# KELLER'S RADIO CALL BOOK *and* LOG

PUBLISHED QUARTERLY (MARCH, JUNE, SEPTEMBER AND DECEMBER 1ST) BY

KELLER PUBLISHING COMPANY, St. Paul, Minn.

Subscription Price: \$1.00 Per Year.

VOL. 8

FALL ISSUE (SEPTEMBER-OCTOBER-NOVEMBER), 1932

No. 3

Entered as Second Class matter May 24, 1927, at the post office at Saint Paul, Minnesota, under the Act of March 3, 1879.

*Edited from Official Information Received Directly from Washington, D. C., and Ottawa, Canada*

## For Those Who Want the Best!

This magazine is published especially for those Radio enthusiasts who want Complete, Reliable and Up-to-date information concerning the Radio Broadcasting Stations of the World always on or near their Radio Receiver for quick reference.

It is now in the EIGHTH year of publication and is recognized throughout the U. S. and Canada as the one dependable Radio Reference Book that is always up to date.

Contains ALL Broadcasting Stations of the U. S. and Canada, arranged in THREE WAYS for convenient reference. Contains ALL Broadcasting Stations of Foreign Countries having power of 50 watts or more. Contains Short Wave Stations; Television Stations; National and Columbia Broadcasting Stations, Police and Fire Department Broadcasting Stations and the latest news concerning the world's progress in Radio.

## Every Radio Owner Should Subscribe.

Every owner of a Radio Receiving Set should subscribe for Keller's Radio Call Book because it is the only publication that is revised and corrected frequently enough to constitute a *reliable* index of the Call Letters and other information relating to the Broadcasting Stations of the World. Its handy size and its reliability recommend it to every user.

## Changes Are Numerous.

*There are numerous changes* in Call Letters, Location, Wave Length and Power *every month*; new stations are continually being added and frequently old stations are discontinued. Hence any list of stations, however accurate when printed, becomes very inaccurate, incomplete and unreliable within two or three months after it is issued and a newly revised book is absolutely necessary.

## How to Subscribe:

Subscriptions for Keller's Radio Call Book will be received by any Radio or News Dealer or may be sent directly to us by mail. Use the Subscription Blank printed in the back of this book. Each subscription must be accompanied by a Money Order or Bank Draft for the full amount. Until further notice a useful and valuable *Distance Chart* will be included FREE with each Subscription.

# LATEST NEWS OF THE RADIO WORLD

Important Items of Interest from  
the Field of Radio Broadcasting

## *Canadian Radio Plan Perfected*

AN exchange of frequencies between the United States and Canada, whereby we would grant to Canadian broadcasters the use of the 540-kilocycle frequency, now used for military aviation, and of the channels on 1,050 and 1,100 kilocycles in exchange for exclusive use of the channels on 580, 890, 1,010, 1,200 and 1,210 kilocycles, now shared by the two countries, is under negotiation between the Canadian Minister in Washington and the State Department.

The reallocation of frequencies was suggested by the Canadian government in order that it may make effective the recommendations of a special committee appointed to investigate the whole question of Canadian broadcasting, calling for the establishment of a chain of high-power stations, operating on cleared channels, extending across the entire Dominion, with a number of low-powered stations of limited range to be used for community service.

## *Radio Develops A New Language*

AN entirely new language, intelligible only to the members of the radio fraternity, has been developed by the radio amateurs of the country as a means of reducing the time required for the transmission of long messages which, in view of the large number of amateurs operating, aids in the elimination of interference.

This "radio language," it is explained by C. A. Briggs of the American Radio Relay League, in writing of amateur operations in the Yearbook of the United States Bureau of Standards, is a new and standardized form of language based on

abbreviations which are practical, and presents an interesting example of a logical and well-founded practice arising out of experience. It is world-wide and, on account of the energy of the American youth in developing radio, is based on English. It is so comprehensive that amateurs have sometimes talked to each other without realizing that neither could speak the other's language.

