Wherever reliability, transparency, power and size conservation are of critical importance, NEC's Television Routing Switcher takes first place honors. The TKA-105 is capable of behind the scene operation in any 60X60 matrix or larger application, from fixed station to Olympic coverage.

All audio signals are digitized in the TKA-105, with provisions for up to 4 discrete audio channels for each video input. Major design advancements include 8X1 crosspoint chips,

1980 Olympics

1X6 video distribution amplifier chips, and full micro-processor logic in every controller. Optional NTC-7 VITS signals may be added asynchronously to

each input for automatic signal verification. Controllers are available in a variety of styles including touch-pad with the ability to select any of the four audio channels and perform A/B comparisons.

The TKA-105 Switcher offers performance specifications far superior to the equipment signals it routes, and is capable of outside data interface, permitting computer,

mini-computer, or microcomputer switching commands plus switch station feedback loops. Whatever events you want to cover you can "make the scene" thanks to LSI technology, from NEC, the world's leading manufacturer of semi-conductors.

Call Toll Free 800-323-6656 24 hours a day. In Illinois call 312-640-3792.

Put your heads in the most capable hands in the industry.

Our Years of Technical Expertise Have Made Us The World's Largest Independent Head Refurbisher

Over 10 years and 18,000 video heads ago, we decided we were going to be the leading independent in quad head refurbishing. To accomplish this, we knew we had to do things better than Ampex and RCA. Our location in the center of U.S. video technology made it possible for us to put together a marvelous marriage of people and technology. It also made it possible for us to achieve our goals.

Many of our technical experts and production people have been with us from the beginning. It's people like this, with their special skills, who put their heads together to provide over 1,000 customers all over the world with the most technically perfect refurbished video heads and the finest service support anyone could possibly ask for.

To learn how our experience can help you keep your quads in top shape, write or call, VIDEOMAX, 3303 Scott Boulevard, Santa Clara, CA 95050, (408) 988-2000, Telex: 910-338-0554. Los Angeles (213) 980-7927, New York (212) 947-8031, Atlanta (404) 992-4490.

THE COVER

The 1979 Broadcast Engineering Buyers' Guide cover reflects the two major markets for manufacturers of broadcast equipment: television and radio.

Counter-clockwise from upper right, the cover depicts

- a simulated TV news studio as demonstrated at NAB'79 in Dallas (Photograph by Christopher Cave, One to One Photography, Dallas, TX);
- the Mt. Sutro transmitting tower which dominates the San Francisco skyline (Photograph by Don Lincoln, KPIX, San Francisco, CA);
- the WABC/Radio studios in New York (Photograph by Robert Deitsch, WABC/Radio, New York, NY); and
- a directional antenna array for radio (Photograph by Harris Corporation, Quincy, IL).

NEXT MONTH

- Preview of SMPTE and AES meetings
- TV automation: Case study of KOMO
- Audio processing: Keeping the sound clear and punchy
- Audio processing: Technology trends

Best In The Field

HITACHI SK-90

Outside the studio, the remarkable Hitachi SK-90 does it all. For EFP, it sports a studio style 5" viewfinder. All key functions can be controlled with your choice of Remote Operating Unit (ROU) or Digital Command Unit (DCU). For ENG, slip off the SK-90's studio viewfinder, slip on the 1.5" viewfinder and shoulder mount. Your SK-90 is now a compact, lightweight self-contained portable!

ENG with EFP image quality. And EFP with total remote control. SK-90 has the field covered!

LW-1
Fits all eyeglasses

LW-1
Lightweight headset with push-to-cough switch.

HD-4
HearDefender headset includes push-push talk switch.

CS-91
Omni-directional mike picks up background color.

Play by play, Color or Interview... Sportscaster Headsets cover them all.

Sportscaster Headset CS-91

Perfect for booth, track or field or whenever you want background color and the excitement of a crowd added to the clear sound of an announcer's voice. Omni-directional dynamic mike. Binaural headphones receive cues and monitor program while screening out ambient noise. Equipped with "push-to-cough" switch.

Sportscaster HearDefender™ HD-4

For interviews in a speedway pit or play-by-play on the sideline, the announcer's voice cuts through the din with this noise cancelling electret mike. High noise attenuating monaural receivers deliver clear cues, monitor the program and eliminate the tendency to shout over the noise. His voice sounds crisp, clear and natural. Equipped with push-push talk switch.

Sportscaster Headset LW-1

In an open broadcast booth or in the hush on a tennis court, the announcer's natural voice is transmitted crystal clear with a close-talking, noise cancelling electret mike. Unobtrusive even on camera, this super lightweight single side receiver headset is worn with headband or clips to eyeglass bows. Unmatched for comfort and equipped with push-to-cough switch.

In the booth or in the crowd, on track, field or court, Telex Sportscaster headsets cover it all. Write for free information.

NO, NO, NO!
WHEN I SAID "QUAD QUALITY"
I MEANT "TAKE THE HBU"

HBU-4400

You don't need a "gorilla" to carry the portable HBU-4400. It weighs only 22 lbs. without the battery and provides 10 full minutes of recording time per cassette. Cassettes are preferred for portable applications because you don't have to monkey around with reel-to-reel tape. High band "quad"

quality is achieved by tripling the head-to-tape speed of the U-format recorder and adding Recortec electronics to a transport with proven interchangeability. For reliability reasons the capstan and scanner speed increase is achieved without any change in motor rpm and, of course, all bearings are still well within their design limits.

And when you need a studio machine for playback and editing there is the HBU-2860 that will faithfully reproduce your high quality HBU tapes. We kept the 2860 remote control interface unchanged so it can work

HBU-2860

with your computerized editing system.

The HBU format is economical to own and economical to use. The HBU costs less than a third of machines of other formats with the same video quality. Tape costs are lower too. **CONCLUSION:** Buy the HBU and donate your "gorilla" to the zoo.

Other products from Recortec are: Video Tape Conditioners and Video Tape Evaluators for all tape widths, Video Cassette Evaluators, Video Tape Timers and Reel Servo Modifications (R-MODs) for quad recorders and Video Tape Addressors which record time code on two-inch tape at high speed.

How can we convince is really a total

Perhaps we should begin by telling you that the Arvin-Echo Slo/Mo-1 is one of the best investments you can make.

It's a great investment because it will allow your staff to offer production techniques that add up to increased business. And increased business means Slo/Mo-1 will pay for itself in a short period of time!

Regardless of your activities—Sports, News, or Commercials—Slo/Mo-1 can make a big difference.

A difference like Animation! Imagine being able to incorporate Animation from any source into your productions!

If that's not enough, let's add the fact that Slo/Mo-1 uses our unique Discassette[®] rather than a hard disc or 1" tape. Because it is a disc, it operates equally well in either forward or reverse. And that means even the most difficult editing job can be greatly simplified!

So add complete editing to Slo/Mo and Animation!

We don't call Slo/Mo-1 a production tool without good reason!

We set out to design the best Slo/Mo possible. And we built in the features that will make your productions stand out from the competition!

Features like *Field/Frame Select*, *Time Lapse Recording*, *Digital Comb Filter*, *High Band Color*. And configured to be so *small, rugged, and portable* that two men can easily transport it to almost any location. Plus Slo/Mo-1

Don't get wrapped up with 1!"

you that our Slo/Mo-1™ production tool?

is *expandable* to meet your system requirements!

So how can we convince you?

In addition to owning one of the best Slo/Mo's on the market, you'll be able to provide services, either in your studio or on location, that will make you Number One with viewers and customers.

Yet, now that we think about it, there's really only one way to convince you.

Give us a call today for a complete, no obligation demonstration and quotation on a lease or buy program!

Feedback

Letters from readers, technical & miscellaneous notes, station & plant visits

Address letters to go in this column to Feedback Editor, P.O. Box 12901, Overland Park, KS 66212.

AM stereo: Which system?

I hope you have information on the situation of AM stereo broadcasting. KEZY Radio, licensee of KEZY/AM, would like to go to the stereo mode of transmission the day it is approved. To do so, we need advanced knowledge on the subject of which system or combination of systems the FCC is favoring, based on performance and technical compatibility with existing receivers.

I would really appreciate obtaining any papers or other literature at your immediate disposal.

Mark R. Mocerì
KEZY Radio
Anaheim, CA

Editor's note: Mark, the whole industry would like to know which way the FCC will rule. We will just have to wait and see. There are five systems being considered, and any one might get the FCC nod.

From Ontario

I was interested in the article in the February 1979 issue of **Broadcast Engineering** dealing with "FM antenna and line measurements."

The techniques and equipment setups described also have been successfully used in cable television. We have used the techniques on FM broadcast antennas as well. Recently we purchased a new HP

8568A spectrum analyzer system with controlling computer, digital plotter and printer and have found that it facilitates the measurements described. The excellent calibration and stability of modern electronic instruments remove the needs for the comparator setups described.

I. Switzer
Switzer Engineering Services
Mississauga, Ontario

"Doc" Herrold's station

The radio pioneer section in your May issue was of great interest.

You show the picture of Dr. Charles D. Herrold's pioneer station located on the roof of State Bank Building in San Jose. I turned that picture over to CBS along with the complete history of KQW-San Jose that was established by Dr. Herrold.

I pioneered KFWM in Oakland, CA, going on the air in February 1925, and in 1926 Dr. Herrold went to work for us at KFWM, having sold KQW at San Jose.

I organized, in 1927, the first network of stations to carry a coast-to-coast program from the West Coast. There were 300 stations carrying it in the United States, nine in Canada and four international shortwave.

Dr. Herrold successfully completed a microwave in

Well, Alex...

If Alexander Graham Bell had to choose between his own great invention and Moseley's new Telemetry Return Link, he might have a tough time. Bell, like many great inventors, was always open to new ideas. Moseley's reputation is built on new ideas and the TRL-1 is the most recent example.

Even if you are currently using an STL with a remote control system, you may still depend on either a phone line or your transmitter carrier for return telemetry.

Moseley's alternative, the

Model TRL-1, allows you to transmit telemetry data back to your control point on the 450 MHz band Remote Pick-up Link frequencies. No more dependence on phone lines and no more worries if your broadcast carrier goes down.

The TRL-1 even has an optional battery pack to survive loss of AC power and a separate MIC input for voice communication. Installation with the Models PCL-505/C, PCL-505 or PCL-101 STL systems and the new Model MRC-1 Microprocessor Remote Control provides an unbeatable, totally independent wireless combination.

Sound like a good idea? Alex would have thought so!

Pending FCC type acceptance.

Model 1701A
Designed for lowest-distortion
Measurements (.0009% or > 100 dB)

Model 1710A
Designed for use
in strong RF fields

Model 1700B
Designed for general
measurement applications

When you need to know about distortion, pick from the analyzers that are easier, faster, and tell you more

The performance leader

When you talk to Sound Tech, you're talking to the firm that introduced a new era in improved distortion measurements with its 1700 Distortion Analyzer.

Now you can choose from three separate Sound Tech analyzers plus several options.

In Sound Tech Analyzers you can get conveniences that simply aren't available elsewhere—conveniences like these:

- **RMS, peak, and average-responding meter circuits.** Different standards require different type meter circuits

- **Higher sensitivity** — measure distortion as low as .0009%
- **Faster and more repeatable** — pushbutton frequency selection measures in 5 seconds
- **Balanced and bridging VM for measuring from 30 μ V to 300 V even on floating circuits**
- **Very-low distortion internal test oscillator with high output level of +26 dBm—adjustable down to -90 dBm in 0.1 dB steps**
- **Balanced, floating, center-tapped but transformerless output for low distortion**
- **Intermodulation distortion measuring option**

- **150-ohm and 600-ohm outputs**
- **Two-year parts and labor warranty**

See about our new easy purchase plan

We also have both an easy purchase plan and a lease plan that can help when budgets are running low.

So contact Mike Hogue/Larry Maguire now. Arrange for a demo and see how useful these analyzers are — not just for measuring distortion but as high-sensitivity balanced voltmeters and as low-distortion signal sources.

Call today.

Feedback

April, 1909. So, he used Victrola and Edison phonographs to play recorded music, plus a piano (he was a fine musician) on the first broadcast ever on earth of modern radio. On this day, the staff (as shown on page 98 of your May issue) began playing music and Dr. Herrold, standing in the studio door, announced the records DJ-style while the operator ran the records.

After about two hours of this, the first broadcast recorded in history, the telephone rang. It was the Mare Island Navy Yard. Mare Island's wireless operator asked, "Are you playing music on our wireless channel?" The answer was yes and the boys went wild.

I am 82 and still active managing my station KICO in the Imperial Valley.

W. L. Gleeson
President, KICO
Calexico, CA

From Illinois

Please allow me to hand you some flowers. Yours is one of the finest publications for our industry. When time allows, I read virtually every word, and very often save complete issues for future reference. Many thanks from a working engineer for a fine, up-to-date, and informative magazine.

E. Neil Pike,
WSIE,
Edwardsville, IL

From New York

Request you clarify circuit changes in steps 6 and 7 of Station to Station, "Transistors solve tube problems for 529" (**Broadcast Engineering**, December 1978). Both paragraphs indicate installation of a 10 μ F silver mica capacitor from pin 3 to V-264 socket to ground. I believe you meant to say V-164 in paragraph 6 and V-264 in paragraph 7.

S. Charles Campione
APO New York

Editor's note: The article was in error and thanks to Mr. Campione the error has been corrected.

From Illinois

This is a letter that I have been meaning to write to you for some time because it appears to be too good to be true.

As president of a communications consulting firm and a video production company, the Kapco Communications division, I need to know what developments are taking shape in the field of closed-circuit video. Because I'm intrinsically involved in the communications process, I also want to keep up with the broadcast and technical aspects of my business. Consequently, I read both *Video Systems* and **Broadcast Engineering** magazines and find them to be way above the quality of other like publications.

My only criticism is with the lack of a letters column. I think it would be great to have some method for feedback. Anyhow, keep up the good work!

Kenneth Rubel
K. L. Rubel and Associates,
Chicago, IL

We've got you covered...

24 hours a day. Every day!

Cinema Products wrote the book on after-sales backup and reliable service when we introduced our CP-16 line of news/documentary cameras to the television industry. And we're doing the same for our MNC-71CP broadcast-quality ENG/EFP video cameras!

When you buy an MNC-71CP, you are automatically covered by Cinema Products' outstanding around-the-clock video service program. Twenty-four hours a day. Seven days a week. Nothing offered by anyone else in the television industry even comes close!

MNC-71CP
Manufactured by **NEC**
exclusively for Cinema Products.

Note and compare:

- ☑ The MNC-71CP is covered by a full one-year warranty — unprecedented in the broadcast industry! (And there's no service charge ever for warranty work.)
- ☑ Replacement parts available anywhere in the United States within 24 hours!
- ☑ Factory-sponsored MNC-71CP maintenance training seminars for your service technicians at no charge.
- ☑ An extensive network of MNC-71CP dealers in 15 locations around the country with "stand by" loaner/rental cameras... *just in case.*
- ☑ An easy-term "state-of-the-art" lease/upgrade program provides built-in insurance against obsolescence.

FCC rearranges and adds to broadcasting rules in "reregulation" effort

With the death of the Communications Act rewrite, H.R. 3333, and little hope held out for Senate bills S-611 and S-622, broadcasters must rely on the mercy of the FCC for any deregulation. The commission expects to have its own proposals ready later this year. Until then, the commission has been pursuing a path it calls "reregulation," or restructuring the broadcast rules.

So far, the FCC has reshuffled its "Broadcast Applications and Proceeding" from Subpart D of Part 1 to Subpart H of Part 73 (substantially the same rules—different location); it has referenced some of its policies to its rules; and it has amended 32 separate rule sections of Parts 73 and 74.

The new amendments include the following.

- Delete the requirement for annual skeleton proof of AM station directional antennas used with remote control operation for all stations.

having approved antenna sampling systems;

- Permit AM stations to use the indirect method of power determination whenever there is a temporary malfunction of a remote reading, remote control or extension meter indication of antenna or common point current;

- Provide guidance in obtaining data necessary to correctly design approved sampling systems for AM directional antennas, with sampling transmission lines of unequal length;

- Clarify the technical requirements for TV remote control and failsafe circuits to avoid use of unnecessarily complex devices that could result in loss of program service to the public and unnecessary expense to station licensees;

- Resolve ambiguity in tolerance specifications for TV video waveform equalizing pulses, by redefining the tolerance in terms of duration rather than area of the pulse;

- Restructure and rewrite the rule on rebroadcasting of signals from other broadcast and non-broadcast stations with editorial corrections requested by the National Bureau of Standards and the Naval Observatory on the use of standard time signals;

- Permit the use of automatic Morse Code for station identification of remote pickup stations for licensees wishing to do so for operating convenience. The code identification procedures are identical to those adopted previously for stations in the Private Radio Services;

- Relax the station identification requirements for auxiliary broadcast stations to agree with previous relaxations in the AM, FM and TV rules;

- Clarify the operator and station identification requirements for fixed microwave links used by broadcast licensees. These stations may now operate fully unattended, similar to

MICROTIME

For Video Processing

- 1 2525 Video Signal Synchronizer
- 2 2100 Video Image Processor
- 3 1600 Time Base Corrector
- 4 Digitrol 2 Video Source Control System
- 5 2020 Video Signal Processor

Microtime offers an entire range of video products for advanced Time Base Correction, Image Processing, Remote or Local Synchronizing, and Automated Programming for the Best pictures possible.

2525 Video Signal Synchronizer

Synchronizes any video source, 3/4" heterodyne, 2" quad, satellite feeds, to station sync. Provides field 1, field 2 or frame freeze for digital video effects. Auto freeze on last field of active video. Infinite H phase resolution and RS-170A Sync Generator for interfacing with any switcher.

2100 Video Image Processor

Provides 6dB video noise reduction in luminance and chrominance, horizontal and vertical detail improvement, chroma crispening and chroma hue error reduction. Automatic Chroma/Luminance delay compensation corrects chroma smear inherent in most heterodyne VTRs. Improves the overall picture quality of any video picture.

1600 CCD Time Base Corrector

The Standalone TBC uses charge-coupled device technology to provide high performance at low cost. 55 dB Signal-to-Noise Ratio, 4 H line correction range, Auto Trac 2 and automatic sync advance are standard.

Digitrol 2 Video Source Control System

Highly versatile automated programmer for use in studio applications, CATV automation, video tape duplication, automatic commercial insertion, editing control, and off-air recording and delay applications.

2020 Video Signal Processor

Time base corrects any video source using digital technology. 58 dB Signal-to-Noise Ratio, 4 H line correction range, Auto Trac 2 and automatic sync advance are standard. Line Error Detection, Velocity Correction, 24 H line Wide Window correction range, Dropout Compensation, Image Processing and Noise Reduction Options are available to fit your particular needs.

CUERAC SERIES 1A

FUTURE JOCK

CUERAC is the world's first complete random access cartridge automation system.

- Fully automatic computer controlled random access library of 500 cartridges.
- Computer expandable to control up to five (5) CUERAC libraries giving random access to a total of 2500 cartridges or 1-4 CUERACS and up to 40 single source replay units.
- Continuous visual display of program: current status, next 10 selected events, lapsed time, actual time, system alarm, syntax error.
- Simple programming for last minute scheduling.
- Provides FCC and diagnostic hard copy logging.

Industry news

the unattended operation of similar stations in the Common Carrier and Private Microwave Services;

- Relax the requirement that licensees of remote pickup station transmitters attach or display full license information on the portable or mobile transmitter units. Similar identification and license posting requirements were previously deleted for the Private Radio Services as no longer having any regulatory purpose; and

- Revise or add technical definitions for frequency modulation, frequency tolerance and radio frequency radiation to conform with American National Standards definitions and with other FCC rules.

FCC wants to know why commercials seem loud

The FCC has begun another inquiry to obtain information and comments on measuring the loudness of commercials broadcast by radio and television stations. (The last inquiry lasted three years and ended 14 years ago.) The commission said it would prefer that the industry resolve the problem of objectionably loud commercials itself, but threatened regulatory action if industry measures are likely to be ineffectual.

Some of the questions on which the FCC is seeking comments from the industry (due December 15) include the following:

- What methods (devices) are suitable for measuring the instantaneous loudness of complex sounds such as voice or music?
- How can a sound segment be characterized in terms of loudness?
- How can two sound segments be compared in terms of loudness?
- To what extent (how loud and how many) are commercials objectionably loud?
- To what extent is there objectionable loudness in other types of material such as public service announcements or station promotionals?
- What causes objectionable loudness in commercials?
- Do listeners confuse loudness with noisiness or annoying sound?
- Is there some factor that is primarily the cause of excessive loudness?
- Is modulation the key, only one of several factors, or an unreliable indicator of loudness?
- What forms should loudness standards take and what limits are reasonable?

Second Generation

Tini "Q-G" — The New Switchcraft Connector That Has Less Bulk! Less Weight! And Low Cost! It's designed for today's miniaturized lavalier microphones and instrumentation. Disconnect is quick and easy!

Take it apart. See Tini "Q-G" quality. Silver-plated pins and contacts for starters. "Non-scooping" plugs and receptacles have recessed pins to protect against accidental damage. They're keyed for proper mating. Tini "Q-G" reflects the proven quality of Switchcraft "Q-G" and "QGP" professional audio connectors.

Choose either three, four, or five pin/contact styles in both cord plugs and receptacles. The cord plug diameter measures a mere .413"... accepts cables up to .115" dia. with flex relief bushing 170" dia. without bushing.

Tini "Q-G" receptacles are available with PC terminations and a choice of seven trim, colored panel escutcheons for quick, easy identification. The rich metal cord plug housing has a nickel finish that minimizes glare and lighting "hot spots"

Compare! You'll easily see why Tini "Q-G" gives you more. But then it's from Switchcraft... a leader for decades in audio connection design

INNOVATIVE

TITLING GENERATORS

T-1024 SERIES

T-2001/T-5002

T-1000A

TOMORROW'S PRODUCTS ... TODAY

Our T-1024 SERIES provides features and performance hereto not available in an inexpensive system.

While compact, it boasts an 8 page memory expandable to 16 pages, auto line centering, character insert/delete, and a highly legible display of 24 characters per line using a 10 x 14 character matrix. **PRICED FROM \$1095.**

Our T-1000A is designed for simplicity of operation with outstanding features.

Fingertip controls provide access to a 16 page memory with simultaneous program and preview display channels, variable length roll, crawl, adjustable title window, and eight choices for character font enhancement. **PRICED \$3995.**

NEW! Our T-2001 offers programming flexibility at an affordable price.

Select on a character line basis, three character heights, two character widths, black or white characters, and three choices of edging. The font library provides 128 characters including upper/lower case, and 32 graphic symbols. Special editing and control features provide operator programming flexibility and ease of operation. **PRICED FROM \$5995.**

NEW! Our T-5002 encompasses all of the features of our other titling systems and more.

Imagine the features of the T-2001 along with a super high resolution dual font library, colored characters or background, and an independent edit channel which can double as a second program channel:

Optional expanded memory, two channel mix, and custom characters or logos makes the T-5002 an unusual titler. **PRICED FROM \$8995.**

Industry news

- Is there some one factor which, if controlled, would minimize the problem?
- In what way are the marketplace forces delinquent in this area?
- In what way could government regulation and marketplace forces act together to minimize the problem?
- Should the FCC control loudness solely by regulation, what specific form should such regulations take, and do current regulations aggravate the problem? and
- Could an automatic loudness control be incorporated into TV sets that would be adjustable for the receiver location and listener preference?

1978 is record year for TV ad revenues

Advertisers spent \$8.06 billion, or 17.8% more on television in 1978 than in the previous year, according to figures released by the FCC. Total industry revenues, less agency commissions, were \$6.9 billion. Industry expenses increased 17.3% to \$5.3 billion and pre-tax profits rose 17.6% to \$1.65 billion.

Of the \$8.06 billion of television advertising expenditures, \$3.72 billion were for network advertising, up 14.9% from 1977; \$2.30 billion were for national and regional advertising, up 16.8%; and \$2.03 billion were for local advertising, up 24.5%.

The three national networks reported revenues of \$2.96 billion, up 14.8% from 1977. But, profits from network operations were \$373.5 million, down 8% from 1977. The three networks reported spending \$265 million on their news and public affairs operations. This compares with \$207 million in 1976.

FCC releases station and complaint totals

The FCC has released the following totals for broadcast stations on the air as of June 30, 1979: 4548 AM radio (no change from May), 3111 FM radio (no change), 993 FM educational (down one), 220 UHF commercial (no change), 517 VHF commercial (no change), 158 UHF educational (no change), and 105 VHF educational (no change).

The commission also reports that broadcast complaints totaled 14,400 in May 1979, a decrease of 814 from April. Other comments and inquiries for May totaled 2694, a decrease of 11,810 from the previous month. The FCC sent 2079 letters in response to

RF Gain Ltd.

CALL TOLL FREE 800-645-2322

100 MERRICK ROAD, ROCKVILLE CENTRE, NEW YORK 11570
N.Y. State call collect 516-536-8868

Dear Friends:

If you've been wondering where Dave Gilden went, please read a little further. I'm going out on my own. The name of my new corporation is "R.F. GAIN, LTD.". We are located in Rockville Centre, N.Y. just 15 minutes from JFK Airport.

I hope to provide you with the service, speed, and accuracy you're accustomed to. I have taken all the feedback you've given me and will provide some new ideas to cater to your needs.

Our product line will be expanded in the beginning to provide you with integrated circuits at reasonable prices. My Transistor cross-reference list is expanded with an emphasis on cross-referencing RF Power Transistors. Finally, we will provide you with Tubes of all major manufacturers with more choices available. Our inventory will be the largest in the country.

As before, we request everybody to call us on our toll-free number - 800-645-2322. We will have sales engineers familiar with the products we sell so, remember "Dave is Back" to provide you with more savings per order, fast delivery, prompt warranty service, and a friendly voice.

If you've been pleased with my service in the past, let me continue to supply your firm in the future.

Sincerely,

Dave Gilden

MDS report guidelines

The FCC has released guidelines on what information MDS interference studies should contain in the event that the location of the transmitting antenna of a proposed MDS station is less than 50 miles from an authorized or previously applied for station. This includes the following:

- A map showing the contour of a 45dB carrier to interference level around both the proposed station and any authorized or previously applied for transmitting antenna sites.
- If the applicant believes that other factors will significantly alter the above contour, these factors shall be listed along with a second 45dB contour illustrating their effect.

In cases where the existing previously authorized or proposed station is or would be affected by other authorized or proposed stations within 50 miles of it, the following should be provided as part of the engineering statement:

- A map showing the contours of the 45dB carrier to interference levels around all such authorized or previously applied for stations without the effect caused by the new applicant, assuming the stated transmitting site characteristics.
- A map showing the contours of the 45dB carrier to interference level taking into account both the authorized or previously filed for stations and the station proposed in the new application.

For more information, contact Herb Wilson, FCC, 1919 M. St. NW, Washington, DC 20554, (202) 632-6440.

Channel use study out

Television Channel Utilization as of December 31, 1978, is a FCC report showing by market, how commercial and noncommercial channels are being used. It details the number of VHF and UHF channels licensed, the number for which construction permits have been granted, the number for which an application has not been filed, the number of UHF channels allocated for television but not available until further FCC action, and the total number of channels allocated.

The report shows that, as of December 31, 1978, applications were pending for 42 UHF commer-

SMPTE EDIT-CODE READER AND CHARACTER-GENERATOR

THE NEW STANDARD OF THE INDUSTRY

FEATURES: "THE McFADIN WINDOW"® wide-range digital decoder; 1¾" rack mounting; Drop-Frame indicator; vertical interval inserting; choice of Time-Code or User-Bits; all front panel controls; regenerated Time-Code output (DUB). **MODEL DR-107**

Family Technology

A. Plumbicon™ Tube Technology
C. Yoke Technology

B. Prism Technology
D. Electronic Circuitry Technology

Philips called it, “Focus on Technology” at NAB '79 in Dallas. Simply put, it was a demonstration of the single, most important reason for the basic superior technology and design advantages that make Philips the acknowledged leader in color television:

“Philips is the *only* camera manufacturer who designs, develops and produces *all* four, critical, picture-determining components — Pick-up Tubes, Prisms, Deflection Yokes, and Electronic Circuitry — each designed for optimum, total camera system performance.”

This basic technological advantage enables Philips to continue offering the world's finest line of broadcast cameras. The most diversified camera family in both price and application. *The Technology Family.*

Technology Family

LDK-14—Newest technological breakthrough.

$\frac{3}{8}$ -inch ENG/EFP/Studio broadcast camera with picture quality and features of Philips larger studio cameras. Lightweight, rugged, one piece with the look and feel of a film camera. Low power consumption; high sensitivity; dynamic beam control (DBC); fully automatic operation including auto-centering, and switchable black stretch. Available with simplified remote control or full facility control unit with full bandwidth chroma key.

LDK-25 Family with ACT or new 1-inch 73XQ Diode-Gun Plumbicons and camera circuitry for higher resolution and lower lag than 30mm cameras. With better than 65% depth of modulation at 400 lines! Makes the finest, state-of-the-art multicore studio and field camera ever produced better than ever. And Philips exclusive rear-loading design delivers the maximum out of this new Diode-Gun technology.

Rounding out the LDK-25 family are: the LDK-5, a digitally controlled triax version for remotes and modernized studio operation; and the LDK-15L, an LDK-5 in a self-contained mode or can be used with the LDK-5 or 25 CCU in system configurations.

VIDEO 80... innovative convertible camera system for multi-use applications. Unique, three $\frac{3}{8}$ -inch Plumbicon camera head converts in seconds from studio mode (available with optional, multi-position, tiltable viewfinder) to new, lightweight EFP field production mode with $1\frac{1}{2}$ " viewfinder to totally self-contained ENG portable. Even to special application modes for telecine, microscopy, endoscopy, etc. Easy set up and operation by non-technical personnel and automatic features for total mobility. VIDEO 80 also offers a complete expandable production system for start up or expansion of existing systems.

I.F. Transmitters... Philips is also the recognized world leader in transmitter technology, now with the fastest growing UHF/VHF transmitter line in North America. Output ranges up to 110kW. Equally suited for single or parallel operation with

automatic or remote control for unattended operation.

Features include I.F. modulation, solid state design except for power stages, high stability and ease of installation and maintenance. SAW filter, reducing number of controls to achieve proper group-delay. Small size and minimum floor space made possible by the advanced design and a unique common exciter that can be retrofitted into earlier competitive systems.

Also included in Philips "Focus on Technology" and part of our growing family of system products:

- One-inch **Video Recorders** to meet your specific requirements.
- New digital **Video Noise Reducer** — Fully automatic.
- A state-of-the-art **Tape Synchronizer** for totally integrated systems operation.

It all adds up to the widest range of cameras and television equipment in the industry. More information is yours simply by writing today on your company letterhead (indicating product interest) to: Philips Broadcast Equipment Corp., 91 McKee Drive, Mahwah, N.J. 07430 (201) 529-3800. (Canada: Philips Broadcast Equipment, 601 Milner Ave., Scarborough, Ontario M1B 1M8).

Innovative Leader in World Television

Industry news

cial channels located in the top 50 markets, and for nine channels in the second 50 markets. In the top 100 markets, 111 UHF commercial channels had not been applied for. In markets 101-200, applications were pending for 23 UHF commercial channels; 90 channels were vacant and not applied for. Of the 61 vacant and not applied for VHF commercial channels, 5 were located in markets 101 through 200 and the remaining 56 were outside 200

markets; applications are pending for 11 VHF commercial channels. Copies of the report may be obtained from the Office of Public Affairs, Room 207, 1919 M St. NW, Washington, DC 20554, (212) 632-7260.

French television pioneer wins ITU Centenary Prize

The International Telecommunications Union (ITU) has awarded its

first ITU Centenary Prize to Georges Valensi, a French engineer and scientist, for his contribution to the development of international telecommunications.

Besides playing a cardinal role in developing international telephony and the world telecommunications network, Valensi contributed to the emergence of color television. His detailed research in physiological optics and colorimetry led to a French patent in 1938 which was the basis for British and American patents validating his reverse compatibility concept for color signal transmission. NTSC, PAL and SECAM make use of this underlying principle, even though the coding methods differ.

The prize will be presented September 23, 1979, in conjunction with the 3rd World Telecommunications Exhibition, Telecom 79, in Geneva.

The ITU is the United Nations' specialized agency for telecommunications. It was founded in 1865 and has 154 member countries.

US and Canada negotiate for UHF-TV allocations

Negotiations are being conducted between Canadian and United States representatives to relocate Canadian UHF-TV allocations to channels below Channel 70. This is a result of steps to implement Land Mobile operation in the 806-890MHz band (TV channels 70 through 83).

Some conflicts remain between US allocations and some of the Canadian proposals listed in the new plan. Negotiations to resolve these conflicts are continuing and corresponding adjustments to the plan will be developed as necessary.

Inter-satellite links ahead

INTELSAT has awarded a US \$170,000 contract to the Electron Dynamics Division of the Hughes Aircraft Company for the design, fabrication and testing of a feasibility model of a Travelling Wave Tube (TWT). The TWT would be a vital component of the on-board satellite equipment required to operate an inter-satellite link.

This is the 102 member-country organization's first step towards establishing inter-satellite communications links within its systems. The objective is to advance technology in this area sufficiently to enable it to install facilities for inter-satellite links on its satellites launched after 1984.

Now—you can add Rotary Matrix & Star wipes to any size switcher!

with CDL's new Extended Effects Generator EEG-1980

It's easy. EEG plugs into your switcher's external key input, and . . .

EEG effects can be used simultaneously with your own effects, such as a Clock Wipe within your circle pattern . . . or use them independently.

Plus you can use your key softness control for some spectacular Rotary, Matrix & Star effects.

See how affordable and easy it is to update your switcher. Write or call for a demo.

ALL NATURAL.

(for a healthy image.)

Take the purity, quality and precision of nature and incorporate it into a broadcast monitor capable of providing the most exacting picture imaginable, and you'll have created the All Natural Ikegami Broadcast Color Monitor.

All Natural because what you'll see is a picture in its purest form: down to the finest detail or defect.

Ikegami Broadcast Color Monitors maintain a healthy image.

It's why more and more engineers are specifying *Ikegami Broadcast Color Monitors*.

