Non-shortening type with standard level length is shown.

**POSITIVE TYPE, 3- and 4-Positions. (Single-deck.)** Specified where quality is a consideration, these lever switches offer many of the design features of the J-B-T SS-14 instrument-type rotary switches. The single-deck models (not illustrated) come in the conventional three-positions and in a newer four-position. Present uses include tube checkers, inspection apparatus, communication systems, hobby equipment, consoles, and sound devices. The four-position types, interchangeable except in slot length with the standard three-position, provide the extra circuit which is often needed. Dimensions are shown on the

5-Position Lever Switch

**MS-20-1L5A-1**, 5-position, 2 circuit (1-deck) ..... **\$2.60**

**MODEL MS-20-1L5A-1.** For the first time designers and servicemen have available 5 live positions, two circuits per deck in a fully enclosed, lustrous black molded construction. Adapted from the MS-20 series of instrument-quality switches shown on a preceding page and having similar electrical characteristics, this positive action lever switch made an instant hit for sound systems. Now that it is released for general use, control, inspection, test and experimental circuits can be simplified by its use. Shipped individually boxed with hardware and threaded black molded knob. Sketch for mounting will be supplied upon request for SK-64.

### KNOB FOR LEVERS

Spare knobs, push-on type, are:

- KN-17, black, modern pointed design, metal insert, shown at left, now regularly supplied ..... **\$0.08**
- KN-19, walnut, same as KN-19 ..... **.06**
- KN-18, black, round, flat-type, shown at right; no insert needed..... **.06**

### 6-POLE DOUBLE-THROW PER DECK—1 or 2 DECKS

**6-Pole Switches.** Double-throw switching, 6 circuits per deck, becomes easy with this unique rotary-type molded switch. It is fully enclosed and similar in appearance to the molded MS-20 switches described on another page. The illustration at the right shows internal construction with back protective cover cut away. Circuit arrangement is designated on the metal front of the switch. Quality features include .007 ohm average contact resistance; heavy, fine-silver plating for 100-hour salt spray test; double-grip collector arms. Now available in non-shortening (break before make) and shorting (make before break).  $2\frac{5}{8}$ " maximum diameter, one deck,  $\frac{1}{8}$ " behind panel; two deck,  $1\frac{1}{8}$ " behind panel.

### SWITCH KIT — 14- and 20-Positions

**MODEL K-1.** The instrument-quality, laminated phenolic switches described previously as SS-14 and SS-20 rotary types now are available in kit form for quick assembly. This arrangement is especially helpful to engineers, experimenters, hams, and electronic maintenance departments, for special assemblies or emergency requirements. The sturdy, 4-drawer, steel cabinet with 48 compartments contains 15 SS-14 index assemblies; 11 SS-20 index assemblies; 50 14-position decks, including non-shortening (break before make), shorting (make before break); A-type (2 circuits); CS-type (complete shorting); F-type (14 live positions); and 33 20-position decks including non-shortening, shorting; A-type (2 circuits); and F-type (20 live positions). One simple tool for pushing rotors on switch shafts, also replacement parts list for ordering refills through distributors are included.

# SPLICING BLOCKS. PRECISION AND VERTICAL ATTENUATORS

## VERTICAL ATTENUATORS

The present model is a new development coming out of seventeen years of experience. It has removed the last objections to a unit of this type and has produced an attenuator of such perfection that we believe it will eventually displace all rotary units.

### SPECIFICATIONS:

- Noise Level:** 130-140 db. below zero level.
- Range:** Standard units are furnished with 30 steps at 1.5 db. and inf. or 20 steps at 2 db. and inf. loss (off) on last contact . . . 31 or 32 contacts.
- Circuit:** Ladder "T" or potentiometer is standard, other circuits can be furnished to order.
- Impedance:** Standard values 30, 50, 150, 200, 250, 500 and 600 ohms for ladders, and 250,000 ohms for potentiometers, others to order.
- Cueing Switch:** Normally closed, open in off position, S.P.S.T.
- Size:** 30 step unit—1 1/2" x 6 1/2" x 3 1/2",  
20 step unit—1 1/2" x 5 1/8" x 2 3/4".
- Insertion Loss:** 0 to 5 db. depending on circuit.
- Dial:** Linear, etched easily read.
- Contact Arms:** Multiple laminated-wiping action.
- Shielding:** Electrostatic shield, dust proof.
- Frequency Response:** Flat to 50 kc.

## EDITALL TAPE SPLICING BLOCK

A new exclusively designed tape splicing block that can be used in conjunction with any tape recorder using standard tape. Splices can be easily and quickly made with a minimum of time and effort. Made of lifetime Duraluminum with no clips or mechanical parts to go out of order. Can be used as a separate unit or mounted as part of the tape recorder itself. Approximate overall dimensions—6 1/2" long x 1" wide x 3/8" high. Furnished with drilled and countersunk holes for easy mounting.

## TYPE 850 PRECISION ATTENUATOR

With the increased demand for precision in laboratory measurement of volume levels, transmission losses, gains of amplifiers, etc., the older methods and standards have become obsolete. The present units are a complete redesign of our older precision attenuators and will serve as laboratory standards. These precision units are now furnished with jack terminals and are completely shielded. They are flat for all frequencies in the audio range and reasonably flat to 200 kc. up to 70 db. They are furnished with either rack or box mounting in gray finish.

### SPECIFICATIONS:

- Mounting:** Type 850-AT and 850-AH, standard rack panels, 3 1/2" x 19" x 1/4". Type 850-B furnished with dust cover.
- Switches:** Multiple leaf, silver alloy blades with silver contacts. Ball type detent.
- Terminals:** Telephone type jacks are used for input and output connections. Solder terminals are provided on rear panels for permanent connections. Insertion of plugs into twin-jacks lifts rear terminal connections.
- Type of Resistors:** All resistors are non-inductively wound. Negligible phase angle.
- Accuracy of Resistors:** All windings are adjusted to within 0.1% of the calculated value except on very low resistance values which are adjusted to within 0.25%.
- Frequency Characteristics:** For "T" configuration, the frequency error is negligible up to 80 db. loss, below 50 kilocycles. Balanced "H" configuration should be used where measurements above 50 kilocycles are necessary.

## "Footrol" FOOT SWITCHES by GENERAL CONTROL COMPANY

**TYPE MA** A new light weight foot switch with an actuating treadle built into its top to permit operation with unusually light foot pressure. A long-life SPDT "du-op" Limit Switch forms the internal switch action. Especially recommended for fast operation where minimum fatigue is important. Access to the internal "du-op" switch terminals is greatly facilitated by simply removing the front end of the casting.

**TYPE MC** Especially adapted for unusual applications and hard use. Easily operated for foot, knee, hand, or elbow. Non-slip-tread top may be operated at any point of its surface.

**TYPE MI** An ideal treadle-type foot switch, especially convenient for many applications. Inclined, non-slip tread has an adjustable heel rest. Two operating pressures: 5 lbs. and 10 lbs. Mounting ears are provided on each side. A BX connector is mounted in the base, and terminal access is by a removable base plate.

**TYPE MB** Heavy-duty switch, especially designed for industrial and machine tool applications where thoroughly safe, rugged, and dependable operation is required. Boot top prevents false operation.

## Precise LIMIT SWITCHES by GENERAL CONTROL COMPANY

PRECISE MACHINE CONTROL depends upon PRECISE LIMIT SWITCHING

### BASIC du . op SWITCH

CUT-AWAY VIEW

The type DU-S "du . op" is a precise action limit switch. The centrally-located plunger acts *directly* on the wide phosphor-bronze blade to insure instantaneous contact at each point of repetitive plunger travel. Delays of pre-travel blade action are eliminated — an important factor at high switching speeds.

## POWER TAP SWITCHES NON-SHORTING TYPE

Each switch is a non-shorting, single pole, rotary, multi-position unit, but switches can be ordered assembled 2 or 3 in tandem (2 maximum, for Model 111) to form multipole assemblies. All ceramic insulation, large, solid silver-to-silver contacts, and "slow-break" action especially designed for alternating current use establish new standards of dependability and performance. Switch shafts are electrically "dead"—insulated by strong ceramic hubs. Contacts and mechanism are entirely enclosed and protected (except for the Model 111).

### MODEL DOSY RELAY FOR PLATE CIRCUIT OPERATION

The high operating sensitivity makes the DOSY relay adaptable to a wide range of electronic control circuits, such as plate circuit controls, etc. Other industrial applications may be as an overload or underload control where the relay would be used in a DC circuit in which it is desirable to obtain a signal indication when the control current increases above a predetermined maximum or drops below a predetermined minimum.

The insulation is of high grade, molded phenolic material. At 115 v. AC or 32 v. DC, non-inductive load, Model DOSY relay has a contact rating of 15 amperes.

There are two DPDT types, one having 10,000 ohms coil resistance (maximum pull-in current of 8 ma. DC); the other having 5,000 ohms coil resistance.

