

SIXTH EDITION

FM ATLAS

and Station Directory

By Bruce F. Elving

**A handy
Reference
to the
FM Stations
of the
United States,
Canada
and Mexico**

FOREWORD

This sixth edition **FM Atlas and Station Directory** should be a welcome addition to the lives of many readers of the fifth edition, published some two years earlier. Several of our readers had written, wondering when this book would be ready, noting that they have made good use of their old edition. One Illinois reader said that he travels frequently, taking his well-worn copy of the **FM Atlas** with him on out-of-state trips.

This book's price, too, represents sharply increased printing and production costs. Production is being geared to a smaller press-run than previously, reflecting our reliance upon individual rather than quantity book sales. Hopefully, this will result in annual publication, which will help to keep the book from physically wearing out for its regular users, and provide the latest FM station news, wherever you are and however you use the book. It is our hope to give you the best possible value in an FM radio station reference, by presenting a maximum amount of information per page in a reduced-size format. This size permits taking the book with you in briefcase, glove compartment or purse, and it saves our nation's resources by cutting down on the amount of paper consumed.

All of the maps have been redrawn, using our new IBM Composer and its various type fonts. Maps of the United States (48 continuous states) continue to indicate cities having FM stations and FM translators, differentiating between educational and commercial stations. Included are station frequencies and call letters, with reduced sizes reserved for FM translators and 10-watt educational stations. Maps of Canada, Mexico, Alaska, Hawaii, Puerto Rico and the Virgin Islands indicate only cities having FM stations, with very small type (7-point before photoreduction) for cities having stations of 49 watts or less; 10-point medium condensed type for cities having stations between 50 and 499 watts; and larger (11-point) type for cities having a station of 500 watts or more. Bold-face type is used to indicate three or more stations of 500 or more watts in a city.

More specific detail pertaining to the stations of all countries will be found in the Station Directories, immediately following the FMaps. The geographical portion of the Station Directory continues to list, with new and hopefully easier to read typography, station location (city of license), call letters, stereo, program format, network affiliation, SCA subcarrier utilization, Dolby, and coverage radius in miles. The by-frequency portion of the Station Directory lists only stations of the United States and Canada, giving effective radiated powers and antenna heights above average terrain in feet. Back by popular demand in this part of the book are listings for 10-watt educational FM stations.

This book is designed for everybody with an interest in FM, including the hi-fi listener with digital readout of station frequencies, the DX hobbyist, and the motorist—as well as those in broadcasting, advertising and related fields.

FMusings

FM Listening Tops AM Listening for the First Time

FM radio, for the first time in its history, passed AM radio during 1979 in terms of total audience, accounting for an estimated 50.5 percent of all radio listening. Helping FM stations gather such impressive listening figures is the fact that presently almost 90 percent of the nation's homes have at least one FM radio, and since 1976 over half of the new cars have been equipped with FM.

Listening to FM has increased more rapidly than expected, with officials of Cox Broadcasting quoted as saying 1981 would be the year when over 50 percent of all radio listening would accrue to FM stations. However, FM advertising revenues have not increased as rapidly, with commercial FM advertising sales at close to three-quarters of a billion dollars during 1979, contrasting with AM radio's more than \$2 billion economy, according to estimates by Blair Radio Research and the Radio Advertising Bureau.

FM stations as a group first showed a profit in 1976, according to data filed with the Federal Communications Commission, and this trend toward increased profitability has continued. FM's increasing share of the audience is undoubtedly due to the medium's superior sound, its static- and interference-rejecting qualities, and the comparative absence of commercials. Regardless of how successful FM stations as a group becomes, the listener seeking relief from radio advertising need only tune to stations found between 88 and 92 on the FM dial (or elsewhere along the dial, as indicated in this reference by the symbol *) to hear noncommercial, educational or "public" stations. On this part of the FM spectrum the government allows no commercial intrusions, confining commercial stations to the 92 to 108 MHz part of the FM band.

