

"THE SWBC JOURNAL" OFFICIAL PUBLICATION OF THE

NORTH AMERICAN SHORTWAVE ASSOCIATION

OCTOBER 1971

VOL. X NO.10

NASWA HEADQUARTERS

POST OFFICE BOX 989

ALTOONA, PA. 16603 USA

NEWS AND NOTES

Many of you will recall that back in June of this year, when "Radio Nordsea" was still operating (prior to the bombing) and was being QRM'd by the Dutch government, NASWA Hdqs received a letter from one Gerard J.T.H. van Dam of the ISFRA, asking for support of pirate stations and offering financial gain for such support. You will also recall that NASWA Hdqs replied to said letter requesting more specific information without making any commitments. Hereto, last week, the letter of reply sent to Mr. van Dam was returned, marked "Unknown", after a period of four months. We take from this that either Mr. van Dam or the ISFRA have gone underground or are no longer operating..... It is possible that NASWA will be offering the 1972 World Radio-TV Handbook for sale to members at a discount price. If so, it will not be via any individual, but from a most reliable source within the USA. Watch upcoming bulletins for further/definite info. Incidentally, there will be no 1972 Summer Supplement for WRTH.....While we do not intend to give excessive space to certain matters, we think it only fair that we mention the following note received from Todd Graves-SWL Guide, in connection with the recent data received from Gilfer Associates; "I have never stated to any customer that I was sales agent for Gulfer, nor have I knowingly implied this. There was a verbal (telephone) arrangement with Gilfer however, whereby they would drop-ship two items for me at prices which were verified by postcard. I ask anyone who is personally concerned to contact me directly. Thank you. Todd Graves.".....Please be alert to fact that within the next month or so there will be two important bits of business of concern to all members, the election of new Board of Directors for two year term, and nonminations for NASWA 'Man of the Year-1971'.....Dan Ferguson informs us that he is presently working on updated frequency surveys and that next may be ready for release next month. Such survey(s) will be included as part of or as supplement to an upcoming Frendx as a bonus to members. Nonmembers will need pay a nominal fee should they desire copies.....Response to last months 'Funtest' was greater than expected. Although there were no prizes offered, to date there have been 74 entries received. It would appear a number of our members enjoy a bit of fun now and then.....Be sure to note new address for Log Report editor Jerry Berg effective this month. Also, when sending reports to QSL Report editor Gregg Calkin, please use airmail (same rate as within USA). See respective sections for current addresses.....Some members will be happy, others will be disappointed to find no Loudenboomer Report this month. Seem's Charlie went on a sojourn due fact his team lost out in the World Series.....Members who have written Hdqs recently, please be patient. Mail load has been heavy and we are trying to keep pace as best we can. Thank you!

NEW MEMBERS, WELCOME!

(Note: Members joining after 15th of the month or who renew after that date, will be listed in next months bulletin. All new members must submit application form in order to be listed.)

RENEWALS

Second year: Bill Buell, Harold Sellers, David Burnell, Aime Beaudry, Dave Thorne, Robert Bruce, Chris Brooks, Mike Clyburn, Mark Bernstein.
 Third year: Milton Kean, Richard Clark, James Ducharme, Ron Bruns.
 Fourth year: Ed Lewis, W.R. Mitchell, Len Hoskins, Bernard Heckel; Dick Kamba, Irwin Glasberg.
 Sixth year: Mike Macken, Art Mitchell.

HELPING HAND SERVICE

For sale: Drake SW4A crystals...4500-5000 kHz, 5000-5500kHz, 5500-6000kHz. Write to Corky Webb, 4014 Travis, Apt.4, Dallas, Texas 75204.
 For sale: Zenith TransOceanic portable. For details contact Mike Watman, 5 Brian Street, Somersworth, New Hamp. 03878.
 For sale: 'GoldLine' antenna tuner in very excellent condition. Write Ed Pyatt, 606 McBain Hall, 562 W. 113th St., NY. 10025.
 For sale: Hallicrafters SX-130. Also a Knight crystal calibrator (minus xtal). Contact Ed Shaw, 415 North Shore Road, Norfolk, Virginia 23505.
 For Sale; Realistic DX-150, Heathkit Q-multiplier; Lab-I freq marker, Knight stereo headphones. Would like to sell as a package deal. Write Tony Marks, P.O.Box 521, LaGrande, Oregon 97850.
 For sale: Hallicrafters S-200. Write to Jerry Stuart, Box 1487, Lawton, OK. 73501.

SPECIAL OFFER

If you are having trouble identifying or recognizing certain interval signals, I may be able to help you snag those countries you failed to ID because of language barriers. I have available a collection of at least 70 good quality IS from various countries..some common, some rare. Just send a 3" reel with at least 300' of tape plus \$1.00 (postage/handling) and I will return tape via first class mail with the IS recorded for you. This is special service offer and for NASWAers only. Sorry but no cassettes yet, just 3" reels and recorded at 3.75 ips. Send to...

Edward C. Shaw
 415 North Shore Road
 Norfolk, VA. 23505

Any questions re IS or ID, I will effort to help, but please be sure to enclose a stamps or SASE for reply.

Ed Shaw

1. Chris Lobdell
2. Jerry Berg
3. Mike Macken
4. Steve d'Adolf
5. Evan Berg

(Note: While these are "BADs" of NASWA, it is not the full compliment of them. There are a number of others.)

Our thanks for these pix goes to Steve d'Adolf.

"BADS" = BOSTON AREA DXERS

Several months back we heard of the "BADS" for the first time and were puzzled as to what/who they were. After inquiring around, we learned, contrary to our initial conclusions, they were a group of DXers residing within the Boston, Mass. area. Some are members of just NASWA, some are not NASWA members, some are members of a number of clubs. Anhyow, we asked Steve d'Adolf if, at the next 'get together' of the group, he might take and send us some pix...this he did and the overside is result. Of course theses pix are not of all the BADS, there are a number of others whom we hope to have appear in future Frendx photo pages. It should be pointed out that there are other such groups in various cities/areas of the country, but the BADS seem to be the most active and closely related. Not only do they promote the hobby during their regular 'get togethers', but too, they cooperate in promoting friendship between themselves and the clubs to which they belong.

CHRIS LOBDELL has been with NASWA four years and has been a regular reporter right from the beginning. In addition, he has many times compiled White Lists that have been contained in our QSL Report sections and which have been very useful to those members who actively collect QSLs. Chris is a DXer in his own right, using a Drake SW4A. He is also currently serving as one of the section editors for the recently organized SPEEDX organization.

JERRY BERG, currently serving as NASWA Log Report editor, is an experienced DXer who has been in the hobby a number of years, partalking of both MW and SW. An attorney, he is a graduate of Temple University and Georgetown Law School. Presently he uses a Haethkit SP-310 receiver and a longwire antenna. Married and proud father of a son.

MIKE MACKEN is an 'oldtimer' in NASWA, now with us for six years. Due to educational and vocational pursuits he has not been as active in recent months as he had been in past, but he still finds time to report/support when he can. Mike uses a Hallicrafters SX-99 receiver which has served him well over the years.

STEVE d'ADOLF began DXing while stationed on Kwajalein in the Marshall Islands and has been a regular reporter since coming aboard NASWA some months ago. He is single and works as an electronics engineer. Fast becoming recognized as a reputable DXer, Steve uses a Galaxy R-530 receiver with an SB-310 as standby. Antennas are a dipole and a longwire. Aside from being a most worthy NASWAer, he is currently editing one of the SWBC sections for new SPEEDX group.

EVAN BERG is probably the youngest DXer in NASWA or any other club and has one of the best teachers any novice could want...Jerry Berg (who he?). In years to come, no doubt todays oldtimers will find much competition from such new blood.

* * * * *

*NOTE: We invite/solicit pix from other groups who have meetings or get togethers. To date we have been promised such from certain of our members in the Raleigh, North Carolina area and we plan to feature them in future bulletin. How about you fellows in Brooklyn, and you in Chicago....there are numerous members residing in these as well as other cities/areas. Why not get together and meet one another as friends as well as fellow-DXers/NASWA members? You'd be surprised how it stimulates your club spirit and DXing interests. Just ask any of the BAD's.

* * * * *

**NOTE: While we make no promise, it could be possibility that we will have photo's appear in certain other sections of our bulletins in future. Shortwave Center editor-Bill Matthews and HDQs are contemplating and investigating such possibilities.

