# THE RADIO LISTENERS RED BOOK MAGAZINE

Published quarterly by THE WAYNE ANDREWS CO. Inc.  
261-262 Central Building, Ft. Wayne, Ind.

Entered as second class matter March 1, 1927 at the post-office at Fort Wayne, Indiana  
under the Act of March 3, 1879

Copyrighted 1927 by THE WAYNE ANDREWS CO., Inc.

VOLUME 2

Fall, 1927

NUMBER 3

Subscription price: 75c per year, payable in advance, single copy 25c

THE RADIO LISTENERS RED BOOK MAGAZINE is scientifically compiled and arranged from reports obtained directly from the Government. Properly used, according to the directions below, it will add greatly to the pleasures of Radio reception.

List the readings in the DIAL READING SECTION as soon as a station is heard so they can be turned to instantly in the future. "Hit or Miss", "Guesswork", and "Remember" methods of tuning cause squeals and howls.

Owing to the exclusive and copyrighted method of cross-indexing by page and line number used in the RED BOOK, it is only necessary to record your dial readings in one section, not in two or three. Any station can be easily found in the RED BOOK. Page 26 lists Call Letters alphabetically. Page 20 lists Cities alphabetically. Both these alphabetical listings give page and line number for recording Dial readings.

Dial readings of each station should be listed separately, regardless of how many others are on the same wave length, because frequently, readings of stations on the same wave length vary slightly through no fault of yours or your sets. In addition, it's a pleasure to know definitely how many stations you have actually tuned in.

The RED BOOK will indicate where on your dials you can tune in any station which your set will reach after the dial readings of a few easily "picked up" stations have been listed. Its progressive listing of stations by wave lengths and frequencies gives you the names of stations above and below a listed dial reading which can be tuned in by slowly moving your dials to either side of this same listed dial reading.

For instance, suppose the dial readings of station WGY at Schenectady, N. Y., (page 13, line 13) were listed and you wanted to listen to WOC at Davenport, Ia., (line 10). Merely turn your dials to WGY'S dial readings and then slowly move them backwards a point or two. If WOC is "on the air" and your set will reach them, a slight adjustment of one or two of your dials should bring them in.

Again, suppose you want to listen to KTHS at Hot Springs, Ark., (page 13, line 18). Turn your dials to the nearest listed dial reading which might be WGY at Schenectady (line 13). Then slowly move them ahead a point or two, and if they are broadcasting and your set will reach them, you can easily tune them in.

If the station desired is more than one wave length above or below the station whose dial reading is listed, the dials should be turned a point or two further. After a little practice RED BOOK users will be able to judge the distance to move dials and you will be surprised at how easily and quickly it can be done.

Only 100 watt stations and larger are shown in the dial reading section as reception from stations smaller than this covers only a small area. On pages 28, 29, 30 and 31 will be found a list of stations of less than 100 watts power.

Note: Where letter "D" precedes watts, this designates stations which broadcast only during the day.

COMPLETE LIST OF CHAIN STATIONS, PAGE 31

## INDEX

Dial Reading Section, showing call letters, city, meters, kilocycles and wattage .....	Pages 3 to 15 inc.
Map, United States, Canada, Mexico, Cuba, showing broadcasting stations and national time divisions .....	16 and 17
The Radio Doctor and His Trouble Chart .....	18 and 19
Cities, indexed alphabetically, including call letters, meters, kilocycles, watts and owners .....	20 to 26 inc.
Call Letters, indexed alphabetically, and location .....	26 to 28 inc.
Stations of less than 100 watts power indexed alphabetically according to location, including call letters, meters, kilocycles, watts and owners .....	28 to 31 inc.
Chain Stations, Complete List of .....	31

Additional copies will be mailed, postage prepaid, on receipt of twenty-five cents each, if your local radio dealer or newsstand cannot supply you.

APPROXIMATE  
 SCALE OF MILES  
 1/4" EQUALS 75 MILES  
 1" EQUALS 300 MILES

SCALE OF MILES  
 0 75 150 300 450 600

**AIR-LINE DISTANCE**  
 Measure distance between any two desired points with ordinary ruler and every 1/4" of this distance is equal to 75 miles, or 1 inch of this distance is equal to 300 miles.  
**LOOP AERIAL**  
 The direction of a distant station from your set as shown on this map is accurate. Use it accordingly to properly point your aerial.

**CITIES WHERE BROADCASTING STATIONS (100 WATTS POWER AND LARGER) ARE LOCATED**  
 REFER TO INDEX OF CITIES, PAGES 20 TO 26 INC., FOR FULL INFORMATION REGARDING INDIVIDUAL STATIONS

## A FEW DO'S AND DON'TS

Undoubtedly the manufacturer of your set knows more about it than anyone else, so follow his instructions as closely as possible while assembling and installing it.

Be sure it is operating to your entire satisfaction, according to the instruction sheet which accompanies each set, before trying any experiments or connecting any additional equipment.

Be particular about who services your set. Find a reliable, conscientious, experienced service man, thoroughly familiar with your type of set, and stick to him, A service man can do much more harm than good if he is not thoroughly competent.

Be sure switch is turned on.

Interchanging tubes in their sockets is sometimes beneficial to reception. Care must be taken that special detector tubes are not placed in any other stage than that for which they are intended. Other tubes may be inter-changed without damage.

Solder joints wherever practical and possible, especially aerial wire connections which corrode very easily, and cover battery terminals and connections with vaseline after a clean contact has been made and screwed down tight.

