## PERMALINE TV TRANSMISSION LINES

COLUMBIA is first to offer a television transmission line with an insulation so good that it can be GUARANTEED IN WRITING to give a service life far beyond the normal life of brown Polyethylene television lines. PERMALINE is a high molecular weight Polyethylene containing carbon black for maximum resistance to sunlight, which has been proven the chief factor in deterioration of ordinary television lines. The insulation value of 50 Mils of PERMALINE is equal to over 150 Mils of conventional brown Polyethylene.

Electrical characteristics of PERMALINE are very similar to Brown Polyethylene television lines but as there is no deterioration attenuation remains constant instead of increasing as is the case with brown Polyethylene, which becomes brittle and cracks. This is truly the first new development in television transmission lines in ten years.

## "SPONGEE" AIR FOAM 300 OHM UHF/VHF WEATHERPROOF LEAD-IN TRANSMISSION WIRE

Saxton "Spongee" foam polyethylene hi-gain lead-in owes its efficiency to the unique arrangement whereby the sponge-like arrangement of the plastic fibers provides thousands of individual but connected cells so arranged that all possible moisture is eliminated between the conductors. This results in the maintenance of a constant impedance and negates the necessity for the sealing or draining of the terminal joints. Abrasion and damage from sun or rain are eliminated by the tough outer concentrated polyethylene wall.

## SAXTON LIGHTNING ARRESTOR

### Identifying No. LA6

A highly efficient arrester and static eliminator made of glazed reinforced porcelain for UHF and VHF applications.

Positive protection is obtained by externally fusing both sides of line so that the circuit is broken prior to damage. Built-in compensating inductor improves reception by maintaining constant line impedance. Resistor network drains off static impulses and prevents dangerous potentials across the set terminals.

## FLOATING GUY RING

### Identifying No. FG

Cast aluminum, 2-piece floating guy ring (see illustration) fits masts up to 1 1/2" in diameter. Available with 3, 4, or 6 holes. Standard 4-hole units will be shipped unless otherwise stipulated. Individually packed, complete with set screw hardware in individual plastic bags, 50 to the master carton.

## GROUND MAST CLAMP

### Identifying No. GMC

Brass alloy mast clamp for use in grounding masts or for effecting ground connection on cold water systems. Ridged tooth inner section makes for good, solid, effective ground. Complete with set screw. (See illustration.) 100 to carton.

## STAND OFF INSULATOR

### Identifying No. "Tappee"

A standoff which is especially designed for use with open line transmission wire installations. To take up slack in line, tighten screws in slots after pulling taut. For use as ordinary spacer—partially tighten set screws (see illustrations). This will permit free movement of wire in the slots, thereby doing away with potential wire breaks due to backward and forward motion caused by wind. Ideal also for use as an anchor point or spacer for "Fence Wire" installations.

For use in 600 ohm installation, use outside two slots. Particularly good for community installations, where random spacing of open lines is desirable to avoid tuned circuits created by regular spacing. Permits inexpensive, efficient, time-saving, trouble-free installations. For use with wire gauges from No. 12 to No. 18.

Molded polystyrene standoff with proper spacing for either 300 ohm, 450 ohm, or 600 ohm installations. 100 to box, 1000 to master carton.

## SPIRAFIL CABLE

Information on Foamflex also available on request.

Spirafil is a semi-flexible, aluminum sheathed coaxial cable which is ideal for community antenna, broadcast, communications, or microwave work. A product of the Phelps Dodge Copper Products Corporation, it is impervious to migratory losses or variation of electrical value caused by chemical reaction, weather aging, or other influences commonly creating this condition. For use in underground or underwater applications, it is also obtainable with a high molecular weight polyethylene habirlene jacket which will allow such installations to be made without fear of corrosion for the life of the installation. Spirafil is made with an impedance of either 50 ohms or 70 ohms, and in either 3/8" or 1/2" diameters.

