Since 1876, the LM Ericsson organization has pioneered in telephony. Ericsson engineers developed this line of miniature electronic tubes primarily for Ericsson telephone installations throughout the world. Now, for the first time, these Longlife tubes manufactured by AB SVENSKA ELEKTRONROR, the LM Ericsson electronic tube subsidiary, are being offered in production quantities to manufacturers, and for replacement use in all types of equipment. LM Ericsson is a licensee of Western Electric.

Dependable Longlife tubes produced by LM Ericsson answer to the highest demands of continuous long service life. The use of Longlife tubes is an advantage from both the engineering and economical aspects. Longlife tubes are recommended for application where dependable long service is required, and where heater voltages show small variations.

All prices and availabilities are subject to change without notice. We will be pleased to quote on your production requirements, and are prepared to contract for your yearly requirements.

Reach anyone you need, instantly, without leaving your desk, yet keep your outside telephone service free for incoming calls with an efficient Bogen-Phone intercom system. Bogen-Phones provide simple, push-button intercommunication that is ideal for office, plant, store or home. ### TWIN TWO-STATION WIRELESS SYSTEM

The Bogen Twin, a new two-station wireless system employing the power line and ground as the transmitting media, provides the most reliable and quiet wireless operation yet developed. Each station in the Twin contains a transmitter and receiver operating at 175 kc. Operation at this frequency minimizes the possibility of interference. Both stations automatically suppress line noise and thereby assure a unit which is free of noise and sound until it is in actual use. This circuit can be set for optimum performance by simple screw driver adjustment at the time of installation. The Bogen Silent Watchman is a most important feature of the new Twin. A convenient locking lever permits a station to be locked in "transmit" position for use in various applications where it is necessary to check noises and other sounds occurring in a given place.

For operation, simply plug each into a regular 117 volt AC or DC outlet, fasten the ground wire to the screw holding the power receptacle plate. Additional stations can be added to the system at any time (any number can be used).  
 Tubes: 2-50B5, 1-12AX7, 1 selenium rectifier. Power Output: 1.5 watts. Frequency: 175 kc. Power Consumption: 25 watts, 117 volts, AC-DC. Dimensions: 6" high, 6½" wide, 7½" deep. Shipping Weight 10 lbs. U/L Approved.

It permits you to keep the remote station "alive" so that all activity of announcements in the vicinity of the remote will be heard by you. You hold the conversation with the remote by operating your press-to-talk bar. By turning down the "DUAL-DUTY" volume control on the "200" master, you can silence the remote station. The operator of the remote calls you by operating his talk bar. This unusual versatility permits the "200" to serve practically every two-station intercom need. ### MODELS 600 AND 1200

Housed in a sturdy gray polystyrene cabinet. Incorporates volume control, bar type press-to-talk switch and 7-position selector switch. When used in a single master-multiple remote installation, the "mute" position silences the background noise at the remote stations. In this condition the remote can still initiate a call to the master. The "all" position permits a master station in either type system to call other stations simultaneously. Model 60R remote is housed in a matching polystyrene cabinet and is equipped with an initiating call bar. During conversation with the master, the remote does not operate any control.  
 System Type 1: One master and up to five remote stations. Master can call all remotes simultaneously. (Requires three-conductor cable between master and each remote.)

Simple to install, no wiring, simply place each Master where needed, plug into an electrical outlet, and talk! Where changes of location are desired, simply pick-up the unit and move it. Each Master Station has a 6-Channel Selector and can converse with any other station selectively, and can receive calls on any channel it elects. Hold as many as 3 separate conversations with 6 Masters. Masters can also setup conferences. Where some locations need not originate calls, but must reply when called, Wireless Staff Stations are available. Wireless Staff Stations can also be used to receive Paging calls simultaneously from any Selective Wireless Master Station in the system. Use as many Wireless Staff Stations as needed (all Staffs must operate on same channel for this purpose). Equipped with the most effective noise-free circuit ever developed, the "SONIC GATE CIRCUIT". Operates universally on 110-120 Volts, AC-DC. All units in system must operate from same electric service transformer. Size: Masters—12" x 9" x 7", Wt. 12 1/2 lbs. ## NEW TALK-A-PHONE DELUXE SYSTEMS

### Master Selective Systems (Figs. 1 & 2)

A system consisting of one Master Station and one to ten Sub-Stations. Master Station can talk and listen to any one Sub-Station or with all simultaneously. Sub-Stations do not communicate with each other. Only the Master Station plugs into an electrical outlet. You may start with only one Master and one or two Sub-Stations and then add later when necessary. Installation of system has optional feature, whereby Sub-Stations can be connected "privately," or "non-privately" and still originate calls to the Master under either application. Once a conversation has been initiated with a "non-private" system, persons at Sub-Stations need operate no controls and can reply from a distance. When the system is connected "privately," Master unit cannot "listen in" on Sub-Stations. However, they can reply when called, and also originate calls to the Master. Operates universally on 110-120 volts, AC-DC. U.L. Approved. The AC-5406 and AC-5411 Master Stations operate as above with the added feature of 10 times volume output. A desirable feature for large areas or noisy locations. Operates on 110-120 volts, AC only. Only one master station can be used in these systems.

### "Chief" Redi-Power Master Stations (Figure 2)

"Chief" Redi-Power Master Stations have all the operational features listed above, plus the additional feature of built-in extra power for use when needed. This added power (up to 20 watts), gives you the additional volume needed, for example, when calling a number of stations at one time or calling noisy locations. Return speech from called stations is received at normal volume. Needs no separate power booster which would eliminate return speech. "Chief" Redi-Power has self-compensating volume, whether you call 2, 10 or 20 stations simultaneously. Each station receives its pre-determined volume with no division of output when you call more stations at one time. One or more Redi-Power Masters can be combined with regular Chief Masters and Staff Stations in same system. 110-120 volts, AC only.

Redi-Power Master Stations are also available with the added feature of pre-selected paging for each master unit as Model C-RP-5911. Provides 11-station capacity with one selector button for paging. Each Master may page its own pre-selected stations without any external paging equipment. 110-120 volts, AC only.

For C-4920 and C-RP-5920, use two lengths of 6224 Cable and for C-4930 use three lengths of 6224 Cable, etc. To connect C-41, C-20, HP-2 or HP-3 Staff Stations, measure from Staff Station to the one Master to which Staff Station originates calls. To connect C-42 and C-46 Staff Stations measure a separate length of cable from Staff Station to each Master Station to which Staff originates calls (for each C-42 or C-46, follow same procedure).

Prices slightly higher west of the Rockies.

### "Chief" Staff Stations (Figure 3)

For use with any "Chief" Master, Staff Stations may be connected "privately" or "non-privately." Connected "non-privately," persons can answer Master at a distance from the Staff without operation of any controls. Persons at "non-private" Staffs may reply to all Masters in the system (whether connected directly to them or not) and can originate calls to one, two, or up to six Masters, depending upon its capacity. Connected "privately" no one can "listen-in," but any Master can call. Private Staff can originate calls and reply to 1, 2 or 6 Masters depending on its capacity. ## NEW TALK-A-PHONE All-Transistor Home Intercom Radio System

• LISTEN-IN ON BABY, CHILDREN OR SICK ROOM . . . from any room in the house, day or night • ANSWER OUTSIDE DOORS FROM ANY ROOM . . . in any part of the house—without opening doors to strangers • TALK FROM ROOM TO ROOM . . . back and forth, up stairs or downstairs, any time, day or night • LISTEN TO YOUR FAVORITE RADIO PROGRAMS . . . follow you throughout the house with a flick-of-a-switch.

# AN AMPLIFIER FOR EACH INDIVIDUAL INSTALLATION, A CHOICE OF NUMBER OF INPUT CHANNELS AND POWER OUTPUT

## SINGLE CHANNEL

Now, booster or bridging amplifiers are available in a wide range of power outputs. The lower power series can be used with inter-coms to build paging systems. The higher power series can be used to build high coverage systems where large amounts of power are required.

- 14A6 — 14 WATT, Single Channel (Booster) Amplifier.
- 20A6 — 20 WATT, Single Channel (Booster) Amplifier.
- 30A6 — 30 WATT, Single Channel (Booster) Amplifier.
- 50A6 — 50 WATT, Single Channel (Booster) Amplifier.

## TWO CHANNELS, WITH TONE.

When two input channels are required, this series will be used. One microphone input and one phonograph input are provided, each with a separate gain control. A treble attenuation control permits easy adjustment of tones.

- 14B5 — 14 WATT, 2 Channel Amplifier.
- 20B5 — 20 WATT, 2 Channel Amplifier.

# Fleetwood Custom Television

## with EXCLUSIVE DEFINITION CONTROL

Fleetwood's definition control varies the picture quality from hard and sharp to soft and diffused . . . lets you see the picture as you like it. Full electronic remote control Fleetwood models put all of the normal operating controls at viewing distance. Fleetwood . . . designed for custom installation . . . can be used with high fidelity sound systems.

Fleetwood picture fidelity is the perfectionist's choice. It's the same outstanding quality usually seen only on TV station monitors . . . also made by Fleetwood.

Set employs 27 tubes in addition to picture tube and provides audio power for a speaker, as well as a detector output to connect to high fidelity sound systems. The picture chassis is relay operated by the on-off switch on the separate tuner chassis for full remote control. Both units are attractively finished. An eye-catching, gold finished, hinged escutcheon plate is furnished for easy access to secondary controls.

The separate tuner unit has simulated leather front panel, with edgelit dial and individual channel pilot lamps. Includes the off-on/volume, contrast, brightness, definition, channel selector/fine tuning controls. The tuner is of the Super Cascade type and is completely adaptable for Ultra High Frequency reception, by a simple interchange of tuning strips and insertion of the correct channel identification number. The illuminated channel numbers are readily replaceable and a full set of numerals, from 2 to 82, is provided. The four video I.F. stages provide full four megacycle bandpass, and there are separate cathode followers for audio and video circuits. Three audio outputs are provided: (a) low level high impedance, and (b) low level cathode follower, both for connection to existing high fidelity music systems, and (c) power amplifier to operate a loud speaker.

# TRUMPETS

University pioneered the reflex trumpet, now the industry standard where maximum conversion efficiency, intelligibility and distance or noise penetration are essential. Careful, scientific design and meticulous attention to mechanical detail are virtues that are more than skin deep with these University products. Any similarity between these trumpets and other brands is largely in their appearance. For uncompromising performance, University presents a wide and varied selection of directional, wide-angle and radial models to satisfy the most demanding specifications.

## DIRECTIONAL

These models, designed to concentrate acoustic energy in a relatively narrow angle of sound dispersion, are incomparable for applications requiring maximum penetration of distance and noise. Rigid adherence to time-proven design formula achieves peak attainable conversion efficiency, resulting in higher sound pressure output and greater utilization of amplifier power. Four trumpet sizes satisfy every need. The GH has very low cut-off for finest reproduction of music. LH is excellent for general use where music quality, voice intelligibility and penetration are important considerations. The PH has wider dispersion and may be used for both music and voice where cost is a factor. The SMH is ideal for speech and for covering wider areas with good penetrative qualities. All models take any University driver unit; have positive-lock, serrated swivel "U" mtg. bracket.

## WIDE-ANGLE

**Cobreflex** Unmatched for ruggedness and exceptionally high speech articulation in fixed or mobile applications requiring coverage of areas having greater width than depth. "Dual Exponential Flare" design . . . two identical *one-piece* all die-cast aluminum combination air column/bell castings form a completely integrated, virtually indestructible and scientifically perfect twin wide-angle reflex trumpet. Nothing else like it! Takes any University driver unit; use singly or in clusters. Adjustable, positive-lock "U" mtg. bracket.

**Model CLH** Newest addition to University's expanding line of wide-angle trumpets and paging speakers. The CLH combines longest air column length and new wide-angle bell designed for maximum low frequency response and compact, low silhouette dimensions. New *omni-swivel*, positive-lock mtg. bracket permits speaker to be placed where most convenient and rotated horizontally and vertically for optimum projection. Dispersion can be literally *tuned* to avoid echo and reverberation, or used to specifically include elusive "dead spots." CLH is perfect too for multi-speaker cluster arrays; can be "stacked" in any configuration, for any sound distribution pattern. Uses any University driver.

## RADIAL

Economical and efficient, these models provide uniform horizontal dispersion in all directions from a single projector. Fewer loudspeakers needed to cover an area. Using University drivers, they give as much as 500% more output than radials using cone speakers. Especially popular for high-ceilinged factories, hangars, church interiors and towers, warehouses, etc. Rugged, weather-resistant; ideal as well in installations subject to high humidity and dust-laden atmosphere. Model RLH has longest air column for maximum low frequency response. RPH has higher cut-off; is suitable for both music and speech in general purpose applications. RSH is good for speech and further cost reduction.

## HORN AND DRIVER ADAPTERS

# PAGING AND TALK-BACK

University progress and ever increasing standards of achievement have yielded an exceptionally large series of compact, moderate-power speakers capable of literally incredible performance for their size. The unusual variety of types available for paging and "talk-back" applications is certain to more than satisfy every conceivable technical and installation requirement.

University

**Model MIL** - Small, compact reflex; excellent for limited areas and filling in "dead" spots. High conversion efficiency triples effectiveness of low power paging and intercom systems normally using cone speakers. Tropicalized, hermetically sealed. Exclusive OMNI-LOK swivel mounting bracket; also fastens to 1/2" pipe without additional fixture.

**Model CMIL** - High efficiency paging and talk-back speaker with University "cobra" horn for effective coverage of wide areas. Eliminates waste of sound where not needed. Tropicalized Hermetically sealed. Geared omni-swivel mounting bracket with 2-plane positive-lock; also fastens to 1/2" pipe without additional fixture.

**Model IB** - World's most widely used medium power speaker. For paging/talk-back. Tropicalized, weatherproof, for trouble-free lifetime operation. High efficiency, special rising frequency characteristic, wide range response and 90° projection assure maximum penetration and intelligibility in noisy areas. Geared 2-plane omni-swivel positive-lock mtg. bracket; also fits 1/2" pipe.

**Model CIB** - Exclusive University "cobra" horn for uniform wide-angle sound pattern with optimum vertical dispersion. OMNI-LOK swivel mtg. bracket directs sound where desired. Ideal for coverage of wide area where ambient noise level is not excessive. Design minimizes feed-back problems. Highly efficient. Bi-sectional driver mechanism is tropicalized, hermetically sealed for continuously dependable performance.

**Model IBR** - Exceptionally compact, complete with built-in driver. Uniform 360° sound dispersion offers an economical solution to installations where omni-directional coverage is required but the total number of speakers must be kept to a minimum. For cube-like areas where speakers can be suspended from the ceiling. Tropicalized, hermetically sealed; ideal for both commercial and industrial applications.

**Model MIS** - Compact reflex speaker similar to Model MIL, but designed for flange or flush mounting in cabinets, walls, ceilings, bulkheads, dashboards, etc. Tropicalized, hermetically sealed for total weather-proofing. Ideal replacement for less efficient cone speakers, provides more output gain and greater reliability. Cork-neoprene flange gasket included.

**Model CR** - Big power in a small package. 90° dispersion, built-in driver with heavy-duty 2" voice coil—for the punch and penetration that assures high intelligibility in noisy areas. Its frequency response makes Model CR ideal for paging/talk-back systems that must also reproduce music. Tropicalized, hermetically sealed; serrated swivel bracket.

**Model 2WP** - Bi-directional paging projector enables economical coverage of two oppositely located areas with a single driver unit. Use with MA-25, SA-HE, SA-30 or PA-HF driver. Adjustable mtg. bracket permits output from the two horns to be directed 10° downward or outward for best sound distribution. Mounts on any surface, pipe or superstructure.

# UNIVERSITY FOLDED-HORN ENCLOSURE KwiKits

Because ... in performance, mechanical design, construction and ease of assembly, these new KwiKits are unquestionably the *very finest* enclosure kits — at any price!

KEN-12 ... for 12" speakers and systems

KEN-15 ... for 12" or 15" speakers and systems

MODEL KEN-12

## ROOM-BALANCED PERFORMANCE

KwiKit acoustic design and tilted baffle combine direct speaker radiation and compensated rear horn loading in a way that blends bass, middle and treble ranges perfectly ... for uniform response throughout the listening areas of a room.

## HEAVIER CONSTRUCTION

Heavy 3/4" first grade, fully cured lumber for top, bottom, sides and back ... not flimsy 1/2" wood commonly used in "kits." Bigger, sturdier — as much as 30% heavier than others in the same price class. Eliminates spurious resonances so detrimental to achieving richer, cleaner bass reproduction.

## PRECISION MECHANICAL DESIGN

Exterior and interior elements, even the cleats, fit snugly within close tolerance "rabbeted" grooves. Gluing and screwing of each piece results in reliably air-tight, permanent joints. No nails used. No pencil markings necessary. Mitering and plenty of glue blocks and bracing for truly rigid construction.

## PLACE ANYWHERE IN ROOM

Underside view shows how advanced design, self-contained folded horn extends to the front of the cabinet, projecting low frequencies out into the room ... not back into a corner, splashed against the walls. Small slot in base is resistively controlled vent which equalizes woofer diaphragm excursions in compression chamber. KwiKits are therefore independent of room furnishings, shape or placement and can be used against a flat wall, in a corner ... even up in the air!

## FOOLPROOF ASSEMBLY

All pieces are pre-cut and pre-drilled ... engineered to go together quickly. All you need is a screwdriver! Baffle board is pre-cut ... blank plugs and adapters supplied for easy installation of additional components as your system expands. ## ULTRA-LINEAR SPEAKER SYSTEMS

### Ultra-Linear 15, Models S-11H and S-11L

"Incredible . . . outstanding" — these are the words you'll use to describe the magnificent performance of the Ultra-Linear 15.

Small overall size is achieved by coupling the new University infinite loading/annular relief enclosure design to the new, heavy duty high compliance C-15HC woofer. A specially designed matched-level network integrates the Diffusicone-8 with its own compression chamber for mid-range and the new HF-206 Hypersonic Tweeter for response to beyond audibility. The S-11 will outperform most other systems regardless of type, size and cost! Extra heavy construction; beautiful, fine furniture finishes, styled in good taste to complement every decor. Operates with power input of 20 to 60 clean watts. S-11H is upright model, S-11L for lowboy use. 8 ohms impedance. Cabinet base removable. Available in mahogany, walnut and blond. 26 $\frac{1}{2}$ " x 19 $\frac{1}{2}$ " x 17 $\frac{1}{2}$ ". List Price: Mahogany—\$408.33, Walnut—\$421.67, Blond—\$415.00.

### Ultra-Linear 12, Models S-10H and S-10L

These systems are intended for use where available space is most restricted, yet highest quality reproduction is essential. Model S-10H is for use where minimum width must be considered; S-10L where height must be conserved. Either model can be used without its base, for shelf, bookcase or "built-in" applications. Only 25" x 14" x 14 $\frac{1}{2}$ "; base adds 1 $\frac{1}{2}$ ". The new C-12HC 12" high compliance, low resonance woofer is employed with the 2500 cps. wide-angle tweeter and a specially matched-level crossover network. Includes high frequency adjustment for matching room attenuation characteristics. Operates with power input of 25 to 60 clean watts. 8 ohms impedance. Enclosure is a new infinite-loaded design with annular compression relief. Heavy 1 $\frac{1}{4}$ " thick double braced construction; beautiful natural grain, hand-rubbed finish. Cabinet base removable. Available in mahogany, walnut and blond. List Price: Mahogany — \$231.67, Walnut — \$245.00, Blond — \$238.33.

## "BEST BUYS" IN SMALL SYSTEMS AND ENCLOSURES

### Tiny Mite Enclosure, Model TM-812 Speaker System, Model S-3TM

Where the cost of the enclosure, loudspeaker and amplifier must be kept to a minimum but not at the expense of achieving high fidelity reproduction, the TM-812 TINY-MITE enclosure operating with one of the University high efficiency 8" or 12" extended range speakers is the solution. Sturdy  $\frac{3}{4}$ " wood is used throughout. Versatile enclosure is supplied with baffle board cut out for 12" speakers; adapter available for 8" speaker with ample space for tweeter. Baffle board removable from front for easy installation. Beautifully finished, including rear of cabinet. True "cornerless-corner" design permits use in corner, against wall or upside down! TM-812 is available in mahogany, walnut, blond and unfinished. 21 $\frac{1}{2}$ " H. x 15 $\frac{1}{2}$ " W. x 12 $\frac{1}{2}$ " D. Shpg. wt., 25 lbs. **PR-100**

## Imperial

In the search for pure high fidelity, completely authentic, with smooth coverage of the complete frequency range from the lowest bass to upper limits of audibility, Jensen designed the RS-100 Laboratory Reference Standard Reproducer (see below) for use as a standard of comparison in high fidelity. For those who pursue the ultimate, the very same reproducer is offered here as the Imperial PR-100 in cabinetry that bespeaks a place of honor in the distinguished home. There's a totally new, smooth sound, utterly real—undoubtedly the finest sound you've ever heard. Voices come to life and there's a new, almost geometrical separation of instruments. The l-f unit is loaded by a new-design reactance-annulling trilateral-mouth horn for bass; selected compression-driver horn-loaded mid-channel with intrarange equalizer for a final touch to precise balance and coloration elimination; and a superlatively smooth, space-blended supertweeter top. Expensive to be sure . . . but priceless in performance. Place it on sidewall or in a corner as you choose. Individually serial numbered, laboratory tested with signed certificate and guarantee of performance. Impedance 16 ohms, power rating 35 watts. 54 $\frac{1}{4}$ " H.; 32 $\frac{3}{8}$ " W.; 24 $\frac{3}{8}$ " D. Shipping Weight, 225 lbs.

# Jensen High Fidelity Loudspeakers

## YOU'RE AHEAD WITH JENSEN AUTHENTIC HIGH FIDELITY!

The new Jensen line of unitary loudspeakers offers for the first time a complete range of types and sizes to meet every performance and budget requirement. Many have remarkable cost advantages over previously available similar speakers; in each case, skillful design and advanced manufacturing methods have resulted in **more** performance . . . **authentic** high fidelity by Jensen . . . at lower cost.

### TRIAxIAL\* AND TRIAX\* 3-WAY SYSTEMS

The famous Jensen G-610A and new G-600 are genuine 3-way systems, the only speakers with three electrically and acoustically independent L-F, M-F and H-F channels for utmost balance, efficiency, smoothness and range extension to upper hearing limit. M-F and H-F sections both employ compression-driver horn-loaded units for low distortion and wide angle dispersion of highs. Separate dual crossover network, M-F and H-F Balance Controls, fully wired. The ultimate in performance in a unitary speaker.

