# FOREWORD

This Eighth edition **FM Atlas and Station Directory** includes hundreds of stations not shown in the previous edition, more FM translators, and myriads of program format and network affiliation changes. An updated discussion of the FM industry, including some station history and responses from readers, precedes the FM maps. New to the maps is an enlarged version of Idaho-Montana-Wyoming, pages 62 and 63. All of the other maps are unchanged, except perhaps cluttered with more stations and FM translators. New insert maps are included for certain Canadian and Alaskan areas.

The book was held to 128 pages, mainly because FM translators were excluded from Part II of the Station Directory. You will still find these rebroadcasting devices on the maps and in Part I of the Directory. Difficulties with two old IBM Composers contributed to poor column alignment in the Directories.

Late news from Canada has it that the Canadian Broadcasting Corporation has been told by the Canadian Radio-television and Telecommunications Commission that it must not get out of AM radio, but keep at least some of its AM stations. This was seen as a victory for private commercial broadcasters, who were worried the CBC would gobble up lucrative FM channels. Listed in this directory are CBC-FM stations on the air or shortly expected to begin broadcasting. Most of these are identified by call letters starting with "CB----."

Some readers of the last edition were surprised to see, on page 21, coverages of New York FM stations given in kilometers instead of miles. "I thought metric stuff was dead. . . I just hope you don't try to pull a fast one and some day change all coverages in the Station Directory to kilometers," writes N. L., Atlanta GA. But J. P., Arlington VA, says "I think kilometers should be the standard for the whole book. It might be easier to give the power in kilowatts, instead of watts, too." Well, you'll see miles are still the standard in the Directories; however, the metric system is more logical and simpler to use, so I hope without too much prodding the United States will join Mexico and Canada in adopting it.

Speaking of distances, you will note the return of secondary coverages—the 50 microvolt contour. By separating the two numbers by commas, it is hoped that more data can be given in the directories without cluttering. The secondary contour should be useful to travelers wondering how far a station can be heard, at least monaurally, and for people at home with outside FM antennae. Because of interference from other stations, it may not always be possible to hear FM to the outermost limit of the secondary contours.

Good news to our readers is that the price is the same as last edition. One reader predicted, based on the price increase from the Sixth to the Seventh editions, that the edition for the year 2000 would cost \$1280! So, enjoy this cheap book, and its presentation of facts—many of which are unique to this reference, and used by travelers, broadcasters, researchers, DXers and others. Good listening!

## FM Widens Its Lead Over AM

The more than 4,500 FM radio stations on the air now command over 63 percent of the radio audience, according to RADAR research. Fall '82 data show FM listening leading in all dayparts, and among most age groups. The exception is among the 50 and over audience, where AM gathered 56 percent of radio listening. FM held 81 percent of the market among 12- to 24-year-olds, 71 percent for 25- to 34-year olds and 58 percent for those 35 to 49.

Reasons for FM's gaining over AM are invariably more technical than because of the programming. FM radio is hardly more interesting and diversified in 1983 than it was in 1972, when the first edition of the **FM Atlas** appeared, save, of course, for more stations. Instead, the appeal of stereo and FM's noise-free and interference-rejecting qualities have to be credited, as well as the increase in circulation of FM radios in almost everybody's home and vehicle.

Comments about FM and its programming and reception will appear a bit farther on in these Musings, but it's good to keep in mind that even without stereo, FM is capable of broadcasting the full audio bandwidth of 50 to 15,000 Hz, whereas AM, except in unusual cases, does not carry over 5,000 Hz. FM's wider bandwidth permits stereo and subsidiary communications activities to be conducted simultaneously on one station carrier.

For the first time ever, more FM than AM stations are on the air or about to come on the air. FCC data show a total of 4,900 FM stations compared to 4,820 AM stations. The FM total includes 1,200 educational stations, with only about 30 educational AM stations. Of course, this means there are still more commercial AM than commercial FM stations, but look for the trend toward more FM to continue.

More FM stations are coming into small towns, as you should be able to tell by comparing any of the FMaps in this edition to those of the previous edition. Another development may cause more stations to be created, and that's Docket 80-90 of the Federal Communications Commission. As reported in the last edition, this would allow lower-powered Class A stations on higher-powered Class B and C frequencies, among other changes. [See Part II of the Station Directory for a listing of the various frequencies, along with the stations, their powers, and antenna heights above average terrain.] The FCC is reportedly ready to act on this, and possibly by the time this book is in the hands of its readers the first applications for new FM stations made possible by this liberalizing of the rules will have been filed.