- Identifying No. SP50-A 3/8" 50 ohm Spirafil  
 SP50-B 1/2" 50 ohm Spirafil  
 SP70-3 3/8" 70 ohm Spirafil  
 SP70-B 1/2" 70 ohm Spirafil

For habirlene covering add H — i.e., SP 50-H is 3/8" Spirafil, 50 ohms impedance, habirlene covering. Spirafil must be ordered in units of 2000'. The unique construction of Spirafil, whereby the center solid copper conductor is centered in the solid, tubular aluminum sheath by means of a spirally wound polyethylene spacer, creates some very interesting features. Some of these features are no radiation, low attenuation, excellent frequency response, uniform electrical properties over wide temperature variations, and unlimited operating life. Additional information and specifications available on request.

### Identifying No.

- TTC—for coaxial cables  
 TTS—for Spirafil or Foamflex cables

The tapping arrangement also provides proper impedance match from the distribution line to the service line.

### Identifying No.

- TTC 59—from RG59 to RG59U  
 TTC 11—from RG11U to RG59U  
 TTC SP—from Spirafil or Foamflex to RG59U

U-8X

Has "Hi-V" reflector. All elements are hardware factory mounted and captivated. Combines hurricane design and high-speed-assembly. Solid rod elements insure low wind resistance and long life. Has cylindrical dipole reflector.

ME-2X

With "Hi-V" reflector. Specify whether solid or doweled tubular elements preferred. Shipped with 8 plug-in rods per multi-arrangement bay. This, and completely aluminum construction, makes the "Universal" an outstanding value.

U4X-TV

Receive all channels. Same antenna as "Universal" except center elements cut to peak at any channel specified, without destroying the antenna's broad band characteristics. Has "Hi-V" reflector.

4X-TVS

Special 1/2-wave stacking and other design details gives this antenna optimum performance on channel 2 to 13 with exceptional low S/W/R. Eight solid or doweled tubular elements. All-aluminum construction.

VU2X-8

7/32" D. solid duraluminum rod, or doweled tubular elements. Six supplied in the 2X-6 type; eight elements, in the 2X-8 type. Both types feature "Universal" style "butterfly" element brackets, at each end of the crossarm, facilitating several radiator and reflector arrangements.

CH4X-16

Requires no rotator to pick up signal from front or back. Transposition bar stacking gives vertically narrow, noise-free reception lobes. Tough closed loops yield lightly in high winds, but have no tendency to snap off.

CLV

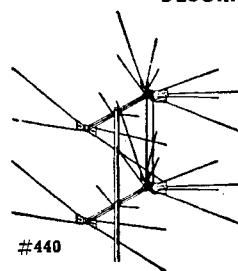

"Conical-V-Beams" are produced under re-issue Pat. No. 23,346, and Canadian Pat. No. 500436 and in England Pat. No. 691485.

MIXER HEAD

### MODEL U2V, UHF CONVERTER

Pulling UHF pictures out of the snow where other converters haven't a chance, the U2V top mounted mixer head converts right at the antenna. The UHF oscillator is mounted at the amplifier location (or at the TV receiver for individual home installations) and feeds signals for conversion up to the mixer (a technique developed in radar installations). Signals leave the mixer as VHF so coaxial cable may be used. The U2V will convert any UHF channel to any VHF channel. Order by specifying UHF channel to be converted to a specific VHF channel.

# POLYSTYRENE ROD — TUBING — SHEET

For radio and electronic applications, because of its very low loss factor at ultra high frequencies, Polystyrene is the ideal material for insulators, coil forms, shields, etc. It has excellent arc resistance, is non-tracking and has splendid insulating properties. Because its water absorption is practically zero it has excellent dimensional stability.

## NOTE "A"

Tuners listed in Col. 1 are basic types supplied to television set manufacturers for original equipment.

Frequently the receiver manufacturer assigns his own type number to the tuner — however, in all cases the **Standard** Coil basic types TV-100-TV-2200, etc., etc., always appears on the tuner chassis.

Note that TV - 1501 or TV - 1526, etc., etc., falls under the category of the TV - 1500 type and that TV - 2201 or TV - 2246, etc., etc., would come under the TV - 2200 type and so on.

## NOTE "B"

The "T" Type approved replacement tuners listed in Col. 2 are **NOT** manufactured with sound traps as integral parts for split sound I.F. systems.

For those systems which previously required the use of a 21.25 MC I.F. sound "take off" coil connected to the tuner converter plate circuit, we have developed our sound "take off" coil part XM752. This coil can be mounted in a suitable location on the TV chassis. Detailed instructions are packed with each coil.