## *Denmark Leads World in Set Distribution*

BROADCASTING is more popular in Denmark than in the United States, if the number of receiving sets per thousand of population is taken as the criterion, it is disclosed by a survey just completed by the Union Internationale de Radioiffusion at Geneva.

With a population of less than 3,500,000, Denmark at the close of last year had 475,000 sets, an average of 133.9 sets per 1,000 inhabitants, while the United States, with nearly 125,000,000 people, had 16,680,000 sets, or an average of 133.1 per 1,000, it is shown.

Interest in broadcasting has increased tremendously in Denmark in the past five years, it is revealed, it being estimated that in 1926 there were only 35.5 sets per 1,000 of population.

## *Police Radio Proving Value*

SEVERAL years of operation have demonstrated conclusively the value of police broadcasting services, and many high police officials see in the not distant future the establishment of such services in every large city and the linking of all services within areas covering several hundred square miles into a closely knit network which will make escape after a crime highly difficult.

## *New Regulations Improve Reception*

**M**ATERIALLY improved reception in practically every section of the country already has resulted from enforcement of the Federal requirement that broadcasting stations must keep within 50 cycles of their assigned frequency.

Put into effect nationally on June 22, measurements by Government radio inspectors immediately showed a diminution of interference and, consequently, an increase in the effective area of many stations. Largely as a result of this, engineers declare, radio now is better than it has been in any summer since broadcasting was established.

## *Band Width Big Problem of Television*

**F**UTURE development of the scanning disc method of television may necessitate a tremendous broadening rather than a narrowing of the channels used for that service, and it is for this reason that the Government has been reluctant to make any permanent provision for television frequencies, according to Radio Commissioner Harold A. Lafount.

The commission has been following closely the progress of television and will give consideration to a fixed position in the radio world for it, as soon as it is demonstrated to be commercially feasible, Mr. Lafount declared. But, he added, "we are not yet convinced that television has emerged from the laboratory and is ready to matriculate into the more severe course of adult entertainment and education."

## *Amateur Radio Growing*

**A**MATEUR interest in radio is today growing more rapidly than ever before, the number of amateur stations last year showing an increase of about 40 per cent over the preceding year and the total licensed, 31,859, being more than double the number in 1922.

## *Super-Power to be Tried Out*

**N**EW experiments in the use of super-power for broadcasting have been authorized by the Federal Radio Com-

mission in the granting of a permit to the Crosley Radio Company's station for operation on 500,000 watts.

This will be the highest power ever used in the United States, the limit heretofore having been 400,000 watts, used by the Westinghouse station at Pittsburgh. Use of these high powers, however, is limited to the hours between 1 and 6 A. M., in order that there may be no interference with regular broadcasting.

## *Government Claims to Patents Rejected*

**C**LAIMS of the Federal Government to ownership of patents on inventions perfected by its employes have been denied for the second time, the United States Circuit Court of Appeals at Philadelphia having affirmed a decision of the District Court of Delaware holding that Percival D. Lowell and Francis W. Dunmore were entitled to the benefits from radio inventions made by them while in the employ of the Bureau of Standards.

## *Synchronization Declared Failure*

**P**RESENT methods of synchronizing two or more high-powered broadcasting stations on the same frequency to transmit the same program have not proved successful, and the Federal Radio Commission has called a halt to the experimental work which has been going on along this line until new ways of accomplishing synchronization are developed.

## *Radio Most Important Electrical Industry*

**R**ADIO production in the past ten years has become the most important subdivision of the electrical goods industry, with an output in 1929 estimated at more than 20 per cent of the aggregate value of the entire industry.

Probably no other industry in the history of the country has ever so rapidly carved out an equally important place for itself. Radio sets, parts and accessories handled by the wholesale trade in 1929 exceeded a half-billion dollars in value, the retail value of the year's trade being placed at more than \$1,000,000,000.

## *Government Control No Radio Panacea*

CLAIMS that government control of broadcasting operations eliminates all the evils that are charged against the American system are exploded in a report on broadcasting abroad, just issued by the National Advisory Council on Radio in Education.