### COAXIAL 2-WAY SYSTEMS

Jensen "H" and "K" Series Coaxials are genuine 2-way with electrically and acoustically independent "woofer" and "tweeter". "K" Series uses direct radiator cone type "tweeters" for a maximum of value at low cost; they have integral electrical crossovers. KTX-2 Step-Up Kit will later provide compression-driver highs above 2000 cps. "H" Series is designed for ultimate coaxial performance; they employ the expensive through-bore compression-driver "tweeter" for maximum 2-way system performance and low crossover frequency (2000 cps). Full L-C crossover network. KTX-1 Step-Up Kit may be added later for range extension to upper hearing limit.

### COAXIAL 3-ELEMENT SYSTEMS

"CX" Series speakers are a combination of a compression driver supertweeter and a 2-element direct-radiator woofer-mid-channel. Electrical crossover is at 4000 cycles. Small diffusion radiator disperses and balances radiation from 2000 to 4000 cps. Three terminals for easy wiring of KTX-3 Step-Up Kit for later conversion to full 3-way system with compression driver mid-channel. A "best buy" for performance intermediate between DUAX and "H" Series coaxials.

### DUAX\* 2-ELEMENT SYSTEMS

"DX" Series speakers have two carefully coordinated cones driven by a single voice coil. Both operate together up to a "mechanical crossover" at 4000 cps; the small H-F radiator is effective above 4000 cps. May be expanded to 2-way system with compression driver "tweeter" with KTX-2 Step-Up Kit.

### UNAX\* SINGLE ELEMENT LOUDSPEAKERS

A new high in single-cone single voice coil speakers with performance exceeding that of some speakers costing far more. Cone is specially designed so central sector radiates smoothly and efficiently at high frequencies. Viscous edge damping. KTX-2 Step-Up Kit may be added to make 2-way system.

## HIGH FIDELITY EXTENDED RANGE SPEAKERS

These units, ranging from 5-inch to 12-inch size classes, attain a high level of performance by proper extension of the frequency range and control of all factors which lend "presence" to reproduction.

The selection of a direct-radiator loudspeaker from this series, in size or cost appropriate to the application, insures the best quality obtainable in a "one-way" speaker. Alternate models in the same size group differ mainly in efficiency and power rating.

JENSEN Extended Range loudspeakers are ideal as replacement-improvement units for less worthy speakers in radio, television and record playing equipment. The logical choice for better reproduction on a low budget.

## NEW HYPEX® LIFETIME DRIVER UNITS

The new Jensen Hypex® Lifetime Driver Units have many new features which contribute to increased performance and reliability. Frequency range is based on achieving substantially higher conversion efficiency, higher power ratings and improved reliability over comparable units previously available, while affording good fidelity in the reproduction of speech and music. Lower cutoff frequency is somewhat below those of the horns with which they will be used; the specifications show the maximum upper limiting frequencies, but response has been shaped to give emphasis to the 3-5 kc region, which is extremely important in high efficiency sound projection. As a result of these design choices and special research on ruggedization, the D-30 can be rated at 30 watts speech and music, D-40 at 40 watts, and a Lifetime Guarantee extended against failure under normal conditions of use!

The DD-100 100-watt Superpower Driver Unit, similarly guaranteed, is the first double acting integrated sound chamber driver unit ever to be offered; it is also the first 100 watt unit available.

achieving a higher power input rating to a single projector or an array, than has ever been possible before. Magnetic structures are the most efficient that research has been able to develop, yielding the highest magnetic energy from the generous sized Alnico V magnets which scientific proportioning of magnet material and soft iron structure can provide. Specially shaped reinforced plastic diaphragms combine ruggedness with excellent acoustic properties and freedom from "breakup". Voice Coils are varnish wound, baked and aged on treated, heat and moisture resistant bobbins, resulting in a rigid assembly that is indestructible in normal service. Beryllium copper leads are indefinitely fatigue-resistant. Models D-40 and DD-100 have precision self-centering moving system assemblies which are added insurance for dependability under severe operating conditions. External leads connect to heavy binder screw terminals; added reliability for wiring is provided by strain reliefs on all units. All units are threaded 1 1/8"-18.

## JENSEN COMPLETE HYPEX® PROJECTORS

### HF-100 WEATHERPROOF TWO-WAY HIGH FIDELITY PROJECTOR

Here is a real high fidelity projector for use indoors or out, under all weather conditions. Consists of a heavy duty 8" woofer, feeding a folded horn plus a horn-loaded compression driver "tweeter". Low frequency unit feeds horn by a combination of direct radiation and phase-inversion bass reflex ports for superior efficiency in the low frequency region. The high frequency horn has a 90° fold and is mounted so that the driver unit is at the top, thus providing self-draining and making it impossible for rain, sleet or snow to reach the driver unit.

Horn outer section is spun aluminum with baked enamel finish. Central enclosure is glass fibre reinforced polyester in matching natural molded Modern Tan finish. Sturdy "U" mounting bracket is fully adjustable and positive locking.

#### SPECIFICATIONS: HF-100 PROJECTOR

Jensen VH-91 and VR-11 Hypex® projectors are the most compact in the line and their use is indicated where speech reproduction is the only important consideration and where size or cost are controlling factors. Designed for maximum efficiency in the upper frequency range, these units provide excellent penetration of noise. Small in size, they can also be located near areas of extreme noise. Magnetic structures are highly efficient, using Alnico V magnets in ample soft iron structures. Corrosion-resisting finishes and materials such as plastic cloth base diaphragms insure long life under outdoor and industrial atmospheric conditions. For further protection driver units are completely enclosed inside the rigid outer shell.

### MODEL VH-91 HYPEX® PROJECTOR

Equipped with universal mounting brackets for orientation in any direction and secure locking with a single wing nut. Two mounting holes on bracket are spaced to accommodate standard 3/8" x 3/8" transformers with the same mounting screws.

### MODEL VR-11 HYPEX® RADIAL PROJECTOR

For application requiring 360° coverage in horizontal plane, such as low ceiling industrial areas. Equipped with sturdy eye-bolt for clamping or suspension from above.

### BV-1 BLAST VALVE

The BV-1 Blast Valve is an accessory device for protecting the driver unit from high pressures due to explosive forces. Valve is the same as used in Jensen military blastproof loudspeakers. Under the positive blast pressure phase, the valve moves inward to seal off the driver unit from the horn throat. On the negative phase the valve moves out-

ward, again effecting a seal. With the valve in neutral position, attenuation of sound is negligible. Screws between horn and driver unit. Overall diameter 3". Fits all Jensen driver units and horns.  
 Net weight, 1/2 lb. Shipping Weight, 3/4 lb.

## NEW JENSEN HYPEX\* PROJECTOR HORNS

These new projector horns are acoustically coordinated in design for best performance with HypeX\* Driver Units D-30, D-40 and DD-100, any one of which may be used on any of the horns. The horn expansion formula is the hyperbolic exponential (U. S. Patent 2,338,262) providing low frequency reproduction superior to that obtained with conventional horns of the same mouth size. Horns (with the exception of RT-20) are spun aluminum with weather-resistant baked tan enamel finish. Horns are threaded 1 1/4"-18 and may be used with any driver units with this thread. Sturdy steel mounting "U" brackets allow horn to point in any desired direction; horn locks in desired position by means of new positive action trunion clutches.

(See separate description and specifications on RT-20 Rectangular Horn).

## MODEL RT-20 RECTANGULAR HORN

These versatile new horns may be used in a variety of ways to provide projector systems of almost any desired directional characteristics and total power rating. They may be used singly just as round horns are used and in such cases, the rectangular shape is frequently an advantage in appearance, minimizing obstruction to vision, and facilitating mounting.

RT-20 Horns are designed so that they may be stacked in plane or circular arrays. Eight units, each with a geometric sector angle of 45 degrees, form a complete circle with a diameter of 5' 9 1/2", giving 360° horizontal coverage. Fewer units are used where less than 360° coverage is required as indicated below:

Number of Units	Horizontal Coverage Angle
1	80°
2	125°
3	170°
4	215°
5	260°
6	305°
8	360°

Horns may be "double deeked," which will concentrate the sound in a narrower angle in the vertical plane. A stack two units high will give a vertical coverage angle of approximately 30 degrees; at the same time, there is a gain in sound pressure on the axis of 2.5 db, due to the restricted angle of radiation.

The horn is molded of high impact strength glass fibre reinforced polyester. Natural molded finish in Modern Tan color.

## TWO-WAY AND THREE-WAY UNITARY HIGH FIDELITY LOUSPEAKERS

These outstanding unitary two-way and three-way loudspeakers have been especially designed for institutional, industrial and commercial sound systems where high fidelity music and realistic voice reproduction are essential. They may be mounted in proscenium arch or underneath a canopy; flush or in small enclosures on walls; in large or small cabinets. In enclosures they may stand on floor or be suspended overhead for large audience coverage. In wide angle coverage of entire frequency range and in sound quality, they are markedly superior to projector type speakers. Ideal for school rooms, auditoriums, arenas and the like.

Moving systems and other parts have been moisture-proofed so that they are highly satisfactory for protected outdoor service where not directly exposed to rain, sleet, or snow. Durable finishes and materials are used throughout. Construction is rugged to insure trouble-free performance indefinitely. Terminals are provided for insertion of fixed or adjustable pads if desired (not furnished—see control listings) in the "tweeter" circuits. All units have full dividing networks (mounted on housing in H-525C and H-225C). Input terminals are screwdriver type. Housing finish is baked tan enamel; horns, etc., at the front of the units are finished in black enamel for minimum visibility through grille cloth. All units are thoroughly dustproofed.

These units incorporate Alnico 5 magnets in highly efficient conservatively designed magnetic structures. Table shows loudness efficiency relative to Model H-225C.

## EXTENDED RANGE HIGH FIDELITY LOUSPEAKERS

Here is a complete line of loudspeakers of latest designs especially for commercial and general purpose applications, all field tested for the exacting and rigorous requirements of professional service. There is a loudspeaker for every need—ruggedly dependable units which have enjoyed the position of "world's quality standard" for many years in the professional field.

These heavy duty loudspeakers are of the extended range high fidelity type with performance suitable for applications where two-way and three-way speakers are not needed. High efficiency is assured with carefully designed magnetic structures using Alnico 5 magnets and ample soft iron circuits. Moisture-resistant cones and other materials contribute to long life expectancy. The units are especially suitable for protected outdoor locations not directly exposed to rain, sleet and snow, as well as for indoor use.

Extended h-f range insures excellent music reproduction. The l-f range will depend on the enclosure size and design. Commonly used in small enclosures or ceiling baffles. Models P8-SC and P12-SC are practically standard in the industry for interior low level music distribution systems.

Sizes from 4" to 15" offer the best performance possible in each size and cost class. Choices as to efficiency and power ratings are available in some sizes. Relative loudness efficiency is shown in the table referred to the P4-VC. A speaker with relative loudness efficiency of +3 db will be noticeably louder than the P4-VC for the same power; only one-half the power will be required to be equally as loud as the P4-VC.

# THE R. T. BOZAK SALES COMPANY

## Quality Loudspeakers

There are only three basic Bozak Loudspeakers — *one line of one quality* — which combine into Speaker Systems of various sizes, with realism, range, and power-handling capacity depending solely on the number of bass speakers employed.

All Bozaks are completely compatible in their electrical and acoustical characteristics. All are direct-radiators, well suited to the infinite-baffle mounting required to preserve their outstanding smoothness and transient response. With the infinite baffle, *Systematic Growth* by the addition of more Bozaks and modification of the N-10102 Network, is easily accomplished.

The slow 6-db-per-octave crossovers are through electrical networks, free of transient distortion, which blend the

ranges smoothly without sense of separated sound sources. The Bozaks must be used with a turntable, pickup and amplifier of the highest quality; the amplifier's damping factor *must* be between 8 and 20. Automatic Impedance-Matching devices and Loudness Controls *must never* be used, as they alter tonal balance and muddy the response: compensation at low levels is best achieved with the regular Bass and Treble Controls.

Bozak factory-made enclosures are infinite baffles of 3/4-inch or heavier plywood, glued and screwed and cross-braced, lined and curtained with acoustical-damping materials, veneered with fine woods, and handsomely finished. The E-300 is available as a complete Kit. Plans are available on request for all enclosures.

Low frequency performance equal to many larger systems because of the exclusive rectilinear vent. Available in mahogany, blonde, or fruitwood handrubbed finish on birch. Shipped with CA-12 installed. Shipping Weight: 50 lbs. approx. See your distributor for details.

To gauge the effect of a Karlson installation with your speaker, cover your ears with your hands during a symphony. What you hear when you uncover them will give you an idea of the difference a Karlson makes.

\*The Karlson is a basic invention in the field of acoustic transducers and is entirely different from the other basic forms, e.g. Horn, Helmholtz resonator, drum (infinite baffle.)

This invention overcomes the fundamental limitations of these other approaches, to provide a new and higher standard of sound reproduction.

# Electro-Voice P. A. PROJECTORS

## FOR PERFECT VOICE PENETRATION AND FULL-RANGE MUSICASTING WEATHERPROOF • SPLASHPROOF • BLASTPROOF

848

**Electro-Voice Compound Diffraction Projector\*** provides a loudspeaker system so advanced in concept—so efficient in performance—that there is no basis for comparison with conventional P.A. reentrant horns. The "CDP" works in the same manner as an optical slit. When the slit width is of a shorter dimension than the wave length of the sound it passes, the sound energy is highly dispersed in the direction of this short dimension. Polar response of the "CDP" is phenomenal.

An increase in efficiency of three db over multi-cellular horns is achieved with better dispersion. There is no pinpointing effect since there are no cells to beam the sound path. Elimination of multiple throats at the driver mouth permits greater high-frequency efficiency as compared to multi-cellular horns. The direct path and optimum throat dimension of the "CDP" also has these advantages over the reentrant horns, resulting in a greater transfer efficiency and smooth extended high-frequency response.

The "CDP" bell and diaphragm are fabricated of molded fibreglass. Other parts are die-cast zinc and steel treated against corrosion. Edge-wise-wound copper ribbon voice coil puts 30% more conductor in the gap, raises the efficiency 20%. In E-V tests the "CDP" driver has been subjected to months of continuous operation under 30 watts of power at 60 cycles AC without failure for any reason whatsoever. Should it become necessary, the diaphragm is easily replaced in a moment. Silver contacts eliminate the need for soldering operations. The "CDP", with its higher sensitivity and power handling on a basis of distributed signal, provides superior coverage of the listening area with fewer units and at far lower cost. The "CDP" unit is weatherproof, splashproof, and blastproof, and virtually indestructible. It represents something so entirely new in public address efficiency and fidelity that it is indeed hard to believe such reproduction is possible.

876

**Model 846 25-Watt CDP**—Conservatively rated at 25 watts, the Model 846 provides peak-free response 200 to 10,000 cps—delivers  $2\frac{1}{2}$  octaves more musical range than usual P.A. units of even larger size. Speech articulation index is substantially increased. Polar distribution pattern exceeds  $120^\circ$ . The Model 846 utilizes two coaxially mounted horns working from opposite sides of a single diaphragm. Each horn is designed for optimum reproduction within its own range. Lower response is augmented by 100-cps horn taper, which insures at least one-half octave added bass over that possible from larger conventional P.A. horns. Nominal impedance is 16 ohms. The attractive neutral gray color is molded right into the bell material, which is impervious to acids, alkalis and most solvents. Hang up bracket has two mounting positions. Projector may be installed horizontally or vertically for augmented dispersion. Dimensions at mouth:  $10\frac{1}{2}$ " wide,  $20\frac{1}{2}$ " high. Overall depth 20". Shipping Weight, 17 lbs. List Price.....**\$75.00**

879

**Model 847 12-Watt CDP**—Compact, extremely efficient wide-range paging unit. Has low distortion and gives high articulation, permitting lower volume levels with high intelligibility. Response  $\pm 5$  db 300 to 10,000 cps; allows clear, clean music reproduction because of unusual low-frequency balance. RETMA sensitivity rating is 51 db. Polar coverage is  $135$  degrees; power handling is 12 watts. Impedance is 16 ohms. Weatherproof, splash-proof and blast-proof. Size  $11\frac{1}{4}$ " wide,  $7\frac{3}{4}$ " high, 10" deep. Shipping Weight, 7 lbs. List Price.....**\$46.33**

# You can have the finest sound reproduction throughout all frequency ranges without distortion

You will hear a remarkable difference in the clarity of Norelco \*Full Response Speakers. In a single speaker, twin-cones reproduce low frequencies, middle range, as well as the higher frequencies extending beyond the audible range—without distortion.

## WHY ARE NORELCO FRS SPEAKERS SO EXCEPTIONAL?

They have incorporated a number of technical refinements which are evident the moment you listen. The air gap has been made long so that the coil is completely enclosed in an even magnetic field at all times. A copper ring has been fitted into the deep air gap to keep the voice coil impedance constant over the whole frequency range; this avoids incorrect matching. High flux densities are obtained through the use of "Ticonal" magnet steel.

*Norelco FRS Improved Bass Reflex Enclosures are available in three sizes; FRS Enclosures I, II and III. Priced from \$33.75 to \$119.95.*

## *Norelco F.R.S.*

*speakers are available  
5", 8" or 12" sizes in standard impedances.  
Priced from \$6.75 to \$59.98  
Blue prints are available for the  
do-it-yourself enclosure builder.*

Norelco speaker-matched enclosures are scientifically designed acoustical boxes which enhance the exceptional tone qualities of FRS speakers; bringing out their true performance values.

Norelco FRS Speaker Enclosures are available in three sizes to match the characteristics of the speaker in use. Supplied in either mahogany or blond, these enclosures incorporate a removable base permitting the enclosures to be placed horizontally or vertically to suit any room arrangement or decor.

## QUAM ADJUST-A-CONE® SUSPENSION

This patented QUAM feature is your added assurance of trouble-free operation. In other speakers the spider is cemented in place with no means of accurate adjustment. The Adjust-a-Cone suspension permits precision centering of the voice coil as a final production operation.

## QUAM U-SHAPED COIL POT

Another QUAM exclusive, this patented U-shaped coil pot construction, used throughout the QUAM replacement line, provides an unbroken flux path of sufficient cross-section to carry the full energy of the magnetic field.

These new, unusual additions to the Lowell line of speaker baffles are top quality heavy 18 gauge spun aluminum in a buffed satin finish. Designing assures controlled 360° dispersion of undistorted sound. Echo and feedback are at the minimum. Louvres and conical diffuser "float" on very small soft rubber

grommets. Baffles are coated with clear lacquer which also serves as prime coat for on-the-job painting. Wide choice of colored lacquer finishes available on request.

Shipped complete with hardware and instructions for mounting to Lowell Protective Speaker Enclosures illustrated.

From architecture to acoustics, Lowell STL series meets every requirement — in ultra-modern design . . . for even, undistorted low-level sound distribution throughout 360°. Recommended baffle placement is usually 25' from center to axis. Where straight line placement is impossible, triangulating the baffles in the ceiling is highly effective.

DW-9R

These weatherproof re-entrant paging speakers are capable of high intelligibility in locations where high noise levels prevail. Construction is non-vibratory throughout and consists of heavy aluminum spinings and castings. Voice coils are designed to provide a high degree of efficiency when these speakers are also used as microphones in "talk-back" systems. Ideal for replacing conventional cone speakers. RE-12 and RE-15 provided with heavy cast aluminum ratchet bracket. DW-9R is supplied with flange for flush mounting.

## NEW PAGING AND TALK-BACK SPEAKERS

**RE-20** — Model RE-20 has a nominal rating of 25 watts and incorporates a varnish vacuum impregnated transformer provided with a removable weatherproof aluminum spinning. Primary impedances are 625, 1250, 2500 and 5000 ohms and the secondary is tapped at 4, 8, and 16 ohms. By connecting directly to and between these terminals, the resulting impedances of 310, 625, 1250, 2500, 3650, 5000, 7300, 10000, 14,500 and 29,000 ohms are equivalent to 16, 8, 4, 2, 1.3, 1.0, 0.7, 0.5, 0.34 and 0.17 watts respectively when connected across a 70 volt line. Weatherproof construction throughout.

**RE-11** — Similar to the RE-20, but has a higher cutoff and a nominal rating of 12 watts. The built-in 10 watt transformer has primary impedances of 500, 1000, 1500 and 2000 ohms and a secondary tapped at 8 and 15 ohms.

**RE-18** — This is the economical answer to all paging and "talk-back" applications where low to medium power levels are necessary and where "specs" do not call for line transformers. Bell and back cover are integrally spun of aluminum to assure weatherproof performance of the 12 watt driver unit. Complete with adjustable "U" bracket.

## STRAIGHT EXPONENTIAL TRUMPETS

Output from any straight trumpet is approximately 2 DB higher than corresponding re-entrant type because it lacks the attenuation inherent in all re-entrant horns. "Stormproof" Trumpets are made of non-vibratory RACON ACOUSTIC CLOTH. Weather-treated for indoor or outdoor use. "All Aluminum" Trumpets are made of

heavy gauge aluminum spinnings with rolled beaded edge and cast aluminum throat sections. "Unbreakable" Trumpets are made of heavy gauge aluminum spinnings reinforced and damped with Patented RACON ACOUSTIC MATERIAL. Large sizes are useful for church chime systems, C-D systems, airports and stadiums, parks, playgrounds, music festivals, for both speech and music. Smaller sizes for railroad and bus terminals, waiting rooms, factories.

## CAST ALUMINUM HORN TWEETERS

Response is essentially uniform to 20,000 cycles. Horn design permits wide angle distribution. Alnico V magnets, featherweight drawn dural diaphragms and aluminum wound voice coils are a few of their outstanding characteristics.

## COBRA TYPE HORN

COB-11

The RACON COB-11 "cobra" type horn is designed for public address systems requiring high clarity reproduction with maximum concentration of sound in a horizontal plane. It is of "straight" horn design and

exponentially flared for maximum transfer of energy. The low cutoff of 250 cycles results in crisp, highly articulate quality without a trace of boominess. The horn consists of a heavy two-piece non-vibratory aluminum casting and is provided with a two-section serrated mounting bracket. Finish is baked gray hammertone over a zinc chromate primer.

