

DEPARTMENT OF COMMERCE
RADIO SERVICE BULLETIN

ISSUED MONTHLY BY BUREAU OF NAVIGATION

Washington, November 1, 1924—No. 91

CONTENTS

	Page		Page
Abbreviations.....	1	Miscellaneous—Continued.....	Page
New stations.....	2	Details of time, weather, press, and hydrographic bulletin schedules transmitted by naval radio stations.....	14
Alterations and corrections.....	8	Lost commercial radio operators' licenses.....	16
Miscellanous:		Sandhamn (Finland) radio station transmits ice reports.....	17
Compass station established in Gulf of Aden.....	13	Foreign radio broadcasting stations.....	19
Additional radio fog signal service for Nantucket Shoals Light Vessel, Mass.....	13	References to current radio periodical literature.....	23
Large station established in Lithuania.....	13	Standard frequency stations.....	25
Bureau of Lighthouses, general call.....	13	The standard frequency transmitting set at WWV.....	26
Identification card lost.....	13	Methods of receiving the broadcasting stations of higher frequency.....	26
Changes in German compass stations.....	13	Radio testing.....	27
Hydrographic information by Duluth (Minn.) station.....	14		
Radio fog signal established in Germany.....	14		
Regulation of use of wireless by foreign war vessels in South African waters.....	14		

ABBREVIATIONS

The necessary corrections to the List of Radio Stations of the United States and to the International List of Radiotelegraph Stations, appearing in this bulletin under the heading "Alterations and corrections," are published after the stations affected in the following order:

Name	= Name of station.
Loc	= Geographical location. O = west longitude. N = north latitude. S = south latitude.
Call	= Call letters assigned.
System	= Radio system used and sparks per second.
Range	= Normal range in nautical miles.
W. l.	= Wave lengths assigned: Normal wave lengths in italics.
Service	= Nature of service maintained. PG = General public. PR = Limited public. RC = Radio compass station. FS = Fog signal. P = Private. O = Government business exclusively.
Hours	= Hours of operation: N = Continuous service. X = No regular hours.
F. T. Co.	= Federal Telegraph Co.
I. W. T. Co.	= Independent Wireless Telegraph Co.
K. & C.	= Kilbourne & Clark Manufacturing Co.
R. C. A.	= Radio Corporation of America.
S. O. R. S.	= Ship Owners' Radio Service.
W. S. A. Co.	= Wireless Specialty Apparatus Co.
C. w.	= Continuous wave.
I. c. w.	= Interrupted continuous wave.
V. t.	= Vacuum tube.
FX	= Fixed station.
U. S. L.	= After operating company denotes that the change applies only to the List of Radio Stations of the United States.
Ke.	= Kilocycles.
Fy.	= Frequency.
A. c.	= Alternating current

RADIO SERVICE BULLETIN

NEW STATIONS

Commercial ship stations, alphabetically by names of vessels

[Additions to the List of Radio Stations of the United States, edition of June 30, 1924, and to the International List of Radiotelegraph Stations published by the Berne Bureau]

Name of vessel	Call signal	Rates	Service	Hours	Owner of vessel	Station controlled by—
Edna.....	KIPT		PG	X	Sudden & Christensen	
George Washington.....	WFR		PG	N	Old Dominion S.S. Co.	
Utownana.....	KFSII				Allison V. Armour.....	
Tusitala.....	KFSQ	8	PG	X	Ship Tusitala (Inc.).....	

Commercial land and ship stations, alphabetically by call signals

[b=ship station; cl=land station]

Call signal	Name of station	Call signal	Name of station
KPSH	Utownana.....	b	KIPT
KFSQ	Tusitala.....	b	WFR Edna.....
			George Washington..... b

Broadcasting stations, alphabetically by names of cities

[Additions to the List of Radio Stations of the United States, edition of June 30, 1924]

City	Call signal	City	Call signal
Atlanta, Ga.....	WBFF	Indianapolis, Ind.....	WFBBM
Baltimore, Md.....	WFBB	Joliet, Ill.....	WWAEE

2XAM	Second district: New Brunswick, N. J.	9XAI	Denver, Colo.
2XQ	Schenectady, N. Y.	9XAW	Golden, Colo.
8ZAD	Eighth district: Dayton, Ohio.		Houghton, Mich.

