# LITTELFUSE

“Quicker than a Short Circuit”

TAB WIDTH VARIES WITH AMPERAGE

## THE LIMITED CURRENT (L.C.) LINE OF FUSES AND FUSE HOLDERS

END STAMPING IDENTIFIES SPECIFIC FUSE AMPERAGE.

"C" IS REGULAR FUSE.  
"N" IS SLO-BLO FUSE.

Here is a completely new approach to circuit protection to completely eliminate the possibility of over-fusing circuits.

This has been accomplished by a combination of three different fuse lengths and seven different widths of bayonet locking tabs on the fuse caps.

The fuse post is made to accept only the size amperage range and type (regular or slo blo) in its range. For example: a 1 amp. slo blo fuse is 1 1/4" long with .115 to .120 width tabs. The holder used with this will only accept a slo blo fuse (N type) above 3/4 to 1 1/4 amps.

The holder is a ruggedly designed unit, molded from high strength bakelite.

It snaps into a predetermined chassis mounting hole and locks into place by means of a quick snap-in type lock washer. It can be pressed into place by hand or simple tools.

The fuse locks into the holder by means of a bayonet lock which permits easy and quick insertion and removal of fuses.

Both solder connections are behind panel making the installation of the unit simple and inexpensive.

# BUSS Fuses

## FUSETRON DUAL-ELEMENT Fuses and Fuse Holders

for Protection of TV, Radios, Instruments and Electronic Equipment

### FUSETRON and BUSS MATCHED FUSES and FUSEHOLDERS

Safeguard against use of wrong size and type of fuse. FUSETRON Type N are "slow-blowing" fuses for use where harmless surges or starting currents might cause ordinary fuses to open needlessly. Use in Type HN fuseholder.

BUSS Type C are "quick-blowing" fuses for fast interruption of fault current. Use in Type HC fuseholder.

### BUSS INDICATING FUSES, 1/4 x 1 1/4 inch

Fibre Tube. Silverplated indicating pin extends from end of fuse when fuse is blown.

This pin can also be used to actuate a signal by using fuses in BUSS HKA Fuseholders or BUSS Signal Fuse Blocks. GLD fuses in sizes larger than 5 amperes have dual tube construction. They can be used in BUSS Signal Fuse Blocks but not in HKA Fuseholders.

Test specifications—carry 110%, open at 135% in one hour or less.

### FUSETRON FIBRE TUBE FUSES

#### 1 3/32 x 1 1/2 inch

Dual-Element — Slow Blowing Type. Avoid needless blows from starting currents or

surges. Have fuse link that operates only on very high overloads or short-circuits, and thermal cutout on low overloads. Thermal cutout cannot operate quickly at any load, hence long time-lag is obtained. Yet protection is provided against short-circuits or continued overloads.

Test specification—carry 110%, open at 135% within 1 hour.

Approximate blowing time: at 200% load 25 seconds.  
at 300% load 8 seconds.  
at 500% load 5 seconds.

# COMPONENT RECTIFIERS

## SILICON, SELENIUM, GERMANIUM, AND COPPER-OXIDE

Rectifiers for practically any d-c power requirement are available. Vac-u-Sel\* rectifiers are a high-quality type of selenium rectifier produced by an exclusive

G-E sphere-type, vacuum-evaporation process. In addition, General Electric also makes a full line of copper-oxide, germanium, and silicon rectifiers.

New double diode for electronic applications

Embedded stacks for tough environmental applications

New 300-ampere silicon stack

### GENERAL ELECTRIC *Vac-u-Sel* RECTIFIERS

- 63 VOLTS PEAK INVERSE
- 150 C PLATE TEMPERATURE
- 80,000 HOURS LIFE EXPECTANCY

The special vacuum-evaporation process employed in making Vac-u-Sel rectifiers makes possible the outstanding performance characteristic of this selenium rectifier. With G-E Vac-u-Sel rectifiers, you can now match performance requirements for life expectancy, ambient operating temperature, and atmospheric protection, as well as electrical characteristics. Two (2) rectifier cells make up the line of Vac-u-Sel rectifiers: a 26-volt and a 45-volt cell. Both are high-temperature cells.

The 26-volt cell is a long-life, standard industrial cell with a life expectancy of 80,000 hours at normal current rating at 35 C ambient. The 26-volt cell can meet operating requirements up to 150 C at full voltage. Current need not be derated where shorter life is acceptable. Life expectancy at 150 C is 1000 hours.

The 45-volt cell has a 63-volt peak inverse voltage. Unlike most 45-volt rectifiers, this is a true, long-life industrial cell. Frequently, this rectifier may be substituted for those employing 26-volt cells. Since fewer cells are required, savings of up to 30 per cent in cost, and up to 35 per cent in the size of the stacks are possible. Life expectancy of the 45-volt cells at normal current rating at 35 C ambient is 60,000 hours, and they can be used at ambient temperatures up to 110 C.

All Vac-u-Sel rectifiers operate with exceptionally low forward-voltage drop and low reverse leakage, and their margin of superiority in these characteristics increases with service. All Vac-u-Sel rectifiers undergo extensive testing and grading, and matched cells are used in assembling stacks. A variety of finishes and mounting arrangements are available to meet virtually any requirement. Write for Bulletins GEA-6538 (double-diode) and GEC-1330 (application manual).

#### COPPER-OXIDE RECTIFIER STACKS

G-E copper-oxide rectifier stacks offer these outstanding features:

- No unforming
- Ability to withstand momentary current overloads
- Ability to withstand momentary voltage overloads
- Long life with little aging
- Highest efficiency at low voltages

These features of G-E copper-oxide rectifiers make them especially suited for certain types of magnetizing circuits,

which require the rectifier to withstand high current inrush and momentary voltage overload.

Perhaps the most widespread use of copper-oxide rectifiers is in the field of circuit-breaker operation. Here, the unique characteristics of copper-oxide rectifiers are especially important.

The above features also make G-E copper-oxide rectifiers ideal for the following applications: Blocking • Metering • Polarizing relays • High-speed relays • Electroplating • Electrolytic reduction • Telephone and telegraph equipment • Control contactors • Low-voltage, high-current power supplies • Testing equipment • High-voltage surge protectors • D-c welders. Write for Bulletin GEA-5699.

\*Registered trade-mark of General Electric Co.

#### INDUSTRIAL SILICON AND GERMANIUM RECTIFIERS

These heavy power rectifiers offer many outstanding features, such as:

- Best current output, smallest size, and lightest weight per watt output of existing metallic rectifiers
- Highest voltage rating per cell
- High efficiency
- No unforming
- Negligible aging

The new G-E germanium and silicon metallic rectifiers are of the broad-area type. Their very low forward-voltage drop gives excellent regulation. The high output voltage per cell permits the use of fewer cells, and rectifying properties are instantaneous since they do not require artificial forming. These rectifiers can be operated at extremely high current densities, and a large d-c output is obtainable from a very small rectifier assembly.

The regulation is less than 6 per cent when operated at full current density. With most metallic rectifiers, regulation is usually between 15 and 20 per cent at their normal current densities. Germanium and silicon rectifiers have a broad application in power conversion where size and weight requirements are at a premium.

Complete information on all of these rectifiers is available from your nearest G-E Apparatus Sales Office, or by writing to Section 640-476, General Electric Company, Schenectady 5, N.Y.

*...For complete protection in Radio and Television circuits*

Radio Receptor Selenium Rectifiers are built and tested to eliminate arc-over danger, short circuits and heating at the center contact point. This "Safe Center" feature is an added safety factor that gives protection during mounting and in use.

Because of their consistent dependability under all conditions — including high humidity — these bright green units are demanded by an ever increasing number of engineers and servicemen in the U.S. and throughout the world. The rectifiers listed to the right are normally stocked by distributors. Many other types available for special applications.

See your local distributor for your requirements.

\*Stud mounted—8-32 x 2" overall. Current ratings are for a maximum plate temperature of 75° C when the rectifiers are new, in a maximum ambient temperature of 45° C. Recommended plate temperature for new rectifiers is 70° C. Output current ratings are based on R.M.S. rectifier current not in excess of 2.5 times rated output current.

CLEARANCE FOR NO. 6 MACHINE SCREW (RETMA STANDARD).

NOTES:

\*10-32 stud extends to one side only — one mounting bracket used.  
†Across outer legs of center tap connection.

MOUNTING: Mounting studs are centrally located on the cell and where more than one is used the measurement is 3 1/4" between centers. A 10-32 stud is used with cell sizes up to 3.9" square and a 1/8"-18 stud is used with the larger cell sizes.

The stacks shown above are adaptable for a wide range of common applications. The ratings are for stacks mounted with cells in a vertical position with normal convection cooling, and in an ambient temperature of 35°C (95°F) with a resistive or inductive load. Many other types are available for special requirements.

Developed by Siemens Organization of West Germany and now manufactured exclusively in the U.S.A. by Radio Receptor Co., Petti-Sel rectifiers are the result of an improved vacuum process requiring no artificial barrier layer. These rectifiers have an estimated life of 100,000 hours, low forward voltage drop, and much smaller cell sizes than conventional units of the same ratings.

### TECHNICAL CHARACTERISTICS

Power supply requirements for every radio, television and instrument use—ranging from small AC-DC receivers to large-screen TV—can be met with available Kool-Sel rectifiers. A summary of the important engineering characteristics of each Kool-Sel type is given on this page. You should consider the use of Kool-Sel components for the following applications:

**RADIOS and RADIO-PHONOGRAPHS** — Low-cost, efficient rectifiers for radios and radio-phonograph combinations are Kool-Sel KS-65, KS-75 and KS-150. The needs of most 5-tube chassis are met by the KS-65, while the KS-75 and KS-150 are used in sets with larger current requirements.

**RADIO ACCESSORIES** — TV boosters, UHF converters, phonograph oscillators, intercoms and the like gain compactness and dependability when you use small, cool-running Kool-Sel. Type KS-65 is suitable for most of these uses.

**TELEVISION** — High-voltage power supplies in television receivers — including color sets — use Kool-Sel rectifiers, Catalog Nos. KS-200, KS-250, KS-300, KS-350, KS-400 and KS-500. These rectifiers, used in voltage doubler or voltage tripler circuits, provide proper B-plus voltage, eliminating the size, cost, weight and hum problems of power transformers.

**LABORATORY INSTRUMENTS, POWER SUPPLIES, AMPLIFIERS** — Rectified high voltage through the use of voltage doubler and tripler circuits, for equipment where current requirements run as high as 500ma, may be provided with Kool-Sel rectifiers. Catalog Nos. KS-200, KS-250, KS-300, KS-350, KS-400 and KS-500 will be found useful for laboratory power supplies, DC filament supplies, motion picture projectors, amplifiers, test equipment and other specialized uses.

THE WORLD'S LARGEST SUPPLIER OF INDUSTRIAL METALLIC RECTIFIERS

# SILICON and SELENIUM Rectifiers

Sarkes Tarzian area type silicon rectifiers are made by a special process that provides optimum forward to reverse ratios and long useful life. Current ratings for half wave application range from 500 milliamperes dc to 15 amperes dc and voltage ratings per unit range from 50 to 400 volts peak inverse. Small size coupled with high efficiency and allowable high ambient temperatures make silicon rectifiers the practical component for most applications that require dc power. Our staff of competent power conversion engineers is ready to consider your application for prompt recommendations. Write, wire or phone.

**Type M** silicon rectifiers are rated at 500 milliamperes dc with peak inverse voltage ratings of 100 to 400 volts. Connection is made by means of end ferrules that fit standard fuse clips. Low cost holders are available.

**Type N**—Four basic terminal arrangements are available in the N series of silicon rectifiers. (1) Axial leads, (2) Axial stud and lead, (3) Axial stud and lug, (4) Axial studs. The convection cooled current rating is 500 milliamperes and the conduction cooled rating is 1 ampere provided an adequate heat sink is used. Voltage ratings range from 50 to 400 volts peak inverse.

**Type P**—The P series of silicon rectifiers includes the same end terminal designs as the N series. The dc current ratings, however, are 1.5 amperes with convection cooling and 5 amperes when a heat sink is used. Voltage ratings range from 50 to 400 volts peak inverse.

**Type L** silicon rectifiers are rated at 1.5 amps in half wave circuits with peak inverse voltage ratings of 100 to 400 volts. Mounting is by means of ferrules that fit standard fuse clips. Low cost holders are available.

**Type LF**—Use of a special heat sink arrangement and hardware allows a current rating of 5 amperes dc from the Type L rectifier. Precautions must be taken, however, to provide adequate cooling area to limit case temperature. Voltage ratings range from 100 to 400 volts peak inverse.

**Type Q**—The Q series of rectifiers is provided with axial studs only, however, it is possible to attach special end terminals. The current rating is 7.5 amperes in convection cooled applications and 15 amperes when a heat sink is used. Peak inverse voltage ratings range from 50 to 300 volts.

## A Rectifier for Every Application

A wide selection of Selenium Rectifier designs is offered to the design engineer by the Sarkes Tarzian line. It is possible to provide ratings of a few milliamperes to thousands of amperes and from a few volts to thousands of volts by using series, parallel and series-parallel arrangements. Whatever your power conversion problem write for specific recommendations for your application.

**Standard and High Temperature**—Sarkes Tarzian standard and high temperature selenium rectifiers offer the design engineer a variety of combinations. The standard line includes fourteen basic cell sizes and the high temperature line includes nine cell sizes. Maximum permissible cell temperature an high temperature types is 150°C.

**Radio-Television Types**—Radio and Television type selenium rectifiers are mass produced under tight quality control standards. The resultant good availability, good quality and low price have made these types popular in a variety of electronic equipments.

**Embedments**—Embedments provide a small unit at relatively low cost when extreme environmental or shock conditions are anticipated. Six basic cell sizes are available to assemble various combinations.

**High Voltage**—Series stacking of cells in glass or phenolic enclosures increases voltage ratings and half wave units are available with ratings as high as 7500 volts peak inverse with current ratings as high as 25 milliamperes. Axial leads or ferrules are available for connection.

Remember—whatever your problem on power conversion, let Sarkes Tarzian applications engineers provide you with the practical answer.

TYPE A-4M

TYPE B2

TYPE C-4

Schauer copper oxide rectifiers for instrument and other uses are processed and individually tested to meet the requirements of the user. Versatile processing techniques make possible variations in characteristics for special or unusual applications. Each rectifier is rated conservatively for long life and dependable operation.

Size "B" Rectifiers are encapsulated—fully sealed in special formula polyester plastic in attractive red color. Cells are specially processed with vacuum evaporated gold contact areas to give maximum efficiency, stable operation and low aging characteristics. All rectifiers are supplied with 3" leads, color-coded. (Red, positive; black, negative; yellow, A.C.) Plastic encapsulated rectifiers have lead insulation imbedded in the plastic for better sealing, eliminating short circuits at the rectifier. Lead lengths of other

than 3" can be supplied on special order.

"A" SIZE CELLS have good frequency response above the audio range and can be used at higher frequencies. Recommended for meter applications needing 1MA or less for operation. Can be used for other applications requiring up to 5 MA.

"B" SIZE CELLS are for meter, relay and other applications requiring 1MA up to their maximum rating. Recommended for commercial and low audio frequency operation.

"C" SIZE CELLS are for general applications requiring larger output currents and operation of meters, relays and other apparatus. Special process cells for varistor applications.

Write, wire or telephone for complete information. We welcome your inquiries concerning any special rectification problem.

**NOTE:** The Schauer Mfg. Corp. is the exclusive manufacturer of replacement Westinghouse copper oxide rectifiers.

Standard rectifiers are connected internally according to one of the five circuit diagrams shown.

Series 500, 160 and 160-C are the well known standard line of instrument rectifiers and are constructed to the highest standards of quality. Construction is conventional.

TUA (tubular, axial leads) and TUR (tubular, radial leads) construction is desirable especially in rectifiers designed for high voltage operation. Total enclosure of the stack however limits heat radiation necessitating derating of cells.

ERM (external resilient member) construction insures maintenance of optimum stack pressures regardless of ambient or operating temperatures. Rectifiers in ERM construction are smaller, lighter and cheaper.

## T-90 BANDMASTER TRANSMITTER

The T-90 is the result of our long study concerning the operating requirements of most amateurs. Sufficient power to "get out" on all bands, either fixed or mobile, under today's QRM conditions, plus space limitations of the average home, has been the prime objective in its design. The many refinements contributing to smooth and efficient operation which have been incorporated in the T-90, have up to this time been found only in transmitters selling at a much higher price. A close study of the following features will provide convincing evidence that the T-90 is the transmitter YOU WANT for your shack or car.

**DIMENSIONS (overall):** Cabinet 12 3/4" wide, 10 1/2" deep, 6 3/4" high; weight 17 3/4 lbs. Factory built and tested complete with tubes, less power supply.

## R-9 BANDMASTER RECEIVER

In our further studies of amateur requirements, we found that the ultimate desire of all was to have equipment which "went together." The difficulty of installing odd sizes of cabinets has always been a source of irritation to the neat and efficient operator. The R-9 is physically an identical twin to the T-90. Now at last, without any reservation, you can have fixed station performance either in your shack or in your car. This highly stable all-band double conversion receiver has a versatility and a number of refinements which have never before been offered in such small space. Price is complete with tubes. Dimensions same as transmitter.

## EXPLANATION OF TYPE NUMBERS

The first portion of the type number indicates the capacity per section in mmfd. The following letter indicates the frame size or type. A second letter "D" indicates a two-section type—"A" differential, "B" butterfly. The final number multiplied by 100 is the approximate peak break-down voltage.

## TYPE "M" CAPACITORS

Requiring a panel area just  $\frac{5}{8}$ " wide by  $\frac{3}{4}$ " high, these diminutive capacitors provide the perfect answer to problems encountered in the design of compact radio frequency equipment. Bridge type stator terminal provides extremely low inductance path to both stator supports. Soldered plate construction, oversize bearing, and heavily anchored stator supports insure extreme rigidity. Relatively large beryllium copper compression spring rotor contact provides steady torque—rotor stays "put" where set. Rotor contact nickel plated—all other metal parts nickel plated. Steatite end frames DC-200 treated. Mounting bushing threaded  $\frac{1}{4}$ "-32 with flats to prevent turning—mounting nut furnished. Peak voltage 1250 volts on .017" spaced units—850 volts on 160-130 which is spaced .013"— $\frac{3}{16}$ " diameter shaft\* slotted for screwdriver adjustment. JOHNSON Miniature Air Variables are available in production quantities with the following features: 1. Locking bearing. 2. 180° stop. 3. Various shaft extensions. 4. High torque. 5. Silver or other platings.

\*Instrument type tuning knob to fit  $\frac{3}{16}$ " shaft available. (See knob and dial section of this catalog.)

## TYPE "L" CAPACITORS

A superior quality general purpose capacitor by JOHNSON embodying important advances in design and construction. The rotor bearing and stator support rods are actually soldered directly to the ceramic (steatite) end frames making the capacitor virtually vibration proof. A special split sleeve tension bearing and silver plated beryllium copper contact provide constant torque and smooth, silent capacity variation. Heavy brass soldered plates and large diameter tie rods provide great rigidity. Plating is heavy nickel. Bearings threaded  $\frac{3}{8}$ "-32, mounting nut provided. Removable chassis mounting brackets can be used to mount auxiliary equipment. Plate spacing .030". Available with .020", .060" and .080" spacing as well as special platings, shaft lengths and stator terminal locations in production quantities. Models with 6-32 tapped mounting posts soldered to end frame are also available on special order.

## JOHNSON KNOBS AND DIALS

A distinctive line of matching knobs and dials, derived from a new basic knob design. Knobs have twelve well defined flutes and present an essentially round appearance.

Tough, scratch resistant black phenolic is used for all molded parts (meets MIL-P-14). Metal dials are etched satin aluminum, anodized finish. This contrasts greatly with deeply etched and filled engraving, provides maximum legibility under poor lighting conditions. All types have accurately centered metal inserts for  $\frac{1}{8}$ " shafts except 116-214-2.

Variations available, such as special shaft sizes, scales or indicators in production quantities.

## TUBE SOCKETS

A new standardization program calculated to simplify the selection of sockets and to provide complete specifications for standard, industrial and military requirements has been instituted recently. By reducing the number of variations in special socket types, it will permit the maintenance of stocks of military and industrial types as well as standard sockets and provide shorter delivery cycles on quantity orders. Specifications for the three variations of each socket type are as follows:

### BAYONET SOCKETS—GENERAL SPECIFICATIONS

**Standard** (designated -1) A commercial grade socket suitable for general requirements. Porcelain bases, glazed top and sides—phosphor bronze contacts, cadmium plated .0002. Nickel plated hardware. Bayonet shells are etched aluminum.

**Industrial** (designated -100) Superior in quality to Standard types, Industrial types have glazed steatite bases, DC200 treated. Phosphor bronze or beryllium copper contacts, .0005 silver plated. Aluminum bayonet shells, iridite No. 14 treated. Fungus resistant cushion washers under contacts.

**Military** (designated -200) Top quality for military requirements. Glazed L4 steatite bases, DC200 treated. Beryllium copper contacts .0005 silver plated. Hot tin-dipped terminals—brass bayonet shells, .0003 nickel plated. Threaded hardware .0002 nickel plated, unthreaded hardware .0003. Fungus resistant cushion washers under contacts.

### WAFER SOCKETS—GENERAL SPECIFICATIONS

**Standard** (designated -1) A commercial grade socket suitable for general requirements. Glazed steatite base is DC200 treated—contacts are of plated brass with steel springs. Etched aluminum shields on shielded types.

**Industrial** (designated -100) Superior in quality to Standard types, Industrial types have glazed steatite bases, DC200 treated. Contacts are phosphor bronze with beryllium copper springs .0005 silver plated. Shields on shield types are iridite No. 14 treated aluminum. Fungus resistant cushion washers under contacts.

