VOL. 2 NO. 4

## CONTENTS

2 How to use this book

### SECTION 1

#### 7 Dimensions

Radio ownership trends, listening levels, leading spot and network advertisers, advertising volume trends, media cost indices.

### SECTION 2

#### 19 Station Directory

Alphabetical listing by station and Metro market showing rep, group ownership, network affiliation, address, general manager.

### SECTION 3

#### 71 Rep Directory

Alphabetical listing of radio station representatives with addresses, phone numbers and key personnel at each office.

### SECTION 4

#### 81 Ethnic Radio

Listing of radio stations with representatives that are exclusively or dominantly programed for the Black and Hispanic markets.

### SECTION 5

#### 85 Sports on Radio

For four professional sports—baseball, football, basketball, hockey—originating station, sales rights owner, rep, network size, cost estimates.

### SECTION 6

#### 91 Planning Guides

Cost estimates and coverage data to reach the 300 GRP level are shown for the top 50 ADI's and 174 Metro markets for various demos and dayparts.

### SECTION 7

#### 219 Radio Networks

Quick facts about each of the wired, rep sponsored, and state networks. Also, RADAR data for the wired networks.

### SECTION 8

#### 253 Glossary

Definitions of radio terms used by timebuyers and planners based on three existing lexicons.

Published by Decisions Publications, Inc.

# HOW TO USE THIS BOOK

**T**his planning book is designed for use at various levels in the media planning world; it is for the experienced as well as the beginner. Its value increases in direct relationship to the extent to which you acquaint yourself with its content.

**Trends in Radio (P. 7)**  
Here are the basic statistics—listening trends, FM growth in sets and listenership, auto

radio sales and listening, ad volume, leading spot and network advertisers, cost index trends. This is a valuable source of basic data for the radio industry. Get acquainted with its contents.

**Station Directory (P. 19)**

For Arbitron's 174 Metro Markets, an alphabetical listing of stations home to the metro market, most of which qualified for inclusion in the April/May 1979 Arbitron Metro books.

■ Shown are representatives, ownership, network affiliation, station address, key contact.

This section will come into use after you have determined which markets you need to reach your target. Sections in this book are planned to be used in conjunction with one another; first you determine the demographic you want, then you figure the cost to reach the markets you need to achieve the goal, you then tally the cost to determine how far your budget will let you go. Then you use the station directory to find the stations available. The Station Directory section tells you this as well as who to contact and with the help of the Rep Directory, which follows, the address of the nearest office of the representative and the name and phone number of the local rep contact.

(Continued)

## Network Radio Planning Guide

This wheel was developed to expedite the early stages of network radio planning. It is a general rather than a specific planning device. Therefore, it should be used for broad dayparts and demographics (i.e., Monday-Sunday 6AM-12 Midnight, 6AM-7PM, Adults 18+, 18-49).

For specific networks and schedules we recommend you contact your NBC Radio Network Sales Representative who will supply you with a detailed reach and frequency computer printout derived from RADAR audience data.

### Estimated 4-Week Reach and Frequency

#### How to Operate

Move the arrow under the four week gross rating point (GRP) appears in the top of the Guide. Read the four week reach and frequency (to) levels in the network.

#### Example

If a GRP of 100 would offer the following reach and frequency:

Reach	Frequency
15	2.7
23	4.0
30	5.2
38	7.4
45	9.5
50	12.5

Radio Network

# Free Anti-Inflation Kit for Desperate Advertisers.

Is the price of a cup of coffee getting you down? Or the going rate for a 30-second spot on Network TV? Then send for our new, easy-to-use Network Radio Planning Guide. Yours free for the asking.

In just seconds you can get a fix on how many people you can reach by using any of the seven major networks, singly or in combination. And the number of times you can reach them. The "numbers" plus the cost of a typical Network Radio spot will start you salivating.

As a service to advertisers and agencies, our Research staff have been hosting a series of Seminars on Network Radio Media Planning. Score card to date: 40 Seminars, 987 attendees. For more info on Seminars or a free copy of the Guide, write on your letterhead to Kathy Lenard, V.P., NBC Radio Research, 30 Rockefeller Plaza, New York, New York 10020.

Network

### **Where Are the Reps? (P. 71)**

In alphabetical order, we are presenting a listing of radio station representatives (national and regional) in the United States, showing addresses, telephone numbers, key personnel at each of their offices. This section should be used along with the Station Directory which precedes it.

### **Ethnic Radio (P. 81)**

Considering the increase in population in both the Black and Hispanic cultures, more and more broadcasters are targeting their programming to these ethnic targets. In this section we present a list of radio stations that are programmed either exclusively or dominantly for either the Black or Hispanic audience. Many more stations devote a fragment of their broadcast hours to these markets. These have not been included. In addition, there are stations in markets with a high percentage of Black and Hispanic groups that program for a general audience yet achieve a high percentage of an ethnic group. These stations are not shown in these listings as the management does not designate them as ethnic stations.

### **Sports on Radio (P. 85)**

For four professional sports—baseball, football, basketball and hockey—this section presents the details needed to make a buy. Shown for each pro team are the

name of the originating station, the owner of the sales rights, national representative, size of the network (if any) and estimates of cost. This service was provided by a committee from the Station Representatives Assn. and the Radio Advertising Bureau. This is not the final answer; things change. But it is a place to start from.

### **Planning Guides (P. 91)**

For both the 174 Metro areas the top 50 ADI's as defined by The Arbitron Co., costs are shown for rough planning purposes. These costs were developed by Blair Radio at the 300 GRP level (60 reach and five frequency). Planners can use these approximations in estimating other

combinations of reach and frequency and other GRP levels. These data give you the opportunity to use this book for quick, tentative estimates of what it will cost to reach a market and the depth of penetration one will achieve.

Markets are presented in rank order and grouped in units of ten. Gross cost, cost per average rating point and cost per thousand TSA impressions are shown. Data are also broken by the following demographics and time periods: adults daytime; men daytime; men drivetime; women all day; women drive through housewife time; teens in teentime. Except for teens there are four age breakouts in each category: 18+; 18-34; 18-49; 25-54. Other data for each market include number of stations and announcements required to reach the 300 GRP goal, the net reach and gross impressions for the TSA (Total Survey Area).

### **Radio Networks (P. 219)**

In three sections—wired, rep sponsored and state (regional, farm included) you will find "quick facts" about each of these networks—who to contact and where. For the wired nets, some program details are shown.