ALTERATIONS AND CORRECTIONS

COMMERCIAL LAND STATIONS

[Alterations and corrections to be made to the List of Radio Stations of the United States, edition of June 30, 1924, and to the International List of Radiotelegraph Stations, published by the Berne bureau]

BEAUMONT, TEX.—System, Western Electric v. t. telegraph and composite, 1000.
 DEARBORN, MICH.—W. l., add 1875.
 DULUTH, MINN.—W. l., add 1764.
 EAST MORICHES, N. Y.—System, R. C. A. 1000 and composite arc.
 NEW YORK, N. Y. (KUVS).—System, R. C. A., 1000; w. l., 300, 600, 730; service, P.; hours, N.
 NEW YORK, N. Y. (WNY).—Strike out all particulars regarding spark apparatus.
 PHILADELPHIA, PA.—System, composite v. t. telegraph.
 ROCKY POINT, N. Y.—W. l., add 1760.
 SPRINGFIELD, OHIO.—Loc. (approximately) O 84° 02' 00", N 40° 01' 00"; w. l., add 1934.

COMMERCIAL SHIP STATIONS, ALPHABETICALLY BY NAMES OF VESSELS

[Alterations and corrections to be made to the List of Radio Stations of the United States, edition of June 30, 1924, and to the International List of Radiotelegraph Stations, published by the Berne bureau]

ADMIRAL WATSON.—System, add R. C. A. v. t. telephone; w. l., add 870.
 AQUIDABAN.—W. l., add 706; Dutee W. Flint Transpn. Co., owner of vessel.
 ATENAS.—W. l., add 706.
 BARRYTON.—Station operated and controlled by R. C. A. (U. S. L.).
 BACOL.—Mount Hope S. S. Co. owner of vessel.
 CHESTER VALLEY.—Station operated and controlled by R. C. A.
 CITY OF FLINT.—System, Navy—W. S. A. Co., 1000; w. l., add 706.
 COAHOMA COUNTY.—System, Navy—W. S. A. Co., 1000; w. l., 300, 600, 706.
 COMANCHE.—W. l., 300, 600, 706.
 CUPRUM.—W. l., add 706, 2100, 2400.
 DANNEDAIKE.—System, Navy—R. C. A., 1000; w. l., add 706.
 DEERFIELD.—W. l., add 450, 706; station operated and controlled by owner of vessel.
 DIX.—Name changed to Grace Dollar.
 DOCHET.—Station operated and controlled by R. C. A.
 EDENTON.—Station operated and controlled by R. C. A.
 EDGEHILL.—Station operated and controlled by R. C. A. (U. S. L.).
 EDWARD J. BERWIND.—Range, 150; system, Navy—Simon, 1000; w. l., 300, 600, 706; rates, Great Lakes service, 4 cents per word; station operated and controlled by owner of vessel.
 E. T. BEDFORD.—W. l., 300, 600, 706.
 EL CAPITAN (KKH).—Range, 200.
 ELDENA.—W. l., add 706.
 ELMSPORT.—Station operated and controlled by R. C. A.
 EL ORIENTE.—W. l., 300, 600, 706.
 EL SIGLO.—W. l., 300, 600, 706.
 EL SUD.—W. l., 300, 600, 706.
 GRIFFDU.—Station operated and controlled by I. W. T. Co.
 HENRY FORD II.—Range, 200; system, R. C. A. v. t. telephone and telegraph:

GOVERNMENT LAND STATIONS, ALPHABETICALLY BY NAMES OF STATIONS

[Alterations and corrections to be made to the List of Radio Stations of the United States, edition of June 30, 1924, and to the International List of Radiotelegraph Stations, published by the Berne bureau]

NOTE.—The change in call letters of the light vessels and stations named below will become effective January 1, 1925.

