## Duopolies Continue to Threaten FM Diversity

New rules of the Federal Communications Commission are now in place, solidly legitimizing radio duopolies. Duopolies are common ownerships of two or more FM stations in the same city or market. They started on Long Island, with WWHB 107.1 Hampton Bays NY rebroadcasting almost all the programming of WNEW-FM 102.7 New York—in what the industry now called an “LMA,” Local Marketing Agreement. A station which may not be doing well financially turns to another to either program it, represent it in advertising sales, or a combination of the two. Once frowned upon by a more paternalistic FCC, many LMAs have grown into full-fledged duopolies, where ownerships of two or more stations are integrated. This results in economies of scale to the licensee, but reduced employment opportunities for announcers, engineers and sales reps. Duopolies and LMAs have flourished in an environment having too many commercial stations. In mid-1993, fully 60 percent of all radio stations were said to be unprofitable.

Most months my *FMedia!* newsletter has mentioned new stations entering into duopolies or LMAs. For example, KRXY-FM 107.5 and AM Lakewood-Denver was bought for \$7 million by Jefferson Pilot Communications, owners of KYGO-FM 98.5 and AM. One reason radio stations are turning to one another for relief is the lack of bank financing. Jim Duncan, in his newsletter, mentioned that getting loans for radio station acquisitions continues to be difficult. And he does not see any great technical changes happening within the next decade, despite talk of digital audio broadcasting. “I am not sure there will be much consumer demand for DAB anyway,” he said.

All stations having a lease agreement must retain “control” over programming, maintain an office and studio in the city of license, keep a public records file of the problems and issues of the community, and have a minimum staff. This “control” includes being able to provide some original programs and/or rejecting programs offered by the leasing station. Often leased stations will continue to offer weekend religious programs or sports to fulfill contracts, or they’ll break away with their own commercials.

Last year, I mentioned the physical move-in and reallocation of stations from a small city to a larger market. WHMA-FM 100.5 Anniston AL tried but failed to persuade the FCC to allow it to move to a suburb outside Atlanta. A few modest move-ins did occur, or are about to occur, such as KCLE-FM 92.1 Hamilton TX, moving to Glen Rose, and upgrading. This will give it a better signal in or near Fort Worth.

## FM Listening Holds at High Levels—But Industry Revenues Stagnate

The dramatic growth in FM listening appears to have leveled off, with FM maintaining its 77 percent share of the audience of persons 12 years and older, according to RADAR (Radio’s All Dimension Audience Research). With new stations coming on the air, but at a slower rate of increase than was true before publication of the last “FM Atlas,” station revenues have not kept pace, prompting LMAs, duopolies, or just plain stalling. On the map pages you’ll see occasional stations marked “off the air.” These are either stations which have been off for over a year, or with longstanding construction permits that have not built. Some of those stations are in Canada, with the Canadian Broadcasting Corporation fairly strapped for funds and not able to activate all the stations for which it had approval. CJBC-FM, a new French stereo station, did come on the air; and you’ll hear it on 90.3 in the Toronto-Buffalo area.

## Beware of Supporting Public Stations Broadcasting Between 92-108 mHz: They Might Go Commercial!

Most noncommercial, educational, educational FM stations in the U.S. are found between 88 to 92 megaHertz, but a few are in the part of the band where all the commercial stations reside: 92-108 mHz. The licensees of those few face a temptation their brethren between 88-92 don't have: the opportunity to sell the station to commercial interests, since even a noncommercial station that has never sold ads has a certain "stick value" to a would-be owner. A prominent educational station going commercial is WAJC 104.5 Indianapolis. It sold for \$7 million, creating a duopoly with WFMS 95.5, and becoming "The Bear," WGRL, with a country format. WCTS 100.3 Minneapolis was silent for a few months until the new owners could get studios ready and a new format for its replacement, WBOB-FM. WBOB-FM is a country station co-owned with KQQL 107.9 Anoka-Minneapolis-St. Paul, which replaced the noncommercial, religious WCTS. WCTS received \$10 million in the sale, and in turn bought WMIN (AM) Maplewood MN for a little over \$1 million, but losing its FM stereo status. WBOB-FM's call letters are interesting. There is a WBOB AM Galax VA, and I found out that the Minneapolis WBOB-FM paid the VA broadcaster to use those call letters, but was unable to ascertain for how much.