Two new classes of station the FCC would create under this proposal are B1 with a maximum effective radiated power of 20,000 watts (compared to the present Class B with 50,000 watts maximum), and Class C1 with 100,000 watts at 305 meters above average terrain. Under present rules Class B stations are

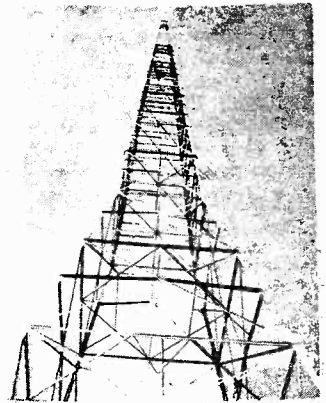

only found in Zone I and IA (mainly the northeastern part of the United States and southern California), but the proposal would allow Class B stations with their closer-together spacings anywhere in the country. Zones are shown on the FM maps.

A Baltimore reader remembered that in the Fifth edition there were some logos printed of FM stations that quit broadcasting in the late 1940s and early 50s. One of these was WWIN-FM 94.7 Baltimore. This has significance because the AM station formerly associated with WWIN-FM applied for the frequency of WYST 92.3 from United Broadcasting. That reader sent a 1951 radio station log to WYST, in which WWIN-FM was the first station listed. The people at WYST “were very interested in that fact that WWIN had an FM before,” and he feels that information may help to save “a good FM station from oblivion.”

Another reader sent a history note: WKTU 92.3 New York was originally WMCA-FM, and was sold to WHOM in the mid-1950s for \$5,700. And he claims that he has not misplaced the decimal point!

Your author, along with John Ebeling of Bloomington MN, did a three-part historical article on WEBC-FM Superior WI, and later Duluth MN, in November and December, 1982, issues of **Radio World**, which goes out to radio stations. Our five-year research on that station, which was on the air from 1940 to 1950, indicated that it may have been the first FM station west of Chicago-Milwaukee. It operated as an experimental shortwave station, near our present citizens-band frequencies from 1935 to 1939, then as an FM on the old 44-50 MHz band, and later on 92.3 MHz in the present FM band from a steel tower high atop the Duluth hill. It was one of the few stations nationally to experiment with transit radio, and its general manager, Walter C. Bridges, was a friend of FM's inventor, Edwin H. Armstrong. WEBC's long-time director of engineering was Charlie Persons, now living in Brainerd MN, an **FM Atlas** reader who supplied much historical data on WEBC's FM venture. The present owners of WEBC(AM) Duluth are buying WGGR (FM), so there again could be a WEBC-FM, some 33 years after the original station left the air—the victim of being far ahead of its time.

## FM vs. AM: Feedback From Readers

There was quite a reaction to last edition's comments on AM radio being irrelevant to most of its readers, and the medium's heading for extinction, even despite AM stereo. Many mentioned that AM radio is capable of better fidelity than the way we usually hear it, and AM provides long-distance communication, especially at night. AM allows for greater freedom in hearing programs from the great cities, and sporting events not available on FM, which is more local in its coverage. Others commented on FM's programming, centering on youth, and the monotony of program formats. Here are some of the responses:

I think the personalities are brighter and funnier to listen to on AM, like on KRMG Tulsa during the day. . . If the FCC approves stereo for AM, it won't seem so antique any more. . . D. B., Stillwater OK.

AM is here to stay whether you like it or not! Canada has the most illogical radio policy in the world. Here is the world's second largest country in land area totally ignoring and spurning a good way of enhancing communications to its isolated communities. . . Catching New York City or Salt Lake City night after night with just a transistor portable radio is magical enchantment to me. FM DX is something exotic and sporadic that happens only once in a great while, but long-distance, old-fashioned AM listening is a charming thing I can enjoy most nights of the year, W. B., St. Louis MO.

AM radio is still important to me and I did find your attack on AM broadcasting somewhat striking. Your comments seem to be unnecessary at the present time. FM, after all, is getting an equal and in many cases an upper hand in the ratings war. . . While I know that FM sounds a little sharper than AM in most circumstances, I will listen to an AM station if it is playing my favorite music or has a format I like, H. J. H., Gouldsboro PA.

