NAB2003 Exhibit Guide

30th
Anniversary
Mix With the Best
PM Consoles since 1972
Digital Consoles since 1987

Thirty Something.

For thirty years Yamaha has been producing PM class analog consoles.

We've sold more large format analog consoles than all our competitors combined. There's a reason.

We invented the affordable digital mixer business. We've been refining it for over 15 years. With over 100,000 Yamaha digital consoles sold worldwide no competitor even comes close. There's a reason why.

Come see the latest addition to our analog legacy — the PM5000
and our innovative new digital mixer the DM1000.

With Age Comes Wisdom.

World Radio History

WELCOME TO NAB 2003

Those who attend the National Association of Broadcasters (NAB) spring convention for the first time quickly discover that it is the best investment they can make to improve their business. Nowhere can you find a more comprehensive showcase of broadcast, multimedia and digital video products. This year, new products are everywhere. In the next few days, thousands of state-of-the-art offerings will be introduced for the very first time. Whether you need one specific product, or you are outfitting an entire facility, you'll find it at NAB2003.

As NAB regulars know, it's not just about exhibits. This show offers you a fantastic selection of educational sessions on every facet of telecommunications. The biggest names in broadcasting, cable, Internet and video production are here for this show. You will not only hear from top industry CEOs and entrepreneurs - but from those who make the laws that impact your business - members of Congress, FCC commissioners and other key government officials.

The NAB spring convention is just one of the offerings the National Association of Broadcasters provides our members. If you are not a member, you're missing out on many services and products that can help you run your business. Just ask one of the NAB staff, identified by their silver and black name badges, to direct you to the NAB Zone, where you can learn what being an NAB member could mean to your future.

Now get out there, and start to enjoy the show

Eddie Fritts

NAB President & CEO

David Kennedy

Chair of the NAB Joint Board

Official Show Policies

Location

This year, NAB2003 – The World's Largest Electronic Media Show – will be held at the Las Vegas Convention Center (LVCC). All sessions, exhibits, and events are at the LVCC unless otherwise noted.

Video Taping

Audio and video recording of the convention without NAB permission is prohibited. Permits are available in the following locations:

Exhibitors – Show Management Office, C201

Journalists – Newsroom, N259

Other Attendees – NAB Information Centers, Lobby locations

Your convention attendance authorizes NAB, its contractors, licensees and assignees to make recordings and reproduce, distribute for sale or otherwise, make derivative works, transmit, display and publicly perform recordings, transcriptions and derivative works in any medium containing your image and/or statements made at the convention.

Registration Age Requirement

You must be 16 or older to register for the NAB2003 conferences and exhibits. No one under the age of 16 is permitted in the exhibit halls or sessions.

No Smoking Policy

Smoking is not permitted in the LVCC. Please observe the NO SMOKING signs posted throughout the convention center.

Signs/Other Solicitation

Only authorized convention and show management signs are permitted. All other signs, posters, etc. will be discarded. Distribution of unauthorized leaflets, pamphlets or other materials in any facility or official convention hotel is strictly prohibited.

Security Procedures

Photo ID is required for on-site badge pickup. Group badge pickup is not permitted on-site. Attendees cannot pick up badges for colleagues.

Registration & Fees

Attendee Registration Location

For assistance, please go to the Main Registration area in the Central Hall. Pre-registrant pickup is also available at the East Entrance of the South Hall.

Hours:

Friday 1:00pm-5:00pm
(Main Registration Only)

Saturday - Wednesday 7:30am - 6:00pm

Thursday 7:30am - 2:00pm
(Main Registration Only)

Registration Categories

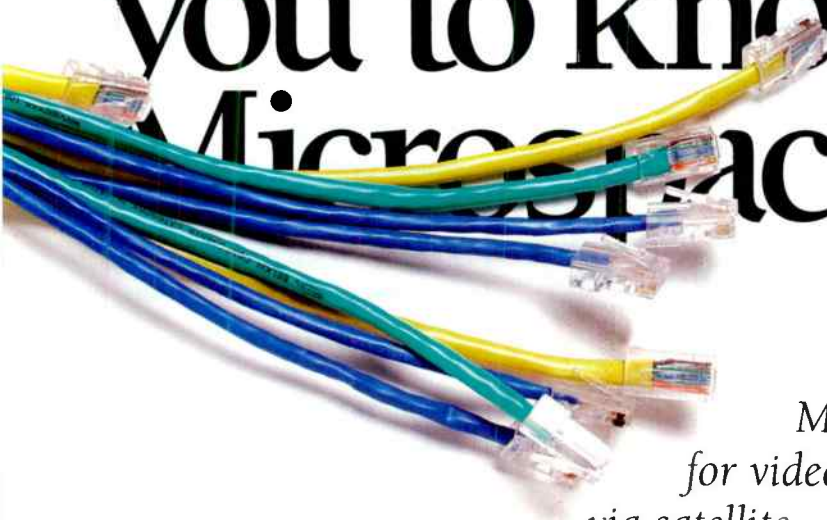

Full Conference – includes access to all conference sessions (except the Seminar Packages which must be purchased separately), the Radio-Television News Directors Association (RTNDA) conference, super sessions, exhibits and one luncheon ticket. Spouse registration (available only if not involved in the industry) includes the same benefits and must be accompanied by a Full Conference registration.

RTNDA@NAB – includes access to all RTNDA and NAB conference sessions (except NAB Seminar Packages which must be purchased separately), super sessions, exhibits, the Paul White Award Reception and Dinner, the RTNDA luncheon and one ticket to either the NAB Radio or TV luncheon.