**Military** (designated -200) Top quality for all military requirements. Glazed steatite bases, DC200 impregnated. Phosphor bronze contacts and beryllium copper springs silver plated .001—hot tin-dipped solder terminals. Fungus resistant glass base melamine cushion washers iridite No. 14 treated aluminum shields on shielded types. Entire socket protected for 200 hour salt spray test.

**POWER!**

**40 Watt CW Transmitter-Exciter • All Band,

**VIKING "NAVIGATOR"**

This splendid new JOHNSON Transmitter/Exciter will appeal particularly to the discriminating CW operator who requires a flexible, highly stable VFO, a first rate keying system, means for rapid QSY and bandswitching, with substantial RF output. Ample RF power to excite most high powered final amplifiers on CW or AM. A wide range pi output network will match transmission line impedances from approximately 40 to 600 ohms. Bandswitching 160 through 10 meters. Internal VFO or crystal control provides flexibility with full TVI suppression and filtering. The timed sequence keying system applies wave shaping to the keyed amplifier stages for perfect "make" and "break" on your keyed signal. Signal clicks and chirps are eliminated, yet the "break-in" advantages of a keyed VFO are retained. The system may be set to operate so fast that a breaking station may be heard between transmitted dots! Electronic time sequence keying uses no relays and only one dual triode plus a rectifier tube for the grid block bias.

**T-R SWITCH**

This new Johnson T-R Switch provides instantaneous high-efficiency electronic antenna switching. Exclusive double-gated circuitry, with 6BL7 dual triode, gives excellent receiver isolation — printed circuit wiring means extra durability. Gain: 0 db at 30 mcs., ...6 db at 3.5 mcs. Will handle high peak power capabilities of new linear amplifiers — rated at 4,000 watts peak power. Instantaneous break-in on SSB, DSB, CW or AM. Will not affect transmission line SWR — will provide an effective impedance match to most receivers through the 3 to 30 megacycle range. Nylon tip jack facilitates connection to an internal RF probe for driving an oscilloscope or other monitoring device.

**DIRECTIONAL COUPLER AND INDICATOR**

The new Johnson Directional Coupler and Indicator provides a continuous reading of SWR and relative power in the transmission line. Coupler may be permanently installed in 52 ohm coaxial line — will readily handle maximum legal power as specified by the FCC for amateur service. Standard tip jacks will permit the use of a commercial multimeter as an indicating instrument — reference sheets showing curves are supplied with each coupler for popular multimeter basic ranges. Indicator consists of a 0-100 micro-ammeter calibrated directly in SWR and relative power. Continuous monitoring of either incident or reflected power may be quickly selected with a switch on the front of the meter cabinet. A second control on the front panel, permits easy adjustment and calibration of the meter.

Completely self-contained with internal blocking bias, voltage regulator, screen and bias supplies. Two meters provide constant visual check of operation. Plate current meter also reads watts input and a second meter reads grid current or plate voltage.

## MODEL 4350 DUAL-CONVERSION RECEIVER

- CRYSTAL-CONTROLLED DUAL CONVERSION
- 1 TO 2 MV SENSITIVITY, 2.8 KC SELECTIVITY
- 75:1 AND 1:1 TWO-SPEED TUNING KNOB

The RME 4350 is a completely new amateur receiver of professional quality incorporating crystal-controlled dual conversion and many other deluxe features usually found only in higher priced models. Designed specifically for communications on amateur frequencies, the Model 4350 has a large, evenly graduated, illuminated dial covering the following six bands: 1.76 to 2.2 mc; 3.48 to 4.26 mc; 6.98 to 7.32 mc; 13.98 to 14.43 mc; 20.8 to 21.52 mc; 26.95 to 29.8 mc. Smooth, even tuning without backlash is provided by the unique differential, ball planetary type tuning knob with choice of 75-to-1 or 1-to-1 ratios by selection of coaxially mounted rims; triple spaced plates in tuning condenser greatly reduce microphonic susceptibility; 1st IF 2195 kc, 2nd IF 455 kc.

With RME crystal-controlled dual conversion, noise factor is maintained at from 3.5 to 6 while images are greatly reduced, no less than 54 db on any band.

Selectivity control offers four positions; nose of curve is 3 kc wide without crystal filter with attenuation 60 db down seven kc above or below desired frequency. Crystal filter has phasing control for variable rejection of unwanted adjacent signals. High sensitivity of 2 microvolts for 10 db signal-to-noise ratio; excellent image rejection; extremely low noise figure. Temperature-compensated components with heavy steel chassis, sturdy steel cabinet and pressure-cast control panel hold drift to  $\pm .01\%$  for first 20 minutes with zero drift after warm-up. Extreme stability permits single sideband reception with or without adapters. BFO injection control for accurate carrier frequency insertion for SSB operation.

Other features include "S" meter calibrated in steps of 6 db from S1 to S9, plus 10 db units over S9; automatic noise limiter of the peaked type set for 85% modulation, may be switched in and out of circuit; front panel frequency correction control to set frequency exactly at any scale point. Antenna trimmer on front panel permits peak adjustment for different antennas. Smooth acting RF gain control with 6 db attenuation for each 5 degrees rotation; function switch selects receiver operation—MGC-BFO, AGC-AM phone, AGC-SSB, MGC-SSB. Two coaxial jacks provided for addition of Model 4301 single sideband adapter or other adapters; 4-ohm speaker terminals; antenna connections for doublet and Marconi-type; transmitter relay control. ### BALUNS

The No. 46672 (1 far each amateur band) wound Balun is an accurate 2 to 1 turns ratio, high Q auto transformer with the residual reactances tuned out and with very tight coupling between the two halves of the total winding. The points of series and parallel resonance are selected so that each Balun provides an accurate 4 to 1 impedance ratio over the entire band of frequencies for which it was designed. Suitable for use with the No. 90672 Antenna Bridge or medium power transmitters.

No. 46672-80/40/20/15/10.....

### ANTENNA BRIDGE

The Millen 90672 Antenna Bridge is an accurate and sensitive bridge for measuring impedances in the range of 5 to 500 ohms (or 20 to 2000 ohms with balun) at radio frequencies up to 200 mc. ### 50 WATT EXCITER-TRANSMITTER

Modern design includes features and shielding for TVI reduction, bandswitching for 4-7-14-21-28 megacycle bands, circuit metering. Conservatively rated for use either as a transmitter or exciter for high power PA stages. 5763 oscillator-buffer-multiplier and 6146 power amplifier. Rack mounted.

No. 90801, less tubes.....

### VARIABLE FREQUENCY OSCILLATOR

The No. 90711 is a complete transmitter control unit with 6SK7 temperature-compensated, electron coupled oscillator of exceptional stability and low drift, a 6SK7 broad-band buffer or frequency doubler, a 6AG7 tuned amplifier which tracks with the oscillator tuning, and a regulated power supply. Output sufficient to drive a 6146 is available on 160, 80 and 40 meters and reduced output is available on 20 meters. Since the output is isolated from the oscillator by two stages, zero frequency shift occurs when the output load is varied from open circuit to short circuit. The entire unit is unusually solidly built so that no frequency shift occurs due to vibration. The keying is clean and free from annoying chirp, quick drift, jump, and similar difficulties often encountered in keying variable frequency oscillators.

No. 90711, with tubes.....

### HIGH VOLTAGE POWER SUPPLY

The No. 90281 high voltage power supply has a d.c. output of 700 volts, with maximum current of 235 ma. In addition, a.c. filament power of 6.3 volts at 4 amperes is also available so that this power supply is an ideal unit for use with transmitters, such as the Millen No. 90801, as well as general laboratory purposes. The power supply uses two No. 816 rectifiers. The panel is standard 8 3/4" x 19" rack mounting.

No. 90281, less tubes.....

### HIGH FREQUENCY RF AMPLIFIER

A physically small unit capable of a power output of 70 to 85 watts on 7M or 87 to 110 watts on C-W on 20, 15, 11, 10, 6 or 2 meter amateur bands. Provision is made for quick band shift by means of the No. 48000 series VHF plug-in coils. The No. 90811 unit uses either an 829-B or 3E29.

No. 90811 with 10 meter band coils, less tube.....

### RF POWER AMPLIFIER

This 500 watt amplifier may be used as the basis of a high power amateur transmitter. The No. 90881 RF power amplifier is wired for use with the popular "812A" type tubes. Other popular tubes may be used. The amplifier is of unusually sturdy mechanical construction, on a 10 1/2" relay rack panel. Plug-in inductors are furnished for operation on 10, 20, 40 or 80 meter amateur bands. The standard Millen No. 90801 exciter unit is an ideal driver for the No. 90881 RF power amplifier.

## The Oscilloscopes and the Amplifier Sweep

The oscilloscopes in their packaged form are entirely adequate for many laboratory as well as industrial and communication uses. By the addition of such units as sweeps, pulse generators, amplifiers, servo sweeps, etc., all of which can be conveniently and neatly constructed on companion rack panels, the original basic scope unit can be expanded to serve any conceivable application. Here again the research engineer is freed of the drudgery of time consuming mechanical construction and other such details of the basic scope before being able to proceed with his specialized work. The oscilloscopes are designed for standard rack mounting and incorporate metal shielding and power supply as well as functional controls.

## Delay Lines and Networks • "Designed for Application"

The James Millen Mfg. Co., Inc. has been producing continuous delay lines and lump constant delay networks since the origination of the demand for these components in pulse formation and other circuits requiring time delay. The most modern of these is the distributed constant delay line designed to comply with the most stringent electrical and mechanical requirements for military, commercial and laboratory equipment.

Distributed-constants delay line is furnished in three forms:

1. Bulk line
2. Flexible sealed completed units
3. Cased hermetically sealed completed units

The bulk delay line is approximately  $\frac{3}{16}$  in. diameter and is furnished in random lengths. It is priced "by the foot."

The flexible, sealed, complete lines are furnished with delay time of from 0.1 microseconds to 10 microseconds. The terminals are No. 18 tinned leads, extended through molded end caps. This form of line is particularly useful in applications where space is at a premium, as the line can be tucked around the edges of the chassis, in otherwise waste space. The flexible lines are furnished with terminals on both ends for transmission use or with a dummy molded end replacing one of the terminals for pulse forming lines. Delay time is specified as time required for the transmission through one length of line only.

Care must be used not to coil line around a diameter of less than  $\frac{1}{2}$  in.

The cased lines are mounted in hermetically sealed metal containers with "metal to glass" terminals. Lines of this type can be furnished in values up to approximately 36 microseconds and with multiple sections, in a single case. Delay lines from 0.5 microsecond to 1.5 microseconds 1350 ohm characteristic impedance are mounted in a standard can  $\frac{3}{4}$  in. long by  $\frac{1}{2}$  in. high, by 1 in. thick. Delay lines from 0.1 microseconds to 0.5 microseconds are mounted in a standard can 1 inch by 1 inch square and length to accommodate the particular time-delay line requirements. Delay lines 550 ohm impedance from 0.1 microseconds to 0.25 microseconds are also mounted in the standard 1 x 1 inch square can.

Case size, terminal arrangement, mounting feet or lugs, etc., can be furnished to customer's requirements.

Due to the special nature of delay line applications, we list no standard units, but solicit correspondence regarding your exact requirements.

### ELECTRICAL CHARACTERISTICS:

Characteristic Impedance: 1350 ohms  $\pm$  20% or 550 ohms  $\pm$  20%. Special lines of any impedance between 400 ohms and 2000 ohms can be supplied.

Time Delay: Approximately 22 inches per microsecond for 1350 ohm line. Approximately  $\pm$  1 feet per microsecond for 550 ohm line.

Frequency Response: 1350 ohm line — When a 1 microsecond square pulse is applied to the line, the leading edge of the pulse after transmission through 4 microseconds of line has a time rise of not more than 0.2 microseconds and the duration of the pulse is less than 1.5 microseconds. (Line terminated by characteristic impedance.) Rise time is a function of delay.

Band Pass: A function of delay.

Attenuation: Approximately 1.0 db. per foot for one microsecond pulse. With a four microsecond delay line terminated in its characteristic impedance and a one microsecond square pulse input, the transmitted pulse height is no less than 35% of the input pulse height.

Test Voltage: 600 volts d.c. between winding and shield, between winding and case and between shield and case.

Leakage Resistance: 100 megohms or more between winding and shield and between winding and case.

Ambient Temperature Range: Minus 50 degrees centigrade to plus 85 degrees centigrade.

Thermal Drift: Less than 0.00038 microseconds per microsecond delay per degree centigrade.

Weight: Approximately 0.6 ounce per foot.

Many special applications require lumped-constant delay line. We are in a position to manufacture such lines to your specifications. The above illustrations are typical examples. Other designs including hermetically sealed units can be supplied.

## Magnetic Metal Shields

The James Millen Mfg. Co., Inc. has for many years specialized in the production of magnetic metal cathode ray tube shields and bezels for the entire electronic industry, supplying magnetic metal shields to manufacturing companies, laboratories and research organizations. The study of such problems has resulted in the use of two outstanding metals for this purpose: NICOLOI and MUMETAL. It is possible by selecting the proper material, that is, Mumetal or Nicoloi, or the correct combination of these materials, to reduce the effect of undesired magnetic fields.

Mumetal is generally used on equipment requiring the most thorough shielding, and where the trouble-causing field is not of excessive magnitude. Nicoloi is very effective in reducing fields of high flux concentration. Single Nicoloi shields are satisfactory for general purpose applications where the ultimate design does not necessitate too critical consideration of the effect of external fields. Where there is a combination of the requirement for optimum shielding and an abnormally high external field, the combination of Nicoloi outer shield and a Mumetal inner shield is used. The Nicoloi outer shield reduces the high field most effectively; and the Mumetal inner shield is then operating under the best condition whereby it reduces the interference from a low field to a minimum. For most applications, however, the single Mumetal shield is entirely adequate and to be recommended.

Both Nicoloi and Mumetal obtain their effectiveness due to the correct selection or allows on one hand, and the process of annealing so as to relieve stresses and provide the best possible molecular structure for effective shielding, on the other.

Magnetic metal shields can be furnished to meet the most stringent requirements and match the color of the equipment incorporating such shields. Due to the high alloy

content neither Nicoloi or Mumetal is subject to corrosion and, in general, it is recommended that a zinc chromate primer and a high heat lacquer be used in finishing the shields. Plating is generally avoided due to the possibility that the shields might become magnetized in the plating process which necessarily is done after annealing. Care is used in the selection of materials used in conjunction with the shields for such purposes as brackets, supports, etc., so as to minimize many operations on the shields after annealing.

Cold rolled or stainless steel brackets are recommended as it is impractical to use brass which would melt under the high annealing temperature. Tube clamps must necessarily be made of spring metal which would lose its temper during annealing. In order to avoid this clamps are mounted on the shields after treatment by means of spun rivets so as to avoid any shock to the shield.

Shields and bezels have been designed to meet the stringent requirements of military, laboratory and industrial uses and still provide units which are economical and can be assembled into the complete equipment without complexity. Our standard shields and bezels are arranged to support the cathode ray tube from the front panel without addition of complicated supports and brackets.

Standard shields and bezels for the more popular tubes are available from stock for both production and research programs.

Many production programs, however, make desirable shields designed in conjunction with the specialized requirements of the basis apparatus. Our Custom Shield design and fabrication department is at the service of our customers for the development of magnetic metal shields for such specialized application.

### Grid Dip Meters

Millen Grid Dip Meters are available to meet all various laboratory and servicing requirements.

The 90662 Industrial Grid Dip Meter hand calibrated  $\pm 0.5\%$  for laboratory use with a range from 225 kc. to 300 mc. incorporates features desired for both industrial and laboratory application, including three wire grounding type power cord and suitable carrying case.

The 90661 Industrial Grid Dip Meter is similar to the 90662 except for a reduced range of 1.7 to 300 mc. It likewise incorporates the three wire grounding type cord and metal carrying case.

The 90651 Standard Grid Dip Meter is a somewhat less expensive version of the grid dip meter. The  $\pm 2.0\%$  calibration is adequate for general usage. It is supplied without grounding lead and without carrying case. The range is 1.7 to 300 mc. Extra inductors available extends range to 220 kc.

The Millen Grid Dip Meter is a calibrated stable RF oscillator unit with a meter to read grid current. The frequency determining coil is plugged into the unit so that it may be used as a probe.

These instruments are complete with a built-in transformer type A.C. power supply and internal terminal board to provide connections for battery operation where it is desirable to use the unit on antenna measurements and other usages where A.C. power is not available. Compactness

has been achieved without loss of performance or convenience of usage. The incorporation of the power supply, oscillator and probe into a single unit provides a convenient device for checking all types of circuits. The indicating instrument is a standard 2 inch instrument with an easy to read scale. The calibrated dial is a large 205° drum dial which provides seven direct reading scales, plus an additional universal scale, all with the same length and readability. Each range has its individual plug-in probe completely enclosed in a contour fitting polystyrene case for assurance of permanence of calibration as well as to prevent any possibility of mechanical damage or of unintentional contact with the components of the circuit being tested.

The Grid Dip Meters may be used as:

1. A grid Dip Oscillator
2. An Oscillating Detector
3. A Signal Generator
4. An Indicating Absorption Wavemeter

The most common usage of the Grid Dip Meter is as an oscillating frequency meter to determine the resonant frequencies of de-energized tuned circuits.

Size of Grid Dip Meter only (less probe): 7 in. x 3 $\frac{1}{2}$  in. x 3 $\frac{3}{8}$  in.

## Midget Absorption Frequency Meters

Many amateurs and experimenters do not realize that one of the most useful "tools" of the commercial transmitter designer is a series of very small absorption type frequency meters. These handy instruments can be poked into small shield compartments, coil cans, corners of chassis, etc., to check harmonics; parasitics; oscillator-doubler, etc., tank tuning; and a host of other such applications. Quickly enables the design engineer to find out what is really "going on" in a circuit.

Types 90604 thru 90610 are extremely small and designed primarily for engineering laboratory use where they

will be handled with reasonable care. The most useful combination being the group of four under code No. 90600 and covering the total range of from 3.0 to 140 megacycles. When purchased in sets of four under code No. 90601 a convenient carrying and storage case is included. Series 90601 are slightly larger and very much more rugged. They are further protected by a contour fitting transparent polystyrene case to protect against damage and dirt. This latter series is designed primarily for field use and are not quite as convenient for laboratory use as the 90605 thru 90608 types. All types have dials directly calibrated in frequency.

### RELAYS USING VACUUM SWITCHES

Type R and RH Vacuum Switches are available from Jennings mounted as relays for indoor use. They may be mounted with contacts normally open or normally closed or two switches may be mounted in a single pole double throw arrangement. Either ac or dc solenoids may be used. Insulation between the switch and its actuating solenoid is provided by a 2 to 8 inch puller rod providing 40 to 100 kv insulation. CE grade phenolic laminate is recommended for dc or 60 cycle use; Grade G7 silicone glass laminate is recommended for radio frequency applications.

## STANDARD VARIABLE CAPACITORS

### "RMC" CAPACITORS

**FEATURES**—The "RMC" was designed specifically for applications requiring an "MC" type tuning capacitor with very rigid construction. Its sturdy frame consists of heavy gauge aluminum end panels held together by three aluminum tie rods. It has a brass sleeve front bearing and a single ball thrust rear bearing for smooth tuning and a high degree of resetability. The rotor contact is a forked silver plated beryllium copper spring wiping against a wide disc on the rotor. The plate shape and other constructional features are the same as on the "MC." Tapped holes in front panel and in mounting feet, as well as additional brackets for inverted mounting permit a wide variety of assembly methods.

**SPECIFICATIONS**—Straight line capacity. Air gap is 0.0245" nominal. Tested at 1000 V. R.M.S., 60 cycles.

### "VU" CAPACITORS

VU

**FEATURES**—The "VU" is a uniquely designed UHF tuning capacitor using completely original concepts. With it, conventional "lumped constant" circuits, rather than tuned cavity techniques, can be efficiently used up to 500 megacycles. In addition to employing the capacitor sections in series to eliminate the rotor wiper, the design also utilizes Pyrex balls to form precision bearings and to completely isolate the rotor. Thus, noise generated by rubbing metal-to-metal contacts and variable resistance paths in the bearings have been totally eliminated. Circuit connections are made to threaded studs on each stator. This permits vacuum tube and inductor to minimize circuit inductance. The symmetrical design is ideal for tuned circuits operating up to 500 megacycles.

**CONSTRUCTION**—Rotors and stators are of brass with plates soldered in precisely located grooves and then silver plated to increase the "Q" of the capacitor. The insulation is silicone treated steatite. All lengthwise frame members are of brass to minimize temperature effects. Base mounting brackets are provided. **SPECIFICATIONS**—The capacity characteristic approaches a straight line frequency curve as indicated by nominal values in table. Air gap is .0168" nominal. Tested at 700 V. R.M.S., 60 cycles, between rotor and each stator.

### "BFC" CAPACITORS

**FEATURES**—The "BFC" "butterfly" type capacitor has very low minimum capacity, low inductance and isolated rotor for use in VHF applications as a series capacitor with no rotor connection. For dual split-stator capacitor use, it has a low-loss positive rotor contact. Mechanical and electrical symmetry and stator terminal locations minimize circuit inductance. **CONSTRUCTION**—Brass rotors and stators are soldered and nickel-plated. The contact wiper is heavily silver plated beryllium copper. Tapped studs on the silicone treated steatite front panel permit mounting the capacitor without grounding the rotor. The sleeve type bearing is nickel-plated brass. **SPECIFICATIONS**—Straight line capacity. 90° rotation from minimum to maximum capacity position. Air gap is 0.030" nominal. Tested at 1200 V. R.M.S., 60 cycles between rotor and each stator.

### "MAC" CAPACITORS

**FEATURES**—The "MAC" provides the low minimum capacity essential for use as a trimmer in the VHF range. It was engineered to achieve the smallest dimensions practical to meet the requirements of a miniaturized component.