Said a subscriber about the Indy deal: "Indianapolis got 'ripped off' with this sale and conversion of channel to commercial. FCC should never have allowed it without some *quid pro quo*. Indianapolis now has no full power educational station, and coverage of those remaining is not what it could be. Also, city is now one of most poorly served by educational broadcasting in nation for its size. TV6 is also deserving of criticism for its militancy in preventing full development of lower part of band. This is why 104.5 was important channel as noncommercial. Butler [University] did generally poor job with WAJC, so am

# WAJC

FM RADIO AT ITS FINEST

THE CLASSICAL SOUND OF THE MIDDLEWEST  
1611 S STREET AT CLARENDON ROAD • WALNUT 3-1212 • INDIANAPOLIS, INDIANA 46207

not surprised they disposed of it. Student announcers were obviously disinterested in the programming and were very sloppy describing what was being played." WAJC's outreach was better than WFYI-FM \*90.1 and WICR 88.7 for such programs as National Public Radio's *All Things Considered*.

WAJC wrote me in 1965 and said, "Our station started broadcasting in the fall of 1950 with a power of about 820 watts. We are an educational station on a commercial band but do not carry commercials. It is supported by the school. There is no paid staff. Students from the Radio and Television Department keep the station functioning. For their effort those in responsible positions receive part of their tuition."

If you are a supporter of public radio, bear in mind that if you donate to an FM station broadcasting within the 92 to 108 mHz part of the dial, there is a very real threat that the station you presently enjoy and support could turn commercial. With FM properties being as valuable as they are, I dare say virtually every noncommercial station, whether CPB-qualified (public), community, student or religious, faces the danger of being sold—so think twice before

donating to such stations! WAJC operated on a channel designated by the FCC as commercial, which is true of almost all other 92-108 mhz public outlets.

We read in the last edition how WLOL-FM 99.5 Minneapolis fetched \$12 million from Minnesota Public Radio and became \*KSJN, so trades happen in the other direction as well. Another formerly commercial station is WLTO 103.9 Harbor Springs MI. It has been gobbled up by Central Michigan University, and is now known as \*WCMW, with eight or nine employees let go. KMHT-FM 103.9 and AMarshall TX did not build; instead, it is being donated to Wiley College, owners of KBWC \*91.1. No word as to whether Wiley will run both FM stations, or drop the lower powered KBWC in favor of KMHT-FM. It could, if it wished, run KBWC noncommercially and operate KMHT-FM as a commercial station. Buena Vista College in Storm Lake IA ran commercial station KIDA 92.9 Ida Grove, but has since sold it.

### Unusual FM Station Sales Made, Not Made, Or Proposed

Group owner Infinity Broadcasting has paid, subject to FCC approval, \$110 million for KRTH 101.1 Los Angeles, from Beasley Broadcasting. Infinity already is licensee of KROQ-FM 106.7 Pasadena-Los Angeles. This eclipses the previous high price for a standalone FM, the \$40 million paid for KXEZ 100.3 Los Angeles by Viacom, which already owned KYSR 98.7 there. Los Angeles, noted for its long commutes and hours spent listening to car radios, is a natural setting for record high prices spent for FM station ownerships. Buying KRTH for \$110 million was a "good investment," said Raymond Katz, senior vice president at Lehman Brothers. KRTH generated \$22 million in ad sales in 1992. A petition to deny the sale has been filed with the FCC. Infinity is noted as the licensee of WXRK 92.3 New York, the station where the notorious Howard Stern originates. The FCC has found Stern and many of the stations carrying his show guilty of "indecentcy," and has issued fines of just over \$1 million to Infinity, as well as \$73,750 to KFBI 107.5 Pahrump-Las Vegas NV, a Stern affiliate. The NV action was because Stern's broadcasts on nine separate occasions from Nov. 10, 1992, to Jan. 13, 1993, "were replete with references to sexual and excretory activities and organs," with 19 pages of transcripts given the Commission. The transcripts were described by the FCC as "patently offensive." Los Angeles-based Americom Broadcasting, which owns KFBI, declared it will "vigorously fight" allegations of indecentcy.

The battle of indecentcy on the FMedium started during the Bush administration. Howard Stern had urged his listeners to vote Democratic in 1992. Vice President Al Gore favors regulating audio pornography, and the war against Stern and his ilk continues, with the apparent full blessing of the Clinton administration.

Not on the market is KICR \*89.7 Council Bluffs IA, which had hoped to cut its costs and sell out to another noncommercial owner. Three bids were received by the Iowa Western Community College board, but they were rejected "because none met the specifications. The bids ranged from \$100,000 to \$525,000." One option the board is considering is to use KIWR for instruction at the college; it is mainly classical music.

