## Harris is your end-to-end radio solution provider.

AM/FM Analog or HD Radio™ • Audio Consoles • Broadcast Studios

High Power AM • Systems and Service • Intraplex Transport

HD Radio™ is a trademark of IQuiquity Digital Corporation

Harris PR&E NetWave console with optional networking. Available in 8-16-24 channel frames, all with fully modular construction.

ZX1000, 1 kW tri-mode FM/FM-HD or digital only transmitter. FM transmitters available from 250 W to 70 kW, in analog or HD Radio.

FlexStar HDx exciter—the gold-standard for FM and FM-HD excitors, featuring RTAC (Real Time Adaptive Correction for best mask compliance) and Engine, the latest IQuiquity platform in HD Radio.

Destiny 3DX-50, 50 kW medium wave direct digital drive high efficiency, high reliability AM transmitter. AM transmitters from 1 kW to 2 megawatts, all fully compatible with HD Radio.

Imagine Harris transmitters...

combined with legendary Orban audio processing.

### OPTIMOD 9400-AM Digital

No-compromise, independent, multiband processing for analog AM and digital radio—in one box!

For over 20 years, OPTIMOD-AM has dominated the sound of major-market AM radio. Orban's new 9400 offers even better analog AM processing, while its unified analog and digital design substantially reduces costs compared to a two-box configuration.

## License? Who needs a license?

**A**s a broadcaster, you operate your station under the guidelines of the FCC rules. We can all agree that there are certain shortcomings in the rules and the process that creates the rules, but for the most part they work pretty well.

Many believe that there is insufficient variety in the voices heard on the airwaves, so with good intentions (and a disregard for the laws of physics) LPFM was created by an act of Congress in 2000. The process to obtain an LPFM license follows a course of action similar to a full-power license.

The rules and procedures are in place to try to maintain harmony on the airwaves. But what if an individual decides that he wants to operate a station but does not want to obtain a license? The person becomes a pirate broadcaster and violates FCC rules. If the FCC learns of this pirate, it can take steps to shut the station down. If the pirate begins broadcasting again, he can and should be shut down again. Unfortunately, it doesn't work this way any more.

A pirate LPFM station in Goldfield, NV, operated by Rod Moses, has shown radio pirates how to circumvent the FCC rules. Moses' Radio Goldfield Broadcast operated a pirate station, was shut down by the FCC, and then found a senator to help him skip all the due process and obtain a special temporary authority (STA) to operate the pirate station. The pirate has been legalized.

I credit Moses for his ingenuity in getting what he wanted. In this case, he didn't like the rules so he found a way to write new ones. Senator Harry Reid of Nevada overstepped his authority and the FCC cowered and caved.

Sen. Reid contacted FCC Chairman Kevin Martin to endorse the Radio Goldfield operation, touting its public interest contributions. In response, the

FCC issued the STA on Jan. 29, 2007, stating that the FCC can grant an STA in cases of "extraordinary circumstances requiring temporary authorizations in the public interest." The public interest is served by Radio Goldfield's reports on road conditions, local law enforcement and public safety. Funny, the STA made no mention of the music being played from an MP3 player.

If Sen. Reid wants to change the allocation process, he should do so in the proper way so that it benefits all broadcasters and not just voters in his state. Likewise, if the FCC wants to change the rules to allow unallocated broadcasts, it has a mechanism in place to change its rules.

The act that created LPFM included a stipulation that any station that previously operated as a pirate station would be ineligible to obtain an LPFM license. Granted, Moses does not have an LPFM license—in fact he never applied for one—but the same standard should apply.

I also wonder if Moses is maintaining records so that he can pay the appropriate music licensing fees for the music he plays on the air.

Now that this is done, why should any pirate be concerned with the FCC rules? Just apply for the STA and state that the station serves the public interest. The end result is that an individual who violated FCC rules has been rewarded with a temporary license. This is a bad precedent any way you look at it.

I urge you to take action immediately. Send a protest letter to Chairman Kevin Martin and copy Peter Doyle, chief of the Audio Division at the Media Bureau. You can also file a petition for reconsideration. If you live in Nevada, I also encourage you to express your displeasure with Senator Reid.

## The path to upgrading

By John Battison,  
P.E., technical editor, RF

**S**ometimes the upgrade project originates with the chief engineer who is tired of managerial complaints that valuable income-producing areas are not adequately covered. Sometimes the manager comes up with a grandiose idea of increasing the number of people served and coincidentally advertising higher power. In the former case the engineer has probably arrived at some idea of how the improvement will be developed. In the second case it may turn out to be a pipe dream and the engineer is expected to come up with an answer.

The best way to deal with the second situation is to ask how much money the manager is prepared to spend on facilities improvement and what he expects. If he has no good answer to this question my advice is to say something like "That's a good idea!" and hope that he forgets it. If, on the other hand, he has an intelligent answer the procedure should be similar to the one you would follow if you had come up with the idea.

The procedure depends on the type of facility you are upgrading, its mode of operation and your own capability. Let's consider an AM station because they are typically the most complex. This may be an old daytime station with a small, almost gratuitous, nighttime power with or without a DA, a full time non-DA operation, a DA1, a DA2 or even a DA3.

If the proposed upgrade involves daytime operation run what I call a 25 $\mu$ V/m check (sometimes called the O25). This considers the daytime

groundwave interfering contour that could interfere with existing co-channel stations and must not overlap the standard daytime 0.5mV/m protected contour. If you find an overlap using a non-directional antenna, a DA will probably be required.

This test will provide an idea of any co-channel interference problems, and immediately indicate a potential need for a directional antenna or may even show that a daytime power increase is not feasible.

If you are considering an upgrade to the night-time operation, look at the existing night contour and consider the class of station. The object of this inspection is to determine how much work will be involved in the project and estimate whether it's worth spending the money and time.

If the proposed upgrade operation is for a nondirectional daytime station the station's chief engineer may decide to do it himself using one of the numerous software services that are now available. [See Trends in Technology in the January 2007 issue for some ideas.]

Either way, if it looks as though a DA or a larger existing DA will be involved stop and think about real estate and cost.

### Location, location

If the existing transmitter site is large, or is in an area where additional ground can be reasonably obtained, it may be worth spending additional time and money determining how much extra space, and its cost, will be required. If, on the other hand, the original site is small, nondirectional and surrounded by housing estates or other commercial property a new problem arises. Operation on that site will not be possible.

Site suitability and availability are important

**Dan Bishop, OME**  
(OBSESSIVE MACKIE ENGINEER)

# This man could use a vacation.

## Take advantage of his obsession with the New VLZ3s.

We didn't think we could improve on the original VLZ mixers... at first. Then an over-achieving engineer decided to try it. First he made a more musical 3-band EQ. Then he came up with the new XDR2 mic preamp, one with more consistent frequency response across the entire gain range. We figured that was it. Didn't hear from him for awhile. Then he burst in showing how his new summing bus lets you add more signals together without running into clipping. OK, OK we thought. Give it a rest! But he couldn't be stopped. He started doing things like rounding off corners, building a clever handle right into the mixer... he even made the silkscreening on it EASIER TO READ. It got so out-of-hand, our HR department advised us to make him take some time off. So we did. But not before we put all of his improvements into the new VLZ3 mixers.

Learn more about this OCD-driven triumph at: [www.mackie.com/vlz3](http://www.mackie.com/vlz3)

### NEW XDR2 MIC PREAMPS

Our new mic pres are quieter than ever, and with even higher headroom. Oh, and there's a good 60dB of gain range, too.

### FULL BANDWIDTH

Across the entire frequency range of a VLZ3 you'll experience an amazingly low noise floor, even at excessively high output levels.

### MORE CHANNELS BEFORE CLIPPING

Taking advantage of "negative gain summing," our new summing bus lets you mix more signals together while maintaining optimum audio.

### MORE MUSICAL EQ

Musical EQ isn't new to Mackie, but with our new EQ the three bands work better independently of each other, giving you more overall control.

1604-VLZ3

1202-VLZ3

1642-VLZ3

1402-VLZ3

# VLZ3

# MACKIE®

[www.mackie.com/vlz3](http://www.mackie.com/vlz3)

factor because in these days of shrinking real estate suitable for transmitter antennas, land cost can be prohibitive. This must be taken into consideration before spending a lot of money and time preparing Form 301 and associated exhibits, and then discovering that the upgrade is not feasible.

Assuming that a nighttime power increase is possible, a multi-tower antenna system requires finding a new site. This is the beginning of a long series of

filing applications and tying up land options.

Once suitable land has been found ensure that it's available and obtain a conditional option to purchase with adequate time frames. This will protect you from forced purchase if the CP is not issued. After a year or two the construction permit may be issued. It's the culmination of all your efforts and the beginning of a great deal more work.

Among other things, use permits will need to be obtained, numerous hearings from NIMBY groups will need to be attended, FAA objections will need to be overcome, electrical power requirements will need to be established and planning arrangements will need to be arranged with the power company. Transmitter building plans will need to be drawn, including water and toilet facilities. Equipment installation and wiring plans must be prepared and, in the case of remote or inaccessible locations, a provision for personnel sleeping and eating.

### Gearing up

Transmission lines, transmitting equipment and towers were probably placed on conditional order at the beginning of the project. Now comes the time to confirm the order. Ground system planning should be completed next and it will be installed once construction traffic has eased.

Remote control and an STL will need to be determined while awaiting issuance of the construction permit and the necessary arrangements made with the link provider (if necessary), STL equipment ordered and STL construction permit applications filed.

Proper fencing will be required at the base of each tower together with security fencing around the transmitter building and an associated security system. Don't forget padlocks and keys for the tower base fence doors. And don't forget to obtain a large supply of keys for tower bases well as the transmitter building; somehow these always seem to get lost.

FCC approved non-ionizing radiation warning signs must be properly displayed together with tower identification and registration numbers and working telephone numbers.

Create a working timetable that includes plans for equipment testing and initial directional antenna adjustment.

Finally, after the proof of performance has been completed satisfactorily the commission should be informed and Form 302 filed in accordance with the rules.

E-mail Bettison at [batcom@bright.net](mailto:batcom@bright.net).

## Digital Radio Is In His Future, Belden Should Be In Yours!

### Don't Trust Your Digital Conversion to Anything Other Than Belden — The Proven Leader in Broadcast and Data Cable Technology.

Belden is the leader in broadcast cable technology, offering the best quality and the broadest line of audio and video cables in the industry. In fact, Belden Brilliance® products are the important link in any number of radio broadcasts, network and cable TV broadcasts, and post-production recording and film studios. For radio, this includes hundreds of top-quality cables for instrumentation, microphone and line-level equipment applications — including AES/EBU-compliant digital cable designs.

Additionally Belden is the market leader in Unshielded Twisted Pair (UTP) data cable design, supplying extremely high quality cables for 10 Gigabit Ethernet performance, as well as Category 6 and 5e. And, only Belden offers UTP cables with Bonded-Pairs. Belden Bonded-Pair cables ensure good attenuation characteristics over longer distance since the pair conductors are bonded together to maintain a consistent conductor-to-conductor

spacing. Bonded-Pairs also mean Installable Performance® — that is, unlike other UTP designs, Bonded-Pair cables maintain their superior electrical performance even after the rigors of installation.

