HOW TO USE THIS DIRECTORY

Before using this directory please consider these important points:

GENERAL INFORMATION

- a) All listings, except for U.S. and Canadian Recording & Mastering Studios, appear alphabetically.
- b) Listings appearing under the headings "U.S. Recording & Mastering Studios" or **recording studios** in the Canada section, are presented geographically by state and then by city/metro area. In this geographical format, where there may be many listings in the same city or metro area, details that would be common to all (i.e. city/metro area name) appear only in the sub-head for each particular city or metro area to avoid needless repetition.
- c) Brand names used in Equipment listings appear in all CAPS.

U.S. EQUIPMENT MANUFACTURERS/IMPORTERS

- a) Equipment listed is divided into 5 sub-categories: **Recording & Monitoring** (consoles, tape recorders, microphones, amplifiers); **Special Electronic** ("outboard gear" including compressors, delay systems, equalizers, noise reduction systems, echo chambers); **Video** (video recorders, cameras, monitors); **Professional Film** (motion picture cameras, dubbers & recorders, projectors, screens); **Tape Equipment & Accessories** (replacement heads, demagnetizers, bulk erasers)
- b) Companies engaged in any of the many aspects of studio design and/or construction have **Studio Designers & Builders** in their product descriptions with specific limitations or details indicated. A categorical listing of companies providing these services immediately follows the U.S. Equipment listings.
- c) Equipment items listed in this section are of professional or semi-professional grade. If you wish to locate companies involved in the manufacture/import of home audio/video/tape equipment please refer to the **Billboard Audio/Video/Tape Sourcebook**.

BLANK & BULK TAPE PRODUCT CHARTS & LISTINGS

- A(This section outlines the major manufacturers and/or loaders of all types of Blank Loaded and Bulk-Raw audio and video tapes. Pertinent information such as manufacturer, brand name or product designation, tape type or width, coatings and list prices, are laid out in a convenient, easy to use grid format. Information and list prices have been supplied by the companies listed and are subject to change without notice.
- b) Alphabetical listings with addresses, phone numbers, personnel and branch offices of companies listed on the charts immediately follow.

U.S. RECORDING & MASTERING STUDIOS

- a) Recording studios (of 8 tracks or more) as well as

disk mastering studios are listed geographically in this section.

b) It is assumed that all recording studios listed can provide basic recording, editing and mixdown services.

c) **Important Note:** Information regarding the number of studios and tracks available at any of the studios in the directory appears in parentheses at the end of the main body of each listing. The number of recording studios is given first, followed by the maximum number of tracks on any one analog and/or digital recorder. All track designations are for analog recorders unless otherwise indicated. Examples: (1 studio, 24-tracks) or (1 studio, 24-tracks analog; 32-tracks digital). In the case of multiple studios only the recorder with the greatest number of tracks is given. This does not necessarily mean that all studios have the number of tracks stated. Example: (3 studios, 24-tracks) does not necessarily mean 3 24-track studios.

INTERNATIONAL SECTION

All of the above applies except for the following points:

- a) All listings, except Canadian recording studios, are alphabetical.
- b) There are no tape charts. Tape information is presented in standard alphabetical listing format.
- c) Listings in some countries may have names reversed to facilitate alphabetization. Example: Studio Billboard = Billboard (Studio).

ADDITIONAL POINTS TO REMEMBER

- a) Make note of any legends that may appear below any of the section heads. They contain important information that applies to that section's listings.
- b) There is an advertiser index on the last page of this directory that will enable you to locate a particular company's advertisement quickly.
- c) Sometimes it is necessary to "jump" portions of some categories to other parts of the directory. Watch for notations, usually at the bottom of the pages, and follow the listings to the page indicated.
- d) For a concise description as to the listing format, contents and location of each section please refer to the Table of Contents.
- e) When contacting a company, either through a listing or an advertisement, please say you saw it in **Billboard's International Recording Equipment & Studio Directory**.

