# Big News About Something Small.

## The Varian Compact Satcom MPA.

Our new Compact Medium Power Amplifier (CMPA) is big news in the portable satcom market. It's ideal for SNG, flyaway and small earth terminals.

The CMPA packs high efficiency in a 5.25" single rack drawer. It's also easy to use, featuring microprocessor control. Digital and analog control interfaces make the CMPA a snap to integrate into the system. Plus, it's easy to maintain with modular construction and built-in fault diagnostics— all in a rugged design that can stand up to a world of conditions.

And, as with all Varian amplifiers, the CMPA is backed by the industry's largest sales and global service network.

No matter where in the world your story breaks, Varian's CMPA will be there transmitting the news.

# ENERGY SAVING EEV IOTs

***...the tubes with the proven track record!***

EEV has been a prime mover in energy efficiency improvements throughout its involvement in the US UHF television industry. One of the most recent technologically advanced products added to the EEV range is the high power UHF TV IOT. In addition to its energy saving features, the EEV IOT has shown that it is ideally suited to combined amplification transmitters for conventional NTSC service, together with the requirements of digital HDTV transmission.

EEV IOTs follow the Company's established philosophy of providing customers with products that are user friendly, while satisfying their technical requirements. This, together with applications engineering support and a reputation for service second to none, has established EEV as the market leader.

Why not contact EEV today to find out how you can save up to 50% on your electric power bills.

IOTs are presently available for 40kW and 60kW visual service and combined amplification powers of up to 42/4.2kW.

**Dear Subscriber:**

This edition of the **Television & Cable Factbook** marks the 50th year of its publication. It has been my privilege to assist in its preparation since 1945. The first Factbook actually wasn't called the Factbook—it was called simply Supplement No. 1, issued Sept. 1, 1945, accompanying the first edition of our first newsletter, **Television Digest with FM Reports**. The publisher was Martin Codel.

That Supplement comprised all of 2 pages. It consisted of a listing of the nation's 6 licensed TV stations and the 3 construction permits authorized. The licensed stations operated as many as 2 hours a day—occasionally. Supplement No. 1 is reproduced on pages v & vi. The number of TV receivers in the hands of the public was about 5,000—all monochrome sets built before World War II. Today there are over 260 million receivers in use in the U.S.—the majority color sets. Elsewhere in the world in 1945, there were a few thousand sets in England—and that was about it. Today, there are more than 600 million receivers outside the U.S.

The first edition of what was to become the Factbook Cable Volume was called Supplement No. 79, issued May 10, 1952. It consisted of just 4 pages. It listed 70 cable systems; they served some 14,000 subscribers. Today, about 58.3 million U.S. homes are linked to cable.

Now, the Factbook comprises 3 volumes totalling approximately 4,800 pages. The Stations Volume runs 2,000 pages, covering more than 1,500 TV stations. The Cable Volume has 2,200 pages, providing details on approximately 11,200 systems. The Services Volume covers over 600 pages.

The astonishing growth of these industries is a story of people, of leadership. I have had the rare opportunity to know most of the pioneers and those who built on the foundations laid by the pioneers, and to report their work. There were literally thousands of such people, prominent among them David Sarnoff of RCA and NBC, William Paley of CBS, Leonard Goldenson of ABC, FM inventor Edwin Armstrong, tube inventor Lee DeForest, big-picture-tube advocate Allen DuMont, cable pioneers Martin Malarkey, Bill Daniels, Milton Shapp and Irving Kahn, FCC chairmen such as Paul Porter and Wayne Coy, Colorado Senator Edwin Johnson and Rhode Island Senator John Pastore, lawyers such as Harry Plotkin, engineers such as Andrew Ring.

The expansion of this Factbook is likewise a story of people—our talented colleagues with a passion for accuracy, a devotion to detail.

The development of television and related industries is one of incredible technical and economic advance. I bought my first TV set in 1946—a 10-inch Admiral, black-&-white of course—for \$440, about 20% of my year's salary. What kind of set could you buy for that now? Suppose Cadillacs followed the same trend—how much would one cost today?

