

ANTIQUE RADIO CLASSIFIED

VOLUME 27

AUGUST 2010

NUMBER 8

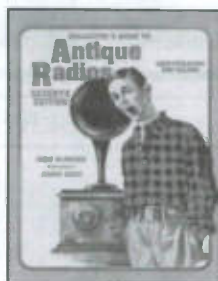

**Coming Soon
Changes to A.R.C.**

A.R.C. — THE NATIONAL PUBLICATION FOR BUYERS AND SELLERS
OF OLD RADIOS AND RELATED ITEMS — WWW.ANTIQUERADIO.COM

A few of our Radio Collecting Books

See complete list at www.antiqueradio.com

Collector's Guide to Antique Radios 7th Edition by John Slusser. 10,000+ sets from the 1920s to the 1950s. Updated 2007 prices. 1,200 color photos, 317 pages. — \$24.95

Where Discovery Sparks Imagination By John D. Jenkins. A fascinating history of electricity and radio as seen through the comprehensive collection in the American Museum of Radio and Electricity. From Leyden jars to vacuum tubes and from telegraph to the golden age of radio. 218 pages - 400+ full color photos. Hardcover — \$34.95

Radio Manufacturers of the 1920's by Alan Douglas. Vol. 1: A-C Dayton to Ferguson, 225 pages. Vol. 2: Freed-Eisemann to Priess, 266 pages. Vol. 3: RCA to Zenith, 292 pages. Softcover. Each Volume — \$29.95

Radiola - The Golden Age of RCA, 1919-1929, Wenaas. Documents & pictures every radio receiver and the major accessories sold by RCA during the first decade. 700 color photos, 485 pgs. Hardcover — \$45.00

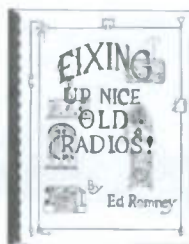

Practical Radio Repair, A Handbook for Radio Collectors, Bintliff. Provides practical information on how to repair and restore vacuum tube radios and related electronic devices. 270+ figures, 140 pgs. — \$25.95

Fixing Up Nice Old Radios by Ed Romney. Written by a retired radio instructor. Plastic binding. 300+ figures, 185 pages. — \$35.00

Old Time Radios Restoration and Repair by Joseph J. Carr. A self-paced training guide. History, theory and practical operation of antique and classic radios. 200 illustrations, 256 pages. — \$19.95

A.R.C., P.O. Box 2, Carlisle, MA 01741 – Toll Free: (866) 371-0512

Fax: (978) 371-7129 – E-mail: ARC@antiqueradio.com – Web: www.antiqueradio.com

U.S. Shipping \$3.00 for 1st book, \$1.00 each additional. Typical U.S. order will be received within 7 days, but allow 2-3 weeks. Most orders shipped by next business day. Send payment with order. Mass. residents add sales tax. Non-U.S. orders, contact us for shipping costs. For your protection, if using a credit card, use our secure website. Do not send credit card info via e-mail. Money back return policy.

(#51-Jul10)

THE HISTORY OF RADIO ON CD-ROM

Radio Era Archives produced the QST-VIEW series of CD's for the American Radio Relay League (ARRL) and over 1/2 million CD's have been sold. QST Magazine has been continuously published since 1915. We are now proud to announce that this small mountain of CD's (about 35) is now available exclusively from REA (All Sets)! Every magazine published from 1915 to 1994, front cover to back cover, every article and column, all accessible with our database search engine.

QST-VIEW CD Edition truly captures the history of radio in 11 volumes. All CD's warranted to work on all Windows platforms from Windows 95 through XP. Each set is \$ 39.95 and we have all sets in stock. The sets are: 1915-1929, 1930-1939, 1940-1949, 1950-1959, 1960-1964, 1965-1969, 1970-1974, 1975-1979, 1980-1984, 1985-1989, 1990-1994. Each set of years is a self-contained set so you can operate one or all sets together. Now that large capacity hard drives are so inexpensive, the 36 CD's can be loaded on about 20Gb of hard disc space for instant searching and viewing without having to swap discs! Full information is provided with each purchase and QST-VIEW has on-line instructional help for operating the QST-VIEW browser!

EACH SET \$ 39.95 (specify the years)

ALL 11 SETS \$ 379

S&H USA for first set is \$ 5.00, add \$ 1.00 each set thereafter

S&H Export first set is \$ 15.00, add \$ 2.00 for each set thereafter

2009 1/2 PRICE SPECIAL (while supply lasts)

Don't forget, we have the entire John Rider's Perpetual Troubleshooters Manuals on a single DVD. All 23 Volumes of the Riders available at the click of a mouse! Over 120,000 different model radio schematics and related service information in an easy to use DVD. Thousands sold at \$ 199. SPECIAL \$ 99 + \$ 6.00 S&H in the USA, add \$12 for worldwide delivery. Order Now while supply lasts!

We now have a small mountain of vacuum tubes at very competitive prices - Thousands sold since our first posting of these tubes. All types including receiving and transmitting types. Tube price listings on the web:
<http://www.radioera.com/tubes.asp>

SCHEMATIC DIAGRAM & MANUAL SERVICE

Over a Million schematics & 100,000 manuals and growing! Schematics and most manuals may be emailed instantly via the internet

Check the web - On-line antique radio flea market - Radios for sale - Antique radio museum - Zenith Trans-Oceanic museum - thousands of old catalogs, manuals, literature, information, how-to data, reference, auction price section and much-much more! Visit antique radios largest web address today!

**POSTMASTER: Send address changes to Antique Radio Classified, P.O. Box 2, Carlisle, MA 01741.
Printed in U.S.A.**

PURPOSE. Antique Radio Classified is published for people involved in the radio collecting hobby. Its purpose is to stimulate growth of the hobby through the buying, selling and trading of radios and related items, and to provide a monthly forum for the interchange of ideas and information.

