The Second Edition of the NRC Domestic Log is gratefully dedicated to the many members of the National Radio Club whose volunteer efforts have kept the NRC in operation continuously since 1933.

CREDITS & ACKNOWLEDGEMENTS . . .

*Preparation and correlation of station information: Russell Edmunds, Randall Kane, John Callarman, Gordon Nelson.

*Proofreading: George Kelley, Randall Kane, Marc DeLorenzo, Phil Sullivan, Tom & Carolyn Holmes, Gordon Nelson.

*Data Key punching: Lon Berman, John Daller, Mark Katz, Don Kenney, Gordon Nelson, Michael Northam, Gail Oakes, Phil Sullivan, Wendy Wallis.

*Final Copy Preparation: Peggy Kelley, Carlita Nelson, George Kelley, Gordon Nelson, Randall Kane, Ruth Nelson.

*Special Lists: Bruce Reynolds (networks), Page Taylor (LPRT's).

*Printing Liaison: Everett Rust

Special thanks also go to Gilfer Associates for advertising and other essential services, cooperating DX clubs, and the Information Operators of the phone company who've put in more effort for the Log than they'll ever know . . .

Time Zone Map	i.b.c.

This latest edition of the NRC Domestic Log is not completely accurate. Since the first edition of the Log appeared a year and a half ago, more than 3,000 changes have taken place and have been incorporated into the present edition. Since this corresponds to an average of about 5 changes a day, it's obvious that absolute accuracy can only be approached - but never reached! In spite of the volatile nature of AM station information (particularly addresses and network affiliations), the edition you are now reading is by far the most complete and accurate station guide of its kind ever produced. The basic information in this Log has come from a variety of sources and in many cases has been validated by monitoring by members of the National Radio Club.

The NRC invites all users of this Log to supply us with corrections, additions, and changes for use in preparation of the next edition. Members of NRC will receive Updaters to the Log as a regular feature of DX NEWS magazine. A companion publication, the NRC Latin American Log, listing complete information on all stations in the Caribbean area, South and Central America, will appear in the near future; further information can be obtained from NRC HQ, Box 99, Cambridge, Massachusetts, 02138. Good DX!

Gordon P. Nelson
Chief Editor

How To Use the NRC Log

2

EXPLANATION OF SYMBOLS:

Column One gives the call letters of the station. Certain symbols involving construction permits are presented in this column. They are: (*) for a new station not yet on the air, (+) for a permit to change power, antenna, or location on the same frequency, and (#) for a permit to change to this channel from operation elsewhere in the band.

Column Two gives information naming the city or town to which the station is officially licensed; the zip code is also given if the mailing address is the same as the license address.

Column Three provides information regarding the licensed hours of operation and directional antenna patterns if used. The symbols are as follows:

- D1 Daytime operation only, nondirectional antenna
- D3 Daytime operation only, directional antenna
- L3 Limited time operation, directional antenna
- SH Specified hours as directed by the station license (note: these are usually stations in areas of low population density which for financial reasons seek to operate less than the minimum number of hours specified for unlimited licenses.)
- ST Shared time operation; broadcasting time is shared with another station on the same channel
- U1 Licensed to operate unlimited time with nondirectional antenna
- U2 Unlimited hours of operation with a directional antenna at night (defined as sunrise to sunset)
- U3 Unlimited hours of operation with the same directional antennas both day and night
- U4 Unlimited hours of operation; directional antennas both day and night but different patterns
- U5 Unlimited hours of operation; directional antennas during the day but nondirectional at night
- U6 Unlimited hours of operation; directional antennas at night and during critical hours (until two hours after sunrise and from two hours before sunset)

Columns Four and Five show night and day operating powers respectively, in watts.

Column Six contains special power information for stations which must operate with special power during critical hours (CH) and for stations with Presunrise Service Authorities (PSA's). The PSA's are used during the months when local sunrise occurs after 0600 local time. Daytime stations (i. e., those licensed to operate local sunrise to local sunset) may begin operations during these months at 0600 with their PSA power. Under certain conditions a station licensed for unlimited operation may also use PSA power with their daytime antenna pattern - either to take advantage of the daytime pattern's ability to provide increased coverage of special areas (in spite of reduced PSA power) and/ or because operation with a directional pattern requires the presence of a First Class engineer at the transmitting site.

