RCA Radiotrons—the preference of radio experts

The Importance of a High Quality Vacuum Tube

RCA Radiotrons are primarily instruments of precision—the most sensitive ever manufactured and sold on a large scale. They might well be called electrical eyes; for they "see" waves to which human eyes are unresponsive—the waves which carry radio entertainment to the home.

The amount of energy received by a radio set may be only a few millionths of a millionth of that broadcast, but Radiotrons respond to it and amplify it millions, even billions, of times. Despite its sensitivity this extraordinary artificial sense organ is so sturdy that it withstands ordinary usage and it is made in large quantities, so that its price is low.

One of the functions of a Radiotron is to control the flight of billions of electrons— invisible bits of electricity, so small that they bear the same size-relation to atoms that a football bears to a large dirigible balloon. A stream of electrons speeding from filament to plate is instantly and automatically influenced by the waves from the broadcasting station which affect the grid. What we hear is a duplicate of what is broadcast.

A few years ago high-capacity storage batteries were required for satisfactory heating of the filament. Radiotrons of today contain improved filaments for operation from inexpensive trickle-charge storage batteries,

When experts agree on RCA Radiotrons—why take chances?

compact dry cells, and, more economical, AC supply from the lighting mains.

These improvements result from ceaseless research conducted to make Radiotrons more and more efficient. More electrons are emitted from the improved Radiotron filaments in spite of the fact that less power is required to heat them.

An air or gas molecule is immense compared with an electron; it would stop an electron in its flight from the filament to the plate. Even the finest vacuum pumps will not remove all air molecules. Research showed how obstructing air molecules could be swept out of the bulb—a triumph of the laboratories that stand behind the Radio Corporation of America.

Research has made Radiotrons what they are today—made them not only sense-organs of radio but made them so inexpensive that they can be sold over the counter like scores of other products much more easily manufactured.

The manufacture of Radiotrons is exacting. Each Radiotron must pass through many stages, and at each stage it must be rigorously inspected and tested. If it fails to measure up to RCA standards it is rejected. For this reason every Radiotron leaves the factory a faultless and matchless radio detector or amplifier—a supreme achievement of research, engineering, and manufacturing.

That is why the leading makers of radio sets sold on a quality basis use Radiotrons throughout and specify them for replacement.

**RCA Radiotrons—the standard equipment in fine
radio sets of leading manufacturers**

Progress in the radio art is measured by the development of RCA Radiotrons

An RCA Radiotron for Every Purpose

RCA Radiotrons are classified in six distinct groups and the prospective user may, without any confusion, select the tube that is just suited for any particular function.

Special Detector: Extremely sensitive Radiotrons designed particularly for detection and not to be used for other purposes.

Special Amplifier: Under this heading will be found the new four electrode Radiotron for use as radio-frequency or resistance-coupled audio-frequency amplifiers.

Detector-Amplifiers: In this group may be found the Radiotrons that can be used interchangeably as detectors or amplifiers with excellent results.

AC Radiotrons: Detectors and amplifiers that require no "A" batteries. The filaments of these Radiotrons are operated from the alternating current lighting socket by means of small stepdown transformers.

Power Amplifiers: These Radiotrons will handle, without distortion, extraordinary volume built up by preceding stages of amplification and are advantageous in the last audio stage only.

Rectifiers: These Radiotrons are the tubes that are used to supply uni-directional current, from an alternating current source, for the elimination of radio batteries.

Special Radiotrons: This group contains the Radiotrons that are designed for the automatic regulation of voltage and current.

Give your receiving set a chance—use
RCA Radiotrons

Every Radiotron is tested and inspected in 41 different ways before it is approved

RCA® Radiotron UX-200-A

Detector

Radiotron UX-200-A is the most sensitive and efficient detector ever placed on the market. It is not at all critical to the adjustment of the plate voltage. The use of this Radiotron in the detector socket of a radio set employing Radiotrons UX-201-A will produce additional sensitivity and volume ap-

proximately equal to that which would be obtained by the addition of one stage of radio frequency amplification. The advantage becomes readily apparent on receiving signals from *distant* stations. The characteristics of this Radiotron are such that no changes in the set itself are required, when it is used to replace Radiotron UX-201-A. The filament consumption and the plate voltage required are identical to those of Radiotron UX-201-A.

Radiotron UX-200-A..... \$3.50

Radiotrons are the heart of your radio set

RCA Radiotrons—the hallmark of a good radio set

RCA ~ Radiotron UX-222

Radio- Frequency Amplifier

Radiotron UX-222 is a new four-electrode Screen-Grid tube particularly designed for radio-frequency amplification. With proper shielding of the radio-frequency circuit, neutralizing and stabilizing devices are unnecessary. The shielding "Screen Grid" between the usual or "control grid" and plate not only eliminates the effect of plate to grid feedback capacity, but also increases the mutual conductance of the tube.

