The astatic construction of inductive components together with special shielding reduces the hum pickup of standard filters to extremely low levels.

Standard filters with low pass, high pass and band pass characteristics are available.

The attenuation characteristics of these filters are:

- Low Pass Filters** 6 db at cut-off frequency.  
 35 db at 1.5 times cut-off frequency.  
 40 db at twice the cut-off frequency.
- High Pass Filters** 6 db at cut-off frequency.  
 35 db at 67% of cut-off frequency.  
 40 db at 50% of cut-off frequency.
- Band Pass Filters** 2 db at  $\pm 3\%$  of center frequency.  
 40 db at one half and twice the center frequencies.

ULTRASONICS

New developments and applications of ultrasonics for industrial cleaning, soldering, welding, and mixing have created a demand for generators and components specifically designed for ultrasonic applications.

Using the latest developments in the field of special magnetic materials the FREED ultrasonic transformers are designed for greatest efficiency and maximum reliability. They feature small size, excellent performance and long life under continuous duty operation.

To save development time complete kits designed for ultrasonic electronic generators, amplifiers (from 100 watts to 1 KVA) and transducer bias supplies are available. These kits include all necessary reactive components and are supplied with a complete schematic.

A 250 VA ultrasonic amplifier is available from stock. (Completely wired).

Transformers with an extended frequency range (frequencies up to 2 MC) can be supplied upon request.

Extensive engineering and laboratory facilities are available for consulting, development and research in components for ultrasonic generators and amplifiers.

**MODULATION TRANSFORMERS—THE "FIVE" SERIES**

SNC universal modulation transformers are specifically designed to provide maximum application possibilities per type. All units are provided with two identical secondary windings, permitting series or parallel operation. Changes in the ratio can be readily accomplished, when desired, without removing the unit from the chassis. Most units available in either air cooled or compound filled cases.

**FILAMENT TRANSFORMERS—THE "FOUR" SERIES**

Most SNC Filament Transformers are constructed to provide two identical center tapped secondary windings and offer a minimum of three applications. They provide three-fold the number of possible applications of ordinary filament types. A few are single secondary units and are so designated. All have 117 V. 50/60 cycle primary.

## MINIATURES

### JAF SERIES—HERMETICALLY SEALED

These tiny transformers are hermetically sealed to MIL-T-27 requirements and are encased in standard military AF cans deep-drawn from "Trialloy" nickel alloy magnetic shielding material. Wide frequency range is consistently achieved by layer wound coils of extremely fine wire.

## HIGH FIDELITY OUTPUT TRANSFORMERS

TRIAD "HS" Series Output Transformers represent the application of the most modern techniques in the design of fine audio equipment. Use of annealed grain-oriented core materials, combined with multiple interleaved coil structures, have resulted in an open circuit inductance to leakage inductance ratio of 10,000, representing a frequency response range of better than 13 octaves. These transformers will deliver full rated power output within 1 db. from 7-50000 cycles. Full DC plate current can be carried through the primary windings, but every effort should be made to balance the two plates in push-pull circuits to obtain optimum results at the extreme low frequencies.

## POWER

### Combined PLATE and FILAMENT Transformers

#### Primary 115 volts 50/60 cycles

All types are "Climate" treated, both coil and core, for protection against moisture and for elimination of lamination chatter. Although they are small in size, the high quality materials used keep losses to a minimum and hold temperature rise below 55° C. Only copper foil static shields, grounded to the case and core, are used. Leads are of a type approved by UL for high temperature operation.

## INSTRUMENT POWER

### Instrument POWER SUPPLY Transformers

Intelligent design and construction of measuring instruments involves consideration of many factors normally neglected in electronic circuits. Regulation of power supply voltages, limitation of external magnetic fields by minimum flux density, multiple static shields to limit capacitive coupling, multiple filaments where tubes must operate at different potentials, all become necessary to obtain peak performance. The transformers on this page are a series of special designs which have been developed for instrument design.

## PULSE

These miniature blocking oscillator transformers are now in quantity production for manufacturers in a number of applications and with outstanding results. Their multiple winding construction makes them available for a variety of circuits and their fast rise time (.03 micro-seconds) makes them exceptionally useful. Positive hermetic sealing prevents deterioration of performance with time (absolutely necessary for long shelf life).

Type No.	Application	Wt. Lbs.
PL-4	2 equal windings. Pulse width .35 to 1.2 microseconds. Duty cycle .01 max. Dimensions .4" dia. by .625" long.	
PL-5	3 equal windings. Pulse width .35 to 1.2 microseconds. Duty cycle .01 max. Dimensions .5" dia. by .68" long.	
PL-6	3 equal windings. Pulse widths .35 to 1.2 microseconds. Duty cycle .01 max. (Transformer only) 1 1/4" dia. by 3/4" long. Mounts with 8-32 x 1/2" stud.

## FILAMENT

Electronic tubes, as used in most equipment, operate with filaments on continuously. Filament transformers should then be designed for low temperature rise under continuous operation, good regulation, minimum size, and long life. Triad filament transformers meet all these requirements. All units are "Climatite" treated, both coil and core, for moisture protection and elimination of lamination noise. All types are permanently marked with connection data and cased types are beautifully finished in grey baked enamel. Only the highest quality of materials are used to permit rated output in minimum size.

### REPLACEMENT POWER

Triad replacement power transformers are designed as closely as possible to meet the electrical and physical specifications of the transformer for which they are a replacement. Where possible, these transformers take advantage of better materials to operate at a lower temperature and thus to increase effective life. All Triad replacement power are "Climatite" treated, both coil and core, for moisture protection and elimination of lamination chatter. All are beautifully finished in grey baked enamel and are permanently marked with connection data. Copper foil static shields are used for maximum isolation. Leads are of a type approved by UL for this service.

## PLUG-IN INPUT Transformers

These are high-quality input transformers with a high degree of magnetic shielding and are designed to couple low-impedance microphones or magnetic heads to amplifier input. They are equipped with nine prong plugs to prevent possible insertion in tube sockets and to match the sockets on many commercial amplifiers.

UTC type VIC variable inductors offer a revolutionary approach to the problem of tuned audio circuits. By adjusting a set screw in the side of the case, an inductance value of +85%, -45% from mean value is obtainable. Range is covered in 600° rotation. Setting is positive. Effective Q for a wide frequency range and variation of inductance with applied AC voltage are shown on the illustrated curves, for a typical VIC unit.

The VIC inductor is housed in a rugged die cast case 1 1/2" long, 1 1/4" wide and 1 1/8" high with mounting centers on terminal board side 1 3/16" by 2 3/32", tapped for 4-40 screw. Weight is 5 1/2 oz.

UTC variable inductors have served as the ideal solution to many filter, oscillator, equalizer, and tuned amplifier problems—for over a decade. Extended development has now made possible the new HVC series of inductors with improved characteristics. They are hermetically sealed to MIL-T-27 specs... extremely compact... wider inductance range... higher Q's... lower and higher frequencies... superior voltage and temperature stability.

Adjustment of set screw in top of case permits changing inductance + 200%, -70% of nominal value shown. Range is covered in 900° rotation. Setting is positive. Effective Q for a wide frequency range and variation of inductance with applied AC voltage are shown on the illustrated curves, for a typical HVC unit. Case dimensions are 1 1/8" long, 2 3/32" wide, 1 1/2" high. The two terminals and two 4/40 mounting studs are on opposite diagonals — 1 3/16" spacing.

# NEW "M" TYPE TOROIDS

(Hermetically sealed to MIL-T-27A specs.)

**MAXIMUM Q**  
**MINIMUM SIZE**

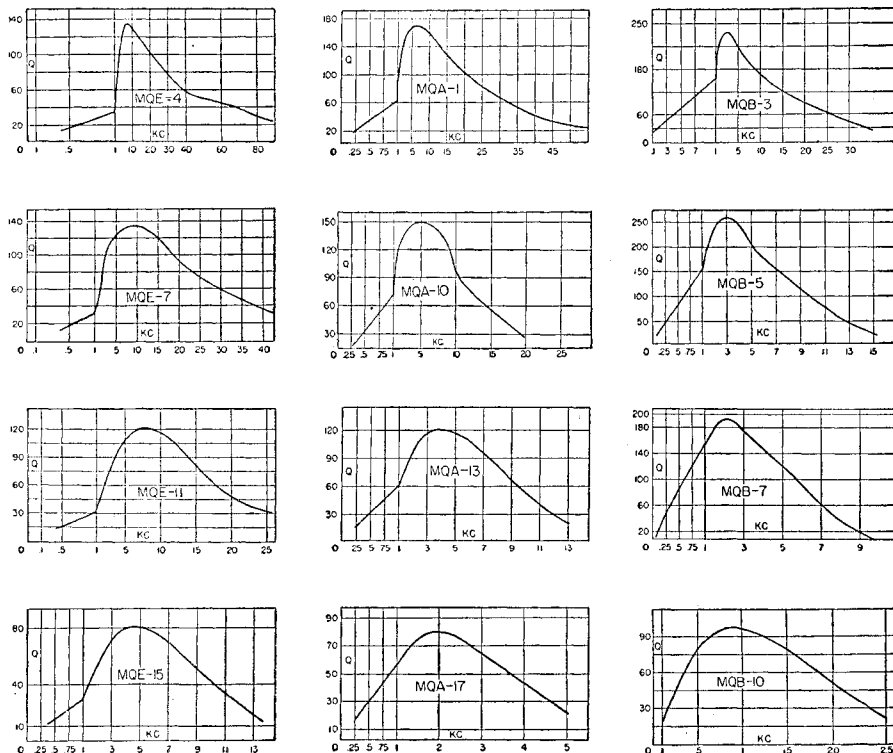

UTC Permalloy Dust Toroids have been the standard of the industry for over 15 years. The MQ series of coils provide the highest Q factor in their class (see curves below), with miniaturized dimensions. All units are hermetically sealed to MIL-T-27 Specifications . . . laboratory adjusted to 1% tolerance—0 DC.

The stability is excellent. For the MQE-7 the inductance change is less than 1% for voltages from .1 to 3 volts. The MQA-13 change is less than 1% for applied voltages from .1 to 20 volts. The MQB-5 change is less than 1% for applied voltages from .1 to 50 volts. DC is permissible through the coil (values listed below). Inductance is virtually independent of frequency, temperature and vibration.

Hum pickup is extremely low due to the toroidal winding structure, with windings uniformly spread over the core. The case is of high permeability, affording additional shielding such that close spacing of units can be effected, the coupling attenuation being approximately 80 DB.

Other values of inductance than those listed are available on special order at the price of the next higher listed value. Uncased and molded toroids or glass solder seal terminals available on production orders.

# UTC LOW FREQUENCY HIGH Q COILS

(Hermetically sealed to MIL-T-27A Specs.)

Permalloy dust toroids are not suited to providing high Q at low frequencies. The MQL series of laminated Hipermalloy coils were specifically designed for this class of service. The unique structure employed provides exceptional Q and stability. Inductance values are laboratory adjusted to 2% tolerance at 1 volt, 60 cycles. Stability with voltage is excellent, for MQL-3 inductance variation is less than 1% from .1 V. to 1 V. 60 cycles. Temperature stability is exceptional, total inductance swing being less than 3.5% for the wide range of  $-55^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$ . A hum reducing lamination structure plus heavy Hipermalloy shielding provide very low hum pickup . . . 240 microvolts/gauss for MQL-3 series connected. Two identical windings brought out to four terminals permit series, parallel, center tapped, or transformer type connections. Drawn case  $1\frac{13}{16} \times 1\frac{13}{16} \times 2\frac{1}{2}$  high, 1 lb.

## HIGH Q PRECISION INDUCTANCE DECADES

UTC DI inductance decades are invaluable instruments for design and experimental work with tuned circuits, wave filters, and equalizers. They set new standards of Q, stability, frequency range, and convenience. The low hum pickup toroid coils employ a new permalloy dust core which, combined with special winding methods, provides very high Q, excellent voltage and temperature stability, and high self resonance frequency. The switch employed is a new low capacity type which lab tests have proven for low contact resistance after 100,000 operations. The inductance values are laboratory adjusted to better than 1% precision. Die cast case  $4\frac{1}{2} \times 4\frac{3}{4} \times 2\frac{3}{8}$ , 2 lbs.

DI inductance decades are housed in a compact, rugged, die cast case with control on a sloping panel, ideally suiting these units to laboratory use. Ganging panels are available for mounting two, three, or four decades together. It is merely necessary to unscrew the four rubber feet at bottom of decade to attach to panel.

UTC standardized filters have been designed to take care of many present day filter requirements through stock units. The interstage type filters have a nominal impedance of 10,000 ohms, and lend themselves to effecting gain simultaneously with their frequency discrimination.

**BMI** units (Band Pass) have 2:1 gain. They are sharply peaked, having approximately 2 DB attenuation at plus or minus 3% from center frequency and attenuation of 40 DB per octave as shown. Input 10,000 ohms, output to grid.

**HMI** units (High Pass) have a loss of less than 6 DB at cutoff frequency, and an attenuation of 35 DB at .67 cutoff frequency. Input and output 10,000 ohms. **LMI** units (Low Pass) have a loss of less than 6 DB at cutoff frequency, and an attenuation of 35 DB at 1.5 cutoff frequency. Input and output 10,000 ohms.

**HML** (High Pass), and **LML** (Low Pass) filters are similar to the interstage filters, in all characteristics, except that they are intended for an input and output impedance of 500/600 ohms. **BML** (Band Pass) have input of 500/600 ohms, output to grid.

All of the standard filters are housed in hermetically sealed cases, shielded to reduce hum pickup to 150 MV per gauss at 60 cycles.

In addition to the stock filters listed, any of the s.x types are available as special units for any frequency from 100 to 12,000 cycles. Order by type followed by frequency, as LMI 2800, designating low pass interstage filter--2800 cycles cutoff frequency. These special units are priced at \$35.00 net. If preferred, glass solder seal terminals available on production orders.

# MINIATURE WIDE APPLICATION PULSE TRANSFORMERS

# MAGNETIC AMPLIFIERS FOR SERVO MOTOR APPLICATIONS

(Hermetically sealed to MIL-T-27A Specs.)

The MAT 1-4 Magnetic Amplifiers are exceptionally stable units designed for the control of 2 phase, 115V., 400 cycle servo motors. They are compact... hermetically sealed... magnetically shielded... and meet MIL-T-27 and MIL-E-5400 Specifications. The output is sinusoidal, amplitude variable, and phase reversible. Control is provided by a dual triode such as 12AU7 operating with a plate voltage of 115 volts, 400 cycles, or higher. The signal to the triode grids can be polarity reversible DC or phase reversible 400 cycles with or without suppressed carrier modulation. These units eliminate DC power requirements as well as temperature sensitive dry disc rectifiers. The high input impedance provides minimum loading on sensing elements and high power gain. Ringing at low load level has been reduced to a minimum through high internal damping factors. The power output figures are conservative... power gain of the MAGNETIC STRUCTURE is approximately 40... response time approximately 7.5 milliseconds. The maximum null voltage is 3 volts RMS. For single phase supply voltage the load capacitor should effect 90° phase shift with motor load... for 3 phase, 30° phase shift. (The chart values shown are approximate.)

For AC signal control the circuit of Figure 1 is employed. For DC signal control Figure 2 applies. Figure 3 shows the use of a power transformer (MAT-5) which provides higher plate voltages and eliminates the input transformer (MAT-6). The typical response curve of Figure 4 applies to all units, the larger units feeding heavier loads.

# HERMETIC AUDIO COMPONENTS

For over fifteen years UTC has been the largest supplier of transformer components for military applications, to customer specifications. Listed below are a number of types, to MIL-T-27A specifications, which are now catalogued as UTC stock items.

**Terminals** on items H-20 through H-24 are neoprene-ceramic assemblies. All other units employ glass bead headers, but can be supplied with neoprene-ceramic terminals where required. For **printed circuit use**, wire terminals on glass header units can be straightened out without injury. Straight wire terminals available on production orders.

The **frequency response ratings** are based on military requirements. Actually, most of the units that do not carry DC are appreciably better in response than the range shown.

The **level ratings** are maximum level for reasonable distortion at the lowest frequency specified. For higher frequencies considerably higher levels are permissible.

The **impedance ratings** are listed in standard manner. Obviously, a transformer with a 15,000 ohm primary impedance can operate from a tube representing a source impedance of 7700 ohms, etc. In addition, transformers can be used for applications differing considerably from those shown, keeping in mind that impedance ratio is constant. Lower source impedance will improve response and level ratings . . . higher source impedance will reduce frequency range and level rating.

## ... DOTS FOR SHORT

### REVOLUTIONARY TRANSISTOR\* TRANSFORMERS

UTC has been the leader in miniaturization for over twenty years. In view of this, it was surprising to many people that UTC did not quickly bring out a series of transformers designed for use and comparable in size to transistors. Unfortunately, extremely miniature transistor transformers of standard construction had poor general characteristics, poor reliability characteristics, and were woefully inadequate for a large number of applications. Instead, UTC started a development program to evolve a new transistor transformer structure designed to provide full performance in extremely miniature size. The culmination of this development is found in the new DOT series\*\*. Listed below are the standard types of DOTS now being made and curves showing their general characteristics in typical transistor application. To fully appreciate the unprecedented performance of these revolutionary transistor transformers, the curves also show characteristics of similar size units now on the market.

Special DOT units (some even smaller in size) are available on production order.