Column Seven gives the network affiliation (or, in the case of Canadian and Puerto Rican stations, the language used if not English).

(Ac) - American / Contemporary
 (Ae) - American / Entertainment
 (Ai) - American / Information
 (C) - Columbia Broadcasting System
 (N) - National Broadcasting System
 (M) - Mutual Broadcasting System

(S) - Spanish language programming
 (F) - French language programming
 (B) - Bilingual, French & English

Column Eight gives the mailing address of the station for reception reports. If no address is given and the station is not an LPRT or AFRS outlet, the call letters and city name are sufficient address for reports.

Column Nine gives the schedules for fulltime and specified hours stations when this information is available. Times in parentheses (unless otherwise specified) are for Sunday operation. Because the schedules for stations operating with daytime and limited time licenses vary with the season, no attempt has been made to include these schedules. A set of maps showing the time of local sunrise and sunset throughout North America for various times of year are available from National Radio Club headquarters; write for further information. A number of special abbreviations are used in this column: (SP) - Silent Period; (NSP) - No Silent Period; (LSR) - Local Sunrise; (LSS) - Local Sunset.

AFRS & AFCN Stations

These are low-powered stations belonging to the American Forces Radio Service (AFRS) and Armed Forces Caribbean Networks (AFCN) designed to cover certain military bases and installations. Programming usually consists of a mixture of local and transcribed programs and local identifications are often omitted or infrequently given. Usually the addresses given here in the NRC Log will suffice for reception reports but if they fail try routing your reports through AFRS HQ: Deputy for American Forces Radio and Television, Office for Information for the American Forces, ASD(M+RA), Washington, DC, 20305. These stations are usually interested in reception reports and tend to be good verifiers.

Canadian L.P.R.T. Stations

Canada's population is spread very thinly over a very large area and this makes the task of supplying adequate radio service difficult; the presence of the auroral zones means that even 50 kw clear channel outlets are blacked out at times. Canada has therefore established a far-flung network of low-powered local medium-wave transmitters to serve isolated communities. These low powered relay transmitters are situated in Canadian Pacific Railroad stations and receive their programming from special phone lines; the power of these stations is only 20 to 40 watts and they are unattended operations. In spite of their low power they are often heard by DX'ers - although the fact that several LPRT's relaying the same station often operate on the same channel may make positive identification difficult. The call letters of the relay station indicate the major Canadian Broadcasting Corporation station relayed: e.g., CBNC carries the programming of CBN, etc. Reception reports should be addressed to the stations relayed.

Carrier-current Stations

These are small, low-powered operations designed to provide AM radio coverage to colleges and universities. Although many of these stations use legal sounding call-letters and otherwise seem to be professional broadcasting stations, they are actually unlicensed operations manned by students. The 500-odd carrier current stations operate by virtue of an FCC Rules provision which permits unlicensed low-power operation on the medium-wave band as long as the effective radiated power is below specified levels. When operating properly such a station cannot be heard at a distance greater than about a mile under the best of conditions; very often, however, these stations radiate more than the legal amount of signal permitted by the FCC and under such conditions may be heard by DX'ers in distant locations. Most carrier-current stations operate in the lower part of the band, with 550, 560, 640, and 650 being favorite channels. The technical quality of the signals from these stations tends to be very good and frequently the call-letters adopted reflect the initials of the college, e.g., WNEU = Northeastern University. Some of these stations will verify reception reports if the listener takes care to stress that he is using special receiving equipment and is not just a casual listener. There is no comprehensive list of these stations available although we plan to incorporate one into the next edition of the NRC Log; consult the short list in the Broadcasting Yearbook if you are trying to identify one of these stations.

Illegal Stations

Unlike carrier-current stations which if properly operated are completely legal, at any particular time there are usually quite a number of unlicensed "bootleg" stations on the air and these are frequently logged by the alert DX'er. Illegal stations are usually characterized by poor audio quality, drifting frequency, and erratic schedule. Most of these operations are strictly local affairs but occasionally a high-powered bootlegger will take to the air and be widely heard. The majority of these stations operate in the top of the band because of transmitter and antenna considerations; the region right above 1600 kHz is probably the favorite spot. Most of these operations are quite ephemeral for obvious reasons and it is a real challenge to track them down and obtain a verification before the FCC moves in. . .