Why continue with AM radio? Two major reasons: to serve the rural public and to disseminate cultural differences—all to broaden the choices in programming to the listener, P. S., Moran KS.

What is happening to FM radio these days? With the exceptions of classical and religious formats, stations are filling the airwaves with the same monotony. It seems that rock, album rock, contemporary, and country stations are more restricted and are not introducing new material that deserves credit, J. L., Bound Brook NJ.

## Offshore Broadcasting to Make Waves in Atlantic City FM

A novel way has been found by a would-be broadcaster to create a channel to apply for in Atlantic City NJ. Doctor R. Grants, Jr. has convinced the FCC that it is feasible to allocate 95.9 MHz to that resort city if the transmitter is located approximately one mile offshore in the Atlantic Ocean. This would put the transmitter the minimum distance from other stations, such as WADB 95.9 Point Pleasant NJ and adjacent-channel WFLN-FM 95.7 Philadelphia. Clearances will also have to be obtained from the Federal Aviation Administration, Coast Guard and Army Corps of Engineers. It would employ technology similar to that of offshore oil exploration crews.

Bill Fletcher, at WHLA-FM-TV La Crescent MN, had some adverse comments about a broadcaster not using stereo in a location having bad terrain: "This whole area has irregular terrain, but it didn't stop all that I know of from staying away from stereo transmission." John White responded, saying his station, KQYB 98.3

Spring Grove MN, has stereo studio equipment and would go stereo if it could get 50,000 watts under the new FCC 80-90 docket. This would permit wider coverage to outlying towns which now get a good monaural signal, but which would have a poor signal in stereo at its present power of 3,000 watts.

## SCA: FM's Second Service Now in the National Spotlight

Over 900 stations listed in the **FM Atlas and Station Directory** are sending out special talking and musical programs, as well as data, to a select clientele. SCA stands for "Subsidiary Communications Authorization," and is a sub-carrier contained in the normal FM channel. Its programs are entirely different from what the station may be sending out on the main channel to the public. Canada has a similar service called "SCMO," and SCA exists on several Mexican FM stations.

Originally, SCA was created as a means to help struggling commercial FM stations stay in business by offering background music on their sidebands. The SCA concept has broadened since it started in the mid-1950s to include non-commercial stations with instructional programs and readings for the blind. Also on SCA, in various locations, is medical news for doctors, financial and farm news, ethnic and religious programming, and "program relay" to other radio stations (most often, network programs, with ABC being the network most active in having its schedule carried over various stations on SCA).

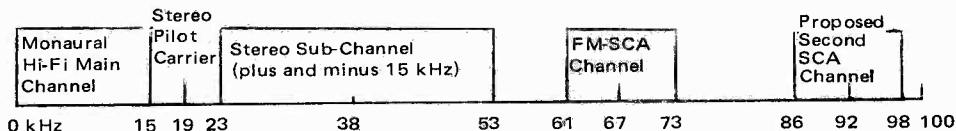

By tuning in SCA you are not in violation of any law; the problem, according to Sec. 605 of the Communications Act, is that you are not to "divulge" the contents of these transmissions. This language is unchanged from the early days of wireless telegraphy, and has been used as the alleged legal basis to stop the public from tuning in. SCA is no different from the emanations of radar detectors, police and public service-band scanners, and short-wave radios—all of which are widely sold in stores.

Largely because of this publication's listing of which stations have an SCA and the specific uses they make of this service, the FCC has taken a new interest in SCA. The **FM Atlas** is quoted in two tables in the **Federal Register**, Aug. 19, 1982. Those tables show that some 942 stations have an active SCA, which is only 26 percent of the stations which could possibly have an SCA. Concerned about this underutilization of a good technology, the FCC has proposed expanding the uses of the SCA channel to a variety of nonbroadcast services and largely eliminating regulation. Says the FCC: "With the ever expanding uses being found for ancillary SCA spectrum, it appears to the Commission that it is in the best interests of the American people to treat SCA use on its own merits, permitting it to seek out its most valuable uses." With modern equipment at stations, there is no sacrifice in the quality of the signal when a station has SCA, and there should be no noticeable difference to the listener when tuning from a station having an SCA to tuning a station not having a subcarrier.