*The various tuner types (TV200 - TV2200 - TV6500, etc.) were brought about by the rapid development in the art of tuner design and development and, to enable Standard Coil to keep pace with the set makers' changes in circuitry, cabinet design and the mechanics involved.*

## IMPORTANT INFORMATION FOR REPLACEMENT APPLICATIONS

**SHAFT LENGTHS** (1) Each approved replacement tuner in Col. 2 is equipped with an extra long **flatted** shaft extending 10-11/32" from front of tuner chassis making it interchangeable mechanically in a wide variety of applications. Installation instructions, including proper circuit diagrams and detailed data on how to cut shafts to proper length included with each tuner.

**MOUNTING DIMENSIONS** (2) Mounting dimensions are standard for almost all applications.

**I.F. CIRCUITRY** (3) The I.F. output of the approved replacement tuners in Col. 2 will match the input of the I.F. amplifier in many cases. However, some applications may require a modification of the coupling networks **i.e.** low side capacitive coupling or two-or-three turn link, wound over the B+ end of the I.F. Coil in the tuner.

Additional helpful information can be secured by referring directly, to the TV receiver manufacturer's schematic for the proper type of tuner output circuitry, necessary for optimum receiver performance.

**SERIES HEATER DATA** (4) The "T" types listed in Col. 2 are not available at present for replacing series heater type tuners (with 600 mil. tubes) requiring insulated shafts or any other tuners with insulated shafts or special applications requiring rear shaft extensions.

## ELECTRIC SOLDERING IRONS

Embodied in these Electric Soldering Irons are features of construction and design that specialized experience—since 1894—has demonstrated to be desirable for efficient and lasting service. Hundreds of thousands are in use throughout the world in a wide variety of manufacturing plants; in service, maintenance and repair shops; Army and Navy Services; in telephone, telegraph, radio and TV stations. Because of their proven efficiency and durability, they are preferred by those who measure the value of a tool by the service it renders.

**No. 3128** For Servicing TV, electronic and radio equipment and similar light work.  
**No. 3138** Designed primarily for production and maintenance in radio, telephone, telegraph, ignition, switchboard and telephone installation work and similar industrial applications.

**No. 3138A** Similar in appearance to the No. 3128-A except that it is equipped with a heat-shield near the handle (like the No. 3138) and the top is  $\frac{3}{8}$ " diameter instead of  $\frac{1}{4}$ " as is true of the No. 3128-A.

**No. 3158** For the same purpose as the No. 3138 but for work requiring an iron of greater capacity.

**No. 3178** For use on still heavier work; for light commutators, service and production work. A very useful iron for general purposes.

**No. 3198** For heavy work of all kinds. Supplies a large volume of heat at high temperature. Used in many different lines; for shop, service, production work, etc.

**No. 3128-A**

**No. 3128A** A companion iron to No. 3128—the angle shape permits easy application to soldering operations difficult to accomplish with the conventional straight No. 3128.

**No. 3138-A**

**No. 3138-A** is a companion iron to the No. 3138 and, likewise, is designed for production and maintenance in TV, radio, telephone, telegraph, ignition, switchboard and telephone installation work and similar applications.

**SPECIFICATIONS:** Available in standard voltages and for 32 volts. No. 3138 also made for 6, 12, 24 and 64 volts. All irons can be equipped with three-conductor cord; one wire grounded, at slight additional charge. Separate heat-insulating stand supplied with each iron except the No. 3138-A.

## American Beauty BANTAM SOLDERING IRONS

Small, compact and lightweight as they are, American Beauty Bantams — like every other model of our line of electric soldering irons — are built to American Beauty traditional quality standards and designed especially for the electronic trade.

They are instantly ready for use; on the other hand, they can be idled for as much as twenty-four hours a day without damage to iron or tip. Their 30-watt input (40-watt also available) provides ample heat for fine and medium-fine soldering jobs of all kinds.

The six models of American Beauty Bantams are the same in design and construction except for the length of casing, tip size and shape of handle.

Handles of our Bantams are flared to protect hand of user from coming in contact with casing of hot iron.

As an added safeguard, a special fibre disc shield is available. Mounted between a welded retainer ring and the handle, it provides additional protection. When ordering, specify "with shield." A small additional charge applies.

