## MINIATURE FILTERS

Freed standard filters are hermetically sealed, miniature high performance components designed for production and laboratory applications in the electronics and communications industries.

To achieve attenuation characteristics not obtainable with one single filter several standard filters of different transmission characteristics can be combined. Wide band characteristics can be obtained by combining low and high pass units.

The astatic construction of inductive components together with special shielding reduces the hum pickup of standard filters to extremely low levels.

Standard filters with low pass, high pass and band pass characteristics are available.

The attenuation characteristics of these filters are:

- Low Pass Filters** 6 db at cut-off frequency.  
35 db at 1.5 times cut-off frequency.  
40 db at twice the cut-off frequency.
- High Pass Filters** 6 db at cut-off frequency.  
35 db at 67% of cut-off frequency.  
40 db at 50% of cut-off frequency.
- Band Pass Filters** 2 db at  $\pm 3\%$  of center frequency.  
40 db at one half and twice the center frequencies.

## SERIES 1950 NULL "T" FILTERS

The Freed Series 1950 Null T networks consist of two resistance capacitance networks, whose outputs completely cancel each other at the balance frequency. They may be used as rejection networks particularly at low frequencies where LC filters become excessively large and unstable.

Standard models are available for 30, 60 and 120 cycles in a wide range of impedances. Each network will give a minimum of 50 db attenuation at the null frequency.

The null frequency is adjusted to a tolerance of  $\pm 2\%$ .

All Null T Filters are hermetically sealed.

## PRECISION HI-FI ACCESSORIES

### • UNIVERSAL IMPEDANCE MATCHING AND LEVEL ADJUSTING TRANSFORMER — Model HM-80

This precision transformer has been designed for the audiophile who is modifying or enlarging his sound system by the addition of auxiliary speakers, equalizers, crossover networks, etc. The HM-80 permits these system changes to be made without unbalancing the present hi fi system by maintaining required impedance matches and power levels.

Eliminates power wasting resistance pads; preserves amplifier dynamic power range.

- Power: 50 watts. Peak power 100 watts.
- Frequency Response: 15 to 30,000 cycles.
- Impedance Range: Amplifier or Crossover Network: 16, 8, 4 Ω  
1 to 3 speaker systems (in any combination): 16, 8, 4 Ω.
- Power Level Adjusting Range: 3 db steps.
- Guide Chart: Easy to follow hookup chart provided.
- Size: 3½" x 3¾" x 4¾" high. Mounting Centers: 2¾" x 3⅞".
- Finish: Baked Enamel.
- Weight: 4.0 lbs.

### • TELEPHONE PICK-UP COIL — Model HP-61

For transcribing telephone conversations with recorder or making messages audible on amplifier. May also be used as probe for locating sources of hum.

- Equalized Level: Local and distant conversations recorded with more constant signal level than base mounted units.
- Suction Cup: Mounting on telephone receiver.
- Universal Model: One unit suitable for all types of telephones.
- Plug-in Use: Supplied with 68" shielded cable, terminated with standard phone plug for mike input of recorder or amplifier.
- Finish: Optical Black.
- Compact: Size only ⅝" diameter x 2¾" long.
- Weight: 1½ ounces.

### • MAGNETIC TAPE ERASER — Model HD-11

A bulk tape demagnetizer that develops a high intensity magnetic field. Erases recorded signals and noise from magnetic tape without rewinding. Saves unnecessary wear on heads and tape. Noise level reduced below level of standard erase heads. Restores tape to like new condition or better.

- Spindle Mounting of reel permits rapid through coverage without missed spots.
- Reel Size Range: 5", 7", 10½". Spindle removable for use with other reel sizes.

Over-voltage connection (0 to 17% above line voltage) or line voltage connection is available to the user by the type of connections made, however, line voltage connection on Types 1500B and 1520B must be specified.

† Ganged units of these types when connected for over-voltage operate from 60 cycle service only.

‡ Output current reduces to approx. 44% at full voltage.

# air dux<sup>®</sup>

Illumitronic Engineering has developed a complete, versatile series of air core inductors designed especially for the amateur rig, or for prototypes of RF transmission equipment. These coils may be used for pi output circuits, conventional LC output circuits, interstage and oscillator circuits. The series consists of a standard coil type, a variable pitch type, and an indented type, in a range of diameters from 1/2 inch to 3 inches. All Air Dux<sup>®</sup> coils are constructed of tinned (silver or formvar) copper wire wound on large low loss polystyrene rods for the highest mechanical strength and lowest electrical losses.

ORIGINATORS OF MINIFORMERS® AND TINYFORMERS®

## MASTER TECHNICIANS IN MINIATURE TRANSFORMERS

Manufacture a complete standard line of 138 items available for shipment from stock.

**GRAMER-HALLDORSON** miniature transformer lines featuring *Miniformer* line and the *Tinyformer* line are designed by miniaturization specialists for the complete range of civilian and military applications.

Hearing aid manufacturers began specifying Gramer-Halldorson products several years ago—today all audio applications, particularly in connection with transistorized circuits, are admirably served by Gramer-Halldorson stock lines as are many other miniaturized electronic devices.

**How Wide is the Range?** In addition to the *Miniformers* and *Tinyformers* Gramer-Halldorson makes a complete range of miniature transformers—*Super Tinyformers*, *Sub-Miniatures*, *Miniatures*, *Midgets*, *Small Transformers*, ranging upwards from 3/8" x 11/32" x 3/8" to 1-1/16" x 25/64" x 13/16" for open frame construction and weighing from .005 pounds to .069 pounds each.

**WHAT about MILITARY SPECIFICATIONS?** Gramer-Halldorson miniature transformers are manufactured to MIL-T-27 specifications. Other applicable specs can be met on special request.

**What is the Availability?** Gramer-Halldorson is dedicated to keeping available from stock 138 separate items covering most requirements. These include standard interstage, input, output, choke, microphone input and microphone to line transformers listed in the *Miniature Transformer Catalog*—open frame, shielded and hermetic sealed types.

**What about further data?** Simply write: Technical Information Department, Gramer-Halldorson—full specifications including frequency response curves will be forwarded immediately at absolutely no charge.

**What if Requirements are Special?** Gramer-Halldorson has a Special Products Research Division that exists for the sole purpose of assisting in solving the problems of special applications and developing units to customers' individual specifications.

# GRAMER-HALLDORSON TINYFORMERS®

## OPEN TYPE TRANSFORMERS

Part numbers M1 thru M10

Preferred and specified as standard equipment by leading manufacturers of miniature electronic devices. Available in 7 types, each heat sealed in a cellulose acetate envelope, contained in fibreglass box with Chart Sheet that gives frequency in cycles, response in decibels and complete details.

## MU-METAL SHIELDED TINYFORMERS

Part numbers M1-S thru M7-S

Mu-Metal Shielded Tinyformers are for use in closely coupled or high gain circuits. Hum level can be reduced 18 to 20 db. Tiny size, extreme lightweight (104 per pound) are made possible by fine wire, precise nylon coil forms and high-nickel alloy high-Q cores. Supplied in satin finish with flexible color coded leads. The Mu-Metal Shielded Tinyformer is potted in a non-hydroscopic compound for excellent moisture and humidity-proof construction.

## HERMETICALLY SEALED TINYFORMERS

Part numbers M1-H thru M7-H

Hermetically sealed to Mil-T-27, Grade 1, Class A. Glass sealed 1/8" high terminal construction.

Tinyformer is encased and sealed in metal container with a black satin finish. Mounts with one #3-48 stud, 3/16" long and is supplied with lock washer and nickel plated hex nut.

## ALL TINYFORMER

transformers are designed for highest efficiency in transistor circuits. Tiny size and extreme lightweight are made possible by fine wires, precise nylon coil forms and high-nickel alloy high-Q cores. They are attractively packaged for quick sales.

## MINIFORMERS®

The MINIFORMER® has been designed for a wide range of electronic applications where space and weight limitations are of prime importance.

This unit provides maximum adaptability for diversified usage such as: transistorized circuits, miniature radios, hearing-aids, pocket recorders, computers, Geiger counters, and air-borne equipment.

A smaller, lighter transformer measuring only 1/4" x 5/16" x 3/8" and weighing but .004 lbs (242 per lb).

The use of precise nylon coil forms and high-nickel laminations, together with the configuration of the laminations, result in an extremely flat response with a wider control range.

Current production includes a full line of MINIFORMER audio transformers: driver, interstage, input, output, chokes and small pulse transformers. All are conservatively rated at 2.5 milliwatts for primary inputs from 1 volt to 7 volts.

Write to our factory for complete technical data on miniature transformers or send us your individual specifications. We manufacture hundreds of different types or styles of miniature audio transformers.

TO SELECT the proper transformer for a medium-powered transistor, first locate the required output in milliwatts (MW) and trace its line across to the point intersecting with the intended voltage supply. Then read directly below for the load impedance. EXAMPLES: A Class A single-ended audio amplifier with a required output of 40 MW at 12 volts the load impedance is 1250 ohms (Part No. GH108). A Class B push-pull audio amplifier with an output of 100 MW at 6 volts the load impedance is 700 ohms (Part No. GH6).

## ULTRA - LINEAR II 60 WATT POWER AMPLIFIER KIT

The Acrosound Ultra-Linear II is a 60 watt power amplifier which combines the inherently superior qualities of Ultra-Linear\* circuitry with new feedback circuit design to provide a new standard of stability in feedback amplifier performance.

This combination of features makes possible a power amplifier of distinctly superior listening qualities which is unusually well suited to meet the difficult requirements imposed by complex speaker systems as, for example, those embodying electrostatic tweeters and electrodynamic woofers.

A secondary feature of the amplifier is the provision of an effective damping control which is adjustable over a range of damping factors between 0.5 and 10 for optimum speaker match. This control does not change volume (i.e. overall feedback), nor increase distortion, and is not frequency discriminating.

The amplifier is supplied in kit form with all critical wiring preassembled on a rugged printed circuit board. Components used are of the finest grade, and no economies are made that will adversely affect performance or cause a deterioration in performance over the life of the amplifier. A full choke, condenser power supply is used, transformers are supplied fully potted in drawn steel containers, and tubes are operated well within ratings.

The heart of the amplifier is the new Acrosound TO-600 Output Transformer which combines extremely low leakage reactances between windings with a novel feedback winding\*\* providing a degree of feedback relatively unaffected by the reflected impedance of the speaker system. The speaker system may therefore have any degree of complexity or reflect either highly inductive or capacitive impedances with little effect on amplifier performance.

The amplifier is attractively styled and presents a professionally finished appearance that is both functional and pleasing.

**Rated output power:**

60 watts, 120 peak.

**IM Distortion:**

Less than 1% at 60 watts for any standard combination of test frequencies.

**Harmonic Distortion:**

Less than 1% at any frequency between 20 CPS and 20 KC at power output within 1 DB of 60 watts.

**Frequency Response:**

At 1 watt 1 DB from 5 CPS to 100 KC. At 60 watts 1 DB from 18 CPS to 30 KC. Note: There is no peaking at any frequency; the rolloff is gradual and controlled above 100 KC for best transient response.

**Square wave response:**

Undistorted squarewave response from 20 CPS to 20 KC with no overshoot or ringing. Capacity loads will not cause ringing or any other type of instability. Rise time of wave 1.5 microseconds.

**Sensitivity:**

1.8 Volts RMS for 60 watts output.

**Output Impedances:**

4, 8, and 16 ohms.

**Damping Factor:**

Variable from 0.5 to 10. Damping control may be switched out to provide a fixed damping factor of 15.

**Hum:**

90 DB below rated output.

**Size:**

7" by 15 1/8" by 8" high.

**Weight:**

30 lbs.

**Tubes:**

1-ECC83/12AX7, 1-ECC82/12AU7  
1-GZ 34, 2-EL 34/6CA7

**Color:**

Amplifier attractively finished in two-tone metallic Brown.

**Net Price:**

\$79.50 complete with all components. \$109.50 wired and assembled. Slightly higher in the west.

## Ultra Small Aluminum-Cased Electrolytics

Type NL capacitors are ultra-small, compression sealed, aluminum foil units. They are housed in aluminum containers which in turn are covered by a skin-tight, clear plastic insulating sleeve. The tinned copper pigtails are securely anchored in crimped stud terminals.

They are especially recommended for use in printed circuit assemblies, miniature radios, recorders, hearing aids, portable TV cameras and similar compact equipments.

TEMPERATURE RANGE: -20°C. to +65°C.

## PHENOLIC-CASED PAPER TUBULAR FOR PRINTED CIRCUITS

TYPE BC

- ◆ **PARALLEL LEAD WIRES:** May be plugged directly into printed circuit.
- ◆ **PRE-MOLDED PHENOLIC SHELL:** No distortion and no stresses are set up because capacitor section is not subjected to molding pressures.
- ◆ **WIDE TEMPERATURE RANGE:** Vikane impregnated units (rated at 600 WVDC) will withstand operating temperature from  $-55^{\circ}\text{C}$  to  $+100^{\circ}\text{C}$ . Units impregnated with HT compound (rated at 400 WVDC and 200 WVDC) will with-
- stand operating temperatures from  $-40^{\circ}\text{C}$  to  $+90^{\circ}\text{C}$ .
- ◆ **POLYKANE FILL:** Securely anchors leads, locks section in place and provides a barrier to moisture.
- ◆ **SOLID CONNECTIONS:** Leads are soldered directly to the extended tails for low resistance connections.
- ◆ **STRONG CONSTRUCTION:** Will withstand the extremes of soldering temperatures without damage to case material, moisture seal, lead connections or electrical performance.

## COMPACT METALIZED-PAPER CAPACITORS

Cornell-Dubilier self-healing, metalized paper capacitors have better electrical characteristics and extra long service life. Units are light and compact.

"PUP" units have bare wire leads securely anchored in metal end-caps, wax-impregnated and dip-sealed against humidity. All units are extended foil—non-inductive wound for low impedance at high frequencies, have high insulation resistance, low power factor and small capacity change with temperature and life.

"METAPUPS" are one piece metal tubular cased, pressure sealed by spin-over on synthetic rubber gaskets.

"SEALPUPS" are a high quality metalized paper capacitor, designed for smallest size and positive seal against moisture. They are hermetically sealed in metal cases with solder—seal glass terminals. Especially recommended in military and commercial equipment where miniature size and light weight are paramount.

For further data on C-D metalized capacitors, write for Bulletins 142-3-4 and NB-152.

TEMPERATURE RANGE:  $-40^{\circ}\text{C}$  to  $+60^{\circ}\text{C}$ .

## HIGH TEMPERATURE Metalized-Paper CAPACITORS

- **POLYKANE-IMPREGNATED:** This impregnant insures excellent electrical properties over long service life.
- **MOISTURE RESISTANT:** MTX tubulars have the finest glass-to-metal solder seal terminals for maximum protection against moisture. MPX tubulars have POLYKANE-impregnated paper tubes, bonded securely to the POLYKANE fill. An external flash wax dip provides an increased moisture seal for extra long storage and service conditions under extremes of humidity.
- **NON-LEAKING:** "POLYKANE" is a solid thermosetting plastic that will not soften, crack, or leak at the maximum temperature. No oil or wax is used internally with these units.

## MOLDED MIDGET "SILVER-MIKE" CAPACITORS

### HIGH-STABILITY "SILVER-MIKE" UNITS

Type 22R miniature "Silver-Mike" capacitors are especially adapted for use in circuits where accuracy and stability of capacity is of prime importance. They are rated at 500 volts D.C.W. and tested at 1,000 volts D.C., molded in low-loss red plastic and fully protected against physical damage or changes in characteristics due to varying atmospheric conditions.

**STANDARD TOLERANCE**  $\pm 5\%$ , but in no instance less than  $\pm 1$ mmf. For capacity Tolerance of: 20% deduct 10% from List; 10% deduct 5% from List; 3% add 10% to List; 2% add 15% to List; 1% add 25% to List.

TYPE 1R - X-1 THICK  
TYPE 1DR - X-1 THICK  
**TYPE 1R & 1DR**

**TYPE 5R**

Types 1R, 1DR, and 5R "Silver-Mike" silvered mica capacitors are designed for use in high Q electronic circuits where frequency stability and minimum loss must be maintained. They are ideally suited for use in circuits where the LC product must be maintained constant, and particularly adapted for use in tuning IF transformers, push-button tuning circuits and other similar applications. Standard units are molded in low-loss red plastic.

## "Super" ENCAPSULATED Molded-Case MIDGET MICA CAPACITORS

Cornell-Dubilier "SUPER MICADONS" represent an entirely new conception in Midget Mica Capacitor construction. The vastly improved design and construction of the new "C-D SUPER MICADONS" now makes it possible to produce miniature units of greatly increased capacitance and superior quality over conventional units of the same case size. Every characteristic desirable in a mica capacitor has been incorporated into one compact, miniature sized unit. No mica capacitor of conventional design has achieved this comprehensive quality.

### HIGH VOLTAGE POWER PACKS

The high voltage power packs listings are designed for 118 volts 60 cycle input. Three styles are available. All except the HV20-202H and HV50-302H have a separate primary input for the heaters of the rectifier tubes if used. This enables the high voltage output to be adjusted from zero to rated voltage by changing the input from zero to 118V.

**HV SEALED TUBE TYPE** is smaller than the HV Standard and have the rectifiers sealed in the metal container. This necessitates return to the factory for rectifier tube replacement at a nominal charge.

## RF AND PULSE GLASS CAPS

The plastic films used in the manufacture of RF and PULSE GLASS CAPS have very low losses. These capacitors will handle large peak currents such as encountered in a 25 ohm type E plus forming network charged to the peak pulse voltage at a repetition rate of 1000 PPS.

## POLYSTYRENE CAPACITORS

Polystyrene capacitors feature extremely low dielectric absorption, very high stability and ultra high resistance. The polystyrene capacitors listed have a resistance of one million megohms X mfd or one million megohms whichever is less and a dielectric absorption of .02% maximum. Standard capacitance is 5% but tolerances of as low as 0.1% are available in the PC and PB style and 2% in the PG style.

### FP-WP Dry Electrolytic Capacitors

For use at ambient temperatures up to 85°C in filter and by-pass circuits in radio, TV and industrial electronics. Sealed in aluminum cans with twist-prong, lug construction. FP types have Mallory exclusive Fabricated Plates. WP have special etched plates. All feature low RF impedance and minimum coupling between sections. Separate anode terminals. Case is common cathode. For hardware, see page 13, Mallory Capacitors Section, of this catalog.

**XT Type  
Tantalum Capacitors**

**Application**—Originally designed to meet the exacting requirements of geophysical, well drilling and other applications where a ruggedly constructed, hermetically sealed electrolytic capacitor was necessary. The possible applications for the present models of the Mallory tantalum capacitors are unlimited in circuit designs requiring rugged use and wide variations in temperature.

**Description**—The Mallory metal encased tantalum capacitor is the answer to applications calling for a capacitor designed to withstand temperatures ranging from  $-55^{\circ}\text{C}.$  to  $+200^{\circ}\text{C}.$  The XT type is enclosed in a hermetically sealed steel case which will withstand 100 hours of 20% salt spray at  $95^{\circ}\text{F}$  without harmful corrosion. The case is sealed with a glass-to-metal end seal.

The standard case diameter for all XT types is  $\frac{7}{8}$ ". The height will vary from  $\frac{1}{2}$ " to  $4\frac{1}{16}$ ", depending on capacity and voltage ratings.

**Terminals**—Provided with a wrap-around terminal for easy soldering.

**Mounting**—Mounting hardware is not supplied with the capacitor. The variety of applications for this capacitor is not conducive to a single means of mounting. Insulating material, such as Teflon, etc., should be used between the capacitor and mounting bracket where the cathode is not at chassis potential. **CAUTION:** Soldering to any part of the case is not recommended.

For 100% Environmental Testing add \$1.55 each for any quantity

Prices are for 175°C. maximum. For 200°C. ratings, add "X" to part number and add 10% to base price. i.e.: XTL-120 becomes XTLX-120

Cathode Tab can be supplied at no extra charge—add "A" to part number. i.e.: XTL-120A

**MALLORY MOLDED TUBULAR CAPACITORS**

Effectively sealed against moisture ingress and mechanical shock.

See page 6 — Mallory Section.