With features like our comb filter which results in resolution at 600 plus lines, shadow mask CRT's power-protective circuits to avoid damage to the picture tube, an active convergence circuit, a phase lock system which eliminates horizontal hold control, sturdy construction, modular PC boards for simple servicing and maintenance, a

built-in degaussing circuit and magnetic shield to permit movement without affecting picture quality, and a wide range of models including 25, 20, 16, and 14 inch units (14 and 20 inch units offering standard and high resolution models), isn't it time you got into shape with Ikegami Broadcast Color Monitors?

For high-end, precision broadcast color monitors, it's Ikegami—naturally!

Industry news

The organization claims that such links would have significant advantages. At present, direct satellite transmissions can only be provided between points within a single satellite coverage area—about one-third of the earth's surface.

Communications bound for destinations outside the coverage area must complete their journey via land-based links or through a second satellite hop.

With inter-satellite links, these

signals could be switched directly from the first satellite to the second—thus saving one down and one up link transmission, freeing this capacity for other communications.

INTELSAT says it also would enable one earth station to communicate through more than one satellite in each area, improving system flexibility by increasing the number of receive stations which can be accessed directly.

FCC fears limited powers if RF radiation regulated

Controversy over the effects of low-level and long-term exposure to RF radiation is on the increase. So, the FCC has opened an inquiry on how to discharge its regulatory duties if a health and safety agency should limit allowable RF radiation exposure levels.

The commission said a parallel purpose of the inquiry is to provide documentation so that it can participate in rulemaking proceedings of the health and safety agencies and ensure that any new standards adopted take into account the impact on the licensees and equipment regulated by the FCC and on the public.

Comments are due by December 15 and replies by March 15, 1980.

Radiation is classified in two types for health and safety purposes. High frequency-high energy radiation such as x-rays and gamma rays, which are beyond the range of frequencies the FCC regulates, are capable of causing harm through ionization of atoms in living tissues. FCC-regulated frequencies do not have sufficient energy to cause ionization, but in sufficient amounts are capable of causing damage through generation of heat.

A spokesman at one electronic shielding manufacturing company says the level of worldwide radio frequency radiation has risen from virtually zero a few decades ago to today's "pollution-level index." Arnold Zais of Keene Corporation, calls it "radio frequency pollution" and says it is increasing at the rate of 50% a year.

Sources of radio frequency radiation include commercial radio and television; radar and microwave communications; military, amateur, citizen's band and police radios; communications and other satellites; high voltage electrical transmission lines; industrial and military equipment; lighting systems; and natural radiation phenomenon from outer space.

FCC enters environment assessment business

After consulting with the Council on Environmental Quality, the FCC has proposed amendments to its rules covering the environmental impact aspects of communications facilities it authorizes.

The proposed commission rules provide that, before action is taken

Superior pictures at lower cost! Join the ferrite generation.

Spin Physics will save you 25% to 40% of your costs and give you 2 to 5 times longer life than you receive from ordinary video heads. Get the facts from our full-time field engineer who serves your region.

Superior pictures and significant savings are yours when you specify state-of-the-art high technology hot-pressed ferrite quad video heads from Spin Physics. Bring your quad machines into the new generation — the ferrite generation. The money you save on refurbishing may help toward new generation equipment in some other aspects of your operation. Our steadily growing customer list includes smart operators in all sizes of stations and production centers, and in NTSC, PAL and SECAM standards. You owe it to yourself to compare Spin Physics' advantages.

broadcast features and
construction.

MA Series: Studio
monitors; 12 W mono, 20
W stereo; 10 Hz-50 kHz±1
dB; distortion 0.05% max:
\$121 and \$171.

MIC/LINE/STUDIO AMPLIFIERS:

L Series: Line amps, with or without equalization; up to 10
mono, 5 stereo ch.; solid-state balanced and unbalanced
inputs; +21 dBm max. in and out; response 10 Hz-50 kHz
+0, -1 dB; distortion 0.008%: \$135 to \$453.

SMA Series: Studio monitor; 25 W rms/ch.
stereo; 15 Hz-50 kHz±1 dB; distortion
0.6% max: \$325.

MLA Series:
Mic/line inputs;
studio or remote:
\$128 to \$185.

DML Series:
Dual mic in to
amplify, mix, limit and control
gain; built in compressor; AC
and DC: \$239 to \$281.

AUDIO ROUTER/AMPLIFIER

ARA-1612: Up to 16 in, 12 out; LED status display;
\$1099 to \$2296.

TURNTABLE PREAMPLIFIERS

MP-8 & SP-8: Mono & stereo; S/N
-77 dB; ±1 dB RIAA: \$98 & \$144.
ESP-38: 0.03% distortion; S/N
-85 dB; ± 25 dB RIAA: \$325.

AUDIO DISTRIBUTION AMPLIFIERS

DA Series: 12 versions from 1 x 30 mass feed to 20
x 80 rack mount; 20 Hz to 20 kHz±0.5 dB; -75 dB
separation: \$145 to \$2276.

Prices subject to change without prior notice.

2 WEEKS.

***You can use any of the gear you see free for 2 weeks (with credit approval prior to shipment).**

Play with the cart/cassette record/playback/duplication center that eliminates stereo phase shift error once and for all. The most advanced turntable preamp in captivity. Consoles so advanced, so silent you're not going to believe them until you try them. Or an audio router that makes whatever you've got now look—and sound—like so much spaghetti.

Then, if it's not for you, just ship it back.

But in all fairness, we have to warn you—once you've tried Ramko, chances are you're hooked for life.

Phase shift doesn't matter in mono.

So instead of adding failure-prone electro-mechanical components or re-inventing the cartridge, in the Ramko PhaseMaster Cart/Cassette Duplicating Center, we simply encode the stereo before it ever sees the heads or tape, then decode the signal after it leaves these two major sources of stereo phase shift error.

The result is phase-error-free recording/reproduction/duplication, and performance specifications that meet or exceed whatever cart drives you're using now.

Features include: an A and B cart deck; an A cart deck; and a cassette deck. Simple cassette-to-cart(s) and cart-to-cassette duplication. Automatic switching of record/playback, encoding/decoding and mono/stereo. Left, right and phase analysis meters. Front panel input selection. Three cue tones. And so much more that you'll just

have to contact us for details and a demonstration.

Ask for the Ramko PhaseMaster.

Just another turntable preamp?

Look at what one user wrote:
"Three days ago I replaced the (brand name) preamps in our studio with your ESP-38 preamps."

"The result was astounding. The next day we had six unsolicited calls from local stereo stores. All commented on our improved disk reproduction and wanted to know what we had done."

"The comments from listeners have been excellent."

Try it. You're going to like it a lot.

For AM stereo, or an FM station upgrade.

Ramko consoles come with features you won't even find in more expensive competitive units.

Total dc control of all mixing and switching function means no more noisy pots and switches, no stereo tracking error, and much more resistance to RFI.

We've developed solid-state balanced inputs for better sound. Added gain select on each input. Included switch-programmable cue and monitor mute selection. Provided mono, stereo and phase meters as standard features.

And then we backed everything with a 2-year warranty (4 years on the DC-38 and DC-12).

Kiss your patch panels good-bye.

Because with the Ramko ARA-1612 Audio Router/Amplifier you use front panel pushbuttons to route 16 inputs to any of 12 outputs, simultaneously or individually, with an instant LED display of what is

going where. You've never seen anything like it.

IC switching and isolation buffers mean no loading and no degradation of S/N or frequency response with multiple feeds (stack them for up to 45 in and thousands out). On-board switches change stereo to mono instantly. Individual gain control on all inputs allows precise level matching. Frequency response is 20 Hz–20 kHz±0.5 dB; S/N is –75 dB; distortion <0.3%; and input/output levels are +21 dBm max.

And all this is yours at the lowest cost per crosspoint in the industry.

The music goes 'round and 'round...

For moving sound around, we offer more different kinds of amplifiers than anybody.

Ten models of Audio Distribution Amplifiers, each with 10 Hz–20 kHz±0.5 dB frequency response, less than 0.1% distortion, and more inputs and outputs for the size and price than any other comparable ADA.

Four different Line Amplifiers with 20 Hz–50 kHz±0, –1 dB frequency response, 0.008% distortion, balanced in and out, and +21 dBm max out.

Portable and studio dual function MIC/LINE amplifiers with balanced in and out, built-in RFI suppression, 20 Hz–20 kHz±0.5 dB frequency response, gain from 64 dB on MIC to 26 dB on the high level channels, and distortion at an inaudible 0.1%.

And isn't that music to your ears?

To hear more, contact: Ramko Research, 11355 Folsom Blvd., Rancho Cordova, CA 95670.

Or just call (916) 635-3600 collect today.

RAMKO

Industry news

on authorizations for facilities classified as "major" because of their location, an environmental assessment will be prepared and published.

FCC commissioner Abbott Washburn was alone in dissenting the action and issued a statement saying that the FCC doesn't know anything about environmental protection and that FCC person-hours should not be tied up in reading environmental assessments which the FCC is not compelled by law to require.

For more information on the proposed rule, contact Upton Guthery, FCC, (202) 254-6530.

TV experiments for deaf

Captioning for the hearing impaired is a subject that has been on the FCC's agenda lately, but the commission says it is awaiting the outcome of voluntary closed captioning before making any moves. In upholding a recent denial of a complaint by the Los Angeles Council on Deafness against eight TV stations, the FCC claimed that if closed captioning should not be successful, it might be necessary to regulate.

One such voluntary closed captioning project the commission is watching is being undertaken by the Public Broadcasting System, the National Broadcasting Company and the American Broadcasting Company. If successful, a total of up to 20 hours of captioned programming for the hearing impaired will be broadcast weekly by 1980. Special decoding devices needed will be provided by Sears, Roebuck & Company, with no mark-up for profit. The Department of Health, Education and Welfare will help establish and fund a nonprofit National Captioning Institute that will caption programming for the networks.

In the meantime, the FCC has made available a videotape of a meeting it held on the subject last April. The meeting included a briefing on plans for closed captioning of TV programs and a panel discussion among representatives of the broadcast industry, the Public Broadcasting Service and the federal government.

Copies of the 4-hour tape may be taken out on loan from or viewed at the FCC's various field offices. For more information, call Jon Crowe, Public Service Branch chief, at (202) 634-1940.

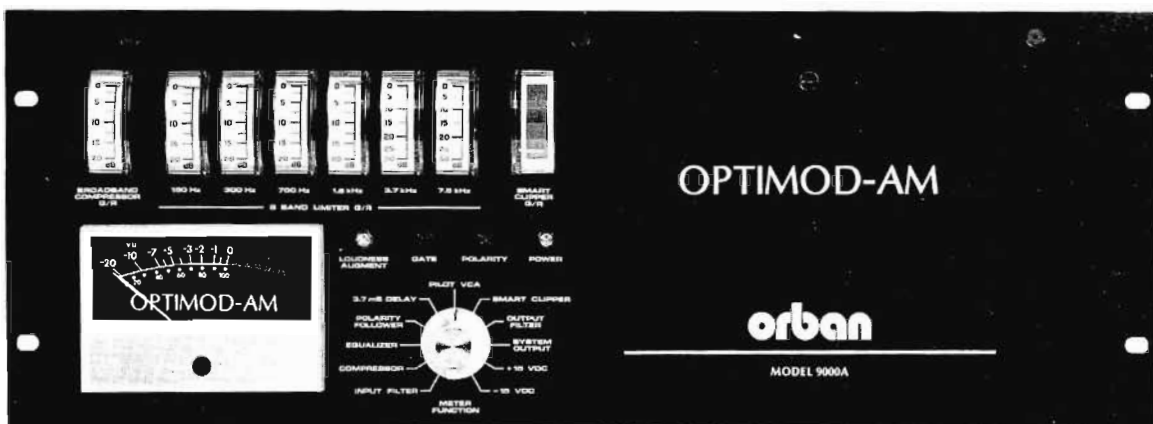

OPTIMOD

CLEANER, BRIGHTER, LOUDER.

OPTIMOD-FM combines compressor, limiter, and stereo generator into an integrated system that's become the #1 audio processor for North American FM's. Users report improved quality, coverage, and loudness—and love the easy installation.

And the new OPTIMOD-AM permits progressive-minded AM broadcasters with quality plants to broadcast a standout signal that's perceived as "almost high fidelity" on common car, table, and portable radios—without loudness loss or objectionable distortion. Hundreds are already in use.

AM or FM—OPTIMOD creates sound that dominates the dial. To find out more, call us toll-free (800) 227-4498. In California or outside the U.S. (415) 957-1067.

business news

Bell & Howell purchases Mach One video editing

Bell & Howell's TeleMation division has acquired the assets and business of Mach One Digital Systems. The company's Mach One videotape editing systems will complement TeleMation's existing line of broadcast and teleproduction equipment, according to Bell & Howell Video Group president Robert B. Pfannkuch. The editor will be sold and serviced through TeleMation, which also will start to manufacture the Mach One system at its Salt Lake City plant by the beginning of the fourth quarter of 1979.

Bell & Howell also has announced its entry into the field of designing and manufacturing display monitors for the computer terminal, word processing and medical markets. The products will be marketed to the computer industry and other OEM markets under the Bell & Howell name and will be marketed to the professional video markets under the TeleMation brand name.

3M Mincom wins Maker of the Microphone award

The Maker of the Microphone Award has been presented to 3M's Mincom division for "outstanding contribution to the world of sound." Specifically, the division was commended for its development of a practical digital audio recording system with electronic editing and disc-mastering interface.

The award is a trophy presented

annually in memory of Emile Berliner, who invented the microphone, the disc record, the disc record player (gramophone) and the method of mass producing discs from a single master record.

The award was presented by his grandson, Oliver Berliner (left), to Marshall Hatfield, vice president of the division.

THE NETWORKS' CHOICE. (AND EVERYONE ELSE'S.)

At Camera Mart, we've been a leading equipment supplier to broadcasters and producers for years. We're no strangers to the 'instant' needs, unexpected calls, tough standards and difficult operating conditions that are often S.O.P. in this rough-and-tumble business. But you probably know that...at least, when it comes to film.

What you may *not* know is, for the past few years, we've been quietly doing the same in *video*! Testing and selecting the leading equipment for performance and reliability. And offering a wide selection of production and post-production components and packages—on rental, lease and purchase plans with our customary flexibility.

But don't take our word for it: talk to our customers. You'll see why so many people the industry depends on, depend on us.

Business news

TeleMation recently signed a marketing agreement with Dytek Industries of Denver, CO. TeleMation will distribute Dytek's production switcher line, known as the SL Series Video Controllers and its DVC Series switchers.

Harris plans to buy CVS

Harris Corporation has purchased Consolidated Video Systems (CVS) of Sunnyvale, CA, for approximately \$13 million. Harris said the move will enable it to enter the digital video equipment market. CVS, with current sales of about \$9 million annually, produces video equipment for television stations, cable TV companies and industrial, educational and government TV users.

In 1974, CVS won an Emmy for the technical contribution to television provided by the company's digital time base corrector. The Harris acquisition plan calls for CVS to remain in California and to be operated as part of the Harris Broadcast Products division.

In other news at Harris, the company has formed a new division to market information systems overseas. The new unit, the Harris Information Systems International Division, will handle sales and customer service for computers, distributed data processing systems and interactive and remote batch terminals in all countries outside the US and Canada.

M. Andrew Haladej has been named president-general manager of the new division.

Microwave Associates

Microwave Associates has entered the semiconductor service business to be headed by Walter Sobie. The new operating group will market services which include custom metallization, photo-resist scribing techniques using lasers, diamonds and saws, scanning electron microscopy, energy dispersive x-ray analysis and atomic emission spectrometer services.

Black Africa to invest heavily in communication

According to a 530-page study by Frost & Sullivan, Black Africa will invest between \$12.5 billion and \$15 billion in telecommunications systems and equipment through 1990 (1978 prices). Black Africa comprises 41 separate states covering 12 million square miles.

Only some \$2.1 billion in contracts

with our new models and our faster delivery.

As manufacturers of solid state video equipment, Electrohome has gained worldwide acceptance with reliable, high-performance 9", 11", 14", 17", 23" monochrome, 19" and 25" color monitors. Built to NTSC and PAL standards, these monitors are specifically designed for broadcast, educational, industrial, commercial, medical, security and data applications.

Now, we have added the new 2000 Series to our product range. Developed to meet high standards of the broadcast industry, the 2000 Series color monitor is modular for easy adaptability to RGB/NTSC/PAL encoded signals. Available in 19" case and rack and 25" case, the 2000 Series maintains Electrohome's high standard of engineering.

In addition to an expanded line, Electrohome has a new west coast distributor network to provide fast delivery. For complete information on all our video equipment, contact Electrohome Limited at one of these offices:

Business news

.....
have been placed so far, the study finds, with British companies having secured the biggest market chunk.

The study warns, however, that "there is a high probability that investment will be delayed either as a result of inflation or through difficulties in raising funds." The market outlook also shows a wide disparity among countries, from the least-developed country, the Republic of Benin, to oil-rich Nigeria.

For more information, contact Customer Service, Frost & Sullivan, Dept. BE, 106 Fulton Street, New York, NY 10038, (212) 233-1080. Report number E300.

Tube company formed

Dave Gilden has formed RF Gain, Ltd., which will supply transmitter and other tubes to the broadcast industry. The company is located at 100 Merrick Road, Rockville Center, NY 11570, (516) 536-8868.

INTELSAT reports 25% increase in satellite use

Demand for worldwide international telecommunications via the INTELSAT satellite system increased by more than 25% during 1978. This does not include occasional use services such as international satellite television, which jumped by 53.3% to over 11,600 channel hours. INTELSAT is the 102-member country organization which owns and operates the telecommunications satellites used by countries around the world.

The organization also predicts global international telecommunications via satellite to increase by about 100% by 1983. This prediction came out of the 1979 Global Traffic Meeting in Washington, DC. More than 200 delegates representing over 100 countries attended the week-long meeting with the purpose of determining short, medium and long term demand forecasts for the telecommunications service provided by the INTELSAT global satellite system.

Ampex: Belgium VTRs; scraps duplication plans

Ampex has announced that it will begin producing VPR-2 helical scan VTRs and TBC-2 digital time base correctors at its Nivelles, Belgium, facility. The facility will produce VPR-2s in the PAL and SECAM broadcast formats.

The company also has reached an

**“FINALLY THERE’S A ONE-INCH
AS WELL UPSIDE DOWN**

VIDEO RECORDER THAT WORKS AS IT DOES RIGHT SIDE UP.

DAVID HALL / OPRYLAND PRODUCTIONS

Opryland Productions is one of the largest video production houses east of the Mississippi. The company's facilities have been used for shows as varied as "Nashville on the Road," "Big Ten Basketball," and "Dance in America."

David Hall, General Manager of Opryland Productions, has been using the Sony BVH-1000 video recorder for close to two years and two BVH-500 portable recorders for about six months.

"Sony one-inch equipment has expanded our capabilities considerably," says Hall. "With a BVH-500, we were able for the first time to get broadcast quality tape on a roller coaster for an upcoming special."

"We also took the BVH-500 on a ferris wheel and in a helicopter to tape 'Superstars at the Ohio State Fair.' It performed as well as they did."

"Now we're using Sony on almost all shows we tape in the field. The big advantages are portability and cost. Durability, too. Sony even bailed us out when we were taping a quad production and our equipment broke down. We used Sony to finish the job, then transferred the results to quad. The client was more than satisfied."

"And when the Dominican Republic asked us to tape the visit of Pope John Paul II, we couldn't have done it without our Sony video recorders," Hall adds.

"Because they travel so well, we could get down there fast and do a professional job."

Of course, Sony makes a full line of one-inch broadcast equipment, all of it backed by state-of-the-art technology. We have video recorders, cameras, editors, and the BVT-2000 digital time base corrector.

For information, write Sony Broadcast, 9 West 57th Street, New York, N.Y. 10019. Or call us in New York at (212) 371-5800; in Chicago at (312) 792-3600; or in Los Angeles at (213) 537-4300.

Like David Hall at Opryland, you'll be impressed. Even if your productions don't have you going around in circles.

agreement to sell the machinery and related inventory of its custom duplicating facilities in Elk Grove Village, IL, to CBS Records.

Poniatoff awards

Ampex presented four 1979 Alexander M. Poniatoff (AMP) awards to its employees for technical achievements. Winners were Peter Jensen, engineering section manager, audio-video systems division; Billy Baker, senior staff engineer, data systems division; Chi Chao and Bhupendra Shah, project engineers, magnetic tape division.

Jensen was honored for contributions to the development of video time base correctors. Baker received his award for the invention of the super high bit recorder automatic tracking system for instrumentation recorders. Chao and Shah shared an award for their development of the sandmill process used to manufacture some of the company's videotape.

Scully bought by Ampro

Ampro Broadcasting has purchased Scully Recording Instruments, formerly a division of Dictaphone, and has changed its name to Ampro/Scully to reflect the new association. Ampro/Scully has added facilities in Newtown, PA, for manufacturing and warehousing Scully recorders. Executive offices also have been relocated to 826 Newtown/Yardley Road, Newtown, PA 18940, (215) 968-9000.

SALES CONTRACTS

Bosch Fernseh

Sales of Bosch Fernseh's BCN range of 1-inch VTRs continue to rise rapidly, according to the company. Over 100 orders were received for BCN units in April.

Robert Bosch GmbH, Darmstadt, is scheduled to deliver two high-speed reporter vehicles for the 1980 Moscow Olympics. The ENG/EPF vehicles will travel about 100 mph at fully loaded top speeds. They will be equipped with two KCA cameras with base stations. Monitoring, VTR, audio mixing and radio link equipment is built into the car.

Rockwell International to produce and ship nearly \$1 million of Coastcom's Model 412 single channel per carrier (SCPC) modulators and demodulators during the remainder of 1979.

E-Systems

E-Systems TelSatCom Division, Garland, TX, has signed a contract with Empresa Nacional de Telecomunicaciones TELECOM Bogota, Colombia, to engineer, furnish and install a 13-meter non-standard Intelsat earth terminal on a turnkey basis. The terminal, to be located in Leticia, Amazonas State, will be linked to the Colombian domestic satellite network, utilizing leased satellite capacity of the Intelsat system.

Marconi Communication

Marconi Communication Systems is under contract to supply and install a 750kW broadcast transmitter to the Kuwait Broadcasting and Television Service. The contract, valued at nearly \$4.4 million, also provides for any necessary updating

of the three Marconi 750kW transmitters currently in use.

Marconi also has received contract for VHF and UHF television transmitters to be used by RAI—Radiotelevisione Italiana. The nearly \$2.2 million order calls for the VHF transmitters to replace existing equipment operating on the first TV channel while the UHF transmitters are a part of a major project which includes replacement of some transmitters of the second TV channel and the establishment of an additional color TV channel.

Another large order has been received by Marconi for five television cameras, two telecines, installation materials, spares and training of the personnel at the Radio and TV Organization of the Yeman Arab Republic. The order will re-equip two studios at the television center in the nation's capital.

Microdyne

Microdyne booked over \$1.2 million in new orders for satellite TV receiving equipment at the National Cable Television Association con-

vention in Las Vegas. A company spokesman indicated that this was the highest volume of business ever booked by the company at a single trade show.

Neve Electronics

Neve Electronics International has received orders for two consoles from Anglia TV's facilities in Norwich. The largest of the two was a custom-built 36-input channel mixing desk based on the 5315/24-input channel model. The second was an 8301 10-channel "Kelso" transportable console.

Neve also reports sales of a 44-input 32-track 8088 console to Queen Village Recording, and a 8068 recording console with a custom 48-channel Necam automation system to Sound Labs.

Quantel

Quantel Limited has received an order for 15 DPE 5000 NTSC Digital Production Effects systems and other digital video devices valued in excess of \$2 million from the

BUILT TO MAKE IT!

AND MAINTAIN IT!! Measures frequency response on TVs, VTRs and other video equipment.

The Asaca Video Sweep Generator 205 contains a built-in standard color sync signal generator. The color burst can be switched on and off so the 205 is ideal for oscillator comparisons to measure frequency response of color equipment.

There is a selection of output signals: video sweep (0.1 - 10 MHz), chroma sweep (sub carrier ± 2 MHz), CW and multi-burst.

Also, the 205 features facilities for composite sync signal outputs and trigger pulse outputs (H. D/V. D. Selectable) and so it can be used for oscilloscope triggering. Digital read out for CW frequency and variable marking.

Business news

Atlantic Research

Earnings at Atlantic Research for the first six months of 1979 increased by 17% over the same period last year. Net income was \$734,000 on sales of \$24.8 million, compared to \$625,000 and \$21.5 million for a like period in 1978. Earnings per share were 63 cents this year compared to 62 cents in 1978.

Cohu

Cohu reported net income of

\$475,035 or 28 cents per share for the first six months of 1979. Revenues were \$10.6 million compared to income of \$216,759 or 13 cents per share on revenues of \$9.1 million in the like period of 1978. An eighth consecutive quarterly cash dividend of 4 cents per share has been declared by the directors.

Comcast

Comcast has declared a quarterly cash dividend of 3 cents per share on Class A and Class B common

stock. The payment will be made September 27 to shareholders of record as of September 6.

COMSAT

Consolidated second quarter net income of \$10.6 million or \$1.32 per share, has been reported at COMSAT. This is an increase of 37% from \$7.7 million or 96 cents per share for the second period of 1978. Compared with the first quarter of 1979, second quarter net income decreased by \$1.3 million or 17 cents per share.

Datatron

Datatron reported a profit of \$34,254 on sales of \$1,249,477 for the third quarter ended March 31.

Farinon

Farinon has announced increased sales and earnings for its fiscal year ended March 31, 1979. Sales for the year were \$92.8 million or 23% above last year's sales of \$75.4 million. Net income at \$5.7 million was also 23% above the previous year's income of \$4.6 million. Net income per share for the year was \$1.18 compared with last year's \$1.00.

RCA

Second quarter earnings at RCA rose 9% over the record profit in the same quarter of 1978 on a sales gain of 17%. Net profit for the three months ended June 30, 1979, was \$85.6 million, compared with \$78.3 million in the same period last year. Quarterly earnings per common share rose from \$1.02 a year ago to \$1.13. Sales for the quarter reached \$1.89 billion, against \$1.61 billion a year ago.

Scientific Atlanta

Scientific Atlanta reported sales of \$86 million for the nine months ended March 31, 1979. That is 29% over the same period last year. Net earnings of \$5 million were 37% higher than in the first nine months of last year. Net earnings were equal to \$1.85 per share, compared with \$1.50 per share in the first nine months of previous year.

Sennheiser Electronic

Sennheiser Electronic of West Germany has reported sales of \$28.9 million in 1978, an increase of 10% over the previous year. Headphones now account for almost half of the manufacturer's sales, compared with only 1% 10 years ago. □

The Senator just announced he's running again. Too bad your camera isn't.

If you've lost a story because of weak, unreliable batteries, take a look at Alexander Ni-Cad replacement batteries. Alexander was a pioneer in the development of nickel-cadmium batteries for ENG and EFP. And we're working closely with station engineers and videographers to develop new power products for even greater reliability.

Alexander. Batteries are our only business.

improves antenna stability for AM directionals.

"In addition to dielectric integrity, PHILLYSTRAN tower guys offer several major advantages. These non-conducting guys combine high strength, light weight and inherent flexibility for installation ease. They also are essentially maintenance-free, even around salt-laden corrosive atmospheres.

"Since these non-metallic synthetic guys eliminate white-noise arcing, they should be considered where high water tables and common grounding, severe lightning storms, or frequently inclement weather tend to create transmission and reception problems.

"Several broadcasters improved antenna stability for AM directionals by replacing steel guys with PHILLYSTRAN:"

Lerner elected chairman of NAB radio board

Arnold S. Lerner and Edward O. Fritts have been elected to 1-year terms as chairman and vice chairman, respectively, of the National Association of Broadcasters' radio board of directors. Lerner is chairman of WLLH, Lowell, MA, and

Fritts is president of Fritts Broadcasting, Indianola, MS. In the new positions, both will serve on the executive committee which advises Vincent T. Wasilewski, president, on the implementation of NAB policies.

FCC asked to rethink microwave frequency decision

The NAB has asked the FCC to reconsider its decision on microwave frequency use and not allow the expansion of Cable Television Relay Service (CARS) into the band set aside for broadcast auxiliary service which includes ENG operations. The petition stated that, "with an astounding lack of foresight and with little, if any, regard for the full record, the FCC has struck a

critical blow to the future of ENG, creative public service programming and overall video responsiveness by the broadcast television medium." If the commission insists on some entry of the CARS service into this band, "it must do so on either a waiver basis or by according CARS nothing more than a secondary status, at least in the top 100 television markets."

Voluntary receiver performance program proposed

In two separate actions made recently, the NAB proposed a voluntary program of AM and FM radio performance standards and an inclusion in the capability of television receivers to reject noncommercial FM interference to channel 6.

In the area of radio performance standards, the NAB is proposing that receiver manufacturers voluntarily submit tests to NAB or an independent laboratory. Under the plan, the NAB would authorize the manufacturer to attach a seal signifying compliance if the radio meets the standard. Three classes of performance are proposed: A, B

and C. The purpose is to encourage design improvements in receivers and to help buyers utilize electrical performance as part of their purchasing decision.

Regarding TV receiver performance, the NAB said that the action would be a long-term solution and urged the FCC to adopt their earlier plan which asked for FM station assignment policy modifications, FM power limitations, FM vertical polarization requirements and the creation of an FCC task force to consider the channel 6 interference problem and prepare a plan of action.

NAB asks FCC to regulate home satellite reception

The NAB has requested that the FCC make an inquiry and adopt policies governing home satellite reception before proliferation of receive-only earth stations occurs. According to the association, "unregulated growth of such reception antennas could lead first to the serious impairment of the program

supply market, through unlawful and uncompensated use of program product, and second, could threaten the conventional terrestrial television system and the principle of local video service responsive to local needs and interests." The NAB urged the commission to maintain a system of earth station licensing and

Direct drive made Panasonic Series 9000 a great 3/4" editing system. Here's what makes the new 9000A an even better one.

The new Panasonic Series 9000A offers even more impressive performance, even more quality, and more professional features than the Series 9000 did last year. And we still have the lowest price tag in the business.

The new system consists of the NV-9500A editing recorder, the inexpensive NV-9200A player/recorder, and the NV-A950, the versatile editing controller that goes between them.

Together, they deliver the cleanest Panasonic frame-to-frame edits ever.

S/N ratios are our highest ever, 46 dB color and 50 dB black and white, thanks to new crystal-oriented HPF™ video heads. And in addition to those crisp, clean edits, you get reduced audio delay at the edit point. And substantially increased frequency response at the first generation.

That's not all: The newly increased frequency response works with a patented dubbing mode for

even better dubbing quality. And still another of the many important improvements is a new tape guide path on the video head cylinder. It reduces tape edge movement for an even better RF envelope, and an even better signal—the best yet from Panasonic.

You get all these improvements, plus professional features you can count on in a Panasonic editing system: Like controls that are completely solenoid-operated. A separate RF output for use with an external DOC. Even subcarrier and external sync inputs for use with a time base corrector.

The Panasonic Series 9000A 3/4" editing system. The only thing that looks better than its performance is its price.

For more information, write: Panasonic Company, Video Systems Division, One Panasonic Way, Secaucus, N.J. 07094. In Canada, Panasonic Video Systems Department, Mississauga, Ontario.

NAB

noted that any proliferation of earth stations or modification of current satellite uses would be in direct violation of domestic and international restrictions.

Advisory team requested

In a letter to the secretary of the FCC, Erwin Krasnow, senior vice president of the NAB, repeated a request that the commission establish a joint government-industry advisory committee on full-time radio services. Krasnow stated that the

committee should be "established to make a comprehensive review of all proposals pertaining to aural allocations, including the proposed restructuring of some of the Class I-A clear channels." The NAB believes that an overall national radio allocations policy is necessary rather than a piecemeal approach.

Antitrust suit brought

The US Justice Department recently requested that the US district court of Washington, DC, rule that

the NAB television code standards are in violation of the Sherman Antitrust Act and should prohibit their use. The code, in effect since 1952, places the following restraints on nonprogram time, including commercials:

- for network affiliates: in prime time, 9½ minutes per hour, and 30 seconds per hour for promotional announcements when deemed necessary;
- in children's programming on Saturdays and Sundays, 9½ minutes per hour;
- in children's programming on other days, 12 minutes per hour;
- all other time, 16 minutes per hour;
- time, seven minutes per half hour; and
- in all other times, eight minutes per half hour.

According to the government's suit, the codes place unreasonable restraints on trade and commerce, however, the NAB contends that the codes are in the public interest.

Minority fund grows

The Minority Investment Fund established last February by the NAB to assist minorities in purchasing broadcast facilities has received corporate guarantees and cash contributions of almost \$9 million to date. The goal is to obtain \$15 million in contributions from individuals and corporations which will be supplemented by matching funds from the Small Business Administration.

Dismissal of complaint against form requested

The dismissal of a Citizens Communications Center complaint against their request that the FCC modify and clarify its revised annual employment report has been requested by the National Association of Broadcasters (NAB). NAB says the complaint contains "seriously distorted characterizations of NAB's petition and of the employment and employment reporting practices of the broadcast industry."

In its original filing the association had suggested that the commission add job titles erroneously omitted from the revised form, include particular titles in more than one job category and reinstitute the provision allowing licensees to place employees in job categories where equivalent to similar positions are found. □

Wang Time Tunnel™ because: What they don't hear can't hurt you!

All it takes is one inadvertent obscenity or ethnic slur and away goes a chunk of the market you are trying so hard to nail down.

Time Tunnel™ solves the problem for 26 cents an hour with a six second digital delay that lets you drop, chop or bleep anything you don't like, long before it hits the air.

Call the gang at Wang at 800-258-1034
for information on our free trial offer.

It could be the last time you ever have to worry
about your station airing the wrong words at the wrong time.

Super LEADER Package

PROOF-OF-PERFORMANCE at Unheard of Prices!

LEADER LAG-125 LOW DISTORTION AUDIO GENERATOR

- Clean square waves test transient response.
- Low distortion sine wave output — less than .03%.
- Burst signals for transmitter tests.
- Pushbutton frequency range switching, 5 steps.
- 0 to 50 dB calibrated attenuator.
- Frequency sync. from external source.
- 600 Ohm output termination.