# OUNCER AUDIO UNITS

## STANDARD AND PLUG-IN TYPES

UTC OUNCER components represent the acme in compact quality transformers. These units, which weigh one ounce, are fully impregnated and sealed in a drawn aluminum housing  $\frac{7}{8}$ " diameter . . . mounting opposite terminal board.

Ouncer items are ideal for portable broadcast, hearing aid, aircraft, concealed service, and similar applications. High fidelity characteristics are provided, uniform within approximately 1 DB from 30 to 20,000 cycles, except for O-14, O-15, and units carrying DC which are intended for voice frequencies. Maximum level + 8 dbm.

"P" series units are identical to the UTC OUNCER units but are sealed in bakelite housings with plug-in base to fit standard octal socket. While of submersion proof design, these units weigh but two ounces. Oversize pins in the base make it impossible to dislodge these units from their sockets.

# SUBOUNCER UNITS

FOR HEARING AIDS...VEST POCKET RADIOS...MIDGET DEVICES

UTC Sub-Uncer units fulfill an essential requirement for miniaturized components having relatively high efficiency and wide frequency response. Through the use of special nickel iron core materials and winding methods, these miniature units have performance and dependability characteristics far superior to any other comparable items. They are ideal for hearing aids, miniature radios, and other types of miniature electronic equipment.

The coils employ automatic layer windings of double Formex wire . . . in a molded Nylon bobbin. All insulation is of cellulose acetate. Four inch color coded flexible leads are employed, securely anchored mechanically. No mounting facilities are provided, since this would preclude maximum flexibility in location. Units are vacuum impregnated and double (water proof) sealed. The curves below indicate the excellent frequency response available. Alternate curves are shown to indicate operating characteristics in various typical applications.

# SUB-SUBOUNCER UNITS

FOR HEARING AIDS AND ULTRA-MINIATURE EQUIPMENT

UTC Sub-Sub-Uncer units have exceptionally high efficiency and frequency range in their ultra-miniature size. This has been effected through the use of specially selected Hiperm-Alloy core material and special winding methods. The constructional details are identical to those of the Sub-Uncer units described above. The curves below show actual characteristics under typical conditions of application.

# LINEAR STANDARD AUDIO TRANSFORMERS

The ever increasing use of wide range equipment for broadcast service has reached the point where the major limiting factor is the frequency range of the transformers employed. UTC Linear Standard components represent the closest approach to the ideal transformer from the standpoint of uniform frequency response, low wave form distortion, high efficiency, thorough shielding, and dependability.

# ULTRA COMPACT AUDIO UNITS

The UTC Ultra compact audio units are small and light in weight, ideally suited to remote amplifier and similar compact equipment. High fidelity is obtainable in all individual units, the frequency response being  $\pm 2$  DB from 30 to 20,000 cycles.

All units except those carrying DC in Primary employ a true hum balancing coil structure, which combined with a high conductivity outer case, effects good inductive shielding. The die-cast case provides for top or bottom mounting. Maximum operating level  $\pm 7$  DB.

# HIPERM ALLOY TRANSFORMERS

The UTC Hiperm alloy audio and power transformers are specifically designed for portable and compact service. While light in weight, neither dependability nor fidelity has been sacrificed. The frequency characteristic of the Hiperm alloy audio units is uniform from 30 to 20,000 cycles. They incorporate a Hiperm-alloy nickel iron core and hum balanced coil structure. The rugged die cast case is of high conductivity alloy finished in grey, arranged for mounting with the terminals either up or down. DC in Prim'y shown is maximum unbalanced.

# COMMERCIAL GRADE COMPONENTS

The commercial grade series of transformers incorporate conservative design and rugged construction to assure dependability under continuous service operation in industrial and commercial grade communication equipment. These units are mounted in uniform drawn cases finished in light grey enamel, and intended for chassis mounting. All items are poured with special sealing compound in addition to vacuum impregnation of coil structures. Type numbers are identical with the PA units except for the prefix "CG."

CG-134, 135 and 136 are of the hum-bucking type to assure low hum pick-up. All audio components are linear.  $\pm 1\frac{1}{2}$  DB from 40 to 10,000 cycles (no unbalanced D.C.), except CVL and CVM units . . . 40 to 6000 cycles. Parallel feed low level interstage units with 50,000 ohms and .25 mfd. 20u ohm windings on input transformers are balanced and may be used for 150 to 250 ohm circuits.

### NEW UNIVERSAL INTERSTAGE EQUALIZER—CGE-1A

The UTC CGE-1A is the ideal device for any application where frequency response control is desired. Incorporating the latest developments in design and manufacture, this new unit provides the ultimate in control and flexibility. This equalizer is not a simple R-C tone control, but employs resonant circuits in a unique arrangement providing equalization characteristics unobtainable by conventional circuits. Designed to work from a low or medium impedance source (0 to 20,000 ohms) to a high impedance (500,000 ohms or open grid), the CGE-1A affords continuously variable equalization over a 30 DB range at either end of the spectrum, while introducing only 18 DB total insertion loss. (See curve above). Complete independence of high frequency and low frequency controls permits a wide variety of settings without affecting the over-all volume level. Because of its low insertion loss, this unit may be incorporated directly in many amplifiers. If existent gain is low, a single medium- $\mu$  triode stage will provide both proper gain and source impedance. The mechanical construction permits mounting with case on panel directly behind controls, or with case separated from controls and panel. An etched, calibrated panel is provided.

CGE-1A Panel Dim. 2 3/4" x 3 1/2" x 2 1/2" deep. Wt. 2 lbs.

### DYNAMIC NOISE SUPPRESSION INDUCOR

Incorporates two accurate High Q coils (.8 hy. and 2.4 hy.) for use in dynamic noise suppression circuits. Excellent circuit accompanies unit.

## CG VARIMATCH LINE TO VOICE COIL TRANSFORMERS

The UTC VARIMATCH line to voice coil transformers will match any voice coil or group of voice coils to a 500 ohm line. More than 50 voice coil combinations can be obtained, as follows:

.2, 4, .5, .62, 1, 1.25, 1.5, 2, 2.5, 3, 3.3, 3.8, 4, 4.5, 5, 5.5, 6, 6.25, 6.6, 7, 7.5, 8, 9, 10, 11, 12, 14, 15, 16, 18, 20, 25, 28, 30, 31, 40, 47, 50, 63, 69, 75.

When speakers are to be connected in groups to one transformer, it is preferable that parallel connection be used to eliminate the possibility of multiple resonance. If two speakers of different impedances are connected in parallel, the lower impedance speaker will develop greater power. If connected in series, the higher impedance speaker will develop greater power.

## CG VARIMATCH LINE AUTOFORMERS

UTC Varimatch Line Autoformer will match one to ten 500 ohm lines or CVL windings to the 500 ohm output of an audio amplifier. The CVL-10 autoformer has impedances of 500, 250, 167, 125, 100, 83, 71, 62, 50 ohms.

## CG VARIMATCH MODULATION UNITS

Will match any modulator tubes to any RF load. The ever increasing number of vacuum tubes available for audio and RF applications has increased the difficulty of obtaining transformers suitable for matching to the various correct tube loads. If a standard transformer having a limited impedance range is purchased and used for a specific purpose as the "nearest thing" available, comparatively high distortion is inevitable. While a 20% mismatch caused by such an occurrence does not represent a serious loss in power, it greatly reduces the undistorted power available from a class B modulator because optimum plate load is not reflected to the tubes. The UTC Varimatch transformer eliminates this difficulty through the use of a combination of tapped windings affording an extremely wide range in impedance matching. Designs provide that for any load impedance employed, full class C plate current can be carried by secondary winding.

UTC CG power transformers, Varimatch units and chokes are designed to A.I.E.E. commercial standards. Ratings are conservative for continuous duty. Designs provide temperature rise less than 55 degrees C. Units are tested for breakdown at twice maximum working voltage plus 1000 volts. Plate transformers are given a surge test of 250% normal voltage at 200 cycles. All items are vacuum impregnated and sealed with special insulating compound. The conservative design and manufacturing procedure of these units make them suitable for virtually all types of commercial equipment as well as ideally suited for quality amateur and public address service.

UTC Special Series transformers are specifically designed for amateur and popular-priced PA service. The Special units are finished in a rich, commercial type medium gray enamel. A recessed terminal strip is provided permitting above chassis or breadboard wiring in addition to standard chassis type wiring. The universal windings provided on driver, matching and output transformers assure a maximum of flexibility. Modulator output units will carry the DC current of the class C stage for any of the impedances available and will match practically any audio tubes to any RF load within the power rating of the transformer. Large components are housed in formed cases with top or bottom mounting. All units are vacuum impregnated—compound filled.

# SPECIAL SERIES POWER EQUIPMENT

UTC Special Series power supply components are designed specifically for amateur and popular-priced PA service. The ratings are based on such applications and recommended for ICAS intermittent use. For commercial application, GG or H grade components should be employed. Tapped coil structures on power and bias supply transformers afford maximum flexibility, permitting a given transformer to be used with many circuits and types of tubes. Stand by service should not be obtained by interrupting high voltage center tap.

## SIGNALLING AND CONTROL TRANSFORMERS

Primary 119-120 volts, 50/60 cycles—Secondary 4, 8, 12, 16, 20, 24 volts

High power transformers suitable for operating relays, sirens, horns, gongs, etc. from 115 V. 50/60 cycle line. These units have four secondary terminals providing 4, 8, 12, 16, 20 and 24 volt output. The volt ampere rating is based on the 24 volt secondary tap with corresponding reduction at the lower voltages. Underwriters' approved primary leads are employed, and screw-type binding posts.

Over-voltage connection (0 to 17% above line voltage) or line voltage connection is available to the user by the type of connections made, however, line voltage connection on Types 1500B and 1520B must be specified.

† Ganged units of these types when connected for over-voltage operate from 60 cycle service only.

‡ Output current reduces to approx. 44% at full voltage.

STACO Transformers are compact and modern in design. Only the highest quality silicon lamination steel is used which assures cool operating transformers. Each coil is layer wound with the best quality enameled wires, each layer is insulated with heavy insulating material, each coil is varnished impregnated and high temperature baked. High Voltage Breakdown Test is performed on each coil and transformer in accordance with existing RMA Specs. This combination of high quality materials plus the finest workmanship is assurance of better and lasting performance at highest operating efficiency, yet costs no more than average.

Finishes: Mount type #1, Black baked enamel, Mount type #2, Black baked enamel, Mount type #3, Natural Buffed Aluminum, Mount type #4, Black Wrinkle baked enamel.

# FERRANTI TRANSFORMERS

This group of transformers are hermetically sealed in standard Mil-T-27A case sizes, and are designed to meet the full requirements of the Mil-T-27A specification. They provide the highest standard of quality necessary for professional and military requirements.

The range includes the specific types stan-

dardized by the Armed Services Electro Standards Agency for universal military use, as well as a group of standard types for 400 cycle power supplies.

Use of these standard high quality components in experimental equipment will avoid the necessity for redesign for production.

## TWIST-PRONG BASE ELECTROLYTICS

Types UP, UPT and UPE are small round-can electrolytic units provided with mounting prongs that can be securely locked into position on the chassis. Each unit is furnished with a bakelite and a metal mounting washer.

- ◆ Wide Temperature Range
- ◆ Stable Capacitance
- ◆ High Ambient Temperature Stability
- ◆ Special Unit for Selenium Rectifier Circuits

Popular replacement unit for standard TV receivers, radios, amplifiers and similar equipment. §

Type UPE is especially designed for SELENIUM RECTIFIER circuit applications. ONLY TYPE UPE SHOULD BE USED FOR THIS SERVICE. These types are indicated by the prefix "X" in the Rotational Stock Number listings. NOTE—A protective series-resistor of approximately 50 ohms for a 100 ma. load, and at least 10 ohms for a 250 ma. load, should always be used to protect the rectifier and filter capacitors.

NEW simplified Rotational Stock Numbering System lists units in sequence according to their capacitance and voltage rating. Arrangement on shelf by Rotational Stock No. permits quick selection of desired unit.

**TEMP. RANGE:** to incl. 475 V.D.C.W. +85°C.  
over 475 V.D.C.W. +65°C.

## MOLDED MYLAR\* TUBULARS

Cornell-Dubilier NEW PM SERIES of molded tubular capacitors are designed to meet the need for a rugged, high-temperature MOLDED unit. These fine capacitors are fabricated with the Du Pont Company's latest new dielectric material, "MYLAR" which maintains excellent electrical characteristics at temperatures up to +130°C.

- ◆ **TEMPERATURE RANGE:** —55°C to +130°C. No voltage derating required to +100°C; to 130°C de-rate only to 75%.
- ◆ **NON-INDUCTIVE:** Construction insures low resistance connections and low RF impedance
- ◆ **THERMOSET:** Firmly secures leads and sections to withstand extremes of handling, vibration, shock and soldering temperatures.
- ◆ **MOISTURE RESISTANT:** Exceeds JAN-C-91 requirements.

\*DU PONT trade mark.

†For metal-cased Mylar tubulars—See Type TWM Bul. No. 151.

## STEATITE-CASED MYLAR\*

Cornell-Dubilier "MINIROC" tubular capacitors are high quality, sub-miniature, high temperature components in non-metallic (Steatite) cases. Fabricated from DuPont "Mylar" polyester film dielectric material.

- ◆ **STEATITE CASES:** Conform to JAN-1-10. Carefully processed for maximum protection against moisture.
- ◆ **POLYKANE END FILL:** Anchors lead wires and sections securely, will not crack, soften, or flow.
- ◆ **WIDE TEMPERATURE RANGE:** Rated from —55°C to +130°C.
- ◆ **MOISTURE RESISTANT:** Exceeds MIL-C-91 requirements.
- ◆ **NON-INDUCTIVE:** Extended foil construction insures low resistance connections and low RF impedance.
- ◆ **STRONG CONSTRUCTION:** Withstands extremes of soldering temperature without damage to the case material, moisture seal, lead connections, or electrical performance.

## PHENOLIC-CASED PAPER TUBULAR FOR PRINTED CIRCUITS

TYPE BC

- ◆ PARALLEL LEAD WIRES: May be plugged directly into printed circuit.
- ◆ PRE-MOLDED PHENOLIC SHELL: No distortion and no stresses are set up because capacitor section is not subjected to molding pressures.
- ◆ WIDE TEMPERATURE RANGE: Vikane impregnated units (rated at 600 WVDC) will withstand operating temperature from -55°C to +100°C. Units impregnated with HT compound (rated at 400 WVDC and 200 WVDC) will with-
- stand operating temperatures from -40°C to +90°C.
- ◆ POLYKANE FILL: Securely anchors leads, locks section in place and provides a barrier to moisture.
- ◆ SOLID CONNECTIONS: Leads are soldered directly to the extended foils for low resistance connections.
- ◆ STRONG CONSTRUCTION: Will withstand the extremes of soldering temperatures without damage to case material, moisture seal, lead connections or electrical performance.

## COMPACT METALIZED-PAPER CAPACITORS

Cornell-Dubilier self-healing, metalized paper capacitors have better electrical characteristics and extra long service life. Units are light and compact.

"PUP" units have bare wire leads securely anchored in metal end-caps, wax-impregnated and dip-sealed against humidity. All units are extended foil—nan-inductive wound for low impedance at high frequencies, have high insulation resistance, low power factor and small capacity change with temperature and life.

"METAPUPS" are one piece metal tubular cased, pressure sealed by spin-over on synthetic rubber gaskets.

"SEALPUPS" are a high quality metalized paper capacitor, designed for smallest size and positive seal against moisture. They are hermetically sealed in metal cases with solder—seal glass terminals. Especially recommended in military and commercial equipment where miniature size and light weight are paramount.

For further data on C-D metalized capacitors, write for Bulletins 142-3-4 and NB-152.

TEMPERATURE RANGE:  $-40^{\circ}\text{C}$  to  $+60^{\circ}\text{C}$ .

## HIGH TEMPERATURE Metalized-Paper CAPACITORS

- **POLYKANE-IMPREGNATED:** This impregnant insures excellent electrical properties over long service life.
- **MOISTURE RESISTANT:** MTX tubulars have the finest glass-to-metal solder seal terminals for maximum protection against moisture. MPX tubulars have POLYKANE-impregnated paper tubes, bonded securely to the POLYKANE fill. An external flash wax dip provides an increased moisture seal for extra long storage and service conditions under extremes of humidity.
- **NON-LEAKING:** "POLYKANE" is a solid thermosetting plastic that will not soften, crack, or leak at the maximum temperature. No oil or wax is used internally with these units.

## MOLDED MIDGET "SILVER-MIKE" CAPACITORS

### HIGH-STABILITY "SILVER-MIKE" UNITS

Type 22R miniature "Silver-Mike" capacitors are especially adapted for use in circuits where accuracy and stability of capacity is of prime importance. They are rated at 500 volts D.C.W. and tested at 1,000 volts D.C., molded in low-loss red plastic and fully protected against physical damage or changes in characteristics due to varying atmospheric conditions.

**STANDARD TOLERANCE** ±5%, but in no instance less than ±1mmf. For capacity Tolerance of: 20% deduct 10% from List; 10% deduct 5% from List; 3% add 10% to List; 2% add 15% to List; 1% add 25% to List.

TYPE 1R - X & 4 THICK  
TYPE 1DR - X & 4 THICK

TYPE 5R

Types 1R, 1DR, and 5R "Silver-Mike" silvered mica capacitors are designed for use in high Q electronic circuits where frequency stability and minimum loss must be maintained. They are ideally suited for use in circuits where the LC product must be maintained constant, and particularly adapted for use in tuning IF transformers, push-button tuning circuits and other similar applications. Standard units are molded in low-loss red plastic.