FOULED BY THE FICKLE FINGER OF FATE

First late stencils/poor mail service, then a malfunction of mimeo, then vocational QRM plus a sick spell. Result, another late bulletin. Other reasons could be added, but these are the major.

As a number of you have written, late bulletins are useless, especially the DX sections (LR and FS), but you should also understand that late bulletins are not intentional. In over nine years of operation, surely we are entitled to 'rough waters' on occasion. Some of the mail received here was outright nasty and uncalled for. Hereto, if you are one who wrote such, why not ask for refund? It will be sent you expediently. We do our best to operate the club smoothly and effeciently, but there are times when unexpected and unforeseen problems enter in; Members should be able to realize this, accept it. Thank goodness the majority do!

It seems probable that we will need to replace editor of QSL Report (Gregg Calkin) even though we do not wish to do so. But his duties in his new post with the Canadian Embassy in Mexico demand his being in various places at different times, thus QRming his club work. We will have to act to rectify the situation. The mail load, aside from the 'nasty' letters, has been heavy of late and HDQs will do as best it can to get caught up. Some of the mail will be 'farmed out' in order to do so. Please be patient if you have a reply due you. (Special apologies to Sara Stillman and Werner J. Selby!) All in all, if the fates are kind, we will be back on sked with November bulletin. B.E.

LATEST AWARDS

Awards Chairman Warren Nordgren sends the following list of NASWA members are the award certificates they have earned; Congrats to all!!

WorldWide DXer Award

Jim Zabransky 100 countries
Richard Anderson 100 countries
Edward Insinger 75 countries
Mildred Marshall 75 countries
Rick Charnes 75 countries
Bert Adams 50 countries
Mark Konen 50 countries
R. Stephn Dildine 50 countries
Kenneth Schnur 50 countries
Tom Gavaras 50 countries

Continental DXpert Award

Alvin Sizer 18 North American countries

Continental DXer Award

Jim Zabransky 28 European countries
Jim Zabransky 13 North American countries
Charles Mohr 28 European countries
Richard Anderson 28 European countries
Rick Charnes 28 European countries
Alvin Sizer 40 Asian countries
Hiroatsu Matsuura 40 African countries
Richard Anderson 13 North American countries

Missionary Award

Jim Zabransky 12 stations
John Kolb 12 stations

NOTICE

If you recently sent to Hdqs for copy of new/revised NASWA country list, check and make sure you received complete copy. It seems page with countries 171-199 was missing in some (so we have been notified by a few members).

WANT A PEN-PAL IN GHANA?

His age is 22, he is unmarried and works for postal department. Interested in DXing, stamps and photography. His address is: Joseph Appiah Yorke, Mails Office G.P.O., Accra, Ghana. West Africa

OREGON GET-TOGETHER

Members/DXers/SWLs in Oregon who would like to meet others are requested to get in touch with NASWAer Andy Kerr, 555 West D Avenue, Creswell, Oregon 97426. He plans shindig in the near future. Drop him a note.

+++++

IN OUR "TRYING" TIMES, IT IS OUR GOOD FRIENDS AND SINCERE MEMBERS WHO CONTINUE SUPPORT!

A.N.A.R.C. REPORT

One of the most refreshing results of the recent ANARC convention was the genuine interest shown in revival of the hobby. I even found myself with a renewed verve and desire to get out into the streets to hawk SHORT WAVE LISTENING. The name of the game recently is publicity. Mr. Alvin V. Sizer, journalist from Connecticut, and distinguished DXer to boot, has undertaken one of the most promising ventures yet devised under the auspices of ANARC. The hobby in general could use a bit of publicity and it seems likely we can expand our ranks in NASWA or other clubs with some diplomatic application of publicity, and MR. SIZER is well-suited.

Actually, Mr. Sizer has always nourished the pet notion that publicity for our enlightening hobby left something to be desired. He has sponsored, in recent years, a feature article in the Sunday section of a New England newspaper dealing with Short Wave Listening. As the official chairman for ANARC's Publicity Committee, Mr. Sizer has his job cut out for him - and it has already begun.

The plan is this: Arrangement have been made with a well-known association dealing in SWL equipment to exchange names and addresses of known persons who may be interested in the hobby, or of persons who have written to specifically ask for more information about the hobby. Mr. Sizer would like to farm these leads out to experienced DXers in order that the DXer can take personal interest in the new lead through correspondence, telephone, or eyeball QSO. The purpose is to guide the new lead into the clubs best suited to him. The DXer will advise where to obtain books, equipment, and answers to problems. The concept of the personal sponsor is not new by any means. Many other organizations have used such methods for years. Not only does it help expand the hobby, increase memberships, and save lost time for beginning mistakes - it also creates an atmosphere of camaraderie not realized in other hobby organizations. Many DXers maintain correspondence with SWL/DXers known from years back and have yet to personally meet them. True, monthly postage fees sometimes are out of this world, but I wouldn't trade my personal situation for anything. At least, my NYL says the hobby keeps me off the street and home where I belong. (Some DXers I know manage both hobby and street - hi.)

Be that as it may, there is some assurance we can successfully recruit new SWLs. Especially needed at the moment are some volunteers in the deeper south, midwest, and far-west coast (both north and south) who will consent to receive names of leads in their areas from Mr. Sizer for the purpose of establishing personal contact for the good of the hobby. Please avail yourselves of this opportunity to do some good - it can't be too much trouble to explain to a budding DXer what having a WRTH will mean to him. Remember how you floundered until you stumbled across a copy? At least, that's the way it happened with me. Anyway, I will give an address below to which you should volunteer - or at least send your vote of confidence and well-wishes.

I hope that I will be able to keep you properly informed as to ANARC workings, and next month I plan to bring you up-to-date on what the various ANARC committees hope to achieve. Send your name and address for volunteer service to:

Mr. Alvin V. Sizer
ANARC Publicity Chairman
22 Country Way
North Haven, Conn. 06473

And a sincere 73 from: Edward C. Shaw

RADIODIFUSORA DE LA CASA DE LA CULTURA ECUATORIANA.
Richard E. Wood

The House of Ecuadorian Culture is more than a mere cultural center in Quito. It is an important feature of Ecuadorian life in all parts of the country, and a significant educational and cultural agency. It organizes art and music competitions, acts as the representative of Ecuador in international contests in these and other cultural fields, and performs an important service in basic education.

On June 1, 1949, it entered the field of radio, inaugurating the Radiodifusora de la Casa de la Cultura Ecuatoriana. The principal aim was to broadcast the work of Ecuadorian composers and musicians, taking their work beyond the narrow confines of the concert halls and musical salons of Quito, and into the homes of the peasants in the countryside and the workers in the barrios. But the equipment was weak and antiquated, and the station was forced to close in 1964. Meanwhile, however, a new 10 kW shortwave transmitter had been ordered from Philips in Holland. It cost \$34,000 (including an FM studio/transmitter link). But, although it was delivered in 1962, the difficulties in which the station found itself prevented the unpacking of the new equipment. It lay there in its crate, unopened, deteriorating in the wind and weather. Meanwhile, the organizers of the station said the purchase had been an expensive mistake; they should have bought a medium wave transmitter instead, to cover the primary listening audience in Quito.

Eventually, a new President of the House of Culture, Dr. Benjamin Carrión, put an end to the stagnation by forming a committee with the task of getting the station on the air. With interruptions caused by periodic lack of funds, construction resumed in 1968, with Philips del Ecuador S.A. in charge of the installation of the 10 kW short-wave outlet, which came on the air November 15, 1968. With this accomplished, the old 1 kW medium wave transmitter (1430 kHz) was completely rebuilt. It returned to the air in early February, 1969. An FM station at 103 MHz was also installed in 1969. Total cost of the new installation, including labor, was a million sucres.

Even now, the Casa de la Cultura has limited funds at its disposal. It is almost totally dependent for program material on overseas stations; for news, it relies exclusively on off-the-air relays of foreign stations. In keeping with the new nationalistic policy of the Ecuadorian government (similar to those of Chile, Peru and Bolivia), not only the old Western favorites, the BBC and VOA, are relayed, but also Radio Havana, twice a day, at the important listening times of 7 a.m. and 1 p.m., local time, and Radio Moscow, whose transcription service provides Science News from the USSR at 9:15 a.m. and 12:30 p.m. Saturdays, and other transcriptions at 9 a.m. Saturdays. The Voice of America is relayed four times daily; the first daily newscast taken from the VOA is at 7:30 a.m., directly after the Havana relay at 7, so that a sharp contrast is made. They are received on a British-built CR-88 communications receiver.