AMBROSE CHANNEL LIGHT VESSEL.—Call signal changed to WWAO.
 BALBOA, CANAL ZONE.—W. I., 6970 changed to 6663.
 BLUNTS REEF LIGHT VESSEL.—Call signal changed to WWBU.
 BOSTON LIGHT VESSEL (FS).—Call signal changed to WWAF.
 BROWNSVILLE, TEX.—W. I., 5000 changed to 4997.
 BRUNSWICK LIGHT VESSEL.—Call signal changed to WWBG.
 CAPE CHARLES LIGHT VESSEL.—Call signal changed to WWAY.
 CAPE LOOKOUT SHOALS LIGHT VESSEL.—Call signal changed to WWBA.
 CAVITE, P. I.—W. I., 5280 changed to 5260.
 COLON, CANAL ZONE.—W. I., 1820 changed to 1817.
 COLUMBIA RIVER LIGHT VESSEL.—Call signal changed to WWBQ.
 CORNFIELD POINT LIGHT VESSEL.—Call signal changed to WWAM.
 DIAMOND SHOALS LIGHT VESSEL.—Call signal changed to WWAZ.
 DULUTH RANGE REAR LIGHT STATION, MINN.—Call signal changed to WWEB.
 FENWICK ISLAND SHOAL LIGHT VESSEL.—Call signal changed to WWAW.
 FIRE ISLAND LIGHT VESSEL.—Call signal changed to WWAN.
 FIVE FATHOM BANK LIGHT VESSEL.—Call signal changed to WWAR.
 FORT McARTHUR, TEX.—Read, Fort McArthur, Calif.
 FRYING PAN SHOALS LIGHT VESSEL.—Call signal changed to WWBE.
 GUANTANAMO, CUBA.—Read, Guantanamo Bay, Cuba; w. l., 1395 changed to 1397.
 HEALD BANK LIGHT VESSEL.—Call signal changed to WWBJ.
 KEY WEST, FLA. (REGULAR STATION, NAR).—W. I., 1462 changed to 1463.
 KEY WEST, FLA. (WUBV).—Loc. (approximately) O 81° 48' 00", N 24° 33' 00".
 MARQUETTE LIGHT STATION, MICH.—Call signal changed to WWEE.
 NANTUCKET SHOALS LIGHT VESSEL.—Call signal changed to WWAH.
 NEW ORLEANS, LA.—W. I., 2605 changed to 2607.
 NEWPORT, R. I.—W. I., 2605 changed to 2607.
 NORTH EAST END LIGHT VESSEL.—Call signal changed to WWAQ.
 POLLOCK RIP SLUE LIGHT VESSEL.—Call signal changed to WWAG.
 PUGET SOUND, WASH.—W. I., 2500 changed to 2499.
 RELIEF LIGHT VESSEL No. 72.—Call signal changed to WWBB.
 RELIEF LIGHT VESSEL No. 76.—Call signal changed to WWBW.
 RELIEF LIGHT VESSEL No. 78.—Call signal changed to WWAS.
 RELIEF LIGHT VESSEL No. 85.—Call signal changed to WWAI.
 RELIEF LIGHT VESSEL No. 90.—Strike out all particulars.
 RELIEF LIGHT VESSEL No. 92.—Call signal changed to WWBR.
 RELIEF LIGHT VESSEL No. 109.—Call signal changed to WWBH.
 SAN DIEGO, CALIF.—W. I., 1540 changed to 1538.
 SAN FRANCISCO, CALIF. (NPG).—W. I., 4835 changed to 4836 and 7240 changed to 7006.
 SAN FRANCISCO, CALIF., LIGHT VESSEL.—Call signal changed to WWBV
 SAN JUAN, P. R.—W. I., 2852 changed to 2855.
 STANNARD ROCK LIGHT STATION, MICH.—Call signal changed to WWED.
 SUPERIOR ENTRY LIGHT STATION, WIS.—Call signal changed to WWEC.
 SWIFTSURE BANK LIGHT VESSEL.—Call signal changed to WWBO.
 UMATILLA REEF LIGHT VESSEL.—Call signal changed to WWBP.
 WASHINGTON, D. C. (Arlington, NAA).—W. I., 5950 changed to 5949.
 WINTER QUARTER SHOALS LIGHT VESSEL.—Call signal changed to WWAX.

GOVERNMENT SHIP STATIONS, ALPHABETICALLY BY NAMES OF STATIONS

[Alterations and corrections to be made to the List of Radio Stations of the United States, edition of June 30, 1924, and to the International List of Radiotelegraph Stations, published by the Berne bureau]

NOTE.—The change in call letters of the vessels named below owned by the Bureau of Lighthouses will become effective January 1, 1925.