Trends that may disturb some listeners to educational stations, however, are frequent underwriting announcements from businesses donating funds for program production, and the practice of many stations to stop regular programming for one-week or longer periods during the year to conduct fund-raising marathons. Readers who find these practices excessive have only to check the **FM Atlas and Station Directory** for help in finding a similar-formatted area station to tune to which may be receivable, particularly with the benefit of an outside FM antenna connected to a quality receiver.

Noncommercial FM Radio Rules Changed by the FCC

A long-standing FCC inquiry concerning a variety of changes in how non-commercial broadcasting stations should function came to a head in 1979 when the Commission announced: all 10-watt educational stations must either file application for a minimum of 100 watts by January 1, 1980 in order to retain their present frequency in the educational band—or face having to move to a commercial

channel; move to a newly-created channel, 87.9 MHz (which cannot be used in areas near channel 6 TV stations or close to the Canadian and Mexican borders); or accept secondary status in the 88-92 MHz part of the FM dial. Educational stations now must operate a minimum of 36 hours per week, although school stations will be exempt from the rule when students are not on campus. Stations operating a yearly average of less than 72 hours per week will be liable for time-sharing after Jan. 1, 1980, should another local applicant want to operate on the same frequency. Already this rule has shaken the lethargy of some school stations. KUSF *90.3 San Francisco has added six hours of afternoon rock programming to its schedule, while KBEM *88.5 Minneapolis is expanding to Sundays, and hopeful for a Corporation for Public Broadcasting grant to operate 18 hours each day.

The purpose of these rules is to open more of the educational part of the FM band to higher-power stations and force stations remaining as 10-watters to accept secondary status where they will not interfere with other stations. To date, very few 10-watters have chosen to move to commercial channels, although KHDX Conway AR is moving to *93.1, WWPB Princeton Junction NJ will be on *107.9, WPRG Baton Rouge on *107.3, WCCX Waukesha WI on *104.5 and WGHR in Marietta GA on *102.5. There are quite a number of applications for higher power by 10-watters, including one application prepared by this writer. The FM Atlas was one of the concerns filing comments with the FCC in this matter, and that was done Sept. 23, 1976. We suggested that 10-watt stations and FM translators move to even channels, such as 88.2, 88.4, etc. A map was drawn, showing how, in the congested Chicago area, scores of new 10-watt stations could be created, many others now in existence could increase power, and a new Class B high power frequency could be added. By using these spacings and existing receivers, 90.8 MHz could be employed by Chicago area 10-watt stations with no interference to or from WMBI-FM on *90.1 and WBEZ on *91.5. Instead, the FCC added 87.9 for 10-watt operation and suggested that 10-watters move to the commercial part of the dial, further antagonizing relations between commercial and educational broadcaster. It is my prediction that 87.9 will be an allocations failure; this frequency with its power limitation at ten watts and the fact that it is in the channel 6 TV audio band will make operation on that frequency undesirable. No applications are on file for 87.9. There is a freeze on applications for new 10-watt station applications by the FCC, but those applications previously filed are being processed and, in many cases, granted.

Remaining to be decided by the FCC are such matters as whether a national table of educational FM allocations, similar to the table of commercial allocations that has been in use since 1961, should be established; who should qualify as a noncommercial, educational FM station licensee; multiple ownerships of these stations; and limits on the number of marathons and on-air fund-raising drives that these stations can conduct.

As you tune in FM on your travels, be aware of the fact that many of the formerly 10-watt stations may have upped their power—usually close to the FCC-mandated minimum of 100 watts, but sometimes in significant jumps. WUAL *91.7 Tuscaloosa AL is applying for funding to go to a 100,000-watt public radio

station, while applying to the FCC for a second station, a 120-watt student radio station on 90.7. And, tuning carefully across the commercial part of the FM dial, and you may hear the weak, elusive 10-watter that has elected to join KHDX and maintain an innocuous existence outside the broadcasting mainstream. A few 10-watters, unable or unwilling to comply with the new rules, will undoubtedly go out of business, as did WLNK 90.9 Columbus and WWCL 91.1 Wesson, both Mississippi; WSMH 89.9 Lancaster NY; and KASD 90.1 Aberdeen SD went out of business rather than change to 970 watts, for which they had FCC approval.

