PUBLISHED BY TELEVISION DIGEST, INC., WASHINGTON, D. C.

Five of a kind

All alike. Yet different.

Each different, with its own distinctive (and colorful!) personality attuned to the heartbeat of its own community.

All alike, in their dedication to being "good citizens," deeply involved in the life of the communities they serve. Alike, too, in their well-known propensity for delivering big audiences.

A good deal. The five CBS Owned television stations.

CBS TELEVISION STATIONS/ CBS Owned WCBS-TV New York, KNXT Los Angeles, WBBM-TV Chicago, WCAU-TV Philadelphia, KMOX-TV St. Louis.

PROGRAM COMMANDER IFS SWITCHER

NEW AUTOMATIC PROGRAM COMMANDER™

The Jerrold Program Commander Model PC-6 lets you comply with FCC non-duplication requirements *automatically*—on a week-by-week basis. You can pre-set programming for six different output events to occur at any half-hour or hour during a one-week period. Locally or remotely located, Model PC-6 provides event output

switching adapted to fit various requirements; plus "at-a-glance" program status indications, and an automatic alarm circuit.

Program Commander IF Switcher, Model IFS—Designed to implement commands from the Program Commander, Model IFS is compatible with any programming equipment with a +24 volt dc output. The heart of this unit comprises six single-pole, double-throw coaxial relays. For complete information on Program Commander equipment, phone 215-925-9870, or write

For colorful happenings...

General Electric is what's happening in color broadcasting.

Colorful happenings happen more colorfully on General Electric cameras. Live or film, they never miss a red, a blue, a green or a black.

The General Electric PE-250 live color camera's advanced design gives you the highest color fidelity in television today. For example, it has four lead-oxide Plumbicon* tubes, including a separate one for superior luminance. And a unique combination of advanced electrical, optical and

mechanical features. The result is beautiful, precise color pictures.

And the General Electric PE-240 second-generation 4-vidicon film camera gives you consistently sharp pictures in both color and black and white. That's why it's the most widely accepted color film camera in the industry.

General Electric cameras are on the air for four of the five U.S. and Canadian networks, many group own-

erships and numerous other stations throughout the country.

But see for yourself. Let G-E color cameras make your happenings more colorful. General Electric Company, Visual Communication Products Department, Electronics Park, Syracuse, New York 13201. GE-41

Is the program you send...the program they get?

Old and inadequate receiving antennas in your area could be murdering the reception of your color signal—and the size of your audience. You might be transmitting a fine signal and the best show. But obsolete antennas could be sabotaging its reception while letting other channels come through sharp and bright.

The answer? . . . JFD's double-barreled attack:

1. We have a **PROGRAM**—called **Operation Bootstrap**—which combines on-air time with intensive dealer and distributor merchandising and advertising to help your audience grow in size and loyalty.
2. We have the **ANTENNA**—scientifically designed **LPV Log Periodics*** that will bring in your channel crisply and cleanly—in glorious color or black and white.

JFD has helped other TV stations do it. We can help you do it, too. Just write or phone for details about Operation Bootstrap.

**before you buy any
color processor,
ask yourself these**

6 questions:

How long does it take to warm up?

Normally it takes most processors 3 to 4 hours to get from ambient 70° to the required 100-110°. With a Treise Color Processor, warm-up takes only 20-45 minutes. (Think how much valuable time you save!)

Once on temperature, does it stay on temperature?

Treise Processors feature a unique "proportional control" system that maintains a close watch over the temperature and provides just the right amount of heat to maintain it at all times. There is no "stop 'n go," no wide fluctuations of temperature. Thus a Treise Processor is more economical to run than any other processor.

Does it provide consistent quality?

No other processor can assure you such unvaryingly consistent quality and performance — end to end, side to side, roll to roll, day to day! This is the kind of performance you should demand from a processor . . . and can take for granted when you buy from Treise.

Is it flexible enough to fully utilize the new films?

Treise Processors provide for 50% additional first-

developer time to permit full utilization of the new EF Ektachrome film. (This feature is important when you consider that news work demands wide flexibility in film speeds to achieve optimum results under all shooting conditions.) To our knowledge, only Treise offers such outstanding flexibility!

Does it "cut corners" to feature a "cut-rate" price?

Treise Processors meet or exceed all film manufacturers' specifications. All chemical solutions are pump recirculated and filtered. All moving parts in the drive system run on ball bearings. All components are the finest that money can buy. Materials and construction make absolutely no compromise with quality!

How easy is it to maintain?