Also, RADAR data for wired networks showing demographics of audience composition for various time periods. Figures show average quarter hour and cume listening. Data comes from RADAR 18, volumes II and III.

### **The Language of Radio (P. 253)**

A glossary of terms used in planning and buying radio based on three existing lexicons.

**“We have never  
been more  
aware of  
the influence  
of radio.”**

Guglielmo Marconi had a great deal of influence in his day. As did Sir John Fleming, who gave us the diode tube. Their influence gave birth to radio.

Even in its infancy, radio began to influence lives. It has made us cry. It has made us laugh. It has made us love freedom and hate freedom's enemies. It has brought wars into our living rooms, followed by treaties of peace. It has made us respond to human needs and tragedy. It has pleaded causes and won hearts and reported deaths and given birth.

Plough Broadcasting Company has never been more aware of the influence of radio.

Our job is to continue using it wisely. If this reads like a public service announcement, it is.

# Blair Radio. We've got what it takes to win.

## **Sheer aggressiveness. And the skill and resources to back it up.**

Radio is a highly competitive business, to put it mildly. It takes a lot of doing to win. And Blair out-does the competition in every category.

Blair salespeople are the most resourceful, most spirited, most motivated in radio. They don't wait for agencies to come to them. They plunge right in and show people how to use radio to get results.

If the buying specs for a campaign can be improved, Blair people work to get them improved. If a prospective radio client can use a demonstration of radio creativity, Blair will often step in and bankroll pilot commercials.

And the tools we give our salespeople are unmatched. Such as Blair's powerful new BRAIN computer system, which makes all radio easier than ever to plan and buy.

For our Blair Radio station clients, we provide ongoing programming counsel to make sure they get the best audience results in their markets.

In short, Blair Radio is *the* leading source of creative action in the industry. We win because we act, instead of reacting. Which means, more often than not, we beat the competition to the punch.

**Blair Radio**

## DIMENSIONS

Here in compact form are the basic facts about the radio medium. These data range from the physical—number of stations, sets in use, households, FM trends, auto-radio trends—to the more advertiser-meaningful trends—listening levels by season, by daypart, by demographics.

Also included are historical trends of the advertiser investment in the medium, a comparison with other media, leading advertisers in both spot and network radio in the year past, historical cost trends.

Peruse this section—get the feel of its contents. Know where to look when you need that basic fact or trend number.

# MEDIA COSTS - 1970-1978

This review of cost trends in major media was prepared by the media department of J. Walter Thompson Co. The calendar year 1978 was taken as Index 100 and costs in years previous, starting

with 1970 were compared to it to show unit cost changes on both an index and dollar basis, average audience, cost per thousand and cost per rating point.

## 1. PRIMETIME NETWORK TELEVISION. Costs of one 30-second announcement

CALENDAR YEAR	ESTIMATED COST PER 30"		AVERAGE MINUTE AUDIENCE FOR TV HOUSEHOLDS				COST PER 1,000		COST PER RATING POINT	
	Dollars	Index	(000)	Index	AA	Index	Dollars	Index	Dollars	Index
1970	\$20,900	43	9,713	76	16.5%	94	\$2.15	57	\$1,267	46
1971	20,488	42	10,308	80	17.0	97	1.99	53	1,205	44
1972	23,346	48	10,756	84	17.1	98	2.17	58	1,365	49
1973	26,563	55	11,013	86	16.9	97	2.41	64	1,572	57
1974	29,613	61	11,675	91	17.5	100	2.54	67	1,692	61
1975	30,738	64	11,799	92	17.2	98	2.61	69	1,787	65
1976	35,827	74	12,228	95	17.5	100	2.93	78	2,047	74
1977	43,579	90	12,517	98	17.4	99	3.48	92	2,505	91

# "Radio gives us the impact of television at a fraction of the cost."

Boyd W. Humphrey, Western Union.

When introducing Mailgram, Western Union tested four major media: newspapers, magazines, television and radio.

"Radio did the best job overall," says Boyd W. Humphrey, Assistant Vice President, Advertising and Sales Promotion. "Mailgram sales have tripled since we've been using radio as our primary medium. Mailgram's main customer is the upscale, business professional, and radio allowed us to target this audience without waste."

Radio delivers every target audience without waste. Revlon's Oxy 5, for example, used radio as a primary medium and became the number one acne product in America. You couldn't find a wider span of marketing targets than Mailgram and Oxy 5 represent. Yet radio, as the primary medium for each, delivered sales the way some advertisers used to believe only television could.

Every day, radio leads all media in people reached, including newspapers, magazines and TV. With all its audience strengths, radio works for local and national advertisers. In the past ten years, local advertisers with their "cash register" sense have increased use of radio 185% (way ahead of advertising's total growth).

If your product or service needs more impact, make radio your primary medium. For more facts write to: Radio Advertising Bureau, 485 Lexington Avenue, New York, N.Y. 10017. Or call (212) 599-6666 and ask for the Radio Facts Book.

Contributed by ABC Radio.

SECTION

# 2

## STATION DIRECTORY

This section presents an alphabetical listing of stations home to the 174 Metro Markets as defined by The Arbitron Co. The listings in each market are mostly those stations that qualified for the April/May 1979 Metro book.

Once one determines which markets and demos are needed to reach a target, this section can be used to find the calls, reps, net affiliations and group ownership.

The rep names are coded for brevity in a few cases, but in all cases the full name, address and phone number of each office will be found in the Rep Directory—pg. 71.

The key to the group listings and pertinent details will be found starting on pg. 65.

It is suggested that the rep be contacted for specific information. If more direct contact is needed, we present for each station the local address and name of a principal sales contact.

SECTION

# 3

## REP DIRECTORY

The planning guides in this directory should only be used as a point of reference from which to start. The "real" buying data can best be obtained from the representative handling the station. One would be hard put to develop and implement a plan without help from the station representatives.

The Station Directory (pg. 19) in this radio planning guide will lead one to the name of the representative handling a particular station.

This section then will provide addresses and phone numbers of both national and regional reps, and, as an added service, the name of the principal contact.

Change is a constant in the rep field. During the life of this Encyclomedia, some stations will change reps. All such changes were made up to deadline.

## ETHNIC RADIO

Need to know the call letters of stations that program completely or dominantly for the Black and Hispanic communities?

The following five pages will lead you to this information. Representatives were surveyed to find out which of their stations met these requirements. We let the reps decide.

This is Encyclomedia's first presentation of data of this nature. Also, to the best of our knowledge, it has not been presented in so concise a fashion before.