### NEW OHM'S LAW CALCULATOR

Redesigned! This new, improved version of the famous Ohmite Ohm's Law Calculator — popular the world over with servicemen, engineers and students — now has scales for solving parallel resistance problems, AND a standard slide rule. More useful than ever! With one setting of the slide the calculator gives the answer to any Ohm's Law problem—reading directly in ohms, volts, amperes, and watts. Three of the new scales on the back provide a quick, one-setting means of solving parallel resistance problems. The slide rule scales will multiply, divide, find squares, and square roots.

## TELEPHONE TYPES

### TA & TQ SERIES (miniature)

Power consumption in the two TA telephone relays listed below is minimized through the use of bifurcated blades, short armature travel, and highly efficient magnetic structure. Contacts are platinum-silver alloy.

The TQ relay occupies only .94 cu. in. of space. The conventional hinge pin is replaced by a beryllium copper retaining spring, hence no hinge pin to wear out.

Mechanical failure is minimized as the relay is secured mechanically throughout. Spacers between contact blades are silicone glass, and fastening screws are encased in "KEL-F" tubing.

## AMPERITE THERMOSTATIC DELAY RELAYS

STANDARD

MINIATURE

Amperite Thermostatic Delay Relays are actuated by a heater . . . can therefore be used on A.C., D.C., or pulsating current. Being hermetically sealed, Amperite Relays are not affected by altitude, moisture, or other atmospheric conditions.

**CIRCUITS:** At the present time only SPST is available — normally open or normally closed.

**HEATER VOLTAGES:** Relays are available with heater voltages from 2.5 to 115 V. For short delays (1 to 10 seconds) a low voltage heater, preferably 6.3 V. is recommended. **STANDARD HEATER VOLTAGES:** 6.3, 26 (for 22-30 V.), 115 V. Other voltages available are 2.5, 5.0, 12.0 and 50 V. For 220 V., use a 115 V. relay with a dropping resistor.

### EFFECT OF HEATER VOLTAGE VARIATION ON DELAY

**FIGURE 1** — Effect of change in heater voltage on delay in seconds. Only low voltage heaters (2.5 to 26 V.) incorporate heater voltage regulations as shown in this diagram.

For 22 to 30 V. supply: We recommend Amperite Delay Relays with 26 V. heaters for airplanes and similar power supplies. These heaters are regulated for battery variation of 22 to 30 V. as shown in this diagram.

**STANDARD HEATER VOLTAGES:** Amperite Delay Relays with low voltage heaters such as 2.5, 5.0, 6.3, 12 and 26 V. are designed with automatic voltage regulation of the heater to compensate for line voltage variation. The effect of voltage variation on a typical relay is shown in Fig. 1. Without regulation, the delay would vary as the square of the supply voltage variation. 115 V. heaters CANNOT be supplied with heater voltage regulation.

**HEATER WATTAGE:** The wattage consumed by the heater is approx. 2 W. Flashers approx. 1 W. All Heaters may be operated continuously. Life, 5000 hours minimum.

### CONTACT RATING

	Delay	Contract Rating		Voltage Breakdown	
		Non-Inductive		Contact-to-Contact	Heater-to-Contact
STANDARD RELAYS	2 to 10 Sec.	115V — 3a AC		250V	500V
	15 to 180 Sec.	115V — 3a AC		1000V	1500V
		220V — 1a AC		1000V	1500V
MINIATURE RELAYS	2 to 10 Sec.	115V — 2a AC		250V	500V
	15 to 180 Sec.	115V — 2a AC		1000V	1500V
		220V — 1a AC		1000V	1500V

**FLASHERS** have contact rating of 115V — ½a AC, non-inductive.

**AMBIENT TEMPERATURES:** Relays are compensated for temperatures of  $-55^{\circ}$  to  $+70^{\circ}$ C. Tolerances given are  $20^{\circ}$ C. Ambient temperature tolerances depend on type. Low voltage heaters 26V or less have much better ambient compensation than high voltage heaters.

**LIFE** of any individual relay will depend on the service the contacts are subjected to. With a 115 V. — 2A A.C. non inductive load the contacts will withstand at least 250,000 operations. The heater can be operated continuously. Heaters will not be damaged by a 50% overload in voltage for short durations.

**DELAYS AVAILABLE:** From 2 to 180 seconds. Relays can be used in series to obtain longer delays. The delay of any individual relay can be increased up to 30% by using a resistor in series with the heater. Relays with short delays such as 2 to 5 seconds can be increased 150%.

**FLASHERS:** Normally closed relays are supplied as flashers. They are available from 30 to 90 flashes per minute, and are furnished in 6, 26, and 115V heaters, as standard types.

**INDUCTIVE A.C. LOADS:** When breaking an inductive A.C. load, use a condenser of .01 to .1 mfd. across contacts.

Flashers operate approximately 1/3 on, 2/3 off. The percentage time on can be increased by reducing the voltage of the heater.

Normally closed flashers are standard, and are indicated by the letter "F." The number following letter "F" denotes flashes per minute. For example a 6F30 flasher, has 6.3V heater, normally closed for 30 flashes with a ± 10 flashes per minute tolerance. A 6F30T, would be the same type but in 9-pin miniature. Flashers are available from 30 to 90 Flashes per minute with tolerances as shown in the chart below:

Tolerance FPM - 20°C	Standard Flashers Available		
± 10	6F30	26F30	115F30

# PHOTOELECTRIC RELAYS AND ACCESSORIES

## CR7505-K100G3 Relay

The CR7505-K100G3 photoelectric relay and accessories provide a complete line of inexpensive, but thoroughly reliable, apparatus for general-purpose indoor applications which include counting, diverting, controlling, signaling, limiting, and

protecting. Underwriters' Laboratories listed. The CR7505-K100G3 includes phototube and thyatron, has a contact rating of 10 amp a-c, may be used to start f-hp motors directly, and can operate all motor starters up to and including NEMA Size 4.

## CR7505-K201, -K202 Relays

These photoelectric relays will perform the same type of functions as the -K100 with greater speed and sensitivity. These relays operate on either light increase or decrease, depending on connections. The relays will operate from light flashes on interruption of 1/15 second between impulses, with not less than 1/15 second between flashes. The d-c phototube circuit permits remote location of phototube with no loss in sensitivity.

## Accessories for Use with -K100G3

Model No. 9T53Y8025 light-source transformer, rated 115 volts, 50/60 cycles, primary; 4.8 volts secondary; lens-barrel assembly CR7505-B207G1, 3 in. in diameter, for mounting directly on relay; two light sources, -C201G1 with 1½-in. lens and -C203G1 with 3-in. lens; two phototube holders with six feet of special phototube cable and a plug for connecting to tube socket in the relay, -P211G1 with 1½-in. lens, and the -P212G1 with 3-in. lens. With 1½-in. lens, maximum operating distance is 12 ft; with 3-in. lens, maximum operating distance is 30 ft.

Sensitivity of -K100G3 may be increased five times by use of -B207G1 lens-barrel assembly.

## CR7505-N210, -N211, -N212 Relays

These three relays are similar in circuit design and are especially adapted for photoelectric applications where a device must respond to rapid light changes or high operating rates.

A time-delay feature, adjustable up to ½ second by means of a potentiometer dial, is provided to delay the dropout of the magnetic delay in cases where the relay would be energized for such a short time that the period would not be sufficient to perform the external control operation desired.

The relays will respond to light changes as small as ½ foot-candle, providing there is sufficient light on the phototube.

Separate phototube holders are required for these units.

# ELECTRONIC TIMERS AND DEVICES

## Photoelectric Accessories for Use with -K201 and -N210 Series

The light sources are of die-cast aluminum construction. The -C201G1 light source has a 1½-in. lens, focusable from 2 feet to infinity. The -C202G1 has a double lens for short focus, for a concentrated spot approximately ¼ in. in diameter at a distance of 2½ - 4 in. in front of the lens. The -C203G1 light source has a 3-in. lens, with high-intensity beam for long-distance operation. The -C201G2, -C202G2, and -C203G2 are identical in operation with the G1 group, but have rubber gaskets between the front and back covers which makes them weather-resistant and dust-tight in accordance with NEMA Standards.

4.8 volts is required for all the above light sources and the following transformers are recommended:

**Light-source transformers.** The 9T53Y8047 is enclosed in a conduit box with knockouts for conduit connections. It is rated 115/230 volts, 50/60 cycles. The 9T53Y8036 is of open-type construction, but has same rating as 9T53Y8047. The 9T53Y8058 for 25/50/60 cycles is of weather-resistant construction; except for size and type of construction, rating is identical with 9T53Y8047.

The -C208 light source is explosion-proof and can be made watertight by applying a rubber gasket which is furnished. It has a 3-in. lens and a self-contained step-down transformer for 115/230-volt operation.

The phototube holders are similar in construction to the light sources. The -P202G2 has a 1½-in. lens and the -P203G2 has a 3-in. lens. Both come with a 9-ft phototube cable with spade terminals.