## "Super MICADON" ENCAPSULATED Molded-Case MIDGET MICA CAPACITORS

Cornell-Dubilier "SUPER MICADONS" represent an entirely new conception in Midget Mica Capacitor construction. The vastly improved design and construction of the new "C-D SUPER MICADONS" now makes it possible to produce miniature units of greatly increased capacitance and superior quality over conventional units of the same case size. Every characteristic desirable in a mica capacitor has been incorporated into one compact, miniature sized unit. No mica capacitor of conventional design has achieved this comprehensive quality.

ERIE RESISTOR CORPORATION—ERIE, PA.

**ERIE GENERAL PURPOSE CERAMICONS®**

TYPES GP1 — GP2 — GP3

**ERIE CERAMICONS** are small fixed capacitors consisting essentially of a ceramic dielectric with silver electrodes which are fired on at a very high temperature. Erie Ceramicons are outstanding because of their excellent high frequency characteristics, small size, rugged construction and availability in a wide range of capacity values.

**GP1 CERAMICONS** — The performance specifications of Type GP1 Ceramicons are identical with those of temperature compensating types of Ceramicons. A GP designation does allow the capacitor manufacturer added flexibility in selecting ceramic body. These capacitors meet performance specifications of RETMA Standard No. REC-107-A, Class 1, Characteristic U2.

**GP2 CERAMICONS** — The capacitance of GP2 Ceramicons will not vary more than + 10% or - 35% from + 25°C. value, as the temperature is varied from - 40°C. to + 85°C. These capacitors meet the performance specifications of RETMA Standard No. REC-107-A, Class 2, Characteristic Y5Y.

**GP3 CERAMICONS** — The capacitance of GP3 Ceramicons will not vary more than + 25% or - 50% from the 25°C. value, as the temperature is varied from + 10°C. to + 75°C. These capacitors meet the performance specifications of RETMA Standard No. REC-107-A, Class 2, Characteristic Z5Z.

are ideally suited for such applications as coupling and by-passing, in circuits where temperature coefficient is not important — in other words for all receiver applications except in frequency determining circuits. Working voltage — 600 volts D. C. Use Erie "GP" Ceramicons as replacements for molded mica and paper tubular capacitors.

Available in both molded and phenolic insulated styles

## TEMPERATURE COMPENSATING CERAMICONS®

Erie Ceramicons are capacity-sensitive to temperature in varying pre-determined degrees, and because of this characteristic have found wide-spread application as temperature-compensating elements in circuits which must be frequency-stabilized over wide temperature ranges. They are also manufactured with practically no thermal sensitivity for use in applications requiring a capacitor whose value is not affected by temperature.

## NPO TEMPERATURE COEFFICIENT CERAMICONS®

NPO Temperature Coefficient Ceramicons are highly recommended for frequency determining applications where no capacity change with change in temperature is desired. "Q" for NPO Ceramicons above 30 mmf is 1000 or higher. Below 30 mmf "Q" decreases slightly as capacity decreases. Working voltage — 600 volts D. C. Recommended as replacements for silver-mica capacitors.

### PARALLELING TC AND CAPACITIES

A wide range of capacitance values and temperature coefficients can be obtained by using Erie NPO capacitors in parallel with either N330 or N750 units. The following

formulae are used in determining the capacitance of the various temperature compensating units that are required to obtain any desired temperature coefficient and capacitance:

1. 
$$\frac{(\text{Capacitance in MMF}) (\text{Temp. Coef. Required})}{*750} =$$

Capacitance in MMF of the N750 unit to be used (use nearest standard capacitance value)

2. (Total Capacitance Required) minus the value found in step 1 = capacitance in MMF of the NPO unit to be used.

3. The total desired capacitance and temperature coefficient are obtained by connecting the units found in steps 1 and 2 in parallel.

\*If an N330 unit is to be used in parallel with an NPO unit, substitute 330 for 750 in this equation.

**NEGATIVE TEMPERATURE COEFFICIENT CERAMICONS®**

N330 and N750 units provide temperature compensation to eliminate drift. Positive and Negative Temperature Coefficient Ceramicons P100 through N1500 are available on special order through your distributor. See table on next page for other values and styles.

## ERIE HIGH VOLTAGE DISC CERAMICONS®

Designed to employ the same basic diameters that have been standardized in 600 volt capacitors. Careful and detailed life testing has been accomplished over a long period of time to establish required dielectric thicknesses

to assure conservative ratings in the high voltage line. They differ in appearance from lower voltage units in having greater thickness, the degree of difference depending on voltage rating.

## ERIE CERAMICON<sup>®</sup> TRIMMERS

These trimmers have been well known for years for their stability under the most exacting conditions. The top of the base and underside of the titanium dioxide rotor are lapped optically flat, thus eliminating air space variations with temperature. Fired silver electrodes are applied to top of base and rotor, so that capacity is changed by varying the

amount of overlap. Capacity change per degree of rotation is approximately constant, resulting in a smoothness of adjustment not possible with compression type trimmers, where the greater part of capacity change is concentrated close to one end of adjustment.

## CORNING FIXED GLASS CAPACITORS

### CONFORMS TO MIL-11272-A SPECIFICATIONS

Glass dielectric material is formed as homogeneous, continuous ribbon. The properties of the capacitor are those of the closely controlled dielectric, and are not determined by assembly method or affected by any subsequent treatment. Offers a higher degree of miniaturization and maximum reliability and electrical stability at high temperatures.

ERIE TEFLON\* STAND-OFF INSULATORS

TE-400 SERIES

TE-405 SERIES

These Insulators are designed for low-loss, high frequency service in radar, television and other electronic equipment, as completely insulated tie-points in circuit wiring — unaffected by a wide range in ambient temperatures, pressure, altitudes, humidity, and mechanical shock and vibration.

These Miniature Stand-Off Insulators are compressed into mounting holes, are self-fastening, requiring no additional hardware. Hand tool for mounting available. High heat resistance permits soldering without damage to insulators. Excellent electrical characteristics adapt them to miniaturization and high frequency, high temperature, high voltage circuits.

ERIE TEFLON FEED-THRU INSULATORS

CF-405 SERIES

CF-408 SERIES

Series CF-405 Feed-Thru Insulators have a hollow threaded metal body which fits through the bed plate and is secured by a hex nut. The terminal, which passes through the hollow body, is spaced by a force-fitted Teflon plug. These Feed-Thru Insulators combine the unsurpassed insulating properties of Teflon for high frequency, high temperature, high voltage service with mechanical ruggedness unusual in miniature insulator design.

Teflon Miniature Feed-Thru Insulators, compression type, are force-fitted into mounting holes, are self-fastening and self-sealing. No additional hardware is required for assembly. The resiliency of the Teflon bodies insures against breakage in assembly and transit, and offers shock-proof and vibration-proof durability in service. Hand tool for mounting available. Teflon's unexcelled electrical properties for high frequency, high temperature and high voltage use, unaffected by a wide range in ambient temperatures, pressure, altitudes and humidity, recommend them for critical circuits.

## FP-WP Dry Electrolytic Capacitors

For use at ambient temperatures up to 85°C in filter and by-pass circuits in radio, TV and industrial electronics. Sealed in aluminum cans with twist-prong, lug construction. FP types have Mallory exclusive Fabricated Plates. WP have special etched plates. All feature low RF impedance and minimum coupling between RF sections. Separate anode terminals. Case is common cathode. For hardware, see page 11, Mallory Capacitors Section, of this catalog.

**XT Type  
Tantalum Capacitors**

**Application**—Originally designed to meet the exacting requirements of geophysical, well drilling and other applications where a ruggedly constructed, hermetically sealed electrolytic capacitor was necessary. The possible applications for the present models of the Mallory tantalum capacitors are unlimited in circuit designs requiring rugged use and wide variations in temperature.

**Description**—The Mallory metal encased tantalum capacitor is the answer to applications calling for a capacitor designed to withstand temperatures ranging from -55°C. to +200°C. The XT type is enclosed in a hermetically sealed steel case which will withstand 100 hours of 20% salt spray at 95°F without harmful corrosion. The case is sealed with a glass-to-metal end seal.

The standard case diameter for all XT types is 3/8". The height will vary from 1/2" to 4 1/16", depending on capacity and voltage ratings.

**Terminals**—Provided with a wrap-around terminal for easy soldering.

**Mounting**—Mounting hardware is not supplied with the capacitor. The variety of applications for this capacitor is not conducive to a single means of mounting. Insulating material, such as Teflon, etc., should be used between the capacitor and mounting bracket where the cathode is not at chassis potential. **CAUTION:** Soldering to any part of the case is not recommended.

**Type XT**

For 100% Environmental Testing add \$1.55 each for any quantity

Prices are for 175°C. maximum. For 200°C. ratings, add "X" to part number and add 10% to base price. i.e.: XTL-120 becomes XTLX-120

Cathode Tab can be supplied at no extra charge—add "A" to part number. i.e.: XTL-120A

**Mallory Type TAW and TAP  
Silverlytic Capacitors**

**Application**—Designed for those who need an extremely small (subminiaturized) capacitor for transistor applications.

**Description**—The Mallory type TAW and TAP Silverlytic Capacitors are the result of intensive development and research and are designed to meet the most rigid specifications for performance, stability, and reliability. They are premium capacitors, ruggedly constructed and capable of giving a performance equivalent to standard electrolytics of conventional size. They possess extremely long operational life, double seal construction, "a case within a case," and excellent low temperature characteristics. Operating temperature for the TAW Silverlytic ranges from -55°C. to +65°C., and for the TAP Silverlytic operating range is -55°C. to +85°C. DC leakage is less than 1 microampere after 10 minutes of rated voltage. Capacity tolerance for the TAW is -15% to +100%, and for the TAP -15% to +75%.

**Terminals**—Axial leads 1 1/2" long, tinned for easy soldering.

**Mounting**—Designed for mounting with attached leads.

**Packaging**—5 units per display carton.

(Voltage Rating—600 VDC)

Mallory tubular, fixed, ceramic capacitors are manufactured in 3 types. UC is general purpose type for by-passing, coupling and other applications where a moderate capacitance change with temperature change can be tolerated. ZT is zero temperature type, the nominal capacitance of which remains substantially constant over a temperature variation from -55°C to 85°C. NT is negative temperature type with a negative coefficient of 750 parts/million/degrees C. These capacitors are supplied with a dipped phenolic insulation for protection against moisture and have radially placed bare, tinned-copper leads approximately 1/4" long.

Voltage Rating—600VDC.

## Instructions for use of RETMA Color Code

Hold capacitor with arrow pointing to right. From left to right, the first dot shall always be white to indicate standard RETMA molded mica capacitor. The second and third dots become the first two significant figures in the capacitance. The second row is read from right to left. The lower right dot should be the multiplier. The lower second dot indicates the tolerance and the lower left dot indicates the class.

Example shown above = 1300 mmfd.  $\pm 2\%$ , 500 V.W.

The key to color significance is as follows:

Color	Sig. Fig.	Mult.	Tol.	Class.*
Black	0	1	$\pm 20\%$	A
Brown	1	10		B
Red	2	100	$\pm 2\%$	C
Orange	3	1000	$\pm 3\%$	D
Yellow	4	10000		
Green	5		$\pm 5\%$	
Blue	6			
Violet	7			
Gray	8			I
White	9			J
Gold		0.1		
Silver		0.01	$\pm 10\%$	

\* Denotes various electrical characteristics.

Voltage ratings vary with capacitance as shown in RMA Specification—April, 1946.

# CAPACITORS

There are many kinds of capacitors . . . some stable . . . or rugged . . . or vaporproof . . . or tiny . . . some very good at averting loss or noise . . . or efficient over a wide temperature range. Some capacitors combine two, or even three of these features.

## "VITRAMON" Capacitors Give You All 7

Only two materials go into "VITRAMON" Capacitors . . . porcelain enamel for the dielectric and encasing insulation . . . fine-silver for the electrodes. Perfectly bonded, the two become, effectively, one homogenous unit —

**Stable over a Wide Temperature range.**

The solid black of "quality crockery" in which the silver electrodes are immersed makes "VITRAMON" Capacitors both

**Rugged and vaporproof.**

Pure materials plus perfect bonding combine to eliminate both

**Loss and Noise.**

Finally . . . their unique construction allows for "layering" the electrodes so that much greater active dielectric area can be squeezed into the same cubic content . . . They're

**Miniature.**

## TANTALYTIC CAPACITORS FOR LOW-VOLTAGE USE

The Tantalytic capacitor is designed for certain direct-current applications up to 150 WVDC where aluminum electrolytics and paper capacitors are not entirely satisfactory, and is suggested for use where superior characteristics and ultimate size reduction in the high-quality electrolytic field are of prime importance.

This capacitor is a tantalum-electrode electrolytic unit, similar in construction to an aluminum electrolytic capacitor, but smaller in size because of the characteristics of the tantalum. The Tantalytic capacitor has lower leakage currents, longer shelf life, and a wider range of temperature operation ( $-55^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$ ), without derating, than the conventional aluminum electrolytic capacitor.

Both polarized- and nonpolarized-type capacitors are available. Polarized types are suitable for applications where no reversal of potential occurs. Nonpolarized units are for use in applications where reversal of potential does occur. However, the cathode (negative) electrode in the polarized type is formed to 3.75 volts as protection against small reversals.

Tantalytic capacitors, in a wide range of ratings, are currently being used in telephone equipment and military communication and ordnance equipment.

These capacitors are available in either plain or etched tantalum foil. Advantages of each and a comparison thereof appear in the specifications, GET-2333.

## MICRO-MINIATURE TANTALYTIC CAPACITORS

Micro-miniature Tantalytic capacitors are designed for low-voltage d-c applications where long shelf life, electrical stability, and ultimate size reduction are of prime importance. Widely used in hearing aids and other subminiature assemblies employing transistors, micro-miniatures are rated as high as 4 volts, 8  $\mu$ f in the  $\frac{3}{16}$ -inch case; higher ratings can be achieved in the  $\frac{1}{2}$ -inch case. Capacitance tolerance for all units is  $-0\%$   $+200\%$ .

The micro-miniature employs a tantalum anode enclosed in a silver case and impregnated with a nonacid electrolyte. A synthetic plug is roll-crimped into the end of the case and a solderable tin-coated nickel lead is lap-welded to the projecting tantalum anode lead. This permits connection up to the bushing. The case itself is the cathode and is equipped with a tin-coated nickel lead soldered to the case. The unit is of the polarized type.

### For A-c and D-c Applications — Fixed Paper-dielectric Capacitors

A-c/d-c dual-rated Pyranol capacitors for motors, controls, luminous-tube transformers, electronic equipments, and other applications will reduce inventories, simplify design problems, and increase standardization. Capacitors in the voltage ranges 236 through 660 volts, a-c, and 400 through 1500 volts, d-c, are now dual-rated and can be used for either a-c or d-c applications. Other a-c and d-c ratings available: 0.01 to 75 microfarads, 236 to 660 volts, a-c, and 400 to 100,000 volts, d-c.

Because of the high dielectric strength, high permittivity, and exceptional stability of Pyranol, its use as a treating material has made possible a capacitor which is much smaller in size, and far superior to those formerly available.

#### Design Advantages

- (1) Units are small and compact, because of the use of Pyranol.
- (2) A wide range of ratings is available in rectangular, cylindrical, and oval cases.
- (3) Three styles of mounting brackets are available and are supplied separate from the units. Units may be operated in any position.

## Case Style 70

Case Style 70 units with various types of terminals and removable mounting brackets

These Pyranol fixed paper-dielectric capacitors in Case Style 70 are hermetically sealed in rectangular cases. This line includes standard ratings, ranging from very small units weighing only three ounces to large high-voltage units weighing up to 175 pounds.

All are of single-capacity construction, with a capacitance tolerance of  $\pm 10$  per cent. Cases are isolated and the two bushings are brought out through the cover. Units in 600-, 1000-, and 1500-volt ratings are available with either solder-lug terminals or with pillar-insulator terminals. All higher-voltage ratings have pillar-insulator terminals. These units may be operated in altitudes up to 7500 feet.

Up to 600 volts d-c, bushings with solder-lug terminals are made of G-E silicone; above this rating, they are of phenolic-cup construction. Bushings with pillar-

insulator terminals are made of molded phenolic or porcelain of the highest quality. All bushings are thoroughly bonded to the container to provide a permanent liquid-tight seal.

All units can be supplied with removable mounting brackets. Both spade-lug and L-type are available. Brackets can be attached to either the top or the bottom of the units to permit upright or inverted mounting.

## Case Style 60

These small rectangular-case fixed-paper-dielectric units are of narrower width than the "bathtub" units, and will fit into a very restricted panel surface, where case height is not the limiting dimension. Removable-type mounting lugs are of very sturdy construction.

These units have solder-lug terminals, and are available in either single- or dual-section construction for all circuit diagrams.

The metallic containers are hermetically sealed, and of deep-drawn construction.

Case Style 60 units have no brackets, but removable brackets of either the footed or spade-lug type can be supplied.

## CAPACITORS FOR OSCILLATOR TANK CIRCUITS

This line of fixed paper-dielectric capacitors has been developed primarily for grid and plate blocking service in the electronic oscillator circuits of high-frequency induction-heating equipments. They can also be used to advantage in other high-frequency oscillator circuits of a similar nature.