When it comes to maintaining a Treise Processor, there's frankly very little of it. When necessary, however, you'll find that it has been designed with service in mind. For example, the film racks are removable without the use of tools and without disturbing thread-up. This unique feature permits spot inspection of the film transport system and results in minimum "down-time." All pumps, filters, etc., can be easily inspected and replaced in a few minutes, instead of the usual 2 to 3 hours delay!

TREISE MT-20

This model accommodates 16mm color reversal film at rates up to 60 fpm and is the finest TV color processor that money can buy!

These words have a very special meaning to the people at ARB, for they represent the spirit that influences the direction of our research.

This purposeful and continual development of new and better research techniques is the very foundation of ARB. It is also the underlying force which has initiated the great strides made in all commercial media research.

This same bold spirit is reflected in methodological testing and refinements which produce the useful and reliable data published in ARB reports.

The 1952 figures also do not include revenues from July national political conventions. PIB began compiling TV figures in 1949, discontinued monthly reports as of Jan. 1, 1958.

† Not available, but DuMont reported total 1950 network revenue as \$4,500,000.

From a recording studio or a rehearsal or concert hall—from the musical theater—from television and radio—the sound of music written and performed by talented people can be heard everywhere today. *℘* BMI in a little over a quarter of a century has developed an organization through which more than 10,000 writers and 7,000 publishers have chosen to license their music for public performance. And their number is in-

creased every day. *℘* Through BMI new talents have found an audience. New music has been able to gain a hearing. New vitality has been brought to traditional forms of music. The result has been an enrichment of the store of music to which music users and the public have access

PLANNING

One of the reasons for our leadership in audience measurement is that we anticipate the needs of the television industry and make plans to meet them.

ARB planning has led to the development and use of the Television viewing Diary, Instantaneous Television Audience Measurement (ARBITRON), Simultaneous All-Market Measurement, Spot Activity Reports, the Personal Diary Method for Radio Measurement, Product Usage Data in survey reports, Quality Control Procedures in samples to account for CATV and UHF, the Instant Cume, and many other significant contributions to broadcast audience research.

Planning through research . . . responding to the medium we serve with ever-improved, more refined techniques . . . is the force behind our leadership. At ARB our planning pays off . . . for you.

IMAGINATION

Never, in the history of advertising has a medium moved so fast and changed so often and dramatically as television. ARB is meeting this challenge of change with imaginative new techniques in television audience measurement.

At ARB, we realize that this rapid pace places greater emphasis on selective buying and the proper allocation of advertising weight, market-by-market. This in turn, requires that audience research develop the right tools to help you accomplish the tasks of determining target audiences and their location. Research information must provide more realistic cost appraisals for reaching these audiences.

This has been ARB's objective in the design of its service for 1967-68.

We have imagined and developed new research tools, new audience estimates methods and new reporting formats that aid media specialists in every phase of their work.

Let ARB put its imagination to work for you.

DELIVERY

When we say that we're coming out with a new report, new services, or a new measurement technique of any kind . . . we do it.

During the past year, ARB added the revolutionary concept of Areas of Dominant Influence (ADI) to its Television Market Reports . . . included product usage INFORMATION on specific categories, in day-part summary form . . . and, developed Geographic, Economic and Demographic market planners to name just a few.

We increased the effectiveness of our Network Program Analysis Report by adding *total* network viewing, regardless of station source, within the exclusive ADI area.

In addition, our Special Studies and Special Tabulations Departments produced a vast amount of "custom tailored" research information, too numerous to mention. But, that's true of ARB . . . we don't talk a lot . . . we deliver.

CBS TELEVISION NETWORK RATES

(Rate Card 17—Sept. 11, 1966)

(Consult Network for Discounts, Specifications, etc.)

The CBS Television Network, as a national advertising medium, solicits those orders which will provide the largest nationwide circulation, the best program quality most suitable for a given time period, and which will leave no substantial portion of the nation without network service. While no minimum line-up of stations is required, the CBS Television Network in determining whether to accept a particular order, will consider the foregoing objectives. In the case of a program involving more than one advertiser, such consideration will include the station line-ups carrying the program or ordered by other sponsors.

UNCOMMON DENOMINATOR

No matter how many kinds of programming NBC presents—and we try to achieve a balance among all varieties of offerings—one standard is applied to all. NBC's highly uncommon denominator is a commitment to excellence.