So, for a better link to the future, stay tuned to Belden.

# Mid-term EEO reports due for some

By Harry Martin

**B**eginning in June, radio stations with 11 or more full-time employees will have to file the new FCC Form 397 Broadcast Mid-Term Report, which will provide the commission with information about each reporting licensee's on-going EEO efforts. As shown in the schedule below, Form 397 is due on June 1 for radio stations in D.C., Maryland, Virginia and West Virginia, with stations in other states following suit every other month in the order of the anniversary dates of their renewal application filings.

The requirement for a mid-term EEO report was put into place in 2002, when the FCC last revised its EEO rules and policies, and is intended to provide the commission with an accounting, four years after renewal filing, of each licensee's EEO compliance. Here's a summary of what has to be done.

*What must be filed?* The new Form 397 has

have to submit Form 397 (together with copies of their annual EEO reports taken from their public files). Smaller stations (stations with fewer than 11) appear to be exempt from the filing requirement, although once the final version of the form is adopted it is possible smaller stations will have to file a Form 397 just to claim the exemption.

The FCC will be examining each Form 397 to determine whether the licensee has been complying with the rules. Any non-compliant broadcasters will be contacted by the FCC, and if the non-compliance is significant enough, the commission will consider issuing a forfeiture notice.

## Dateline

Radio stations in Texas must file their biennial ownership reports on or before April 2, 2007.

Also on April 2, radio stations in Delaware, Indiana, Kentucky, Pennsylvania, Tennessee and Texas must place their 2007 EEO reports in their public files and place them on their websites.

All radio stations must place their first quarter issues and programs lists in their public files by April 10.

not yet been released. A draft version of the form was prepared in 2002. It requires the standard identifying information about the licensee filing the form (name, address, station list). If the licensee is subject to the full filing requirement, copies of the licensee's two most recent annual EEO reports as placed in the stations' local public inspection file, must be attached.

*When must it be filed?* The schedule for filing Form 397 is based on the staggered schedule for filing renewal applications. Thus, the schedule for 2007 and 2008 is as shown at the right.

*Who must file?* Only employment units with 11 or more full-time employees will

## Availability of Form 397

The revised Form 397, as of this writing, is still awaiting approval by the Office of Management and Budget, and is expected to be available electronically in April or May, which would be in time for the initial June 1 deadline.

This new filing requirement should be routine for most stations. As long as the licensee has been preparing its annual EEO public file reports—a requirement for all stations that have five or more full-time employees—and those reports indicate that EEO-sensitive recruitment procedures have been followed except in extraordinary situations, no compliance issues should arise.

*Martin is a past president of the Federal Communications Bar Association and a member of Fletcher, Heald & Hildreth, Arlington, VA. E-mail martin@fhhlaw.com.*

## Form 397 filing schedule

- June 1: D.C., Maryland, Virginia, West Virginia
- August 1: North Carolina, South Carolina
- December 1: Florida, Puerto Rico, the Virgin Islands
- February 1, 2008: Arkansas, Louisiana, Mississippi
- April 1, 2008: Indiana, Kentucky, Tennessee
- June 1, 2008: Michigan, Ohio
- August 1, 2008: Illinois, Wisconsin
- December 1, 2008: Colorado, Minnesota, Montana, North Dakota, South Dakota

# *Able to leap tall buildings?*

No distance or line-of-sight restriction makes **Starlink SL9003T1** the ideal choice for STL/TSL and intercity links.

**Starlink T1's** bidirectional high capacity significantly reduces communications costs compared to discrete audio, telephone and data circuits.

| Vegas Tips          | 84 |

### Registration areas

There are two registration areas for the convention. One is in the North Hall near the taxi drop off. The other is at the back of the South Hall Lower.

### Online Extra

The NAB Insider e-mail newsletter complements our convention preview. It comes to your e-mail inbox every Tuesday leading up to the convention. If you're not receiving it, go to [beradio.com](http://beradio.com) and click on the subscribe link.

**T**he NAB convention is a huge event, and the common mistake made by attendees is to not plan ahead. The convention floor is huge. The sessions run non-stop. There are even more exhibitors in hotel suites. Where do you begin? Right here with the March issue of *Radio* magazine.

The NAB convention has been held in Las Vegas for the past 17 years. Las Vegas has the deserved reputation of being an adult playground, but the city is a good place to hold a convention because it can accommodate the flood of visitors. Still, once you're in the Convention Center, you're on your own.

Our convention preview has several parts to help you plan your time. The most visible part of the convention is the exhibit hall. In this case, there are four of them plus an outdoor exhibits area. This massive exhibit area itself can't be completely covered in four days. It's 1/3 mile from the north end to the south end alone. The NAB Extra! is a collection of products that will be unveiled, so you can get a head start on what to see. We'll also have some stragglers to include the April issue, so don't forget to look there as well.

Navigating the show floor can be a challenge, so we have two tools to help you. The major portion of radio exhibitors are in the North Hall, so we have highlighted this section with a pull-out map. Additional copies of this map will also be distributed in our booth

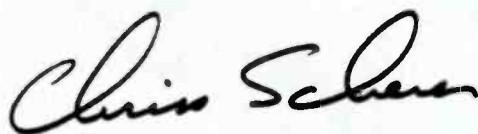

in the North Hall (N6128).

Because you're probably going to the convention with some specific equipment quests, we have also organized the exhibitors into categorized listings in the FASTrack. In addition, the exhibitors in these categories are arranged in booth order so you can quickly move from booth to booth with the most direct path. Don't waste time backtracking, use the FASTrack to plot the most direct course.

What's a convention without sessions? Again, time is short, so you have to pick and choose which sessions you want to attend. We have outlined the radio-relevant sessions in the Insight to Sessions section so you can decide which sessions are right for you. We have also included some sessions outside the Broadcast Engineering Conference that may be of interest. All of this is then displayed in a timetable grid so you can plan your day.

Your time in Las Vegas doesn't need to be all business. Get some extra tips from the *Radio* magazine staff. Turn to page 84 and get some inside tips.

Now you're ready for NAB2007. See you in Las Vegas.

# NAB Extra!

Some of the most innovative products debuting at NAB2007

This section provides access to products long before you get to the show, so you can plan which booths to visit. With booth numbers included, the NAB Extra! will help you find exactly what you are looking for.

## Broadcast automation software OMT Technologies Booth N9011

**Imediatouch:** Enhancements to this automation software include a new talk button that allows the user to insert a live talk segment into the log while still in automation mode. Users now have the option to use a condensed version of the audio library screen to drag and drop audio

events into the main log schedule. The compact full log screen displays the day's log in a wider view so more items are listed on the main on-air screen. Users can also now drag and drop audio from the full log into the main playback log. A cart-style Event Display changes the standard log-based playback to static cart decks when users are in a live assist mode.

## Radio newsroom system RCS Booth N6511

**RCS News:** RCS News is a radio newsroom system providing solutions for the entire news operation from newscast gathering, writing and editing to the actual on-air broadcast and story archiving. This comprehensive, standalone newsroom software enables reporters to write newscasts, receive and revise wire copy and digitally record, edit and playback audio.

## Networked audio system Wheatstone Booth N7111

**Evolution 6:** The E-6 Surface, the E-series Studio Satellite and the E-series Network Switch combine to create a networked audio system. Each studio operates independently yet can share all the sources and mixes through the E-series network. Switch without traffic limitations, audio latency or machine control delays. The E-6 features event recall, bus-minus and mix-minus and four aux mixes—all with dedicated talkback

systems. The console also features four monitor outputs and standard EQ, dynamics, panning and mic processing on all channels (simultaneously). It supports multiple arrays of programmable input channel and master panel switches for customized functions like phone, intercom, salvos or machine commands.

# the professional broadcaster's choice for IP STLs

## WorldCast Eclipse

**At last! An IP audio codec that offers a reliable, DSP-based platform and automatic back-up for 24/7 reliability.**

APT's WorldCast Eclipse is the ultimate in flexibility and choice offering IP, X.21/V.35 and ISDN interfaces and a selection of popular coding algorithms including Enhanced apt-X, MPEG Layer 2/3, MPEG 4 AAC, G.711 and G.722

All the features you expect from a professional broadcast codec are supplied as standard: analog and AES/EBU I/Os, adjustable silence detection, alarm ports, contact closures, speed dials, embedded auxiliary data and many more...

Configuration and control of the WorldCast Eclipse is straight-forward and simple thanks to APT's powerful and intuitive Codec Management System (CMS). Offering extensive real-time management of multiple codec units, the CMS enables alarm monitoring, logging and performance monitoring as well as configurable user and audio profiles.

To see the full functionality of CMS, download a trial version from [www.aptx.com](http://www.aptx.com).

Also Available:

**WorldCast Horizon**  
*Bidirectional stereo audio codec offering Enhanced apt-X over IP*

**WorldCast Meridian**  
*Multi-algorithm audio codec with both IP & X.21/V.35 interfaces*

**WorldNet Oslo**  
*Professional, Modular Audio Multiplexing Platform offering up to 14 stereo channels over T1, E1 or IP links with Enhanced apt-X or linear audio. Built-in redundancy, automatic back-up and hot-swappable cards ensure round the clock reliability for multi-channel STLs.*

# NAB Extra!

**UADC-1:** This analog-to-digital converter and switch provides 24-bit conversion with AES3 audio path insertion and interruption functions. The device may be used as a standalone A-to-D converter or as a way to insert stereo

analog inputs into an AES stream via remote control. A sampling rate of 32kHz or 48kHz is selectable via internal jumpers. Front-panel LEDs display the audio present and clipping for left and right analog inputs, the input selected for output and the status of the device. Recessed front-panel gain controls for the analog inputs are included.

## LPFM antenna Jampro Antennas Booth C2515

**JLCP:** This stainless steel, omni-directional antenna is easy to install with a supplied 2" pole mount. The antenna offers higher V-Pol, which provides better car reception and building penetration. A stacking harness is included when multiple bay arrays are ordered. The antenna features a VSWR 1.5:1 or better  $\pm 150$ kHz.

[jampro@jampro.com](mailto:jampro@jampro.com)

## Internet radio Solutions Radio Booth N8636

**Church Web Radio:** This Internet receiver features a built in dial-up modem that can be connected to an existing telephone or DSL line. Turn the unit on and the service can be heard live. The system automatically stores each service so it can be listened to after the live service has ended. Call waiting has been implemented so that the system will switch off and the call can be answered.

See Live Demos of our Flexible Formats, STORQ Automation, and PDQ  
(Production Done Quickly) During NAB 2007 at our Hilton Suite

## Get Ready For The Future Of Network Radio Waitt Radio Networks Introduces... Flexible Formats

- Choose your day parts
- Choose your jocks
- Choose your music
- Choose your local content
- Choose your level of local inventory

With our new Flexible Formats model, for the first time ever network radio doesn't mean one size fits all. Only Waitt lets you do it your way.

Check out our Flexible Formats at [www.wrnonline.com](http://www.wrnonline.com)

## The Secret's Out!

For years, our network affiliates have called our STORQ Automation system the best kept secret in the business.

Now we're making it available to everyone.

