MEMORANDUM

35 - Denver, 2954 Adams

36 - Shindoh

30 - Mexican Border, 047100 (8:40)

The Right Tube for the Right Socket

C-11: 1.1 volt, .25 Ampere Dry Cell Detector and Amplifier

This dry cell tube has a special base designed for use in sets having special sockets. It is an excellent detector and audio frequency amplifier.

CX-12: Similar to C-11 but with the Standard CX Base

This tube is identical with C-11 in operating characteristics but is mounted on the standard CX base to allow the use of a dry cell tube in sets equipped with standard sockets.

CX-299, C-299: 3.3 volt, .063 Ampere Dry Cell Detector and Amplifier

Highly efficient in operation. A sensitive detector as well as an excellent radio and audio frequency amplifier.

CX-220: 3.3 volt, .132 Ampere Dry Cell Power Amplifier

This dry cell amplifier tube will provide increased loud speaker volume and improved quality of reproduction from dry battery operated sets. It is suitable for use only in the last stage of audio frequency amplification.

CX-322: 3.3 volt, .132 Ampere Screen Grid Amplifier

The unusual performance obtainable from this tube is made possible by the introduction of a second grid. This second grid is placed between the usual grid and plate.

The tube requires special circuit design and cannot be adapted to receivers already in service.

CX-300A: 5 volt, .25 Ampere Super-Sensitive Detector

Designed for use only in the detector socket, will give a receiver clearer and sweeter tone on distant signals, increase volume on far away stations.

CX-301A: 5 volt, .25 Ampere Detector and Amplifier

With storage batteries, this tube will give extreme amplification at either audio or radio frequency.

CX-340: 5 volt, .25 Ampere Detector and Amplifier Tube for Resistance or Impedance Coupled Amplifiers

The CX-340 may also be used to advantage as a detector.

It is very important that the proper value of grid bias voltages and plate and grid resistors be used with this tube.

CX-326: 1.5 volt, 1.05 Ampere, A.C. Filament General Purpose Amplifier

This tube is designed to fill the requirements of receivers to be operated direct from the A. C. lighting mains. It is designed for use only in radio and audio frequency amplifier circuits.

C-327: 2.5 volt, (Max.) 1.75 Ampere, A. C. Heater Type

This tube has the new type heater element which gives humless operation as a detector on A. C. current. The cathode is indirectly heated by the filament. It is primarily intended for use as a detector on an A. C. source in a receiver using the CX-326 tubes as amplifiers, but it can be used to good advantage as an amplifier.

C-324: 2.5 volt, 1.75 Ampere, A. C. Heater Type. Screen Grid Amplifier

This tube combines the unusual performance obtainable from a screen grid radio frequency amplifier with A. C. heater type alternating current operation. It is recommended for use as a radio frequency amplifier and as a detector.

CX-112A: 5 volt, .25 Ampere Detector and Amplifier

May be used as a power amplifier, first stage audio amplifier or detector. It may be used in place of CX-301A tube in the last audio stage without change in voltages.

CX-371A: 5 volt, .25 Ampere Power Amplifier

A power amplifier tube for the last audio stage that practically eliminates all possibility of signal distortion at this point and improves the operation of any reproducer. This tube supplies ample power for loud speaker operation without the necessity of high plate voltages.

CX-345: 2.5 volt, 1.5 Ampere Power Amplifier

A power amplifier tube for last audio stage capable of supplying 1.6 watts loudspeaker energy at maximum plate voltage of 250 volts. Made with a rugged coated filament and operates at 2.5 volts usually supplied by a 2.5 volt filament winding on power transformer of set. Mounted on large standard CX base.

CX-310: 6.0 to 7.5 volt, 1.25 Ampere (Max.) Heavy Duty Power Amplifier

This tube is a heavy duty amplifying tube designed especially to operate large loud speakers, and is capable of producing exceptional volume with highest tone quality.

CX-350: 7.5 volt, 1.25 Ampere Heavy Duty Power Amplifier

The exceptional performance obtainable from the CX-310 has developed a demand for a tube capable of furnishing still greater undistorted power output. This demand is met by the CX-350 which is capable of furnishing a power output three times greater without increase in plate voltage, 250 to 450 volts being required by this tube.

CX-380: 5 volt, 2 Ampere Full Wave Rectifier

This full wave rectifier is of the heavy duty type, being capable of giving an output of 125 milliamperes with a maximum plate voltage per anode of 300 volts (R. M. S.). The large CX four prong base is provided.

CX-381: 7.5 volt, 1.25 Ampere Half Wave Rectifier

This heavy duty half wave rectifier is particularly suited for use in rectifier units which are designed to supply considerable power at high voltages.

CX-374: Glow Lamp for Plate Voltage Regulation

Develops 90 volts across terminals on any current up to 50 milliamperes. When placed in parallel with plate voltage supplied to receiving set, and with proper regulating resistance in series, voltage on amplifier tubes cannot exceed 90 volts, regardless of number of tubes in use or of fluctuations in line voltage.

C-376: Ballast Lamp

Designed for use in series with primary of transformer supplying "B" battery eliminators, and will maintain output voltage constant despite line voltage variations.

C-386: Ballast Lamp

Similar to type C-376 but designed for heavier currents; generally used in place of C-376 where current supply is 40 cycles and equipment is designed for 60 cycle supply.