**Mallory Type TAW and TAP  
Silverlytic Capacitors**

**Application**—Designed for those who need an extremely small (subminiaturized) capacitor for transistor applications.

**Description**—The Mallory type TAW and TAP Silverlytic Capacitors are the result of intensive development and research and are designed to meet the most rigid specifications for performance, stability, and reliability. They are premium capacitors, ruggedly constructed and capable of giving a performance equivalent to standard electrolytics of conventional size. They possess extremely long operational life, double seal construction, "a case within a case," and excellent low temperature characteristics. Operating temperature for the TAW Silverlytic ranges from  $-55^{\circ}\text{C}.$  to  $+65^{\circ}\text{C}.$ , and for the TAP Silverlytic operating range is  $-55^{\circ}\text{C}.$  to  $+85^{\circ}\text{C}.$  DC leakage is less than 1 microampere after 10 minutes of rated voltage. Capacity tolerance for the TAW is  $-15\%$  to  $+100\%$ , and for the TAP  $-15\%$  to  $+75\%$ .

**Terminals**—Axial leads  $1\frac{1}{2}$ " long, tinned for easy soldering.

**Mounting**—Designed for mounting with attached leads.

**Packaging**—5 units per display carton.

## Fixed Ceramic Capacitors

(Voltage Rating—600 VDC)

Mallory tubular, fixed, ceramic capacitors are manufactured in 3 types. UC is general purpose type for by-passing, coupling and other applications where a moderate capacitance change with temperature change can be tolerated. ZT is zero temperature type, the nominal capacitance of which remains substantially constant over a temperature variation from -55°C to 85°C. NT is negative temperature type with a negative coefficient of 750 parts/million/degrees C. These capacitors are supplied with a dipped phenolic insulation for protection against moisture and have radially placed bare, tinned-copper leads approximately 1/4" long.

Voltage Rating—800VDC.

### Instructions for use of RETMA Color Code

Hold capacitor with arrow pointing to right. From left to right, the first dot shall always be white to indicate standard RETMA molded mica capacitor. The second and third dots become the first two significant figures in the capacitance. The second row is read from right to left. The lower right dot should be the multiplier. The lower second dot indicates the tolerance and the lower left dot indicates the class.

Example shown above = 1300 mmfd. ±2%, 500 V.W.

The key to color significance is as follows:

Color	Sig. Fig.	Mult.	Tol.	Class.*		
Black	0	1	±20%	A		
Brown	1	10		B		
Red	2	100		C		
Orange	3	1000		D		
Yellow	4	10000	±5%	I		
Green	5					
Blue	6					
Violet	7					
Gray	8					
White	9					
Gold		0.1			±10%	J
Silver		0.01				

\* Denotes various electrical characteristics. Voltage ratings vary with capacitance as shown in RMA Specification—April, 1946.

## TANTALYTIC CAPACITORS FOR LOW-VOLTAGE USE

The Tantalytic capacitor is designed for certain direct-current applications up to 150 WVDC where aluminum electrolytics and paper capacitors are not entirely satisfactory, and is suggested for use where superior characteristics and ultimate size reduction in the high-quality electrolytic field are of prime importance.

This capacitor is a tantalum-electrode electrolytic unit, similar in construction to an aluminum electrolytic capacitor, but smaller in size because of the characteristics of the tantalum. The Tantalytic capacitor has lower leakage currents, longer shelf life, and a wider range of temperature operation ( $-55^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$ ), without derating, than the conventional aluminum electrolytic capacitor.

Both polarized- and nonpolarized-type capacitors are available. Polarized types are suitable for applications where no reversal of potential occurs. Nonpolarized units are for use in applications where reversal of potential does occur. However, the cathode (negative) electrode in the polarized type is formed to 3.75 volts as protection against small reversals.

Tantalytic capacitors, in a wide range of ratings, are currently being used in telephone equipment and military communication and ordnance equipment.

These capacitors are available in either plain or etched tantalum foil. Advantages of each and a comparison thereof appear in the specifications, GET-2333.

## MICRO-MINIATURE TANTALYTIC CAPACITORS

Micro-miniature Tantalytic capacitors are designed for low-voltage d-c applications where long shelf life, electrical stability, and ultimate size reduction are of prime importance. Widely used in hearing aids and other subminiature assemblies employing transistors, micro-miniatures are rated as high as 4 volts, 4 $\mu$ f in the 0.195-inch case; higher ratings can be achieved in the 0.500-inch case. Capacitance tolerance for all units is -0% +200%.

The micro-miniature employs a tantalum anode enclosed in a silver case and impregnated with a nonacid electrolyte. A synthetic plug is roll-cripped into the end of the case and a solderable tin-coated nickel lead is lap-welded to the projecting tantalum anode lead. This permits connection up to the bushing. The case itself is the cathode and is equipped with a tin-coated nickel lead soldered to the case. The unit is of the polarized type.

### For A-c and D-c Applications — Fixed Paper-dielectric Capacitors

A-c/d-c dual-rated Pyranol capacitors for motors, controls, luminous-tube transformers, electronic equipments, and other applications will reduce inventories, simplify design problems, and increase standardization. Capacitors in the voltage ranges 236 through 660 volts, a-c, and 400 through 1500 volts, d-c, are now dual-rated and can be used for either a-c or d-c applications. Other a-c and d-c ratings available: 0.01 to 75 microfarads, 236 to 660 volts, a-c, and 400 to 100,000 volts, d-c.

Because of the high dielectric strength, high permittivity, and exceptional stability of Pyranol treating material, its use has made possible a capacitor which is much smaller in size, and far superior to those formerly available.

#### Design Advantages

- (1) Units are small and compact, because of the use of Pyranol treating material.
- (2) A wide range of ratings is available in rectangular, cylindrical, and oval cases.
- (3) Three styles of mounting brackets are available and are supplied separate from the units. Units may be operated in any position.

### Case Style 70

Case Style 70 units with various types of terminals and removable mounting brackets

These Pyranol fixed paper-dielectric capacitors in Case Style 70 are hermetically sealed in rectangular cases. This line includes standard ratings, ranging from very small units weighing only three ounces to large high-voltage units weighing up to 175 pounds.

All are of single-capacity construction, with a capacitance tolerance of  $\pm 10$  per cent. Cases are isolated and the two bushings are brought out through the cover. Units in 600-, 1000-, and 1500-volt ratings are available with either solder-lug terminals or with pillar-insulator terminals. All higher-voltage ratings have pillar-insulator terminals. These units may be operated in altitudes up to 7500 feet.

Up to 600 volts d-c, bushings with solder-lug terminals are made of G-E silicone; above this rating, they are of phenolic-cup construction. Bushings with pillar-

insulator terminals are made of molded phenolic or porcelain of the highest quality. All bushings are thoroughly bonded to the container to provide a permanent liquid-tight seal.

All units can be supplied with removable mounting brackets. Both spade-lug and L-type are available. Brackets can be attached to either the top or the bottom of the units to permit upright or inverted mounting.

## Case Style 60

These small rectangular-case fixed-paper-dielectric units are of narrower width than the "bathtub" units, and will fit into a very restricted panel surface, where case height is not the limiting dimension. Removable-type mounting lugs are of very sturdy construction.

These units have solder-lug terminals, and are available in either single- or dual-section construction for all circuit diagrams.

The metallic containers are hermetically sealed, and of deep-drawn construction.

Case Style 60 units have no brackets, but removable brackets of either the footed or spade-lug type can be supplied.

## CAPACITORS FOR OSCILLATOR TANK CIRCUITS

This line of fixed paper-dielectric capacitors has been developed primarily for grid and plate blocking service in the electronic oscillator circuits of high-frequency induction-heating equipments. They can also be used to advantage in other high-frequency oscillator circuits of a similar nature.

G-E high-voltage paper-dielectric capacitors are of relatively high capacitance ( $0.01 \mu\text{f}$ ) for high-frequency units, yet they are more economical than conventional high-frequency units of considerably smaller capacitance values. They can, therefore, be applied with savings in cost as well as reduced losses and lower voltage drop across the capacitor.

**TYPE PR Wax-Filled Tubular Capacitors**

Wax-filled electrolytic tubulars in wax-impregnated cardboard tubes. Sections manufactured to same high standards as more expensive metal-cased units. These units are made for exact duplicate replacements in television receivers and antenna rotating devices. Tolerances meet RETMA standards and are manufactured for operating temperatures of 0-65°C. PR numbers designate replacements for Television Receivers, XA numbers designate replacements for Rotators.

TYPE PRS-AC (AC rated units)  
NP-PRS (non-polarized units)**

Compact, electrolytic tubular capacitors furnished in aluminum cans with cardboard insulating sleeves. Designed for use in television and radio applications where space is at a premium.

Included in this listing are the AC rated units (PRS-AC) and non-polarized units (NP-PRS) for replacement use in cross-over networks and color TV receivers. Also listed are Types PRSB — separate section, dual units for use in specialized applications.

Single section capacitors are furnished with bare tinned copper leads 3 inches long. Negative grounded to case. Multiple units are furnished with insulated, stranded copper leads 5 inches long. Negative is common and grounded to case.

Sizes listed are diameters over cardboard insulating sleeve. For actual can size deduct 1/16" from diameter and 1/8" from length. Multiple units are supplied with mounting strap. If mounting strap is required on single units, specify on order.

Tolerance and surge voltage are in accordance with RETMA Specification RS-154.

**TYPE SRE "BANTAM" METAL TUBULAR ELECTROLYTICS**

Smaller than the PRS, the SRE capacitor handles full-sized loads and is available in a wide range of capacitances and voltages. Ideal for cramped and limited space applications in hearing aids, personal portable radios, TV receivers and instruments. They are especially useful in low-voltage miniaturized circuits. Hermetically-sealed in aluminum cans and furnished with a cardboard insulating sleeve. Negative grounded to can.

**TYPE PWE "PEE-WEE"  
CERAMIC-CASED  
ELECTROLYTIC  
CAPACITORS**

This construction provides a most effective moisture barrier and insures maximum life. With the exception of the metal-cased, hermetically-sealed unit, the Type PWE capacitor offers the best humidity protection available.

These tiny capacitors are capable of handling full-sized loads and are rugged enough for industrial usage. They are especially suitable for limited space applications in transistorized radios, hearing-aids, instruments, etc.

Aerovox presents a full line of miniature ceramic-cased electrolytic capacitors. These miniature units are encased in dense steatite tubes with a special Aerovox plastic end-fill which binds to the ceramic case.

Operating temperature range is minus 30°C/plus 65°C. Capacitance at 25°C is minus 10%/plus 250%.

**"AUTOPASS" Type P-151N Vertical Mounting Bakelite-Cased Paper Capacitors**

Aerovox Type P151N capacitors were specifically designed and developed for use in conjunction with printed-wiring assemblies where it is highly desirable to mount capacitors at right angles to the mounting surface thereby conserving valuable space.

Aerolene impregnated and assembled into a molded phenolic case, Type P151N capacitors are then sealed with a thermo-setting end-seal. The end-seal surface is below the outside edges of the plastic case, permitting the capacitor to be mounted flush against the mounting surface. The leads of these capacitors are stiff, and critical spacing is closely held to facilitate their use in mechanized assemblies. Outside foil is identified by wire lead nearest to edge of case or by a paint stripe on the case nearest the outside foil.

**Tubular Capacitors**

Toughest capacitors ever offered for radio-electronic equipment, DURANITE capacitors. Design, impregnant, processing, and casing insure glove-fitting contact and seal throughout. DURANITE provides a permanent, non-varying, rock-hard casing, does not dry out, does not develop cracks or fissures. Pig-tail leads firmly imbedded, won't pull out, won't work loose. Moisture-proof; operate from sub-zero to over 212°F. Exposure to temperatures of 250°F. will not impair life or performance, no deterioration on the shelf. A white band around one end of the capacitor identifies the outside foil.

**R-F NOISE CAPACITANCE SUPPRESSORS**

These radio-noise suppression capacitors have been especially designed for use in aircraft, vehicular and industrial electric and electronic fields.

Primary application of the INA-116, INA-117, and INA-118, is as r-f bypass capacitors from line to ground in low voltage DC supply lines. These units are rated at full 150 VDC over temperature range of -55°C. to +71°C. and 60 VDC from -55°C. to +95°C.

Types INA-218, INA-219, INA-220 and INA-221 are feed-thru capacitors in which the effective section inductance is minimized by the so-called "duct-type" design. Significant reductions can often be realized in size, weight and in some instances, overall cost by the use of feed-thru capacitors as compared to the conventional r-f suppression filter designs. The feed-thru capacitors listed below may be used with good characteristics to 1000 megacycles. Operating temperature range is -55°C. to +85°C.

**PAPER SUB-MINIATURES**

Tubular, metal-cased capacitors, hermetically sealed with glass terminal end seals. Miniaturized, conventional, foil-paper construction. Especially developed to meet high temperature and minimum space requirements of present day electronic equipment. Designed for rugged long life operation, these units are preferred for many of those applications where reliability is a factor. Impregnated with Hvyol "S" a special, high-temperature-operating, stable, liquid impregnant for operation at elevated temperature. These units are capable of withstanding a voltage breakdown test of twice rated voltage between terminals or between terminals and case for a one-minute period. Ambient temperature shall be plus 25°C. plus or minus 10°C. during this test. Power factor will be less than 1% when measured or referred to a frequency of 1000 cycles per second at 25°C. Types P123S and P123SX are rated for operation over a temperature range of -65°C. to +100°C. Types P323S and P323SX are rigidly processed to assure operation over the temperature range of -65°C. to +125°C. The capacitor sections on types P123S and P323S utilize an inserted tab construction to obtain minimum size. Types P123SX and P323SX utilize extended foil construction for those applications where operation is required at very low AC voltages.

All values are available in ±10% or ±20%.

TYPE V84C

AEROFILM (MYLAR\*) CAPACITORS

V84C† Aerofilm Tubular Capacitors are high quality units in dense stearite cases. These units have exceptionally high Insulation<sup>®</sup> resistance and low dielectric absorption and power factor. They are extremely Stable having a relatively small capacitance change with temperature variations over a range of 0 to 85°C.

These excellent characteristics are due to the use of Aerofilm (Aerovox's trade name for Mylar\* polyester film), finest quality casing material, and an epoxy end fill which will not flow, soften or melt at any operating temperature.

Standard tolerance is ±10% but also available in ±5% and ±20%.

Oil impregnated and filled, drawn-metal cased capacitors, immersion proof and hermetically sealed. This unusually compact "bathtub" type capacitor is the most popular of the small units for severe operating conditions. Available with terminals on side (CP53), top (CP54), or bottom (CP55). The standard tolerance on single section units is  $\pm 10\%$  (K), on multiple section units  $\pm 20 - 10\%$  (V).

Type A      Type AX      Type B      Type BX

Ordering Example: RA7A = (Type A 7 Pin Socket)

Available in 7-pin and 9-pin types in four styles, these sockets are designed to meet existing MIL Specifications. Active contacts are silver plated and non-faliguing contact pressure provides proper insertion and withdrawal pressure with a minimum of contact resistance. Ideal for hand or mechanical insertion into printed-wiring boards using simple in-line punched round holes. Templates are furnished with each socket. Long terminals permit use of sockets on wide range of board thicknesses.

- Type A — for general purpose applications.
- Type AX — for special applications (military and commercial) where extra strength and rigidity are required.
- Type B — same as Type A except tube shield shell added.
- Type BX — same as Type AX except tube shield shell added.

RA 7 — 7 pin right angle tube socket.      RA 9 — 9 pin right angle tube socket

**\* MODULIZED STANDARD CIRCUITS**

Modules are comprised of uniformly standard, stacked statelite wafers combining the required resistive, capacity and inductive components to form a completely reliable, ruggedly compact electronic circuit.

Based on a study conducted by the National Bureau of Standards, the modules listed below were chosen as representative of circuits appearing in both military and commercial equipment. In all cases, similar functional circuits have been in use for at least ten years without major improvement. Accessories, such as the twelve position bread board, the individual module mounting socket and banana plugs are available to facilitate the inter-connecting of standard circuit modules to form complete electronic sub-assemblies.

Ceramic disc and tubular capacitors may be roughly divided into two main categories; namely, General Purpose (including By-pass and Coupling) and Temperature Compensating. The Aerovox line furnishes both tubular and disc-type ceramics in both categories as well as many special purpose types, including Stand-off, Feed-thru, High-voltage Cartwheels and Plate Assemblies.

All general purpose units are marked with Aerovox name or trademark, capacity and voltage, if other than standard.

All temperature compensating units are color-coded in accordance with RETMA Specifications REC107A.

Bypass Coupling Capacitors (BPD) are furnished in GMV (Guaranteed Minimum Value) capacity tolerance since in applications such as in screen grid bypassing, capacity is not a critical characteristic. Due to this fact, Hi-K (Hi Dielectric constant) bodies are used, resulting in the smallest size body for a given capacity.

General purpose capacitors (DI-SI-CI), on the other hand, are recommended for circuits where capacity is more critical such as RC networks, etc. Since capacity tolerance in these cases is  $\pm 20\%$  or less, Hi-K bodies cannot be used. Therefore, sizes of this type of unit are larger than the bypass coupling type.

Temperature compensating units (NPO, N750 in discs and tubular) are for use in critical applications where capacity must not change appreciably with changes in temperature; for example, resonant

circuits or any other application where stability of capacity is necessary.

Since the temperature coefficient is determined by the ceramic mix, all temperature compensating units are manufactured to standard tolerance

Unless otherwise specified, the tolerance on the temperature coefficient is as follows:

Temp. Coef.	Tolerance PPM
NPO	$\pm 30\%$
N080	$\pm 30\%$
N330	$\pm 500\%$
N750	$\pm 100\%$

It should be noted that this is the tolerance of the temperature coefficient and not on the capacity value.

All ceramic capacitors are made by firing the silver electrodes directly to the ceramic dielectric to assure low noise operation. Units are coated with a non-Hygroscopic Phenolic or sealed in Steatite tubes and then impregnated with micro-crystalline wax which helps protect the units from humidity.

The special items such as feed-thru, stand-off, high-voltage cartwheels and printed assemblies are manufactured to complete a full line of ceramic capacitors for replacement as well as industrial use.

**Hi-Q TUBULAR STAND-OFF CAPACITORS**

Hi-Q stand-off capacitors are basically tubular, having as an integral part of their construction, a screw fixture for mounting to the chassis or common ground. Close coupling and their unique construction make them an excellent choice for by-passing high frequencies.

All units are coated with a high temperature enamel, stamped with capacity and supplied with mounting nut, if desired.

The MCS is a quick mounting type which permits high speed mechanical installation. The ceramic tube is enclosed in a cadmium-plated metal case with a specially developed end seal for protection against humidity and temperature changes.

All units are flash tested at 1250 volts D.C. The power factor is under 3% and the insulation resistance is above 7500 megohms.

**Hi-Q TUBULAR FEED-THRU CAPACITORS**

Hi-Q Feed-Thru Capacitors provide means to transmit thru shields or ground potentials and simultaneously by-pass unwanted frequencies. A good mechanical connection is provided by the silver-plated bushing. These are excellent dependable units even under severe mechanical vibrations as in aircraft, missiles and automotive requirements. All units are flash tested at 1250 volts D.C.

Hi-Q Eyelet Feed-Thru Ceramic Capacitors provide the ultimate in miniaturization. They can be soldered directly to the chassis and provide excellent by-pass performance where space is critical. Especially recommended for use in UHF.

Ceramic mounting insulators (specify "M") available. 1650-54 series furnished with 6-32 tapped holes for screw mounting.

**TYPES 1550L, 1570L and 1590L Potted Transmitting Capacitors**

These potted transmitting capacitors in thermo-setting case materials have greater load-carrying capacity than molded-in-thermo-setting case material capacitors. Types 1550 to 1590, inclusive, not only have high voltage rating but afford higher current ratings than equivalent capacitances in thermo-setting case material units. Because of their construction they are made with higher capacitance stability. Furnished only in low-loss thermo-setting case material as standard. Bakelite cased mica stack capacitors. These units have highest quality mica sections stacked for greater load carrying capacity. The sections are potted in low-loss bakelite cases and permanently clamped with non-magnetic material.

Stack-Mounting Transmitting Capacitors**

These stack-mounting transmitting mica capacitors are especially intended for various applications such as grid, plate blocking, coupling, tank, and by-passing functions for higher-powered installations. They are made with a special cylindrical low-loss, glazed ceramic case providing a long creepage path between terminals. They are designed to eliminate corona losses, inside and outside alike, and also provide uniform voltage gradient. The cast-aluminum terminal ends provide low contact resistance between units. These units are conservatively rated to withstand surge voltages above their rated values. They have extremely low power factor so that they can handle large KVA loads without overheating.

TYPES ADM-15, ADM-19, ADM-20**

Aerovox plastic-coated dipped-mica units exceed many of the advantages of molded mica units, and at the same time are smaller than conventional units. Meeting all the applicable RETMA Test Standards for molded mica capacitors, these unique dipped-mica units offer the following outstanding features:

- High operating temperatures —55°C to +125°C
- Excellent long-life characteristics
- Improved temperature coefficient range
- Radial leads for automatic insertion and plug-in assemblies
- Ideal for printed-wiring assemblies
- Unsurpassed performance and stability characteristics
- Smaller physical size.

