# The BEGINNERS' STORY of RADIO

By B. FRANCIS DASHIELL

OUR Story of Radio is intended primarily for beginners. And by beginners we mean those members of that vast family of enthusiasts who tune their dials successfully and log hundreds of stations, all without an adequate knowledge of the functions of a radio set. Radio receivers, like motor cars, quite generally are operated by people who, although wishing they knew just why the thing works, have been deprived of the kind of enlightenment they seek.

It is true that libraries have dozens of radio books on their shelves. But most of these "fundamentals" and "principles" are massive works which are further complicated by mathematical and technical descriptions that mean little to him who reads and runs. The fundamentals of radio make dry reading, so dry, in fact, that the romance which has been associated with radio from the very beginning is lost. Of course, professional writers are correct when they insist that a study of fundamentals and the connected sciences is absolutely necessary for a rather complete mastery of the theories of radio.

But, for our purposes, we may well leave the study of theories to those who live and work in radio. Let us, then, learn something of the interesting and fascinating wonders performed by this amazing marvel by taking a little sightseeing journey through the inner workings and ramifications of radio. Let us follow the radio waves from the originating studio and station to our loud speakers and see just what it is that takes place.

## Consider the Miracle

Pull up your favorite chair before the radio. Snap on the switch and bring in some distant station by the mere twist of the wrist. Simple, isn't it? Yet what marvelous laws

of nature are called into play, each perfectly coordinated with the other, so that reception will take place. Listen to the instant and faithful reproduction of a musical program. Then close your eyes and imagine that, standing beside the receiver, a musician plays his instrument. His every movement will appear simultaneously with the music coming from the speaker. It does not seem possible that he actually may be half way around the earth instead. When you hear a single mellow note of a piano you must realize that the player's finger has not yet left the key. Some day television will demonstrate all this with dramatic vividness.

Still seated in your chair, suppose you imagine that you are a modern Alice approaching the Wonderland of Radio. You are entering the studio of the distant station from which your program is coming. Suppose, too, that through some legerdemain

*Ethel ("Stormy Weather") Waters, famed colored songstress, with Mills' Blue Rhythm Band, on the NBC-WJZ network Wednesdays at midnight EST.*

you can become a tiny bit of nothing. Step up to the studio's microphone and speak into it, take a seat on the sound wave your voice creates; hold on for dear life, for you are about to go on a ride unrivaled in all nature.

Immediately some unknown force whisks you out of the studio, along wires across miles of country to the broadcasting station. Then, through a maze of controls, tubes and coils, you rush out upon the antennas high above the station and are shot, without further ado, into space. Higher and higher you rise, passing far into the perpetual cold of space, and it seems that you will go on, and on, forever. But suddenly you are turned back toward earth, for you have met the great Heaviside reflecting radio ceiling that prevents all radio signals from flying off into the depths of space. You speed down, down, and soon your own antenna, tuned to the length of the wave upon which you are riding, beckons, and you slide safely home.

Once again your carrier wave glides through another maze of tubes, coils and condensers. But this time it is your receiver that quickly amplifies and enlarges you to your normal size as you tumble from the loud speaker back into your chair. And if your journey was as much as 2,500 miles it only took one-seventieth of a second!

### With the Speed of Light

The instant flight from the micro-

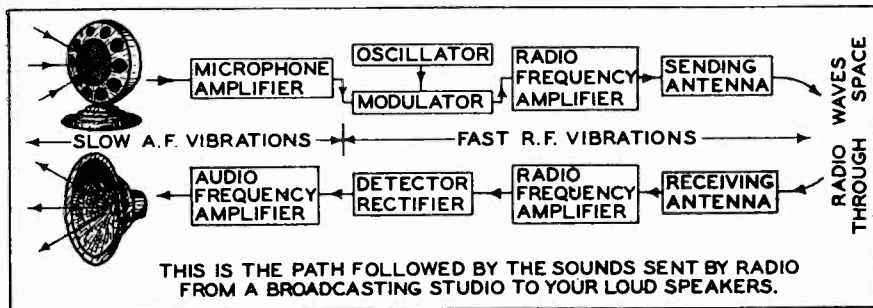

phone to your radio was made at the incredible rate of 186,000 miles per second! Such is the speed of radio. It also is the velocity of electricity and light. A radio wave, electric current or ray of light will travel around the earth in one-seventh of a second.

Vibrating sound and radio waves go to make up radio, and before music and speech can come from your loud speaker many things must take place. At the broadcasting studio sound waves pass through the air from the lips of speakers and singers, and from musical instruments, to strike the sensitive microphone and cause it to vibrate and thus vary the flow of an electric current. A microphone is nothing more than a refined type of telephone transmitter. The microphone receives sound waves from the air in much the same manner your ears enable you to hear, it is, in fact, radio's ear.

### Underlying Principle

The radio transmitter takes the sound waves, converts them to a modulated or fluctuating high frequency oscillating electric current which is broadcast across the surface of the earth as a form of vibrating electromagnetic energy. The radio receiver picks up some of this energy, which is in a greatly reduced condition, and converts it back again to sound waves. The construction and action of the radio receiver is, therefore, just the reverse of the transmitter.

Every piece of metal or wire in

the world is filled with hundreds of vibrating electrical currents induced by the passing radio waves. But these waves may be sorted out by the act of tuning a radio receiver connected to the wire or antenna, and only one wave to which the receiver is made to vibrate in harmony is permitted to pass. This very weak signal will be amplified in strength; reduced from its high radio-frequency vibration rate to a much lower audible rate, amplified again with power tubes, and fed into the speaker which is made to vibrate and thus communicate those vibrations to the air so that sound may be heard by the ear.

Radio is simply a means for sending sound waves through the air without wires. The higher the rate of the electrical vibrations, or the greater their frequency, the farther the radio waves will penetrate. This is the reason why short waves, or high frequencies, carry so far. The same may be said of a steam whistle—one having a shrill, high pitch will carry farther than one that is deep and low-pitched. Radio transmission is accomplished without the medium of conducting wires, such as are necessary for the telephone and telegraph. Radio in its earlier days was spoken of as wireless telegraphy and telephony.

In order more fully to understand what makes a radio receiver work it is important that we know at least a little something about the mysterious force that makes radio possible. Radio is nothing but electricity, and next month we shall discuss electricity and magnetism and how they work in radio.

### Queries

1. How fast do radio waves travel?
2. How long does it take a radio signal to travel from a station 2500 miles away?
3. What instrument first receives the sound waves?
4. What effect do the sound waves have upon the electric current?
5. Into what type current does the transmitter convert the sound waves?
6. What type current does your aerial pick up?
7. How do transmitter and receiver compare in method of operation?

8. What phenomenon prevents radio signals from flying off into space?
9. Through what changes do the radio waves pass in the receiver?
10. Which waves carry farther, the long or the short?

*The second lesson in this interesting home study course in Radio, will appear in the November issue.*

## Radio in Japan

IN AN interesting letter to our short wave Editor, Mr. Yoshimura of Moji, Japan, gives the following information in regard to the broadcasting situation in the Island Empire:

"All Japanese broadcasting stations are under the superintendence of the Japanese Broadcasting Association (Nippon Hos Kyokai). There are 24 stations on the air at the present time and also nine new stations which should be installed during 1933 and 1934.

"Daily programs of JOAK-1 are generally relayed by all J stations excepting JOBK, JODK, JFBK, JQAK and JOAK-2 and even the first four named relay a part of the programs of JOAK-1. JOAK-2 has his own programs but no musical features, transmitting scientific, educational, foreign language courses, etc.

"As to their operating times, they transmit the relay from JOAK-1 from 6:30 a. m. to 9:45 p. m. JST in April, May, September and October while in the other months they transmit from 7:00 a. m. to 9:45 p. m. JFAK, JFBK and JQAK transmit one hour later than the other stations."

Mr. Yoshimura, who says that RADEX is no stranger in Japan as he reads it often, gives us the following station corrections:

JOJK 300 watts instead of 3000; JONK on 635 kcs. instead of 940; and JODK-1 on 610 kcs. with 10,000 watts instead of 690 and 1000. Otherwise the list of Japanese, Korean and Manchurian stations are correct as published in our world list in the Midsummer Edition.

# IMPORTANCE *of a* GOOD GROUND

● ● ● *By E. O. CUTLER, Vice President Newark News Radio Club*

IT seems ridiculous to me that so many thousands of radio listeners who spend so much time DXing, pay so little attention to experimenting to determine the best ground. Undoubtedly many of your readers are perfectly contented to get a good set, build a good aerial and yet hitch a ground to a nearby radiator or water pipe without regard to simple and better alternatives in the way of outdoor grounds.

As I see it, any mass of metal planted under ground and watered and properly connected to the ground post of the set, will show radical signal strength increases with many aerials and on many frequencies. A ten-cent switch and a little wire and pipe together with two or three hours of work, are all that are required to make many a DXer happy.

The following article containing my ideas on this subject recently appeared in the Newark News.

I firmly believe that one of the most profitable diversions for those members who wish to monkey with their sets during the Summer is that of experimenting with various grounds.

Those whose homes are so situated that they can plan an outdoor ground should do so, and also run ground wires to radiators and cold water pipes (three connections in all) to switches near the receiver. I procured two double-throw switches at 10 cents each at the 5 and 10 and ran the ground wire from the set to the center of one switch and from the latter to the center of the second switch. This provides connecting posts for four different experimental grounds.

After the soil surrounding the outdoor ground has become well satur-

ated with water you will be amazed at the increase in volume of many stations. By mounting these switches on a board, near the receiver, it will be convenient to test out all grounds on various stations from one end of the dial to the other.

After a year of experimentation I have determined that a good outdoor ground is superior for all stations when an indoor aerial is used, and on all remote stations (say over 1,500 miles) with long roof aerials.

In published reports of remarkable DXing I have noticed that outdoor grounds are used. For example, RADEX, Midsummer edition, tells about the work of C. R. Caraven of Vancouver who uses an Ollie Ross ground. The issues of RADEX for February, 1931, and Midsummer, 1931, describe the Ollie Ross ground and his DX results in Vallejo, Calif.

About a month ago I set out to find a simple, cheap and easily installed pipe ground and have been very successful.

## The Ollie Ross Ground

The Ollie Ross ground is a length of copper tubing about one inch in diameter by four feet long wrapped with bare copper wire this wire being soldered to the insulated lead to the receiver. The tube was buried underground with rock salt to draw dampness in dry seasons (California!).

Mr. Ross suggested (RADEX) that the U. S. standard ground be tried. This consists of an eight-foot rod or one-half inch pipe driven vertically; a hole one foot deep and one foot square is dug and five pounds of rock salt melted in the hole and the ground is driven down in its center. However, Mr. Ross also suggested that if this U. S. ground was

used a piece of aerial wire should be soldered along the entire length of the rod or pipe, the wire being soldered to the lead-in to the set.

My theory is that any type of outdoor ground, no matter how efficient it is, can be improved if means are provided to get water down to the bottom at all times and thus saturate all the earth near the metal.

Incidentally, if any one tries to solder wire on lengths of rod or pipe and then drive them into hard ground with a sledge hammer he will find that the soldering is apt to break.

### Mr. Cutler's Method

My new ground consists of a five-foot length of half-inch standard iron pipe, galvanized, screw-threaded on the outside of one end. In order to provide a wedge-shaped bottom, I procured a standard brass reducer (one-half inch to one-quarter inch, pipe standards) and screwed it on to the pipe end. A four-inch length of one-quarter inch brass pipe was screwed into the reducer. This brass pipe was squeezed to a wedge shape in a vise and ground down to a chisel edge on an emery wheel.

About ten one-quarter inch holes were drilled in the pipe, at random, from the bottom up three feet.

Since the reducer is larger in diameter than the pipe, when the pipe was driven down into the ground with a sledge there was left a slight clear space outside of the pipe all the way down.

The pipe was left with about three inches projecting above the ground, so that a funnel can be inserted and water poured down at any time. The water runs out through the holes in the pipe and saturates the soil. For the first few weeks I left a cavity on the surface about six inches deep and a foot in diameter and, after filling the pipe, filled up the cavity as well. Improvements in reception were noted as the ground became thoroughly wet. A cork stopper is tied by wire to the top of the pipe.

### Attaching the Wire

I soldered a length of bare copper

*Sandra Phillips (left) and Peggy Keenan have been vaudevilleing with Tony Wons but now all three are back on the WABC-Columbia. The duo pianists are well worth hearing (as well as seeing) Sundays at 10:45 a. m. EST and Mondays and Thursdays at 11:30 a. m.*

wire on to the entire length of the pipe, but it stripped in driving, so that the lead to the set is now simply wrapped around and soldered to the top of the pipe. If I were making this ground again with iron pipe, I would drill two small holes into the pipe near the bottom in order to firmly secure the end of a bare copper wire and wind the wire around the pipe, soldering it to the top of the pipe and to the set lead. This should prevent the wire breaking away when the pipe is being driven. The reducer, being of larger diameter than the pipe, should protect the wire when the pipe is driven, but apparently soldering alone will not hold the wire under the shock of driving.