Seminar Packages – include seminar only and access to all exhibits. Seminar packages are available for the Digital Video Production Workshop or the Digital Cinema Summit. Full Conference registrants must purchase these packages separately. Seminar Packages do NOT include a luncheon ticket or access to any other sessions.

Exhibits-Only – includes only admission to all exhibits. Luncheon tickets may be purchased separately. A \$20 processing fee will be applied to all on-site Guest Pass registrations.

Savings up to 98%? No wonder the big telcos don't want you to know about Microspace.

*They can't compete with
Microspace's VELOCITY® service
for video, audio, and data broadcasting
via satellite – can't beat the reliability, either.*

The nation's telcos have a terrible secret: Microspace satellite service is every bit as reliable as landlines, yet costs you up to 98% less.

They hope you never find out we serve more than 300,000 sites and operate the world's largest business satellite broadcasting network.

And, they can't compete with us for easy implementation and scalability. We can add new locations for you in a matter of days – not weeks or months – with the simplicity of dealing with one vendor.

But why worry about what the telcos can't do? Go ahead and call (919) 850-4500 or visit www.microspace.com right now. Discover what Microspace can do for you.

What's stopping you?

Come see us at Booth #1648

Microspace Communications Corporation, 3100 Highwoods Blvd., Raleigh, NC 27604 • (919) 850-4500 • www.microspace.com

Luncheon Tickets

All Full Conference registrants receive one complimentary luncheon ticket with their registration. Only registered attendees may purchase additional luncheon tickets. Tickets can be purchased for \$55 each at Main Registration in the Central Hall.

Bill Cosby Ticket Exchange

The Ticket Exchange counter for the NAB Opening Celebration featuring Bill Cosby is located at Customer Service, Main Registration in the Central Hall. **Ticket vouchers can be exchanged ONLY at this location.**

Lost Badges

Lost badges can be replaced at Main Registration in the Central Hall. Replacement fee for badges is \$50.

Super Sessions

These high-caliber, high-level sessions feature industry visionaries who provide their own unique viewpoints, insights and expertise into a broad range of topics – from the latest in Internet broadcasting to digital video production, just to name a few. Super Sessions are open to all Full Conference Registrants only.

News Media Services

Media Badge Pick-up

Newsroom: N259

Interactive choice is good

When it comes to interactive TV, no one gives you choices like NDS. Whether it's voting, home shopping, games, secure transactions or designing EPGs, NDS has created many award winning Value@TV interactive applications. That's why companies like DIRECTV Latin America, QVC,

MTV, Nickelodeon, Reuters, Discovery, CCTV and BSKyB choose NDS. From concept to design and integration, NDS knows iTV. We'll even give you tools to create your own applications in house. When someone gives you a choice - make the right one!

▶ See NDS iTV excellence for yourself at the NAB Interactive Pavilion and in South Hall Meeting Room S-213. Or call us at 949-725-2653 for an appointment.

Featured Exhibit Areas

Interactive Living Pavilion- South Hall

The NAB Interactive Living Pavilion will deliver the premier companies in the areas of Interactive Television, Video On Demand Technologies, T-Commerce, Programming and more.

Presented by

BROADCASTING & CABLE

and Hosted by

World Radio History

SAN Pavillion Featuring Network Storage and Security - Central Hall Booth C4162

This exciting new pavilion will feature data storage and security experts involved in data backup, storage management, SAN, NAS, IP, and Virtual Private Networks. Participants include: Hitachi Data Systems, Isilon Systems, Legato Systems, Sony Electronics, Z-force and more.

Digital Media Theater - South Hall

Stay connected with the latest developments in digital media. Learn what's new in live broadcasting and video on-demand, hosting and playback quality. Theater guides containing a detailed schedule are available in bins in the South Hall.

Sponsored by

Mobile Media Exhibits - Walkway between Central & South Halls

This year, remote broadcast technologies for news, sports, television and radio move outside on the walkway between Central and South Halls. Mobile satellite uplink technologies, power generators for backup and protection and large-scale video projection equipment are just a few of the technologies you'll find.

RTNDA@NAB Exhibits - Las Vegas Hilton

Technologies specifically geared toward radio and television news directors will be on display in the Las Vegas Hilton Pavilion.

International Pavilions

Korean Pavillion - SL2864

UK/US Partner Pavillion - SU6234

Italian Pavillion - N1410

The "Punto Italia" hosts a number of Italian companies - leaders in the fields of satellite telecommunications, broadband technologies, data broadcasting, video and audio entertainment, streaming, webcasting and wireless technologies. The Pavilion also hosts representatives of the SAT Expo, the Digital and Satellite Telecommunication Exhibition held yearly in Italy. Punto Italia is sponsored by the Italian Trade Commission (ICE) with the intent of promoting and facilitating international commerce.

Attn: Anton Bauer Users

The Azden 1000URX-AB UHF receiver is a 1000URX receiver pre-assembled into the Anton Bauer "Gold Mount" for easy and secure mounting to your camera. Designed to perform at broadcast-quality levels, this true diversity receiver with 2 complete front-ends, has 121 user-selectable UHF channels in the 723-735MHz range. For complete features and specifications visit our website: www.azden.com.

