## Directory and Log Book

The Radio Directory and Log-Book will add greatly to the pleasure in any radio receiving set. It is scientifically compiled and helps you to quickly locate stations on your dials not already logged. You can more accurately log each individual station after it is received.

The exclusive and copyrighted method of cross indexing by page and line enables you to quickly locate any Call Letter or City in the Dial Reading section, thereby eliminating the necessity of writing the dial readings in more than one section.

Log each station separately, regardless of how many others are on the same wave length. Through no fault of yours, dial readings of stations of the same wave length frequently will vary slightly although they are supposed to be the same.

You will find after logging several stations, that the stations in the Dial Reading section are listed in the same order that you receive them on your set and that your first dial reading in this section will be near one extreme point on your dials and your last dial reading near the other extreme point on your dials.

This arrangement enables you to quickly locate any station on your dials which can be "picked up" by your set. After you have determined the station you want to "bring in", find the nearest station to it in your log-book that you have already received. Turn your dials to this reading and then slowly rotate them towards the station desired. After a little practice, you will be able to judge the distance you should move them and you will be surprised at how easily and quickly it can be done.

This arrangement also enables you to check the efficiency of your receiving set. Select any two dial readings. The stations shown in the Dial Reading section between these two dial readings will also be found between the same two dial readings on your set, depending on the efficiency of your set and conditions "in the air."

Only 100 watt stations and larger are shown in the Dial Reading section as reception from stations smaller than this covers only a very small area. On pages 25, 26, and 27 will be found a list of stations of less than 100 watts power and any of these which you might receive can be listed in the Dial Reading section on the blank lines provided for that purpose.

### INDEX

	PAGES
Dial Reading Section, showing call letters, city, meters, kilocycles and wattage.....	3 to 12 inc.
The Radio Doctor.....	13 and 16
Map, United States, Canada, Mexico, Cuba, showing broadcasting stations and national time divisions..	14 and 15
Cities, indexed alphabetically, including call letters, meters, kilocycles, watts and owners.....	17 to 22 inc.
Call Letters, indexed alphabetically, and location.....	23 to 25 inc.
Stations of less than 100 watts power indexed alphabetically according to cities and including call letters, meters, kilocycles, watts and owners.....	25 to 27 inc.

Additional copies will be mailed prepaid on receipt of twenty-five cents each if they cannot be obtained from your local Radio or Magazine Dealer.

INTERCOLONIAL  
TIME

CITIES WHERE BROADCASTING STATIONS (100 WATTS POWER AND LARGER) ARE LOCATED

REFER TO INDEX OF CITIES, PAGES 17 TO 22 INC., FOR FULL INFORMATION REGARDING INDIVIDUAL STATIONS

AIR-LINE DISTANCE

MEASURE DISTANCE BETWEEN ANY TWO DESIRED POINTS WITH ORDINARY RULER AND EVERY 1/4" OF THIS DISTANCE IS EQUAL TO 83 MILES, OR 1 INCH OF THIS DISTANCE IS EQUAL TO 332 MILES.

LOOP AERIAL

THE DIRECTION OF A DISTANT STATION FROM YOUR SET AS SHOWN ON THIS MAP IS ACCURATE. USE IT ACCORDINGLY TO PROPERLY POINT YOUR AERIAL.

### SUGGESTIONS REGARDING TUBES

Inter-changing tubes in their sockets is sometimes beneficial to reception. Care must be taken that special detector tubes are not placed in any other stage than that for which they are intended. Other tubes may be inter-changed without damage.

When tubes become old, they may be rejuvenated by disconnecting the "B" batteries and turning on the "A" power until the tubes are as bright as possible and permit them to remain this way for from ten minutes to an hour. This has a tendency to build up an electron crust on the filaments and to strengthen tubes for further use. No benefit is derived, however, if the "B" batteries are left connected while undergoing this process.

Always keep your tubes turned down as low as possible consistent with clear reception.

### DEFECTIVE CONNECTIONS

Almost every trouble known to affect radio receiving sets can be at times traced to defective connections.

Look for these at terminals, joints, and at prong contacts of both sockets and jacks.

Solder joints wherever practical and possible and cover battery terminals and connections with vaseline after a clean contact has been made and screwed down tight.

### STATIC AND INTERFERENCE

Genuine static is something no one yet has been able to entirely overcome, and it is liable to make almost any kind of a noise in your set.

Another form of interference sometimes erroneously called static, and which may be local to yours and other sets in your vicinity, may cause any of the above mentioned noises. Sparking brushes in motors and dynamos, X-ray and violet-ray instruments, street-cars and even facial massage machines and vacuum sweepers are a few of the many causes which will sometimes set up an electrical disturbance affecting your set. Frequently these troubles can be eliminated by tracing them to their source and, perhaps just as frequently, all you can do is make the best of it.

So-called static is sometimes due to loose connections in your house lighting fixtures. To test for this, pull main switch of your house lighting circuit and, if the noise stops, here lies your trouble.

If, after you are thoroughly convinced that your batteries, loud speaker, tubes, etc., are O. K., the noises still remain, you can feel reasonably sure that your trouble is due to outside interference or static.

Try to bring in stations in other parts of the country and, if this does not reduce the noise, all you can do is to either shut off your set or "grin and bear it".