FM Programming and Operational Trends

The big news in radio programming toward the end of the decade was disco. After the meteoric rise in ratings of WKTU 92.3 New York when it changed from soft rock to disco in 1978, quite a number of stations tried to emulate this success, but with mixed results. WEZB 97.1 New Orleans and WBOS Brookline-Boston were briefly disco, but reverted to rock; KFMX 104.1 St. Louis Park MN abandoned disco in favor of big bands music, and even WKTU's audience tapered off. Disco, as a distinctive musical idiom, will play a major role in radio—particularly as it infiltrates the sound of rock music stations. All-disco radio stations will probably not increase, and indeed, this format by itself could become as rare on radio as stations playing all polka music or all Hawaiian music.

Very few progressive/underground rock FM stations exist, and most of those that do are college radio stations. Going against the trend of commercial stations embracing progressive rock is KKDJ 105.9 Fresno, which a listener-correspondent hailed as a station whose "programming fills a definite void in Fresno radio, and it is responsive to the desires of its listening public," including the use of high-quality transmitting equipment.

The increase of five Twin Cities area stations to 100,000 watts horizontal and vertical effective radiated power from atop the highest building in Minnesota—the IDS Center, at a height of over 240 meters—has caused impaired reception of other area stations. Three stations petitioned that FCC test authority to program from that site be withheld. The FCC's response was to temporarily reduce to 50,000 watts the power of the five stations—KQRS-FM 92.5, WAYL 93.7, WLOL 99.5, KDWB-FM 101.3 and KEEY-FM 102.1. Satan was the culprit, stated WCTS in a letter to its listeners, seeking \$90,000 to improve its signal (probably by adding vertical polarization). More to blame, most likely, is the fact that the five strong signals, which have met all FCC technical rules, overload and interfere with reception on cheap stereos, inexpensive transistor radios and imported car radios. This problem is not unique to Minneapolis, but appears in such cities as Tulsa, Detroit, St. Louis and Milwaukee, where high-powered stations are clustered in an area creating cross-modulation interference that plagues all but the best-designed home and car radios.

People expecting the best in car-radio performance and in the market for a new car should specify a factory-installed, American-made radio (and not getting a cheap substitute that a dishonest dealer might install) for the unique rural-urban reception conditions in this country. Engineers from the big American car com-

panies travel throughout difficult reception areas checking FM, and incorporating design changes in the radios based on the findings of those field trips. The absence of a local-distance switch is often a clue to good design of a car radio. The newer home radios have better local station overload rejection features; and quality stereo equipment will usually give no problems in strong-signal areas, unless you use too much antenna, and aim the antenna at your friendly local broadcasters.

In a Booz-Allen study of car radio pricing, the cost of making a car radio with FM was only about \$10.60, but the percentage markup for AM-FM as opposed to AM-only was found to be quite close, suggesting that AM-FM car radios may not be as overpriced as critics of the industry had suggested. It is possible that if a law were passed requiring FM to be included in all radios sold in the United States, as this writer has long advocated, poorer-performing car radios might be made, which could turn potential listeners away from FM.

Other FM Developments

The FCC decided against having any restrictions on the importation of distant radio signals by cable communications companies. After studying the matter, they decided regulation would be too complicated and that no one would really benefit from such rules. National Public Radio is leading the way toward satellite dissemination of radio programming to its affiliates, with the majority of the 200-odd Corporation for Public Broadcasting-qualified stations expected to have satellite receive dishes installed during 1980, and to pick up network programs in high fidelity and in stereo, with quadrasonic capacity built into the system. A commercial station with a fine-arts format, WFMT 98.7 Chicago, became the first radio "super station." Its programs are being sent via satellite for distribution to cable systems, who then charge their subscribers an extra fee for a radio hookup that includes WFMT.