## CR7504-A142 Electronic Timer

The -A142 timer is for timing applications of short time duration (-A142G1, 0.06 to 1.2 sec; -A142G2, 0.6 to 12 sec; and -A142G3, 6 to 120 sec) where long life, low maintenance, and high repetitive accuracy is required.

The -A142 has double-pole, double-throw contacts; can be used to start f-hp motors directly. Time-range dials read directly in seconds.

Two different types of operation available; immediate-start for timing operations or delayed-start for providing a time delay. Power supply, 115/230 volts, 50/60 cycles; power consumption, 15 watts.

## CR7511-A126 Resistance-sensitive Relay

This relay is used to obtain a reliable contact from the touch of two conductors through which only small currents flow. It will operate motors, lights, contactors, and solenoids whenever there is sufficient change in the resistance of a circuit, including liquid-level-control applications. In this way, large amounts of power can be controlled

from a low-current high-resistance input.

It has 10-amp a-c contact rating, two single-pole, double-throw, contacts for controlling two independent circuits. Enclosure is weather-resistant and dust-tight.

## CR7505-R201G1 Smoke-density Indicator

This control and associated equipment can be used to indicate smoke density, gas density, or the density of any fluid where density is directly related to the light transmission through the fluid. It can be used to warn furnace operators of excessive smoke conditions, to turn on blowers or relevant equipment at any smoke density level,

and when used with a suitable recorder, a continuous permanent record of smoke density is always available.

The indicator has a semi-dust-tight enclosure (NEMA Type 1A) and an industrial-type relay, 45 amp make-break and 10 amp carry, at 115 or 230 volts, a-c. Simple calibration adjustments are made with four locking-type knobs on the panel, while indicating lights and a smoke-density instrument are on the front cover of a panel.

For complete information, consult your nearest G-E Apparatus Sales Office or Distributor, or write direct to Section 640-443, General Electric Company, Schenectady 5, New York.

 Foot-Candles . . . . . 20 10 5 2  
 Distance in ft.—Normal 30 42 57 85  
 —Low 18 25 31 40

The lamp assembly is swivel-mounted in the case for convenient directional adjustment of the beam.

The lamp is a No. 4515 sealed-beam spot; average life, 3000 hours at normal 10,000 hours at low voltage. replacement cost, \$1.95. Case is splashproof, cast aluminum; rigid mounting, tapped for 1/2" conduit. 115/230 v., 50-60 cycles, standard.

**L6 High Intensity Light Source**—Net Each. **\$36.00**

### FOOTNOTES

\*The Safety Relay may be used to control a machine, operate a signal or other safety circuit when a tube filament burns out. Energizes when power comes on the photoelectric control; de-energizes when power goes off or a tube fails. Contacts are SPDT, rated at 5 amperes, 115 v., AC, noninductive load.

†The Safety Relay with warm-up protection energizes after the photoelectric control tubes warm up to operating temperature. Otherwise same as 1 above.

#Available with built-in heating element at \$7.50 extra. Heats inside case during shut down periods. Used where humidity and temperature change are excessive.

‡Safety Relay energizes when the lamp comes on, de-energizes when the lamp fails or goes off. Otherwise same as \* above.

\*\*Has a built-in adjustable resistor. Permits adjustment to minimum intensity required for reliable operation—thus prolonging life of tube and lamp.

## ELECTRONIC CONTROLS & DEVICES

**SUNSWITCH LIGHT CONTROLS** The SUNSWITCH uses an amplifier and phototube that responds to the foot candle value of daylight. When illumination falls below a pre-determined value, the lights are turned on. When the illumination has increased to the correct value, the lights are automatically turned off. Applications are numerous — Street Lights, Radio and TV Towers, Signs, Factories, Construction Work, Airports, Railroads, etc. Mounted in standard watt-hour meter case or in extruded aluminum housing.

### NEW INSULATED ALLIGATOR CLIPS

Patent Pending

No. 63 or 63-C Clip

Sold only as a unit, with factory-applied insulators.

A radically new development that doubles the usefulness of Alligator Clips! Completely insulated right down to the nose. Flexible 2-piece skin-type vinyl insulator of high dielectric strength, with "lip action" slotted nose that permits opening of clip without exposing metal. Insulator nose is only  $15/64$ " O.D. ## CLAMPIPE GROUND CLAMP

CLAMPIPE  
U.S. PATENT No. 1,794,976

The exclusive patented feature of a U-shaped cross section in combination with a U-shaped clamp gives a rigidity and effectiveness to the ClamPipe that cannot be found in any other make.

The ClamPipe will not bend or lop over when applied to a pipe. The point of the large case hardened screw, cuts through rust, paint or corrosion into clean, fresh metal, insuring a good contact. The Clamp may be installed on a pipe lying flush against a wall. Will not spread open.

## THE "TENNA-CLAMP"

A New 3-in-1 Stand-off Insulator Clamp!

Supports TV and FM Lead-ins on MASTS, PIPES, GUTTERS and GUY-WIRES

Has same general features and specifications as Tenna-ClampPipe described above except different type clamp when used on end to take standard guy-wire in addition to pipes.

**HAS THESE USEFUL FEATURES** —  
• One standard size solves many lead-in problems — far more useful than straps or wire bands.  
• Brings lead-in to edge of roof — right where you want it — no more "draping" of wire across the roof.  
• On those high jobs, come right down a guy-wire — and get around the gutter in the clear.

# TAPE RECORDER INVERTERS

Specially Designed for Operating Standard A.C. Tape Recorders, Wire Recorders, Dictating Machines, Radios, Public Address Systems, Amplifiers, Electric Razors, Record Players, Mixmasters, and Electronic Test Equipment from D.C. Voltages in Automobiles, Buses, Trucks, Boats, Trains, and Planes. Ideal for Emergency Lighting.

This group of ATR Inverters is especially recommended for use with standard A.C. operated tape or wire recorders, dictating machines, radios, amplifiers, and similar electronic equipment, being exceptionally well filtered to insure interference free radio reception. With ATR Inverters, the need for special equipment is eliminated. They are designed for quiet, long-life operation. All models indicated are equipped with ATR plug-in Inverter Vibrators. These Inverters also come equipped with four-point voltage regulators which make possible the correct output voltage for minimum to maximum loads and also help compensate for input voltages which are lower or higher than normal. The operating efficiency is in excess of 75%. To figure approximate current consumption from storage battery, divide the rated input wattage of the recorder (or load) being operated by the storage battery voltage and further divide this answer by .75 which will give the actual current consumption based on the actual load and efficiency. The battery current consumption required for a tape recorder is normally less than that drawn by ordinary automobile headlight(s). These Tape Recorder Inverters are recommended only for use with loads having power factors in excess of 70%. ATR Inverters should be used only for the applications as outlined above.

Above illustrates operation of tape recorder in car utilizing Inverter Remote Control Unit as shown below.

Let your car be a ROLLING OFFICE — dictate your reports promptly and accurately in the field — on the spot.

Radio frequency interference completely suppressed. \*Recommended for 24 Volt Battery Systems. Any of the above type Inverters are available with 220 volt A.C. output at prices slightly higher. In ordering, specify "S" after the type number and substitute for the last letter in the code word "T"; that is, if a 110 volt D.C. Inverter having a 220 volt A.C. output is desired, this would be ordered as Type 110S covered by code word, "GRSET."

All models designated above are housed in attractively finished grey-hammerloid metal cabinets. Dimensions of Standard (RSE) Model Inverters, 8 3/4" x 9" x 5 1/4"; shipping weight, 19 lbs. # RADIO INVERTERS

Specially Designed for Operating Standard A.C. Radios, Radio-Phonographs, Tape Recorders, Wire Recorders, Record Players, Dictating Machines, Public Address Systems, Amplifiers, Radio Transmitters, Mix-masters, Food Blenders, Electric Razors, and Electronic Test Equipment from D.C. Voltages in Trains, Rural Areas, and in D.C. Districts.

This group of ATR Inverters is especially recommended for use with standard AC radios, record players, tape or wire recorders, dictating machines, amplifiers, and similar electronic equipment being exceptionally well filtered to insure interference free radio operation. With ATR Inverters the need for special equipment is eliminated. They are designed for quiet, long-life, radio operation. All models indicated are equipped with ATR plug-in Inverter Vibrators. These Inverters also come equipped with four-point voltage regulators which make possible the correct output voltages which are lower or higher than normal. The operating efficiency is in excess of 85%. To figure approximate current consumption from D.C. voltage source, divide the rated input wattage of the radio set (or load) being operated by the D.C. voltage and further divide this answer by .85 which will give the actual current consumption based on the actual load and efficiency. These Radio Inverters are recommended only for use with loads having power factors in excess of 70%. ATR Radio Inverters should be used only for the applications as outlined above.

ATR Inverters are not recommended for operating refrigerators, washing machines, or similar motor-driven appliances; also, ATR Inverters are not recommended for operating toasters, electric irons, sun lamps, or similar appliances of high wattage or low power factor. # GERMICIDAL LAMP INVERTERS

Specially Designed for Operating Standard A.C. Germicidal Lamps from Storage Battery Voltages in Trucks, Buses, Boats, Trains, and Planes.

