A new, versatile stereo control center preamplifier-amplifier whose excellent performance, advanced stereo features, compatibility with all existing monaural applications, and low cost make it EASY TO SET UP YOUR OWN STEREO SYSTEM NOW! A totally new kind of amplifier, the new LAFAYETTE LA-90 has been "custom-tailored" for stereo high fidelity. It has special speaker connections (dual output taps up to 32 ohms) to allow parallel operation of the 2 amplifier channels for 28 watts monaural output to single speaker systems of up to 16 ohms impedance; or, you can add it to an existing 20-30 watt hi-fi system for a second 28-watt stereo channel, providing a balanced stereo system and protecting yourself against obsolescence of the older amplifier, since you will always be able to play stereo; or, you can feed one 14-watt amplifier channel to a woofer and the second to a mid-range and tweeter combination for a 28-watt monaural system with electronic crossover. Its performance for standard 2-channel stereo is highly satisfying: frequency response is 20-20,000 cps; full record equalization is provided; inputs are present for every type of stereo or monaural program source, such as tape head, tuner, and crystal or ceramic or magnetic cartridge; it has a channel reverse switch so that music which should be on the left or on the right is properly positioned; it has a speaker phasing switch to overcome the loss of some frequencies due to stereo recording deficiencies sometimes unavoidably present. Other special stereo/monaural features are individual channel balance controls to obtain the balance necessary for good stereo effect, a master level control for controlling volume of both channels without disturbing stereo balance, separate bass and treble tone controls for each channel, mounted concentrically so that bass or treble can be adjusted individually for each channel—

and once adjusted can be used simultaneously to maintain tonal stereo balance. A special tape monitor output and tape monitor switch allow you to make stereo or monaural recordings and to play them back, using a tape deck and one or two record/playback preamplifiers permanently connected to the LA-90.

The H. M. Scott Model 299 Complete Stereo Amplifier and the highly regarded Garrard RC-88-411 changer, newly redesigned for stereo playing, are here combined to form the core of a compact stereo phono system. The E-V 12TRXB 3-way speakers supplied in this system are completely in line with the high quality of the electronic components. In addition to these units, the new GE Golden Classic GC-7 Magnetic Variable Reluctance Cartridge with 0.7 mil DIAMOND STYLUS fills out the system. This system is easily capable of yielding a response of ± 1 db from 35-15,000 cps. The 20 watts RMS audio output power from each channel is enough for any home installation. Like the more elaborate Scott 130 Preamp, the Type 299 has complete balance between channels, phase reversal switch, separate inputs for magnetic or ceramic stereo cartridges, input for FM-AM broadcasts, ability to play a monaural record through both amplifiers for higher power capacity, tape input as well as tape recorder output. This complete amplifier combination can be mounted in a very small cabinet or on a small shelf. Comes complete with interconnecting plugs, cables and simple installation instructions. LAFAYETTE PROFESSIONAL BULK TAPE ERASER AND DEMAGNETIZER

- COMPLETELY ERASES TAPE
- REDUCES NOISE LEVEL
- FOR 3", 5", 7", OR 10 1/2" REELS
- TWO ERASING COILS
- 6 1/2 AMPERES DRAIN

Regularly 49.95 Special 21.50

A carefully designed and precisely manufactured professional tape "degusser" for complete erasing of tapes. Just place the tape reel on spindle of demagnetizer, slowly rotate 2 or 3 turns, take off, and that's all—a completely clean tape. The demagnetizer removes every signal on the entire tape—even extra strong sounds too loud to be removed by the recorder's own erase head. Completely clears tape of any prior recordings. In addition, by leaving tape completely unmagnetized, it serves to reduce tape hiss to the level of new "virgin" tape. In fact, tape hiss is so low that subsequently passing it over the erase head of a recorder actually INCREASES noise by 4-6 db. To take advantage of this noise reduction, some users