Not only has the FCC taken an interest in our SCA research, but so have broadcasters and the public. An audience especially well served by this medium are blind people, with about 110 FM stations having a reading service for newspapers, magazine articles and books. A customer with a modified FM-AM portable radio with the SCA feature wrote: "I've enjoyed it so very much and want you to know how pleased I am with it... I want to tell all the blind how wonderful it is," K. DuF., Newton IL. Information on SCA devices and radios may be had by sending a self-addressed, stamped envelope to **FM Atlas**, Adolph MN 55701, U. S. A. The catalog is available on cassette tape for the visually handicapped, for which one dollar is asked for postage and duplication costs.

It is possible the FM station bandwidth may be expanded to allow for a second SCA program. National Public Radio is interested in having public stations earn commercial revenue, selling data and electronic mail, via SCA. Since most reading services are on educational stations' subcarriers, there could be a major disruption of that service if the second SCA channel is not created. Already, KCSM \*91.1 San Mateo CA has discontinued its reading service, looking toward the day when it can have a for-profit SCA. Apparently taking an early chance to earn SCA revenue, KCFR \*90.1 Denver has a split SCA, with talking book and high-frequency data chirps, filtered from each other in the same channel.

Here is a picture of the spectrum of a single FM station, showing how the main carrier, stereo information and SCA are accommodated. Zero is the midpoint of the channel, with an equal and symmetrical representation going to the

left. FM channels are 200 kHz wide, and this drawing shows only half the channel. Presently, the area above 75 kHz is set aside as a guard band for adjacent-channel stations. FCC rules would have to be changed to allow for an SCA at 92 kHz, as shown.

SCA stations may be found in the first part of the Station Directory, following the symbol †. Refer to the Key to Symbols, page 12, for the SCA program codes. We are constantly striving for more complete information about SCA utilization in North America, and urge all readers having an SCA receiver to write and let us know which stations in your area do or do not make use of their SCA—and what they are using their SCA for.

### The Decline of Beautiful Music

It is ironic that this edition should recognize beautiful/background music as a program format separate from middle-of-the-road music at a time when the "b" format appears to be in a decline. Notable examples of stations abandoning the

format are: KVLV Edinburg TX, WWSH Philadelphia, WIAL Eau Claire WI, WM<sub>T</sub>-FM and KFMW Cedar Rapids-Waterloo IA, KYND Pasadena-Houston TX, WDBO-FM Orlando FL, KFOG San Francisco, and WEZS Richmond VA. Most of those stations switched to various types of rock formats. An interesting variation is in Milwaukee, where WFMR changed from classical to a "Magic 96" rock format. Menomonee Falls 98.3 went from beautiful music to classical, and public station WUWM will be carrying increased amounts of classical and jazz music.

There is still an audience for "b" format stations, and most larger cities will undoubtedly continue to have at least one such outlet. But expect its decline in medium and smaller markets to continue. An exception to the trend is the new KEZA 107.9 Fayetteville AR, heard with "b" along with other ingredients making for good radio—live announcing, time checks, news and weather.

In areas where the beautiful music format has been abandoned by broadcasters, listeners with FM-SCA devices can still get similar music in their homes from stations having a Muzak or similar background music service. Check the Station Directory to see if a station with a music SCA is near you.

### The Translator: Catalyst for Growth in FM

Quietly gaining in numbers, and helping to spread FM's programming and reception to under-served areas is the FM translator. Translators have the same characteristics as the original station—programming, stereo, hi-fi sound, SCA—but are on different frequencies. There are now over 770 FM translators in the United States—and this book, alone among references in the field, lists them all! Similar to the translator is the FM booster, which operates on the same frequency as the originating station. Boosters are only practicable in places where there are sharp terrain differences, permitting a shielding of the signal coming in from that sprayed out to the valley below.

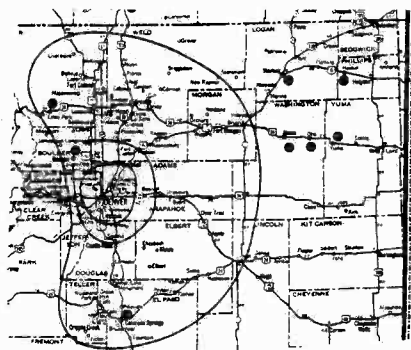

FM translators west of the Mississippi River can have 10 watts, but those in the East are limited to 1 watt. Many translators are situated on ridges high above the towns they intend to serve and use directional beams. Some use multi-beams, sending out amplified signals in several different directions.