WNYE New York was also for sale for a while, with the expectation it would go religious. Listeners to the ethnic programming of \*91.5 have, however, so far convinced the school board not to sell. Another monophonic school board station on \*91.5 is, or was in late 1993, for sale—KSLH St. Louis. Broker Gary Stevens ran an ad in *Religious Broadcasting* magazine asking \$250,000 minimum bid, "including the broadcast license and transmission equipment. It will be necessary for the purchaser to establish new operating premises." KSLH remains

on the air. One of my radios' customers checked it out and said, "Yes, they're still on the air, playing traditional jazz, and you're right, they're strictly mono. I really don't have any interest in listening to them."

## Rape of the Public Interest: The Lack of FM-SCS Access in Radios Sold in United States

There is a certain paranoia on the part of special interest groups (including the government) which the curious radio listener has to contend with in order to pursue his or her avocation. Broadcasters would rather you listen only to local stations. They have gone so far as to persuade the FCC to effectively stop long-distance listening by means of translators, limiting translators mainly to "fill in" service in local areas, rather than extending the FM signal and program to more distant places. Other restrictions on the public's ability to tune in include or have included:

- Hostility between commercial and public broadcasting. In many places, both types of stations get along fine, but when living in Nebraska in the early '80s, I became aware of an intense hostility between the two camps. The Nebraska Broadcasters Association lobbied the unicameral legislature to keep public FM from developing statewide for some 10 years, saying that commercial stations were doing a good enough job of serving the public.

- Laws that once restrained the use of scanners and radar detectors in automobiles have largely been overturned. For the most part, you are free to use a scanner to hear anything going on over the airwaves that is not encrypted or coded—at least in the privacy of your home. Strangely, certain scanners such as the Radio Shack Pro-2006, which could easily be modified to receive cellular transmissions, 825-845 and 870-890 mhz, will have to contain circuitry making them more difficult to modify, as per a new law going into effect in April, 1994, but old scanners that cover those ranges can still be used or sold. *Communications News*, which is read by people in the telephone and point-to-point communications industries, had a letter saying, "People who monitor cellular calls have been portrayed as weird hackers with tons of mistuned special equipment. . . I accidentally tuned in cellular calls on my Sony television set. Near channel 82 a pattern of dots appeared on the screen and the FM audio turned out to be private phone conversations. . ." The editor said: "Cellular conversations are about as private as the surf at Waikiki Beach on a sunny Sunday. Yes, a TV will pick up the signals—but it's really more fun to get a Bearcat or Radio Shack scanner for cellular eavesdropping and keep the TV tuned to a Penn State football game."

- Covenants in certain neighborhoods forbidding an outdoor antenna. While most municipal laws against home satellite dishes have been discarded, there remains a legitimate concern by home and condo owners that their rights to tune in other than the most local stations are being abridged by their neighborhood peers. One "FM Atlas" reader purposely bought a house in a Chicago suburb where reception of non local FM stations was good, and where outside antennas were allowed.

- Listening to FM subcarrier transmissions or as I call them, FM/SCS for "subsidiary communications services" can be a "crime" unless you are an "authorized user." Australia has an even less glamorous name for subcarrier radio, "Ancillary Broadcast Services," with the BBC World Service on stations in Melbourne and other cities at 92 kHz. You, dear listener residing in the United States, are not to tune in, or even attempt to tune in, multiplexed transmissions which are not "readily available" to the public. Multiplex transmissions include FM stereo, color television and FM-SCS. Which are "readily available" to tune in

I am not about to decide, but with upwards of two million FM-SCS sets in use by the public, one could conclude that SCS listening, like FM stereo listening or color TV viewing, is a "readily available" technology, except that you cannot ordinarily go to your corner store to buy a subcarrier-equipped FM radio.

Denial of such easy access to SCS by the public is a national disgrace. Were more people able to buy SCS radios, there would be even more diversity of service available to minorities, the handicapped and special interest groups. Instead, most such people have to "pirate," and do the unthinkable—resorting to ownership of a radio that is not "assigned" them to listen to by some agency.

We are not living in Communist Albania, but you might think we are when one considers the irrational policies of government to try to deny public access to as an important medium of communication as FM-SCS radio. By taking the shackles off SCS, more use of this energy-efficient medium of communication could take place. Instead of only a small percentage of the FM stations offering such things as background music, foreign language programming, reading to the blind and religion, more stations could do so, and thereby turn a greater profit, or offer a meritorious service to the public. For interests wanting privacy, let them encrypt, but I reissue my plea that programs in clear voice or music should be freely receivable by the public on the hitherto unexploited medium which is FM/SCS radio. Indeed, it is a rape of the public interest that *any* FM radio is sold without SCS receiving capability!