prefer to permanently disconnect the recorder's erase head, and use only bulk erasure. Two completely separate coils are used for doubly effective erasure, even of large, 10 1/2" reels. An extra powerful unit for heavy-duty use—draws over 6 1/2 amperes. The Lafayette Tape Demagnetizer offers all of these features, and at this special price. Can be used to demagnetize tape, magnetically striped film, plus tools and watches. This professional unit has a heavy, custom finished case, a rugged non-magnetic tap, heavy duty on-off switch and power cord. Has built-in fuse. Pilot light prevents accidentally leaving it turned on. Size 6 1/2" x 7 1/2" x 3 1/2". Shpg. wt., 14 lbs.

LAFAYETTE TAPE HEAD DEMAGNETIZER

3.95 REMOVABLE POLEPIECES EXTRA CONVENIENT 3.95

Unlike other demagnetizers, the Lafayette Tape Head Demagnetizer uses removable polepieces. Three complete sets are furnished: straight, 45°, and 90° (right angle), permitting quick and easy use with any tape head. Tape heads need no longer be removed from the recorder so they can be reached by the clumsy polepieces of older head demagnetizers; the Lafayette Demagnetizer's polepieces reach every head.

Far from being a luxury, a tape head demagnetizer is necessary for best tape recorder performance. Among all the possible sources of noise in tape recorders, there is only one which is common to all recorders and is a perfectly natural, common occurrence—tape hiss due to magnetized heads. Although unmagnetized when new, tape heads gradually become magnetized by sharp switching pulses occurring while switching the recorder from play

to record or vice versa. Some audio sources (especially the human voice) produce unbalanced signals containing more power peaks in one direction than in the other. This unevenness is also sufficient to cause magnetization of tape head.

The solution is to use a demagnetizer to remove this permanent magnetism from the head, thus reducing the noise level. Periodic head demagnetization is required for all tape recorders to insure optimum signal-to-noise ratio. For this reason, some professional tape recorders are demagnetized as often as several times weekly. Now, Lafayette enables anyone with even the most modest budget to perform this necessary demagnetization, with a minimum of effort. For 110 volts 60 cycles. Shpg. wt., 1 lb.

THE LAFAYETTE KT-600 SOLVES EVERY STEREO/MONAURAL CONTROL PROBLEM

In Lafayette's constant effort to bring you the very latest and most advanced developments in electronics—and particularly in high fidelity—at prices everyone can afford, Lafayette went to the most forward-looking experienced brains in the electronics/high fidelity industry and has now DARED to produce what we think is the MOST REVOLUTIONARY DEVELOPMENT IN STEREO HIGH FIDELITY—A BRILLIANT NEW ACHIEVEMENT—THE LAFAYETTE KT-600 STEREO MASTER AUDIO CONTROL CENTER!

The KT-600 provides 4 dual concentric input level controls for balanced use of different types of program sources—such as AM and FM tuners, tape recorder with microphone, phonograph plus microphone, etc., and without overloading inputs; 3 controls are for high level input, and a separate level control is provided for the output of the preamplifier stage. The KT-600 provides separate turnover and rolloff dual concentric switches for 24 possible positions of accurate equalization on each channel; equalization on each channel may be set independently of the other. Furthermore, all inputs can be variably mixed, manually, at will (mix with phono, tape recorder with phono, etc.). The Bridge Control permits cross-channel feed or optionally acts as a volume control for the 3d channel (Bridge) output to eliminate "ping-pong" or "hole-in-the-middle" effects. An audible, sharp, accurate "null" (dip in sound output) is provided by the "Calibrate" positions of the Stereo Function Switches working in conjunction with the clutch-type Balance Controls for precise stereo balance—highly important for good stereo performance. The 3d channel output can also serve for mixing any stereo program (stereo record, tape, AM/FM stereo) to produce excellent monaural recordings or to play a stereo program monaurally through a separate amplifier and speaker system in another room. The KT-600 has Electronic Phase Reversal to make up for reversed-phase recordings sometimes found commercially, in which there

is a loss of some portions of the frequency spectrum, and to correct speakers connected out of phase. Channel reversal is also present for correct positioning of stereo music to the right or to the left—and this may optionally be accompanied by phase reversal for best overall stereo sound. The KT-600 has a Presence Rise Switch which pulls a solo instrument out of the general musical background with minimum disturbance of orchestral balance.