# RACON ACOUSTICAL EXCELLENCE

RE-ENTRANT TRUMPETS  
RADIAL HORNS and SPEAKERS  
PM DRIVER UNITS

## Re-Entrant Trumpets, Radial Horns and Speakers

RE-35 RE-50 RE-60

RACON re-entrant horns and speakers are designed to deliver highly concentrated sound with great efficiency over long distances. This is due to true exponential design throughout and the elimination of all vibratory members and sound dissipating devices. The base and inside tone arms are husky aluminum castings and bell is a heavy gauge aluminum spinning. The

RE-35, RE-50 and RE-60 incorporate reflectors made of patented RACON ACOUSTIC MATERIAL to prevent resonant effects. All models are supplied with "U"-bracket mounting (ratchet swivel type on request). Finish is in weatherproof hard baked gray hammertone. RE-60 & RE-50 recommended for maximum low frequency music reproduction. RE-35 and RE-25 best suited for incidental music and high speech intelligibility.

The SR-35R and SR-60R are weatherproof radial re-entrant horns designed to project sound over an area of 360 degrees. The centre reflectors are of patented RACON ACOUSTIC MATERIAL and the deflectors are aluminum spinnings covered with this same non-vibratory material. Standard "U" bracket supplied. Thread size is 1 3/8"-18, permitting the use of any driver unit listed below. 1 7/8"-16 thread on request. The SR-60R is ideal for church tower sound installations and the SR-35R for incidental music and speech.

SR-35R SR-60R

SR-15R SR-12R

The SR-15R and SR-12R are rated at 20 and 10 watts respectively and are supplied complete with built-in 15 ohm\* driver units. These models are intended primarily for speech in paging and "talk back" systems and are completely weatherproof. Supplied with cast swivel ratchet and wall bracket.

## Waterproof Permanent Magnet Driver Units

The driver unit is the most important single element in a successful public address system. In these four new driver units, primary emphasis is on: high continuous power handling capacity with ample reserve

for overload peaks up to 100%, maximum conversion efficiency, response ranges suitable for every type sound system, and waterproof construction.

These four units employ Alnico V magnets and Armco magnetic iron throughout. All soft steel parts are doubly plated to prevent corrosion. An automatic electromagnetic cut-out switch is used in the magnetizing process, assuring maximum flux density in the gap and high uniformity. Units are individually measured for flux density. Each unit is tested with special equipment for power handling capacity as well as a 350-volt ground test.

Long life plastic diaphragms and formers are supplied. Voice coil leads are non-fatiguing beryllium copper, insuring lifetime performance. All units are completely waterproof, yet permit ready replacement of diaphragm where needed.

#### HIGH FIDELITY LOUDSPEAKERS

These radically new 12" and 15" high fidelity loudspeakers reflect every advance in the acoustical art to date and in addition, incorporate a number of unique design features never available heretofore.

Each model uses a special formulated plastic suspension, resulting in practically a free edge cone. Free air resonance is lower than heretofore obtainable, manifesting itself in exceptionally clean bass response to the lowest limits of program material. To prevent cone breakup at high levels, stiffening struts of rigid styrofoam are cemented radially to the cone's rear surface.

Mid range reproduction in

the dual cone and tri-cone models is achieved by a separate cone fastened near the apex of the large cone from which it is decoupled by means of a special resilient compound.

A combined compression and direct radiator tweeter covers the upper band. Highs are silky smooth to the limits of audibility, without the harsh quality usually associated with most horn type tweeters.

**NOTE:** The 15-XB 15" tri-cone, integrated speaker, is the only answer to requests for a true extended range speaker at a net price under \$55.00. Despite this seemingly impossible price goal, no concession has been made to quality.

# METAL SPEAKER ENCLOSURES

## RECESSED CEILING and WALL ENCLOSURE

This speaker housing is suitable for an 8" speaker and reduces installation costs considerably. Adjustable brackets make the housing ideal for use in old or new construction. The depth of the box is 4", so that it can be mounted in walls where the studding is 2" x 4".

All of the features of acoustical perfection, durability and economy found in the universal type of speaker enclosure apply to the recessed enclosure as well.

This speaker housing is easily installed in a ceiling where acoustical tile has been used, since the grill plate is a 14" square. This, therefore, perfectly covers the space from which a 12" acoustical tile has been removed.

## ADJUSTABLE MOUNTING BRACKET

The adjustable mounting bracket can be used with any of the universal type enclosures. This makes possible an adjustable feature by which the speaker housing can be adjusted in any angle in a horizontal plane. There is a hole in the bracket which will pass a half inch conduit, permitting the speaker housing to be suspended from the ceiling.

## REAR SEAT SPEAKER ASSEMBLY

This unit is available in two types, as shown in the table below. The rear seat speaker grill assembly consists of the rear seat speaker grill, together with mounting screws, switch, bracket for

holding switch and sufficient wire for installation. The switch permits selection of either speaker or use of both speakers simultaneously.

The rear seat speaker grill is a finely louvered unit made from heavy gauge steel, which assures you of having a grill that will "take a beating." The finish is a beautiful silver grey hammertone, which is a fine enough finish to be attractive and yet dull enough to assure you that no glaring sun reflection will be picked up by a rear vision mirror and be a potential blinding flash to the driver.

## WALL TYPE SPEAKER CASES

This is a distinctive line of speaker cabinets, for wall or table use. Since these units are made of steel, all troubles with wood warping and splitting are eliminated. Keyway holes are provided for wall mounting and four embossed feet on the bottom are provided to prevent damaging table surfaces. Finished in brown wrinkle enamel only.

## SILVER SONANCE LINE

The Silver Sonance Line is divided into three parts. The first is the Universal Speaker Enclosure. There are many advantages of the Universal type of speaker housing that makes it the most outstanding unit of its type. It can be used in hospitals, schools, factories, auditoriums, stores, airports, railroad stations, stadiums and any other place where a speaker is used.

A prominent feature of this housing is the adjustability that is achieved by mounting our speaker case with an accessory known as the Bud Adjustable Mounting Bracket. Full information on this bracket is given on page 14. When the adjustable feature is not desired, the speaker housing may be attached directly to the wall. There are two holes in the sides of the speaker housing enabling installation in this manner. The holes in the cabinet are so spaced that the housing may be mounted either to an outlet box or screwed directly to the wall.

The new BUD UNIVERSAL speaker enclosures have a bi-lateral feature which permits sound to come from both the front and the back of the speaker housing. This is an ideal feature when speakers are used for paging purposes, or when speakers are used in corridors, hallways, or other places where the intention is to have the sound travel in two directions.

There is no danger of cracking, warping, splitting, or any of the other disadvantages found when a wood speaker baffle is used. Since our speaker enclosure is made of heavy gauge steel, none of these disadvantages are present. Changes in temperature and weather conditions have absolutely no effect on this speaker case. The finish is a beautiful silver grey hammertone. The hammertone finish assures ease of cleaning, as the housing may be cleaned by wiping with a damp cloth.

A special sound-deadening compound is used to eliminate the metallic resonant sound that is present in other metal speaker cases. All screws and nuts are furnished for mounting the speaker in the enclosure. There are no holes to drill and no time will be wasted in the installation.

*Dynetic*

PHONO REPRODUCER

PRICE \$79.50

THROUGH THIS NEW PRINCIPLE!

You can obtain superb fidelity—with a new 0.7 mil radius Diamond stylus—at one gram tracking force!

You can completely avoid accidental scratching of your records—and practically eliminate record and stylus wear!

You don't have to worry about groove jumping or leveling turntables!

You obtain the silk-smooth action of a fully jeweled bearing movement!

You obtain the low distortion of a dynamic pickup with the ruggedness and convenience of a magnetic pickup!

**1 GRAM TRACKING—0.7 MIL RADIUS NEEDLE**

The new Studio Dynetic tracks at only 1 gram! This is 1/6 of the usual tracking force—It makes it possible to use the new 0.7 mil radius diamond tip needle, compared to the usual 1 mil radius—which affords a remarkable improvement in fidelity over conventional high fidelity reproducers. The 1 gram force also means that the record will not scratch if you accidentally slide the arm across it. Your mint LP's stay that way . . . no matter how often you play them.

**BALANCED DESIGN**

The Studio Dynetic Phono Reproducer is fully balanced about a ruby pivot on its vertical axis. This means that there is equal mass on both sides of the pivot. The cartridge is mounted on a low-mass beam provided with two sleeve-and-cap ruby bearings of amazing strength and negligible friction—with counter balance adjustment of 1-2 grams. When something causes vibration—be it motor board rumble or heavy-footed people walking by—the balanced design causes the vibration in the front part of the

arm to be compensated for in the back, thus *cancelling it out!* Balanced design, combined with low mass cartridge mount, means that the Studio Dynetic at 1 gram is far more stable than most high fidelity reproducers at 4-6 grams.

**BALANCED DESIGN AND THE LAW OF GRAVITY**

When you use the Studio Dynetic, you don't have to worry about leveling your turntable. Balanced design compensates for the law of gravity, and keeps the stylus perfectly in position, even if you tilt the motor board while the record is playing. Yes, and you also get fine reproduction from your warped records.

**PERFECT FIDELITY WITH PERFECT CONVENIENCE**

The Studio Dynetic phono reproducer was designed with your convenience in mind. Exclusive push-button groove selector helps you find the desired groove on the record—avoids the possibility of damage! The stylus can easily be replaced by the user. Adequate output eliminates the need for transformers—will provide full volume from your present high fidelity equipment.

**WHY HAVEN'T WE SAID ANYTHING ABOUT FREQUENCY RANGE?**

Because we felt these other features—being unique to the Studio Dynetic—had more interest. If we didn't have these unique features to talk about, we could still talk about the exceptional performance of the Studio Dynetic. The Studio Dynetic has a Laboratory Verifiable frequency range from 20 to 20,000 cycles per second, plus or minus 2 db, with measurable response to 30,000 cycles! Its straight line shape reduces arm resonance to an absolute minimum; and its Dynamic Damping eliminates "boom," low frequency rumble, and motor noise. Its "groove oriented" stylus gives an optimum tracking condition. Its high vertical compliance and low needle-tip mass practically eliminate "needle talk". For truly high fidelity performance the Studio Dynetic is your best buy.

## OMNI-DIRECTIONAL DYNAMIC MICROPHONES

The new Slendyne 535 is the most versatile fine quality probe microphone ever developed — actually five microphones in one because of its practical design and useful accessories! The "535" is a moving-coil dynamic microphone built to provide wide range reproduction of music and voice. It can be used for indoor or outdoor applications in the following manner: (1) in the hand, (2) on a floor stand, (3) on a desk stand, (4) hung around the neck on a lavalier cord. Add to these factors an on-off switch adaptor and a dual-impedance switch and you have the most completely versatile fine quality probe ever developed. Frequency response is 60 to 13,500 c.p.s..

The Slendyne 535 is ideal for high quality public address, theater-stage sound systems, and all recording applications where an omni-directional microphone is desired. The microphone is ruggedly built to withstand hard usage, and is unaffected by temperature and humidity variations. The 18-foot, high quality, shielded, two-conductor cable is supplied with a microphone plug equivalent to the Amphenol 91-MC3M plug. The "535" meets the requirements for maximum quality and minimum size. It is finished in rich satin chrome. A self-adjusting swivel adaptor is supplied with the microphone, and permits it to be tilted from 90° from vertical to horizontal, making it possible to tilt the microphone at the source of sound. Also includes on-off switch adaptor.

The "535" is specially recommended for "interview-type" use where the "hand-a-bility" is important. Of special interest to P.A. technicians and recording enthusiasts is the quick-disengaging feature that permits the microphone to be instantaneously removed from the stand swivel adaptor, for use as a hand microphone during audience participation shows, interviews, and for home recording sessions.

The Model 530 Slendyne is the deluxe broadcast Slendyne, finished in an attractive black and gold anodized finish. It has a frequency range of 50 to 15,000 c.p.s., and is furnished with a 20-foot, high quality, two-conductor shielded cable with a Cannon XL-3-11 cable connector. Furnished with swivel adaptor, deluxe lavalier cord and belt clip, on-off switch adaptor.

## BI-DIRECTIONAL GRADIENT MICROPHONE

This rugged high fidelity multi-impedance microphone is recommended for fine quality general purpose uses. It features a frequency response of 50 to 12,000 cps—will reproduce voice and music in a clear, natural tonal quality, which makes it ideal for use in auditoriums, night clubs, schools and churches. The "315" is similar in features and design to the Studio Model 300. It is ideal for those numerous public address applications where its streamlined design and striking beauty lend dignity and prestige to any setting in which it is used. This gradient microphone is a favorite of professional performers and educators because it provides unusual freedom of motion on the platform—making it possible for the user to stand at a 73% greater distance from the microphone than is possible with omni-directional microphones. Its bi-directional "Fig. 8" pickup pattern extends over a broad frequency range—and it permits the sound system to be operated at a level almost 6 db higher than is possible with non-directional (omni-directional) microphones! The "315" picks up voices and music from front to back—is "dead" at the sides, reduces reverberation and the pickup of random noises by 66%. This feature means the "315" can be used in those critical installations where feedback makes it impossible or impracticable to use conventional microphones. It is "PFF"-proof—filters out the "PFF"-type noises often heard over conventional microphones. Here again is another fine quality Shure microphone made under scientific control conditions, which are your guarantee that it can be used month after month without deviation from its original standards. Dimensions: height 6"; width 1 7/16"; depth 1 3/32". The "315" is furnished with an 18-foot, high quality, two conductor, shielded cable, supplied with the equivalent of the Amphenol 91-MC3M plug.

Model "51"  
"Sonodyne"

The "Sonodyne" is ideal for all general purposes, including public address, wire and tape recording, and similar applications. It is widely used by bands, instrumentalists and professional recording artists because of its outstanding reproduction of both voice and music. Widespread usage by home users of tape recorders indicates that the Sonodyne is the ideal high-quality, moderately-priced replacement for the conventional microphone supplied with tape recorders. The wide range frequency response is 60 to 10,000 c.p.s. This rugged microphone is of the pressure type, with conventional semi-directional characteristics, and it may be used for close-talking without undue low frequency emphasis. The Sonodyne is a multi-impedance microphone, providing the versatility of three microphones in one—far low, medium and high impedance. Has built-in receptacle and a 15-foot, two-conductor shielded cable with microphone plug attached. Satin chrome finish.

**SHURE****GENERAL PURPOSE MICROPHONES****NEW****"COMMANDO" ALL-PURPOSE MICROPHONES**

The new Commando series represents a significant achievement in providing quality performance at nominal cost. These dramatic looking, rugged microphones can be used indoors or outdoors. Models 415 and 430 provide practical versatility of operation. They can be held in the hand, set on a floor stand or on a desk stand — can be inserted or withdrawn from the stand in a second, without the use of any tools. Model 420 is of more compact design and is intended primarily for use as a lavalier microphone. It is readily detachable from its lavalier clip for use as a hand held unit. Coupled with this versatility of usage, the Commandos are ideal for general-purpose applications where both voice and music reproduction are of critical importance. Commandos can be used for tape recording in the home; theater-restaurant public address systems; lecturing; paging and dispatching systems; interview-type shows; outdoor public address systems for carnivals, picnic and special events.

All three units are ruggedly constructed of attractive, non-reflecting gray, impact resistant polystyrene. The lower part of Models 415 and 430 are of die cast zinc with a satin chrome finish.

**CABLE TYPE TRANSFORMER**

Model A86A

Model A86A is a high-quality, cable-type transformer which makes it convenient to run a long microphone line from a low impedance microphone to a high impedance amplifier. It is housed in a compact, sturdy and magnetically-shielded case. Connection terminals are easily accessible, and compression fittings crimp the microphone and amplifier inputs. The A86A matches 35-50 ohm and 150-250 ohm microphones to high impedance amplifier inputs. This type of system usually solves the problem of excessive high frequency loss and objectionable hum pickup when long lengths of microphone cable are necessary. The A86A offers additional versatility when used in conjunction with Shure Models 51, 55S, 556S, 300, 315, 330, 333, 525, 530 and 535 Dynamic and Ribbon Microphones. And in addition to these the Model A86A may be used in specialized applications which require high impedance to low impedance circuit connections. The transformer is finished in an attractive two-tone gray and is furnished with a 2-foot cable. Frequency response: 20 to 20,000 c.p.c., plus or minus 1 db. Model —A86A

## CAPPS CUTTERS

Patent No. 2187512 and 2530284

CAPPS CUTTERS are the finest examples of precision hand craftsmanship available in this country today. Each one is made by a series of hand shaping and polishing operations on delicate facets so small that they can be covered by a human hair. Each is individually disc tested to assure the highest possible recording standards. PRODUCTION TOLERANCES: Included angle-Plus 7, minus 3 degrees; Radius, plus or minus .0003; Burnishing facet, plus or minus .00025 (measured at radius tip); Noise meter reading of minus 55db or better at an 8" record diameter.

### CUSTOM MADE AND SPECIAL DESIGN STYLI AVAILABLE (MRS, ANM and FEATHER EDGE)

Eccentric styli, Advance balls, Shaving knives, Wax points, Embossing styli, Replaceable Sapphire reproducing needles, Cartridge assemblies with Sapphire points.

### CAPPS RESHARPENING SERVICE

Most CAPPS MADE styli can be resharpened upwards of five times depending on whether they are simply dull or badly chipped (Thermo styli cannot be resharpened this many times because of the wiring which limits the available area of sapphire.) CAPPS "RESHARPS" are given the same exacting care and attention as CAPPS new styli and are returned to the sender promptly.

## HOT STYLUS UNIT

The CAPPS HOT STYLUS UNIT is used for applying heat to disk recording styli, softening the disk material at the point of contact thereby producing smoother more accurate grooves. This results in a substantial reduction in surface noise, especially at the inner diameter and minimizes the mechanical load on the cutting head increasing its efficiency and frequency response.

When ordering specify make and model number of cutter head and stylus requirements.

### Reporter Microphone

model B-110

Rugged construction, ivory color Polapas moulding. Shielded against strong R. F. Frequency response: 30-13000 with rising high end for crisp speech qualities. Complete with standard Ronette shielded microphone connector.

MICROPHONE STANDS featuring SPECIAL FULL-GRIP

VELVET ACTION CLUTCHES — maximum STABILITY, QUIET and EASE

The "Full-Grip" Clutch offers an extended length clutch body, permitting a secure, full-hand grip. The clutch mechanism is inner-lined with a wearproof bakelite locking collet which grips without jamming, slipping, or sudden dropping. All bases are functionally designed to offer maximum stability for a given base weight. The maximum base mass is located at the outer periphery of the casting where the concentrated weight is most useful. All bases include self-leveling, shock-absorbent base pads, plus three additional "anti-tip" points located between the base pads. The complete tube assemblies of all models are "super-chrome" plated, assuring "life-time" wear. All models terminate in a  $\frac{5}{8}$ "-27 carefully machined thread.

## 16" ... ..PRECISION TURNTABLE

### The MODEL B-16H 3 Speeds

Offers the broadcaster and recording studio the finest professional performance at the lowest cost. The turntable itself is precision lathe-turned, non-magnetic, cast aluminum — dynamically balanced — and with an extra-heavy rim for effective flywheel action. Turntable diameter is standardized at 15¾ inches to allow a ½-inch overhang for cueing. It is internally rim-driven by means of neoprene compound idlers. All inter-moving parts are case-hardened and ground to a micro finish. Rotates on a single-ball pivot which takes the entire thrust of the turntable shaft.

Extremely low distortion has been achieved through effective acoustical damping — through special attention to motor bearings, motor suspension, idler design, concentricity of pulleys and all the other elements essential to smoothness, quiet and overall quality of performance. Rumble, wow and flutter and speed regulation are well within NARTB standards. Requiring no more than routine maintenance, all parts are readily and easily accessible.

#### SPECIFICATIONS:

**SPEEDS:** 33 ⅓, 45 and 78 rpm.

## RECORDING DISCS AND STYLI

### PRESTO RECORDING DISCS

	Type Number	Overall Thickness In Inches	Diameter in Inches	Net Price
<b>GREEN LABEL</b>				
Presto Green Label discs are, without question, the finest for instantaneous recording—discs to be played back without processing. The extremely clean lacquer and carefully selected flat aluminum base assure perfect cuts for standard or microgroove recording. The surface noise, even after many playings, is virtually inaudible and, what is most important, the consistently high quality is the recording engineer's guarantee of perfect results. Both sides of the Green Label are warranted flawless. Packed 25 per box—a spacer between each disc—with separate envelopes—no labels.	610-A	.040	10	\$1.55
	611-A	.050	11 $\frac{7}{8}$	2.55
	616-A	.050	16	4.60
<b>BROWN LABEL</b>				
Brown Label discs are identical to the perfect Green Label except that only one side is warranted to be flawless. They are offered to those who intend to cut on only one side of the disc. In other respects all of the superior qualities of the Green Label are present in the Brown Label disc. Packed 25 per box—a spacer between each disc—with separate envelopes—no labels.	810-B	.040	10	1.30
	811-B	.050	11 $\frac{7}{8}$	2.00
	816-B	.050	16	3.70
<b>WHITE LABEL</b>				
The White Label disc represents a quality disc at a saving. Both surfaces are warranted to be useable without danger of breaking a sapphire cutting stylus. The White Label is perfectly suited for reference recordings, playbacks, tests and rehearsals. Packed 25 per box—a spacer between each disc, with separate envelopes—no labels.	510-A	.040	10	1.30
	511-A	.050	11 $\frac{7}{8}$	2.00
	516-A	.050	16	3.70
<b>ORANGE LABEL</b>				
Orange Label Discs differ from other Presto types in that the aluminum base is of a lighter gauge. The fine lacquer, however, is the same as that used on all other Presto discs and is responsible for the very high quality of the Orange Label disc. It is designed specifically for educational institutions where good quality must be available at a reasonable cost. The fine surface of the Orange Label disc has made it popular also with recording studios as a "playback" where good quality at low cost is desired. Packed 50 per box in jackets of five discs each—in envelopes and with labels attached.	306-A	.035	6 $\frac{1}{2}$	.50
	308-A	.035	8	.75
	310-A	.035	10	1.05
	311-A	.040	11 $\frac{7}{8}$	1.55
<b>DOUBLE SIDED MASTERS</b>				
Double sided masters are truly the most perfect discs that can be produced for processing work. They are warranted to silver plate quickly and uniformly. Masters are packed with a spacer between each disc. Individual envelopes are not included. However, envelopes when required may be had on request. The 10, 11 $\frac{7}{8}$ and 16 inch discs are packed 25 discs to the box. The 17 $\frac{1}{4}$ inch disc is packed 20 to a box, because of its additional thickness. The 13 $\frac{3}{4}$ inch disc is packed 30 to a box.	620-A	.050	10	2.50
	621-A	.050	11 $\frac{7}{8}$	3.20
	623-A	.050	13 $\frac{1}{4}$	4.05
	626-A	.050	16	5.95
	627-A	.064	17 $\frac{1}{4}$	6.95
<b>SINGLE SIDED MASTERS</b>				
Single sided masters are identical to double sided masters except that only one side is warranted perfect. The primary side is flawless. Single sided discs represent a definite saving since only one side of a master can be processed. In all other respects the single and double sided discs are similar.	820-B	.050	10	1.95
	821-B	.050	11 $\frac{7}{8}$	2.50
	823-B	.050	13 $\frac{1}{4}$	2.95

<b>DURAL SHANK SAPPHIRE CUTTING NEEDLES</b>			
Sapphire cutting needles—dural shank—are for use where the very best is demanded. This needle cuts sharp, clean grooves which play back with the least possible surface noise. Long shank sapphires are for use with the Presto type 1-D cutting head. Short shank sapphires are for use with all other types of cutting heads. If needles for microgrooves are required, simply add the word "micro" after the regular type number. Each Presto needle is individually tested and consistently uniform results are assured. Sapphire life varies considerably but 8 to 10 hours may generally be expected. Needles are packed individually or in boxes of six individual units. <b>BRASS SHANK SAPPHIRE CUTTING NEEDLES</b>			
Brass shank cutting needles are generally similar to dural shank needles except that the high frequency response is not as good due to the increased weight of the shank. For this reason they are not supplied for microgroove. Both long and short brass shank needles are available. Needles are packed individually or in boxes of six individual units. ## HIGH-FIDELITY ULTRA-LINEAR CERAMIC CARTRIDGES

### 80 SERIES ULTRA-LINEAR CERAMIC CARTRIDGE COMBINES BEST FEATURES OF ALL PICKUPS

This true high-fidelity cartridge embodies the most advanced concept in pickups; combines all the benefits of ceramic and magnetic cartridges (with none of the disadvantages) in one pickup that fits any arm or plug-in head (adapter for Fairchild and Gray slide-in arms included).