**CONSTRUCTION**—Its silicone treated steatite base is only  $\frac{3}{8}$ " x  $\frac{3}{8}$ ". Rotor and stator are soldered assemblies and are of brass, nickel-plated. Rotor and stator terminals are positioned to permit short leads. The threaded bearing is provided with flat sides to permit single hole mounting.

## STANDARD VARIABLE CAPACITORS

### "APC" CAPACITORS

**FEATURES**—The "APC" trimmer capacitor originated by Hammarlund over twenty years ago is still widely recognized as the standard capacitor of its type. Its use is indicated in all classes of equipment where a compact, high quality air dielectric trimmer is required. It was designed to resist effects of temperature, moisture and vibration. Silicone treated steatite insulation is used to insure high leakage resistance.

**CONSTRUCTION**—Brass rotor and stator plates are soldered to brass supports. Nickel-plated phosphor bronze wiper assures positive rotor contact. All metal parts are nickel-plated. Terminals are hot-tin dipped. Tapped brass mounting studs fastened to silicone treated steatite base permit mounting capacitor without grounding the rotor.

APC

**SPECIFICATIONS**—Straight line capacity characteristic. Available either with hexagonal collar on slotted shaft to permit rotor adjustments to be made with wrench or screwdriver or with 1/8" extended shaft for knob control or shaft coupling. "APC-C" Lock Type now also available through distributors. Air Gap is 0.013" nominal. Tested at 600 V. R.M.S., 60 cycles.

### "MAPC" CAPACITORS

**FEATURES**—The "MAPC" capacitor is representative of Hammarlund's efforts to meet the demand for smaller dependable components. It is a sealed-down version of the popular "APC" with everything reduced except the quality and performance characteristics. For example, an "MAPC" is about half the size and weight of an "APC." Lower minimum capacities and low inductance make the "MAPC" suitable for VHF use. **CONSTRUCTION**—The standard "APC" construction is used in this capacitor. Rotors and stators are fabricated by soldering brass plates to supporting members and nickel-plating the assemblies. Nickel-plated Beryl. Copper wiper assures positive rotor contact. Tapped brass mounting studs fastened to silicone treated steatite base permit mounting capacitor without grounding rotor.

**SPECIFICATIONS**—Straight line capacity. Available either with screwdriver or socket wrench adjustment or with 7/16" extended shaft for knob control or shaft coupling. "MAPC-C" Lock Type now also available through distributors. Air Gap is 0.0135" nominal. Tested at 600 V. R.M.S., 60 cycles.

### "NZ-10" CAPACITORS

**FEATURES**—The "NZ-10" is a compact transmitter neutralizing capacitor designed for easy and accurate adjustment. The rotor is attached to a fine-thread lead screw which may be adjusted with smooth and precise action by a screwdriver and locked securely by a readily accessible clamping screw. A stop prevents shoring of plates at maximum capacity. Long leakage paths to ground from both rotor and stator are provided. Glazed steatite insulators and smoothly rounded aluminum plates minimize flashover.

**SPECIFICATIONS**—Capacity is adjustable from 2.3 to 10 mmf. Peak voltage rating is 3000 V. at maximum capacity (minimum gap) position.

NZ-10

### "FC" and "FNC" COUPLINGS

**FEATURES**—The "FC-46-S" is an insulated flexible coupling designed to provide for mechanical ganging of shafts even though angularly misaligned. The smallest dimensions have been incorporated consistent with the rugged construction necessary for general service. A high degree of electrical isolation is achieved through the use of silicone treated steatite insulation. Flashover voltage is approximately 5000 V. R.M.S. Brass hubs and spring

temper phosphor bronze flexible arms are nickel plated. An exclusive and important feature of this coupling is its characteristic of uniform side-thrust through 360° of rotation. This eliminates tendency to vibrate at high speeds, minimizes bearing wear and assures accurate tracking.

The "FNC-46-S" is a non-insulated coupling for use where electrical continuity between shafts is required. The flexible arms are held securely to a nickel plated brass ring instead of an insulator.

## SPECIAL VARIABLE CAPACITORS FOR ALL NEEDS

### HAMMARLUND CUSTOM ENGINEERED CAPACITORS

Hammarlund has for many years been considered the foremost designer and producer of variable capacitors for special military, scientific and precision applications. Should you have a special capacitor requirement, your engineers will find the services of our capacitor design group to be of inestimable value. Illustrated are two communications receiver multiple-section tuning capacitors and a single-section frequency meter capacitor. All of these capacitors feature exceptionally precise calibration accuracy, the highest possible degree of re-stability, essentially zero temperature coefficient, close tolerances on starting and running torque, high "Q" under adverse operating conditions and complete freedom from noise. To produce these and similar capacitor designs involve the techniques of metallurgy, gearing, finishing, bearing design, ceramics, vibration and shock—to mention but a few. These techniques are possessed to a high degree here at Hammarlund.

Should you have need for facilities such as ours, we will welcome your inquiry.

## STANDARD VARIABLE CAPACITORS

### "MC" and "MCD" CAPACITORS

MC

MCD

**FEATURES**—The "MC" is a versatile single section tuning capacitor designed to give the equipment engineer a choice of mountings, connections and capacity characteristics. The threaded brass front bearing and tapped aluminum end brackets permit panel or base mounting. A rotor stop permits 180° clockwise rotation for increasing capacity. "MC-S" capacitors have a straight line capacity characteristic. "MC-M" units have offset plates resulting in a "Midline" characteristic which more equally spaces frequencies. "MC-X" units are wide-spaced for high voltages. For optimum performance all Hammarlund "MC" capacitors have silver plated beryllium copper wiping contact, silicone-treated steatite insulation, soldered nickel-plated brass rotors and stators, rotor shaft supported on bearings at both front and rear of capacitor. The "MCD" is a split-stator panel-mounted capacitor with all the "MC" features. Stators have terminals on both sides. Stators on single-spaced capacitors are separated by a shield. Wide-spaced units have no shield. **SPECIFICATIONS**—Straight line or "Midline" capacity characteristic. Single-spaced types have 0.0215" nominal air gap and are tested at 1000 V. R.M.S., 60 cycles. Wide-spaced ("X") types have 0.0715" nominal air gap and are tested at 1750 V. R.M.S., 60 cycles.

### "HF" and "HFD" CAPACITORS

**SINGLE SECTION CAPACITOR**—The "HF" is a single section tuning capacitor employing "APC" rotor and stator design. Extra long sleeve bearing and positive contact nickel-plated phosphor bronze wiper make this unit ideally suited to high frequency applications. Silicone treated steatite insulation. Single hole or base mounting. Special spacing, capacity values, finishes and other modifications are available to manufacturers on special order.

**DOUBLE SECTION CAPACITOR**—The "HFD" dual capacitors, like the "HF" singles, incorporate advanced features providing for maximum efficiency at high frequency. Soldered brass plates are nickel-plated. Aluminum front and rear end panels are mounted on a heavy silicone treated steatite base. Wide front and rear bearings with individual silver plated beryllium copper wipers for each section assure long life and maximum contact efficiency. Single hole panel mount or base mounting. Electrostatic shield between sections. Terminals are provided on both sides of each stator to permit mounting tube and inductor on opposite sides. **SPECIFICATIONS**—Straight line capacity. Single spaced types (HF and HFD) have 0.015" air gap and are tested at 600 V. R.M.S., 60 cycles. Wide spaced types (HF-X and HFD-X) have 0.045" air gap and are tested at 1400 V. R.M.S., 60 cycles.

### MACBF CAPACITORS

**FEATURES**—The "MACBF" is a miniaturized butterfly capacitor providing extremely low capacity for the VHF range. It is of the straight-line capacity type. **CONSTRUCTION**—Rotor and stator of brass, solder assembled, and nickel-plated. Base is of silicone-treated steatite. Terminals are hot-tinned dipped. Threaded bushing with datted sides for panel or chassis mounting. **SPECIFICATIONS**—Straight line capacity. Screwdriver adjustment. Air gap is 0.017" nominal. Tested at 750 V. R.M.S., 60 cycles.

### "HFA" and "HFB" CAPACITORS

**SINGLE SECTION CAPACITOR**—The "HFA" is a single section tuning capacitor similar to the "HF" except that larger plates permit wider air-gaps for the same capacitance values. Resultant higher break-down ratings extend the use of the capacitor into the high frequency low-power transmitter field. A threaded sleeve bearing permits single hole mounting and the bracket supplied may be used for base mounting. A lug-type terminal mounted with the bearing provides an efficient rotor connection.

**DOUBLE SECTION CAPACITOR**—The "HFB" is a dual, balanced rotor transmitting capacitor employing front and rear panels plus a ball-thrust rear bearing, but other incorporating constructional features identical to the smaller "HFA." An insulated shaft extension safeguards operating personnel from the high voltages which may be applied to the rotor. The small size, rugged construction, balanced rotor and range of capacitance values and breakdown voltages make this capacitor ideally suited to many applications.

## Radio Frequency Chokes

### R.F. Chokes with Axial Leads

These chokes cover an inductance range from .1 microhenry to 10 millihenries in 5 decades with 8 coils per decade. Inductance values increase in steps of approximately 50%. Either single layer or 3-pi universal windings are used to insure low distributed capacity. Chokes are wound on low-loss molded phenolic or powdered iron core forms and are impregnated with a moisture- and fungus-resistant varnish. The type of powdered iron used allows the chokes to operate at all frequencies up into the ultra-high frequency region.

## Transistor Components & Misc. R.F. Chokes

### Ferrite Antenna Rods

All loops described below have a secondary which is overcoupled for maximum gain stability with a variation in output load. Designed to match an input impedance of approximately 600 ohms.

These loops can be easily removed from their mounting boards if an alternate method of mounting is desired. Care should be exercised when mounting loops to insure that they are not in close proximity to large metal objects. This precaution will greatly increase loop efficiency.

These loops also make excellent antenna coils for conventional vacuum tube receivers. They offer better signal pickup and increased selectivity over ordinary air loops.

### Standard Transistor Antenna Rod

Due to its large pickup area the #2000 is one of our most popular loops. It has a fixed inductance of 240 uh and covers a band of 540-1650 KC when used with a variable condenser having a range of 15-365 mmf. Dimensions: 3/4" x 9".

Cat. No.	Q @ 790 KC	Freq. Range	Tuning Cond. Max. Capacity	List Price
2000	450	540-1650 KC	365 mmf.	\$2.75

### Miniature Transistor Antenna Rods

Similar to the #2000 described above but smaller in size for miniature sets. Slightly less signal pickup than the #2000, but extremely high Q. Catalog #2001 has an inductance of 240 uh for use with a standard 365 mmf. condenser (Miller #2112). The #2003 has an inductance of 700 uh for use with a miniature 130 mmf. condenser (Miller #2110). Dimensions: 3/4" x 3 3/4".

### Ferrite-Strip Transistor Antenna Rods

These coils are wound on flat ferrite strips rather than the normal ferrite rods. Due to this unique physical configuration they are remarkably sensitive for their small size. The #2004 has an inductance of 240 uh. To be used with a condenser of 365 mmf. (Miller #2112). The #2005 has an inductance of 700 uh. To be used with a condenser of 130 mmf. (Miller #2110). ### Sub-Miniature Transistor Antenna Rods

Adjustable antenna coils with high Q ferrite cores. Inductance range of part #2002 is 40-300 uh; part #2007 is 150-1000 uh. The inductances ranges shown allow for the use of variable capacitors outside our recommended values. Dimensions: 1/2" x 2 1/2".

## VARIABLE TOROIDAL INDUCTORS

Now the advantages of the Rotoroid principle of inductance variation—simplicity, stability, linearity, and high “Q”—can be realized economically in the numerous applications where toroid with a limited variation of inductance is desired. Using similar construction to the Rotoroid, the Adjustoroid allows a total inductance variation of approx. 10%.

## CODE PRACTICE OSCILLATOR AND MONITOR CPO-128A

The BUD CODEMASTER is a real money-saver. No longer do you have to consider your code practice oscillator useless after you have learned the code. A flip of the switch and you have a good CW monitor. This is a really versatile instrument. It has a 4" built-in permanent magnetic dynamic speaker and will operate up to twenty earphones. 2 tubes—50C5 and 35W4. A volume control, and pitch control permit adjustments to suit individual requirements.

Any number of keys can be connected in parallel to the oscillator for group practice.

This unit will operate on 110 volts A.C. or D.C. An external speaker may be plugged in without the use of an output transformer. All controls are placed on the front of the unit and all jacks are in the rear. The unit is 6 1/2" high, 5 1/2" wide and 3 1/2" deep. It is finished in Grey Hammertone enamel with red lettering.

## CODE PRACTICE OSCILLATOR AND MONITOR-EARPHONE MODEL CPO-130-A

This unit is similar to the CPO-128A. The difference is that the 4" speaker is not included. The monitor feature, however, is included. A phone jack is provided for the output and as many as 20 pairs of phones and keys can be operated at one time for classroom operation. This model will also operate a permanent magnetic dynamic speaker.

Plug the voice coil leads into the phone jack—no output transformer is needed. Size of case is 5 1/2" wide, 4 1/2" high and 3 1/2" deep.

## FREQUENCY CALIBRATOR FCC-90A

To comply with federal regulations, some means of accurately checking transmitter frequency must be available at every "ham" station. The BUD FCC-90A consists of a 100 kc. crystal oscillator that is Completely Self-Powered and has 2 tubes. It will give 100 kc. check points on all bands up to 30 megacycles. This enables the operator to determine exact band edges.

No extra wiring is required to install this unit. Plug the FCC-90A into a 110 volt receptacle, connect the pick-up lead to the antenna binding post of the receiver and the unit is ready for operation. An ON-OFF switch and a STANDBY switch are provided.

## WIRELESS PHONO OSCILLATOR WO-6A

This compact unit is designed to enable any standard record player to be easily converted to wireless operation. Record reproduction is then possible through a regular radio receiver without the necessity of cumbersome inter-connecting wires. Installation is simple according to the complete instructions furnished with each unit.

The circuit incorporated in the Wireless Oscillator is of such design that faithful reproduction is assured. The unit comes completely wired and tested including tubes and is finished in black enamel. Operates from 115 volts AC or DC. Frequency range is approximately 1100-2150 K.C. Actual weight 1 lb.

## FILTERS TO REDUCE OR ELIMINATE TELEVISION INTERFERENCE

The sources of television interference are most often short wave broadcasting stations, amateur radio transmitting stations, diathermy equipment, X-ray equipment, automotive ignition noises or similar sources. The basic problem of eliminating this interference is that of rejection of the signals received from these sources.

### LF-601 LOW PASS FILTER

Interference to television receiver reception caused by transmissions from an amateur station can be caused by harmonics or by shock from the transmitter. The shock from the transmitter fundamental can be cured at the television receiver with a Bud HF-600 high pass filter. Harmonics can be greatly reduced or eliminated at the transmitter by use of a Bud LF-601 low pass filter.

The LF-601 high attenuation low pass filter has the following characteristics:

1. Minimum attenuation of 35 decibels on all frequencies above 54 megacycles and a minimum of 93 decibels above 70 megacycles.
2. Maximum rejection is adjustable from 55 to 90 megacycles. This tunable feature provides two slots at least 100 decibels down.
3. The cut-off frequency is 42 megacycles.
4. The unit will easily handle a full kilowatt modulated on a reasonably flat line.
5. The insertion loss is less than one DB.
6. Since the design of this filter provides an adjustable feature, the unit can be used with either 62 ohm or 72 ohm coax.
7. Each inductance is in an individually shielded compartment.
8. All capacitors used are variable.

LF-601

Dealer Cost  
\$21.00

### HF-600 HIGH PASS FILTER

The HF-600 high pass filter is designed to have a cut off frequency at 42 megacycles, thus this filter rejects signals from 0 to 42 megacycles. It is within this range that the majority of signals causing interference would be received. Since there is no attenuation above 42 megacycles, picture strength or quality is not affected.

This unit is easily installed and complete installation instructions are included. The filter is housed in an attractive aluminum case 3 1/4" x 2 1/8" x 1 1/8".

### GIMIX GX-79

The Bud Gimix is a multipurpose unit requiring no batteries or power supply. It is calibrated for use on the 10, 15, 20, 40 and 80 meter amateur bands. No additional coils are needed as the one coil does the work on all bands. It can be used as a Wave-Meter, a Monitor, a Field Strength Indicator, a Carrier Shift Indicator and a sensitive Neutralizing Instrument. Operating instructions supplied with each unit.

## BUD FEED-THROUGH AND BASE MOUNTED NEUTRALIZING CONDENSERS

In circuits utilizing tubes with the grid lead terminated in the base a feed-through type of neutralizing condenser is particularly suited. One hole is required for mounting of feed-through condensers. Neutralizing condenser illustrated is feed-through type. Plates are made of aluminum rounded at edges to cut down losses. After proper tuning is attained, movable plate can be locked with the knurled nut.

No. 852 is ideal for popular low power beam tubes.

## BUD TINY MITE PADDERS

For applications requiring a constant padder capacity under all temperature and humidity conditions, these units are ideal. They lend themselves readily to I. F. transformer applications, fixed tuned circuits for exciters, ganged condenser air trimers, and plug-in-coil padding as they fit inside of standard 1 1/2" diameter coil forms. Rotor and stator assemblies are made up of brass plates (.0015" thick) and rods electrically soldered into a solid unit and then are bright cadmium plated. Insulation is Steatite. Each unit may be adjusted in capacity by either a screw-driver or a 1/4" hex. wrench.

## BUD TINY MITE DUAL CONDENSERS

The construction of these units is similar to the regular Tiny Mite Tuning Condensers. The two end pieces are held together firmly with three tie-rods. A separate round plate is soldered on rotor rod to shield the two stator sections. Large surface front and rear sleeve bearings, provide smooth rotation.

## BUD "CE" MIDGET CONDENSERS

These Midget Condensers were designed to meet the rigid requirements in design of efficient high frequency electronic devices and precision laboratory equipment. Brass rotor and stator plate stacks are assembled into permanent units by means of electro-soldering, which assures long life and accurate plate spacing. End-plates of Steatite

insulate the mounting bushings and angles from the rotor and stator assemblies. A large front sleeve bearing provides for smooth rotation. Special wiper contact provides noise-free tuning. All metal parts are cadmium plated. Rotor plates are semi-circular shaped. For either panel or base mounting.

## BUD "CE" TYPE DUAL MIDGET CONDENSERS

These well constructed dual condensers are similar in design to the double-bearing "CE" types. They feature a rotor wiping contact placed at center of the rotor assembly to assure maximum efficiency at high frequency. Opposed rotor construction assures perfect counterbalance and provides even torque at any position of rotation. Steatite insulation eliminates closed induction loop in frame.

# CONDENSERS

## BUTTERFLY TRANSMITTER CONDENSERS

These Butterfly condensers are unequalled for mechanical and electrical balance in push-pull amplifier circuits. Where space behind the panel will not permit the use of our Giant or Master condensers, these dual condensers are ideal.

Rotor and Stator plates are made from .062" thick, highly polished aluminum with all edges rounded and surfaces highly polished to minimize corona loss and danger of peak voltage flash-over Steatite bars are used as insulators.

These condensers are so designed that a pair of single plate neutralizing condensers can be fastened to the end plate. Brackets for mounting coil jack bars are furnished with the condensers.

All condensers that have an air gap of .5" are furnished with brackets for kilowatt coils and the condensers that have .3" air gap are furnished with brackets for the mounting of 500 watt coils. The height of the condensers is 6 1/4" and the width is 7".

.500" air gap available in 25 mmfd., 33 mmfd., 54 mmfd., 70 mmfd. and 86 mmfd. capacities.

.300" air gap available in 31 mmfd., 51 mmfd., 71 mmfd., 92 mmfd. and 114 mmfd. capacities.

For pricing information write our factory since these are custom built units.

## GIANT TRANSMITTER CONDENSERS

BUD GIANT TRANSMITTER CONDENSERS are built with a sturdy frame consisting of 3/16" thick aluminum end plates, connected by 1/2" diameter duraluminum rods. Formed brackets at top and bottom of end plates provide for mounting these units, and permit placing of associated inductances directly on the condenser.

Rotor and stator plates are accurately stamped from 0.064" thick highly polished aluminum with all edges rounded to minimize corona loss and danger of peak-voltage flash-over. The plates are separated by accurately machined duraluminum spacers that insure a constant air-gap throughout the entire length of the condenser.

The large two-finger rotor-contact spring, made from plated spring brass, assures positive contact with noise-free operation. Steatite bars insulate the stator, and are placed well outside the electrostatic field to keep dielectric losses at a minimum.

Available in both single and dual section.

In single section: .250" air gap available in 195 mmfd., 345 mmfd. and 530 mmfd. capacities. .500" air gap available in 55 mmfd., 95 mmfd., 150 mmfd. and 255 mmfd. capacities. .750 air gap available in 50 mmfd., 75 mmfd., 110 mmfd. and 160 mmfd. capacities. 1" air gap available in 55 mmfd., 85 mmfd. and 105 mmfd. capacities.

For pricing information write our factory since these are custom built units.

## MASTER TRANSMITTING CONDENSERS

All tie-rods in this series are insulated by glazed Steatite pillars, thus completely eliminating all closed metallic loops in the condenser frame. A special outstanding feature, developed by BUD engineers, is that of placing the positive double wiping rotor contact between the two sections at the center of the rotor. These features contribute to perfect circuit balance and eliminate the majority of difficulties encountered in high frequency equipment due to parasitics, circulating currents and poor neutralization. Use BUD condensers throughout and be trouble free.

Available in both single and dual section.

In single section: .200" air gap available in 25 mmfd., 50 mmfd., 75 mmfd., 100 mmfd. and 145 mmfd. capacities. .300" air gap available in 35 mmfd., 55 mmfd., 75 mmfd. and 100 mmfd. capacities.