**DON'T** place your set on a radiator or near excessive heat. Insulations will be melted and the set ruined.

**DON'T** run your aerial directly over or under telephone or electric light wires.

**DON'T** use a cheap lightning arrester. It must have the approval of the Insurance Underwriters; otherwise your insurance may be void.

**DON'T** hook ground wire to gas pipe. Always use water pipe.

**DON'T** connect your set with tubes in the sockets. An accidental touch of the wrong battery wire might ruin them all. Connect batteries first, then put in tubes.

**DON'T** try to tighten any connection in your set with a metal tool while the "B" batteries are connected. An accidental touch of the wrong wire might burn out all of your tubes.

**DON'T** direct the loud speaker towards the receiving set. Sound vibrations affect the tubes.

**DON'T** turn tubes too bright. Turn as low as possible consistent with good reception. This gives better music and saves batteries.

**DON'T** try to paralyze your ears with loud reception. Best results and real music are in the modified tones.

**DON'T** let your storage battery lie idle. It is cheaper to use it every day than once a week. Permitting a storage battery to become completely exhausted injures it. Hydrometer reading should never fall below 1250 and plates should be covered with distilled water.

**DON'T** permit your set to remain open so that dust can get in it. Dust between the plates of your variable condenser spoils reception. Clean them occasionally by drawing pipe-cleaners between the plates. Care should be used not to spring the plates in any way.

INDICATION	SOURCE						
	Aerial	Batteries			Connections	Tubes	Speaker
		"A"	"B"	"C"			
No Signal	Grounded or Poor insulation	Weak or wrong size	Weak or wrong size		Check all, scrape clean and solder	Test tubes and sockets	Connections, broken wire in cord, speaker unit
Weak Signals	DITTO	DITTO	DITTO	Weak or wrong size	DITTO	DITTO	
Fading Signals	Loose or swaying	Weak	Weak				
Broad Tuning	Too long	Weak	Weak		DITTO	Defective	
Sound Distortion		Weak or wrong size	Weak or wrong size	Weak or wrong size	DITTO	Defective—reduce power	Speaker unit
Howling and Squealing	Running parallel with battery wires					Reduce power	
Humming and Whistling	Too close to high voltage wire	Charger or eliminator	Charger or eliminator			DITTO	Turn or move away from set
Hissing		Weak	Weak				
Crackling and Crashing		Weak, over-charged, gassing	Weak		DITTO	DITTO	
Periodic Noises					DITTO		
Poor Distance Reception	Too short	Weak	Weak	Weak	DITTO		

## THE RADIO DOCTOR'S TROUBLE CHART

**Lists the Principle Indications of Radio Receiving Set Troubles and Suggests Possible Sources and Conditions Causing them.**

If you are thoroughly convinced that your batteries, loudspeaker, tubes, etc., are O. K., and the noises still remain, you can feel reasonably sure your trouble is due to either trouble inside your set which only an experienced service man should repair or to outside interference.

**Outside interference is of three varieties:**

**Controllable Interference** which is almost always created in your own home and is caused by improperly adjusted or dirty brushes on the motors of washing machines, sewing machines, vacuum sweepers, etc.; violet ray machines, vibrators, ozonators, door bells and buzzers, telephone ringers, oil burners with spark ignition, battery chargers of the vibrator type, poor contacts in light and fuse sockets and switches. Usually these troubles can be traced to their source and remedied either by you or your electrician.

**Semi-Controllable Interference**, which is caused by live wires arcing in trees, dirty or worn commutator brushes on motors and generators, sign flashers, arcing trolley wires and defective rail bonds, certain kinds of electric medical apparatus, such as, "X" and violet ray machines, etc., leaking power lines, insulators and transformers, charging apparatus for electrical batteries, improperly adjusted regenerative radio sets. Locating these sources is your biggest problem but after this is accomplished, most owners will gladly remedy the trouble.

**Uncontrollable Interference**, which, when caused by atmospheric conditions, is commonly known as "static" and "fading." There is no practical remedy for this trouble. Stations broadcasting on the same wavelength or closely related wavelengths frequently overlap or "run together" to such an extent that their incoming signals are badly distorted. Tuning your set to a station on another wavelength or located in another part of the country will sometimes reduce or eliminate undesirable noises in your set. If not, about all you can do is to either shut off your set or "grin and bear it."

Ready Reference may be quickly made to any City in the Dial Reading section (pages 3 to 15 inc.) by referring to the page and line number preceding each City on this page. The first number indicates the page and the second number indicates the line.

See pages 28 to 31, inc., for list of stations not included in this section.

# CALL LETTER INDEX

Ready Reference may be quickly made to any Call Letter in the Dial Reading section by referring to the page and line number which precedes each Call Letter on this page. The first number indicates the page and the second number indicates the line. See pages 28 to 31, inc., for list of smaller stations not included in this section.

## BROADCASTING CHAINS

The National Broadcasting Co., 195 Broadway, New York City, broadcasts its programs over three chains of associated stations: the Red Network with WEFB, New York City, as the key station, the Blue Network with WJZ, New York City, as the key station and the Pacific Coast Network.

The Columbia Broadcasting System, Paramount Building, New York City, operated by the Columbia Phonograph Broadcasting System, Inc., broadcasts over a chain of associated stations with WOR, Newark, N. J., as the key station.

The American Broadcasting Company, Seattle, Washington, broadcasts over a chain of associated stations with KJR, Seattle, Washington, as the key station.

The following lists show members of various chains and page and line number where they will be found in Dial Reading Section.

In Dial Reading, Call Letter and Location indexes, the chain stations are indicated as follows: Red Network (®), Blue Network (Ⓟ), Columbia (Ⓢ), Pacific Coast Network (Ⓟ), American (Ⓐ).
