Twelfth Edition

PART IV

FREQUENCY MODULATION AND TELEVISION STATIONS

INFORMATION CORRECTED TO

1 March 1954

4.5
n2986
3534.

FOREWORD

This edition of "Broadcasting Stations of the World" lists all known radio broadcasting and television stations except those in the continental U.S.A. on domestic channels. For convenient reference this publication is divided into four parts as follows:

PART I: (Blue Cover) Information is indexed alphabetically by **COUNTRY AND CITY**. Within a city, frequencies are listed in ascending order. Other information included is call letters and/or station name, power, wavelength, frequency, status of frequency or transmitter and ownership.

PART II: (Green Cover) Information is indexed according to **FREQUENCY** in ascending order. Owing to certain limitations introduced by machine processing, frequency indexing follows the right rather than the conventional left margin of the page.

PART III: (Maroon Cover) This compilation is indexed first by **CALL LETTERS** and second by **STATION NAME** or **SLOGAN**. Since it is used primarily to identify stations, only items of information enabling location of full information by cross-reference to **PART I** or **PART II** are included.

PART IV: (Brown Cover) Two sections, one for **FREQUENCY MODULATION** broadcasting stations and the other for **TELEVISION** stations, each separately indexed by country and city and by frequency, include the same elements of information as Parts I and II plus additional pertinent data necessary to distinguish audio, video, polarization, and other technical factors applying in their range of the spectrum.

A table of summer, winter and standard time differences with respect to G.M.T. for each country is included in the back of **PART III**.

P	PROJECTED (TRANSMITTER AND FREQUENCY)
R	RELAY STATION
U	UNVERIFIED INFORMATION

SECTION A

FREQUENCY MODULATION STATIONS

The column headings covering all data listed in Section A are defined as follows:

COUNTRY: The country, colony, mandate, protectorate or overseas territory in which the station is located.

CITY: The announced location of the station. It is usually the studio location, since most FM transmitters are placed upon the highest location in the area in order to obtain more widespread coverage. Wherever possible, the transmitter location follows the name of the city. In a few cases, the area where the transmitter is located is given on the third line of the entry.

SYMBOLS: See Page iv for explanation. Status denoted by symbols may change at any time after the publication date of this edition.

CALL LETTERS: The identification of a station in terms of letters of the alphabet and/or numerals, usually selected from block combinations allocated each country by international agreements. Numerous countries do not assign call letters to broadcast services, hence the omission of this information from a considerable number of entries. Many stations will be identified by the announcement of a station name which can be given in lieu of, but may be given in addition to, the call letters.

OWNERSHIP: The entity, individual or corporate, in whose name the station is licensed and operated.

POWER: Stated in watts. All entries which show an asterisk (*) reflect the effective radiated power (ERP), due to the station's antenna system. All other entries give the actual rated power of the transmitter.

FREQUENCY: Expressed in kilocycles per second. For various reasons, stations may, at times, utilize frequencies which are at variance with this publication.

ADDITIONAL INFORMATION: Certain entries will carry additional information on the third line concerning the programs carried.

SECTION B
TELEVISION STATIONS

The column headings covering all data listed in Section B are defined as follows:

COUNTRY: The country, colony, mandate, protectorate or overseas territory in which the station is located.

CITY: The announced location of the station. It is usually the studio location, since most TV transmitters are situated upon the highest location in the area in order to obtain more widespread coverage. Wherever possible, the transmitter location follows the name of the city, or in certain cases, the second line of the entry will show the area served by the transmitter.

CALL LETTERS: The identification of a station in terms of letters of the alphabet and/or numerals, usually selected from block combinations allocated each country by international agreement. Many countries which normally assign call letters to broadcast services, have not required TV stations to broadcast or exhibit call letters. This accounts for the omission of this information from a considerable number of entries.

SLOGAN: The name announced by or applied to a station for identification purposes in lieu of or additional to the call letters. The station name has been reduced in many cases due to space limitations, but the essential elements or abbreviations thereof have been preserved.

OWNERSHIP: The entity, individual or corporate, in whose name the station is licensed and operated.

SYMBOLS: See Page iv for explanation. Status denoted by symbols may change at any time after publication date of this edition.

MODULATION: Two systems of modulation are used to transmit the audio signal of the television stations, either Frequency Modulation (FM) or Amplitude Modulation (AM). All video transmissions are normally Amplitude Modulated.

POLARIZATION: Signals are Horizontally Polarized (HP) or are Vertically Polarized (VP). Polarization is usually selected according to the need for a reduction of interference with other stations, or to obtain engineering standards as required by the government of the country in which the station is located.

BAND WIDTH: Shown in kilocycles and represents the limits within which both the video and audio transmission are contained.

LINES: Expressed as the number of lines transmitted to form one complete frame or picture.

FRAMES: Stated as the number of times per second the picture area is completely scanned.

VIDEO POWER: All entries are stated in watts. The entries which show an asterisk (*) denote the effective radiated power (ERP) due to the station's antenna system. All other entries give the actual rated power of the transmitter.

AUDIO POWER: The same remarks apply as for the Video Power.

VIDEO FREQUENCY: Stated in kilocycles per second. The relationship between the quoted figure and the limits of the video band varies among countries and can be determined by reference to the standards of the systems used by the respective countries. See Appendix for details.

CENTER FREQUENCY: Stated in kilocycles per second. Representing the exact center of a television channel's band width, it has no technical significance but serves as a common denominator in handling multiple and variable factors as a single quantity.

AUDIO FREQUENCY: Stated in kilocycles per second. The relationship between the quoted figure and the limits of the audio band varies among countries and can be determined by reference to the standards of the systems used by the respective countries. See Appendix for details.