In one form or another, the results of that commitment are on display every day of every week. Standout entertainment shows like "Bonanza" and "Walt Disney." Award-winning dramatic fare like "Chrysler Theatre" and "Hallmark Hall of Fame." Daily news coverage and frequent News Specials by NBC News, broadcasting's largest and most distinguished news organization. Intensive coverage of every major sport. Religious programs. Musical shows. Educational programming for children.

Collectively, it's television's most vital and far-ranging line-up—and all of it is brought to you in

color. In the months ahead, audiences will be enjoying more of the same—meaning more of the best—more often on NBC.

NBC-TV NETWORK RATES

Effective Jan. 31, 1967

(Consult Network for Discounts, Specifications, etc.)

In order to serve the public interest in having NBC television programs available on a national basis and to maintain the network function as an effective national advertising medium, orders for NBC-TV Network facilities are subject to acceptability of the station line-up ordered.

Consistent with the foregoing objectives, a station line-up order shall be deemed acceptable if the Class A hourly rates of the stations ordered total \$110,000 or more. Recognizing the interests of national advertisers with unusual marketing requirements, NBC will consider for individual approval orders for station line-ups which do not meet the hourly rate totals specified.

In connection with administering orders for participating or multi-sponsored programs, NBC may designate for each such program individually the basis of station order acceptability.

Gross Rates follow (applicable to 6-11 p.m., Mon.-Sun.). One-half gross rates apply to 5-6 p.m. & 11 p.m.-1 a.m. Mon. thru Sun.; 4-5 p.m. Sat. & Sun. All other times, 35% of Gross Rates. Note: Rates following are to be used only as an estimate of cost, subject to change.

Corporate structure: The Canadian Broadcasting Corp. is a publicly-owned corporation chartered by Parliament with carrying on a national broadcasting service in Canada. It is directly responsible to Parliament and is financed by an annual Parliamentary appropriation, supplemented by revenue from advertising.

CBC national programming is fed out over 501 transmitters of AM, FM & short wave radio & VHF television. Of these, 212 are TV stations and their satellites, including 177 which are privately-owned and 33 maintained by the CBC. Because of the bicultural nature of the country, broadcast services are provided in English and French. There is one English-language TV network and one radio network; in the French-language, there is one TV and one radio network. There is also a service to Arctic communities, with 6 northern radio stations and short-wave broadcasts. The program services of the two national radio networks are received by 267 transmitters, which can broadcast to 98 per cent of Canadians. This is achieved by means of 42 stations and 147 low power relay transmitters of the CBC, and 79 privately-owned stations. This is a unique feature of the Canadian system, that privately-owned radio and television stations are affiliated with the publicly-owned body and assist in the vital task of distributing national program service.

PLANNING

One of the reasons for our leadership in audience measurement is that we anticipate the needs of the television industry and make plans to meet them.

ARB planning has led to the development and use of the Television viewing Diary, Instantaneous Television Audience Measurement (ARBITRON), Simultaneous All-Market Measurement, Spot Activity Reports, the Personal Diary Method for Radio Measurement, Product Usage Data in survey reports, Quality Control Procedures in samples to account for CATV and UHF, the Instant Cume, and many other significant contributions to broadcast audience research.

Planning through research . . . responding to the medium we serve with ever-improved, more refined techniques . . . is the force behind our leadership. At ARB our planning pays off . . . for you.

innovation

Innovation is one of the qualities which distinguishes one company from another.

In media and marketing research . . . as in any endeavor . . . the constant search for a better way is the spirit of innovation. ARB imagination, guided by sound professional knowledge, has created many improvements in basic research technique and many new research services that provide important data for today's advertising community.

Accompanied by the excitement and controversy which new ideas bring, the results of many ARB innovations are evident. But the process of innovation should not end with this. That's why, at ARB, refinement, thought and creativity are a necessary and continuing part of our operation.

IMAGINATION

Never, in the history of advertising has a medium moved so fast and changed so often and dramatically as television. ARB is meeting this challenge of change with imaginative new techniques in television audience measurement.

At ARB, we realize that this rapid pace places greater emphasis on selective buying and the proper allocation of advertising weight, market-by-market. This in turn, requires that audience research develop the right tools to help you accomplish the tasks of determining target audiences and their location. Research information must provide more realistic cost appraisals for reaching these audiences.

This has been ARB's objective in the design of its service for 1967-68.

We have imagined and developed new research tools, new audience estimates methods and new reporting formats that aid media specialists in every phase of their work.

Let ARB put its imagination to work for you.