English-Language Foreign Stations

The alert DX'er will discover a number of English language stations in the band not listed in the NRC Log; while international DX'ing on the MW band is a highly sophisticated specialty within the DX hobby, we are here listing a few of the stations that are likely to be logged on simple equipment in North America.

- 690 XETRA, Tijuana, Mexico
- 750 Jamaica Broadcasting Corporation
- 780 Radio Barbados, Barbados/ ZBVI, British Virgin Islands
- 830 Radio Havana, Cuba
- 1090 XERB, Rosarito Beach, Mexico
- 1235 ZBM1, Bermuda
- 1540 ZNS, Bahamas

How To Send a Reception Report 179

Given sufficient skill and patience on the part of the DX'er, very few U.S. and Canadian stations will fail to verify reception reports. Many stations have become a bit reluctant to verify, however, because of the large number of inadequate and incorrect reports that are received. Even worse for station relations are the not infrequent reception reports which demand rather than request verification of reception.

What goes into a good reception report for a medium-wave station? A number of items are standard and should go into every report without fail. Give the date of reception and the frequency in kilocycles. In the case of U.S. and Canadian stations the NRC Log should supply exact frequencies; for Latin American and other foreign stations, estimate the frequency as closely as possible.

The most crucial portion of the reception report - and the part most often found lacking in many poor reports - is the listing of specific and verifiable program details. The object of a reception report is to supply the station with incontrovertible evidence that the particular reception did in fact occur; the station must be able to compare the details of programming supplied by the DX'er with the station log or their knowledge of their own programming before they can issue a meaningful verification of the reception. No hard-and-fast rule can be given for how many minutes of program details should be given in a reception report but generally speaking the more the better. Common sense must dictate what the acceptable minimum of detail is for a particular reception. For example, a word-for-word transcription of a one minute local advertisement would constitute excellent verification material whereas a listing of 20 pop record titles might be meaningless since stations are not required to include specific record titles in the station log. Medium-wave stations in the U.S. are required to enter the times of identifications, commercial spots, and public service announcements in the station log, however, and those are the types of program details of greatest value for reception reports. Song titles, especially for Top 40 programmed stations, are often next to worthless. Particular emphasis should be placed on program details that are unique to the station in question: exact wording of station promos and local advertising, names of station personnel, exact sign-on and sign-off formats, etc. Programming that can appear on several stations simultaneously such as Network newscasts is often useless for report detailing unless some local material is also noted.

Describe the quality of reception in some detail, with particular emphasis on interfering stations. Try to give some indication of whether or not the station is frequently received in your location or if the reception was a rare "fluke". Mention any other stations in the same locality that you might have heard in the past and try to give some idea of how well they were received in comparison with the station you are reporting. Avoid using short-wave reporting systems such as SINPO as they are unheard of at most stations on MW. Briefly describe your receiving equipment with particular emphasis on special items such as loop antennas and the like.

Very politely request that the station check your report against their records and, if it agrees, provide you with a verification of reception. Never demand verification - always ask politely! ALWAYS INCLUDE RETURN POSTAGE! Good luck...

DX'ing Aids Available from the NRC

Each year the National Radio Club publishes about 1000 pages of unique information on medium-wave DX'ing in its magazine DX NEWS. In addition to many pages devoted to member reports on what's actually being heard on the band, many special articles also appear regularly. Most of these articles deal with highly specialized aspects of medium-wave DX'ing of great interest to the broadcast-band listener and unavailable from any other publication. Because of the great interest in these reprints from past issues of DX NEWS, the NRC makes available to all DX'ers inexpensive copies of these articles. More than 200 pages of reprints are available - almost all dealing with MW DX topics not to be found in any book or magazine! Some sample topics:

- FOR DOMESTIC DX'ERS: Frequency Check List - (lists regularly scheduled equipment tests from many hard-to-hear stations). . . . Condition of Frequency List - (shows occupants of each domestic channel on Monday Mornings). . . . Voice of Prophecy Log - (lists schedules of the many stations carrying this popular program). . . . Unrestricted Radiation - (all about carrier current stations). . . . And many more!
- REDUCING INTERFERENCE: Spurious Signals - (general discussion of the cause and cure of spurious reception). . . . Television Interference on the Broadcast Band - (lists frequencies of QRM produced by black and white and color receivers). . . . Mechanical Filters on the BCB - (only article describing use of MF's for super-selectivity). . . . Local Sideband Splash - (how much "splash" from your local is legal?). . . . And more!
- MW DX EQUIPMENT: Selecting a MW Receiver. . . . Cheap Audio Filters. . . . Antenna Tuning Devices. . . . Electronic Vernier Tuning. . . . How to Live with a Budget Receiver. . . . Curing the Tracking Problem. . . .
- LOOP ANTENNAS & DIRECTION FINDING: The FET Altazimuth Loop. . . . The Simple Loop. . . . Tips on Loop Construction. . . . Direct Coupled Loops. . . . Simple FET Loop Booster. . . .
- PROPAGATION OF MW DX: MW Signal Paths. . . . Auroral Control of Transatlantic DX. . . . Summer Patterns in MW DX. . . . Quasimonthly Patterns in MW DX. . . .

Plus dozens more! Free list of all available reprints from NRC HQ, Box 99, Cambridge, 02138; please enclose self-addressed, stamped envelope.

The National Radio Club is the largest and oldest hobby group dealing exclusively with medium-wave DX'ing (established in 1933). The NRC's magazine-bulletin, DX NEWS, is published weekly during the winter DX season for a total of 32 issues per year and is crammed with information specifically by and for the MW DX'er. In our latest publication year we carried more than 1000 pages of information exclusively for the MW DX'er - feature and technical articles, the latest FCC & DOT station information, plus page upon page of invaluable tips from our membership telling what's actually being heard. The NRC is the only DX club large enough to produce a handy-sized bulletin by commercial printing - not mimeograph.

In Musings, DX'ers write in to tell about their DX'ing experiences - their latest catches, descriptions of equipment - anything of interest to other DX'ers in fact. In International DX Digest you'll find a concise and very up-to-date listing of international MW stations being heard by our world-wide membership as well as the most accurate general information on international MW broadcasting available anywhere. In Domestic DX Digest you'll read the latest info on domestic stations as reported by our alert membership - new stations on the air, changes in schedules, etc. These three regular DX NEWS features often contain hot information less than a week old.

Many interesting and valuable feature and technical articles appear in the pages of DX NEWS including hints on improving reception, plans for MW equipment and antennas, reports on original scientific research on MW DX'ing, and much more. NRC Log Updaters designed to keep your NRC Log super-accurate appear regularly in DX NEWS. Annual listings of all-night Monday morning stations and regularly scheduled frequency checks permit our members to quickly build up their totals. For those who like contests, the NRC runs a regular series of contests designed to really test DX'ing skill and foster friendly competition. Because the NRC numbers in its membership experts and authorities on almost every aspect of MW DX'ing, members with questions or problems are often able to get prompt help by merely asking for assistance in DX NEWS.

The Courtesy Programs Committee is one of the club's most important and interesting activities. Members of this group regularly arrange special programs dedicated to the NRC from hard-to-hear stations at special times favorable for DX'ing. Literally hundreds of otherwise impossible-to-hear stations have been logged and verified through NRC Specials. All members are welcome to join in the work of this committee and many find CPC work to be one of the most rewarding activities in the hobby.

Through the NRC you will be able to purchase at discount such special items as mechanical filters for super-selectivity, equipment plans, and copies of past NRC publications. The preeminence of the NRC in the field of MW DX'ing is recognized by World Radio Handbook, which has chosen the NRC to prepare the North American list for that world-famous publication. Our program over Radio Nederland introduces many DX'ers throughout the world to medium-wave DX'ing.

NRC'ers are among the friendliest people around and informal gatherings and get-togethers take place often in many parts of the country. Our annual convention, to be held in New Jersey this summer, will attract many members

from the U.S., Canada, and foreign countries for a long weekend of DX discussions, station tours, and general partying...

The NRC is a nonprofit, volunteer-operated club and membership dues go to pay the expenses of printing and mailing DX NEWS for the membership, and for other essential club services. Since each members dues pays for his portion of the NRC's operating costs, and for his share of postage, dues are dependent upon postal rates. At present rates the dues are \$10.00 yearly for First Class mail delivery; \$7.50 for Third Class delivery; and \$13.25 for domestic Air Mail. Special airmail rates can be arranged for overseas members. An additional fee of \$1.00 is charged the first year only to pay for the new member's mailing plate, 60-page New Member Kit, etc. If you're an active MW DX'er or just getting started, you'll get a wealth of unique information by joining the NRC today!