Likewise, the station is almost incredibly dependent upon overseas transcription services for its musical programs. Dozens of musical transcriptions are carried from every station providing such a service in Spanish: VOA, BBC, ORTF, R. Nederland, BRT, Deutsche Welle, Radio Moscow and Radio Sweden. Nevertheless, the station does produce its own programs also, and indeed, what they lack in quantity they make up in quality: they have won two international prizes in recent years: the Bronze Windmill of Radio Nederland and "Ondas 1969" of Spain. Perhaps the most Ecuadorian in character of all the programs of the Radiodifusora is its first daily offering, at 5:30 a.m.,

RADIODIFUSORA DE LA CASA DE LA CULTURA ECUATORIANA
(continued)

"Despertar Indígena", presented in Quechua at a time when most Indians are up, preparing for work in the fields and factories, but when most Spanish-speaking city dwellers are still abed. This program includes world and national news in Quechua, hints for farmers, and health and hygiene tips: it attempts to bridge the cultural and linguistic gap and incorporate the Quechua-speaking Indians into the national life. It is presented by Professor Narciso Lema, one of the few Quechuas who has successfully overcome the social and racial barriers and become a leading educator among his own people.

Radiodifusora de la Casa de la Cultura transmits on 4930 kHz with a reserve frequency of 4895 kHz occasionally noted. Schedule is 1030-1530, 1645-2030 and 2245-0415 GMT. Verification is by QSL card, showing four views of the city of Quito, signed by the Director, H. Pérez Estrella, and the station welcomes reports, preferably in Spanish.

"EL CHEAPO" - THE POOR MAN'S DIPOLE
Edward Shaw

To answer a recent request in FRENDX for designs of effective antennas that will not flatten your wallet, the following jewels are offered. All can be constructed for less than \$5.00 - provided you are adept with fingers, and you will have a fairly potent antenna to serve you. Two of these have served me faithfully for many years and I can attest to their effectiveness. Don't ask me the theory behind this antenna --the answer, as is true of antennas, is technical and less important than the results one gets. This design seems to be the equal in performance of other commercially-designed antennas by Moseley and Hy-Gain. Used with my A.T.U.*, I find this antenna to be superior - especially for the 60 meters band which is my favorite. *A.T.U.'s are simply constructed, or may be purchased commercially - a near essential for the discriminating DXer and any antenna less than 50 feet long.

Materials needed: 100' coil of 300 ohm TV lead wire, 3 ceramic insulators, sufficient length of RG-59/U coaxial cable to reach from your receiver to the antenna, 1 male motorola plug, supply of nylon cord or other weather proof cord, and other household or shop hardware.

nylon cord

EXHIBIT A - Roll out the coil of TV lead wire full length. Determine the exact center and mark this location. Bring ends together to form a 40° "V" angle with the marked center at bottom. Attach insulators on ends and affix nylon cord as illustrated.

THE POOR MAN'S DIPOLE
(continued)

EXHIBIT B - At the angle where you have snipped the TV wire, neatly bare only one lead on each side. Leave the other two close cut and unused. Affix nylon cord to one end of ceramic insulator and then insert RG-59/U cable as illustrated. Connect to the antenna at center angle. Wrap all bare soldered connections with tape. Better yet, coat thoroughly with silastic silicone rubber calking and let cure before wrapping with tape.

Wrap all bare connections with tape - or coat with a silicone rubber calking.

EXHIBIT - B

EXHIBIT C - The ceramic insulator at center angle should be secured at some point near your house and about 20 feet off the ground - such as your TV mast or chimney. Use the nylon cord for this purpose, so RG-59/U cable will dangle freely to receiver.

EXHIBIT - C

It is important to maintain the 40° angle between the arms of your antenna when it is erected - it is also important to erect the arms up at a 25° angle from ground level. This antenna is most sensitive toward the direction of the open angle, so erect to your best advantage. I point one due north, and another due east for the Asians and Africans respectively. The antenna resonates best for 60 and 31 meters. The total unfolded length of wire in the antenna arms is about 60 meters. The male motorola plug may be installed on the receiver end of the RG-59/U for plugging into your A.T.U. I will be interested in hearing from those desiring to try this antenna, or who already have this design, although I believe my measurements and angles are unique.

* * *

Thanks to Ed Shaw for his article ----- and we shall see how the drawings come out.....

Now follows an article dealing with clandestine radio.....to some it may appear somewhat political....yet, DXers just may be able to receive this illusive station! No other information regarding frequencies or times of transmission are available.... so keep an ear tuned for this one - and report that logging either to Log Report or the Flashsheet.

RADIO BROADCASTS PORTRAY SIHANOUK AS MAO'S PUPPET

PHNOM PENH, Cambodia - (AP) - A radio station that claims to speak for Prince Norodom Sihanouk but which actually undercuts the former chief of state is part of a psychological war being waged against the Communist side in Cambodia.

On several occasions, according to Khmer-speaking broadcast monitors, a man pretending to be Sihanouk has given a nearly perfect imitation of the exiled prince's high-pitched speechmaking. Well-informed sources suspect the station is located in southern Laos inside a secret paramilitary camp run by the Central Intelligence Agency. The station calls itself the voice of Sihanouk's United National Front of Kampuchea, or FUNK. It devotes much of its three-hour-long daily broadcasts to violent attacks on Marshal Lon Nol, Cambodia's prime minister, and members of his Cabinet.

But when the speakers are not engaged in anti-government tongue-lashing they mouth slogans and statements aimed at portraying Sihanouk as a puppet prince manipulated by foreign Communists. The Station's programs ends with the statement that the voice of FUNK is "commanded by Prince Norodom Sihanouk and governed by the thoughts of Chairman Mao Tse-tung." Sihanouk has been in Peking since his ouster from power 16 months ago. On one occasion, the listeners report, the phony Sihanouk went on the air to urge Cambodian girls living in regions controlled by Hanoi to sleep with North Vietnamese and Viet Cong soldiers. Another statement broadcast by the bogus prince accepted responsibility for damage inflicted upon the temple of Angkor Wat in fighting earlier this year. The North Vietnamese soldiers who caused the damage, the statement said, were mere youngsters who did not know how deeply the Khmers venerate the ruined temples and they were unaware of their princeless historic value.

The genuine Sihanouk is heard by a broad cross section of Cambodians who tune in to Radio Peking's Khmer programs. His jibes at Lon Nol and his ministers are items of everyday gossip. There is also a genuine JUNK radio, believed to broadcast from North Vietnam.

IRAQI RADIO

John Banta

The Broadcasting Station which was established in 1936 with a total transmitting time of no more than five hours a day, broadcasts now for more than 20 hours daily in Arabic alone. Aimed for sheer entertainment in its early years, this station has become a significant means of public education, political guidance and the development of objective thought.

There is one main broadcasting station in IRAQ at present, namely the Baghdad Broadcasting Station. There is also another radio station affiliated to it and known as "VOICE OF THE MASSES". Both stations transmit the locally recorded programs in Arabic, local languages (Kurdish & Turkmanian), and in foreign languages which include: English, Russian, German, French, Hebrew, Turkish, Persian and Urdu. Transmitter power runs from 50 to 250 kw, and broadcasts consist of news, cultural items and music. Baghdad Radio can be heard in North America with an Arabic transmission from 0230 to 0400 GMT, on 15400 kHz., with a good signal strength.

Efforts are exerted to provide experts and technical cadre for the broadcasting station so as to raise its standard. These efforts include the sending of students and technicians to foreign institutes to study the art of communicating with the

IRAQI RADIO
(continued)

masses and the various arts of broadcasting.

Baghdad Radio usually verifies with a full data map QSL card and sometimes sends booklets or magazines to its listeners. Waiting time for a reply is long and reports should be sent by registered airmail to: BAGHDAD RADIO, Ministry of Culture & Information, Baghdad, IRAQ.

* * *

A GOOD ANTENNA

The Best RF-Amplifier

With the increasing number of half-waves on an antenna, the angle of maximum radiation (the main lobe) moves towards the direction of the antenna wire. An antenna of an infinite number of half-waves would have its angle of maximum radiation parallel to its wire. It is obvious, that the power gain of an antenna increases with its length, i.e., the number of half-waves on it. The following is a list showing the relationship between relative antenna length and the power gain.

| antenna length in $\lambda/2$ | power gain in dbs | horizontal angle of maximum radiation in $^{\circ}$ |
|-------------------------------|-------------------|---|
| 1 | 1.0 | 90 |
| 2 | 1.2 | 54 |
| 3 | 1.3 | 42 |
| 4 | 1.4 | 36 |
| 5 | 1.7 | 30 |
| 8 | 2.1 | 26 |
| 10 | 2.5 | 22.5 |
| 12 | 3.0 | 20 |
| 24 | 7.0 | 12 |

The following table shows antenna lengths for 1 to 5 half-waves for the international broadcasting bands 49 through 11 m.