LEADER LDM-170RF DISTORTION METER

- Completely RF shielded
- Voltage range 1 mV to 300 V in 12 ranges
- Accuracy $\pm 5\%$ of full scale
- Distortion ranges: 100%, 30%, 10%, 3%, 1%, .3%
- Less than .03% residual distortion
- Monitor output

LEADER LBO-507A 20 MHZ TRIGGERED OCILLOSCOPE

- Stable, bright display
- Outstanding trigger sensitivity over entire operational range.
- 10 mV sensitivity and 17.4 nSec rise time.
- X5 magnification
- Includes probe

**IMMEDIATE DELIVERY &
TWO-YEAR WARRANTY
MONEY-BACK GUARANTEE IF YOU
ARE NOT COMPLETELY SATISFIED.**

Check These Prices!

NRBA

National Radio Broadcasters' Association

1705 De Sales Street, NW
Washington, DC 20036

NRBA proposes new radio deregulation measures

The NRBA has begun to press for a radio deregulation bill now that HR-3333 is dead. The association has submitted a summary of radio deregulation proposals to Representatives Lionel Van Deerlin and James Broyhill. These congressmen will share the proposals with other members of the House Communications Subcommittee in the near future.

Highlights of the proposals include the following:

- Radio licenses extended to 7 years;
- Licensees will meet the public interest, convenience and necessity standard by broadcasting a certain

percentage of non-entertainment programming—this percentage, to be determined by the FCC, shall not exceed 8% for AM stations or 6% for FM stations;

- License revocation only in cases of willful and intentional reporting of false information to the FCC, willful and repeated failure to operate as set forth in the license, violations of lottery, fraud and/or obscenity laws as outlined in the United States Criminal Code;
- The FCC shall be prohibited from evaluating program content, format, presentation or topics covered in non-entertainment programming in renewal proceedings;

- Section 317 of the Communications Act of 1934, sponsorship identification rules, will be repealed;
- In the event a renewal application is designated for hearing, competing applications will not be entertained;
- Ownership will be limited to 10 AM and 10 FM stations—no restrictions on cross-ownership of AM and FM stations;
- FCC required to set standards for petitions to deny or revoke, and to establish sanctions for abuse of these processes—parameters for standards and sanctions to be set by statute; and
- Establish fund to make moneys available to minority applicants qualified to own and operate a radio station. Fund to be administered by the FCC.

Benefit questions asked

The NRBA has distributed forms to its member stations in order to determine their interest in developing several employee benefit plans. This includes Group Life, Basic Hospitalization, Major Medical,

DOES YOUR SYSTEM PERFORM TO ITS FULL POTENTIAL?

Restore your signal to the quality you should expect with the Sigma Electronics video processing system.

Sigma's video processing system consists of the field-proven genlock sync generator, CSG-300, and the new video processing amplifier, VPA-100.

Optimize your video signals by independently controlling video, chroma, burst, sync and blanking.

YOU CAN AVOID PRODUCT REDUNDANCY

Sigma's VPA-100 will perfectly mate to your existing sync generator.

"Scotch" is a registered trademark of 3M Company.

IN A TEST OF ONE-INCH VIDEO TAPES, WE ACED OUT THE COMPETITION.

When we tested the top four brands under strict lab conditions, the overwhelming performance leader was Scotch 479 Master Broadcast Video Tape. In fact, we came out on top in all ten performance categories.

If that isn't reason enough to make us your choice, maybe this is. We're the only one-inch supplier that winds your tape onto a special cushioned flange reel to protect against shipping and handling damage. And we pack and ship our tape in a flame-retardant case to give you even more protection.

We're the people who pioneered the development of video tape 25 years ago. And according to the pros who know video tape best, we're still the best video tape. Give or take an inch.

3M

JVC's \$17,000 editing system.

If you think a third audio channel and 10 extra lines of resolution are worth an extra \$6000 in a 3/4" video editing system, read no further.

But if you'd like to save \$6000 compared to the nearest performing competition...yet perform advanced editing functions at tape speeds up to 10 times normal (a JVC exclusive)...and produce broadcast quality tapes even if you're not an expert...then the CR-8500LU system including RM-85U Editing Control Unit is for you. It has many features you won't find elsewhere

except on that higher priced system. Plus some you won't find even there.

Fast, no-glitch editing

With pushbutton ease, you get distortion-free frame-to-frame editing, thanks to JVC's built-in rotary erase head, blanking switcher and advanced servo mechanism. First, you have a choice of 11 forward and rewind search speeds, from still-frame to an unequalled 10 times normal. After picking edit points, you also have a wide choice of automatic preroll times. (The more expensive

system limits you to 2 or 5 seconds.) Then you can preview your edits and adjust edit points. Preroll again, and edits are made automatically, electronically, at exactly the selected points ± 2 frames—an accuracy equal to the higher priced system. There's also a horizontal sync phase compensator to minimize timing error. A patented dubbing switch for maintaining stable color. And much more.

The RM-85U Editing Control Unit has independent LED displays for player and recorder. Each gives elapsed tape time in

For those who need funds, not frills.

minutes, seconds and frames. Or, the exact length of one edit—a JVC exclusive. But wait! Maybe you don't even need a full system.

Stand-alone versatility

Let's say you just want to assemble or insert edit live material onto a tape. All you need is one CR-8500LU Recorder/Editor...which still gives you the benefit of automatic preroll. By contrast, the higher priced brand makes you buy a control unit as well.

Let a JVC dealer show you how our editing system gives

you much more for your money. For the name of your nearest dealer, call one of these numbers collect: East, 212-476-8300; Midwest, 312-364-9300; South, 713-741-3741; West, 213-537-6020. US JVC Corp., 58-75 Queens Midtown Expressway, Maspeth, NY 11378.

NRBA

Dental Insurance, Long Term Disability and High Limit Accident. The form asks, for each plan, whether the station now has, would be interested in or might join if the NRBA comes up with a better plan than the station now has.

The form was due August 1.

Community service study

According to a recently completed NRBA survey, radio stations in one and two station markets will contin-

ue to serve their communities of license in the absence of government regulation.

The study was prompted by concerns expressed by the National Telecommunications & Information Agency and the White House Domestic Policy staff that one and two station radio markets might not be subject to the same types of competitive marketplace conditions that would force larger radio markets to meet the needs of the listening public.

The survey found that 93% of

single-station markets receive an average of 12 strong radio signals from other markets. More than 85% of these indicated that the outside radio stations also sell advertising in their markets.

The study also cited results from 1978 studies by Frank Magid Associates which showed that good local news coverage is a primary reason people choose one station over another.

Severeid receives award

Eric Severeid, semi-retired CBS news correspondent, will be awarded the NRBA Golden Radio Award October 8, during the Sixth Annual Conference and Exposition at the Washington Hilton in Washington, DC.

The Golden Radio Award is presented when merited for outstanding contributions to the radio industries. Previous recipients include Representative Lionel Van Deerlin, ex-FCC chairman Richard Wiley and Lowell Thomas.

5 new regional directors elected to NRBA board

The ballots have been tallied and five new NRBA regional directors have been elected. The following will serve 2-year terms: Bob Herpe, WPLR/WOMN, New Haven, CT, Region 1; Bernie Mann, WGLD/WOKX-High Point, WKIX/WYYD-Raleigh, Region 3; Ron Kempff, WHIO AM/FM, Dayton, OH, Region 5; Paul Lange, KDLR, Devils Lake, ND, Region 7; and Eric Hauenstein, KDKB AM/FM, Phoenix, AZ, Region 9.

Suspect petition misuse

The NRBA has filed with the FCC a request for an inquiry into the uses which have been made of petitions to deny over the last 10 years.

The association says that the basis for the request is that an "aura of misuse and abuse has grown up around petitions to deny." It added that it appears that petitioners frequently file frivolous and unsupported applications and burden the commission's staff. Further, questions have occasionally been raised about the propriety of the reimbursement aspects of some agreements under which petitioners withdraw their petitions (or agree not to file them in the first place) in return for reimbursement of expenses, among other things. □

When you cover the action from the source...

the source for mobile studios should be Gerstenslager.

In a van or trailer, your most modern, best equipped studio could be your Gerstenslager. It all starts when you tell us what you need. The job to be done. Then we'll work with your engineers and principal equipment suppliers. Develop the plans. Detail placement of every piece of equipment, generators, wiring, climate control, consoles. Exactly as you want it. Then, build the unit from the frame up. A studio on wheels that is actually a dependable broadcasting station comparable to conventional studio systems.

How we do it with examples of work we have done for others is included in this brochure. It's yours for the asking. Write or call: (216) 262-2015.

ADM

Control the complete audio spectrum. At the controls of the new ADM® broadcast consoles you command every aspect of audio broadcast production. At your fingertips is a unit far beyond the scope of ordinary expectation. It's designed to the most exacting standards; manufactured to the most rigid tolerances. Its functions appear limitless; its quality obvious. So confident is ADM of their consoles, that they're backed with an exclusive five year warranty. For a complete catalog and list of users contact Audio Designs and Manufacturing, Inc., 16005 Sturgeon, Roseville, MI 48066. Phone: (313) 778-8400. TLX-23-1114.
The Audio Company.

Some things are easily broken...

...not the CO90!

The CO90 miniature condenser microphone was designed by engineers who understand the "real world" requirements of a studio microphone. They've included things like cable assemblies that can be easily and inexpensively replaced in the field. But the CO90 has one feature that no other manufacturer can offer - the Electro-Voice warranty.

Electro-Voice backs up the CO90 with the only two-year unconditional warranty in the business. That means Electro-Voice will repair or replace your CO90 when returned to Electro-Voice - *no matter what caused the damage.*

Electro-Voice can offer that type of warranty because the CO90 was designed to withstand the rigors of professional use. If your application demands a miniature condenser microphone that can take less-than-gentle treatment, the CO90 is the one you should buy.

Take 1: More feedback on jobs and training in TV

The current series of columns relating to jobs, training and pitfalls, as relating to the TV operations area, has set off an avalanche of incoming mail. Letters have been received from interested parties such as guidance counselors at the radio/TV universities, vocational institute representatives, employers and lastly, would-be employees.

This response is welcome as evidence that we are relating what seemingly is important and relevant to **BE's** readers. Also, that we may be able to be of some real assistance to these various parties that represent quite a comprehensive cross-section of the TV Family.

Without identifying individuals, here are some brief extracts of what is being received. An instructor at a midwestern technical institute writes: "...You addressed some common problems...many of which concern us as a broadcast training station. ...As we continue to send graduates into the broadcast field, we are encountering the importance and necessity for 1) a national broadcast organization that would promote professional standards within the industry; 2) a national job information clearinghouse;...and 3) a resource information center that would provide the broadcast worker and trainee with seminars, newsletters, new equipment and happenings in the industry." Another letter from a graduate coordinator at a large northern university's school of radio/TV says, "Please send information on how ASTVC can help our students prepare for careers in television. We have nearly 700 undergraduate majors in radio and television...arrange for a

rep of ASTVC to visit our campus."

A systems division manager of a southwestern production house wrote "Our company is involved in field production, post-production editing and duplication based here in Arizona...Your article in **BE** attracted my attention because we are having the same problems related in the article. ...I would be interested in receiving...information you can send me regarding *qualified* personnel as we will require very shortly one producer, one director, four camera-people, script writers, etc...I would...entertain the prospect of receiving resumes from those interested."

This next letter is representative of many expressing similar points of view, and quite possibly is the one most common criticism we hear. "...As a recent college graduate, the article was just what I was looking for in terms of job-seeking guidance. I do not consider myself (as yet) a cameraperson...although I did take the (required) TV/film courses...for my MassComm BA degree. Most of my years in college centered around the student-run... station. My college courses failed to prepare me for a career in broadcasting because of a lack of state-of-the-art equipment, and although new facilities are being built, the department's staff has dwindled to one full-time professor. Such is the case with many...schools."

We believe that the letters printed (in extract form) for your general information and guidance represent the thoughts and experiences of so many people in our industry. Still, this is just a superficial view of the many complicated and frustrating

WHY FUJI?

Just a few short years ago, few people in the industry even knew our name. Let alone, what we stood for.

Then we introduced H701E—the low noise, high-band broadcast videotape that gave the industry a whole new set of performance standards. And Beridox.

A videocassette tape formulation combining the best features of chromium and ferric oxide. Now available in one-inch, as well.

Now, it seems a lot of people are standing in line for our products. Because they know—and like—what we stand for.

Fuji. Count on us to improve your image. For more information, write or call.

EDI's New Trouper Line . . . The Clear Choice

It is The Clear Choice because this portable controller line Truly Cuts Costs... many standard Trouper features may be optional elsewhere, even if they can be found in a trouper configuration.

The basic Trouper comes in a desk or trouper model and comprises two scenes of up to 36 channels each, with switches above the channels indicating operational modes: Master, Independent, and Full Independent. Two time faders (0-100 seconds) associated with split cross faders-plus a switch to defeat the split mode-mean precise, dipless cross fades. Unique to the Trouper is a **third** time fader, providing a timed Independent Master.

With EDI's Trouper you also save time and money on calibration. Calibration for the entire unit requires just a single adjustment to one control card.

Prices start at \$695.00 for a 2 scene 12 channel Trouper and range to \$1495.00 for a 2 scene 36 channel. More on the Trouper? It's expandable... add other units and slave them to the original. For even more, write us or call (Phone (503) 645-5533)

ASTVC

problems that present themselves to all those interested in the human resources factor of this industry. In future issues of this column, we will examine related areas of concern and, by telling it like it is, endeavor to answer those questions put to us by member and non-member alike. We are most grateful to the editors of **Broadcast Engineering** for providing us with the means to present this forum which we know to be of interest and value to so many of our readers.

Take 2: The Arabs are coming!

Our column in the June issue of **BE** related how the ASTVC was chosen by the US Department of Labor to coordinate the training program for several visitors representing Yemen Broadcast Authority. As stated then, we believe that what we learn through our efforts to provide a comprehensive training program for these people will prove most useful to the ASTVC in aiding us in many of our own programs for members.

We would like to say how pleased we are for those offers to cooperation and assistance extended us by organizations such as NBC, WNET (PBS), USMA-TV and the pending commitments of several others. These guests of the Labor Department's Bureau of International Visitors will first undergo an extensive English language refresher course slated to begin at Georgetown University on or about August 6. At the conclusion of this course, present plans call for a period of intern or over-the-shoulder type training at one or more Washington-based outlets. From there, they will travel to NYC to undergo related training at still more broadcast and/or production houses. For one or two of them, there will be a period of indoctrination at one or more transmitter sites.

Additionally, there may be a period of residence instruction provided by one of the vocational/technical schools to be chosen if necessary. Once again, the ASTVC hopes to learn much that can be of future value to our membership and the readers of this column. We will analyze most carefully the training programs (and results) provided by this project and the various participating agencies. □

STUDIO PRODUCTION VIDEO SWITCHING SYSTEMS

(Also available in PAL and PAL-M versions)

8 Haven Avenue
Port Washington, New York 11050
Tel: (516) 883-4414

FOR REMOTE & SMALL PRODUCTION FACILITIES

MODEL J & D 712

\$7,400.00

12-input, 4-output mix-effects amp with downstream mixer, includes downstream preset & program busses with cut bar, RGB chroma key

Standard Features

- 12 inputs including Black-burst and Color Background
- Built-in Black Burst Generator
- Built-in Colorizer
- Built-in RGB Chroma keyer
- Four Switching busses
- Downstream Preset and Program Busses with cut bar
- Rack-mounted electronics
- Adjustable Soft Wipe
- Adjustable Border edges
- Color Matte
- Vertical Interval switching thru-out
- Illuminated Momentary Contact push buttons
- Internal, external, Chroma-key, and matte inputs to keyer

- Built-in pattern modulator with frequency and amplitude controls
- Full Tally
- Pattern symmetry control
- Illuminated Momentary contact push buttons for effects selection
- Normal/Reverse/Normal-reverse wipe transitions
- Pattern limit controls for presetting size of patterns or varying vertical and horizontal aspect ratio
- Loop-through inputs
- Input amplifiers with clamping
- Synchronous/Non-synchronous inhibit
- Modular construction with front access plug-in modules

Options:

Downstream Keyer

FOR MODERATE SIZE FACILITIES

MODEL B1-154

\$10,990.00

15-input, 4-bus mix/eff/key amp with downstream mix/key amp. Many optional features including DSK & quad-split, etc.

FOR SOPHISTICATED FACILITIES

MODEL B1-156

\$21,795.00

15-input, 6-bus with two full mix/eff/key systems & dir. pgm & pre busses: many options available, DSK, quad, etc.

MODELS 154 & 156

STANDARD FEATURES

1. **Switcher Models 154 and 156** are of the same basic design and utilize the same electronic sub assemblies. These switchers have the same standard basic features, differing only in the number of busses and in the number of mix/effects units. The basic standard features include 32-pattern mix/effects, color black and color matte background generator, and a mix/key unit in the case of the Model 154.
 2. **Input Amplifiers**
 - loop through high impedance input • gain equalization for 1000' cable • 22° sub carrier phase control • clamped inputs (10% to 90% APL) • sync addition on non composite signals if desired.
 3. **Tallies**
 - isolated dry contact relay closure on all inputs (2 amps at 50 v.)
 4. **Mix-Effects Units (Includes Keying Function)**
 - One (1) used in Model B1-154
 - Two (2) used in Model B1-156.
- Fades (or Supers), Wipes, Keys may be produced. Positioner Joystick for each M/E positions patterns.
- **Pattern Modulation** may be accomplished by an internal waveform generator. Modulating sources may be either (1) sine wave, (2) square wave, (3) saw tooth, or (4) an external customer generated source.
 - **Mix Key and Wipe Key** available.
 - **Soft Wipe and Soft Key** available with adjustable variations.
 - **Push to Preview** obtained by depressing knob on clip potentiometers (provides for M/E monitor output).
 - **Wipe Mode**—3 interlocked buttons select "NOR", "REV" or "N/R".
 - **Hard Wipe, Soft Wipe or Border** can be selected with degree of softness made by "Edge" control adjustment.
 - **Border** may be **Colorized** by adjustment of "Hue" and "Luminance" control.
 - **Symmetry of Pattern** may be adjusted by "SYM" knob.
 - **Preset Wipe Limits** are set by potentiometers. "H" and "V" vertical preset limits activated by Pattern Limit button.
 - **Spotlight** alternate action push button produces a 6 db. level difference between "A"

and "B" input channels in the "Wipe" mode. (Operates on all patterns.)

- **Pattern Assignment** is made by depressing "ASSIGN" button. Pattern select feature may be "locked" to pattern matrix by depressing the "ASSIGN" button a second time on the same pattern. Patterns assigned appear on LED display on M/E control panel.
- **Non-Synchronous Inputs.** An "NS" indicator is provided. Tearing is prevented by not allowing a non-synchronous signal to be switched except at extreme position of fader handle where a "cut" transition occurs.
- **Key Input Sources** may be either (1) "A" bus video for self keying, (2) preview Key bus, (3) chroma key, or (4) an external key source.
- **Key Invert** selector provided to accommodate either positive or negative video as a keying source.
- **Key Fill** may be either "A" video for self keying or a colorized matte.
- **Mix/Key** provided a lieu of second Mix/Effects function for Model B1-154 switching system. Provides for all mix and keying functions of mix/effects system (as previously described) except for the pattern effects.

OPTIONAL FEATURES

May be added at any time (required control panel wiring already installed)

- Chroma Keyer (C.K.)** \$950.00
 - Hue—selects hue of keying color • Gain—adjusts the amplitude • Clip—adjusts the clip level for keying • Camera (4 x 1) input switcher—selects RGB output of any one of 4 cameras to feed C.K.
- Down Stream Keyer (DSK)** \$1,275.00
 - Keys in titles, inserts, or fades to black with or without insert • Color matte background
 - Key sources: (1) Mix/Effect, (2) Chroma Key, (3) External • Push to Preview (Monitor)
- DSK Border** \$1,200.00
 - Border—black edge around insert • Shadow—black edge on right side and bottom of insert
- Quad Split** \$1,190.00
 - Provides four (4) variable size quadrants from ten possible sources with variable width border.
- Aux Busses—(Model 156 only)** \$2,100.00
 - Two remote outputs are available—remote control panel and amps required.

State broadcasting organizations and other associations

State associations

Arkansas Broadcasters Association

The ABA has joined several organizations in a combined effort to inform the public about the Freedom of Information Act in Arkansas. June 1st was proclaimed as a special day to observe the operation and the openness of municipal courts in Arkansas.

Colorado Broadcasters Association

Due to changing the date of the 1980 Winter Convention, now January 24-26, there will be a change in dates for the submission of entries in the Colorado Broadcasters Association Annual Awards of Excellence.

It is anticipated that for 1979 only, entries must be broadcast on or before November 30, 1979, and submitted by December 5, 1979.

Georgia Association of Broadcasters

Fred Pierce of WICL Radio/TV, Savannah, has been elected 1979-80 president of the GAB. In accepting the job, Pierce called on broadcasters throughout Georgia to get involved in the fight to influence legislation positive to the broadcast industry.

Kansas Association of Broadcasters

The Annual KAB Engineer's Sem-

inar, held June 6 at The Hilton Inn, Wichita, attracted more than 30 participants. Engineers discussed such topics as AM Stereo, FCC field inspections and Broadcast Loops—What's New, and How to Keep Telco Costs down for Your Station.

Kentucky Broadcasters Association

The Kentucky Broadcasters Association has announced that four new members of the board of radio district directors have been elected. All candidates were unopposed and will serve 2-year terms beginning November 1, 1979. They are Shelby McCallum, Radio WCBL-AM/FM; Charles M. Anderson, Radio WKVE; William J. Laney, Radio WNVL; and Roy A. Redmond, Radio WFTM-AM/FM.

Senator Barry Goldwater will speak at the October 24-26 convention at the Lexington Hyatt Regency.

Missouri Broadcasters Association

The MBA fall meeting will be held October 18-21. A big program area will be the elections of 1980: how to handle candidates, both news and

at AUDI-CORD we build CARTRIDGE MACHINES and — we're not done yet — more new products coming

"A" SERIES

An intermediate priced cartridge tape machine series with most of the quality and features found in units costing much more.

1 Tone Models:
Mono—\$649
Stereo—\$699.
(For 3 Tones
Add \$20.)

GIVE US A CALL AND TALK CARTRIDGE NEEDS

3 TRANSPORT REPRODUCER:

1 Tone Models:
Mono—\$1919.
Stereo—\$2069.
(For 3 Tones
Add \$60.)

THE "A" SERIES PLAYBACK:

- Modular constructed for easy service.
- Interchangeable transports and other assemblies.
- 1 or 3 tone — mono or stereo.
- Replay reminder system.
- Full remote control — automation compatible.
- Meets the needs of the 1976 NAB standards.
- Latching connectors — slip/lift cover.

Modu-Cart 100 Series

MODEL 115 RECORD-REPRODUCER

1 Tone Models:
Mono—\$1389.
Stereo—\$1509.
(For 3 Tones
Add \$40.)
Timer Add \$130.

The Audio-Technica philosophy:

EQ should be used to improve the sound... not to fix the mike!

Introducing affordable smooth sound. The remarkable AT801 and AT811 Electret Condensers. With curves so smooth you would have to pay a bundle to match them anywhere else.

Response like this has a number of benefits. First, your EQ is used only to touch up the sound, not to correct built-in errors of the microphone. Which leaves more leeway to control the overall sound.

And without unwanted peaks you have more usable headroom. That's vital when you're working near the dynamic limit of a preamp or line amp. Sound stays clean and sharp. Compressors or limiters sound less forced, because they are controlling peaks in the *sound*, not peaks in the *mike*!

But perhaps the biggest advantage is the versatility of these A-T condensers. Because they have just the right amount of presence for today's recordings, they're not limited to just one kind of instrument... just one type of voice. Put them *anywhere* in the mix: brass, reeds, percussion, chorus, or strings. Then listen. What you hear in the studio you'll hear at the console. Which is a great place to start in miking any session.

At their highly affordable prices, these are two of the best bargains you'll find these days. Reliable, clean-sounding, and the most predictable microphones you can use. Make them a mainstay in your studio today. Write for spec sheets and dealer list.

Great sound, right from the start!

sales; election return computation at national and state levels; and returns broadcasts in smaller markets.

Ohio Educational Television Network

WGTE-TV Toledo, and WGUG-FM, Cincinnati, were winners in the 1979 Ohio Educational Broadcasting Awards competition presented June 11 in Bowling Green. The Toledo station accepted Oebies in both the Public Information and Development

categories with its "Vibrations in Black" awareness campaign and Studio Club Membership drive respectively while WGUC-FM claimed honors in the same categories with its "Show Off '78" awareness campaign and fund raising marathon.

Rhode Island Broadcasters Association

The association has elected the following officers: Dave Russell, president; Sandy Davey, executive

vice president; Bob Carson, treasurer; and Don Kane, secretary.

South Carolina Broadcasters Association

At the last meeting of the South Carolina Broadcasters Association, the board of directors announced that judging of the entries for the association's awards activities had begun. Also, a form has been sent to all member stations requesting information about their EBS status.

Broadcast media teams must be ready at a moment's notice. With Christie's integrated system; the REFLEX® 20 Charger and sempiternal ni-cad battery packs, there is virtually no wait. Recharge? The fastest in the industry. 12 to 20 minutes and you're completely charged.

Because of the revolutionary "burping" system the batteries remain cool, their cycle life is extended up to 10 times that of conventional ni-cads and 50 times that of other rechargeable batteries.

The Christie System . . . reliable, effective and 90-97% efficient.

50 years experience plus REFLEX® 20 makes you: CHRISTIE-READY.

National/International groups

ABES

An association of broadcasters dedicated to the establishment and maintenance of optimum technical standards in the regulation of radio broadcasting, the Association of Broadcast Engineering Standards, is now actively expanding its membership and addressing industry issues. According to William Potts, Jr., ABES secretary, a special committee of the board of directors has been formed to screen and select an executive director. The special committee is currently meeting with candidates and hopes to have an executive director, who will be based in Washington, selected early in September.

At a major meeting on March 25th the ABES elected the following officers for a 1-year period: Richard R. Miller, KBOW, Butte, MT—president; Jeffrey Hatch, Communications Investment, Salt Lake City, UT—vice president; Thomas K. McKnight, Combined Communications, Phoenix, AZ—vice president; Col. John Bowman, Washington, DC—treasurer; and William J. Potts, Jr., Haley, Bader & Potts, Washington, DC—secretary.

The ABES Technical Committee includes the following members: James Wulliman, WTMJ, Milwaukee, WI; Russel Arnold, Wabash Valley Broadcasting, Terre Haute, IN; Col. John Bowman, Washington, DC; Ralph Green, CBS Radio, New York; Everett Lawson, WLAC, Nashville, TN; and George J. Capalbo, RKO Radio, Boston, MA. All have been elected to the committee for a one-year term.

Persons interested in joining the ABES, or in making their views clear on critical issues, may write William J. Potts, Jr., ABES Secretary, Suite 700, 1730 M Street Northwest, Washington, DC 20036.

Low Cost High Performance Professional Degaussers

- Save Time
- Save Tape and Film
- Save Money

WRE's wide range of degaussers are designed for years of dependable service for clean and simple erasure of magnetic film and tapes in just about any configuration.

Backed by years of proven reliability, these units are the answer to cutting man-hours and reducing material costs by allowing reuse of prerecorded media.

TYPE 9205A Degausser is ideally suited for complete erasure of program and residual noise from video, audio, and data recording tape and magnetic film—in reels, cartridges and cassettes. This unit will bulk erase reels up to 2 inches thick and 17 inches in diameter. Available for 115 or 230 volt operation.

TYPE 642-21 Degausser is similar to the 9205A except it is limited to erasure of 10 1/2 inch reels. This unit is recommended where size and cost are limiting factors.

TYPE 8905 Magnetic Erasing Pencil is an excellent tool for erasing limited, small areas of tape or film and for demagnetizing record/play heads. In program material, words, complete sentences, and even syllables may be erased. This unit is equipped with a press-to-operate switch on the handle.

MODEL 22-323-1 Foot Switch is a companion accessory to the bulk degaussers that allows convenient, "hands free" operation and provides a positive means of turning the degausser off immediately after use. This is a momentary acting switch and can help extend the life of the degausser.

If you're looking for a degausser with proven reliability that will save you time and money, call or write WRE today.

Other associations

SMPTE

The record for the greatest number of booths taken at a SMPTE exhibit has been broken by the upcoming SMPTE exhibit that is scheduled for the Century Plaza Hotel in Los Angeles October 21-26. Three hundred booths have been taken so far; the previous record was 220 booths at the Los Angeles Exhibit in 1977. There will be 140 companies from both the motion-picture and television industries participating in this exhibit. In addition to the exhibit the conference will feature a 5-day program of sessions on the subjects of television and motion-picture technology. More than 7000 people from the motion-picture and television industries are expected to attend. For more information, contact SMPTE, 862 Scarsdale Ave., Dept. BE, Scarsdale, NY 10583.

PMPEA

"The Visual Effect of Special Effects" symposium hosted by William A. Fraker, ASC will be presented by the PMPEA in conjunction with the 121st SMPTE October conference in Los Angeles. The association is now sponsoring its fifth annual seminar that has each year produced an informal hands-on atmosphere of hardware usage. Tickets will be on sale prior to the show at the Century Plaza Hotel during the SMPTE Sunday registration and Monday exhibit hours. Tickets are \$6 per person. Mail requests and inquiries to PMPEA National Headquarters, Dept. BE, University Tower, Suite 806, 6440 N. Central Expressway, Dallas, TX 75206, (214) 696-1448.

AMTA

The Antenna Measurement Techniques Association was formed March 12-13 in Atlanta as a non-profit organization composed of individuals interested in advancing the art of antenna measurement. The meeting was attended by key personnel from government and commercial organizations representing the interest of the antenna test and measurement field and manufacturers of antenna test instrumentation. Plans for the organization include a software pool which would be available to all members to assist in the development of programming for automatic systems.

For additional information, contact Joe Pape, Scientific-Atlanta, 3845 Pleasantdale Road, Atlanta, GA 30340, (404) 449-2354. □

Sound Advice

The Problem: Selecting a first playback stage, low noise tube for an Ampex Professional Audio tape recorder.

The Solution: Replace the tube with a VIF 1006 JFET device that has lower noise, higher amplification, and will last about 600 times longer than an equivalent tube without drift or aging.

The Price: \$33.00 each. Some Ampex models require an Adaptor, available at \$16.00 each.

CREATIVE FREEDOM

A microprocessor-based editing control system

Who more than you, deserves all this?

The Z6/B has all of the outstanding features of its predecessor, the Z6/A plus . . .

- **Auto Edit** — any or all 99 events can be performed at the push of a single button.
- **Sync** — a Z6 exclusive, keeps both tapes synchronous with respect to each other. Move either tape in either direction and the other transport will move the exact number of frames.
- **ADR** — Automatic Data Replacement, when activated, sends the editor in a "looping" condition. The operator can replace data numerous times until it is a "take."
- **Auto Cal** — automatically assigns the proper number to the proper frame of video on any new tape. No longer do known locations or SMPTE addresses need to be referenced.

Z6/B standard features include . . .

- Bi directional joystick shuttle
- Auto search
- 99 event memory
- Full status display
- Cruise control
- Rehearse, perform, review edit
- Error and prompting message
- Programmable Pre and Post rolls
- Single glide ballistics
- NO mechanical mods to VTR's
- SMPTE or Micro-code display
- Return to "in" or "out" points
- Micro-loc* — frame accuracy
- Consecutive non stop mode change
- Full VTR remote control
- A/B monitor select
- Tag functions

Z6/B options include . . .

- Drop frame/Non drop frame readout
- Dump — an exclusive Z6 feature which records all memory on the video tape itself
- Line Printer — allows a hard copy read-out of all edit decisions and parameters

Z6 is truly the most powerful video tape editing system available. Call Videomedia or your local dealer for more information.

*pat. pend.

The Z6 data display is a continuous readout of all edit parameters, including operator prompting messages.

WILKINSON ELECTRONICS

AM-250SS SOLID STATE 250 WATT AM TRANSMITTER

FEATURES

- Not Susceptible To Reacting Loads
- Low Operating Cost - Extreme Efficiency
- Drawer Construction - Extreme Accessibility
- Expandable - Combine two for 500 Watts
- Available at 125 Watts or Less
- Power Flexible - 115 or 220 volts AC
- 125% Modulation Capability
- Exceeds U.S. FCC Specifications

The Wilkinson Electronics AM-250SS is an all solid state 250 watt Am transmitter housed in an attractive 24 inch cabinet, 52 inches in height. All components are mounted in two drawers for maximum accessibility and ease of maintenance. Space is available in the cabinet for a second transmitter making it possible to combine two 250 watt units to obtain 500 watts. It is also available at any power below 250 watts at a reduced price.

Radio/Television

Robert N. Ordoñez, vice president, Donrey Media Group's broadcast division, has resigned. **Gene Spry**, also general manager of Donrey's KORK-TV, Las Vegas, will assume the additional duties of vice president of the broadcast division.

Solaris Television Studios' new vice president/general manager is **Jerry O'Brien**. Formerly vice president/finance of the television production and post-production company, he will be responsible for all corporate financial management and studio supervision.

John A. Tagliaferro has been appointed vice president-operations at the Hughes Television Network. Tagliaferro has been vice president-communications services since 1977. In his new position he will be responsible for the division and technical and production capabilities at the Madison Square Garden facilities.

The New Jersey Public Broadcasting Authority board of commissioners has named **Gordon A. MacInnes, Jr.** as its executive director. MacInnes was selected from a field of 130 applicants. From 1970 to 1978 MacInnes served as the executive director of The Fund for New Jersey and assisted in the development of the New Jersey Coalition for Fair Broadcasting, the Center for Analysis of Public Issues, the Office of Newark Studies and Schoolwatch.

Outlet Company recently announced the appointment of **Charles F. Kennedy** as senior vice president of the television station group as a reorganization of the broadcast division. Kennedy was most recently the division's vice president of planning.

Recent elections at Cox Broadcasting have resulted in the following: **Alan D. Chunka** to vice president; **John Boyette**, **John J. Rouse, Jr.**, and **Robert E. Gartin** to assistant treasurers; and **Linda Stewart** to assistant secretary. **Elaine K. Boryk** has been appointed controller.

Edward L. Corn has been appointed chief engineer, KORK-AM/FM, Las Vegas. He has spent the last three years in engineering positions with KIOA and KCBC, Des Moines, IA.

Reid Carpenter has been promoted from director of engineering to vice president and director of engineering at KUTV. Carpenter has been with the Salt Lake City station since it went on the air in 1952 as design construction engineer and studio supervisor.