AND STILL OTHER PROFESSIONAL FEATURES OF LAFAYETTE'S KT-600 ARE: Tape head equalization for the new 4-track stereo tapes; Master Gain Control for individual or simultaneous adjustment of channel levels; inputs for constant velocity (magnetic) and constant amplitude (ceramic, crystal or capacitive) phono cartridges, all equalized by the Rolloff and Turnover selector switches; individual channel concentric bass controls and concentric treble controls which permit pre-setting for good stereo tonal balance and maintaining that balance at other tone control settings; tone control circuits use 5% tolerance components and 2 1/2% tolerance precision potentiometers for accurate centering of their "Flat" positions; switched rumble and scratch filters; switched Fletcher-Munson loudness contour compensation; tape monitor output jacks and tape Monitor-Play switch permit monitoring with recorders having special monitor heads and preamplifiers and also permit a stereo/monaural tape deck with 1 or 2 record/playback preamplifiers to be permanently connected to the KT-600 for recording and playback; "plate follower" output stages for low impedance (1300 ohm) outputs with extremely low distortion; special low-flux power transformer and DC operation of all filaments for exceptionally low hum and cool operation; low-noise deposited metal-film resistors and 7 of the new premium low-noise type 7025 tubes are used for extra-good signal-to-noise ratio. The KT-600 has printed circuit board construction for ease of wiring and maximum performance stability.

THE LAFAYETTE STEREO-TUNER IS UNIQUE AND INCOMPARABLE

More than a year of research, planning and engineering went into the making of the Lafayette Stereophonic Tuner. Designed against obsolescence, it incorporates every practical and worthwhile feature that is considered necessary for your complete satisfaction of all present and future types of broadcasting. Already, breathtaking stereophonic programs are being transmitted via FM and AM. It will certainly become more and more the popular method of high fidelity broadcasting. The tuner also provides an output for multiplex FM stereophonic reception, enabling you to enjoy the ultimate in high-fidelity sound reproduction. Since the FM and AM sections are completely independent of each other, this tuner can be used furthermore as a dual-monoaural tuner. In this way, the music lovers are able to listen to concert programs on the FM channel in one room, while the younger-set can listen to a different program on AM in another room. In addition, on a monoaural program which is broadcasted simultaneously via FM and AM, this tuner will enable you to tune in both channels and reproduce them through individual amplifier-speaker systems. The improvement of quality will be immediately noticeable because the sound source is now distributed and at the same time, the hole-in-the-wall point source effect is completely eliminated. Of course, the unit can also be used as an ordinary type of FM-AM tuner, providing you with unsurpassed quality of reception.

Tuner you are assured of noise-free, drift-free, distortion-free performance. You will not only hear this quality, but also sense it even in the mechanical details; in the "feel" on the velvety-smooth easy flywheel tuning, in the professional appearance of the tastefully selected colors that will blend with any decor. The just-right shade of gold-brass escutcheon contrasts just enough with the dark maroon background, and is set off by matching maroon knobs with gold inserts. The design of the cabinet has the simplicity of modern styling, touched by a stroke of traditional elegance. Carefully designed for easy installation in console if desired.