Try a no risk demo today, and see for yourself that STORQ is:

- Stable
- Powerful
- Easy-to-use

STORQ Automation is comparable to any other system, but so affordable that the competition would like us to keep it a secret.

Well we can't. The secret's out!

Check out STORQ Automation at [www.STORQAutomation.com](http://www.STORQAutomation.com)

## 37-pin audio connectors Nemal Electronics Booth C2642

**NE3700 series:** This DT12 connector for field and studio applications features a patented set screw design that prevents insert rotation. Accessories include dust caps, fan-outs, and break-out boxes to XLR connectors. Typical applications include termination of 12-pair audio mult cable or up to 37-conductor control cable. Additional features include a positive lock insert system to prevent conductor breakage during interconnection, secure attachment of cap to connector, standard thread strain relief and compatibility with existing ITT Canon type designs. The connectors are available from stock, individually or terminated on cable.

**IFB transmitter  
Lectrosonics  
Booth N8116**

**IFBT4:** This interruptible foldback base-station transmitter replaces the analog IFBT1 unit. The IFBT4 is a 250mW digital hybrid wireless transmitter for IFB and other types of radio links. The transmitter features a backlit LCD with front-panel control for programming and operation. A selectable high-pass filter with settings at 35Hz and 50Hz allows for transmission of full audio bandwidth. The equipment is powered by 6V to 18V dc via a locking connector and is supplied with a quarter-wave whip antenna that is detachable from the 50Ω BNC connector on the rear panel.

**Digital mic  
Neumann  
Booth N7117**

**KM D series:** The modular construction of these microphones permits the KM D output stage to be combined with the various passive microphone capsules (omni-directional, cardioid or hypercardioid).

In the microphone, the A/D converter receives the output signal directly from the capsule. The microphones are equipped with a three-pin XLR connector for transmission of a bi-directional signal conforming to the AES 42 standard. All standard sampling frequencies are supported, from 44.1kHz to 192kHz. An A/D converter receives the output signal directly from the microphone capsule. Level matching required for subsequent devices is performed digitally in the microphone itself.

## FOUR CHOICES OF PROCESSING

▼ AGC ▼ AGC with Limiting ▼ Multiband ▼ Multiband with Limiting

- Two digital AES/EBU outputs and one stereo analog output.
- Mastering-quality look-ahead limiter provides tight peak control for both "flat" and pre-emphasized channels.
- Flexible routing: Any output can emit the AGC or Multiband processed audio, with or without look-ahead limiting.
- Exclusive Precode™ technology minimizes artifacts in low bitrate codecs (like HD Radio's HDC) without sucking the life out of the audio.
- New compression ratio and knee controls makes the 6300 ideal for mastering and production studio applications.
- Remote controllable via GPI contact closures, Ethernet, and RS232 serial connections.
- Smooth, responsive PC Remote Control application for Windows PCs is included.
- Quick Setup wizard, dozens of excellent factory presets, and LESS-MORE control make setup and tuning easy.
- Includes CBS Loudness Controller™ for TV applications.

Fax 480-403-8301

The Orban 6300 is a high-quality, multipurpose stereo audio processor for digital radio, digital television, netcasts, STL protection, satellite uplink protection, and digital mastering. With 20 kHz audio bandwidth, the 6300 succeeds Orban's popular OPTIMOD-DAB 6200 audio processor but offers improved processing algorithms and more flexibility.

So a while back I was out walking my dog Biccup when the thought occurred to me that what the planet really need...  
 I had by now, I think we got it! WireCAD does all the heavy lifting for you. Come see me at the NAB show booth N2138 and tell me the name of my dog, and I'll give you ten percent off the really cool show specials that we will be running there. Thanks for taking the time to read this whole thing, Christian Holbrook, President.  
 It occurred to me that we needed to make documentation so easy that it actually got done! Silly thought, I know, but that is what we set out to do. And by now, I think we got it! WireCAD does all the heavy lifting for you. Come see me at the NAB show booth N2138 and tell me the name of my dog, and I'll give you ten percent off the really cool show specials that we will be running there. Thanks for taking the time to read this whole thing, Christian Holbrook, President.

**Condition monitoring  
Dielectric  
Booth C1907**

**M2M:** The device can monitor and manage non-IT-based assets such as HVAC units, back-up generators, security access

instruments, street lamps and cooling towers. The monitor can help with predictive maintenance, which can streamline operations. The units in the M2M product line are simple enough to monitor lights at a cell tower or complex enough to manage and control a cooling tower at a large power facility.

[www.dielectric.com](http://www.dielectric.com); [dcsales@dielectric.com](mailto:dcsales@dielectric.com)

**On-air switcher  
Sonifex  
Booth N4928**

**RB-OA3:** A 1RU unity gain on-air switcher, this unit is capable of switching three stereo pairs between three studios. Each studio can control the transmission path together with two peripheral paths for equipment such as a codec or hybrid. It also allows for seamless and continuous broadcast from any multi-studio radio network. The unit can be expanded to switch between five studios or six stereo pairs by connecting multiple units via RJ-45 serial connections. Features of this switcher include an input impedance of greater than 20k $\Omega$ , an output impedance of less than 50 $\Omega$ , a frequency response of 20Hz to 20kHz  $\pm$ 0.1 dB and 0.01 percent THD at 1 kHz.

# FM BROADCASTERS!

## Join the **RADIO** **REVOLUTION!**

- ✓ **GSSNET keeps FM the TOP CHOICE for vital EMERGENCY INFORMATION**
- ✓ **GSSNET connects to ALL DEVICES with FM chips**
- ✓ **GSSNET provides NEW REVENUE for FM BROADCASTERS**

With the GSS First Alert system, FM broadcasters can deliver messages to any device that has an FM chip. And because it's scalable, FM broadcasters can deliver messages to one receiver or one million receivers at the same time.

The GSS First Alert system also gives FM broadcasters a new way to deliver targeted information like advertising, consumer alerts and customer service notifications to any device with an FM chip. It opens up new revenue streams for FM broadcasters.

# NAB Extra!

## Simulcasting product Harris Booth N2502, N3100

**Intraplex Synchroncast3:** This third-generation simulcasting product allows radio broadcasters with overlapping transmitters to create audio synchronization in multiple-transmitter networks. The system uses an Intraplex T1/E1 multiplexer or Net Xpress IP multiplexer platform with GPS digital timing to enable a network of transmitters to increase coverage areas and reduce interference. The product offers more efficient use of network bandwidth by the timing system, allowing users to allocate additional bandwidth to voice and data transmission.

800-622-0022; [www.broadcast.harris.com](http://www.broadcast.harris.com)  
[broadcast@harris.com](mailto:broadcast@harris.com)

**Watchband:** This receiver provides stereo, phase and field intensity data, streaming audio and decoded RDS to any PC with an Internet connection. Broadcasters can record audio streams for remote playback, as well as log audio metrics for review and analysis. Automatic logging routines allow station-to-station comparisons for the entire market.

800-255-8090; [www.burk.com](http://www.burk.com); [sales@burk.com](mailto:sales@burk.com)

## FM bandpass filter Myat Booth C2220

**FMBP1000:** This FM bandpass filter is rated for 1kW and can be used as a standalone device to filter unwanted out-of-band energy, can provide the necessary filtering requirements for IBOC signals and can be used in a channel combining system to combine two close-spaced FM channels that would then feed a common antenna. FMBP1000 series filters attenuate unwanted signals to reduce cross modulation. The filter is available in three- and four-section designs with or without cross coupling.

# OMNIRAX

## BROADCAST FURNITURE

### What people are saying about Omnirax...

"Within a short amount of time Omnirax was able to come up with a beautiful concept for our new studios."

"The Omnirax design makes these studios incredible for talent and operators on both sides of the console."

"Our furniture from you not only fit into our budget and timeline, it was very well constructed and looked beautiful. I expect to be outfitting many more facilities with Omnirax..."

"I was impressed with the exceptional care given packaging for shipment. A few very large and potentially fragile components made it cross-country completely unscathed"

"I wholeheartedly recommend Omnirax to everyone."

# VISIT CROWN BROADCAST

## Booth N6906

**New features for 2007!**

**-All units frequency agile from front panel**

**-Power upgrade on low power units**

**FM100 now 150 watts**

**FM250 now 300 watts**

**FM500 now 600 watts**

**-Stop by to see these and more new features**

**Come see the new look  
Crown transmitters at  
NAB Booth N6906**

**Crown Broadcast will also have a fully functional demo on the Crown LA series linear amplifiers and Fanfare TRO series off-set receiver for HD translator applications**

**CROWN BROADCAST IREC**

## Inovonics... the RDS/RBDS Leader

Our family of RadioData products puts your message up-front!

### Model 702

#### "Mini Encoder"

Our low-cost "Mini Encoder" supports simultaneous Scrolling-PS and RadioText messages for station IDs, promos and advertising, plus all the housekeeping IDs and flags. Quickly installed and easily programmed with Windows® / USB interface.

\$420

**NOW IT SCROLLS!**

### Model 712

#### Dynamic Encoder

The RS-232 serial port ties directly to station automation to scroll song artist/title info and promos or advertising. The PS and RadioText fields are simultaneously available for greatest messaging capability. Static housekeeping data is easily programmed with the supplied Windows® software.

\$1250

### Model 713

#### TCP/IP Dynamic Encoder

All the messaging functionality of the Model 712, but with direct LAN/Internet connectivity. 3-way addressability: TCP/IP network, serial RS-232, USB. Supplied with Windows® software for network setup and static register programming.

\$1690

### Model 510

#### Decoder/Reader

Monitor, decode and log all the RDS data groups. Read the data from the front panel or use the supplied Windows® software for further analysis and logging.

\$1700

# NAB Extra!

## Transmitter PTEK Booth N6126

### 1kW Transmitter:

This transmitter is a single box 1kW transmitter with drop-down front panel for easy access to two replaceable 700W modules. The modular version will still be available.

888-889-2958; [www.ptekpower.com](http://www.ptekpower.com)  
[sales@ptekpower.com](mailto:sales@ptekpower.com)

## Hand-held recorder

### Nagra Booth N2226

**ARES-MII:** The hand-held recorder and player records to a 2GB built-in memory, recording PCM mono or stereo, or MP2/MP3. USB2 offers a fast download time.

The recorder is similar in size to an Ipod.

615-726-5191; [www.nagraaudio.com](http://www.nagraaudio.com); [mail@nagra.com](mailto:mail@nagra.com)

## Enhanced Radio Assist range Netia Digital Audio Booth N5721

**Radio Assist 7.5 Upgrades:** Netia has integrated its U-Share network management system into Radio-Assist 7.5 to automate the exchange of content for content distribution. The speech-to-text upgrade offers broadcasters content analysis and retrieval. By turning audio content into text the software helps identify and evaluate broadcast patterns. The Multitrack XT is designed for multitrack digital audio recording and editing. Finally, Radio-Assist 7.5 is now available bundled with customized Axia IP-Audio networking components that allow any audio workstation PC running Windows to send studio-grade audio directly to an Axia audio network from its network interface card.

866-638-4222; [www.netia.net](http://www.netia.net); [j.martin@netia.net](mailto:j.martin@netia.net)

## On-air console Audioarts Engineering Booth N7111

**+Air2:** The new radio console is designed for small market stations, such as college radio and worships facilities, that are seeking high-end features such as: phone channel with TB, two stereo buses and separate control room/studio monitoring.