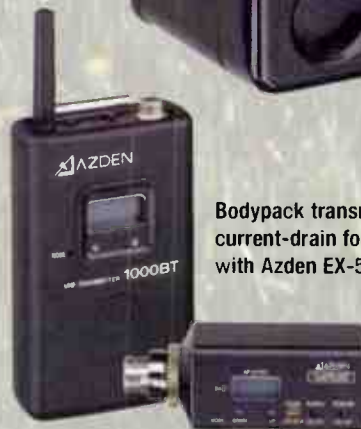

Here's what Buck McNeely, of the TV Show "THE OUTDOORSMAN WITH BUCK MCNEELY" has to say about the 1000:

"My choice of wireless microphones is the AZDEN 1000 series. I can mount up to 2 receivers in line between the camera body and the battery on the gold mount adapter and it's powered by the attached battery with little noticeable extra drain. We have hundreds of channel options and appreciate the clear reception and range these Azden units deliver."

 **AZDEN**[®]

P.O. Box 10, Franklin Square, NY 11010

Automated Responses Interactive (ARI), uses computers in place of costly personnel to answer the call for you. And that call can come over the phone or from the web. ARI combines the telephone and web with the endless capabilities of interactive voice response (IVR) for a powerful yet cost-effective way to collect and deliver information. The ARI system uses the two most common and accessible communication tools in the world - the telephone and the web. ARI has over 18 years of experience in interactive voice response, computer telephony and work flow process automation. Everyone at ARI is devoted to the planning and deployment of your project. We do what it takes to get the job done on schedule and within your budget. Using our 24/7 customer service or with do-it-yourself web service there is no longer a wait to make changes that need immediate attention. ARI has been helping businesses automate existing work flow processes for over 18 years. ARI has created products combining the telephone, web, and automated voice response computers for a powerful and cost-effective way to collect and deliver information. ARI's customers are all sizes. No business is too large or too small. Let ARI's exclusive product line expand revenue and lower costs for your business.

Artbeats, the industry leader of royalty free stock footage for broadcast, desktop video, and multimedia, will display over 40 new fresh and exciting, high quality collections produced since NAB 2002! This dramatic increase is due in part to customer requests and a dedicated staff whose goal is to deliver the best royalty free stock footage in the business. In addition to being royalty free, the Artbeats Digital Film Library is further enhanced over traditional stock footage by their extra touches that include: frame by frame cleaning and color correcting (if needed), and where applicable: creating flawless seamlessly looping clips, making hand-tuned mattes for keying, or putting together exciting transitions. Not only is Artbeats the leading provider of royalty free stock footage in D1 resolution, they are the leading provider of royalty free stock footage in Hi-Def. Artbeats produced their first Hi-Def collection in 1998. Now with over 30 Hi-Def collections in their library, Artbeats continues to be the best choice for royalty free content. The Artbeats library contains over 3000 royalty free stock footage clips in Hi-Def, NTSC, and PAL sizes. Artbeats NTSC and PAL resolution clips are also available for download from the Artbeats web site. For more information about Artbeats and to receive a free D1 resolution clip for download and a catalog CD, register online at www.artbeats.com. Or, feel free to call one of our knowledgeable sales representatives who will be pleased to help make Artbeats' royalty free stock footage an affordable solution for your design needs.

Axcera is a premier provider of RF transmission equipment and systems for the television broadcast and broadband wireless/MMDS industries around the world. Founded in 1982, the company was formed as ITS Corporation and quickly became a leader in the broadcast industry, earning its reputation as a high quality manufacturer

with the focus on meeting customers' needs. Today, Axcera provides the most comprehensive line of television transmitter systems available from any manufacturer, as well as complete broadband wireless/MMDS solutions, including system planning, design and integration services. Axcera broadcast products include a full line of low, medium, and high-power television transmitters and exciter retrofits for both NTSC and DTV broadcasting. These products are designed and manufactured at our facility just south of Pittsburgh, Pennsylvania using precision surface-mount technology. At NAB, as the leader in DTV booster technology and the only manufacturer to implement an operational distributed transmitter (DX) network, we will demonstrate this advanced DTV signal distribution method which allows the use of multiple on-channel DTV transmitters in place of a single high power transmitter. We will also demonstrate many other products and technologies at the show, including: - Visionary DT - the most full-featured and best-engineered IOT-based DTV transmitter available. - Innovator DT - one of the most advanced and versatile transmitters available today with broadband amplifiers that cover the entire operating band with no tuning. - DT Gateway - low power DTV transmitter system designed for easy future upgrade to a Visionary DT high power IOT transmitter.

AZCAR is a full service consulting, engineering, design, project management, installation and turnkey systems integration company with over two decades of experience in the provision of analogue and digital

television and radio broadcasting, studio and mobile production systems and RF and transmission facilities for our many clients worldwide. Clients in North and South America, Europe, the Middle East, Caribbean, Asia and Africa identify us with high quality workmanship and excellence in engineering and design. At AZCAR we take seriously our commitment to "The Application of Imagination" and diligently work to reflect creativity, practicality, efficiency and effectiveness in our designs, and in their implementation. Among the most experienced and trusted consulting, project management and technology integration companies in the media arena, AZCAR is headquartered in suburban Toronto and maintains design and implementation facilities both there and in Canonsburg, just outside Pittsburgh, P.A. Employing a staff of about 100 professionals, many of whom are recognized experienced consultants and designers, AZCAR combines the wealth of experience in systems design and construction of IMMAD Broadcast Systems and Synergistic Technologies Limited within the AZCAR Technologies Inc. public company, listed on the Toronto Stock Exchange. AZCAR has developed proprietary tools for analyzing complex technical facilities and providing simplified reports on physical loads and specifications. These tools are an extension of the toolset developed to support the design and drawing process, contributing to the population of the design with appropriate devices, managing change and automating the production of wire and detailed equipment lists.