Jonathan E. Fricke has been named operations manager of WSAI, Cincinnati with responsibility for the supervision and direction of all station departments except for sales. Fricke most recently served as program director.

The Christian Broadcasting Network has named **Tom Smith** to the position of general manager at WXRI-FM. Smith also will serve as general manager and general sales manager of the CBN operated WYAH-TV station. He will be responsible for sales management,

administration and operation of the FM station.

At KCET-TV/Los Angeles, **Steve deSatnick** has been promoted to vice president of operations and engineering. Previously, deSatnick was the station's director of operations and engineering.

Steve Flyte has joined KABC-TV/Los Angeles as a mini-cam engineer for their news department. Flyte was formerly with KATU-TV/Portland, OR, in the same capacity.

Emmett H. Massie is now director of engineering for public television station WUFT, Gainesville, FL. Massie formerly was chief of technical operations for the United States Army Intelligence School at Fort Devens, MA.

Recent staff appointments at KFVS-TV, Cape Girardeau, MO, include **Warren Bottorff** to chief engineer, and **Jerrold Hollis** to production manager. Bottorff was most recently at WRVY-TV, Dothan, AL; Hollis has been with KFVS-TV.

Don Kerouac has been promoted to chief engineer of WKAN, Kankakee, IL. Kerouac joined the station a year ago.

WGN Continental Broadcasting Company has announced the retirement of **Ralph F. Batt**, vice president and manager of engineering. Batt had been with WGN since 1940.

George Semyan, WJLA-TV technician in Washington, DC, died May 17, 1979, of a heart attack. The 59-year-old television pioneer had been with the station for 31 years. He pioneered televising early presidential inaugurations, press conferences, medical TV experimentation, Redskins' football, parades and congressional hearings (Army-McCarthy hearings).

Agencies/Associations

Thomas E. Bolger was elected to a 1-year term as chairman of the 48-member National Association of Broadcasters' board of directors. Bolger is president, WMTV-TV, Madison, WI.

The National Association of Broadcasters' Television Board of Directors has elected **Robert K. King** as its chairman. King is senior vice president, Capital Cities Communications, Philadelphia.

Ragan Henry, owner of Broadcast Enterprises Network, has been elected president of the National Association of Black-Owned Broadcasters. **Elliott E. Franks** has become chairman. Other officers elected were **Pierre Sutton** of Inner City Broadcasting, and **Eugene Jackson** of the National Black Network.

The SMPTE's executive director, **Denis A. Courtney**,

Useful Bits of Data

Skotel Time Code Generators and Readers will conveniently and accurately identify audio and video tapes with SMPTE User Data.

The TCG-80N Generator has unique features that meet the growing demand for identifying tapes with start of program sequences, scene/take numbers, official time of sporting events, time countdowns and documentary data.

The User Data memory can be loaded from the thumbwheels or from an external source, and the Data and Time code is displayed on the front panel.

Another feature that can be added to the Generator and Reader is our video character generator. It has an integral insert keyer that can simultaneously insert User Data and Time code into selected positions in the video of a work print or on a monitor.

Our Reader TCR-80 will save you time because it reads User Data and Time code from hand turn reel speed to 40 times play speed.

If we have all this, you can count on Skotel to include all the other features you require in Time code Generators and Readers.

For complete details and application information call . . .

.....
has retired after 26 years with the organization.
Donald F. Breidt has succeeded him. Breidt comes to
SMPTE from Harcourt Brace Jovanovich.

Robert B. Mitchell will succeed Wayne C. Cornilis as
vice president for membership for the National
Association of Broadcasters it was recently an-
nounced. Mitchell, who joined the staff in January,
has been in broadcasting since 1955, in various
capacities. In another appointment, **Peter A. Lund**,
vice president of the CBS owned AM stations in New
York City, was named to the board of directors.

Richard J. Shiben has been named chief of the FCC
Broadcast Bureau. Shiben has been with the
commission since 1962, most recently as chief of the
bureau's renewal and transfer division.

The FCC has appointed **Frank G. Washington** deputy
chief of the Broadcast Bureau. Washington, who has
been serving as chief of the policy and rules division
of the Broadcast Bureau since May 6, joined the FCC
in November 1977.

The FCC has announced that **Roy J. Stewart**, chief of
the Broadcast Bureau's transfer branch, has been
appointed chief of the bureau's renewal and transfer
division.

Henry L. [Jeff] Baumann has been named chief of the
FCC policy and rules division. Formerly chief of the
Broadcast Bureau's renewal branch, he has been with
the FCC since October 1969.

Officers for The Society of Cable Television Engineers
for 1979-80 are: **Harold R. Null**, vice president of
engineering for Storer Cable TV, president; **William
H. Ellis**, engineering director for Evansville Cable TV,
eastern vice president; **Frank J. Bias**, vice president of
engineering for Viacom Communications, western vice
president; **Kenneth S. Gunter**, executive vice president
and director of UA-Columbia Cablevision, secretary;
and **Thomas A. Olson**, president of Tomco Communi-
cations, treasurer.

Roger Allan, WRKO, Boston, has been elected to the
board of director's post for the Radio and Television
News Directors Association. He has served on the
board of directors for two terms in the past.

Animator **Harry Klynn** and programmer **Stu Rosen**
have been added to the Academy of Television Arts &
Sciences board of governors.

David Schnuelle, chief engineer at TPC Communi-
cations, has been named to a committee of the Audio
Engineering Society, which will study the problem of
transmission of audio signals in TV broadcast.
Schnuelle worked with National Teleproductions and
the University of Kentucky Television Center before
joining TPC in 1974.

Manufacturers/Distributors

UMC Electronics has announced two appointments.
James C. Leu is now president of the company. He
was president of the US Electrical Motors division of
the Emerson Electric Company. **Philip Lohman** is now
vice president-marketing, UMC. He was previously
assistant vice president-international for the US Elec-

If you think their character generator is easy to operate, just go ahead and exawkm.

Before you invest in a top of the line character generator, you should know more than just what it can do. That's why the versatile new 3M D-8800 character generator could be just the one for you. You see, all instructions are in English, not in code. And we've put them on a convenient L.E.D. panel above the keyboard for less wasted eye motion. So even a beginner can soon be composing in all kinds of fonts and colors. See your 3M representative right away for the character generator any of your people can run, or call 612-736-1032 for more information. Unless of course, you'd rather exawkm.

AM, FM, TV... ?

CCA is all you need in broadcast equipment

In broadcasting, you need equipment . . .
and suppliers . . . you can depend on.

At CCA, broadcast equipment is our specialty, our only business. For nearly two decades we've offered a complete line of transmitters, antennas, consoles and associated equipment . . . both as individual units and complete turnkey packages . . . for FM, AM and TV broadcasting.

Thousands of CCA equipped stations are now in operation around the world.

Our nationwide network of representatives is backed by a toll free telephone hot-line to give you emergency service and technical information 24 hours a day, seven days a week.

That's why we say CCA is all you'll ever need. Equipment, and a supplier, you can count on.

trical Motors division of Emerson Electric Company.

Ampro/Scully has announced several management changes: **Tom Creighton**, formerly national sales manager, is now vice president of sales and marketing; **Bill Hamilton**, formerly eastern regional manager at Scully, has been appointed national sales manager; and **Ed Zdobinski** has been appointed customer service manager for Scully products.

Richard N. Lawrence has been promoted to general manager of Lenco Electronics Division. Previously, Lawrence was sales manager for the company.

Philips Test & Measuring Instruments has named **Robert Hynes** national sales manager. He was eastern regional sales manager for the company.

William C. Ebell has joined A. F. Associates as national sales manager. Ebell was senior sales engineer with Ampex, AVSP division.

Ken Kohda, TDK Electronics, adds the title of general manager to that of vice president of the quality audio and videotape marketer/manufacturer for the firm. **Ann Boucher** has been appointed advertising and publicity manager.

Sharp Electronics has promoted four executives: **Mike Akamatsu** has been promoted to a new executive level position with the company's international division in Japan. **Charles Daigneault** has been promoted to executive vice president. **Ted Inoue** has been named assistant executive vice president and **Ted Nakano** has been promoted to general manager, business administration, consumer electronics division. Also at Sharp, **Ron Colgan** will assist the company's West Coast dealer network for the professional products department. Two new regional salesmen also have been named: **Jim Freeman** to southeastern regional sales manager, and **Robert McNeill** to eastern regional sales manager.

RCA has announced several staff appointments: **Stanley E. Basara**, promoted to division vice president and general manager of RCA Broadcast Systems; **Donald M. Cook**, appointed division vice president and general manager of RCA Distributor and Special Products division; **Dr. James Vollmer**, elected RCA group vice president with responsibility for the Commercial Communications Systems division and the Government Systems division; and **Paul R. Tatge**, appointed manager of Satellite Communications Services for the RCA Service Company.

Hitachi has announced the appointment of **Clyde W. Smith** as vice president of research and development. Smith was director of audio/video engineering at Thompson-CSF and was responsible for the Microcam Program.

Microtime has announced the appointment of **Robert J. Anderman** as director of marketing. Anderman came to Microtime from McM Martin Industries where he served as broadcast sales manager.

John F. Delissio returns to the broadcast products division of Harris as vice president of international sales. Delissio previously served as director of international sales and then as director of domestic sales until his appointment of vice president of

when cost is more important than price

Value conscious broadcasters specify the Studer B67 because it outperforms its competitors on the really significant broadcaster criteria:

- Studer state-of-the-art quality
- Long service life with low failure rate
- Speed and ease of user maintenance

If you're more concerned with *total* cost than just initial price, write to us for complete information on the superiority of the Studer B67 Broadcast Recorder/Reproducer. We'll show you why it's your best tape recorder investment.

marketing at the satellite communications division in 1977.

Scientific-Atlanta has named **Donald Begitschke** manager of engineering for its Optima Division. Begitschke will have responsibility for the engineering and design functions for the enclosure manufacturer.

UMC Electronics has named **David M. Kelly** sales and marketing manager for their broadcast products division. Kelly most recently served as an associate with the Chapman Company, a nationwide radio and TV station broker.

Ampex has added three sales engineers to the marketing staff of the audio-video systems division: **Bob Natwick**, video sales engineer for the northeast; **Tony Dean**, audio sales engineer for the northeast; and **Earl Higgins**, video sales engineer for the southeast.

EEV has announced **Robert E. Knowles** as product sales manager for Arkansas, Kansas, Louisiana, Minnesota, Nebraska, North Dakota, Oklahoma, South Dakota and Texas. **Harry Kozicki** has been appointed product sales manager for Alabama, Florida, Georgia, Mississippi, North Carolina, South Carolina, Tennessee, Virginia, West Virginia and Puerto Rico.

Sony Consumer Products has named **Don LaDieu** national accounts manager. Previously, LaDieu served as regional sales manager in Sony's New England Office.

Electro-Voice's new high fidelity products marketing manager is **Tony Satariano**. He comes to the company from the Koss Corporation where he was midwest regional sales manager.

Harvey Ray is Commercial Electronics Incorporated's new eastern regional sales manager. He was formerly vice president at ITI Glendale. **Dave Lindsey** is CEI's midwestern regional sales manager. He was formerly national product manager at GBC.

Herman Schloss has been named vice president of US JVC's Pro Vid division. Prior to his appointment, Schloss directed the division's operations as national sales manager.

Telex Communications announced the appointment of two representative organizations for its broadcast and professional audio products group. On the East Coast **LCA Sales** was appointed for greater NYC, New Jersey, Delaware and Eastern Pennsylvania; **Robert Milk Company** was named for Indiana and Kentucky.

McMartin Industries has appointed **Don Denver** to national sales administrator. Prior to joining the company, he held an administrative and engineering post at KECK in Lincoln, NE. Also at McMartin, **Charles E. Goodrich** has been named director of marketing. Formerly, he was director of engineering.

Richard F. Corrigan and **Stanley Risetter** have joined Fuji Photo Film USA as sales representatives in the Midwest and Southwest. Both will specialize in sales and support of broadcast products. □

America's Largest Manufacturer of Broadcast Cameras. West of the Delaware River.

A JILLION CAMERAS

SINCE 1968. We've been at it longer and better than most. Consequently, we know TV cameras. In 1977 we committed CEI to a new direction in broadcast color television cameras. At last components were small. Needs were different. Flexibility was key. And portability was a must. So, we developed the 310 system and not just one more bulky contraption with unnecessary flaps, doors, handles, corners, louvers, wires, cables ... and weight.

TOTE IT. MOUNT IT. POINT IT. USE IT. The CEI 310 is a camera designed to be used. It is a true two-in-one camera which performs beautifully in either studio or field applications. When you want to change from one to the other, you can do so simply in a matter of minutes. Plus CEI cables hook together without special-ordered adaptors — for a range of up to 2400 feet. The CEI 310 is built for real live people. When field equipped, it's naturally suited for the shoulder. The eight pound head rests easily for hours at a time. The cord's exit path follows a normal line down the back of the cameraman.

A SIMPLE LITTLE THING, OUR EU. A six-sided box, blank on four sides: The front panel has all the controls. The rear has all the connections. That's it. Simplicity itself. Inside, the first five of our printed circuit boards handle the normal functions you'd expect. But what we call "board 6" is for today's engineer. Because it's for tomorrow. And it's empty. That's where we put such things as automatic pedestal, iris window shade and a SMPTE time code generator. That's today. For tomorrow there'll be more. The point is, once you've got our basic unit we can offer you bells and whistles for years to come. They'll always fit your 310.

RUGGED RELIABILITY. Kick it around. A lot. The 310 has been places you've never seen: Coal mines, helicopters, surgery, sports fields, studios, wheel wells, fishing piers and cable cars. CEI stands behind our guarantee of service and parts in less than 48 hours. But you don't have a broken 310? We're not surprised. Few people do. That's why we offer you an unedited list of uncoached users. We're betting you'll find a preponderance of good comments about CEI and its cameras.

WE SHOW UP AT THE SHOOT-OUTS. Everybody claims to meet their specifications. And finely-tuned, in a clean room, some do. Ours goes the next step better, in actual use, every day: The 310 actually beats our published specs. We would be happy to lend you a camera for an evaluation in your facility. Our Chief Engineer speaks your language and he is here every day to answer your technical questions. Give us a call.

meetings, events & seminars

September 19-26—The World Telecommunication Forum will be held in the Palais des Expositions of Geneva, Switzerland. The forum is organized by the International Telecommunication Union (ITU) and professional engineering societies from around the world.

Part 1 of the forum, "Telecommunication perspectives and economic implications," takes place from September 19 to 21; Part 2, the "Integration of the world telecommunications network," will take place from September 24 to 26.

For more information, contact Rita Glita, American Express Travel Service, 7, rue du Mont-Blanc, Boite postale 859, 1211 GENEVE 1 (Switzerland), (022) 31 76 00.

September 20-26—The Third World Telecommunications Exhibition, TELECOM 79, will be held in the Palais des Expositions of Geneva, Switzerland. Specialists, delegates of the telecommunications administrations in some 140 countries, engineers and industry representatives will be on hand to assess the displays of nearly 600 exhibitors from about 40 countries.

The exposition will coincide with the opening in Geneva of the World Radio Conference.

For more information, contact Rita Glita, American Express Travel Service, 7, rue du Mont-Blanc, Boite postale 859, 1211 GENEVE 1 (Switzerland), (022) 31 76 00.

September 24-November 30—The World Administrative Radio Conference (WARC) will open on September 24, 1979. Organized by the International Telecommunication Union, it will last 10 weeks and will be held at the Geneva International Conference Center and in the ITU headquarters building. The purpose of WARC-79 is to revise, harmonize and bring up to date the international regulations applicable to all radio communication services. As a governmental conference, the decisions made will have the force of a treaty. For more information contact Union Internationale Des Telecommunications, Place des Nations, 1211 Geneve 20, (022) 99 51 11.

October 7-10—The National Radio Broadcasters Association (NRBA) will hold their Sixth Annual Conference and Exposition at the Washington Hilton hotel in Washington, DC. For more information contact the National Radio Broadcasters Association, Suite 500, 1705 DeSales St., NW, Washington, DC 20036.

October 9-13—The Inter-American Association of Broadcasters will meet at the Mayflower Hotel in Washington, DC.

For more information, contact Hector Armengual, Inter-American Association of Broadcasters, Calle Yi, 1264-Montevideo, Uruguay, 90-4456.

October 11-14—The American Film Institute national conference on film and television is scheduled for the Sheraton Universal hotel, Universal City, CA.

For more information, contact the American Film Institute, Kennedy Center, Washington, DC 20566.

We interrupt this magazine

One call is all it takes to get anything and everything you need in broadcast equipment — from turntables to AM and FM transmitters.

Choose from Rockwell-Collins equipment plus that of close to a hundred different manufacturers. It's one-stop shopping with fourfold advantages:

1. Quality products. Our transmitters and consoles are the result of our technical excellence and single-minded dedication exclusively to the radio broadcaster for over 40 years. We've never once deviated from our goal: to make our name synonymous with quality, reliability and long life... for your benefit.

2. Broad choice of products. In addition to our own Generation 4[®] FM transmitters and our all-new Power Rock 5-kW AM transmitters (the cleanest,

to bring you all you need in broadcast equipment.

brightest, loudest AM in town), we carry products from the largest team of respected specialty vendors available anywhere from a single source — from ADC to UREI, with nearly a hundred other such leaders in between. If we don't have what you want, chances are we can get it for you. Fast.

3. Flexible financing arrangements. If it's under \$1000, you can use your own or your company's Master Charge. For larger orders, take your choice of time-purchase (up to 5 years) or lease plans.

4. Unbeatable customer support. Your emergency is our emergency. We're ready to respond — without delay — 24 hours a day, 365 days a year.

See the cities listed below for the representative nearest you — and call him for one-stop shopping, Rockwell-Collins style. Ask him for a copy of our new brochure, or contact: Collins Broadcast Marketing, Commercial Telecommunications Group, Rockwell International, Dallas, Texas 75207. Phone: 214/996-5424.

What do these manufacturers have in common??

**GE, Magnavox, Hitachi,
Toshiba, Sony, Mitsubishi,
Panasonic, JVC, Sanyo,
NHK and NEC . . .**

They all have the 588 Digital Test Pattern Generator on the Production Line!

The test pattern is produced by circuitry that is completely digital in nature and which substitutes for a monoscope tube. The digital circuit is very dependable and stable. There is no distortion. No pattern deterioration. There is an excellent signal to noise ratio.

Pattern data is stored in a read-only memory element (ROM). This standard-test-pattern generator can be employed both for adjusting television video equipment and for judging its merits and demerits . . . both on production lines and for the maintenance of broadcasting equipment.

The 588 generator can be applied to these picture quality checkpoints: resolution, focus, screen's center size, deflection linearity, vertical/horizontal aspect ratio, shading, streaking, gradation and luminance settings, interlace.

As an option, color burst signals can be added to the patterns through the insertion of external color signals.

Both high resolution and PAL version available.

Write for free information and demonstration.

RCA

It's the RCA tradition of growth and innovation; a tradition of being an engineer's company dedicated to pioneering new technologies. We brought

Nipper™ back to emphasize the fact that although we are one of the nation's largest industrial firms, we are still an imaginative, pioneering bunch of innovators not unlike the group who started it all. If you have some ideas you'd like to get on the move, talk with us.

We have openings at all experience levels for BS/MSEE's with backgrounds in RF systems and antenna design, closed loop servo systems, high speed digital signal processing, VTR's, and related areas of

electromagnetic imaging, recording, and transmission. For further career information with RCA in the above areas, send your resume and background information to John Hendrickson, RCA Broadcast Systems, Bldg. 3-2, Camden, NJ 08102. We'll return a full-color print of our familiar trademark Nipper, to you, suitable for framing, at no obligation.

We are an equal opportunity employer Male/Female.

A Tradition On The Move!

Circle (68) on Reply Card

SONY INTRODUCES WIRELESS MICROPHONE SYSTEMS WITH AN INNOVATION NOBODY ELSE HAS: SIGNIFICANTLY BETTER SOUND.

Until now, using a wireless microphone system meant sacrificing the quality of the sound in a trade-off for portability.

No more.

Sony has engineered wireless microphone systems as portable and versatile as any on the market.

But with a very big difference. Excellent sound.

To begin with, Sony offers a wider dynamic range than any other wireless system, a range of 96 dB. This accommodates sound pressure levels up to 130 dB. (While most other wireless systems have limiters which hold their dynamic range to, at most, 75 dB, Sony engineering has produced a system that requires no limiters.)

So what goes into the microphone comes out again at the same sound level. And nothing takes away from the thrill of performance.

What's more, audio distortion is less than 0.1% and signal-to-noise ratio is better than 57 dB (both ± 2.4 kHz deviation, at 1 kHz).

And the new Sony systems are virtually drift-free. Frequency stability is an amazing $\pm 0.005\%$.

Furthermore, Sony wireless systems are available with up to 14 channels in UHF, which means that interference from other sound sources is much less likely than at lower frequencies.

And while many wireless systems are put together with a mixture of components from several manufacturers, Sony uses only one: Sony.

So we've been able to create fully integrated systems that offer you a wide variety of options.

For EFP and ENG, Sony's system includes a tiny lavalier mike, a transmitter about the size of a cigarette

pack and a tuner smaller than a paperback book.

The system also comes with a shoulder-strap antenna and a leather carrying case. Altogether, it's compact and efficient and offers outstanding sound.

For studio and stage use, Sony has a modular rack-mounted system that can be engineered in any combination you want, from single-channel to multi-channel diversity reception.

It can be portable or fixed, and runs from 110 volts AC or 24 volts DC.

For more information, call Sony Professional Audio Products at (212) 371-5800, extension 143 or 145.

You'll find out that no other wireless systems sound as good as Sony's.

SWITCHERS DON'T MAKE MISTAKES...PEOPLE DO

That's why we've designed a whole new series of human-engineered control panels that are setting new standards for goof-proof switching.

Once you've designed audio and video routing switcher matrices as transparent and reliable as ours, there's not much room for further improvement at that end. However, there has been a need for improvement in the control end--particularly where operators must make accurate, quick-decision source selections. The panels described below are designed to eliminate the confusion too often associated with routing switcher control, while providing the control flexibility so important to present-day signal routing requirements.

For installation simplicity, each of these new panels connects directly to the system party line via loop-through coax connections. They provide continuous status readout and can be encoded to permit each input (or output) to be addressed by its name (VTR-2, CAM-4, etc.) rather than by an arbitrary matrix number.

We are also prepared to supply custom variations of these panels to suit your exact requirements.

CSP-200

Permits audio and/or video selection--including simultaneous A/V switching from different sources--on a single output bus. Available in recessed mount, one unit per rack panel and two units per rack panel versions

CSP-300/R

Full Matrix Control Panel. Permits audio and/or video switching on any selected bus. Encoded version can be restricted to switch only on specific pre-assigned busses. Rackmount or recessed.

CSP-10

Controls and statuses ten busses (20 with Program Select switch installed). Provides separate audio and video switching and statusing.

CSP-20/CX-20

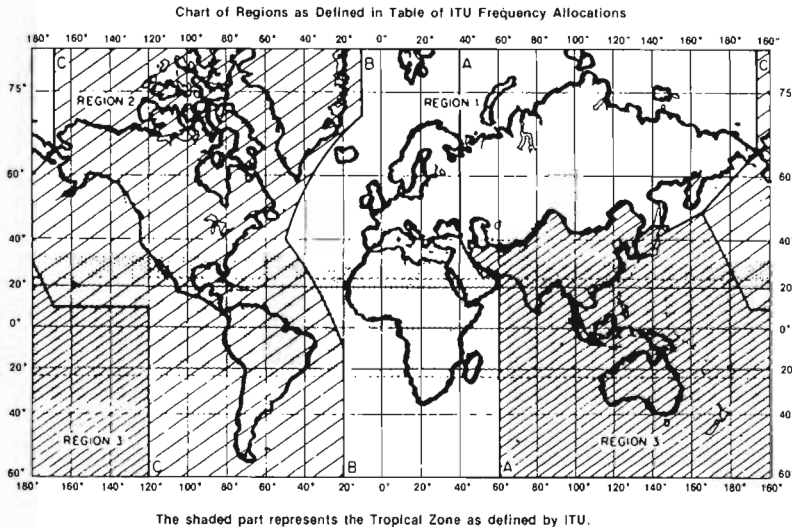

Permits button-per-source input selection on assigned bus. Basic panel accommodates 20 inputs. Expansion in 20-button increments is provided by adding CX-20 slave panels. Permits fast single-stroke selection of any input. Button lamps provide both audio and video status from refresh memory while *Only* buttons permit selective audio or video switching.

World Administrative Radio Conference: Ten decisive weeks for the future of broadcasting/telecommunications

The shaded part represents the Tropical Zone as defined by ITU.

The World Administrative Radio Conference (WARC), the most important radiocommunications conference to be held for 20 years, will be opening September 24, 1979. Organized by the International Telecommunication Union (ITU), it will last 10 weeks and will be held at the Geneva International Conference Centre (CICG) and in the ITU headquarters building.

The purpose of WARC-79 is to revise, harmonize and bring up-to-date the international regulations applicable to all radiocommunications services. It is a governmental conference whose decisions have the force of a treaty. The international legislation governing telecommunications, established and approved by the 154 member countries of the ITU, comprises the International Telecommunication Convention, a treaty which defines the basic principles in telecommuni-

International Telecommunications Union

The International Telecommunication Union (ITU) is the specialized agency of the United Nations for telecommunications. It regulates, plans, coordinates and standardizes telecommunications of every type. It was founded in 1865 and has 154 member countries. Its headquarters in Geneva comprises four permanent organs: the General Secretariat, the International Frequency Registration Board (IFRB), the International Radio Consultative Committee (CCIR) and the International Telephone and Telegraph Consultative Committee (CCITT).

The Plenipotentiary Conference is the supreme organ of the Union and is responsible for revising the International Telecommunication Convention and defining the general policies of the ITU. The first such conference was held in Paris in 1865.

World Telecommunication Day is celebrated on May 17 each year by 154 ITU member countries. This date marks the anniversary of the signing of the first International Telegraphic Convention in Paris in 1865.

Canadians face WARC issues

According to Canada's communications minister, Jeanne Sauvé, the federal government has approved recommendations for Canada's participation in and proposals to the WARC.

"All users of the air waves, from ham radio operators to broadcasters, have a stake in the outcome of the conference," Mme. Suavé said. "Since the spectrum is a valuable, but limited, natural resource, and since the demand for telecommunication services using the spectrum is growing, Canada and other nations must ensure that this resource is used in a manner that will ensure that frequencies are available for the development of services in the years ahead."

As Canadian radiocommunication requirements have grown, Canada's participation in WARC has increased in order to ensure adequate

TELECOM 79

Opening concurrently with WARC-79, the 3rd World Telecommunication Exhibition, TELECOM 79, will be held at the Palais des Expositions, Geneva, from September 20 to 26.

This exhibition, organized by the ITU in accordance with the wish expressed by its 154 member countries, is placed under the patronage of the Swiss government. With more than 500 exhibitors from some 40 countries occupying nearly 70,000 square meters, it will be the largest telecommunication exhibition ever held. In addition to the exhibition itself, the following events will be

held in connection with TELECOM 79:

- the 3rd World Telecommunication Forum, attended by some 2000 participants: senior telecommunications officials, economists and engineers;
- the 3rd International Festival of Telecommunication and Electronics Films, *The Golden Antenna*;
- the 1st World Book Fair on telecommunications and electronics.

Among the tens of thousands of visitors expected will be many ministers and directors-general of telecommunications.

DYNAMIC NEW DIMENSIONS IN VISUAL PRESENTATION —with General Electric Professional Large Screen TV Projection

IN BUSINESS—General Electric projectors display real-time computer-generated data for Merrill Lynch Government Securities, New York.

IN ENTERTAINMENT—General Electric color projector brings large screen race action to Ontario Jockey Club, near Toronto, Ontario, Canada.

General Electric professional large screen television projectors—displaying color or monochrome pictures up to 25 feet wide—bring new dimensions of presentation impact to a broad spectrum of applications.

A wide choice of new and improved color and monochrome models is available to meet specific requirements for television display applications, in standard or high brightness, for various scan standards.

The color projectors utilize General Electric's exclusive single optical path light valve. All color information is projected simultaneously in one light beam. This system eliminates time-consuming registration of three separate color images, which is required for all other television projectors.

These projectors can display any size television picture from two feet to 25 feet wide, with high resolution and contrast over their full range of light output.

Among the primary applications of the projectors are:
Medical and Dental Education. Technique and procedural training.

Business. Sales meetings, industrial training, product presentations, real-time display of computer-generated data, teleconferences.

Aerospace and Defense. Situation displays, simulator training.

Entertainment. Theatre television and closed-circuit TV events, overflow crowds, discotheque special effects.

Television Production. Backgrounds for news programs, special effects, data display, program previewing.

Call or write: General Electric Company, Video Display Equipment Operation, Electronics Park 6-206, Syracuse, NY 13221. Phone: (315) 456-2562/2533/2179.

Canada position

provisions for the operation and growth of Canadian radiocommunication systems. Canada is one of about 20 countries that submit proposals which are used as the basis for revisions; the other member countries of the ITU usually participate in the conferences but do not submit proposals.

For WARC-79, the Canadian preparations began in late 1974 with the formation of the Canadian Interdepartmental Committee (CIC) made up of frequency management experts representing all federal government departments and agencies with interests in radiocommunications (Communications, Transport, Defense, External Affairs, Energy, Mines and Resources, NRC, CRTC, CBC, RCMP, Teleglobe and Telesat). After extensive technical studies and public consultations with the private sector and provincial governments, including the public distribution of two drafts, the CIC has prepared two groups of technical proposals for revising the International Radio Regulations.

The Canadian proposals for this WARC are contained in a 200-page document. Among the main Canadian proposals are the following:

- that additional spectrum be allocated for mobile communications in the UHF band;
- that the standard AM broadcasting band be extended to provide for additional channels to permit coverage of areas in Canada not at present adequately served;
- that the amount of shortwave spectrum employed for international broadcasting be substantially increased;
- that additional radio spectrum be provided for Canadian and international requirements for radiocommunications by satellites;
- that additional spectrum be provided for the amateur radio service.

As **BE** goes to press, 41 delegates have been selected to represent the Canadian interests at WARC.

As a result of the public consultations and the interdepartmental participation in the preparations, it is considered that the proposals fully reflect current and future Canadian radiocommunication requirements. Since the WARC will establish new technical standards for radiocommunication equipment, particular care has been taken to ensure that the Canadian proposals are compatible with the current and planned models of radiocommunication equipment manufactured in Canada.

WARC-79

cations and which sets out the structure and *modus operandi* of the ITU.

This convention is supplemented by administrative regulations which govern the use of telecommunications and are binding on all members of the ITU:

- telegraph regulations;
- telephone regulations;
- Radio Regulations (RR) which deal with the use of the frequency spectrum, the use of the geostationary orbit, conditions for the operation of radio stations and the relevant administrative provisions; and
- additional Radio Regulations, which deal with questions relating to traffic and charges in the aeronautical mobile service and the maritime mobile service.

It is the last two bodies of regulations, the Radio Regulations being the most voluminous (1473 pages including appendices, resolutions and recommendations against 51 pages for the additional regulations) which will be reviewed to a large extent by the conference.

The last conference with a comparable mandate was held in Geneva in 1959. Since that time, specialized world conferences have

Stand back 50 feet. Imagine seeing the numerals this easily while timing a newscast.

When compared to the features on your present clock, Celestra has an optional timer that permits countup/countdown use, plus instant switchback to the exact time. Offers outstanding reliability for precise timings of everything from documentaries to detergent commercials. What's more, the 2" liquid crystal numerals can be read in both high and low ambient light. For more information on

Introducing the new TDK testing machines.

At TDK, we know that your test cassette is a vital element of your laboratory or service procedure. So when we created a series of test tapes, we approached them as integral components, with both tape and housing engineered as precisely as your test instruments.

You'd expect that from the makers of TDK SA, the high bias reference standard for many manufacturers' cassette decks.

TDK test cassettes don't jam and they're dropout-free. They're built to last under unceasing use. If you're a store service manager, assembly line quality control inspector, or highly discerning audiophile, you need that kind of precision and reliability. To make absolutely sure you get it,

we custom quality-control each and every one.

No matter what data you need, TDK has a test cassette to help you find it out: bias/EQ alignment; playback level calibration; Dolby calibration; head azimuth alignment; wow and flutter and tape speed and 11, five and three-point frequency characteristics checks.

Check out the complete line of TDK test cassettes by writing, or calling (516) 746-0880. When you do, find out about our bulk duplication cassettes, bulk duplication pancake tape, audio visual, leaderless, data and endless cassettes, too.

You'll find that the same TDK quality and reliability that goes into our test tapes applies all the way down the line.

TDK

World leader in recording tape technology.

WARC-79

met to take account of new technical developments and new frequency requirements for each particular radio service: the service using space techniques, the maritime mobile, aeronautical mobile, sound and television broadcasting and direct satellite broadcasting services.

The international regulations revised by WARC-79 will, in all

likelihood, remain in force until the year 2000 or longer. They will have a considerable influence on the development of all types of telecommunications in the 21st century.

Origin of WARC-79

The tenth Plenipotentiary Conference of the ITU (Malaga-Torremolinos, 1973) adopted a resolution to convene WARC-79, considering:

- that, since 1959, various world administrative radio conferences

US plans strong delegation to WARC

Under the leadership of Glen Robinson, formerly an FCC commissioner and now a law professor at the University of Virginia, the US delegation of around 64 specialists will descend on Geneva to represent US interests at WARC-79.

Robinson is now on leave and working for the state department to coordinate the US effort. Members of the delegation representing the broadcast interests will be Neal McNaughten and Charles Breig of the FCC Broadcast Bureau and George Bartlett of the National Association of Broadcasters.

The US proposals for WARC-79 are contained in a formal document already before the WARC. Work behind this document represents extensive efforts by people and organizations from every facet of broadcasting and telecommunications.

Technical inputs for the broadcasting proposals contained in the US document to the ITU were obtained chiefly through eight notices issued by the FCC. These resulted in working groups to allow industry and private sectors to participate in establishing the US position on

Historical notes

The advent of radiotelegraphy at the end of the nineteenth century was due to the work of scientists such as Maxwell, Lodge, Hertz, Branly, Popov, Marconi and many others. Ships were the first to benefit from the new technique: unlike cables or wires, electromagnetic waves are not subject to artificial boundaries and the distances they cover generally depend on the transmission power.