\*Also available with angle-type casing covered by Catalog Nos. 3118-A, 3120-A.

## American Beauty TEMPERATURE REGULATING STAND

An automatic device for regulation of the tip temperature of an electric soldering iron while connected to current and not in use. Prevents overheating of the iron and helps to eliminate frequent re-tinning of tip while at the same time maintaining it at full working temperature or lower if desirable or necessary. (Simple adjustment in base.)

The base of stand is plastic; cradle is copper; equipped with receptacle in base for connection of iron and cord with plug-cap for connection to service outlet.

## STANDARD COPPER TIPS

DIAMOND POINT

CHISEL POINT

American Beauty copper tips, both standard and special, are made from commercially pure drawn copper rod — heavily nicked to resist corrosion and oxidation. All are plug type. All tip lengths are proportioned to size of the iron for which they are intended, allowing full insertion into element-core while at the same time permitting sufficient extension from casing of iron for proper soldering. All are available in either diamond or chisel point.

This small pot is used largely for individual dipping of small parts and reaches a temperature of approximately 750°. For higher temperatures, it is possible to use either a #36 or a #60 element. See table below for details.

**No. 12** →

**No. 70T** This is a thermostatically controlled pot, maintaining a temperature of 400/600° to within plus or minus 4°. Adjustable control permits the pot to be used anywhere between these two temperatures. See table below for details.

This pot is used for dip soldering of bundles of lead wires and where a slightly hotter pot is required than the #12. It operates at approximately 750°. If a higher temperature is required, a #60 element may be used. See table below for details.

**No. 36** →

**No. 75T** This pot is similar in operation to the #70T, but is intended for the dipping of small panels which cannot be accommodated in a round pot. Temperature range is 400/600° plus or minus 4°. The pot is also available without a thermostat but is then catalogued as #75. Without a thermostat, the pot reaches a temperature of 850°. See table below for details.

This pot is used for volume finning and operates at a temperature of 800°. On occasion where production requires greater heat drain capacity, elements of a higher wattage than the standard 325 watt have been supplied. However, we recommend the use of the #70 600W Pot for this greater heat requirement and higher temperature. See table below for details.

**No. 60** →

**No. 80** This pot is intended for printed circuit panels and is thermostatically controlled. Temperature range is 400/600°. The pot stands on 4 corner posts in a sand tray, which has screws for leveling. See table below for details.

This is a high heat pot reaching a temperature of approximately 900°, and has considerable heat drain capacity. Where pots are required for 220V operation, longer element life will be secured than in the case of the #60. See table below for details.

**No. 70** →

**No. 90** This is a high temperature pot intended for silver soldering, and will maintain a temperature of 1300/1500°. See table below for details.

This sand tray will accommodate all of the round base solder pots shown on this sheet. The tray is fitted with leveling screws. See table below for details.

Four-tap

Specially designed transformers are available as optional equipment in two types:

1. Single-tap, 115- or 230-volt primary—for use where only one soldering heat (25 watts) is required
2. Four-tap, 115- or 230-volt primary—gives wide range of heats (from 25 to 35 watts) for close temperature control of tips

Transformers are small, lightweight, but sturdy. Their 6-foot extension cords can be plugged in any 115- or 230-volt outlet.

## 1/4 Ounce PRECISION SOLDERING INSTRUMENTS

### Model 6

The smallest, lightest ORYX soldering instrument. Its precision tip greatly simplifies the manufacture and service of electrical measuring instruments, hairspring movements, r.f. coils, and fine sub-assemblies of all kinds. Particularly recommended for soldering to transistors and diodes!

### Model 6A

The most popular ORYX soldering instrument. Model 6A combines the light weight advantages of Model 6 with the convenience of inexpensive, replaceable tips. Widely used on hearing aids, tuners, printed circuits, and transistor amplifiers.

### Model 9

An outstanding recent development! Model 9 is unequalled for use on complex circuitry; radar, color television, missile sub-assemblies, electromedical devices, all applications calling for a precision tool with generous heat capacity.

### Model 11

NEW! This special high-temperature model develops a searing 400 degrees C. Specifically designed for high-temperature solder alloys and applications requiring a hotter iron. Uses pure nickel tip.