NOTE: If you were not listed in this year's directory and you feel that your company's activities qualify for a listing in one of the sections please contact us at the address below so that you may be put on our mailing list for future editions of this and other Billboard Directories.

Stanton-The Professional in The Recording Industry

Application — Stanton monitors the quality of the pressing

Record pressing is one step in the process that delivers sound to you. The process begins when a premeasured amount of pure poly vinyl chloride preheated to 300 degrees is dispensed in the form of a vinyl biscuit (a) which is sandwiched between the two record labels (b). The biscuit is then squeezed between two nickel plated stampers by a hydraulic press (c) spreading the vinyl to form the record, (d) which is then trimmed and stacked for testing and packaging. The average press turns out 8500 records daily. Last year's largest single pressing of a particular album was over 14,000,000 copies.

Stanton plays a vital role in assuring that only the very finest of recordings will ultimately reach the consumer.

Engineers rely on Stanton cartridges for playback of the pressing. Stanton's 881S Professional Calibration Standard Cartridge is the logical choice to evaluate the newly pressed records. The 881S is a low mass pickup that features the patented, expanded contact area Stereohedron® stylus tip for truest fidelity and gentlest possible treatment of the record groove. Each Stanton 881S is individually calibrated with the test results packed in each unit. *From disc cutting to disco to home entertainment your choice should be the choice of the Professionals... Stanton cartridges.*

BRAND USAGE RESPONSE SURVEY

This special Billboard survey of recording studio equipment usage was compiled from questionnaires returned by 546 US recording and mastering studios from July through August 1983. Not necessarily reflecting the exact total situation in US studios, the calculations show the percentage of studios using each brand and the percentage of brand responses attained by each brand.

Listed below each category heading are the number of studios reporting information for the particular category and the number of brand responses reported by the studios. Since a studio could list more than one brand, the number of brand responses always will be greater than the number of studios.

The percentage of studios figure, which measures the strength of a brand independent of the other brands, typically will have a total percentage figure per category that far ex-

ceeds 100%. The percentage of brand responses figure, which accounts for a particular brand's position relative to the other brands, will total 100% per category. Note that the percentage of brand responses does not account for the number of items of equipment used by each studio. Thus, this percentage is not a market share percentage of actual equipment pieces used.

To expand upon the difference between the two percentages, consider the following example. Assume that a category has 500 studios reporting an average of two brand responses each or a total of 1000 brand responses (500 x 2). If 250 studios report that they use a particular brand, then it has 50% of the studios (250/500) and 25% of the brand responses (250/1000).

For information about regional and track breakdowns, contact Leslie Shaver, Billboard, Box 24970, Nashville, TN 37202.

THE HIT SEAT

Photo courtesy New River Studios, Fort Lauderdale, Florida

This is it. The chair where hits are made. Behind a state-of-the-art console. Beside racks of the best signal processing gear. And in front of a full complement of Studer recorders.

Of course, Studer recorders do cost more. But they earn that money back—and then some. For example, studios with Studer multi-tracks produce top-10 hit records at a rate far beyond the average for non-Studer facilities. Skeptical? Check the charts, look up the studio credits, then find the equipment

rosters in magazines or directories. You'll discover that Studer-equipped studios are making more than their "fair share" of hits.

It all comes down to hard dollars and common sense. Paying business comes to the studios that produce paying results. At Studer, we can't take all the credit for the hit-making success enjoyed by our customers. But we seem to tip the odds in their favor. Is it your turn to try out the hit seat? Call your Studer representative for more details.

MORE RECORDING STUDIOS USE CROWN MONITOR AMPS THAN ANY OTHER BRAND.*

If you're going for gold, you've got to have the best – the best talent, the best writing, the best equipment. You'll leave nothing to chance.

That's why most studio professionals choose Crown monitor amplifiers.