Publisher and Editor: John V. Terrey, **Assistant Publisher:** Cindie Bryan, **Managing Editor:** Dorothy Schecter, **Advertising Manager:** Cindie Bryan, **Staff:** Bobby Lyman, Ray Bindiff, Dave Crocker, **Founding Publisher/Editor:** Gary B. Schneider, **Contributing Writers & Consultants:** Mike Adams, Richard L. Arnold, Richard Begbie, Ray Bindiff, Norman Braithwaite, Ray Chase, Dave Crocker, Alan Douglas, Richard Foster, Andrew Hayden, Jim Kreuzer, Phil MacArthur, Ron Ramirez, Gary Schneider, Daniel Schoo, Frank White.

CONTACTING ANTIQUE RADIO CLASSIFIED.

All correspondence should be sent to:
A.R.C., P.O. Box 2, Carlisle, MA 01741.

Only UPS, FedEx, etc. items to street address: 498-A Cross Street.

Telephone: (866) 371-0512; Fax: (978) 371-7129

E-mail: ARC@antiqueradio.com - Web: www.antiqueradio.com

Please, no classified ads by telephone; thanks.

Your ads, renewals, letters, etc. can be handled faster and more efficiently if your name, address and SUB# are written on each.

Unfortunately, A.R.C. is not staffed to answer all letters with questions about antique radios or requests for advice. However, A.R.C. does solicit letters of interest from its readers and publishes them as space permits.

GUARANTEE. You may cancel your subscription at any time and receive a pro rata refund for issues not yet mailed. If errors to ads are made by A.R.C., upon request a free correction will be run in the next available issue.

WEB. Antique Radio Classified issues are published on the web as PDF files for subscribers. Web-only subscriptions are available. One issue is available for viewing by all on the web as a sample.

ADVERTISING. Classified advertising information is included on the first classified advertising page. Display advertising rates and artwork specifications are available on the web site.

PAYMENT. Please include full payment with your order or ad. A.R.C. does not carry accounts: all subscriptions, ads, etc. must be prepaid. Pay in U.S. funds. Checks drawn on a U.S. bank, money orders, VISA, MasterCard, American Express or Discover. Make check out to "A.R.C." Subscriptions will be prorated to amount sent if amount is incorrect. *For your protection, no credit cards by e-mail; use our secure website instead.*

CHANGE OF ADDRESS. Please notify us in advance of a change of address. Send your new address, your old address, your SUB# and the effective date of the change.

PUBLISHING RIGHTS. Unless other arrangements are made: (1) All received materials (ads, articles, letters, correspondence, e-mail, photos, artwork, etc.) become the property of A.R.C. may be edited, combined with other material, published, and will not be returned. (2) For all received materials, A.R.C. is granted publishing and reprint rights in all forms of media including the monthly printed magazine, internet, etc. (3) Publication is subject to approval by A.R.C. and to time and space constraints.

MAILING OF ISSUES. U.S. subscribers can receive A.R.C. by First Class or Periodicals mail (Periodicals is the way most magazines are mailed). The mailing of First Class copies is staggered with faraway copies mailed before local copies. Mailing dates change each month. See page 6 for the revised publishing schedule for the remainder of 2010.

ETHICS. No person involved in the production of A.R.C. is to act on any information in the magazine until the first delivery day after local copies are mailed.

DISCLAIMER. The publisher is not responsible for any buying and selling transactions incurred, or for any other use of the contents of this publication.

NOTICE. Subscription rates, frequency of publication, content, policies, size and ad details, and rates are subject to change at any time by A.R.C.

ANTIQUE RADIO CLASSIFIED

EDITOR'S COMMENTS

As our cover announces, more changes are coming to A.R.C. The most immediate one is that the September and October issues will be combined into a single double issue. The same will be done for a November/December double issue. The result will be later delivery than you are used to and require a little patience on your part. For example, instead of the usual delivery schedule in late August or by September 10, the September/October issue may not arrive until September 22. For the revised advertising deadlines and the mailing schedule, see the rear cover and the next page.

The second change is that, after nearly 24 years as your publisher/editor, I have decided to look for someone else to take over, someone who might have new vision for A.R.C. Under new leadership, A.R.C. may not continue as we know it, but it may evolve into what is appropriate for the new media environment. It may become a web-only publication. It may merge into another magazine. It is possible that with a new business model, A.R.C. can be rejuvenated and will continue to grow and serve the radio-collecting community.

If Larry King can hang up his suspenders after over 20 years, I guess I can too. Anyone with a passion for old radio who is interested in participating in A.R.C.'s future, please give me a call (978-369-9770), write (John Terrey, 498 Cross St., Carlisle, MA 01741) or e-mail (johnterrey@aol.com).

A.R.C. OVER THE YEARS

As those of you who read these pages monthly must be aware, for some time this publication has attempted to adapt to the changes brought about by the new media environment — primarily, the Internet. The means of delivering information has changed drastically in the last ten years and all print media are struggling to find their niche and to continue with their print publications.

I took over the publishing of A.R.C. in 1986, and, within ten years, grew the subscriber base from 1,800 to over 8,000. Our biggest problem back then was how to get the classified ads to

everyone at the same time. We tried every reasonable solution, but problems with the U.S. Postal Service persist to this day.

However, the solution to instant delivery of information was finally invented — the Internet. Now all who subscribe to A.R.C. can get the information at the same time by reading A.R.C. on our website.

Nevertheless, this seemingly miraculous delivery system has proved to be both a blessing and a curse to print publications trying to preserve the quality of their editorial offerings and to find a way to pay the bills. In our case, in addition to the offerings on the website, we have a history of quality articles and of spreading the word about radio preservation and the pleasure and camaraderie inherent in this hobby.

For example, we have had requests for over 92,000 free samples over the years, often from individuals who have just one radio that might have been destined for the town dump. Instead, our free sample copy may have resulted in an owner's connection with an interested buyer who restores the radio. In addition, we have offered a free listing on our pages for clubs and museums to help them promote their events and add to their membership.