Family Radio, Inc., and Western Translators, Inc., of Los Gatos CA, users of the **FM Atlas** and its translator information, have applied for translators in places like Skowhegan ME (94.7), Clinton IA (92.7), South Hollywood and Del Ray Beach FL (92.3), Clearwater FL (98.7), and Indianapolis (101.9). These stations would all pick up KEAR 106.9 San Francisco from the satellite. If this trend continues, you might expect to get KEAR on an open channel near you! The FCC is going slow, not yet agreeing to allow translators which pick up their programs from satellites, nor are they yet willing to allow for low-power radio (translators with full program capability), as they do in television.

As FM radio itself is increasing in popularity, the growth in FM translators should continue.

## FM Coverage Explained

FM station coverages are given in the geographical part of the Station Directory. The FCC requires FM stations to calculate their coverages according to antenna height above average terrain and effective radiated power data. All coverages reported in this book have been calculated according to FCC charts to help take the guesswork out of FM reception. By computing all coverages the same way, different stations in the same market can be objectively compared. Some stations, however, employ directional antennas, limiting their coverage in certain directions to avoid interference with other stations with which they may be short-spaced. Other stations may be next to mountain ranges, with coverages varying considerably according to direction. The coverage of KLIR 100.3 Denver CO is indicated on the accompanying map. Here you can see the influence of the Rocky Mountains on this station's coverage to the west.

COVERAGES CONTOUR MAP

KLIR Stereo

SITUATED AT THE FOOT OF THE SNOW-CAPPED  
ROCKY MOUNTAINS, IN MILE-HIGH  
DENVER, COLORADO

EASY LISTENING AT 100.3

CIRCULAR-POLARIZED

The FCC requires FM stations to take note of their 3.16 millivolt per meter "principal city" contour, as well as the 1 millivolt "primary." This book lists the 1 millivolt primary only, and not the 50 microvolt secondary as shown in earlier editions. By showing only one mileage figure for each station some of the clutter in the station directory is eliminated. The 50 microvolt contour can only be claimed for coverage purposes if it is interference-free. With the development of more and more stations, many do not enjoy interference-free secondaries. A way of estimating secondary coverages is to multiply the primary coverage radius for a 3,000 watt station by three; and a 100,000 watt station primary radius by two. A directional home antenna can also help people enjoy FM up to and beyond the secondary coverage limit.

The best car reception will be with a vertical antenna mounted on the front fender, and extended to about 31 inches. Windshield antennas are best used in areas where vandalism is a problem. Normally, your FM radio will give you the sharpest possible reception of nearby stations. The advantage of FM over AM shows up more clearly after dark, when many AM stations leave the air, go directional, or reduce power. Interference increases on the AM band, and the traveler interested in nearby weather or travel information finds FM offers clear and distinct station separation. Stations with vertical or circular polarization (marked with a "v" in the Station Directory) offer the best mobile reception, as opposed to stations that transmit only horizontally.

## Improving FM Reception

To get better home reception, the most important thing you can do is work on improving the antenna. Even radios with built-in antennas or portables with "whip" antennas can perform better simply by better placement within the room. Residents of high-rise buildings often report very good reception when such a radio is placed in front of a window facing the direction of desired stations. A connection of your radio to a building master antenna can be tried, but since most such antennas are engineered for TV, your radio might work better without it. In metropolitan areas the use of outside antennas should be avoided unless you have a set with good overload rejecting features (such as field-effect transistors in a well-designed receiver), and if the antenna can be rotated to null interference. Otherwise, the antenna could bring so much interference that the effort and expense in connecting your radio to it would not be worthwhile.

Often a rabbit ears antenna is a good choice for people who own small radios or FM tuners that include two small screws or terminals on the back of the radio for attaching of an outdoor antenna. This antenna can be mounted some distance from the radio (such as on top of a bookcase), rotated and adjusted for best reception of a number of signals.

Clearly, the best choice, when your receiver, your landlord, and your geographic area permits is the outdoor FM antenna. With your own outdoor antenna you will almost certainly pick up more FM stations than your local cable company may bring you (although perhaps not all as clearly or as fade-free). The best FM antenna is a yagi type, such as shown here. This antenna is directional, and it is best to have a rotational device, either an electronic rotator or the "armstrong" method, to turn it to favor various stations. You can also turn the antenna away from your local broadcasters and see what stations from more distant towns will come in. Even the best FM receivers will overload when you aim the antenna directly at your local stations and you live in a metropolitan area. If interference from strong nearby stations is still a problem, traps are available that can help you tune out the offending signals.

