**FOREWORD**

The *Radio-Electronic* MASTER (formerly RADIO'S MASTER®) is the Official Buying Guide and Reference Book for radio-tv-electronic parts and equipment sold by distributors.

•

While most distributors maintain a large and varied stock, they do not represent that they necessarily stock all manufacturers' products cataloged in this MASTER.

•

Prices are furnished for information only — they are not offered as quotations.

•

**WHERE LIST PRICES ARE SHOWN, TRADE DISCOUNTS APPLY IN MOST CASES . . . PHONE OR WRITE FOR PRICES AND DELIVERY.**

•

Participating manufacturers reserve the right to make mechanical changes in specifications, to change prices or withdraw items without notice.

•

Every precaution is taken to insure accuracy in the preparation of these catalog pages and indexes. The publishers cannot guarantee against the possibility of error or omission, nor can they be held responsible for price changes or withdrawal of items during or after publication.

**IMPORTANT**

**When ordering, please mention The MASTER, 21st EDITION, also page number on which the item appears and specific catalog or code number, if any. This will help to expedite the filling of your order and lessen the chance of error.**

# PENTA

high-efficiency

## POWER TUBES

Major electronic equipment manufacturers specify Penta high vacuum and hydrogen thyratron tubes where long life, uniform high quality, and adherence to specifications are strict requirements. Thorough quality control and life testing under conditions simulating actual use assures maximum durability.

Whether your requirements are for the new beam pentodes — for applications where superior linearity and low distortion at high efficiency are critical requirements — the new miniaturized hydrogen thyratrons — or the older conventional types — Penta is your logical source.

## NEW E-V CIRCLOTRON POWER AMPLIFIERS

### FEATURING . . .

- CIRCLOTRON CIRCUIT
- EXCLUSIVE CRITICAL DAMPING CONTROL
- MODERN STYLING

Model A20

Model A100

A complete, beautifully-styled line—the result of a new approach to design and development of high-fidelity amplifiers. All power amplifiers and preamplifiers, except Model A100, feature a brushed-brass and rich brown baked enamel finish. Custom knobs have matching finish. The fine styling of these beautiful amplifiers matches E-V's new companion line of stereophonic FM-AM tuners and will blend with contemporary room decors.

E-V's New Circlotron Circuit removes all DC output current from the output transformer through the use of a bridge circuit. All switching transients are eliminated through unity coupling between output tubes. Allows cool optimum, efficient utilization of output tubes . . . extends their life . . . reduces distortion. The primary impedance of the output transformer is one quarter of that found in conventional amplifier output circuits, allowing an increase in power output at extremes of the frequency spectrum.

E-V's New Critical Damping Control permits perfect match of amplifier to the critical damping resistance of the loudspeaker, as well as to type of enclosure. Operates optimally into the variable impedance of a speaker load rather than a purely resistive load as in previous amplifiers. Control eliminates speaker bass losses from over-damping . . . minimizes low-frequency distortion . . . subdues hangover due to underdamping. Assures most efficient sound reproduction. Control is continuously variable, covering all commercially available high-fidelity speakers and enclosures.

Public address, paging, music distribution, and intercommunication systems for every need—indoor, outdoor, portable or mobile—for the large factory, school, church, stadium, or the small office, auditorium, bus or store—designed and built by the country's largest manufacturer of sound systems.

Bogen amplifiers range in power from 10 watts to 125 watts and are available in a wide variety of "package" systems including different microphones and loudspeakers for different applications. In addition, if you have a special problem, the Bogen Custom Engineering Division will design and assemble a system for your particular installation, regardless of size.

The table below lists the Bogen P.A. amplifiers and package systems. All are conservatively rated in accordance with accepted engineering standards. Each has a frequency response carefully selected to insure

optimum performance in the applications for which the model has been designed.

Each amplifier marked with an asterisk (\*) carries Underwriters' Laboratories approval. Each is finished in tasteful tones of green and buff or green and gray. All, except the mobile and phonograph top models, are available on panels for mounting in standard steel racks, if so ordered. (Panel mounting adds \$24.25 or \$30.75 to the list price, depending on the model.)

Deluxe models JX50 and JX30 incorporate the exclusive Bogen ANTI-FEEDBACK CONTROL, which permits the tuning out of acoustic feedback and hence the use of more power in the system. These models also feature separate, continuously variable bass and treble tone controls, and provision for plug-in remote volume control of two input channels. (Order remote control unit separately—SCR50 [50-ft. cable] at \$16.75 list price, or SCR100 [100-ft. cable] at \$21.75 list price.)

All "J" models (except J1623) have provision for easy plug-in of low impedance input transformers, when it is desired to use low impedance microphones located a considerable distance from the amplifier. Order plug-in transformers separately for desired number of low impedance inputs: T155, T156, T157, for 200, 500, 50 ohms, respectively. For low impedance input on J010, J050 or J030, order T161 (500 ohms). In addition, models HE10 and RP1 may be ordered as low impedance versions HE10 and RP-1L for \$13-\$25 additional to the list price. "J" models also feature broadcast-type microphone connectors, with positive lock and quick disconnect.

For simple, rapid impedance matching between amplifier and speakers, constant voltage output taps (70 volts, 140 volts) are provided on all Bogen amplifiers where there is likely to be need for them in addition

to conventional constant impedance taps. These eliminate the involved calculations previously required to determine the necessary speaker matching transformers, if any.

All indoor systems include a microphone and two or four speakers mounted in wall baffles (G), with connecting cables and plugs. Outdoor systems include a microphone with cable and plug and one, two or three trumpets. Portable systems include a microphone and two speakers mounted in a carrying case (H), with cables and plugs. The case, which also carries the amplifier, divides into two speaker baffles ready for instant use.

No matter what your requirements, you cannot buy a sound system of finer performance or greater dependability than a Bogen.

More stations can be added at any time; all stations will receive any messages transmitted by any other station. Mobile-units can be moved anywhere an electrical outlet is available. Uni-Trans gives you dictation and supervisory control. When set for Uni-Trans, unit provides continuous transmission to other unit, to dictate or to "listen in" ... for example, on baby's room. The "Sonic Gate" together with the Talk-A-Phone "Squelch," effectively suppresses line noises and hum while system is in actual operation as well as when in stand-by position. Beautifully styled in sturdy, impact bakelite cabinets, finished in rich walnut or executive gray. For 110-120 volt AC-DC. All units in system must operate from same electric service transformer. Size 8 1/4" x 6 1/4" x 7 1/2". Complete with tubes and instructions.

### The New 6-Station Selective Wireless System (Figure 4)

Simple to install, no wiring, simply place each Master where needed, plug into an electrical outlet, and talk! Where changes of location are desired, simply pick-up the unit and move it. Each Master Station has a 6-Channel Selector and can converse with any other station selectively, and can receive calls on any channel it elects. Hold as many as 3 separate conversations with 6 Masters. Masters can also setup conferences. Where some locations need not originate calls, but must reply when called, Wireless Staff Stations are available. Wireless Staff Stations can also be used to receive Paging calls simultaneously from any Selective Wireless Master Station in the system. Use as many Wireless Staff Stations as needed (all Staffs must operate on same channel for this purpose). Equipped with the most effective noise-free circuit ever developed, the "SONIC GATE CIRCUIT". ## NEW TALK-A-PHONE DELUXE SYSTEMS

### Master Selective Systems (Figs. 1 & 2)

A system consisting of one Master Station and one to ten Sub-Stations. Master Station can talk and listen to any one Sub-Station or with all simultaneously. Sub-Stations do not communicate with each other. Only the Master Station plugs into an electrical outlet. You may start with only one Master and one or two Sub-Stations and then add later when necessary. Installation of system has optional feature, whereby Sub-Stations can be connected "privately" or "non-privately" and still originate calls to the Master under either application. Once a conversation has been initiated with a "non-private" system, persons at Sub-Stations need operate no controls and can reply from a distance. When the system is connected "privately," Master unit cannot "listen in" on Sub-Stations. However, they can reply when called, and also originate calls to the Master. Operates universally on 110-120 volts, AC-DC, U.L. Approved. The AC-5406 and AC-5411 Master Stations operate as above with the added feature of 10 times volume output. A desirable feature for large areas or noisy locations. Operates on 110-120 volts, AC only. Only one master station can be used in these systems.

Master Stations may talk to each other and to all Sub-Stations in the system selectively; or you can have one or more Sub-Stations which are exclusive to only one Master Station (as illustrated in the diagram above). Master Stations have the option of making themselves "private" or "non-private" at will. You can begin with two stations (at least one must be a Master) and add other units as required. ### "Chief" Redi-Power Master Stations (Figure 2)

"Chief" Redi-Power Master Stations have all the operational features listed above, plus the additional feature of built-in extra power for use when needed. This added power (up to 20 watts), gives you the additional volume needed, for example: when calling a number of stations at one time or calling noisy locations. Return speech from called stations is received at normal volume. Needs no separate power booster which would eliminate return speech. "Chief" Redi-Power has self-compensating volume, whether you call 2, 10 or 20 stations simultaneously. Each station receives its pre-determined volume with no division of output when you call more stations at one time. One or more Redi-Power Masters can be combined with regular Chief Masters and Staff Stations in same system. 110-120 volts. AC only.

Redi-Power Master Stations are also available with the added feature of pre-selected paging for each master unit as Model C-RP-5911. Provides 11-station capacity with one selector button for paging. Each Master may page its own pre-selected stations without any external paging equipment. 110-120 volts. AC only.

### How to Determine Cable Requirements

To inter-connect Master Stations, measure from first Master to second Master only, from second to third Master only, etc., until the last unit in the system is reached, and total. For C-4920 and C-RP-5920, use two lengths of 6224 Cable; and for C-4930 use three lengths of 6224 Cable, etc. To connect C-41, C-20, HP-2 or HP-3 Staff Stations, measure from Staff Station to the one Master to which Staff Station originates calls. To connect C-42 and C-46 Staff Stations measure a separate length of cable from Staff Station to each Master Station to which Staff originates calls (for each C-42 or C-46, follow same procedure).

### "Chief" Staff Stations (Figure 3)

For use with any "Chief" Master, Staff Stations may be connected "privately" or "non-privately." Connected "non-privately," persons can answer Master at a distance from the Staff without operation of any controls. Persons at "non-private" Staffs may reply to all Masters in the system (whether connected directly to them or not) and can originate calls to one, two, or up to six Masters, depending upon its capacity. Connected "privately" no one can "listen-in," but any Master can call. Private Staff can originate calls and reply to 1, 2 or 6 Masters depending on its capacity. Staff Stations do not need electrical outlet. Handsomely styled in molded impact bakelite cabinets. Walnut finish. Size: 8 1/4" wide, 6 1/4" high, 7 1/2" deep.

# New! AUTOMATION IN INTERCOM...

## The New TALK-A-PHONE Super Chief

**TWO NEW SUPER CHIEF AUTOMATION SERIES** to meet the intercommunication needs of modern business.

- Series 7700 featuring Sensational New AUTOMATIC VOICE CONTROL and AUTOMATIC TRAFFIC CONTROL.
- Series 7600 featuring AUTOMATIC TRAFFIC CONTROL and manually operated TOUCH CONTROL.

Both VOICE CONTROLLED and TOUCH CONTROLLED Series can be intermixed.

For the discriminating executive. The TALK-A-PHONE SUPER CHIEF system features many exclusive achievements in inter-communication engineering.

- **BUILT-IN AUTOMATION** — Only the new TALK-A-PHONE SUPER CHIEF system gives you AUTOMATION—an exclusive TALK-A-PHONE feature which provides for AUTOMATIC VOICE CONTROL\*, AUTOMATIC TRAFFIC CONTROL, and AUTOMATIC MONITORING SIGNAL\*, as well as "closed circuit" CONFERENCES—all automatically.
- **AUTOMATIC VOICE CONTROL\*** — An exclusive TALK-A-PHONE feature. No longer is it necessary to manually operate a Talk-Listen Control during conversation; yet you have "private" and "selective" communication. Your own voice automatically operates the Talk-Listen Control for you. Operates automatically on VOICE CONTROLLED MASTERS, even when conversing with TOUCH CONTROLLED MASTERS. (Only TOUCH CONTROLLED UNITS need manually operate Touch Talk-Listen Control.)
- **AUTOMATIC TRAFFIC CONTROL** — Automatically determines and controls the traffic on the line. GREEN VISUAL SIGNAL... line is "clear"... communication established by you... voice goes through. RED VISUAL SIGNAL... line is "busy"... communication cannot be established by you... voice cannot go through. AMBER VISUAL SIGNAL... line is being called... communication is established with you... caller's voice comes through... ready for your reply.
- **AUTOMATIC REPLY** — Directs your reply automatically only to the station calling you. It is not necessary to know which station is calling; and no other station can listen-in. When called at a VOICE CONTROLLED MASTER, simply depress and lock AUTOMATIC REPLY BUTTON\* and continue your conversation without further use of any control. AUTOMATIC REPLY BUTTON may be left depressed when not in conversation so that you may answer calls instantly from VOICE CONTROLLED MASTERS without touching unit. When called at a TOUCH CONTROLLED MASTER, simply depress TOUCH BAR to talk; release TOUCH BAR to listen. Your reply will automatically be directed only to the station calling you.
- **CONFERENCE CONTROL** — Provides for "private" "closed-circuit" conferences between as many as four Master Stations. VOICE CONTROLLED\* and TOUCH CONTROLLED MASTERS can be INTERMIXED in a conference. Stations not selected to be "in" on the conference cannot interrupt or listen-in to conference.
- **DYNASONIC DESIGN** — Assures maximum flexibility. Provides for intermixing of VOICE CONTROLLED\* and TOUCH CONTROLLED\* TALK-A-PHONE SUPER CHIEF units. 4, 10, 20, 30 and 40-Station Masters, Staffs and Subs can be used within the same system.
- **MULTI-MAGIC SELECTOR** — The patented TALK-A-PHONE feature that gives you 4, 10, 20, 30 and 40 station capacity in the SAME BEAUTIFUL CABINET. Up to 20 station capacity with only 12 push buttons; 30 and 40 station Masters have 14 push buttons.
- **AUTOMATIC MONITORING SIGNAL\*** — A feature of Model ACS-7701 Staff Station which visually indicates to the Staff that it is being monitored.
- **TOUCH CONTROL WITH UNI-TRANS\*** — Convenient TOUCH-BAR\* operates Talk-Listen Control. Depress TOUCH-BAR to "talk"; release TOUCH-BAR to "listen". Depress and Lock TOUCH-BAR in UNI-TRANS position for dictating without further operation of controls.
- **CRADLE PHONE** (Optional accessory) — Live Microphone. Provides greater listening and speaking privacy. Use in noisy areas to diminish background noises. WHEN CRADLE PHONE IS USED WITH ANY MASTER OR STAFF STATION OF THE SUPER CHIEF SERIES, INCLUDING TOUCH CONTROLLED UNITS, PERSONS AT SUCH UNITS NEED NOT OPERATE ANY CONTROLS TO TALK AND TO LISTEN while conversing over Cradle Phone.
- **POWER PAGING** — Can be added at any time. To provide the latest and most modern power paging circuit whereby any Master can page, add Model HP-30 (30-watt) Power Booster and auxiliary speakers, (Models HP-3 and C-20.)

\* A feature of Series 7700. † Applicable to Series 7600.

TALK-A-PHONE SUPER CHIEF STAFF STATIONS are available in both the TOUCH CONTROLLED and VOICE CONTROLLED series. Staff Stations can reply, when called, to any Master Station of either series in the system, but cannot originate calls. Model ACS-7701 VOICE CONTROLLED Staffs can reply at a distance without operating any controls, and are equipped with AUTOMATIC MONITORING SIGNAL which visually indicates when Staff is being monitored. Model ACS-7601 TOUCH CONTROLLED Staff, must manually operate Talk-Listen Control to reply. For locations where reply is not necessary use SUPER CHIEF Sub-Stations. Both VOICE CONTROLLED and TOUCH CONTROLLED Masters can call Subs but Subs cannot reply or originate calls.

### HOW TO DETERMINE CABLE REQUIREMENTS

*Quality Loudspeakers*

The Bozak Loudspeakers and Speaker Systems are recognized as being the most suitable of any available today for use in wide-range, low-distortion music systems. The line includes only three basic units — Treble, Mid-Range and Bass — all of which are of equal quality and compatible design. Each is designed solely for optimum performance in its range, and for use in multiples with other Bozak Speakers to form various two-way and three-way systems of power-handling capacities from 15 Watts up. Existing Bozak Speaker Systems may easily be expanded at any time by the addition of more Bozak units and without problems of balancing and leveling. Each Bozak Speaker System, properly mounted and powered, offers the finest transient response, lowest distortions, widest usable frequency and dynamic ranges, that can be had at anywhere near its price. Experienced listeners agree that Bozaks are unrivalled for realism and listening ease. All Bozak Speakers, being of the direct-radiating type with gradual rolloff, are

completely compatible with each other. No leveling controls or pads are required for use in multiples. The "slow" crossover rate of 6 db per octave is achieved through non-resonant networks that cannot cause the "ringing" (transient distortion) commonly associated with sharp-cutoff networks. **Mounting** should be in an infinite baffle (large wall), or a true horn, or in a rugged, acoustically-lined, completely-enclosed box. Under no circumstances should a "tuned" or resonant chamber be used for Bozak Speakers, because this type of enclosure destroys the perfect transient response inherent in the drivers, and introduces spurious peaks that distort the smooth, robust, true-pitch bass.

**Associated Equipment** must be of uniformly high quality throughout, because even a Bozak Speaker cannot compensate for deficiencies in the signal fed to it. Turntables must be free of rumble, because the

range of the Bozaks extends well down into the 30-cycle region. The amplifier must have low distortion under speaker load, as well as in steady-state tests, and should have a power of at least 20 Watts for a B-207A Coaxial and proportionately higher for the larger systems.

**Efficiency** is not a measure of quality, but "high efficiency" is an indication of unbalanced response (specifically, too-heavy a mid-range). Because of the uniformity and realism of their response throughout the entire audible range, Bozak Speaker Systems will not sound as loud as other systems of similar size with equal inputs of power. Therefore, in A-B Tests the amplifier gain should be adjusted so that all speakers sound equally loud; this will put "efficiency" and quality in their proper relationship, and emphasize the realism and freedom from listening fatigue that distinguish the Bozaks.

# Electro-Voice P. A. PROJECTORS

## FOR PERFECT VOICE PENETRATION AND FULL RANGE MUSICASTING

**Electro-Voice Compound Diffraction Projector\*** provides a loudspeaker system so advanced in concept—so efficient in performance—that there is no basis for comparison with conventional P.A. reentrant horns. The "CDP" works in the same manner as an optical slit. When the slit width is of a shorter dimension than the wave length of the sound it passes, the sound energy is highly dispersed in the direction of this short dimension. Polar response of the "CDP" is phenomenal.

An increase in efficiency of three db over multi-cellular horns is achieved with better dispersion. There is no pinpointing effect since there are no cells to beam the sound path. Elimination of multiple throats at the driver mouth permits greater high-frequency efficiency as compared to multi-cellular horns. The direct path and optimum throat dimension of the "CDP" also has these advantages over the reentrant horns, resulting in a greater transfer efficiency and smooth extended high-frequency response.

The "CDP" bell and diaphragm are fabricated of molded fibreglass. Other parts are die-cast zinc and steel treated against corrosion. Edge-wise-wound copper ribbon voice coil puts 30% more conductor in the gap, raises the efficiency 20%. In E-V tests the "CDP" driver has been subjected to months of continuous operation under 30 watts of power at 60 cycles AC without failure for any reason whatsoever. Should it become necessary, the diaphragm is easily replaced in a moment. Silver contacts eliminate the need for soldering operations. The "CDP", with its higher sensitivity and power handling on a basis of distributed signal, provides superior coverage of the listening area with fewer units and at far lower cost. The "CDP" unit is weatherproof, splash-proof, and blast-proof, and virtually indestructible. It represents something so entirely new in public address efficiency and fidelity that it is indeed hard to believe such reproduction is possible.

876

**Model 848 25-Watt CDP**—Conservatively rated at 25 watts, the Model 848 provides peak-free response 200 to 10,000 cps—delivers  $2\frac{1}{2}$  octaves more musical range than usual P.A. units of even larger size. Speech articulation index is substantially increased. Polar distribution pattern exceeds  $120^\circ$ . The Model 848 utilizes two coaxially mounted horns working from opposite sides of a single diaphragm. Each horn is designed for optimum reproduction within its own range. Lower response is augmented by 100-cps horn taper, which insures at least one-half octave added bass over that possible from larger conventional P.A. horns. Nominal impedance is 16 ohms. The attractive neutral gray color is molded right into the bell material, which is impervious to acids, alkalies and most solvents. Hang up bracket has two mounting positions. Projector may be installed horizontally or vertically for augmented dispersion. Dimensions at mouth:  $10\frac{1}{2}$ " wide,  $20\frac{1}{2}$ " high. Overall depth 20". Shipping Weight, 17 lbs. List Price. . . . . **\$75.00**

# Jensen Hi-Fi Sound Reproducers

## Imperial

### The Ultimate in High Fidelity

In the search for pure high fidelity, completely authentic, with smooth coverage of the complete frequency range from lowest bass to upper limits of audibility, Jensen designed the RS-100 Laboratory Reference Standard Reproducer (see below) for use as a standard of comparison in high fidelity. For those who pursue the ultimate, the very same reproducer is offered here as the Imperial PR-100 in cabinetry that bespeaks a place of honor in the distinguished home. There's a totally new, smooth sound, utterly real—undoubtedly the finest sound you've ever heard. Voices come to life and there's a new almost geometrical separation of instruments. A three-way system (we'd have used **six** channels if necessary, but three were far and away the best), with 1-f unit loaded by a new-design reactance-annuling trilateral-mouth horn for bass; selected compression-driver horn-loaded mid-channel with intrarange equalizer for a final touch to precise balance and coloration elimination; and superlatively smooth, space-blended supertweeter top. Expensive to be sure . . . but priceless in performance. Place it on a sidewall or in a corner as you choose. Individually serial numbered, laboratory tested with signed certificate and guarantee of performance, accompanied by handsome descriptive presentation brochure. Impedance 16 ohms, power rating 35 watts. 54 $\frac{1}{4}$ " H.; 32 $\frac{5}{8}$ " W.; 24 $\frac{3}{8}$ " D. Shipping Weight 222 lbs.

## Laboratory Standard RS-100

### Designed Especially for Ultra-Critical Applications

Intended especially for ultra-critical applications. Designed by the Jensen engineering staff as a reference standard for comparison of high fidelity reproduction, the RS-100 is a new and important tool for sound engineers and psycho-acoustic laboratory specialists. It also will find extremely wide application in broadcast and TV station monitoring, recording studios and other installations requiring exacting sound reproduction. Music lovers and audiophiles, too, will find ready usage for the RS-100 in experimental or permanent home tuner-amplifier-record player and tape-recorder set-ups. It embodies the same electrical and acoustical characteristics as the PR-100.