Humidity Resistance: these capacitors shall have an insulation resistance of not less than 2,000 megohms after being subjected to the Humidity Resistance Test as outlined in RETMA Standard RS-153. Minimum Insulation Resistance: 25,000 megohms at 25°C; 1000 megohms at 125°C.

Capacitors will be marked with capacity and tolerance where tolerance is closer than plus/minus 20%. In addition, voltage rating will be marked on all units other than 500 volts rating.

**CARBOFILM PRECISION RESISTORS**

Made under licensed agreement with Western Electric, these precision resistors are the result of years of intensive research in developing components with extreme accuracy and stability. Carbofilm resistors are intended for circuits calling for the accuracy and stability of wire-wound resistors with the marked economy of carbon resistors. They serve a real need in test equipment and laboratory instruments.

Packed and sealed in plastic tubes for your protection.

**SIZES**

- CPS ½ watt 0.162D x 1 1/2 L
- CP ½ watt 0.230D x 1 1/4 L
- CPL ½ watt 0.230D x 1 3/4 L
- CP 1 watt 0.293D x 1 3/4 L
- CP 2 watt 0.293D x 2 1/4 L

**Carbofilm Characteristics**

**TEMPERATURE COEFFICIENT . . . .**

Temperature coefficient of deposited carbon resistors increases with resistance value and varies from -0.00018 per °C. for lowest values to -0.0005 per °C. for the higher values over the temperature range of -55°C. to +85°C.

**HUMIDITY . . . .**

Will meet the requirements of MIL-STD-202 Method 106.

**OVERLOAD . . . .**

Application of a D.C. Test potential 2½ times the rated continuous working voltage, but not exceeding twice the maximum voltage specified in MIL-R10509A for a period of 5 seconds will not cause a change in excess of .5%.

**LOAD LIFE . . . .**

A maximum change of 1% may be expected with operation at full rated wattage applied intermittently 1½ hours on—½ hour off for a period of 1,000 hours at 40°C., provided voltage ratings of MIL-R10509A are not exceeded.

**ACCURACY . . . .**

Guaranteed tolerance of plus/minus 1% at 25°C. (77°F.).

**AGING . . . .**

Due to manufacturing process and control, changes attributed to aging are negligible. The average change in resistance for self-aging is approximately 0.2% per year.

**NOISE . . . .**

Noise level will not exceed .2 microvolts per volt.

**FREQUENCY . . . .**

Because of inherently low inductance and absence of skin effects deposited carbon resistors are superior in performance at high frequencies to conventional resistors.

**DERATING . . . .**

Full load operation at 40°C.—Derate to zero load at 120°C.

## AEROVOX L-C CHECKER — Model 97

Aerovox Corporation, New Bedford, Massachusetts, announces the availability of their new Model 97 L-C Checker. Completely redesigned and engineered according to the latest in design theories, the L-C Checker utilizes the newest techniques of printed-circuitry to achieve the most efficient instrumentation available today to technicians and servicemen. The all-new Model 97 L-C Checker represents the ultimate in versatility and adaptability in a test instrument.

Some of the new features of the Model 97 L-C Checker include extended frequency range from a minimum of 150

kc to a maximum of 44 megs.; a recessed front panel with an extra-large, easy-to-read dial, with a magnifying indicator. Finished in an attractive smooth grey, the instrument weighs only 8½ pounds and measures 13" x 8½" x 6" deep and is furnished with all the necessary test cords and probes.

The Aerovox Model 97 L-C Checker is the only test instrument presently available capable of testing true capacitance without removing the capacitor from the circuit. A partial listing of the applications of the L-C Checker Model 97 includes:

1. Checking capacitors for values of capacitance and relative Q at radio frequency.
2. Checking capacitor insulation resistance.
3. Checking alignment of radio frequency and intermediate frequency circuits of domestic, marine, and short wave receivers.
4. Tracking of super-het oscillators.
5. Checking alignment of FM-I.F. channels and independent alignment of FM-I.F. transformers.
6. Checking resonant absorption troubles in "all wave" receiver circuits, locating dead spots, etc.
7. Location of resonant points in shorted windings (unused coils) in multi-range oscillators, etc.
8. Checking natural resonant points of r.f. chokes to make sure they are beyond circuit operating range.
9. Checking natural period of antennae and transmission lines.
10. Checking quartz crystals for true or false frequency, operation at harmonics and activity.
11. Checking transmitter buffer, amplifier and tank circuits for parasitic current loops with power off for safety.
12. Tuning of wave traps and filters for harmonic suppression.

The Aerovox Model 97 L-C Checker is truly the one piece of test equipment most capable of answering the servicemen's and technicians needs.

## ERIE GENERAL PURPOSE CERAMICONS®

### TYPES GP1 — GP2 — GP3

**ERIE CERAMICONS** are small fixed capacitors consisting essentially of a ceramic dielectric with silver electrodes which are fired on at a very high temperature. Erie Ceramicons are outstanding because of their excellent high frequency characteristics, small size, rugged construction and availability in a wide range of capacity values.

**GP1 CERAMICONS** — The performance specifications of Type GP1 Ceramicons are identical with those of temperature compensating types of Ceramicons. A GP designation does allow the capacitor manufacturer added flexibility in selecting ceramic body. These capacitors meet performance specifications of RETMA Standard No. REC-107-A, Class 1, Characteristic U2.

**GP2 CERAMICONS** — The capacitance of GP2 Ceramicons will not vary more than + 10% or - 35% from + 25°C. value, as the temperature is varied from - 40°C. to + 85°C. These capacitors meet the performance specifications of RETMA Standard No. REC-107-A, Class 2, Characteristic Y5Y.

**GP3 CERAMICONS** — The capacitance of GP3 Ceramicons will not vary more than + 25% or - 50% from the 25°C. value, as the temperature is varied from + 10°C. to + 75°C. These capacitors meet the performance specifications of RETMA Standard No. REC-107-A, Class 2, Characteristic Z5Z.

### "GP"® GENERAL PURPOSE CERAMICONS

are ideally suited for such applications as coupling and by-passing, in circuits where temperature coefficient is not important — in other words for all receiver applications **except** in frequency determining circuits. Working voltage — 600 volts D. C. Use Erie "GP" Ceramicons as replacements for molded mica and paper tubular capacitors.

Available in both molded and phenolic insulated styles

## TEMPERATURE COMPENSATING CERAMICONS<sup>®</sup>

Erie Ceramicons are capacity-sensitive to temperature in varying pre-determined degrees, and because of this characteristic have found wide-spread application as temperature-compensating elements in circuits which must be frequency-stabilized over wide temperature ranges. They are also manufactured with practically no thermal sensitivity for use in applications requiring a capacitor whose value is not affected by temperature.

## NPO TEMPERATURE COEFFICIENT CERAMICONS<sup>®</sup>

NPO Temperature Coefficient Ceramicons are highly recommended for frequency determining applications where no capacity change with change in temperature is desired. "Q" for NPO Ceramicons above 30 mmf is 1000 or higher. Below 30 mmf "Q" decreases slightly as capacity decreases. Working voltage — 600 volts D. C. Recommended as replacements for silver-mica capacitors.

### PARALLELING TC AND CAPACITIES

A wide range of capacitance values and temperature coefficients can be obtained by using Erie NPO capacitors in parallel with either N330 or N750 units. The following

formulae are used in determining the capacitance of the various temperature compensating units that are required to obtain any desired temperature coefficient and capacitance:

1. 
$$\frac{(\text{Capacitance in MMF}) (\text{Temp. Coef. Required})}{*750} =$$

Capacitance in MMF of the N750 unit to be used (use nearest standard capacitance value)

2. (Total Capacitance Required) minus the value found in step 1 = capacitance in MMF of the NPO unit to be used.

3. The total desired capacitance and temperature coefficient are obtained by connecting the units found in steps 1 and 2 in parallel.

\*If an N330 unit is to be used in parallel with an NPO unit, substitute 330 for 750 in this equation.

## NEGATIVE TEMPERATURE COEFFICIENT CERAMICONS®

N330 and N750 units provide temperature compensation to eliminate drift. Positive and Negative Temperature Coefficient Ceramicons P100 through N1500 are available on special order through your distributor.

## ERIE HIGH VOLTAGE DISC CERAMICONS®

Designed to employ the same basic diameters that have been standardized in 600 volt capacitors. Careful and detailed life testing has been accomplished over a long period of time to establish required dielectric thicknesses

to assure conservative ratings in the high voltage line. They differ in appearance from lower voltage units in having greater thickness, the degree of difference depending on voltage rating.

## ERIE STAND-OFF CERAMICONS®

Stand-off Ceramicons, an original Erie development, are now widely used for the dual purposes of by-passing R.F. current to ground, and of mechanically supporting other circuit elements. They are especially suited for V.H.F. and U.H.F. applications, due to their low-inductance electrical paths and resultant high resonant frequency.

## ERIE FEED-THRU CERAMICONS®

These very practical feed-thru capacitors are highly recommended for by-passing R.F. to ground in feed-thru applications. Wire terminals of Style 362 and hook type terminals of Style 327 are sufficiently rugged to serve as tie points for several connections, for supporting other circuit elements, and long enough for point to point wiring. Style 327 is hermetically sealed and ruggedized, and is primarily for military and similar commercial usage. Nut supplied.

## ERIE SUPPRESSORS

Erie Suppressors are ruggedly constructed to withstand motor temperatures, vibration, and road shock. There are no soldered contacts in the assembly to open circuit due to engine heat. Every unit is sealed, making it impossible for water, grease or dirt to affect its operation.

The change in resistance of Erie Suppressors after 1000 hours in 100% humidity at 40°C. is well within usual tolerances specified by radio manufacturers.

Many suppressors will drop considerably in resistance value after a few thousand miles of use, thus decreasing their suppression efficiency. The drop in Erie Suppressors is very small.

**L-Type Suppressor Installed on Spark Plug**

L-Type Suppressors are held firmly on the spark plug ferrules by the pressure contact at two points. The bottom of the bakelite suppressor case presses against the top of the plug ferrule and the crimp in the suppressor sleeve against the side of the ferrule.

**Type S-5 Suppressor Installed on Distributor Cable**

The Type S-5 Suppressor is installed by twisting the wood-type screws into the ignition cable. The base of the wood-screws in all types of Erie Suppressors is a hexagon which is recessed in a hexagonal cavity to prevent its turning when the cable is being installed.

**Type L-7 Suppressor Installed on Distributor**

The bottom of the two rings extending around the metal terminal of the Type L-7 Suppressor snaps into a correspondingly positioned groove in the distributor head socket, forming a secure lock. If desired, a rubber skirt can be used to cover this distributor head opening.

**Type S-14 Suppressor Installed on Magneto-Cable**

S-14 Suppressor is especially made for mounting into the magneto in certain types of ignition systems. The spring fits directly into the magneto. The other end has the wood screw for cable mounting.

## ERIE CERAMICON® TRIMMERS

These trimmers have been well known for years for their stability under the most exacting conditions. The top of the base and underside of the titanium dioxide rotor are lapped optically flat, thus eliminating air space variations with temperature. Fired silver electrodes are applied to top of base and rotor, so that capacity is changed by varying the

amount of overlap. Capacity change per degree of rotation is approximately constant, resulting in a smoothness of adjustment not possible with compression type trimmers, where the greater part of capacity change is concentrated close to one end of adjustment.

## CORNING MINIATURE FIXED CAPACITORS

Developed through Corning research, these truly miniature fixed glass capacitors possess outstanding behavior characteristics that suggest use in critical applications and under high temperatures. If you're concerned with guided missile development, nuclear equipment, and other high reliability systems, these glass capacitors offer you much.

### THE DIELECTRIC

A homogeneous, low-loss, uniformly produced continuous ribbon of glass; no foreign inclusions, no cracks, no imperfections to degrade the performance of the capacitor.

### THE CASE

The glass case, used only to anchor the wire leads, is of the same glass composition as the dielectric; thus, the capacitor performance is a function only of the superior dielectric properties of the glass and not of any enclosing or potting material or impregnant.

### CONSTRUCTION

Only three simple elements: The glass dielectric and case of identical glass composition; the metal foil plates; the wire terminal leads. After assembly, the many layers of dielectric glass, the metal foil plates, the glass case, and the wire leads are sealed together at a high temperature and pressure as an integral, rugged, monolithic unit. Thus, the properties of the capacitor are those of the closely controlled dielectric, and are not determined by assembly method or affected by any subsequent treatment.

### CHARACTERISTICS

Corning Fixed Glass Dielectric Capacitors, Types CY10, CY15, CY20, and CY30, are designed and manufactured to conform to the requirements of Military Specification MIL-C-11272A.

### STABILITY

Capacitance Drift — As defined by MIL-C-11272A is less than 0.1% or 0.1 uuf whichever is greater; it is very nearly zero and is generally within the accuracy of measurements.

Temperature Coefficient — Is fixed and therefore predictable and traceable. It is within the limits of  $+140 \pm 25$  ppm/°C. as defined by MIL-C-11272A from  $-55^\circ\text{C}$ . to  $+85^\circ\text{C}$ . and referred to  $+25^\circ\text{C}$ . (See figures 1 and 2.) The difference in temperature coefficient between any units at any given temperature is less than 15 ppm/°C.

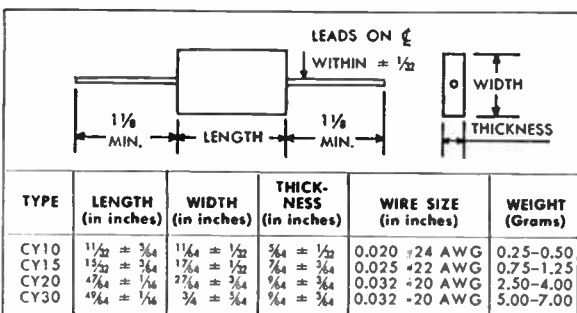

FIGURE 1

### MINIATURIZATION

The glass capacitor offers a higher degree of miniaturization than any other high quality capacitor. The volume of Type CY10 is only about 0.005 cubic inches; further reductions to as little as one-tenth of the volume of the standard wire lead types can be realized where wire lead terminals are not required. For physical dimensions see figure 1.

### INSULATION RESISTANCE

When measured under the conditions specified in MIL-C-11272A, the insulation resistance will be found to be greater than  $10^{11}$  ohms; that is, above the range of most standard measuring equipment.

### INDUCTANCE

Because of the direct connection of the wire leads to the foil plates, the inductance is less and therefore the self-resonant frequency is higher than for other similar capacitors.

### DIELECTRIC ABSORPTION

The dielectric absorption is extremely low; the percentage of charge reappearing after discharge is less than 0.1%.

### MOISTURE RESISTANCE

The glass capacitor meets the temperature cycling, immersion, and 10-day moisture resistance tests which are prescribed in the military standards MIL-C-11272A for capacitors which must meet stringent environmental requirements.

### VOLTAGE RATINGS

Standard ratings based on continuous operation in ambient temperatures from  $-55^\circ\text{C}$ . to  $+85^\circ\text{C}$ . and from  $-55^\circ\text{C}$ . to  $+125^\circ\text{C}$ . are shown in figure 2. Higher voltage ratings may be made available upon request.

### CAPACITANCE

From 1 to 10,000 uuf in standard sizes as shown in figure 2. Higher capacitances in special forms available upon request.

TYPE	CAPACITANCE RANGE (UUF)	
	DC WORKING VOLTAGE	
	300 V. — 85°C. 180 V. — 125°C.	500 V. — 85°C. 350 V. — 125°C.

CY15	57 — 1200	57 — 510
CY20	200 — 5100	200 — 3300
CY30	470 — 10,000	470 — 6200

FIGURE 2

### CAPACITANCE TOLERANCE

Standard tolerance is  $\pm 5\%$  or  $\pm 0.25$  uuf whichever is greater. Also available as  $\pm 20\%$ ,  $\pm 10\%$ ,  $\pm 2\%$ ,  $\pm 1\%$ , but in no case less than  $\pm 0.25$  uuf.

### DIELECTRIC LOSS

Losses are extremely low. The dissipation factor at 1 kc. and  $25^\circ\text{C}$ . is in the order of 0.055% and is not dependent on capacitance. Losses remain relatively low at elevated temperatures.

### LIFE

The shelf life change in capacitance is very small, and even at the elevated temperature of the  $125^\circ\text{C}$ . life test of MIL-C-11272A the recorded change in capacitance is less than 1% in 2,000 hours.

### EXPOSURE TO RADIATION

These capacitors have been found to withstand high levels of X-radiation without permanent damage or degradation of electrical properties.

## CORNING FIXED FILM RESISTORS — TYPE S

**CORNING TYPE S RESISTORS (MIL-R-11804B SPECS) FOR RELIABLE, STABLE, ACCURATE OPERATION UP TO 200°C.**

Corning has developed these fixed film Type S resistors to meet problems of small space and high ambient temperatures.

These are not ordinary film-type resistors. They are integral units made by bonding a metallic oxide film to PYREX brand glass at red heat. The rugged film is noninductive, impervious to moisture, unaffected by the heat of soldering and is more abrasion resistant than the base glass itself.

**APPLICATIONS**

- Miniature power units
- High-gain, low-signal amplifiers
- Computers
- Missiles where shelf-life is critical
- Aircraft instruments where weight is critical

**SPECIFICATIONS**

**Resistance Element** — An accurate, stable, metallic oxide film, fused to a PYREX brand glass core, meets the most exacting circuit needs. The film thickness ranges from 20-50 microinches. Rugged performance does not depend on encapsulation.

**Protective Coating** — Moisture-resistant, high temperature Silicone lacquer is baked on the resistor for extra mechanical and dirt protection. Plastic stand-off insulating sleeves over end caps available for special applications. Fungus-resistant coating per MIL-V-173A is available if desired.

**Tolerance** — Tolerances are 1, 2, 5, and 10%. Tolerance calibrated at 25°C. ambient.

**Power Rating** — Full rating at 120°C. ambient. Double rating at 40°C. ambient for miniaturized power applications.

**Stability** — The maximum change in resistance is guaranteed to be less than 3% when tested with DC power on 1½ hours, off ½ hour, for 1,000 hours, employing proper power per derating curve for any particular ambient.

**Overload** — A standard 5-second overload of 10 times rated power causes a permanent resistance change of less than 1.0%. Repeated overloads cause negligible further changes.

**Voltage Coefficient** — Negligible factor averaging less than 0.001 % per volt.

**Temperature Coefficient** — For the Type S resistor, a temperature coefficient of ±0.03% per °C. can be guaranteed from -55°C. to +235°C. referenced to 25°C.

**Humidity** — Core and film are impervious to moisture. Corning Type S resistors more than meet the moisture-resistance tests per MIL-R-11804B.

**Noise** — Extremely low noise level. Some sources indicate readings 1/10 those of carbon film resistors.

**Frequency Characteristics** — Corning Type S resistors are noninductive up to and over 250 mc. The capacitive component varies between 0.2 to 1.0 uuf as frequency increases to 250 mc.

**Shelf Life** — One year aging shows less than 0.2% resistance change under the most adverse conditions.

TYPE		RESISTANCE		WATTAGE		Voltage	DIMENSIONS		AXIAL TERMINALS

## CORNING TYPE R HIGH-POWER RESISTORS TO MIL-R-11804A SPECIFICATION

**Corning Type R Power Resistors** have a range of 10-1,000,000 ohms, ratings of 7-115 watts, and are non-inductive. They are designed for stable long-life service under the most adverse operating conditions. Noise and frequency characteristics are exceptionally good. Moisture resistance and overload capacity are superior.

**Cores** — The glass tube cores are made from a PYREX brand glass insuring highest resistivity even at elevated temperatures, low expansion, and unusual resistance to chemical and mechanical attack, as well as thermal shock. The cores are impervious, and the glass has been developed to eliminate electrolysis and voltage creepage.

**Resistance Film** — The resistive film of metallic oxides is as rugged as the glass. It is permanently and integrally bonded to the core at red heat. Expansions are matched. The film is practically noninductive at all usable frequencies.

**Terminals** — Silver metallized bands are fired onto the film conductor and core. Lug-type terminals of silver-plated copper alloy strip are expansion fitted over the silver bands to insure a perfect electrical and mechanical junction.

**Silicone Coating** — The coating is tough, moisture and acid resistant, and a good conductor of heat. It adds to the thermal shock resistance but is not essential to overall performance.

**Mounting Brackets** — These are supplied with the resistors at extra charge. They are made to MIL-R-11804A requirements.