There has been a trend toward the acquisition of daytime AM stations by FM broadcasters in the same city. Many aggressive FM operators, concerned especially about the FM car radio problem, are convincing the struggling daytime AM station in their city to cash in and sell to the FM broadcaster. On another front, the FCC has been asked to limit AM-FM combinations in the same city, so in the future it is possible that such common ownerships could be reduced in number. In late 1979, KSJN *91.1 St. Paul bought fulltime AM station WRRD 1330 kHz in Minneapolis, changing the latter from commercial to noncommercial, with a news and public affairs image.

In California, a complicated series of frequency changes, financed by the Columbia Broadcasting System, resulted in KCBS-FM San Francisco moving from 98.9 to 97.3, and with superior technical facilities. KEAR then moved from 97.3 to 106.9. KMPX, which used to be on 106.9, moved to 98.9 with its big bands format. KEAR, with its religious format, is bolstering its coverage with a series of new FM translators. Two new stations in western California, situated along busy interstate highway 15, are being established mainly to serve travelers between Los Angeles and Las Vegas. The stations are 98.1 at Yermo, where the studios will be, and 99.5 at Mountain Pass.

A report, "Sound Broadcasting Requirements for Canada: A Long-Range
Canadian Radio-television and Telecommunications Commission Forecast," by the
Canadian Radio-
Television and

Telecommunications Commission, predicts that the bulk of future radio growth will be in FM, with a need especially for 95 new stations in the Windsor-Quebec City area by the year 2001.

There's been talk in the United States of possible reductions in FM station channel spacings as a way to create more stations, but possibly at a cost of reduced coverage and reduced fidelity—something the listeners would not tolerate. One proposal would be to place stations physically closer together, utilizing directional antennae and terrain shielding, while another would reduce the bandwidth of an FM channel from 200 to 150 or even 100 kHz. The latter could impair FM's main channel fidelity, and it is likely that FM subcarriers (or SCA) would not be possible, either. Increasingly, noncommercial broadcasters, as well as commercial stations, are embracing SCA as a means of reaching alternative audiences, or as a means of generating station revenues.

SCA: Radio the Government and Private Interests Don't Want You To Tune In

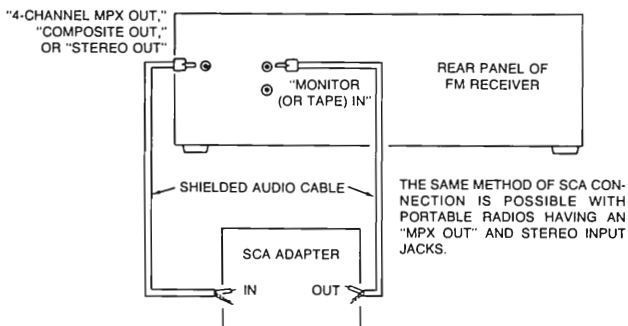

Over 900 stations listed in the *FM Atlas and Station Directory* are sending out special talking and musical programs to a select clientele. Through a collusion of government and entrenched special interests the public is denied ready access to the broadcast-type service being performed by stations having an SCA, or Subsidiary Communications Authorization. The geographical part of the "Station Directory" lists all stations known to have an active SCA, and what they offer on this subcarrier, which a normal FM radio cannot pick up.

Originally, SCA was created as a means to help struggling commercial FM stations stay in business by offering background music on their sidebands. The SCA concept has broadened since it started in the mid-1950s to include non-commercial stations with instructional programs and readings for the blind. Also on SCA, in various locations, is ethnic programming, farm news, and "program relay" to other radio stations (most often, network programs, with ABC being the network most active in having its schedule carried over various stations on SCA).