The frequencies chosen are approximate band center frequencies.

| number of half-waves: $\lambda/2$ | bands | | | | | | | |
|-----------------------------------|-------|-------|------|------|------|------|------|------|
| | m 49 | 42 | 31 | 25 | 19 | 16 | 13 | 11 |
| MHz | 6 | 7.2 | 9.6 | 11.8 | 15.3 | 17.8 | 21.5 | 25.8 |
| 1 | 23.7* | 19.8 | 14.8 | 12.1 | 9.3 | 8.0 | 6.6 | 5.5 |
| 2 | 48.7 | 40.6 | 30.4 | 24.8 | 19.1 | 16.4 | 13.6 | 11.4 |
| 3 | 73.6 | 61.5 | 46.0 | 37.5 | 29.0 | 24.0 | 20.3 | 17.8 |
| 4 | 98.6 | 82.4 | 61.7 | 50.2 | 38.7 | 33.3 | 27.8 | 23.2 |
| 5 | 124.0 | 103.0 | 77.4 | 63.0 | 48.5 | 41.7 | 34.3 | 29.0 |

*lengths in metres

If we go through our list and try to find an all-band antenna we shall be disappointed. Yet there is one length with equivalents in another ten short-wave bands. Of course, we have to admit slight deviations which will not harm our resonance problem, for due to the width of the broadcasting bands we have to accept compromises. In this connection we should mention a very efficient device for making antennas resonant: the Collins Filter. From our table (antenna lengths) under "42-m-band" we take 61.5 metres. If we take this antenna length as a maximum unit, we find resonance on the following metre-bands:

| 125m | 90m/80m | 60m | 42m | 31m | 25m | 19m | 13m | 11m |
|------|---------|------|------|------|------|------|------|------|
| 61.5 | 20.3 | 30.4 | 61.5 | 30.4 | 63.0 | 29.0 | 20.3 | 29.0 |
| 61.7 | | | 61.7 | | | | | |

A GOOD ANTENNA
(continued)

Only 49 and 16 metres are excluded. By the way, if an antenna length does not correspond to a certain metre-band, and if it is properly built, one can still use it as a good, however, non-tuned antenna putting either the one or the two lead-in plugs together into the antenna socket of the receiver.

CALIBRATING YOUR RECEIVER

Gerry Wood

Unless one has a really good receiver there is always difficulty in determining the exact frequency of a broadcaster. The problem is increased with a valve receiver which tends to drift, whereas a transistor set is usually quite stable. Every time one identifies a station on a known frequency, a bandsread reading could be entered in the WRTH against that frequency. The only trouble with this method is that it could take a long, long time to fill in enough readings to make it a usable method of calibration.

There are a number of ways of obtaining "frequency read-out", some expensive, others costing very little. The degree of accuracy varies with the cost. There is on the market a frequency meter called the BC 221. This is a highly-accurate piece of equipment which can give you a frequency reading accurate to 2 or 3 cycles. They are easy to use after a bit of practice but are difficult to obtain in this country. One could be ordered from the UK at a cost of about £15 plus p/p and are well worth the money. They cover MW to 20 MHz and higher on harmonics.

At less cost are the crystal calibrators. You have to zero your receiver every 100 or 500 kHz to the calibrator and then the calibrator will give you fairly accurate frequency readings over the next 100 or 500 kHz. These calibrators are around in SA but usually one orders from the UK at prices ranging from £3 to £12. Often the power pack has to be purchased separately or constructed. They are not as accurate as the BC 221 but give usable results.

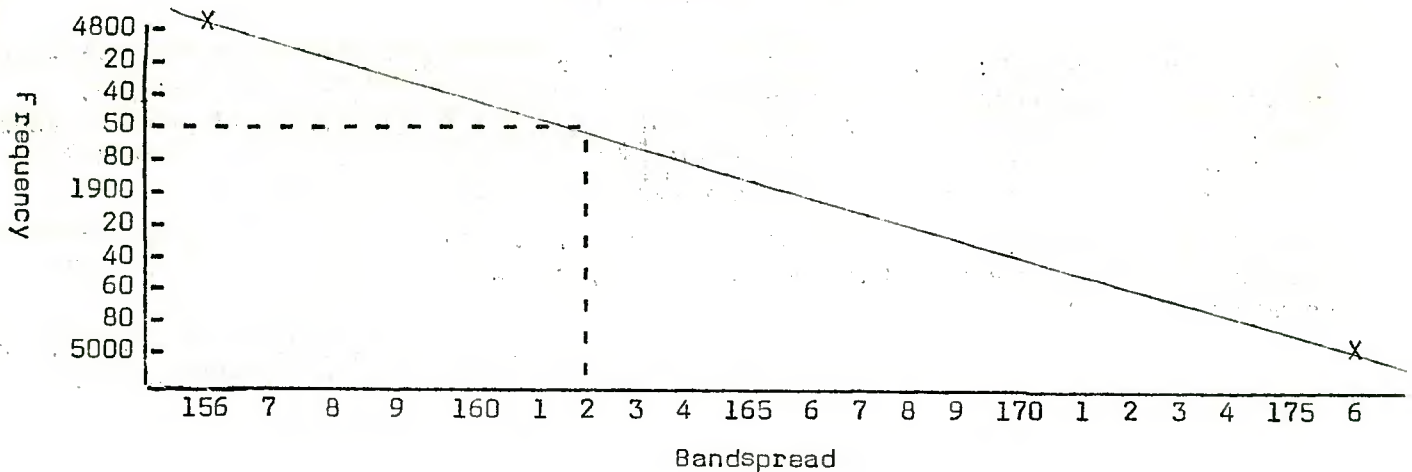

The last method I am going to suggest is that of calibration charts. These take a bit of constructing but give a reasonable degree of accuracy and are fairly easy to use. Assuming your set (receiver) has a bandsread of 0-100 or something similar, one can easily draw a graph to cover a full band or part of a band. I usually draw graphs for each 100 kHz on a broadcast band as the degree of accuracy is thereby increased. Also, as the changes in frequencies on a receiver are not linear, the more range one crams onto one graph the more likely you are to obtain a curved line, thereby reducing the accuracy.

If a chart is required for the 60m band, first a number of bandsread readings must be taken for stations on known frequencies, e.g., Lesotho on 4800, the SABC on 4875 and 4965, ZUD on 5000 and Lome, Togo on 5047 kHz. The more stations one can identify on known frequencies, the more accurate the graph.

| Frequency | Bandsread |
|-----------|-----------|
| 4800 | 156 |
| 4925 | 168.5 |
| 5000 | 176 |
| 5047 | 180.75 |

Draw a graph on 1/10th graph paper with frequencies on the Y axis (left hand side of page) making each 1/10th block count as 5 kHz or 2½ kHz or 2 kHz as you wish. The bandsread is on the X axis (bottom of page). One now makes marks where the readings of the above table coincide in the body of the graph. These marks are then joined by straight lines.

CALIBRATING YOUR RECEIVER
(continued)

It should now be obvious that if one hears a station on a bandsread of say 162, one should be able to read the frequency off the graph. One follows the vertical graph line running through 162 on the base-line until this line touches the graph-line; at this point one follows a horizontal path to the left and takes the frequency reading at this point - in this example 4860 kHz.

These charts are only as accurate as you draw them. If you have chosen for a marker a station which is off frequency then you are going to build in inaccuracies. Do not use Mozambique stations as markers, as most of them are off frequency by 1-3 kHz. The SABC is quite accurate, as is Rhodesia on 4828 and 5016 kHz. Most of the international broadcasters are bang on frequency and these can be used as markers. One can therefore draw graphs for all broadcast bands. You will find at 15 mcs and above that the graph readings will be accurate to only plus minus 5 kHz. This is due to the fact that these bands have not been given enough bandsread and it is therefore difficult to separate 2.5 kHz on the bandsread reading.

