10,000 Watts 660 Kilocycles

March 20, 1944

Mr. Kermit Geary
R.F.D. #2
Walnutport, Pennsylvania

Dear Mr. Geary:

Thank you very much for your interesting and informative letter of February 27th. This is our verification of your reception of this station on that date.

You can well imagine how well pleased we are that you heard us with such clarity at that distance.

Last December KEAF increased its power from 5,000 to 10,000 watts, and changed frequency from 610 to 660 kilocycles.

As you probably know, 660 is a clear channel assignment, which should allow reception in the East when WEAF has signed off the air. If you ever hear us again, we'd surely appreciate another reception report.

Very truly yours,

August G. Hiebert

Dear Mr. Geary,

It is apparent that you actually did hear us on our last freak check. However, I am surprised somewhat when you state that no modulation was heard 1:43am to 1:56am PST (also Ketchikan time). We were modulating continuously with transcriptions.

The time is correct, and the time of identification also is correct. So, apparently you heard us.

Very truly yours,
Herbert L. Foster