G-E high-voltage paper-dielectric capacitors are of relatively high capacitance ( $0.01 \mu\text{f}$ ) for high-frequency units, yet they are more economical than conventional high-frequency units of considerably smaller capacitance values. They can, therefore, be applied with savings in cost as well as reduced losses and lower voltage drop across the capacitor.

# SPRAGUE CAPACITORS

## INDUSTRIAL AND MILITARY ITEMS AVAILABLE THRU YOUR SPRAGUE APPOINTED INDUSTRIAL DISTRIBUTOR

The capacitors, resistors, and filters mentioned on this page will be of special interest to Engineers and Buyers of components for industrial and military applications. Complete listings of ratings, sizes, avail-

ability of items etc., can be furnished by your Sprague. Appointed Industrial Distributor. Write to Sprague Products Company North Adams, Massachusetts for the name of the one nearest you.

### SUBMINIATURE PAPER CAPACITORS

Electrically and mechanically designed to meet stringent operating requirements. Hermetically sealed in metal cases. A variety of mounting arrangements are available. Can be had in grounded or ungrounded cases, with inserted tab or extended foil construction. Available with stabilized wax or Vitamin Q® impregnations. High insulation resistance. To 125°C operation.

### PAPER CAPACITORS TO MIL-C-25A

Types CP25, CP26, CP27, CP28, CP29 tubulars. Types CP40, CP41 cylindricals. Types CP53, CP54, CP55 "bathtubs". Types CP61, CP63, CP65, CP67, CP69 small rectangulars. Type CP70 large rectangulars. Made in accordance with military specification MIL-C-25A. Hermetically sealed in metal cases. Impregnated with specially-processed mineral oil. Available in Characteristics E and K.

### HYPASS® AND THRU-PASS CAPACITORS

3-terminal network "feed-through" units for high frequency filtering applications in communication and radar equipment, etc. Connected in a circuit in a manner similar to low pass filters. Terminals are connected in series with the circuit to be filtered and the case is grounded. Extremely low inductance to ground. Hermetically sealed in metal cases. High insulation resistance. Minimum capacitance change with temperature.

### PROKAR® MOLDED CAPACITORS

Developed for use where small capacitors are required to operate continuously at high temperatures. Impregnated with exclusive material which polymerizes to solid resin. Molded in mineral-filled plastic. Will operate over a temperature range of -55°C to +125°C. More stable performance, in smaller sizes, at higher temperatures than any other capacitor of type.

### METALLIZED PAPER CAPACITORS

Hermetically sealed in metal cases. Unusually high insulation resistance and long life. Two types, for operation to 85°C and 125°C. Because Sprague metallizes its own paper, quality is carefully controlled in every operation, resulting in superior performance. Available in a wide variety of mounting styles.

### RADIO INTERFERENCE FILTERS

Designed for aircraft and mobile electrical and electronic equipment. These high insertion loss noise filters are smaller in size, weight, and volume than previous designs, without any sacrifice in performance. Hermetically sealed in cylindrical or "bathtub" metal cases. Filter types available for low-current applications, ac-dc applications, power supply applications, auto applications, high-current applications, etc. Current ratings from 0.1 ampere to 50 amperes.

### "LYTIC" CAPACITORS TO MIL-C-62A

Suitable for use in filter and bypass circuits where excesses of capacitance over nominal rating can be tolerated. Available in a variety of operating temperature ranges. Made in accordance with military specification MIL-C-62A. Special etching and formation techniques and high-stability oxide film are unmatched for long shelf life. These units will withstand high temperatures, high surge voltages, and high ripple currents.

### TANTALEX® TANTALUM CAPACITORS

Miniature d-c electrolytics for operation from -55°C to +85°C. Intended for low-voltage applications where small size and stable electrical characteristics are required. Extremely low leakage current, low power factor, small capacitance drop-off at low temperatures. Tantalex capacitors exhibit virtually no self aging. Ratings in voltages from 3 vdc to 150 vdc.

### MICA CAPACITORS TO MIL-C-5A

Ear-mounting Types CM45, CM50. Semi-hexagonal Types CM55, CM60. Molded case potted Types CM65, CM70. Stack-mounting ceramic case Types CM75, CM80, CM85, CM90. Made according to military specification MIL-C-5A.

### WIREWOUND RESISTORS TO MIL-R-26B

Vitreous enamel Blue Jacket® Types RW29 through RW47. Blue Jackets meet severe humidity tests of MIL-R-26B for characteristics G and V. Thermal expansion characteristics of winding cores, terminal bands, and coating enamel are closely matched.

Ceramic-jacketed Koolohm Types RW50 through RW56. Koolohm "tropicalized" ceramic outer shell enables resistors to withstand humidity tests for characteristics G and J. Can be mounted against live or grounded parts with absolute safety.

### PERMASEAL® PRECISION RESISTORS

For 85°C and 125°C ambient temperatures. Designed for applications which require highly accurate resistance values in small physical sizes. Standard resistance tolerance  $\pm 1\%$ . Closer tolerances available upon request. Carefully aged for maximum stability. Available with radial tab or axial lead terminals. Will meet severe humidity requirements of MIL-R-93A.

TC TEMPERATURE COMPENSATING TUBULARS

Designed especially to limit frequency drift in r.f. circuits where temperature variations are prevalent. These capacitors are con-

structed with a ceramic body which changes capacities as the temperature varies. Use Centralab TC Hi-Kaps when servicing superhet receivers — replace older types in oscillator and detector circuits in TV, AM and FM receivers. 1,200 volts D.C. test; 600 volts D.C. working. Comply to JAN-20-A specifications.

TCZ TUBULAR HI-KAP®

All TC Hi-Kaps comply to JAN-C-20A specifications. NPO Units (JAN-CH-CJ-CK) which show zero capacitance change over temperature range—20° C. to +85° C.

### MOLDED DISC CERAMIC HI-KAPS®

For Bypass, Coupling and General Applications

Molded disc ceramics feature highest available breakdown to ground, highest lead strength, and resistance to mechanical damage, closest tolerance. "MD's" can be placed directly against a chassis, or adjacent to high voltage leads without danger of flashover or breakdown.

Low inductance makes these units highly efficient in high frequency circuits. They are not recommended for use in resonant or tuning applications. Voltage Rating: 1,000 V.D.C.W. to 5,000 mmf, 600 V.D.C.W. over 5,000 mmf. Maintain high capacity and stand up under +85° C. operation. Insulation—Molded Centrathene†. 2,500 V.D.C. breakdown to ground. Electrical properties constant to 3,000 megacycles. Insulation resistance of molding 300,000 megohms. Moisture absorption .005%. Power factor of molding .02%. Fungus resistant. Unaffected by azone, salt water, any known acid, or solvent at room temperature. Will not become brittle at -55° C. Leads — No. 22 tinned copper 1/2" long. All units one size — 1/16" diameter, 3/16" thick, maximum. Packaged — 5 units per polyethylene bag. 5 bags (25 units) per carton.

**PACKAGED ELECTRONIC CIRCUITS (P. E. C.)®**

Centralab Packaged Electronic Circuits have been proved by the performance of more than 60,000,000 now in use. Original-equipment manufacturers have marveled at the extremely low failure percentage of P.E.C.'s, as compared to individual standard components.

However, millions of old radio and TV sets were built before P.E.C.'s were used. Locating a shorted or

intermittent component in these old-style circuits wastes valuable time.

Now, with a single Centralab P.E.C., you can replace an entire section of the circuit quickly and easily. You not only replace the one worn-out component — you automatically replace all components of the same age. That way, you make another set-owner happy in the long run and save yourself a costly call-back.

PACKAGED ELECTRONIC CIRCUIT H PADS**

The Centralab PCH-4 Television Attenuator Switch is designed as a service tool to determine the amount of attenuation required to secure best TV reception. It is also valuable for permanent installation in receivers. The switch incorporates Centralab's exclusive Packaged Circuit TV H-Pads.

**ADVANTAGES OF SWITCH**

The switching arrangement makes it possible to attenuate each station as much or as little as necessary depending on daily conditions such as weather or existing interference, and allows for proper attenuation to balance two or more stations. Switching also eliminates the "hit-or-miss" method of installing H-Pads. Switch is installed in series with 300 ohm — twin-lead. PCH-4.....List Price \$7.50

**STEATITE**

Centralab has been producing fine ceramics since 1928 . . . primarily for its own use in fixed resistors, ceramic capacitors, switches, and more recently, packaged electronic circuits. Often called upon by other manufacturers to produce many "standard" and custom designs, some very intricate, Centralab is the only ceramic manufacturer capable of producing many of these in quantity. All items listed are Grade L-5 Steatite, approved without limitation for Army and Navy use. Characteristics:

Uniform, white appearance, high dielectric strength, exceedingly low loss at high frequencies, and strong mechanically. Impervious to moisture and common acids, will not warp, withstands high temperatures; harder than hardest quartz.

# SANGAMO CAPACITORS

## ELECTROLYTIC CAPACITORS

### TYPE MT-MTD-MTH

SANGAMO Type MT electrolytics are especially designed for television and other electronic applications where operation at 85°C. temperatures is required. They are hermetically sealed in round aluminum containers which are encased in heavy insulating sleeves on which polarity is clearly indicated. Being small in physical size they are most popular where mounting in limited space is required — They will fit anywhere and can be mounted in almost any position.

# SANGAMO CAPACITORS

## ELECTROLYTIC CAPACITORS

**TYPE PL**  
FOR TELEVISION AND OTHER  
ELECTRONIC APPLICATIONS . . .

The SANGAMO Type PL electrolytic capacitors are specially designed for all television and electronic applications requiring long life and dependable performance at 85°C under conditions of extreme ripple currents and high surge voltages. They are sealed in round aluminum cans and have twist-prong tabs for washer or direct chassis mounting. The capacitor element current carrying tabs are securely clamped and staked to the terminal lugs, providing permanent, low resistance connections. In all cases the aluminum can is negative and the mounting ring provides the negative electrical connection.

The Type PL has been specially engineered for the rigid TV replacement applications found in all of the leading television receivers manufactured in the industry.

### TYPE CS

The SANGAMO Type CS electrolytic capacitors are contained in wax-filled cardboard tubes with insulated leads approximately

8 inches in length extending from both ends of the unit. Capacity, voltage and polarity of each section is clearly indicated by color of the lead wires; coding information necessary to identify the individual sections is clearly stamped on the tube. Each unit is supplied with a mounting strap to facilitate mounting to the chassis.

### COLOR CODE OF WIRE LEADS FOR TYPES FM, CS, AND SL CAPACITORS

Black	Common negative
Orange	Positive, highest voltage or capacity
Red	Positive, next highest voltage or capacity
Blue	Positive, next highest voltage or capacity
Yellow	Positive, next highest voltage or capacity
Brown	Negative, in separate section unit

NOTE: Lead colors are determined by the rated working voltages. Where there are two or more sections of different voltages and the same capacity, the lead color will designate the voltage; with the same voltages and unequal capacities, the lead color will designate the capacity. If there are two sections with equal capacities and voltages the two lead wires will be in the same color.

NOTE: Based upon proposed R.T.M.A. Color code.

## TYPE SL

Designed primarily as replacements for wet electrolytics, the Type SL electrolytic capacitors are assembled in round aluminum cans with threaded necks providing easy

mounting to a chassis with the aid of a palnut which is supplied. The Type SL is completely insulated from the container, the negative connection being made to one of the insulated leads extending through the threaded neck of the can.

## TYPE TS

Ideally suited for all applications where quick capacitor changes are required, the SANGAMO Type TS units are equipped with a

four-pin octal base mounting for use with standard octal base tube sockets. The special design of the bakelite octal base insures that the aluminum container will not contact the mounting surface and the connections to the brass pin terminals are imbedded in this bakelite base. The base pins are nickel-plated to prevent corrosion and insure good contact with the socket terminals.

## PAPER CAPACITORS

### TYPE 71

SANGAMO Type 71 diactor impregnated and filled paper capacitors have the advantage of light weight, and are smaller than the case size specified by MIL-C-25. Diactor\* is a specially compounded, chemically purified chlorinated dielectric oil. This synthetic impregnant, whose characteristics can be controlled with great uniformity, possesses a high dielectric constant, high volume resistivity, low power factor, high dielectric strength, and is non-inflammable and non-explosive. Type A mounting brackets are supplied with each capacitor as standard equipment. If Type B or C brackets are required, they must be specified when ordering. Either composition rivet or stand-off porcelain terminals can be supplied, and the type desired should be specified.

## NEW MOLDING COMPOUND FOR SANGAMO WIRE LEAD MICAS

All SANGAMO wire-lead micas are molded in HUMIDITITE, a new molding compound developed by Sangamo, that gives them moisture resistance characteristics far superior to any others on the market. The standard moisture resistance test described in MIL-C-5A (proposed) Specification requires mica capacitors to offer at least 100 megohms of insulation resistance after ten 24-hour cycles in a humidity chamber at 90% to 95% relative humidity. The best competitive micas barely meet this requirement . . . but Sangamo HUMIDITITE Micras, under the same conditions, all tested in excess of 50,000 megohms! For additional information about HUMIDITITE, write for Engineering Bulletin No. TS-111.

# AEROVOX STANDARD CIRCUIT MODULES

Available for the first time from Aerovox. Now . . . the design engineer, prototype technician, special equipment builder and the experimenter can enjoy the advantages of basic circuit assemblies in the form of neat, compact, plug-in standard circuit modules. Aerovox has selected the most popular basic circuits and made them available in modular form through its parts distributors. As a further convenience in selecting and connecting these modules, Aerovox makes available a 12-position printed-wiring breadboard with connection jacks and bus bars. Individual standard circuit modules, breadboards and individual mounting sockets, may be purchased separately. Complete module kit, containing seven standard circuit modules, the 12 position breadboard, banana plugs and instruction manual and catalog, all packaged in handsome plastic box is available at a very special introductory price. For complete literature on Standard Circuit Modules, write Aerovox Corporation, Distributor Division, New Bedford, Mass.

## UHF-INTERFERENCE FILTERS

These latest filter units provide maximum attenuation from 150 KC well up into the UHF range. And they are extra-rugged, extra-compact, extra-efficient, by any comparison with previous filters.

Primary applications are in r.f. noise suppression work in military or commercial aircraft and for vehicular low-voltage d.c. applications. Also, for special applications such as battery or low-voltage d.c. filters, for shield room applications, and for critical equipment.

Available in seven standard types meeting a wide variety of applications. For extraordinary requirements, special filters can be developed and built to your order.

## R-F NOISE CAPACITANCE SUPPRESSORS

### TYPE INA-II6

### TYPE INA-II7

### TYPE INA-II8

These radio-noise suppression capacitors have been especially designed for use in military or commercial, aircraft and vehicular applications. Primary application is as an r-f bypass capacitor from line to ground in low voltage dc supply lines. Units are especially treated to assure extremely long, noise-free life.

Operating temperature range is minus 55 degrees C to plus 95 degrees C. For full 150 volt rating the operating temperature range is minus 55 degrees C to plus 50 degrees C. Units may be used at operating voltages up to 120 vdc over a temperature range of minus 55 degrees C to plus 71 degrees C; and 60 vdc over a range of minus 55 degrees C to plus 95 degrees C.

## BUILT-IN FILTERS

High attenuation type, hermetically sealed units for use where severe interference is encountered and dependability is required. For permanently mounted applications.

Aerovox special "Pi type" construction insures efficient radio noise reduction over low frequency broadcast, shortwave, and television bands. Suitable for Army-Navy or aircraft equipment where immersion and

severe humidity tests must be met.

For single wire unbalanced applications. For two wire filtering use one filter in each line. Filter case must be securely bonded to the filter appliance and ground for maximum efficiency. These filters when used on high voltage AC should be used only on permanently grounded equipment.

### Silvered Mica Capacitors

AEROVOX silvered mica units for most critical applications where precise capacity values are required. Encased in red low-loss bakelite. Similar in external appearance to standard bakelite molded mica units.

Available with temperature coefficient and retrace characteristics as defined by characteristics A to F inclusive of REC-115 and MIL-C-5 specifications for molded capacitors. Exceptionally high "Q". Mechanically protected against physical damage and changes in electrical characteristics due to varying atmospheric conditions. Wax impregnated externally. Ideal for circuits where inductance and capacity product must remain constant under all operating conditions.

### TYPES 1991 and 1996 Porcelain-Cased Capacitors

Ideal for high-frequency application. Glazed porcelain case, high temperature wax sealed. Heavy duty power terminals. Minimum power loss due to dielectric absorption. No heating at full load.

SIZE: 4" overall by 3" high; 3-1/2" between mounting holes.

### TYPES 1550L, 1570L and 1590L

#### Potted Transmitting Capacitors

These potted transmitting capacitors in thermo-setting case materials have greater load-carrying capacity than molded-in-thermo-setting case material capacitors. Types 1550 to 1590, inclusive, not only have high voltage rating but afford higher current ratings than equivalent capacitances in thermo-setting case material units. Because of their construction they are made with higher capacitance stability. Furnished only in low-loss thermo-setting case material as standard. Bakelite cased mica stack capacitors. These units have highest quality mica sections stacked for greater load carrying capacity. The sections are potted in low-loss bakelite cases and permanently clamped with non-magnetic material.

#### Stack-mounting Transmitting Capacitors

These stack-mounting transmitting mica capacitors are especially intended for various transmitting applications such as grid, plate blocking, coupling, tank, and by-passing functions for higher-powered installation. They are made with a special cylindrical low-loss, glazed ceramic case providing a long creepage path between terminals. They are designed to eliminate corona losses, inside and outside alike, and also provide uniform voltage gradient. The cast-aluminum terminal ends provide low contact resistance between units. These units are conservatively rated to withstand surge voltages above their rated values. They have extremely low power factor so that they can handle large KVA loads without overheating.