It might be better to use a length of stiff brass or copper pipe. In all

*(Continued on page 79)*

# RADIO *from a* Box Seat

• • • *With "Betty"*

CONRAD THIBAULT, young American baritone, raised the money to pay for the first part of his musical education by working as a floorwalker in a big New York department store. In the first place, says Conrad, it was hard work just to stand around, so hard that when he came home to his furnished room at night it required real moral fiber for him to make himself drag his aching feet uptown to take a singing lesson. But he stuck it out for three reasons.

First, there was a girl back home. Before leaving his home town of Northampton, Mass., he had become engaged, and all through the early part of his career this charming girl, herself a singer, spurred him on to his best efforts.

Second, there was a choirmaster in Northampton who had seen the

possibilities in his rich baritone voice and who had urged him to try, in spite of financial hardships, to make something of his singing. And third, there was himself—his own self respect. Three people to consider, and he couldn't let any of them down.

So he worked by day, and studied by night, and at the end of the year he went back home, ready for the next step in his march upward to fame. It came in the form of a scholarship to the Curtis Institute of Music in Philadelphia, which he won in competition with other young singers who perhaps hadn't tried quite so hard to train themselves, or who hadn't the same inspirational forces behind them.

Conrad started his studies there under the great baritone, Emilio de Gogorza, famous for years in grand opera, and at the beginning of his second term he was given a contract by the Philadelphia Grand Opera Company. Then there was rejoicing in the Thibaults' small home (for he and the young lady were married before he won the scholarship).

## Into Grand Opera

He continued his work at the Curtis Institute for five years, meanwhile appearing regularly with the opera company and advancing from small parts to leading roles. While in Philadelphia, Thibault also began that part of his career that later was to carry him to the heights—he started to sing in radio.

He made an immediate hit on the air, and an audition at the NBC studios in New York was arranged without any difficulty at all. So Conrad came to the big city, was heard and signed to a contract, all on the same day. It was the proudest moment in his life, the day he and his young wife had dreamed of for years during the lean times that

*Conrad Thibault*

go hand in hand with the start of any career. But the triumph was mixed with bitterness, for the girl he loved and had worked for never knew of it. She was taken to the hospital the day he left for New York, and died as he was on his way back to her.

In spite of this terrible loss, Conrad carried on. His years of training stood squarely behind him. They wouldn't let him quit, they had made a trooper of him. The show must go on—and it did.

The young singer fitted in almost immediately on some featured programs over NBC networks, notably the "Through the Opera Glass" series of recitals with Archer Gibson, famous organist, last year. But this was only the beginning. At present he is heard over NBC networks in three outstanding sponsored programs.

Conrad is 30 years old, well built and a keen amateur athlete, putting up a good battle at handball, tennis or swimming.

### She Capitalized Trouble

It was a series of "bad breaks" that brought pretty and blonde Vera Van to radio stardom. As a baby in Marion, Ohio, where her family had lived for generations, Vera suffered from anemia, and several times the doctors despaired of her life. Finally, one doctor suggested that she be given dancing lessons for beneficial exercise. So Vera took to her toes.

Her health speedily improved. The Van family migrated to California in the hope that she might benefit from the climate. By this time, Vera had become a talented dancer, and when only seven years old she was earning a hundred dollars weekly as premiere danseuse of a child ballet. It was her early illness that resulted in her success on dancing feet.

But while she was tripping the light fantastic another "bad break" came along. She suffered a severe attack of influenza just as her mother was on the point of signing an at-

Vera Van

tractive vaudeville contract on her behalf. A stroke of ill fortune it seemed, but with her recovery came a more lucrative and desirable engagement in a musical show. Vera says her four months as ingenue with this company gave her the diversified experience that has helped her more than any other work.

Five years ago, Vera, who now is really a very healthy young lady, was stricken with spinal trouble, resulting in her inability to move her left side for several weeks. This affliction was diagnosed by the doctors as an aftermath of too much toe dancing as a youngster. She was ordered off her feet for a long rest.

### From Toes to Transmitter

But, figuratively, Vera was still on her toes. Now accustomed to turning the bad breaks to her advantage, she speculated on how she might benefit from this siege. So she started singing—and by the time she was up and around, her friends had convinced her that voice was her forte.

It was to KFI, Los Angeles, that

*Don Ross*

she took her songs and one hour later she was signed on the dotted line.

Her next radio work was with KMTR, also on the west coast, where her singing was so well received that at the termination of her contract, KHJ, Columbia's outlet, hurriedly signed her up. All the while she was studying at school, taking voice culture and making personal appearances, including an engagement at George Olsen's Club in Culver City.

Then came her appearance on the California Melodies program, which served as the network cradle for Bing Crosby, the Boswell Sisters and John P. Medbury. Now it seems that anyone carrying a diploma from the California Melodies school finds a rosy path to success ahead—more than likely in the east.

But Vera Van came very near not making the trip to New York where she is heard on three programs each week. She was just about to sign a year's contract in Los Angeles with an orchestra, but her lawyer, who was to approve the terms, was called out of town. Vera, anxious to begin work,

was disappointed. She thought it was another tough break. When he returned, and five minutes before she was to close the contract, a telegram arrived from New York with the invitation to come east.

Vera lives with her mother in a Manhattan hotel. Her first big ambition was to be a nurse. . . Raymond Paige and Ted Fiorito are her favorite band-leaders. . . Likes horseback riding, canoeing and hiking. . . Collects all sorts of silver money. . . Also gathers toy dogs and curious vases. . . Her favorite song is "Night and Day." . . Her pet fan letter was from a young man who said: "You sing so beautifully that you are probably as ugly as sin and at least forty." She is very pretty and nineteen.

#### **Jane Froman's Husband**

Don Ross, heard over the Columbia network as the Pontiac Minstrel, was born at Osakis, Minnesota, on July 16, 1905. His father, Fred E. Ross, is a minister and his mother is the former Mary Hamm. The Ross family points with justifiable pride to its distinguished Scottish ancestry.

At an early age Don's father was transferred to a pulpit at Washington Court House, Ohio, and it was there that the baritone received his primary education. During vacations he took a job in the local theatre at \$2.00 a week. Although he served as general helper—his duties included selling tickets, acting as usher and being a prompter in the wings—his real interest was in the entertainment side and from those early days dates his ambition to be a performer.

After graduation from high school he matriculated at Ohio State University. College was no bed of roses for Don. He had to help pay his way by being a chauffeur, digging ditches and working for a roofing company. With it all he managed to receive good grades in the classroom as well as take part in several activities. He was a member of the football, baseball and basketball squads, took part in col-

lege dramatics and debating and was vice president of the Glee Club. A fellow singer was Jack Brooks. As a team he and Don were featured in several college shows. Their work was exceptionally well received by the students, who encouraged them to continue it after they left college. In a short time Brooks and Ross were known all over the country. They started with appearances in picture houses, were featured in an edition of the Greenwich Village Follies and for several seasons were on the Chicago staff of the Columbia Broadcasting System.

While on tour the harmonists played an engagement at Cincinnati and were invited to make a broadcast over a local station. They were introduced to an attractive, brown-haired girl. Soon after Don Ross formed a new partnership, this time for life. The girl was Jane Froman, now a radio star in her own right.

The team of Brooks and Ross was dissolved early this year. Jane was enjoying radio and personal appearance success in the east and Don decided to follow her to New York. The Rosses live in Garden City, a Long Island suburb of New York. Not on the air together, they attend each other's rehearsals and programs. When Don is broadcasting, he can see Jane in the control room, singing his songs along with him and nodding encouragement to him.

On their off days they swim, ride and play tennis and golf together. In the evenings they learn new songs. This winter Don and Jane will be in the Follies, their first regular joint appearance and the first radio performers to be engaged for the famous Ziegfeld production.

#### George Olsen's Wife

Ethel Shutta, who is heard on the Nestle's Program as a co-star with Walter O'Keefe, every Friday at 8:00 p. m. EST, over the NBC (Blue) network, has sung for the musical comedy stage, the microphone and the talking picture screen—but this is the first time she has been in an

extended radio series without her husband, George Olsen.

Miss Shutta was featured in the Ziegfeld Follies and in "Louis the Fourteenth." She had a leading role in both the stage and screen versions of "Whoopee," and she has been on many outstanding radio programs with Olsen and his music.

A daughter of stage parents, Ethel made her first public appearance when she was three, and took her first speaking part when she was eight. From then on she never was away from the stage for more than a few months at a time.

Singing came naturally to her, and she soon began to appear in musical as well as dramatic productions. By the time she was in her 'teens she was a veteran trouser. She had played all over the country. Then a vaudeville act brought her to New York and her first part in a Broadway revue. An engagement in the Follies followed, and she was on the road to fame.

Miss Shutta came to radio after her retirement from the musical comedy stage as an occasional vocalist with her husband's orchestra. Popular demand soon made her an air headliner.

Ethel Shutta

# STATIC REDUCING ANTENNA SYSTEMS

. . . By B. FRANCIS DASHIELL

**W**HEN electric sparks are created by friction or the opening and closing of electrical contacts they radiate energy in the form of tiny radio waves which carry from a few to several hundred feet. All electrical apparatus, such as light switches, motors, utilizing brushes, street cars, trains, automobiles, elevators, circuit breakers, dial telephones, vacuum cleaners, refrigerators, fans, and other appliances, make themselves heard by producing clicks, hums, crashes, bangs and buzzes in the radio loud speaker. Motors produce a constant, grinding noise; x-ray or violet-ray machines create a loud, mushy, crackling roar.

The radio receiver picks up and amplifies this "man-made" static. The oscillations enter the receiver through the power lines, the antenna and the lead-in, or through the set itself. In the April, 1933, issue of *RADEX* (No. 68), we learned how static impulses coming over the power lines can be filtered out. But frequently static interference continues to baffle the listener. Let us, then, turn our attention toward the antenna system.

## The Inevitable Static

The antenna, in most all cases, is sufficiently removed from the active field of man-made static generated by devices operating within the building in which the receiver is located. We cannot expect the antenna to avoid picking up the natural atmospheric static which abounds when the weather is stormy, humid or hot. If we try to eliminate nature's static or atmospherics we at once hinder the collection of radio signals.

Since the majority of man-made static impulses cannot reach the an-

tenna because of its location high above the receiving set, it at once becomes obvious that the set itself or the lead-in wire may be at fault. But, because the modern receiver is so perfectly shielded, it seldom can be blamed for picking up noise.

## Lead-in Is Susceptible

Let us, then, examine the antenna down lead. This wire drops down from the high, outside antenna and passes close to the sources of local man-made static. Tiny spark waves or oscillations easily pass into the field of the wire and their impacts create the "shock excitation" that instantly becomes the static we hear in our loud speakers.

*The Philco Antenna System*

Now it is quite possible to bring the lead-in wire down past the zone of local static through a pipe or some other form of metallic shielding which will not permit radio waves to pass. And in this way the impulses of static would be prevented from reaching the wire for they would pass into the earth by way of the grounded, surrounding metal conductor or shield. But such a shield, if it happens to be rather lengthy, will sap most of the radio energy collected by the antenna because of a condenser or capacity effect set up between the insulated inner wire and the surrounding metal surface. The higher the frequencies being received the greater will be this energy loss through the long condenser.

Short waves, therefore, are very difficult to handle, and the shielding of lead-ins usually produces much signal loss. The least condenser effect in a short-wave antenna system means loss of signal strength. But success has been obtained by certain transposed down-lead systems in place of the usual shielded lead-in wire.

Shielding against static has been improved by utilizing small radio-frequency transformers for input and output together with a low impedance circuit between the antenna and receiver. Properly matched transformers at both ends of the lead-in permit the antenna to be located in the most desirable place and position, and the receiver may be installed in any location without relation to noise or proximity to the antenna.

### Antenna Transformer Systems

The general principle in use by several efficient noise-reducing antenna systems now on the market is decidedly similar. A small transformer is attached to the antenna wire. Passing down from this device is a pair of twisted lead-in wires covered with a metallic braid or shield, which is grounded. At the radio end another transformer connects to the antenna and ground terminals of the set. There are some systems which do not

*The Lynch Transposed Aerial*

use a shield covering, but transpose the two wires continuously all along the circuit. Several transformers may be used on one lead-in so that three or four sets can be operated simultaneously on a single antenna.