By tuning in SCA you are not in violation of any law; the problem, according to Sec. 605 of the Communications Act, is that you are not to "divulge" the contents of these transmissions. This language is unchanged from the early days of wireless telegraphy, and has been used as the alleged legal basis to stop the public from tuning in. SCA is no different from the emanations of radar detectors, police and public service-band scanners, and shortwave radios—all of which are widely sold in stores. Tuning in SCA at home is similar to tuning in satellites on your television, as some people are doing with the help of large and expensive receive dishes and special sets, bypassing local cable systems, and watching feature films, networks, Canadian programming, religion and special events. We cannot supply

information on home satellite reception, although it's becoming increasingly interesting as a subject, now that WFMT Chicago is on the bird.

External SCA adapters will play off sets now in use having a jack marked: "stereo out," or "MPX out," as in some of the radios and tuners designed to have FM stereo added later; as well as in sets having jacks marked "4-Channel MPX Out," "FM Detector Out," or "Composite Output." The latter sets are being marketed in anticipation of the FCC allowing a system of discrete quad. You can hear SCA by plugging an adapter into such a jack, then plugging the adapter's output into a "stereo in" or "tape in" jack (for receivers having a "tape monitor" switch), or into a separate amplifier and speaker. Small SCA adapters can be operated on 9-volt batteries, or special AC power supplies can be built for them. SCA adapters built into radios or receivers can often use the 6 to 18 volts' power found within the sets. SCA has been found to work off the horizontal oscilloscope jack on Heathkit receivers so equipped.

Addition of Outboard SCA Adapter and 9-Volt Battery to an FM Receiver Having a 4-Channel MPX Output Jack and a Tape Monitor Control on its Front Panel

Reception of SCA is as clear and static-free as FM itself, although sometimes there is crosstalk, or leakage of the main-channel program into the SCA channel. Here is a radio channel that is as reliable a form of communication as your local FM station—an untapped resource for the broadcaster and for community groups to seize upon for the enlightenment and entertainment of mankind. It is a pity that the service is either unused at many stations, or relegated to occasional telemetry tones, and not used for meaningful programming. Since coming out with the previous edition, we have received three lawsuit threats from entrenched SCA interests, but have stood firm, resolving to help open the valuable resource of SCA radio to the public. As a service to our readers we offer a variety of SCA products, including adapters, radios and custom installations. Information on these items may be had by sending a self-addressed, stamped envelope to FM Atlas, Adolph MN 55701. For 25 cents we offer an article, "SCA: Radio the FCC Doesn't Want You to Own," which reviews the SCA service in more detail than presented here.

FM Coverage Explained

FM station coverages are given in the geographical part of the Station Directory. The FCC requires FM stations to calculate their coverages according to antenna height above average terrain and effective radiated power data. All coverages reported in this book have been calculated according to FCC charts to help take the guesswork out of FM reception. By computing all coverages the same way, different stations in the same market can be objectively compared. Some stations, however, employ directional antennas, limiting their coverage in certain directions to avoid interference with other stations with which they may be short-spaced. Other stations may be next to mountain ranges, with coverages varying considerably according to direction. The coverage of KLIR 100.3 Denver CO is indicated on the accompanying map. Here you can see the influence of the Rocky Mountains on this station's coverage to the west.

COVERAGE CONTOUR MAP

KLIR Stereo

SITUATED AT THE FOOT OF THE SNOW-CAPPED
ROCKY MOUNTAINS, IN MILE-HIGH
DENVER, COLORADO

EASY LISTENING AT 100.3 CIRCULAR-POLARIZED

The FCC requires FM stations to take note of their 3.16 millivolt per meter "principal city" contour, as well as the 1 millivolt "primary." This book lists the 1 millivolt and the weaker 50 microvolt contours in miles for each station. The FCC formerly had stations note their 50 microvolts as adequate coverage for rural districts and small towns. It is included here because it represents a standard toward which FM set owners should look in determining the areas from which to expect reception, especially with the quality home or car receivers many FM Atlas readers have. Car reception up to the 50 microvolt per meter contour will generally be monaural, and subject to interference from other stations, while home reception will often require an outside antenna, especially for stereo.