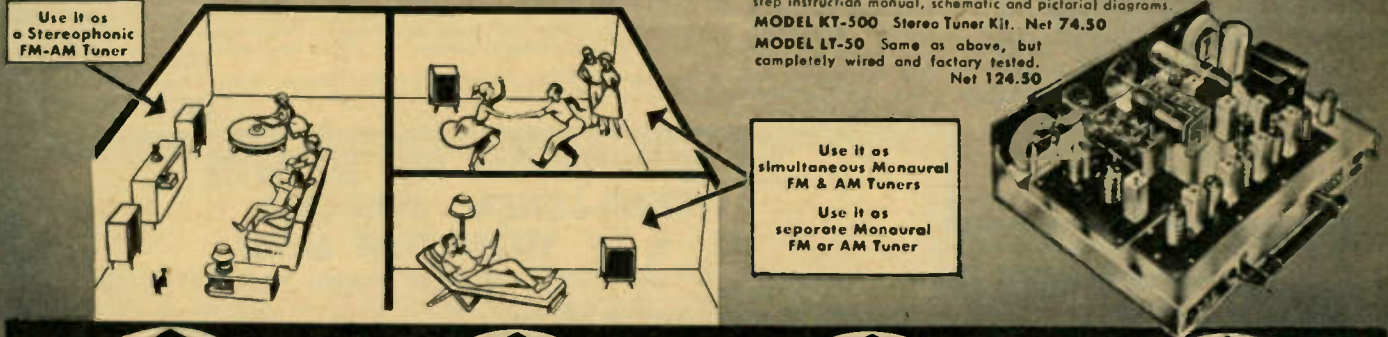

Deluxe features include separate FM and AM sections, each tuned with its own 3-gauge tuning capacitor, and each has its individual low impedance cathode follower output. This means that the tuner can be installed using shortest possible FM antenna lead-in wire to minimize undesirable pickup. Long output cable can be used to connect tuner to control center without fear of high frequency loss. Also, separate volume controls are provided for each channel so that, when used for stereophonic reception, a proper balance between channels can be achieved. Without this important feature, the wonderful realism of stereophonic sound would be destroyed. Convenient front panel switch changes from stereo to monoaural use. Simplified accurate knife-edge tuning is provided by magic eye which operates independently on FM and AM. Automatic frequency control "locks in" FM signal permanently. Ferrite rod antenna with loading ring is supplied to bring in weak AM stations for quality reproduction. Designed for easy assembly, the kit is built around two printed circuit boards and prealigned IF's, making construction and wiring simple, even for such a complex unit.

Apart from its unique flexibility, this is, before all else, a superior high-fidelity tuner, employing many features found only in the highest priced units. An inspection of the tubes and parts used will reveal that this tuner is engineered without compromise of any kind. With the Lafayette Stereo-

RUGGED CONSTRUCTION — FOOLPROOF — TROUBLE FREE

A remarkable advance in tone arm design is presented in these new Lafayette tone arms. An unusual new principle, utilizing 2 vertical and 2 lateral hardened-steel knife-edge pivots supported by hardened steel bearings, provides extremely low horizontal and vertical friction. This unusual type of bearing provides minimum waveform distortion and no undesirable motion or loose-jointed action as viewed from the stylus end. Groove tracing is smooth, with excellent tracking even with very light pickup weight, due to the absence of frictional losses. Friction in horizontal and vertical directions is low, but mechanical impedance is high at 45°, providing maximum effectiveness with 45-45 stereo cartridges. The unique knife edge bearing construction makes it possible to draw out the 2 shielded leads from the center of the support column, eliminating "stiffness friction" due to the leads. A highly-precise bubble level is provided at the top of the support column; the bubble plus 3 adjustments on the base make for perfect levelling. Height of the arm is adjustable from 1 1/4" to 2 1/4" above motorboard. Overall length of PK-270 12" arm is 12 1/4"; linear distance from support column to stylus tip is 10"; the PK-280 16" arm is 14 1/2" overall; effective length is 11 1/2"

- JEWEL BEARING SUPPORT
- INSTANT PLUG-IN CARTRIDGE CHANGE
- AUTOMATIC FLUID CONTROL
- PERFECT RECORD TRACKING
- ACCOMMODATES MOST STEREO & MONAURAL HIGH FIDELITY CARTRIDGES

