FOREWORD

After almost a two-year hiatus, the *FM Atlas* is back in this larger-than-ever 10th edition. Twenty pages of new maps highlight this book, with Canada given equal map coverage to its southern neighbor. Supplying military maps of their areas were Rod O'Connor, Alaska, and William R. Hepburn, formerly of Resolute, Northwest Territories. These maps were changed in size so as to have equal scales, and the result is on pp. 80-81, including insight as to the possible political future of extreme northern Canada!

The growth in stations continues, especially in educational FM, 88 to 92 mHz, and among church stations there; as well as in FM translators, which pick up and rebroadcast primary stations in areas where distance or terrain militate against direct reception. All of these stations have been dutifully recorded and help to account for this book's bulk. Originally planned at 160 pages, the book came out to 164, and forced for the first time going to a press that will handle multiples other than 16 pages at a time.

Some changes in the directories may be of interest. Networks are now listed only by frequency, while secondary coverages have been eliminated, leaving only primary coverages. This was done to reduce clutter and speed up production of this book. Added are FM subcarriers, at the new frequency of 92 kHz, as well as the older 67 kHz. Interest in FM-SCA is at an all-time high, with many people using this book as the only readily-available source to show which stations make use of this previously hidden technology. Turn to p. 12, "Key to Symbols," to see how subcarriers and other data are given.

The listing of FM translators is another unique feature of this book, and the proliferation of translators is such that in a few years their numbers should exceed the total number of primary FM stations on the air. Indeed, translators and the prospect of their one day being allowed to originate programming ("low power FM") provide good reason for broadcasters and third parties to get involved in this still unexploited area of communications. Those interested in finding a frequency on which to establish a translator need only consult the FM Maps in this book for possible channel fitting-in opportunities.

Travelers, radio hobbyists and others will be interested in the regular features of the *FM Atlas*—its maps and the ease of finding stations wherever you are; the directories with programming and technical information on the stations. The introductory material has been rewritten, with many people saying they enjoy that section of the book, even though this issue there may be more spice than before. Write in with your comments, pro or con.

Thanks to all who have contributed, including all of you who have sent news of FM stations in your area changing music formats, adding or dropping stereo (KWVE in San Clemente CA actually dropped stereo!), embracing an SCA, adopting slogans or mentioning multiple cities in their hourly identifications, and for other changes. All of this is in addition to official data obtained from the Federal Communications Commission and the Mexican government. With improvements in photocopiers, I have been able to make the FM Miscellany logos, pp. 127-162, more nearly standardized in size and shading. Thanks to Father-in-law Weldon Patterson for photocopying services and to wife Carol for working with the Postal Service in getting our mailing list sorted according to ZIP + 4 for economies in mailing, and to those of you who buy and use this book.

Good listening!

The Near-Irrelevance of AM Radio

FM radio's share of the audience has hit the highest level ever, as AM listening drops, according to 1985 RADAR radio data. FM now accounts for 71.8 percent of total radio listening, up from 68.2 percent in 1984. If this rate of increase were to continue, we could expect zero AM listening by the year 1997! FM now dominates among all members of the radio audience nationally, save for the age group 50 and above, where AM commands 55 percent of the audience. By contrast, FM's lead is greatest among listeners 12 to 24, with 90 percent tuning in FM.

Except for occasionally checking AM out of curiosity, seldom do I bother with AM, even though I have just joined the age group supposedly favoring AM. Such sparse or non-use of AM is shared by millions of others, who now rely on FM stations for music listening on radio, news, play-by-play sports (with some major league baseball and professional football teams selecting an FM station as flagship for their radio networks), and alternative radio programming, such as provided by public, community and Christian radio stations, whose existences on AM are becoming increasingly meaningless.

Different measures have already been approved to help the faltering AM radio service, and still others proposed. The AM broadcast band is scheduled to be expanded from 1600 to 1700 kHz, many stations have AM stereo equipment (but often carry the monaural talk and sports programs to which AM has largely gravitated), and most Class IV (local) AM stations now broadcast with 1,000 watts at night instead of the 250 watts they formerly were authorized. Some daytime AM stations are getting permission to broadcast pre-sunrise and post-sunset, but with powers sometimes only 14 watts or less! And FCC Mass Media Bureau chieftain James McKinney suggested recently that the duopoly rules be eased for AM, whereby two AM stations in the same city could have the same ownership. The latter is seen as a way for AM stations to better compete with FM.

