HORIZONTAL OUTPUT TRANSFORMERS

FLYBACKS

All Horizontal Output Transformers manufactured by Merit are designed as exact replacements for use in a specific TV receiver. However, many of them are also replacements in other TV receivers with slight modifications. When the transformer is specified as a replacement in other than an exact, simple footnotes are added to the Merit replacement part number. This footnote list can be found at the end of the replacement number section.

NOTE: Pages 5 through 27 show listings, photos, schematics, inductance and resistance values of each horizontal output transformer manufactured by Merit.

DEFLECTION YOKES

Merit manufactures a complete line of Deflection Yokes ranging in deflection angles of 50° to 114°. All yokes are designed as exact replacements for specific TV receivers. Some units can be used as a universal yoke in many TV receivers with slight changes in the standard networks or circuit change as indicated in footnotes in the replacement number section.

The physical and electrical characteristics of a Merit exact replacement deflection yoke is identical to the original manufacturer's product. Merit continues to use polyethylene insulating material between the Horizontal and Vertical Coils as it has been field tested through the years of use which has proved this type of insulation provides maximum voltage safety and deflection sensitivity.

Merit has long had an excellent record of producing transformers of all types that are completely reliable as exact replacements in radio or television receivers.

The following pages list power transformers in their order of voltage rating. All units have been conservatively designed to meet the requirements of underwriters laboratories.

Merit is continually striving to improve its products through the use of better insulating materials, impregnating compounds and production methods to provide a still better product at lower cost.

It is felt that the following Power Transformers listed in this portion of the catalog will completely cover the requirements of the distributors of transformers for all types of electronic equipment.

TRANSISTOR POWER TRANSFORMERS

Transistor power supplies replace Dynamotors and Vibrators wherever a DC voltage change is required. Typical use is in mobile and marine radio receivers and transmitters. They have very high efficiency and long reliable life. The absence of mechanical moving parts contributes to superior performance in every respect.

AUDIO TRANSFORMERS

Audio Transformers produced by Merit have long been the leaders in this type of transformer. Being constantly on the alert to incorporate new materials and production methods has placed Merit in a position that cannot be other than first place.

All materials used in the construction of transformers at Merit are completely acid free and impervious to corrosion. Merit, using the most modern method of vacuum impregnating their transformers, provides a unit that is completely free of possible failure due to insulation breakdown and a transformer that will continue to function faithfully for the life of the equipment in which it is installed.

The following pages of Audio Transformers list every type of transformer commonly used in all electronic equipment.

RF-IF TRANSFORMERS AND COILS

The following pages listing RF-IF Transformers and coils manufactured by Merit are units that cover a wide variety of coils for use in replacement in radio and television receivers. All coils are precision built to the most exacting specifications. All coils that are tunable are set at the frequency it is intended to operate. All coils that are 'fixed' or manufactured to a specific value, are held within very close tolerance. Schematic drawings are provided for ease of identification of part function.

Wave Traps

These capacity tuned units are designed to reject interference caused by amateur radio, diathermy, X-ray, and mobile radio or FM transmission equipment.

TOROIDS

Merit Toroid Coils incorporate the use of powdered nickel alloy which provides a High Q Coil for minimum size. The coils have high stability with temperature and extremely resistant to shock.

The stock Toroid Inductors listed here are held to $\pm 2\%$ of inductance specified.

Merit Type 'EN' series are supplied with rugged solder terminals and are encapsulated with an epoxy material to meet most mechanical and thermal shock requirements.

Merit Type 'MO' series are supplied in a molded epoxy case which will meet all test requirements for shock and extreme temperatures. Wrap-around stud terminals are provided for lead attachment. Will meet MIL-T-27A tests.

NOTE: We invite your inquiries for price and delivery quotations for Toroid Coils (Inductors or Transformers) that can be manufactured to your exact specifications.