## Hi-Q TUBULAR FEED-THRU CAPACITORS

EYELET FEED-THRU  
TYPE EF

FEED-THRU TYPE CFC

FEED-THRU TYPE CF

Hi-Q Feed-Thru Capacitors provide means to transmit thru shields or ground potentials and simultaneously by-pass unwanted frequencies. A good mechanical connection is provided by the silver-plated bushing. These are excellent dependable units even under severe mechanical vibrations as in aircraft, missiles and automotive re-

quirements. All units are flash tested at 1250 volts D.C.

Hi-Q Eyelet Feed-Thru Ceramic Capacitors provide the ultimate in miniaturization. They can be soldered directly to the chassis and provide excellent by-pass performance where space is critical. Especially recommended for use in UHF.

## Hi-Q TUBULAR STAND-OFF CAPACITORS

TYPE MCS

TYPE CS

Hi-Q stand-off capacitors are basically tubular, having as an integral part of their construction, a screw fixture for mounting to the chassis or common ground. Close coupling and their unique construction make them an excellent choice for by-passing high frequencies.

All units are coated with a high temperature enamel, stamped for capacity and supplied with mounting nut, if desired.

The MCS is a quick mounting type which permits high speed mechanical installation. The ceramic tube is enclosed in a cadmium-plated metal case with a specially developed end seal for protection against humidity and temperature changes.

All units are flash tested at 1250 volts D.C. The power factor is under 3% and the installation resistance is above 7500 megohms.

Known the world over for their reliability under all operating conditions, EL-MENCO CAPACITORS are chosen by manufacturers who want successful performance and long life from their products.

EL-MENCO fixed mica dielectric capacitors are compact, precision made. Manufactured in accordance with American military standards to meet Army and Navy MIL-C-5A Specifications. All impregnated and MIL or RMA color coded. Standard specifications limits are shown.

Moulded in low loss bakelite, tested at double the working voltage. Tests for dielectric strength, insulation resistance, temperature co-efficient and capacitance drift, humidity and life tests according to MIL and RMA STANDARDS. All units are wax dipped for salt water immersion seal.

For low voltage circuitry, higher capacities are available at 100 VDCW rating.

### DUR-MICA CAPACITORS SPECIFICATIONS (DM SERIES)

The Dur-Mica Capacitor is a silvered mica capacitor coated with specially developed material which provides maximum protection at environmental extremes of moisture and temperature. This combination provides a reliability and life expectancy which far surpasses anything heretofore obtained.

#### DIMENSIONS:

	DM15	DM19	DM20	DM30
L	7/16	5/8	23/32	25/32
D	11/32	15/32	15/32	27/32
T	5/32 min. to 7/32 max.			5/16
S	15/64	11/32	7/16	7/16

Leads are No. 22 tin-coated copper, 1/4" minimum. Dimensions shown are maximum except "S", the tolerance of which is ±1/64".

CAPACITY RANGES: —mmf.	DM15	DM19	DM20	DM30
MAX. CAP. 500VDCW	400	3000	3900	10000
MAX. CAP. 300VDCW	820	3900	5100	15000
MAX. CAP. 100VDCW	820	5100	7500	20000

Minimum tolerance available is ±½% or ±0.5 mmf., whichever is greater.

**OPERATING TEMPERATURE RANGE:**  
-55°C. to + 125°C.

**MINIMUM INSULATION RESISTANCE:**

25000 megohms at 25°C.  
1000 megohms at 125°C.

**STABILITY (CAPACITY DRIFT):**

= 0.05% + 0.1 mmf. MAX.

All other specifications meet or exceed applicable MIL-C-5A and RETMA standards for similar sized molded mica capacitors.

#### COMPONENT RELIABILITY:

Life tests presently being performed at 125°C. and 150% rated voltage have passed 10,000 hours without a single failure. This is roughly equivalent to more than 20 years of operation under normal operating conditions.

### TELEVISION · TRANSMITTING · INDUSTRIAL HIGH VOLTAGE MICA CAPACITORS

DC WORKING VOLTAGES: FROM 1000 TO 2500 VOLTS  
Molded in CM-20, CM-35 and CM-40 Cases

Demand for smaller units in higher voltages designed to meet the requirements for TELEVISION, POWER AMPLIFIERS, LOW POWER TRANSMITTERS, and various INDUSTRIAL USES has increased. ELMENCO designed and produced units listed below are especially adaptable to compact circuits where space is an important factor. Their acceptance has been overwhelming by the various manufacturers of TELEVISION RECEIVERS.

In many cases, these units will do the work of capacitors molded in CM-45, CM-50, and CM-55 cases without breaking down. NO SPECIAL MOUNTINGS ARE NECESSARY; just wire right into the circuit.

The capacitors are molded in low-loss bakelite and tested at double the branded voltage. They are tested for dielectric strength, insulation resistance, temperature coefficient, capacitance drift, susceptibility to humidity, and length for life, according to RCM Standards. All units are wax-dipped for protection against salt water immersion.

# PAPER DIELECTRIC CAPACITORS CP TYPE

### MINERAL OIL IMPREGNATION NON INDUCTIVE WINDING SYNTHETIC RESIN END SEALS — STEATITE CASE

The Steatite tube and baked synthetic resin end-fill provide a seal which rivals that of hermetically sealed construction, resulting in a dependability and longevity previously unequalled. Whether in operation or on the shelf, this paper tubular capacitor will maintain its excellent characteristics for years.

El-Menco CP type paper tubular capacitors are sealed into Steatite Tubes which serve to insulate the capacitor electrically as well as against moisture and heat. The capacitor insert is impregnated with Mineral Oil, thereby assuring long life at 85° C operating conditions. This feature insures successful operation at the high ambient temperatures existing in small, compact enclosures.

The Non-Inductively wound paper and foil units are sealed in the Ceramic Tubes by means of baked Synthetic Resin End Fills which cannot melt at any conceivable operating temperature. The end fills will not dissolve in wax, permitting the capacitors to be potted without damage to the insert. Leads are of tinned copper 2¼" long.

#### DIMENSIONS FOR CP TYPE CAPACITORS

	Max. Diameter	Max. Length
CP-1	23/64"	1-1/8"
CP-2	27/64"	1-3/8"
CP-3	31/64"	1-3/8"
CP-4	9/16"	1-5/8"
CP-5	3/4"	2"
CP-6	51/64"	2"

Part numbers can be read as follows: First one or two numbers indicate voltage rating in hundreds of volts. CP indicates type of capacitor. Next number between the dashes indicates case size. Last three digits indicate capacity, the first two being significant figures and the last the decimal multiplier.

El-Menco High Voltage Capacitors are manufactured in accordance with MIL and RMA specifications for molded mica capacitors and are additionally designed to operate at higher voltages than normally expected of units of this size. They are ideally suited for use in high voltage, low power circuits, particularly where space requirements are an important factor. Axial wire leads provide simplicity of wiring through elimination of added mounting devices. All units are molded in low-loss phenolic cases and are wax-dipped for protection against salt-water immersion.

El-Menco CP type paper tubular capacitors are sealed in impervious steatite ceramic tubes through use of synthetic resin end fills which are waterproof and will not melt at any conceivable operating temperature. The non-inductively wound paper and foil inserts are mineral oil impregnated. This combination of fine quality material and construction insures long life at high ambient temperatures, indefinite shelf-life and trouble-free operation under the most adverse conditions.

## F-C-I POLYSTYRENE CAPACITORS

F-C-I Polystyrene capacitors are characterized by a unique combination of low power factor, high insulation resistance and low dielectric absorption ("soakage") which cannot be duplicated by any other type of capacitor except Teflon units. Furthermore, the capacitance stability is excellent, and the temperature coefficient of capacitance is very small. Values of electrical characteristics are given in

Table I. F-C-I Polystyrene capacitors are furnished as standard units in hermetically sealed glass tubes with metal end caps; in bathtub cases with low loss glass terminals; and in style CP70 metal cans with low loss glass terminals. Special units, including multi-section blocks are also available to order, and made to your specifications.

## F-C-I TEFLON CAPACITORS

F-C-I Teflon capacitors are essentially identical to polystyrene capacitors in their electrical characteristics, with one important difference—Teflon capacitors may be operated at temperatures up to 200° C,

whereas polystyrene capacitors have a maximum operating temperature of 85° C. Furthermore, the insulation resistance of Teflon capacitors is many times that of polystyrene at elevated temperatures.

# FILM CAPACITORS, INC.

## F-C-I HIGH VOLTAGE CAPACITORS

F-C-I Type D capacitors employ a newly developed plastic film dielectric which, with suitable processing, produces capacitors which are better, smaller and cheaper than could ever be produced before. The table below shows the electrical properties of these capacitors. In view of these excellent characteristics, it is evident that F-C-I Type D capacitors are suitable for practically every type of high

voltage D.C. application. With these capacitors available, it is no longer necessary to stock groups of units each outstanding in only one property. F-C-I Type D capacitors are furnished in glass tubes with hermetically sealed metal end caps and either threaded studs or wire leads. Sizes not listed here can be furnished upon request. Ask for our quotation.

### GENERAL DATA

Pyramid Electric Company introduces the CRA-2, Capacitor-Resistor Analyzer, a versatile, up to date, moderately priced test instrument. The CRA-2 is the perfect multi-purpose analyzer for the technician, serviceman and engineer, in industrial and military electronics, black and white, and color television, and all related fields.

The guesswork has been removed from circuit trouble shooting. When making leakage-current measurements, the values are read directly from the meter while the rated operating voltage is applied to the capacitor. A vacuum-tube ohmmeter circuit displays accurate insulation-resistance values on the meter for

many types of capacitors. The extended range calibrated power factor control permits power factor measurements of electrolytic capacitors rated as low as 6 volts DC working and as high as 600 volts DC working. The special "QUICK CHECK" circuits perform rapid "IN CIRCUIT" test for short, open, intermittent high RF impedance and high power factor without removing or disconnecting the component from its operating circuit.

**PLUG-IN ELECTROLYTIC CAPACITORS**

Designed for 85° operation. Hermetically sealed in round aluminum containers. Provided with four pins (Nos. 1, 3, 5, 7) on standard octal base. Plugs into standard 8-pin octal socket. Ideally suited for any application where quick capacitor changes are required. Grounding lug supplied for grounding case to chassis. (In accordance with military standards, a low variable resistance exists between pin 1 (negative) and the case; to ground pin 1, a direct ground connection must be made from the corresponding lug on the socket.) For mounting rings, see page.

**HERMETICALLY SEALED subminiature**

**TUBULAR PAPER CAPACITORS for 125° C operation at full rating**

Pyramid "GLASSEAL" capacitors are subminiature metal cased tubular units which have been designed to meet severe and rigid operating requirements, especially where an important design consideration is limited space.

"GLASSEALS" have proven themselves to be unsurpassed in reliability over the entire operating temperature range from —55° C to +125° C. Rigid inspection throughout the manufacturing processes assure their continued excellence.

Pyramid "GLASSEALS" are available in a variety of impregnants, and internal constructions hermeti-

The listing below indicates those types and values normally available from Pyramid's Authorized Industrial Distributors' stocks. All are BASIC STYLE—Floating case—

cally sealed with glass-to-metal end seals in non-magnetic metal tubular cases. They are available in many mounting styles. See Engineering Catalog PG-3 for full details. Pyramid "GLASSEALS" are manufactured in accordance with MIL-C-25/1B and may be secured with MIL designations CP04, 05, 08, 09, 10 and 11 whenever required.

## METEOR\* SUBMINIATURE PAPER CAPACITORS

For 125°C. Operation without voltage derating

- Amazingly small sizes, compact and light-weight units.
- Highly dependable operation at temperatures up to 125°C. without voltage derating.
- Exceptional capacitance stability, less than 5% change, over entire temperature range of -65°C. to +125°C. due to use of ASTRON-developed high-temperature impregnant X-250\*.
- High insulation resistance, low power factor, unusually low resonance loss. High test voltage indicates extra margin of safety in operation.
- Built to exceed stringent requirements of Specification MIL-C-25A for styles CP04-05-08-09-10-11 (ASTRON Types AQ, TQF, and variations); and styles CP53-54-55, Characteristic K (ASTRON Type ADZ, bathtub).
- Positive hermetic closure of the metal cases is assured by glass-to-metal solder seal terminals.
- Tubulars supplied in a variety of construction and mounting styles to meet your specific needs: extended foil or inserted tab; capacitor section grounded to case or insulated from case; plastic outer sleeve; with soldered-on tangential or L-type bracket; screw neck mounting style; or stud-base mounting style.

## METALITE®

**Metallized Paper Capacitors for 65°C. and 85°C. Operation**

### METALITE CAPACITORS

#### Feature:

- Ultra-compact sizes. Light weight. Ideal for miniaturization applications, and portable, mobile and airborne equipment.
- As much as 75% reduction in size over conventional paper-foil capacitors.
- Self-healing — the ability to withstand high dielectric stresses. METALITE capacitors can be subjected to momentary overvoltages and surges over and over again without danger of permanent failure.
- Temperature Range (Metal cased units) -65°C. to +85°C.; (cardboard cased Type ML) -55°C. to +65°C.
- Excellent RF characteristics. Low RF impedance due to small sizes and short current path. Low power factor.
- Wide variety of applications: RF and audio bypass circuits, noise suppression filters and systems, instruments, and various types of communication equipment where small size, light weight and the self-healing feature are especially desirable characteristics to meet specific circuit requirements.
- Interchangeability with standard paper-foil capacitor designs when operated within published ratings and circuit requirements.

## NOMENCLATURE

1. **TYPE** The type is identified by a two or three letter symbol in accordance with Table I. The general shape of the case and additional specific details other than case size are specified in style prints. Each type designation includes a family of case sizes.

2. **CAPACITANCE** The nominal capacitance value expressed in micro-micro-farads is identified by a four-digit number; the first two digits represent significant figures and the last digit specifies the number of zeros to follow.

3. **VOLTAGE** The d.c. working voltage for continuous operation at the maximum high temperature for each type as indicated in Table I, is identified by a combination of a single numeral and a single letter in accordance with Table II.

4. **CAPACITANCE TOLERANCE** The capacitance tolerance in percentage is identified by a single numeral in accordance with Table III.

5. **STYLE** The style is identified by a single letter which is an identification as to the terminal, the circuit, and the general shape of the case in accordance with detailed drawing (see style prints).

# Miniature Capacitors and "MYLAR"\*

EFCON Close Tolerance Capacitors . . . both Polystyrene and "Mylar" . . . provide excellent stability over an extended temperature range. . . Polystyrene has extremely high insulation resistance ( $10^{12}$  ohms at  $25^{\circ}\text{C}$ ). They have a low negative temperature coefficient. In addition to a very low dielectric absorption . . . EFCON Capacitors feature the lowest dissipation factor of any film capacitors. They are tested at a DC voltage of at least 200% of rated voltage at  $25^{\circ}\text{C}$ .

Both EFCON Polystyrene and "Mylar" Capacitors are mass produced in two types: Polystyrene Type PC and "Mylar" Type MC feature a rigid, wax impregnated, tubular construction. Polystyrene Type PH and "Mylar" Type MHH and Type MH are hermetically sealed in a metal case with glass-to-metal, solder-sealed terminals. Both types feature non-inductive extended foil construction with leads soldered directly to the foil . . . assuring minimum contact resistance.

**NOTE:** Due to space limitations only the largest values in a specific tube are listed.

**WRITE** for brochure which gives temperature characteristic curves for capacitance change, power factor and insulation resistance over an

extended temperature range . . . plus detailed test data and general characteristics. Also available is information about EFCON "Teflon" High Temperature Capacitors and Type S, molded Silvered Mica.

Larger values and/or voltages than those listed are available in bath tub or CP70 type cans. All above listings are for  $\pm 5\%$  tolerances. For  $\pm 2\%$  tolerance — add 20%. For  $\pm 1\%$  tolerance — add 50%. Tolerances closer than  $\pm 1\%$  are available; Inquire for prices.

## All Purpose Paper Capacitors "ROCKETTES"

Planet ROCKETTES are impregnated and jacketed with a HARD-as-ROCK plastic which will not dry out, shrink away from the leads nor develop fissures nor cracks, thus guaranteeing against the entrance of moisture and guaranteeing good shelf life and long service life. The coiled heads of the leads are securely soldered to the foil, which is imbedded in the same plastic used as an impregnant, making it impossible for them to work loose or pull out. ROCKETTES have exceptionally high insulation resistance which is maintained proportionately over the entire temperature range of  $-30^{\circ}$  to  $+85^{\circ}$  C.

# INSULATED RESISTORS

## TYPE BT FIXED COMPOSITION CARBON RESISTORS

More IRC Filament Type BT Resistors are used in the electronic industry than any other brand of fixed composition resistors. For original equipment, IRC BT's are by far the leading choice of Electronic Engineers. For replacement, Service Technicians favor IRC BT's over all other brands combined.

IRC's exclusive filament-type resistance element is combined with superior construction features to provide a stable resistor of extremely low operating temperature and excellent power dissipation in a compact, light weight, fully insulated unit.

### COLOR CODING AND STAMPING

Resistance values are clearly indicated by standard RETMA Color Code. All resistors in Distributor Packages, except BTR, are individually stamped with value and wattage.