This from a radio-electronics magazine is worth considering: The present trend indicates that in a foreseeable time the U. S. will undoubtedly be converted from AM to FM. The reason is simple: once a radio set buyer has listened to the much clearer, practically noiseless and staticless radio reception of an FM receiver, he will shy away from AM. This is indeed what is now happening all over the U. S. It also explains the present FM boom, both in transmitters being erected and receivers sold. The article, "The Rising Tide of FM," by Hugo Gernsback, appeared in *Radio-Craft*, June, 1948. Here are more excerpts:

"At one time it was thought that FM would be a completely independent adjunct to radio broadcasting in America. It was felt then that every FM station would disseminate its own programs, or that there would be a country-wide high-fidelity FM network, which would actively compete with AM stations and AM networks. This did not come about, although there are of course many independent FM stations which originate their own programs—mostly phonograph music at present—and one or two high-fidelity regional FM networks.

"Instead of strictly independent FM programs, the present trend is unmistakably toward a solid duplication of those broadcast by the AM stations. More and more do AM broadcast station owners invest in FM transmitters. And as soon as they do so they now invariably duplicate the programs which are broad-

cast by their AM transmitters over their FM transmitters as well, even though this means sacrificing high-fidelity transmission to network standards (100-5,000 cycles).

"Moreover, the exigencies of economics will make it necessary for the independent small-town FM transmitters to take the high-grade, sponsored AM network programs . . . The reason for such affiliation is a purely economic factor; no small-center independent FM station can possibly afford to pay for a continuous stream of high-class programs. Besides, the American public has been educated to the big-feature, big-star radio programs. If the FM stations do not broadcast these features, then FM would be doomed to failure. Clearly this will not come about, and the present tendency supports this view.

"That the public's listening trend is unmistakably toward FM is clearly shown by the radio receiver manufacturers. There is first of all a huge output of pure FM radios. Next we have an even higher output (at present) of FM tuners that can be attached to old-style AM receivers to bring in FM programs. Then, we have combination AM receivers with FM, to bring in both types of programs. Finally, all the newer and better television sets are also equipped for FM, making reception much more pleasurable.

"How long will it be till the entire U. S. broadcasting facilities have been completely converted to FM? From about 8-10 years might be a conservative estimate for 85% to 90% of our transmitters. But from 10% to 15% of them may remain for much longer—in fact some of the larger stations may continue to transmit AM indefinitely."

Except for some of the ideas about program duplication and networks, there is prophetic material that investors in broadcasting stations and listeners alike should heed.

The magazine then asked for "FM Scouts," saying that "FM is a new art in Radio. Much of it remains to be learned by engineers. The behavior of radio waves in the FM band is still understood imperfectly. According to theory, FM signals should not reach much beyond the horizon. Yet often they do," and "Scouts" were asked to write in and report any long-distance (DX) reception they got. Too bad there was no "FM Atlas" to guide the "Scouts" in those days, but a list by frequency of FM stations was given. For example, on 104.9, there were listed: KONG Alameda CA . . . KURV-FM Edinburg TX . . . WLAL Lakewood OH. . . WMCK-FM McKeesport PA. On 105.1: KCLI Los Angeles CA . . . WDNC-FM Durham NC . . . WFMJ-FM Youngstown OH WQDI Quincy IL WVCN de Ruyter NY.

And some of the "Radio Scouts" reported in two months later. These included Hayes Lyon of Austin TX, hearing KNX-FM Hollywood CA and WNDB Daytona Beach FL. He got what is now recognized as skip reception on a Scott receiver "with the antenna built into the cabinet. The signals faded out, being absolutely clear and noiseless at their best John A. Beckman of Jacksonville FL reports frequent reception of WMIN-FM St. Paul MN. WMIN-FM (now WLOL 99.5) was also reported by S. B. Knapp of Baton Rouge LA. Mr. Knapp made a wire recording of the program to prove his DX report." And a certain 13-year-old in Duluth MN received his first FM DX as WMIN-FM was picked up shortly after buying a Zenith table radio in October, 1948.

FM stations listed in Canada, May, 1948, included CKUA-FM 98.1 Edmonton, CBR-FM 105.7 Vancouver, CJOB-FM 103.1 Winnipeg, CHSJ-FM 100.5 Saint John NB, for those provinces' only stations. Two in Nova Scotia, two in Quebec and 14 in Ontario (including CKPR-FM 94.3 Fort William and CHML-FM 94.1 Hamilton) rounded out the picture. "All stations are operating with a nominal power of 250 watts, except for CFPL-FM London (93.5), which uses 3,000."