From the very beginnings of radiotelegraphy it was acknowledged that radiocommunications are by their very nature international. In 1903, less than two years after news of the first transmission of a radiotelegraph signal across the Atlantic (December 12, 1901) had

been received, the first intergovernmental radio telegraph conference was held to establish international regulations governing the use of radio waves.

Many intergovernmental radio conferences have been held to establish or revise radio regulations on a world or regional level. All of these conferences stem from the Radio Regulations drawn up in 1906 and have been organized either in response to an invitation by a member of the ITU or by the ITU itself. The objective of the ITU, when it was founded in 1865, was the establishment of international regulations for telegraphy; later it concerned itself with telephony and then finally with radio, in 1903.

US position

significant issues, including television, AM and FM radio, international broadcasting, and satellites. These groups provided a wealth of inputs to the FCC, including requirements for the spectrum allocation tables.

In addition, the FCC considered inputs from private individuals, interested companies, station personnel, and the three major networks.

The formal positions of the US contained in the document submitted to WARC is now public information. But, there are fall-back positions on issues that remain confidential. The impact of some of the negotiated decisions to be made at WARC may not be felt for months or years to come.

In brief, some of the proposals contained in the US document include the following.

- Expansion of the AM band from 1605kHz to 2000kHz to be shared with the radio location service. Very little change is being reported for FM.
- For television, a sharing of the

band is being proposed for fixed and mobile services.

- For satellite service, a new band of 500MHz is being proposed to extend the band from 12.2 to 12.7GHz. The fixed satellite services would retain the 11.7 to 12.2GHz band and the broadcast satellites would utilize the proposed extension.

The associated problem is to find an uplink to feed the broadcast satellite. The US is proposing a shared 17.1 to 17.6GHz band, but agreement on the sharing circumstances may be difficult to attain.

There will be extensive work required following WARC to put decisions made there into perspective. Plans are under way for a March 1980 meeting in South America on the MF broadcasting band throughout Region 2, in which the United States is located. This meeting presumably would resolve the 9kHz/10kHz spacing problem in Region 2. The FCC is still accepting filings on this topic to pave the way for a US position at this meeting.

WARC-79

have amended the Radio Regulations and additional radio regulations on specific points without having been able to harmonize the decisions taken because of the limited nature of their agenda;

- that, as a result of technical advances, some of the provisions in these regulations should be reconsidered, particularly with regard to certain services which are developing rapidly;
- that, for these reasons, a general revision of the Radio Regulations and of the additional radio regulations should be undertaken in a world conference in 1979.

As directed by the Plenipotentiary Conference, the ITU Administrative Council at its annual sessions took adequate measures to ensure the administrative and technical preparation of the conference. On the technical level, the Administrative Council's action was 2-fold: to structure the Radio Regulations so as to provide the conference with a framework for the revision of the regulations, and to provide technical standards to equip the conference with international standards on which to base its decisions.

Structure of the regulations. At its

WHY JBL FLATTENS THE COMPETITION.

INTRODUCING THE 4313.

Flat frequency response. It means accuracy. Naturalness. Reality.

JBL gives it to you without the bigger box that you'd expect along with it, since the 4313 only measures about 23" by 14" x 10"!

This new, compact professional monitor produces deep, distortion-free bass. And does it with a newly developed 10" driver.

Its massive magnet structure and voice coil are equivalent to most 12" or 15" speakers. Yet it delivers heavy-duty power handling and

*On-axis frequency response,
4313 monitor.*

a smoother transition to the mid-range than most larger-cone speakers.

The 4313's edge-wound voice coil midrange accurately reproduces strong, natural vocals and powerful transients.

Up top, a dome radiator provides high acoustic output with extreme clarity and wide disper-

sion. A large 1" voice coil gives it the ruggedness needed in professional use.

Working together, these precision-matched speakers offer superb stereo imaging, powerful sound levels and wide dynamic range.

Audition the 4313 soon.

We think you'll agree that its combination of flat response, power and moderate size flattens the competition.

WARC-79

30th session in 1975, the Administrative Council convened a group of experts to prepare the draft of a possible rearrangement of the Radio Regulations.

This group, which comprised experts from telecommunication administrations of members of the ITU assisted by representatives of the permanent organs of the union, met in Geneva on January 19, 1976 and worked for four weeks. Its task consisted of separating in the existing regulations the administrative provisions from those relating to operation, and to classify the latter according to the various services concerned. The group's report was considered and approved by the World Administrative Broadcasting-Satellite Radio Conference (Geneva, 1977) and was subsequently distributed by the ITU to all member administrations so that it could be used as a framework for the preparation of their proposals to WARC.

Technical standards. At its 31st session the Administrative Council instructed the International Radio Consultative Committee (CCIR), one of the permanent organs of the ITU:

- to carry out the studies necessary to achieve timely provision of the technical information likely to be needed as a basis for the work of the conference; and
- to arrange for a special joint meeting of CCIR study groups at the end of 1978 to assemble this technical information.

Participation in the conference

The national delegations to ITU conferences are designated by the members of the union. A delegation is defined in the International Telecommunication Convention as "the totality of the delegates and, should the case arise, any representatives, advisers, attachés, or interpreters sent by the same country. Each member (country) shall be free to make up its delegation as it wishes. Accreditation of delegations to administrative conferences shall be by means of instruments signed by the head of state, by the head of the government, by the minister for foreign affairs, or by the minister responsible for questions dealt with during the conference."

The following are also entitled to attend conferences: United Nations observers; observers from regional telecommunications organizations; observers from specialized agencies of the United Nations and from the

International Atomic Energy Agency; observers from accredited international organizations which have submitted a request for admission; and representatives of recognized private operating agencies duly authorized by the member country to which they belong.

About 1500 delegates from some 140 member countries of the ITU are expected.

ITU member activities

Many member countries of the ITU have set up national governmental coordination committees grouping the various users of radio-communications to prepare proposals for submission to the conference. Numerous bilateral and multilateral discussions also have been held by member countries to coordinate their proposals as far as possible. Many of these proposals already have been received at ITU headquarters; they may only be submitted by members of the union. They are currently expected to amount to more than 3500 typed pages by the eve of the conference.

In addition, a number of national or international organizations concerned with radiocommunications have already held or will hold meetings to discuss preparations for WARC. □

Break Out of the Studio with McMartin RPU

Hand-held, mobile and fixed-base transmitters. Portable and studio receivers. McMartin Industries has everything you need to cover any news story, sports event or entertainment happening. No need for phone lines.

150 MHz and 450 MHz bands available. All specifications exceed FCC requirements.

The Professional's Choice— the you-name-it, you-got-it video test set.

This totally integrated modular video test set is designed for the discriminating professional. The Lenco 300 System lets you specify video test signals to meet your system requirements, not the manufacturer's.

Use the Lenco PSG-310 Digital Color Sync Generator, or one of your own generators, with any one, a combination, or all of the test modules. Mix 'em or match 'em any way you want. There are 29 test signals available to answer all of your system test specifications.

With the Lenco 300 System, you get a lot more for a lot less. For instance, all of our advanced

test signal modules have composite video delay, making Lenco the *only* manufacturer that can *individually time* the test signals to your system.

And we're the only American manufacturer that supplies a color bar generator with the new SMPTE alignment test signal (reverse bars).

We're so sure of your acceptance of Lenco equipment that we offer a *two-year* warranty on all parts and labor—and that includes freight to and from our factory!

Call or write for a demonstration today. You'll find Lenco to be your first—and only—video test set alternative.

September 1979 *Broadcast Engineering* 95

Technical achievements in producing *Live from Lincoln Center*

By Donald W. Redell, Broadcast Engineering correspondent

Since the advent of videotape about 20 years ago, there has been very little live television aired on the three major networks except for sports, news and **Saturday Night Live**. The fourth network, PBS, offers an alternative in live programming—**Live from Lincoln Center**.

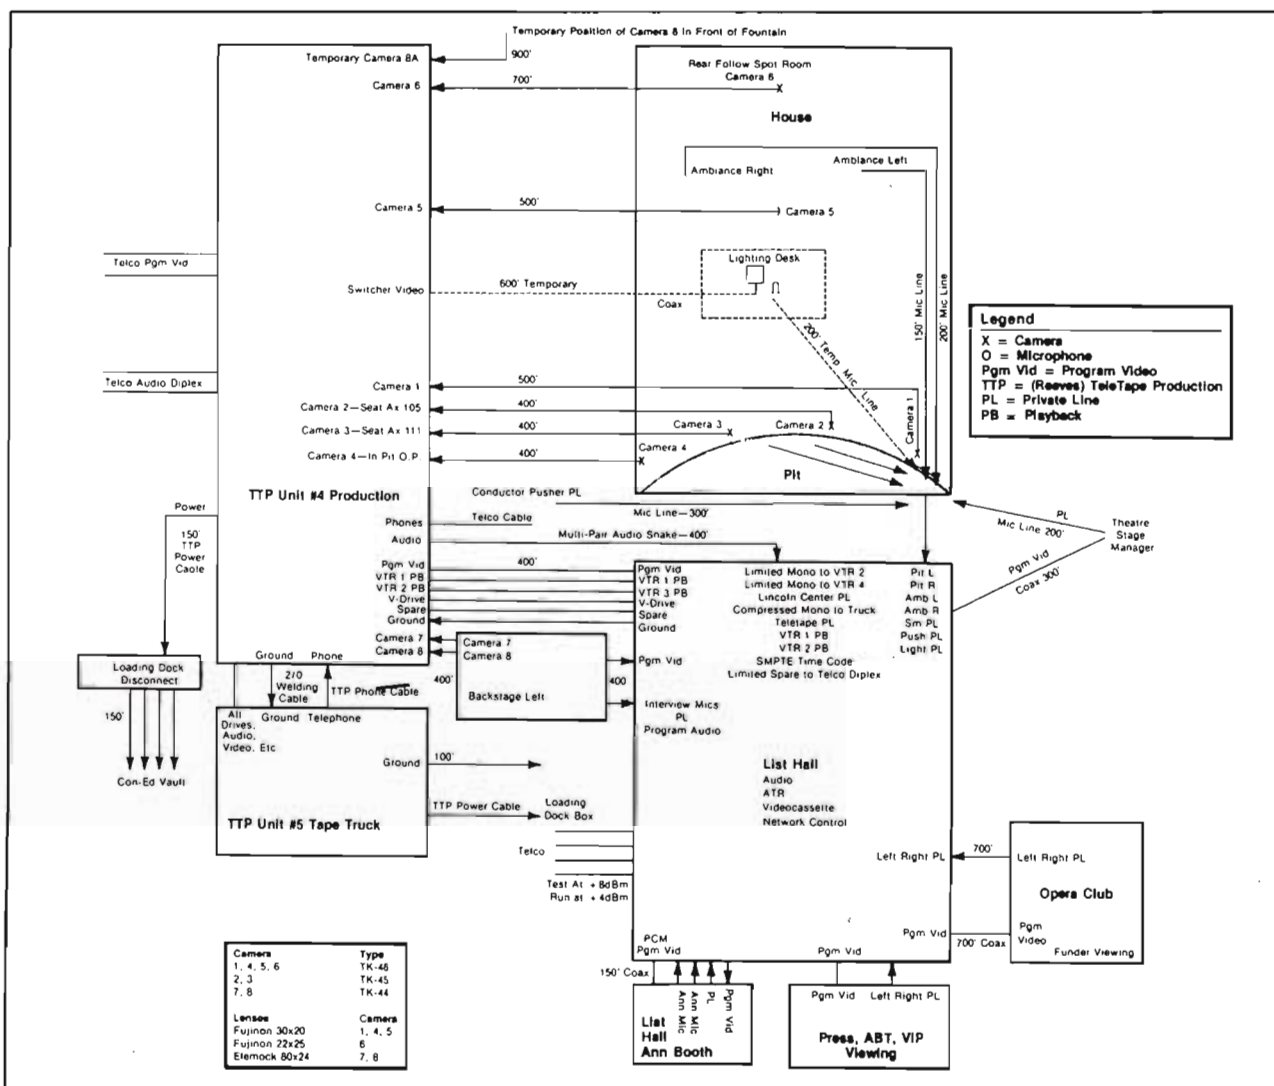

On January 30, 1976, *Live From Lincoln Center* began providing live television events to the Public Broadcasting network and has broadcast 27 of them since. The latest was The American Ballet Theater's production of *Sleeping Beauty* in May. Nearly every form of the serious musical and performing arts events has been produced at Lincoln Center in this series: ballet, opera, symphony orchestras and virtuoso recitals—all live.

Live From Lincoln Center, however, is a new kind of networking. Before videotape, getting the program on Telco facilities, across the country on phone lines and to the viewer was all that was necessary. Video was the

major problem; after all, networks had been doing radio since the 1920s, and audio was easy. In addition, the needs of the cameras and of the television production staff came first; the on-stage production and the audience had to adjust.

Live From Lincoln Center has changed all that. Audio now is at least as important as video; the Lincoln Center audience is never aware that there is a television pickup present, and the performers are never asked to vary their performances for the cameras. In fact, there is never a special camera rehearsal. All television planning is done around the live production and never interferes with it.

To accomplish this feat, experimentation began in 1971 with the first Lincoln Center for the Performing Arts program to be telecast. *Le Coq D'Or*, which originated at The New York State Theater, was seen by cable subscribers on TelePrompTer's Manhattan CATV system. Between November 1971 and May 16, 1975 there were nine experimental *Live From Lincoln Center* broadcasts of various kinds, each of which had at least one engineering or production first, and in the 27 succeeding broadcasts there were 18 more firsts. Out of all of these

This cable layout for the American Ballet Theater production is typical for a *Live from Lincoln Center* event.

experiments and broadcasts evolved the following set of parameters.

Lighting—Light levels often fall below 1 fc and rarely exceed 25 fc; lighting ratios often exceed 1000:1; dimmed incandescent lights often are used in the same scene as xenon and carbon arcs; all lighting instruments may be gelled different colors; bare flames, bare bulbs, flashbulbs and flash powder must often appear in a scene.

Contrast—Within these lighting conditions characters may appear together wearing everything from black velvet to white satin with sequins.

Camera positioning—Cameras which may have to pick up a tight face shot may be located more than 100 ft from their subject; cameras used in ballet must be located at front row center for proper perspective and must have their lenses above stage level, yet must remain invisible to the audience; cameras used in outdoor shots may endure subzero blizzard conditions and then must be repositioned indoors, set up again, and ready to go within the space of a single scene; cameras often are located in virtually inaccessible positions, cramping operators and making maintenance difficult.

Sound pickup—Microphones must be invisible to the

Lincoln Center media development "firsts"

November 9, 1971—First performing arts program telecast on a CATV system: Rimsky-Korsakov's *Lo Coq D'Or*, by the New York City Opera, televised live by Teleprompter Manhattan Cable Television from the New York State Theater.

December 3, 1973—First use of an image intensified color TV camera in any television production, during the experimental taping of the Metropolitan Opera's *Tales of Hoffman*.

November 20, 1974—First live anamorphic video projection experiment, in conjunction with Camera Mart, General Electric and Video Camera Services.

January 28, 1975—First transmission of ballet via satellite: The Colorado Concert Ballet via NASA's ATS-6 satellite from Denver to New York. This was also the first time a television signal from a satellite had ever been received directly within the City of New York and the first interactive dance instruction by satellite.

May 16, 1975—First use of ultra long focal length lenses in televising a concert, during an experimental taping of the New York Philharmonic.

Live from Lincoln Center

audience; in operas, singers must be picked up as far as 150 ft from the edge of the stage or as much as three stories above the stage floor; intermission guests often refuse to wear a microphone, yet must be picked up in a noisy environment amidst stagehands changing scenery or musicians tuning up; in addition to the microphones picking up a performance, separate microphones must be used for each position of the host, each intermission guest (occasionally in different locations), and announcers, who may be located more than 500 ft from the audio mixing board.

Sound transmission—All shows, domestic or international, must be transmitted live with stereo sound, even though that may involve satellites, microwave, land lines, delay lines and as many as 14 different common carriers; international feeds may require different announcers or videotape audio than domestic feeds and may desire video without titles and subtitles as well; sound networks must be established and tested immediately before air time.

Overall—All shows are transmissions of live performances with paying audiences: neither the audience nor the performance (staging, lighting, etc.) may be interfered with. Given those constraints, the show must look as good as any network studio show (lest it be turned off) and must sound like a high-fidelity stereo recording. Foreign language operas must be subtitled live. Program synopses must be transmitted somehow both visually and orally.

Countdown to broadcast

To accomplish this and to broadcast on schedule,

Media "firsts"

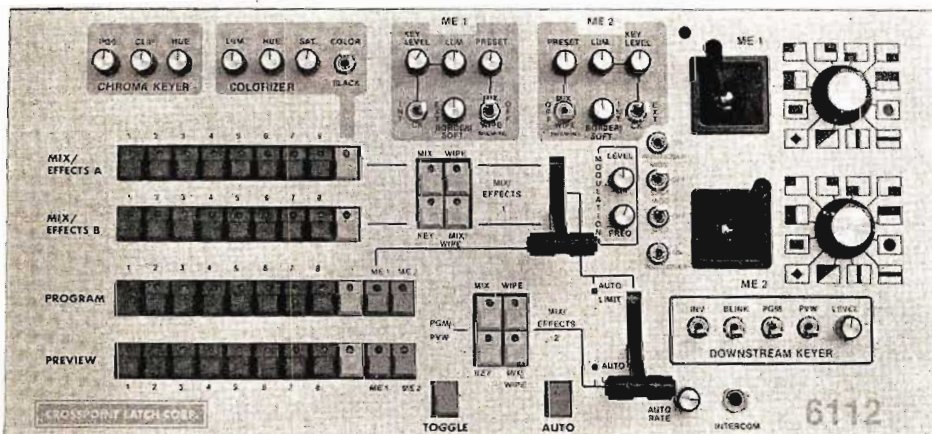

January 30, 1976—First concert ever broadcast under existing performance conditions; first nationwide live television-stereo simulcast network; first stereo simulcast via satellite—all during *Live From Lincoln Center—The New York Philharmonic* on PBS and in stereo in 15 cities. Nominated for Emmy Awards for best classical music program, best sound, and outstanding achievement for the stereo simulcast network.

February 3, 1976—First patent ever issued for an accessory to allow high fidelity stereo audio reception of television programs, Number 3,936,594.

April 21, 1976—First opera ever broadcast under existing performance conditions; first live stereo network ever to reach more than half of all US television households—both during *Live From Lincoln Center—The Ballad of Baby Doe* on PBS and in stereo in 48 cities.

June 30, 1976—First broadcast of a full-length ballet, *Swan Lake*, on PBS and in stereo in 50 cities.

On FEATURES, PERFORMANCE and QUALITY, the 6112 OUTPERFORMS all switchers in the \$6,000 — \$13,000 category

Two fully independent special effects generators each with double re-entry; downstream keyer.

Plug-in option:
Encoded Chroma
Keyer \$950.00

Price \$5995.00

Here you have one switcher that covers the entire range. Except for the number of inputs (nine including colorizable black) nothing comes even close to matching the performance of the 6112—excellent balance in video levels because of the technique of double clamping on the back porch, very stable and linear patterns, inherent timing, stability with no internal adjustments since there is nothing to drift, silky smooth fader arms with zero backlash, a downstream keyer with preview, automatic and manual faders, borders, standardized plug-in boards which are interchangeable with all our other switchers, just to mention a few points.

Ask your dealer to show you his demo tape. Call or write for information on the 6112 or our other switchers and products.

Now You Can Afford To Do A-B Rolls With Your HET VTR'S.

Introducing the Edutron ccd2h-1. Full Time Base Correction For Only \$5,800.

The ccd2h-1, when used at your editing station or for post production, can solve many problems while it is correcting and enhancing your heterodyne VTR signal. You will be able to synchronize your VTR, allowing you to use it as a source to do mixing at your switcher. With two ccd2h-1's, you can now do A-B rolls between two VTR's.

By using the latest advancements in charge-coupled-device memory technology, we can give you superior performance at a realistic price. The ccd2h-1 has a signal-to-noise ratio of 58 db, $\frac{1}{2}^\circ$ of differential phase, and 1% differential gain. This will give you the best possible reproduction of the video from your VTR.

If you have bad tapes you would like to clean up or good tapes you would like to make look even better, the ccd2h-1 is ready. By using a unique noise coring that gives up to 4 db of noise reduction, all generations of tapes will look better. A horizontal

enhancement of up to 200% boost will sharpen your video. All of this is standard in the ccd2h-1 and available at no extra cost.

The two horizontal lines of window correction will handle typical distortions. The automatic steerable advanced sync will make the window appear much wider as it keeps your VTR centered in the window. This will give you maximum correction range and a zero time system delay.

For complete specifications and the name of your nearest Edutron dealer, please write or call us at: EDUTRON INC., 25 Oak Street, Suite 1, Roswell, Georgia 30075. Phone (404) 992-1626.

100 *Broadcast Engineering* September 1979

Live from Lincoln Center

design engineer Mark Shubin starts about a year in advance by booking the AT&T circuits with Telco representative Paul Dujardin, to whom Shubin attributes much of the success of the network. The fall show's master list carries 69 separate lines, including all the lines booked (locally and nationally) from the three Lincoln Center auditoriums to and among various points, such as NBC, WNET (New York), Western Union and NR (Telco's Network Radio). Telco's Dujardin works closely with Shubin on each show, from booking the lines through to sign-off, putting out all the fires as they occur and rerouting when necessary.

The next booking is with the facilities company which supplies the mobile unit and maintenance crew. Usually that's Reeves/Teletape, and with the unit comes John Leay, engineering consultant. About six months in advance a hold is put on the facilities and confirmed a month before the broadcast. Next, all the equipment is checked out at the facility's studios.

The audio equipment, dollies, monitors and cables arrive at Lincoln Center three days before the broadcast. The stage hands lay cable and the audio staff begins setting up the extensive audio equipment in List Hall, a small recital hall near Metropolitan Opera's backstage. Two days before air the camera unit arrives, cameras are set up, chipped and aligned. (Chipping is done live with a young man wearing a black T-shirt with a color chart on the front. Chip chart and skin tones in one!)

The Chyron is loaded with crawl copy and other graphic

Media "firsts"

August 18, 1976—First live 3-D video projection experiment, in conjunction with General Electric, Camera Mart and Stephens & Associates.

August 30, 1976—First stereo simulcast tariff ever filed with the FCC goes into effect; filed by Western Union specifically for Lincoln Center.

September 30, 1976—First satellite/terrestrial network test to prove insignificant delay regarding lip-synchronization, utilizing NBC Television Network.

November 3, 1976—First television show ever transmitted under a stereo simulcast tariff.

November 28, 1976—First live full-length recital televised, André Watts.

March 15, 1977—First live telecast of an opera from the Metropolitan Opera at Lincoln Center, *La Boheme*.

June 2, 1977—First telecast of a ballet from the Metropolitan Opera, American Ballet Theatre's *Giselle*.

September 24, 1977—First use of unobtrusive cameras within the orchestra in a

Storeel is dedicated to conserving energy. Yours.

Energy conservation is much in the news these days. Like the weather, many talk about it but few do anything about it. We haven't figured how to change the weather, but we do have several systems specifically engineered for broadcasters that both conserve energy and add efficiency. The very latest (shown installed) is called **STOR-MAX™**.

Save energy (yours) by converting your overcrowded film and VTR libraries to the new "Instant Access" high-density systems engineered and distributed only by Storeel. **Modular Rapid Transit Storage™** maximizes units stored per square foot of floor space, minimizes retrieval time, optimizes energy efficiency.

Our many years of design and engineering pay off in solutions to your storage problems.

Call or write "The Railriders" at Storeel today for free estimate. No obligation, of course.

Illustrated catalog of Storeel's "confusion eliminators" available upon request. Write on your letterhead or telephone for your free copy.

**Creative Flexibility . . .
Great.
Under \$6,000.
Amazing!**

Finally.
An uncom-
promising switcher

that even the most cost conscious
facility can afford.

Because while we're saving you money we're also giving you today's most desired production features. Like two Mix Effects Systems that utilize our exclusive shared pattern generator. Which enables mix, wipe, and mix or wipe key (with 'matte' key and key invert) on each M/E.

And our 'rotate' pot that lets you create hundreds of standard and special wipes from the seven basic patterns.

Need adjustable and variable hard, soft, and bordered edges? It's standard on the 902 along with pattern modulation, electronic spotlight, positioner, and preset pattern select.

We don't stop with features, either. With ten tailed inputs (including blackburst/colorizer), true Mix Effects re-entry, and separate program and preview output switching busses the 902 gives you 'big board' flexibility.

Last (but certainly not least!) The 902 carries ISI's full two (2) year warranty. And, with almost two hundred units delivered and in the field, one of the industries best service records.

When you add it all up, it all adds up to 902!

Live from Lincoln Center

material. On the afternoon before air, director Kirk Browning and the camera crew view the single camera, wide-angle videotape that was shot at a dance rehearsal and camera shots are set. At 8 PM there is a performance which the television crew uses as a dress rehearsal and which is taped on 3/4-inch tape for viewing the next day.

On air day, after the cameras are fired, there is a rehearsal of the intermission interviews, and at 2 PM the cameramen and Browning view the previous day's tapes to refine the shooting script. At 5 PM the opening is rehearsed—the roll-in reel cues, the Chyron, etc. From 6:05 to 7:05 PM Shubin tests the network—and until 8 PM if there are problems. 8 PM to 11 PM is AIR—LIVE.

To broadcast *Live From Lincoln Center-ABT's Sleeping Beauty* on May 2, it took, besides the production staff:

- 8 Cameramen
- 2 Video operators
- 2 Videotape men
- 3 Audio engineers
- 1 Audio designer
- 1 Technical consultant

- 1 Electronic graphics man
- 1 TD/switcher
- 1 Senior technician
- 3 Maintenance men
- 1 Technical designer

This technical crew operated eight cameras, the entire audio and network control room in List Hall, four mics for

Media "firsts"

live concert, The New York Philharmonic, Zubin Mehta conducting.

October 18, 1977—First live opera transmitted with subtitles, New York City Opera's *Manon*.

January 31, 1978—First live telecast of the New York City Ballet, *Coppelia*.

February 12, 1978—First live solo recital telecast from the Metropolitan Opera, Luciano Pavarotti.

September 20, 1978—First live transatlantic stereo simulcast, *Horowitz: Live!*, fed simultaneously to the NBC, BBC, Antenne 2 (France), ZDF (Germany), and ORF (Austria) networks, tape delayed for Japan with the first international distribution of a television program on stereo SMPTE Type C 1-inch videotape.

December 10, 1978—First live telecast of chamber music from Alice Tully Hall.

March 12, 1979—First test of the PBS Digital Audio Transmission Equipment system from a broadcast site, utilizing common carrier facilities.

"We evaluated all carts and have standardized on the Audiopak® AA-3"

—Bob Kanner
Chief Engineer
KRTH, FM 101
KHJ, AM 93
Los Angeles

"Our test results show that the Audiopak® AA-3 holds stereo phasing better than any other cart on the market."

"The excellent phase stability of the AA-3 will be of major importance as AM stations convert to stereo."

"The High Output, Low Noise (HOLN) tape in the AA-3 gives us excellent frequency response combined with 6db more head-room."

"The AA-3 maintains excellent tape motion with low wow and flutter."

"We had had previous cart pressure pad problems with our multiple playback machines — these have been resolved by the durability of the AA-3 pressure pads."

"The AA-3 is the 'state of the art' in cartridges — it meets or exceeds the specifications of the current NAB standards."

MORE... FOR LESS!

We're ISI
and quite
frankly we're
concerned

that you might be thinking about a 'big board' production switcher, without thinking of us. And that would be a shame. Because we've developed a common sense approach to production switching that gives you high powered performance at a surprising price.

Our 1200 series for example, has all the effects, patterns, and features you'd expect to find on a top of the line switcher. Plus some things no one else offers, or offers only as extra cost options. Like fade through black. Or tandem keying that allows you to do primary key (luminance or chroma) then add a second downstream key with outline, shadow, or border. All on a single, standard 1200 series Mix Effects System.

Look at our board. It gives you the creative flexibility to use more of the 1200's features—more of the time. Because it's simple and straightforward. No tricks or special combinations to remember.

Service? With our full two-year warranty, on sight test and check out, and toll free technical support number. We won't hang you up by letting you down.

So, if you're thinking about production switchers, remember this: by keeping it simple, we'll give you more! And cost you less! Now that's worth thinking about.

Live from Lincoln Center

the performance, and two mics for the intermission interviews.

Support equipment

Much of the technical equipment is either special or specially operated.

- **First, the cameras.** Because the Metropolitan Opera House and Avery Fisher Hall are very large, and the parameters listed above must be observed, the cameras (TK 46s and TKP 45s) are not out of the ordinary, but the lenses and set-ups are. The TK 46s are fitted with Fujinon lenses, which were chosen because of their exceptional optical quality and coating. The TKP 45s have a developmental lens designed by Rank Taylor Hobson in England and custom fitted to the cameras. The lens and a bracket are mounted on the camera tripod, and the camera is attached to the lens (so that the lens supports the cameras rather than the reverse).

The cameras are set up to run with extended gain at the expense of some noise like a sports pick up. The tubes are hand picked for minimum problems in black, to lessen noise, and for minimum lag and microphonics since the two TKP 45s are in the front row next to the orchestra. In addition, the stage scenes are evaluated for lighting; hot spots and follow spots are brought down so that contrast is more nearly controlled. Generally the

DOLBY FM: QUALITY CALL LETTERS

These stations, and many others, broadcast Dolby FM. Their engineers know the difference Dolby FM makes in sound quality, and their managers know how widely recognized the name Dolby is among today's sound-conscious listeners.

But not everyone has heard the difference Dolby FM can make. That's why at the NRBA convention Dolby Labora-

tories will be conducting brief demonstrations of the Dolby FM system.

Hear the difference for yourself. Discuss with us the possibility of your broadcasting Dolby FM experimentally, without obligation. In time you too may want to add your call letters to the growing list of Dolby FM broadcasters.

Hear the difference: Dolby at NRBA Washington D.C. October 7-10

Live from Lincoln Center

picture leaves Lincoln Center looking pretty good. On occasion a little noise is evident, but given the requirements of the broadcast, the video is excellent.

• **Next the audio** is fed to List Hall in stereo (incidentally, 3/4-inch videocassettes are recorded there) where it goes through two identical boards. One feeds the whole audio portion of the program and one provides a clean feed, without announce and similar material, for foreign broadcasts.

Audio emphasized

Lincoln Center and producer John Goberman felt from

The control booth is the scene of tense action in broadcasting the New York Philharmonic, *Live from Lincoln Center*, Zubin Mehta conducting. Director Kirk Browning sits in the center. (Photograph by Susanne Faulkner Stevens)

the beginning that in order to succeed with *Live From Lincoln Center* a major development in the recording and transmitting of sound was needed. Since the inception of television broadcasting and up to the present, audio has been secondary to video. Microphones generally are visible or on booms outside the shot. In addition, the quality of audio has not been emphasized since television sets have 3-inch monaural speakers, and the attitude has been to "get the sound there, that's enough."

Live From Lincoln Center producers planned to broadcast serious music, and satisfying the serious

The cameraman focuses on a scene from "An Evening of Ballet with the American Ballet Theater," *Live from Lincoln Center*.

THE STATE OF OUR ART

- New "series II" improved headsets
- 50 station capability with up to 8 channels using S88 switchboard monitor
- External program feed with volume control
- Wide frequency response (200Hz to 12kHz) for exceptional intelligibility
- Designed for high noise environments
- Visual signalling uses bright amber lights
- Adjustable sidetone reduces feedback and background noise

- Mic on-off feature standard with headset and remote stations
 - Single and two channel systems virtually immune to RF and SCR dimmer noise
 - Remote stations available in portable, wall mount and rack mount versions including speakers for paging and monitoring
- Catalogue with complete specifications available upon request

DELTA BROADCAST PRODUCTS

AMC-1

The **Amplitude Modulation Controller** is the only modulation controlling system that provides a completely closed loop around the transmitter. The sampling of actual modulation levels after the PA output network assures precise adjustment for optimum modulation levels. The AMC-1 also keeps a digital count of positive and negative overmodulation bursts for both present and previous one minute periods.

DAM-1

The **Digital Antenna Monitor** couples pushbutton ease of operation with digital accuracy. The DAM-1 will accept RF samples from up to 12 towers (with an auxiliary panel) and features $\pm 1^\circ$ phase and $\pm 2\%$ current ratio accuracies. Remote panels and other accessories are available.

AAM-1

The **Analog Antenna Monitor** gives stable phase and ratio readings even in high RF fields. Separate phase and ratio mirrored-scale meters assure accurate meter indications.

TMCS

The **TMCS Antenna/Transmitter Remote Control System** offers complete transmitter and antenna parameter control for stations utilizing the DAM-1 Antenna Monitor. Alarm indications and failsafe circuitry is also provided, giving complete transmitter system control.

APC-1

The **Automatic Power Controller** is your insurance against citations for over- and under-power operation. The APC-1 continuously monitors the transmitter output power, and makes automatic power adjustments with the transmitter loading control. This assures proper power adjustment at all times.

6730-E
6740-B

Designed to switch two transmitters from antenna to dummy load, the 6730E interfaces with 1 5/8 inch coaxial cable. For 3 1/8" lines, the 6740-B transfer switch is used. Either manually or remote controlled, the **Transfer Switch** is fully interlocked and can be wired to existing equipment to prevent "hot" switching.

State of the art antenna current metering has arrived in the **TCA Ammeter Systems**. Accurate, Modulation-free, temperature stable current indications are found in the TCA. Models include single and dual scale meters.

TCT

Delta's **Toroidal Current Transformers** provide accurate sampling current and phase values without the problems associated with sampling loops. Three output voltage ranges are available, as well as high voltage models for high-power facilities.

OIB-3

OIB-1

The **Operating Impedance Bridge** measures the impedance of networks, radiators, and the like while they operate under full power. VSWR as well as complex impedances of up to $400 \pm j300$ ohms can be measured.

The **OIB-3 Operating Impedance Bridge** provides extended resistance and reactance ranges, measuring up to $1000 \pm j900$ ohms. The bridge has a built-in carrying case and RF amplifier for improved nulling.