Amy, Aceves and King offer their "Akaformer" outfit which consists of an antenna Akaformer and a set Akaformer joined together with a length of single-wire, flexible-braid, shielded cable. Two antenna leads are provided at the set Akaformer; one for a receiver of low impedance, and one for a high impedance set. Tobe Deutschmann's model 33 "Filterizer" consists of impedance matched units for the antenna and radio set with a Filterized shielded down-lead cable. A good match may be obtained between any aerial, the shielded cable, and a receiver of any input impedance. Two terminals on the set transformer permit this close matching.

Pacent offers their No. 341 "Radioformer" system consisting of antenna and set Radioformers and special shielded transmission cable. An additional lead permits careful matching and excellent short-wave reception. Arthur H. Lynch has produced a broadcast noise-reducing "No-Stat" system using the antenna and set transformers and shielded cable. Most of these sets are similar to the Akaformer system, and some manufac-

# REPORTING

## Reception in French

IN the March, 1933, issue of this magazine (No. 67) appeared a letter in Spanish to be used in reporting reception of Spanish-speaking stations. Accompanying it was the English translation. This month we present the same letter in French; for the English translation see page 19 of the issue above referred to.

Monsieur le Ingénieur Chef  
Station de Radiodiffusion (Call)  
Cher Monsieur:

Je viens de m'amuser beaucoup en écoutant votre station de radiodiffusion (Call) en—kcs. Ci-dessous se trouve la liste des sélections que j'ai entendues. Voulez-vous avoir la bonté de vérifier celle-ci avec votre liste des stations, et m'adresser une vérification de ma réception.

Tobe Deutschmann Transformer Aerial

turers have been licensed under the Amy, Aceves and King basic patents which are said to control the system. The older Kolster system has been described previously in RADEX (November, 1932).

### The Transposed Lead-In

Some experimenters have perfected devices that do not use shielded cable. The Philco system avoids the use of metallic shielding and consists of two transformers; one, the antenna, and the other, the set transformer. A length of transposed, twisted lead-in wire is used to drop down from the antenna. A high ground close to the antenna is necessary. This Philco "Three-Purpose" system not only prevents man-made static from entering the set, but is said also to increase efficient reception and bring in many more stations. The "Staticlear" system also uses the transposed two-wire down-lead cable. Both it and the Philco work well on short waves without the need of a special transformer terminal. The Lynch "Doublet" transposed system was designed particularly for use on short waves, but it

# EXPLORING *the* Short Wave SPECTRUM

• • • *With* PAGE TAYLOR

**B**ECAUSE of the fact that reliable short wave reception depends upon so many different factors, it is necessary that broadcasting stations have constant and comprehensive reports from listeners so they may determine the proper frequencies antennae and operating schedules to use to obtain maximum results in transmission.

To assure these stations of a continuous stream of reports covering reception on the North American Continent, RADEX has appointed from among its readers, Official Auditors, whose duty it will be to watch the transmissions of a selected group of stations from day to day. These reports will be compiled and sent to the stations once each month. It is expected that such reports covering a period of several months can be of value to the designated stations, and of course, they will aid listeners in that they will surely result in better reception on this Continent.

## From the Stations

Mr. D. R. P. Coats, Broadcasting Manager of VE9JR, kindly sends us their correct operating schedule. This station works on Sundays from 9 to 10 p.m.; on Saturdays from 9:30 to 10 a.m.; 11 to 11:30 a.m.; 12:45 to 1:15 p.m.; 7 to 8:30 p.m.; and 9 to 10:30 p.m. On the other days of the week the schedule is: 9:30 to 10 a.m.; 11 to 11:30 a.m.; 2 to 2:15 p.m.; 3:15 to 3:35 p.m. and 7 to 10:30 p.m.

Mr. Coats writes that he would be very pleased to have RADEX readers report regularly on reception from VE9JR. They may be addressed at Radio Office, 155 Royal Alexandra Hotel, Winnipeg, Manitoba, Canada.

Mr. Hermann Degwitz, owner of YV3BC, writes:

"Answering your letter, we are giv-

ing you below our latest schedule:

6134 kcs., 11 a.m. to 1:30 p.m. and 5 to 10 p.m., Caracas time.

9510 kcs., 10 to 10:30 p.m., Caracas time.

"The above is on working days, on Sundays we transmit on 6134 kcs. from 9 a.m. to 12:30 p.m. and from 3:30 to 7 p.m. Caracas time in addition to our regular transmission which starts at 8 p.m. and ends at 11 p.m.

"We are not working on 6080 kcs. any more, and we believe that in a short time we will get a new frequency assignment instead of 6134 kcs. as this wave is very near W8XK (only 6 kcs.) and results in considerable interference.

"Our address is Radiodifusora Venezuela, Bajos Pasaje Ramella,

*Howard Barlow, conductor of the Columbia Symphony Orchestra, is one of the air's most popular leaders. Mondays at 10:45 p. m. EST and Wednesdays at 11:00 p. m.*

Caracas, Venezuela."

Caracas time is one half hour faster than EST.

### German S.W. Stations

From Herr Eppen of the Reichspostzentramt comes a letter containing accurate information about the German stations.

"The transmitters are located at Zeesen, a suburb of Berlin," he writes. "At this time two transmitters are working on various wavelengths and with different aerial systems.

"From 8 a.m. to noon, EST, one sender works on 15,200 kcs. (19.737 meters, DJB), also from 12:30 to 6:30 p.m. This same transmitter also works on 31.38 meters (DJA).

"The second transmitter works from 10 a.m. to 6 p.m. on 25.51 meters (DJD), and from 7 to 9 p.m. on 49.83 meters (DJC). Many programs are relayed from our long wave station on 1634.9 meters and also from the Berlin sender over the aforementioned wavelengths. The antenna output of these stations is 5 kw. and modulation is about 70%."

Additional information is given in a letter received from the Reichs-Rundfunk-Gesellschaft, Berlin-Charlottenburg 9, Haus des Rundfunks, Masurenallee. This letter states that DJA, 31.38 and DJC, 49.83 meters, work daily from 7 to 9 p.m. EST with news items in German, English and Spanish nightly at 8:45 p.m.

Reception reports for German broadcasting stations should be sent to the Reichs-Rundfunk-Gesellschaft at the address given above. We believe, however, that the Reichspostzentramt will continue to acknowledge communications regarding commercial or experimental stations. This organization can be addressed at Berlin-Tempelhof, Schöneberger Strasse 11-15.

### In the Dominican Republic

Accurate data have been received about station HI-1-A from its owner, Mr. Rafael Western. He writes:

"This station is constructed in this

country by its owner, Mr. Rafael Western. It works on a power of 7½ watts, and according to reports is heard in the United States, Cuba, Porto Rico, Venezuela, Virgin Islands and all the Dominican territory.

"The actual hours of transmission which we have scheduled are the following: 8 to 8:30 a.m.; 12:30 to 1:30 p.m. and 8 to 9 p.m. every day." (We believe EST is indicated.)

The frequency used is given on the letter-head as 6,272 kcs. or 47.8 meters, and the address as: Estacion Radiodifusora Commercial HI-uno-A, "La Voz del Yaque," Santiago de los Caballeros, Dominican Republic.

The two League of Nations stations at Prangins, Switzerland, have changed their schedule, according to information received from C. R. Anderson, 1026 1st St., N. E., Mason City, Iowa; I. Beitman, 249 Gates Ave., Elyria, Ohio, and John Strong, 1436 Meridian Place, Washington, D. C. Stations HBP and HBL operate

"It's funny business" that takes Milton Berle, 24-year-old wise-cracker, from Broadway to the Old Gold broadcasts with Fred Waring's Pennsylvanians. You will hear him Wednesdays at 10:00 p. m. EST on the Sec-Bcc-Ess.

now from 5 to 5:45 p.m. EST Saturdays instead of Sundays.

### A Two-Way Police System

Some of our readers may be interested in the information contributed by Nathan Handler, 102 West 16th St., Bayonne, N. J. He writes that his "home town," Bayonne, has installed and is now using a short wave police radio system that works in duplex, or, as he says, "a system that works both ways, from a central station to police cars and from the cars to the station at headquarters, at the same time. The headquarters set operates with 25 watts power and the 9 police cars with 4.5 watts each. They all use the 34,630 kcs. frequency. The local police also have permission from the FRC to operate experimentally on the following frequencies: 41,000; 51,400; 60,000 and 400,000 kcs. I have not been able to find out what call letters are used. I hope you will find this information useful. This is the first time in the East that two-way communication has been tried with police radio."

These stations have experimental call letters at this time. The headquarters station is W2XEA, while the nine police cars are W2XEB, W2XEC, XED, -XEE, -XEF, -XEG, -XEH, -XGG and -XCJ. We would be interested in knowing how many of our readers are able to receive these ultra-high frequencies. 34,600 kcs. is equal to 8.6 meters. If readers are interested we will include in another issue of RADEX a list of these high frequency police transmitters. Several such stations have been licensed and should be in operation in the near future.

### Caracas and Saigon

A questionnaire sent to YV1BC was returned with the information that two frequencies are used, 6112 and 11,695 kcs. with 300 watts power. The station announces as "YV1BC, Broadcasting Caracas, le habla a la nacion," and chimes are used as an interval signal. The mailing address of this station is Compañia Anónima

*When the Richfield Country Club broadcasts on Mondays at 7:30 p. m. EST, listeners hear these artists. Left to right, Mary McCoy, soprano; Ernest Chappell, m. of c.; Betty Barthell, blues singer; and Jack Golden, orchestra leader. Miss McCoy, who once toured with Madame Schumann-Heink, sings light opera and semi-classical selections. Miss Barthell, throaty voiced daughter of the South, sticks to popular "blues" tunes, sung in a style all her own.*

Almacén Americano, Apartado 290, Caracas. YV1BC sends an interesting 14-page booklet filled with pictures to listeners in acknowledgment of correct reports.

According to a letter received from Compagnie Générale de Télégraphie Sans Fil, P. O. Box 238, Saigon French Indo-China, two transmitters working on three wavelengths are used for telephony with Ste. Assise, France.

Mr. P. Marty of this station writes: "Station FZS works telephony with Paris, FTK, on 16.345 meters (18.342 megs.). The service commences at 1345 GMT (8:45 a. m., EST). The power in the antenna is 15 kilowatts and the frequency is stabilized by quartz crystal.

"Telephonic communication with France is also maintained on 25.02 meters (11.983 megs.) by the same transmitter, FZS.

"We also use, but more rarely, another transmitter, FZR, which works on 18.51 meters or 16.200 megs."

A letter from TGW informs us that they work on short and long wave simultaneously, as follows:

Sundays, 12 noon to 1 p. m.

Other days, 12 to 1 p. m.; 6-7 p. m. and 9-11 p. m.

Standard time is not indicated, but we believe this schedule is given in CST. The wavelength is given as 45 meters.

Despite the fact TGW consistently requests reports from their audience, we have never heard of anyone receiving a confirmation.

### The Summer Logs

"We've had some swell days this summer for short wave," reports Geo. K. Glass, 1320 Cadillac Blvd., Detroit, Mich. "The old Kennedy has performed perfectly. I've never been able to get NRH but in trying for him I picked up XETE in Mexico.

"DJD and DJB have been wonderful all summer. DJA and DJC also come in regularly, but not so perfectly. GSF, GSB and EAQ get an A-1 rating. Pontoise does not line up very well though some Sundays I get them on 25.2 and 25.6. I've gotten VK2ME a few times. In general, I have been doing more listening to programs than DXing. In fact, we've danced here several times to music from DJD. They broadcast a German orchestra one evening playing 'Stormy Weather' and we just had to dance. They sure outline their programs for the following two days in fine style at 7 p. m. I've had quite a few letters from Deutscher Kurzwellensender. They are quite interesting in reports.

"I notice that sometimes GSD and DJD conflict but yesterday I could separate them perfectly. Had another session with 2ME yesterday morning. Couldn't hear them from 1 to 3. They came in very good from 5 to 9 but couldn't get them from 11:30 to 1:30.

"The Hummingbirds" are the latest trio of harmonizers to be heard on the CBS. With Ted Husing, Barbara Maurel and Leon Belasco's orchestra, they provide the talent for the Oldsmobile programs, each Tuesday and Thursday night from 10:30 to 10:45 EST. Left to right: Margaret Speaks, Katherine Cavalli and Dorothy Greeley.

I occasionally get Pontoise on 25.6 clear enough to understand if I knew enough French. YV1BC has been missing for some time for me."

"South Americans are not receivable here at this writing," advises C. R. Anderson, Mason City, Iowa. "The German, French, and English are good at times. Spain being the most consistent of the lot, but you know how inconsistent short wave reception can be, one day no foreigners being heard at all, but the next time you turn in they are all there. J1AA on 30.4 meters is now on from 6 to 7:30 a. m. daily. I often hear a Mexican in the mornings on 16.88 meters, call not yet known. A Spanish station on 30.45 meters is also heard playing American recordings and asking for any American or Mexican station to come in. I would like more information on this from anyone."