This group of ATR Inverters is especially recommended for use with standard A.C. operated germicidal lamps providing protection against bacteria and mold spores in perishable food areas or hospital-like areas in trucks, boats, planes, and trains. Bacteria and mold spores cause losses of millions of dollars each year through spoilage, contamination, and added maintenance costs. Effective control of air-borne germs, bacteria and mold spores by use of germicidal lamps is widely used in processing and packaging of fresh food products. This same protection against contamination during delivery is now possible using germicidal lamps operating from an ATR Inverter connected to D.C. Storage Battery Power. With ATR Inverters, the need for special equipment is eliminated. They are designed for quiet long-life operation. These rugged, efficient, little power houses are self-maintaining — require no warm-up. They change your D.C. battery power to 110 volt A.C. (household type) power instantly and quietly. ATR Inverters are fully protected and are big enough to do a proper job and small enough to fit most anywhere. All models indicated are equipped with ATR plug-in Inverter Vibrators. These Inverters (except Model LIG) also come equipped with four-point voltage regulators which make possible the correct output voltage for minimum to maximum loads, and also help compensate for input voltages which are lower or higher than normal. The operating efficiency is in excess of 75%. The battery current consumption required is normally less than that drawn by ordinary automobile headlight(s). These ATR Inverters should be used only for the application as outlined above.

# AUTO Plug-In Type — Portable BATTERY CHARGERS

NO INSTALLATION — JUST PLUG INTO CIGARETTE LIGHTER RECEPTACLE

For keeping the storage battery fully charged right in the car, truck, boat, or plane! A storage battery necessity — needed more now than ever before — makes motor starting easy!

The additional appliances — such as auto radios, spotlights, motors, heaters, fans, cigarette lighters, etc. — operated from the storage battery impose a severe drain on the battery making the normal "hard starting", especially in cold weather, still more difficult. The ATR Automatic Tapering Battery Charger solves this problem by charging the storage battery right in the car, truck, boat, or plane conveniently and economically. No need to remove the battery! Simply plug special charger cable into dash receptacle of the vehicle; or, if truck type charger, clip charger cable leads to the storage battery and flip the charger toggle switch "on". Danger of overcharging battery is minimized due to automatic tapering charge feature.

ATR Plug-In and Truck clamp type battery chargers, as above illustrated, operate from any 110-120 volt 50-60 cycle AC line. ATR chargers utilize a full-wave dry-disc type selenium rectifier, assuring extreme long life and reliability. ATR Charger models protected with automatic reset circuit breaker eliminating need for fuses. All of the above chargers equipped with charger indicators such as pilot light or meter as above illustrated with the exception of the 4 ampere grouping. ## Mallory 12RS6D Bench Power Supply

The Mallory 12RS6D is a dual purpose bench power supply designed for use on the radio service bench for operating conventional 6 and 12 volt automobile and truck radio sets. Fully AC-operated from the 115V/60 cycle line, the 12RS6D supplies rectified and filtered DC in either of 2 ranges. Range "A" supplies 0 to 16 volts at 6 amperes continuously, or 12 amperes intermittently. Range "B" supplies 0 to 8 volts at 10 amperes; or 20 amperes intermittently. Both ranges are infinitely variable from zero to maximum output to permit precise adjustment of bench test voltages. The 12RS6D is equipped with a DC voltmeter, a DC ammeter, infinitely variable voltage control, a range switch, an on-off toggle switch, automatic overload protection, primary fuse and rubber-covered line cord and plug. The rectifying system employs a full-wave metallic rectifier. The cabinet is sheet steel finished in blue enamel and measures 6¾" high, 10¾" wide and 5½" deep. Shipping weight approximately 8 lbs. Catalog No. 12RS6D \$42.95 Net

## Mallory Service Bench Rectopower Supplies

Model 28RS15D is designed to operate from 110-120 volts, 60-cycles, and is equipped with accurate reading DC voltmeters and ammeters, self-reclosing overload circuit breakers in the DC circuit, fuse protection in the AC circuit and an "on-off" switch. Both models are equipped with a continuously adjustable transformer-rotor system to provide precise adjustment of the output voltage to any value from 0 to rated output voltage. Both models are filtered by high-capacity electrolytic capacitors.

These models are also equipped with a new, simplified automatic voltage regulating system (no relays) which keeps the output voltage relatively constant as the load changes from no-load to full load. Model 28RS15D will supply 0-16VDC @ 30A or 0-32VDC @ 15A.

Model 28RS15D \$224.50 Net.

## Mallory 12RS14D Heavy Duty Six Volt DC Power Supply

The Mallory 12RS14D 6/12 volt, 25 ampere rectifier type power supply is designed to replace storage battery-charger combinations for bench testing medium power 2-way mobile-phone equipment. It may also be utilized for non-radio uses requiring well-filtered low voltage DC in the 25 ampere range. Heavy sheet-steel housing makes it adaptable for use in garages as mobile radio bench equipment.

The 12RS14D operates from a standard 115 volt 60 cycle source to supply DC voltage from 0 to 8 volts at continuous or variable loads of 0 to 25 amperes. Intermittently, it will supply a maximum of 40 amperes at 6 volts.

An adjustable variable control allows quick selection of any voltage from 0 to 8 at 0 to 25 amperes. Three capacitors totaling 30,000 mfd. filter the output to less than 1 volt ripple and suppress RF and power line interference. A 0-10 volt DC voltmeter and a 0-40 ampere DC ammeter are included.

Conduction cooling of the full-wave Selenium Rectifier Cells, automatic overloading protection, and a self resetting circuit breaker insure long life.

Overall dimensions—11" high, 10½" wide, 8¾" deep. Shipping weight—26 lbs. Catalog No. 12RS14D \$139.50 Net

CORNELL-DUBILIER HEAVY DUTY VIBRATORS are available in the above four styles for operation at 60 or 100 cycles with regular or close frequency adjustment in any of 6 standard operating voltages — 6, 12, 28, 32, 64 and 110. Although these combinations result in 96 "standard" vibrators, only those models which are generally used are listed below for Jobber distribution.

All heavy duty vibrators have separate driving circuits with provision for external suppression. Two or four sets of power contacts are brought out individually. Center reads are common.

Precision ground ceramic spacers, micrometrically selected Swedish steel center reads, and precision oscillographic adjustments combine to insure uniform reliable service life.

Coding of the heavy duty vibrators is meaningful. In a typical part number such as 110VB6, the prefix 110 denotes operating voltage, V denotes vibrator, B denotes the style, and 6 denotes 60 cycles with regular frequency tolerance. Close frequency adjustment as desired for television is denoted by a final H suffix. A typical close frequency vibrator is 110VB6H.

1. Standard models deliver 110 volts, 60 cycle, AC power. Output watt ratings are based on continuous operation on high power factor loads. They should be reduced by the percent of power factor where inductive loads are involved.
2. All models are housed in cases of similar design and appearance. The class designations signify approximate size and weight as follows:  
 SP — Shaver Pack—2 5/8 x 2 1/2 x 3 7/32..... 2 lbs.  
 LM — Light Midget—3 x 3 1/2 x 4 13/16..... 4 lbs.  
 M — Midget—3 11/16 x 4 5/8 x 5 1/16..... 6 lbs.
3. Vibrators as produced by different manufacturers employ driving circuits which require more or less power. Such power is applied by either series or shunt driving means. Where shunt drive is employed, a given vibrator must be used at its design voltage only. Where series drive is used, an external resistor may be used to drop a higher voltage for use of a particular vibrator. These considerations apply to many 6/12 Mobile Communications equipment.

\* Radiart vibrators have always used an exceptionally strong driving coil to obtain long and dependable service. When a 6 volt Radiart series drive vibrator is used for 12 volt operation in a 6/12 equipment, the usual resistor may not pass enough power to drive it properly. To avoid any dependence at all upon the coil resistor, Radiart provides similarly numbered shunt drive vibrators for use when 6/12 equipment is used on 12 volts.

In addition to insuring proper drive, the practice of using a 6 volt vibrator at 6 volts and a 12 volt vibrator on 12 volts, permits the factory to provide an adjustment and selection of contact that is best for each application.

\*\* Where 12 volt operation only is involved, a choice of either shunt drives such as 6715 or series drive such as (6715 S) is available.

\* D.C. Ampere rating is based upon measurement made with a D.C. ammeter in primary lead. Circuit must be properly designed for load being handled. Technical advice is available through Jobber Service Department.

### OBsolete TYPES

It is entirely impractical to continue to stock the hundreds of different heavy-duty vibrators that have been supplied in past years for a large variety of uses. Every attempt is made to maintain equipment in service, even though it originally used vibrators which have generally become obsolete. Some obsolete vibrator types are still carried in limited stock at the factory. In a great many cases, simple instructions are available so that a radio technician can change wiring, sockets, or other minor

features in an old design to adapt it for use with new standard vibrators.