The "FM Atlas" lists stations known to have an FM subcarrier. See the stations listed throughout the Station Directory, Part I, by geography, all following the † symbol, and look at p. 8 for what the letter codes stand for. Indeed, this listing of stations having an SCS, or not having one, makes this book unique among broadcast references. Data for this section comes from individual monitors and hobbyists, broadcasters and SCS equipment suppliers. *FMedia!* newsletter continues to be a source of news on late-breaking FM-SCS station developments.

If the public had greater access to FM-SCS, it's possible the growth of duopolies, especially in public FM, might be slowed. Instead of having a classical service in stereo and a separate FM station with monophonic news-information in the same city, the latter could reside on an SCS. This could reduce clutter along the FM dial, but would come at a cost, which is that FM-SCS only has 10 percent of the effective power of the main channel, and its reception is affected by multipath, more so than is FM stereo. It can also suffer from crosstalk from the main station, and if not engineered well, can generate some crosstalk into the main station's stereo. With modern transmission equipment, the danger of an SCS affecting the main channel is very minimal.

### **FMedia! Newsletter a Must for Updating the "FM Atlas"**

A companion publication to this book is the monthly *FMedia!* newsletter, which contains late-breaking FM station and industry news. It generally runs eight pages a month, full of official and unofficial FM radio news—much of it contributed by "FM Atlas" readers. In it, you'll read of call letters' changes, format changes, station embracing stereo, nonIDs, multi-city IDs, translator and SCS developments. It reports on FM industry developments, such as DAB (Digital Audio Broadcasting), has information on FM DX listening, and includes the controversial "AM Happenings Most Likely

The logo for FMedia! features the word "FMedia!" in a bold, italicized, sans-serif font. The letters are white with a thick black outline, set against a solid black rectangular background.

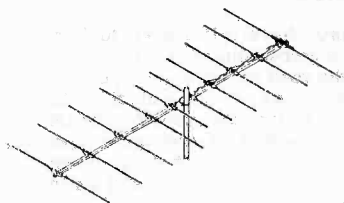

The FM radio newsletter

Caused by FM." Many months include a look at "FM As it Was—or Might Have Been," as well as "FM ForuM—Contributions From Readers." Contact me about subscribing information, or use the coupon on the back page.

## FM: Far More in Reception If You Do it Right

In spite of the increasing crowding of the FM dial by new stations, it is still possible to improve your reception range and search out new stations and unique formats. This is best done if you can install an outdoor high-gain antenna (one made specifically for the FM band of 88 to 108 mhz, and not a combination TV-FM antenna), and which can be rotated in various directions. It is best to aim your antenna **away** from your strong local stations to minimize overloading of the receiver, and to try to pull in stations from other area cities.

The best antenna is a yagi or log-periodic similar to the picture. If interference from strong local stations continues to be a problem you can cut down on that by using a "trap" or an attenuator in series with the lead going into your tuner. I have just learned how to phase FM signals, using a special phase box, along with two rotatable FM antennas on separate towers. This enables tuning in a more distant station on the same frequency as a semi-local station. Other modifications many FM DX listeners do is to increase FM selectivity by replacing the original ceramic filter(s) in a radio or tuner with 110 or 150 kHz types.

Mobile FM reception has been aided in recent years by digital readout, rather than your having to tune an analog dial. Thus, you can easily tune in stations shown in the "FM Atlas" by their exact frequencies. Some stations will be imprecise in giving their frequency, such as saying "FM 98," when a glance at this book might tell, for example, that the station is at 97.7. A few stereo boomboxes sport digital readouts and station presets, as well as most FM tuners and receivers. However, digital tuning has all but vanished from portable FM-AM radios and walkmen-type sets. It is possible, even with digitally tuned radios, to improve their selectivity, although sometimes at the expense of slightly reduced sensitivity, or off-tuning from what is shown on the digital display. Nevertheless, the better FM car radios are much more sensitive and resistant to strong station overload in metro areas than were their predecessors of a few years ago.

## New FMaps Added, Helping to Reduce "FM Atlas" Clutter

As with previous editions, the first task in producing a new "FM Atlas" is to see which maps need improving. Mexico was remapped, including the listing by Mexican states; already that map looks cluttered! Texas was the first U. S. state to get remapped, this time spreading out over six pages, and California was also given new map coverage (except for the east and south portions). I then remapped WI, FL, ID, MT and WY, while in anger I destroyed the left half of the AZ map and later re-did it. Old maps become very difficult to work with, when wielding an X-Acto knife and applying correction tapes. It is easy to make holes in the map, and then difficult to type over bumpy surfaces that have been pasted up. Some day, perhaps, the maps will be computerized like the Station Directories are! I want to thank my daughter, Karin, 18, for working on many of the maps before leaving for college in Lincoln NE in August, 1993.