## JUNIOR CONDENSERS

Electro-soldered plate assemblies are featured in the construction of these condensers. This assures correct plate spacing, overall rigidity and light weight. Losses are reduced to a minimum by this method of assembly. End plates are rigidly constructed. The frame has formed angles on top and bottom for mounting the condenser in any position which allows associated tuning inductance to be mounted on the condenser frame. The edges of the brass rotor and stator plates are

rounded and the assemblies are cadmium plated. Alsismag insulation is used throughout. Large surface front sleeve bearing and ball and cup rear bearings provide constantly smooth operation. A two finger spring brass pressure contact wiper assures noise-free and positive rotor contact at all times. The low minimum capacities of these units make them especially suitable for multi-band applications where a high ratio of maximum to minimum capacity is desired.

Available in both single and dual section.

In single section: .051" air gap available in 50 mmfd., 100 mmfd., 145 mmfd., 250 mmfd. and 340 mmfd. capacities. .078" air gap available in 25 mmfd., 55 mmfd., 110 mmfd., 150 mmfd., 190 mmfd. and 245 mmfd. capacities. .144" air gap available in 20 mmfd., 55 mmfd., 80 mmfd. and 105 mmfd. capacities. .175" air gap available in 18 mmfd., 40 mmfd., 55 mmfd. and 100 mmfd. capacities.

In dual section: .051" air gap available in 20 mmfd., 50 mmfd., 70 mmfd., 145 mmfd., 200 mmfd., and 250 mmfd. capacities. .078" air gap available in 25 mmfd., 55 mmfd., 80 mmfd., 110 mmfd. and 150 mmfd. capacities. .144" air gap available in 20 mmfd., 40 mmfd. and 55 mmfd. capacities. .175" air gap available in 18 mmfd. and 40 mmfd. capacities.

## TRANSMITTING CHOKES

 Here are two heavy duty R. F. Chokes that can really take it in high powered transmitter plate circuits. Each choke is wound on 9/16" dia. Steatite rod, has connection lugs and a mounting foot. All chokes have a heavy ceramic coating which prevents moisture absorption and enables them to withstand momentary overloads without collapsing the individual pies. Consists of five graduated pies wound in continuous winding. Care has been taken to prevent any of the pies from being resonant on an amateur band and to keep the distributed capacity at a minimum. Overall height 3 1/4".

## IRON CORE R. F. CHOKES

 The efficiency of any circuit requiring an R. F. choke will be definitely improved by utilizing one of these chokes with a finely divided molded metallic core. The improved "Q" possible with this construction results from the D. C. resistance of these chokes being from 40 to 50% less for a given inductance than for regular air-core types. Thus, the D. C. voltage drop through the choke is considerably less, yet the choking action is equally as good. Windings are made with silk-covered enameled wire terminated on convenient soldering lugs, and the chokes are mounted in small square shield cans measuring 1 1/4" x 1 1/4" x 1-7/16".

## HEAT RADIATING PLATE AND GRID TUBE CONNECTORS

Bud heat radiating connectors fit all sizes of industrial and transmitting vacuum tubes. These connectors serve a dual purpose, not only are they useful to make connections to plate or grid terminals, but they provide a large heat radiating surface that will dissipate heat from the glass seal and tube element. Eight sizes fit all grid and plate leads and also provide sufficient heat radiation for any tube operating in the range of 50 to 2000 watts. All radiators are machined from special aluminum rod. Edges are rounded to minimize corona loss.

## BASIC SYNCHROS & SERVOMECHANISMS

by Van Valkenburgh, Nooger  
& Neville, Inc.

There are hundreds of thousands of synchros and servos in operation today! In addition to wide use in the military, aeronautical, and maritime fields, synchros and servos perform an ever-increasing variety of tasks for industry . . . faster and more accurately than is possible manually. They produce and control rotary motion from a distant point . . . direct the flow of liquids into pre-selected channels . . . operate remotely located valves for mixing purposes . . . control temperature . . . and play a vital part in the growth of Automation!

In all, synchros and servos have created a tremendous interest — both in the jobs they now do, and in the many new tasks they will be called upon to perform as industry swings further and further into automatic controls and production. Untold thousands will be affected by this change-over, and the need for a truly basic text to explain synchros and servos has never been greater. Nothing explains these vitally important devices like "Basic Synchros and Servomechanisms."

These fabulous picture-text books teach synchros and servomechanisms faster and easier! The principles and practice of synchros and servomechanisms are here presented in a manner which permits a rapid grasp of the fundamentals of these vitally important subjects. ## BASIC POWER ELECTRICITY

by Anthony J. Ponsini

A "picture book" training course in Basic Power Electricity, teaching the fundamentals of electricity as used in industry and power utilities.

The abundant use of specially prepared illustrations conveys idea by idea . . . page by page . . . in the most understandable manner. No previous knowledge of electricity is assumed. Each thought expressed in words is also illustrated for greatest comprehension. Teaching and learning are made easier than ever before. Written expressly for a specific area of training by an experienced training director, each example has the flavor of industrial application.

Each idea is developed on a step-by-step basis . . . to be taught as rapidly or as slowly as you want to advance. In either case, the result is a thorough understanding of the subject.

The numerical examples reflect the practical application. The quantities of current, the levels of voltage, and the power consumption values used in the examples and problems are those that will be encountered by the reader in industrial and power utility uses of electricity. This generates the closest possible association between theory and practice.

BASIC POWER ELECTRICITY is now in preparation and will soon be released. It will be available in two Soft Cover volumes at approximately \$7.50 per set, and in a Cloth Edition (both volumes in a single binding) at about \$9.00.

## BASIC PHYSICS

by Alexander Efron, A.B., M.A., E.E., Ph.D.

A thoroughly readable, psychologically organized course, in two volumes, covering classical and modern physics at the intermediate level. In its first part (Volume 1) it offers an overall view of most of the simpler material of the standard course and, in its second part (Volume 2), certain more difficult topics as well as a "deeper look" at those topics which had been previously presented in a purely descriptive and empirical fashion.

Thus, the student is first given a glimpse of the "whole" and, as he gains maturity, is returned to the consideration of "parts" which he then re-assembles into his own, more meaningful pattern. The resulting spiral widens gradually until the final approach becomes fully mathematical and analytical. The spiral, of course, never closes since learning is never complete or definitive in nature. Volume 1 is non-mathematical; Volume 2, mathematical at the intermediate level. Each book is a complete entity, a complete course by itself.

Special attention has been given to the selection and execution of each illustration. The books are rigorously correct technically, yet generate and maintain interest. Basic demonstration experiments are described and model problems are set up and solved. The historical development of every important physics principle is presented.

The study of both volumes fully satisfies the requirements of the College Board as well as all local, regional and State syllabi.

Cloth Bound (both volumes in a single binding), about 720 pp., 6 1/2 x 9 1/2", illus. Cat. No. 195.

# RELAY RACKS

## ADD-A-RACK SERIES

It always has been necessary to buy special racks without louvres on one side to obtain maximum interior space with a minimum of floor space. Now, you no longer need to buy an entire new cabinet when you want additional space. When multiple rack units are required, we not only offer additional racks at a lower cost, but provide a sturdier, better looking assembly. Only Add-A-Rack series can accomplish this savings.

Illustration A shows the two Add-A-Rack cabinets assembled together. Illustration B shows the unique and ingenious method of adding a unit to your present equipment. Instead of buying an entirely new outfit, you purchase, as a unit, four parts: 1. The door, 2. the top, 3. the bottom, 4. an Add-A-Rack Coupling Unit. The right or left side of your present relay rack is removed and replaced by the Add-A-Rack Coupling Unit. Next, the top and bottom are fastened into place. The side taken from the first rack is then fastened onto the second rack. Place the additional door into position and you now have two racks, properly and efficiently coupled together. In the same simple way, more racks can be added at any time. Every one will be in a continuous one piece assembly.

## SUPER DELUXE 2 DOOR RACKS

This relay rack is an entirely new model that consists of a relay rack made of 16 gauge steel with 7/64" gauge panel mounting supports. The panel mounting supports are recessed so that no edges of the panel will be exposed. IN ADDITION, THEY ARE ADJUSTABLE FROM FRONT TO BACK IN VARIOUS STOPPING POINTS. THIS ENABLES YOU TO USE THE SPACE IN FRONT AND BEHIND THE PANEL TO ANY DEGREE THAT YOU MAY FIND NECESSARY. Overall width is 22". Depth 17 1/8". Inside clearance depth in back of panels 16 1/8". Clearance thru rear door 17 3/8". Clearance across panel mounting rails 17 3/4". Panel rails tapped 10/32 with W. E. spacing. Clearance behind panels is 15" to 9" in increments of 1 inch.

These racks are fitted with both front and rear doors. The louvred rear door is to cover any of the equipment behind the panel and at the same time provide easy accessibility to it. The front door, flush with front of rack, is to provide a means of concealing dials, knobs, etc., that may be in front of the panel.

The exclusive Bud feature of supports on the bottom so the casters may be fixed directly to the base, eliminating the need and expense of dollies, is also present in this series of racks. Bud RC-7756 casters will fit these units. The casters are not included in the price of the cabinet.

If black wrinkle finish is desired, use suffix letter "B." If grey wrinkle finish is desired, use suffix letter "G." If light grey hammered finish is desired, use suffix "HG."

# "PRESTIGE" CABINETS

## STANDARD "PRESTIGE" CABINETS

Bud Radio, Inc. proudly announces its new line of "PRESTIGE" Cabinets, with eye pleasing contours, highly stylized, yet with quiet dignity. These new cabinets are soundly engineered, versatile in usage; a stock cabinet of advanced design suitable for housing highest quality instruments, etc. We invite your inspection of the following details of construction.

Hinged cover; available—solid or perforated. Swings back completely for easy access to equipment within. Covers may be entirely removed if necessary. Perforated cover is reinforced to provide rigidity and sturdiness.

Smoothly grommeted finger holes assure easy cover lifting. Cover snaps closed to body of cabinet by means of pressure fasteners.

Cabinet is furnished complete with two supporting rails, which can be moved laterally to accommodate any width chassis or mounting platform. Supporting rails may be permanently fixed to cabinet base by means of screws or by welding.

Height of mounting rails permits free air flow under chassis, and provides easy removal of entire cabinet contents through front opening.

Additional ventilation is obtained by means of rear cabinet opening, and louvers in rear of cover.

Cabinet may be comfortably carried by two recessed handle slots, safety shielded to prevent contact with equipment housed within.

Built of 16 gauge steel, and flawlessly finished in attractive grey hammertone, this cabinet will accommodate standard size relay rack panels. Embossed feet are attached to the bottom to prevent scratching of the surface upon which the cabinet rests.

## MINIBOXES

There are thousands of uses in the field of radio and electronics for these boxes. They are made of high quality aluminum. The design of the box permits installation of more components than would

be possible in the more conventionally designed box of the same size. Construction is of the two piece type, each half forming three sides. The flange type construction assures adequate shielding. These units are available in either natural aluminum finish or grey hammertone finish.

## TYPE "C" UNIVERSAL CABINET RACKS

SERIES "PX" & "FX" RACKS WITH SOLID SIDE WALLS  
FOR 19"-24"-30" WIDE PANELS - 18" & 24" DEEP

**WITH REAR DOOR ONLY**

No. PX-6718

For over two decades, we have made various types of enclosed relay racks, differing in styling, specifications, and sizes. In presenting our **UNIVERSAL CABINET RACKS**, we offer a line with a complete range of sizes; one which combines all the advantages of racks previously listed; and which introduces new features of design providing greater flexibility and economy in assembly.

The advantages of **UNIVERSAL CABINET RACKS** may be summarized as follows:

**DIMENSIONS:** Racks are available for 19", 24", or 30" wide panels. Cabinet heights are 48 $\frac{1}{8}$ ", 67 $\frac{1}{8}$ ", 76 $\frac{1}{8}$ ", and 83 $\frac{1}{8}$ "; depths available are 18" or 24".

**DESIGN:** All sizes listed may be obtained with conventional solid side walls (listed on Page K-615), or with open side walls and detachable side panels (listed on Page K-617).

**DOORS:** All sizes may be ordered with rear doors only; or with matching front and rear doors.

**GROUPING:** All racks of the same height may be set up in "gangs" or rows; racks with 19", 24" or 30" wide panels may be intermixed; racks with or without front doors may also be intermixed.

**MID-RAIL MOUNTING OF PANELS:** The panel mounting angles or "strips" are fully adjustable on all racks, and may be positioned at any location from front to back. Additional panel mounting angles may be easily inserted where needed for mounting terminal boards, etc.

**VERTICAL SIDE SUPPORTS:** These supports provide a new method for supporting chassis and other equipment in the racks. Installing brackets or shelves is now a simple procedure: the means of attaching such brackets is fully adjustable so that chassis may be accurately lined up with the front panels. No drilling or other fabrication is required. The chassis may then be installed or removed with a minimum of effort. The vertical slide supports also facilitate the installation of special sliding devices obtainable from slide manufacturers.

**SLIDING SHELVES AND DRAWERS:** Several models are listed on page K-619. These are constructed for mounting on the front of the racks the same as regular panels.

**FINISHES:** All racks may be obtained in any of the following finishes: **GREY RIPPLE ENAMEL, BLACK RIPPLE ENAMEL, GREY HAMMERTONE ENAMEL, ALUMINUM GREY LACQUER, and PRIMER COAT ONLY.** It is essential that the finish required be specified on your order to avoid subsequent inquiry and delay.

**WITH FRONT & REAR DOOR**

No. FX-6718

In this group are shown our standard "PX" type racks, 24" deep. The racks at the end positions are for 24" wide panels, and 19" wide panels are used on the two center racks. Regular width vertical trim strips covering the panel mounting screws are used in this arrangement.

Similar groupings could be made using "PX" racks of the same height in 18" or 24" deep racks, using 19" or 24" wide panels. All of the racks in this group have solid sides.

with detachable side panels**

**WITH REAR DOOR ONLY**

**No. PR-6718**

**WITH FRONT & REAR DOORS**

**No. FR-6718**

This Cabinet has Detachable Side Panels mounted.

Series "FR" cabinet shown above is equipped with detachable side panels. Universal Cabinet Racks illustrated on this page are similar to those on the preceding pages except for construction with OPEN SIDES and DETACHABLE SIDE PANELS. Illustrations at left and right show these racks with side panels removed.

In the price list on the opposite right-hand page, you will note the last two columns list the matching detachable side panels; prices are per pair. The illustrations below are typical assemblies of multiple installations; many others are possible.

UNIVERSAL CABINET RACKS facilitate the location and mounting of chassis supports, shelves, sliding shelves, and standard sliding devices. Panel mounting angles may be positioned at the sides of the racks at any location from front to back.

In this group, types "PR" and "FR" racks are intermixed.

Racks for 24" wide panels are used on the ends, whereas the three center racks are for 19" wide panels. Three of the racks have front as well as rear doors. The position of the racks can be interchanged as desired.

Similar groupings can be made with our Solid Sides Cabinets illustrated on Page K-614.

Advantages of "UNIVERSAL" Type Racks may be summarized as follows:

1. A complete line of racks to provide unit row type assembly, or for use as single racks.
2. Racks with or without front doors, for either 19", 24" or 30" wide panels may be used singly, in rows, or intermixed.
3. The panel mounting angles on ALL racks are fully adjustable, and may be set at any position from front to back.
4. Vertical Side Supports (see Page K-618) for attaching chassis brackets, shelves, slides, etc., may be installed without drilling or fitting.
5. Either regular or "Narrow Type" vertical corner trims are available without additional cost.
6. A simplified method is provided for installing standard or custom-built slides.
7. Available finishes are black or grey ripple enamel, primer coat only, grey hammer-tone or aluminum grey lacquer.

**PLEASE SPECIFY FINISH DESIRED WITH YOUR ORDER. THANK YOU.**

This typical group consists of racks with open sides, using types "PR" and "FR" racks intermixed. Narrow trim strips are used throughout, because racks with front doors are in the assembly.

If "PR" racks (with rear doors only) were in the group exclusively, either regular width or "narrow" type trims could be installed at your option. Detachable side panels are installed on the end racks.

## VERTICAL SIDE SUPPORTS

These vertical side supports are supplied in sets of four uprights to fit type "PX," "PR," "FX" and "FR" racks listed on Pages K-614 thru K-617. (Cut shows side mounting brackets in place which are sold separately—see listing below).

Uprights are fastened to grooved bolt retainers which hold panel mounting angles in place, and are adjustably mounted from front to back of rack. Holes are drilled and tapped vertically on "universal centers" to provide adequate vertical adjustment for mounting brackets, shelves, and various sliding devices made for electronic equipment.

When installed in racks for 19" wide panels, the clearance between uprights (from right to left) is 17 3/4". On 24" wide panel racks, the clearance is 22 3/4"; on 30" wide panel racks, the clearance is 28 3/4". Uprights are 2 5/8" wide and 1 1/2" deep.

Uprights are made from 1/8" steel, finished in aluminum enamel. Each set is supplied with necessary bolts for rack mounting.

## DOUBLE WIDTH ROLLER TRUCKS

It is often necessary to mount groups of 2 of our type "C" enclosed racks on roller trucks. The

truck illustrated above is used for that purpose. They are similar to our heavy duty trucks (page K-625), except that they have been reinforced with heavier steel because of their greater length.

They are supplied with 6 - 3" diameter wheels with heavy duty type casters. They are available at double the cost of roller trucks for single racks listed on Page K-625. Please advise finish required. They may be obtained in black or grey ripple, grey hammertone enamel, grey lacquer, or primer coat only.

## SLIDING SHELF UNITS

These sliding shelves may be mounted on all of the relay racks listed by us, as they are screw mounted to the front panel mounting angles, the same as regular panels.

Basic Slide Assembly SD-1916

The basic assembly illustrated is sold as a complete unit. Chassis may be bolted directly to the sliding shelf; panels may be attached to the shelf using standard chassis brackets listed on Page K-633. Formed panels with a minimum height of 7" are recommended. The forward movement of shelves for 18" deep racks is 13 1/4"; for 24" deep racks, it is 17 1/4". The shelf may be quickly removed from the slide while it is in an extended position.

The illustration shows a sliding shelf unit with the slide carrier in a vertical position. This type affords the maximum load capacity, but reduces the usable shelf space to 15 5/8" wide. The shelf height is only 1 1/4".

We also list shelves with slide carriers mounted horizontally under the shelf. This method permits the use of 17" wide chassis, but reduces the load capacity. The shelf height is also 1 1/4". All parts on both types are zinc plated.

No. P-6618

These racks have been a standard unit in the electronic industry for many years, and have been adapted to a broad field of requirements. # TYPE "A" CHANNEL RELAY RACKS

## FOR 19" WIDE PANELS

### DELUXE TYPE

No. RR-197

OUR NEW DELUXE CHANNEL TYPE RELAY RACK extends the utility and applicability of the standard channel relay rack.

The panel space has been changed to 77"x19", to match a standard height used on enclosed cabinet racks.

The upright channels have been modified to an 8" overall depth, which when combined with a formed recess for the panels, greatly increases the rigidity of the rack. The edges of the panels are not exposed.

The rack is drilled and tapped for 10-32 screws at both front and back permitting the optional use of either panels, or dish type chassis mounted to the racks at both front and back. The full panel space of 77"x19" is available on the back, the same as the front.

The clear distance between panel mounting flanges (from front to back) is 6¾". It is practicable to use this 6" depth as an enclosure for dish type chassis listed on Page K-633. When such chassis are mounted at the back, the addition of standard or hinged type panels (see Page K-626) will make a rack enclosure with a clear depth of 6¾". The top cross-brace is provided with a grille for ventilation where needed.

The top brace and the vertical channel members are securely welded together. The base and rear braces are shipped knocked down, with all necessary bolts for assembly. Panel mounting screws are also supplied.

# UTILITY DESK ASSEMBLIES

*Standardized Units Adaptable to Individual Requirements*

## General Description

**SINGLE UNIT ASSEMBLY**

The combination of a control cabinet mounted on a table, desk or similar support has been in general use in the electronics industry for some time. Due to the various functions for which it may be employed, such equipment has assumed various forms, arrangements and sizes, requiring costly, custom-built construction to achieve their purpose.

While it is obvious that no particular fixed design can serve every demand, we have devised a group of **standardized units**, the combination of which is readily adaptable for control stations, testing apparatus, sound distribution systems, and similar applications.

The **line drawing on the opposite page** is a composite view of a complete equipment in which have been grouped various available components. Essentially, it consists of a desk cabinet or turret, a 71" long table top, and two pedestals. Other arrangements include a 51" long table top, a pedestal and end table support, and a smaller desk cabinet; where a single pedestal only is needed, a 25" wide table top and suitable desk cabinet is listed.

The sizes and specifications of the various units are catalogued on the following pages. There are several new features which warrant your consideration, **particularly the pedestal**. The pedestal is, in reality, a cabinet type relay rack. The panel mounting angles, or "strips" are adjustable, and can be located at the **front or back** for any standard **19" wide panels**, or located at any position from front to back for "mid-rail" panel mounting.

The above illustrates how brackets are mounted. They are used for mounting chassis, standard shelves, or drawers. With all sides open, easy access saves considerable time in assembly.

The pedestal doors may be mounted at the front or back of the pedestal, in addition to the panels. Where knobs, dials, etc. protrude from the front of the panel, clearance from the door is accomplished by recessing the panels to allow for the knobs, etc.

The left and right sides of the pedestal are also open, allowing complete access to the interior on all four sides. The left and right sides of the corner posts have holes drilled and tapped on "universal" centers for mounting standard relay rack panels; these holes may also be used for attaching mounting brackets CB-20 (see page K-631) and shelves CD-12 for supporting equipment on the interior of the pedestal. The standard pedestal doors may be used on these sides instead of rack panels.

No drilling or fitting is necessary for the assembly of pedestals, table tops, brackets, shelves, or panels. The desk cabinets have mounting holes on the bottom, but no holes have been provided in the table tops to accommodate them, to permit the desk cabinets to be located wherever desired.