Radiotron UX-222 may also be used in a totally different role as an audio-frequency amplifier in resistance coupled circuits. Higher overall amplification at audio frequencies is possible with this Radiotron without greater plate resistance than with three electrode high-mu tubes.

The filament of the UX-222 operates at 3.3 volts and .132 amperes, but with a series resistor of 15 ohms it can be connected in parallel with the 5 volt filaments of other Radiotrons. Thus it may be used in either dry or storage battery receivers of correct design.

Radiotron UX-222 \$6.50

To maintain high quality performance in your radio set—use RCA Radiotrons

RCA Radiotrons—standard for every use

RCA Radiotron UX-201-A

Detector Amplifier

Radiotron UX-201-A is the equivalent of the well-known UV-201-A equipped with the new standard UX base. UX-201-A will fit both the old Navy socket and the new Push Type socket. This sturdy Radiotron has long been the accepted standard of every radio engineer, amateur and broadcast listener. It is the

standard, all-around, flexible storage-battery tube of radio, good in detector and radio- or audio-frequency amplifier circuits, and sure to give the best results at the lowest operating cost.

The experimenter is referred to the data on pages 23 and 24 of this booklet in which is set forth the characteristics of Radiotron UX-201-A to serve as a guide to its proper use in a circuit.

All the results of modern electron-tube research are embodied in UX-201-A. Thus its filament has an electron emission which is not simply high, but extraordinarily high—and this at low current consumption and with long life.

Radiotron UX-201-A \$1.40

RCA Radiotrons set the standard for all radio tubes

Use RCA Radiotrons*

RCATM Radiotron WX-12

Detector Amplifier

The WD-11 and the WX-12 differ only in their bases. Both have coated filaments and the electrical characteristics of these Radiotrons are exactly the same. Hence what is said about WD-11 applies in a radio sense to WX-12. But Radiotron WD-11 fits only a WD-11 socket, while WX-12 fits the standard Push Type socket and the Navy socket as well.

RCATM Radiotron WD-11

Detector Amplifier

The "WD-11" was the first dry-cell Radiotron ever introduced and although many different types of Radiotrons have since been developed, this pioneer is still very popular and widely used both as detector and amplifier.

Radiotrons WD-11 or WX-12... \$2.50

[2] There's an *RCA* Radiotron for every purpose [2]

Change your tubes once a year—Use RCA Radiotrons

RCA ~ Radiotron UX-199

Detector Amplifier

Radiotron UX-199 is adaptable to either portable or home dry battery operated sets. It is equally serviceable as a detector or as a high-efficiency radio or audio frequency amplifier. Economy of operation is particularly pronounced when it is used in circuits having more than three tubes.

Radiotron UX-199 . . \$2.00

RCA ~ Radiotron UV-199

Detector Amplifier

UV-199 and UX-199 are electrically identical, differing only in their bases. UV-199 will fit only the UV-199 socket and UX-199 will fit only the standard Push Type socket.

Both Radiotrons operate at low filament temperature so that the dry cells of the "A" battery are subjected to very slight drain.

Radiotron UV-199 \$2.25

For better radio reception—use **RCA Radiotrons**

RCA Radiotrons are your best insurance against tube troubles

RCA~Radiotron UX-112-A

Power Amplifier and Detector Amplifier

Radiotron UX-112-A is an improved general purpose storage-battery tube. While it was primarily designed as a power amplifier for use in the last audio stage, it may also be used for detection or amplification as evidenced by its characteristics which will be found on pages 23 and 24.

It is extremely sensitive as a detector and is an excellent radio-frequency or audio-frequency amplifier.

Radiotron UX-112-A has a coated filament which operates at such a low temperature that only a dull red glow is visible. Its low current consumption of only one quarter ampere permits very economical operation.

Radiotron UX-112-A is unique in the general purpose class. Never before has a single tube been capable of such all around use.

Radiotron UX-112-A \$2.50

RCA Radiotrons—the preference of radio experts

Improve your radio set with RCA Radiotrons

RCA Radiotron UX-240

(High-Mu)
**Detector
Amplifier**

Radiotron UX-240 is designed for use in resistance or impedance-coupled amplifier circuits as either detector or amplifier.

Having an Amplification Factor (Mu) of 30, Radiotron UX-240 will be welcomed, particularly by set builders who prefer resistance-coupled amplification.