For information regarding a possible replacement for obsolete vibrators, send details including model number of equipment, original vibrator type number, voltage and frequency to the Jobber Service Department.

## NOTES ON SPECIFICATIONS

Note 1: Continuous ratings are based on operation of nameplate rating indefinitely at ambient temperatures not to exceed 100° F. with free air circulation. Intermittent ratings are based on 25% duty cycle, with on-time not in excess of 15 minutes. Up to 30 minutes operation at the intermittent maximum is not detrimental, provided it can be followed with approximately two hours of cooling time.

Note 2: Output watts ratings are based upon 70%-100% Power Factor loads.

Note 3: Classes of Models indicate case size and approximate weight as follows:

SP—Shaver Pack	2-5/8 x 2-1/2 x 3-7/32	— 2 Lbs.
LM—Light Midget	3-1/2 x 3 x 4-13/16	— 4 Lbs.
M—Midget	4-5/8 x 3-15/16 x 5-5/16	— 6 Lbs.
L—Lightweight	5-1/2 x 6-1/4 x 8	—12 Lbs.
S—Standard	5-1/2 x 6-1/4 x 9	—14 Lbs.
H—Heavy Duty	6-1/2 x 7-1/2 x 11	—20 Lbs.
SH—Super Heavy	8 x 9-1/2 x 13	—35 Lbs.

Note 4: RADIART VIPOWERS contain added components required to make them universally applicable to various kinds of loads within their name-plate rating. For example, the same unit may be used for television, radio, dictating service, office machines, and even for industrial purposes. Principal uses are coded in Specifications as follows. Any model is suitable for uses coded for models of lower output rating.

RA—Radio  
TV—Television  
DI—Dictation  
TR—Tape Recorder  
BE—Battery Eliminator  
MT—Mobile Transmitters  
A—Amplifiers  
PH—Phonometers  
IN—Industrial  
SH—Shaver  
PA—Public Address

Note 5: Power Factor Correctors are available for use with highly inductive loads, so that they may be handled by Regular VI-POWERS. Model PF1 corrector used on 60% PF loads handles up to 100 watts; On 30% loads, to 25 watts. PF2 on 60% PF loads handles 150-300 watts; on 30% loads, 50-75 watts. PF3 on 60% loads handles 350-500 watts; on 30% loads 100-150 watts. See Engineering Bulletin EB-3007 for details.

Note: See Engineering Bulletin EB-3013 for mounting kits for all models, and for leads, master fuse kits and remote control kits for 6 or 12 volt models.

# Perma-Power Equipment --- made better!

## PERMA-POWER RADIO-CONTROL GARAGE DOOR OPENER

Just a touch of your finger . . . . .  
. . . . . opens and closes your garage door

The Perma-Power Garage Door Opener embodies novel design features providing maximum convenience and safety to the user. Styling, too, was given important consideration. All mechanism is contained in a modern spun-aluminum fixture that illuminates as well as beautifies the garage interior.

The concealed motor is a 1/4 HP, 117 volt, capacitor-start type with ample power to operate the largest of modern, residential, garage doors. Also in the fixture is the radio receiver which turns on the motor when it gets a signal from the transmitter in the car.

- When button is pressed, door automatically opens and turns on fixture light, illuminating garage. When button is pressed again, door automatically closes and light turns off.
- Door locks securely when shut. No conventional key lock required.
- New automatic shut-off gives extra protection. If door hits an obstacle, power shuts off instantly. When started again, door reverses, pulling away, so object cannot be trapped.
- Sensitive safety clutch is easily adjusted by a knob to exert just enough force to move door reliably. This vital safeguard makes door travel gentle and, consequently, easy to arrest.
- A detachable door arm permits unlatching for manual operation of the door in case of power failure.
- A push-button with wire is supplied for wall mounting in garage or other location to operate door from inside. This control circuit is only 24 volts and safely isolated from the main service line. Additional buttons may be easily installed at auxiliary points. A key operated switch is available for outside mounting.
- Electrical overload devices protect the entire installation. The radio-control receiver is individually fused.
- The radio-control transmitter is crystal-controlled, sending out its signal on an FCC authorized frequency of 27.255 mc. Being small, it mounts under the hood and operates directly from the 6 or 12 volt car battery. When door operation from more than one car is desired, a separate transmitter is installed in each additional car.
- The radio-control receiver is contained inside the aluminum fixture in the garage. It plugs into the main assembly and is constantly ready to obey the car signal to open or close the door.
- An exclusive, coded channel is set up in each radio control system upon installation. Ten different factory-sealed plug-in channel units are available, requiring no adjustment at the point of use. This allows interference-free operation to and from neighboring installations and other electrical devices.
- One easy-to-get tube type, the 6U8, is used in the radio-control equipment—one in the transmitter, two in the receiver.
- Illumination of garage from operator fixture may be had even with door closed. Suitable terminals are provided for wiring to a wall switch.

**DOOR REQUIREMENTS**—The Perma-Power Garage Door Opener will operate all one-piece tilt-up or sectional roll-up residential doors that travel on horizontal or curved roller tracks. Doors may be up to 18' wide and 8' high and of metal or wood construction. As little as 2" of headroom (space between high-arc of door and ceiling) in garage is adequate for installation.

**INSTALLATION**—Entire system was designed to make installation an easy one-man job. Simplified step-by-step instruction manual assures fast, professional results using common hand tools. Every part required is supplied, including mounting materials.

Most models operate less than 3000 RPM. 615V and 128V models are designed for 30 watt transmitters and deliver 3 times rated current for intermittent transmit service. 610V and 125V are designed for 10 to 20 watt transmitters and deliver two times rated current on intermittent transmit service. High efficiency. Voltage regulation from 15 amperes to 45 amperes is approximately 1.3 volts. Also available in 24, 28, 32, and 70 volt inputs to change directly to 6 or 12 volt. Change-A-Volt can also serve as a battery equalizer when operating low voltage equipment on several cells of a higher voltage battery system. A double pole switch or relay must be used when operating the dynamotor as a battery equalizer.

Size 1 1/8" long, 7/16" high, 4 1/2" wide. Weight approx. 25 lbs.

FOR PROFESSIONAL AND  
BROADCAST TAPE RECORDING**

The new Custom Converter with manual frequency control has been developed to provide a portable DC to AC power source for professional and broadcast tape recorders, heavy duty electronic measuring devices, and Tape recorder-AC motor driven camera combinations. Now for the first time, sufficient frequency constant AC power is available to operate this type of equipment from DC lines or battery source.

The rheostat control and the frequency meter are mounted in the attractive aluminum housing. A noise filter is also available in the same housing, although it is not usually necessary for operating recorders, amplifiers or other audio devices. Filtering is required when radios or other RF circuits are operated from the converter.

Convenient recessed DC male plug is furnished for 32, 64, 115 and 230 volt DC input models. 12, 24 and 28 models are equipped with heavy stranded input leads for battery connections, as shown. A flush AC mounted receptacle is supplied on all models for quick AC connections. The sturdy carrying handle allows the converter to be moved immediately after its operation, a life-saver for taping remote broadcasts.

Each model must be designed to properly match the power factor, voltage, frequency, and load requirements. Any of the Custom models can be furnished with frequency control. Model listed below has been laboratory tested and is matched to provide perfect operation. Kindly send your special requirement to the factory for prompt and careful consideration.

## Converters for Popular Wire and Tape Recorders

Converter AC output frequency and Converter Power Factor must be perfectly matched to the recorder load to assure proper recording and play back performance. Most wire and tape recorders are of medium Power Factor design, approximately 70%. Standard high power factor (85 to 100%) Rotary Converters therefore will not operate the recorders properly as this type Converter will produce higher AC voltage and frequency because of the inductive recorder load.

The equipment listed below has been laboratory-tested and the correct Carter Converter recommended for each model. Use this chart for your recorder Converter requirements. If the equipment is not listed on this chart, please write to the factory.

## POWERSTAT VARIABLE TRANSFORMERS FOR SINGLE PHASE DUTY

POWERSTAT variable transformers are auto-transformers of toroidal core design with a movable brush tap which is rotated to deliver any desired output voltage from zero to, or above, line voltage. Glass smooth commutator surfaces and advanced winding techniques assure smooth operation and permit adjustment to a fraction of a volt.

Other important features include: excellent regulation, high efficiency, conservative ratings, zero

waveform distortion and rugged construction.

A wide range of standard POWERSTAT variable transformers are available for 120, 240 and 480 volt, single phase operation. Both manually-operated and motor-driven types are offered for air-cooled and oil-cooled duty.

The rating chart lists some of the most-called-for standard POWERSTATS.

A POWERSTAT Line Corrector functions as its name implies — it corrects line voltage variations to maintain a constant output voltage. It consists of two components. A POWERSTAT variable transformer, appropriately tapped, controls the primary of a fixed ratio step-down transformer. Although a POWERSTAT Line Corrector is generally employed to correct line voltage variations, it can also be used to supply a limited output voltage range from stable a-c power sources. At the sacrifice of a wide output voltage range, relatively large amounts of current can be controlled.