**TYPE BW INSULATED WIRE WOUND  
RESISTORS**

Type BW's are exceptionally stable, inexpensive wire wound resistors for low range requirements. These small, completely insulated units are similar in appearance to insulated composition resistors but are readily identified by the double width of the first color code band.

The wire element is uniformly and tightly wound on an insulated core. Timed, solid wire leads are keyed to the element by a specially designed terminal. Leads are anchored inside the insulation and cannot turn or pull loose.

# TYPE Q VOLUME CONTROLS

## 1/4" LONG BUSHING

Shorter bushing and compact 15/16" design suit Q Controls to all small sets, yet handle large set needs as well.

## RADIO-TV TECHNICIANS'

## TYPE Q VOLUME CONTROL

IRC's Type Q Control is the basic control for servicing all sets. It is carefully engineered to meet most replacement requirements with a minimum stock. The quality appearance and "cushioned turn" of the Q Control assure customer satisfaction. Easier installation and dependable performance provide more profitable servicing.

### KNOB MASTER STANDARD FIXED SHAFT

Standard shaft is knurled, flatted and slotted and fits most knobs without alteration. For knurled or spring type push-on knobs, cut to length. For over-size, worn or web type knobs, split shaft slot lengthwise and spread ends. For positioned knobs, bend down control locating pins and rotate control base for correct knob position.

(3) Remove standard shaft from control base. (4) Insert special shaft in base. (5) Roll new Ring into shaft groove. (6) Replace cover (or add switch).

IRC INTERCHANGEABLE FIXED SHAFTS ARE INDIVIDUALLY PACKAGED with complete instructions and extra Resilient Retainer Ring.

# Q CONTROL ACCESSORIES

## TAB MOUNT CONTROLS

Many recent TV sets use Tab Mount Controls. These are single controls without switch. They differ from standard controls in that bushing is omitted and mounting to chassis is made with two heavy twist-type mounting tabs.

### IRC TAB-MOUNT KITS

Since assembly of Tab-Mount Controls is so simple, IRC supplies three 3-Part Tab-Mount Kits which will assemble with any standard plain or tapped IRC Base-Element to provide satisfactory Tab-Mount Controls. Each TM Kit includes a Tab-type Ground Plate, a control cover and a finger-knurled and screw-driver slotted shaft of appropriate length for universal replacement. Packaged with instruction sheet but without necessary Base-Element.

TM-1—IRC Tab-Mount Kit—Shaft  $\frac{1}{4}$ " long. List Price \$0.65

TM-2—IRC Tab-Mount Kit—Shaft  $\frac{5}{8}$ " long. List Price \$0.65

TM-3—IRC Tab-Mount Kit—Shaft 1" long. List Price \$0.65

## EXTENSION SHAFTS

These attach to regular shafts, thus extending length to any needed size. They frequently make it possible to use standard controls for "special" jobs.

Type	Dimensions
Shaft 441.....	4" x $\frac{1}{4}$ " dia. x $\frac{3}{8}$ " flat
Shaft 442.....	4" x $\frac{1}{4}$ " dia. x $\frac{3}{8}$ " flat
Shaft 443.....	4" x $\frac{1}{8}$ " dia. x $\frac{1}{8}$ " flat
Shaft 444.....	8" x $\frac{1}{4}$ " dia. x $\frac{3}{8}$ " flat for 4" lengths

List Price \$0.45

## SHAFT COUPLER

For use with standard controls to meet special shaft requirements. Two set screws give rigid connection.

TYPE C3—Plain coupler to couple  $\frac{1}{4}$ " shafts; insert allows coupling of  $\frac{1}{4}$ " shaft to  $\frac{3}{8}$ " shaft.

List Price \$0.35

## SLEEVE BUSHINGS

TYPE S1—For use with standard controls. List Price \$0.50

TYPE S2—To provide bearing for switching mechanism. List Price \$0.35

TYPE S3—For use with standard controls to set control back from chassis or mounting bracket.  $1\frac{1}{2}$ "— $\frac{1}{2}$ " dia. for 1" unthd. — $\frac{3}{8}$ " dia. for  $\frac{1}{2}$ ",  $\frac{3}{8}$ "—32 thd.—.344 flat. List Price \$0.65

TYPE S4—For use with concentric duals to provide  $\frac{1}{8}$ " dia. bushing.  $1\frac{1}{2}$ "— $\frac{1}{8}$ "—28 thd. full length—.375 dbl. flat. List Price \$0.65

TYPE S5—For use with standard controls to provide  $\frac{1}{2}$ " dia. bushing.  $2\frac{1}{4}$ "— $\frac{1}{2}$ "—28 thd. full length—.437 flat. List Price \$0.65

## SPECIAL PURPOSE CONTROLS

Type QJ-3  
TV ATTENUATOR

- Reduces overloading effects on TV sets in strong signal areas.
- Diminishes interstation interference caused by nearby or powerful stations.
- Minimizes buzz due to high signal level in intercarrier systems.
- Permits easy adjustment of signal RIGHT AT SET.
- Frequently prevents mismatch of antenna load to set.

IRC's QJ-3 TV Attenuator permits ready adjustment of signal input to TV sets. In most cases, it corrects or substantially reduces such conditions as:—Adjacent channel interference, background picture on weaker stations, poor definition, picture and sound breaker. Also useful in service work—duplicating fringe area signals when shop is near strong local station. List Price \$3.65

Type LC-1  
LOUDNESS CONTROL

A continuously compensated control that boosts lows and highs as volume is decreased—maintains depth and brilliance even at whisper level. Type LC-1 replaces makeshift compensating units—tapped volume controls, stepped-type loudness controls, bass and treble boost circuits. Automatically maintains proper balance of all frequencies in the audio spectrum at any listening level. Simplicity itself—as easy to wire into an audio circuit as any standard three-terminal volume control. Complete instructions included, showing applications. Type 76-1 or 76-2 switch can be added to this control. List Price \$10.95

design, these new controls bring many unique and desirable features to provide convenience, economy and long life. The new IRC Printed-Silver Tone Switch eliminates contact fatigue—assures positive, no bump contact. Simple detent assures positive positioning independent of switch action. Control position feature of  $\frac{1}{16}$ " and  $\frac{1}{2}$ " bushings permits exact duplication of original. Short control depth fits most crowded locations. Power switches amply rated for both TV and Auto Radios. Consult S-012 Part Number Replacement Manual for needed controls.

## IRC CONCENTRIKIT ASSEMBLES EXACT DUPLICATE CONTROLS features quick assembly—no modification of parts.

### 14 Basic CONCENTRIKITS

IRC Concentrikits are the common parts to various types of Exact Duplicate Controls. When assembled with parts shown in IRC Parts Number Manual (Form S-012) or Auto Radio Replacement (Form S-031), they will produce any IRC Exact Duplicate TV or Auto Radio Controls. No cutting or filing of shafts or bushings—one minute assembly.

Base-Elements and Exact Duplicate Shafts for CONCENTRIKIT assembly are listed on 3 pages following ➔

IRC Base-Elements are a revolutionary advance in concentric dual replacement. A relatively small stock at low investment provides wide coverage of electrical requirements of many concentric duals. Each unit is a complete molded control base with element, terminals and collector ring installed. There are no loose parts.

Two types of Base-Elements are available: Type B for panel or rear carbon sections and Type W for wire-wound panel or rear sections.

Two Base-Elements are required for each concentric dual.

## DEPENDABLE MECHANICAL FIT FOR YOUR TV REPLACEMENTS

Exact Duplicate Shaft Stock Numbers indicate shaft length measured from mounting face when installed in control ( $L_1$  is Outer Shaft length;  $L_2$  is Inner Shaft length). First digit is number of whole inches in shaft length; remaining two digits indicate number of additional 32nds of an inch. Thus, P1-210 has shaft lengths of 2-10/32" or 2-5/16". Exception is Inner Shafts when used with K-3 CONCENTRIKIT where 3/32" should be subtracted to determine shaft length.

## MICROSTAK SELENIUM DIODES

Type GA Microstak Diodes for use in low current circuits where very high back resistance and low forward resistance are required. Miniature selenium cells with outstanding performance characteristics, they are ideal for such applications as A. V. C., switching, blocking and bias supplies. Design and small size give high frequency performance not found in conventional cells — tests prove their successful performance in circuit applications up to 1 megacycle. Hermetically sealed to assure stable operation under high humidity, dust, fumes and changing pressures.

Dimensions: (Type 6GA1) Length of leads — 1½". Body length — .450". Diameter — .145". (Type 9GA1) Length of leads — 1½". Body length — .500". Diameter — .210".

### TYPE 6GA1

**Stock No. 6GA1-2B.** Minimum forward current (at 2 V.D.C.) is 0.5 M.A. and corresponding resistance, 4000 ohms. Maximum inverse current (at 20 V.D.C.) is 20 microamperes and corresponding resistance, 1 megohm. Peak inverse volts —36. Continuous inverse volts —22. Maximum A.C. input (RMS volts with resistive load only) —26. Temperature range is —55°C to +90°C. Shunt capacitance — approximately 25 mmf (measured with two plates back-to-back on 1000 cycle bridge).

List \$1.67

**Stock No. 6GA1-3C.** Minimum forward current (at 2 V.D.C.) is 1 M.A. and corresponding resistance, 2000 ohms. Maximum inverse current (at 20 V.D.C.) is 10 microamperes and corresponding resistance, 2 megohms.

## SINGLE CONTROLS

TYPE PQ

TYPE RQ

IRC Distributor Controls for Industry offer commercial users a wide selection of resistance values and two industrial shaft types. Shafts are fixed. This combination of wide selection of values and speedy Distributor delivery holds many advantages for industrial purchasers. These Industrial Controls are adaptations of the new, compact  $\frac{15}{16}$ " Q Control. Power rating is  $\frac{1}{2}$  watt, 500 volts maximum. Electrical rotation is the same with or without switch.  $\frac{3}{8}$ " bushing is brass and held to close tolerance for snug shaft fit.

Terminals are heavily tinned for easy soldering, and may be bent without becoming noisy. Two locating lugs are provided, either or both of which may be bent down if not needed. Molded base. Both Types PQ and RQ are supplied in standard tapers.

**TYPE PQ.** Full round  $\frac{1}{4}$ " shaft, approximately 3" from mounting face, with  $\frac{3}{8}$ " long bushing. Available in 33 stock values as shown. Regular IRC stock numbers are used with prefix PQ.

LIST \$1.40

**TYPE RQ.** Very short screw-driver slot shaft,  $\frac{1}{4}$ " diameter and approximately  $\frac{1}{2}$ " long from mounting face with  $\frac{3}{8}$ " long bushing. Available in 33 values as shown. Regular IRC stock numbers are used with prefix RQ.

## DUALS AND TRIPLES

IRC Type PQ and RQ Industrial Controls are supplied as single controls. Dual Control and Triple Control combinations are available by adding IRC MULTISECTIONS.

## MULTISECTIONS

IRC MULTISECTIONS are complete control sections that can be added like a switch to any Q, PQ or RQ Control. With these units, the Radio Technician or Engineer is provided with an endless variety of dual, triple or even quadruple controls. Duals assembled from IRC MULTISECTIONS will accommodate Type 76 switches. Available in a selection of 22 values, as shown in following table. Each MULTISECTION adds  $\frac{11}{16}$ " to basic control.

IRC Power Wire Wounds are designed for continuous operation at full rated power. Derating is unnecessary even for the highest stock values. IRC Power Wire Wounds are full size, thus capable of efficiently handling greater wattage. Cooler performance assures longer resistor life, and safeguards critical components mounted adjacently. Clear, permanent markings show type, size, wattage, and resistance value; markings improve in legibility with temperature rise. Terminals are tin plated for easy soldering.

# PRECISION WIRE WOUND RESISTORS

Improved ceramic winding forms have high insulating qualities, high mechanical strength and low coefficient of expansion. Special winding technique, developed by IRC, eliminates shorted turns or strains in the winding.

Improved insulation provides greater humidity protection and contributes to longer trouble-free service. Improved lug and lead terminals assure perfect electrical connections without strain on the windings, and are easily soldered.

IRC offers a complete line of redesigned Precision Wire Wound Resistors. These improved units are fully interchangeable with earlier types, while providing higher standards of performance plus new sizes and terminals.

All IRC Precisions, except Type WW10J, are furnished with rugged lug terminals for soldered connections. Type WW10J has wire lead terminals 2" long.

All Types except WW8J and WW10J are wound with adjacent sections in opposite directions. This provides windings of low residual inductance, and windings that have little coupling effect from other parts of the circuit. Type WW8J, with single section, is wound non-inductively. Type WW10J has a single section winding, but inductance is minimized by the comparatively small size of this unit.

# CLOSE TOLERANCE PRECISTORS

## TYPE DC DEPOSITED CARBON RESISTORS

1% ACCURACY  
PRECISION PACKAGED  
1/2, 1 and 2 WATTS

IRC Deposited Carbon Precision Resistors offer a unique combination of close tolerance, stability and economy. Pure crystalline carbon is bonded to selected ceramic cores to produce a resistor ideally suited to the requirements of instrumentation, advanced electronics and critical television circuits.

Deposited Carbon Precistors provide a combination of characteristics not found in any other resistor type. The wide range of values, accuracy, high stability, low voltage coefficient, excellent frequency characteristics, predictable temperature characteristics, high voltage rating, low noise level and small size of PRECISTORS make them superior for many popular applications.

IRC Type DC Deposited Carbon Precistors are available in three sizes: 1/2 watt (body size 1 1/8" x 3/2"), 1 watt (body size 1 1/2" x 3/2"), and 2 watts (body size 2 1/8" x 3/2"). Accuracy ±1% (25°C).

For complete protection against scratches, jars and surface injury IRC PRECISTORS are factory packed in capped plastic tubes. This special precision packaging also safeguards these close tolerance resistors against excessive handling.

**TYPE MBC**

IRC's Molded Boron-Carbon Precistor is a precision film type resistor that incorporates the added advantages of a fully insulated unit. The molded plastic housing provides complete mechanical protection, and minimizes the effect of moisture. Because of its greater heat dissipating capacity, load life characteristics for the Type MBC are improved over those of either boron or deposited carbon unmolded units.

**APPLICATIONS**

Type MBC Molded Boron-Carbons are particularly suited for applications where unmolded boron or deposited carbon units cannot be used due to the risk of mechanical damage to their coating, insulation breakdown, or high moisture change.

# INSULATED CHOKES

IRC Insulated Chokes are available in four sizes designated as types CL $\frac{1}{2}$ , CLA, CL1, and CL2. All four are fully insulated in molded phenolic housings for full protection against high humidity. The insulated housing also guards the winding from abrasion and physical damage, and prevents any possibility of shorting to chassis. Color coded for easy identification.

The wide range of size and characteristic combinations available permits accurate replacement with respect to space and electrical requirements.

## COMPOSITION-ELEMENT CONTROLS

These "Pick-A-Shaft"\* and "Ad-A-Switch"\* controls will take any of the shafts listed on page R-24, including High Voltage Coupler and insulated shaft. Your choice of any one of the 12 shafts listed (this does not include insulated shaft) with each control. "A47F" and "A47" controls use "SWE" switches, shown on page R-24. Tolerances of these controls are in accord with RETMA standards — overall resistance tolerance of plus/minus 20% for all values up to and including 100K ohms; plus/minus 30% above 100K. Controls are available with factory-assembled shafts at no extra charge, by omitting prefix "A" from catalog number and designating type of shaft desired, when ordering. Example: 47-100K-S with FKS- 1/4 shaft.

### Graph Explanation:

- Taper S—Straight or uniform resistance change with rotation.
- Taper T—Right-hand 30% resistance at 50% of C.C.W. rotation.
- Taper U—Left-hand 1% resistance at 33 1/3% of C.W. rotation.
- Taper V—Right-hand 20% resistance at 50% of C.C.W. rotation.
- Taper W—Left-hand 20% resistance at 50% of C.W. rotation.
- Taper Z—Left-hand (Log. audio) 10% resistance at 50% of C.W. rotation.
- Taper Y—Left-hand 5% resistance at 50% of C.W. rotation.

## POWER RHEOSTATS

U. S. Pat. 2,346,598

Clarostat Power Rheostats maintain their full power rating at settings as low as one-third rotation without excessive temperature rise. Standard overall resistance tolerance plus/minus 10%. Closer tolerances are available upon special order.

The metal cored winding is embedded in a cold-setting, inorganic cement and is thereby bonded to the ceramic body. Unit mounts through a single hole. A locking pin is provided for rear panel mounting.

## SOUND-SYSTEM CONTROLS

For proper control of volume and tone alike, Clarostat offers a choice of several controls, such as L- and T-pads, output attenuators, and individual-speaker volume controls as used for drive-in theatre instal-

lations. These are not ordinary radio controls but rather sound-system controls designed and built for critical requirements.

### CONSTANT-IMPEDANCE CONTROLS

Self-compensating volume controls known as L-pads and T-pads for use in sound systems. Rated at 2½ watts DC, but will handle up to 10 watts audio. Continuous range from 0.5 to 30 decibels attenuation in 90° rotation. Last 10% affords infinite attenuation. With Clarostat constant-impedance L-pads and T-pads the input and output impedances of associated circuits can be kept within the limits of a constant required value. Knob and dial plate furnished with each control.

### CONSTANT IMPEDANCE OUTPUT ATTENUATORS

Series "CIB" rated at 10 watts, but will handle up to 30 watts in audio circuit. Linear attenuation provided in 3 decibel steps up to 24db, then 30db followed by infinity. Equipped with dial plate and bar knob. One-hole mounting, ⅜" bushing diameter, 1" shaft. This control has been developed to meet the need for a constant-impedance attenuator capable of handling considerable power without measurable insertion loss. Recommended as an output level control for power amplifiers, or as an input attenuator for individual or for a group of speakers in a public address system.