AMARANTH.—Call signal changed to WWDG.
 ANEMONE.—Call signal changed to WWCD.
 AZALEA.—Call signal changed to WWCE.
 CEDAR.—Call signal changed to WWDO

CYPRESS.—Call signal changed to WWCT.
 FERN.—Call signal changed to WWDN.
 HEATHER.—Call signal changed to WWDQ.
 HIBISCUS.—Call signal changed to WWCA.
 HYACINTH.—Call signal changed to WWDK.
 IVY.—Call signal changed to WWCW.
 KUKUI.—Call signal changed to WWDX.
 LARKSPAR.—Call signal changed to WWCI.
 LOTUS.—Call signal changed to WWCF.
 MANZANITA.—Call signal changed to WWDR.
 MADRONO.—Call signal changed to WWDU.
 MAGNOLIA.—Call signal changed to WWCY.
 MANGROVE.—Call signal changed to WWCU.
 MAPLE.—Call signal changed to WWCN.
 MARIGOLD.—Call signal changed to WWDH.
 MAYFLOWER.—Call signal changed to WWCP.
 ORCHID.—Call signal changed to WWCO.
 ROSE.—Call signal changed to WWDS.
 SEQUOIA.—Call signal changed to WWDV.
 SPEEDWELL.—Call signal changed to WWCQ.
 SPRUCE.—Call signal changed to WWCL.
 SUMAC.—Call signal changed to WWDL.
 SUNFLOWER.—Call signal changed to WWcz.
 TULIP.—Call signal changed to WWCH.
 ZIZANIA.—Name changed to Ilex; call signal changed to WWCB.
 Strike out all particulars of the following-named vessels: Arbutus, Lilac.

SPECIAL LAND STATIONS, BY NAMES OF STATIONS

[Abbreviations and corrections to be made to the List of Radio Stations of the United States, edition of June 30, 1924]

BIRMINGHAM, Ala. (5ZAZ).—Address, 1218 Eleventh Court, East.
 LANSING, Mich. (8ZR).—Address, 325, North Pennsylvania Avenue.
 LOS ANGELES, CALIF. (6XBX).—Address, 2901 Keniston Avenue.
 SAN FRANCISCO, CALIF. (6XX).—Address, 28 Geary Street.
 Strike out all particulars of the following-named stations, Chicago, Ill. (9XN); Cleveland, Ohio (8XBN); Dover, Ohio (8XBF); Mayville, N. Y. (8ZAD); Morgantown, W. Va. (8XAA); New York, N. Y. (2XBG); Portland, Oreg. (7XF); Rosedale City, Mich. (8XRJ); Rye, N. Y. (2XH); Toledo, Ohio (8XBS).

MISCELLANEOUS

COMPASS STATION ESTABLISHED IN GULF OF ADEN

A compass station has been established at Cape Guardafui, Gulf of Aden, Italian Somaliland, located in $11^{\circ} 44' 12''$ N., $51^{\circ} 13' 24''$ E., call signal ISK. The station keeps watch from sunset to sunrise, every day except during the first five minutes of each hour, and will render service as a wireless direction finding station on request during this period. For the first two minutes of each hour the station sends out its own call signal (ISK). The normal wave length used is 600 meters, but bearings may be obtained on other wave lengths up to 3,000 meters on demand. Range, 150 miles.

ADDITIONAL RADIO FOG SIGNAL SERVICE FOR NANTUCKET SHOALS LIGHT VESSEL, MASS.

The radio fog signal on the Nantucket Shoals Light Vessel will be operated every day and night during the second 15 minutes of each hour in clear weather for experimental and test purposes for a period of six months beginning about October 29, 1924. During foggy weather the radio fog signal will be operated continuously except during daily listening-in periods from 10 to 10.15 a. m. and from 4 to 4.15 p. m., seventy-fifth meridian time. Vessels are requested to forward reports to the Commissioner of Lighthouses, Washington, D. C., or to the superintendent of lighthouses, Boston, Mass., as to the effectiveness of this additional service.