The cabinet is made of plywood—modern—artistically styled and finished in two-tone, blue gray. Each RS-100 is individually, laboratory tested and accompanied by a signed certificate and guarantee of performance, and a descriptive brochure. 52 $\frac{5}{8}$ " H. x 33" W. x 25 $\frac{1}{2}$ " D. Shipping Weight: 222 lbs.

# Jensen Hi-Fi Sound Reproducers

## THE GREATER TRI-PLEX 3-WAY SPEAKER SYSTEM

Jensen's new **greater TRI-PLEX** is offered to you with the conviction that in quality of reproduction, it will outperform any comparable speaker system. Bass response has been enhanced with the new Bass-Ultraflex enclosure. The design objective has been the attainment of the full high-fidelity frequency range with extreme smoothness, precisely adjusted intra-range balance, and complete elimination of all false coloration effects. The result is a reproducer which in its outstanding listening qualities will delight the discriminating listener who seeks completely faithful music reproduction without harshness or exaggeration.

Technically, the TP-200 represents a high point in the development of the true 3-way system. Three completely independent reproducers divide the frequency range as indicated in the specifications, the combined total result being blended into a superb unity which cannot be approached with short-cut designs which simulate, but do not afford comfortable, livable listening quality. For example, both mid-frequency and high-frequency channels employ horn-loaded compression-driver units with plastic diaphragm moving systems in precision sound chambers for utmost smoothness—there are no metallic elements to introduce harsh or irritating effects. Individual controls are provided at the side of the cabinet for exact adjustment of response balance, presence and brightness to fit **your** surroundings and precise taste.

New cabinet styling is a natural blend of simplicity and elegance which will merge gracefully with traditional or modern decor. Woods are offered in a choice of fine selected Mahogany or satin Blonde Korina veneers with genuine solid matching hardwood trim, all finely crafted in the best furniture-making traditions.

Each TRI-PLEX is individually tested and is accompanied by a certificate and guarantee of performance meeting the high engineering standards established for the design.

**New Bass—Ultraflex.** Enclosure principle used in the new TRI-PLEX TP-200, 2-way CT-100 and BL-220 and BL-250 cabinets, is the latest result of Jensen's advanced research on enclosure acoustics. Precisely matching "woofer" characteristics to enclosure volume, Bass—Ultraflex gives more true balanced bass response than previous methods employed in medium sized cabinets.

May be used either in a corner or against a sidewall with excellent results.

## THE NEW Concerto 2-WAY SPEAKER SYSTEM

Here is high fidelity reproduction in a compact enclosure which fits even the crowded living space, yet embodying the smoothness balance and extreme frequency range coverage of the most expensive true coaxial speakers. There is economy too—with fine music reproduction not approached except at far greater cost.

The CT-100 is a true 2-way system with separate "woofer" and "tweeter". The low frequency unit is the new P12-NL 12-inch speaker which was especially designed for this reproducer. In combination with the Bass-Ultraflex cabinet, the system gives ample, full bass response. High frequencies above 2000 cycles are handled by the RP-102 High Frequency Unit which provides exceptional smoothness and range approaching the practical upper limits of audibility. A full 2-channel crossover network is employed. H-F Balance Control is located at the side of the cabinet.

The new cabinet design reflects fine proportions and clean sculptured appearance appropriate to fine traditional or modern interior decor. Available in your choice of selected Mahogany or Blonde Korina veneers. Reproducer is fully assembled and carefully tested at the factory. 30 1/2" high, 22 1/4" wide, 17 1/4" deep. ## EXTENDED RANGE SINGLE-UNIT SPEAKERS DIRECT-RADIATOR TYPE

These units, ranging from 5-inch to 15-inch size classes, attain a high level of performance by proper extension of the frequency range and control of all factors which lend "presence" to reproduction. The selection of a direct-radiator loudspeaker from this series, in size or cost appropriate to the application, insures the best quality obtainable in a "one-

way" speaker. Alternate models in the same size group differ mainly in efficiency and power rating.

JENSEN Extended Range loudspeakers are ideal as replacement-improvement units for less worthy speakers in radio, television and record playing equipment. The logical choice for better reproduction on a low budget.

## NEW HYPEX® LIFETIME DRIVER UNITS

The new Jensen Hypex® Lifetime Driver Units have many new features which contribute to increased performance and reliability. Frequency range is based on achieving substantially higher conversion efficiency, higher power ratings and improved reliability over comparable units previously available, while affording good fidelity in the reproduction of speech and music. Lower cutoff frequency is somewhat below those of the horns with which they will be used; the specifications show the maximum upper limiting frequencies, but response has been shaped to give emphasis to the 3-5 kc region, which is extremely important in high efficiency sound projection. As a result of these design choices and special research on ruggedization, the D-30 can be rated at 30 watts speech and music, D-40 at 40 watts, and a **Lifetime Guarantee extended against failure under normal conditions of use!** The DD-100 100-watt Superpower Driver Unit, similarly guaranteed, is the first double acting integrated sound chamber driver unit ever to be offered; it is also the first 100 watt unit available,

achieving a higher power input rating to a single projector or an array, than has ever been possible before. Magnetic structures are the most efficient that research has been able to develop, yielding the highest magnetic energy from the generous sized Alnico V magnets which scientific proportioning of magnet material and soft iron structure can provide. Specially shaped reinforced plastic diaphragms combine ruggedness with excellent acoustic properties and freedom from "breakup". Voice Coils are varnish wound, baked and aged on treated, heat and moisture resistant bobbins, resulting in a rigid assembly that is indestructible in normal service. Beryllium copper leads are indefinitely fatigue-resistant. Models D-40 and DD-100 have precision self-centering moving system assemblies which are added insurance for dependability under severe operating conditions. External leads connect to heavy binder screw terminals; added reliability for wiring is provided by strain reliefs on all units. All units are threaded 1 1/4"-18.

## HF-100 WEATHERPROOF TWO-WAY HIGH FIDELITY PROJECTOR

Here is a real high fidelity projector for use indoors or out, under all weather conditions. Consists of a heavy duty 3" "woofer" feeding a folded horn plus a horn-loaded compression driver "tweeter". Low frequency unit feeds horn by a combination of direct radiation and phase-inversion bass reflex ports for superior efficiency in the low frequency region. The high frequency horn has a 90° fold and is mounted so that the driver unit is at the top, thus providing self-draining and making it impossible for rain, sleet or snow to reach the driver unit. Horn outer section is spun aluminum with baked enamel finish. Central enclosure is glass fibre reinforced polyester in matching natural molded Modern Tan finish. Sturdy "U" mounting bracket is fully adjustable and positive locking.

The BV-1 Blast Valve is an accessory device for protecting the driver unit from high pressures due to explosive forces. Valve is the same as used in Jensen military blastproof loudspeakers. ## JENSEN COMPLETE HYPEX® PROJECTORS

Jensen VH-91 and VR-11 Hypex® projectors are the most compact in the line and their use is indicated where speech reproduction is the only important consideration and where size or cost are controlling factors. Designed for maximum efficiency in the upper frequency range, these units provide excellent penetration of noise. Small in size, they can also be located near areas of extreme noise. Magnetic structures are highly efficient, using Alnico V magnets in ample soft iron structures. Corrosion-resisting finishes and materials such as plastic cloth base diaphragms insure long life under outdoor and industrial atmospheric conditions. For further protection driver units are completely enclosed inside the rigid outer shell.

### MODEL VH-91 HYPEX® PROJECTOR

Equipped with universal mounting brackets for orientation in any direction and secure locking with a single wing nut. Two mounting holes on bracket are spaced to accommodate standard 3/8" x 3/8" transformers with the same mounting screws.

### MODEL VR-11 HYPEX® RADIAL PROJECTOR

For application requiring 360° coverage in horizontal plane, such as low ceiling industrial areas. Equipped with sturdy eye-bolt for clamping or suspension from above.

## NEW JENSEN HYPEX\* PROJECTOR HORNS

These new projector horns are acoustically coordinated in design for best performance with HypeX\* Driver Units D-30, D-40 and DD-100, any one of which may be used on any of the horns. The horn expansion formula is the hyperbolic exponential (U. S. Patent 2,338,262) providing low frequency reproduction superior to that obtained with conventional horns of the same mouth size. Horns (with the exception of RT-20) are spun aluminum with weather-resistant baked tan enamel finish. Horns are threaded 1 3/4"-18 and may be used with any driver units with this thread. Sturdy steel mounting "U" brackets allow horn to point in any desired direction; horn locks in desired position by means of new positive action trunnion clutches.

(See separate description and specifications on RT-20 Rectangular Horn).

## MODEL RT-20 RECTANGULAR HORN

These versatile new horns may be used in a variety of ways to provide projector systems of almost any desired directional characteristics and total power rating. They may be used singly just as round horns are used and in such cases, the rectangular shape is frequently an advantage in appearance, minimizing obstruction to vision, and facilitating mounting.

RT-20 Horns are designed so that they may be stacked in plane or circular arrays. Eight units, each with a geometric sector angle of 45 degrees, form a complete circle with a diameter of 57 9/16", giving 360° horizontal coverage. Fewer units are used where less than 360° coverage is required as indicated below:

Number of Units	Horizontal Coverage Angle
1	80°
2	125°
3	170°
4	215°
5	260°
6	305°
8	360°

Horns may be "double decked," which will concentrate the sound in a narrower angle in the vertical plane. A stack two units high will give a vertical coverage angle of approximately 30 degrees; at the same time, there is a gain in sound pressure on the axis of 2.5 db, due to the restricted angle of radiation.

The horn is molded of high impact strength glass fibre reinforced polyester. Natural molded finish in Modern Tan color.

## TWO-WAY AND THREE-WAY UNITARY HIGH FIDELITY LOUSPEAKERS

These outstanding unitary two-way and three-way loudspeakers have been especially designed for institutional, industrial and commercial sound systems where high fidelity music and realistic voice reproduction are essential. They may be mounted in proscenium arch or underneath a canopy; flush or in small enclosures on walls; in large or small cabinets. In enclosures they may stand on floor or be suspended overhead for large audience coverage. In wide angle coverage of entire frequency range and in sound quality, they are markedly superior to projector type speakers. Ideal for school rooms, auditoriums, arenas and the like.

Moving systems and other parts have been moisture-proofed so that they are highly satisfactory for protected outdoor service where not directly exposed to rain, sleet, or snow. Durable finishes and materials are used throughout. Construction is rugged to insure trouble-free performance indefinitely. Terminals are provided for insertion of fixed or adjustable pads if desired (not furnished—see control listings) in the "tweeter" circuits. All units have full dividing networks (mounted on housing in H-525C and H-225C). Input terminals are screwdriver type. Housing finish is baked tan enamel; horns, etc., at the front of the units are finished in black enamel for minimum visibility through grille cloth. All units are thoroughly dustproofed.

These units incorporate Alnico 5 magnets in highly efficient conservatively designed magnetic structures. Table shows loudness efficiency relative to Model H-225C.

### G-615C 15" THREE-WAY LOUSPEAKER

The TRIAXIAL\*, a unitary three-way loudspeaker, has three electrically and acoustically independent speaker elements, each handling a portion of the frequency range. Separate three-way 600 and 4000 cycle crossover network with provision for easily adding m-f and h-f balance controls (not supplied—see separate listing). Heavy duty curvilinear l-f diaphragm and compression horn-type m-f and h-f units in exclusive Jensen design. Excellent damping and high conversion efficiency. Power rating 35 watts, impedance 16 ohms. Recommended baffle opening 13 1/4" dia.; OD 15 3/8"; depth 10 1/4"; net weight 29 lbs.; shipping weight 48 lbs.

## EXTENDED RANGE HIGH FIDELITY LOUSPEAKERS

Here is a complete line of loudspeakers of latest designs especially for commercial and general purpose applications, all field tested for the exacting and rigorous requirements of professional service. There is a loudspeaker for every need—ruggedly dependable units which have enjoyed the position of "world's quality standard" for many years in the professional field.

These heavy duty loudspeakers are of the extended range high fidelity type with performance suitable for applications where two-way and three-way speakers are not needed. High efficiency is assured with carefully designed magnetic structures using Alnico 5 magnets and ample soft iron circuits. Moisture-resistant cones and other materials contribute to long life expectancy. The units are especially suitable for protected outdoor locations not directly exposed to rain, steel and snow, as well as for indoor use.

Extended h-f range insures excellent music reproduction. The l-f range will depend on the enclosure size and design. Commonly used in small enclosures or ceiling baffles. Models PS-SC and P12-SC are practically standard in the industry for interior low level music distribution systems.

Sizes from 4" to 15" offer the best performance possible in each size and cost class. Choices as to efficiency and power ratings are available in some sizes. Relative loudness efficiency is shown in the table referred to the P4-VC. A speaker with relative loudness efficiency of +3 db will be noticeably louder than the P4-VC for the same power; only one-half the power will be required to be equally as loud as the P4-VC.

# NEW SONOTONE LINEAR STANDARD SPEAKERS

## Sonotone 220 Loudspeaker System

The Sonotone 220 loudspeaker system consists of the CA-15 15-inch coaxial loudspeaker mounted in an enclosure especially designed to give the smoothest overall frequency response and the optimum response to transients. In the 220 System the CA-15 radiates directly. The sound does not bend around any corners, nor does it filter through a sieve of dispersers or vanes. There is nothing between you and the music!

The 220 System is not a bass reflex type. Neither is it a folded or back-

loaded horn. In fact the back wave is completely absorbed in the enclosure. A special acoustic loading array imposes direct *acoustical* damping on the rear of the speaker, which contributes markedly to the system's incomparable transient response and low distortion.

The 220 System may be located anywhere in the room. It does not require corner placement nor must it be placed directly against the wall. Available in mahogany, blonde (Korina), or fruitwood finish.

## The CA-15 15" Coaxial Loudspeaker

Range—20 to 17,000 cycles.  
Power—25 watts continuous,  
40 watts peak.  
Resonance—30 cycles.  
Impedance—15 ohms.  
Crossover—Built-in L-C divid-  
ing network. Crossover at  
2,000 cycles.

This superb new coaxial loudspeaker provides in one assembly a host of exclusive features which provide wide range with very low distortion. Among them are: Direct radiating cone-type tweeter for low distortion. Velour suspension for high compliance. Elliptical tweeter for wide coverage. High flux density gaps for maximum damping.

The 15" chassis is a rugged aluminum casting of great strength finished in attractive black wrinkle. The special curvilinear cone with its annular corrugations and soft velour suspension, together with 2-inch diameter, 3/8-inch

long voice coil, provides for optimum reproduction of the complex wave shapes encountered in voice and music, up to the highest levels. Aluminum voice coil forms are used on both high and low frequency speakers for structural rigidity and power handling ability. The use of a special cone speaker for the tweeter results in an unusually smooth, clean response, free from metallic, tinny highs, while the unique elliptical shape gives very broad spatial coverage at the high frequencies without the displeasing effects found with dispersers, etc.

## The W-15 15" Low Frequency Driver

## QUAM ADJUST-A-CONE® SUSPENSION

This patented QUAM feature is your added assurance of trouble-free operation. In other speakers the spider is cemented in place with no means of accurate adjustment. The Adjust-a-Cone suspension permits precision centering of the voice coil as a final production operation.

## QUAM U-SHAPED COIL POT

Another QUAM exclusive, this patented U-shaped coil pot construction, used throughout the QUAM replacement line, provides an unbroken flux path of sufficient cross-section to carry the full energy of the magnetic field.

## UNIVERSAL FOCALIZER UNIT QF-4

fits all picture tubes regardless of size or anode voltage  
Now all you need is one focalizer unit to cover all of the sets in use today.

## ATLAS 'DR' WEATHERPROOF DOUBLE-REENTRANT PROJECTORS

Non-Resonant • Uniform Response • Sturdy • Stormproof  
Compact • Demountable

The modified exponential taper developed in Atlas projectors has proved most efficient for overall performance. All acoustical paths are clean and uniform. Reflex turns are smooth and flowing. These important features eliminate turbulence, frequency cancellation and resultant signal distortion. Ruggedly constructed of heavy castings, precision stampings, accurate die castings and uniform metal spinnings. All metal-to-metal surfaces insulated with non-vibratory material. Bell rim dampened and mechanically protected with formed rubber rim. All metals specially processed by chemical and electro-chemical means to impart complete weather-protection. Heavy "U" bracket mountings, securely fastened to main body casting of each model, do not fail even under extreme stress, strain or vibration. 1 $\frac{3}{8}$ "-18 thread. For greatest efficiency and low frequency response, the larger size horns are recommended. The smaller horns are excellent where space and cost limitations pertain.

**Model T-12**—Primary: 45 ohms. Secondary: 4 and 8 ohms, for matching 40-60 ohm intercom line to 8 ohm speaker. List Price \$8.00

Specifically designed for high efficiency and ease of installation, these new transformers enable the matching of the popular Atlas "TP" and "HU" paging and talk-back speakers to either constant voltage (70-volt line) or constant impedance systems. The transformer taps eliminate the need for complex computations. Protective housings are heavy steel. Double rubber grommets and gaskets protect cable connections entering the housing. Convenient transformer bracket is easily integrated with speaker mounting bracket—no extra fastenings needed. Frequency response assures efficiency over entire range required, with a minimum insertion loss. Power-handling capacity of both models is 12 watts. Finish is in durable gray enamel.

### TWO UNIT TO ONE PROJECTOR

### THE CITADEL DIRECT DRIVE AMPLIFIER — FINEST AMPLIFIER BUILT

- Frequency response  $\pm 1/4$  db 20-70,000 c.p.s.
- Full 20 watts of audio.
- Distortion is less than  $1/2$  of one per cent.
- Phase shift—less than  $15^\circ$  at 20 c.p.s.

(Above figures are a true picture at full output of 20 watts.)

Here's the first amplifier to successfully eliminate the output transformer. All distortion introduced by transformers is eliminated. Great clarity of tone is noticeable at once. Hum and noise are at a minimum. Frequency response is  $\pm 1/4$  db 20-70,000 c.p.s., achieved with far less phase shift than can be obtained with a transformer . . . especially on the low end. Matching Stephens Tru-Sonic speakers with 500 ohm v.c. impedance designed as companion units for The Citadel Amplifier are shown on adjoining page.

Primary impedances are 625, 1250, 2500 and 5000 ohms and the secondary is tapped at 4, 8, and 16 ohms. By connecting directly to and between these terminals, the resulting impedances of 310, 625, 1250, 2500, 3650, 5000, 7300, 10000, 14,500 and 29,000 ohms are equivalent to 16, 8, 4, 2, 1.3, 1.0, 0.7, 0.5, 0.34 and 0.17 watts respectively when connected across a 70 volt line. Weatherproof construction throughout.

**RE-11** — Similar to the RE-20, but has a higher cutoff and a nominal rating of 12 watts. The built-in 10 watt transformer has primary impedances of 500, 1000, 1500 and 2000 ohms and a secondary tapped at 8 and 15 ohms.

**RE-18** — This is the economical answer to all paging and "talk-back" applications where low to medium power levels are necessary and where "specs" do not call for line transformers. Bell and back cover are integrally spun of aluminum to assure weatherproof performance of the 12 watt driver unit. Complete with adjustable "U" bracket.

## STRAIGHT EXPONENTIAL TRUMPETS

Output from any straight trumpet is approximately 2 DB higher than corresponding re-entrant type because it lacks the attenuation inherent in all re-entrant horns. "Stormproof" Trumpets are made of non-vibratory RACON ACOUSTIC CLOTH. Weather-treated for indoor or outdoor use. "All Aluminum" Trumpets are made of

heavy gauge aluminum spinnings with rolled beaded edge and cast aluminum throat sections. "Unbreakable" Trumpets are made of heavy gauge aluminum spinnings reinforced and damped with Patented RACON ACOUSTIC MATERIAL. Large sizes are useful for church chime systems, C-D systems, airports and stadiums, parks, playgrounds, music festivals, for both speech and music. Smaller sizes for railroad and bus terminals, waiting rooms, factories.

## COBRA TYPE HORN

COB-11

The RACON COB-11 "cobra" type horn is designed for public address systems requiring high clarity reproduction with maximum concentration of sound in a horizontal plane. It is of "straight" horn design and

exponentially flared for maximum transfer of energy. The low cutoff of 250 cycles results in crisp, highly articulate quality without a trace of boominess. The horn consists of a heavy two-piece non-vibratory aluminum casting and is provided with a two-section serrated mounting bracket. Finish is baked gray hammertone over a zinc chromate primer.

RADIAL HORNS and SPEAKERS  
PM DRIVER UNITS

## Re-Entrant Trumpets, Radial Horns and Speakers

RE-35 RE-50 RE-60

RACON re-entrant horns and speakers are designed to deliver highly concentrated sound with great efficiency over long distances. This is due to true exponential design throughout and the elimination of all vibratory members and sound dissipating devices. The base and inside tone arms are husky aluminum castings and bell is a heavy gauge aluminum spinning. The RE-35, RE-50 and RE-60 incorporate reflectors made of patented RACON ACOUSTIC MATERIAL to prevent resonant effects. All models are supplied with "U"-bracket mounting (ratchet swivel type on request). Finish is in weatherproof hard baked gray hammertone. RE-60 & RE-50 recommended for maximum low frequency music reproduction. RE-35 and RE-25 best suited for incidental music and high speech intelligibility.

The SR-35R and SR-60R are weatherproof radial re-entrant horns designed to project sound over an area of 360 degrees. The centre reflectors are of patented RACON ACOUSTIC MATERIAL and the deflectors are aluminum spinnings covered with this same non-vibratory material. Standard "U" bracket supplied. Thread size is 1 1/8"-18, permitting the use of any driver unit listed below. 1 1/8"-16 thread on request. The SR-60R is ideal for church tower sound installations and the SR-35R for incidental music and speech.

SR-35R SR-60R

SR-15R SR-12R

The SR-15R and SR-12R are rated at 20 and 10 watts respectively and are supplied complete with built-in 15 ohm\* driver units. These models are intended primarily for speech in paging and "talk back" systems and are completely weatherproof. Supplied with cast swivel ratchet and wall bracket.

## Waterproof Permanent Magnet Driver Units

The driver unit is the most important single element in a successful public address system. In these four new driver units, primary emphasis is on: high continuous power handling capacity with ample reserve

for overload peaks up to 100%, maximum conversion efficiency, response ranges suitable for every type sound system, and waterproof construction.

These four units employ Alnico V magnets and Armco magnetic iron throughout. All soft steel parts are doubly plated to prevent corrosion. An automatic electromagnetic cut-out switch is used in the magnetizing process, assuring maximum flux density in the gap and high uniformity. Units are individually measured for flux density. Each unit is tested with special equipment for power handling capacity as well as a 350-volt ground test.

Long life plastic diaphragms and formers are supplied. Voice coil leads are non-fatiguing beryllium copper, insuring lifetime performance. All units are completely waterproof, yet permit ready replacement of diaphragm where needed.

## HIGH FIDELITY LOUDSPEAKERS

### TRI-AXIAL, DUAL CONES, WOOFERS

#### HIGH FIDELITY LOUDSPEAKERS

These radically new 12" and 15" high fidelity loudspeakers reflect every advance in the acoustical art to date and in addition, incorporate a number of unique design features never available heretofore.