252-638-7000; [www.wheatstone.com](http://www.wheatstone.com)  
[sales@wheatstone.com](mailto:sales@wheatstone.com)

## Portable broadcast mixer JK Audio

### Booth N9426

**Remote Mix 4:** A four-channel field mixer and headphone amplifier, this unit is a communications interface that features a phone line hybrid and keypad, a PBX handset interface and a 2.5mm cell phone interface. Use it as a phone line hybrid, calling into the studio talk show hybrid. Use it as a front-end mixer for a POTS, ISDN or IP codec. Features include four XLR mic jacks with phantom power, male XLR clean mixer output and four 1/4" headphone jacks with individual source selectors and level controls. The mixer is powered by dual 9V batteries and/or 100-240Vac external ac power supply.

800-552-8346

[www.jkaudio.com](http://www.jkaudio.com); [info@jkaudio.com](mailto:info@jkaudio.com)

## AES/EBU digital interface Henry Engineering Booth N7432

**USB-AES Matchbox:** This digital interface provides AES/EBU digital audio input and output from any PC or laptop computer via a USB port. The unit is used instead of a PC sound card, and is compatible with any digital recording, editing or automation software that supports USB. The interface features XLR input and output connectors for AES/EBU digital audio, as well as secondary analog outputs on the XLR connectors. The system supports 16-bit digital audio at sample rates up to 48kHz. The unit is USB powered.

## IP intercom Barix Technology Booth 8034

**Annunicom 100:** This intercom can be deployed over a standard IP or Ethernet network infrastructure. It can connect directly to a PC or function autonomously with other Barix products. The device can connect to one of eight preset radio stations. It can also connect to an unlimited amount of stations in a point-to-multipoint configuration. Target stations can be addressed over a standard Web browser, contact input or a serial interface. Used within the standalone paging, emergency call and intercom system, the unit is equipped with an Ethernet interface and communicates over existing TCP/IP networks. All network-connected devices can be controlled from a central command station. Each device comes with its own integrated Web server that allows it to be configured over a standard Web browser.

# NAB Extra!

**2604, 2612:** These interdigital bandpass filters provide filtering in a footprint less than half the size of conventional bandpass filters. The 2604 is designed for use with transmitters up to 2.5kW and the 2612 for transmitters up to 10kW. Both are manufactured for use in HD Radio applications.

## Terminated mic snake Holophone Booth N6034

**Side-winder 6:** When used in combination with any of the microphones in the Holophone line the terminated mic snake encodes a 5.1 surround recording into a stereo recording. The accessory connects to the H4 Super Mini multi-channel preamplifier, monitor and encoder with left and right outputs. Attached to the equipment is a 3' Monster Cable that terminates in six Neutrik six-pin XLR connectors. The Matrix encoded surround output created by the module can be transmitted, shared and processed via any surround infrastructure.

## Find the mic winner January issue

Congratulations to  
**Theresa Swann**

of Tusculum College  
 Greeneville, TN.

Her name was drawn from the correct entries for the January issue. She won a Heil PR-20 mic from Transaudio Group.

The mic icon was in the B in the Ravens logo in the lower right corner.

ON THE AIR

# SANITIZED FOR YOUR PROTECTION

SOME WORDS SHOULD BE OBSCENE AND NOT HEARD

Eventide Broadcast Delays are designed to keep profanity off your air, and angry listeners, embarrassed advertisers, and the FCC off your back. We invented the obscenity delay and have a solution for stations large and small that provides up to 80 seconds of the highest quality revenue and license-protecting delay.

Our new HD compatible BD600, 24-bit delay, comes standard with AES/EBU, and provides up to 80 seconds of memory — twice as much as other delays. There are fully adjustable Delay and Dump functions, and a Sneeze function which "edits" audio entering the delay, allowing the host to sneeze, cough, or make a short comment without being heard on air.

The BD600 offers two different methods of delay buildup and

reduction: Eventide's catch-up and catch-down system, and an exclusive fast-entry-and-exit feature which allows starting a broadcast with the delay already built up to a safe amount and ending it with a rapid reduction of delay.

For HD, the BD600 offers MicroPrecision Delay™ mode which allows up to 10 seconds of delay to be adjusted in real time in 100 nanosecond increments. This is useful for synchronizing analog and digital signals while on-air, without audible artifacts, to maintain a seamless user experience.

Whatever your size, whatever your format, you can't expect to protect the integrity of your air and the foundation of your business without an Eventide Broadcast Delay in your rack.

## Automation system D.A.V.I.D. Booth N5431

**Digasystem:** The scheduling and play-out tools of this system can send text and graphics to the station's website to show what is presently playing on the air and the 10 songs that preceded it. The News Portal allows text, audio and graphics to be assembled into a story for view on the Internet. Listeners can browse through station audio to replay and download news stories, memorable program moments and full-length interviews. One-click and

automatic podcasting is now possible. Remote Reporter allows users to access the database through a standard Web browser from anywhere. The EAS Listener manages alerts and sends notifications as pre-configured to do. The system now includes hundreds of Metadata fields.

## Portable receiver Sennheiser Electronics Booth N7117

**EK 3241:** This receiver is specifically designed for location sound recording. It improves on its predecessor, the EK 3041, by using a 36MHz switching bandwidth that is tunable in 5kHz increments to generate 7,200 frequency options. Weighing just over seven ounces, the receiver delivers between nine hours and 18 hours of continuous operation. Battery status is displayed in detail. The unit ships with 32 custom frequencies preprogrammed, and users can store another 20 frequencies in a user memory bank.

## Exciter/transmitter SBS/Eddystone Broadcast Booth N5128

**XE150, XE300:** The XE150/XE300 is a broadcast FM exciter that is also suited for use as a low-power standalone transmitter. It can be equipped with several input options from the standard composite and three SCA/RDS, to stereo input with AES/EBU for stereo digital input, as well as a rebroadcast RBRX version.

## Surround sound mixing system Beyerdynamic

### Booth N9014

**Headzone:** Using current DSP technology, this system provides headphone-based 5.1 surround sound reproduction. It also offers an ultrasonic-headtracking system that locates the orientation of the listener's head with respect to the source material and adjusts the audio accordingly. The system also offers an advanced room simulation program that allows users to create a space to monitor the surround audio.

## Network management software Axia Audio Booth N7726

**Probe:** This utility is a network maintenance and diagnostics suite that makes managing, updating and remote-controlling an Axia system easier. The auto-documentation feature queries and documents configuration settings for every networked Axia device. The organizer tool lets users perform tasks such as gathering nodes into logical groups. The software works with any Axia IP-Audio network and runs on any P2-400MHz (or greater) PC, with 10/100 or 100/1000 Ethernet NIC running Windows 2000, XP or Vista.

**MPEG  
gateway  
Telos  
Systems**

**Booth N7726**

**Zephyr Iport:** Transport multiple channels of stereo audio across any network with T1 and T3 connections and MPLS networks with this system. The device incorporates eight stereo MPEG-AAC codecs in one box, converting linear PCM IP audio into compressed IP audio and back again. With a unit at each end of a T1 connection, stations can share audio between cities easily. The equipment uses the Livewire standard for networked audio over Ethernet, so users can connect it directly to an Axia IP audio network. A CAT-6 cable is all that's needed for eight channels of stereo I/O plus remote control. It works without the Axia network by pairing it with an Axia AES/EBU or Analog Audio Node for use as a standalone, high-density audio processor.

**Console  
Logitek  
Booth N6521**

**Artisan:** This flexible, modular control surface for the logitek Digital Audio Engine, a modular X-Y router, offers a low-profile design. Multiple frame sizes are available to accommodate two to 30 faders along with two master mixes, eight sub mixes, four aux mixes, 24 mix-minus outputs and three monitor outputs. Surround processing is available on one master mix, one sub mix and one monitor out. Available modules include fader, monitor, master and effects. Two sizes of meter bridges are also available, along with the Vscreen software application, which allows the user to build full-screen meter banks as well as router controls. All parts in the surface are isolated from the ac mains power. The power supply includes 25 GPI in and 25 GPI out connections for external device interfacing.

**Look for the winners on Wednesday  
afternoon at the convention.**

# Logitek knows audio routing.

With over 1,000 Audio Engine routers in use around the world, we're hardly a newcomer to the routing market. Our routers are flexible, versatile and linkable—configurations can run from as small as 12 x 12 to 2016 x 2016. We also offer many non-traditional router functions including mixing, EQ, compression, program audio delay, profanity delay, high and low audio alarms and more.

Find out for yourself what hundreds of users have discovered—Logitek routers give you the audio capabilities you need at a great price.

Visit us at

# NAB FASTtrack

**A Radio magazine exclusive  
Booth numbers  
made easy**

**N**avigating the exhibits is easier if you understand the numbering plan. All the booths are arranged in a column and grid format. The first digits indicate the column, the last two digits indicate the row. As you stand at the North Hall entrance facing north (with the Central Hall behind you), the columns begin on the right.

The rows begin in front of you. Booth N402 is to the front right, while booth N9437 is in the back on the left.

The Central and South Halls begin their numbering as you face east with Paradise Road behind you. In the Central Hall, the columns begin on the right, and the rows begin in front of you, except the row numbers begin on the left. Booth C158 is in front on the right. Booth C12200 is in the back on the left.

The South Halls begin the column numbers on the left and the rows in front. Booth SL106 is in the front on the left, and booth SL14020 is in the back on the right. The South Upper plan is the same.

You can walk between the South Hall Lower and the Central Hall through the outdoor exhibits. Use the doors near the middle of the Central and South Lower Halls to access the path and avoid walking all the way around.

All that said, the FASTtrack organizes exhibitors in to categories, and then arranges them in booth order so you can make a fast track to see them all.

## GENERATING EXCITEMENT

MR-PRO and MR2 Audio Signal Generators

Two new Minirators from NTI set the standard for portable audio generators.

Both feature a new ergonomic instrument package & intuitive operation, balanced and unbalanced audio outputs, and a full set of audio signals including sweeps and noise.

#### MR-PRO Adds:

- ▶ Load impedance & phantom voltage measurements
- ▶ User wave files
- ▶ Even higher performance
- ▶ Cable test & other features

As a broadcaster, you make a serious investment to get your programming on air. But often the real value of the devices and components in your station are measured by more than price and features alone.

Sometimes the true benefits are found in the quality, integrity and experience of the people who bring them to you.

## It's not just what's in the box, but who delivers the package.

SAS has been serving, supporting and supplying innovation to this industry for 20 years. And in that time our evolving technologies have consistently led the industry. Why? Simple. We listen to our customers. Solve problems. Invent new ideas.

From digital routers to console control surfaces, from intercommunications to systems integration, SAS provides comprehensive and competitive broadcast engineering solutions that are intelligent, reliable and expandable for broadcasters large and small.

Ask us about our turn-key studio engineering solutions, including furniture and installation.

How can we help you?

Call us. We'll deliver the goods.

**SIERRA  
AUTOMATED  
SYSTEMS**

20 years of listening. 20 years of innovation.