Where tubes of the general purpose type have heretofore been used in resistance-coupled circuits, improved amplification may now be obtained by the use of one or two Radiotrons UX-240.

The UX-240 may be used in the popular types of resistance-coupled amplifier circuits without change in plate coupling resistances, but with superior results. The best performance is obtained, however, when resistance values recommended in the instruction sheet are employed.

Radiotron UX-240 consumes less than one tenth the plate current of the average general purpose tube. The filament is identical to that of Radiotron UX-201-A.

Radiotron UX-240 \$2.00

When experts agree on RCA Radiotrons—why take chances?

RCA Radiotrons—the standard equipment in fine radio sets of leading manufacturers

RCA Radiotron UX-226

Amplifier

Radiotron UX-226 is an amplifier tube, the AC filament of which is operated from alternating current. It can be used for radio or transformer-coupled audio-frequency amplification. It is not, however, ordinarily suited for detection.

Radiotron UX-226 contains a plate, a grid, and a heavy filament of the coated type designed to operate at a relatively low filament voltage, which is one of the outstanding features of this tube. Except for the fact that its filament is designed to be AC operated and the fact that it is not generally suitable for use as detector, Radiotron UX-226 possesses characteristics very similar to those of Radiotron UX-201-A, as may be seen from a comparison of their characteristics as found on pages 23 and 24.

Radiotron UX-226 is equipped with the large standard UX base.

Radiotron UX-226 \$2.00

Progress in the radio art is measured by the development of RCA Radiotrons

AVERAGE CHARACTERISTICS OF RECEIVING RADIOTRONS

(4) Note the use of this Richardson above (below)

- Inner Grid - 11 Volts; Outer Grid +45 Volts, .15 Milliampere
- Outer Grid - 11 Volts; Inner Grid +22 Volts, .6 Milliampere
- Applied plate coupling resistance of 250,000 Ohms
- Grid voltage is given with respect to mid-point of filament

Every Radiotron is tested and inspected in 41 different ways before it is approved

To maintain high quality performance in your radio set—use RCA Radiotrons

RCA Radiotron UX-120

Power Amplifier

This dry-cell power amplifier Radiotron is to be used in the last stage of audio-frequency amplification.

Owners of Radiola Super-Heterodyne (semi-portable), Super VIII, Radiolas 25 and 28, and practically all dry-battery operated receivers may enjoy greatly increased loudspeaker volume and clarity with Radiotron UX-120.

This Radiotron is manufactured with the small standard UX base. Adapters are available which permit its use in practically any tube socket and which provide connections in many cases for the additional plate and grid voltages so that changes in wiring within the receiver are unnecessary.

All dry-battery operated set owners should avail themselves of the advantage of improved quality at high volume which is provided by this efficient but low-priced amplifier. The high-emission filament is one of the features of this Radiotron.

Radiotron UX-120 \$2.50

RCA Radiotrons—standard for every use

RCA Radiotrons set the standard for all radio tubes

RCA~Radiotron UX-171-A

Power Amplifier

Radiotron UX-171-A is a power amplifier tube of extremely low output impedance for use in the last audio stage only. It employs a coated low-temperature filament.

Since the plate current of Radiotron UX-171-A is exceptionally high at maximum voltage, as can be seen from the characteristics table, some form of loudspeaker coupling such as an output transformer or a choke coil and by-pass condenser should be used to prevent DC from passing through the loudspeaker.

The output of the UX-171-A at 90 volts is exceptionally high, but at this voltage the usual direct connection to the loudspeaker may be used, omitting the loudspeaker coupling mentioned above.

UX-171-A was designed to handle great volume without distortion. This is accomplished very economically since the filament consumption is only .25 ampere.

Radiotron UX-171-A.....\$2.50

*A radio set can be no better than its vacuum tubes—

There's an RCA Radiotron for every purpose

RCA Radiotron UX-210

Power Amplifier

Radiotron UX-210 is a high-power amplifying tube. It is capable of handling far greater volume without distortion than any receiving vacuum tube on the market except Radiotron UX-250.

The filament of the UX-210 is normally operated from the 7.5 volt winding of a transformer, and its plate supply is usually obtained from a high-voltage B eliminator.

The high plate current of this Radiotron makes a loudspeaker coupling device, such as described for use with the UX-171-A, a necessity. This device should be so connected as to prevent the high plate voltage from reaching the loudspeaker leads.

Radiotron UX-210 \$9.00

Change your tubes once a year—use RCA Radiotrons

For better radio reception—use **RCA Radiotrons**

RCA~ Radiotron UX-250

Power Amplifier

Radiotron UX-250 is the largest and most powerful amplifier Radiotron for radio reception. It is capable of handling over three times as much undistorted energy as the UX-210, long the favorite power amplifier tube for maximum volume and tone quality from radio receiving sets.