Celebrate these 50 years with us—and prepare for the next 50!

Sincerely,

A handwritten signature in cursive script, appearing to read "Albert Warren".

Note: The change in the number of systems operating each year is determined by three factors: (1) New systems which began operation during the year. (2) Older systems coming to the attention of Television & Cable Factbook for the first time and therefore included in the total for the first time. (3) The splitting or combining of systems by operators.

## Commercial Television License and CP Holders as of Sept. 1, 1945

# Description of Station Directory

## THE STATION MAPS

The only official and uniform rough guide to a station's physical coverage is found in the files of the Federal Communications Commission. Each TV station grantee is required to submit to the Commission its coverage contours predicted on the basis of engineering formulas designated by the Commission. The FCC specifies three grades of service as a general indication of the probable quality of reception.

The FCC does not intend or expect the predicted coverage contours, submitted by each station, to reflect whether a signal is received or not received at any specific location. Rather, the Commission regards the contours as a general guide to probable reception. The basic use made by the Commission of the contours is as a tool to determine where to allocate channels to minimize interference among stations.

Though all stations and applicants are required to submit predicted contours to the FCC, stations may also file contours based on actual measurements of transmitted signals. Under FCC rules, such filings are not mandatory, and only a relatively few stations have offered such measurements voluntarily. The Commission has no official and uniform rules for measuring service contours; such submissions are associated with stations' files but are not given official status by the Commission.

The maps are intended to serve as guides. It should be emphasized that the use of maps for legal proceedings, such as those before the FCC, may require precision greater than that reasonably obtainable in maps of the size employed in the *Factbook*.

The three grades of predicted contours required by the FCC are as follows:

**Grade B Service:** The quality of picture expected to be satisfactory to the median observer at least 90% of the time for at least 50% of the receiving locations within the contour, in the absence of interfering co-channel and adjacent-channel signals.

**Grade A Service:** Satisfactory service expected at least 90% of the time for at least 70% of the receiving locations.

**Principal City Service:** Satisfactory service expected at least 90% of the time for at least 90% of the receiving locations.

We obtained the predicted contour maps from the FCC files or from the stations. We publish two contour lines, "Grade A" and "Grade B."

## NIELSEN TV STATION CIRCULATION

The *Average Weekly Circulation* estimates are based on NSI (Nielsen Station Index) diary households from the most recent February, May, July and November

<b>— NEW AREA CODES —</b>			
State	Before	After	Effective Date
Alabama	205	205	Northern half of Alabama; including Birmingham, Huntsville & Tuscaloosa.
		334	Southern half of Alabama; including Auburn, Mobile, Montgomery & Selma.
Arizona	602	602	Metropolitan Phoenix.
		520	Remainder of Arizona.
Colorado	303	303	Metropolitan Denver.

survey periods. These Sunday-Saturday 7 a.m.-1 a.m. average quarter-hour tuning shares are based on commercial television stations only.

## DEFINITIONS OF NIELSEN TERMS

**Designated Market Area**—An area comprised of all counties wherein the combined share of audience for the home market commercial station(s) is larger than the combined share of audience for any station(s) assigned to another home market.

**Television Households**—A television household is an occupied dwelling unit having one or more television sets. Updated estimates of TV households in each county, rounded and expressed in tens, are prepared annually by the Nielsen Research Department. Those estimates are derived by applying percent television set ownership estimates, county by county, to the estimates of total households made by Market Statistics.

**Cable Television Households**—A cable television household is an occupied dwelling unit which subscribes to some level of delivery service for television signals, rounded and expressed in tens.

**Non-Cable Television Households**—A television household which receives broadcast television signals, rounded and expressed in tens.

**TV Penetration**—The percent of total homes having one or more television sets at the time of the surveys. TV penetration uses current regional penetration estimates derived by the Advertising Research Foundation from U.S. Bureau of the Census surveys conducted in accordance with ARF specifications.

**Average Weekly Circulation**—The estimated average number of different television households viewing a particular station at least once per week, Monday-Sunday, Sign-on to Sign-off.