How many radio enthusiasts have we reached out there? Well, over the years we have had over 28,000 subscribers. Add to these the 92,000 free samples and we have been in touch with over 120,000 collectors or individuals interested in old radios. And today, we have over 1,000 visitors to

(Continued on following page)

ON THE COVER

Our cover is altered from a postcard from the John V. Terrey collection. To convey our own message, we "Photoshopped" both the flag on the microphone, which originally said "BBC," and the text, which on the script held by the announcer said, "Weather Report & News." Above the drawing were the words, "It will be Wet..." — probably not exactly news in England. The back of the card states: "Inter-Art" Comique Series, London, and the postmark is Scarborough, Yorkshire, July 16, 1951.

(Editor's Comments, continued)

our website each day. Unfortunately, those impressive numbers have not translated into the enlarged subscription base so essential to any publication. To those who remain loyal subscribers, we cannot thank you enough for your support, but it is unfortunate that so many more fail to realize the value of *Antique Radio Classified!*

When I took over the publication of A.R.C., I believed that by making it a "real business," as opposed to a "sideline," and a "real magazine" as opposed to a "newsletter," there would be both continuity and quality. Quality we achieved, but continuity is now elusive. In our better years, there were four full-time plus additional part-time employees answering the phones, typing the ads, taking orders, shipping the books, editing the articles, doing "paste-up." (Paste-up in those days meant using an X-Acto knife and wax; page layout software such as Pagemaker or InDesign did not exist!) A.R.C. was, and still is, one of those small businesses that furnishes an excellent product — plus provides jobs, purchases goods and services, and pays taxes. Unfortunately, surviving as a small magazine business today is proving not only difficult but also extremely challenging. I am hoping that in the near future, someone with a new vision will take up that challenge.

PARTICIPATE IN A.R.C.'S FUTURE!

As I said on the previous page — anyone with a passion for old radio who is interested in participating in A.R.C.'s future, please give me a call (978-369-9770), write (John Terrey, 498 Cross St., Carlisle, MA 01741) or e-mail (johnterrey@aol.com).

THE CURRENT ISSUE

Now back to what makes this job a pleasure every month — the content of the current issue. I'm always struck by how dedicated the contributors of articles are to preserving antique radios and radio history. Howard Stone excels in that category as is evident in Part 2 of his article on his outstanding collection of early wireless equipment now also shown on his website.

This time Howard concentrates on his Marconi items. The three Fleming valves pictured, all manufactured by Marconi, are examples from his large tube collection. Before and after photos of his Marconi Type 16 crystal set illustrate the quality of his restoration techniques. Those bar-

nacles or whatever they were covering the set brought up from the ocean bottom must have known the game was up when Howard took on the restoration. The products of such a dogged pursuit of perfection and accuracy are what make this hobby so endlessly interesting.

Phil MacArthur too is engaged in another kind of dogged pursuit. He searches for "benchmark radios" and urges fellow collectors to join him in documenting coming across a first model or the first of a particular class of radio such as the transistorized Trans-Oceanic Royal 1000 or the Zenith 500 series. That kind of collaboration in record keeping would be another giant step in keeping track of everything worth knowing about the world of antique radio.

That world is endlessly surprising as proved by Gary Milner's *Photo Review* submission — an RCA Model 301 Duo, which might be called a "stealth radio/phonograph." Unless you lifted the cover, you'd never know that a phonograph lurked beneath.

As always, thanks to Ray Chase for a fine report on the Estes auction of the Steven Ralston Collection. This auction had to be a happy event for many participants who saw some high quality, uncommon items cross the block. The colorful GE and RCA wooden advertising dolls by Maxwell Parrish drew a lot of attention and solid bids of \$700 and \$750, while the top bid of \$4,250 went to a superb McMurdo Silver Masterpiece V in a Clifton cabinet. As Ray often reminds us, at auctions you have the pleasure of seeing fine old radios, even though you may not be able to take one home.

You should have many more such opportunities in the remaining summer/fall months. Enjoy!

A.R.C. Benefits. Be sure to take advantage of A.R.C. benefits: a toll-free number (866) 371-0512; Discover, MasterCard, American Express, Visa accepted; a secure shopping cart on the website, www.antiqueradio.com; a searchable auction price database, now nearly 25,000 entries; and the full magazine available on the website. **Note:** Please do not send credit card info by e-mail. Use our secure website or U.S. Mail, or call or fax.

Coming Radio Events. This is definitely "Meet Month" — 8 are listed, along with 25 meetings and 5 auctions. Fellow collectors are waiting for you to join them everywhere.

Happy Collecting!

John V. Terrey, Editor

* Target Date is earliest date copies might be received.

WITH THE COLLECTORS

Wireless at Stone Vintage Radio — Part 2

BY HOWARD STONE

As promised in Part 1, Howard Stone presents an overview of his prized Marconi sets that can also be viewed on his website. (Editor)

In last month's issue of A.R.C., I discussed several wireless receivers from 1914 to 1919 that may be seen in my virtual museum StoneVintageRadio.com. This month I will again look at wireless sets, but this time all of the sets are made by Marconi. Some were made by the Marconi Company in the U. K. and others by American Marconi.

The story of Marconi, thought by many to be the father of radio, is well known to all serious radio historians and collectors. Born in 1874, he began experimenting with wireless in Italy at an early age. He became fascinated with the work of Heinrich Hertz, and it occurred to him that he could use Hertzian waves to communicate from point to point without wires.

Most researchers in the late 18th century were interested in Hertzian waves purely as a scientific exploration. Marconi found that he had to go to England to get a good hearing for his ideas of wireless communication. Soon he started wireless companies in the U. K. and also in many countries around the world. At first he would not sell his equipment but offered it only for lease. Included here are a few selected pieces of Marconi equipment from the collection at StoneVintageRadio.com. (I urge readers not familiar with Marconi and his wireless sets to read J. & F. Kreuzer's "Marconi—The Man and his Apparatus," in Vol. 9 of the *AWA Review*.)

