If you're interested in Radio, TV or Electronics—as a hobby or a possible future career—clip the coupon below and mail it for your FREE copy of this new 64-page booklet. It was written to answer the questions people usually ask about these fields. Questions you may well have.

For example: What electronics course should you study? It depends on your reason for wanting to learn about electronics—and "Electronics" helps you match your personal ambitions with the types of courses that are available. You'll learn what each kind of course will teach you . . . and what jobs it will prepare you to fill. (The booklet uses 22 International Correspondence Schools courses for reference; they represent the broadest range you'll find anywhere.)

"Electronics" also contains a detailed description of the home study "extras" you can expect when you study with I.C.S.

What's it like to study an electronics course by mail? "Electronics" tells you. • What guarantee do you have of success in electronics? An eminent educator answers this and other basic questions. • How

World-Wide Short-Wave Stations

■ The shortwave section of *White's Radio Log* is an exclusive feature of RADIO-TV EXPERIMENTER magazine. This is a listing of the most active and most often reported stations, as compiled from reader reports sent in to us, from published schedules of the stations listed, and from actual monitoring at the official RADIO-TV EXPERIMENTER monitoring station, DX Central.

We invite our readers to send in their loggings for inclusion in these listings. Be sure to include the following information for each station reported: approximate frequency, call sign and/or station name, and time monitored in Greenwich Mean Time (24 hour clock). Address your reports to: DX Central, White's Radio Log, RADIO-TV EXPERIMENTER, 505 Park Avenue, New York, N.Y. 10022, U.S.A.

To aid you in converting GMT into your local time, we offer you the following chart, which you may find a handy guide around your DX shack.

Whistlers

Continued from page 49

ten earth stations are spread out from Labrador to Antarctica. And last year, an OGO-C satellite blasted off from Vandenberg Air Force Base in California, to carry special radio receivers into space to record the low frequency signals of the traveling wave. And just before going to press, the Canadian satellite Alouette reported it had cited a new whistler that reaches 8,000 miles into space.

But Dartmouth men report even deeper penetration. They claim that studies of whistlers has expanded the concept of the ionosphere thousands of miles into space. Before these whistler studies, man believed atmosphere ended and space began some 1500 miles above the earth. Now conservative estimates place division at around 8,000 miles.

Recent Dartmouth studies report—even at a distance of four earth radii or 16,000 miles from the earth's surface—a whistling wave with one thousand electrons to each cubic inch of atmosphere. All of which proves space may not be as "empty" as we thought. And if engineers persist studying the whistling wave, we may be in for more surprises, perhaps even a new means of communication. ■

BUILD, EXPERIMENT, EXPLORE, DISCOVER WITH NRI CUSTOM-DESIGNED TRAINING KITS

BUILD YOUR OWN PHONE/CODE TRANSMITTER

This is just one of seven training kits programmed into NRI's Complete Communications course. You get actual practice in building your own crystal-controlled, phone/code transmitter and putting it on the air. You experiment with modulation, "clamping" circuits, key filters, other aspects of commercial transmitter operation. Can be put on the air simply by attaching an antenna and complies with FCC regulations. As with all NRI training kits, you get the most modern features and parts.