**Range** — Resistance range varies with size and power. It is summarized on Table I. Standard tolerance is  $\pm 5\%$  for striped or spiraled units.

**Ratings** — Power ratings are based on 25°C. operating ambient. Maximum operating ambient may be as high as 200°C. and hot spot temperature 235°C.

**Temperature Coefficient** — The value of temperature coefficient in the range of 25-85°C. is less than  $\pm 0.035\%$  per deg. C. Type R resistors meet the requirements of MIL-R-11804A.

**Stability** — The average change of resistance after 500 hours operation at maximum dissipation at 25°C. ambient is 4%.

**Overload** — A standard 5-second overload of 6.25 times the rated power causes a permanent resistance change of less than 0.5%.

**Humidity** — Type R resistors more than meet the specifications for maximum resistance change of MIL-R-11804A.

**Voltage Coefficient** — The voltage coefficient averages less than .001% per volt.

**Noise** — Available data show an inherent noise level of less than .1 microvolt per volt.

**Frequency Characteristics** — The thin film construction of R type resistors makes them inherently noninductive. Inductance is of the order of magnitude of that of the terminals. They are particularly suited to sharp pulse work.

**Design Information** — The power ratings in Table I are for horizontal operation. When vertically operated, the dissipation may be safely increased by about 12%. Power ratings may be increased 4 times by forced air cooling.

## CERAMIC CAPACITORS (Cont'd)

### MOLDED DISC CERAMIC HI-KAPS®

For Bypass, Coupling and General Applications

Molded disc ceramics feature highest available breakdown to ground, highest lead strength, and resistance to mechanical damage, closest tolerance. "MD's" can be placed directly against a chassis, or adjacent to high voltage leads without danger of flashover or breakdown.

Low inductance makes these units highly efficient in high frequency circuits. They are not recommended for use in resonant or tuning applications. Voltage Rating: 1,000 V.D.C.W. to 5,000 mmf, 600 V.D.C.W. over 5,000 mmf. Maintain high capacity and stand up under +85° C. operation. Insulation—Molded Centrathene†. 2,500 V.D.C. breakdown to ground. Electrical properties constant to 3,000 megacycles. Insulation resistance of molding 300,000 megohms. Moisture absorption .005%. Power factor of molding .02%. Fungus resistant. Unaffected by ozone, salt water, any known acid, or solvent at room temperature. Will not become brittle at -55° C. Leads—No. 22 tinned copper 1½" long. Packaged—5 units per package.

SIZE: ½" diameter, ⅜" thick thru 2,000 mmf. ⅓" diameter, ¼" thick over 2,000 mmf.

# SPRAGUE CAPACITORS

## SUBMINIATURE PAPER CAPACITORS

These capacitors are electrically and mechanically designed to meet stringent operating requirements. They are all hermetically sealed in metal cases.

Standard military-grade capacitors are impregnated with specially processed oils to meet required temperature characteristics. The commercial units are impregnated with Vitamin Q<sup>®</sup>, an organic polymeric impregnant which is exclusive with Sprague. Vitamin Q units have a higher

insulation resistance than comparable MIL capacitors.

Recent design improvements now make it possible to use inserted tab capacitors for low-voltage applications, as low as 1 volt. The principal difference between the two construction types is that at resonance, losses are likely to be lower in the extended foil type. Unless this is a critical factor, the inserted tab is recommended because of its smaller size.

**IMPORTANT**—Be sure to add the correct prefix to the code number listed in the table. For example: If a .015 mf @ 200 V unit is required with a plain metal case with inserted tab construction for 85° C operation, the complete catalog number would be 91P1530252. The corresponding military-grade unit would be SP-CP04A1EC153M.

## TYPE 102D TANTALEX® CAPACITORS

Type 102D Tantalex capacitors are miniature d-c electrolytic capacitors which will operate over the wide temperature range of  $-55^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$ . They are intended for low-voltage applications where small size and superior, stable electrical characteristics are required.

These outstanding units have extremely low leakage current, low power factor, and small capacitance drop-off at low temperatures.

Type 102D capacitors are hermetically sealed against atmospheric conditions and leakage or contamination of the non-corrosive electrolyte.

Units listed below have bare metal tubes. For units with outer insulating sleeves, add "A1" to end of catalog number, and add  $\frac{1}{16}$ " to both diameter and length.

## TYPE 104D TANTALEX CAPACITORS

The operating temperature range of these units is from  $-55^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$  at rated working voltage. Type 104D capacitors exhibit virtually no shelf aging and have extremely low leakage current.

The sintered porous tantalum anode of these capacitors is housed in a miniature

silver thimble which serves both as cathode and container for the electrolyte.

Extremely small in size, Type 104D capacitors are  $\frac{1}{2}$ " long and  $\frac{5}{16}$ " in diameter at their widest point. Excluding the connection leads, these tiny capacitors have a volume of less than  $\frac{1}{10}$  of a cubic inch.

## HYPASS® CAPACITORS

Exclusive 3-terminal network feed-thru capacitors. By-pass V-H-F currents where ordinary capacitors are ineffective. Suppress TVI from short-wave transmitters, diathermy machines, electronic heating apparatus, etc. Eliminate interference caused by line-conducted radiation between neighboring TV sets. Install leads in series with circuit being filtered and ground the case.

# SANGAMO CAPACITORS

## TYPES F1, F2, F3 MICA CAPACITORS

Types F1, F2, and F3 capacitors, the smallest of the Sangamo line of transmitting types, possess a range of voltage and current ratings suitable for many applications. They are housed in low loss molded bakelite cases. The mica and foil sections are permanently clamped, vacuum impregnated, and installed in the case in such a manner as to provide stable characteristics and adequate moisture proofing.

## MICA CAPACITORS

### TYPE M Button Mica Capacitors

Small and light in weight, SANGAMO Type M silvered mica button capacitors are designed particularly for application in high frequency circuits. Their high "Q" is indicative of their low loss. These units meet all requirements for V.H.F. and U.H.F. applications, and are rigidly constructed to be electrically and mechanically stable.

The silver plated case design performs the dual purpose of shielding and being the low potential terminal. The high potential terminal through the center of the capacitor allows 360 degrees electrical current distribution, resulting in extremely low series inductance and more efficient performance in high frequency applications.

These Button Mica Capacitors are tested for dielectric strength and leakage at 1250 volts D.C. (working voltage 500 volts D.C. or 350 volts A.C.), are sealed against moisture, and the insulation resistance of each unit must be well over 10,000 megohms. Button mica capacitors with temperature coefficients and drift characteristics of W and X per the Joint Army-Navy specification MIL-C-10950A. The operating temperature range is from  $-50^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$ . Their greatest application is found in military equipment.

# PAPER CAPACITORS

The SANGAMO "Telechief" is molded in HUMIDITITE to provide more stable capacity values, unsurpassed moisture resistance, excellent seal characteristic, and operation up to  $85^{\circ}\text{C}$ . temperature. Small in physical size, and rugged in construction, this tubular is especially adaptable to television, auto radio, small AC-DC set, and other uses. The leads are firmly imbedded in the hard plastic case and have been especially designed to resist breakage. The "Telechief" assures operating dependability under extremes of heat, humidity and physical stress.

# SANGAMO CAPACITORS

## ELECTROLYTIC CAPACITORS

### TYPE MT-MTD-MTH

SANGAMO Type MT electrolytics are especially designed for television and other electronic applications where operation at 85°C. temperatures is required. They are hermetically sealed in round aluminum containers which are encased in heavy insulating sleeves on which polarity is clearly indicated. Being small in physical size they are most popular where mounting in limited space is required — They will fit anywhere and can be mounted in almost any position.

## ELECTROLYTIC CAPACITORS

### TYPE CS

The SANGAMO Type CS electrolytic capacitors are contained in wax-filled cardboard tubes with insulated leads approximately 8 inches in length extending from both ends of the unit. Capacity, voltage and polarity of each section is clearly indicated by color of the lead wires; coding information necessary to identify the individual sections is clearly stamped on the tube. Each unit is supplied with a mounting strap to facilitate mounting to the chassis.

### COLOR CODE OF WIRE LEADS FOR TYPES FM, CS, AND SL CAPACITORS

Black	Common negative
Orange	Positive, highest voltage or capacity
Red	Positive, next highest voltage or capacity
Blue	Positive, next highest voltage or capacity
Yellow	Positive, next highest voltage or capacity
Brown	Negative, in separate section unit

NOTE: Lead colors are determined by the rated working voltages. Where there are two or more sections of different voltages and the same capacity, the lead color will designate the voltage; with the same voltages and unequal capacities, the lead color will designate the capacity. If there are two sections with equal capacities and voltages the two lead wires will be in the same color.

NOTE: Based upon proposed R.T.A.A. Color code.

## TYPE EM and MJL MOTOR STARTING CAPACITORS

SANGAMO type EM and MJL electrolytic capacitors are standard universal replacements for all motor starter type presently in use, and their dimensions are comparable in every respect. The type EML is with solder terminals, the type EMS being equipped with screw types; otherwise the two units are identical in construction and operational characteristics. Insulating tubes are supplied with both types. The MJL is provided with solder lug terminals and plastic case. Bracket and end caps can be supplied.

### TYPE PL

FOR TELEVISION AND OTHER ELECTRONIC APPLICATIONS . . .

The SANGAMO Type PL electrolytic capacitors are specially designed for all television and electronic applications requiring long life and dependable performance at 85°C under conditions of extreme ripple currents and high surge voltages. They are sealed in round aluminum cans and have twist-prong tabs for washer or direct chassis mounting. The capacitor element current carrying tabs are securely clamped and staked to the terminal lugs, providing permanent, low resistance connections. In all cases the aluminum can is negative and the mounting ring provides the negative electrical connection.

The Type PL has been specially engineered for the rigid TV replacement applications found in all of the leading television receivers manufactured in the industry.

Over 1250 capacity and voltage combinations available in single, dual, triple, and quadruple construction. Also available with special terminal designs for printed circuit applications.

### TYPE SL

Designed primarily as replacements for wet electrolytics, the Type SL electrolytic capacitors are assembled in round aluminum cans with threaded necks providing easy mounting to a chassis with the aid of a palmnut which is supplied. The Type SL is completely insulated from the container, the negative connection being made to one of the insulated leads extending through the threaded neck of the can.

### TYPE DCM

### Energy Storage Electrolytic Capacitors

The SANGAMO Type DCM unit is an electrolytic capacitor intended for use in an energy storage component in DC circuitry. These capacitors are principally utilized in applications where peak power requirements of the load exceed the maximum output of the associated power supply. Such capacitive components may well be used to minimize the cost of an overall electronic gear by enabling the design engineer to economize in his power supply design.

These units utilize etched cathodes to prevent loss of capacity due to reverse-current internal electrolytic action. This capacitor can be supplied in a variety of capacity values and voltage ratings. The terminal structures are designed to provide extremely low contact resistance and thus minimize arcing and heating during current surges.

# SANGAMO

# SPECIALTY COMPONENTS

The SANGAMO ELECTRIC COMPANY develops, designs, and manufactures a variety of transformers, inductors, magnetic amplifiers, special Low-X resistors, dynamotors, and stand-off wiring devices. We also enter the field of circuitry in producing filter networks and 125°C operating temperature high voltage power supplies.

Following is a description of some of the special products that we are now supplying to the electrical and electronic industry.

## TYPE N46 & N51

The SANGAMO Types N46-N51 assemblies are multi-section, non-inductive, very high-frequency mica capacitors. These are multiple button type mica capacitor assemblies, pre-mounted in silver-plated, non-ferrous brackets to facilitate installation in miniaturized, high-frequency electronic circuitry. Such assemblies relieve the set fabricator of laborious, expensive, and often destructive mounting problems. The individual sections are of the same basic, non-inductive, highly stable design as the items supplied to the performance requirements of existing button type mica capacitor specifications. For further electrical characteristics and description of the individual units that make up the assembly, see data on Button Mica Capacitors in Sangamo Catalog No. 830A.

## TYPE N31

The SANGAMO Type N31 is a metal enclosed, hermetically sealed, highly stable capacitor network. This capacitor is furnished with solder-sealed glass terminals and is contained in a corrosion resistant case complete with affixed mounting bracket. The capacitor sections are specially designed for this product to possess inherently superior temperature coefficient characteristics and low dissipation factor.

The complete assembly is potted in a high electrical grade thermo-setting compounded resinous plastic. The unit is ideally adapted for use in tuned filter assemblies. This item is presently being produced in .01/.047-.05 mfd., 300/600 WVDC rating. Other combinations of capacity values and voltage ratings can be furnished upon request.

## TYPE N35

The SANGAMO Type N35 capacitor is a miniaturized multi-section mica capacitor specially designed for use in coupling carrier frequency communication systems to high voltage power distribution lines. A unique unitized construction provides excellent stabilization of capacity. The capacitor assembly is contained in a retaining frame that is designed to prevent arc-over to the structure. The completed capacitor is sealed in a heavy coating of moisture resistant insulating varnish. These units are produced in a multiplicity of capacity and voltage ratings.

## TYPE N38

The SANGAMO Type N38 capacitor is a hermetically sealed, oil-filled, mica capacitor designed for power pulse service. This unit is a capacitance-resistance network intended for use in low-frequency, high power pulse circuits. Both terminals are insulated from the metallic container. The design pictured here is specifically intended for use where a radio-frequency pulse envelope of large magnitude is superimposed on a high DC voltage. Similar units specifically designed for continuous duty on radio-frequency power applications can be supplied upon request.

The SANGAMO N38 capacitor represents an engineering achievement of attaining definite miniaturization over presently available MIL type potted mica capacitors. This unit is now produced in a value of .06 mfd., only, as a specialty item, but can be supplied on demand in a variety of capacities. The specialty item is designed for operation at 4800 VAC, RMS pulse with 8000 volts DC superimposed.

## TRANSFORMERS

SANGAMO ELECTRIC COMPANY has been designing and building specialty transformers since 1927. These transformers have been used in a wide variety of applications in commercial and military apparatus. Although the major part of this transformer production has been for use in metering, telephone, and military equipment produced by Sangamo, we have also supplied a limited group of electrical and electronic manufacturers with transformers of special design. This "quarter-century plus" of transformer manufacturing and design experience is now available to the industry.

Hermetically sealed units are available in a great variety of case sizes, and include both drawn and fabricated cans. A full line of standard MIL-T-27 cans is also available. Three terminal styles are available; neoprene-ceramic, glass bead, or phenolic feedthrough.

Units may be either oil filled or compound filled. We recommend the use of oil filled units for extreme reliability and long life when unusual operating conditions are encountered. All Sangamo oil filled transformers are vacuum dried at high temperature prior to filling to assure the complete removal of moisture and entrapped air.

## OPEN FRAME

Open frame units can be furnished in all standard sizes and can be equipped with brackets as shown, vertical or horizontal channels, or several types of end bells. These units are customarily vacuum dried and varnish impregnated. Either stranded leads or solder lug terminals are available. For special applications these units can be made to operate at temperatures up to 200°C.

## TOTE-M-POLES

The Tote-m-pole component mounting post provides ideal support for small components such as resistors, capacitors, diodes and transistors at their operating point. Critical leads to grid suppressor resistors, for example, can be reduced to pigtailed.

The Tote-m-pole mounts in a single drilled hole. It can be reused many times for mock-up or component replacement. It is adapted to jig wiring practices whether the jig is of cardboard for design study or a production type. Tote-m-poles, as manufactured by Sangamo, are available with 4, 3, and 2 terminals and may be used with or without ground rosettes and spacers.

## AUDIO TRANSFORMERS

SANGAMO manufactures both a general line and a specialized line of audio transformers, including interstage, modulation, and output types. The general line offers good frequency response and adequate power handling facilities at a reasonable cost. By proper selection of core material and careful manufacturing techniques, special audio units can be supplied whose frequency coverage is flat within 3 db from 3 cycles to 100 kilocycles per second. Low distortion and phase shift are inherent in the design of these special quality units.

### MAGNETIC AMPLIFIERS

Several types of magnetic amplifiers are currently being produced by Sangamo. These magnetic amplifiers include both saturating and non-saturating types. They are constructed for a variety of purposes including computer elements, temperature controlling units, and servo motor applications.

### MULTIPLE COMPONENT ASSEMBLIES

Special resonant and anti-resonant circuits, involving transformers, chokes, and capacitors, can be incorporated into single units having precise electrical characteristics. As custom engineered assemblies, these units can be adapted to a wide variety of applications. In resonant circuits, extreme accuracy can be obtained by careful selection and adjustment of components.

### PHASE SHIFTING UNITS

Phase shifting units are designed for applications requiring the maintenance of precise phase relationships between input and output circuits. These units, generally designed to operate with constant loads, are used in current feedback circuits, metering devices, and similar applications. By proper design, the effect of direct current in either winding can be made negligible over a wide range of voltages.

### HIGH VOLTAGE POWER SUPPLIES

Several types of high voltage oil-filled power supplies are being manufactured by Sangamo. These units, complete with transformers, rectifiers, and filter sections, are designed with a wide margin of safety for long, trouble free life. A typical unit pictured above delivers 10,000 volts D.C. at 250 microamperes from a 115 volt 400 cycle supply. The AC ripple voltage is less than 0.1%. This unit is designed to operate at 125°C maximum and at a maximum altitude of 50,000 feet.

## MINIATURE POLYSTYRENE AND MYLAR® CAPACITORS

HERMETICALLY SEALED — CLOSE TOLERANCE

F-C-I miniature polystyrene and "Mylar" capacitors are furnished in metal shells hermetically sealed with metal-glass compression type seals. The capacitor elements are non-inductively wound, and wire leads are carefully soldered to the swaged, extended foils to minimize self-

inductance, power factor and noise. Characteristics of the polystyrene capacitors are given on pg. P-1156. The Mylar dielectric capacitors are characterized by high insulation resistance ( $10^9$  megohm-microfarads at 20° C); 0.5% power factor; and a temperature coefficient of +500 PPM/° C.

The capacitors listed above are suitable for continuous operation at 125° C without derating. For 85° C operation, 100 volt series HD capacitors may be operated at 200 volts; 200 volt capacitors at 400 volts; 400 volt capacitors at 600 volts; and 600 volt capacitors at 1000 volts. To correctly designate 85° C capacitors, omit the letter "H" in the part number, and correct the single number standing for the voltage rating.

Prices listed above are for ±5% tolerance. For ±2% tolerance, add 20% and for ±1% tolerance, add 50% to these prices. These capacitors are also available in ceramic shells with epoxy resin end fill. Write for prices.

We are set up to produce these capacitors in any quantity to any odd value of capacitance at close tolerance for manufacturers of filter networks, R-C networks and the like. Write for information.

## HIGH CAPACITANCE MYLAR® CAPACITORS HERMETICALLY SEALED—HIGH INSULATION RESISTANCE

F-C-I Series D-2 capacitors are Mylar dielectric capacitors which possess extremely high insulation resistance, together with good power factor and dielectric absorption. The insulation resistance runs well over 10<sup>8</sup> megohm-microfarads at room temperature, even for the highest values of capacitance. The power factor and the dielectric

absorption are both on the order of 0.5%. These properties make Series D-2 capacitors extremely useful in computers of moderate precision, in timing circuits, and similar types of circuitry. Standard tolerance is ±10%, and closer tolerances are available on order. (Case sizes indicated below are in inches.)

# TELEVISION · TRANSMITTING · INDUSTRIAL HIGH VOLTAGE MICA CAPACITORS

DC WORKING VOLTAGES: FROM 1000 TO 2500 VOLTS — MOLDED IN CM-20, CM-35 AND CM-40 CASES

Demand for smaller units in higher voltages designed to meet the requirements for TELEVISION, POWER AMPLIFIERS, LOW POWER TRANSMITTERS, and various INDUSTRIAL Uses has increased. EL-MENCO designed and produced units listed below are especially adaptable to compact circuits where space is an important factor. Their acceptance has been overwhelming by the various manufacturers of TELEVISION RECEIVERS.

In many cases, these units will do the work of capacitors molded in CM-45, CM-50, and CM-55 cases without breaking down. NO SPECIAL MOUNTINGS ARE NECESSARY; just wire right into the circuit.

The capacitors are molded in low-loss bakelite and tested at double the branded voltage. They are tested for dielectric strength, insulation resistance, temperature coefficient, capacitance drift, susceptibility to humidity, and length of life, according to RCM Standards. All units are wax-dipped for protection against salt water immersion.

### MINERAL OIL IMPREGNATION NON INDUCTIVE WINDING SYNTHETIC RESIN END SEALS — STEATITE CASE

The Steatite tube and baked synthetic resin end-fill provide a seal which rivals that of hermetically sealed construction, resulting in a dependability and longevity previously unequalled. Whether in operation or on the shelf, this paper tubular capacitor will maintain its excellent characteristics for years.