Each model uses a special formulated plastic suspension, resulting in practically a free edge cone. Free air resonance is lower than heretofore obtainable, manifesting itself in exceptionally clean bass response to the lowest limits of program material. To prevent cone breakup at high levels, stiffening struts of rigid styrofoam are cemented radially to the cone's rear surface.

Mid range reproduction in

the dual cone and tri-axial models is achieved by a separate cone fastened near the apex of the large cone from which it is decoupled by means of a special resilient compound.

A combined compression and direct radiator tweeter covers the upper band. Highs are silky smooth to the limits of audibility, without the harsh quality usually associated with most horn type tweeters.

**NOTE:** The 15-XB 15" tri-cone, integrated tri-axial speaker, is the **only** answer to requests for a true extended range speaker at a net price under \$55.00. Despite this seemingly impossible price goal, no concession has been made to quality.

# METAL SPEAKER ENCLOSURES

## RECESSED CEILING and WALL ENCLOSURE

This speaker housing is suitable for an 8" speaker and reduces installation costs considerably. Adjustable brackets make the housing ideal for use in old or new construction. The depth of the box is 4", so that it can be mounted in walls where the studding is 2" x 4".

All of the features of acoustical perfection, durability and economy found in the universal type of speaker enclosure apply to the recessed enclosure as well.

This speaker housing is easily installed in a ceiling where acoustical tile has been used, since the grill plate is a 14" square. This, therefore, perfectly covers the space from which a 12" acoustical tile has been removed.

## ADJUSTABLE MOUNTING BRACKET

The adjustable mounting bracket can be used with any of the universal type enclosures. This makes possible an adjustable feature by which the speaker housing can be adjusted in any angle in a horizontal plane. There is a hole in the bracket which will pass a half inch conduit, permitting the speaker housing to be suspended from the ceiling.

## REAR SEAT SPEAKER ASSEMBLY

This unit is available in two types, as shown in the table below. The rear seat speaker grill assembly consists of the rear seat speaker grill, together with mounting screws, switch, bracket for holding switch and sufficient wire for installation. The switch permits selection of either speaker or use of both speakers simultaneously.

The rear seat speaker grill is a finely louvered unit made from heavy gauge steel, which assures you of having a grill that will "take a beating." The finish is a beautiful silver grey hammertone, which is a fine enough finish to be attractive and yet dull enough to assure you that no glaring sun reflection will be picked up by a rear vision mirror and be a potential blinding flash to the driver.

## WALL TYPE SPEAKER CASES

This is a distinctive line of speaker cabinets, for wall or table use. Since these units are made of steel, all troubles with wood warping and splitting are eliminated. Keyway holes are provided for wall mounting and four embossed feet on the bottom are provided to prevent damaging table surfaces. Finished in brown wrinkle enamel only.

## SILVER SONANCE LINE

The Silver Sonance Line is divided into three parts. The first is the Universal Speaker Enclosure. There are many advantages of the Universal type of speaker housing that makes it the most outstanding unit of its type. It can be used in hospitals, schools, factories, auditoriums, stores, airports, railroad stations, stadiums and any other place where a speaker is used.

A prominent feature of this housing is the adjustability that is achieved by mounting our speaker case with an accessory known as the Bud Adjustable Mounting Bracket. Full information on this bracket is given on page C-48. When the adjustable feature is not desired, the speaker housing may be attached directly to the wall. There are two holes in the sides of the speaker housing enabling installation in this manner. The holes in the cabinet are so spaced that the housing may be mounted either to an outlet box or screwed directly to the wall.

The new BUD UNIVERSAL speaker enclosures have a bi-lateral feature which permits sound to come from both the front and the back of the speaker housing. This is an ideal feature when speakers are used for paging purposes, or when speakers are used in corridors, hallways, or other places where the intention is to have the sound travel in two directions.

There is no danger of cracking, warping, splitting, or any of the other disadvantages found when a wood speaker baffle is used. Since our speaker enclosure is made of heavy gauge steel, none of these disadvantages are present. Changes in temperature and weather conditions have absolutely no effect on this speaker case. The finish is a beautiful silver grey hammertone. The hammertone finish assures ease of cleaning, as the housing may be cleaned by wiping with a damp cloth.

A special sound-deadening compound is used to eliminate the metallic resonant sound that is present in other metal speaker cases. All screws and nuts are furnished for mounting the speaker in the enclosure. There are no holes to drill and no time will be wasted in the installation.

### BI-DIRECTIONAL GRADIENT MICROPHONE

Model "300"

This rugged, high fidelity, multi-impedance microphone is widely used for television, radio broadcasting, professional recording and high-fidelity uses. The "300" reduces reverberation and the pickup of random noise by 66%. The "300" combines the best features of conventional velocity microphones with advanced acoustic design—including an anti-"PFF," anti-blast filter screen. Its bi-directional polar pattern is effective over a broad frequency range. It provides sound pickup at the front and rear of the microphone, but greatly reduces pickup at the sides. One of the outstanding features of the "300" is the fact that the microphone can be placed at a 73% greater distance from the performer than is possible with omni-directional microphones! The "300" has a non-reflecting "Baked Bronze" finish, so it blends into the background, gives the spotlight to the performer. The "300" has a readily accessible Voice-Music switch, vibration-isolation unit mounted in live rubber, and a multi-impedance switch, providing low medium and high impedance. Response plus or minus 2 1/2 db, 40-15,000 c.p.s. Dims: Ht., 6"; Wth., 1 7/16"; Depth., 1 3/32".

# GENERAL PURPOSE MICROPHONES

## OMNI-DIRECTIONAL DYNAMIC MICROPHONES

The new Slendyne 535 is the most versatile fine quality probe microphone ever developed — actually five microphones in one because of its practical design and useful accessories! The "535" is a moving-coil dynamic microphone built to provide wide range reproduction of music and voice. It can be used for indoor or outdoor applications in the following manner: (1) in the hand, (2) on a floor stand, (3) on a desk stand, (4) hung around the neck on a lavalier cord and clip assembly. Add to these factors an on-off switch adapter and a dual-impedance switch and you have the most completely versatile fine quality probe ever developed. Frequency response is 60 to 13,500 c.p.s.

The Slendyne 535 is ideal for high quality public address, theater-stage sound systems, and all recording applications where an omni-directional microphone is desired. The microphone is ruggedly built to withstand hard usage, and is unaffected by temperature and humidity variations. The 20-foot, high quality, shielded, two-conductor cable is supplied with a microphone plug equivalent to the Amphenol 91-MC3M plug. The "535" meets the requirements for maximum quality and minimum size. It is finished in rich satin chrome. A self-adjusting swivel adapter is supplied with the microphone, and permits it to be tilted from 90° from vertical to horizontal, making it possible to tilt the microphone at the source of sound.

The "535" is specially recommended for "interview-type" use where the "hand-a-bility" is important. Of special interest to P.A. technicians and recording enthusiasts is the quick-disengaging feature that permits the microphone to be instantaneously removed from the stand swivel adapter, for use as a hand microphone during audience participation shows, interviews, and for home recording sessions. The Model 530 Slendyné is the deluxe broadcast Slendyne, finished in an attractive black and gold anodized finish. It has a frequency range of 50 to 15,000 c.p.s., and is furnished with a 20-foot, high quality, two-conductor shielded cable with a Cannon XL-3-11 cable connector.

## BI-DIRECTIONAL GRADIENT MICROPHONE

This rugged high fidelity multi-impedance microphone is recommended for fine quality general purpose uses. It features a frequency response of 50 to 12,000 cps—will reproduce voice and music in a clear, natural tonal quality, which makes it ideal for use in auditoriums, night clubs, schools and churches. The "315" is similar in features and design to the Studio Model 300. It is ideal for those numerous public address applications where its streamlined design and striking beauty lend dignity and prestige to any setting in which it is used. This gradient microphone is a favorite of professional performers and educators because it provides unusual freedom of motion on the platform — making it possible for the user to stand at a 73% greater distance from the microphone than is possible with omni-directional microphones. Its bi-directional "Fig. 8" pickup pattern extends over a broad frequency range — and it permits the sound system to be operated at a level almost 6 db higher than is possible with non-directional (omni-directional) microphones! The "315" picks up voices and music from front to back — is "dead" at the sides, reduces reverberation and the pickup of random noises by 66%. This feature means the "315" can be used in those critical installations where feedback makes it impossible or impracticable to use conventional microphones. It is "PFF"-proof — can be used outdoors in moderate drafts or breezes, a condition made possible by the acoustically streamlined external grille which filters out the "PFF"-type noises often heard over conventional microphones. Here again is another fine quality Shure microphone made under scientific control conditions, which are your guarantee that it can be used month after month without deviation from its original standards. Dimensions: height 6"; width 1 7/16"; depth 1 3/32". The "315" is furnished with a 20-foot, high quality, two conductor, shielded cable, supplied with the equivalent of the Amphenol 91-MC3M plug.

## BROADCAST-TV DYNAMICS

E-V engineering brings new, versatile high-output designs in keeping with current requirements for better TV-broadcast flexibility and quality. Unique Variable "D" cardioid principle delivers greater front-to-back discrimination, ultra wide range with rugged single dynamic element. Slim-Trim omnidirectional, close tolerances.

### CARDIOID UNIDIRECTIONAL MICROPHONES

**Model 666 Super Cardioid Microphone**—Totally new concept in directional microphone design uses Variable D principle (variable acoustical distance between front and back openings). High discrimination against sounds from back hemisphere. Highly resistant to mechanical shock. Model 666 affords another octave of uniform HF response over that found in conventional broadcast cardioids. Permits close talking with no bass accentuation. Increases working distance over pressure microphones by factor of 1.7:1 due to reverberation reduction. Designed for operation on boom, stand or in hand. Uses only one moving element with exclusive, rugged Acoustalloy diaphragm. Response range, typical 40-15,000 cps; output -55 db. Impedance changed on internal terminal board. Wired for 50 ohms, taps at 150 and 250 ohms. Aluminum cast case finished in TV gray. Built-in Cannon UA-3 connector. Eccentric styli, Advance balls, Shaving knives, Wax points, Embossing styli, Replaceable Sapphire reproducing needles, Cartridge assemblies with Sapphire points.

#### CAPPS RESHARPENING SERVICE

Most CAPPS MADE styli can be resharpened upwards of five times depending on whether they are simply dull or badly chipped (Thermo styli cannot be resharpened this many times because of the wiring which limits the available area of sapphire.) CAPPS "RESHARPS" are given the same exacting care and attention as CAPPS new styli and are returned to the sender promptly.

## HOT STYLUS UNIT

The CAPPS HOT STYLUS UNIT is used for applying heat to disk recording styli, softening the disk material at the point of contact thereby producing smoother more accurate grooves. This results in a substantial reduction in surface noise, especially at the inner diameter and minimizes the mechanical load on the cutting head increasing its efficiency and frequency response.

When ordering specify make and model number of cutter head and stylus requirements.

## The MODEL B-16H 3 Speeds

Offers the broadcaster and recording studio the finest professional performance at the lowest cost. The turntable itself is precision lathe-turned, non-magnetic, cast aluminum — dynamically balanced — and with an extra-heavy rim for effective flywheel action. Turntable diameter is standardized at 15 3/4 inches to allow a 1/8-inch overhang for cueing. It is internally rim-driven by means of neoprene compound idlers. All inter-moving parts are case-hardened and ground to a micro finish. Rotates on a single-ball pivot which takes the entire thrust of the turntable shaft.

Extremely low distortion has been achieved through effective acoustical damping — through special attention to motor bearings, motor suspension, idler design, concentricity of pulleys and all the other elements essential to smoothness, quiet and overall quality of performance. Rumble, wow and flutter and speed regulation are well within NARTB standards. Requiring no more than routine maintenance, all parts are readily and easily accessible.

## PORTABLE SOUND SYSTEMS, RECORD PLAYERS and VARIABLE-SPEED TURNTABLES

# Rhythmmaster

### VARIABLE SPEED PHONOGRAPH AND SOUND SYSTEM

The Rhythmmaster is basically a phonograph with a CVS-12 Turntable which permits the playing speed to be continuously varied from 25 rpm to 100 rpm without resetting the mechanism or stopping the record. It is ideally suited in applications where rhythm control is necessary: square dancing, swimming, skating, calisthenics, etc. and is used by teachers, coaches, directors, and others who recognize the advantage of being able to slow down a record to as little as 1/4 of its normal tempo, or speed it up as much as 300%. The Rhythmmaster is also used as a high fidelity public address sound system.

# Recitalist

### HIGH FIDELITY PHONOGRAPH AND SOUND SYSTEM

The RECITALIST is a high quality phonograph for 33-1/3, 45 and 78 rpm records. It employs the famous Model LP-743 Turntable, a long time popular favorite with hi-fi enthusiasts (see Page E-1 for specifications). The RECITALIST is used as a public address system in the same manner as described for the Rhythmmaster.

#### SPECIAL FEATURES of RHYTHMASTER and RECITALIST

Both the RHYTHMASTER and RECITALIST permit a microphone to be used even while a record is being played. Volume of each can be independently controlled for effective mixing. There is also provision for connecting the outputs to an existing loudspeaker system, indoors or outdoors.

With the exception of the turntables, referred to above, the components, features, and specifications of both the RHYTHMASTER and RECITALIST are the same. Each is available with single speaker mounted in the detachable cover of the carrying case or may be obtained with twin speakers. In the twin speaker models, there is no provision for a speaker in the cover. The two speakers are mounted in two half-case sections which join (when not in use) to form one case.

## PRESTO 64-A TRANSCRIPTION TURNTABLE

**Presto 64-A Transcription Turntable  
(Type 153 Reproducer extra)**

The Presto 64-A transcription turntable offers the following features which are of major importance to the owner and operator: Unusual mechanical simplicity . . . low mechanical disturbance . . . maximum speed accuracy . . . extreme ruggedness for long continuous operation . . . instantaneous selection of desired speed . . . and no requirements for mechanical adjustments.

This transcription turntable is directly gear driven and employs two separate motors, one for 33-1/3, and the other for 78.26 rpm. There is no friction device of any kind in the mechanism and no mechanical shift is required to change speeds. To select 33-1/3 rpm, 78 rpm or "off," the operator merely throws a three-position switch. These changes may be made as rapidly as desired while the turntable is in motion with no damage to the mechanism. Only one motor at a time is in operation. The transmission "over-runs" the motor which is not turning and thus does not carry it along in rotation although the stationary motor is never disengaged from the mechanism.

### SPECIFICATIONS

**Standard Equipment:** The 64-A transcription turntable includes the electro-mechanical gear drive, turntable and cabinet. Reproducer and network not included.

**Speed Accuracy:** No deviation from 33-1/3 and 78.26 rpm.

**Noise Level:** Mechanical noise originating in the equipment is kept to at least 50 db below program level.

**Power Requirements:** Approximately 75 watts from a 115 volt, 60 cycle line. Motors are of the 1800 rpm synchronous type and are available for other voltages and frequencies at additional cost.

**Mounting:** Turntable and gear drive mounted in heavy wood cabinet 24 x 24 x 33 inches (61 x 61 x 84 cm.)

## PRESTO 6-N RECORDER AND A-93 AMPLIFIER

The PRESTO 6-N Recorder and A-93 Amplifier is the ideal recording equipment for portable or stationary operation.

The 6-N Recorder is outstanding in its suitability for broadcast stations because it offers all the qualifications for good recordings, including master records, at the most economical price. It is ideal for the station requiring delayed broadcast of network programs, and for reference recordings.

The 6-N standard equipment includes the Presto 1-D cutting head, spiraling feed screw, vertical damper, time scale and pick-up. It is available for microgroove recording at additional cost.

The Presto A-93 is a power amplifier primarily intended for disc recording purposes. It was especially designed for use with the model 1D cutter head on the Presto 6N, 8D and 8D-G disc recorders. The unit has an excellent frequency response, negligible distortion, and a low effective output impedance.

Any one of four different frequency responses may be provided by means of a pushbutton control on the panel. The first response is substantially flat between 20 and 17,000 cps. The second provides a gradual rise above 100 cycles to a maximum of 10,000 cps, which

conforms to the modern practice of making 78 rpm recordings. The third follows the standard NARTB pre-emphasis curve for lateral transcriptions. The fourth pushbutton, in conjunction with the Presto 161-A equalizer on the recorder, compensates for variable losses resulting from the changing diameter of the disc being recorded. Noise is 55 db below recording level.

### SPECIAL FEATURES

1. Pushbutton control provides choice of frequency response.
  2. Radius equalizer compensates for change in diameter of disc.
  3. Rated output of 30 watts assures ample reserve for recording.
  4. Harmonic distortion is less than 0.3%, intermodulation distortion less than 1%, at normal recording levels.
  5. Meter monitors recording level and checks output tube current.

### PRESTO T-18—FOR THE HOME

The PRESTO T-18 is a three-speed, 12" diameter record player especially designed for high fidelity use. It combines dependable speed accuracy with simplicity of operation and attractive appearance. Exceptionally well-designed, it contains only one moving part in the entire shift mechanism to engage each of the three interchangeable drive idlers.

This professional-type turntable is heavy cast aluminum with a retractable adapter disc for 45-rpm records. Two types of motors are available: a heavy-duty, four-pole motor or a hysteresis synchronous motor for those who want the ultimate in speed accuracy and quiet, rumble-free operation. A single control lever, operating in a horizontal plane, selects 33 1/3, 45, or 78.26 rpm speeds or shuts off the mechanism. The panel, finished in attractive telephone black, is small and unobtrusive and requires only a simple rectangular cutout for mounting.

### PRESTO T-68—FOR THE PROFESSIONAL

The T-68 Transcription Turntable was developed by PRESTO to meet the demand for an inexpensive high-quality transcription turntable operating at the three standard speeds of 33 1/3, 45, and 78.26 rpm. It is intended for broadcast stations, recording studios, schools and other installations where absolute accuracy and completely noiseless operation are essential.

The new PRESTO shift mechanism makes it possible to produce this fine transcription table at a fraction of the usual cost. It consists of a single movable plate on which the three heavy-duty idlers are mounted. The turntable is a heavy aluminum casting dynamically balanced and equipped with a retractable 45-rpm adapter disc. The T-68 is available with either a four-pole induction motor or with a hysteresis synchronous motor for the most rigid speed and noise requirements. The small panel does not interfere with the installation of the pickup arm and requires only a rectangular opening for mounting.

## PRESTO RECORDING DISCS

DESCRIPTION	TYPE NUMBER	IN INCHES	NET PRICE
<b>GREEN LABEL</b>			
Presto Green Label discs are, without question, the finest for instantaneous recording—discs to be played back without processing. The extremely clean lacquer and carefully selected flat aluminum base assure perfect cuts for standard or microgroove recording. The surface noise, even after many playings, is virtually inaudible and, what is most important, the consistently high quality is the recording engineer's guarantee of perfect results. Both sides of the Green Label are warranted flawless. Packed 25 per box—a spacer between each disc—with separate envelopes—no labels. Overall thickness of disc .050 inches.	610-A	10	\$1.54

<b>ORANGE LABEL</b>			
Orange Label Discs differ from other Presto types in that the aluminum base is of a lighter gauge. The fine lacquer, however, is the same as that used on all other Presto discs and is responsible for the very high quality of the Orange Label disc. It is designed specifically for educational institutions where good quality must be available at a reasonable cost. The fine surface of the Orange Label disc has made it popular also with recording studios as a "playback" where good quality at low cost is desired. Masters are packed with a spacer between each disc and individual envelopes are not included. However, envelopes when required may be had on request. Sizes 11 7/8 inches, 13 1/4 inches and 16 inches are packed 25 discs to the box. The 17 1/4 inch disc is, because of its additional thickness, packed 20 to a box. ## PB-17A TAPE REPRODUCER CONSOLE

The PB-17A Tape Reproducer Console has been developed to provide automatic, continuous reproduction of taped program material in industrial plants, amusement parks, and other areas where a constant source of background music is required.

The console consists of the PRESTO PB-17A tape transport mechanism interconnected with the A-904 amplifier in a handsome plexiglass-topped console cabinet. It plays back from 14" diameter reels of pre-recorded dual-track tape traveling at a speed of 3¾ inches per second. After four hours of playing time on one track, the mechanism automatically reverses itself to provide an additional four hours on the second track. At the end of this time, the machine either recycles or shuts itself off. The PB-17A mechanism is also available with the A-904 amplifier in the new vertical console, or it may be furnished separately for rack mounting.

### HIGH-FIDELITY ULTRA-LINEAR CERAMIC CARTRIDGE

COMBINES BEST FEATURES OF ALL PICKUPS!

#### 80 SERIES ULTRA-LINEAR CERAMIC CARTRIDGE

This true high-fidelity cartridge embodies the most advanced concept in pickups; combines all the benefits of ceramic and magnetic cartridges (with none of the disadvantages) in one pickup that fits any arm or plug-in head (adapter for Fairchild and Gray slide-in arms included).

The Electro-Voice Model 80 series high-fidelity ultra-linear ceramic cartridge is a displacement or amplitude-actuated device. It is available in two basic series, the standard model for use with high-impedance crystal and ceramic inputs, and the M series which directly replaces all magnetic pick-ups. Housed in a resonant-free die-cast case, attractively styled with black and gold or silver finish, the Model 80 embodies the most advanced concepts in phono-pickups.

The Model 80 cartridges complement the recording characteristic of modern microgroove recordings without recourse to equalizing circuits. The 80 series cartridge output will be flat,  $\pm 2\%$  db, from 20 to 15,000 cps when referred to the popular RIAA-Orthophonic recording characteristic. Low-frequency response, determined by the magnitude of the input load, will be sensibly flat to DC when the cartridge is working into an infinitely high impedance.

Because of the high-output level, the standard series requires no further preamplification. The M series has internal equalization for use with any magnetic preamplifier, replacing all magnetic pickups without adjustment or circuit modification.

The Model 80 series ultra-linear ceramic cartridge has a high compliance of  $3 \times 10^{-9}$  cm/dyne. Such a high compliance practically eliminates record wear and reduces tracking problems to a minimum when used with specified stylus pressures. Because the ultra-linear ceramic cartridge is a piezo-electric device, inductive pickup of hum from motors or stray fields is eliminated. Vertical response is the lowest of any cartridge now on the market, which results in a very high signal-to-noise ratio. Turntable rumble and room vibration pickup are reduced to the lowest possible value in the design of this cartridge. Temperature variations do not affect the ultra-linear ceramic cartridge; in higher temperature ranges, even at the boiling point of water, performance is uniform and the cartridge will operate with full efficiency.

The 80 series turnover models have two independent generating elements. Full output from stylus and element in use... no distortion or resonance from unused stylus. Smooth acting turnover mechanism accurately positions needle.

**Outstanding Features—Unequaled response.** 20 to 15,000 cps. **Lowest intermodulation distortion.** Less than 3% at 18 cm/sec. **High output.** 80 Series, 500 millivolts; 80M Series, 25 millivolts. **No hum.** Absolutely noninductive. Not sensitive to motor and transformer fields. **High compliance.**  $3 \times 10^{-9}$  cm/dyne—several times the average hi-fi pickup compliance. **No preamp required.** Standard 80 series works into any amplifier input not having magnetic cartridge equalization. 80M Series works into any magnetic cartridge input. No modifications needed.

