gathering organization on a *cost* basis.

# FM SHOWING PROGRESS

By IRWIN ROSTEN, Staff Writer, RADIO DAILY

THURSDAY, January 29, 1948, will go down in the annals of radio history as the turning point in the progress of frequency modulation broadcasting. On that day, in joint statement with the nation's four major networks, James C. Petrillo announced the end of his ban on FM duplication of AM live musical programs. Three days later, for the first time since October, 1945, listeners throughout the country were able to hear their favorite network shows with the higher fidelity that only FM can provide.

The day after the joint AFM-network announcement, Petrillo met with Everett Dillard, president of the Frequency Modulation Association and also of the first major FM web, the Continental Network. When the confab ended, Petrillo announced the removal of his ban on FM stations originating live music, and said that AFM locals may negotiate contracts with FM outlets.

This was the news for which FM broadcasters had long been waiting. No longer need they feel like unwanted stepchildren of the radio industry. For those who had patiently attended the FM infant for several years, it meant virtual assurance of their eventual success and hastened the day when red would no longer be the dominant color on their ledgers. For some, this happy switch to black ink will come during this year. For newcomers, for those licensees who had been holding back construction, the advent of music for FM meant that they would now try to get their stations on the air as soon as possible.

The breaking of the music czar's strangle hold on FM broadcasting is expected to provide strong stimulus for the ever-growing FM audience. A record-breaking total of 1,175,104 FM-AM receivers were produced last year, according to the RMA, as compared with only 181,485 in 1946. Early estimates of anticipated 1948 production

Rosten

placed the number of FM sets at least double last year's figure. This, however, was before the lifting of the music bans. The RMA had gone on record as stating "that the day network programs are made available to FM, production of FM sets will be stepped up." Now that that day has arrived, some trade estimates of FM receiver output for 1948 are as high as four or five million.

The achievements scored by FM during 1947 offer added substance to the optimism prevalent in the trade. According to the 13th annual report of the FCC, "FM showed its biggest and most material gain" last year. As this is written, there are 371 FM stations on the air, 312 of which are affiliated with AM outlets. The total number of FM authorizations is more than 965.

Indications are that national advertisers are gradually growing more aware of FM's possibilities. A spot check made by RADIO DAILY in New York revealed that key executives of the three independent FM stations in that city agree that "the worst is over." All three outlets reported increased sales, broader programming and an appreciable jump in listener response. Although they are still operating in the red, hopes are high that they may be able to break even this year.

The FM system, however, will not gain its due prominence solely on its own merits. Although, in the words of former FCC Chairman Charles R. Denny, "FM is the finest aural broadcasting system attainable in the present state of the radio art," it must be promoted, sold, plugged and promoted again to assure universal acceptance in the shortest possible time. The story of FM must be kept before the public eye and ear at all times.

A unique plan to increase local FM audiences—and one that may well be followed by many stations—was developed towards the end of last year by a new outlet on Long Island. The station sponsored a contest among local retailers, with free air time awarded dealers selling the most FM receivers or tuners. First prize was 65 quarter-hour periods over 13 weeks, with runner-up receiving 39 quarter-hour shows. The next 15 stores each receive one 15-minute seg a week for 13 weeks, and all other entries get five spots each.

# PROGRESS OF EDUCATIONAL FM

By **GEORGE JENNINGS**, *Director, Radio Council—WBEZ, Chicago Public Schools*

DESPITE some difficulties met with during the past year, such as changing of frequency and the lack of suitable radio receivers for classroom use, educational FM broadcasting has taken great strides. The change in frequency seriously affected the operation of station WBEZ in Chicago, for example, since it meant the purchase of new transmitter, new antenna system, new antenna tower and a new site for the location of the transmitter. Cleveland, Ohio's WBOE made the changeover without stopping service and is now broadcasting on both the low and the high FM band. New York City's WNYE did or will close down for the period of change over.

Jennings

radio broadcasting and use in the annual sessions of the American Association of School Administrators. It is the administrator who ultimately controls the school funds for the establishment of stations and studios.

The Association for Education by Radio, and organization of administrators and teachers has held two semi-annual meetings during the year on a national basis and has established local units in Cleveland, Indianapolis, Washington, Detroit, Philadelphia, Chicago, Portland, Klamath Falls (Oregon), Sacramento, and Atlanta.

With the increased local interest in FM broadcasting and the increasing availability of radio receivers suitable for classroom use the growth of FM broadcasting seems assured. A warning must be made, however, concerning the fact that school stations, as with all others, must be programmed. Years ago when schools and universities held all licenses to operate, programming was the greatest difficulty, and many boards of education and trustees of universities were not prepared to finance an adequate program. Consequently, many such AM licenses were returned to the FCC. Educators are stressing, therefore, the use of radio and are likewise stressing the programming of stations.