### Model 12

The standard ORYX instrument for radio and television service and manufacture. Model 12 has unbelievable heat capacity and is widely used by production departments, service shops, and radio amateurs.

**POWER SOURCE.** ORYX soldering instruments operate from AC or DC. They are generally powered by a step-down transformer, although any low voltage source is suitable, including dry cells, automobile battery, filament transformer, or laboratory power supply.

**SPARE TIPS.** Replacement tips are available for all ORYX soldering instruments except Model 6. They are formed of a special copper alloy and are heavily nickel plated to minimize the need for tinning and dressing.

### TECHNICAL ADVANTAGES

#### ERSIN FLUX

Ersin Flux is exclusive to Multicore and will not be found in any other solder. It is a high grade, water white rosin, homogeneously activated.

Ersin Flux has a vigorous fluxing action and possesses the non-corrosive and protective features of the original rosin. Soldered joints made with Ersin Flux do not corrode even after prolonged exposure to any degree of humidity. Ersin Flux reduces the surface tension of molten solder, causing it to wet metals rapidly, increasing speed of operation with resultant production economies.

Free from objectionable odor. Non-toxic in use. Leaves nothing but pure rosin on the work after soldering, and may be used wherever plain rosin is specified.

#### MULTICORE SOLDER

Five separate cores of flux eliminate possibility of no flux in a portion of the wire, which may occur in single cored solder. Guaranteed continuity of the flux stream prevents "dry" joints, i.e., those having high electrical resistance.

Although there are five cores of flux in Multicore, the total percentage of flux to solder is less than many single cored solders.

Very rapid melting results from the multiple core construction which provides thinner walls of solder than are found in the same gauge single cored solder. Multicore's unique properties make perfect joints possible on difficult metals and alloys, even if oxidized.

Ability to tin rapidly produces perfect joints with less solder. Greater coverage per pound.

## DECALS FOR ELECTRONICS

- TITLE PLATES

- HIGH VOLTAGE SIGNS

### For convenience - safety - appearance

The world's largest assortment of Decals for Electronics contains over 200 different title plates, dial plates, alphabets and numerals, high-voltage signs in red, call letters in black and gold. The Decals are printed in neat, opaque letters on a clear, tough backing. Top surface has a tough protective coating which provides high resistance to wear. Superior adhesive qualities of Decimeter Decals, and the toughness of the backing material, bonds the Decal in place so tightly that danger of peeling or chipping is eliminated.

Water-type "slip-off" decals

### SILVER Q FLUX

- Especially compounded for radio soldering
- Leaves no gummy residue
- Does not stain the work

Silver Q is a free-flowing flux designed for fine metal soldering. Silver Q is applied with a small brush to the surface to be soldered. When the work is rapidly heated and coreless solder is applied, the solder flows almost instantly over all fluxed surfaces—even into the tightest joints. Excess flux may be wiped off with a damp cloth. Silver Q leaves no stain or gummy deposits on the work.

### DECASOL ADHERENT

- Bonds decals permanently
- Improves adherence to rough surfaces

Decasol decal adherent is a permanent bonding medium for attaching decals to paint, plastic, or enamel surfaces, either rough or smooth. Decasol is a solvent which dissolves the back of the decal into the surface to which it is applied. Decasol should be used when decals are subject to extremely hard usage, or prolonged dampness. It is impossible to remove a decal adhered with Decasol without damaging the surface.

# SPECIFY ATLEE PRODUCTS—WHEN YOU WANT THE BEST!

## atlee COMPONENT HOLDERS

Provide firm holding under extreme shock and vibration. For capacitors, resistors, relays, wires, cables, tubing, etc. Withstand vibrations of 10 to 500 cycles and 5 to 20 G's for eight hours without resonant frequencies. Structurally designed to derive maximum grip from the component itself. Made of spring steel which flexes under heavy vibration and temperature changes, automatically increasing holding power when most needed. SPECIFICATIONS: SAE #1065 tempered carbon steel, formed in the annealed state, cadmium plated, per QQ-P-416, Class B Type II Iridite #4, able to withstand minimum 50-hour salt spray test, per AN-QQ-S-91. SIZES: 0.175 to 1.125. FIL-O-MATIC REFERENCE: section 19, page 4, for more information.