(Continued on page 33)

# SICK SETS *and* Their Symptoms

... *By the* TECHNICAL EDITOR

**P**LEASE tell me what sort of circuit is used in the RCA R-21 receiver.

The RCA model R-21 receiver uses a 9-tube circuit, or eight tubes without counting the rectifier. It is a standard superheterodyne receiver and takes the following tubes: one -35 radio-frequency, one -27 oscillator, one -24 first detector, one -35 intermediate frequency, one -27 automatic volume control, one -27 second detector, two -47s in push-pull power output, and one -80 full-wave rectifier.

## Pick-Up With RCA Victor R-74

*How can I use an electric pick-up table in connection with my RCA Victor R-74 radio receiver?*

This particular receiver has a grid bleeder or resistance connected from the grid return to ground of the second detector, with a 0.1 mfd. condenser shorting or by-passing the return to the cathode of this tube. Place the terminals of the pick-up across the bleeder mentioned and remove the 0.1 condenser. It may be necessary to put a .002 mfd. condenser in its place. Then shunt or by-pass the 20,000 ohm second detector cathode resistance with a 3,500 ohms resistor. This will complete the adaption of the receiver.

## Changing To Short Waves

*I have a Radiola AR 812 receiver that I would like to change over for short wave reception if practicable. Will you advise me how to proceed?*

Although this circuit has been adapted to short wave reception there is no specific information available on the method of making the conversion. The loop must be tapped and only a small portion of it used. The tuning condensers should be reduced in capacity or value or replaced with

smaller ones. The coils shown in your circuit diagram, marked L1b, L2, L9 and L10, must be reduced in inductive values. And adjustments, alignment and the balancing of the circuit for higher frequencies is then a matter of experiment. Removal of turns of wire from the coils to shorten the wave lengths received are best determined by experimentation.

## Voice Coil On Sparton 301

*How can I go about cutting the speaker wires to insert a silencing switch when using headphones on my Sparton model 301?*

*When "The Bath Club" resumes its programs over WABC and the Columbia net, on Sunday, Oct. 1st. at 9:00 p. m. EST, Nino Martini, peer of radio tenors, will join the cast. Martini is the first singer to go from Radio to Metropolitan Opera though many have traveled in the other direction.*

Two yellow wires connect the power tubes to the primary of the output transformer, and blue and red wires attach to the field magnet of the field coil. Trace the two yellow wires from the chassis to the transformer. There you will find also two additional short wires leading from the secondary of this transformer to the voice coil which is wound on the tip of the speaker cone, being somewhat free to vibrate or "float." These are the voice coil wires, and either one may be cut for the series insertion of the silencing snap switch.

### Replacing Majestic Tubes

*Will it be possible to make a substitution of newer tubes for the tubes now in my Majestic model 90-B receiver?*

All Majestic tubes are similar, with only a very few exceptions, to standard tubes and they all may be interchanged. In your set all four of the -27 radio-frequency tubes may be replaced with 56s. However, in the interest of economy, we suggest that you purchase but one tube at a time and replace only those -27s where actual improvement may be noted by ear. If a 56 works well in each of the -27 sockets then all -27s may be replaced. No other changes are recommended.

### Magnetic Speaker On A-K 55

*How shall I go about attaching a magnetic speaker to my Atwater Kent 55 receiver?*

We assume that you wish to attach the speaker for use simultaneously with the dynamic speaker of the set. Of the four wires in the cable from the chassis socket to the speaker the two yellow wires with a black trace through them are the voice coil leads. Cut one of these short wires and insert a single closed circuit jack in series with the cut. When a phone plug is inserted in the jack it connects the magnetic speaker in series with the dynamic speaker—both operating together. If the magnetic speaker is not desired when the dynamic speaker operates, or vice versa, use another

type of phone jack which will cut off the dynamic speaker when the magnetic speaker plug is inserted in the jack.

### New Tubes In National Jr.

*Do you think it would be wise for me to change over to the newer types of tubes in my National Jr. short-wave receiver?*

The circuit is very critical and for this reason it is not advisable to substitute other and newer tubes for the ones now in use. The set is designed so carefully for the tubes furnished that any change will tend to throw off the extremely fine balancing of the circuits. Replace the old tubes with new ones if they are weak. Clean the set, particularly between the plates of the variable condenser, and remove all dust that tends to lower efficiency.

### Radex S. W. Converter

*I have been able only to procure a 30 millihenry choke for my short wave converter I am building. Will this work? Which tubes in my set are best for furnishing filament and B current?*

The 30-mh choke coil will serve quite well. The values given in our May and June issues were, of course, those best calculated to work in harmony with each other. Slight variations will not matter very much. You may take the filament current from one of the -45 tubes with a wafer adapter beneath, and the plate current with another wafer beneath the -27 first audio tube. This, of course, provided your receiver is rather standard in its arrangement.

### Failure Of All-Wave

*I have a Brunswick 9-tube receiver with a built-in short wave attachment which gives very poor results. Can you advise me how to use this set? Also, there are two coils that came with my receiver and I do not understand how to use them.*

This Brunswick receiver is a sort of all-wave set with plug-in short-wave coils. Since our available data do not give the values of the coils,

as well as some other essential information, we advise you to get in touch with Brunswick Engineers, 619 West 54th Street, New York, N. Y., who will gladly furnish you with all needed information about their receivers.

### Hum in R. C. A. Set

*My RCA 66 set has an objectionable hum when you sit to one side. It sounds wavy if the station tuned in is a powerful one. How can I filter this hum out of the receiver, for it begins as soon as the set is turned on?*

No general statement can be made in regard to receiver hum as there are a large number of possible sources of hum. As tubes become old their emission becomes irregular and causes a hum. The improper neutralization due to shifting tubes from one socket to another may cause hum. There are other sources too numerous to mention, such as improper plate voltage, improper grid voltage, insufficient heater current, leaky or open cathode condensers, defective filter units, etc., all or any of which can only be located by a well-equipped service man and shop. Of course, there is the question of a wavy or throbbing hum caused by station interference which no set can eliminate. It comes under the heading of interfering harmonics caused by two or more station carrier waves working against each other.

In this receiver all of the -27 tubes may be replaced with 56s, but the r.f. tuning, the i.f. tuning, the neutralization, and the oscillator, must be carefully and correctly readjusted. Because of the great increase in gain in these new tubes the volume control need never be turned as high as previously. More shielding on this set is not advised as it will alter to a certain extent the circuit characteristics and possibly beyond the range of the variable adjustments within the set.

### Coils And Condensers

*How are coils and condensers matched up in a radio circuit? How*

*The "Ford Dealers of the Air," otherwise "Lum and Abner," excellent interpreters of rural community life, obviously know their "common pee-pul." On the NBC-WEAF network each Monday, Tuesday, Wednesday and Thursday at 7:30 p.m. EST. They are also on the same systems Friday nights at 10:30 with an old-time sociable.*

*does a condenser tune a coil of wire?*

When you change continuously the capacity of a variable tuning condenser, or change the number of turns of wire on a coil, the process is called tuning. This is the method of regulating the circuit reactance. Reactance in a radio coil is its resistance to a flow of alternating current. A coil may have almost no resistance to direct current, yet present a high resistance to an alternating current. When the frequency is very high even a small coil has a great reactance.

Tuning may be accomplished through a change of condenser capacity, and this variation will balance its capacity reactance against the inductive reactance of the coil when the latter is a fixed unit, such as is the case in radio circuits. What we do by tuning the condenser is to

establish a point of resonance by creating a condition of zero reactance in the coil for the passage of a radio signal of a given frequency. No other frequencies can pass except the one to which the coil is tuned to a state of no resistance, and the circuit is said to be in tune with that certain frequency.

It can be seen, therefore, that coils must be carefully designed so they can be tuned by condensers, and that there is a definite ratio between these two units of the circuit. The coil, in a broadcast receiver, must not oppose frequencies between 545 and 1500 kilocycles which are induced in the receiving antenna, yet it must be capable of being tuned with a condenser to any frequency within that range. The usual condensers have capacities of .00035 and .0005 microfarads, or millionths of a farad. On the broadcast band with a .0005 condenser, about 50 turns of No. 28 wire on a two-inch tube will suffice, or about 65 turns for a .00035 mfd. condenser.

#### Freed-Eiseman Wiring

*How can I identify the wires for batteries on a Freed-Eiseman, model N-89, six-tube set, so they can be attached to A and B battery eliminators?*

The B 135-volts wire leads to the speaker jack and the plate of the -71 power tube in the set. The 90-volts B wire leads to one side of the primary of the second audio transformer; it also connects to —A through the by-pass fixed condenser. The B 22-volts wire connects to the primary end of the first audio transformer and then to the plate of the detector tube. The positive A wire goes to the volume control rheostat. The —A, —B and plus C wires connect to the ground and to one side of the filament terminals of all sockets. Negative C 4½ volts connects to the secondary coil of the first audio transformer (immediately following the detector tube). And C —22½ volts goes to the secondary coil of the second audio tube, thence to the grid of the last power tube, a -71 type.

#### New Tubes Cause Howling

*My General Electric a.c. receiver uses -24 and -27 type tubes which I replaced with 56s. Poor results were had, with whistling and other noises. What should be done?*

You have not indicated the model of your set, but we assume it is either H-31, H-51 or H-71, all of which use the same tube arrangements. The -27 oscillator tube in these sets cannot be replaced with 56s without readjustment and alignment of the oscillator condenser. This part of the circuit is very critical. The same applies to a lesser extent to the second detector, which is also a -27 tube. With rebalancing of the tuning condensers a 56 can be used in place of the second detector. The oscillator is the -27 tube next to the -24 at the right hand end of the chassis (looking down from the front), while the second detector is the last -27 at the left hand end of the row of tubes.

#### Poor Volume On RCA 46

*My RCA model 46 receiver seems to fluctuate in volume for half an hour or so after being turned on. What do you suggest as a remedy?*

The fluctuation appears to be due to trouble in the volume control which is a 50,000 ohms resistance that varies the voltage on the screen grids of the two r.f. tubes—type -22. It should be tested and replaced if at fault. Then there is a line voltage resistance with switch for regulating the 110-125-volt power. These resistances, which are three, each with 16 ohms resistance, may be defective. The series filaments resistors, two in parallel, totalling 268 ohms, in the maroon and red wire leading to terminal 8 of the terminal strip, may need replacing.

All tubes, sockets, connections and resistors must be tested and replaced if defective. It is evident that after the set warms up the defective point expands and produces good contact. There have been cases of such variation in resistance being so difficult to

*(Continued on page 76)*

# NOVICES *and* Experts in the DX FIELD

• • • *At our Readers' Dials*

**I**NTRIGUED by the letters from our DXers, each month sees many new hands twirling the dials for the distant station. Here is one of the most interesting pastimes or hobbies in the world, one in which not a single cent need be spent or in which a verification collection of great interest may be built up. There are no membership fees and no formalities. If you have a radio set, start tonight to see how many stations you can log with your receiver whose call you hear distinctly.

## From a Beginner

"I found RADEX to be so helpful and interesting that I decided to become a DXer," states A. Rodriguez,

Sergeant Service Co., 28th Infantry, Fort Niagara, Youngstown, N. Y. "What are the qualifications to become a member?" Sgt. Rodriguez has a 7-tube All-Wave Silverstone super and one of the first stations he has on his new log is DJC, Zeesen, Germany, which, he says, "comes in very loud and clear, almost like a local. I got this station Tuesday night at 8:15 EDST and again Wednesday at 9:00 and she is coming in again tonight, Thursday as they announced they would. When I first picked them up, it was such a surprise to me that I didn't think it could be possible until 9:00 p. m. when they announced for the second time in German, English and Spanish." In answer to the Sergeant's question, the DX game has been covered in a number of articles in recent issues of this magazine. See What Do You Mean—DX in March, 1932; Radio DX as an Interesting Hobby, in October, 1932; Rules and Regulations of DX, in November; On Riding a Hobby, in December; and many others.

## From Some Old Hands

"There is nothing I like to do better than sit by my radio in the wee, small hours and try for far-off distant signals," says Walter Dice, 714 Chess St., Bridgeville, Pa. "I have never identified any stations farther than the Pacific Coast but won't give up until I do. I do not seem to have any trouble getting California, Washington, Oregon and British Columbia but beyond that, nothing doing. I have heard signals several times on 750 kcs. which could have been KGU, Honolulu, or perhaps JOBK-1, Osaka, Japan. Also on 720 kcs. I have heard signals several times other than WGN, Chicago, but have never been able to get call letters loud enough. I

*Fred Allen, droll funster from the Broadway musical show, brings his own company of clowns to the air as a garnishee for the Salad Bowl Revue. Allen's company includes his wife, Portland Hoffa, Roy Atwell, the twongue-tister, and Jack Smart. Ferde Grofe's orchestra furnishes the music—all on the NBC-WEAF net Friday nights at 9:00 p. m. EST.*

believed these latter signals to be 2YA, Wellington, N. Z. I will not *guess* I heard a certain station and until I hear the call letters and location, I will not count them.