The Lenfest Group formed CAM Systems, LLC, in 1996. In 1998, CAM Systems launched its

first scalable traffic and billing application into the cable television advertising industry, and has become the solution of choice. Today, CAM Systems' Eclipse software is trafficking cable ads for nearly 30 million US households, has been chosen by all the largest Multiple System Operators (MSOs), and is the solution in 6 of the top 10 cable ad systems/interconnects in the country. In addition to a successful history in local cable, CAM Systems has become a major player in network cable and broadcast markets. As a result of aggressive development initiatives and several major acquisitions during 2001 and 2002, the company has rapidly expanded its offerings as well as the markets served. The company delivers solutions to an impressive group of cable networks.

It's not the first time we changed the way you look at pro-video test equipment.

- First to introduce and deliver Serial Digital HD test solutions
- First to implement 720P capabilities in our products
- First test equipment provider to include both analog and digital input capabilities in one package
- First to provide built in 10 bit analog decoding for picture monitoring
- First to introduce an HD Rasterizer with built in XGA display capabilities

And now Leader is the first to bring pro-video test and measurement information to the palm of your hand! No more endless trips from the set to the camera to view the action.

Our simple to use software connects the award winning LV5700 Multi-SDI monitor to a wireless capable PDA, allowing the user to monitor key signal functions such as waveform, vectorscope, audio, status, as well as view the picture the camera is producing... away from the camera.

When it comes to industry innovations... Leader is first.

At NAB 2003, Chyron Graphics and Pro-Bel will introduce several new products for broadcasters who are looking for the latest in technology and cost-effective solutions. Chyron Graphics is introducing two new CGs: SOLO, a laptop-based CG featuring full graphics and squeezeback capabilities, and MicroScribe, a 1 RU character generator offering digital I/O and bypass relay. For broadcast station groups, CAMIO is a suite of flexible centralized graphics creation and routing applications. CAMIO, as well as several graphics products being shown, will feature MOS and other industry standard protocols. In addition, GPIO workflow enhancements for Lyric, Chyron's premier content creation and playout software, will be featured through the new plug in modules: Quarterback, Harvester, and StylistPRO. The Pro-Bel division will highlight a number of new offerings: Procion 2 offers unprecedented freedom in designing GUI's. This application enables customized control interfaces to be easily created and integrates fully with Pro-Bel's existing router control systems including Aurora; and Phantasia, a small scale, server-based automation system. New capabilities and configurations have been added to its router line including Halo, a multi-format 32 X 32 router, and a new 256 X 256 frame for the award winning Sirius hybrid router. Pro-Bel's Eclipse MADI has been enhanced with a

completely re-designed new central router increasing density and lowering cost.

Reduce transport and operating costs by consolidating VIDEO, AUDIO, VOICE and DATA bi-directionally over one coax/fiber network connection. For applications like CentralCasting, digital-video broadcasting (DVB), distributed video production (DVP), studio-transmitter links (STL), backhauling or broadcast-quality video services, worldwide standard DVB interfaces transport real-time video streams across a broadband network.

FLYING HIGH (HI DEF, THAT IS)

Get some
"hands on" with our new
HI DEF GYRON at NAB.
See us at booth SU4705
across from Fujinon.

HI DEF Gyron (Sony T-950/Fujinon 36X)

If you're going to shoot HI DEF from the air, then reliability and creative latitude are a must. It's not the place to cut corners. The good news is that you don't have to. **GYRON** is the ultimate answer and it costs the same as any of the lesser units.

Academy Award winning camera systems designer Bob Nettmann has given birth to this undisputed best aerial platform. From 35mm to IMAX, HI DEF to Video and everything in between, no other gimbal even comes close. Visit our web sites at

Vectorvision Top and Bottom Ports
and Jet Stills

Super Nose Mount

www.gyron.com and
www.wolfeair.com for

current credits, rates and technical information.

Rent any of our aerial GYRONs directly through Gyron Systems International or let us put together a complete aerial production unit through Wolfe Air Aviation to work with your team. Wolfe Air also exclusively offers **VECTORVISION**, the premier Learjet based camera system.

Any way you want it, give us a call. Let us help you get your production "off the ground".

DIGITALTV

Digital TV is the nation's premiere monthly television industry production and business magazine dedicated to in-depth analysis and insider views of the business of television—the individuals, market trends, technology, products, and policies that drives the television industry. Digital TV's readers are the movers and shakers of the television industry—the decision makers. They use Digital TV as a strategic tool to learn about technology resources, new and improved products, industry trends, and how to do their jobs better. Digital TV defines the people and technologies that shape the world of television.

What do you use your storage for?

Storage this good is worth looking into. The new USTOR™ storage solutions provide up to 2 Terabytes of capacity in a single U (1.75" high) of rack space. Work without limits in environments where high speed and capacity is important. We've automated the reliability features to keep things simple and added virtual maintenance for remote management using any Internet browser. It's also affordable and ready for direct attachment to servers, workstations and SAN environments now.

New USTOR models supporting 2GB Fibre Channel, SCSI Ultra 160 and NAS are available in out of the box or white box configurations for qualified solution providers.

Storage for digital cinematography

Reason # 136: Broadcast Video

Government Video is an informative, educational resource that provides comprehensive coverage of tools and technology for video professionals in the

public service. The magazine explores future technologies and the application of state-of-the-art video, audio, presentation, and Internet-based technologies as they relate to projects funded by tax dollars and government grants. The Government Video Technology Expo (GV Expo) provides hands on demonstrations of the latest professional video, audio, and multimedia products available today. The GV Expo offers a unique opportunity for exhibitors to meet face to face with leading government decision makers. The Government Video Technology Expo 2003 will be held on December 3rd and 4th at the Washington DC, Convention Center.

