

# Index: electronic engineering January to December, 1971

## MAIN THEMES

### January

Random signal theory in communication systems  
Applied principles of operational amplifiers

### February

The computer in systems engineering  
Design and application of TO-5 relays

### March

Optoelectronic display systems  
Selecting semiconductor heatsinks

### April

Network theory and analysis  
Ensuring consistent circuit performance

### May

Advances in component technology  
Interface drive circuits using i.c.s

### June

Ways and means with minicomputers  
Parametric amplifiers for receiving systems

### July

Linear and nonlinear conversion techniques  
An improved phase-measuring instrument

### August

Effective interference suppression

### September

Transducers and their applications  
D.C. equations for bipolar transistors

### October

Testing and repairing multilayer p.c. wiring  
Thick-film hybrids for space applications

### November

Advances in computer storage systems  
Simplified conversion between binary and b.c.d.

### December

Techniques for pulse analysis and counting  
Pulse transformer selector chart

## FEATURE ARTICLE INDEX

	Issue	Page		Issue	Page
Antenna aesthetics — the engineer's problem by M.F. Radford	1	33	computer for industrial control servoloop — feedback eliminates power loss in high- current output stages.	6	61
Arithmetical aid for sequential-logic design, evolving a. by N. Darwood	5	60	Dual-voltage comparator with linear i.c. — peak-to-peak detection using class A i.c. amplifier — t.v. camera preamplifier uses f.e.t.s in cascode — scratch-pad memory with data selectors and distributors.	7	63
Applications. Miniature multiplier — 4-channel linear mixer — power supply — amplifier analogue — voltage comparator — inverting gain, high impedance amplifier — guide to nonlinear circuits.	1	52	F.E.T. input operational amplifier — i.c. regulator in power-supply designs — an m.o.s. analogue multiplier.	8	44
Continuous a-d. conversion — voltage- controlled quadrature oscillator-log of current ratio circuit — overload clamps — differential voltage gain — binary b.c.d. converter.	2	72	Regulating the speed of d.c. micromotors — determining loudness level — Johnson counters — voltage-to-frequency converter — switching and multiplexing with f.e.t.s — compound transistor connections — video distribution amplifier — decimal-to-binary conversion.	9	58
Allow for phase shift in feedback error calculations — digital transversal filter with adaptive capability — synthetic inductor — ultralinear voltage-to-frequency converter — anode driver for Nixie tubes — 1000 unity gain follower.	3	75	Schmitt with three stable conditions — fast decimal-to-binary conversion — loss measurements on gapped ferrite cores — converting truth-table entries into Boolean functions — deadtime correction with a logarithmic counting rate output — para- metric power transformer — oscillators using an i.c. amplifier array.	10	62
I.Cs for a.m./f.m. communications — image- matching in parametric amplifier circuits — shift register clock drivers and power supplies — stable servo loop — exposure measuring system.	4	62	Relaxation oscillator uses an i.c. op. amp. — a.c. op. amp. with f.e.t. input — wide-range pulse generator — low-frequency division with a programmable unijunction — peak detector for a.d.c. input scaling.	11	54
High-speed sample and hold — f.e.t. input stages for i.c. op. amp. — low-cost high-power regulator — preamplifier for radiation detectors — the f.e.t. as a variable resistor — novel neutralisation circuit for feedback capacitance — f.m. tuner uses dual-gate m.o.s.f.e.t.	5	76	Peak detector for any waveform — fixed- gain amplifier as a Wien-bridge oscillator — ultralinear voltage-to-duty-cycle converter—		
Using standard-length shift registers in custom-length applications — magnetically coupled pulse generator — average-power					