"I did not have an outside antenna last winter because, where I was living, it was impossible to put one up. Neither did I have a ground on my set. Just a short wire run from the antenna post on the receiver to a hot air register. This, I found, made my set very selective because I was able to hear and verify on February 9th, at 7:15 p. m. EST, station CFCC on 1010 kcs. using 250 watts, with our own local KDKA using 50,000 watts at the same time on 980." Among Walter's other catches are HJN, YV1BC, KFPM, WKAQ, KFOX, KMPC, 10-BQ, CJOR and WNBW.

"Due to a difficult course in ceramics here at the University of Illinois," comments Rexford Newcomb, Jr., 605 Nevada Street, Urbana, Ills., "I was unable to do any DXing all last winter. Two weeks ago, however, I stayed up late to listen to a favorite dance program and, after its conclusion, I twirled the dials for fun and was lucky enough to get in with a bunch of stations giving frequency check program. On that night and the following, I logged 31 new stations, bringing my total log to 418. The best catch of these test programs was KGKL, 100 watts in San Angelo, Texas. This came in well despite the summer static. I received a verification from them yesterday morning to bring my total verifications up to 283.

"My pet peeve is a station that broadcasts nearly all night on some channel for months at a time and simply ruins DX on that particular channel. For instance, I can't seem to get anything but WEXL on 1310 kcs. and WNBR on 1430.

"I don't believe I have ever seen any other DXer mention the Trav-ler set in RADEX. I have done all my DXing on a 6-tube midget set of this make which I think should constitute some kind of a record. Anyway, if any other readers are DXing with a

set like mine, I would be especially glad to correspond with them."

"Congratulations on your June issue!" writes Murray D. Bryce, Rt. 1, Royal Oak, B. C., Canada. "It is just about the swellest possible. It sure is great to see the foreigners listed in the indices. I wish you would publish such a pair of lists several times a year.

"Through RADEX I have made friends with another RADEXer, Frank Macedo of Victoria (page 18, February). I visited him, saw his set and two hundred odd veris. His log now totals about 385, fifteen ahead of me. I think it is the largest on Vancouver Island. His record is nothing short of remarkable, as his set is only a tiny two-tuber, but I don't think there is the slightest doubt about its authenticity, which is more than can be said about some of the fans.

"No doubt you have heard that the DXers on the coast have put on a

Al Goodman and his orchestra furnish the music for the Irvin S. Cobb programs, Wednesdays and Fridays at 9:00 p. m. Columbia time. Cobb isn't much of a hand to watch the clock and this makes Goodman do some fast mental calculations.

campaign to get some time for DXing on the 1200 channel by getting KGFJ, the 24-hour-a-day nuisance, to leave the air sometimes. We have been writing both the station and the FRC, but with little avail. The station has not replied. The FRC said, "There is no restriction as to the number of hours an unlimited time station may operate, regardless of classification—local, regional or cleared channel. Therefore no action may be taken by the commission to curtail the present operating schedule of station KGFJ." It is certainly too bad if nothing can be done."

### Our Symbols

"Who says you can't DX in the summer?" postcards Rex Newcomb, Jr., Urbana, Ill. "I've added 48 new stations to my log since August 3rd bringing the total to 453. I don't agree with your symbols regarding verifications. I have cards from WJS, WGN, WTAM, WMAQ and KGKY whereas you list all these stations as not verifying reports of reception." One of the questions on our recent questionnaire to all stations was "Do you verify reception for your listeners upon receipt of accurate report and return postage?" When a station answers Yes or No, we have to assume they can read the English language and know what they are saying. The symbols in RADEX indicate the answers the stations themselves gave us. When we attempt to change these symbols because some listener did or did not get a verification, we get into hot water. We can only tell our readers exactly what the stations told us.

"To prove to those DXers who believe in the fallacy that DX is terrible after June 1st," remarks Karl J. Halpern, 495 E. 3rd St., Brooklyn, N. Y., "the following is a list of some of the stations I have heard testing: KTFI, KGGM, WIND, WMBO, WNBO, WHBC, WHBD, WIEH, WEXL, and numerous Pacific coast stations from 500 watts up. Every one of the above stations was heard with a minimum

of static. This summer has been exceptional in that many small stations have been testing. WIND is on every morning till 4:00 o'clock EDST, with their Old Milkman Matinee. WIEH is WMCA's short wave transmitter on 1542 kcys., a very good catch. They use between 10 and 50 watts. Can be heard in the early evenings."

"My radio log for the two years I have been DXing," reports Luther E. Grim, 505 S. Main St., Red Lion, Pa., "stands at 586, with 36 verified. About ten that I know of have been deleted since I heard them. There may be more when I check over the Canadian changes. These are all included in my log. My verification from HJN arrived sometime in May, making my second South American verification, YV1BC being the other."

### Likes His New Set

"After three years' experience with several different sets," contributes Clevement Van Velsor, 1033 Sanford Ave., Irvington, N. J., "I have come into possession of a set I've always wanted—the new Scott Deluxe. I find it to be the most powerful instrument for reception I have come across. Really, it is too fine to be called merely a set or receiver; it is an instrument for reception. Even in August I can pick up every channel by 9:00 p. m. EDST. Two weeks ago I pulled in every single channel save 850 (WABC was a little too strong for that one) at 8:30 p. m. When I can get WDEL, Wilmington, at 6:00 p. m. and WHAM, Rochester, at 7 during the summer, I need not mention what I expect when winter comes. Selectivity is fully 25% better than other sets I have used. I mean by this, selectivity over the entire dial and with all stations. I have been surprised again and again by the way I can pick up distant stations which heretofore were drowned out by interference. Short wave reception is all a real fan could ask for. At present GSB is coming in as quietly and as clearly as our local WOR. Even the great amount

of ignition interference from passing cars which formerly ruined many good programs bothers me now only a little."

### Radio in Cuba

J. A. Vinas, Vista Hermosa letra "L", entre S. Pedro y Pinera, Cerro, Havana, Cuba, kindly sends us the latest official list of the Cuban stations and adds: "Now for a little chat. We have few real radio fans in this island. Short wave here is in its cradle as far as fandom is concerned. There seems to be a tendency to spend all in a radio set but as little as possible on antenna, ground and accessories. On the long waves, anybody with any kind of a radio hears all of those 50,000 watters and a few 25,000 and 5,000 ones that you have up in the states and some of the big ones in Mexico, but none of the rest even those located right here in Cuba outside the Havana city limits. Tell your readers to tune in for a native program on CMCJ with the best singers of Cuban airs in the country. Also for CMCY every Sunday night from 9:00 to 11:00 EST for the best imitation of last-decade theatrical successes in Spanish."

Here is a DXer that has the courage of his convictions. Robert Rosenberger, 17 Janssen Place, Kansas City, Mo., writes: "Kindly inform all DXers that any one who will telephone WE-4882 in Kansas City, Mo., will hear LR4, Radio Splendid, Buenos Aires, via the phone between the hours of 8:00 and 9:00 p. m. any Tuesday or Wednesday evening (when conditions are half-way fair). I will promise to tune this station in at least half the time although I cannot guarantee the volume nor conditions. I receive this station so frequently that I can safely say that most people who telephone me will hear LR4 relayed on the telephone." That's a pretty big offer Robert makes and we hope conditions will be favorable if he gets any calls.

Sam Kiamie, 2357 Sampson Ave., New York City, has just purchased a Grebe model 88 super which he says

is "a wonderful little set. It is not only sensitive but gives ten-key. selectivity on local stations. Today I got a great kick out of pulling in WIBG in Glenside, Penna., only 25 watts, in the afternoon although WAAT in Jersey City and WBSO in Needham, Mass., on the two adjacent channels were also on at the same time. WIBG gave its location as Germantown and not Glenside."

"I have been DXing for five months and have logged 180 stations," records John Hawkins, Sallisaw, Okla. "My best catches are CMC, WEXL, WJTL, KTM, KTFI and KTAR. I am using a Philco Model 70, 7 tubes. I would like to correspond with a DXer on the west coast."

### Foreign Programs

Should radio stations in the U. S. A. pick up and rebroadcast programs for foreign countries. This question is raised by Earl R. Roberts, 42 Burt Avenue, Newark, Ohio, who writes.

"I am now a member of the IDA of Bloomington, Illinois and have written to a number of Spanish speaking stations for DXes this fall to be dedicated to the International DX'ers Alliance and the Atlantic Radio Club. By writing these letters in Spanish, better results are obtained in receiving replies as I found out last year. So far I have sent to these stations for DXes during the months of October, November, and December 1933: PRAA, PRAG, PRAK, LR4, LR5, OAX, ZP1, HHK, CX26, CX24, CE86, CE74, EAJ1, EAJ3, Algiers, N. Africa, Rabat Morocco, La Paz, Bolivia Fecamp France, Julianehaab Greenland, and in SW to YV2AM, EAR58 and CT3AQ. Replies have been received from PRAA and CX26. The former apologized because they were unable to accept the DX and the latter stated that they would be ready to "prolong their transmission on a Saturday morning in order to facilitate the reception." The date and hour I asked for CX26 is Saturday, November 18th from 3:30 to 4:30 a.m. EST. They asked whether the

program was to be retransmitted or not but I do not know if they wanted it to be or not. I'll leave that up to them since I think WIOD Miami might retransmit it as they did HJN once last fall. I don't care much about it myself because some DXers are sure to take advantage of it and write direct to CX26 for a verification. What do you think?

"As I receive their letters of acceptance or refusal I will let you know the dates and hours of each of the programs to print in the DX column."

### Tips and Other Info

Thos. C. Roberts, 1043 S. Boxelder, Casper, Wyo., sends us a clipping from a Casper newspaper regarding a completely new station now under construction for KDFN, and says: "Perhaps when this new station is completed, Mr. E. B. Watson, of Ottawa, Ont., (mentioned in the September RADEX) may be able to log them. For Mr. Watson's benefit, KDFN sometimes stays on the air on Saturday nights until 9:30 or 10:00 MST. They did this last winter on several occasions so if Mr. Watson will try sometime to tune in on them after 9:00 p. m. MST, he might succeed in logging them."

For the benefit of the brethren in "Anzacland," WBBX, Claremont, New Hampshire, will give its first DX program of the season on November 19th, from 2:00-3:00 a. m. EST. The corresponding times "on the other side" according to the RADEX Time Converter are as follows: West Australia, 3:00-4:00 p. m.; Central Australia, 4:30-5:30 p. m.; East Australia, 5:00-6:00 p. m.; and New Zealand, 6:30-7:30 p. m.; all the same day. The information comes to us from R. R. Rawstron, Claremont, who adds: "In the U. S. A. we would appreciate reports relative to tone qualities of our improved amplifying system."

"For the benefit of DXers trying to log Eastern Canadian stations," suggests Donald F. Logan. 54 Bruns-

wick Street, Gruso, Nova Scotia, "you might advise them that most of these stations run the Canadian Radio Commission programs and are on until midnight, AST, or later." Mr. Logan advises us that he has been appointed Eastern Canadian representative of the New Zealand DX Radio Association and that Canadian readers who would like to join the active New Zealand club may write to him.

"I would like to hear from DXers who have a 16-tube superheterodyne Midwest radio," requests Mrs. J. Maple, 1035 S. Vermont Ave., Los Angeles, Calif., "and the success they have on the broadcast band. We are new in the radio game and have not been able to do much so far. It may be our location isn't so good. We are surrounded by about ten broadcasting stations. Just about in the center of them, and also near power lines and streetcars."

A ball game has Walter J. Dmitrzak, 337 Gibson St., Buffalo, N. Y. up in the air. "On the morning of September 1st, from 3:15 to 3:50 EDST, I heard what was positively a baseball broadcast. Whether it was a night game or a far-distant day game, I want to find out. At 3:25 the score was tied, four and four. Static prevented identification of the station which was on either 1170 or 1180 kcs. Three o'clock EDST is eleven o'clock even on the West Coast and it seems hardly likely that a night game would be played that late. Can anyone identify?"

## Canadian DX Specials

The Canadian DX Relay announces the following programs: Time is a. m. EST.

- Oct. 14, 1:00-2:00, WWAE, Hammond, Ind.  
3:00-4:00, WCAZ, Carthage, Ill.  
4:00-5:00, CFQC, Saskatoon, Sask.
- Oct. 22, 3:00-4:00, CKCO, Ottawa, Ont.
- Oct. 29, 4:00-5:00, WWNC, Asheville, N. C.

