THE NRC AM ANTENNA PATTERN BOOK

The lists of U.S. and Canadian stations are those licensed by the US Federal Communications Commission and Canada's Industry Canada, and coincide with those appearing in the 39th Edition of the National Radio Club's *AM Radio Log*. Many stations have a Construction Permit (CP) for changes to their facilities. It is assumed that these changes will eventually be employed, so are depicted as such. Additionally, several Mexican stations located adjacent to, and near, the United States border are included, as well as stations on 810, 1240 and 1540 in Nassau, Bahamas.

Naturally, a non-directional signal travels as far as possible, depending upon the transmitter's output power through a single tower. Directional patterns are used to avoid interference to other stations on the same or adjacent frequencies, and may require as many as twelve towers to achieve this. Pattern plots in this book are reproductions of those shown by the FCC, and backed up by those generated by a computer program written by NRC member **Neil Adams**. Each illustration closely reproduces the pattern's shape and bearing. However, the size does not reflect the actual coverage areas due to many variables: frequency; a directional pattern (if used); the electrical tower height; ground conductivity; terrain; weather; atmospheric conditions, and interference from other stations. Your ability to hear any station, of course, is based upon these factors plus your receiving equipment.

PATTERN PLOTS: **Daytime** patterns are illustrated with a dashed line; **Nighttime** patterns by a solid line; **Critical Hours** patterns are depicted by a solid line with small circles at various intervals. Many stations, mostly on 'clear channels', operate during what is referred to as 'Critical Hours'. These periods are from sunrise to sunrise plus two hours, and sunset minus two hours to sunset. This is when the ionosphere transitions from nighttime to daytime (morning), or daytime to nighttime (evening) conditions resulting in greater coverage for a station than what would be expected using their licensed daytime power. Licensed 'Daytime' operation during these periods would cause interference to co-channel and adjacent-channel stations. So, the FCC has implemented Critical Hours periods for stations who agree to operate during those periods with (normally) a power level lower than that licensed during the daytime, and in some cases utilizing a directional pattern. Currently, no Canadian or Mexican station is licensed to operate using a Critical Hours operation.

U1 and U3: Patterns for stations which operate with the same power day and night, designated in the AM Log as U1 (non-directional) or U3 (same pattern all hours), are depicted with a single, solid line. Many stations with the same power all hours and designated DA2 by the FCC and U4 by the NRC, but have identical parameters. Those patterns are also drawn with a single, solid line.

Except for four, all stations on 1230, 1240, 1340, 1400, 1450 and 1490 kHz are licensed to operate non-directional all hours, so no patterns are drawn for them. Patterns are illustrated, however, for the four using a directional signal. All non-directional signals less than 500 Watts are depicted by a small, equally-sized circle.

All stations in Alaska and Hawaii operate non-directional full time, except one. That being in Nome, Alaska on 850 kHz (directional only during Critical Hours operation; see pattern on Page 64). All stations in Alaska, Hawaii and Northwest Canada are designated on the List pages by an A, H or C, and their locations are plotted on Page 238.

Every attempt has been made to place the listed number adjacent to the corresponding dot of the city so as not to interfere with the pattern or a state/province line. Where not possible, or in the case of space restrictions, an arrow has been utilized to match the number with the location of the station.

INDEX

About The National Radio Club

Our magazine, DX News, is a must for the serious or casual DX'er and is only available through the National Radio Club. Subscribing to either DX News magazine or e-DXN.com entitles you to membership privileges, including discount prices on many National Radio Club products.

In the early days of radio broadcasting, when the listening audience was comprised of amateur operators, experimenters, engineers and the like, a new hobby had its beginning. DX, in the parlance of telegraphers, meant long distance, and gradually came to mean distant reception as well. The early listener had usually constructed his own receiver, and his big thrill was not just from the news or the music he heard, but the realization that his assortment of glass and wires with a bedspring antenna was really bringing in voices and music all the way from Pittsburgh, Chicago or Los Angeles!

It was a natural development for the hobbyist to tune up and down the dial, logging the numerous stations that could be heard. These stations were eager to hear from their listeners. This was the only way, at the time, that they could learn how well their signal was getting out. Listeners were asked to write letting the station know from where, how well, and under what conditions the station's signal had been heard. In return, stations began sending cards or letters thanking the listener and confirming his or her reception. With the collecting of these verifications (QSL's), the DX hobby was born.

Numerous clubs were formed in those early years for the sole purpose of exchanging information about equipment, antennas, tuning tips and general information about the hobby and the stations. The National Radio Club was one of these early pioneer clubs, getting its start in York, Pennsylvania in 1933, when a small group of DX'ers organized and began to mimeograph a bulletin, DX News. Now after 80 plus years of continuous operation, DX News is still the premier publication for the medium wave (AM) DX'er. Membership soon spread from York to all parts of the U.S. and Canada and now to members around the world.

Over the years the National Radio Club has gained recognition as a leader among DX clubs. The National Radio Club has pioneered many areas, the offset printing of bulletins, the NRC Domestic Log (now AM Radio Log), numerous books on antennas and receivers, and information books on the hobby. The National Radio Club is still growing and improving, with new books and our on line e-DXN.com.

DX News offers 20 bulletins per year, bi-weekly in winter, monthly in summer, over 750 pages a year of DX and radio information. Our on line version is <http://www.e-DXN.com>.

For a sample copy of DX News please mail \$1 to: The National Radio Club, P.O. Box 473251, Aurora CO 80047-3251. The DX News is also available as downloadable files at our on forum site <http://www.e-dxn.com>. We would be happy to welcome you into the National Radio Club family!