# "GREENOHM"\* WIRE-WOUND RESISTORS

**FIXED TYPES** Wire-wound resistors for most rugged applications. Will withstand tremendous overloads and temperature changes without altering resistance values or appearance. Wire windings on high grade ceramic tubing and coated with special inorganic cement. In accordance with RETMA standards, overall tolerances are  $\pm 5\%$  for resistors of 50 ohms and higher. For resistors of 49.9 ohms and lower, overall tolerances are  $\pm 10\%$ .

**ADJUSTABLE TYPES** Same electrically and mechanically as Fixed types, but incorporating sliding band or bands for tapping any desired resistance values. Slider band tightened by means of screw. In accordance with RETMA standards, overall tolerances are  $\pm 10\%$ .

**POWER RESISTOR DECADE BOX**

The Resistance Decade Box Model No. 240C allows changing resistance at a flip of the switch in a working circuit. Any value obtainable from 1 ohm to 999,999 in steps of one ohm and at a maximum power rating of 225 watts using a maximum of 1000 volts D.C. or 660 volts A.C.

Resistance changing switches are of the type that prevents a resistance breakdown between steps, thus protecting delicate meters and measuring instruments in the circuit. Pointer knobs indicate at a glance the resistance value being used.

Clarostat "Greenohm" resistors are used

throughout. These are inorganic-cement-coated wire-wound power resistors. The resistors are mounted on rigid metal supports. A baffle plate separating the resistor bank from the switch assembly protects the latter against heat.

The heavy-gauge metal case is finished in frosted gray wrinkle, with an etched black-and-aluminum front panel. 13 in. long; 8 1/2 in. deep; 5 3/4 in. high. Weight, 11 lbs.

SUGGESTED USES: Resistance determination. Load Resistance. Meter Multiplier. Calibrating Meters. Providing any desired ohmage as a universal power resistor.

**"FIXTOHM"**  
**(Deposited-Carbon)**  
**PRECISION RESISTORS**

Manufactured by the Clarostat subsidiary, Campbell Industries, Inc., Chattanooga, Tenn., to MIL-R-10509A Military Specifications.

A patented, alkaline earth, ceramic insulator developed to properly receive and hold pyrolytically-deposited carbon, is the basis of all "FIXTOHM" Resistors.

A pure, crystalline carbon film is deposited by thermal decomposition of a hydrocarbon, no binder or filler being used. This form of carbon has almost diamond hardness, is extremely stable, and has a very low temperature coefficient of resistance.

Bands of silver are baked on each end of the resistor. Over these bands, tinned brass terminal assemblies are press-fitted. This assures the excellent terminal conductivity and minimum noise of "FIXTOHM" Resistors.

For lower resistance values no "spiralling" is required. For the medium and higher resistance values, the basic resistances are "spiralled" by cutting thru the crystalline carbon film down into the insulator to create a helical current path around the resistor core. The entire active length of the resistor is always "spiralled" and used.

The resistor is carefully adjusted to final resistance value by slight and uniform abrasion over the entire surface of the crystalline carbon film to insure the final accuracy of "FIXTOHM" Resistors.

To protect this very accurate, crystalline-carbon film, multiple layers of insulating, moisture resisting varnishes are separately baked on the resistor.

## Explanation of Mallory Tapers

Taper Number 1 is a modified logarithmic left hand taper in the carbon type of control and an approximation to this logarithmic taper in the wire-wound type. This taper should always be used in shunt circuits, as in usual antenna and audio circuits, or where only the center and left hand terminals are used.

Taper Number 2 is a right hand logarithmic taper in the carbon and an approximation in the wire-wound type. Used in series circuits, as in cathode voltage controls, or where only the center and right hand terminals are used.

Taper Number 4 is a linear taper. Strictly speaking it is not a "taper" although commonly referred to as such. A linear "taper" is used wherever a control should be such that voltage change is proportional to the degree of rotation.

Taper Number 7 is made only in the wire-wound type of control and is a form of left hand taper. This taper is desirable for the antenna shunt plus bias control, wherein greater attenuation is obtained by increasing the bias voltage. The slight left taper then suffices to gradually reduce the signal to zero volume by the shunting action in the antenna circuit.

**Types HS and DC Deposited Carbon Resistors**

(Resistors illustrated are approximately 1/3 actual size)

**Type DC ± 1% Deposited Carbon Precision Resistors**

Mallory Deposited Carbon Precision Resistors are designed primarily as low-cost replacements for expensive wire-wound resistors in high-quality laboratory instruments. Their unique operating characteristics also make them ideal for replacement or substitution in all radio, television, electronic, or electric circuitry where stability, close tolerance, low-noise, and low inductance are desired. Average shelf life change will not exceed 1/4% per year. One thousand hour load life test indicates a maximum change not exceeding ± 1%.

These resistors are formed of pure, crystalline-carbon particles deposited on specially compounded ceramic. Each Mallory Deposited Carbon Resistor is equipped with 1/2" tinned copper, axially-placed leads rigidly attached to silver plated brass end-caps. Baked moisture-resistant insulation is incorporated in construction for protection against humidity. Each resistor is calibrated at a nominal temperature of 25°C. and each has a negative temperature coefficient range of approximately .03% for low resistance values, through .08% for resistances exceeding 1 megohm.

Each unit is inspected according to requirements of accepted government specifications, and each is marked with resistance value, type and tolerance, except the smaller types which have a separate label.

**Type HS ± 10% Deposited Carbon Resistors**

For the first time the well-known advantages of high-stability low inductance, and small size of Mallory Deposited Carbon Resistors are available at moderate cost for use in many commercial applications where accuracy of resistance is of less importance than the consistency of operation over long periods of time and through many changes of temperature. Average shelf life change will not exceed 1/4% per year. One thousand hour load life test indicates a maximum change not exceeding ± 1%.

Television servicemen, laboratory technicians, and model shop engineers, in particular, will find these resistors ideal for critical television and other oscillator circuits where constancy of resistance is of utmost importance. The electrical and mechanical characteristics of HS types are exactly the same as similar DC types, with exception of the resistance tolerance which has been increased to ± 10% of the nominal value. The same quality and temperature coefficient, as featured in the DC types, is maintained throughout.

### TYPE "AB" ADASHAFT RADIOHMS®

#### SELECT THE CONTROL ADD-A-SHAFT TO MEET YOUR NEEDS

Adashaft Controls are now built in the popular Model "B" —  $\frac{15}{16}$ " construction. The basic control unit is constructed with a patented stub shaft... usable just this way in many cases as a short, screw-driver slotted unit. A selection of nine basic shaft types are available, ranging from  $\frac{3}{8}$ " to 10" in length, including auto types, insulating nylon and many others. This original, patented Centralab construction permits instant locking... resulting in a solid, integral, well aligned unit. There is no price premium on Adashaft... you pay for exactly what you need. After adding the required shaft, the units may be converted to switch type with the new "Fastatch" type KB line switches. All "AB" characteristics same as Model B. Packaged — singly including all data.

G-H, fixed composition resistors of highest quality, feature permanent electrical characteristics, small physical size for a given wattage rating, great mechanical strength. Leads are differentially tempered—prevent sharp bends near the resistor body while still permitting easy forming to fit a particular wiring arrangement.

Resistor bodies are molded brown phenolic with coding in brilliant colors.

G-H resistors are now supplied in attractive new containers. Three convenient sizes with pull-out sections accommodate standard quantities of 1/2, 1 and 2 watt resistors.

A G-H innovation, Gold and Silver container ends, permits instant identification of 5% or 10% tolerance units. Quantity, wattage and resistance values are also clearly printed on these ends. These attractive black and green containers with Gold and Silver ends provide a space-saving, functional shelf display.

Manufactured under the most rigid quality control standards to deliver matchless performance and economy. Dalohm Type DC resistors now supplied with an improved coating material which incorporates extreme toughness, low temperature cycling, humidity resistance, and high temperature characteristics — making these resistors suitable for printed circuit solder dipping without the added space required for sleeving.

## TYPE DCH HERMETIC SEAL RUGGEDIZED DEPOSITED CARBON RESISTORS . . .

the ultimate in precision under all conditions

Ideal for use in UHF equipment where only the optimum of quality may be tolerated. Completely high temperature alloy solder sealed in envelope of non-hydroscopic ceramic. Ruggedized for incorporation into snap-in clips. Production tested for resistance to thermal shock, salt-water immersion, and resistance to humidity.

## LIGHT WEIGHT WIRE WOUND RESISTORS

### ENCAPSULATED for HERMETIC SEALING

Dale engineers and chemists have compounded a chemically inert material making possible these light weight precision resistors that surpass the requirements of applicable JAN and MIL specifications. They are completely impervious to the penetrating effects of salt ions, humidity, moisture and corrosive gases and vapors. In addition, the material in which they are encased has a very high di-electric strength, and, due to its coefficient of expansion matching that of the wire itself, it eliminates the possibility of distorted windings and shorted turns that are quite common on other resistors of this type.

- Non-inductive, pi-wound
- Resistance range—0.1 ohm to 5 megohms depending on type
- Tolerances—0.1% to 1%
- Temperature coefficient—0.00002/per degree C at 25° C
- Humidity test—no change in resistance after cycling per MIL-R-93A Specs

# \* CARBOFILM RESISTORS

## CARBOFILM RESISTORS Precision Resistors made with Matchless Accuracy

Made under licensed agreement with Western Electric, these precision resistors are the result of years of intensive research in developing components with extreme accuracy and stability. Carbofilm resistors are intended for circuits calling for the accuracy and stability of wire-wound resistors with the marked economy of carbon resistors. They serve a real need in test equipment and laboratory instruments. All in all, Carbofilm resistors meet the requirements of accuracy, stability and economy.

The Carbofilm resistors are a carbon deposit type and are available in the following standard or jobber stock sizes with the resistance value shown in the listing. Packed and sealed in plastic tubes for your protection.

Aerovox Type CPC—ceramic-cased, hermetically sealed Carbofilm resistors are available to meet requirements of MIL-R 10509B. For additional information request technical brochure #CPR-369 by writing Aerovox Corp., New Bedford, Mass.

## LECTROHM IS CREATING NEW DESIGNS AND MATERIALS IN WIRE WOUND RESISTORS FOR NEW ASSEMBLY METHODS

In addition to supplying the electronics industry with superior vitreous enameled wire-wound power resistors in the familiar sizes and ratings, LECTROHM is producing whole new groups of types, each designed to solve a special problem. Miniaturization and printed circuit restrictions in space and ventilation no longer are complicated by conventional power re-

sistor size standards. New coating materials and winding methods developed by LECTROHM permit an infinite variety of configurations yet retain operating and life characteristics expected of the finest grade vitreous enameled types. LECTROHM engineers will fit the resistor size and shape to your design.

## VITREOUS ENAMELED RHEOSTATS

### Insulated shafts and mounting bushings

**Type A-25** — Will withstand rugged treatment under the most adverse conditions. It has unusually smooth mechanical operation. The terminals, made of strong corrosion resistant alloy, are permanently welded to the winding form. The wound ring is made on integral part of the refractory base by vitreous enamel. The phosphor bronze actuating arm, with its graphite brush, gives smoothest action and excellent electrical control. Shafts are insulated. Three terminals permit either potentiometer or rheostat use; and our new high temperature gray enamel gives an added safety factor.

**Types H-50, H-100, H-150** — These are our newest rheostats and they will give longer service and greater protection. They are designed for use under extremes of humidity and abnormal atmospheric conditions. The unique "buss bar" type brush automatically adjusts tension for complete, continuous contact. It eliminates backlash and prevents binding. It assures perfect contact with the entire winding surface. Our new high-temperature gray enamel bonding gives you an increased safety factor and better overall service. These improved rheostats are designed to comply with current standards of: (a) Military Specifications MIL R-22. (b) RETMA. (c) N.E.M.A. (d) "listed by Underwriters Laboratories, Inc."

## ADJUSTABLE VITREOUS ENAMELED RESISTORS WITH MOUNTING BRACKETS

Embodying features originated by Hardwick, Hindle, Inc., resulting in a Resistor possessing the many advantages of Vitreous Enamel Construction, plus an adjustable feature.

The winding is closely and evenly spaced, assuring ample insulation between turns. Where the winding appears exposed in the track, its underside is tightly embedded in the enamel, the upper surface only being exposed for contact with the adjustable band.

All sizes of Adjustable Resistors listed herein are furnished complete with mounting brackets and with one adjustable contact band.

## BLUE RIBBON RESISTORS

TABLE OF RATINGS

Blue Ribbon resistors differ from tubular resistors in that they are wound on an elliptical core. An aluminum bar through the center insures more even distribution of heat, avoiding hot spots.

Our gray enamel eliminates crazing which results in failure of the resistive element due to moisture penetration from humidity, salt and other severe atmospheric conditions.

Mounting studs—corrosion and rust resistant—peened to the ends of the thru-bar conduct heat to the mounting surface. You can stack two or more units. Our method of fastening the tube to the thru-bar prevents loosening.

In comparison with tubular units of equivalent wattage rating these resistors offer outstanding advantages: • Higher wattage rating per unit space requirement. • Reduction in space requirement. • Simple sturdy mounting, single or stacked. • Light weight. • Lower inductance.

Designed for and manufactured in accordance with JAN-R-26A specifications.

\*This rating based on a maximum temperature rise of 300 degrees C. with the Resistor mounted horizontally on a 10" x 10" x .040" steel plate supported horizontally 1/2" above a wooden surface.

When Resistors are mounted on a non-metallic base the nominal watt rating should be reduced by approximately 15%.

## 10 and 20 WATT FIXED VITREOUS ENAMELED RESISTORS

Designed for radio service and replacement use—conservatively rated—wound upon Steatite Tube—combination lug and pigtail terminal connections. Vitreous

enamel insulation, insures proof against moisture. 10 watt and 20 watt sizes, in the range of resistance values shown.

- a. **High temperature enamel**—bonds the wire to core and the core to base to afford greater safety factor where overloaded conditions are demanded.
- b. **Bus-bar construction** gives minimum resistance and ample safety under maximum current requirements. Made of alloy materials to fit wire size and current requirements of various resistance values and also to give minimum wear on wire.
- c. **Constant pressure contact arm**—This patented feature is made of high carbon spring steel to insure uniform pressure of contact brush on both collector ring and winding surface and to eliminate troublesome contact resistance.
- d. **Tripod Mounting Frame**—Alloy casting designed to give greater safety factor under shock and vibration.

# METAL FILM RESISTORS

WITH AXIAL OR RADIAL LEADS

## NOBLETTE TYPE NA

## NOBELOY TYPE NR

## DESIGN AND CONSTRUCTION

A metallic resistance element is deposited on a low loss ceramic carrier using a pyrochemic process developed and patented by Continental. A layer of vitreous enamel protects metal film against unusual atmospheric conditions. They are calibrated to value by means of spiralled grooves cut into the film to increase the resistance path. The NOBLETTE with its axial leads and the NOBELOY with radial leads permits the use of metal film resistors in a wider range of application.

Notable quantities of these metal film resistors are low inductance—initial accuracy and excellent resistance stability under adverse operating conditions.

Both types are stocked in standard tolerances of  $\pm 1$  and 5%. Also available in  $\frac{1}{2}$  and 2%—prices furnished on request. When ordering, specify quantity, resistance, tolerance and type or wattage.

CONTINENTAL SUPPRESSORS have been subjected to years of laboratory development and actual road service. They effectively remove noise interference from spark discharge at the plugs and high-tension distributor—yet do not in any way affect the motor car ignition system.

They have mechanical strength to stand the most severe service. The resistance value of 10,000 ohms has been scientifically determined. Sparking across the terminals is eliminated by careful shaping of the electrodes and cases.

The S-19, S-21 and S-23 Suppressors are equipped with a removable terminal nut for spade type mountings.

## VITREOUS ENAMELED RHEOSTATS

### CLOSE CONTROL RHEOSTATS

**Underwriters' Laboratories Reexamination  
Service Listed**

For many years the Ohmite line of ten wirewound, vitreous enameled rheostats, ranging from 25 to 1000 watts in size, has been the most extensive available to industry. Six of the most popular sizes have been carried in stock by Ohmite Distributors and at our factory. Now, the other four sizes, the Model G, 75 watts; Model P, 225 watts; Model T, 750 watts; and the Model U, 1000 watts are available from stock, thus making the entire line of ten sizes quickly obtainable for design and production needs and for emergencies.

**FEATURES OF CONSTRUCTION:** Ohmite rheostats are designed to produce permanently smooth, close control. The construction is all ceramic and metal; there is nothing to smoke, char, shrink, or shift. All models have insulated shafts with provision to keep the rheostat from turning on the panel. The resistance wire is wound over a solid ceramic core. Each turn is a separate resistance step and is locked against shifting by vitreous enamel. The core and base are also bonded by vitreous enamel. The pivoted universal-action-mounted contact brush is of copper-graphite or silver-graphite on the heavier current rheostats. It rides upon a large flat surface and assures perfect contact without wear on the wire. Pressure

at the contact and at the center lead are independent. The construction is patented under U. S. Patent No. 1,942,495 and Re-issue 19607; other patents pending. Ohmite Rheostat Models H, J, K, L, and N, all marked Series A, are listed under the Underwriters' Laboratories Reexamination Service.