# EXPAND-A-RACK SERIES

## DESCRIPTION:

- A. When it is necessary to join two or more racks together, WYCO METAL PRODUCTS offers the "EXPAND-A-RACK" series.
- B. Figure "A" shows two Expand - A - Racks joined together.
- C. Figure "B" illustrates the method of expanding your present rack space. In place of purchasing an additional rack, a unit, consisting of the following items, would be bought: (a) the door; (b) the top; (c) the bottom; (d) an Expand-A-Rack joining unit. The right or left side of your existing relay cabinet rack is dis-assembled and replaced with an Expand-A-Rack joining unit. Following this step, the top and bottom are assembled. The cabinet side removed from the original rack is then fastened onto the second rack. Upon hanging the additional

door, two complete racks are now joined together.

- D. Wyco's Expand-A-Rack series may be purchased by one of two methods. One method consists of buying one complete rack (the "W" series) plus one Expand-A-Rack unit. If you already have one of our basic "W" series cabinets, then order an Expand-A-Rack unit.
- E. Supports are electronically welded to the bottom to receive our casters (#RC-100).
- F. There is an ample amount of compound knockouts in the Expand-A-Rack joining unit center partition. This allows cables and leads to be taken from one cabinet to the other.
- G. Available in Grey or Black Wrinkle and Silver Grey Hammertone.

**TV ANTENNA ATTENUATOR PCH-4 SWITCH**

Eliminates "tearing" of image due to high power through use of "H" pads. Proper attenuation also eliminates "ghosting" by reducing signal strength—reduces the weaker signal in a single channel. Useful in matching impedance between antennas and receivers.

Unit has six switching positions: 1 — Regular antenna. 2 — a 10 db signal loss inserted between the antenna and receiver. 3 — a 20 db loss. 4 — a 30 db loss. 5 — a 40 db loss. 6 — a 50 db loss — disconnects antenna for areas of immediate proximity to high power transmitter.

## SINGLE SECTION ROTARY SWITCHES

3612-01 to 3612-10

These single section rotary switches were designed to keep pace with the demand for smaller components. They are the smallest switches available to handle multi-circuit switching and are ruggedly built with heavy silver plated contacts, high grade phenolic insulators, best spring brass and steel. These switches are ideal for radio-phonos, wave band, tone control, meter and antennae switching applications, as well as many other uses in electronic equipments. All switches are supplied with one knob, mounting nut and lock washer.

## MULTI-SECTION ROTARY SWITCHES

3612-11, 12, 15, 19

3612-18

The flat rivet "Wedgelock" which fastens the contact to the stator is a unique feature of these switches. The small cross sectional area permits the use of sturdily designed contacts without sacrificing over-all stator size. The outstanding feature of this flat rivet is a contact assembly that will not loosen or rotate due to soldering heat. A free floating rotor assembly results in this rugged construction as the rotor blades do not support the assembly and only required rotor blades are used. One, two and four section switches in both shorting and non-shorting types are stocked to meet applications such as meter switching, test equipment and various electronic instruments. All switches are supplied with one knob, mounting nut and lock washer.

## LEVER ACTION SWITCHES

3612-20, 21, 22

Erie Lever Action Switches employ the same type stator and construction as the Multi-Section Switches assuring a high quality assembly for inter-communication and test equipment applications. Smooth, positive action and indexing, high quality phenolic insulation, heavy silver-plated contacts and best spring brass are features which make the switch ideal for replacement or new uses. Each switch is supplied with mounting screws and knob. Packaged individually in a durable sealed plastic bag in the familiar Erie display box for maximum protection against corrosion.

## GENERAL PURPOSE SWITCHES

3612-23, 24, 25

Extreme care was taken in the design of these very small compact switches to insure a very rugged and accurate construction. Again, the flat rivet is used to firmly secure the contacts against rotation in a very strong phenolic insulator. The stator assembly is attached directly to the detent plate insuring positive indexing. Heavy silver-plated contacts provide dependable and efficient operation. They may be used for simple circuit switching and wherever space is at a premium. Each switch is supplied with one knob, mounting nut and lock washer. Packaged in individual durable sealed plastic bags and the familiar Erie display box.

## POWER TAP SWITCHES NON-SHORTING TYPE

Each switch is a non-shorting, single pole, rotary, multi-position unit, but switches can be ordered assembled 2 or 3 in tandem (2 maximum, for Model 111) to form multiple assemblies. All ceramic insulation, large, solid silver-to-silver contacts, and "slow-break" action especially designed for alternating current use establish new standards of dependability and performance. Switch shafts are electrically "dead"—insulated by strong ceramic hubs. Contacts and mechanism are entirely enclosed and protected (except for the Model 111).

### MODEL DOSY RELAY FOR PLATE CIRCUIT OPERATION

The high operating sensitivity makes the DOSY relay adaptable to a wide range of electronic control circuits, such as plate circuit controls, etc. Other industrial applications may be as an overload or underload control where the relay would be used in a DC circuit in which it is desirable to obtain a signal indication when the control current increases above a predetermined maximum or drops below a predetermined minimum.

The insulation is of high grade, molded phenolic material. At 115 v. AC or 32 v. DC, non-inductive load, Model DOSY relay has a contact rating of 15 amperes.

There are two DPDT types, one having 10,000 ohms coil resistance (maximum pull-in current of 8 ma. DC); the other having 5,000 ohms coil resistance.

### OHMITE R.F. PLATE CHOKES

This series of seven Ohmite single layer wound solenoid radio frequency plate chokes covers the entire frequency range of 3 to 520 megacycles. The four highest frequency chokes are wound on low power factor plastic cores while the other three units are wound on steatite tubes. The single layer winding is designed to avoid adverse harmonic effects within the recommended operating range and also prevents breakdown from high r.f. potentials.

### STAND UP UNDER TOUGH ENVIRONMENTAL TESTS

Like J-B-T Switches in the rotary, lever-action, and heavy-duty toggle switch fields, this new series has quality as its first objective. J-B-T controls quality by doing its own designing, actual manufacturing and in-plant testing of production samples.

**Sound Electrical Characteristics . . .** Stationary contacts are brass, heavily silver plated; wiping contacts are phosphor bronze, heavily silver plated. Tested to meet 50% overload for brief periods. Contact resistance well under 0.01 ohm requirement of military specifications. High dielectric exceeds 1000 volts r.m.s., 60 cycles at sea level.

**Cold and Heat . . .** Specialized aircraft lubricant facilitates mechanical and electrical operation at both low and high temperatures (-67°F to 185°F).

**High Humidity . . .** Materials, plating, construction and lubricant enable switch to withstand tropical climates.

**Salt . . .** Meets 100 hour Salt-Spray Test QQ-M-151a which is twice the required minimum.

**Vibration and Shock . . .** No momentary make or break nor mechanical damage during stringent shake tests and 75 G's drop test.

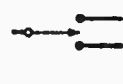

**Combination . . .** Can be used under any or all of these adverse conditions.

**Exceptionally Rugged . . .** Dull nickel plate external finish . . . terminals withstand 5 pound pull . . . operating cycles far in excess of the minimum specified as acceptable . . . stainless steel springs.

**20 AMP. — HEAVY DUTY**  
This page covers 32 models of toggle switches nominally rated at 20 amp. at 125 VAC, and 10 amp., 250 VAC, and other higher and lower ratings where specified in JAN-S-23 or other pertinent specifications.

## SINGLE HOLE • FLUSH MOUNTING TOGGLE SWITCHES HEAVY-DUTY TYPES DESIGNED FOR GOV'T SPECS. SUCH AS JAN-S-23 AND DDAX SERIES

Variations in construction are made for aircraft type MIL-S-6745 (AN-S-20a) series AN3021, AN3027, and other types under development for pending MIL-S-3950.

### REGULARLY TESTED TO MEET ADVERSE OPERATING CONDITIONS

**Overload** . . . Tested to make and break at 50% overload for brief periods. To assure performance of these switches with their comparatively heavy current ratings, J-B-T features ample size **solid coin silver contacts and rocker arms** instead of clad or brazed construction. Contact resistance is under 0.005 ohms. High dielectric exceeds 1000 volts r.m.s. at 60 cycles at sea level.

**Cold and Heat** . . . Specialized aircraft lubricant facilitates mechanical and electrical operation at both low and high temperatures (-67°F to 185°F).

**Vibration and Shock** . . . No momentary make or break or mechanical damage during stringent shake tests and 75 G's drop test.

**High Humidity** . . . Materials, dull finish on outside metal parts (as required by Armed Services specifications) and lubricant enable switches to withstand tropical climates.

**Salt** . . . Meet 100 hour Salt-Spray Test QQ-M-151a which is twice the required minimum of JAN-S-23.

**Rugged Service** . . . Generously proportioned and substantially built for extra life. For instance, both screw-type terminals and solder lugs easily withstand a 30 pound pull test. Operating cycles far in excess of minimum specified as acceptable. Springs are stainless steel. Quality standards are maintained by in-plant testing of production samples to meet adverse operating conditions.

## INSTRUMENT AND TESTER SWITCHES (LAMINATED)

### Rotary Selector — Single and Multi-Gang — Non-Shorting and Shorting

SS-14-2

J-B-T Instrument-type Rotary Selector Switches are used widely in quality test equipment, portable instruments, inspection setups and avionics where trouble-free, dependable performance is of major importance. Available in two basic types—14 and 20 position—the design gives extra contacts in minimum space. One to six decks.

**FEATURES:**

**Reliability**—Rigid, 3-post deck suspension, instead of the usual 2; all current carrying parts are brass or phosphor bronze, silver flashed and then heavily plated with fine silver to meet 100 hour salt spray test; ball bearing action, beryllium-copper balanced spring (SS-14); leaf-type (SS-20), and sharp detent assure positive indexing. Springs of both switches are generally replaceable without disturbing soldered connections. Laminated plastic decks and rotors selected for maximum mechanical and dielectric strength. Insulation resistance above 50,000 megohms.

**Exceptional Compactness**—14-position switch takes 13 circuits and "off" in 2" circle; 20-position switch handles 19 circuits and "off" in 2-23/32" circle. Each deck above first adds only 5/16".

SS-20-2

**Low Contact Loss**—Double-grip collector arms, and large-area contacts, silver to silver, result in an average contact resistance of .007 ohms or less during the useful life of the switch.

**Ample Dielectric**—AC or DC; normal carrying capacity (not make-and-break), 1 amp.; maximum momentary capacity (not make-and-break), 5 amp.; maximum voltage between contacts 1,500 volts R.M.S.; between decks and ground, 2000 volts R.M.S.

**Military Variations**—The following can be supplied on special order at extra cost: (a) laminated plastic, Type PBE-P per Spec. MIL-P-3115B; (b) vacuum impregnation of rotors, decks, spacers, and ceramic spacers with approved fungicides; (c) hot tin dip on contact surfaces to be soldered; (d) 14 to 20 live positions, no off, (add suffix F, as SS-14-2F); (e) common position in non-standard location.

**BASIC 14-POSITION:** 1 1/4" Bar knob supplied only on individually packed units—not on bulk orders unless specified. Collector arm placed directly opposite to flat of shaft, unless otherwise specified. Contact lugs and common lugs positioned as shown below, 13 contacts per deck. **One to six decks;** for each additional deck (or gang) add 5/16" to depth. **Continuous rotation type** supplied unless otherwise specified. **Adjustable Stop** normally is supplied on standard cataloged switches. **Fixed Stops** can be supplied on quantity orders at moderate cost. **Panel locator** positioned as shown unless otherwise specified on bulk orders.

**BASIC 20-POSITION:** 2" Bar knob supplied only on individually packed units—not on bulk orders unless specified. Collector arm placed directly opposite to flat on shaft, unless otherwise specified. Contact lugs and common lugs positioned as shown, 19 contacts per deck, continuous rotation types. **One to six decks;** for each additional deck, add 5/16" to depth. **Continuous rotation type** supplied unless otherwise specified. **Panel locator** positioned as shown unless otherwise specified on bulk orders.

**SWITCH KIT (Laminated Phenolic)**

Most of the 14 and 20 position laminated switches, plus special variations as needed, can be assembled quickly from the kit shown on an adjoining page. Designers, service engineers, laboratories, and industrial maintenance departments will especially appreciate the convenience, flexibility, and time saved.

## UNIQUE—MOLDED ROTARY SELECTOR SWITCHES

Fully Enclosed—Single and Multi-Gang—Shorting and Non-Shorting

MS-14-2

- All moving contacts enclosed—minimizes dirt and corrosion—also 3-post deck suspension, double grip collector arms, and rectangular drive shaft for precision indexing.
- Interchangeable, electrically and mechanically, with SS-14 and SS-20 laminated switches widely used by industry and Armed Services.

**FEATURES:** For description of rigid 3-post construction; heavy fine silver plating to meet 100-hour salt-spray test; exceptional compactness; .007 ohm average contact resistance; insulation resistance above 50,000 megohms; current-carrying capacity and voltage breakdown; see adjoining page on SS-14 and SS-20 laminated switches. Besides fully enclosing all the moving contact parts, the molded

MS-20-1

switches differ from the laminated construction in the design of the detent mechanism, but both types provide the positive indexing which quickly identifies the superior quality of J-B-T switches. Test results are available on request covering certain procedures of MIL-E-5272A on insulation resistance; high and low temperature and temperature shock; humidity; altitude; salt spray; vibration; fungus resistance; rain, sand and dust; explosion; shock; and endurance values. (Ratings for MS-20-6DTS Types differ somewhat)

**BASIC 14-POSITION MOLDED (MS-14):** 13 circuits and "off" per deck in 2 3/8" circle for compactness. Molded end cover regularly supplied. 1 1/4" Bar knob included with individually boxed units—not on bulk orders unless specified. Collector arm placed directly opposite to flat of shaft, so that knob pointer points to live contact. Common or "off" contact lug is bent down for ready identification. Internal construction: double-grip collector arms hold contact lug on upper and lower surfaces; collector ring is self-wiping. One to ten decks add 1/8" per deck (or gang) to depth; for eleven decks and over, add 1/2" to depth for double indexing mechanism; add 1/4" to depth for adjustable stop mechanism. Continuous rotation type supplied unless adjustable stop (type MAS) is ordered or, on quantity orders, pre-set fixed stops are specified. Panel locator is available at extra cost on quantity orders when specified; on MS-14-4 and MS-14-6, extra hex nut and longer screw can be supplied for inverting supporting screw nearest common, thus converting into panel locator.

**BASIC 20-POSITION MOLDED (MS-20):** 19 circuits and "off" per deck in 2 3/8" circle for compactness. Molded end cover regularly supplied. 2" Bar knob included with individually boxed units—not on bulk orders unless specified. Collector arm placed directly opposite to flat of shaft, so that knob pointer points to live contact. Common or "off" contact lug is bent down for ready identification. Internal construction: double-grip collector arms and self-wiping collector ring are standard construction. One to seven decks; add 1/8" per deck (or gang) to depth. Continuous rotation type supplied; on quantity orders, pre-set fixed stops are available. Panel locator available at extra cost on quantity orders when specified; on MS-20-4 and MS-20-6, extra hex nut and longer screw can be supplied for inverting supporting screw nearest common, thus converting into panel locator.

**NEW BONDED RUGGEDIZED TYPES**—Both MS-14 and MS-20 rotary switches may be ordered with bonded construction as MS-14B and MS-20B types using cured lamination for ruggedization, shock-proofing and further enclosure. Add 35c per deck to catalog price. Thus, 2 deck switch is MS-14B-2 at \$3.25.

## LEVER ACTION SWITCHES, KITS AND SPECIAL SWITCHES

3- and 4-Position Lever Switches — New 5-Position — Unique 6-Pole Double-throw per Deck

**SS-14-1L4F-2**  
Two-Deck Lever-Action Switch

**POSITIVE TYPE, 3- and 4-Positions. (Single-deck.)** Specified where quality is a consideration, these lever switches offer many of the design features of the J-B-T SS-14 instrument-type rotary switches. The single-deck models (not illustrated) come in the conventional three-positions and in a newer four-position. Present uses include tube checkers, inspection apparatus, communication systems, hobby equipment, consoles, and sound devices. The four-position types, interchangeable except in slot length with the standard three-position, provide the extra circuit which is often needed. Dimensions are shown on the

drawing below. Variations in mounting hole sizes, lever length, and tapped mounting holes can be supplied on long runs involving set-up charges. Switches are normally individually boxed with mounting hardware and KN-17 black pointed knob as illustrated. Spacing between single decks: recommended  $\frac{3}{4}$ ", minimum  $\frac{3}{8}$ ". Also see list of available mounting plates.

**Spring Return Type.** Single deck 3-position switches also may be ordered with spring return. Lever returns to position 11, giving momentary action at positions 9 and 10 (Model Suffix—R).

**Two-Deck Lever Action Switches.** These use the same strong parts, 3-pole suspension and double-grip collector arms as the one-deck type, but are specified where quality is the prime requirement. Spacing is  $\frac{3}{4}$ " between decks, the same distance as TV twinlead wires. Non-shortening (break before make) positive action, individually boxed including KN-17 knob and hardware. Recommended spacing between decks  $\frac{11}{8}$ "; minimum spacing  $\frac{11}{8}$ ".

## AIRCRAFT TYPE SWITCHES AND INDICATOR LIGHTS

### TOGGLE SWITCHES *Space-Saving, Cylindrical Types*

Exceptionally rugged, cam-roller Hetherington Toggle Switches positively cannot be teased off contact. Cylindrical anodized aluminum cases reduce size by 25% over conventional rectangular switches. Firmly anchored terminals separated by heavy insulation barrier. All are 2-position, snap-action.

### PUSHBUTTON SWITCHES *Snap-Action, Momentary Contact*

The exclusive Hetherington snap-action mechanism reduces arcing and contact wear . . . provides far greater current capacity than the small sizes of these switches would indicate. Mechanism enclosed in dust- and moisture-resistant anodized aluminum housings (phenolic in B2001 & B2002). 1-piece terminals and contacts firmly anchored to bases. Many types meet JAN and MIL Specs for aviation and military requirements.

## Precise LIMIT SWITCHES by GENERAL CONTROL COMPANY

PRECISE MACHINE CONTROL depends upon PRECISE LIMIT SWITCHING

### BASIC du . op SWITCH

CUT-AWAY VIEW

The type DU-S "du . op" is a precise action limit switch. The centrally-located plunger acts directly on the wide phosphor-bronze blade to insure instantaneous contact at each point of repetitive plunger travel. Delays of pre-travel blade action are eliminated — an important factor at high switching speeds.

## LONG AND SHORT FRAME JACKS

**LONG JACKS** . . . The original long jacks were adapted from the telephone switchboard jacks. Long rugged, phosphor-bronze springs parallel to the plug axis give precise action. These jacks take minimum panel mounting space, less than the short jacks. Supplied with nickel-plated Palnut.

**SHORT JACKS** . . . Carter short jacks are small and compact, but do a full-sized job. Depth behind the panel is cut down by placing the tempered nickel-silver springs parallel to the panel. High quality sheet phenolic and tubular ebonite insulators are used throughout—no paper or fibre used in Carter Jacks. Supplied with nickel-plated Palnut.

Short and long jacks mount in single  $\frac{3}{8}$ " hole in panels up to  $\frac{1}{8}$ " thick. Fit of the plug in the jack is not affected by the thickness of the panel. Fit all standard plugs in two and three conductor types. Cadmium plated steel frame. All contacts between springs are fine silver, giving minimum contact resistance.

## CARTER TELEPHONE JACKS

### SPECIFICATIONS

**CONTACTS:** Palladium is standard silver-zinc, coin silver, fine silver and others can also be supplied in production quantities.

**BUSHING:** Plain brass is standard. Available with nickel-plate when specified.

**SPRINGS:** Finest grade nickel silver with soldering terminals hot tinned for easy soldering.

**INSULATION:** Spacers made of high grade laminated phenolic.

**FRAME:** Frame and face plate cadmium plated steel. Frame and face plate are electrically welded to form one integral unit. This provides outstanding strength and superior ability to "stand the gaff." Where paramount quality and ruggedness is desired this telephone jack is recommended.

Carter "imp" Telephone Jacks can be supplied in many circuit combinations to suit your requirements. They are ideal for use in telephone, broadcast studio and audio equipment.

## TYPE 850 PRECISION ATTENUATOR

With the increased demand for precision in laboratory measurement of volume levels, transmission losses, gains of amplifiers, etc., the older methods and standards have become obsolete. The present units are a complete redesign of our older precision attenuators and will serve as laboratory standards. These precision units are now furnished with jack terminals and are completely shielded. They are flat for all frequencies in the audio range and reasonably flat to 200 kc. up to 70 db. They are furnished with either rack or box mounting in gray finish.

**NOTE:** Relays shown in this bulletin are standard relays in stock and ready for immediate shipment. From them a type can be chosen to meet the needs of most Electrical or Electronic applications.

All relay contacts are rated at 115 volt-60 cycle, non inductive load.

**When ordering specify relay type and coil voltage or resistance.**

**Example:** PR5AY, 115 Volts AC, 60 cycles or LB5, 2500 ohms resistance.

To operate 110V DC relays on 220V DC use a 5 watt wire-wound resistor of a value approximately the relay coil resistance in series with the relay coil.

## AMPERITE THERMOSTATIC DELAY RELAYS

STANDARD

MINIATURE

Amperite Thermostatic Delay Relays are actuated by a heater . . . can therefore be used on A.C., D.C., or pulsating current. Being hermetically sealed, Amperite Relays are not affected by altitude, moisture, or other atmospheric conditions.

**CIRCUITS:** At the present time only SPST is available — normally open or normally closed.

**HEATER VOLTAGES:** Relays are available with heater voltages from 2.5 to 115 V. For short delays 2 to 10 seconds) a low voltage heater, preferably 6.3 V. is recommended. **STANDARD HEATER VOLTAGES:** 6.3, 26 (for 22-30 V.), 115 V. Other voltages available are 2.5, 5.0, 12.0 and 50 V. For 220 V., use a 115 V. relay with a dropping resistor of 6500 Ohms—5W.