The Model 80 series ceramic cartridge is a displacement or amplitude-actuated device. It may be used with HI-Z phono amplifier input, or magnetic preamp input, without circuit modification, by using adapter supplied. (Adapter de-equalizes magnetic input and reduces ceramic cartridge output to conform, without degradation of reproduction.) Housed in a resonant-free die-cast case, attractively styled with black and gold or silver finish, the Model 80 embodies the most advanced concepts in phono-pickups.

The Model 80 cartridges complement the recording characteristic of modern microgroove recordings without recourse to equalizing circuits. The 80 series cartridge output will be flat,  $\pm 2\frac{1}{2}$  db, from 20 to 15,000 cps when referred to the popular RIAA-Orthophonic recording characteristic. Low-frequency response, determined by the magnitude of the input load, will be sensibly flat to DC when the cartridge is working into an infinitely high impedance.

The Model 80 series ultra-linear ceramic cartridge has a high compliance of a  $3 \times 10^{-4}$  cm/dyne. Such a high compliance practically eliminates record wear and reduces tracking problems to a minimum when used with specified stylus pressures. Because the ultra-linear ceramic cartridge is a piezo-electric device, inductive pickup of hum from motors or stray fields is eliminated. Vertical response is the lowest of any cartridge now on the market, which results in a very high signal-to-noise ratio. Turntable rumble and room vibration pickup are reduced to the lowest possible value in the design of this cartridge. Temperature variations do not affect cartridge; in higher temperature ranges, even at the boiling point of water, performance is uniform and the cartridge will operate with full efficiency.

The 80 series turnover models have two independent generating elements. Full output from stylus and element in use... no distortion or resonance from unused stylus. Smooth acting turnover mechanism accurately positions needle.

**Unequal response.** 20 to 15,000 cps. **Lowest intermodulation distortion.** Less than 3% at 18 cm/sec. **High output.** 80 series, 500 millivolts; 80M Series, 25 millivolts. **No hum.** Absolutely noninductive. Not sensitive to motor and transformer fields. **High compliance.**  $3 \times 10^{-4}$  cm/dyne—several times the average hi-fi pickup compliance. **No preamp required.** 80 series works into any amplifier input.

The PICKERING ISOPHASE is a revolutionary new speaker with a single, virtually massless, curved diaphragm. Conventional cone or dynamic speakers reproduce sound by moving only small amounts of air at high velocities. The ISOPHASE, with its *large* sound-generating surface, is a radical departure from this older concept. Sound is reproduced at constant level over the entire surface of the curved diaphragm . . . *more than 1000 square inches!* Here is *truly* wide-range treble dispersion.

The PICKERING ISOPHASE diaphragm is vibrated as a unit by an electrostatic field. Sound is generated into the air at a low velocity, closely approximating the unit area energy of the sound at the microphone in the concert hall or studio. The result is a startling quality of "presence" that is breathtakingly realistic.

The PICKERING ISOPHASE covers the musical range from 400 cycles per second to well beyond the limits of human hearing. The response over this range is consistent and absolutely uniform—without the slightest hump, peak, or resonance of any kind. This in itself—is an *unprecedented characteristic for a loudspeaker!*

## Model 190D PICKUP ARM

*...for Optimum Performance on Microgroove and Standard Records*

Designed to overcome deficiencies of conventional arms, so severely accentuated by LP microgroove recordings, the Model 190D Pickup Arm embodies all of the features which enable a high-quality magnetic cartridge to deliver distortion-free tracking performance.

Studies by audio engineers have revealed that pickup arms which perform well on 78 rpm records and standard transcriptions often do not produce satisfactory results on microgroove recordings. Regardless of cartridge quality, inadequate pickup arms will cause considerable tracking distortion.

The Model 190D is designed specifically for microgroove records; and, is equally effective for 78 rpm record reproduction. The Model 190D provides distortion-free tracking while maintaining the correct relationship between the lateral and vertical moments of inertia. This characteristic is of great importance in order to faithfully reproduce both LPs and 78s with minimum record and stylus wear.

### OUTSTANDING FEATURES OF THE MODEL 190D

For use with any single cartridge that has standard RETMA 1/2" spaced mounting holes; and, the Series 350 or 370 FLUXVALVE cartridge. • The vertical mass has been minimized in order to track any record without imposing extra vertical load on the grooves. Plays badly warped records as well as flat ones. • No spurious arm resonance at any frequency. • Pivot friction is lower than 3 gram centimeters—bearings are rugged and trouble-free. • Statically balanced about the vertical axis—eliminates tendency to jump grooves when bumped or jarred. • Lowest possible ratio of vertical-to-lateral moment of inertia. • Offset head reduces tracking error to less than  $\pm 2 1/2^\circ$ . • Stylus point is protected against contact with anything but the record groove. It cannot strike the turntable mat or center-pin.

### ESL DUST BUG

The problems of dust, lint, and static buildup on phonograph records and pickup styli have been solved by this ingenious new invention which cleans the record as it is being played. The plush pad is slightly moistened with special, harmless activating fluid supplied in a replaceable applicator. This helps to loosen groove dust and dirt, which is then collected by the pad. It also neutralizes the static charge present in all records. Every point on an LP record is cleaned by the wide pad approximately one hundred times during a single play.

## AUDIO SWEEP FREQUENCY TRANSCRIPTION

The Sweep Frequency Transcription is a new method of making instantaneous frequency response runs. It has been designed with all correction factors included in the original recording, therefore, no charts or graphs are needed. Before the development of the Sweep Frequency Transcription, the tone record was used for frequency response measurements on playback systems. This method was both time consuming and laborious. If adjustments were required, a new frequency run was required after each adjustment. Now all that is needed is a cathode ray oscilloscope and a Sweep Frequency Transcription for instantaneous response measurements. Only a few quick adjustments on the equalizer circuits and the job is done. For complete frequency checking of all broadcast transmission equipment and components for production testing of phonographic reproducers, filter networks, audio amplifiers, preamplifiers, tone control systems and components.

## "400" SERIES PLUGS AND SOCKETS

(Formerly "Heavy Duty")

### General Specifications

Made in 2, 4, 6, 8, 10 and 12 contacts. All Plugs and Sockets are polarized. Body of molded Bakelite. Phosphor bronze "knife-switch" type Socket contacts engage both sides of flat Plug Contacts—double contact area. Plug prongs are 1/4" wide by 1/8" thick. Caps are finished in Black Crystal and equipped with fibre lining. Plugs and Sockets arranged for cap or panel mounting.

Note: Standard angle brackets cannot be attached to S-402-AB due to narrow block and insufficient material for screw threads. A special bracket is supplied (Type 46) See illustration. The Socket fits into this bracket which is attached to panel.

Check the No. 2400 Series Plugs and Sockets listed on pages F-42 and F-43 which are similar to the 400 Series except their design increases the creepage distances and therefore can take higher voltages.

## “2400” SERIES PLUGS AND SOCKETS

The 2400 Series Plugs and Sockets are designed for highest electrical and mechanical efficiency, and although they carry the same rating as the 400 Series, they will actually handle considerably higher currents due to their improved construction.

An entirely new type of socket contact has been designed. Four individual flexing surfaces make positive contact over practically their entire length. Note in the illustration how they exert maximum pressure at every point. Also note unique method of anchoring terminals in the block—they cannot be moved up or down.

This design provides greater contact surface, increased pressure, with smoother action.

Socket contacts are of phosphor bronze, cadmium plated. Male contacts are of heavy brass  $\frac{1}{4} \times \frac{1}{8}$ ", cadmium plated.

The contact to contact, and contact to ground distance has been considerably increased by mounting the contacts into recessed pockets with a Bakelite barrier surrounding and extending above. This method is used on both the top and bottom sides of both plugs and sockets, greatly increasing the leakage path.

The outside dimensions of corresponding plug and socket bodies are the same and can, therefore, be changed from brackets to caps, or vice versa.

Two styles of brackets are furnished "SB" (shallow bracket) for flush mounting and "DB" (deep bracket) for recessed mounting. Caps are furnished with flared hole in top or end, or with cable clamps in top or end. Unless otherwise specified the following size cable entrance holes will be supplied:

2402— $\frac{3}{8}$ "	2406— $\frac{7}{8}$ "	2410— $\frac{1}{2}$ "
2404— $\frac{1}{8}$ "	2408— $\frac{1}{8}$ "	2412— $\frac{5}{8}$ "

As noted above, the 2400 Series is furnished in 2, 4, 6, 8, 10, and 12 contacts. All plugs and sockets are polarized.

Plug and socket bodies are of molded Bakelite. The fibre linings in the caps are the same for both plugs and sockets.

A shoulder extends around the face side of plug and socket presenting a finished appearance when mounted in bracket or cap.

On account of this shoulder extending around the entire face of the body blocks, angle brackets cannot be used with the 2400 Series Plugs or Sockets.

The entire 2400 Series is interchangeable with the 400 Series as 2400 Plugs fit corresponding 400 Sockets, and 400 Plugs fit corresponding 2400 Sockets.

Solder connecting side of Plug Body showing Recessed Pockets with Barriers around contacts. Plug contacts are also in Recessed Pockets on opposite side.

Solder connecting side of Socket Body showing Recessed Pockets with Barriers around contacts. Socket contacts are also in Recessed Pockets on opposite side.

## “500” SERIES PLUGS AND SOCKETS

Designed for 3,000 volts and 25 amperes per contact. Circuit characteristics, however, may alter this rating one way or the other.

Long leakage path from terminal to terminal, and terminal to ground. Contacts are brass and phosphor bronze, silver plated. Metal parts of caps and brackets are steel, parkerized (rust-proofed). Plug and socket blocks are interchangeable in caps and brackets.

All sizes are polarized in a manner to prevent a smaller plug being inserted in a larger socket. Thus different sizes may be used on one installation, without danger of making wrong connections.

Extreme care has been taken to make terminal connections under cap very accessible both for original wiring and subsequent inspection. The cap is insulated with canvas bakelite. Plug prong cross section  $\frac{1}{8}$ " x  $\frac{3}{32}$ ".

**IMPORTANT:** For safety with high voltages DEEP BRACKETS should always be used on one plug or socket, when the other plug or socket has a CAP. SHALLOW BRACKETS are for use only in connecting two units, each unit having plug or socket with SHALLOW BRACKET.

**Cable entrance:** Because of the great variation in type and size of cables, we have considered it best not to supply cable clamps of any kind. The cap end is made to accommodate standard BX clamps which may be obtained at any electrical jobbing house. The cap end will be furnished with round hole from  $\frac{1}{2}$ " diameter and  $1\frac{1}{4}$ " diameter in steps of  $\frac{1}{8}$ ", if the size required is given on order. If no size is given, plain cap end with center punch locating center will be shipped.

### LOCKS FOR 500 SERIES PLUGS AND SOCKETS

No. 500-L Locks

Locks shown above are used in connection with any DEEP BRACKET and cap combination.

The locks securely hold the units together, but they can be released instantly.

The mounting plates are made to fit all DEEP BRACKETS, and are fastened by the same screws or rivets that hold the deep brackets to the panel. Can not be used on shallow brackets. Sold in pairs only.

## BARRIER TYPE TERMINAL STRIPS

Increased insulation is provided by having Barriers placed between each Terminal. These Barriers follow around the edge of the Strips and terminate at the base. They not only make a long leakage path but prevent direct shorts from frayed wires at the terminals. Mounting holes are at the ends as illustrated. The base is molded Bakelite. The Eyelets and Binder Screws are of brass, nickel plated. The 3/4 W or Y terminals are of brass, hot tin finish.

# NEW COMPONENTS

## POLYFOAM CABLES

To meet special requirements for cables with lower attenuation, lower capacity, lower cost and lighter weight than standard RG cables, AMPHENOL has developed a new and versatile dielectric material—Polyfoam. It is a cellular polyethylene which utilizes an inert gas as an expanding agent to form completely enclosed cells within the polyethylene. Polyfoam has a dielectric constant of 1.50 as compared to 2.25 for solid polyethylene.

Polyfoam 621-100-101 provides approximately 35% less attenuation than that of standard RG-11/U and is sweep-tested over the VHF channels. Except for the solid center conductor, the 621-100-101 is dimensionally equivalent to standard RG-11/U and can be used with UHF series connectors. It has a specially compounded non-contaminating black polyethylene jacket providing improved weathering properties and abrasion resistance.

Polyfoam 621-100 is identical to 621-100-101 except that it is

not sweep-tested for the VHF channels and, therefore, is less in cost.

For greater shielding effectiveness, where radiation of the cable presents a problem, the 621-102-101 Polyfoam triaxial cable is available. It is equivalent to the 621-100-101 with an added full coverage shield and jacket.

The Polyfoam version of RG-59/U (621-715) provides lower cost, but retains the same electrical characteristics. Utilizing the same center conductor as standard RG-59/U, the Polyfoam dielectric diameter was reduced approximately 25%. The 621-715 can be used with UHF series connectors (using Reducing Adapter 83-185) and with BNC connectors. It has a specially compounded non-contaminating black polyethylene jacket providing improved weathering and abrasion resistance.

Polyfoam 621-700 and 621-701 are similar to 621-715 except that 621-700 has a Type IIa non-contaminating black vinyl jacket and 621-701 has a Type I black vinyl jacket.

These extremely small connectors were designed to allow utilization of the unique 'ribbon' contact features in miniaturization programs, particularly in airborne electronics and computer projects, for increased reliability. The smooth, easy insertion and extraction action, the self-wiping, self-cleaning features and the double-sided, flexing action of both mating contact members make Micro-Ribbons the first miniature connectors to provide reduction in size with added reliability. Available in as many as 50 contacts, Micro-Ribbons make possible the routing of a great many circuits through one or more small connectors at a great saving of space and weight.

New cable-to-chassis types in the Micro-Ribbon family broaden the application possibilities of these superior connectors. Contact arrangements are the same as the shell types.

## Micro RIBBON CONNECTORS

Bodies are molded of an improved diallyl phthalate with extremely high impact strength and excellent dielectric features. Contacts are gold-plated over silver. Shells are cadmium-plated brass with clear chromate treatment. Receptacle shells have float bushings allowing a float of .020 in each direction. Pretinning wires before soldering is recommended.

## for Power, Signal and Control Circuits in Electronic Equipment

"AN" stands for Army-Navy and these services have provided the official definition of the AN connector: to provide a detachable connection in one or more electrical circuits; a complete AN connector consists of two mating units—a plug assembly and receptacle assembly.

AMPHENOL AN connectors, although designed and approved under government specifications for use by the armed forces, are ideal for commercial and industrial use where the same dependability is mandatory. These modern, efficient connectors are being used by practically every part of the giant electronics industry.

LARGE RECEPTACLE & PLUG

SMALL RECEPTACLE & PLUG

CABLE RECEPTACLE

PLUG FOR POTTING

Compact in size, extremely efficient in operation, the AMPHENOL 165 series offers many new possibilities to design engineers who have long requested a miniature version of standard "AN" connectors for aircraft instrumentation.

The 165 series connectors are pressure-proof and completely waterproof, mated or apart. Weights average about one third that of standard "AN" connectors. These miniature "AN" type connectors withstand government specified salt-spray tests by many hours in excess of standards. The female connectors feature a sandwich construction with the insert spun into the cartridge and the connector sealed at the factory to prevent leakage. A highly efficient "O" ring is used on both the plug and receptacle as a sealer.

The 165 Series is available in two connector sizes and six contact configurations. The smaller size has 5, 9 and 12 contacts; the larger size, 11, 14 and 24. All plugs, receptacles and cable receptacles may be ordered with either male or female inserts. Shells are aluminum with a grey anodic finish. The dielectric material is diallyl phthalate—the famous AMPHENOL "Blue" material with its superior mechanical and electrical characteristics. Contacts are high conductivity bronze with gold-plating over silver.

The standard plugs feature a built-in cable clamp which provides positive cable strain-relief. All plugs (male or female inserts) are also available in a special construction for potting. Potting increases circuit reliability by assuring a positive moisture-proofing around the soldered leads at the back of the connector. Complete information is available from AMPHENOL as to methods and materials.

To order any 165 Series Miniature AN-type plug for potting simply add the suffix (-1000) to the part number: 165-33-1000 for example.

The Cannon Electric XLR connectors are a newly expanded audio connector series... the most modern addition to the long line of Cannon Connectors featured on all top-quality microphones. It's really quiet, too!

New resilient insulator and specialized construction of socket contact assembly protects against disagreeable mechanical interference... noise problems encountered with connectors when their cables are moved, pulled, or subjected to shock.

Features streamline design, satin nickel finish, integral cable clamp, neoprene cable relief, and the time-tested latchlock that Cannon pioneered on the first audio connectors. Available with three 15-amp. or four 10-amp. contacts. Available in panel receptacle type, providing same continuous characteristics.

### ERIE TEFLON TUBE SOCKETS

**ADVANTAGES.** Teflon tube sockets offer ultra superior electrical advantages. Its extremely low dielectric constant and dissipation factor result in a capacity, between pins, only twice that of air, and a circuit Q better than 5,000. Contributing to circuit

stability is the fact that the capacity and Q remain constant; the actual change is negligible, over a frequency range of 60 cps to 30,000 Megacycles and a temperature range of minus 110° F to plus 500° F. Sockets meet all RMA and JAN Specifications.

### ERIE KEL-F\* TUBE SOCKETS

**ADVANTAGES.** Erie Kel-F Insulated 7 and 9-Pin Miniature Tube Sockets are designed to fill the need of the electronics industry for high performance tube sockets for use where high or low ambient temperatures or frequency stability are problems. Kel-F, a thermoplastic Fluorocarbon Polymer, is readily molded to accurate dimensions. It is dimensionally stable throughout its wide service temperature range from a

low of -320° F to +390° F, and there is no appreciable change in its electrical and physical properties. Water absorption is zero by ASTM Test — hence it is unaffected by extreme humidity.

All metal parts of sockets are precision made and plated to JAN Specifications. Contacts exceed all JAN Specifications for tube retention, tab flexing and pin contact resistance.

### ERIE TEFLON CONNECTORS

**9-PIN CONNECTOR**

CN-409M

**USE.** Teflon 9-Pin Connectors are designed to mate with 9-Pin Miniature Tube Sockets, Catalog No. SO-429-3.

**ADVANTAGES.** Teflon 9-Pin Connectors provide exceptionally low loss between pins and between pins and ground. The Teflon insulation offers a loss factor of less than 0.0002; surface resistivity of 3.5 x 10<sup>13</sup> ohms; dielectric constant of 2.0 (60 cycles to 30,000 megacycles). It will not DC plate or carbonize under arcing.

Pins are silver-plated brass and insulating body is designed with "windows" for making easy solder connections.

**HOW TO ORDER.** Specify Teflon 9-Pin Connector No. CN-409-M for mating with Miniature Tube Socket No. SO-429-3.

**15- and 18-PIN CONNECTORS**

CN-415M

CN-415F

**USES.** Erie Teflon Connectors are designed for low-loss, high frequency service in interconnection of radio, radar and other electronic equipment — where connectors must be unaffected by wide range in ambient temperatures, pressure, altitudes, humidity, and mechanical shock and vibration.

**ADVANTAGES.** The principal characteristics of these Teflon connectors are outlined in the tabulation below.

Material of terminals in male connectors is Brass, silver-plated, gold-flashed; female connectors, Beryllium Copper, silver-plated, gold-flashed.

**HOW TO ORDER.** Specify Erie Teflon Connector Type CN-415 or CN-418 for 15 or 18-pin connectors, with subscript M or F for male or female types, or both for mating pairs.

**CRYSTAL SOCKETS**

CS-441

**USES.** Teflon Crystal Sockets are designed for use wherever low loss and frequency stability are desired and mechanical shock and vibration are problems.

**ADVANTAGES.** Made of Teflon, these Crystal Sockets are unusually sturdy and due to the inherent resiliency of the plastic, they aid in absorbing shock and vibration in severe service. Teflon Crystal Sockets have a loss factor of less than 0.0002 and a dielectric constant of only 2.0 from 60 cycles to 30,000 megacycles.

Teflon Crystal Sockets mount by means of a single hole and can be either screw or rivet mounted. Assembly is facilitated as there is no danger of breakage as with ceramics.

**HOW TO ORDER.** Specify Teflon CS-441 Crystal Sockets for 0.050 pins spaced 0.486 inches. Specify Teflon CS-442 Crystal Sockets for 0.095 pins spaced 0.486 inches.