They say this will be one of the first DX programs, if not the first, for CKCO.

# A Methodical SHORT WAVE SERVICE

• • • *The "Official Auditors"*

**H**ERETOFORE radio listeners have taken a great deal from the broadcasting stations but contributed only too little in return. RADEX has now worked out a method which we believe will be of inestimable service to the broadcasters. Under the direction of our Short Wave Editor, Page Taylor, a group of "Official Auditors" have been appointed for the short wave spectrum. It is hoped in time to have at least one Auditor in each state and in each foreign country.

Each month a group of cooperating short wave stations will be chosen by Mr. Taylor. Our Auditors will check the programs from these stations and submit reports of their reception to Mr. Taylor covering the volume and clarity of the signals, the presence of static and other interference, fading, modulation, etc., etc. These reports will be compiled and sent to each station. The engineer of the station will then have before him a composite picture of the transmission of his signals as received at many widely scattered points.

During the present month, the Auditors will concentrate on the Daventry stations: DJA, DJB, DJC, DJD; VE9JR; VK2ME, VK3ME; and EAQ. In addition to this work, the Auditors will act as official reporters of the short waves to RADEX, providing this publication with a constant supply of authentic data.

The list of Official Auditors so far been named is as follows:

#### California:

Glendale, A. E. Armstrong, 2021 Bonita Drive  
Los Angeles, Stuart Walmsley, 1316 W.

## ELIMINATING NOISES

*"Radio Noises and Their Cure" is a big 75-page book published by the Tobe Deutschmann Corp. to sell for 50 cents. It completely describes man-made noises of all kinds and prescribes the proper treatment in each case. With each year's subscription to RADEX, we will give a copy of this book free in lieu of the Map of the World with Time Converter. Be sure to specify it if desired.*

# KEEPING STEP *with* Radio

• • • *and the* EDITOR

**J**UDGING from the letters we have received, the changes in arrangement in the September issue are meeting with universal favor of our readers. Putting the time on the air in the Index by Frequencies, is a most convenient arrangement. Some readers wish that we would convert all of these times into that of Eastern Standard. While this would be a big advantage to listeners in that zone, we fear it would be very annoying to readers in the other zones. They would be forced to perform mathematical calculations all the time even for stations in their own zone. We wish we knew a happy answer to this problem but we don't. It seems fairer to give the time actually used by each station.

The first "Lesson" in Mr. Dashiell's "Beginners' Story of Radio" appears in this issue and another installment will be found in each succeeding number. It is a very difficult thing to present a highly technical subject in words which anyone can understand but we are sure our readers will have a much clearer understanding of the intricacies of Radio after completing Mr. Dashiell's "home-study course."

Next month, too, our Technical Editor will have an article on "Overhauling the Set" which will, we know, be of great interest to those who must perforce use sets a few years old. While we are glad to present these hints on modernizing the old receiver, at the same time we believe that now is the time to buy a new one. Prices will not be so low again, in all probability for many years, and every purchase now helps strengthen the wings of the blue eagle and keep the factories running. It is almost a patriotic duty at this time to buy everything one needs and can possibly afford.

Anticipating Mr. Dashiell's article, we present a letter from one reader who has made interesting changes in his set.

## New Tubes in Philco

"For those who are interested," writes J. O. Challenger, Apt. 20, 5549 Queen Mary Road, Montreal, Quebec, "I have replaced all the type -24 and type -27 tubes in my Philco super-heterodyne-plus, model 112, by the new types -58 and -56 respectively. I have noted an all-round improvement notably the elimination of interference from local stations with those stations operating ten kilocycles on either side, the quieter op-

## STOPS RADIO NOISE

Acclaimed by Radex readers as the finest system for eliminating local man-made static and improving DX reception. Stocked by leading radio supply houses in every city.

**DEMAND THE ORIGINAL**

Ask your dealer or write

**TOBE DEUTSCHMANN CO. P.**

1033 Perry St.

CANTON,

MASSACHUSETTS

eration of the set and an improvement of the tone. The above improvements appear in spite of operating with range switch set at maximum.

"The replacement of the -27 tubes by the -56 requires only the removal of the -27 and the plugging in of the -56 since the sockets for both tubes are five-prong. The -58, being a six-prong tube, cannot be inserted in the five-hole socket of the -24 so it is necessary to remove the old socket and replace by a new six-hole socket. I do not recommend the use of an adapter because it is necessary to modify the wiring for one of the tubes."

We fear not many of our readers possess Mr. Challenger's skill in making these changes and we hesitate to publish his directions for fear we may lead some owners into water over their heads. If, however, any of our readers feel that they have the skill to make these changes in wiring and sockets, we will be glad to send them the rest of Mr. Challenger's letter by mail.

#### From Little HIH

An interesting letter comes to us from Domingo Dominguez, owner of Station HIH, in San Pedro de Macoris, Dominican Republic. "This small station has only 15 watts with 420 volts and a radiation of 1.15 amperes in antenna and we work on a frequency of 1395 kilocycles. Yet in February and January we were reported heard in Chicago by Lionel F. Stetson and by many radio listeners from different parts outside of Santo Domingo. We are going to have a little on short waves and will be pleased to notify you as soon as it is ready. It will be the same as the other—15 watts, and we are almost certain that on short waves, we will obtain a much better record than on the long waves.

"This little station HIH is almost a sister station to NRH in regard to the record with the difference that our station with such a small voltage and on such a high frequency, cannot pos-

sibly obtain a record for greater distances. I am short of money to make improvements but a number of radio listeners have helped generously and with this assistance I have been going forward slowly with this little station HIH. If any radio listener or radio firm desires to give a present to this little station, a theme of four or five sounds will thank them; or if it is from some make of radio, we will be pleased to mention it in each broadcast when this theme is played and mention the gift and the giver."

As our readers probably know by this time, the long-awaited North American conference was a complete "flop." Practically nothing was accomplished and the conference ended in a dead-lock. Mexico asked for some thirty of the 90-odd channels and altogether the nations south of the Rio Grande and in the West Indies wanted nearly half of the available channels. Canada and the U. S. felt that the demands of our southern neighbors were so vast that there was no hope of even a compromise. Therefore the conference adjourned *sine die*. All hope of clearing up the North American air is abandoned.

#### Club Notes

Too late for inclusion in our roster of the DX clubs last month, comes the following information: The Atlantic Radio Club (membership not stated) was organized in the spring of 1932. The dues are \$1.50 per year (slightly higher in Canada) with an initiation fee of \$1.00 when joining. A four-page bulletin of DX information is mailed to the members every week by first class postage. Last season over one hundred programs were broadcast for the ARC by stations all over North America and many stations gave weekly broadcasts of tips and Club activities.

The Canadian DX Relay opened its new season with a special program from CHRC, Quebec, on September 9th, the news of which reached us too late to make the September issue.

KSD, St. Louis, followed on September 24th and WWAE, Hammond, Ind., will be on from 1:00 to 2:00 a. m. EST, the morning of October 14th. Other programs will follow with prizes for the correct reports received from the greatest distance. Address P. O. Box 339, Goderich, Ont.

The International Radio Society is an unique organization in that it makes no charge for membership or dues. The society has 1220 members in 42 countries, writes Leslie W. Orton, the founder, of "Kingsthorpe," Willowbank, Uxbridge, England.

### Another System

"Why is it that you never mention the Southwest Broadcasting Company of Fort Worth, Texas?" asks B. L. Ahman, Jr., 3313 Westerwald Ave., Baltimore, Md. "It owns eleven stations in Texas and Oklahoma, and features Columbia programs as well as their own from Fort Worth. Some of their stations are KTAT, KTSA, KGKO, WACO, KOMO, KNOW, KGRS, KTRH, and WRR. As an authority for this I have a verification from KOMO explaining who the Southwest Broadcasting Company is, after I had heard a program by them. It seems that they deserve a designation mark as much as Don Lee or the Yankee network. Just got my first new season DX catch. WHB of Kansas City, experimenting on 1120 keys, and broadcasting a frolic on the morning of Monday, August 21st."

"Just a few words in appreciation of the Spanish report-of-reception letter, published in the March RADEX with the necessary words and phrases," writes Miss Florence Haist, Box 157 Lindenwold, N. J. "Could you please publish a French, German and Italian translation, too?" The French translation of the same letter will be found in this issue and, through the courtesy of Radexer Rudolph Kure, 3633 Vine St., (Clifton) Cincinnati, Ohio, a German translation will appear in November. Perhaps some of our readers who

write the Italian language will send us a translation in that tongue.

### Canadian Gossip

"Today, August 31st, CFCA goes off the air," writes Ernest L. Near, 32 Northcliffe Blvd., Toronto, Ont. "They have been operating since March, 1922. They are Canada's pioneer station. Their reasons for signing off are that they can see no future for privately owned stations in Canada. It seems too bad they must close down but with their low power and poor frequency, they cannot compete with CRCT (formerly CKGW) as both carry identical CRC programs.

"Another old-timer to go off soon is CKCL. They have been on the air since October, 1923. CKNC and CRCT are uniting. That will leave just CFRB and CRCT in Toronto. CKCL is now badly heterodyned by XEPN."

Station CFCO in Chatham, Ontario, holds a radio fan program every Sunday morning from 9:15 to 10:15, EST. There are chats on radio reception, DX tips and other features of interest to fandom. Those of our readers who can bring this station in in daylight, will probably find much of interest on this program.

### Still More Outlaws?

Pennsylvania seems to be a hotbed for unlicensed stations if all reports that reach us are any indication. Where are the inspectors for the FRC?

"While fooling around the dials the other day," reports Chas. Solomon, 752 Portland Way, Pittsburgh, Pa., "I ran into two new stations here in Pittsburgh—WWSP in the south hills of Pittsburgh and WBTC in New Kensington, Pa. WWSP came in at about 820 kcs. and WBTC at about 800. I have not been able to get any information on these stations."

Chas. L. Morgan, 800 East 179th Street, New York City, regarding whose skill with the pen, mention was recently made in RADEX, sends us

*(Continued on page 80)*

# INTERNATIONAL CONTEST

## *for Foreign Stations*

**A** DX contest for foreign stations on the broadcast band is announced by the International DX'ers Alliance, of Bloomington, Illinois, which ought to interest our Super-DX'ers. A letter from Charles A. Morrison gives the details:

Starting October 1st, the International DX'ers Alliance, will sponsor a world-wide DX Contest, to ascertain who may be able to verify the most foreign Broadcast Band stations, during the six months from Oct. 1st to Mar. 31st, inc.

All verifications must be in the hands of the judges not later than June 31, 1934.

Verifications must be from stations at least 2000 miles away, and no stations on the same continent as the Dx'er will be counted. (Australia, and New Zealand being considered as one continent.)

All verifications must be approved by the contest judges. In sending verifications to the judges, return postage must be included. In the case of the indecision of a contest judge, on any particular verification, it will be referred to one of the honorary judges for settlement, the honorary judges being neutral. A complete list of judges both contest and honorary, will be announced in the September Globe Circler. For the time being refer all inquiries to Mr. Frank H. A. Johnson, 59 West 66th Street, Chicago, Ill.

The Grand Award in this contest will be a 1934 Model Custom Built All-wave LINCOLN Receiver, through the great courtesy of the Lincoln Corporation.

Second Prize will be a complete, and custom-built Ollie Ross AERIAL-GROUND Unit.

Additional Prizes for the winner in each continent will be a one year's subscription to the Globe Circler.

Special Prize of a one year's sub-

scription to RADEX will go to the member having in the opinion of the judges, the finest single verification.

Any publicity you can give the contest will be greatly appreciated by all members, and you may state that all those desiring further information, or application blanks for I. D. A. membership may obtain the same from the International DX'ers Alliance, Headquarters, at Bloomington, Illinois, or in Europe from Mr. Francis Wiseman of 90 Brighton Grove, Newcastle on Tyne, England, or in New Zealand, or Australia, from F. H. A. Barnett, of 5 Chapman St., Anderston, Dunedin, New Zealand.

---

## Anti-Noise Antennae

*(Continued from page 14)*

responds well to signals in the broadcast band.

Good experimental results may be had with only a cable consisting of a pair of duplex twisted and insulated No. 18 wires. One wire is connected to the antenna and the lower end of the *same* wire hangs free close to the ground and is wrapped with tape for insulation. A connection is made at some point where it passes close to the radio set for the latter's antenna contact. The lower end of the remaining wire of the pair is grounded, and its upper end, close to the antenna, is insulated with tape and left hanging free. A ground wire is run to the receiver but carefully twisted around the short antenna connection previously arranged. The capacitive effect of the paired wires will weaken the antenna signals somewhat, of course, but the induced static noises are weakened in much greater proportion, and the noise level ratio is considerably reduced.