They know they'll get the clearest highs, the most accurate mid-range, the most solid lows with Crown amps.

Sonic accuracy has always been the first goal – and the hallmark – of Crown engineering. Crown amps *are* powerful,

but never at the loss of sonic accuracy. Crown amps *are* reliable, but our first concern is sonic accuracy.

Crown amps will never get in the way of the music. With Crown, you'll know for sure when you've got a gold.

THE MCI PROMISE.

When MCI engineers set out to design the world's finest recording/remixing console, they promised to pack every one with more performance and more features than ever before. And they kept their promise. So well, in fact, that MCI consoles have become the choice of leading recording studios.

Now Sony is making a promise. The same versatile MCI JH-600's that turn out hit after hit can tackle every new mixing and sweetening job you have, head-on. Audio production for broadcast, teleproduction, or wherever your studio is moving.

one of Sony's four flexible MCI JH-600 consoles can move right with you. You have our word on it.

AMPEX GRAND MASTER® 456

Consistency is what you get with Ampex Grand Master® 456. Consistency you can count on, reel after reel, case after case, year after year.

Consistency that begins with manufacturing. Every reel of Grand Master 456 Studio Mastering Tape is made from the finest raw materials—base films, oxides, and binders. And they're inspected for quality and consistency every step of the way. Consistency that is assured by over 118 stages of inspection.

Consistency proven by testing. For example, every reel of 2" Grand Master 456 is tested end-to-end and edge-to-edge, to make certain you get virtually no tape-induced level variations from one reel to the next. The strip chart in every box of 2" 456 proves it.

But, consistency is what you expect from the audio quality leader. That's why more recording professionals have more confidence in Ampex tape than in any other studio mastering tape.

LEXICON'S *NEW* 224X with LARC Its only limit is your imagination

Only Lexicon's 224X does it all. And now the 224X comes with LARC—the key that gives you easy access to the *total* capabilities of the most powerful processor in the world.

LARC (Lexicon Alphanumeric Remote Console) tells at a glance where you're at . . . which *family* of programs you're into . . . the *specific* program selected . . . plus the variations *within* the program. They're all spelled out on LED displays. And, with LARC, you can now store your setups on audio cassettes.

Unique Split Reverb/Effects

Achieve two levels of effects simultaneously—either two reverberations or reverberation combined with effects.

Each input can be processed independently, with different effects, and for each input there are stereo outputs. Split reverb puts the processing capabilities of two systems into one. Only Lexicon has it.

Unparalleled Sound Quality

Unquestionably the best! Lexicon digital reverberation programs are the most mature in the industry, repeatedly acclaimed by users and reviewers. Full 15-kHz bandwidth, 84-dB dynamic range, and less than 0.07% distortion.

Unmatched Versatility

Hall, Plate, and Room/Chamber algorithms, including a Small Room program for subtle acoustic enhancements and film/video work. More than 30 preprogrammed variations (with more to come).

Superior controls. Decay time in two frequency bands . . . crossover . . . high-frequency rolloff . . . apparent listener position . . . predelay . . . internal chorus . . . diffusion. And early reflections provide exceptional control over the initial sound.

Dynamic decay. Special signal processing capabilities can change reverb time in response to program dynamics.

Comprehensive delay effects. The most extensive set of time-delay functions available. Put in a vocal track and get out six independent voices. Create phasing, flanging, and, repeats in a single pass. Put in a rhythm track and get out syncopated chords. Use up to six separately adjustable delay taps, with up to 1860-ms delay, each with high-cut and low-cut filters tunable from 170 Hz to 19 kHz.

36 nonvolatile memories. All parameters of setups can be stored in memory for instant recall—and can be archived on cassette tape.

An Investment in the Future

Your investment in a 224X with LARC is an investment that will pay big dividends today—and tomorrow. Your initial purchase price buys you all software updates, subject only to a small media charge.