## POST SOCKET TURRETS

10-0-12T

6-M-6T

10-12

VECTOR SOCKET TURRETS are widely used for mounting circuit components. The posts are Grade XXXP phenolic (or glass silicone to order) 1/2" O.D. with 1/16" wall. Sockets are mica filled phenolic. The terminals are hot tinned brass, saddles cad. plated steel. Also available are premium quality sockets with hot tinned brass or steel saddles, beryllium copper, silver plated terminals (Add "J" to Cat. No. for this). Terminal Turrets without sockets, useful for many mountings, are listed at end of the table.

TRANSISTOR TURRET SOCKETS fit either 3-in-line or 3 on 0.2" Dia. circle type bases. Round socket mounts inside turret with saddle outside. Requires 0.365" mounting hole with two 1/8" side holes spaced 3/4".

## DECK TURRET AND WALL TURRET

10-NN-7A3-2

10-NN-7A7-4

DECK TURRET & WALL TURRET assemblies provide means for mounting circuit components similarly to Post-Turrets but are somewhat better adapted to compact multi-tube assemblies. Deck Turrets have terminal strips parallel to the socket plane whereas Wall Turrets have strips perpendicular thereto (See figures). They are designed for use on a chassis or with plug in units. Pattern "A" strip is standard.

## LIP LOC CASES

Plug-In Unit made with Kit 4-EK3 using Case EX-12

LIP-LOC CASES: Provide ideal aluminum enclosures without interior structures for Plug-in-Units, instruments, etc., consist of two drawn end pieces and 2 L shaped center-section members which clamp between the end pieces. Only 2 screws need be removed to disassemble. Parts may be mounted on any 4 of 6 sides, with good accessibility. These cases may be combined readily with Turrets and Plugs to make compact Plug-in-Units. Caustic etch finish is standard or anodized to special orders.)

## MULTI-USE PLUG-IN-KIT:

These flexible assemblies provide simple readily wired packages utilizing LIP-LOC cases and Deck-Turrets which may be arranged to mount many circuit assemblies. For example, KIT 4-EK3 may be set-up to mount 1 to 3, either 7 or 9 pin miniature sockets in any order using adapter rings to accommodate different socket diameters. Socket holes are 3/4" diameter with slots for saddle screws. Plug bases are supplied to close socket holes where tubes are not required. (If octal sockets are required, holes can be enlarged by customer.) 7 and 9 pin sockets are supplied and also an equal number of JAN type shield bases of each type and corresponding to the number of socket holes in the cover. An extra undrilled plug base is supplied so that larger plugs such as the "Blue-Line" may be mounted. (Latter is not supplied but spacers & screws for this are included.) Finish is caustic etch on aluminum. Sockets are mica filled phenolic, commercial grade, terminal strips and spacers are phenolic. Adapter rings to mount 7 pin sockets are furnished. Two Deck type strips with ZIP terminals are assembled with 9 pin sockets and 11 pin octal type plug into case. One extra third deck is supplied as a loose port which may be easily inserted in the stack if desired. Overall height of all units is 3".

PRBL

Vector Tube Base Plugs fit the 7-pin miniature, 9-pin noval and 8-pin octal tube sockets. Castings are mica-filled phenolic. The pins are of high strength phosphor bronze. These plugs may be mounted in three ways:

- By means of a screw passing through the center of the plug. The miniature and noval plugs have a recessed hexagonal hole in the base which fits a #4-40 or 5/40 small pattern nut.
- They may be retainer ring mounted in a plate or chassis. If the plugs are to be mounted in a plate add the letter "R".
- Where round shells are to be attached, the 7- and 9-pin plugs can be furnished with 2 threaded inserts in the side (#1-72 thread) when the letter "F" is added to the part number. The miniature plugs are available without the center post, and with the pins bent into hooks to facilitate soldering.

VECTOR ZIP TERMINALS — Remarkable new "ZIP" Terminals do "everything". The PUSH-IN Type need only be pushed into the .093" hole (Pattern A or AA board) and holds itself in without staking (May be staked if desired for maximum holding). It is provided with serrated slots to grip inserted wires — it also has through panel hole and additional slot on opposite side and is offset for Riser wire application. "Side Zip" type as used in Deck type units provides side projecting fork and is eyeletted in place in .093" hole. "Edge Zip" is similar to latter-but laps over edge of strip with main fork perpendicular to strip. Hot tin dipped eyelets listed separately for attaching ZIPS (except Push-in type) may also be used alone as terminals.

## TUBE SOCKET TEST ADAPTERS

T80

T9N

TUBE SOCKET TEST ADAPTERS are inserted between the socket and the tube and provide test tab elements for checking. Connections are wired straight thru from plug to socket. Beryllium copper socket contacts for long-life — malded tan phenolic bodies.

Catalog Number	Socket Type
T-8-0	Octal
T-7-M	Miniature
T-9-N	Noval
T-789	Set of above three in kit
P-1	Probe for above

## EXPERIMENTER'S TEST ADAPTERS

EXPERIMENTER'S TEST ADAPTERS. These are similar to the Socket Test Adapter but are less the shells and tabs so that connections can be cross-connected in any desired way. User must solder connections (Outer shells available at factory — add "S" to number to obtain).

Catalog Number	Socket Type
TX-8-0	Octal
TX-7-M	Miniature
TX-9-N	Noval
TX-789	Set of above three in kit

TX-8-0

## SOCKET EXTENDERS

SOCKET EXTENDERS provide a replaceable unit for use in tube testers. Wear is shifted from the socket in the tester to the one in the Extender so that when it is worn out a new one can be easily inserted. Sockets have highest grade beryllium copper contacts. A screw projects thru the plug and may be used to hold the unit firmly in place if desired. Socket to plug leads are soldered and an outer shell is used.

Catalog Number	Socket Type
#1262	Octal 8
#1263	9 P. Noval
#1264	7 P. Miniature

## THE ROTOPROBE

THE ROTOPROBE is a new type of test adapter to which a rotating test lead is permanently attached. Rotation of the shell causes a contact arm to move across the pins connecting the socket elements so that any position may be quickly contacted. This serves the same purpose as the usual Test Adapters but is more convenient and faster.

Catalog No.	Socket Type
T-8-B	Octal
T-7-B	Miniature
T-9-B	Noval
T-789-B	Set of above three in kit

## SOCKET CHANGE ADAPTERS

SOCKET CHANGE ADAPTERS facilitate use of unlike tube bases in existing sockets where a change of tube types is required. To be wired by user. Add "S" to number for an outer shell which may be cemented in place.

### DYNAMIC MUTUAL CONDUCTANCE TUBE TESTER

**Most Accurate Engineers' Laboratory Model**

Tests Tubes Per Tube Handbooks and JAN Specifications

**Model 700:** For precise laboratory measurements of the most important vacuum tube characteristics, Transconductance (Mutual Conductance). With this Tube Tester it is possible to duplicate the results found in tube manuals. This instrument places a separate voltage on each element of the tube. These voltages can be varied and measured by means of separate variable rheostats and meters in each circuit. A.C. ripple has been completely filtered out of the plate, screen and grid circuits.

In addition to providing accurate measurements of Mutual Conductance, it is possible to study the behavior of various tubes when used in non-conventional and special types of circuits. Amplification Factor and Plate Resistance may be obtained from the test results. The HICKOK Model 700 may be operated in either of two ways. First, by making use of alternating current null methods of measurement in which capacitance and resistance errors have been eliminated; and second, by direct reading on a meter. The Null Method of making measurements on the tube is the most accurate and is the one which is recommended where sufficient time for the test is available.

Complete with all leads and accessories. Attractive and sturdy case.

#### Model 700

#### TECHNICAL FEATURES...

1. Micromho ranges are available as follows: 600, 1500, 3000, 6000, 15,000, 30,000 and 60,000 micromhos.
2. Four separate signal voltages are available, 1.0 volts, 0.5 volts, 0.1 volt and 0.05 volts.
3. Plate voltage supply is continuously variable from zero to 300 volts. An individual D.C. voltmeter in the plate circuit reads plate voltage at all times.
4. Screen voltage is continuously variable from 0 to 300 volts. This is metered by means of a separate D.C. Voltmeter in the screen circuit.
5. The control grid voltage is continuously variable from 0 to 75 volts. This voltage is measured by means of a separate D.C. Voltmeter in the grid circuit. Provision is made to make bias either negative or positive. Suppressor can be used as control grid if desired.
6. An extra negative circuit is provided for holding unused tube elements negative while test is being made on other elements.
7. Provision is made for testing tubes under self-bias conditions when required by that particular tube or when such information is desired.
8. Filament voltage may be applied to the tube up to 117 volts A.C. The separate A.C. Voltmeter in this circuit measures the voltage applied to the filament at all times. This voltage is continuously adjustable. A two-range filament current meter is provided — enabling the measurement of filament current up to 8 amperes.
9. A D.C. Milliammeter is provided for measuring plate current, screen current, or cathode current. This reads from 0 to 150 ma. and may be switched into the three circuits for this purpose.
10. A separate D.C. Microammeter is mounted in the control grid circuit to read grid current, if and when it exists.
11. Amplification factor can be easily calculated from values obtained from the meter readings. Other factors may be similarly calculated.
12. Provision is made for testing tapped filaments either in series or in parallel.
13. Provision is made for adjusting to the electrical center of filament type tubes.
14. Twin tube sections may be tested either singularly or in parallel.
15. Screen grid tubes can be connected as triodes or tetrodes, etc., as may be desired. Switching arrangement is provided for this purpose.
16. A built-in power supply is included with the instrument providing thoroughly filtered D.C. on plate, screen, and control grid.
17. A voltage adjustment with an accurate A.C. meter in the circuit is provided to insure exact signal voltage and correct phasing.
18. Includes a filament current meter with double scale for measurement of filament current up to 8 amps.
19. Designed and calibrated for 60 cycles, 110 or 120 volts operation, 150 watts. Calibration for other frequencies and voltages available.
20. Approximate size — 8" D. x 20" W. x 29" L. Approximate 70 lbs. net, 90 lbs. shipping.

**Model 7001**

**Model 7001:** Null Reading Apparatus is self-contained in a small case placed alongside the Model 700 tester. It consists of a voltage supply (source from the Model 700 to assure correct phasing), a sensitive A.C. Galvanometer, a calibrated resistor, and an accurate A.C. Voltmeter. It is connected directly into the plate circuit of the tube under test by binding posts on the panel of the Model 700. The grid-signal-produced-component of plate current is balanced by an equal and opposite current applied to the plate from the power supply through the calibrated resistor. The reading of the Micromho Meter at the top of the panel is proportional to the Transconductance of the tube, and is therefore calibrated in Micromhos. The effect of the Null Reading Method is to reduce resistance in series with the plate to zero, thereby assuring the highest accuracies obtainable.

**Model 7001:** for obtaining bridge type null readings of 1½% accuracy. 8" D., 8" W., 13½" L.

Model 123A

## AUTOMATIC TUBE-TESTING MACHINE

### Dynamic Mutual Conductance...Cardmatic

Model 123A: Automatic and by far the fastest, but the real news is the greatly improved circuit of this equipment which is the first important New Tube Tester Design in the past 25 years.

Prior to the design of this equipment, only the HICKOK Model 700 laboratory type tester permitted the exact setting of all the different voltages to the different elements of a tube. Now, with the engineered perfection of the 123A; an infinitely large number of exactly controlled voltages are available for each element of a tube under test. In fact, through use of the HICKOK Cardmatic system, the design engineer can now choose a great variety of voltages for design testing of tubes used in special purpose circuits.

The tough long wearing Vinyl code cards instantly and positively trip the automation mechanism to make all the electrical connections required for the testing of a receiver type vacuum tube.

The unusually low 0.22 volts RMS signal used on the grid is necessary in testing the newer, more sensitive type tubes in order to avoid test distortion.

#### SPECIAL FEATURES

**300% MORE ACCURATE:** Tests Gm to an accuracy of 1%. (Most portable Gm testers attain 5% accuracy or less. Emission type testers cannot test for Gm and therefore have very poor performance in detecting weak tubes.)

**SCREEN and PLATE VOLTAGES:** 12 to 160 volts: This wide selection of voltages protects against obsolescence. For instance, new car radios use 12 volt plate voltage.

**FILAMENT VOLTAGES:** 0.1 to 119.9 volts in 1/10 volt steps. More and more tubes are now in use with odd filament voltages. The 123A will accurately test all of them at their exact filament voltage.

**EXTRA SENSITIVE GAS TEST AND GRID EMISSION TEST:** The most accurate tube gas evaluation test available today.

**200 MA LOAD ON RECTIFIER TUBES:** This gives an accurate test of the operation of a rectifier tube under load.

**NEW KNEE TEST:** This new test evaluates the ability of a tube to perform in TV horizontal or vertical output circuits. As a tube gets older it loses its ability to deliver current which results in non-linearity of raster. (crowding of the raster where one side pulls away, etc.). The 123A tests this "Knee" point to determine whether the tube will cause trouble in a TV set.

**TESTS SHORTS AND LEAKAGE TO 20 MEGOHMS:** (Users have detected as high as 50 megohms leakage.)

### VOLT-OHM-MILLIAMMETER

This new portable multimeter is a small and compact instrument with a single Function-and-Range selector switch to facilitate ease of use by industrial or electronic technicians.

This equipment incorporates a full-wave bridge type rectifier circuit.

The modern case design with wide vision diffused-light type face and inclined dial permits maximum ease of reading while instrument is lying flat in a normal Use-Position. The design advantage of this Use-Position greatly minimizes the invitation for physical abuse evident with conventional multimeters which are so easy to accidentally upset and bump off of the workbench.

This equipment also features a patented protection system which protects both the meter and associated circuits from damage due to accidental overload. The design is such that when the circuit is exposed to an excessive overload, a protection system will open the input until the overload has been removed and the protective system reset by pressing a reset button on the front panel.

The protected ranges of the system are so designed that overloads which do not trigger the protective system will not possibly damage the equipment. This automatic overload cut-out and fuse system has been reliably proven in both military and civilian use. In fact, it is so effective that any high voltage or current may be applied directly across any function including ohms without danger to the meter, resistors, shunts or other associated components.

Batteries are housed in a special compartment that is accessible without removing the case. No soldering is required . . . batteries can easily be snapped in or out.

Instrument is available in either of two models.

Model 660: Features light weight, portable style with detachable cover. Weighs only 15 pounds. Especially designed for home service calls. This equipment is ideal for the alignment of color TV receivers. It is accurate and unusually easy to use. Preset channels allow easy selection through a built-in switching arrangement.

Provides either of 3 patterns on the screen of any color TV receiver:  
White Line Crosshatch; 20 vertical and 15 horizontal, less those in blanking.  
White Dot (small size); 300 dots, less those in blanking.  
Color Display Pattern; crystal-accurate blended in sequence of orange, red, magenta, blue, cyan, green.

#### DESIGN FEATURES:

Model 660 features the necessary high degree of stability not found in variable white-dot generators. In the 660 all frequencies generated are crystal controlled and locked together with extreme stability.  
Frequency of chrominance (color) signal is exactly crystal controlled to reduce possibility of alignment errors. This feature permits increased accuracy over ordinary color generators which use a free running oscillator.  
RF output frequency is in preset channels, 2 thru 6, to allow easy selection through a built-in switching arrangement.  
Small dot and crosshatch size down to two lines in both horizontal and vertical planes.  
Color display pattern with crystal accuracy is a blending in the following color sequence: Orange, Red, Magenta, Blue, Cyan and Green.  
Ratio of sync to video is variable from 10 to 90%.  
The small-size portable design of this equipment permits easy on-location color TV checks to quickly determine ability of a receiver to produce color in the proper hue . . . even in the absence of a station signal.  
The circuit of the 660 is such that regardless of future color TV receiver design, this instrument will be useable.  
The exceptionally stable timer circuit will hold synchronization over a very wide range of line voltages that may be encountered in on-location servicing.

#### Used By Leading Color TV Receiver Manufacturers

RF modulated by all video outputs (60% modulation). Sturdy, black leatherette covered portable case with detachable cover. 10½" x 10½" x 5¼" D. 15 lbs. 105-125 volts, 50-60 cycles, 40 watts.

### 100% FULLY SATURATED NTSC\* STANDARD TV COLOR BAR GENERATOR

Model 656XC

\*National Television Systems Committee as approved by Federal Communications Commission.  
Model 656XC: Matched to the other HICKOK instruments, housed in a handy portable detachable cover carrying case attractively covered with durable black leatherette. 16¾" W., 18¾" L., 7½" D. 40 Lbs. net; 48 Lbs. shipping.  
Absolutely stable. Entirely independent of changes in line voltage. Compare the wave form information and sharpness of detail of the 656XC with any other TV color bar generator. . . . You'll pick the HICKOK immediately.

Model 656XC: Produces a standard 100% fully saturated NTSC color bar pattern on color TV sets. This is a must for non-obsolescence. Regardless of future color television receiver design this HICKOK color bar generator will be compatible. This is the type of signal that is transmitted over the air. All literature and alignment data are published around this standard NTSC signal. The Model 655XC provides signal for complete color alignment. Produces color bars on TV screen in the following order from left to right: green, yellow, red, magenta, white, cyan, blue and black. Phase of colors produced is accurately set with precision delay lines. The amplitude of sub-carrier and the amplitude of the brightness component are accurately set with precision resistive Networks. This results in the high stability required for proper alignment. Proper colors are generated within 30 seconds after warmup. In addition to color bar patterns, the 656XC produces: White Dot Crosshatch (20 vertical and 15 horizontal, less those in blanking); Vertical Lines Only; Horizontal Lines Only; and Small Size White Dots are "locked" to assure stability. This locking is achieved through the extremely stable crystal controlled timer circuit. The white dots are of perfect size (approx. 2 lines thick) to permit accurate convergence adjustments. 300 dots are present in each raster, less those in blanking region.

#### DESIGN FEATURES:

Precisely crystal controlled: Sub carrier and horizontal framing.  
Produces clearly defined wave forms to provide ease of alignment and assure minimum possible error.  
NTSC standard phase and brightness: This NTSC standard signal was used in designing all color TV receivers, and is now used by TV manufacturers.  
Self checking: Assures operator that generator is producing accurate NTSC standard signal at all times.  
Generates 3 primaries, 3 complements plus black and white. (An essential feature of this equipment is that white is produced by adding the 3 primaries.)  
Equivalent vestigial side band modulation avoids overloading of chroma channels. This instrument was designed and built in cooperation with leading color TV receiver manufacturers, and is specified by them for their field service engineers.  
Generator is self contained . . . no complicated external synchronizing connections. Output is either R.F. or Video. Video: 0-2 volts peak-to-peak open circuit. 0-1 volt peak-to-peak across 100 ohms with positive or negative output. R.F.: modulated output modulated through color bar pattern is available through channels 2 thru 6.  
A sound carrier is also provided for accurate setting of local oscillator in TV receivers. In addition to color bars this instrument generates the necessary signals to align R-Y, B-Y or I and Q type demodulators. These signals appear at black level with equal amplitudes.  
Provision for switching I, Q, R-Y, B-Y or Chroma On-or-Off.  
The 3.58 MC sub-carrier output of one volt peak-to-peak is also available for troubleshooting and alignment of color synchronizing circuits.

## Latest Television SWEEP and MARKER UHF-VHF ALIGNMENT GENERATOR For Black and White or Color

**Model 615:** A complete, single-unit TV sweep and marker generator specifically engineered to provide all the necessary features and ranges required for visual alignment of modern TV receivers. Permits complete TV video IF and RF alignment. Provides harmonic output on UHF. Both the marker and the sweep have excellent attenuation. (Due to the high sensitivity of today's TV receivers, alignment equipment must have good attenuation to achieve required results.) Hickok all-electric sweep features no moving parts to wear out or become inoperative. In any FM oscillator it is most desirable to eliminate amplitude modulation because it distorts the final curve as viewed on a scope. In the Model 615, amplitude modulation is less than 0.1 db per megacycle. Marker frequency accuracy is at least 0.5% at any setting. Non-parallax — knife-edge pointers practically eliminate reading errors.

Strong 0.25 volts RMS marker amplitude and excellent attenuation of marker. Frequency: 2.5 to 5.5 MC, 19 to 50 MC, 54 to 108 MC and harmonic 108 to 216 MC.

Built-in retrace blanking is controllable from front panel to provide zero reference base line.

Built-in switching arrangement and panel connector permit internal marker mixing with FM or external with heterodyned marker adder such as HICKOK Model 691.

### UHF-VHF SWEEP-ALIGNMENT GENERATOR

#### All Electronic Sweep

Model 695

Model 695: Here is a completely new generator with ALL-ELECTRONIC sweep. It will exactly fill all top requirements of the professional TV serviceman or lab. engineer. There are no moving parts to wear out. Though moderately priced, this unit features a sweep signal that is absolutely linear and without amplitude modulations. Features a high .3 volt output. Triple shielded—no leakage problem here. Signal can be attenuated from 300,000 to 3 microvolts. 0-12 volts variable bias voltage with continuous tuning allows set alignment to more sensitive for "fringe areas," or less sensitive for "prime areas" to prevent overloading. Continuous tuning and detailed, easy-to-read scales provide foolproof method of alignment. Three RF oscillators provide complete VHF coverage on fundamentals (UHF on harmonics) and heterodyned output IF 0 to 50 mc. This assures the strong signal necessary for aligning front ends.

#### OUTSTANDING FEATURES

- All-Electronic sweep.
- Fundamental output on all VHF channels (.3 volt output).
- Continuously variable tuning.
- 0 to 50 mc. IF heterodyned output, .15 volts output.
- Blanking of oscillator, provides reference base line.
- 100 db. attenuation, 3 volt to 3 microvolts.
- Triple shielded, very low leakage. Provides attenuation down into "snow" region to check IF's for excitation.
- Metered variable DC bias voltage 0-12 volts. Eliminates use of batteries for fixed bias.
- 170° of phasing.
- Sweep width of 0-15 mc.,  $\pm 3$  mc. depending on frequency.
- Linear sweep.
- Amplitude variation of less than 0.1 db. per mc.
- Output impedance is 90 ohms.
- Attractive steel portable case. 16 $\frac{1}{4}$ " W., 13 $\frac{1}{4}$ " H., 8" D. 30 lbs. net; 38 lbs. Shipping.

### UHF or VHF HETERODYNED MARKER ADDER

Model 691

Model 691: This unit in conjunction with the Model 695 Sweep-Alignment and Model 690 Marker provides the utmost in TV alignment technique. Takes guesswork out of alignment jobs. Eliminates errors previously introduced by overload due to markers. The 691 provides a marker visible at all times (including trap points) and will not change in amplitude or distort the response curve WHAT-SO-EVER. This feature, in addition to the accuracy and minimum leakage of the other units (690-695), will greatly simplify any alignment. The outputs of the sweep and marker generators are heterodyned and applied to a scope in such a manner that the marker signal will never pass through the receiver itself — therefore cannot cause overloading. This unit will work well with any of your present equipment that has an output of 50,000 microvolts or more.

#### OUTSTANDING FEATURES

- Input RF voltage required: 50,000 microvolts.
- Output marker voltage: maximum 3 volts.
- Attenuation of marker: variable 0 to 60 db.
- Attenuation of response curve: variable 0 to 20 db.
- Input impedance: 90 ohms.
- Power supply required: 105-125 volts A.C., 50-60 cycles, 25 watts.
- Attractive steel portable case. 1 $\frac{1}{4}$ " W., 8 $\frac{3}{4}$ " H., 7" D. 10 lbs. Net; 15 lbs. Ship.

## NEW! FOR TV SERVICING In-Circuit HORIZONTAL SYSTEM ANALYZER

### MODEL 382

- saves time in running checks on TV horizontal deflection systems
- tests capacitors, too!

Model 382 is the world's most complete "testing package" for analyzing TV horizontal deflection systems. With this one instrument, you can:

(1) Check any winding in the horizontal system (transformer or yoke) for **shorts** and **opens**. Even one shorted turn is clearly indicated on a large 4½" meter. Uses reliable, time-proven Q-type test.

(2) Check flyback and yoke system **IN-CIRCUIT** (disconnect only plate cap of output tube). High-Q systems are checked on a quick-reading, Good-Bad scale (most present day sets use the High-Q system); Low-Q systems on comparative logging scale.

(3) Measure capacitance value (and check for open capacitors) — direct-reading scales indicate from 10 mmf to 0.1 mfd — no bridge to balance. Measures capacitance to better than 10%.

(4) Make continuity checks of any wire-wound component, such as width coils, linearity coils, oscillator transformers; check capacitors for direct shorts. Can check many other components for Q, either directly or by logging scale.

SIZE: 7¼" x 8" x 11¾".

Model 383A

World's First  
IN-CIRCUIT

Capacitor Leakage Tester

The "Capacohmeter" combines in "one package" the flexibility to: (a) Measure leakage of defective paper, mica, or ceramic capacitors in ohms; (b) indicate directly the capacitance of good paper, mica, or ceramic capacitors over a range of 10.0 micromicrofarads to 10.0 microfarads; (c) detects many marginal capacitors by means of a pulse technique. All tests are read directly on a 4 1/2" instrument. No adjusting of a bridge circuit and balancing controls. All measurements made under load conditions. Borderline capacitors which cause costly "call backs" are immediately "knocked out" with the "pulse test." Many tests are made right "in circuit."

## NEW! METER RELAYS

Improved Design  
Gives Greater Reliability

Now you can get a reliable, supersensitive meter relay that offers lower costs and circuit simplification in many applications. These new relays feature platinum alloy contacts and increased contact force which minimize sticking and give extreme reliability. Units control up to one watt on less than 50 millimicrowatts. Currently available in 2" DC and 3" AC and DC models. Non-locking type. Write for complete information.

## SHUNTS

External switchboard type for use with DC ammeters. Adjusted for 50 millivolt drop. Shunts available for one ampere to 7000 amperes. Six-foot lead included with each unit.

## CURRENT TRANSFORMERS

These current transformers are of the inserted, one turn, primary type. Designed for switchboard and panel AC ammeters that require external transformers. Models available for 50-1000 amperes primary — all with 5 amperes secondary.

## PANEL INSTRUMENTS

These panel instruments reflect half a century of instrument skill and the Weston tradition of building instruments to the highest standards of dependability and service.

Models 301, 425 and 476 are available in round flush bakelite cases 3 1/2" or 3 3/8", and 3 1/4" metal cases with black finish; also in round surface metal and rectangular flush bakelite cases. Models 301 and 425 supplied in round surface bakelite cases. All are calibrated normally for use on non-magnetic panels. For magnetic panel use, instruments will be adjusted for a specified steel panel thickness. Order instruments in bakelite cases for use on circuits above 300 volts when it is not possible to connect in grounded side of line. The 1301 line of instruments listed at bottom, incorporate the Weston CORMAG® self-shielded mechanism. They can be mounted interchangeably on magnetic or non-magnetic panels without need for adjustment. For other instrument prices, write to Weston Electrical Instrument Corporation, Newark 12, New Jersey.

# WESTON Electronic TEST EQUIPMENT

## A New Simplified Approach to TV Alignment

The Weston Model 980 line provides servicemen with the most advanced, and by far the most simple and accurate method of TV receiver alignment. It comprises all of the instruments necessary for all-purpose observation of complex wave forms by the electronic industry.

With the Weston method, the output of the sweep generator is fed into the calibrator making it unnecessary to connect the calibrator to the TV set. Only two connections are necessary. This eliminates receiver oscillations ordinarily encountered with the conventional method of receiver test hook-up. Further, there

is no disappearance of markers at trap resonant frequencies. Response curve is not disturbed. Annoying trimmer touch-up on trap circuits is minimized.

This simplified technique is only possible when the companion instruments—Weston Calibrator and Sweep Generator—are used with a scope having provisions for Z-axis intensity modulation. However, individual instruments in the Model 980 line can be used with available test equipment in the conventional method of alignment.

### WESTON MODEL 985 CALIBRATOR

The Weston Model 985 Calibrator is a highly functional instrument for TV shop, engineering, laboratory, and industrial alignment applications. Markers are provided for waveform patterns, local tuner oscillator frequencies, and trap circuit alignment. The instrument is extremely useful for making linearity adjustments, calibrating signal generators, and determining signals of unknown frequencies.

#### FEATURES

**SCALE CALIBRATION:** The frequency calibration of each frequency setting can be checked and adjusted with crystal accuracy. Crystal calibrating points are available at 1.5 and 4.5 megacycles throughout the entire scale. A scale shift knob is provided to align properly the scale with the crystal calibrating dots. A neon type bulb is utilized to indicate visibly the crystal frequency points.

**SCALE PRESENTATION:** Slide rule type in which one scale is visible at a time. Ten scale range bands available . . . total scale length of 8¼ ft.

**DUAL MARKERS:** 4.5 mc side band markers permit simultaneous observation of video and sound carrier.

**INTERNAL MARKERS:** Special circuitry provides an internal marker of either a positive or negative pulse suitable for Z-axis intensity modulation of the scope pattern. This eliminates the necessity of feeding an RF calibrator signal directly into the TV receiver which can cause overload and oscillation in the TV set. The marker is visible even at the sound trap frequencies.

**HETERODYNE DETECTION:** With an input sensitivity of 500 microvolts, the local TV receiver-tuner channel oscillator frequency can be determined without tuner disassembly.

**BAR PATTERN GENERATOR:** Amplitude modulated signals of the band oscillator at 400 cycles for the horizontal linearity check and 300 KC for the vertical linearity check can be readily fed to TV antenna terminals to produce horizontal and vertical bars.

#### SPECIFICATIONS

**FREQUENCY RANGE (with Variable Frequency Oscillator):**

- 4-110 megacycles in 7 bands.
- 170-260 megacycles in 3 bands.
- Use of second harmonic is suitable for UHF 340-520 megacycles in 3 bands.

**OUTPUT ATTENUATOR RANGE:** 100% to 1%.

**CRYSTAL MARKER ACCURACY:** 1.5 mc position  $\pm 0.01\%$   
4.5 mc position  $\pm 0.01\%$

**INTERNAL MODULATION FREQUENCIES:** 400 cps, 300 KC, 4.5 mc

**HETERODYNE INPUT SENSITIVITY:** 500 microvolts

**LINEARITY ADJUSTMENT:** Horizontal — 400 cycles

## MODEL 983 OSCILLOSCOPE

The Model 983 is a high gain, wideband Oscilloscope designed to accurately reproduce waveforms comprising a wide band of frequencies. High sensitivity of 15 millivolts per inch RMS makes this Oscilloscope ideal for — setting resonant traps . . . signal tracing in low level stages . . . as a general null indicator . . . for phase characteristic measurement in Industrial Applications . . . and for sweep frequency visual alignment of TV receivers.

The scope contains identical vertical and horizontal push-pull amplifiers with a choice of a-c or d-c coupling without affecting either sensitivity or bandwidth. Both amplifiers have compensated step

attenuators and cathode follower input.

It has excellent square wave reproduction with overshoot of only 2 to 5% with a rise time of 0.1 microsecond. The scope response is essentially flat throughout the specified range of 4.5 mc and is usable to 6 mc.

The unit has provisions for internal voltage calibration, internal phased sine wave, and Z-axis intensity modulation. Reversal of polarity of both horizontal and vertical signals is easily accomplished by means of toggle switching. Tube replacements are non critical, and etched circuitry facilitates quick and rapid maintenance.

### SPECIFICATIONS

**WIDE BAND FREQUENCY RESPONSE:** Flat within 1.5db from 0-3.6 mc and within -3db to 4.5 mc on both vertical and horizontal amplifiers. Transient response: overshoot 2 to 5%. Rise time: 0.1 microsecond.

**HIGH DEFLECTION SENSITIVITY:** 15.0 millivolts per inch, RMS, on both vertical and horizontal amplifiers.

**PHASE SHIFT:** Between Horizontal-Vertical Amplifiers, 0 to 500 kc — 0°; to 1 mc within 2°; by internal adjustment with gain controls at max. 0° phase shift possible on any specific frequency to 6 mc.

**CALIBRATING VOLTAGES:** 500 millivolts, 5 volts, 50 volts, 500 volts, peak to peak.

**Z-AXIS MODULATION:** Input terminal mounted on front panel.

## WESTON MODEL 982 VACUUM TUBE VOLTMETER

The Weston Model 982 is a self-contained, battery operated Vacuum Tube Voltmeter. It is particularly adaptable to the Radio-TV Servicing industry where the requirements of peak to peak measurement of a-c voltages exclude the use of conventional meters. This instrument makes possible quantitative measurement of all complex wave form voltages utilized in video, sync and deflection circuits with no a-c line interference in critical measurements.

### FEATURES

**BATTERY OPERATED:** Unit affords complete isolation from spurious response due to stray a-c fields and circulating ground currents. Extremely low drain for long battery life. Power Consumption: Less than 25 milliwatts.

**DIRECT PEAK TO PEAK MEASUREMENTS.**

**NO SWITCHING OF LEADS IS REQUIRED:** One shielded lead is used for all measurements, a-c, d-c, ohms, and peak to peak.

**RANGE FUNCTION SWITCH:** Makes negative and positive d-c potentials measurable DIRECTLY.

**HIGH INPUT IMPEDANCE:** 10 megohms on d-c for accurate measurements — 2.8 megs. a-c, RMS — 1 meg. a-c, peak to peak.

**NO ZERO SCALE DRIFT:** Instrument can be used immediately without waiting for warm up . . . resetting of zero corrector when switching from range to range is entirely eliminated.

**DC ISOLATION ADAPTOR:** Makes d-c measurements possible in the presence of a-c voltages.

**FREQUENCY RESPONSE:** Suitable for measurement of TV wave forms, such as sync pulses, saw tooth, drive voltages, and other complex wave form voltages.

**DISCRIMINATOR ALIGNMENT:** Zero corrector knob has sufficient latitude to center scale.

**A-C VOLTS:** 20 cps — 1.5 kc; Peak-to-Peak Volts: 20 cps — 300 kc; for voltages above 160 volts peak-to-peak containing frequency components up to 300 kc a low capacitance probe is furnished. For frequencies above 300 kc to 250 megacycles an RF Probe is available.

RF PROBE is available as an accessory.

## WESTON MODEL 981 PROPORTIONAL MUTUAL CONDUCTANCE TUBE CHECKER

### FEATURES

- METER MEASUREMENT OF HIGH LEAKAGE RESISTANCE:** Provides an accurate meter measurement of leakage resistance as high as 5 megohms between tube elements, thus being particularly useful for TV servicing and TV line production assembly.
- MULTIPLE SWITCHING FACILITIES:** Protection against obscrescence is assured through the use of nine single circuit, twelve position, selector switches. These multiple switching facilities make possible many more combinations of tube connections.
- TWIN SECTION TUBES:** Three toggle switches make it possible to rapidly check and compare the respective sections of twin section tubes at only one setting of the selector switches.
- SINGLE SOCKET FOR EACH TUBE BASE REGARDLESS OF TUBE CONNECTION:** Eliminates the possibility of plugging a tube into the wrong socket. Sockets are provided for conventional type tube bases as well as acorn, and 7 and 8 pin subminiatures.
- Gm MEASUREMENTS:** Gm measurements are made more accurately by using filtered d-c plate, screen grid and control grid potentials. A precision voltage divider network and selector switch allows a proportionate value of signal voltage to be chosen for testing tubes having transconductances up to 30,000 micromhos. Signal voltages of 5.2, 2.6, 1.3, and 0.65 volts peak-to-peak having a frequency of 5000 cycles are provided.
- ROLL INDEX CHART:** Provides comprehensive, up-to-date test data on commonly encountered tubes, as well as those infrequently used.
- LEAKAGE TEST:** The leakage tests are performed at a d-c potential of 125 volts. For each numbered position of the LEAKAGE TEST switch, a specific tube element is isolated and connected into a series ohmmeter circuit consisting of the isolated element, the 125 volt d-c potential, a current limiting resistor, a milliammeter, and all other elements of the tube.
- VOLTAGE REGULATOR TUBES:** A selenium rectifier supply furnishes 200 volts d-c for testing of voltage regulator tubes.
- SUBMINIATURE TYPE TUBES:** A 45 volt potential source facilitates testing of subminiature tubes.

Full flexibility and high speed set-up are assured with the 648A's sequence switching. You are able in seconds to set up the correct test conditions for every kind of receiving tube. *No panels to change, no new cards to buy.* Anti-obsolescence is built right into the 648A.

## NOW! 23 SEPARATE HEATER VOLTAGES for ALL the latest tubes JACKSON MODEL 648A

No longer need you use compromise heater voltages in testing latest series string tubes. The new Jackson 648A gives you the correct voltage for every newly announced and presently planned or available type. And, the correct voltage is important, for only by having the correct heater voltage can you be sure of the tubes performance. Too high a voltage will result in excess output making a weak tube look good. Too low may make a good tube look bad.

**New! Zig-Zag Speed Chart**—Eliminates unnecessary chart-twirling. Order of middle column of listings is inverted, starting at bottom. Helps you locate tube type quickly. New data listed monthly in PF Reporter. Completely new charts issued regularly.

**New! Variable Sensitivity Shorts Test**—Lets you check interelement leakage at any value between 250K ohms and 2 megohms. Perfect for grid leak checks on tubes in RF, IF, and AGC circuits. Makes special Grid circuit checkers unnecessary.

### Plus These Popular 648 Features

**Dynamic-Principle**—Originated by Jackson. Separate loads or voltages applied to each element of tube under test. Sequence switching with push-button speed makes the set-up time less than the warm-up time of the tube.

**Automatic Line Voltage Indicator**—You center the needle using the line-voltage switch and pointer automatically indicates the actual line voltage. Saves carrying a separate line voltmeter.

**Life Line Indicator**—Tells you when a good tube is approaching the end of its life. Avoids call-backs.

**Easy Reading Meter**—Easy to read from any angle. Calibrated in GOOD-BAD and percent of relative transconductance.

**Portable Case**—Finished in attractive gray and green tough plastic.

## VIBRATING REED FREQUENCY & TIMING INSTRUMENTS

### GENERAL DESCRIPTION

Vibrating Reed Instruments are direct reading frequency indicators for use where the efficient operation of A.C. equipment depends upon the maintenance of known or constant frequency. They are self contained, their accuracy is not affected by wide voltage variations or wave form distortions and require no auxiliary apparatus. They consist of a number of steel reeds, of high Q, each of which is tuned to a single frequency within the band covered by the instrument. Indication is by visual pattern formed by the vibration of the reed in resonance with the line frequency. Excitation is electromagnetic, and the reeds are the only moving elements. **Running Time Meters** are synchronous motor operated instruments to automatically measure service periods or service requirements.

### APPLICATIONS

A large demand exists for VIBRATING REED FREQUENCY METERS for use with engine driven A.C. generator units as this is the most simple speed and frequency indicator yet devised for A.C. generator sets. These meters are also generally used in laboratory and portable test equipment, electronics, telephony, aircraft, industrial plants and numerous applications where electrical frequency indication is desired. Engineering services are available for those desiring assistance on their application problems. **Running Time Meters** are often used in conjunction with reed type frequency meters.

## APPLIANCE TEMPERATURE TESTERS

**A NEW IDEA IN TESTERS** — The need for scientific but sturdy portable test equipment in the appliance service field is met by this exclusive line. Here the user profits from J-B-T's wide experience in building field test sets for many well known manufacturers of ranges, irons, refrigerators, deep freeze units, and similar equipment. All J-B-T testers include the principle of remote reading of temperature, —and temperature measures the real usefulness of the appliance. Although called appliance testers, these handy portable testers have found a multitude of uses for trouble-shooting, experimenting and research in industry and in laboratories.

### OVEN TESTERS

**MODEL 23-JP-1.** Latest addition to the widely-known family of J-B-T oven temperature testers is this modern and compact unit. Like the Models 32-JP-3 and 32-JP-4 described below, this indicating portable pyrometer is designed to save time and furnish reliable information in testing and setting thermostats on electric or gas ranges and other appliances by showing oven temperatures as they change. The same size of dial, 0-650°F., with 2 3/8" scale arc reading, is used but covered by an all-plastic instrument front. The indicator is mounted on a black metal panel affixed inside a pocket-sized, black top-grain leather case 4 1/2" x 2 7/8" x 4 1/4" over hardware. Characteristic of more expensive pyrometers, the 23-JP-1 is automatically compensated for ambient temperature. Thus the tester eliminates calculations, avoids likelihood of serious error as temperatures change inside the instrument itself, and gives fool-proof direct readings. Supplied with attached SA-116 5 1/2' calibrated thermocouple, clip, and convection shield ..... \$26.00

**MODEL 32-JP-3.** This sturdy, fast reading portable is by far the most widely used oven tester in the country. The rigid outer carrying case 6" x 3 7/8" x 3 3/4" is covered in black leatherette; the glass-covered indicator fits in a 3/4" flanged metal case. The dial shows 0-650°F. in 10° divisions readable to 2 1/2°. Exceptionally fast, continuous response. Automatic compensation for ambient temperature is valuable feature whether the tester is used for service work, sales demonstrations, or inspection. More details on the 32-JP-3 are available in Bulletin JP-103. Price includes attached SA-116 5 1/2' calibrated thermocouple, clip for attaching to grill, and convection shield for steady readings. .... \$27.50

### VERSATILE OVEN TESTERS

**MODEL 32-JP-4.** Companion tester to the 32-JP-3 with all the features of that tester, plus a leather carrying strap, and binding posts for quick attachment and interchanging of various thermocouples listed on this page, to check irons, washers, waffle-bakers, toasters, roasters, clothes dryers, etc. Range, 0-650°F.; black leatherette case 6" x 3 7/8" x 3 3/4". More details on the 32-JP-4 are available in Bulletin JP-104. Price includes SA-116 5 1/2' calibrated thermocouple, clip and convection shield. .... \$28.75

TEMPERATURE INDICATORS

**WHERE TO USE:** To determine heat rise of motors, transformers and coils; for laboratory furnaces, inspection set-ups, for remote indication of infrared and other oven temperatures; and to check temperatures in industrial processes such as heat treating and annealing.

When used with selector switch, permits centralized reading of one to ten thermocouples, as in diesel exhaust manifold applications.

MODEL 32-J

**MODEL 32-J PYROMETER IN SN-7 STAND.** Mounted in sloping front black metal stand, 4 1/4" high x 4 3/8" deep x 4 1/8" wide. Compensated for ambient temperature. Medium resistance system, damped for quick reading on 2 3/8" scale, assures ruggedness and pointer stability. To retain the ±2% accuracy of the installation: use only the type and resistance of thermocouple and lead which are provided; do not cut extra lead—coil it—change in length changes calibration. A protection tube is not generally required. Many users find it convenient to keep an extra couple and lead on hand.

INFRARED TEMPERATURE UNITS

**MODEL 32-J PYROMETER COMBINATION.** When used with the thermocouples shown below, this unit checks operating temperatures of infrared baking, drying, and preheating. After selection of the proper matched tip, the user measures heat at the most important place in this method—at the surface of the work in process.

Here's a moderately-priced, always handy tester for laboratory and pilot-run experiments, maintenance on the infrared heat source, and trouble-shooting on the finish itself. Equally important, the user can keep temperatures consistent and reproduce good results. Select the unit that manufacturers of finishes and of infrared ovens supply to their own field men. Like all pyrometers, this instrument is automatically compensated for ambient temperature — no need to re-set the zero adjuster when reading.

**MODEL 32-J INFRARED PYROMETER COMBINATION.** Indicator 0-650°F. for RP-1080 iron constantan, mounted in SN-7 sloping front metal stand 4 1/4" high x 4 3/8" deep x 4 1/8" wide; complete with two of the 35' thermocouples below (may be one type and a spare, or two types); SA-113 "A" disc type and SA-115 "B" ball type supplied if not otherwise specified.....\$40.00

## VIBRATING REED FREQUENCY METERS (PATENTED)

J-B-T Vibrating Reed Frequency Meters are used extensively in radio, telephone, and television service, on engine generator sets, in laboratories, in many types of electronic equipment, on panel and control boards, in inspection set-ups — wherever constant or known frequency is important to efficient operation of equipment. More than 15 years of continuous experience covering many thousands of these instruments are your assurance of quality for both commercial and defense applications.

The patented, simplified design used in the J-B-T meter operates on AC or interrupted DC. Each reed is adjusted to respond by resonance to but one frequency. As the current excites the driving coil, the reed "in tune" with the frequency in the coil will respond by vibrating rapidly because of permanent magnet polarization and induced magnetism from the coil. The instrument is adapted to specified operating voltage by a series resistor. To determine frequency, simply read the reed.

The response patterns differ with the increments of frequency between reeds. For example, at 60 cycles, half-cycle steps give the broad response shown below at left, whereas full cycle steps bring the sharp response at right.

**CAUTION:** If a meter plugged in on a 60-cycle AC power line does not indicate exactly 60 cycles, trust the meter! Power supply may momentarily be off-frequency due to changing load conditions. All J-B-T Frequency Meters are accurately calibrated at the factory, entirely independent of frequency of power supply. Production and inspection equipment are checked regularly against National Bureau of Standards frequency signals.