Are you working with MPEG-2?

We have the cure for long GOP MPEG-2 pain.

Mediaware Solutions provides high quality **editing**,
multiplexing and **transcoding** software products
that are proven in applications for

Broadcast, Defense, Surveillance and Education

Talk to the experts at NAB - call (650) 814-6382

Desktop Software Solutions

- *M2-edit Pro* desktop editor with Transport and Program transcoding and frame accurate editing
- *M2-edit Advanced* Live-File 'real time' editing for news and sports satellite feeds and proxy editing
- *M2-edit Mosaic* with improved SNR and mosaic still capture for still broadcast and surveillance

Advanced and Mosaic editors are SMPTE 336M and MPEG-2 metadata sensitive (metadata maintained in stream during edit). All editors MP1, MP2 and AC3 capable. All desktop editors support transcoding to MPEG-2, MPEG-1 and streaming formats with bit-rate adjustments.

Modular Software Components

- *MV_mux/MV_split* live-stream KLV metadata muxer-demuxer pair for SMPTE 336M and MPEG-2 metadata standards
- *MV_pipe* live MPEG-2 and data stream T junction and signal delay unit
- *VideoShears* Metadata-aware live MPEG-2 stream editor and repacketizer
- *M2_xcodeCL* component transcoder for MPEG-2
- *M2_editCL* component editor for MPEG-2

Kay Industries manufactures the Phasemaster® rotary phase converter, the broadcast industry standard for changing 1-phase to 3-phase power. The converter turns any location with 1-phase utility service into 3-phase site capable of operating any 3-phase radio or TV broadcast transmitter at full capacity. The converter virtually eliminates utility installation charges.

compression technology, delivering modular software codecs designed to run on standard platforms. At NAB2003, Ligos will introduce its new MediaRig™ line of encoding products for Broadcasters and Professionals, supporting real-time MPEG-2, 4:2:2, AC-3, and Transport Stream output via DVB-ASI. MediaRig is a cost-effective, modular approach to MPEG encoding that provides high performance and pristine quality on-demand, for a variety of Broadcast and Professional applications. Through the award-winning GoMotion® MPEG SDK and its upcoming MediaRig® line of products, Ligos provides real-time solutions for MPEG-1, MPEG-2 and MPEG-4 for implementation and licensing by application and system developers. By aggressively leveraging its patented software-based encoding methodologies, Ligos has demonstrated compelling new solutions that scale from low bit rate encoding to real-time broadcast studio quality video. The excellence, versatility, and affordability of its real-time MPEG technologies have made Ligos a leader in the global digital video market, meeting the diverse needs of the broadcast and network video industries as well as those of desktop video applications.

klu@miranda.com

Miranda is showing a new HD/SD version of its 'Master Control Glass Cockpit', which greatly simplifies the control and monitoring of multiple transmission channels. The system is based on an HD/SD version of the ultra-robust, Kaleido-K2 multi-image display

processor; an enhanced version of the Presmaster 2 multi-channel, master control switcher; and the iControl Web audio, video and infrastructure monitoring system. A new, two-channel, 3-D DVE is now available for the Oxtel Series Imagestore 3 automated master control switching and channel branding system, which features integral clip storage. The new DVE allows the payout of dual, squeeze-back type programming, as well as many other complex branding effects. Imagestore 3 operates with the new Gallery graphics preparation and data interfacing software, which is designed for the payout of graphics rich, data-driven television. Miranda's growing range of Densité Probes provide video and audio signal measurement and alarm profiling, as well as visual confidence monitoring with low latency, low bit rate video and audio streaming, using standard IP networks. The range now includes digital and analog, video and audio Probe cards for the Densité DA range. Miranda's new, ultra compact DVC-800 HD downconverter and DV encoder greatly simplifies on-set HDTV acquisition monitoring, rough cut DV editing, and the preparation of dailies. The interface operates with Sony HDCAM and Panasonic AJ-HDC27A cameras, and provides HD-SDI, SDI, and composite outputs, as well a DV output for interfacing with DV disk drives or laptop based editing systems.

Pinnacle Systems provides cutting-edge digital media creation, storage, and playback solutions for use in the Studio and on the Air. Pinnacle's award winning digital media creation, storage and playback solutions are in use around the world for broadcast, cable and satellite television, video editing, DVD and CDR authoring, and on the Internet. Pinnacle's best-in-class point products include recognized names that professionals rely on such as Deko, CinéWave, TARGA and Thunder, as well as emerging leaders like Pinnacle Liquid editing, PDS switchers and others. Perhaps the greatest area of interest among broadcasters, however, is Pinnacle's leadership in developing comprehensive digital system solutions that integrate consulting services, systems engineering and technology components to deliver increased operational efficiency. Leveraging our extensive experience in developing IT-based products, Pinnacle is focused on delivering workflow-enhancing solutions for key operational areas including Networked Editing, Networked Graphics, News and Sports, and Ingest and Playout. At NAB this year, Pinnacle embraces those two important facets of our approach to product development. Numerous new products will join what is now the industry's broadest spectrum of networked media products. Pinnacle's open approach to system development enables our solutions to readily integrate with legacy systems as well as provide a foundation for forward-looking infrastructure development. Virtually every element in Pinnacle's lineup will be shown working in coordination with other Pinnacle products and third party products through Pinnacle's Palladium networked media architecture. The results of this effort are truly integrated solutions that offer resource and time-efficient workflows for meeting today's challenges.