RG-3

The **Receiver/Generator** combines a two-watt RF output and a correlation detector circuit that virtually eliminates interference problems. The RG-3 can be used in conjunction with any conventional impedance bridge including the OIB series.

CPB-1

The **Common Point Impedance Bridge** is designed for permanent installation; and allows continuous monitoring of the common point, thus facilitating network adjustment. This model can be provided with one of Delta's TCA ammeters mounted in the front panel.

DPM-1

Delta's **Digital Panel Meter** displays up to sixteen channels of information in a 3 1/2 digit LED display. Any combination of operating parameters can be selected, such as plate current and voltage, common point current, base currents, etc.

September 1979 *Broadcast Engineering* 107

Live from Lincoln Center

music audience requires the sound to do more than just get there.

The nearly three years of experimentation developed high quality mics, many designed by the Lincoln Center technical staff. Then the problem became delivery of that high fidelity sound. It was decided to simulcast in stereo via FM radio stations and to diplex and multiplex the signal.

A Van Cliburn recital with the New York Philharmonic on January 30, 1976 was the first network *Live From Lincoln Center*. Nine days before the show a test of diplexing equipment was initiated with Western Union, and the next day it worked. Five days before the show, Lincoln Center's desire to use the equipment was presented to Western Union's Board of Directors and four days before air the Board approved it but required that specific West Coast equipment be used. On the day before air it arrived, was unpacked and set up. It worked. For the second show, *The Ballad of Baby Doe*, two and a half months later, new diplexing equipment had been specially designed and approved.

For the Van Cliburn concert the network consisted of 13 cities plus New York and Los Angeles, making the network national. The second show had 40 cities, using about 12 different network carriers, and the program was available to 50% of the US audience. Now the network reaches, via satellite and the audio network, 250 Public Television stations, and 60 to 70 FM stations.

Audio/video routing

The audio and video take two different network routes. The audio leaves the board, and goes to a *Rack* (called Rack, designed by Mark Shubin), which adds limiting

necessary for reception by the satellite, and splits and isolates the various stereo feeds to the network. If there is a failure of one or two feeds, the others won't go down either. Rack has two normal audimeters plus 28 *idiot meters* which indicate that the audio is going through, with no indication of quality or gain. Son of Rack is in design now for next year's series.

From Rack, the audio goes to WNET via New York Telco where it's put into a 250ms delay unit to compensate for the time lost when the video goes up to the satellite and back. From there it goes by land line to NR at AT&T. It is then microwaved to the stations by diplexing on the AT&T video network and by multiplexing into the multiplex message network (like the telephone system) occupying the space of 12 phone calls. At the local TOC (Television Operating Center) the diplex signal is decoded and the multiplex is pulled off onto a local loop and sent to the station.

The video signal leaves the mobile unit via coax to the microwave transmitter on the roof of Lincoln Center to the Telco building on 11th Avenue in New York. From there it's sent to WNET which acts as master control. WNET sends the signal either to Washington, DC or to Hartford, CT, via Telco microwave. At the Hartford Eastern Educational Network uplink, or the one at MacLean, VA, video goes to the Westar satellite PBS transponder and to the ground station at each receiving PBS station. *Sleeping Beauty* was the first *Live From Lincoln Center* to be received by every station via satellite.

After nine major experimental productions and 27 *Live From Lincoln Center* broadcasts, producer John Goberman says, "Each show becomes a little easier, but it's basically about the same as in the beginning. The difference is that we have a few better lenses, better cameras, and more people can do it now." □

The Complete FM Stereo Processing System

The Orange County CLX-5 FM belongs in your FM chain to assure you of transparent, non-fatiguing sound. And the versatile controls allow you to optimize performance to your specific format whether it be beautiful music or Top 40.

- Ultra-fast peak limiter with 250:1 slope for absolute overmodulation protection
- Optimum modulation through the use of "no-overshoot" low pass filter
- Compressor with adjustable ratio, threshold, attack and release times, for loudness enhancement
- Highly effective expander/noise-gate for noise reduction
- High frequency limiter with selectable pre-emphasis characteristics which include standard 75us, or 25us Dolby® FM
- Overall performance specs and construction to the highest industry standard

Also investigate the VS-3 Stereo Processor which offers internally pre-set functions for the budget-conscious station looking for great sound.

Introductory digital circuits

Part 2:

Logic circuits and simplification

By Dr. Ron Jetton, Bradley University, Peoria, IL

This article covering the basics of digital circuitry is Part 2 of a series on digital technology for broadcasters. The continuing series will include applications to audio and video portions of broadcasting and will consider implementing digital into station operation.

Part 1 of this series examined the mathematical language of digital circuits. A summary of the important theorems and laws of Boolean Algebra is given in Table 1. It is extremely helpful in gaining an understanding of logic circuits and their design and simplification if the basic concepts of Boolean Algebra are well understood.

Part 1 showed the relationship between logical, true/false statements and Boolean variables. The next step is to discuss the relationship existing between Boolean algebra and switching circuits.

A switching circuit can be considered in its elemental form to be simply a black box with input and output terminals as shown in Figure 1.

Figure 1

The input and output terminals of the logic block will be thought of in a more restricted sense than in ordinary analog circuits. Each input or output terminal must be in one of two possible states. Depending on the nature of the block, the states may be on or off, up or down, positive or negative, or high or low.

First consider circuits in which an output is determined only by the present states existing at the inputs. Such circuits are referred to as *combinational* while circuits in which outputs are a function of past states as well are termed *sequential*. An understanding of combinational

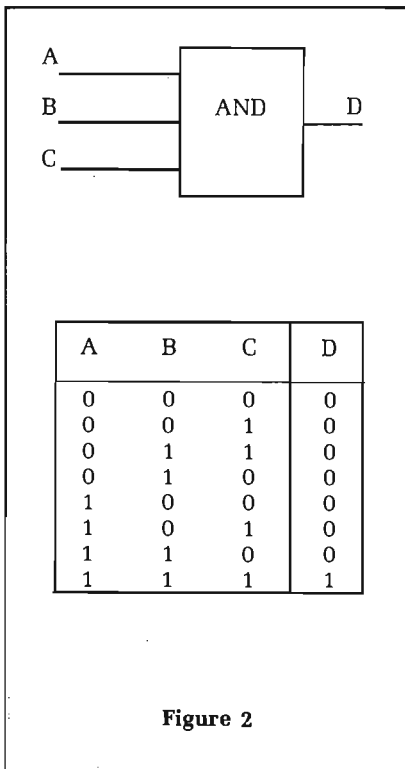

Figure 2

circuits is necessary to proceed in a rational way to sequential circuits.

Since the output of a logic circuit is a function of its inputs and a Boolean expression is a function of its variables, manipulations and simplification of a Boolean expression are related to network simplification.

Logic blocks

The five basic logic blocks needed to make up functional circuits are AND, OR, NOT, NOR, and NAND.

The AND block output equals 1 only when all of the inputs are 1 and is 0 when one or more inputs are 0. Figure 2 illustrates a 3-input AND block with its corresponding truth table.

The OR function output equals 1 only when one or more of the inputs equal 1 and equals 0 only if all of the inputs are 0. Figure 3 illustrates a 2-input inclusive OR block and its corresponding truth table.

Figure 3

The NOT function equals 1 only when its input equals 0. Also, the function equals 0 when its input equals 1. This block, of course, has only one input. Figure 4 illustrates the NOT circuit and its truth table.

Figure 4

The NOR function is, of course, a

Digital Basics

complemented OR (NOT OR) function. The output of this functional block is 0 only when one or more of the input variables equals 1. The output will be 1 only when all of the input variables are equal to 0. The NOR circuit and its truth table are illustrated in Figure 5.

Figure 5

The last of the basic building blocks is the NAND function (NOT AND). This function has an output equal to 0 when all of its inputs equal 1 and an output of 1 when

Figure 6

one or more inputs are 0. Figure 6 illustrates a 2-input NAND circuit and its truth table.

These five logic functions use the Boolean values 0 and 1 to represent the values taken on by the various variables. Realizing that 1 or 0 may be replaced by any discreet pair of values such as "+" and "-", or "on" and "off," the truth tables containing the algebraic values 0 and 1 can be used to describe the conditions on actual logic blocks. Just pair off the Boolean values 1 and 0 with state values such as voltages, polarities or other physical quantities. For instance, a value 1 may be assigned to the higher of two voltage levels and 0 to the lower. All that is necessary is that there be two distinct values of voltages to consider.

Positive and negative logic

The discussion above assumes that the Boolean value 1 will correspond to a "higher" or "up" or "on" physical value. This is not always done, and it is sometimes convenient to employ the opposite assignment of values.

$$- = 1$$

$$+ = 0$$

Digital basics

as negative logic, and in terms of the logic blocks previously considered the following statements can be made:

- an OR circuit performs the AND function
- an AND circuit performs the OR function
- a NOR circuit performs the NAND function
- a NAND circuit performs the NOR function
- a NOT circuit is still a NOT function.

To avoid confusion it is helpful to label the block with the function it performs and use a notation that will indicate when negative logic is being used on an input or output. An example of this concept is the use of the so-called bubble notation. A small circle or bubble is drawn at the junction of an input or output line and the function block to indicate the assignment of negative logic to that line.

As an example, consider the block shown in Figure 7.

A voltage or physical state truth table for both circuits of Figure 7 would be as shown in Figure 8.

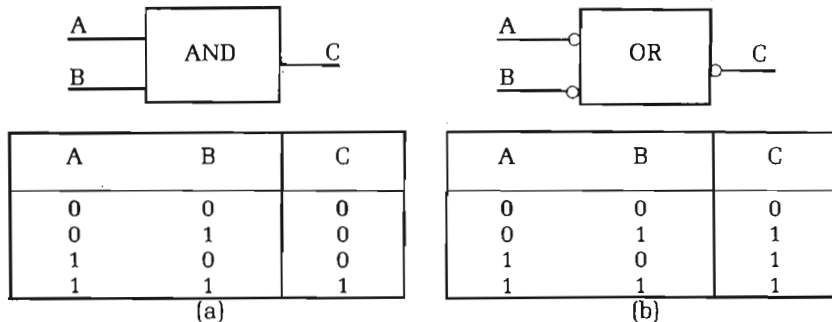

Figure 7

A	B	C
-	-	-
-	+	-
+	-	-
+	+	+

Figure 8

The negative logic versions of the OR, NAND and NOR circuits are shown in Figures 9, 10 and 11.

Note that by making use of complementation (inverters) OR gates may be used to perform an AND function and AND gates may be used to perform an OR function. This reasoning leads to the following statements regarding realization of Boolean expressions:

- Any Boolean function can be realized with AND and NOT functions only.
- Any Boolean function can be realized with OR and NOT functions only.
- Any Boolean expression can be realized with NAND functions only.
- Any Boolean expression can be realized with NOR functions only.

In the latter two cases the NOT function can be obtained by using only one input of the NOR or NAND blocks.

Minterm and maxterm forms

Maxterm and minterm are two

slow scan TV, compressed video, narrow band video . . .

TV FACSIMILE

. . . whatever you call it, it will expand your communications capabilities.

CVI systems convert normal TV signals to audio bandwidths, then transmit single frames of video information via the dial-up telephone network or dedicated circuits.

- Use standard CCTV cameras & monitors
- Transmission time from 4 to 156 seconds
- Resolution to 512 x 512 pixels
- To 256 levels of gray
- Available in 525 or 625 line standards

Specifications and applications material cheerfully sent on request.

VERSATILE.

O'Connor Model-50. A fluid head with 378 combinations.

NEW, ADJUSTABLE BALANCE, QUICK RELEASE PLATFORM.

The Model 50-D Fluid Head can be ordered with one of six different platforms. Each has its special features and purposes, but our newest is the ultimate.

First, it has a unique camera mounting plate which can be attached to your camera in one of eight different positions. This is used to balance your camera on the head, greatly improving the head's performance.

Besides an adjustable camera mounting plate, the entire platform (with camera atop) can be shifted

back and forth on the head so that you can find the precise center of gravity for whatever particular gear you're using at any given moment, such as heavy lenses, large magazines, etc.

It takes only a second to release your entire camera with O'Connor's new quick release option. To prevent accidental releases, it has a built-in safety feature.

WITH BASES, WE'RE LOADED.

The Model 50 can be ordered with one of six bases. Besides two Pro Jr. types, Mitchell, Arri 16 and

Arri 35, we also offer the O'Connor Claw Ball Base with the "ultra positive grip." The distinctive aluminum ridges

dramatically increase the holding power with far less effort needed to secure it in position. This Claw Ball design can also be adjusted $\pm 15^\circ$ to the horizontal plane within the top casting of the tripod to correct or alter your panning plane.

O'CONNOR COUNTERBALANCE DEFIES GRAVITY.

Three counterbalance spring options are available for the Model 50. It is important that you use the proper method to determine which spring is correct for your needs. If you're not sure, consult an O'Connor dealer or talk to us direct.

When you have the correct counterbalance spring, you should be able to stop the camera at any point in the normal tilting range and release the handle without the camera moving.

And it should take no more effort to tilt it upward than it does to tilt it downward. We specifically design counterbalance into all our heads to correct this natural act of gravity so that your "tilts" are as steady as your "pans."

MORE CONTROLS FOR MORE CONTROL.

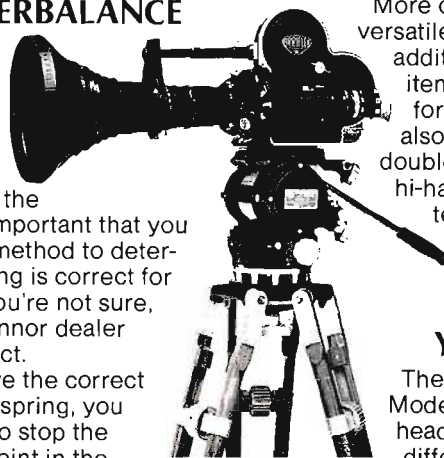

Like all O'Connor heads, the Model 50 is designed to provide maximum versatility. Separate controls for the pan drag, pan lock, tilt drag and tilt lock—all improve the flexibility and repeatability of camera movement.

O'CONNOR HAS MORE OPTIONS.

More options mean a more versatile system for you. In addition to some of the items already mentioned for the Model 50, we also have adjustable double video handles, hi-hats, cases, adapters, teak tripods and the ever amazing Hydro-ped.

ORDER IT YOUR WAY.

The basic O'Connor Model 50 fluid camera head can be ordered 378 different ways. If you're not sure how you want yours, maybe you should send for our brochure and price list to help you pick the equipment that's perfect for your needs.

O'Connor

"Stainless Towers... the best choice we ever made!"

No matter how many times we've heard this from customers, we'd love to hear it this time from you!

When you choose Stainless to fill your tower needs you get quick access to a wealth of experience. We don't just *sell* towers, we give you performance-proven advice on all aspects of the job, even ones you may have overlooked in your specs.

We'll show you how we cut costs with no sacrifice of quality, using automated processes for faster, cheaper and better results.

Stainless will build to *your* specs on *your* site or, we'll pick the best site, run soil analyses, then design, build and erect the optimum performance tower you need. We've been satisfying government, military and industrial customers, worldwide, for over 30 years. Every Stainless Tower, whether 200' or 2000', has priceless experience and reliability built in — to last!

Call Stainless, "the Tower People" and make a good investment for the future.

INSTANTANEOUS Digital Command

30 Functions for only \$2195

TFT Model 7601 represents a major breakthrough in remote control systems. Now, you can get 10 channels of digital command functions plus 10 channels of digital telemetry functions for less than \$2200! And it's the same high quality, reliable design that has made TFT equipment a standard in the broadcast industry. Just check this line-up of features:

DATA SECURITY ASSURED

Full command-code redundancy, *plus* odd/even parity check, makes digital data errors virtually impossible. A TFT proprietary feature. Even lightning induced noise has no effect on integrity of command functions.

INSTANTANEOUS COMMAND

Less than 0.2 second marks the time for a complete command/execute function with the new TFT high speed data modem.

ONE MAN CALIBRATION

The front panel of the Model 7601R (Remote Terminal) has a DVM and scaling potentiometers so that just one man, on-site, can perform the FCC required weekly calibration. A studio lock-out switch provides complete operator safety for on-site work.

CHOICE OF TRANSMISSION METHODS

Model 7601 interconnection can be either telephone lines or radio links which include STL, TLS or SCA.

MINIMAL SERVICE DOWNTIME

Quick-disconnect rear barrier strips allow fast removal of the 7601 from the rack without disconnecting any of the interface wiring between the remote terminal and the transmitter or alarm sampling points.

TEN OPTIONAL STATUS CHANNELS

In addition, 10 status indicator functions may be factory or field installed to provide instant status display and alarm.

The Model 7601 is just one of a full line of field-proven, reliable, fail-safe remote control systems offered by TFT. Other remote control systems designed for AM, FM and TV include the Model 7610, a 110-channel digital telemetry/status/control system; the Model 7815, a fully independent 15 to 45 channel DIRECT control/status/alarm system; the Model 7840 data acquisition, automatic logging and alarm system and a complete line of remote control accessories. They're all available from TFT. For all the facts on these and other TFT products call or write:

TFT TIME AND FREQUENCY TECHNOLOGY, INC.

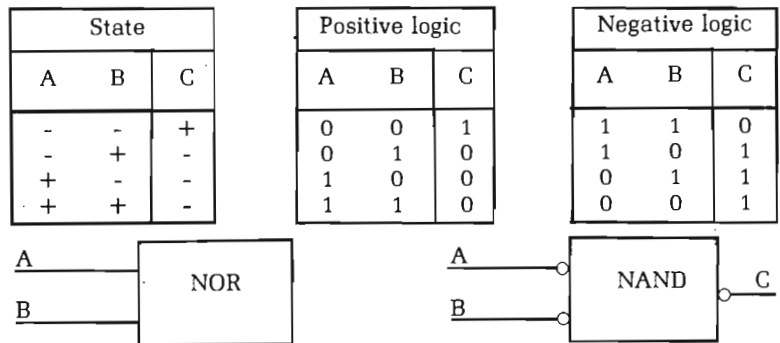

Figure 11 [NOR circuit]

Digital basics

very common forms for logic expression or Boolean equations. Either form may be used as the basis for a logic circuit. A special form of truth table (which is now obsolete) was the origin of the terms.

- The minterm form may also be thought of as a sum of products formulation. For example:

$$X = (ABC) + (\bar{A}BC) + (A\bar{B}C)$$

- The maxterm form can be considered to be a product of sums formulation such as:

$$X = (\bar{A} + \bar{B} + C)(A + \bar{B} + \bar{C})$$

In terms of logic circuits, a particular expression may be implemented by either form as a result of deMorgan's Theorem. For example, to implement the expression

$$X = (\bar{A}B) + (AB),$$

a minterm formulation would be as shown in Figure 12.

Figure 12

A logic function may be imple-

mented in maxterm form as shown in Figure 13.

Figure 13

This circuit is obviously implemented from the expression

$$X = (A + \bar{B})(\bar{A} + B).$$

The sum of products, or minterm form of an expression, may be written directly from a truth table. That is, the truth table can be considered to be a minterm formulation. For example, the truth table in Figure 14 can be translated into the circuit as shown.

A	B	C	X
0	0	0	0
0	0	1	1
0	1	0	0
0	1	1	0
1	0	0	0
1	0	1	1
1	1	0	0
1	1	1	0

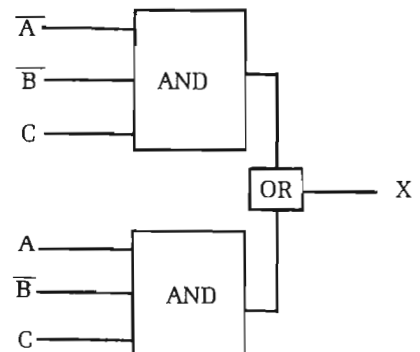

Figure 14

Consider a 0 in the A column to be \bar{A} and a 1 in the A column to be A with a similar interpretation for the B and C columns. Thus,

$$X = \bar{A}\bar{B}C + A\bar{B}C$$

can be written for the X variable by forming terms for each combination that results in X having an entry of 1. The circuit shown can be drawn directly from the Boolean equation.

The minterm form is the most commonly used; however, the maxterm form may be used. It is formed by complementing a minterm truth table. For example, given the minterm table in Figure 15(a), complementation results in the maxterm table of Figure 15(b).

A	B	X
1	1	0
1	0	1
0	1	0
0	0	1

(a)

A	B	X
0	0	1
0	1	0
1	0	1
1	1	0

(b)

Figure 15

The minterm and maxterm forms perform identical logic functions and are interchangeable from the standpoint of logical function. One of the formulations may appear to be more complex than the other due to redundant terms. Inclusion of these redundant terms represents an unnecessary expense and needless complexity when designing a circuit. Therefore, it is desirable to denote some design effort to simplification of the algebraic expressions or networks.

The next part of this series will consider some of the methods of simplification. These methods are all based on the basic premise that input combination can be divided into three groups:

- combinations for which an output is desired, i.e. output equals 1;
- combinations for which no output is desired, i.e. output equals 0; and
- combinations which can't occur (physically impossible) or where it doesn't matter if the output is 1 or 0.

The inclusion of terms of the third type may either complicate an expression (increasing the complexity and cost of a circuit) or may actually simplify an expression (reducing the cost and complexity of a resulting circuit). Thus, the simplification methods discussed are crucial in optimizing a design. □

Fidelipac gold is on the standard!

If it isn't gold, it isn't a Fidelipac Test Cartridge. Only Fidelipac's new Gold Standard test carts are factory produced, certified, calibrated, sealed and guaranteed to meet NAB standards for test cart repeatability and uniformity from pass to pass . . . cart to cart.

September 1979 *Broadcast Engineering* 121

National Radio Broadcasters Association 6th Annual Conference & Exposition

October 7-10, 1979
Washington Hilton Hotel
Washington, DC

NRBA '79 attendees will see the largest show in NRBA history. Previous exhibitor sign-up records already have been exceeded, and new attendance records are expected.

The exhibitor list for the convention is still growing, but registrants

will receive a program listing all exhibitors and their booth assignments.

Those not attending NRBA '79 may use the following list to receive NRBA '79 exhibitor data. This listing is up-to-date as of press time, but a complete replay of NRBA '79 containing information gathered at the show will appear in the November issue of **BE**. For exhibitor information, circle the number following the equipment or service on **BE's** reader service card. The exhibitor(s) will mail the requested information.

(Where available, specific exhibitor products for NRBA have been listed; where this information is not yet available, "product line" indicates that NRBA-related information will be mailed.)

The italicized listings denote new products being introduced at NRBA '79.

Further information on the convention may be obtained by contacting the National Radio Broadcasters Association, 1705 De Sales Street N.W., Suite 500, Washington, DC 20036, (202) 293-3570.

Dielectric: Supplier of quality components to the communications industry

For 40 years Dielectric has supplied various segments of the communications industry with high quality, durable components and systems.

For the *Broadcast* industry, motor driven coaxial switches, transmission lines, high power loads, and waveguides. For the *Telephone* industry, compact dehydrators for cable drying. For the *2-Way Radio* industry, RF wattmeters and dummy loads.

Today, Dielectric recognizes its responsibility and continues producing high quality components for this important communications industry. For more information on Dielectric's products and services, circle the appropriate reader service number:

DO YOU NEED A CHARACTER GENERATOR

THAT CAN DO ALL THIS FOR YOU?

- Match your budget and requirements with a system that can grow in the future with your needs.
- Give you your choice of one or two channels, desktop or rack mounting, basic or extended font capacity.
- Provide high character resolution, multistyle or multisize font capacity.
- Provide a high capacity, easy to use diskette storage system for fonts and displays.
- Give you advanced capabilities, such as animation, in even the most inexpensive model.
- Give you a choice of optional keyboard font compose or camera based font/logo composition.
- Give you high reliability, simple rapid diagnostics, high equipment reliability.

YES?

YOU NEED A VISTA 80 GRAPHICS SYSTEM!

Change Sound to Silence with a **TABERASER**

This rugged, heavy duty bulk tape eraser wipes sound from all magnetic tapes, cartridges, cassettes and magnetic film stock; handling up to 2".

It erases with minimum residual noise because the field automatically diminishes at the end of each 30-second cycle. A thermal control and blower keeps the unit below 71° C.

Available for 60Hz or 50Hz operation.

For the distributor in your area—Call or write:

SPORTSCASTER HEADSET

ISN'T IT TIME YOU GAVE YOURSELF A HELPING HAND ???

Hands-free communication is within your reach. Television Equipment's well-proven Sportscaster headset, with integral dynamic boom mike, gives you complete freedom of movement - just right for those tense moments when you need to consult your references.

The headset has a...

Dynamic Boom Microphone; 400 OHMs, frequency range 50-15,000 Hz, sensitivity 2mV (loaded) for close speech.

Double Headphones: independently wired, 200 OHMs each, frequency range 50-15,000 Hz.

Ventilated foam cushions eliminate perspiration and let you hear ambient sound (optional ear-enveloping cushions).

Weight: 6½ oz. Practically unbreakable components. Optional cough switch.

at: \$119 - Single Phone
\$149 - Double Phone

Delivery from stock Satisfaction guaranteed

For your helping hand phone today...

WGBH engineers talk about the Ikegami HK-312

WGBH covers Boston Pops Orchestra concerts with Ikegami HK-312 cameras from Symphony Hall, Boston.

Eight Ikegami HK-312 studio color cameras are in service at WGBH, Boston, some dating back to October 1977 — long enough for intelligence on their performance. From recent interviews with key WGBH people, read these excerpts.

Pops without noise

Tom Keller, Director of Engineering:

“The HK-312s have such high sensitivity that we were able to reduce significantly our light levels at the Boston Pops and Symphony telecasts. Yet, despite the major light reduction, we experienced no visible noise with the HK-312s... With their remarkable reliability record, we can depend on 6 cameras for 6-camera coverage, and not 7 for 6 as in the past. After all, you can't stop a live orchestra performance for a retake if you've lost a camera.”

2 IRE, but a complaint

Ken Hori, Senior Engineer for Advanced Development:

“We tested several camera makes for RFI within a quarter-mile of a 50 KW radio transmitter. The HK-312 measured 2 IRE, whereas most others were in the 5 to 7 IRE area, and some as high as 20 IRE... For symphony remotes we'd need 2 to 5 hours for warm-up, but nowadays we're set up in less than an hour... We like its straightforward design — example, its truly high signal-to-noise ratio as compared to other cameras that resort to reduced bandwidth to attain a comparable ratio but wind up delivering noise too...”

We did get one complaint from the maintenance crew. They said that because they rarely found the problem of a down HK-312, they would never get to know the HK-312 well enough to fix it.

Washouts and dropouts

*Bill Fairweather,
Video Control Engineer:*

“During a lighting seminar staged here by Imero Fiorentino Associates, an actor in a normally lighted scene held up a sheet of white paper with printing on

it to show loss of detail in the case of more than 60 percent tv white reflectance. The HK-312, however, was able to retain enough detail for the printing to be readable on the monitor.

Next came a demonstration of the dangers of too much or too little light on a chroma-key background. The HK-312 held the key to such a low light level on the blank background that the lecturer grinned and said, “I guess WGBH has pretty good cameras!” and went on to the next subject.”

The HK-312 is the camera that met WGBH criteria for performance, stability, and reliability. They also have HL-53s, high-performance portable cameras that interface with HK-312 CCUs and can operate portably with their own CCUs.

Adapters for triax cable, using digital techniques, make their cameras remote-usable at nearly a mile from base stations, yet easily revertible to multi-core cable whenever needed.

In daily use, their HK-312s and HL-53s are interfaced with microprocessor-computer control units that automatically cycle them through all set-up adjustments, including black-and-white balance, flare and gamma correction, video gain, and eight registration functions, then recheck all those adjustments — all within 45 seconds. The cameras can also operate independently of the set-up computers, a feature that is an Ikegami exclusive.

If all of this suggests that the HK-312 is probably the best studio/field color camera in the industry, consider this: camera, set-up computer, and triax adaptor are not only operational, they are deliverable. For details or a demonstration, contact **Ikegami Electronics (USA) Inc.**, 37 Brook Ave., Maywood, NJ 07607, (201) 368-9171 / West Coast: 19164 Van Ness Ave., Torrance, CA 90501, (213) 328-2814 / Southwest: 330 North Belt East, Houston TX 77060, (713) 445-0100.

Circular polarization (CP) field tests

By Bill Loveless, chief engineer, Bonneville International

Circular Polarization (CP) does not provide better television reception than the traditional Horizontal Polarization (HP), based on a series of field tests Bonneville International Corporation conducted in the Salt Lake Valley. Both the field tests and electromagnetic field theory demonstrate that horizontal signal polarization is generally superior to CP in poor reception areas.

The tests were implemented to evaluate the installation of a CP transmitter in Bonneville International Corporation's Seattle, WA, television outlet, KIRO. The tests were conducted in the Salt Lake Valley because the company has two similar high-band VHF stations with transmitters located at the same site. Both are public television stations, and so both broadcast materials from the same sources. However, one station uses a CP transmitter, and the other employs the traditional HP transmission mode. Thus, the tests were conducted under actual broadcast conditions and in a wide variety of receiver locations, including open areas, urban high-rise building areas, mountainside areas, and others.

Bonneville International Corporation recently purchased a double power TV transmitter for a new CP installation at the company's Seattle outlet, KIRO TV Channel 7, on the premise that CP is a good solution to correct TV reception defects such as multipath ghosts, as reported in various trade journal articles. However, two well-known TV consulting engineers independently expressed

to us their concern about the degrading effects of CP under certain reception conditions. In order to help solve our dilemma and to get some factual information first hand, Bonneville Engineering decided to run some comparative field tests and document the results.

Being based in Salt Lake City, it was convenient to make comparative CP/HP tests, since the two VHF TV stations co-located at the same transmitter on Mt. Vision, 20 miles southwest of Salt Lake City. KBYU, Channel 11, is CP with the new Harris transmitter and antenna, while KUED, Channel 7, is conventional HP. The field tests were designed to address the following questions:

- Does CP cancel multipath ghosts and reflections in the TV picture? If so, under what conditions and how much?
- Does CP provide a stronger, more snow-free TV picture than HP? If so, under what conditions?
- How much does CP cause multipath ghosts and reflections that degrade rather than improve TV reception? Under what conditions?

Test antennas—A specially built CP receiving antenna cut to Channel 11 was ordered from Simplicity Tool Company of Portland, OR. The antenna consists of a 5-element horizontal yagi mechanically phased 90° in front of a 5-element vertical yagi on the same boom. The boom is end mounted to the mast behind the vertical reflector for minimum mast interaction. A remotely switchable phasing system is used to switch the CP antenna feeds between vertical, horizontal, right-hand circular, left-hand circular and a separate rabbit-ear antenna mounted atop the vertical mast. The rabbit-ear antenna length was adjusted halfway between maximum Channel 7 and 11 video carrier signal strength on the field meter with elements set 45° from vertical.

Additionally, two separate 5-ele-

ment horizontal yagis (one cut to Channel 7 and the other cut to Channel 11) on separate masts were used to compare the HP component of the Channel 11 CP signal with the Channel 7 HP signal. A Rohde & Schwarz field meter, a 17-inch Sony color TV set, and a 35 mm SLR color film camera were used to document the picture.

Test procedure—Using a control site with near perfect TV reception conditions approaching free space, the video carrier signal strength readings along with color photographs of the TV set picture were taken using the various antenna and polarization combinations on the CP station, Channel 11, and the HP station, Channel 7. After obtaining predictable free space results at the control site, 11 other sites, each with various reception conditions, were selected and visited. The same group of measurements and photographs were taken at each site. In every case, the antennas were positioned for a uniform signal field at a fixed height of 15 ft and oriented for maximum signal.

Results of CP tests—In the good reception areas, the CP signal delivered the expected "double power" signal strength on the CP receiving antenna with excellent picture quality and no ghosts. However, to our great disappointment, at the poor reception sites where ghosts and multipath are visible, the Channel 11 CP signal on the CP receiving antenna did not reduce ghosts and multipath reflections. In fact, the conventional HP Channel 7 had the strongest signal with the least ghosting on all the antenna combinations, including rabbit ears. The performance of CP was disappointing, to say the least.

In trying to explain the poor CP results, the theory was studied again. Theory indicates that in order for a CP receiving antenna to cancel CP ghosts, condition 1, the

Editor's note: In the wave of advances in CP antenna design and installation successes, this paper suggests some caution may be exercised in system selection. The data and its interpretation, along with the conclusions and recommendations, are those of the author. They are printed here as a service to the industry, but, such publication does not imply **Broadcast Engineering** endorsement as to test results, interpretation or recommendations.

There's a good chance that we know more about studio lighting than you do.

vertical component of the CP ghost signal, must be phased 90 degrees leading and of equal amplitude to the horizontal component of the CP ghost.

Furthermore, to obtain double power from the CP receiving antenna, condition 2, the vertical component of the direct CP signal, must be phased 90 degrees lagging and of equal amplitude to the horizontal component of the CP signal. Both of these free space conditions seemed to be closely approximated in the good reception areas but not in the multipath ghost area.

CP theory also indicates that if the CP reflected ghost signal does not have the desired phase and equal amplitude relationship between its horizontal and vertical components, then the ghost is amplified and the direct signal is reduced. This is condition 3.

Realizing that there are two different types of ghosts, a study was made to determine what two reflection conditions will produce a condition 1 ghost, cancellable with a CP receiving antenna, and a condition 3 non-cancellable ghost. An important clue was found by comparing the TV set picture photos from the separate horizontal and vertical antenna signal components of the CP signal. In the multipath areas, the vertical component was consistently lower in amplitude and contained significantly more multipath ghosts, while the horizontal component was stronger and relatively free from ghosts. It became obvious that the defective vertical component of the CP signal was causing the condition 3 ghosts. With this clue, further study of Electromagnetic Field Theory confirmed and explained the CP test results so that predictions could be made.

General predictions regarding CP—Condition 1 ghosts can be produced by a CP signal reflecting from a highly conductive flat surface, such as the side of a metal skinned

Kliegl was in the lighting business for more than 40 years before and we've been furnishing TV lighting and control equipment for more than 40 years after the advent of television. The fact is we've been able to help more than a thousand studios and facilities, including the five major networks in North America.

Our seasoned staff will be happy to assist you in coming up with a carefully-engineered custom design to fit your specific and special needs.

Or, if you want a really economical buy, one of our typical packages will meet the usual needs for standard sized studios.