### Look who's talking now.

ABC Air America Bonneville ClearChannel CBS Disney ESPN Moody  
NPR Pama Radio One Spanish Broadcasting System Westwood One  
And more than 1000 major market and smaller radio stations and broadcasters across  
the country and abroad depend on the expertise of SAS. Shouldn't you?

**NO MORE SECRETS @ NAB**

Booth **N8111**

**NAB 2007**  
 THE WORLD'S LARGEST ELECTRONIC MEDIA SHOW

**ON-AIR**

**CBT Systems' Classic ON-AIR Light** has become the hottest light in the industry. Its timeless design reminds us of the good old days. The aluminum housing is built using traditional sand casting methods, machined, and then polished to a chrome-like finish. The plexiglass window which comes standard in either blue or red can be ordered with optional legends like **Recording**. The unit can be mounted horizontally or vertically.

CBT Systems' Classic and NEW Dual Lens **ON-AIR Lights** can both be ordered at [www.cbtsystems.tv](http://www.cbtsystems.tv)

## Omni or Cardioid, You've Got It Covered.

Forget tapes, discs, cards and cables. Just pick up a FlashMic and go.

Combining a broadcast-quality Flash recorder with a Sennheiser mic capsule, HHB's new FlashMic is perfect for interviewing, journalism and any type of voice recording.

One button press is all it takes to start recording in either linear or MPEG 2 formats. 1GB of built-in memory stores a massive 18 hours/999 tracks of recordings and it's easy and quick to transfer files for editing or onward transmission via FlashMic's built-in USB interface.

Power comes from standard AA batteries, and the included FlashMic Manager software makes it easy to configure single or multiple FlashMics, select record mode, control the gain setting, high pass filter, and enable your preferred configuration of your FlashMic. Available with cardioid or omni capsules, FlashMic is all you need for broadcast-quality recording.

So just pick up a FlashMic and go.

# Insight to Sessions

The sessions are a major part of the NAB convention. With so many papers being concurrently presented, there's no way to attend them all. As a *Radio* magazine reader, you are probably the most interested in the Broadcast Engineering Conference sessions, but don't neglect other conference sessions. We have reviewed the session lists to provide an overview of items you don't want to miss.

## HD Radio

Once again, HD Radio is the hot topic for radio in the Broadcast Engineering Conference. There are a few mentions of other digital transmission technologies (Worldspace and DRM) in the digital transmission sessions, but multicast, RF, data, surround, advanced services and

station workflow for HD Radio are the prime focus. *Radio* magazine contributors Jeff Smith and Steve Fluker are among the moderators taking part in the sessions.

## But not just HD Radio

About half of the radio-specific sessions are not strictly about HD Radio and cover a wide range of topics. The Audio Solutions for Radio session delves into several important aspects of maintaining audio quality for radio including IP, processing, digital data reduction and remotes.

Emerging Broadcast Technologies offers a peak into the most recent broadcast technologies and provides some solutions to implementing them today. This includes interactive radio and serving audio streams across multiple delivery mechanisms. The Radio Facilities session deals with issues of radio station infrastructure, from facility planning to audio networking to software management.

On Wednesday afternoon, the session titled Engineering Management for the 21<sup>st</sup> Century turns to the administrative side of broadcast engineering. Many engineers resist the management aspect of their jobs, but this session offers some practical insight into the modern technical workspace.

The last radio technical session is called Radio Technology Advancements, and it seems fitting that the Broadcast Engineering Conference should conclude with a look at the future of radio broadcasting.

### Ennes Workshop

The Society of Broadcast Engineers will again present an Ennes Educational Workshop. Held all day on Saturday, this year's theme is Everything Audio. The session starts with an audio primer and moves on to audio wiring and IP audio systems. PBS is partnering with the SBE to present the session, and the afternoon portion shifts to a TV-oriented focus.

### Regulatory issues

The Broadcast Regulatory and Legislative Conference has a full agenda of sessions, but there are several sessions that we think

could be interesting to the media engineer or technology manager. These sessions include From Anxiety to Opportunity: Managing and Leading During Times of Change; Legally Speaking: All Things Radio; Stay Out of Trouble with the FCC: What Recent Enforcement Actions Mean to You; The FCC Breakfast; and Tower Siting in a Newly Regulated World. They all touch on various aspects of station operations. The FCC Breakfast itself is usually a good forum to hear directly from the FCC commissioners on the current activities of the FCC.

In addition, the session titled Legal Advice for Small Market and Independent Stations will provide some valuable advice for all stations. One of the featured panelists is Radio magazine legal contributor Harry Martin.

### Plan ahead

Once on site, be sure to check the session guides for updates on times and locations for all the sessions. To help you plan your time now, the session timetable grid below highlights many of the sessions that will be of the most interest to you. Use this as a starting point when planning your schedule.

# A remote remodel

By Doug Irwin

There are a couple of good reasons why radio stations execute remote broadcasts. First, it's a great way to interact with the local audience; and second, it can often be a nice revenue source for the station.

As the station engineer, you may be charged with determining the best way to execute remotes for the station. For our purposes, let's assume that you're putting together a brand new system without any legacy equipment. We'll focus primarily on 21<sup>st</sup> century techniques.

### Wired vs. unwired

When setting up a system for remotes decide if with the wired route or the unwired route fits the application. This distinction is clouded somewhat with the wide availability of the public Internet, so there is quite a bit of crossover with some of the equipment that is available.

Generally speaking, the wired route is based on older technology. You could totally rely on the local telephone company to provide wire connections back to the station. In the old days you could order an 8kHz or 15kHz audio circuit. While they often worked well (and they often didn't) they always required a test visit before the day of the remote. The tariffs are usually quite high for this type of circuit, so unless you planned on originating multiple remotes from the same location, this type of wired circuit was not economical.

In the early 1990s, ISDN codecs became available and supplanted the dedicated audio circuits. While an ISDN circuit was often less expensive (not only for installation but also on a monthly basis) it had much in common with the older style of lines: the telephone company required a couple of weeks to install it, and it still needed to be tested ahead of the remote date. To a great extent, the quality of the remote broadcast audio depended on the codec itself and not the quality of the telephone company technician that installed the line. On the other hand the complexity of the ISDN codecs sometimes scuttled the remotes.

The unfortunate reality is that ISDN is now also obsolete; some telephone companies balk when the customer wants to place an ISDN order. The reason is pretty simple: There are better ways to get more data over a single copper pair, which means more money for them. Telephone service providers are inclined to spend their capital dollars on equipment that can handle these new methods, forsaking the older.

So what are you left with if you want to make use of wired circuits for remotes? POTS (though also becoming obsolete in its pure form)

**Talk shows on remote are an ideal way to interact with listeners. Chef Jasper Mirablile (seated) talks with guest Chef Gary Puetz while Dennis Eversoll, CPBE CBNT, checks the setup on KCMO-AM Kansas City.**

is ubiquitous so that is an option, and the Internet is readily available in many places because of DSL technology. Still, there are lots of options for wired connections.

Comrex has many years of experience in building equipment used to broadcast remotes over plain old telephone circuits and not surprisingly its current line includes all the features and functionality that you would expect. The Matrix codec field version has one mic-level input, one mic or line level input, a headphone output and a line-level out as well. The studio version is 1RU and does not have the mixer and headphone features. The Matrix uses an on-board POTS codec that can provide 15kHz of duplex audio response

depending on the quality of the POTS connection. However, the user can also add modules to the Matrix such as the Portable ISDN module, the Matrix GSM module or the Matrix Telcell module.

Comrex also offers the Access, which takes advantage of the increasingly diverse set of connection possibilities: POTS, DSL, cable DSL (as well as 802.11x (Wi-fi), 3G data networks, high-speed cellular data networks). It uses the Comrex-developed Broadcast Reliable Internet Codec and will perform at several user-selectable quality levels. HE-AAC and AAC low-delay are also available for use over robust networks.

Tieline offers the I-mix G3, which is a complete remote broadcast package (mixer and headphone amp built-in). The basic unit is a POTS codec, but it has an expansion slot to plug in other types of codec modules. For example, a second POTS codec module can be added, giving the I-mix the capability of bonding two POTS lines together, providing mono,

stereo or even dual-mono feeds of as much as 15kHz in audio bandwidth. Alternatively, the expansion slot can be loaded with Tieline's IP software module, allowing the unit to connect to wired LAN. (ISDN and GSM plug-in modules are available for the I-mix 3 as well.)

Musicam has its own codec that will work via IP: the Netstar. This device can send and receive audio, contact closures and ancillary data via TCP/IP, ISDN or dedicated data lines. It contains not only the standard algorithms such as G.711, G.722, MPEG Layer 2 and MPEG Layer 3, but also MPEG AAC and MPEG Layer 4 AAC-low delay. This unit can deliver uncompressed 20kHz audio with near-zero delay if the IP connection supports it.

Audio TX sells a software package called Communicator that allows the user to create a remote session via TCP/IP through physical connections such as a LAN, Wi-fi or DSL. The PC or laptop on which Communicator runs can also be turned into an ISDN codec. The Windows software includes algorithms for MPEG Layer 2, Layer 3, G.722 and G.711, and can connect with other manufacturers' codecs.

The APT Tokyo is another full-featured, multiple algorithm codec that can be used over a LAN by way of Ethernet, or via its USB connector. In addition to MPEG Layers 2 and 3, G.711, G.722 and MPEG

Millerium RS-18D Console

## CONTROL.

Digital or Analog — Millerium broadcast consoles provide the best mix of features and value available. With STANDARD mix-minus, remote control, talk-back, clocks and the best warranty in the industry — Radio Systems consoles are in control at thousands of small and large market stations.

AAC, it also includes the APT proprietary algorithms such as Standard Aptx and Enhanced 16, 20 and 24-bit Aptx. This device features a built-in inverse multiplexer that allows it to use four separate ISDN circuits, and hence provide up to a 512kb/s data rate.

The Orban Opticodec 7600 is a duplex audio codec for use via Ethernet, X.21 or V.35

interfaces, or as many as three ISDN interfaces or mixed with POTS interfaces. Configure and operate the codec directly with the front panel keypad and high-resolution graphical display.

A relatively new player is Mayah, and it recently introduced the Centauri II 3300/3301. This is a codec with multi-channel I/O. The bit rate is determined by the application and can be as low as 160kb/s with AAC+SBR (MPEG4 AAC HE) or as high as 6Mb/s with linear audio. Connectivity via IP and ISDN is possible.

Perhaps the best-known manufacturer of ISDN and POTS codecs is Telos Systems. The Zephyr Xport is a POTS codec that, with the inclusion of the field-installable ISDN option, can be made into an ISDN codec as well. The Xport uses AAC Plus audio coding for POTS connections; MPEG AAC low delay for ISDN connections made with an Xstream on the far end; and its G.722 option allows it to communicate with other G.722 codecs as well. The unit offers a built-in mixer with mic and line-level inputs, and independent headphone outputs that can listen to received audio or monitor mixes.

### No wires

Perhaps you've decided that the wireless route is the one you would prefer. You could still choose from several of the codecs discussed above.

The Tieline I-mix 3, when equipped with the IP software module, can operate over a Wifi connection with the addition of a wireless media adapter connected directly to its LAN port.