POWERSTAT Line Correctors are offered in a multitude of models and ratings for single and three phase applications; as manually-operated and motor-driven assemblies.

## STABILINE AUTOMATIC VOLTAGE REGULATORS

It is obviously impossible to produce any single type of electrical apparatus that will fulfill all requirements for every application. STABILINE Automatic Voltage Regulators are manufactured in three distinct types to meet individual needs. These three are: Type IE (Instantaneous Electronic) . . . for the most exacting control — Type EM (Electro Mechanical) . . . for controlling large

industrial loads or for applications requiring zero waveform distortion — and Type TM (Tubeless Magnetic) . . . for unattended locations. All are designed and manufactured to assure precise correction and dependable operation over long periods of continuous use. They will meet the most rigid mechanical and electrical specifications. A wide range of standard models are available and are listed below.

### TYPE IE (Instantaneous Electronic)

TYPE IE51002

TYPE IE5101R

Type IE is completely electronic with no moving parts. Providing instantaneous correction, it is ideal for laboratories, test lines, as a component of other equipment . . . and everywhere that the most exacting automatic voltage regulation is required. At no load, full load or any intermediate stage, constant output voltage is maintained regardless of line fluctuations. The output voltage is held to within  $\pm 0.1$  volts of nominal for wide line variations and within  $\pm 0.15$  volts of nominal for any load current or load power factor change from .5 lagging to .9 leading. Waveform distortion never exceeds 3%.

### TYPE EM (Electro Mechanical)

TYPE EM6220Y

Type EM is an electro-mechanical device with a very sensitive detector controlling a motor-driven POWER-STAT variable transformer and auxiliary transformer. While not instantaneous, Type EM corrects faster than most other automatic voltage regulators. Highly efficient in operation, it finds widest application in controlling large industrial loads and also in electronic equipment where zero waveform distortion is essential. Features include: complete insensitivity to the magnitude and power factor of the load, no effect on system power factor, no critical adjustments and adjustable output voltage.

### TYPE TM (Tubeless Magnetic)

TYPE TM7103

Type TM has no moving parts. It has no tubes to replace and no transistors. It is ideal for unattended locations where maintenance is not a possibility over long periods of time and for critical applications where failure at any time under the most adverse operating conditions cannot be tolerated.

## VARICELL D-C POWER SUPPLIES

### A VARIABLE RANGE OF STABILIZED AND REGULATED D-C VOLTAGES FROM AN A-C SOURCE

The ideal source of low d-c voltages, the VARICELL is simply plugged into any convenient, single phase a-c outlet supplying a nominal 115 volts at 60 cycles and it is ready to operate. Turning the handwheel provides any desired output voltage from 0-30 volts. Its load rating is 15 amperes. Any setting from 6 to 30 volts is unaffected by changes in line or load current. For any setting from 6 to 30 volts, R.M.S. ripple voltage never exceeds 0.1 volts, and stabilization and regulation is  $\pm 0.25$  volts.

## VOLTBOX A-C POWER SUPPLIES

### A COMPACT, PORTABLE SOURCE OF VARIABLE A-C VOLTAGE

This is a handy instrument widely used in chemical, physical, electrical and other laboratories and in inspection, testing and plant maintenance departments. It eliminates the need for collecting a variable transformer, voltmeter and connection leads when tests involve variable a-c voltages. All necessary components are housed in a compact case. By turning the "On-Off" switch to "On"; snapping the line-load switch to "Load" and rotating the knob; the desired voltage is available. Ratings to meet every requirement.

## Automatic Instantaneous Voltage Regulation

SOLA Constant Voltage Transformers are static-magnetic voltage regulators. They are designed to provide a constant output voltage which is unaffected by changes in input voltage. You will find, listed in the following pages, the widest range of ratings and types available from stock offered by any manufacturer.

In addition, CUSTOM DESIGNED UNITS can be manufactured in capacities from 1 V.A. to 25,000 V.A., to suit your individual specifications. When ordered in substantial quantities, they cost only slightly more than standard units of the same general size. Often, time and money can be saved by direct use or modification of a regulator from the several hundred special designs on file. Custom designs can include: SPECIAL VOLTAGE RATIOS, SPECIAL FREQUENCIES, COMPENSATION FOR FREQUENCY VARIATION, MULTIPLE OUTPUT VOLTAGES, THREE-PHASE SERVICE, and MILITARY SPECIFICATIONS.

SOLA Constant Voltage Transformers have eight distinct advantages over regulators which depend solely upon saturation of core materials for their regulating action, or electronic type regulators:

1. Response time, 1.5 cycles or less.
2. No moving or renewable parts . . . no manual adjustments.
3. Completely automatic continuous regulation.
4. Self-protecting against short circuits.
5. Current limiting characteristic protects load equipment from excessive fault currents.
6. Can often be substituted for conventional non-regulating transformers.
7. Relatively compact.
8. Provide isolation between input and output circuits.

# SOLA *Constant Voltage* DC POWER SUPPLIES

For intermittent . . . variable . . .  
pulse . . . or high amperage loads

This combination of Sola Constant Voltage Transformer, germanium power rectifier, and high-capacitance filter yields a dc power supply compact in size, low in weight, and with other important advantages.

1. Output regulation of  $\pm 1\%$  or less with  $\pm 10\%$  line voltage variations.
2. Minimum output voltage change with wide, rapid load changes.
3. Low input power, with resultant good efficiency.
4. Ability to withstand high, short-time overloads without damage to components.
5. Ripple voltage of approximately 1% (rms) or less.
6. High overall economy by eliminating overload capacity needed in other types of power supplies for certain applications.

7. Low ratio of size and weight to power output.
8. Freedom from routine adjustment and maintenance.
9. Exceedingly low output impedance.

In addition to its important function of correcting line voltage variations, the Sola CV's inherent current-limiting action permits safe, economical use of the efficient germanium rectifier with its low forward voltage drop and other advantages. This same current-limiting action also permits use of high-capacitance filter sections by controlling excessive charging currents which might damage rectifier junctions. The high-capacitance filter yields very low ripple voltage without need for heavy, bulky choke components, with their substantial and often-varying load voltage drops.

## ADJUSTABLE, REGULATED DC POWER SUPPLY THE "DC SOLAVOLT"

... Gives all the advantages of the Sola DC Supply design plus an output adjustable over a considerable range of voltage.

Regulation over the entire range of adjustable output voltages is within  $\pm 1\%$  at full load, with supply voltage

variations up to  $\pm 15\%$ . At 50% load and lowest voltage setting, regulation is within  $\pm 1.5\%$ . Ripple voltage is held within 0.05% at full load and nominal input voltage.

This adjustable DC Power Supply design offers simplified operation and maintenance. There are no tubes to replace, no "compensating" or "zero" adjustments to make, no instruction sheet to refer to in normal daily operation. No routine maintenance is required. All components on rear of panel are enclosed by a perforated housing.

# STANCOR TRANSFORMERS AND RELATED COMPONENTS

## TELEVISION COMPONENTS

Almost 200 TV replacement transformers and related components, the most complete line in the industry, are available from Chicago Standard. These include over 50 exact replacement flybacks and almost 60 power transformers, as well as yokes, vertical outputs, width and linearity coils

and many other popular TV replacement units. Ask your distributor for a free copy of the latest edition of the Stancor TV Transformer Catalog and Replacement Guide listing these units and replacement data on thousands of television sets.

## STANCOR ULTRA-LINEAR HIGH-FIDELITY AMPLIFIER

Now you can build an Ultra-Linear version of the famous Stancor-Williamson high fidelity amplifier, using Stancor Ultra-Linear Output Transformer A-8072. For complete construction details see Stancor Bulletin 479.

The original Stancor-Williamson amplifier can be converted to Ultra-Linear operation by a few simple circuit changes and the installation of the A-8072. Conversion instructions are included in Bulletin 479.

Stancor supplies a set of two completely punched and finished chassis for the Ultra-Linear Amplifier; Chassis Set WM-8, \$5.75 net. In addition to Ultra-Linear Output Transformer A-8072, \$15.00 net, this amplifier uses power transformer PC8412, \$8.58 net and filter choke C-1411, \$4.29 net. The other components used cost about \$25.00. They are all stock parts and can be readily obtained from your Stancor distributor.

Write for your FREE copy of Bulletin 479.

## HIGH FIDELITY OUTPUT TRANSFORMERS

Better than  $\pm 1$  db from 20 to 20,000 cps.

These Stancor output transformers combine the most advanced design and manufacturing practices to provide outstanding audio response at low cost. Maximum power level is conservatively rated at 50 watts. They are designed to match the most popular types of output tubes to speaker or line impedances.