If you like the look of your studio before you've talked to us, you'll love it after it's lighted with Kliegl equipment.

For further information, see your local agent or dealer or write Kliegl.

Equipto Enclosures

... the highest quality electronic cabinets you can buy!

Here's why:

1. Designs are handsome and functional
2. Cabinetry is durable, rugged
3. Service — prompt and dependable

Whatever you're looking for in cabinetry or desk systems, we have several lines of modular enclosures available to effectively display and protect your instrumentation. Or, we'll custom design enclosures to suit your individual needs. Choice of color at no extra charge.

CP tests

building. These ghosts should be reduced by using a proper CP receiving antenna.

Condition 2 is a CP signal under free space conditions without ground reflections. Double power can be captured with a proper CP receiving antenna.

Condition 3 ghosts can be produced by a CP signal reflecting from a poor conducting dielectric surface such as concrete, asphalt, brick, dirt, rock, mountains, trees, water, grass, ice, apartment and office buildings and ground reflections. These ghosts cannot be cancelled by a CP receiving antenna. Path obstacles, irregular metallic shapes and power lines also can produce condition 3 ghosts. The critical angle associated with reflections from poor conducting surfaces is the Brewster angle. For typical ground reflections, the Brewster angle is 6 degrees. The CP signal component normal to the surface is reflected with rapidly changing amplitude and phase near the Brewster angle.

At angles of incidence equal to the Brewster angle, the normal component is absorbed and not reflected. At small angles near zero

degrees, both the normal and parallel components are reflected with equal amplitude and uniform 180 degree phase shift. At higher angles the normal component is poorly reflected with increasing amplitude and phase shift approaching zero degrees. The CP signal component parallel to the surface is reflected at full amplitude and 180 degree phase shift for all angles of incidence. These CP signal reflections produce condition 3 ghosts that cannot be cancelled with a CP receiving antenna.

The Electromagnetic Laws of Physics and CP Theory may be used to explain and predict the poor results obtained in the CP tests in the multipath areas. The same laws and tests also confirm the conclusions reached by panel 9 of the National Television Standards Committee, NTSC, when in 1941 it observed that horizontal polarization was superior to vertical polarization in regard to multipath and ghosts.

Conclusions—After gaining an understanding of the practical capabilities of CP, with its limitations, the useful benefits of CP seem to be somewhat diminished. CP works properly under free space condi-

tions where it is really not needed. Under these ideal conditions, CP's advantages are:

- Condition 1 ghosts can be reduced with a proper CP receiving antenna.
- Double power can be extracted with a proper CP receiving antenna.
- Rabbit-ear and fish-pole antennas are less critical to adjust because the vertical component is present in CP. However, as expected, these antennas produce no more power from a CP signal than from an HP signal.

In the fringe and multipath reception areas where help is really needed, CP has a disadvantage. The defective vertical component of the CP signal is usually low in amplitude and has multipath ghosts. This non-correctable condition causes condition 3 ghosts and reduces the signal strength on all antennas, including CP and rabbit ears.

Recommendation—Both CP field tests and Electromagnetic Field Theory demonstrate that horizontal signal polarization is generally superior to CP in the poor reception areas on all types of antennas. Standard HP is therefore recommended over CP as the preferred mode of TV transmission. □

The TV Blanking Analyzer You've been hearing about!

With AFA's HV-100 TV Blanking Analyzer even an inexperienced operator can take horizontal and vertical blanking measurements **in seconds**, using only a wave form monitor or pulse-cross picture monitor.

Position the reference markers at the desired points on the monitor and interval is automatically indicated on large digital display... **that's all there is to it!**

Measurements Provided

- Picture Blanking
- Set Up Blanking
- Front Porch
- Sync Width
- Burst Length
- Sync to: Burst End
Burst Start
Set Up
- Vertical Blanking

Specification Highlights

- Horizontal Resolution** .02 u sec
- Vertical Resolution** 1/2 horizontal line
- Horiz. Time Reference** 10 MHz Crystal Clock
- Horizontal Range** .5 to 14.5 u sec
- Vertical Range** 12.0 to 30.0 lines

DIRECTIONAL ANTENNA HANDBOOK

by Robert A. Jones, PE

ONLY \$12.95

Based on the recent **Broadcast Engineering** series, this 104 page volume focuses on the essentials of directional antennas then expands to encompass the entire arena of design, from a two tower array through twelve tower systems. Chapters cover such important areas as:

- Design of nighttime directional antennas.
 - Calculating RMS efficiency.
 - The FCC's Standard Method of calculating directional antennas for submission with FCC applications.
- Additional sections review the basic math used in calculations and provide tips on using computers and hand calculators for computation.

Whether you use a consultant or design your own systems, this book is an absolute must. Order yours today!

Blanking Problems?

A new instrument from World Video, Inc. will enable you to check your blanking and measure it quickly and accurately.

The PWI provides a quick and accurate measurement of any pulse or combination of pulses on the H line. In addition, vertical blanking may be measured to an accuracy of 1/2 line with independent measurement of vertical field A & B. All measurements are easily read in microseconds or lines on the front panel LED display.

PWI is installed in-line with a waveform or pulsecross monitor and does not require modifications to other equipment.

Tape recorder air-checks programming

By John Shepler, chief engineer, WROK/WZOK, Rockford, IL

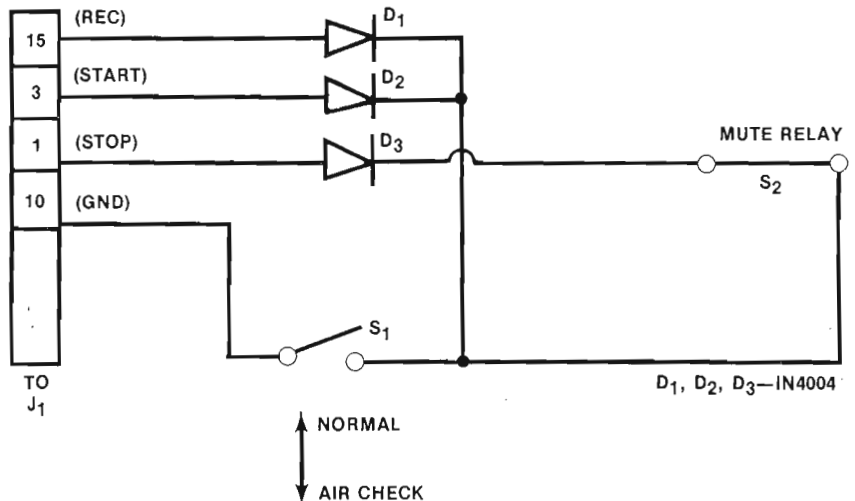

Many program directors and announcers air-check their shows by having a recorder running only when the studio microphone is on. The usual method involves wiring the motor circuit of a cassette machine through the microphone muting relay. Although this works, it is desirable to have a studio quality reel machine start and stop in conjunction with the microphone switch.

At WZOK there are two ITC 850 reel-to-reel recorders in the FM control room. An enclosed circuit starts the recorder when the microphone is on and stops it when the mic goes off. A switch (S1) determines whether the machine will run normally or in the air-check mode. When S1 is closed, the record and start circuits are energized through diodes D1 and D2. The stop circuit is controlled through diode D3

which is routed through a set of normally closed contacts on the microphone mute relay in the board (S2).

If the microphone is off, the mute contacts are closed and the stop circuit is energized. The stop circuit will take precedence over the other circuits and the machine will remain stopped. When the relay contacts open (microphone on) the stop circuit will be open and the machine will start in the recording mode.

The circuit is simple to construct using three rectifier diodes (type 1N4004 or equivalent). The recorder connections are made on the remote control plug (P1) which may also be used for its normal function. When the switch S1 is open, the recorder behaves just as though the air-check features was not connected. All normal remote control connections also remain the same.

Back in action with improvised horn feed

By Steve Flyte, ENG engineer, KATU, Portland, OR

KATU, the ABC affiliate in Portland, OR, has used live/tape ENG capabilities extensively and aggressively since January 1976. So, I

figured December 27, 1978 was going to be more or less a routine day for me. I was driving our Mobile Two news van to Salem, 50

ELECTRONICS UPGRADING Seminars

at ST. LOUIS, MO.

CONSUMER/DEALER TECHNICIANS
NOVEMBER 7 - 9, 1979

INDUSTRIAL MAINTENANCE TECHNICIANS
NOVEMBER 14 - 16, 1979

SPECIAL OPTION - VTR Servomechanism Servicing
NOVEMBER 10 or 17, 1979

Consumer or industrial electronics upgrading made easy.
Unique, concise tell-and-show methods, plus hands-on experience,
place new electronics technology at your fingertips.

So VITAL that no electronics servicer should miss it!

SUMMARY OF THREE-DAY SEMINAR

DAY 1 - TRIGGERED SCOPES Hands-On Workshop

Learn to manipulate modern scopes wisely and knowledgeably. Speed up troubleshooting of even the most complex equipment. This familiarization program explains controls for CRT, vertical input, time base, and triggering...plus advanced scope techniques. Scope displays become easy to analyze after this day-long session, with Forest Belt instructing.

DAY 2 - SOLID-STATE UPGRADING and Updating

Gain unexpected insight into new and established solid-state devices and technology. Practical, entertaining tips on solid-state circuitry teach you how to troubleshoot quickly. Industrial maintenance session covers higher-power solid-state devices and applications. Wayne Lemons instructs.

DAY 3 - DIGITAL ELECTRONICS for Home or Industry

Clear up mysteries of digital electronics: gates, flip-flops, R-S stages, truth tables, and more. Practical help in troubleshooting digital circuits. Instruments that make servicing clear and direct. An information-packed day that puts you on top of digital technology, whether for consumer or industrial electronics. James R. Manery and Forest Belt instruct.

VTR Servomechanisms - OPTIONAL (Separate Fee of \$150)

Take the uncertainty and frustration out of VTR servicing. Forest Belt guides you step-by-step through the electronic heart of motor control in Beta and VHS video recorders. Truly understand the unusual three-phase, electronically commutated, direct-drive DC motor that spins the helical-recording heads drum. On the day industrial technicians attend, U-Matic will be treated too.

FEES:

Consumer/Dealer Tech Session November 7, 8, 9, 1979	\$ 750 *
Industrial Tech Session November 14, 15, 16, 1979	\$ 850 *

Sorry, but the Tangent Series 80 Production Console offers only two standard features.

The two most important features are the basics of the Tangent Series 80 . . . flexibility and reliability. From those **you design** the system that fits your complicated needs.

Reliability? We build the series 80 custom production consoles specifically for the broadcast, film, and video production industry, using only durable, quality components such as Penny & Giles conductive plastic faders and extrusion-anchored mainframes. Built solid, built for years of round-the-clock use.

Flexibility? Semi-parametric equalization, multiple echo and cue sends, and up to 16 output assign busses are some of the options that give you full capability for any production situation.

You design it? What you need and want on your console is strictly up to you . . . except we insist you always take our two standard features. Call us at (602) 267-0653 today and let's make plans.

Station-to-station

miles south of Portland, to meet the Channel 2 and ABC Network news teams to transmit their videotapes back to Portland for their respective news broadcasts.

After meeting with the crews and discussing our operation plans for the day, I proceeded up the hill not far from the Marion County Courthouse to establish our microwave circuit. It was when I arrived up on the hill that I discovered our Nurad circularly polarized feed section for our 4-ft dish on the roof was missing. Like most of the news vans around the country, Mobile Two stores its feed section inside the van when traveling, and when the dish is erected for transmitting, the center feed horn with its four arms is held to the dish with four small tabs.

Without that one component, our \$275,000 news van was not worth a thing to anybody. The first idea that came to mind was to try to fabricate some sort of makeshift assembly to fit to the dish. A telephone call to the local TV station proved negative—no extra 2GHz dish components laying around the shop. Next, I tried the Microflect Company. They install large microwave repeater sights all over the nation. After going through their junk box, all we could come up with was a feed horn for a 10-ft dish, instead of something for the 4-footer mounted on the van. Figuring that the focal length would be wrong, I decided to try it anyway.

The borrowed feed assembly was quite heavy and approximately 4-ft long. It required lots of rope and gaffer tape to hold it into place.

After installation, I contacted the studio—nothing. I really didn't expect anything with the focal length being so far off.

Almost ready to bag it with the agony of defeat, I decided to try one more thing. There happened to be a short piece of RG-11/U coax in the van with an N connector on it. I called back to the station and asked the assistant chief engineer to look up in the Nurad manual what the proper focal length was supposed to be. He called back and said approximately 22 inches.

At this point, I took some of my 15 years of experience with amateur radio antennas to mind (dipoles and yagis) and fanned the shield and center conductor on the end of the coax into a small dipole, each side being ¾-inches long. I ran the coax through a small hole in the center of the dish, pulled it out to 22 inches

from the center, and just held the little dipole out in midair with lots of gaffer tape supporting it. I oriented the dipole in the horizontal configuration, and called the station again to look for my signal.

I went up on the roof of the van and started tuning the dish. To everybody's surprise a trace of bars were starting to appear on the monitors and scopes at the station. We all felt like Marconi sending his first radio signals across the Atlantic. More tuning proceeded, and finally the studio told me we had a fine quality, fully broadcastable signal with this Rube Goldberg concoction. We were all amazed. (Have you ever opened up one of the Nurad horns and seen the complexity of plumbing, coaxes, etc.?)

Soon, Channel 2 News and ABC arrived, and they sent their tracks and everybody was happy. Later that night, I drove back to Portland, and we did a live basketball remote from Memorial Coliseum for Channel 2 News. What a day!

FREEZE-FRAME & SLO-MO

Station-to-station

2-tone attention signal broadcasting system

By Patrick Bryant, studio/theater engineer, ABC, Hollywood, CA

In the past, the FCC has required participating broadcast stations to have equipment for broadcasting a warning signal in the form of a carrier-break followed by a 1000Hz tone. The FCC now requires two tones to be broadcast simultaneously at 853Hz and at 960Hz with a variation of less than ± 0.5 Hz for a period of time between 20s and 25s.

One class of such 2-tone broadcasting equipment includes a manual switch, that, when depressed, causes a switch to interrupt the audio signal from the broadcast studio and a generator to generate the 2-tone signals and a circuit that combines the two signals for amplification and modulation.

Conventional implementation of such a system suggests that (1) the time that the warning signals are broadcast is controlled by an analog circuit (such as an RC circuit); and (2) two sine-wave signals are generated in tank circuits for combination and application through the interrupt switch to the amplification and modulation equipment. Such circuitry is known in other types of tone transmitting systems. This type of system has the disadvantage of being relatively expensive and not as precise as desired. The expense occurs because timing equipment

with the required accuracy and the equipment necessary to generate the sine waves is expensive.

Signaling systems are known which generate the two frequencies digitally, convert them to sine waves, and combine these sine waves for broadcasting. Such a system is disclosed in US Patent 3,676,780 to Niemann. However, this type of equipment has relatively high distortion and low accuracy in the timing of the signals. One cause of the distortion is that the digital signals are applied directly without differentiation to resonant tank circuits for conversion to sine waves. This distortion, coupled with any distortion from the application of the signals through telephone wires from the interrupt switch, is a disadvantage which would impede the direct use of such equipment in a 2-tone attention signal generator.

A new circuit (US Patent 4,103,235) provides a novel 2-tone attention signal broadcasting system. The circuit was designed to provide (1) a 2-tone attention signal broadcasting system which is relatively inexpensive; (2) a system with a relatively simple and inexpensive timing system that provides precise timing of the duration of the signals; (3) a low distortion 2-tone system;

(4) a sine-wave generator which provides a low distortion sine-wave output signal from a square-wave input signal; (5) a system for generating two frequencies from a single clock frequency and combining them into a 2-tone sine-wave audio signal; and (6) an interrupt system for terminating the audio signal from a broadcasting station and transmitting instead a 2-tone attention signal to the amplification, modulation and transmitting equipment.

Accordingly, the 2-tone attention signal broadcasting system described here includes an encoder and an interrupt switch. The switch interrupts the audio signal which is being transmitted from the studio to the modulation, amplification and broadcasting equipment upon the depressing of a manual switch and transmits instead a 2-tone signal developed by the encoder for a fixed period of time between 20s and 25s. The 2-tone signal is received by receivers forming part of the 2-tone attention signal broadcasting system and decoded to provide an alarm and to demute certain radio receivers for a reception of further information.

Complete details of the entire system may be obtained by purchasing referenced patent from the US Patent and Trademark Office, Washington, DC 20231.

Building a digital lock

By John Linebarger, WREG-TV, Memphis, TN

We have constructed a digital lock to eliminate a large number of keys that would be necessary if a majority of station employees were to have access to the building entrance or any door for that matter. Additionally, eliminating the need for even having a key would eliminate lost or stolen keys.

The lock can be constructed using TTL logic devices available from the shelf of any electronics retailer. A power supply of 150 mA should be plenty for power with the exception of the external door controls or alarm.

The circuit is very straight forward. In order to gain access, one presses four buttons or flips four switches to enable the device to function. After this is done, a TTL logic level is sent to a transistor driver for door release. If the wrong

A professional makes even the toughest jobs seem easy

That's the way it is with Waters professional audio attenuators. They feature glass-hard MystR® conductive plastic elements and slip rings as well as precious metal contacts. What's more, Waters computer-controlled curve-shaping technique assures superior tracking.

Result: smooth, quiet, long-life performance under the most grueling service conditions.

You'll find Waters complete line of professional audio controls meets every need — linear or rotary motion — mono, stereo, or quad. Two standard impedance values are now available, 600 or 10,000 ohms.

If you're into mixing, you ought to get the complete story on Waters audio controls. Write today, or call us at 617-358-2777.

It's the professional way.

Figure 2

An improved digital logic probe

By Edward P. Alciatore, III, weekend supervisor, WCKT-TV, Miami

There was an article in November, 1977, **BE** on how to build an inexpensive digital logic probe. Since everything is becoming more digital, I immediately started looking for the parts for this useful device. Several days later, after spending even less than the \$3.50 claimed by the original author, I had my probe ready for testing. The high and low lamps worked perfectly, but the pulse lamp would not function.

I determined that the circuit would work if the $1/\mu\text{F}$ capacitor had a large amount of leakage. This struck me as a rather undesirable situation, so I revised the pulse detector section as shown in Figure 1. I also raised the input impedance by using voltage divider R1 (680 K), R2 (300 K) to bias the probe at 1.5 V when no input is present and I selected resistors R3 (2600), R4 (1900) and R5 (500) to provide a low threshold of 0.5 V and high threshold of 2.4 V. This combination of probe bias and threshold voltages provides a better match to TTL characteristic and turns all the

lamps off when the probe is not being used or if the circuit being probed is in a high impedance state. This precludes getting false low readings.

I used this version for some time but found that, useful as it was, it did not show the fast, low duty cycle pulses often found in digital circuits. These pulses are one of the prime reasons for using a logic probe. You always miss them on the scope due to limited bandwidth, improper triggering or a brightness control that stops $1\frac{1}{2}$ turns before the necessary intensity level is reached.

Looking at the circuit again, I quickly determined that the limited bandwidth of the LM339 was the problem. However, since we are trying to detect logic pulses, logic ICs should provide a good means of catching them. In Figure 2, the 74123 is a dual, edge triggered, mono stable multivibrator. By using the normal input on one section and the inverting input on the other section, one of the outputs will be present for either positive going or

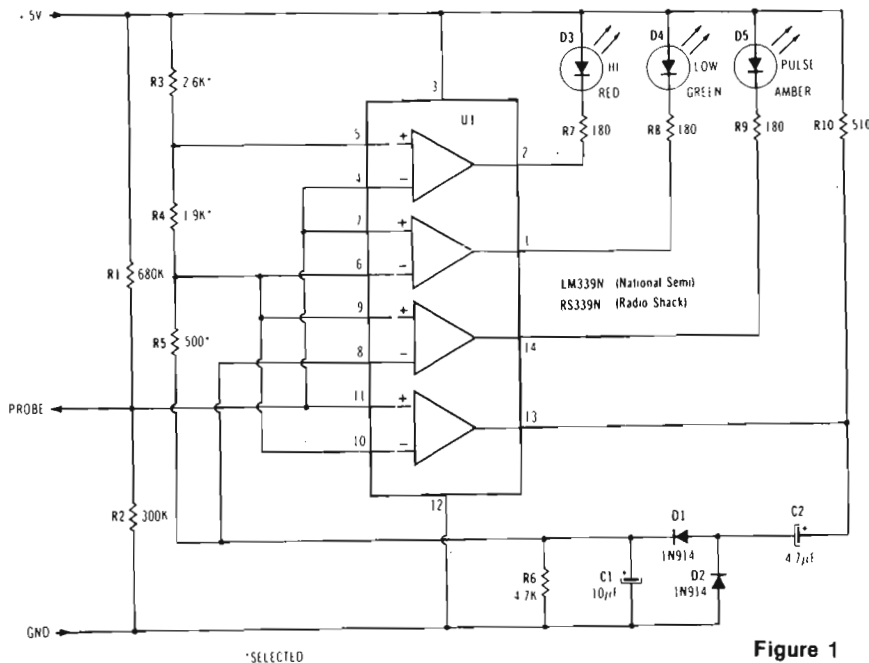

Figure 1

OTARI MX-5050-B BROADCAST RECORDER

Otari's new MX-5050-B continues the proud heritage of the MX-5050 Series, a recorder now extensively used by television and radio broadcasters worldwide. The new version has all the proven features of the earlier pace setter, including front adjustable bias and record EQ, built-in test oscillator, edit and cue, splicing block, motion sensing, selective reproduce, and adds many new features all its own: ultra reliable TTL switching, noise free inserts, three speeds in field-selectable pairs of $15/7\frac{1}{2}$ or $7\frac{1}{2}/3\frac{3}{4}$ ips, 24 dBm headroom with 28 dBm output into 600 ohms, dc capstan servo with $\pm 7\%$ speed control (to match program length to a time slot), peak reading LED plus standard full sized VU meters, return to zero memory, and LED function indicators, among others.

Add these features to a 66 dB S/N ratio and a frequency response from 30 to 22,000 Hz ± 2 dB at 15 ips and you have a machine that competes with those costing thousands of dollars more.

Compare features and benefits, compare performance, compare our track record for reliability. Call Ruth Pruett at 415/593-1648.

Station-to-station

negative going transitions. R11-C1 and R12-C2 determine the length of the output pulses and therefore how long the pulse lamp is lit. The values shown should provide about 0.1 s.

The inverted outputs from U2 are combined in U3 which acts as a NOR gate. This output will be high for 0.1 s after each positive or negative transition in the probe. The third section of U1 compares this with a 1.5 V reference and drives the pulse lamp, D3. The other section of U3 is used as a buffer between the probe and U2; it accounts for most of the input loading of 1.2 unit TTL loads.

The high and low detectors are simple voltage comparators as in the original circuit. F1 and D4 form a protection circuit which I haven't tested so you may use them or not as you wish.

I packaged the circuit with a double sided PC board in a 1"x2"x3" (nominal) plastic box with a metal cover. The circuit board is mounted on four 4-40X 3/4-in screws

used as standoffs and the LEDs are mounted with long leads to allow them to fit through holes in the cover. I kept the probe and power leads to a reasonable length to avoid stray capacitance and pickup. A single sided board with jumpers, perfboard or even the IC bricklaying techniques could also be used.

The main disadvantage of this approach is that the probe is now limited to the various forms of TTL and a 5 V supply voltage. On the positive side, the 74123 is guaranteed to detect 40 ns pulses and in tests, my probe detected the shortest pulses I could breadboard, about 8 ns. This, plus the other improvements, should make it a very good TTL probe.

My cost was well under \$10 although you could exceed this amount if you pay top price for too many of the parts. I have found this probe to be an excellent TTL troubleshooting aid and it fits well in my policy of acquiring minimum cost test equipment with the maximum possible utility.

The 150 Hz/8kHz tone detector for cartridge machines

By Tom M. Cupp, broadcast operations engineer, WCTE-TV, Cookeville, TN

I have designed and built a 150 Hz/8 kHz tone detector for cartridge machines. A description of the circuit and components follows.

The power supply for the tone detector is a dual voltage supply that supplies the +30 Vdc (relay pull-in voltage) and the regulated +5 Vdc (detector circuit voltage). C1, C2 and C3 are filter capacitors. R1 is a 2 W dropping resistor. Five detector circuits can easily be powered by this circuit.

The preamp may or may not be needed, depending upon the cart machine used. I found it necessary with the ITC-3D and the Harris Criterion machines. This circuit amplifies the tone to a level that provides a good sample at the detector IC input. The amplifier is common to both the 150 Hz and the 8 kHz tones.

The 150 Hz detector IC is a LM 567 tone decoder phase locked loop with a 0 to 14% controllable bandwidth determined by R8 and R9 and adjusted by R9. These resistors provide an approximate bandwidth of 140 Hz to 160 Hz.

When the determined tone is detected IC 1 provides a saturated transistor switch to ground which, after passing through a 7404 inverter (one section of the 7404), is fed to the relay pull in circuit.

To best adjust the detector circuit:

- Hook a frequency counter to pin 5 of the IC. Adjust R9 until 150 Hz is obtained. You are adjusting the current controlled internal oscillator.
- From a reliable audio oscillator, feed 150 Hz into the IC on pin 3. (1 V or less)
- Place a dc voltmeter on pin 8 of the IC. If the circuit is working properly, you will read zero V when the tone is present.
- Remove the tone from pin 3. You should now read +5 V on pin 8.
- A slight adjustment of R9 may be necessary to compensate for characteristics of tape and cartridge machine.

Basic operation of the 8 kHz detector is the same as the 150 Hz

detector but the frequency determining components are different. Also C11 is a paper .047 μF used for stability. Frequency adjustments are made with R13. Frequency range or bandwidth is from 7500 Hz to 8500 Hz.

After passing through the 7404 inverter, the signal passes through a special delay circuit. This circuit may or may not be desirable for your operation. Some cart machines run through 150 Hz oscillator being started up. This action causes the 150 Hz detector (if used as an end of message detector) light to momentarily flash. The delay circuit is of 1

to 2 s delay and will prevent this. When saturated with several bursts of 150 Hz, the delay will in effect become invisible to the signal. Again, this action may not be undesirable to your operation. The delay circuit consists of C9 and R11.

The basic operation with the 8 kHz relay pull in circuit is the same as the 150 Hz circuit, but the delay circuit should not be used.

Practically all parts used in the circuit were bought at a local Radio Shack. Each deck or cart machine requires a 150 Hz and 8 kHz detector costing about \$30 each. The power supply costs about \$15.

- NOTES
- 1 All capacitor values are in MFD
 - 2 Resistors are $\frac{1}{4}$ watt 5% tolerance unless otherwise indicated
 - 3 C9 and R11 form a time delay on the 150Hz circuit. See 150 decoder section for details
 - 4 All voltages made with a B & K model 280 digital meter, no signal applied
 - 5 Voltages on IC2 are the same as IC1
 - 6 C11 (8kHz Detector) is a paper .047MFD capacitor for frequency stability
 - 7 RS1 is the remote start switch of the next deck to be started
 - 8 Relays are shown unlatched, no signal applied

ARS-1000 AUTOMATED RADIO STATION REPRODUCER

Widely used in leading automation systems. Specifically designed to meet their stringent requirements for highest audio performance, long term reliability and around-the-clock operation. Basically, the ARS-1000 is a work horse two-channel stereo reproducer with two tape speeds (7½ and 3¾ ips) and the following features: heavy duty 19-inch top plate, head mounted pre-amp to minimize hum, RFI and yield superior S/N, special long-life polyurethane pinch roller tire, friction reducing ball bearings, heavy duty motor and brake assemblies, and gold plated PCB connectors. It's easy to maintain with its plug-in PCB's and mother board configuration, easy-access flip-up head cover, and front adjustable output level and head azimuth (to minimize stereo phasing errors). Its operating features include removable Play and Stop, a ready light to indicate proper tape threading, head lifters for fast modes, a cue control for audible monitoring, and optional 25 Hz cue tone sensor. All connections are brought out to a single 25 pin Cinch connector.

Compare features and benefits, compare performance, compare our track record for reliability. Call Ruth Pruett at 415/593-1648.

Transmission line pulser

By Victor Castens, KOAM-TV, Pittsburg, KS

We developed a simple circuit (Figure 1) to enable us to locate noisy bullets or bad joints present in a transmission line. The test circuit is a 555 square-wave oscillator driving a one transistor output line driver.

Figures 2 and 3 show the results that were obtained when we checked each of the two feed lines to a RCA TF-12BH antenna. In Figure 2, T1 is located at the matching section near the base of the antenna, 573 ft from the test location. Figure 3 shows the results

of a test made of the second feed line to the same antenna. This oscilloscope photo shows the effects of a noisy bullet at 9.5 μ s, point T, 465 ft. Notice the thickened line to the right of T. This bounce is due to the varying resistance of the bullet near that level.

Figure 4 is a graphic diagram of the results of the pulse generator output with no line attached, an open cable and a shorted cable. A listing of velocity factors also is included for use in computing the distances involved to a line problem.

Figure 1

Figure 2

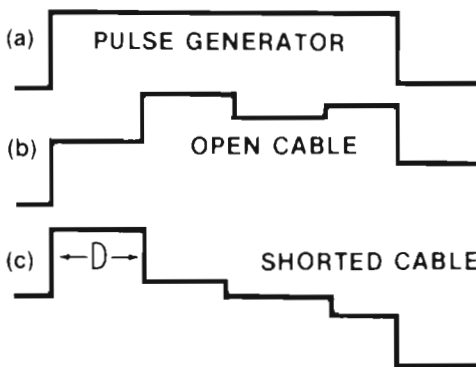

Figure 3

Figure 4

Electret condenser mics

By Ian M. Evans, news director, KRCR-TV, Redding, CA

KRCR-TV uses five miniature electret condenser microphones on the news set each night. Several more are used with the mini-cams by our commercial production department. We're satisfied with them, and while the \$50 to \$75 price each isn't hurting the station's finances, \$2.49 is more attractive.

You can readily see why the electret condenser microphone elements advertised for \$2.49 in a Radio Shack flyer (Catalog 270-092) caught my attention. Fidelity seemed fine, comparing favorably with the Sony ECM-50s we've been using. My response check was a little on the informal side, amounting to plugging one Radio Shack and one Sony into separate channels of a mixer and then listening to the mixer output on a good pair of headphones. If anything, the Radio Shack unit had a better bass response. A small response chart printed on the back of the blister pack that the microphone element came in showed a slight peak in output at 6 kHz, but, if it was there, I couldn't hear it.

Your \$2.49 investment brings only the actual microphone element, you'll have to think up a package and cabling for it. I developed the idea of sticking the element and a necessary capacitor inside the plastic barrel of a ¼-inch phone plug. The element makes a snug fit and no glue is necessary to hold it in place. Like most broadcast stations, the 3-wire Cannon-type plug is our standard and one was readily available from the engineering department's junkbox.

That little capacitor in with the mic element allows you to superimpose the audio output signal on the wire carrying the power. That's necessary if you're unable to come up with miniature 2-conductor shielded cable. The capacitors I used were 5 µF at 15 V, electrolytic. You can substitute on capacitance value here, anything reasonably close should work. Supply voltages from about 3 V through 10 V should work, I chose 9 V because of the easy accessibility of the NEDA 1604-type battery.

So far, the units I've put together have been running more than six months with no battery failure. If so, then 12 of these batteries amount to a 6-year supply. Naturally, a more expensive alkaline type battery should last substantially

longer, probably well over a year.

Fastening the microphone to the talent's tie or lapel can be done with an alligator clip or an old tie clasp. I fastened the mic to the clasp with a couple of drops of

cyanocrylate glue. This dries in a few minutes, with a strong bond.

The experiment also gave me a chance to improve on what I've considered a weak spot in the physical design of miniature micro-

Station-to-station

phones. My station always has at least one of these units in the shop for repairs, usually broken leads either at the microphone or at the output connector. I mounted the battery, battery connector and coupling capacitor in a small plastic utility box that fastens at the waist. An unexpected tug pulls off an

easy-to-repair solder joint rather than those microscopically tiny connections. The banker's clip used to hold the utility box to the wearer's belt is available at office supply stores.

You may have noticed the output of this microphone is unbalanced. Our microphones are 60 ft of cable

away from the control room, but we notice no problem. It will be necessary to ground the unused contact in the microphone output plug. This allows the microphone's output voltage to appear across the mixer's input transformer or transistor, while still keeping the cable shield at ground potential. □

Announcing the New PW-200 Pulse Width Measuring Set

The PW-200 generates precision markers which are locked to either station sync or to incoming video. These markers are inserted into incoming video for viewing on a standard B&W picture monitor or television waveform monitor.

VERTICAL or HORIZONTAL mode is selected via front panel switching and front panel controls are used to adjust the position of the markers to the start and finish of the pulse to be measured. The time between markers is computed by the internal 10 MHz clock and is numerically displayed on the LED readout.

STANDARD PW-200 FEATURES INCLUDE:

- Internally generated pulse-cross-allow measurements to be made on any standard B&W monitor.
- Separate, non-interacting controls for vertical and horizontal rate measurements.
- Two isolated outputs—one for pulse-cross monitor display and one to feed a waveform monitor with markers inserted into the video signal.

hardware report

Tech note: The solution to 3/4-inch tape edge damage

Most tape edge damage in 3/4-inch cassettes occurs when the pack rides at the wrong height inside the cassette, having been positioned at that height by a misaligned spindle. In some cases, the tape will continue to play in the defective drive without any sign of damage, since the tape in the cassette has adjusted to the particular height of the misalignment. But as soon as the cassette is moved to a correctly-adjusted drive, or a drive that is adjusted to a height different from the first, the tape edge rubs against the guides as it travels around the scanner to the take-up reel, or against the edge or reel of the cassette as it enters the cassette housing. In some cases, tape edge

Hardware report

.....

damage may occur immediately; at other times, the tape may be packed so high on the supply reel that it slips off the transport in the threading operation and wraps around the scanner, necessitating disassembly of the machine. This spindle height misalignment frequently causes the take-up pack to jam against the housing as it rotates inside the cassette. The resulting friction may become so serious that take-up is slowed; the capstan continues to pull tape off the supply reel without take-up tension and the tape rides loosely around the transport. When the hindered take-up reel intermittently moves, it yanks the loose tape into the cassette, resulting in stretched tape in addition to edge damage.