Comrex uses the Access in a slightly different manner. The Access plugs into a laptop (or other PC) via an Ethernet crossover cable. Then, using Windows ICS, the Access shares the wireless Internet connection that the laptop makes—irrespective of the network type.

Now wait just a minute here. I'm kind of writing ISDN off, but even though remote pickup (RPU) technology is far older than ISDN I'm

## Announcer's Consoles for Live Events

Whether used in radio, television, production, or stadium announce applications, the Model 200-series of announcer's consoles provide uniformly excellent performance. With five models to choose from, everything on your "wish list" can easily be handled. And while each unit provides a unique mix of features, all share a common core: great audio quality, a simple user interface, and reliable operation.

To see which Model 200-series product is right for your application, visit our website.

bringing it up anyway. With appropriate receive sites built in advance and an effective means by which the RPU audio can get back to the station's HQ RPU is really hard to beat—at the very least—in terms of its timeliness.

TFT offers the 8888 RPU transmitter and the 8889 RPU receiver. The system includes frequency-agility, selectable deviation on the transmitter (with 20W RF out) and selectable bandwidth on the receiver. The receiver can be controlled remotely and DTMF tones change the operating channel and IF bandwidth. The transmitter includes a built-in mixer with three mic- or line-level inputs; a send/return loop for connection to an external audio processor; a built-in peak limiter and a headphone output for monitoring the locally mixed audio.

Not to be outdone, Marti recently introduced a new RPU transmitter: the SRPT-30. This unit comes with two factory selectable frequencies, four front-panel mic level inputs (line level input available on D-connector on the back of the unit) going into its built-in mixer, and as much as 30W RF out. The SR-30 is the current model RPU receiver.

**Conquering the delay issue**

Whether you use one of the IP codecs or even ISDN, you will have to deal with the delay in the "round trip" time that the remote talent will experience. Unless you want the talent throwing the headphones down on the table (or maybe even at you) you'll have to send mix minus audio back to the remote site in some way. If you are transmitting HD Radio, then you have an additional eightsecond delay to deal with. If you're doing a live show then you will be operating with a profanity delay in-line as well. The bottom line is that this is an issue that can't be ignored.

If you choose to go the wired route you will take advantage of the duplex nature of all POTS, TCP/IP (and ISDN) codecs. Develop a mix-minus at the station and feed it back to the remote site. If you choose the wireless Internet option, you can solve the problem in the same manner due to the duplex nature of the connection. If you want to go strictly wireless with RPU, then your problem is a bit more cumbersome.

First is the use of a phone coupler. Because the remote site isn't tethered, you'll likely use a cell phone to call this coupler, steal the receive audio from it somehow and mix that into the talent headphones. Sounds easy, right? There are a few challenges. Usually the connections aren't that reliable. You need to be within range of a cell, then you need to get a circuit, then it needs to remain connected. As anyone who has used a cell phone can tell you, none of those things are guaranteed. Oh yes, then there is the cost of the call itself.

Secondly, you can make use of an RPU channel to transmit the IFB

audio outbound to the remote site. This is convenient if you have the channel and the equipment and the site—all of which can be problematic. If the IFB transmitter is at the same location as the RPU

receiver, then use the same RPU antenna with a duplexer to receive and transmit.

Thirdly, use some spectrum in the upper part of the FM baseband to transmit audio to the remote site. This obviously requires spare capacity on the studio-transmitter link to carry the IFB audio. This also requires the available subcarrier spectrum. A station that already has one or two SCAs could have some challenges. All this also assumes that there is an FM signal in the station group.

There are at least two manufacturers offering SCA generators; one is Broadcast Electronics. BE offers the FC-30, a 1RU device that lives at the transmitter site or back at the studio if carried on a 950MHz composite STL and operates between 33kHz and 95kHz. A 150 microsecond pre-emphasis setting is standard, but it can be set internally for 75 microseconds, which allows use of a legacy FM audio processor to drive its audio input.

Modulation Sciences offers the SCA-186, a 2RU device that includes the subcarrier generator, a built-in audio processor, a devia-

tion meter and a transmitter tuning aid.

Now if someone just made an SSB SCA generator. This would eliminate the need to turn the SCA carrier off after the remote is done.

### The last mile

Any one of these three methods requires some type of receiver at the remote setup location, whether it is a table top or the inside of a remote truck. How do you get the IFB audio to a talent roaming with a wireless mic? There are several wireless mic manufacturers that make IFB systems as well.

Lectrosystems offers the T4, a frequency-agile (operating on one of 256 UHF channels, in 100kHz steps) that transmits a 250mW signal. The receiver is the R1a and its receive frequency range complements the T4. It comes in the belt-pack form with a housing of machined aluminum, and sports as much as eight hours of battery life with an alkaline cell.

Shure offers several systems known as personal monitors that can be used for IFB service. The PSM 700 system is made up of the P7T transmitter and the P7R beltpack receiver. The transmitter occupies a half-width rack unit, even with its built-in power supply. The unit has an antenna connector, so the transmit antenna can be located away from the unit. The belt-pack receiver features LED indicators for power, low battery and RF reception. The system can operate in stereo mode.

Sennheiser also makes several systems that can be used as IFBs. The EW300IEMG2 operates on any one of 1,440 channels spread over five blocks in the UHF TV band. The transmitter can be rack mounted, includes audio input metering and radiates 30mW. The belt-pack receiver uses an autoscan function to find the transmitter. The system can operate in stereo mode.

One little hint I will give is this: when building a remote truck, put the wireless mic receive antenna and the IFB transmit antenna on top of the mast. Make sure the coil running up the mast has the appropriate number of coaxial cables installed ahead of time.

Executing remote broadcasts has always been in the province of the engineering department. When building a new system, find the correct balance between functionality and ease of use. Having a nicely engineered and constructed remote system is a great way to make a good impression on air staff, programmers and clients—and goes a long way in getting them all to recognize you as the hero you know you are. 🎧

# A foundation for the future

By Keith Stuhlmann

**F**t. Myers Broadcast Company, a privately-held, family-owned broadcast business nestled in southwest Florida since 1940, and who established the first radio and TV stations in the market, recently put the finishing touches on a new transmission facility for its WINK-FM and WINK-DT stations serving the Ft. Myers-Naples market. In its most basic description, the project entailed the addition of a 40 feet by 60 feet space attached to an older, steel-framed transmission facility that still houses the WINK-TV analog and backup FM transmitters. But the story extends far beyond the basics into a highly complex project that begins at the base of a new cement building and rises to the top of a combined radio/TV tower 1,500 feet in the air.

The multi-year project began in September 2002 with a series of FCC filings that would ultimately preserve WINK-FM's full Class C status. Another regional station's request to increase power, if passed, would have reduced WINK's status to Class C-0. This would have made the station unlistenable near Marco Island, an Arbitron diary-keeping area that is financially important to the company.

Our June 2003 filing to preserve the station's Class C status eventually prevailed. The rulings would be central to a series of new antenna installations, older antenna modifications and choice of transmitters for the new transmission facility. Harris and Dielectric provided the new transmitters and antennas that have ultimately shaped the way we broadcast today and into the future.

The FCC has revised the Class C definition over the years. Originally, it was defined as a 100kW FM radiated at a height above 1,000 feet. The last revision requires that to preserve Class C status, the station must have a center of radiation at or near 1,500 feet. A lowered antenna position would place the station in the new Class C-0 status, reducing the station's protected coverage range. This means that fringe area listeners may lose the station's

signal due to increased coverage from an adjacent or co-channel signal in a different location.

WINK's co-located TV operation proved advantageous over the course of the decision process. The TV/FM tower, standing at 1,519 feet, offered plenty of room and flexibility to implement unique antenna design strategies. We plotted the installation of a special stacked antenna directly after our 2003 filing. This would boost our FM center of radiation to 1,500 feet and also accommodate WINK-TV's DTV antenna.

The work on the new transmission facility was postponed when Hurricane Charley roared through the area in August 2004. Although our facility suffered no structural damage, the storm devastated homes and businesses in the southern part of Charlotte County, just north of Ft. Myers. Construction was halted as contractors worked to rebuild, so we turned our attention to building our HDTV studios and technical core.

### Construction work

Construction of the transmission facility was reinitiated as contractors again became available. Nu-Cape Construction of Cape Coral, FL, and Christopher J. Lee Architects

# “My Number One Codec Rental is Zephyr Xstream”

-Steve Kirsch President Silver Lake Audio

Rack 'em and stack 'em! The Silver Lake Audio Crew pictured from left to right: Steve Kirsch, Ken Stiver, Kirby Micvac and Jay Shoemaker

“When ISDN equipment rentals began in the early 1990s, we started with an equal number of different companies’ codecs. Today, Silver Lake has over 100 Zephyrs in stock, ten times more than any other brand.” says Steve Kirsch, owner of Silver Lake Audio.

The reasons should be obvious. Reliability, ease of use, compatibility, great support.

of Ft. Myers assisted with facility construction and design. The new section of the transmission facility is essentially a giant bomb shelter; a 40 by 60 bunker-style cement block with a poured cement roof. The result is a completely hurricane-proof construction encompassing enough electrical, ac and transmission redundancy to

preserving the Class C status for WINK-FM.

Second, a new eight-bay side-mounted Dielectric antenna was installed for WINK-TV terrestrial Channel 11. This antenna, a broadband system covering Channels 9 through 11, will automatically become the backup DTV antenna when the FCC-mandated analog TV shut-off date arrives on Feb. 17, 2009.

The old top-mounted Channel 11 antenna was removed, and the 10-bay ERI rototiller antenna that previously sidemounted near the top of the tower was lowered 100 feet and retained as a backup for WINK-FM. This antenna was lowered to its new position to remove it from the aperture of the new side-mounted Channel 9-11 TV antenna.

The new Dielectric antenna had a significant effect on our choice of FM transmitter. The older 10-bay antenna, with its high antenna gain, required only 25.5kW of transmitter power output. Dielectric's stacked, five-bay

**Above: A view of the old building with the new 40'x60' wing. Right: The Caterpillar 3412 diesel-power generator serves as backup for the new wing.**

ensure that all broadcast properties on site will remain on-air at all times outside of complete devastation.

Plans for accommodating the appropriate antenna systems for WINK-FM, WINK-TV, WINK-DT and future transmissions (such as HD Radio) remained consistent throughout the weather-related construction delays. These plans were set into motion as construction moved forward.

Antenna installations and modifications were complex and versatile: first, the installation of a stacked antenna designed by Dielectric consisting of a TDM-5FM antenna on top with a TW-6B9 TV antenna on the bottom. This accommodated WINK-DT terrestrial Channel 9 while

design prevented us from exceeding the FAA's ceiling height of 1,519 feet. It also changed our transmitter output requirement to 54.2kW because at only five bays the antenna gain was reduced. This led to our choice of a Harris HTD-60CD FM transmitter as the new main WINK-FM transmitter.