Plat Communication Components (Plat'C2) introduces the BTBox (Broadband Terminal Box), a hardware device and software development platform for home and corporate use that plays Hi-Vision quality MPEG-2 (up to 20Mbps) video over optical fiber, CATV and DSL based high-speed Internet connections and corporate LANs. With the BTBox one can enjoy broadband

content, web browsing and e-mail; all from your home television or plasma display. The tiny BTBox (5.5in x 2.4in) packs an MPEG-2 decoder chip, digital audio and video outputs, LAN and USB ports, a web-browser, an E-Mail client and a remote control interface for easy navigation and text input. Set atop a plasma display or an HDTV compatible television the BTBox is ideal for both home and office use. The BTBox is even more effective when integrated into corporate solutions, such as high-end POS playback systems, information kiosks, and conference room presentation devices. Combining hard disk and data card playback technologies with an extremely small footprint makes the BTBox a highly-portable MPEG-2 player Plat'C2 is looking for partners, system integrators, value added resellers and developers interested in developing corporate and consumer targeted broadband solutions for the BTBox platform. About Plat'C2 Plat'C2 was incorporated to design, develop and manufacture products that meet the needs of Broadband users in the upcoming age of the ubiquitous network. All of the Plat'C2 products are ready for OEM sales. Plat'C2 software and hardware is available for licensing. In addition, Plat'C2 offers custom software/hardware design and development services.

admin@pro-mpeg.org

The Professional-MPEG Forum is an international association of broadcasters, network-operators and equipment manufacturers dedicated to increasing interoperability in digital TV facilities. At NAB-2003, the metadata-enabled networked world of production and distribution draws closer, and the Pro-MPEG Forum is again partnering with the AAF Association and TV-Anytime to display the progress in "The Interoperability Center". Leading manufacturers will be demonstrating the results of industry collaboration and open standardisation with technologies such as MXF, AAF, Video over IP and TV-Anytime. The demonstrations will feature participating organisations exchanging video, audio and metadata over a shared network and server. Using open standards these organisations will be testing, proving and demonstrating interoperability. A particular emphasis will be workflow presentations, explaining the benefits of material sharing and metadata in a real world context. The successful work of these industry organisations will also be confirmed by the launch of new conforming products from companies throughout NAB. Companies demonstrating in "The Interoperability Center" include : Avid Technologies, BBC, BLT Italia, BTextact Technologies , Cisco Systems Inc, IRT

& MOG Solutions, Leitch Technologies Inc., Metaglug, NDS, NOB, Omneon Video Networks, onTV, Path1, Philips, Quantel, Snell&Wilcox, SGI, Sony, TandbergTV, Thomson Grass Valley, and Tribune Media Services. Marketing Regions: Worldwide

「情報」がビジネスを熱くする。

映像新聞は、放送や映画、CATV、デジタルコンテンツプロダクション、映像制作者など映像業界へ向け、ビジネスとテクノロジーの両視点で情報を発信している専門誌です。

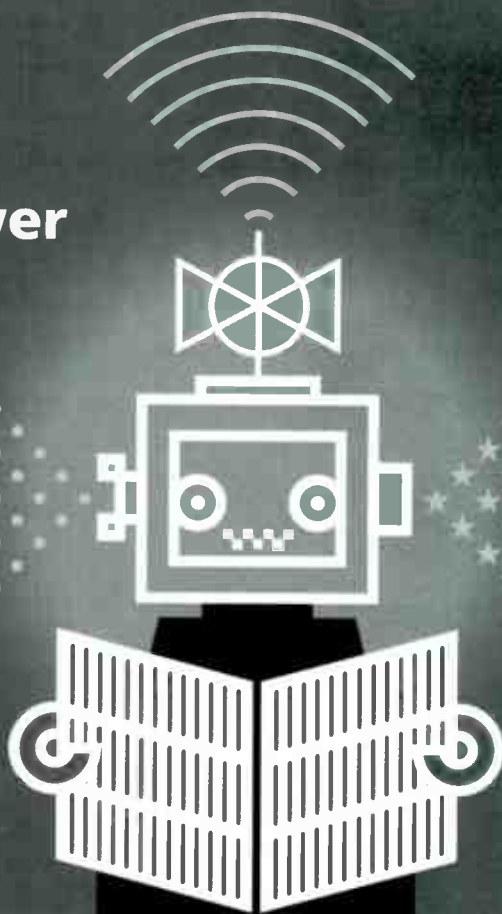

映像のデジタル化は、デジタル放送やデジタルシネマといった新しい文化を創り、ブロードバンドにより新しいコミュニケーションを発達させました。映像新聞は、これらの動きをいち早く伝え、新鮮な情報をお届けいたします。ビジネスを熱くするメディア……

それが「映像新聞」です。

"Information" is the power that drives business.

The Eizo Shimbun (literally "Image Newspaper") has been Japan's leading weekly television industry newspaper for more than 35 years. As a prime news source for Japanese production professionals, the Eizo Shimbun covers many aspects of the business and technology of television, film production, broadcasting, computer graphics, the Internet and digital media.

Digital imaging has spawned new models for production, broadcasting, and digital cinema. Broadband internet continues to expand our communication and connectivity options in the global network infrastructure. The Eizo Shimbun will continue to expand our coverage to bring you the media information to take your business to the next level.