## atlee SUBMINIATURE TUBE HOLDERS AND SHIELDS

For conditions of extreme shock and vibration, high-rate heat dissipation and minimum-space mounting. Withstand up to 20 G's at 500 cycles without resonant frequencies; average heat reduction over 50° (tests); low center design for minimum space — maximum holding power. Ultimate in convenience — no wrap-around motions in cramped spaces — just clip in or clip out. Tubes can freely be removed and replaced without loss in Holder performance. Holders available in silver alloy and silver-plated beryllium copper as well as cadmium-plated tempered carbon steel. Shields available in silver alloy and silver-plated brass. Vertical and Oval Sub-miniature Tube Holders available in tempered carbon steel. FIL-O-MATIC REFERENCE: section 19, pages 1 and 2, for more information.

## atlee CRYSTAL DIODE CLIPS

For miniature, low-cost support and/or connection of crystal diodes. Tiny, compact, yet strong and durable. Assure positive electrical contact under high shock and vibration. Can be dip-soldered or riveted into printed circuits. Afford convenience as well as diode protection — no solder joints to make or melt, just clip diode in or out. 100 insertions and withdrawals reduce gripping force less than 6 ounces. SPECIFICATIONS: silver-plated phosphor bronze, spring temper, grade A, per MIL-B-892; contact resistance: 0.00075 ohms; capacitance: less than 1 mmf between clips,  $\frac{3}{16}$ " spacing; insertion or withdrawal force: 2 lbs. (initial). SIZES: 0.065" to 0.085" (terminal pin), for thru-panel, surface-panel or rear-of-panel mounting. FIL-O-MATIC REFERENCE: section 19, page 3, for more information.

## atlee JAN SHIELD INSERT

Designed to reduce tube failures, the JAN Shield Insert lowers miniature tube bulb temperatures by as much as 100°C. and provides almost perfect electrostatic shielding. It was developed by the Reliability and Standards Branch of the Navy Electronics Laboratory. The JAN Shield Insert is made of corrugated brass shim stock with Ebonol C finish, to withstand 50-hour salt spray test. Bent into circular shape, with the ends fitted together, it is inserted inside the older JAN Shields in all present equipments. The Insert makes contact with the glass bulb on one side and with the Shield on the other, distributing the hot spot on the tube and conducting the heat to the shield with a greater radiating surface. Available in small, medium and large, for both 7 and 9-pin tubes. Send for bulletin for more information.

## atlee LUCITE CAP NUTS

For superior electronic assemblies. Non-corrosive, non-fungi nutrient. Cannot be shaken loose by vibration. Extremely useful as lock nuts over conventional metal nuts. Easy to put on — hard to take off. Due to the microscopic "nap" developed as the Lucite Nut is tightened by hand in one direction, a real force by a wrench is necessary to reverse that "nap" and loosen the Cap Nut. Repeated screwing and unscrewing, however, does not affect this locking quality. Made of clear methyl methacrylate, they are available either clear or dyed. Using standard colors, color coding for circuit identification is possible with dyed Cap Nuts. SIZES: 4-40, 6-32, 8-32, 10-24, 10-32, 12-24,  $\frac{1}{4}$ -20,  $\frac{3}{16}$ -18. Send for bulletin for more information.

## ACRYLIC SPRAY COATING

**for Television, Radio, Electronic Use**

- prevents corona in high voltage sections
- keeps lead-in connections tight
- prevents rusting and pitting of antennas

Just spray it on — that's all! No special equipment needed. Krylon dries in a few minutes to form a hard, waterproof coating that seals and lasts. Resists climatic conditions, salt spray, etc. . . . doesn't dry out or crack. Krylon, due to its high dielectric strength, prevents many of the causes of picture fading and high-voltage section losses.

"KRYLON-izing" is standard procedure in TV installations! And for one good reason: it pays off in dollars and cents!

### Krylon Characteristics

Dielectric constant of 3.2 to 3.7 (1,000 cycles)

Dielectric strength of 400 to 800 (number of volts necessary to cause an electric arc through a Krylon coat one mil thick)

Electrical resistance of  $10^{10}$  ohms/cm<sup>2</sup>.