**Average Daily Circulation**—The estimated average number of different television households reached by a particular station on each day of the week, Sign-on to Sign-off.

## SURVEY METHODS, DESCRIBED BY NIELSEN

Nielsen collects household tuning over a four week measurement period using a diary methodology. Telephone calls are made to a sample of listed and unlisted telephone numbers in the survey area. The telephone calls enlist the cooperation of the household for a one week survey, verify names and addresses among listed households and obtain names and addresses for unlisted households. In addition, the households are asked several basic questions regarding their household composition and television set ownership. Diaries are mailed to all households where an address is available. Reminder phone calls are made and mailings sent during the diary-keeping week to encourage the household to record their tuning and return the completed diary.

As diaries are returned, they are edited using established procedures and are entered into a computer system for processing. In order to compensate for differences in response rates, a weighting methodology is used to adjust the final intab sample data so that the weighted sample is in balance with the universe for various household characteristics—including geography. NSI measures the viewing in over 200 television markets across the United States at least four times a year.

## EXPLANATION OF FCC SYMBOLS

FCC Filing Symbols:

1. BPCT: Broadcast Permit Commercial Television.
2. BMPCT: Broadcast Modification of Permit Commercial Television.
3. DOC: Docket (designation applied by FCC to hearing cases).
4. GRANTED: Date of authorization by FCC.

**Note:** "BPCT" and "BMPCT" designations, accompanied by numbers, are affixed by the FCC to applications for new or changed station facilities to identify each when it is accepted for filing. They therefore constitute file numbers. Each map in the Factbook is accompanied with its file number to facilitate reference to the Commission's official files. In each case, the file number used is the one affixed to the application for facilities which were subsequently authorized by the FCC and in use at the time this Factbook was published. "Docket" numbers are used in those few cases where the application was in a hearing status and a file number had not been assigned. The "granted" date indicates when the FCC approved construction of facilities involved.

After a station is completed according to the terms of its construction permit, it receives a license; this is identified by a number with a "BLCT" (Broadcast License Commercial Television) prefix. When a license is renewed, a number with a "BRCT" (Broadcast Renewal Commercial Television) prefix is employed. Applications for licenses or license renewals do not include requests for changes in facilities, thus do not affect predicted Grade A & B contours. Therefore, they are not employed as references in the Factbook.

The Grade A & B contours on the maps are predicted by station engineers according to the formulas designated by the FCC, as previously explained. They are based on facilities authorized or in use by stations at the time of Factbook publication.

Latitude and longitude coordinates on the station pages are taken from the FCC's official files. They currently are based on the North American Datum of 1927 (NAD 27). In 1995, the FCC will begin converting records to reflect the North American Datum of 1983 (NAD 83). The Factbook will continue to reflect accurately the data as on file at the FCC.

# U.S. Television Station Index

Data updated to November 1, 1994 unless otherwise indicated. Includes rate digests, personnel, facilities and other data.

## THE STATE PAGES

Following the map of each state, rankings for Nielsen's Designated Market Area Television Households are shown. DMA Household Rank is established by Nielsen.

The state pages also carry additional cross-reference material, indicating for example, those stations within the state that are identified with two or more cities, or with cities in another state.

Operating commercial and educational TV stations by VHF and UHF are shown for each state in a status report as of November 1, 1994.

## STATION PAGES

Rates, personnel and other data supplied by stations.

**RATE DIGESTS:** These show only the highest one-time rate charged by the stations. Most rates are also subject to frequency discounts, separate or additional rehearsal charges, talent & production charges, etc. For further details and for contract conditions, specifications etc., consult complete station rate cards, available from the stations on request.

**STATION POWER:** Powers shown are Effective Radiated Powers (ERP).

**NIELSEN DATA:** The individual stations show Total TV Households, both cable and non-cable, Average Weekly Circulation totals and an Average Daily Circulation total. For definitions of Nielsen terms, consult Description of Station section.

**SATELLITE STATIONS** are shown with a dash line pattern in relation to the parent listing. In the satellite listing the parent station is shown with a dash line pattern.