It was mentioned earlier that valve sets tend to drift. This is caused by numerous reasons: valve performance decreasing; component performance likewise - a new valve being inserted can throw calibration off by up to 20 kHz; between cold and warming up a valve set can drift by 1-5 kHz. All this poses a problem. How accurate are the graphs drawn today going to be in six months time? The answer - not known. The solution? - simple! Instead of fixed bandsread readings at the base of the graph, replace with a movable cursor. Cut half-inch strips of thin cardboard and cover each with a strip of graph paper. Calibrate the strips in bandsread readings. In any stamp shop one can buy strips of perspex used for holding mint stamps. These strips have a sticky base. Cut one of the strips shorter than the calibrated strip and stick it at the base of the graph. Insert the calibrated strip behind the perspex and adjust it to read correctly off the graph. Mark the graph with a reading you expect to be correct, e.g. 5000kHz - 176. Check this each time you use the graph. If the set has drifted just adjust the cursor to the new reading by tuning in to 5000 kHz (or any known station on other bands).

These graphs take a bit of time to draw up but are invaluable when completed. If you decide to make some, be sure to take your time and be accurate.

For the person who has time and patience there is another method based on that detailed above. You will all know what a slide rule looks like. One piece of calibrated material which slides between two fixed calibrated pieces. This method can be used to make frequency/bandsread readers. In most timber supplies one can obtain strips of wood which are tongued and grooved along opposite sides. The narrower the strips the better, as the size must be kept to a minimum. Taking as many pieces as are required, a number of "dead" pieces are secured to a baseboard, spaced so as to, take the moving pieces. The fixed pieces carry frequencies and the

CALIBRATING YOUR RECEIVER
(continued)

moving ones the bandsread. Each fixed face is covered in graph paper and calibrated in frequencies. The moving pieces are covered similarly and set into position. Readings are then taken of different stations and the moving pieces calibrated according to the bandsread readings. Intermediate bandsread readings are interpolated. From then on as the receiver drifts so the moving pieces are adjusted.

These last two ideas, with adjustable bandsread, are solely for valve-type receivers. Most transistor sets are stable and should only require the simple graph to give frequency readings.

ON THE HOBBY
Dan Romanchik

The thing that probably turns more young people away from the hobby of DX'ing is that to really succeed in this hobby there is so much you have to know. A SWL must be familiar with propagation principles, station skeds, reporting techniques and the electronics of his receiver. Being a novice DX'er can be very frustrating if one is not under the guiding hand of an expert. In their book, Better Shortwave Reception, William Orr and Stuart Cowan provide the expertise.

This book contains a myriad of information for the DX'er. Included are chapters on propagation, receiver design and construction, receiver alignment, antenna construction, reception techniques and much more. Explained in simple terms, it adds much to one's understanding of his receiver and the idea of SWL'ing.

But SWL'ing isn't the only thing that this book covers. Sections are devoted to digital transmission, radio science, CB, ham radio reception, VHF, UHF, radio astronomy, and astronaut communication.

A beginner in this hobby encounters many things which he cannot explain. Such things confuse and discourage him. This book does much to untangle this mess for the beginner as well as the veteran.

AN INDOOR ANTENNA
Gordon Gladstone

Many DXers are living in apartment buildings where the problem of setting up a good antenna becomes a maddening dilemma. The BBC has come up with a workable solution which I have tried and am completely sold on as THE home-brew indoor antenna. Materials required: four nails, length of #18 stranded and insulated wire. Procedure: For a directional antenna, choose a wall in whatever room you use as your shack, that runs in the general direction you are interested in, i.e. N/S, E/W, etc. Drive the nails into the four corners of that wall. Stretch the wire around the four nails beginning at the middle of the floor side of the wall connect one end of the wire to your antenna terminal and the other end to your ground terminal. For a less directional antenna use the floor or preferably the ceiling for the loop of wire. (Do not use a ground wire with this antenna.) Thus:

QSL REPORT

Gregg A. Calkin-Editor, Rio Balsas 35-702, Colonia Cuauhtemoc, Mexico 5, D.F. Mexico

Deadline 12th of the Month

((Note: To clarify...September stencils were mailed by Gregg, but either due to some foul up by postal system, or some unforeseen/unknown delay/censure by customs, they never arrived at Hdqs. This month however, we have tested (successfully) a new mode of mailing and we do not anticipate future problems hereto. It is regretful we cannot repeat the Sept. section which contained a White List and current Scoreboard. B.E.))

* * * * *

First of all, before getting into our regular reports, your editor would like to apologize for the lack of a September column. The column was typed and mailed by the normal deadline, but appears to have been lost somewhere in the Mexican mail system. If it has not been delivered in Altoona in time for this or the next issue, the highlights (and there were many) will be included in November QSL REPORT.

QSLs RECEIVED

ALBANIA: Radio Tirana, 6200, b/w card w/picture of bldg and 2 p/p/cards. 2 months, no IRCs sent (d'Adolf) 10 weeks for 3 IRCs; air w/full data (Webb)

ALGERIA: RTVA, Algiers, 11715, white-gold card plus sked + rpt form; 3 wks air for 3 IRCs and English rpt (eely) 60 days for 2 IRCs (Lewis) 9510, 57 days seamail for mint stamps and report in French using NASWA French language form (Michalenka)

ANGOLA: Radio Huambo, 3345, multi-lingual African drummer card rcvd in 22 days air for Portuguese report and 2 IRCs. Confirms reception but no details (Hall)

Radio Clube do Cuanza Sul, 4840, card showing view of station bldg; QSL text in 5 languages. Signed by "the Director"; 5 wks air for Portuguese rpt w/3 IRCs (Padula)

Radio Clube Lobito, 4910, card shows drawing of natives washing clothes in river in jungle; QSL text in 6 languages; 8 wks air for English rpt w/2 IRCs (Padula)

ARGENTINA: RAE/11710, light green world globe card in 127 days seamail. (Lewis) 9690, card in 102 days air. No IRCs (Bianco)

ASCENSION IS: BBC Relay sent Thames card w/site typed in in 126 days (Hardester)

AUSTRALIA: VNG Time Signal, 12000, color folder card in 14 days w/full data (Jamison) 11 days air w/folder card; all data (Kaufman) 8 days; no IRCs (Brode)

Radio Australia, 17795, card seamail in 2½ months. (Maslak) 50 days for rpt card (Hailpern) 15240, Darwain Aerial card w/full data in 2 months (Lobdell)

ABC/VLR6, Melbourne, map card in 2 months w/xmtr site given as Lyndhurst. (Sizer)

BELGIUM: ORU, 9550, yellow/blue map and tower card with full details; power marked as 100 kW. 35 days for 1 IRC (Ingram) 40 days air (Kelbher) 1 month (Konen) 5 weeks air; mint stamps not used (Bianco)

BOLIVIA: CP75, La Cruz del Sur, card w/drawing of mountain plus small blue pennant in 35 days air for English report and mint stamps (Zabransky)

BRAZIL: Radio Brasil Central, ZYX2, 4995, letter in English and Portuguese w/full data; also p/card of station in 30 days air for Port report and Mint stamps (Zabransky) 3 wks air for Portuguese rpt; say they do not issue pennants now (Williamson)

Radio Globo, 11805, paper thin QSL, 5 months seamail for Portuguese report w/2 IRCs (Padula) 2½ months for 2 IRCs (Sizer) 3 months for English report w/MS (Brode)

Radio Guaiba, ZYU61, folder shows view of Porto Alegre, confirmation in English; full data. V/S: Enio Berwanger. 15 weeks sea for English report + 4/IRCs (Zabransky)

Radio Jornal do Comercio, 15145, picture card w/full data + personal letter for 4 IRCs. Reported by registered mail; reply by air in 2 weeks (Brums)

BOUGAINVILLE IS: R. Bougainville; folder in 3 weeks for 2 IRCs (Brode)