**Cut down contact service calls—easy with Krylon**

- Spray Krylon Crystal-Clear on high voltage coil and insulation; in socket of high-voltage rectifier; on transformer and other component parts . . . to help prevent corona and arcing . . . protect against dampness . . . minimize wire cover fading.

### INSTRUCTIONS — FOR MEASURING BELTS

To determine size of belt, if the old belt is available, cut the belt and measure for stretched out length. This will be "cut length" of belt. If old belt is not available or is worn out so that it cannot be properly measured, stretch a thin thread around belt pulleys on set. (Be sure to use thin thread as a thick cord will give an inaccurate reading.) Measure the thread. It will be our "circumference around pulleys." In measuring belts always remember that the circumference around pulleys is not the same as stretched out or cut length. A belt when cut, develops approximately  $\frac{1}{8}$ " extra length when stretched out, depending on thickness of belt.

## BALL BEARING RATIO DRIVES

**A Totally New Concept! Up to 20:1**

For exceptionally smooth control of electronic components in instruments. A unique series of "in-line" ratio drives utilizing precision, ball-bearings, provide exceptionally smooth rotary control of circuit functions in electronic applications. Ruggedly built and permanently lubricated, these units are small in size.

Cat. No.	Ratio	Output shaft				Mtg. Ctr. Dia.
		A	B	C	D	
RDL-1	2.66:1	29/32	1-1/8	1/4	1-3/4	1-3/8
RDL-2	7.08:1	1-11/32	1-1/8	1/4	1-3/4	1-3/8
RDL-3	18.8:1	1-3/4	1-1/8	1/4	1-3/4	1-3/8
RDS-1	2.7:1	19/32	5/8	1/8	1-1/8	7/8

RDS-3	19.65:1	1-1/64	5/8	1/8	1 1/8	7/8

## RIGHT ANGLE RATIO DRIVES

Featuring dual output shafts, this series of miniature, right angle drives for the control of components, is available with matched bevel or worm gears with a wide range of ratios. Assembled in dust-proof housings, the gears are permanently pinned in place on stainless steel shafts, mounted in oilite bearings and held under constant pressure, with thrust washers.

### BEVEL GEAR RIGHT ANGLE DRIVES

Cat. No.	Ratio	"A"	"B"
RABG-1	1:1	1/2	1/2
RABG-2	2:1	1/2	1/2
RABG-3	3:1	1/2	1/2

### WORM GEAR RIGHT ANGLE DRIVES

Cat. No.	Ratio	"A"	"B"
RAWG-1	5:1	3/4	3/4
RAWG-2	10:1	3/4	3/4
RAWG-3	20:1	3/4	3/4

Note: JAN'S WORM GEAR RIGHT ANGLE DRIVES are especially suited to handling spring or gravity loaded components since the output shaft automatically locks in any desired position and is controlled only by the input shaft which remains free for smooth drive in either direction.

## SLIP-CLUTCH KNOBS

**Fixed or Retractable Spinner**

Designed for driving devices such as variable capacitors, inductors, potentiometers, etc., these knobs work on the principle of a "slip-clutch," automatically disengaging and slipping when a predetermined torque is exceeded. JAN'S SAFETY KNOBS are fluted to aid in sensitive adjustment and also have either a fixed or a retractable spinner for fast turning. Made from single unit construction, molded Bakelite-to-metal inserts, these knobs safeguard delicate and costly instruments against careless or inadvertent cranking beyond their normal stops. Note: Model K-1376 is identical to Model K-1375 but has the additional feature of a retractable spinner. It has a positive toggle type action, being spring loaded in either open or closed position and thus is useful where equipment must fit into small spaces.

## SPINNER KNOBS

Models K-1275 and 1276 are spinner knobs having an identical appearance to K1375 and K1376 respectively and are available without the slip-clutch mechanism. Designed for 1/4 inch shafts, these knobs are made from single unit construction, molded black bakelite-to-brass insert. Supplied with two set screws for firm attachment to the shaft.

## JACK COVERS (Trimmer Covers)

These sturdy JACK COVERS are used to keep out dust and moisture and to prevent inadvertent disturbance of control settings. They are made of steel finished in enamel after bonderizing. Supplied assembled with stainless steel spring, hinge pin and neoprene pad. Fit jack or panel bushings. Supplied in three standard finishes. For black wrinkle specify (-1), smooth grey(-2), olive drab (-3) or other colors to order.