# FLUXVALVE

*A New Concept in Magnetic Pickups*

## THE MODEL 350 FLUXVALVE

The greatest single advance in phonograph pickup design of the last decade—since the first lightweight magnetics appeared after World War II. The FLUXVALVE is based upon a new and revolutionary principle. This design provides very wide range (VWR) response heretofore unattained by conventional pickups.

The FLUXVALVE pickup is intended for a new era in phonograph reproduction. Record manufacturers are now releasing products with extended frequency and dynamic range and records which can utilize a stylus tip of less than 1 mil radius.

The FLUXVALVE was initially developed for the recording industry and for commercial record reproduction where a pickup with virtually no frequency discrimination in the audio spectrum is a primary requirement. Record companies require pickups which will not damage expensive masters. Commercial operators demand long record and stylus life. Fulfillment of these requirements is inherent in the FLUXVALVE.

Pickups with poor frequency characteristics can destroy transient and high frequency groove modulation with resultant deterioration in overall quality and increased surface noise.

*Even a perfect diamond stylus cannot prevent a pickup with poor frequency characteristics from ruining wide range recordings.*

The use of excessive damping to reduce peaks in such pickups results in high stylus impedance through the entire response range, thereby increasing record wear at all recorded frequencies.

Only the FLUXVALVE (to which Pickering and Company, Inc. retains all proprietary rights) can offer all of these features necessary to the new era in record playing.

1. *High compliance with low vibrating mass insures excellent tracking characteristics with low tracking force (2 to 6 grams).*
2. *Frequency response flat well beyond both ends of the audible frequency spectrum with unprecedented transient response and smoothness.*
3. *The complete absence of resonances in the audio frequency band insures long record life. New records retain their top "sheen" indefinitely, exhibiting no increase in surface noise.*
4. *Low overall distortion.*
5. *Capable of utilizing a stylus of less than 1 mil radius.*
6. *Replaceable stylus—the only part that moves and is subject to wear is the stylus-armature assembly which is easily replaceable without the use of tools.*
7. *Turnover type for all stylus sizes.*
8. *The cartridge body is hermetically sealed and completely encapsulated in a tough plastic, obviating damage through mishandling, high humidity and wear.*
9. *High output—25 millivolts at 10 cm/sec.*

### SPECIFICATIONS FOR MODEL 350 FLUXVALVE PICKUP

# PICKERING TURNOVER PICKUPS

*for the Professional and the Audiophile*

## MODEL 260

Acclaimed by thousands of owners as the finest phonograph pickup ever produced. Engineered and manufactured with the care and craftsmanship traditional with all Pickering equipment, Model 260 plays microgroove and standard groove recordings with wide dynamic range and distortion-free quality. The Model 260 actually consists of two miniature cartridges, a Series 240 for microgroove and a Series 220 for standard recordings. They are mounted back to back in a gold-plated light-weight aluminum turnover mechanism which permits either cartridge to be brought into playing position with a simple flip of the handy lever that is clearly marked to show which cartridge is in use.

## MODEL 220-240

These identical individual reproducers which make up the famous 260 Turnover Pickup have the same broad frequency response, wide dynamic range and distortion-free quality that characterizes the superiority of the Model 260.

The gold 220 series cartridge is for use with 78 rpm records and is available with either diamond or sapphire stylus. The silver 240 series cartridge is for use with microgroove records, both 33-1/3 and 45 rpm. The silver 240 series is available with diamond stylus only for maximum protection of the fine grooves of LP records. Diamond styli wear many times longer than sapphire and are less susceptible to damage, thus assuring preservation of expensive records.

When purchased separately as 220 or 240 cartridges, a simple clip type universal adapter is packaged with each cartridge. This universal adapter permits easy installation of the cartridges in all standard makes of changers and tone arms.

The 260, 220 and 240 Cartridges are velocity-sensitive devices and are inherently "flat" on a velocity basis. When measured with an equalized preamplifier having 6 db per octave bass boost and a standard test record, their performance characteristics are in accordance with the curve shown.

## SPECIFICATIONS FOR 220, 240 and 260 CARTRIDGES

### RECOMMENDED LOAD RESISTANCE —

## PICKUP ARM — MODEL 190D

*for Optimum Performance on Microgroove and Standard Records*

The 190D Arm is designed to overcome deficiencies of conventional arms, so severely accentuated by LP microgroove recordings. The 190D Pickup Arm embodies all the features that enable a high-quality magnetic cartridge to deliver distortion-free tracking performance.

Studies by audio engineers reveal that reproducer arms which perform well on 78 rpm records and standard transcriptions often do not produce satisfactory results on microgroove recordings. Regardless of the cartridge quality, considerable tracking distortion is caused by inadequate pickup arms.

The Model 190D provides distortion-free tracking while maintaining the correct relationship between the lateral and vertical moments of inertia. These features are required to faithfully reproduce both LPs and 78s and to assure minimum record and stylus wear.

1. The ratio of vertical-to-lateral moment of inertia is as low as possible.
2. The vertical mass has been minimized in order to track any record without imposing extra vertical load on grooves. It plays badly warped records just as well as flat ones.
3. There is no spurious arm resonance at any frequency.
4. Pivot friction is lower than 3 gram centimeters and the bearings are rugged and trouble-free.
5. The arm is statically balanced about the vertical axis to eliminate tendency to jump grooves when subjected to bumping or jarring.
6. Offset head reduces tracking error to less than plus or minus 2½°.
7. Stylus point is protected against contact with anything but the record grooves. It cannot strike the turntable mat or center-pin.

400-CYCLE CROSSOVER**

Each speaker is provided with an Isophase MODEL 401D DIVIDER, which incorporates a crossover network, d.c. power supply, and balancing control.

**MODEL 580  
1000-CYCLE CROSSOVER**

**The Pickering Isophase** is a revolutionary new speaker with a single diaphragm that is curved and virtually massless. This diaphragm is moved or driven as a unit by an electrostatic field. It re-introduces an audio signal into the air at a low velocity to closely approximate the unit area energy of the sound at the microphone in a concert hall or studio, thereby creating a "window-on-the-studio" quality that is breathtakingly realistic. Conventional cone or dynamic type loudspeakers reproduce sound by moving only small amounts of air at high velocities. The ISOPHASE, with its large sound-generating surface, is a radical departure from the older concept.

The ISOPHASE is available in two models. Model 581 covers the musical range from 400 cycles per second up to well beyond the limits of human hearing. The response over this range is consistent and absolutely uniform—without the slightest bump, peak, or resonance of any kind. This in itself is an unprecedented characteristic for a loudspeaker.

Model 580 has the same uniform response and clarity starting at 1000 cycles per second and similarly going out to supersonic frequencies.

Using an ISOPHASE SPEAKER with a FLUXVALVE PICKUP, recorded sound is reproduced for the first time *without distortion caused by the frequency characteristics of the transducers* . . . the middle and higher frequencies are recreated with a smoothness, definition, and degree of balance never before achieved with any speaker.

### AUDIO SWEEP FREQUENCY TRANSCRIPTION

The Sweep Frequency Transcription is a new method of making instantaneous frequency response runs. It has been designed with all correction factors included in the original recording, therefore, no charts or graphs are needed. Before the development of the Sweep Frequency Transcription, the tone record was used for frequency response measurements on playback systems. This method was both time consuming and laborious. If adjustments were required, a new frequency run was required after each adjustment. Now all that is needed is a cathode ray oscilloscope and a Sweep Frequency Transcription for instantaneous response measurements. Only a few quick adjustments on the equalizer circuits and the job is done. For complete frequency checking of all broadcast transmission equipment and components for production testing of phonographic reproducers, filter networks, audio amplifiers, preamplifiers, tone control systems and components.

## 10 STRIKING FEATURES

1. **Tracking Error Completely Eliminated.** The cartridge moves radially—in a straight line from the edge of the record to center.

2. **Stylus Never Scratches Record.** The stylus is placed and removed from the record by a slight tilt of the arm—no scratching possible through manual fumbling.

3. **Saves Record Life.** Virtually frictionless movement of the cartridge carrier, coupled with "never-scratch" feature, results in maximum stylus and record life.

4. **Space Saver.** Fits into smallest cabinets—yet will play any size record.

5. **Positive Stylus Placement.** You may stop play and continue anytime later at the exact spot where you left off.

6. **Easy Cueing.** Calibrated scale permits accurate cueing—start your records at any pre-determined spot.

7. **Simple Stylus Pressure Adjustment.** Turning thumb-screw adjusts for any desired stylus pressure.

8. **Simplified Cartridge Changing.** Most cartridges mount instantly through slide-in action.

9. **Installation Easy.** Fits all turn tables, including changers. Two mounting screws fasten base—one hole for wires. That is all!

10. **Engineering Excellence.** A precision instrument, yet so sturdily constructed that none of its parts can wear out. Once installed, no further adjustment required.

## REDDI-SWEEP RECORD BRUSH

THE INDISPENSABLE HI-FI RECORD ACCESSORY

### IMPROVES REPRODUCTION SAVES RECORD AND STYLUS LIFE!

KEEPS RECORDS CLEAN

Considerable surface noise is caused by dust collected on records. Stylus picks up dust and scrapings off record—this causes distortion.

Brushes Dust Out while record is playing. Brush faces direction of revolution thus removes dust and scrapings, unlike most brushes that sweep dust right into the grooves. You swing brush away after a few revolutions.

#### FITS ANY TURNTABLE

Position of brush is adjustable to any height. Once set, no further adjustment needed. A flip of a finger spins brush away for changing records.

Installed in a Jiffy. Pressure-sensitized base permits instantaneous installation. You simply press base down on table (metal or wood) and there you are . . . Reddi-Sweep is permanently installed.

#### A QUALITY PRODUCT

REDDI-SWEEP Record Brush is an ingeniously engineered and attractively designed product. Fine camel hair brush exerts no pressure on record, yet efficiently cleans it while the record is spinning. Base is of durable plastic.

Color Combinations. Available either in marblette green and red, or in black and white.

### DELUXE THREE-SPEED RIM DRIVE FOUR POLE MOTOR

**MODEL DSS** — 78, 45, 33½ R. P. M.

115 volts a.c., 60 cycles

Model DSS

Simple speed change is accomplished by shifting the idler wheel vertically to the appropriate diameter on the motor shaft for desired turntable speed. When shifting speed selector to off position, a switch turns the motor off and the idler wheel is disengaged from the motor shaft. The driving motor is of the four-pole, shaded-pole type resulting in absolute minimum of stray field radiation—ideally suited for use with all types of pickups including magnetic. Motor uses oilless bearings and motor is dynamically balanced to a fine degree.

Precision construction throughout—low friction oilless turntable bearing—radially operated shift lever—10 inch turntable.

List Price, \$24.50

Dimensions: Length 6 5/8"—Width 6 1/8"—Depth 2 3/8" below mounting plate. Furnished complete with 10 inch turntable, speed indicator dial, 45 RPM record adapter, off-on switch, and mounting plate ready for installation. Packed in individual cartons. Shipping Weight 6 1/2 lbs.

Model TR

**MODEL TR** — 45, 78, 33½ R. P. M.

115 volts a.c., 60 cycles

Deluxe three-speed rim drive, 2-pole motor. Turntable speeds of 33½, 45 and 78 R.P.M. are secured through three separate pulleys running on oil-impregnated bearings and mounted on a turret plate. By means of a simple lever, the desired pulley is brought into contact with the idler wheel. The two pulleys not in contact with the idler wheel remain stationary. Symmetrical electrical and mechanical design results in minimum stray field and maximum performance. Ingenious locking device holds turret plate firmly in driving position at any of the three speeds. Available with 8" or 9" turntable. A 45 R.P.M. record adapter and speed indicator dial are furnished with each motor.

List Price, \$12.10

Dimensions: Length—3 1/8"; Width—2 1/4"; Depth—2 1/8" below mounting plate. Furnished complete with turntable and mounting plate ready for installation. Shipping weight—4 lbs.

Deluxe rim drive, 4-pole motors with a simple and positive mechanism for shifting from one speed to the other. Speed change is accomplished by means of an external push-pull lever. An ingenious mechanism raises and lowers the entire idler assembly, disengages the idler wheel from the two-diameter motor shaft and moves the idler wheel from one diameter to the other. At the slow speed the idler wheel engages the small diameter of the motor shaft; at the fast speed it engages the large diameter.

### MITER CUTS, TRIM CUTS AND BONDS SPLICING TAPE

Robin's GIBSON GIRL Tape Splicers cut the two tape ends diagonally so that they butt together exactly and trim the splices with two slight concave indentations, giving the splice a GIBSON GIRL shape. This leaves the edges of the tape which contact critical parts of the recorder entirely free of adhesive. Adhesive deposited on critical parts of the recorder is a frequent cause of erratic operation, wow and flutter.

GIBSON GIRL TAPE SPLICERS have cutter cartridges which house three long life blades. The cartridge has two operating positions, which are selected by moving the knob back and forth. With the knob in the back position the miter cut is made. In the forward position (Illustrated), the GIBSON GIRL trim cut is made.

NEW! GIBSON GIRL SEMI-PRO TAPE SPLICER—Tape guide has pressure sensitive adhesive for fastening on recorder. Hand held splicer has two sets of blades, one for diagonal cut, the other for GIBSON GIRL trim cut. For amateur and semi-professional use.

## EQUIFLEX ALL METAL VIBRATION ISOLATORS

Equiflex Vibration Isolators consist of a double array of springs arranged to form two opposed cones, the springs serving to join the outer plate member resiliently to the inner tubular member. Within the two cones of multiple springs there is a damper consisting of two floating metal stampings held apart by an internal compression spring. The damper serves to keep the amplitude at resonance within safe limits. The mounting incorporates safety rebound washers attached to each end of the inner tubular member, thus taking care of overload and shock conditions and keeping the equipment within proper limits.

## "400" SERIES PLUGS AND SOCKETS

(Formerly "Heavy Duty")

### General Specifications

Made in 2, 4, 6, 8, 10 and 12 contacts. All Plugs and Sockets are polarized. Body of molded Bakelite. Phosphor bronze "knife-switch" type Socket contacts engage both sides of flat Plug Contacts—double contact area. Plug prongs are 1/4" wide by 1/8" thick. Caps are finished in Black Crystal and equipped with fibre lining. Plugs and Sockets arranged for cap or panel mounting.

Note: Standard angle brackets cannot be attached to S-402-AB due to narrow block and insufficient material for screw threads. A special bracket is supplied (Type 46) See illustration. The Socket fits into this bracket which is attached to panel.

Check the No. 2400 Series Plugs and Sockets listed on pages F-42 and F-43 which are similar to the 400 Series except their design increases the creepage distances and therefore can take higher voltages.

## "2400" SERIES PLUGS AND SOCKETS

The 2400 Series Plugs and Sockets are designed for highest electrical and mechanical efficiency, and although they carry the same rating as the 400 Series, they will actually handle considerably higher currents due to their improved construction.

An entirely new type of socket contact has been designed. Four individual flexing surfaces make positive contact over practically their entire length. Note in the illustration how they exert maximum pressure at every point. Also note unique method of anchoring terminals in the block—they cannot be moved up or down.

This design provides greater contact surface, increased pressure, with smoother action.

Socket contacts are of phosphor bronze, cadmium plated. Male contacts are of heavy brass  $\frac{1}{4} \times \frac{1}{8}$ ", cadmium plated.

The contact to contact, and contact to ground distance has been considerably increased by mounting the contacts into recessed pockets with a Bakelite barrier surrounding and extending above. This method is used on both the top and bottom sides of both plugs and sockets, greatly increasing the leakage path.

The outside dimensions of corresponding plug and socket bodies are the same and can, therefore, be changed from brackets to caps, or vice versa.

Two styles of brackets are furnished "SB" (shallow bracket) for flush mounting and "DB" (deep bracket) for recessed mounting. Caps are furnished with flared hole in top or end, or with cable clamps in top or end. Unless otherwise specified the following size cable entrance holes will be supplied:

2402— $\frac{3}{8}$ "	2406— $\frac{1}{4}$ "	2410— $\frac{9}{16}$ "
2404— $\frac{7}{16}$ "	2408— $\frac{1}{2}$ "	2412— $\frac{5}{8}$ "

As noted above, the 2400 Series is furnished in 2, 4, 6, 8, 10, and 12 contacts. All plugs and sockets are polarized.

Plug and socket bodies are of molded Bakelite. The fibre linings in the caps are the same for both plugs and sockets.

A shoulder extends around the face side of plug and socket presenting a finished appearance when mounted in bracket or cap.

On account of this shoulder extending around the entire face of the body blocks, angle brackets cannot be used with the 2400 Series Plugs or Sockets.

The entire 2400 Series is interchangeable with the 400 Series as 2400 Plugs fit corresponding 400 Sockets, and 400 Plugs fit corresponding 2400 Sockets.

Solder connecting side of Plug Body showing Recessed Pockets with Barriers around contacts. Plug contacts are also in Recessed Pockets on opposite side.

Solder connecting side of Socket Body showing Recessed Pockets with Barriers around contacts. Socket contacts are also in Recessed Pockets on opposite side.

## “500” SERIES PLUGS AND SOCKETS

Designed for 3,000 volts and 25 amperes per contact. Circuit characteristics, however, may alter this rating one way or the other.

Long leakage path from terminal to terminal, and terminal to ground. Contacts are brass and phosphor bronze, silver plated. Metal parts of caps and brackets are steel, parkerized (rust-proofed). Plug and socket blocks are interchangeable in caps and brackets.

All sizes are polarized in a manner to prevent a smaller plug being inserted in a larger socket. Thus different sizes may be used on one installation, without danger of making wrong connections.

Extreme care has been taken to make terminal connections under cap very accessible both for original wiring and subsequent inspection. The cap is insulated with canvas bakelite. Plug prong cross section  $\frac{1}{16}$ " x  $\frac{3}{32}$ ".

**IMPORTANT:** For safety with high voltages DEEP BRACKETS should always be used on one plug or socket, when the other plug or socket has a CAP. SHALLOW BRACKETS are for use only in connecting two units, each unit having plug or socket with SHALLOW BRACKET.

Cable entrance: Because of the great variation in type and size of cables, we have considered it best not to supply cable clamps of any kind. The cap end is made to accommodate standard BX clamps which may be obtained at any electrical jobbing house. The cap end will be furnished with round hole from  $\frac{1}{2}$ " diameter and  $1\frac{1}{4}$ " diameter in steps of  $\frac{1}{8}$ ", if the size required is given on order. If no size is given, plain cap end with center punch locating center will be shipped.

### LOCKS FOR 500 SERIES PLUGS AND SOCKETS

No. 500-L Locks

Locks shown above are used in connection with any DEEP BRACKET and cap combination.

The locks securely hold the units together, but they can be released instantly.

The mounting plates are made to fit all DEEP BRACKETS, and are fastened by the same screws or rivets that hold the deep brackets to the panel. Can not be used on shallow brackets. Sold in pairs only.

## BARRIER TYPE TERMINAL STRIPS

Increased insulation is provided by having Barriers placed between each Terminal. These Barriers follow around the edge of the Strips and terminate at the base. They not only make a long leakage path but prevent direct shorts from frayed wires at the terminals. Mounting holes are at the ends as illustrated. The base is molded Bakelite. The Eyelets and Binder Screws are of brass, nickel plated. The  $\frac{3}{4}$ W or Y terminals are of brass, hot tin finish.

## Micro RIBBON CONNECTORS

Latest result of AMPHENOL's continuing program of miniaturization are the extremely small, highly reliable Micro-Ribbon connectors. The smooth and easy insertion extraction action, the self-wiping, self-cleaning features and the double-sided flexing action of both mating 'ribbon' contact members make Micro-Ribbons the first miniature connectors offering not only reduction in size but increase in reliability. Available in 14, 24 and 36 contacts. Dielectric material is an improved diallyl phthalate; contacts are gold-plated over silver finish. Shells are cadmium-plated brass with a gold iridescent iridite finish.

Voltage Rating: 5 Amps  $\left\{ \begin{array}{l} 700 \text{ Volts D.C. at Sea Level} \\ 200 \text{ Volts D.C. at 70,000 Feet Altitude} \end{array} \right.$

## CAPTIVATED\* CONTACT RF CONNECTORS

Captivated Contact RF connectors offer a remedy for the problem of receding or shrinking cable dielectrics under abnormal operating conditions. By means of an entirely new design the contacts

are captivated within the structure of the connector itself. Even under great extremes of hot and cold contacts and conductors remain fixed in position, even when the cable dielectrics recede.

## SOLDERLESS RF CONNECTORS

These new RF connectors meet for the first time demands by commercial users of Series UHF connectors for easy-to-assemble plugs. Designed to eliminate one or both of the two common soldering operations in assembly, the 83-850

is completely solderless (both braid and contact) while the 83-851 eliminates the need for soldering the braid. Both are electrically similar to the AMPHENOL 83-1SP plug. Bodies are cadmium-plated brass; contacts are silver-plated.

# for Power, Signal and Control Circuits in Electronic Equipment

"AN" stands for Army-Navy and these services have provided the official definition of the AN connector: to provide a detachable connection in one or more electrical circuits; a complete AN connector consists of two mating units—a plug assembly and receptacle assembly.

AMPHENOL AN connectors, although designed and approved under government specifications for use by the armed forces, are ideal for commercial and industrial use where the same dependability is mandatory. These modern, efficient connectors are being used by practically every part of the giant electronics industry.

## features of AMPHENOL AN CONNECTORS

- Contacts** All contacts are gold-over-silver plated for improved appearance and better electrical and mechanical surface. Gold assures indefinite, like-new shelf life. Gold-plated contacts make soldering easier and faster—no pre-tinning of solder cups is required.
- Dielectric** Inserts are molded of AMPHENOL high-strength 1-501 Blue dielectric material. This material has high impact strength, exceptionally low loss and low shrinkage.
- Finish** Chromate conversion finish over cadmium. Extremely high corrosion resistance as well as excellent conductivity.

## ORDERING AN CONNECTORS

The AN series of connectors includes thousands of combinations, but the functional numbering system permits easy and accurate ordering. To illustrate the system employed a typical part number, AN3100A-16-11P, is exploded and analyzed.

**ERIE TEFLON TUBE SOCKETS**

**ADVANTAGES.** Teflon tube sockets offer ultra superior electrical advantages. Its extremely low dielectric constant and dissipation factor result in a capacity, between pins, only twice that of air, and a circuit Q better than 5,000. Contributing to circuit

stability is the fact that the capacity and Q remain constant; the actual change is negligible, over a frequency range of 60 cps to 30,000 Megacycles and a temperature range of minus 110° F to plus 500° F. Sockets meet all RMA and JAN Specifications

**ERIE KEL-F\* TUBE SOCKETS**

**ADVANTAGES.** Erie Kel-F Insulated 7 and 9-Pin Miniature Tube Sockets are designed to fill the need of the electronics industry for high performance tube sockets for use where high or low ambient temperatures or frequency stability are problems. Kel-F, a thermoplastic Fluorocarbon Polymer, is readily molded to accurate dimensions. It is dimensionally stable throughout its wide service temperature range from a

low of -320° F to +390° F, and there is no appreciable change in its electrical and physical properties. Water absorption is zero by ASTM Test — hence it is unaffected by extreme humidity.