## FM DX Listening

If you have an outside antenna and a good FM tuner or receiver, you might enjoy the hobby of long distance (DX) listening on FM. Anybody with the willingness to check parts of the dial without local stations will, over a period of time, be able to enjoy this unique pastime. FM DX is possible by means of **sporadic E-skip**, mainly in the summer during daylight, and bringing in stations at 1,000 or more miles; **tropospheric enhancement**, mainly in the spring along the Gulf Coast and in the fall around the Great Lakes, the Midwest and eastern United States; plus **auroral** and **meteor scatter** reception. Write the nonprofit Worldwide TV-FM DX Association, PO Box 97, Calumet City IL 60409, for more information. Annual dues are \$15; sample copies of the club's monthly bulletin are \$1.25.

# Key to Symbols

- \$ A station broadcasting all or part of its daily schedule in multiplex stereo.
- v A station transmitting with a vertically (or circularly) polarized signal, in addition to the usual horizontal signal, for better reception on auto radios and portables. "d" is for a station with a directional antenna, listed after height.
- \* A noncommercial radio station, usually educational, "public" or religious.
- t An FM translator.
- † A station with a Subsidiary Communications Authorization (SCA), 67 kHz.
- = Dolby-equipped station. This symbol appears after the mileage figure in Part I of the Station Directory.

\$ A station sharing time with a nearby station on the same frequency.  
 - A station with its antenna below the average surrounding terrain.

15, 46 Coverage radii in miles. The first figure is the primary signal area, where, generally, no outside FM antenna is needed for good reception. The second figure is the secondary radius, which is subject to interference from other stations. Beyond those areas reception is possible using FM-DX techniques.

**Program [music] codes** (given in Part I of the Station Directory in small letters after city: b beautiful/background music, c classical, e ethnic, g gospel, j jazz, k country, L Latin/Spanish, m middle of the road, n all news, p progressive rock, r rock (oldies, current hits, "contemporary"), s soul, t talk formats.

**Language codes** (given just to the left of the program codes in Part I of the Station Directory): E English (stations so listed are located in Quebec or in Latin America), F French, P Portuguese (see New Bedford MA), S Spanish.

**Network codes** (given in both parts of the Station Directories): A ABC-FM, with ABC standing for American Broadcasting Company, B National Black Network, C Columbia Broadcasting System, D ABC Direction, E ABC Entertainment, I ABC Information, K ABC Rock, M Mutual Broadcasting System, N National Broadcasting Company, O CBS RadioRadio, P National Public Radio, R RKO, S Associated Press Audio, T NBC's The Source, U United Press Audio, Y ABC Contemporary, Z Sheridan Broadcasting Network.

**SCA symbols** (all following † in the first part of the Station Directory: A ABC network, C CBS network, E ethnic and foreign language, F financial or talking farm news, G gospel, L Mutual network, M music, N NBC network, Q physicians news, S sports or special events, T talk, including talking book for the blind, instructional programs, state network news relays, W weather, X data chirps or tones.

The state maps of the United States are arranged in a geographical order from east to west. It is the density of FM cities which generally determines the scale used for each state, and whether or not that state is to be grouped with its neighboring states. Selected FM cities in bordering states are noted on the individual state maps. For information concerning station call letters, programming, stereo capability, vertical polarization, power and heights, refer to the Station Directories immediately following the FM Atlas maps. **Key to Symbols** for the maps and Station Directories is on page 12.