Thanks to all of you who have contributed station news from your areas, or from where you have traveled. Without this input from readers this book would not be as complete and accurate as it is. Good reading and good listening!

# KEY TO SYMBOLS

- d A station with a directional antenna, listed after height, by-frequency section
- h A station transmitting with a horizontal-only signal
- t An FM translator or on-channel FM booster
- v A station transmitting with a vertical-only signal (receiving antenna should be mounted vertically). Stations without a "v" or "h" in the by-frequency part of the book have both polarizations, or circular polarization, with v and h powers the same unless shown otherwise
- \* A noncommercial station, usually educational, "public," or religious
- \$ A station broadcasting all or part of its weekly schedule in multiplex stereo
- † A station with a Subsidiary Communications Service (SCS, SCA, or in Canada, SCMO). If parentheses (), it is at 57 kHz, if by itself at 67 kHz, and if following a comma: † , at 92 kHz.
- § A station sharing time with a nearby station on the same channel; shown on maps only
- A station with its antenna below the average surrounding terrain

**Program [music] codes** (given in Part I of the Station Directory after city): b beautiful/easy listening, c classical/"Fine Arts," e ethnic, f folk music, g gospel and religious, j jazz, k country (including polkas), l Latin/Spanish, m middle of the road music, n news, o rock oldies (stations having this format exclusively), p progressive rock, r rock including top hits, s soul/rhythm and blues ("urban"), t talk. Up to two letters are used to indicate stations having two distinct types of music, or intermixing records of two main types (such as "op" for "classic rock"). **Language codes** (given just to the left of the program codes in Part I of the Station Directory): E English (for stations in Quebec and Latin America), F French, P Portuguese, S Spanish.

**SCS symbols** (following † in Part I of the Station Directory): A ABC network relay, B relays of networks other than ABC, C relays of AM, FM stations, cable audio, or campus carrier current stations; E ethnic or foreign language, F farm or financial (voice), G gospel and religious, M music (easy listening), P paging (voice; occasional audio preceded by a tone), R music (foreground, usually rock), S sports and special events (occasional audio), T talk (usually talking book for the blind, but may include instructional programs), U tones, telemetry chirps or warbles—used for transmitter control—listed only if on a majority of the time; V WWV National Bureau of Standards time, W weather (such as relaying a nearby NOAA weather station), X medium speed data, miscellaneous data, Z high speed frequency shift data, or extremely high speed non-frequency shift data, () indicates 57 kHz SCS, Radio Broadcast Data Systems and/or Cue Paging. Stations with only an open carrier SCS are not listed.

## Part I: Geographical Directory Example

	St. Pierre and Miquelon . . . . .	109

Maps of the United States are arranged in a geographical order from east to west, and Canada from west to east. Selected stations in bordering states or countries are shown on individual maps. Stations sharing time with another station, or those scheduled to change frequency, are shown on the maps, with both the new and old frequencies given. Minor, ten-watt educational FM stations and FM translators and boosters with less than 100 watts are shown in reduced size.

For technical, stereo, SCS and programming data on the various stations, consult the Station Directories, immediately following the FMaps. "NonID" and station multiple-city identifications are listed in the Station Directory by frequency, starting on p. 158.

# NEW JERSEY NEW YORK

[Southeast portion—remainder of New York is on preceding plate]

Showing transmitter locations for stations licensed to New York City and for other stations whose transmitters are outside their cities of license. This map should be useful to FM Atlas readers in the New York area who would like to aim their antennas for optimum reception.

(directional away from New York City and Fairfield CT)

## New York City's FM Dial

Stations serving all or parts of New York City with a primary (or strong secondary) signal:

107.5	WBLS	New York NY	50	Empire State Building
107.9	WEBE	Westport CT	47	Bridgeport CT

Note regarding below list:  
Most stations on the Empire State Building now transmit from the new master antenna at 415 meters above average terrain, while a few other stations maintain their own antennae at a slightly lower height.