# Exploring the Short Waves

(Continued from page 18)

## Short Waves on Ships

The peculiarities of tuning the short waves from the high seas are described in a letter from T. D. Richardson, Second Engineer of the M. V. "El Aleto" of the Atlantic Refining line: "I use a Pilot Dragon 8-tube set, a. c. working from the ship's d. c. mains through a Janette rotary converter (output 150 watts, 110 volts, 60 cycle). The ship is engaged in oil transport on a regular schedule from La Libertad, Ecuador, to Philadelphia. The American short wave stations W2XAF, W1XAZ, W3XAL, W8XK and W2XE come in excellently throughout the voyage. GSB, GSA, EAQ, DJC come in on the Atlantic side of Panama at full loud speaker strength. On the Pacific side I lose EAQ and DJC but receive VK2ME splendidly and GSB is much clearer on that side. The broadcast band is hopeless in the Caribbean but fairly free of static when we are on the Ecuadorian Coast.

"The cabin fans on 110 volts d. c. cause a lot of noise in the receiver, making it necessary to stop those in adjoining cabins. This noise is only present when I am on the short wave band. I contemplate the purchase of a Scott Deluxe 12-tube set; would the fan trouble be more acute in a 12-tube set or would the Scott avoid this? There are five short wave sets aboard this ship and consequently RADEX is very popular and it certainly deserves its popularity."

## All Set for H. F.

"My DXing is nothing about which to speak long or loud, as I only settled down to business in January—to find my antenna in a high noise and man-made static field," submits Ben G. Freiland, 6715 McPherson Blvd., E. E. Pittsburgh, Pa. "Using RADEX since December, I naturally came upon the article on the use of

phones and successfully attached a set of them to my new RCA R-75, following your complete information. Now with a new doublet antenna, longer and higher, and a Lynch transposed lead-in, I find myself in the hot, static summer weather. However, I prepared for that by purchasing a Pilot 4-tube s. w. converter and surprise many skeptical friends by letting them enjoy broadcasts from EAQ, YV1BC, DJB, DJD, GSB, I2RO, TI-4-NRH, Pontoise, and many other stations."

"From a letter I received from Reichs - Rundfunk - Gesellschaft, the German short wave transmitters, the other day, asking me to check their programs from August 18th to 27th, it would seem that they are to have special programs over the DJ's during that part of August," concludes W. T. R. Morris, Jr., 3219 Garland Ave., Richmond, Va. "They indicate that they would appreciate reports from s. w. enthusiasts the world over on those particular programs.

"I might add that anyone writing to the German stations must not expect a letter from them if they write but once. The German stations are desirous of corresponding with only those they are sure are interested in their stations and not in just a hurried verification."

## A Home-Made Set

Mr. P. J. Soper, 256 Burroughs Terrace, Union, N. J., uses a three-tube set which he built himself. This receiver tunes from 13.5 to 5000 meters, but is most sensitive below 200 meters. It is battery operated and has an aerial 150 feet long running NE to SW. Mr. Soper writes: "Besides the broadcast stations, I have listed hundreds of commercial phones, police, airways, etc. I do not log the amateur stations. My log, without duplications, totals 329 stations. I do not log a station twice when it uses two wavelengths, unless the call signal is different for each wave used, as in the case of the Daventry stations. I do not attempt to verify all stations nor do I bother with commercial transmit-

ters. A few of the positive verifications I have are from PRADO, CM5-RY, DHC, 3ME, PLW, G5SW, T14-NRH, PHI, PCJ, CT1AA, F31CD, HRB and Rabat. The best reception of a short wave station in this locality is from DJD Germany between 5:30 and 8 p. m. There is little fading and very loud clear signals. I2RO is fair, as is GSD. GSB is very good from 7 to 8 in the evening."

A note from John Strong, 1436 Meridian place, N. W., Washington, D. C., supplies the following information: "GSF has discontinued their nightly broadcast and GSD is now used with GSB for the Canadian Zone. CP5 is a new station in La Paz, Bolivia, on 49.3 meters."

"I have been in Illinois on vacation and have been having good results," advises Doyle E. Carpenter, Emmetsburg, Iowa. "I2RO, DJB, DJD, EAQ and the Daventry stations have been very good. Heard I2RO playing good old American jazz the other night . . . have they become polluted also? Haven't heard Huizen for ages and Radio Coloniale has been missing for quite a while. I simply can't get OXY. I wonder if it's working?"

According to listeners' reports in "World Radio," OXY is being heard regularly on 49.4 meters. This station is very hard to get in the United States. They work from 2 until 6:30 p. m., EST.

#### Verification Troubles

"DXing has been poor this summer," writes David F. Thomas, Twenty-sixth St., Ferry Co., Proctorville, Ohio. "I have added a few good ones to my list, though, namely: VK3LR, 52 meters, 200 watts; VQ7LO, FIUI and SR1. Would like to know why TGX promises to verify reports that are correct, yet in every instance they failed to do so. They came in here one morning on a test program on 49.6 meters so loud and clear that they were rebroadcasted by a local station here. The German, French and many other countries are exceptionally nice about answering QSL's."

Roy E. Robinson, 133 Mitchell St.,

Providence, R. I., is justly proud of the results he has had with his Stewart-Warner 100 Series with built-in converter 301-A, which, he says, "sure is a great combination."

"Just now and until about the middle of September," he continues, "I am at my summer home about 15 miles from Providence and right beside a river, making ideal conditions for radio reception. My results in the city have been remarkable too. This summer I have heard VK2ME Sydney nearly every Sunday morning, real good, and VK3ME about very Saturday and Wednesday morning, quite good. To date I have logged 45 broadcast stations, 24 telephones, 42 police and 2 ships."

"In a little over a year I have logged about 100 s.w. stations throughout the world," informs Charles A. Perdicaro, 7225 New Utrecht Ave., Brooklyn, N. Y. "I am using a Majestic superhet converter Model 10 with an R. C. A. Victor Model R-90. Now for some information which I hope can be of use. All time is EST. WPFU, 2422 kcs. new police station located at Portland, Maine.

#### Some Tips

"W9XAA, Chicago, Ill. 49.34 meters is now back on the air from 3 to 6 p. m. daily.

"CNR, Rabat, Morocco, operates also on 37.33 meters Sundays from 2:30 to 5 p. m.

"VE9HX, Halifax, N. S., 48.98 meters, 8:30 to 11:15 a. m. and 5 to 10 p. m. daily. Address, Director, P. O. Box 998.

"HC2JSB, Guayaquil, Ecuador, now works on 90 meters, Monday, Wednesday and Friday, 8 to 11 p. m.

"HCK (formerly HC1DR), Quito, Ecuador, is on 52.65 meters from 8 to 11 p. m."

"Now for the first San Joaquin Valley report I have ever seen or heard of in a short wave magazine," comments R. M. Ballard, Visalia, Calif. "I have heard 2ME, 3ME, Rocky Point and Lawrenceville phones. I hear nothing below the 31 meter band and

*A flood of fan mail attests the popularity of "The Voice of Experience." His 25 years as lecturer, traveler and student qualify "The Voice" to act as "next friend" to thousands in their problems. On the Columbia net, Mondays through Fridays from 12:00 to 12:15 p. m. EST and Tuesdays from 8:30 to 8:45 p. m. EST and 11:45 p. m. to midnight EST.*

# CLASSIFIED INDEX TO CHAIN PROGRAMS

*Time in Eastern Standard*

## CONCERTS

Howard Barlow, 10:45 p.m., Mon., Wed., Fri., C.  
Concert Footlights, 7:30 p.m., Thursday, B.  
Jules Lande, 10:30 p.m., Monday, R.  
Light Opera, 8:00 p.m., Sunday, B.  
Light Opera Gems, 10:45 p.m., Tuesday, C.  
Walter Logan, 2:15 p.m., Sun.; 6:00 p.m., daily, except Sat. and Sun., R.  
National Opera, 3:00 p.m., Sunday, B.  
New World Salon, 12:30 p.m., Sunday, C.  
Radio City, 12:30 p.m., Sunday, B.  
Russian Symphonic Choir, 1:30 p.m., Sunday, R.  
Sonata Recital, 1:15 p.m., Sunday, R.  
Sous les Ponts de Paris, 8:30 p.m., Saturday, R.  
String Symphony, 7:30 p.m., Friday, B.  
Symphonic Hour, 3:00 p.m., Sunday, C.  
Temple of Song, 4:30 p.m., Sunday, R.  
Trio Romantique, 6:45 p.m., Sunday, B.

## DANCE BANOS

Paul Ash, 5:15 p.m., Sunday, R.  
Leon Belusco, 10:30 p.m., Tues. and Thurs.; 10:15 p.m., Sat., C.  
Ben Bernie, 9:00 and 12:00 p.m., Tuesday, R.  
Casa Loma, 11:30 p.m., Mon.; 8:15 p.m., Sat., C.  
Reggie Childs, 6:00 p.m., Thursday, B.  
Charlie Davis, 11:30 p.m., Wed., Thurs. and Sat., C.  
Meyer Davis, 7:15 p.m., Monday, 7:00 p.m., Saturday, R.  
Jack Denny, 11:30 p.m., Mon. and Thurs., R.; 11:30 p.m., Wed., B.; 7:15 p.m., Mon., Wed., Fri., C.  
Eddie Duchin, 6:00 p.m., Sunday, C.  
Jerry Freeman, 11:30 p.m., Sun.; 11:00 p.m., Sat., C.  
Jan Garber, 2:30 p.m., Sunday, B.  
Roger Gerston, 6:30 p.m., Thursday, R.  
Al Goodman, 9:00 p.m., Wed. and Fri., C.  
Green Brothers, 10:30 p.m., Sunday, B.  
Johnny Green, 8:30 p.m., Sunday, C.  
Ferde Grofe, 9:00 p.m., Wed.; 9:00 and 11:30 p.m., Fri., R.  
Phil Harris, 9:00 p.m., Friday, B.  
Richard Himber, 6:00 p.m., Mon. and Sat., B.  
Ernie Holst, 7:15 p.m., Wed., R.; 11:30 p.m., Tues., B.  
Isham Jones, 9:30 p.m., Monday, C.  
Henry King, 6:00 p.m., Friday, B.  
Wayne King, 3:00 p.m., Sun.; 8:30 p.m., Tues., R.; 9:30 p.m., Thurs., B.  
Guy Lombardo, 11:00 p.m., Sun.; 9:30 p.m., and 12:30 a.m., Wed.; 11:30 p.m., Fri., C.  
Vincent Lopez, 7:00 p.m., Sunday, B.  
Delph Martin, 7:30 p.m., Mon., Wed., Fri., C.  
Dick Messner, 6:00 p.m., Tues. and Wed., B.  
George Olsen, 8:00 p.m., Wednesday, R.  
Freddie Rich, 10:00 p.m., Sunday, C.  
Willard Robison, 5:00 p.m., Sun.; 10:00 p.m., Thurs.; 9:30 p.m., Sat., C.  
Buddy Rogers, 11:15 p.m., Monday, R.  
B. A. Rolfe, 10:00 p.m., Saturday, R.  
Harry Sosnick, 11:00 p.m., Saturday, R.  
Rudy Vallee, 8:00 p.m., Thursday, R.  
Fred Waring, 10:00 p.m., Wednesday, C.  
Frank Westphal, 9:00 p.m., Tuesday, C.  
Paul Whiteman, 10:00 p.m., Thursday, R.

## DIALOG

Fred Allen, 9:00 and 11:30 p.m., Friday, R.  
Amos 'n' Andy, 7:00 and 11:00 p.m., daily, except Sat. and Sun., B.  
Phil Baker, 9:30 p.m., Friday, B.  
Milton Berle, 10:00 p.m., Wednesday, C.  
Burns and Allen, 9:30 p.m., and 12:30 a.m., Wednesday, C.  
East and Dumke, 9:30 p.m., Tuesday, R.  
Just Relax, 7:15 p.m., Friday, R.

Lum and Abner, 7:30 and 11:15 p.m., Mon., Tues., Wed. and Thurs.; 10:30 p.m., Fri., R.  
Lulu McConnell, 9:30 p.m., Monday, C.  
Olsen and Johnson, 10:00 p.m., Friday, C.  
Optimistic Mrs. Jones, 7:45 p.m., Saturday, R.  
Potash and Perlmutter, 8:30 p.m., Mon., Wed., Fri., B.