A word of caution: In many communities with high percentages of Black or Hispanic population groups, stations may program for a general audience yet achieve a high penetration of an ethnic group. The sophisticated marketer, planner or buyer should be able to identify these markets and stations.

Also, check The Arbitron Co. for information on which markets have ordered ethnic studies.

# BLACK RADIO PROGRAMING

## RADIO STATIONS WITH TOTAL OR DOMINANT BLACK COMMUNITY PROGRAMING

In their efforts to reach the black community, radio stations adapt one of three attitudes. First, there is the station that is programed 100% for the black community; second, there are those stations who dedicate a major portion of their programing (but not all) to reach the black audience. In some cases the rest is directed to other ethnic audiences (principally Spanish language). The third category of black-oriented stations are located in major markets. Pro-

graming is not designed specifically to reach the black audience or the format is so specified that it is not possible to accurately indicate a black orientation. Some of these stations, to the sophisticated buyer, will be obvious because of their absence from the following list. In these cases the management of the station is aiming toward a general audience, but the nature of the market and its ethnic makeup generates a large, but not total, black audience.

## **SPORTS ON RADIO**

Are sports bought the same as other spot buys? It depends.

However, the following pages in this section will take the guesswork out of buying into the sports broadcasts of the leading professional sports—baseball, football, hockey and basketball.

This report shows for each team the originating station, tells who owns the sales rights, the national representative and contact, number of stations in the network (if any) and, in most cases, cost estimates.

# SPORTS ON RADIO

Increasingly, sports programs are becoming more important advertising outlets for an expanding list of product/advertiser categories. So much, so that in many cases some categories are protected for contract advertisers.

The following service was provided by a committee from the Station Representatives Assn. and the Radio Advertising Bureau's National Spot committee. The official report is titled SRA/RAB Radio

Sports Report. The professional sports covered are: baseball, basketball, football and hockey.

A compilation of this nature is always subject to change without notice. This information, however, will provide a starting point for planning. It is recommended that at the critical point direct contact be made with the national representative indicated or Bob Alter at the Radio Advertising Bureau, (212) 599-6663.

## BASEBALL

<u>Team</u>	<u>Orig. station</u>	<u>Sales rights owner</u>	<u>National representative</u>	<u>No. sta. in net</u>	<u>Cost estimates for season packages</u>
Atlanta Braves	WSB	WSB	Christal—Bill Froelich (212) 688-4414	60	Available on request.

## PLANNING GUIDES

How many stations and announcements are needed to achieve reach and frequency levels in a market against a given target audience?

Here in rank order of penetration are number of stations and announcements in 174 Arbitron Metro areas and top 50 ADI's needed to reach 60% of the target audiences five times (total GRP's 300).

Computations were by Blair Radio, following a formula set by a committee of the Station Representatives Assn.

This guide permits radio planners to approximate the requirements to reach the stated goal and to project from this the cost of other reach and frequency goals.

Since markets are presented in rank order, a locator guide shows in which market grouping (by tens) a specific Metro or ADI is located.

# How do you spell "relief" from the pain of high TV costs?

The jump in cost of television is giving a lot of local and national advertisers acid indigestion.

This season, for example, a thirty-second commercial on one of those humorous situation comedies could cost you a not-very-funny \$120,000.

It's no wonder so many national and local advertisers are turning to R-A-D-I-O for fast, fast relief.

But, despite its high costs, some advertisers continue to buy TV because they want "impact."

Radio does much more, however, than control costs. It produces proven sales results the way some advertisers used to believe only television could.

Revlon's Oxy 5 used radio as its primary medium and became the number one acne product in America.

Maxwell House Coffee did a searching study of alternatives to remaining virtually an all-TV advertiser. They moved big dollars into radio.

Western Union summed up what so many well-operated companies have discovered when they said, "Radio gives us the impact of television, at a fraction of the cost." (Mailgram used radio as their primary medium to triple sales.)

Maybe it's time your business took a big dose of radio for relief. For more facts, write to Radio Advertising Bureau, 485 Lexington Avenue, New York, N.Y. 10017. Or call us at (212) 599-6666 and ask for the Radio Facts Book.

Contributed by ABC Radio.

**RADIO** It's red hot.

# MSA PLANNING GUIDE

## COST AND COVERAGE DATA FOR 174 METROPOLITAN AREAS

The following sets of tables were designed to aid a planner in budgeting for spot radio by showing what it would cost to enter a market or group of markets at the 300 GRP level.

The audience data are based on Arbitron's surveys for the April/May 1979 sweep. Data are presented for total adults, men, women and teens. In each unit, the data are shown for four age groupings (except for teens): 18 years and over, 18-34, 18-49 and 25-54.

The adults data were developed for daytime listening, Monday-Friday, 6am-7pm. For men, two day-parts were used, drivetimes combined plus weekend,

and daytime. For women the dayparts used were daytime, and morning drive through housewife time. The cost data for teens were developed on what is referred to as teentime—3 pm to midnight on weekdays and 10am to 7 pm on weekends.

The rates used were those in the computer at Blair Radio, whose facilities were used to compile these cost planning tables. However, the rates were adjusted 15% downward to allow for the inevitable effect of negotiation. The stations used to reach the 300 GRP target were those that had the highest reach in the market.

# ADI PLANNING GUIDE

## COST AND COVERAGE DATA FOR TOP 50 ADI'S

The following sets of tables were designed to aid a planner in budgeting for spot radio by showing what it would cost to enter a market or group of markets at the 300 GRP level.

The audience data are based on Arbitron's surveys for the April/May 1979 sweep. Data are presented for total adults, men, women and teens. In each unit, the data are shown for four age groupings (except for teens): 18 years and over, 18-34, 18-49 and 25-54.

The adults data were developed for daytime listening, Monday-Friday, 6am-7pm. For men, two dayparts were used, drivetimes combined plus weekend,

and daytime. For women the dayparts used were daytime, and morning drive through housewife time. The cost data for teens were developed on what is referred to as teentime—3 pm to midnight on weekdays and 10am to 7 pm on weekends.

The rates used were those in the computer at Blair Radio, whose facilities were used to compile these cost planning tables. However, the rates were adjusted 15% downward to allow for the inevitable effect of negotiation. The stations used to reach the 300 GRP target were those that had the highest reach in the market.

# Look what's putting heat on the old "retail" medium.

Newspapers are starting to feel the hot breath of the new retail medium. Radio.

In the past 10 years, local businesses have increased their expenditures in radio 185%.