Look into the Lexicon 224X digital reverb/effects system with LARC*. Compare it with anything else on the market. You'll find this superb system is, by far, the most powerful of them all.

*Field conversion is available for owners of existing 224X systems. Contact Lexicon.

Sonex is manufactured by Illbruck/USA.

A black AKG C460B condenser microphone is shown diagonally against a dark background with a green waveform graphic. The microphone has 'AKG C460 B' printed on its body. The background features a grid pattern and a green band with a white waveform.

Because every
Sound

ends in
Silence

THE C460B

Condenser microphone is designed for applications requiring the widest dynamic range. With its low self-noise (15dB SPL), the C460B captures sounds from silence to the most demanding sound pressure levels (140dB) with no change in T-O even with selectable attenuation. Before you invest in new studio monitors, consider all the angles.

No one has to tell you how important flat frequency response is in a studio monitor. But if you judge a monitor's performance by its on-axis response curve, you're only getting part of the story.

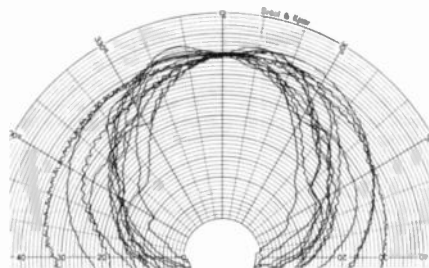

Most conventional monitors tend to narrow their dispersion as frequency increases. So while their on-axis response may be flat, their off-axis response can roll off dramatically, literally locking you into the on-axis "sweet spot." Even worse, drastic changes in the horn's directivity contribute significantly to horn colorations.

Introducing the JBL Bi-Radial Studio Monitors.

At JBL, we've been investigating the relationship between on and off axis frequency response for several years. The result is a new generation of studio monitors that provide flat response over an exceptionally wide range of horizontal and vertical angles. The sweet spot and its traditional restrictions are essentially eliminated.

The key to this improved performance lies in the unique geometry of the monitors' Bi-Radial horn! Developed with the aid of the latest computer design and analysis techniques, the horn provides constant coverage from its crossover point of 1000 Hz to beyond 16 kHz. The Bi-Radial compound flare configuration maintains precise control of the horn's wide 100° x 100° coverage angle.

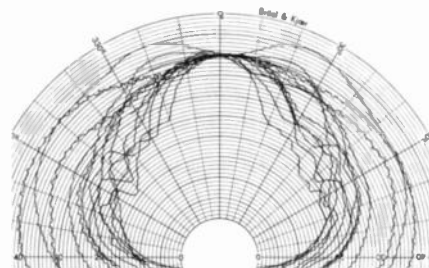

1. Patent applied for.

Typical horizontal

JBL 4430 horizontal

Typical vertical

JBL 4430 vertical

And the Bi-Radial horn's performance advantages aren't limited to just beamwidth control. The horn's rapid flare rate, for instance, dramatically reduces second harmonic distortion and its shallow depth allows for optimal acoustic alignment of the drivers. This alignment lets the monitors fall well below the Blauert and Laws criteria for minimum audible time delay discrepancies.

But while the Bi-Radial horn offers outstanding performance, it's only part of the total package. The new monitors also incorporate JBL's most advanced high and low frequency transducers and dividing networks. Working together, these

components provide exceptionally smooth response, high power capacity, extended bandwidth, and extremely low distortion.

Judge For Yourself

Of course, the only way to really judge a studio monitor is to listen for yourself. So before you invest in new monitors, ask your local JBL professional products dealer for a Bi-Radial monitor demonstration. And consider all the angles.

By supporting the American Heart Association you may:

- avoid capital gains tax on appreciated securities or other property
- reduce current and future income taxes
- provide a lifetime income for yourself or beneficiaries
- avoid probate and publicity
- maximize new estate tax savings

It may pay you to inquire about the American Heart Association's Planned Giving Program by contacting your local American Heart Association, 7320 Greenville Avenue, Dallas, TX 75231.