LARGE STATION ESTABLISHED IN LITHUANIA

It has been reported to the bureau that the Lithuanian Government is erecting a large station on one of the hills which surround Kovno, Lithuania. It is expected that the station will be ready for operation within the next few months. The antenna will be a fairly large one strung from two towers which will be 492 feet in height. A radio service with all Europe for Lithuania is expected to be the result of this station.

BUREAU OF LIGHTHOUSES GENERAL CALL

Call letters WWLH have been assigned as a general call signal for all radio stations of the Bureau of Lighthouses. This signal is to be used only when all radio stations of the Bureau of Lighthouses or a group of these stations are called. When only one station is to be communicated with, the call letters of that station must be used.

IDENTIFICATION CARD LOST

During the week of September 22, last, George E. Sterling, assistant radio inspector, Baltimore office, lost his identification card, and up to the present time it has not been recovered. Should anyone find this card the bureau would appreciate its return.

CHANGES IN GERMAN COMPASS STATIONS

The radiocompass station at Stolpmunde, located in (approximately) $54^{\circ} 34' 40''$ N., $16^{\circ} 50' 06''$ E., has been discontinued.

Wilhelmshaven third entrance compass control station has ceased operating as the control station for German compass stations in the North Sea. This station was located in (approximately) $53^{\circ} 31'$ N., $08^{\circ} 10''$ E., call letters KAN.

Nordholz, located in $53^{\circ} 46' 51''$ N., $08^{\circ} 38' 42''$ E., call letters KBN, has been established as the compass control station in place of Wilhelmshaven, and German compass stations in the North Sea now operate under its direction. Ships requiring simultaneous bearing should first call Nordholz control station in the usual manner. The procedure to be followed in obtaining bearings, except for the change in the control station and the call signal, is the same as heretofore.

HYDROGRAPHIC INFORMATION BY DULUTH (MINN.) STATION

The radio station of the Inter City Radio Telegraph Co., at Duluth, Minn., call signal WME, will broadcast hydrographic information received by the branch hydrographic office at Duluth at 10 a. m. and 4 p. m., ninetieth meridian time, on 600 meters. This station will receive messages from vessels regarding hydrographic information free of charge. All messages should be addressed "Government Hydro, Duluth." A watch is maintained at this station from 7 a. m. to 7 p. m. daily.—*Hydrograph Bulletin, October 8, 1924.*

RADIO FOG SIGNAL ESTABLISHED IN GERMANY

A radio fog signal has been established on Borkum Riff Light Vessel, located in (approximately) $53^{\circ} 46' N.$, $06^{\circ} 04' E.$, to operate experimentally in conjunction with the submarine bell on the vessel. During fog both signals will be transmitted simultaneously, which will enable a ship fitted with radio direction-finding apparatus to determine her bearing, and by noting the time elapsed between the radio transmission and the coincidence of the two signals her distance from the light vessel can also be calculated.

REGULATION OF USE OF WIRELESS BY FOREIGN WAR VESSELS IN SOUTH AFRICAN WATERS

(a) Foreign men of war and service aircraft accompanying them lying in a naval port, or in any harbor which is close to a naval port, shall obtain permission from the senior naval officer at the naval port to use their wireless telegraphy or telephony apparatus, stating system, wave lengths, and times of transmission proposed.

(b) Foreign men of war and service aircraft accompanying them lying in any harbor which is not close to a naval port shall conform to the following regulations:

I. Transmission on 600 meters is forbidden, except for the purpose of making or answering signals of distress.

II. Interference with naval, army, or air-force signalling, or any fixed shore station must be avoided.

III. Transmission must be discontinued on request from (1) any naval authority, (2) the port authorities, (3) any fixed shore station.

IV. Protracted singalling using apparatus transmitting other than pure continuous waves must be avoided.

V. If there is a British or Dominion fleet or warship lying in the harbor, the senior naval officer should be consulted.

The above regulations were promulgated by the Department of Posts and Telegraphs of the Union of South Africa, under date of September 3, 1924.

* Hurricane warnings are issued and repeated every two hours.