(Meter operating at 60 cycles)

### 10 REEDS

**Range:** 48-52 and 58-62 cycles. Double window for ease of reading either range. Often specified for export. 100-130 volts; 130 ohms per volt; 1 watt power consumption. Accuracy  $\pm 0.3\%$  at reference temperature. Flush panel mounting. See Table of Dimensions, lines 4 and 5.

**30-F**, (illustrated). 48-52 and 58-62 cy., 3/4" Metal Case. \$27.50

**30-FX**, 48-52 and 58-62 cy., 3/2" Molded Case, MIL-M-6A mtg. \$27.50

### 5 REEDS

Used on standby power equipment. Handy for accurately measuring frequency of power source. Five reeds, 58-62 cycles, 100-130 volts. Other characteristics same as Model 30-F. See Table of Dimensions, lines 4 and 5. (This meter also is made with 7 reeds.)

**31-F**, (illustrated). 58-62 cy., 3/4" Metal Case. \$23.65

**31-FX**, 58-62 cy., 3/2" Molded Case, MIL-M-6A mtg. \$23.65

**ADVANTAGES:** Guaranteed accuracy at reference temperature of 77°F is  $\pm 0.3\%$  or better; of the AC frequency being measured, unless otherwise stated. Accuracy on interrupted DC may be somewhat less. High fatigue safety factor for continuous operation. Temperature compensations are not required as temperature coefficient of reeds is only approximately 75 parts per million per degree F., negative.

All meters are permanently calibrated at the factory and do not require subsequent adjustment. J-B-T reeds have relatively high Q characteristics, an especially desirable factor in electronic circuits. Wave form or external magnetic fields do not ordinarily have an adverse effect. Built with no pivoted parts and with lock washers at every crucial point, these rugged meters can take rougher treatment than many instruments.

### 9 REEDS — 400 CY.

Used for measuring frequency of high-cycle power sources, particularly aircraft. Accuracy  $\pm 0.3\%$  at reference temperature. Nine reeds, 380-420 cycle range; 100-130 volts; 70 ohms per volt; 1.75 watts power consumption. Flush panel mounting. See Table of Dimensions, lines 4 and 5.

**33-F**, (illustrated). 380-420 cy., 3/4" Metal Case. \$34.10

**33-FX**, 380-420 cy., 3/2" Molded Case, MIL-M-6A mtg. \$34.10

### 9 REEDS — 60 CY.

Covers a broad frequency band. Nine reeds, 56-64 cycles, or in half-cycle steps (accuracy  $\pm 0.2\%$ ) 58-62 cycles. 100-130 volts; 130 ohms per volt; 1 watt power consumption. Flush panel mounting. See Table of Dimensions, lines 4 and 5.

**34-F**, 56-64 cy., 3/4" Metal Case, 1-cycle steps. \$27.25

**34-FX**, (illustrated). 56-64 cy., 3/2" Molded Case, MIL-M-6A mtg. \$27.25

**34-F-Z**, 58-62 cy., 3/4" Metal Case, 1/2-cycle steps. \$28.90

**34-FX-Z**, 58-62 cy., 3/2" Molded Case, MIL-M-6A mtg. \$28.90

### 18 OR 21 REEDS

Advanced design offers 21 reeds as an interchangeable 3/2" panel meter with 2-cycle intervals for close reading over the band of 380 to 420 cycles per second. Accuracy  $\pm 0.3\%$  at reference temperature. The reed flag size is necessarily smaller than the 9-reed 400-cycle meter, such as the model 33-FX, but the 21 reeds are located in an enlarged window 2" wide with flags 3/32" high x 1/16" wide to give maximum readability. A revised internal construction for mounting the reeds in one clamp assures ruggedness. This instrument and its variations are particularly useful where unusually close indication of frequency throughout the band has not been available heretofore. These meters are not regularly stocked. See Table of Dimensions, line 5.

**36-FX-21**, (as illustrated). 380-420 cycles, 21 reeds, 28 volts operation, 3/2" Molded Case; 17 ohms per volt; 1.7 watts power consumption. \$51.60

**36-FX-21-115**, (as illustrated). 380-420 cycles, 21 reeds, 100-130 volts; 50 ohms per volt; 2.5 watts power consumption. \$52.80

**30-FX-18**, (not illustrated). 46-54 and 56-64 cycles, 18 reeds in one window with two groupings, 100-130 volts; 300 ohms per volt; 0.35 watts power consumption. \$36.30

## 2 1/2" METERS — 5 REEDS

## ELAPSED TIME — FREQUENCY METERS

31-FE SERIES. To conserve panel space and centralize information, this panel instrument combines the elapsed time or running time meter with frequency reeds. It is used on motor generator sets and on electrical equipment where maintenance routine calls for periodic servicing. The J-B-T design, proved by years of field experience, uses a separate exciting coil for the reeds to achieve close control of reed amplitude and frequency. Reads 0-9,999.9 hours, and 58-62 cycles with 5 reeds, for 100-130 volt operation; self starting. Tenths shown in red, all other numerals in black. Black metal case with front mounting per Table of Dimensions, line 6. Power consumption is 3.5 watts. For variations having 7, 9, or 11 reeds, not regularly stocked, such as Model 34-FE, see revised print SK-45.

- 31-FE, 3 1/4" metal case.....\$33.00

## NOTE ON METER VOLTAGE

J-B-T Vibrating Reed Frequency Meters of all sizes normally are made with two studs and are designed to be connected across one phase of a multi-phase line. The single phase voltage where the meter will be used thus becomes the voltage to be specified for the meter. Special meters with extra studs are made only for the purpose of reading two or more voltages, not additional phases.

## 3 1/2" SEALED METERS

FHXX TYPE sealed meters, glass-to-metal construction, with solder terminals and detachable flange, supersede the former FHX sealed meters (Print SK-24). While JAN-I-6 and MIL-M-6A (Type MR38) do not refer to frequency indicators, the FHXX series uses the front mounting dimensions, and meets or exceeds the sealing and electrical requirements including the 3000 volt breakdown. Mounting dimensions are shown below. Standard voltage is 100-130. Electrical characteristics and accuracy are the same as for corresponding models without the HXX designation. Every meter tested in water where the absolute pressure of the air above the water is reduced to 2.5 inches of mercury (approx. 57,000 ft. altitude) and is maintained for one minute. While not regularly stocked, these meters are in production. For dimensions, see Table, line 8.

## O-1 DC MILLIAMPERES

Sensitive-type meters such as Stock No. 9300Z, 0-1 DC Ma. with approximately 1000 ohms internal resistance, and Stock No. 9332Z, 0-3 DC Ma., 500 ohms internal resistance, open new design possibilities. Where the necessarily more costly D'Arsonval permanent magnet meter was formerly thought to be the only choice, these Shurite variations are now used in many circuits. Substantial quantity production makes moderate prices possible.

Shurite panel meters are attractive, rugged, dependable instruments with accuracy well within 5%. All models have metal cases with telephone-black fronts except the 850 which is plastic. All models fit 2-5/32" hole. Model 850 also fits any smaller hole down to 2-1/64". DC meters are polarized-vane solenoid type, or moving-magnet construction when indicated, AC meters are double-vane repulsion type with jeweled bearing. Although the jewel construction costs more to build, it pays off by providing continuing accuracy during a longer useful life. All are guaranteed.

- **GUARANTEE:** Meters are guaranteed to users against defective workmanship and material, and will be repaired or replaced if sent to the factory postpaid with 40¢ handling charge within one year after purchase.
- **ALL-METAL DIALS**—age and moisture resistant, lithographed in black on white for high visibility.
- **STURDY DESIGN**—with husky new coil frames designed to prevent breakage, rigidly mounted in cases with anti-turning hex head studs. Interchangeable in other respects with a popular brand formerly available.
- **MODERN APPEARANCE**—with concealed coils and new raised dial design, enhancing appearance and greatly increasing readability.
- **WIDE SELECTION**—Shurite offers the broadest line of standard meters in the economy-priced field. Distributor stocks are backed by an extensive factory inventory.

**TYPICAL USES:** Shurite products, with their rugged design, and ability to duplicate readings, enjoy wide acceptance in the electronic and electrical fields for transmitters, receivers, TV antenna rotator controls, battery indicators, appliances, power sources, battery eliminators, electric fence controllers, and the very popular basic meters in radio test kits, battery voltage indicators on emergency lighting, burglar and fire alarm systems, output meters on rectifiers, rate-of-charge indicators, testers for hearing aid batteries and their chargers, ammeters for plating sets, and polarity indicators for metals analysis, automotive test equipment to pin-ball circuit testers, and well-depth indicators. Shurite has long been the favorite brand for hobbies and experiments.

## MOUNTING DETAILS

All cases mount flush, using 2 3/2" hole (850 Series can also use 2 3/4" hole); most standard ranges use 6-32 studs.

## IMPORTANT — HOW TO ORDER

For all standard models, give: (1) Model Number, (2) Range, (3) Stock Number. If Model number and stock number are not stated, Model 550 will be supplied.

**ZERO ADJUSTERS (Z)** For DC meters, zero adjusters are available on Models 550, 650 and 850, but on only two Models 950 — 9300Z and 9332Z. For AC meters, zero adjusters are available only on Model 850. When ordering, add Z to stock number. Example: Model 550-DC voltmeter, 0-1 volt range without zero adjuster is 5101. With zero adjuster, it is 5101Z.

**PANEL CALIBRATION (S)** Meters are calibrated for non-magnetic panels. If for magnetic (steel) panel mounting, specify thickness and overall size of panel, and add -S to stock number when ordering, as 5101-S.

**VISCOSITY DAMPING (V)** Careful application of new silicone compound on bearing surfaces damps pointer overtravel. Add V to stock number, as 5406V, and 5 cents to price. Not regularly stocked; available only on quantity order.

**SEE YOUR DISTRIBUTOR** Besides carrying most types, and being able to obtain your other needs promptly, your authorized Shurite distributor of electronic parts is qualified to suggest the right meter for your need.

The New  
Model TD-55

## TUBE TESTER

FOR } The Experimenter or Part-time Serviceman, who has delayed purchasing a higher priced Tube Tester.  
} The Professional Serviceman, who needs an extra Tube Tester for outside calls.  
} The Busy TV Service Organization, which needs extra Tube Testers for its field men.

Speedy, yet efficient operation is accomplished by:

1. Simplification of all switching and controls.
2. Elimination of old style sockets used for testing obsolete tubes (26, 27, 57, 59, etc.) and providing sockets and circuits for efficiently testing the new Naval and Sub-Minor types.

**YOU CAN'T INSERT A TUBE IN WRONG SOCKET**  
It is impossible to insert the tube in wrong socket when using the new Model TD-55. Separate sockets are used, one for each type of tube base.

### CHECKS FOR SHORTS AND LEAKAGES BETWEEN ALL ELEMENTS

The Model TD-55 provides a super sensitive method of checking for shorts and leakages up to 5 Megohms between any and all of the terminals. Continuity between various sections is individually indicated.

### ELEMENTAL SWITCHES ARE NUMBERED IN STRICT ACCORDANCE WITH R.M.A. SPECIFICATION

The 4 position fast-action snap switches are all numbered in exact accordance with the standard R.M.A. numbering system. Thus, if the element terminating in pin No. 7 of a tube is under test, button No. 7 is used for that test. "FREE-POINT" ELEMENT SWITCHING SYSTEM  
Any pin may be used as a filament pin and the voltage applied between that pin and any other pin, or even the "top cap."

The New Model TW-11

## STANDARD PROFESSIONAL TUBE TESTER

- Tests all tubes, including 4, 5, 6, 7, Octal, Lock-in, Hearing Aid, Thyatron, Miniatures, Sub-miniatures, Novals, Sub-minors, Proximal fuse types, etc.
- Uses the new self-cleaning Lever Action Switches for individual element testing. Because all elements are numbered according to pin-number in the RMA base numbering system, the user can instantly identify which element is under test. Tubes having tapped filaments and tubes with filaments terminating in more than one pin are truly tested with the Model TW-11 as any of the pins may be placed in the neutral position when necessary.
- The Model TW-11 does not use any combination type sockets. Instead individual sockets are used for each type of tube. Thus it is impossible to damage a tube by inserting it in the wrong socket.
- Free-moving built-in roll chart provides complete data for all tubes. All tube listings printed in large easy-to-read type.

- **NOISE TEST:** Phono-jack on front panel for plugging in either phones or external amplifier will detect microphonic tubes or noise due to faulty elements and loose internal connections.

### EXTRAORDINARY FEATURE

- **SEPARATE SCALE FOR LOW-CURRENT TUBES** — Previously, on emission type tube testers, it has been standard practice to use one scale for all tubes. As a result, the calibration for low-current types has been restricted to a small portion of the scale. The extra scale used here greatly simplifies testing of low-current types.

The Model TW-11 operates on 105-130 Volt 60 Cycles A.C. Comes housed in a beautiful hand-rubbed oak cabinet complete with portable cover.

## TRANS-CONDUCTANCE TUBE TESTER

ALSO TESTS TRANSISTORS

### TESTING TUBES

• **Employs improved TRANS-CONDUCTANCE circuit.** An in-phase signal is impressed on the input section of a tube and the resultant plate current change is measured. This provides the most suitable method of simulating the manner in which tubes actually operate in Radio & TV receivers, amplifiers and other circuits. Amplification factor, plate resistance and cathode emission are all correlated in one meter reading.

- **NEW LINE VOLTAGE ADJUSTING SYSTEM.** A tapped transformer makes it possible to compensate for line voltage variations to a tolerance of better than 2%.
- **SAFETY BUTTON** — protects both the tube under test and the instrument meter against damage due to overload or other form of improper switching.
- **NEWLY DESIGNED FIVE POSITION LEVER SWITCH ASSEMBLY.** Permits application of

separate voltages as required for both plate and grid of tube under test, resulting in improved Trans-Conductance circuit.

### TESTING TRANSISTORS

A transistor can be safely and adequately tested only under dynamic conditions. The Model TV-12 will test all transistors in that approved manner, and quality is read directly on a special "transistor only" meter scale. The Model TV-12 will accommodate all transistors including NPN's, PNP's, Photo and Tetrodes, whether made of Germanium or Silicon, either point contact or junction contact types.

## 76

For the first time ever: ONE TESTER PROVIDES ALL THE SERVICES LISTED BELOW!

IT'S A CONDENSER BRIDGE with a range of .00001 Microfarad to 1000 Microfarads (Measures power factor and leakage too.)

IT'S A SIGNAL TRACER which will enable you to trace the signal from antenna to speaker of all receivers and to finally pin-point the exact cause of trouble whether it be a part or circuit defect.

**✓ CAPACITY BRIDGE SECTION**

4 Ranges: .00001 Microfarad to .005 Microfarad; .001 Microfarad to .5 Microfarad; .1 Microfarad to 50 Microfarads; 20 Microfarads to 1000 Microfarads. Will locate shorts, and leakages up to 20 megohms. Will measure the power factor of all condensers.

**✓ TV ANTENNA TESTER SECTION**

Loss of sync, snow and instability are only a few of the faults which may be due to a break in the antenna, so why not check the TV antenna first? The Model 76 will enable you to locate a break in any TV antenna and if a break does exist, the Model 76 will measure the location of the break in feet from the set terminals.

IT'S A RESISTANCE BRIDGE with a range of 100 ohms to 5 megohms.

IT'S A TV ANTENNA TESTER. The TV Antenna Tester section is used first to determine if a "break" exists in the TV antenna and if a break does exist the specific point (in feet from set) where it is.

**SPECIFICATIONS**

**✓ RESISTANCE BRIDGE SECTION**

2 Ranges: 100 ohms to 50,000 ohms; 10,000 ohms to 5 megohms.

**✓ SIGNAL TRACER SECTION**

With the use of the R.F. and A.F. Probes included with the Model 76, you can make stage gain measurements, locate signal loss in R.F. and Audio stages, localize faulty stages, locate distortion and hum, etc. Provision has been made for use of phones and meter if desired.

Model 76 comes complete with all accessories including R.F. and A.F. Probes; Test Leads and operating instructions. Nothing else to buy.

## ANTENNA LINE TESTER

Model ALT-1

Model ALT-1 \$19.95

### SIMPLE TO USE

Disconnect antenna line from set . . . Attach instrument test leads to antenna line at the set. The readings will tell you instantly if there is a break in either leg of antenna line. . . . The ALT-1 also tells you in feet from the receiver exactly where the break is located.

The only instrument specifically designed to check twin-lead antenna lines for breaks, where a continuity check is not possible. With the ALT-1 the serviceman determines immediately if the trouble is in the antenna line or in the TV chassis. If it is the antenna line he proceeds to spot the exact location of the break — even under the insulation, without leaving the house.

### NO OTHER INSTRUMENT CAN DO THIS JOB . . .

- ✓ Locate antenna line breaks in all non-continuity antennas such as conicals, yagis, double V's, etc.
- ✓ Check from inside the house for breaks in either leg of antenna line.
- ✓ Locate under-insulation breaks in seconds.
- ✓ Determine whether antenna line or TV set is at fault.

## TYPE 1030-A LOW FREQUENCY "Q" INDICATOR

### USES

The Type 1030-A Low Frequency "Q" Indicator measures directly the "Q" factor of coils. The instrument can also be used to measure the inductance of coils, distributed capacity, impedances, and dielectric losses. The "Q" Indicator can be used to study the magnetic properties of iron, such as stability of iron cores in function of applied voltages, and iron losses as a function of the frequency.

### FEATURES

The main and essential feature of the instrument is that the "Q" factor is read directly without any complicated computations. The possibility of measuring "Q" through the whole audio and super-sonic frequency range is provided. The setting up and the measuring of the "Q" of coils is practically instantaneous. The instrument is unaffected by line voltage variations, is entirely self-contained and A.C. operated. Both meters ("multiply-by" and "Q") are protected against overloads and cannot be burned out. The frequency range for "Q" measurements is 20 to 200,000 cycles. The terminals of the variable decade condensers are available directly on the front panel of the instrument. The condensers, therefore, can be used as high quality precision variable condensers. To reduce the residual capacitance a link is provided on the front panel of the instrument which disconnects all but the 100 mmfd variable air condenser. When the link is closed five decade capacitors and the air variable are connected across the condenser terminals. The total capacitance range is from 26 mmfd to 11.11 mfd so that an extremely wide range of inductors may be tested at any

desired frequency without adding external capacitors which introduces large errors. The R. C. Oscillator and variable impedance amplifier can be used as a separate low frequency generator with an output power of five watts into a 50 ohm load. The "Q" scale is calibrated from 0 to 100. A high accuracy of measurement is obtained, since "Q" variations from 0 to 100 are read on a 4 inch meter. "Q" factors of coils can be measured with up to 100 volts across the coil, and therefore makes it possible to determine the stability and the variations of the "Q" factor of coils as a function of the applied voltage. The voltage fed into the series circuit is variable from 10 volts to .01 volt.

### SPECIFICATIONS

**Range of "Q" Measurements:** The range of "Q" factors is from 0.1 to 1000 over the frequency range from 20 to 50,000 cycles with an accuracy of 5%, from 50,000 cycles to 200,000 cycles the accuracy of "Q" measurements is limited by the residual capacity of the measuring circuit; (for iron core coils measurements in this frequency range will approach the 5%).

**Oscillator Frequency Range:** Continuously variable from 20 to 200,000 cycles in four ranges.

**Frequency Accuracy:** 1% under normal conditions. The frequency stability is better than 2% over a long period of time.

**Output Impedance and Voltage:** Four output impedances are available.

(a) 10 ohms impedance — 25 V Output Voltage

(b) 1 ohm impedance — 2.5 V Output Voltage

(c) .2 ohm impedance — .25 V Output Voltage

(d) .1 ohm impedance — .02 V Output Voltage

These Impedances are measured at 50,000 cy.

**Variable Condenser:** The variable condenser is composed of a 10 x 1 mfd., 10 x 0.1 mfd., 10 x 0.01 mfd., 10 x 0.001 mfd. and 10 x 0.0001 mfd. decade condenser and a 100 mmfd. variable air condenser.

**Power Supply:** The instrument is entirely self-contained and operates on 105-125 volts, 50-60 cycles. Total consumption 200 watts.

**Dimension:** Width 19½" x Depth 14½" x Height 23"

**Weight:** 120 lbs.

## TYPE 1010-A COMPARISON AND LIMIT BRIDGE

### USES

This instrument is a comparison and limit bridge for use in both laboratory and production testing of resistors, condensers and inductors. The manufacturer of these components can use it for production tests, the user for incoming inspection and acceptance tests. The instrument is particularly useful for laboratory work (bridge or filters) where very accurate components are required.

### FEATURES

For precision and production testing, the bridge has many advantages. Power line operation and the visual null indicator make the instrument completely self-contained. It can be used in noisy locations. Its small size and light weight permit the instrument to be moved easily and to be set up wherever necessary.

### DESCRIPTION

The instrument is composed of an oscillator, a bridge and a selective amplifier. The oscillator output is coupled into the bridge through a shielded isolation transformer. A switch is provided which connects either a high or low impedance winding across the bridge, consisting of two fixed resistors, the unknown impedance and the standard. A variable resistor between the two fixed resistors makes it possible to read the percentage difference between the unknown and the standard on a specially calibrated dial. A high gain selective amplifier indicates the balance of the bridge. The general method of testing is the comparison of an unknown component with a standard component of the same type. Accurate percentage measurements are obtained by the use of precision components in the arms of the bridge. The use of a high gain amplifier and adequate internal shielding assures a very sharp and distinct balance.

A visual null indicator, consisting of a meter used in connection with the high gain amplifier makes it possible to use the No. 1010-A Bridge as a precision limit bridge in production testing.

### SPECIFICATIONS

**Frequency:** Three test frequencies are available: 50 or 60 cycles, 1000 cycles and 10,000 cycles.

The 50 or 60 cycles are taken from the line. The 1000 and 10,000 cycles are generated by an oscillator and are accurate to within  $\pm 2\%$ .

**Range:** Two comparison ranges are provided. 5% and 20%. The percentage difference is read directly on a calibrated dial.

**Resistor Measurements:** Resistors from 1 ohm to 20 megohms may be compared at 60 cycles to an accuracy of  $\pm 0.1\%$ .

**Condenser Measurements:** Condensers from 50 mmfd to 10 mfd are measured at 1000 cycles. Condensers above 10 mfd are measured at 60 cycles. Condensers below 50 mmfd may be measured if the ground-unground switch is in the unground position.

## TYPE 1410 WIDE BAND AND CARRIER FREQUENCY DISTORTION METER

### USES

The Type 1410 Wide Band Carrier Frequency Distortion Meter may be used in the laboratory or in production testing of receivers, amplifiers and oscillators.