It's not surprising when you compare radio to newspapers. Radio's audience has jumped over 60% since 1967. Daily newspaper circulation has grown less than 1%. And over the same period, newspapers' cost-per-thousand went up 111%. Radio cpm increased only 52%.

But radio isn't just cost-efficient. It also lets you target different types of customers. Which makes radio a "no-waste" buy. (Another reason why retailers are turning to radio as a primary advertising medium.)

Also, radio is primary with customers.

Every day, radio reaches more people than all other media.

The average American (18-plus) listens to radio three hours and 23 minutes a day. That's a big advantage for radio. Newspapers get only 34 minutes of reading time a day. (This may be why retailers say newspapers don't generate traffic like they used to.)

Which leads us to the last and probably the most important reason why retailers all over America are warming up to radio. It sells merchandise at a cost they can still afford.

For more facts, write to Radio Advertising Bureau, 485 Lexington Avenue, New York, New York 10017.

Or call us at (212) 599-6666 and ask for the Radio Facts Book.

Contributed by ABC Radio.

## RADIO It's red hot.

# Radio BRAINpower!

**That's Blair's newest BRAIN\* computer system and the Radio Evaluation Team. Together, they can make your next radio campaign the easiest you've ever planned.**

Varying audience delivery from one market to the next often made planning and buying a network/spot radio combination campaign a complex, time-demanding job.

Until now.

Because Blair Radio's new, powerful BRAIN Multi-Market/Network Computer System has made *all* radio easier than ever to plan and buy.

Overnight, this newest Blair BRAIN system can give you a complete, in-depth evaluation of network radio plans, multi-market buys or network/spot combinations. The system is so flexible, you can thoroughly analyze schedules by market, by station, by network, and then determine your best radio options.

Blair's experts behind the newest BRAIN system are Bob Lobdell, VP, National Sales, and

Bob Galen, VP, Research & Media Planning. They form Blair's unique Radio Evaluation Team which is helping agencies and advertisers use Blair's BRAINpower in their radio planning. With this new, dynamic media marketing tool, major advertisers have even more control over the productivity of their radio schedules.

Why have we put so much of our company's energy and resources into providing this advanced computer system as a service to our industry? Because at Blair, *radio is our business*, and we want to see it used as much as possible, in the most effective way.

Learn how Blair's Radio Evaluation Team and BRAINpower can help make your radio planning more productive, faster, and more complete. Call Bob Galen or Bob Lobdell at (212) 752-0400. You'll discover that radio's never been easier to use.

SECTION

# 7

## **RADIO NETWORKS**

Although spot radio attracts the bulk of radio advertising volume, the network concept is still basic when planning use of the medium. This section is devoted to guidelines for planners interested in combination station buys.

In addition to the wired nets, we present here listings for the rep networks (non-wired) and the state nets (wired and non-wired, including regional and farm) showing address, telephone, national rep and the principal net contact.

RADAR data for the wired nets show demographics of audience composition for various time periods. Figures show average quarter hour and cume listing.

# RADAR 18—SPRING/FALL 1978

**A**udience data for the radio networks are developed twice annually by Statistical Research, Inc., Westfield, N.J. The reports are referred to as RADAR Reports (Radio's All Dimension Audience Research).

The following pages contain a sampling of the data from the Spring and Fall 1978 reports. Shown are summary cumulative audience figures by network for several time periods and average-quarter-hour data for the more popular age groups by sex. Data are also shown for teenagers.

These audience figures are only a small part of the total service. Complete listening detail is also available, program by program, quarter hour by quarter hour, and network by network.

RADAR network audience data reflect actual audiences reached in specific quarter hours for 3,000+ stations and 625+ programs by cleared commercials. The results are based upon a sample size of approximately 5,000 respondents.

The primary purpose of RADAR is to provide a measurement of network radio audiences, but it is also an effective radio planning tool. It provides radio usage data on many bases. The data accompanying this description are but the tip of the iceberg—consult the publisher for a complete run-down on the service.

SRI explains its reports this way: "RADAR audience estimates are based on daily telephone inter-

views during a week. These interviews cover seven days of radio listening behavior. The measurements are conducted during four weeks in the Spring and four weeks in the Fall of each year. Within each measurement interval, one week of clearance information is processed for each network."

The audience estimates are presented in three volumes. Volume 1 covers total radio usage. It provides estimates of the audience of all AM and FM radio stations in total and for several segments of radio usage and of the population.

Volumes 2 and 3 provide estimates of "Network Audiences to Cleared Programs (plus Commercial Exposures)" and "Network Audiences to Cleared Programs (excluding Commercial Exposures)," respectively.

Not all network affiliates carry every network-fed program and commercial. It is for this reason that RADAR tracks clearances and merges them with audience data. The difference between Volume 2 and Volume 3 RADAR is that "Volume 2 reports the commercial audience whether that [specific] commercial is within the program or at some other time. Volume 3 reports the *in-program* audience only."

The RADAR studies are jointly sponsored by American Broadcasting Co., Columbia Broadcasting System, Mutual Broadcasting Co. and National Broadcasting Co. radio networks and are available to advertisers and agencies on a subscription basis.

## NETWORK RADIO COSTS (Wired Networks—Total Cost)

Prepared by McCann-Erickson, Inc.

	Morning drive		Run of station		No. of affiliates
	60 sec.	30 sec.	60 sec.	30 sec.	
ABC Contemporary Network	\$4,590	\$2,295	\$3,158	\$1,579	396
ABC Entertainment Network	4,638	2,319	3,124	1,562	477
ABC Information Network	5,154	2,577	3,592	1,796	491
ABC FM Network	2,160	1,080	2,370	1,185	193
CBS Radio Network	3,400	2,600	2,000	1,500	276
NBC Radio Network	3,500	2,500	2,000	1,450	260
Mutual Broadcasting System	3,000	1,500	1,800	900	950

The rates given in this table are the average costs per announcement for a majority of the network programming slots available.

The cost of a one-minute announcement was observed to be approximately 75% higher than the cost of a 30-second announcement. Fixed position rates were observed to be approximately 45% higher than those for run of station.

**WARNING:** Network rates are highly negotiable. These typical rates should be used only as benchmarks for relative cost indications between networks.

# Look what's catching fire.

In a recent article, Business Week magazine reported that, "The radio business is enjoying a prosperity undreamed of just five years ago."

Americans spend more money in a year for new radio sets (\$3.5 billion) than they do for tickets to all spectator sports.

Every day, radio leads all media in the number of people reached. And the average American spends three hours and 23 minutes a day listening.

So it's no wonder that more and more advertisers are using radio as a primary medium.