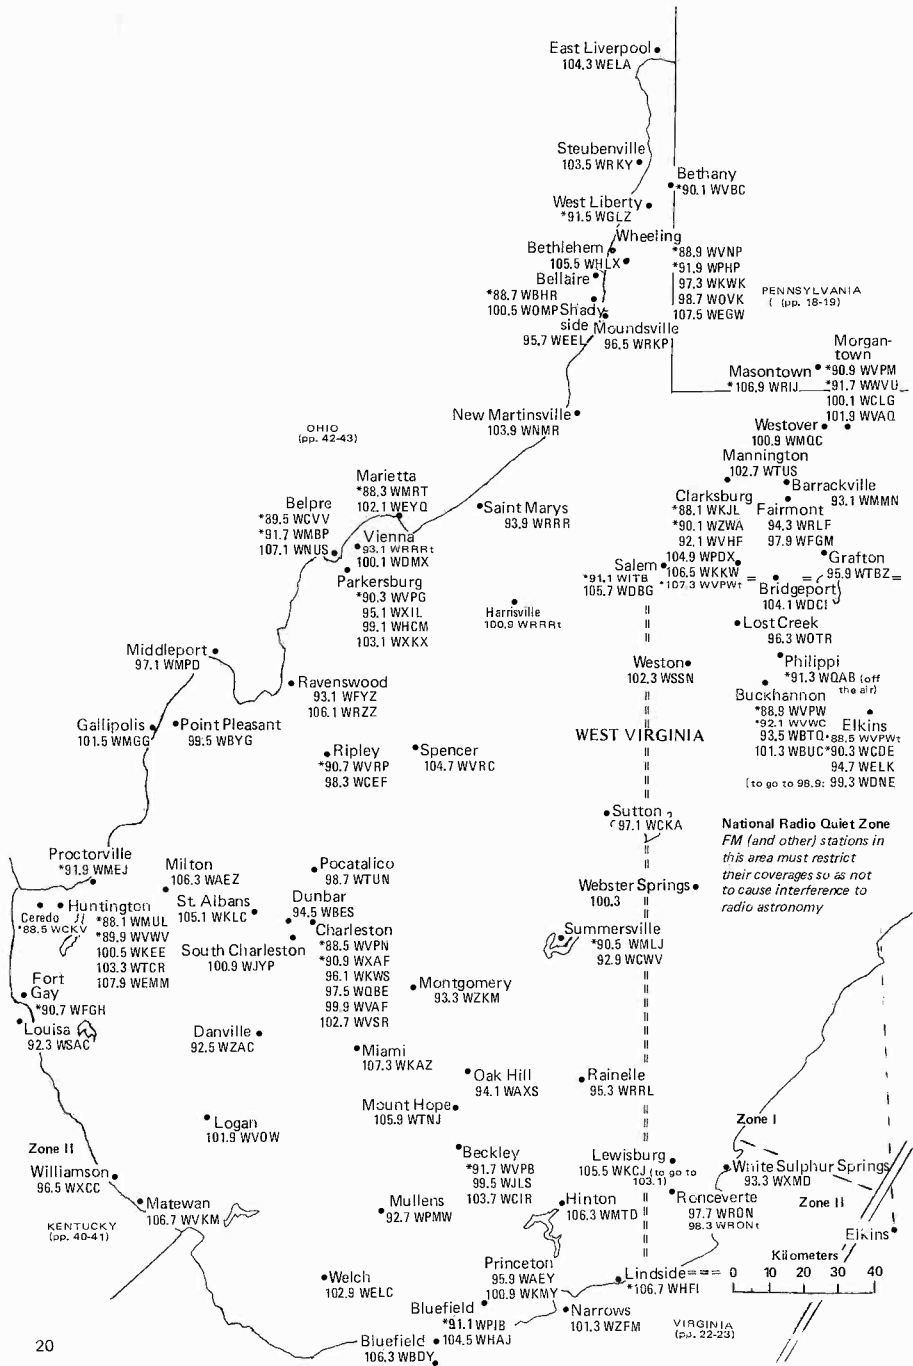

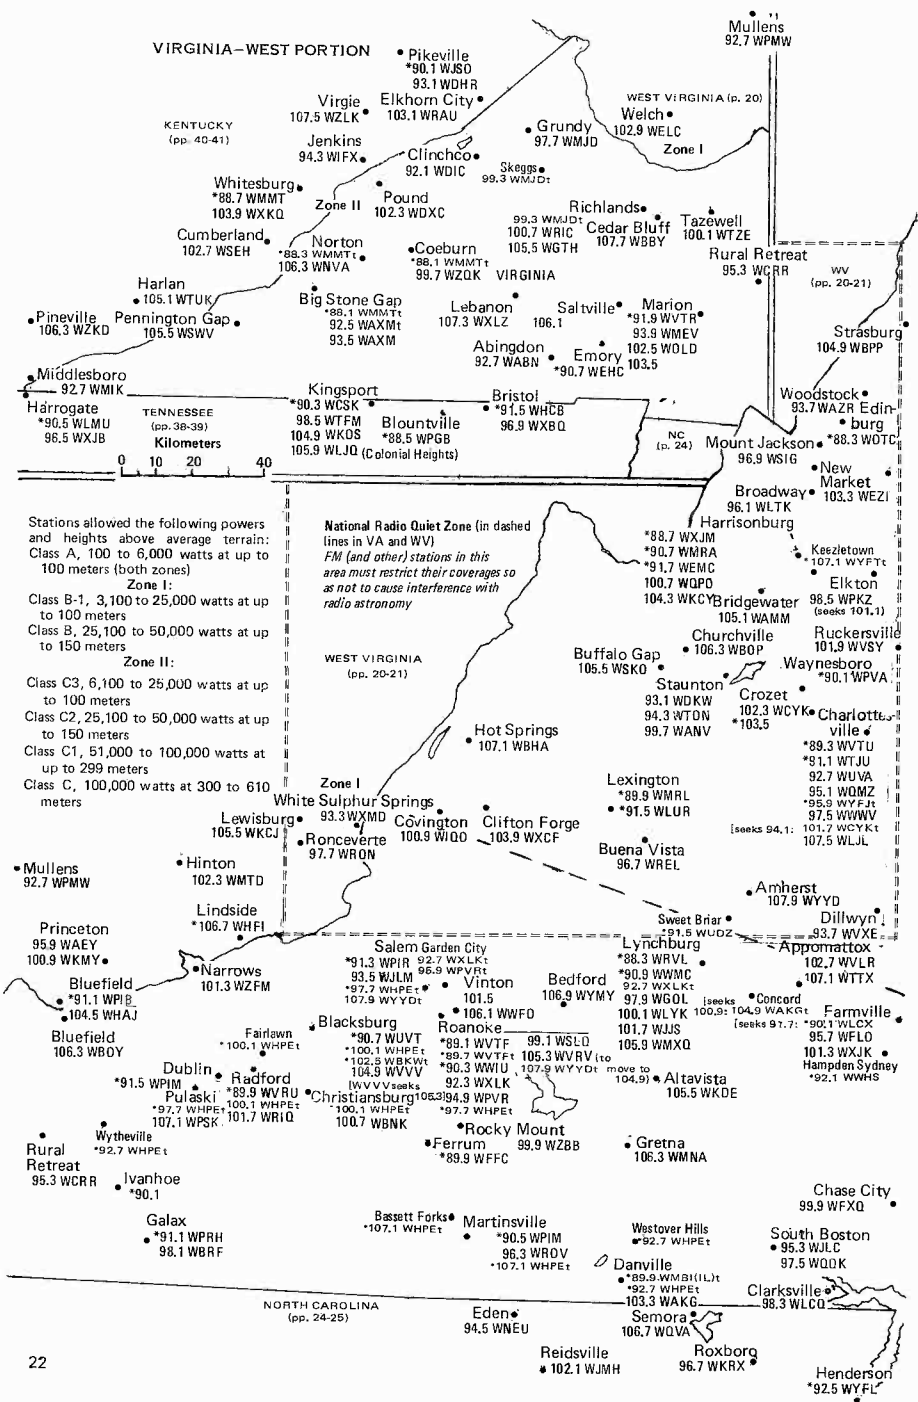

Eastern Time Zone/Daylight Saving Time observed

# PENNSYLVANIA

VIRGINIA—WEST PORTION

KENTUCKY  
(pp. 40-41)

TENNESSEE  
(pp. 38-39)

WEST VIRGINIA  
(pp. 20-21)

NORTH CAROLINA  
(pp. 24-25)

Stations allowed the following powers and heights above average terrain:  
 Class A, 100 to 6,000 watts at up to 100 meters (both zones)  
**Zone I:**  
 Class B-1, 3,100 to 25,000 watts at up to 100 meters  
 Class B, 25,100 to 50,000 watts at up to 150 meters  
**Zone II:**  
 Class C3, 6,100 to 25,000 watts at up to 100 meters  
 Class C2, 25,100 to 50,000 watts at up to 150 meters  
 Class C1, 51,000 to 100,000 watts at up to 299 meters  
 Class C, 100,000 watts at 300 to 610 meters

National Radio Quiet Zone (in dashed lines in VA and WV)  
 FM (and other) stations in this area must restrict their coverages so as not to cause interference with radio astronomy

# CANADA

Canada Coverage Note: Coverages are indicated only for stations where we know the effective antenna height above average terrain. Many stations come on the air or move their towers without an announcement of their antenna heights. You can check the powers of virtually all Canada stations in Part II of the Station Directory.