	<i>Issue</i>	<i>Page</i>		<i>Issue</i>	<i>Page</i>
f.e.t.s as simple constant-current sources — long-duration timer with a programmable unijunction transistor — an easily tunable notch-pass filter — amplifier with voltage gain of 6500 — temperature-compensating all alloys used for thermal switches.	12	48	S.Q.A.M.A. Hossain.	2	65
Biasing of f.e.t.s ensures consistent circuit performances. by J. Sherwin.	3	52	Logic tables up to 4 factors, representation of. by N. Darwood.	1	44
Bipolar transistors, simplifying d.c. equations for the. by P.D. Neville.	9	28	M.O.S.Ts store analogue voltages for long periods. by J. Dunlop.	11	34
Bipolar transistors useful for modulator comparison, transfer characteristics of. by S.M. Bozic.	3	64	Meter for silicon-carbide varistors, non-linearity-index. by M. Uno.	1	41
Boolean to AND and back. by N. Darwood.	4	43	Minicomputers are easier to live with. by W. Gledhill.	6	48
Cable impedance and attenuation measurements, simplifying. by T.A. Kasinski.	12	46	Minicomputers in systems engineering, using by J.I. Mutzeneek.	2	45
Computers combat rising costs in equipment design and manufacture. by K. Hosking and N.A. Hutley	2	35	Multilayer motherboards, locating and repairing faults in. by W.G.L. Brownrigg.	10	27
D.V.M. with standards-room accuracy. by B.E. Howse and C. Bocket-Pugh.	4	47	Multilayer p.c. wiring, modified harness tester checks. by R. Sansom.	10	30
Data-acquisition system has real-time capability. by A.S. Chambers.	6	35	Network analysis simplified by modified Thevenin's equivalents. by T.C. Penn.	4	34
Deflection-measuring system uses transducers and an operational amplifier. by A.A. Akhtaruzzaman and P.J.E. Sullivan.	9	55	Nonlinear elements offer analogue solutions. by W. Gledhill.	5	70
Die-bonding principles and considerations. by T.F. Bunzl.	10	32	Nonlinear functions from d.-a. converters. by W. Grzybowski and F. Wagner.	7	48
Digital control system, graphical procedure allows exact analysis of a. by Y. Koren and J. Ben Uri.	2	41	Operational amplifiers — applied principles, Pt. 1. by E. David.	1	48
Digital counters, modern approach to the design of. by N.L. Ayres.	2	52	Operational amplifiers — applied principles, Pt. 2. by E. David.	3	70
Digital power-factor meter has high order of accuracy. by F. Bombi and D. Ciscato.	2	55	Optoelectronic displays, developments in. by L.H. Lea.	3	34
Digital presentation of sample concentrations using an online computer. by M.B.D. Cooke and R.J. Eadie.	3	59	Parametric amplifiers designed for receiving systems. by C.S. Aitchison.	6	56
Electro-optics in data capture. by J. Carroll	3	42	Peripherals limit computer applications. by R.G. Britten.	6	40
Epoxy-glass laminates for p.c.s and multilayer boards. by A. Franze and G. Tappe	10	37	Phase measuring with increased accuracy. by C.J. Paull.	7	52
Faster computer stores are now economically viable. by P.A. Walker.	11	32	Phase-shift in carrier-type analogue multipliers, reducing. by J.B. Naylor and J.M. Townsend.	4	38
Foldback current limiting, greater regulator efficiency with. by R.H. Hill.	3	67	Phasor diagrams simplify Fourier transforms. by J.G. Thomas.	10	54
Frequency-to-voltage converter has rapid response to frequency changes. by E. Ahad and K.C. Smith	7	42	Potentiometer, miniature precision a.c. by R. Brown and E.S. Hill.	7	57
GaAs varactor diode for operation in the 1-5GHz range. by S.C. Gratze and P.H. Wisbey.	1	30	Pulse-amplitude analyser has variable deadtime. by J. Bialkowski.	12	28
Hybrid i.c.s a major factor in microwave component development. by B. Oliver.	5	41	Pulse separation and counting system, increased input frequency with novel. by G. Frangakis.	12	32
I.C.s can simplify conversion between binary and b.c.d. by J. Linford.	11	48	Pulse transformer, choosing a. by W.S.E. Mitchell.	12	40
I.C.s simplify voltage-to-frequency and voltage-to-time conversions. by A. Civit and S. Bracho.	12	36	R.C. network controlled by two elements, variable null in. by S. Kalyugarvaradan.	4	29
Industrial research at Cranfield — the way to higher precision. by J. Dinsdale.	2	69	R.F.I. — one of the undesirables. by N. Bond.	8	32
In-house microelectronics — fostering a delicate fledgling. by D. Boswell.	10	44	Random and pseudorandom signals, measuring probability distribution on, Pt. 1. by A.J. Birch.	9	47
Interface circuits drive high-level switches from low-level inputs. by J.O.M. Jenkins.	5	45	Random and pseudorandom signals, measuring probability distributions on, Pt. 2. by A.J. Birch.	10	49
Ion-beam thinning of semiconductor materials, preliminary experiences with. by D.P.G. Liddbury, H.R. Pettit and G.R. Booker.	9	50	Random signal theory in the study of communication systems, Pt. 1. by P.D. Sharma.	1	26
It pays to be discrete. by W. Gledhill.	5	33	Random signal theory in the study of communication systems, Pt. 2. by P.D. Sharma.	2	49
L-band stripline circulator has increased bandwidth. by R.C. Kumar.	12	43	Research — from the magic lamp. by W. Gledhill.	5	55
Logic circuitry and vidicon measure displayed areas. by S. Myers and			Resins improve s.c. performance, junction coating. by O. Dobson.	3	47
			Reverse recovery in power rectifier diodes, defining and measuring. by A.M. Martin.	3	50
			Self-scanning glow-discharge display gives full alphanumeric capability. Burroughs Corp.	3	37
			Semiconductor components, new technologies lead to highly advanced. by W.S.E. Mitchell.	5	36
			Semiconductor heatsink selection, taking the guesswork out of. by M.J. Robinson.	3	55