Sometimes, it can be better to give than to receive.

FOR THOSE WHO CHOOSE SCOTCH® THIS IS BUT ONE REWARD.

Michael Jackson

The Oak Ridge Boys

Charlie Daniels Band

Quincy Jones

Stephanie Mills

Olivia Newton-John

Earth, Wind & Fire

Rickie Lee Jones

Donna Summer

3M Scotty awards are reserved for artists who go gold or platinum with albums recorded on Scotch® recording tape.

But in a way, every artist who records on Scotch recording tape is a winner.

The reason is simple. Music sounds better on Scotch. Just ask a Scotty winner.

To save you time and money we've just spent over 546 hours training your next employee!

When money and time are tight, you can't afford to train an employee from scratch. Our graduates have spent a full year in an intensive study of Audio Engineering, Music Production, Studio Electronics, Music Business and Finance, Copyright Laws and Entertainment Contracts. They're young, knowledgeable, and—because they're well trained—effective from the start. Graduates and referrals among the Majors!

If you are in need of someone already possessing the basic knowledge and skills of the industry, we might just have the person to fit your situation.

So call or write us at: **College for Recording Arts**

665 Harrison Street, San Francisco, California 94107
Phone: (415) 781-6306

P.S. If you know a promising and talented person that you'd like to help along, why not let us train them for you!

The school is accredited by the Accrediting Commission of the National Association of Trade and Technical Schools (NATTS), approved by the Calif. Superintendent of Public Instruction, approved for Veteran training, and is authorized under Federal law to enroll non-immigrant alien students. It is also endorsed by the National Academy for Recording Arts and Sciences Training Institute.

Some people
come to Miami
for sunshine,
but you
should come
for Coconuts!

It's great to know you can come enjoy all South Florida's good times and still call home to report a productive session in Miami's newest studio.

At Coconuts Recording Co. the studio itself is as well-designed as it is beautiful. We offer the best equipment available including our MC1 536 automated console, 24 track fully Dolby-zized tape system and a full array of special effects devices. What's really special is that all these "toys" plus a Yamaha concert grand are all there for your use at no extra cost.

We know that technical facilities alone aren't everything. So we've made an effort to create a private, homelike atmosphere as well. Even the vending machines are free. All reasons why you should pick Coconuts in Miami!

ACCURACY—NOT FLATTERY

Knowing exactly "what's on the tape" is of paramount importance to the professional recording engineer and producer. Unfortunately, many recording, mixing, mastering and listening rooms are less than ideal, making truly accurate monitoring difficult.

For over a decade, permanently installed Westlake Audio studio monitors have been the worldwide choice of professionals who demand accurate reference monitors. Now, that same precision is available in the Westlake Audio BBSM series of Portable Reference Monitors.

The BBSM's pinpoint stereo imaging, wide bandwidth, totally symmetrical polar pattern and coherent wave front, even when monitoring as close as 18 inches, are a result of a unique combination of drivers, cross-over and mounting configuration. Best of all, this has been achieved in a size that makes these Reference Monitors easy to carry with you from studio to studio.

Capture sound at its purest.

Hold a seashell to your ear and hear nature's pure and natural sound. Compare it to the final sound produced by a Neve. You'll begin to understand why Neve is far and away the most respected name in audio mixing.

The Neve sound is so pure and natural, one might suspect that nature herself had a hand in the design. Perhaps.

Not every engineering achievement can be explained away. There are mysteries in nature, just as there are mysteries man-made.

Some suggest that Neve's unique Formant Spectrum Equalizers account for its unparalleled sound by taking into account the psycho-acoustic properties of voice and music while satisfying the critical demands of balance engineers. Others claim it's superior technical performance, novel circuitry, or high quality components.

All agree on one thing: To capture sound at its purest, aspire to Neve.