All metal parts of sockets are precision made and plated to JAN Specifications. Contacts exceed all JAN Specifications for tube retention, tab flexing and pin contact resistance.

**ERIE TEFLON CONNECTORS**

**9-PIN CONNECTOR**

CN-409M

**USE.** Teflon 9-Pin Connectors are designed to mate with 9-Pin Miniature Tube Sockets, Catalog No. SO-429-3.

**ADVANTAGES.** Teflon 9-Pin Connectors provide exceptionally low loss between pins and between pins and ground. The Teflon insulation offers a loss factor of less than 0.0002; surface resistivity of 3.5 x 10<sup>13</sup> ohms; dielectric constant of 2.0 (60 cycles to 30,000 megacycles). It will not DC plate or carbonize under arcing.

Pins are silver-plated brass and insulating body is designed with "windows" for making easy solder connections.

**HOW TO ORDER.** Specify Teflon 9-Pin Connector No. CN-409-M for mating with Miniature Tube Socket No. SO-429-3.

**15- and 18-PIN CONNECTORS**

CN-415M

CN-415F

**USES.** Erie Teflon Connectors are designed for low-loss, high frequency service in inter-connection of radio, radar and other electronic equipment — where connectors must be unaffected by wide range in ambient temperatures, pressure altitudes, humidity, and mechanical shock and vibration.

**ADVANTAGES.** The principal characteristics of these Teflon connectors are outlined in the tabulation below.

Material of terminals in male connectors is Brass, silver-plated, gold-flashed; female connectors, Beryllium Copper, silver-plated, gold-flashed.

**HOW TO ORDER.** Specify Erie Teflon Connector Type CN-415 or CN-418 for 15 or 18-pin connectors, with subscript M or F for male or female types, or both for mating pairs.

**CRYSTAL SOCKETS**

CS-441

**USES.** Teflon Crystal Sockets are designed for use wherever low loss and frequency stability are desired and mechanical shock and vibration are problems.

**ADVANTAGES.** Made of Teflon, these Crystal Sockets are unusually sturdy and due to the inherent resiliency of the plastic, they aid in absorbing shock and vibration in severe service. Teflon Crystal Sockets have a loss factor of less than 0.0002 and a dielectric constant of only 2.0 from 60 cycles to 30,000 megacycles.

Teflon Crystal Sockets mount by means of a single hole and can be either screw or rivet mounted. Assembly is facilitated as there is no danger of breakage as with ceramics.

**HOW TO ORDER.** Specify Teflon CS-441 Crystal Sockets for 0.050 pins spaced 0.486 inches. Specify Teflon CS-442 Crystal Sockets for 0.095 pins spaced 0.486 inches.

## POST SOCKET TURRETS

VECTOR SOCKET TURRETS are widely used for mounting circuit components. The posts are Grade XXXP phenolic (or glass silicone to order) 1/2" O.D. with 1/16" wall. Sockets are mica filled phenolic. The terminals are hot tinned brass, saddles cad. plated steel. Also available are premium quality sockets with hot tinned brass or steel saddles, beryllium copper, silver plated terminals (Add "J" to Cat. No. for this). Terminal Turrets without sockets, useful for many mountings, are listed at the end of the table:

## DECK TURRET AND WALL TURRET

DECK TURRET & WALL TURRET assemblies provide means for mounting circuit components similarly to Post-Turrets but are somewhat better adapted to compact multi-tube assemblies. Deck Turrets have terminal strips parallel to the socket plane whereas Wall Turrets have strips perpendicular thereto (See figures). They are designed for use on a chassis or with plug in units. Patter "A" strip is standard.

## STRUCTURES FOR CIRCUITRY

**Unitize** — Vector structures provide economical methods of unitized modular construction of electronic circuitry. Unitized assembly on Vector Turrets eliminates useless lead length and improves performance.

**Miniaturize** — Better space utilization, compactness, accessibility and ease of assembly are some of the advantages of the Vector modular system.

**Plug-inize** — Vector turrets combined with a Lip-Loc case forms a plug-in unit . . . for faster final assembly and ease of equipment maintenance.

For example, KIT 4-EK3 may be set-up to mount 1 to 3, either 7 or 9 pin miniature sockets in any order using adapter rings to accommodate different socket diameters. Socket holes are 3/4" diameter with slots for saddle screws. Plug buttons are supplied to close socket holes where tubes are not required. (If octal sockets are required, holes can be enlarged by customer.) 7 and 9 pin sockets are supplied and also an equal number of JAN type shield bases of each type and corresponding to the number of socket holes in the cover. An extra undrilled plug base is supplied so that larger plugs such as the "Blue-Line" may be mounted. (Latter is not supplied but spacers & screws for this are included.) Finish is caustic etch on aluminum. Sockets are mica filled phenolic, commercial grade, terminal strips and spacers are phenolic. Adapter rings to mount 7 pin sockets are furnished. Two Deck type strips with ZIP terminals are assembled with 9 pin sockets and 11 pin octal type plug into case. One extra third deck is supplied as a loose part which may be easily inserted in the stack if desired. Overall height of all units is 3".

VECTOR ZIP TERMINALS — Remarkable new "ZIP" Terminals do "everything". The PUSH-IN Type need only be pushed into the .093" hole (Pattern A or AA board) and holds itself in without staking (May be staked if desired for maximum holding). It is provided with serrated slots to grip inserted wires — it also has through panel hole and additional slot on opposite side and is offset for Riser wire application. "Side Zip" type as used in Deck type units provides side projecting fork and is eyeletted in place in .093" hole. "Edge Zip" is similar to latter but laps over edge of strip with main fork perpendicular to strip. Hot tin dipped eyelets listed separately for attaching ZIPS (except Push-in type) may also be used alone as terminals.

## SOCKET SADDLE NUTS

U nuts designed especially to slip over and clamp on socket saddles provide convenient means for quickly screwing sockets to chassis. ## SOCKET EXTENDERS

SOCKET EXTENDERS provide a replaceable unit for use in tube testers. Wear is shifted from the socket in the tester to the one in the Extender so that when it is worn out a new one can be easily inserted. Sockets have highest grade beryllium copper contacts. A screw projects thru the plug and may be used to hold the unit firmly in place if desired. Socket to plug leads are soldered and an outer shell is used.

## COLOR-BAR GENERATOR WR-61B

The RCA WR-61B Color-Bar Generator is a compact, light-weight instrument designed for use in checking the overall operation of color television receivers, and for adjusting monitors. The WR-61B generates the signals for producing 10 bars of different colors simultaneously (without manual switching), including the bars corresponding the R-Y, B-Y, G-Y, I, and Q signals. The bars are accurately spaced at 90-degree phase intervals.

The output signal from the WR-61B, fixed at channel 3, consists of an unmodulated sound carrier, and a picture carrier modulated by a color sub-carrier, and horizontal synchronizing pulses at 15,750 cps. The picture carrier, color subcarrier, sound carrier, bar frequency, and horizontal sync pulses are crystal controlled for accuracy and stability.

Separate video output, with reversible polarity, is available for checking studio monitors. Video output at the HI terminal is approximately 8 volts peak-to-peak across 4700 ohms.

189 Kc pedestals, adjustable in amplitude, provide luminous channel information.

Luminance signals are provided at the edges of the color bars to check the "fit" or registration of the luminance and chrominance signals. Amplitude of the color subcarrier and the bar signals is adjustable to facilitate checking color-sync lock action in the receiver.

The WR-61B is supplied with a shielded rf-output cable for connection to balanced 300-ohm inputs, and a shielded video cable for connection to 75-ohm video circuits.

Supplied with rf-output cable, video output cable, ground lead, TV-input adapter, instruction booklet.

## RCA WR-46A VIDEO DOT/CROSSHATCH GENERATOR

The RCA WR-46A Video Dot/Crosshatch Generator is designed for use in checking and adjusting static and dynamic convergence in color-TV receivers and for checking the vertical- and horizontal-scanning linearity of both color and black-and-white television receivers. The unit is compact and portable, permitting use in the factory, service shop, or in the home, where installation of a color-TV receiver requires adjustment of the convergence circuits.

The WR-46A provides a choice of vertical-bar, horizontal-bar, dot, or crosshatch pattern output. The output signal is continuously adjustable in amplitude on all patterns from 0 to 35 volts peak as measured across a 4000-ohm load and is more than sufficient to drive either a black-and-white or color picture tube directly. This range of output makes it possible to inject the test-pattern signal directly into the grid or cathode circuits of black-and-white receivers, or into the three individual grid circuits or common cathode circuit of color picture tubes or into different points in the video-amplifier section of both black-and-white and color-TV receivers.

The number of dots or bars in a vertical row is adjustable from approximately 10 to 25 by means of a front-panel control. A brightness-equalizer control is provided to permit adjustment of the brightness ratios between the vertical and horizontal bars.

Special attention has been given to the synchronizing circuits in the WR-46A to produce a video test pattern which is exceptionally free of crawl and jitter. A synchronizing signal is taken from the TV receiver under test, after the receiver has been tuned to a broadcast signal, to synchronize the vertical- and horizontal-oscillators in the WR-46A. For best results, the horizontal and vertical sync in the receiver should be locked together by tuning in a broadcast signal on the receiver. The generator signal should then be locked to the receiver sync. If a generator employing only internal sync is used, it is possible to obtain proper static and dynamic convergence during the adjustment procedure but, unless the generator sync is crystal controlled, dynamic convergence may be unsatisfactory when a broadcast color picture is received.

Both "plus" and "minus" output is available, and the output leads are dc isolated, permitting connection into any section of the video amplifier. Three video-output leads, a sync-pickup lead, and a ground lead are supplied with the instrument. The output leads are coded red, green, and blue for connection to the "red", "green", and "blue" grids of color picture tubes in receivers which do not utilize the picture tube for matrixing. The output voltage is properly divided in the WR-46A so the correct voltage ratios are available at the output leads. In receivers which utilize the picture tube for matrixing, such as the RCA 21-CT-660-series receivers, only one lead need be connected to the common cathode circuit. The WR-46A is housed in a blue hammeroid case, has a brushed aluminum panel, and is equipped with a black leather carrying handle.

**\$179.50** (User Price)\* The WR-46A is supplied complete with video output cable, sync-pickup lead, ground lead, and instruction booklet.

\* Optional. Prices higher in Alaska and Hawaii.

## TELEVISION SWEEP GENERATOR WR-59C

Featuring preset sweep positions from channel 2 through channel 13, the WR-59C also provides a continuously adjustable video sweep signal from 50 Kc to 50 Mc. The WR-59C combines all the essential features required in a sweep generator for trouble-shooting and aligning both black-and-white and color receivers.

The WR-59C provides flat output on all channels. The push-pull oscillator provides output on fundamental frequencies and output is free of harmonics and spurious components. Output voltage is more than adequate for all service and manufacturing applications.

An outstanding feature of the generator is the dual-piston attenuator which provides smooth, even attenuation over a wide voltage range. Energy is capacitively coupled from the oscillator, and the attenuator may be set to give flat output from as low as 5 microvolts to as high as 100,000 microvolts.

Other features of this fine instrument include a blanking circuit, phasing control for use with an oscilloscope sweep, and a separate attenuator control for adjusting the output level of the video-frequency output signal.

## CRYSTAL-CALIBRATED MARKER GENERATOR WR-89A

Featuring continuous tuning, the RCA WR-89A Crystal-Calibrated Marker Generator furnishes you with an rf carrier of crystal accuracy for use in aligning and trouble-shooting of TV and communications receivers, transmitters, and other equipment in such services as fm, aeronautical, and marine, operating in the frequency range of 19-260 Mc. Calibration of the generator may be checked at 2.5 Mc intervals throughout its tuning range by means of a built-in harmonic crystal oscillator of high accuracy.

In this one versatile instrument you not only get a multiple-marker generator, but also a very useful bar-pattern generator for checking both vertical and horizontal deflection linearity of a TV receiver. When video and sync information from an operating TV receiver is fed into the WR-89A, you can use the generator as a rebroadcast transmitter to produce a TV picture on any channel of another TV receiver.

And when an external rf signal is fed into the WR-89A, you may also use the generator as a heterodyne frequency meter for measuring the frequency of the external signal.

These and other important advantages reflect the expert engineering and functional design of the WR-89A—assuring you the dependability so essential for today's critical testing requirements.

## VIDEO MULTIMARKER WG-295A

The RCA WG-295A Video MultiMarker provides five simultaneous absorption-type markers accurately preset at the following frequencies required in marking the video response curves in color receivers: 0.5 Mc (for Q filter); 1.5 Mc (for I filter); 2.5 Mc (for band-pass-filter); 3.58 Mc (color subcarrier frequency); 4.5 Mc (sound-trap frequency).

Each of the marker frequencies in the WG-295A is definitely and quickly identified simply by touching the corresponding contact on the MultiMarker; this has the effect of reducing the amplitude of the particular marker notch. The WG-295A is connected between the IF/VF output on the sweep generator and the regular video output cable.

## RF SIGNAL GENERATOR WR-49A

You don't have to bother with the nuisance job of connecting dc blocking capacitors to the probe tip of the RCA WR-49A RF Signal Generator, because it has built-in dc blocking capacitors. With it, you can inject rf signals into plate circuits and other points where dc is present without placing a dc load on the circuit under test—and with protection from burn-out in both the equipment and signal generator.

The functional-design dial facilitates accurate and easy readings. And full-length shielding of the output cable minimizes radiation and hum pickup in the receiver under test or adjacent test equipment. And that's not all! The extremely stable cathode-follower output stage isolates the oscillator from effects of load reactance and resistance, thereby maintaining good output waveform, voltage regulation, and frequency stability.

Compact and lightweight, the WR-49A can be depended upon in such applications as alignment and signal tracing of am and fm radio receivers, alignment of low-frequency if amplifiers in TV receivers, and signal tracing and trouble-shooting in TV receivers.

## 5-INCH OSCILLOSCOPE WO-78A

The WO-78A Oscilloscope is a dual-bandwidth oscilloscope designed especially for both color and black-and-white TV equipment production and servicing, and other applications requiring an instrument of high sensitivity and wide-band response. Bandwidth is changed by means of a front-panel switch.

The WO-78A has excellent phase characteristics throughout its 4.5-Mc band pass range. Push-pull output stages in both the vertical and horizontal amplifiers minimize "line bounce", "crosstalk," and astigmatism.

An outstanding feature of the new WO-78A is the push-button

voltage calibration which eliminates the need for external connections and does not require that the probe and cable be disconnected from the test circuit. This calibration feature, combined with flat frequency response out to 4.5 Mc, make possible simultaneous voltage measurement and waveshape observation of such critical waveforms as the color-sync burst in color-TV receivers. Other features of this fine instrument include a horizontal sweep oscillator having a frequency range from 10 cps to 100 Kc, front-panel switch positions for locking in on TV-line and field-scanning frequencies, automatic sync-signal limiting, a feature which eliminates the need for a separate sync-injection control, and a flat-faced high-sensitivity cathode-ray tube.

## 7" OSCILLOSCOPE WO-56A

Featuring identical, direct-coupled vertical and horizontal amplifiers, the WO-56A 7-inch oscilloscope provides facilities which allow fast and accurate trouble-shooting of TV receivers. The identical amplifiers also permit the use of the WO-56A in special applications.

Each amplifier consists of three push-pull stages of amplification, a feature which provides high deflection sensitivity with good stability. The trace can be expanded to approximately three times the diameter of the screen and centered on any portion for examination of waveshape details. The use of push-pull stages also reduces astigmatic distortion, thus providing a uniformly sharp trace over the entire useful area of the screen.

## 5" OSCILLOSCOPE WO-88A

If your present 'scope is a temperamental performer on the service bench, or if your business is limited by "substitute" TV servicing methods, you owe it to yourself to find out about the "88."

"Superlative in its price class" best describes this new 5" 'scope.

Tops on the list of quality features is the '88's "picture-perfect" square-wave response and its remarkably faithful reproduction of horizontal and vertical sync and blanking pulses, sweep alignment traces, and other complex wave-shapes encountered in TV servicing.

A direct-coupled push-pull, two-stage vertical amplifier with frequency-compensated and voltage-calibrated attenuators gives the '88" plenty of deflection sensitivity with a uniform frequency response maintained over the entire range of the attenuators. And sync action is exceptionally stable over the entire range of the 'scope.

You will find such quality extras as — front-panel source of calibrating voltage, graph screen scaled directly in peak-to-peak volts, "plus" and "minus" sync, 60-cycle sweep with wide angle phasing control, special maintenance control adjustments accessible from outside of cabinet, high-impedance input, and many others in the new RCA "88."

**WG-388A Wide Band Modification Kit . . .** to adapt the WO-88A Oscilloscope for Color TV.

The WG-388A Modification Kit includes all parts and a detailed instruction bulletin for modifying the WO-88A to provide for both narrow-band and wide-band operation from dc to 4.5 Mc. With the modified WO-88A, it is possible to observe and measure the color-burst signal and trouble-shoot in the chrominance circuits of color television receivers.

## SENIOR VOLTOHMYST WV-98A

The WV-98A Senior VoltOhmyst is an ultra-modern vacuum-tube voltmeter which is completely new in size, shape, and design. The new Senior VoltOhmyst incorporates all the important time-proved performance features of earlier VoltOhmyst and includes an improved circuit providing 3 percent accuracy on ac and dc voltage measurements; and a big, full-vision meter face with one of the easiest reading scales ever designed into a vacuum-tube voltmeter, and a rugged die-cast aluminum case.

The new instrument features a high-impedance, frequency-compensated attenuator network used in conjunction with a full-wave vacuum-tube detector. ## JUNIOR VOLTOHMYST WV-77B

The new RCA WV-77B Junior VoltOhmyst embodies several new design features in addition to operational characteristics which have made earlier versions of the instrument the choice of thousands in radio and TV servicing, industry, electronics, communications, broadcasting, and in the armed forces. The new instrument is factory assembled, factory wired, and factory tested; it is factory calibrated with the finest laboratory standards.

Using the reliable VoltOhmyst bridge circuit, a sensitive 200-microampere meter movement, and  $\pm 1\%$  carbon-film multiplier resistors, the all-electronic WV-77B incorporates features usually found in more expensive instruments. As a DC Voltmeter, it measures from 0.05 volt to 1200 volts in five ranges, even in presence of ac. Less than 3 uuf input capacitance with 11-megohm input resistance makes the WV-77B invaluable for dc

measurements in avc, oscillator, and other high-impedance circuits.

As an ac voltmeter, the WV-77B measures from 100 millivolts to 1200 volts (rms) in five ranges. High ac-input impedance of vacuum-diode signal rectifier permits use in audio and rf applications. Frequency range is flat with 1 db from 30 cps to 3 Mc, and from 50 kc to 250 Mc when used with the WG-301A accessory probe.

As a wide-range ohmmeter, the WV-77B measures resistance from 0.2 ohm to 1-billion ohms in five ranges. Danger of burnout of low-current devices such as battery-tube filaments is minimized by use of a single 1.5-volt battery in the ohmmeter circuit. The meter is electronically protected against burnout on all functions.

## MASTER VOLTOHMYST WV-87A

Featuring a 7½" meter, the new WV-87A Master VoltOhmyst is the deluxe member of the RCA VoltOhmyst family. Its peak-to-peak scales are particularly useful for television, radar, and other types of pulse work.

The WV-87A measures dc voltages accurately in high-impedance circuits, even with ac present. It also reads rms values of sine waves and the peak-to-peak values of complex waves or recurrent pulses, even in the presence of dc.

Like all RCA VoltOhmysts, the WV-87A features ±1% multiplier and shunt resistors, a ±2% meter movement, high-input resistance, zero-center scale adjustment for discriminator alignment, dc polarity-reversing switch, and a sturdy metal case for good rf shielding.

The RCA WV-87A Master VoltOhmyst has the accuracy and stability necessary for many laboratory applications. Its large, easy-to-read meter also makes it especially desirable as a permanently mounted instrument in the factory and repair shop.

## ELECTRON-TUBE MICROMHOMETER WT-100A

The RCA WT-100A Electron-Tube MicroMhoMeter is a laboratory-quality instrument which brings a reliable concept of tube-testing technique to users of tubes on the production-line, in the laboratory, and in circuit design. A uniquely designed, compact, self-contained unit, it offers a versatility and accuracy which compares favorably with more elaborate and complex tube-factory equipment used for measuring transconductance. This remarkable instrument provides test results which correlate with tube manufacturers' published data.

The RCA WT-100A makes it possible to test tubes under actual voltage and current conditions . . . to set up tests from tube manufacturers' published data . . . to obtain test results in terms of actual performance, which can be evaluated against original specifications. Now, true transconductance readings can be obtained simply and quickly on a "portable-type" instrument with a single, direct-reading meter.

In addition to testing tubes at published ratings, the instrument can also be set up to provide the operating voltage for a circuit of specific design to determine the performance of the tube under the desired circuit conditions.

The wide range of controls, the flexibility, and the accuracy of the WT-100A makes this instrument an invaluable tool for testing tubes where accuracy and proper evaluation of test results is required.

The WG-289 is provided with microphone-type connector for use with the VoltOhmysts and other voltmeters having microphone-type connectors. The WG-290 is equipped with phone-tip connectors for use with voltmeters having phone-tip jacks.

These High Voltage Probes are capable of extending the dc voltage range of your meter to 50,000 volts. When used with a VoltOhmyst the input resistance is increased to 1000 megohms, an important feature when working in high-impedance circuits where loading seriously affects the stability of the circuit under test.

A choice of five multiplier resistors is available enabling these probes to be used with practically all popular electronic and non-electronic voltohmmeters.

### UHF DEMODULATOR FOR 300-950 Mc WG-298A

Excellent for checking standing-wave ratios on 300-ohm line terminations. Fits 50-ohm BNC type connectors.

**\$37.50\***

### DC/AC OHMS PROBE AND CABLE WG-299B

A special feature of the WG-299B is the handy built-in fingertip switch for instant selection of dc or ac/ohms operation. The probe, designed for use with VoltOhmysts, is completely shielded from connector-to-tip and is insulated to prevent accidental shorts, grounds and shocks.

**\$8.75\***

### WG-302A RF/IF/VF SIGNAL TRACING PROBE

The WG-302A "slip-on" high-frequency probe is designed for use with the WG-300A probe and cable and the (WO-88A and WO-91A) 'Scope, to permit visual signal tracing for rapid isolation of trouble in radio receivers and in television IF and video stages.

**\$8.50\***

### WG-304A RF MODULATOR

The WG-304A is an accessory used to check the overall frequency response of TV receivers from antenna to picture tube grid. The unit permits modulation of an rf marker signal from a marker generator (such as WR-89A) by a signal from a video sweep generator (such as WR-59C).

**\$28.50\***

### WG-305A VIDEO TEST ADAPTER

Designed to simplify trouble-shooting in the video stages of color-TV receivers employing a 6CL6 in the second video amplifier stage. The WG-305A makes it possible to inject video signal from the WR-36A directly into the grid circuit of the 6CL6.