The best car reception will be with a vertical antenna mounted on the front fender, and extended to about 31 inches. Windshield antennas are best used in areas where vandalism is a problem. Normally, your FM radio will give you the sharpest possible reception of nearby stations. The advantage of FM over AM shows up more clearly after dark, when many AM stations leave the air, go directional, or reduce power. Interference increases on the AM band, and the traveler interested in nearby weather or travel information finds FM offers clear and distinct station separation. Stations with vertical or circular polarization (marked with a "v" in the Station Directory) offer the best mobile reception, as opposed to stations that transmit only horizontally.

Improving FM Reception

To get better home reception, the most important thing you can do is work on improving the antenna. Even radios with built-in antennas or portables with "whip" antennas can perform better simply by better placement within the room. Residents of high-rise buildings often report very good reception when such a radio is placed in front of a window facing the direction of desired stations. A connection of your radio to a building master antenna can be tried, but since most such antennas are engineered for TV, your radio might work better without it. In metropolitan areas the use of outside antennas should be avoided unless you have a set with good overload rejecting features (such as field-effect transistors in a well-designed receiver), and if the antenna can be rotated to null interference. Otherwise, the antenna could bring so much interference that the effort and expense in connecting your radio to it would not be worthwhile.

Often a rabbit ears antenna is a good choice for people who own small radios or FM tuners that include two small screws or terminals on the back of the radio for attaching of an outdoor antenna. This antenna can be mounted some distance from the radio (such as on top of a bookcase), rotated and adjusted for best reception of a number of signals.

Clearly, the best choice, when your receiver, your landlord, and your geographic area permits is the outdoor FM antenna. With your own outdoor antenna you will almost certainly pick up more FM stations than your local cable company may bring you (although perhaps not all as clearly or as fade-free). The best FM antenna is a yagi type, such as shown here. This antenna is directional, and it is best to have a rotational device, either an electronic rotator or the "armstrong" method, to turn it to favor various stations. You can also turn the antenna away from your local broadcasters and see what stations from more distant towns will come in. Even the best FM receivers will overload when you aim the antenna directly at your local stations and you live in a metropolitan area. If interference from strong nearby stations is still a problem, traps are available that can help you tune out the offending signals.

FM DX Listening

If you have an outside antenna and a good FM tuner or receiver, you might enjoy the hobby of long distance (DX) listening on FM. Anybody with the willingness to check parts of the dial without local stations will, over a period of time, be able to enjoy this unique pastime. FM DX is possible by means of **sporadic E-skip**, mainly in the summer during daylight, and bringing in stations at 1,000 or more miles; **tropospheric enhancement**, mainly in the spring along the Gulf Coast and in the fall around the Great Lakes, the Midwest and eastern United States; plus **auroral** and **meteor scatter** reception. Write the nonprofit Worldwide TV-FM DX Association, PO Box 97, Calumet City IL 60409, for more information. Annual dues are \$13; sample copies of the club's monthly bulletin are \$1.00.

KEY TO SYMBOLS

- \$ A station broadcasting all or part of its daily schedule in multiplex stereo.
 - v A station transmitting with a vertically (or circularly) polarized signal, in addition to the usual horizontal signal, for better reception on auto radios and portables.
 - * A noncommercial radio station, usually educational, "public" or religious.
 - t An FM translator.
 - † A station with a Subsidiary Communications Authorization (SCA), 67 kHz.
 - = Dolby-equipped station. This symbol appears after the program format data in Part I of the Station Directory.
 - # A station sharing time with a nearby station on the same frequency.
- A station with its antenna below the average surrounding terrain. When following call letters, refers to "-FM." Thus WWWB-FM [Jasper AL] could be abbreviated WWWB-.