Writes a broadcast engineer, who sent an article on the near-irrelevance of AM radio in his city:

"It amazes me that years after the death of Major Armstrong, his opponents are still trying to quash his invention. I learned of his biography, *Man of High Fidelity*, sent for it and read it, and found it extremely interesting, as well as heart-rending in the way he was treated by his corporate opposition. He was accused of being a 'visionary', but I think the real visionaries any more are those who think that AM can remain a viable service in its present form. . . . [There is] a proposal to require all stereo radios to be able to receive all types of stereo broadcasts (the various AM, as well as FM). . . And they want the AM sections to be hi-fi. They want to eliminate the bandswitch and have continuous digital tuning from AM to FM (as new digital TV tuners select VHF and UHF without switching or separate knobs), or in the case of analog dials, just a long dial with AM at one end and FM at the other. They say that the listener won't know what he is listening to—it will just be hi-fi. Incredible! Just make a wideband AM stereo receiver without a bandswitch and all the static, interference, whistles, noise, fading, etc., of AM will disappear. Major Armstrong should have hit upon this idea years ago when he was searching for a way to eliminate static before he hit upon FM!

"We aren't driving around in Model T's any more and we aren't listening to Atwater Kents any more, so why can't we give up the Model T of radio broadcasting? I guess because the AM station owners don't want to lose their investment. Those who think AM can sound as good as FM must be living in some kind of a dream world. They're certainly not in the real world . . . I liked your editorial coverage in the latest (9th edition) Atlas and will be looking forward to more. As always, this is confidential. My views would brand me as a heretic by some in the industry."

Maybe the FCC's gone back and read that old article on the future of AM, because they have proposed amending the rules to permit unlimited program duplication by co-owned AM and FM radio stations. Current rules call for stations licensed to communities over 25,000 to devote no more than 25 percent of the average week to duplicated programming on the FM station. The FCC observed that "the FM radio service is now a fully competitive and viable component of the radio industry program duplication might benefit many heretofore profitable AM stations that now are experiencing financial distress due to the growth of the FM service." Our broadcast engineer friend, quoted before, has some ideas on program duplication:

"Whereas simulcasting was once regarded as stunting the growth of FM, it is now increasingly being looked upon as something to preserve AM. This brings up the old question of spectrum efficiency, but even in the '60s, I thought that simulcasting actually did provide a useful service in providing a high-fidelity outlet for a radio program. . . I didn't go along with the split then, as I assumed correctly that stations would just fill time with background music, and indeed they did for several years. . . . Now, simulcasting will make a radio program available to those few listeners who haven't joined the modern age, as well as reducing station expenses."

New FM Channels for the Masses

In the last edition, mention was made about the new classes of channels that are being created in the United States under FCC "Docket 80-90." The FMaps list classes of stations with powers and heights, according to zones in the country. These range in power from 3,000-watt Class A to 100,000 (at 300 meters and higher effective altitude above average terrain) Class C stations. Applications are being granted in filing "windows," with the first such selection being

channel 243, 96.5 mHz. A new window is expected to open every two weeks in 1986, with all the new channels expected to be granted within three more years. For anybody interested in starting one or more of these new FM stations, there are consulting engineers we can recommend; send a self-addressed, stamped envelope for this information. These people can help you with an application, or can help get a channel assigned to your community, which can later be applied for by yourself, as well as anybody else who chooses to apply against you.

F Miscellaneous Musings

Applications for new stations or changes in facilities of existing stations that do not meet the minimum standards for Class B or C will be considered by the FCC to be for Class B1, C1 or C2. Stations already on the air have until March 1, 1987, to file for minimum power and height to qualify for Class B or C. If they don't, they'll be downgraded to one of the lesser classes. This means other stations can develop at closer mileages in nearby communities on the same dial setting, or up to three channels away on the dial.

No Atlantic City offshore FM broadcasting will take place after all (see *FM Atlas* Eighth edition, p. 6). The FCC has deleted 95.9 and added 107.3, channel 297B1. WELY (AM) Ely MN, mentioned pp. 4-5 of the last edition, is back on the air quasi-commercially, with advertiser and listener support, country format.

Peter Hunn, founder of WHRC 92.1 Port Henry NY, wrote: "Back in the early 1970's, my desire for an FM station was sparked by an early copy of your Atlas. My little radio station has been pegged as the 'smallest commercial FM', and was featured on TV's *PM Magazine*." Hunn recently sold the station, and it is now known as WKLZ.