## Retailers warm up.

The first group that warmed up to radio were the retailers and the reason was simple: results.

Local advertisers with their

"cash register" sense have flocked to radio. In the past 10 years local retail businesses increased their expenditure in radio by 185%. Well ahead of advertising's total growth.

Recognition of radio's ability to produce results is also spreading among national advertisers.

## Hot national campaigns.

Maxwell House Coffee did a searching study of their marketing needs. When they finished, they moved a substantial portion of the budget into radio.

When Chevrolet launched a major promotion ("National Chevy Week"), they chose radio as their primary medium.

Revlon's OXY 5 used radio as its primary medium to become number one in the skin treatment

field in four years.

And radio has been the primary medium for Western Union's successful Mailgram program since its beginning.

## Costs stay cool.

Radio users have also received another pleasant surprise.

Between 1967 and 1979, television's CPM went up 103%. Newspapers jumped 111%. Outdoor 102%. Magazines 58%.

Radio's CPM on the other hand is up only 52% during the same period. So R-A-D-I-O spells relief from the declining power of your advertising dollar.

## It's red hot.

# GLOSSARY

A must for the beginner as well as a refresher for the experienced. This set of definitions has been developed from several existing glossaries and edited for brevity.

The editors have tried to include all of the most oft-used terms. But there is always the possibility that some term or other has been overlooked.

The titles and sources of the original glossaries appear in the introduction accompanying the presentation.

# GLOSSARY

## RADIO TERMS FOR TIME BUYERS AND PLANNERS

The glossary which follows is a composite, with modifications, of three existing dictionaries of terms related to radio time buying, planning and research. When several definitions were available, the simplest and clearest was taken and often modified for brevity. It is hoped that clarity was not sacrificed for the sake of brevity.

The three source glossaries are:

- *Standard Definitions of Broadcast Research Terms*

—copyright 1973 by the National Assn. of Broadcasters, 1771 N St. N.W., Washington, DC 20036. Price: \$1.50.

- *Ayer Glossary of Advertising and Related Terms*—published by N.W. Ayer ABH International and available from The Ayer Press, 210 West Washington Square, Philadelphia, PA 19106. Price: \$9.95.

- *Glossary of Selected Terms*—published in Arbitron's Radio Reports.

### A

**aa**—Abbreviation for "average audience," the number of homes tuned to a particular radio program during the average minute it is on the air.

**Accumulated Audience**—See **Cumulative Audience**

**Accumulated Households**—The total number of different households reached by a given broadcast over a specified period of time.

**Across-the-Board**—Descriptive of a program or commercial scheduled at the same time each day, Monday through Friday. (Also known as strip.)

**ADI** (Area of Dominant Influence)—Where applicable, Arbitron Television's geographic market design which defines each television market exclusive of others based on measurable viewing patterns. Every county in the United States (excluding Alaska and Hawaii) is allocated exclusively to one ADI. (Originally a TV-area concept but now being used by other media.)

**Affiliate**—A network-owned or independently owned radio station that carries programs provided by the network through contractual agreement.

**Air Check**—A recording made "off the air" to verify how a com-

mmercial or program was actually broadcast on radio.

**AM**—Abbreviation for "amplitude modulation," the "regular" band in radio broadcasting.

**AM-FM Totals**—An Arbitron figure shown for AM-FM affiliates in time periods when they are predominantly simulcast.

**Area of Dominant Influence:** See **ADI**

**Audience**—A group of households or individuals, that are counted in a radio audience according to any one of several alternative criteria.

Audience measurements are generally expressed in two ways: as percentages, in which case they are called ratings, and as absolute numbers. See also: **Circulation** and **Coverage**.

**Audience Accumulation**—The addition of new audiences to the total reach of a medium with successive broadcasts.

**Audience Characteristics**—The objective traits of those people who have been exposed to a broadcast. The traits may include age, sex, lifestyle, educational background and economic status. (Sometimes referred to as audience composition, audience profile, demographic characteristics, demographics and profile.) See also: **Demographic Characteris-**

**tics and Audience Composition**

**Audience Composition**—A statement of the audience in terms of such physical characteristics as age, sex, race, location, etc. See also: **Audience Characteristics** and **Demographic Characteristics**

**Audience Profile:** See **Audience Composition**

**Audience Turnover**—A measurement of the frequency with which a program's audience changes over a period of time; more specifically, the ratio of the net unduplicated cumulative audience over several time periods to the average audience per one time period. The greater the turnover in audience, the higher is the ratio. (Also known as turnover.)

**Avail**—Short for "availability."

**Availability**—Radio time available for purchase by advertisers; also any portions of programs available for sponsorship. (Often shortened to avail.)

**Average audience**—See **aa**

**Average Audience Rating**—A type of rating computed for some specified interval of time, such as for the length of a radio program or for a 15- or 30-minute period. Conceptually, it is possible to compute a rating as of any given instant of point in time. An average audience rating may be

thought of as the average of such instantaneous ratings over a number of points in time. In all cases, exactly which values are used in computing the average must be made clear.

**Average Frequency:** See **Frequency**

**Average Instantaneous Audience Rating:** See **Average Audience Rating**

**Average Minute Rating:** See **Average Audience Rating**

**Average Quarter-Hour Persons**

—The estimated number of persons who listened at home and away to a station for a minimum of five minutes within a given quarter hour. The estimate is based on the average of the reported listening in the total number of quarter hours the station was on the air during a reported time period. This estimate is shown for the MSA, TSA, and ADI. Used in Arbitron audience data.

**Average Quarter-Hour Rating**—The Average Quarter-Hour Persons estimate (Arbitron) expressed as a percentage of the universe. This estimate is shown in the MSA and ADI. See also:

**Cume Rating and Rating**

**Average Quarter-Hour Share**

—The Average Quarter-Hour estimate for a given station expressed as a percentage of the Average Quarter-Hour Persons estimate for the total listening in the MSA within a given time period. This estimate is shown only in the MSA. See also: **Share**

**Average Total Audience Rating:** See **Total Audience Rating**

**Away-From-Home Listening**—

Estimate of listening for which the diary keeper indicated listening was done away from home.

## B

**Back to Back**—Descriptive of adjacent broadcasts, commercials, or time periods.

**Barter Plan**—A plan whereby the cost of a medium's space or time is paid for in merchandise or

services rather than in money. (Also known as a due bill.)

**Basic Network**—The minimum number of stations for which an advertiser must contract in order to use the facilities of a radio network.