#### DIMENSIONS FOR CP TYPE CAPACITORS

	Max. Diameter	Max. Length
CP-1	23/64"	1-1/8"
CP-2	27/64"	1-3/8"
CP-3	31/64"	1-3/8"
CP-4	9/16"	1-5/8"
CP-5	3/4"	2"
CP-6	51/64"	2"

El-Menco CP type paper tubular capacitors are sealed into Steatite Tubes which serve to insulate the capacitor electrically as well as against moisture and heat. The capacitor insert is impregnated with Mineral Oil, thereby assuring long life at 85° C operating conditions. This feature insures successful operation at the high ambient temperatures existing in small, compact enclosures.

The Non-Inductively wound paper and foil units are sealed in the Ceramic Tubes by means of baked Synthetic Resin End Fills which cannot melt at any conceivable operating temperature. The end fills will not dissolve in wax, permitting the capacitors to be potted without damage to the insert. Leads are of tinned copper 2 1/4" long.

Part numbers can be read as follows: First one or two numbers indicate voltage rating in hundreds of volts. CP indicates type of capacitor. Next number between the dashes indicates case size. Last three digits indicate capacity, the first two being significant figures and the last the decimal multiplier.

The base is made of the lowest dielectric loss ceramic material available and the mica is clear India Ruby.

The soldering lugs may be bent in any position without affecting capacity setting due to the rigid construction of adjusting plates.

EL-MENCO TRIMMING CONDENSERS are treated for resistance to humidity and for permanence of capacity setting.

Trimmers shown here are standard sizes and capacities.

Voltage 350 VDCT — 175 VDCW.

El-Menco High Voltage Capacitors are manufactured in accordance with MIL and RMA specifications for molded mica capacitors and are additionally designed to operate at higher voltages than normally expected of units of this size. They are ideally suited for use in high voltage, low power circuits, particularly where space requirements are an important factor. Axial wire leads provide simplicity of wiring through elimination of added mounting devices. All units are molded in low-loss phenolic cases and are wax-dipped for protection against salt-water immersion.

## ARCO TYPE 46 TRIMMER KIT #5

El-Menco CP type paper tubular capacitors are sealed in impervious steatite ceramic tubes through use of synthetic resin end fills which are waterproof and will not melt at any conceivable operating temperature. The non-inductively wound paper and foil inserts are mineral oil impregnated. This combination of fine quality material and construction insures long life at high ambient temperatures, indefinite shelf-life and trouble-free operation under the most adverse conditions.

**PLUG-IN ELECTROLYTIC CAPACITORS**

Designed for 85° operation. Hermetically sealed in round aluminum containers. Provided with four pins (Nos. 1, 3, 5, 7) on standard octal base. Plugs into standard 8-pin octal socket. Ideally suited for any application where quick capacitor changes are required. Grounding lug supplied for grounding case to chassis. (In accordance with military standards, a low variable resistance exists between pin 1 (negative) and the case; to ground pin 1, a direct ground connection must be made from the corresponding lug on the socket.) For mounting rings, see page.

## GENERAL DATA

Pyramid Electric Company introduces the CRA-2, Capacitor-Resistor Analyzer, a versatile, up to date, moderately priced test instrument. The CRA-2 is the perfect multi-purpose analyzer for the technician, serviceman and engineer, in industrial and military electronics, black and white, and color television, and all related fields.

The guesswork has been removed from circuit trouble shooting. When making leakage-current measurements, the values are read directly from the meter while the rated operating voltage is applied to the capacitor. A vacuum-tube ohmmeter circuit displays accurate insulation-resistance values on the meter for

many types of capacitors. The extended range calibrated power factor control permits power factor measurements of electrolytic capacitors rated as low as 6 volts DC working and as high as 600 volts DC working. The special "QUICK CHECK" circuits perform rapid "IN CIRCUIT" test for short, open, intermittent high RF impedance and high power factor without removing or disconnecting the component from its operating circuit.

## METEOR\* SUBMINIATURE PAPER CAPACITORS

Far 125°C. Operation without voltage derating

- Amazingly small sizes, compact and light-weight units.
- Highly dependable operation at temperatures up to 125°C. without voltage derating.
- Exceptional capacitance stability, less than 5% change, over entire temperature range of -65°C. to +125°C. due to use of ASTRON-developed high-temperature impregnant X-250\*.
- High insulation resistance, low power factor, unusually low resonance loss. High test voltage indicates extra margin of safety in operation.
- Built to exceed stringent requirements of Specification MIL-C-25A for styles CP04-05-08-09-10-11 (ASTRON Types AQ, TQF, and variations); and styles CP53-54-55, Characteristic K (ASTRON Type ADZ, bathtub).
- Positive hermetic closure of the metal cases is assured by glass-to-metal solder seal terminals.
- Tubulars supplied in a variety of construction and mounting styles to meet your specific needs: extended foil or inserted tab; capacitor section grounded to case or insulated from case; plastic outer sleeve; with soldered-on tangential or L-type bracket; screw neck mounting style; or stud-base mounting style.

### MIL TYPE CP08 and CP09

## METALITE®

**Metallized Paper Capacitors for 65°C. and 85°C. Operation**

### METALITE CAPACITORS

#### Feature:

- Ultra-compact sizes. Light weight. Ideal for miniaturization applications, and portable, mobile and airborne equipment.
- As much as 75% reduction in size over conventional paper-foil capacitors.
- Self-healing — the ability to withstand high dielectric stresses. METALITE capacitors can be subjected to momentary overvoltages and surges over and over again without danger of permanent failure.
- Temperature Range (Metal cased units) -65°C. to +85°C.; (cardboard cased Type ML) -55°C. to +65°C.
- Excellent RF characteristics. Low RF impedance due to small sizes and short current path. Low power factor.
- Wide variety of applications: RF and audio bypass circuits, noise suppression filters and systems, instruments, and various types of communication equipment where small size, light weight and the self-healing feature are especially desirable characteristics to meet specific circuit requirements.
- Interchangeability with standard paper-foil capacitor designs when operated within published ratings and circuit requirements.

### METALITE® TYPE MQC

85°C. Operation

#### Glass-to-Metal Sealed SUBMINIATURE TUBULARS

## NOMENCLATURE

1. **TYPE** The type is identified by a two or three letter symbol in accordance with Table I. The general shape of the case and additional specific details other than case size are specified in style prints. Each type designation includes a family of case sizes.

2. **CAPACITANCE** The nominal capacitance value expressed in micro-micro-farads is identified by a four-digit number; the first two digits represent significant figures and the last digit specifies the number of zeros to follow.

3. **VOLTAGE** The d.c. working voltage for continuous operation at the maximum high temperature for each type as indicated in Table I, is identified by a combination of a single numeral and a single letter in accordance with Table II.

4. **CAPACITANCE TOLERANCE** The capacitance tolerance in percentage is identified by a single numeral in accordance with Table III.

5. **STYLE** The style is identified by a single letter which is an identification as to the terminal, the circuit, and the general shape of the case in accordance with detailed drawing (see style prints).

#### Dual Section Electrolytics — Type "IL"

Hermetically sealed in aluminum tubes with completely flexible leads. U/L Approved, plastic coated leads are rivetted directly to the condenser end disc, eliminating the use of rigid terminal risers, allowing capacitor to fit into smaller space, and eliminating lead breakage. IL capacitors have wrap around mounting strap and are common negative, guaranteed for one year.

## All Purpose Paper Capacitors "ROCKETTES"

Planet ROCKETTES are impregnated and jacketed with a HARD-as-ROCK plastic which will not dry out, shrink away from the leads nor develop fissures nor cracks, thus guaranteeing against the entrance of moisture and guaranteeing good shelf life and long service life. The coiled heads of the leads are securely soldered to the foil, which is imbedded in the same plastic used as an impregnant, making it impossible for them to work loose or pull out. ROCKETTES have exceptionally high insulation resistance which is maintained proportionately over the entire temperature range of  $-30^{\circ}$  to  $+85^{\circ}$  C.

## CAPACITORS

MINIATURE • RUGGED  
LOW LOSS • LOW NOISE  
STABLE • VAPORPROOF  
WIDE TEMPERATURE RANGE

The biggest names in electronics use VITRAMON capacitors in guided missiles, jet ignition, proximity fuses and in radar, servo, guidance, fire control, telemetering and carrier telephone systems.

If substitutes are not good enough . . . if you need the best . . . write today!

There are many kinds of capacitors . . . some stable . . . or rugged . . . or vaporproof . . . or tiny . . . some very good at averting loss or noise . . . or efficient over a wide temperature range. Some capacitors combine two, or even three of these features.

### "VITRAMON" Capacitors Give You All 7

Only two materials go into "VITRAMON" Capacitors . . . porcelain enamel for the dielectric and encasing insulation . . . fine-silver for the electrodes. Perfectly bonded, the two become, effectively, one homogenous unit —

**VITRAMON**  
INCORPORATED

### Stable over a Wide Temperature range.

The solid block of "quality crockery" in which the silver electrodes are immersed makes "VITRAMON" Capacitors both Rugged and vaporproof.

Pure materials plus perfect bonding combine to eliminate both Loss and Noise.

Finally . . . their unique construction allows for "layering" the electrodes so that much greater active dielectric area can be squeezed into the same cubic content . . . They're Miniature.

Two materials — a monolithic block of porcelain enamel and fine-silver electrodes — fused into one strong, stable, efficient and effectively homogenous unit.

### TOLERANCES

Standard Tolerance is  $\pm 5\%$  of nominal, with a minimum of  $\pm 0.25$  mmf. Closer tolerances are available as detailed in the Price List at the left.

### CAPACITIES

Capacities available from stock range from 0.5 mmf to 6800 mmf, as measured at 1 mc.

### LEADS

Leads are of tinned copper, high-temperature brazed to the Capacitors to withstand 5 pounds of axial pull, and 2 pounds of pull at 90°, subsequently reversed 180°. This strength is maintained through 200° C, and soft-soldered connection may be made as close as 1/8-inch to the body. For the two smaller-size bodies, leads are No. 22 wire; on the two larger bodies No. 20 wire is used. All provide maximum resistance to corrosion.

### MARKINGS

The Capacity and Voltage Rating of every "Vitramon" capacitor are indicated by numerals, and all are identified by the "Vitramon" Trade Mark.

### - A / R SERIES

In addition to the Axial-Lead Series shown here, the new Axial/Radial-Lead Series has been developed to meet broader applications. It is interchangeable with the -A Series, and it offers the following features: (1) unitized electrode/lead construction, plus (2) better adaptability to both axial- and radial-lead applications.

ENCAPSULATED MICA

## Capacitors

Micamold Micaps are silvered mica capacitors having the same mica capacitor sections as the Micamold molded styles CM-15 and CM-20. They differ in that they are hermetically sealed by a dip coating method and have radial wire leads instead of axial leads. This latter feature results in a shorter RF current path and greater ease of installation, making them specially suitable for use in printed circuitry. Micamold Micaps are smaller than the comparable molded types and are particularly applicable in the development of miniature equipment.

### TYPE DESIGNATION TO BE IN FOLLOWING FORM:

<sup>o</sup>The nominal capacitance value expressed in microfarads is identified by a three-digit number; the first two digits represent significant figures and the last digit specifies the number of zeros that follow.

# MICAMOLD TROPICAP<sup>®</sup> MOLDED TUBULAR PAPER *Capacitors*

Micamold developed and introduced the first molded paper capacitors in 1935, and has since supplied HUNDREDS OF MILLIONS to the industry.

Micamold now introduces its new TROPICAP<sup>®</sup> molded tubular paper capacitor which is the finest ever developed. The TROPICAPS are distinguished by their hermetic sealing that affords protection from exposure to high humidity or even total immersion. The case is non-flammable and is not injured by severe mechanical or thermal shocks. These capacitors have a long life at maximum temperature rating of 85°C.

# MICAMOLD STEACAP<sup>®</sup> TUBULAR PAPER Capacitors

Micamold Steacaps are paper capacitors encased in steatite tubes, sealed with thermo-setting end fills. The terminal seals will not soften or leak at temperatures considerably above the operating range of 85°C. Steacaps are especially suitable for use in tropical, hot, humid and other severe climates where other types of paper capacitors will fail. The steatite tube and thermo-setting end seals insure long shelf-life and dependability in operation.

## Ultra Small Aluminum-Cased Electrolytics

Type LE capacitors are ultra-small, compression sealed, aluminum foil units. They are housed in aluminum containers which in turn are covered by a skin-tight, clear plastic insulating sleeve. The tinned copper pigtails are securely anchored in crimped stud terminals.

They are especially recommended for use in printed circuit assemblies, miniature radios, recorders, hearing aids, portable TV cameras and similar compact equipments.

**TEMPERATURE RANGE:**  $-20^{\circ}\text{C}$ . to  $+65^{\circ}\text{C}$ .

## PHENOLIC-CASED PRINTED CIRCUIT PAPER TUBULAR

PB

- ◆ **PARALLEL LEAD WIRES:** May be plugged directly into printed circuit.
- ◆ **PRE-MOLDED PHENOLIC SHELL:** No distortion and no stresses are set up because capacitor section is not subjected to molding pressures.
- ◆ **WIDE TEMPERATURE RANGE:** Vikane impregnated units (rated at 600 WVDC) will withstand operating temperature from  $-55^{\circ}\text{C}$  to  $+100^{\circ}\text{C}$ . Units impregnated with HT compound (rated at 400 WVDC and 200 WVDC) will with-
- stand operating temperatures from  $-40^{\circ}\text{C}$  to  $+90^{\circ}\text{C}$ .
- ◆ **POLYKANE FILL:** Securely anchors leads, locks section in place and provides a barrier to moisture.
- ◆ **SOLID CONNECTIONS:** Leads are soldered directly to the extended fails for low resistance connections.
- ◆ **STRONG CONSTRUCTION:** Will withstand the extremes of soldering temperatures without damage to case material, moisture seal, lead connections or electrical performance.

## COMPACT METALIZED-PAPER CAPACITORS

ME & MEX

MEW & MET

MEM

TOBE self-healing, metalized paper capacitors have better electrical characteristics and extra long service life. Units are light and compact.

"ME" units have bare wire leads securely anchored in metal end-caps, wax-impregnated and dip-sealed against humidity. All units are extended fail—non-inductive wound for low impedance at high frequencies, have high insulation resistance, low power factor and small capacity change with temperature and life.

"MEM" types are one piece metal tubular cased, pressure sealed by spin-aver a synthetic rubber gaskets.

"MEW" types are a high quality metalized paper capacitor, designed for smallest size and positive seal against moisture. They are hermetically sealed in metal cases with solder seal glass terminals. Especially recommended in military and commercial equipment where miniature size and light weight are paramount.

## High Temperature Metalized-Paper Capacitors

- **RESIN-IMPREGNATED:** This impregnant insures excellent electrical properties over long service life.
- **MOISTURE RESISTANT:** MET tubulars have the finest glass-to-metal solder seal terminals for maximum protection against moisture. MEX tubulars have RESIN-impregnated paper tubes, bonded securely to the RESIN fill. An external flash wax dip provides an increased moisture seal for extra long storage and service conditions under extremes of humidity.
- **NON-LEAKING:** RESIN is a special solid thermosetting plastic that will not soften, crack, or leak at the maximum temperature. No oil or wax is used internally with these units.

Types YDT and YDB are oil impregnated and oil filled with non-inflammable, non-oxidizable liquid. They are especially suited for use in bypass, audio frequency coupling circuits and other applications. Units are sealed in drawn metal shell containers and provided with leakproof terminals either on top or bottom of the can containers. They will meet MIL-C-25A performance and test requirements.

**TEMPERATURE RANGE:** -55°C to +85°C.

**STANDARD TOLERANCE:** +20%, -10%.

Types WDT and WDB Capacitors are smaller size units of similar construction and electrical characteristics but only supplied in single section units with two terminals. These units are ideally suited for use in assemblies where space is limited and multiple units may be mounted close together. They will meet MIL-C-25A performance and test requirements.

**TEMPERATURE RANGE:** -55°C to +85°C.

**STANDARD TOLERANCE:** +20%, -10%.

# INSULATED RESISTORS

## TYPE BT FIXED COMPOSITION CARBON RESISTORS

More IRC Filament Type BT Resistors are used in the electronic industry than any other brand of fixed composition resistors. For original equipment, IRC BT's are by far the leading choice of Electronic Engineers. For replacement, Service Technicians favor IRC BT's over all other brands combined.

IRC's exclusive filament-type resistance element is combined with superior construction features to provide a stable resistor of extremely low operating temperature and excellent power dissipation in a compact, light weight, fully insulated unit.

### COLOR CODING AND STAMPING

Resistance values are clearly indicated by standard EIA (formerly RETMA) Color Code. All resistors in Distributor Packages, except BTR, are individually stamped with value and wattage.

## TYPE BW INSULATED WIRE WOUND RESISTORS

Type BW's are exceptionally stable, inexpensive wire wound resistors for low range requirements. These small, completely insulated units are similar in appearance to insulated composition resistors but are readily identified by the double width of the first color code band.

The wire element is uniformly and tightly wound on an insulated core. Tinned, solid wire leads are keyed to the element by a specially designed terminal. Leads are anchored inside the insulation and cannot turn or pull loose.

## MICROSTAK SELENIUM DIODES

Type GA Microstak Diodes for use in low current circuits where very high back resistance and low forward resistance are required. Miniature selenium cells with outstanding performance characteristics, they are ideal for such applications as A. V. C., switching, blocking and bias supplies. Design and small size give high frequency performance not found in conventional cells — tests prove their successful performance in circuit applications up to 1 megacycle. Hermetically sealed to assure stable operation under high humidity, dust, fumes and changing pressures.

Dimensions: (Type 6GA1) Length of leads — 1½". Body length — .450". Diameter — .145". (Type 9GA1) Length of leads — 1½". Body length — .500". Diameter — .210".

### TYPE 6GA1

Stock No. 6GA1-2B. Minimum forward current (at 2 V.D.C.) is 0.5 M.A. and corresponding resistance, 4000 ohms. Maximum inverse current (at 20 V.D.C.) is 20 microamperes and corresponding resistance, 1 megohm. Peak inverse volts —36. Continuous inverse volts —22. Maximum A.C. input (RMS volts with resistive load only) —26. Temperature range is —55°C to +90°C. Shunt capacitance — approximately 25 mmf (measured with two plates back-to-back on 1000 cycle bridge).

# TYPE Q VOLUME CONTROLS

RADIO-TV TECHNICIANS'

## TYPE Q VOLUME CONTROL

IRC's Type Q Control is the basic control for servicing all sets. It is carefully engineered to meet most replacement requirements with a minimum stock. The quality appearance and "cushioned turn" of the Q Control assure customer satisfaction. Easier installation and dependable performance provide more profitable servicing.

### KNOB MASTER STANDARD FIXED SHAFT

Standard shaft is knurled, flatted and slotted and fits most knobs without alteration. For knurled or spring type push-on knobs, cut to length. For over-size, worn or web type knobs, split shaft slot lengthwise and spread ends. For positioned knobs, bend down control locating pins and rotate control base for correct knob position.

### 1/4" LONG BUSHING

Shorter bushing and compact 15/16" design suit Q Controls to all small sets, yet handle large set needs as well.

## TAB MOUNT CONTROLS

Many recent TV sets use Tab Mount Controls. These are single controls without switch. They differ from standard controls in that bushing is omitted and mounting to chassis is made with two heavy twist-type mounting tabs.

## IRC TAB-MOUNT KITS

Since assembly of Tab-Mount Controls is so simple, IRC supplies three 3-Part Tab-Mount Kits which will assemble with any standard plain or tapped IRC Base-Element to provide satisfactory Tab-Mount Controls. Each TM Kit includes a Tab-type Ground Plate, a control cover and a finger-knurled and screw-driver slotted shaft of appropriate length for universal replacement. Packaged with instruction sheet but without necessary Base-Element.

# TELEVISION and AUTO SET CONTROLS

For those who prefer factory-assembled special controls, IRC provides an exceptionally broad line of over 800 Exact Duplicate Controls. Each control is specified closely to manufacturers' original control specifications—required. Carbon and wirewound elements are used for panel and rear sections as required.

The IRC Exact Duplicate Line now includes over 100 concentric dual controls for auto radios. Modern in

Over 800  
Exact Duplicate Controls  
for TV and Auto Radios

design, these new controls bring many unique and desirable features to provide convenience, economy and long life. The new IRC Printed-Silver Tone Switch eliminates contact fatigue—assures positive, no bump contact. Simple detent assures positive positioning independent of switch action. Control position feature of  $\frac{1}{16}$ " and  $\frac{1}{2}$ " bushings permits exact duplication of original. Short control depth fits most crowded locations. Power switches amply rated for both TV and Auto Radios. Consult S-012 Part Number Replacement Manual for needed controls.