Complete guide to video production companies and services in Japan (Available in Japanese only)

screen
subtitling
systems Ltd

This will be our fifth year of exhibiting independently at NAB and we at Screen are more excited than ever before with the very best line up of new technologies on display yet! We have pioneered subtitling technology for the past 25 years. Furthermore, our support and development personnel have a wealth of knowledge on all system configurations and customer integration

scenarios. We are the only subtitling company which provide a complete end to end solution including developing system specifications for live subtitling, newsroom, preparation, monitoring and our systems cater for all transmission formats including DVB, Open and closed captioning, Imitext and teletext. The main product line of preparation and transmission products under the name of Poliscrypt (preparation) and Polistream (transmission) remain the emphasis for 2003. With new product features and industry partnerships adding to the portfolio on a regular basis. New for NAB 2003: INTELLIGENT MONITORING TECHNOLOGY - Using the advanced features of Polistream MSX monitoring software, SSS have produced an intelligent monitoring system, which monitors the subtitle transmission stream more effectively than ever before. MSX will be on display with an interface demonstration with Tandberg Television - Ncompass monitoring technology. PARTNERSHIP ANNOUNCEMENTS - Polistream technology has attracted major industry players - and new partnership alliances will be announced at the show! POLISCRIP- PAY AS YOU GO! For the very first time Screen subtitle preparation customers will be able to purchase a cost-effective solution, which allows the user to purchase operating hours rather than paying for a full system.

THALES
BROADCAST & MULTIMEDIA

THALES Broadcast & Multimedia is a global leader, determined to provide the best solutions to lead our customers into the digital age. Active in the broadcast, multimedia, satellite, and cable markets, Thales designs and manufactures a wide range of products, and enters partnerships to ensure comprehensive and unmatched solutions for the markets we serve. Thales is comprised of "great people behind great solutions" who continue to research, design and supply the best digital solutions to guide our customers and expand the company's technological growth. THALES Broadcast & Multimedia boasts the largest specialized team in the broadcast industry. THALES has deployed over 24,000 transmitters in more than 145 countries - becoming one of the world's largest suppliers of radio and TV broadcasting equipment in the world. With the wide range of skills necessary for the design and implementation of each step of the complete transmission chain, THALES has unrivalled experience and competence in system engineering. THALES Broadcast & Multimedia is a multiple Emmy award winner for technological excellence, and offers a wide and unique product line, including MPEG-2 multimedia distribution systems and test equipment, television and radio systems, as well as broadcast antenna systems. THALES Broadcast & Multimedia's company headquarters and French subsidiary is located at Conflans-Saint-Honorine, a suburb of Paris. Other THALES Broadcast & Multimedia companies are located in Southwick, Massachusetts (U.S. Headquarters), Mannheim, Germany, Turgi, Switzerland, and Rennes, France. THALES Broadcast & Multimedia is a wholly owned subsidiary of the THALES Group.

TRF Production Music Libraries constitute the largest and most diversified collection of contemporary, retro and traditional production music available to fill every conceivable need for television, radio, film and multimedia purposes. The TRF libraries contain more than 50,000 selections (4,000 discs). Libraries include Cobra, Dennis, MP 2000, Musictrack, PowerSound, Pyramid, Stock, the new cutting-edge Kool Kat library, the new Bravo library, the authentic international ethnic libraries, PAN and Spain Is Music, and the most complete Classical library, Supraphon. The TRF libraries have a varied repertoire including Industrial/Corporate, New Age, Nature, Dramatic, Period, Rock, Atmospheric, Comedy/Children, Country, Christmas, Romantic, Techno/Dance/Electronic, Hip-Hop, Jazz, News, Sports and Jingle discs. The selections range from full-length compositions to jingle-length versions including all types of openings, closings, underscores, bridges, beds, transitions, dissolves, punctuations, stings, etc. The instrumental combinations range from full symphony orchestras to small groups and even single instruments. TRF compact discs are of the highest quality with full frequency range and contain an average of 75 minutes of music per disc, considerably more than compact discs of other libraries. Complete music selection services. Large Sound Effects library and new Production Elements CD, Powerdistortion. TRF's Special Annual Blanket Program, for unlimited use of the TRF libraries, allows you to design your own library at a very economical rate. New Releases are recorded weekly. Free catalogs and music sampler demo upon request.

dgibson@tvone.com

TV One is celebrating its twelfth year producing products for the professional video and broadcast markets worldwide. Long known for computer-to-video scan conversion equipment, based on its exclusive CORIO(TM) video processing technology, TV One has a solid product history of Scan Converters, Video Scalers and HDTV Converters. Recent additions to the video conversion product range include Standards Converters, IEEE-1394 DV to Analog and SDI to Analog Converters. The new C2-770 Universal Video Scaler is the industry standard for bi-directional conversion between SDTV, HDTV

and Computer Resolutions. The company's MPEG-2@Disk Digital Video Recorders were designed specifically to replace tape machines in constant duty applications, while keeping the familiar look and feel of VCR's. Building upon the success in this field, the new Content@Disk Multimedia Archive and Retrieval System takes TV One firmly into the Internet/Intranet-based Video/Audio/Image Server business. The L-Series of high performance, professional LCD monitors includes the only affordable direct IEEE-1394 DV to LCD, all-digital monitoring solution. Most video, audio and computer monitoring can be addressed with display sizes from ranging from 4" to 20". Products are available in stylish plastic cases, metal field cases or 19" rackmount configurations. TV One's Image Matrix(TM) Routing Switchers with 400Mhz bandwidth provide transparent signal management of high resolution RGBHV and YPbPr video for HDTV and Computer applications. Wideband Distribution Amplifiers are also available. This technology is now migrating into a new line of SDTV and SDI Routing and Distribution products. TV One will continue to develop innovative professional and broadcast products at affordable prices.