## DRAMA

Big Ben, 5:00 p.m., Sunday, R.  
Columbia Dramatic Guild, 8:30 p.m., Thursday, C.  
Red Davis, 8:45 p.m., Mon., Wed., Fri., B.  
Death Valley Days, 9:00 p.m., Thursday, B.  
Desert Guns, 7:30 p.m., Sunday, B.  
Eno Crime Clues, 8:00 p.m., Tues. and Wed., B.  
Evening in Paris, 9:00 p.m., Monday, C.  
First Nighter, 10:00 p.m., Friday, R.  
Goldbergs, 7:45 p.m., daily, except Sat. and Sun., R.  
H-Bar-O Rangers, 6:15 p.m., daily, ex. Sat. and Sun., C.  
K-7, 9:30 p.m., Saturday, R.  
Lives at Stake, 10:00 p.m., Tuesday, R.  
Myrt and Marge, 7:00 and 10:45 p.m., Daily, except Saturday and Sunday, C.  
Buck Rogers, 6:00 p.m., Mon., Tues., Wed., Thurs., C.  
Soconyland Sketches, 8:00 p.m., Monday, R.  
Roses and Drums, 7:30 p.m., Sunday, C.

## PIANO AND ORGAN

Henri Deering, 6:30 p.m., Sunday, B.  
Archer Gilson, 10:30 p.m., Thursday, B.  
Gould and Sheffner, 6:45 p.m., Fri., R.; 4:00 p.m., Sun., B.  
Sam Herman and Frank Banta, 8:15 p.m., Saturday, R.  
Dion Kennedy, 4:30 p.m., Sunday, B.  
Ohman and Arden, 9:30 p.m., Sunday, R.  
Playboys, 2:15 p.m., Sunday, C.

## POPULAR PROGRAMS

A. & P. Gypsies, 9:00 p.m., Monday, R.  
Album of Familiar Music, 9:30 p.m., Sunday, R.  
Fred Allen's Revue, 9:00 and 11:30 p.m., Friday, R.  
Armour Program, 9:30 p.m., Friday, B.  
Blackstone Plantation, 8:00 p.m., Tuesday, R.  
California Melodies, 10:00 p.m., Tuesday, C.

 Walter Winchell, 9:30 p.m., Sunday, B.  
 Alexander Woolcott, 10:30 p.m., Wednesday and Friday, C.

**KEY TO SYMBOLS**

As Shown in the Index by  
 Frequencies and Dial Numbers

Frequency is given in kilocycles; wavelength in meters. Night power is shown in watts in third column. Daytime power is shown in parenthesis in fourth column in kilowatts, thus (25) indicating 250 watts. Some stations outside the United States use a "split frequency." Their exact frequency is shown in fourth column. Time Zones: A—Atlantic, E—Eastern, C—Central, M—Mountain, P—Pacific, L—Local. A. M. time is shown in light face type.

**Second Column Symbols**

- a Verifies reception for return postage.
- b Verifies only occasionally.
- c Does not verify.
- d Verification 10c; letter 25c.
- e Sends Ekko stamp for 10c.
- f Sends Ekko stamp for 5c.
- g Sends Ekko stamp for postage.
- h Sends own station stamp for 10c.
- i Sends own station stamp for 5c.
- j Sends own station stamp for postage.
- k Has no stamps.
- z No information available.

**Fourth Column Symbols**

- A Amalgamated Broadcasting System.
- B National "Blue" network.
- C Columbia network.
- D Daytime only.
- Du Daytime with occasional evening hours.
- E Trans-Canada network.
- F Canadian Radio Brestg. Commission.
- G All Canadian networks.

- H Yankee network.
- J Orange network.
- K Michigan network.
- L Canadian Pacific Ry. network.
- M Central Canada network.
- N National "Red" and "Blue" networks.
- P Has construction permit only.
- Q Great Lakes network.
- R National "Red" network.
- S Sunday only.
- Sy Synchronized.
- T Don Lee System.
- U Dixie network.
- V Maritime Broadcasting network.
- W All-Florida network.
- W Curtiss-Indiana network.
- X Has permit to increase power.
- Y Has permit to change location.
- Z Has permit to change frequency.

a-b-c. Small letters show stations using same transmitter  
 1-2-3. Figures denote stations sharing time.  
 ..... No information.

## SHORT WAVE RELAY BROADCASTING STATIONS

### *Grouped According to Network Programs Transmitted*

Frequency in megacycles in first column, wavelength in meters in second column, schedule in third column, time being EST. The location of the broadcast band station is given in parentheses following the geographical location of the short wave transmitter.

#### COLUMBIA BROADCASTING SYSTEM

W2XE-WABC, Wayne, N. J. (New York, N. Y.)	W3XAL-WJZ, Boundbrook, N. J. (New York, N. Y.)
15.258 19.65 11 a.m. to 1 p.m.	17.772 16.87 1 <sup>st</sup> 30 to 6:30 p.m., except Sat.

## Symptoms of Sick Sets

(Continued from page 22)

locate that every joint in the circuit had to be resoldered before the trouble ceased.

### Connecting S. W. Converter

*How can I go about connecting an Audiola short-wave converter to my Colonial model 32 AC receiver?*

The converter has four leads. One goes to a large prong on the -80 rectifier tube in your receiver, which is the high voltage side. This provides the necessary plate potential for your tubes in the converter. One prong only of the -80 is the proper one to connect to, and you must experiment with both prongs to locate the proper one. Be careful of the high voltage!

One wire of the converter, through a small condenser, next connects to the antenna terminal of the receiver; another wire connects to the ground terminal. The antenna wire connects to your converter. The wire leading to the antenna of the Colonial set from the converter must be as short and direct as possible without close contact with other wires.

The Colonial set is a tuned radio frequency circuit and is not as powerful as a superheterodyne. But the converter turns it into a short-wave superheterodyne. Short wave tuning is complicated, and we suggest you follow short wave articles in RADEX, particularly the one in May RADEX dealing with tuning problems.

### Changing Tubes

*Will it be practicable to change the older tubes in my Radiola 82 over to the newer 56 and 57 types of tubes?*

We do not believe the improvement in volume will be remarkable, but there will be some other advantages if certain of the tubes are changed. The first tube, a -24, can be replaced with a 57. While the two intermediate-frequency tubes could be replaced with 57s, tuning and adjustments would be necessary. Since there is no first audio amplifier in this circuit there is no position where a 56 tube can be used, unless in the second detector (-27), and that would be a mere experiment because of the critical adjustments in the tuning of that tube.

*Now is your opportunity to buy a high grade world globe for a low price. See back cover.*

# One Hundred Best Short Wave Stations *Arranged Alphabetically*

Stations marked with an asterisk (\*) will not verify. Frequencies are given in megacycles. Times are given in Eastern Standard.

Next month, with 400 stations cooperating, the special DX programs commence in earnest. Watch for the November DX Calendar.

# One Hundred Best

## Short Wave Stations

*By Frequencies and Wave Lengths*

Submitted by our readers as being most regularly received. First column gives frequency in megacycles (for kilocycles read the decimal point as a comma) and the second column, wavelengths in meters.

For complete lists of short wave stations see the following issues of this magazine:

September: Foreign stations arranged by countries.

November: American stations by States.

December: Canadian stations by Provinces and Complete list by call letters.

April: Complete list by frequencies and wave lengths.

Stations marked with an asterisk (\*) will not verify.

## Exploring the Short Waves

(Continued from page 34)

results above are very poor. There are lots of signals I cannot tune in. Give us Valley s.w. fans a break and some help."

R. W. Evans, 832 Richie Ave., Lima, Ohio, reports several new stations he is hearing. "XETE in Mexico City runs from 5:30 to past midnight on 9600 kcs.," he writes. "Programs of XETE are rebroadcast from XEPE on 600, which must be a new one also. VE9HX relays CHNS on 6100 kcs. in the late afternoons, sometimes up till 11 p. m. EST."

The May issue, No. 69, contained the slogans and names of buildings used by stations in announcements, mail addresses, etc.

The June issue, No. 70, contained in the Index by Frequencies, all the broadcasting stations of the world.

The September issue, No. 71, contained a list of 300 stations with time they are to be checked monthly. Also Sunday's time on the air for all stations.

A few back copies left: price 25c each.

## The Ground is Important

(Continued from page 7)

cases, however, the reducer or another wedge-shaped affair, larger in diameter than the pipe, should be attached to the lower end—to facilitate driving and to provide circulation space for water.

### Moisture is Necessary

I maintain that the Ollie Ross, the U. S. Standard, or any kind of rod or pipe ground—no matter how good—can be improved by providing means to wet the soil all the way down.

This ground is much superior to the radiator and cold water pipe grounds, with indoor and short outdoor aerials. There is little choice between grounds for powerful local stations with long roof aerials. I have had no opportunity to check with long roof aerials and distant stations. The outdoor ground is better with WHAS and the Chicago stations. It is handy for installing lightning arrestors outside.

(Concluded on page 80)

## That's What Our Readers Say

"We are certainly delighted to know that part of the prize money was used to renew your subscription to RADEX. We think it is the finest and most complete radio magazine published today."—Radio Station CFCO, Chatham, Ontario, in a letter to F. W. A. Barnett, 5 Chapman St., Anderston, Dunedin, New Zealand.

"After you have used RADEX once, it would seem an impossibility to DX without it. We recommend RADEX to our members as the *one and only* authentic radio publication."—Henry P. Allen, Vice President, Atlantic Radio Club, 513 City Line, Oak Lane, Philadelphia.

"I find RADEX invaluable when doing DX work—as a matter of fact, I could not do DX work without it."

—Robert Mumford, Brighton Villa, 47, Sydney Parade, County Dublin, Irish Free State.

"Thank you for your splendid magazine. It is a real radio guide. Have been reading RADEX about a year now and do not miss a copy."—Sergeant Wm. Senkewich, Co. F, 16th Infantry, Ft. Jay, N. Y.

"I have read almost every radio magazine on the market but I have never seen one that came as near being perfect as RADEX."—Dolphus Whitten, Jr., Gurdon, Arkansas.

"In my opinion it is the greatest book of its kind. I'll have RADEX as long as I have the money to buy it."—Wallace Archambeau, Ironwood, Mich.

This pipe ground is cheap and can be planted in a very small space, close to the house, and again I say to the members, try it out this Summer with radiator and cold water pipe grounds also available. You are due for surprises!

## Keeping Step with Radio

(Continued from page 31)

a letter he received from a reader in New Zealand, Chas. G. Forbes, Grant Road, Woodville, N. Z. The letter is an interesting one regarding radio in our Antipodes. Mr. Forbes, who is a journalist in Woodville, would like to exchange cards with other readers. Mr. Morgan also sends us samples of the hand-illustrated verifications he is now sending to stations heard. Attractively drawn in ink and in colors, Mr. Morgan's verifications will constitute a most unusual and valuable collection.

George W. Burns, 2466 Wahl Terrace, Cincinnati, Ohio, sends us a clipping from the Tombstone (Ari-

zona) Epitaph regarding a new station, KSUN, to be installed at Bisbee, Ariz., by the Copper Electric Company, the owners of the new KIGY at Lowell, Ariz. Who can give us the details?

Robert Base, 4105 Alto Road, Baltimore, Md., sends us a photograph of his Scott set and some of his verifications which we are sorry we are unable to reproduce. He has a business-like DX outfit.

## RADEX RADIO MAP of the WORLD

Showing all Countries and their Principal Cities  
with Call Letters and Time Zones of each Country

PRICE  
**25¢**

Just turn the dial to the time in your zone and—Presto: Change—there is the time for every other place in the world.

No adding; no subtracting; no trying to figure which is yesterday, today or tomorrow. The dial does it all.

Big map of the world showing all principal cities and their time zones.

Only a Quarter  
Postpaid to any  
country.

**DIRECTIONS**—Turn the desired hour, either A.M. or P.M., to the sector marked "TODAY" opposite your own zone and the current time in all other zones in the world will be shown. It will also be indicated which of the other zones are "Yesterday" and which are "Tomorrow". The position of daylight, darkness and dawn is graphically shown. Or, if you desire to tune in a New Zealand program, turn the hour of the program (say 9:00 p.m.) to the New Zealand sector and you will find that it is 4:30 A.M. some day in Eastern Standard Time or 11 P.M. yesterday in Hawaii.

**At Last—**

## **A REAL WORLD GLOBE**

*Every Radio Fan Can Afford to Own*

Right up to the minute and so large every state in the U. S. A. and all the principal cities are plainly shown. Twelve inches in diameter—nearly 39 inches in circumference—beautifully printed in many colors. Ball is substantial metal.

A wonderful addition to the radio set and a big help to the children in the home. Only with a globe can you get a true picture of the relative position of one country to another.

This is the first globe for a low price we have found that was large enough to be worth-while. Get yours before the price goes up.

We regret that the size of this globe is too large to ship parcel post outside the U. S.

PRICE ONLY

**\$5.50**

POSTPAID ANYWHERE IN THE  
U. S. A.