A Canadian reader wondered if CBC network stations could be listed. He thought that a simple explanation that stations beginning with "CB--" are Canadian Broadcasting Corporation stations, would suffice—so here it is! CBC stations with the \$ (stereo) symbol are mainly affiliates of the CBC stereo network, French or English, with a classical music format. CBC stations without stereo are mainly relayers of CBC owned AM stations in principal cities, mainly with a "tm" format, which stands for talk and middle-of-the-road music. A few stations owned by the CBC start with other letters, such as the French CKSB-affiliates in Manitoba and northwest Ontario; and French CJBC- stations in Ontario. CBC stations do not normally carry advertising, but this book lists them as commercial, as they have been known to carry ads in the past, have carried Texaco Metropolitan Opera Broadcasts (as many U. S. "noncommercial" FM stations have) with commercials, and they retain the right to return to commercial status. Similarly, most college stations in Canada are non-profit, but can carry advertising.

The CBC is becoming shy about identifying their correct call letters over the air, and this is very disconcerting to the traveler and DX listener. You could listen for hours to CBQT 90.5 Fort Frances ON, for example, and never hear a correct call letter identification (or even city mentioned) for this 50,000 watt station on the U. S. border. There is no rule in Canada that FM stations have to identify, as Mexico and the United States require on (or close to) the top of each hour. This is an unfortunate loophole, and I have urged the Canadian Radio-Television and Telecommunications Commission to require FM stations to identify their

individual transmitters at regular intervals.

The CB-- call letter combination is forbidden to Canada by the International Telegraphic Union—which years ago set up blocks of call letters and numbers to different countries. Canada is allocated various calls starting with C and V, such as CH--, CI--, CK--, but not CB. The CB calls are reserved for use in Chile, so Canada's use of them is not internationally sanctioned. [The United States is assigned call letters starting with A, K, N and W, with most broadcast stations using K call letters if west of the Mississippi River and W stations found east of that river, but there are exceptions to this rule, with the FCC losing track of where the river actually runs in states like Louisiana and Minnesota. But I digress.

Call letters continue to be assigned CBC stations, and this publication lists them, much like it would license numbers that are never advertised. It is my hope that the CBC will utilize the latest in automated technology to give regular identifications of its individual transmitters in the near future. This would make tuning in CBC more interesting, and help to make each transmitter and service area less of a "clone" of any other station in their web. On the new map of Northwest Territories and the Yukon you'll find some stations that utilize CBC programs for the most part, but which break away for their own programming, usually ethnic or community public service material.

A United Statesian suggested that some terms, used in the 9th edition, be better defined. Here they are:

FM translator: A low-powered rebroadcasting device, using a different frequency from the originating station, often in outlying areas or in the primary service area, but where shielded by terrain from the main station. Has all the characteristics of the main station—identical programming, stereo, and SCA subcarrier. An FM booster is similar to a translator, but operates on-channel and is found only in close-in locations to the main channel, where there is a sharp terrain difference, so that no interference results between the main station and the booster. [Some translators operate on the same frequency as the main station. They are not "boosters," but receive their signal from an intermediate translator on a different frequency.]

Zones I, IA, II (see each map for some boundaries and explanation under "New FM Channels for the Masses," above). Significance of various Classes of FM Stations, such as A, B, C? See individual maps for powers and heights. Generally, Class C stations are the highest power with the greatest coverages, while As are lower power. Individual coverage radii for stations can be measured out, using the coverage information for each station, as listed in Part I of the Station Directory in this book.

Does meters refer to antenna height of the transmitter or what? FM coverage is determined by how high the station's antenna is above the average terrain. This is a concept, figured on the basis of eight equally-spaced radials encircling the tower. Using a map giving terrain contours and altitudes, the engineer averages out the height of the FM antenna's center of radiation at a distance of from 2 to 10 miles in each of the eight directions. This then gives the antenna height above average terrain (the total of the eight altitudes divided by eight). The figures in this book are just those—averages. In certain directions, a station may get out much better than other directions, because of such physical features as hills, mountains, lakes; or even which side of the tower the FM antenna is mounted on.