Ft. Myers Broadcasting has been a Harris transmission

# NO MORE SECRETS.

customer for TV and radio for a long time. The previous main WINK-FM transmitter, a Harris HT-25CD, is now in backup mode transmitting over the ERI antenna. (WINK-FM's previous backup, a Continental Electronics transmitter, remains installed in the older transmission facility with the HT-25 and several NEC and Harris TV transmitters for analog Channel 11.) WINK-DT recently went on the air with a Harris Platinum PTCD20P2 solid-state digital VHF transmitter in the new transmission facility. Meanwhile, several other regional Ft. Myers Broadcasting and Meridian Broadcasting properties—all engineered by Ft. Myers Broadcasting under a joint agreement—operate Harris FM and AM transmitters.

The HTD-60CD is effectively two 30kW transmitters running in parallel into a Harris-engineered switchless combiner. Dual exciter designs are incorporated into each side of the transmitter. The main exciter drives each transmitter with automatic switchover to the backup to continue operating at the same power in the event of failure or maintenance. The same design was used in the Platinum DTV transmitter via the Harris Apex digital ATSC exciter. The Harris Digit CD is used for all of our analog Harris transmitters.

The tube design of the HTD-60 is the same as most of our older Harris transmitters. The HTD-60 maintains much of the same cavity design as its older siblings, but uses an improved power supply, drawing less electrical current and offering a more stable product overall. The PAs and IPAs remain singular to each transmitter, which allows us to take one offline and remain on the air with relatively strong signal coverage throughout the area. The HTD-60 also gets high marks for providing several monitoring points for standard remote controls, and offering a wide array of status readings for control and monitoring.

The switchless combiner, responsible for forwarding power from both transmitters into the transmission line and RF system, ensures that the station drops to only half-power if a transmitter is taken down for maintenance or other reasons. Without the combiner, the output drops to quarter-power. The drop to half-power means that only fringe-area listeners are affected. The HT-25 can provide close to full regional coverage in drastic situa-

**A rear view of the support racks for the WINK-FM and WINK-DT transmitters.**

tions, even though the ERI antenna is now positioned lower on the tower.

### High beams

The multiple changes and modifications to the tower between antennas and transmission line required a significant amount of tower strengthening prior to installation. Tower Innovations engineered the tower strengthening project, which required heavier cross members in certain areas and additional plates on older cross members to support the weight of the new and old antennas and associated transmission line. Tower Innovations provided the cross members and plates, with Dielectric providing the transmission line.

The new portion of the transmission facility spans about two stories from floor to ceiling. This left plenty of space above the transmitters for the line to shoot up and across the ceiling to the exit port, where it continues outside and to the tower bridge. A  $6\frac{1}{8}$ " transmission line was used to handle the 54kW TPO for the WINK-FM transmitter, along with  $3\frac{1}{8}$ " line for DTV transmission. This added quite a bit of weight to the existing  $6\frac{1}{8}$ " analog TV line and  $3\frac{1}{8}$ " FM line for the HT-25 transmitter.

# A foundation for the future

While built as a standalone entity, the new transmission facility, is separated by a double door entry that allows engineers to move between the new and old rooms. With no room to squeeze a new transmitter, the 2009 shut-off date for analog TV means that all main transmission systems will operate out of the new section. To further emphasize the separate entity feel, each side features its own electrical system, cooling system, transformer and generator.

The original part of the transmitter site uses a diesel-powered generator for backup that came in handy for Hurricane Charley. The new side adds a giant UPS for the new WINK-DT and FM transmitters. A second diesel power generator was installed in February 2007; the HT-25 can also be switched on using the older diesel generator if necessary.

This area is cooled through two redundant Liebert ac units that operate on weekly

**An overhead view of the HTD60 FM transmitter.**

alternating cycles to preserve the life of the units. One unit can handle the heat loads from the DTV and FM transmitters. A large, mounted exhaust fan and two air louvers were incorporated into the building design in the event of total ac failure. The fan automatically starts if the temperature climbs above the set degree, and the louvers automatically open to exhaust heat from the room and keep the transmitters in operating condition. The room normally operates as a closed system.

This additional failsafe cooling procedure was added due to an experience at another transmission facility that had a total ac failure from the Hurricane Charley power outage. The temperature in the transmitter room exceeded 130° on the engineer's arrival, and the transmitters shut

**The combiner network combines the output of the two 30kW transmitters to produce the 60kW output.**

## STEREO HEADPHONE AMPLIFIER

*Shown in AFM-DC1N tabletop chassis*

### THE ALL NEW AF-SH1 FEATURES:

- Integral Long-Life VCA Stereo Level Control
- Balanced or Unbalanced Inputs
- Switch-Selectable Input Sensitivity
- Switch-Selectable Mono (Left) or Stereo Operation
- Amplifier To Drive High or Low Impedance Headsets
- Convenience of APPFLEX™ Mounting Possibilities

The AF-SH1 is part of the group of versatile APPFLEX products from Radio Design Labs. These modules combine advanced circuitry, durable all-metal construction, attractive RDL ULTRASTYLE™ colors and versatile mounting possibilities. APPFLEX modules are ready to drop in a cabinet, chassis or panel cutout. Numerous ULTRASTYLE wall mounting accessories and tabletop chassis are optionally available to facilitate system design.

down as a result of the heat. Similarly, four by four glass blocks were incorporated into the design. These blocks line the ceiling and walls, and allow engineers to work by sunlight rather than flashlight in the event of power failure.

The electrical system is designed so everything comes into the new side of the building at 480V and is then stepped down to address various electrical requirements. The transmitters run on less but the tower elevator requires the higher voltage. This also provides extra capacity for WINK-FM's future HD Radio transmitter, which will require a separate antenna. Electrical and floor space is also mapped out for a second DTV transmitter when the current Platinum transmitter moves to backup status. These considerations ensure that we'll never run out of electrical capacity or real estate for future transmission and RF systems for antennas.

The facility also is designed to remain clean, as it does not take in any outside air. The closed ac system eliminates bugs and debris. This all adds up to easier transmitter maintenance. The Harris transmitters require limited maintenance; keeping filters clean of dirt and dust, and paying attention to temperature and discoloration in the wiring jackets are the big issues. The HTD-60 allows us to take down one 30kV transmitter, inspect and clean it, and put it back online before repeating the same steps with the second transmitter. This is far easier than the hard switchover of the older transmitters (for which we also run weekly test loads for maintenance purposes).

Transmitter rack equipment is limited mostly to modulation monitoring, with units provided by Inovonics. An ATI distribution amplifier splits the signal to ensure it feeds the HT-25 in the older building. As we prepare for HD Radio, STL upgrades and additional monitoring and processing equipment will certainly be needed. For now, four years of FCC filings, antenna adjustments, tower strengthening and RF design work has paid off nicely. The new DTV transmitter went on the air on May 30, 2006, with the WINK-FM HTD-60 transmitter following on July 17—with plans in place for future expansion.

politician's speech or remove unneeded portions of a large file to save storage space. It is not a full-featured editing system. The graphical representation of the WAV file can be magnified for precise cutting. In and out points are selected by pressing a button or by inputting time code.

**Some operating controls and connections are placed on the sides of the recorder.**

The File/Folder Manager works like Windows Explorer, allowing you to create or rename directories and move files among them. The PAW 120's memory is formatted in standard FAT, making the recorder a plug-and-play utility on Windows or Apple machines.

For all its advantages, there are a few quirks: Printed documentation is thin, somewhat vague and printed in tiny type. The website for firmware updates, [www.paw-recorder.com](http://www.paw-recorder.com), is still in Chinese only, months after the unit's U.S. release, making a mystery of its links for those of us who do not read Chinese.

Carrying the recorder around in my hand while it is turned off, I constantly seem to hit several secret

combinations of buttons that launch Chinese-language routines. I've not been able to exit any of them without opening the battery hatch and momentarily removing a battery. I could remember to engage the hold switch, which locks the keyboard, to prevent this—but it is weirdly annoying.

The PAW 120 originally displayed in English or Chinese. Through a firmware update in early November it has added Spanish to the mix. This firmware update also reprogrammed, among other things, search function controls for greater ease in navigating audio files. Apparently, AEG is listening to end users and will update the PAW 120's operating software as the recorder gains real-world experience, a philosophy all too rare these days.

**The PAW 120 is formatted in standard FAT, making the recorder a plug-and-play utility.**

# Solutions for All of Your IBOC Needs from ERI

From the beginning, ERI has been a leader in the research and development of IBOC FM technologies. Join us as we continue to work toward developing new products for this exciting technology.

## ◀ MASK-960 IBOC Spectral Compliance Filter

ERI has developed a compact arrangement of our famous FM 970 band pass filter cavities to address the specific needs of FM IBOC broadcasting. ERI's mask filter configuration can provide the right response for any requirement.

## Low/Medium/ High Power Hybrid Combiners ▶

The quality and reliability of ERI's standard quarter wave hybrids have been adapted for use as an IBOC Hybrid Combiner. The iBOX™ 10 dB Hybrid Combiner is available in two versions:

- Low/medium power version for analog FM power levels up to 30 kW
- High power version which is rated to handle up to 80 kW of analog FM power.

## ◀ LYNX™ Dual Input Side Mount FM Antenna for IBOC Operations

The Electronics Research LYNX™ Dual Input Side Mount FM Antenna is designed specifically for FM IBOC applications. This new antenna is capable of transmitting both the analog and digital FM signals without requiring a high loss hybrid combiner and maintains high isolation between the digital and analog transmitters. The design meets the current Federal Communications Commission requirement for informal notification of IBOC implementation.

## Aphex Model 230

By Bill Eisenhamer

It was time for KSON and KIFM in San Diego to embrace the digital age of HD Radio. In this march forward, we needed new, simple microphone processing that meshed with our new digital console and air chain. After many listening tests, we selected a processor that had the warmth of old and integrated with the new digital of today: the Aphex 230 voice processor.

Installation of the 230 is straightforward. The rear panel features an XLR mic input with a graphic warning of the potential of 48V phantom power. Next to the mic input is an effects loop, which is not normally used in a broadcast environment. The send and return are both 1/4" balanced TRS jacks labeled for 0dBu. There are two line outputs: a male XLR +4dBu and a 1/4" TRS phone jack that is run unbalanced -10dBV. Both outputs can be used simultaneously if the need arises. There is also a 1/4" TS cough switch jack if needed.

The rest of the rear panel is dedicated to digital. There are three digital outputs: An XLR AES, a coaxial RCA S/PDIF and an optical TOS output. Beside the output jacks are two switches that choose the sample rate. The first switch designates 44.1 kHz or 48kHz sample rate while the second switch is a multiplier being one or two. Thus, in addition to the 44.1 kHz and 48kHz it provides 88.2kHz or 96kHz sample rates. In our facility 44.1 kHz is the house rate. These are the internal sample rates. If you prefer to use a central word clock you have that option. Choose the switch for internal or external clock, and if you use an external clock you have BNC connectors for word

clock/disengage each effect, nor does the gate or de-esser, but the de-esser is essentially shut off by setting the threshold to +24dB.

### Delving deeper

The first stage comprises the RPA tube preamp and the Easyrider compressor. The tube used is a 12AT7/ECC81 dual triode. Input control is the combination gain and drive that sets the gain of the preamp and the drive to the compressor. This is graduated from 20 to 70. The release knob, with a range from slow to fast, controls the density of the compressor. With the proper combination of gain/drive and release, the compressor is smooth and controls the levels well. I opted for a middle-release level. To monitor the amount of gain reduction there is the dual purpose LED meter. A switch is used to view VU or gain reduction.