Program [music] codes (given in Part I of the Station Directory in small letters after city): c classical, d disco, e ethnic, g gospel, j jazz, k country, L is Latin/Spanish, m middle of the road or easy-listening, n all news, p progressive rock, r rock including easy rock, s soul, t all talk.

Language codes (given just to the left of the program codes in Part I of the Station Directory): E English (stations so listed are located in Quebec or in Latin America), F French, P Portuguese (see New Bedford MA), S Spanish.

Network codes (given in both parts of the Station Directories): A ABC-FM, with ABC standing for American Broadcasting Company, B National Black Network, C Columbia Broadcasting System, E ABC Entertainment, I ABC Information, M Mutual Broadcasting System, N National Broadcasting Company P National Public Radio, S Associated Press Audio, T NBC's The Source, U United Press Audio, Y ABC Contemporary, Z Sheridan Broadcasting Network.

SCA symbols (all following † in the first part of the Station Directory): A ABC network, E ethnic and foreign language, F farm news, G gospel, L Mutual network, M music, N NBC network, Q physicians news, S sports or special events, T talk including instructional programs and talking book for the blind, W weather, X is audible teletype, teleprinter or telemetry chirps.

Part I, Geographical Directory examples:

City	<u>music</u>	Call	Stereo	Network	Primary coverage radius in miles	Secondary coverage radius
Joplin	g	*90.7 KOBC	\$v I	A	22	59

The state maps of the United States are arranged in a geographical order from east to west. It is the density of FM cities which generally determines the scale used for each state, and whether or not that state is to be grouped with its neighboring states. Selected FM cities in bordering states are noted on the individual state maps. For information concerning station call letters, programming, stereo capability, vertical polarization, power and heights, refer to the Station Directories immediately following the FM Atlas maps. Key to Symbols for the maps and Station Directories is on page 12.

Stations scheduled to change to a different frequency are shown on the maps, with both the new and old frequencies given. Minor, ten-watt educational FM stations and one- and ten-watt FM translators are shown in reduced size.

STATION DIRECTORY

Part II: FM Stations Listed by Frequency. Canada and the United States only (and excluding United States' territories). Powers given are the horizontal effective radiated, expressed in watts. Antenna heights are above average terrain, and expressed in feet. Stations with permission to identify with more than one city are indicated, as are stations using a slogan or short phrase in lieu of call letters. See Key to Symbols, page 12.

APPLICATIONS' DATA

* This fast-changing part of the FM radio scene is available as a computer print-out. Our data base includes full technical information on FM stations being applied for, except for geographical coordinates, and music formats and stereo data when known in advance. Also included are FM translator applications. Price \$6 for this computer listing of FM station and FM translator applications, entire United States.

* Also available from FM Atlas, Adolph MN 55701, U. S. A., are computer up-datings for the entire United States and Canada, or by individual states. A new frequency compiler program permits the printing of data arranged by frequency from geographically-arranged cards. This service is inexpensively priced, and includes all data found in the FM Atlas, except for stations' slogans or "nonIDs."

FMentions

Several responses were received to the contest, announced in the Fifth Edition. Because of the wide geographical spread of our readers and FM's local nature of transmission, no station received more than one vote. Therefore, there were no winners, but here are excerpts from some of the entries:

"KAXE 91.7 Grand Rapids MN for its innovative approach to rural public radio, as a means of truly educating people in lightly populated areas. It is also notable for its high level of community involvement. KAXE's programs, both music and public affairs, have been consistently innovative. . . one of the truly original radio stations in the country."