On the contrary, it is indicated in the report, European broadcasting methods and programs leave much to be desired; and, while no attempt is made to compare foreign broadcasting service with that of the United States, the conclusion is inescapable that broadcasting in this country, free from all government control except with respect to licenses, needs no apology nor could it be materially improved by the adoption of European methods.

## *Radio License Fee Imposition Expected*

IMPOSITION upon broadcasting and other radio transmitting stations of fees for licenses is expected to be given serious consideration by Congress next December if, as now appears possible, the tax bill which has just become effective fails to provide the revenues which the Treasury some weeks ago estimated it would raise.

Tax returns have been dwindling steadily for a number of months, and the Treasury has been forced repeatedly to revise its estimates. Present indications are that the miscellaneous taxes imposed under the new law will fall short of the amounts hoped to be collected, in which event the next session of Congress is expected to undertake additional tax legislation and a thorough survey of the field of Government effort in an attempt further to reduce expenditures.

## *Call Assignments Methodical*

PRESENT methods of allocating call letters to radio stations are the result of years of development and while to the average listener they are merely substitutes for names, to the initiated they identify not only the general location of the station but also its type.

In the early days of radio there was little system in the use of calls for station identification, but even before the advent of broadcasting it became evident that some method of allocation would be required to prevent confusion. Under an international convention effective in 1908, this country was allocated all combinations beginning with N, W and K, with the exception of certain K calls then assigned to other countries. For ease of identification, the radio division of the Department of Commerce allocated all K calls to stations in the West and to ships plying the Atlantic Ocean and Gulf of Mexico, and W calls to stations in the East and to ships on the Pacific Ocean. The division of calls between ships worked until the opening of the Panama Canal when, of course, ships from one ocean crossed to the other and segregation was no longer possible.

Government officials have always been lenient in granting requests for special call letters, and dozens of stations throughout the country have combinations of their own choosing, more or less descriptive of their location or their ownership. Examples of this are WACO, at Waco, Texas, and WCCO, at Minneapolis, erected by the Washburn Crosby Company.

## *Short Wave Ban in Japan*

RECEPTION of international broadcasts in Japan is now impossible because of the government prohibition upon possession of short-wave sets and there is considerable agitation for modification of the ban which may result in a relaxation of the regulations, according to reports transmitted to Washington by Government representatives at Tokyo.

## *Radio Control Merged*

WITH the issuance of an Executive Order by President Hoover on July 20, the radio division of the Department of Commerce passed out of existence and its functions, appropriation and personnel became a part of the Federal Radio Commission, bringing under one head all administration of the radio laws and control of broadcasting, communications and other radio activities.

## Government Radio Control Feared

GRAVE fears that the Government is about to embark upon a program of broadcasting control are entertained in the radio industry as a result of the recent report to Congress of the Federal Radio Commission despite the fact that the commission held that no real need exists for control of radio advertising.

## Radio to Carry Bulk of Campaign

RADIO broadcasting will form the backbone of the forthcoming Presidential campaigns and will to a very large extent carry to the voters of the country the arguments of the two major candidates and their army of campaigners, in lieu of personal appearances.

The decision to use broadcasting almost exclusively for the speeches of party leaders has been reached by the boards of strategy of the two parties—the national committees—after somewhat doleful surveys of their respective treasuries. While it cannot be said that the Republicans will have a plethora of funds, the Democrats, it now appears, will have to dig deep for sufficient money to stage any sort of national show at all.

## Still Blaming Radio for Weather

IF the weather this summer is too wet or too dry, don't blame it on broadcasting, for radio has absolutely no influence upon climatic conditions.

Following a custom now of many years' standing, meteorologists in various sections of the country are issuing their annual denial that radio and the weather have any connection, in a vain effort to head off the protests which yearly are received in large numbers.

Broadcasting is a dozen years old and weather records show that no changes in climatic conditions other than those to be expected have occurred in that time, yet there are thousands of persons throughout the country who place the responsibility for rainy periods or droughts at the door of the broadcaster.

## Higher Station Powers Made Permanent

SUCCESSFUL operation of a number of broadcasting stations on "experimental" powers allowed by the Federal Radio Commission has resulted in the commission granting the use of such powers to the stations permanently.