Some thirty applications for FM broadcast station license have been granted by the FCC to schools, school systems, teachers colleges, and universities. Among the new stations to get into operation were WDTR, Detroit Public Schools and KUSC, the University of Southern California. The increased interest in FM for schools is evidenced by the increase in attendance at such educational meetings as the School Broadcast Conference, held annually in Chicago; the Institute for Education by Radio, held annually at Ohio State University and the Regional Radio Conference sponsored by the University of Oklahoma.

Another outgrowth of the interest in FM is the number of teachers organizations, such as the National Council of Teachers of English and Social Studies, which have included the consideration of the classroom use of radio in their annual progress. That interest is not alone on the part of the teaching staff is evidenced by the inclusion of sessions on

The state-wide FM network picture has lagged somewhat, with Wisconsin the only state at the moment which seems to have gone ahead with its plan for a statewide FM network. One station has been placed in operation at Madison and another is under construction at a site near Milwaukee. Despite the well-known advantages of such a state FM network for educational use, legislators are loath to use tax funds for what some of their constituents might think was in competition with other stations.

The ideal situation for FM educational broadcasting remains the large city school system, and some educators are doubtful if the smaller cities can not adequately be supplied with time for educational broadcasts by their own local AM and FM stations.

# FAX MAKING PROGRESS

By VAL ADAMS, Staff Writer, RADIO DAILY

RADIO gets more versatile every day. But a couple of decades ago a radio set was based on one little idea—AM broadcasting. Then they began to trick it up. A phonograph was put in. Along came FM. Television rightfully had to get in the act too. Now we're about to get facsimile, a fifth element in our radio sets which spews the printed word and lush layouts all over the living room floor, even while the events are in progress.

The home used to be a place where you slammed the door on the outside world. That era is over. Radio homes of the future will be communication centers in themselves, snowed under by incoming traffic via the eye, ear and printed page from the four corners of the earth. Walter Winchell's going to have to get a word better than "flash" or he'll be out of business.

This is an era when veteran newsmen are being tapped on the shoulder by managing editors and informed. "You're the facsimile editor. Get out a facsimile edition." And before those who are tapped can ask just what the heck they're supposed to do, they are informed that the managing editors are merely carrying out orders of the publishers. In other words, a lot of competent newsmen are suddenly getting titles they never even heard of before and they're strictly on their own.

It seems that those connected with the technical development and sale of facsimile facilities have made a successful pitch to broadcasters and publishers. Many of the latter are sold on the idea to the point of having laid their money on the line and some are already showing facsimile in their cities. As to whether or not this new medium has possibilities, there must be some significance in the fact that the New York Times and WQXQ staged the first postwar demonstration in that city early in 1948.

Facsimile newspapers won't be as common as the housing shortage overnight. But the trend of broadcasters and publishers making a decision to "Let's appoint a facsimile editor" is definitely growing. There are many who don't know just where facsimile is headed but they think it important enough to get their finger in the pie just in case.

Stations and newspapers starting facsimile today are not getting in on the

ground floor — they're in the basement. You write your own textbook as you go along. Technically, from the standpoint of scanners and recorders, facsimile is ready to go to the public. Next step is to work out a technique for making up facsimile newspapers. While some have done a little preliminary work, in general all are completely ignorant on this subject. But it's something that won't be learned or worked out in a laboratory. It must be done by actual operation—making up daily facsimile editions and putting them on the air. It will be learned only by hit and miss.

To sell an idea to the public, it normally must be a little different from a previous one, some new advantage must be added. Consequently, facsimile is not likely to sell itself publicly merely on the idea that now you can get your newspaper delivered into the home by radio instead of by boy. New kinds of formats, different from the average newspaper, must be worked out and probably new types of entertainment gimmicks particularly suited to facsimile.

News-wise, facsimile's greatest attraction lies in its possibilities as a picture medium. You can't lightly toss off the thought that with facsimile a housewife can hold a picture in her hand of a big fire with the caption reading, "Firemen are still fighting the blaze." The Miami Herald and WQAM-FM put a wet photo on the air of an attempted suicide, lying crumpled on the pavement, while an ambulance rushed the victim to the hospital.

If it's competition that makes business, then facsimile is going to be a big one. One of the hottest battles broke out in Philadelphia in 1947 between the Inquirer and the Bulletin and their FM outlets. Several weeks ahead, the Inquirer announced a public facsimile demonstration for early in May but about two days before the date the Bulletin suddenly staged its own. Late in December, the Inquirer started what it called the first daily facsimile newspaper but the Bulletin promptly exclaimed it had been doing it for eight months. It's an argument which might best be left for historians to decide but the real story seems to be that each can claim a first in separate ways. Technicalities, however, were overlooked in the rush for promotion.

# ***FM Broadcast Stations In Operation As of Jan. 1, 1948***

**O**PERATION prior to March 1, 1948, on the frequency shown is contingent on clearance of image frequency interference in present aeronautical aid receivers.