For maximum efficiency in video data creation, transmission, verification and management needs, visit XOrbit Software. As pioneers in Time of Air Data Systems (TOADS), we develop unique and ultra-reliable end-to-end solutions for closed captions, itv, etv, v-chip, broadcaster and program information, creating efficiencies and significant labor savings. See how broadcasters HGTV, Food Network, Hallmark, Discovery, and others have made video data hassles yesterday's news. Using UltraCast, they've eliminated the need to encode or re-encode assets with closed captions, maintain v-chip schedules, or worry about FCC Caption Compliance reporting. Moreover, they save tens of thousands each year while maintaining a better than 99.99% uptime. Our line of products work seamlessly in analog or digital environments, are network enabled and vendor friendly. We support all major data vendors, including Soundwriters, NCI, CaptionMax, Vitac, WGBH, CheetaH, CCS, RapidText, CPC, and hardware vendors, such as Philips/Alamar, Harris/Louth, Probel, Encoda, Odetics, EEG, Evertz, Norpak, and more. Change your view of video data encoding. Stop by our booth to learn how you can streamline your facility and register for a chance to win a free UltraCast system.

Zandar Technologies plc is a dynamic and progressive company with a worldwide presence and a wide range of innovative multi-source display and management solutions. International customer base includes many of the world's leading companies in the broadcast, television and professional video markets. Applications are numerous and include multi-channel monitoring, camera monitoring, multi-view displays, command and control, videoconferencing and electronic program guide. A dedicated sales and engineering team, professional resellers and responsive technical support specialists underline a commitment to quality, continuous improvement and customer satisfaction. At NAB Zandar's Fusion Series of High-Resolution Video Display Processor Systems will be on show. The Fusion Series combines our proven multi-window display technology with our most powerful image processor to date. The Series is founded on a modular architecture consisting of a range of plug in processing cards and associated i/o, enabling users to combine input formats - analog-video, SDI, computer and DVI - in the one system. The cards can be used in 3RU or 1RU frames. The 3RU base system supports up to 13 dual-channel processing cards for 26 inputs, and is designed for mission critical applications with optional dual redundant power supplies and easily accessible front loading cards. The new 1RU base system accepts 4 processing cards, supporting up to 8 scalable windows. New optional software for the Fusion Series allows user configuration of displays, and multi-system

control, while options also exist for UMD/Tally, hot-swappable front-loading redundant PSU, Dual Output Display and in-picture audio monitoring of analog, AES/EBU and SDI embedded audio.

Zope Corporation is the leading provider of enterprise content management solutions based on the open source Zope application server and its new Content Management Framework (CMF). Zope Corporation rapidly

creates and deploys high-performance content management solutions that are scalable, reliable, and easily maintained. Source code is delivered with their systems, so clients have complete control over their software. Customers include Fortune 1000 companies, newspapers and other media, telecommunications firms, government agencies, the military, educational institutions and Internet businesses. Zope Corporation offers Zope4Media - the most advanced and affordable content publishing solution for television and radio companies. Zope4Media is available as a turnkey, hosted-solution or as a product for use in existing collocation and hosting facilities. With industry-leading support for AP, weather, local content (e.g., school closings) as well as other inbound and outbound content syndication services, Zope4Media should be a part of every broadcaster's Internet arsenal. Success stories abound e.g., 1010WINS in New York City, WCCO in Minneapolis, KCAL in Los Angeles, WWHO in Columbus along with thirty-five other small to large broadcasters. Zope Corporation is backed by Opticality Ventures www.opticality.com. The company is headquartered in Virginia. For more on Zope Corporation and Zope visit www.zope.com.

What's the Most Intelligent Data Storage Management Solution for Broadcast?

AVALONidm™

EMC's Avalon Product Division developed AVALONidm™, the world's first intelligent data management solution for broadcast. Ever since then, we've consistently improved and enhanced AVALONidm, incorporating new features that deliver greater performance quality, flexibility and control for our customers. As a result, we've helped our customers to create more efficient and reliable data storage infrastructures for their broadcast enterprises.

This year is no different. Now AVALONidm incorporates more new features and functionality into its policy-based, open architecture platform that provide even greater capabilities to broadcasters who are constantly seeking new ways to easily and cost-effectively meet their workflow requirements. More than ever before, AVALONidm allows broadcasters to put their data where they need it, when they need it. AVALONidm interfaces seamlessly with partner applications to provide proven, integrated solutions that work in today's broadcast environments.

Avalon now partners with over 30 broadcast industry leaders to deliver the most integrated, intelligent data management systems for the broadcast enterprise.

See how AVALONidm can improve your data storage workflow — and your bottom line. For more information, call (303) 293-9331 or email us at ava_sales@emc.com.

Console User Interface:

AVALONidm's user interface provides complete ease of use for monitoring, administering and controlling the entire data storage management system.

WAN Manager:

The AVALONidm WAN Manager allows files to be transferred anywhere on the broadcast network, thus increasing both availability and protection.

File System Interface:

The AVALONidm File System Interface enables broadcasters to store data via standard NFS or CIFS-mounted file systems. Now user applications can access AVALONidm through our open API or standard file system.

Content Addressed Storage:

AVALONidm now provides support for Centera, EMC's innovative solution for CAS, Content Addressed Storage. Now you can utilize Centera as a managed storage device under AVALONidm control.

DVD Support:

AVALONidm now adds DVD to the list of supported storage devices. Broadcasters can thus manage DVD, data tape and magnetic disk separately or all together as part of an integrated, intelligent data management system.

AVALONidm

INTELLIGENT DATA MANAGEMENT