## IRC CONCENTRIKIT ASSEMBLES EXACT DUPLICATE CONTROLS features quick assembly—no modification of parts.

### 14 Basic CONCENTRIKITS

IRC Concentrikits are the common parts to various types of Exact Duplicate Controls. When assembled with parts shown in IRC Parts Number Manual (Form S-012) or Auto Radio Replacement (Form S-031), they will produce any IRC Exact Duplicate TV or Auto Radio Controls. No cutting or filing of shafts or bushings—one minute assembly.

Base-Elements and Exact Duplicate Shafts for CONCENTRIKIT assembly are listed on 3 pages following →

IRC Base-Elements are a revolutionary advance in concentric dual replacement. A relatively small stock at low investment provides wide coverage of electrical requirements of many concentric duals. Each unit is a complete molded control base with element, terminals and collector ring installed. There are no loose parts.

Two types of Base-Elements are available: Type B for panel or rear carbon sections and Type W for wire-wound panel or rear sections.

Two Base-Elements are required for each concentric dual.

# CONCENTRIKIT EXACT DUPLICATE SHAFTS

Save time—be assured of accurate fit! IRC now provides a complete line of Exact Duplicate Shafts for CONCENTRIKIT—factory-tailored for dependable mechanical fit. No filing, slotting, soldering or cutting required! Many shafts are flatted as well as slotted to provide wider replacement coverage. Each shaft is a complete assembly, including contactor. Factory-lubricated, packaged in cellophane and in individual carton.

## DEPENDABLE MECHANICAL FIT FOR YOUR TV REPLACEMENTS

Exact Duplicate Shaft Stock Numbers indicate shaft length measured from mounting

face when installed in control ( $L_1$  is Outer Shaft length;  $L_2$  is Inner Shaft length). First digit is number of whole inches in shaft length; remaining two digits indicate number of additional 32nds of an inch. Thus, P1-210 has shaft lengths of 2-10/32" or 2-5/16". Exception is Inner Shafts when used with K-3 CONCENTRIKIT where 3/32" should be subtracted to determine shaft length.

# DISTRIBUTOR CONTROLS FOR INDUSTRY

## MULTISECTIONS

IRC MULTISECTIONS are complete control sections that can be added like a switch to any Q, PQ, RQ or RQL Control. With these units, the Radio Technician or Engineer is provided with an endless variety of dual, triple or even quadruple controls. Duals assembled from IRC MULTISECTIONS will accommodate Type 76 switches. Available in a selection of 25 values, as shown in following table. Each MULTISECTION adds  $\frac{1}{8}$ " to basic control. LIST \$2.25

### TYPE RQL

IRC's new line of 10% tolerance Locking Type Bushing Controls. Screw-driver slot shaft  $\frac{1}{4}$ " diameter and approximately  $\frac{1}{2}$ " long from mounting face, with a  $\frac{3}{8}$ " split type bushing, and locking nut. LIST \$2.60

### MULTISECTION DIMENSIONS

DUAL CONTROL

TRIPLE CONTROL

## SINGLE CONTROLS

TYPE PQ

TYPE RQL

TYPE RQ

IRC Distributor Controls for Industry offer commercial users a wide selection of resistance values and two industrial shaft types. Shafts are fixed. This combination of wide selection of values and speedy Distributor delivery holds many advantages for industrial purchasers. These Industrial Controls are adaptations of the new, compact  $\frac{1}{8}$ " Q Control. Power rating is  $\frac{1}{2}$  watt, 500 volts maximum. Electrical rotation is the same with or without switch.  $\frac{3}{8}$ " bushing is brass and held to close tolerance for snug shaft fit.

Terminals are heavily tinned for easy soldering, and may be bent without becoming noisy. Two locating lugs are provided, either or both of which may be bent down if not needed. Molded base. Both Types PQ and RQ are supplied in standard tapers.

**TYPE PQ.** Full round  $\frac{1}{4}$ " shaft, approximately 3" from mounting face, with  $\frac{3}{8}$ " long bushing. Available in 33 stock values as shown. Regular IRC stock numbers are used with prefix PQ. LIST \$2.25

**TYPE RQ.** Very short screw-driver slot shaft,  $\frac{1}{4}$ " diameter and approximately  $\frac{1}{2}$ " long from mounting face with  $\frac{3}{8}$ " long bushing. Available in 33 values as shown. Regular IRC stock numbers are used with prefix RQ. LIST \$2.25

NOTE: Other distributor controls for industry—Types WP, WPRL—see page R-1255.

## DUALS AND TRIPLES

IRC Type PQ, RQ and RQL Industrial Controls are supplied as single controls. Dual Control and Triple Control combinations are available by adding IRC MULTISECTIONS.

# ADJUSTABLE POWER WIRE WOUND RESISTORS

IRC Power Wire Wounds are designed for continuous operation at full rated power. Derating is unnecessary even for the highest stock values. IRC Power Wire Wounds are full size, thus capable of efficiently handling greater wattage. Cooler performance assures longer resistor life, and safeguards critical components mounted adjacently. Clear, permanent markings show type, size, wattage, and resistance value; markings improve in legibility with temperature rise. Terminals are tin plated for easy soldering.

Improved ceramic winding forms have high insulating qualities, high mechanical strength and low coefficient of expansion. Special winding technique, developed by IRC, eliminates shorted turns or strains in the winding.

Improved insulation provides greater humidity protection and contributes to longer trouble-free service. Improved lug and lead terminals assure perfect electrical connections without strain on the windings, and are easily soldered.

# PRECISION WIRE WOUND RESISTORS

IRC Precision Wire Wound Resistors are designed and manufactured to exacting standards necessary to insure consistent accuracy in critical applications.

The unencapsulated resistor types of the former Hycor ceramic bobbin line of resistors have been added to the IRC WW series resistor line (see following page). This results in presenting a more extended line of unencapsulated precision wire wound resistors to the industry.

These resistors are made on modern equipment from specially selected materials. High reliability is assured by maintaining rigid quality control procedures throughout all manufacturing stages.

# CLOSE TOLERANCE PRECISTORS

## TYPE DC DEPOSITED CARBON RESISTORS

**1% ACCURACY  
PRECISION PACKAGED  
1/2, 1 and 2 WATTS**

IRC Deposited Carbon Precision Resistors offer a unique combination of close tolerance, stability and economy. Pure crystalline carbon is bonded to selected ceramic cores to produce a resistor ideally suited to the requirements of instrumentation, advanced electronics and critical television circuits.

Deposited Carbon Precistors provide a combination of characteristics not found in any other resistor type. The wide range of values, accuracy, high stability, low voltage coefficient, excellent frequency characteristics, predictable temperature characteristics, high voltage rating, low noise level and small size of PRECISTORS make them superior for many popular applications.

IRC Type DC Deposited Carbon Precistors are available in three sizes: 1/2 watt (body size 1/8" x 3/8"), 1 watt (body size 1/4" x 3/4"), and 2 watts (body size 3/16" x 3/2"). Accuracy ±1% (25°C).

For complete protection against scratches, jars and surface injury IRC PRECISTORS are factory packed in capped plastic tubes. This special precision packaging also safeguards these close tolerance resistors against excessive handling.

PRECISTORS**

**TYPE MBC**

IRC's Molded Boron-Carbon Precistor is a precision film type resistor that incorporates the added advantages of a fully insulated unit. The molded plastic housing provides complete mechanical protection, and minimizes the effect of moisture. Because of its greater heat dissipating capacity, load life characteristics for the Type MBC are improved over those of either boron or deposited carbon unmolded units.

**APPLICATIONS**

Type MBC Molded Boron-Carbons are particularly suited for applications where unmolded boron or deposited carbon units cannot be used due to the risk of mechanical damage to their coating, insulation breakdown, or high moisture change.

**SPECIFICATIONS**

**WATTAGE RATING:** 1/2 watt at 40°C. ambient (per MIL-R-10509A), derated to 0 at 120°C.

**RESISTANCE VALUES:** 10 ohms to 510K ohms.

# INSULATED CHOKES

IRC Insulated Chokes are available in four sizes designated as types CL $\frac{1}{2}$ , CLA, CL1, and CL2. All four are fully insulated in molded phenolic housings for full protection against high humidity. The insulated housing also guards the winding from abrasion and physical damage, and prevents any possibility of shorting to chassis. Color coded for easy identification.

The wide range of size and characteristic combinations available permits accurate replacement with respect to space and electrical requirements.

## KOOLOHM® WIREWOUND RESISTORS

- Wound with wire which is insulated before winding with a flexible ceramic coating. Coating is impervious to 1000°C.
- Each resistor is "tropicalized" by a

- to inner resistance
- Insulated wire permits winding higher values in layers, which means much smaller physical sizes
- Insulated wire permits true "non-inductive" wound designs

Glazed ceramic outer coating and new type end seals for complete protection against all climatic conditions

- May be mounted anywhere — even flat against chassis or grounded parts
- Extremely high insulation resistance — 10,000 volts from surface of ceramic jacket elements.

## BLUE JACKET® WIREWOUND RESISTORS

- Dependable in Critical Equipment, Yet Priced Low Enough for Radio-TV Service Work
- Ideal for Point-to-point, Terminal Board, and Printed Chassis Wiring
- Will Meet MIL Performance Requirements with 35% to 50% Reduction in Size
- Crazeproof Vitreous Enamel Coating Guards Against Humidity and Prevents Failure from Electrolysis
- Hot Spot Rating of 300°C Rise above 40°C Ambient Temperature
- Standard Resistance Tolerances to 50 ohms, ±10%—over 50 ohms, ±5%.

All SU-No. 4—Linear Taper. (see Explanation of Mallory Tapers, page 2, Mallory Resistors and Controls section, this catalog).

## Explanation of Mallory Tapers

Taper Number 1 is a modified logarithmic left hand taper in the carbon type of control and an approximation to this logarithmic taper in the wire-wound type. This taper should always be used in shunt circuits, as in usual antenna and audio circuits, or where only the center and left hand terminals are used.

Taper Number 2 is a right hand logarithmic taper in the carbon and an approximation in the wire-wound type. Used in series circuits, as in cathode voltage controls, or where only the center and right hand terminals are used.

Taper Number 4 is a linear taper. Strictly speaking it is not a "taper" although commonly referred to as such. A linear "taper" is used wherever a control should be such that voltage change is proportional to the degree of rotation.

Taper Number 7 is made only in the wire-wound type of control and is a form of left hand taper. This taper is desirable for the antenna shunt plus bias control, wherein greater attenuation is obtained by increasing the bias voltage. The slight left taper then suffices to gradually reduce the signal to zero volume by the shunting action in the antenna circuit.

## Theater Speaker Controls

## Types HS and DC Deposited Carbon Resistors

(Resistors illustrated are approximately 1/3 actual size)

### Type DC ± 1% Deposited Carbon Precision Resistors

Mallory Deposited Carbon Precision Resistors are designed primarily as low-cost replacements for expensive wire-wound resistors in high-quality laboratory instruments. Their unique operating characteristics also make them ideal for replacement or substitution in all radio, television, electronic, or electric circuitry where stability, close tolerance, low-noise, and low inductance are desired. Average shelf life change will not exceed 1/4% per year. One thousand hour load life test indicates a maximum change not exceeding ± 1%.

These resistors are formed of pure, crystalline-carbon particles deposited on specially compounded ceramic. Each Mallory Deposited Carbon Resistor is equipped with 1/2" tinned copper, axially-placed leads rigidly attached to silver plated brass end-caps. Baked moisture-resistant insulation is incorporated in construction for protection against humidity. Each resistor is calibrated at a nominal temperature of 25°C. and each has a negative temperature coefficient range of approximately .03% for low resistance values, through .08% for resistances exceeding 1 megohm.

Each unit is inspected according to requirements of accepted government specifications, and each is marked with resistance value, type and tolerance, except the smaller types which have a separate label.

### Type HS ± 10% Deposited Carbon Resistors

For the first time the well-known advantages of high-stability low inductance, and small size of Mallory Deposited Carbon Resistors are available at moderate cost for use in many commercial applications where accuracy of resistance is of less importance than the consistency of operation over long periods of time and through many changes of temperature. Average shelf life change will not exceed 1/4% per year. One thousand hour load life test indicates a maximum change not exceeding ± 1%.

Television servicemen, laboratory technicians, and model shop engineers, in particular, will find these resistors ideal for critical television and other oscillator circuits where constancy of resistance is of utmost importance. The electrical and mechanical characteristics of HS types are exactly the same as similar DC types, with exception of the resistance tolerance which has been increased to ± 10% of the nominal value. The same quality and temperature coefficient, as featured in the DC types, is maintained throughout.

## 5% and 10% TOLERANCE, 1/2, 1 and 2 WATT RATINGS

Fixed composition resistors of highest quality, feature permanent electrical characteristics, small physical size for a given wattage rating, great mechanical strength. Leads are differentially tempered—prevent sharp bends near the resistor body while still permitting easy forming to fit a particular wiring arrangement.

Resistor bodies are molded brown phenolic with coding in brilliant colors.

2W 1W 1/2W (ACTUAL SIZE)

These resistors are now supplied in attractive new containers. Three convenient sizes with pull-out sections accommodate standard quantities of 1/2, 1 and 2 watt resistors.

A G-H innovation, Gold and Silver container ends, permits instant identification of 5% or 10% tolerance units. Quantity, wattage and resistance values are also clearly printed on these ends. These attractive black and green containers with Gold and Silver ends provide a space-saving, functional shelf display.

## COMPOSITION-ELEMENT CONTROLS

These "Pick-A-Shaft"™ and "Ad-A-Switch"™ controls will take any of the shafts listed on page R-24, including High Voltage Coupler and insulated shaft. Your choice of any one of the 12 shafts listed (this does not include insulated shaft) with each control. "A47F" and "A47" controls use "SWE" switches, shown on page R-24. Tolerances of these controls are in accord with RETMA standards — overall resistance tolerance of plus/minus 20% for all values up to and including 100K ohms; plus/minus 30% above 100K. Controls are available with factory-assembled shafts at no extra charge, by omitting prefix "A" from catalog number and designating type of shaft desired, when ordering. Example: 47-100K-S with FKS-1 shaft.

Graph Explanation:

- Taper S—Straight or uniform resistance change with rotation.
- Taper T—Right-hand 30% resistance at 50% of C.W. rotation.
- Taper U—Left-hand 1% resistance at 33 1/3% of C.W. rotation.
- Taper V—Right-hand 20% resistance at 50% of C.W. rotation.
- Taper W—Left-hand 20% resistance at 50% of C.W. rotation.
- Taper Z—Left-hand (log. audio) 10% resistance at 50% of C.W. rotation.
- Taper Y—Left-hand 5% resistance at 50% of C.W. rotation.

## POWER RHEOSTATS

U. S. Pat. 2,346,598

Clarostat Power Rheostats maintain their full power rating at settings as low as one-third rotation without excessive temperature rise. Standard overall resistance tolerance plus/minus 10%. Closer tolerances are available upon special order.

The metal cored winding is embedded in a cold-setting, inorganic cement and is thereby bonded to the ceramic body. Unit mounts through a single hole. A locking pin is provided for rear panel mounting.

## SOUND-SYSTEM CONTROLS

For proper control of volume and tone alike, Clarostat offers a choice of several controls, such as L- and T-pads, output attenuators, and individual-speaker volume controls as used for drive-in theatre instal-

lations. These are not ordinary radio controls but rather sound-system controls designed and built for critical requirements.

### CONSTANT-IMPEDANCE CONTROLS

Self-compensating volume controls known as L-pads and T-pads for use in sound systems. Rated at 2½ watts DC, but will handle up to 10 watts audio. Continuous range from 0.5 to 30 decibels attenuation in 90% rotation. Last 10% affords infinite attenuation. With Clarostat constant-impedance L-pads and T-pads the input and output impedances of associated circuits can be kept within the limits of a constant required value. Knob and dial plate furnished with each control.

### CONSTANT IMPEDANCE OUTPUT ATTENUATORS

Series "CIB" rated at 10 watts, but will handle up to 30 watts in audio circuit. Linear attenuation provided in 3 decibel steps up to 24db, then 30db followed by infinity. Equipped with dial plate and bar knob. One-hole mounting, 3/8" bushing diameter, 1" shaft. This control has been developed to meet the need for a constant-impedance attenuator capable of handling considerable power without measurable insertion loss. Recommended as an output level control for power amplifiers, or as an input attenuator for individual or for a group of speakers in a public address system.

### SPECIAL DRIVE-IN THEATRE L-PAD

To meet the needs of theater sound systems, more especially those of drive-in theaters, a special 8 ohm L-Pad is now available, containing two separate windings of 5 ohms and 40 ohms. Also 50 ohm linear rheostat and 35 ohm tapered rheostat, as listed. Units have 3/8-32 bushing 3/4" long, and 1 1/2" round shaft.

## SPACE-SAVER CONSTANT-IMPEDANCE ATTENUATORS

Characterized by reduced depth and diameter, these attenuators are ideal for use in remote control of speakers since they are small enough to be installed in standard electrical boxes in the home, office, stockroom, etc.

These controls are rated 2 watts D.C., but will handle up to 4 watts of audio, depending upon the type signal being handled. (As the frequency becomes constant, wattage reduces to 2 watts or the same as the D.C. rating).

## "GREENOHM"\* WIRE-WOUND RESISTORS

**FIXED TYPES** Wire-wound resistors for most rugged applications. Will withstand tremendous overloads and temperature changes without altering resistance values or appearance. Wire windings on high grade ceramic tubing and coated with special inorganic cement. In accordance with RETMA standards, overall tolerances are  $\pm 5\%$  for resistors of 50 ohms and higher. For resistors of 49.9 ohms and lower, overall tolerances are  $\pm 10\%$ .

**ADJUSTABLE TYPES** Same electrically and mechanically as Fixed types, but incorporating sliding band or bands for tapping any desired resistance values. Slider band tightened by means of screw. In accordance with RETMA standards, overall tolerances are  $\pm 10\%$ .

**POWER RESISTOR DECADE BOX**

The Resistance Decade Box Model No. 240C allows changing resistance at a flip of the switch in a working circuit. Any value obtainable from 1 ohm to 999,999 in steps of one ohm and at a maximum power rating of 225 watts using a maximum of 1000 volts D.C. or 660 volts A.C.

Resistance changing switches are of the type that prevents a resistance breakdown between steps, thus protecting delicate meters and measuring instruments in the circuit. Pointer knobs indicate at a glance the resistance value being used.

Clarostat "Greenohm" resistors are used

throughout. These are inorganic-cement-coated wire-wound power resistors. The resistors are mounted on rigid metal supports. A baffle plate separating the resistor bank from the switch assembly protects the latter against heat.

The heavy-gauge metal case is finished in frosted gray wrinkle, with an etched black-and-aluminum front panel. 13 in. long; 8 1/2 in. deep; 5 1/2 in. high. Weight, 11 lbs.

SUGGESTED USES: Resistance determination. Load Resistance. Meter Multiplier. Calibrating Meters. Providing any desired ohmage as a universal power resistor.

## FIXED & ADJUSTABLE RESISTORS

Fixed taps available.  
Edison type base also available.

### ADJUSTABLE RESISTORS

Adjustable WIRT POWER resistors are made under the same specifications as the fixed. A portion of the winding is exposed longitudinally to which a slider contact band is attached. A screw-driver adjustable band is supplied with each resistor to make contact at any point of the exposed portion. Ratings are based on the entire resistance from terminal to terminal and rated proportionately to the point of the adjusting contact band. Loosen the band free of the winding before moving to avoid abrasion of the resistance wire.

### WIRE WOUND FLAT RESISTORS

Construction is of evenly spaced nickel alloy resistance wire wound on a special molded rectangular ceramic base. Terminal leads are permanently affixed by a special Patent Applied For process to insure positive and everlasting contact. These resistors are coated with a tough moisture resistant high temperature material. Center taps and other positioned taps can be furnished on special order to provide a wide assortment of styles in various ratings. Standard tolerance is  $\pm 10\%$ ; however, other tolerances are available. Resistors are permanently marked with resistance, ratings and manufacturers designation. Maximum surface temperature is  $250^{\circ}\text{C}$  in an ambient of  $40^{\circ}\text{C}$  at full rated load.

WIRT POWER resistors are produced to exacting quality standards for maximum reliability and long trouble-free operation. WIRT POWER resistors are rated for hot spot temperature of  $515^{\circ}\text{F}$  in an ambient of  $40^{\circ}\text{C}$  ( $104^{\circ}\text{F}$ ). They are available from stock in all standard RETMA resistance values.