Tape edge damage is often unnoticeable by the naked eye when inspecting the tape, but the slightest damage along the edge of helical scan tape can have serious adverse effects on tape performance.

Symptoms of edge damage

The results of tape damage are visible long before the most obvious stage of malfunction—loss of vertical lock. When tape is pulled away from the traveling heads, even for

only a moment, loss of sync causes tearing and skewing of the picture in the RF portion of the screen and can travel up into the viewing area of the picture if damage is severe. Control track pulses recorded along the tape edge are crucial in maintaining proper head drum and capstan synchronization. When there is edge damage, the tape loses contact with the heads, which results in a rolling picture that continues to roll until the moving head can lock up with the next available sync pulse. Tape damage of this sort is usually permanent,

rendering that portion of the tape useless.

All of these problems can be solved by the proper alignment of reel tables. If the tape travels at a centered height, it will wind into the cassette without rubbing against the plastic reel, cassette housing or machine guides. The reels inside the cassette are able to rotate freely and smoothly with the motor speed. In addition, if reel tables are adjusted to the correct height above the drive registration planes, cassettes can be played on any correctly-adjusted drive without the resulting edge damage. Cassette life will be dramatically increased once the machine spindles are properly aligned.

Because previous manual means of measuring alignment were inadequate to measure and solve the problem, Memorex, 1200 Memorex Dr., Santa Clara, CA 94303, developed a cassette-like gauge called SHAG (Spindle Height Alignment Gauge). SHAG has dial indicators which, when placed into the drive, quickly register the difference between the machine registration post and the machine registration surfaces of the drive spindles. A mini-cassette version was also developed and tested, again with good results. The final version of the gauge can be used on all brands of standard or portapack VCRs.

With SHAG it is possible to check the registration planes to reel table height in less than a minute. The SHAG is placed on a set-up block which is designed for the standard heights of 3/4-inch cassette reel tables. Two dial indicators, one for the supply spindle and one for the take-up spindle, are zeroed using thumb screws on the side of the gauge. SHAG is then lifted off the block and placed into the videocassette drive, and the reading of the indicators give the height deviation from the standard spindle height (i.e. supply reel: 0.150-in; take-up reel: 0.197-in). Proper spindle height specifications within 0.0005-in are indicated on SHAG, with no disassembly of the machine necessary for the reading. This reading indicates the exact amount of shimming necessary to achieve proper spindle height alignment, and upon completion of adjustment and reassembly, SHAG will confirm that proper alignment has been achieved. Richard Engebretson, Engineering Services Manager, Memorex.

THE SUPER SYSTEM

RTS Systems introduces an innovative new intercom system for teleproduction communications in studio and field. With *Super System Phase III*, we've incorporated a number of advances which mark a significant increase in product versatility.

Our new design features the portability of 12 volt battery power and the convenience of dry-line operation. The system can be arranged with up to 50 various user stations on line, and may be coupled to existing communications lines using our new RTS interface devices.

Phase III offers impressive capabilities like powerful headphone amplification, two (or more) channel operation, microphone level limiting, and stable sidetone level. The new units are handsomely packaged and completely field serviceable.

With increased flexibility, improved circuitry, and greater reliability, our *Super System* represents a new development in meeting the demands of modern teleproduction. For additional information, contact RTS Systems, Inc.

Perfect Timing

MASTER CLOCK SYSTEMS

If seeing the same time on all your clocks is important, select **ES 192** - Line Frequency timebase, for only \$300.

If a guaranteed accuracy of three seconds per month is what you want, choose **ES 160** - \$966.

How about one second per month? **ES 160/1** - \$1134.

Or National Bureau of Standards accuracy! **ES 190** is synchronized to Radio Station WWV to provide a Master with unquestioned accuracy. \$1134 with receiver and antenna.

For a Time/Temperature Master, ask for **ES 196** - \$709.

ESE Master Clock Systems are simple to install. All Masters have a Serial Time Code output, able to drive twenty slave displays without buffering. Slaves range in size from .3" LED to 3" gas discharge displays, priced from \$146 to \$415.

IF YOU ALREADY HAVE A SYSTEM AND WANT TO EXPAND IT, get the **ES 167** Serial Time Code Generator (\$136), then add any number of our low cost slaves.

Many, many options and accessories are available. Ask us about them. Our brochure tells the whole story, but not for long. We keep adding new products.

AUDIO PADS MADE SIMPLE

with the
**RESISTIVE
PAD
CALCULATOR**

Do you design, install, or maintain audio gear? This unique calculator will make your life easier.

When you need an H or an O pad, why search for the resistor values in the back of an old equipment catalog? Why fumble with formulas from your old engineering textbook? The Resistive Pads CALCULATOR puts the resistance values at your fingertips. PRECISE resistance values for T, H, Pi, and O pads in 1 dB steps up through 60 dB. Separate scales for 600 Ohm, 150 Ohm, and 600-to-150 Ohm pads. All in a convenient, simple-to-use slide chart.

The popular Resistive Pads MANUAL makes an ideal companion to the CALCULATOR. The MANUAL contains the pad data found in the CALCULATOR... PLUS a detailed description of VU meter pads, complete with pad chart... PLUS information on stereo splitting pads, bridging pads, pad selection, variable pads, attenuation measurement, and more!

TO ORDER, SEND:
\$6.95 for the CALCULATOR,
or \$5.95 for the MANUAL.
SAVE \$2.00 and order BOTH
for \$10.90 (postpaid)

Perfect Levels

ES 214 Dynamic Audio Level Indicator

made especially for the broadcaster and recording engineer

Features:

- Peak Audio Levels or Apparent Loudness (Fast Averaging)
- Uses Standard V.U. Scale
- High Brightness, 3-Color Display
- Transformer Isolated Input
- Unregulated "Single-Supply"
- High Input Impedance and Sensitivity
- Low Cost

There are a number of Audio Level Indicators using L.E.D. bar graphs on the market today. Their acceptance is becoming widespread due to obvious advantages. However, the ES 214 gives you more: Transformer Isolated Input others consider too costly; A Power Supply Regulator on the circuit board, so you can use any unregulated D.C. voltage from +15 to +35 while others require dual supplies; The Standard Scale so you don't have to adapt to new numbers; and, the ability to select Peak Responding Mode or a special Fast Averaging Mode to approximate Apparent Loudness.

Get a handle on your levels with the ES 214

Reverberation unit

AKG Acoustics has begun shipping the EZ version of the BX-10 portable reverberation unit. The torsional transmission line system

has been redesigned and equalization has been added to the TTL system electronics. For speech applications there is a special short-decay time version available, the BX-10E2-Short.

Circle (522) on Reply Card

Make up controller

An automation make up controller

has been added to Aitken Communications' existing automation system. Features include an active notch filter to remove 25 Hz program material and a low distortion oscillator. A front panel or remote push-button which overrides the timer controls the unit.

Circle (523) on Reply Card

Boom box

The Boom Box from Allied Broadcast Equipment, was created for the disco market but lends itself to constructive use with pop and AOR formats. The unit creates sub-harmonics of existing program material. Because the unit operates on the principle of synthesis there is some audible fuzzing of the human voice as the unit attempts to provide bass for the person speaking. Various methods are being employed to minimize or eliminate this effect.

Circle (524) on Reply Card

Plumbicon camera tube

A 1/2-inch Plumbicon camera tube, type 74XQ, has been introduced by Amperex Electronics. The unit is a diode gun tube with very high resolution, typically 55% response at 400 TVL. A high beam reserve can provide 4 f stops for highlight

protection when used with the dynamic beam control. The tube is suited for studio use as well as ENG and EFP applications.

Circle (525) on Reply Card

1-inch videotape

A 1-inch broadcast quality videotape developed to achieve maximum performance from the helical scan video recorders has been introduced by Ampex. Ampex 196 Series broadcast helical videotape is compatible with all 1-inch high-band helical recorders and all video standards.

Weather radar accessor

Arvin CATV is offering a system, Tel-Weather TW-2, which accesses and displays NOAA weather radar data. The system can be connected to virtually any of the US National Weather Services' 111 weather radars. The system is independent of the Weather Bureau's Remote Radar transmitters which provide the weather data as an analog signal by phone line.

The TW-2 provides direct access of radar direction, range and intensity information, and converts these data into digital form for transmission over a 1200 baud dedicated communications line to a receiver where it is reassembled into a line-by-line television signal.

access control of 600 electronic slides with full instant replay slow motion. A keyboard control addresses any location within the 600-capacity disc chassis. Once located, a sequence can be played as single steps, animation crawl or at speeds up to full motion, in either direction.

The single images can be displayed as either fields or frames. Sources for slides are live camera, film chain or ENG tapes. The model 16 includes high-band signal system, J-control and digital time base corrector/dropout compensator.

Circle (540) on Reply Card

Omnidirectional mic

Electro-Voice has introduced a shock-mounted omnidirectional microphone, the D056. Primarily intended for hand-held broadcast and

sound reinforcement, the main acoustic cavity and the diaphragm/voice coil assembly are isolated as an integral unit from the case. Frequency response extends to 18,000Hz. There is a slight emphasis in the 2000-12,000Hz range, with a slow rolloff below 200Hz to reduce low frequency noise interference.

Circle (541) on Reply Card

Bulk eraser

Fidelipac has introduced a hand-held bulk eraser called Blank-IT. The unit includes a high mu core capable of erasing magnetic tape of all formats, including audiotape of up to 1-inch, computer tape and both VHS and Beta videocassettes.

Bring automated sound to life.

The Inovonics 377 Dual-Channel Tape Playback Pre-amp adds new life to radio automation system sound. You can expect high stability, low noise, and wide-range response — with new or existing installations.

Model 377 works with a variety of tape heads and transports, and is pin-compatible with older Ampex and Schafer equipment.

Bring automated sound to life. Call or write today for details.

Circle (542) on Reply Card

User-bit encoder

Gray Engineering Labs' User-Bit Encoder, UBE-118, features the use of multiplexing 320 separate user bits in the SMPTE edit code, every 10 frames. This allows the operator to transmit many more kinds of information, such as calendar date, video machine number, titles, reel number, operator identification, company code, customer code, etc. These data can be encoded in memory and can be transmitted, changed or recalled at will.

The unit is designed to be used with the company's Edit Code Generators DT-104, DT-113, or the User Bit Modifier-Display MD-111.

Circle (543) on Reply Card

Color monitor

Hitachi's CM-182 18-inch color monitor features resolution in excess of 370 lines. Signal-to-noise ratio is more than 46dB, and deflection linearity is less than 2% (within the central zone of diameter equal to picture height).

The NTSC monitor is recommended for broadcast and medical TV applications which demand accurate colorimetry.

Circle (544) on Reply Card

Production switcher

The PAL and PAL-M versions of ISI's model 902 video production switcher is now available. The unit features two mix effects systems utilizing a shared pattern generator with rotate and modulate enabling hundreds of possible wipes. Standard features include electronic spotlight, border generator, preset pattern limit, key invert, matte key and joystick positioner.

Circle (545) on Reply Card

Automation preamp

Inovonics has introduced a dual-channel tape playback preamp. The model 377 interfaces with a wide variety of tape heads and transports

and is pin-compatible with Ampex and Schafer equipment. The preamp is RFI-proofed and offers balanced outputs capable of 24 dBm. Panel features include multiturn gain and equalization adjustments.

Circle (546) on Reply Card

RGB-to-NTSC encoder

Lenco has introduced an RGB-to-NTSC color encoding system that enables computer graphics or alphanumeric information to be displayed on standard commercial color television monitors.

The CCE-850 is designed to encode high-resolution RGB colorgraphic computer displays, regardless of scan rates.

The encoder may be used with any computer graphics system when NTSC video is required for videotaping and distribution. An additional feature includes a color reference test pattern to allow for proper NTSC color monitor alignment.

New products

TV interval timer

Marconi has introduced the television interval timer model 2920. The timer provides digital readout

of 15 different parameters. Changes in measurements can be monitored directly by front panel selection of the particular parameter of interest. All functions may be controlled remotely.

Circle (548) on Reply Card

Audio control center

The "S" system by Micro-Trak is a packaged 6-channel broadcast system which provides turntables,

turntable preamplifiers, interconnecting wiring and the model 6618 6-channel audio control console. The 30"x80" operating desk provides space for desk top equipment such as cart machines as well as accessory space in the pedestal.

Circle (549) on Reply Card

Amplifiers

Modular Audio Products (MAP) has introduced models 7821 and 7822 rack mounting audio distribution amplifiers. Both feature low distortion and noise through the use of MAP audio op-amps in a transformerless bridging input, differential amplifier configuration. Both units also feature self-contained power supplies.

Model 7821 provides eight balanced outputs from one input, while model 7822 provides 16 balanced outputs from two separate inputs. All outputs are 600 Ω at up to +20dBm level per output, with a minimum of 80dB of isolation between outputs, and from output to input. Alternatively, model 7821 can provide 16 unbalanced outputs and model 7822 can provide 32 unbalanced outputs. Inputs can be strapped for a single source feed. The amplifiers are internally protected against short circuit and input overload.

Circle (550) on Reply Card

TV transmitters

NEC offers the PCN-1200 series VHF and the PCU-700 series UHF TV transmitters. The PCN-1200 series transmitters employ IF modulation and feature a minimum of vacuum tubes. Other features include a broad-band matching system allowing full spectrum coverage of Band III (170-230 MHz) without adjustment, integrated circuit technique to minimize the number of electrical and mechanical parts and integrated CIN Diplexer for size reduction and ease of installation and maintenance. The series is available in 1, 2, 5, 10 and 25 kW models.

The PCU-700 series uses all solid-state IF modulator and exciter high-efficiency Klystrons for both visual and aural power amplifiers. Features include 30% reduction in parts by use of IC and other current circuit techniques high-performance non-linear distortion compensation circuit for both DG and DP adopted at IF frequency and new vestigial side-band SAW type filter for steeper sideband response. The series is available in 10, 30, 40, 55, 60 and 110 kW models.

Circle (551) on Reply Card

Equalizer accessory

Orban Associates has announced the availability of a transmitter equalizer accessory for their Optimod-AM compressor/limiter/equalizer system. The equalizer is designed to compensate for low frequency tilt inherent in many transmitters and also to compensate for transmitter-antenna system overshoot and ringing.

Two separate equalizer sections (remotely switchable) permit independent adjustment of day/night transmitters or day/night power levels. Each section has three controls: one for low-frequency tilt and

two for high-frequency compensation. When desired, the entire transmitter equalizer can be switched out. A front panel jack permits convenient insertion of square wave test signals for initial setup. LEDs indicate the day/night status of the circuit.

It is available as an accessory kit for retrofit into existing units and is being included on all current production units.

Circle (552) on Reply Card

24-track recorder

The MTR-90 Masterecorder from Otari is available in 16 or 24 track versions or in a 16 track prewired for 24 tracks. The unit features symmetrical pinch-roller-free direct

drive, 30 and 15 ips tape speeds, fulltime servo system for capstan and reel motors, digital tape timer, automatic monitor switching and variable-speed cue control. Auto locator with full shuttle search-to-cue capabilities and 10 memory capacity and a 16/24 track conversion kit are optional.

Circle (553) on Reply Card

Camera tubes

Philips has announced the 74XQ series of 2/3-inch Plumbicon television camera tubes for ENG appli-

cations. Resolution for these tubes is typically 55% at 400 TV lines (uncorrected for the lens). The 74XQ has a high beam reserve and when used with dynamic beam control it can provide four F-stops of highlight protection to minimize comet-tailing.

The 2/3-inch camera tube also is suitable for studio use, such as continuity, interviews and news reading, as well as for electronic field production (EFP).

Special features of the 74XQ series are the use of a photoconductive layer for increased resolution, and the use of a diode electron gun for dynamic beam control to minimize comet-tailing and blooming.

Circle (554) on Reply Card

16mm telecine

RCA has introduced a 16mm film handling system with advanced capabilities for specialized broadcast and teleproduction telecine applications. The FR-16 projector system features an incremental 16mm film handling system designed for presenting an illuminated film frame to a telecine camera. A servo controlled film drive mechanism functions as a film drive station using a low-inertia dc servo motor with a large diameter sprocket.

Start, from zero to cine speed (24 or 25 frames per second), occurs in less than five film frames. Stop occurs in less than one film frame. A smooth stop-reverse-start sequence, as a special effect, occurs in less than one-half second.

In the freeze frame (still) mode, the application of light remains the same as when the projector is operating, with no degradation of the picture.

Microphone mixer

The model HPMO41 microphone mixer by RTS Systems is designed for professional applications ranging from location film and tape to major recording console input augmentation.

Input features include four Lo-Z mic inputs, a 3-position attenuator switch, a 3-position high pass switch, limiter circuit on each input, a phase reverse switch for each input, and an auxiliary input. Other features include a tone oscillator with on/off switch on front panel and trim pot on the circuit card, a peak indicator LED on the front panel, an illuminated VU meter with buffer amplifier and range select switch for +8dB or +4dB for zero reading on the meter, and a 1W

headphone amplifier with front panel volume control and headphone jack.

Circle (556) on Reply Card

Monitor

The model MAS-1 monitor amplifier/speaker from Ramko Research is an all purpose utility amplifier with

speaker and headphone jack. Standard features include a 20k balanced bridging input, 1 W RMS audio amplifier, 12 position input select switch and level control.

Circle (557) on Reply Card

Wireless microphones

The Schaffer B&T wireless instrument and microphone by the Ken Schaffer Group is said to have the same performance capabilities as its more expensive counterpart, the

Schaffer-Vega Diversity System, with one exception: Musicians must allow a few minutes for a sound check to ensure the absence of dead spots by selecting optimum antenna placement. Signal-to-noise ratio of better than 90dB, crystal controlled stability, interference proof performance and no tuning are common to both systems.

Circle (558) on Reply Card

Distribution amplifiers

The Masterline series of UHF/VHF distribution amplifiers designed for small TV signal distribution systems is available from Singer Products. The system is a medium

gain, low noise, broadband amplifier with both VHF and UHF amplifiers.

Front panel switches permit the selection of combined or separate VHF/UHF inputs and the switching in of a built-in FM stop filter.

Circle (559) on Reply Card

FM transmitter

Sintronic has introduced the model S1-F-25 FM broadcast transmitter, 27.5kW, designed for long-term performance in the 87.5-108MHz FM broadcast band.

The transmitter is housed in a dual section, single cabinet. The left section consists of the driver and the right section houses a complete RF power amplifier with separate power supply. A combination of meters, illuminated pushbuttons and LEDs provide full visual monitoring of transmitter status and primary operational parameters at a glance. Major control panel and facilities are included in the transmitter for remote control and metering.

The company's S1-10E exciter is the heart of the transmitter. It uses six ICs and four transistors in its front-panel visual monitoring system. Operating status is monitored continuously by five LED indicators which normally are illuminated through electronic sensing circuitry.

Circle (560) on Reply Card

Lavalier microphone

The ECM-50PS lavalier microphone by Sony is suited to binaural recording because of its compact size, S/N ratio of 66 dB and sensitivity of 56 dB. The mic uses

the standard cannon output connector and is equipped with a 2-way power system (battery or studio power supply).

Circle (561) on Reply Card

Audiocassette tape

TDK Electronics has developed a metal tape, designated MA-R, which is loaded into a Reference Standard cassette mechanism made of die-cast metal.

The 60-minute metal cassette tape utilizes particles which have greater magnetic energy than oxide particles. Coercivity of the new tape is

1050 oersteds, while remanence has been fixed at 3000 gauss. In a suitably biased cassette deck, an increase of high-frequency maximum output level (MOL) of as much as 7dB can be expected.

The die-cast metal shell is said to be less sensitive to warp than conventional plastic molded shells, and is not subject to deformation caused by changes in ambient temperature or humidity.

Circle (562) on Reply Card

Sportscaster headset

A professional boom-mic headset for live sports broadcasting has been introduced by Telex. Designed for use in moderately noisy conditions, the Sportscaster II is effective for broadcasts from a press box, interview on the side lines, or reporting from the playing field or track.

The headset, model CS-91, features an omnidirectional dynamic microphone and an in-line push-to-cough switch which lets the announcer mute the microphone when

Digital monitoring

A digital remote control and status monitoring system (model 7815) is available from Time & Frequency Technology. The system features fully duplexed digital data with parity check, control and status functions for 15 channels (expandable to 45), double scan compare logic for full data integrity, built-in crystal controlled FSK data modems and interconnection adaptability for phone line or radio.

The configuration of the system consists of 15 independent front panel toggle switches for easy control of 15 on/off functions. Each function is verified by an adjacent and independent LED status indicator which is activated by a telemetry signal from the remote site.

The system may be expanded by the addition of up to two model 7830 channel expanders to give an ultimate capability of 45 separate control and status functions. A time sharing communications link with other remote control and telemetry systems also is available as an option. A site selector may be added to the system to provide control and monitoring of up to 16 separate locations with a single system.

Microwave leak detector

Metrifast's hand-held microwave leak detector monitors unsafe radiation levels in microwave equipment which might occur through equipment damage, misuse or wear. A light-emitting diode in the center of the arrow-shaped device glows red when in contact with radiation levels above the prescribed US minimum of 5mW/cm² at a distance of 2 inches.

The unit, model 748, is comprised of a microwave dipole receiving antenna connected to a passive non-linear alarm which is energized solely by radiation received by the antenna. There are no batteries or moving parts.

Circle (580) on Reply Card

Digital effects system

The three enhancement options available for the Quantel DPE 5000 digital effects system by Micro Consultants include Picture Reversal, Autolink and Multilink.

Picture Reversal gives the illusion of a picture reversing or producing a mirror image. Reversing the picture in succession creates a spinning effect while changing the picture size and position during spinning creates a tumbling effect.

The Autolink option permits several DPE 5000 control panels to be used with one DPE 5000 effects system.

Multilink allows interlinking of up to four DPR 5000s with up to four control panels when multiple picture manipulation is required.

phor bronze is formed into a tube with a front guiding sleeve followed by two helical spring-like fingers with contact dimples.

The helical form of these fingers provides longer spring elements than commonly used. The staggered position of the contacts produces an insertion force which is lower at the beginning of contact engagement and increases as the two connectors seat. Two-point wiping action also is provided. The shape of the wiping contacts has been designed to improve the desired self-cleaning action without undue contact pressure which might wear through the plating of the mating connector pin.

WHEN YOU THINK OF THE LEGENDARY AMPEX VR-1200's AND VR-2000's THINK OF AFA...

We're keeping the legend alive!

AMPEX VR-2000's and VR-1200's are the stuff legends are made of... they're the best. So if you can't afford a New VTR... consider owning a "pre-owned" legendary AMPEX VTR instead.

Our customers, including TV Stations, Manufacturers, Institutions, TV and Film Production Facilities have purchased \$8 million in AMPEX VR-2000's, VR-1200's, AVR-1's, HS-200's and paid only half that price. They know they're still getting the best in VTR's.

AFA VTR's are fully rebuilt and good as new... even better! These "legends" are in a class of their own... and at prices that are becoming legendary in their own rights.

And when the New AMPEX VTR's become legend... AFA will be there to keep them "alive" too.

Who knows... some day someone will have to keep our legend alive.

AFA...the largest rebuilder of the best VTR's in the world.

AFA

1979 BROADCAST BUYERS' GUIDE

-
- *Product directory section begins on page 182.*
 - *Manufacturers' addresses section begins on page 228.*
 - *Dealer/distributor section begins on page 242.*
 - *Edges of each section are color coded so that they can be found easily.*
-

Since our first edition of the Buyers' Guide 11 years ago, the broadcasting industry has grown tremendously in complexity of equipment and completeness of broadcast services. Just as the industry has responded to the use of new technologies—most notably the microprocessor in all phases of automation—the Buyers' Guide has responded by providing the most complete directory possible for engineers, managers; and purchasing agents requiring broadcasting equipment or services. Reflecting the current healthy state of our industry, this year's Buyers' Guide has nearly 800 product categories, lists more than 700 manufacturers, and contains more than 200 advertisers. It's the result of a dedicated staff effort to make it our finest tool for purchasing the industry's hardware, software and services.

Each year, **Broadcast Engineering** mails extensive questionnaire forms to suppliers around the world. They are asked to identify, by special code number, every product they currently market. In the process, scores of new products and companies are added, while lines that have been phased out—and firms that have left the field—are deleted. Once amassed and

assembled, these new data are processed through a unique computer operation, programmed to "read" the code numbers and assign company names and Red Listings to appropriate product headings.

Advertisers in this issue are listed in **red** under each appropriate product heading. These Red Listings include the ad page location to serve as a direct reference to the product information you are seeking.

Broadcast Product Dealer/Distributors are listed separately in the section beginning on page 242, followed by the states they serve and the products/services they provide. If they are advertisers, their ad appears either on the page of their listing or on the facing page. A full explanation of this section appears on page 242.

Broadcast Product Manufacturers' Addresses begins on page 228. There, you will find a complete, alphabetized index of mailing addresses for all of the companies listed in the Product Directory. Additional information appears under the index listing for advertisers in this issue: the name and telephone number of the home office sales manager, followed by, in many cases, a roster of regional sales contacts for that firm.

Reader Service Cards are bound into this edition for your convenience. Each card is valid for a full year. By circling the appropriate numbers on the card, you can secure additional information directly from the advertiser through August 1980.

broadcast product dealer/distributors

For your added convenience, **Broadcast Engineering** has designed this NEW Broadcast Product Dealer/Distributors section to provide close-to-home purchasing assistance. Use it, in conjunction with other sections in the 1979 Buyers' Guide, to plan new facilities, and equipment expansion or upgrading. For broadcast product dealer/distributors, this directory identifies: address and telephone, products handled and territory served.

Listings are arranged alphabetically by location. Firms listed do not include all dealer/distributors serving an area, but only those who returned **BE's** listing form.

Both a typical dealer/distributor listing, and the geographical area and product classification code keys are included on this page to assist you. We think you will find this new section, in addition to the updated Product Directory and Broadcast Product Manufacturers' Addresses section, makes this issue the most useful and comprehensive purchasing aid for the broadcast industry.

Typical listing

- | |
|--|
| (1) Jones Broadcast Sales,
2912 W. 10 St.,
(2) Kansas City, Mo. 64105
(816-842-1234)
(3) IA, KS, MO, OK, 1, 2, 5, 7, 9 |
|--|

- (1) firm name, street address
(2) city, state, zip code, telephone
(3) geographical area served and products handled (see code keys)

This firm covers Iowa, Kansas, Missouri and Oklahoma, and sells audio equipment, video equipment, tape, film equipment, and service and repair.

Key to geographical area code

AK Alaska	KS Kansas	NV Nevada	WI Wisconsin
AL Alabama	KY Kentucky	NY New York	WV West Virginia
AR Arkansas	LA Louisiana	OH Ohio	WY Wyoming
AZ Arizona	MA Massachusetts	OK Oklahoma	
CA California	MD Maryland	OR Oregon	(Abbreviations
CO Colorado	ME Maine	PA Pennsylvania	for Canadian provinces)
CT Connecticut	MI Michigan	PR Puerto Rico	ALTA Alberta
DC District of Columbia	MN Minnesota	RI Rhode Island	BC British Columbia
DE Delaware	MO Missouri	SC South Carolina	MAN Manitoba
FL Florida	MS Mississippi	SD South Dakota	NB New Brunswick
GA Georgia	MT Montana	TN Tennessee	NF Newfoundland
GU Guam	NC North Carolina	TX Texas	NS Nova Scotia
HI Hawaii	ND North Dakota	UT Utah	ONT Ontario
IA Iowa	NE Nebraska	VA Virginia	PEI Prince Edward Island
ID Idaho	NH New Hampshire	VI Virgin Islands	QUE Quebec
IL Illinois	NJ New Jersey	VT Vermont	SASK Saskatchewan
IN Indiana	NM New Mexico	WA Washington	YUK Yukon Territory

Key to product numerical code

- | | |
|---|--|
| 1 AUDIO EQUIPMENT (including recorders, microphones, mixers, consoles, cart machines, turntables, processing devices, etc.) | 5 TAPE (including video and audio recording tape, etc.) |
| 2 VIDEO EQUIPMENT (including cameras, videotape recorders, production switchers, monitors, lights, etc.) | 6 VACUUM TUBES (including video camera, transmitter, TWT, etc.) |
| 3 TEST AND MEASUREMENT EQUIPMENT (audio and video) | 7 FILM EQUIPMENT (including cine cameras, processing equipment, film projectors, etc.) |
| 4 TRANSMITTERS, ANTENNAS AND TRANSMISSION SYSTEMS (including towers, ATS, STL, MDS, etc.) | 8 VANS AND ACCESSORIES |
| | 9 SERVICE AND REPAIR |
| | 10 SYSTEM DESIGN (including studio installation, etc.) |
| | 11 USED EQUIPMENT (including leasing, rent, etc.) |

FREE CATALOG

For a free government catalog listing more than 200 helpful booklets, write: Consumer Information Center, Dept. A, Pueblo, Colorado 81009.

Advertising rates in Classified Section are 50 cents per word, each insertion, and must be accompanied by cash to insure publication. Each initial or abbreviation counts a full word. Minimum classified charge, \$4.00.

For ads on which replies are sent to us for forwarding (blind ads), there is an additional charge of \$5.00 per insertion, to cover department number, processing of replies, and mailing costs.

Classified columns are not open to advertising of any products regularly produced by manufacturers unless used and no longer owned by the manufacturer or a distributor.

TELETRACK^{T.M.}

American Totalisator Has Exciting Positions In It's Newest OTB Production

Teletrack, located in New Haven, Connecticut, combines the excitement of a most modern entertainment center with that of the actual thrill of the racetrack including full color video representation of the prime New York races live on a large screen.

With the scheduled opening rapidly approaching, we are currently seeking the following professionals to staff this new concept in sports centers.

Our current needs are:

AUDIO-VIDEO OPERATIONS MANAGERS (2)

Requirements include experience with broadcast quality professional/video tape recorders. Individual will be responsible for the production of acceptable audio/visual programs and will direct a crew of technicians engaged in video control, audio and other related technical state-of-the-art equipment.

AUDIO-VIDEO MAINTENANCE ENGINEERS (2)

Candidate must have experience with the maintenance and calibration of switchers, professional video recorders, monitors and test equipment.

AUDIO-VIDEO OPERATIONS TECHNICIANS (4)

Individual must have experience in operating broadcasting quality videotape recorder and other related equipment.

AUDIO-VIDEO PROJECTION ENGINEERS (3)

Candidate must have experience in operating and maintaining sequential Eidophor projectors.

We offer a wide range of career possibilities and a comprehensive compensation package with a full range of benefits. The opportunities to shine in our newest production are here. Interested applicants should call collect or send resume including salary history to:

Jack Monahan
(301) 666-8700

AMERICAN TOTALISATOR SYSTEMS
GENERAL INSTRUMENT CORPORATION

11126 McCORMICK ROAD • HUNT VALLEY • MD 21031

ENGINEERING MANAGEMENT

★ Network Studio Operations

The Technical Manager is involved in the production of video taped shows from pre-production meetings through final taping. Responsibilities include selecting engineering crews, setting schedules, satisfying the creative needs of the production company, and maintaining control over engineering costs.

★ Local Station Operations

The Technical Facilities Manager is responsible for the operations and maintenance of all equipment in the news technical operations center for the local station.

★ Audio/Video Systems Engineer

Position involves designing, creating and planning engineering installations for television and associated technical equipment, and facilities for use in network and local station broadcasting operations. Requires BSEE or equivalent experience, knowledgeable in state-of-the-art broadcasting techniques and equipment, plus background in engineering supervision preferred in manager position.

If you are interested in any of the above positions, please send resume in confidence to:

Mike Sweet

PHASER

A high performance full Frame Store TBC/Synchronizer with Freeze Frame for less than \$18,000.

We take pride in introducing the PHASER, a Frame Store TBC/Synchronizer that outperforms all the economy priced models on the market, and sells for less too.

The PHASER is a new "computer" technology system that uses software to save you money.

The PHASER offers many significant unique advantages.

- Multiple microprocessors and adaptive digital circuitry eliminate adjustments and mode switching.
- A clean "Hot Switch" between non-synchronous heterodyne and direct color signals, with full bandwidth processing.
- Automatic phase locking between multiple input signals and station reference.
- Horizontal and Vertical Blanking are never widened.
- A "smart" hands-off system that runs itself.
- The cleanest pictures anywhere.

Add to these the best features offered on competitive models, which we consider as standard, and you've got the PHASER, the undisputed leader in its class.

The PHASER is backed up by a network of conveniently located service centres, the most comprehensive warranty in the business, and a unique "No-Tweak" board exchange program when the initial one year warranty period is over.

Talk to your nearest authorized Digital dealer. He'll prove there is no other choice. Or ask us for full details: Digital Video Systems, 716 Gordon Baker Road, Willowdale, Ontario, Canada M2H 3B4. (416) 499-4826

DIGITAL

The digital video experts.

SQUEEZOOM

is...

now with
CHROMAZOOM

FRAME SYNCHRONIZER

Locks all remote signals to house sync. Network, ENG, Remote pick-ups, and satellite signals will mix with local signals with no disturbance.

Sampling video at 4 times sub-carrier for superior technical standard and picture quality.

CHROMAZOOM

New built-in composite CHROMAKEY gives halo-free pictures with full control of size, positioning and Squeezoom manipulation.

FRAME FREEZER

Will act like having another camera in the studio for still shots. Will freeze any full frame picture. Will retain last frame of interrupted incoming signal automatically until picture is restored.

VIDEO COMPRESSOR

No matter how a slide or scene comes in, you can compress and/or change its aspect ratio as you wish, down to one picture element, and position it anywhere on the screen.

Ask for demo tape for convincing force of Squeezoom. Available in NTSC, PAL and SECAM.

One Channel

or up to

4 Channels in One

Simultaneous Live Telecast

ELECTRONIC ZOOM

See or read information not possible without zoom.

In sports, determine if ball is good, simply freeze and enlarge. Call foul plays more accurately. Zoom capability on a remote or recorded scene. Zoom while chroma key tracking.

VERY SPECIAL EFFECTS

With 2 channels or more, open new unlimited vistas of movie-type effects.

Avoid FCC violations. TV blanking standards automatically restored with squeezoom.

Record 4 pictures on one recorder and play back any one full screen with no perceptible degradation.

Display two or more ENG feeds simultaneously. Decided advantage in news, special events, sports.

Conceived, designed, and manufactured in Florida by **Vital Industries, Inc.**—makers of the VIX-114 Series Switching Systems.