**Block**—A series or succession of similar type programs on radio.

**Break**—The time after, before or within a program which is used for announcements.

**Broadcast**—1. A single radio program of commercial. 2. To transmit a radio program or commercial.

**Buy**—A purchase of time or space in the media.

## C

**Call Letters**—The initials used to identify a radio station, approved by the Federal Communications Commission.

**Calls:** See **Call Letters**

**Chain Break**—An announcement of varying length within or between programs to identify the local station—as apart from the network—or a local station commercial. More commonly known as a station break.

**Circulation**—The number of households or individuals, regardless of where located, that are estimated to be in the audience of a given radio network or station at least once during some specified period of time. Thus circulation is simply a term used to describe the size of the cumulative audience of a network or a station over some period of time. See also: **Audience** and **Coverage**

**Circulation Area**—A geographic area within which a radio station actually obtains audiences. It can be described in terms of a group of counties or, perhaps, a group of minor civil subdivisions. One commonly used criterion is whether at least some specified percentage of the households or individuals is estimated to be in the audience of that station dur-

ing a specified period of time.

A circulation area is defined on a "do-receive" basis and should not be confused with a **Coverage Area** which is defined on a "can receive" basis.

Another method of defining a coverage area is in terms of certain geographic contours, which are determined on the basis of engineering calculations about which areas are within range of a broadcast signal of specified strength.

**Combination Buy**—A special, combination rate purchase of advertising time offered or required (forced) by two or more broadcasting stations, usually under the same ownership.

**Commercial Impressions:** See **Impressions**

**Commercial Protection**—A broadcast medium's guarantee to an advertiser that his commercial will be separated by air time from commercials for competitive products. (Also known as product protection.)

**Contiguity Discount**—A discount given for advertising schedules and/or contracts running back to back.

**Continuity Acceptance**—A script of a program or commercial which a network or local station has designed to be suitable for broadcast. (Also known as a continuity clearance.)

**Continuity Clearance:** See **Continuity Acceptance**

**Continuity Discount**—A discount given for commercials that are run for a long period of time or have a heavy schedule during a limited time period.

**Cost Per Thousand:** See **CPM**

**Coverage**—The number of households or individuals that are able to receive a station's signal. When coverage figures are given for a limited area, the limited area should be clearly stated. See also: **Audience** and **Circulation**

(Continued)

**Coverage Area:** See **Circulation Area**

**CPM (Cost Per Thousand)**—The ratio of the cost of an advertisement (in dollars) to a number of households (in thousands) or to a number of individuals (in thousands) estimated to be in the audience at the time the advertisement is run. The term is more fully referred to as cost per thousand households, homes, viewers, readers, etc.

**Cume**—Short for "cumulative audience." For example, a four-week cume represents the cumulative audience over a period of four weeks.

**Cume Persons**—The estimated number of *different* persons who listened at home and away to a station for a minimum of five minutes within a given daypart. (Cume estimates may also be referred to as "cumulative," "unduplicated," or "reach" estimates). This estimate is shown in the Arbitron reports for MSA, TSA and ADI markets.

**Cume Rating**—The estimated number of Cume Persons expressed as a percentage of the universe. This estimate is shown for the MSA only. See also: **Rating** and **Average Quarter-Hour Rating**

**Cumulative Audience**—A term that refers to the net size of a radio audience during two or more time periods. However, even though a household or individual appears in audiences during two or more time periods, it is counted only once. Also called "net audience" or "unduplicated audience" or "accumulated audience."

**Cumulative Estimates:** See **Cume Persons**.

## D

**Dayparts**—The principal radio broadcasting divisions are: morning drivetime (6-10am), evening drive-time (3-7pm), midday (10am-3pm), and teentime (3pm-midnight, Mon.-Fri. and 10am-

7pm, Sat. & Sun.). These are by no means standard among radio stations.

**Demographic Characteristics**—As used in broadcast research, a broad term that refers to the various social and economic characteristics of a group of households or individuals. It refers to characteristics such as the size of household, age, sex, occupation, education and income. See also: **Audience Characteristics** and **Audience Composition**

**Designated Market Area:** See **DMA**

**DMA (Designated Market Area)**—A Nielsen area concept similar to Arbitron's Area of Dominant Influence, embracing the counties in which the TV station obtains the highest proportion of the viewing audience. (Originally a TV-area concept but now being used by other media.)

**Double Spotting**—The practice of stations placing two spot announcements back to back.

**Drivetime**—The commuting hours when radio listening is at its maximum. Though the hours are determined by the specific radio station or network and thus vary in each community generally they are 7-10 am and 3-7 pm on weekdays.

**Due Bill:** See **Barter Plan**

## E

**Effective Sample Bases (ESB)**—The sample size to be used for estimating the statistical variance of audience estimates.

**Exclusive Cume Listening**—The estimated number of Cume Persons who listened to one and only one station within a given daypart.

## F

**FM**—Abbreviation of "frequency modulation," a static-free band used on radio broadcasting and for the sound of television.

**FCC**—Abbreviation for Federal Communications Commission, a U.S. government regulatory agency which issues operating licenses to radio and TV stations.

**Federal Communications Commission:** See **FCC**

**Frequency**—The average number of time periods, out of a set of specified time periods, in which households or individuals are in the audience of a given radio network, station or program. This type of average is normally computed only for those households or individuals that are in the audience during at least one of the time periods. Also referred to as "average frequency."

## G

**Gross Audience**—A term that refers to the gross total of the number of households or individuals counted in the radio audience during two or more time periods. Thus, if a household or an individual appears in audiences during two or more time periods, that household or individual is counted two or more times in computing the gross audience total which reflects both reach and frequency. See also: **Gross Rating Points**

**Gross Rating Points**—The simple total of radio ratings during two or more time periods, or for two or more programs. Normally this sum should be taken only of ratings with the same base.

Gross rating points represent the size of a gross audience expressed as a percentage of the base used in developing the particular ratings included in the gross total. Thus, multiplying gross rating points by that base yields a gross audience figure.

## H

**Hitchhike**—A commercial attached to the end of a radio program, but still within the program's limit.

**Homes Per Dollar:** See **Households Per Dollar**

**Homes Reached:** See **Households Reached**

**Homes Using Radio Rating:** See **HUR Rating**

**Household**—The person or group of people living in one dwelling, constituting a social unit.

**Household Characteristics**—An expression or statement of the habits, economic and educational status, and composition or a household of which some member has heard a particular broadcast.