FLEMING VALVES, AMERICAN MARCONI

Shown in Figure 1 are three Fleming valves made by the American Marconi company. The Fleming Valve was the first commercial application of the Edison Effect (the flow of electrons through space by a heated element) used as a vacuum tube rectifier/detector. J.A. Fleming developed the tube in 1904. The Fleming Valve is by most accounts the grandfather of the modern vacuum tube.

It is hard to estimate how many of these Fleming valves are still in existence. One knowledgeable authority suggested that there were about 60 in the U. S., about 30 in the U. K. and about 20 or so elsewhere. Shown are three different Fleming

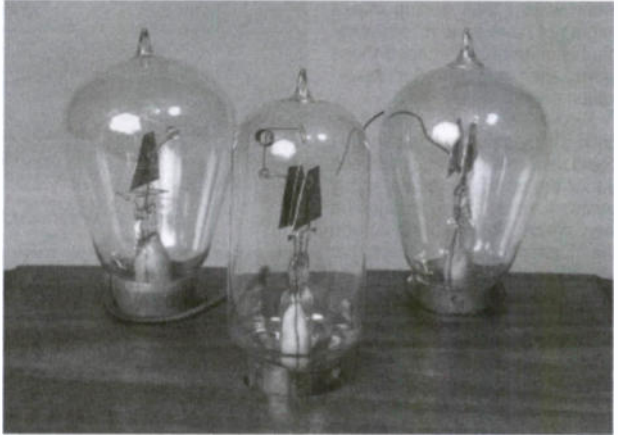

Figure 1. Three different American Marconi Fleming Valves.

Valves. You see two different shapes of glass enclosures. The valve on the left has one plate and the other two have two plates. I assume that the single plate is an earlier version of the valve. The valve on the right has an intact carbon filament.

103 RECEIVER, AMERICAN MARCONI

The Marconi 103 seen in Figure 2 is an early radio made by American Marconi. It is a crystal set and was made for the most part with English parts. It came out in 1913 and primarily was used on board ships. The frequency it tunes is 200 to 600 meters. Just two years after the 103 was introduced, most were recalled to the factory for a significant change of its circuitry. The result was the more commonly seen Model 107 or 107A. You can tell the difference between a 103 and a 107 because the 107 has a 6-point switch mounted on top of the panel in the center. By changing the tuning circuit of the 103 to the 107, it could now tune 250 to 4,000 meters, according to the J. & F. Kreuzer article mentioned earlier.

TYPE 16 CRYSTAL RECEIVER

Around 1918, a ship went down. Although I know nothing about the ship, it must have been a modern ship of its time because it was outfitted with a Marconi wireless station. The receiver was a Marconi Model 16 crystal set first introduced in 1914. It is a 2-crystal detector set; the two detectors can be used for balanced or independent working. The

(Continued on following page)

(Stone Vintage Radio Part 2, continued)
Marconi 16 covers 250 to 3,500 meters.

In 1999, the Model 16 crystal set I have in my collection was brought up from the bottom of the ocean — along, presumably, with other treasures from the sunken ship. Another collector did some preservation work on the set for three years before turning over the reins to me. He commented, "If I knew what I was getting into, I might not have done it." Many radio historians have echoed those words after they started a preservation project.

Figure 3 shows the set as I received it. If someone had told me I could restore a radio that had been under the ocean for some eighty years, I would have thought he was crazy! But my wife agreed that I needed a big project that would keep me occupied for a long time. As it turned out, preserving the Marconi 16 has been my most satisfying project in over 35 years of restoring radios. The restored receiver is seen in Figure 4.

I do enjoy preserving radios — even basket cases; in fact, it is the aspect of radio collecting that I value most. I am neither fond of nor very good at finding sets. When I take a mouse-infested, ratty old shambles of a radio and make it look good again, that is satisfaction. I probably developed this bent to my hobby because, as a teacher married to a teacher, many times I could not afford good clean examples of the sets I wanted. I had Dom Perignon taste on a Tecate budget.

You can read the story of reclaiming the Model 16 crystal set on my website.

MAGNETIC DETECTOR

Most seasoned radio collectors spend many hours helping antique dealers and others learn about radios. It is in our own interest to have more eyes out there looking for radio gear. When I was teaching at Texas Christian University, every seventh year I was granted research leave — the first three times in Cambridge, England. As a result, my wife and I have many British friends, among them an antiques dealer who finds items of early technology from time to time. On one research leave (1992-93), he and I were poring over an early book on electrical and wireless technology while we waited for tea.

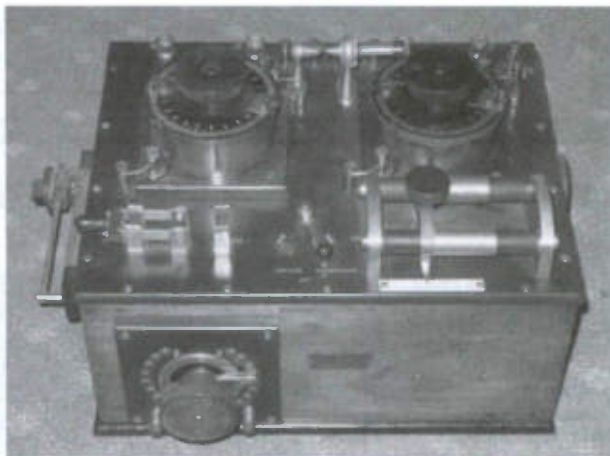

Figure 2. American Marconi 103 receiver.

Figure 3. Type 16 crystal receiver retrieved from the ocean bottom.