What are the optimum antenna setups for cars with FM receivers and the

difference between horizontal and vertical polarization? Virtually all FM stations send out a horizontally-polarized signal, and with a home antenna, you'd mount the antenna in a flat position, pointed at the station. Vertical polarization has been in use for about 20 years, and is commonly combined with horizontal to form what is called "circular polarization." This means your antenna can be mounted on its tower at almost any angle (but still facing the station), and reception should be excellent. Car antennas, to work their best, should be fender-mounted and vertical. Fixed-length antennas are usually the best, as they are optimized for FM frequencies, 88-108 MHz. Even the windshield antennas on some cars are mainly horizontal and very directional, despite the fact that there is a small vertical element going down the center of the windshield. It is best to replace such with a vertical antenna, mounted at the fender and not at the rear of the vehicle, where line loss can be a problem. Almost all FM stations are now with circular polarization, with a few remaining h(orizontal) only. Recently, however, because of problems with educational FM and channel 6 TV stations interfering with each other, the FCC is allowing some stations at the low end of the FM dial (88-92 MHz) to embrace vertical polarization only. The first stations granted under this new policy are WVUA *90.7 Tuscaloosa AL and a new station in Joplin MO on *88.7.

FM Piracy

"K-RADIO" an FM pirate? Radio news and programming consultant Jim Cameron sent word about the temporary FM station he helped create. It made its debut amid a flurry of press coverage at the National Radio Programming Convention in Los Angeles, and was on for the entire conference, Sept. 17-19, 1984. The station was commercially sponsored, on 24 hours per day at 104.7. "K-RADIO, the low power FM station of the NAB-NRBA Radio Convention has brought to reality the radio dreams of dozens of participants. K-RADIO is staffed by some of the nation's hottest radio talent. . . " It featured news of the conference and AOR, "all over the road," music by participants who stepped into the studio to volunteer time to do shows. "It's all a little quasi-legal, but with the American and NAB flags wrapped around us, I'd just dare [FCC Chairman] Mark Fowler to slap the cuffs on us We run a clean operation, always choosing a good frequency with plenty of RF room (often using your *FM Atlas*, I may add)"

The on-air concept has expanded to other meetings, including the National Federation of Community Broadcasters, which used 88.1 in Madison WI for their 1985 convention. Canada has similar ephemeral stations, often set up on St. Lawrence River islands near Montreal, for conventions, usually running 20 watts. Those stations, however, obtain specific advance permission from the CRTC to operate.

FM is becoming a favorite band for quasi-legal broadcasting, with its reasonably good coverage for low power, and less interference. Best places to pick up pirates are in large cities and in college towns. New York pirates are mainly on 91.5 after WNYE signs off and 91.9 for "Stereo NINE." They typically operate nights or weekends. Some readers may recall the article, "How I Built an FM Translator--I Even Thought It Was Legal," in the June, 1983, *Popular Communications*. That magazine also has a regular column devoted to clandestine radio activity. Sources of equipment include discarded college 10-watt transmitters, modifying FM radios to become transmitters, and buying kits or plans from mail-order companies. Some of those companies are mentioned in the back of our radio and electronics catalog.

A drive-in theatre in Miami uses 89.1 to send audio to cars. Shows are often X-rated, and religious broadcaster WRMB *89.3 is concerned that passing listeners might hear a dialog like: "Take my hands" (a spiritual), followed by: "Hey, gang, what say we all take a community shower? . . . And let me sing words only for my king." An FCC official was not sure if the movie FM operation is legal, saying: "If they're broadcasting over FM, I just don't know. I've never seen that done before, and it concerns me." He obviously had not heard of a real estate radio station which used 104.1 to promote a house sale, and was widely publicized in Nebraska, after a reporter came, saw the sign and tuned into the short-range transmission.

This publication does not encourage pirate broadcasting, but only mentions it as one aspect of the total FM picture. Like translators, which started out as illegal, but which the FCC was finally persuaded were needed, many of today's FM pirates could become tomorrow's respected broadcasters.

SCS: Radio That the FCC Doesn't Want You to Own (or even talk about)

Little known and hardly ever mentioned to the public is the medium of SCS, SCA or subcarrier FM. Stations with an SCS ("Subsidiary Communications Service") can send out a program, or even two different programs, which are entirely separate from the main channel stereo. You can hear background or foreground music without commercials, medical news, foreign language programs and radio reading services for the blind, as well as paging and data to interface with your computer. All of this activity is listed in Part I of the Station Directory—and it is all yours to tune in on with a special modified radio or an adapter.