### DESCRIPTION

The instrument consists of a capacitive input attenuator, a low impedance output preamplifier, a null T network and a high gain vacuum tube voltmeter.

The signal to be measured is applied to the capacitive input attenuator, which reduces it sufficiently so that it may be fed into a three stage distortionless amplifier. The output impedance of this amplifier is 1 ohm due to the high amount of inverse feed back applied. In order to prevent the amplifier from being driven into non-linearity, a monitoring circuit is included in the instrument.

The attenuated signal is fed into a null T network which completely eliminates the fundamental. The residual signal consists wholly of harmonics and noise, and this is measured by the vacuum tube voltmeter.

The null T network is switched out of the circuit and the signal level is attenuated by a calibrated resistive divider. When the voltmeter indicates the same level as the level of harmonics, the divider reads the percentage distortion directly.

### FEATURES

The high sensitivity of the instrument permits measurements to be made on signals as low as 0.2 volts to an accuracy of 0.1%. Signals as high as 1000 volts may be applied to the input terminals directly.

The frequency range of the instrument is 20 kc to 1 mc. in 10 overlapping ranges. Frequencies up to 3 mc. are passed without attenuation by the amplifier circuits, so that distortion measurements can be made on fundamental frequencies up to 1 mc.

An isolation transformer and line filter provided with the instrument prevent any feedback through the power line.

### SPECIFICATIONS

**Frequency Range:** 20 kc to 1 mc.

## TYPE 1560 DIFFERENTIAL VOLTMETER

### USES

The Freed Type 1560 Differential Voltmeter measures difference in voltage levels as low as 0.1% regardless of their phase relation. ## FREED DECADE CAPACITORS

Freed decade capacitors are high quality capacitors designed for use in wave filters, tuned circuits and equalizers for audio and supersonic frequencies where a rather large variable capacitance is desired. Their stability, accuracy and low dissipation factor make them especially useful during the preliminary design period when capacitance values are determined experimentally.

Each decade is variable from 0 to 10 by use of 11 position selector switch. The losses in the switches and mountings are kept low by the use of special low loss, impregnated switch wafers. A positive detent mechanism allows the switch to be set accurately. The accuracy is  $\pm 1\%$  at frequency of 1 kc.

**No. 1415** is a 1 mfd/step mylar capacitor. Total capacitance 10 mfd. Size: 3" x 3" x 8". Wgt.: 2 lbs.

**No. 1416** is a 0.1 mfd/step polystyrene capacitor. Total capacitance is 1 mfd. Size: 3" x 3" x 8". Wgt.: 2 lbs.

**No. 1417** is a .01 mfd/step polystyrene capacitor. Total capacitance is 0.1 mfd. Size: 3" x 3" x 8". Wgt.: 2 lbs.

**No. 1350** is a five section decade capacitor. The type 1415, 1416, 1417 and 1418 are mounted on one panel with a 1000 mmfd precision air variable condenser. Size: 19" x 7 $\frac{3}{4}$ " x 8". Wgt.: 20 lbs.

**No. 1351** is a six section decade capacitor. The type 1415, 1416, 1417, 1418 and 1419 are mounted on one panel with a 100 mmfd precision variable condenser. The 100 mmfd may be used singly in which case the stray capacity is less than 10 mmfd or it may be used in conjunction with the other decades by simply closing a shorting link.

The capacity is continuously variable from 10 mmfd to 11.1111 mfd in 100 mmfd steps with  $\pm 1\%$  accuracy.

The maximum voltage that may be applied to these decades is 500 D.C. working volts.

The dissipation factor of the polystyrene units when measured at 1 kc. is less than .0002. The dissipation factor of the 1 mfd/step decade (mylar) is less than .005. Size: 19" x 10 $\frac{3}{4}$ " x 8" Wgt.: 25 lbs.

Modern Engineering . . .

**EMICO** panel and test meters are rugged and reliable instruments. (Available with plastic or metal face.) DC meters have the new HI-TORK magnetic movements and are accurate to well within 5%. AC meters are of the moving iron type and are also accurate to within 5%.

**MOUNTING** — All model NF-2C, RF-2C, and RF-2¼C with plastic front meters will fit into a 2-1/16" diameter hole and are mounted by means of a U clamp.

**DESIGN** — EMICO meters are designed to give satisfactory service under the most severe conditions. They are styled to add to the prestige and appearance of electrical equipment.

**CALIBRATION** — Since the instruments are calibrated in steel cases, their accuracy is not affected by panels made of magnetic materials of nominal thickness.

**GUARANTEED** — ALL EMICO instruments are guaranteed against defective material and workmanship for a period of one year after date of purchase, and will be repaired or replaced if sent to the factory postpaid with a 50¢ handling charge.

## SYSTEMS CONCEPT

**RAKSCOPE S-12-C**

**PANELSCOPE®**

The Waterman SYSTEMS RAKSCOPE, S-12-C series is a rack mounted oscilloscope with SYSTEMS CONCEPT. Systems concept is a basic means for rapid monitoring of desired signals with minimum operative effort and without the use of auxiliary switching or jack panels. S-12-C series provide the following:

1. **BASIC UNIT**—The basic S-12-C SYSTEMS RAKSCOPE is a complete combination systems monitoring and trouble-shooting oscilloscope with outstanding physical and electrical characteristics. The RAKSCOPE occupies but 7 inches of a standard 19" rack and extends only 10 inches behind the front panel. Identical vertical and horizontal amplifiers are DC type having rise times better than 0.35 usec, and 50 or 71 millivolts rms per inch of deflection respectively. Signal calibration method uses a direct reading accurate meter. Time base sweeps are from 1/2 cps to 50KC in trigger or repetitive operation. Sync from internal or external sources provide stable operation by means of new sync lockout circuits. Special plug-in elliptical sweep circuit for easy phase and frequency checks greatly increase its systems utility. Construction is ruggedized throughout. Tube type options include standard commercial, ruggedized commercial or ruggedized military. Operable from 50 to 400 cycles.

2. **CUSTOM MODIFICATION**—Desired flexibility is obtained with the optional signal input selector. For the first time it is possible to select up to eleven different signal sources with the necessary built-in attenuation (supplied by us or by you) for each source. Thus the entire switching panel can be omitted from an overall system resulting in circuit and space economics. Standard elliptical sweep is 60 cycles, but plug-in units for other frequencies can be supplied. Accessories such as attenuating, direct, and amplifying probes are available.

Improve your existing or contemplated systems by including the S-12-C SYSTEMS RAKSCOPE as an integral part. Your local Waterman representative is ready to assist you in determining specific requirements.

The Waterman PANELSCOPE is a custom-built cathode ray tube oscilloscope, with simplified operation, and yet available at a low price. The PANELSCOPE concept provides for the following:

(1) **MINIATURIZATION**—Panel space required is only 5 1/4" x 5-3/16"—depth is 10" and the weight is less than 7 lbs. The PANELSCOPE can be installed in practically any equipment—mobile or stationary—air, sea, or land—military or commercial.

(2) **SIMPLICITY OF OPERATION**—Twist of a single rotary switch provides a synchronized pattern of desired incoming signal (up to 11 circuits) against proper linear time base. This is ideal for monitoring and trouble shooting, as it removes the need of fiddling with knobs as is done now on general purpose oscilloscopes. The static controls, such as beam, focus, positioning, and graticule brightness are located in tube escutcheon.

(3) **CUSTOM DESIGN**—A wide variety of—signal amplifiers with response from dc to megacycles and sensitivities from 5 millivolts—synchronized or triggered linear time base generators from 1/2 cycle (and lower if need be) to 2 microseconds—can be specified by you to fit your needs for particular equipment.

(4) **PARTIAL KIT FORM**—the PANELSCOPE comes fully wired and tested with chosen signal amplifier, linear time base generator and attendant sync. amplifier. The desired signal attenuators, frequency and amplitude determining components, and method of synchronization can be installed either by us or by you.

(5) **POWER REQUIREMENT**—Less than 10 watts of line power for built-in high voltage supply—The required B+ and heater current as selected by your requirements. For those cases where B+ and heater power is not available, auxiliary power pack can be supplied.

There is a place in your equipment for Waterman PANELSCOPE, a custom built oscilloscope at production prices, although your needs may be but one or two. Ask for specification sheets either from our representatives or direct from the factory.

Servicemen know the Precise Model 111 (the winner in an independent survey) easily rates "the finest tube tester in the field" at any price, BUT FOR AN ON THE JOB QUICK-TEST . . . the fastest, most accurate is the PRECISE Model 116. What's more you test tubes the foolproof method inherent in the famous Precise Model 111.

Did you ever wish you could plug in 5 of the same type tubes at once and check each one individually by rotating a switch? YOU CAN WITH THE PRECISE MODEL 116—Plug in 5 IF tubes and let them heat up at once and then check each one separately by rotating the TUBE BANK switch. ACTUALLY CHECK 5 TUBES IN 20 SECONDS. 4 SECONDS PER TUBE.

The Precise Model 111 taught the lesson that IF amplifier tubes (like the 6BC5 or 6AU6) should be tested for GM (mutual transconductance) while the power amplifiers (like the 6L6) should be tested for Em (emission). The Model 116 test checks each section of each tube separately . . . by rotating the FUNCTION SWITCH . . . each triode of a dual triode is checked individually . . . each diode and the triode of a duo-diode-triode is separately tested and not lumped as in other testers . . . and a pentode is tested as a pentode—not a diode. TRANSISTORS, SHORTS, GAS, LIFE, Em Gm etcetera can be tested with the PRECISE Model 116.

You can inexpensively extend the Precise Model 116 to test filament current, etc. The Model 116 gives an accurate, ultra-fast (3 basic knobs for testing) check of television tubes!

No Surplus—An etched panel—beautiful Moleskin covered wood carrying case and cover and specially simplified instructions makes the PRECISE MODEL 116 THE FINEST FAST-CHECK TUBE TESTER AND DOLLAR EARNING TRAVELING COMPANION A TV SERVICEMAN EVER HAD.

INDEPENDENT SCIENTIFIC SURVEY AND LAB TESTS PROVE PRECISE MODEL 111 "BEST COMMERCIAL TUBE TESTER AT ANY PRICE."

**ENGINEERING DESIGN CONSIDERATION:** To understand the Model 111 Mutual Conductance and Emission Tube Tester, it is perhaps best to spend a moment with the original design considerations. Basically we recognize the fact that:

1. A GM or Emission type tube tester actually read a goodly percentage of tube troubles—BUT each alone missed a great many. We could not say with any degree of assurance which type of tube test was the best. Certain applications required GM, while others required Emission. PRECISE Solution: The Model 111 checks Gm and Emission separately. It indicates on the roll chart the most important single test for normal applications. It is, of course, desirable to make both tests.
2. In series T.V. filament arrangements, which are daily enjoying greater popularity, the "Voltage Sapper" (a tube which developed too much filament voltage as compared to the other tubes) was a constant trouble. PRECISE Solution: The Model 111 allows the filament current to be measured directly on the meter.
3. A whole series of different test voltages (sweeping from zero voltage up) was required. PRECISE Solution: The Model 111 sweeps from 0 through the normal testing range when making measurements. This gives an average evaluation for the tube over an extended range of operation.
4. Short tests usually require elaborate switch manipulation. PRECISE Solution: The Model 111 uses a single rotary switch which checks each element against every other element. No conversion chart is required to ascertain which pins are shorted. This test may be made at any time hot or cold without changing any other switches.
5. The instrument would have to be rugged to stand the "trunk of a car" type of abuse. PRECISE Solution: In the Model 111 a heavy wooden cabinet houses the entire unit. The panel is deeply etched aluminum.
6. Tube Bias, being an important consideration, should actually be measured on the meter. PRECISE Solution: The Model 111 measures tube bias directly on the indicating meter.
7. The instrument should be simple to operate. PRECISE Solution: The Model 111 uses a no-blacklash roll chart, and a sectionalized design setting off each section.
8. There should be a provision for new tubes. PRECISE Solution: The Model 111 is one of the simplest type tube testers to set up for new tubes. The pin connections and function positions may be taken directly from the tube manual. The instrument already includes provisions for testing many color tubes.
9. It should check all modern tubes. PRECISE Solution: The Model 111 is provided with sockets for testing the following type bases. Large 4 prong, large 5 prong, large 6 prong, large 7 prong, medium 7 prong, miniature 7 prong, in-line 7 prong (sub-miniature), Octal, Noval, sub-miniature 8 prong, CRT and Loctals. Weight 24 lbs. Size 14" x 16" x 6".
10. The instrument should check Cathode Ray Tubes. PRECISE Solution: The Model 111 also checks cathode ray tubes with CRT adaptor. Model PTA-K \$2.95, PTA-W \$4.25.

The PRECISE Model 315 is a best buy as a low cost, high quality oscilloscope for general radio and TV applications. It features such innovations as frequency compensated vertical and horizontal attenuators along with identical vertical and horizontal amplifiers.  
 The Model 315 is rugged and simple to build. It uses a 5CP1 type tube with a post accelerator. Both the horizontal and vertical sections are cathode-follower input type and are AC coupled.  
 The instrument is housed in a grey steel cabinet. Attractive brushed aluminum with black lettering and a bezel comprise the front panel.

**SPECIFICATIONS:**  
**VERTICAL —** The vertical amplifiers are within ±6db through 500KC. Single ended, AC coupled, cathode follower, frequency compensated stepping attenuator input. Basic sensitivity is approximately 250 millivolts per inch. Outputs are push-pull.  
**HORIZONTAL —** The same general specifications as the vertical amplifier.  
**SYNCHRONIZATION —** External, internal.  
**SWEEP RATE —** From approximately 10 cycles to 100 KC. Hard vacuum type sweep circuit.  
**CALIBRATION —** 6.3 volts sine wave.  
**FOCUSING —** Focus, intensity and astigmatism controls. The astigmatism control is available from the rear. A standby switch is used to turn off CRT filaments when not in use.

As you know Precise does not use, nor advocate, surplus parts — especially in a kit. In accordance with this policy (although a cathode ray tube is supplied with each Model 315 as a convenience, at no charge) we are officially listing this instrument without CRT. The CRT supplied, free of charge, is new, guaranteed for 1 year. Has never been used and was purchased from the Government in its original unopened carton. If a new tube, not Government, is desired it is available at an additional charge of \$14.00.

## • NEW PRECISE MODEL UPA-IN AND UPA-IP ULTRA PREAMPLIFIER

The PRECISE Model UPA-1 preamplifier is an ultra-modern presentation of true high fidelity, set off in a beautiful rich brushed brass colored panel, designed to enhance a living area. • It embodies the most modern circuitry with separate controls for Bass Boost, Treble Boost and Roll-off, Volume Record Compensation which also includes the latest AES curves (this year), a main Selector switch which connects to Phono, Microphone, Radio Television and an auxiliary position (4 separate input jacks are mounted on the rear chassis), a separate On-Off switch also operates the Convenience outlet at the rear of the instrument. • The instrument is designed so that it is completely self-contained or, if desired, it may be mounted directly into a console panel. In the latter case, no additional hardware is required because of a unique cabinet and chassis design. The cabinet dimensions are 12 x 4 x 4 and it weighs approximately six pounds. • The input gain and amplifier latitude is more than ample for Reluctance or Crystal inputs. Long lines may be used with the cathode-follower input

The UPA-1 is available in two circuits:  
UPA-IP has its own transformer supply and is operated directly from the 110 volt AC line.

ONCE again, from the engineering laboratories of the Precise Development Corp., a remarkable achievement in the field of testing... PDC CUSTOM METERS... immediately available for general meter use, engineers, experimenters, hobbyists, pilot runs, spot applications, and in-the-field measurements.

**PRECISE PDC METERS** now offer you an opportunity to have **immediately available** individual custom meters that will cover any one of 100 voltage and current AC and DC ranges.

#### EACH METER FEATURES

- D'Arsonval Moving Coil Design
- Polished Jewels and Pivots
- Fatigue Tested Springs
- Stress-released units
- 2% Accuracy
- Knife-Edged Pointer
- Mirror Scale
- Lithographed Scale Faces
- High Quality Shunts and Multipliers
- Optional Illumination Packet
- Optional Shadow Mask
- Plastic Case
- Sizes: 2½", 3½", 4½"

#### REVOLUTIONARY DESIGN ADDS METER VERSATILITY

**PDC CUSTOM METERS are INTERCHANGEABLE.** All Precise Custom Meters are interchangeable. Special interchangeable slip-on scales, and companion snap-in shunts and multipliers, add to the ranges that may be covered from one basic custom meter.

**Here's How It Works.** Let's say you have a 15-volt, 20,000 ohms-per-volt PDC custom meter, and you need a 2.5 volt, 20,000 ohms-per-volt meter for another application. With the PRECISE PDC revolutionary design, you don't have to buy another separate meter. All you need do is to take the same 15-volt, 20,000 ohms/volt meter, open the case, slip out the interchangeable scale face, pull out the resistor in the rear... and then slip on a 2.5 scale face, snap in its companion multiplier into the lock-type jaws in the rear... and when you snap the cover back in place...

**In Less Than a Minute You Have a New Custom Meter.** That's how simple it is to have a professionally accurate, perfectly calibrated custom meter with a special lithographed scale face, and scale identification... **WITHOUT BUYING ANOTHER CUSTOM METER.**

**Precise PDC Custom Meters** are comparably priced with custom meters currently being sold today. Now you can have many custom meters from just one... PRECISE'S revolutionary design adds meter versatility to save you money.

Tracks 'em Down Dead or Alive

The **CIRCUITRACER** is the only electrical tester (other than expensive meters) that can test dead circuits, low voltage live circuits AND high voltage live circuits. It is made of the finest materials available and is designed for long life.

Weights only 2 1/2 ozs.

**Circuitracer**\*

**THE ONLY POCKET SIZE 3-IN-1 ELECTRICAL TEST "LAB"**

**DON'T SEND A MAN TO DO A BOY'S JOB!** An expensive meter should be used only when the value of voltage, resistance or current must be known. Under any other conditions a Circuitracer will provide simple continuity and voltage checks faster and easier than an expensive, bulky meter.

**CIRCUIT TESTING WITH A CIRCUITRACER IS FASTER** because the signal light is in the tip at the point of contact. This makes it possible to determine the existence of a circuit or voltage without looking away from the test point to read a meter.

**SAVE METER REPAIR MONEY BY USING DESCO CIRCUITRACERS.** An overvoltage across a meter usually results in extensive damage which takes the meter out of service until repaired or replaced. The worst that can happen to your Circuitracer is a burned out lamp that costs ten or fifteen cents and can be replaced by the operator in less than a minute!

**LIST PRICE \$4.95**

The Desco patented Circuitracer Tip adapted for use with a Flexiprobe. More convenient than the Adapter Nut for production use.

**LIST \$1.50**

Special Adapter Nut and Flexiprobe for your Circuitracer. Just screw it on the Circuitracer tip and it's ready to test those delicate receptacles.

**LIST \$1.25**

*Without the vital connector the electronic business could not exist . . .*

**PROTECT THOSE DELICATE CONTACTS** with

**Flexiprobe**

Since reliability of electronic connectors is an important aspect of good circuit design, the technician must exercise great care when inserting a test probe into pin and printed circuit receptacles. Use of an oversize probe or accidental lateral movement of the handle warps or bends the receptacle's spring contacts. While this damage may not be apparent, it will show up under operating conditions . . . causing aborted missions in the case of aircraft and missile guidance systems or expensive shutdowns in the case of industrial control equipment.

Desco Flexiprobe in a standard pin vice type handle.

**ELIMINATES POSSIBILITY OF DAMAGE TO A-N AND PRINTED CIRCUIT RECEPTACLES**

The Desco Flexiprobe is particularly well adapted to testing subminiature assemblies. It can be inserted into even the smallest connector with a smooth, spring-loaded wiping action which assures positive electrical contact with no chance of damage to the receptacle. Made in two sizes and adapted to various types of testers, the Desco Flexiprobe is available at most electronics parts distributors.

OMNIDIRECTIONAL  
PLASTIC DOME

**EASY LAMP REPLACEMENT:** All assemblies (whether for front or rear insertion) have this important feature: The plastic domes or metal caps are easily removed from front of panel — thus making the lamps accessible for easy lamp replacement. Please refer to our Form L-156A which describes these units in detail.

**PLASTIC DOME — OMNIDIRECTIONAL:** The unique "stovepipe" lens, moulded of high heat plastic, radiates light in all directions. Heavy plastic walls are reinforced by threaded brass insert. This fitting receives lamp well up into plastic dome for maximum light dispersion.

**LENS WITH MESSAGE — easily positioned.** A DIALCO exclusive is the specially designed cap-and-lens (as shown at right). By pressing on spring-mounted lens and rotating in either direction the legends may be positioned *after* installation of the assembly.

**INSULATED:** Lamp, socket, and all connections are completely insulated from the bushing and panel to which it is attached.

**FINISH:** Black nickel.

Fig. 16

The new NE-51 lamp is especially useful for pilot lights to be operated on commercial voltages. It has a distinctive orange-red glow and consumes very little current.

#### MULTI-VUE or CLEAR CAPS

In addition to the advantages given by the provision of the built-in resistor, these assemblies offer another feature that is especially important in obtaining effective indication with the NE-51 lamp. The "Multi-vue" cap shown at the left gives a high degree of visibility by directing an increased amount of light toward the eye when the indicator is viewed from any angle. When it is desirable to view the electrodes directly, the CLEAR CAPS shown below are very effective. For concentrating the light into a beam the metal lens holders are equipped with convex lenses as shown.

# LITTELFUSE

"Quicker than a Short Circuit"

## AIRCRAFT LITTELFUSES—ANTI-VIBRATION TYPE

Especially designed for Aircraft Service. Characteristics: High Mechanical Strength—Resistance to Fatigue—Long Vibration Life

**CONSTRUCTION:** Glass-enclosed. Littelfuse Locked Cap Assembly (no cements) prevents loosening of caps. High visibility transparent label for amperage. Elements mechanically depolarized by twisting at 90° (see illustrations) are braced against extreme vibration. "Gooseneck" non-crystallizing fuse element takes up expansion and contraction. Ratings 5 amp. or less use Spring and Link. Service life six times simple wire. The 4 AG and 5 AG sizes are supplied for Aircraft services for their strength and greater carrying capacity than 3 AG fuses.

**CURRENT RATING:** Rated to NEC specifications to carry 10% overload indefinitely, to blow on 35% overload within 1 hr., and 100% overload within 2 min.

**VOLTAGE RATING:** Voltage at which fuses will break without arcing over, or bursting under short circuit conditions.