Obviously, while the new tube is capable of enormous volume it may be employed at but a fraction of its full capacity, thus securing undistorted output at all times with ample reserve power.

The output of the UX-250 cannot be fed directly to the ordinary loudspeaker. It is necessary to utilize some form of loudspeaker coupling system either in the form of an output transformer or a choke and by-pass filter.

Radiotron UX-250.....\$11.00

RCA Radiotrons are your best insurance against tube troubles

RCA Radiotrons—the preference of radio experts

RCA~Radiotron UX-281

Half-Wave Rectifier

Radiotron UX-281 is a half-wave rectifier tube of the coated-ribbon filament type. As in the case of Radiotron UX-280 the filament of UX-281 is very sturdy and gives unusually high emission.

As in the case of Radiotron UX-280 the plate of this Radiotron has a specially treated surface which

causes rapid dissipation of heat. While the maximum rated output of the UX-281 is 85 milliamperes, a value of 65 milliamperes is recommended to insure the greatest possible period of usefulness.

Radiotron UX-281.....\$7.25

Improve your radio set with RCA Radiotrons

take chances?*

RCA~Radiotron UX-280

Full-Wave Rectifier

Radiotron UX-280 is a new and improved full-wave rectifying tube that contains a coated ribbon filament. This filament is extremely sturdy both electrically and mechanically and gives exceptionally high emission.

The plate of this Radiotron has a specially treated surface (to be noted by its dark appearance) which causes rapid dissipation of heat.

Radiotron UX-280 is highly evacuated and has many advantages over the gas type rectifiers. The maximum output of Radiotron UX-280 is 125 milliamperes.

Radiotron UX-280.....\$3.50

[2] *RCA Radiotrons—the standard equipment in fine radio sets of leading manufacturers* [2]

*Progress in the radio art is measured by the
development of RCA Radiotrons*

Special ~ RCA Radiotrons

Special Purpose Radiotrons

This group contains the Radiotrons that are designed for uses quite different from those of the vacuum tubes listed on the previous pages. The following Radiotrons are designed for the automatic regulation of voltage and current respectively. They are the "Electrical Brains" of modern super-power radio receivers and radio power devices.

RCA ~ Radiotron UX-874

Voltage Regulator

Radiotron UX-874 is a voltage regulator tube designed to maintain constant voltage supplied by B eliminators at different current drains.

UX-874 is so made that when properly connected it maintains a constant potential of 90 volts to the radio receiver.

Radiotron UX-874 . . \$4.75

RCA ~ Radiotrons UV-876 and UV-886

Ballast Tubes

Radiotron UV-876 is a current regulator used in the rectifier-power-amplifier unit of Model 104 Loudspeaker and Radiola 30 and 30-A when operated from 50 to 75 cycle AC. Radiotron UV-886 is for use in the same equipment when operated from 40 to 45 cycle AC and in Radiola 32 when operated from 60 cycle AC.

Radiotron UV-876 or
UV-886 \$6.50

RCA Radiotrons—standard for every use

License Notice

The apparatus and devices which, or the use of which, are covered by patents are sold only under certain specified licenses set forth in a notice attached permanently to the said apparatus and devices, or if this is impracticable on account of size, then on tags or wrappers attached to the said apparatus and devices or on the cartons containing the same. This license notice is as follows:

"In connection with devices it sells, Radio Corporation of America has rights under patents having claims (a) on the devices themselves and (b) on combinations of the devices with other devices or elements, as for example in various circuits and hook-ups.

"The sale of this device carries a license under the patent claims of (a), but only for (1) talking machine uses, (2) radio amateur uses, (3) radio experimental uses and (4) radio broadcast reception; and only where no business features are involved.

"The sale does not carry a license under patent claims of (b), except only (1) for legitimate renewals and repairs to apparatus and systems already licensed for use under such patent claims on combination, (2) for accumulating by amateurs and experimenters, and not by others, with other licensed parts or devices, or with parts or devices made by themselves, but only for their own amateur and experimental radio uses where no business features are involved, and not for sale, nor for use by others, and (3) for use with licensed talking machines and licensed radio broadcast receiving devices; and only where no business features are involved.

"This device is licensed for no other use unless, by special written contract of sale with Radio Corporation of America, the purchaser has agreed to use it in some other special manner only, as set forth in the contract of sale. The right to employ the device in such special manner is non-transferable except by special agreement with Radio Corporation of America."