Two firms which supplied SCS devices to the home consumer have bowed out. The owners of Music Associated in New Jersey have retired, and Communications Poly Services in Massachusetts has stopped selling to the public, reportedly because of selling more to the industry, although one consumer mentioned that FCC pressure stopped them, and wondered if I would be next. We have offered SCS devices mainly as a service to people concerned about what is on those hidden subcarriers. The SCS component is as important to the radio listener as is knowledge of the phosphorescent coating or watermark on a stamp is to the philatelist.

It is a pity, with AM radio in its death throes, station owners do not rally behind SCS as an alternative to AM. Within its service range, SCS is as static free as FM itself, coming through reliably day and night, although not with the same outreach, and somewhat subject to crosstalk from the main channel. SCS is an energy-efficient resource that can even send out pictures in color!

In Columbus OH, WOSU-FM has utilized 92 kHz for sending out slow-scan color TV programs to a site in Newark OH, 100 km away. Charts, graphs, etc. can be plotted, with an eight-second picture build-up time. Audio went out on an interactive telephone circuit. No interference was reported to WOSU-FM's stereo main channel classical music, or to its 67 kHz reading service to the blind SCS.

There are two main SCS frequencies in use—67 kHz, which is the granddaddy of them all, and the new 92 kHz. It was only after the FCC broadened the FM station baseband (or channel width) that broadcasters could use the 92 kHz setting. One effect of that is the virtual extermination of 41 kHz as an SCS setting. Monaural stations like WEVD 97.9 New York used 41 kHz, but now WEVD has embraced stereo and kicked the Chinese-language broadcasts upstairs, to 92 kHz. And the trend is growing for a broadcaster to send out two separate music services—an easy listening background music at 67 kHz and a rock, "fore-

ground" service at 92 kHz, as two San Francisco stations are doing (KKCY 98.9 and KYUU 99.7). The 57 kHz channel has been squeezed in to accommodate Blaupunkt's ARI traffic system, and a few stations use it for paging or data.

FM: Far More in Reception if You Do It Right

FM station coverages are given in Part I of the Station Directory. By computing all coverages the same way, different stations in the same market can be objectively compared. These coverages are from our plottings, using the FCC curves for FM broadcasting, and we never accept coverage estimates supplied by stations. You can judge how good a home receiver and antenna you have, or how sensitive your car radio is, by comparing your own reception with the coverage figures given for the individual stations.

For the best home reception, the most important thing you can do is work to improve your antenna system. Even radios with built-in antennae or portables with a whip can benefit from better placement within a room, such as in front of a window facing the direction of desired stations.

Clearly, the best choice is the outdoor FM antenna. With your own antenna you'll almost certainly pick up more FM stations than your local cable company could give you. The best FM antenna is a yagi or log-periodic, such as shown here. This antenna is directional, and it is best to have a rotational device to turn it to favor various stations. You can also turn it away from your local broadcasters and see what stations from more distant cities will come in. Even the best FM receivers will overload when you aim the antenna directly at your local stations and you live in a metropolitan area. If interference from strong nearby stations is still a problem, traps are available that can help you tune out the offending signals, and there's a tunable booster you can buy to cut down on strong signals and amplify the weaker ones.

FM DX Listening

An advantage of having a good receiver and antenna is that you can enjoy the hobby of long-distance (DX) reception. Anybody with the willingness to check parts of the dial without local stations will, over a period of time, be able to enjoy this unique pastime. FM DX is possible by means of sporadic-E skip, which can be used to tune in stations 700 to 1,500 miles away, mainly during late spring and early summer in the daytime; and by tropospheric enhancement many times of the year, and can result in reception up to 700 miles at its best. There is also reception afforded by the momentary passing through the atmosphere of meteors, called meteor scatter reception. And some masochistic listeners spend time trying to pull in decipherable signals through the garbling caused by the aurora, or "northern lights."

For more information on FM DX, write the nonprofit Worldwide TV-FM DX Association, P. O. Box 514, Buffalo NY 14205-0514. Their monthly "VHF-UHF Digest" contains reports on DX (FM and television) occurrences, tips on reception, equipment reviews, and station news. Dues are \$15; and a sample bulletin is one dollar.

Key to Symbols

- d A station with a directional antenna, listed after height, part II of the Directory.
 t An FM translator.
 v A station transmitting with a vertically (or circularly) polarized signal, in addition to the usual horizontal signal, for better reception on auto radios and portables.
 * A noncommercial radio station, usually educational, "public" or religious.
 \$ A station broadcasting all or part of its daily schedule in multiplex stereo.
 † A station with a Subsidiary Communications Authorization (SCA), 67 or 92 kHz.
 S A station sharing time with a nearby station on the same channel; shown on maps only.
 - A station with its antenna below the average surrounding terrain.
 16 Coverage radius (primary) in miles. This is the area where no external antenna is generally necessary for good reception; beyond this reception is still possible, but subject to interference from other stations. See also the discussion on FM DXing, page 11.