NOTE.—All naval time signals are made in a standard manner, which is as follows: The signals begins 5 minutes before the hour to be marked and consists of a dot for each second. The dot for the twenty-ninth second of each minute is omitted, and also the last 5 seconds of the first 4 minutes. The last 10 seconds of the fifth minute are omitted, this silence being followed by a 1-second dash, the beginning of which marks the time signal.

LOST COMMERCIAL RADIO OPERATORS' LICENSES

Printed below is a list of radio operators' licenses which have been reported to this bureau as having been lost. Should any of them be found, they should be returned to the bureau for cancellation. Inspectors and others concerned should see that lost licenses are not being used by unauthorized persons.

SANDHAMN (FINLAND) RADIO STATION TRANSMITS ICE REPORTS

Sandhamn Radio Station (OJA) transmits on a wave length of 5,200 meters, at about 16.58 Finnish time (14.58 Greenwich mean time), ice signals and the effects of ice conditions on navigation. Transmission, according to the following code, follows the weather bulletin and the report concerns the conditions on the morning of the day the message is sent:

Ice Finland AA ininin ininin BB ininin ininin CC ininin ininin DD ininin ininin EE ininin ininin FF ininin ininin GG ininin ininin HH ininin ininin II ininin ininin JJ ininin ininin.

The letter "I" replaced by either a number (0-9) or the letter "x" indicates ice conditions, and the letter "n" replaced by either a number (0-9) or the letter "x" indicates navigational conditions, have the following signification:

j=Ice conditions	n=Effect on navigation
0—Clear of ice	0—Navigation unobstructed.
1—Light ice	1—Navigation unobstructed for steamer; difficult for sailing vessels.
2—Close sludge	2—Navigation difficult for small steamers; dangerous for sailing vessels.
3—Fined sheet of ice	3—Navigation only possible for large steamer without ice breaker.
4—Drift ice	4—Navigation only possible for steamers strengthened for ice, without help of ice breaker.
5—Packed ice	5—Navigational channel kept open.
6—Close packed drift ice	6—Navigational channel kept open with the assistance of ice breaker.
7—Rift in the ice parallel to the coast	7—Navigation interrupted.
8—Screwed ice	8—Sea mist, fog or snow.
9—Coarse ice masses	9—Navigation closed.
—No information	—No information.

The double letters AA, BB, CC, DD, EE, FF, GG, HH, II, and JJ divide the message into ten main groups, each one consisting of two subgroups with three pairs of the letters "in" in each. The letters "in" indicate the conditions in a distinct area or fairway, as follows:

Main group	Subgroup	Pair of letters	Fairway or area
AA.....	I.....	First..... Second..... Third.....	Björkösund. Väkkomotala's vicinity. The sea westward of Björko.
	II.....	First..... Second..... Third.....	Fairway Viborg-Trangsund. Fairway Trangsund-Rödholn. Off Rödholn.
	BB.....	I.....	Kotka Harbor and neighborhood. Off Rancko. Off Luppli.
		II.....	The sea westward of Hogland. The sea southward of Hogland. The sea westward of Hogland.
		I.....	Helsingfors southern harbor and neighborhood Off Sveaborg. Off Grankarsbadarna.
CC.....	II.....	First..... Second..... Third.....	At Porkala. Off Kallbadjan, BarosundsJärden.
	DD.....	I.....	The sea off Jussaro. Hango Harbor and neighborhood. Vicinity of Russaro.
		II.....	The outer sea off Russaro. Hango western fjord. The southern part of Gulikrone Fjord.
		I.....	Abo Harbor to Stora Becken. Erstan. Välskär Fjord.
EE.....	II.....	First..... Second..... Third.....	Vicinity of Uto. The outer sea off Uto. Skiftet.
	FF.....	I.....	At Ledstrand. Eastward of Nyhamn. The sea off Kobba klintar.
		II.....	Vicinity of Mariehamn. Westward of Eckerö. Toward Salskar.
		I.....	Vicinity of Raumo. The sea off Raumo. The neighborhood of Redandersgrund.
GG.....	II.....	First..... Second..... Third.....	Mantyluoto Harbor and vicinity. Off Kallo and Raizo. The outer sea off Raizo.
	HH.....	I.....	Vasklos Harbor and neighborhood. Between Storhasten and Ensten. Ronnskar Fairway.
		II.....	Norrskär Fairway. Jakobstad Harbor. Ado Roadstead.
		I.....	The sea off Masaskar. Yxöla Harbor. Inner sea at Tankar.
II.....	II.....	First..... Second..... Third.....	The outer sea off Tankar. Brähestad Roadstead. Toward Nahkiainen.
	JJ.....	I.....	The sea northward of Iekkresseli. The outer harbors of Uleåborg. The channel to the harbors of Uleåborg.
		II.....	The sea off Marjaniemi Light. The harbors of Lappi.