BROADCAST

BUREAU

INFORMATION

TV FILM RATING

Broadcast Information Bureau's job is to make station buying of film foolproof, with "\$"-ratings (of motion picture film) and APQ-ratings of made-for-TV film. Three source books do the job:-

"TV FEATURE FILM SOURCE BOOK"

"Series, Serials and Packages"

THE MADE-FOR-TV FILM SOURCE BOOK

"FREE FILM" SOURCE BOOK

The public relations - public service film Source Book.

There's a reason why they're on the desks of 80% of the world's TV film buyers.

You may not be able to save millions as networks have, but you will save thousands.

AMCI BROADCASTING ANTENNAS

For ITV, UHF-TV, VHF-TV and FM

- Directional and Omnidirectional TV Antennas
- Directional and Omnidirectional ITV Antennas
- Dual Polarized Directional and Omnidirectional FM Antennas
- Antenna may be top or side mounted

AMCI Antennas are ruggedly designed and constructed of noncorrosive materials such as 6061-T6 aluminum, copper, and stainless steel. This type of construction, combined with an electrical design that requires few transmission line seals (*from 1/8 to 1/4 as many as other comparable antennas*), yields an extremely dependable antenna that requires essentially no maintenance.

AMCI also custom designs antenna arrays to meet particular requirements. For a description of one of AMCI's custom designs (An FM Antenna on the Chrysler Building), write for Bulletin 10.

Assignments Affecting Borders

Channel Allocations for Canada and Mexico

Allocations within 250 miles of Canadian and Mexican borders are as agreed upon by U.S. and respective countries through exchange of diplomatic notes. Though allocations beyond 250 miles of border do not require agreement between countries, Canada unofficially reports assignments beyond 250 miles; Mexico reports VHF within 250 miles, UHF within 200 miles.

Plus (+) and Minus (-) symbols designate offset carrier positions of channels
(L) indicates limited allocation under "Working Arrangement" of Canadian-U.S.A.
Television Agreement of 1952, announced March 29, 1961.

your super, not-so-silent salesman

Increasing television station sales — and profits! — is virtually a reality with an EMCEE VHF or UHF Translator on the job. Designed to automatically rebroadcast television signals without degradation and without change (except to shift the signal to a new channel), EMCEE Translators provide several key functions in opening up new coverage areas, filling shadows and holes in existing coverage areas, and assuring a stronger color signal for even the Grade B coverage area.

And with the new FCC rulings authorizing microwave feed to television translators, you have an ideal relay system to areas previously unreached due to topographic or distance factors.

When you consider these market penetration benefits — plus their low cost and hands-off, maintenance-free operational factors — you will readily see why leading broadcasters have specified EMCEE 5 to 1 for over six years!

Whose hues?

They're Collins', of course. Yours, too, when you relay color programming via Collins' new 5-watt, i-f heterodyne microwave system. Perfect color hues require low differential phase and gain. For the best color TV long-haul performance in the industry, specify Collins' new MW-109E microwave system.

The MW-109E is the most advanced microwave video system available today. In addition to excellent color performance provided by i-f heterodyne repeater techniques, a high-powered traveling wave tube provides superior propagation reliability and signal-to-noise ratio. Rack space and power consumption have been greatly reduced by all solid state circuitry (except TWT's) to ensure equipment reliability and low maintenance costs.

TRANSISTORIZED UHF KLYSTRON TRANSMITTERS FOR ALL POWER LEVELS

FULL RANGE OF POWER CAPABILITY

Townsend Associates pioneered the new generation of klystron transmitters in 1962 using the water cooled Eimac klystrons. The first transmitter is still using the original klystrons, each of which exceeds 28,000 hours of operation.

All TA transmitters are designed for simple conversion to the next power level. Replacement of the visual klystron and power supply, the addition of more heat exchanging, and modification of the R.F. output system are the only changes necessary. The field modifications can be performed with no disruption to program service.

TA transmitters include 3 to 10 kilowatt air cooled klystron transmitters and water cooled models ranging in power from 15 to 100 kilowatts. Only the 100 kilowatt model requires parallel klystron operation.

All TA klystron transmitters use only three vacuum tubes—two klystrons and the visual modulated amplifier. Transistorization in all other circuits assures excellent reliability and performance.