- DON'T** place your set on a radiator or near excessive heat. Insulations will be melted and the set ruined.
- DON'T** run your aerial directly over or under telephone or electric light wires.
- DON'T** use a cheap lightning arrester. It must have the approval of the Insurance Underwriters; otherwise your insurance may be void.
- DON'T** hook ground wire to gas pipe. Always use water pipe.
- DON'T** connect your set with tubes in the sockets. An accidental touch of the wrong battery wire might ruin them all. Connect batteries first, then put in tubes.
- DON'T** try to tighten any connection in your set with a metal tool while the "B" batteries are connected. An accidental touch of the wrong wire might burn out all of your tubes.
- DON'T** direct the loud speaker towards the receiving set. Sound vibrations affect the tubes.
- DON'T** turn tubes too bright. Turn as low as possible consistent with good reception. This gives better music and saves batteries.
- DON'T** try to paralyze your ears with loud reception. Best results and real music are in the modified tones.
- DON'T** let your storage battery lie idle. It is cheaper to use it every day than once a week. Permitting a storage battery to become completely exhausted injures it.
- DON'T** permit your set to remain open so that dust can get in it. Dust between the plates of your variable condenser spoils reception. Clean them occasionally by drawing pipe-cleaners between the plates. Care should be used not to spring the plates in any way.

This information compiled with the assistance of W. H. JERRETT, Publisher of The Broadcast Listener, and C. W. KEEN, Owner and Manager of Station WCWK at Fort Wayne, Ind.

Undoubtedly the manufacturer of your set knows more about it than anyone else, so follow his instructions as closely as possible while assembling and installing it.

Be sure it is operating to your entire satisfaction, according to the instruction sheet which accompanies each set, before trying any experiments or connecting any additional equipment.

Be particular about who services your set. Find a reliable, conscientious, experienced service man, thoroughly familiar with your type of set, and stick to him. A service man can do much more harm than good if he is not thoroughly competent.

Be sure switch is turned on.

Grounded aerial may cause this trouble. Inspect all connections and insulators and be sure aerial touches nothing.

See that tubes are all lighted. If one or more are lighted and the balance dark, be sure that contacts in tube sockets are O. K. If this does not remedy trouble, have tubes tested by competent service man.

If all tubes are dark, check your connections and wires again with instruction sheet. Be sure tubes are making proper contact in tube sockets. If trouble still remains, call service man.

### NO SIGNAL IN EITHER LOUD SPEAKER OR EAR-PHONES

### WEAK RECEPTION OR MUFFLED TONES

Test "A" batteries. Hydrometer reading of storage battery should be at least 1250. If dry batteries, obtain new ones, as old dry batteries cannot be successfully recharged.

Test "B" batteries. If they are weak, replace dry batteries or recharge storage batteries.

Too high voltage in "B" batteries will also cause these troubles. Be sure all wires leading to your set are attached to the proper battery terminals.

Scrape all aerial wire connections until bright and solder wherever possible, as these connections become corroded very easily.

Keep your tubes turned down as low as possible consistent with clear reception.

Some of these troubles may be due to too long an aerial. Shorten your aerial a few feet at a time, as it is easily possible to make it too short. A short aerial makes a set more selective, but, when shortened too much, makes it almost impossible to tune in anything except local stations. As the proper length varies for different sets and under different local conditions, you will have to try different lengths until you find one that satisfies you.

Operating a set at full power emphasizes these troubles, so keep your rheostat turned to the lowest point consistent with clear reception.

Do not expect as clear reception from distant stations as from local stations, as there is always a certain amount of static that increases as you bring in stations farther away.

A humming sound may indicate that your aerial is close to high voltage wires or your lead-in runs close to house lighting wires.

High-powered stations sometimes interfere with smaller stations, causing a howl or squeal while you are tuning in the smaller station. Tune in another station.

Setting loud speaker too close to set will sometimes cause a squeal or howl.

Loose or dirty battery connections will make these noises. Scrape contacts until bright and be sure connections are screwed down tight.

Covering battery connections and terminals with vaseline, after they have been scraped bright and screwed down tight, will help eliminate further trouble.

Overcharged or gassing battery will cause trouble. Have battery inspected by competent battery service man.

Noises created while hunting for or tuning in stations indicate that your set is past the oscillating point. If turning down rheostat does not eliminate this trouble, consult reliable radio service man.

Aerial wire running parallel with battery wires will sometimes cause squealing.

Whistling frequently indicates that a regenerative set in your neighborhood is trying to tune in the same station you have. The best thing you can do in this case is to tune in on another station.

# INDEX OF CITIES

Ready Reference may be quickly made to any City in the Dial Reading section (pages 3 to 12 inc.) by referring to the page and line number preceding each City on this page. The first number indicates the page and the second number indicates the line.

See pages 25 to 27, inc., for list of stations not included in this section.

Page & Line	City	Call Letter	Meters	Kilo-cycles	Watts	Owners
6-9	Akron, Ohio	WADC	258	1160	500	Allen Theatre
5-39	Albuquerque, N. Mex.	KFLR	254	1180	100	University of New Mexico

## STATIONS OF LESS THAN 100 WATTS POWER

Blank lines have been provided in the Dial Reading section for filling in the Call Letters, City, etc., of any station shown in this list which you might want to log.

We would suggest your using the blank lines nearest printed stations of the same wave length for this purpose.

City	Call Letter	Meter	Kilo-cycles	Watts	Owner
Agricultural College, N. Dak.	WPAK	275	1090	50	N. D. Agricultural College
Albuquerque, N. M.	KFVY	250	1200	10	Radio Supply Co.
Allentown, Pa.	WCBA	254	1180	15	Charles W. Heimbach