**RATING:** The current carrying capacities shown in the tables are for use in *free air*; when units are enclosed, these currents should be reduced possibly as much as 30% to 50%, depending upon the degree of ventilation. The rated current will cause the rheostat to dissipate its rated wattage when the full resistance is in the circuit.

## OHMITE® STOCK AXIAL-LEAD RESISTORS

Ohmite axial-lead, vitreous-enameled resistors are compact, wire-wound units available in three stock sizes: 3-Watt ( $\frac{5}{16}$ " x  $\frac{1}{4}$ " ), 5-Watt (1" x  $\frac{3}{16}$ " ), and 10-watt ( $1\frac{1}{4}$ " x  $\frac{3}{16}$ " ) . . . The resistance wire and terminal lead are both welded to the end cap, utilizing the patented Ohmite welding technique. All have  $1\frac{1}{2}$ " tinned wire leads, are simple to mount, and occupy small space.

Axial-lead resistors are especially suited for printed circuits, terminal board, and point-to-point wiring applications.

The standard resistance tolerance is  $\pm 5\%$ , 50 ohms and higher; tolerance below 50 ohms is  $\pm 10\%$ .

## OHMITE R.F. PLATE CHOKES

This series of seven Ohmite single layer wound solenoid radio frequency plate chokes covers the entire frequency range of 3 to 520 megacycles. The four highest frequency chokes are wound on low power factor plastic cores while the other three units

are wound on steatite tubes. Windings are insulated and protected by a moisture-proof coating. The single layer winding is designed to avoid adverse harmonic effects within the recommended operating range and also prevents breakdown from high r.f. potentials.

## 2 WATT MOLDED COMPOSITION POTENTIOMETER - TYPE AB

The Type AB Potentiometer is an exceptionally high quality unit designed especially for industrial, laboratory, radio service and other uses where reliability is particularly important. Because the resistor element is molded, the unit has an exceptionally large safety factor. The power rating of 2 watts is unusual for a unit of such small size. The unit has a very low noise level and low voltage coefficient. It will pass the Army-Navy 200 hour salt spray test, specification AN-QQ-S-91. The single unit is 1-1/16" diameter and extends 9/16" behind the panel. The dual unit extends 1-3/16" behind the panel. The 2" long round shaft (including the 3/8" long mounting bushing) is available from stock on potentiometers with all three resistance tapers and on the dual unit. The screw-driver shaft with locking-nut is available from stock on the linear taper units only. A SPST switch, to be attached to the back of the control, can be supplied extra.

## 25-Watt — 50-Watt

The Ward Leonard 25-watt (Type 25R) and 50-watt (Type 50R) Type Rheostats are especially suited for use in electronic and electrical circuits where gradual and positive resistance change is essential. Balanced contact arms, self-lubricating metal graphite contact shoes, and no backlash in the drive shaft combine to assure uniform contact pressure and smooth operation.

Standard shaft length for back-of-board mounting on 1/4" panel.

Vitreous enameled wire-wound resistors built on a strong refractory core, and provided with low mounting brackets. Particularly suited for applications where space is limited. Specially adapted to stacking for networks.

All Stripohms, except the Ministrip, are 1½" wide. The "Ministrip" is smaller in size than the standard Stripohm. May be stacked by using ½" washers. Rated at 20 watts.

**BALLAST TUBE FOR AUTOMATIC REGULATION OF CURRENT AND VOLTAGE**

**AUTOMATIC REGULATION**

**WHAT IT IS!** AMPERITE is an automatic "rheostat" designed to keep the current in a circuit at a definite value, e.g., 0.5 amps.

Should we supply voltage increase, the AMPERITE will automatically increase in resistance to take up the increase in supply voltage.

Since AMPERITE is a constant current device, it can only be used on a fixed load.

We strongly recommend that you send us your specifications on special problems, and let us recommend the BALLAST TUBE you need.

**ADVANTAGES**

Light . . . Compact . . . No Moving Parts (Will withstand vibrations of 10G min.) (Not affected by altitude or humidity changes) . . . Can Be Changed as Easily as a Radio Tube . . . Operates Equally Well on AC or DC . . . Inexpensive.

**CAPACITIES AVAILABLE**

Current values of 60 ma. to 5 amps; threshold voltage 0.4 to 30 V. Maximum dissipation per AMPERITE 50w per tube (ST19 bulb). Any number of AMPERITES with the same voltage range can be operated in parallel. AMPERITES should not be used in series.

**AGEING**

AMPERITE Ballast Tubes may change approximately up to 3% in current if aged for 4 to 8 hours, at maximum voltage. They will change very little thereafter.

**LIFE EXPECTANCY**

Average life if operated as recommended ..... 2000 Hours  
If operated continuously at maximum voltage ..... 1000 Hours  
If operated continuously at 80% maximum voltage ..... 5000 Hours  
If filament is operated below glow point ..... 5000 Hours up

In operation, the Amperite filament starts to glow at one point; as the voltage is increased, the glow spreads over the entire filament. Like incandescent lamps, turning Amperite on and off reduces its life, especially if operating near its maximum voltage.

**TIME LAG CHARACTERISTICS**

Time lag encountered in an Amperite Ballast Tube depends upon the wattage consumed by the ballast and the size of the bulb. Where the wattage is small for the size of the bulb, the action can be made practically instantaneous — less than 1 second. In such cases the bulb will remain at practically ambient temperature. When the wattage is high enough to heat the bulb to a temperature uncomfortable to the hand (160°F) the lag might be as much as several minutes for final readings—but normally reaches within 90% of final readings within a few seconds.

**AMPERITE NUMBERING SYSTEM**

In general, the AMPERITE number approximately denotes the current—voltage threshold value. For example:

AMPERITE NUMBER	3-4	3H4	10-7	12-11	12H11
THRESHOLD CURRENT	0.3	0.35	1.0	1.2	1.25
THRESHOLD VOLTAGE	4.0	4.0	7.0	11.0	11.0

### AMBIENT EFFECTS

Ambient temperature variation of  $-50^{\circ}$  to  $+70^{\circ}\text{C}$  will change the current value of an Amperite approximately 2% on regulating portion of curve shown directly below. Being hermetically sealed the Amperite is not affected by altitude or humidity changes.

We strongly recommend that you send us your specifications on special problems, and let us recommend the BALLAST TUBE you need.

Amperite Ballast-Type 6-4 current voltage characteristic under ambient conditions of  $-55^{\circ}$ ,  $24^{\circ}$ , and  $85^{\circ}\text{C}$ . The percentage change with ambient is approximately the same with all type Amperite ballasts.

This diagram illustrates far superior regulating characteristics of the Amperite Ballast-Regulating Tube.

**STANDARD SIZES** available for various wattage consumption . . . For good regulation, a bulb should not be required to dissipate more than 50% of maximum wattage.

### BATTERY CHARGING AND DISCHARGING

Amperite Ballast Tubes are very successfully used for keeping the current constant in charging and discharging batteries. Any number of Amperites of the same voltage range can be placed in parallel in order to obtain the proper current. The current can be kept to  $\pm 1\%$ . Advise voltage variation and currents desired.

On 115V supplies  $\pm 1\%$  regulation can be obtained by shunting the load or transformer primary with a G.E. 3W-NE-44 Neon Lamp. 1 G.E. 3W-NE-44 Neon Lamp should be used for each 50 watts of load. This is the cheapest and most compact method of obtaining  $\pm 1\%$  regulation. The Amperite is not affected by frequency changes.

### POWER SUPPLIES

We strongly recommend, for any particular application, to fill and return one of our special problem sheets (ASP 343) and permit us to recommend the most suitable AMPERITE.

Pow. Supply	Dry Cells	6 Volts	12 Volts	26 Volts	115 Volts
Supply Variation	2.2-3.0V	5.5-7.5V	10.0-14.0V	22.0-30.0V	105-125V
Desired on Load	1.8-2.0V	3.9-4.1V	6.1- 6.4V	17.5-18.5V	90- 95V
Required on AMPERITE	0.4-1.0V	1.6-3.4V	3.9- 7.6V	4.5-11.5V	15- 30V
Current Variation	.29-.32a	.29-.31a	.29-.31a	.29-.32a	.29-.32a

The above chart shows the maximum load voltage for the given supply to obtain  $\pm 2\%$  regulation on load. Better regulation is obtainable by increasing the voltage across the AMPERITE. In general, the higher the percent of the supply voltage taken by the AMPERITE, the better the regulation.

We strongly recommend that you send us your specifications on special problems, and let us recommend the BALLAST TUBE you need.

## CONSTRUCTION

The TRU-OHM power rheostat will provide smooth variation of resistance under the most severe operating conditions. The all ceramic-metal construction insures dependable service even at extreme operating temperatures. An extra deep core, on which the resistance wire is toroidally wound, means a more conservative power rating.

Types R-50, 75, 100 and 150 have an exclusive torsion spring assembly which provides uniform pressure of the contact brush against the winding at all times. Current flows from the brush through a flexible shunt wire to a large size slip ring. Positive, low-wear contact is maintained against the center terminal by an adequate compression spring. Back lash in the rotating assembly is reduced to a minimum by means of the design. A positive stop is provided at the extremes of rotation entirely independent at the contact arm assembly.

## SPECIAL FEATURES

TRU-OHM rheostats are available with many extras such as off positions, screw driver control, shaft assemblies for special mounting conditions, etc. Prompt engineering service is available for all special requirements. Knobs furnished upon request.

## FIXED and ADJUSTABLE RESISTORS

WIRT POWER resistors are produced to exacting quality standards for maximum reliability and long trouble-free operation. WIRT POWER resistors are rated for hot spot temperature of 515° F in an ambient of 40°C (104° F). They are available from stock in all standard RETMA resistance values.

### FIXED RESISTORS

**WINDINGS** — A low temperature coefficient resistance wire is precisely space wound on a low loss ceramic core. Maximum wire size is used consistent with wattage ratings and resistance.

**TERMINALS** — Bands are securely clamped and permanently secured to the winding and core to insure continuity of resistance. Wire terminals are affixed to all sizes of 20 watts and below unless expressly omitted.

**COATING** — Each resistor winding is protected with a coat of vitreous enamel fused on at high temperature to insure a moisture-proof, acid resistant barrier and rapid dissipation of heat.

**MARKING** — Each resistor is marked with resistance wattage and manufacturers designation. Special markings available if desired.

### ADJUSTABLE RESISTORS

Adjustable WIRT POWER resistors are made under the same specifications as the fixed. A portion of the winding is exposed longitudinally to which a slider contact band is attached. A screw-driver adjustable band is supplied with each resistor to make contact at any point of the exposed portion. Ratings are based on the entire resistance from terminal to terminal and rated proportionately to the point of the adjusting contact band. Loosen the band free of the winding before moving to avoid abrasion of the resistance wire.

### WIRE WOUND FLAT RESISTORS

Construction is of evenly spaced nickel alloy resistance wire wound on a special molded rectangular ceramic base. Terminal leads are permanently affixed by a special Patent Applied For process to insure positive and everlasting contact. These resistors are coated with a tough moisture resistant high temperature material. Center taps and other positioned taps can be furnished on special order to provide a wide assortment of styles in various ratings. Standard tolerance is  $\pm 10\%$ ; however, other tolerances are available. Resistors are permanently marked with resistance, ratings and manufacturers designation.

Maximum surface temperature is 250°C in an ambient of 40°C at full rated load.

## BIRFLON TEFLON TUBING BUS BAR WIRE - INSULATED BUSHINGS

Spaghetti, Sleeving, made from "TEFLON" is used in electronic equipment primarily for connection of components. Where temperature range and space is a factor, spaghetti made from "TEFLON" is ideal because its continuous service temperature is 250° C. This is more than 100° C. above other materials used for spaghetti. "TEFLON" is a Class C dielectric. Even where 100° C. temperature applications are indicated "TEFLON" will be of help in simplifying the soldering technique since "TEFLON" is not harmed by the hot barrel of the soldering iron—therefore, the assembly of aircraft and communication electronic equipment is greatly speeded up.

### ADDITIONAL ADVANTAGES OF BIRFLON T-500 "TEFLON"\*

- Good dielectric strength (500 to 1000 volts/mil)
- Lowest dielectric constant (2.0) and dissipation factor (0.0002) of any solid dielectric
- NO change of electrical properties with temperature (25° C. to 250° C.) or frequency (60cps to 100mc.)
- Service range from -320° F. to 500° F. and retains toughness and flexibility throughout temperature range from -110° F. to 500° F.
- Non-flammable, Non-explosive
- Unaffected by corrosive atmospheres and fungus
- Zero water absorption
- Full range of colors for identification

### ADDITIONAL USES FOR BIRFLON T-500 SPAGHETTI

- SHEATHING FOR SEVERAL WIRES
- MEDICAL APPLICATIONS
- INSULATION FOR BARE WIRES
- INSTRUMENT TUBING
- REPLACEMENT FOR HOOK-UP WIRE INSULATED WITH "TEFLON"\*

BIRNBACH is your best source of tubing, made from "TEFLON." Your inquiry and order will receive immediate attention. We offer wide range of standard sizes, colored tubing and special sizes, quick delivery and right price.

# FEEDTHRU — STEATITE PILLARS — CORRUGATED CERAMIC — STANDOFF INSULATORS. TRANSMITTING SOCKETS

## BIRNBACH FEEDTHRU INSULATORS

Made of highly vitrified, low absorption porcelain smoothly glazed to prevent accumulation of dust or dirt. Maximum strength is achieved by the proper proportions and flat mounting surfaces. Long insulating sleeves on the lower part of the insulator contribute much to their performance on high voltages. Brass nickel plated hardware.

## CORRUGATED FEEDTHRU INSULATORS

The six new corrugated type feedthru insulators have more than twice the leakage path of the straight type because of increased surface of the corrugations and recommends itself where a straight side insulator of equal height is not satisfactory because of its shorter leakage path. Brass nickel plated hardware and cork mounting washers supplied.

## STEATITE BUTTONS

This specially designed Steatite button is intended for use to simplify wiring and to be used as a binding post or a binding post insulator. Attention is called to the uniqueness of the design which prevents either section of the insulator from turning in respect to the special screw. The specially designed screw locks both sections.

### microphone cables

#### plastic microphone cable

All Belden Microphone Cables are exceptionally limp, with long flex life, low capacitance, high tensile strength, and high resistance to abrasion.

Plastic Microphone Cables, because of their non-marking jacket and lightness in weight, are excellent for use in audience participation programs.

For Hi-Fi installations, 8401 and 8411 are recommended as connector cords because of their low loss and low capacitance.

The stranded versions of Belden Intercom Cables have the same outstanding features but because of their flexibility are easier to pull through a conduit having more than the usual number of bends.

The vinyl plastic jacket of Belden Intercommuni-  
cation System Cables is tubed for greater flexi-  
bility and fast, easy stripping.

## broadcast audio cables

Belden Broadcast Audio Cables are designed to meet the most exacting requirements of the industry for trouble-free, dependable service. High insulation resistance, precision cabling of the conductors, and a high percentage of shielding assure a low noise circuit, free from crosstalk. Spiral wrap copper shield plus drain wire plus shield isolation eliminate current loops so often found troublesome in this service. Free stripping jackets and fast shield termination reduce installation time and costs to a minimum.

## magnet wire

Nylclad magnet wire combines the most desirable features of Formvar with the well-known toughness and solvent resistance of Nylon enamel.

For difficult and exacting windings, these plus values may represent the difference between low and high rejections.

Nylclad will out-perform all other A.I.E.E., Class A, film-coated wires with respect to: (1) ability to

withstand winding abuse and forming operations; (2) resistance to the solvent action of insulating varnishes and all types of thinners; (3) resistance to softening at elevated temperatures; (4) solvent crazing; (5) windability.

Other types of Belden Magnet Wires available are Beldenamel, Single Cotenam, and Single Nyltex enamel.

# Rome Synthinol . . . . . A ROME CABLE PRODUCT

## THERMOPLASTIC INSULATED HOOK-UP WIRE

Rome Synthinol is a polyvinyl chloride type of thermoplastic insulation impervious to oils, acids, alkalies, moisture and flame, and possessing unusually high dielectric strength. Colors are of rem-like permanency. Approved by Underwriters' Laboratories where exposed to temperatures not exceeding 80° Centigrade or where exposed to oil at temperatures not exceeding 60° Centigrade with ratings at 300 and 600 volts as indicated below. The Underwriters' approval seal appears on every factory length reel of Rome Synthinol.

**SPECIFICATIONS**  
 Conductors: Annealed tinned solid or stranded copper conforming to A.S.T.M. Specification B 33 and/or Underwriters' Standards.  
 In order to provide maximum flexibility and prevent unraveling of the strands, a short lay stranding is used as follows:  
 No. 22 Awg. .33" max. No. 30 Awg. .50" max.

## RUBBER INSULATED HOOK-UP WIRE

The result of extensive laboratory development and proved by a decade of service—Rome Hi-Temp is offered for radio and electronic circuits where resistance to moisture and heat is required.

### SPECIFICATIONS

Conductors: Annealed tinned, solid or stranded copper conforming to A.S.T.M. Specification B 33 and/or Underwriters' Standards.  
 In order to provide maximum flexibility and prevent unraveling of the strands a short lay stranding is used as follows:  
 No. 22 Awg. .33 inch max.  
 No. 20 Awg. .50 inch max.

Underwriters' approved and labeled for 75°C.—500 volts

Insulation: Rome Hi-Temp—a high quality, free-stripping heat-resistant rubber insulation approved by Underwriters' Laboratories.