This Stereo/Monaural transcription arm assures dependable and stable operation, utilizing the floating-action principle of viscous-damping. The arm is supported at a single point by a pivot and jewel bearing having negligible friction. Damping is accomplished by a silicone fluid occupying the gap between a ball and socket. This damping control permits high compliance and negligible tracking error and prevents damage to either record or stylus should the tone arm be accidentally dropped. Low frequency resonance, skidding and groove-jumping are likewise minimized. The tone arm accepts all Stereo or Monaural hi-fi cartridges by means of precisely engineered adapters which simplify installation and provide proper stylus pressure. The arm has a decorative glossy-black finish. Overall length is 12"; height adjustable from 3/4" to 2 1/4" above motorboard; round mounting base is 2 1/4" in diameter. Shpg. wt., 2 1/2 lbs.

ACOUSTIC RESEARCH AR-1 and AR-2 SPEAKER SYSTEMS

ACOUSTIC RESEARCH AR-1

Based on new "acoustic suspension" principle. Utilizes cabinets filled with Fibreglas, and with specially-constructed speaker-mechanism suspension plus air-tight cabinet in which compression of the air by the speaker causes spring-like return of the speaker cone. Advantages of this new principle are lowest bass harmonic distortion in the industry, exceptionally uniform extended low frequency response, and small cabinet size for optimum performance. The AR-1 includes an acoustically-suspended 12" low-frequency mechanism and an 8" mid-range and high-frequency unit. AR-1 is a 4-ohm system. Amplifier should be 10 to 30 watts, damping factor 1 for standard use, 4 for corner use. Woofer magnetic circuit is 3.3 lbs. Alnico 5 plus 6 lbs. Armco iron. System resonance: 43 cps ± 16 cps. Response 38-1000 cps $\pm 1 1/2$ db; 1,000-13,000 cps ± 5 db; down 15 db at 20 cps and 17,000 cps. Harmonic distortion (10 watts input) 25-70 cps: 4 1/2%; 70-1100 cps: 1%; 1100-14,000 cps: less than 1%. The AR-2 is a lower-priced version of the AR-1 with 10" acoustic-suspension speaker and newly-developed tweeter assembly. Response 42-14,000 cps ± 5 db; down 10 db at 30 and 14,000 cps. Harmonic distortion (10 watts input) under 2% down to 60 cps, under 3% down to 50 cps. 8 ohms. Requires amplifier delivering 10 or more clean watts over entire audio range. Size: AR-1—25" w x 11 1/2" d x 14" h; AR-2—24" w x 11 1/2" d x 13 1/2" h. Shpg. wt., AR-1: 60 lbs.; AR-2: 45 lbs.

The lens is detachable for panel mounting, with a separate base for the tweeter furnished for external mounting where desired. Aluminum voice coil has 16 ohms impedance. Size: 4 1/4" long x 3" diameter, lens extends 2 1/2". Requires a crossover network, preferably one with a level control, such as the LN-2. With full instructions. Shpg. wt., 5 lbs.

A crossover network is required; the Lafayette LN-2 is ideal. Voice coil impedance 8-16 ohms. Size: 3 1/2" x 2 1/2" x 3" diam. Shpg. wt., 3 lbs.

Here in kit form is an AC-DC hi-fi amplifier that presents unusual features despite its amazingly low price. The separate bass and treble controls permit adjustment of both low and high frequency response and balance. Works equally well with both crystal or ceramic cartridges. Has a 6-tube line up—a 12AX7 amplifier and phase inverter, a 35W4 rectifier and a pair of 35CS's in push-pull, having a power-packed low distortion output. The circuit utilizes an inverse feedback loop to reduce the level of hum and distortion. Kit is complete containing all essential parts, tubes and detailed instruction manual showing pictorial and schematic diagrams. Shpg. wt., 4 lbs.

LAFAYETTE SIGNAL GENERATOR
NEVER BEFORE HAS A COMPLETELY WIRED AND TESTED INSTRUMENT OF SUCH ACCURACY AND QUALITY BEEN OFFERED AT SUCH A PRICE!

- FREQUENCY 120 KC TO 260 MC
- 120 KC TO 130 MC ON FUNDAMENTALS
- LABORATORY ACCURACY AND QUALITY

A completely wired and tested instrument not to be confused with units sold in kit form at almost the same price, but with a quality and accuracy of instruments 3 to 4 times its price. Six overlapping ranges generate signals of 120KC - 320KC, 320KC - 1000KC, 1MC - 3.2MC - 11MC, 11MC - 38MC and 37MC - 130MC all on fundamentals with calibrated harmonics from 120MC to 260MC. Selector switch gives instant choice of ranges. Switch gives choice of internal modulation of 400 CPS or use of any external source at other frequencies. For audio testing the 400 cycle signal can be used separately. Outputs are unmodulated RF, modulated RF and 400 CPS audio. RF output is in excess of 100,000 microvolts and jacks are provided for choice of either high or low RF output. Stability is insured by special circuit design. Has a fine adjustment RF control. AF output is 2-3 volts, AF input is 3 volts across 1 megohm. Large clear 5 inch etched dial plate and pointer are protected by transparent plastic bezel. Common AF terminals for EXT-MOD input and INT-AF for audio tests eliminate need for special AF output connectors. Machine engraved panel lettering. Handsome gray metal case with carrying handle. Measures $8\frac{1}{2}'' \times 10'' \times 4\frac{1}{2}''$. Comes complete with pair of leads. AC line cord and plug. Operates on 105-125V 50-60 cycle AC. Shpg. wt. 8 lbs.

Ideal for TV sets, home radios, high-fidelity sets, amateur gear, commercial communications equipment - wherever a truly portable unit is required. This is a completely wired precision instrument, NOT A KIT. Uses a sensitive, rugged 38 microampere basic meter, a d'Arsonval movement with jewelled bearings providing easy, accurate read-off from its large, clear scales. $2\frac{1}{2}''$ meter face. 1% precision resistors guarantee top-notch accuracy. This unit weighs only 10 oz., measures only $4\frac{3}{4}'' \times 2\frac{1}{4}'' \times 1\frac{1}{4}''$ - fits into pocket without bulging, without weighing down. The entire front is protected by a thick, clear sheet of plastic, preventing scratching

and eradicating of switch markings, protecting your meter and preserving its appearance. Single selector switch with positive detents and clearly marked positions permits one-handed operation. Recessed, break-proof zero-ohms knob permits easy adjustment, yet cannot be broken even under rough handling.

- 20,000 OHMS PER VOLT DC
- 10,000 OHMS PER VOLT AC
- 40 MICROAMPERE 3" D'ARSONVAL METER MOVEMENT

ONLY 11.95

The semi-kit is a new concept in test equipment kits. All the important or difficult parts are already mounted. All that remains to be done is to mount and wire in a few small parts - a job so simple you'll finish before you realize it, and best of all, you'll have one of the finest high sensitivity multitesters on the market. When used in a circuit, the high input resistance on all DC and AC ranges does away with the highly inaccurate readings

common to low resistance testers which load the circuit. Ranges: DC Volts, 0-10-50-250-500-1000; AC Volts, 0-10-50-250-500-1000; DC CURRENT, 0-500 μa , 0-10-250 ma; OHMS, 0-10K-100K-1 meg; DECIBELS, -20 to +36; PLUS 0-5000 henries and 250 mmf. to .02 mfd. A LAFAYETTE SPECIAL TUBE TESTER!

COMPLETELY WIRED - NOT A KIT

- MOST ADVANCED ENGINEERING TO FIT SERVICEMAN'S NEEDS

26.95

A new streamlined tube tester with a realistic approach to the problem of quickly testing the ever increasing number of tube types. It incorporates new and advanced engineering features and all at a price of about half of even the most ordinary tube tester. Read these Specifications.

"FREE POINT" ELEMENT SELECTOR SWITCHING: Newly designed, it reduces possibility of obsolescence to a minimum because any pin may be used as a filament pin and voltage applied between it and any other pin, or even the "top cap". Tubes with tapped filaments or with filaments terminating in more than 1 pin are truly tested.

MULTIPURPOSE TUBES: Special isolating circuit allow each section of multi-purpose tubes to be tested individually as if it were in a separate envelope.

SHORTS AND LEAKAGES: Supersensitive method checks shorts and leakages up to 5 megohm between any and ALL elements; continuity between various sections individually indicated.

SIMPLICITY: Fast simple operation. The 4 position fast action snap switches are all numbered in exact accord with IMA standards. Thus when testing element terminating in pin No. 7 of a tube - you use button No. 7. You can't insert a tube in the wrong socket - there's one for each type of tube base.

TUBE TYPES: Tests all octal, octal, 7 pin miniatures, 9 pin miniatures as well as the new novel and Sub-Minar types. Old type sockets used for testing obsolete types - that you rarely see anymore - have been eliminated.

SIZE: A practical size to carry with you as well as for use in the shop - only $8\frac{1}{2}'' \times 6\frac{1}{2}'' \times 2\frac{1}{4}''$ deep. Shpg. Wt. 5 lbs.

• TESTED AT 3 TIMES WORKING VOLTAGE
 • EXCEPTIONALLY RESISTANT TO HIGH TEMPERATURES AND MOISTURE
 • SURPASSES PERFORMANCE OF MOLDED PLASTIC TUBULARS

They're new, they're different, and they're better! Now, at a price far less than that of ordinary plastic molded tubulars, Lafayette brings you, for every day service work, a condenser that was designed for critical industrial applications. The case is of durable gleaming porcelain, a ceramic known for its high degree of imperviousness to moisture and resistance to heat. The capacitor is of finest quality, tested at 3 times the rated voltage with much closer capacity tolerance. It maintains its characteristics under extreme conditions of heat and humidity. Its mechanical construction is excellent, the leads are firmly attached and sealed — they won't twist or break off. We've selected the most popular values and put them up in two serviceman designed kits. Each condenser is plainly marked. Each value is mounted on separate handy strips. All are conservatively rated at 600 DC working volts. See chart for contents of each kit.

NEW! LAFAYETTE 8" HI-FI SPEAKER

- "MECHANICAL 2-WAY" SPEAKER OF UNUSUAL DESIGN
- EXTRA-HEAVY MAGNETS, EXTREMELY HIGH FLUX
- RESPONSE 40-16,000 CPS
- SPECIAL PATENTED CONE CONSTRUCTION AND MATERIAL FOR SMOOTH, DISTORTION-FREE RESPONSE
- EXCELLENT FOR STEREO

8" 9.95

A most unusual dual-cone construction is used in these extra-high-quality 8" speakers to economically provide the same type of wide-range frequency response normally found only in true coaxial speakers or multiple speaker systems. There are 2 separate cones, acting through a common voice coil. The outer edge of the tweeter cone is attached to the mid-section of the woofer cone; both cones "float" on flexible, corrugated edges. This mounting, plus apertures provided behind the woofer cone, results in mechanical crossover so that both cones operate in phase at low frequencies, but only the tweeter cone operates at high frequencies. This gives improved high frequency directional

characteristics and minimum distortion. The patented cone materials provide extremely smooth reproduction. Magnets are large and heavy, with flux density of 10,500 gauss and total flux of 56,000 maxwells. Their high efficiency means good transient characteristics, low distortion, and good response at either high or low sound levels. Terminals are screw-type for solderless connections. Sensitivity is 99.5 db/watt; resonance is 55-70 cps; voice coil is 8 ohms. Size is 8" diam., 4 1/2" deep; requires 6 1/4" diam. baffle opening. Shpg. wt., 5 1/2 lbs. SK-98 8" 2-WAY SPEAKER Net 9.95

NEW! Achromatic BARLOW LENS

4.95

- Makes Any Good Telescope Better!
- Doubles Your Telescope's Power!
- Improves Definition!
- Provides Greater Eye Relief!
- Greater Illumination—Wider Field!

The Barlow Lens is a negative (diverging) lens which can increase the range of magnification of any given set of eyepieces. Greater eye relief is provided—even on short focal length eyepieces. Sharpen definition and reduce image deterioration by permitting use of low-power eyepieces to achieve high magnification. This also provides for greater illumination and a wider field. By increasing the effective focal length of the objective—and reducing its relative aperture—it greatly reduces aberrations present in poorly corrected eyepieces. Lafayette's Barlow lens will make any good telescope perform like a much larger one. Fits all Lafayette telescopes except F-330 Explorer. Accepts eyepieces of 24.5mm (.97") O.D. and fits draw tubes of that size. Shpg. wt., 1 lb.

DIRECT VISION PRECISION SPECTROSCOPE

- 400-800 MILLIMICRON SCALE
- ADJUSTABLE SLIT WIDTH; DRAWTUBE SLIT FOCUSING
- HORIZONTALLY SPLIT FIELD

A prismatic type, hand-held instrument that has most features of the finest standard laboratory instruments. The millimicron scale is adjustable for sharp focus and for position (with "lock-in" feature to fix scale with relation to known spectral lines). Highest grade optics yields a broad dispersion field of high intensity obtained from best quality glass dispersing prisms, while excellent lens system resolves the closest spectral lines into 2 distinct lines. By a twist of the collar, a horizontally split field is obtained by which a comparison can be made of two light sources simultaneously. Tubes and collars are constructed of highly polished corrosion proof steel. Equally suited to laboratory or field work, the spectroscope has a wide array of applications: emission spectrometry of light sources; qualitative chemical analysis and metallurgical analysis by emission spectroscopy; qualitative analysis of absorption spectra by examining aqueous or other solutions contained in the small test tubes provided. Absorption spectrum analysis has application in many branches of technology—color and dye chemistry, blood chemistry, clinical medicine, criminology. SUGAR REFRACTOMETER

- MODIFIED ABBE DESIGN — READS % SUGAR DIRECT
- NO MOVING PARTS TO WEAR OUT
- CAN BE USED TO DETERMINE REFRACTIVE INDEX

Here is a beautifully constructed scientific tool of simple design, easy to operate, with no moving parts, except for the focusing eye piece. Operation is very simple. A few drops of the sample are placed on the prism, the cover is closed and observation is made by means of tungsten illumination or daylight. A perfectly clear field, completely color corrected, shows a reticle graduated in percent from 0-32%. With the sample in place as described above the field will show a sharp dividing line between a bright and dark portion; where the dividing line falls determines the reading, which can be estimated to 0.1% accuracy. The instrument can be converted to a universal laboratory type by changing % readings to "index of refraction" readings, etc. (Consult Chemical Handbook or literature.) This instrument is an essential tool in the fields of sugar refining, agricultural, food technology, medicine, theoretical chemistry, etc. Comes in a convenient portable leather case. Internal electronic components are protected by a clear plastic cover which keeps the hearing aid dust and moisture free—while making inspection and service easy. A smoothly operating volume control permits easy adjustment for the various requirements of daily living. The alumite case is extremely handsome and finished in gold by a special process to prevent peeling and rusting. A good-looking gray leather zipper carrying case is also supplied. Uses only 2 pen-light battery cells, low-cost and replaceable anywhere, yet battery life is approximately 2 months with a rate of use of 4 hours per day! Shpg. wt., 1 lb.