**NOTE: J-1300 "SNAP-JACK" IS A TOTALLY NEW DESIGNED JACK COVER. IT SNAPS TO OPEN OR SHUT POSITION AND WILL REMAIN OPEN TO 90° until snapped shut!**

**J-1304 IS A MINIATURIZED JACK COVER SIMILAR TO J-1301.**

## "JOLTA" SHOCK TESTING MACHINES

JAN'S "Jolta" shock testers for small components provide for rapid and precise testing of anticipated shock stresses. Designed for laboratory and production testing of instruments such as relays, electric meters, clocks, transistors and other electrical and electronic devices, they are accurately calibrated for direct readings in accord with specifications now required in most military and Commercial contracts. The testers are ruggedly built and accommodate all shapes of test specimens. Specimens may be tested while in actual operation and under electrical load. Each machine is individually calibrated and computation charts are supplied thus insuring accurate interpretation of test results. JOLTA SHOCK TESTERS feature the exclusive JAN INERTIA BRAKE which automatically captures the carriage at the summit of its first rebound eliminating secondary (irrelevant) shocks and dangerous manual grasping.

## JAN THICKNESS GAUGES

JAN's thickness gauges are a necessity for adjusting condenser plates and microwave plumbing. They also suit the needs of the engineer and the machinist for general use—such as measuring shim stock requirements, determining flatness of machined parts, amount of backlash, and adjusting drill jig or milling fixtures. These gauges are manufactured from fine grade hardened and tempered steel, with tolerances of plus or minus .00025" to .0005", and are guaranteed to be accurate. All numerals are permanently etched and legible.

### Auxiliary Planetary Drives

The two ball-type planetary drive units on this page are useful whenever a compact drive is needed for reduced-speed operation of light mechanisms. Both have a ratio of approximately 5 to 1. They may be used as auxiliaries to existing instruments or incorporated in new construction. Both of these units have hubs to fit 1/4" instrument shafts. Croname planetary units are made as detailed below. To meet all needs, there are single speed and two speed models. If desired two planetaries can be operated in tandem to produce a combined ratio of approximately 25 to 1; a drive ratio of 5 to 1 will also be available at the same time if the front unit of the pair is one of the two-speed units.

### Two-Speed Planetary Drive

No. 599—This is an "A Type" adjustable unit as explained below. Permits slow speed operation at approximately 5 to 1 ratio and high speed at 1 to 1. Our No. 6665 pair of knobs below fits this unit. No. 599 is a precision device used for both military and civilian production. Can be used as a single-speed drive by omitting knob on the high-speed sleeve. Complete with mounting accessories.

List Price ea. \$10.61

### Single Speed Planetary Drive

No. 27067—"Type A." This unit is the same as No. 599 described above except that the sleeve for a high-speed knob has been omitted; in its place there's a threaded sleeve with shoulder so an milling-dial or pointer may be installed. Clamping nut, clamping washers and planetary anchor stud are included. Has 1/4" diameter knob shaft and fits 1/4" diameter instrument shaft.

List Price ea. \$10.61

All Croname planetary units depend on the action of steel balls that rotate between the knob shaft and a concentric sleeve that is attached to the driven instrument. "Type A" units are adjustable so that the pressure on the balls can be varied to match the operating load; this assures maximum smoothness while maintaining adequate torque. Maximum torque 14 inch ounces; minimum torque 10 inch ounces.

### Pair of Knobs

No. 6665—These knobs fit the No. 599 two-speed planetary drive. Large knob is aluminum, 1 3/8" diameter drilled 3/8" to fit high-speed sleeve on planetary. Smaller knob is molded black butyrate with brass insert to fit 1/4" low-speed planetary shaft. Both are supplied with set screws.

List Price ea. \$ 1.12

### Auxiliary Gear Type Drive Unit

No. 104—GEAR REDUCTION UNIT. Double-gear and spring design eliminates back-lash in this gear and pinion mechanism. Provides 6 to 1 ratio between knob shaft and drive shaft of your instrument. Accepts any knob with 1/4" shaft hole and has removable reducing bushing in hub so the same unit can be used on either 1/4" or 1/8" instrument shaft. Complete with set screw.

List Price ea. \$7.30