## MEXICO

Map pp. 110-111

*Mexico Coverage Note: Coverages in kilometers are calculated for stations where antenna heights above average terrain are known; otherwise, only the effective radiated powers in watts are given. \$ is stereo; h=horizontal effective radiated power in watts; v=vertical effective radiated power in watts; heights given are in meters above average terrain; (da) means a station transmits with a directional antenna. SCServices (†) follow the stations' music formats.*

## FM Translators

*Translators operate on a different frequency from the primary station, helping give FM service where distance or terrain make direct reception difficult. Translators are limited to 250 watts or less; those east of the Mississippi can serve up to an 8 km radius (at 32 m maximum), while those west of that river can serve 13 km (at 107 m). Some translators have as little as one or 10 watts, however. FM boosters operate on the same frequency as the primary station, with up to 20 percent of the power of the primary station. In the list which follows, city, frequency and call number of the translator are followed by call letters and frequency of the primary. Boosters are identified by call letters of the primary followed by a numeral (such as KMYX-1). Radiated powers of booster stations are given. Only translators and boosters in the United States are listed here.*

**STATION DIRECTORY**

Part II: FM Stations Listed by Frequency, United States and Canada (excluding U. S. territories). Stations identifying with more than one city are listed, as well as those using a short phrase ("nonID") in lieu of call letters during much of a typical hour's programming. Selected station logos ("FMiscellany") are included on a space available basis. See Key to Symbols, page 8.

This edition printed by McNaughton & Gunn, Saline MI, printers also of the 9th edition, 1984, and the 13th edition, 1990. Don't blame them if you find it hard to read these last few pages. Next edition I'll hope to have space for station logos and avoid reducing the type size. We're all getting older and it's hard to read the print when it keeps getting smaller! See you when the 16th edition comes out!

[Send this to "FM Atlas," Adolph MN 55701-0024, U.S.A., or copy it.]

Notify me when the 16th edition FM Atlas is available. Also,  send your radio and electronics catalog.

enclosed is \$3 for a sample copy of the monthly *FMedia* newsletter along with subscribing information.

## Other Selected Radio Station References

"FM Atlas" readers occasionally ask who publishes an AM Atlas, a TV list or other specialized information. Here's a selected bibliography.

*Broadcasting & Cable Yearbook 1994*, at \$169.95 cover price, the "bible" of the industry with its programming, technical and personnel data for AM-FM-TV stations. Lists consultants, engineers, attorneys, FCC addresses, about 1000 pages. Scheduled for publication March '94 by R. R. Bowker Co., P. O. Box 31, New Providence NJ 07974-9903; call (800) 521-8110 to find out about any prepublication discounts.

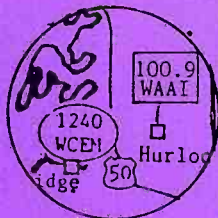

*M Street Radio Directory*, 1994 edition, just out in September, 1993, it's the newest reference book to be printed close to this edition's deadline. Its 732 pages of FM (and AM) station addresses and 'phone numbers are complete with format information, an alphabetical listing by station call letters, a "1993 FCC Overview" and more. \$32.95 from M Street Corporation, 304 Park Ave. S., Floor 7, New York NY 10010.

National Technical Information Service, U. S. Department of Commerce, Springfield VA 22161; (703) 487-4650. Ask for PR-718-1CAU (FCC lists on microfiche). The latest FCC listing cost me \$25 for a set of microfiche cards of FM stations arranged by geography; for the same price you can get the stations listed by frequency. NTIS lists FM stations and translators, giving antenna heights above average terrain, effective radiated powers, directional antenna data and geographical coordinates. It includes FM station applications and rulemaking petitions.

*NRC AM Log*, 1993, shows daytime/nighttime powers and if a station has a directional antenna, \$19.95 postpaid in the U.S.. Also available from the National Radio Club—a product catalog for \$1, listing additional publications—P. O. Box 164, Mannsville NY 13661-0164.

*The Traveler's Country Music Radio Atlas*, 1993 ed., has maps by states listing "FM High Power," "AM High Power," "FM Low Power," etc. Its maps offer something many "FM Atlas" readers wish this book had—highways! Interstate and major U.S. highways are shown. It has some interesting "Radio Trivia," and is \$6.20 with postage; discounts available in quantity. A real value and highly recommended! From Hanalei Publishing Co., Dept. FMA, P. O. Box 369, Port Huneme CA 93044-0369.

If you know of other directories which should be mentioned in the next edition of the "FM Atlas," send a postcard, giving information like shown above, and your opinion of the reference.