## WORLD FAMOUS MODEL 260\* Set Tester

World's Most Popular  
High Sensitivity Set Tester  
For RADIO and TELEVISION

There are more Simpson 260 high sensitivity volt-ohm-milliammeters in use today than all others combined. No other instrument of its kind has approached the world-wide popularity of the Simpson 260.

Removal of the Model 260 from its heavy, handsome case of molded bakelite will disclose how it differs from most set testers. You will see a sub-panel with a score of small recesses each holding a separate resistor or other component. You will notice complete absence of cable wiring. All connections are short and direct, thus offering a strength and firmness of assembly and the finest of insulation to reduce chances of shorts. All components are readily accessible.

At 20,000 ohms per volt the 260 is highly dependable, rugged and accurate. Its practically negligible current consumption assures remarkably accurate voltage readings. It provides DC current readings as low as 2 microamperes and up to 10 amperes. Dependable resistance readings can be made up to 20 megohms and as low as 1/5 ohm. With the 260 you can measure automatic frequency control, diode balancing circuits, grid currents of oscillator tubes and power tubes, bias of power detectors, automatic volume control diode currents, high-mu triode plate voltage, as well as a wide range of other measurements which cannot be checked with ordinary servicing instruments.

**ROLL-TOP SAFETY CASE MODEL** — Offers the highest degree of efficient, economical instrument protection. A flick of the finger rolls the top up or down for instant use or full protection. Case is heavy, molded bakelite.

**EVER-REDY CARRYING CASE** — Saves you time. Large, one-piece lid folds back to expose meter and switches. Made of tough, long-wearing vinyl.

### TEMPERATURE METER

#### Model 385-3L

Measures Temperatures  
from  $-50^{\circ}$  to  $+70^{\circ}$  F

The Temperature Meter was developed primarily for servicing refrigeration equipment such as deep-freeze units, home refrigerators, and walk-in coolers. It can also be used to service air-conditioning units when the test requirements fall within its temperature range.

MODEL 385-3L, for three 15-foot leads, is especially useful where two or three temperatures must be checked at the same time, such as in setting up a refrigerator thermostat or in checking ambient temperature rises and control apparatus.

**LEADS** — General purpose type, 15' long. Thermistor tip.

**SIZE AND WEIGHT** — 3" x 5½" x 2½", 1½ lbs.

## PANEL AND PORTABLE INSTRUMENTS

Fine Instruments for more than Fifty Years

MODEL Nos. 641, 645 and 649  
Plastic Styrene Cases

HOYT moving-coil Meters are built on the D'Arsonval principle using carefully selected jewel bearings and polished steel pivots. Accuracy within 2%. Alnico Magnets with soft-iron pole-pieces of uniform flux density used in all movements. Permanently correct balance assured by HOYT "cross arm" spiral wire balance. High torque to weight ratio. Quick response and good damping under all conditions. Choice of "knife-edge" or "lance" type pointers.

MODEL Nos. 600 and 647  
Bakelite Cases

MODEL Nos. 635 and 597

MODEL Nos. 582 and 17/3

NOTE: If "in-between" ranges are required, add \$1.00 to price of next higher range listed. If "zero-center" ranges are required, add \$1.00 to price of that range. For in-between ranges on moving-coil type Voltmeter 150 volts and up, add \$2.50 to prices shown. Voltmeter Sensitivity — Ranges 1-50 volts are 100 ohms per volt. Ranges 50-500 volts are 1000 ohms per volt. Ranges 500-750 volts are 2000 ohms per volt.

NOTE: Please specify type of case on order from chart above. Unless specified, all meters are calibrated on non-magnetic panels. If steel panels are used, give thickness of steel and size of panel hole (No extra charge). All prices are net — subject to change or withdrawal without notice.

## PANEL INSTRUMENTS

These panel instruments reflect half a century of instrument skill, and the Weston tradition of building instruments to the highest standards of dependability and service.

Models 301, 425 and 476 are available in round flush bakelite cases 3 1/2" or 3 3/4", and 3 1/4" metal cases with black finish; also in round surface metal and rectangular flush bakelite cases. Models 301 and 425 supplied in round surface bakelite cases. All are calibrated normally for use on non-magnetic panels. For magnetic panel use, instruments will be adjusted for a specified steel panel thickness. Order instruments in bakelite cases for use on circuits above 300 volts when it is not possible to connect in grounded side of line. The 1301 line of instruments listed at bottom, incorporate the Weston CORMAG® self-shielded mechanism. They can be mounted interchangeably on magnetic or non-magnetic panels without need for adjustment. ## A New Simplified Approach to TV Alignment

The Weston Model 980 line provides servicemen with the most advanced, and by far the most simple and accurate method of TV receiver alignment. It comprises all of the instruments necessary for all-purpose observation of complex wave forms by the electronic industry.

With the Weston method, the output of the sweep generator is fed into the calibrator making it unnecessary to connect the calibrator to the TV set. Only two connections are necessary. This eliminates receiver oscillations ordinarily encountered with the conventional method of receiver test hook-up. Further, there

is no disappearance of markers at trap resonant frequencies. Response curve is not disturbed. Annoying trimmer touch-up on trap circuits is minimized.

This simplified technique is only possible when the companion instruments—Weston Calibrator and Sweep Generator—are used with a scope having provisions for Z-axis intensity modulation. However, individual instruments in the Model 980 line can be used with available test equipment in the conventional method of alignment.

### WESTON MODEL 985 CALIBRATOR

The Weston Model 985 Calibrator is a highly functional instrument for TV shop, engineering, laboratory, and industrial alignment applications. Markers are provided for waveform patterns, local tuner oscillator frequencies, and trap circuit alignment. The instrument is extremely useful for making linearity adjustments, calibrating signal generators, and determining signals of unknown frequencies.

#### FEATURES

**SCALE CALIBRATION:** The frequency calibration of each frequency setting can be checked and adjusted with crystal accuracy. Crystal calibrating points are available at 1.5 and 4.5 megacycles throughout the entire scale. A scale shift knob is provided to align properly the scale with the crystal calibrating dots. A neon type bulb is utilized to indicate visibly the crystal frequency points.

**SCALE PRESENTATION:** Slide rule type in which one scale is visible at a time. Ten scale range bands available . . . total scale length of 8¼ ft.

**DUAL MARKERS:** 4.5 mc side band markers permit simultaneous observation of video and sound carrier.

**INTERNAL MARKERS:** Special circuitry provides an internal marker of either a positive or negative pulse suitable for Z-axis intensity modulation of the scope pattern. This eliminates the necessity of feeding an RF calibrator signal directly into the TV receiver which can cause overload and oscillation in the TV set. The marker is visible even at the sound trap frequencies.

**HETERODYNE DETECTION:** With an input sensitivity of 500 microvolts, the local TV receiver-tuner channel oscillator frequency can be determined without tuner disassembly.

**BAR PATTERN GENERATOR:** Amplitude modulated signals of the band oscillator at 400 cycles for the horizontal linearity check and 300 KC for the vertical linearity check can be readily fed to TV antenna terminals to produce horizontal and vertical bars.

#### SPECIFICATIONS

**FREQUENCY RANGE (with Variable Frequency Oscillator):**

- 4-110 megacycles in 7 bands.
- 170-260 megacycles in 3 bands.
- Use of second harmonic is suitable for UHF 340-520 megacycles in 3 bands.

## MODEL 983 OSCILLOSCOPE

The Model 983 is a high gain, wideband Oscilloscope designed to accurately reproduce waveforms comprising a wide band of frequencies. High sensitivity of 15 millivolts per inch RMS makes this Oscilloscope ideal for—setting resonant traps . . . signal tracing in low level stages . . . as a general null indicator . . . for phase characteristic measurement in Industrial Applications . . . and for sweep frequency visual alignment of TV receivers.

The scope contains identical vertical and horizontal push-pull amplifiers with a choice of a-c or d-c coupling without affecting either sensitivity or bandwidth. Both amplifiers have compensated step

attenuators and cathode follower input.

It has excellent square wave reproduction with overshoot of only 2 to 5% with a rise time of 0.1 microsecond. The scope response is essentially flat throughout the specified range of 4.5 mc and is usable to 6 mc.

## 0-1 DC MILLIAMPERES

Sensitive-type meters such as Stock No. 9300Z, 0-1 DC Ma. with approximately 1000 ohms internal resistance, and Stock No. 9332Z, 0-3 DC Ma., 500 ohms internal resistance, open new design possibilities. Where the necessarily more costly D'Arsonval permanent magnet meter was formerly thought to be the only choice, these Shurite variations are now used in many circuits. Substantial quantity production makes moderate prices possible.

Shurite panel meters are attractive, rugged, dependable instruments with accuracy well within 5%. All models have metal cases, telephone-black front; all require  $2\frac{3}{8}$ " hole. DC meters are polarized-vane solenoid type, or moving-magnet construction when indicated, AC meters are double-vane repulsion type with jeweled bearing. Although the jewel construction costs more to build, it pays off by providing continuing accuracy during a longer useful life. All are guaranteed.

- **GUARANTEE:** Meters are guaranteed to users against defective workmanship and material, and will be repaired or replaced if sent to the factory postpaid with 40¢ handling charge within one year after purchase.
- **ALL-METAL DIALS**—age and moisture resistant, lithographed in black on white for high visibility.
- **STURDY DESIGN**—with husky new coil frames designed to prevent breakage, rigidly mounted in cases with anti-turning hex head studs. Interchangeable in other respects with a popular brand formerly available.
- **MODERN APPEARANCE**—with concealed coils and new raised dial design, enhancing appearance and greatly increasing readability.
- **WIDE SELECTION**—Shurite offers the broadest line of standard meters in the economy-priced field. Distributor stocks are backed by an extensive factory inventory.

**TYPICAL USES:** Shurite products, with their rugged design, and ability to duplicate readings, enjoy wide acceptance in the electronic and electrical fields for transmitters, receivers, TV antenna rotor controls, battery indicators, appliances, power sources, battery eliminators, electric fence controllers, and the very popular basic meters in radio test kits, battery voltage indicators on emergency lighting, burglar and fire alarm systems, output meters on rectifiers, rate-of-charge indicators, testers for hearing aid batteries and their chargers, ammeters for plating sets, and polarity indicators for metals analysis, automotive test equipment to pin-ball circuit testers, and well-depth indicators. Shurite has long been the favorite brand for hobbies and experiments.

## DYNAMIC MUTUAL CONDUCTANCE TUBE TESTER

### Most Accurate Engineers' Laboratory Model

Tests Tubes Per Tube Handbooks and JAN Specifications

**Model 700:** For precise laboratory measurements of the most important vacuum tube characteristics, Transconductance (Mutual Conductance). With this Tube Tester it is possible to duplicate the results found in tube manuals. This instrument places a separate voltage on each element of the tube. These voltages can be varied and measured by means of separate variable rheostats and meters in each circuit. A.C. ripple has been completely filtered out of the plate, screen and grid circuits.

In addition to providing accurate measurements of Mutual Conductance, it is possible to study the behavior of various tubes when used in non-conventional and special types of circuits. Amplification Factor and Plate Resistance may be obtained from the test results. The HICKOK Model 700 may be operated in either of two ways. First, by making use of alternating current null methods of measurement in which capacitance and resistance errors have been eliminated; and second, by direct reading on a meter. The Null Method of making measurements on the tube is the most accurate and is the one which is recommended where sufficient time for the test is available.

Complete with all leads and accessories. Attractive and sturdy case.

### Model 700

#### TECHNICAL FEATURES...

1. Micromho ranges are available as follows: 600, 1500, 3000, 6000, 15,000, 30,000 and 60,000 micromhos.
2. Four separate signal voltages are available, 1.0 volts, 0.5 volts, 0.1 volt and 0.05 volts.
3. Plate voltage supply is continuously variable from zero to 300 volts. An individual D.C. voltmeter in the plate circuit reads plate voltage at all times.
4. Screen voltage is continuously variable from 0 to 300 volts. This is metered by means of a separate D.C. Voltmeter in the screen circuit.
5. The control grid voltage is continuously variable from 0 to 75 volts. This voltage is measured by means of a separate D.C. Voltmeter in the grid circuit. Provision is made to make bias either negative or positive. Suppressor can be used as control grid if desired.
6. An extra negative circuit is provided for holding unused tube elements negative while test is being made on other elements.
7. Provision is made for testing tubes under self-bias conditions when required by that particular tube or when such information is desired.
8. Filament voltage may be applied to the tube up to 117 volts A.C. The separate A.C. Voltmeter in this circuit measures the voltage applied to the filament at all times. This voltage is continuously adjustable. A two-range filament current meter is provided — enabling the measurement of filament current up to 8 amperes.
9. A D.C. Milliammeter is provided for measuring plate current, screen current, or cathode current. This reads from 0 to 150 ma. and may be switched into the three circuits for this purpose.
10. A separate D.C. Microammeter is mounted in the control grid circuit to read grid current, if and when it exists.
11. Amplification factor can be easily calculated from values obtained from the meter readings. Other factors may be similarly calculated.
12. Provision is made for testing tapped filaments either in series or in parallel.
13. Provision is made for adjusting to the electrical center of filament type tubes.
14. Twin tube sections may be tested either singularly or in parallel.
15. Screen grid tubes can be connected as triodes or tetrodes, etc., as may be desired. Switching arrangement is provided for this purpose.
16. A built-in power supply is included with the instrument providing thoroughly filtered D.C. on plate, screen, and control grid.
17. A voltage adjustment with an accurate A.C. meter in the circuit is provided to insure exact signal voltage and correct phasing.
18. Includes a filament current meter with double scale for measurement of filament current up to 8 amps.
19. Designed and calibrated for 60 cycles, 110 or 120 volts operation, 150 watts. Calibration for other frequencies and voltages available.
20. Approximate size — 8" D. x 20" W. x 29" L. Approximate 70 lbs. net, 90 lbs. shipping.

Model 7001

**Model 7001:** Null Reading Apparatus is self-contained in a small case placed alongside the Model 700 tester. It consists of a voltage supply (source from the Model 700 to assure correct phasing), a sensitive A.C. Galvanometer, a calibrated resistor, and an accurate A.C. Voltmeter. It is connected directly into the plate circuit of the tube under test by binding posts on the panel of the Model 700. The grid-signal-produced-component of plate current is balanced by an equal and opposite current applied to the plate from the power supply through the calibrated resistor. The reading of the Micromho Meter at the top of the panel is proportional to the Transconductance of the tube, and is therefore calibrated in Micromhos. The effect of the Null Reading Method is to reduce resistance in series with the plate to zero, thereby assuring the highest accuracies obtainable.

Model 7001: for obtaining bridge type null readings of 1½% accuracy. 8" D., 8" W., 13½" L.

## NEW TV PICTURE- TUBE TESTER

**Model  
CR5**

### Light-Weight, Easy to Use, Fully Field Tested

**Model CR5: VIDEOCHEK Cathode-Ray Tube Tester** is an electrical instrument specially designed for use by TV servicemen and dealers in checking the electron gun of cathode-ray tubes. This equipment tests for both shorts and open elements in the electrodes of the electron gun through use of a sensitive neon lamp.

The CR5 permits a rapid determination of the condition or quality of the emitting cathode. This check uses the cathode-ray tube in conjunction with a neon lamp in a bridge circuit. The combination is rugged, both electrically and mechanically, and there is no sensitive meter to be damaged.

The beam current (peak) principal of test, which is essentially equivalent to light output, is employed for electron guns of the tetrode designs (conventional electromagnetically-focussed types). For triode type electron guns, a peak emission check is used to determine the condition of the cathode.

The tube socket furnished provides for tubes having 6.3 volt heaters utilizing the duodecal basing which is used on approximately 99% of all TV picture tube types.

## VHF-UHF MARKER GENERATOR

**Model 690:** Crystal controlled. High .25 volt RF output. Provides dual markers with any TV sweep generator. Features another HICKOK First — a Non-Parallax shadow type dial. Conventional dials unless viewed at exact, right-angle introduce error, since hairline indicator is always a slight distance from the scale. The HICKOK Non-Parallax dial can be viewed from any angle without introducing error. The 45 inches of dial can be self-calibrated to within .05% accuracy with self-contained crystal calibrator. Complete RF coverage channels 2 thru 83. Also, 3.57 mc crystal (color burst frequency) is available. Leading TV manufacturer's engineers have tested this unit and comment highly on its frequency, stability and time saving features. You need the 690 for VHF or UHF black and white alignment right now.

## UHF or VHF HETERODYNED MARKER ADDER

**Model 691:** This unit in conjunction with the Model 695 Sweep-Alignment and Model 690 Marker provides the utmost in TV alignment technique. Takes guesswork out of alignment jobs. Eliminates errors previously introduced by overload due to markers. The 691 provides a marker visible at all times (including trap points) and will not change in amplitude or distort the response curve WHAT-SO-EVER. This feature, in addition to the accuracy and minimum leakage of the other units (690-695), will greatly simplify any alignment. The outputs of the sweep and marker generators are heterodyned and applied to a scope in such a manner that the marker signal will never pass through the receiver itself — therefore cannot cause overloading. This unit will work well with any of your present equipment that has an output of 50,000 microvolts or more.

### Model 691

#### OUTSTANDING FEATURES

- Input RF voltage required; 50,000 microvolts.
- Output marker voltage; maximum 3 volts.
- Attenuation of marker; variable 0 to 60 db.
- Attenuation of response curve; variable 0 to 20 db.
- Input impedance: 90 ohms.

### UHF-VHF SWEEP-ALIGNMENT GENERATOR

#### All Electronic Sweep

**Model 695:** Here is a completely new generator with ALL-ELECTRONIC sweep. It will exactly fill top requirements of the professional TV serviceman or lab. engineer. There are no moving parts to wear out. Though moderately priced, this unit features a sweep signal that is absolutely linear and without amplitude modulations. Features a high .3 volt output. Triple shielded — no leakage problem here. Signal can be attenuated from 300,000 to 3 microvolts. 0-12 volts variable bias voltage with continuous tuning allows set alignment to more sensitive for "fringe areas," or less sensitive for "prime areas" to prevent overloading. Continuous tuning and detailed, easy-to-read scales provide foolproof method of alignment. Three RF oscillators provide complete VHF coverage on fundamentals (UHF on harmonics) and heterodyned output IF 0 to 50 mc. This assures the strong signal necessary for aligning front ends.

#### OUTSTANDING FEATURES

### Latest Television SWEEP and MARKER UHF-VHF ALIGNMENT GENERATOR For Black and White or Color

**Model 615:** A complete, single-unit TV sweep and marker generator specifically engineered to provide all the necessary features and ranges required for visual alignment of modern TV receivers. Permits complete TV video IF and RF alignment. Provides harmonic output on UHF. Both the marker and the sweep have excellent attenuation. (Due to the high sensitivity of today's TV receivers, alignment equipment must have good attenuation to achieve required results.) Hickok all-electric sweep features no moving parts to wear out or become inoperative. In any FM oscillator it is most desirable to eliminate amplitude modulation because it distorts the final curve as viewed on a scope. In the Model 615, amplitude modulation is less than 0.1 db per megacycle. Marker frequency accuracy is at least 0.5% at any setting. Non-parallax — knife-edge pointers practically eliminate reading errors.

Strong 0.25 volts RMS marker amplitude and excellent attenuation of marker. Frequency: 2.5 to 5.5 MC, 19 to 50 MC, 54 to 108 MC and harmonic 108 to 216 MC.  
Built-in retrace blanking is controllable from front panel to provide zero reference base line.  
Built-in switching arrangement and panel connector permit internal marker mixing with FM or external with heterodyned marker adder such as HICKOK Model 691.  
Variable sweep width: 0-15 MC.  
Dual fused for extra protection of power transformer and other components.  
Generates frequencies necessary for proper alignment of color TV receivers. Has video sweep in addition to IF and RF sweep.

Built-in 4.5 MC crystal provides dual markers for IF or RF alignment, and very accurate 4.5 MC signal for inter-carrier sound alignment.  
Both marker and crystal oscillators may be amplitude modulated approximately 30% by a self-contained 900 cycle internal modulator.  
Excellent sweep linearity. Includes video sweep for checking video amplifiers.  
External sweep variable phasing (170°) is provided on front panel for use with scopes which do not have variable sweep phasing control.  
Attractive portable steel case 13 $\frac{3}{4}$ " H., 16 $\frac{1}{4}$ " W., 8" D. 31 lbs. net, 39 lbs. shipping.

Color Display Pattern; crystal-accurate blended in sequence of orange, red, magenta, blue, cyan, green.

#### DESIGN FEATURES:

Model 660 features the necessary high degree of stability not found in variable white-dot generators. In the 660 all frequencies generated are crystal controlled and locked together with extreme stability.

Frequency of chrominance (color) signal is exactly crystal controlled to reduce possibility of alignment errors. This feature permits increased accuracy over ordinary color generators which use a free running oscillator.

RF output frequency is in preset channels, 2 thru 6, to allow easy selection through a built-in switching arrangement.

Ratio of sync to video is variable from 10 to 90%.

The small-size portable design of this equipment permits easy on-location color TV checks to quickly determine ability of a receiver to produce color in the proper hue . . . even in the absence of a station signal.

The circuit of the 660 is such that regardless of future color TV receiver design, this instrument will be useable.

The exceptionally stable timer circuit will hold synchronization over a very wide range of line voltages that may be encountered in on-location servicing.

### 100% FULLY SATURATED NTSC\* STANDARD TV COLOR BAR GENERATOR

Model 656XC

\*National Television Systems Committee as approved by Federal Communications Commission.

**Model 656XC:** Matched to the other HICKOK instruments, housed in a handy portable detachable cover carrying case attractively covered with durable black leatherette. 16¼" W., 18¾" L., 7½" D. 34 Lbs. net; 42 Lbs. shipping.

Absolutely stable. Entirely independent of changes in line voltage. Compare the wave form information and sharpness of detail of the 656XC with any other TV color bar generator. . . . You'll pick the HICKOK immediately.

**Model 656XC:** Produces a standard 100% fully saturated NTSC color bar pattern on color TV sets. This is a must for non-obsolence. Regardless of future color television receiver design this HICKOK color bar generator will be compatible. This is the type of signal that is transmitted over the air. All literature and alignment data are published around this standard NTSC signal. The Model 655XC provides signal for complete color alignment. Produces color bars on TV screen in the following order from left to right: green, yellow, red, magenta, white, cyan, blue and black. Phase of colors produced is accurately set with precision delay lines. The amplitude of sub-carrier and the amplitude of the brightness component are accurately set with precision resistive Networks. This results in the high stability required for proper alignment. Proper colors are generated within 30 seconds after warmup. In addition to color bar patterns, the 656XC produces: White Dot Crosshatch (20 vertical and 15 horizontal, less those in blanking; Vertical Lines Only; Horizontal Lines Only; and Small Size White Dots are "locked" to assure stability. This locking is achieved through the extremely stable crystal controlled timer circuit. The white dots are of perfect size (approx. 2 lines thick) to permit accurate convergence adjustments. 300 dots are present in each raster, less those in blanking region.

#### DESIGN FEATURES:

Precisely crystal controlled: Sub carrier and horizontal framing.