### EFFECT OF HEATER VOLTAGE VARIATION ON DELAY

**FIGURE 1 —** Effect of change in heater voltage on delay in seconds. Only low voltage heaters (2.5 to 26 V.) incorporate heater voltage regulations as shown in this diagram.

For 22 to 30 V. supply: We recommend Amperite Delay Relays with 26 V. heaters for airplanes and similar power supplies. These heaters are regulated for battery variation of 22 to 30 V. as shown in this diagram.

**STANDARD HEATER VOLTAGES:** Amperite Delay Relays with low voltage heaters such as 2.5, 5.0, 6.3, 12 and 26 V. are designed with automatic voltage regulation of the heater to compensate for line voltage variation. The effect of the supply voltage variation on a typical relay is shown in Fig. 1. Without regulation, the delay would vary as the square of the supply voltage variation. 115 V. heaters CANNOT be supplied with heater voltage regulation.

**HEATER WATTAGE:** The wattage consumed by the heater is approx. 2 W. Flashers approx 1.5 W. All Heaters may be operated continuously. Life, 5000 hours minimum.

### CONTACT RATING

	Delay	Contract Rating Non-Inductive	Voltage Breakdown	
			DC Contact-to-Contact	Heater-to-Contact
STANDARD RELAYS	2 to 10 Sec.	115V — 3a AC	250V	500V
	15 to 180 Sec.	115V — 3a AC 220V — 1a AC	1000V 1000V	1500V 1500V
MINIATURE RELAYS	2 to 10 Sec.	115V — 2a AC	250V	500V
	15 to 180 Sec.	115V — 2a AC 220V — 1a AC	1000V 1000V	1500V 1500V

**FLASHERS** have contact rating of 115V — ½a AC, non-inductive.

**AMBIENT TEMPERATURES:** Relays are compensated for temperatures of  $-55^{\circ}$  to  $+70^{\circ}$ C. Tolerances given are  $20^{\circ}$ C. Ambient temperature tolerances depend on type. Low voltage heaters 26V or less have much better ambient compensation than high voltage heaters.

**LIFE** of any individual relay will depend on the service the contacts are subjected to. With a 115 V. — 2A A.C. non inductive load the contacts will withstand at least 250,000 operations. The heater can be operated continuously. Heaters will not be damaged by a 50% overload in voltage for short durations (1 hour approximately).

**DELAYS AVAILABLE:** From 2 to 180 seconds. Relays can be used in series to obtain longer delays. The delay of any individual relay can be increased up to 30% by using a resistor in series with the heater. Relays with short delays such as 2 to 3 seconds can be increased 100%.

**FLASHERS:** Normally closed relays are supplied as flashers. They are available from 30 to 90 flashes per minute, and are furnished in 6, 26, and 115V heaters, as standard types.

**INDUCTIVE A.C. LOADS:** When breaking on inductive A.C. load, use a condenser of .01 to .1 mfd. across contacts.

Normally closed flashers are standard, and are indicated by the letter "F." The number following letter "F" denotes flashes per minute. For example a 6F30 flasher, has 6.3V heater, normally closed 30 FPM with a ± 10 flashes per minute tolerance. A 6F30T, would be the same type but in 9-pin miniature. Flashers are available from 30 to 90 Flashes per minute with tolerances as shown in the chart below:

Tolerance FPM - 20°C	Standard Flashers Available		
± 10	6F30	26F30	115F30
± 12	6F45	26F45	115F45

± 15	6F75	26F75	115F75
± 20	6F90	26F90	115F90

Flashers operate approximately 1/3 on, 2/3 off. The percentage time on can be increased by reducing the voltage of the heater.

**FLASHERS** have contact rating of 115V - 1/2a AC, non-inductive.

# PHOTOELECTRIC RELAYS AND ACCESSORIES

## CR7505-K100G3 Relay

The CR7505-K100G3 photoelectric relay and accessories provide a complete line of inexpensive, but thoroughly reliable, apparatus for general-purpose indoor applications which include counting, diverting, controlling, signaling, limiting, and

protecting. Underwriters' Laboratories listed. The CR7505-K100G3 includes phototube and thyatron, has a contact rating of 10 amp a-c, may be used to start f-hp motors directly, and can operate all motor starters up to and including NEMA Size 4.

## CR7505-K201, -K202 Relays

These photoelectric relays will perform the same type of functions as the -K100 with greater speed and sensitivity. These relays operate on either light increase or decrease, depending on connections. The relays will operate from light flashes on interruption of 1/15 second between impulses, with not less than 1/15 second between flashes. The d-c phototube circuit permits remote location of phototube with no loss in sensitivity.

## Accessories for Use with -K100G3

Model No. 9T53Y8025 light-source transformer, rated 115 volts, 50/60 cycles, primary; 4.8 volts secondary; lens-barrel assembly CR7505-B207G1, 3 in. in diameter, for mounting directly on relay; two light sources, -C201G1 with 1½-in. lens and -C203G1 with 3-in. lens; two phototube holders with six feet of special phototube cable and a plug for connecting to tube socket in the relay, -P211G1 with 1½-in. lens, and the -P212G1 with 3-in. lens. With 1½-in. lens, maximum operating distance is 12 ft; with 3-in. lens, maximum operating distance is 30 ft.

Sensitivity of -K100G3 may be increased five times by use of -B207G1 lens-barrel assembly.

## CR7505-N210, -N211, -N212 Relays

These three relays are similar in circuit design and are especially adapted for photoelectric applications where a device must respond to rapid light changes or high operating rates.

A time-delay feature, adjustable up to ½ second by means of a potentiometer dial, is provided to delay the dropout of the magnetic delay in cases where the relay would be energized for such a short time that the period would not be sufficient to perform the external control operation desired.

The relays will respond to light changes as small as ½ foot-candle, providing there is sufficient light on the phototube.

Separate phototube holders are required for these units.

Internal timing circuit permits operation on pulses as short as 0.001 sec and may be adjusted to keep relay energized up to 0.5 sec.

NEMA ENCLOSURE TYPES: I—Protection only, III—Weather-resistant, IV—Watertight, V—Dust-tight, VII—Explosion-proof.

# ELECTRONIC TIMERS AND DEVICES

## Photoelectric Accessories for Use with -K201 and -N210 Series

The light sources are of die-cast aluminum construction. The -C201G1 light source has a 1 1/2-in. lens, focusable from 2 feet to infinity. The -C202G2 has a double lens for short focus, for a concentrated spot approximately 1/4 in. in diameter at a distance of 2 1/2 - 4 in. in front of the lens. The -C203G1 light source has a 3-in. lens, with high-intensity beam for long-distance operation. The -C201G2, -C202G2, and -C203G2 are identical in operation with the G1 group, but have rubber gaskets between the front and back covers which makes them weather resistant and dust-tight in accordance with NEMA Standards.

4.8 volts is required for all the above light sources and the following transformers are recommended:

**Light-source transformers.** The 9T58Y8047 is enclosed in a conduit box with knockouts for conduit connections. It is rated 115/230 volts, 50/60 cycles. The 9T53Y8036 is of open-type construction, but has same rating as 9T58Y8047. The 9T53Y8058 for 25/50/60 cycles is of weather-resistant construction; except for size and type of construction, rating is identical with 9T58Y8047.

The -C208 light source is explosion-proof and can be made watertight by applying a rubber gasket which is furnished. It has a 3-in. lens and a self-contained step-down transformer for 115/230-volt operation.

The phototube holders are similar in construction to the light sources. The -P202G2 has a 1 1/2-in. lens and the -P203G2 has a 3-in. lens. Both come with a 9-ft phototube cable with spade terminals.

## CR7504-A142 Electronic Timer

The -A142 timer is for timing applications of short time duration (-A142G1, 0.06 to 1.2 sec; -A142G2, 0.6 to 12 sec; and -A142G3, 6 to 20 sec) where long life, low maintenance, and high repetitive accuracy is required.

The -A142 has double-pole, double-throw contacts; can be used to start f-hp motors directly. Time-range dials read directly in seconds.

Two different types of operation available: immediate-start for timing operations or delayed-start for providing a time delay. Power supply, 115/230 volts, 50/60 cycles; power consumption, 15 watts.

## CR7511-A126 Resistance-sensitive Relay

This relay is used to obtain a reliable contact from the touch of two conductors through which only small currents flow. It will operate motors, lights, contactors, and solenoids whenever there is sufficient change in the resistance of a circuit, including liquid-level-control applications. In this way, large amounts of power can be controlled

from a low-current high-resistance input.

It has 10-amp a-c contact rating, two single-pole, double-throw, contacts for controlling two independent circuits. Enclosure is weather-resistant and dust-tight.

## CR7505-R201G1 Smoke-density Indicator

This control and associated equipment can be used to indicate smoke density, gas density, or the density of any fluid where density is directly related to the light transmission through the fluid. It can be used to warn furnace operators of excessive smoke conditions, to turn on blowers or relevant equipment at any smoke-density level,

and when used with a suitable recorder, a continuous permanent record of smoke density is always available.

The indicator has a semi-dust-tight enclosure (NEMA Type 1A) and an industrial-type relay, 45 amp make-break and 10 amp carry, at 115 or 230 volts, a-c. Simple calibration adjustments are made with four locking-type knobs on the panel, while indicating lights and a smoke-density instrument are on the front cover of a panel.

## AC-DC GUARDIAN SOLENOIDS

Available in both intermittent and continuous duty types. Intermittent types should not be energized for more than 5 consecutive minutes, or be permitted to rise more than 85° C. above 24° C. ambient rating without giving sufficient time to cool between operation cycles. Continuous duty types are designed so they will not rise more than 85° C. above the 24° C. ambient temperature rating when operated at rated load. Plunger has slotted end with  $\frac{1}{8}$ " diameter hole for coupling. In chart, (I) indicates intermittent duty type, (C) indicates continuous duty type.

### MINI-GATOR CLIP

(Smallest Insulated Clip Ever Made)

U.S. Patent No. 2,762,028

Trademark Reg.

Mini-Gator

Mini-Gator with Insulator

A truly miniaturized clip—the only one of its kind. Indispensable for testing or incorporation into miniaturized equipment. Skin-tight flexible Vinyl Insulator (sold separately) covers completely—has slotted "lip action" tip. Clip weighs 1/20th oz., has tiny 1/64" O.D. nose, but ample 3/8" jaw spread. Crimping ears. Solder connection. Surprisingly strong bite penetrates corrosion and coatings.

### COMPLETELY INSULATED ALLIGATOR CLIPS

Patent Pending

#### No. 63 or 63-C Clip

Sold only as a unit, with factory-applied insulators.

A radically new development that doubles the usefulness of Alligator Clips! Completely insulated right down to the nose. Flexible 2-piece skin-type vinyl insulator of high dielectric strength, with "lip action" slotted nose that permits opening of clip without exposing metal. Insulator nose is only 15/64" O.D. The tight fitting sheath preserves all the slimness of the Alligator Clip, still giving complete protection against shorts in even the tightest spots. These clips could be bunched together—touching all around—without danger of shorting. Screw connection easily made by slipping insulator forward.

#### No. 63—INSULATED ALLIGATOR CLIP (STEEL)

**Mallory 12RS6D Bench Power Supply**

The Mallory 12RS6D is a dual purpose bench power supply designed for use on the radio service bench for operating conventional 6 and 12 volt automobile and truck radio sets. Fully AC-operated from the 115V/60 cycle line, the 12RS6D supplies rectified and filtered DC in either of 2 ranges. Range "A" supplies 0 to 16 volts at 6 amperes continuously, or 12 amperes intermittently. Range "B" supplies 0 to 8 volts at 10 amperes; or 20 amperes intermittently. Both ranges are infinitely variable from zero to maximum output to permit precise adjustment of bench test voltages. The 12RS6D is equipped with a DC voltmeter, a DC ammeter, infinitely variable voltage control, a range switch, an on-off toggle switch, automatic overload protection, primary fuse and rubber-covered line cord and plug. The rectifying system employs a full-wave metallic rectifier. The cabinet is sheet steel finished in blue enamel and measures 6 3/4" high, 10 3/8" wide and 5 1/2" deep. Shipping weight approximately 8 lbs. Catalog No. 12RS6D \$42.95 Net

**Mallory 12RS14D Heavy Duty Six Volt DC Power Supply**

The Mallory 12RS14D 6/12 volt, 25 ampere rectifier type power supply is designed to replace storage battery-charger combinations for bench testing medium power 2-way mobile-phone equipment. It may also be utilized for non-radio uses requiring well-filtered low voltage DC in the 25 ampere range. Heavy sheet-steel housing makes it adaptable for use in garages as mobile radio bench equipment.

The 12RS14D operates from a standard 115 volt 60 cycle source to supply DC voltage from 0 to 8 volts at continuous or variable loads of 0 to 25 amperes. Intermittently, it will supply a maximum of 40 amperes at 6 volts.

An adjustable variable control allows quick selection of any voltage from 0 to 8 at 0 to 25 amperes. Three capacitors totaling 30,000 mfd. filter the output to less than 1 volt ripple and suppress RF and power line interference. A 0-10 volt DC voltmeter and a 0-40 ampere DC ammeter are included.

Conduction cooling of the full-wave Selenium Rectifier Cells, automatic overloading protection, and a self resetting circuit breaker insure long life.

Overall dimensions—11" high, 10 1/2" wide, 8 3/4" deep. Shipping weight—26 lbs. Catalog No. 12RS14D \$139.50 Net

**Mallory Service Bench Rectopower Supplies**

Model 28RS15D is designed to operate from 110-120 volts, 60-cycles, and is equipped with accurate reading DC voltmeters and ammeters, self-reclosing overload circuit breakers in the DC circuit, fuse protection in the AC circuit and an "on-off" switch. Both models are equipped with a continuously adjustable transformer-rotor system to provide precise adjustment of the output voltage to any value from 0 to rated output voltage. Both models are filtered by high-capacity electrolytic capacitors.

These models are also equipped with a new, simplified automatic voltage regulating system (no relays) which keeps the output voltage relatively constant as the load changes from no-load to full load. Model 28RS15D will supply 0-16VDC @ 30A or 0-32VDC @ 15A. Model 28RS16D \$224.00 Net.

# UNIVERSAL INVERTERS

Specially Designed for  
Operating Standard A.C.  
Tape Recorder, Television Set,

Dictating Machine, Radio Set, Ham Gear, Public Address System, Amplifier, Record Player, Electric Razor, Food Mixer, Vacuum Cleaner, Sewing Machine, Business Machine, Electric Drill, Fluorescent and Incandescent Lamp, and Electronic Test Equipment from D.C. Voltages in Automobiles, Buses, Trucks, Boats, Trains, Planes, and D.C. Districts. Ideal for Emergency Lighting Applications for Civil Defense, Red Cross, Rescue Work, etc., Simply Using Extension Cords.

ATR Universal Inverters are actually a combination of 4 Inverter designs in one unit! These Inverters are especially recommended for applications as mentioned above and feature complete RF frequency interference suppression, instant starting, frequency stability, and built-in power factor corrector utilizing a simple toggle switch. With ATR Inverters, the need for special equipment is eliminated. They are designed for quiet, long-life operation at high efficiency and maximum reliability. All models indicated are equipped with ATR heavy duty plug-in Inverter Vibrators. These Inverters also come equipped with four-point voltage regulator which make possible the correct output voltage for minimum to maximum loads and also help compensate for input voltages which are lower or higher than normal. The operating efficiency is in excess of 75%. To figure approximate current consumption from storage battery, divide the rated input wattage of the recorder (or load) being operated by the storage battery voltage and further divide this answer by .75 which will give the actual current consumption based on the actual load and efficiency. The battery current consumption required for a tape recorder is normally less than that drawn by ordinary automobile headlight(s). These Universal Inverters are recommended only for use with loads having power factors in excess of 70%.

Featured cut above illustrates  
Model 12U-RHG.

ATR Inverters should be used only for the applications as outlined above and on the reverse side of this sheet.

## EASY TO OPERATE

ATR Electronic Tube Protectors should double or triple the life of all electronic tubes including picture tube in TV or Hi-Fi Sets, Amplifiers, Electronic Organs, and other similar electronic equipment. The ATR Electronic Tube Protector utilizes a thermal cushion-action principle which also protects all other components by eliminating initial damaging surge currents. The ATR Electronic Tube Protector can be used with any electronic equipment having input wattage of 100 to 300 watts. The Electronic Tube Protector plugs into the AC wall socket; whereas, the TV or Hi-Fi Set then plugs into the tube protector receptacle. # AUTO Plug-In Type — Portable BATTERY CHARGERS

NO INSTALLATION — JUST PLUG INTO CIGARETTE LIGHTER RECEPTACLE

For keeping the storage battery fully charged right in the car, truck, boat, or plane A storage battery necessity — needed more now than ever before — makes motor starting easy!

The additional appliances — such as auto radios, spotlights, motors, heaters, fans, cigarette lighters, etc. — operated from the storage battery impose a severe drain on the battery making the normal "hard starting", especially in cold weather, still more difficult. The ATR Automatic Tapering Battery Charger solves this problem by charging the storage battery right in the car, truck, boat, or plane conveniently and economically. No need to remove the battery! Simply plug special charger cable into dash receptacle of the vehicle; or, if truck type charger, clip charger cable leads to the storage battery and flip the charger toggle switch "on". Danger of over-charging battery is minimized due to automatic tapering charge feature.

Vibrators as produced by different manufacturers employ driving circuits which require more or less power. Such power is applied by either series or shunt driving means. Where shunt drive is employed, a given vibrator must be used at its design voltage only. Where series drive is used, an external resistor may be used to drop a higher voltage for use of a particular vibrator. These considerations apply to many 6/12 Mobile Communications equipment.

\* Radiart vibrators have always used an exceptionally strong driving coil to obtain long and dependable service. When a 6 volt Radiart series drive vibrator is used for 12 volt operation in a 6/12 equipment, the usual resistor may not pass enough power to drive it properly. To avoid any dependence at all upon the coil resistor, Radiart provides similarly numbered shunt drive vibrators for use when 6/12 equipment is used on 12 volts.

In addition to insuring proper drive, the practice of using a 6 volt vibrator at 6 volts and a 12 volt vibrator on 12 volts, permits the factory to provide an adjustment and selection of contact that is best for each application.

\*\* Where 12 volt operation only is involved, a choice of either shunt drives such as 6715 or series drive such as (6715 S) is available.

\*D.C. Ampere rating is based upon measurement made with a D.C. ammeter in primary lead. Circuit must be properly designed for load being handled. Technical advice is available through Jobber Service Department.

### OBsolete TYPES

It is entirely impractical to continue to stock the hundreds of different heavy-duty vibrators that have been supplied in past years for a large variety of uses. Every attempt is made to maintain equipment in service, even though it originally used vibrators which have generally become obsolete. Some obsolete vibrator types are still carried in limited stock at the factory. In a great many cases, simple instructions are available so that a radio technician can change wiring, sockets, or other minor

features in an old design to adapt it for use with new standard vibrators.

For information regarding a possible replacement for obsolete vibrators, send details including model number of equipment, original vibrator type number, voltage and frequency to the Jobber Service Department.

### NOTES ON SPECIFICATIONS

Note 1: Continuous ratings are based on operation of nameplate rating indefinitely at ambient temperatures not to exceed 100° F. with free air circulation. Intermittent ratings are based on 25% duty cycle, with on-time not in excess of 15 minutes. Up to 30 minutes operation at the intermittent maximum is not detrimental, provided it can be followed with approximately two hours of cooling time.

Note 2: Output watts ratings are based upon 70%-100% Power Factor loads.

Note 3: Classes of Models indicate case size and approximate weight as follows:

SP—Shaver Pack	2-5/8 x 2-1/2 x 3-7/32	— 2 Lbs.
LM—Light Midget	3-1/2 x 3 x 4-13/16	— 4 Lbs.
M—Midget	4-5/8 x 3-15/16 x 5-5/16	— 6 Lbs.
L—Lightweight	5-1/2 x 6-1/4 x 8	— 12 Lbs.
S—Standard	5-1/2 x 6-1/4 x 9	— 14 Lbs.
H—Heavy Duty	6-1/2 x 7-1/2 x 11	— 20 Lbs.
SH—Super Heavy	8 x 9-1/2 x 13	— 35 Lbs.

Note 4: RADIART VIPOWERS contain added components required to make them universally applicable to various kinds of loads within their name-plate rating. For example, the same unit may be used for television, radio, dictating service, office machines, and even for industrial purposes. Principal uses are coded in Specifications as follows. Any model is suitable for uses coded for models of lower output rating.

RA—Radio  
TV—Television  
DI—Dictation  
TR—Tape Recorder  
BE—Battery Eliminator  
MT—Mobile Transmitters  
A—Amplifiers  
PH—Phonamotors  
IN—Industrial  
SH—Shaver  
PA—Public Address

Note 5: Power Factor Correctors are available for use with highly inductive loads, so that they may be handled by Regular VIPOWERS. Model PF1 corrector used an 60% PF loads handles up to 100 watts; On 30% loads, to 25 watts. PF2 on 60% PF loads handles 150-300 watts; on 30% loads, 50-75 watts. PF3 on 60% loads handles 350-500 watts; on 30% loads 100-150 watts. See Engineering Bulletin EB-3007 for details.

Note: See Engineering Bulletin EB-3013 for mounting kits for all models, and for leads, master fuse kits and remote control kits for 6 or 12 volt models.

Vibrators as produced by different manufacturers employ driving circuits which require more or less power. Such power is applied by either series or shunt driving means. Where SHUNT drive is employed, a given vibrator must be used at its design voltage only. Where SERIES drive is used, an external resistor may be used to drop a higher voltage for use of a PARTICULAR vibrator. These considerations apply to many 6/12 Mobile Communications equipment.

\* Cornell-Dubilier vibrators have always used an exceptionally strong driving coil to obtain long and dependable service. When a 6 volt Cornell-Dubilier series drive vibrator is used for 12 volt operation in a 6/12 equipment, the provided resistor may not pass enough power to drive it properly. To avoid any dependence of all upon the coil resistor, Cornell-Dubilier provides similarly numbered shunt drive vibrators for use when 6/12 equipment is used on 12 volts.