Following the compressor is the gate. Unlike many gates, this is the patented Logic Assisted Gate. I tried many different settings. I could not get this gate to chatter; a problem we had with our older microphone processors. With this gate all you set is the threshold and depth controls. The threshold ranges from -40dB to 0dB and the depth can be set between -2dB and -6.5dB. If the depth control is set too deep you get the noise on/noise off sound that I dislike in gates. This can be avoided by setting the depth to no more than 12 o'clock—around 6dB.

The other unique stage is the equalization stage that follows the gate and de-esser. Unlike traditional parametric equalizers with level and bandwidth controls for three bands, you are presented with the Big Bottom bass enhancer, a parametric EQ and the Aural Exciter. Even if you are not fans of these controls, I found that with a little play and minor adjustments they work better than a basic equalizer. The Big Bottom is set with a tune knob and a mix knob, likewise the Aural Exciter. The Big Bottom frequency tuning range is from 80Hz to 300Hz, and the Aural Exciter has a range between 600Hz and 6kHz. Both feature mix controls that range from zero to max.

The parametric EQ came in handy to smooth out any annoying frequencies with its frequency control, Q (bandwidth) control and gain control.

## Performance at a glance

- Low-noise RPA tube mic preamplifier
- Logic Assisted gate
- Includes Big Bottom bass enhancer and Aural Exciter
- High-resolution 24/96 A/D converter

clock in and out. The 230 will sync to frequencies between 32kHz to 96kHz.

The front panel is loaded with the controls of the processor. All switches and knobs are logically located making it easy to visualize the flow of the signal. A power switch is provided on the front, which I find useful in situations when access to the back is difficult. The switches for low cut, 48V phantom power, polarity, the phase rotator and a 20dB pad are at your fingertips. A switch is provided to engage the compressor. With a single switch you can turn on the equalization processing of the Big Bottom, the parametric EQ and the Aural Exciter. There is no switch to en-

The frequency range is from 240Hz to 4.5kHz, the bandwidth ranges from .5 (broad) to 5 (narrow), and the gain, or peak/dip, ranges from -12dB to +12dB. I ended up dipping a moderately wide bandwidth for the room, which allows the voice to be more natural.

This is a new installation, and I have not run into any maintenance issues. One concern I had was installing a tube-based device. According

to Aphex, the patented tube circuit has been in thousands of units for more than a decade with fewer than a handful of failures. Even if I had to change a tube, it would be a small price to pay for maintaining a unique and quality sound. At the same time, when deciding where to place

## Independent Talkback

*A Headphone System with Selectable Talkback for Each User*

### FlexPhones Master

The FlexPhones Master is a professional Broadcast/Studio six channel distributed headphone system with independent talkback capabilities. Each of the six channels provides stereo program monitoring and selective talkback with Interconnection via CAT5 cable to multiple Active Headphone Remotes (AHR-1) and/or Monitor Selector Interface (MSI). Multiple masters may be cascaded to form larger systems.

The FlexPhones Master is equipped with inputs for stereo program and talkback audio. Rear panel program and talkback trimmers are provided to pre-set maximum input levels. The microphone/line level talkback input is available via a rear panel plug-in euroblock connector, while the front panel XLR connector facilitates the use of a user-provided gooseneck microphone or headset. The front panel is equipped with a level control for local headphones with both 1/4" and 1/8" stereo headphone jacks. The six front panel talkback switches allow the user to independently communicate with each AHR-1 listener and can be configured to insert talkback audio into only the left or both ears and dim either or both program channels. Any combination of switches may be pressed, while the "All-Call" interrupts all listeners. The Talkback function can be remotely controlled. Six RJ45 jacks are provided to distribute audio and power via CAT5 cable to the AHR-1's, which conform to the Studio Hub format. Low-Z balanced audio distribution is used to preclude audio degradation with long cable runs.

### AHR-1 Active Headphone Remote

The Active Headphone Remote (AHR-1) contains a stereo amplifier designed to work with any combination of high-efficiency headphones with impedances between 24 and 600 ohms. The AHR-1 is equipped with 1/8" and 1/4" headphone jacks, level control, user-configured utility momentary pushbutton and LED indicator. Two rear panel RJ45 jacks are provided for connection via CAT5 cable to the FlexPhones Master. The AHR-1 may be desktop mounted, under counter or with the optional HR-1/MP or HR-1/MP-XLR mounting plates, which may be turret or counter-top mounted.

## FCC Certified FM Stereo Transmitters

### GET ON-THE-AIR, STAY ON-THE-AIR!

- ✓ 50W RF output continuous duty!
- ✓ Auto protect, auto soft fail, auto restore!
- ✓ Automatic battery backup!
- ✓ Digital display of all parameters!
- ✓ Simple to install!

What's the bottom line? To stay on the air! The PX50 was designed with that in mind! Auto monitoring of all parameters, with automatic power reduction and restore on VSWR and temperature errors! No more down time AND no more trips to the tower site! Plus the PX50 is FCC Certified under parts 2, 73, & 74 (PF3PX50) and Industry Canada approved (IC: 4318A-PX50) so you never have to worry about non compliance! Make your life easy with the PX50 from Ramsey!

### THE ORIGINAL... "STATION-IN-A-BOX"

Since the introduction of our "Station-In-A-Box" hundreds have been put in service worldwide! From temporary locations, rapid deployment installations, to emergency broadcast facilities, there is no quicker way to get on the air!

Custom designs include full audio production and control, record and playback of CD's, CD-R's, MP3's, MD's, and cassettes. Quick deployment antennas with LMR cable make installation a breeze. When you simply have to get on the air anywhere, rely on the proven and original "Station-In-A-Box" from Ramsey!

## Design » Build » Installation Radio and Television Studios

Ram Broadcast Systems builds studios for most of North America's major networks, group stations, and news organizations.

Ram offers comprehensive studio design, fabrication, systems integration, and components. Put Ram's 35 years of experience to work for you:

- Studio Design & Fabrication
- Pre-Wired Systems
- Broadcast Furniture
- Switchers
- Metering
- Amplifiers
- Wire & Cable
- Racks
- Accessories
- Used Equipment
- And More!

## FM Investigator V3 AM

The first thing you will notice when you launch the program is a new button on the tool bar. You use this button to select AM or FM studies. Yes, in the same program, you choose, AM or FM.

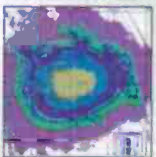

The next thing you discover is that things are no longer locked together. With multiple monitors, move the job control, station table, and other tool boxes to one screen then, expand the map to full size on another. The map is a resizable rectangle.

Well, you have created the contours and shown the cities, but you need to show your client. Just put some labels and arrows on to identify everything, save map to clipboard, and paste it into your word processing program. It is easier than ever to keep your clients informed or to create the needed FCC engineering exhibits.

But what if you need to show both AM and FM contours on the same map? You can move the contours from either mode into the other. Count the populations... or what ever... it is so simple.

**Now included:**

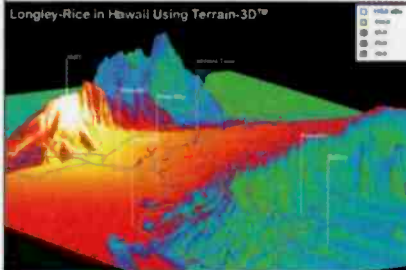

- 3-second USGS Terrain
- Block Level census data
- The Antenna Structure Registry Database
- One set of National Geographic TOPOI Maps

## Do you remember?

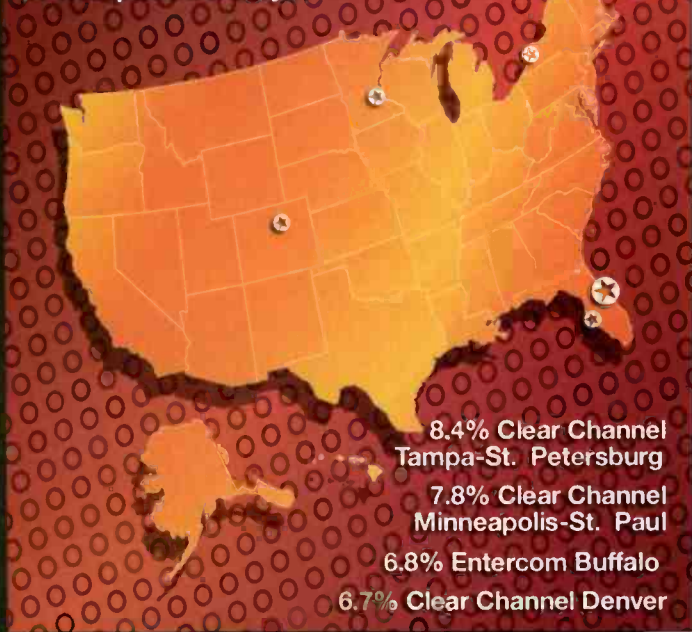

Gates-Harris Intertype manufactured and marketed the Vanguard 1 kW AM transmitter during the early 1960s. The transmitter combined solid-state circuitry with a single tube amplifier. Built-in remote metering was provided as well as accommodations for top or back air exhaust. All interior components were accessible from the bottom of this transmitter, which sported an usual shape for its day.

## Sample and Hold

### Highest-rated Radio Website Clusters in the U.S.

12% of adults in Daytona Beach, FL, visited a Clear Channel website in the past 30 days

## That was then

This picture was published in the Cox Radio Annual Report from 1967. At the time, AM ruled the airwaves. FM radio was still considered new, even though many stations had been launched in the 1940s. Many FM stations were simulcasts of the AM or automated with classical or other music. The new WSB-FM studios were the equal to most AM studios in the country at that time.

# Condition your Signal

with the New Vorsis® HD-P3

## What Is It?

A four-band parametric equalizer feeding a three-band limiter with adjustable crossover points, AGC and selectable filters for FM, AM or streaming audio formats. The HD-P3 includes a variable de-esser, an expander and dual digital outputs (one with user selectable HD latency FM delay), plus high pass, low pass and notch filters, and a signal de-correlator to optimize bass content. All this controlled by an ethernet protocol computer interface that lets you run one or many HD-P3s from your office or internet based locations.

## What It's For:

Processing for your new HD signal, improving your existing FM or AM signal chain, preprocessing streaming audio-over-internet, a standalone HD processor or a realtime DJ monitor feed—and finally—a KILLER studio production tool.

## What's It Like?

“PERFORMANCE WITH OVERDRIVE”

# VORSIS®

It's What's Next in Processing  
a division of Wheatstone Copyright © 2007 by Wheatstone Corporation

# THE TOOLS HAVE CHANGED...

## BUT THE *MISSION* REMAINS THE SAME

Today's audio control surface has evolved to a very high degree. Yesterday's wish list is today's feature set: total router integration, routable audio and logic, total show recall, and a complete set of DSP audio processing are under the hood of this G7...

All in a package of stainless steel and aluminum designed for years of 24/7 service, with a familiar look and feel that will *help your talent make years of great radio.*

Networked audio requires a higher level of expertise, experience and resources. Benefit from all three with *WHEATSTONE!*

**WE MAKE THE GOOD STUFF**

 **Wheatstone**