- BRUNEI: Radio Brunei, 7215, mosque/map card in 20 days air. 4 IRCs sent; full data reply from V/S: A. Frigout, C.E. Also sked (Zabransky)
- BULGARIA: Radio Sofia, 9700, Sofia U. card in 50 days; no IRCs (Gehan) card, pennant, rpt form, sked in 1 month; 2 IRCs w/f/up (d'Adolf) 63 days for 1 IRC (Fazekas) 1½ months; no IRCs (Dildine) 22 days air w/full data (Ingram) 9550, 110 days (Kelbher) 1 3/4 months for 1 IRC (Kennedy)
- BURMA: BBS, 5040, letter verie from Pe kyaing, Second Secretary, Burmese Embassy, after BBS had confirmed reception to them and asked them to relay to me. Reports should go to: U Than Pe, Deputy Secretary, Ministry of Information, Bo Aung Gyaw Rd., Rangoon. I worked on this one for nearly 15 years and figure the cost at \$25-\$30! (Dexter) similar letter from Embassy Official, w/full verification. BBS says few N.A. rpts received (!) I waited 6 years for this one! (Shaw) Ditto letter saying that QSL-cards are unavailable "due to temporary suspension of the program". My QSL in response to a tape sent to BBS 8 months earlier and a f/up letter (Berg) Excellent, gentlemen!! (Ed)
- BYELORUSSIAN SSR: Radio Moscow, cards in for Minsk/9655 and Orsha/9755 from Mrs. Stepanova. Originally rcvd in 5 wks w/out sites, so I returned them and they came back in 1 month (Berg) card from Mrs. S. for Minsk/15150 w/small pennant (d'Adolf) Minsk/15150 in 25 days air (Neely) Minsk/15150 in 22 days air; map card (Plum)
- CAMEROON: Yaoundé, 4972.5, map card in 35 days w/full data; no signature; seamail for 1-IRC and French report (Watman)
- CANADA: Radio Canada, 15190, special transmission by 250 kw xmtr; stamped; 9 days (Kaufman) 15165, inauguration card for new transmitters plus FDC of CBC Commemorative stamp; 16 days (Banta) 5970, Anik card in 4 months (Magne) 9625, 12 days (Neely) 2 weeks (Banta) 15325, 16 days (Dickey) 8 days (Dildine) 14 days air (Hardester) 15440, 10 days (Burns) 1 month (Padula) 15325 (Banta)
- CFRX, Toronto, 6070, color card of Toronto's Old and New City Halls; V/S: Clive Eastwood; seamail (Ingram)
- CFVP, Calgary, 6030, card in 0 days surface (Kaufman)
- CHU Time Signal, 3330, card in 10 days (Hardester) 27 days for 7335 (Kennedy)
- CANAL ZONE: NBA, prepared card returned from Washington in 9 days; no IRCs. V/S: R. Glenn Hall for 17697.5 (Hailpern) ditto in 4 weeks plus mimeo letter from Frank Knutson direct in 3 weeks. Direct Address is: Box 5007, Fort Amador, FPO New York, N.Y. 09580 (Michalenska) prepared card returned from Washington; 2 weeks (Field)
- CANARY IS: RME/Tenerife, 15365, complete veri statement in Spanish typed on the blank side of a QSL-sized program sked! 11 days air; 2 of the 3 IRCs were returned (Konen) blue folder card showing studio w/full data, pennant and sked in 9 days from Madrid for 2 IRCs and address label (d'Adolf) 17 weeks from V/S Juan de Rojas (Howard) 5 months for 1-IRC (Ricchezza)
- CENTRAL AFRICAN REPUBLIC: Bangui, 5035, letter w/all info in 3 months for French rpt; 3 IRCs (Brode)
- CEYLON: Radio Ceylon, 15120, old yellow card showing xmtr bldg; Sent to Bombay Ad Agency; 25 days air for Indian mint stamps (Konen) 2 weeks direct for English report on 11800 (Neely) Elephant Bath card; air in 8½ months (Marshall) card for 3 IRCs w/rpt to Bombay (Field)
- CHINA (P.R.): Radio Peking, 15060, full data verie and letter explaining RP's purpose. From the "English Section"; one month air for aerogramme rpt (Smallshaw) 2½ months; no IRCs (Neely) QSL w/out verie data, plus magazines, p/cards and sked (Verzosa)
- CLAUDESTINE: Radio España Independiente, 14483, Picasso card via Prague from Paris. 1-IRC; 10 weeks. Gives frequency at 14480 kHz (Howard)
- COLOMBIA: Radio Bucaramanga, 4845, Spanish letter from V/S: Jaime Sorzano B., Sub-Gerente; also small blue pennant; 14 days air for mint stamps and Span rpt (Zabransky) Radio Nacional, verified w/beautiful color foto QSL card in 3 wks air; Span. rpt and mint stamps sent (Williamson) p/card of Church, sked in French (!) and typed thank-you in Spanish; 2 months, 3 weeks (Berg) 1 month for English rpt and MS (Brode) Radio Santa Fé, card and pennant in 3 months seamail from Sr. de Bernal. I asked for a sked and the reply was "we work around the clock" hi (d'Adolf)

COLOMBIA: Radio Sutatenza, 5075, folder w/pic of transmitter facilities and station info; full data in 204 days for Spanish rpt and IRC (Watman) 6 months seaimail (Lewis)

Radio Vision Medellin verified by letter in 4 wks air for Spanish rpt and mint stamps. V/S is unreadable (Williamson)

COMORO ISLANDS: Radio Moroni, 7260, sent fine QSL letter in French w/full details for report in French w/5 IRCs. Received in 15 days air w/sked. V/S: M. Satti, Le Chef d' Etablissement. (Hall) Excellent, Earle (Ed)

CONGO, D.R. RNC/Kinshasa, 15245, letter in French gives date and frequency, saying still out of QSL cards. V/S: V. Nikuna. 27 days air for French report and 3 IRCs for 3rd try (Zabransky)

Radio Bukavu, 4839, form letter w/full data except time. 191 days seaimail after several f/ups in French. ADDR: Le Directeur Provincial-Chef du Service de L' Information, B.P. 2220, Bukavu. Fully stamped and signed. (Hall) Rare! (Ed)

CONGO REP: ORTF/Brazzaville, yellow/brown map card in 20 days for 15190 (Hailpern) 3½ months air for 1-IRC (Insinger)

COSTA RICA: TIFC, card and mimeo letter in 5 weeks for mint stamps; also in 1 week (Smallshaw) 3 weeks w/9 postal cards, stamps and tourist info/pennant (Field)

CUBA: Radio Havana Cuba, 9525, full data card and letter for Voice of Vietnam relay in 1 year for aerogramme report (Smallshaw)

Radio Havana, 11760, card in 10 months (Sawallesh) 11840/15250/11960 in 16-26 weeks (Padula)

CYPRUS: BBC Relay, 7140, Thames card in 13 weeks; site written on back (Howard) 15420, letter sent direct from Limassol stating definite veri statement w/power, but no other details. V/S: G. A. Appleton, Engineer in Charge. No IRCs; 3 weeks (Kaufman) 13 weeks seaimail (Zabransky) 17 weeks; no data (Bruns)

CZECHOSLOVAKIA: Radio Prague, 17840, 98 days seaimail. No IRCs (Kelbher) 7345, new black/white card shows two women in Czech national costumes. 1 month (Banta) 25 days, w/sked and card in 46 days for 9540 () 11990, 51 days seaimail; no IRC (Dildine) 1 month air for 2 IRCs (Kennedy)

DENMARK: Radio Denmark, 9520/11895, cards of radiohouse in 3/2 months w/full data air; no IRCs (Lobdell) 16 days air; 1-IRC (Ricchezza) 5 weeks for 1-IRC (d'Adolf) 15 days by air for IRC and English report (Watman)

DUBAI: Voice of the Coast, 6040, card from Abdul Marum Totad, Adv. Manager. 3 IRCs; reply on 2nd try in 6 weeks; by air (Field) Now issuing a card (Ed)

DOMINICAN REPUBLIC: HIN verified w/red/white/blue card showing island and call letters and two page letter from Sr. Hector Quesada, Gerente also received. Spanish report and mint stamps sent (Williamson)

Radio Cristal, 5071, pleasant letter from Elizardo A. Dickson N., Director General. Gives date and time and verification statement only. Air in 94 days; tnx to César Objio (Wood) letter from same V/S, headed "Prodisca" Division de Radio y Propaganda, Calle 19 de Marzo 62, 2° Piso, Santo Domingo. (Williamson) 5010, letter of acknowledgement w/no data; says will sent QSL and pennant for my next report. (Zabransky)

ECUADOR: HCJB, card of compound at night (Hardester) 3 months air; card plus new pennant and survey. 15115 (Hailpern) 24 weeks seaimail plus a miniature doll, and card showing view of Stereo Control Room, + sked and religious material. Air in 8 weeks also for 9715 kHz (Padula) 11745, 20 days air (Dickey)

Norea Radio sent a multi-colored, large letter plus flag and sked for relay over HCJB. V/S: Sigbjorn Spikkeland, Technician. 4 months air for 2 IRCs (Berg)

La Voz del Triunfo, 5955, letter in far from literate Spanish (typical spellings: "Buestra" for vuestra, "hasimismo" for asimismo, "bera" for vera), gives verie statement only. Included two photos of Colorado Indians and sent attractive gold/blue/red/green pennant showing two performers at mic. V/S: Manuel M. Yanez O., Gerente Proprietario; air in 97 days (Wood) Sounds like my maid, who keeps leaving me notes addressed to "joben" (Ed.)