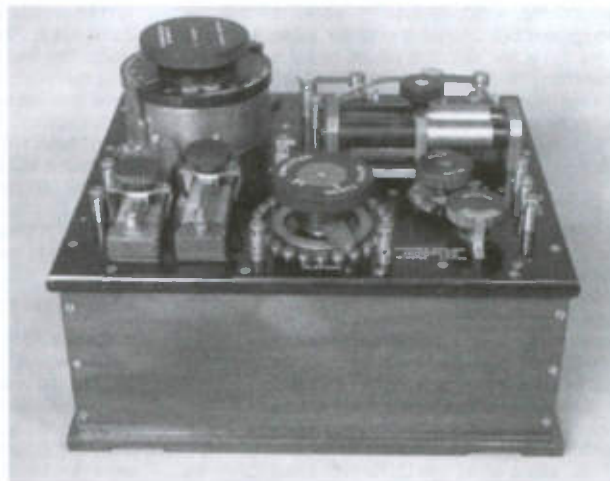

Figure 4. The restored Type 16 crystal receiver.

I would point at a picture and say, "If you ever see this, please buy it for me." Tea came, and we put the book aside.

Nine months later, back in Fort Worth, Texas, I received a phone call from England. My friend had found a magnetic detector. Did I want it? My answer, obviously, was yes. When the magnetic detector arrived, it was a little scruffy, but all original. Figure 5 shows the magnetic detector today.

A little history: In 1895, Ernest Rutherford, a scientist in England, was able to detect signals transmitted a mile away, using a magnetometer, a device used for measuring the strength of magnetic fields. Rutherford's research was based on the prior work of Lord Rayleigh and other scientists studying oscillatory currents. Rutherford attached an antenna to the magnetometer, the received signal deflected the needle of the magnetometer, and, thus, an early "magnetic detector" had been discovered. Marconi further developed the work of Rutherford, and in 1902, he produced his own magnetic detector.

The first "Maggie" (the nickname widely used for the magnetic detector) was installed in the Italian Navy's warship the *Carlo Alberto* in 1903. Magnetic detectors were very reliable for shipboard communication and were the primary detectors installed on European vessels from 1903 to 1912, replacing coherer type detectors. In fact, because of their reliability, magnetic detectors were used as back-up detectors on many ships into World War I to supplement crystal and later valve detectors. For more information on Marconi magnetic detectors, see the article I wrote for A.R.C. in the June 1999 issue.

AMERICAN MARCONI MAGNETIC DETECTOR

Most of the Marconi magnetic detectors, like the one discussed above, were manufactured in England. The few built in the United States were produced in Aldene, New Jersey. The Aldene plant did not begin full operations until 1912 when magnetic detectors were already on their way out as valves and crystal detectors came in. The result was that not many were produced, and today, no more than a dozen American versions are known still to exist. My American Marconi magnetic detector is shown in Figure 6.

Printed on the bottom of the drawer of this American Marconi magnetic detector is the date it was made, September 26, 1912. There are several obvious differences in the American Maggie: the hinged lid, the beveled glass top, the shape and number of magnets (two vs. four in the English version), and

Figure 5. Marconi magnetic detector.

Figure 6. American Marconi magnetic detector.

the inclusion of a drawer. It still functions like the English version.

MULTIPLE TUNER

The magnetic detector needed something to tune in the desired frequency and a Mr. C. S. Franklin of the Marconi Company developed the multiple tuner to do just that. It was patented in 1907. My multiple tuner is shown in Figures 7 and 8.

The multiple tuner was produced for ship or shore installations. The magnetic detector was connected to the terminals marked "detector" on the multiple tuner. With the switch on the multiple tuner set at "tune," the magnetic detector was in series with a condenser that was coupled inductively with another circuit called the "intermediate circuit." This intermediate circuit was coupled with the antenna circuit. Each of these circuits was adjusted to the desired wavelength.

Most Marconi installations from 1907 to 1914 used the multiple tuner and are seen with the magnetic detector in many pictures of early shipboard radio rooms. The three round objects on the top of

(Continued on following page)

(Stone Vintage Radio Part 2, continued)

the tuner are high quality variable condensers. The parallel horizontal bars on the front are for tuning and the large knob on the front left is for varying inductance. By selecting the appropriate taps of the antenna inductance, variocouplers, and variable condensers, the set can cover 80 to 2,600 meters. The multiple tuner worked very well for the time.

WAVEMETER NUMBER ONE

Wavemeters are used to measure the length of transmitted waves; from the wavelength, the frequency of a transmission can be calculated. They were one of the first pieces of test equipment developed at the beginning of radio. In 1906, Marconi introduced the Marconi Wavemeter Number One in England. The first commercial wavemeter that Marconi made, it was used mainly at ship-to-ship and ship-to-shore stations. It typically covered the frequencies of 100 to 800 meters (this particular wavemeter, when introduced, was calibrated to measure from 200 to 1,040 meters).

I found this Marconi wavemeter while living in Cambridge, England. It was a basket case. The glue was no longer holding and the cabinet was falling apart at all of the joints. The leather was dried and curled up. The leather strap had to be soaked to soften it and then re-glued to the box on the left end that holds the earphone.

Because the wavemeter was in such poor shape, I was not sure how the finish should look. It did not look like other early Marconi apparatus I had seen. I tried to find one in someone's collection in the United Kingdom with no luck. The Science Museum in London had several later Marconi wavemeters, but not the Number One. I contacted the Marconi archives in England; they replied that they had an example of this wavemeter in their collection but would not let me see it because the archives, at that time, were not open to the public. That was bad news for anyone studying or restoring early wireless.

Finally, I mailed some stain chips and a list of specific questions to the archives and got some answers. I found out what I already suspected: the wood of the case was teak — not mahogany, oak or walnut as one might expect in radios or wireless equipment, but it certainly makes sense for equipment used on shipboard. Fortunately, about half of the original finish was still there so the rest of the

finish could be blended in.

