# TRADE NAME INDEX

The following list of trade names of manufacturers and products in or related to the field of electronics has been prepared from data supplied by manufacturers. This list is intended for use in determining the manufacturer's name when only a purported trade name is known. The editors for obvious reasons have not attempted to determine a manufacturer's right to the exclusive use of any such name. Addresses can be obtained by referring to the Manufacturers Index on Page D-232. Only coined trade names are listed as it was deemed unnecessary to include a company name inasmuch as the manufacturer's identity was immediately apparent.

**RCA-2N140**—For converter and mixer-oscillator applications in standard-AM broadcast-band receivers. Linotetrah 3-pin base. For flexible-lead version, specify **RCA-2N219**.

**RCA-2N269**—For low-level, medium speed, on-off, control applications as in flip-flop and gating circuits of electronic computers.

**RCA-2N139**—For 455-Kc IF amplifier applications in standard-AM broadcast-band receivers. Linotetrah 3-pin base. For flexible-lead version, specify **RCA-2N218**.

**RCA-2N247**—"Drift" Transistor for use as an RF amplifier in the AM broadcast-band and up into the short-wave bands.

**RCA-2N109**—For large-signal AF amplifier service. In class B push-pull, two RCA-2N109's can deliver max. signal power output of approximately 150 milliwatts. Linotetrah 3-pin base. For flexible-lead version, specify **RCA-2N217**.

**RCA-2N206**—For moderate-power AF amplifier service. Meets military specification MIL-T-25380/4 USAF. (Max. collector dissipation, 75 mw. at ambient temp. of 25°C.)

**RCA-2N175**—Exceptionally low-noise type for pre-amplifier or input stages of transistorized audio amplifiers operating from extremely small input signals. Linotetrah 3-pin base. For flexible-lead version, specify **RCA-2N220**.

**RCA-2N301**—For audio-power output stages of equipment requiring high output with low distortion at high power gain. In class A, one RCA-2N301 can deliver a max. signal power output of approximately 2.7 watts; a pair can deliver up to 12 watts in class B push-pull. For operation at peak collector voltages as high as 60 volts, specify **RCA-2N301-A**.

**RCA-2N270**—For large-signal AF amplifier service. In class A, one RCA-2N270 can deliver a max. signal power output of approximately 60 milliwatts; in class B push-pull, a pair can deliver up to 500 milliwatts.

# SPECIFY RCA TRANSISTORS

RCA offers a broad line of superior-quality p-n-p transistors for RF, IF, AF, and switching service in entertainment, industrial, military, and computer applications.

When you design equipment for mass production, uniformity of transistor characteristics is vital to good end-product. Special-purpose electronics apparatus requires transistors with the added feature of extreme stability. RCA's advanced manufacturing techniques combined with rigid quality controls assure "top performance" in commercial, military, and industrial applications. Described here are some of the outstanding transistors from RCA's broad line — now commercially available.

Contact your RCA Field Representative for a discussion of the many advantages offered your specific designs by RCA Transistors.

**YOUR RCA FIELD ENGINEER AND YOU...**

# **Nucleus for better designs**

To speed the pace of progress in the field of electronic equipment design, RCA Field Engineers work hand-in-hand with equipment designers—from the beginning of the circuit concept to completion of the product.

Through this close engineering teamwork, equipment design requirements are carefully correlated with tube and semiconductor-device parameters. First-hand knowledge of customer requirements reflects directly into RCA product design—to make RCA the outstanding choice wherever tubes or semiconductor devices are specified.

For experienced help in the proper application of RCA Tubes and Semiconductor Devices in your equipment designs...your RCA Field Engineer is at your service.