C.R.E. Guayaquil, 4765, letter/pennant in 1 month. V/S: Alicia de Blacio,

ECUADOR (cont'd): Secretaria. Reported in Spanish w/mint stamps (Williamson) 3 months air for Spanish report and mint stamps (Berg)

EL SALVADOR: Radio Nacional, card, no details, and travel brochure and small pennant in 1 month for 2 IRCs and local p/p/card. Reported in Spanish for 9553/5960 (Brode) 6 weeks w/pennant and blue/white card; mint stamps sent (Williamson)

ENGLAND: VOA/Wooferton, 15205, usual card from Washington by seammil in 7 days. All info but time (Lobdell) 7 days (Mayo) 6 days for 15205 (Flum)

BBC, 11750, Thames card in 15 weeks. No IRC (Howard) 9510, sked and card in 81 days. No data (Gehan) 11780, 105 days (Munger)

ETHIOPIA: ETLF, Addis Ababa, 9680, blue card in 5 weeks after f/up w/2 IRCs (Bruns)

FIJI IS: Suva, 3284, colorful card of native sailboat on the beach sent by air for report w/5 IRCs; 46 days. V/S: P. Lloyd Littin. Country N° 100! (Michalenka)

FINLAND: FBC, 9530, usual card w/full data in 1½ months airmail for 1-IRC (Lobdell) 30 days air w/sked (Lewis) 7 weeks w/sked air (Ricchezza)

FRANCE: ORTF, orange card for 15120 in 14 days air. No IRCs; also folder sked (Konen) 17720/17730 hand written card for reports of English and Arabic transmissions; 2 months; Pennant promised under separate cover (Hailpern)

GABON: RTG, 4777, card w/full data in 5 weeks for English report. 2 IRCs (d'Adolf) card in 3 months for English report and 3 IRCs (Brode)

GAMBIA: Radio Gambia, Bathurst, 4820, form letter w/date and short confirmation stmt. Letter gives technical data on station and country. V/S: Director of Information and Broadcasting. Returned all 3 IRCs. 26 days air (Konen) 20 days air (d'Adolf) 3 IRCs sent (Neely) 4½ months following QSL received in May (Brode)

G.D.R. RBI, 9730, letter in 75 days from R. Friedel. No IRCs (Munger) sports star card seammil in 12 weeks (Padula) 2 months for 2 IRCs (Howard)

G.F.R. DAM Time Signal, 6475.5, Elmshorn, full veri personal letter in 89 days air. IRCs and English report sent (Dildine)

Bayerischer Rundfunk, 6085, attractive card w/drawing of boy playing horn and towers in background. No data except acknowledgement and frequency. Air w/brochure on Munich in 8½ months. Mint stamps sent (Calkin)

Deutsche Welle, Köln, 9735, card and sked by air in 60 days. No IRCs (Gehan) 6075, map card of Europe, air in 94 days (Munger)

GHANA: Radio Ghana, card and sked for 3326; air in 6 wks (Padula) 11850, card in 33 days; all data (Kennedy) 43 days for 3295; no mention of 3326, so probably spurious (Hall) see above, Earle (Ed.) 11850, seammil in 1 month (Banta) 5 weeks air (Ricchezza)

GREECE: NHBI, Athens, 15345, plain white card w/all details signed by the Director of Technical Services. 3 weeks air for 2 IRCs (Konen) 7 weeks for 15345 (Neely)

GUATEMALA: Radio Cultural, TGNA/B, 9505, green/red/white Quetzal bird card w/letter about the station and Guatemalan stamps in 1 month for 1-IRC; air (Konen) 20 days from V/S: David Keeler plus religious pamphlet (Hailpern)

La Voz de Guatemala, 6180, blue/white QSL, all details in 5 weeks for Spanish report w/mint stamps (Williamson)

La Voz de Mahuala, 3360, attractive card, all details except the time; reverse shows flame over mountains. Air in 132 days. No signer (Wood) 14 weeks air for Spanish report and 3 IRCs (Zabransky) 3 months + 1 week for English report and 2 IRCs (Brode) beautiful card in 2 months (Field)

GUYANA: Radio Demerara, 3265, card w/date and confirmation statement signed by A. Brewster for E-In-C. 22 days air for 1 IRC (Watman)

Guyana Broadcasting Service (Action Radio), form letter verie from Maurice O. Denny, C.E., which notes transmitters are at Sparendaan, 6 months from Georgetown on the coast; air in 3½ weeks (Dexter) so are Radio Demerara's xmtrs (Ed) 23 days for 1 IRC for 3290 (Zabransky) 9 days for mint stamps; theme mx at s/on is "Puppet On A String" (Hall)

HAITI: 4VEH, Cap Haitien, 11835, blue map card in 2 months air w/sked (Banta)

HAITI (cont'd): folder card in 22 days air from V/S: Mrs. Kent Ragsdale (Plum) 69 days w/1971 calendar, sked and religious enclosures (Marshall)

HAWAII: WWVH, Maui, 15000, Blue Beach Scene card, no time. VS: S. Hatahana; 10 days; no IRCs (Dildine)

WWVH, Kaul, 15000, Green card w/ocean/canoe/tree "1st Day" QSL; no time. V/S: C. L. C A N A D A.

Our featured QSL this month comes from the offshore station Radio Nordsee International currently operating off the coast of Holland on board the Mebo II. RNI has been heard well in North America since beginning transmissions in early 1970, and can now be logged on 6205 kHz and occasionally on 9935 kHz. The reverse side of the card shows a beautiful color photograph of the boat and masts.

Finally, sincere thanks to the following 54 members who made this column possible:

LISTENERS DIGEST

Dan Ferguson-Editor, 1521 Smith Road, Apt.7, Charleston, W.Va. 25314 Deadline 15th

* * * * *

CHILE To late to get the info to the membership in time, I found that, according to a note from Arthur Cushen over HCJB's DX Party Line, Radio Presidente Balmaceda will broadcast a special program in ENGLISH for the New Zealand DX League on 26 September, at 0500-0515(DF) And Bill Matthews advises tha the NZ DX Times says the pgm will be at 0450-0515, and that reports should be sent to Sr. Hector Sepulveda, Manager.(Matthews)

SWEDEN R.Sweden is now on 11825 to ENA at 0000-0230. English at 0030-0100 & 0200-0230. Reception is very poor here in W.Va. at both times. RS is now using 9590 to ANZ at 0515-0545, poor in W.Va....The Eng tx to WNA continues on 11705 at 0330-0400. RS is now on 21625 at 1400-1530 to ENA. Eng at 1400-1430 & 1500-1530(Richard Wood, DF)

VATICAN VR is on 5995 to NA w/EE 0050-0100, for the fall quarter.(DF)

DOMINICAN REPUBLIC R.Antilles has been reactivated. Has been inactive since the latter part of 1967. Is on 4962+ kHz, and well heard evenings. (DF)

GAMBIA Radio Gambia, 4820 kHz, is sked 0625-0800 daily except Sunday, and 1655-2300 daily.(Al Sizer) The 0625 transmission is well heard in North America.(DF)

CONGO(DR) From time to time we will include notes on when/where certain stations might be heard. These notes will take into account propagation and scheduling. If such notes are useful, and productive of results, we will include them. I don't want to be accused of sending anyone off chasing wild geese, so please remember that these notes are based on schedule information, and not necessarily on actual loggings. Your comments welcome. The first such feature on the CONGO(DR);

Radiodiffusion-Télévision Nationale Congolaise, Kinshasa. Try 4880 kHz at *0400 to abt 0600. Try 7115 kHz at 0200-0400. RFE is sked to use the fqy from 0400, but has not been heard there at the most recent checks, so this may be open longer....9770 kHz might be heard around 2200.....Try 15245 around 0200-0600 and 1800-2000.

Radio Lubumbashi might be heard in the 0415-1000 time slot. Best bet seems around 0415-0630 GMT.This on 11862v kHz....9540 may be currently active; if so would be best hrd around 0630-0700.

Radio Mbandaka is currently scheduled 0400-0800, and 1500-2100, but there does not seem to be any chance of hearing this one in NA currently. 5993 kHz.

Radio Bukavu, 4839 kHz, try 0400 s/on till 0530. Will be best at s/on, when audible.

Radio Kasai, Luluabourg, 6125 kHz, scheduled 0400-0700, but VoA-Gvl covers the channel.

Radio Mbuji-Mayi, 7300 kHz, might be audible around 0400-0500 kHz.

(Comments on this type of information desired. If you find it useful, what other areas or countries would you like covered in this manner. Please remember, the above times are given only as POSSIBILITIES.) (DF)

COSTA RICA Current SW operations from Costa Rica:

4832 kHz Radio Capital, 24 hours

5954 kHz Radio Casino, 1 kw, 1200-0600

6006+ kHz R.Reloj, 1 kw, 24 hours

6037 kHz TIFC, Faro del Caribe, 1 kw, 1130-0400, English 0300-0400.

6150 kHz R. Atenea, 1 kw, 24 hours. Well heard 0600 & later,

9645 kHz TIFC, Faro del Caribe, 2 kw, 1130-0400. English 0300-0400.

(DF)

Your support for this section earnestly desired. NEXT DEADLINE 18 OCTOBER.

ECUADOR HCJB is now using 9615 to NA in EE at 0110 past 0500, //11745/15115 kHz. (DF)

ECUADOR I will be contributing short tapes with DX and SWL information to the HCJB DX Party Line. Exact dates are not yet determined, but there will be an average of two tapes per month, each about 5 min. in length. The DX Party Line is aired at 0030 Monday (GMT) on 11745 kHz; and at 0300-0330 on Tuesday (GMT) on 9615/11745/15115 kHz to NA. (DF)

JAPAN There are several SW outlets relaying Japanese HS transmissions in Japan. The following list is by no means complete, but I have found no further information on the regional Japanese outlets. If any member has additional information on these outlets I would appreciate hearing from that member.

Hiroshima - 6175 kHz, 5 kw, 2030-0900
Matsuyama - 6005 kHz, 5 kw, 2030-1500
Nagoya - 9535 kHz, 5 kw, 2330-0830
Tokyo Kawagu - 9550, 5 kw, 0100-1300

Best chance for NA DXers to hear Hiroshima on 6175 seems to be 0830, from the info I have. Best chance for Matsuyama would be around 1000 & later. WC DXers might have a better chance than those on the ECNA, since it is still a target after R.Rejoj has faded...Nagoya on 9535 may be difficult to hear since Kuching, Sarawak, is also on the fqy till 0830 s/off. However, if Nagoya is to be heard in NA, it would most likely be not long before the 0830 s/off....Try for Tokyo Kawagu on 9550 from around 0800 till they s/off at 1300. West Coasters again probably have the best chance of hearing this one. (DF)

QUESTION How do I hear Turk Island?

Answer: Wait 12 years for the next hurricane to hit the island, then tap Al Niblack's phone to find out the correct fqy to tune. And speaking of Turk Island, a note from Don Jensen says, "Not wishing to rub salt in the wound, but Turk Is. just verified by letter for 4788, Aug 25 (GMT)." OK, Don, thanks for the pepper! Hi. (DF)

ANARC AWARDS COMMITTEE This editor is the new chairman of the Awards Committee. Nominations are being accepted for Merit Awards, and for the 1972 Man of the Year Award. Nominations for either award should include a letter giving full details, plus 4 carbon copies of the letter and a self-addressed, stamped envelope. Any member of an ANARC affiliated club may make nominations. (Dan Ferguson)

BAND SURVEYS are being compiled for the following bands: 1605-4000 kHz, 4000-5700 kHz, and 5700-7000 kHz. Hopefully the first survey will be completed in time for the November FRENDX. (DF)

NEPAL The sked of R.Nepal as of 15 August:
0120-0350 on 4600 & 7105
0720-0920 on 7105
1320-1650 on 4600/7105
Pwr & lang not given. (Jim Zabransky, Jr.)
7105 was 5kw last I knew. (DF)

Very little material in for this section this month, undoubtedly because of the late arrival of the September FRENDX, and the fact that most members were not aware of what type of material was desired.....

WE WILL BE using schedules of stations, hopefully after they are checked out for accuracy. The sooner the material is here the easier it is to check schedules out on the receiver; so although we have a deadline, you are asked not to wait for mailing until just before the deadline. I will be checking out some of the schedules here, and cooperators will be checking in other parts of the NA. This should enable us to give the SWL a clear picture of what stns he can hear in NA, especially English programs....We currently plan a quarterly list of English transmissions to NA, and to include other EE transmissions easily heard in NA. For the winter quarter this will appear in DECEMBER, to give time to collect the info after the winter skeds go into effect....Your notes on xmsns hrd after 6 November should be here by 18 Nov, for inclusion in the December issue.....

Other material which might be of general interest to DXers & SWLs is also welcome. We especially are interested in accurate skeds of DX stations, but if you don't know how accurate they are, send them in anyway - we'll get them checked out..... Personal notes about the members are welcome; e.g., comments on equipment and/or techniques, etc. (Just remember that feature articles belong in the SHORTWAVE CENTER, so should be sent to Bill Matthews.If you have questions that can be answered here, we will try to do so. I.e., questions about unidentified stations, or even where & when to try for a particular country, we'll even try to get an answer for such questions.....This section can be pretty much what you want it to be, so let me hear from you. 73, Dan Ferguson

LOG REPORT

Jerry Berg-Editor, 38 Eastern Avenue, Lexington, MA. 02173 Deadline 12th of Month

Be alert to new address!! Mail before deadline!! Please use NASWA report forms!

VATICAN WR using 5995 to replace 15420 to NA 0030-0130; watch for other possible changes. (Dr. R. E. Wood)
CLANDESTINE 6199 LAOS LV du Pathet Lao, 9/12, 1230 going from Viet to Lao with characteristic theme music. 23433 (Hauser)

AUGUST 1971

SUNSPOT COUNT AS FURNISHED BY THE ZURICH OBSERVATORY 9-7-71:

1-70, 2-57, 3-58, 4-43, 5-48, 6-40, 7-48 8-55, 9-59, 10-64, 11-60, 12-58, 14-58, 15-53, 16-49, 17-52, 18-60, 19-62, 20-82, 21-107, 22-98, 23-106, 24-93, 25-91, 26-82, 27-49, 28-37, 29-29, 30-17, 31-15 MEAN--59.9

PREDICTIONS: SEP-57 OCT-55 NOV-53 DEC-51 JAN-49 FEB-47 (Grady Ferguson, No. Car.)
 (It looks like a banner low band DX season is approaching, Editor)
ERRATUM: ARGENTINA Time stations LQB9 and LQC20 are not new; have appeared on utility lists as early as 1966 in ASWLC. (Hauser)...CHINA (TIBET) Report would seem extremely doubtful; in the first place its a largely daylight path. (Hauser)...The listing of R. Mexico 0800-2400 on 9705 is an obvious error as this fqy is used by R. RSA with 250kW. Aside from the fqy discrepancy, which xmission would you bet on hearing? (Bob Peritz, N. Y.)...Good audibility of LOL, Argentina is reported on 15000. This is also the same fqy used by WWV in Colo. Once again, I put my money on WWV to overshadow LOL. After listening for several days, the best SINPO rating for LOL is fair to poor. (Bob Peritz)
 ...Look at the logging for La Voz de la America Latina, 6165, reported as operating at 0620. Its a neat trick to hear them at 0620 when S/off is 0600. (Bob Peritz) (Please see previous FS for reference to the above items) (Editor)

SILENT RECEIVER: IN MEMORIAM - This Flashsheet for October is dedicated to the memory of Ab Saylor, formerly of Quantico, Va. Veteran DXer and long time good friend Ab passed away recently after an illness and complications. Ab, quite active years ago in the DX World, has of recent been inactive at the hobby. We kept in touch. Ab was proud of his crystal sets; he knew his way around in the inside of receivers, and he knew what made them talk. Ab, you will be remembered and the hobby needs more like you.

Anthony Marks (Oregon) and Ed Shaw (Va.) report that they are new and happy owners of the just arrived Allied SX-190 Receivers. (how about some reports fellows, Editor?)

ACKNOWLEDGEMENT: Thanks for the able assistance this month. Due to corrections and other details that it was necessary to run, we had to delete some of the material in the reports. Please keep them coming. Phone Flash items to 882-3976 after 2200. Vy 73, AL