The detector used in the wavemeter is a chunk of crystal wedged in between two 2-inch long pieces of spring brass to the back left of the condenser. The small turned round wood box in the back of the earphone box is for spare crystals. The card in the lid is for calculating the wave-

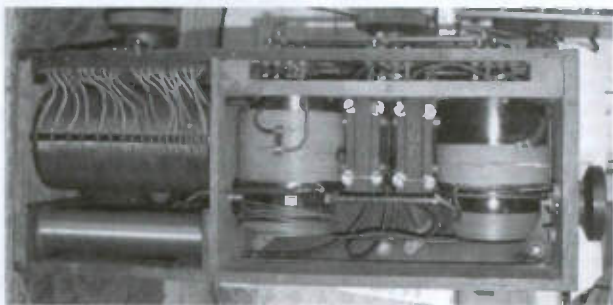

Figure 8. An inside view of the multiple tuner.

Figure 9. The Wavemeter Number One.

length. Surrounding the card wrapped in black tape is the coil.

UNITED WIRELESS TYPE E TUNER

The Type E tuner shown in Figure 10, was manufactured by United Wireless in 1911. In 1912, when Marconi took over United Wireless, the Type E tuner was put out as a Marconi set. Therefore, although this particular set was made by United Wireless before Marconi took the company over, both Marconi and United Wireless Type E tuners exist.

The Type E tuner was the first United Wireless set that had a loose coupler on top of the hard rubber panel. The Type E tuner served as the basic design of the oversized Marconi Type 101 receiver, which incorporated a loose coupler mounted behind the panel and tuned from 100-4,000 meters; it was first supplied to the U.S. Navy in 1914. The loose coupler is of very high quality workmanship. The detector could be detached by loosening the two knurled nuts that hold it in place.

MARCONI 4 VA VALVE AMPLIFIER

I've never seen a description or data on the Marconi 4 VA, a four-step valve amplifier, but it would be safe to describe it as a 4-tube cascade amplifier using Marconi VT vacuum tubes. Jim Kreuzer suggested that "It would have been among the last products produced by American Marconi, about the same time as the Type 120-121-122 receivers. These are dated 1918 and received the final approval on 10-1-1919, only three weeks before the merger into RCA." (Personal communication, December 29, 2009) Only a few of these sets exist today.

IN CONCLUSION

I have covered several Marconi wireless pieces in my collection that can be found on the virtual museum at StoneVintageRadio.com. The website features additional Marconi pieces, as well as early tubes, horn speakers, radio advertising, and of course, radios up to the 1950s.

Marconi's genius lay in transforming scientific observations into commercially viable products. I sometimes wonder how fully he understood the science behind his wireless transmitters and receiver, but undeniably he had the vision and energy needed to revolutionize communication. Thanks to Marconi, the world was in touch — without wires.

(Howard Stone, Texas Christian University, Box 298130, Fort Worth, TX 76129)

Howard Stone is Professor Emeritus of Pastoral Counseling at Texas Christian University, Fort Worth, Texas. A longtime collector, he is especially interested in wireless one and two-tube battery sets of the early 1920s, as well as crystal sets. His many articles for A.R.C. include a series on British crystal sets and an article on round Ekcos.

WITH THE COLLECTORS

“Benchmark” Radios

BY PHIL MACARTHUR

In pursuit of “benchmark” Zenith Trans-Oceanic radios, Phil MacArthur hopes his fellow collectors will join him in the search for “benchmarks” in other sets and brands as well. Every addition to early radio history is welcome. As Phil has said, “We’re doing all this buying and selling without much record keeping.” Editor)

I recently sold a Zenith B600 Trans-Oceanic to a collector in California. I had claimed in an ad that it may have been the very last unit to come off the last assembly line making tube portables in the U.S.A. This claim was based on a very late cabinet date of April 27, 1962, and chassis parts codes from May 1962. Whether this claim is true is still in question, although I’ve been checking every B600 I have come across in the last 20 years and have not encountered any later dates.

In any event, I hope this article will encourage collectors to be more aware of similar benchmark radios as they peruse *Antique Radio Classified* and eBay listings, or walk through a flea market. For instance, if you already have a couple of 600 series Trans-Oceanics, you probably just walk on past any other 600s that you see. However, as conservators, shouldn’t we be looking out for the first of that series — the L600 with early date codes, say from January 1954, but introduced in May 1954, as well as the last? The same is true for the other models — the 7G605, the 8G005, and so on.

I’ve written ad nauseam about the Realistic Flavoradio mainly because it was the last production AM radio made. Otherwise, that little unremarkable blip on the screen would have passed into history unheralded.

My collection also has what may be the first transistorized Trans-Oceanic built. It has a speaker coded 738 (part code 343738) — the 343 is Zenith; the 738 means the 38th week of 1957. The tuner is coded 731, and the transformer 732. These are all the earliest dates any of us Zenith collectors have seen (those of us who are speaking to each other, that is) so the Trans-Oceanic Royal 1000, serial number 6250523 (perhaps actually number 523) may be among the very first produced. See Figure 1. I have this set in my collection, but

Figure 1. The Trans-Oceanic Royal 1000, serial number 6250523, may be among the first produced. This is the lowest serial number known to the collectors with whom I'm in touch.

I'd certainly like to hear from collectors who have earlier numbers.

THE WORK TO BE DONE

Several of us have been in a friendly competition for the earliest Zenith 500. This was the only radio to be sequentially numbered from 00000 up. Most manufacturers code their serial numbers so as to keep their total production figures secret.

For several years, Bob M. had the earliest number at 00506. Then Gary obtained number 00046 and shortly after that, I found #00016, shown in Figure 2. However, that one had been photographed with nonmatching components, so my holding may be of questionable integrity. But, all of us should be on the lookout for a single digit survivor, as it would certainly come from the first day of regular production.

I wonder if anyone knows what the earliest surviving serial number Regency TR-1 is — or the last.