### FIXED RESISTORS

**WINDINGS** — A low temperature coefficient resistance wire is precisely space wound on a low loss ceramic core. Maximum wire size is used consistent with wattage ratings and resistance.

**TERMINALS** — Bands are securely clamped and permanently secured to the winding and core to insure continuity of resistance. Wire terminals are affixed to all sizes of 10 watts and below unless expressly omitted.

**COATING** — Each resistor winding is protected with a coat of vitreous enamel fused on at high temperature to insure a moisture-proof, acid resistant barrier and rapid dissipation of heat.

**MARKING** — Each resistor is marked with resistance wattage and manufacturers designation. Special markings available if desired.

## METAL FILM RESISTORS

### NOBLETTE TYPE NA

### NOBLELOY TYPE NR

### DESIGN and CONSTRUCTION

A metallic resistance element is deposited on a low loss ceramic carrier using a pyrochemic process developed and patented by Continental. A layer of vitreous enamel protects metal film against unusual atmospheric conditions. They are calibrated to value by means of spiralled grooves cut into the film to increase the resistance path. The NOBLETTE with its axial leads and the NOBLELOY with radial leads permits the use of metal film resistors in a wider range of application.

Notable quantities of these metal film resistors are low inductance—initial accuracy and excellent resistance stability under adverse operating conditions.

Both types are stocked in standard tolerances of  $\pm 1\%$ . Also available in  $\frac{1}{2}\%$ , 2%, and 5%—prices furnished on request. When ordering, specify quantity, resistance, tolerance and type or wattage.

## VITREOUS ENAMELED RHEOSTATS

### CLOSE CONTROL RHEOSTATS

Underwriters' Laboratories Reexamination Service Listed

For many years the Ohmite line of ten wirewound, vitreous enameled rheostats, ranging from 25 to 1000 watts in size, has been the most extensive available to industry. Six of the most popular sizes have been carried in stock by Ohmite Distributors and at our factory. Now, the other four sizes, the Model G, 75 watts; Model P, 225 watts; Model T, 750 watts; and the Model U, 1000 watts are available from stock, thus making the entire line of ten sizes quickly obtainable for design and production needs and for emergencies.

**FEATURES OF CONSTRUCTION:** Ohmite rheostats are designed to produce permanently smooth, close control. The construction is all ceramic and metal; there is nothing to smoke, char, shrink, or shift. All models have insulated shafts with provision to keep the rheostat from turning on the panel. The resistance wire is wound over a solid ceramic core. Each turn is a separate resistance step and is locked against shifting by vitreous enamel. The core and base are also bonded by vitreous enamel. The pivoted universal-action-mounted contact brush is of copper-graphite or silver-graphite on the heavier current rheostats. It rides upon a large flat surface and assures perfect contact without wear on the wire. Pressure

at the contact and at the center lead are independent. The construction is patented under U. S. Patent No. 1,942,495 and Re-issue 19607; other patents pending. Ohmite Rheostat Models H, J, K, L, and N, all marked Series A, are listed under the Underwriters' Laboratories Reexamination Service.

**RATING:** The current carrying capacities shown in the tables are for use in *free air*; when units are enclosed, these currents should be reduced possibly as much as 30% to 50%, depending upon the degree of ventilation. The rated current will cause the rheostat to dissipate its rated wattage when the full resistance is in the circuit.

## OHMITE® STOCK AXIAL-LEAD RESISTORS

Ohmite axial-lead, vitreous-enameled resistors are compact, wire-wound units available in three stock sizes: 3-Watt ( $1\frac{1}{8}$ " x  $\frac{1}{4}$ " ), 5-Watt ( $1\frac{1}{8}$ " x  $\frac{1}{2}$ " ), and 10-watt ( $1\frac{1}{8}$ " x  $\frac{3}{8}$ " ) . . . The resistance wire and terminal lead are both welded to the end cap, utilizing the patented Ohmite welding technique. All have  $1\frac{1}{2}$ " tinned wire leads, are simple to mount, and occupy small space.

Axial-lead resistors are especially suited for printed circuits, terminal board, and point-to-point wiring applications.

The standard resistance tolerance is  $\pm 5\%$ , 50 ohms and higher; tolerance below 50 ohms is  $\pm 10\%$ .

## 2 WATT MOLDED COMPOSITION POTENTIOMETER - TYPE AB

The Type AB Potentiometer is an exceptionally high quality unit designed especially for industrial, laboratory, radio service and other uses where reliability is particularly important. Because the resistor element is molded, the unit has an exceptionally large safety factor. The power rating of 2 watts is unusual for a unit of such small size. The unit has a very low noise level and low voltage coefficient. It will pass the Army-Navy 200 hour salt spray test, specification AN-QQ-S-91. The single unit is 1-1/16" diameter and extends 9/16" behind the panel. The dual unit extends 1-3/16" behind the panel. The 2" long round shaft (including the 3/8" long mounting bushing) is available from stock on potentiometers with all three resistance tapers and on the dual unit. The screwdriver shaft with locking-nut is available from stock on the linear taper units only. A SPST switch, to be attached to the back of the control, can be supplied extra.

## 1/2 WATT MINIATURE POTENTIOMETER - TYPE AS

### Molded Composition Type

Only 1/2" in diameter, this control has a maximum continuous power rating of .5 watts at 70°C ambient (metal panel mounted - full resistance in circuit). Ideal for rheostat and potentiometer applications in small or light-weight electronic assemblies. In fifteen resistance values from 100 ohms through 5 megohms with linear taper. Locking type shaft is standard.

## VITREOUS ENAMELED RHEOSTATS

### Insulated shafts and mounting bushings

**Type A-25** — Will withstand rugged treatment under the most adverse conditions. It has unusually smooth mechanical operation. The terminals, made of strong corrosion resistant alloy, are permanently welded to the winding form. The wound ring is made an integral part of the refractory base by vitreous enamel. The phosphor bronze actuating arm, with its graphite brush, gives smoothest action and excellent electrical control. Shafts are insulated. Three terminals permit either potentiometer or rheostat use; and our new high temperature gray enamel gives an added safety factor.

**Types H-50, H-100, H-150** — These are our newest rheostats and they will give longer service and greater protection. They are designed for use under extremes of humidity and abnormal atmospheric conditions. The unique "buss bar" type brush automatically adjusts tension for complete, continuous contact. It eliminates backlash and prevents binding. It assures perfect contact with the entire winding surface. Our new high-temperature gray enamel bonding gives you an increased safety factor and better overall service. These improved rheostats are designed to comply with current standards of: (a) Military Specifications MIL R-22. (b) RETMA. (c) N.E.M.A. (d) "listed by Underwriters Laboratories, Inc."

## BLUE RIBBON RESISTORS

TABLE OF RATINGS

Blue Ribbon resistors differ from tubular resistors in that they are wound on an elliptical core. An aluminum bar through the center insures more even distribution of heat, avoiding hot spots.

Our gray enamel eliminates crazing which results in failure of the resistive element due to moisture penetration from humidity, salt and other severe atmospheric conditions.

Mounting studs—corrosion and rust resistant—peened to the ends of the thru-bar conduct heat to the mounting surface. You can stack two or more units. Our method of fastening the tube to the thru-bar prevents loosening.

In comparison with tubular units of equivalent wattage rating these resistors offer outstanding advantages: • Higher wattage rating per unit space requirement. • Reduction in space requirement. • Simple sturdy mounting, single or stacked. • Light weight. • Lower inductance.

Designed for and manufactured in accordance with JAN-R-26A specifications.

\*This rating based on a maximum temperature rise of 300 degrees C. with the Resistor mounted horizontally on a 10" x 10" x .040" steel plate supported horizontally 1/2" above a wooden surface.

When Resistors are mounted on a non-metallic base the nominal watt rating should be reduced by approximately 15%.

- a. **High temperature enamel**—bonds the wire to core and the core to base to afford greater safety factor where overloaded conditions are demanded.
- b. **Bus-bar construction** gives minimum resistance and ample safety under maximum current requirements. Made of alloy materials to fit wire size and current requirements of various resistance values and also to give minimum wear on wire.
- c. **Constant pressure contact arm**—This patented feature is made of high carbon spring steel to insure uniform pressure of contact brush on both collector ring and winding surface and to eliminate troublesome contact resistance.
- d. **Tripod Mounting Frame**—Alloy casting designed to give greater safety factor under shock and vibration.

**WIRE WOUND  
ENCAPSULATED  
PRECISION RESISTORS  
SURPASS MIL-R-93A**

Completely impervious to penetrating effects of salt ions, humidity, moisture, and corrosive gases and vapors, Daleohm's new encapsulating material has very high di-electric strength. All materials are carefully selected for coefficient of expansion characteristics, thereby eliminating the possibility of distorted wiring and shorted turns which are quite common in similar types of resistors. Type WW resistors are all non-inductive, pi-wound.

- Resistance range 0.1 ohm to 5 megohms
- Tolerances .05%, .1%, .25%, .5% and 1%
- Powered at .1 watt to 2.5 watts, depending on size, type and tolerance
- Temperature coefficient 0.00002/Deg. C
- Terminals: WWL-lugs; WWA-axial leads; WWP, parallel leads; WWR-radial leads

## AUTOMATIC REGULATION

### What It Is!

The **AMPERITE Ballast-Regulating Tube** is an automatic "rheostat" designed to keep the current in a circuit at a definite value, for example, 0.5 amps.

Should the supply voltage increase, this Ballast-Regulating Tube will automatically increase in resistance to take up the increase in supply voltage.

MINIATURE

Being a constant current device, the **AMPERITE Ballast-Regulating Tube** can be used only to regulate a constant load—fixed wattage. Thermostatic relays can sometimes be included in these regulators to reduce initial surge.

We strongly recommend that you send us your specifications on special problems, and let us recommend the **BALLAST TUBE** you need.

(T) = Threshold Current & Voltage

## ADVANTAGES

Light . . . Compact . . . No Moving Parts (Will withstand vibrations of 10G min.) (Not affected by altitude or humidity changes) . . . Can Be Changed as Easily as a Radio Tube . . . Operates Equally Well on AC or DC . . . Inexpensive.

## CAPACITIES AVAILABLE

Current values of 60 ma. to 5 amps; threshold voltage 0.4 to 30 V. Maximum dissipation per **AMPERITE** 50w per tube (ST19 bulb). Any number of **AMPERITES** with the same voltage range can be operated in parallel. **AMPERITES** should not be used in series.

## AGEING

**AMPERITE** Ballast Tubes may change approximately up to 3% in current if aged for 4 to 8 hours, at maximum voltage. They will change very little thereafter.

## LIFE EXPECTANCY

Average life if operated as recommended . . . . . 2000 Hours  
 If operated continuously at maximum voltage . . . . . 1000 Hours  
 If operated continuously at 80% maximum voltage . . . . . 5000 Hours  
 If filament is operated below glow point . . . . . 5000 Hours up

In operation, the Amperite filament starts to glow at one point; as the voltage is increased, the glow spreads over the entire filament. Like incandescent lamps, turning Amperite on and off reduces its life, especially if operating near its maximum voltage.

## TIME LAG CHARACTERISTICS

Time lag encountered in an Amperite Ballast Tube depends upon the wattage consumed by the ballast and the size of the bulb. Where the wattage is small for the size of the bulb, the action can be made practically instantaneous—less than 1 second. In such cases the bulb will remain at practically ambient temperature. When the wattage is high enough to heat the bulb to a temperature uncomfortable to the hand (160°F) the lag might be as much as several minutes for final readings—but normally reaches within 90% of final readings within a few seconds.

## AMPERITE NUMBERING SYSTEM

In general, the **AMPERITE** number approximately denotes the current—voltage threshold value. For example:

AMPERITE NUMBER	3-4	3H4	10-7	12-11	12H11
THRESHOLD CURRENT	0.3	0.35	1.0	1.2	1.25
THRESHOLD VOLTAGE	4.0	4.0	7.0	11.0	11.0

We strongly recommend that you send us your specifications on special problems, and let us recommend the **BALLAST TUBE** you need.

### AMBIENT EFFECTS

Ambient temperature variation of  $-50^{\circ}$  to  $+70^{\circ}\text{C}$  will change the current value of an Amperite approximately 2% on regulating portion of curve shown directly below. Being hermetically sealed the Amperite is not affected by altitude or humidity changes.

We strongly recommend that you send us your specifications on special problems, and let us recommend the BALLAST TUBE you need.

Amperite Ballast-Type 6-4 current voltage characteristic under ambient conditions of  $-55^{\circ}$ ,  $24^{\circ}$ , and  $85^{\circ}\text{C}$ . The percentage change with ambient is approximately the same with all type Amperite ballasts.

This diagram illustrates far superior regulating characteristics of the Amperite Ballast-Regulating Tube.

STANDARD SIZES available for various wattage consumption . . . For good regulation, a bulb should not be required to dissipate more than 50% of maximum wattage.

### BATTERY CHARGING AND DISCHARGING

Amperite Ballast Tubes are very successfully used for keeping the current constant in charging and discharging batteries. Any number of Amperites of the same voltage range can be placed in parallel in order to obtain the proper current. The current can be kept to  $\pm 1\%$ . Advise voltage variation and currents desired.

On 115V supplies  $\pm 1\%$  regulation can be obtained by shunting the load or transformer primary with a G.E. 3W-NE-44 Neon Lamp. 1 G.E. 3W-NE-44 Neon Lamp should be used for each 50 watts of load. This is the cheapest and most compact method of obtaining  $\pm 1\%$  regulation. The Amperite is not affected by frequency changes.

### POWER SUPPLIES

We strongly recommend, for any particular application, to fill and return one of our special problem sheets (ASP 343) and permit us to recommend the most suitable AMPERITE.

Power Supply	Dry Cells	6 Volts	12 Volts	26 Volts	115 Volts
Supply Variation	2.2-3.0V	5.5-7.5V	10.0-14.0V	22.0-30.0V	105-125V
Desired on Load	1.8-2.0V	3.9-4.1V	6.1- 6.4V	17.5-18.5V	90- 95V
Required on AMPERITE	0.4-1.0V	1.6-3.4V	3.9- 7.6V	4.5-11.5V	15- 30V
Current Variation	.29-.32a	.29-.31a	.29-.31a	.29-.32a	.29-.32a

The above chart shows the maximum load voltage for the given supply to obtain  $\pm 2\%$  regulation on load. Better regulation is obtainable by increasing the voltage across the AMPERITE. In general, the higher the percent of the supply voltage taken by the AMPERITE, the better the regulation.

We strongly recommend that you send us your specifications on special problems, and let us recommend the BALLAST TUBE you need.

## CONSTRUCTION

The TRU-OHM power rheostat will provide smooth variation of resistance under the most severe operating conditions. The all ceramic-metal construction insures dependable service even at extreme operating temperatures. An extra deep core, on which the resistance wire is toroidally wound, means a more conservative power rating.

Types R-50, 75, 100 and 150 have an exclusive torsion spring assembly which provides uniform pressure of the contact brush against the winding at all times. Current flows from the brush through a flexible shunt wire to a large size slip ring. Positive, low-wear contact is maintained against the center terminal by an adequate compression spring. Back lash in the rotating assembly is reduced to a minimum by means of the design. A positive stop is provided at the extremes of rotation entirely independent at the contact arm assembly.

## SPECIAL FEATURES

TRU-OHM rheostats are available with many extras such as off positions, screw driver control, shaft assemblies for special mounting conditions, etc. Prompt engineering service is available for all special requirements. Knobs furnished upon request.

## PLASTIC and RUBBER MICROPHONE CABLE MULTI-CONDUCTOR — ARMORED CABLE

### PLASTIC MICROPHONE CABLE

Designed to stand up under physical abuse and is resistant to oil, moisture and aging for long life. These cables have low capacitance, high insulation resistance and low attenuation at audio frequencies. Will not stain or mark.

#1839 is used for high impedance microphone, lapel, contact, crystal, ribbon, velocity and Hi-Fi interconnecting cable.

#1840 is used for high impedance lapel microphones.

#1841 is used for crystal, ribbon and other impedance microphones.

Above recommended for Hi-Fi installations because of low loss and low capacitance.

#### PLASTIC — ONE-CONDUCTOR MICROPHONE CABLE

## BIRFLON TEFLON TUBING BUS BAR WIRE - INSULATED BUSHINGS

### NEW THIN WALL

### TEFLON TUBING

Spaghetti, Steeving, made from "TEFLON" is used in electronic equipment primarily for connection of components. Where temperature range and space is a factor, spaghetti made from "TEFLON" is ideal, because its continuous service temperature is 250° C. This is more than 100° C. above other materials used for spaghetti. "TEFLON" is a Class C dielectric. Even where 100° C. temperature applications are indicated "TEFLON" will be of help in simplifying the soldering technique since "TEFLON" is not harmed by the hot barrel of the soldering iron—therefore, the assembly of aircraft guided missile, hermetically sealed, potted components and communication equipment is greatly speeded up.

### ADDITIONAL ADVANTAGES OF BIRFLON T-500 "TEFLON"\*

- Good dielectric strength (500 to 1000 volts mil)
- Lowest dielectric constant (2.0) and dissipation factor (0.0002) of any solid dielectric
- NO change of electrical properties with temperature (25° C. to 250° C.) or frequency (60cps to 100mc.)
- Service range from -320° F. to 500° F. and retains toughness and flexibility throughout temperature range from -110° F. to 540° F.
- Non-flammable, Non-explosive
- Unaffected by corrosive atmospheres and fungus
- Zero water absorption
- Full range of colors for identification

### ADDITIONAL USES FOR BIRFLON T-500 SPAGHETTI

- SHEATHING FOR SEVERAL WIRES
- MEDICAL APPLICATIONS
- INSULATION FOR BARE WIRES
- INSTRUMENT TUBING
- REPLACEMENT FOR HOOK-UP WIRE INSULATED WITH "TEFLON"

BIRNBACH is your best source of tubing, made from "TEFLON". Your inquiry and order will receive immediate attention. We offer wide range of standard sizes, colored tubing and special sizes, quick delivery and right price.

## ELECTRONIC WIRES & CABLES

### microphone cables plastic

All Belden Microphone Cables are exceptionally limp with long flex life, low capacitance, high tensile strength, and high resistance to abrasion.

For Hi-Fi installations, 8401 and 8411 are recommended as connector cords because of their low loss, and low capacitance.

Plastic Microphone Cables, because of their non-marking jacket and lightness in weight, are excellent for use in audience participation programs.

Belden Broadcast Audio Cables are designed to meet the most exacting requirements of the industry for trouble-free, dependable service. High insulation resistance, precision cabling of the conductors, and a high percentage of shielding assure a low noise circuit, free from cross-talk. Spiral wrap copper shield plus drain wire plus shield isolation eliminate current loops so often found troublesome in this service.

## magnet wire

Nylclad magnet wire combines the most desirable features of Formvar with the well-known toughness and solvent resistance of Nylon enamel.

For difficult and exacting windings, these plus values may represent the difference between low and high rejections.

Nylclad will out-perform all other A.I.E.E. Class A, film-coated wires with respect to: (1) ability to withstand winding abuse and forming operations; (2) resistance to the solvent action of insulating varnishes and all types of thinners; (3) resistance to softening at elevated temperatures; (4) solvent crazing; (5) windability.

## THERMOPLASTIC INSULATED HOOK-UP WIRE

U/L Voltage Rating—300 Volts Max. Single and Two-Conductor Twisted Cable; Color Coded

Rome Synthitol is a polyvinyl chloride type of thermoplastic insulation impervious to oils, acids, alkalis, moisture and flame, and possessing unusually high dielectric strength. Colors are of gem-like permanency. Approved by Underwriters' Laboratories where exposed to temperatures not exceeding 80° Centigrade or where exposed to oil at temperatures not exceeding 60° Centigrade with ratings at 300 and 600 volts as indicated below. The Underwriters' approval seal appears on every factory length reel of Rome Synthitol.

Rome Synthitol is specially designed for the chassis and sub-chassis wiring of radio and television receivers and transmitters as well as all other types of electronic equipment. It has physical and electrical characteristics of unusual permanency.

**SPECIFICATIONS**  
Conductors: Annealed tinned solid or stranded copper conforming to A.S.T.M. Specification B 33 and/or Underwriters' Standards.

## PERMALINE TV TRANSMISSION LINES

COLUMBIA is first to offer a television transmission line with an insulation so good that it can be **GUARANTEED IN WRITING** to give a service life far beyond the normal life of brown Polyethylene television lines. PERMALINE is a high molecular weight Polyethylene containing carbon black for maximum resistance to sunlight, which has been proven the chief factor in deterioration of ordinary television lines. The insulation value of 50 Mils of PERMALINE is equal to over 150 Mils of conventional brown Polyethylene.