In addition to insuring proper drive, the practice of using a 6 volt vibrator at 6 volts and a 12 volt vibrator on 12 volts, permits the factory to provide an adjustment and selection of contact that is best for each application.

\*\* Where 12 volt operation only is involved, a choice of either shunt drives such as 6715 or series drive such as (6715 S) is available.

CORNELL-DUBILIER HEAVY DUTY VIBRATORS are available in the above four styles for operation at 60 or 100 cycles with regular or close frequency adjustment in any of 6 standard operating voltages — 6, 12, 28, 32, 64 and 110. Although these combinations result in 96 "standard" vibrators, only those models which are generally used are listed below for Jobber distribution.

All heavy duty vibrators have separate driving circuits with provision for external suppression. Two or four sets of power contacts are brought out individually. Center reads are common.

Precision ground ceramic spacers, micrometrically selected Swedish steel center reads, and precision oscillographic adjustments combine to insure uniform reliable service life.

Coding of the heavy duty vibrators is meaningful. In a typical part number such as 110VB6, the prefix 110 denotes operating voltage, V denotes vibrator, B denotes the style, and 6 denotes 60 cycles with regular frequency tolerance. Close frequency adjustment as desired for television is denoted by a final H suffix. A typical close frequency vibrator is 110VB6H.

- Standard models deliver 110 volts, 60 cycle, AC power. Output watt ratings are based on continuous operation on high power factor loads. They should be reduced by the percent of power factor where inductive loads are involved.
- All models are housed in cases of similar design and appearance. The class designations signify approximate size and weight as follows:  
 SP — Shaver Pack — 2 5/8 x 2 1/2 x 3 7/8 ..... 2 lbs.  
 LM — Light Midget — 3 x 3 1/2 x 4 1/8 ..... 4 lbs.  
 M — Midget — 3 1/8 x 4 3/8 x 5 1/8 ..... 6 lbs.

## RADIO-CONTROL GARAGE DOOR OPENER

Just a touch of your finger . . . opens and closes your garage door

The Perma-Power Garage Door Opener embodies novel design features providing maximum convenience and safety to the user. Styling, too, was given important consideration. All mechanism is contained in a modern spun-aluminum fixture that illuminates as well as beautifies the garage interior.

The concealed motor is a 1/4 HP, 117 volt, capacitor-start type with ample power to operate the largest of modern, residential, garage doors. Also in the fixture is the radio receiver which turns on the motor when it gets a signal from the transmitter in the car.

- When button is pressed, door automatically opens and turns on a fixture light, illuminating garage. When button is pressed again, door automatically closes and light turns off.
- Door locks securely when shut. No conventional key lock required.
- New automatic shut-off gives extra protection. If door hits an obstacle, power shuts off instantly. When strated again, door reverses, pulling away, so object cannot be trapped.
- Sensitive safety clutch is easily adjusted by a knob to exert just enough force to move door reliably. This vital safeguard makes door travel gentle and, consequently, easy to arrest.
- A detachable door arm permits unlatching for manual operation of the door in case of power failure.
- A push-button with wire is supplied for wall mounting in garage or other location to operate door from inside. This control circuit is only 24 volts and safely isolated from the main service line. Additional buttons may be easily installed at auxiliary points. A key operated switch is available for outside mounting.

- Electrical overload devices protect the entire installation. The radio-control receiver is individually fused.
- The radio-control transmitter is crystal-controlled, sending out its signal on an FCC authorized frequency of 27.255 mcs. Being small, it mounts under the hood and operates directly from the 6 or 12 volt car battery. When door operation from more than one car is desired, a separate transmitter is installed in each additional car.
- The radio-control receiver is contained inside the aluminum fixture in the garage. It plugs into the main assembly and is constantly ready to obey the car signal to open or close the door.
- An exclusive, coded channel is set up in each radio control system upon installation. Ten different factory-sealed plug-in channel units are available, requiring no adjustment at the point of use. This allows interference-free operation to and from neighboring installations and other electrical devices.

**DOOR REQUIREMENTS** — The Perma-Power Garage Door Opener will operate all one-piece tilt-up or sectional roll-up residential doors that travel on horizontal or curved roller tracks. Doors may be up to 18' wide and 8' high and of metal or wood construction. As little as 2" of headroom (space between high-arc of door and ceiling) in garage is adequate for installation.

**INSTALLATION** — Entire system was designed to make installation an easy one-man job. Simplified step-by-step instruction manual assures fast, professional results using common hand tools. Every part required is supplied, including mounting materials.

## CARTER CHANGE-A-VOLT DYNAMOTORS

Designed for long life, this slow speed Dynamotor is equipped with low copper content Line-O-Life brush grades for operating radio receivers continuously. Most models operate less than 3000 RPM. 615V and 128V models are designed for 30 watt transmitters and deliver 3 times rated current for intermittent transmit service. 610V and 125V are designed for 10 to 20 watt transmitters and deliver two times rated current on intermittent transmit service. High efficiency. Voltage regulation from 15 amperes to 45 amperes is approximately 1.3 volts.

Change-a-Volt can also serve as a battery equalizer when operating low voltage equipment on several cells of a higher voltage battery system. A double pole switch or relay must be used when operating the dynamotor as a battery equalizer. Size 1 1/8" long, 7/16" high, 4 1/2" wide. Weight approx. 25 lbs.

FOR DIESEL LOCOMOTIVE, TELEPHONE STANDBY  
MARINE RADIO-TELEPHONE COMMUNICATIONS

This Custom Dynamotor permits use of 6 volt or 12 volt Mobile Communications equipment on 24, 32, 48, 64 or 110 volt Diesel locomotives. Now, switch engines can easily be tied in with the rest of mobile communication systems. Rugged, Heavy Duty construction throughout makes it ideal for Diesel and Marine service. The under-loading permits slow speed and low temperature rise. Coupled with over-size brushes, extra long life is attained. Excellent results; have been reported on units in operation more than 3 years. High voltage outputs up to 1000 volts available.

## SELECTOR CHART - Converters for Popular Wire and Tape Recorders

Most wire and tape recorders are of medium Power Factor design, approximately 70%. Standard high power factor (85 to 100%) Rotary Converters therefore will not operate the recorders properly as this type Converter will produce higher AC voltage and frequency because of the inductive recorder load. If the equipment is not listed on this chart, please write to the factory.

erly as this type Converter will produce higher AC voltage and frequency because of the inductive recorder load. If the equipment is not listed on this chart, please write to the factory.

## PACKAGED POWER SUPPLIES

These conveniently packaged power units will be found ideal for applications requiring minimum size and weight. Features isolated high voltage terminals permitting either the positive or negative side to be grounded. Rectifier tubes are operated from separate filament transformers so that DC output voltage can be varied from zero to full rated value. Selenium rectifier types have extra cells to assure operation under high line voltage or light loading. All standard units have well filtered DC output. # SOLA *Constant Voltage* TRANSFORMERS

## AUTOMATIC, INSTANTANEOUS VOLTAGE REGULATION

Sola Constant Voltage Transformers are static-magnetic voltage regulators. They are designed to provide a constant output voltage which is unaffected by changes in input voltage. You will find, listed in the following pages, the widest range of ratings and types available from stock offered by any manufacturer.

They have eight distinct advantages over regulators which depend solely upon saturation of core materials for their regulating action, or electronic type regulators:

1. Ultra-fast regulating action. Response time is usually 1.5 cycles or less.
2. No moving or renewable parts or manual adjustments; eliminates need for routine maintenance and spare parts stock.
3. Completely automatic, continuous regulation. No manual adjustments or instruction booklets are required.
4. Self-protecting against short circuits on output or load circuit.
5. Current-limiting characteristic protects load equipment from excessive fault currents.
6. Availability of transformer ratio for step-up, step-down, plate and/or filament supply permits substitution in place of conventional non-regulating transformers.
7. Relatively compact compared to other equipment for comparable ac voltage regulation.
8. Provide isolation between input and output circuits.

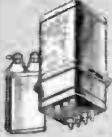

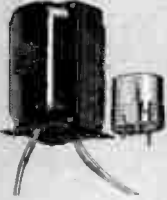

In addition, CUSTOM DESIGNED UNITS can be manufactured in capacities from 1 va to 25,000 va, to suit your individual specifications. When ordered in substantial quantities, they cost only slightly more than standard units of the same general size. Often, time and money can be saved by direct use or modification of a regulator from the several hundred special designs on file. Custom designs can include: SPECIAL VOLTAGE RATIOS, SPECIAL FREQUENCIES, COMPENSATION FOR FREQUENCY VARIATION, MULTIPLE OUTPUT VOLTAGES, THREE-PHASE SERVICE, and MILITARY SPECIFICATIONS.

## Sola DC power supplies:

### compact, regulated, for high-amp loads

This combination of Sola Constant Voltage Transformer, germanium power rectifier, and high-capacitance filter yields a dc power supply compact in size, low in weight, and with other important advantages.

1. Output regulation of  $\pm 1\%$  or less with  $\pm 10\%$  line voltage variations.
2. Minimum output voltage change with wide, rapid load changes.
3. Low input power, with resultant good efficiency.
4. Ability to withstand high, short-time overloads without damage to components.
5. Ripple voltage of approximately 1% (rms) or less.
6. High overall economy by eliminating overload capacity needed in other types of power supplies for certain applications.

7. Low ratio of size and weight to power output.
8. Freedom from routine adjustment and maintenance.
9. Exceedingly low output impedance.

In addition to its important function of correcting line voltage variations, the Sola CV's inherent current-limiting action permits safe, economical use of the efficient germanium rectifier with its low forward voltage drop and other advantages. This same current-limiting action also permits use of high-capacitance filter sections by controlling excessive charging currents which might damage rectifier junctions. The high-capacitance filter yields very low ripple voltage without need for heavy, bulky choke components, with their substantial and often-varying load voltage drops.

## STANCOR ULTRA-LINEAR HIGH-FIDELITY AMPLIFIER

Now you can build an Ultra-Linear version of the famous Stancor Williamson high fidelity amplifier, using Stancor Ultra-Linear Output Transformer A-8072. For complete construction details see Stancor Bulletin 479.

The original Stancor-Williamson amplifier can be converted to Ultra-Linear operation by a few simple circuit changes and the installation of the A-8072. Conversion instructions are included in Bulletin 479.

Stancor supplies a set of two completely punched and finished chassis for the Ultra-Linear Amplifier; Chassis Set WM-8, \$5.75 net. In addition to Ultra-Linear Output Transformer A-8072, \$15.00 net, this amplifier uses power transformer PC8412, \$8.58 net and filter choke C-1411, \$4.29 net. The other components used cost about \$25.00. They are all stock parts and can be readily obtained from your Stancor distributor.

Write for your FREE copy of Bulletin 479.

## HIGH FIDELITY OUTPUT TRANSFORMERS

Better than  $\pm 1$  db from 20 to 20,000 cps.

These Stancor output transformers combine the most advanced design and manufacturing practices to provide outstanding audio response at low cost. Maximum power level is conservatively rated at 50 watts. They are designed to match the most popular types of output tubes to speaker or line impedances.

Extensively interleaved "trifilar" windings, extremely tight coupling and careful electrical balance result in audio fidelity to please the most critical specialist. Inasmuch as elaborate shielding is not required at the audio output level, an inexpensive, but thoroughly practical, Type C mounting is used. Shipping weight is 6.5 lbs.

## POLY-PEDANCE DRIVER MULTI-TAPPED UNITS FOR USE IN CIRCUITS WHERE THE OPTIMUM RATIO CANNOT BE PREDETERMINED.

Driver circuit changes often require new transformers. Many times it is impossible to match correctly tubes involved with a specific transformer, with high distortion resulting. *Poly-Pedance* units solve that problem; three transformers with the maximum number of usable ratios will match the driver tubes to any Class B modulator grid circuit without exceeding the power capabilities of the driver tubes.

### POLY-PEDANCE MODULATION MULTI-TAPPED UNITS TO PROPERLY MATCH THE OUTPUT OF THE MODULATOR STAGE TO THE MODULATED LOAD. WILL MATCH ALL COMMON IMPEDANCES OF CLASS "B" MODULATOR (2,000 to 20,000 OHMS) TO CLASS "C" LOAD IMPEDANCES OF 2,000 TO 20,000 OHMS.

The number of excellent transmitting tubes available is constantly increasing. R.F. applications, too, have increased and it is sometimes difficult to obtain the correct modulation transformer suitable for matching some given modulator tubes or R.F. load. These units give an almost unlimited range in power and impedance ratings to assure a correct impedance match in all cases.

\*Transformers and Rectifiers will have a higher temperature rise when operating with a capacitive load as compared to a resistive or inductive load for a given load current. If this is undesirable extra ventilation should be provided or else the output current from the rectifier should be derated by approximately 20% from the values shown.

†Designates part number to be removed from next catalog. ★ Designed for a nominal input of 117 volts, 50-60 cycles.

### DETAILS OF NEW EQUIPMENT LINE MOUNTINGS

**YY CASE MOUNTING**—Hermetic sealing meets all MIL-T-27A specifications. Steel base cover is bonded into the case by deep-seal soldering. Terminals are hermetically sealed by unique rubber gasket—ceramic bushing construction. Units are stud mounted.

**C-TYPE MOUNTING**—Moisture-resistant compound surrounds coil and core. Ten-inch RETMA color-coded leads, ends stripped and tinned for easy soldering. Flange-mounted drawn steel cases.

**S-TYPE MOUNTING**—Precision-fitted steel base-covers and terminal boards, plus compound filling, keep moisture out. Solder-lug terminals are clearly identified, easy to use. Drawn steel cases are flange-mounted.

**B-TYPE MOUNTING**—Steel bases are bonded into the drawn steel cases by deep-seal soldering to make units completely moisture proof. Stud-mounted cases take minimum chassis space. Convenient, compact, pin-type terminals.

## TRANSISTOR TRANSFORMERS

Here are the smallest iron core audio transformers ever built. They weigh less than 1/10 ounce and are no larger than the transistors they power. Write for Bulletin 462 showing typical circuit application.

These transformers are designed primarily for transistor audio application but they can be used wherever low power is involved. Useful range, below 1 mw level. They are constructed of extremely fine wire, wound on molded nylon bobbins, with special nickel alloy steel laminations. Mounting style is coil and iron only, type UM.

**SPECIAL Chicago-Stancor ultra-miniature transformer, designed and built to your requirements, can be supplied in quantities of five or more. Send your specifications for information on price and delivery.**

## MINIATURE HIGH FIDELITY AUDIO TRANSFORMERS

Chicago-Stancor Tinytrans are miniature transformers made with nickel steel laminations. They have an exceptional frequency response for units of this size; ±1 db. 30-15,000 cps, Maximum level 0 db. Write for Bulletin 463 showing frequency response curves on these transformers.

These units are sealed and potted in 7/8" square, anodized aluminum cases with phenolic terminal boards. Total height, including terminals, is 1 1/4". The case has two 2-56 threaded inserts, 11/16" centers, for easy chassis mounting. The entire transformer weighs only 1.3 ounces.

## PUBLIC ADDRESS RANGE TRANSFORMERS

Frequency Response within ±1 db, 50 to 10,000 Cycles

Driver and output transformers in this CHICAGO series are designed for three general power levels to fit a wide range of application. Up-to-date secondary impedances match 600 or 150-ohm lines, 16, 8, and 4-ohm speakers.

(16/8/4-ohm taps also suitable for 20/6/3.2-ohm speakers.) Output transformers have tertiary windings for 10% inverse feedback that minimizes distortion and provides extra audio watts without loss of fidelity.

### HF AND WF SERIES HIGH FIDELITY AUDIO TRANSFORMERS

#### HF Series

These units have a wide frequency response of 20 to 20,000 cps with  $\pm 1$  db. Correct design reduces harmonic and intermodulation distortion to a negligible amount. Balanced construction minimizes hum pickup. Chicago-Stancor impregnation insures long life. Cases are finished in gray enamel and have four threaded holes at each end for flush mounting. Stud-type terminals are plainly marked for easy identification.

### STEP-DOWN TRANSFORMERS—Primary, 50/60 cycles

CHICAGO step-down autotransformers solve the problem of operating standard 117-volt radios, amplifiers, and various electrical appliances from 220-volt power sources. They are particularly well adapted to use in Central and South American countries, where 220-volt lines are frequently found, and where the Sealed-in-Steel construction protects them against corrosion caused by excessive humidity. Input side is equipped with 8-foot, rubber-covered cord and plug. Output side has standard female receptacle.

### ISOLATION TRANSFORMERS—Primary, 50/60 cycles

A rotary switch on each CHICAGO isolation transformer adjusts to either of three primary voltages, 125/115/105 volts. With the unit operating on a 115-volt line, the three switch positions also provide varying secondary voltages, 105/115/125 volts isolated from line. Eight-foot, rubber-covered cord and plug on primary, standard female receptacle on secondary.

## INSTRUMENT POWER

### Instrument POWER SUPPLY Transformers

Intelligent design and construction of measuring instruments involves consideration of many factors normally neglected in electronic circuits. Regulation of power supply voltages, limitation of external magnetic fields by minimum flux density, multiple static shields to limit capacitive coupling, multiple filaments where tubes must operate at different potentials, all become necessary to obtain peak performance. The transformers on this page are a series of special designs which have been developed for instrument design.

#### DESCRIPTIVE DATA, GENERAL

Maximum rated operating level ▼ applies to frequency range 20-20,000 cps. Power rating is ½ at 15 cps, ¼ at 10 cps. Full power (60 cps) primary open circuit inductance is approximately 100 Henrys for each 1000 ohms of primary impedance. Leakage inductance, secondary referred to total primary, is approximately 1 mh per 1000 ohms of primary impedance. Leakage inductance, half primary to half primary is approximately 1 mh per 1000 ohms of primary impedance. Can be used between half and double of rated impedances. For halved impedances, power ratings are doubled. For doubled impedances, power ratings are halved. Secondary may be operated with either end, or C.T. grounded.

## UTC HERMETIC VARIDUCTORS

\*\*Hermetically sealed to MIL-T-27A spec., MIL Type TF4RX20YY

UTC variable inductors have served as the ideal solution to many filter, oscillator, equalizer, and tuned amplifier problems—for over a decade. Extended development has now made possible the new HVC series of inductors with improved characteristics. They are hermetically sealed to MIL-T-27 specs . . . extremely compact . . . wider inductance range . . . higher Q's . . . lower and higher frequencies . . . superior voltage and temperature stability.

Adjustment of set screw in top of case permits changing inductance + 200%, -70% of nominal value shown. Range is covered in 900° rotation. Setting is positive. Effective Q for a wide frequency range and variation of inductance with applied AC voltage are shown on the illustrated curves, for a typical HVC unit. Case dimensions are 1½" long, 2½" wide, 1½" high. The two terminals and two 4/40 mounting studs are on opposite diagonals — ¼" spacing. Wt. 2 oz.

UTC type VIC variable inductors offer a revolutionary approach to the problem of tuned audio circuits. By adjusting a set screw in the side of the case, an inductance value of +85%, -45% from mean value is obtainable. Range is covered in 600° rotation. Setting is positive. Effective Q for a wide frequency range and variation of inductance with applied AC voltage are shown on the illustrated curves, for a typical VIC unit.

The VIC inductor is housed in a rugged die cast case 1½" long, 1¼" wide and 1¼" high with mounting centers on terminal board side ¼" by 2½", tapped for 4-40 screw. Weight is 5½ oz.

\*DC MA shown is maximum recommended . . . will effect some reduction in inductance and Q.

# NEW "M" TYPE TOROIDS

Hermetically sealed to MIL-T-27A specs., MIL Type TF4RX20YY

**MAXIMUM Q**  
**MINIMUM SIZE**

UTC Permalloy Dust Toroids have been the standard of the industry for over 15 years. The MQ series of coils provide the highest Q factor in their class (see curves below), with miniaturized dimensions. All units are hermetically sealed to MIL-T-27 Specifications . . . laboratory adjusted to 1% tolerance—0 DC.

The stability is excellent. For the MQE-7 the inductance change is less than 1% for voltages from .1 to 3 volts. The MQA-13 change is less than 1% for applied voltages from .1 to 20 volts. The MQB-5 change is less than 1% for applied voltages from .1 to 50 volts. DC is permissible through the coil (values listed below). Inductance is virtually independent of frequency, temperature and vibration.

Hum pickup is extremely low due to the toroidal winding structure, with windings uniformly spread over the core. The case is of high permeability, affording additional shielding such that close spacing of units can be effected, the coupling attenuation being approximately 80 DB.

# UTC INTERSTAGE AND LINE FILTERS

(Hermetically sealed to MIL-T-27A specs.)

UTC makes a wide range of specialized filters covering bands ranging from .1 cycle to 400 megacycles. A group of standardized filters have been developed covering the more common mid-range frequencies, which take care of many filter requirements with stock units. All of these standard filters are in drawn hermetically sealed cases shielded to reduce hum pick-up. Special frequencies to order.

BMI units (Band Pass) have 2:1 gain. They are sharply peaked, having approximately 2 DB attenuation at plus or minus 3% from center frequency and attenuation of 40 DB per octave as shown. Input 10,000 ohms, output to grid.

HMI units (High Pass) have a loss of less than 6 DB at cutoff frequency, and an attenuation of 35 DB at .67 cutoff frequency. Input and output 10,000 ohms.

LMI units (Low Pass) have a loss of less than 6 DB at cutoff frequency, and an attenuation of 35 DB at 1.5 cutoff frequency. Input and output 10,000 ohms.

HML (High Pass) and LML (Low Pass) filters are similar to the interstage filters, in all characteristics, except that they are intended for an input and output impedance of 500/600 ohms.

BML (Band Pass) have input of 500/600 ohms, output to grid.