We should be documenting the early and late models of all the benchmark radios. Certain radios from many different manufacturers come to mind: Admiral 909, Hallicrafters S-93 and the TW series, the big Philco T-9, the RCA StratoWorld series, and the Magnavox AW-100, the first transistorized all-wave radio. And where are the first and last of the Privat-Ear sets from 1951, the first pocketable radio? Can we hear from the Sony and Hitachi collectors? Where are the benchmark units from the European

Figure 2. The Zenith Royal 500, serial number 00016, is the lowest reported number from the first day of regular production.

manufacturers?

There is a lot of work to be done here and the most important part is the documentation, certainly here in *Antique Radio Classified*, but also in your own blog or web page. Share what you know. I only started doing

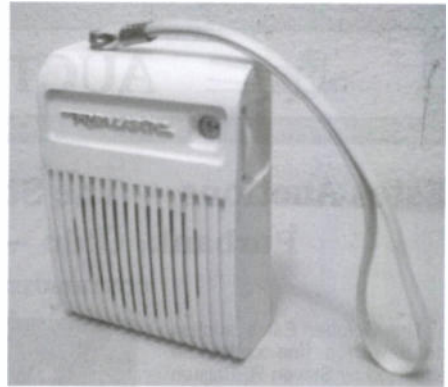

Figure 3. The white Flavoradio in my collection, the only one ever reported.

this a couple of years ago when I found that Verizon would give me a web page for free.

I hope to start a firestorm of activity here, but I especially want to find that Zenith 500 with serial number 0000x.

Not to mention another white Flavoradio, as shown in Figure 3.

(Phil MacArthur, 60 W. Schuyler St., Oswego, NY 13126. OswegoRadio.Com; keywestmac@verizon.net)

After 25 years of teaching in Key West, Florida, Phil MacArthur and his wife June happily retired and returned to the "four-seasons Northeast." ("And while we were gone, you guys invented the snowblower.") They collect Zenith radios and Flavoradios. ("Who knows why?").

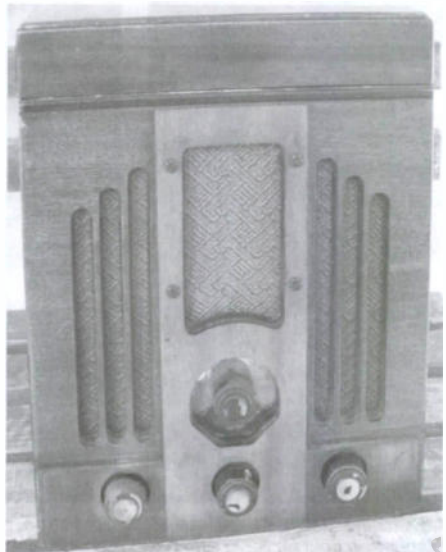

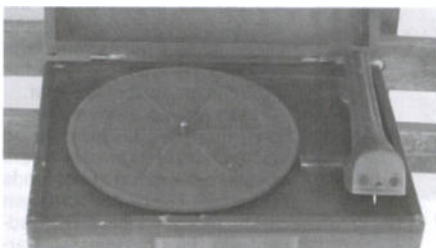

RCA Model 301 Duo – Radio/Phonograph

BY GARY MILNER

Gary Milner submitted this set for "Photo Review," but, instead we are featuring it here separately. (Editor)

The RCA Model 301 Duo from 1934 is an interesting tombstone since it has a hidden phonograph under the lift top of the cabinet. In addition to the phonograph, this 4-tube, AC set also has a shortwave band.

(Gary Milner, 106 Henry Little Cir., Pea Ridge, AR 27251)

AUCTION REPORT

Estes Auctions — The Steven R. Ralston Collection Burbank, Ohio — October 10, 2009

CONTRIBUTED BY RAY CHASE

The October Estes auction dealt with a fine collection amassed by Steven R. Ralston of Lyons, Colorado. Included were a Grebe CR-18 with coils and a RORK amp, a McMurdo Silver Masterpiece V in Clifton cabinet, a magnificent Philco 37-690, two of the RCA & GE wood advertising dolls designed by Maxfield Parrish, many military sets, Ham sets, and a large selection of tube testers, along with the usual great selection of tubes.

This was a large sale. I recorded over 500 items in the main sale and missed quite a few items due to several side auctions that I wanted to attend. There were side auctions of phonograph items, transistor radios, paper items, and the usual bulk tube lots later in the day, none of which I recorded. There was also the usual 8:30 A.M. auction of low value items that

These communications receivers sold well. Counterclockwise from upper left: a Breting 40 receiver, w/speaker sold for \$175, a Hammarlund SP-600 sold for \$250, a Collins 75A-3 receiver sold for \$300, and a Collins 51J receiver, in the wrong cabinet, sold for \$175.

lasted until 10:07 A.M. and was not recorded. These early morning auctions are an interesting free-for-all, and it's amazing how much "stuff" moves out in a short period of time. Bargains are to be had and sometimes a few really good items turn up.

The total sale proceeds that I recorded came to over \$47,000, not including the 5 percent buyer's premium. With that number and the auction items I missed, the total sale value must have been closer to \$60,000.

There was rain on Friday when we arrived and Saturday morning was cold and wet, although not raining. However, by mid-morning, the sun was out, and it was warm enough to open the auction hall doors for ventilation. The parking lot was full and over 100 bidders registered for the sale. Competition was firm, and it seemed as if prices were firming up a bit after being in the doldrums for most of the year.

However, as always at auctions, there are bargains to be had, especially as the day wears on, and bidders run out of funds or stamina. The two seldom seen wood-articulated GE & RCA advertising dolls by Maxwell Par-

Advertising dolls: At left, an RCA Radiotron and at right, a GE Magnetron sold for \$275 and \$700 respectively.

rich sold for \$700 and \$750. A very nice Grebe CR-18 with coils and RORK amp sold for \$2,300. The excellent McMurdo Silver Masterpiece sold for \$4,250 while the very nice Philco 37-690 console went for \$800. Other prices were more or less in line with current valuations, but I was shocked when a really nice Philco 39-116 console complete with its Mystery remote control was sold for only \$35. I guess if you do not have room for it, it matters little how low the price goes.