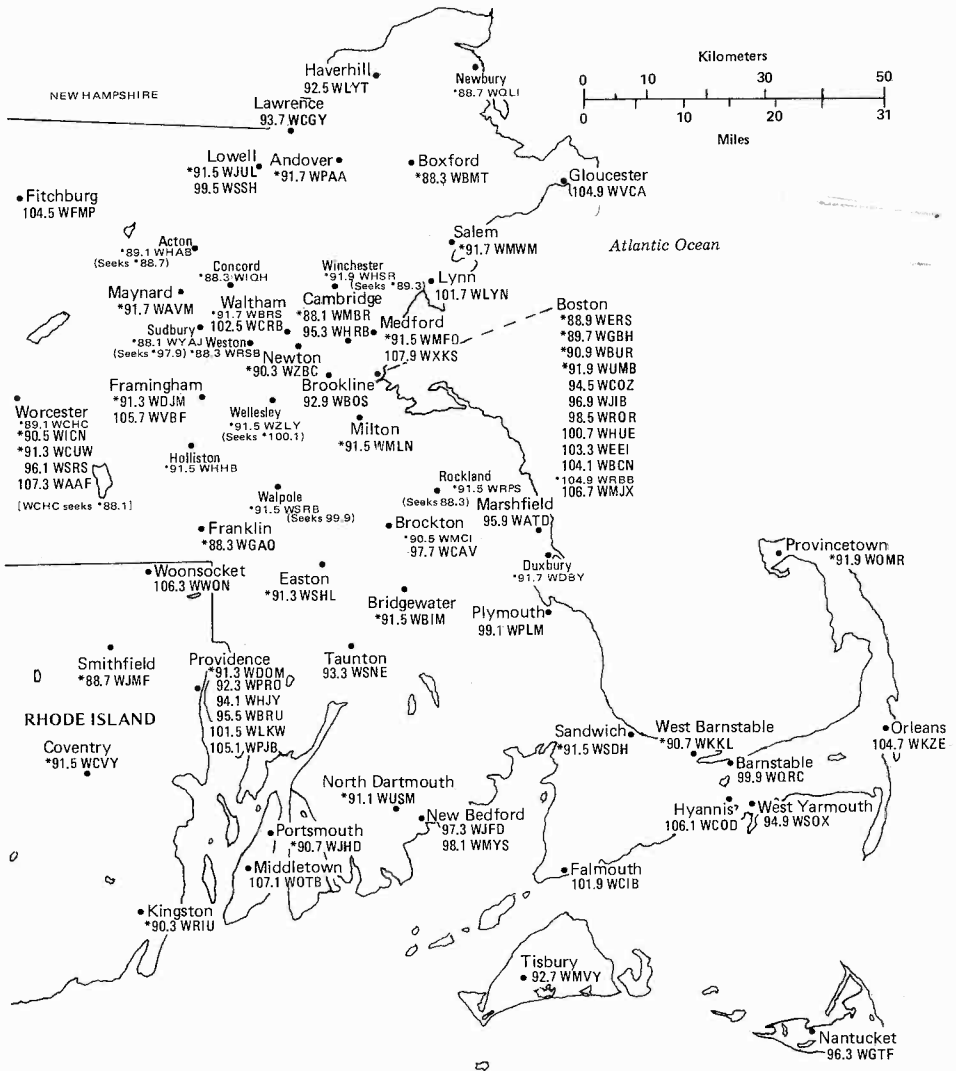

Stations scheduled to change to a different frequency are shown on the maps, with both the new and old frequencies given. Minor, ten-watt educational FM stations and one- and ten-watt FM translators are shown in reduced size.

stations allowed with up to  
50,000 watts at 500 feet

Eastern Time Zone/Daylight Saving Time Observed

# NEW JERSEY NEW YORK— SOUTHEASTERN PORTION

Showing transmitter locations for stations licensed to New York city and for other stations whose transmitters are outside their cities of license. This map should prove useful to FM Atlas readers in the New York area who would like to aim their antennas for optimum reception.

## New York City's FM Dial

Stations serving all or parts of New York city with a primary [or strong secondary] signal:

- ♣ A station sharing time with a nearby station on the same frequency.
- \* A noncommercial station.