## UTC LOW FREQUENCY HIGH Q COILS

Hermetically sealed to MIL-T-27A specs., MIL Type TF4RX20YY

Permalloy dust toroids are not suited to providing high Q at low frequencies. The MQL series of laminated Hipermalloy coils were specifically designed for this class of service. The unique structure employed provides exceptional Q and stability. Inductance values are laboratory adjusted to 2% tolerance at 1 volt, 60 cycles. Stability with voltage is excellent, for MQL-3 inductance variation is less than 1% from .1 V. to 1 V. 60 cycles. Temperature stability is exceptional, total inductance swing being less than 3.5% for the wide range of -55°C to +85°C. A hum reducing lamination structure plus heavy Hipermalloy shielding provide very low hum pickup . . . 240 microvolts/gauss for MQL-3 series connected. Two identical windings brought out to four terminals permit series, parallel, center tapped, or transformer type connections. Drawn case 1 13/16 x 1 13/16 x 2 1/2 high, 1 lb.

# MINIATURE WIDE APPLICATION PULSE TRANSFORMERS

Hermetically sealed to MIL-T-27A spec., MIL Type TF5RX36ZZ

UTC miniature, wound core, pulse transformers are suited to a wide variety of blocking oscillator, interstage, and low level modulator applications. The high reliability design includes hermetic sealing by vacuum molding in a special epoxy . . . meets full MIL-T-27A specifications . . . is suitable for service from -70° C to +130° C.

For most versatile use, all stock items provide 3 windings of equal (1:1:1) ratio. Two winding, tapped winding, other ratio types, and metal cased units are available on special order. The short rise time of these items is illustrated by the .05  $\mu$ sec. rise time of the H-50. Insulation test is at 1250 volts RMS.

# MAGNETIC AMPLIFIERS FOR SERVO MOTOR APPLICATIONS

Hermetically sealed to MIL-T-27A Specs., MIL Type TF4SY40YV

The MAT 1-4 Magnetic Amplifiers are exceptionally stable units designed for the control of 2 phase, 115V., 400 cycle servo motors. They are compact . . . hermetically sealed . . . magnetically shielded . . . and meet MIL-T-27 and MIL-E-5400 Specifications. The output is sinusoidal, amplitude variable, and phase reversible. Control is provided by a dual triode such as 12AU7 operating with a plate voltage of 115 volts, 400 cycles, or higher. The signal to the triode grids can be polarity reversible DC or phase reversible 400 cycles with or without suppressed carrier modulation. These units eliminate DC power requirements as well as temperature sensitive dry disc rectifiers. The high input impedance provides minimum loading on sensing elements and high power gain. Ringing at low load level has been reduced to a minimum through high internal damping factors. The power output figures are conservative . . . power gain of the MAGNETIC STRUCTURE is approximately 40 . . . response time approximately 7.5 milliseconds. The maximum null voltage is 3 volts RMS. For single phase supply voltage the load capacitor should effect 90° phase shift with motor load . . . for 3 phase, 30° phase shift. (The chart values shown are approximate.)

For AC signal control the circuit of Figure 1 is employed. For DC signal control Figure 2 applies. Figure 3 shows the use of a power transformer (MAT-5) which provides higher plate voltages and eliminates the input transformer (MAT-6). The typical response curve of Figure 4 applies to all units, the larger units feeding heavier loads.

# HERMETIC AUDIO COMPONENTS

(To MIL-T-27A Specs.)

For twenty years UTC has been the largest supplier of transformer components for military applications, to customer specifications. Listed below are a number of types, to MIL-T-27A specifications, which are now catalogued as UTC stock items. All units employ glass bead headers or terminals. For printed circuit use, wire terminals on glass header units can be straightened out without injury. Straight wire terminals available on production orders as well as flat (7/8 x 3/32 x 3/16) case for SM units.

The frequency response ratings are based on military requirements. Actually, most of the units that do not carry DC are appreciably better in response than the range shown. For example, H-1, H-3, H-5, H-8 are within 2db from 30 to 20,000 cycles. The level ratings are maximum level for reasonable distortion at the lowest frequency specified. For higher frequencies considerably higher levels are permissible. For example, the H-3 will handle +21dbm at 400 cycles.

The impedance ratings are listed in standard manner. Transformers can be used for applications differing considerably from those shown, keeping in mind that impedance ratio is constant. Lower source impedance will improve response and level ratings... higher source impedance reduces them. Units may also be used reversed, input to secondary.

# DECI-OUNCER TRANSFORMERS

REVOLUTIONARY TRANSISTOR\* TRANSFORMERS, hermetically sealed to MIL-T-27A Specs.

UTC started a development program 2 years ago to evolve a new transistor transformer structure designed to provide full performance in extremely miniature size. The culmination of this development is found in the new DO-T series\*\*. Listed below are the standard types of units now being made and curves showing their general characteristics in typical transistor application. To fully appreciate the unprecedented performance of these revolutionary transistor transformers, the curves also show characteristics of similar size units now on the market. Available on production orders with drawn hipermalloy magnetic shield (25-30 db).

These transformers can be used for applications differing considerably from those shown, keeping in mind that impedance ratio is constant. Lower source impedance will improve response and level ratings . . . higher source impedance will reduce them. Units may also be used reversed, input to secondary.

# OUNCER AUDIO UNITS

## STANDARD AND PLUG-IN TYPES

UTC OUNCER components represent the acme in compact quality transformers. These units, which weigh one ounce, are fully impregnated and sealed in a drawn aluminum housing  $\frac{7}{8}$ " diameter . . . mounting opposite terminal board.

Ouncer items are ideal for portable broadcast, hearing aid, aircraft, concealed service, and similar applications. High fidelity characteristics are provided, uniform within approximately 1 DB from 30 to 20,000 cycles, except for O-14, O-15, and units carrying DC which are intended for voice frequencies. Maximum level +8 dbm.

"P" series units are identical to the UTC OUNCER units but are sealed in bakelite housings with plug-in base to fit standard octal socket. While of submersion proof design, these units weigh but two ounces. Oversize pins in the base make it impossible to dislodge these units from their sockets.

OUNCER Type No.	Application	Pri. Imp.	Sec. Imp.	PLUG-IN Type No.

# SUB-SUBOUNCER UNITS

## FOR HEARING AIDS AND ULTRA-MINIATURE EQUIPMENT

UTC-Sub-Sub-Ouncer units fulfill an essential requirement for ultra-miniaturized components having high efficiency and wide frequency response. Through the use of special nickel iron core materials and winding methods, these miniature units have superior performance and dependability characteristics. The coils employ automatic layer windings of double Formex wire . . . in a molded Nylon bobbin. All insulation is of cellulose acetate. Four inch color coded flexible leads are employed, securely anchored mechanically. No mounting facilities are provided, since this would preclude maximum flexibility in location. Units are vacuum processed and double (water proof) sealed. The curves below indicate the excellent frequency response available.

# LINEAR STANDARD AUDIO TRANSFORMERS

The ever increasing use of wide range equipment for broadcast service has reached the point where the major limiting factor is the frequency range of the transformers employed. UTC Linear Standard components represent the closest approach to the ideal transformer from the standpoint of uniform frequency response, low wave form distortion, high efficiency, thorough shielding, and dependability.

# ULTRA COMPACT AUDIO UNITS

The UTC Ultra compact audio units are small and light in weight, ideally suited to remote amplifier and similar compact equipment. High fidelity is obtainable in all individual units, the frequency response being  $\pm 2$  DB from 30 to 20,000 cycles.

All units except those carrying DC in Primary employ a true hum balancing-coil structure, which combined with a high conductivity outer case, effects good inductive shielding. The die-cast case provides for top or bottom mounting. Maximum operating level  $+7$  DB.

The UTC Hiperm alloy audio and power transformers are specifically designed for portable and compact service. While light in weight, neither dependability nor fidelity has been sacrificed. The frequency characteristic of the Hiperm alloy audio units is uniform from 30 to 20,000 cycles. They incorporate a Hiperm-alloy nickel iron core and hum balanced coil structure. The rugged die cast case is of high conductivity alloy finished in grey, arranged for mounting with the terminals either up or down. DC in Prim'y shown is maximum unbalanced.

# COMMERCIAL GRADE COMPONENTS

The commercial grade series of transformers incorporate conservative design and rugged construction to assure dependability under continuous service operation in industrial and commercial grade communication equipment. These units are mounted in uniform drawn cases finished in light grey enamel, and intended for chassis mounting. All items are poured with special sealing compound in addition to vacuum impregnation of coil structures.

CG-134, 135 and 136 are of the hum-bucking type to assure low hum pick-up. All audio components are linear  $\pm 1\frac{1}{2}$  DB from 40 to 10,000 cycles (no unbalanced D.C.), except CVL and CVM units . . . 40 to 6000 cycles. Parallel feed low level interstage units with 50,000 ohms and .25 mfd. 200 ohm windings on input transformers are balanced and may be used for 150 to 250 ohm circuits.

## CG VARIMATCH LINE TO VOICE COIL TRANSFORMERS

The UTC VARIMATCH line to voice coil transformers will match any voice coil or group of voice coils to a 500 ohm line. More than 50 voice coil combinations can be obtained, as follows:

.2, 4, .5, .62, 1, 1.25, 1.5, 2, 2.5, 3, 3.3, 3.8, 4, 4.5, 5, 5.5, 6, 6.25, 6.6, 7, 7.5, 8, 9, 10, 11, 12, 14, 15, 16, 18, 20, 25, 28, 30, 31, 40, 47, 50, 63, 69, 75.

Where speakers are to be connected in groups to a transformer, it is preferable that parallel connection be used to eliminate the possibility of multiple resonance. If two speakers of different impedances are connected in parallel, the lower impedance speaker will develop greater power. If connected in series, the higher impedance speaker will develop greater power.

UNIVERSAL INTERSTAGE EQUALIZER—CGE-1A

The UTC CGE-1A is the ideal device for any application where frequency response control is desired. This equalizer is not a simple R-C tone control, but employs resonant circuits in a unique arrangement providing equalization characteristics unobtainable by conventional circuits. Designed to work from a low or medium impedance source (10 to 20,000 ohms) to a high impedance (500,000 ohms or open grid), the CGE-1A affords continuously variable equalization over a 30 DB range at either end of the spectrum, while introducing only 18 DB total insertion loss. (See curve above). The mechanical construction permits mounting with case on panel directly behind controls, or with case separated from controls and panel. An etched, calibrated panel is provided.

## CG VARIMATCH MODULATION UNITS

Will match any modulator tubes to any RF load. The ever increasing number of vacuum tubes available for audio and RF applications has increased the difficulty of obtaining transformers suitable for matching to the various correct tube loads. If a standard transformer having a limited impedance range is purchased and used for a specific purpose as the "nearest thing" available, comparatively high distortion is inevitable. While a 20% mismatch caused by such an occurrence does not represent a serious loss in power, it greatly reduces the undistorted power available from a class B modulator because optimum plate load is not reflected to the tubes. The UTC Varimatch transformer eliminates this difficulty through the use of a combination of tapped winding affording an extremely wide range in impedance matching. Designs provide that for any load impedance employed, full class C plate current can be carried by secondary winding.

UTC CG power transformers, Varimatch units and chokes are designed to A.I.E.E. commercial standards. Ratings are conservative for continuous duty. Units are tested for breakdown at twice maximum working voltage plus 1000 volts and surge tested at 250% normal voltage. All items are vacuum impregnated and sealed with special insulating compound. The conservative design and manufacturing procedure of these units make them suitable for virtually all types of commercial equipment as well as ideally suited for quality amateur and public address service.

UTC Special Series audio units are specifically designed for amateur and popular-priced PA service. The Special units are finished in a rich, commercial type medium gray enamel. A recessed terminal strip is provided permitting above chassis or breadboard wiring in addition to standard chassis type wiring. The universal windings provided on driver, matching and output transformers assure a maximum of flexibility. Modulator output units will carry the DC current of the class C stage for any of the impedances available and will match practically any audio tubes to any RF load within the power rating of the transformer. Large components are housed in formed cases with top or bottom mounting. All units are vacuum impregnated—compound filled.

# SPECIAL SERIES POWER EQUIPMENT

UTC Special Series power supply components are designed specifically for amateur and popular-priced PA service. The ratings are based on such applications and recommended for ICAS intermittent use. For commercial application, CG or H grade components should be employed. Tapped coil structures on power and bias supply transformers afford maximum flexibility, permitting a given transformer to be used with many circuits and types of tubes. Stand by service should not be obtained by interrupting high voltage center tap.

# REPLACEMENT TYPE COMPONENTS

UTC replacement type transformers (Pri. 117 V. 50/60 cycles) represent the culmination of years of development in this field. All units are low temperature rise, vacuum sealed against humidity with special impregnating materials to prevent corrosion and electrolysis. Shells are finished in attractive high lustre black enamel.

## SIGNALLING AND CONTROL TRANSFORMERS

Primary 110-120 volts, 50/60 cycles—Secondary 4/8/12/16/20/24 volts

High power transformers suitable for operating relays, sirens, horns, gongs, etc. from 115 V. 50/60 cycle line. These units have four secondary terminals providing 4, 8, 12, 16, 20 and 24 volt output. The volt ampere rating is based on the 24 volt secondary tap with corresponding reduction at the lower voltages. Underwriters' approved primary leads are employed, and screw-type binding posts.

### MODULATION TRANSFORMERS—THE "FIVE" SERIES

SNC universal modulation transformers are specifically designed to provide maximum application possibilities per type. All units are provided with two identical secondary windings, permitting series or parallel operation. Changes in the ratio can be readily accomplished, when desired, without removing the unit from the chassis. Most units available in either air cooled or compound filled cases.

**FILAMENT TRANSFORMERS—THE "FOUR" SERIES**

Most SNC Filament Transformers are constructed to provide two identical center tapped secondary windings and offer a minimum of three applications. They provide three-fold the number of possible applications of ordinary filament types. A few are single secondary units and are so designated. All have 117 V. 50/60 cycle primary.

## BROADCAST QUALITY COMPONENTS

Modern high fidelity broadcasting and transcription equipment requires the use of "Audio" — transformers of utmost quality and reliability in performance. Freed broadcast quality components have been designed to meet these requirements. They are wide band, high fidelity components with low distortion throughout the audio range and beyond. Frequency response for most units is in the order of  $\pm 1$  DB from 20 to 20,000 cps and for high level output transformers in the order of  $\pm 0.5$  DB from 20 to 30,000 cps.

These units feature astatic construction, longitudinal balance, high efficiency, uniform response, and constant impedance match throughout the audio frequency spectrum. Maximum neutralization of stray fields is accomplished through the use of hum balanced coil structures and multiple alloy shielding. Equal high fidelity response is assured on every tap of any universal impedance winding without line reflection of transverse coupling.

All broadcast quality components are thoroughly impregnated in a special non-hygroscopic varnish and fully encapsulated with a moisture proof, high melting compound.

All broadcast quality components are **hermetically sealed**.

All units are tested in accordance with and meet "RETMA" standards.

Almost all units are designed with universal impedance windings to insure greatest versatility.

A full line of high Q reactors complements this series of audio transformers.

### QGC HIGH Q REACTORS

QGC-Reactors are designed for low audio frequency application requiring very high Q and inductance stability. These units are impregnated with a special compound and mounted in **hermetically sealed** cases. A hum reducing lamination structure used in these reactors results in an extremely low pickup of extraneous stray fields. A very low temperature coefficient is achieved by a specially developed impregnation and assembly process. All QGC High Q Reactors have an extremely low voltage coefficient.

All Resistance values are nominal and can vary by  $\pm 20\%$ .

Inductance values are given within  $\pm 2\%$ .

**Closer Tolerances and Inductances other than the standard Catalog items can be supplied on special orders.**

**Inductance Values up to 400 Henries can be supplied.**

The graphs showing the coil characteristics make use of the following formulas:

1. "Q" versus frequency was measured with voltages given by the expression:

$$V = K \sqrt{\frac{LH}{1H}} \times \frac{FKC}{1KC}$$

K — a constant listed in every chart

LH — inductance in Henries

FKC — frequency in kilocycles at which the measurements were made.

2. Variation of inductance versus normalized Direct Current.

The normalized DC is given by

$$I_n = I_{dc} \sqrt{LH}$$

where  $I_{dc}$  is the dc current in MA and LH the inductance in Henries.

3. Variation of Inductance versus normalized AC voltage.

The normalized AC voltage is given by

$$V_n = \frac{V}{\sqrt{LH}} \times \frac{60}{F_{cps}}$$

$V_n$  — normalized AC voltage

V — voltage across the coil

LH — inductance in Henries

F — frequency of measurement in cps.

Hermetically sealed Pulse Transformers for use in blocking oscillator, low level interstage coupling, and modulator output circuits. These components meet MIL-T-27 A specifications. The pulse transformers are designed for maximum power, efficiency, and optimum pulse performance. Balanced coil structures permit series or parallel connection of windings for turn ratios other than unity. Pulse characteristics, voltages and impedance levels will depend upon the interconnections made.

## STANDARD MILITARY TRANSFORMERS

This group comprises audio and power units designed to meet MIL-T-27 A specifications. The functional characteristics of these transformers were established by the Armed Services Standardization Program.

These units are supplied in standard MIL cases.

Transformers meeting MIL-T-27A specifications Grade 1 through 6 with temperature characteristics of Class S, T, or U can be supplied on special order.

Encapsulated units using either Epoxy-Resins or Fosterite can be supplied for Grade 2 and 5. Class U components can be supplied molded in special high temperature Freed resin.

## TOROIDAL INDUCTORS

Using the latest developments in the field of magnetic materials and new impregnation techniques the Freed Transformer Co. makes available to the industry the most extensive line of toroidal inductors.

Freed Toroids are available in three types of construction. Open units coated with a special high temperature, extremely low loss compound, hermetically sealed or molded in special Freed epoxy resin. Both hermetically sealed and molded units meet the latest military specification.

Freed toroidal inductors are supplied with either molypermalloy cores or special powdered iron cores. The catalog items with the letter "S" added to the type designations are wound on temperature stabilized cores.

SB indicates temperature stability of  $\pm 0.1\%$  from  $+13^{\circ}\text{C}$  to  $+35^{\circ}\text{C}$   
SD indicates temperature stability of  $\pm 0.1\%$  from  $-1.5^{\circ}\text{C}$  to  $+54^{\circ}\text{C}$   
SW indicates temperature stability of  $\pm 0.25\%$  from  $-54^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$

The "Q" values given in the individual graphs are accurate within  $\pm 10\%$  for hermetically sealed and molded units. For open units the "Q" tolerance is  $\pm 20\%$ .

All Toroids are adjusted at frequencies well below their self-resonant frequency,  $f_0$ .

The apparent inductance at any frequency  $f$  is given by the expression

$$L_{\text{app}} = \frac{L}{1 - \left(\frac{f}{f_0}\right)^2}$$

where  $L$  is the nominal inductance.

For frequencies well below the resonant  $f_0$  the fractional increase in inductance due to the distributed capacity  $C_0$  is approximately

$$\frac{\Delta L}{L} = \left(\frac{f}{f_0}\right)^2 = \omega^2 LC_0$$

The graphs showing the coil characteristics make use of the following formulas:

1. "Q" vs. frequency was measured with voltages given by the expression

$$V = K \sqrt{LH} \times \frac{FKC}{1KC}$$

where  $K$  is a constant listed on every chart  
 $LH$  is inductance in Henries  
 $FKC$  is the frequency in kilocycles at which the measurements were made.

2. Variation of inductance vs. normalized Direct Current. The normalized DC is given by:

$$I_{\text{norm.}} = I_{\text{dc}} \sqrt{LH}$$

where  $I_{\text{dc}}$  is the DC current in the coil in MA., and  $LH$  is the inductance in Henries.

3. Variation of Inductance vs. normalized AC voltage. The normalized AC voltage is given by

$$V_{\text{norm.}} = \frac{V}{\sqrt{LH}} \times \frac{60 \text{ cps.}}{F \text{ cps.}}$$

$V$  is the voltage across the coil  
 $LH$  is the inductance in Henries  
 $F$  is the frequency of measurements in cps.

For high frequency Toroids the above expression is changed to

$$V_{\text{norm.}} = \frac{V}{\sqrt{LH}} \times \frac{1KC}{FKC}$$

Toroids with special requirements, tapped Toroids and toroidal transformers can be supplied upon request. Our engineering and laboratory facilities are available for consultation, research and development.

## MAGNETIC AMPLIFIERS AND SATURABLE TRANSFORMERS

The ever increasing demand for reliability, ruggedness, miniaturization and high performance has made the magnetic amplifier an indispensable component of many military and industrial automatic control and servo systems. Recent advances in materials and techniques permit an even greater utilization of the well-known inherent advantages of magnetic amplifiers such as direct operation from line voltage, no warm up time, long life components, ease of signal mixing, and hermetic sealing.

Freed Transformer Co. manufactures an extensive line of magnetic amplifiers, ranging from saturable transformers to half-wave type, fast response servo amplifiers. Choice of catalog amplifiers assures standardization, lowest possible cost and rapid delivery.

The MAO line of single ended magnetic amplifiers provides a single stage of DC controlled amplification, utilizing positive feedback to obtain a gain much higher than that of a saturable reactor.

The MAP line of push-pull magnetic amplifiers features high gain, polarity-sensitive amplification, and a phase reversible output.

The MAF type of fast response magnetic amplifiers combines high power gain, ruggedness, and reliability with a maximum 2 cycle response. All MAF units are phase-reversible.

The MAS line of saturable transformers, commonly controlled by dual-triodes or transistors, emphasizes low cost, small size, extreme reliability (no rectifiers), and phase-reversible output.

All standard units are designed for continuous operation and will operate in an ambient temperature range of -55°C to +75°C.

Vacuum tube and transistor preamplifiers can be supplied if very high impedance inputs are required.

In addition to standard items, Freed Transformer Co. has extensive facilities for the design and production of special amplifiers, saturable reactors, and magnetic components.