Produces clearly defined wave forms to provide ease of alignment and assure minimum possible error.

NTSC standard phase and brightness: This NTSC standard signal was used in designing all color TV receivers, and is now used by TV manufacturers.

Self checking: Assures operator that generator is producing accurate NTSC standard signal at all times.

Generates 3 primaries, 3 complements plus black and white. (An essential feature of this equipment is that white is produced by adding the 3 primaries.)

Equivalent vestigial side band modulation avoids overloading of chroma channels. This instrument was designed and built in cooperation with leading color TV receiver manufacturers, and is specified by them for their field service engineers.

Generator is self contained . . . no complicated external synchronizing connections. Output is either R.F. or Video. Video: 0-2 volts peak-to-peak open circuit. 0-1 volt peak-to-peak across 100 ohms with positive or negative output. R.F.: modulated output modulated through color bar pattern is available through channels 2 thru 6.

A sound carrier is also provided for accurate setting of local oscillator in TV receivers. In addition to color bars this instrument generates the necessary signals to align R-Y, B-Y or I and Q type demodulators. These signals appear at black level with equal amplitudes.

Provision for switching I, Q, R-Y, B-Y or Chroma On-or-Off.

The 3.58 MC sub-carrier output of one volt peak-to-peak is also available for troubleshooting and alignment of color synchronizing circuits.

## NEW UNIVERSAL VIDEO GENERATOR COMPATIBLE FOR COLOR OR BLACK AND WHITE RECEIVERS

**Model  
650C**

This fine new instrument is the first of its kind. Now available to rapidly and accurately solve your service problems. Does in minutes many TV servicing jobs that would require hours by other methods.

The 650C has a new timer circuit which delivers video pulses of 60 cycles, 900 cycles, 15,750 cycles and 315 kc., singularly or in any combination, both positive and negative output. Pulses are all locked together and crystal controlled for greater accuracy.

Pulses can be used directly, metered in peak-to-peak volts or to modulate the self-contained RF oscillator.

RF oscillator covers all TV channels in two bands (2-6 and 7-13), all on fundamentals. RF output is metered at all times from 1 to 10,000 microvolts with calibrated attenuation and variable percentage modulation. RF can be externally modulated with video frequencies from 5 cycles to 4 MC with variable percentage modulation on all channels.

Self-contained, substitute external video amplifier, 5 cycles to 4 MC with a variable gain from 0 to 10, with high input impedance, low output impedance and metered peak-to-peak voltage output.

Includes horizontal and vertical sawtooth voltages which can be directly substituted for vertical and horizontal oscillator in a TV receiver. Both the vertical and horizontal sawtooth amplitude is sufficient to give full raster deflection and in the case of flyback type high voltage power supplies the horizontal sawtooth can be used to light up the picture tube.

The 650C also contains an AC line voltage scale for instantaneous check on line voltage fluctuation, a common source of TV trouble.

This tester is an absolute must for accurate registration adjustment of the three color guns of color TV receivers, as well as accurate adjustment of focus, convergence, centering of individual beams, purity yoke, dynamic convergence, linearity and aspect ratio. A real time saver, you need the 650C for TV servicing now.

### OUTSTANDING FEATURES

Quickly localizes and identifies trouble in any section of a TV receiver. Provides electronically accurate bar or dot pattern on the screen of any TV receiver — independent of station operation. R.F. output, directly calibrated in microvolts for sensitivity measurements.

## NEW MUTUAL CONDUCTANCE TUBE TESTER

Here is Proportional Mutual Conductance tube testing by a new patented circuit—offering advantages hitherto unavailable to the service trade. The right Tube Tester for TV and Radio Tubes. The circuit provides the true proportional relationship to the Gm curve for measuring in Micromhos the tube characteristics. Diodes, transistors and low power thyratrons are tested on the GOOD-?-BAD scale.

This new tester handles the most perplexing tube testing problems in many fields—Radio Servicing, Industrial Production, Laboratory Testing, Theatre and P.A. Equipment, Communications, etc. Patented circuit for Proportional Mutual Conductance tube testing employs actual signal oscillator (4KC) for grid signal. Thus, hum and ripple, and tubes with open grids present no problem, and cannot give false readings. Signal component of output is picked off and measured by the specially designed instrument circuit. Tests all types of receiving tubes, low power transmitting tubes, rectifiers, thyratrons, voltage regulator tubes, eye tubes, subminiature, acorn, ballast tubes and pilot lamps. Continuity test circuit also may be used to check electrical appliances for shorts or open circuits. Flexible three-position lever switches for complete coverage of both present and future tube connections. Only three positions mean no guess work on settings. Speed and ease of operation mark use of the tester. 0-10 ACV (variable) available for testing low voltage tubes. Also five other voltages available. (10, 30, 70, 100 and 250). Full range filament voltage settings provides complete and accurate filament or heater voltage at tube base connections: .63, 1.4, 2.0, 2.35, 2.5, 3.15, 4.2, 4.7, 5, 6.3, 7.5, 9.45, 12.6, 19.6, 25, 32, 50, 70, and 117 volts. Instrument is Model 420, 4" long scale, knife edge pointer for easy readability; adjusted to 100 microamperes at 250 millivolts for good temperature compensation. Sockets: 4 prong, 5 prong, 6 prong, 7 prong large and small with combination for pilot lights and flashlight bulbs, 8 prong octal, 8 prong loctal, 7 prong miniature, 7 pin subminiature (for hearing aid tubes), 8 pin subminiature (round), 8 pin acorn, 9 pin subminiature. ## RADIO & TV SERVICING WITH LOAD-CHEK — Model 660

Model 660

### RANGES

WATTS—A.C. or D.C.: 0-500 (50 division scale); 0-1600 (50 division scale)  
VOLTS—A.C. or D.C.: 0-150 (65 division scale)

The LOAD-CHEK for the first time makes it possible for every technician to utilize what is perhaps the simplest and quickest of all service methods—servicing by Power Consumption Measurements, long proven by auto-radio servicemen as a rapid method of localizing troubles in auto radios. Triplet Model 660 is the first Wattmeter to be produced at moderate cost, and with the proper ranges, to bring this short-cut method within the reach of every radio and TV serviceman. Following are only two of many time-saving uses of this new instrument:

**LOCATING A SHORT**—The chassis tag may show a normal consumption of 225 Watts. Simply plug a power cord of the chassis into LOAD-CHEK (no loose ends to connect or be in the way). Note the reading—which should be possibly 350 Watts. By removing the rectifier tube you can determine at once which side of the tube the short is on. With a soldering iron and long-nosed pliers you can check through the chassis, locate and correct the trouble without having to lay down tools or to check with lead wires!

**REPLACING BURNED-OUT RESISTORS**—With the chassis to be repaired plugged into a LOAD CHEK MODEL 660, note the wattage reading with the burned out resistor circuit open. Now replace the resistor. Should the increase in watts be greater than the resistor rating, it indicates an extra load has caused the trouble which has not been cleared. LOAD-CHEK is made-to-order for the busy serviceman because it's a Time Saver; and at its moderate cost can be standard equipment on every service bench.

Black, molded, insulated case, 2½" x 5½" x 6", with removable black leather strap handle. Black molded panel with white markings. Weight: 2 lbs.

## UHF MARKER GENERATOR AND ALL-PURPOSE SIGNAL GENERATOR

UHF Continuously Variable Through Channels 14-83 on Linear Scale 13" Long—  
All Fundamental Readings (470-900 MC) Accuracy—½% to 1%

MODEL 3436

An easy-to-use invaluable test aid as a Signal Generator or Marker Generator for: (1) Adjusting UHF TV receiver front ends and UHF converters. (2) Setting the end limits of UHF converters and receivers. (3) Pre-setting fixed channel converters, a procedure especially needed in fringe areas where the station signal may be too weak for sufficient test indication. Pre-setting can be easily accomplished with the Triplet 3436. (4) A reliable signal source to compare the gain of UHF receivers and converters, also especially needed in fringe areas. Bad crystals in the UHF section can be detected by this method. (5) Used as an alignment generator for UHF converters and TV front ends. (6) Used as a UHF Horizontal Bar Generator, the tester generates approximately 12 lines by using the modulation and feeding into the front end of the receiver. This makes possible linearity adjustment of the TV picture.

Variable-link type attenuator. Adjustable modulation of RF signal at approximately 1000 cycles. Can be used as horizontal bar generator. ON-OFF switch. Also ON-OFF plate switch for pre-heating oscillator tube filament before applying plate voltage.

Heavy steel case, handsomely finished and professional in appearance, 15½" x 11½" x 8¼". Black baked-on suede enamel finish. Sturdy leather strap handle for ease in carrying; makes the generator adaptable for portable as well as test bench use. Weight: 24 lbs. net.

Panel etched heavy aluminum with red and black characters. Tubes, 6AF4, 6J5, 6K6, VR105 and 6X5. Complete with instruction books and test leads.

MODEL 3436.....U.S.A. DEALER NET.....\$169.50

## VIBRATING REED FREQUENCY & TIMING INSTRUMENTS

### GENERAL DESCRIPTION

Vibrating Reed Instruments are direct reading frequency indicators for use where the efficient operation of A.C. equipment depends upon the maintenance of known or constant frequency. They are self contained, their accuracy is not affected by wide voltage variations or wave form distortions and require no auxiliary apparatus. They consist of a number of steel reeds, of high Q, each of which is tuned to a single frequency within the band covered by the instrument. Indication is by visual pattern formed by the vibration of the reed in resonance with the line frequency. Excitation is electromagnetic, and the reeds are the only moving elements. Running Time Meters are synchronous motor operated instruments to automatically measure service periods or service requirements.

### APPLICATIONS

A large demand exists for VIBRATING REED FREQUENCY METERS for use with engine driven A.C. generator units as this is the most simple speed and frequency indicator yet devised for A.C. generator sets. These meters are also generally used in laboratory and portable test equipment, electronics, telephony, aircraft, industrial plants and numerous applications where electrical frequency indication is desired. Engineering services are available for those desiring assistance on their application problems. Running Time Meters are often used in conjunction with reed type frequency meters.

## APPLIANCE TEMPERATURE TESTERS

**A NEW IDEA IN TESTERS** — The need for scientific but sturdy portable test equipment in the appliance service field is met by this exclusive line. Here the user profits from J-B-T's wide experience in building field test sets for many well-known manufacturers of ranges, irons, refrigerators, deep freeze units, and similar equipment. All J-B-T testers include the principle of remote reading of temperature, and temperature measures the real usefulness of the appliance. Although called appliance testers, these handy portable testers have found a multitude of uses for trouble-shooting, experimenting and research in industry and in laboratories.

### OVEN TESTERS

**MODEL 23-JP-1.** Latest addition to the widely-known family of J-B-T oven temperature testers is this modern and compact unit. Like the Models 32-JP-3 and 32-JP-4 described below, this indicating portable pyrometer is designed to save time and furnish reliable information in testing and setting thermostats on electric or gas ranges and other appliances by showing oven temperatures as they change. The same size of dial, 0-650°F., with 2 $\frac{3}{8}$ " scale arc reading, is used but covered by an all-plastic instrument front. The indicator is mounted on a black metal panel affixed inside a pocket-sized, black top-grain leather case 4 $\frac{1}{2}$ " x 2 $\frac{7}{8}$ " x 4 $\frac{1}{4}$ " over hard-

ware. Characteristic of more expensive pyrometers, the 23-JP-1 is automatically compensated for ambient temperature. Thus the tester eliminates calculations, avoids likelihood of serious error as temperatures change inside the instrument itself, and gives fool-proof direct readings. Supplied with attached SA-116 5 $\frac{1}{2}$ " calibrated thermocouple, clip, and convection shield.....\$23.50

**MODEL 32-JP-3.** This sturdy, fast reading portable is by far the most widely used oven tester in the country. The rigid outer carrying case 6" x 3 $\frac{7}{8}$ " x 3 $\frac{3}{4}$ " is covered in black leatherette; the glass-covered indicator fits in a 3 $\frac{1}{4}$ " flanged metal case. The dial shows 0-650°F. in 10° divisions readable to 2 $\frac{1}{2}$ °. Exceptionally fast, continuous response. Automatic compensation for ambient temperature is valuable feature whether the tester is used for service work, sales demonstrations, or inspection. More details on the 32-JP-3 are available in Bulletin JP-103. Price includes attached SA-116 5 $\frac{1}{2}$ " calibrated thermocouple, clip for attaching to grill, and convection shield for steady readings.....\$25.05

### VERSATILE OVEN TESTERS

**MODEL 32-JP-4.** Companion tester to the 32-JP-3 with all the features of that tester, plus a leather carrying strap, and binding posts for quick attachment and interchanging of various thermocouples listed on this page, to check irons, washers, waffle-bakers, toasters, roasters, clothes dryers, etc. Range, 0-650°F.; black leatherette case 6" x 3 $\frac{7}{8}$ " x 3 $\frac{3}{4}$ ". More details on the 32-JP-4 are available in Bulletin JP-104. Price includes SA-116 5 $\frac{1}{2}$ " calibrated thermocouple, clip and convection shield.....\$26.15

### IRON TESTERS

**MODEL 32-JIT.** Self-contained bench type tester; checks all makes of irons; measures thermostat temperatures; and shows open or short circuits. Automatically compensated for room temperature. Also indicates operating temperature of the sole plate (working surface) on non-electric or cordless irons. Black metal base; overall size 10" x 12" x 5 $\frac{1}{2}$ ", scale 0-650°F., 15 amp. fuse, 6' cord, 110-volt, 50-60 cycles.....\$31.65

### ALL-PURPOSE TESTERS

**MODEL 61-JRT.** This 9-in-1 tester speeds accurate temperature adjustment and current analysis of ranges, refrigerators, etc. Rapidly reads four cold zones, -100° F. to +80° F. up to 14' distant; two heat zones 0-600° F. up to 5 $\frac{1}{2}$ ' distant; one voltage range 0-300 AC; and with transformer, two current ranges, 0-30 and 0-60 amps, AC. Sturdy, polished walnut case 15 $\frac{1}{2}$ " x 10 $\frac{1}{2}$ " x 4 $\frac{3}{4}$ " with handle and slip hinges. Two-color etched metal panel. Separate switches protect bulb and ammeter circuits. Requires one standard flash-light cell, replaceable in the field. Temperature scale accuracy  $\pm 2\%$  of full scale. Rectified AC readings  $\pm 5\%$ . Accessories listed below may be added for testing irons, grills, roasters, washers, etc. Includes two SA-116 resistance bulbs, two SA-116 thermocouples, necessary electrical leads, and AS-TR-2 built-in transformer.....\$107.25

For more details, see Bulletin JRT-349.

**MODEL 61-JRT (LESS TRANSFORMER).** Same unit, same scales, except does not read in amperes; AS-TR-2 transformer assembly omitted.....\$93.50

### THERMOCOUPLES

(See next page for Resistance Bulbs and Transformers)

**SA-116 with SHIELD and CLIP.** Standard flexible No. 22 gauge iron constantan, asbestos insulated, 5 $\frac{1}{2}$ ", with attachment clip and convection shield as normally supplied with 23-JP-1, 32-JP-1, 32-JP-2, 32-JP-3, 32-JP-4, 60-JRT and 61-JRT Testers. ## TEMPERATURE INDICATORS

**WHERE TO USE:** To determine heat rise of motors, transformers and coils; for laboratory furnaces, inspection set-ups, for remote indication of infrared and other oven temperatures; and to check temperatures in indus-

trial processes such as heat treating and annealing. When used with selector switch, permits centralized reading of one to ten thermocouples, as in diesel exhaust manifold applications.

### MODEL 32-J

**MODEL 32-J PYROMETER IN SN-7 STAND.** Mounted in sloping front black metal stand, 4 1/4" high x 4 3/8" deep x 4 1/8" wide. Compensated for ambient temperature. Medium resistance system, damped for quick reading on 2 3/8" scale, assures ruggedness and pointer stability. To retain the  $\pm 2\%$  accuracy of the installation: use only the type and resistance of thermocouple and lead which are provided; do not cut extra lead—coil it—change in length changes calibration. A protection tube is not generally required. Many users find it convenient to keep an extra couple and lead on hand.

### INFRARED TEMPERATURE UNITS

**MODEL 32-J PYROMETER COMBINATION.** When used with the thermocouples shown below, this unit checks operating temperatures of infrared baking, drying, and preheating. After selection of the proper matched tip, the user measures heat at the most important place in this method — at the surface of the work in process.

Here's a moderately-priced, always handy tester for laboratory and pilot-run experiments, maintenance on the infrared heat source, and trouble-shooting on the finish itself. Equally important, the user can keep temperatures consistent and reproduce good results. Select the unit that manufacturers of finishes and of infrared ovens supply to their own field men. Like all pyrometers, this instrument is automatically compensated for ambient temperature — no need to re-set the zero adjuster when reading.

**MODEL 32-J INFRARED PYROMETER COMBINATION.** Indicator 0-650°F. for RP-1080 iron constantan, mounted in SN-7 sloping front metal stand 4 1/4" high x 4 3/8" deep x 4 1/8" wide; complete with two of the 35' thermocouples below (may be one type and a spare, or two types); SA-113 "A" disc type and SA-115 "B" ball type supplied if not otherwise specified .....\$36.30

**PROTECTION TUBES.** To support, enclose, and protect thermocouples like the above, especially at higher temperature or in damaging atmospheres, various wrought iron or alloy protection tubes are recommended. See Page 5 of Catalog 556 for such protection tubes and CH-6 connector head.

## VIBRATING REED FREQUENCY METERS (PATENTED)

J-B-T Vibrating Reed Frequency Meters are used extensively in radio, telephone, and television service, on engine generator sets, in laboratories, in many types of electronic equipment, on panel and control boards, in inspection set-ups — wherever constant or known frequency is important to efficient operation of equipment. More than 14 years of continuous experience covering many thousands of these instruments are your assurance of quality for both commercial and defense applications.

The patented, simplified design used in the J-B-T meter operates on AC or interrupted DC. Each reed is adjusted to respond by resonance to but one frequency. As the current excites the driving coil, the reed "in tune" with the frequency in the coil will respond by vibrating rapidly because of permanent magnet polarization and induced magnetism from the coil. The instrument is adapted to specified operating voltage by a series resistor. To determine frequency, simply read the reed.

The response patterns differ with the increments of frequency between reeds. For example, at 60 cycles, half-cycle steps give the broad response shown below at left, whereas full cycle steps bring the sharp response at right.

**CAUTION:** If a meter plugged in on a 60-cycle AC power line does not indicate exactly 60 cycles, trust the meter! Power supply may momentarily be off-frequency due to changing load conditions. All J-B-T Frequency Meters are accurately calibrated at the factory, entirely independent of frequency of power supply. Production and inspection equipment are checked regularly against National Bureau of Standards frequency signals.

(Meter operating at 60 cycles)

### 10 REEDS

**Range:** 48-52 and 58-62 cycles. Double window for ease of reading either range. Often specified for export. 100-130 volts; 130 ohms per volt; 1 watt power consumption. Accuracy  $\pm 0.3\%$  at reference temperature. Flush panel mounting. See Table of Dimensions, lines 4 and 5.

**30-F**, (illustrated). 48-52 and 58-62 cy., 3/4" Metal Case. \$27.50

**30-FX**, 48-52 and 58-62 cy., 3/2" Molded Case, MIL-M-6A mtg. \$27.50

### 5 REEDS

Used on standby power equipment. Handy for accurately measuring frequency of power source. Five reeds, 58-62 cycles, 100-130 volts. Other characteristics same as Model 30-F. See Table of Dimensions, lines 4 and 5. (This meter also is made with 7 reeds.)

**31-F**, (illustrated). 58-62 cy., 3/4" Metal Case. \$23.65

**31-FX**, 58-62 cy., 3/2" Molded Case, MIL-M-6A mtg. \$23.65

**ADVANTAGES:** Guaranteed accuracy at reference temperature of 77°F is  $\pm 0.3\%$  or better of the AC frequency being measured, unless otherwise stated. Accuracy on interrupted DC may be somewhat less. High fatigue safety factor for continuous operation. Temperature compensations are not required as temperature coefficient of reeds is only approximately 75 parts per million per degree F., negative.

All meters are permanently calibrated at the factory and do not require subsequent adjustment. J-B-T reeds have relatively high Q characteristics, an especially desirable factor in electronic circuits. Wave form or external magnetic fields do not ordinarily have an adverse effect. Built with no pivoted parts and with lock washers at every critical point, these rugged meters can take rougher treatment than many instruments.

### 9 REEDS — 400 CY.

Used for measuring frequency of high-cycle power sources, particularly aircraft. Accuracy  $\pm 0.3\%$  at reference temperature. Nine reeds, 380-420 cycle range. 100-130 volts; 70 ohms per volt; 1.75 watts power consumption. Flush panel mounting. See Table of Dimensions, lines 4 and 5.

**33-F**, (illustrated). 380-420 cy., 3/4" Metal Case. \$34.10

**33-FX**, 380-420 cy., 3/2" Molded Case, MIL-M-6A mtg. \$34.10

### 9 REEDS — 60 CY.

Covers a broad frequency band. Nine reeds, 56-64 cycles, or in half-cycle steps (accuracy  $\pm 0.2\%$ ) 58-62 cycles. 100-130 volts; 130 ohms per volt; 1 watt power consumption. Flush panel mounting. See Table of Dimensions, lines 4 and 5.

**34-F**, 56-64 cy., 3/4" Metal Case, 1-cycle steps. \$27.25

**34-FX**, (illustrated). 56-64 cy., 3/2" Molded Case, MIL-M-6A mtg. \$27.25

**34-F-Z**, 58-62 cy., 3/4" Metal Case, 1/2-cycle steps. \$28.90

**34-FX-Z**, 58-62 cy., 3/2" Molded Case, MIL-M-6A mtg. \$28.90

### 18 OR 21 REEDS

Advanced design offers 21 reeds as an interchangeable 3/2" panel meter with 2-cycle intervals for close reading over the band of 380 to 420 cycles per second. Accuracy  $\pm 0.3\%$  at reference temperature. The reed flag size is necessarily smaller than the 9-reed 400-cycle meter, such as the model 33-FX, but the 21 reeds are located in an enlarged window 2" wide with flags 3/32" high x 1/16" wide to give maximum readability. A revised internal construction for mounting the reeds in one clamp assures ruggedness. This instrument and its variations are particularly useful where unusually close indication of frequency throughout the band has not been available heretofore. These meters are not regularly stocked. See Table of Dimensions, line 5.

**36-FX-21**, (as illustrated). 380-420 cycles, 21 reeds, 28 volts operation, 3/2" Molded Case; 17 ohms per volt; 1.7 watts power consumption. \$51.60

**36-FX-21-115**, (as illustrated). 380-420 cycles, 21 reeds, 100-130 volts; 50 ohms per volt; 2.5 watts power consumption. \$52.80

**30-FX-18**, (not illustrated). 46-54 and 56-64 cycles, 18 reeds in one window with two groupings, 100-130 volts; 300 ohms per volt; 0.35 watts power consumption. \$36.30

## 2 1/2" METERS — 5 REEDS

**MODEL 21-FX**, illustrated, matches other 2 1/2" panel instruments. Meets ASA C39.1-1951 and MIL-M-6A (Type MR 24 or MR 25) in depth of case and mounting dimensions. Weighs only 4 1/2 ozs.; 5 reeds; 850 ohms per volt; 0.15 watt power consumption. Also 116 to 124 cy.; 250 ohms per volt; 0.5 watt power consumption. 390 to 410 cy.; 100 ohms per volt; 1.3 watts power consumption. Flush panel mounting, see Print MD-20, also Table of Dimensions, Line 2.