I stopped recording at 4:45 P.M. while there was still a lot to sell and bidding was still active. All in all, a nice sale on a good day. It was wonderful to see and touch those fine radios even if you could not manage to take many home with you.

e=excellent, vg=very good, g=good, f=fair, p=poor, unk=unknown condition, gf=good fil, N.O.S.=new old stock, wk=working, nwk=not working, WT=with tubes, NT=no tubes, BB=brass-based, TT=tipped tube, SW=shortwave, PS=power supply, PB=pushbuttons, WE=Western Electric. All prices have been rounded down to the dollar. Some low cost items and items in poor condition or with non-specific descriptions are omitted.

Sponsored by New England Antique Radio Club

Saturday, October 2, 2010 - 7:30 AM to Noon

Inside the Manchester Bingo Center

165 John E Devine Drive, Manchester NH

Public Welcome — Free Parking — Food inside at Wingman's Grill

7:30 AM to 8:30 AM — \$10 — Admission During Dealer Setup

8:30 AM to 10:00 AM — \$3 — Regular Admission

10:00 AM to 12 Noon — Free! — Open "No Charge" Admission

For more info: Visit our website www.nearc.net or phone Charlie (603) 898-4821.

— Directions —

- Use I-93, Everett Turnpike (Rte 3 in MA) or Rte 101 to reach I-293 in Manchester NH.
- Take I-293 Exit 1 & turn North (*away from the Mall*) onto South Willow Street (Rte 28).
- On South Willow Street after all the I-293 entrance/exit ramps, turn left at the second traffic signal onto John E Devine Drive. A two-story brick TD Bank is on your left and a Friendly's Restaurant & Ice Cream is on your right *after* your turn.
- The Bingo Center is ¼ mile in on your left. Take the 2nd driveway if the 1st lot is full.

AMERICAN MUSEUM OF RADIO and ELECTRICITY

*First Time Ever – American Museum of Radio & Electricity Opens Vault
- Selling Select Items to the Public*

The American Museum of Radio and Electricity (AMRE) is selling a truck-full of vintage radios and equipment at the **37th Annual Antique Radio Swap Meet** in Seattle, WA, sponsored by the Puget Sound Antique Radio Association.

SUNDAY, AUGUST 15th 9 AM to 1 PM

“We have never done this before,” says AMRE co-founder and president, John Jenkins. “Both Jonathan Winter and I are life-long collectors and think it’s time to sell our duplicate pieces as well as some rarities that don’t fit our collection.”

A wide variety of rare and unique radio equipment will be for sale including —

United Wireless Telegraph Type D Tuner
Marconi of America “Maggie” Magnetic Detector
Marconi of America Type 1 Antenna Switch
Independent Wireless Telegraph Model A-1 Tuner
Wireless Specialty IP-500
Western Electric 7A Amplifier
Western Electric SCR-68 Receiver
Kennedy Model 110 receiver
Crosley 51 table top
Select Atwater Kent Breadboards
Variety of Grebe receivers
Early Crystal Radio Sets
Test Equipment, parts, tubes... *and much more!*

John Jenkins will be available to sign his award winning books including
“Where Discovery Sparks Imagination”
a pictorial history of radio and electricity and featuring many items from the
Museum collection.

**For further information regarding the Museum’s sale
items contact Tana at 360.738.3886 or tana@amre.us**

The Puget Sound Antique Radio Swap Meet is a community event — free and open to the public. Located at the Shoreline Museum parking lot, N 175th Street and Linden Avenue North, Seattle, Washington (one block west of Aurora or one mile west of I5, exit 176). For further information regarding this event please visit the Puget Sound Antique Radio Association <http://www.eskimo.com/~hhagen/psara/index.html>

NEW DVD: RF Alignment Made Easy!

Run time: 52 minutes © 2009 Bret's Old Radios

In this new DVD, you'll learn how the sensitive RF, IF, and oscillator circuits in your radio work, & how, with just a signal generator & a volt meter, you can fine-tune them so that your radio is as sensitive and selective as it can be! We'll discuss TRF sets, early Super-Hets, the All-American Five, plus wave-trap antennas, FM & Short Wave!

View a streaming preview here:

www.youtube.com/watch?v=EcZ4sGJI0Uo

Filmed live at ARCI's *RadioFest*, this hour-long video is a fun, visual, and interactive learning experience that will help you get even more fun and satisfaction from radio collecting & repair.

FOR SALE/TRADE: Consider mere paper dollars! I recently purchased a beautiful collection of vintage ham gear and am willing to sell/trade some of the dupes. I've got Heathkit DX 100, Apache TX 10, Marauder HX 10, Johnson Ranger II, National NC 183, NC 173, Hammarlund SP 600, in correct case! Knight T 150, Central Electronics 100 V, HRO 50 R rackmount version. ART 13 with Comco crystal mod, BC 191 with Dyna, appears new, is in original box. Have several tuning units. Akai M7, M8 tube reel-to-reel recorders, clone of Ampex 602. Enough to make one dandy machine! Heathkit TC 2 early Heathkit tube tester, good shape, tests ancient tubes up to 7M9 pin miniature. Beautiful National HRO post war rackmount receiver with power supply, all coils, speaker and even the original rack, restored. **WANTED:** For BC 669 transceiver: PE 110 C power supply, RM 21 C remote, TS 11 handset, connectors. Can deliver items to Willowbrook. Always buying: Interesting early wire and tape recorders; disc cutters; broadcast & recording mics; stands; tube preamps & amps; compressors; early hi-fi ham & military tube type transmitters & receivers, cash or trade for above. Ward Kremer, K14JHA, 57262 Poppy Rd., South Bend, IN 46619. (574) 204-2877. E-mail: witzend99@comcast.net. Website: <http://www.radioattic.com/kremer>