**Households Per Dollar**—The ratio of the number of households estimated to be in a radio audience to the cost of that time. This quantity is inversely related to cost per thousand. Also called, inexactly, "homes per dollar."

**Households Reached**—The number of households that are estimated to be in the audience of a radio network, station, or program during a specified period of time, regardless of where located. Also called, inexactly, "homes reached."

**Households-Using-Radio Rating:** See **HUR Rating**

**HUR Rating (Households-Using-Radio Rating)**—The rating shows the percentage of households with one or more radios that are estimated to be in the audience of any one of a group of radio stations, at a specified time.

A household should be counted as using radio only once in the computation of this type of rating even if it is using two or more radios simultaneously.

Without the word "rating" attached the term should be used to refer to the actual number of households rather than a percentage.

## I

**Impressions**—The total audience, including duplications, for all commercials in an advertiser's schedule. (Also known as

commercial impressions.)

**In-Tab Sample**—The number of usable diaries returned and actually tabulated in producing an Arbitron report.

**Independent Station**—A station which is commercially operated but not affiliated with any network.

**Individuals Reached**—The number of individuals that are estimated to be in the audience of a network, station or program during a specified period of time, regardless of where located.

**Individuals-Using-Radio Rating** A type of rating for radio in general rather than for a specific network, station, or program. The base is all individual persons or perhaps some specified demographic group. This rating shows the percentage of these individuals that are estimated to be in the audience of any one of a group of radio stations, at a specified time.

An individual should be counted only once in the computation of this type of rating.

**Inherited Audience**—That segment of a particular radio program's audience which had been tuned to and inherited from the immediately preceding program.

**Instantaneous-Audience Rating**—The size of a radio audience as of a given instant, or point in time, expressed as a percentage of some specified base.

## L

**Length of Commercial**—Usually 10, 30 or 60 seconds, but it may extend to two or even three minutes depending upon special negotiations.

**Listener**—A person whose radio is tuned to a particular program, station or network at a particular time.

**Listener Characteristics**—The demographic characteristics (age, sex, education, income, etc.) of the audience to, or a typical listener of a particular radio program, station, or network.

**Log**—The listing of a station's programs, in order, throughout the broadcast day.

## M

**Metro Rating**—A rating computed for the household or the individuals in a well-defined metropolitan (metro) area.

**Metro Share**—A share, or share of audience percentage, computed for a well-defined metropolitan (metro) area.

**Metro Survey Area:** See **MSA**  
**Metro Totals and ADI Totals** (Total listening in Metro Survey Area or Total listening in the ADI)—The Metro Total and ADI Total estimates include estimates of listening to reported stations as well as to stations that did not meet Arbitron's Standards plus estimates of listening to unidentified stations.

**Minimum Reporting Standards:** See **MRS**

**Mobile Unit**—A radio unit, usually a truck or van, for originating broadcasts from on-the-spot locations away from the studio.

**MRS (Minimum Reporting Standards)**—Specific Minimum Reporting Standards are applied to determine the stations listed in an Arbitron report.

**MSA (Metro Survey Area)**—Metro Survey Areas generally correspond to Standard Metropolitan Statistical Areas (SMSA's) as defined by the U.S. government's Office of Management and Budget (OMB) subject to exceptions dictated by historical industry usage and other marketing considerations.

In New England, SMSA's are defined on a "town" rather than a county basis. Where the SMSA represents 65% or more of the SRDS full-county definition for the market, Arbitron uses the SRDS full-county definition to define the Metro Survey Area; where the SMSA represents less than 65% of the population of

(Continued)

the SRDS full-county definition for the market, Arbitron uses the SMSA to define the Metro Survey Area.

## N

**National Rating**—Any rating calculated for a program over the United States. In general this kind of rating shows the percentage of households or individuals that is estimated to be in the audience of a network or a program over a specified time.

**National Spot**—Radio time purchased by a national advertiser from an independent station, rather than via a network. (Commonly called, simply, a spot.)

**Net**—Short for "network," the multiple radio stations linked together regionally or nationally by lines, coaxial cables or microwave relay.

**Net Audience:** See **Cumulative Audience**

**Net Rating Points**—A relative measure of cumulative audience. The figure shows the percentage of a specified demographic base estimated to be in the audience at least once during two or more time periods.

**Net Reach:** See **Reach**

**Net Unduplicated Audience**—The number of different households tuned to a particular broadcast over a specified period of time. (Sometimes called accumulated audience, cume, cumulative audience, reach or unduplicated audience.)

**Network:** See **Net**

**Network Participation**—The purchase of commercial time available within a network TV or radio program, as differentiated from program sponsorship. (Also called a network spot buy or a spot buy.)

**Network Spot Buy:** See **Network Participation**

## O

**O & O Station**—Abbreviation of "owned and operated station," a

local station owned and managed by a radio network.

## P

**Persons Reached:** See **Individuals Reached**

**Persons-Using-Radio Rating:** See **Individuals-Using-Radio Rating**

**Piggyback**—A single advertiser's announcement divided into two wholly separate and distinct product or service commercials.

**Product Protection:** See **Commercial Protection**

**Psychographics**—A categorization of consumers on the basis of psychological, as distinguished from demographic, dimensions. It may include activities, interests, opinions, values, attitudes, life-styles, personality traits, etc. (Also known as psychological characteristics.)

## R

**Rating**—The percentage expression of the size of a TV or radio program's audience. For example, an eight rating means that eight percent of all homes with sets in the coverage area were tuned in to the particular program. (Also called rating point.)

See also: **Average Quarter-Hour Rating** and **Cume Rating**

**Rating Point:** See **Rating**

**Reach**—The net unduplicated or total homes delivered by a specific program in a particular time slot over a measured period of time, usually one or four weeks. (Sometimes called accumulated audience, cume, cumulative audience, net unduplicated audience or unduplicated audience.)

**Reach Estimates:** See **Cume Persons**

**Rebroadcast**—The repetition of a radio program for a different audience in a different time zone, usually scheduled for the same hour as that of the original broadcast.

**ROS**—1. Abbreviation of "run of schedule," the maintaining of the

same conditions throughout a schedule. 2. Abbreviation of "run-of-station," descriptive of a commercial which may be placed anywhere in a station's schedule at its own discretion.

**Rotating Plan**—A schedule of assorted TV or radio commercials on a rotating basis.

**Run of Schedule:** See **ROS**

**Run of Station:** See **ROS**

## S

**Sampling Unit**—A geographic area consisting of a single county, a group of counties or a part of a county.

**Scatter Plan**—In time buying, the random placement of daytime or nighttime radio commercial participations throughout a given period of time, sometimes to achieve broader reach but usually to enjoy more economic rate advantages.