Program [music] codes (given in Part I of the Station Directory after city): b beautiful/easy listening, c classical/"Fine Arts," e ethnic, g gospel and religious, j jazz, k country (including polkas), l Latin/Spanish, usually with Spanish announcing, m middle of the road music, n news, p progressive rock, r rock, including easy rock, top hits, rock oldies, s soul/rhythm and blues, t talk. Up to two letters are used to indicate stations having two distinct program formats, or intermixing records of two types. **Language codes** (given just to the left of the program codes in Part I of the Station Directory): E English (for stations in Quebec or Latin America), F French, P Portuguese, S Spanish.

Network codes (given in Part II of the Station Directory): A ABC-FM, with ABC standing for American Broadcasting Company, B National Black Network, C Columbia Broadcasting System, D ABC Direction, E ABC Entertainment, G Moody Broadcasting (IMS) network, I ABC Information, K ABC Rock, M Mutual Broadcasting System, N National Broadcasting Company, O CBS RadioRadio, P National Public Radio, R United Stations Radio network, S Associated Press Radio, T NBC's The Source, U United Press, Y ABC Contemporary, Z Sheridan Broadcasting network. Canada's CBC network stations generally start with call letters "CB-," while the French CBC network (Radio Canada) generally uses letters, like CJBC, followed by a numeral.

SCA symbols (following † in Part I of the Station Directory; first entry is for SCAs at 67 kHz and entry following comma is for 92 kHz SCAs): A ABC network, C CBS network, E ethnic and foreign language, F farm or financial news (voice), G gospel, L Mutual network, M music, N NBC network, P paging (voice), Q physicians' news, S sports or special events (occasional audio), T talking book for the blind, instructional programs or state network news relays, W weather, X data noise or chirps, tones or telemetry warbles.

Part I, Geographical Directory example:

			Call	Stereo	Coverage (to the 1 mv/m primary in miles)
Iron Mountain	r	93.1	WIMK	\$ 39	
City	Music	r	101.5	WJNR	\$ 34 †M--SCAActivity
		g	105.5	WRVM	102.7t--Translator of WRVM 102.7 SuringWI

Part II, By-Frequency Directory example:

					Feet above average terrain
State or province	-AL	Gadsden	Q-104	WQEN	\$ 1080 97000 v Y--Network
	City	Slogan	Call	Stereo	Watts Vertical polarization

New Jersey	20-21	N. W. Territories-Yukon	80-81
New Mexico	64-65	MEXICO	90
		ST. PIERRE AND MIQUELON	89

The state maps of the United States are arranged in a geographical order from east to west. It is the density of FM cities which generally determines the scale used for each state, and whether or not that state is to be grouped with its neighboring states. Selected FM stations in bordering states are noted on the individual state maps. For information concerning station call letters, programming, stereo capability, vertical polarization, powers and heights, refer to the Station Directories immediately following the FM Atlas maps. Key to Symbols for the maps and Station Directories is on page 12.