Extensively interleaved "trifilar" windings, extremely tight coupling and careful electrical balance result in audio fidelity to please the most critical specialist. Inasmuch as elaborate shielding is not required at the audio output level, an inexpensive, but thoroughly practical, Type C mounting is used. Shipping weight is 6.5 lbs.

## POLY-PEDANCE DRIVER MULTI-TAPPED UNITS FOR USE IN CIRCUITS WHERE THE OPTIMUM RATIO CANNOT BE PREDETERMINED.

Driver circuit changes often require new transformers. Many times it is impossible to match correctly tubes involved with a specific transformer, with high distortion resulting. Poly-Pedance units solve that problem; three transformers with the maximum number of usable ratios will match the driver tubes to any Class B modulator grid circuit without exceeding the power capabilities of the driver tubes.

May be used as a single plate to single grid, single plate to push-pull grid or push-pull plate to push-pull grid interstate transformers. Overall ratios are 3:1, however, primaries are center-tapped and secondaries have split windings, thus providing ratios of 1:1, 3:1 and 6:1 in either step-up or step-down applications. § Has split secondary.

## SMOOTHING CHOKES FOR D.C. POWER SUPPLIES.

Inductance varies with the amount of D.C. flowing through the coil, therefore these units have been tested under uniform conditions. They are rated at 10 volts, 60 cycles, with maximum D.C. in winding. Tolerance of plus 15% is maintained on all ratings.

## SWINGING CHOKES FOR INPUT SECTION OF D.C. POWER SUPPLIES.

Inductance varies with the amount of D.C. flowing through the coil, therefore these units have been tested under uniform conditions. Swinging chokes are rated at 10 volts, 60 cycles, from maximum to 10% of maximum D.C. in windings. Tolerance of plus 15% is maintained on all ratings.

## POLY-PEDANCE MODULATION MULTI-TAPPED UNITS TO PROPERLY MATCH THE OUTPUT OF THE MODULATOR STAGE TO THE MODULATED LOAD. WILL MATCH ALL COMMON IMPEDANCES OF CLASS "B" MODULATOR (2,000 to 20,000 OHMS) TO CLASS "C" LOAD IMPEDANCES OF 2,000 TO 20,000 OHMS.

The number of excellent transmitting tubes available is constantly increasing. R.F. applications, too, have increased and it is sometimes difficult to obtain the correct modulation transformer suitable for

matching some given modulator tubes or R.F. load. These units give an almost unlimited range in power and impedance ratings to assure a correct impedance match in all cases.

\*Transformers and Rectifiers will have a higher temperature rise when operating with a capacitive load as compared to a resistive or inductive load for a given load current. If this is undesirable extra ventilation should be provided or else the output current from the rectifier should be derated by approximately 20% from the values shown.

**Testing Autoformer**—Designed especially for various service and test application. Incorporates a convenient tap switch to permit variable voltages from 90 to 150 volts. It may be used to apply an overload voltage to amplifiers, radio receivers, or other electronic

devices being serviced, which will indicate and cause suspected parts to break down. Primary equipped with 6 ft. approved cord and plug. Secondary connected to female receptacle.

### LINE ADJUSTING AUTOFORMERS

Stancor Line Adjusters permit operation of electrical devices at 115 volts when the supplied voltage is 65, 75, 90, 100, 115, 130 or 145. They are also useful for altering a 115 volt line above or below that level. The line adjuster input is correctable in seven steps by means

of a selector switch and is accurately indicated by an output voltmeter. The meter has a convenient red-line marker at 115 volts on a 150 volt scale.

## NEW EQUIPMENT AUDIO TRANSFORMERS

CHICAGO STANDARD TRANSFORMER CORPORATION

### TRANSISTOR TRANSFORMERS

Here are the smallest iron core audio transformers ever built. They weigh less than 1/10 ounce and are no larger than the transistors they power. Write for Bulletin 462 showing typical circuit application.

These transformers are designed primarily for transistor audio application but they can be used wherever low power is involved. Useful range, below 1 mw level. They are constructed of extremely fine wire, wound on molded nylon bobbins, with special nickel alloy steel laminations. Mounting style is coil and iron only, type UM.

**SPECIAL** Chicago-Stancor ultra-miniature transistor transformers, designed and built to your requirements, can be supplied in quantities of five or more. Send your specifications for information on price and delivery.

### MINIATURE HIGH FIDELITY AUDIO TRANSFORMERS

Chicago-Stancor Tinytrans are miniature transformers made with nickel steel laminations. They have an exceptional frequency response for units of this size; ±1 db. 30-15,000 cps, Maximum level 0 db. Write for Bulletin 463 showing frequency response curves on these transformers.

These units are sealed and potted in ⅜" square, anodized aluminum cases with phenolic terminal boards. Total height, including terminals, is 1¼". The case has two 2-56 threaded inserts, ⅛" centers, for easy chassis mounting. The entire transformer weighs only 1.3 ounces.

### PUBLIC ADDRESS RANGE TRANSFORMERS

#### Frequency Response within ±1 db, 50 to 10,000 Cycles

Driver and output transformers in this CHICAGO series are designed for three general power levels to fit a wide range of application. Up-to-date secondary impedances match 600 or 150-ohm lines, 16, 8, and 4-ohm speakers.

(16/8/4-ohm taps also suitable for 20/6/3.2-ohm speakers.) Output transformers have tertiary windings for 10% inverse feedback that minimizes distortion and provides extra audio watts without loss of fidelity.

## NEW EQUIPMENT AUDIO TRANSFORMERS

CHICAGO STANDARD TRANSFORMER CORPORATION

### HF AND WF SERIES HIGH FIDELITY AUDIO TRANSFORMERS

#### HF Series

These units have a wide frequency response of 20 to 20,000 cps with  $\pm 1$  db. Correct design reduces harmonic and intermodulation distortion to a negligible amount. Balanced construction minimizes hum pickup. Chicago-Stancor impregnation insures long life. Cases are finished in gray enamel and have four threaded holes at each end for flush mounting. Stud-type terminals are plainly marked for easy identification.

#### Splatter Chokes for High Level "Clipper" Filters

Can withstand high peak voltages. Has tapped windings to cover an inductance from .02 to 1.5 henries at relatively constant Q. Eliminates splatter, caused by heavy modulation; limits band width to 3,000 cycles, effectively increases "get through" ability of phone signals, and prevents negative peak clipping.

#### Low Pass Filter No. LPF-1

For attenuating frequencies above 3,000 cycles in low level speech amplifiers. Operates out of a 15,000 ohm source, e.g., the plate of 6C5, 6J5, etc. when its 60,000 ohm secondary is connected to an equal impedance output. Operates at signal levels up to -8 db. Complete with operating instructions. S type mtg. Case size 13. (See pg. N-13).

### ISOLATION TRANSFORMERS

CHICAGO Isolation Transformers are designed for a dual purpose: (1) To supply 115 volts isolated from a line of above/below normal, or normal, voltage—primary switch sets for 125/115/105 volts, 50/60 cycles; or (2) For use in servicing to eliminate shock hazard, by isolating chassis ground from line ground (particularly important on "hot" AC-DC television sets). Also provide 125 and 105 volts on the secondary for locating doubtful tubes, etc.

#### DESCRIPTIVE DATA, GENERAL

Maximum rated operating level ▼ applies to frequency range 20-20,000 cps. Power rating is 1/2 at 15 cps, 1/4 at 10 cps. Full power (60 cps) primary open circuit inductance is approximately 100 Henrys for each 1000 ohms of primary impedance. Leakage inductance, secondary referred to total primary, is approximately 1 mh per 1000 ohms of primary impedance. Leakage inductance, half primary to half primary is approximately 1 mh per 1000 ohms of primary impedance. Can be used between half and double of rated impedances. For halved impedances, power ratings are doubled. For doubled impedances, power ratings are halved. Secondary may be operated with either end, or C.T. grounded.

High Fidelity Output Transformers for every application.

## BROADCAST QUALITY COMPONENTS

Modern high fidelity broadcasting and transcription equipment requires the use of "Audio" — transformers of utmost quality and reliability in performance. Freed broadcast quality components have been designed to meet these requirements. They are wide band, high fidelity components with low distortion throughout the audio range and beyond. Frequency response for most units is in the order of  $\pm 1$  DB from 20 to 20,000 cps and for high level output transformers in the order of  $\pm 0.5$  DB from 20 to 30,000 cps.

These units feature astatic construction, longitudinal balance, high efficiency, uniform response, and constant impedance match throughout the audio frequency spectrum. Maximum neutralization of stray fields is accomplished through the use of hum balanced coil structures and multiple alloy shielding. Equal high fidelity response is assured on every tap of any universal impedance winding without line reflection of transverse coupling.

All broadcast quality components are thoroughly impregnated in a special non-hygroscopic varnish and fully encapsulated with a moisture proof, high melting compound.

All broadcast quality components are **hermetically sealed.**

All units are tested in accordance with and meet "RETMA" standards.

Almost all units are designed with universal impedance windings to insure greatest versatility.

A full line of high Q reactors complements this series of audio transformers.

**PROFESSIONAL GRADE COMPONENTS**

This group of components has been designed for use in high fidelity and professional equipment and for public address service. Freed has developed this series of units employing the latest design techniques and the best commercially available materials. Except for units carrying unbalanced direct current the frequency response is  $\pm 1$  DB from 30 to 15,000 cps. All units feature excellent performance characteristics combined with minimum size and weight.

All units are vacuum varnished and then potted in compound to insure long life and trouble free performance.

Professional Grade components are supplied cased. Upon request these units can be supplied open or in shell type construction.

All cased Professional Grade Components supplied with terminals meet "RETMA" standards.

**QGC HIGH Q REACTORS**

QGC-Reactors are designed for low audio frequency application requiring very high Q and inductance stability. These units are impregnated with a special compound and mounted in **hermetically sealed** cases. A hum reducing lamination structure used in these reactors results in an extremely low pickup of extraneous stray fields. A very low temperature coefficient is achieved by a specially developed impregnation and assembly process. All QGC High Q Reactors have an extremely low voltage coefficient.

All Resistance values are nominal and can vary by ± 20%.

Inductance values are given within ± 2%.

**Closer Tolerances and Inductances other than the standard Catalog items can be supplied on special orders.**

**Inductance Values up to 400 Henries can be supplied.**

The graphs showing the coil characteristics make use of the following formulas:

1. "Q" versus frequency was measured with voltages given by the expression:

$$V = K \frac{\sqrt{LH}}{1H} \times \frac{FKC}{1KC}$$

K — a constant listed in every chart  
 LH — inductance in Henries  
 FKC — frequency in kilocycles at which the measurements were made.

2. Variation of inductance versus normalized Direct Current.

The normalized DC is given by  
 $I_n = I_{dc} \sqrt{LH}$   
 where  $I_{dc}$  is the dc current in MA  
 and LH the inductance in Henries.

3. Variation of Inductance versus normalized AC voltage.

The normalized AC voltage is given by

$$V_n = \frac{V}{\sqrt{LH}} \times \frac{60}{F_{cps}}$$

$V_n$  — normalized AC voltage  
 V — voltage across the coil  
 LH — inductance in Henries  
 F — frequency of measurement in cps.

# HERMETICALLY SEALED PULSE TRANSFORMERS

Hermetically sealed Pulse Transformers for use in blocking oscillator, low level interstage coupling, and modulator output circuits. These components meet MIL-T-27 A specifications. The pulse transformers are designed for maximum power, efficiency, and optimum pulse performance. Balanced coil structures permit series or parallel connection of windings for turn ratios other than unity. Pulse characteristics, voltages and impedance levels will depend upon the interconnections made.

**TOROIDAL INDUCTORS**

Using the latest developments in the field of magnetic materials and new impregnation techniques the Freed Transformer Co. makes available to the industry the most extensive line of toroidal inductors.

Freed Toroids are available in three types of construction. Open units coated with a special high temperature, extremely low loss compound, hermetically sealed or molded in special Freed epoxy resin. Both hermetically sealed and molded units meet the latest military specification.

Freed toroidal inductors are supplied with either molypermalloy cores or special powdered iron cores. The catalog items with the letter "S" added to the type designations are wound on temperature stabilized cores.

- SB indicates temperature stability of  $\pm 0.1\%$  from  $+13^{\circ}\text{C}$  to  $+35^{\circ}\text{C}$
- SD indicates temperature stability of  $\pm 0.1\%$  from  $-1.5^{\circ}\text{C}$  to  $+54^{\circ}\text{C}$
- SW indicates temperature stability of  $\pm 0.25\%$  from  $-54^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$

The "Q" values given in the individual graphs are accurate within  $\pm 10\%$  for hermetically sealed and molded units. For open units the "Q" tolerance is  $\pm 20\%$ .

All Toroids are adjusted at frequencies well below their self-resonant frequency,  $f_0$ .

The apparent inductance at any frequency  $f$  is given by the expression

$$L_{app} = \frac{L}{1 - \left(\frac{f}{f_0}\right)^2}$$

where  $L$  is the nominal inductance.

For frequencies well below the resonant  $f_0$  the fractional increase in inductance due to the distributed capacity  $C_0$  is approximately

$$\frac{\Delta L}{L} = \left(\frac{f}{f_0}\right)^2 = \omega^2 LC_0$$

The graphs showing the coil characteristics make use of the following formulas:

1. "Q" vs. frequency was measured with voltages given by the expression

$$V = K \sqrt{LH} \times \frac{FKC}{1KC}$$

where  $K$  is a constant listed on every chart

$LH$  is inductance in Henries

$FKC$  is the frequency in kilocycles at which the measurements were made.

2. Variation of inductance vs. normalized Direct Current. The normalized DC is given by:

$$I_{norm.} = I_{dc} \sqrt{LH}$$

where  $I_{dc}$  is the DC current in the coil in MA., and  $LH$  is the inductance in Henries.

3. Variation of Inductance vs. normalized AC voltage. The normalized AC voltage is given by

$$V_{norm.} = \frac{V}{\sqrt{LH}} \times \frac{60 \text{ cps.}}{F \text{ cps.}}$$

$V$  is the voltage across the coil

$LH$  is the inductance in Henries

$F$  is the frequency of measurements in cps.

For high frequency Toroids the above expression is changed to

$$V_{norm.} = \frac{V}{\sqrt{LH}} \times \frac{1KC}{FKC}$$

Toroids with special requirements, tapped Toroids and toroidal transformers can be supplied upon request. Our engineering and laboratory facilities are available for consultation, research and development.

## MAGNETIC AMPLIFIERS AND SATURABLE TRANSFORMERS

The ever increasing demand for reliability, ruggedness, miniaturization and high performance has made the magnetic amplifier an indispensable component of many military and industrial automatic control and servo systems. Recent advances in materials and techniques permit an even greater utilization of the well-known inherent advantages of magnetic amplifiers such as direct operation from line voltage, no warm up time, long life components, ease of signal mixing, and hermetic sealing.

Freed Transformer Co. manufactures an extensive line of magnetic amplifiers, ranging from saturable transformers to half-wave type, fast response servo amplifiers. Choice of catalog amplifiers assures standardization, lowest possible cost and rapid delivery.

The MAO line of single ended magnetic amplifiers provides a single stage of DC controlled amplification, utilizing positive feedback to obtain a gain much higher than that of a saturable reactor.

The MAP line of push-pull magnetic amplifiers features high gain, polarity-sensitive amplification, and a phase reversible output.

The MAF type of fast response magnetic amplifiers combines high power gain, ruggedness, and reliability with a maximum 2 cycle response. All MAF units are phase-reversible.

The MAS line of saturable transformers, commonly controlled by dual-triodes or transistors, emphasizes low cost, small size, extreme reliability (no rectifiers), and phase-reversible output.

All standard units are designed for continuous operation and will operate in an ambient temperature range of  $-55^{\circ}\text{C}$  to  $+75^{\circ}\text{C}$ .

Vacuum tube and transistor preamplifiers can be supplied if very high impedance inputs are required.

In addition to standard items, Freed Transformer Co. has extensive facilities for the design and production of special amplifiers, saturable reactors, and magnetic components.

## SERIES 1950 NULL "T" FILTERS

The Freed Series 1950 Null T networks consist of two resistance capacitance networks, whose outputs completely cancel each other at the balance frequency. They may be used as rejection networks particularly at low frequencies where LC filters become excessively large and unstable.

Standard models are available for 30, 60 and 120 cycles in a wide range of impedances. Each network will give a minimum of 50 db attenuation at the null frequency.

The null frequency is adjusted to a tolerance of  $\pm 2\%$ .

All Null T Filters are hermetically sealed.

A complete line of Band Pass Filters, Low Pass Filters and Discriminators is available for multi-channel telemetering applications. These components cover the frequency range from 400 cps to 70,000 cps. The filters feature plug-in construction and excellent selectivity characteristics. The Discriminators, either fixed or slug tuned, have exceptional linearity, high amplification, and utmost stability.

### NARROW BAND PASS FILTERS

### WIDE BAND PASS FILTERS

## TELEMETERING BAND PASS FILTERS

These filters cover the frequencies from 400 c.p.s. to 70KC. Narrow frequency B.P.F. have a band width of  $\pm 9\frac{3}{4}\%$  of center frequency and 50 DB points at  $\pm 7\frac{1}{2}\%$  of center frequency of higher or lower adjacent channels. Wide frequency B.P.F. have a band width of  $\pm 19\frac{1}{2}\%$  of center frequency and 50 D.B. points at  $\pm 15\%$  of center frequencies of higher or lower second adjacent channels.

## MINIATURE FILTERS

Freed standard filters are **hermetically sealed**, miniature high performance components designed for production and laboratory applications in the electronics and communications industries.

To achieve attenuation characteristics not obtainable with one single filter several standard filters of different transmission characteristics can be combined. Wide band characteristics can be obtained by combining low and high pass units.