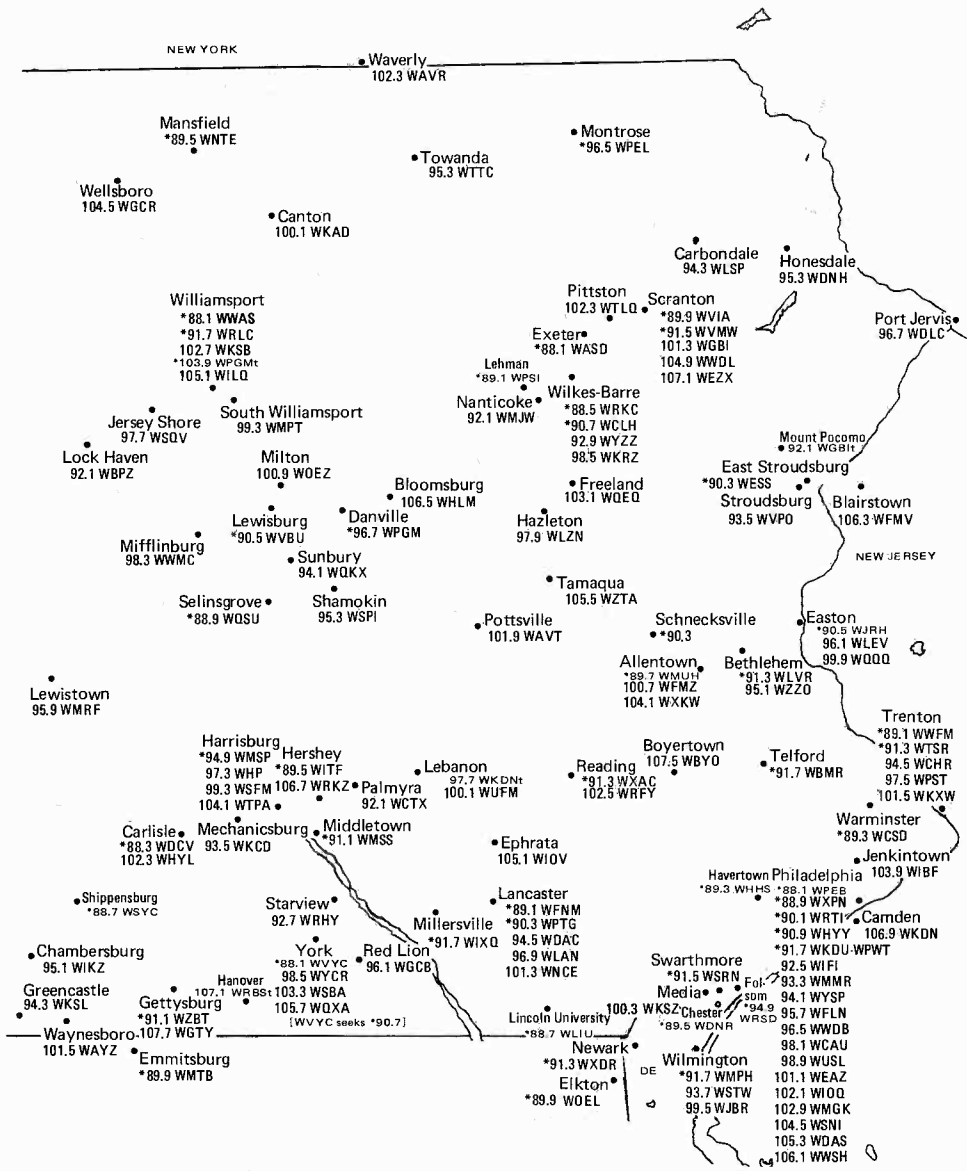

Hazlet

## STATION DIRECTORY

Part II: FM Stations Listed by Frequency. Canada and the United States only (and excluding United States' territories). Excludes FM translators. Powers given are the horizontal effective radiated, expressed in watts. Antenna heights are above average terrain, and expressed in feet. Stations with permission to identify with more than one city are indicated, as are stations using a slogan or short phrase in lieu of call letters. See Key to Symbols, page 12.

## FMeditations

Literally hundreds of you have contributed to the success of these listings, and I appreciate the kindness of all of you for monitoring and sharing the information on FM in your area with the readers of this publication.

Because our book makes use of both official and unofficial sources of data, your input is needed. If you know of stations in your area changing their musical programming, network affiliations, or slogan used on the air in lieu of call letters (except for the on-the-hour identifications), drop us a line.

Among the people with FM-SCA devices, I especially covet information about what is happening in your area on the FM subcarrier channels. Do let us know what stations are making use of their SCAs and for what purpose, and which stations listed in the directory as having an SCA are inactive. This will help to make the directory as useful as possible to the people who are studying new and expanded uses of SCA in the future.

This book is revised periodically—hopefully, it can come out annually from now on. To make sure you are included on our mailing list to be notified when a new edition comes out, either clip out the form below, or make a copy of it on a post card. And mail it to our main address, "FM Atlas," Adolph MN 55701, U. S. A.

---

Notify me when the Ninth Edition of the FM Atlas is available:
