ALPHABETICAL LISTING OF PLACES

Introduction

CONCEPT

The Radio and Television City Book shows the composition of each 1986-1987 defined Arbitron Television Area of Dominant Influence (ADI) and each 1986 defined Arbitron Radio Metro Survey Area (Metro) in terms of cities, towns and communities which have been provided to Arbitron by Market Statistics.

The places listed in this book consist of cities, boroughs, towns, villages and unincorporated places (not located in an urbanized area) which had 2,500 or more inhabitants at the time of the 1980 U.S. Decennial Census for the Continental U.S. Places which have exceeded a population of 2,500 since 1980 do not appear. Unincorporated places that are located within a Bureau of the Census defined urbanized area are listed only if they had at least 5,000 inhabitants at the time of the 1980 U.S. Decennial Census. The user should bear in mind that the places listed in this publication are not the basis for determination of the geographic definitions of ADIs or Metros. The *Radio and Television City Book* serves as a guide in locating place names associated with ADIs and Radio Metros as defined by Arbitron. For Arbitron's current ADI definitions, refer to the *Arbitron Television 1986-1987 Universe Estimates Summary*. Arbitron Radio Metro definitions can be found on page 2B of each market's *Local Market Report*.

SECTIONS OF THE REPORT

I. LISTING OF PLACES BY TV ADI

MARKET/This section lists names of places located within each Arbitron ADI for the 1986-1987 survey year. This listing is in alphabetical order by ADI market, then by state and place name within the ADI.

II. LISTING OF PLACES BY RADIO

METRO MARKET/This section lists names of places located within each Arbitron Radio Metro market effective with the Fall 1986 Survey. The Spring 1986 market definitions apply to those markets not measured in Fall 1986. This listing is in alphabetical order by Metro market, then by state and place name within the Metro. (Note that places in the Anchorage and Honolulu Radio Metros are not included in this report.)

III. ALPHABETICAL LISTING OF

PLACES/This section lists all places included in Sections I and II. This listing is in alphabetical order by place name and by state. Included are the county location of each place, the 1986-1987 ADI assignment and where applicable, the Radio Metro market assignment of the county. If a place is not part of a Radio Metro definition, the Radio Metro Market column is blank for that place. A place may be included in more than one Radio Metro but all places are listed in one and only one ADI.

Some places geographically straddle county lines and therefore exist in more than one county. For such "split" places, each county in which the place exists is listed. In instances where the straddled county line is also an ADI or Radio Metro boundary, the place name is listed under each ADI affected in Section I or Radio Metro affected in Section II.

A place may exist in a county that is geographically split for an ADI or Radio Metro (see ADI and Radio market definitions descriptions below). If a county is split differently for an ADI and Radio Metro, both splits are listed. In this report a Radio split county is always a subset of the ADI county definition whether the ADI county is a whole county or geographically split itself.

Conditions such as "split" places, geographic county splits which differ for Radio and Television market definitions, and places which are in more than one Radio Metro will result in more than one line of information being provided for some places.

AREA OF DOMINANT INFLUENCE (ADI)

The ADI or Area of Dominant Influence is a geographic design which defines each television market exclusive of all others based on measurable viewing patterns. It is an area that consists of Arbitron sampling units in which the home-market commercial stations and satellite stations reported in combination with them received a preponderance of total viewing hours. A sampling unit is normally one county or an independent city, although some counties may be divided into two or more sampling units due to topography. For purposes of this publication, sampling units will be referred to as counties. Each county in the U.S. (excluding Hawaii and Alaska) is allocated exclusively to one ADI. There is no overlap. Markets in non-contiguous states, territories and possessions may be ADIs if there are station subscribers in those markets.

When a county is split by Arbitron into more than one geographic sampling unit, each unit is analyzed as if it were a county for ADI purposes, and is assigned to an ADI on the basis of the rules described below.

Assignments of counties to ADIs are effective for an entire survey year, commencing each October.

The original ADI allocations were based on a 1965 county-by-county study of television circulation using the viewing data obtained by diary from approximately 250,000 television households. From these viewing data, Arbitron prepared estimates of the total viewing hours in each county for an average week, and the percentage of the estimated total viewing hours for each station for which viewing was reported.

Arbitron now updates the estimates annually, the most recent update having been computed from viewing records from the May 1985, July 1985, November 1985 and February 1986

Introduction (continued)

surveys. Based on these estimates, Arbitron made its ADI allocations for the 1986-87 Survey Year.

Once the estimated total viewing hours for a county and the percentage of such estimated total viewing hours for each station are determined, Arbitron sums the percentages by the station's market of origin. The county under consideration is allocated, for ADI purposes, to the market of origin having the largest total percentage of viewing hours (deemed to be the "dominant influence"). For further information regarding ADI assignment procedures, see separate publication provided to all local Television Market Report subscribers entitled *Description of Methodology*.

RADIO METRO SURVEY AREA (METRO)

Arbitron Radio Metro Survey Areas generally correspond to the federal government's Office of Management and Budget (OMB) definitions such as a Metropolitan Statistical Area (MSA), a Primary Metropolitan Statistical Area (PMSA), or a Consolidated Metropolitan Statistical Area (CMSA), subject to the exceptions dictated by historical industry usage and other marketing or topographic considerations.

An MSA always includes a city or cities whose population is specified as that of the central city together with the county (or counties) in which it is located. The MSA also includes contiguous or

additional counties when the economic and social relationships between the central and additional counties meet specified criteria for metropolitan character and integration. An MSA may cross state lines. Population, commuting and other data supplied by the U.S. Bureau of the Census are used to define MSAs.

The Consolidated Metropolitan Statistical Area (CMSA) is a large MSA (over one million population) which can be subdivided into areas that qualify as MSAs individually. Such subdivisions are given the designation Primary Metropolitan Statistical Area (PMSA).

In New England, the OMB metropolitan areas are frequently defined two ways because of the high population density. The more precise definitions are based on towns and are called MSAs (PMSAs or CMSAs). As an alternative, whole county definitions called New England County Metropolitan Areas (NECMAs) are also available. Arbitron uses one of the two (depending on the preference of Metro subscribers) in most New England survey areas.

If 80 percent or more of subscribing home stations licensed to the Metro of a survey area with five or more home station subscribers agree to a deviation from the MSA (PMSA, CMSA or NECMA), Arbitron may add or delete counties accordingly. If there are less than five home station subscribers licensed to the Metro, all subscribing stations must agree to any deviation from the existing MSA (PMSA, CMSA, or NECMA). All Metro definition changes are subject to final review and approval by Arbitron. For a market that does not qualify as an OMB metropolitan area, Arbitron usually defines the Metro as the county(ies) of the majority of the stations' city(ies) of

license. Metros may cross state lines. While in most instances outside New England, Radio Metros are defined in terms of whole counties, it is sometimes necessary to split counties into two or more sampling units in order to accommodate extreme variance in signal reception and/or radio listening patterns within that county. These splits are done at the zip code level, based on population estimates from the 1980 Decennial Census. Once divided, the individual segments of a county are treated as separate counties (or sampling units) for purposes of Metro Survey Area definition, sample placement and returned sample weighting. For further information regarding Metro Survey Area definitions, refer to the Arbitron Radio Market Reports *Description of Methodology*.