	<i>Issue</i>	<i>Page</i>
Sequential b.-d. converters for simplified interfacing. by J.D. Nicoud.	7	36
Serial-mode interfacing cuts hardware costs. by L. Molyneux.	6	45
Small computer, scientific applications of. by D. Buckingham.	6	52
Soldered joints, accelerated aging forecasts the service life of. by J.E. Tomlin.	4	58
Stagger-rejection low-pass filter with a digital computer, designing a. by J.N. Saha.	2	32
State space methods for systems analysis. by C.P. Lewis and L. Balmer.	11	42
Stripline Gunn oscillators are compatible with microwave i.c.s. by D.J. Ellis and M.W. Gunn.	5	50
Suppressing harmonics generated by thyristor-controlled circuitry. by J.R. Taylor, J.A. Sunda and H. Schaffner.	8	37
Systems engineering — the circuit designer is not a dying breed. by J.G.L. Rhodes.	2	38

	<i>Issue</i>	<i>Page</i>
Telecom 71 — is this what an exhibition should be?	9	26
Thick film hybrids meet satellite requirements, Pt. 1. by J.R. Corkhill and H.D. Fisher.	10	40
Thick film hybrids meet satellite requirements, Pt. 2. by J.R. Corkhill and H.D. Fisher.	11	37
Thick-film filter designed for television signals. by J.R. Corkhill and M.J. Martin.	5	65
TO-5 relays offer considerable space saving with high reliability. by A. Sutton.	2	60
Transducers? by W. Gledhill.	9	44
Transistorised core counter has improved pulse registration. by H.H. Ho.	9	35
Triple-channel modulation of a single pulse train. by O.E. Kruse and W.D. Dobbs.	4	36
Will m.o.s. stimulate a new computer generation? by S.G.T. Maine.	11	27
Wireless in the 1920s. by P.E.K. Donaldson.	1	37