EXCLUSIVE FEATURES OF TA TRANSMITTERS

1. Back-to-the-wall mounting, resulting in space saving and ease of maintenance.
2. Separate Beam power supplies for aural and visual amplifiers.
3. All water control and metering devices mounted on front facing sub-panel and totally isolated from the system electronics.
4. Individual focus coil power supplies.
5. Quick set up for multiplexing through one amplifier in an emergency.
6. Modulator built by Ampex and modeled after famous processing amplifier.
7. Unitized power supplies completely enclosed in tank for outside mounting.
8. Positive control of beam power with vacuum switch even while transmitter is in operation.
9. Complete test and monitoring equipment built into driver including scope, picture monitor, sideband response analyzer, and frequency and modulation monitor.
10. Aural driver completely transistorized.
11. Single, rugged, precision tuned cavity in visual driver.

'ENGLISH ELECTRIC' SERVES THE TV INDUSTRY—AND THE VIEWER!

st
st

These English Electric camera tubes incorporate an entirely new target material giving an operational life expectancy of at least 3 times that of normal tubes.

THE ELCON* TARGET ACHIEVES:

- Guaranteed life of 750 hours
- Complete lack of image retention—no sticking pictures
- Sensitivity fall-off greatly reduced—sensitivity remains constant for life
- Stability of contrast reproduction—no matching problems
- Immediate switch-on—no warm-up delay.

Experience has proved that operational lives of 3000/5000 hours are obtainable. Another EEV development in ELCON tubes is the complete absence of image-induced microphony. The availability of these new improved EEV Image Orthicons means that the picture will be better than ever.

** ELCON is derived from the properties of the new EEV target—namely, EElectronic CONducting as opposed to the familiar ionic conductors normally used.*

If longer lengths of
CATV cable can
simplify your installation,
save you money on splices,
improve system performance,
reduce system maintenance—

call us.

Right now, only ITT can supply you with 75-ohm aluminum-sheathed CATV cable in extra-long lengths. Or in any short length you like, in .412", 1/2", or 3/4" diameters. Each length is **guaranteed** to deliver a minimum of 26 db structural return loss across all channels from 2 through 13, and that **guarantee** is backed up by a verified test report with each reel.

Another big difference in ITT's cable is the TIG welding of our pressure-sealed sheath. TIG welding delivers a homogeneous, high-burst-strength seam; free of the leak-likely pinholes and distortion-producing internal bead that are char-

acteristic of r-f welding. Add to this ITT's moisture-proof, controlled-foam polyethylene dielectric and you're assured of stable, predictable performance.

These cables are available also with impervious polyethylene jacket for underground use or for corrosive atmospheres; and polyethylene jacket with steel messenger for overhead suspension. Delivery of any type, in long lengths from stock.

PLANNING

One of the reasons for our leadership in audience measurement is that we anticipate the needs of the television industry and make plans to meet them.

ARB planning has led to the development and use of the Television viewing Diary, Instantaneous Television Audience Measurement (ARBITRON), Simultaneous All-Market Measurement, Spot Activity Reports, the Personal Diary Method for Radio Measurement, Product Usage Data in survey reports, Quality Control Procedures in samples to account for CATV and UHF, the Instant Cume, and many other significant contributions to broadcast audience research.

Planning through research . . . responding to the medium we serve with ever-improved, more refined techniques . . . is the force behind our leadership. At ARB our planning pays off . . . for you.

Why Western Electric rewired its safety program to include training in defensive driving. And why you should too.

Last year, American industry lost over 22,000 trained employees killed in off-the-job traffic accidents. And 1½ billion dollars in lost time and production. But, hundreds of companies—big and small—are doing something about it. Like Western Electric. In the last two years, Western Electric trained 800 employees with the National Safety Council's Defensive Driving Course. And hundreds more are

signed up to take this complete course in new and tested concepts and techniques of defensive driving. You can do the same thing for the employees of your plant, office or facility. The National Safety Council will be glad to tell you how to set up the Defensive Driving Course in your company. And reduce traffic accidents among your employees *significantly*.

“It’s good business to help colleges”

“Our colleges and universities must have enormous quantities of new money almost constantly if they are to be enabled to serve society as it needs to be served. Every business institution benefits today from the money and labors that those now dead have put into the building of these institutions. We are all dependent upon them for future numbers of educated young men and women from which to choose, and for the continued expansion of man’s knowledge of the world he inhabits.

“We owe these institutions a great debt, and we can pay this debt in two ways: By supporting them generously with contributions of money and time, and by upholding their freedom to remain places of open discussion, and to pursue truth wherever it is to be found.

“Last year our company contributed to colleges and universities more than \$310,000 which represented 1.2% of profit before tax.”

**J. Irwin Miller, Chairman
Cummins Engine Company**

A major problem in the education of students is rising costs. If companies wish to insure the availability of college talent, they must help support colleges with financial aid.