Electrical characteristics of PERMALINE are very similar to Brown Polyethylene television lines but as there is no deterioration attenuation remains constant, instead of increasing as is the case with brown Polyethylene, which becomes brittle and cracks. This is truly the first new development in television transmission lines in ten years.

## POCKET PAK SPOOL DISPLAY

A very compact display in two square feet of floor space, contains 192 spools of 48 different electronic and hook-up wire items. This attractive display will constantly remind your customer of his wire needs. No need now to spend costly time measuring and pricing small quantities of wire. A complete description of each type is printed on the spool, in addition to the stock number. Full description of all spools on pages 19 and 20 of cat. 107.

## PERMALINE VHF - UHF TELEVISION TRANSMISSION LINE

Since the introduction of this cable in May 1956, it has been proven beyond any doubt that this cable has no equal for reliability over the entire range of VHF and UHF channels under the most adverse conditions, such as salt spray, sunlight, extremes of heat and cold, stress cracking, chemical fumes, whipping in high winds, etc. In many areas throughout the country where other cables have failed due to salt deposits on transmission lines, this cable has given satisfactory reception at all times. Foam polyethylene tubes provide excellent low loss dielectric and require no sealing. 22 gauge solid copperweld conductors mean high tensile strength so necessary where whipping of cable is a problem. Heavy duty jacket of high molecular weight BLACK PERMALINE POLYETHYLENE is a protection against all hazards. We believe this is the finest all-purpose television transmission line available today. Impedance is 270 ohms, nominal attenuation is 3.2 D/B at 500 M/C and 4.6 D/B at 900 M/C. Cable size is approximately .295 x .402.

- MAY BE LOWERED QUICKLY . . . for extra safety in hurricanes or unusual weather . . . for antenna adjustment or repair.

- WON'T RUST . . . CORROSION RESISTANT, no rust streaks on tower or on adjacent buildings.

- AUTOMATIC LOCK-UP, can't get out of control . . . easy to crank up to full height. . .

You do not have to crank up the entire tower before you can secure the guys . . .

"Guy as you go", a completely safe, simple procedure.

- (1)—Anchor hinged feet, push up into vertical position. It's light . . . about 1 pound per foot.
- (2)—Secure guys on lowest section.
- (3)—Crank up next section.

- (4)—Secure guys. Repeat steps 3-4 until tower is at its full height.
- (5)—Stand back and admire your ALPAR tower.

These crank up towers are available in three different models, the basic difference between them being in the height — and cross-section — of the tower sections. The desired combination will normally be selected upon the basis of overall height and/or the height of the tower with all sections lowered, i.e., 6', 12' etc. Refer to chart below.

Use Antenna Mount Port CA-1 with all M-90 towers.

Where rotator is used, advise diameter and factory will recommend tower section for adequate fit.

Eliminate adjacent channel interference, permit reception of weak, distant stations normally blocked by a strong local channel.

BEFORE

AFTER

TRAP-EASE "KNOCKS OUT ADJACENT CHANNEL INTERFERENCE". This tunable "deep notch" antenna trap (greater than 50 db) permits TV viewers to remove "beat" or "herringbone" patterns caused by adjacent channel sound or video carriers. Permits clear reception of even weak distant stations.

Works with any TV receiver and any 300 ohm antenna that would normally bring in pictures from the distant stations if the interfering adjacent channel was not on the air. Does not affect reception of regularly viewed channels.

# POLYSTYRENE ROD — TUBING — SHEET

For radio and electronic applications, because of its very low loss factor at ultra high frequencies, Polystyrene is the ideal material for insulators, coil forms, shields, etc. It has excellent arc resistance, is non-tracking and has splendid insulating properties. ## THE MIDGET OFFERS MAJOR ADVANTAGES

**Low-cost soldering**—Solders more efficiently, using only approximately one-fourth wattage normally used.

**Fingertip operation**—Only 8 inches long, weighs but 1 $\frac{3}{4}$  ounces. Styled for fingertip grip.

**Quick, continuous heat**—Famous G-E heater built into Ironclad copper tip for rapid heat transfer and tip temperature recovery.

**Easy renewal**—Ironclad tip and heater assembly are replaced as a unit merely by unscrewing from handle.

**Long life, low maintenance**—Low voltage permits use of heavy, long-lasting nickel-chromium resistance wire. Less maintenance is required with long-lasting Ironclad copper tip.

# ESICO Electric Solder Pots

This small pot is used largely for individual dipping of small parts and reaches a temperature of approximately 750°. For higher temperatures, it is possible to use either a #36 or a #60 element. See table below for details.

**No. 70T** This is a thermostatically controlled pot, maintaining a temperature of 400/600° to within plus or minus 4°. Adjustable control permits the pot to be used anywhere between these two temperatures. See table below for details.

This pot is used for dip soldering of bundles of lead wires and where a slightly hotter pot is required than the #12. It operates at approximately 750°. If a higher temperature is required, a #60 element may be used. See table below for details.

**No. 75T** This pot is similar in operation to the #70T, but is intended for the dipping of small panels which cannot be accommodated in a round pot. Temperature range is 400/600° plus or minus 4°. The pot is also available without a thermostat but is then catalogued as #75. Without a thermostat, the pot reaches a temperature of 850°. See table below for details.

This pot is used for volume tinning and operates at a temperature of 800°. On occasion where production requires greater heat drain capacity, elements of a higher wattage than the standard 325 watt have been supplied. However, we recommend the use of the #70 600W Pot for this greater heat requirement and higher temperature. See table below for details.

**No. 80** This pot is intended for printed circuit panels and is thermostatically controlled. Temperature range is 400/600°. The pot stands on 4 corner posts in a sand tray, which has screws for leveling. See table below for details.

This is a high heat pot reaching a temperature of approximately 900°, and has considerable heat drain capacity. Where pots are required for 220V operation, longer element life will be secured than in the case of the #60. See table below for details.

**No. 90** This is a high temperature pot intended for silver soldering, and will maintain a temperature of 1300/1500°. See table below for details.

This sand tray will accommodate all of the round base solder pots shown on this sheet. The tray is fitted with leveling screws. See table below for details.

## ESICO Luger Gun

**SOLDER MELTING CAPACITY:**

The Model "C" is fully equivalent in solder melting capacity to 150 watt professional model guns on the market.

**BALANCE:**

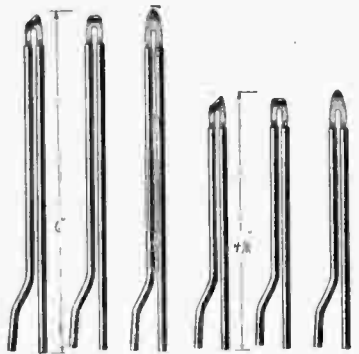

The LUGER, with its transformer built in the handle, has a very much superior balance over conventional soldering guns and there is none of the TIP HEAVINESS experienced with conventional guns.

**TIP SHAPES:**

The design and style of tips available for use in the LUGER fills a long felt need, and many soldered connections inaccessible to the average gun can be reached with LUGER tips. It is also possible to unsolder and pry off wires and components with the Model AB Tip.

### TECHNICAL ADVANTAGES

#### ERSIN FLUX

Ersin Flux is exclusive to Multicore and will not be found in any other solder. It is a high grade, water white rosin, homogeneously activated.

Ersin Flux has a vigorous fluxing action and possesses the non-corrosive and protective features of the original rosin. Soldered joints made with Ersin Flux do not corrode even after prolonged exposure to any degree of humidity. Ersin Flux reduces the surface tension of molten solder, causing it to wet metals rapidly, increasing speed of operation with resultant production economies.

Free from objectionable odor. Non-toxic in use. Leaves nothing but pure rosin on the work after soldering, and may be used wherever plain rosin is specified.

**ONLY SOLDER MADE WITH  
NON-CORROSIVE, EXTRA-ACTIVE  
ERSIN FLUX!**

#### MULTICORE SOLDER

Five separate cores of flux eliminate possibility of no flux in a portion of the wire, which may occur in single cored solder. Guaranteed continuity of the flux stream prevents "dry" joints, i.e., those having high electrical resistance.

Although there are five cores of flux in Multicore, the total percentage of flux to solder is less than many single cored solders.

Very rapid melting results from the multiple core construction which provides thinner walls of solder than are found in the same gauge single cored solder. Multicore's unique properties make perfect joints possible on difficult metals and alloys, even if oxidized.

Ability to tin rapidly produces perfect joints with less solder. Greater coverage per pound.

**HANDLES**—are Hi-Impact Styrene 4" x 3/8" hex—won't roll off the work bench.

**METAL ENDS**—(separated from each other) non-magnetic stainless steel, to which solder won't adhere. Are firmly seated in handles and are twist-proof.

**FORKED END**—straddles the wire and with a slight twist, grips it for easy unwinding and removal, or guides it into another lug for soldering. Since handles act as insulation, there is no danger of shock when working on sets in operation. 1/8" forks are made especially for use on printed circuits and transistors.

**SPADE END**—is a reamer to clean lug holes of solder.

**CURVED END**—can be used as a scriber for marking chassis. As a circuit tracer when looking for loose connections. As a dial cord stringer. Hook can be bent to a 90 degree angle if desired.

**WIRE BRUSH**—has approx. 200 bristles of stainless steel wire .0035 in dia. For use in cleaning connections before soldering, brushing out splattered solder and in repairing printed circuits.

**KNIFE & SCRAPER**—for cutting and repairing printed circuits.

These soldering aids are available in lots of 200 or more with name and address in a two line imprint. Details on request.

# Thermo-Tip instant heat

## Lightweight Resistance Soldering Tools. Especially Designed for Faster Positive Production Soldering of Miniature and Subminiature Parts

An efficient production tool expressly designed for soldering electronic circuits and parts, aircraft connectors, pin-type plugs, wire-to-wire, terminals, instruments, and printed circuits. Its pencil-small element gets into tight spots and is so much lighter and easier to handle than a soldering iron or gun that a woman can use it all day without fatigue!

### INSTANT RESISTANCE HEATING

Thermo-Tip is so fast that many joints can be soldered in less than 1 second! It heats by passing a high amperage current through wires, terminals, connector pins, etc. For power savings full rated wattage is used only when actually soldering.

### CUTS SOLDER VOID REJECTS

Resistance principle requires that joint being soldered be hot enough to melt the solder. Even an inexperienced person can get sound joints every time. Less solder will be necessary, too. Uniform heat cuts solder void rejects to a minimum.

### PREVENTS HEAT DAMAGE TO DELICATE PARTS—"PIN-POINTS" THE HEAT

Only the part being soldered is heated. Surrounding parts are not burned or melted by a hot tip near them. Thermo-Tip heats so fast that leads

can be soldered before resistors, transistors, diodes, condensers, printed circuits, terminal fibre, etc., are damaged or other connections loosened. Power units permit selection of outputs to meet heat requirements of the job.

### SAFE-LOW SECONDARY VOLTAGE

Soldering "pencil" uses harmless low voltage and high amperage from step-down transformer. Fire hazards are reduced, too, because the electrodes heat only when in use. No operator burns because heat is confined to electrodes.

Cat. No. 12-124 Power Unit and Cat. No. 12-157 Double Metal Attachment Tool, shown soldering large telephone jack.

Double Metal Attachment Tool. Cat. No. 12-157, shown soldering miniature relay.

Double Carbon Attachment Tool. Cat. No. 12-155, shown soldering resistor board.

250-Watt Power Unit  
Cat. No. 12-123 List Price \$34.90 ♦ Suggested Resale \$20.95.

Includes primary lead and secondary leads. Primary 115 V., 60 cy. only. This higher watt unit will handle all the work listed for the 125 watt unit at a faster rate and will solder larger components. Power is supplied to attachments by high and low secondary leads.

### How to Select Proper Attachment Tools

In selecting the proper soldering attachment tools, consideration must be given to the following:

- Size of wires and terminals.
- Available working space.
- Production speed required.
- Adaptability to jig soldering.
- Sensitivity of components to heat.

The 12-157 Double Metal Attachment with the 12-124 Power Unit is the most generally useful combination—

handling the widest variety of work.

On large work, the 12-155 or 12-156 Double Carbon Attachments are used, depending on space available.

The 12-141 and 12-142 Single Electrode Attachments are used where work lends itself to jig soldering (as in aircraft connectors). Ground wire clamped to jig makes jig part of circuit. Ground wire and clamp are furnished as part of the attachment tools.

Chisel-Tip Irons 12-143 and 12-144 are available for those few applications where irons are necessary.

# KRYLON CRYSTAL-CLEAR

## ACRYLIC SPRAY COATING

for Television, Radio, Electronic Use

- prevents corona in high voltage sections
- keeps lead-in connections tight
- prevents rusting and pitting of antennas

Just spray it on — that's all! No special equipment needed. Krylon dries in a few minutes to form a hard, waterproof coating that seals and lasts. Resists climatic conditions, salt spray, etc. . . . doesn't dry out or crack. Krylon, due to its high dielectric strength, prevents many of the causes of picture fading and high-voltage section losses.

"KRYLON-izing" is standard procedure in TV installations! And for one good reason: it pays off in dollars and cents!

### Krylon Characteristics

Dielectric constant of 3.2 to 3.7 (1,000 cycles)

Dielectric strength of 400 to 800 (number of volts necessary to cause an electric arc through a Krylon coat one mil thick)

Electrical resistance of  $10^{10}$  ohms/cm<sup>2</sup>.

Cut down contact service calls—easy with Krylon

# FEEDTHRU — STEATITE PILLARS — CORRUGATED CERAMIC — STANDOFF INSULATORS. TRANSMITTING SOCKETS

## BIRNBACH FEEDTHRU INSULATORS

Made of highly vitrified, low absorption porcelain smoothly glazed to prevent accumulation of dust or dirt. Maximum strength is achieved by the proper proportions and flat mounting surfaces. Long insulating sleeves on the lower part of the insulator contribute much to their performance on high voltages. Brass nickel plated hardware.

**RATIO DRIVES—SPEED REDUCERS**

JAN ratio drives employing precision ball bearings are used for the smooth control of components in instruments or in speed reduction applications where miniaturization is essential. Ruggedly built and permanently lubricated, these units render a smooth rotary control between input and output shafts which rotate in the same direction. Type RDL and RDS are supplied with "in-line" output-input shafts. Type RDLC is supplied with concentric type input-output shafts. Torque rating is 2 in. 1b max.

**RIGHT ANGLE RATIO DRIVES**

Featuring dual output shafts, at right angles to input shafts, this series of miniature drives provide an ideal type instrument control and are available with matched BEVEL or WORM GEARS covering a wide range of ratios.

JAN'S WORM GEAR RIGHT ANGLE DRIVES are especially suited for handling spring or gravity loaded components since the output shaft automatically locks in any desired position and is controlled only by the input shaft which remains free for smooth drive in either direction.

Assembled in dust-proof housings, the gears are permanently pinned in place on stainless steel shafts, mounted in oilite bearings and held under constant pressure.

**SLIP-CLUTCH KNOBS** Cat. Nos. K-1375, K-1376

**Fixed or Retractable Spinner**

Designed for driving devices such as variable capacitors, inductors, potentiometers, etc., these knobs work on the principle of a "slip-clutch," automatically disengaging and slipping when a predetermined torque is exceeded. JAN'S SAFETY KNOBS are fluted to aid in sensitive adjustment and also have either a fixed or a retractable spinner for fast turning. Made from single unit construction, milled bakelite-to-metal inserts, these knobs safeguard delicate and costly instruments against careless or inadvertent cranking beyond their normal stops. Note: Model K-1376 is identical to Model K-1375 but has the additional feature of a retractable spinner. It has a positive toggle type action, being spring loaded in either open or closed position and thus is useful where equipment must fit into small spaces. Designed for 1/4" shafts.

**SPINNER KNOBS** Cat. Nos. K-1275, K-1276

Models K-1275 and 1276 are spinner knobs having an identical appearance to K1375 and K1376 respectively and are available without the slip-clutch mechanism. Designed for 1/4 inch shafts, these knobs are made from single unit construction, milled black bakelite-to-brass insert. Supplied with two set screws for firm attachment to the shaft.

**JACK COVERS (TRIMMER COVERS)**

These sturdy Jack Covers fit jack or panel bushings and are used to keep out dust and moisture as well as to prevent inadvertent disturbance of control settings. Jack Covers are supplied with stainless steel spring, hinge pin and neoprene pad. Outer surfaces are finished in standard colors of baked enamel.

NOTE: No. J-1300 (SNAP-JACK) is made with toggle action. It snaps to open or shut position and will remain open until snapped shut. No. J-1304 is a miniaturized Jack Cover similar to a No. J-1301 but without thumb lift.

## NEWCASTLE FABRICS CORP.

# SPECIFY ATLEE PRODUCTS—WHEN YOU WANT THE BEST!

## atlee COMPONENT HOLDERS

Provide firm holding under extreme shock and vibration. For capacitors, resistors, relays, wires, cables, tubing, etc. Withstand vibrations of 10 to 500 cycles and 5 to 20 G's for eight hours without resonant frequencies. Structurally designed to derive maximum grip from the component itself. Made of spring steel which flexes under heavy vibration and temperature changes, automatically increasing holding power when most needed. SPECIFICATIONS: SAE #1065 tempered carbon steel, formed in the annealed state, cadmium plated, per QQ-P-416, Class B Type II iridite #4, able to withstand minimum 50-hour salt spray test, per AN-QQ-S-91. SIZES: 0.175 to 1.125. FIL-O-MATIC REFERENCE: section 19, page 4, for more information.

## atlee SUBMINIATURE TUBE HOLDERS AND SHIELDS

For conditions of extreme shock and vibration, high-rate heat dissipation and minimum-space mounting. Withstand up to 20 G's at 500 cycles without resonant frequencies; average heat reduction over 50° (tests); low center design for minimum space — maximum holding power. Ultimate in convenience — no wrap-around motions in cramped spaces — just clip in or clip out. Tubes can freely be removed and replaced without loss in Holder performance. Holders available in silver alloy and silver-plated beryllium copper as well as cadmium-plated tempered carbon steel. Shields available in silver alloy and silver-plated brass. Vertical and Oval Sub-miniature Tube Holders available in tempered carbon steel. FIL-O-MATIC REFERENCE: section 19, pages 1 and 2, for more information.

## atlee CRYSTAL DIODE CLIPS

For miniature, low-cost support and or connection of crystal diodes. Tiny, compact, yet strong and durable. Assure positive electrical contact under high shock and vibration. Can be dip-soldered or riveted into printed circuits. Afford convenience as well as diode protection — no solder joints to make or melt, just clip diode in or out. 100 insertions and withdrawals reduce gripping force less than 6 ounces. SPECIFICATIONS: silver-plated phosphor bronze, spring temper, grade A, per MIL-B-892; contact resistance: 0.00075 ohms; capacitance: less than 1 mmf between clips,  $\frac{9}{16}$ " spacing; insertion or withdrawal force: 2 lbs. (initial). SIZES: 0.065" to 0.085" (terminal pin), for thru-panel, surface-panel or rear-of-panel mounting. FIL-O-MATIC REFERENCE: section 19, page 3, for more information.

## atlee JAN SHIELD INSERT

Designed to reduce tube failures, the JAN Shield Insert lowers miniature tube bulb temperatures by as much as 100°C. and provides almost perfect electrostatic shielding. It was developed by the Reliability and Standards Branch of the Navy Electronics Laboratory. The JAN Shield Insert is made of corrugated brass shim stock with Ebonol C finish, to withstand 50-hour salt spray test. Bent into circular shape, with the ends fitted together, it is inserted inside the older JAN Shields in all present equipments. The Insert makes contact with the glass bulb on one side and with the Shield on the other, distributing the hot spot on the tube and conducting the heat to the shield with a greater radiating surface. Available in small, medium and large, for both 7 and 9-pin tubes. Send for bulletin for more information.

## atlee LUCITE CAP NUTS

For superior electronic assemblies. Non-corrosive, non-fungi nutrient. Cannot be shaken loose by vibration. Extremely useful as lock nuts over conventional metal nuts. Easy to put on — hard to take off. Due to the microscopic "nap" developed as the Lucite Nut is tightened by hand in one direction, a real force by a wrench is necessary to reverse that "nap" and loosen the Cap Nut. Repeated screwing and unscrewing, however, does not affect this locking quality. Made of clear methyl methacrylate, they are available either clear or dyed. Using standard colors, color coding for circuit identification is possible with dyed Cap Nuts. SIZES: 4-40, 6-32, 8-32, 10-24, 10-32, 12-24,  $\frac{1}{4}$ -20,  $\frac{3}{16}$ -18. Send for bulletin for more information.