## Our Portrait on the Front Cover

EDWARD BRITT HUSING was born in Deming, N. M., in 1902, but his boyhood was spent in Gloversville, N. Y., and in New York city.

The end of the war found "Ted" restless and without plans for the future. The next few years were spent in playing professional sports in the fall and winter and roaming the country during the summer months, hitch-hiking or riding the rails.

He finally secured a job as a "runner" with a Wall Street firm at \$12.00 a week. This employment lasted two weeks. The second week he was there, Jess Willard met Jack Dempsey for the heavyweight championship. Ted bet the head of his firm a week's salary that the Manassa Mauler would knock out the hulking cow-

boy, Willard, in the fourth round. The genial employer gave him "ten to one" and Ted quit his job with \$120.00.

With his indomitable energy and concentration, Husing learns all there is to know about anything that interests him. Announcing interested him from the start and still does. Within six months after entering radio, he was introducing the President of the United States to fifty-million people!

Ted Husing is as much a part of Broadway as is Times Square. He wears astonishing clothes, including a blue tuxedo,—clothes that would make a matinee idol look shoddy; and he can talk, if necessary, at the rate of 300 words a minute!

## TO RECORD YOUR DIAL READINGS

Find the Station in the "Alphabetical List by Call Signals"; ascertain the Wave Length or Frequency; then turn to the corresponding page in the List of Stations "Arranged by Wave Lengths" (Pages 17 to 22). The spaces between the wave length and call letters of stations may be used for recording dial readings if desired. The dial setting of any station will apply to any other station of the same wave length.

## United States Broadcasting Stations

### Alphabetical List by Call Stations

NOTE: The call Letters in parentheses under the heading "Other Data" are stations with which time is divided. "C. P." indicates that a Construction Permit has been issued for a higher power than now being used. "Daylight" indicates that the station is permitted to broadcast during daylight hours only. "Lim. time" or "L. T." indicates that broadcasting is restricted to certain hours. Where higher and lower amounts of power are given, the higher power is for daytime only.

## Cumberland Mountain Stories

A New Booklet of the best humorous and other stories of the Cumberland Mountains, by W. N. Hinkle. Mr. Hinkle was born and reared in the Cumberlands and he understands the people of that interesting section. These are, without doubt, some of the cleverest short stories ever published. Mr. Hinkle, a newspaper editor with years of writing experience, is a humorist of the highest ability and these stories may be read in the family circle or in a mixed assemblage with keen amusement to all. Every reader is delighted with them. Order a copy, TO-DAY, read it, enjoy it and tell your friends about it.

(Postage stamps not accepted.)

Price, postpaid, 50c.

KELLER PUBLISHING COMPANY, St. Paul, Minn.

## Funniest Darkey Stories

A New Booklet of W. N. Hinkle's best Darkey Stories. These are positively among the funniest Darkey Stories ever written, absolutely true to life, depicting the character of the Southern Negro in his native surroundings; they are most humorous and entertaining; yet, they contain nothing coarse or offensive; on the contrary, they will be enjoyed by every reader and enjoyed immensely. Without having read this booklet, you have missed an opportunity for delightful entertainment that you cannot afford to overlook. Order a copy, TO-DAY. You will never regret it!

(Postage stamps not accepted.)

Price, postpaid, 50c.

KELLER PUBLISHING COMPANY, St. Paul, Minn.

## Poems of Paul Pickett

A New Booklet of Verse, by "The Poet of the Hoosier Hills and Valleys." Mr. Pickett knows the plain, upright folks of rural Indiana. He has shared their joys and their sorrows. His poems reflect their lovable characteristics in an original style that is fascinating and genuine. To lovers of real poetry, both humorous and serious, but always inspiring and uplifting, this booklet is worth many times its small cost.

(Postage stamps not accepted.)

Price, postpaid, 50c.

KELLER PUBLISHING COMPANY, St. Paul, Minn.

## "Favorite Poems and Prose"

A New Literary Magazine that ALL can enjoy. (New size, 8½x11½ inches.)
