## NOTES ON USING THIS BOOK

It must be realised by all users of diodes of any sort, that it is impossible to guarantee absolute equivalents.

It should be noted that the equivalents quoted in columns (v) to (vii) of this book, may possibly differ slightly in electrical and/or mechanical characteristics to those shown in column (i). Also please note that near equivalents are marked with an asterick (\*) or are shown in parenthesis ( ).

It is therefore recommended, especially in critical circuits or those where space is critical, to check against the original the detailed electrical and mechanical characteristics of possible equivalent diodes by using the manufacturers' current specification or data sheets, before a substitution is made.

## International Diode Equivalents Guide

- This book is designed to help the user in finding possible substitutes for a large user-orientated selection of the many different types of semiconductor diodes that are available today.
- Besides simple rectifier diodes, also included are Zener diodes, LEDs, Diacs, Triacs, Thyristors, OCIs, Photo diodes and Display diodes.
- Wherever possible material type, function or type of diode and country of origin are shown and equivalents are sub-divided into European and American and in some cases Japanese types.
- An extremely useful addition to the bookshelf of all those interested in electronics, be they technicians, designers, engineers or hobbyists.