## ELAPSED TIME — FREQUENCY METERS

**31-FE SERIES**. To conserve panel space and centralize information, this panel instrument combines the elapsed time or running time meter with frequency reeds. It is used on motor generator sets and on electrical equipment where maintenance routine calls for periodic servicing. The J-B-T design, proved by years of field experience, uses a separate exciting coil for the reeds to achieve close control of reed amplitude and frequency. Reads 0-9,999.9 hours, and 58-62 cycles with 5 reeds, for 100-130 volt operation; self starting. Tenths shown in red, all other numerals in black. Black metal case with front mounting per Table of Dimensions, line 6. Power consumption is 3.5 watts. For variations having 7, 9, or 11 reeds, not regularly stocked, such as Model 34-FE, see revised print SK-45.

- 31-FE**, 3 1/4" metal case.....\$33.00
- 31-FEX-1**, (per print SK-44—not regularly stocked) like Model 31-FE, except with 3 1/2" metal flange permanently attached for MIL-M-6A front mounting per line 7, Table of Dimensions.....\$34.10

## RUGGEDIZED FREQUENCY METERS

The inherently sturdy construction of vibrating reed meters usually does not need further ruggedization. Sealed meters can be supplied, on special order, to meet extra severe shock and vibration requirements. Such reed meters carry the suffix RUG.

## NOTE ON METER VOLTAGE

J-B-T Vibrating Reed Frequency Meters of all sizes normally are made with two studs and are designed to be connected across one phase of a multi-phase line. The single phase voltage where the meter will be used thus becomes the voltage to be specified for the meter. Special meters with extra studs are made only for the purpose of reading two or more voltages, not additional phases.

## 3 1/2" SEALED METERS

**FHXX TYPE** sealed meters, glass-to-metal construction, with solder terminals and detachable flange, supersede the former FHX sealed meters (Print SK-24). While JAN-I-6 and MIL-M-6A (Type MR36) do not refer to frequency indicators, the FHXX series uses the front mounting dimensions, and meets or exceeds the sealing and electrical requirements including the 3000 volt breakdown. Mounting dimensions are shown below. Standard voltage is 100-130. Electrical characteristics and accuracy are the same as for corresponding models without the HXX designation. Every meter tested in water where the absolute pressure of the air above the water is reduced to 2.5 inches of mercury (approx. 57,000 ft. altitude) and is maintained for one minute. While not regularly stocked, these meters are in production. For dimensions, see Table, line 8.

- 15-FHAC** .....\$20.30

**15-FH-5 METERS** (lower photo) also use the 1 1/2" black metal case with 2-3/32" detachable flange and glass-to-metal seal. The 15-FH-5 series features 5 reeds in a row for 100-130 volt operation. Specified where size and weight are important. Same 100% inspection for approx. 57,000 ft. altitude as FHXX types. Standard meter, but not regularly stocked. See Table of Dimensions, line 1.

J-B-T engineers recommend AC elapsed time meters for superior accuracy, especially where voltage or ambient temperatures vary

widely. Popular for tube life, TV equipment, punch presses, conveyors, oil burners, maintenance schedules, etc. Types for 99,999 hours or for 50 cycles are available on special order.

Model 31-EX Molded Case, meets type MR-34 or MR-35 flange dimensions of MIL-M-6A, also JAN-1-6 and ASA C39.1-1951

**3 1/2" SEALED ELAPSED METERS—60 Cycles**

**MODEL 31-EHXX.** Where rugged requirements make a completely sealed elapsed time meter desirable, this glass-to-metal construction, with flat glass front and 3 1/2" diameter separable flange, often is specified. Heavy-duty solder terminals are supplied. Every instrument is checked in a vacuum chamber. Overall dimensions and appearance match the FHXX series sealed frequency meters. Maximum voltage between terminals and case, 1000 volts, R.M.S. See print SK-53. The meter registers in 1/10 hour steps to 9,999.9 hours,

then automatically re-sets. Tenths indicator is in red, all others in black.

- 31-EHXX, 60 cy., 110-125 volts .....\$19.75

**2 1/2" SEALED ELAPSED TIME METERS—60 Cycles**

**MODEL 21-EHXX.** This new 2 1/2" sealed meter, with front mounting dimensions the same as Type MR-26 electrical indicating instruments in MIL-M-6A, nevertheless offers a full-size counter reading 0-9,999.9 hours in 1/10th hour steps and a rugged self-starting synchronous motor. **400 CYCLE BROAD AND VERNIER INDICATORS**

**MODEL 41-FX.** This 2-window frequency meter is widely used for electronic and aircraft testing in commercial and military applications. The lower window shows a broad range of 300-500 cycles, with 21 reeds in 10-cycle steps. The upper window gives a vernier effect with 13 reeds indicating 380-420 cycles in 4-cycle steps, with 2-cycle increments in the critical range of 396-404 cycles. **PORTABLE FREQUENCY TESTERS  
METAL CASE (TS-328A/U, 33-FP-9M, 34-FP-9M)**

This portable frequency meter meets the exacting test requirements of aviation, signal and communication equipment. Its accuracy of ±0.3% results from the J-B-T reed construction, based on 13 years of field and laboratory use, plus care in manufacture and thorough run-in for permanent calibration. The sturdy, light-weight case of anodized aluminum with gray protective finish locks tightly when not in use. The detachable cover is the only removable portion; leads, sub-panel, and meter assembly are permanently attached. Case dimensions are 6 3/8" long x 4" wide x 3-9/32" deep with attached D-ring for belt or carrying strap. Panel and meter barrel are molded in one piece to exclude moisture and dirt; coil and electrical connections are fungus treated. When made to Government specifications, using pertinent name plate, the 9-reed, 380-420 cycle model is known as TS-328A/U. It has the same case exterior as the TS-297/U multimeter. See print SK-63-10.

## SYSTEMS CONCEPT

**RAKSCOPE S-12-C**

**PANELSCOPE®**

The Waterman SYSTEMS RAKSCOPE, S-12-C series is a rack mounted oscilloscope with SYSTEMS CONCEPT. Systems concept is a basic means for rapid monitoring of desired signals with minimum operative effort and without the use of auxiliary switching or jack panels. S-12-C series provide the following:

1. BASIC UNIT—The basic S-12-C SYSTEMS RAKSCOPE is a complete combination systems monitoring and trouble-shooting oscilloscope with outstanding physical and electrical characteristics. The RAKSCOPE occupies but 7 inches of a standard 19" rack and extends only 10 inches behind the front panel. Identical vertical and horizontal amplifiers are DC type having rise times better than 0.35 usec, and 50 or 71 millivolts rms per inch of deflection respectively. Signal calibration method uses a direct reading accurate meter. Time base sweeps are from 1/2 cps to 50KC in trigger or repetitive operation. Sync from internal or external sources provide stable operation by means of new sync lockout circuits. Special plug-in elliptical sweep circuit for easy phase and frequency checks greatly increase its systems utility. Construction is ruggedized throughout. Tube type options include standard commercial, ruggedized commercial or ruggedized military. Operable from 50 to 400 cycles.

2. CUSTOM MODIFICATION—Desired flexibility is obtained with the optional signal input selector. For the first time it is possible to select up to eleven different signal sources with the necessary built-in attenuation (supplied by us or by you) for each source. Thus the entire switching panel can be omitted from an overall system resulting in circuit and space economics. Standard elliptical sweep is 60 cycles, but plug-in units for other frequencies can be supplied. Accessories such as attenuating, direct, and amplifying probes are available.

Improve your existing or contemplated systems by including the S-12-C SYSTEMS RAKSCOPE as an integral part. Your local Waterman representative is ready to assist you in determining specific requirements.

The Waterman PANELSCOPE is a custom-built cathode ray tube oscilloscope, with simplified operation, and yet available at a low price. The PANELSCOPE concept provides for the following:

(1) MINIATURIZATION—Panel space required is only 5 1/4" x 5-3/16"—depth is 10" and the weight is less than 7 lbs. The PANELSCOPE can be installed in practically any equipment—mobile or stationary—air, sea, or land—military or commercial.

(2) SIMPLICITY OF OPERATION—Twist of a single rotary switch provides a synchronized pattern of desired incoming signal (up to 11 circuits) against proper linear time base. This is ideal for monitoring and trouble shooting, as it removes the need of fiddling with knobs as is done now on general purpose oscilloscopes. The static controls, such as beam, focus, positioning, and graticule brightness are located in tube escutcheon.

(3) CUSTOM DESIGN—A wide variety of—signal amplifiers with response from dc to megacycles and sensitivities from 5 millivolts—synchronized or triggered linear time base generators from 1/2 cycle (and lower if need be) to 2 microseconds—can be specified by you to fit your needs for particular equipment.

(4) PARTIAL KIT FORM—the PANELSCOPE comes fully wired and tested with chosen signal amplifier, linear time base generator and attendant sync. amplifier. The desired signal attenuators, frequency and amplitude determining components, and method of synchronization can be installed either by us or by you.

(5) POWER REQUIREMENT—Less than 10 watts of line power for built-in high voltage supply—The required B+ and heater current as selected by your requirements. For those cases where B+ and heater power is not available, auxiliary power pack can be supplied.

There is a place in your equipment for Waterman PANELSCOPE, a custom built oscilloscope at production prices, although your needs may be but one or two. Ask for specification sheets either from our representatives or direct from the factory.

## THERMISTOR BRIDGE TYPE POWER METERS

### TRUE AVERAGE READING

These broad band R.F. power meters are of the absorption type consisting of an oil filled, air cooled coaxial load resistor and thermistor type power bridge calibrated to read watts.

A thermistor is used as the power sensitive element. Temperature and voltage variation compensation is incorporated in a sensitive bridge type circuit. The instrument is battery operated.

The power is read directly on the 0-200 microamperes and is read in direct relation to the meter division. For instance, the full scale power reading is 200 watts at 200 microamperes, 100 watts at 100 microamperes and 25 watts at 25 microamperes.

The accuracy of this instrument is greater than that of the dummy load volt meter type power meters using a silicone diode for the power detecting element. The thermistor type power detector depends only on the heat developed by the radio frequency power in it, and errors, due to spurious resonance, poor V.S.W.R., are greatly reduced, if not completely absent. The accuracy is  $\pm 3\%$  of full scale and no more than  $\pm 6\%$  at any point of the scale.

## FEED-THRU TYPE POWER MONITOR

Frequency Range 30-200 and 1500-1000 Mc

Measures incident and reflected power and permits adjustment of transmitter with antenna connected. Each instrument covers two power ranges, by means of a toggle switch. The direction of measurement is switched by means of a turning element in rear of instrument. The accuracy is  $\pm 5\%$  of full scale. The instrument is self-contained and no auxiliary power is required.

## AVERAGE READING R.F. POWER METERS

100 kc to 700 mc . . . 1.5 watts to 6000 watts

These broad band R.F. power meters are of the absorption type consisting of an oil filled, air cooled, coaxial load resistor and voltmeter calibrated to read watts. The power meter is suitable for use as a field or laboratory test instrument, is completely shielded and non-radiating, permitting transmitter testing and adjustment without interference. The meter box is easily detached, permitting location of the load resistor at a remote point. In cases where power measurements are not required the load resistor may be used as a dummy load. No correction curve is necessary to cover the frequency range. The spurious response usually associated with directional couplers and capacitive voltage dividers is absent in this purely resistive voltage divider.

Since this is a resistive voltage divider which has the same voltage division at DC, 60 cycle AC, and at high radio frequencies, this instrument can be calibrated and its calibration can be checked frequently on 60 cycle supply voltages. The instruction book accompanying our R.F. power meter gives full instructions on the calibration of these power meters, using 60 cycle power supply. Such calibration is necessary only when crystals or vacuum tubes are changed, or when possible damage to the crystals or vacuum tubes is suspected.

### ACCURACY

These Power Meters do not use specially selected crystals or vacuum tubes. If the calibration instructions are carefully followed, an overall accuracy of  $\pm 5\%$  of full scale, but not more than 10% at any point of the upper 80% of the meter scale can be expected. For example, on the 60 watt scale an error of 5% of the full scale is 3 watts. At 15 watts this error would result in a reading somewhere between 12 and 18 watts. Our power meters are guaranteed to be within 10%, at the 15 watt point, and the reading should be between 13.5 and 16.5 watts.

## TUBE TESTER

### SPECIFICATIONS

- Tests all tubes, including 4, 5, 6, 7, Octal, Lock-in, Peanut, Bantam, Hearing Aid, Thyatron, Miniatures, Sub-miniatures, Novals, Sub-Minars, Proximity fuse types, etc.
- Uses the new self-cleaning Lever Action Switches for individual element testing. Because all elements are numbered according to pin-number in the RMA base numbering system, the user can instantly identify which element is under test. Tubes having tapped filaments and tubes with filaments terminating in more than one pin are truly tested with the Model TV-11 as any of the pins may be placed in the neutral position when necessary.
- The Model TV-11 does not use any combination type sockets. Instead individual sockets are used for each type of tube. Thus it is impossible to damage a tube by inserting it in the wrong socket.

- Free-moving built-in roll chart provides complete data for all tubes.
- Newly designed Line Voltage Control compensates for variation of any line voltage between 105 Volts and 130 Volts.
- **NOISE TEST:** Phone-jack on front panel for plugging in either phones or external amplifier will detect microphonic tubes or noise due to faulty elements and loose internal connections.

The model TV-11 operates on 105-130 Volt 60 Cycles A.C. Comes housed in a beautiful hand-rubbed oak cabinet complete with portable cover.

## TRANS-CONDUCTANCE TUBE TESTER

ALSO TESTS TRANSISTORS

### TESTING TUBES

- Employs improved **TRANS-CONDUCTANCE** circuit. An in-phase signal is impressed on the input section of a tube and the resultant plate current change is measured. This provides the most suitable method of simulating the manner in which tubes actually operate in Radio & TV receivers, amplifiers and other circuits. Amplification factor, plate resistance and cathode emission are all correlated in one meter reading.
- **NEW LINE VOLTAGE ADJUSTING SYSTEM.** A tapped transformer makes it possible to compensate for line voltage variations to a tolerance of better than 2%.
- **SAFETY BUTTON** — protects both the tube under test and the instrument meter against damage due to overload or other form of improper switching.
- **NEWLY DESIGNED FIVE POSITION LEVER SWITCH ASSEMBLY.** Permits application of

separate voltages as required for both plate and grid of tube under test, resulting in improved Trans-Conductance circuit.

### TESTING TRANSISTORS

A transistor can be safely and adequately tested only under dynamic conditions. The Model TV-12 will test all transistors in that approved manner, and quality is read directly on a special "transistor only" meter scale. The Model TV-12 will accommodate all transistors including NPN's, PNP's, Photo and Tetrodos, whether made of Germanium or Silicon, either point contact or junction contact types.

The New Streamlined Model TC-55

## TUBE TESTER

**FOR:** The Experimenter or Part-time Serviceman, who has delayed purchasing a higher priced Tube Tester.  
**FOR:** The Professional Serviceman, who needs an extra Tube Tester for outside calls.  
**FOR:** The busy TV Service Organization, which needs extra Tube Testers for their field men.

Speedy, yet efficient operation is accomplished by: 1—Simplification of all switching and controls. 2—Elimination of old style sockets used for testing obsolete tubes (26, 27, 57, 58, etc.) and providing sockets and circuits for efficiently testing the new Noval and Sub-Minor types.

You can't insert a tube in wrong socket. It is impossible to insert the tube in the wrong socket when using the new Model TC-55. Separate sockets are used, one for each type of tube base. If the tube fits in the socket it can be tested.

"Free-point" element switching system. The Model TC-55 incorporates a newly designed element selector switch system which reduces the possibility of obsolescence to an absolute minimum. Any pin may be used as a filament pin and the voltage applied between that pin and any other pin, or even the "top-cap."

Checks for shorts and leakages between all elements. The Model TC-55 provides a super sensitive method of checking for shorts and leakages up to 5 Megohms between any and all of the terminals. Continuity between

various sections is individually indicated. This is important, especially in the case of an element terminating at more than one pin. In such cases the element or internal connection often completes a circuit.

Elemental switches are numbered in strict accordance with R.M.A. specification. One of the most important improvements, we believe, is the fact that the 4 position fast-action snap switches are all numbered in exact accordance with the standard R.M.A. numbering system. Thus, if the element terminating in pin No. 7 of a tube is under test, button No. 7 is used for that test.

The Model TC-55 comes complete with operating instructions and charts. Housed in rugged steel cabinet. Use it on the bench—use it for field calls. A streamlined carrying case, included at no extra charge, accommodates the tester and book of instructions.

## RF POWER AND VSWR MEASURING EQUIPMENT

MICROMATCH is the registered trade name which identifies a complete line of M. C. Jones Electronics Co., Inc. R. F. Power and VSWR measuring instruments.

These instruments contain a patented circuit designed to produce an output essentially independent of frequency. They cover the frequency range of 0.5 to 4000 mcs. and power levels of 10 milliwatts to 120 kilowatts.

The R. F. Power and VSWR instruments are rugged field and laboratory type complete measuring equipment, consisting of both coupler and indicating units.

The DC and RF output coupler units only are sold principally to manufacturers who incorporate these units directly into government or commercial type transmitters.

Because they are made in quantity to the highest government and commercial standards, MICROMATCH instruments combine the highest quality with extremely low cost.

## TYPE 1030-A LOW FREQUENCY "Q" INDICATOR

### USES

The Type 1030-A Low Frequency "Q" Indicator measures directly the "Q" factor of coils. The instrument can also be used to measure the inductance of coils, distributed capacity, impedances, and dielectric losses. The "Q" Indicator can be used to study the magnetic properties of iron, such as stability of iron cores in function of applied voltages, and iron losses as a function of the frequency.

### FEATURES

The main and essential feature of the instrument is that the "Q" factor is read directly without any complicated computations. The possibility of measuring "Q" through the whole audio and super-sonic frequency range is provided. The setting up and the measuring of the "Q" of coils is practically instantaneous. The instrument is unaffected by line voltage variations, is entirely self-contained and A.C. operated. Both meters ("multiply-by" and "Q") are protected against overloads and cannot be burned out. The frequency range for "Q" measurements is 20 to 200,000 cycles. The terminals of the variable decade condensers are available directly on the front panel of the instrument. The condensers, therefore, can be used as high quality precision variable condensers. To reduce the residual capacitance a link is provided on the front panel of the instrument which disconnects all but the 100 mmfd variable air condenser. When the link is closed five decade capacitors and the air variable are connected across the condenser terminals. The total capacitance range is from 26 mmfd to 11.11 mfd so that an extremely wide range of inductors may be tested at any

desired frequency without adding external capacitors which introduces large errors. The R. C. Oscillator and variable impedance amplifier can be used as a separate low frequency generator with an output power of five watts into a 50 ohm load. The "Q" scale is calibrated from 0 to 100. A high accuracy of measurement is obtained, since "Q" variations from 0 to 100 are read on a 4 inch meter. "Q" factors of coils can be measured with up to 100 volts across the coil, and therefore makes it possible to determine the stability and the variations of the "Q" factor of coils as a function of the applied voltage. The voltage fed into the series circuit is variable from 10 volts to .01 volt.

### SPECIFICATIONS

**Range of "Q" Measurements:** The range of "Q" factors is from 0.1 to 1000 over the frequency range from 20 to 50,000 cycles with an accuracy of 5%, from 50,000 cycles to 200,000 cycles the accuracy of "Q" measurements is limited by the residual capacity of the measuring circuit; (for iron core coils measurements in this frequency range will approach the 5%).

**Oscillator Frequency Range:** Continuously variable from 20 to 200,000 cycles in four ranges.

**Frequency Accuracy:** 1% under normal conditions. The frequency stability is better than 2% over a long period of time.

**Output Impedance and Voltage:** Four output impedances are available.

(a) 10 ohms impedance — 25 V Output Voltage

(b) 1 ohm impedance — 2.5 V Output Voltage

(c) .2 ohm impedance — .25 V Output Voltage

(d) .1 ohm impedance — .02 V Output Voltage

These Impedances are measured at 50,000 cy.

**Variable Condenser:** The variable condenser is composed of a 10 x 1 mfd., 10 x 0.1 mfd., 10 x 0.01 mfd., 10 x 0.001 mfd. and 10 x 0.0001 mfd. decade condenser and a 100 mmfd. variable air condenser.

**Power Supply:** The instrument is entirely self-contained and A.C. operated. Total consumption 200 watts.

**Dimension:** Width 19½" x Depth 14½" x Height 23"

**Weight:** 120 lbs.

## TYPE 1620 MEGOHMMETER

### DESCRIPTION

The instrument is a direct-reading, precision-balanced electronic ohmmeter with a variable D.C. test potential included as part of the unit. The D.C. test potential is variable from 50 to 1000 volts and is indicated by a four inch meter.

The insulation resistance is measured in six overlapping ranges and is indicated by a four inch meter, protected against overload. A relay, operated from the front panel, disconnects the high voltage from the test terminals and eliminates all danger of shock due to exposed high potential. In the standby position (when push button is released) a resistance is connected between the chassis and the high voltage terminal, so that the danger of shock is eliminated when disconnecting the component under test.

### SPECIFICATIONS

**Range:** .5 megohms to 4,000,000 megohms in six overlapping ranges selected by a multiplier switch.

**Accuracy:** Plus or minus 5%.

**Voltages on Unknown:** The voltage applied to the unknown terminals is continuously variable from 50 volts to 1000 volts. A 4" meter indicates the voltage applied to the unknown.

**Terminals:** Four terminals are provided, two for connecting the unknown, one guard and one ground.

**Power Supply:** 105-125 volts A.C. — 50-60 cycles.

**Cabinet:** 15" x 9" x 7½".

### CONTROLS

1. Range selector and calibrating switch.
2. Zero adjust control for setting meter scale to infinity.
3. Push button switch for activating the relay which applies test voltage to terminals — when released, discharges capacitive component across the unknown terminals.
4. Variable D.C. adjust — for setting the D.C. test voltage at desired level.
5. A.C. on-off switch.

## TYPE 1620-C MEGOHMMETER

## TYPE 1010-A COMPARISON AND LIMIT BRIDGE

### USES

This instrument is a comparison and limit bridge for use in both laboratory and production testing of resistors, condensers and inductors. The manufacturer of these components can use it for production tests, the user for incoming inspection and acceptance tests. The instrument is particularly useful for laboratory work (bridge or filters) where very accurate components are required.

### FEATURES

For precision and production testing, the bridge has many advantages. Power line operation and the visual null indicator make the instrument completely self-contained. It can be used in noisy locations. Its small size and light weight permit the instrument to be moved easily and to be set up wherever necessary.

### DESCRIPTION