"WHCN 105.9 Hartford CT with its album oriented rock format. I have been to the station once and saw the operation, and was warmly welcomed (I visited unannounced). They clean their records before they play them, and you never hear a click or pop on this station. I know, because I own a \$1,000 tuner, and I have a great antenna system. . . WHCN is always helping someone. For instance, every Sunday night is Free Time when local bands play live or on tape to get some free exposure. WHCN made a record album of Connecticut's best bands and gave all the profits to different charities. The programming is excellent; WHCN really knows how to mix the music, keep you interested, and give something to everybody."

"KFMW 107.9 Waterloo IA, middle of the road music, mostly automated. KFMW is probably the best 'beautiful music' station I have heard. They carry news hourly, usually more than just brief updates, including numerous stock, sports, and market reports. The strongest point in their schedule is 6 to 9 a. m., announced live, using the canned music. There are many news, farm and sports reports; one about every five to ten minutes. Most of these are local; nothing is simulcast with KFMW's AM affiliate. KFMW runs frequent public affairs spots, editorials, and a special big band music program 10 a. m. to noon Sunday. Blackhawk Broadcasting seems to be very interested in feedback from listeners. Four times a year they broadcast 'Broadcasting and You,' a two-hour call-in with station executives. . . KFMW sounds great. The signal is excellent [the first station in Iowa to use Dolby] and the automation is flawless."

"I nominate KUSP 88.9 Santa Cruz CA as best station. Excellent classical and jazz programs, and clean sound are the reasons. Their classical is sometimes undermodulated in their efforts to avoid limiting, but that's easy to forgive, considering that the personnel are mostly volunteers. (And I'm out where noise can be a problem, so the lack of limiting isn't academic to me.)"

"WBRE-FM 98.5 Wilkes-Barre PA, the only all-news FM radio station I know of. It broadcasts news for 20 hours each day, sometimes carrying NBC news, sports and special events, and updates the news whenever possible."

"I choose station **WHPA 104.9 Hollidaysburg PA**. To the best of my knowledge, this station is all live and its music is basically middle of the road and rock. I nominate WHPA because: a) it uses microwave (and not telephone lines as some other area FM's do) to relay its programming from its studio in Hollidaysburg to its mountain-top transmitter, resulting in a signal of unparalleled quality here in the Altoona area; b) the station is excellently programmed, with special programs like big bands, jazz and disco on various nights; c) WHPA is the primary NBC FM affiliate for the greater Altoona area, and is carried on over fifty cable systems throughout west-central Pennsylvania."

"I would like to nominate station **KKDJ 105.9 Fresno CA**. To the best of my knowledge, this station is all live. Its music is basically progressive rock, but may include jazz, soul, country, comedy, etc. News is expertly produced at the station and no network news is currently being aired. KKDJ's programming fills a definite void in Fresno radio and it is responsive to the desires of its listening public. Broadcast quality is of utmost importance, whether it be in personnel or in equipment. Care in quality extends from program sources (predominantly discs) through transmitter. Even the advertisements are of high audio quality and few in number. Its anti-drunk driving campaign on New Year's eve was of great value. A short audio docudrama using California Highway Patrol officers enacting a drunk-driving arrest was as effective as it was timely. All in all, KKDJ takes as much pride in its broadcasting as I do in my reception."

"**WCTY 97.7 Norwich CT**, featuring Bob Kingsley's *American Country Countdown* Saturday 9 a. m. and again Sunday at 9 p. m. WCTY's music is automated; they use ABC's American FM network news, with local news at 15 minutes before the hour. WCTY puts out 3 kw and operates from 6 a. m. to midnight seven days a week. I wish, however, they would go 24 hours and increase power. WCTY is the only fulltime country station in eastern Connecticut."

The FM Atlas congratulates these FM stations as exemplifying the best in broadcasting, regardless of format. Even though this contest is not being continued, feel free to write in and tell us about your area stations—particularly, noting changes in any station's music format, stereo status, network affiliation, or "nonidentification" given in lieu of call letters. And be sure to fill in the form below to be notified about our next edition. Mail to **FM Atlas, Adolph, Minn. 55701, U. S. A.**