**Sectional Announcements**—Different commercials for different parts of the country, presented simultaneously during a network broadcast program.

**Sets in Use:** See **SIU**

**Sets-In-Use Rating**—The percentage of some specified group of radios-sets that are being used during some period of time. Similarly, the term "sets in use" without the word "rating" should be used to refer to the actual number of radios in audiences, rather than a percentage.

Incidentally, in view of the large number of multi-set households, the term "sets-in-use rating" should not be used as a synonym for "households-using rating."

**Share**—Short for "share of audience," the ratio of the number of radio households tuned to a particular program to the sets in use at the time the program was on the air, expressed as a percentage. See also: **Average Quarter-Hour Share**

**Sign-on**—The time at which a station begins its broadcast day. Similarly, **sign-off**, the time at

which a station ends its broadcast day.

**Simulcast**—The broadcasting of the same program at the same time by AM-FM affiliated stations.

**SIU (Sets In Use)**—The number of radio sets being used during a certain time period in a certain area.

**Special**—A program that pre-empts a regularly scheduled program of a series.

**Sponsor**—The advertiser who pays for a radio program.

**Sponsor identification**—The verbal portion of a program that identifies the sponsor. Also, the percentage of listeners of a radio program who can identify its sponsor or product.

**Spot**—Radio time purchased from an independent station, rather than via a network. Such a time purchase by a national advertiser is actually a national spot, though called, simply, a spot; a purchase by a local advertiser is, strictly speaking, a local spot, but called local radio.

**Spot Buy**—1. The purchase of commercial time available on a local radio station(s). 2. The purchase of commercial time available within a network radio program, as differentiated from program sponsorship. (Also called network participation or network spot buy.)

**Station Break:** See **Break**

**Station Rating**—Any rating calculated for a radio station. Because there are several different types of ratings, there are several different types of station ratings. In general, however, this kind of rating shows the percentage of radio households or individuals in a specified area that is estimated to be in a station's audience over a specified time.

**Syndicated Program**—1. A TV or radio program sold by a packager or independent producer to a local station for local sponsorship. 2. A TV or radio program sponsored by a single advertiser on a number of local stations, each of which is bought individually.

## T

**TA:** See **Gross Audience**

**Tag**—A short announcement placed at the end of a program; usually a promo for another program of the same sponsor.

**TAP (Total Audience Plan)**—An announcement schedule that utilizes multi-dayparts.

**Time Period Rating**—Any rating calculated for a specified period of time, rather than for a specific network station or program.

**Total Audience:** See **Gross Audience**

**Total Audience Plan:** See **TAP**

**Total Audience Rating**—A type of rating computed for some spe-

cified interval of time. To be counted, a household or an individual must be in the audience for some consecutive period of time during the interval. To calculate a total audience rating, the number counted is expressed as a percentage of some specified base.

**Total Survey Area:** See **TSA**

**TSA (Total Survey Area)**—Where applicable, a geographic area that includes the Metro Survey Area plus certain counties located outside the MSA.

**Tune-in Audience**—Those persons who have actually tuned in to a particular radio program, as distinguished from an inherited audience which is defined as those persons who remain tuned in to a following program as a result of having actually tuned in to a particular preceding program.

**Turnover**—A measurement of the frequency with which a program's audience changes over a period of time. See **Audience Turnover**.

## U

**Unduplicated Audience:** See **Cumulative Audience**

**Unduplicated Estimates:** See **Cume Persons**

**Universe**—The estimated number of persons in the sex-age group and geographic area being reported.

# 1980 RADIO ENCYCLOMEDIA

VOL. 2 NO. 4

## CONTENTS

2 How to use this book

### SECTION 1

#### 7 Dimensions

Radio ownership trends, listening levels, leading spot and network advertisers, advertising volume trends, media cost indices.

1

### SECTION 2

#### 19 Station Directory

Alphabetical listing by station and Metro market showing rep, group ownership, network affiliation, address, general manager.

2

### SECTION 3

#### 71 Rep Directory

Alphabetical listing of radio station representatives with addresses, phone numbers and key personnel at each office.

3

### SECTION 4

#### 81 Ethnic Radio

Listing of radio stations with representatives that are exclusively or dominantly programed for the Black and Hispanic markets.

4

### SECTION 5

#### 85 Sports on Radio

For four professional sports—baseball, football, basketball, hockey—originating station, sales rights owner, rep, network size, cost estimates.

5

### SECTION 6

#### 91 Planning Guides

Cost estimates and coverage data to reach the 300 GRP level are shown for the top 50 ADI's and 174 Metro markets for various demos and dayparts.

6

### SECTION 7

#### 219 Radio Networks

Quick facts about each of the wired, rep sponsored, and state networks. Also, RADAR data for the wired networks.

7

### SECTION 8

#### 253 Glossary

Definitions of radio terms used by timebuyers and planners based on three existing lexicons.

8

# How do you spell "relief" from the pain of high TV costs?

The jump in cost of television is giving a lot of local and national advertisers acid indigestion.

This season, for example, a thirty-second commercial on one of those humorous situation comedies could cost you a not-very-funny \$120,000.

It's no wonder so many national and local advertisers are turning to R-A-D-I-O for fast, fast relief.

But, despite its high costs, some advertisers continue to buy TV because they want "impact."

Radio does much more, however, than control costs. It produces proven sales results the way some advertisers used to believe only television could.

Revlon's Oxy 5 used radio as its primary medium and became the number one acne product in America.

Maxwell House Coffee did a searching study of alternatives to remaining virtually an all-TV advertiser. They moved big dollars into radio.

Western Union summed up what so many well-operated companies have discovered when they said, "Radio gives us the impact of television, at a fraction of the cost." (Mailgram used radio as their primary medium to triple sales.)

Maybe it's time your business took a big dose of radio for relief. For more facts, write to Radio Advertising Bureau, 485 Lexington Avenue, New York, N.Y. 10017. Or call us at (212) 599-6666 and ask for the Radio Facts Book.

**RADIO** It's red hot.

# They Laughed When We Sat Down To Play The Midwest.

But they don't laugh now. In just 15 short years, we've become a major factor in the midwest market: Chicago. Detroit. St. Louis. The Century Triangle, we call it. We began with 3 FM stations, one in each city. Now we've added an AM station in Chicago.

---

**3 very important markets.  
4 very important stations.**

---

*When you need to talk to the Midwest, talk to Century.*