RADIO SERVICE BULLETIN

19

The message may be abbreviated as follows:

(a) If the ice and navigational conditions of all the areas of one main group are the same, the message gives after the pairs of letters (AA, BB, etc.) only one pair of symbols "in"; for example, AA 34.

(b) If the ice and navigational conditions of all the areas of several successive main groups are the same, only the pairs of letters followed by only one pair of symbols will be issued; for example, BBCCDD 00.

(c) When there is no need to issue warnings for a whole main group, this group will be omitted.

(d) If the conditions of a whole main group are unknown, this group will not be omitted, but treated as under (a); that is, FF xx.

Approximate position of Sandhamn Radio Station, lat. 60° 08' N., long. 25° 03' E.—*Underrattelser for Sjofarande 26 (372), Helsingfors, September 20, 1924.*

Note.—Hango Radio Station (OJD) will repeat, on request, on a 600-meter wave, the ice report broadcasted by the Sandhamn Station. The Hango Station will answer also, on the above wavelength, questions regarding the code of the ice report.

FOREIGN RADIO BROADCASTING STATIONS

The following list of broadcasting stations in foreign countries and noncontiguous territories of the United States is compiled from the information in the files of the electrical division. It includes only those stations which broadcast programs for popular reception, though many of the stations included do so only as a minor part of their business.

REFERENCES TO CURRENT RADIO PERIODICAL LITERATURE

This is a monthly list of references prepared by the radio laboratory of the Bureau of Standards and is intended to cover the more important papers of interest to the professional radio engineer which have recently appeared in technical periodicals. The number at the left of each reference classifies the reference by subject, in accordance with the scheme presented in A Decimal Classification of Radio Subjects—An extension of the Dewey System, Circular No. 138, a copy of which may be obtained for 10 cents from the Superintendent of Documents, Government Printing Office, Washington, D. C. Further information about these lists, availabilities of previous lists, and of the several periodicals is contained in the extended statement preceding the early lists as published in the Radio Service Bulletin prior to April, 1923, and also in May and September, 1923.

STANDARD FREQUENCY STATIONS

As a result of measurements by the Bureau of Standards upon the transmitted waves of a limited number of radio transmitting stations, data are given in each month's Radio Service Bulletin on such of these stations as have been found to maintain a sufficiently constant frequency to be useful as frequency standards. There may be many other stations maintaining their frequency just as constant as these, but these are the only ones which reached the degree of constancy shown among the stations upon whose frequencies measurements were made in the bureau's laboratory. There is, of course, no guaranty that the stations named below will maintain the constancy shown. As a means of maintaining constant frequency the high-power, low-frequency alternator stations listed below have speed regulators. Most of the broadcasting stations listed use frequency indicators (one-point wavemeters) and maintain a maximum deflection of the frequency indicator throughout the transmission. These broadcasting stations, with rare exceptions, vary not more than 2 kilocycles from the assigned frequency. The transmitted frequencies from these stations can be utilized for standardizing wave meters and other apparatus by the procedure given in Bureau of Standards Letter Circular No. 92, Radio Signals of Standard Frequencies and Their Utilization. A copy of that letter circular can be obtained by a person having actual use for it upon application to the Bureau of Standards. Washington, D. C.

THE STANDARD FREQUENCY TRANSMITTING SET AT WVV

An article of the above title, by H. J. Walls, of the Bureau of Standards, appeared in the October issue of QST. This article describes the special radio transmitting set used to transmit the semimonthly standard frequency signals from the Bureau of Standards. The transmitting set is a 1-kilowatt continuous-wave set of the "master-oscillator power amplifier" type, which is capable of transmitting either telegraph or telephone signals on frequencies from 125 to 2,000 kilocycles. The master oscillator is used to control the frequency of the set, and its output is amplified by four 250-watt tubes in parallel. The set has been designed so that the frequency will remain constant regardless of small changes in antenna constants, and so that the frequency may be readily shifted and accurately adjusted to any value within the range of the set. The circuits used and antenna arrangements are described in detail. Signals from this transmitting set have been received in all United States radio districts, Canada, Cuba, England, and Italy.