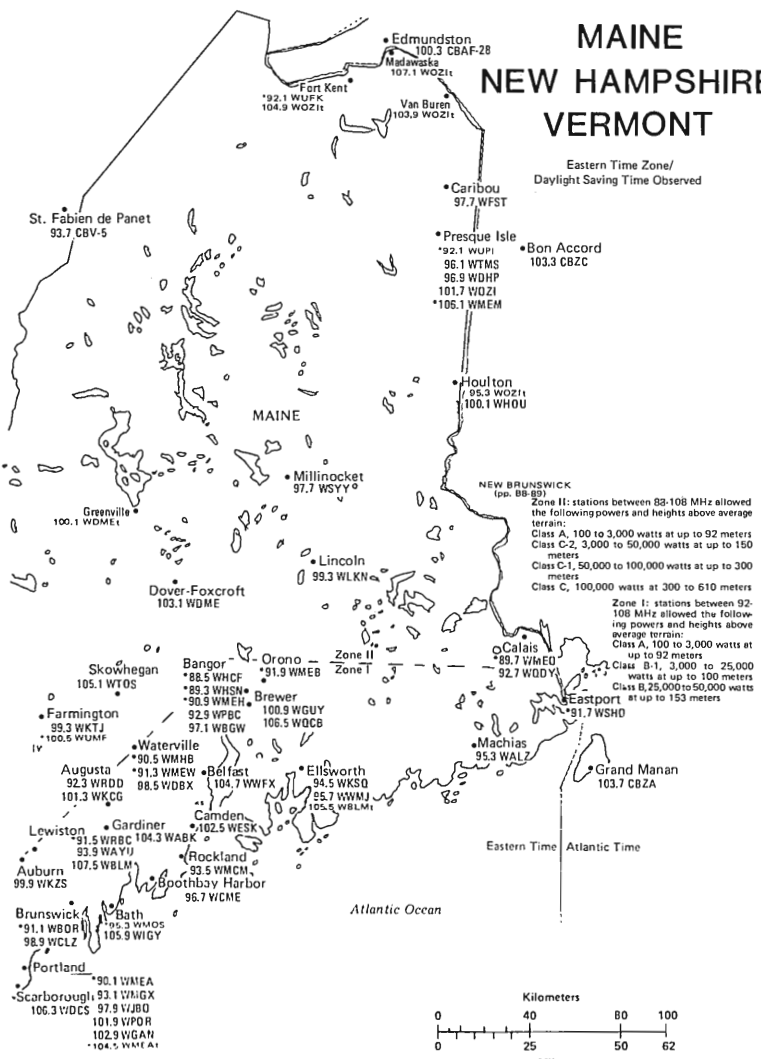

Stations scheduled to change to a different frequency are shown on the maps, with both the new and old frequencies given. Minor, ten-watt educational FM stations and one- and ten-watt FM translators are shown in reduced size.

NEW JERSEY NEW YORK

[Southeastern Portion—Remainder of New York is on preceding plate]

Showing transmitter locations for stations licensed to New York city and for other stations whose transmitters are outside their cities of license. This map should prove useful to FM Atlas readers in the New York area who would like to aim their antennas for optimum reception. (directional away from New York city)

New York City's FM Dial

Stations serving all or parts of New York city with a primary [or strong secondary] signal:

- 5 A station sharing time with a nearby station on the same frequency.
- A noncommercial station.

CANADA

Canada Coverage Note: Coverages are indicated only for stations where we know the effective antenna height above average terrain. Many stations come on the air or move their towers without an announcement about antenna heights. You can check the powers of all Canadian stations in Part II of the Station Directory.

STATION DIRECTORY

Part II: FM Stations Listed by Frequency, United States and Canada only (excluding territories). Excludes FM translators. Powers given are horizontal effective radiated, expressed in watts. Antenna heights are above average terrain, and expressed in feet. Stations identifying with more than one city are indicated, as are stations often using a slogan or short phrase in lieu of call letters. See Key to Symbols, page 12.

Vhf-Uhf DIGEST

The Official Publication of the Worldwide TV-FM DX Association

NOVEMBER 1984

WHERE'S THE SKIP?

The FM Atlas has finally come of age, when its cover adorns the lap of somebody who looks like Clara Peller! For information on FM DX and what "skip" is, look at page 11. (Used by permission of the Worldwide TV-FM DX Association, and illustrator Bill Fahber of Bridgeton NJ.)

FM PROGRAM FORMATS

[For other abbreviations, see Key to Symbols, Page 12.]

- b beautiful/easy-listening music
- c classical/"Fine Arts"
- e ethnic and foreign language
- g gospel and religious
- j jazz
- k country and wester, including polkas
- l Latin/Spanish, music, usually with Spanish announcing
- m middle of the road music
- n news
- p progressive/album rock
- r rock, including easy rock, top hits, rock oldies
- s soul/rhythm and blues music, "urban contemporary"
- t talk format

Stations without a program listing usually have a variety format, or may be "construction permits," and not yet on the air.

To be notified about the 11th edition, please fill in the form below or copy it, and send to "FM Atlas," Adolph MN 55701, U. S. A. Feel free to write in any time with news about stations coming on the air, whether stereo or not, and stations using slogans or "nonIDs."

Notify me when the 11th edition of the FM Atlas is available. Also,
 send your new radio and electronics catalog when it is printed;
 notify me when your proposed FM radio newsletter is launched.

Name _____
(Please print)

Address _____

City _____

State or Province _____ ZIP or Postal Code _____

(U. S. customers, use the ZIP+4 on your address label, or find out your ZIP+4 by calling 1-800-228-8777.)