METHODS OF RECEIVING THE BROADCASTING STATIONS OF HIGHER FREQUENCY

Some broadcast receiving sets now in use can not be conveniently tuned to stations broadcasting on frequencies higher than 1,000 or 1,200; that is, not below 300 or 250 meters. The Third National Radio Conference recommended that the broadcast band of frequencies be extended to 1,500 kilocycles (200 meters). This emphasizes the importance of the production by manufacturers of sets which will tune conveniently at the higher frequencies and the desirability of information on how to use existing sets so that all stations may be tuned in. The range of receiving sets which employ a single tuned circuit—that is, where the antenna is part of the tuned circuit—may be extended to the higher frequencies without much difficulty. This applies both to crystal and tube sets. It can be done very simply by providing a fixed condenser (about 0.0002 microfarad) in series with the antenna which may be switched in or out of the circuit. The settings of the dials are different when the condenser is in and out of circuit. Shortening of the antenna likewise reduces the capacity and consequently increases the maximum frequency (minimum wave length) to which the set will tune.

In the two-circuit and other more complicated receiving sets the extension of the frequency range may not be so convenient. A general rule, however, may prove useful. The natural frequency of a circuit is determined by the product of the inductance and capacity in the circuit, the larger this product the lower the frequency (higher the wave length). To increase the frequency to which a

or both. The inductance may be reduced by reducing the number of turns, while a reduction in the number of plates or increase in spacing of the plates reduces the capacity of a condenser. The effective capacity in a circuit may also be reduced by using two condensers in series. Changes in receiving sets of this type can, in general, be readily made by radio listeners who construct their own sets.

RADIO TESTING

In order to correct a misapprehension about the radio-testing service of the Bureau of Standards, a statement of the subject is given herewith. The bureau receives many requests for tests of material and apparatus for radio use. There is such a large demand for this testing in comparison with the limited resources available for the work that the bureau has to concentrate on those phases of the work that are of maximum service to the public. This work includes the research required to maintain accurate standards, tests for the Government, tests of instruments which are in turn used as standards for testing considerable numbers of other instruments, tests of importance to the bureau as a matter of research, and a few other tests for which special reasons arise. Consequently, the radio tests made are limited almost entirely to fundamental standards of measurements. No testing service is, in general, given which duplicates service obtainable from commercial testing laboratories. No tests are made the results of which are intended for use in advertising or sales promotion.

A number of laboratories handle commercial tests of radio apparatus and materials. Among these laboratories are the following:

Electrical Testing Laboratories, Eightieth Street and East End Avenue, New York, N. Y.
J. H. Morecroft, One Hundred and Seventeenth Street and Broadway, New York, N. Y.
General Radio Co., Massachusetts Avenue and Windsor Street, Cambridge, Mass. Dartmouth College, attention Prof. G. F. Hull, Department of Physics, Wilder Laboratory, Hanover, N. H.
The School of Electrical Engineering, College of Engineering, Cornell University, Ithaca, N. Y.
University of Tennessee, attention Dr. Chas. A. Perkins, director, engineering experiment station, College of Engineering, Knoxville, Tenn.
University of Wisconsin, attention Prof. H. M. Crothers, College of Mechanics and Engineering, Madison, Wis.
Armour Institute of Technology, Department of Physics, attention Prof. G. M. Wilcox, Chicago, Ill.
Curt High Tension Electric Laboratory, Harvard University, Cambridge, Mass.

There are many other laboratories which do radio testing, and their absence from this list is no indication of disapproval by the bureau. No comprehensive investigation of all such testing laboratories has been made.

A method by which individuals may standardize their own wave meters is provided through the standard frequency signals which the Bureau of Standards transmits semimonthly, announcements of such transmissions being made in advance in the press and in the Radio Service Bulletin.
